A unique cleaning, lubrication and protection treatment for relay and other non-wiping switch contacts, edge connectors etc, and other contacts requiring only a thin film of protective lubricant. For very dirty contacts use a solvent first. For heavy duty contacts especially where arcing occurs the treatment should be followed up with an aerosol contact lubricant. Supplied in packets containing 20 strips.

Order Code	Type	Price each
FM79L	Cleaning Strips	£1.28

Cleaning Pads

Solvent impregnated pads for cleaning the edge connectors of printed circuit boards and other delicate items. Contains isopropanol and demineralised water. Supplied as two sachets with one Pad in each sachet.

Order Code	Type	Price each
FM81C	Safe Pads Sachet	49p

Safecleans

An anti-static cleaner particularly for VDU and TV screens, etc. It is approved by manufacturers of anti-glare coatings. Used in conjunction with Safewipes it removes dust, dirt, finger marks and nicotine stains whilst at the same time eliminating static charges. This reduces eye-strain and errors caused by a blurred display. It would also be most useful for cleaning the glass of photocopiers, microfilm readers and lenses, and will also remove typewriter ribbon ink from the hands. Supplied in 250ml aerosol can.

Order Code	Type	Price each
YK91Y	Safecleans	£4.49

Safebuds

Small cotton buds on sticks to used with Safecleans for awkward or fiddly cleaning jobs. 150mm in length. Supplied in packs of ten.

Order Code	Type	Price each
YK98G	Data Buds Pk of 10	24p

Safewipe

Lint free cotton squares 230 x 230mm, which are used with Safecleans for cleaning VDU screens etc. Due to their lint free nature they can be safely used for very delicate cleaning operations on component parts of computer hardware. Supplied individually.

Order Code	Type	Price each
YK99H	Data Wipes	28p

WD-40 All Purpose Lubricant

The legendary WD-40 all-purpose light oil and solvent, which lubricates, penetrates, disperses and replaces water, frees tight components and forms a protective film over metal surfaces to protect them from oxidation. Electrically insulating, and resists tracking up to 12kV. Ideal for all automotive servicing applications; will drive damp out of HT leads and immediately restore normal engine running; protects battery terminals, cleans and recovers all types of electrical connections and switches. As a penetrating lubricant it frees any type of sticky mechanism. Use it to recover the smooth action of locks, padlocks, door catches; the joints of pliers, secateurs, shears, and switches of any type. Eliminates annoying squeaks in door, gate and car door hinges. Squirt WD-40 into your car locks to make them ice-proof in the winter. WD-40 is also a powerful cleaning agent, dissolving crayon, grease, tar, gum, adhesive and hard water deposits. It can be used to clean machine parts prior to maintenance or repair, and will even clean your hands afterwards! Supplied in aerosol cans in the following sizes: 100ml, 200ml and 400ml. Contains no CFC's.

Warning: contains 78% petroleum, extremely flammable. Flash point 43°C. Under no circumstances apply to hot surfaces or expose to a naked flame.

Order Code	Type	Price each
ZF08J	100ml WD-40	£1.49
ZF09K	200ml WD-40	£1.99
ZF10L	400ml WD-40	£2.99

Permagard 40 Electrolube

Similar to the popular 'WD40' type general purpose lubricant. As such Permagard lubricates, penetrates, disperses and replaces water, frees tight components, and forms a protective film over metal surfaces to protect them from the effects of oxidation. It is electrically insulating and ideal for automotive applications (for example, driving damp out of HT leads, preventing tracking between battery terminals due to condensation, cleaning and recovering electrical connections) and other electrical appliances which find themselves most used or stored out of doors. It is instrumental in recovering the reliability and smooth action of all types of switches. Supplied in 250g aerosol can.

Order Code	Type	Price each
YJ47B	Permagard 40	£2.49

Clear Mechanical Oil Electrolube

A multi-purpose, light machine oil of very high quality and performance. Ideal for delicate mechanisms, yet is designed to meet high temperature and extreme pressure conditions. Contains non-staining Molybdenum Disulphide additives for long life, tenacity and exceptional anti-wear protection. Supplied in 200ml aerosol can.

Order Code	Type	Price each
DM92A	Aerosol Mech Oil	£3.25

General Purpose Oil Electrolube

A high quality, low viscosity oil for general purpose use. Excellent lubrication and penetration characteristics. Supplied in 250ml can with dispensing spout.

Order Code	Type	Price each
JL76H	General Purpose Oil	£2.99

Dry Film Lubricant Electrolube

A special colourless dry lubricant (PTFE) with excellent anti-stick and mould release characteristics. Non-oily, extremely pure, chemically inert even at high temperatures. Does not affect plastics. Supplied in 200ml aerosol can. Uses pentane propellant

Order Code	Type	Price each
DM93B	Dry Film Lubricant	£5.99

Multi-Purpose Grease Electrolube

A general purpose grease for use in many mechanical and electro-mechanical applications. It has a wide temperature range and good lubrication and thermal properties. Supplied in a tube of 50ml.

Order Code	Type	Price each
FM80B	Tube of Grease	£1.10

Silicone Grease

A tube of good quality silicone grease for gear boxes and other moving parts of all types of racing models. All models should be kept well greased at all times.

Order Code	Type	Price each
JG00A	Silicone Grease	£1.20

Anti-Seize Paste

A corrosion inhibitor which, when applied, will help prevent the seizing of mechanical components due to progressive rusting or oxidation. The threads of screws, nuts and bolts are the most obvious candidates for such treatment. Supplied in a 2gm syringe.

Order Code	Type	Price each
FM82D	Syringe Anti-Seize	£1.39

Potting Compound

Encapsulate your circuits to make them damage and moisture proof. Our potting compound packs are available in four different sizes to minimise wastage. Final mix is black. All resins get hot as they are curing, but where delicate electronic components are concerned, it can be a considerable advantage if the cure temperature is low and our compound does exhibit a comparatively low exothermicity. The resin and hardener are supplied in a single airtight pack with each part separated by a clip. When you wish to use the compound simply remove the clip and grip each end of the pack and pull gently. The compound may then be mixed in the bag which takes about 5 minutes. Full instructions are supplied with the pack. The compound remains workable for about 90 minutes, and is completely cured in 24 hours at 20°C. May be stored for at least 12 months without detriment. Has very high electrical resistance. Available in four sizes: 50g size makes 28.7cc, 100g size makes 57.5cc. 250g size makes 143.7cc, 500g size makes 287.4cc.

Order Code	Type	Price each
FT17T	Potting Compnd 50g	£3.25
FT18U	Potting Compnd 100g	£3.75
FT19V	Potting Compnd 250g	£4.99
LQ02C A1	Potting Compnd 500g	£6.99

Flexible Rubber Sealant

A ready-to-use one part paste which when cured forms a tough flexible rubber seal. Adheres to most surfaces and has excellent electrical insulating and waterproofing properties. It is ideal for making watertight, electronic equipment used outdoors. Supplied in an 78gm tube with plunger.

Order Code	Type	Price each
YJ91Y	Flex Rubber Sealant	£3.99

Plastic Gloves

A pair of light, throw-away plastic gloves for those especially messy jobs, or when handling chemicals. Ideal for protecting the hands whilst handling ferric chloride and PCB's in the process of being etched. Supplied in pairs.

Order Code	Type	Price each
YJ48C	Plastic Gloves	49p

Riggers Gloves

These heavy duty 'riggers' gloves offer protection from sharp edges or rough surfaces when lifting or handling materials and are used on building sites, in warehouses, or gardens.

Order Code	Type	Price each
RJ04E	Gloves	£1.99

Funnel

A general purpose high density polyethylene funnel. Diameter, 120mm. Spout requires minimum 20mm diameter entry hole.

Order Code	Type	Price each
JU50E	Funnel 120mm	80p

Brass Brush

A wide wire brush with brass bristles and a hardwood handle. Bristle length: 25mm
Brush width: 35mm
Brush length (including handle): 280mm.

Order Code	Type	Price each
ZC34M	Wire Brush	99p

Dustbuster Black & Decker

A compact and lightweight cordless rechargeable vacuum cleaner. Ideal for cleaning in 'nooks and crannies' and cleaning up everyday spills. Supplied with wall-mounting housing and recharger.

Order Code	Type	Price each
RJ21X	DustBuster	£21.99

ADHESIVES

Superglue

A fast, high viscosity cyanoacrylate adhesive that has a handling time of 8 to 20 seconds for plastics and rubber and 20 to 40 seconds for metals.

Development of strength is very rapid, 50% of the ultimate strength is achieved in one hour. The durability of joints is good, particularly where plastic and rubber components are concerned. The adhesive is applied sparingly to one surface, usually one drop is sufficient, and the components are brought together quickly and correctly aligned. Sufficient hand pressure is applied to ensure the adhesive spreads into a thin film. The joint must not be disturbed or realigned until curing is achieved, normally in a few seconds. It is strongly recommended that polythene gloves are used when applying the adhesive. Available in 20g containers.

Order Code	Type	Price each
BA08J	Superglue 20g	£13.49

Fast Superglue

A very fast, low viscosity cyanoacrylate adhesive designed for bonding some of the more difficult rubbers and plastics, or when exceptionally fast cure is required. Usually one drop applied to one surface is sufficient – curing times are 1 to 5 seconds for rubber and plastics, and 5 to 10 seconds for metal.

Development of strength is very rapid, 50% of the ultimate strength is achieved in one hour. It is strongly recommended that polythene gloves are used when applying the adhesive. Available in 20g containers.

Order Code	Type	Price each
BA09K	Fast Superglue 20g	£13.75

Cyanoacrylate Adhesive

A one part adhesive which forms a very strong bond in a matter of seconds.

The adhesive is suitable for virtually all materials except polyethylene, polypropylene, Teflon (PTFE) and very porous surfaces. Apply the adhesive to one surface only. Align surfaces then bring them together quickly applying light finger pressure. For very small bond areas spread glue by lightly rubbing components together once or twice, but once bond is established do not break it (adhesive cures in a few seconds depending on material, but in general do not handle for 10 minutes).

Supplied in 3g tubes.

Order Code	Type	Price each
FL46A	Cyanoacrylate 3g	99p

Maplin

FOR TOP
QUALITY
& VALUE

Fax your orders to:
01702 553935

5-Pack Cyanoacrylate Adhesive

A single part, solvent free, rapid curing adhesive, that sets in seconds. The adhesive is applied sparingly to one surface (usually one drop is sufficient), the components are brought together and by applying sufficient hand pressure to ensure the adhesive spreads into a thin film, curing is achieved. The durability of joints is generally good, particularly, where plastics and rubber components are concerned. Supplied in packs of 5 x 5g bottles.

Order Code	Type	Price each
BA07H	Cyanoacrylate 5Pk	£16.49

Threadlock

An anaerobic adhesive designed for locking and sealing threaded metal parts. Handling strength is reached after 10 to 25 minutes and full strength after 24 hours. Supplied in a 10ml bottle.

Order Code	Type	Price each
BA13P	Threadlock	£3.99

Retainer

An anaerobic adhesive designed for retaining metal parts i.e. bushes, studs, bearings, etc. Applied straight from the bottle, the components are brought together (and by doing so air is excluded) and then, and only then, will the curing process commence. The components can be handled after 10 to 25 minutes and a full strength bond is reached after 24 hours. Supplied in a 10ml bottle.

Order Code	Type	Price each
BA12N	Retainer	£3.75

Thermal Bonding Compound

A metal-oxide loaded two part epoxy bonding system having excellent thermal conductivity while being electrically insulating. Ideal for bonding to heatsinks etc. Supplied in two syringes and applied in the ratio 3 parts of Part A (colour blue) to 1 part of Part B (colour cream). Contains 20ml total.

Order Code	Type	Price each
FA81C	Thermalbond Compound	£6.99

Fast Setting Epoxy Resin

A quick setting two part epoxy resin supplied in two 7.5g tubes (resin and hardener). The resin is suitable for use with metal, porcelain, glass, wood, stone and concrete. Surfaces to be joined should be clean and free from dust and grease. Smooth surfaces (such as metal) should be sandpapered to provide a 'key' for the adhesive. Resin will begin to set in 5 minutes, usable bonding strength reached in 15 to 60 minutes.

Order Code	Type	Price each
JL92A	Epoxy Resin 15g	99p

Fast Setting Clear Epoxy Resin

A quick setting two part epoxy resin that dries clear with superior strength. The joint is stronger than many other types of adhesive and is resistant to fuel, oil and water. Ideal for bonding metal, wood, china, glass, fibreglass and rigid plastic, the adhesive begins to harden in 4 to 5 minutes. Supplied in two tubes or bottles and in combined weights of 28g, 112g, and 224g packs. A slower setting version is available that has a higher strength, the setting time being half to one hour, available only in 168g packs.

Order Code	Type	Price each
KC17T	Speed Epoxy 28g	£3.25
KC19V	Speed Epoxy 112g	£6.49
KC20W	Speed Epoxy 224g	£7.99
KC21X	One Hour Epoxy 168g	£7.25

Araldite Rapid

A quick setting version of the famous two part epoxy resin glue made by Araldite. Suitable for bonding almost all materials in common use; metals, wood, rubber, earthenware, glass and most plastics except polythene. Araldite sets with virtually no shrinkage and joints are resistant to chemical attack and provide a seal which is impervious to moisture, electrically insulating and a protection against electrolytic corrosion. Supplied in two 16gm tubes, one containing the resin and one the hardener. The tubes are supplied in a pack with detailed instructions.

Order Code	Type	Price each
FL44X	Araldite Rapid	£3.99

Extra-Fast-Setting Adhesive

A two part epoxy resin adhesive that sets in 3 to 5 minutes. Supplied in a 3.5gm sachet simply cut off the end and squeeze out. Sachet contains exactly the correct proportional amounts of the resin and hardener to ensure a perfect mix. Stir the two parts together with stick (supplied) and apply immediately to both surfaces to be bonded then hold tightly together for a few minutes. Within one hour bond reaches a considerable strength, but is not completely cured for 24 hours. Can also be used as a filler.

Order Code	Type	Price each
FL45Y	Double Bubble Sachet	89p

Double Bead Extra Fast Epoxy Resin

The easy way to use extra-fast setting epoxy adhesive. Two syringes, containing equal amounts of resin and hardener, are used to dispense equal amounts for mixing and give 25ml of mixed adhesive. The adhesive sets in 3 to 5 minutes and reaches a working strength in about 30 minutes. Suitable for bonding a wide variety of materials such as metals, plastics, wood, ceramics and concrete, and for filling gaps and voids.

Order Code	Type	Price each
BA11M	Twin Syringe Epoxy	£2.99

means fast service and **LOW** prices!

COMPARE OUR PRICE & QUALITY – SAVE MONEY TODAY!

Adhesive Spreader/Mixer

A useful plastic tool for spreading and mixing adhesive, suitable for use with most adhesives, such as contact adhesive and epoxy resin. Length, 70mm. Spreader width, 13mm.

Order Code	Type	Price each
JU49D	Glue Spreader	10p

ADHESIVE TAPES

Paper Masking Tapes

A general purpose masking tape with a sticky backing, ideal for protecting areas prior to painting, spraying etc. Available in two widths 19mm and 25mm, both in roll lengths of 25m and 50m.

Order Code	Type	Price each
BZ05F	19 Masking Tape 25M	59p
DF17T	19 Masking Tape 50M	85p
BZ06G	25 Masking Tape 25M	85p
DF18U	25 Masking Tape 50M	£1.00

PVC Insulation Tape

Strong, self-adhesive flame resistant PVC insulation tape. Width: 3/4 in (19mm). Length: all colours including black: 4.6m reel. Alternative black only: 20m reel. Breakdown voltage: 7500V. Insulation resistance: 10¹⁴Ω/cm. Thickness: 0.15mm. VDE Approved. Available in Black, Blue, Green, Red, White and Yellow.

Order Code	Type	Price each
FM84F	20m Black PVC Tape	89p
FT20W	4.6m Black PVC Tape	30p
FT21X	4.6m Blue PVC Tape	30p
FT22Y	4.6m Green PVC Tape	30p
FT23A	4.6m Red PVC Tape	30p
FT24B	4.6m White PVC Tape	30p
FT25C	4.6m Yellow PVC Tape	30p

Gaffer Tape

A very tough, self-adhesive, synthetic fibre tape which can be used for sealing boxes, binding cables or securing them, joining carpets, temporary repairs and the like. It is 50mm wide and is supplied on 50m long reels. Available in silver, black and white.

Order Code	Type	Price each
KW31J	A1 Gaffer Tape Black	£4.65
KW33L	A1 Gaffer Tape Silver	£4.65
KW32K	A1 Gaffer Tape White	£4.65

Aluminium Tape

Ewan James

A self-adhesive, 30µm thick aluminium tape 25mm wide which has many applications, particularly within the field of electronics and electrics. For example, it can be used for PCB repair, screening enclosures and circuits susceptible to RFI, and when applied to windows it can be used as a very cost-effective 'broken window detector' for security systems. Supplied on a reel containing 4.6m of tape.

Order Code	Type	Price each
KW30H	Aluminium Tape	£1.60

Self-Amalgamating Tape

A very useful derivative of insulating tape which can be used for waterproofing connections. To use, the top protective layer is peeled off and the rubbery self-amalgamating tape underneath is wrapped tightly around the connection to be waterproofed. Eventually, the layers of this tape will merge together and create a waterproof seal. This tape is highly recommended for automotive work and also aerial installations, particularly those for satellite TV where cables enter the LNB and polariser. The tape is in black, 19mm wide and is supplied on 10m reels.

Order Code	Type	Price each
KW29G	Self Amalgamate Tape	£4.25

P.T.F.E. Thread Sealing Tape

12mm wide white P.T.F.E. screw thread sealing tape for threading pipe joints, e.g. water, gas, etc.. Thickness of tape is 0.075mm. Supplied on 12m rolls.

Order Code	Type	Price each
RJ45Y	PTFE Thread Tape	30p

METAL AND VOLTAGE DETECTOR

A very useful instrument for tracing pipes, detecting nails and screws etc. in walls. In addition to detecting metals it can also detect electric cables that are connected to the mains even if no current is flowing. To distinguish between metal objects and mains cables an LED indicator and buzzer will give a continuous tone and light for metal objects and an intermittent tone and flashing light for mains cable. The detector is housed in a tough plastic case and is powered by one 9V PP3 battery (not supplied).

Order Code	Type	Price each
YP30H	Metal/Volt Detector	£6.99

QUICK MAINS CONNECTOR

A completely safe way of connecting mains cables to the power supply without having to fit plugs. The wire ends of the cable simply fit under three clips which are exposed when the lid is lifted. With lid lifted it is not possible to touch any live part. When lid is closed all live parts are fully enclosed and mains is connected to the clips and thus to the cable.

Specification

Max rating: 13A, 240V AC
Size: 127 x 67 x 51mm high.
Weight: 340gms (12oz)

Order Code	Type	Price each
YB21X	Quick Mains Connectr	£10.99

AMATEUR RADIO BOOKS

Amateur Radio for Beginners – How to Discover the Hobby

by Victor Brand G3JNB

Amateur Radio is a hobby which is enjoyed by over one and a half million people. These people are on air from their homes, clubs and schools worldwide. Designed for the absolute beginner, this book could easily be enjoyed by another million. As well as extolling the virtues of 'Ham' radio, the book goes on to explain how to make your first receiver

and progress through to the acquisition of a licence. The grades of Novice (class A or B) licence are described, as is the help provided by R.S.G.B. to obtain the licence. The support and benefits derived from being in a club are described. Hopefully, this will go some way to shattering the common fallacy that 'Ham' radio is some kind of lonely attic hobby. For many people the discovery of amateur radio has been the beginning of an entirely new and unique hobby. They have derived much from its pursuit and have gained knowledge of electronics in the process. Whatever the age, or reason this book will ensure the absolute beginner has all the information needed to join the worldwide Amateur radio family. 1991. 65 pages, 210 x 145mm, illustrated.

Order Code	Type	Price each
WT69A	Amtr Radio Beginners	£3.50 NV

An Introduction to Amateur Radio

by I.D. Poole

Amateur radio is a unique and fascinating hobby which has attracted thousands of people since it began at the turn of the century. It encompasses a wide variety of subjects from the historical to the latest technology, and from operating to construction. In fact there is always some aspect of the hobby to interest people.

This book gives the newcomer a comprehensive and easy to understand guide through the subject so that the reader can gain the most from the hobby. It then remains an essential reference volume to be used over and over. Topics include the basic aspect of the hobby, such as operating procedures, jargon and setting up a station. Technical topics covered include propagation, receivers, transmitters and aerials etc. 1989. 160 pages 176 x 112mm, illustrated.

Order Code	Type	Price each
WS50E	Intro Amateur Radio	£3.50 NV

Setting Up An Amateur Radio Station

by I.D. Poole

The aim of this book is to give guidance on the decisions which have to be made when setting up any amateur radio or short wave listening station. Often, the experience which is needed is learned by making mistakes, but this can be expensive. To help overcome this, the book gives advice on many aspects of setting up and running an efficient station, and then proceeds by discussing the steps that need to be taken in gaining a full transmitting licence.

The topics covered include: the equipment needed; setting up the station; which aerials to use; methods of construction; test equipment; and preparing for the licence. 1991. 94 pages. 178 x 111mm, illustrated.

Order Code	Type	Price each
WT74R	Set Up Radio Station	£3.95 NV

Projects for Radio Amateurs and S.W.L.s

by R. A. Penfold

This book describes a number of electronic circuits, most of which are quite simple, which can be used to enhance the performance of most shortwave radio systems. Even those who are not interested in building receivers and transmitters are often keen to experiment with home built aerials, and to construct some accessories for their ready-made equipment. The circuits include an aerial tuning unit, audio filters (notch and a high performance bandpass type), a volume expander, add-on B.F.O, simple active aerial, a C.W./RTTY decoder and other useful projects. Where appropriate there are details of how to set up and use the equipment, plus notes on any unusual aspects of construction. No precise constructional details are provided, as some experience of electronic construction is assumed. Some of the projects are very simple, and should be within the capabilities of practically anyone who has previously built one or two simple projects, and providing the experience to progress to the more complex circuits. 1992. 92 pages. 178 x 111mm, illustrated.

Order Code	Type	Price each
WZ69A	Prjts For Radio Hams	£3.95 NV

An Introduction to VHF/UHF for Radio Amateurs

by I.D. Poole

The increase in the use of the VHF and UHF bands is now one of the largest growth areas within amateur radio. In fact, most radio amateurs have equipment for use on these bands, either for local contacts or simply to exploit some of the many interesting and challenging aspects of so

doing. This book covers the essentials required to gain the most from using the VHF and UHF bands. As such it will be of use to both the newcomer and the more experienced enthusiast alike.

Topics include propagation, the bands and channels, aerials, receivers, transmitters, and a special chapter on scanners. In addition, operation of repeaters and mobiles is included together with DXing and data modes, and a section on packet radio. 1990. 110 pages. 178 x 111mm, illustrated.

Order Code	Type	Price each
WS93B	Intro VHF/UHF Radio	£3.50 NV

An Introduction to Amateur Communications Satellites

by A. Pickard

There are a large number of amateur communications satellites around the world, traversing the globe continuously and they can be tracked and their signals received with relatively inexpensive equipment. This equipment can be connected to a home computer such as the BBC micro or an IBM compatible PC for decoding the signal. This book describes several currently available systems, their connection to an appropriate computer and how they can be operated with suitable software.

The results of decoding signals containing such information as telemetry data and weather pictures are demonstrated and will hopefully encourage the reader to become actively involved in pursuing this fascinating activity, which embraces many aspects of electronics, engineering and science as well as being an encapsulation of information technology. 1990. 102 pages, 178 x 110mm, illustrated.

Order Code	Type	Price each
WT24B	Intro Amtr Comm Sat	£3.95 NV

An Introduction to Satellite Communications

NEW!

by F. A. Wilson

Satellites have become a very important part of our everyday life. Not only are they instrumental in providing us with a plethora of additional television programmes, but they are also vital in the fields of communications and navigation. There are literally hundreds of them circling the earth already, and there are many more planned to join them.

The aim of this book is to provide the reader with an insight into the workings of satellites – the technical level of the book is moderate. It has not been written with the expert in mind but is intended for the general electronics engineer or enthusiast who wishes to obtain a basic understanding of the technology. 1993. 240 pages. 198 x 129mm, illustrated.

NEWNES PRACTICAL RF HANDBOOK

NEW

by Ian Hickman

This book is primarily intended to help both the amateur and professional increase their knowledge and expertise in the field of RF engineering. The book is not intended to be a textbook, and lengthy derivation of formulae have been omitted. Text covers the portion of the RF spectrum up to 1000MHz. This is used for a wide variety of services, including sound broadcasting and television, commercial, professional, government and military communications, telemetry and telecontrol, radio telex and facsimile and amateur radio. 1993. 280 pages. 232 x 155mm, illustrated.

GREAT VALUE!
£16.95 ^{NV}
AA15R

The Aviation Enthusiast's Handbook

by Kevin M. Fox

Plane spotting is a popular and growing hobby, but there has never been one totally comprehensive guide and reference to the pastime. This book fills the gap. Packed with tips, advice and hints, the book includes detailed information on aircraft operations, aircraft types, propulsion and avionics, air-traffic control, optics, computer systems, aviation and weather as well as numerous appendices and radio frequency databases. One important feature of the book is a section which covers the complete HF/VHF and UHF range of airbands.

If you are an avid plane spotter, then this handbook, presented in a non-technical and easily digestible format, is the one book you will not want to be without. 1991. 250 pages. 232 x 155mm, illustrated.

WT95D	Aviation Handbook	£9.95 NV

Radio Amateur and Listener's Pocket Book

by Steve Money G3FZX

A unique collection of useful and intriguing data for the traditional and modern radio amateur and the hi-tech listener. Familiar radio topics are probably covered more concisely than in any similar book (for example, abbreviations and codes, symbols, formulae and frequencies) but the most interesting sections of the book deal with the newer features of the ham's world;

AMTOR, packet radio, slow scan TV, computer decoding, airband and maritime glossaries and so on. Radio amateurs, 'hackers' and monitors will all find this book the best single-source, quick reference guide to an increasingly wide-ranging subject. 1987. 160 pages. 196 x 95mm, illustrated.

Order Code	Type	Price each
WP91Y	Radio Ams Pocket Bk	£10.95 NV

Radio Communication Handbook

5th Edition
Radio Society of Great Britain

The most authoritative reference manual for the radio amateur. Completely revised and up-dated, often in parts entirely re-written, its many pages cover all aspects of radio from the fundamentals of Ohm's Law to design and construction of high powered transmitters. Tending towards those who have an interest in low frequencies, i.e. under 30MHz, it also has practical information on VHF technology and equipment. Chapters include; principles, HF and VHF receivers, HF and VHF transmitters, RTTY, propagation, HF and VHF aerials, mobile and portable equipment, satellites, noise, interference and measurement. 1982. 808 pages. 248 x 182mm, illustrated.

An Introduction to Radio Wave Propagation

by J.G. Lee

Radio wave propagation has its origins in the world of solar physics. The Sun's radiation provides the mechanism for the formation of the ionosphere. How this is done and how it provides long distance communication is carefully explained. Non-ionospheric propagation, including 'moonbounce' or satellite communications is covered as well. This book has been written with the average electronic hobbyist in mind. Technical language and mathematics have been kept to a minimum in order to present a broad, yet clear, picture of the subject. The radio amateur, as well as the short-wave listener, will find the explanations of the propagation phenomena which both experience in their pursuit of communications enjoyment. 1991. 124 pages, 178 x 111mm, illustrated.

Order Code	Type	Price each
WT48C	Intro Radio Wave Prp	£3.95 NV

Radio Amateurs Examination Manual

13th Edition

by G. L. Benbow G3HB

This highly informative manual is aimed at supplying all the knowledge required to become a radio amateur. The book covers all the technical subjects you need to know to pass the RAE examination, as well as general information about being an amateur and some example examination papers (with answers). The subjects covered include electrical theory, semiconductors, receivers and transmitters, measurements, propagation, antennas, and operating practices and procedures. Other sections cover mathematics, transmitter interference and licence conditions. Valid for 1994 examinations. 1992. 128 pages. 244 x 180mm, illustrated.

WP87U	Radio Ams Exam Manul	£6.99 NV

The Morse Code for Radio Amateurs

Eight Edition by George Benbow G3HB

It is an international requirement that every person holding a radio amateur licence shall have satisfied the licence-issuing authority of their country that they have a sound knowledge of the Morse Code. Slow morse practice transmissions are radiated daily on frequencies in the amateur bands. The book shows the morse alphabet, procedures and includes 9 do-it-yourself exercises. 1992. 28 pages, 244 x 183mm, illustrated.

Order Code	Type	Price each
WT36P	Morse Code AM Radio	£3.99 NV

The Secret of Learning Morse Code

by Mark Francis

Morse code is the oldest means of radio communication and yet is also one of the most reliable. It is not until you come to study the code that you begin to realise just how effective it can be. When voice communication fails, owing to weak signals or interference, morse code invariably gets through.

Yet the equipment required is the most basic of all. There are many circumstances, both at professional and amateur levels where these advantages are of paramount importance. Several amateur radio operators are still 100% morse code users. Not only do they find it ideal for long distance contacts with modest power and aerial systems, but they also enjoy the satisfaction and pleasure obtained from practising their skills as CW operators.

1989. 93 pages. 210 x 148mm, illustrated.

AMTOR; SSTV and FAX; packet radio; commercial decoders; controlling a radio with a computer; computer assisted circuit development and appendices. 1990. 363 pages. 214 x 138mm, illustrated.

VHF/UHF Manual

4th Edition
by G. R. Jessop, G6JP

A companion volume to the Radio Communication Handbook, this book is dedicated to the VHF/UHF enthusiast who uses frequencies above 30MHz. Its very detailed chapters guide the reader from first principles through to the design and testing of quality VHF and UHF transmitters and receivers. Included in the book are chapters on propagation, receivers, transmitters, filters, aerials, microwave operation, space communication and integrated equipment.

1983. 526 pages. 248 x 184mm, illustrated.

Introduction to Antenna Theory

by H.C. Wright

Any conducting body exposed to radio waves will have electric currents induced in it and, conversely, any conductor carrying varying electric currents will radiate energy in the form of radio waves. Thus an antenna can take any form from a bedstead to a tin-tack and, while these particular items are seldom encountered in practice, the experimenter can test ideas and innovations with little more than bent copper wire, particularly when it comes to TV and CB wavelengths. This book illustrates the basic concepts relevant to receiving and transmitting antenna in a manner which emphasises the mechanism involved, supported by copious diagrams and illustrations which help to reduce mathematics to a minimum.

1987. 86 pages. 178 x 110mm, illustrated.

Order Code	Type	Price each
WP78K	Intro Antenna Theory	£2.95 NV

Experimental Antenna Topics

by H.C. Wright

Although nearly a century has passed since Marconi's first demonstrations of radio communication, there is still research and experiment to be carried out in the field of antenna design and behaviour. The aim of the experimenter will be to make a measurement or confirm a principle, and this

can be done with relatively fragile, short-lived apparatus. Because of this, devices described in this book make liberal use of cardboard, cooking foil, plastic bottles, cat food tins, etc. These materials are, in general, cheap to obtain and easily worked with simple tools, encouraging the trial-and-error philosophy which leads to innovation and discovery. Although primarily a practical book with text closely supported by diagrams, some formulae which can be used by straightforward substitution and some simple graphs have also been included.

1990. 80 pages. 178 x 110mm, illustrated.

Practical Wire Antennas Effective H.F. Designs for the Radio Amateur

by John D. Heys
G3BDQ

Wire antennas offer one of the most cost-effective ways of putting out a good signal on the HF bands, and this practical guide to their construction has something to interest every amateur on a budget. Many different types are covered, ranging from simple dipoles to ingenious multi-wire systems, even underground antennas! Full details about feeding and matching are included, making each antenna easy to set up and use successfully.

Theory has been kept to a minimum – instead, the author has shared his years of experience in this field, offering down-to-earth advice that will be appreciated by beginners and enthusiasts alike. No-one who builds and uses wire antennas can afford to be without this handy guide.

1989. 100 pages, 244 x 184mm, illustrated.

Amateur Radio Operating Manual

3rd Edition
by R. J. Eckersley,
G4FTJ

Such is the pace of modern electronic and radio technology, that this book is now in its third edition. There have been many advances, notably in amateur satellites, packet radio and computer RTTY. This book gives the newcomer an excellent guide to the proper operating practices of all aspects of amateur radio. Chapters include; setting up a station, mobile and portable operation, slow-scan television, contests and eight appendices giving everything from foreign language contacts to international call signs.

1985. 204 pages. 245 x 182mm, illustrated.

Newnes Amateur Radio Computing Handbook

by Joe Pritchard

The widespread availability of small computers has changed the lives of radio enthusiasts. 'Old' modes of communication, such as morse code and even voice, have been joined by new, computer-based methods of communication. Computers are even used to predict which frequencies to use for the best results.

Contents include basic radio principles; basic computer principles; software for electronic design; logkeeping and QSL card software; satellite and geographical software; miscellaneous software; interfacing the computer to the radio; morse code; RTTY and ASCII;

25 Simple Indoor and Window Aerials

by E.M. Noll

For the short-wave listening enthusiast who may be living in a flat or similar accommodation where the use of external aerials is impossible, this book describes how one can install aerials in or around the room, ceiling, windows, attic, etc. – twenty-five different permutations are shown in detail. The book also shows how simple variations can be improved for optimum performance. Much information is given on the short-wave bands, aerial directivity, time zones, working dimensions etc. 1984. 64 pages. 178 x 110mm, illustrated.

HF Antennas for All Locations

2nd edition
by Les Moxon

The introduction of the 10, 18, and 24MHz bands in recent years has brought a lot of opportunities for amateur radio enthusiasts, as well as many problems. The worsening problem of interference, as well as the demand for smaller, less visible, antennas has resulted in an interest in small transmitting loops. The aerial designer is faced with the dilemma of whether to maximise gain or minimise interference. This second edition has been revised, updated and expanded and includes more novel antenna designs, including beams which cover more bands with fewer problems, no trap losses and better rejection of interference. A chapter provides a comprehensive review of ways to make antennas smaller, with particular emphasis on small transmitting loops. The book provides a wealth of practical information on the choice and construction of antennas to suit most locations and requirements, and will be an indispensable reference for the antenna experimenter and enthusiast. 1993. 322 pages. 245 x 186mm, illustrated.

Beam Antenna Handbook

by William I. Orr and Stuart D. Cowan

This handbook covers all aspects of HF and VHF Yagi antenna design. Information on construction, installation, testing and operation of these aerials is included along with the effects of element taper, mounting hardware and matching systems. The twelve chapters cover topics ranging from radiation and propagation antenna, transmission lines, matching the antenna to the line through to antenna test instruments. This is in addition to the many antenna designs that are featured in this book including computer derived designs for high gain antenna for the HF and VHF bands. Dimensions are conveniently provided in both English and metric measurements, along with scaling information that permits many designs to be used on frequencies outside the amateur bands. This attractively priced book is a must for all amateur radio enthusiasts. 1990. 272 pages. 233 x 186mm, illustrated. American book.

Simple Short Wave Receiver Construction

by Robert Penfold

Short Wave Radio is a fascinating hobby, and can be pursued for a minimal monetary outlay if you are prepared to undertake a bit of DIY, and the receivers described in this book can all be built at low cost. All the sets are easy to construct, full wiring diagrams, etc. are provided, and they are suitable for complete beginners. The receivers only require simple aerials, and do not need any complex alignment or other

difficult setting up procedures. Topics covered include: the broadcast bands and their characteristics; the amateur bands and their characteristics; the propagation of radio signals; simple aerials; making an earth connection; short wave crystal set; simple t.r.f. receivers; single sideband reception; and a direct conversion receiver. Contains everything you need to know in order to get started in this absorbing hobby. 1990. 88 pages, 178 x 111mm, illustrated.

Short Wave Superhet Receiver Construction

by R.A. Penfold

The basic short wave receiver described in this book is a superhet with separate mixer and oscillator stages, a ceramic filter for good selectivity and a simple audio amplifier which drives headphones. An optional BFO permits reception of CW and SSB, the main operating modes used for the amateur short wave bands. The receiver also include AGC. The remainder of the book describes a number of 'add on' enhancements. These consist of: input filter to improve image rejection; RF amplifier to boost sensitivity and image rejection; product detector for improved CW and SSB reception; higher powered audio output amplifier for loudspeaker; signal strength ('S') meter; audio CW filter; stabilised mains power supply. The fully expanded receiver provides excellent results from the broadcast and amateur bands, but remains relatively inexpensive to build. 1991. 80 pages, 78 x 111mm, illustrated.

Shortwave Listening Guidebook – 2nd Edition

by Harry L. Helms

It is a strange fact of life that in this age of satellite television and digital communications, that shortwave listening should still be a very popular hobby. So what makes a shortwave listener? Regardless of the particular frequencies or bands they listen to, SWLs are searching for something out of the ordinary - listening for signals that the general public does not normally receive. This book provides all the information that is required to become a successful SWL in a concise and non-technical way, and in a style that is very easy to read. The book is entertainingly written and not only provides an introduction and the requirements for SWLing, but includes a very informative history of the subject – well worth a read. 1993. 338 pages. 228 x 152mm, illustrated. American book.

AA53H	S/Wave List GuideBk	£17.50 NV

Short Wave International Frequency Handbook

by Bill Laver

Intended to be of particular interest to the European short wave listener, this guide covers all the stations that are capable of being heard in the Northern hemisphere. Some stations are low powered and will need good aerials and receivers, but under favourable conditions even modest set-ups will 'pull them in'. The guide's main objective is to quickly direct the listener to the frequency or band most likely to provide him with the kind of station that he is seeking. To many the SW band presents something of a mystery, pouring out a wide range of strange noises which at first convey no intelligible information whatsoever. Indeed, the newcomer can be excused for being somewhat overwhelmed at the wide range of signals to be heard, all apparently fighting for space. In fact the SW band is full of surprises and even the most experienced listener is frequently rewarded with a new station that he or she has never heard before. It helps to know where to start looking and so there is a real need for a guide such as this to the utility stations on the SW band, and to this end this book should more than fill the gap.

1993. 188 pages. 298 x 210mm, illustrated.

An Introduction to Scanners and Scanning

by I. D. Poole

Radio scanners are rapidly increasing in popularity, opening a whole new realm to shortwave listening. This book aims to cater for the new breed of scanner listener. Scanners are specifically designed for modern listening. They can be programmed to tune or scan over a number of preset frequencies and stop when they find a signal. By using this facility the receiver can be made to monitor several frequencies of interest. Topics covered in the book include: radio wave propagation; types of transmission which can be heard, how a scanner operates, aerials, the radio frequency spectrum (including a frequency list), operating procedures, broadcast bands, amateur radio, and citizen's band. In addition to this there is an appendix which includes a glossary of essential terminology and call sign prefix lists. This book will provide a useful reference to scanner listeners, those who own World Band Radios and anyone with an interest in shortwave listening of any description.

WZ62S	Intro To Scanners	£4.95 NV

of 3 TV services in the UK has now made the area centred around 200MHz available to many PMR users, and clearly the use of UHF will also be actively promoted by the DTI who will be anxious that the pressure be taken off the frequencies below 200MHz. And newly launched public telephone and satellite services will require more airwave space. Consequently the bands have gone through a major re-shuffle making it difficult to find some transmissions again because they have moved. Covers equipment requirements including aerials, the future of VHF/UHF communications, frequency guide to 26 to 225MHz, military aeronautical band of 225 to 399MHz, and a frequency guide from 399.9MHz to 47.2GHz. 1993. 156 pages. 296 x 210mm.

WT70M	VHF/UHF Freq Guide	£9.95 NV

The VHF/UHF DX Book

Edited by Ian White

Contacting stations in far-away places - 'working DX' - is one of amateur radio's greatest challenges, especially if you choose to do it on the VHF and UHF bands. The VHF and UHF bands can produce some truly exotic signals. These bands offer many different modes of propagation, and activity has increased so much that almost every DX opening is recognised and exploited. From the UK, amateurs have worked all over western and central Europe on 144MHz and 432MHz. Additionally 50MHz can cover the world at the height of the sunspot cycle. The aim of the book is to bring together the operating and the technical sides of VHF/UHF DX, as each needs the other. A station assembled with no technical knowledge can never be operated at full efficiency, and a technically good station is pointless if it is never used.

Order Code	Type	Price each
AA08J	The VHF/UHF DX Book	£18.00 NV

Scanners - a VHF/UHF Listener's Guide

by Peter Rouse GU1DKD

The first complete British guide to VHF/UHF listening. Subjects covered include the equipment, accessories and aerials, and explains basic radio theory, modes, and simplex and duplex transmission, installation and use. A most useful feature is the inclusion of full British wave-band charts from 26MHz to 1300MHz, including aviation, marine, amateur, emergency services, satellites (amateur, military, communication, navigation, weather, including the COSMOS and NASA Space Shuttle frequencies), cordless telephones, cellular radio, beacons, pagers, message handling, private mobile radio (PMR), radio microphones, telemetry, industrial, scientific and medical etc. Also explained is how to interpret what is being said when 'RT procedure' is being used.

All About VHF Amateur Radio

by William Orr

This handy, inexpensive VHF handbook has been written for the non-technical and ham enthusiast who wants to work on the 6m and above bands. The text, illustrations and general information is presented in an enjoyable and easily understood style, and provides valuable information covering all aspects of VHF radio. The book covers VHF bands and propagation; VHF repeaters; VHF moonbounce communication; amateur satellite communication; coaxial lines; VHF vertical and mobile antennas; VHF beam antennas; VHF interference. There are many suggestions for the DIYer for building vertical, mobile and beam antennas.

Order Code	Type	Price each
AA58N	VHF Amateur Handbook	£7.50 NV

The VHF/UHF Scanning Frequency Guide

Compiled by Bill Laver

The pressure on frequency space in the VHF/UHF bands, together with technological improvements, results in almost endless changes and amendments that have recently occurred. These include 25kHz channel stepping in both bands, requiring that many civil and RAF frequencies be reallocated. Similarly private mobile radio, due to increasing use which is now causing major overcrowding problems in the VHF band. The removal

Air Band Radio Handbook

Third Edition

by David J. Smith

Air band radio listening allows you to eavesdrop on the conversations between aircraft and those on the ground who control them, and is an increasingly popular and fascinating hobby. It not only assists in the recognition of aircraft flying overhead, but also provides an insight into the complex world of air-traffic control. The author, who is an air-traffic controller by profession, describes the types of air band radio available and how to use them. With the intricacies of air-traffic control and its jargon explained, you will be able to translate what you hear into what's actually going on over your head. The book also includes full appendices containing comprehensive, up-to-date lists of VHF, UHF and HF frequencies, call signs etc. This extensively revised and updated edition maintains the book's position as the indispensable guide to the hobby, and the essential companion for every air band radio enthusiast.

Marine UK Radio Frequency Guide

Compiled by **Bill Laver**

Produced for the benefit of the many enthusiasts who enjoy listening to marine radio transmissions, this book is entirely devoted to UK stations as it is felt that these provide the greatest interest for listeners in the British Isles. It is intended to be a handy reference book for the listener and is not a definitive manual, but contains information that has been taken from official publications and reference books. The frequencies cover both the VHF and short wave bands and to successfully monitor all those listed would require the use of two receivers, one for HF up to 30MHz and another to cover the marine band in the VHF segment to 174MHz. The information has been kept as concise as possible while providing the fullest details from the point of view of the listener. Channel numbers are also included for receivers, with which they are calibrated, mariners are more familiar with channels than frequencies, and coast stations usually direct ships to which channel to use, so you will need to know what they are. The information will fill a need that many have considered long overdue.

Order Code	Type	Price each
WT71N	Marine Freq Guide	£4.95 NV

International Radio Stations Guide

by **P. Shore**

A fully revised and updated edition which includes as much up-to-date information as possible, eliminating that which is no longer current or accurate. It is presented in a most readable way, and includes in many of the tables the town and country in which the radio station's transmitter is sited. The transmission frequency in kHz/MHz and/or wavelength in metres, plus the ERP in kW is listed. The book is divided into fifteen sections including listings of: worldwide short wave stations; medium wave stations in Europe, Middle East and Africa; and UK FM stations. There are listings of broadcasts in English, as well as useful information for SWL's such as time differences around the world, country codes, using the ISRG, choosing a short wave receiver and lots more.

Radio Systems for Technicians

by **D. C. Green**

This book provides a comprehensive coverage of the circuits and techniques used in modern radio communication systems and equipment. The BTEC scheme for the education of telecommunication technicians introduces the basic principles of radio systems in a unit intended for inclusion in certificate/diploma courses. This book has been written to provide a complete coverage of this unit. All the important aspects of radio engineering are covered from amplitude and frequency modulation, r.f. transmission lines, aerials and radio wave propagation, to the circuits and techniques used in modern radio receivers and transmitters and communication systems. A comprehensive text on radio communication systems is provided that should be eminently suitable for all non-advanced students of radio engineering.

The Setmakers

by **Keith Geddes in collaboration with Gordon Bussey**

This very enjoyable book tells of the British involvement in the development of radio and television, the colourful characters involved, which led to the enormous growth in radio in the 30s, and television in the 50s. This rapid growth was soon followed by an equally rapid fall, with the subsequent loss of famous household names in manufacturing. This change in fortunes left many in its wake and witnessed some hugely expensive casualties. The book discusses the interdependence of setmakers and broadcasting, and in particular the very close liaison between the setmakers and the BBC. This liaison led to major technological developments in Britain, not least of all, television, which by 1937, Britain was showing to the world. The book is very much up to date, as it goes on to tell the story of the chaos surrounding the introduction of satellite TV in the UK.

This profusely illustrated hardback book is highly recommended to anyone, young or old, who has an interest in radio or television, as it provides a detailed history of setmaking in the UK.

AUDIO BOOKS

Newnes Audio and Hi-Fi Handbook

2nd Edition

Edited by **Ian Sinclair**

Prior to the introduction of digital audio, advances in Hi-Fi technology was very much a case of the law of diminishing returns. However, during the late eighties and now the nineties, this situation has changed, with advances in audio technology on the move again. This book is concerned with the new technology and is aimed at the professional designer, service engineer and home user, as the book covers areas where professional and domestic audio overlap, such as electronic music and public address. The handbook covers a vast range of audio topics from the basic theory of sound waves and acoustics through to digital equipment such as compact disc, NICAM, DAT, DCC and MD. Loudspeakers and enclosures as well as in-car audio are all covered in great detail. A must for all Hi-Fi enthusiasts whether professional or amateur.

The New Stereo Soundbook

by F. Alton Everest and Ron Streicher

This book sets out in a very readable and non-mathematical way to answer the question – what is stereophonics? The book is suitable for the beginner and novice alike, as no previous knowledge is required, although an interest in stereo or audio production would be useful. The opening chapter gives an interesting and informative history of stereophonics. The following chapters deal with how stereo information is conveyed to the ear, and how the ear and brain interpret stereo information. Two chapters are devoted to the philosophical and pragmatic implications of stereo production techniques, while five chapters examine in detail modern stereo microphone practices. Other chapters explore 'auditory spaciousness', colouration of sound, and optimising the stereo listening environment. This profusely illustrated book is packed with tips and techniques you can use to get the most out of your stereo system. 1992. 294 pages. 235 x 189mm, illustrated. American book.

Killer Car Stereo on a Budget

by Daniel L. Ferguson

Car stereo systems have come a long way in the last few years, particularly in the field of electronics. However, what the driver and passengers hear has remained largely unchanged, normally due to the severe limitations posed by the loudspeaker systems installed by the car manufacturer. The purpose of this handy little book is to describe in detail how to build and install a high-powered, biamped in-car loudspeaker system. Although an American book, there are many suggestions and ideas that can be adapted by anyone with enthusiasm and a reasonable understanding of electronics and loudspeakers. The book includes

THE LOUDSPEAKER DESIGN COOKBOOK – FOURTH EDITION

by Vance Dickason

This latest edition of this highly regarded book provides a comprehensive listing of the most widely accepted engineering procedure that can be used to construct a pair of high quality loudspeakers – with the minimum of test gear. Additionally, the text describes the science of loudspeaker design, and using all this information, will yield numerous possible variations in loudspeaker design, with a wide range of subtle and not so subtle differences. The opening chapter gives a very detailed but easily understandable insight into how loudspeakers work. The following chapters delve into closed box, vented-box, passive radiator and transmission-line low frequency systems. These chapters are followed by cabinet construction, mid and high frequency drivers, passive and active crossover networks and loudspeaker testing. A highly recommended book for all those who wish to build a pair of high quality loudspeakers to be proud of. 1991. 192 pages. 279 x 214mm, illustrated. American book.

NEW

circuit and construction details for an electronic filter-crossover designed for use with a sub-woofer, that can be made from readily available components. There are suggested systems for saloon, hatchback and pickups, with in-depth guides on installation. 1989. 126 pages. 216 x 152mm, illustrated. American book.

Bullock on Boxes

by Robert M. Bullock

This book is a compilation of a series of articles written by the author for the highly regarded magazine Speaker Builder. It is an easy to read guide to designing and building vented-box systems based on Thiele-Small models. In addition to the background theory and descriptions of the models, the text covers a host of related information drawn from a variety of sources. By far the best way to tackle the design of a loudspeaker box is to use a computer program of the model to investigate the various options. The use of computer programs is explained in clear detail with programs supplied and developed by the author. Filled with tables, graphs and design tables this book is a must for the serious home loudspeaker constructor. 1991. 79 pages. 279 x 215mm, illustrated. American book.

Loudspeakers for Musicians

by Vivian Capel

Few musicians can claim also to be sound technicians. Their scene is making music, not delving into the technicalities of the complex equipment that nowadays is needed to produce it, yet the high cost of equipment makes the prospect of constructing your own very attractive. With electronic equipment there is little that can be done in the way of DIY unless you are one of the knowledgeable few. It is a different story with loudspeakers, however. Great savings can be had from building your own, and you do not need to be an electronics expert. Ten designs are included at the end of this book which should give results equally as good as commercial ones at a fraction of the cost. This book looks at the subject from the musician's point of view, and although some technical terms must of necessity be used, they are explained to make them clear to a non-technical reader. It explores the nature of sound, examines different driver designs and types of cabinets, and explains why wadding is used. This is a loudspeaker book written especially for working musicians.

1991. 170 pages, 178 x 111mm, illustrated.
Order Code WT47B **Type** Speakers for Muscns **Price each** £3.95 NV

Public Address Loudspeaker Systems

by Vivian Capel

The loudspeaker system is a critical part of any public address installation. All too often, it is woefully inadequate, resulting in poor intelligibility and unnatural reproduction. This book examines the various systems and their drawbacks, describing LISCA, the Line Source Ceiling Array. This gives astonishing clarity, coverage and reduced feedback, natural source location and even a pseudo-stereo effect. It promises to be the ultimate system for small to medium sized halls. Full step-by-step constructional and installation details are given. Also included: low impedance matching, 100V line systems, transmission lines, and how to design and install inductive hearing-aid loops. Few public address systems could not be improved from the information supplied in this book.

1990. 114 pages, 178 x 110mm, illustrated.
Order Code WT25C **Type** Public Address Spkrs **Price each** £3.95 NV

An Introduction to Loudspeakers and Enclosure Design

by V. Capel

There is more to building a loudspeaker enclosure than just fitting a couple of speaker units into a box. There are many types of enclosure and drive units, each having their own features, good points and snags. This book explores these, and in particular examines the whys and wherefores so that the reader can understand the principles involved and so make an informed choice of design, or even design loudspeaker enclosures for him or herself.

Crossover units are also explained, the various types, how they work, the distortions they produce and how to avoid them. Finally, there is a step-by-step description of the construction of the Kapellmeister loudspeaker enclosure, a design that involves novel features which overcome many of the disadvantages of more conventional types. It is a transmission line speaker that has remarkable stereo imaging, an uncoloured musical sound, occupies minimal floor space and is inexpensive to build.

1988. 148 pages, 178 x 111mm, illustrated.
Order Code WS31J **Type** Intr L/S Encl Design **Price each** £2.95 NV

Digital Audio and Compact Disc Technology

Second Edition

This book is essential reading for audio engineers, students and hi-fi enthusiasts. All modern and proposed sound transmission and storage systems use digital techniques, specifically pulse code modulation (PCM). This book forms a clear and easy-to-follow introduction and includes a technical description of DAT (Digital Audio Tape). The book starts with a short history of audio technology and then goes on to discuss: Principles of digital signal processing; sampling, quantisation, A/D conversion systems; codes for digital magnetic recording, principles of correction; the compact disc, compact disc encoding, optoelectronics and the optical block, servo units in CD players, signal processing; digital audio recording systems, PCM, Video 8, R-DAT, S-DAT.

1992. 247 pages, 246 x 189mm, illustrated.
Order Code WZ53H **Type** DAT/CD Tech **Price each** £17.95 NV

Introducing Digital Audio, CD, DAT and Sampling

Second Edition by Ian R. Sinclair

The compact disc (CD) was the first device to bring digital audio methods into the home, and digital audio tape (DAT) equipment has now appeared. All this development has involved methods and circuits that are totally alien to the technician or keen amateur who has previously worked with audio circuits. This book is intended to bridge the gap of understanding for the technician and enthusiast. The principles and methods are explained, but the mathematical background and theory is avoided other than to state the end product. The aim is to show what is involved in the digital part of audio signals, particularly in the newer devices such as CD, DAT and sampling, rather than go into esoteric details.

1992. 160 pages, 216 x 138mm, illustrated.
Order Code WP95D **Type** Intro Digital Audio **Price each** £7.95 NV

Audio and Hi-Fi Engineer's Pocket Book

Second Edition by Vivian Capel

A concise collection of practical and relevant data for anyone working on sound systems. The topics covered include microphones, gramophones, compact discs, tape recording, high quality radio, amplifiers, loudspeakers and public address. Acoustics is not often dealt with in audio books, so a section has been included dealing with most aspects the technician is likely to encounter, from human hearing to sound insulation.

1991. 209 pages, 196 x 95mm, illustrated.
Order Code WP90X **Type** Audio/Hi-Fi Poket Bk **Price each** £10.95 NV

How to Set Up a Home Recording Studio

by David Mellor

For musicians, recording enthusiasts and students, this book explains how to set up a home recording studio with practical details on equipment, wiring, acoustics and sound-proofing, with a useful glossary of terms and lists of useful addresses. The book describes the setting up of an eight to sixteen track studio with an outline of the musical and recording equipment needed, but concentrates on the techniques of putting that equipment together into an efficient and productive recording studio in the home. Includes invaluable but hard to come by advice on patchbay wiring schemes, and describes how to custom build a rack to suit your own particular requirements. If you already have a studio at home or are thinking about setting one up, there's something in this book for you.

1990. 124 pages, 215 x 136mm, illustrated.
Order Code WS88V **Type** Setup Hme Rec Studio **Price each** £6.95 NV

Acoustic Feedback - How to Avoid It

by Vivian Capel

While feedback cannot be completely eliminated, there are certain things that can be done to reduce it to a level at which it is no longer a problem. Some types of microphones and certain loudspeaker systems can affect feedback, as well as the way the units are positioned. Additionally, live concerts have special requirements which can affect feedback. All these matters are fully explored, as well as electronic aids such as equalisers, frequency shifters and notch filters. Also includes a circuit and layout for an inexpensive, but highly successful, twin-notch filter, with instructions on use.

1991. 98 pages, 178 x 110mm, illustrated.
Order Code WT89W **Type** Acoustic Feedback **Price each** £3.95 NV

ELECTRONIC MUSIC BOOKS

Electronic Music Projects

by R.A. Penfold

Contains circuits and construction details of many not too complex electronic music projects including fuzz-box, waa-waa pedal, sustain unit, reverberation, phaser unit, tremolo generator and many more. 1980. 112 pages. 180 x 108mm, illustrated.

Practical MIDI Handbook

by R.A. Penfold
Second Edition

The Musical Instrument Digital Interface (MIDI) is surrounded by a great deal of misunderstanding, and many of the user manuals that accompany MIDI equipment are quite incomprehensible to the reader. This book is aimed at musicians, technicians and enthusiasts. It explains what MIDI can do and how you can exploit it to the full, with practical advice on connecting up a MIDI system and getting it to work, as well as deciphering the technical information in those equipment manuals. It covers all the MIDI based equipment you can use; keyboards, drum machines, sequencers, effects units, mixers, drum pads and guitars. There's also a section on computer music that covers software, real and step time sequencing, notation/score writing programs, voice filters, etc. And for those of you who want to do your own MIDI programming there are details of the MIDI code numbers. 1992. 152 pages. 216 x 138mm, illustrated.

Advanced MIDI User's Guide

by R. A. Penfold

This book is for those who wish to go beyond the very basic slaving and sequencer set-ups, and who wish to exploit MIDI to the full. The topics covered include: MIDI modes and codes; MIDI signal routing and patch bays; System exclusive messages and their practical uses; MIDI trouble-shooting including, using a computer as a diagnostic tool; MIDI gadgets, channelisers, filters, merge units, pedals etc.; synchronisation using MIDI time code, SMPTE etc.; the basics of MIDI programming; and MIDI hardware specification. Anything within reason can be accomplished with MIDI – this book shows you how. 1991. 192 pages. 216 x 138mm, illustrated.

Phone 01702 556751

MIDI Projects

by R.A. Penfold

MIDI interfacing enables any so equipped instruments, regardless of manufacturer, to be easily interconnected and used as a complete, sophisticated system. This book provides details of how to interface most of the popular home computers with MIDI systems, including all circuit diagrams with operational detail, plus examples of programming used to drive the interface. Machines catered for include the Amstrad CPC464 and 6128, CBM 64 and VIC-20, BBC Model B, MTX and MSX computers, and the Sinclair QL, Spectrum and ZX81. The book also includes examples of interfacing MIDI equipment to analogue and percussion synthesisers. 1986. 103 pages. 178 x 112mm, illustrated.

Order Code	Type	Price each
WP49D	MIDI Projects	£2.95 NV

More Advanced MIDI Projects

by R.A. Penfold

The projects in this book fall into two main categories; those that are designed to overcome a deficiency in an item of equipment in the system and those that are designed to enhance performance of the system or to make it easier to use. Included are circuits for a MIDI indicator, THRU box,

merge unit, code generator, pedal, programmer, channeliser and analyser.

These projects are generally more complex than those featured in the MIDI Projects book, although a few simple units have been included as well. While most of the projects are not suitable for beginners, they should be well within the capabilities of someone who has a reasonable amount of experience in electronics construction. The circuits should also provide some useful electronic building blocks for use in readers' own designs.

1989. 128 pages, 178 x 110mm, illustrated.

Electronic Music Learning Projects

by R. Bebbington

It is a sad fact that electronic hobbyists with little or no knowledge of music often ignore projects that have the slightest hint of musical flavour. The converse is also true. Musicians are often reluctant to consider an electronic project with a musical bias. The projects in this book have been written in a style that attempts to bring together both types of enthusiast. Whether you are interested in music or electronics, or both, then these unusual projects will provide many hours of entertainment. All the projects in the book are powered by a 9V battery. 1993. 120 pages. 173 x 111mm, illustrated.

Order Code	Type	Price each
AA13P	Music Learning Project	£4.95 NV

The PC Music Handbook

by Brian Heywood and Roger Evan

This book takes you through the creative possibilities of the PC and is a guide through the twin minefields of choosing software and hardware for making music. It will be of interest to the professional musician, the gifted amateur or the just plain curious. It explains the possibilities of computer music and covers what is currently available in both software and hardware.

It advises which pitfalls to avoid, and suggests a number of possible music systems that could bring out the best in your musical skills or creativity. Contents include: music as text; the MIDI connection; MIDI sequencing on the PC; using the PC for remote control; the PC as a sound source; bits and the PC; and MIDI specifications and on-line communications among the appendices. 1991. 160 pages, 216 x 138mm, illustrated.

MAPLIN SERIES – MUSIC PROJECTS **NEW**

by R. A. Penfold

The author's reputation for innovative circuit designs and well-thought out projects is firmly established. His work has been regularly featured in the popular 'Bob's' Mini Circuits' section of Electronics – The Maplin Magazine. This is a collection of his best ideas from the magazine and features projects based on music applications. Components are widely available and the circuits form the basis for further experiments. Circuit diagrams are shown and include parts lists along with photographs of the main circuits. Projects include an accented metronome, a tremolo unit, a guitar compressor, a bass fuzz, a chorus unit and many more. 1994. 200 pages. 216 x 138mm, illustrated.

Electronic Music and MIDI Projects **NEW**

by R. A. Penfold

The projects described in this book are primarily aimed at keyboard players and are easy to build – even complete beginners to project building will find them easy to assemble.

All the projects are explained in detail, with full instructions on assembly. They are accompanied by clear, precise, easy to follow circuit diagrams, schematic drawings, component layouts and lists. The basic mixer, MIDI tester, MIDI lead tester, metronome, electronic swell pedal, THRU box, and MIDI automatic switcher are all well suited to beginners. Other projects included are the analogue echo unit, stereo mixer, MIDI patchbay and the byte grabber. None of the designs require the use of any test equipment in order to set them up – any setting up is very straightforward and described in detail. 1994. 140 pages. 245 x 190mm, illustrated.

AA81C	Music-Midi Projects	£9.95 NV

Electronic Projects for Guitar

by R. A. Penfold

Whether you wish to savemoney or simply have fun building some electronic music gadgets, the designs featured in this book should suit your needs. The projects are all easy to build and include a guitar preamplifier, headphone amplifier, soft distortion effects unit, compressor, auto-waa, waa-waa pedal, phaser, dual tracking effects unit, expander, treble booster, dynamic treble booster, dynamic injection box, improved distortion unit, thin distortion unit and a guitar tuner. Several projects are so simple that even complete beginners at electronic project construction can tackle them with ease. Each project has an introduction, an explanation of how it

works, a circuit diagram and complete instructions on stripboard layout and assembly. All the designs are suitable for any normal guitar pick-ups, both high or low output types. None of the designs requires the use of any test equipment in order to get them set up properly. Where any setting up is required, the procedures are very straightforward, and they are described in detail. 1992. 113 pages. 246 x 190mm, illustrated.

Musical Applications of the Atari ST's

by R.A. Penfold

The Atari ST computer range is now firmly established as the computers to use in electronic music applications. The range and sophistication of these machines may not be fully realised or understood by most people – this book aims to correct these misunderstandings and present the Atari ST as a useful tool in developing your musical talents. A wide selection of topics are covered – the internal sound chip, the AY-3-8910; MIDI, (musical instruments digital interface); applications programs such as sequencing and score writing etc.; simple but useful add-on projects for MIDI programming. Much of the material is usable by anyone who understands no more than just the basics of an ST, and who does not possess a great deal of electronics expertise. A great many screen photographs of actual programs (Lengeling/Adam, Hybrid Arts Inc) are given to assist the reader. All the subjects are covered in much detail with particular reference to the ST computers. Whatever your interest in music and the ST computer, this book will provide plenty of interesting and practical ideas for you to develop your interest and musical talents to the full. 1988. 90 pages, 263 x 192mm, illustrated.

