PREFACE

TUBE CADDY - TUBE SUBSTITUTION GUIDEBOOK has been published in answer to the requests of many technicians for an efficient guide which can be carried in their tube caddies.

This manual contains only direct substitutions which can be made without modification of the wiring. All substitutions included here will yield excellent or good results, noted by E or G, respectively, in the Performance (Perf.) column.

Because of the exact electrical characteristics of many types and the very similar characteristics of others, this information has been compiled with the thought that many sales losses resulting from the unavailability of exact replacements can be avoided. Moreover, the public convenience in securing the needed tubes will be served.

In the other substitution guides - *Receiving Tube Substitution Guidebook*, the four *Supplements* thereto, and the all-encompassing *Master Receiving-Picture Tube Substitution Guidebook* - all substitutions are listed, including those which require rewiring and socket changes. In those books, when the filament current of the tubes differs, the notation "Parallel circuits only" is made. However, because we believe that *Tube Caddy - Tube Substitution Guidebook* will be in general use by a high percentage of nontechnical personnel rather than by electronic technicians, we have included some substitutes with filament current unequal to that of the original. This has been done only in cases where the type to be substituted is almost never used in other than parallel circuits. There is limited possibility that these may not operate

PREFACE

properly where the filament circuit is not wired in parallel. It was thought better to take this gamble than to eliminate the many good substitutions which this would entail. If the needed substitution is not listed in Section 1, see Section 2.

Although the substitutions listed here will almost always give from excellent to good results, it must be remembered that this information is for substitutes and, with the exception of those listed in Section 2, we do not recommend their use when the original type is available.
