INTRODUCTION

IN this sixth edition of **Hi-Fi Year Book** will be found many new items of equipment, and these appear in almost every directory section. Those readers who have followed the changes in the audio and high fidelity market, through our previous annual editions, will also note the items that have vanished from the scene. Interesting as the first of these facts may be, and sad as some of the gaps must be, the most heartening side of the picture is the continuance of so many models by so many of the firms who have always been the backbone of the business. It is possible that there is more than one moral, or lesson, tucked away behind all this; but one thing is certain and easy to see—new models every year, spectacular changes in design, modifications for the sake of novelty, and suchlike, have no place in this industry. When the first essential is assured—and that is quality—the deciding factor which must sway all purchasers is reliability; and although there is no valid reason why new equipment, or modified equipment, should be any less reliable than other items which have been on the market for ten years, it is a fact that potential customers tend to think that way. And, unfortunately, they *have* reason for that outlook.

Teething Troubles

During the past five years the audio industry has had far from an easy time—and, as a consequence, the same may be said for those who have taken up "sound" as their hobby during those years. First, there have been the impacts of tape and stereo, which have made life very difficult for the buyer. Second, there has been the rush to climb on to the bandwagon by far too many people who have done little to help the cause of high fidelity in their primary aim to help themselves. It is this fact, chiefly, which has been responsible for a lack of trust on the part of the buying public; and because it may not be an immediately recognisable fact it deserves a clarification; for one of the first essentials for putting something to rights is to understand exactly what is wrong.

Quality before Quantity

When the "hi-fi" industry was relatively small and intimate, catering only for a comparative handful of enthusiasts, quality was the only thing that counted, and no manufacturer who was not personally enthusiastic and keen on the job would have thought of entering the field. Those who were in it, or who were establishing themselves in it, would sooner have worked without profit than they would have turned out apparatus in which they had not full satisfaction and confidence. Then came the day when "hi-fi" became a slogan for a much wider public, and the industry was invaded by others who looked upon it primarily as a business. Inevitably, quantity came first, and quality came second if it was lucky. Many newcomers to "hi-fi" suffered through this, because they knew nothing and trusted almost everything which bore the "hi-fi" tag.

More unfortunate even than this, however, was the effect that the invasion had upon a section of the industry which was at the moment in the difficult period of building itself up. In many cases, it was a case of "compete or go under"; and in order to compete, prices were lowered or maintained in face of rising costs. This, of course, is a fatal step when one

is attempting to concentrate upon quality; and it had the disastrous effect of degrading the products of some of these potentially good newcomers to the field—and to such an extent that they, with all their initial determination and high hopes, ended up by producing equipment which, by virtue of sloppy workmanship, was little better than the glorified "near-fi" products which never could have qualified for their job in anything but name.

Those days, we are glad to say, have nearly ended. The bandwagon proved to be far less of a picnic than many had thought it would be, and there is now more room on the wagon for those who deserve a seat. And because of this there is more room in the market for the good quality product; and because of this, again, the customers are far better able to distinguish the good from the bad; and, as a natural result, there is already a noticeable and commendable improvement all round.

Demand it—and get it

After such an indictment, however, it would be unfair not to let fly in equally outspoken terms at a section of the buying public, who are after all, very much responsible for part of the past trouble. It is said, and very truly, that a country gets the government and the newspapers that it deserves. And the same may be said with equal truth about many products on the market, and of "hi-fi" in particular. "Hi-Fi" means high fidelity or should: and high fidelity must mean quality: and quality, in anything, must be paid for. Provided that one buys carefully and in a selected market, the more one pays the better the product one can expect to get. And the reverse applies when one tries to save pence.

The manufacturer who tries to woo customers by, say reducing the price of his amplifier from £32 to £31 18s. 6d. has taken the wrong turning. The enthusiast who is tempted by such a line of attack had also better turn back and think again. Both will lose by following that road.

Promising Future

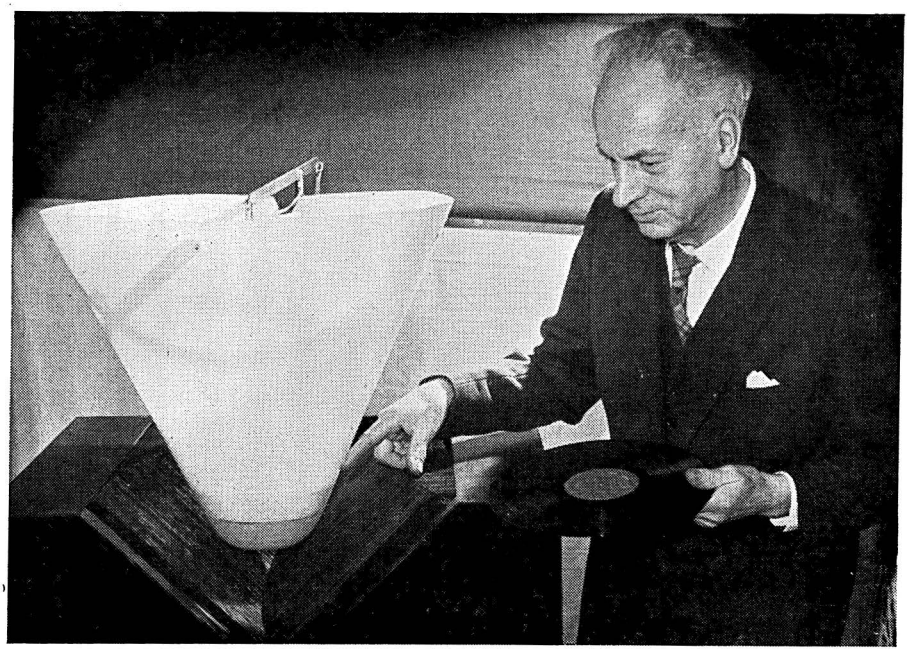
We think—and we say this with confidence—that the whole industry has already seen, and passed, the second turning point in the see-saw graph of the past five years. The period of hesitancy and uncertainty on the part of a much-confused public is ending. Most of the products that did not make the grade have vanished. Many of the new products which have appeared show a marked advance—in design, presentation and workmanship—over what have gone. A survey of the many hundreds of products which are illustrated and detailed in this edition of **Hi-Fi Year Book** show a healthy and determined industry. A comparison between these products, and those available in other lands, leaves no doubt that British Audio Products are well in the lead. The good name that they have already earned abroad is well deserved.

Hi-Fi Year Book has two simultaneous jobs to do. It must provide the most complete summary possible of all audio equipment on the market, in order to make it of maximum use to the widest possible readership—for this includes manufacturers, dealers and reference departments in most parts of the world, apart from the several thousands who rely upon it for use in the home. At the same time it must be a genuine guide to good hi-fi equipment for all potential buyers. With the passing of the years it has incorporated features and sections that were once foreign to it; but the layout and the subdivisions of its directory sections have, we think, maintained the basis of its title more than adequately within its now wider framework.

THE PERFORMANCE AND CARE OF LP AND STEREO DISCS

by Cecil Watts

A transcript of a talk given to the Institute of Recorded Sound



The author demonstrates his giant model which simulates stylus behaviour on a scale of about X 5000! When the groove moves under the tip, the stylus "goes into orbit", as lateral and stereo conditions are created.

THE difficulty I always find, when talking about the gramophone record and how it works, is to know roughly how much can be taken as already understood. For instance it may be a waste of time to say that there is only one groove on each side of a record, and that it spirals from the outside edge to the centre. Mathematical equations expressing the forces involved in playing it are virtually useless to convey practical information, so I will introduce this essay with a description of "High Fidelity from records" from a recent magazine article. I quote: "Sheer perfection is reached by the Hi-Fi enthusiast when he turns up the controls fully and puts on the supreme test record—a disc with blank grooves.

"Listening in rapt attention for the least signs of undesired sound he has at last achieved the dream of dreams—a machine which will play in complete silence". The Miracle is that it sometimes happens. But let me continue to quote: "These antics may be better understood if we stop to consider the fantastic job that a record player has to do. From the sound engineers' point of view, a musician playing a note is

merely making the air vibrate. If he plays a high note the air vibrates rapidly: if he plays a low note it wafts to and fro slowly. For each note there is a *rate* of vibration. This is called its frequency. The bottom note on a piano, for instance, has a frequency of 27 cycles per second—that is, it vibrates to and fro 27 times a second. At the other end of the scale—the top note on the piano vibrates over 4,000 times a second and, indeed, the individual shape of each vibration is different for each instrument even though they sound the same note.

"If the sound pattern or vibration of a violin is multiplied by 20 other violins, and the vibrations of all the other orchestral instruments are added, you have an idea of the commotion in the air of a Concert Hall when a Symphony orchestra is playing. The *combined* vibrations form *one* very complex sound pattern. What the recording engineer has to do is to translate this complex sound pattern into wriggles of the groove in a gramophone record".

Different Notes; Different Forms

Now, what the writer of the article means by *the shape of the vibrations being different for each instrument* is important. Consider this "wriggle in the record groove" as representing perhaps a sound from one instrument. If the sound is a smooth continuous musical note, the wriggle or waveform in the groove will curve smoothly, and will change its direction at an even rate as it passes under the stylus. Such a note could be produced by a flute or an organ. But now consider, say, the same note played on a piano. The note is the same: i.e., the frequency at which it vibrates will be identical; but the shape of its waveform will be quite different.

Steep Wavefronts

At the beginning of the note the hammer strikes the string, so producing a steeper wavefront; and a more violent acceleration results where it changes direction. Only if the note is sustained long enough does the waveform gradually smooth itself to an even vibration.

The waveforms of some sounds with violent accelerations indeed frequently resemble the teeth of a saw. "When we lower the Gramophone needle on to a long playing record" (I continue to quote from the same article) "we force its tiny point to clatter along a track two and a half thousandths of an inch wide, where it gets buffeted from side to side by the turns and twists of the wiggles like a miniature bobsleigh. The vibrations generate a tiny electrical current in the pickup. This is increased several thousand times by an amplifier and injected into a loudspeaker which shakes back and forth; and the result is supposed to be exactly the same marvellously complex pattern of sound vibrations that perturbed the air in the Concert Hall".

The Disc takes the Rap!

Well now! It could be true. The bit which is going to concern us here however, is to establish as far as possible the facts about "this tiny point clattering along its track". Of course it does nothing of the kind: it is the groove, which travels along underneath the tiny point and, in passing, attempts to force it to follow the recorded waveforms. If the point is obstinate—being too stiff or too heavy—the groove cannot manage the job, and it gets some of its wiggles ironed out or knocked off. The lighter and more flexible the pickup movement, and the smaller the radius on the stylus, the easier is the task of the groove to make the stylus follow, *exactly*, every intricate little contour of the recorded waveforms. Hence the efforts of designers to reduce the stiffness and mass of pickup movements, so as to obtain the highest possible fidelity in tracing the groove, and with the least possible damage to the recorded sound pattern.

The Groove "Adjusts" Itself

Observe the beautifully simple mechanics. Just a spherical tip snugly resting between two inclined surfaces. Self adjusting to fit the stylus employed and, should the recorded velocities become too *great* for the stylus to respond to it, it is forced up the inclined wall—or even over the top of some waveforms without serious distress to the user.

The actual size of the groove in a long playing record is less than the thickness of a human hair, and the tip of the stylus is smaller still; and this perhaps makes it difficult to appreciate the effects of all the forces involved when the record is played. The groove in the

original master disc from which records are pressed is cut with a cutter having a "VEE shaped profile—the included angle being 90°. The apex is usually slightly radiused. The deeper the groove is cut, the wider it becomes across the top, from shoulder to shoulder. If you will refer to the photomicrograph on page 8, I think you will appreciate that this is just such a groove, viewed from above. It is a small section of a stereo record magnified about 325 times.

Finer than a hair

The average width across the top of the groove is approximately 60 microns—or less than three thousandths of an inch. A human hair averages about four thousandths of an inch. Now observe, even at this magnification, the smooth surfaces of the groove walls in the photograph. Commence exploring from the narrow part of the centre groove at the bottom.

For the first inch or so the centre groove narrows as it approaches the crest of a low frequency sound modulated mainly on the left hand channel: that is the left hand wall of the groove. The thick white line at the bottom of the groove is light reflected from the curved radius. The crest of the waveform is reached at about 1½ inches where it changes direction, and light is now reflected from the walls of the groove and discloses the indentation of a stylus having sufficient pressure to indent the walls almost from the top to the bottom. There is obviously a deeper impression on the left hand wall than on the right.

Detective Work

The impression of a half thousandth stylus at this magnification would only occupy about an ¼ of an inch to either side of the groove bottom, so the evidence here is that the stylus used was larger. I should say it had a radius of one thousandth of an inch.

Following the groove still further until at about half way up (just about the centre of the photo) the groove has a little transient wiggle (the reflection from the bottom radius gives the true amplitude of this and the light reflected from the shoulder of the left hand wall shows that the modulation is mainly on the left hand channel). Tracing the indentation of the stylus, however, it can be seen that it has taken a straight course through this little transient, which has been somewhat ironed out in the process.

Transients you don't hear!

This is the normal behaviour of a record being accommodated to the reproducer used. Had a more sensitive pickup been used, the impression of the stylus would probably have shown that this transient (occupying less than a ten thousandth part of a second) had been faithfully traced.

Observe now the groove to the left of the picture. Although not so simple to follow, the same thing has happened more or less to halfway, where a very violent high frequency sound commences. This is one of those waveforms like a saw edge which only the smallest stylus could trace properly. See how the large stylus behaves. The first two cycles, where the sound is building up, show nothing unusual. I suspect the first violent wavefront kicked the stylus into the air; but the three top right hand wavefronts have nonetheless been severely blunted, as evidenced by the white patches reflected from the now flattened surfaces as the stylus ploughed from crest to crest. No doubt *some* reproduction of the sound occurred, but the finer detail—in fact *all* the harmonic content of the sound—has not been reproduced.

Pulverising the High Frequencies

This is the condition which causes the grey appearance of some loud passages when examined with the naked eye. The small fragments of groove material thus scraped off, form a dust which if not removed collects along the bottom of the groove.

Perhaps the most remarkable fact about these observations is that although the record has not been used under the best conditions, it is a fact that it has accommodated itself to those which existed; and for a long time it is still likely to give the best reproduction that the pickup employed is capable of providing. Another point to note is the uneven pressure observed on the groove walls. During recent years I must have examined thousands of records under the microscope, and almost without exception similar evidence was visible. I will refer to this later on.

To pursue our subject further will you follow a little simple arithmetic. A record revolving at 33⅓ r.p.m. travels under the

A photo by the author of stereo on disc. Approx. × 325 magnified. *See page 7*

stylus at the outside edge of a 12-inch record at about 16 inches per second; and of course at about half this speed towards the centre. I have already said that the lowest note on the piano has a frequency of 27 cycles per second, so each cycle will occupy just over half an inch of groove length.

Over the top, for top

We do not have to be very exact about this. The important thing I want to emphasise is that with each octave the frequency is raised, the wavelength is halved; so that by the time we get to the top of the piano (that is, seven octaves above the lowest note), *the waveform is as small as the normal stylus;* and towards the centre of the record it can only just follow the general outline of the waveform, and sometimes it even has to ride over the top.

One good stereo by-product

It would be possible to spend many hours studying the situation now before us. It can be shown that frequencies as high as 15,000 cycles per second are faithfully recorded in the groove, and that electrical responses of pickups can equal this; but a major limiting factor in the extraction of all the delicate details of the recorded sound—*is the size of stylus necessary to provide robust equipment for domestic use*. Here is one advance that has been forced by the requirements of stereo, where the groove also varies in size as the modulations rise and fall, requiring a smaller stylus so that it can remain in the groove on the crests of the waveforms.

Vee for Victory

Now, if the shape of the groove in all makes of record had a "Vee" form, the problem of using a smaller stylus would be somewhat simplified; but there are millions of records in use—and millions are still being issued—in which the groove bottom is radiused to such an extent that a half thousandth stylus could easily ride along the groove bottom without making proper contact with the walls. It is unfortunate that there is little information from the makers on this subject, and with the exception of the *Decca* Company which notably employs a "Vee" shaped groove, it is still a matter of experiment to find the smallest stylus which can be used consistent with minimum distortion.

A 5,000-ft. disc—to scale

Now let us refer to the model illustrated on page 5. We are dealing with stereo as well as lateral reproduction, so let me "dress the stage" as it were. In front of us is this enlarged model of a tiny section of a groove. Imagine that the concert hall with its musicians is behind it (right at the back). In between there will be some microphones, the recording room, the record factory; and the model in front is a small section of the "end product" of a recording session. Of course, a complete disc at this scale would measure some 5,000 feet across! I could never rotate it, or move the stylus at audio frequencies, so for this demonstration the movements must be in very slow motion. It is also necessary for you to imagine that the groove is moving towards you as the record rotates.

Even the smallest armature and stylus in use today—having say, a quarter of an inch overall length—would extend to some 12 feet in diameter, and would rise over 100 feet in the air. So it is apparent from its relative size to the groove that a large effort is still required to vibrate it. The radius on the stylus tip is roughtly equivalent to half a thousandth, and when the model is set in motion it can be seen to ride almost at the bottom of the groove. If the groove bottom were radiused to any extent it would in fact appear to touch all round, underneath the stylus.

Stylus in Orbit

If you will now refer to the diagrams on page 11, you will be able to observe the various stylus motions which occur during the tracing of a record. These motions may be split up into individual movements—half left; full left; full right; half right; plus maximum and minimum depth (vertical movement), and their movements, in practice, are changing with each fraction of a second.

One of the chief disadvantages in using smaller styli is the foreign matter which collects in the groove. This becomes much larger in proportion and I would now like to discuss the problem it creates. Dust is always in the atmosphere, and only when the particles are large can we see them; and even without the assistance of static attraction which most l.p. records possess, a lot must fall on the record surface and collect in the groove. With a small stylus there is little or no room

for it to pass underneath, so it has either to be collected in a little clump, or bounced over by the stylus, which causes annoying extraneous noise, and distortion.

Airborne, cellular fragments are usually too large actually to get into the groove, and they mainly lie on the surface until they are pushed aside or collect round the stylus. At this magnification of the model they would look like telegraph poles, or large trees; and they can and do often form a bunch large enough to obstruct the movements of miniature pickups.

The most harmful form of dust is formed of mineral or crystalline particles which become broken down to provide a rough gritty path for the stylus. Many of these particles are sharp enough to become embedded in the groove material and it is very difficult indeed to remove them. Washing is not always a good thing —in fact the impurities in water can leave a precipitation in the groove which is often worse than the original condition.

Brobdingnagian Droplets

At this scale, a drop of water on the record would be deep enough to swim in, and the precipitation from it, when dried, would approximate to a liberal sprinkling of sand or granulated sugar. The smaller the stylus employed the greater is this nuisance, as it destroys all chance of obtaining a silent background. There are now several record cleaning cloths, tissues and accessories available to us. Indeed over the past five years much of my time has been occupied with the problems. I still think the most difficult task is to get the *users* of these accessories to employ them to their best advantage.

What do we mean by "Damp"

Let us first consider the use of a damp cloth. For a normal person using an average quality record-player this is all that may be deemed necessary. If an attempt was made to use a dry cloth, as fast as the dust was wiped off one side, a strong static charge would be generated, and the dust would cling all the tighter to the other. Slightly damping the cloth with water provides a temporary leakage path for any static charge, and the dust usually collects on the cloth. If the cloth is used too often, there will come a time when the accumulated dust is just being transferred from one record to the next.

The degree of dampness is very important. It is surprising how very differently some instructions are interpreted, even by intelligent people. I often receive specimens of records which are claimed to have been cleaned only with a barely damp cloth *on which there are large areas of dried mud*. Of course the background noise will be high. The free moisture has spread into the groove, especially where it has been wiped straight across, and it has left a gritty residue in the path of the stylus.

Impregnated Cloths

Any free fluid applied to a record is usually harmful. Record manufacturers supply impregnated cloths and tissues for those who desire something more efficient than the scarcely damp cloth. Decca supply an impregnated cloth. There is the *Emitex* Tissue, also the Phillips *Discleaner*, which is another impregnated cloth.

The subject of dust behaviour in static conditions is a very involved one, and most confusing. There is no short explanation for the fact that, under a stated static condition, some dust is attracted and some repelled.

Cationics and Anionics

The various agents used for impregnating record cleaning materials have known characteristics. Some are Cationic by nature and some Anionic—meaning that applied friction will induce either a positive or a negative charge in them. It is also known that static is akin to magnetism, in that opposite charges attract each other, while like potentials, repel. These agents all evaporate very slowly, if at all, and remain stable for long periods. Water of course is a good conductor and incapable of holding a static charge. It behaves as a temporary leak to any charged surface, rather like shorting the terminals of the millions of tiny accumulators—the molecules holding the charge. Some antistatic agents have the property of attracting and absorbing moisture to form a similar leakage path. I hope this rather poor description will give a slight understanding of the purpose of the different antistatic agents employed, each of which has some advantage.

As regards their application I confess I am still unable to hold a record while

using these cloths, without leaving finger-marks on the record; so while the turntable manufacturer might not agree, I find it easier to treat a record while it rotates on the turntable, assisting its rotation if necessary with a finger on the label. This method I find also permits an even application. Except perhaps for the Phillips Discleaner which should only be used very occasionally, it is safe to use either the Emitex tissue or the Decca cloth quite frequently without producing an excess accumulation of the agent on the record surface. The Phillips Discleaner in my opinion is over-generously impregnated with an extremely efficient antistatic agent which *can* become greasy on the record if used to excess.

Cloths versus Bristles

Unfortunately, a cloth or tissue is unable to penetrate very far into the groove; and in an effort to ensure the complete removal of all dust from the groove I developed the accessory which I dubbed the "Dust Bug". It was used at first to clean the groove during examination under the microscope, but it was so efficient for this purpose that it was produced for general use. It has a small tuft of nylon bristles shaped at their tips to penetrate to the bottom of the groove, and to rake out any dust, while the record is played. A plush pad is incorporated, which collects the dust, and which is maintained at a lower electrical potential by being slightly moistened with a dilute solution of Ethylene Glycol in distilled water. Any static in the record is discharged by this the instant before the brush contacts the dust.

It is *not* intended that any of the fluid should be transferred to the record surface, although kind friends have stated that the Ethylene Glycol lubricates the record; and because of this I believe many users apply excess fluid to the plush pad in an attempt to obtain this result. A little thought should bring the realisation that the outside edge of the record will receive this excess fluid, while the centre will get none; and the practice rather defeats the original design. The "Dust Bug" should *not* be considered as an antistatic applicator.

Once it was realised that a method had been found to clean the groove with certainty the "Parastat" became a natural development to treat records more rapidly. It also became possible to provide a controlled microfilm of an efficient antistatic combined with dry lubricant which left no visible trace on the record surface.

The Disc Material

Let us next consider the material of which the record is composed. It is flexible and relatively soft. It is easily marked. Under the microscope I can, for instance, *observe every spot where any pickup has been placed on it.* Physicists have taken much trouble to measure the depression caused by the stylus. Using a one thou radius indenter with a downward pressure of 10 grammes, the indentation measures just short of half a thou. While if the pressure is reduced to one gram it is just half this amount—let us say 5 microns. Any pressure above two grammes we are told stresses the record material beyond its elastic limit and the surface is permanently deformed.

Statements of this kind could easily frighten us until a little thought shows

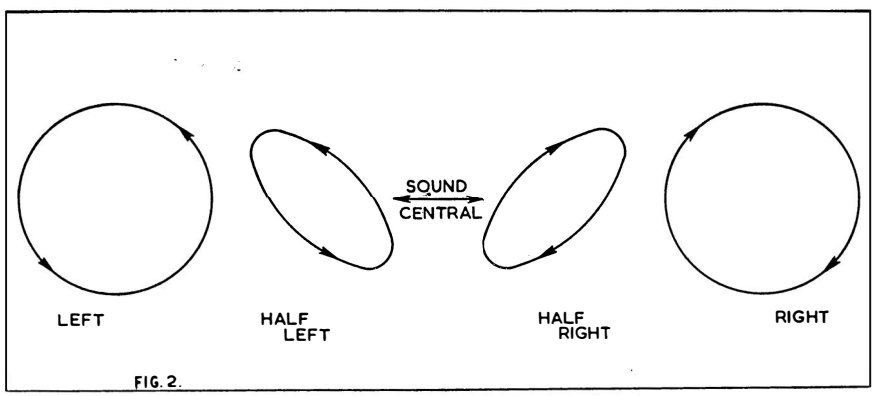


FIG. 2.

These drawings show the orbital paths followed by a stylus when tracing a groove.

that these figures are taken while the record is stationary—rather like measuring the depression of a water skier standing stationary on the water. The force required for his support on the surface is not there until he is in motion. The measurements do show, however, that the record material yields under pressure and indicates the elastic limit.

The Facts

Consider the real case. The groove is always in motion, passing under the stylus. My observations show that on an unmodulated groove the normal domestic record player having a ¾ thou stylus with a downward pressure of 5 grammes can trace the groove with little permanent deformation, even after many playings; but wherever the groove is modulated extra force is required to move the stylus, and at each change in direction the groove wall is indented until there is sufficient supporting area in contact with the stylus to provide the force to move it.

It is only when the resistance of the stylus to movement exceeds the strength of the record material that the result is as shown in the photomicrograph, which indicates the further reduction of the mass and stiffness of pickup movements being desirable, rather than still smaller styli with less downward pressure. With the best equipment today, the groove distortion is reduced to very small proportions indeed, and only the most violent accelerations may cause sufficient deformation of the groove to be recognised audibly. Stereo, however, still requires a much more exact equalisation of the forces at present applied to the stylus. We have seen that it is required to execute an orbital motion in translating the stereo information. We also know that the record material is, within limits, elastic.

Uneven forces distort

It is clear, then, that even though the musical quality of the sound may be unaffected, any uneven force causing more pressure on one wall than the other will result in a false orbital path, and will also disturb the complimentary amplitudes of the waveforms of the two channels, as well as a false interpretation of their phase relationships. *It is unfortunate that such an uneven force is produced from all pickup arms in use today.*

Consider the friction between the stylus and groove which produces a force pulling the stylus in a forward direction. In the old days of the wax cylinder record, the stylus was transported over the record by a separate lead screw driven by the motor. It was only the introduction of the more robust shellac disc which permitted the record *groove* to perform this function. It was very convenient for the acoustic tone arm to follow suit and, later, pivoted pickup arms became the accepted method.

Pickup Overhang

More recently the inherent tracing distortion of the method has been reduced by cunningly overhanging the pickup, and it is this which in most cases now produces an inward pull resulting in the left hand or inside wall of the groove receiving the greater pressure. To demonstrate this we must consider the pickup arm as a piece of string connecting the arm pivot to the stylus itself. There is only one position for the string where the stylus can exert an even pressure on both walls of the groove—that is when it is at right angles to a radial line drawn from the record centre to the stylus. If the stylus overhangs this line, then it pulls inwards; or if the stylus is behind, then it pulls outwards. In the effort to reduce tracing distortion to a minimum, pickup arms today produce a strong inward pull.

We cannot yet hear it all

It is not difficult to appreciate that with one wall of the groove supporting a greater proportion of the downward pressure, the other wall supports less; and the unbalanced indentation of the groove walls is often appreciably more than the difference in amplitude between the separately recorded channels.

It is certain that at the moment we are only able to reproduce a small percentage of the stereo information recorded in a record groove.

Finally there is some speculation that the size of groove and stylus will become smaller still; but this can only happen when and if the use of the half thou stylus becomes general. If the progress in pickup design ever permits this to happen, then the idea would be most attractive; for with a groove half the present size we could look forward to up to an hour's performance from each side of a 12 inch record with no other change of equipment.

Cecil Watts

DIRECTORY OF PICKUPS AND ARMS

★ In the abridged specifications of this directory, the following abbreviations are used for economy of space: **S.p.**—stylus pressure recommended by manufacturer; **Cms**—centimetres per second; ■ denotes stereo equipment.

Bang & Olufsen, Struer, Denmark. Sole U.K. importers: Aveley Electric Ltd., Ayron Road, South Ockendon, Essex. Tel.: South Ockendon 3444.

Orthophonic balanced 8-pole variable reluctance pickup. Available as single stylus or dual stylus. Sapphire or diamond. Output voltage 1.p. 100 mV; 78 200 mV. Range 20-16,000 c/s. S.p. l.p. 5-7 gm.; 78 9-12 gm. Load imp. 10-100 K. Price from £1 (U.K. purchase tax 6s. 11d.) single sapphire to £3 8s. 2d. (£1 2s. 8d.) dual diamond.

■**Stereodyne 11** stereo magnetic pickup. Stylus 0.7 thou diamond. Output voltage 7 mV per channel at 5 cm/sec. Channel separation > 22 dB. Range 30-15,000 c/s ± 2 dB. S.p. 2-4 gm. Rec. load 47,000 ohms or higher. Price £7 7s.

■**ST/L Arm and moving iron** stereo pickup complete. Diamond stylus 0.7 thou. Load imp. 47,000 ohms per channel. Output voltage 1.4 mV per channel. Range 30-15,000 c/s ± 2 dB. S.p. 3 gm. Price £13 7s. 9d. (U.K. purchase tax £4 9s. 3d.)

Burne-Jones & Company Ltd., 18 Brunswick Road, Sutton, Surrey. Tel.. Vigilant 5050. Cables: Burjomag, Sutton.

■**B.J. Stereo Cartridge.** Non-magnetic. Diamond stylus approx. ½ thou. Output voltage 200 mV. Range 30-12,000 c/s. S.p. 4-7 gm. Load imp. 2 Megohms. Price £3 0s. 0d. (U.K. purchase tax 19s. 3d.)

■**B.J.-ELAC210.** Magnetic stereo cartridge. Diamond stylus 0.5-0.7 thou. Output voltage 20 mV for 10 cm/sec. Range 30-15,000 c/s +6 −3 dB. S.p. 4-6 gm. Load imp. 1,500 ohms. Price £13 3s. 9d. (U.K. purchase tax £4 4s. 8d.)

■**B.J.-ELAC310.** Magnetic stereo cartridge. Diamond stylus 0.5-0.6 thou. Output voltage 15 mV for 10 cm/sec. Crosstalk better than 25 dB at 1,000 c/s, and 14 dB at 15 Kc/s. Range 30-15,000 c/s ± 2 dB. S.p. 3-6 gm. Load imp. 1,500 ohms. Price £16 12s. 6d. (U.K. purchase tax £5 6s. 8d.)

B.J. Tan/11 arm. Designed to overcome "tracking error". Total tracking error less than 1 degree. Height adjustable. Price £3 3s. (U.K. purchase tax £1 0s. 3d.)

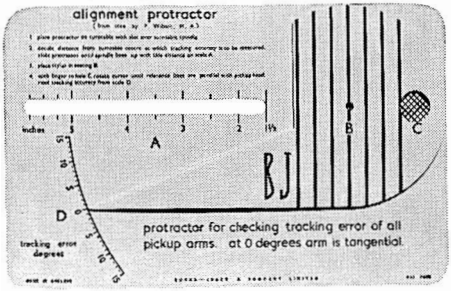
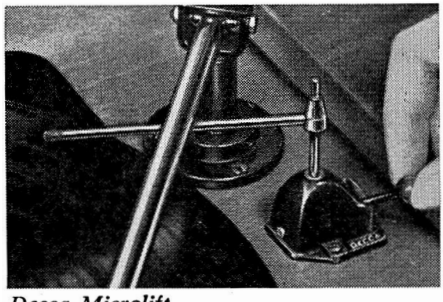
ACCESSORIES

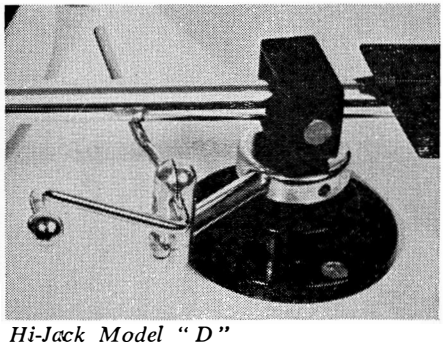
Auriol pickup control



B.J. alignment protractor



Decca Microlift



Hi-Jack Model "D"

Auriol (Guildford) Ltd.. By-Pass Works, Guildford, Surrey. Tel.: Guildford 66712.

Auriol Pickup Control. This unit eliminates accidental damage to the record by the stylus, the control provides air cushioned lowering and positive vertical lifting and lowering of the stylus. The supporting arm is serrated and calibrated for accurate positioning of the stylus at any pre-selected position within 1-2 micro-grooves. Three cursors are provided to mark starting positions and an indexing clip is supplied to suit any specified pick-up arm. U.K. price £3 3s., inc. purchase tax. Export price £2 15s.

Auriol Pickup Control Mk. II. This is dimensionally similar to the above but the arm will swing clear of the turntable to allow its use with the Autochanger/ Manual player units. U.K. price £4 0s. 6d., inc. purchase tax. Export price £3 7s. 6d.

★

Burne-Jones & Co. Ltd., 18 Brunswick Road, Sutton, Surrey. Tel.: Vigilant 5050. Cables: Burjomag, Sutton.

Counterweight Unit. The addition of this unit to a B.J. pickup arm permits speed and accuracy in weight compensation. The unit may be attached with or without standard weights supplied, and produces a total point pressure variation of approximately 4 gm. Price 12s. (U.K. purchase tax 3s. 11d.)

Alignment Protractor. For measuring the tracking accuracy of all pickup assemblies. Made in plastic ivorine. Price 7s.

★

Cosmocord Ltd., Eleanor Cross Road, Waltham Cross, Herts. Tel.: Waltham Cross 25206.

Acos Changer Dust Bug. Developed in conjunction with Cecil Watts. Clips on to changer arms. Price 17s. 6d. (U.K. purchase tax 5s. 8d.)

★

Decca Radio & Television, Ingate Place, Queenstown Road, London, S.W.8. Tel.: Macaulay 6677.

Decca Microlift. A device for raising and lowering a manual pickup arm at any

point on the record for minimising risk of damage either to record or stylus through handshake. Easy to fit to any back-pivoted pickup. It does not hinder record handling by over-lapping the turntable. Price £1 2s. 8d. (U.K. purchase tax 7s. 4d.)

★

M. B. Fitch, 11 Glennie Road, London, S.E.27. Tel.: Uplands 7667.

"Hi-Jack" Model "D". A raising and lowering device specially designed for direct attachment to the Decca ffss pickup pedestal. All metal chrome plated construction, positive stops in gully raised and lowered positions. Price: 16s. 10d. (U.K. purchase tax 5s. 8d.

"Hi-Jack" Standard Model. Pickup arm raising and lowering device for use with most types of transcription motors and pickups. Positive stops in gully raised and lowered positions. 1½ in. height adjustment. Needs ⅜ in. hole for fixing. All metal construction. Price 13s. 1d. (U.K. purchase tax 4s. 5d.)

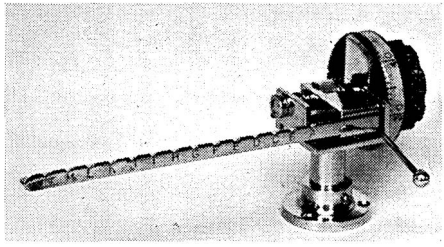
"Hi-Jack" Universal Model "U". A raising and lowering device specially suited for use with the Garrard 4HF motor unit for which no extra fixing hole is required. 1½ in. height adjustment by means of sliding head. All metal chrome plated construction. One 3/16 in. hole needed for fixing. Price 16s. 10d. (U.K. purchase tax 5s. 8d.)

"Hi-Jack Cuematic". A precision groove locating device with independently operated local and remote pickup lifting control. By selection of the appropriate groove on the lifting bar and adjusting the dial to a pre-determined setting, any one groove can be selected. Price £11 15s. 7d. (U.K. purchase tax £3 19s. 5d.)

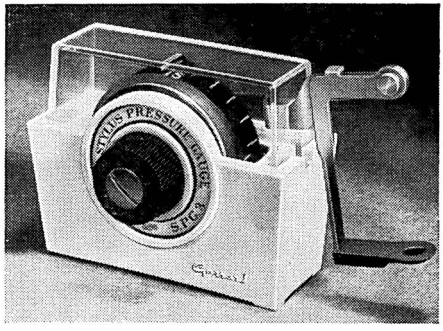
★

Franell Laboratories Ltd., 486 Finchley Road, London, N.W.11. Tel.: Speedwell 7512 (Sole agents for U.K.)

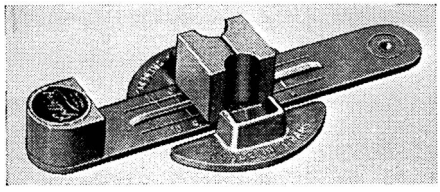
Rexon. An automatic record cleaning device which cleans discs as they are being played. A lightweight arm resembling that of a moulded plastic pickup with a head carrying a pad on a self adhesive base. A plastic mounting pillar carries the Rexon arm and three assorted bases are supplied—suction cap, impact adhesive, and weighted free-standing support. Will fit any turntable. Price 24s.



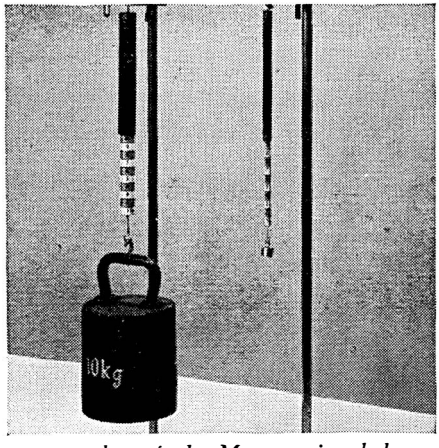
Hi-Jack Cuematic



Garrard S.P.G.3



The Goldring STB1



Two examples of the Maey spring balance

The Garrard Engineering & Manfg. Co. Ltd., Newcastle Street, Swindon, Wilts. Tel.: Swindon 5381. Cables: Garrard, Swindon.

S.P.G.2. Stylus pressure gauge, also includes a spirit level for checking the level of the turntable. Price 19s. 3d. (U.K. purchase tax 6s. 4d.)

S.P.G.3. Stylus pressure gauge. 0-12 grammes with ½ gram. indication. Price 14s. 8d. (U.K. purchase tax 4s. 10d.)

★

W. N. Gay. North Street, Midhurst, Sussex.

Disc-C_2. A pure alcohol anti-static cleaner for all l.p. records. Price 6s.

★

Goldring Manufacturing Co. (Great Britain) Ltd., 486/488 High Road, Leytonstone, E.11. Tel.: Leytonstone 8343. Cables: Echovox, London.

Anti-static Cleaning Pad. Removes dust from records and is fitted with a detachable brush for keeping stylus clean. Price 4s. 6d. (U.K. purchase tax 1s. 6d.)

STB.1. Stylus balance, a simple yet accurate gauge which operates at record level. Stylus pressure is read directly in grams off the calibrated scale. Price 3s. 6d. (U.K. purchase tax 1s. 2d.)

Stylus microscope designed especially for the examination of pickup styli; it has variable magnification from ×50 to ×150 providing illumination both under and behind the stylus tip. A clip is fitted to hold any type of stylus in position under the lens. Price on application. Trade only.

★

The Metro-Sound Manufacturing Co. Ltd., 19a Buckingham Road, London, N.1. Tel.: Clissold 8506. Cables: Metrosound, London.

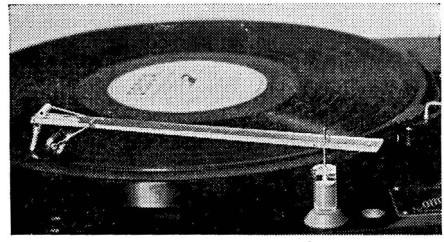
Stylometer. 4-digit counter for recording the number of playings. Price, single unit, £2 5s., double unit £4.

★

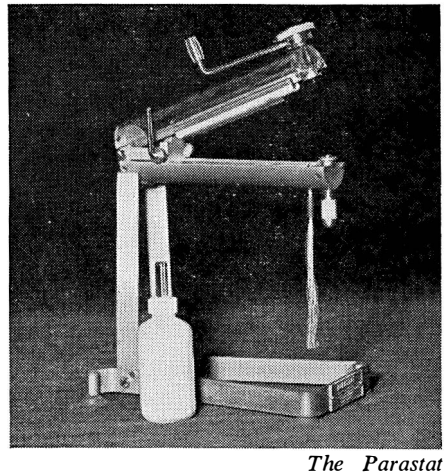
Rimington van Wyck Ltd., 42/3 Cranbourn Street, London, W.C.2. Tel.: Gerrard 1171.

Clendisc. An anti-static cleaner and preserver for all records. Price 3s. 9d. & 8s. 6d.

Fredorec. A cleaning pad for removing dirt from records. Price inc. purchase tax 3s. 4d.