TV & VIDEO BOOKS

Guide to Satellite TV

Installation, Reception & Repair

Third Edition

by D.J. Stephenson

A practical guide, without excessive theory mathematics, to the installation and servicing of satellite TV receiving equipment, primarily for those involved in the aerial installation and TV trades. The book includes computer programs, written in the simplest Microsoft dialect of BASIC to run on any PC or 8-bit micro, for the calculation of elevation, azimuth, polar and declination angles from any point in Europe for any current or future satellite. Among the many practical matters covered are the problems of 'sparklies', rain, trees, and vandals (the latter solved by the 'two-dunks high' dish-mounting rule!). Contents include an overview of satellite TV, antennae, head units, cables, line amplifiers and connectors, satellite receivers, the 'linked budget' calculation; installation and alignment of antennae and cabling, indoor wiring up, repairs and appendices and glossary. 1991. 381 pages. 240 x 160mm hard cover, illustrated.

World Satellite TV and Scrambling Methods

The Technicians Handbook – 3rd Edition from Frank Baylin, Richard Maddox and John McCormack

The purpose of this book is two-fold; to provide a technical training and reference source on home satellite systems, and to provide a troubleshooting manual that can be used on almost any satellite receiving system. Although satellite systems have become a commonplace consumer product, their installation and service are certainly more complex than, for example, stereo or other video entertainment components. This profusely illustrated book assumes that the reader already has an understanding of basic electronics, as well as some knowledge of TV and FM broadcasting. It is indispensable for satellite television system installers, technician engineers or anyone who is interested in acquiring detailed knowledge of satellite systems. 1993. 371 pages. 277 x 214mm, illustrated American book.

The Satellite Book

A Complete Guide to
Satellite TV Theory and Practice
Second Edition
by John Breeds

This book provides a broad yet fairly in-depth introduction to satellite related subjects for both technicians and enthusiasts. The chapters are organised into two broad sections; practical, and theoretical. The topic for each chapter was carefully chosen, and the text written by a recognised expert in this particular field. The result is a handbook that is both comprehensive and authoritative. Contains lots of really interesting information about the satellites, signal protocols, scrambling, signal distribution and much more.

1992. 289 pages. 295 x 210mm, illustrated.

Order Code	Type	Price each
WT46A	2 The Satellite Book	£30.00 NV

Satellite Television Installation Guide

Third Edition by
John Breeds

The purpose of this booklet is to help newcomers to correctly align both azimuth/elevation and polar mount dish types. If a polar mount assembly is accurately set up then the dish will be able to automatically track the satellites available now, and those launched in the future. The usual

knowledge and skills normally associated with installing terrestrial UHF aerials are assumed. The booklet provides detailed guidelines on how to install a dish and receive satellite pictures. There are no mathematical explanations or complex formulae involved. The notes and procedures given are based on practical experience. They provide readers with hints and tips, tricks of the trade and other quick but accurate methods of aligning a dish. The challenge of the changing technology must be continually met by all of the support services, and this guide is designed to help installation technicians achieve this, and so is equally useful to the competent home DIY enthusiast.

1992. 60 pages. 297 x 210mm, illustrated.

Broadcast Television Fundamentals

by Michael Tancock

This book deals with the fundamentals of television with special emphasis given to the techniques used in broadcasting. It is aimed at technicians having a good general knowledge of electronics, including some digital techniques, but who are unfamiliar with the special requirements needed to produce high quality television pictures. Also suitable for graduate electronics engineers who have not previously dealt with the engineering aspects of television. The book begins with the fundamental considerations of the portrayal of motion, deals in some detail with the colorimetry of television, and goes on to look at the very latest techniques such as CCD sensors, high-definition television, MAC coding and serial data communications. The explanations are detailed but deliberately keep the use of mathematics to a minimum. Although specific examples are based upon the UK television system, the NTSC and SECAM systems are also examined in sufficient depth to make the book international in its scope.

1991. 175 pages. 240 x 160mm, hard cover, illustrated.

Newnes Guide to TV and Video Technology

by Eugene Trundle

This book represents a breakthrough in terms of value-for-money technical information. Based on two of the most popular Technical Guides, this new edition brings together in depth accounts of television and VCR technology. In twenty one chapters, over 250 illustrations and 400 odd pages, the technicalities of television, video and allied equipment are lucidly and concisely explained for the benefit of technicians, students, laymen and others. Coverage is wide and deep, extending from the camera lens via videotape signal processing and deck management to the very latest TV screen technology. Along the way we look at space satellites, microcomputers and such practical matters as videorecorder servicing and maintenance. Eugene Trundle, a practising video and TV engineer, has a knack of conveying highly technical information in the form of a 'good read'. It is well demonstrated here.

Television Receivers

by K. F. Ibrahim

This book sets out to comprehensively explain the use of discrete and IC components in modern TV receivers. The text is profusely illustrated with diagrams, many of which are practical circuits currently used by TV receiver manufacturers. The book provides a thorough coverage of TV receiver theory and practice, starting from basic principles of monochrome and colour reception through to digital processing of TV signals. A full explanation of NICAM digital stereo and computer controlled TV receivers is included, as well as comprehensive coverage of digital techniques, that are used in modern TV receivers. The book will be particularly useful for students studying BTEC level II, III, IV, City and Guilds courses and anyone involved in courses with television reception as a subsidiary topic. The TV servicing engineer will find this book a useful source of reference reading.

An Introduction to Microcomputer Systems

Architecture & Interfacing
by John Fulcher

Provides a thoroughly modern and up-to-date introduction to microcomputer interfacing, as well as a general introduction to the fundamentals of microcomputer architecture. Discussion of the hardware and software aspects of interfacing are woven together and exemplified by reference to two industry standard 16-bit microprocessors, the Intel i8086 and the Motorola 68000.

Continued on next page.

Maplin
means fast
service and
LOW
prices!

Continued from previous page.

Contains over 350 diagrams and written in a clear and friendly style, and packed with up-to-date specifications and data. Numerous programming examples are shown based on the two standard 16-bit microprocessors, with self test objectives and summaries provided with each chapter, with self-assessment review questions.

Suitable for students of computer science and electrical and computer systems engineers, and anyone who needs to interface real-world devices and peripherals to their microcomputers. For those with a hardware background, the necessary I/O programming techniques are introduced; for those with a programming background, the relevant hardware concepts are presented.

Microprocessor System Design

A Practical Introduction
by Michael Spinks

This book introduces the essential concepts and techniques that underlie the design of useful electronic circuits, especially microprocessor boards and their peripherals. No previous knowledge of electronics is assumed: new terms and ideas are explained as they arise, and maths and jargon are kept to a minimum, the book concentrates on helping the reader acquire and understand the few relatively simple elements and techniques from which complex circuits are built up. The book is not just about microprocessor systems. There is also plenty of information about other electronic circuits and devices, including op-amps. After an introduction to these electronic circuits, both analogue and digital components, op-amps and PALs, the book goes on to describe how microprocessors work and how they are used in bus-based systems. To conclude, some practical aspects of electronics design are examined.

MAPLIN SERIES – NEW HOW COMPUTERS WORK

by Graham Dixey

In an informative and straightforward manner, the author describes how to turn what might seem an incomprehensible "black box" into a powerful and enjoyable tool that can help you in all areas of your work and leisure. The book explains how computers interact with the world around them and therefore make them a useful tool. Topics covered include descriptions of all the components that make up a computer, principles of data exchange, interaction with peripherals, serial communications, input devices, recording methods, computer-controlled motors and printers. Filled with plenty of handy tips and clear illustrations, this book can improve your computer system.

1994. 200 pages. 216 x 138mm, illustrated.

assembly language programs yourself, however, the book shows how to set about carrying out the construction of real hardware which includes a monophonic organ and pulse and waveform generators, seven segment displays, keyboard interface, digital storage oscilloscope, intruder alarm controller, serial communications and serial links. Microcomputer Interfacing

A Practical; guide for Technicians, Engineers and Scientists

by Joseph J. Carr

The microprocessor has literally revolutionised the electronic instrument and control system design fields, and has done so in record time. Where instruments designer were once exclusively analogue engineers, today's instrument designer has to be a synergist who can integrate the principles of sensor selection, analogue circuit design and operation. Today, even small instruments are based on microprocessor chips, and for that reason these devices are considered in some detail. There are three basic forms of computer mentioned. first there is of course the IBM PC or compatible type that is now the standard of the industry. But also covered are the Apple II computer and the Z80 chip. The book provides a practical, workbench basis for both electronics engineers and other technicians whose expertise is in fields other than electronics or computing.

Microprocessor Interfacing

by R. Vears

Principally this book covers the BTEC level NIII Microprocessor Interfacing syllabus U86/335, and can be regarded as a comprehensive textbook on the subject of interfacing microprocessors to external peripherals and sensors. The text concentrates on the widely used 6502, Z80 and 6800/6802 microprocessor families, and so is directly applicable to many 8-bit home microcomputers and 'breadboard' systems using these popular microprocessors. Basic details of typical interfacing devices for each of these are included in the text, but the reader is encouraged to obtain complete data sheets for such a device when the need arises to solve an interface problem. Copious amounts of detailed hardware and software examples are provided covering signal amplification and filtering to condition the output from external sensors and make them logic compatible, D/A and A/D conversion, data transfer techniques including STD and IEEE-488 bus protocols, and parallel and serial I/O including the EIA-RS232 standard. Well recommended for anyone planning a home built microprocessor system, no matter how modest, to communicate with another computer or electronic peripherals including relays, motors, sensors and opto-isolators etc.

THE BEST OF SERVICE

Interfacing Standards for Computers

An IEEIE Monograph
by A.C. Maine

This monograph serves as an introduction to the interfacing techniques and standards used by computers. Both computer standard buses and local area networks have been deliberately excluded from the text as due to their breadth, complexity and importance, each deserves a monograph in their own right. With communication being such a vital concept in computing systems, the basics of interfacing never hurt from restating. The opening chapter defines the need to have devices which have to be physically connected and which must recognise a common data format. The book then goes on to discuss RS-232C Serial Interface Standard, the IEEE-488 General Purpose parallel interface bus, the HP-IL Serial Interface Standard and Parallel Interfaces in general. A note upon Character Code Standards and Appendices giving a data transmission Glossary and a Summary of the CCITT recommendations complete the work. This book will ensure that linking is both good practice, good engineering and has regard to the International standards and protocols.

1986. 62 pages, 209 x 147mm, illustrated.

Understanding Computer Systems Architecture

The Complete Course Text
by M. Lacy

This book is aimed at those students entering high level computing courses with non-computing backgrounds and those students wishing to make full use of open access facilities, and the requirement for more self-study material. This book aims to provide for students in both of these groups, as well as catering for the person new to computing and wanting to find out more about the subject in general, in all its different forms. There are many books at an introductory level which attempt to cover the whole of computing between the two covers. Then there are the higher level books which act as reference texts on specialist areas of computing. However, this book fills the gap between the two by covering the fundamentals in just one discipline, called Computer Systems Architecture. It starts at a general introductory level, providing the reader with the knowledge and skills which will enable him or her to consult the more advanced texts with confidence. The material covered comprises the essentials of various courses called Computer Systems, Computer Architecture and Computer Technology, as taught by the author to HND, degree and BCS level. The book assumes that the reader is already familiar with the representation and manipulation of numbers in various bases (binary, octal, hexadecimal, etc.), and has had some experience with writing simple programs in a high level language such as BASIC or Pascal.

Local Area Networks - Making the Right Choices

by Philip Hunter

Local area networks (LAN) are now an indispensable part of computer installations in small and medium size businesses being the only practical way to share applications and resources such as printers. Without a LAN, it is extremely difficult for companies to exploit information technology (IT) efficiently or competitively. For those who are about to install a LAN, or to upgrade or expand an existing one, then this book will help you choose a LAN system that is compatible with your business requirements and objectives. The book has been written in a non-technical style and is intended to help you to select the most suitable LAN components for your particular requirements or installations.

Experiments with EPROM's

by Dave Prochnow

This book provides fifteen fascinating hands-on 'EPROM experiments'. Each experiment comprises building different devices to use the EPROM's. These include a 'Boole's box', used for determining the logic levels present on digital IC pins; a keyboard encoder which generates a digit and displays the

character of the key pressed; 'Bit Smasher I' and 'Bit Smasher II', extremely simple and more versatile EPROM programmers; 'Eprogrammer II', a versatile, portable, computer-based EPROM programmer; EPT-EPROM program tester, used to test and debug an EPROM's data before writing the data to the device; 'ROM Drive', and many more.

1988. 240 pages. 233 x 186mm, illustrated. American Book.

The Transputer Handbook

by Ian Graham & Tim King

The Transputer Handbook describes the software and hardware implementation of transputer parallel processing systems, bringing together information from a multitude of sources in a readily accessible form. Intended to act as a guide to the capabilities of the transputer family and transputer based systems, the book will show the reader the process of how software and hardware solutions are found for particular problems. Examples of transputer processors mentioned include the T225, T400 and T800 series. An introduction to the OCCAM programming language developed alongside the transputer is introduced, but you will notice several examples alternatively written in 'C'. Not only are example hardware connection circuits provided but also the common transputer assembly language instruction set. If you want to know how transputers work and what they do, you must read this book!

1990. 210 pages, 234 x 172mm, illustrated.

Computing

An active learning approach
by P. M. Heathcote

The initial aim of this book is to provide the classroom support material needed for computing study courses. It has been designed as an interactive teaching and learning aid, eliminating the need for hand-outs or copious note-taking. This book is also ideal for any reader wanting to get in on the ground floor of computer studies and around which he/she can build a learning programme. There are ten sections covering an introduction to computers and business data processing, programming in Pascal, data structures, databases, systems development, programming languages, compilers and interpreters; internal organisation of computers, operating systems and networks, peripherals, and computer applications and social implications.

1991. 358 pages. 275 x 214mm, illustrated.

FOR TOP QUALITY & VALUE!

Hard Disk Pocket Book

Second Edition
by Mike Allen & Tim Kay

This book is a comprehensive guide to hard disks, covering every aspect from manufacture, drives and components, organisation, utilities and data security. The utilities include Disk Manager, Norton Utilities, PC Tools, SpinRite II, XTree and Windows 3. Also covers IDE drives and SCSI II technology. In addition floppy drives are introduced and followed by an investigation into what the future might hold for data storage. Also included is an extensive glossary of terms, acronyms and details associated with hard disks. If you own one or are thinking of getting one this book is a must. 1992. 379 pages. 197 x 94mm hard cover, illustrated.

Data Communications Pocket Book

Second Edition
by Michael Tooley

Presenting, in as succinct a manner as possible, information of everyday relevance to the world of data communications. Despite the apparent complexity of the subject, care has been taken to ensure that the book is meaningful to as wide a range of readers as possible. Tabulated reference material has been interspersed with brief explanatory text and relevant diagrams. Invaluable to anyone involved with the interconnection of computer systems: technicians and engineers involved with the installation, commissioning and maintenance of data communications equipment; executives and clerical staff as the 'end users' of data communications related products; and managers involved with the specification and purchasing of such products and systems. Similarly the book should also appeal to the growing number of enthusiasts using data communications for home management and leisure pursuits. 1992. 176 pages. 195 x 95mm hardcover, illustrated.

WS77J	Data Comms Pkt Book	£12.95 NV

Computer Hobbyists Handbook

R.A. & J.W. Penfold

The 'Computer Hobbyists Handbook' provides a range of useful reference material in a single source so that it can be quickly and easily located. The subjects covered include microprocessors and their register sets; interfacing serial, parallel, monitor, games and MIDI ports; numbering systems; MIDI codes; operating systems and computer graphics. There is also a useful glossary of computer terms, and appendices covering topics such as ASCII codes, Epson control codes and flowchart symbols. The reader is not simply presented with raw data, but in most cases

there are useful explanations so that the information can be used by beginners as well as more experienced users. Although primarily aimed at the computer hobbyist, no doubt, this book will also prove to be very useful to those involved in computing professionally, as well as being a useful source of information for students. 1989. 120 pages, 264 x 195mm, illustrated.

Computer Engineer's Pocket Book

Third Edition
by Michael Tooley

To be able to fully exploit the potential of microprocessors and microcomputers it is becoming increasingly necessary to abandon the old boundaries which have until now existed between what has been called 'hardware' and 'software', simply because it is becoming impossible to work exclusively with one without getting involved somehow with the other. The same is true of any home microcomputer where it is required to be interfaced to the outside world. Includes popular CPU instruction sets, character sets, CMOS and TTL IC pin-outs with internal schematic diagrams, logic symbols, connectors' wiring and a host of glossaries, in fact everything you need to quickly and accurately make up your Veroboard add-ons. 1991. 255 pages. 196 x 95mm, illustrated.

The Protection of Computer Software - Its Technology and Applications

Edited by Derrick Grover

Many pieces of commercial software represent the result of many thousands of hours of investment. It is therefore essential for the originator to protect this investment from piracy and corruption. Whilst the law provides certain protection it cannot provide a complete safeguard, and so technical means have emerged. This new edition incorporates chapters on both computer viruses and hacking, covers the state-of-the-art in the technology of software protection, and is intended to create a general awareness of the aims and possibilities of this technology. The book describes techniques which can be implemented to protect programs from being used or copied by the copyright infringer and the software pirate. 1992. 321 pages. 228 x 151mm, illustrated.

Computer Viruses and Anti-Virus Warfare

by Jan Hruska

The virus danger is here to stay. In the U.S., the Far East and Africa it has already reached epidemic proportions, and it is only a matter of time before it becomes more common in the rest of the world. In just the three months of Spring 1989, the number of separately identifiable viruses increased from seven to seventeen. You must read this fascinating book, especially if you own a PC - some examples of the IBM DOS orientated viruses are horrifyingly simple to create and complete in their destructiveness. Read all about 'Trojan horses', 'logic bombs' and 'worms', to begin at the beginning. 1990. 130 pages, 241 x 167mm, illustrated.

CAD/CAM - From Principles to Practice

by Chris McMahon and Jimmie Browne

The use of computers in the product design and manufacturing process (CAD/CAM) has resulted in some spectacular successes in engineering. This book is intended to give an in-depth understanding of the central techniques of CAD/CAM, by concentrating on both the principles and applications. The reader is taken through the processes of defining with the aid of computers, of developing manufacturing plans and instructions for the product, and of managing the manufacturing system itself. The book is divided into three parts, each part may be looked on as a stand-alone section. Part One, computer-aided design, is concerned with the fundamentals of the modelling process by which designs are defined using computers. Applications of the CAD model within the design process are discussed. Part Two is concerned with activities at the design/manufacture interface, such as the preparation of process plans and manufacturing instructions from the design data. Part Three discusses the planning and control of the flow of work through a factory floor, and considers production planning and control issues at all levels in the factory. The book is intended to provide a tutorial and a reference source for student and professional engineers who have an interest in the application of computers in product design and manufacture. 1993. 515 pages. 241 x 193mm, illustrated. Hardback.

PCs FOR DUMMIES

by Dan Gookin & Andy Rathbone

As with other titles in the 'Dummies' series, this book is designed for those people who wish to do the job and not to become computer geniuses. This book is more a reference as each topic is independent and can be read in isolation - cross references are provided for the times when further information is required.

Everything you need to know about your PC is covered in the text, except information on using the software and using DOS.

1992. 395 pages.
235 x 188mm, illustrated.
American book.

The Personal Computer

by J. R. Doyle

There have been many books and articles in the leading PC magazines explaining how to use the modern 'Personal Computer', how it works and describing the system operation. To many readers, the information given has been a case of 'too much, too soon', with many authors showing off their in-depth knowledge and expertise of the subject matter. This book breaks the mould and starts from the very bottom, and explains everything in plain language. When some technical knowledge is given, this is presented as simply, and as concise as possible. The book covers basic fundamentals such as types of hardware, keyboard layout, types of VDUs, mouse, floppies and printers. Several chapters are devoted to using a PC and hopefully, to alleviate the readers fears about their use. A handy little book that should remove many of the problems that many first-time users of PCs experience. 1993. 134 pages. 210 x 148mm, illustrated.

Understanding PC Specifications

by R.A. Penfold

If you require a microcomputer for business applications or a high quality home computer, an IBM PC or compatible is often the obvious choice. They are competitively priced and are backed up by an enormous number of applications programs, hardware add-ons, etc. The main difficulty for the uninitiated is deciding on the specification that will best suit his or her needs. It would be very easy to choose a PC system that is inadequate to run your particular applications efficiently, or one which goes beyond your needs and consequently represents poor value for money. While explaining PC specifications in detail, subjects covered include: differences between types of PC

The PC Support Handbook

by David Dick

This British book was written by a Senior Lecturer who specialises in microcomputer technical support. The A4 spiral-bound book offers a more general approach and covers a wide range of material, that includes basic DOS commands (up to DOS 6) to advanced subjects such as disk organisation and memory management techniques. This well written, illustrated book brings together material not normally found in one volume and covers the latest techniques such as clock-doubling, local bus systems, PCMCIA etc. The book is filled with numerous facts, diagrams and explanations and is divided into 15 chapters with each chapter having its own contents page. Also included is a high-density 3 1/2 in. software disk of computer based training material on a wide range of topics plus many diagnostic and other utilities. 1993. 400 pages. 298 x 230mm, illustrated.

Inside the IBM PC and PS/2

Fourth Edition
by P. Norton

This best-seller has been thoroughly updated to include every model of the IBM microcomputer family! Detailed in content yet brisk in style. The book reviews fundamentals and then moves on to discover new ways of using your microcomputer to its fullest potential. Definitive in all respects. Includes a detailed look at all of the special features of the IBM PC family, its 'clones' and their compatibility; the fundamentals of the 80286, 386 and 486 microprocessors, plus the DOS operating system versions 1.1 to 4.0 and BIOS. Programming examples to show how each feature works in BASIC, Pascal, and Assembly Language are included, plus disk drive operation and data storage techniques, how ROM is allocated and much more. 1991. 398 pages. 233 x 188mm, illustrated. The Concise PC Notebook and Laptop User's Guide

by Dan Gookin

Portable computers are rapidly becoming the computer choice for many people who prefer the convenience and flexibility of laptops and 'notebook' computers that weigh less than six pounds. This book brings together all the information you need in order to buy and use a laptop, from setting up a portable with software to communicating with primary desktop PCs. The book comes with its own handy laptop diskette (3 1/2 in). On the disk there are dozens of utilities, batch files, and shareware programs, ideally suited for use on a laptop. If you are a laptop owner, or you are thinking of buying one, then this book will help you take full advantage of your laptop system. Includes 3 1/2 in floppy disk. 1992. 296 pages. 234 x 187mm, illustrated. American book.

BUILD YOUR OWN MULTIMEDIA PC

by Aubrey Pilgrim

Since the introduction of Windows 3.1, Multimedia has become one of the more advanced computer technologies, and is now the fastest growing technology since the PC was first introduced. Multimedia adds a whole new dimension to the PC in business, education, training and entertainment. The aim of this book is to provide everything you need to know about multimedia PCs, - no experience is required.

The book will benefit those businesses that want to better utilise their computers and so contribute towards increased productivity, better presentations and help to create training tools. A CD-ROM is included that provides a wide variety of software that you can try on your new multimedia computer. 1994. 356 pages. 185 x 232mm, illustrated. American book.

How to Expand, Modify and Repair PCs and Compatibles

by R. A. Penfold

Not only are PCs and compatibles very expandable, but before long many users actually wish to take advantage of that expandability and upgrade their PC systems. Some aspects of this can be a bit confusing, but this book provides advice and guidance on the popular forms of internal PC expansion, and should help to make things reasonably straightforward and painless, and little knowledge of computing or computer hardware is assumed. All you need is to have and be able to operate a PC of some description. Topics include a PC overview, memory upgrades, how to add a hard drive, how to add an extra floppy drive, display adaptors and monitors, fitting a maths co-processor, keyboards, ports, mice and digitisers. All are covered in detail with emphasis on practical advice rather than theory. The final two chapters deal with maintenance (including the preventive kind) and repairs and the increasingly popular subject of DIY PCs. 1990. 176 pages. 198 x 130mm, illustrated.

PC Data Recovery and Disaster Prevention

by S. Harris and S. Nugus

It is widely believed that data recovery is beyond the scope of all but the most skilled professionals, but fortunately recent software development has provided the tools and programs that are needed for such situations. These programs are easily usable by almost anyone who has a basic knowledge of PCs. However, data recovery is a technological minefield, in which it is very easy to cause irreparable damage to the data being recovered. It is vitally important that anyone who is likely to be involved with any form of data recovery has a good basic knowledge about data recovery. This book provides that basic knowledge, and also demonstrates through the use of examples and case studies how such data recovery problems should be approached to obtain a successful recovery. Chapters deal with using DOS to recover data as well as Norton Utilities and PC Tools. A further chapter takes an in-depth look at computer viruses. 1992. 267 pages. 243 x 170mm, illustrated.

Getting the Most from your PC's Hard Disk

by J.W. Penfold

For those thinking of adding a hard disk, this book gives the basic information on how a disk is fitted, and how to format it for use. The information on interleave factors and installing DOS may also be useful to those who already have a hard disk. For those with hard disks, this book gives advice on arranging files into subdirectories so that

35

they are easy to find, and also on making your applications easy to use. Information and advice on back-up and security procedures is also included, plus a section with technical details of hard disk operations under DOS. A hard disk is not simply a large and fast version of a floppy disk. It needs a wholly different approach to gain the most benefit from it. This book will show you how.

Virtual Reality

by Ken Pimentel and Kevin Teixeira

Virtual Reality is a major technological breakthrough that allows you to step through the computer screen into a 3-D artificial world. In the last few years, VR has gone from being an unknown scientific exercise to what many believe will be the future of computing.

This book is designed to provide a guide to VR and is filled with numerous photographs and illustrations. It is divided into three parts aptly titled 'Stepping through the new looking glass', '21st century tools' and 'Brave new worlds'. The first part defines VR and provides an overview along with the developments in the VR field. Part two is a layman's guide to VR technology, and part three gives an insight into what can be done with VR and the future.

The Virtual Reality Construction Kit

by Joe Gradecki

This is a 'nuts-and-bolts' project book which will introduce the reader to the fascinating world of Virtual Reality (VR). VR technology allows a user to explore and manipulate objects in a virtual world, which exists only in the memory of a computer. The author gives clear, step-by-step instructions, with numerous illustrations, for building 18 inexpensive items of virtual reality equipment, including a 3-D mouse, a head-mounted display, a 3-D sound system, and an arm-based head tracker. No experience in programming or electronics is assumed, or required!

The book comes complete with all of the software required to test and use any equipment that you make, as well as various virtual worlds including a virtual park, a virtual squash court game, a two-player combat game that can be played over modems, and you can even build your own: (virtual) ancient Greek temple.

All software can be run using a conventional mouse/joystick as well as any equipment built, and is supplied on a 3.5-in. disk.

1994. 340 pages. 232 x 190mm, illustrated. American book.

Zen and the Art of the Internet

By Brendan P Kehoe

Did you realise that there are over 15 million people world-wide who are interconnected via the Internet? The Internet allows people to 'talk' to each other via computer terminals, and provides numerous other services, including access to a vast amount of information on just about any subject known to man. This book serves as a very comprehensive and readable introduction to the fascinating world of the Internet. Subjects covered include: network basics, electronic mail (e-mail); Anonymous FTP; Usenet News; Telnet; commercial services; data retrieval tools, and many others. Also included are detailed appendices which give information about connecting to other networks, newsgroup creation, and services available via Telnet.

1994. 193 pages. 228 x 152mm, illustrated. American book.

The Virtual Reality Programmer's Kit

by Joe Gradecki

If you have ever wanted to create your own virtual worlds, then this kit will show you how! This book is a natural sequel to *The Virtual Reality Construction Kit*, and provides all of the information and software necessary to design and build your own virtual worlds.

The REND386 programming environment allows novice programmers to create simple VR worlds, and the book has been packed with numerous hints and tips that allow more advanced C programmers to add

3-D sound, animation, and other advanced features to their VR worlds.

Included in the kit are 4 complete virtual worlds, software to test and calibrate equipment, and previously unrealised utilities that make VR object drawing easier. All software is supplied on a 3.5-in. disk.

1994. 544 pages. 235 x 190mm, illustrated. American book.

The BBS Construction Kit

by David Wolfe

Have you ever used someone's bulletin board system (BBS) and thought 'I could do better than that'? Well this book will show you how! The author has been running his own popular BBS system for several years, and he knows all the tricks to running a BBS and keeping its users hooked.

This book guides you through the entire process, from installing the BBS software, structuring file transfers, setting up doors, automatic system events, virus protection, through to customising your BBS to keep users interested.

The book has been well written, and is somewhat modular in structure; it may be read from cover to cover, or the reader can simply read the chapters of interest. The first four chapters deal with the necessary background technical information, mentioning any hardware required, and the remaining chapters explain how to set up various aspects of a BBS, such as doors, and external transfer protocols, etc. Suitable for anyone with some basic BBS/computer knowledge.

1994. 373 pages. 235 x 190mm, illustrated.

The Robot Builder's Bonanza

99 Inexpensive Robotics Projects

by Gordon McComb

This book offers you a complete and unique collection of tested and proven project modules that you can mix and match to create an almost endless variety of highly intelligent and workable robots.

By using the modular approach there is plenty of leeway for your imagination. 99 different experiments are provided which, in different combinations, enable you to create robots of all shapes and sizes and abilities. There are rolling robots, walking robots, talking robots, robots which can vacuum the floor, serve drinks, teach the kids, protect the family against fire and intruders, in fact almost anything is possible using these modules and a little ingenuity, as none of the projects are very expensive. The book is aimed at both the novice and intermediate robotics enthusiast; the projects include all the necessary information you need to construct the essential building blocks that go into the typical personal robot.

In addition to the abundance of illustrations, schematics, diagrams and parts lists, there is also a listing of tools and equipment required, and computer programs for supplying your creation with more than switches for control.

CRAFT AND GUIDE BOOKS

Marquetry & Inlay - 18 Decorative Projects

by Alan & Gill Bridgewater

The art of using marquetry and inlay to decorate wood and other objects is centuries old.

This book describes the art and includes a wide range of decorative projects. Fully illustrated with step-by-step directions, each project includes an explanation of the techniques, a materials list, working grids, an evaluation of the design, and a conclusion of helpful 'hints' for each project. The book describes how you can create unique designs on many household items, including: bookends, jewellery boxes, clock cases, tables and mirrors, picture frames and chopping boards. The book also provides a special section of patterns to inspire the reader to create other projects, and a completely illustrated glossary that defines terms, wood types, and various marquetry and inlay techniques. American book.

Through The Telescope - A Guide for the Amateur Astronomer

by Michael R. Porcellino

This book offers an introduction to what can be a richly satisfying new hobby as an amateur astronomer. The book provides information on viewing the skies through binoculars, as well as through a telescope; practical guidance on the various types of amateur telescopes including advantages and disadvantages, information on lenses, mounts, and filters, and tips on proper usage. If you already own a telescope, then there are practical suggestions for making your own equipment to enhance telescope performance: aperture masks to help resolve the images of unequal double stars, setting circles for star hopping, and a device to help collimate your system. Details are provided on observing the moon, the planets, comets, and meteors, as well as in-depth guidance in viewing the stars. You will learn how to see and identify double stars, variable stars, and deep-sky objects such as star clusters, nebulae, and supernovae. Special techniques for safely observing the sun are also provided. The author has included several appendices that contain the different charts and statistics you need to help find your way round the sky in this well illustrated book. American book.

1989. 350 pages. 233 x 185mm, illustrated.

BOOKS FOR BEGINNERS

Introduction to Electronics

by Pam Beasant

This book is an introduction to the basic principles of electronics, and ideal for the younger beginner. The bulk of the book comprises many simple, practical experiments. Each experiment is designed to illustrate an important principle of electronics and demonstrate how each different component works. This ranges from the very basic through transistors, use of tools and soldering. 1990. 48 pages. 240 x 170mm, illustrated in colour.

Order Code	Type	Price each
WP50E	Intro Electronics	£4.99 NV

200 Illustrated Science Experiments for Children

by Robert J. Brown

This book is a fascinating collection of science experiments suitable for children of all ages. An ideal source book for parents, teachers and anyone who is fascinated with the wonders of science. The experiments cover air, sound, vibration, water, mechanics, chemistry, light, heat, biology, electricity and magnetism. The book is designed to make learning basic scientific principles exciting and fun - a good way to introduce youngsters of all ages to the world of science. N.B. Many of the experiments MUST be performed under strict adult supervision since electricity, chemicals and heat are involved. American book.

1987. 190 pages. 210 x 130mm, illustrated.

Order Code	Type	Price each
BZ02C	Science Experiments	£8.95 NV

Mastering Electronics

by John Watson

A comprehensive handbook containing all the essential information required to learn and master the principles of electronics. Arranged as a complete self-contained course, for individual or classroom use, it includes basic theory as well as more advanced subjects such as Radio & TV, computers etc. Tested projects are featured to provide the reader with practical experience. This reasonably priced book is recommended for the beginner in electronics. 1991. 441 pages. 215 x 135mm, illustrated.

Order Code	Type	Price each
WM60Q	Mastering Electronic	£7.50 NV

Electronics – Build and Learn

2nd Edition
by R.A. Penfold

Electronics is a practical subject, but a certain amount of theoretical knowledge is necessary if you are to become proficient in it. This book combines theory and practice so that you can 'learn by doing'. Full constructional details of a circuit demonstrator unit are given which is used in subsequent chapters to introduce common electronic components. Later chapters describe how these components are built into useful circuits, oscillators, bistables and logic circuits. At every stage there are practical tests and experiments that you can carry out to investigate the points described and to help you understand the principles involved. 1988. 110 pages. 216 x 138mm, illustrated.

Order Code	Type	Price each
WP97F	Elec Build/Learn	£6.95 NV

Adventures with Electronics

by Tom Duncan

To start you don't need to know anything about electronics. But by the end of this book, you will find that you have learned quite a bit about this vital area of modern science and industry. The 'bits and pieces' needed for making all these models can be bought inexpensively as a complete kit, or you can search for them separately at radio hobby shops. Full details are given of both methods. And no soldering is required, which will be especially good news for beginners. Projects include a parking light, rain detector, fire alarm, flashing lamp, morse buzzer, burglar alarm, electronic organ, electronic metronome, wailing siren, intercom, three types of radio, electronic timer, and a (binary) 'computer counter'. 1978. 64 pages. 246 x 190mm, illustrated.

Order Code	Type	Price each
WS53H	Adventures Elctrnics	£7.25 NV

Investigating Electronics

Volume 1
by R. Higgins and A. J. C. May

This book is intended for readers wishing to be introduced to practical electronics. Little or no previous electrical or electronic knowledge is assumed and it provides a basis on which the reader can build up a knowledge of electronics slowly and steadily from first principles. To help achieve this goal, text has been kept at a minimum while exercises and diagrams have been used extensively.

This book along with volume two, *Electronics and Investigating Digital Electronics*, give adequate coverage of the EITB TR21 basic training requirement in electronics. Other groups who may find the books useful include those studying 'Design and Technology' in schools and students taking BTEC Engineering

courses having a practical electronics content designed to meet the 'common skills' element of their course.

The layout of this book, and its contents, make it an invaluable source of reference to students of all ages embarking on electronic study.

1991. 130 pages. 245 x 189mm, illustrated.

Order Code	Type	Price each
WZ82D	Investigat Elec Vol1	£7.99 NV

Investigating Digital Electronics

Volume 2
by R. Higgins and A. J. C. May

This book is intended for readers who have completed volume one 'Investigating Electronics' or those who have some basic electronic knowledge. It is written in the same style with text kept to a minimum and extensive use made of diagrams to explain important concepts. Practical exercises and self-assessment questions are provided to build confidence as the reader progresses through the chapters.

A straightforward and informative text that will be welcomed by students of ETIB and BTEC courses containing a practical electronics content, and students of 'Design and Technology' who have a basic understanding of components and circuitry. 1991. 131 pages. 245 x 189mm, illustrated.

Order Code	Type	Price each
WZ83E	Invest Dig Elec Vol2	£8.99 NV

Adventures with Digital Electronics

by Tom Duncan

This book of entertaining and instructive projects is designed for students in schools and colleges, and also for hobbyists and electronics club enthusiasts. It is a follow-up to *Adventures with Microelectronics* and provides a stepping-stone to the microprocessor. A first part deals with the properties of some basic 'chips' used in digital electronics such as logic gates, multivibrators, flip-flops, counters, shift registers, memories, adders, magnitude comparators, code converters and displays. The second part gives details of how to build eight devices – an electronic shooting gallery, quiz-game switches, an electronic fruit machine, computer space invaders game, two types of two-way traffic lights, pedestrian crossing signals and an electronic adder. For each project there is an explanation of 'how it works' and also suggestions for 'things to try'. Construction is on two standard circuit boards (no soldering required), using a 9V battery as the power supply. 1982. 64 pages. 245 x 188mm, illustrated.

WS55K	Advent Dig Elctrnics	£7.25 NV

Digital Electronics Projects for Beginners

by Owen Bishop

Contains 12 digital electronics projects suitable for the beginner to build with the minimum of equipment. The projects cover a wide range of topics from instrumentation to home security, and a few 'fun' projects as well. With just one exception, all the projects are battery powered, and so are completely safe for the beginner. The introductory chapter and the detailed explanations of the workings of each project make this not just a book of practical, useful projects, but also an introduction of the simplest basic theory and applications of digital electronics. Each project is provided with a circuit diagram, a drawing of the stripboard layout and full construction details complete with instructions for testing the circuit at each stage. The appendix explains how to solder and how to build circuits on stripboard. 1990. 120 pages. 216 x 138mm, illustrated.

WT08J	Dig Elec Projects	£6.95 NV

30 Solderless Breadboard Projects Book 1

by R.A. Penfold

An ideal book for beginners because all the components used are carefully described in a 20 page section at the beginning. The projects can all be built on a Verobloc and wherever possible the components are common to several projects. Thus it is possible, with a small number of relatively inexpensive components, to build in turn every project shown. 1982. 160 pages. 178 x 110, illustrated.

The Secret Life of Quanta

by Dr. M. Y. Han

This down-to-earth book sets out to explain to non-scientists how the laws of quantum physics operate in high technology devices and processes, with which we have almost daily contact. The author has focused on electrons and atoms, which are at the bottom of everything around us. An understanding of the fundamental concepts of atomic structure and of the physical nature of the chemical bond that holds atoms in molecules together. The author goes on to describe the basic principles that are used by scientists and engineers everyday in the creation and development of the remarkable new technologies that regularly appeared, such as lasers, fibre optics, microprocessors and superconductors. The book avoids mathematical equations, and is written in a very enjoyable way, and will be invaluable to anyone who wishes to acquire a greater understanding of quantum physics. Highly recommended. 1990. 190 pages. 228 x 153mm, illustrated. American book.

WVK63T	Make And Design PCBs	£2.50 NV

Practical Electronics Handbook Third Edition

by Ian Sinclair

This book has been designed to include, within a reasonable space, most of the information which is useful in electronics together with brief explanations which are intended to serve as reminders rather than instructions. The book is not, of course, intended as a beginner's guide to the whole of electronics, but the beginner will find much of interest, as well as a compact reminder of electronic principles and circuits. The constructor of electronic circuits and the service engineer should find the data in this book of considerable assistance. The professional design engineer will also find items of frequent use, which are usually only available in collected form in much larger volumes.

DATA BOOKS

Newnes Radio & Electronics Engineer's Pocket Book

by Keith Brindley

An invaluable compendium of facts, figures and formulae, including common transistor and diode data and pin-outs, TTL and CMOS details, radio and TV frequencies, metric conversions, wire gauges and much, much more, plus a superb index. 1989. 341 pages. 196 x 95mm, illustrated.

Order Code	Type	Price each
RL06G	Book NB0740	£10.95 NV

Newnes Electronic Engineer's Pocket Book

by Keith Brindley

This pocket book now includes the latest aspects of semiconductor technology, namely LSI integrated circuits and microprocessors and their support chips, as well as operational amplifiers and communications devices. Commencing with electron theory, and semiconductors, manufacture of semiconductor devices and ICs, the book goes on to illustrate essential circuit design for amplifiers and oscillators for most applications, AF and RF. A large proportion of the book is given over to digital techniques and computer systems and their construction, optoelectronics, servo and control mechanisms and power supplies. 1993. 315 pages. 196 x 95mm, illustrated.

WP67X	Elec Pocket Book	£12.95 NV

Practical Electronic Calculations & Formulae

by F.A. Wilson

This book aims to bridge the gap between complex technical theory and trial and error practical methods. It is in six sections: units and constants, DC circuits, passive components, AC circuits, networks and theorems, and measurements. 1981. 250 pages. 180 x 108mm.

Order Code	Type	Price each
RQ23A	Book BP53	£3.95 NV

Further Practical Electronic Calculations and Formulae

by F.A. Wilson

A companion volume to the original reference book Practical Electronics Calculations and Formulae, this version continues on from where the other finishes. Where the first book deals with components, elementary circuit analysis, networks and measurements, this book encompasses many aspects of electronics where a knowledge and familiarity of the appropriate formulae is essential for a fuller understanding of the subject, in order to achieve the desired results. Written in the same style as the first volume, but which it does not replace, this is a practical workshop manual. 1986. 450 pages. 178 x 110mm, illustrated.

WP68Y	Further Elec Calcs	£4.95 NV

Master Handbook of Electronic Tables and Formulas

by Martin Clifford

This book features all the latest developments in electronics technology and has been logically organised and fully indexed to give instant access to the formulas and vital component data needed when working on an electronic project. There is information on everything from resistance formulas, meter multipliers, and sine waves to capacitance, impedance vectors, decibels, and much, much more. A wide range of topics are covered, including microphones, magnetic data, modulation methods, filters, and analogue-to-digital and digital-to-analogue technology, as well as updated material on audio and video recording, antennas, TV broadcasting, computer logic and more. An indispensable reference book for hobbyists as well as professionals. 1992. 566 pages. 235 x 188mm, illustrated. American book.

INTEGRATED CIRCUIT DATA BOOKS

Audio IC Circuits Manual

by R.M. Marston

A vast range of audio and audio-associated ICs are readily available for use by amateur and professional design engineers and technicians. This manual is a guide to the most popular and useful of these devices, with over 240 diagrams. It deals with ICs such as low frequency linear amplifiers, dual pre-amplifiers, audio power amplifiers, charge coupled device delay lines, bargraph display drivers, and power supply regulators, and shows how to use these devices in circuits ranging from simple signal conditioners and filters to complex graphic equalisers, stereo amplifier systems, and echo/ reverb delay line systems, etc. This book deals with its subject matter in an easy-to-read and non-mathematical manner, presenting the reader with many practical applications and circuits. It is specifically written for the practical design engineer, technician, and the experimenter, as well as electronics students and amateurs. Most of the ICs and other devices used in the practical circuits are modestly priced and readily available types, with universally recognised type numbers. 1989. 168 pages, 260 x 135mm, illustrated.

TTL Pocket Guide

Volume 1:

7400 to 74200

Provides a comprehensive listing of all commonly used TTL ICs from 7400 to 74200 as available from all the major manufacturers. All the current families, Standard, Low Power, Schottky, Low Power Schottky, Advanced Schottky, Advanced Low Power Schottky, High Speed and Fast Schottky are covered. The Pocket Guide extracts all the essential data from the manufacturers' own data books and presents it in a clear and concise format, and is invaluable as an aid to choosing a device or identifying an unfamiliar component. English translation of the German original. 1990. 288 pages. 185 x 105mm, illustrated.

Fax your orders to:
01702 553935

HCMOS Pocket Guide

Covers all the commonly used HCMOS special devices currently available. It also sticks to a format which follows a clear and easy style with one device per complete page. Data which applies to the HCMOS series as a whole is not repeated for every device, but is presented in an introductory section. Each page describes one device only and is divided into eight sections. The guide extracts all the essential information from the manufacturers' own data books and presents it in a clear and concise format. As space within the package outlines is limited for diagrams, the internal schematic is necessarily simplified as far as possible and in block form. This may mean that in some instances the proper circuit symbols could not be used. Translated from the German original.

Order Code	Type	Price each
WZ46A	HCMOS	£11.95 NV

Linear and Interface Circuit Applications Volume 1

by D.E. Pippenger and E.J. Tobaben

The first in a series of books showing applications using Texas Instruments' linear integrated circuits. This book covers op-amps and comparators, video amplifiers, voltage regulators, switching power supplies, power supply supervision and protection and timers. The book shows complete designs and how to design your own circuits in great detail. 1986. 312 pages. 210 x 148mm, illustrated.

Operational Amplifier User's Handbook

by R. A. Penfold

This book deals with the properties and applications of modern operational amplifiers. Chapter one covers the standard operational amplifier building blocks, with the emphasis on the improvements that can be made by using modern devices. Chapter two deals with practical applications using the devices, such as very low noise, precision DC, high output current and wide bandwidth types. Many practical circuits are included such as low noise tape and RIAA preamplifiers, audio power amplifiers, DC power controllers, the audio millivolt meter, temperature monitor and many more. A useful and invaluable book for all those involved in electronics. 1994. 126 pages. 177 x 112mm, illustrated.

Wire It

by Robert Henley

This book is intended for the average DIY person wanting to undertake some simple electrical modifications. The book explains the basics of home wiring and how the electricity meter, the mains switch and the ring main system help deliver light and power. Simple guides to topics such as fuses and meter reading are complemented with one or two projects such as outdoor wiring and adding extra sockets. A good mixture of diagrams and colour illustrations explain some of the jargon including the reasons why amps, volts and watts are so important. The book is well scattered with safety advice and warnings, also ways and means of dealing with electric shock. Amply demonstrating how important safety is in this area. It makes an ideal present for the novice or those moving into a first or new home. 1989. 31 pages, 225 x 165mm, colour illustrations.

Order Code	Type	Price each
WT55K	Wire It	£1.99 NV ⁶⁰⁷¹

Wiring and Lighting

by Albert Jackson and David Day

This book will help anyone wanting to undertake household electrical tasks. It covers things as diverse as mending fuses and changing plugs through to good advice on complete rewiring. The diagrams and instructions here are full, many are step by step, and a lot of the matters left hanging in the small book are explained. There are also a number of extended special sections which discuss the wiring of fixed appliances, the basic home electricians toolkit and how to reduce the cost of electricity – legally! A short glossary explains some of the more basic terms as well as covering such matters as PME and ELCB. This is the book for the serious home electrician. 1988. 64 pages, 258 x 212mm, full colour illustrations.

Order Code	Type	Price each
WT56L	Wiring & Lighting	£6.99 NV ⁶⁰⁹⁶

IEE Wiring Regulations

Regulations for Electrical Installations – 16th Edition

This edition supersedes the fifteenth edition from the 1st January 1993, and is based on the plan agreed internationally for the agreement of safety rules for electrical installations. Also, the technical substance of the parts of the IEC Publications 364 so far published, and of the corresponding agreements reached in CENELEC, have been taken into account. The opportunity has also been taken to revise certain regulations for greater clarity or to take account of technical developments. Considerable reference is made throughout the Regulations to publications of the British Standards Institute, both specifications and codes of practice. These publications are conveniently listed in Appendix 1 with their full titles, whereas throughout the Regulations they are referred to only by their numbers. The book is divided into seven parts. Part one details the scope, object and fundamental requirements for safety; part two covers definitions; part three the assessment of general characteristics; part four covers protection for safety; part five details selection and erection of equipment; part six covers special installations or locations and part seven covers inspection and testing. 1991. 266 pages. 296 x 210mm, illustrated.

On-Site Guide

This Guide is concerned with limited application of the Regulations in accordance with '1.1 Scope'. The booklet is split into 11 sections which includes: introduction, the service position, protection, bonding and earthing, isolation and switching, labelling, conventional final circuits, special locations giving rise to increased risk of electric shock, inspection and testing, guidance notes on initial testing of installations, operation of residual current operated devices. The appendices covers a variety of related topics, including; cable capacities of conduit and trunking, resistance of copper and aluminium conductors under fault conditions, current-carrying capacities and voltage drop for copper conductors etc. 1992. 115 pages. 216 x 155mm, illustrated.

Order Code	Type	Price each
WZ97F	IEEE On Site Guide	£10.00 NV

Guidance Notes to the 16th Edition IEE Wiring Regulations

A series of guidance notes that have been issued by the Wiring Regulations Committee of the Institute of Electrical Engineers (IEE). These booklets are designed to enlarge upon and amplify some of the requirements in the 16th Edition of the IEE Wiring Regulations (WZ90X). The principle section numbers that each guide relates to, are shown in the left hand margin, with the relevant Regulations and Appendices noted in the right hand margin. The Notes may also include material that was included in earlier editions, but may not be in the 16th Edition. Additionally, the Guidance Notes contain references to other relevant information. A very useful range of booklets that all electricians in the electrical installation and maintenance industries should find extremely useful.

Number 1 - Selection and Erection

Number One in the series is concerned with Part 5 - Selection and Erection. The eight sections cover the topics: selection and erection of equipment; protection against electric shock; external influences; installation of cables; the sizing of cables; other influences; installation of equipment. A comprehensive appendices covers related topics. 1992. 122 pages. 297 x 210mm, illustrated.

Order Code	Type	Price each
WZ98G	Selection & Erection	£12.00 NV

Number 2 - Isolation and Switching

Number Two in the series is concerned with Chapter 46 - Isolation and Switching. The six sections in this booklet cover: statutory requirements; the regulations for electrical installations, definitions and principles; isolation; switching off for mechanical maintenance; emergency switching and emergency stopping; and fireman's switches. 1992. 30 pages. 297 x 210mm, illustrated.

Order Code	Type	Price each
WZ99H	Isolation & Switch	£9.00 NV

Number 3 - Inspection and Testing

Number Three in the series deals with Part 7 - Inspection and Testing. The booklet is divided into three parts: part one covers initial inspection, testing and verification; part two covers periodic inspection and testing; part three covers reference tests for initial and periodic testing, and includes polarity tests, earthing and residual current operated devices. 1992. 92 pages. 297 x 210mm, illustrated.

Order Code	Type	Price each
AA00A	Inspection & Testing	£12.00 NV

Number 4 - Protection Against Fire

Number Four in the series deals with Chapter 42 - Protection against thermal effects. The five sections cover the statutory requirements; wiring regulations; thermal effects; use of the installation and alterations and additions; and finally other related topics (safety services, fire alarms, emergency lighting, smoke detectors, lightning etc.). 1992. 23 pages. 297 x 210mm, illustrated.

Order Code	Type	Price each
AA01B	Protect Against Fire	£9.00 NV

Number 5 - Protection Against Electric Shock

Number Five in the series covers Chapter 41 - Protection against electric shock. The eight sections deal with wiring regulations, protection against direct contact; protection against indirect contact; protection by means of extra-low voltage; earthing; circuit protective conductors; bonding and special installations or locations. 1992. 85 pages. 297 x 210mm, illustrated.

Order Code	Type	Price each
AA02C	Protect Against Shck	£12.00 NV

Number 6 - Protection Against Overcurrent

Number Six in the series is concerned with Part 4 - Protection for Safety. The eight sections in this booklet deal with the regulations concerning protection against overcurrent; protection against overload; protection against fault current; determination of fault current; equations for the calculation of short-circuit currents; equations for the calculation of earth-fault current; selection of conductor size and finally a note on 'fault current withstand of flexible cords.' 1992. 87 pages. 297 x 210mm, illustrated.

THE BEST OF SERVICE

IEE Wiring Regulations Explained and Illustrated Second Edition by Brian Scaddan

Written primarily for the student electrical technician or installation contractor who needs to understand the Wiring Regulations and how to apply them, but this knowledge is also essential for anyone contemplating domestic electrical wiring. Full of really useful and practical advice for the electrician, clearly explaining the background to the design principles as set out in the Regulations and concentrating on the key areas of earthing and bonding, protection and circuit design. Topics include safety requirements, earthing, protection, control, circuit design and testing procedures. 1991. 99 pages. 146 x 210mm, illustrated.

Snags and Solutions – Electrical Installation Practice

4th Edition
NICEIC

This handy little book, now in its 4th edition, has been prepared by members of the National Inspection Council for Electrical Installation Contracting (NICEIC) and is intended to provide practical advice on the application of the 16th edition of the IEE Wiring Regulations (WZ90X). The answers to the many problems that are encountered daily by electricians and electrical installation contractors are provided, also emphasises the wiring problems found by NICEIC inspecting engineers in the course of their visits to various establishments throughout the country. An invaluable aid for all electricians and electrical installations contractors.

Order Code	Type	Price each
WZ93B	Snags & Solutions	£9.95 NV

Electrical Installation Designs

by Bill Atkinson

The majority of electrical contractors have an understanding of the requirements that are related to their own, regular, everyday activities. Normally, work is carried out using rule-of-thumb methods and repetitive designs. There is nothing wrong with using standardised designs and this book is a varied collection of typical projects that are examined to produce designs that will fit current standards. The installer may select a suitable design that corresponds as near as possible to the contract in hand and can use it accordingly. The designs illustrate methods that could be used for particular types of installation, ranging from a house to an industrial workshop. Electrical installations contractors, students and non-electrical associates in the construction industry will appreciate the user-friendly approach, but this book is not intended as a do-it-yourself for the untrained person.

AA68Y	Elect Install Design	£14.99 NV

The Guide to Electrical Safety at Work

by John Whitfield

The Electricity at Work Regulations 1989 became effective in Great Britain on 1st April 1990 and in Northern Ireland on 1st January 1992. The purpose of the regulations is to ensure that all necessary precautions are taken in work related activities to prevent death or personal injury from electricity. They are statutory Regulations made under the Health and Safety at Work Act 1974. This book is intended to answer questions that are likely to arise for people at work who need to know about the Regulations. The employer and self-employed will find this a very useful book to have permanently to hand. Equally, the employed person will find the book extremely useful. The material has been presented in a non-technical manner so that the book will be useful for all. Highly recommended.

Electrical Safety and The Law

Second Edition

by Ken Oldham Smith

This book summarises EC and British electrical safety regulations, including the Electricity at Work Regulations and the non-statutory Institute of Electrical Engineers Wiring Regulations. This latest edition takes into account the recent changes in legal requirements and deals extensively with the 16th Edition of the IEE Regulations. The book is primarily intended for the electrician, electrical engineer and safety officer and presents the facts in a simple and practical manner. It deals with electrical hazards and how they arise, accident and dangerous occurrence reporting, safety precautions, testing flammable atmospheres and the particular problems associated with underground cables and construction.

Wiring Systems and Fault Finding For Installation Electricians

by Brian Scaddan

This book particularly welcomed by all those, including both installation and plumbing contractors, self-employed heating engineers and the home electrician, who need to be able to trace faults in circuits whether they be domestic, commercial or industrial systems. The book covers the interpretation of wiring circuit diagrams, wiring systems and the principles and practice of testing for fault diagnosis. Diagrams which are closely linked with comment and explanation lead the reader from the basic symbols and circuit/wiring diagrams, through more complex circuitry and various types of wiring systems, to the logical and methodical approach to the pinpointing of circuit faults.

WZ50E	Wiring Systems	£9.95 NV

Electrical Installation Calculations

by B. D. Jenkins

The 16th Edition of the Wiring Regulations from the IEE has been accompanied by many supplementary guidance materials and numerous books explaining the 16th Edition. However, very few, if any, deal with the calculations involved in circuit design for compliance with the IEE Wiring Regulations. This book is intended to fill the gap, and includes worked examples with the minimum discussion of theory. The extensive use of worked examples and avoidance of unnecessary theory, will make invaluable reading for all electrical contractors, as well as students and plant engineers.

Modern Wiring Practice

11th Edition

by W. E. Steward and T. A. Stubbs

A completely revised edition of Modern Wiring Practice taking into account the requirements of the 16th edition of the IEE Regulations for Electrical Installations. Includes new procedures developed since the ninth edition was published. Both the design of electrical installation systems and the practical work itself are covered, and the authors have many years' experience of electrical installation. An absolute must for all electrical engineers, apprentices, contractors and architects etc., and an invaluable reference for DIY wiring at home.

Order Code	Type	Price each
WP64U	Mod Wiring Practice	£14.95 NV

Electrical Safety at Work

An IEEIE Monograph

This volume is intended as a guide to the regulations covering electrical safety at work, with emphasis on the Electricity at Work Regulations 1989. The eight chapters are written by specialists in their particular field, and the monograph covers such areas as general inspection and the testing requirements to satisfy HSE regulations, the role of the electrical contractor, periodic testing, safety testing of appliances, local RCD protection, electrical safety in schools and hazardous areas. Appendices list the relevant safety regulations and standards, together with their sources. This is an obligatory book for the professional electrician, serious contractor or very advanced DIY person.

Principles of Electricity

4th Edition
A. Morley and E. Hughes,
revised by W. Bolton

This standard text, now in its fourth edition, has been expanded and revised to give complete and current coverage of the electrical principles required by technicians. The text is ideal for students studying for BTEC National Certificates, or Diplomas, in Electrical Engineering, Electronics, Telecommunications and related subjects. The additional chapters cover transformers, circuit theorems, DC, transients and three-phase supply and the material on electronics has been completely rewritten to cover semiconductors. The chapter on electrical measurements has been extended to give coverage of a greater range of measurements and the graphical symbols used in the circuit diagrams have been revised to bring them in-line with BS 3939. The book contains 83 worked examples and 435 problems, most of which have been taken from past examination papers, with the answers at the end of the book. A very useful section on symbols, abbreviations and definitions, conveniently located at the front of the book.
1992. 480 pages. 214 x 137mm, illustrated.

WZ86T	Principles of Elect	£12.99 NV

Specification Clauses for Electrical Installations

An IEEIE Monograph

This technical monograph is intended to assist contractors and designers by providing guidance to the selection of appropriate wording for specification clauses in electrical installation contracts. Such clauses relate to utilisation features, technical requirements and definitions of requirements on performance factors for equipment. The booklet covers such areas as statutory regulations and standards, building construction, switchgear and fusegear, cable and wiring systems, wiring accessories, lighting and hazardous locations. Thorough knowledge of this book and the material behind it will ensure that contractors and designers word their specifications in a way which ensures that the high standards set by the IEE are maintained, operate and are universally recognised as best practice.
1988. 72 pages, 209 x 147mm, illustrated.

Solar Electricity

by Simon Roberts

A Practical Guide to Designing and Installing Small Photovoltaic System. Whether you are interested in solar power for a lamp, radio, workshop application or whatever, this guide provides you with the methods you need to design solar electric systems and components. The non-technical language makes this book suitable for the lay person, but it is also suitable for students on undergraduate courses in power systems and solar electricity. The book is divided into three parts. Part one gives an introduction to solar electricity, describes solar modules, battery storage of electricity, control units, distribution at low voltage and electrical appliances, inverters and lighting. Part two covers planning, installation, operation and maintenance. Part three describes the building of electronic units associated with solar electric power. The first chapter gives an introduction to electronic components and circuit building, and is followed by chapters dealing with the construction of expanded-scale voltmeters, voltage adaptors, charge regulators for nickel-cadmium cells and control units for appliance circuits. The Maplin Catalogue contains a wide range of solar cells and panels that may be suitable for projects described in this book.
1991. 440 pages. 234 x 173mm, illustrated.

Automobile Electrical and Electronic Systems

A 'Haynes' Manual
by Tony Tranter

This book meets the need for a clear explanation of modern electronic equipment used in the car, and has been written with the co-operation of the major manufacturers. The book sets out to explain how electrical and electronic equipment works, while at the same time no prior knowledge is assumed on the reader who progresses logically to an understanding of the latest technology. Specific equipment and vehicles are referred to by way of illustration and the text is an ideal combination of theory and practice. Topics include batteries, starting and charging systems, fuelling, ignition and combustion, engine management, lighting and instruments, electromagnetic interference, vehicle wiring, general fault diagnosis, test equipment, and includes latest developments in fuel injection, pollution control, engine and body electronics, and braking and anti-skid systems.
1990. 264 pages, 279 x 214mm, illustrated, hard cover.

Microwave For Certain

by James Garrod and
Annemarie Rosier

It is important for microwave ovens to be used intelligently. Some people quickly take to microwave, whilst others have difficulty breaking away from the familiar heat and temperatures. The microwave story as told in this book should leave no cause for doubt or confusion, and it may be an eye-opener even to the most successful microwave cook. The chapter on how to look after a microwave oven and recognise whether or not it needs attention is particularly good. This is the first publication to offer comprehensive advice along those lines. Engineers are often called out to microwave ovens which are in no way faulty. Everyone who uses a microwave oven has something to gain by reading this book, especially if they follow it through right from the beginning. It is strongly recommended they do just that.
1990. 89 pages. 210 x 148mm, illustrated.

Order Code	Type	Price each
WT50E	Microwave for Certn	£4.45 NV

An Introduction to Microwaves
by F. A. Wilson

This is an introductory book and no background in microwave technology is needed, although some elementary electronics experience is assumed. The mathematics required are little more than ordinary algebra. Organisation of the book is straightforward. Brief reminders and technical explanations of those facets of electronics important for an appreciation of microwaves are followed by chapters on microwave generators and amplifiers. This leads on to the practical uses of microwaves in communications generally, mobile communication and television. The book ends with a look at radar and heating, and includes notes on the domestic microwave cooker.
1992. 144 pages. 178 x 111mm, illustrated.

ELECTRONICS HANDBOOKS

The Art of Electronics

by Paul Horowitz and Winfield Hill

This is a text/reference book that emphasises electronic circuit design techniques and scientific measurement. Written in a down-to-earth manner it takes the reader from basic principles through to a reasonable degree of proficiency in circuit design. Included in the chapters are; transistors, feedback, operational amplifiers, active filters, regulators, digital/analogue techniques, computing and measurement, active filter designs, switched-capacitor filters, quadrature oscillators, low-dropout regulators, switching supplies, crowbars, isolation amplifiers, SCR latchup, 'ground bounce,' dynamic power dissipation, optoelectronics, RS-232 interfacing, modems, memory chips, schematic capture, AM detection, battery characteristics, sensor linearization.

1989. 1125 pages. 254 x 176mm, illustrated.

Basic Skills - Electronics

by Tom Duncan

This book is suitable for anyone taking an introductory course in electronics, at school, college, or by study at home, or for anyone who wants to gain a knowledge and understanding of some of the basic principles of electronics. This book will meet the needs of those working for the Associated Examining Board's Basic Test in Electronics. Theory is covered in Part 1, while Part 2 provides practical course work in the form of experiments and projects, and provides an opportunity to become familiar with some basic components.

1988. 120 pages. 245 x 188mm, illustrated.

WS54J	Basic Skills Elect	£6.25 NV

The Electronics Workbench

Tools, Testers and Tips for the Hobbyist
by Delton T. Horn

This book is a complete guide to selecting electronic test and circuit design equipment, and provides you with a complete overview of everything you will need to know to design a permanent or portable workbench that best suits your specific needs. The following major categories are covered: multimeters, frequency meters, signal injectors and tracers, digital test equipment, oscilloscopes, LCR bridges and capacitance meters, signal generators and semiconductor testers and much more. Warning: references may be made to the American standard 110V AC mains supply. You should translate these into the English 240V AC mains standard and take the appropriate precautions with the higher voltage level.

Practical Electronics for GCSE

by Owen Bishop

This course of practical electronics by the author of many successful books in computing and electronics, is designed for GCSE Electronics and the Electronics component of Technology courses. It offers the most comprehensive course of fully documented electronics practicals yet made available at this level. It is completely up to date with current techniques, equipment and approaches, with an extensive range of practical exercises, projects and open-ended investigations accompanied by the background information and essential theory required. The ideal workshop companion.

1989. 208 pages. 280 x 207mm, illustrated.