The Dust Bug



The Parastat

M. Tietze, 25 Castellain Road, London, W.9. Tel.: Cunningham 2846.

Maey Spring Balances. A range of spring balances from 1 gm full scale up to 10 Kg. Prices from £1 9s. 6d. to £3 5s.

★

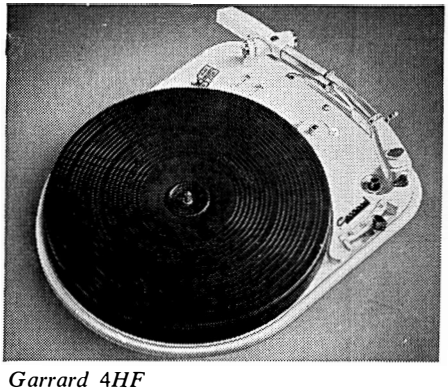
Cecil E. Watts Ltd., Darby House, Sunbury-on-Thames, Middx.

The "Dust Bug." Claimed to be the most efficient method of removing all static and dust from records as they are played. Instantly fitted, suitable for all types of records. Record quality is improved, surface noise and wear reduced. Price 17s. 6d. (U.K. purchase tax 5s. 10d.) Note: A model suitable for use on autochangers is produced in co-operation with Cosmocord Ltd.

The "Parastat." For cleaning both sides of an l.p. disc simultaneously and making it inert to all static charges. Principally for trade use. Price Mk. II £18 10s. (U.K. purchase tax £6 3s. 4d.)

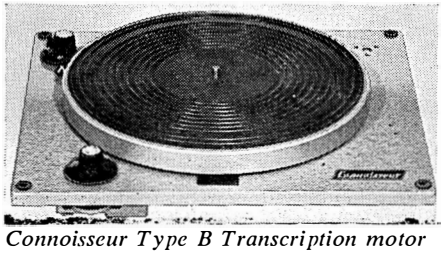
DIRECTORY OF MOTOR UNITS

Garrard 301 with Strobo' turntable



Garrard 4HF

Goldring-Lenco GL60



Connoisseur Type B Transcription motor

Garrard Engineering & Manufacturing Co. Ltd., Swindon, Wiltshire, England. Tel.: Swindon 5381. Cables: Garrard, Swindon.

Model 301 Transcription Motor. Three speeds. Variable speed adjustment. Price £16 17s. 6d. (U.K. purchase tax £5 9s. 9d.)

Stroboscopic Turntable, extra cost, £1 3s. 6d. (U.K. purchase tax 7s. 7d.)

Garrard 4HF. Four speed record player complete with pickup arm. 12-in. pressed steel turntable. Rheostat speed control ± 3%. Automatic stop may be disconnected. Price with GC8 cartridge £13 19s. (U.K. purchase tax £4 10s. 9d.), with GMC5 cartridge £20 1s. 3d. (plus £6 10s. 6d.)

★

Goldring Manufacturing Co. (Great Britain) Ltd., 486/488 High Road, Leytonstone, London, E.11. Tel.: Leytonstone 8343.

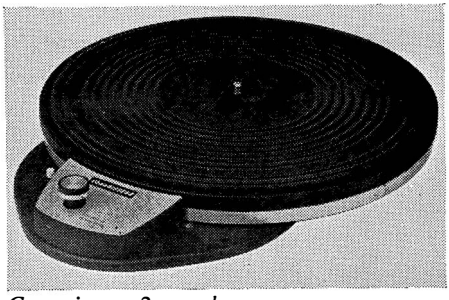
Lenco Transcription Unit GL58. Infinitely variable speed adjustment with preselected stops for 16, 33⅓, 45, and 78 r.p.m. Groove location arm lowers pickup on to record as on/off is operated. Fitted with G.60 arm. Price £13 15s. (U.K. purchase tax £4 9s. 5d.)

Lenco Transcription Unit GL60. Non-ferrous turntable, weight 8 lb. Infinitely variable speed adjustment. Groove location arm. Massive centre spindle on nylon thrust bearing. Fitted with G.60 arm. Price £18 10s. (U.K. purchase tax £6 0s. 3d.)

★

A. R. Sugden & Co. (Engineers) Ltd., Market Street, Brighouse, Yorkshire. Tel.: Brighouse 2142. Cables.: Connoisseur, Brighouse.

Connoisseur Transcription Motor Type B. Similar to the original model, but incorporating a large stroboscopic disc beneath the turntable, viewed through a mirror with an internal light source. Precision ground revolving shafts run in nylon graphite bearings, which are adjustable to maintain full accuracy throughout the life of the unit. Price £20 10s. (U.K. purchase tax £7 6s. 1d.)

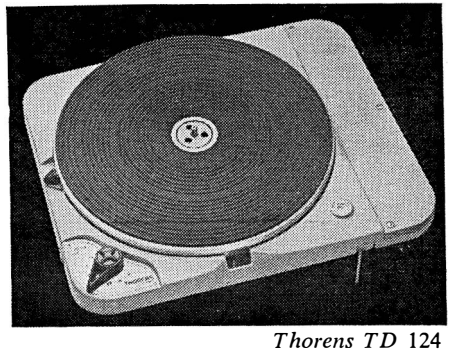


Connoisseur 2 speed

Connoisseur 2 speed stereo transcription motor. Operates at 33⅓ and 45 r.p.m. fixed speeds. Full 12-in. turntable of non-ferrous material. All bearings are adjustable throughout the life of the unit. Synchronous motor. Price £12 10s. (U.K. purchase tax £4 3s. 1d.)

★

Thorens. Distributed in the U.K. by Technical Suppliers Ltd., Hudson House, 63 Goldhawk Road, London, W.12. Tel.: Shepherds Bush 2581, 4797. Cables: Teknika, London.



Thorens TD 124

Thorens TD124 Transcription Turntable. Four speeds with "OFF" position of selector switch between each speed. Eddy current speed control ± 3%. Built-in stroboscope for four speeds at 50 and 60 c/s. Price £40 17s. (U.K. purchase tax £13 15s.)

AMPLIFIERS and PRE-AMPLIFIERS

A RE-STATEMENT OF SPECIFICATION REQUIREMENTS

by George S. Tillett

THE first Hi-Fi Year book made its appearance in 1956 and in that particular issue I dealt at some length with amplifier specifications and requirements. A lot has happened during the last six years; for example, the impact of stereo, the advent of the integrated amplifier, spectacular improvements to speaker systems etc., etc. For these reasons, and of course for the benefit of the many new readers, it may be as well to take another look at these specifications. Here then are the basic requirements of a High Fidelity amplifier:—

1 Low harmonic and intermodulation distortion: **2** Linear frequency response: **3** Good transient response: **4** Adequate power output: **5** Low output resistance: **6** Low hum and noise level: **7** Efficient tone controls and filter system: **8** reasonably versatile equalising and pickup matching facilities.

A stereo system must in addition have the following facilities: **9** A balance control to adjust the gain of one or both amplifiers: **10** Provision for switching both channels in parallel for single channel operation.

Harmonic and Intermodulation Distortion

If a pure sine wave is applied to a perfect amplifier we would get a pure sine wave out; in other words we would get amplification without distortion (see **fig. 1**). However, nothing is perfect in this world, and even the best of High-Fidelity amplifiers produce a little distortion. Compared with pickups, loudspeakers or records it is quite small, but it *is* there. It is mainly caused by the inherent curvature of valve characteristics, plus output transformer deficiencies. One effect of this distortion is the production of harmonics, thus the application of a 1,000 c/s note would result in an output consisting of a 1,000 c/s fundamental, plus a second harmonic of 2,000 c/s, a third harmonic of 3,000 c/s, a fourth at 4,000 c/s and so on. **Fig. 2**

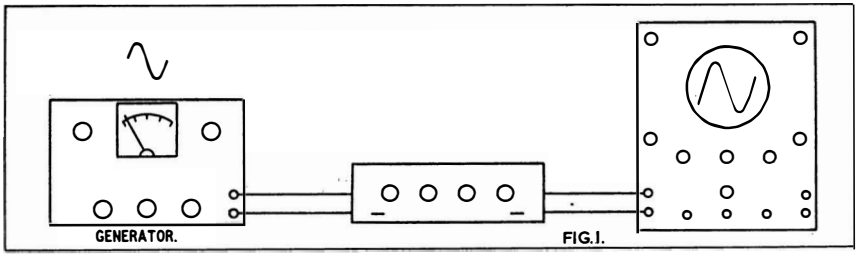


FIG.I.

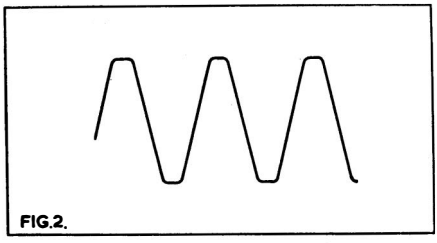


Wave-form of an amplifier working in a condition of overload.

shows such a waveform, and this is an example of an amplifier in an overloaded condition giving a 6% third harmonic, plus a 1% second. The output was just under 15 watts and the distortion at the rated output of 10 watts would be less than 0.1%. The symmetrical "Clipping" of the waveform indicates that the output stage is a push-pull type—and that the two valves are balanced.

It is generally agreed that the presence of higher order harmonics, such as the 5th, 7th and 9th which are not harmoniously related to the fundamental, are objectionable even in small percentages. Since these harmonics are progressively more unpleasant some authorities have advocated the "weighting" of the figures accordingly. It is obviously very difficult to assess their relative unpleasantness so this method is rarely used.

Spurious fre-uencies

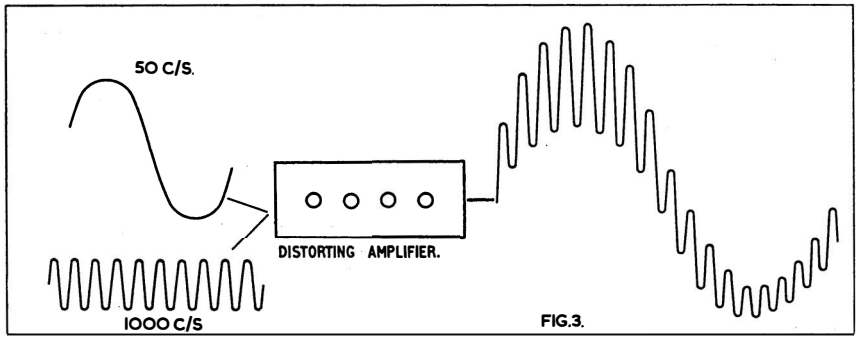
Intermodulation distortion is really a result of harmonic distortion but is usually considered much more serious. It can be described as the formation of new frequencies when two or more frequencies are passed through a non-linear system. These spurious frequencies are known as sum-and-difference or combination frequencies, and as they are not harmoniously related to the original tones they are nearly always musically discordant. **Fig. 3** shows a 1,000 c/s and a 50 c/s note applied to a "Distorting amplifier" and clearly shows the modulation of the 1,000 c/s note which is caused by the harmonic distortion of the low frequency. The output will include the original 50 c/s and 1,000 c/s plus a whole series of sum-and difference frequencies such as 1050, 950, 1100, 800 c/s, etc., etc.

There is no definite relation between the two forms of distortion, although obviously if the harmonic distortion is high then the intermodulation distortion will be high. For a well-designed amplifier the proportion is usually about 3.8 : 1 up to the rated output, with the ratio increasing up to overload point.

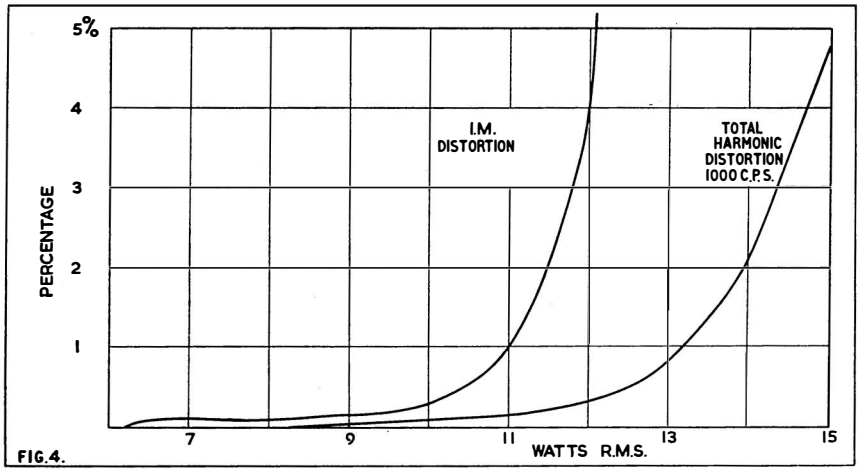
Fig. 4 shows this relation in a typical 10 watt amplifier. Note the sharp increase in IM above 10 watts. If the frequency response of the amplifier rolls-off fairly rapidly above 10 Kc/s, then the harmonic distortion may be decreased at a greater rate than the IM.

How is Distortion Measured?

Harmonic distortion is measured by a distortion bridge which removes the fundamental frequency and leaves the spurious harmonics to be read off on a calibrated meter. **Fig. 5** shows the basic arrangement. The usual circuit employed in this type of instrument is a tuned Bridge—T network or a Wien bridge: the former is capable of giving a sharper rejection. The meter is in effect a valve voltmeter and is used in conjunction with a switched attenuator to give a direct reading from 0.5% or as low as 0.05% on the better instruments. One disadvantage is that all the harmonics, plus hum and noise, are lumped together; although there are more elaborate bridges,



Intermodulation distortion. Note how the low frequency has modulated the 1,000 *c/s wave-form.*



The relationship between Harmonic and Intermodulation distortion is shown here.

such as the "*Radiometer*", which has both high and low pass filters, allowing hum and noise to be evaluated separately. The harmonics are still integrated and expressed as a whole but this is perfectly satisfactory for most purposes. If we need to know the proportions of individual harmonics then we use an instrument called a "wave-analyser" which can be tuned to each harmonic; so we would get a% second, plus b% third, c% third, and so on. These figures are not simply added together because the total distortion factor is the *ratio* of the total r.m.s. voltage of all harmonics to the *total* r.m.s. voltage. Thus the formula is

$$D(\text{Distortion}) = \frac{\sqrt{E_2^2 + E_3^2 + E_4^2 \cdot +}}{\sqrt{E_2^2 + E_2^2 + E_3^2 + E_4^2}} \times 100$$

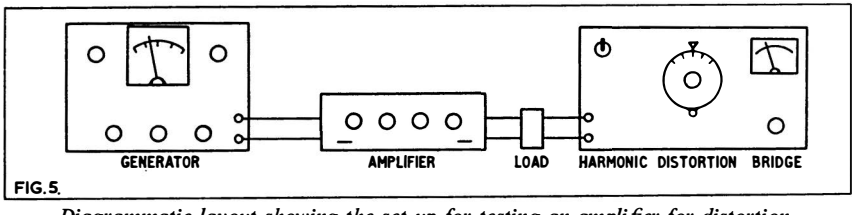
where D=percentage of harmonic distortion: E=amplitude of fundamental voltage: E= amplitude of second harmonic etc.

The advantage of the Bridge

Lazy people will still prefer to use the direct reading bridge! However there are occasions when the individual percentages are required, and the mathematics are not really as involved as they look. One thing must be stressed: whichever type of instrument is used it is essential that the signal generalator itself be free from distortion, otherwise a filter must be used. What frequencies are used? In this country it has been customary to specifiy either 400 c/s or 1,000 c/s, i.e. somewhere near the centre of the audio range. This has been criticised—and rightly —because it is just in this band that the distortion is at its lowest, and these figures would not necessarily give a true indication of the performance of an amplifier.

Medium, high and low examples

Fig. 6 shows the distortion of our 10-watt amplifier taken at high, medium and low frequencies as now given in the *Hi-Fi News* amplifier reviews. The top frequency of 4,000 c/s was selected because the main harmonics will always be within the range of the amplifier. Another way of presenting this information is to give the total harmonic distortion curve at 1,000 c/s, with the maximum power output available at the extremes; but it is felt that the 3-frequency



Diagrammatic layout showing the set-up for testing an amplifier for distortion.

method is more accurate. A good amplifier should give full rated power at a total harmonic distortion of less than 0.2% at 1,000 c/s, 0.5% at 40 and 4,000 c/s.

Intermodulation Distortion

Intermodulation distortion is measured by introducing into the amplifier a composite signal, composed of a high frequency and a low frequency, usually in the proportions of 4 to 1. There are several standard test frequencies—40 and 4,000, 60 and 6,000, 60 and 10,000, and 70 and 7,000 probably being the most common. The output of the amplifier is fed to an IM analyser which removes both fundamentals, leaving the spurious sum-and-difference signals. It is common practice to combine both signal sources with the analyser, which then becomes quite an expensive instrument. Many competent authorities maintain that the co-relation between IM and harmonic distortion is sufficient for the IM distortion alone to give a picture of the performance of an amplifier. Certainly this method is widely used in America although there are no definite standards as yet. The Heath company have three gradings as follows: Professional 1% or less, High-Fidelity 2% or less and Professional 3% or less (60 and 6,000 mixed 4 to 1). Langford-Smith gives the following figures—*Extremely high fidelity IM*, less than 2%, *Good fidelity*, less than 8% and a *typical radio receiver*, less than 40%. In a good amplifier an IM of 1% would correspond to a centre frequency harmonic distortion of about 0.3%.

Wider range—less distortion

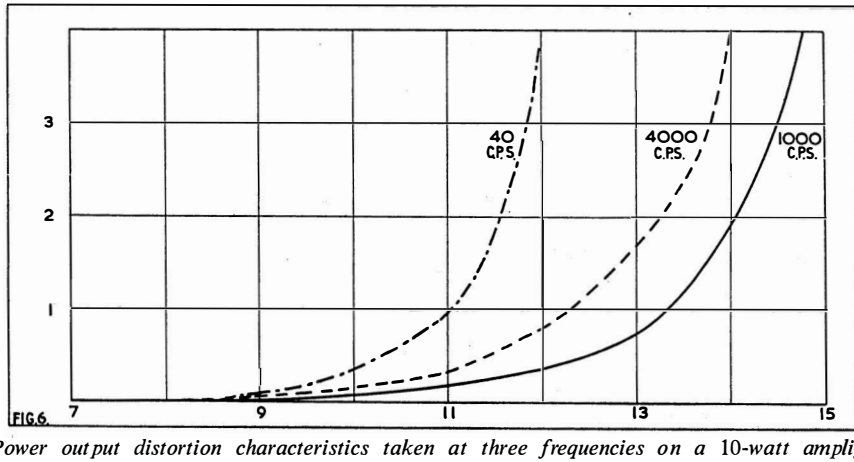
Before leaving the subject of distortion it should be noted that the permissible or rather tolerable distortion of an amplifier is to a certain extent dependent on the frequency range of the system, in other words the wider the range the lower must be the distortion. As I believe Hugh Brittain once remarked, "The wider you throw open the window, the more muck blows in".

Linear Frequency Response

This should be substantially flat from 20 to at least 20,000 c/s, and these figures should always be stated with a reference. Thus a good amplifier will have a frequency response from 20 to 20,000 c/s ± 1 dB. or 2 dB., ref. 1,000 c/s.

Adequate Power Output

Adequate power output must be available to handle peak transient power without distortion Assuming a speaker system of average efficiency (5%), the normal power used under domestic conditions would be of the order of 250 to 300 milliwatts; but to handle peak transient power with an adequate factor of safety, an amplifier rated at 10 watts should be used. For stereo an amplifier having a rating of 8 plus 8 watts will be sufficient for all but the largest rooms. Some of the smaller bookcase speakers are very inefficient, and a 10 plus 10 watt or even larger amplifier might be necessary. For instance, the small AR-2 speaker which is very popular in America is advertised as needing no less than 30 watts !



Power output distortion characteristics taken at three frequencies on a 10*-watt amplifier (Heathkit MA*12).

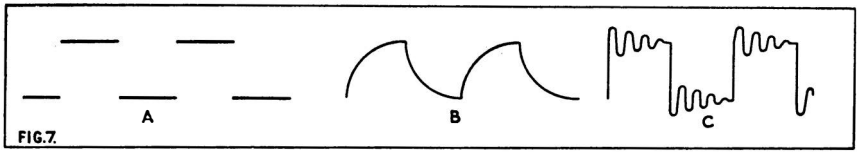


FIG.7.

These figures show (a) 1,000 c/s square wave input (b) HF attenuation and (c) ringing.

There is another factor to consider. Many people listen to stereo at a higher volume level than they would to single channel sound. This is partly because of the lower incidence of "listener fatigue" with the more natural reproduction, and partly because of the greater dynamic range of some of the more recent tapes and records. In the 1956 Year Book I wrote that: "*The power response of an amplifier is not necessarily identical with the frequency response. Some amplifiers optimistically rated as* "10 *watt*" *have no difficulty in giving the stated output at* 1,000 *c/s, but at* 50 *c/s it is quite another story. One such amplifier which uses a small output transformer was tested recently and found to deliver a maximum output of* 5 *watts at* 40 *c/s*". Well, those amplifiers are still with us, but their numbers are fortunately decreasing.

Grain-oriented Strip

Nearly all the best amplifiers use transformers made of grain-oriented strip which has almost completely ousted the more expensive "C" core materials. One thing must still be emphasised, if the power output is not maintained down to 20 c/s then a filter must be fitted in the early stages to prevent the lower frequencies from overloading the output stages and causing distortion. As far as the high frequencies are concerned the full power output should be essentially maintained to at least 10,000 c/s and preferably not less than half power at 20 to 30 Kc/s. These specifications are much more stringent than hitherto thought necessary; however, research by Somerset Murray (published in *Hi-Fi News*) and A. Radford among others, confirm my own findings that any significant departure from these figures will be audible with really first-class equipment.

Good Transient Response

A wide frequency response is not the only factor affecting the reproduction of transients, which are sounds of short duration, such as those made by cymbals, piano or other percussive instruments. One factor is the high frequency power response mentioned above, but it is also important that the amplifier be free from peaks and supersonic oscillations which will cause "ringing". The usual method of testing is to apply a square wave to the amplifier, the output of which is connected to an oscilloscope. Loss of high frequency response will be shown as a rounding of the square wave (see **fig. 7**). The effect of "ringing" is shown at *c*; in this instance it is similar to that caused by incorrect damping of the negative feedback loop. (See page 000). Transient response can also be adversely affected by some types of tone control or low pass filters. For instance a filter attenuating from 8 Kc/s at a rate of say 10 dB per octave, having a rise of only 2 dB at the cut-off frequency, will produce a transient ring which will be quite audible with good equipment. This brings me to the question of filters and tone controls.

Filters

In order to avoid distortion produced by imperfect radio transmissions, or on gramophone records due to processing defects or wear, it is often necessary to restrict the upper frequencies. We cannot do this effectively with the normal treble controls because they normally operate from the middle of the scale around 1,000 c/s, so we would not only remove the distortion but most of the programme as well. Hence we have to use a special type of treble control, called a filter, which will attenuate the frequencies above 5 or 7 Kc/s without affecting the middle frequencies.

Transient Ringing

This is not so simple as it might appear because if the attenuation is too sharp a form of transient ringing will occur which may be even more unpleasant than the original distortion. Furthermore, as mentioned previously, if there is an appreciable rise in frequency near the cut-off point then this will also cause transient mutilation. Therefore the upper frequencies must be removed gradually without losing too much of the musical values and without introducing further distortion. Owners of early 78

recordings may prefer a very steep cut filter, sometimes attenuating as low as 4 Kc/s: such ringing as might be caused under these conditions is considered less objectionable than the surface noise. For those not having 78 recordings a filter cutting at 7 and 9 Kc/s at a rate of 10 to 15 dB per octave will be perfectly adequate. A continuously variable type will be even better, whilst the addition of a slope control to vary the rate of attenuation will be absolute luxury! (For those interested, details of some of these filters were given in the 1960 *Year Book*.)

Turning to the other end of the scale, we come to the problem of "Rumble". Many authorities still believe that the right way to tackle this bugbear is at its source. Certainly in the days of "mono" a transcription motor was the best solution. But with the coming of stereo I am not so certain. Stereo pickups with their inherent response to vibrations in the vertical direction are very sensitive to motor rumble, and I have stated before that even the best transcription motors will produce an audible amount of rumble if used with a low output stereo pickup. Whether it is enough to be objectionable will depend on the room, the response of the speakers at the lower frequencies and also to the listening level. It must be emphasised that distortion can be caused by rumble, although the rumble itself may not be audible and often the effect of a 35 c/s filter is to clean up the reproduction to a remarkable degree. So although I am well aware that some people believe a rumble filter is a "confession of failure" I must continue to advocate it. Frequency? I would say from 30 to 40 c/s attenuating at least 12 dB per octave (there is not very much of musical value below 30 c/s, and in any case a very large room would be needed to hear these frequencies).

Tone Controls

These controls are necessary to compensate for studio or recording deficiencies, room acoustics etc. For normal use a lift and cut of 10 to 12 dB at 40 and 9,000 c/s is all that is required. If more than this is found necessary it indicates a fault in the equipment somewhere in the chain. Certain types of bass reflex speaker systems are notoriously non-linear and need an appreciable amount of bass boost to restore the balance when listening at low volume levels. Many of the smaller bookcase speakers share this deficiency—which may explain why most American amplifiers have bass lifts of as much as 18 to 20 dB.

Passive and Selective

There are two types of tone control in common use; one, the passive network of resistors and condensers, and the other a selective feedback type known as the Baxandall. The passive type has the effect of rotating the response about a central "hinge" in the region of 1,000 c/s, whilst with Baxandall system the lift and cut are initially confined to each end of the scale. This means that the extreme low frequencies can be lifted appreciably without affecting the region of 300 to 500 c/s, and also the treble frequencies can be progressively attentuated after the manner of a filter control. **Fig. 8** shows the response curves of a typical passive system, and **fig. 9** shows the characteristics of the Baxandall system. Because this latter system uses negative feedback the distortion is reduced to a minimum, although a feedback loop can

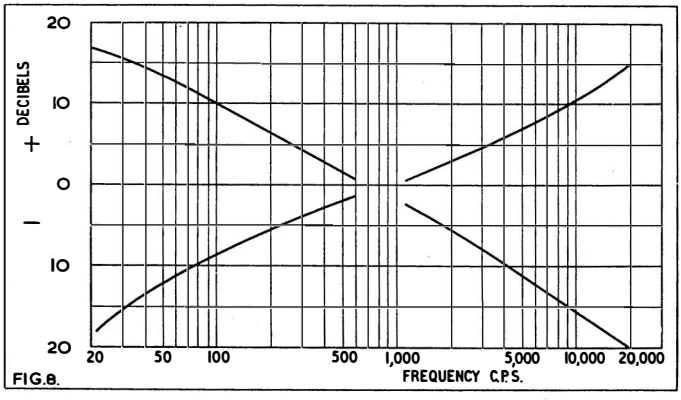

FIG.8.

★

Here are the response curves plotted from a passive control system.

★

be used with a passive network to reduce the distortion to quite negligible proportions.

Low Output Resistance

Although the nominal output impedance of an amplifier may be specified as 3 or 15 ohms the actual impedance as "*Seen*" by the speaker may be very much less—perhaps only a fraction of an ohm. The ratio of nominal impedance to internal impedance is defined as the "damping factor" of an amplifier. A damping factor of 30 means that at the nominal load impedance of 15 ohms the output resistance would be 15 divided by 30—in other words, half an ohm. A high damping factor means that the loudspeaker "*sees*" a very low resistance which tends to damp any inclination of the diaphragm to vibrate at its natural frequency; thus, as soon as the audio input ceases, the cone of the speaker is rapidly brought to rest. The higher the damping factor the more efficient this brake becomes, but practical tests have shown that any increase in damping factor above about 20 results in little further improvement. This is because the resistance of the loudspeaker speech coil is always in series with the output.

Variable Damping Controls

Variable damping controls were achieving a certain measure of popularity in America in 1956, but few amplifiers are fitted with this device today. As I said at that time, "a good loudspeaker system having a well-damped enclosure will reflect very little effective resonance into the electrical circuit—certainly too small for a critical damping point to be determined". With the improvements in loudspeakers systems this is even more true today.

Hum and Noise

The figures for hum and noise are sometimes quoted separately, and sometimes a combined figure is given. It is usual to give the rated output of the amplifier as a reference figure, but many authorities prefer to quote a standard output of 1 watt. Hum consists mainly of 50 and 100 c/s and it can be due to insufficient smoothing of the power supply, pickup from the valve heater supply (either in the valve itself or in the associated wiring), radiations from the mains transformer, etc. Internal valve noise is responsible for most of the hiss heard on a high gain amplifier, although carbon resistors can contribute an appreciable amount. Special low-noise, high-stability resistors are normally used in the first stages of an amplifier, or the new metal oxide resistors which are even better. The noise factor of an ordinary carbon resistor is about 10 microvolts per applied volt, against 3 microvolts for a good high stability type, *compared with less than* 0.01 *microvolt per volt in some of the new metal film resistors.*

A combined hum and noise level of −90 dB relative to the full output of a 10 watt amplifier would be quite inaudible even close to the speaker and a level of −60 dB for amplifier plus pre-amplifier can only be heard as a slight breathing sound at about a foot away from the speaker. For a high gain amplifier with an input sensitivity of around 4 millivolts this figure can be considered very satisfactory.

Equalising and Pickup Matching

In 1956 it was very necessary to have provision for various recording characteristics, we had *NARTB, FFR, Col, Lp, EMI* 78, and many others to contend with. Now,

★

Compare the curves on the opposite page with those frequency response curves of a Baxandall tone control.

★

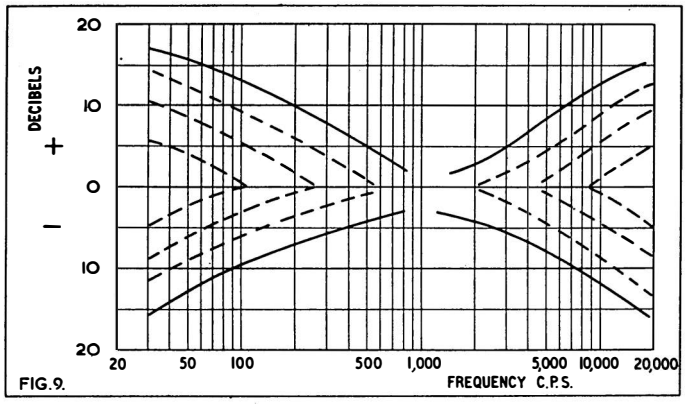

FIG. 9.

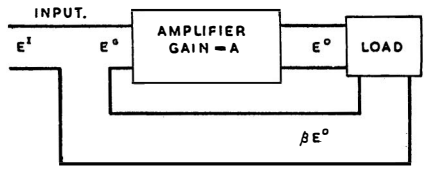
fortunately, we have only one—the standard RIAA; and so we have one knob fewer to fiddle with (unless we have a collection of older records). Pickup matching is still necessary although stereo pickups can be divided into two groups—high output high impedance crystals and low-output, medium-impedance magnetic types. The cheaper amplifiers will only have provision for the crystal pickups, but it is often worthwhile buying a more expensive amplifier so that a magnetic pickup can be used at a later date if so desired.

Some of the more expensive amplifiers such as the *BTH*, *Radford*, *Dulci* 8, etc., have provision for playing direct from an output of a tape head. It must be remembered that this facility is only provided for what is known as "pre-recorded" tape, and a separate bias and erase unit (with recording amplifier and level indicators) is required to actually *make* recorded tapes. These facilities are usually combined in a special tape record-replay unit which are available in mono or stereo versions.

Negative Feedback

All modern amplifiers make extensive use of negative feedback, and it was this invention which enabled H. J. Leak to revolutionise amplifier design with his famous "point One" in 1945. The principle had even then been known for some years—in fact as far back as 1934 H. Black published an article dealing with stabilised feedback amplifiers, but for various reasons it was not used in amplifiers commercially until 1945. Basically, feedback means that a portion of the output of an amplifier is fed back into the input in opposite phase thus reducing the overall



This block diagram shows the arrangement of an amplifier with a negative feedback loop.

gain. **Fig. 10** shows a block diagram of an amplifier with a negative feedback loop. The gain of the amplifier is A, thus:

$$A = \frac{E^O}{E^G}$$

If the feedback is applied, and the input voltage increased to E^I to give the same output voltage E^O as without feedback, it then follows that;

$$A_{fh} = \frac{E^O}{E^I} = \frac{E^O}{E^G - \beta E^O}$$

The gain reduction due to feedback is therefore

$$\frac{A}{A_{fh}} = \frac{E^O/E^G}{E^O/(E^G - \beta E^O)} = I - \frac{\beta E^O}{E^G} = (1 - \beta A)$$

The quantity $(1 - \beta A)$ is called the feedback factor, and is usually expressed in dB. Therefore if an amplifier is stated to have a feedback of 20 dB it means that the loop has reduced the overall gain of the amplifier by 20 dB or 10, and if the amplifier has been well designed the distortion will be reduced by a like amount. **Fig. 12** shows the circuit of a typical 10-watt amplifier similar to the one mentioned earlier. The feedback loop is connected in the usual manner from the transformer secondary to the

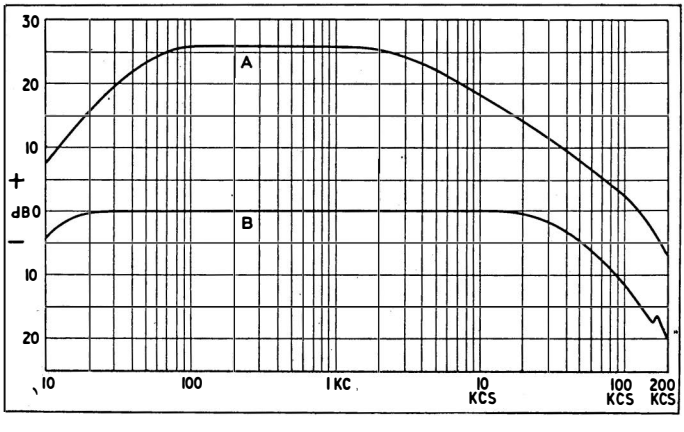


Fig. 11

Frequency response curves of an amplifier, showing the results with and without the application of feedback.

cathode of the input valve. The feedback is 26dB—or a factor of 20, and the input voltage required to give full output is 3 millivolts with the feedback loop disconnected.

Under these conditions the distortion is 1.7%. Closing the *loop* brings the distortion to about 0.1% and the input voltage required is then 20 times 6—or 60 millivolts. **Fig. 11** shows the frequency response under both conditions. It will be seen that the response without feedback falls at each end of the scale:—the high frequency loss is due to transformer self capacity, valve and circuit stray losses, plus an intentional roll-off derived from a high frequency "step".

Simple RC Combination

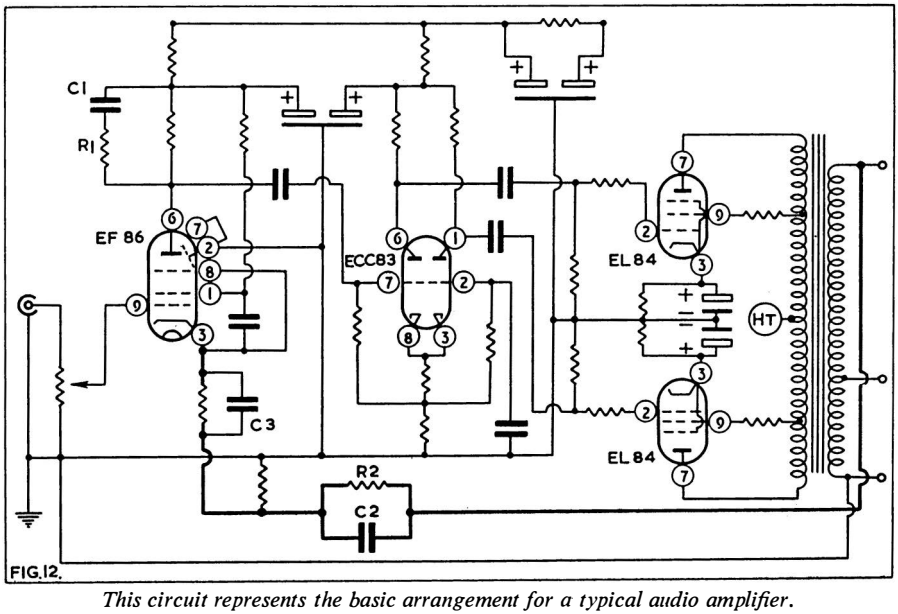
This is a simple resistor-capacitor combination (C1 and R1 in the diagram) which is usually connected in parallel with the anode load of the first valve, and its purpose is to change the phase and reduce the loop gain of the amplifier at the higher frequencies to preserve stability. It will be appreciated that for optimum feedback the voltage fed back must be exactly 180 degrees out of phase with the applied signal but, due to stray capacitances, resistor capacitor combinations, output transformer leakage inductance and capacitance, there is in practice an appreciable phase shift. This is shown in **fig. 13,** and it will be seen that the phase shift is negative at the low frequency end and positive at the high frequencies.

Incipient Instability

If this phase change *exceeds* 180 deg. thus changing the negative feedback to positive, oscillation will occur. This can happen at either low or high frequencies (sometimes both) and the "step" network mentioned earlier is one way of ensuring stability. Further phase shift is obtained by the capacitor connected across the feedback resistor (C5) but it is obvious that a high value should not be used here, as it would be influenced by speaker and cross-over characteristics. The stability margin of an amplifier should be at least 10dB—i.e. the feedback loop should be increased by that amount before instability becomes evident.

If the margin is very much less it may well be only conditionally stable; in other words instability may be triggered off by a sudden transient or switching surge. Incipient instability of this nature can easily cause damage to fragile ribbon speakers, and even to the output transformer itself. Much the same thing can occur at the low frequency end, and here the instability takes the form of a sub-sonic oscillation, or an actual "motorboating". This was one of the symptoms afflicting the early Williamson amplifier, and the reason was that the output transformers (or some of them) were not up to the stringent specifications.

If the transformer is well designed there is usually more margin at the low frequencies than at the high end, but it is not unknown



This circuit represents the basic arrangement for a typical audio amplifier.

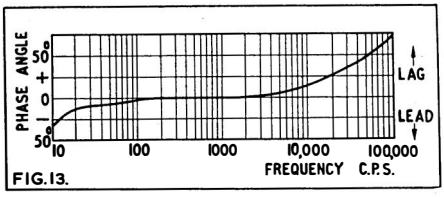


FIG.13.

Phase-shift characteristics of an amplifier.

for low frequency "steps" to be used. These take the form of a capacitor in parallel with a resistor which is in series with a coupling circuit-usually to the output valves. Such a circuit is in fact used in several of the Radford amplifiers.

Feedback Circuitry

Turning back to out circuit diagram, it will be seen that the cathode resistor of the EF86 is by-passed by a capacitor. If this were omitted it would cause degeneration or, more correctly, a negative feedback current loop of about 6 dB. This is actually used in many amplifiers, including the *Heathkit* "MA-12" and the *Leak* "Point-One" series. The *Radford* "Stereo 12" also has a subsidiary loop, but in this case it is in the form of an anode-grid network which has a secondary "step" effect.

Comparing the curves **A** and **B** in the diagram, it will readily be seen that the nominal 26 dB feedback is only maintained in the centre of the scale, at 10 Kc/s and. and 20 Kc/s. it falls to 18 and 16 dB respectively. This means that the distortion at the high and low frequencies will be higher than that in the centre portion—a fact which was mentioned earlier. In a well-designed amplifier this increase is not too serious, but it is quite possible for an amplifier to have a distortion of less than 0.1% at 1,000 c/s. and 2% or 3% at 40 and 10,000 c/s. This has long been realised by the Heathkit Company and also Cape Electrophonics who both publish the distortion measurements of their amplifiers taken over a range of frequencies. As far as I am aware the latter company were the first to do so in this country.

Other Advantages . . .

Finally, the other important fact to be learned from the frequency response characteristics is the remarkable effect which feedback has on them. The response curve B is almost linear from 20 c/s to 20,000 c/s! But feedback can do more than this: it will reduce the output impedance of the amplifier, thereby increasing the damping factor. This would be about 1·5 for the amplifier discussed earlier, and it would be increased to almost 25 by the application of 26 dB feedback.

Feedback will also reduce hum and noise originating in the stages within the loop, and it can have the effect of stabilising the gain of an amplifier with respect to changing valve parameters and voltage variations. It can change the input and output source impedances of an amplifier increasing them or decreasing them—depending upon how it is applied.

. . . and disadvantages

Are there any disadvantages? Yes it must be admitted that there are. One of them is a loss in gain, which is not very important; another is the possibility of increasing the audible distortion by applying a large amount of feedback to an amplifier which has a very high distortion factor. This apparent paradox occurs because the feedback voltage containing a high proportion of second and third harmonics will in its turn generate further harmonics (fourth and ninth, etc.) which sound unpleasant in quite small proportions.

Yet another possible disadvantage is the effect of feedback on the overload characteristic. This is quite gradual on an amplifier having no feedback, and it rises until it becomes almost a right-angle with an amplifier having about 30 dB feedback. The effect is that overload point is reached suddenly—and painfully! The solution is to use only the minimum of feedback to achieve the required results, and to have an adequate reserve of power.

. . . and improvements gained

It is by no means certain that we know everything about the effect of feedback, especially with complex waveforms; but we do know that, used intelligently, it has enabled amplifier designers to produce results undreamed of not so many years ago. Even in 1939 a really first class quality amplifier could boast of a distortion no less than 5%: as for the intermodulation—it must have been something like 30%!

DIRECTORY OF AMPLIFIERS & CONTROL UNITS

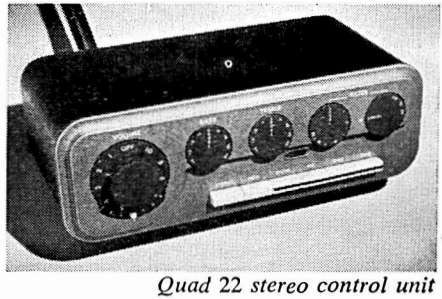
★ The following abbreviations are used in this directory section: **H.D.**—Harmonic Distortion; <—less than; **H** and **N**—Hum and Noise; **P.a.t.**—Power supplies available for tuner; **R.M.S.**—root mean square; **N.L.**—Noise level; **Sel.**—Selector switch; ■—Stereo equipment.

Acoustical Manufacturing Co. Ltd., St. Peter's Road, Huntingdon, Hunts. Tel.: H'don 361 and 574. Cables: Acoustical.

Quad II Q.C. II Control Unit. Inputs: radio/tape 100 mV; mic. 1.5 mV; gram. to suit pickup. Treble, base, vol. and on/off, filter slope. Switch filter 5, 7, 10 Kc/s and "out." Tape record socket, switched playback socket. H.D. <0.1%. H and N — 70 dB. Size $10\frac{1}{2} \times 3\frac{1}{2} \times 6\frac{1}{2}$ ins. To operate with Quad II power amp or similar. Price £19 10s.

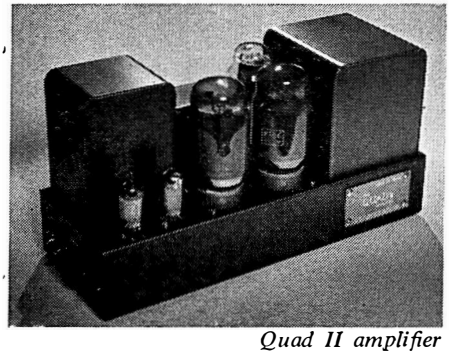
Quad Q.C. II control unit

■**Quad 22 Control unit.** Inputs: Radio/tape 70 mV at 100 K; mic. 1.5 mV at 100 K; pickup dependent on adaptor unit used, Vol. and on/off bass, treble, filter slope, filter switch 5, 7, and 10 Kc/s. Push-button selection of channels, mono/stereo, and record equalisation. H.D. <0.02%. H and N — 70 dB total, P.a.t. 330v 35 mA each tuner, 6.3v 3 amps. Size $10\frac{1}{2} \times 3\frac{1}{2} \times 6$ ins. Price £25. To operate with QUAD II amplifiers.



Quad 22 stereo control unit

Quad II Amplifier. 15 watts. Dist, total 3rd harmonic and higher. <0.1% at 12 watts. Input for spec. output 1.4v. R.M.S. for 15 watts. Response 20-20,000 c/s. ± 0.2 dB; 10-50,000 ±0.5 dB. Feedback incorporated in original ultra-linear arrangement. N.L. — 80 dB at 15 watts. Out. imp. 7 and 15 ohms. Output KT66's. Original combined anode/screen current circuit. Size $12\frac{1}{2} \times 4\frac{3}{4} \times 6\frac{1}{2}$ ins. To operate with QCII or Q22 control units. Price £22 10s.

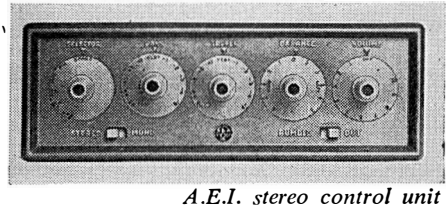


Quad II amplifier

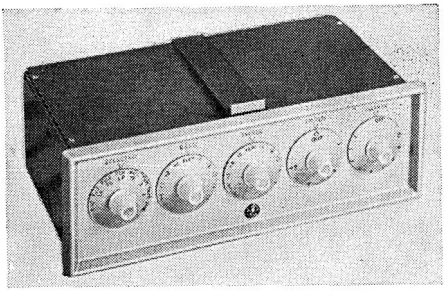
★

A.E.I. Sound Equipment Ltd., Crown House, Aldwych, London, W.C.2. Tel.: Temple Bar 8040. Cables: Soundequi, Estrand, London.

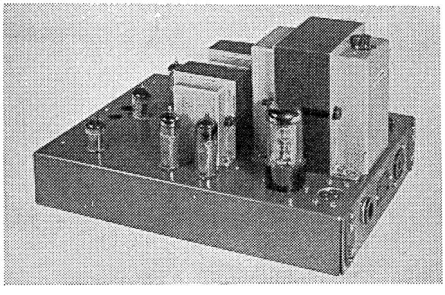
Hi-Fi Control Unit Mk. 1. Inputs: Mic. 5 mV; tape head 5 mV; pickup 6 and 250 mV; Equalised tape 180 mV; radio 180 mV. 8-position sel., filter, bass, treble, volume and on/off. H.D. <0.05%. H and N — 86 dB. P.a.t. 320v 30mA, 6.3v 3 amps. Size



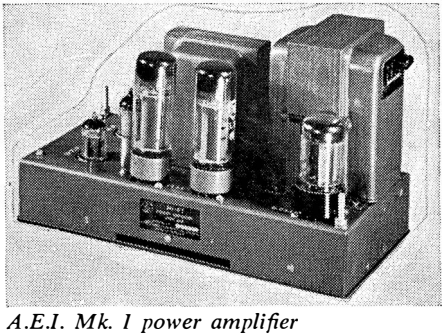
A.E.I. stereo control unit



A.E.I. Mk. 1 control unit



A.E.I. stereo power amplifier



A.E.I. Mk. 1 power amplifier

Altobass stereo 70 C/U and Twin 12 amp.

$10\frac{1}{4} \times 3\frac{5}{16} \times 5\frac{1}{2}$ ins. Price £17 10s. To operate with BTH Hi-Fi Amplifier, or similar.

HI-FI Power Amplifier Mk. 1. 20 watts nominal, 30 watts peak. Dist. <0.05%. Input for 20 watts 100 mV. Response 20-20,000 c/s ± 1 dB. Feedback 24 dB. N.L. —80 dB. Out. imp. 4, 8 and 15 ohms. Output EL34's. Ultra-linear. Size $10\frac{3}{4} \times 5\frac{1}{2} \times 6\frac{3}{4}$ ins. Price £24 10s. To operate with BTH Hi-Fi Pre-amp. or as a pair with BTH Stereo Control Unit.

■**Stereo Hi-Fi control unit.** Inputs: stereo and mono pickup, stereo tape, radio, mic. spare. 6 position sel. bass, treble, balance, vol., on/off. Rumble filter. H.D. less than 0.05% at 10 watts. H and N — 85 dB. P.a.t. 200v 30 mA, 6.3v 3 amps. Size $10\frac{1}{4} \times 5\frac{1}{2} \times 3\frac{5}{16}$ ins. To operate with BTH stereo amplifier or two mono amplifiers. Price £24 9s.

■**Stereo Power Amplifier.** 10 watts each channel, 15 watts max. Dist. less than 0.05% at 10 watts. Input for spec. output 100 mV. Response 20-20,000 c/s ± 1 dB. 24 dB feedback. N.L. —90 dB relative to 10 watts. Out. imp. 4, 8 and 16 ohms. Output EL84's ultra-linear. Size $12\frac{3}{4} \times 10 \times 7\frac{3}{8}$ ins. To operate with BTH stereo control or similar. Price £27.

★

Allegro Sound Equipment Ltd., 7/8 Avery Row, Mayfair, London, W.1.

■**Allegro 66 Integrated Stereo Amplifier.** Inputs mic. 30 mV, tape 30 mV. 7 watts per channel. Dist. 0.5% at 4.3 watts. Response 25-20,000 c/s ± 3 dB. N.L. — 60 dB. Out. imp. 15 ohms. Output ECL82's. Size $13\frac{1}{4} \times 9\frac{1}{2} \times 5\frac{1}{4}$ ins. Price £29 8s.

★

Altobass Ltd., Percy Road, Aylestone Park, Leicester. Tel.: Leicester 31616. Cables: Altobass, Leicester.

"High Fidelity 510" Control Unit. Inputs: tape/radio 100 mV; P/U (l.p.) 50 mV; P/U (78) 60 mV; mic. 10 mV 5-pos. sel., treble, bass vol. and on/off. Tape replay socket. H.D. 0.15%. H and N — 64 dB mic.; — 71 dB on other inputs. Size $10 \times 3\frac{1}{2} \times 4\frac{1}{4}$ ins. Price £8 8s. Sold only with 510 power amp.

"High Fidelity 510" Amplifier. 10 watts nom., 11 watts max. Dist. 0.1% (10 watts. at 400 c/s). Input for spec. output 40 mV.

Response 15-20,000 c/s ± 0.6 dB. Feedback −20.5 dB. N.L. −78 dB relative to 10 watts. Out. imp. 3.75 or 15 ohms output EL84's., Ultra-linear. Size 13¼ × 5½ × 5¾ ins. Price £15 15s.

Altobass Seventy Control Unit. Inputs: Pickup 4 and 50 mV; Radio 250 mV; Tape 5 and 250 mV; Aux. 50 mV. 6-position sel., bass, treble, volume and on/off, switched high pass filter 100 c/s, switched low pass filter 5.5 Kc/s. H.D. 0.015%. H and N Tape — 52 dB, others —56 dB. Size 10⅜ × 4 × 4¼ ins. Price £16 16s. To operate with Altobass 510.

■**Altobass Stereo 70 Control Unit.** Inputs: pickup 4 mV; radio 220 mV; tape 3 mV; mic. 5 mV; aux. 100 mV. 5-position sel., bass, treble, volume, function switch and on/off. H.D. 0.015%. H and N — 54 dB. Rumble filter. Size 13½ × 7 × 3¼ ins. Price £24 3s. To operate with Altobass Twin Twelve.

■**Altobass Twin-Twelve Stereo Amplifier.** 10 watts each channel, 12 watts max. Dist. 0.1% at 10 watts. Input for spec. output 150 mV. Response 20-20,000 c/s ± 0.5 dB. 20 dB feedback. N.L. — 78 dB relative to 10 watts. Out. imp. 4, 8 and 16 ohms. Output EL84's. Ultra-linear. Size 14½ × 7 × 6¾ ins. Price £30 9s. To operate with Altobass Stereo 70 Control Unit.

■**Altobass Twin II Amplifier and Control Unit.** Inputs: 200 mV for 2 watts per channel. 3-position sel., dual-concentric volume and frequency controls with on/off switch. H and N — 56 dB referred to 2 watts. Size: Main amp. 9 × 6 × 5½ ins., Control Unit 5 × 3 × 4½ ins. Price £16 16s. complete.

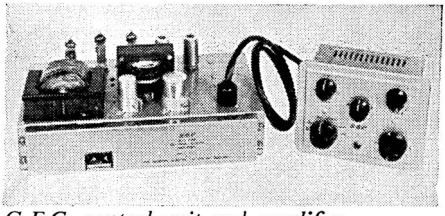
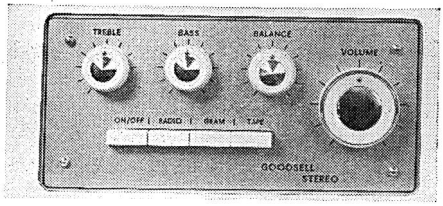
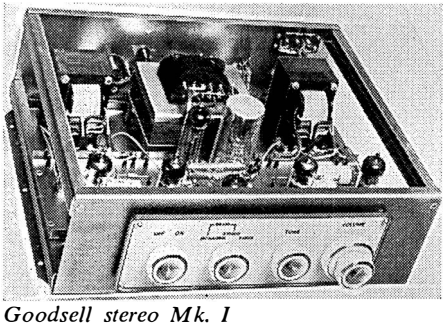
P.a.t. from power amp. Size 12 × 3½ × 6 ins. To operate with Expert "Master" and "Standard" or any similar power amp. Price £18.



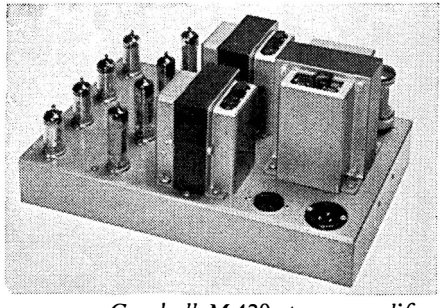
G.E.C. control unit and amplifier



Goodsell stereo III control unit



Goodsell stereo Mk. I



Goodsell MA20 stereo amplifier

Expert "Standard" Amplifier. 12 watts nom., 14 watts max. Dist. 0.1%. Input for spec. output 200 mV. Response 20-25,000 c/s ± 0.5 dB. Feedback 30 dB. N.L. − 80 dB at 8 watts. Out. imp. 15 ohms. Output EL84's. Ultra-linear. Size 12 × 9 × 6½ ins. To operate with Expert control unit or similar. Price £23.

Expert "Master" Amplifier. 20 watts nom., 26 watts max. Dist. 0.07%. Input for spec. output 200 mV. Response 20-30,000 c/s ±0.5 dB. Feedback 30 dB. N.L. −85 dB at 20 watts. Out. imp. 15 ohms. Output EL34's. Ultra-linear. Size 12 × 9 × 7½ ins. To operate with Expert control unit or any similar. Price £35.

Expert "Standard" Stereo Amplifier. 10 watts per channel. Dist. 0.1% at 10 watts. Input for spec. output 200 mV. Response 30-20,000 c/s ±1 dB. 28 dB feedback. N.L. −80 dB ref. 8 watts. Out. imp. 15 ohms. Output ECL82's. Size 12 × 9 × 6½ ins. To operate with stereo Mk. I control unit. Price £23.

Expert Stereo Mk. I Control Unit. Inputs (6) 250 mV sensitivity. Switched bass, treble, function controls. H.D. less than 0.1%. P.a.t. Size 12 × 3½ × 3 ins. To operate with "Standard" stereo amplifier. Price £18.

General Electric Co. Ltd., Radio Group, Lena Gardens, Brook Green, Hammersmith, London, W.6. Tel.: Riverside 4671. Cables: Polyphase, London.

BCS2417A. Control Unit. Inputs: pickup 5-15,000 mV, radio 300 mV, tape 7.5 mV. 6 position sel., vol., treble, bass, presence. Size 7½ × 6¼ × 5⅛ ins. To operate with BCS2418A amplifier. Price £11 11s.

G.E.C. BCS2418A Amplifier. 12 watts nom. Dist. <0.5% at 12 watts. Input for spec. output 120 mV. Response 20-20,000 c/s ±1 dB. Feedback 22 dB overall. Out. imp. 15 ohms (or 1, 2 or 3 3-5 ohms speakers). Output N709's. Size 14 × 7¾ × 6½ ins. To operate with BCS2417A. Price £17 17s.

★

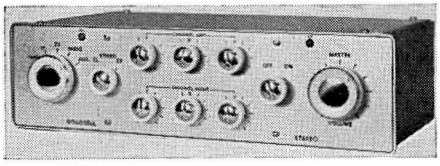
Goodsell Ltd., 40 Gardner Street, Brighton. Tel.: Brighton 26735.

Golden PFA Control Unit. Inputs: pick-up 5-7 mV; mic. 5 mV; radio 80 mV. 4 pos. sel., treble, bass, vol. Separate "roll-off" and "turnover" facilities covering all known equalising characteristics. Switched filter 5, 7, 9, 13 Kc/s and "out." Spec. dependent on amp. used. Size 11 × 9 × 3½ ins. To operate with all Goodsell amplifiers. Price £20.

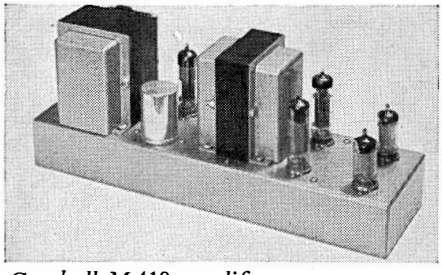
Stereo I Control Unit. Inputs: Pickup 7 mV stereo; radio 150 mV. Selector switch, vol., bass, treble and on/off. H.D. 0.1%. Size 7 × 6 × 4 ins. Price £16 15s.

Stereo II Control Unit. Inputs: pickup 7 mV stereo; radio 150 mV; tape 3 mV. Selector switch, vol., bass, treble, on/off. H.D. 0.1%. Size 13 × $7\frac{1}{2}$ × $3\frac{3}{4}$ ins. Price £27 15s.

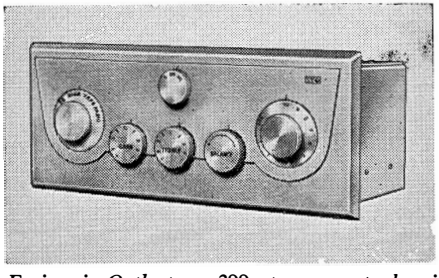
Stereo III Control Unit. Inputs: pickup 60 mV, radio and tape 100 mV. Push-button selector, ganged bass, treble, volume controls. H and N −65 dB. To operate with Goodsell "Mullard" stereo amplifier. Price not yet available.



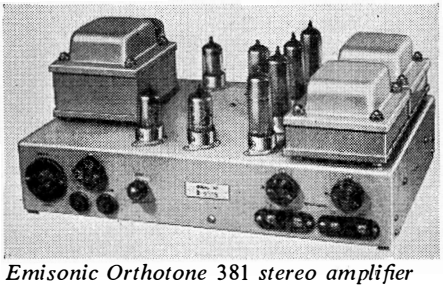
Goodsell stereo II control unit



Goodsell MA10 amplifier



Emisonic Orthotone 399 stereo control unit



Emisonic Orthotone 381 stereo amplifier

MA8 Stereo Amplifier. 3.5 watts per channel. Dist. 0.4%. Input for spec. output 1.5 volts. Response 30-30,000 c/s. Feedback 25 dB. N.L. −70 dB. Out. imp. 3 and 15 ohms. Output EL84's Ultra-linear. Size 14 × 6 × 6 ins. Price £17. To operate with Stereo I or Stereo II Control Unit.

MA10 Amplifier. 10 watts. Dist. 0.1%. Input for spec. output 1.5 volts. Response 30-30,000 c/s ±0.5 dB. Feedback 22 dB. N.L. −70 dB. Out. imp. 3 or 15 ohms. Output EL84's. Ultra-linear. Size 14 × 5 × 6 ins. Price £18. To operate with Stereo I or Stereo II Control Units.

GW25 Amplifier. 20 watts. Dist. 0.1%. Input for spec. output 1.5v. Response 20-100,000 c/s. Feedback 20 dB. N.L. better than −75 dB. Out. imp. 3, 8 and 15 ohms. Output KT66's. Ultra-linear. Size 14 × 10 × 7 ins. Weight 35 lb. To operate with PFA control unit. Price £27 10s.

Golden GW50 "Williamson" Amplifier Mk. II. 40 watts. Dist. <0.1%. Input for spec. output 1.5v. Response 20-100,000 c/s ±2 dB. Feedback 20 dB. N.L. −75 dB. Out. imp. 3 or 8 or 15 ohms. Output KT88's. Size 17 × $11\frac{1}{2}$ × $8\frac{3}{4}$ ins. Weight 54 lb. To operate with PFA control unit. Price from £40 10s.

MA20 Stereo Amplifier. 10 watts per channel. Details as MA10 above. Price £32 5s.

"Mullard" Stereo Control Unit. Details as per Mullard 2-valve design. To operate with Goodsell "Mullard" amplifier. Price £16 15s.

"Mullard" Stereo Amplifier. 7 watts per channel. Details as per Mullard design. To operate with Stereo III or "Mullard" control unit. Price £17 to £19 10s.

★

The Gramophone Company Ltd., Hayes, Middx. Tel.: Southall 2468. Cables: Jabberment, London.

H.M.V. Stereoscope 555. Integrated Stereo Amplifier. Inputs: pickup 2 mV magnetic; 60 mV crystal, tape 3 and 150 mV; microphone 2 and 20 mV, tuner 150 mV. 7 position sel. for each channel. Bass,

treble, vol., loudness, scratch filters, rumble filter. Cathode ray tube for balance and level checking. Mixing of two channels for recording purposes. 10 watts per channel, 12.5 max. H.D. <0.1%. Response 20-20,000 c/s ± 1 dB at 5 watts. Crosstalk −50 dB at 1 Kc/s, −30 dB at 20 c/s and 20 Kc/s. H and N −80 dB. 34 dB feedback. Output EL84's. Size 14 × 4 × 13¾ ins. Price £63 3s.

■H.M.V. Stereoscope 556. Stereo Control Unit. Inputs: as 555, plus an extra magnetic pickup pair at 2 mV. Other facilities as 555. Cathode follower output rated from 160 mV to 6 volts, adjustable by preset controls in each channel. Size 14 × 4 × 9 ins. To operate with Type 557 or 381 stereo amplifiers or pair of 373 amplifiers. Price £40 19s.

■Emisonic Orthotone 399 Stereo Control Unit. Inputs: pickup 3.5 mV; radio and tape 30 mV. 4-position sel., bass, treble, balance, volume, function switch. H.D. < 0.1%. H and N −60 dB. Rumble filter. Size 11¾ × 4⅝ × 7 ins. Price £22 1s. To operate with E.M.I./381 and E.M.I./373 amplifiers.

■Emisonic Orthotone 444 Combined Stereo Amplifier and Control Unit. Inputs: pickup, radio, and aux. 200 mV. 6-position sel., bass, treble, balance, vol. 2.5 watts per channel. Dist. 0.3%. Out. imp. 15 ohms. Size 11¾ × 4⅝ × 10 ins. Price £27 6s.

■Emisonic Orthotone 381 Stereo Amplifier. 10 watts per channel. Dist. 0.1%. Input for spec. output 200 mV. Response 30-20,000 c/s ± 1 dB. Feedback 26 dB. N.L. −80 dB. Out. imp. 4, 8, and 16 ohms. Output EL84's. Ultra-linear. Size 8½ × 13 × 6 ins. Price £29 8s. To operate with E.M.I./399 Control Unit.

Emisonic Orthotone 373 Amplifier. 25 watts. Dist. 0.1%. Input for spec. output 160 mV. Response 20-20,000 c/s ± 1 dB. Feedback 28 dB. N.L. −76 dB. Out. imp. 4, 8, and 16 ohms. Output EL34's. Ultra-linear. Size 11 × 9 × 6½ ins. Price £25 4s. To operate with E.M.I./448 and E.M.I./399 Control Units.

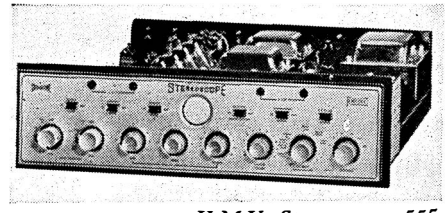
★

Grampian Reproducers Ltd., Hanworth Trading Estate, Feltham, Middx. Tel.: Feltham 2657/8/9. Cables: Reamp, Feltham.

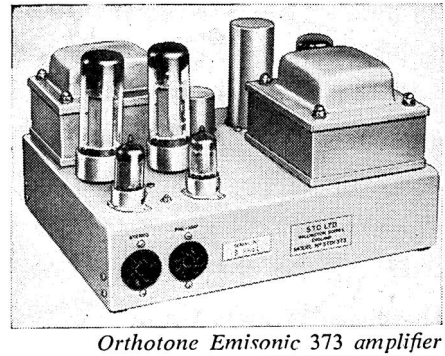
Grampian 582 Control Unit. Inputs: pickup 15 mV; radio 200 mV; tape 500 mV. Selector switch, bass, treble, vol. Size 10¼ × 4 × 5½ ins. Price £14. To operate with "Ten Fifteen" Amplifier.

Grampian 580 Control Unit. Similar to 582, but for crystal pickups. Sensitivity 600 mV, radio 500 mV. Price £8 5s.

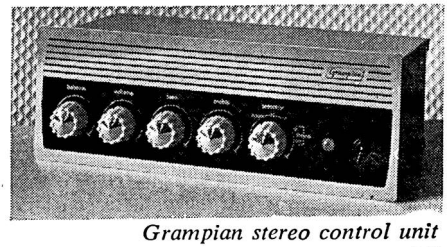
Grampian 10-15 Amplifier. 10 watts nom,. 15 watts peak. Dist. 0.1% at 10 watts. Input for spec. output 50 mV. Response 30-20,000 c/s ± 1 dB. Feedback 20 dB. N.L. −65 dB below full output. Out. imp. 4, 8, 15 ohms. Output EL84's. Ultra-linear.



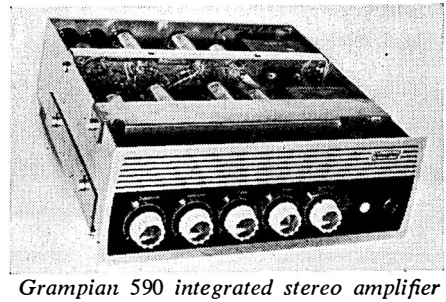
H.M.V. Stereoscope 555



Orthotone Emisonic 373 *amplifier*



Grampian stereo control unit



Grampian 590 *integrated stereo amplifier*

Size 11 × 7½ × 6½ ins. To operate with "580" and/or "582" control unit. Price £18.

Grampian 590 series. Stereo Control Unit with single channel amplifier and provision for adding a second amplifier for stereo. 7 watts per channel, 10 watts peak. Dist. 1%. H and N −60 dB. Inputs: pickup 0.5v at 1 Megohm, tuner and tape 1v at 0.5 Megohm. Sel., switch, balance, bass, treble. Out. imp. 4 and 15 ohms. Size: chassis 10⅞ × 3⅞ × 13 ins., wood surround 12¼ × 5¾ × 13 ins. Price 590/1 (control unit and one 584 amplifier) £21 10s., 590/2 (control unit and two 584 amplifiers), £32, 584 amplifier £10, wood surround £3.

In Preparation. 10 watt integrated amplifier.

★

Jason Electronic Designs Ltd., 3/4 Gt. Chapel Street, London, W.1. Tel.: Gerrard 0273/4.

J10 Combined Control Unit and Power Amplifier. Inputs: mic. 1 mV; tape 0.5 V; radio 0.5V; P/U 1.0v and crystal P/U. 6 pos. sel., treble, bass, vol. P.a.t. 270v at 10 mA, 6.3v at .3A. Output 10 watts nom., 15 watts max. Dist. 0.1%. Response 30-30,000 c/s ± 2 dB. N.L. better than 55 dB (mic. input). Out. imp. 15 ohms (other imps. to order). Output EL84's. Ultra-linear. Size 15 × 8¼ × 4⅜ ins. Price £24.

J2-10. Integrated Stereo Amplifier, Mk. III. Inputs: pickup 3 mV and 60 mV; tape 1.5 mV; radio 60 mV; mic. 5 mV. 5 position sel. switch; bass, treble, vol., balance, function, 9 Kc/s and 6 Kc/s filter. H.D. less than 0.1%. H and N −55 dB. Rumble filter. 10 watts per channel, 15 watts max. 18 dB feedback. Out. imp. 4, 8, 15 ohms. Output EL84's. Size 15 × 4⅜ × 12 ins. Price £40 19s.

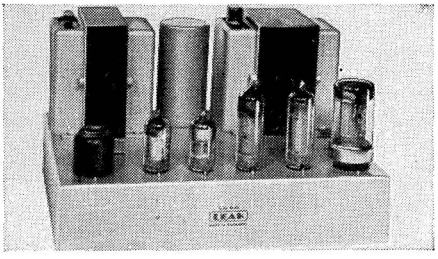
★

H. J. Leak & Co. Ltd., 57-59 Brunel Road, East Acton, London, W.3. Tel.: Shepherds Bush 1173. Cables: Sinusoidal, Ealux, London.

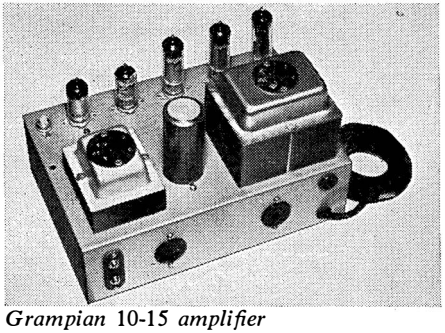
"Point One Plus" Control Unit. Inputs: tape 50 mV or mic. 4 mV; tuner 50 mV; P/U 9.5 mV. 6 pos. sel., 4 record equal, treble, bass, vol., mains on/off. Switch filter 4, 6 and 9 Kc/s. Input level control for P/U, tuner. Tape record and replay sockets on front and rear. H.D. < 0.01%. H and N −66 dB. Size 11½ × 4 7/16 × 5 ins. To operate with TL/12 Plus, TL/25 Plus or TL/50 Plus amplifier. Price £12 12s.

"Vari-slope III" Control Unit. Inputs: tape 50 mV or mic. 4 mV; tuner 45 mV;

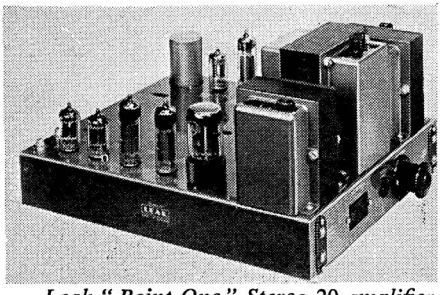
Jason J2-10 Mk. III integrated stereo amp.



Leak TL/12 plus amplifier



Grampian 10-15 amplifier



Leak "Point One" Stereo 20 amplifier

pickup I 9 mV; pickup II 9 mV. 6 pos. sel. and change-over switch for pickup I/pickup II. Treble, bass, vol., mains on/off. Switched low pass filter 4, 6 and 9 Kc/s plus Vari-slope control. Rumble filter cut in. Input level controls for tuner, pickup I, pickup II. Tape input sockets on front and back panels. H.D. < 0.01%. H and N −66 dB. P.a.t. on TL/12 plus power amp. Size $11\frac{1}{2} \times 4\frac{7}{16} \times 5$ ins. To operate with TL/12 Plus, TL/25 Plus, and TL/50 Plus amp. Price £15 15s.

"Point One" TL/12 Plus Amplifier. 12 watts. Dist. 0.1%. Input for spec. output 125 mV. Response 20-20,000 c/s ± 0.25 dB. Feedback 26 dB. N.L. −84 dB. Out. imp. 4, 8 and 16 ohms. Output EL84's. Ultra-linear. Size 10 × 8 × 6 ins. To operate with Vari-slope III or Point One Plus control units. Price £18 18s.

"Point One" TL/25 Plus Amplifier. 25 watts. Dist. 0.1%. Input for spec. output 125 mV. Response 20-20,000 c/s ± 0.25 dB. Feedback 26 dB. N.L. −83 dB. Out. imp. 4, 8 and 16 ohms (other imps. to order). Output EL34's. Ultra-linear. Size $10 \times 8 \times 6\frac{3}{4}$ ins. To operate with Vari-slope III or Point One Plus control units. Price £25 4s.

"Point One" TL/50 Plus Amplifier. 50 watts. Dist. 0.1%. Input for spec. output 125 mV. Response 20-20,000 c/s ± 0.25 dB. Feedback 26 dB. N.L. −84 dB. Out. imp. 4, 8 and 16 ohms (other imps. to order). Output KT88's. Ultra-linear. Size $11\frac{1}{2} \times 9 \times 6\frac{3}{4}$ ins. To operate with Vari-slope III or Point One Plus control units. Price £33 12s.

■**Vari-slope Stereo Control Unit.** Inputs: Pickup I 3.5 mV or 35 mV; pickup II 3.5 mV or 350 mV; tape 3 mV; tuner 50 mV or 250 mV; mic. 2 mV; extra 50 mV or 1V (all mono and stereo), sel. switch. Bass, treble, vol., on/off. Switched low pass filter 4, 6, 9 Kc/s plus Vari-slope control. Rumble filter cut/in. Balance control. H and N −60 dB. Size $11\frac{1}{2} \times 4\frac{1}{2} \times 6\frac{1}{2}$ ins. To operate with any Leak amplifiers. Price £25.

■**"Point One Stereo" Control Unit.** Twin channel inputs for P/U, 3.5 mV; tuner 35 mV, tape recorder 35 mV; tape head 3 mV; mic. 2 mV. Stereo/monaural and rumble switches, balance, treble, bass, vol., mains on/off. Input level controls. Tape sockets for recording. H.D. 0.01% on each channel. H and N — 60 dB. To operate with "Point One" Stereo 20 amplifier. Price £21.

■**"Point One" Stereo 20 Amplifier.** 11 watts each channel. Dist. 0.1% on each channel. Input for spec. output 125 mV. Response 20-20,000 c/s. Feedback 24 dB.

Leak "Varislope" stereo

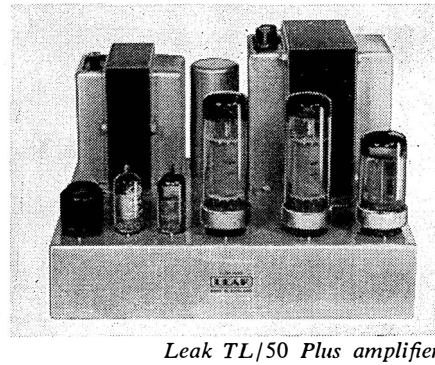
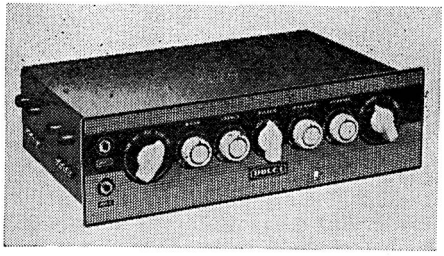
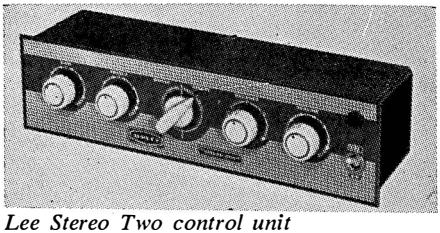
Leak TL/25 Plus amplifier



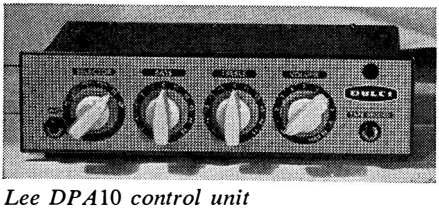
Leak TL/50 Plus amplifier



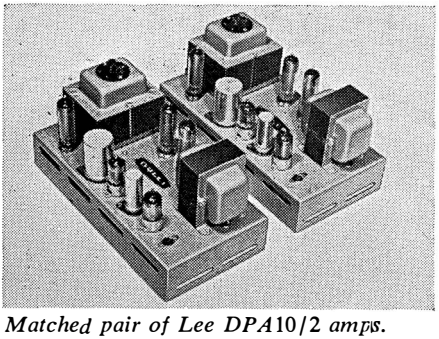
Lee Stereo Eight control unit



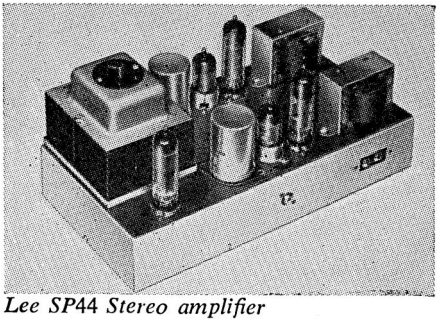
Lee Stereo Two control unit



Lee DPA10 control unit



Matched pair of Lee DPA10/2 amps.



Lee SP44 Stereo amplifier

N.L.— 80 dB. Out. imp. 4, 8 and 16 ohms. Output EL84's. Ultra-linear. To operate with "Point One Stereo" or "Varislope Stereo" control units. Price £30 9s.

■**"Point One" Stereo 50 Amplifier.** 25 watts each channel. Price £42.

★

Lee Products (G.B.) Ltd., Elpico House, Longford Street, London, N.W.1. Tel.: Euston 5754. Cables: Leprod, London.

Elpico AC88. Inputs: mic. 4 mV; radio, pickup and tape 100 mV. 10 watts nom., 16 watts max. Dist. 0.5% at 10 watts. Response 50-20,000 c/s ± 3 dB. N.L.— 55 dB. Out. imp. 3-15 ohms. Out. EL84's. Ultra-linear. Size 14 × 7½ × 8 ins. Price £25 4s.

DPA10 Control Unit. Inputs: pickup 6 mV; tape 100 mV; mic. 1.5 mV; radio 100 and 300 mV. 6-position sel., bass, treble, volume and on/off. H.D. <0.1%. H and N — 45 dB. Size 11¼ × 3 × 5¼ ins. Price £8 8s. To operate with DPA10 amplifier.

DPA10 Power Amplifier. 15 watts nominal. Dist. 0.3%. Input for 10 watts 40 mV. Response 30-15,000 c/s ± 1 dB. Feedback 26 dB. N.L. —75 dB. Out. imp. 3-16 ohms. Output EL84's. Ultra-linear. Size 11⅛ × 6 × 5½ ins. Price £14 14s. To operate with DPA10 Control Unit, Stereo Two, or Stereo Eight.

■**"Stereo Two" Control Unit.** Inputs: radio and tape 100 mV; pickup adjustable 50 mV to 2 volts. 6-position sel., bass, treble, volume, balance. H.D. <0.1%. H and N —60 dB. Size 12½ × 3¼ × 5 ins. Price £10 10s. To operate with two DPA10, or SP44 amplifiers.

■**"Stereo Eight" Control Units.** Inputs: mic. and tape 3 mV; radio 100 mV; pickup 4 to 100 mV; tape 100 mV; aux. 50 mV to 2 volts. 6-position sel., bass, treble, filter, balance, function. H.D. <0.1%. H and N — 50 dB. Rumble filter. Size 14¼ × 4 × 9⅜ ins. Price £23 2s. To operate with two DPA10, or SP44 amplifiers.

■**SP44 Stereo Amplifier.** 4 watts per channel. Dist. <1%. Input for 3 watts, 65 mV. Response 40-25,000 c/s ± 1 dB. Feedback 20 dB. N.L. — 72 dB. Out. imp. 3 and 15 ohms. Output EL84's. Size 11½ × 6 × 5½ ins. Price £14 14s. To operate with "Stereo Two", or "Stereo Eight".

Lowther Manufacturing Co., Lowther House, St. Mark's Road, Bromley, Kent. Tel.: Ravensbourne 5225. Cables: Lowther, Bromley.

Lowther No. 2 Control Unit. Inputs: mic 45 mV; P/U 45 mV; radio 100 mV. 4-pos. sel., treble, bass, vol., on/off. Mic./tape input socket. H.D. 0.1% on 1v R.M.S. H and N — 60 dB. Size 10½ × 3 × 3½ ins. To operate with LL15, LL26 and similar power amp. Price £10 10s.

Master Control Unit Mk. II. Inputs: mic., P/U and tape head 3 mV; radio, tape and aux. 100 mV. 6-pos. sel., 5-pos. record equal, treble, bass, vol., on/off. Low pass filter. 18 dB per octave. 35 down to 4 Kc/s. Socket for direct connection to tape playback head. H.D. <0.1%. H and N — 90 dB. Size 10½ × 5½ × 7½ ins. To operate with LL15, LL26 and similar power amp. Price £24.

Lowther LL15 Amplifier. 16 watts. Dist. <0.1%. Input for spec. output .75v. Response 30-30,000 c/s ± 1 dB. Feedback 22 dB. N.L. — 80 dB. Out. imp. 16 ohms with adjustment. Output EL34's. "Lowther Linear" (screen and anode feedback). P.a.t. Size 12 × 9 × 6½ ins. To operate with MCUII, MCUIV or control unit No. 2. Price £27 10s.

Lowther LL26 Amplifier. 26 watts. Dist. <0.1%. Input for spec. output 0.75v. Response 20-60,000 c/s ± 1 dB. Feedback 22 dB. N.L. — 90 dB. Out. imp. 16 ohms with adjustment. Output EL34's. "Lowther Linear". P.a.t. Size 12 × 12 × 8½ ins. To operate with MCUII, MCUIV or control unit No. 2. Price £47.