GCSE Electronics

by Tom Duncan

This book is fully up to date with current developments in electronics. It is designed to meet the requirements of all GCSE Electronics and the Electronics component of Technology courses. The text develops the subject logically from first principles through to electronics systems, with reinforcement questions (and answers) throughout. Has useful references for practical aspects of the course. Contains check lists of learning objectives and additional banks of questions (with answers and explanations) at core and further levels, so that students can monitor the progress throughout the course.

1989. 180 pages. 280 x 210mm, illustrated.

Digital and Analogue Electronics for HNC

by G. C. Loveday

This book primarily covers the required BTEC syllabus topics for electronic engineering at HNC/HND level, and in particular for BTEC units Analogue Electronics 13768B and Digital Electronics 13679B. Undergraduate students on electronic engineering degree courses will also find this book very useful as supplementary reading to their main course texts. The author has adopted an engineering approach to text presentation, providing the student with many analysis and design examples, as well as exercises and solutions to consolidate the theory discussed in the text. Emphasis is placed on the fundamental principles of electronic theory.

Teach Yourself Electricity and Electronics

by Stan Gibilisco

This book has primarily been written for those people who want to learn basic electricity and electronics without taking a formal course, but it can also serve as an introductory classroom text. The book is easy to follow as nothing is very advanced, starting with simple, general concepts and moves to more specialised topics. It is not necessary to have a mathematical or scientific background to make use of the book, as secondary school level mathematics and physical science should suffice. The style of the book does require a certain amount of self-discipline on the part of the reader, but the book is easy to read and follow, and the reader can set his/her own pace. A highly recommended book.

1993. 678 pages. 234 x 188mm, illustrated. American book.

Protection of Electronic Equipment

Edited by
W.S.E. Mitchell

This technical monograph, is intended as a guide for the protection of electronic equipment against the potentially harmful effects of wide-ranging environmental and electrically-induced conditions. Individual chapters are written by specialists in their particular fields, covering such areas as protection against climatic and mechanical environments, hazardous areas (chemical etc.), electromagnetic and RF interference, electrostatic discharge, surges and transients on power or signal lines, thermal protection and management and special requirements relating to micro-electronic devices. There is good advice on correct wiring procedures, so you should be able to design and make up well thought-out cable looms taking all these precautions into account and not simply string things together with haphazard wiring! 1989. 96 pages, 210 x 148mm, illustrated.

Hitchhikers' Guide to Electronics in the '90s

by **David Manners**

This highly readable book puts the advances in electronics in a historical context, looks at the microchip technology which is at the heart of all technological advances, and surveys the major industrial electronics power houses, and finally peeks into the future of both the technology and the emerging markets. Chapters include a discussion on the impact of electronics, how it is shaping politics and the world; the 'chip wars' technology race and how Japan won; brief history of

electrical discoveries and electronics; jargon; electronics industry and consumers; the chip business and the main worldwide companies, who and where they are; trends for the '90s, the pressing need for both the U.S. and Western Europe to rebuild technological and industrial strength, and whether Eastern Europe will become a serious market or producer. A really interesting book. 1990. 220 pages, 210 x 148mm.

Collins' Dictionary of Electronics

by **Ian R. Sinclair**

This dictionary is designed for all who need a guide to the subject, including advanced school students and those embarking on further education courses, as well as technicians and hobbyists. Contains over 2,000 entries, from *aberration to zero error*. Includes over 1,000 diagrams, with lists of symbols used in electronics; microprocessor technology, digital electronics, telecommunications, hi-fi, radio and television. The form of the dictionary has been set out so as to make it easier to find an explanation of a device or principle under one heading. In addition cross references guide the reader to other related entries. 1988. 378 pages. 202 x 130mm, illustrated.

Oxford Dictionary 8th Thumb Index Edition

The eighth edition of The Concise Oxford Dictionary is a thorough revision of the foremost authority on current English. The text has been expanded and largely rewritten, with the emphasis on ease of use and coverage of contemporary English. It marks a radical departure from previous editions with many more words and phrases given separate articles, and definitions written in a clear, straightforward style. The use of special symbols and abbreviations has been kept to a minimum and explanations of grammar and word origins have been considerably revised and clarified. Many more derivatives are given. There are 120,000 entries (including compounds, phrases, derivatives, abbreviations, and a generous coverage of inflections) and 190,000 definitions. Special attention has been paid to the vocabulary of science and technology, including newer fields such as environmental studies and the information sciences. Other features new to this edition include generous treatment of English used throughout the world, pronunciations given in the standard International Phonetic Alphabet, and articles on the English language and dictionary writing. With this edition the dictionary enters the computer age. The text has been compiled from the extensive records of words and usage held by the Oxford Dictionary Department, including the continuously updated database of The Oxford English Dictionary. The result is an unrivalled account of the English language in general use today. 1992. 1488 pages. 242 x 167mm, hard cover.

The Oxford Dictionary for Scientific Writers and Editors

This dictionary provides scientists, science writers and all who work in scientific publishing with a clear and concise style guide for the presentation of scientific information. It reflects widely accepted usage and follows the recommendations of international scientific bodies such as IUPAC and IUPAP. The dictionary gives clear guidance on such matters as spellings (US and UK), punctuation, abbreviations, prefixes and suffixes, units and quantities, and symbols. Over 9,500 entries cover the fields of physics, chemistry, botany, zoology, biochemistry, genetics, immunology, microbiology, astronomy, mathematics, and computer science. There are also extensive supplementary tables including SI units, mathematical symbols, the electromagnetic spectrum and the periodic table. This guide sets out an up-to-date and consistent style for scientific material intended for publication. The contributors to this dictionary are all scientists or science writers from a variety of disciplines. The editors have cast their net wide in the hope of making the book as comprehensive and useful as possible. 1992. 389 pages. 204 x 140mm, hard cover, illustrated.

Electrical and Electronic Engineering Principles – A Ready-Reference Guide

Compiled by J. O. Bird

The study and practice of electrical and electronic engineering involves the use of a large number of important formulae, as well as the various quantity definitions, units and symbols. The aim of this handy ready-reference guide is to present, concisely, the most common quantities, units, symbols, definitions, formulae and circuit diagram symbols used in the field of electrical and electronic engineering. Some 150 graphical symbols selected from the British Standards Institute are included. This well laid out and presented book will be extremely valuable for students and lecturers in colleges, polytechnics and universities, as well as technicians and engineers in the electrical and electronic engineering industries.

Analog Electronics

Analog Circuitry Explained

by Ian Hickman

Many young designers are lured away from fundamental electronics to the more 'glamorous' digital work. Yet there are still many simple requirements for which a purely analogue realisation is cheaper and more reliable than a microprocessor based solution. In this book the author includes many examples from his large collection of circuits built up over many years, selected for their usefulness in a wide range of applications. They are practical analogue circuits, complete with component values in many cases, representing over a quarter of a century of working experience packed into a single volume. But the book is also completely up-to-date and with the latest developments and techniques, and will enable the reader to acquire an easy familiarity with the circuitry and how it works – and also why it fails if it should do so. The book is intended for anyone already involved in electronics, either as a hobby or professionally – amateurs, students, technicians, graduates and even chartered engineers will all benefit from reading this book.

MAPLIN SERIES – LOGIC DESIGN

NEW

by M. Wharton

This book offers a clear and concise introduction to logic circuit design and is based on a collection of feature articles that originally appeared in *Electronics – The Maplin Magazine*. As well as providing a first guide for the beginner, the volume includes practical information and reference material for the more experienced electronics enthusiast or student.

1994. 200 pages. 216 x 138mm, illustrated.

Practical Electronics

by Barry Woollard

This book covers many electronic components, detailing their attributes, ratings and typical applications. There are sections on Resistors and Capacitors, Inductors and Transformers, Power Supplies, Transistors, Thyristors and Triacs, Pulse Shaping, Amplifiers, Logic and Digital Electronics, and also Measurements and Fault Diagnosis. Each section is complemented by a series of practical exercises for which typical results are given later in the book. This book is ideal for Students and Teachers alike.

1984. 260 pages. 230 x 150mm, illustrated.

Order Code	Type	Price each
WP05F	Pract Electronics	£11.95 NV

Practical Electronic Timing

by Owen Bishop

This book is essentially a project book of practical electronic timing circuits, that employ several different types of specialised IC. Each group of projects has an introductory discussion highlighting the problems of timekeeping and the methods of solving such problems by using electronics. There are projects that are suitable for beginners as well as the more experienced electronics constructor – the projects being suitably identified as either beginners, average or advanced. All the projects will operate from batteries, making them safe to build and operate – especially important for young beginners. In fact, there are several low-cost projects, that are specifically aimed at the beginner and younger enthusiast.

1993. 174 pages. 178 x 110mm, illustrated.

Order Code	Type	Price each
AA28F	Electronic Timing	£4.95 NV

Practical Electronic Design Data

by Owen Bishop

This book is a comprehensive reference manual for electronics enthusiasts of all levels, be they hobbyists, students or professional electronic engineers. A major section of the book covers the main types of components, including surface-mounted devices. For each component, the book lists the most useful and readily available types, complete with details of their electronic characteristics, pin-outs and other useful information. A special feature of this section is the easily followed charts and tables which suggest how to select the best type of component for any particular purpose. Basic electronic units are defined, backed up by a fully explained compendium of the most often required formulae.

1992. 332 pages. 178 x 111mm, illustrated.

WZ70M	Prct Electr Design	£4.95 NV

Electric Circuits

by Noel M. Morris and Frank W. Senior

This book is one of a series for use by students, not only as a text book but also as a guide to good practice in the solution of problems. The topics reflect the most popular areas in first year HND and HNC courses in Electrical and Electronic Engineering. While much of the mathematics is on the heavy side, many electrical engineering terms and circuit theory analyses are clearly and concisely described and illustrated in this very detailed book.

1991. 370 pages. 275 x 215mm, illustrated.

WZ07H A2	Electric Circuits	£9.99 NV

Instrumentation Electronics

by P. P. L. Regtien

We are all aware that electronics has penetrated deeply into our daily life, for electronic systems can be observed almost everywhere. There are hardly any appliances, tools or instruments that do not contain electronic parts, and designers of technical systems must be fully-aware of the possibilities and limitations of modern electronics. It is equally important that users of electronic systems have at least some basic knowledge of electronic principles to exploit fully the possibilities of an instrument, to be aware of any limitations and to correctly interpret measurement results. This book is designed to offer the basic knowledge to obtain these skills, and covers the basic properties of both analogue and digital components and circuits, as used in electronic measurement systems. This well written book is based on electronic and electronic instrumentation courses, and requires a basic knowledge of mathematics and physics to first year degree level, or equivalent. No knowledge of electronics is required.

1992. 490 pages. 233 x 173mm, illustrated.

Order Code	Type	Price each
WZ87U	Instrument Electron	£18.95 NV

THE BEST OF SERVICE

Digital Logic Gates and Flip-Flops

by Ian R. Sinclair

This book, intended for enthusiasts, students and technicians, seeks to establish a firm foundation in digital electronics by treating the topics of gates and flip-flops thoroughly. This is not a constructor's book in the sense of presenting circuits to build and use, it is for the user who wants to design and troubleshoot digital circuitry with considerably more understanding of principles than the constructor, and who wants to know more than a few rules of thumb about digital circuits. Topics such as Boolean algebra and Karnaugh mapping are explained, demonstrated and used extensively, and more attention is paid to the subject of synchronous counters than to the simple but less important ripple counters. No background other than a basic knowledge of electronics is assumed, and the more theoretical topics are explained from the beginning, as also are many working practices. The book concludes with an explanation of microprocessor techniques as applied to digital logic.

1989. 198 pages. 216 x 138mm, illustrated.

Electronic Circuits Pocket Book

Volume 1

by Ray Marston

This information packed book is a single-volume applications guide to the most popular and useful linear ICs, and presents a total of 625 diagrams, tables, and carefully selected practical circuits, backed up by over 50,000 words of highly informative text. It deals with many strictly linear ICs such as op-amps, audio pre-amplifiers, power amplifiers, signal conditioners and power supply regulators, etc., as well as various 'hybrid' configurations, which use a mixture of linear and digital devices, such as the 555 timer IC, bargraph display drivers, CCD delay lines, function and waveform generators, phase-locked-loops (PLLs), and power control ICs. Each subject is treated in an easy-to-read, concise, highly practical and non-mathematical manner. Great emphasis is placed on practical 'user' information and circuitry throughout, and most of the ICs and other devices used in the practical circuits are modestly priced and readily available, with universally recognised type numbers. 1991. 336 pages. 197 x 95mm hard cover, illustrated.

1991. 336 pages. 197 x 95mm hard cover, illustrated.

Electronic Circuits Pocket Book - Volume 2

by Ray Marston

This volume complements the best-selling volume one, and is produced in the same informative style. Covering passive electrical components, transducers and simple discrete semiconductor devices, this book has a total of 670 diagrams, tables and carefully selected practical circuits. The informative text explains the basic features and important details of modern passive components such as resistors, capacitors, inductors, switches etc., as well as relays, loudspeakers, 'phones, diodes, transistors, SCRs and TRIACs etc. The text is non-mathematical and highly practical, and is aimed at engineers, technicians, students and experimenters who can build a design directly from a circuit diagram.

1993. 375 pages. 197 x 95mm, illustrated.

A Practical Introduction to Electronic Circuits

2nd Edition

by Martin Hartley Jones

This book dispels much of the mystery which surround electronics with its down to earth practical approach in presenting the various building blocks of electronics. Mathematics is limited to a basic understanding of Ohm's Law and a little calculus. Fourteen chapters covering amongst other subjects; amplification, thermionic valves, negative feedback, impedance matching, differential amplifiers, power supplies, integrated analogue and digital building blocks, pulse circuits and microcomputer circuits. 1985. 278 pages. 245 x 174mm, illustrated.

Electronics

by G. Waterworth

This book is primarily intended as a text for electrical engineering students, but is equally useful for the amateur hobbyist and is a companion volume to 'Electric Circuits', WZ07H. It describes all the common semiconductor devices, how they work and how they are used in various circuit schemes. The topics are arranged in the traditional order for semiconductor devices: diodes, BJTs, FETs and op-amps, followed by their applications in a variety of electronic subsystems such as amplifiers, oscillators, non-linear circuits, power amplifiers, regulated power supplies, power electronics systems, combinational and sequential logic circuits. 1991. 257 pages. 275 x 210mm, illustrated.

Order Code	Type	Price each

Circuit Source Book 1

by R. A. Penfold

This book has been written to help the reader create and experiment with their own electronic designs by combining, and using, the various standard building block circuits described in the book. To widen the possible use of some circuits, advice is given on how to alter the circuit parameters. Many simple projects can be built up from standard circuit blocks, and this book will be invaluable to those who are embarking on electronic project design. To the more experienced circuit designer, it will be a very useful reference source, for all the circuits are tried and tested, and are not just theoretical circuits. Example values are given, together with advice on how to alter the values of components so as to alter the circuit parameters e.g., to vary the value of a filter frequency, or amplifier gain etc. Explanation of circuit block functions and what they do, is not given in great detail, for the book is only intended for those who have some knowledge of electronics. However, no advanced mathematics is required in order to make use of this book.

A very useful and handy book for all professionals, students and hobbyists to have in their book collection.

Order Code	Type	Price each
WZ92A	Circuit Source Book1	£4.95 NV

Circuit Source Book 2

by R. A. Penfold

This book provides a number of electronic circuits which make useful 'building blocks' for designers of electronic projects. The book is divided into four chapters with the first chapter covering oscillators and includes 555 astables, op amp oscillators, sinewave and function generators, V. C. O.s, CMOS oscillators and RF oscillators. Chapter two covers monostables and timers, and includes precision timers. Chapter three discusses digital circuits and covers A-to-D, and D-to-A circuits as well as many other types of digital circuits. Finally, chapter four describes power supplies. The book is really only intended for those that have some background knowledge in electronics. However, no advanced mathematics is required in order to make use of this book. Over 170 circuits are provided which should provide a useful reference source for those involved in circuit design and applications, whether they are professional, student or a keen hobbyist.

A Reference Guide to Practical Electronics Terms

by F. A. Wilson

This inexpensive reference guide explains briefly and succinctly, many of the underlying electronics features of practical devices, most of which, to a certain extent, control our lives.

This book is in effect more than just a dictionary of practical electronics terms, it goes a stage further in also getting down to fundamentals. Accordingly the number of terms may be limited but the explanations of the many which are included are designed to leave the reader more competent and satisfied.

Complicated mathematics has been avoided as this can be confusing on first reading. The entries are in alphabetical order, and where necessary, entries have references for further reading. The references are no more than enlightened suggestions, and the reader can choose which, if any, should be explored further.

This practical reference guide is ideal for everybody concerned with electronics. 1992. 442 pages. 198 x 130mm, illustrated.

Order Code	Type	Price each
WZ59P	Guide Electr Terms	£5.95 NV

Practical Electronic Filters

by Owen Bishop

Filters play a vital part in almost all electronic circuits, this book deals with the subject in a non-mathematical way. It reviews the main types of filter, explaining in simple terms how each type works and how it is used. The book also presents a dozen filter-based, practical projects with applications in and around the home or in the constructor's workshop. These include a number of audio projects such as a rhythm sequencer and a multi-voiced electronic organ. Project descriptions include circuit diagrams, explanations of their operation, and detailed instructions for building them. Concluding the book is a practical step-by-step guide to designing simple filters for a wide range of purposes, with circuit diagrams and worked examples. 1991. 204 pages. 178 x 111mm, illustrated.

Preamplifier and Filter Circuits

by R. A. Penfold

This book provides both circuits and background information for a range of preamplifiers, together with tone controls, filters and mixers etc. to go with the amplifiers. The use of modern, low noise operational amplifiers and a specialist, high performance audio preamplifier IC results in designs having excellent performance but which are still quite simple. All the circuits featured can be built at quite low cost, in most cases, for just a few pounds. In fact, everything you need to put together your own, custom preamplifier system is in this book.

Filter Handbook - A Practical Design Guide

by Stefan Niewiadomski

This book is a guide to electronic filter design and implementation, clearly written and without the enormous amount of mathematics usually found in books on this subject. With many outstanding features, the handbook covers passive and active filters, and contains computer programs to aid the design process. Outlines practical problems of implementing filters and how to overcome them, using simulation and measured results. Contains many working examples of filter designs for use at radio and audio frequencies. Explains the principles in a way that requires no advanced mathematical knowledge. Helps in the selection of the optimum filter response to meet a design requirement. Deals with switched capacitor and switched resistor filters. Includes a useful catalogue of pre-calculated tables. 1989. 195 pages. 253 x 190mm, illustrated.

MAPLIN SERIES – NEW STARTING ELECTRONICS

by Keith Brindley

This text provides an important introduction for the new-comer to the fascinating world of electronics. Essentially practical, all the bits and pieces that an experimenter will meet when tackling projects and building circuits are introduced and explained. Detailed and practical explanations of components are combined with clear descriptions and methods to give a thorough grounding in the basics. This is the essential primer for all electronics enthusiasts and a valuable guide for students. 1994. 200 pages. 216 x 138mm, illustrated.

practical rather than the theoretical. The book is conveniently divided into three parts. Part One, components, covers power semiconductor devices, thermal design, power semiconductor components, EMC, and power semiconductor protection. Part Two, circuits, discusses static switches, AC line control, phase-controlled rectification and inversion, direct AC frequency converters, forced commutation techniques. DC to DC converters and DC link frequency converters. Part Three describes some of the applications of power semiconductor circuits, such as power supplies, electrical machine control, heating and lighting and electromechanical applications. A list of symbols used, a glossary of terms and a bibliography are provided in the book. The book is profusely illustrated and will be of great interest to the power electronics engineer and student. 1993. 418 pages. 231 x 154mm, illustrated.

Electric Motors and Drives

by Austin Hughes

This book explores most of the currently widely-used modern types of motor and electronic driving methods, including conventional and brushless DC, mains and inverter fed induction motors, stepping motors, mains and converter fed synchronous motors, and reluctance motors.

Applications are deliberately spread throughout the text in order to emphasise the fact that there is no longer any automatic correlation between motor type and application. If you need to do anything with an electric motor you must read this super book first. 1990. 320 pages. 203 x 135mm, illustrated.

Order Code	Type	Price each
WS84F	Electric Mtr & Drivs	£15.95 NV

Electric Motors

by Jim Cox

This book sets out in simple terms the essential characteristics and operating limitations of the principle motor and generator types. The approach is essentially practical in nature with few calculations needing anything more than simple arithmetic, giving basic operation and installation information to the first time user. The book shows you how to apply automotive, industrial and domestic motors in home-made applications, and identify their ratings; less common motor and generator types such as servo and stepper motors are included. Readily available in the surplus market, the unusual types can be extremely useful in special applications. The book includes data about motor starting systems, electronic speed control and motor braking. 1990. 134 pages. 209 x 148mm, illustrated.

Power Control Circuits Manual

by R. M. Marston

Electronic Power Control techniques are used to control (either manually or automatically) the brilliance of lamps, the speed of electric motors, the temperature of heating elements, the loudness of audio signals and so on. This control can be achieved using electro-mechanical means via switches and relays, or by electronic components such as transistors, SCR's, TRIAC's and power IC's. This book takes an in-depth look at the whole subject of electronic power control, and presents the reader with a vast range of useful circuits and diagrams. Subjects covered include basic principles, switch and relay circuits, CMOS switches and selectors, AC power control and DC power supply methods, and including audio power amplifiers and some used for in-car systems. The manual is primarily aimed at the practical design engineer, technician and experimenter as well as the electronics amateur enthusiast. 1990. 206 pages. 214 x 136mm, illustrated.

A Beginners Guide to Modern Electronic Components

by R. A. Penfold

This book describes the basic functions of components but is not an electronics text book. Instead it deals with the practical aspects such as colour codes, deciphering code numbers and the suitability of components for given applications. Some of the components covered include Resistors (including Potentiometers), various types of capacitors, inductors, diodes (including Zeners and Varicaps). Transistors both silicon and germanium, opto electronic devices, operational amplifiers, logic integrated circuits, loudspeakers and microphones and meters. The book cleverly divides the components into Passive, semiconductors integrated circuits and The Rest which includes connectors, switches and multiway components. A useful index has to be used in conjunction with the contents pages, but does enable much of the detail about components to be tracked down.

Data Communications and Distributed Networks

by Uyles D. Black

Even though the many components that form data communications systems and distribute networks may appear to be complex, the purpose of this technology is to transport user data between and among user machines. This book sets out to provide a practical yet detailed explanation of the data communications system networks with special reference to software and data bases. The book is written using as few formulae and as little technical jargon as possible, however, sufficient detail is provided to remove the mystery and confusion that often surround these topics. The book includes the new standards such as some of the IEEE 802 LAN standards and some of the CCITT ISDN standards, and frame relay and broadband ISDN. The book contains material on distributed systems and internetworking, with the emphasis on internetworking of personal computers and client-server operations. This book is ideal for the beginner and the more advanced reader who is interested in obtaining a good understanding of data communications and networks.

Electronic Circuit Design Art and Practice

by T.H. O'Dell

The theme of this textbook is the practical element of electronic design. There is more to circuit design than a good theoretical foundation augmented by a considerable amount of laboratory experience. Where do new circuit ideas come from? This question is followed in the first chapter, and the discussion is maintained throughout the following eight chapters dealing with high and low frequency, small-signal amplifiers, optoelectronic circuits, digital circuits, oscillators, translinear circuits and power amplifiers. One or more experimental circuits are described in each chapter in detail for the reader to build, a total of thirteen project exercises in all. The last chapter draws some conclusions about the fundamental problem of design in the light of the circuits that have been dealt with in the book.

Digital Systems Design with Programmable Logic

by Martin Bolton

Programmable logic devices (PLD's) bring indispensable benefits in terms of speed, flexibility and reliability to digital systems design. This book provides a clear and careful introduction to modern, structured digital systems design from a programmable logic perspective. Extensively covering synchronous and asynchronous techniques, a 'top-down', implementation-independent approach to design is taken throughout. Topics covered include extensive coverage of state machine design, an appendix listing all known PLD's, test objectives, summaries and problems with each chapter, and a very comprehensive bibliography.

Digital System Design

2nd Edition

by Barry Wilkinson with Rafic Makki

This book introduces the fundamental topics of digital system design, and can be used as a text for undergraduate electrical engineering, computer engineering, and computer science courses in logic design and microprocessor systems. The book has three parts. The first part deals with logic design, while part two is devoted to the components of a microprocessor system. The last part contains further aspects of digital system design, and extends topics introduced in the other two parts. In this second edition, the treatment of logic design has been expanded, and the text on microprocessors has been up-dated. A major new chapter on VLSI systems design and testing has been included.

1992. 558 pages. 235 x 174mm, illustrated. American book.

Getting the Most from Your Multimeter

by R. A. Penfold

The first piece of test equipment that most electronic hobbyists normally buy is a multimeter. The basics of analogue and digital multimeters are covered, discussing their relative merits and limitations. Various methods of component checking are described, including tests for transistors, thyristors, resistors, capacitors and diodes. Circuit testing is also covered with subjects such as voltage, current and continuity checks. Using these simple techniques the reader should be able to confidently tackle servicing of most equipment.

Order Code	Type	Price each
WP94C	Get Most Multimeter	£2.95 NV

More Advanced Uses of the Multimeter

by R.A. Penfold

This book is primarily intended as a follow-up to 'Getting The Most From Your Multimeter' and also anyone who already understands the basics of voltage testing and simple component testing. Thoroughly testing some components requires specialised and expensive equipment. In some cases there would not seem to be equipment of the right type available at any price. By using the techniques described, you can test and analyse the performance of a range of components. Designs for simple add-ons are given to make the multimeter even more useful: An active RF probe, a high resistance probe, an AC sensitivity booster and a current tracer.

How to Use Oscilloscopes and Other Test Equipment

by R. A. Penfold

Advances in electronics over recent years have brought some quite advanced pieces of test equipment within the scope of many electronics hobbyists. This book explains the basic functions of an oscilloscope giving a detailed explanation of all the standard controls, with advice on choosing an oscilloscope. A separate chapter deals with using the instrument for fault-finding both linear and logic circuits, with plenty of example waveforms. The function and use of other pieces of test gear are also covered, including signal generators, logic probes, logic pulsers, and crystal calibrators.

Oscilloscopes

How to Use Them, How They Work Third Edition by Ian Hickman

An enormous range of different models is available, and choosing an instrument suitable for your needs has never been easy, particularly for the hobbyist beginner. Includes new material on storage CRTs, DSOs (Digital Storage Oscilloscopes), sampling oscilloscopes, oscillographs, X/Y, X/T and X/Y/T plotters, both stand-alone and as existing oscilloscope accessories; UV recorders, laser recorders, and use of dot matrix printers as output devices. In this case PCs are used with 'plug-in' oscilloscope and logic analyser cards. There is also additional material on network analysers, intrinsically safe oscilloscopes, display oscilloscopes and fibre-optic TDRs. A new appendix covers the considerations relating to achievable measurement accuracy in various types of oscilloscope voltage, time, frequency, rise-time etc.; electronic cursors, coupled DVMs etc.

MAPLIN SERIES – **NEW** AUDIO IC PROJECTS

Each of the circuits in this book is based on those appearing in the popular 'Data Files' feature in *Electronics – The Maplin Magazine*. 'Data Files' are building blocks which constructors can use to experiment with components and use as a starting point for further development. Each of the circuits is based around readily available chips, and provide an excellent way to become familiar with the characteristics of the chip as well as providing constructional details of useful projects. Each project includes pinouts and pin designations, output waveforms, parts lists, circuit diagrams, PCB layouts and photographs of the boards. This book will provide a useful toolkit for building audio systems and circuits based on readily available components using straightforward techniques. 1994. 200 pages. 216 x 138mm, illustrated.

GREAT VALUE!
£9.95^{NV}

Instrumentation and Test Gear Circuits Manual

Primarily, this book is a manual of modern instrumentation and test gear circuits that will be of immense value to the industrial, commercial, or amateur electronics engineer or designer. This book is filled with nearly 500 varied and extremely useful carefully selected practical circuits, diagrams, graphs and tables. The diverse range of practical circuits cover; attenuator and filter circuits, basic meter and multimeter circuits, electronic analogue meter circuits, digital panel meter circuits, waveform generator circuits, scope trace doubles, timebases, and digital frequency meters, power supply circuits and many more. The majority of the semiconductors specified in the designs are reasonably priced and readily available.

Electronic Test Equipment Handbook

by Steve Money

In this book the principles of the various types of test instrument are explained in simple terms with a minimum of mathematics. The problem is going to be what to choose given a limited budget. Here you will find described a wide selection of test instruments ranging in complexity from the humble continuity tester through analogue and digital multimeters to the next most popular item, the oscilloscope, followed by signal generators and finishing with computer controlled testing equipment. 1990. 206 pages, 216 x 134mm, illustrated.

RQ28F	Book BP48	£1.95 NV

Electronic Projects for Your PC

by R.A. Penfold

This handy little book provides a number of useful PC add-ons including: digital input/output ports, analogue to digital and digital to analogue converters, voltage and current measurement circuits, resistance meter, capacitance meters, temperature measurement interface, constant voltage model train controller, pulsed model train controller, position sensors, stepper motor interface, relay and LED drivers and triac mains switching interface. The ports and projects featured utilise the basic eight bit PC expansion bus, and are therefore suitable for use with any PC or compatible which has the standard ISA or EISA expansion bus. In practice, this means anything from the original PC through to the modern 386 and 486 PCs.

The book assumes that the reader has a certain knowledge of PC computer interfacing. 1992. 105 pages. 178 x 110mm, illustrated.

Electronic Modules and Systems for Beginners

by Owen Bishop

Forget having to 're-invent the wheel' as it were, and design electronic systems using already established and developed circuit designs. Many oscillators, bistables, monostables and amplifier stages use time honoured techniques that are known to work. This book describes over 60 electronic circuit modules; how they work, how to build them and how to use them. In the process of working with these 'building blocks' you will learn the basic fundamentals of many established designs. Many modern electronics engineers are systems, not circuit, designers. Become such a systems' designer and combine the modules together to make hundreds of different electronic systems, both analogue and digital. To show you how over 25 actual electronic systems are described in detail, covering such diverse applications as timing, home security, measurement, audio, including a simple radio receiver, games and remote control. Although a book aimed at beginners, introducing the principles and practice of electronics, there are plenty of circuit ideas for the more experienced constructor too. 1989. 208 pages. 178 x 110mm, illustrated.

The Maplin Electronic Circuits Handbook

by Michael Tooley

This book contains a unique collection of practical working circuits together with supporting information so that circuits can be produced in the shortest possible time and without recourse to theory. The circuits have been thoroughly tested and, wherever possible, a range of commonly available, low-cost components is used. The circuits can be readily modified and extended by the reader to meet his or her own application. Related circuits are grouped together and cross referenced within the text and an index, identifying which common types can be interconnected and produce more complex systems. As far as is possible a common range of supply voltages, signal levels and impedances have been adopted. The book assumes that the reader has an elementary understanding of electrical principles and is familiar with common units and quantities. A selection of Maplin projects is included. 1990. 288 pages. 246 x 189mm, illustrated.

Remote Control Handbook

by Owen Bishop

This book includes many new circuits which have never been published before. There are circuits for interfacing to computers, use of fibre-optics and for using the domestic mains supply as a means of transmission. There are also circuits for frequency to voltage conversion and voltage to frequency conversion.

In this book the circuits have been designed as far as possible, to be modular in concept, i.e. they can all be linked together in many different configurations to produce exactly the type of remote control system to suit the individual taste. Whatever type of system you require this book has a great deal to offer. 1988. 226 pages. 178 x 111mm, illustrated.

More Advanced Power Supply Projects

by R.A. Penfold

This book is the companion volume to 'Power Supply Projects' and should be of interest to any one who has a reasonable knowledge of power supply basics and would like to learn about recent developments and more advanced designs. The practical and theoretical aspects of the circuits are covered in some detail, and the reader is not assumed to have an in-depth knowledge of electronic circuit design. However it is recommended that any one who is not familiar with the fundamentals of power supply design and operation should obtain the introductory book first. Topics covered include switched mode power supplies, precision regulators, dual tracking regulators and computer controlled supplies. 1988. 92 pages. 178 x 111mm, illustrated.

Real-Life Scenic Techniques for Model Railroaders

by Carl Caiati

If you are a model railway enthusiast who will not settle for the ordinary, run-of-the-mill layout, then this complete, step-by-step guide is for you. It opens the door to hundreds of tips, hints, and techniques for creating elaborate, multi-level scenic layouts that are accurate to every last detail. The book, backed by numerous photos and drawings, describes in detail how to create scenic backdrops, mountains, tunnels, terrain, trees, foliage, fences, and water that will make your layout approach state-of-the-art realism. Whether you want your trackwork to look rustic and weathered, modern and industrial, or all natural, you will find all the instructions you need in this invaluable guide. American Book. 1987. 176 pages. 233 x 188mm, illustrated.

RADIO CONTROL BOOKS

Introducing Radio Control Model Boats

by Vic Smeed

The book covers all aspects – including radio control equipment, boats and competition classes, construction, power options, equipment installation, pre-launch checks and operation.

A useful discussion of maintenance and fault finding concludes the book, which should ensure that the modeller does not have to wade out too far to deal with equipment failure. The existence of 33 classes of models for competition means that the scope for getting involved in this long established but popular sport is vast. Certainly the experience passed on in this book should mean the transition from the modelling bench and bath-tub trials, to an enjoyable afternoon boating, is a quick one. 1989. 95 pages, 210 x 145mm, illustrated.

Order Code	Type	Price each
WT68Y	Model Boats	£5.50 NV

Getting Started in Model Car Building

by Dennis Doty

While this book has nothing to do with electronics directly, it would however, be very useful for anyone interested in building radio controlled models for example. While concentrating on static model cars, the chapters constitute a complete guide to the materials and tools you will need, descriptions of various painting methods, and details on realistic finishing applications for both plastic and metal components, and includes hints and tips from an author having many years experience behind him, enabling you to produce authentically detailed models. American book.

1989. 128 pages. 233 x 188mm, illustrated.

Aero Modellers' Handbook

by Les Netherton

Getting a model aircraft to fly successfully is not difficult, but in addition to possessing the right tools and a certain amount of manual skill, it does require a basic knowledge of what keeps an aeroplane in the air, and how its controls work. These basic principles are the starting point at the beginning of the book,

which also explains all the essential principles so that the construction of the first model proceeds on a sound footing. Different methods of assembly are discussed using different materials for fuselages, wings and tail-planes, plus undercarriage construction, making propellers from scratch, and covering and painting the model. Different types of

aircraft are also considered, including gliders, rubber-powered models, diesel, glowplug and electric motors, radio control and control line systems. Fully illustrated with drawings, diagrams and photographs, the book is both a first-class primer for the beginner and a sound reference source for the more experienced modeller. 1990. 218 pages. 241 x 163mm hard cover, illustrated.

Order Code	Type	Price each
WT85G	A1 Aero Modellers Hbook	£14.99 NV

Introducing Radio Control Model Aircraft

Bill Burkinshaw

This book from the former editor of RCM&E magazine knows the areas which may bemuse or baffle the newcomer. He therefore takes us step by step through the theory of flight, how aircraft will be controlled, into radio equipment, through engines, construction finishing and installation, and finally into the flying of powered aircraft. He also describes flying helicopters and flying gliders to complete the book.

1989. 95 pages, 210 x 145mm, illustrated.

RB10L	Book NB269	£13.95 NV

Electronic Security Devices

by R.A. Penfold

The book covers switch activated burglar alarms with exit and entry delays, infra-red, ultrasonic and Doppler shift systems as well as smoke and gas detectors, water temperature and baby alarms. All the circuits are fairly simple and Veroboard layouts are given. 1979. 102 pages. 180 x 108mm, illustrated.

Order Code	Type	Price each
RL43W	Book BP56	£2.95 NV

More Advanced Electronic Security Projects

by R.A. Penfold

Intended primarily as a sequel to 'Electronic Security Devices' this book provides a number of slightly more complex projects that, it is hoped, should be within the capabilities of most electronics hobbyists including beginners. Ease of construction should be ensured as in all cases stripboard layouts have been provided. Although the projects are not substantially more complex than those in the earlier book they do use more advanced techniques. The projects include a passive infra-red detector that can be used with a variety of lens systems, a fibre-optic loop alarm, computer based alarms and an unusual form of ultrasonic intruder detector.

1988. 95 pages, 178 x 111mm, illustrated.

WS25C	Adv Elect Sec Proj	£2.95 NV

Electronic Projects for Home Security

by Owen Bishop

This book deals with many aspects of home security, covering intruder, fire and flood protection, with the emphasis on how to make the best use of electronic devices that you can build yourself. There are 25 constructional projects, ranging in complexity from a single-door protection circuit that can be built in an hour or two, to a sophisticated, multi-channel security system, that most intruders will find very difficult to beat. The projects can be readily undertaken by the beginner. Even the multi-channel system starts at a simple level and is expandable later as the constructor's experience grows. 1991. 141 pages. 216 x 135mm, illustrated.

HOME SECURITY NEW

by Vivian Capel

The purpose of this book is to provide practical, independent advice and guidance on securing the home. It shows the burglar's preferred methods of entry, the weak points he looks out for, many of the tricks he uses, and what you can do to thwart him. This book explains the pros and cons of an alarm system, discusses which features are important, and clears away the mystery surrounding those technical terms and expressions. It shows how to install a system, how to prevent faults, and what to do if any occur. Other security devices are given a critical scrutiny along with further measures to avoid becoming a victim of crime. 1994. 186 pages. 234 x 150mm, illustrated.

AMAZING VALUE!

Diode, Transistor and FET Circuits Manual

by R.M. Marston

This is primarily a manual of circuits based on 'discrete' semiconductor components such as diodes, transistors, FETs and associated devices, and as such it presents a total of over 340 carefully selected and outstandingly useful practical circuits, diagrams, graphs and tables. It deals with its subject in an easy-to-read, down-to-earth, non-mathematical but very comprehensive style.

The manual is specifically aimed at the practical design engineer, technician and experimenter, but will also be of interest to the electronics student and the amateur. 1991. 247 pages. 215 x 138mm, illustrated.

Order Code	Type	Price each
WZ18U	Diode/Trans Manual	£13.95 NV

Timer/Generator Circuits Manual

by R. M. Marston

This book is mainly concerned with waveform generator techniques and circuits. Waveform generators are used somewhere or other in most types of electronic equipment, and thus form one of the most widely used classes of circuit. They may be designed to produce outputs with sine, square, triangular, ramp, pulse, staircase, or a variety of other forms. The generators may produce modulated or unmodulated outputs, and the outputs may be of single or multiple form. The book is divided into 11 chapters presenting over 300 practical circuits, diagrams and tables. These comprise basic principles, sine wave generators; pulse generators; 'timer IC' generator circuits; triangular and sawtooth generators; multiple waveform generation; waveform synthesiser ICs; special waveform generators; phase-locked loop circuits; and miscellaneous '555' circuits.

1990. 278 pages. 215 x 138mm, illustrated.

ELECTRONIC SERVICING

Electronic Testing and Fault Diagnosis

Second Edition

by George Loveday

The ability to rapidly diagnose the causes of faults in electronic equipment and circuits is one of the important skills that can be acquired by the electronics technician. The exercises throughout this book are designed to assist the student in acquiring this ability. The text mainly concentrates on component failure occurring in particular types of circuit. Techniques for localising faults in complete electronic instruments or systems, is covered briefly. 1989. 257 pages. 245 x 185mm, illustrated.

Mobile Radio Servicing Handbook

by Roger Belcher, Mike Fitch, David Ogley and Geoff Varrall

An authoritative and practical information source-book on the servicing and repair of VHF and UHF mobile radios and base stations, together with the maintenance and support requirements of the overall radio system, including antenna and mast installations. The book covers the impact of data over radio, cellular radio, and trunking technologies on servicing, diagnosis and repair procedures. Essential background topics covered include radio theory, amplitude (AM) and frequency (FM) modulation, radio wave propagation, reception and demodulation, fundamentals of receiver and transmitter systems, principles of transmitter and receiver design, synthesiser techniques, selective tone signalling and the digital signalling control and access protocols of cellular and trunked radio. 1989. 298 pages. 240 x 160mm hard-cover, illustrated.

Electronic Fault Diagnosis

Third Edition

by G. C. Loveday

The ability to rapidly diagnose the causes of faults in electronic equipment and circuits is one of the important skills that can be acquired by the electronic technician or mechanic, including the hobbyist. The text concentrates mainly on component faults occurring in particular types of circuit rather than the fault-finding techniques used for localising faults in complete electronic equipment or systems. However, there is a section that deals briefly with system fault-finding methods. A basic introduction to fault-finding microprocessor based systems is included, showing an example designed around an 8-bit microprocessor using readily available chips. The book also reflects other important trends in the field of electronics, and includes notes and exercises on optoisolators, timer ICs, SMPU designs and power FETs. 1988. 131 pages. 245 x 189mm, illustrated.

Home VCR Repair Illustrated Service & Repair Your Own VCR and Save a Bundle by Richard Wilkins & Cheryl A. Hubbard

This book was based on an accumulation of ideas and the experience of the author gained in VCR repair. The methods described are simple and safe to use on any VCR, if you follow the instructions carefully. The book is designed to teach you

how to do-it-yourself in your own home, using household items and basic tools and step-by-step instructions. No test equipment is involved. The book is broken down into sections that correspond to each particular section of a VCR, so you can easily proceed to the relevant section. Most chapters contain a review section, providing step-by-step instructions to assist in diagnosis and repair. This also acts as a checklist so you don't miss any important steps when carrying out repairs. The examples discussed and shown in the photographs try to cover every commercial possibility and at no time is any example a specific make or model of VCR. **Warning:** references may be made to the American standard 110V AC mains supply. You should translate these into the English 240V AC mains standard and take the appropriate precautions with the higher voltage level. 1991. 398 pages. 234 x 188mm, illustrated. American book.

The Washing Machine Manual Second Edition

A 'Haynes' Manual
by Graham Dixon

The householder's complete DIY guide to plumbing-in, maintaining and repairing of automatic, front-loading washing machines, including the latest type of washer/dryer 'laundry centres'. All popular

makes and models spanning at least a decade are covered. In the Haynes tradition detailed step-by-step instructions are linked to photographs and fault finding flow charts, enabling the do-it-yourselfer to diagnose and repair faults quickly, saving money on call-out charges and maintenance contracts. Several useful chapters deal with stain removal, the latest information on textile care labelling codes and jargon. 1992. 190 pages. 276 x 214mm hard-cover, illustrated.

Order Code	Type	Price each
WS98G	Wash Machine Manual	£12.95 NV

The Dishwasher Manual

A 'Haynes' Manual
by Graham Dixon

The householder's complete DIY guide to plumbing-in, maintaining and repairing domestic dishwashing machines. All popular makes and models, spanning at least a decade, are covered. As with Haynes' well known car and motorcycle owners' workshop manuals, this book places great emphasis on the experience gained through actually doing the jobs on the machine in question and overcoming problems as they occur. This book is designed to help in the understanding, functioning, maintenance and repair of all domestic

dishwashers irrespective of their country of origin or maker's name. As with washing machines, dishwashers are produced in many countries and are exported worldwide, hence this book is invaluable for dishwasher owners all over the world. There are chapters full of useful facts such as a table showing the hardness of water around the British Isles. a table of international symbols of the icon type now commonplace around the world (e.g. a picture of a wine glass meaning 'fragile') as might be found on a dishwasher to describe its capabilities, and a list of 'jargon' words and their meanings.

1990. 112 pages. 276 x 214mm hard-cover, illustrated.

Order Code	Type	Price each
WS97F	Dishwasher Manual	£12.95 NV

The Home Electrical Appliance Manual

A 'Haynes' Manual
by Graham Dixon

Each year sees an increase in the number and variety of small electrical appliances for use in the home and garden. All these appliances have one thing in common, at

sometime they will fail to function correctly. Often lack of maintenance is responsible for the failure of both new and old equipment. Although mass production and large volume sales have made many of these items very low cost, it may still be a practical proposition to effect a repair, even though the lack of spares outlets for these items makes it difficult. This book helps you understand how many of our household items work, and from this you can understand how and why faults occur and how to prevent them.

1991. 182 pages. 276 x 212mm hardcover, illustrated.

SOFTWARE, ASSEMBLY AND MACHINE LANGUAGE PROGRAMMING BOOKS

An Introduction to 6502 Machine Code

by R.A. & J.W. Penfold

The 6502 microprocessor is used in many popular home computers including the Electron, BBC models A and B, VIC-20, ORIC-1/Atmos and Atari models. This book illustrates how to use machine code programming with such machines, which enables a vast increase in running speed, instead of using a built-in high-level computer language such as BASIC. The programming does become somewhat more complex however, although it is not as difficult as might be supposed. The book includes some simple demonstration programs which will run on the above computers.

1984. 108 pages. 177 x 110mm, illustrated.

Assembly Language Subroutines for the 6809

by Lance Leventhal & Sally Cordes

This book serves as both a source and a reference for 6809 assembly language programs, containing a collection of useful subroutines described in a standard format, accompanied by an extensive documentation package covering parameters, results, execution time and memory usage. The collection emphasises common tasks that will be required in many applications including code conversion, array and bit manipulation, data structure management, I/O routines, sorting and searching, and routines handling common family chips such as parallel and serial interfaces and timers. This book will save you much time and effort by not having to write and de-bug your own standard routine library, instead just choose the specific routines required and get on with the main task of completing your programs. Each routine is provided with test data to verify correct assembly. Recommended. 1989. 365 pages, 235 x 171mm, illustrated.

Order Code	Type	Price each

Assembly Language Subroutines for the 68000

Routines to Run on the 68000/010/020/030
by Lance Leventhal & Fred Cordes

This book is intended as both a source and reference for the 68000 assembly language programmer. It contains a collection of useful subroutines described in a standard format and accompanied by extensive documentation. The documentation covers the procedure, parameters, results, execution time, memory usage and each showing at least one example of execution which provides known test data. The routines will also run on related microprocessors such as the 68008, 68010, 68020 and 68030.

The nature of the library emphasises common tasks that occur in many applications. These tasks include code conversion (integer/hex, decimal, BCD); array manipulation, 16-bit and BCD arithmetic, bit manipulation, shifting functions, string handling, data structure management, sorting and searching. 1989. 416 pages, 235 x 170mm, illustrated.

Programming the M68000

by Tim King & Brian Knight

This comprehensive guide explains how to program the M68000, which is one of the most advanced microprocessors available at the present time. It is written in a clear and readable manner and provides a wealth of information. The basic M68000 architecture is introduced and then each instruction is explained. Many practical programs are given and readers are encouraged to write effective programs. A complete small monitor program which will handle input and output, test programs etc. is also included. In the new edition the 68010 and 68020 are also covered.

1986. 288 pages. 235 x 156mm, illustrated.

IBM PC Assembly Language and Programming

by Peter Abel

The spread of microprocessors has also caused a renewed interest in assembly language, because a program written in assembly requires considerably less memory space and execution time. Secondly, a knowledge of assembly language and its resulting machine code provides an understanding of the machine's architecture that no high level language, even such as Pascal or C, can possibly provide. This second edition book can act as both a tutorial and a permanent reference, including DOS feature through to version 4.01, information unique to the IBM PS/2 series, features of Borland's turbo assembler, features of Intel's 80386 and 80486 processors, the use of simplified segment (addressing) directives and later additional interrupts, memory management, program overlays and keyboard buffer details.

1991. 560 pages. 234 x 176mm, illustrated. American book.

PROGRAMMING BOOKS

Understanding PC Software

by R.A. Penfold

This book is concerned with the software side of PC computing, and it assumes that you have very little previous knowledge of computer software, but something about the hardware side of things, and that you can get the computer up and running. All main types of business computer software are covered in this book, including word processors, graphics programs such as CAD, desktop publishing, databases and spreadsheets. Once you understand the basis of these programs it becomes fairly obvious which are the best for you, and you can avoid costly mistakes that are almost certain to occur as a result of stumbling around in the 'software maze'.

BASIC Programming

Third Edition

by B. J. Holmes

The aim of this book is to present to the reader the many facets of the BASIC language, in the context of a college-based course on computer programming. The book has already proved to be very popular with those students studying for computer examinations, where BASIC is the preferred language. In addition, the home-computer enthusiast who wishes to progress beyond the 'game-playing' stage will also find this text invaluable in understanding how to program a computer. This book, however, has not been written for any one dialect, but deliberately for use with any computer that uses BASIC. However, the dialect differences between Microsoft BASIC as used on the IBM PC and compatibles and the BBC/Electron BASIC are included by way of illustration.

1989. 287 pages. 245 x 190mm, illustrated.

Order Code	Type	Price each
WZ27E	BASIC Programming	£7.95 NV

Visual Basic

by Steven Holzner and Peter Norton

Visual Basic is a tremendous toolbox of programming resources.

This book explains how to create your own screen display windows, beginning with the essentials, and following the natural course of Windows programming development starting with a simple blank window, and then adding colour, graphics, 'buttons' and text boxes, which Visual Basic calls 'controls'. Dialogue boxes, messages and menus can also be added, going onto more advanced topics that real Windows applications deal with, the clipboard, bitmaps, icons and error handling. There are chapters on debugging and dynamic data exchange, allowing the user to communicate with other Windows applications like those from Microsoft. Getting Windows programs running and producing real results is simply a matter of designing what you want on screen and then letting Visual Basic handle the details. To use the book properly, some familiarity with BASIC is required. Also needed are Windows V3.0 or later; a mouse; and a copy of the Visual Basic software, any version. The book includes over 100 ready-to-run programs.

1991. 449 pages. 235 x 187mm, illustrated.

PASCAL Programming

The Complete Course Text

by B. J. Holmes

The aim of this book is to help the reader acquire and develop the skill of computer programming in a block-structured language and foster an understanding of the related topics of data structures and data processing. It can be regarded as a complete text on programming and the use of data structures. The contents are sufficient to give confidence to any reader who is taking Computer Studies to GCE A, BTEC National and higher national awards, first year undergraduate level and British Computer Society Part 1 examinations. The book is also ideally suited to those requiring a knowledge of programming, yet whose major course of study is not computing. All programs have been compiled and tested, using Borland's 'Turbo Pascal 5.5', on an IBM compatible PC. However, the reader is directed throughout the text to differences between this dialect and that of Sheffield Pascal, which conforms more to Standard Pascal.

1991. 463 pages. 243 x 190mm, illustrated.

BASIC and PASCAL in Parallel

by S.J. Wainwright

This book takes the two languages and develops programs in both simultaneously. Emphasis is placed on structured programming by the systematic use of control structures, and modular program design is used throughout. Example programs are used to illustrate the program structures as they are introduced, and the reader can learn by example. As the title suggests the book is intended as a bilingual introduction to programming which can be used to learn both languages simultaneously, and to learn programming techniques which are compatible with both languages.

Order Code	Type	Price each
WK53H	Book BP126	£1.50 NV

BASIC and FORTH in Parallel

by S.J. Wainwright

Forth is a very different language from BASIC, but this book takes both languages and investigates how things are done in each of them. BASIC is used as a familiar 'handle' with which to grasp the various programming techniques. A FORTH-Stack simulator program is included which runs on a 16K or 48K Spectrum computer. The Stack is central to the operation of FORTH and an understanding of the Stack is fundamental to the FORTH programmer.

SPECIALISED SOFTWARE BOOKS

A Concise Introduction to GEM

J.W. Penfold

If you have a computer which uses GEM, this book is designed to help you get the most from it. Though much of GEM is straightforward, you will find those parts which are not explained here. Not just written as an introduction for new users, it has also been structured to provide a convenient, compact source of reference for more experienced users, and serves to refresh the finer points for anyone who has not used GEM for sometime.

The book describes GEM and its capabilities, how it can be used for the housekeeping of both hard and floppy disk files, how to configure and run applications from the GEM desktop to the best advantage. All versions of GEM up to release 3.01 and including the versions supplied with the Amstrad PC and Atari ST machines are covered, and all the GEM menus, graphics and other special features available to users within GEM applications programs.

1989. 80 pages. 195 x 130mm, illustrated.

A Concise Introduction to OS/2

by N. Kantaris

If you are a multi-tasking PC user and want to get the most out of your computer in efficiency and productivity, then you must learn its OS/2 operating system. With this Concise Introduction to OS/2 you will learn to do just that in the shortest and most efficient way. The more experienced user can start from any section. The book explains: How the OS/2 operating system is structured so that you understand what happens when you first switch on your computer. How to use the OS/2 commands to perform various house-keeping operations on your disk files. How directories and sub-directories can be employed to organise the way you keep files on your disk so that your system's efficiency is maximised. How to use the editor to fully configure your system by writing your own CONFIG.SYS, STARTUP.CMD and AUTOEXEC.BAT files. How to write batch files to automate the operation and use of your system. How to manage your system's environment. The book covers both the command-line mode of processing and the Presentation Manager of OS/2 Standard Edition 1.1 as implemented by IBM and Microsoft.

DOS For Dummies

A Reference book for the Rest of Us!
2nd Edition
by Dan Gookin

The basic idea of this book is very simple – you are an intelligent person, but don't know anything about DOS. What's more, you have absolutely no intention of becoming a DOS wizard. If you just want to be using your PC, then this is the book for you. It covers 100% of all the things you will be doing with your computer. All the common activities, the daily chores, the painful things that go with living with a computer are all described in plain English. The book is meant to be treated like a reference and not read from cover to cover. The book is essentially written for DOS 5 and 6, but is also relevant for earlier versions 4.0/1 and 3.3. Highly recommended, and amusing. Includes free DOS command reference.

1993. 340 pages. 234 x 188mm, illustrated. American book.

DOS 5 Made Easy

by Herbert Schildt

This book is for anyone who wants to learn how to use DOS version 5. No prior experience with computers is necessary for learning DOS using this book. If you have previous experience running an older version of DOS, you will be able to advance quickly through the first few chapters, concentrating mostly on the new features of DOS 5, and there are many. DOS is a complex program with many commands and options. This book distils its most useful components and concentrates on getting you running DOS as quickly and easily as possible. After reading just the first three chapters, you will be able to begin using your application programs. By the time you finish this book, you will be running DOS like a professional user. 1991. 412 pages. 235 x 187mm, illustrated. American book.

you need it. In one volume this comprehensive user guide covers the entire spectrum of Quattro Pro features, including important information for all the new features of Version 4.0. Its tips and shortcuts will show you how to make your work easier and help you unlock Quattro Pro's hidden power. These topics include Quattro's powerful new SpeedBar, which allows you to build custom menus; 'WYSIWYG' capabilities with enhanced font support; custom styles; 2D and 3D graphics features, including the new 'Intelligent Graphs'; linking and consolidating multiple spreadsheets; the macro command language; extensible @function libraries; linking to other Borland programs such as Paradox and dBASE; and 'slide show' and other presentation tools. The book forms a good desktop reference and will almost certainly increase your productivity. 1992. 893 pages. 235 x 178mm, illustrated.

FoxPro 2.5 for DOS

Made Easy

by Edward Jones

NEW!

In this third edition of the acclaimed FoxPro Made Easy, you will find a complete step-by-step guide that is simple, yet thorough. You'll find easy-to-follow chapters on database creation, data manipulation and entry form creation. The later chapters deal with programming with FoxPro, where the reader will learn to create command files (or programs) to perform tasks in FoxPro, together with learning how functions, variables, expressions, and operators can be used within a FoxPro program. For those of you who are familiar with FoxPro, all the new features of Release 2.5 are explained and discussed in great detail. The appendices comprehensively cover a glossary of FoxPro commands and functions for beginners and those who are reasonably familiar with FoxPro.

Paradox 4.0 Handbook

The Official Borland Book

by Celeste Robinson

Officially endorsed by Borland International, this handbook offers comprehensive coverage of the latest version of the Paradox database management system. A complete reference and application guide it provides users and developers with useful and time-saving techniques for entering, querying, analysing and printing data. The book also shows novice and intermediate users how to use the Paradox Application Language (PAL) to automate database tasks. Advanced database developers can quickly familiarise themselves with the Paradox application development environment. The handbook will help you quickly become an expert on using the new Paradox windowing interface; creating databases of related information tables; designing custom forms and reports; using queries to find, relate and update data; making use of validity checks, table lookups and other features to help you maintain data integrity; and using PAL scripts and the new Applications Workshop to develop custom applications. Whether you want to become familiar with the basics of Paradox or you want to master the program's most sophisticated concepts, the Paradox 4.0 Handbook is an invaluable source of tips, tricks and techniques. 1992. 647 pages. 234 x 180mm, illustrated.

The Complete Idiot's Guide to 1-2-3 NEW

by Peter Aitken

Lotus 1-2-3 is probably the most popular spreadsheet program ever written for the PC. However, it is not particularly obvious how to use Lotus 1-2-3, and the reference manuals can be very daunting. This book is not really for idiots, but for intelligent capable people, who know very little about computers and even less about Lotus 1-2-3, but do have a need to learn enough about 1-2-3 to get some useful work completed in the shortest possible time. The book adopts a very practical approach as to what topics to cover and those to skip - concentrating on those topics that are needed most often. It is not necessary to memorise information as techniques are easy to find and are described in plain English that is very enjoyable to read. 1993. 285 pages. 230 x 185mm, illustrated. American book.

A Concise Introduction to Lotus 1-2-3

by N. Kantaris

If you are a PC user and want to get to grips with Lotus 1-2-3, then this book will teach you how to do just that, in the shortest and most effective way. The book was written with the non-expert, busy person in mind and, as such, it has an underlying structure based on 'what you need to know first, appears first'. The more experienced user can start from any section. The book explains:— how Lotus 1-2-3 can be used to build up simple spreadsheet examples, edit, save and retrieve them. How to format labels, enter and format numbers, change the default width of cells, enter formulae and Lotus 1-2-3's in-built functions, and print a worksheet. How to freeze titles on screen. use a non-continuous address range, inset, erase and move blocks, add graphs to a worksheet, add legends and titles to graphs, view and print graphs. How to set up a database management system, sort and search a database, use the find and extract commands to query information held in a database. How to create a simple macro. The book lists all Lotus 1-2-3 indicators, functions and macro commands so that it is self-contained and can be used as a reference book long after the reader becomes an expert in the use of the program. 1989. 144 pages. 198 x 128mm, illustrated.

A Concise User's Guide to Lotus 1-2-3 Release 3.1

by N. Kantaris and P. R. M. Oliver

If you are a PC user and want to upgrade to Lotus 1-2-3 Release 3.1, then this book will teach you how to do just that in the shortest and most effective way. It was written with the existing spreadsheet user in mind, and has been designed so that you don't have to start at the beginning and go right through to the end. The more experienced user can start at any section as these were designed to be self-contained. You will find out how to generate and manipulate 3-dimensional worksheets and link files together; how to generate and add graphs to a worksheet, edit, preview and print worksheets; how to use the WYSIWYG add-in to produce top quality displays; how to set up a database management system, sort and search a database, use the find, extract and modify commands; how to create macros and custom menus, use macro keywords and debug a macro. The book lists all the Lotus 1-2-3 3.1 indicators, functions and macro commands so that it is self-contained and can be used as a reference long after you become an expert in the use of the program. 1991. 112 pages. 198 x 130mm, illustrated.

A Concise Introduction to Microsoft Works

by N. Kantaris and P. R. M. Oliver

'Microsoft Works' is an easy to use, integrated package for a PC which incorporates four modules: word processing, spreadsheet with graphics, database, and communications. The modules are downward compatible with earlier versions (version 3.0 is dealt with in this book). The package comes with its own front-end graphic interface and full documentation. This book was written to help the beginner, and the material is presented on a 'what you need to know first appears first' basis, although the underlying structure is such that you don't need to start at the beginning. Experienced users can go to any of the self-contained sections for reference. 1993. 158 pages. 198 x 130mm, illustrated.

A Concise Introduction to Windows 3.0

by N. Kantaris

If you are a PC user and want to get to grips with Microsoft's Windows 3.0 then this book will teach you how to do just that in the quickest and most effective way. The book was written with the busy, non-expert, person in mind. However, the more experienced user can begin at any section, as the sections were designed to be self-contained. The book explains hardware requirements needed to run Windows 3.0 successfully, and how to install, customise and fine-tune the program; how to manipulate Windows' screens and how to run Windows and DOS applications under the Windows Graphical User Interface (GUI) environment; how to use the Windows Triple Management system, Program Manager, File Manager and Print Manager to advantage; how to use the word processor accessory 'Write' to type, edit, format, print and save documents. Also explained is the use of 'Paintbrush' and its tools to draw and edit drawings, and how to set up, sort and search a Cardfile database and exploit its autodial feature. How to use the Windows Calendar to enter appointments, add special times and alarms, and how to use the Terminal accessory to connect to remote systems. 1991. 128 pages. 198 x 130mm, illustrated.

Quattro Pro for Windows Handbook

The Official Borland Book

by Mary Campbell

A single-source tutorial and command reference, this is a comprehensive guide to the latest Windows-based release of Borland International's powerful spreadsheet package.

Aimed at the novice to intermediate user, the book provides an in-depth tutorial to the product features and commands, along with a complete reference guide to increase productivity. Special attention is given to 'Quattro Pro for Windows Spreadsheet Notebooks', the revolutionary new object-oriented metaphor for intuitively organising your data. Quattro Pro's stunning graphics capabilities and powerful macro command language are fully explained. Also stressed are Quattro Pro's abilities to support custom applications with its User Interface Management System, to tap into databases using the DataBase Desktop, and to share live data via the Windows OLE feature. The book provides you with powerful applications and techniques for creating and storing spreadsheet data in notebooks, adding and modifying SpeedBars to include custom features; using DDE and OLE links, as well as the Clipboard, to share data; changing cell and spreadsheet features with the powerful Object Inspector; creating professional slide shows with Quattro Pro's built-in graph-making capabilities; linking with Paradox or dBASE through the DataBase Desktop; customising your applications with the User Interface Management System; creating and extending @functions and macro functions. Covered in detail are the customisable icon palette, dynamic linking between pages, and the new Object Editor. Quattro Pro for Windows also makes it easy to use data from other applications by directly opening and saving data in the most popular spreadsheet, database, and text formats. Advanced users will find the information on debugging and macro programming using PowerButtons essential. 1992. 904 pages. 234 x 178mm, illustrated.

Windows for Dummies

by Andy Rathbone

This book, like others in the 'Dummies' series, is aimed primarily at those people who are more concerned at getting the work done, than becoming computer supremos. The book has no difficult technical computer jargon, and there is nothing to learn or memorise. The comprehensive index allows the reader to find a particular topic, that will easily show how to solve your problem - it is not necessary to read the book from cover to cover. It is divided into six self-contained parts, the first being a very basic introduction followed by using Windows, and others that discuss using Windows applications, working with DOS and DOS based programs and help! Part six provides a useful list of tips etc.

A book well worth having on the bookshelf, be it for the computer enthusiast or the computer user. 1992. 350 pages. 234 x 188mm, illustrated. American book.

Windows 3.1 the Pocket Reference

by Allen L. Wyatt

This small, compact book is designed to serve as a memory jogger or a quick reference, and is divided into three sections. The first section gives information that is fundamental to understanding Windows 3.1 and fully absorbing the information in the other two sections. For the reader who is familiar with Windows, this section can be skipped, or just scanned. The second section is the Command Reference section, and covers, in alphabetical order, the most commonly used Windows 3.1 commands. Discussed, again in alphabetical order, in the third section are Task Reference commands. This pocket reference book is a handy memory jogger for the newest release of Windows, that you will not want to be without. 1992. 220 pages. 202 x 118mm, illustrated. American book.