■Lowther S.C.U. Stereo Control Unit. Input as for Master Control Unit Mk. IV. Tape input sockets. H.D. 0.1%. Dual low pass filters. Dual output balanced and balance controls between channels. Size as M.C.U. Mk. IV. To operate with LL15S power amp. Price £40.

■Lowther LL15S Stereo Amplifier. 16 watts output on each channel. Dist. 1%. Input for spec. output 0.75v. Response 20-40,000 c/s ± 1 dB. N.L. — 80 dB. Out. imp. 7.5 or 15 ohms. Output EL34. "Lowther Linear". Size 11 × 10 × 8 ins. To operate with SCU control unit. Price £47.

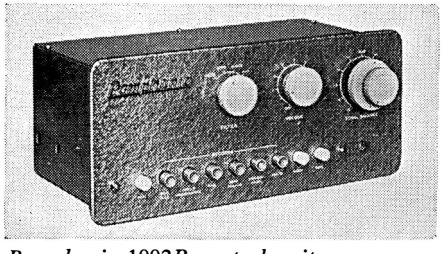
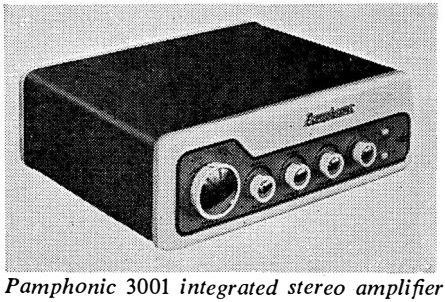
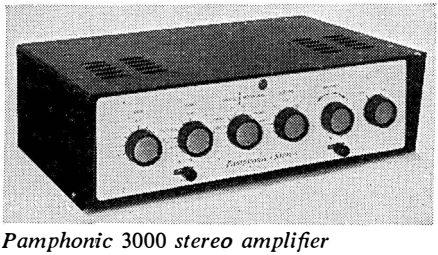
Lowther Integrated stereo amplifier



Pamphonic 1002*B control unit*



Pamphonic 3001 *integrated stereo amplifier*



Pamphonic 3000 *stereo amplifier*

Pamphonic Reproducers Ltd., 17 Stratton Street, W.1. Tel.: Grosvenor 1926.

1002B Control Unit. Inputs: mic. 2-3 mV; radio/tape 60 mV; P/U 6-8 mV. Push-button sel. 9 pos. (6 gram.). Cut off filter 4, 7, 12 Kc/s and "out". Terminals for tape input. H and N 60 dB below 0.5v. P.a.t. Size $10\frac{1}{4} \times 4\frac{1}{4} \times 7\frac{1}{4}$ ins. To operate with 2001 power amp. Price £25 4s.

2001A Control Unit. Inputs: 3-120 mV depending on input. 6-pos. sel. Pre-set level control for tape/radio. Cut-off filter at 4, 7, 12 Kc/s and "out". Loudness control. Tape input sockets. H and N 60 dB below 0.5v. P.a.t. To operate with 2001 power amp. Price £12 12s.

2001 Amplifier. 25 watts. Dist. at 1,000 c/s, 0.05% at 15 watts. Input for spec. output 0.5v. Response substantially flat 2-100,000 c/s. Feedback 28 dB. N.L. 90 dB below full output. Out. imp. 3.75, 6.6, 10 and 15 ohms. Output KT66's. Ultra-linear. To operate with 2001A or 1002B control units. Price £29 8s.

■**3000 Stereo Amplifier.** 7.5 watts per channel. Dist. 0.5%. Inputs: radio 1 volt; tape 0.5 volts; pickup crystal stereo. Response. 50-15,000 c/s. Feedback 20 dB. N.L. — 57 dB. Out. imp. 15 ohms each channel. Ultra-linear. Size 14 × $9\frac{3}{4}$ × $4\frac{1}{2}$ ins. Price £31 10s.

■**3001 Integrated Stereo Amplifier.** Inputs: pickup 4-6 mV and 150 mV; tape or radio 400 mV and 1 volt. Bass, treble, balance controls. Dist. 0.5% at 6 watts. H and N −60 dB. 7.5 watts per channel. Out. imp. 15 ohms. Response 40-20,000 c/s ± 1 dB. Crosstalk better than 60 dB. Output ECL82's. Size 13 × $10\frac{1}{4}$ × $4\frac{1}{4}$ ins. Price £35.

★

Period High Fidelity Ltd., 28 South Street, London, W.1. Tel.: Grosvenor 4686.

■**Saville Double Six.** Integrated stereo amplifier. Inputs: pickup 5 and 100 mV; tape 4 mV and 100 mV; radio 100 mV. 6-pos. sel., bass, treble, balance, vol. controls. H.D. <0.5%. H and N better than 40 dB. P.a.t. 230v at 40 mA; 6.3v 2.5 amps. 6 watts per channel, 9 watts max. Response 30-20,000 c/s ± 1 dB. 12 dB feedback. Out. imp. 15 ohms or to order. Output ECL83's ultra-linear. Size 13 × 8 × $3\frac{3}{4}$ ins. Price £33 12s.

Saville 12P. Stereo Control Unit. Inputs: pickup 3 and 45 mV; tape 1 and 20 mV; radio 50 mV. 6-pos. sel., bass, treble, balance, vol. controls. H.D. less than 0.1%. H and N better than — 50 dB. Rumble filter. P.a.t. 300v at 40 mA; 6.3v at 2.5 amps. Size 14 × 4½ × 3¾ ins. To operate with Saville Double Twelve stereo amplifier. Price see below.

Saville Double Twelve. Stereo Amplifier. 12 watts per channel, 21 watts peak Dist. <0.1% at 10 watts. Input for spec. output 200 mV. Response 25-30,000 c/s ± 1 dB at 10 watts. 18 dB feedback. N.L. −65 dB. Out. imp. 15 ohms or to order. Output EL84's. Size 11¼ × 8 × 6 ins. To operate with Saville 12P stereo control unit. Price, complete with control unit, £51 9s.

★

Pye Limited, Blue Town, Sheerness, Kent. Tel.: Sheerness 3076. Cables: Faramarine, Sheerness, Kent.

HF10 Mozart Self-contained Control Unit and Power Amplifier. Inputs: tape 100 mV; radio 100 mV; P/U 15, 10 and 10 mV on each of the 3 curves at 1,000 c/s., special compensation for all makes of P/U. 5-pos. sel., treble, bass, vol., mains on/off, filter at 4, 7, 12 Kc/s and out. Tape replay socket. H.D. 0.3% at 1,000 c/s and 9 watts. H and N main amp. — 70 dB; tape, radio — 60 dB; P/U — 55 dB. Output 10 watts nom. Response 3-70,000 c/s ± 3 dB. Feedback 3 main loops over output stage — 5, 8 and 14 dB. Out. imp. 4, 8 and 15 ohms. Output 1 EL34. Integrated single-ended ultra-linear. Size 10½ × 3½ × 5½ ins. Price £23 2s. Also available in metal case for shelf mounting. HF10M £24 13s. 6d. and mounted in cabinet with provision for motor HFP1 £33 12s. 117v model available.

Mozart Stereo Amplifier and Control Unit. HFS20. Inputs: Pickup 7 mV; radio and tape 100 mV. Col., bass, treble, balance, on/off, selector switch. H and N — 58 dB. 9 watts per channel nominal, 10 watts max. Dist. 0.3%. Response 5-50,000 c/s ± 2 dB. Feedback 27 dB. Out. imp. 4, 8 and 15 ohms. Output EL34. Size 4 × 10½ × 11 ins. Price Chassis £35, in metal case £36 15s. Available in kit form £30.

Radford Electronics Ltd., Ashton Vale Estate, Bristol 3. Tel.: Bristol 661873.

D.S.M. Stereophonic Control Unit. Inputs: tape/pickup/aux. 4.5 mV per channel. 6-pos. sel. equalisation, aux., tape, disc, disc lateral, dual. H.D. 0.1%. Rumble filter 35 c/s with 20 dB/octave attenuation. Size 9½ × 3½ × 6½ ins. Price £34 13s.

Rogers Development (Electronics) Ltd., 4-14 Barmeston Road, Catford, S.E.6. Tel.: Hither Green 7424/4340. Cables: Rodevco, London, S.E.6.

RD Cadet Control Unit. Prov. spec. inputs: tape 200 mV; radio 200 mV; P/U1 comp. 60 mV; P/UI flat 18 mV; P/U2 comp. 360 mV; P/U2 flat 220 mV. 6-pos. sel., treble, bass, vol. on/off. Tape record and replay sockets. Size $8\frac{1}{2} \times 5\frac{1}{8} \times 2\frac{1}{2}$ ins. To operate with RD Cadet amplifier. Price £7.

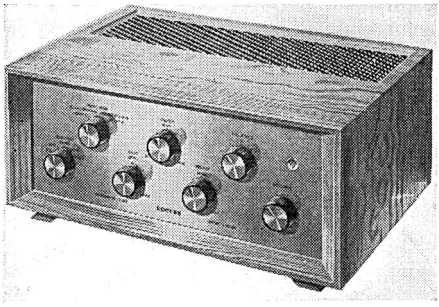
RD Junior Mk. II Control Unit. Inputs: tape 20 mV; radio 50 mV; mic. 5 mV; P/U1 5-9 mV; P/U2 40-75 mV. 7-pos. sel. (4 record equal.), treble, bass, vol. on/off. Switched filter 4, 5, 7, 9 and 20 Kc/s. Tape record and replay sockets. Size $8\frac{1}{2} \times 5\frac{1}{8} \times 4\frac{7}{8}$ ins. To operate with RD Junior Amplifier. Price £11.

RD Cadet Amplifier Mk. II. 8 watts nom., 6 watts max. Intermod. Dist. 3.5% at 4 watts (100 c/s and 6,000 c/s mixed 4 to 1). Input voltage for spec. output 600 mV. Response 30-20,000 c/s ± 1 dB. Feedback 18 dB ± 1 dB, 30-20,000 c/s. N.L. — 75 dB below 8 watts. P.a.t. 250v at 40 mA, 6.3v at 2.2 A. Out. imp. 4, 8 and 16 ohms. Output EZ81's. Ultra-linear. Size 11 × $4\frac{1}{2}$ × $4\frac{1}{4}$ ins. To operate with RD Cadet control unit. Price £12.

RD Senior Mk. II Amplifier. 20 watts nom., 36 watts peak. Dist. 0.1% at 15 watts. Input for spec. output 1.4v for 20 watts. Response 25-20,000 c/s ± 0.25 dB. Feedback 25 dB (2 loop). N.L. −95 dB below 20 watts. Out. imp. 3.75, 7.5 and 15 ohms. P.a.t. 425v at 40 mA, 6.3v at

2 A. Output EL34's. Ultra-linear. Size 13 × 8 × 8 ins. To operate with RD Senior Mk. IV control unit. Price £28.

RD Junior Amplifier. 10-12 watts nom., 14 watts max. Dist. at 1,000 c/s. 0.12% at 10 watts. Input for spec. output 600 mV. R.M.S. for 10 watts. Response 20-30,000 c/s ± 0.25 dB. Feedback 20 dB. N.L. −85 dB below 10 watts. P.a.t. 285v at 40 mA, 6.3v at 2.5A. Out. imp. 2-3, 6-8, 12-16 ohms. Output EL84's. Ultra-linear. Size 11 × 6 × 5¼ ins. For Junior II control unit. Price £17.



Rogers HG88 integrated stereo amplifier

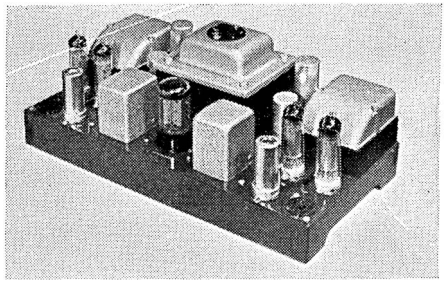
RD Cadet Stereo Control Unit. Inputs: pickup 50 mV; radio and tape 100 mV. Bass, treble, vol., function switch, selector switch. Size 8½ × 5⅛ × 4⅞ ins. Price £12. To operate with two RD Cadet, Junior, or Senior II amplifiers.

RD Junior Mk. II. Stereo Control Unit. Inputs: pickup 5-10 and 100-200 mV; tape 4 and 50 mV; radio 50 mV. Push-button sel., bass, treble, balance, filter controls. Response 25-20,000 c/s ± 1 dB. Crosstalk −40 dB. Size 8½ × 5⅛ × 5⅜ ins. To operate with RD Junior stereo amplifier. Price £18.

Rogers Master stereo control unit

RD Master Stereo Control Unit. Inputs: pickup 3-30 mV and 30-400 mV; tape 1.5-30 mV; radio 30-250 mV. Push-button sel., bass, treble, balance, equalisation. Response 20-20,000 c/s ± 1 dB. Crosstalk −40 dB. Size 14 × 6½ × 5⅛ ins. Price £35.

RD Junior. Stereo Amplifier. 12 watts per channel, 18 watts max. Dist. 0.2% at 12 watts. Input for spec. output 750 mV. Response 20-20,000 c/s ± 0.25 dB. 20 dB feedback. N.L. −85 dB. Out. imp. 4, 8 or 16 ohms. Output EL84's. Size 14 × 8 × 5⅜ ins. To operate with RD Junior Mk. II stereo control unit. Price £28 10s.



Rogers RD Junior stereo amplifier

HG88. Combined stereo amplifier and control unit, 8 watts per channel. Dist. 0.5%. H and N −55-60 dB. Response 30-60 dB. Response 30-20,000 c/s ± 1 dB. Inputs: pickup 4, 10, 60 and 150 mV at 60K and 1 Megohm, radio and aux. 40 mV, tape 4 mV, mic. 3 mV. Sel. switch, bass, treble, balance, filter, and precision volume control. Out. imp. 3.75 or 15 ohms. Size 15½ × 10½ × 7 ins. Price complete in case £40. Chassis model £37 10s.

Rogers RD Cadet amplifier

Shirley Laboratories Ltd., 3 Prospect Place, Worthing, Sussex. Tel.: Worthing 30536.

Jupiter 3B/1-15E Self-contained Control Unit and Power Amplifier. Inputs: radio, tape, P/U 78 and L.P. Output 15 watts nom. 25 watts max. Input approx. 10 mV for 15 watts. Treble, bass, vol. Response 45-35,000 c/s ± 1 dB. N.L. −80 dB. Dist. 0.2% at 10 watts and 1,000 c/s. Out. imp. 15 ohms or as requested. Output EL84. P.a.t. 250v at 35 mA, 6.3v at 2 A. Size 10 × 7 × 6½ ins. Price £23 2s.

Jupiter 3B/1-30E Self-contained Control Unit and Power Amplifier. Spec. as for 3B/1-15E except output 30 watts nom., 45 watts max. Response 28-35,000 c/s ± 1 dB. Output EL34's. Price £33 12s.

■PA 4/86 Stereo Control Unit. Inputs: pickup 3 and 50 mV; radio 100 mV; tape 3 mV and 0.5 volts, selector switch, bass, treble, volume, balance. H.D. 0.1%. H and N −58 dB. Price £21 1s. To operate with SF/10 amplifier, or two SB/7-30.

SB/7-30s Amplifier. 20 watts nominal, 35 watts max. Dist. 0.1%. Input for spec. output 2.5 volts. Response 34-40,000 c/s ± 0.3 dB. N.L. −80 dB. Out. imp. 15 ohms. Output EL34. Ultra-linear. Size 11 × 7½ × 8 ins. Price £29 8s. 28 watt version £32 11s. To operate with PA 4/86 Control Unit.

Jupiter SB1-15F Combined Amplifier and Control Unit. Input 2 mV minimum. Dist. 0.2%. 14 watts nominal, 23 watts max. Response 45-35,000 c/s ± 1 dB. N.L. −80 dB. Out. imp. 100 ohms line or to order. Size 10 × 7 × 6½ ins. Price £23 2s.

■SF/10 Combined Stereo Amplifier and Control Unit. 12 watts per channel, 18 watts peak. Dist. 0.1%. Control Unit similar details to PA 4/86 above. Price complete £45 3s.

■2SB/10. Integrated Stereo Amplifier. Inputs: magnetic and crystal pickup; tape direct from high impedance head and from tape recorder; radio. Sel. switch, bass, treble, volume, balance controls. 7 watts per channel. Output ECL82's. Price £45 3s.

■2SB/12. Integrated Stereo Amplifier. 12 watts per channel, 20 watts peak. Output EL84's. Other details as 2SB/10. Price £48 6s.

■2SB/50. Integrated Stereo Amplifier. 25 watts per channel, 40 watts peak. Output

KT88's. Response 35-35,000 c/s ± 1 dB at 25 watts. Dist. 0.05% at 25 watts. Other details as 2SB/10. Price £84.

★

H. L. Smith & Co. Ltd., 287/289 Edgware Road, London, W.2. Tel.: Paddington 5891/7595.

Cooper-Smith Mk. II Control Unit. Inputs: radio 100 mV; P/U 3 mV; mic. 1.5 mV; tape 100 mV. 6 pos. sel. (3 record equal.), treble, bass, vol. on/off. Switch filter 6, 8 and 10 Kc/s. Co-axial tape replay switch. H.D. 0.1% or less at 1,000 c/s. H and N −80 dB. Rumble filter 12 dB cut at 30 c/s. Size 10 × 3½ × 6½ ins. To operate with B.P.I. power amp. Price kit £7 17s. 6d. Assembled and tested £10 17s. 6d.

Cooper-Smith B.P.I. 10 watts nom., 12 watts max. Dist. 0.15% or better at 10 watts. Input for spec. output approx. 1.9 V. Response 20-30,000 c/s ± 1 dB. Feedback 18 dB. N.L. 90 dB below max. output. Out. imp. 3.75 and 15 ohms. Output 6BQ5's or EL84's. Ultra-linear. Size 12 × 7 × 7½ ins. To operate with Cooper-Smith Mk. II control unit. Price kit £12 5s. Assembled and tested £14 5s.

"Prodigy" Combined Amplifier and Control Unit. Inputs: pickup 8 mV; radio and tape 100 mV, 6 watts, 9 watts max. Dist. 0.2%. Response 30-25,000 c/s ± 1 dB. Feedback 15 dB. N.L. −70 dB. Out. imp. 3¾, 7½ and 15 ohms. Output ECL82's. Ultra-linear. Size 10½ × 7 × 5½ ins. Price kit £12 10s. Assembled and tested £15 15s.

■**Cooper-Smith Stereo Control Unit.** Inputs: pickup 3 mV; tape 100 mV; radio 100 mV. 4 position sel., bass, treble, vol., balance. H.D. 0.15%. H and N −60 dB. Size 10½ × 4½ × 3½ ins. To operate with Cooper-Smith stereo amplifier. Price kit £12 12s. Assembled and tested £15.

■**Cooper-Smith Stereo Amplifier.** 6 watts per channel, 9 watts peak. Dist. 0.2% at 6 watts. Input for spec. output 800 mV. Response 40-25,000 c/s at 6 watts. 15 dB feedback. N.L. −80 dB. Out. imp. 3.75, 7.5, 15 ohms. Output ECL82's. Size 12 × 7 × 6¾ ins. To operate with Cooper-Smith stereo control unit. Price kit £13 13s. Assembled and tested £16.

Cooper-Smith Magnum. 20 watts nom., 30 watts max. Dist. 0.1% at 30 watts.

Response 30-30,000 c/s ± 0.5 dB. Feedback 26 dB. N.L. −80 dB. Output imp. 3.75, 7.5 and 15 ohms. Output EL34's. Ultra-linear. Size 14 × 8¼ × 7¾ ins. To operate with Cooper-Smith Mk. II. Price kit £21 2s. 6d. Assembled and tested £23 12s. 6d.

★

Sound Sales Ltd., Works and Acoustic Laboratories, West Street, Farnham, Surrey. Tel.: Farnham 6461/2/3. Cables: Sounsense.

A-Z Wide Range Control Unit Mk. III. Inputs: pickups 5 and 50 mV; radio 50 mV; mic. 1 mV. 8-position sel., bass, treble. presence. H.D. 0.06%. H and N −80 dB. Rumble filter. P.a.t. 250v at 40 mA. Size 11¼ × 4⅝ × 5½ ins. To operate with Mk. III Amplifier, and not sold separately.

A-Z Mk. III Amplifier. 10 watts nominal, 13.5 watts max. Dist. 0.06%. Input for 10 watts −18 dB ref. 1 volt. Response 12-27,000 c/s ± 1 dB. Feedback 22 dB. N.L. −80 dB. Out. imp. 3, 6, 15, and 30 ohms. Output EL84's. Ultra-linear. Size 10¼ × 7⅛ × 6 ins. To operate with Mk. III Control Unit. Price complete £25. Amplifier only £17.

■**A-Z Twin Twenty Stereo Control Unit.** Inputs: pickup 5 mV and 100 mV; radio 3 at 30 mV; tape 14 and 125 mV; mic. 1.4 mV. 11-position sel., balance, bass, treble, filter. Size 11¼ × 4⅝ × 9½ ins. Price £20.

■**A-Z Twin Twenty Stereo Amplifier.** 10 watts per channel, 13.5 watts peak. Dist. .08%. Input for spec. output 0.1 volts. per channel. Response 20-20,000 c/s flat. N.L. −80 dB . Out. imp. 3, 8, and 15 ohms. Output EL84's. Ultra-linear. Size 12½ × 10 × 6½ ins. Price £30. To operate with Twin Twenty Control Unit, or A-Z Wide Range Control Unit.

A-Z Senior Control Unit with transistor input. Inputs: mic. 1 mV; radio 100 mV; tape 250 mV; tape 1 mV (from head) C.C.I.R. and N.A.R.T.B.; P/U variable 1-100 mV. 11 pos. sel. (5 record equal.), treble, bass, vol., presence control, switched filter, 2 pos. and out combined with variable slope. Tape recording in all positions, also jacks for portable recorders. Specially designed for use with M.C. pick-ups or tape-head without necessity of transformers. Size 11 × 4½ × 6 ins. Sold only with A-Z Senior power amp.

Tri-Channel Control Unit with transistor input. Inputs: mic. 1 mV; radio 100 mV; tape (from recorder) 250 mV; tape (from head, C.C.I.R. and N.A.R.T.B.) 1 mV; P/U variable 1-100 mV. 11 pos. sel. (5 record equal.). Presence, middle channel response; treble, top channel response; bass, bass channel response. Infinitely variable electronic crossover system, controlling 3 separate amplifying channels to appropriate speakers via master vol. control. Switched filter. Tape recording in all positions also jacks for portable recorders. H and N better than −80 dB. Dist. not measurable at normal output. Size $11\frac{1}{4} \times 4\frac{3}{8} \times 6$ ins. Sold only with Tri-channel amp. and speaker enclosure.

Tri-Channel Amplifier Mk. V. Bass 20-30 watts, mid channel 8-12 watts, treble channel 4 watts. Total undistorted output approx. 45 watts. Dist. 0.05%. Response infinitely variable on 3 channels. N.L. better than −80 dB. Output LN309, EL84, EL34. Ultra-linear. Size $18 \times 10 \times 8\frac{3}{4}$ ins. Price complete with control unit and tri-channel speaker enclosure £125.

■Tri-Channel Stereo Control Unit and Tri-Channel Stereo Amplifier. Designed for stereophonic or monaural reproduction using 2 Tri-channel main amps. and 2 labyrinth speakers. Stereo to monaural changeover switch, giving parallel or stereo connection. Price complete with control unit, 2 amps and 2 speaker systems £300.

A-Z Senior Mk. II Amplifier. 20 watts nom. 30 watts max. Dist. 0.05% at 20 watts. Response flat 10-30,000 c/s. Feedback 25 dB. N.L. −80 dB at 20 watts. Out imp. 3, 6, 15 or 30 ohms. Output EL34's. Ultra-linear. Size $14\frac{1}{4} \times 8\frac{1}{2} \times 8\frac{1}{2}$ ins. Price complete with A-Z Senior control unit £42.

Stentorian WB12 Major control unit

RADIO TUNERS

An Introduction — by R. N. Baldock, B.Sc.*

NOW that VHF/FM transmissions can serve most of the British Isles, it is surprising how many people remain either unaware or unconvinced of the advantages of this system. It is the writer's opinion, based on personal observations, that this is almost entirely due to reluctance to connect a suitable aerial system. Over the last thirty years or so the public has become accustomed to using a trailing piece of wire as the aerial for medium wave equipment. At these frequencies, signal strength falls smoothly with distance and fair results are easily obtained, especially when noise and interference from unwanted stations is reduced by low bandwidth; impulsive interference is also no problem.

If a VHF/FM tuner is connected to an "aerial" of the above kind, a very different state of affairs results. Unless the site is very favourable, reception will suffer from high random background noise, programme distortion and interference from unsuppressed electrical appliances, particularly passing vehicles. Effects from aircraft, multipath reception and unwanted programmes may also occur and the unenlightened listener may easily conclude that VHF/FM is a waste of money.

Aerial to Suit

To illustrate the difference that a suitable aerial can make, consider the case of an FM tuner, sensitivity say 10 μV for 6 dB quieting, located in a "fringe" area where the VHF signal, usually measured 30 ft. above ground level, is only 50 μV/metre. Connecting a length of wire to the tuner will give a few microvolts, at best, and results will be extremely poor as described above. Erecting a 4-element array at chimney height with suitable feeder and connectors will, however, present the tuner with a signal of over 70 μV and all the advantages of VHF/FM reception will be apparent.

Aerial Gain

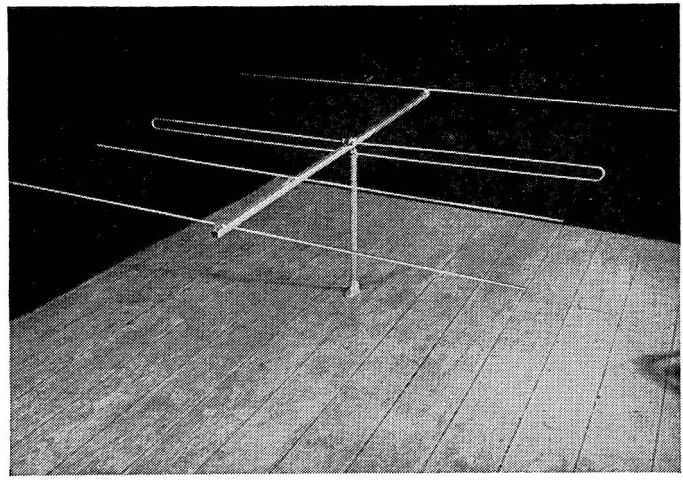
Incidentally, the best practical aerial arrays can give as much gain as the RF stage in a tuner, but with the added advantages of less noise and more discrimination against vehicle interference and unwanted transmissions. Best results will only be obtained if the aerial is properly sited, and the importance of this is perhaps better understood when it is realised that the VHF signal in and around a normal house may vary from place to place by 100:1!

Circuit Aspects

Having obtained the best possible signal in any given circumstances, there remains the question of what qualities the tuner itself should possess. Firstly, the *RF stage* must be carefully designed so as to add as little extra noise as possible. Various circuits may be employed, but in general some form of "cascode" arrangement usually gives the best results.

Turning to the *local oscillator*, the main requirements here are lack of radiation and good frequency stability. Output should quickly settle to within a few kc/s of the required frequency after switching on, since even with AFC incorporated distortion can arise if the circuits are "pulling". If a clear and sensitive tuning indicator is fitted, these difficulties may be overcome, although in the writer's opinion the best results for reception of one transmitter location (three or four programmes in the British Isles) are obtained

*Hon. Lecture Secretary, British Sound Recording Association.



Hi-fi by radio demands a decent aerial. This 4-element folded dipole fits easily out-of-doors or in the loft, and will give good signal strengths and noise rejection on the local VHF/FM transmissions.

using preset switching with precision frequency control; more expensive but welcomed by unskilled operators! For these transmissions, a continuous tuning range from 88 to 100 Mc/s is sufficient but for export tuners the range must be increased to 108 Mc/s.

IF Amplifier

After the *mixer*, which may be contained within the local oscillator circuits, comes the *IF amplifier*. This should have a frequency response which is flat topped or at least smooth over ± 75 kc/s (or more) within 3 dB to minimise phase distortion and include significant sidebands. Restricted bandwidth will, in contrast to AM, give amplitude distortion at all audio frequencies, being worst at low frequencies of high amplitude. This is because most of the modulation energy lies towards the outer sidebands. For fringe area reception the IF response should fall rapidly outside the required pass band, but the most important section of the tuner under these conditions is the following stage—the limiter.

The Limiter

A well-designed *limiter* will reduce the effects of multipath reception, give a good "capture ratio" for efficient rejection of unwanted transmissions close in frequency and level to that required, and minimise impulsive interference. In addition, background noise will rapidly diminish with increasing signal, an important feature since FM tuners with their increased gain tend to generate more internal noise than their AM equivalents.

It only remains to convert the IF to audio with the least possible distortion. There are several methods of achieving this, probably the most popular for high quality tuners being the Foster-Seeley type or variants. Where a separate limiter cannot be included, the ratio detector possesses useful AM rejection properties, but the audio output tends to vary with signal strength and is not usually of such low distortion. Probably the lowest distortion is obtained using the pulse counter discriminator, but because a low IF centre must be used and the audio output is relatively low it has not gained commercial acceptance.

De-emphasis

To make the most efficient use of the VHF/FM system, high audio frequencies are emphasised on transmission, and the tuner must therefore include a de-emphasis circuit of the inverse characteristic. In some tuners this is followed by an amplifier stage of low output impedance so that unknown cable and switching capacitances in the audio equipment do not affect treble performance and long leads may be used without hum pickup. Where such a stage is not included, the user must be careful not to upset performance by connecting unsuitable equipment and Manufacturers instructions should always be heeded.

Reception Distance

As the distance between tuner and transmitter is decreased, some of the foregoing requirements may be relaxed to some extent, e.g., a simple indoor dipole will suffice. RF

stage may be omitted (provided local oscillator radiation is sufficiently low), IF amplifier gain and selectivity may be reduced, and limiter performance need not be so exacting. AGC applied to the RF stage is useful to minimise intermodulation and reduce noise. Local oscillator stability must still be good, and audio distortion will depend on IF bandwidth and discriminator performance.

AM Tuners

These tuners have been developed for so long that new examples are rare, although at least one notable specimen has appeared during the last year. Using a well designed tuner, excellent results can be obtained on medium wave during daylight hours when interference from continental stations in the form of heterodyne whistles, inverted "monkey chatter", etc., is absent. The audio quality obtainable from an AM tuner is dependent on the bandwidth and detector design. The latter is not always given the attention it deserves and careful design is needed to avoid amplitude distortion at high modulation levels.

Combined Circuits

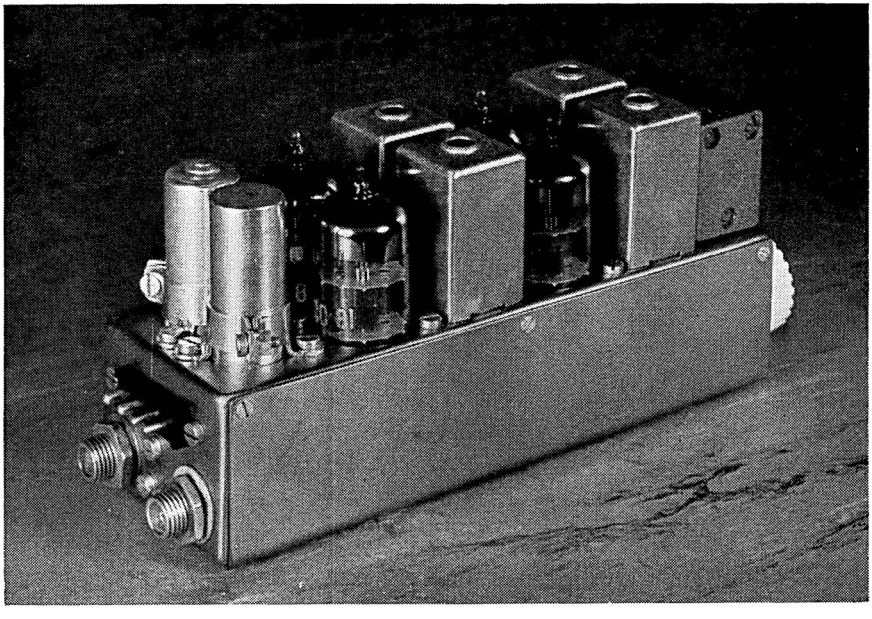
All the above remarks apply with equal force to AM/FM and AM/FM/TV tuners. For a given performance they will probably cost 30 to 50 per cent. more than a tuner for FM only, even if extensive switching of circuits is employed. To ensure long term reliability these switches must be suitably designed.

Power and Output

Tuners fall into two categories—"self powered" or "supplied from associated equipment". With the former, it is necessary only to connect mains power and take the output lead to the audio amplifier. The latter are usually supplied with HT and heater power from the power amplifier. If the tuner and amplifier are built by the same manufacturer, provision is usually made for supplying the tuner with the correct voltages. In other cases it is important to maintain the power supply voltages within the limits specified, otherwise poor performance or overheating and early breakdown may result.

Pre-set Gain

If the tuner is fitted with a gain control, this should be set so that the final sound output level is similar to that obtained from other sources—discs, etc. This will ensure that the early stages in the audio amplifier are



This miniature FM tuner gained the author first prize in a B.S.R.A. Competition, and was described by him in a series of constructional articles in "Hi-Fi News". Crystals are used for each of the four switched stations.

not overloaded; some tuners have an output of several volts if their gain control is set at maximum. When it is required to make recordings from a tuner, it is most convenient if the signal is picked up at the input to the main gain control. Recording levels may then be preset and monitoring carried out at any desired level.

Prospects

Transistorised VHF/FM tuners are appearing commercially with similar performance to their valve counterparts. They offer better reliability with long life, low power consumption and are lighter and less bulky.

At the moment VHF/FM can offer the nearest approach to the "ideal system", i.e., one in which no controls are needed. Once the equipment has been adjusted for frequency response for a particular listening environment, only the gain control is still necessary; the characteristics of the transmitting chain are optimised for any programme source and the overall results are not generally improved by "knob twiddling".

Since stereo discs are now part of the everyday scene, the question is often asked "Why is the BBC not transmitting regular stereo programmes"? The answer is that many stereo broadcasting systems are under consideration, both here and abroad, each with its own attractions. Because of bandwidth and noise considerations the choice is not easy, and the ultimate decision will depend on factors such as whether the system will still give good service on mono equipment, signal/noise performance, extra facilities required such as studio equipment, land lines, etc., etc.

Using the same total bandwidth, for stereo reception, there appears to be an inevitable signal/noise degradation of about 20 dB with any two channel system, but this should prove serious only to "fringe area" listeners. For those nearer the transmitter, however, it may bring home the importance of using an adequate aerial system.

DIRECTORY OF RADIO TUNERS

★ In the abridged specifications of these directory entries the following abbreviations have been used: **P.s.n.**—Power supply needed; **A.F.C.**—Automatic frequency control.

Acoustical Manufacturing Co. Ltd., St. Peter's Road, Huntingdon, Hunts. Tel.: Huntingdon 361 and 574. Cables: Acoustical.

F.M. Tuner. Variable tuning. Range 87.5-108 Mc/s. Special double neon display ind. P.s.n. 330v at 27 mA; 6.3v at 1.85 amps. Size 10½ × 3½ × 6 ins. Price £21 (U.K. purchase tax £7 17s. 6d.)

A.M. Tuner. Variable tuning. Range 5.8-18.5 Mc/s, 185-588 and 800-2070 Metres. Magic Eye ind. P.s.n. 330v at 35mA; 63v at 1.2A. Size 10½ × 3½ × 6 ins. Price £24. (U.K. purchase tax £9.)

★

Armstrong Wireless & Television Co., Walters Road, Holloway, London, N.7. Tel.: North 3213/4.

F.M. Tuner T4. Free tuned. Range 87-108 Mc/s. A.F.C. Balanced ratio det. Self-powered. Preset vol. control. Size 8½ × 7½ × 3¾ ins. Price £15 2s. (U.K. purchase tax £4 17s.)

Stereo 12 Mk. 2 AM/FM. Tuner amplifier chassis. Variable tuning. Range 87-108 Mc/s, 187-570, 1053-2,000 Metres. A.F.C. Ratio disc. Magic Eye ind. Self-powered. Size 14¼ × 9 × 5½ ins. Price £33 7s. 9d. (U.K. purchase tax £10 14s. 3d.)

★

C. T. Chapman (Reproducers) Ltd., Sales Division, 24 Upper Brook Street, London, W.1. Tel.: Hyde Park 2291.

F.M. Tuner FM90. Switched, 4 positions. Range 87.5-100 Mc/s. A.F.C. ratio disc. P.s.n. 250v at 40 mA; 6.3v at 2A. Size 5 × 4½ × 6½ ins. Price £14 9s. (U.K. purchase tax £5 1s.)

F.M. Tuner FM91. Free tuned. Range 87.5-100 Mc/s or 88-108 Mc/s. A.F.C. Wide band ratio det. Bright Line tuning ind. P.s.n. 250v at 40 mA; 6.3v at 2A or self-powered. Size 12 × 4⅛ × 6¼ ins. Price £17 6s. 8d. (U.K. purchase tax £6 1s. 4d.) Self-powered £20 5s. 7d. (£7 1s. 11d.)

LOUDSPEAKERS

An Introduction—by R. L. West

DURING the past year, there have been no spectacular developments, though the keen observer may have noted reports suggesting that some of the more difficult loudspeaker design problems have been solved by alchemy! Looking back through the Previous five Hi-Fi Year books it is surprising how few changes have occurred. The only big breakthrough during this time was right at the beginning—the Quad Electrostatic, and it still shows no sign of becoming out of date. Many others continue, too, more or less unchanged, and are still held in high esteem. It shows they were all very good designs in the first place.

Some of the Old are Still Good

There have been changes, of course. A few items have been replaced by more up-to-date counterparts. A few have disappeared, but mainly due to changes in company policy. A few newcomers have been welcomed in.

There are many people with five-year-old equipment that is still by no means out of date. Thus a good £52 loudspeaker, for instance, will have cost only a mere 4s. per week, even if it were to be scrapped right now. The better type of loudspeaker is thus likely to be a good investment.

Concerning the choice of loudspeaker, much has been said and written, and it is no simple matter. As a generalisation, it is safe to say that only the very best the listener can afford should be considered. Many people find that experience with fairly good quality equipment usually sharpens their critical faculties and a standard of reproduction that once was quite adequate becomes unacceptable after a time. The best quality equipment, however, remains acceptable for a very long time.

Compromise

The actual choice is still a very personal matter and we can never all agree on what we consider best. Until such time that we can present the ear with an *exact* copy of the original sound field, in magnitude and direction, we must accept compromise. A dozen or so channels at least would be needed to get really near the original, but both economic and domestic reasons rule this out and limit us to only two at the moment, though we may dare to think of three or four later on maybe. It is in the choice of compromise that we can have endless combinations and thus a wide choice of loudspeakers results. Some people are more sensitive to the smoothness of response, some to the frequency range, and yet others to the type of sound distribution produced. Very often the listener is not aware of the reason for his choice and only knows that A sounds better than B to him. This after all is what matters, *but do make sure A sounds better than B with many different types of sound, speech and music before finally deciding.*

Quality Still Costs Money

Generally, the more one pays for a loudspeaker, the better it is likely to be, but this does not imply that the best is the most expensive. The most expensive may be thus because it has the most lavish decor. On the other hand, don't expect to get superb results for £5. Most of the reputable manu-

facturers have been in the game a long time and have very wide knowledge and experience. Ideally a loudspeaker is not a musical instrument and should have no character or characteristic tone of its own. In practice, it always has a little, sometimes rather more, and we start talking about "colouration". In practice, therefore, it is a musical instrument and its characteristic sounds must not only be unobtrusive but pleasant.

The Ears are Most Important

Science and good engineering alone cannot produce the superb loudspeaker, but they do help. They also help to ensure consistency in the product, and they should at least prevent a bad one being made. To go that bit farther, i.e. to choose the right compromises, we have no electronic instruments sophisticated enough to help us. We thus have to rely on our own brain with its vast memory stores. A keen and experienced ear is thus very necessary, and is not likely developed overnight. Antonio Stradivari made his famous violins when he was over forty years of age, but he had been learning for some thirty years. This is not mentioned to discourage initial enthusiasm, but to emphasise just how sensitive our hearing can be, how difficult to satisfy, and how much subtlety is built into many of our better loudspeakers.

As has already been pointed out, the advent of stereo stimulated the design of small loudspeakers. Some of these were very carefully designed to give the smoothest possible response and were indeed very pleasant to listen to. The bass response was usually down somewhat and unfortunately not correctable by the bass boost on most amplifiers. There seems now to be a return to designs that produce more bass in the 30–50 c/s region, although the response may not be quite so smooth. The writer considers this a better compromise. The extreme bass is vital to our full enjoyment, as music with its full complement of bass is less tiring to listen to.

At the other end of the scale, at long last an electrostatic tweeter has appeared and seems to be very satisfactory. There is still only one ribbon speaker, but its sensitivity has crept up and up and it can partner pretty well any bass unit. Having the smallest and lightest moving parts of any loudspeaker made in this country, it has a very good start when considering transient response.

Foam Surrounds

Foam surrounds continue to be popular —and effective, and cone resonances get lower and lower, a very good thing. The cellular sandwich construction already used in aircraft design because of its very high strength to mass ratio, looks like invading the loudspeaker province. It is a step towards our ideal structure of zero mass with infinite stiffness and bids fair to give bass loudspeakers a wider useful frequency range.

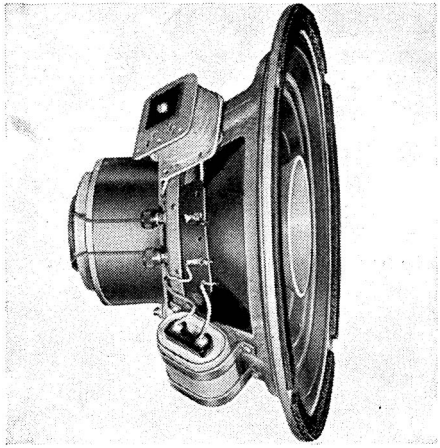
"Satisfactory Progress" sums up the year's activities in the realm of loudspeakers.

DIRECTORY OF SPEAKERS AND ENCLOSURES

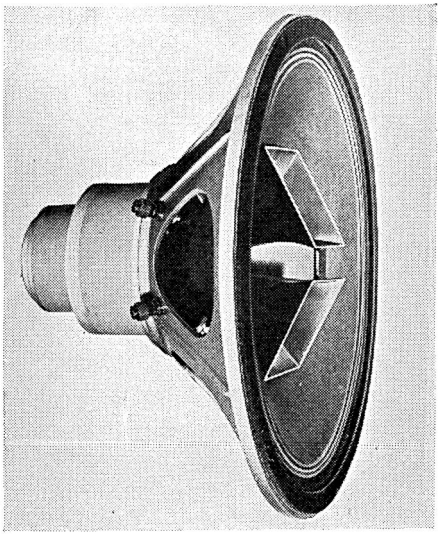
●This directory is divided into two parts. **Part 1** deals with the range of drive units which, by makers' specifications, are within the Hi-Fi classification. **Part 2** deals with complete enclosures. These, as a general rule, embody the drive units of Part 1. For economy of space the following abbreviations are used: **v.c.i.**—voice coil impedance; **r.c.f.**—recommended crossover frequency (and in Part 2) **Rec.**—recommended units; Height by Width by Depth are the order of printed dimensions.

PART I—DRIVE UNITS

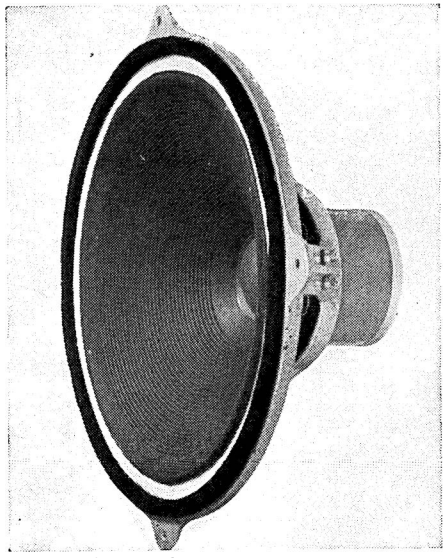
AEI Type 18A



AEI Type DC12



AEI K10A Dual Concentric



Bakers Selhurst 15-in/CS Auditorium

A.E.I. Sound Equipment Ltd., Crown House, Aldwych, London, W.C.2. Tel.: Temple Bar 8040. Cables: Soundequi, Estrand, London.

A.E.I. 12A. 12 in. Paper cone. Fabric surround. Voice coil 1¾ in. Gap flux 14,400 gauss. Total flux 122,000 maxwells. H.C. 18 watts. v.c.i. 15 ohms. F.R. 50-10,000 c/s. Price £14.

A.E.I. 12B. 12 in. paper cone. Foam surround. Voice coil 1¾ in. Gap flux 14,400 gauss. Total flux 122,000 maxwells. H.C. 12 watts. v.c.i. 15 ohms. F.R. 40-10,000 c/s. Price £14 14s.

A.E.I. DC12 Dual Concentric. 12 in. Paper cone. Fabric surround. Voice coils. (L.F.) 1¾ in. (H.F.) 1.56 in. Gap flux (L.F.) 10,000 gauss (H.F.) 13,000 gauss. Total flux (L.F.) 85,000 maxwells (H.F.) 49,000 maxwells. H.C. 15 watts. v.c.i. 15 ohms. F.R. 50-14,000 c/s. Built-in crossover 1,500 c/s. Price £25.

A.E.I. 18A. 18 in. Paper cone. Fabric surround. Voice coil 2½ in. Gap flux 15,000 gauss. Total flux 376,000 maxwells. H.C. 40 watts. v.c.i. 10 ohms. F.R. 30-9,000 c/s. r.c.f. 500 c/s. Price £41.

A.E.I. 18B. Details as above, but Felt surround. R.F. 20-9,000 c/s.

A.E.I. 18C. 18 in. Paper cone. Fabric surround. Voice coil 2½ in. Gap flux 11,800 gauss. Total flux 215,000 maxwells. H.C. 30 watts. v.c.i. 10 ohms. F.R. 30-9,000 c/s. r.c.f. 500 c/s. Price £25 10s.

A.E.I. K10A. Dual Concentric. 18 in. Paper cone. Felt surround. Voice coils (L.F.) 2½ in. (H.F.) 1.56 in. Gap flux (L.F.) 14,300 (H.F.) 16,700 gauss. Total flux (L.F.) 285,000 (H.F.) 63,000 maxwells. H.C. 25 watts. v.c.i. 10 ohms. F.R. 30-17,000 c/s. Separate filter unit. 1,700 c/s. Price £48.

★

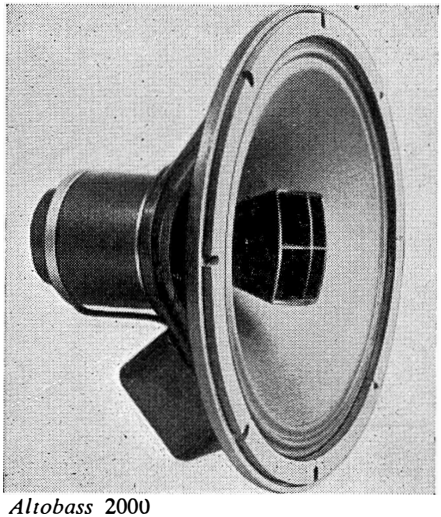
Richard Allan Radio Ltd., Bafflette House, Taylor Street, Batley. Tel.: Batley 1123/1308/4033. Cables: Acoustics Batley.

Golden Eight. 8 in. Paper cone and surround. Voice coil 1 in. Gap flux 12,000 gauss. Total flux 48,000 maxwells. H.C. 5 watts. v.c.i. 15 ohms. F.R. 60-10,000 c/s. Price £2 10s. (U.K. purchase tax 16s. 1d.)

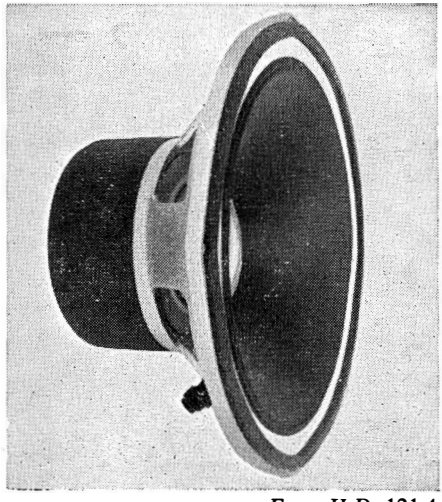
Golden Eight. 8 in. Paper cone with Foam surround. Voice Coil 1 in. Gap flux 12,000 gauss. Total flux 48,000 maxwells. H.C. 5 watts. v.c.i. 15 ohms. F.R. 45-10,000 c/s. Price £2 15s. (U.K. purchase tax 17s. 8d.)

Golden Ten. 10 in. Paper cone. Foam surround. Voice coil 1½ in. Gap flux 14,000 gauss. Total flux 82,000 maxwells. H.C. 10 watts. v.c.i. 15 ohms. F.R. 40-5,000 or 40-9,000 c/s. r.c.f. 5,000 c/s. Price £5 12s. (U.K. purchase tax £1 15s. 11d.)

Bronze Ten. 10 in. Paper cone. Foam surround. Voice coil 1½ in. Gap flux 12,500 gauss. Total flux 73,000 maxwells.



Altobass 2000



Fane H.D. 121A

H.C. 8 watts. v.c.i. 15 ohms. F.R. 40-5,000 or 40-9,000 c/s. Price £4 17s. (U.K. purchase tax £1 11s. 2d.)

Golden Twelve. 12in. Paper cone. Foam surround. Voice coil 2 in. Gap flux 14,000 gauss. Total flux 182,000 maxwells. H.C. 15 watts. v.c.i. 15 ohms. F.R. 25-15,000 c/s. r.c.f. 1,100 c/s. Price £12 12s.

Bronze Twelve. 12 in. Paper cone. Foam surround. Voice coil 2 in. Gap flux 12,500 gauss. Total flux 162,000 maxwells. H.C. 12 watts. v.c.i. 15 ohms. F.R. 25-5,000 c/s. r.c.f. 1,100 c/s. Price £9 9s.

410T. Tweeter. 4 in. Paper cone and surround. Voice coil 9/16 in. Gap flux 10,000 gauss. Total flux 15,000 maxwells. H.C. 3 watts. v.c.i. 15 ohms. F.R. 2,000-17,000 c/s. r.c.f. 5,000 c/s. Price £1 5s. (U.K. purchase tax 8s.)

★

Altobass Ltd., Percy Road, Aylestone Park, Leicester. Tel.: Leicester 31616. Cables: Altobass, Leicester.

2000. Dual Concentric. 12 in. Moulded paper cone, corrugated surround (L.F.). Duralumin pressure tweeter. Voice coil 1¾ in. (L.F.), 1 in. (H.F.). Gap flux (L.F.) 8,000 (H.F.) 13,000 gauss. Total flux (L.F.) 90,000 (H.F.) 50,000 maxwells. H.C. 10 watts. v.c.i. 10 ohms. F.R. 30-20,000 c/s. Built-in crossover at 1,200 c/s. Price £17 17s.

Bakers "Selhurst" Radio, 523 London Road, Thornton Heath, Surrey.

8 in. Special. Fibre cone, bakelised apex. Foam surround. Voice coil 1 in. Gap flux 18,000 gauss. H.C. 8 watts. v.c.i. 15 ohms. F.R. 35-20,000 c/s. Price £7 10s.

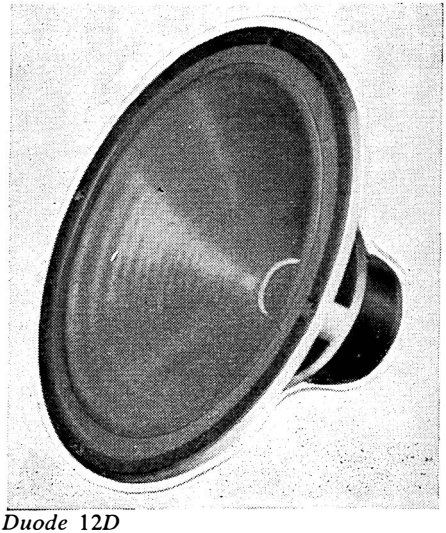
12in. de-luxe fibre curvilinear cone, bakelised apex. Foam surround. Voice coil 1½ in. Gap flux 15,000 gauss. H.C. 15 watts. v.c.i. 3 or 15 ohms. F.R. 20-17,000 c/s. Price £9 10s.

12-in. Ultra de-luxe fibre curvilinear cone, bakelised apex. Foam surround. Voice coil 1½ in. Gap flux 17,000 gauss. Peak H.C. 20 watts. v.c.i. 15 ohms. F.R. 18-20,000 c/s. Price £15 15s.

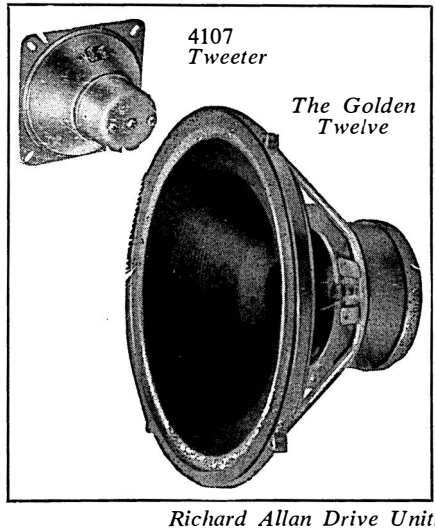
Ultra Twelve 12-in. fibre curvilinear cone, bakelised apex. Foam surround. Voice coil 1½ in. Gap flux 17,000 gauss. Aluminium voice coil and drive. H.C. 20 watts v.c.i. 15 ohms. F.R. 20-25,000 c/s. Price £17 10s.

15-in./CS Auditorium. Fibre cone, bakelised apex. Foam surround. Voice coil 2 in. Gap flux 17,000 gauss. H.C. 15 watts. v.c.i. 8 or 15 ohms. F.R. 20-13,000 c/s. r.c.f. 5,000 c/s. Price £18.

Ultrasonic 3¼ in. bakelised cone. Foam surround. Voice coil 1 in. (aluminium). Gap flux 18,000 gauss. H.C. 12 watts above 1,000 c/s. v.c.i. 15 ohms. F.R. 1,000-25,000 c/s. r.c.f. 1,600 or 3,000 c/s or by 3μF condenser. Price £6.



Duode 12D



Richard Allan Drive Units

Duode Ltd., 523 London Road, Thornton Heath, Surrey.

Duode 12E. 12 in. Linen moulded cone. Foamed plastic surround. Voice coil 1.5 in. Gap flux 17,000 gauss. Total flux 190,000 lines. H.C. 30-15 watts. v.c.i. 15-8-5 ohms. F.R. 20-16,000 c/s. Price £15.

Duode 12D. 12 in. Linen moulded cone. Foamed plastic surround. Voice coil 1.5 in. Gap flux 14,500 gauss. Total flux 130,000 lines. H.C. 15 watts. v.c.i. 30-15-8-5 ohms. F.R. 20-16,000 c/s. Price £12.

ACOUSTIC RESISTANCE UNITS

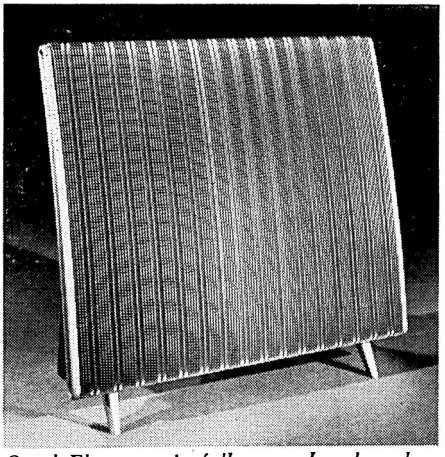
Goodmans Industries Ltd., Axiom Works, Wembley, Middx. Tel.: Wembley 1200. Cables: Goodaxiom, Wembley.

ARU Units. These units combine both reflex port and acoustic resistance in one complete unit. The port area and resistance are calculated to suit a particular cabinet volume and speaker cone resonance, thus being usable with a variety of cabinet designs and driving units. Price £2 15s. 3d. to £4 4s.

ELECTROSTATIC SPEAKERS

Acoustical Manufacturing Co. Ltd., St. Peter's Road, Huntingdon, Hunts. Tel.: Huntingdon 361 and 574. Cables: Acoustical.

Quad Electrostatic Loudspeaker. Full range doublet covering 45 c/s to 18 Kc/s. Attenuation outside band asymptotic to 18 dB/8ve. Total integrated radiation at max. output equivalent to 95 phons in rooms of up to 5,000 cu. ft. with average reverberation. Dispersion approx. 70 deg. horizontal; 15 deg. vertical. Impedance 30-15 ohms, 40 c/s to 8 Kc/s falling above 8 Kc/s. Designed for use with standard Quad II Amplifier or equivalent. Suitable for AC supplies 100-120 or 200-250v. 50-60 c/s. Free standing unit requires no enclosure or cabinet. Weight 35 lb. Price £52 complete.



Quad Electrostatic full range Loudspeaker

Stentorian Sloping Dual Front. Tweeter housing, reversible, either forward or rear facing. One 8 in. unit. Rec. T816. Response 1,000-17,000 c/s. Size 13 × 10½ × 7½ ins. Price, with unit, £8 8s. 11d. (U.K. purchase tax £2 17s. 10d.); without unit, £3 17s. 6d.

Stentorian Prelude Major. Reflex, forward facing. 10 in. or 12 in. drive units. Rec. HF1214 and T10. Response 30-17,000 c/s. Size 35 × 20 × 33 ins. Price (complete), £45; without units £25.

Stentorian Prelude Horn Loaded. Folded horn, forward facing. One 8 in. drive unit. Rec. HF817. Response 60-22,000 c/s. Size 35 × 18¾ × 16¾ ins. Price (complete) £27 12s. 10d. (U.K. purchase tax £2 14s. 6d.) Price, without units, £19 10s. 10d.

Stentorian Junior Column. Reflex upward facing omni-directional. One 6 in. unit. Rec. HF610. Response 100-11,000 c/s. Size 36 × 9 × 9 in. Price (complete) £11 17s. 7d. (U.K. purchase tax 15s. 5d.) Price, without unit, £9 16s. 6d.

Stentorian Senior Column. Reflex upward facing omni-directional. One 8 in. unit. Rec. HF816. Response 60-14,000 c/s. Size 57 × 13½ × 13½ ins. Price (complete) £23 15s. 7d. (U.K. purchase tax £1 19s. 5d.) Price, without unit £18 18s.

Stentorian Stentereo. Infinite baffle. Corner speaker, forward facing. Two drive units 8 in. and 5 in. Rec. HF812 or HF810 with S.510. Crossover 1,500 c/s. Response 100-12,000 c/s. Size 22 × 12¼ × 10 ins. Price (complete), with HF810, £14 17s. 3d.; with HF812, £15 7s. 9d. (U.K. purchase tax, HF810 £1 2s. 10d.; HF812 £1 8s.) Price, without units, £7 10s.

Note: All units for the above may be supplied separately.

TAPE RECORDERS

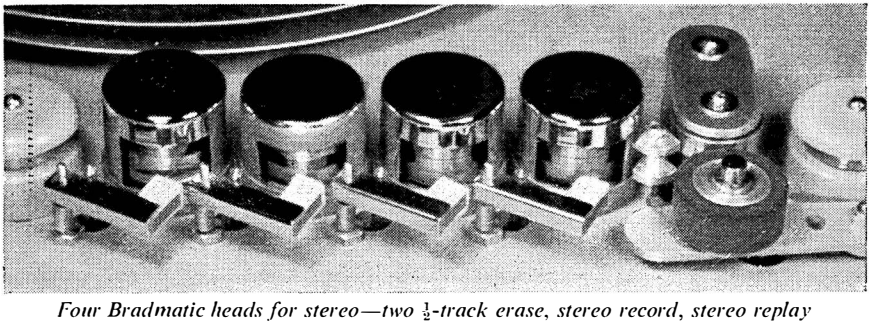
An Introduction — by A. Bartlett Still

WHEN it is considered that tape recorders, in the domestic sense, have been known only since the war, it becomes a little difficult to realise that the first experiments in magnetic recording were carried out before 1898. For the following fifty years or so progress was slow and tended to be erratic as each facet of the system, now accepted as commonplace. was contributed. Poulsen's "Telegraphone", at the end of the last century, obviously suffered from a lack of suitable amplification being prior to the invention of the thermionic valve, but even in 1935 the A.E.G. company's "Magnetophone" using an oxide tape, suffered from a very poor signal/noise ratio. Just before the last war the BBC were using a steel tape recorder, the Marconi-Stille "Blattnerphone", which has a tape speed of nearly 60 i/s.

Perhaps the biggest "breakthrough" was in 1940 when in Germany, Braunmuhl and Weber developed the idea of using high frequency AC bias for recording. Wartime development effort in this country concentrated on steel tape and wire as a medium, while in Germany efforts were made to produce satisfactory plastic tapes. In consequence the majority of present day machines must be said to stem from German designs, quite apart from the fact that more tape recorders are produced in Germany than anywhere else in the world.

Recorder Performance

It can be said, with probable fairness, that the developments being carried out today are aimed at increasing saleability rather than improving the general technique of recording. The published frequency response of most manufacturers' products is continually being extended, and during the last year we have seen the widespread introduction of four-track working. There can be no doubt that the combination of an effectively doubled tape length, and the permitted using of a lower tape speed, represents a real economy in terms of tape cost. Unfortunately the profit and loss account has to be balanced, and it is not all due to improvements in technique, the



Four Bradmatic heads for stereo—two ½-track erase, stereo record, stereo replay

difference being made up by a deterioration in *real* performance.

What is meant by *real* performance? It is the way in which the tape recorder works and sounds, something not completely covered by a set of performance figures, however carefully and truthfully they may have been prepared. What it all comes down to is that a prospective purchaser should study the manufacturers' published information with a view to preparing a "Short List", the final decision should not yet be taken. Obviously, a number of factors outside actual performance must be taken into consideration, notably price, and the purpose for which the machine is required. The next step is to visit a reputable dealer and hear the chosen few, hear them on the type of programme material in which you are interested, and hear them playing their own recordings as well as tape records. Now this may take a little time, but the good dealer knows that the sale of a tape recorder represents several pounds profit to him there and then, and a satisfied customer means more potential profit, however indirectly, in the future. He may show you a machine that you have not considered; study its performance, see if it qualifies for the short list, and, if so, go on from there.

Listening Tests

What are you going to listen for that is not covered by the written specification such as appears in the following pages? Take the question of signal/noise ratio, for instance. Two machines may have the same figure, quoted in dB, but if on one the residual noise is made up of hiss, rather than mains hum, the noise will be more noticeable. For normal domestic purposes a figure of 40 dB is a minimum for this ratio, and remember, with dB, 43 is twice as good, and 46, four times better, in terms of noise power output in the speaker. As these figures are quoted with respect to full recording level, the advantage is even greater when referred to mean programme level, so consider signal/noise ratio to be an important item in the specification.

A wide frequency response is certainly desirable, but it is, in the writer's opinion, nowhere near so important as is sometimes claimed. One should, for instance, consider the likely sources of programme material. It is pointless having a machine capable of 18Kc/s, for live recording via a microphone with a cut off at 12 Kc/s. This would be particularly true if, as sometimes happens, the striving after frequency response worsens the hiss/hum ratio in the total noise. One other point is important on this subject of frequency response. You will not always be playing just your own recordings, there will come a time when you wish to replay a tape record, or a recording made on another machine. To do this it is essential that your chosen machine replays "according to the C.C.I.R. characteristic". This is an internationally agreed manner of frequency correction to ensure that tapes, of the same speed, are interchangeable all over the world. Not *all* models of tape recorder available in this country conform to this characteristic, the worst offenders being, perhaps understandably, in the cheaper price brackets.

Tape and Hi-Fi

What about the enthusiast who already has a Hi-Fi set up to which the addition of tape is contemplated? Your amplifier may well have sockets for "Tape Record" and "Tape Replay", the latter normally requiring the sort of signal that comes from the high impedance output socket of a tape recorder. Provided the tape recorder will accept signals through the usual variety of inputs, and has a high impedance output, it may be connected, for recording and replaying, to most amplifier rigs. Do not expect to be able to buy a tape deck only, and use it by making a few connections. Even if you are in a position to make the various electronic bits and pieces, you will not achieve the performance standards you expect without the use of expensive test gear for setting and aligning, and, in all probability, you will have lost the very real advantage of portability that a complete tape recorder will give you. This whole matter is really a question of outlook. If you feel, as indeed do many, that the building and adjusting of the record and replay amplifiers is going to be half the fun of the whole operation, then by all means go ahead, because you will already have a fair idea of what is involved. If, however, your main concern is the recording and replaying of tapes, be well advised to think again.

Enough has been said elsewhere on the pros and cons of stereo; suffice it to add that tape is an extremely good medium (the best?) for stereo with, as always, the fascinating possibility of making your own recordings.

DIRECTORY OF TAPE RECORDERS

★ The abbreviations used for the specifications in this directory are as follows: **F.R.**—frequency response; **i/s**—inches per second; **P.s.n.**—Power supply needed; <, better than; **M.E.**—Magic eye; **W. & F.**—Wow and flutter; **S-N**—signal to noise ratio; ■—Stereo equipment.

PROFESSIONAL and SEMI-PROFESSIONAL

Ampex (Great Britain) Ltd. Arkwright Road, Reading, Berkshire. Tel.: Reading 84221. Cables: Videotape, Reading.

■**Ampex 960.** Portable stereo recorder. Speeds 7½ and 3¾ i/s. 7 in. spools. F.R. 7½ i/s 30-20,000, 3¾ 30-15,000 ±2 dB. W. & F. <0.2%. Meter. External amplifiers and speakers required. Price £189.

Ampex 919. Portable recorder. Two or four track. Speed 7½ and 3¾ i/s. 7 in. spools. F.R. 7½ i/s 30-20,000, 3¾ i/s. 30-15,000 c/s ±2 dB. W. & F. <0.2%. Meter. Size 13 × 15 × 6⅛ ins. Weight 36 lbs. Price £156 9s.

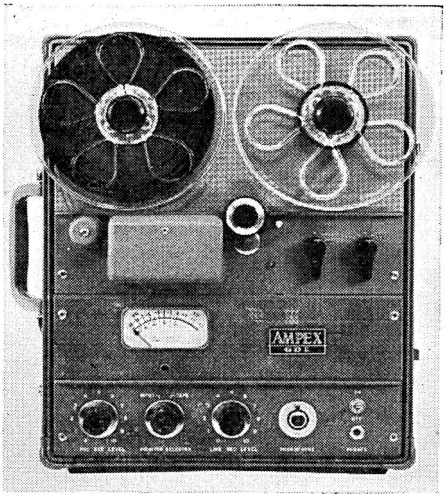
■**Ampex 970.** Portable stereo recorder speeds 7½ and 3¾ i/s. 7 in. spools. F.R. 7½ i/s 30-20,000, 3¾ 30-15,000 c/s ±2 dB. W. & F. <0.2%. Meter. Two 7 in. speakers 5 watts per channel. Size 25½ × 15 × 9 ins. Weight 46 lbs. Price £236 5s.

Ampex 2010. Ten watt speaker amplifier. 8 in. speaker to match. Model 960 and 970. Price £86 2s.

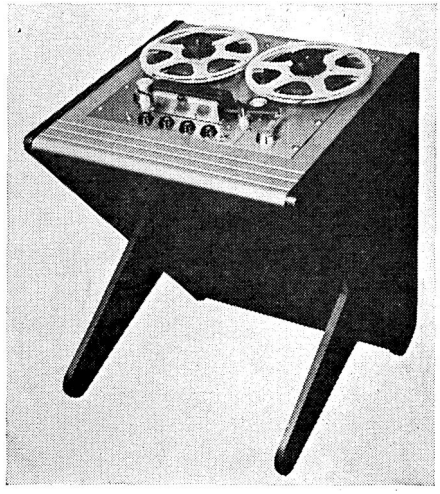
Ampex 300 Series. Prof. recorders. One to eight tracks. Speeds 15 and 7½ i/s. 3 motors. 14-in. spools up to 1-in. wide. F.R. 15 i/s, 30-18,000 c/s; 7½ i/s, 40-12,000 c/s, both ± 2 dB. Large scale V.U. meter. H. & N. —60 dB full track, −55 dB multi-track. W. & F. less than 0.1% at 15 i/s. Prices on application.

Ampex 351. Prof. recorder in console, portable or rack-mounted form. Full or half track. Speeds 15 and 7½ i/s, or 7½ and 3¾ i/s. 3 motors. 10½-in. N.A.B. spools. F.r.: 15 i/s, 30,18,000 c/s; 7½ i/s, 40-12,000 c/s; 3¾ i/s, 50-8,000 c/s, all ± 2 dB. Large scale V.U. meter. H. & N. —70 dB full track, −65 dB half track at 15 i/s. W. & F. less than 0.15% at 15 i/s. Size (console) 48 × 24 × 28 ins. Weight 168 lbs. Price (15 and 7½ i/s), £662 portable, £682 console.

Ampex 352. Prof. reproducer only in console or rack-mounted form. Full or half track, or stereo. Speeds 15 and 7½ i/s. 3 motors. 10½-in. N.A.B. spools. F.r.: 15 i/s, 30-18,000 c/s; 7½ i/s, 40-12,000 c/s, both ± 2 dB. H. & N. −70 dB full track,



Ampex 601 *portable recorder*



Ampex 352 *console*

−65 dB half track. W. & F. less than 0.15% at 15 i/s. Size (console) 35 × 24 × 24 ins. Weight 109 lb. Price £503 mono, £635 stereo. Console cabinet extra.

■**Ampex 354.** Professional console recorder. Speed 15 and 7½ i/s or 7½ and 3¾ i/s. 3 motors. 10½ in. N.A.B. spools. F.R. 15 i/s 30-18,000 c/s; 7½ 40-12,000 c/s. ±2 dB. 2 V.U. meters H. & N. −65 dB. W. & F. 0.15% at 15 i/s. Price on application.

Ampex 601. Prof. portable recorder. Speed 7½ i/s. One motor. 7-in. spools. F.r.: 40-10,000 c/s ± 2 dB. Large scale V.U. meter. H. & N. −55 dB full track, −50 dB half track. W. & F. less than 0.17%. Size 16½ × 13¾ × 8 ins. Weight 28 lb. Price £295.

■**Ampex 601-2.** Stereo version of Ampex 601. Size 24½ × 13 × 8 ins. Weight 42 lb. Price £486.

★

Elstone Electronics Ltd. Edward Street, Templar Street, Leeds, 2. Tel.: Leeds 3-5111.

■**Tandberg Series 6.** Speeds 7½, 3¾ and 1⅞ i/s. F.R. 30-20,00 c/s. ¼ track. 7-in. spools. H. & N. −55dB. W. & F. 0.1%. Size 16 × 12 × 6 ins. Weight 30 lb. Price £115 10s.

★

The Gramophone Company Ltd., Hayes, Middx. Tel.: Hayes 3888. Cables: Jabberment, London.

■**TR52/D.** Prof. portable stereo/mono recorder. Speeds 7½ and 3¾ i/s. One motor 7-in. spools. F.r.. 7½ i/s, 50-10,000 c/s; 3¾ i/s, 50-6,000 c/s, both ± 2 dB. W. & F. less than 0.25% at 7½ i/s. Crosstalk −45 dB. V.U. meter. Size 20 × 17½ × 13½ ins. Weight 80 lb. Price £245.

E.M.I. Model TR90. Prof. recorder for rack mounting or as a console on transportable trolley, 30 and 15 i/s or 15 and 7½ or 7½ and 3¾ i/s. 4 motors. 10½-in. spools. F.r.: 15 i/s, 50-15,000 c/s; 7½ i/s, 50-10,000 c/s; 3¾ i/s, 50-6,000 c/s. All ± 2 dB. V.U. meter level ind. or peak programme meter. Size (transportable version) 2 cases 14½ × 20 × 16½ ins. Weight 80 and 58 lb. Price, from £588.

★

Leevers-Rich Equipment Ltd., 78b Hampstead Road, London, N.W.1. Tel.: Euston 1481. Cables: Leemag, London.

Model E. No. ER141M. Prof. reproducer console. 15 and 7½ i/s. 3 motors. 11½-in. spools. F.r.: 15 i/s, 50-15,000 c/s; 7½ i/s, 50-10,000 c/s, both ± 2 dB on C.C.I.R. test tape. Size 24 × 24 × 36 ins. Weight 200 lb. Price £420.

Model E. No. E141R. Complete rack mounting prof. recorder. 15 and 7½ i/s. 3 motors. 11½-in. spools. F.r.: 15 i/s, 50-15,000 c/s; 7½ i/s, 50-10,000 c/s, both ± 2 dB. V.U. level meter. Size 19 × 17½ × 9 ins. Weight 50 lb. Price £435.

Model E. No. E121P. Prof. portable recorder. Spec. as for E141R. In two cases, 20 × 17 × 11½ ins. and 15 × 18 × 10 ins. Weight 79 lb. Price £550.

Model E. No. E141M. Prof. network recorder console. Spec. as for E141R. Size 24½ × 23¼ × 35 ins. Weight 205 lb. Price £530.

Model C. Model C621P. Prof portable recorder. 15 i/s. 3 motors. 9½-in. spools. F.r.: 50-15,000 c/s ± 2 dB. V.U. level meter. Size 13 × 18 × 10 ins. Weight 73 lb. P.s.n. 12v battery or auxiliary mains unit. Price £450.

Model DB. No. DB221P. Prof. portable recorder. Spec. as for C621P but in two cases, 13 × 18 × 10 ins. and 16 × 20 × 11¼ ins. Total weight 74 lb. P.s.n. as C621P. Price £500.

Model CS. No. CS621P. Syncropulse recorder, for magnetic recording in sync. with cameras, etc. Spec. as for C621P. In two cases both 13 × 18 × 10 ins. Total weight 73 lb. P.s.n. as C621P. Price £550.

■**Model E. No. ED 142P.** Complete portable dual channel recorder. 3 motors. 15 and 7½ i/s. Monitoring off tape, separate V.U. Meter, unit amp. L.R. and H.R. Mic. or line inputs. 11½-in. spools. Response at 15 i/s, 50-15,000 c/s ± 2 dB. Size 2 cases 16 × 20 × 11 ins. Total weight 80 lb. Price £655. M console version, £680.

★

M.S.S. Recording Co. Ltd., Colnbrook, Bucks. Tel.: Colnbrook 2431. Cables: Emessco.

Model CMR/DE. G.P. recorder. 7½ and 3¾ i/s, 3 motors. 8¼-in. spools. F.r.: 3¾ i/s, 100-7,500 c/s. ± 3 dB; 7½ i/s, 60-10,000 c/s. ± 5 dB; flat 100-7,000 c/s. Level meter. Size 36 × 28 × 18 ins. Weight 110 lb. Price £140; F.M. tuner available at an extra £25.

★

Telefunken–Sole U.K. distributors, **Welmec Corporation Ltd.,** 147 Strand, London, W.C.2. Tel.: Temple Bar 3357. Cables: Welmcor, London.

Magnetophon M24. Studio recorder. Half track. Speeds $7\frac{1}{2}$ and $3\frac{3}{4}$ i/s. 3 motors. $8\frac{3}{4}$-in. spools. F.R. 30-18,000 c/s. $7\frac{1}{2}$ i/s, 40-15,000 c/s. $3\frac{3}{4}$ i/s. H. & N. -50 dB. W. & F. 1.5% at $7\frac{1}{2}$ i/s. Size according to cabinet. Prices from 159 gns.

★

Vortexion Ltd., 257/263 The Broadway, Wimbledon, London, S.W.19. Tel.: Liberty 6242/3. Cables: Vortex, Wimbledon.

Model WVA. Complete semi-pro. portable recorder 15 and $7\frac{1}{2}$ i/s or $7\frac{1}{2}$ and $3\frac{3}{4}$ i/s. Wright and Weaire deck. 3 motors. $8\frac{1}{4}$-in. spools. F.r.: 30-17,000 c/s $\pm$ 3 dB at 15 i/s; 30-15,000 c/s $\pm$ 3 dB at $7\frac{1}{2}$ i/s. S-N $<$50 dB unweighted. W. & F., $<$0.2%. Meter level ind. Provision for fitting stereo head with direct connection. Loads 7uV mic. Weight 49 lb. Price £93 13s. (£5 extra for 15 i/s).

Model WVB. Spec. as for WVA, but with extra monitor head and amplifier. Echo facilities. Provision for fitting of stereo head. Price £110 3s. (£5 extra for 15 i/s.).

Model WVA/S Spec. as for WVA with provision for plug-in stereo head, and can be supplied with this and stereo playback pre-amplifiers with equalisation each having an output of 1 volt from a cathode follower. Speeds $3\frac{3}{4}$ and $7\frac{1}{2}$ i/s. Price £112 10s.

GENERAL PURPOSE and DOMESTIC RECORDERS

● *Some late arrivals are listed out of alphabetical order at the end of this section.*

Abbey Radiogram Manufacturing Co., 1a Compton Terrace, Hoppers Road, London, N.21. Tel.: Palmers Green 7492.

Sovereign. Collaro Mk. IV deck. F.R. 15 i/s, 50-15,000 c/s ± 3 dB; 7½ i/s, 50-12,000 c/s; 3¾ i/s, 50-7,000 c/s ± 3 dB. W and F, 0.15%. M.E. level ind. Monitoring of input signal through speaker. Mixing of inputs. Screw-in legs available. Size 18½ × 13¾ × 9½ ins. Weight 38 lbs. Price, with tape and mic., £50 8s. Legs £2 2s.

Royal Monardeck. 3¾ i/s. M.E. level ind. Variable monitoring. Mixing. Outlet from pre-amp. Size 14½ × 14 × 8. Weight 19 lbs. Price £26 5s.

Regent. Collaro Studio deck. 7½, 3¾, 1⅞ i/s. 3 motors. M.E. level ind. Variable monitoring. Mixing. Size 15 × 18 × 8 ins. Weight 32 lbs. Price £40 19s. Legs £2 2s.

Allegro Contessa

60-3,000 c/s ± 3 dB. S-N, < −40 dB. W & F, < 0.2% at 7½ i/s. M.E. level ind. Outlet from pre-amp. stage. Straight through amplifier. Adaptable for Stereo. Headphone monitoring. Size 15 × 15 × 7 ins. Weight 30 lbs. Price, with tape and mic., £60 18s. (Quarter track model available at same price.)

Three Star Stereo. Stereo recorder, 7½, 3¾ and 1⅞ i/s. 7-in. spools. Level ind. in each channel. Twin built-in loudspeakers. Bass and treble controls. Straight through amp. Performance details as Three Star. Weight 40 lbs. Price £93 9s. or £99 15s. with two microphones. (Quarter track model available at same price.)

Mk. 5. 15, 7½, 3¾ and 1⅞ i/s. 3 motors. 8¼-in. spools. F.R. 15 i/s, 50-16,000 c/s; 7½ i/s, 60-12,000 c/s; 3¾ i/s, 60-7,000 c/s; 1⅞ i/s, 60-4,000 c/s. All ±3 dB. M.E. level ind. (Meter available.) H & N −45 dB. W & F 0.05% at 15 i/s. Hi-fi outlet at 200 mV. Straight through amp. Switched frequency correction. Pause control and monitoring. Size 18 × 18 × 8 in. Weight 43 lbs. Price £67 4s., with meter £72 9s.

Mk. 5 Stacked Stereophonic. Rack mounted. General details as Mk. 5. Records and replays stereo or half-track mono. Alternatively records on one track whilst replaying on other. Price £99 12s.

Brenell Staggered Stereo record and replay. Mk. 5 deck, 15, 7½, 3¾ and 1⅞ i/s. Two Mk. 5 amps. F.R. as Mk. 5 portable. Mounted in special rack 17½ × 16½ × 11 ins. Weight 43 lbs. No speakers. Price £93 16s.

★

British Ferrograph Recorder Co. Ltd., 88 Horseferry Road, London, S.W.1. Tel.: Sullivan 5426. Cables: Britferro, Sowest.

Ferrograph 4A/N and 4A/H. Complete portable recorder. Any two adjacent speeds from 3¾ to 15 i/s. 3 motors. 8¼-in. spools. F.R. 15 i/s, 40-15,000 c/s ± 2 dB; 7½ i/s 40-12,000 c/s ± 3 dB, 50-10,000 c/s ± 2 dB; 3¾ i/s, 50-6,000 c/s ± 3 dB. Sustained peak signal level meter. Space under the head cover for additional plug-in head for monitoring, lower track working stereo playback or American dual stereo standard. Size 18½ × 17½ × 9¾ ins. Weight 50 lbs. Prices, 4 A/N (7½ and 3¾ i/s) £85 1s.; 4 A/H (15 and 7½ i/s) £90 6s.

Ferrograph 4 S/N and 4 S/H as models 4 A/N and 4 A/H, but with stereo replay heads fitted. For the replay of stereo tapes through external amplifiers. Prices, 4 S/N £92 8s., 4 S/H £97 13s.