Windows - In Easy Steps

by Harshad Kotecha

The advent of 'Windows' for the PC has certainly made using a PC much more user-friendly. Software designed to run under Windows has the same consistent 'look and feel', so once you have mastered one Windows package, it is much easier to learn another. One of the many features of Windows is 'multitasking' which, when used on a suitably equipped PC, allows several programs to be available simultaneously. This facility allows you to print a large document from your wordprocessor and whilst this task is going on, open another application, such as a spreadsheet. 1992. 128 pages. 227 x 186mm, illustrated.

The Visual Basic 3 for Windows Handbook

NEW!

by Gary Cornell

Before Visual Basic, developing Windows applications was much harder than developing DOS applications. Programmers had to worry about too much, such as what the mouse was doing, where the user was inside a menu, and whether the user was clicking or double clicking at a given place. Developing a Windows application needed expert C programmers, and even they had trouble.

Visual Basic has changed this situation, such that sophisticated Windows applications can now be developed in a fraction of the time previously needed. Programming errors (bugs) do not happen as often – and if they do, they are a lot easier to detect and fix. This book is a comprehensive hands-on tutorial to all the ins and outs of Visual Basic programming that does not assume you have programmed before. However, those that are familiar with QuickBasic or another structured programming language will have an easier time of it. As you work through the book and build your skills with hands-on exercises and examples, you should soon be writing sophisticated Windows applications that would once have taken weeks to create.

A Concise Introduction to MS-DOS

by N. Kantaris

PC users who want to get the best out of their computer in terms of efficiency and productivity must learn its PC/MS-DOS operating system. This book will help you to do just that in the shortest and most effective way. The book provides enlightenment about such things as what happens when the computer is first switched on, and the files it uses as it 'auto-boots' from a system disk, how to use 'EDLIN.COM' to write your own 'CONFIG.SYS' and 'AUTOEXEC.BAT' files (and also what to write!), and how to organise your disk storage using sub-directories. Covers all versions of 3.x and 4.x of both PC-DOS and MS-DOS as implemented by IBM and other manufacturers of 'compatibles' including Amstrad.

Windows for Workgroups 3.11 in Easy Steps

by Harshad Kotecha

Windows is the most popular graphical environment being used on personal computers (PCs) and Windows for Workgroups 3.11 is the latest version of Windows. It provides an easy to use networking facility as well as much improved performance for Windows users. Like other titles in the 'Easy Steps' series, the book is enjoyable to read and provides a cost-effective training guide. By combining stunning Windows screen shots, exactly as they appear in the software, with simple, clear instructions on how to perform specific tasks, the book is easy to follow and understand. Text is clear and concise with no unnecessary long winded explanations.

The New MS-DOS Primer

by Martin Thomson

MS-DOS, Microsoft's Disk Operating System, has become the world standard for microcomputers. It is the software that turns your machine into a functioning computer. Covering MS-DOS versions 3, 4 and 5, this book is written for the beginner. It uses simple straightforward language and everyday examples to teach the most frequently used features of MS-DOS. The chapters are short and logically organised, each ending with a summary emphasising the main concepts covered. The mystery is removed and technical jargon is avoided wherever possible. Perhaps most importantly of all, the book covers disk formatting and the storage of files on disks, and gives details on how to copy, rename, delete and move files from disk to disk. The making of security copies is fully covered, so that you can insure against the loss of your valuable data. Guidance is given on how to avoid the destruction of your data by computer viruses, and what to do if your computer becomes infected. With this book you will learn how to use MS-DOS and release the power of your computer.

A Concise Advanced User's Guide to MS-DOS

by N. Kantaris

If you are a PC user and are at ease with the routine usage of its PC/MS-DOS operating system, but are looking for ways to improve your system's efficiency and productivity, while learning something new, then this book will help you to do just that, in the shortest and most efficient way. The book explains how to write both simple and advanced customised batch files which allow you to display what you want, and in the form you want it. How the ANSI.SYS display and keyboard commands can be used to position the cursor on any part of the screen, change the intensity of the displayed characters or change their colour, or re-define the keyboard keys so that by pressing such a key a complete command can be

issued as if it were typed at the keyboard. How the EDLIN line editor can be used to enter ESCape (ANSI.SYS) commands in to a file so that simple menus can be built. How the DEBUG program can be used to create, see and change the contents of any file, including those of programs written in assembler code. How to find your way around the names and tasks of the CPU registers and the meaning of some simple assembler mnemonics. How to write programs in assembly code, using DEBUG, which can control your screen and keyboard. How to design and set up interactive professional looking menu screens so that you or others can run programs or applications packages easily. This book is relevant to both the PC-DOS and MS-DOS flavours of DOS including MS-DOS 5, as implemented by IBM, and other manufacturers of 'compatible' microcomputers. It covers all versions of 2.x, 3.x, 4.x and 5.x.

A Concise User's Guide to MS-DOS 5

by Noel Kantaris

Like many of the books in the 'Concise User's Guide' series, this informative guide is written for the beginner on a 'what you need to know first appears first' basis. The book is circular, which means that you don't have to start at the beginning and go to the end. The more experienced user can start from any section as each section is self-contained. Topics dealt with in this informative guide include; how the DOS operating system is structured so that you can understand what happens when you first switch on your computer; directories and subdirectories and how they can be employed to structure your hard disc for maximum efficiency; how to manage disc files and how to use the MS-DOS Editor to fully configure your system by writing your own CONFIG.SYS and AUTOEXEC.BAT files; how to optimise your system by either increasing its conventional memory or increasing its speed; how to write batch files to automate the operation of your system. At the same time, this handy little guide has been written in such a way as to also act as a reference guide, a summary of the MS-DOS operating system commands are given in the penultimate section of the book. The commands are explained with relevant examples and, as such, the section can serve as a quick reference guide.

MS-DOS 6 Explained

NEW

by **N. Kantaris & P. R. M. Oliver**

This book deals with the latest version of the PC operating system MS-DOS version 6 and includes the very latest 6.2 update. No previous knowledge of DOS is assumed, and each section is self-contained, so that the more experienced user will also find this book very useful. The book is not intended to replace the documentation that is supplied with MS-DOS 6 but to supplement and explain it. Additionally, the book covers the enhancements to be found in versions 6.0 and 6.2 of MS-DOS, several aspects of which are new. As with other books in this series, it is not necessary to read several hundred pages that cover every aspect of the subject, when a few selected pages are more than adequate. The book seeks to highlight the simplicity of the MS-DOS operating system by presenting with examples, the principle of what you need to know, when you need to know it. 1993. 209 pages. 197 x 128mm, illustrated.

A Concise Introduction to WordPerfect

by **R.A. Penfold**

WordPerfect has now become the most popular word processor for the IBM PC range and the numerous "compatibles" currently in use around the world. The WordPerfect user has a tremendously powerful writing tool at his or her disposal. A word processor of this quality enables you to work quickly but still produce well formatted and accurate documents. Although software of this complexity can be a bit daunting for the beginner, with the aid of this small book you will soon learn to master most aspects of WordPerfect. The book is aimed at beginners to word processing, and assumes a minimal amount of knowledge about computers and running applications programs. Areas covered include how to enter and edit text, and move quickly around the large documents. How to perform block operations including move, copy, delete, case change and printing. How to format text ready for printing including the use of advanced features such as newspaper columns and graphs, as well as basic formatting, such as line spacing and setting margins. How to install printers and print out documents using various fonts and printing effects. How to use the mail-merge facilities to customise standard letters. How to exploit useful facilities such as the spelling checker, Thesaurus and sort routine. Up to WordPerfect version 5.0 are covered. 1989. 106 pages. 198 x 129mm illustrated.

A Concise Introduction to Word for Windows

NEW

by **N. Kantaris & P. R. M. Oliver**

Microsoft's Word for Windows is the best selling Windows wordprocessor, and is naturally fully integrated with Microsoft's Windows environment. In all the Windows versions Word has been biased towards desk top publishing (DTP), featuring a WYSIWYG mode with full edit capability. Additionally, the package features the ability to manipulate full colour graphics, making this a powerful wordprocessing package. Although, Version 2.0 and above have been designed to make full use of the improved features of Windows 3.1, they are equally at home with Windows 3.0. The text is written with an emphasis on what the authors consider to be the most important aspects of the program, such as page layout, paragraph styles and the use of frames etc. 1993. 160 pages. 198 x 130mm, illustrated.

WordPerfect 5.1 Made Easy

Covers Versions 5.0 and 5.1

by **Mella Minberg**

This book is for the beginner or newcomer to WordPerfect or the intermediate user, and covers version 5.0 and 5.1. In here you will find everything you need to complete your documents, from instructions for installation, to directions for printing your text with fancy fonts and special characters. Version 5.1, released in November 1989, offers additional features to make the program even easier to use: mouse support, pulldown menus and new features enabling the user to create the correct layout for mathematical equations, produce tables and import spreadsheets. The capabilities of both versions are described in this book; those that refer to only one or the other version are clearly marked as such. 1990. 1071 pages. 234 x 185mm, illustrated. American book.

WordPerfect 6 For Windows - The Complete Reference

NEW

by **Allen L. Wyatt, Steve Dyson, Daniel J. Fingerman, Stephen Cobb and Kirsty Clason**

For many years, WordPerfect has been the best-selling word processor for all types of computers, but now this established program is available in a revised version for Windows. Whether you are a newcomer to WordPerfect, or an old hand, this version - WordPerfect 6 for Windows - provides a wide range of new and improved features to enhance

performance and significantly improve productivity. This book is much more than just a complete reference, that is, an alphabetical reference list of command names and features, for it contains useful examples of common applications, with information organised according to task. Extremely helpful notes and tips are liberally placed throughout the book to help the beginner and experienced WordPerfect user understand the many features of the program. In general, each section and chapter is self-contained with references to other chapters where necessary. 1993. 829 pages. 231 x 187mm, illustrated. American book.

DTP for the PC User

NEW

by **Mark Houghton**

It was the early 1980s that saw the introduction of the Apple Macintosh computer with its user friendly graphical user interface (GUI). It was this advantage over the PC that saw the Apple Mac become the dominant machine for desk top publishing (DTP). However, with the drop in price and the rapid advance in microprocessors, PCs are now in a comparable position especially with the introduction of modern software such as Windows. This book concentrates exclusively on PC based desktop publishing, for a cheap-and-cheerful PC can be equally as effective for DTP as the Mac. But how do you find out what additional hardware and software you will require? This is where this book will be of great assistance, recommending the type of PC to buy for serious DTP work, together with the essential printers and scanners to complete your system. A wide range of software packages are reviewed from the low-cost PagePlus to QuarkXPress for Windows, as well as graphics packages from GST's Designworks to CorelDRAW! Finally, a comprehensive list of hardware and software suppliers in the UK are listed. If you are planning to set up your own DTP system, or are hoping to expand an existing system, then this book is for you. It will provide you with information needed to assess what are the best possible combinations of hardware and software for your requirements and budget. 1993. 240 pages. 229 x 152mm, illustrated.

Easy AutoCad – 3rd Edition

by John Hood

The third edition of this informative textbook now covers AutoCad Releases 11, 12 and Windows for AutoCad. This edition, as before, has been written in a way that immediately involves the student in the drawing process. This edition now includes the use of pull-down menus and dialogue boxes along with the standard screen menu. The text is composed of a series of tutorial projects each about three hours in length which are designed to bring the novice user, with no experience, to the level of a fully-trained CAD operator in a short period of time. The student should be able to master all the powerful features of AutoCad such as dimensioning, layering, isometric drawing, 3-D drawing, attributes, solid 3-D modelling, multiview drawings, blocks and much more.

Desktop Design Getting the Professional Look

by Brian Cookman

This is a teaching book primarily intended for those readers who want to learn and practise the art of 'Computerised Integration of Text and Graphics'. The Desktop Publishing system (DTP) replaces smelly adhesives, ever-blunting scalpels and the eternally shaking drawing pen.

In the second edition of his book Brian Cookman sets out the best way to use a desktop system with regard to design. He includes many of the tricks of the trade, that he has picked up over the years, which will hopefully alleviate hours of frustration.

This book is full of illustrations to back up what the author has written. Ideally suitable for all levels of DTP users as it will not only inform the beginner, but will refresh the memory of the expert. The book is not intended to be for any particular system, as most of those available will handle the designs without any trouble.

1993. 126 pages. 210 x 206mm, illustrated.

An Introduction to Desktop Publishing

by R.A. & J.W. Penfold

Desktop publishing is one of the most exciting developments in computing in recent years. It puts all the facilities of document design and typesetting at the disposal of anyone with a suitable microcomputer. This opens up the field of written communication as never before.

The book introduces the software and hardware required for 'DTP', and shows that it does not necessarily require very expensive equipment, though this may be desirable for best results. It shows how a start can be made with modest computers and printers.

The book shows you how to create and lay out documents, how to use fonts and typography, and how to add illustrations, both drawn and scanned graphics. Also included is an extensive glossary of DTP, computing and printing terms.

CorelDRAW! 4 Made Easy

by Emil Ihrig, Sybil Ihrig, Martin S. Matthews and Carole Boggs Matthews

CorelDraw! 4 has become one of the most widely used graphics software packages for the PC, as probably no other drawing package offers so many powerful drawing, text handling, autotracing, colour separation, and special effects facilities in one package. Version 4 adds a new range of desktop publishing features including multipage documents, text control, extensive bullets and improved colour styles with auto-trapping. There are many new artistic features including powerlines, textures and fills, artistic styles to manage complex drawings and weld capability to join the outlines of existing objects. In addition, there is a completely new technical illustrator, that includes dimensioning, clones that mirror their master, attaching data to objects and drag and drop symbol manipulation. Finally, a multimedia animation package called CorelMOVE! has been incorporated, that provides the combination of sound, graphics and two dimensional animation for use in a presentation.

A Practical Reference Guide to Word Processing on the Amstrad PCW8256 and PCW8512

by F.A. Wilson

With the PCW8256 and 8512 Amstrad have now brought word processing within the reach of everyone. These machines are capable of manipulating letters and words in practically every conceivable way, and what can be achieved with them is probably limited only by the user's ingenuity. This indispensable book includes easy to follow step-by-step charts to guide the inexperienced through many complex procedures. The book includes a comprehensive reference section for the manuals, and has itself been entirely prepared by the author for the final printed pages, using a PCW8256.

Easy Add-On Projects for Amstrad CPC 464, 664, 6128 and MSX Computers

by Owen Bishop

Seventeen projects which can be used with the Amstrad CPC 464, 664, 6128 or MSX computers.

The projects include a Picture Digitiser, Five-Key Pad, Model Controllers, Bleeper, Lamp Flasher, Magnetic Catch, Lap Sensor, Photo-Flash, Games Control, Data Selector and six more projects that make up a Weather Station. All of the projects are fairly simple and inexpensive to build, and a complicated Address Decoder does not need to be made first since the computer is accessed via its joystick or printer ports.

1986. 154 pages. 178 x 112mm, illustrated.

PC-Assisted Linear Circuit Analysis & Drawing

by Ian Sinclair

This book introduces the principles of linear circuit analysis and explains what is required to analyse a variety of common circuits, by following a large number of examples. In addition, the effects of stray capacitance, and source and load resistance values are illustrated. The book uses Aciram and AutoSketch as example software. By using a low-cost CAD program such as AutoSketch, it is possible to automate the process producing precise and printable circuit diagrams of a very high standard.

1993. 280 pages. 246 x 189mm, illustrated.

Encapsulated PostScript

Application Guide for the Macintosh and PC
by Peter Vollenweider

This book presents a detailed and clear introduction to the PostScript language, including information on how text, graphics and images may be mixed at the PostScript level using the Encapsulated PostScript file (EPSF) format as an interchange standard: EPS files may be imported for example by Aldus PageMaker, or Xerox Ventura Publisher. The contents of this book include detailed information on Adobe's latest version (2.0) of the Encapsulated PostScript file (EPSF) and version 3.0 of the document structuring convention specifications; includes a look at colour support, the HyperCard application, LearnPS, the Adobe Type Manager (ATM) and the Art Importer by Altsys; EPS effects by SmartArt and TypeAlign, and the PostScript interpreter operating on the IBM mainframe; and concentrates on the mixing of PostScript files, and the PostScript-related Macintosh and IBM PC programs, and provides information on networking PostScript based hardware. This is a practical instruction book written for all desk top publishers at all levels of expertise. PostScript designers and programmers, and those dealing with computer communications between minis, micros and mainframes with a graphics emphasis. Students of computing, graphics, art and design who are learning page description languages and PostScript as an introduction to programming will find the material contained within this book both easy to understand and enjoyable to use, and it will remain a quick and easy reference guide. In addition PostScript is important to anyone at all involved in DTP at any level, for whom this book will be very instructive.

1990. 243 pages. 235 x 173mm, illustrated.
American book.

PostScript Language Reference Manual

Second Edition
Adobe Systems Incorporated

The PostScript language has fuelled a revolution in the world of visual communications. This powerful and flexible language efficiently describes the appearance of text, sampled images, and graphics on a printed page or display. PostScript language interpreters have been incorporated into some of today's most innovative printers, typesetters, film recorders and computer display environments. This reference manual, from Adobe Systems Incorporated, who created the language, is the official reference to PostScript. This entirely new and up-to-date second edition offers the most comprehensive coverage of the entire PostScript language, including the recent advancements of PostScript Level 2. PostScript is becoming part of the basic fabric of the printing, publishing and computing industries. If you have anything even remotely to do with any of these subjects, you ignore PostScript at your peril.

1990. 764 pages. 232 x 187mm, illustrated.

PostScript Language Tutorial and Cookbook

Adobe Systems Inc.

PostScript, a revolutionary, device-independent page description language, is quickly becoming the industry standard for printing high-quality integrated text and graphics. It is a powerful, flexible language that has the ability to efficiently describe the appearance of text, images, and graphic material on the printed page. Already PostScript has been incorporated into some of today's most innovative printers, including the LaserWriter from Apple. The PostScript Language Tutorial and Cookbook is a thorough and clearly written guide to PostScript that outlines the features and capabilities of the language and shows practical ways to create useful PostScript programs. Using numerous annotated examples and short programs, the tutorial provides a step-by-step guided tour of PostScript, highlighting those qualities that make it such a unique and powerful language. The cookbook offers a collection of some of the most useful techniques and procedures available to PostScript programmers. The book is a companion to the PostScript Language Reference Manual (WZ04E). PostScript is fast becoming an international standard for DTP and publishing generally.

1985. 243 pages. 234 x 187mm, illustrated.

PostScript Language Program Design

Adobe Systems Inc.

The PostScript language has become the industry standard for printing high-quality graphics and text. This powerful language has the ability to describe efficiently the appearance of text, images and graphics on a printed page. The PostScript language is currently incorporated into over 30 different products, including phototypesetters and high-speed laser printers from many well-known computer systems vendors. From Adobe Systems Incorporated, the inventors of the PostScript language, here is the definitive guide to designing efficient PostScript programs. It teaches the programming principles that are unique to the PostScript language with numerous, usable sample programs and examples of efficient code. In this book, programmers learn techniques for such tasks as setting text, constructing graphics, writing emulators, debugging programs and more. The sample programs are also available on a disk directly from Adobe Systems. The book is a companion volume to the two other books written by Adobe Systems, the PostScript Language Reference Manual (WZ04E) and the PostScript Language Tutorial and Cookbook (WZ13P).

1988. 238 pages. 233 x 187mm, illustrated.

Adobe Type 1 Font Format

Version 1.1 Adobe Systems Incorporated

The PostScript language has become the industry standard for imaging high quality graphics and text for all kinds of professional publications. This powerful language has the ability to efficiently describe the appearance of text, sampled images and graphics on a printed page or display. Since letters are used so frequently in the description of a page, the PostScript language has special facilities to handle collections of letter shapes conveniently and efficiently. These collections are called fonts. Written by Adobe Systems, the inventors of the PostScript language, this is the official specification for the Type 1 font format. This new, updated version describes the syntax of the Adobe Type 1 format, including complete information regarding font and character level hints, character outline encoding, new flex procedure (V1.1), 'eexec' encryption, charstring encryption, and New Expansion Factor hint (V1.1). Companion volumes by Adobe Systems are also available through Maplin, including the 'PostScript Language Reference Manual' (WZ04E), a definitive guide to the language; the 'PostScript Language Tutorial and Cookbook' (WZ13P), a practical and accessible introduction to the language and its capabilities with examples, while 'PostScript Language Program Design' (WZ14Q) is the proven guide to designing efficient PostScript programs.

1990. 108 pages. 231 x 187mm, illustrated.

BATTERY TESTERS

Battery Tester

A liquid crystal battery tester for use with 1.5V cells (not Ni-Cad types). The tester is a clear flexible plastic strip which is folded around the battery so that the two silvered spots on the back of the tester make contact with the positive and negative terminals of the battery. The coloured marks on the face of the tester then "light up" to show the condition of the battery. Full instructions for use are printed on the tester.

Order Code	Type	Price each
FP60Q	Battery Tester	79p

Battery Checker

A low-cost and compact battery tester suitable for determining the state of both dry and NiCd cells. The state of the cell is shown as 'Replace/Recharge', 'Low' and 'Good' on the integrated moving coil meter. The spring loaded arm is used for testing 'N', 'AAA', 'AA', 'C' and 'D' cells and all similar 1.5V cells, while PP3 batteries are held against two contacts on the side of the unit. In addition, the spring loaded arm can also be used to test button cells from watches and calculators.

Order Code	Type	Price each
DM75S	Handy Battery Tester	£3.99

Car Battery Analyzer

A handy device for checking the state of a car's battery and charging circuit. Simply plug the device into the car's cigar lighter socket and read the display. For testing the battery turn the engine off and leave the car with the lights on dipped beam for one minute. Now connect the device and read the display. If the battery is defective the meter will register low. To check the alternator/dynamo state just check the meter scale after driving for more than 15 minutes. A healthy charging circuit will register in the middle of the scale. The legend on the meter is easy to read, and colour coded to show easily, which areas of the scale are healthy and which are bad. Suitable for negative ground electrical systems.

DRY BATTERIES

NEW!

GP

A range of quality batteries with consistent discharge performance, leakage resistance, shelf life, and reliability in extreme conditions. Three different ranges are presented here, comprising zinc carbon, 'environmentally friendly' zinc chloride and alkaline. None of these batteries contain any mercury and are therefore environmentally safe in use and disposal.

Heavy Duty General Purpose

A basic range of zinc carbon batteries, suitable for all electronic devices, including toys, photographic equipment, data banks, calculators, audio appliances, remote controllers and paging machines. AAA and AA sizes are only sold in packs of 4. C and D sizes are only sold in packs of 2. PP3 size is sold singly.

Mercury Free Extra Heavy Duty Range

A range of batteries whose main electrolyte comprises zinc chloride. Suited to heavier duty, high drain applications, these batteries are also 'environmentally friendly'.

Continued on next page.

THE BEST OF SERVICE

Continued from previous page.

friendlier' as they contain no mercury. Also suitable for all electronic devices, including toys, photographic equipment, data banks, calculators, audio appliances, remote controllers and paging machines. AAA and AA sizes are only sold in packs of 4. C and D sizes are only sold in packs of 2. PP3 size is sold singly.

Alkaline Range

Alkaline batteries are now more widely used in place of other types for their high current and high capacity performance with minimum supply degradation for modern electronic circuitry. These batteries use an alkaline manganese chemical system, and contain no mercury or cadmium. Suitable for all electronic devices, especially for those requiring a heavy current drain, including toys, paging machines and alarm clocks. All alkaline cells are sold singly.

Characteristics

Type	IEC Size	Mass	Nominal capacity
Carbon AAA	R03	9g	0.3Ah at 15Ω for 4.6hrs to 0.9V
Carbon AA	R6	18.1g	0.4Ah at 3.9Ω for 1.3hrs to 0.8V
Carbon C	R14	46g	1.1Ah at 3.9Ω for 3.6hrs to 0.8V
Carbon D	R20	100g	3.75Ah at 2Ω for 6.25hrs to 0.9V
Carbon PP3	6F22	35.5g	0.3Ah at 620Ω for 26hrs to 5.4V
Chloride AAA	R03	9g	0.34Ah at 15Ω for 4.28hrs to 0.9V
Chloride AA	R6	18.7g	0.48Ah at 3.9Ω for 1.58hrs to 0.9V
Chloride C	R14	49.5g	1.8Ah at 3.9Ω for 5.9hrs to 0.9V
Chloride D	R20	102g	3.8Ah at 2.2Ω for 7hrs to 0.9V
Chloride PP3	6F22	38g	0.35Ah at 620Ω for 30hrs to 5.4V
Alkaline N	LR1	8.9g	0.6Ah at 20Ω for 11.6hrs to 0.9V
Alkaline AAA	R03	10.7g	0.8Ah at 20Ω for 14.3hrs to 0.9V
Alkaline AA	R6	23g	1.89Ah at 10Ω for 15.8hrs to 0.9V
Alkaline C	R14	68g	5.2Ah at 3.9Ω for 17hrs to 0.9V
Alkaline D	R20	138g	7.5Ah at 2Ω for 12.5hrs to 0.9V
Alkaline PP3	6F22	47g	0.45Ah at 180Ω for 11hrs to 5.4V

Where batteries are supplied in bubble pack sets of more than one battery, they will be indicated as such by the quantity in the pack following the description, e.g. 'x 2', 'x 4', etc.

DURACELL BATTERIES

A range of alkaline batteries by Duracell. The alkaline system takes its name from the electrolyte, which is a highly conductive aqueous solution of potassium hydroxide. The electrodes are high purity manganese dioxide and granulated zinc, a combination which gives a superior, yet economic, battery capable of operating efficiently at both high and low rates of discharge and over a wide range of duty cycles. The operating voltage range is 1.3 to 0.8V per cell under most load and temperature conditions. Maximum open circuit voltage is typically 1.56V per cell. The recommended exhausted voltage level of a single cell in use is 0.8V, increasing to 0.9V per cell if 6 or more are used in series, at which point they must be replaced.

The alkaline battery excels at powering continuous, heavy loads. There is no distinct upper load limit, and the chemistry is typically capable of supplying, intermittently, loads up to 2A at normal room temperature.

Duracell batteries are leak-proof under all normal conditions of operation and storage, however, the following should be avoided to prevent damage and possible leaks: wrong polarity; short circuit; reversed drive of series cells; or attempts at recharging. The alkaline system operates efficiently over a temperature range of -30°C to +70°C, subject to load and duty cycle regimes. High relative humidity may cause external corrosion and should be avoided. All batteries are fully sealed and highly resistant to differences in external air pressure, even down to a vacuum.

Characteristics

Type	Mass	Nominal capacity
Size N	8.3g	0.91Ah at 100Ω for 70 hrs to 0.8V
Size AAA	11g	1.1Ah at 10Ω for 8.5 hrs to 0.8V

Zinc Air Batteries

GP

A battery system specifically designed for use in hearing aids, where it will give twice the life of mercury types. A zinc-air battery is interchangeable with any similarly numbered mercuric oxide battery, and is activated by removing the sealing tab on the base immediately prior to use.

Type	Voltage	Dimensions (mm)
ZA312	1.4V	7.8 dia. x 3.56 high

Lithium Batteries

GP

Lithium manganese cells all having a nominal voltage of 3.0V. Suitable for use where very low quiescent currents need to be maintained for very long periods, with only occasional demands for high current drain. Seven types are available.

Type	Dimensions (mm) dia. x height	Voltage	Nominal capacity max. (mAh)
CR1220	12.5 x 2	3.0V	38
CR1616	16 x 1.6	3.0V	42

RECHARGEABLE LEAD-ACID BATTERIES

Rechargeable Lead-Acid Battery for Cyclic Operations

Yuasa

A rechargeable lead-acid battery similar in construction to the Yuasa 'NP' series but specifically designed for cyclic operations. The battery has been designed to withstand 500 charge/discharge cycles but, with care, should handle many more. As with the 'NP' series this battery is classed as 'non-spillable', having the same unique sealing properties and gas recombinant system. This battery is ideally suited for such duties as powering wheelchairs, golf carts, lawn mowers, communications, robots, remote pumps, and other equipment needing a compact, resilient, self-contained source of power. It is recommended that a stabilised, constant voltage charger is used with current limiting to restrict the current flow to the permitted maximum. *Car battery type chargers must never be used.* This battery should never be left in a severely discharged condition. Optimum charging time for this battery is 9 hours with a maximum charging time not exceeding 20 hours. This means that the optimum charging current should be in the region of 2 1/2 A, falling steadily to a trickle charge. However, maximum permitted charging current is 6A, allowing boost charging if necessary. If it is going to be stored out of use for any length of time this battery should first be fully charged; if stored at 20C, the battery should be recharged once every nine months – more frequently at higher temperatures.

Specification	
Voltage:	12V DC
Capacity:	24Ah
Charging voltage:	14.6V to 14.8V DC
Maximum charge current:	6A at 25°C (77°F)
Optimum charge current:	2.6A
Optimum charge time:	9hrs
Maximum charge time:	20hrs
Optimum discharge current:	Less than 24A
Maximum discharge current:	72A
Discharged voltage limit:	Not less than 11.8V

Rechargeable Lead-Acid Batteries

Yuasa

A range of maintenance free, sealed construction lead-acid batteries combining small size with high output and long life, in 4V, 6V and 12V versions from 1Ah to 38Ah. The batteries are classified as 'non-spillable', having unique sealing techniques to guarantee that no electrolyte leakage can occur. The batteries are provided with a means of recombining gas internally during normal usage, and in the event that a build-up

of gas at excessive pressure should occur, a low pressure venting system, operating at 7 to 10 psi, will dispel the excess and reseal itself.

The 'non-spillable' feature of these batteries means that they can be operated in any position, unlike the usual form of vented lead-acid battery which is strictly 'one-way-up'. A service life of 5 years should be expected if the batteries are used most often in the 'floating' or 'standby' modes of operation, where top-up trickle charging is regular and discharge is infrequent. The batteries also feature a low 'self discharge' rate of only 3% of rated capacity per month, allowing the battery to be left unused for some time without loss of efficiency or any appreciable deterioration of performance.

Charging

Because these lead-acid batteries are sealed, some care has to be exercised whilst charging, and it is recommended that a stabilised, constant voltage source should be used, with current limiting proportional to the battery's Ah rating.

Car battery type chargers must never be used.

Battery performance and service life will be directly affected by the choice and efficiency of the charging circuit used. Constant voltage charging is the most suitable method, and the output must be within 2.25 to

2.30 volts per cell for trickle charging, or in the case of 'cyclic' use (regular discharging) 2.40 to 2.50 volts per cell. It is also recommended that the current output be normally limited to a maximum of 0.25 x rated capacity of the battery (where Ah represents a ratio of current output versus time, e.g. 10Ah = 1 ampere discharge over 10 hours, or 10 amperes over 1 hour). Charging outside these limits will seriously damage the battery.

These batteries, unlike some other makes, can recover full capacity even after they have been subjected to extreme overdischarge unless left standing in a totally discharged state for a long period.

Terminations

The 4V, 6V and 12V batteries YJ65V to XG77J have a pair of moulded-in blade terminals which can accept the 1/4 in. push-on connectors shown in the Connectors section. XG78K to XG80B have terminals with which M5 bolts and nuts are used. These are supplied.

Suitably sized metric solder tags for use with these fittings may be found in the Hardware & Sundries section — though note that neither of these methods of termination may be able to adequately cope with the maximum short duration discharge current from any battery.

All batteries are encased in grey high impact ABS plastic resin, with black sealed top covers

12V Sealed Lead Acid Battery Charger

Yuasa

A 12V lead acid battery charger for batteries in the capacity range 1.2Ah to 6Ah. The charger plugs into the mains and has a 1.5m twin flying lead that has two push-on spade connectors, suitably colour coded, which push on to the battery terminals. The unit has a red LED to indicate the battery is being charged, and a green LED which illuminates when the battery is between 90 - 100% charged. A fully discharged 1.2Ah battery should take about 6.5 hours to be fully charged and a 6Ah battery should take 30 hours. The unit is protected against short circuit connection and against reverse polarity connection, for both these conditions the green LED will be continuously illuminated while the mains voltage is applied. The charger can recharge most deeply discharged lead acid batteries. This operation will take many hours depending on the degree of battery sulphation.

STACK-A-TIER STORAGE SYSTEM

A very versatile storage system for CDs, computer game cartridges, video cassettes and audio cassettes. By assembling the rack with the shelf supports in various positions, the system can hold up to 56 CDs, or 34 audio cassettes, or 9 video cassettes in film cases (10 in slip cases) or various combinations of each. The rack is stackable, up to a recommended maximum of three high, and can be expanded horizontally, simply by placing units side by side.

SUPERB QUALITY!
£6.99
MJ13P

Supplied flat packed for easy carriage, the unit can be assembled to your requirements by means of straightforward push-fit joints. Overall assembled dimensions: 325(H) x 340(W) x 138(D)mm. Colour: black.

Sealed Lead Acid Battery Charger

NEW!

Yuasa

A 12V 4A 3-stage battery charger specifically intended for sealed lead acid batteries types 12V 24Ah cyclic battery (RT77J), 12V 24Ah (XG79L) and 12V 38Ah (XG80B). The charger has LED indication of float and bulk charge (float indicates 95% approx charged), reverse polarity protection with LED indication, short circuit and over voltage protection. Manufactured to BS 415, BS 3456, IEC 335, UL 1236.

Specification

Input: 100, 110, 220, 240V AC
±10%, 50/60Hz ±5%

Output: 13.8V ±1% temperature compensated float charge
14.5V nominal bulk charge
<600mV (resistive load)

Ripple: Bulk to float transition current: 900mA ±20%

Overvoltage protection: operates >16V

Dimensions: 200 x 96 x 173mm

Order Code	Type	Price each
AQ19V	D5 S/Lead Acid Batt Chg	£79.99

Sealed Lead-Acid Battery Charger

Yuasa

A constant voltage battery charger which takes stepped down AC on the input and provides regulated and accurate DC at the output for charging our range of sealed lead acid batteries. For use in float charge applications, providing the battery with regulated DC even under fluctuating load conditions, which should ensure maximum battery life. Available in both 6V and 12V output versions. Input must be in the range 11 to 13V AC or 12 to 15V DC and for 12V version 17 to 19V AC. Output is 6.9V DC with a max. current of 700mA and 13.6V DC with a max current of 500mA. This charger is only suitable for batteries up to 8Ah, Size 71 x 45 x 25mm.

Sealed Nickel Cadmium Batteries

NEW!

GP

Nickel cadmium (NiCd) cells will replace dry batteries in most medium and high current applications. They are very economical in applications where dry batteries constantly need replacing. They must be recharged using special constant current chargers but, even if the cost of the charger is added to the cost of the batteries, they still show a considerable saving over dry batteries after just a few changes. NiCd cells are not suitable for use in very low-power applications such as clocks, or any similar application where a dry cell would only need replacing once a year.

Internal Description

These high quality cells have sintered plates to give a very low internal resistance. The positive is nickel hydroxide, the negative is cadmium, and the electrolyte is potassium hydroxide. The cells are fitted with a resealing, one-way safety vent that relieves any excess internal pressure caused by a fault or abuse. It opens at about 200psi and closes again at about 175psi. Typical abuse conditions would be charging at too high a current, or excessive reverse charging. Cells are usually supplied discharged in case they are accidentally shorted in transit. It is important that you never short circuit nickel cadmium cells, because their very low internal resistance allows very high currents to flow (several tens of amperes), which may damage the cell.

Charging Guidelines

NiCds have a very flat charge/discharge curve, and it is advisable to fully discharge the cell prior to charging. However, when dealing with packs of cells, such a method can cause damage to an individual cell that is part of a pack, because the low cell is reversed. For this reason, most discharge arrangements limit the discharge to 1V per cell per battery pack, to avoid the possibility of a weak cell in a pack being reversed. If the nickel side is exhausted first, then hydrogen gas is formed, causing permanent loss of electrolyte and storage capacity. If recharging at the original I_{10} rate then takes place, further damage can occur after full charge. This 'avalanche' effect will soon destroy the cell.

NiCds will absorb overcharging at a limited rate, i.e. I_{10} . If charging continues beyond the point needed to restore the nickel side, oxygen ions are produced but, having no material to oxidise, they eventually return to the negative side, the cadmium. Current thus passes through the cell harmlessly. The voltage will rise to 1.3V when this occurs, and hold steady at that point. NiCds should be used regularly. Cells which are left dormant for long periods lose their capability, hence the 'loss of charge' or 'memory effect'. During prolonged disuse the cadmium crystalline structure 'grows', developing fine filaments which can extend to eventually cause a short circuit inside the cell. It is possible to rescue such cells by giving them a high flash current to remove the short, then a fast charge to half capacity, followed by a similar discharge. This may need repeating several times but, when the cell has been recovered, a lengthy charge of I_{10} for 20 hours or so can be applied. The gentle overcharging seems to finalise the recovery process.

Below the freezing point of the electrolyte (about

-30°C) the NiCd battery will not function. However, at low temperatures, the charging process becomes more efficient, and for continuous charging under these conditions an upper charge voltage limit of 1.55V per cell is often imposed. This means charging circuits are designed so that as this voltage is approached the charging current will decrease, and the upper voltage limit is not exceeded. This will greatly reduce the possibility of gassing under these conditions. Temperature will also affect retention of charge on standing, this being much better at lower temperatures.

All the batteries in the range should have a minimum life of at least 500 full charge/discharge cycles. Providing that the charge rate never exceeds the maximum current stated and the discharge rate never exceeds twice the current, the life should be around 3,000 full charge/discharge cycles. Cells may be charged at any current up to the maximum stated, but will take progressively longer to charge at lower currents. No harm will result if the cells are charged for longer periods.

In the following list AG21X is a 'tagged' version of AG22Y, i.e. having solder tag terminals for making up rechargeable battery packs, and AG28F is a Nickel Metal Hydride (NiMH) type (see NiMH batteries for a description of this type).

The 'odd' sizes shown below are to be found in an increasing number of new consumer products, such as electric shavers, etc.

Nickel Cadmium Button Cells

Rechargeable button cell batteries with a life expectancy of 500 to 1000 charge/discharge cycles, much above the requirement of IEC standard. They have a high charge retention, and at 20°C the cells still retain 40% of the nominal capacity after 12 months of idleness, thus they are suitable for portable instruments that are used infrequently. A voltage level of 1.2V or more is maintained during 80% of the discharge cycle. Built-in chemical protection is provided if cell polarity is reversed, or the cell is otherwise misused. These cells exhibit no 'memory effect' and are suitable for continuous trickle charging, they will not experience voltage drop or lowered capacity during discharge.

Order Code	Nominal capacity (mAh)	Dimensions Dia. x Hght (mm)	Weight (g)	Standard charge for 14 hours (mA)
AG34M	60	15.45 x 6.2	4	6
AG35Q	170	25.1 x 6.7	10	17
AG36P	280	25.1 x 9	14	28

Order Code	Type	Price each
AG34M	Button NiCd 60	99p
AG35Q	Button NiCd 170	99p
AG36P	Button NiCd 280	99p

Nickel Metal Hydride (NiMH) Batteries

The new generation of rechargeable 'NiMH' or Nickel Metal Hydride cells, free of toxic or hazardous elements such as cadmium, lead, mercury or lithium, which can be used repeatedly and disposed of safely when finally thrown away. A service life of 500 to 1000 charge/discharge cycles can be expected, and the capacity related performance is normally 30 to 50% better than that of the best equivalent NiCd cells. Moreover, the absence of cadmium in the formulation means that NiMH cells are free of the undesirable memory effect. Voltage level is maintained at 1.2V or more during 80% of the discharge cycle, and up to 100% of the nominal capacity at a rate of 3C₁₀A is possible. A resealing safety vent guards against possible misuse.

Order Code	Nominal capacity (mAh)	Cell size	Dimns Dia. x Height (mm)	Weight (g)	Standard charge for 14 hours (mA)
AG28F	1200	AA	14.6 x 50.0	30	120

PCB Mounting Batteries

Ever Ready

Specially designed as a cost effective power back-up, these batteries offer extended working life combined with a sealed leak-proof construction. With a nominal capacity of 110mAh and excellent charge-retention characteristics they offer good protection against extended supply interruption. Their lower internal resistance also makes them suitable for high-current power back-up applications. Charge may be maintained by a trickle current of 0.5 to 1.0mA with no requirement for regulation or smoothing.

Nominal capacity at 22mA discharge rate: 110mAh/2.7V
 Nominal voltage: 3.6V
 Max. charging current: 11mA
 Trickle charge: 1mA
 Discharge current: 165mA max.
 Height x diameter: 13.3 x 23.5mm
 Pulse: 1.5A for 2 sec. max.

Replacement Batteries for Cellular Telephones

GP

A range of replacement battery packs for popular models of cellular 'phones. All battery packs are supplied in a discharged state, and should be given a first charge at the standard (C10) rate for 16 to 20 hours. Thereafter, recharging can be performed at the standard (C10) or rapid (C1) rates. Brands of cellular 'phones mentioned in the following list are registered trademarks of the respective manufacturers.

Camcorder Batteries

Premium Gold

A range of camcorder battery packs to suit most popular camcorders. Type D601-N is an economy 6V two-way design suitable for Sony, Panasonic, Sharp and most others, equivalent to Sony NP55 and NP77, etc. The C601-N is an economy equivalent to the Canon BPE77. The D605 is a higher capacity version of the D601-N, whilst the C605 is a higher capacity version of the C602-N. Both the C601-N and the C605 include an extension strap to allow you to extend the length of your hand strap if the battery mount is located in the grip of your camcorder. In this event replacement packs may protrude more than the original packs, requiring a longer hand strap. The H601-N is an economy pack to fit Hitachi, RCA, Minolta etc. The D605 is an extended capacity version of the 6V D601 or D605. The J961 is a 9.6V pack equivalent to JVC NBP6U or NPB8U.

D Models

Capacities

Type	Voltage	Capacity	Notes
D601-N	6V	1700mAh	Economy
H601-N	6V	1700mAh	Economy
C602-N	6V	1700mAh	Economy with strap
D605	6V	2400mAh	High capacity
H605	6V	2400mAh	High capacity
C605	6V	2400mAh	High capacity with strap
D608	6V	3200mAh	Extended capacity
J961	9.6V	1400mAh	VHS-C battery

C Models

There is one drawback with the Ni-Cd battery which is familiarly known as the 'memory effect'. If a Ni-Cd is not charged frequently from a condition other than fully discharged, the capacity will be significantly reduced. It is therefore always recommended to refresh a Ni-Cd battery by discharging it fully before recharging.

H Models

Order Code	Type	Price each

THE BEST OF SERVICE

Camcorder Batteries

GP

Rechargeable replacement batteries compatible with original equipment portable VCR's and Camcorders. The batteries are supplied discharged for transit and must be charged before use. Each battery (except type VP77) includes a 'charge marker' beneath a small sliding cover which indicates the battery's state of charge and which can be red (discharged) or black (fully charged) and may be switched over after use to indicate that the pack is discharged. Seven types are available as follows:

VP66

6V 1200mAh and 1800mAh. Replacement for Fisher FVC901, Fuji F610, Nikon VN9000, Pentax PVC840, PVC840E, Ricoh R610, R630, Sanyo VMD3, VMD5, Sony CCDV88, CCDV90, CCDV95, CCDF330, CCDF335, CCDF340, SP5, Tamron CX7. Equivalent replacement for Sony NP55, NP77, Fuji NP55, NP77, Sanyo NP55, NP77, Tamron NP77, Pentax PVBT810, PVBT820, Ricoh NP55.

VP10

6V 1200mAh and 2400mAh. Replacement for Panasonic MS70, NV-S1, NV-G1, NV-G2, NV-G3, VBS1E, VBS2E, PV-10, NVM10, PV-BP15, PV-20, PV-40, MS70, NV-MS70E. Ferguson FC31. JVC GR-AX2, GR-AX7, GR-SX9, GR65, Minolta C-606, C-660, Philips VKR6847, VKR6875. Equivalent replacement for battery models Panasonic VW, and others.

VP77

6V 1200mAh and 2400mAh. Replacement for Canon A1, A-1H1, A1-H1B, A-2-H, A-9, A-10, A-11, BP-E77, BP-E77K, BP-E718, BP-E722, E6, E30, E51, E57, E60, E70, E77, E80, E90, E440, E640, E660, E680, E708, E800H1, E808, EX1H1, H460, Bauer/Bosch C81, VCC810, and others. Equivalent replacement for battery models Canon BPE77.

VP962

9.6V 1300mAh. Replacement for Bauer Bosch VCC606AF, VCC616AF, VCC656AF, Ferguson FC05, FC06, FC07, FC08, FC15, JVC GRC9, GRC11, GRC30, GRC45, GRC60, GRS77E, Minolta C50, Nordmende 2201, RP3000, Philips VKR6835, VKR6841, Panasonic VMC6, VMC10, MS50, Telefunken VM2895, VM2892, VM4000, VM4100, Toshiba A1420BK. Equivalent replacement for Bauer Bosch, Ferguson VA314, VA315, JVC 3NV6GU, Panasonic VWVBC1E, Telefunken V2932, Nordmende AC1100, Minolta VBP501, VBP500.

HOT TIP

Mercury Oxide, Silver Oxide and Zinc Air Batteries

Be careful how you handle these batteries, as touching them whilst inserting them into equipment can cause corrosion and premature discharge. This is because the properties of your skin are detrimental to the battery. So when handling the battery, use a clean handkerchief or use a small piece of 'Bio-Tack' to pick up the battery and place it in the equipment.

Dual Function Camcorder Battery Charger

This multi-function charger is suitable for a wide range of camcorder battery packs. It will charge 6V, 7.2V and 9.6V Ni-Cad packs of 800mA or higher capacity, and various physical shapes, e.g. Sony 6V and JVC 9.6V types. It can be used from the mains adaptor included. The charger stops automatically when charging is complete to prevent batteries from overcharging; an LED status indicator decreases in brightness as charging proceeds and extinguishes when charging is completed. It takes about 5 to 6 hours to completely charge a 1000mA battery. A long lead with a wide range of connectors is included, as is a plug and lead to connect to a car's cigar lighter socket. The charger comes complete with a soft, black vinyl case and operating instructions.

Dimensions of charger: 152 x 68 x 53mm
Weight: 175g.

Order

Racing Packs

GP

NEW

Top quality nickel cadmium racing packs available in 4.8V, 7.2V and 9.6V combinations. The 4.8V and 9.6V packs are high capacity types, the 7.2V pack is standard density. All packs are shrink-wrapped in heavy duty PVC and are supplied complete with silicone coated, high temperature leads and standard racing pack plug.

The packs may be charged as follows: for standard cells, 16 hours at 120mA for full charge, thereafter indefinitely with no harm; 7 hours at 240mA for full charge, thereafter continuing for approximately 10 days with no harm. For high capacity cells, 16 hours at 140mA for full charge, thereafter indefinitely with no harm; 4 hours at 420mA for full charge, thereafter continuing for approximately 10 days with no harm.

Order Code	Type	Price each
AG46A	7.2V Race Pack	£14.99
AG48C	4.8V Race Pack	£5.99
AG47B	9.6V Race Pack	£8.99

NICKEL CADMIUM BATTERY CHARGERS

8 Cell NiCd Battery Charger

Calvyn Industrial

NEW

A mains powered eight cell battery charger that automatically adjust for either AAA or AA NiCd batteries. The charger will accept from one to eight batteries and, depending on the type of battery in use (AAA or AA), the current level is selected automatically. Typical charge currents are 28mA for AAA or 90mA for AA. There are 4 LED's (one for each set of two cells) to indicate that the battery has been inserted correctly and is being charged. This unit must only be used to charge nickel cadmium type rechargeable batteries. It is not suitable for use with any other type of battery.

Dimensions 185mm x 75mm x 55mm.

Specification Charge Time	Battery Type and Capacity	
	AAA	AA
8h:	180mAh	500mAh
10h:	220mAh	600mAh
12h:	—	700mAh

Order Code	Type	Price each
RZ07H	8C Charger	£8.99

Automatic NiCd Charger and Discharger

Calvyn Industrial

NEW

A compact automatic charger/discharger for AAA and AA NiCd batteries. A slide switch on the base of the unit selects the charge rate and battery type. The batteries are discharged first before being fast charged. A built-in timer automatically changes from fast charge to trickle charge. This discharge/charge cycle helps to prevent 'memory' effect. Each cell has an LED which indicates the state of the charge/discharge process. The unit will accept one to four batteries.

Dimensions: 125 x 85 x 50mm.

Specification

Charge Time	Battery Type and Capacity	
	AAA	AA
3h:	—	500mAh
3h 45m:	180mAh	600mAh
4h 15m:	220mAh	700mAh

Order Code	Type	Price each

YOUR GUARANTEE OF QUALITY & SERVICE

Heatshrink Sleeving for Radio Control Models

A heat-shrinkable crosslinked polyolefin material that will shrink to 50% of its original diameter when heated to over 121°C. For more rapid shrinking, higher temperatures may be used without detrimental effect. Shrinkage can be achieved by hot air guns, gas flame etc. The sleeving is self-extinguishing and has a high tensile strength and is resistant to solvents, acids, alkalis, fuel and oil. Breakdown voltage 11kV. Colour is black.

Size as supplied 50.8mm diameter.

Minimum diameter after shrinkage 25.4mm.

Minimum wall thickness after shrinkage 1.14mm.

Supplied in 200mm lengths.

Order Code	Type	Price each
XS11M	Race Pk Heatshrink	£1.49

Fast NiCd Charger with Discharger

Calvyn Industrial

NEW

A fast, compact NiCd charger that will charge 2 or 4 AAA or AA type batteries in 2h. A slide switch selects either the charge or discharge function. After the batteries have been discharged, they are fast charged for 2h and then automatically switched to a trickle charge mode. This sequence will prevent the 'memory' effect that is often found in NiCd batteries. The unit will automatically adjust for AA or AAA type batteries – 380mA for AA, and 100mA for AAA with a trickle charge of 20mA. LEDs indicate when the unit is in the fast trickle or discharge mode. Dimensions 125 x 85 x 50mm.

Order Code	Type	Price each
RZ08J	4C Charge/Discharge	£9.99

Fast 8 Cell NiCd Charger with Discharger

Calvyn Industrial

NEW

A fast, eight cell NiCd battery charger for AAA or AA type batteries that will fully charge 500mAh batteries in 2h. After this time the batteries are charged at the 20mA trickle rate. Batteries are charged in pairs, and four LEDs indicated that each pair is being charged correctly. A selector switch on the base of the unit selects different battery capacities. Dimensions 125mm x 85mm x 50mm.

Specification	Battery Type and Capacity	
Charge Time	AAA	AA
2h:	—	500mAh
2h 24m:	180mAh	600mAh
2h 48m:	220mAh	700mAh

Order Code	Type	Price each
RZ10L	8C Charge/Discharge	£14.99

Universal NiCd Battery Charger and Discharger

Calvyn Industrial

NEW

A very high quality universal automatic NiCd charger that has a discharge cycle built-in, and accepts AAA, AA, C, D and PP3. The charger will automatically select the correct charge/discharge rate for the different size batteries. Fast charge will not happen until all the batteries have been fully discharged, and a built-in timer automatically changes from fast to trickle charge. This process will help to prevent 'memory' effect. The unit will charge all the cells (except PP3) in 4h and will accept just one or groups of cells. One or two PP3 will be charged at the standard rate. Each cell (except PP3) has an LED which indicates the state of the charge/discharge process. This charger is designed for NiCd batteries only and is not suitable for other types of cells.

Dimensions: 225 x 65 x 115mm

Specification

Battery type	Capacity	Charging Time
C/D:	600mAh	4h
AA:	200mAh	4h
AAA:	60mAh	4h
PP3:	11mAh	4h

Order Code	Type	Price each
RZ18U	Uni Charge/Discharge	£19.99

AA Charger with Fast Charge

A nickel-cadmium battery charger capable of charging 2 or 4 AA cells simultaneously. A switch permits charging at standard rate 14 to 16 hours, or fast rate 3 hours max. Charge current at standard rate is 45mA approx and at fast rate 150mA. Two LED's are provided, one for each pair of cells and the LED lights when charging is in progress. The unit has 1.8m mains lead. Overall size: 99 x 72 x 42mm. This charger is ONLY for use with nickel-cadmium rechargeable cells.

Order Code	Type	Price each
YN28F	AA Nicad Charger	£4.99

'AA' Solar Battery Charger

A small, neat solar powered battery charger which will accommodate up to four AA size Ni-Cd cells. Very simple to use; simply place your AA batteries into the battery compartment of the charger, and set the lid, which carries the solar panel, to face the sun rays. A single battery can be charged in 2 to 3 hours, 2 batteries, 4 to 6 hours; 3 batteries, 7 to 10 hours; 4 batteries, 10 to 14 hours. Times will vary depending on the strength of the sunlight and/or the depth of discharge of the batteries. For best results, batteries should be recharged at the first sign of 'weakness'. Batteries will last up to 4 times longer if charged after only 50% discharge. Dimensions of unit (closed): 95 x 65 x 28mm.

▶ IT'S A FACT! ◀

Count Giuseppe Antonio Anastasio Alessandro Volta

(1745 to 1827) was an Italian physicist. A pioneer in the sphere of electricity, he invented the 'electrophorus', a device to accumulate electricity, and the voltaic pile (1800). Thankfully, we now use a shortened version of his name (Volt) in our calculations.

One volt is the SI unit of electric potential and electromotive force, equal to the difference in electric potential between two points on a conducting wire carrying a constant current of one ampere when the power dissipated between the points is one watt.

Mains and 12V Rapid Ni-Cd Charger for Radio Control Models

A fast charger for recharging 7.2V 1200mAh nickel-cadmium radio control battery packs. The charger can be powered from either 240V AC mains or from 12V DC car accessory socket (the charger must not be plugged into 24V DC sockets found on lorries). The charger incorporates a timer that will fast charge a battery pack for 20 minutes and then switch to trickle charge. This prevents battery packs from being overcharged, yet continues to top up the charge at a low enough rate such that it could be left on indefinitely without harming the battery pack. 90% of full charge will be reached during fast charge, the remaining charge to 100% is obtained by safe trickle charging. To use: connect the charger's connector to the battery pack. Plug the charger into the power source (either 240V AC or 12V DC), the red LED will illuminate indicating fast charging. After 20 minutes the LED will extinguish and the charger switches automatically to trickle charge. When charging is completed, disconnect the charger from the power source and detach the battery pack. It is essential to disconnect the charger before recharging another battery pack to allow the timer to reset. Battery packs should not be recharged when they are warm (i.e. straight after removal from a model after racing) nor should battery packs be recharged whilst still fitted in a model. During charging both battery pack and charger will become warm, this is normal. The charger is fitted with a mains lead (13A plug not supplied), a 12VDC power lead and accessory plug, and a battery connector lead to suit standard battery packs.

Overall dimensions: 81 x 67 x 131 (excluding leadouts).
Charging current: 2.4A.
Charging voltage: 7.2V.

Order Code	Type	Price each
YP89W B2	Rapid Charger	£24.99

Standard Charger

A nickel-cadmium battery charger capable of charging between 1 and 4, AA, C or D cells singly or simultaneously in any combination. In addition one PP3-size ni-cad can also be charged. Five LED's are provided which light to show which charge positions are in use. Also one position may be used to test the cells (not PP3). With the cell in this position throw the switch provided to "test" and the strength of glow of a special lamp shows the cell condition. If the lamp fails to glow or is very dim, charge the cell fully. If the lamp shines strongly the cell is charged. The unit has 1.7m mains lead. Overall size: 214 x 108 x 56mm.

Charge rates for full charge

AA	14 to 16 hours
C Commercial	20 to 25 hours
C Industrial	35 to 40 hours
D Commercial	20 to 25 hours
D Industrial	70 to 75 hours
PP3	14 to 16 hours (24 hours max)

This charger must ONLY be used with nickel-cadmium rechargeable cells and batteries.

Order Code	Type	Price each
WY22Y A1	Ni-Cad Charger	£7.49

Universal Charger

A nickel-cadmium battery charger capable of charging AAA, AA, C, D, PP3 and rechargeable button cells singly or simultaneously in numerous combinations. There are two charge sockets for PP3 batteries and either one or two may be charged together. There are two positions where AAA or AA cells may be charged and four positions where AA, C or D cells may be charged. In addition there are two positions for rechargeable button cells, diameters 16mm, 11.6mm or 8mm, but note that it is VERY DANGEROUS to attempt to recharge mercuric oxide, zinc-air or silver oxide cells. All ten charge positions may be used simultaneously or in any combination. Each of the eight main charge positions (i.e. not the button cells) has an LED associated with it which lights when charging is in progress. In addition three test positions are provided, one for AAA and AA, one for C and D cells and one for PP3 batteries. When the charging switch is off, depressing the test button for the test position in use allows the meter to show if the battery is flat. The unit has 1.7m mains lead. Overall size: 185 x 155 x 56mm.

Charge rates for full charge

AAA in position marked UM3,4,5	5 to 7 hours
AA in position marked UM3,4,5	13 to 17 hours
AA in position marked UM1,2,3	5 to 7 hours
C Commercial	13 to 17 hours
C Industrial	22 to 28 hours
D Commercial	13 to 17 hours
D Industrial	45 to 55 hours
Button cells	5 to 7 hours
PP3	11 to 13 hours (20 hours max)

Note that of the 6 positions for AA cells, four will give a fast charge and two a standard charge.

This charger must ONLY be used with rechargeable cells and batteries. It must NOT be used to charge silver oxide, zinc-air, mercuric oxide, alkaline, zinc-chloride or zinc-carbon cells.

Order Code	Type	Price each
YN27E A	Deluxe Nicad Charger	£10.99

12 VOLT POWER ADAPTORS

An easy-to-use car voltage step-down converter and regulator which simply plugs into any cigar lighter socket and converts the car battery supply to any of seven levels, 1.5V, 3V, 4.5V, 6V, 7.5V, 9V or 12V DC. The output is selected by a 7-way slide switch and max current rating for each voltage is as follows:

12V	800mA	9.6W
9V	700mA	6.3W
7.5V	500mA	3.75W
6V	400mA	2.4W
4.5V	350mA	1.58W
3V	300mA	900mW
1.5V	250mA	375mW

Fitted with a 1.7m long lead terminated with a moulded 2-pin line socket. To this any one of six little right-angled adaptor plugs can be connected in either polarity. These comprise a 3.5mm jack, then miniature 1.3mm, standard 2.1 and 2.5mm, 'narrow sleeve' 2.1mm (5mm o/d), and 'fat sleeve' 1.3mm (5.5mm o/d) power plugs, one of which should fit nearly all items using these types of connectors. (For 2.5mm use a 3.5/2.5mm adaptor.) A flexible plastic keeper strip has six holes to hold all adaptors. All power plugs are long reach type for both short and long reach sockets. Max. insertion depth of car plug, 55mm; diameter 20mm. Dimensions of regulator unit 80 x 55 x 28mm.

CAR BATTERY TO 240V MAINS CONVERTER

A very efficient and compact 12V car battery to 240V AC converter, that can be used to power domestic appliances up to 200W. Designed to be permanently installed in the vehicle with direct connections to the battery, by two heavy duty leads. A third low current signal lead taken to the ignition switch turns the unit on and off via an internal electronic relay. The mains output, indicated by a neon light, is by a standard 13A socket. The unit is fitted with an audible warning that sounds when the battery is becoming discharged. The warning tone gets louder as the battery voltage falls, and if the battery voltage falls below a critical level, the unit will switch off. The unit is designed to operate with the car engine idling when supplying high power continuously. Over current protection is provided, so that if the unit is plugged into unsuitable equipment, for a short time, it will not be damaged.

A mounting bracket kit for permanent installation of the 12V DC to mains converter is also available.

Order Code: KR65V £5.99

GREAT VALUE!
£109.99
 KR64U
 [B1]

Specification

Voltage input: 11V to 15V DC, 12V nominal
 Input current: 1A approx. for every 10W of load
 0.3A approx. with no load
 Output voltage: 240V AC RMS nominal, 216V to 255V RMS over continuous load range up to 1.1A
 Power output: 200W continuous, 250W short term, 500W surge
 Size: 141 x 94 x 45mm
 Weight: 800g.

MAINS ADAPTORS

Mains adaptor/battery eliminators which plug directly into standard 13A sockets. Each unit has approximately 1.75m of lead terminated in a multiplug unit having 2.5mm and 3.5mm jack plugs and 2.1mm and 2.5mm dc power plugs to suit most battery powered equipment. Polarity is reversible on all types.

Regulated 12V 1A DC

This unit has a single regulated output of 12V DC at 1A (max), the presence of which is shown by a power 'on' indicator. Power output is fed through a flying lead approx. 6ft. long. The end of the flying lead is terminated in a 2-pole socket. The unit is supplied with eight plug-in adaptors to mate with the 2-pole socket. Overall size of body is 120 x 76 x 67mm.

Order Code	Type	Price each
CC10L B3	Adaptor 12V 1A	£9.99

12V Regulated Power Supply

A fully regulated mains adaptor style power supply especially suitable for musical electronic keyboards and any application which requires stringent low noise supply regulation. It is double insulated and connection to the mains supply should be made via a 13A plug fitted with a 3A fuse. The output is supplied through a 4-way multiplug combination providing 2.5 and 3.5mm jack plugs and 2.1 and 2.5mm power plugs, plus a 1.3mm Walkman type power connector. An inline reversible 2-pin plug is also included in the output lead.

Specification

Input: 240V AC @ 50Hz
 Output: 12V DC @ 600mA max.

NB: the max. current drain of 600mA should not be exceeded. Complies with BS 4435.

Order Code	Type	Price each
YZ21X	Reg PSU 12V 0.6A	£9.99

12 Volt 500mA Regulated PSU

A quality 12V regulated mains adaptor conforming to BS 3535 for use with personal computers, radios, calculators, cassette players and other battery operated equipment. The adaptor features short circuit and overload protection, and thermal overload protection. The regulated output ensures constant DC output with minimal ripple. The output is via a 2m long flying lead terminated in a standard 2.1mm power plug.

Specification

Input: 240V AC at 50Hz
 Output: 12v DC at 500mA max.
 Please note: Centre of connector is positive.

ZF51F	12V Reg PSU 0.5Amp	£15.99

Regulated 300mA

Uniross

This unit is regulated to keep the output voltage constant at all currents up to 300mA, and which is switchable for 3, 4.5, 6, 7.5, 9 and 12V DC output.

Order Code	Type	Price each
YB23A	AC Adaptor Regulated	£9.99

Unregulated 300mA

This unit has outputs of 3, 4.5, 6, 7.5, 9 and 12V DC at 300mA (max). Unit is not stabilised and therefore at low current drains the voltage rises. At less than 150mA this rise could be considerable. If you wish to use this adaptor at current drains less than 150mA you

Continued on next page.

Continued from previous page.

should increase voltage slowly from the lowest voltage setting until the input is at the required voltage. (A meter placed across any of the 3 spare spider connections will allow you to monitor the voltage.)

Order Code	Type	Price each
XX09K	AC Adptr Unreg 300mA	£4.99

Unregulated 800mA

This unit has outputs of 3, 4.5, 6, 7.5, 9 and 12VDC at 800mA (max). There is a power 'on' indicator and a polarity switch. In addition to the four standard output plugs, the unit has a 1.3mm Walkman-type plug as well. Overall size of body 98 x 67 x 57mm. Note that this unit is unregulated and therefore at low current drains, the voltage can approach double the full load voltage.