Ferrograph Stereo 808. A complete Monaural stereo recorder/reproducer. For tape speeds of 3¾ i/s and 7½ i/s. Switched input meter enables levels of both channels to be balanced. Output of each channel on playback approx. 1.5 volts across 5,000 ohms. Can also be used for monaural record/replay. Price £110 5s.

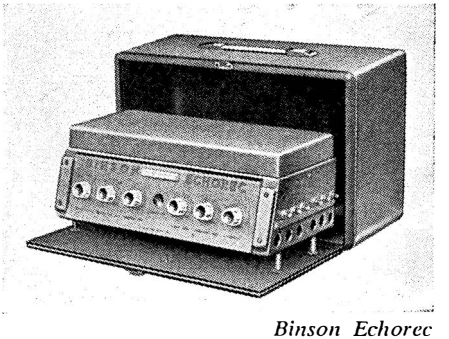
M.S.S. Recording Co., Ltd., Colnbrook, Bucks. Tel.: Colnbrook 2431. Cables: Emessco.

4 M 2 or 2 ML. Microphone mixing and control unit. Up to 4 mics. or line, P/U and 2 mics. Microphone switching and level control. Output sockets for 600 ohm line and headphone monitor. 4 input

Binson Baby Echorec



Binson Echorec

sockets. H.D. at 1 mW 1,000 c/s. tone, is 0.25%. H and N at normal output level on 1 mV signal to noise ratio 60 dB. Size 14½ × 12 × 7 ins. Price £50.

RA/50. Amplifier for recording and playback. 50 watts. Dist. 2.5% at 50 watts. Input for spec. output 1v. Response 30-15,000 c/s. ±2 dB. Feedback 12 dB. N.L. −80 dB at full output. Out. imp. RA50/1 1,800 ohms; RA50/2 200 ohms; RA50/3 15 ohms. Output EL37's. Size 19 × 14 × 8 ins. Power available for pre-amp. Price £70.

★

Penco Products, 36 Coniston Road, Kings Langley, Herts. Tel.: Kings Langley 3134. Cables: Penco, Kings Langley.

Epigram Mix/3. 3 channel unit. Incorporates 3 transistors and is designed for 2 low impedance 15/30 ohms and one high impedance input. Power derived from 4 volt Mercury Cell. Output is high impedance. Price £15 15s.

Epigram Mix/35. Details as above except that 5 transistors are included giving extra gain, e.g. to by-pass input stage of recorder. Price £26 5s. Specials to order.

Epigram Mix/35L. As Mix 35 but fitted with low noise transistors. Price £29 8s.

★

Philips Electrical Ltd., Century House, Shaftsbury Avenue, London, W.C.2. Tel.: Gerrard 7777. Cables: Phillamps, London.

Philips ET.1039. A channel unit. Each input is designed for a microphone of 50/600 ohms impedance and includes a transformer. The output voltage is approximately 90 mV and is cathode follower. A master gain control is included and mains supply is required. Size 12 × 6½ × 3 ins. Price £36.

Philips EL.3989. 4 channel unit. Incorporating 4 separate potentiometers. Price £4 4s.

★

Rank Cintel Ltd., Worsley Bridge Road, London, S.E.26. Tel.: Hither Green 4600. Cables: Televisor, London.

Cintel Microphone Amplifier. Transistorised unit. Input 30 to 600 ohms. Gain 70 dB. Attenuation 0 to 30 dB. F.R. 40 to 15,000 c/s. Distortion <0.2%. Output matched to 600 ohms. Price not yet available.

Cintel Line Amplifier. Transistor unit. Input and output imp. 600 ohms. F.R. 30-15,000 c/s ±1 dB. Distortion less than 0.2%. Normal output +14 dBm, maximum output + 26 dBm. Price not yet available.

■**Cintel Transistor Stereo Pre-amplifier.** 4 position input selector for mic. radio, tape, pickup bass and treble controls. H.D. less than 0.1%. Variable slope 0 to 36 dB. Size approximately 10 × 5 × 4 ins. Price not yet available.

Cintel Transistor stereo 88 amplifier. Output 8 watts per channel. Distortion 0.05% at 6 watts. Input for spec. Output 500 mV. F.R. 10-50,000 c/s. ±1 dB. H & N −80 dB. Size 10 × 5 × 5 ins. Price not yet available.

★

Rogers Developments (Electronics) Ltd., "Rodevco Works," 4-14 Barmeston Road, Catford, S.E.6. Tel.: Hither Green 7424. Cables: Rodevco, London.

General Purpose Power Pack, Model A. Suitable for tape units and radio tuners. Output 250v at 45 mA, 6.3v at 2.5A. Size 7½ × 3 × 5 ins. Price £4 5s.

Model C for switched FM unit. Price £4.

★

Henri Selmer & Co. Ltd., 114 Charing Cross Road, London, W.C.2. Tel.: Temple Bar 5432. Cables: Selmatone, Westcent, London.

Saba Regiemixer 100. 4-channel unit, comprising sliding controls and volume preset adjustment in each channel. Input sensitivity 0.05 mV on first three channels at 1,000 ohms, 350 mV at 500 K on fourth channel. F.R. 20-20,000 c/s. H and N −65 dB. Inter-channel crosstalk −65 dB. Output 60 mV max. into 15,000 ohms. 3 transistors type TF65. Size 8½ × 6½ × 3⅛ ins. Weight 2¾ lb. approx. Price £18 18s.

★

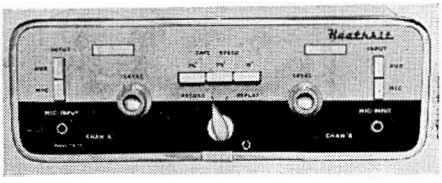
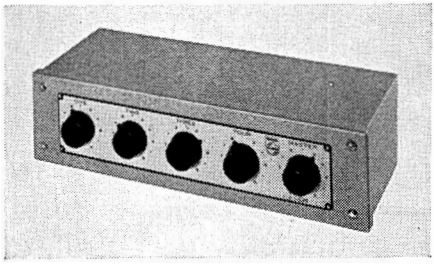
TW/PA2. Recording amplifier for use with high quality power amplifier. Inputs:

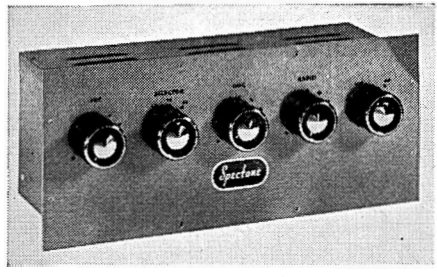


Heathkit TA-15 Tape pre-amp.

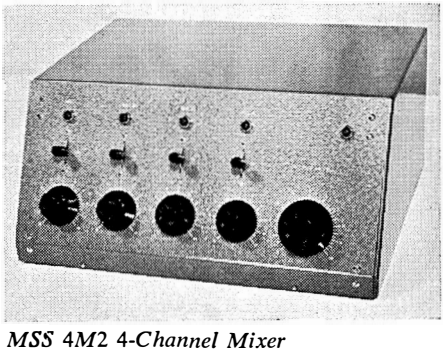
Jason J.S.M. 1 Tape Unit



Philips ET1039 Mixer

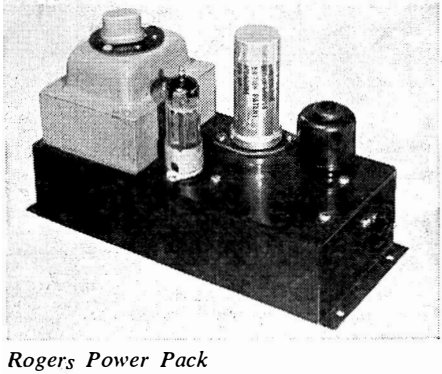


Spectone Mixer

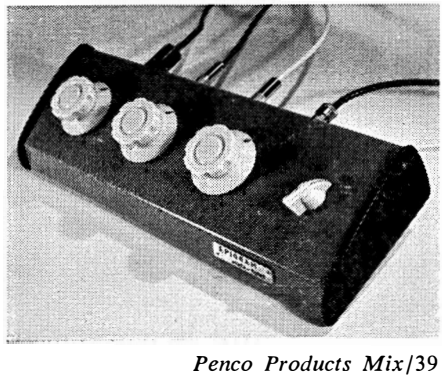


MSS 4M2 4-Channel Mixer

MSS RA 50 recording amplifier



Rogers Power Pack



Penco Products Mix/39

1.5 mV and 60 mV. Bias and erase oscillator. Full corrections. Valve voltmeter modulations level ind. For use with Wearite tape deck, can be supplied to order for any deck. Size $10 \times 5\frac{1}{2} \times 5\frac{1}{4}$ ins. P.s.n. from main amp. or power pack can be supplied at £4 14s. 6d. Price £31 10s.

TWA/15. Tape amplifier for use with most tape decks, also for use with pickup or radio. Inputs: 1-1.5 mV and 40 mV. Output. 15 watts, 20 watts peak. F.r.: as recorder 50-14,000 c/s; as reproducing and gram amp. 20-30,000 c/s. Bass and treble boost and cut. H and N 85 dB down. Valve-Voltmeter level ind. power supply on separate chassis. Price £47 5s.

■**TWA/1515.** Complete stereo record and replay amplifier. Output 15 watts continuous, 25 watts peak on each channel. Inputs: 1.5 mV and 50 mV. Bass and treble boost and cut. Level indicated by separate sustained peak-reading valve voltmeters. Power supply and oscillator on separate chassis. F.r.: 40-30,000 as ordinary amp.; 40-15,000 as recording amp. Size: control unit $23 \times 7\frac{1}{2} \times 7$ ins. Power unit $10 \times 8 \times 7\frac{1}{2}$ ins. Price £100 16s.

■**TW/PA22F.** A two-channel version of the TW/PA2. Price £52 10s.

★

Simon Equipment Ltd., 48 George Street, London, W.1. Tel.: Welbeck 2371. Cables: Simsale, London.

■**SP/4 Stereo Adaptor.** For use with Simon SP/4 tape recorder, providing replay of stereo pre-recorded tapes. Consists of two units, a stereo pre-amplifier feeding 330 mV at 50,000 ohms for the right-hand channel (through SP/4) and 1v at 1,000 ohms for the left-hand channel. The latter is reproduced through the second unit, a 10 watt amplifier and loudspeaker housed in a cabinet identical in size to the SP/4. Price £51 9s.

★

Sound News Productions, 10 Clifford Street, New Bond Street, London, W.1.

Unimixer 1. 3 channel unit. Channels 1 and 2 have duplicate sockets for low or high impedance microphones—30 ohms or 400 K ohms. Recommended load impedance not less than 500 K ohms. Price £9 9s.

Unimixer 2. 3 channel unit. Inputs as above but high impedance is 5 M ohms in channels 1 and 2. Power supply needed 200/300 volts D.C. at 5 mA, 6.3v at 0.3 amps. Special connectors available to obtain power supplies direct from Ferrograph or Vortexion recorders without any alteration. Price £15 15s.

★

Sound Sales Ltd., Works and Acoustic Laboratories, West Street, Farnham, Surrey. Tel.: Farnham 6461-2-3. Cables: Sounsense.

A-Z General Purpose Power Pack for supplying additional units beyond the scope of the main amplifier. Output 250v at 35 mA, 6.3v at 2A. Size $11\frac{1}{4} \times 4\frac{1}{2} \times 4\frac{1}{2}$ ins. Price £5 10s.

A-Z Precord Unit. Designed for use with Wearite or Truvox tape deck. Self-powered. Inputs: mic. or radio/pickup. Sel. switch for record and replay. Green and red ind. lights give add. visual check. Calibrated recording level indicator. Equalisation for $3\frac{3}{4}$, $7\frac{1}{2}$ and 15 i.p.s. C.C.I.R. and N.A.R.T.B. characteristics. Variable bias control. Record level gain control. Size $11\frac{1}{4} \times 9\frac{1}{2} \times 4\frac{3}{4}$ ins. Price £30.

★

Specto Ltd., Vale Road, Windsor, Berks. Tel.: Windsor 1241. Cables: Specto, Windsor.

Spectone Electronic Mixer. 142 and 142A, Inputs: radio 100 mV; mic. 1.5 mV; P.U.1 6 mV; P.U.2 50 mV. Output 0.5v. P.U.1 can be used as second mic. input. F.r.: radio 20-20,000 c/s. ±0.5 dB; mic. 25-20,000 c/s. ±0.5 dB. H and N P/U −53 dB. P.s.n. model 142, 200-300v at 5 mA; 6.3v at 1.2 amps. Model 142A, self-powered. Size panel $12\frac{1}{4} \times 5\frac{1}{4}$ ins. Casing $11\frac{1}{4} \times 4\frac{1}{4} \times 4\frac{1}{4}$ ins. Price: 142, £17 17s.; 142A, £22 1s.

★

Stern Radio Ltd., 109, 111 and 115 Fleet Street, London, E.C.4. Tel.: Fleet Street 5812-14.

HF/G2P. Tape pre-amplifier. Inputs: mic 2.5 mV, radio/pickup 300 mV. F.R. 50-10,000 c/s ±3.5 dB, equalised for $3\frac{3}{4}$ i/s. Output 250 mV. Size $12 \times 9\frac{1}{2} \times 5\frac{1}{2}$ ins. Weight 5 lb. To operate with Garrard magazine loading deck. Price £14.

HF/G2A. Tape amplifier. Details as HF/G2P plus 2.5 watts audio output into 3, 7½ or 15 ohms. Price £15.

HF/TR3. Tape amplifier. Inputs: mic 2.5 mV, radio/pickup 300 mV. F.R. 35-16,000 c/s ±3 dB at 15 i/s. Equalisation available for 15, 7½ and 3¾ i/s or 7½, 3¾ and 1⅞ i/s. 3 watts output into 3, 7½ or 15 ohms. To Mullard design, suitable for Brenell, Collaro, Motek, Truvox and Wearite decks. Price, with separate power unit, £16 10s. Also available in kit form.

Type C Tape Pre-amplifier. Inputs: mic. 0.5 mV, radio/pickup 250 mV. F.R. 30-17,000 c/s ±3 dB at 15 i/s. Equalisation available for 15,7½ and 3¾ i/s or 7½, 3¾ and 1⅞ i/s. 250 mV audio output. To Mullard design, suitable for Brenell, Collaro, Motek, Truvox and Wearite decks. Price, with separate power unit, £17. Also available in kit form.

☆

Technical Suppliers Ltd., Hudson House, 63 Goldhawk Road, London, W.12. Tel.: Shepherds Bush 2581/4794. Cables: Teknica London.

3 channel mixer unit. Designed for high impedance inputs. Jack plug sockets fitted. Size 4¼ × 3⅛ × 4½ ins. Price £2 2s.

★

Tele-Radio (1943) Ltd., 189 Edgware Road, London, W.2. Tel.: Paddington 4455.

Masterlink M2A. Tape pre-amp originally for Wearite series of deck, suitable for Reflectograph, Collaro and Brenell decks. 2 units, pre-amp and oscillator and separate power supply. Switched inputs for mic., 1.2 mV and radio/P.U., 100 mV. Meter indicates bias, rec. signal, P/B signal. F.r.: 30-20,000 c/s. ±1 dB. Oscillator cut-out facility for deck connection. Switched equalisation for 3¾, 7½ and 15 i.p.s. Low imp. output approx. 200 mV. C.C.I.R. adjustment pre-set. Size 12 × 6 × 8 ins. Price £28 7s.

★

Truvox Ltd., Neasden Lane, London, N.W.10. Tel.: Gladstone 6455. Cables: Truvoxeng.

Type M Recording Amplifier. Inputs: 1 megohm at 1-2 mV; ½ megohm at 0.5 v. Vol. and on/off. Compensated for 7½ and 3¾ i/s. Record/replay switch. Tone control. High imp. output. H and N —45 dB. Output 4 watts. Primarily for Truvox tape deck. Price £21.

Type K Mk. 2 Recording Amplifier. Similar to Type M. Power available for bias and erase. Price £19 19s.

★

Vortexion Ltd., 257/263 The Broadway, Wimbledon. Tel.: Liberty 6242/3. Cables: Vortexion, Wimble, London.

3-channel Prof Mixer. Built-in mu-metal shielded input transformer, hermetically sealed controls, screened mains transformer. Output 1m/watt, 600 ohm balanced or unbalanced. Peak programme meter calibrated zero level + 12 to ± 20 dB. Size 18¼ × 10¼ × 6 ins. Price on request.

4-channel Prof. Mixer. For 30-50 ohm mic. balanced line or other imps. to order, heavy mu-metal shielded transformers, hermetically sealed controls. Outputs ½v on more than 20,000 ohms or 600 ohms, 1 mV. Has own screened power pack for AC mains. Size 18¼ × 10¼ × 6 ins. Price £40 8s. 6d. 600 ohms output extra. Similar 12 way is also available.

2MGT.15W. Combined 4-channel mixer and 10/15 watts power amplifier. Distortion 0.1%. F.R. 2-20,000 c/s ± 1 dB. 24 dB feedback. H and N —80 dB. Out. imp. 4, 8, and 15 ohms. Size 18 × 6 × 9½ ins. Price £49.

S/30/50. Combined 3-channel mixer and 35/200 watts power amplifier. Distortion 0.2%. F.R. 30-20,000 c/s ± 1 dB. 22 dB feedback. H and N —85 dB. Out. imp. 4, 8, and 15 ohms. Size 18½ × 10½ × 9½ ins. Price £59.

S/120/200. 140/200 watts power amplifier. Distortion 0.2%. Input for spec. output 0.775v into 600 ohms. F.R. 30-20,000 c/s ± 1 dB. 24 dB feedback. H and N —95 dB. Out. imp. 110 or 220 volt line. Size 19 × 12¼ × 12 ins. To operate with Vortexion 4-channel mixer or 3-channel plus P.P.M., etc. Price £112.

MAGNETIC TAPE

AN INTRODUCTION

ONE of the easiest ways of introducing a subject is to look back over the past and to spin a web around it. Usually this is a lazy idea, but in the case of magnetic tape it is sufficiently interesting to merit the procedure. No doubt many readers of the **Year Book** were "in at the beginning" of tape in this country—and it is equally certain that quite a few will have had plenty of experience with what came before tape—wire. The writer has, and recalls vividly the nights of torment which were spent in attempting to unravel incredibly tangled piles of steel wire, of cutting out bits and knotting in the wrong ones, of replaying musical works and listening to the key changing as wire, recorded at one speed, passed the replay head at a speed quite different. There was the interminable waiting, too, while wire was rewound for replay—forward or reverse—at precisely the same slow speed at which it was recorded.

Wire out—Tape in

Wire went out as tape came in—approximately, and for general domestic use, in 1947/8. And memory brings back the first commercially produced tape recorders for the domestic market in Britain which used a "paper" tape and recorded on it at full track. Speed, $7\frac{1}{2}$ i/s. This however, was a phase quickly passed; and within three years the half-track recorder had begun to establish itself. Then the race started. It may have been inspired by the apparent need to make tape competitive to disc: on the other hand it may equally well have begun as a result of trying to offer value for money: it may even have been Progress, refusing to be stifled. But half-track it was; and then down came the tape speed to $3\frac{3}{4}$ i/s. The quantity of the recorded material that could be put on to a given length of tape was thus increased x 4.

Hard on the heels of these developments came the next move, and this time by the tape manufacturers—*Long Play* tape, by which the factor was further increased by 50% as a result of using a thinner base, thereby making it possible to get half as many turns again on to a spool. Double Play Tape still further increased the turns-per-spool factor from 50% to 100%.

Tape speed then took another dive, and $1\frac{7}{8}$ i/s was introduced on to many models of domestic recorders. The overall gain—for those who were interested in such savings—was thus × 16 over the original full-track, full thickness tape at $7\frac{1}{2}$ i/s. But then came stereo, which was awkward, for it used two tracks and thus cut things back to × 8! However, that was soon answered by the introduction of $\frac{1}{4}$-track recordings, which restored the position to × 16. All this in approximately 14 years, starting from scratch. It is no wonder that the consumer—the man-in-the-armchair who decides to go in for tape—is a very bewildered person; and it is scarcely less wonder that the industry has taken one or two setbacks as a result of the confusion that it so enthusiastically created for itself.

Speeds down—Quality up

All this time, while tracks were being added, while speeds were being halved, and while thicknesses were being reduced, tremendous research has been going on in all parts of the world where magnetic tape is produced. But the net result is (so far as the domestic user is concerned) that things are approximately as they were at the beginning, in terms of quality of sound: for as fast as the manufacturers made improved quality possible, the users decided to take up one or more of the "advantages" which gave them more playing time per spool, and so used up the improvements in this other direction. Strangely enough, however, the demand for tape by the average domestic user has only increased by a very small percentage,

per head; and this shows very clearly that many thousands of people who have bought recorders for purely domestic use are not using them fully, or obtaining nearly the proper entertainment value from them that they should. Why is this?

Tape-tied to Economy

One very possible reason is that they have tied themselves in—become entangled by their own ideas of tape economy—fallen victims to the very sales gimmicks that persuaded them to buy their recorders in the first place—"*Six hours of recording on one spool!*" Forgetting $\frac{1}{4}$-track recordings for the moment (and they have their own very useful place in the scheme of things) it is impossible to derive maximum value from a recorder until one has taken the plunge and decided to "edit" tape: *and this means using only one track.* It also means buying twice the amount of tape, initially; but that represents a very small outlay in comparison with what has been spent on the instrument. Statistics would almost certainly show that the majority of tape recorder users have perhaps one or two spools of tape, loaded on both tracks with bits of this and that. They cannot cut what they have got. They wipe out a bit here and a bit there, and add a bit more in the gaps thus created.

Buy it—Cut it—Use it

The use of a 4-track recorder for this type of tape-hogging is quite unthinkable —but done. A concluding note for this short introduction, which has so far introduced nothing, is a word of sincere advice to 90% of the users of recorders who fall into the above category. Study the strong and growing list of tape products in the following pages. Buy an editing block and some jointing tape, and begin to discover the real enjoyment that is in the hands of everyone when a new spool of tape in unpacked—and used, properly.

CINE SOUND

An Introduction

LAST year for the first time we introduced a Cine section to Hi-Fi Year Book, and by all accounts this additional feature has proved to be extremely useful to a large section of our readers so we have therefore decided to continue it. The actual market has not changed appreciably during the past 12 months, and the equipment in the directory section largely represents established models, some of them with minor changes, although one or two notably new additions are to be found. The biggest change in the position since the 1960 Year Book was published is the very considerable increase of interest in the application of sound to cine as a whole.

Tape is the Link

As the hobby of amateur film making spreads, more and more people must necessarily think of adding sound to film; and because the link between the two must nearly always be tape, the activities of the cine enthusiast and the sound enthusiast overlap more and more, and from both camps there is a noticeable adoption of the one by the other. A direct result of this is a discovery by both groups of enthusiasts of problems that they had not appreciated before. The cine enthusiast in many cases finds that he must study problems of sound recording, and the tape enthusiast—with all his acquired knowledge of sound recording—finds that the element of cine has presented him with a completely new set of problems to tackle.

However complex this intermarriage of hobbies may appear on the surface, it may be resolved very simply, even if drastically, by the adoption of good quality equipment on the tape side. For example, it is a complete waste of time to attempt to make a worthy sound track on an inferior type of tape recorder. Two of the most important ingredients in the recipe for good, average sound on a good, average film are (1) "clean" recordings, (2) good mechanics. Initially, a sound track must be made on tape via a tape recorder. If the sound is then to be added directly on to the film, the recording is bound to suffer slight losses, however good the mechanics of both recorder and projector may be. If the recorded track is to be used with the addition of a coupler, there will be no loss through transferring the sound but the mechanical requirements of the tape deck must still be of a reasonably high standard.

Buy Good Equipment

In general it must be assumed, and reasonably so, that enthusiasts who are prepared to outlay sufficient money for both cine work and tape recording will be prepared to adopt the wise policy of buying only good equipment. Therefore, on this assumption, it is probable that they will consider it worthwhile to tackle the sound side of the marriage with a more generous outlay than would, say, a person who merely regarded a tape recorder as an additional item for home entertainment. Furthermore, since most people who seriously attempt the marriage of cine and sound will be people of considerable patience and no mean ability, it is also reasonable to assume that they will be prepared to devote relatively more time and thought to the preparation and use of their equipment.

All this adds up to the advice that it is better by far for them to concentrate

upon a tape deck of very good quality, and to add to it the necessary electronics that will ensure good results. However good a domestic tape recorder may be, its electronics are inevitably cramped: and since tape electronics of "Hi-Fi" standards plus a good quality deck cost very little more than (and often less than) a portable domestic instrument, the decision to adopt this policy really only involves time, trouble and non-mobility. With this advice in mind, the reader with cine interests is strongly recommended to refer back to the tape recorder section of this book, and to study the professional and semi-professional decks and the tape recorder electronics sections.

Use the "Kit" Directory

Additionally, cine enthusiasts with a liking for home construction should also refer to the home constructional kits section, for this includes several very worthy do-it-yourself kits for use in conjunction with the various tape decks listed.

Most cine enthusiasts will have seen extremely good films, both 16 mm and 8 mm: similarly most tape enthusiasts will have heard extremely good tapes which have been made on quite modest tape equipment. It is a fact, however, that the majority of amateur sound films —a combination of both the foregoing— do not reach the same standards as either of the two components by themselves. This is the proof of the pudding discussed earlier. The addition of sound to film is by no means easy. When the true sound enthusiast hears sound via a film projector, he is at once aware of several shortcomings. These may include wow, flutter, inadequate frequency response, hum and other background noise. None of them is really necessary when the best quality equipment is used.

Electronic Shortcomings

The items of hum and background noise are often the result of an inferior machine being used for the initial sound track: the wow and flutter items are mechanical troubles and can originate from a poor projector mechanism an inefficient tape recorder, or bad coupling between the two.

The above paragraph deals with the gloomy side of the sound-cine marriage. On the brighter side, however, it must be remembered that some of the more able enthusiasts are producing sound films of almost flawless quality—and a few of them are using tip-top professional equipment in order to achieve these results. The answer they have found is a careful selection of equipment, the meticulous attention to electronic and mechanical details, and the policy of making haste very slowly.

Striping v. Coupling

Many owners of 8 mm cine outfits will be content to obtain the sound for their pictures by means of tape recorder and cine coupler. Their problems are considerably easier than those of the enthusiasts who prefer to have their films magnetically striped, but the latter method means that once the initial troubles have been overcome they are at an end; whereas use of a cine coupler involves the same set of problems every time a film is to be shown.

The system of film striping is obviously the most satisfactory for those who can afford the time and trouble: *but*—and particularly in the case of 8 mm film— extreme care has to be taken with the initial sound track and its transfer to the stripe.

Look ahead now

There is no doubt that within a few years most cine enthusiasts will be demanding sound on their films, and therefore those who are only now taking up cine, or contemplating it, will be well advised to spend some time pondering over the problems involved. It is an encouraging thought, however, to realise that whatever sound tracks are made today on tape, and used via a coupler, should still be adequate for transferring to stripe in several years time. Therefore no work which is done carefully and intelligently today need be wasted, even though it may be some time before the striping method is adopted. There is no doubt that the next few years will see a big advance in this field, and that new projectors in both 8 mm and 16 mm gauges will appear.

* * *

Thinking ahead on these lines, the concluding note of advice is to invest wisely in the sound equipment today, knowing that it will provide a permanent basis for almost anything that lies ahead.

CINE SOUND EQUIPMENT DIRECTORY

Note: This Directory Section is as complete as careful and searching enquiries from overseas manufacturers and British Agents have made it possible. It will be appreciated if these and other manufacturers and agents will keep the Editorial Department of "Hi Fi Year Book" constantly posted with data and pictures, so as to ensure their inclusion in our next edition. Abbreviations used in the following text include: **fs; es; hs**=full, edge and half stripe. **f/r**=forward and reverse. **s/p**=still pictures. **fps**=frames per second. **sps**=suitable power supplies.

CAMERAS

Neville Brown & Co. Ltd., 77 Newman Street, London, W.1. Tel.: Langham 7161. Cables: Nebrofoto, London.

Bauer 88 ES. 8 mm. Cine Camera. Lens; Schneider Xenoplan 1:1.9/13 mm. in focusing mount. Running speeds: 8, 16, 24, 48 f.p.s. Coupled exposure meter. Single pictures, synchro-running equipment for synchronised sound and picture shots. Weight 2 lb. 13 oz. Price £80 6s. 3d. (U.K. purchase tax £13 1s.).

Bauer S Sound Coupler for coupling 88 ES camera to tape recorder. Price £45 4s. 6d.

Bauer 88 DS. As 88 ES, but with three lens turret head. Requires S coupler as above for synchronous recording. Price £98 6s. 10d. (U.K. purchase tax £15 19s. 8d.).

Bauer 88 F. Fully automatic or manual control. f/1.8 Schneider lens, available with wide angle and telephoto attachments. Not synchronised. Price £46 17s. 6d.

Bauer 88 G. Electric eye model fitted f/1.9 Rodenstock lens, four speeds, accepts supplementary wide angle and telephoto lenses, not synchronised. Price £78 10s.

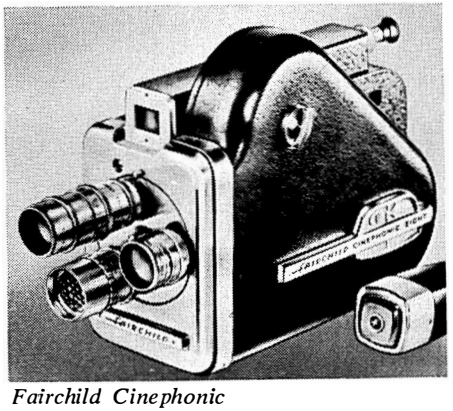
Bauer 88 D. Built-in exposure meter, revolving turret fitted wide angle and telephoto attachments. Four speeds. Price £115.

Bauer 88 H. Fully automatic or manual. Revolving turret for telephoto and wide angle lenses and filters. Price to be announced.

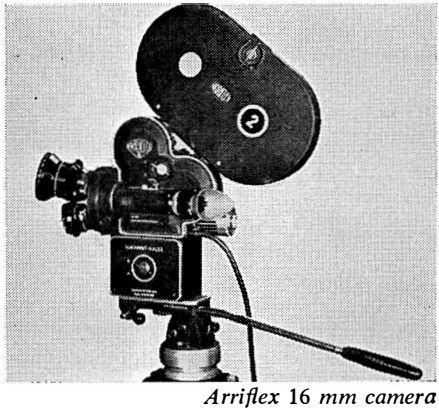
★

Polariser U.K. Ltd. 26 Stamford Street, London, S.E.1. Tel.: Waterloo 6673. Cables. Poluk Souphone.

Fairchild Cinephonic 8 mm camera with built-in recorder, enabling sound to be recorded on a magnetic strip on the film in complete synchronised 3, lens turret. Weight 4½ lb. Size 7½ × 3¼ × 6¼. Price on application.



Fairchild Cinephonic



Arriflex 16 mm camera

Rank Precision Industries Ltd., G.B.—Kalee Division—Studio, Woodger Road, Shepherds Bush, London, W.12. Tel.: Shepherds Bush 2050. Cables: Rankprestu, London.

Arriflex 16 mm. Camera with Magnetic Stripe Equipment.

Camera. Mirror shutter reflex viewfinder with 10 × magnification. Lenses available: 9, 12.5, 16, 20, 25 mm. Also 35 mm. Arriflex. Telephoto lenses up to 600 mm. focal length can be used. Daylight loading standard 50 ft. and 100 ft. spools. Accessory enabling 200 ft. and 400 ft. magazines to be fitted available. Twin vertical claws with registration pin. 8v battery driven with variable speeds 8-48 f.p.s. or A.C. mains. Weight 6½ lb. Price on application.

Type 1690-91 Sound Attachment. "B" Wound single perforated pre-striped colour or monochrome is looped, after picture exposure, through an aperture in the bottom of the camera into the sound recorder which is complete with speed stabilizing filter. Sound is recorded in synchronism with the picture 28 frames in advance on a 100 thou. edge track in the position occupied by one set of perforations on mute film. Quality control is by headphones and recording amplitude is visually indicated on a meter mounted with manual controls and equalisation for speech and music on the two-channel microphone mixer. This is built into the shoulder slung, completely transistorised amplifier which has direct or playback monitoring through headphones. Complete electronic unit operates on enclosed miniature 7.5v battery. Price on application.

Type 1830. Portable Magnetic Recording Unit. Separate unit capable of accepting up to 400 ft. recordings on separate magnetic film with 100 thou. f/s. Input sensitivity and signal/noise ratio identical to stripe attachment. Drive: synchronous motor with coupling to camera. Weight with case, 4 lb. 12 oz. Price on application.

Rank Precision Industries Ltd., Cine and Photographic Division, Mitcheldean, Gloucestershire. Tel.: Drybrook 421. Cables: Rankprecin Mitcheldean, Telex.

Model 631 S. sps 110v 50/60 cycles AC or 200/250v AC in conjunction with transformer. Lamp: 750 watts 100v 110v A1/53 L.B. & H. or 1,200 watts A1/91 optional. Amplifier: 17 watt output, printed circuit. Independent base and treble controls. Speaker: 12 in. in separate case. Capacity: 2,000 ft. Speeds: 18 and 24 fps. f/r. s/p, variable aperture, for wide screen. Weight: projector 34½ lb. Speaker: 23½ lb. Power rewind. Price £258. Transformer £19 10s.

Model 631 Compact. Identical to Model 631 but with built-in detachable 6-in. speaker. Weight 37 lb. Price £232 17s. Transformer £19 10s.

Model 636. sps 200/250v 50/60 cycles AC or DC. Lamp: Mains voltage 750 watts A1/53HV or 1,000 watts A1/91 optional. Amplifier output 8/10 watts. Printed circuit. Speaker 8 in. in separate case. Capacity: 2,000 ft. Speeds: 18 and 24 fps. f/r. f/p. Variable aperture. Power rewind. Weight 34½ lb. Price £235 15s.

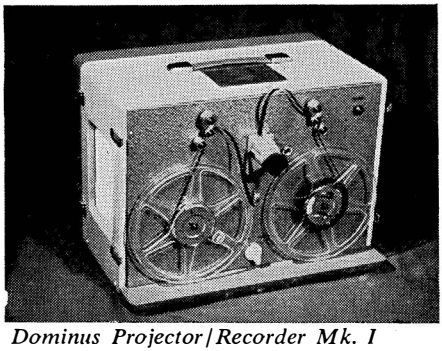
Model 636 S. As above but supplied with 12-in. separate speaker. Price £250 8s.

Model 636 C. As above but with 6-in. speaker built into the projector case. Price £225 15s.

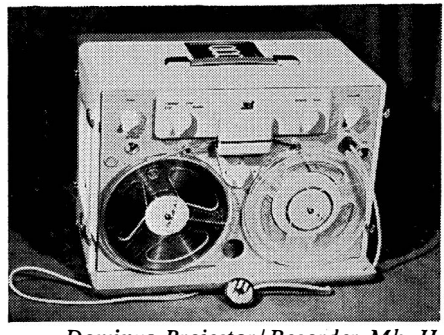
★

RCA (Great Britain) Ltd., Lincoln Way, Windmill Road, Sunbury-on-Thames, Middx. Tel.: Sunbury-on-Thames 3101. Cables: RCA London, Telex.

RCA Hollywood. sps 100/125v AC and 210/250v AC 50 or 60 cycles. Lamp: 110v 750 watts A1/9, 1,000 watts A1/59, or 1,200 watts C13D, if external transformer is used. Mains voltage 750 watts A1/9HV, 1,000 watts A1/95HV, or 1,200 watts C13D without need of external transformer. Amplifier output: 15 watts push-pull output. Separate bass and treble control. Speeds: 16 and 24 fps. f/r. Speaker: 15 ohm 12 in. high flux in separate case. Capacity: 2,000 ft. Weight: Projector 46 lb. Speaker: 21 lb. Price £265. Transformer £21.



Dominus Projector/Recorder Mk. I



Dominus Projector/Recorder Mk. II

Simplex Ampro Ltd., 167-169 Wardour Street, London, W.1. Tel.: Gerrard 2911. Cables: Stafilm Wesdo.

E.B. New Educational. Sps direct from 200 to 250v A.C. or D.C. when using mains voltage lamp up to 1,000 watts. Through resistance unit 7105 with 110/115v A1/9 lamp up to 1,000 watts. Amplifier: A.C./D.C. metal rectifier push-pull output, maximum output 6/8 watts. Two stage feed back-tone control. Speaker: 8 in. 15 ohm in lift-og case. Automatic loop former. Capacity: 2,000 ft. Speeds: variable rheostat 16 to 24 fps. Automatic rewind. Lubrication control through central oil well. Weight 33 lb. Price £183.

Model EDL. De Luxe Educational. As above but fitted with still picture clutch and f/r. Price £197 10s. Additional 10 in. speaker for New Educational: £9.

Simplex Ampro Mark II. sps 110v AC or 200/250v AC when mains transformer 7102 is used. Lamp; 110v 750 watts A1/9 or 110v 1,000 watts A1/58. Amplifier out 15 watts push-pull. Separate microphone input cuts photocell. Capacity; 2,000 ft. Speeds 16 and 24 fps. Speaker; 15 ohm 12 in. permanent magnet type in separate case. f/r. Weight 46 lb. Speaker 31 lb. Price £252 10s. Mains Transformer £22.

16 mm OPTICAL/MAGNETIC

A.E.I. Sound Equipment Ltd. Address see page 167.

BTH Type 451 sps, lamp, amplifier, speaker, capacity, speeds, etc., as 450. Records on es, hs, fs. Modulation indicator. Optical tracks can be transferred to hs—external control available. Weight. as 450 except projector in case 50 lbs. Price £375.

★

Cinetechnic Ltd., Address see page 167.

Debrie D.16 Magnetic Projector. Any Debrie optical sound projector can be converted to magnetic sound by addition of the magnetic sound equipment. Pre-amplifier unit type RP, hooks on to the normal amplifier. Inputs from microphone, disc and film. Volume indicator meter. Separate input volume control. Separate tone controls on playback. Warning light indicator for "amplifier on" and recording. Magnetic sound head panel. Suitable for fs and hs. Three magnetic heads for recording, playing and monitoring/erasing, monitoring through head set is from the recorded track. Conversion of any optical model to magnetic can be carried out usually by the owner. Price: Conversion to Magnetic Record/Playback, £160. Conversion to Magnetic Playback only, £90.

Double-sided Projector. Suitable for 16 mm optical and magnetic sound. Optical sound 2.5 mm track. Magnetic 5 mm track. Drive for both channels from common shaft to double sprockets. Optical and magnetic sound can be played simultaneously to separate commentary from background effects. Price on application.

★

The Cirse Sound 8mm. Projector

PROJECTOR/COUPLER OUTFITS

Actina Ltd., 10 Dane Street, High Holborn, London, W.C.1. Tel.: Chancery 7566-7.

Heutier P.S. 8-100 Projector, 8 mm. (British version): 110, 230, 240, 250v A.C. Lamp: 10v 100W. Lens 20 mm. f/1.5 Angenie (25 mm. version available). Capacity: 400 ft. Variable speeds. f/r. Power rewind. Price £43 15s.

Heutier Synchroniser. Loop synchroniser attaches to projector. Sleeve change-over from 7½ ips to 3¾ ips. Price £13 10s.

★

Neville Brown & Co. Ltd., 77 Newman Street, London, W.1. Tel.: Langham 7161. Cables. Nebrofoto, London.

Bauer T.10 S Projector. sps 110v to 240v AC. Lamp: 12v 100 watts A1/186. Capacity: 400 ft. Fixed speed 16 fps. Lens: Kiptagon 16 mm fl.4. Socket for connecting sound coupler. Power Rewind. Weight 11 lb. 4 oz. Price £45.

Bauer T10/L. As T10/S but with no provision for synchronised sound coupling and without interval lamp socket. Price £39 (including lamp).

Bauer K Coupler. For use with any tape recorder running at 3¾ i/s. Single capstan. Electrical connection only with projector. Price £8 10s.

Bauer N Coupler. De luxe model, with remote control projector switch, split switch roller for automatic on/off switching of the projector by means of the magnetic tape and reduce and increase projector speed buttons. Fitted compartment for its 10ft. cable. For use on tape recorders of 3¾ or 7½ i/s running speed. Price £27 10s.

★

Cinex Limited, Bolex House, Burleigh Gardens, Southgate, N.14. Tel.: Foxlane 1041. Cables: Cinex London.

Paillard Bolex Synchromat. Tape coupler for use with Paillard Bolex M8R projector. Projector requires modification to accept flexible drive between projector and coupler. Suitable for tape recorder running at 3¾ i/s, or with tape recorder at 7½ i/s by means of an additional capstan. Outfit includes special projection table for positioning projector, recorder and coupler. Price £25.

★

Dominus (England) Limited, 29 Cromwell Road, South Kensington, London, S.W.7. Tel.: Kensington 8263. Cables: Domineng, Wesphone, London.

Dominus Mark II Projector/Recorder. Single unit projector and tape recorder. sps 200/240v AC. Lamp: 8v 50 watts A1/185. Amplifier output: 3.5 watts. Speaker: 7 in. Elliptical. Capacity: Film 400 ft. Tape 1,200.

★

Peeling & Komlosy. 181 Victoria Street, Dunstable, Beds. Tel.: Dunstable 1357.

Movilux 8A. sps 240v AC. Lamp. 8v 50 watts A1/185. Lens: Zeiss Sonnar fl.3 20mm. Permanent lubrication system. Induction motor gives uniform speed of 16 fps. Power rewind. May be used in synchronisation with any tape recorder by means of the Zeiss sound coupler designed for this model. Available in five attractive colours. Price £55 3s. Case, £6 12s. 6d.

Sound Coupler for Movilux 8A. Plugs into the top of the Movilux 8A projector. Film and tape run over a common drive.

No flexible shaft required between coupler and recorder. Price £9 18s. Case which also takes projector and accessories, £6 12s. 6d.

Movilux 8B Projector. sps 110, 125, 150, 220 and 240v. Lamp: 8v 50 watts A1/185. Lens: Zeiss P Sonnar fl.3 20 mm. Induction motor, providing three fixed speeds, 16, 18 and 24 fps. Power rewind. Price £62 12s. 6d.

Moviphon B Sound Recorder. Tape Recorder designed to work with Movilux 8B projector and Movivox Amplifier. Driven by flexible shaft from projector. Power supply by electrical connection with projector enables twin track recordings to be made. Supplied complete with speaker having built-in amplifier. Amplifier output: 3 watts. Price £125 5s. with speaker and microphone to order.

★

Specto Limited, Vale Road, Windsor, Berks. Tel.: Windsor 1241/2. Cables: Specto Windsor.

Specto Royal 8mm. sps 110v to 240. AC. Lamp: 21.5v 150w. "Truflector" A/194. Lens: 20mm fl/4. Capacity: 400. Variable speeds. Power rewind. Weight: 10 lb. Price: £29 19s. 6d. Price with "Steinheil Vario" zoom lens. £33.

Specto Royal Tape Coupler. Type 209. Loop synchroniser suitable for use with any tape recorder running at 3¾ i/s. Employs flexible connection, and electrical connection to couple with projector. Price £14 19s. 6d.

CINE RECORDERS

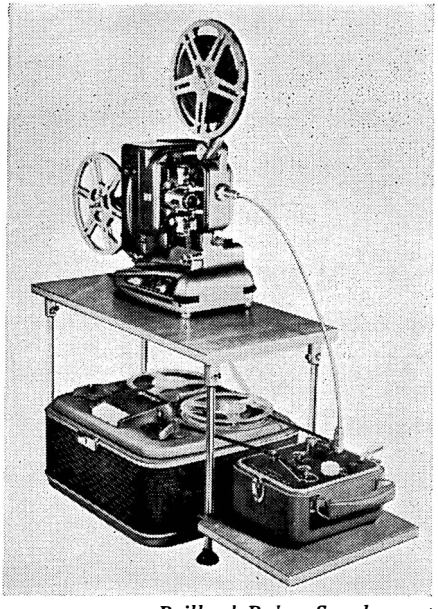
K.G.M. Electronics Ltd. Bardolph Road, Richmond, Surrey. Tel.: Richmond 7171.

Cinecorder, intended primarily for use with Eumig Imperial 8 mm cine projectors. By the use of perforated tape 100% synchronisation accuracy between tape and film is possible. Size 16½ × 13½ × 8½ in. Weight 28 lb. Price approx £59 15s.

SERVICES & ACCESSORIES

Magnetic Stripe Attachments

Paillard Bolex Sonorizer. 8 mm Magnetic Stripe attachment designed especially for use with Paillard Bolex M8R projector, but suitable for any 8 mm projector of



Paillard Bolex Synchromat

similar design. Sound head to picture gate spacing 136 frames. sps 110, 125, 160, 220 or 240v AC 50 or 60 cycles. Amplifier output: 4 watts. Two input sockets mic. 0.1 mV/200 ohms. For tape recorder and record player: 100 mV/500k ohms. Monitoring by neon indicator. Sound head supported by single column from the amplifier plinth. Projector stands on amplifier so that striped film passes through the sound film before passing through the projector. Unit packs away into speaker case. Weight 28½ lb. Superimpositions possible or complete erasure. Supplied complete with microphone, cables. Price £97.

★

Stroboscopes

Arrowtabs Limited, 93 Church Road, Hendon, N.W.4. Tel.: Sunnyhill 3311/2.

Strobe-o-Disc. Synchronises any tape recorder running at 3¾ or 7½ i/s with any cine projector running at either 16 fps with three bladed shutter, or with a projector running at 24 fps with a two bladed shutter. Depends upon variable speed being fitted to projector. Disc is mounted on the edge of the recorder, at correct projector speeds the Strobe is stabilised. If the strobe moves the projector speed is adjustable. Price 35s. 6d.

H.S. Engineering Company, Malvern Close, Kenton, Harrow, Mddx.

Drumsync Unit. Stroboscope Disc supplied on small mounting bracket suitable for attaching directly to the deck of any tape recorder. Tape detours round the disc and is illuminated by attaching a small mirror on the projector lens. Two strobe tracks on the disc indicate 16 and 24 fps. Price 32s. 6d.

★

Magnetic Striping Service

E.V.T. Magnetics, 157 Long Lane, Bexleyheath, Kent. Tel.: Bexleyheath 7440.

Standard liquid, laminated and recess laminated stripe applied to 8 or 16 mm film, also film cleaning and waxing and associated services.

★

Zonal Film Facilities Limited, The Tower, Hammersmith Broadway, London, W.6. Tel.: Riverside 8741. Cables: Zonogram, Hammer, London.

"Zonastripe" Liquid Stripe. Stripping service offered for all gauges of film; 16 mm films can be striped with es, hs and fs. Balancing stripe applied with 16 mm es. Fully coated film available in 8 or 16 mm, minimum length 400 ft.

★

Sound Laboratory Services

United Motion Pictures, 38-39 Fitzroy Square, London, W.1. Tel.: Temple Bar 2025.

Duplicating of all types of 16 mm undertaken. Colour and black-and-white films with magnetic stripe printed to optical track. Recording studio facilities available. Tapes and films synchronised on optical sound track. Details on application.

Rank Precision Industries Ltd., G.B. Film Library, Aintree Road, Perivale, Middx. Tel.: Perivale 6606. Cables: Gebascope, Perivale.

16 mm Duplicating undertaken. 16 mm films with magnetic track printed on to optical sound track. Details on application.

Sound Film Negative and Positive Raw Stock

E.M.I. Sales & Service Ltd., Recording Materials Division, Blyth Road, Hayes, Middx. Tel.: Southall 2468. Cables: Emiservice London.

Emifilm. Fully coated perforated stock for sound film tracks. Made in three gauges — 35, 17, 5 and 16 mm. This sprocketed magnetic recording film is designed for cine, telecine and industrial use, for work where absolute synchronism is essential.

Type 351 (35 mm) in 1,000 ft. reels. Prices: (1 to 19 reels) £8. (20 and over) £7 17s. 6d. per reel.

Type 171 (17.5 mm) in 1,000 ft. reels. Prices: (2 to 18 reels) £4 5s. (20 and over) £4 2s. 6d. per reel.

Type 161 (16 mm) in 1,000 ft. reels. Prices: (2 to 18 reels) £3 17s. 6d. (20 and over) £3 15s. per reel. In 1,200 ft. reels (1 to 19) £4 12s. 6d. (20 and over) £4 10s. per reel. In 2,400 ft. reels: (1 to 9) £9 5s. (10 and over) £9 per reel. Prices for shorter lengths, also illustrated leaflet giving specifications, dimensions, etc. on application. **Note:** Add the following suffixes to type numbers (e.g. 161B/D) for these different windings. A=Wound Oxide "in"; B=Oxide "out"; A/S=Oxide "in", single perforated; B/S=Oxide "out" single perforated; A/D=Oxide "in", double perforated; B/D=Oxide "out", double perforated.

HOME CONSTRUCTION

AN INTRODUCTION

LAST year, the "Do-it-yourself" section of this book was prefaced by a photographic feature, based on a *Heathkit* oscilloscope, which it was hoped would stimulate further interest in this most interesting side of "hi-fi". Whether or not the feature had anything to do with what has actually happened will probably never be known, but the increased interest in home construction has, according to all reports, been quite amazing during the past twelve months. The following pages in the directory section show many new products in kit form, which is a good barometric indication of expansion; but it is the news that comes from specialist dealers—news of hundreds of sets of components bought by readers of *Hi-Fi News* and the *Tape Recorder*—which fills in the other side of the story.

Homework first!

Addressing the reader who has yet to attempt home-built equipment, there are two points which should be mentally noted and regarded as absolutely essential prerequisites. One, buy some cheap components from a dealer, some "*Savbit*" solder, a good, light iron, and some wire, and spend three or four evenings learning how to solder. Only when this very simple, but vital trick has been mastered should the first item of equipment be tackled. Next, whatever piece of equipment appeals, try a simple item first.

On this score, since the home constructor will always have a good use for it, a valve-voltmeter is a very good item to choose. Once that has been built it will be found to be invaluable for all other jobs that follow. As a constructional item it has the advantage of being a piece of equipment which can be finished soundly and easily in one or two evenings. The *Heathkit* product is strongly recommended for beginners for this reason, and because the working instructions issued by that Company are superlative. And that remark applies to every product issued by them. A second item of equipment from the same range is the portable transistorised radio.

Begin Simply

Beginners are indeed recommended to concentrate upon such items—those issued with very detailed instructions and diagrams—until the feel of electronic construction has been acquired. A further very important point is the study of the circuit diagrams issued. The *Heathkit* instructions are so thorough and so simple that it is virtually possible for anyone to build up an amplifier or a radio set, who can handle a soldering iron properly. Therefore it is doubly important—if any real progress is to be made—to check back all work—all connections and wires, point by point, with the circuit when construction is complete. It is good practice to go over the actual circuit diagram with a red pencil, stage by stage, until every line on the diagram has been "inked over".

Move forward a step

Once the feel of home construction has been acquired, enthusiasts will be able to tackle slightly less "spoon-fed" items, such as those which are published in magazines, and which call for considerably more concentration because far more

is left to the constructor to work out. Tape is a subject which has recently received the attention of kit manufacturers, and it is now possible to build up monaural and stereo record/replay amplifiers from kits of parts. These amplifiers, when well constructed, and when used with the tape deck of one's choice, bring really high-fidelity tape results within reach at comparatively low cost. Examples of these products are the monaural record/replay amplifier by *Sterns Radio Ltd.*, and the stereo kit by *Heathkit Ltd.* Both are really fine pieces of equipment in potential.

The Time Factor

The construction time required for such equipment naturally varies according to the neatness of the work that one likes to see, and to the ability of the constructor. Twenty hours of work on a monaural tape amplifier should see a good job of work from a constructor of fair ability. thirty hours should produce a stereo job. These figures must be regarded as most flexible of course, as the foregoing provisos suggest. A monaural amplifier could be constructed comfortably in a week of free evenings. An oscilloscope in slightly more.

Constructors of a more adventurous turn of mind might like to try their hands at the *Shirley Laboratories* TWA 15/15—a combined 2-channel high-fidelity stereo amplifier and record/replay amplifier, as published in *Hi Fi News* during 1960, and shortly to be republished in booklet form. An estimate of the time needed for this item of equipment is from 40 hours, in the hands of a reasonably capable constructor, to 60 hours in the case of someone more cautious; but this type of equipment should be left until good experience has been gained on more simple and less time-demanding jobs.

As a topical note at this stage, readers are also reminded that *Hi-Fi News* has (1961) recently introduced another constructional feature of unusual interest for those who like to undertake relatively big jobs—an electronic organ, on the principle add-on units. This is based upon a standard keyboard, has both manual and pedal keys, and provides for the playing of full chords. This, however, is a big step distant from the modest valve-voltmeter and portable radio which are recommended as *ab initio* constructional introductions.

A fine Range of Products

The following pages of the kits directory section offer the home constructor a really wide range, and cover everything from loudspeaker assemblies to test gear. The quality of the components supplied by the firms is very good indeed—certainly up to the standards that one finds in finished equipment. Given intelligent interpretation of instructions and good workmanship, these kits can provide their purchasers with electronic equipment of really first class quality. Some kits that have been advertised abroad have been of notoriously inferior quality; but it must be emphasised that all kits offered by the better firms on the British home market are good, and some of them are outstandingly good value.

Get the basic Tools

A final word to all potential constructors. First buy a set of good tools. Those recommended regularly in this *Year Book*, and in *Hi-Fi News*, are stocked by **Buck and Ryan Ltd.**, 310 Edgware Road, London, N.W.1, who will gladly post the list of details on request. They are not many, and the outlay is small. Time is the most valuable of all the ingredients needed for home-produced products. Time, plus good components, deserve good tools. Without them, a good job can be ruined—or at best be second-best—and valuable time will be wasted.

DIRECTORY OF CONSTRUCTIONAL KITS

Altobass Ltd., Percy Road, Aylestone Park, Leicester. Tel.: Leicester 31616. Cables: Altobass, Leicester.

Altobass Stereo 44 Amplifier. Inputs: pickup, radio, tape, sensitivity 130 mV. Frequency response 20-20,000 c/s ± 1 dB. H & N −70 dB. Distortion 2.5% at 4 watts (1.5% at 3 watts). Separation better than 40 dB at 1,000 c/s. 4 watts each channel, 8 watts monaural. Output impedance 4, 8 or 16 ohms. Size $11\frac{1}{2} \times 4\frac{3}{4} \times 9$ ins. Price £18 18s.

★

Cossor Instruments Ltd., Cossor House, Highbury Grove, London, N.5. Tel.: Canonbury 1234. Cables: Cossor, London.

1045K. Single-beam Oscilloscope kit. Printed circuits. 4-inch tube. Y amplifier sensitivity 50 mV/cm, response 5 c/s to 3 Mc/s (30% down), rise-time 0.12 microsec. X amplifier sensitivity 0.75 V/cm, response 2 c/s to 275 Kc/s (30% down), rise-time 1.4 microsec. Intensity modulation. 1 volt calibration source built in. Size $14\frac{3}{4} \times 9 \times 18\frac{1}{4}$ ins. Weight 18 lbs. Price £34. Assembled £46.

★

D.G.C. Ltd., 41 High Street Camberley, Surrey.

Oakhurst Doric Speaker Enclosure. To house a single Goodmans Axiette 8 in. speaker. Cabinet available in whitewood or veneered finish. Size $30 \times 11\frac{1}{2} \times 11\frac{1}{2}$ ins. Price in kit form: £8 whitewood, £11 10s. veneered. Assembled: £10 10s. whitewood, £14 14s. veneered. 10% reduction when ordering stereo pair.

Oakhurst Ionic Speaker Enclosure to house single Wharfedale W10/FSB speaker cabinet. Available in whitewood or veneered finish. Size 34 × 13 × 13. Price in kit form £10 12s. 6d. whitewood, £14 1s. 3d. veneered. Assembled: £13 whitewood, £17 14s. 6d. veneered. 10% reduction when ordering stereo.

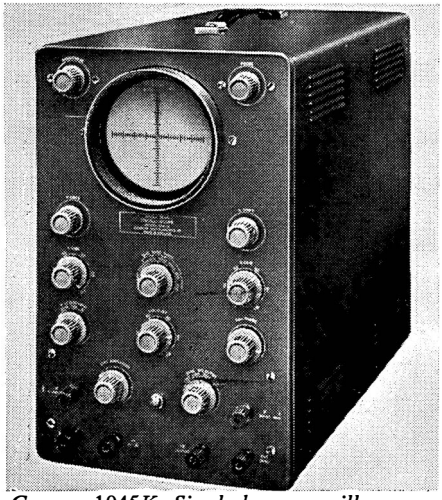
Oakhurst Corinthian Speaker Enclosure to house single. Philips AD S200M (12 in.) speaker. Size 34 × 15 × 15 ins. Price in kit form: £13 10s. whitewood, £19 12s. 6d. veneered. Assembled: £17 8s. 9d. whitewood, £21 18s. 9d. veneered. 10% reduction when ordering stereo.

Also the Penfield range of Hi-Fi furniture kits.

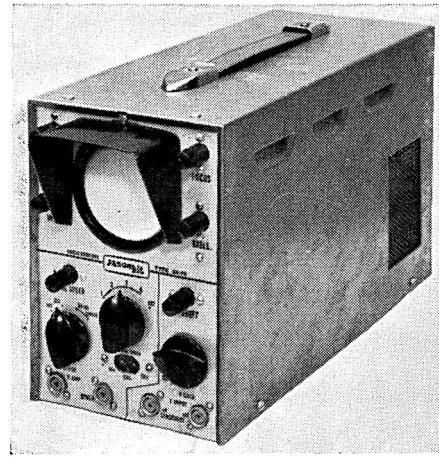
★

Heathkit. Manufactured by Daystrom Ltd., 900 Southgate Street, Gloucester, England.

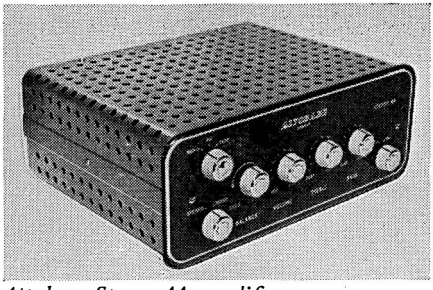
S-88. Stereo amplifier kit. 8 watts per channel. Distortion 0.1%. Stability better than 10 dB. Response 30-20,000 c/s±2 dB. inputs: pickup 20 mV, radio 200 mV, tape 400 mV. Push-button sel., bass, treble, filter, balance and reversing switch. Size



Cossor 1045K Single-beam oscilloscope

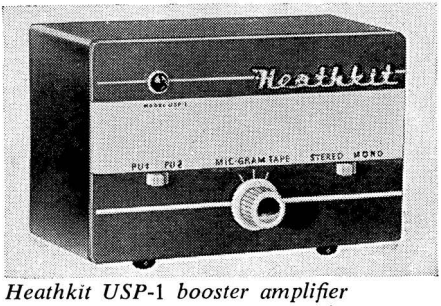


Jason OG10 oscilloscope

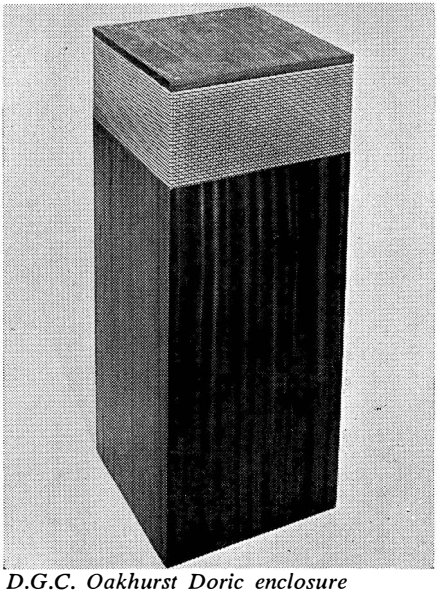


Altobass Stereo 44 amplifier

Heathkit USC-1 stereo pre-amp.



Heathkit USP-1 booster amplifier



D.G.C. Oakhurst Doric enclosure

$13\frac{1}{2} \times 5\frac{1}{2} \times 9\frac{1}{2}$ ins. Price £25 5s. 6d. High sensitivity (4 mV) model S-88B £1 10s. extra.

S-33. Stereo amplifier kit. 3 watts per channel. Distortion 0.3%. Input 100 mV at 1 Megohm. Bass, treble, balance, volume. Price £11 8s.

USC-1. Stereo pre-amplifier. Inputs: pickup 1, 3-4 mV 50 K; pickup 2, 150 mV 1 megohm; tape 1, 2.5 mV 80K CCIR, tape 2, 150 mV 100K; radio 150 mV; mic. 3 mV 1 megohm; aux., 4-150 mV 1 megohm. Controls: bass, treble, rumble filter, variable low pass filter, balance, volume, function, channel reverse. Power required. 250v 10 mA, 6.3v 1.5 amps. Output voltage 1.3 volts RMS. Price £17 19s. 6d.

USP-1. Booster amplifier. Suitable for stereo and monaural sources of low sensivity, e.g. pickups, tape heads or microphones. Input sensitivity 2-20 mV. Output adjustable from 20 mV to 2 volts. Maximum gain 100. Power requirements 180-250 volts, 3-5 mA: 6.3 volts 0.5 amps. Price £5 19s. 6d.

SSU-1. Speaker system kit. Comprises 8 in. and 4 in. matched drive units, and ducted-port bass reflex cabinet. Response 40-16,000 c/s ± 5 dB, crossover frequency 3,000 c/s. Imp. 15 ohms. Size 23 × $11\frac{1}{2}$ × $11\frac{3}{4}$ ins. Price complete £11 16s., without legs, £10 9s.

V-7A. Valve Voltmeter Kit. Printed circuit. Measures A.C. volts (0-1.5, 5, 15, 50, 150, 500, 1,500) R.M.S., A.C. volts (0-4, 14, 40, 140, 400, 1,400, 4,000). Peak-to-peak, D.C. volts (0-1.5, 5, 15, 50, 150, 500, 1,500). Ohms (with 10 ohms centre) × 1, 10, 100, 1,000, 10K, 100K, 1 Meg. 0.1 ohms to 1,000 Megohms with internal battery. Input resistance 11 Megohms. Meter 200 micro-amps. Full scale deflection. Accuracy ± 3% full scale. Price £13.

MGP-1. Power supply unit. 200, 250, 270V 120 mA; 6.3V, 2.5A. Price £4 9s.

OS-1. Service oscilloscope kit. $2\frac{3}{4}$-in. C.R. tube. Printed circuit. Vertical bandwidth 10c/s to 2.5 Mc/s. Built-in calibrator. "Y" sensitivity 10 mV R.M.S. per cm. "X" sensitivity 1v R.M.S. per cm. Price £18 19s. 6d.

O-12U. General purpose oscilloscope Kit. 5 in. flat face C.R. tube. Printed

circuits. Vertical bandwidth 3 c/s to 5 Mc/s. Built-in 1 volt calibrator. "Y" sensitivity 10 mV R.M.S. per cm. "X" sensitivity 0.12v R.M.S. per cm. Phasing control. Z-axis modulation. Price £34 15s.

S-3U. Electronic Switch (oscilloscope trace doubler). Converts a single beam oscilloscope to double beam. Switching rates 150, 500 1,500, 5,000 and 15,000 c/s. Signal frequency response 0-100 Kc/s ± 1 dB. Signal input range 0.1 to 1.8 volts R.M.S. Price £9 18s. 6d.

CM-1U. Direct-reading capacitance meter. Uses a 4½ in. meter with four ranges as follows: 100 picofarads, 1,000 picofarads, 0.01 microfarads and 0.1 microfarads. Price £14 10s.

C-3U. Resistance/capacitance bridge. Self-contained and powered. Capacitance range 0.00001 to 1,000 microfarads. Resistance range 100 ohms to 5 megohms. Power factor and leakage also indicated. Polarising voltages available from 5 to 450 volts. Price £7 19s. 6d.

AV-3U. Audio valve millivoltmeter. Measures voltages as low as 1 mV to a maximum of 300 volts at high impedance in 10 ranges. Frequency range 10-400,000 c/s. Uses a 4½ in. meter. Cathode follower output. Price £13 18s. 6d.

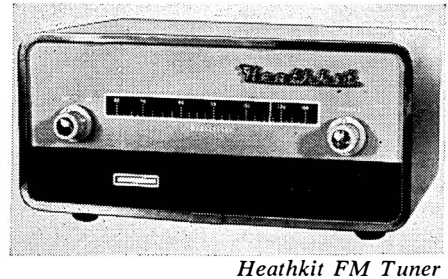
309-CU. RF probe. Extends the range of a valve voltmeter to 100 Mc/s. Uses a printed circuit board. Price £1 5s. 6d.

AW-1U. Audio wattmeter. Uses external loads or the following internal loads: 3, 8, 15 and 600 ohms. 5 power ranges from 0-5 mW to 50 watts. 4½ in. meter calibrated in watts and dB. Price £13 18s. 6d.

AG-9U. Audio signal generator. Range 10 c/s to 100 Kc/s. Distortion less than 0.1% form 20 c/s to 20 Kc/s. Decade switching over 8 voltage ranges from 3 mV to 10 volts monitored. Uses 4½ in. meter. Price £19 3s.

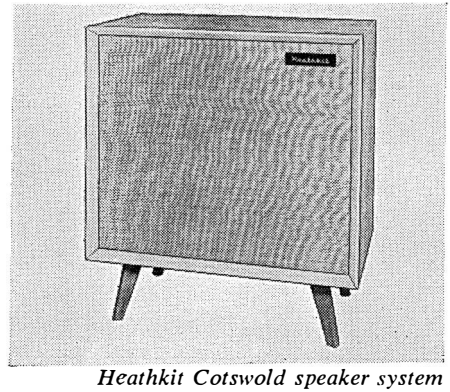
FM tuner. Comprises model FMT-4U tuner unit and FMA-4U IF strip and power supply. Flywheel tuning, thermometer tuning indicator, three IF stages with two limiters, printed circuit board and pre-aligned coils. Tuning range 88-108 Mc/s.

Heathkit S-88 stereo amplifier

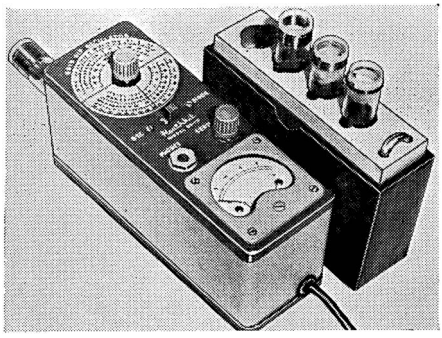


Heathkit FM Tuner

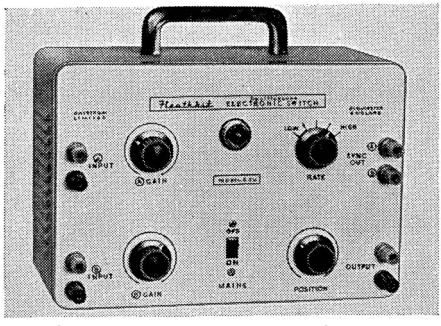
Heathkit AG-9U Audio generator



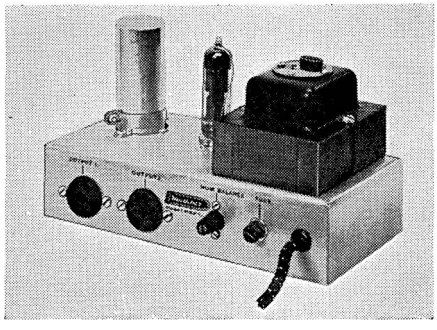
Heathkit Cotswold speaker system



Heathkit GD-1U Grid dip oscillator



Heathkit S-3U Electronic switch



Heathkit MGP-1 power unit.

Jason CC10 Crystal Calibrator

Sensitivity 2.5 microvolts for 20 dB quieting. Price £13 12s. 6d. (for both units).

Cotswold. High fidelity three-way loudspeaker. Drive units are 12 in. bass, 8 × 5 ins. elliptical, and pressure tweeter. Range 30-20,000 c/s. Two volume controls. Celotex lined enclosure. In white wood ready cut and drilled. Dimensions 26 × 23 × 14½ ins. Price complete with cross-over unit, etc. £19 18s. 6d.

Chepstow. Cabinet for hi-fi equipment. Space available for FM tuner, amplifier and record player. Dimensions 34 × 32¾ × 18 ins. Price £10 10s.

Gloucester. Cabinet for hi-fi equipment. Space available to house records, tapes, etc. Mk. 1 accommodates tape deck or record player, FM tuner, and stereo amplifier. Mk. II accommodates both tape deck and record player, FM tuner and stereo amplifier. Dimensions: length 46⅛, height 30, depth 21 ins. Price Mk. I £15 18s. 6d., Mk. II £17 8s. 6d.

Full details of test gear not included in this section can be obtained on application.

★

Jason Electronic Designs Ltd., 3/4 Gt. Chapel Street, London, W.1. Tel.: Gerrard 0273/4.

F.M.T.I Standard F.M. tuner kit. 4 valves only are used, giving an aerial sensitivity of better than 100 microvolts. A ratio detector is combined with a limiter for low distortion and good noise rejection. Price without valves and power supply £5 19s. Power Pack kit £2 14s.

F.M.T.2. This is the same unit as the F.M.T.1. but built into a shelf mounting case. Price, less valves, but with power supply £8 15s.

F.M.T.3. A fringe FM tuner with automatic frequency control. Two limiters combat the effects of aeroplane flutter and car interference. Price with case but less seven valves required, £9 19s.

J.S.A.2. Three watt amplifier kit. Three watts per channel are available from this simple kit which gives good results from such stereo pickups as the *Ronette* and *Acos*. 18 dB of feed-back is applied to the pentode section of the first amplifier which

is an EFC80 while the triode section is used in the tone control circuit. Stereo balance control gives 5 dB variation each way. Price £13 19s. including all valves.

EM10. Valve voltmeter. A four valve bridge circuit, gives good stability. May be used as a general purpose meter. 23 ranges including D.C. current range. Price kit £18 10s. Assembled £23.

AG10 Audio Generator. A capacity tuned Wien bridge covers from 10 c/s to 100 Kc/s with excellent stability and low distortion while the output is held constant within 1 dB. Output impedance is 600 ohm from a cathode follower and the Attenuator uses resistors of 1% accuracy. The rise time on square waves is better than 2 microseconds. Price kit £15 19s.

AA10 Audio Attenuator. Nine slide switches give the following attentuation. 40 dB, 20 dB, 20 dB, 10 dB, 10 dB, 5 dB, 2 dB, 2 dB, 1 dB, while the tenth switch allows the addition of a 600 ohm termination resistor. Resistors of 1 % accuracy are used. The case measures 13 in. long × $2\frac{1}{4}$ in. wide × 1 in. high. Price kit £7 15s.

CC10 Crystal Controlled Calibrator. The exact frequency of a generator may be found by connecting the output to this crystal calibrator when the self-contained audio section and loudspeaker allow marker pips to be heard directly. These marker pips are generated at 10 Mc/s, 1 Mc/s, 100 Kc/s and 10 Kc/s so that generators in the range of 10 Kc/s to 250 Mc/s may be checked. The basic accuracy of .01% comes from a 1 Mc/s crystal oscillator. Price kit £19 19s.

OG10. $2\frac{3}{4}$ in. Oscilloscope has a sensitivity of 10 mV/cm with a bandwidth of 2 c/s-2 Mc/s. Sweep linearity is good and push-pull amplifiers are used on both X and Y. Price kit £22 10s.

W11 Wobbulator. This unit used in conjunction with the Oscilloscope OG10 or OG20 allows frequency response curves to be shown. It is suitable for all IF and RF alignment in TV and radio tuners. 50 c/s sine wave is used for scanning while the return trace is blanked to provide a reference base line. Price kit £14 19s. Built £19 19s.

Mullard Dual Channel Pre-amplifier. (See Amplifier Section). Price £12 10s.

HI-FI FURNITURE

● Housing of High Fidelity equipment has always presented a problem, not only does it have to harmonise with existing decor but also fulfil all the requirements imposed by the equipment. There are a number of firms who specialise in Hi-Fi cabinets and a wide selection ranging from the most contemporary to reproduction antique is now available. The following is a list of firms who take special interest in housing Hi-Fi equipment but most leading dealers stock a good range of proprietory makes.

Brearcliffe, Little Barn, Arford, Headley, Hants. *Single and double Consoles.*

Clyne Radio, Ltd., 18 Tottenham Court Road, London, W.1. *Proprietary and special cabinets.*

Davis, A. & Co., 3-8 Parkhill Place, Hampstead, London, N.W.3. *Range of Consoles in all styles.*

Daystrom, Ltd., Gloucester. *"Chepstow" and "Gloucester" cabinets in kit form.*

Dennis & Robinson, Ltd., Bestwood Works, Drove Road, Old Portslade, Sussex. *"Southdown" cabinets, models designed round Leak and Pye equipment.*

Design Furniture, Ltd., Carnwarth Road, Fulham, S.W.6. *Consoles of all types.*

Fitrobe, 56 Commerce Road, Wood Green, London, N.22. *Cabinets built to individual specification.*

Heal & Son, Ltd., 96 Tottenham Court Road, London, W.1. *Contemporary consoles and unit assemblies.*

The Hi-Fi Centre, 50 Hockerill Street, Bishops Stortford, Herts. *"Sinfonia" Hi-Fi coffee table cabinet.*

The Hi-Fi Centre, 61 West Street, Dorking, Surrey. *Specialists in antique conversion.*

Imhof, Ltd., 112-116 New Oxford Street, London, W.C.1. *"Imflex" matching range of cabinets for all requirements.*

Largs, 76-77 High Holborn, London, W.C.1. *Wide range of "Tailorgram" cabinets of their own design. Stockist for all leading manufacturers.*

Lee Electronics, Ltd., 400 Edgware Road, W.2. *"Uni-Plan", available in one, two or three lid versions.*

Magpie Furniture, Ltd., Station Approach, Mortlake, London, S.W.14. *The "Magpie" coffee table console.*

Period High Fidelity, Ltd., 28 South Street, London, W.1. *Range of reproduction antique cabinets.*

Record Housing, Brook Road, London, N.22. *A comprehensive range of traditional and contemporary designs.*

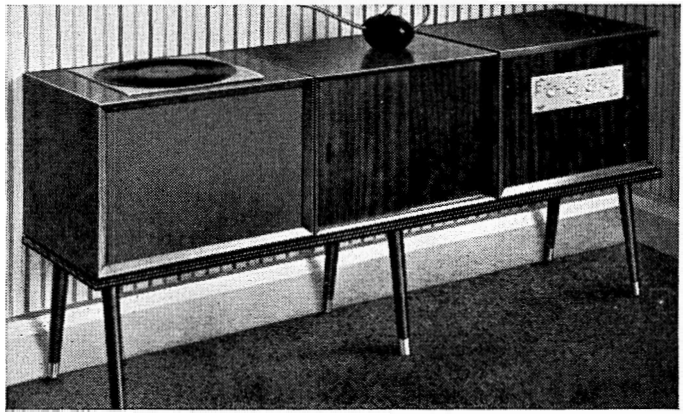
Stamford, A. L., Ltd., 84 Weymouth Terrace, London, E.2. *General purpose and matching cabinets.*

Sugden, A. R. & Co., Market Street, Brighouse, Yorks. *A special console for Connoisseur equipment.*

The Tape Recorder Centre, 82 High Holborn, W.C.1. *All leading makes stocked, special cabinets built.*

Wellington Acoustic Laboratories, Ltd., Allways, Kings Lane, Wrecclesham, Farnham, Surrey. *Single and double "Lowboy" consoles.*

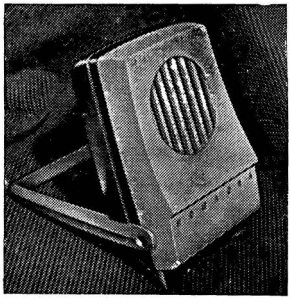
Whiteley Electrical Radio Co., Ltd., Mansfield, Notts. *Five different cabinets available in kit form or ready built.*



This Record Housing Nordyk range represents the popular "unit" type of cabinet. These are easy to instal and any number of units can be used providing a versatile installation.

OUR NEW RANGE

SK PRODUCT



designed by Stanley Kelly

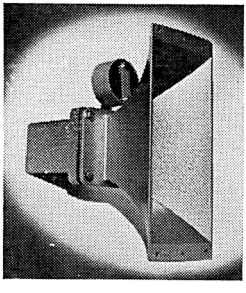
ROMAGNA REPRODUCERS can justifiably challenge comparison for these models on performance, quality and price.

HMC. I CRYSTAL

Price 25/-

THE KELLY **RIBBON H.F. LOUDSPEAKER** MK.II

"I know of no other Tweeter on the market which I should prefer". Thus comments a leading technical authority. The Ribbon Loudspeaker is acknowledged the most successful method of reproducing the higher audio frequencies. Who better than Stanley Kelly to provide the practical reality? *Who else would think of providing a genuine Response Curve with each Unit taken from the actual Speaker?* The brief specification will whet your appetite, as the Ribbon Mk. II is suitable for all domestic Monaural and stereophonic installations.



Brief specification:

Frequency Range: 2 Kc/s. to 20 Kc/s. within −1 & plus 2 dB.
2-Micron Aluminium Ribbon (shock-resistant, reducing distortion).
Built-in matching transformer. Power Capacity: Up to 10 watts maximum.
Impedance: 15 ohms nominal.
Dimensions: 9″ × 5½″ × 9″.
Weight: 9 lb.
Finish: Silver Grey.

Price 10 gns.

For *your* kind of equipment—

cabinets by RECORD HOUSING

handsome — versatile — keenly priced

RAVEL DE LUXE

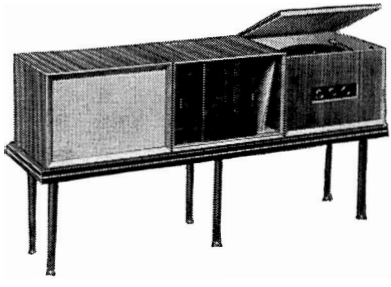
A very versatile cabinet. Under twin lids can be mounted turntable and tape deck. Behind left door, amplifier, pre-amp and radio tuner. 9″ × 5″ speaker cut-out in bottom. Behind right door, room for 100 records. 37″ wide, 19″ deep, 22″ high, 9″ legs. Motor boards: 18″ × 15¼″.

Price: 23 gns.

POLONAISE DE LUXE

will hold under its twin lids: 1. every *turntable*, plus 2. *tape-deck*, plus 3. *pre-amp controls* and 4. *radio tuner*. Below the motor-board there is ample room for the *largest stereo amplifiers*, plus cut-outs on the front baffle for *two* 10″ *loudspeakers*. *Dimensions:* 43″ wide × 19″ deep × 22″ high, plus 9″ legs.

Price: 22 gns.



NORDYK SPEAKER ENCLOSURE (left)
was designed in conjunction with Goodmans Industries Ltd. for use with their 8″ Axiette Loudspeaker. Made entirely of ⅝″ chipboard and lined throughout, it is free from boom and resonance and gives a flat response from 40 cs. up to 15,000 cs. **Price: £6 15s. 0d.**

NORDYK RECORD UNIT (centre)
holds 150 records. Two sliding wooden doors keep your records dust free; interior partitions hold them upright. **Price: £5 7s. 6d.**

NORDYK GRAM UNIT (right)
will house all turntables (transcription or auto-change) and pick-ups. Motor-board measures 19″ × 14½″. Most pre-amplifiers can be mounted on the front panel, while main amplifier is installed below turntable. There may also be room for a radio tuner, depending on size.

Price: £6 19s. 6d.

VIKING REFLEX CORNER ENCLOSURE
This enclosure has been designed for any good 8″ Loudspeaker and carries the official approval of both Goodmans Industries for their 8″ Axiette and Wharfedale for their Super 8″ FS/AL. Constructed entirely of ⅝″ chipboard and lined throughout, it is free from boom or resonance. The frequency response is satisfyingly flat from 40 cs. up to 15,000 cs. Additional cut-outs have been made (and blanked over) for a 10″ unit plus a tweeter for those who wish to use a multiple system.

Choice of two finishes: medium walnut, medium mahogany.

Dimensions: 32″ high (including 6″ legs); maximum width: 19″; depth: 12″.

Price (*complete with legs*): 10 guineas

CHECK THE

Inside Story

OF THE TELEFUNKEN TAPE RECORDER WITH YOUR DEALER

He knows the Features that put the TELEFUNKEN Magnetophon Range in a Class Apart for Quality, Fidelity and Reliability.

THE EXCITING POSSIBILITIES OF TELEFUNKEN 4-TRACK RECORDING

Four-Track recording means you get four tracks on one tape. The perfection of the in-line twin-stacked recording head made this possible by actually allowing a quarter of the tape width to be scanned by each head. Briefly it is possible to record track 1 then rewind and record track 3 in perfect synchronisation. Playing back both tracks together gives an amazing superimposition effect.

MONITORING BY EARPHONE

A unique Telefunken transistorised pre-amplifier actually allows the first track to be monitored by earphones while the second track is being recorded. This opens up a tremendous field of activity for the tape enthusiast. Voice can be dubbed on to music. The Soloist can record himself in a duet! Effects can be added to lectures, speeches and monologues, etc.

The Telefunken Stereo model uses Four-track recording and incorporates two separate amplifiers. Using the D77 microphone, two forms of live stereo recording are possible and many other exciting effects can be produced. Send for full details.