Order Code	Type	Price each
YM85G	AC Adptr Unreg 800mA	£6.99

Fixed Voltage Regulated Mains Adaptors

A range of four fixed voltage regulated mains adaptors for personal computers, radios, calculators, TV games, cassette players, small televisions and other battery operated equipment. The adaptors feature a 'power on' indicator, short circuit protection, plus automatic thermal and overload cut-off. The IC regulated output ensures a constant DC output with minimal ripple. The output is via a 6ft approx. flying lead and has a set of six different plug-in connectors comprising of 2.5 and 3.5mm jack plugs, and 1.2, 1.4, 2.1 and 2.5mm power plugs.

Output voltage	Output current

BZ83E	12V Regulator	£8.99

MAINS POWER SUPPLIES

13.8V Regulated Mains Power Units

A range of four power units with a fixed 13.8V output, ideally suited for powering CB radios, communications transceivers and other devices that require a 13.8V supply. The power supplies are available in 3A, 5A, 7A and 10A versions (continuous rated output current). All four power supply units are finished in a smart black steel enclosure, with illuminated rocker-type on/off switch and two terminal posts (black and red) for the 13.8V output. A mains protection fuse is housed in a fuse holder on the rear panel. The power supplies have over load and short circuit protection.

Specification

Switched Mode Power Supply Modules

Switched mode power supply PCB ('Open Frame') modules for installation in cases, or on chassis for powering computer equipment. Outputs are standardised at 5V and 12V in three versions, with total output powers of 28W, 50W and 65W respectively. The mains input can range from 90V to over 260V AC with no need for voltage selector switching. These supplies are extremely efficient and feature excellent line and load regulation. Forced air-cooling is recommended for confined spaces and the 65W version includes on-board connections for a 12V fan and a power-on LED.

The 28W version has a +5V DC output for logic and a +12V DC output for drive motors, etc. In addition, the 50W version has a -12V output, while the 65W version also includes a -5V output. All PCBs have four mounting holes for fixing to a chassis with pillars, etc. On the 50 and 65W types one of these links PCB earth to chassis ground.

All mains inputs are via 3-way PCB latch plugs (L, N and E, except 50W type which only has Live and Neutral pins). All outputs are via same style PCB plugs, and each voltage output has a corresponding 0V pin, but ALL 0V pins are commoned.

Please note that where a minimum load current is quoted, this MUST be drawn by the load otherwise the module may be damaged.

Specification 28W Version

Input voltage:	90 to 264V AC
Input frequency:	47 to 440Hz
Inrush current (cold):	20A @ 115V AC, 40A @ 230V AC
Operating temperature range:	0 to 50°C

DC/DC CONVERTERS

DC-DC Converters

Astec

A low-cost high-efficiency DC to DC converter for generating low-current additional power rails from a main +5V DC supply. Simply supply +5V input and the output will give -15V DC. Power output up to 1W is possible, and perfect regulation due to an in-built filter capacitor.

Specification

Input voltage: +5V DC \pm 20%
 Efficiency: 75%
 Temperature coefficient: 0.08%/°C
 Line regulation: 0.8%
 Load regulation: 1%
 Output ripple: 500mV peak-to-peak

All dimensions in mm

Pin Assignments

Pin 1: -V in (common)
 Pin 2: +V in
 Pin 3: -V out
 Pin 4: +V out (common)

For some circuits it may be necessary to connect a series inductor in the region of 1 μ H, between load and regulator. On the load side of the inductor a filter capacitor of 47 μ F can be used. Both these precautions help to improve ripple and immunity to noise spikes.

Order Code	Type	Price each
FE59P	DC/DC Conv -15V	£5.99

Miniature PCB Mounting

Newport Components

A range of miniature and sub-miniature, high-efficiency DC/DC converters, the outputs of which are isolated to 1000V DC relative to the input, made possible through the use of tiny toroidal ferrite transformers. With efficiencies of up to 80% and a physical bulk down to the scale of a logic IC, these devices are ideal for eliminating complex power busses on PCBs, or special (and inconvenient) provisions for extra odd supply lines from the main PSU, by providing them anywhere where the additional or isolated power rail is required locally. Furthermore any number of them can be used together in a system. All converters are 100% 'burned-in' and triple tested. They feature a high power to density ratio equivalent to 1.4W per cm², which is probably the highest currently available. Derating at temperatures above 70°C is required. The operating temperature range is -50°C to +125°C. In all cases a switched mode method is employed at a typical frequency of 100kHz, with a no-load power consumption of 100mW. This efficiency makes them compatible with battery powered applications. The packages are SIP (Single Inline Pin) with full epoxy encapsulation rated to UL94-VO within a flame retardant, polyurethane case. Any converter can be soldered into place just like any other IC or SIL array, and no heatsinks are necessary for the rated performance. Input voltages are 5V or 12V DC depending on type. Pin '1' is marked with a dot. Pins are spaced 0.1in. and are 3mm long on all types.

Single Output Types

The NME range operate from a 5V or 12V DC input, and provide an isolated single positive output of 5V, 12V or 15V DC, depending on type. The delivered power is 1W total and up to 200mA is available from a 5V output, 84mA from a 12V output, and 67mA from a 15V output. Each device is contained in a 4-pin inline package measuring only 11.5 x 6 x 10mm high.

The NMF0513S operates from 5V DC input and produces +12.75V DC out. The delivered power is 1W total, and up to 78mA is available from the output. The device is contained in a 6-pin (pin 3 is excluded, not used) inline package measuring only 19.5 x 6 x 10mm high, and includes the extra facility of having a control input (pin 5), which must be open circuit to allow the full 12V to be available at the output. If pin 5 is pulled low to 0V, the output is reduced to 1.2V. The facility is aimed at supporting CMOS 'flash memory' devices, providing the required stability for the programming voltage. The control pin can be driven by an open collector transistor switch.

Type	Input voltage	Output voltage	Output current mA	Load regulation
NME0505S	5V (7 max.)	5V	200	10%
NME0512S	5V (7 max.)	12V	84	10%
NME1205S	12V (15 max.)	5V	200	10%
NME1212S	12V (15 max.)	12V	84	10%
NME1215S	12V (15 max.)	15V	67	10%
NMF0513S	5V (7 max.)	12.75V	40	1.5% max.

Dual Output Types

Each of the NMA range provides dual $\pm 5V$, $\pm 12V$ or $\pm 15V$ DC supply rails with centre-tapped 0V from a single 5V or 12V DC input, depending on type, with a total power throughput of 750mW. Up to 100mA is available from each of the 5V outputs, 42mA from each of the 12V outputs and 25mA from each of 15V. The device is contained in a 6-pin inline package (pin 3 is excluded, not used) measuring only 19.5 x 7 x 10mm high.

These devices are contained in a 6-pin inline package (pin 3 is excluded, not used) measuring only 19.5 x 7 x 10mm high.

Type	Input voltage	Output voltage	Output current mA	Load regulation
NMA0505S	5V (7 max.)	$\pm 5V$	100	10%
NMA0512S	5V (7 max.)	$\pm 12V$	42	10%
NMA0515S	5V (7 max.)	$\pm 15V$	34	10%
NMA1205S	12V (15 max.)	$\pm 5V$	100	10%
NMA1212S	12V (15 max.)	$\pm 12V$	42	10%
NMA1215S	12V (15 max.)	$\pm 15V$	25	10%

BATTERY CLIPS

PP9 Type

Standard separate press-stud type clips for PP9 size batteries and battery packs. Diameter of stud: 15mm. Wire length: 180mm. Suitable for use with batteries PP1, 4, 7, 8, 9 etc.

Order Code	Type	Price each
HF27E	PP9 Clips	58p

PP3 Type

Dual miniature clip for PP3, 6 etc. Insulated overall with twin wire lead approximately 14cm long.

Order Code	Type	Price each
HF28F	PP3 Clip	14p

DUMMY BATTERY

A plastic spacer with straight through metal contact for use as a dummy in our AA size battery holders and nickel cadmium battery chargers. The dummy is exactly the same size as an AA(HP7) size battery.

Order Code	Type	Price each
YX92A	Dummy Battery	70p

BATTERY HOLDERS

PP3 Battery Holder

Vero

A clip-in battery holder moulded in grey polypropylene and designed to accept one PP3 9V battery. Will fit panels from 18swg to 10swg and a 58.5 x 24.5mm cut out is required. The cover, moulded as part of the holder, opens easily for battery changing and snaps shut securely. The holder comes complete with PP3 battery-clip and lead. Overall size 67.5 x 27.5 x 34mm deep. Depth behind front of panel: 29mm.

Order Code	Type	Price each
XX33L	PP3 Battery Holder	£1.85

PP3 Battery Box

A black plastic battery box that securely holds one PP3 battery. Three countersunk holes in the base allow the box to be screwed to a suitable surface. A suitable battery clip, HF28F is not supplied. Overall size: 49 x 29 x 20mm.

Order Code	Type	Price each
CK65V	PP3 Batt Box	83p

High Grade PCB Battery Holders for AAA, AA, C and D Cells

Bulgin

A range of high quality, PCB mounting battery holders for the standard range of round cells. All types have solder tags in addition to 1mm wide PCB pins, and are attached to the PCB with countersunk M3 screws. Each type holds one cell only; holders can be stacked for two or more cells.

Code	Cell Size	Type	Standard Battery Voltage	Ni-Cd Battery Voltage	Overall Size (mm)	Fixing Centres
MJ47B	AAA	AAA PCB Batt Box	1.5V	1.2V	52x14x24	28mm
MJ48C	AA	AA PCB Batt Box	1.5V	1.2V	60x18x32	33mm
MJ49D	C	C Batt Box	1.5V	1.2V	58x30x34	32mm
MJ50E	D	D Batt Box	1.5V	1.2V	71x38x36	35mm

Order Code	Type	Price each
MJ47B	AAA PCB Batt. Box	99p
MJ48C	AA PCB Batt Box	99p
MJ49D	C PCB Batt Box	£1.22
MJ50E	D PCB Batt Box	£1.35

High Grade PP3 Battery Compartments

Bulgin

Chassis mounting battery holders for PP3 batteries having a removable drawer in which the PP3 is placed; when the drawer is re-inserted an internal spring presses the top contacts of the battery against the contacts at the rear of the compartment. These connections are brought out to solder tags at the rear. The compartment body is designed to be mounted in a rectangular hole in a panel and fixed with two countersunk M3 screws, making battery changing very quick and simple. Single and dual PP3 versions are available, the dual version has separate drawers. All drawers are keyed so accidental reversal is impossible.

Code	Type	Overall Depth	Panel Cutout	Fixing Centres
MJ45Y	Single	65mm	34.5x24.5mm	43mm
MJ46A	Dual	65mm	67x24.5mm	75mm

Order Code	Type	Price each
MJ45Y	Single PP3 Ch Holder	£1.72
MJ46A	Dual PP3 Ch Holder	£3.55

PCB Mounting PP3 Battery Holder

Bulgin

A pcb mounting battery holder for PP3 9V batteries. Connections are via the pcb pins or solder tags either of which may be easily clipped off if not required. The moulding is clearly marked positive and negative. Moulded in nylon with nickel-silver contacts.

Viewed from below. Dimensions in mm.

2 x PCB pins. Holes in board Ø1.4

2 x holes. Fit M3 C'SK Hd screws x 10mm

Overall size 58.7 x 29.8 x 38.5mm high
Height above pcb: 33.8mm with solder tags.
26.8mm without solder tags.

Order Code	Type	Price each
JK65V	PP3 PCB Batt Holder	99p

Versatile Battery Holder

Vero

A battery holder in grey polypropylene that will accept two PP3 batteries or four AA cells in a '4AA Battery Box' (HF29G). The holder has a hinged cover (overall size 60.5mm wide x 48mm high) which opens easily for battery change and snaps closed securely. The holder will clip into any panels with a 1.5mm or 3mm gauge or it may be screw fixed (M3) to any thickness panel. A 45.25mm square cut-out is required in the panel. The battery holder (overall depth 70mm) is supplied with two PP3 battery snaps.

Order Code	Type	Price each
HY32K	Large Batt Hldr	£3.35

Holders for N, AAA, AA, C and D Cells

A range of battery holders to suit the standard range of small round cells. The holders are moulded in black polythene.

Cell size	Equivalent types
N	UM5, R1, MN9100, Lady, E90

WIRE

Wire-Wrapping Wire (1/0.25)

A solid-core single silver-plated copper conductor designed especially for wire-wrapping. Insulation resists shrinkage when soldering.

Single core:	1/0.25mm silver-plated 30AWG. (33SWG)
Sheath:	0.125mm Kynar
Overall diameter:	0.5mm
Nom. conductor area:	0.05mm ²
Max. working voltage:	300V RMS
Max. current:	0.4A
Colours:	Black, red and white

On 25m reels only.

Order Code	Type	Price each
BL77J	Wire-Wrap Black	£2.15
BL82D	Wire-Wrap Red	£2.15
BL83E	Wire-Wrap White	£2.15

Light-Duty Connection Wire (10/0.1)

A flexible wire, which is ideal for signal interconnections within apparatus where it is necessary to pack a large number of wires into a small space.

Stranded core, single:	10/0.1mm copper
Sheath:	0.3mm PVC
Overall diameter:	0.9mm
Nom. conductor area:	0.0785mm ²
Max. working voltage:	1000V RMS
Max. current:	0.5A
Colours available:	Black, Blue, Green, Orange, Red, White, Yellow.

On 25m reels only.

Order Code	Type	Price each
BL46A	L/C Wire Black	£1.36
BL47B	L/C Wire Blue	£1.36
BL49D	L/C Wire Green	£1.36
BL51F	L/C Wire Orange	£1.36
BL53H	L/C Wire Red	£1.36
BL55K	L/C Wire White	£1.36
BL56L	L/C Wire Yellow	£1.36

Solid Core Wire (1/0-6)

A wire having a single solid core ideal for plate-wiring (running wires across a chassis with all wires straight or at right-angles to one another) because wire stays exactly in formed shape without ties.

Single core:	1/0-6mm copper 22AWG (23SWG)
Sheath:	0.3mm PVC – conforms to DEF61-12 (part 6) Type 2
Overall diameter:	1-2mm
Nom. conductor area:	0-28mm ²
Max. working voltage:	1000V RMS
Colours:	Black, Blue, Green, Orange, Red, White, Yellow.

In 10m packs and on 100m drums.

Order Code	Type	Price each

Hook-Up Wire (7/0-2)

A flexible wire for general interconnections within apparatus.

Stranded core, single:	7/0-2mm copper
Sheath:	0.3mm PVC – conforms to DEF61-12 (part 6) Type 2
Overall diameter:	1-2mm
Nom. conductor area:	0-22mm ²
Max. working voltage:	1000V RMS
Max. current:	1-4A
Colours:	Black, Blue, Brown, Green, Grey, Orange, Pink, Red, Violet, White, Yellow.

In 10m packs, 100m reels and 1000m drums.

Heat Resisting PVC Equipment Wire

A range of equipment wire that is suitable for operating temperatures beyond the normal PVC range of -5°C to +70°C. The special grade of high temperature PVC, used for the insulation, meets the demands of operating temperatures up to 105°C and is resistant to a wide range of oils, impregnating varnishes and chemical solutions. Ideal for connections on motor-windings, transformers and other components that undergo encapsulation, or other finishing and drying operations. The insulation is to BS7646 Type 4 and the wire is suitable for continuous operation at conductor temperatures not exceeding 105°C for periods up to five years, without embrittlement. The insulation material will withstand temperatures up to 150°C for periods up to 6 hours after immersion in a variety of finishing and encapsulation varnishes. The conductor is tinned annealed high conductivity copper wire to BS 6360. Available in two sizes and two colours, red and black, on 25m reels only.

Conductor	Radial thickness mm (nom.)	Overall diameter mm (nom.)	Current Rating Amps @20°C

High Current Wire (50/0.25)

A flexible wire for high current applications.

Stranded core, single: 50/0.25mm copper
 Sheath: 0.8mm PVC – Conforms to BS6231 (Table 6) Type B

Overall diameter: 3.81mm
 Nom. conductor area: 2.5mm²
 Max. working voltage: 600V
 Max. current: 30A
 Colours: Black, Green, Red
 Sold per metre (max. length in one piece 50m) and on 50m reels.

Order Code	Type	Price each
XR57M	HC Wire Black	35p
PA94C A3	50m HC Wire Black	£11.99
XR58N	HC Wire Green	35p
PA95D A3	50m HC Wire Green	£11.99
XR59P	HC Wire Red	35p
PA96E A3	50m HC Wire Red	£11.99

Miniature Extra-Flexible Wire

A smaller diameter flexible wire, for use with miniature probes or as test leads.

Stranded core: 30/0.1mm copper
 Sheath: 1mm very flexible PVC
 Overall diameter: 2.0mm
 Max. working voltage: 650V DC, 500V AC
 Max. current: 1.5A
 Colours available: Black, Red.

Sold per metre (max. length in one piece 25m) and on 25m reels.

Order Code	Type	Price each
XR68Y	Min Extra Flex Black	16p
PB01B A1	25m Min Ext Flex Blk	£2.75
XR69A	Min Extra Flex Red	16p
PB02C A1	25m Min Ext Flex Red	£2.75

Extra-Flexible Wire

A very flexible wire ideal for test leads, and as inter-connection wires which are frequently being moved.

Stranded core, single: 55/0.1mm copper
 Sheath: 1mm very flexible PVC
 Overall diameter: 2.8mm
 Nom. conductor area: 0.43mm²
 Max. working voltage: 650V DC, 500V AC
 Max current: 2.5A
 Colours: Black, Blue, Green, Red

Sold per metre (max. length in one piece 25m) and on 25m reels.

Order Code	Type	Price each
XR40T	Extra Flex Black	16p
PA97F A1	25m Extra Flex Black	£2.99

Hook-Up Wire (24/0.2)

A flexible wire for general purpose extra heavy duty interconnections within apparatus.

Stranded core, single: 24/0.2mm copper
 Sheath: 0.45mm PVC conforms to DEF61-12 (part 6) Type 2
 Overall diameter: 2.05mm
 Maximum working voltage: 1000V RMS
 Maximum current: 6A
 Colours: Black, Blue, Brown, Green, Orange, Red, White, Yellow.

Sold per 10 metre pack (max. length in one piece 100m) and on 100m reels.

TOP QUALITY PRODUCTS AT SUPER LOW PRICES!

E.H.T. Wire

A heavily insulated wire for very high voltage use. Ideal for use with our laser tube.

Stranded core, single: 16/0.2mm tinned copper
Sheath: 1.5mm flame-retardant white polythene sheathed with 0.55mm red PVC

Overall diameter: 4.5mm
Nom. conductor area: 0.5mm²
Max. working voltage: 25kV
Sold per metre (max. length in one piece 100m)

Order Code	Type	Price each
XR22Y	EHT Wire	75p

Enamelled Copper Wire

A 50g roll of enamelled copper wire. Available in the following diameter sizes mm (approx. swg): 2.0 (14), 1.6 (16), 1.25 (18), 0.9 (20), 0.71 (22), 0.56 (24), 0.45 (26), 0.375 (28), 0.315 (30), 0.28 (32), 0.236 (34), 0.19 (36), 0.15 (38), 0.125 (40), 0.1 (42), and 0.08 (44). All sizes up to 0.125mm (40swg) also available on 250g reels.

Approx. length of wire per reel.

CABLE

Zip Connecting Cable

A flexible twin cable having a "figure 8" shape. Ideal for loudspeaker connections etc.

Stranded core, twin: 7/0.2mm copper
Sheath: White PVC with one side ribbed or traced for identification of polarity

Overall size: 4.0 x 2.0mm
Nom. conductor area: 0.22mm²
Max. working voltage: 60V RMS
Max. current: 1A

Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XR39N	Zip Wire	15p
PA75S	100m Zip Wire	£7.99

Loudspeaker Cable

Flexible figure-8 section twin cable for loudspeaker connections. Current capacity, 2.5A. Stranded cores, 13/0.2mm. Sheathed in white PVC, overall size 4 x 2mm. One side is marked with a black stripe. Sold per metre (max. length in one piece, 100m) and on 100m reels.

Order Code	Type	Price each
XS47B	Loudspeaker Cable	22p
PB60Q	100m Loudspeaker Reel	£10.99

Heavy Duty Loudspeaker Cable

A flexible twin cable having a "figure 8" shape. The cable will carry up to 15A at 60V rms (170V peak) suitable for amplifiers up to 500W output.

Stranded core, twin: 42/0.2mm copper
Sheath: White PVC with one side marked with black line for identification of polarity

Overall size: 6 x 3mm
Nom. conductor area: 1.32mm²
Max. working voltage: 60V RMS
Max. current: 15A

Sold per metre (max length in one piece 100m) and on 100m reels.

Order Code	Type	Price each

Hi-Fi Loudspeaker Cable

A flexible twin cable having a "figure 8" shape. The cable will carry up to 18A at 100V rms (280V peak). Recommended by Hi-Fi experts.

Stranded core, twin: 79/0.2mm copper
Sheath: White PVC with one side marked with a black stripe for polarity identification.

Overall size: 6 x 3mm
Nom. conductor area: 2.48mm²
Max. working voltage: 100V RMS
Max. current: 18A

Sold per metre (max length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XR72P	HiFi Loudspkr Cable	55p
PA09K	100m HiFi Spkr Cable	£38.99

High Quality OFC Loudspeaker Connection Cable

An exceptionally high quality speaker connection wire, these figure-8 section speaker leads are the product of constant innovation and improvement. Each cable contains hundreds of extremely thin, single strands to improve electron flow at high frequencies. This is because, in a strand of wire, conduction tends to concentrate more at the surface at higher frequencies, so more strands provide a greater total surface area. In addition, each cable has a large than normal overall diameter for absolute minimum impedance, thus ensuring good response at bass frequencies. The strands are made from 100% Oxygen Free Copper (OFC), a process which completely removes any trace of oxygen from the wire surface during manufacture and so preventing subsequent oxidation of same, which will interfere with the efficiency of the surface electron flow as described above. Strands are then woven together, producing a cable with a rope-like appearance, creating a higher degree of contact between conductors for a 'fuller' signal. Types 'S10' and 'S12' have a pair of these effectively sealed in an extra-flexible, transparent, figure-8 sheathing which has one side marked with '+' symbols for polarity identification.

Specification Type S12

Strands: 413 strands x 0.1mm dia.
Nominal conductor area: 3.24mm²
Sheath outer diameter: 4.4mm
Total sheath width: 9.2mm
Max. working voltage: 300V peak
Working temperature range: -10°C to 105°C

Type S10

Strands: 1,050 strands x 0.08mm dia.
Nominal Conductor area: 5.28mm²
Sheath outer diameter: 5.5mm
Total sheath width: 11.5mm
Max. working voltage: 300V peak
Working temperature range: -10°C to 105°C
Sold per metre. Maximum length in one piece, 50m.
Also available on 50m reels.

Order Code	Type	Price each
XS37S	Ox Free S12	£2.20
PB61R	F10 50m Ox Free S12	£79.99
XS36P	Ox Free S10	£3.49
PB58N	H14 50m Ox Free S10	£117.99

Silver-Plated OFC Speaker Cable

Flat 2-core loudspeaker cable featuring silver-plated, OFC (Oxygen Free Copper) conductors. Silver plating is to a thickness of 100µ (microns, or 40µin.). Two different gauges of cable are available as medium capacity (0.70mm² total cross section), and high capacity (1.45mm²), and in each case, each core is organised as three bundles of twisted strands, the three bundles are again twisted together and insulated in a 3-channel sleeve. For the medium capacity cable, the sleeve forms a figure of eight cross section with its opposite partner, and can be easily separated.

The high capacity type encloses the inner sleeve with a clear flexible outer sheath. The outer sheath is joined to its opposite partner by a narrow flat strip which has reduced thickness at its join with each sheath, making it easy to 'unzip', or pull apart, the individual wires for connection to speaker terminals. (The centre strip can then be trimmed back with wire cutters.) The centre strip has a red stripe on one side for polarity identification purposes. Note: Silver Solder GW45Y must be used to solder silver wires.

Each type sold by the metre.

CC21X

CC20W

Order Code	Type	Price each
CC21X	Medium Speaker Cable	£4.55
CC20W	HC Speaker Cable	£7.99

Pure Silver Loudspeaker Cable

Flat 2-core loudspeaker cable having pre-extruded, pure silver strands. Each core is organised as three bundles of 7/0.28mm twisted strands of pure silver wire, which are again twisted together and insulated in a 3-channel, white polyethylene inner sleeve, with a clear flexible outer sheath. The outer sheath is joined to its opposite partner by a narrow flat strip which has reduced thickness at its join with each sheath, making it easy to 'unzip', or pull apart the individual wires for connection to speaker terminals. (The centre strip can then be trimmed back with wire cutters.)

The cable is 8mm thick and 19mm wide overall. Note that Silver Solder GW45Y must be used to solder silver wires.
Sold by the 1/4 metre.

Order Code	Type	Price each
XS55K	1/4m Silver Spkr Cbl	£15.00

Flat High Quality Speaker Cable

A flat 4-core high quality speaker cable made from high purity OFC bare copper conductor, stranded tightly into a rectangular cross section for perfect sound transmission. Each core is made from 620 strands of 0.07mm copper and covered in a very high quality anti-oxidation clear PVC. The cores can easily be separated and the outer cores are colour coded for identification of positive, and left and right. Maximum working voltage 300V. Sold by the metre (max length in one piece 50m) and on 50m reels.

Order Code	Type	Price each
BZ94C	4W Flat Speaker	£3.70
CK98G	H16 4W Flat Speaker 50m	£147.99

Car Battery Power Cable

High quality OFC 4AWG copper cable made from 1050 strands of 0.16mm diameter copper. Intended for use in cars, with high power in-car entertainment systems, especially CD players (see entertainment section), to ensure the very best sound quality output. A range of gold-plated accessories i.e. battery clamp, connector block etc., will also be found in the entertainment section. The cable is intended to be used with the distribution block and fuse holders, it is NOT intended to supply starter motors or other car electrical accessories. Available in red and black and sold by the 1/2m and on 50m reels.

Order Code	Type	Price each
BZ91Y	4AWG Cable Red	£1.75
CK94C	H27 4AWG Cable Red 50m	£129.99
CK17T	4AWG Cable Black	£1.75
CK95D	H27 4AWG Cable Black 50m	£129.99

Power Cable for In-Car Entertainment Systems

High quality 8AWG flexible copper cable made from 700 strands of 0.12mm diameter copper, intended for connecting power to high quality in-car entertainment systems. A gold-plated 4 into 1 cable connector, fuse blocks and fuses are also available (see entertainment section). This cable is for use with car audio equipment and is NOT intended for connecting to other car electrical accessories. Available in red and black and sold by the metre (max length in one piece 50m) and on 50m reels.

Order Code	Type	Price each

Signal/Burglar Alarm Cable

General purpose 4-core, 6-core and 8-core signal cables ideal for use with security alarms and other applications where low voltages and low currents are being used. The cable contains flexible wires each having seven strands of 0.2mm tinned annealed copper insulated wire.

Specification

Max. working voltage: 60V RMS
 Max. current per core: 1A
 Max. conductor resistance: 92.4Ω/km @ 20°C
 Max. operating temperature: 70°C
 Conductors: 7/0.2mm strands of annealed copper wire conforming to BS6360
 Insulation: PVC to radial thickness of 0.2mm nominal conforming to BS6746
 Sheath: PVC nominal wall thickness 0.5mm

Nominal overall diameter
 4-core: 3.5mm
 6-core: 4.1mm
 8-core: 4.5mm

Wire insulation colours
 4-core: Red, blue, yellow, black
 6-core: Red, blue, yellow, black, white, green
 8-core: Red, blue, yellow, black, white, green, orange, brown

Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each

CW70M	8-Wire Burglar Cable	35p
PB80B D7	100m 8-Wire Burglar	£23.99

Telephone Cable

A high quality cable complying with British Telecom specification CW 1308 for use in wiring telephones in customers' premises. It is also ideal for use in other low voltage, low current applications. The cable contains four solid tinned annealed copper conductors each 0.5mm diameter insulated with PVC. Insulation colours are blue-white, white-blue, orange-white and white-orange.

Also available in 6-way, with extra green-white and white-green conductors.

Overall insulation is in white PVC. 6-way is also available with black PVC insulation.

Nom. conductor area: 0.2mm²
 Max. working voltage: 80V
 Max. current per core: 0.25A
 Overall diameter: 4-wire 3.6mm
 6-wire 4.5mm

Sold per metre (max. length in one piece 100m) and on 100m reels.

Note: 'British Telecommunications requires of any person who connects subscribers' apparatus directly or indirectly to any telecommunication system, that it runs to comply with the terms and conditions relating to the attachment of subscribers' apparatus under which service is provided by B.T.'

Flat IPC Telephone Line Cord

Four-way flat D section telephone line cord specifically designed for use with the latest style 4 and 6-way IPC (Insulation Piercing Connector) jack plugs, see Telephones Section.

The stranded wires are 7 x 0.15mm, and colour coded Red, Blue, Green, White, Black and Orange, and are sheathed overall in a light grey PVC sheath. For details of how to attach this cable to the IPC BT line jack plugs see telephone accessories in the Connectors Section.

Sold per metre (max. length in one piece 100m).

Order Code	Type	Price each
XR86T	4-Way Flat BT Cable	32p
XS03D	6 Way Flat Phone Crd	38p

Flat IPC Telephone Cord for FCC68 Style Plugs

Three types of multi-strand telephone cord with an extra flat cross section for use with USA style FCC68 telephone connectors. Available colour coded Yellow, Green, Red, Black (4-way), Yellow, Green, Red, Black, Blue, White (6-way).

The third type has a total of eight ways and can have many other applications where a multi-way cable is needed. It is colour coded Grey, Orange, Black, Red, Green, Yellow, Blue and Brown. All three types are sheathed in light grey PVC.

Sold per metre (max. length in one piece 100m), and on 100m reels.

Seven-Core Cable

A seven-core cable for use with Trailer Connectors. Stranded core, six 14/0.25mm and one 14/0.3mm copper conductors.

Sheath: Brown, Blue, Yellow, Green, Red, Black (14/0.25mm) and White (14/0.3mm) PVC in an overall black PVC sheath.

Overall dia.: 9mm
 Nom. conductor area: White 1mm², Other 0.7mm²
 Max. current: White 8.75A, Other 5.5A
 Sold per metre (max. length in one piece 50m) and also on 50m reels.

Note: Only for use up to 50 Volts DC

Ribbon Cables

A flat ribbon-type cable which facilitates wiring in confined spaces. Stranded core 7 x 0.2mm tinned copper conductors sheathed in PVC, colour coded in like manner to the standard resistor colour code, and bonded together to form a flat 'ribbon'.

Nom. conductor area: 0.25mm²
 Max. working voltage: 900V DC,
 Max. current per core: 1.4A
 Core colours: 1 Brown, 2 Red, 3 Orange, 4 Yellow, 5 Green, 6 Blue, 7 Violet, 8 Grey, 9 White, 10 Black, then repeated.

Three types available:
 10-way (overall size 13 x 1.3mm)
 20-way (overall size 26 x 1.3mm)
 30-way (overall size 39 x 1.3mm)

Sold per metre (max. length in one piece 30m) and on 30m reels.

Order Code	Type	Price each

Flat Cable Cutter Xcelite

A handy cutting tool for flat cables, that gives an even, undistorted cut across all conductors (up to 64 conductors). A built-in guide guarantees a square cut, reffered to the edge of the cable. The cutter has a one-piece solid blade for increased durability and accuracy. The cutter is capable of cutting under-carpet electrical cable (up to 4 conductors).

Order Code	Type	Price each
DF91Y	Flat Cable Cutter	£70.49

4-Pair LAN Data Cable (100Mbps/s)

This 4-pair cable is intended for use on high-speed LAN applications up to 100Mbps/s. The cable complies with the electrical characteristics of EIA/TIA TSB 36 Category 5, Nov. 1991. Each solid 0.51mm conductor has a polyolefin insulation, with all the pairs housed in a PVC jacket (4.8mm OD). There is no screening.

Colour Coded IDC Cable

Flat IDC Cable, colour coded as our Ribbon Cable. Available in 16-way, 20-way, 26-way, 34-way, 40-way and 50-way. Each wire has a coloured sheath and is spaced on a 0.05 inch pitch. Stranded cores are 7 x 0.127mm. The cable is manufactured to UL2697. Sold per 30cm (approx. 12in.) Max. length in one piece 30m. Also available on 30m reels.

RS232 Multi-Pair Network Cable

A range of flexible (stranded), multi-pair cables that are suitable for the interconnection of peripheral equipment and host computers, where local area networks are not in use e.g., low-speed data transfer.

Electrical Properties at 20°C	
Pair conductance:	98pF/m @ 1kHz
Capacitance @ 1kHz:	164pF/m (between 1 cond. and other cond. connected to screen)
Attenuation 100kHz:	1.3dB/100m
1MHz:	7.3dB/100m

Mechanical Properties	
Conductors stranded:	0.22mm ² TC
Insulation type:	SR-PVC
Overall screening:	Foil
Drainwire stranded:	0.22mm ² TC
Jacket type:	PVC
Temperature range:	-20°C to +80°C
Minimum bending radius:	8 x ODmm

Thin Ethernet

A thin Ethernet cable that conforms to IEEE 802.3, and is equivalent to Belden 9907.

® Ethernet is a registered trade mark of Xerox Corp.

Specification

Conductor:	Copper stranded tinned AWG 21/19
Core insulation:	Foamed polyethylene
Taping:	Polyesterfoil on both sides laminated with silver
Braiding:	36AWG tinned copper wires, optical cover 93%
Impedance:	50Ω
Attenuation (maximum):	3.3dB/100m @ 5MHz 4.6dB/100m @ 10MHz
Capacity:	81pF/m @ 1kHz
Resistance:	36Ω/km @ 20°C maximum
Operating temperature:	-10°C to +70°C

Sold on 100m reels.

Order Code	Type	Price each
AP16S E7	Thin Ethernet	£41.99

MAINS CABLES

2-Core 3A Mains Cable

A 2-core mains cable with double insulation suitable for low power use, lighting etc. Stranded core, two 16/0.2mm copper conductors

Sheath:	Brown and blue PVC in an oval PVC overall sheath — conforms to BS6500 1990 Table 15.
Overall size:	5.4 x 3.4mm
Nom. conductor area:	0.5mm ²
Max. current:	3A
Colours:	Black or White.

Sold per metre (max. length in one piece 100m).

Order Code	Type	Price each
XR47B	Twn Mains DS Black	20p
PA10L D6	100m Twn Mains Black	£14.99
XR00A	Twn Mains DS White	20p
PA11M D6	100m Twn Mains White	£14.99

2-Core 6A Mains Cable

A 2-core mains cable with double insulation suitable for use with medium power double insulated appliances. Stranded core, two 24/0.2mm copper conductors

Sheath:	Brown and blue PVC in a round PVC overall sheath — conforms to BS6500 1990 Table 16.
Overall diameter:	6.5mm
Nom. conductor area:	0.75mm ²
Max. current:	6A
Colours:	Orange, White or Black

Sold per metre (max length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR61R	Twin 6A Mains Orange	28p
PB06G G12	100m Twin 6A Main Or	£19.99
XR62S	Twin 6A Mains White	28p

CW69A	Twin 6A Mains Black	28p
PB79L G13	100m Twin 6A Main Bk	£19.99

3-Core 3A Mains Cable

A three core mains cable ideal for equipment having power ratings up to 750W. Stranded core, three 16/0.2mm copper conductors

PORTABLE BATTERY POWERED SOLDERING IRON

A novel soldering iron which is powered by either 4 alkaline C cells or two Ni-Cd C cells. The combined low voltage element/bit retracts when not in use which serves both as a safety feature and also protects the element/bit from damage. A conveniently placed push-to-heat button operates the iron, working temperature is reached in approximately 10 seconds. A charging socket is provided so that Ni-Cd cells may be charged in situ from an AC or DC adaptor (suitable type XX09K). Charging time is 12 to 16 hours. Important: Under no circumstances must any attempt be made to recharge non-rechargeable cells. Supplied with one element/bit and solder. Batteries not included. Spare element/bits are available separately.

GREAT VALUE!
£4.99
YZ42V

Sheath:	Brown, Blue and Grn/Yellow PVC in overall PVC sheath — conforms to BS6500 1990 Table 15.

3-Core 6A Mains Cable

A three core mains cable with a thick outer sheath available also in orange for added safety when used as a trailing lead e.g. on power tools. Stranded core, three 24/0.2mm copper conductors.

Sheath: Brown, Blue and Green/Yellow PVC in a substantial overall PVC sheath – Conforms to BS6500 1990 Table 16.

Overall dia.: 6.9mm
 Nom. conductor area: 0.75mm²
 Max. current: 6A
 Colours: Black, White or Orange
 Sold per metre (max. length one piece 100m).
 Also available on 100m reels.

Order Code	Type	Price each
XR03D	C6A Mains Black	39p
PB10L	H14 100m C6A Mains Black	£25.99

Cotton Covered Mains Cable

A three core heat resistant mains cable for use on irons, toasters, small electric fires (up to 1.4kW) etc. Stranded core, three 24/0.2mm copper conductors.

Sheath: Brown, Blue and Green/Yellow rubber in an overall sheath covered by black/white cellulose braid conforms to BS6500.

Overall diameter: 6.2mm
 Nom. conductor area: 0.75mm²
 Max. current: 6A

Sold per metre (max. length in one piece 50m).

Order Code	Type	Price each
XR24B	Cotton Mains	£1.24

Coiled Mains Cables

Three core extendible mains cable for use with tools, instruments etc. Two types are available: 1A type and 6A type.

1A Type

Stranded core: Three 17/0.122mm copper conductors

Sheath: Brown, Blue and Green/Yellow PVC in a coiled black PVC sheath.

Max. current: 1A
 Extended length: 1.8m max.

6A Type

Stranded core: Three 42/0.2mm copper conductors

Sheath: Brown, Blue and Green/Yellow PVC in a coiled black PVC sheath.

Max. current: 6A
 Extended length: 2.9m max.

Order Code	Type	Price each
BL71N	Stretchflex 1A	£3.49
BL72P	Stretchflex 6A	£5.99

4-Core 6A Mains Cable

A four core flexible mains cable for use in mains controlled applications. Stranded core, four 20/0.21mm copper conductors.

Sheath: Brown, Blue, Black and Green/Yellow rubber in a hard-wearing overall black rubber sheath to BS6500 1990 Table 6.

Overall diameter: 8.35mm
 Nom. conductor area: 0.75mm²
 Max. current: 6A

Sold per metre (max. length in one piece 50m).

Order Code	Type	Price each
XR48C	4-Core Mains	£1.10

Flex and Wire Stripper

Toggle Tools

A unique, compact, self-adjusting cable stripper capable of preparing both the inner and outer insulations of round cables, up to 8.5mm diameter.

Order Code	Type	Price each
CW33L	Flex & Wire Stripper	£6.75

THE BEST OF SERVICE

HOUSE WIRING CABLES

All cables conform to BS6004: 1984 Tables 4 and 5.

1mm² Twin and Earth

A twin core and earth flat domestic wiring cable for use on lighting circuits. Three 1/1.13mm copper conductors. 300/500V.

Sheath: Red and Black PVC plus unsheathed earth-continuity conductor, in an overall white PVC sheath.

Overall size: 7.5 x 4mm
 Nom. conductor area: 1mm²
 Max current surface: 15A
 Max current enclosed: 11A

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR49D	1.0mm TE Cable	28p
PA82D	H13 100m TE Cable 1mm	£18.99

1mm² Twin Red and Earth

A twin core and earth flat domestic wiring cable for use on lighting circuits. Three 1/1.13mm copper conductors. Rated at 300/500V.

Sheath: Two red PVC plus unsheathed earth-continuity conductor, in an overall grey PVC sheath.

Overall size: 7.5 x 4mm
 Nom. conductor area: 1mm²
 Max current surface: 15A
 Max current enclosed: 11A

Sold per metre (max. length in one piece 100m).
 Also available on 100m reels.

Order Code	Type	Price each
CK91Y	Twin Red & E	30p
BU67X	D13 Twin Red & E x 100m	£19.99

1.5mm² Twin and Earth

A twin core and earth flat domestic wiring cable for use on separately fused spurs from ring main circuits. Two 1/1.38mm copper conductors, 300/500V and earth.

Sheath: Red and Black PVC plus unsheathed earth-continuity conductor, in an overall white PVC sheath.

Overall size: 8.5 x 4.75mm
 Nom. conductor area: 1.5mm²
 Max. current surface: 20A
 Max. current enclosed: 14.5A

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR50E	1.5mm TE Cable	38p
PA83E H16	100m TE Cable 1.5mm	£24.49

2.5mm² Twin and Earth

A twin core and earth flat domestic wiring cable for use on ring mains and unfused spurs. Two 1/1.78mm copper conductors and earth 300/500V.

Sheath: Red and Black PVC plus unsheathed earth-continuity conductor, in an overall white PVC sheath.

Overall size: 9.5 x 5.25mm
 Nom. conductor area: 2.5mm²
 Max. current surface: 27A
 Max. current enclosed: 19.5A

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR51F	2.5mm TE Cable	52p
PA84F H24	100m TE Cable 2.5mm	£33.99

6mm² Twin and Earth

A twin core and earth flat wiring cable for use on cooker points. Two 7/1.04mm copper conductors and earth 300/500V.

Sheath: Red and Black PVC plus unsheathed earth-continuity conductor, in an overall white PVC sheath.

Overall size: 14 x 7.5mm
 Nom. conductor area: 6mm²
 Max. current surface: 47A
 Max. current enclosed: 34A

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR52G	6mm TE Cable	£1.50
PA85G H46	100m TE Cable 6mm	£104.99

1mm² Three Core and Earth

A three-core and earth flat domestic wiring cable for use on lighting circuits requiring double switching. Three 1/1.13mm copper conductors and earth 300/500V.

Sheath: Blue, Red and Yellow PVC plus unsheathed earth-continuity conductor in an overall white PVC sheath.

Overall size: 10.5 x 4.6mm
 Nom. conductor area: 1mm²
 Max. current surface: 14A
 Max. current enclosed: 10.5A

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR53H	1mm Trpl & ECC Cbl	55p
PA86T H19	100m Tpl & E Cbl 1mm	£36.99

Meter Cable

A double-insulated plain annealed copper conductor with a PVC insulation and PVC sheath, for connecting the meter to the consumer unit. Two sizes available 16mm² and 25mm². Rated at 300/500V.

Specification	16mm ²	25mm ²
Stranding:	7/1.7	7/2.14
Diameter over conductor:	5.10mm	6.42mm
Nominal overall diameter:	9.1mm	11.2mm
Max. current surface:	87A	114A
Max. current enclosed:	61A	80A

Available in red and black. Sold per metre (max length in one piece is 50m).

Order Code	Type	Price each
CK93B	Meter Tail 16mm Red	£2.25
KC88V	Meter Tail 16mm Blk	£2.25
KC87U	Meter Tail 25mm Red	£3.49
CK92A	Meter Tail 25mm Blk	£3.49

Earth Sleeving

A green/yellow PVC insulating sleeve for sleeving the earth continuity conductor on all the above House Wiring Cables (except 6mm²). Sleeve has an inside diameter of 2.24mm and an outside diameter of 3.3mm. Supplied per metre.

Order Code	Type	Price each
XS12N	Earth Sleeve	15p

Earth Bonding Wire

A rigid stranded wire for earth bonding in domestic applications. Available in 10mm² and 16mm². Conforms to BS6004.

Specification	10mm ²	16mm ²
Stranding:	7/1.35mm	7/1.7mm
Sheath:	1.0mm PVC	
Overall diameter:	6.1mm	7.1mm
Nominal conductor area:	10mm ²	16mm ²
Voltage rating:	450/750V	
Maximum current	surface:	65A
	enclosed:	43A
		85A
		57A

Colour: Green/Yellow
 Sold per metre (max. length in one piece 50m).

Order Code	Type	Price each
XS13P	Earthing Wire 10	£1.16
CW71N	Earthing Wire 16	£1.75

Insulated Steel Wire Armoured Cable

A PVC insulated steel wire armoured cable that is manufactured to BS6346 and is available with either two or three, single stranded, 1.5mm, cores. The steel wire may be used for earthing purposes. Outer sheath is black. A cable termination gland is available for use with this cable.

Specification	2-core	3-core
Voltage rating:	600V/1000V	
Maximum sustained voltage:	1100V AC	
Maximum current (clip fixing):	18A	21A
Core diameter:	1.5mm	
Insulation thickness:	0.6mm	
Bedding thickness:	0.8mm	
Nominal wire armour diameter:	0.9mm	
Oversheath thickness:	1.3mm	1.4mm
Approximate overall diameter:	11.7mm	12.3mm
Core colours:	Red, black	Red, yellow, blue

Sold by the metre (max. length in one piece 100m), and on 100m reels.

Order Code	Type	Price each
DM09K	2C Armour Cable Metr	£1.25
PB76H H20	100m 2C Armour Cable	£89.99
CW67X	3C Armour Cable Metr	£1.49

Cable Glands for Armoured Cable

A kit of brass cable glands sufficient to terminate both ends of an armoured cable. The quality brass glands have a body thread of M20 with a thread length of 10mm and internal bore diameter of 11.8mm. They are manufactured to the requirements of BS6121 - Part 1. The kit comprises two brass glands, two galvanised locknuts, two brass earth tags and two shrouds. Suitable for use with our armoured cables DM09K and CW67X.

Order Code	Type	Price each
AP00A	Armoured Cable Gland	£3.95

Water Proof Plastic Conduit and End Fittings

A flexible, ribbed plastic conduit for carrying cable looms and protecting them against physical damage and ingress of water or other fluids. Ideal for outdoor wiring, the conduit can be routed over walls, in walls, beneath floors or below ground. Two sizes are available with inner bores of 13.8 or 17.2mm. Matching plastic end fittings for terminating conduit at junction boxes, etc. are also available; each comprises a main inner portion with threaded boss and securing ring for mounting in a panel hole, while the conduit is pressed into the other end. It is retained in position by sprung, hooked outer jaws which locate over the ribs and are clamped by a threaded outer ring. The fitting can be installed in panels up to 2.5mm thick. Conduit is sold per metre.

Bore	Minimum recommended radius bend	Panel hole clearance for end fitting
13.8mm	25mm	17.2mm
17.2mm	35mm	20.6mm

Order Code	Type	Price each
CC26D	Plastic Conduit 13.8	£1.05
CC27E	Plastic Conduit 17.2	£1.35
CC28F	End Fitting 13.8	£1.70
CC29G	End Fitting 17.2	£1.90

Minimum shrink temperature: 120°C
 Dielectric strength: 8kV/mm minimum
 Volume resistivity: 10¹³Ω/cm minimum
 Low temperature flexibility: Does not crack at -50°C
 High temperature resistance: Does not crack or soften
 Water absorption: 2% maximum
 The caps are resistant to fungus formation, do not contain elements that are corrosive to copper and are self-extinguishing.

Order Code	Type	Price each
MK00A	End Cap 10/4	50p
MK01B	End Cap 20/8	60p
MK02C	End Cap 40/14	£1.80

SCREENED CABLES Miniature Single-Core Lapped Screen

A single screened cable ideal for general audio connections especially in equipment where a large number of cables have to be packed into a small area. Stranded core, 7/0.1mm copper conductor with PVC insulation, lap screened and sheathed overall in grey PVC.

Overall diameter: 2mm
 Nom. conductor area: 0.055m²
 Capacitance (core to screen): 320pF/m
 Sold per metre (max length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR15R	Min Screened	22p
PB13P	100m Min Screened	£14.99

Single-Core Lapped Screen

A single screened cable ideal for general audio connections. Stranded core, 7/0.12mm copper conductor with PVC insulation, lap screened and sheathed overall in PVC.

Overall diameter: 3.0mm
 Nom. conductor area: 0.22mm²
 Capacitance (core to screen): 320pF/m

Available sheathed overall in Black, Grey or White. Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XR12N	Cable Single Black	20p
PA79L	100m Cable Singl Blk	£12.99
XR13P	Cable Single Grey	20p
PA80B	100m Cable Singl Gry	£12.99
XR14Q	Cable Single White	20p
PA81C	100m Cable Singl Wht	£12.99

Cable Blanking Caps

Insulating end caps for covering the exposed ends of multi-way cables and wiring looms which have been cut or where installation of equipment is not yet complete, but in the meantime power needs to be restored. The cap is a plastic tube closed at one end, and having a shallow constriction near the open end to help grip wires or sleeving. On fitting the cap is shrunk onto the cables by heating it to 120°C, and has the capacity to shrink down to less than half its original diameter. Three sizes are available as follows:

Code	Expanded diameter (as supplied)	Fully shrunken diameter	For cable diameter
MK00A	10mm	4mm	4 to 8mm
MK01B	20mm	7.5mm	8 to 16mm
MK02C	40mm	15mm	14 to 32mm

Specification
 Tensile strength: 11MPa minimum
 Ultimate elongation: 300% minimum
 Continuous operating temperature: -55°C to +100°C

FOR TOP QUALITY & VALUE!

Single Screened Cable with Semiconducting Sheath and Double Layer Insulation

A single screened cable which has 20 x 0.12mm copper conductors with PVC insulation, a semiconducting layer, lapped screen and two layers of PVC outer insulation (outer black).

Overall diameter: 6mm
Nom. conductor area: 0.23mm²
Capacitance

(core to screen): 135pF/m

Sold per metre (Max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XS24B	Single Scrn Dble Lyr	75p
PB50E F9	Sgl Scr Dbl Lyr 100m	£49.99

Single-Core Braided Screen

A single screened cable ideal for connections to microphones. Stranded core, 16/0.2mm copper conductor with PVC insulation, braided screen and sheathed overall in black PVC.

Overall dia: 3.75mm
Nom. conductor area: 0.5mm²
Capacitance

(core to screen): 360pF/m

Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XR16S	Single Mic Cable	36p
PA16S C5	100m Singl Mic Cable	£24.99

Silver-Plated Screened Cable

High quality screened cable having a single 0.8mm centre conductor, silver-plated to a thickness of 100µ (microns, or 40µin.), in a polyethylene inner insulator. This is surrounded by a copper braid over foil screen, and sleeved overall in a brown sheath. Overall diameter is 8mm, and capacitance between conductor and screen is 53pF/m. Note: Silver Solder GW45Y must be used to solder silver wires.

Sold by the metre.

Order Code	Type	Price each
CC22Y	Silver Plated SC	£4.15

Pure Silver Screened Cable

High quality screened audio cable having 5/0.28mm extruded, pure silver strands as the centre conductor in a red polyethylene inner insulator, surrounded by a silverplated copper braid over foil screening, and covered overall in a translucent sheath.

Overall diameter is 8mm, and capacitance between conductor and screen is 64pF/m. Note that Silver Solder GW45Y must be used to solder silver wires. Sold by the 1/4 metre.

Order Code	Type	Price each
XS56L	1/4m Silver ScrCable	£4.65

THE BEST OF SERVICE

High Grade Shielded Audio Cable

High quality coax. cable for use in no-compromise audio applications. It features high purity, Oxygen Free Copper (OFC) conductors where each strand is bound tightly for maximum contact area and best electron flow. OFC conductors are completely oxygen free in order to eliminate surface oxidation, which will interfere with the efficiency of the conductor especially at high frequencies, where electron flow tends to be more concentrated at the surface.

The centre conductors are multi-strand bare OFC sheathed in a coax. insulator sleeve made of high density polyethylene, which is very resistant to deformation and therefore maintains the optimum distance required between the inner and screen throughout the length of the cable. The single bare OFC braided screen is sheathed in transparent extra flexible PVC, overall diameter 5mm. Strands of inner, 156/0.06mm. Max. working voltage, 200V peak. Working temperature, -10°C to 105°C. Suitable connectors are JZ07H or JZ08J. Sold per metre (max. length in one piece, 50m) and on 50m reels.

Order Code	Type	Price each
XS38R	Audio Cable	98p
PB62S C5	Audio Cable 50m	£37.99

Low Noise Screened Cable

A very low noise single screened cable ideal for use with low-level signals.

Stranded core, 10/0.1mm copper conductor with polythene insulation over which there is a layer of semi-conducting polythene. This is covered with a braided screen and sheathed overall in black PVC.

Overall dia.: 3.0mm
Nom. conductor area: 0.0785mm²
Capacitance
(core to screen): 102pF/m
Nominal impedance: 50Ω

IMPORTANT NOTE

It is most important when connected that the semi-conducting sheath should not be able to come into contact with the centre conductor or anything connected to the centre conductor, but that it should be stripped back to the braiding. The cable is only suitable for use at audio frequencies.

Sold per metre (max. length in one piece 25m). Also available on 25m reels.

Order Code	Type	Price each
XR18U	Low Noise Scnd	54p
PB14Q A1	25m Low Noise Scnd	£9.99

Twin Overall Lapped Screen

A twin screened cable ideal for general audio connections where crosstalk is not a problem. Stranded cores, 7/0.1mm copper conductors with red and blue PVC insulation, lap screened and sheathed overall in grey PVC. Cores are laid side by side in the cable such that the cable is oval in shape.

Overall size: 2 x 2.8mm
Nom. conductor area: 0.055mm²
Capacitance
(core to screen): 305pF/m
(core to core): 170pF/m

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR20W	Lapped Pair	25p
PB18U A2	100m Lapped Pair	£16.99

QUALITY & SERVICE**

Twin Overall Braided Screen

A twin screened cable ideal for use in low level balanced circuits e.g. low impedance balanced microphones. The cores are twisted together to assist in hum reduction. Stranded cores, 16/0.2mm copper conductors with red and black PVC insulation, braided screen and sheathed overall in black PVC.

Overall dia.: 6.3mm
 Nom. conductor area: 0.5mm²
 Capacitance
 (core to screen): 171pF/m
 (core to core): 120 pF/m

Sold per metre (max length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR08J	Twin Mic Cable	66p
PB17T G11	100m Twin Mic Cable	£43.99

Two-Core Lap-Screened Cable 7/0.2mm

Two 7/0.2mm copper conductors with a blue and a red PVC insulation laid side-by-side and lap-screened and sheathed overall in grey PVC

Overall size: 3.1 x 4.7mm oval
 Capacitance: 272pF core to screen
 148pF core to core

Sold per metre (max length in one piece 100m). Also available on 100m reels

Order Code	Type	Price each
XS23A	Lapped Pair 7/0 2mm	32p
PB49D C5	100m Lap Pair 7/0.2mm	£24.99

Twin Individually Screened

A twin screened cable having each core individually screened and laid side by side in a figure 'B' outer sheath thus keeping crosstalk problems to a minimum, but maintaining the advantages of a single cable. Stranded cores, 10/0.12mm: copper conductor with PVC insulation, lap screened and sheathed overall in grey PVC.

Overall size: 2.8 x 5.6mm
 Nom. conductor area: 0.0785mm²
 Capacitance
 (core to screen): 350pF/m

Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XR21X	Cable Twin	30p
PA17T B4	100m Cable Twin	£19.99

High Grade Shielded Audio Pair

A dual figure-8, individually screened pair, where the entire screen of each cable is composed from a layer of metallised mylar film under two layers of OFC (Oxygen Free Copper) braid, providing the most complete prevention against interference, and having a blue outer sleeve, diameter 6mm. The centre conductors are multi-strand bare OFC sheathed in a coax. insulator sleeve made of high density polyethylene. Strands are 91/0-08mm. Max. working voltage, 200V peak. Working temperature, -10°C to 105°C. Suitable connectors are JZ09K or JZ10L. Sold per metre (max. length in one piece, 50m) and on 50m reels.

Order Code	Type	Price each
XS39N	Audio Pair	£3.35
PB63T F13	Audio Pair 50m	£137.99

High Grade Common Screened Pair

A common screened pair of conductors within one round screen. The two inner are identified as red and white and are also screened with metallised mylar film under one braided OFC layer. The centre conductors are stranded 41/0-12mm bare OFC sheathed in a coax. insulator sleeve made of high density polyethylene. The outer sleeve is blue, overall diameter 7.3mm. Max. working voltage, 200V peak. Working temperature: -10°C to 105°C.

Sold per metre (max. length in one piece, 50m) and on 50m reels.

Order Code	Type	Price each
XS40T	Common Pair	£1.25
PB66W E7	Common Pair 50m	£44.99

Twin Overall Braided Screen Microphone Cable

A very flexible, high quality twin screened microphone cable available with five different colour outer sheaths. Stranded cores, 12/0.18mm copper conductors with red and white PVC insulation, braided screen and sheathed overall in black, blue, green, red or yellow PVC. Overall diameter: 6.2mm.

Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XR98G	Fleximic Black	46p
PA89W G10	100m Fleximic Black	£33.99

Twin Individually Screened Cable with Semiconducting Sheaths

A twin individually screened cable which has 20 x 0.12mm copper conductors in each core, with colour coded PVC insulation, individual semiconducting layers, individual lapped screen and black PVC outer insulation.

Overall Diameter: 6.5mm
 Nominal Conductor Area: 0.23mm²
 Capacitance (core to screen): 135pF/m
 Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XS26D	Twin Single Scrm SS	98p
PB52G	G12 Twn Sgl Scrm SS 100m	£67.99

Four-Core Overall Lapped Screen

A four-core cable with an overall lapped screen available with two different colour outer sheaths. Stranded cores 7/0.12mm copper conductor with red, white, black and yellow PVC insulation, lap screened and sheathed overall in grey or black PVC. Overall diameter: 4.5mm.

Sold per metre (max. length in one piece 100m) and on 100m reels.

Four-Core Individually Screened

A four-core screened cable having each core individually screened, thus keeping crosstalk to a minimum. Stranded cores, 7/0.1mm copper conductor with yellow, black, red and white polythene insulation, lap screened and sheathed overall in grey PVC.

Overall size: 5mm
 Nom. conductor area: 0.055mm²
 Capacitance (core to screen): 95pF/m
 Sold per metre (max. length in one piece 50m) and on 50m reels.

Order Code	Type	Price each
XR23A	Cable Quad	45p
PA18U	A3 50m Cable Quad	£16.99

Four Core Overall Braided Screen

A four core screened cable with particular application in quadrasonic equipment where crosstalk is not a problem. Stranded cores, 7/0.1mm tinned copper conductor with PVC insulation (red, blue, green and yellow), wrapped overall in Melinex tape then covered with a braided screen and sheathed in grey PVC.

Overall diameter: 3.15mm
 Nominal conductor area: 0.055mm²
 Maximum working voltage: 250V RMS
 Maximum current per core: 0.25A
 Capacitance (core to screen): 190pF/m

Sold per metre (max. length in one piece 100m).

Order Code	Type	Price each
XR25C	Multi-Core 4-Way	52p

Multi Core Screened Cable

A range of multi core cables having overall screens. Stranded cores 7/0.1mm tinned copper conductors with PVC insulation wrapped overall in Melinex tape then covered with a braided screen and sheathed in grey PVC.

Cables conform to DEF STAN 61-12 parts 4 and 5.

Nominal conductor area: 0.055mm²
 Maximum working voltage: 250V RMS
 Maximum current per core: 0.25A
 Capacitance (core to screen): 190pF/m

Overall Foil and Braided Screen Multi Core Cable

A range of double screened (foil and braid) multi core cables; which are ideal as computer data cables e.g. RS232 & Centronics interface standards. Each core is 7/0.2mm tinned copper, covered with colour coded PVC insulation. The cores are double screened in overlapping metal foil (inner screen) and braided wire screen (outer screen). Outer insulation is grey PVC. Available in 4, 8, 12, 20 and 36-ways.

60W MAGNIFIER DESK LAMP

GREAT VALUE!
£49.99
RJ40T
[D]

A magnifying lamp which is a practical and functional aid for hobbyists and whenever magnification and extra light are needed for tiny items. It comes with a 60W incandescent bulb and a 1.75x magnification lens. It has an impact resistant, coloured plastic shade and a well balanced, easily adjustable angle-poise arm. Provided with clamp for table fixing.
Dimensions: arm length: 80cm; shade, 22 x 8cm. Colour: grey.

RF CABLES

Low Capacity Screened Cable/UR76

A high quality screened cable for high performance audio connections. Stranded core, 7/0.32mm plain copper conductor with polythene insulation, braided screen and sheathed overall in black PVC.

Overall diameter:	5mm
Capacitance (core to screen):	100pF/m
Maximum voltage:	2.0kV
Nominal impedance:	50Ω

This cable is also suitable for use at RF and has characteristics superior to UniRadio UR76/RG58C.

Attenuation per 10m:	2.0dB at 100 MHz
	7.6dB at 1000 MHz

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR19V	Low C Cable	39p
PB15R	F9 100m Low C Cable	£29.99

50 Ohm Screened Cable RG58

A screened RF cable having a stranded core 17/0.19mm tinned copper conductor with a solid polyethylene insulator and a braided copper screen. Sheathed overall in black PVC.

Overall diameter:	5mm
Centre conductor:	17/0.19mm
Nominal impedance:	50Ω
Attenuation per 10m:	2dB at 100MHz
	7.6dB at 1000MHz

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XS51F	50 Ohm Cable	36p
PB64U	E7 50 Ohm Cable 100m	£22.99

Heavy Duty RF Cable/UR67

A high quality co-axial cable ideal for use as a transmitter up-lead. Stranded core, 7/0.77mm copper conductor with solid polythene insulation, braided screen and sheathed overall in black PVC.

Overall diameter:	10.3mm
Capacitance (core to screen):	100pF/m
Max. voltage:	6.5kV
Nominal impedance:	50Ω
Attenuation per 10m:	0.68dB at 100MHz
	2.52dB at 1000MHz

Sold per metre (max. length in one piece 50m). Also available on 50m reels.

Order Code	Type	Price each
XR63T	UR67 RF Cable	£1.48
PB16S	H19 50m UR67 RF Cable	£59.99

75 Ohm Screened Cable RG59B/U

A screened cable having an impedance of 75Ω, single solid centre conductor, high density polyethylene insulator and braided copper screen. Sheathed overall in black PVC.

Overall dia.:	6mm
Centre conductor:	1/0.65mm
Nominal impedance:	75Ω
Attenuation per 10m:	1.3dB at 100MHz
	4.6dB at 1000MHz

Sold per metre (max. length in one piece, 100m) and on 100m reels.

Order Code	Type	Price each
XS52G	75 Ohm Cable	36p
PB65V	F8 75 Ohm Cable 100m	£24.99

Low Loss RF Cable URM70

High quality coaxial cable suitable for general VHF and UHF use. Stranded core, 7/0-19mm plain copper conductor with high density polyethylene insulation. Screen is braided plain copper sheathed overall in black PVC.

Overall diameter:	5.8mm
Impedance:	75Ω
Capacitance (core to screen):	67pF/metre
Max. voltage:	14kV DC, 1-8kV peak RF
Attenuation per 10m:	1.5dB at 100MHz 5.2dB at 1000MHz

Sold per metre (max. length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XS32K	URM70 Cable	38p
PB57M F8	URM70 Cable 100m	£26.99

RADIO AND TV AERIAL CABLES

Miniature Co-ax

A very high quality miniature coax cable suitable for short interconnections between, for example, computer and monitor or TV, video recorders and similar applications. The cable has a 1/0.4mm tinned copper conductor with expanded foam insulation, a good quality braided screen and a thin outer grey sheath.

Overall dia.	2.8mm
Nominal impedance:	75Ω

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR88V	Miniature Coax	36p
PB19V A2	100m Miniature Coax	£24.99

Low-Loss Co-ax

A low-loss co-axial cable intended for use as aerial downloads for UHF television sets. Solid core, 1/1.0mm copper conductor with cellular polythene insulation, braided screen and sheathed overall in brown and white PVC.

Overall dia:	6.6mm
Nom. conductor area:	0.786mm ²
Capacitance (core to screen):	56pF/m
Nominal impedance:	75Ω
Attenuation per 10m:	0.75dB at 100MHz 2.6dB at 900MHz

Sold per metre (max length in one piece 100m) and on 100m reels.

Order Code	Type	Price each
XR29G	Brown Low-loss Coax	30p
PA21X F9	100m Low Loss Coax	£18.99
XR87U	White Low-loss Coax	30p
PA78K F8	100m L/Loss Coax Wht	£18.99

Satellite TV Cable CT100

Superior quality double-screened, ultra low loss coaxial cable where screening comprises a continuous copper-mylar foil beneath a conventional braided copper screen. 5-celled polyethylene insulator. Sheathed overall in black, or white PVC.

Overall dia.:	6.6mm
Nom. conductor area:	1mm ²
Nominal impedance:	75Ω
Attenuation per 100m:	6.4dB at 100MHz 21dB at 1000MHz

Sold per metre (max. length in one piece, 100m) and on 100m reels.

Order Code	Type	Price each
XS16S	Sat Coax Cable Black	60p
PB42V G12	100m Sat Coax Black	£39.99
XS17T	Sat Coax Cable White	60p
PB43W G12	100m Sat Coax White	£39.99

Low Loss Satellite Cable CT125

Uprated version of XS16S. 5-celled polyethylene insulator. Sheathed overall in black PVC.

Overall dia.:	7.8mm
Nom. conductor area:	1.25mm ²
Nominal impedance:	75Ω
Attenuation per 100m:	4.9dB at 100MHz 18.74dB at 1000MHz

Sold per metre (max. length in one piece, 100m) and on 100m reels. A 6mm F Plug fits this cable.

Order Code	Type	Price each
XS46A	LL Sat Cable	78p
PB59P H16	LL Sat Cable 100m	£51.99

Combined Download and Polariser Cable

A weather-proof cable specifically intended for use with satellite TV installations. The cable consists of a low-loss double screened RF download and polariser cable, side by side in figure-8 configuration. The RF download consists of a 1.0mm diameter solid copper conductor, surrounded by a 4.4mm diameter isolating layer and double screened with 0.1mm thick overlapping foil and braided screen. The cable is protected by an outer 0.8mm PVC sheath. Overall diameter (excluding web and adjacent cable) 6.8mm. The polariser cable consists of three stranded copper conductors 16/0.2mm sheathed with colour coded insulation (red, green and black). The cable is protected by an outer 0.8mm PVC sheath. Overall diameter (excluding web and adjacent cable) 3.9mm. Colour black. Sold per metre.

Order Code	Type	Price each
XS30H	Sat RF & Polar Cable	£1.00

Actuator Power and Control Cable

A weather-proof cable specifically intended for use with satellite TV installations. The power conductors consist of two stranded 32/0-22mm copper conductors, insulated by colour coded PVC insulation (blue and brown). A round PVC 'fillet' (grey) is included to maintain cable geometry. The control conductors consist of three 0.5mm diameter solid tinned-copper conductors sheathed with colour coded PVC insulation (green, yellow and brown). The three conductors are overall screened with 0.03mm thick overlapping foil, connection to the foil screen is by means of a 0.5mm diameter bare copper conductor which is in contact with the foil. The power and control conductors are overall wrapped in a melinex tape and the cable is protected by an 0.8mm PVC sheath. Overall diameter 7.3mm. Colour white. Sold per metre.

Order Code	Type	Price each
XS31J	Sat Actuator Cable	£1.48

300-Ohm Feeder

A balanced feeder cable intended for use as aerial downloads on European, Japanese and American tuners having no 75 ohm input. Stranded cores, 7/0-23mm copper conductors with clear polythene insulation.

Overall size:	9.8 x 2mm
Nom. conductor area:	0.34mm ²
Capacitance (core to core):	13.2pF/m
Nominal impedance:	300Ω
Attenuation per 10m:	0.12dB at 100MHz 1.68dB at 1000MHz

Sold per metre (max. length in one piece 100m). Also available on 100m reels.

Order Code	Type	Price each
XR31J	Bal Feeder	30p
PB20W A3	100m Bal Feeder	£19.99

VIDEO CABLES

A range of connecting cables made to a very high quality of construction, containing both screened and unscreened conductors in different combinations. Applications include carrying high quality audio and/or video signals between equipment using multi-way connectors such as the Peritel (SCART) type. Recommended for use anywhere where external interference and crosstalk must be kept to a minimum. Four different styles are available as follows:

9-Way Overall Screened

Contains a bundle of 9 wires colour coded Black, Brown, Red, Orange, Green, Yellow, Blue, Purple and Grey. Each conductor has 7/0.12mm tinned strands. The whole group is wrapped with a metallised mylar film acting as the screen, which is in contact with a single uninsulated tinned stranded earth conductor with 7/0.155mm strands. Ideal for multi-way audio signals where cross-talk is not a problem. Outer sheath is soft matt black PVC to an overall diameter of 6mm. A cable suitable for making up 'Composite Video and Audio' Peritel cables. This cable should be used for short runs only, otherwise crosstalk between conductors may become a problem. Sold per metre (max. length in one piece, 100m) and on 100m reels.

Order Code	Type	Price each
XS42V	9 Way Cable	65p
PB68Y G14	9 Way Cable 100m	£34.99

20-Way Overall Screened

Comprising a bundle of 20 insulated wires colour coded Black, Brown, Red, Orange, Yellow, Green, Blue, Violet, Grey, White, White/Black, Red/Black, Orange/Black, Yellow/Black, Grey/Black, Blue/Black, Violet/Black, Pink, Sky Blue and Cyan. Each wire has 7/0.12mm tinned strands. The whole group is wrapped with a metallised mylar film acting as the screen, which is in contact with a single uninsulated tinned stranded earth conductor of 7/0.155mm strands. Outer sheath is soft matt black PVC to an overall diameter of 9mm. A cable suitable for making up 'Universal' Peritel cables, where all 21 pins are to be connected. This cable should be used for short runs only, otherwise crosstalk between conductors may become a problem. Sold per metre (max. length in one piece, 100m) and on 100m reels.

Order Code	Type	Price each
XS44X	20 Way Cable	86p
PB70M H19	20 Way Cable 100m	£49.99

2 Screened Cables, One 4-Way Screened, One Single Wire

Contains one red and one blue individually lap-screened, stranded conductors, with high density polyethylene insulators which resist deformation, suitable for two-way video signal traffic. Centre cores are 10/0.115mm strands, and are untinned bare copper as are the screens. Another separate bundle comprises single Red, Black, Yellow and White insulated, bare copper 10/0.11mm stranded wires, sheathed overall with a metallised film screen in contact with an uninsulated stranded conductor which is soldered together into a solid core, and then in grey PVC. The whole cable is completed by one other isolated, single white 10/0.115mm stranded bare copper wire. The whole group is then wrapped in metallised mylar film, which again includes an uninsulated and soldered, stranded conductor as an earth wire. Outer sheath is soft matt black PVC to an overall diameter of 8mm. A cable suitable for making up 'Composite Video and Audio' Peritel cables, where composite Video, Audio and Function Switching connections are to be provided. Individually screened conductors should be used for video in and out signals. 4-way screened conductors should be used for L+R Audio in and out signals. The remaining single conductor should be used for function switching. Sold per metre (max. length in one piece, 100m) and on 100m reels.

Order Code	Type	Price each
XS41U	2 x Screen Cable	89p
PB67X G14	2 x Screen Cable 100m	£51.99

6 Screened Cables, One 4-Way Screened, Four Single Wires

An expanded version of XS41U having Black, Red, Yellow, Green, Blue and White individually lap-screened, stranded cores, with high density polyethylene insulators, also suitable for video signals. Centre cores are 10/0.115mm strands, and are untinned bare copper as are the screens. Similarly a separate bundle is also provided comprising single Red, Black, Yellow and White insulated, bare copper 7/0.12mm stranded wires, sheathed overall with a metallised film screen in contact with an uninsulated stranded conductor soldered into a solid core, and then in grey PVC. Four independent insulated Blue, Red, Yellow and White 10/0.115mm stranded bare copper wires are also provided. The whole bundle is then wrapped in metallised mylar film, which again contacts an uninsulated and soldered, stranded conductor. Outer sheath is soft matt black PVC to an overall diameter of 10.5mm. A cable suitable for making up 'Universal' Peritel cables, where all inputs and outputs are to be connected. The additional individually screened conductors should be used for R, G, B and blanking signals, whilst the additional individual single conductors should be used for data communication signals. Other conductors should be connected as type 3 above. Sold per metre (max. length in one piece, 100m) and on 100m reels.

Order Code	Type	Price each
XS43W	6 x Screen Cable	£1.70
PB69A H28	6 x Screen Cable 100m	£104.99

SLEEVING

Heat-Shrinkable Sleeving

A heat-shrinkable crosslinked polyolefin material which will shrink to 50% of its original diameter when heated over 121°C. Sleeving has high tensile strength (12MPa). It is resistant to solvents, acids, alkalis, fuel and oil. The continuous operating temperature should be between -55°C and +125°C. Self-extinguishing. Breakdown voltage >7kV. Colour is black.

Type	Size as supplied (bore)	Size (max) after shrinkage	Wall thickness (min) after shrinkage	Break-down voltage
CP16	1.6mm	0.8mm	0.46mm	7kV
CP24	2.4mm	1.2mm	0.51mm	8.6kV
CP32	3.2mm	1.6mm	0.51mm	8.6kV
CP48	4.8mm	2.4mm	0.51mm	8.6kV
CP64	6.4mm	3.2mm	0.64mm	11kV
CP95	9.5mm	4.8mm	0.64mm	11kV
CP127	12.7mm	6.4mm	0.64mm	11kV

Supplied in 1m lengths and in 5m hanks.

Low Temperature Heatshrink Tubing

A range of flexible low temperature shrink polyolefin tubing that is easy to use and is suitable for both electrical and mechanical protection. Ideal for high volume production lines in automotive, domestic appliance and all cable harness manufacture. When heated above 80°C the tubing will shrink, unrestricted, to a minimum of 50% of its supplied diameter. The tubing is resistant to common fluids and solvents. Colour black.

Specification	
Operating temperature:	-55°C to +125°C
Minimum shrink temperature:	80°C
Dielectric strength:	20kV/mm
Flammability:	non-flame retardant

'Earthing' Heatshrink Tubing

A high performance, flexible multi-purpose, yellow/green, striped heat-shrinkable tubing that is made from a specially formulated polyolefin material, offering excellent electrical, chemical and physical properties. Particularly recommended where the international electrical ground designation is intended. When heated above 120°C the tubing will shrink, unrestricted, to a minimum of 50% of its supplied diameter. The tubing is resistant to common fluids and solvents.

Specification

Operating temperature:	-55°C to +135°C

THE BEST OF SERVICE

High Shrink Ratio Tubing

A flexible, flame retardant, heat-shrinkable polyolefin tubing with a 3:1 shrink ratio. The tubing has a thin wall and good resistance to common fluids and solvents. When heated above 120°C the tubing will shrink unrestricted to a minimum of 33% of its supplied diameter. The tubing has an operating temperature range of -55°C to +135°C and a dielectric strength of 20kV/mm minimum. Colour is black. Sold per metre and in 5m lengths.

Type	Internal diameter as supplied	Internal diameter after shrinkage maximum	Wall thickness nominal
CPX300/30	3mm	1mm	0.55mm

Heat-Shrinkable Tubing with Adhesive Inner Liner

A semi-flexible tubing with a meltable adhesive inner liner which flows when heated. After shrinkage and upon cooling this provides a moisture proof seal over the product covered. Suitable for a wide range of applications, such as encapsulation of cables, wires, splices, breakouts and components. The tubing has a continuous operating temperature range of -55°C to +110°C and when heated above 120°C will shrink unrestricted to 33% of its supplied diameter. The tubing is flame retardant and has a dielectric strength of 20kV/mm minimum. Supplied in lengths of 1.2m only and colour is black.

Type	Internal diameter as supplied	Internal diameter maximum	Total wall thickness nominal	Meltable wall only thickness

Lay Flat Heat-Shrinkable Tubing

A multi-purpose polyvinylchloride heat-shrinkable tubing supplied in lay flat form. The tubing has an ultra thin wall, is semi-rigid and is ideal for covering batteries, capacitors and other components. When heated above 80°C the tubing will shrink unrestricted to a minimum of 45% of its supplied diameter. The tubing has a continuous operating temperature range of -20°C to +85°C, and a dielectric strength of 20kV/mm. Colour is white. Sold per metre and in 5 metre lengths.

Snap-On Wire Markers

A range of wire markers used for identifying cables, in the form of a 'C' shaped ring which is simply pushed onto the wire required. Fast and easy to fit. The chevron shaped marker is flexible and the tongue arrangement

adjusts itself to fit cable insulation between 1.3 to 3mm diameter without sliding. The material is finest, soft grade, durable PVC that will resist oil, grease, acid

abrasion and other chemicals. The maximum in-service temperature is 85°C. Bold, black print on a yellow background shows your codes plainly, and any combination of numbers can be composed, including letters if desired, in any sequence by using several markers together side-by-side.

11 different legends are available: all numbers '0' to '9'; and an earth symbol. Sold in strips of 20 of each legend. If ordering a quantity of 1,000, supplied in one length on a reel.

Self-Locking Cable Ties

Self-locking cable ties for simple and quick binding of cables or components.

Moulded in natural colour nylon, they are extremely strong and flame resistant to UL94 V2. Simply slip a tie-wrap around the bundle, thread up through head, pull tight and cut off. Available in five sizes in packs of 100 or individually. Dimensions in mm. For fixing gun, see Tools section.

Marker Cable Ties

Cable ties having a flat rectangular area which can be labelled or written on with an indelible marker to identify particular bundles of wires, looms or various other items which need to be marked.

CC24B has a rectangular extension at one end, at right angles to the strap direction and beyond the securing clip end, which will protrude beyond the loom and be easily noticeable. Tie CC25C has a similar right-angled area across the strap direction, but located inside the securing clip, so will lie flush with the loom.

Ties RT82D/83E/84F have a flat area incorporated into and inline with the strap portion near the securing clip, and which will also wrap around the loom out of the way.

Code	Length mm	Maximum diameter mm	Width mm	Minimum tensile strength kg
CC24B	110	25	25	8
CC25C	100	18	25	8.1

Cable Tie Pack

A packet of 75 self-locking cable ties for tidying wire and cable forms. The pack consists of 25 pieces of each of 3 different sizes. These are:

Large:	188mm(L) x 5mm(W) x 45mm(Max Dia)
Medium:	120mm(L) x 5mm(W) x 25mm(Max Dia)
Small:	91mm(L) x 2.5mm(W) x 20mm(Max Dia)

Order Code	Type	Price each
DK27E	75pc Cable Tie Pack	£2.99

FOR TOP QUALITY & VALUE!

Lacing Cord

A high grade tubular nylon-cored cord covered with a flexible PVC coating. Suitable for lacing wire and cable forms. Conforming to DEF5020.

Outside diameter: 1.1mm
Working load: 10lbs
Breaking strain: 17lbs
Sold on 25m reels

Order Code	Type	Price each
BL65V	Lacing Cord	£2.40

Spiral Cable Wrap

An expandable polythene spiral binding which simply wraps around the cable-form gripping it tightly. It will follow any route taken by the cableform and wires can be easily led out from the form. Resistant to chemical attack and has a high electrical resistance. Available in three sizes.

Type	Unexpanded outside dia.	Wall thickness
1/8in	3.18mm	0.79mm
1/4in	6.35mm	1.15mm
1/2in	12.7mm	1.58mm

Type	Pitch between lead out points	Suitable for cable forms of diameter
1/8in	5.56mm	1.59 to 12.7mm
1/4in	9.53mm	4.76 to 50.8mm
1/2in	12.7mm	9.53 to 101.6mm

Supplied per metre (max. length in one piece 30m).

Order Code	Type	Price each
BL57M	Spirawrap 1/8in.	26p
BL58N	Spirawrap 1/4in.	36p
BL59P	Spirawrap 1/2in.	52p

CABLE CLIPS

Cable 'P' Clips

A range of nylon cable clamps moulded in natural colour nylon to UL94V-2. Nylon thickness 1.4mm. The following sizes are available to suit cables diameter:

Type	Fixing hole dia. (mm)	Width (mm)	Length (mm)
3-2 to 4-8mm	5-0	9-6	19-8
4-8 to 6-4mm	4-6	9-6	19-8

Self-Adhesive Cable Fixings

Makes cabling simplicity itself. No more hammering nails into concrete, plaster etc. Just wipe the fixing surface to ensure that it is free from moisture, dust, oil or grease, peel off the clip's protective backing and press firmly into place on the surface. An average workman can fix 20 per minute – an enormous saving in labour time over conventional fixings. Also there is no noise – a further valuable advantage if cabling in occupied premises, hospitals etc.

The fixings are manufactured in 26swg zinc-finished electro-galvanised mild steel with cross-linked, acrylic adhesive coating on a cushion of closed cell polyethylene foam. The fixings will adhere to any clean flat surface; the foam cushion taking up any slight unevenness in the fixing surface giving maximum adhesion area.

Four types are available to suit different cable weights and sizes:

Type	Width (mm)	Size Height (mm)	Maximum Cable Diameter (mm)
Mini 4	15	20	4
4	20	30	4
8	25	38	8
12	38	42	12

Sold individually and in packs of 20.

Order Code	Type	Price each
FS58N	Safix Mini 4	16p
FS59P	20 Pk Safix Mini 4	£2.25
BH26D	Safix 4	18p
FS60Q	20 Pk Safix 4	£2.65
BH27E	Safix 8	20p
FS61R	20 Pk Safix 8	£2.85
BH28F	Safix 12	22p
FS62S	20 Pk Safix 12	£3.40

Plastic Cable Clips

A range of plastic cable clips manufactured from high impact polystyrene which is weatherproof and shatterproof. All of the round clips push fit onto the cable and grip it firmly leaving both hands free for positioning and fixing. Plated long life masonry nails are supplied with all clips except Round 2.75mm and Flat 4mm and 5mm which have carbon steel nails, blued for extra resilience.

The following sizes are available:

Type (mm)	Pin Length (mm)	Pin diameter (mm)	Suits Cable of overall size (mm)
Round 2.75	15	1	2 to 3
Round 3.5	15	1.5	3 to 3.75
Round 4	15	1.5	3.75 to 4.5
Round 5	20	1.5	4.5 to 5.5
Round 6	22	1.5	5.5 to 6.5
Round 7	22	1.5	6.5 to 7.5
Round 8	25	2	7.5 to 8.5
Round 9	25	2	8.5 to 9.5
Flat 4	15	1	Zip Wire
Flat 5	15	1	Twin Mains DS
Flat 9	25	2	1.5m ² TE
Flat 10	25	2	2.5m ² TE and 1mm ² Triple ECC
Flat 14	25	2	6mm ² TE

Round 5mm available in black for use with black telephone cable CW68Y.

Sold in packs of 20 and boxes of 100.

Capacitor Markings

Some of the capacitors we sell are marked using three digits and a letter. The three digits denote the value and the letter indicates the tolerance. The first two digits are the actual value and the third digit indicates the number of zeros that follow the value, and the value is printed in picoFarads. For example a capacitor marked 102 has a value of 10 plus 2 zeros, which is 1000pF (1000pF = 0.001µF). The letter indicates the tolerance as follows: F = ±1%, G = ±2%, H = ±2½%, J = ±5%, K = ±10%, M = ±20%.

01702 553935

CERAMIC CAPACITORS Metalised Ceramic Plate Capacitors

A miniature ceramic capacitor with a cement-coated case. Values up to and including 220pF are suitable for temperature compensation in tuned circuits where low losses, close tolerance and high stability are required.

Values from 270pF to 4700pF are for use in coupling and decoupling applications, where a non-linear change of capacitance with temperature is permissible. Values 10,000pF and 22,000pF are suitable for use in coupling and decoupling applications, where capacitance stability is not critical.

Tolerance:

1.8pF to 8.2pF:	±0.25pF
10pF to 330pF:	±5%
390pF to 4700pF:	±10%
10,000pF and 22,000pF:	-20% +80%

Working voltage:

1.8pF to 4700pF:	100V DC
10,000pF and 22,000pF:	63V DC
Insulation resistance:	>1000MΩ

Temperature coefficient:

1.8pF to 220pF:	Zero
270pF to 390pF:	+350 to -1000ppm/°C
470pF to 4700pF:	medium K (±10%)
10,000pF to 20,000pF:	high K (+22% -82%)

Power factor:

1.8pF to 390pF:	<10×10 ⁻⁴
470pF to 4700pF:	<25×10 ⁻³
10,000pF:	<50×10 ⁻²
22,000pF:	<25×10 ⁻²

MONOLITHIC CERAMIC CAPACITORS Resin-Dipped

A high quality multilayer resin-dipped plate ceramic capacitor, offering a very high capacitance in a very small case at a very economical price. Applications include coupling, decoupling and filtering.

Tolerance:	10pF to 220pF:	±5%
	470pF to 0.1μF:	±10%
	0.22μF to 0.47μF:	±20%

Insulation resistance: >10¹¹ or 10⁹ divided by μF (whichever is less)

Temperature coefficient:

10pF to 220pF:	±30ppm/°C (COG)
470pF to 0.1μF:	±15% (X7R) max from -55°C to +125°C
0.22μF to 0.47μF:	+22% -56% (Z5U) max from -25°C to +85°C

Power factor:	10pF to 220pF	<0.1%
	470pF to 0.1μF:	<2.5%
	0.22μF to 0.47μF	<3%

Case size:	(H x W x T)	Lead pitch
10pF to 0.0047μF:	4.2 x 4.2 x 3.0mm	2.5mm
0.0068μF to 0.033μF:	5.0 x 5.0 x 3.0mm	2.5mm
0.047μF to 0.47μF:	5.5 x 5.5 x 3.0mm	5.0mm

The following values are available:

Value	Voltage	Marking
10pF	100V	100J1C

HOT TIP

Cable ties can be used to secure large can electrolytics to a chassis, Veroboard or PCB. Use a tie at each end of the electrolytic, and secure by passing the ties through holes that have been conveniently drilled in the chassis.

Epoxy Cased

Murata

A very high quality plate ceramic capacitor in a rugged moulded epoxy case.

These capacitors offer very high capacitance in a very small case size. Applications include coupling, decoupling and filtering.

Tolerance: $\pm 10\%$
 Insulation resistance: $>10^{11}\Omega$
 Temperature coefficient: $\pm 15\%$ (X7R)
 Power factor: 2.5%

Dimensions

Case size: 5 x 5 x 2.5mm
 Lead pitch: 5mm

▶ IT'S A FACT! ◀

Michael Faraday (1791 to 1867) was a great British scientist who made fundamental discoveries in electricity and magnetism, and made the first generator of electricity. He showed that if a conducting wire is moved across a magnetic field an electric current is generated in the wire. It is not an exaggeration to say that the whole of our present way of life is based on his discovery. His name is remembered in a number of technical terms, the best known being the unit of capacitance - the Farad. A capacitor has a capacitance of 1F when a change of 1 volt/sec. produces a current of 1A through it.

SILVERED MICA

A capacitor featuring high stability for use in tuned circuits, and filters and for pulse operation. It has a solid wax impregnant with a tough cement coating.

Tolerance: 5pF to 47pF $\pm 0.5\text{pF}$
 68pF to 1000pF $\pm 1\%$

Working voltage: 350V DC

Insulation resistance: 50,000M Ω
 Temperature coefficient: 5pF to 47pF $+75\text{ppm}/^\circ\text{C}$
 68pF to 1000pF $+35\text{ppm}/^\circ\text{C}$

Power Factor: 5pF to 47pF: $<25 \times 10^{-4}$
 68pF to 680pF: $<15 \times 10^{-4}$
 1000pF: $<20 \times 10^{-4}$

Case sizes	W	H	T
5pF to 68pF	13	8	3.2

POLYCARBONATE

Miniature Polycarbonate Film and Foil WIMA FK2

A range of polycarbonate film capacitors with metal foil electrodes that are designed for reservoir and decoupling applications in high-speed digital circuits. The capacitors feature low induction and low damping with an almost linear capacitance temperature coefficient. Housed in a yellow flame-retardant plastic case (UL 94 V-O) with an epoxy resin seal.

Tolerance: $\pm 10\%$
 Temperature range: -55°C to $+100^{\circ}\text{C}$
 Insulation resistance
 50V: $\pm 3.75 \times 10^3 \text{M}\Omega$
 63V: $\pm 1 \times 10^4 \text{M}\Omega$
 Dissipation factors (tan δ) at
 1kHz: $\pm 2 \times 10^{-3}$
 10kHz: $\pm 4 \times 10^{-3}$
 100kHz: $\pm 8 \times 10^{-3}$
 Lead spacing: 5mm

Close Tolerance Polystyrene

Philips

A polystyrene film and tin/lead foil capacitor using extended techniques, resulting in low inherent inductance and low series resistance. This combined with low temperature coefficient, makes these capacitors suitable for use in professional and general purpose applications where precision, reliability, stability and low losses are of prime importance, e.g. in tuned circuits, filter networks, discriminators etc.

Tolerance: $\pm 1\%$
 Working voltage: 100pF to 470pF: 500V DC, 220V AC 50Hz
 560pF to 8200pF: 125V DC, 63V AC 50Hz
 10,000pF and 22,000pF: 63V DC
 Insulation resistance: $>10^{11}\Omega$
 Temperature coefficient: $-150 \pm 60 \text{ppm}/^{\circ}\text{C}$

POLYESTER

Polyester Layer

Siemens

A self-healing layer capacitor with a polyethylene-terephthalate dielectric. Designed specifically for use on printed circuit boards, they offer high values of capacitance in extremely small case sizes and they have low inductance and low loss characteristics.

Tolerance: 0.001 μF to 0.01 μF : $\pm 10\%$
 0.015 μF to 1 μF : $\pm 5\%$
 Working voltage: 0.001 μF to 0.01 μF : 400V DC
 160V AC rms 50Hz
 0.015 μF to 0.18 μF : 250V DC
 100V AC rms 50Hz
 0.22 μF to 1 μF : 100V DC
 55V AC rms 50Hz
 Insulation resistance: 0.001 μF to 0.33 μF : $>7.5 \times 10^{10}\Omega$ ave.
 0.39 μF to 1 μF : $>2.5 \times 10^{10}\Omega$ ave.
 Temp coefficient: 200ppm/ $^{\circ}\text{C}$ ave.
 Self-inductance: 6nH approx.
 Power factor: $<8 \times 10^{-3}$ at 1kHz

Metallised Polyester Film

Philips

These capacitors consist of a low-inductive wound cell of metallised (PETP) film. This is protected by a hard, water repellent, solvent resistant and flame retardant orange epoxy. Designed for use on PCB's for coupling and decoupling applications, the radial leads are solder-dipped copper wire 5mm long. The capacitors are available in two tolerances of 10% and 20%. Please refer to the order code table to verify which tolerance is supplied to any particular value. Rated voltage (DC) and code for dielectric material (MKT = metallised PETP film).

Operating Temperature Range is -40°C to +100°C

Insulation resistance: 0.01µF to 0.33µF: >3 x 10¹⁰Ω
0.47µF to 2.2µF: >5 x 10⁹Ω

Temperature coeff.: 333ppm/°C ave.

Power factor: < 130 x 10⁻⁴ at 1kHz

Mylar Film Capacitors

A general purpose capacitor supplementing the other film and foil capacitor ranges in this catalogue.

Tolerance: $\pm 10\%$
Working voltage: 100V DC

The following values are available:

Value (μF)	Case Size (mm)			
	H	W	T	P
0.001	10	5	3	3.5
0.0022	11	5	3	3.5
0.0047	11	5.5	3	4
0.01	11	6	3	4
0.022	11	6	3.5	5
0.047	12	8.5	4	5.5
0.1	13	10	5.5	6.5
0.22	16	15	6.5	11

Order Code	Type	Price each

Metallised Polypropylene Industrial Capacitors

A high quality metallised polypropylene capacitor for use at very high continuous AC or DC voltages. They meet the requirements of BS2135 for Class X or Class Y use at 250V AC mains.

Tolerance: $\pm 10\%$ (K)
Working voltage: 1000V DC, 500V AC
Power factor: $<1.5 \times 10^{-3}$ at 1kHz
Pulse rating: 0.1 μF and 0.22 μF 70V/ Ωs max
0.47 μF and 1 μF 40V/ Ωs max

The following values are available:

Value	Length (mm)	Dia. max (mm)
0.1 μF	28	15
0.22 μF	28	18
0.47 μF	45	19
1 μF	45	28

Order Code	Type	Price each
FA21X	HV Cap 0.1uF	£1.20
FA22Y	HV Cap 0.22uF	£1.65
FA23A	HV Cap 0.47uF	£2.25
FA24B	HV Cap 1uF	£3.25

General Purpose 160V Range Industrial Capacitors

General purpose, axial polypropylene capacitors rated at 160V DC working. Constructed from metallised polypropylene film and encapsulated using the 'wrap and seal' method, where the wound elements are wrapped in heavy duty insulation tape wider than the element, and the end cavities sealed with high grade epoxy resin. This method results in a cost effective yet high quality construction. Ideal for a wide range of applications, in particular those requiring a low loss and/or low dielectric absorption component in such applications as sample and hold circuits and Hi-Fi including crossover networks. Colour yellow.

Not to be used for mains voltage filtering applications. Five values available: 1 μF , 1.5 μF , 2.2 μF , 3.3 μF and 4.7 μF .

Specification
Tolerance: $\pm 10\%$
Max. working voltage: 160V DC
Max. survivable peak-voltage: 240V for 30s, not to be repeated.
Dissipation factor: ≤ 0.001 at 1kHz & 20 $\pm 3^\circ\text{C}$
Insulation resistance: $\geq 10^4 \text{M}\Omega$ per μF
Operating temp. range: -40 to +85°C

Vibration proof to BS2011 in the frequency range of 10 to 500Hz, where displacement of component does not exceed 0.75mm in any direction.

Value (μF)	L (mm)	W (mm)	T (mm)	t (mm)

POLYPROPYLENE

Miniature Polypropylene Film and Foil

WIMA FKP 2

A range of polypropylene film capacitors with metal foil electrodes that are designed for pulse applications.

The capacitors feature low dissipation, a negative temperature coefficient of capacitance and a low dielectric absorption, making these capacitors suitable for sample and hold circuits. Housed in a green flame-retardant plastic case (UL 94 V-O) with an epoxy resin seal.

Tolerance: $\pm 5\%$
Insulation resistance @ 20°C: $\geq 5 \times 10^5 \text{M}\Omega$ (mean value $1 \times 10^6 \text{M}\Omega$)
Temperature range: -55°C to +85°C
Dissipation factors for ($\tan \delta$ @ 20°)

HIGH VOLTAGE AND INTERFERENCE SUPPRESSION CAPACITORS

Interference Suppression Capacitors

Philips

A metallised film PETP (polyethylene terephthalate) film and impregnated paper dual dielectric moulded in blue flame-retardant polypropylene. The capacitors are designed to suppress electrical interference from domestic appliances and should be connected directly across the mains.

IT'S A FACT!

For capacitors combined in series i.e. C_1, C_2, C_3 etc., the resultant value C is given by the formula:

$$C = \frac{1}{\frac{1}{C_1} + \frac{1}{C_2} + \frac{1}{C_3} + \dots}$$

For capacitors combined in parallel, the resultant value C is the sum of the value of each capacitor i.e.

$$C = C_1 + C_2 + C_3 + \text{etc.}$$

Audio-Grade Polypropylene Axial Capacitors

A range of capacitors that have been specially developed to be used in very high quality loudspeaker cross-over networks in domestic and studio monitoring systems. The inherently low dissipation and dielectric absorption factors of polypropylene, allied with an excellent mechanical stability, results in an extremely detailed sound. The construction results in a low self-inductance and ESR, and the devices are highly stable with respect to temperature and frequency.

Tolerance: $\pm 5\%$
 Rated voltage: 630V DC
 Insulation resistance: $\geq 1 \times 10^4 M\Omega/\mu F$ @ rated voltage and $20 \pm 3^\circ C$
 Dissipation factor: ≤ 0.001 @ 1kHz & $20 \pm 3^\circ C$
 Dielectric absorption: $\leq 0.1\%$ @ $20 \pm 3^\circ C$

Cap (μF)	Case size L (mm)	D (mm)
1.0	38	22
1.5	38	27
2.2	38	31
3.3	38	35
4.7	45	35
6.8	45	42

Terminations are PVC covered 1mm diameter copper wire. Sleeved diameter is 2.5mm.

Order Code	Type	Price each

KR80B	Audio Grade 2.2uF	£2.49
KR81C	Audio Grade 3.3uF	£3.29
KR82D	Audio Grade 4.7uF	£3.75
KR83E	Audio Grade 6.8uF	£4.99

TANTALUM BEAD CAPACITORS

Low Cost Tantalum

A range of resin-dipped solid tantalum bead capacitors featuring very high values of capacitance in an extremely small package.

Tolerance: $\pm 20\%$.
 Reverse voltage must not exceed: 0.5V.
 Leakage current: $0.02\mu A/\mu F V$ or $1\mu A$ whichever is greater.
 Power factor: < 0.1 except $100\mu F$ which is < 0.2 .
 Lead pitch: 5mm.

The following values are available:

IT'S A FACT!

TYPES OF CAPACITOR

Ceramic - These offer low-cost and high capacitance in a small physical size.

Normally there are two types the 'high stability temperature compensating type' and the 'bypass and coupling type'. The former are for use in resonant circuit and filter applications, with a value largely independent of voltage and frequency. The latter is for use in less critical applications, as they are less stable and have non-linear temperature characteristics and are somewhat voltage dependent.

Paper - This type is very rarely used in electronics but are still used in mains supply

applications for power factor corrections, i.e. electric motors.

Polyester - This type offer good stability, a large range of values at low-cost, and are the most widely used capacitor for general applications.

Polycarbonate - These have a low temperature coefficient, low dielectric loss at high frequency and excellent temperature stability characteristics.

Polystyrene - These offer tight tolerance and are highly stable, making them suitable for very stable tuned circuits and oscillators.

Polypropylene - This type have a very low dielectric loss and are particularly suitable in audio circuits and sample-and-hold circuits.

Radial Electrolytics

A range of small electrolytic capacitors designed for direct mounting on pcb's.

Tolerance: ±20%
(-10+50% for 450V types)
Temperature range: -40°C to +85°C (-25°C to +85°C for 450V types)

Axial Lead Electrolytics

A range of miniature, general purpose aluminium electrolytic capacitors, using high etch factor foils to enable wide operating temperatures and high capacitance to be achieved in a miniature can size. For new designs we recommend the use of radial types.

Cap (µF)	Working Voltage (DC)	Case Size (mm) l (max) d (max)	Ripple Current (mA max) @ 120Hz 85°C	Tolerance (%)	Leakage Current (µA max)	Power Factor (max)

High Frequency Electrolytics

Radial lead electrolytic capacitors having very low impedances at high frequencies, designed primarily for use in switch mode power supplies, but suitable for use in many applications where a high grade capacitor is required.

Tolerance: ±20%
Temperature range: -55°C to +105°C
Leakage current: 0.02CV
Power factor: <0.08 (0.1 for 1000µF types)

Cap (µF)	Working Voltage (DC)	Case Size (mm) L (max) D (max) P	Ripple current (max) at 120Hz 105°C	ESR max (mΩ) at 20°C 120Hz	Impedance (mΩ) at 1kHz

Non-Polarised Electrolytics

Non-polarised electrolytic capacitor designed for use in loudspeaker crossover networks, but suitable for use in many applications where a large capacitance is required with a large bipolar signal at relatively low cost.

Tolerance: ±20%
Temperature range: -40°C to +85°C

Snap-in Electrolytics

A range of low-profile high value electrolytic capacitors designed for use in power supplies etc., and featuring standard 10mm snap-in connection terminals which grip the pcb and provide excellent vibration characteristics.

Tolerance: ±20%
 Temperature range: -40°C to +85°C
 Leakage current (µA): $3\sqrt{CV}$ (C in µF)

Value (µF)	Working voltage (DC)	Case size (mm) L D	ESR max (mΩ) at 20°C	Power factor (max) at 120Hz	Ripple current (max) at 85°C 120Hz

CAN-STYLE ELECTROLYTIC CAPACITORS

Standard Range Can-Type Electrolytics

Elna

A range of can-type electrolytic capacitors employing high gain etched aluminium foil non-inductively wound with electrolytic tissue impregnated with long life electrolyte.

All dimensions in mm.

30 to 40mm dia. types

Tolerance: -10+30%
 Temperature range: -40°C to +85°C

Value (µF)	Working voltage (DC)	Case size (mm max) L D	Ripple current (max) at 100Hz 55°C	Leakage current (max)	Power factor (max)
2200	63	50 30	3.4A	5mA	0.35
3300	63	60 30	4.6A	6.3mA	0.35
4700	50	50 30	5.2A	7.1mA	0.5
4700	63	60 35	5.6A	8.9mA	0.5
4700	100	80 40	7.4A	14.1mA	0.4
6800	63	76 35	6.4A	12.9mA	0.5
10,000	35	60 30	6.4A	10.5mA	0.5
10,000	63	80 35	9.8A	18.9mA	0.5

Ripple currents: These shown are the maximum allowable at 100Hz, 55°C. The maximum allowable at other frequencies and temperatures is as follows:

50Hz: 95%	120Hz: 100%	1kHz: 110%
10kHz: 130%	20kHz: 133%	
20°C: 150%	30°C: 125%	
70°C: 75%	85°C: 50%	of value shown.

All types are supplied with vertical mounting clips. Clip dimensions in mm.

High-Grade Can-Type Electrolytic Capacitors

Elna

A very high grade capacitor designed for use in the power supplies and outputs of high power audio amplifiers. The capacitor's excellent response is obtained by lowering the equivalent circuit series resistance to half that of ordinary capacitors. The high grade materials used in the capacitor are chosen to give superior aging and stable tonal quality over the audio range. In addition, particular care has been taken to ensure very low distortion levels, for example third harmonic distortion at 10kHz, 01A is 150dB or less.

50.8mm dia. type

Tolerance: ±20%
 Temperature range: -40 to +85°C.

Value (µF)	Working voltage (DC)	Case size (mm max) L D	Ripple current (max) at 100Hz 55°C	Leakage current (max)	Power factor (max)
4700	63	80 35.5	7.7A	5mA	0.20
10,000	63	80 50.8	13.2A	6.3mA	0.20
10,000	80	100 50.8	14.6A	8mA	0.20
22,000	56	112 50.8	22.3A	12.3mA	0.20

Ripple currents: Those shown are the maximum allowable at 100Hz, 55°C. The maximum allowable at other frequencies and temperatures is as follows:

50Hz: 95%	120Hz: 100%	1kHz: 110%
10kHz: 130%	20kHz: 133%	
20°C: 140%	40°C: 120%	
70°C: 80%	85°C: 40%	of value shown.

Dimensions for 35.5 and 40mm diameter types refer to drawings in Standard Range.

All types are supplied with vertical mounting clips. Clip dimensions in mm:

Capacitor Dia. (D)	Fixing Centres (B)	Overall area (A x C)
35.5	48	58 x 46
50.8	65 dia.	74.5 dia.

MEMORY BACKUP CAPACITORS

Memory Retention Capacitors

Elna

A range of very compact, high value polarised memory retention capacitors. Primarily intended for use with 5V CMOS low power static memory devices to provide a back-up supply so that data is retained when power is switched off. Three values are available; 0.22F, 0.47F and 1F (1F = 1 x 10⁶ µF).

Specifications

Tolerance:	-20/+80%
Working voltage:	5.5V DC (max)
Leakage current 0.22F:	135µA
0.47F:	216µA
1.0F:	315µA
Internal resistance 0.22F:	75Ω
0.47F:	30Ω
1.0F:	30Ω
Operating temperature range:	-25 to +70°C
Size 0.22F:	7.5mm x 13.5mm dia
0.47F:	8.0mm x 21.5mm dia
1.0F:	8.0mm x 21.5mm dia
Lead pitch:	5mm

Order Code	Type	Price each
JP99H	Rnd Memcap 0.22F/5.5	£1.80
JR00A	Rnd Memcap 0.47F/5.5	£3.49
JR01B	Rnd Memcap 1.0F/5.5	£3.99

Choosing an Electrolytic to Suit Your Needs

Since all electrolytic capacitors have a wide tolerance, one of the capacitors here will suffice in most cases where an electrolytic is specified. Choose the nearest value to the one specified, and the nearest voltage equal to or above the one specified, e.g. 50µF at 50V specified, nearest value 47µF; and 100V is the nearest voltage above. Thus a 47µF at 100V will perform exactly the same job as a 50µF at 50V in almost all applications, provided its physical size is not too large.

TRIMMER CAPACITORS

Miniature Film Dielectric Trimmers

A miniature trimmer sturdily constructed on a plastic frame. The dielectric is arranged so as to support the vanes giving a very high degree of stability. Adjustment is by means of a screwdriver slot in the upper face.

Working voltage:	100V DC
Insulation resistance:	>10,000MΩ
Power factor:	<10x10 ⁻⁴ at 1MHz: <25x10 ⁻⁴ at 100MHz

The following values are available:

Max value:	10pF	22pF	65pF
Range:	2 to 10pF	2 to 22pF	5.5 to 65pF
Body colour:	Yellow	Green	Yellow
*Temp. coefficient:	-200	-350	-200
Height above board(max):	10	10	11
Max diameter:	8.8	8.8	11.5
Max dissipation:	0.35W	0.35W	0.9W

*Temperature coefficient is in ppm/°C with a tolerance of ±300.

Order Code	Type	Price each
WL69A	Trimmer 10pF	42p
WL70M	Trimmer 22pF	48p
WL72P	Trimmer 65pF	56p

VARIABLE TUNING CAPACITORS

AM/FM Miniature Tuning Capacitors

Drawing of FT78K

Miniature tuning capacitors for radios, ZN414 circuits and crystal sets. Each has an antenna section and an oscillator section for each band, and a trimmer for each section. The control shaft is a flattened 6mm dia. brass spindle, tapped down the centre with an M2.5 thread. Fixing is either direct pcb or by two M2.5 screws on 14mm centres on same face as shaft. (Note: Thread length is 3mm. If using long screws, take care that they do not foul the vanes.)

Drawing of AB11M

Specifications:

For stock code:	AB11M	FT78K
Capacity AM sections:	126pF	141.6/59.2pF*
FM sections:	20pF	-
Q AM sections:	<500	500
FM sections:	<150	-
Total rotation:	180°	180°
Max voltage:	100V	100V
Dimensions mm: (excluding shaft)	20 x 20 x 13	20 x 20 x 13

*Antenna/Oscillator gang.

Order Code	Type	Price each
AB11M	Mini AM FM Tuner	£1.28
FT78K	Min AM Tuner Cap	£1.15

Variable Capacitors

Mid-line O law characteristics. Air gap 0.19mm, 500V DC tested. Front area (including vanes) 34.95 x 43.25mm. Cadmium plated steel frames. Aluminium vanes. Ceramic insulation. Silver plated wipers. All types with 1/4in. spindles.

Type O 1-Gang

Jackson

Length (excluding spindle) 23.8mm. AM capacity 10 to 365pF. Tested up to 750V.

Order Code	Type	Price each
FF39N	Vari O	£10.99

Type O 2-Gang

Jackson

Length (excl. spindle) 43.25mm. AM capacity, each gang 10 to 365pF. Tested up to 750V.

Order Code	Type	Price each
FF40T	DG Vari	£15.99

Type C804A Series

Jackson

Air dielectric trimmer, SLC Law characteristics. Air gap 0.4mm, 750V tested, air gap 1.15mm 1250V DC tested. Front plate 23.8 x 31.75mm. Values available: 10pF, 15pF, 25pF, 50pF, 100pF and 150pF.

Order Code	Type	Price each
FF42V	SW Trim 10pF	£8.49
FF43W	SW Trim 15pF	£8.49
FF44X	SW Trim 25pF	£8.99
FF45Y	SW Trim 50pF	£8.99
FF48C	SW Trim 100pF	£10.99
FF49D	SW Trim 150pF	£11.99

Dilecon Capacitors

Jackson

Solid dielectric. Front area 44.5 x 46mm. The following values are available: 6.5 to 300pF, 7 to 500pF.

Order Code	Type	Price each
FF50E	Dilecon 300pF	£9.99
FF51F	Dilecon 500pF	£9.99

CRYSTALS

A range of crystals for various applications. All types are cut for parallel resonance except those shown SR under "Load Cap" in the following tables, which are cut for series resonance. To use parallel types in a series circuit simply connect a Trimmer 65pF in series with the crystal.

The crystals are supplied in metal cans and details of the cans are given in the table immediately before 'Crystal Sockets'.

Frequency Standards

Two crystals for use in frequency counters etc., and offering very high stability are available.

Frequency	Can Style	Adjustment Tolerance	Temp Stability	Temperature Range	Load Cap
1MHz	HC-6/U	±20ppm	±50ppm	-20°C to +70°C	30pF
10MHz	HC-43/U	±20ppm	±20ppm	-20°C to +70°C	30pF

Order Code	Type	Price each
HX62S	FS Crystal 1MHz	£7.99
FY78K	FS Crystal 10MHz	£2.49

General Purpose Crystals

A range of crystals for use with microprocessors and other IC's. A typical application for each crystal is shown below.

Frequency	Application
1MHz	6800
2MHz	6502
2.4576MHz	Baud rates

2.5MHz	ZNA234E
3.6864MHz	6802
4MHz	6802, Z80A
5MHz	SAA1043
5.824MHz	TA8662
6MHz	Z80B
6.144MHz	8085A
6.552MHz	NICAM
8MHz	NSC800
12MHz	TMS9995
16MHz	General purpose
16.93MHz	TD6710
18.432MHz	8080A
20MHz	Z80A
21.47727MHz	V9938
24MHz	General purpose

Frequency	Can Style	Adjustment Tolerance	Temp Stability	Temperature Range	Load Cap
1MHz	HC-33/U	±50ppm	±50ppm	-10°C to +60°C	30pF
2MHz	HC-49/U	±30ppm	±30ppm	-10°C to +60°C	20pF
2.4576MHz	HC-49/U	±30ppm	±30ppm	-10°C to +60°C	30pF
2.5MHz	HC-49/U	±30ppm	±30ppm	-10°C to +60°C	30pF
3.6864MHz	HC-49/U	±30ppm	±30ppm	-10°C to +60°C	30pF

Colour TV Crystals

Crystals for use in colour TV receivers, TV games, home computers etc. Frequencies available operate at the colour sub-carrier frequency in American standard NTSC receivers (3.579545MHz), standard British PAL TV receivers (4.433619MHz), and at twice that frequency (8.867238MHz).

Can style	HC-49/U
Adjustment tolerance	±30ppm
Temperature stability	±30ppm
Temperature range	-10°C +60°C
Load capacitor	20pF (30pF for 8.867238MHz)

Order Code	Type	Price each
UJ03D	Crystal 3.5794MHz	99p
FY85G	Colour TV Crystal	99p
UH85G	Crystal 8.867238 MHz	£1.10

Timing Crystals

Three crystals for time keeping purposes, counters etc., using simple flip-flop divider stages. Two crystals generate 1Hz and one generates 50Hz when divided by 2¹⁵. The 32.768kHz crystal is suitable for use as a replacement in most digital watches, and the crystal for generating 50Hz can be used to drive mains operated clocks from a battery when mains fails or in portable applications.

Frequency	Application
32.768kHz	Divide by 2 ¹⁵ for 1Hz (digital watch crystal)
3.2768MHz	Divide by 2 ¹⁶ for 50Hz
4.194304MHz	Divide by 2 ²² for 1Hz

Frequency	Can Style	Adjustment Tolerance	Temp Stability	Temperature Range	Load Cap
32.768kHz	3 x 8	±15ppm	±200ppm	-10°C to +60°C	12.5pF
3.2768MHz	HC-49/U	±30ppm	±30ppm	-10°C to +60°C	12pF
4.194304MHz	HC-49/U	±30ppm	±30ppm	-10°C to +60°C	12pF

Order Code	Type	Price each
UJ02C	Crystal 32.768kHz	99p
FY86T	Crystal 50HzX 2.16	£1.20
FY87U	Crystal 1HzX 2.22	99p

Radio Control Crystals

A range of third overtone crystals for radio controlled models etc. All are plug-in with 6mm pins on 4.9mm centres and are directly interchangeable.

Can style:	HC-25/U Solder weld.
Adjustment tolerance:	±30ppm.
Temperature stability:	±50ppm.
Temperature range:	-10°C to 60°C.
Load capacitor:	20pF.
Can size:	13.5 x 11.1 x 4.7mm.

Available only in matched pairs as follows:

Channel	Transmitter frequency	Receiver frequency
Brown	26.995MHz	26.540MHz
Red	27.045MHz	26.590MHz
Orange	27.095MHz	26.640MHz
Yellow	27.145MHz	26.690MHz
Green	27.195MHz	26.740MHz
Blue	27.245MHz	26.790MHz

Suitable for use with 455kHz i.f.'s.

Order Code	Type	Price each
HX30H	MCR Crys Brown Pairs	£3.79
HX31J	MCR Crystal Red Pair	£3.79
HX32K	MCR Crys Orange Pair	£3.79
HX33L	MCR Crys Yellow Pair	£3.79
HX34M	MCR Crystal Green Pr	£3.79
HX35Q	MCR Crys Blue Pair	£3.79

Useful Information About Crystals

Style	Plug-in or Wire-in	Pins or Wire Length	Pins or Wire Spacing
3 x 8	Wire-in	6mm wires (min)	1.1mm
HC-6/U	Plug-in	6mm pins	12.3mm
HC-13/U	Plug-in	6mm pins	12.3mm
HC-18/U	Wire-in	20mm wires	4.9mm
HC-25/U	Plug-in	6mm pins	4.9mm
HC-33/U	Wire-in	20mm wires	12.3mm
HC-43/U	Wire-in	20mm wires	4.9mm
HC-49/U	Wire-in	20mm wires	4.9mm

Can Dimensions (mm)

Style	Height	Width	Thickness	Weld
3 x 8	8.1 (max)	3.1 (max)	-	Solder
HC-6/U	19.5	19.3	9	Solder
HC-13/U	38.8	19.3	9	Solder
HC-18/U	13.5	11.1	4.7	Solder
HC-25/U	13.5	11.1	4.7	Solder
HC-33/U	19.5	19.3	9	Solder
HC-43/U	13.5	11.1	4.7	Cold
HC-49/U	13.5	11.1	4.7	Resistance

Welds

Solder weld cans have dependable characteristics over a wide frequency range. After can-sealing, they are welded by solder and the air removed from the can under a vacuum. The resistance weld can offers higher quality and is free from contaminants as it is sealed within a clean, inert atmosphere. It ages more slowly than solder weld cans. The cold weld can is free from contaminants, sealed under vacuum and offers the highest quality, greatest dependability and least aging of the standard weld types.

Crystal Socket

A moulded nylon crystal socket suiting crystals with HC-25/U bases. Has a printed circuit connection.

Order Code	Type	Price each
HX60Q	Crystal Socket 25u	90p

OSCILLATORS

TV Sound IF Filters

Two TV F.M. sound I.F. bandpass filters, the 5.5MHz version follows the European TV I.F. standard, the other is for the U.K. standard of 6MHz.

Specification

	UL54J	UL53H
Centre freq.	5.5MHz	6MHz
Bandwidth	-3dB @ ±60kHz	-3dB @ ±80kHz
Insertion loss	-6dB	-6dB
Temperature range	-20°C to +180°C	-20°C to +180°C
Rated voltage	50V DC	50V DC

Order Code	Type	Price each
UL54J	Ceramic Fitr 5.5MHz	42p
UL53H	Ceramic Filter 6MHz	42p

Oscillators

A range of TTL oscillators that are housed in a standard 14-pin DIL package and have a universal output. The oscillators have a HCMOS output buffer capable of driving the usual 10 TTL loads. Therefore, the devices are both CMOS and TTL compatible. The devices offer a low-cost alternative to existing products.

Specification

Overall tolerance:	±100ppm (0.1%)
Operating temperature range:	0°C to +70°C
Supply voltage:	5V ±10%
Maximum supply current:	47mA (37mA typical)
Logic levels:	'0' +0.5V max '1' +4.5V min
Duty cycle:	40% -60% to 2.5V (45% -55% typical)
Rise/fall times:	6ns max., 10% -905 @ 15pF load
Start up times:	50ms for first full cycle to within 1% of nominal frequency
Output:	Universal - HCMOS or 10 TTL loads
Packaging:	Hermetically sealed resistance weld package

Frequency	Maplin code
24.5760MHz	CW90X
50.0000MHz	CW92A
64.0000MHz	CW93B

Order Code	Type	Price each
CW90X	24.5760MHz Osc	£2.99
CW92A	50MHz Oscillator	£2.99
CW93B	64MHz Oscillator	£2.99

Ceramic Resonator

A range of ceramic resonators that offer an alternative to quartz crystals in clock generation circuits. Both the CSA and CSB series are very stable (±0.5%), and have a high mechanical Q making them ideal for use in microprocessors and remote control units.

IT'S A FACT!

CAPACITORS

The insulating material between the plates of a capacitor is called the dielectric. Wide ranges of different materials are used as dielectrics. Capacitance is a measure of how much electrical energy can be stored by the insulating medium between two conductors. It depends on both the size of, and the distance between the conductors, and the nature of the medium.

Electrolytic - These capacitors have special chemical dielectrics that produce capacitors with very high values. The bulk of this dielectric gel is conductive, simulating many layers of conductive 'plates', and having a thin insulating layer on one of the actual metal 'plates'. Without such techniques even a modest 10µF value capacitor could be the size of a milk bottle! The most common type of electrolytic capacitor comprises aluminium

foil, which can be dimpled or corrugated to increase the effective area, enclosed in an aluminium can which is filled with a slightly acidic solution of ammonium perborate in a jelly form. The final part of the manufacturing process involves applying a slowly rising voltage to the capacitor, with the foil positive and the can negative, until the voltage reaches the rated level and the DC current falls to a minimum when the insulating film is formed, at which point the insulation is as good as it is ever going to be. The capacitor must have a DC or polarising voltage applied in the same polarity to maintain the insulating film. If the capacitor is used with a reversed voltage the film will be dissolved, the insulation is thus removed, which then allows large currents to pass through the gel, which will vaporise, and the resulting gas pressure produced will burst the can.

THE BEST OF SERVICE

Ceramic Filter

A ceramic filter designed primarily for use in FM receivers using a 10.7MHz i.f. The filters are small in size with high selectivity, good temperature stability and low distortion.

Specification

Bandwidth: 280kHz (-3dB)
600kHz max (-20dB)

Spurious peaks: (9 to 12MHz):
<40dB (typical)

Insertion loss: 6dB
Input-Output Impedance: 330Ω±15%
Breakdown voltage: 50V DC max
Ripple: <1dB

Owing to the way ceramic filters are manufactured they do not all have an exact 10.7MHz centre frequency. All designers should be aware of this fact and all commercial designs usually allow the i.f. to be used to at least 10.58 to 10.82. The fact that the i.f. is not exactly 10.7MHz has no effect whatsoever on any other parameter and the overall quality of the tuner is not affected in any way. However, it is absolutely vital that all the ceramic filters in one tuner have the same nominal centre frequency. Therefore, during manufacture they are tested and colour coded into matched groups as follows:

- 10.64MHz ±30kHz Black
- 10.67MHz ±30kHz Blue
- 10.70MHz ±30kHz Red
- 10.73MHz ±30kHz Orange
- 10.76MHz ±30kHz White

Therefore, if you are ordering ceramic filters for more than one tuner please indicate how many filters are required per tuner so that we can supply them in sets if we do not have enough of one colour to fulfil the whole order.

Order Code	Type	Price each
HX99H	Ceramic Fitr 10.7MHz	99p

50kHz Scan Filter

Bonex

A ceramic filter with a centre operating frequency of 10.7MHz, and an especially narrow bandwidth.

Specification

Bandwidth: 50kHz
Input-Output Impedance: 330Ω
Breakdown voltage: 50V DC max

Dimensions: width 8mm x height 7mm x 3mm thick.
Pin spacing 2.5mm.

Order Code	Type	Price each
UF71N	Fitr 10.7MHz/50kHz	£1.49

Saw TV IF Filter

A Surface Acoustic Wave (S.A.W.) I.F. filter for PAL T.V. which is NICAM compatible. Passes vision carrier at 39.5MHz, F.M. sound carrier at 33.5MHz and NICAM at 32.948MHz. Separate outputs for vision and sound. Vision channel has a Nyquist slope in the vision carrier region and a flat group delay characteristic. Sound channel has peaks at vision and NICAM sound carriers.

Pin	Description
1	Input
2	Ground
3	Balanced sound output
4	Balanced sound output
5	Balanced vision output
6	Balanced vision output
7	No connection
8	Input return

Specification

Type: SW166
Package: 8-pin TO8
Ambient operating temperature: 20°C
Source impedance: 50Ω
Load impedance: 2kΩ
Sound channel*
Insertion loss: 15dB @ 39.5MHz
NICAM carrier: 0dB
Sound carrier: -3.5dB
In-band trap: -35dB @ 35-38MHz
Adjacent vision trap: -45dB @ 31.5MHz
Adjacent sound trap: -50dB @ 41.5MHz
Group delay ripple: 40ns typ.
Output impedance: 1.4kΩ
Vision channel**
Insertion loss: 17.7dB @ 38MHz
Vision carrier: -5.3dB
Colour carrier: -4.5dB

Patch Lead Set

Six short colour coded screened leads terminated with right angled 1/4in. mono jack plugs for chaining several items of audio or stage equipment together. Supplied as a set. Length 300mm each. Colours: Black, Blue, Green, Yellow, Red, White.

Order Code	Type	Price each
YZ32K	Patch Lead Set	£5.99

Stereo/Mono Patch Bay

A 19in. 1U high, rack mounting 48-way mono or 24-way stereo patch bay. Standard operation is in normalised or half normalised modes and by simply rotating any PCB through 180° will give de-normalised operation. Individual patch bays are numbered '1' to '24', with convenient 'write-on' labels. The unit is of a high quality construction with a steel epoxy resin coated chassis, fibreglass PCB and nickel/silver contacts which have a switch contact better than 15mΩ.

Order Code	Type	Price each
RZ78K	B2 Stereo/Mono Patchbay	£54.99

1/4in. Plug to 3.5mm Mono Socket Adaptor

Allows a 3.5mm mono jack plug to be used with a 1/4in. mono jack socket.

Order Code	Type	Price each
RW00A	Adaptor A	59p

1/4in. Plug to 1/4in. Stereo Socket Adaptor

Allows a 1/4in. stereo jack plug to be used with a 1/4in. mono jack socket.

Order Code	Type	Price each
FK11M	Adaptor L	54p

1/4in. Plug to Phono Socket Adaptors

Allows a phono plug to be used with a 1/4in. mono jack socket. Available with plastic body or high quality gold-plated metal body.

Order Code	Type	Price each
RW01B	Adaptor B	59p
KW36P	Adaptor B Gold	80p

Guitar Leads

Coiled Right Angled Mono 1/4in. Jack Lead

A coiled extension lead terminated with a right angled mono 1/4in. jack plug and a straight 1/4in. jack plug. Coiled length 1.2m. Extended length 3.5m.

Order Code	Type	Price each
RW34M	Pluggak X	£2.29

Straight Mono 1/4in. Jack Lead

A straight extension lead terminated with a metal bodied 1/4in. jack plug at each end. The plug bodies have knurled finger grips and coiled spring strain relief sleeves. Length 3m.

Order Code	Type	Price each
YZ29G	Strght 1/4 Jack Lead	£2.99

Double Screened Straight Mono 1/4in. Jack Lead

A straight extension lead terminated with a metal bodied 1/4in. jack plug at each end. The plug bodies are sleeved with chunky moulded plastic finger grips. The cable features a conductive polythene screen over a polythene insulator for the central conductor which is in overall contact with an outer copper braided screen for minimum noise pick-up. Length 4.5m.

Order Code	Type	Price each
YZ30H	DS Strght 1/4 Jk Ld	£4.59

Double Screened Coiled Mono 1/4 in. Jack Lead

A coiled extension lead terminated with a metal bodied 1/4 in jack plug at each end. The plug bodies are sleeved with chunky moulded plastic finger grips. The cable features a conductive polythene screen over a polythene insulator for the central conductor which is in overall contact with an outer copper braided screen for minimum noise pick-up. Coiled length 1m. Extended length 3.2m.

Order Code	Type	Price each
YZ31J	DS Coiled 1/4 Jk Ld	£4.99

Long Double Screened Coiled Mono 1/4 in. Jack Lead

A coiled extension lead terminated with plastic bodied 1/4 in. jack plugs at each end, with chunky moulded finger grips. The cable has a conductive polythene screen over a polythene insulator for the central conductor, in contact with an outer copper braided screen for minimum noise pick-up. Coiled length: 1.3 metres. Extended length: 5.4 metres. Colour black.

Order Code	Type	Price each
JX84F	LD Coiled 1/4 Jk Ld	£6.99

High Quality Straight Mono 1/4 in. Jack Lead with OFC Conductors

A straight extension lead terminated with a black, metal bodied, 1/4 in. jack plug at each end. The plug bodies have knurled finger grips and coiled strain relief

sleeves. Untinned OFC (oxygen free copper) conductors are used for unparalleled sound purity. Length 6 metres. Colour black.

Order Code	Type	Price each
JX85G	OFC 1/4 Jack Lead	£14.99

Neon Extension Leads

A range of very flexible quality extension leads in a bright fluorescent neon coloured cable. The ends are terminated in standard 1/4 in. jack plugs that are protected and strain relieved by black heat-shrink sleeving. Choice of three colours: green, pink, orange. Length 6m.

Order Code	Type	Price each
CC36P	Neon Lead Green	£8.99
CC37S	Neon Lead Pink	£8.99
CC38R	Neon Lead Orange	£8.99

Guitar Lead

A straight extension lead of the highest quality with a brass bodied, 1/4 in. jack plug at each end. The jack plug bodies have knurled finger grips and moulded strain relief sleeves. This lead is manufactured with untinned OFC (oxygen free copper) conductors to preserve sound purity. Length 6m. Colour black.

Order Code	Type	Price each
CC39N	Guitar Lead	£7.99

1/4 in. Stereo Jack Connectors

Plastic Barrel Plug

A standard 1/4 in stereo jack plug with plastic barrel and strain relief sleeve.

Order Code	Type	Price each
HF88V	Jack PI Sto Plas	£2.99

Side Entry Plug

Standard 1/4 in stereo side entry jack plug with plastic body.

Order Code	Type	Price each
FK00A	Stereo R/A 1/4 in Jk	60p

Screened Plug

A standard 1/4 in. screened stereo Jack plug with a metal barrel and coiled spring cable relief sleeve.

Order Code	Type	Price each
HF89W	Jack PI Sto Metal	77p

Gold-Plated Jack Plug

A gold-plated stereo 1/4 in jack plug, having a plated barrel in addition to plated contact areas, plus a coil spring strain relief sleeve.