A full selection of Telefunken Accessories, Microphones and Telefunken tapes is available. Ask for free brochure.

TELEFUNKEN 'Magnetophon 75k-15'

Tape speeds $3\frac{3}{4}$ i.p.s. and $1\frac{7}{8}$ i.p.s. with frequency response of 60–16,000 c.p.s. and 60–9,000 c.p.s. Playing time of 6 hrs. 20 mins. on $5\frac{3}{4}$" DP tape. Tone control. Extension speaker socket. **47 Gns.**

The amazing 4-Track TELEFUNKEN 'Magnetophon 76k'

Offers over 12 hours playing time from one DP Tape. **57 GNS.**

TELEFUNKEN 'Magnetophon 77KD' 4-Track Stereo

Gives full stereo and Four-Track monaura. superimposition effects. 2 speeds $1\frac{7}{8}$ and $3\frac{3}{4}$ i.p.sl $1\frac{7}{8}$ i.p.s. gives 6 hrs. 20 min. stereo recording. Push button track selection. Full monitoring facilities. Separate speaker in lid. Frequency response: 40–16,000 c.p.s. at $3\frac{3}{4}$ i.p.s. and 40–9,000 c.p.s. at $1\frac{7}{8}$ i.p.s. **85 Gns.**

TELEFUNKEN 'Magnetophon 85KL'

Tape speeds of $7\frac{1}{2}$ i.p.s. and $3\frac{3}{4}$ i.p.s. with frequency response of 30–20,000 c.p.s. ± 3 dB and 30–15,000 c.p.s. 6 watt push/pull power stage. Separate Bass and Treble controls. D.C. heated pre-amplifier valves. **79 Gns.**

TELEFUNKEN 'Magnetophon M24' Studio Recorder

The Telefunken M24 Studio Recorder has been designed to meet the need for a high quality recorder between the conventional domestic recorders and the larger machines for broadcast studios.

**All prices excluding microphone.*

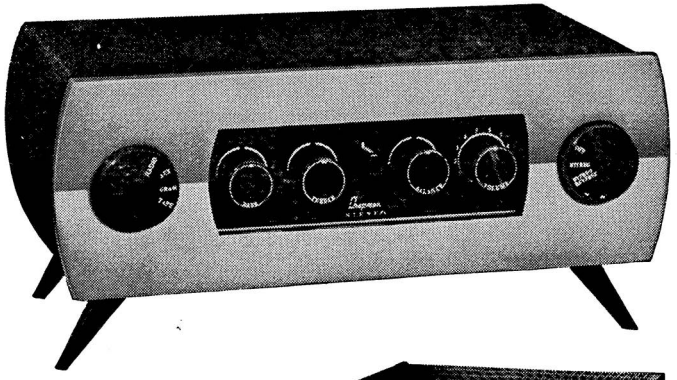
CHAPMAN ULTRASONICS LTD.



The 305 Control Unit affords every facility for high-quality stereo or single-channel radio, gram or tape reproduction. It accepts direct tape head signals and can reproduce pre-recorded tapes without a separate pre-amp. It can be used with low output magnetic or crystal P/U, records stereo and mono tapes and is supplied (£18.18.0) ready for connection with the 305 Main Amplifier. This instrument (£21.0.0) gives 8 watts per stereo channel and 16 watts in parallel. FM and AM/FM Tuners similar to the 305 Control Unit are also available.

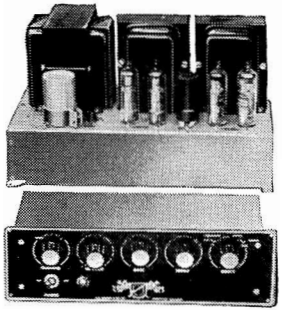
ADVERTISERS' INDEX



Connoisseur

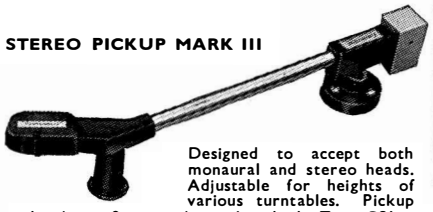
the best that money can buy FOR STEREO OR MONAURAL

STEREO AMPLIFIER AND CONTROL UNIT, TYPE S66

Twin channel, delivering 7.5 watts per channel with ultra linear output stage. Inputs for P.U., Tape and Radio, sensitivity being 6 mV. Separate treble and bass controls.

PRICE: Pre-amp ... **£16.10.0** (No tax)
Amp ... ... **£24.10.0** (No tax)

STEREO PICKUP MARK III



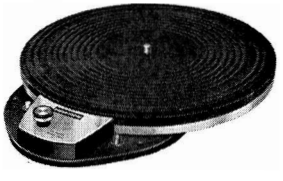
Designed to accept both monaural and stereo heads. Adjustable for heights of various turntables. Pickup head specification identical with the Type CS1.

PRICE:
Arm only ... ... **£3.19.11** (incl. tax)
Stereo head ... ... **£7.19.11** (incl. tax)
Mark II diamond head ... **£8.13.3** (incl. tax)
Mark II Sapphire head ... **£4.13.3** (incl. tax)

STEREO PICKUP TYPE CS1

Pickup arm fitted with integral lifting device. The pickup head employs miniature ceramic units, frequency range 20–16,000 c.p.s., output 20 mV with channel separation of 20–25 dBs. Downward pressure 3½–4 grams. Diamond stylus. Will accept Mark II monaural heads.

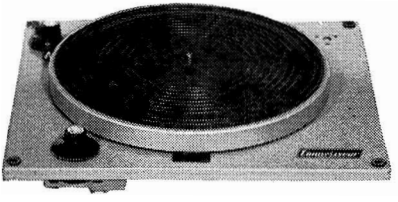
PRICE: Complete ... **£12.19.10** (incl. tax)
Arm only ... **£4.19.11** (incl. tax)
Head only ... **£7.19.11** (incl. tax)



A NEW MODEL 2 SPEED TRANSCRIPTION MOTOR

Finished in black and silver. 33⅓ r.p.m. and 45 r.p.m. Full 12" turntable is lathe turned. New nylon graphite bearings. Synchronous motor dynamically balanced. Neon indicator on/off warning light.

PRICE: **£14.0.0** *plus* **£4.13.1** *P.T.*



VARIABLE 3 SPEED MOTOR

For 33⅓, 45 and 78 r.p.m. Stroboscope fitted with internal light source. Synchronous motor dynamically balanced, resiliently mounted. Mechanical speed change giving 4% variation on all speeds.

PRICE: **£27.16.1** (incl. tax)

Send for FREE leaflets . . .

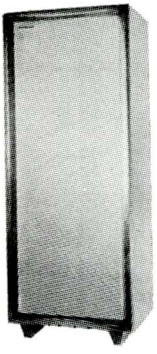
Also available

Omni-directional speaker enclosure. Matching Console to take Connoissueur turntables, pickup, stereo amplifier and pre-amplifier.

A. R. SUGDEN & CO. (ENGINEERS) LTD.

MARKET STREET, BRIGHOUSE

Rarely has such praise been lavished on a loudspeaker



FROM "HI-FI NEWS" JANUARY, 1961, *R.L.W. writes:*
To those at all familiar with the name Mordaunt, they will know the inside (of the speaker) will certainly be something well above average.

The speaker certainly has the master's touch. Right from the start there was consistent sweetness of tone not often obtained or obtained so consistently. One could be tempted to say that this could be due to a deficient or falling off HF response. Definitely not in this instance, as the response on axis or even 20°–30° off axis carries on without flagging well beyond audibility. While noise test, as expected, failed to show up any faults at all. Stereo results were of course good, very good in fact as the smooth and even response added one less error into the stereo chain than we usually expect. The reviewer places the Mordaunt "Arundel" amongst the top few superb loudspeakers and is therefore pleased to recommend it to all serious listeners and music lovers.

FROM "THE GRAMOPHONE" DECEMBER, 1960, *P.G.T. writes:*
This new loudspeaker has excited considerable interest because of its wide frequency range, small dimensions and large power handling capacity. No offending resonances . . . the forward presence called forth approval from everyone who listened. I have nothing but praise for this new loudspeaker. He (Mr. Mordaunt) has been highly successful in creating a first-class reproducer.

(*Space prevents publishing the above reviews in full, but in no way has the substance or intention of either been modified.*)

Bass/mid-range unit employs special coil and cone assembly to cover 30–3,000 c/s with exceptional smoothness. A Kelly horn-loaded ribbon unit carries response smoothly up to 25,000 c/s. The crossover network cuts at 24 dB below 3 kc/s. Impedance, 15 ohms; loading capacity, 12–15 watts. Size, 36″ high × 15″ wide × 12″. Finished medium walnut or mahogany. Other finishes to order.

£39-10-0

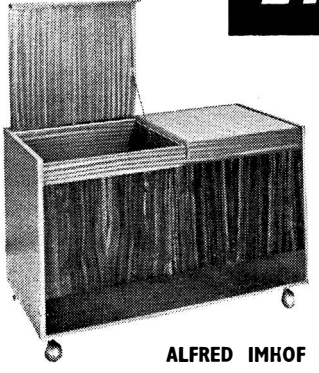
SUPERB STYLING

IMHOFS **HI FI CABINETS**



The complete range of these superbly styled, exclusive hi fi cabinets can be seen only at Imhofs, who undertake, whatever your decor, to find cabinets of suitable size and design to meet your needs. Here too, you can listen at will to one of the world's widest ranges of hi fi and stereophonic equipment. Should concealment be your aim, Imhofs specialise in custom-building equipment into walls and ceilings.

Whatever your requirements, a visit to Imhofs is always rewarding. If you are unable to make a personal call why not send for a descriptive leaflet on cabinets or for a copy of ' THIS YEAR OF HI-FI 1961 '—the address is

ALFRED IMHOF LTD Dept HYB 112-116 New Oxford Street WC1 MUS 7878

BRITISH-MADE MICROPHONES

consistently specified for quality and reliability

THE LUSTRAPHONE RANGE includes a number of microphones designed for special applications as well as models eminently suitable for recording and studio use. Some of the latter are detailed below. Literature on request.

LD.66—DYNAMIC

An entirely new modern style moving-coil microphone designed particularly for use with tape recorders. Response is substantially flat from 70 to 12,000 c/s. In Low, Line, High and Condenser impedances. Prices according to impedance and mounting from **£4.2.6.**

LFV.59—"FULL VISION" DYNAMIC

Lustraphone's famous "Full Vision" microphone as used for TV, stage, film and other professional work. Face diam. only 1 3/16". Available as a hand microphone or for stand mounting. In Low, Line or High impedances. **£8.18.6.**

VR.64—RIBBON VELOCITY

A robustly designed instrument of somewhat miniature proportions which greatly increases the uses of this type of microphone. The specially suspended ribbon is triple-blast screer protected. Response is substantially flat from 50 to 13,000 c/s. Complete on base with cable. Low, Line or High Impedance. **£7.17.6.**

VR.53—STUDIO RIBBON

Bi-directional, high fidelity model for broadcasting, recording and other professional requirements. Has a high level of sensitivity and extended frequency response. For stand mounting. Low, Line or High impedances. **£9.19.6.**

VR/65—TWIN RIBBON STEREO

Two vertically stacked ribbon microphones for stereo use with switching arrangements for mono application. **30 gns.** VR/65NS—stereo ribbon microphone without switching. **15 gns.**

HI-LIGHT BY ACOS

The Acos Hi-Light has been acclaimed since its first appearance as one of the finest pickups in the world. Superb sound reproduction—frequency range from 20–20,000 c/s ± 3 dB. Outstanding tracking performance—statically and dynamically balanced to allow tracking at less than 1 gramme on mono, 2 grammes on stereo—and complete freedom from external vibrational effects. Built-in lifting and lowering device—arm lowers itself gently on to record. Record wear is virtually eliminated.

The Hi-Light is available with a stereo head and a choice of 3 mono heads (0 0005″, 0 001″ and 0 0025″ stylus radii) for every conceivable requirement in record reproduction. UK retail price: **18 gns.** including mono and stereo heads.

HI-FI BY ACOS

Acos provide a magnificent range of audio equipment, including the Hi-Light and Acopoise pickups, mono and stereo cartridges to fit a great variety of equipment, mono and stereo microphones, and Acos X500 styli—individually tested at 500 times magnification. For disc or tape, Acos make sound sense.

Setting New Standards

1945 AMPLIFIERS — LEAK SET A NEW STANDARD — TOTAL DISTORTION REDUCED BY A FACTOR OF FIFTY TIMES

LEAK set a new world standard when, in 1945, they marketed amplifiers having a total distortion content as low as point one of one per cent: this was 50 times better than the then accepted standard for distortion content.

1961 LOUDSPEAKERS—LEAK SET NEW STANDARD WITH VERY-LOW-DISTORTION LOUDSPEAKER SYSTEM

The new LEAK "SANDWICH" LOUDSPEAKER SYSTEM is the product of many years of research and development work

The cabinet is of unique construction which damps panel resonances and permits the loudspeaker motor to reproduce full clean bass without the "boxy" colouration of conventional cabinets. A 3 in. and a 13 in. moving-coil loudspeaker motor of novel design and a half-section cross-over network complete the system which gives the highest quality of reproduction over the whole frequency range of the input signal from records, radio, tape or microphone. THE GREATEST ADVANCE IN THE DESIGN OF MOVING-COIL LOUDSPEAKERS SINCE RICE-KELLOGG INVENTED THE FIRST UNIT IN 1925 HAS NOW BEEN MADE BY LEAK WITH A NEW INVENTION WHICH ELIMINATES BREAK-UP DISTORTION IN THE WORKING RANGE. The 13 in. unit employs a new cone whose stiffness to weight ratio is 200 times better than the best cones which are currently available. The low stiffness of conventional cones results in the flexing of the cone at large amplitudes and break-up resonances. The new LEAK cone which has immense stiffness for no greater weight than a conventional cone has, for the first time, given us a loudspeaker which behaves as the theoretical ideal of a rigid piston; thus there is no flexing of the cone at large amplitudes and there is no breakup distortion within the frequency range handled by the loudspeaker. It is this freedom from colouration, produced in conventional systems by break-up distortion of the cone and cabinet resonances, which distinguishes the superior quality of reproduction of the LEAK " SANDWICH " LOUDSPEAKER SYSTEM from that of the best currently available loudspeaker systems.

The cabinet measures only 26 in. × 15 in. × 12 in.; it can be used in the vertical or horizontal position to suit the convenience of the user.

The illustrations show the Trough-Line II F.M. Tuner, the Varislope Stereo pre-amplifier and the Stereo 20 power amplifier housed in the Southdown cabinet and the new "SANDWICH" loudspeaker system.

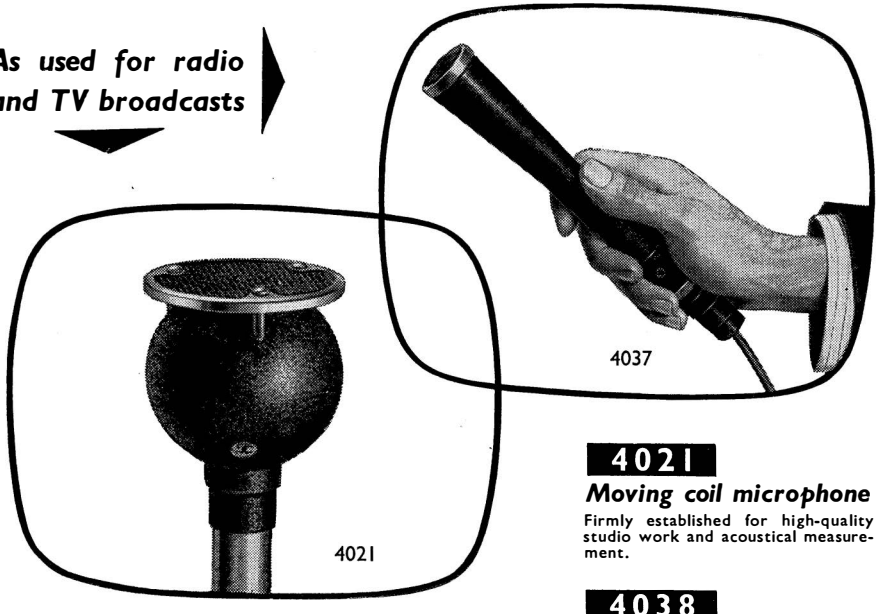
High Quality
microphones

Often the least considered link in the electronic chain, the microphone is an important factor if the highest quality sound reproduction is to be achieved. Any initial loss of quality can never be regained in the amplifying equipment however good it may be.

STC microphones are precision made instruments utilising the finest materials and techniques and will satisfy the most fanatical Hi-fi enthusiast for high quality reproduction of speech and music.

As used for radio and TV broadcasts



4021

Moving coil microphone

Firmly established for high-quality studio work and acoustical measurement.

4038

Ribbon microphone

One of the world's best, and specially suitable for the reproduction of music

4037

Moving coil microphone

Light-weight. Unobstrusive appearance. High-fidelity, omni-directional polar response.

OTHER MICROPHONES IN THE RANGE

4032 Hand Microphone
4035 General Purpose Microphone
4105 Cardioid Microphone
4033 Cardioid Microphone
4104 Commentator's Lip Microphone

Each STC microphone is individually tested to a very exacting specification over tne whole range of its performance.

The pickup for the perfectionist.

M212 STUDIO
STEREO DYNETIC
PICKUP
£36.0.0
(P.T. extra)

Integrated design of arm and cartridge with workmanship of the highest order. Tracks at 1½ grams or 1 gram with mono head. A superb instrument.

"The pickup is beautifully engineered and extremely well thought out . . . it looks right and performs right".

Stanley Kelly,
Hi-Fi- News, October, 1960.

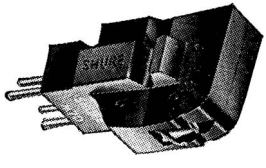
M3D
PROFESSIONAL
STEREO DYNETIC
CARTRIDGE

£18.0.0 (P.T. extra)

For use with transcription arms of the finest quality. A standard of comparison throughout the world. For use where playing weights of 2 grams will not be exceeded, Model M3-N21D can be supplied.

"One can say with confidence that those who invest in a M3D will have no cause for regret."

Percy Wilson,
The Gramophone, November, 1960



M7D CUSTOM
STEREO DYNETIC
CARTRIDGE

£9.10.0 (P.T. extra)

Excellent quality at moderate cost—the cartridge for the enthusiast. Fits standard arms and transcription units. Will operate satisfactorily in record changers.

"The Shure Dynetic M7D Stereo Cartridge comes into the top category of stereo designs."

NEW STANDARDS IN FOUR TRACK STEREO AND MONO REPRODUCTION

Chitnis AUDIOGRAPH Tape Recorders have set unbelievably good standards of performance and quality in tape recorders running at $3\frac{3}{4}$ i.p.s. on both mono and stereo. The use of BOGEN heads has enabled 4-track instruments to be designed which ensure exceptionally wide frequency range, brilliant transient response and freedom from intermodulation. Many unique and attractive refinements are incorporated to make AUDIOGRAPH RECORDERS truly the best in their class, yet you can buy one from as little as 39 gns.

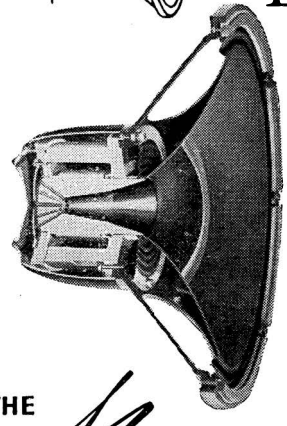
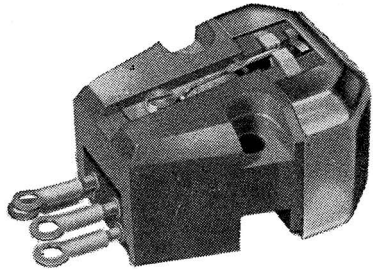
Products of Experience and Leadership



THE *Monitor*

DUAL CONCENTRIC

The Monitor Units, latest in the long line of Tannoy Dual Concentrlc Loudspeakers, mark another Tannoy achievement.
From the introduction of the first Dual Concentric Loudspeaker, Tannoy have won an established place as the quality standard for faithful reproduction.
The Monitor Units embody all the unique features of the earlier widely acclaimed 12″ and 15″ Units, but include the revolutionary Magnetic Shunt, and the H.F. Acoustic Balance Cavity, both important contributions to improved quality of reproduction.



THE

VARI-TWIN Mk II

Compatible Stereo Cartridge

This triumph of Tannoy research provides a magnetic stereo cartridge completely hum-free. Mounting in close proximity to motors and power amplifiers is now a practical proposition. The Vari-Twin Mk II is designed for microgroove stereophonic discs made to Westrex 45/45 system. It is, however, fully compatible and, with appropriate stylus, monaurul discs may be played. It can be mounted in any standard shell or arm suited to its low tracking pressure of 3-4 grms.

The tape recorder that's **WITH IT**

With what? Pretty-well everything! That's because Elizabethan *specialise* in making fine tape recorders.

So many developments in electronics today make it impossible for any but the specialist manufacturer to stay constantly in the lead. And only a specialist manufacturer like Elizabethan can offer these developments — four-track for example — at such a remarkably low price.

Elizabethan tape recorders are made in Britain. When you buy Elizabethan you're spending no money on import duty or shipping costs. You're simply paying for quality. For workmanship. *For reliability.* Hear the Elizabethan range and discover the best in tape recorder value. Your radio or electrical dealer will be glad to arrange a demonstration for you.

LOOK AT THESE FOR VALUE!

POPULAR de Luxe. Latest addition to the range. Supplied complete with microphone, tape, etc., for only **24** gns.

FT1 (illustrated). Wonderful four-track value. **34** gns. *complete*

FT3 Superb three speed, four-track, with every facility for the enthusiast. **45** gns. *complete*

MAJOR. For the man who demands professional standards. Optional as either twin-track or four-track. **65** gns.

Everyone's going

ELIZABETHAN (TAPE RECORDERS) LTD · ROMFORD · ESSEX

microphones

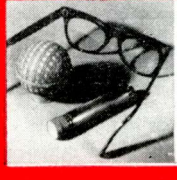
Did you know that dynamic microphones can be used in cold and hot, in dry and humid atmosphere, in wind and rain, by inexperienced people and children. Dynamic microphones are insensitive against shock and careless handling. These are the reasons why most tape recorder manufacturers, broadcast reporters, film units and others prefer to specify dynamic microphones.

AKG leads the world in the research and development of dynamic and condenser microphones. AKG owns hundreds of patents. Among these are many basic patents covering new principles of obtaining cardioid patterns, extended frequency range, low distortion and new designs.

C 60

Miniature Condenser Studio Microphone for T.V., film and stage. Uses either the well proved CK 28 cardioid or the CK 26 omnidirectional capsule. Weight only 2.1 ounces. Pictured with W 60 windscreen

new



K 50

Dynamic headphones for stereo and mono. 30...20 000 cps, 127 phon output per system. Requires only 0.156 milliwatts (=0.25 volts) per system for average listening level. No tight coupling to ear necessary. Used for true sound monitoring.

C 28

The Condenser Studio Microphone with cardioid and omnidirectional characteristics, with extension tubes to make the microphone inconspicous. 30...18 000 cps (cardioid) 30...30 000 cps (omni), 20 db front-back ratio, 1.3 millivolts per microbar at 200 ohms, impedance 50/200 ohms.

D 19 B

The golden Cardioid Microphone for highest fidelity requirements, with bass attenuation switch. Discrimination 15 db, impedance 60, 200 ohms or high, frequency range 40...16 000 cps. Most popular semi-professional microphone on the continent.

All Static and Dust completely removed from Your Records as they are played

THE

"Dust Bug"

AUTOMATIC GRAMOPHONE RECORD CLEANER

PATENT No. 817598

Instantly Fitted. Suitable for all Types of Record. Quality Improved. Surface Noise and Wear Reduced.

STANDARD MODEL FOR TRANSCRIPTION AND SINGLE RECORD PLAYERS.

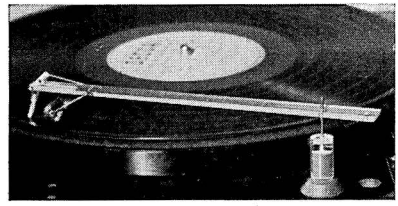
PRICES REDUCED **17/6** (Plus 5/10 purchase tax)

From Your Dealer, or

CECIL E. WATTS LTD.

(Sound Recording and Reproduction)

Darby House, Sunbury-on-Thames, Middx.



The Dust Bug may be placed in any convenient position around the turntable and the adjustable pin of the pillar raised if necessary so that the arm is approximately parallel to the surface of the record.

The use of the fluid dispenser should only provide a trace of dampness to the plush pad. It is not intended that any fluid should be transferred to the record. The slightly damp pad provides a leakage path for the discharge of any static in the record and assists in the collection of dust, etc.

The Dust Bug is the only record cleaner capable of thoroughly cleaning the groove without affecting the record surface in any way.

The

PARASTAT

(Regd.)

TREATMENT FOR L.P. RECORDS *(PATENTS APPLIED FOR)*

Buy where there is a "Parastat" service — Used by dealers who have the customer's interests at heart

This Machine serves three main purposes in the handling of all types of Gramophone Records.

1. It cleans simultaneously both sides of the entire surface of the record (including the label), and removes every particle of dust or foreign matter from the grooves in less than ten seconds.
2. Renders the record permanently inert to all Static charges induced by any means, leaving no trace on either groove or record surface.
3. Reduces the coefficient of friction between stylus and groove wall at all points of violent acceleration reducing tracing distortion wear and surface noise.

Jason

LEADERSHIP IS MAINTAINED

Since the first Jason F.M. Tuner Kit came into being (countless thousands have been sold and are still selling) the company have extended into ever wider fields of hi-fi activity. Their name has come to stand for good design and quality above everything. The Stereo/Mono Amplifier J.2-10 mk.111 is unsurpassed, for wherever a good amplifier is needed, be it with tape-deck, modern small output stereo P.U., radio or any other source of signal. The Jason TV Sound/FM Switched Tuner is another high-light in the Jason Programme which includes tuners to match the J.2-10 mk. 111 as well as kits for building stereo amps and various types of tuners. JASON TEST EQUIPMENT in kit form is yet one more success. Here keen amateur and professional alike, are offered such things as Audio Signal Generator, Oscilloscope, Crystal Controlled Calibrator, Wobbulator, Power Packs and Voltmeter built or in kit form. Unusually copious and interesting literature is available free on request from your stockist or direct. JASON LEADERSHIP IS TRULY MAINTAINED—YOU CANNOT BUY BETTER.

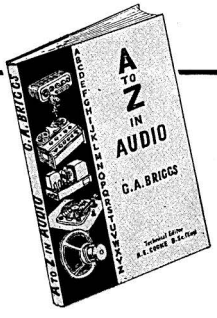
A 'sound' QUINTET



A to Z IN AUDIO

by **G. A. BRIGGS**

Technical Editor R. E. Cooke, B.Sc. (Eng.)

Published November 25th, 1960. 224 Pages, 160 illustrations (of which 110 are original). Fine art paper. Cloth bound. A new book presenting about 400 technical words and subjects relating directly or indirectly to Audio are explained and commented upon in non-technical terms, and occasionally in lighter vein. Many facts and figures about Loudspeakers, Pickups, Sound Recording, and Reproduction, Record Players, Tape Recorders, Television. Transistors, etc., are included, thus providing a handy book of reference.

BEAUTY and the BEST
of HI-FI equipment at LARGS

To appreciate the beauty and truth that only high fidelity can bring to sound reproduction you should come to LARGS of Holborn. Here you can listen in great comfort and make your choice of the best equipment. Our COMPARATOR will assist you in this. It is of our own design, and is almost infinitely selective. At the touch of a switch you can hear every possible combination of equipment in our extensive stock.
Another unique service at LARGS is the TAILAGRAM—a tailor-made radiogram fitted with equipment of your own selection, designed and finished to your own choice.

***send for your FREE copy* "THE MODERN APPROACH TO MUSIC IN THE HOME"**

This full-colour brochure will assist the beginner in understanding true Hi-Fi and the difference between monaural and stereo. The brochure also details our "TAILAGRAM", the tailor-made radiogram, a personal service that only Largs can give.
Whether you are an expert or a beginner, we feel sure you will enjoy this brochure.
Just your name and address on a postcard—a copy awaits you.

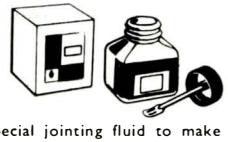
Special Emitape Features

* Anti-static
* High sensitivity
* Low 'print-through' factor
* P.V.C. Leader and Trailer strip fitted to all but 'Message' spools
* In spool sizes for all tape recorders
* Metallic 'Auto Stop' foil fitted to all 44, 88 and 99 spools except 'Message'

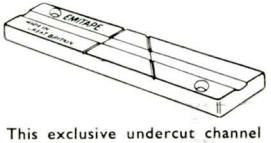
Joint and edit your tape the professional way— with EMITAPE accessories

JOINTING COMPOUNDS AP 35 for C.A.-base Tape and AP 77 for P.V.C.-base Tape



Special jointing fluid to make a permanent welded joint when splicing either P.V.C. or cellulose acetate base magnetic recording tape. **7/6**

EMITAPE JOINTING BLOCK AP 123



This exclusive undercut channel holds the tape fast, enabling you to cut it cleanly at an angle of 45° or 90°. **10/6**

NON-MAGNETIC SCISSORS AP 39

These scissors, made from non-ferrous metal, enable recorded tape to be cut for splicing or editing purposes without magnetising the tape. This ensures a silent joint. **16/-**

P.V.C. LEADER TAPES AP 38/1 to 38/6

This range of coloured tapes means you can insert colour code references for quick identification and indexing purposes in a reel of recorded tape. Colours: White, Red, Yellow, Blue, Orange, Green. **4/6** a reel.

JOINTING TAPE AP 103

Specially prepared adhesive jointing tape for simple and quick splicing and editing of magnetic recording tape. In handy plastic containers. **7/6**

Metallic Stop Foil AP 125

Sufficient for 50 tapes. In handy plastic container. **6/6**

ACCESSORY KIT AP 124

Holds 3 spools of leader, 1 spool of jointing tape, 1 spool of stop-foil, Emitape jointing block, two cutters and full instructions. Packed in a plastic rack (room for 7 spools). Specially designed for the workbench. **37/6**

EMICASE

Polystyrene container. Solves storage problems, protects spools from dust and allows easy identification of leader tapes. 7"—**4/-**, 5¾"—**3/6**, 5"—**3/6**

EMPTY PLASTIC SPOOLS IN CARTONS

Full range of empty plastic spools for programme storage of recorded tapes or for special mailing purposes.

AP 93 3"	3/-
AP 93N 3¼"	3/-
AP 85 5"	4/6
AP 89 5¾"	4/6
AP 87 7"	5/-
AP 118 8¼" Metal Spool ...	12/6

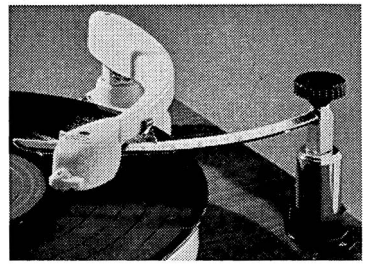
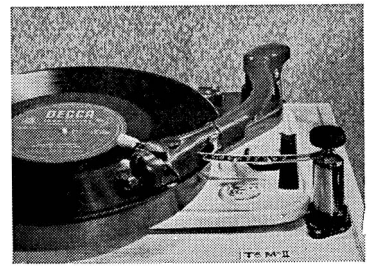
AURIOL

Gramophone Pick-up Controls





No matter what combination of equipment is selected for the playing of gramophone records it will not be complete without an AURIOL pickup control. This piece of precision equipment is designed for use with every model of pickup arm and provides the complete answer to the problem of handling the pickup without risk of damaging the playing surface of the record, or the pickup.
The stylus can be instantly positioned within an accuracy of 1–2 micro-grooves anywhere across the record including the first groove and the pickup may then be automatically lowered under pneumatic control at an adjustable preset speed which provides positive, cushioned contact. At any position across the record the pickup can be raised with the stylus being lifted vertically and cleanly out of the groove. At no time is it possible to drop the pickup on to the record!
The control is exhibited by the Council of Industrial Design at the Design Centre, London, and has been acclaimed by many leading critics including:—

Burnett James—Gramophone Record Review
". . . This is quite obviously the only sane method yet devised of dealing with the problem of the ubiquitous recital record . . . I use one with a BJ 'Super 90' arm and I have come to regard it as an essential piece of equipment."

R. L. West—Hi-Fi News Test Report
". . . Although the Connoisseur pickup is a very easy one to handle, used with an AURIOL it was even easier and it was impossible to damage either pickup or record."

P. Wilson, M.A.—The Gramophone
". . . For a long time we have all been aware that one of the disadvantages of LP records is the difficulty of picking out any particular passage and placing the pickup there positively and gently, or vice versa, of lifting the pickup from the middle of the record. The AURIOL solves that problem. Is its price such as one can afford? You can answer that yourself bearing in mind that an expensive record can be ruined by a single mishap in placing a pickup."

Patented and proved in use throughout the world, these controls are guaranteed to give long, trouble free service.

Standard model for single record players only — **PRICE £3.3.0**

Mk. II model for auto-changer/manual players also— **PRICE £3.16.8**

A standard indexing clip is supplied to suit $\frac{3}{8}$" (9.6 mm round arms. Other arms to be specified.

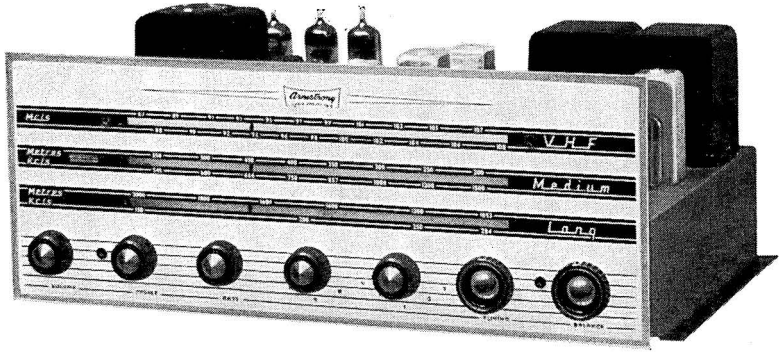
COMPACT HI-FI

by Armstrong



STEREO 12 Mk.2 — 42 GNS

TUNER-AMPLIFIER CHASSIS

The Stereo 12 Mk. 2 is a new and improved version of the famous Stereo-Twelve. It is the most complete chassis ever produced combining AM and FM Tuners, a comprehensive Control Unit and two High Fidelity Amplifiers in one compact unit. Compare the features and specification of each section with tuners and amplifiers sold separately and then compare the cost.

★ AM TUNER

Ferrite rod aerial, unique 2nd IF stage and efficient AVC provide good continental reception. Miniature tuning indicator.

★ FM TUNER

High Fidelity tuner covering the full VHF band (87–108 *mc/s*). *Automatic frequency control ensures complete stability and easy tuning.*

★ STEREO CONTROL UNIT

Separate bass and treble controls. Wide range balance control. Inputs for all pick-ups tape record and playback. Booster unit available for low output pick-ups. Stereo radio, input.

★ TWO HI-FI AMPLIFIERS

Each amplifier provides 8 *watts push-pull output,* 16 *watts total for mono and stereo. Frequency response* 20–30,000 *c.p.s.* ±2*bB.*

We specialise in the manufacture of high quality tuner-amplifier chassis in addition to our normal range of separate tuners and amplifiers. Other compact chassis available: Stereo 55, 32 guineas; Jubilee Mk. 2, 29 guineas; AF208, 22 guineas.

ARMSTRONG WIRELESS & TELEVISION CO. LTD., WARLTERS ROAD, HOLLOWAY, LONDON, N.7. NORTH 3213

Reflectograph

with instant comparison between input and recorded signals

Here is a tape-recorder which is easy to operate, yet contains refinements normally provided only in costly professional machines. This is the ideal recorder for the high fidelity enthusiast or musician whose requirements demand recordings of library or studio quality.

The separate record and playback heads and amplifiers controlled by the Tape-Input switch enables you to compare, instantly, the input signal with the signal on the tape *whilst the recording is being made.* Thus, you can rapidly determine whether to record at 7½ or 3¾ i.p.s. and monitor the recording through the built-in Goodmans loudspeaker. Editing is simplified by the variable speed, single, fast wind control. 3,600 ft. of tape on an 8½" reel can be wound in two minutes—1,200 ft. in 45 seconds.

Some other outstanding features of the Reflectograph are: slimline duotone record level meter; 2 tone controls, 2 volume controls, 2 inputs, 2 outputs; equalisation for 2 speeds; knobs with calibrated skirts; no belts in the tape drive mechanism; a realistic performance specification.

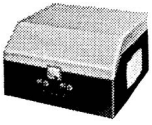
An expert's opinion

" . . . beautiful styling, with the satin finish instrument panel . . . first is the very smooth and level response in the deep base. I know of no other recorder that can equal the Reflectograph in this respect."

P. Wilson
Technical Editor of *'The Gramophone'*

Write for fully illustrated leaflet, or better still, go to your Reflectograph dealer and see for yourself the care that has been lavished on every detail. Then try it for yourself and you will be convinced that this is the recorder you have always wanted.

Cases for Reflectograph Recorders



Type CCA is a close-fitting wooden case covered in two-tone storvine with polished nickel fittings and detachable lid.

Type CCB is aluminium framed, covered in blue/grey lionide with black leather reinforced corners. The inside is lined with velveteen with space for accessories.

QUALITY AMPLIFICATION

When everything is advertised as 'Hi-Fi', we prefer to revert to the term 'Quality Amplification', which implies that the equipment is designed to produce the closest approach to realism obtainable under normal listening conditions. As manufacturers of the world's finest sound equipment for radio, recording and reproducing since 1931, and contractors to the B.B.C., we offer a range of tuners, amplifiers also loudspeakers for the perfectionist. Our export division can ship to any part of the world, and we are represented by enthusiastic agents in most countries.

May we send you details of our latest products?

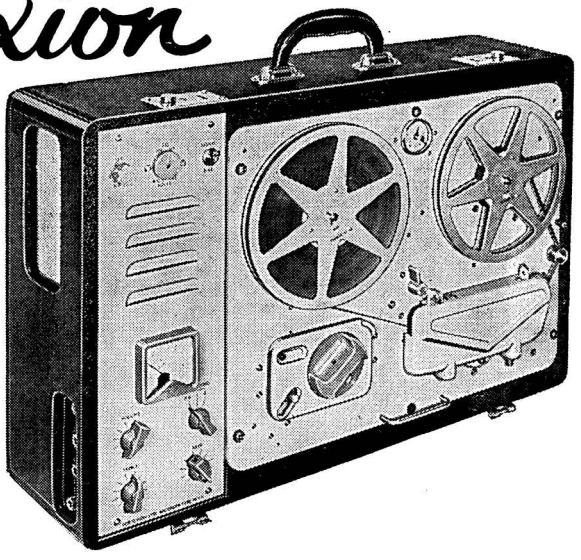
Vortexion

The W.V.B. recorder has an additional amplifier and head with provision for "before" and "after" record monitoring while the recording is in progress, and this also has echo facilities.
The W.V.A. recorder has provision for a plug in stereo head and can be supplied with this and stereo playback pre-amplifiers with equalisation each having an output of 1 volt from a cathode follower. This is type W.V.A/S.



TWELVE-CHANNEL ELECTRONIC MIXER

This is similar to the 4-channel, but is fitted with 12 hermetically sealed controls, 12 balanced line microphone transformers potted in mu-metal boxes, and a mains transformer also potted in mu-metal. All components which can affect noise are tested and selected before insertion. It is supplied in standard steel case or 7 inch rack panel.

30/50 WATT AMPLIFIER

Gives 30 watts continuous signal and 50 watts peak Audio. With voice coil feedback distortion is under 0.1%, and when arranged for tertiary feedback and 100 volt line it is under 0.15%. The hum and noise is better than —85 dB referred to 30 watt.
It is available in our standard steel case with Baxendale tone controls and up to 4 mixed inputs, which may be balanced line 30 ohm microphones or equalised P.U.s to choice.

120/200 WATT AMPLIFIER

Will deliver 120 watts continuous signal and over 200 watts peak Audio. It is completely stable with any type of load and may be used to drive motors or other devices to over 120 watts at frequencies from 20,000 down to 30 cps in standard form or other frequencies to order. The distortion is less than 0.2% and the noise level —95 dB. A floating series parallel output is provided for 100—120 v. or 200—240 v. and this cool running amplifier occupies $12\frac{1}{4}$ inches of standard rack space by 11 inches deep. Weight 60 lb.