Order Code	Type	Price each
FM12N	Gold Stereo 1/4 in Jk	£1.49

Screened Side-Entry Plug

Standard 1/4 in. right-angled side entry stereo jack plug with a metal body.

Quality Gold Plated Phonos

A very high quality screened phono plug having gold plated contact surfaces and a gold plated body in silver-grey or blue. Includes gold plated strain relief grip. Each type is sold in pairs, with a red and black identification band.

Order Code	Type	Price each
AQ57M	Silv Red+Blk Phono Pk	£4.49
AQ56L	Blu Red+Blk Phono Pk	£4.49

Metal Barrel Gold-Plated Phono Plugs For Large Diameter Cables

A range of high quality metal barrelled phono plugs with gold plated contact surfaces for minimum contact resistance and maximum reliability. These plugs are designed for use with large diameter cables, often encountered in semi-professional and professional applications. Suffix 70 types have 27mm x 12mm dia. bodies finished in black with knurled grip rings, an 18mm long coil spring strain relief and are suitable for cables up to 7mm diameter. Suffix 85 types have 36 x 14mm dia. black knurled bodies, a 34mm long coil spring strain relief and are suitable for cables up to 8.5mm diameter, a substantial tubular cable clamp will ensure cable retention. Both types are available with red or white identifier bands around the plug body; for left/right identification in stereo applications.

Order Code	Type	Price each
JU06G	Gold Phono P1-R-70	£1.29
JU07H	Gold Phono P1-W-70	£1.29
JU08J	Gold Phono P1-R-85	£1.64
JU09K	Gold Phono P1-W-85	£1.64

High Quality Gold-Plated Phono Plugs

A range of metal barrelled, gold-plated phono line plugs with different cable entry diameters to match 5, 6, 7 and 8mm dia. sleeving. The high quality of construction includes a body containing a split collet with a ridged inner surface, to grip outer screen when folded back over outer sleeve. Inner conductor can be soldered to centre pin. Insulation material is Teflon. Available with black or red identification band.

Order Code	Type	Price each
JZ07H	Gld Phono Plg 5mm Bk	£1.69
JZ08J	Gld Phono Plg 5mm Rd	£1.69
JZ09K	Gld Phono Plg 6mm Bk	£1.69
JZ10L	Gld Phono Plg 6mm Rd	£1.69
JZ11M	Gld Phono Plg 7mm Bk	£1.80

JZ13P	Gld Phono Plg 8mm Bk	£1.80
JZ14Q	Gld Phono Plg 8mm Rd	£1.80

Lockable Plug and Socket

A phono plug in a metal barrel having a threaded locking ring to firmly attach the plug to the matching socket. Plug has a coiled spring cable relief sleeve. Mounting hole for socket 6.3mm.

Order Code	Type	Price each
JB14Q	Locking Phono Plug	99p
JB15R	Locking Phono Socket	82p

Single-Hole Fixing Chassis Socket

A chassis mounting phono socket that requires a single hole fixing. Mounting hole: 6.35mm dia.

Order Code	Type	Price each
YW06G	Chassis Phono Skt	34p

Gold-Plated Socket

A chassis mounting phono socket with gold-plated contact surfaces for ultimate reliability. Available with either Red or Black colour bands to identify relevant channel. Single hole fixing. Mounting hole: 6.3mm dia.

Order Code	Type	Price each
FT95D	Gold Phono Skt Blk	74p
DE77J	Gold Phono Skt Red	74p

Gold Single-Hole Fixing Insulated Chassis Socket

A chassis mounted phono socket, the body of which is insulated from its panel by shoulder washers. Fixed with supplied nut and tag washer for separate screen connection. Teflon insulation, gold-plated. Available with black or red identification band.

Order Code	Type	Price each
JZ05F	Gld Ch Phono Skt Blk	£1.75
JZ06G	Gld Ch Phono Skt Red	£1.75

PCB Mounting Socket

A compact phono socket which mounts directly onto printed circuit boards. Dimensions: 22 x 15 x 10mm.

Order Code	Type	Price each
HF99H	PCB Phono Skt	45p

Chassis Sockets

Chassis mounting phono sockets fixed to paxolin panels.

Type	No. of sockets	Dimensions of mount mm	Fixing centres mm	Socket centres mm
Single	1	35 x 22	26	-
Twin	2	56 x 22	48	20
Quad	4	76 x 24	65	14
2 Square	4	49 x 36	40 x 26	15 x 16
6-Way	6	65 x 36	55 x 26	15 x 16
8-Way	8	80 x 36	70 x 26	15 x 16

Fixing holes are 3.75mm dia. Phono sockets require 8.5mm dia. cut-outs.

Order Code	Type	Price each
JH93B	Phono Socket Single	21p
JK15R	Phono Socket Twin	36p
BW74R	Phono Socket Quad	56p
JK16S	Phono Socket 2 Sqre	58p
JH95D	Phono Socket 6-way	75p
JK17T	Phono Socket 8-Way	99p

Plastic Line Socket

An in-line plastic barrel phono socket with strain relief sleeve. Available in red and black.

Order Code	Type	Price each
FJ90X	Line Phono Skt Blk	26p
JK23A	Line Phono Skt Red	26p

Screened Line Socket

A screened in-line metal barrel phono socket with coiled spring cable relief sleeve.

Order Code	Type	Price each
HH04E	Line Phono	39p

YW39N	Adaptor X	99p

Phono Plug to 1/4 in. Mono Jack Socket Adaptor

Allows a 1/4 in. mono jack plug to be used with a phono socket.

Order Code	Type	Price each
RW05F	Adaptor F	59p

3-Pin Chassis Plug

Mounting hole: 19mm dia. Bezel: 22 x 36.5mm. Fixing centres: 27mm x M3 countersunk. Overall depth: 25mm.

Order Code	Type	Price each
BW92A	XLR Chassis Plug	£1.86

Phono Plug to Phono Plug

Phono plug to phono plug lead. Length 1.5m. Also see Video Connectors.

Order Code	Type	Price each
RW48C	Pluggak 279	99p

XLR-Type Connectors

3-Pin Plug

Professional quality connectors for use on audio and test equipment etc. The strong metal housings are sandblasted die-cast zinc then copper and nickel plated. Contacts are brass, mercury dipped then silver plated. Self-adjusting strain-relief sleeves on line plug and socket will accommodate cables from 4 to 7mm dia. preventing damage to cable sheath up to 50kg stress.

Current rating: 15A at 120V AC
Contact resistance: 5mΩ max

All parts are latching and will mate with other 3-pin XLR connectors.

Overall length: 70mm. Diameter: 19mm.

Order Code	Type	Price each
BW89W	XLR Line Plug	£2.35

Twin Phono Plug to Phono Plug

Two phono plugs to two phono plugs. Length 1.5m.

Order Code	Type	Price each
RW50E	Pluggak 282	£1.49

Quad Phono Plug to Phono Plug

Four phono plugs to four phono plugs. Length 1.5m.

Order Code	Type	Price each
RW51F	Pluggak 283	£2.19

IT'S A FACT!

Peritelevision (SCART) Audio-Visual Interface Standard

The Peritelevision (also known as SCART) audio-visual interface standard was developed by the European Committee for Electrotechnical Standardisation (CENELEC), as a universal means of interfacing a wide variety of audio-visual equipment; namely the domestic TV, DBS and other satellite decoders, video recorders, video disc players, video cameras, domestic computer equipment, etc. Interface connection is via a single multipole connector, carrying a variety of audio, video and control signals, which is incapable of incorrect connection, thus avoiding problems associated with individual connectors being used for each component signal; which give rise to possible incorrect connection. Many current models of domestic TV and video equipment are provided with Peritel interface connectors.

The Peritelevision interface standard is defined by the European Standard EN 50 049 and the British Standard BS 6552, which is the English language version of the European Standard EN 50 049. Copies of the British Standard BS 6552 publication (payment required) may be obtained from BSI Sales Dept., Linford Wood, Milton Keynes, MK14 6LE. Tel: 0908 220022.

The Peritelevision interface consists of a socket, panel mounted on the equipment; and a plug, attached to the interconnecting cable. Connection between socket and plug is via a staggered 2 row by 10 contact arrangement, plus a contact encompassing shield contact; providing a total of 21 connections.

The pin designations of the Peritel connector are shown here in Figure 1 and Table 1.

Source Selection Table

P8	P16	Source Selected
0	0	Normal 'off-air' signal
0	1	RGB Input
1	0	Composite Input
1	1	RGB Input

Peritel Interconnecting Cables

All equipment fitted with a Peritel socket should have the pins connected as designated, to connect two pieces of equipment an interconnecting cable fitted with Peritel plugs is used. To provide the necessary connection between equipment the interconnecting cable needs to fulfil connections between the appropriate pins, this involves some conductors 'crossing' from input to output (and vice versa), whereas ground and control conductors connect 'straight'. This is illustrated in Figure 2. To allow interconnecting cables to be extended socket to plug and socket to socket interconnecting cables can be used. To prevent 'crossed' connections from becoming 'uncrossed' the following guidelines should be used when making

Figure 2

up interconnecting cables: Plug to Plug, Conductors 'Crossed' as Figure 2; Socket to Plug, Conductors 'Straight' (Pin 1 - Pin 1, Pin 2 - Pin 2, etc.); Socket to Socket, Cables 'Crossed' as Figure 2.

Within the Peritel Standard it is permissible to employ only the conductors required to provided the interconnection, instead of connecting all 21 pins; for example just composite video and audio, but not RGB video. The following connection configurations have been adopted as standard. Type U (Universal) - provides connections to all 21 pins. Type V (Video) - provides all connections excluding Audio pins (3, 1, 6, 2 & 4). Type C (Composite Video & Audio) - provides all connections excluding RGB Video & Blanking pins (15, 13, 11, 9, 7, 5, 16 & 18). Type A (Audio) - Provides all connections excluding Video pins (19, 20, 17, 15, 13, 11, 9, 7, 5, 16 & 18).

Assembling Custom Cables

When assembling custom cables for particular applications, where a standard cable cannot be used (i.e. computer to TV) it is important to use the correct type of cable for the signal being carried: Video (including sync and blanking) connections should be made with 75Ω coaxial cable (e.g. Miniature Coax XR88V) and Audio connections with screened cable (e.g. Low Noise Screened XR18U, Cable Quad XR23A). Other connections should be made with standard insulated cable (e.g. 7/0.2 Wire BL00A). The bundle of cables should be neatly bound by using cable ties at 200mm intervals (approx.), Spiral Wrap or Systoflex sleeving.

Low Cost XLR - Type Connectors

A range of low cost professional quality plugs and sockets moulded from tough nylon. Metal fittings are silver-plated brass. Sockets may be mounted to the front or rear of a chassis, and rear mounting may utilise the PC type. The sockets are panel air-tight construction and secured by two diagonal M3 countersunk screws. Matching male and female plugs are available, and incorporate integral cable/strain relief.

Specification
 Current rating: 3-pin 16A/250 VAC
 Contact resistance: <3mΩ
 Insulation resistance: 1600 VAC between contacts and housing
 Mounting hole: 21.5mm
 Fixing centres: 24 x 18mm

Type	Overall depth	Socket
ACF	32.5mm	female
ACM	30mm	male
ACF-PC	27mm	female PCB type
ACM-PC	27mm	male PCB type
APF	91.6mm	female
APM	92.8mm	male

Optical Fibre Lead

Digital Optical Fibre Lead

An optical fibre lead specifically designed for use with CD equipment, to link the CD player to an external D to A converter unit and convert the digital data into analogue information. The lead is 1m long and manufactured from high quality, flexible, fibre optic light guide material. It is covered in a black protective sheath and terminated with standard couplings to fit most CD's.

Order Code	Type	Price each
CC40T	Fibre Optic Lead Dig	£14.99

Video Connectors

EIA 8 Pin Video Plug

An 8-pin video plug connector to EIA standard with smart plastic body with sprung locking catches and cable clamp.

Order Code	Type	Price each
FJ70M	8 Pin EIA Plug	£2.45

Peritel (SCART) Line Connectors

A 21-way Peritel (SCART) line plug for use with audio/video equipment. Available in both line plug and line socket. Both connectors have plastic connector housings and cable clamps.

Order Code	Type	Price each
FJ41U	Peritel Line Plug	£1.29
JW33L	Peritel Line Skt	99p

Peritel (SCART) PCB Socket

21-way Peritel (SCART) PCB mounting sockets for use with audio/video equipment. Available in right angle and straight versions. Sockets have M3-5mm fixing holes on 58.5mm centres, for panel fixing etc. Panel cut out 48 x 17mm.

Order Code	Type	Price each
FV89W	Peritel R/A PCB Skt	60p
JW34M	Peritel St PCB Skt	£1.10

Round 10-Way

A high quality set of plugs and sockets, mainly for use as video camera connectors. Connectors are keyed and a screw locking mechanism locks them tightly in place. Line socket overall length is 66.5mm, diameter 20mm. Line plug overall length is 70mm, diameter 23mm. Chassis mounting socket length is 18mm, and requires a 16.5mm diameter panel cut-out.

Order Code	Type	Price each
RK52G	10 Way Line Skt	£4.29
RK53H	10 Way Line Plug	£4.29
RK54J	10 Way Chassis Skt	£1.99

Video Lead 1

A BNC plug to BNC plug with approx. 1.5m of cable.

Order Code	Type	Price each
RK84F	Video Lead 1	£2.99

Video Lead 4

Phono plug to phono plug with approx. 1.5m of cable.

Order Code	Type	Price each
RK86T	Video Lead 4	£1.79

Video Lead 5

BNC plug to phono plug with approx. 1.5m of cable.

Order Code	Type	Price each
RK87U	Video Lead 5	£1.99

Video Lead 6

Phono plug to coax plug with approx. 1.2m of cable.

Order Code	Type	Price each
FV90X	Phono/Coaxplg Vid Ld	£1.20

Atari ST to Philips 8833/2 Monitor Lead

A high quality lead set for connecting an Atari ST computer to a Philips 8833/2 monitor. A direct RGB connection is made to the monitor eliminating picture deterioration normally due to conversion of the video signal. The video connection on the ST can be made semi-permanent by tightening the retaining screws on the 9-pin D type connector. Stereo sound signals from the ST are conveyed to the monitor by plugging into the phono sound sockets on the computer. All video and sound connections are made on the back of the monitor by way of a 13-pin high density DIN plug. Overall length: 1.5m.

Order Code	Type	Price each
RZ80B	Atari ST/Philips Ld	£9.99

AUTOMOTIVE CONNECTORS

Skeleton Plug

A skeleton-type plug which fits the aerial sockets fitted to most car radios.

Order Code	Type	Price each
HH13P	Skeleton Car Plug	26p

Plastic Plug

A car aerial plug similar to the skeleton plug above, but with plastic body and screw-on cap.

Order Code	Type	Price each
HH12N	Car AE Plug Plas	72p

Line Socket

A line socket for extending a car aerial lead.

Order Code	Type	Price each
FJ76H	Car AE Line Skt	79p

Socket

A chassis mounting socket to suit above car plugs. As fitted on many car radios. Panel cut-out: 12.7mm. Fixing centres: 20mm x 6BA clear.

Order Code	Type	Price each
HH14Q	Chassis Car Socket	38p

Car Accessory Plug

A plug for cigarette lighter sockets to which car accessories may be connected.

Order Code	Type	Price each
-HW12N	Car Accessory Plug	69p

Car Accessory Plug

A plug for connecting car accessories to the vehicles 12 volt supply via the cigarette lighter socket. Two versions are available: fused and unfused. The fused version takes a 1 1/4 in. long fuse. Fuse not supplied.

Order Code	Type	Price each
CC30H	Car Acc Plug	80p
CC31J	Car Acc Plug Fused	99p

Car Accessory Socket

An in-line socket for cigarette lighter plugs.

Order Code	Type	Price each
FE42V	Car Accessory Skt	79p

Cigarette Lighter Extension Lead

An extension lead with plug at one end to fit the cigarette lighter socket in a car and socket at the other end to accept cigarette lighter plug. Approx. 3.7m of lead.

Order Code	Type	Price each
YB68Y	Car Lighter Ext Lead	£2.49

CLIPS AND TERMINALS

Min Crocodile Clips

A range of crocodile clips with insulating vinyl covers in six colours, Red, Black, Yellow, Green, White and Blue. Clips are 27mm long. Overall length with sleeve 33mm. Also available with completely gold-plated clip with Red or Black sleeve.

Order Code	Type	Price each
FM37S	Red Croc Clip	19p
FK34M	Black Croc Clip	19p
FK35Q	Yellow Croc Clip	19p
FK36P	Green Croc Clip	19p
FK37S	White Croc Clip	19p
FM11M	Blue Croc Clip	19p
FS54J	Gold Croc Clip Red	29p
FS55K	Gold Croc Clip Black	29p

Standard Crocodile Clips

A range of crocodile clips with insulating vinyl covers in six colours, Red, Black, Yellow, Green, White and Blue. Clips are 35mm long. Overall length with sleeve 42mm. Also available with completely gold-plated clip with Red or Black sleeve.

Order Code	Type	Price each
FS48C	Std Croc Clip Red	22p
FS49D	Std Croc Clip Black	22p
FS50E	Std Croc Clip Yellow	22p
FS51F	Std Croc Clip Green	22p
FS52G	Std Croc Clip White	22p
FS53H	Std Croc Clip Blue	22p
FS56L	Gld Std CrocClip Red	32p
FS57M	Gld Std CrocClip Blk	32p

Large Crocodile Clip

Crocodile clips with insulating vinyl covers in red and black. Clips are 50mm long and have a 4mm socket with insulating sleeve formed on one side of the clip. Overall length with sleeve 58mm.

Order Code	Type	Price each
HF23A	4mm Croc Clip Black	39p
HF24B	4mm Croc Clip Red	39p

Battery Charger Clips

Union Brothers

Large plated clip as used on battery chargers. Overall length 75mm. Width of jaws 15mm, maximum gap between jaws when fully opened 28mm. Current rating 25A.

Order Code	Type	Price each
HF26D	Charger Clip	39p

Insulated Battery Charger Clips

Large, heavily-sprung plated clip for use with battery chargers etc. Overall length 74mm. Width of jaws 16mm. Max gap between jaws when fully opened 15mm. Current rating 25A. The clips have a screw terminal connection and very thick PVC insulating cover available in red or black.

Order Code	Type	Price each
FS86T	Large Batt Clip Red	50p
FS87U	Large Batt Clip Blk	50p

CONTACT LUBRICANT

An extra high quality contact treatment oil for preserving long term reliability and performance. It is anti-static, and safe to use on most plastics, paints and rubbers. Supplied in 200ml aerosol can.

GREAT VALUE!

£8.49

JH66W	Spade 5.3mm	32p

Crimp Connector Sets

A choice of three kits, one containing 100 and one 300 assorted insulated crimp terminals and connectors and the other containing 50 and a crimping tool. The crimp tool has bolt cutters for M2.5, M3, M3.5, M4 and M5 bolts, wire strippers for wires and cables of conductor area 0.75, 1.0, 1.5, 2.5, 4.0 and 6.0mm², a wire cutter and it can crimp red, blue and yellow insulated crimp connectors. Terminals are tin-plated copper with PVC insulation. Types with red sleeves suit cables from 0.4mm² to 1.0mm², with blue sleeves from 1.1mm² to 2.6mm² and with yellow sleeves from 2.7mm² to 6.6mm².

Wire Joints

Plastic wire connectors. Max temperature 105°C.

Type	Suits wires (mm ²)	Overall diameter (mm)	Overall length (mm)
Small	0.5 to 1.5	8.5	14.5
Large	1.5 to 2.5	10	17.5

Supplied in packs of 10.

Order Code	Type	Price each
JH91Y	Ins Wire Joint Small	36p
JH92A	Ins Wire Joint Large	49p

Crimp Terminals Uninsulated

Tin-plated copper crimp terminals with solder-filled seams, suitable for wires from 0.4mm² to 1.0mm². Wire entry 1.7mm inside diameter, 3.3mm outside diameter. Terminal thickness 0.8mm.

Eyelets	External diameter	Overall length	Suits bolts
Type (Int dia.)	mm	mm	mm/BA
3-2	5.5	11.2	3/6
4-3	8	15.5	4/4
5-3	8	15.5	5/2

THE BEST OF SERVICE

Snap-Lock Automotive Cable Connector

A very quick and reliable way of connecting additional cables to existing wiring in automotive applications, for example fitting car alarms, radio-cassette units, etc. The cables to be joined are placed inside the snap-lock connector, the cover is pushed home with a pair of pliers and locks shut, thus completing the connection.

Order Code	Type	Price each
JR88V	Quick Snap Connector	15p

Terminal Post with Small Handle

Nickel-plated brass terminal post rated 15A at 250V. It has a 4mm top socket and 2.1mm dia. hole in post. Knob size: 14mm x 11.5mm dia. Fits panels from 0.9mm to 5mm (20swg to 6swg) thickness. Available in the following colours: Black, Blue, Green, Red, White and Yellow.

Order Code	Type	Price each
FD69A	Small Term Post Blk	59p
FD70M	Small Term Post Blue	59p
FD71N	Small Term Post Gm	59p
FD72P	Small Term Post Red	59p
FD73Q	Small Term Post Wht	59p
FD74R	Small Term Post Ylw	59p

Terminal Post with Large Handle

Nickel-plated brass terminal post with insulation moulded in polypropylene. Rated 15A at 240V. It has a 4mm top socket and 2.3mm dia. hole in post. Knob size: 17mm x 12.5mm dia. Fits panels up to 3mm (12swg) thickness. Available in the following colours: Black, Blue, Green, Red and Yellow.

Order Code	Type	Price each
HF02C	Large Term Post Blk	65p
HF03D	Large Term Post Blue	65p
HF05F	Large Term Post Gm	65p
HF07H	Large Term Post Red	65p
HF09K	Large Term Post Ylw	65p

Twin Terminal Post

Gold-plated brass terminal posts, one with a red and one with a black knob on a twin base having one part red and one part black, so that the part on the outside of the chassis can be either red or black. Rated 15A at 240V. Each post has a 4mm top socket and a 2.1mm dia. hole in post. Knob size 16 x 15mm dia. Fits panels from 1.2mm dia. to 7mm thick. Panel cut-out requires two 12.7mm holes on 18.5mm centres. Bezel size 35mm x 16mm.

Order Code	Type	Price each
JK24B	Pair Terminal Posts	£1.89

30A Terminal Post

Cliff

A 30A terminal (binding) post that will accept a 4mm plug-in front or through a cross hole in the post. Available in red and black. Mounting hole: 7mm.

Order Code	Type	Price each
CX83E	30A Post Red	£1.39
CX84F	30A Post Black	£1.39

Recess Terminal Mounting Plate

Cliff

A mounting plate for two 30A terminals that replaces the top insulators of those terminals. Available in black.

Order Code	Type	Price each
CX85G	Mounting Plate	18p

Grounding Post with 4mm Socket

A grounding (terminal) post for use on equipment where a connection needs to be made to the earthed case, e.g. power supplies and measurement equipment. The post is made of chromed brass. It has a central hole to accept a 4mm plug and a 2mm hole in the post. Requires a 5.5mm mounting hole. Overall size 21mm x 10mm dia. Supplied with locking washer, solder tag and two nuts.

Order Code	Type	Price each
JL99H	Grounding Post	55p

Spade Terminals Solder Type

Union Brothers

A spade terminal with insulated handle for use with our terminal posts. Wire is soldered to spade. Spade has 6.3mm (1/4 in.) opening. Overall length 36mm. Overall width 12mm. Available in red and black.

Order Code	Type	Price each
FS90X	Solder Spade Red	49p
FS91Y	Solder Spade Black	49p

Spade Terminals Screw Type

Cliff

A spade terminal with insulated handle forming a 4mm socket, for use with our terminal posts. Grub screw in handle clamps wire to spade. Spade has 6.3mm (1/4 in.) opening. Overall length 42mm. Overall width 15mm. Available in red and black.

Order Code	Type	Price each
JC20W	Screw Spade Red	39p
JC21X	Screw Spade Black	39p

Screw Terminals

Union Brothers

A paxolin strip having a pair of solder tags for terminating wires to a pair of screw terminals. The strip can be attached to a panel or instrument case within a suitably shaped cutout to provide a basic, simple method of connecting cables to the instrument or equipment in question. Bare wires can be wrapped around the screws before tightening, or spade terminals can be used; the screw terminals have ears to positively locate the spades. The screws are M4 size, and suitable for use with 4BA spades and tag washers. Overall size 42 x 18mm. Fixing centres 33mm. Screw/tag spacing 14.5mm.

A four way version of the above. Overall size 72 x 18mm. Fixing centres 62mm. Screw/tag spacing 14.5mm.

Order Code	Type	Price each
FK16S	Screw Terminal 2-Way	40p
FK17T	Screw Terminal 4-Way	70p

Quick Connection Lever Terminals

Spring loaded, lever action, quick connection terminals which will hold wires in a vice-like grip. These terminals, originally intended for terminating loudspeaker leads, have many uses.

The 2-way lever terminal on a round escutcheon has one red and one black lever marked '+' and '-', and 'INPUT'. Escutcheon diameter 74mm. Requires 50mm diameter panel cut-out. Fixing centres 43.5 x 43.5mm x 3mm clear. Overall depth 28mm.

The 2-way lever terminal on a rectangular escutcheon has one red and one black lever. Escutcheon size 55 x 24mm. Fixing centres 43.5mm x 3mm clear. Max depth 22mm. The two solder tags are 4mm from one edge and 19mm apart. The 4-way type has two black and two red levers on a base 70 x 24mm. Fixing centres 60mm x 3mm clear. Max depth 22mm. The four solder tags are 4mm from one edge and 13mm apart.

Order Code	Type	Price each
JK18U	Lever Term 2-Way Rnd	55p
BW72P	Lever Term 2-Way	55p
BW71N	Lever Term 4-Way	85p

Speaker Terminal

A spring loaded terminal for gripping speaker wires etc. The terminal is attached to a base panel with a threaded M3 stud and nut. In use, simply depress plunger and insert wire into side hole. Available in red and black.

Order Code	Type	Price each
JY89W	Spkr Term Blk	49p
JY90X	Spkr Term Red	49p

COMPUTER LEADS

Computer Lead 1

Union Brothers

7-pin DIN plug to 2 x 3.5mm jack plugs and a 2.5mm jack plug. Length: 1m (approx).

Order Code	Type	Price each
FG18U	Computer Lead 1	£2.99

Computer Lead 4

5-pin DIN plug to 2 x 3.5mm jack plugs and 2.5mm jack plug. Length: 1m (approx.)

Order Code	Type	Price each
FG21X	Computer Lead 4	£2.49

RS232C to RS232C M/M

A fully screened 25-way computer cable having 25-way D-range plugs at both ends. Cable is 1.8m long. Pins are connected 1 to 1, 2 to 2 etc. All 25 pins are connected.

Order Code	Type	Price each
JC12N	D25P/D25P Lead	£6.99

Centronics to Centronics M/F

A fully screened 25-way computer cable having a 36-way Centronics-type male plug at one end and a 36-way Centronics-type female socket at the other. Cable is 1.8m long. Pins are connected 1 to 1, 2 to 2 etc., but pins 15, 16, 17, 18, 20, 22, 24, 26, 28, 34 and 35 are not connected.

Order Code	Type	Price each
JC15R	Cent36P/Cent36S Lead	£6.99

Computer Lead 5

A metre of 50 way IDC cable having a 50 way IDC edge connector at one end, and a 50-way transition header at the other end. Particularly suitable for use with the Amstrad CPC 464.

Order Code	Type	Price each
FT66W	Computer Lead 5	£5.99

RS232C to RS232C M/F

A fully screened 25-way computer cable having 25-way D-range plug at one end and 25-way D-range socket at the other. Cable is 1.8m long. Pins are connected 1 to 1, 2 to 2 etc. All 25 pins are connected.

Order Code	Type	Price each
JC13P	D25P/D25S Lead	£6.99

Centronics to Centronics M/F IDC

Union Brothers

A flat 36-way IDC ribbon cable having a polyester 36-way male Centronics plug at one end and a 36-way female Centronics socket at the other. Cable is 1.8m long.

Order Code	Type	Price each
JC16S	IDC Cent36P/36S Lead	£8.99

RS232C to Centronics

A fully screened 25-way computer cable having a 25-way D range plug at one end and a Centronics-type 36-way male plug at the other. Cable is 1.8m long. Suitable for interfacing IBM PC, Apple III etc. to parallel printers etc. The following pins are connected.

Other pins in the 36-way plug are not connected.

Order Code	Type	Price each
JC11M	Cent36P/D25P Lead	£6.99

RS232C to RS232C M/F IDC

A flat 25-way IDC ribbon cable having a polyester 25-way D-range plug at one end and a polyester 25-way D-range socket at the other. Cable is 1.8m long.

Order Code	Type	Price each
JC17T	IDC D25P/D25S Lead	£6.49

Centronics to Centronics M/M

A fully screened 25-way computer cable having 36-way Centronics-type male plugs on both ends. Cable is 1.8m long. Pins are connected 1 to 1, 2 to 2 etc., but pins 15, 16, 17, 18, 20, 22, 24, 26, 28, 34 and 35 are not connected.

Order Code	Type	Price each
JC14Q	Cent36P/Cent36P Lead	£7.99

Printer Cable 26-Way

A 26-way ribbon cable, connected to a 26-way (2 x 13) way IDC socket at one end and a Centronics type plug at the other. Ideal for use with the BBC Micro. Length 1 metre.

Order Code	Type	Price each
FG30H	Printer Cable 1	£5.99

MSX Printer Cable

This cable comprises a cable 1 metre in length, and terminated in a 14-way Centronics type connector at one end and a 36-way Centronics type connector at the other end.

Order Code	Type	Price each
FV93B	MSX Printer Cable	£11.99

D SERIES CONNECTORS

A range of standard D series connectors. Plugs and sockets may be in-line or panel mounted and are available with solder connections, straight pcb connections or right angle pcb connections. A range of shells with separate pins is available so that connectors may be constructed having pins only in the positions required. A wide range of covers is also available.

Solder Type

Gold over nickel plated copper alloy contacts identified on both sides of the PBT and glass fibre reinforced moulding (UL-94-V0). Solder cup terminations.

Specification

Working current: 7.5A per contact.
Working voltage: 300V rms.
Contact resistance: <math>< 3m\Omega</math>
Insulation resistance: >math>10^6 M\Omega</math>

Covers

A thermoplastic cover to fit both the plugs and the sockets described previously. The connector is wired and the cover fitted afterwards. A removable side plate allows subsequent inspection without dismantling the assembly. The cable can enter from the side or top by removing the appropriate knock-out. Supplied with cable clamp & self tapping screws; the shorter one holds the side plate to the cover.

Order Code	Type	Price each
RK62S	D-Range 9-Way Cover	£1.39
BK60Q	D-Range 15-Way Cover	£1.49
YQ50E	D-Range 25-Way Cover	£1.59

25 Way D-type Hoods with Thumb Screws

Hoods for standard 25 way D-type connectors. Supplied with cable clamp, assembly screws and quick secure/release thumb screws. Available in plastic or metallised plastic versions.

Order Code	Type	Price each
JW87U	T/Screw Hood 25W	£1.04
JW88V	T/Screw M/Hood 25W	£1.24

Assembly Instructions

(1) Hooded connector plug

Open window in moulding to give appropriate cable entry. Place spring in slit in hood. Mount connector in lock mechanism, from mating side (i.e. away from release button). Secure connector/lock to hood using the larger self-tapping screws provided. Ensure that the spring is between the release button and the hood then fit the cable clamp. Secure the side plate to the hood with the remaining screw.

Snap-Lock 25 way D-type Plastic Hood

A snap-lock plastic hood that may be used with standard 25 way D-type connectors but not D-type IDC connectors. Assembly of the hood is very quick and easy, the hood simply snaps shut and locks by means of plastic clips. A flat bladed screwdriver can be used to re-open the hood if necessary. Supplied complete with thumb screws and cable clamp.

Order Code	Type	Price each
JW91Y	25W Snap-Lock Hood	89p

Locking Hoods Metallised Type

A range of chrome-plated hoods for standard D connectors, with cable clamp and standard jack screws. Strong thermoplastic moulding.

Order Code	Type	Price each
JB68Y	Metallised D Hood 9W	75p
JB69A	Metallised D Hood 15W	89p
JB80B	Metallised D Hood 25W	£1.19

Locking Hood Metal Type

A chrome plated solid metal hood for standard 25-way D connectors supplied with jack screws.

Order Code	Type	Price each
JB02C	Metal D Hood 25W	£2.19

'Ribbon Cable' Plastic Hood for 25 Way D-type Connectors

A plastic hood designed for use with ribbon cables terminated in 25-way D-type connectors, please note the cover is not suitable for use with IDC D-type connectors. Supplied complete with one pair of jack posts.

Order Code	Type	Price each
JW86T	Ribbon 25W D Hood	69p

Jack Posts

For use with Locking Hoods these jack posts have 8mm long screws and hexagonal spacers centred-tapped with a 4-40UNC thread. Sold in pairs.

Order Code	Type	Price each
FP31J	D Connectr Jack Post	59p

01702 554161

Extension Jack Posts

A pair of hexagonal extension jack posts, tapped with 4-40UNC threads, for use with D-type connectors, 5.03mm A/F x 5.93mm. The extension jack posts when fitted to a panel mounted or free connector allow a mating connector fitted with jack screws to be secured. Bright plated finish over brass.

Order Code	Type	Price each
JW92A	Jack Post Set	24p

Captive Jack Screws with Retainers

A pair of captive jack screws (4-40UNC thread) with retainers for use on standard D-type connectors. The jack screws allow connectors to be secured to a mating connector fitted with jack posts (for jack posts see below). Made from steel with chromate over zinc plating.

Order Code	Type	Price each
JW93B	Jack Screw Set	39p

(2) Receptacle

The latches are mounted from the wiring side of the connector. Ensure that they are correctly orientated with respect to the mating plug. Where a hooded 'free' receptacle is required, assemble as in (1) left (without lock and spring), fitting latches between connector and hood.

Cable to cable or cable to panel.

Fit hood after wiring & choice of cable entry.

Locking Hoods Plastic Type

A range of hoods for standard D connectors, with cable clamp and standard jack screws. Strong thermoplastic moulding.

Order Code	Type	Price each
FP27E	D Hood 9 Way	59p
FP28F	D Hood 15 Way	69p
JZ24B	D Hood 19 Way	79p
JZ25C	D Hood 23 Way	89p

JB66W	D Hood 37 Way	99p
JB67X	D Hood 50 Way	£1.25

MAPLIN KEY CALL Phone 01702 556751

Bail-Lock Mechanism for D-type Connectors

A bail lock mechanism for use with standard D-type connectors. Set contains male and female bail-lock pairs, bail-arms, four nuts and four bolts. Bail-arm pair is attached to one connector (usually socket) and receptacle pair is attached to other connector (usually plug). Bright plated finish over steel.

Order Code	Type	Price each
JW94C	Bail-Lock Set	59p

25-Way D Outlet

A flush mounting 25-way D female socket mounted on a white front plate. Fits standard conduit and surface boxes (see Electrical Accessories) to BS1363. Screws supplied. Depth from rear of plate 6mm.

Order Code	Type	Price each
FP14Q	25W D Outlet	£2.99

High Density 15 way D-type Connectors

Union Brothers

High density 15 way D-type connectors that fit 15 pins into the same size shell as a 9 way standard D-type connector. Termination is by solder bucket. Contacts are copper alloy with gold plating over nickel. Shells are steel with chromate plating over zinc. Insulator is glass reinforced PBT plastic to UL-94-V0.

Order Code	Type	Price each
JW77J	HD 15 Way D Plg	£1.39
JW78K	HD 15 Way D Skt	£1.69

High Density 15 way D-type Connector Shells

High density D-type connector shells with separate gold plated pins for plugs and sockets enabling connectors to be constructed with pins only in the positions where a connection is required. Plug and socket housings are available, plug or socket pins simply snap in from the rear after soldering or crimping wires to them. Both plug and socket pins are supplied in strips of 10.

Order Code	Type	Price each
JW81C	HD 15W D Plg Shell	£1.09
JW82D	HD 15W D Skt Shell	£1.09
JW83E	10pk HD Plg Pin	29p
JW84F	10pk HD Skt Pin	34p

PRECISION WIRE STRIPPER

GREAT VALUE!

£10.99

KC16S

A wire stripper made from precision ground, hardened steel, that strips and cuts wire. The wire stripper has six holes that are used to cut and remove the insulation from the wire. The holes are marked in AWG (American wire gauge) sizes, but are suitable for 18 to 27 SWG sizes. At the base of the jaws is the cutting area which will cut copper or aluminium wire. A convenient flat design allows the wire stripper to be used in tight locations and to fit easily in a pocket or tool kit.

DISK DRIVE CONNECTORS

4 pin 0.2in Spacing Polarised Power Connector

Commonly used on 5 1/4 in floppy and hard disk drives. Supplied complete with connector housing and four crimp/solder terminals. Available in male and female types.

Order Code	Type	Price each
JW64U	0.2in Power Conn M	66p
JW65V	0.2in Power Conn F	57p

4 pin 0.1in Spacing Polarised Power Connector

Commonly used on 3 1/2 in floppy disk drives. Supplied complete with connector housing and crimp/solder terminals. Available in female only.

Order Code	Type	Price each
JW63T	0.1in Power Conn F	54p

FAX YOUR ORDER NOW!

01702 553935

High Density 15 way Right Angle PCB D-type Socket

All dimensions in mm

View from below

A high density 15 way right Angle PCB D-type socket that fits 15 pins into the same size shell as a 9 way standard D-type connector. Termination is by PCB pins. Contacts are copper alloy with gold plating over nickel. Shells are steel with tin plating. Insulator is glass reinforced polyester resin to UL-94-V0.

Order Code	Type	Price each
JW85G	HD 15 way R/A D Skt	£1.79

IEEE-488/CENTRONICS CONNECTORS

Centronics-Type

(See also IDC connectors)

A multi-way connection system commonly used for connecting data interface cables to computers and their peripherals. Cable conductors insert into the hollow solder terminals of the gold-plated, double row contacts. The plugs have ears for the spring clips of the socket to secure them in position.

Screened Plug

A double row plug in a metal body with oval cable entry and clamp. The body is in two parts secured by two screws, this being all that is required to retain the thermoplastic contact block. Available in 14, 24, 36 and 50 ways.

Order Code	Type	Price each
JB46A	Centronix 14W Plug	£1.79
JB47B	Centronix 24W Plug	£1.89
FJ61R	Centronix 36W Plug	£2.19
JB48C	Centronix 50W Plug	£2.79

36 Way Metallised Centronics Hood

A metallised hood for use with 36 way centronics connectors. Supplied with cable clamp.

Order Code	Type	Price each
JW89W	M/Hood Centronics 36	79p

Straight Chassis Socket

A double-row socket with metal shroud. Connections are brought out at rear to two rows of pcb pins. Plug locking clips are included. Sockets are available in 14, 24 and 36 ways. Diagram shows 36-way type.

Fixing holes suit M3/6BA bolts and fixing centres are as follows. 14-way: 36mm; 24-way: 47mm; 36-way: 60mm.

Order Code	Type	Price each
JB49D	Centronix 14W Chaskt	£1.69
JB50E	Centronix 24W Chaskt	£1.89
FV87U	Centronix 36W Chaskt	£2.19

36 Way Right-Angled Socket

A right-angled double row socket suitable for pcb mounting. The socket has two rows 0.17in. apart of 18 pins spaced at 0.85in. at 90° to the metal shrouded socket. Plug locking clips are included. Socket available in 36 ways.

Order Code	Type	Price each
FV88V	RA Centronix 36W Skt	£2.19

EDGE CONNECTORS

0.1in Double-Sided

A series of edge connectors designed to mount directly on PCB's. Ideal for use with double-sided PCB's, and having their main uses in micro-computers. (e.g. ZX81, Spectrum). The 2 x 28-way connector is blank at pin 5, and the 2 x 23-way at pin 3. These connectors use the mounting feet as shown below.

Order Code	Type	Price each
RK35Q	PC Edgconn 2x23 way	£3.99
FG23A	PC Edgconn 2x28 way	£3.99

Polarising Key

A metal polarising key for use with the edge connectors RK35Q and FG23A.

Order Code	Type	Price each
JP45Y	Polarising Key Metal	29p

Mounting feet for Edge Connectors

End brackets (feet) with open or closed sides for use with 0.1in. Double Sided (not Low Cost type) and 0.1in. Single Sided Edge Connectors. Sold individually.

All dimensions in mm

Hole ø3mm
Slot 3 x 5mm

Order Code	Type	Price each
YR58N	Edge Conn Foot Open	39p
FL91Y	Edge Conn Foot Closed	49p

0.1in. Double-Sided Low-Cost

A range of good quality low-cost edge connectors primarily for use with double-sided pcb's. Moulded in glass-fibre reinforced polyester UL94-V0, the connectors have gold-plated phosphor bronze contacts. All types have closed ends and overall width of pcb tongue should be 0.2in. wider than measurement between centres of end contacts. Connectors available in 36, 46, 50, 56, 62 and 98 ways.

Order Code	Type	Price each
JB99H	Locost PC Edge 2x18W	77p
JC00A	Locost PC Edge 2x23W	97p

JC02C	Locost PC Edge 2x28W	£1.19
JC03D	Locost PC Edge 2x31W	£1.39
JC04E	Locost PC Edge 2x49W	£1.49

0.1in. Single-Sided

A range of edge connectors identical in construction to the card frame type on the next page. Although these connectors have two rows of contacts, only one row is provided with solder tags for use with single-sided boards. The unused row provide a means of gripping the PCB as backing contacts. The connectors are open-ended so that wide PCB's may be inserted. Contacts have tags suitable for wiring or direct insertion in PCB's. These connectors use the mounting feet shown above.

Specification

Current rating:	5A per contact
Working voltage:	350V AC peak or DC
Pcb thickness nominal:	1.6mm

DIN 41612 Indirect Cardframe Connectors

A range of DIN 41612 cardframe connectors, for use in cardframe and rackmounted assemblies. These connectors are ideal for use with our modular sub-rack system and eurocard prototyping boards. Other applications include mother board/daughter board interconnections. The connectors comprise of one multiway socket with PCB pins on a 0.1in pitch for fixing to a mother board or backplane. The mating plug has right-angle PCB pins for fixing to a daughter board or plug-in card. Socket contacts are gold plated phosphor bronze, plug contacts are gold plated brass, termination area of each pin is tin plated. Connectors have locking keys to prevent accidental reversal on insertion. Available in 32, 64 and 96 ways. 32 way version is only available in 64 way shell. 64 way version is available in both 64 and 96 way shells (middle row unused). Shells are made from glass reinforced PBT to UL94-V0.

0.156in. Double-Sided

A range of edge connectors designed to mount directly on pcb's, particularly double-sided types. Moulded in glass fibre reinforced polyester UL94-V0, the contacts and pins are gold-plated phosphor bronze. A polarising key which is available separately, can be inserted into the shallow notches between contacts using a long-nosed pair of pliers, if required. Connectors are available in 12, 24 and 30 ways.

IDC Connectors With Cables Fitted

A range of assembled Flat Cables and IDC Connectors conforming to BS9525 with pins on 0.1in spacing. All connectors are moulded in thermoplastic, glass-fibre filled resin. Max working voltage: 750V DC. Max working current: 2A. Fitted with 1/4 metre (10in approx) of cable and other end unterminated. Available in 16 way, 20 way, 26 way, 34 way and 40 way.

Order Code	Type	Price each
FJ01B	16 Way IDC Skt+Cable	£1.39
FJ02C	20 Way IDC Skt+Cable	£1.65
FJ03D	26 Way IDC Skt+Cable	£1.99
BK96E	34 Way IDC Skt+Cable	£2.29
FJ04E	40 Way IDC Skt+Cable	£2.75

IDC Edge Connector and Cable Assemblies

The IDC Edge Connectors as above connected to 1m of IDC cable. The other end of the cable is unterminated.

Order Code	Type	Price each
FT71N	2X17W IDC Edge+Cable	£3.99
FT70M	2X25W IDC Edge+Cable	£4.99

IDC Edge Connectors

These grey moulded edge connectors feature closed ends for precise mating with a tongue shaped card edge, thus completely obviating any mismatch due to sideways slip. These connectors can be supplied in 20-way, 34-way and 50-way.

Order Code	Type	Price each
FT87U	20W IDC Edge Connctr	£2.49
FT89W	34W IDC Edge Connctr	£3.09
FT60Q	50W IDC Edge Connctr	£3.79

DIL IDC Headers

Headers which may be plugged into standard 14-pin, 16-pin or 28-pin DIL sockets, or they can be directly mounted on the pcb. Overall dimensions: (mm)

	14-way	16-way	28-way
Length	22.0	24.8	40.0
Width	10.8	10.8	18.1
Height (excl. pins)	5.9	5.9	5.9
Pin length	4.0	4.0	4.0

Order Code	Type	Price each
JH37S	14Pin DIL IDC Header	69p
JH36P	16Pin DIL IDC Header	79p
JP40T	28Pin DIL IDC Header	£1.59

PCB Transition Headers

Two alternative types of double row or staggered pin transition headers for permanently attaching IDC cable looms to a PCB.

Flat Cable IDC Series D Connectors

Union Brothers

Of the range of the D series plugs and sockets described elsewhere in this section, 9-way, 15-way, 25-way and 37-way plugs and sockets are now available in IDC form, greatly simplifying the task of terminating many wires. In addition, many plugs or sockets can share the same cable harness for looping to several destinations. These metal and plastic bodied connectors will mate with the other D range connectors shown elsewhere in this section.

Order Code	Type	Price each
FV77J	IDC D-Rnge 9-Way Plg	£2.05
FV79L	IDC D-Rng 15-Way Plg	£2.69
FV81C	IDC D-Rng 25-Way Plg	£2.99
JB44X	IDC D-Rng 37-Way Plg	£3.99
FV78K	IDC D-Rnge 9-Way Skt	£2.19
FV80B	IDC D-Rng 15-Way Skt	£2.99
FV82D	IDC D-Rng 25-Way Skt	£3.29
JB45Y	IDC D-Rng 37-Way Skt	£4.49

Low Profile 25 way IDC D-type Connectors

Low profile 25 way IDC D-type connectors, plastic body with metal shell incorporating grounding dimples, designed for use with IDC cable. These connectors will mate with other standard 25 way D-type connectors. Contacts are copper alloy with gold plating over nickel. Shells are steel with tin plating. Body is glass reinforced PBT plastic to UL-94-V0.

Order Code	Type	Price each
JW79L	L/Prfl IDC 25W D Plg	£2.09
JW80B	L/Prfl IDC 25W D Skt	£2.39

Flat Cable Centronics Type IDC Plug

A range of double row plugs in a thermoplastic body with cable clamp for use with IDC cable.

Order Code	Type	Price each
JB55K	IDC Centronix 24Wplg	£2.79
FJ62S	IDC Centronix 36Wplg	£2.19
JB56L	IDC Centronix 50Wplg	£3.29

Flat Cable Centronic Type IDC Chassis Socket

A range of double row sockets in a thermoplastic body with cable clamp and M3/6BA holes for chassis mounting. Includes spring clips for locking the plug. Chassis fixing centres are as follows. 24-way: 47mm; 36-way: 60mm; 50-way: 75mm.

Order Code	Type	Price each
JB57M	IDC Centronix 24Wskt	£2.79

JB58N	IDC Centronix 50Wskt	£3.55

MAINS AND POWER CONNECTORS

Mains Connectors

American Plug

A two pin 7-5A line plug with flat pins on 12.7mm centres. For 110V use only.

Order Code	Type	Price each
HL17T	USA Mains Plug	49p

American Chassis Socket

A two pin 7-5A chassis socket to suit USA Mains Plug. Fixing centres 32mm. For 110V use only.

Order Code	Type	Price each
HL18U	Flat Pin M/S	39p

American 3-pin Chassis Socket

A 3-pin 7-5A chassis socket with snap-in fixing in 23 x 23mm panel cut-out. Bezel size 27 x 27mm. Overall depth: 32mm. For 110V use only.

Order Code	Type	Price each
JK19V	USA 3-pin Socket	79p

American Line Socket

A two pin 7-5A line socket to suit our USA Mains Plug. For 110V use only.

Order Code	Type	Price each
HL19V	Flat Pin Conn	79p

Telefunken Line Socket

A 2-pin line socket for use with the Telefunken style 2-pin mains plug. Twin wire cable can be terminated to the pair of solder tags inside, beneath the removable cover retained by a single screw. Overall length 31mm.

Order Code	Type	Price each
FT99H	Telefunken Skt	45p

Telefunken Plug

A 2-pin mains plug with integral change over switch for isolating internal battery supply or similar, operated on insertion of the line socket. Suits Telefunken plug. Cut-out required: 20 x 20mm. Fixing centres: 26.5mm.

Order Code	Type	Price each
FT98G	Telefunken Plug	99p

Cassette Mains Lead

A mains lead with moulded socket which will fit the mains plugs on many battery/mains cassette players, radios etc.

Order Code	Type	Price each
RW66W	Cas Lead Telefunken	89p

Mains Lead

A non-rewirable mains lead with Telefunken style moulded two-pin socket at one end and a 13A moulded plug at the other. The Telefunken style socket is suitable for use with most mains/battery radios, cassette recorders, etc. The lead is 2m long, coloured black and rated at 250V AC, 2.5 Amp. The 13A plug carries a 3A fuse.

Order Code	Type	Price each
AK16S	2.5A Mains Lead	£2.29

European Style Connectors Line Socket

Rated at 6A at 250V AC, this socket includes cord grip and strain relief sleeve.

Order Code	Type	Price each
HL16S	Eurosocket	£1.35

Right Angle Mains Inlet Line Socket

Bulgin

This well finished right angled or side entry line socket is rated at 10A at 250V AC. It features clearly labelled screw terminals for connecting wires to Live, Neutral and Earth. In addition there is a metal cable clamp, and a strain relief sleeve.

Euro Fused Mains Chassis Plug Inlet

Cliff

A chassis mounting, Euro style, moulded nylon, mains inlet plug with integral fuseholder, or magazine that partially withdraws to accept a 5 x 20mm cartridge fuse. The fuse magazine is connected in the Live line only and the mains connector cannot be inserted unless the magazine is closed. When the fuse magazine is opened the fuse is disconnected and remains loose in the drawer. Changing the fuse is then just a matter of lifting out the old and inserting the new. The magazine has storage space for one spare fuse. (Fuses are not included). Maximum rating is 10A at 250V AC. Connections are tin-plated brass 1/4in. blades and may be soldered, or a quick-fit receptacle used. (e.g., HF10L). The chassis plug is a snap fit, into an aperture of 27.3 x 31.12mm, in a panel of 1.5mm thickness and has an overall depth of 27.6mm. An insulation cover is available for protecting the rear of this item (Manufactured by Bulgin).

Order Code	Type	Price each
MK18U	Euro Fused	£1.49
JK67X	Cover For FT37/MK18	59p

Fused Mains Inlet Chassis Plug

Cliff

A chassis mounting Euro style mains inlet connector with a built in fuseholder that accepts a 5 x 20mm cartridge fuse. The fuse is connected in the Live line only. The fuseholder consists of a small 'drawer' which cannot be withdrawn unless the input lead line socket is removed first. The fuse is automatically disconnected and remains loose in the 'drawer,' changing the fuse is merely a matter of lifting out the old and dropping in the new. Additional space is provided at the front of the 'drawer' to carry a spare fuse. (Fuses are not included). The line socket cannot be inserted without closing the 'drawer'.

An insulation cover for the rear of this plug is also available. (Manufactured by Bulgin).

Order Code	Type	Price each
FT37S	Fused Euro Ch Plg	£1.59
JK67X	Cover For FT37/MK18	59p

Fused Mains Inlet Chassis Plug with Switch

Bulgin

As FT37S but with SPST mains switch incorporated in the one moulding and having a snap-in fixing. Requires a 57 x 34mm panel cut-out. UL, CSA, VDE and SEMKO approved. 10A 250V rating. Bezel size 59 x 36mm. Overall depth behind bezel 26mm. Suitable for 1.0, 1.5, 2.0 and 3mm panel thickness.

Order Code	Type	Price each
JK71N	Fuse/Switch Inlet	£3.29

PHONE BEFORE 5PM FOR SAME DAY DESPATCH

01702 554161

Filtered Mains Inlet Chassis Plug

Littelfuse

A chassis mounting Euro style mains input connector which incorporates an integral interference filter for the exclusion of unwanted noise from the mains supply, or to prevent equipment introducing noise spikes into the mains circuit. The combined inductive and capacitive filter, contained in a metal case, includes the Earth connection in its arrangement together with the Live and Neutral to cover all possible interference sources. Connecting wires are terminated to solder tags.

Specification

Nominal wkg voltage: 250V AC @ 50Hz
 Current rating: 6A
 Earth leakage current: 0.35mA
 Dimensions: Width 50mm, Depth 22mm, Length 55mm.
 Cutout required: 28 x 22mm.
 Fixing centres: 40mm.

Order Code	Type	Price each
FT36P	Mains In Filter Plg	£8.99

Chassis Mount Mains Filters

Littelfuse

A range of chassis mounted mains RF filters with current ratings of 3A, 6A and 10A. Connections are by 'faston' 6.3mm solder tags.

Euro Facility Line Plug

Bulgin

Plug has cord grip and strain relief grommet. The pins are partly shrouded for extra safety. Rated at 6A 250V, BEAB and CSA approved.

Order Code	Type	Price each
HL43W	Euro Facility Plug	£3.29

Euro Facility Chassis Socket

Bulgin

Mounting hole: 28.24 x 23.24mm. Overall depth: 33mm. Socket is snap-in fixing. Rated at 6A, 250V, BEAB and CSA approved. An insulation cover for the rear of this socket is also available.

Order Code	Type	Price each
HL42V	Euro Facility Outlet	£1.14
JK69A	Ins Cover for HL42V	80p

Hot Condition Euro Line Socket

Bulgin

Rewirable cable mounting Hot Condition socket with cord grip and strain relief grommet. Rated at 250V AC 10A maximum.

Order Code	Type	Price each
MK20W	Euro Line Socket	£1.69

Mains Outlet Line Plug

Cliff

A line plug for use with the chassis mounting Euro outlet socket. The line plug has shielded pins to prevent accidental touching of the pins whilst inserting or removing the plug. Wires are terminated to the connectors using screw terminals. Includes cable clamp and strain relief sleeve. Rated at 6A at 250V AC.

Order Code	Type	Price each
FT64U	Euro Outlt Plg P686	£2.22

Mains Outlet Chassis Socket

A mains outlet chassis socket complementary to the mains inlet chassis plug HL15R. Physically identical it requires a 32 x 25mm mounting hole, and has an overall depth of 35mm. Fixing centres are 40mm x 6BA or M3, countersunk. Contacts are rated at 6A at 250V AC, with solder tag terminations at rear 2.5mm wide x 10mm long. An insulation cover for the rear of this socket is also available.

Order Code	Type	Price each
FT63T	Euro Outlt Skt P675	£1.05
JK68Y	Cover For FT63/MK17	60p

Right Angle Mains Outlet Line Plug

Bulgin

A right angled or side entry Euro style mains outlet plug, having the special feature in that the centre portion comprising the shielded pins and screw terminals can be mounted into the body upon assembly in any one of four positions relative to the body and 90° to each other, so that the cable may exit in whichever direction is the most convenient. Includes cable clamp and strain relief sleeve. Rated at 10A at 250V AC. UL, CSA, SEV and BEAB approved.

Order Code	Type	Price each
FT65V	Euro R/A Out Pg P685	£2.69

Fused Mains Inlet and Filter

Littelfuse

A Euro style mains inlet connector with a built-in fuseholder and RF filter. The fuseholder accepts a 5 x 20mm fuse cartridge. The rated current is 6A and connections are by 'faston' 6.3mm solder tags.

Order Code	Type	Price each
KR99H	Fused Inlet/Filter	£9.99

Fused Mains Inlet and Filter with 2-Pole Switch

Littelfuse

A Euro style mains inlet connector with a built-in fuseholder, 2-pole switch and RF filter. The fuseholder accepts a 5 x 20mm fuse cartridge. The rated current is 6A and connections are by 'faston' 6.3mm solder tags.

Order Code	Type	Price each

2 way & 4 way Plug Adaptors

An ingenious way of providing a mains supply to Hi-Fi, computer equipment etc. These units allow either 2 or 4 miniature mains connectors to be connected to one mains socket safely and neatly. The main unit has integral 13A plug pins and sockets to take the miniature connectors. Supplied with miniature connectors.

Order Code	Type	Price each
YZ13P	Plug Connector 2 Way	£8.99
YZ12N	Plug Connector 4 Way	£11.99

4 way and 6 way Mains Distribution Units

A safe and tidy way of connecting up to four or six mains appliances to a single mains socket, ideally suited to Hi-Fi and computer equipment etc. The unit may be used either 'trailing' or fixed to a wall. The unit has the following features: Neon 'on' indicator, sockets are fully shuttered for safety, internally fused, labelling system to identify appliance plug, unbreakable polycarbonate construction. Current capacity 13A (240V AC mains) overall, maximum current per socket 10A. Conforms to BS5733. Supplied complete with miniature connectors.

Order Code	Type	Price each
YZ10L	4 Way Mains Conn	£11.99
YZ11M A1	6 Way Mains Conn	£14.99

Hi-Fi Distribution Box

Designed to be mounted behind hi-fi equipment etc. these neat compact boxes have 4 Eurosockets mounted in line. There is 1m of 6A mains lead fitted. Supplied complete with four Euro-facility plugs. Rated 1.5kW total. Max current 6A.

Overall size: 204 x 36 x 34mm
Fixing centres: 190 x 3mm clear

Order Code	Type	Price each
WY16S A1	Euroboard 4-way	£10.99

Sealed In-Line Connector

Bulgin

A threaded-coupling sealed in-line connector sealed to IP68 and BS5490, 1977 approved, suitable for repairing or extending 3-core circular mains cables. The plastic sealed two-piece black housing is fitted with cable glands and retained together with a screwed ring. Supplied with 3-way terminal block, rated at 6A 250V AC, and fitting instructions. Conforms to IP68 BS5490: 1977.

Order Code	Type	Price each
MK33L	In-Line Connector	£5.49

Threaded-Coupling Connectors

Bulgin

A range of plastic moulded in-line and chassis mounting 3-way interchangeable plug and socket connectors. The threaded-coupling housings are supplied with interchangeable polarised plug and socket inserts to cater for mains inlet or outlet application and cable glands for circular mains cable. Two types of insert/extraction tools are available, for ease of assembly of plugs and sockets, that also double as sealing covers. Rated at 10A 250VAC. Sealed to IP68. BS5490: 1977, UL, CSA approved.

HL44X	Mains Socket P646	£2.19

5-PIECE INSULATED SCREWDRIVER SET WITH SCREW RETAINER

A superb set of five screwdrivers which includes three flat blade and two Phillips crosspoint screwdrivers, all protected with a sliding spring-loaded, insulating sleeve on the blade. A 'gripper' on the end of the sleeve acts like an extra hand by holding the screw onto the blade while it is being inserted. The handles and sleeves, supplied in three sizes, are of a tough shatterproof red plastic and the shafts, which are in three lengths, are of chrome vanadium steel with a chemically black finish.

Flat Blade Types

Blade Width	Shaft Length	Overall Length
5mm	150mm	255mm
4mm	125mm	220mm
3mm	125mm	220mm

Crosspoint Blade Types

Blade Width	Shaft Length	Overall Length
No. 2	175mm	280mm
No. 1	125mm	223mm

Please Note:

Connectors marked ★ are unsuitable for use on domestic equipment at voltages over 50V; unless contact with the connector or terminals is impossible without the use of a tool defined in the Electrical Equipment (Safety) Regulations 1975. Connectors marked ★★ are suitable for use on domestic equipment at voltages over 50V, provided they are NOT live when unmated and are used in conjunction with a connector NOT marked with a ★. Or alternatively, if contact with the connector or terminals is impossible without the use of a tool as defined in the Electrical Equipment (Safety) Regulations 1975.

Order Code	Type	Price each
HL36P	50V Plug P635	£1.74

P636 ★

Bulgin

A six-pin line socket with strain relief sleeve. Rated as P635. Mates with Plug P635.

Order Code	Type	Price each
HL37S	50V Socket P636	£1.99

P551

Bulgin

An eight-pin line plug with cord grip. Side entry type. Will accept up to eight full size insulated conductors or two to three mains cables simultaneously. Rated (per pin): 6A at 250V, 10A at 2.5V AC. Mates with socket P552.

Order Code	Type	Price each
HL39N	Mains Plug P551	£4.69

P552

Bulgin

An eight-pin chassis socket available with solder tags P552, or PCB pins PX0552. Overall depth: 23mm. Mounting hole: 38mm dia. Bezel: 41 x 41mm. Fixing centres: 33 x 33mm x 6BA (M3) countersunk. Rated as P551. Mates with plug P551.

Order Code	Type	Price each
HL40T	Mains Socket P552	£1.49
JZ02C	Mains Socket PX0552	£1.59

Insulating Boot

Bulgin

Flexible black covers providing neat tangle-free cable connection and giving protection against accidental contact. Fits over the back of Plug P429 and Sockets SA2404 and SA2368.

Order Code	Type	Price each
HL51F	Boot 9455	42p

Model Control Connectors

A range of lightweight, compact plug and socket arrays especially suitable for model control applications where small physical size and minimum weight may be essential, in the case of model aircraft, for example. Reliability is assured by the contact surfaces being gold plated, for both plug and socket.

Battery Connector

Union Brothers

A non-reversible, mirror image plug and socket assembly for quick and simple battery coupling.

Order Code	Type	Price each
FK96E	Batt Pl/Skt Pair	92p

3-Pin Connector

A 3-pin plug and socket assembly for interconnections where three wires are required. Note the connectors are not polarised. The socket is designed for pcb mounting.

Order Code	Type	Price each
FK97F	GP Pl/Skt Pair	75p

3-Way Polarised Plug

A 3-pin plug having one pin offset in order to prevent accidental reversal. Such connectors are ideal for interconnecting the receiver to a servo control circuit, providing power on two pins and a signal on the other.

Order Code	Type	Price each
FK99H	3-Pin Offst Plug	42p

3-Way Polarised Socket

A non-reversible 3-pin socket that mates to the above plug.

Order Code	Type	Price each
FK98G	3P Offst Skt	45p

7-Way PCB Socket

A PCB mounting socket providing for up to seven 3-way outlets from receiver board etc. Pins are spaced 2mm apart in each row of 3 pins, with 3mm spacing between rows. Overall length of block: 22mm. Overall width: 7mm.

All dimensions in mm
Viewed from above
Hole data
21 x ø1mm

Note these connectors are non-polarised.

Order Code	Type	Price each
FM01B	7-Way Skt Bloc	£2.39

MAPLIN
KEY CALL
Phone 01702 556751

Eight-Pole Connector

Bulgin

An eight-pole mains connector which is fully shrouded and completely safe when de-mated. It is also polarised and keyed so that mis-mating is impossible. Consequently inputs and outputs may be connected simultaneously through one plug and socket pair with absolute safety. Centre pin is designated 'earth' and unfaillingly, mates first and demates last.

Small 3-Way Plugs

Miniature 3-pin plugs to fit the above 7-way socket block. Plugs are sold singly.

Order Code	Type	Price each
FM00A	3-Pin Plug	39p

1.3mm Plug to 2.1mm Socket Adaptor

Converts 2.1mm power plug to 1.3mm for use with Walkman-type cassette power sockets.

Order Code	Type	Price each
FK08J	DC 2.1 - 1.3mm Adapt	60p

Battery Connectors

Union Brothers

For making your own battery packs and chargers, the standard racing pack plugs and sockets are available pre-assembled to 150mm (6in.) lengths of red and black high-temperature silicone insulated wires. The part with the pins inside the connector housing is the male part and normally connected to the battery, and the part with the sockets inside the housing which also has the latch mechanism is the female part and normally connected to the model or charger.

Order Code	Type	Price each
JG04E	Race Pk Lead Male	89p
JG05F	Race Pk Lead Female	89p

Power Connectors

1.3mm Plug

A miniature DC power plug as used with the Walkman-type personal stereo cassette players. Suitable only for use with matching socket having 1.3mm dia. pin.

Order Code	Type	Price each
FK05F	Mini DC Pwr Plug	33p

1.3mm PCB Socket

A PCB mounting socket compatible with 1.3mm Walkman type plugs.

Order Code	Type	Price each
FK07H	PCB Mini DC Pwr Skt	52p

1.3mm Plug to 2.5mm Socket Adaptor

Converts 2.5mm power plugs to 1.3mm for use with Walkman-type cassette power sockets.

Order Code	Type	Price each
FK09K	DC 2.5-1.3mm Adapt	60p

1.3mm Plug to 3.5mm Mono Jack Socket Adaptor

An adaptor which enables a 3.5mm mono jack plug to be used with Walkman-type cassette players using 1.3mm power sockets.

Order Code	Type	Price each
FK10L	DC 3.5-1.3mm Adapt	60p

Standard 2.1mm Plug

2.1mm power plug of standard length.

Order Code	Type	Price each
HH60Q	Std Power Plug 2.1	32p

Long 2.1mm Plug

2.1mm power plug having a long reach.

Order Code	Type	Price each

Extension Lead and Power Plugs

NEW!

A versatile extension lead, and a separate matching range of interchangeable mini plugs, for powering a wide range of portable equipment from battery eliminators and low voltage power supplies. The 6ft. straight coloured-coded 2-core lead is terminated at one end with two spade connectors, and at the other with a moulded socket to accept the one plug. The range of eight plugs cover almost all power sockets found on personal stereos, portable phones, portable CD players, toys, games, calculators, musical instruments, etc. The plugs can be inserted either way round to make the centre positive or negative to suit the equipment being powered.

The following plugs are available:

Size	Type
2.5mm mono	A
3.5mm mono	B
3 x 1mm power	C
5 x 2.1mm power	D
5.5 x 2.1mm power	E
5 x 2.5mm power	F
5.5 x 2.5mm power	G
3.5 x 1.35mm power	H
4 x 1.7mm power	I
4.75 x 1.75mm power	J
5 x 1.5mm power	M
5.5 x 1.5mm power	N
5.5 x 2.8mm power	P
6.3 x 3mm power	Q
7 x 1mm power	R
2.5 x 0.75mm miniature style power plug	S

The connector lead is not supplied with any plugs.

5 and 6-Way Spider Connectors

NEW!

A pair of spider connectors for use with power supply units, battery eliminators and games adaptors. AQ82D is a 5-way connector with 2.5 and 3.5mm jack plugs, 2.1 and 2.5mm power plugs, and a PP3 type connector. AQ84E is similar in construction but with the addition of a 'Walkman' style power plug. Both leads are terminated with an in-line reversible 2-pin plug, for connection to either an in-line socket, or directly to a plug-in battery eliminator.

Touchproof 4mm Socket

Cliff

A touchproof 4mm polypropylene socket with gold-plated contact that will accept both touchproof and non-touchproof 4mm plugs. Panel isolation of 3KV AC makes it suitable for use in test instruments, and educational equipment. Fixing is by a nylon nut. The socket complies with BS4743 and is rated at 30A max. Overall length: 29mm. Bezel diameter: 14mm. Mounting

Order Code	Type	Price each
KC49D	Shroud Skt Black	32p
CK66W	Shroud Socket Red	32p

Touchproof 4mm Plug and Unshrouded 4mm Plug

Cliff

A touchproof stackable 4mm plug, designed to be used with the touchproof socket, but fits most similar style sockets. The standard contact finish is gold-plated and connection is by soldering. The contact is pushed into the case moulding and locked in place by the rear case moulding. Thick wires should be preformed into an 'S' shape to fit into the built in cable restraint. Rated at 30A max. (with appropriate cable). Available in red and black. The unshrouded (touchable) version is similar and fits all standard 4mm sockets and terminals.

Note: The contact has to be purchased separately.

KC51F	Unshroud Plg Cov Blk	16p
CK68Y	Unshroud Plg Cov Red	16p
KC52G	Contact Probe	34p

PCB CONNECTORS

Printed Circuit Connectors Quick Connecting PCB Terminal Blocks

Cliff

PCB mounting terminal blocks for attaching wires to a board, but using spring-loaded wire grips instead of a screw clamp. Facilitates very fast connection and disconnection of cables from a PCB, ideal for

prototyping, after which the board can become a permanent installation with the same connectors.

Available in 2-way and 3-way versions. The release buttons on top are shrouded to prevent accidental disconnection and the wire entry behind the button, which is vertical, will accept up to 1mm diameter solid core wire. Clamps can resist pulling force on the wire of up to 5.1kg. Buttons and body are made from grey nylon with 15% glass fibre content, and terminals are tin plated brass. Requires 1.6mm dia. PCB holes spaced 7.6mm apart (0.3in.).

Specification

Contact rating: 7A @ 250V AC 50Hz
 Contact resistance: <math><10\text{m}\Omega</math>
 Contact heating: up to 30°C over ambient temperature at max. rating
 Insulation resistance: >100M Ω
 Withstand voltage: 1.5kV AC @ 50Hz for 1 minute
 Operating temperature range: -10°C to +80°C

Order Code	Type	Price each

JZ04E	3W QC Term	69p

PCB Terminal Blocks

Terminal blocks which mount directly onto a printed circuit board or stripboard and provide a quick, easy means of connecting conventional wiring to the board. There are basically four ranges. Types 300, 301 and 320 are soldered to the board while type 332 acts as a free socket, being quickly removable from soldered PCB plug pins. Furthermore the blocks are modular, consisting of 2 and 3-way sections which can be stacked lengthwise with their dovetail joints to make any number of ways in one length of each type. In all cases the body material is flame retardant glass filled polyester to UL94 V0, designed to withstand operating temperatures in the range -33°C to +120°C. Most types feature 'wire guards' (metal leaves) under each screw to protect the wire against any twisting or cutting action by the screw.

All types are available with 5mm (0.197in.) and some with 10mm (0.394in.) pitch between pins. The 10mm pitch is achieved by leaving every even numbered position blank or empty. These pitches are very close to 0.2in. and 0.4in. respectively for stripboard etc, but be aware that blocks will only sit comfortably in 0.1in. stripboard for a maximum of 4 x 5mm pitches (1 x 4-way block). Longer lengths are best made with separate short blocks end to end with the dovetailing removed (soldered types only). Contacts are tin-plated brass bodies with galvanised and chromatised steel screws and tin-plated solder pins.

Standard 300 Series

Soldered type PCB terminal block with 4.5mm long PCB pins requiring 1.2 to 1.4mm holes. Wire insertion direction is 90° to vertical (side entry), screws heads at top. Screw size: M3 x 5.8mm. Current rating: 16A max. Will accept wires up to 2mm thick. This type incorporates test probe holes behind the clamping screws which will hold standard sized (1.75mm dia.) multimeter type test probes or pins in contact with wire below. Height above PCB, 12.5mm. Width, 9mm. Tracking resistance between contacts conforms to VDE0110 Group B (250V @ 5mm, 500V @ 10mm). 2 and 3-way versions available.

Order Code	Type	Price each

JY95D	3W PC Term 300 10mm	49p

Low Profile 301 Series

Soldered type PCB terminal block as type 300 but smaller, being 10mm high above PCB and 7.5mm wide. Screw size: M2.6 x 4.5mm. Current rating: 16A max. Will accept wires up to 1.5mm thick. Has small 'test probe' holes behind the clamping screws of 1.1mm dia. Tracking resistance between contacts conforms to VDE0110 Group B (125V @ 5mm, 250V @ 10mm).

 01702 554161
 Access, Visa, American Express**

Angled 320 Series

Soldered type PCB terminal block with wire entry at screw access offset at 45° from vertical. Particularly useful on a crowded PCB or in a restricted space. A 1.3 to 1.5mm PCB hole is recommended. Unlike the 300 and 301 types, wire gripping is achieved through a rising clamp method. When tightened the screw raises a block which traps the wire beneath a ribbed upper contact. The technique provides a more reliable and rugged method of anchoring the wire compared with the conventional screw pressure method, with or without wire guards. Pins are 4.5mm long. Both height and width are 12.5mm and front face is chamfered at 45°. Screw size, M2.6 x 4.5mm. Current rating, 16A max. Wire capacity up to 2.5mm thick. Tracking resistance between contacts conforms to VDE0110 Group B (60V @ 5mm). Only available in 5mm pitch 2-way and 3-way.

PCB Connectors

Low Cost Types

These connectors are intended as a simple and inexpensive method of making cable to printed circuit board connections. Available with pins on a 0.1in. pitch.

0.1in Series (2.54mm)

A range of connectors for PCB mounting that allow circuit boards to be plugged together at right angles or end-to-end, or cables to be plugged onto circuit boards at right angles or end-on at the edge of the PCB. Both plugs and sockets may be butted up end-to-end to form connectors with any number of ways from 2 upwards. Rated: 2.5A, 250V AC.

Straight Polarised Locking Plug Assembly

A wafer into which square, tinplated brass pins have been inserted. These pins protrude 3-4mm on one side, and these should be soldered flat to the PCB.

The nylon wafer sits flat on the PCB and is 3.3mm thick, and the back wafer provides the locking and polarising. The plug pins are 7.5mm long. Wafers are 2.3mm wide, and the pins require a 1mm dia. PCB hole.

Socket Housing

A housing which accepts the PCB terminals and then plugs onto the wafer plug assembly. Solder the wire to the terminal, then push the terminal into the housing

Continued on next page.

Pluggable 332 Series

A system which combines the ease of wire connection via terminal blocks with the speedy access to equipment, provided by on board plugs and sockets for cables and looms. Allows for swift disconnection of wires from a board during testing, servicing or replacement. An added advantage is that, unlike fixed terminal blocks, wires will not be replaced wrongly. While the actual blocks are attached to the wires, the PCB has rows of pins soldered in position over which the blocks are plugged. The blocks can connect two different ways, with the wires exiting either vertically or horizontally. The pins are provided on a 24-way strip, which is broken down by hand into shorter lengths as required. The blocks then simply plug onto it and may be connected and disconnected up to 30 times. Wires are retained in the usual way as with types 300 and 301, again protected by wire guards. Larger numbers of ways can be made up by joining blocks together with the dovetailed jointing system. Blocks are 11mm high and 13mm wide (screw heads at top). Screw size is M2.6 x 4.8mm. Current rating, 10A max.; wire capacity 1.75mm thick. Tracking resistance between contacts conforms to VDE0110 Group B (125V @ 5mm). Only available in 5mm pitch as 2-way, 3-way, 4-way and 6-way. Strip(s) of 24 PCB pins need ordering separately.

PCB Terminal

Tin-plated phosphor bronze terminals for use with the PCB Latch Housings. Designed for solder or crimp connections. Supplied in strips of ten.

Order Code	Type	Price each
YW25C	PCB Terminal	39p

Right-Angled Socket Assembly

Housing with printed circuit type tin-plated phosphor bronze terminals pre-assembled with pins at right-angles to the housings for direct pcb mounting. Thus boards with straight plugs may be connected at right-angles and boards with right-angle plugs may be connected end to end. Housing is 7.9mm wide 4.7mm high. The housing has a clip which holds it against the edge of the pcb. Pin length: 3.3mm x 1mm dia. holes, which should be drilled 6mm from edge of pcb. Available in 12 way only. Length: 30-38mm.

FOR TOP QUALITY & VALUE!

0.1in Pin Strips

Pin strips which are used in conjunction with pin jumpers to provide 'option pins' on computers, disk drives and other electronic hardware. These pin strips provide an easy means of being able to select various firmware options. Four versions are available, single row of 36 straight pins (1x36ST) single row of 36 right angle pins (1x36RA), double row of 72 straight pins (2x36ST) and double row of 72 right angle pins (2x36RA). Strips may be shortened by cutting at V-notches so any required length may be formed.

Order Code	Type	Price each
JW59P	Pin Strip 1x36 St	64p
JW60Q	Pin Strip 1x36RA	84p
JW61R	Pin Strip 2x36 RA	£1.09
JW62S	Pin Strip 2x36St	99p

0.1in Miniature Pin Jumpers

Miniature jumpers for bridging 'option pins' on computers, disk drives and other electronic hardware. Used in conjunction with 0.1in pin strips, these jumpers provide an easy means of being able to select various firmware options. Two versions are available, with or without extraction handle.

Order Code	Type	Price each
UL71N	Mini Pin Jumper	14p
UL70M	Mini Pin Jumper&Extr	19p

0.1in. Strip Socket

20-way and 32-way strip sockets for use with our 0.1in. pin strips. The body is glass reinforced thermoplastic polyester to UL94-V0, contacts are beryllium copper with tin on nickel-plating, rated at 100V RMS/150V DC @ 1A. Strips may be shortened by means of 'V notches'.

Order Code	Type	Price each
KP51F	20 Way Socket Strip	£1.39
DC17T	32 Socket Strip	79p

PCB Connectors with Screw Terminals

A range of two part PCB connectors with screw terminals, that can accommodate cables up to 2.5mm² (12 AGW), and have a rating of 250V AC horizontal mounting type. The pinstrips have open ends, and the rising clamp cable trap system gives a rugged and reliable connection where frequent rewiring is expected, and will not damage the wire by transmitting screw torque. The connectors meet VDE standards and are UL, CSA and SEMKO approved. Available in 2,3,4,5,6,8,10, and 12-way.

Specification	
Moulding material:	UL94V0 polyamide 6-6
Metal parts:	Phosphor bronze contact nickelled-brass cage steel M3 screw, Zinc passivated
Rating:	10A 250V AC
Operating temperature:	85°C
Pitch:	5.08mm (0.2in.)
PC hole diameter:	1.3 to 1.4mm
Insulation strip:	6mm

IT'S A FACT!

How to Assemble BNC/TNC and Other RF Connectors

1. Cut end of cable evenly and remove 7mm ($\frac{9}{16}$ in) of outer sheath.
2. Slide the clamp nut and pressure sleeve over cable. Comb out the braid.
3. Fold the braid back. Insert the ferrule between braid and dielectric. Trim off excess braid. Remove 5mm ($\frac{13}{64}$ in) of the dielectric without damaging the inner conductor. Tin end of conductor.
4. Slide rear insulator over conductor and locate shoulder of insulator inside recess in ferrule. Slide the contact over conductor until the shoulder of the contact is pressed hard against the rear insulator. Solder contact to the conductor but avoid over-heating.
5. Fit front insulator in body and push sub-assembly into the body as far as possible. Slide pressure sleeve into body and screw in the clamp nut tightly to clamp cable.

Crimp Plug

Union Brothers

Nickel plated brass plug with gold-plated centre pin. The plug is suitable for use with any 50Ω cable where the outside diameter of the sheath of the inner conductor is approx. 3mm and the outside diameter of the outer sheath is 5mm e.g. UR76, RG58 (our XR19V/XS51F). See Page 359 for suitable crimp tool (ZF41U).

Order Code	Type	Price each
JC23A	BNC Crimp Plug 50	£1.10

BNC Boot

An insulating boot for use with crimp plug JC23A. The boot is cut to suit the diameter of the cable if necessary, and then pushed on to the cable, before crimping. The hood is then forced over the crimp, and with the matching hood, the plug is now insulated. Colour black.

Order Code	Type	Price each
CK08J	BNC Boot	16p

THE BEST OF SERVICE

BNC CONNECTORS

A range of BNC series connectors with 50Ω and 75Ω impedances. Both types will mate with one another. Peak working voltage 500V. Max frequency 5GHz.

Free Plug

Nickel-plated brass plug with silver-plated centre pin and ferrule. Available in 50Ω and 75Ω impedance.

Order Code	Type	Price each
HH17T	BNC Plug 50	£1.59
FE99H	BNC Plug 75	£1.79

BNC Hood

An insulating hood for use with crimp plug JC23A. The hood is pushed over the plug before the cable is crimped on. Colour black.

Order Code	Type	Price each
CK07H	BNC Hood	19p

Twist-on Plug

Nickel-plated brass plug suitable for use with any 50Ω cable having a 5mm overall diameter e.g. UR76, RG58C (XR19V, XS51F). To fit, strip about 8mm of outer sheath then fold the screen back over the outer sheath, then strip 6mm of the inner sheath and screw the plug on.

Order Code	Type	Price each
JK21X	Twist-on BNC Plug	£1.39

Right Angled Free Plug

Union Brothers

A right-angled BNC plug with plastic body and strain relief sleeve, and solderless cable connections.

Order Code	Type	Price each

YOUR GUARANTEE OF QUALITY & SERVICE

Round Chassis Socket

Nickel-plated brass chassis socket with gold-plated centre pin and earth tag. Available in 50Ω and 75Ω impedance. Requires 9.7mm diameter panel cut-out.

Order Code	Type	Price each
HH18U	BNC Round Skt 50	£1.09
FE31J	BNC Round Skt 75	£1.15

Insulated Chassis Socket

An insulated earth version of the round chassis socket with gold-plated centre pin. Requires a 9.7mm diameter panel cut-out.

Order Code	Type	Price each
CK05F	Insulated BNC Skt	£1.39

Square Chassis Socket

Nickel-plated brass chassis socket with silver-plated centre pin. Square base 17 x 17mm with four 8BA threaded holes on 12.7mm centres.

Order Code	Type	Price each
YW00A	BNC Square Socket	£1.29

Free Socket

A BNC socket for cable mounting.

Order Code	Type	Price each
YW01B	BNC Line Socket	£1.29

BNC Terminator

A termination plug fitted with an encapsulated 50Ω resistor, and gold-plated centre pin. Suitably for end termination on network computer installations.

Order Code	Type	Price each
CK06G	BNC Terminator Plug	£1.39

Straight Female Adaptor

Two Free Plugs may be connected together with this adaptor.

Order Code	Type	Price each
YW02C	BNC Straight Adaptor	£2.09

Straight Male Adaptor

Back-to-back male plugs in nickel-plated brass with silver-plated centre pin.

Order Code	Type	Price each
FE86T	BNC Double Male	£2.29

'T' Adaptor

Two Free Plugs may be connected together then connected to one socket with this adaptor.

Order Code	Type	Price each
YW03D	BNC T Adaptor	£3.59

'Y' Adaptor

Fitted with a gold-plated pin, this adaptor connects two cables with BNC plugs to one socket.

Order Code	Type	Price each
CK01B	BNC Y Adaptor	£3.59

BNC Male to Phono Socket Adaptor

Union Brothers

A BNC plug to phono socket adaptor enabling a phono plug to be used with a BNC socket.

Order Code	Type	Price each
FA11M	Phono Skt/BNC Plg	£1.64

BNC Female to Phono Plug Adaptor

A BNC socket to phono plug adaptor enabling a BNC plug to be used with a phono socket.

Order Code	Type	Price each
FE88V	BNC Fem/Phono Plug	£1.49

BNC Connectors Mini UHF Male to BNC Female Adaptor

Allows a standard male BNC cable to be connected to a mini UHF female socket.

Order Code	Type	Price each
BZ21X	BNC Fem/Mini UHF Male	£1.49

Mini UHF Female to BNC Male

Allows a mini UHF cable with a male connector to be connected to a standard BNC female socket.

Order Code	Type	Price each
BZ22Y	BNC Male/Mini UHF Fem	£1.49

CO-AXIAL CONNECTORS

Metal Plug

A standard co-ax plug with aluminium body and cap.

Order Code	Type	Price each
HH07H	Co-ax Plug Aly	45p

Plastic Plug

A standard co-ax plug with plastic covered body and plastic cap.

Order Code	Type	Price each
YW08J	Co-ax Plug Plas	29p

High Quality Socket

A standard panel-mounting co-ax socket with nickel-plated brass body. Single-hole fixing. Panel cut-out 9.5mm dia. Supplied with solder tag for screen connection.

Order Code	Type	Price each
FE10L	HQ Co-ax Socket	£1.29

Two Into One Y Adaptor

A low-cost Y-shaped 2 into 1 adaptor for splitting or combining co-axial feeders.

Order Code	Type	Price each
FS23A	2/1 Coax Adptr Typ Y	£1.29

High Quality Plug

Union Brothers

A standard co-ax plug with nickel-plated brass body. The centre conductor is terminated by means of a small grub screw.

Order Code	Type	Price each
FD85G	HQ Co-ax Plug	69p

Line Socket

A standard co-ax in-line socket with aluminium body and cap.

Order Code	Type	Price each
YW09K	Co-ax Line Skt	54p

Two Into One Adaptor

A simple plug-in 2 into 1 adaptor for splitting or combining coaxial feeders.

Order Code	Type	Price each
FT85G	2 into 1 Coax Adptr	£1.29

Coax Connector Crimping Tool

A coax crimping tool that has five separate sections to accept 1.72, 2.5, 5.4, 6.48 and 8.2mm connectors for crimping. The pressure necessary for crimping can be adjusted for individual requirements, and is made easy with the aid of long contoured, plastic covered handles.

Order Code	Type	Price each
ZF41U	Coax Crimper	£19.99

Plastic Line Socket

A standard co-ax socket with plastic covered body and plastic cap.

Order Code	Type	Price each
JB16S	Coax Line Skt Plas	39p

High Quality Line Socket

A standard co-ax in-line socket with nickel-plated brass body. The centre conductor is terminated by means of a small grub screw.

Order Code	Type	Price each
FD86T	HQ Co-ax Line Skt	69p

TV Aerial Flylead

Co-axial cable with co-ax plugs connected at both ends. Available in 2m, 5m and 10m length.

Order Code	Type	Price each
JW39N	Flylead 5m	£2.25
JW40T	Flylead 10m	£2.99

Chassis Socket

A panel mounting socket which protrudes above the chassis surface. Fixing centres: 19mm x 6BA clear.

Order Code	Type	Price each
HH08J	Co-ax Socket Pan	39p

Flush Socket

A panel mounting socket which fits flush to the chassis surface. Panel cut-out 12.7mm. Fixing centres: 19mm x 6BA clear.

Order Code	Type	Price each
HH09K	Co-ax Socket Flush	39p

Line Connector Plastic

A line connector for connecting two co-ax plugs together.

Order Code	Type	Price each
HH11M	Co-ax Conn	39p

Line Connector Metal

A screened line connector for connecting two co-ax plugs together.

Order Code	Type	Price each
FS22Y	Co-ax Conn Metal	49p

Aerial Extension Cable

Coaxial extension lead manufactured from 75Ω coaxial cable and terminated at one end in a coaxial plug and at the other end in a coaxial socket. The terminations are protected with a plastic strain relieving sheath. Length 2m.

Order Code	Type	Price each
GW61R	Aerial Extn Cable	£1.35

FM Aerial Plug

Moulded plugs for connecting aerials to radiograms etc.

Order Code	Type	Price each
HH16S	FM Aerial Plug	39p

F CONNECTORS

Plug

A plug for use with solid centre conductor cables. Plug simply pushes onto cable between inner sheath and screen. The centre wire of the cable takes the place of the centre pin of the plug.

Two types are available: 4mm type suits RG58/RG59 cable. (Order Code XS51F/XS52G). 5mm type suits our low loss co-ax cable (XR29G etc.). The crimping ring is supplied with both types.

Order Code	Type	Price each
JL62S	F Plug 4mm	26p
FE90X	F Plug 5mm	26p

Chassis Socket

A single-hole fixing socket. Requires a 9.5mm diameter panel cut-out.

Order Code	Type	Price each
FE98G	F Socket	39p

F Male to BNC Female Adaptor

Allows a BNC plug to be used with an F socket

Order Code	Type	Price each
FE87U	BNC Fem/F Male	£1.29

TELEPHONE STYLE WIRELESS INTERCOM

A pair of two-way telephone style intercoms which are mains operated and which transmit and receive to and from each other via the common socket ring main. Low frequency RF (230 and 350kHz) is FM modulated and superimposed on the mains supply. The communication system includes phase locked loop receivers which provide a high quality sound with no interference from the mains. The two units are identical and have a call button for 'ringing' the other station. Operation is as with a telephone, communication is fully duplex (transmit and receive active simultaneously), and a telephone style receiver hook defeats both channels. Each unit has four non-slip feet for table-tops or alternatively a wall bracket with screws supplied can be used for wall mounting. Dimensions 225 x 102 x 70mm including handset. RF output power 20mW, audio output 100mW. Supplied with instructions and fitted with 1.5m approx. of twin core mains lead. Supplied in pairs only.

GREAT VALUE!
£44.99
ZA32K
[B3]

TWIN AXIAL CONNECTORS

A range of connectors for rf applications particularly data transmission cables where screened twisted pairs are in use. The connectors have two pins in a metal body with screwed locking rings. The connectors have a keyway to ensure that plugs cannot be incorrectly mated. Ideal for any balanced pair system. Nominal impedance is 100Ω, and frequencies up to 250MHz are handled with minimum loss. Working voltage 500V peak. All connectors are nickel-plated brass with gold-plated pins and sockets for minimum insertion loss with long life.

Plug

Cable entry hole 9mm diameter. See BNC plug for assembly details.

Order Code	Type	Price each
JB07H	Twinax Plug	£3.29

Chassis Socket

Requires a 19mm diameter panel cut-out.

Order Code	Type	Price each
JB09K	Twinax Chassis Skt	£5.49

N SERIES CONNECTORS

Low Cost Range

Constant impedance 50Ω coaxial connectors, distinguished from the UHF style connectors by having a larger diameter. N series connectors are suitable for frequencies up to 10,000MHz, and have insulation strength up to 1000V peak. These connectors have a pressure-sleeve cable clamping system using compressible silicone rubber sealing gaskets. The bodies are nickel-plated brass, with silverplated contacts.

Plugs

FOR CASHTEL
Phone 01702 552941

Two N type coaxial plugs, to suit two sizes of coaxial cable.

Plug N-050 is compatible with coaxial cable of 5mm diameter, such as the Low C Cable/UR76.

Plug N-011 is compatible with heavy duty RF cable of 10/11mm dia., such as the UR67 RF Cable.

Order Code	Type	Price each
FJ77J	Plug N-050	£2.49
FJ78K	Plug N-011	£2.69

Straight Female Adaptor

Union Brothers

An inline adaptor for joining two N type Plugs.

Order Code	Type	Price each
FJ81C	N Double Female	£2.45

Straight Male Adaptor

Back-to-back male plugs.

Order Code	Type	Price each
FE96E	N Double Male	£2.85

N Male to BNC Female Adaptor

Allows a BNC plug to be used with an N type socket.

Order Code	Type	Price each
FJ82D	N Male to BNC Adapt	£2.99

N Female to BNC Male Adaptor

Allows an N type plug to be used with a BNC socket.

Order Code	Type	Price each
FJ83E	N Fem to BNC Male	£2.99

N Female to BNC Female Adaptor

Allows a BNC plug to be connected in-line with an N type plug.

Order Code	Type	Price each
FJ84F	N Fem to BNC Fem	£2.85

N Male to UHF Female Adaptor

Allows a UHF plug PL259 to be used with an N-type socket.

Order Code	Type	Price each
FE97F	N Male/UHF Fem	£2.69

N Female to UHF Male Adaptor

Allows an N-type plug to be used with a UHF socket SO239.

Order Code	Type	Price each
FE94C	N Fem/UHF Male	£2.55

TNC SERIES CONNECTORS

Low Cost Range

A range of RF connectors similar to BNC, but plugs and sockets screw together.

Plug

Nickel-plated brass plug with silver-plated centre pin and ferrule. 50Ω impedance. See BNC plug for assembly details.

Order Code	Type	Price each
FE80B	TNC Plug	£1.49

Crimp Plug

Nickel-plated brass plug with silver-plated centre pin. The plug is suitable for use with any 50Ω cable where the outside diameter of the sheath of the inner conductor is approx. 3mm, and the outside diameter of the outer sheath is 5mm e.g. UR76, RG58 (our XR19V/XS51F).

Order Code	Type	Price each
JC22Y	TNC Crimp Plug	£1.09

Twist-on Plug

Nickel-plated brass plug suitable for use with any 50Ω cable having a 5mm overall diameter e.g. UR76, RG58C (XR19V, XS51F). To fit, strip about 8mm of outer sheath then fold the screen back over the outer sheath, then strip 6mm of the inner sheath and screw the plug on.

Order Code	Type	Price each
JK22Y	Twist-on TNC Plug	£1.09

Chassis Socket

A single hole fixing N type chassis mounting socket, requires 16mm dia. cutout. Earth tag included.

Order Code	Type	Price each
FJ79L	N Type Chassis Skt	£1.79

Square Chassis Socket

Requires 16mm round cutout. Fixing centres: 18 x 18mm x 6BA (M3) clear.

Order Code	Type	Price each
FJ80B	N Type Chass Skt Sq	£1.85

Free Socket

Two N-type free sockets to suit two sizes of co-axial cable. Socket N-050 fits cables of 5mm diameter, such as UR76, while socket N-011 suits cables 10 to 11mm diameter such as UR67. For assembly details see BNC plug.

Order Code	Type	Price each
FP00A	Socket N-050	£2.45
FP01B	Socket N-011	£2.50

TOP QUALITY PRODUCTS AT SUPER LOW PRICES!

Chassis Socket

Nickel-plated brass chassis socket with silver-plated centre pin and earth tag. 50Ω impedance. Requires 9.7mm diameter panel cut-out.

Order Code	Type	Price each
FE81C	TNC Socket 50	75p ¹⁵⁷⁹

Free Socket

Union Brothers

A TNC in-line socket for cable mounting.

Order Code	Type	Price each
FS44X	TNC In-Line Socket	99p ¹⁵⁸¹

Straight Female Adaptor

An in-line adaptor for joining two TNC plugs.

Order Code	Type	Price each
FE82D	TNC Fem/Fem Adaptor	99p ¹⁵⁸³

Straight Male Adaptor

An in-line adaptor for joining two TNC sockets.

Order Code	Type	Price each
FS46A	TNC Male/Male Adaptor	£1.29 ¹⁵⁸⁵

TNC Male to BNC Female Adaptor

Allows a BNC plug to be used with a TNC socket.

Order Code	Type	Price each
FE83E	TNC Male/BNC Fem	£1.35 ¹⁵⁸⁷

BNC Male to TNC Female Adaptor

Allows a TNC plug to be used with a BNC socket.

Order Code	Type	Price each
FS45Y	TNC Fem/BNC Male	£1.10 ¹⁵⁸⁸

TNC Male to UHF Female Adaptor

Allows a UHF plug PL239 to be used with a TNC socket.

Order Code	Type	Price each
FE84F	TNC Male/UHF Fem	£1.29 ¹⁵⁸⁹

UHF Male to TNC Female Adaptor

Allows a TNC plug to be used with a UHF socket.

Order Code	Type	Price each
FS47B	TNC Fem/UHF Male	£1.99 ¹⁵⁹⁰

UHF SERIES (M) CONNECTORS

Low Cost Range

A range of 'uhf' type high quality plugs and sockets. The nominal impedance is 50Ω, but this is not constant and although satisfactory up to 200MHz caution should be exercised between 200 and 500MHz. Working voltage: 500V peak. (Note that all 'uhf' series connectors of all makes have a non-constant impedance).

Plug (PL259)

Union Brothers

Suits cable UR67. Size 38 x 19mm dia. Cable entry hole: 11mm dia.

Order Code	Type	Price each
BW81C	Plug PL259	£1.18 ¹⁶⁰⁵

Reducer Small

Screws into plug PL259 to enable it to be used with cables around 5.3mm dia. e.g. UR76.

Order Code	Type	Price each
BW82D	UHF Reducer Small	29p ¹⁶⁰⁸

Reducer Large

Screws into plug PL259 to enable it to be used with cables around 6.4mm dia.

Order Code	Type	Price each
BW83E	UHF Reducer Large	29p ¹⁶⁰⁹

Right Angled UHF Plug (PL259)

A right-angled UHF plug in a plastic body with strain relief sleeve, and solderless cable connections.

Order Code	Type	Price each
FJ73Q	UHF R/A Plug	£1.29 ¹⁶¹¹

Right-Angle Plug (PL259)

A twist-on PL259 plug with a right angle cable input and reducer for connection to RG58/UR76-type cable.

Order Code	Type	Price each

Round Socket

Mounting hole: 16.5mm dia. Earth tag fitted.

Order Code	Type	Price each
BW84F	UHF Socket Round	£1.10

Lightning Arrester Adaptors

On both these adaptors a terminal is attached for connection to earth. In the event of a lightning strike, the current is diverted to earth thus protecting the equipment. Two types are available.

Female/Female

A straight through adaptor for connecting two PL259 plugs together with provision for connecting an earth wire.

Order Code	Type	Price each
RK01B	UHF Adaptor FFLA	£2.49

Male/Female

A straight through adaptor for connecting a PL259 plug to an SO239 socket, but with provision for connecting an earth wire.

Order Code	Type	Price each
RK02C	UHF Adaptor FMLA	£2.69

UHF Female to BNC Male Adaptor

A BNC plug internally connected to a UHF SO239 socket.

Order Code	Type	Price each
YW04E	Adaptor 239	£1.99

UHF Male to BNC Female Adaptor

A BNC socket internally connected to a UHF PL259 plug.

Order Code	Type	Price each
YW05F	Adaptor 259	£1.99

UHF Female to Phono Plug Adaptor

A UHF socket SO239 internally connected to a phono plug.

Order Code	Type	Price each
FE89W	UHF Fem/Phono Plug	99p

UHF Male to Phono Socket Adaptor

A UHF plug PL259 internally connected to a phono socket.

Order Code	Type	Price each
FE85G	UHF Plug/Phono Skt	99p

Square Socket

Union Brothers

Cut-out 16.5mm dia. Fixing centres: 18 x 18mm x 6BA (M3) clear.

Order Code	Type	Price each
BW85G	Socket SO239	£1.10

Elbow Adaptor

Union Brothers

A right-angle coupler. PL259 to SO239

Order Code	Type	Price each
BW86T	UHF Elbow Adaptor	£1.89

Straight Female Adaptor

Adaptor to couple two PL259 plugs together.

Order Code	Type	Price each
BW87U	UHF Straight Adaptor	£1.10

Straight Male Adaptor

Back-to-back male plugs PL259 to PL259.

Order Code	Type	Price each
FE91Y	UHF Double Male	£1.10

'T' Adaptor

Adaptor to couple two PL259 plugs and then join them to an SO239 socket.

Order Code	Type	Price each
BW88V	UHF T Adaptor	£1.99

Wiring and Lighting

by Albert Jackson and David Day

This book will help anyone wanting to undertake household electrical tasks. It covers things as diverse as mending fuses and changing plugs through to good advice on complete rewiring. The diagrams and instructions here are full, many are step by step, and a lot of the matters left hanging in the small book are explained. There are also a number of extended special sections which discuss the wiring of fixed appliances, the basic home electricians toolkit and how to reduce the cost of electricity – legally! A short glossary explains some of the more basic terms as well as covering such matters as PME and ELCB. This is the book for the serious home electrician.

1988. 64 pages. 258 x 212mm, full colour illustrations.

Order Code	Type	Price each
WT56L	Wiring & Lighting	£6.99 NV

TERMINAL BLOCKS Screw Type

12-way flexible moulded terminal block strips that may be easily cut into shorter lengths. Screw terminals. Four types are available: 2 Amp, 5 Amp, 15 Amp and 30 Amp.

Order Code	Type	Price each
FE78K	Terminal Block 2A	59p
HF01B	Terminal Block 5A	75p
HL54J	Terminal Block 15A	99p
HL55K	Terminal Block 30A	£1.39

Terminal Block Plug and Socket

Union Brothers

A pair of 12-way flexible moulded terminal block strips that may be easily cut into shorter lengths. One block has one screw terminal and a plug per position and the other block has one screw terminal and a socket per position. Rating: 5 Amps.

Order Code	Type	Price each
HL56L	Terminal Block Conn	£2.65

PLUGS 5 Amp

A 5A mains plug moulded in hard wearing heat-resistant bakelite. Fitted with cordgrip. Not fused. Conforms to BS546A.

Order Code	Type	Price each
HL57M	5 Amp Plug Bakelite	£1.15

13 Amp Nylon Plug

A 13A mains plug moulded in hard-wearing heat-resistant white nylon. Fitted with 13A fuse and cord-grip. Conforms to BS1363A.

Order Code	Type	Price each
RW67X	13 Amp Plug Nylon	86p

13 Amp Rubber Plug

A 13A mains plug moulded in unbreakable tough white rubber. Fitted with a 13A fuse and cord-grip. Conforms to BS1363A.

Order Code	Type	Price each
HL58N	Rubber 13A Plug	£1.75

Super Grip Plug

A 13A mains plug moulded in tough white nylon with an integral handle for easier insertion and removal for people with arthritic fingers and similar problems of impaired gripping ability. Ideal for appliances which need frequent connection and disconnection, e.g. electric kettles, vacuum cleaners, toasters etc., and some power tools. The effort required to insert/remove this type of plug is considerably reduced compared with the normal type. Fitted with ASTA approved 13A fuse to BS1362. Manufactured to BS1363/A and ASTA approved. Maximum distance of handle from socket is 50mm (2 inches).

Order Code	Type	Price each
ZB88V	Super Grip Plug	£2.25

Plug Mate

A pull strap attachment for 13A plugs, as an aid for easy removal. Easy to fit and safe to use. Ideal for use in kitchens, workshops and around the home, or where access is difficult. Perfect for the elderly or disabled. Supplied in packs of three.

Order Code	Type	Price each
RZ37S	Plug Mate	£1.20

TOP QUALITY PRODUCTS AT SUPER LOW PRICES!

Fax your orders to: 01702 553935

THE BEST OF SERVICE

Moulded Mains Plug and Lead

This integrally moulded 13A mains plug with 2m of 0.75mm diameter 3-core cable is supplied prepared for fitting to an electrical appliance. The plug features double insulation, and wire connections that have been crimped on by specialised semi-automatic equipment, to ensure consistent safety and reliability. The plug is supplied with solid brass semi-insulated pins and is approved to BS1363A. Supplied fitted with a 5A fuse; cable end stripped 40mm, and cores bared 10mm. Available in either black or white.

Order Code	Type	Price each
CY32K	13A Plug+Cable Black	£3.25
CY33L	13A Plug+Cable White	£3.25

CEE Type Plugs and Sockets

A range of high quality 3-way CEE industrial type connectors rated at 16A that comply to BS 4343, where applicable, and IEC 309/1 + 2. The range includes a wall or panel mounted socket, a coupler and a plug. The socket and coupler have a spring loaded cap to protect the contacts, and when a plug is connected, the cap locks on to the plug and has to be lifted before the plug can be removed. This prevents the plug being removed by pulling on the cable. A keyway, and a larger diameter earth pin/socket make it impossible for a plug and socket/coupler to be incorrectly connected. The connectors are the standard type used on caravans etc. for connecting to mains supplies, and being splashproof are suitable for outside use. Available for use with 110/130V AC supplies (colour coded yellow) and 240V AC supplies (colour coded blue).

Order Code	Type	Price each
KC76H	110V Plug	£2.99
KC77J	110V Coupler	£4.25
KC78K	110V Socket	£5.99
KC79L	240V Plug	£2.99
KC80B	240V Coupler	£4.25
KC81C	240V Socket	£5.99

ADAPTORS

Flex Connector

A 10A 3-pin flex connector. The pins are shrouded and the earth pin is offset so that the connector is non-reversible. Connect mains to socket side and appliance to plug side. Fitted with cord-grip and moulded in hardwearing heat-resistant white nylon.

Order Code	Type	Price each
HL61R	Flex Connector	£2.49

Fax your orders to:
01702 553935

2-Way Multiplug

A 13A 3-pin adaptor that plugs into a standard 13A socket and allows up to two appliances to be plugged into it. Maximum total load: 13A. Unfused. Sockets are shuttered. White.

Order Code	Type	Price each
HL62S	Mains Adaptor 2-way	£2.99

3-Way Multiplug

A 13A adaptor that plugs into a standard 13A socket and allows up to three appliances to be plugged into it. Maximum total load: 13A. Unfused. Sockets are shuttered. White.

Order Code	Type	Price each
HL63T	Mains Adaptor 3-way	£3.99

Shaver Adaptor

Standard 13A 3-pin plug internally connected to a 2-pin socket rated at 1A suitable for accepting the plugs fitted to electric shavers. Sockets are shuttered. Fitted with 1A fuse. White. Imported type. This adaptor is suitable for use with standard 2-pin continental mains plugs.

Order Code	Type	Price each
HL64U	Shaver Adaptor	£1.35

Travel Plug

A one-piece earthed adaptor suitable for use worldwide. No need to change plugs when you travel abroad, just use this neat adaptor.

Suitable for hairdryers, heated curlers, shavers, travel irons, and in fact almost anything that does not exceed 110/220V AC 5Amp rating of the adaptor. Complete with instructions and a list of all the countries where it can be used.

Order Code	Type	Price each
RZ36P	Travel Plug	£4.99

House Wiring

No permission is required in Britain to carry out home electrical installation work, though where the house is rented, permission may be necessary from the owner. Neither electricity boards nor local authorities or any other official body has any jurisdiction in respect of wiring. The work should, however, conform to the IEE wiring regulations published by the Institute of Electrical Engineers and recognised as a code of good wiring practice by all official bodies, including electricity boards and government departments.

The regulations, contrary to popular belief, are not statutory, and an electricity board has no powers to refuse connection to its mains of an installation, or parts of it, which do not strictly conform to the current IEE wiring regulations, but a board can, and will, refuse connection to its mains of any installation which is dangerous and as such does not conform to the Electricity Supply Regulations. These are statutory, and are quoted in the application form signed by a consumer when requiring a supply of electricity.

An installation conforming to IEE wiring regulations is deemed to satisfy the requirements of the Electricity Supply Regulations and the electricity board must connect it to the mains. In these circumstances the board must connect the installation, whether work has been carried out by a recognised contractor or by the householder himself.

From a contractor the board requires a test certificate, and may waive its own test and inspection. The householder who is unable to complete a test certificate can expect the board to test the installation, though they are not obliged to do so. The test is at the option of the electricity board, and is mainly to satisfy them that the installation will not adversely affect the supply to other consumers. It is important to note that good workmanship using correct materials is necessary to conform to the regulations.

The various cables used in house wiring with their sizes, current ratings, and the principal circuits in which they are used are as follows:-

Cable size mm ²	Current rating amps	Circuits
1.0	16	Lighting
1.5	20	Lighting and 15A single socket ccts
2.5	28	Ring circuits and 20A radial circuits
4.0	36	Radial circuits 30A
6.0	46	Cooker circuits, shower unit ccts
10	64	Cooker circuits
16	85	Meter leads
25	108	Meter leads

These current ratings apply where the cables are clipped direct to the surface. Ratings are lower for enclosed cables and some other situations, but are all suitable for the circuits specified.

Three Way Mains Adaptor

This three-way adaptor has built-in overload protection and is designed to BSEN 60730 (1992) to allow you to convert a single 13A socket outlet, safely into three sockets. The adaptor can support a maximum load of 3.1kW and has an indicator to show that power is present at the output. If the socket is overloaded, the in-built protection cuts the supply to all three adaptor sockets and sounds an audible alarm. After the overload has been removed the adaptor can be reset by pressing the reset button. As an extra precaution, the adaptor is also provided with a 13A fuse. Correct use of this adaptor will prevent the cable serving the socket from overheating and causing a fire risk.

Please Note: This adaptor is not intended to be used as a substitute for safe wiring and good electrical practices.

Order Code	Type	Price each
RZ86T	3-Way Converter	£10.99

Double Pole Circuit Breaker

Safeguard yourself with this double pole residual current circuit breaker. Simply plug the circuit breaker into your existing 13A socket outlet and then plug the lawn mower, hedge trimmer or any two or three wire domestic appliance into the 13A socket outlet on the unit. The circuit breaker has a rated trip current of 30mA and will trip within 40ms, with a maximum operating current of 13A. A test button and an indicator flag is incorporated in the unit and allows you to visually check its operation. This facility must be used every time the circuit breaker is used to ensure that the unit is functioning correctly.

Please note, a circuit breaker is not a substitute for good electrical safety practices, and normal precautions should be observed when in use.

Order Code	Type	Price each
RZ85G	DP Circuit Breaker	£19.99

Appliance Residual Current Detector

A Residual Current Detector (RCD) for individual appliances that may be plugged into a 13A mains wall socket or distribution block. The device provides added protection for you and your family against the risk of electric shock and is suitable for use with most electrical household appliances and power tools. Once set and in use, it compares the Live terminal current against the Neutral return current. If this shows a difference of more than 30mA, because of a leak either to the Earth terminal or elsewhere, then the device will trip open circuit, disconnecting and isolating both Live and Neutral terminals.

Particularly suitable for use with electric lawnmowers and hedge trimmers where cables are in danger of being cut. Can also be used for all appliances around the home, especially in the kitchen for kettles and irons where water is present. Also for use with an extension lead, you can make sure that the RCD is connected to the plug of the lead. The device plugs into a conventional 3-pin mains socket, and the appliance then plugs into the device. A trip indicator window will show red when reset, indicating that power is available via the device. When tripped the window shows white. A 'TEST' button is included to make sure that the device operates correctly and should be tried before service every time it is used.

Dimensions of unit: 100 x 56 x 54mm deep not including pins.

Rated voltage:	240V AC @ 50Hz
Maximum operating current:	13A
Rated trip current:	30mA
Trip speed:	40ms nominal
Switching method:	Double pole break
Maximum load:	3kW

Order Code	Type	Price each
RC53H	RCD Adaptor	£19.99

Portable Residual Current Circuit Breaker

A portable and easy to use circuit breaker for use in the home, at work, in the garden or garage. Simple to use and ideal for protecting operators of all types of power-tools. Simply plug the circuit breaker into the wall and press the 'RESET' switch. Any attached equipment can now be operated safely. Should a fault develop, then the supply to the equipment will be cut, protecting the operator from shock. Being portable this unit can be moved around the house as necessary. A test button is also provided, to make sure that the circuit breaker is functioning properly. This unit will protect the user by isolating the supply when a leakage of 30mA or more occurs. Rated at 13A.

Order Code	Type	Price each
AQ70B	13 Amp RCD Adaptor	£19.99

Residual Circuit Breaker Wall Outlet

A wall mounted socket with an integrated residual circuit breaker. Ideal for garages and other places where power tools may be used. Once installed the unit will protect against leakages of current of 30mA or greater. Should a person be using a piece of equipment that is potentially dangerous the unit is designed to trip, protecting the operator from shock. The unit is no deeper than a standard wall socket, and may be used as a direct replacement. Normal electrical precautions should be taken when fitting this unit, i.e. ensure the supply is turned off at the distribution unit. Rated at 13A.

Order Code	Type	Price each
AQ68Y	RCD Socket Single	£34.99

JUNCTION BOXES

5 Amp

Centaur

A 4-terminal junction box rated 5A per terminal. Brown. Size 64mm diameter.

Order Code	Type	Price each
HL65V	Junction Box Small	£1.39

15 Amp

Centaur

A 4-terminal junction box rated 15A per terminal. Brown. Size 76mm diameter. Available individually and in packs of 10.

Order Code	Type	Price each
HL66W	Junction Box Lge	£1.69
YT01B A1	Junction Bx Lge 10pk	£12.99

IN-LINE RESIDUAL CIRCUIT BREAKER **NEW**

An attractive in-line circuit breaker designed for use with garden and power tools. Should a fault develop in the equipment being used, any current leakage will trip the circuit breaker and totally isolate the operator from risk of shock. The RCDs mechanism totally isolates both the live and neutral mains connections, and will not reconnect the supply until the fault has been cleared and the 'RESET' button pressed. This feature protects the user against faulty mains wiring where the live and neutral may have been reversed. Another safety feature of the circuit breaker is that when first plugged in, the 'RESET' switch must be pressed before current is supplied to the equipment. A test button is also provided, to make sure that the circuit breaker is functioning properly. The bright colour of the lead and circuit breaker mean that it is always clearly visible when mowing etc. The device will trip on a leakage of 30mA of current, or more. Rated at 13A.

GREAT VALUE!
£39.99
AQ69A

30 Amp

A 3-terminal junction box rated 30A per terminal. For inter-connections in ring main circuits. Brown. Size 89mm diameter. Available individually and in packs of 10.

Order Code	Type	Price each
HL67X	Junction Box RM	£2.29
YT02C A1	Junction Box RM 10pk	£18.99

Unswitched Double

Voilex

A double 13A socket without switches. White. BS1363. Supplied with fixing screws. Shuttered. Available individually and in packs of 5.

Order Code	Type	Price each
HL69A	Dble Skt Unswitched	£4.99
XJ82D A1	Double Skt Unsw 5pk	£22.99

SOCKET OUTLETS

Unswitched Single

RPP

A 13A socket without switch. White. BS1363. Supplied with fixing screws. Shuttered. Available individually and in packs of 10.

Order Code	Type	Price each
HL68Y	Single Skt Unswitched	£2.79
XJ81C A2	Single Skt Unsw 10pk	£24.99

HOT TIP

Always use PVC green/yellow insulation sleeving on all bare earth wires inside sockets, junction boxes and consumer units, etc.

Unswitched Triple

Voilex

A triple 13A socket without switches. Incorporates a 13A fuse which can be safely replaced from the front without turning the power off. The safety fuseholder is retained by the moulding. White. BS1363. Supplied with fixing screws. Shuttered. Available individually and in packs of 5.

Order Code	Type	Price each
JG35Q	Triple Skt Unswitched	£9.99
XJ94C B3	Triple Skt Unsw 5pk	£46.99

Switched Single

RPP

A 13A socket with single pole switch that switches live only. White. BS1363. Supplied with fixing screws. Shuttered.

Available individually and in packs of 10.

Order Code	Type	Price each
HL71N	Single Sw Socket	£3.29
XJ83E B2	Single Sw Skt 10pk	£28.99

Metal-Clad Switched Single

RPP

A 13A socket with single pole switch that switches Live only. Completely enclosed in a smart silver grey finished box, with earth terminal BS1363. Shuttered. Available individually and in packs of 5.

Order Code	Type	Price each
JG40T	Mtl Single Sw Skt	£7.49
XJ98G B2	Mtl Sngl Sw Skt 5pk	£31.99

Switched Double

RPP

A double 13A socket each with its own single pole switch that switches live only. White. BS1363. Supplied with fixing screws. Shuttered. Available individually and in packs of 5.

Order Code	Type	Price each
HL72P	Double Sw Socket	£5.79
XJ84F A1	Double Sw Skt 5pk	£26.99

Metal-Clad Switched Double

RPP

A double 13A socket each with its own single pole switch operating on the live side. Completely enclosed in a smart silver grey finished box, with earth terminal. BS1363. Shuttered. Available individually and in packs of 5.

Order Code	Type	Price each
JG41U	Mtl Double Sw Skt	£11.99
XJ99H C4	Mtl Dbl Sw Skt 5pk	£54.99

Trailing Single Socket

A single 13A socket without switch. Finished in resilient white thermoplastic. With cord grip. Shuttered. Designed to be fitted to the end of an extension lead.

Order Code	Type	Price each
HL73Q	Trailing Skt Single	£1.89

Trailing Double Socket

A double 13A unswitched socket made in resilient black thermoplastic. Includes cord grip, and both sockets are shuttered. Intended for fitting to the end of a cable to make up your own extension lead. Cable entry is at one end of the rectangular housing, and each socket has the unusual feature of being skewed by 45° to enable both 2 and 3-way multipug adaptors to be used as well, in both sockets. Wiring instructions included inside housing.

Order Code	Type	Price each
ZB41U	Trailing Dble Skt	£5.49

5-Metre Extension Lead

An extension lead having a 13A plug at one end and a trailing socket at the other. The plug and socket are not moulded on types and so can be easily replaced or changed. Rated at 13A and suitable for appliances up to 3kW. Colour white.

Order Code	Type	Price each
ZB82D	5m Lead	£6.49

10 Metre Extension Lead

An extension lead with a 13A plug (fitted with a 5A fuse) at one end and a trailing socket at the other. The 3-core cable is rated at 5A and the maximum load is 1200 watts. Colour white.

Order Code	Type	Price each
KR37S	10m Lead	£7.99

Distribution Board

A plug board with four 13A sockets moulded in unbreakable white PVC. Cord grip on cable inlet at left-hand end enables use with trailing lead or by knocking out two covers on the front, the unit may be fixed to a wall etc. Sockets have safety shutters and a neon pilot light is fitted. Total load must not exceed 13A, and a 13A 1in. fuse is fitted. To BS1363/A.

Order Code	Type	Price each
ZF55K	Dis Board 4-way	£6.99

Extension Lead

A 4 way distribution board ready connected to 2.5m (approx) of mains cable terminated in a 13A mains plug.

Order Code	Type	Price each
YN46A	Extn Lead 13A	£6.99

3 Metre Extension Reel

JoJo

A 3 metre extension reel that is suitable for all domestic household appliances with a maximum combined total capacity of 3120W. Light to carry, the reel is fitted with two childproof sockets and a 13A fused plug. Finished in white. Not for use in wet conditions.

Specification		
Cable length:	3m (10 feet approx.)	
Capacity:	8A (1920 watts) fully wound 13A (3120 watts) fully unwound	
Weight:	600g	

Order Code	Type	Price each
KR25C	3M Mains Cable Reel	£8.99

HOT TIP

Before discarding old cable runs when re-wiring a house, ask yourself whether they could be used as 'fish' wires to help pull new cables through awkward or hard to get at areas. Remember to always use PVC green/yellow insulation sleeving on all bare earth wires inside sockets, junction boxes and consumer units, etc.

10 Metre Extension Reel

JoJo

A 10 metre extension reel with a maximum combined capacity of 1200W. Suitable for use with DIY power tools, Hi-Fi, video, lighting and most domestic electrical appliances. A convenient finger-shaped recess in the base and a small handle on the front make winding in the cable fast and easy – no more tangled cable. Fitted with two childproof sockets and a 5A fused plug. Finished in black. Not for use in wet conditions.

Specification		
Cable length:	10m (33 feet approx.)	
Capacity:	3A (720 watts) fully wound 5A (1200 watts) fully unwound	
Weight:	850g	

Order Code	Type	Price each
KR24B	10M Mains Cable Reel	£9.99

15 Metre Extension Reel

JoJo

Manufactured with safety in mind, this extension reel is suitable for use with power tools, lighting, various household appliances and gardening equipment such as strimmers, lawn mowers etc. The maximum load is 1200 watts. The reel is fitted with a convenient carry handle and an additional handle is provided for easy winding of the cable. Fitted with two childproof sockets, the extension reel conforms to BS6500, BS61363/A and BS5733. Colour black and red. Not for use in wet conditions.

Specification		
Cable length:	15m (50 feet approx.)	
Capacity:	3A (720 watts) fully wound 5A (1200 watts) fully unwound	
Weight:	1.5kg	

Order Code	Type	Price each
KR23A	15M Mains Cable Reel	£14.99

PHONE BEFORE 5PM FOR SAME DAY DESPATCH

01702 554161

Euro Socket to 13A Plug Lead

Moulded, high quality plug and socket non-rewirable cable assembly 2m long and rated at 5A 250V AC. The plug is supplied with a 5A fuse. Colour black.

Order Code	Type	Price each
MK41U	Euro-13A Lead	£3.49

Cooker Control

RPP

A cooker control produced to BS4177C. The cooker switch is a large double pole switch rated at 45A. A switched 13A socket is also provided for electric kettles etc. The socket is shuttered. For ease of wiring separate earth terminals are provided for socket and cooker. Both switches have red rockers and are double pole to switch both live and neutral for absolute safety. Supplied with fixing screws. White.

Order Code	Type	Price each
HL76H	Cooker Switch	£11.99

Shaver Socket for Bathrooms

Le Grand

A dual voltage shaver socket complying with BS3052. A dual-voltage socket is employed with one side providing 115V and the other 240V. Each is keyed to prevent insertion of the wrong style plug. Insertion of a plug automatically switches the sockets on, which are connected via a double wound safety isolating transformer, itself protected by a self-resetting overload device. Designed for use in bathrooms where it meets the relevant IEE regulations. Supplied with fixing screws. Colour White.

Order Code	Type	Price each
HL78K	B2 Shaver Skt Isolated	£26.49

Flex Outlet Switched

RPP

A connecting unit, max. load 13A with a fused flex outlet in a white plate cover and a double pole switch. BS1363. Supplied with fixing screws.

Order Code	Type	Price each
HL83E	Switched Flex Outlet	£6.99

Switched Flex Outlet with Red Neon

RPP

A fused connecting unit, max. load 13A, with a flex outlet in a white plate cover and a double pole switch which is illuminated by a red neon when energised. Supplied with fixing screws.

Order Code	Type	Price each
ZB38R	Sw Flex Outlet Neon	£9.49

Metal-Clad Switched Fused Spur Outlet

RPP

A switched connecting outlet with a double pole switch and fuse holder with 13A fuse. Includes two strapped earth terminals for easy carry through of an earth wire. BS3636.

Order Code	Type	Price each
ZB37S	Metal Sw Outlet	£9.49

Blanking-off Plate

RPP

A white plate that will blank off any spare single mounting box. BS1363. Supplied with fixing screws.

Order Code	Type	Price each
HL86T	Blanking Plate	£1.29

Double Blanking Plate

RPP

A white plate which can be used to blank off any spare double mounting box. Supplied with fixing screws.

Order Code	Type	Price each
ZB49D	Dbl Blank Plate	£2.29

HOT TIP

When running new electrical cable around the house, take every opportunity possible to write on the cable what its purpose is and where it is routed. Then, in a few years time when you, or someone else, decides to add to the household wiring, this information will be of great benefit. Use a black felt-tip pen for optimum readability.

SWITCHES

20A

RPP

A plain white plate switch with a single double pole switch rated 20A, plus flex outlet and cord-grid. Fixing screws supplied. BS3676. Available with or without neon indicator.

Order Code	Type	Price each
HL87U	20A Plateswitch	£4.99
JG30H	20A Neon Plateswitch	£6.99

Shower Wall Switch

RPP

A double-pole rocker switch with red rocker and heavy duty contacts for switching electric shower heaters. Rated at 45A 250V. BS3676 Part 1. Double pole make only. Includes two strapped earth terminals for easy carry through of an earth wire. Rocker includes the legend 'ON' when active. Fixing screws supplied. Switch should not be mounted inside a bathroom. Requires a 35mm deep flush or 40mm deep surface mounting box.

Order Code	Type	Price each
ZB39N	Wall Shower Switch	£9.49

MAPLIN KEY CALL

Phone 01702 556751

Ceiling Switch

RPP

A ceiling mounted, cord operated light switch to BS3676 for use in bathrooms (wall mounted switches are not permitted in bathrooms). Fitting has a one-way switch. Rated at 5A and suitable for fluorescent fittings. White with tough white nylon pull-cord. Fixing centres 51mm.

Order Code	Type	Price each
FQ00A	Ceiling Switch 1-way	£3.95

Shower Pull Switch

A ceiling mounted double-pole switch with heavy duty contacts for switching electric shower heaters. Rated at 40A 250V. BS3676. Double pole make only. Includes two strapped earth terminals for easy carry through of an earth wire. Escutcheon includes a red neon power-on indicator, and moving 'ON' and 'OFF' legends displayed in a window. The 1.7m long cord can be shortened as necessary. Fixing screws supplied. Requires a 35mm deep flush or 40mm deep surface mounting box.

Order Code	Type	Price each
ZB89W	Shower Pull Switch	£11.99

Single Light Switch 1-Way

RPP

A single one-way switch rated at 5A and also suitable for fluorescent fittings. White. Fixing screws supplied. BS3676. Available individually and in packs of 10.

Order Code	Type	Price each
HL89W	Light Swch ST Single	£1.79
XJ85G A1	Light Sw ST 1W 10pk	£14.99

Single Light Switch 2-Way

A single two way switch rated at 5A and also suitable for fluorescent fittings. For use where two switches are used to operate the light/s e.g. in hall and stairways. White. Fixing screws supplied. BS3676.

Order Code	Type	Price each
HL90X	Light Swch DT Single	£1.99

Metal-Clad Single Light Switch 2-Way

RPP

A single 2-way switch rated at 5A and also suitable for fluorescent fittings. Also for use where two switches are used to operate one light. Completely enclosed in smart hammertone grey finish box. BS3676. Available individually and in packs of 5.

Order Code	Type	Price each
JG39N	Mtl Light Sw DT	£5.49
XJ97F A2	Mtl Light Sw DT 5pk	£24.99

Intermediate Single Light Switch

RPP

A single 2-way switch specifically for 'three way' lighting control, where one light can be controlled from three different places. For example, where one lighting circuit covers the front hall and upstairs landing, there can be three switches, one near the front door, one at the end of the hallway and another on the upstairs landing. Two of these need to be 2-way type (HL90X), and the third must be an intermediate type as shown here. It serves to interrupt the three-core cable linking the other two switches, and has two 'L1' and two 'L2' terminals.

Order Code	Type	Price each
ZB61R	Intermediate Switch	£4.99

Double Light Switch

RPP

Two separate two-way switches rated at 5A and also suitable for fluorescent fittings. White. Fixing screws supplied. BS3676.

Order Code	Type	Price each
HL91Y	Light Swch Dual	£3.49

Double Metal-Clad Light Switch

RPP

A dual 2-way switch rated at 5A which can be used where two switches are used to operate one light. Completely enclosed in a smart silver grey finished box. BS3636.

Order Code	Type	Price each
ZB51F	Mtl Light Sw Dble	£7.99

Triple Light Switch

RPP

Three separate two-way switches rated at 5A and also suitable for fluorescent fittings. White. Fixing screws supplied. BS3676.

Order Code	Type	Price each
HL92A	Light Switch Triple	£5.49

LIGHT DIMMERS

Attractive modern light dimmers for filament lamps e.g. standard domestic light bulbs, having a total rating up to the rating shown. All types fit our 16mm flush or 20mm surface pattresses. These dimmers are extremely simple to fit. Switch off electricity at main fuse box, remove existing switch, connect the two wires to the dimmer and screw on to existing pattress. The dimmer switches the light on and off or sets brightness to desired level depending on position of knob.

Rotary Control

White plate with elegant spun aluminium knob. Rotary knob controls up to 400W. Not suitable for use with fluorescent lamps.

Order Code	Type	Price each
FQ10L	400W Rotary Dimmer	£6.99

White Push-on Push-off Single

White plate with elegant spun aluminium knob. Switching is push-on push-off so that light may be switched on or off at any brightness setting. Rated 400W. Not suitable for use with fluorescent lamps.

Order Code	Type	Price each
FQ12N	400W Push Dmr Sngl	£8.99

PATTRESSES Flush Mounting

A range of flush mounting metal boxes which are designed to be buried in the wall with the edges flush with the plaster. Four types are available. All are to BS1363.

Single 16mm

For all light switches. 16mm deep with one adjustable lug and 16mm and 25mm oval knockouts. A hole (9 x 32mm oval) is knocked out on one side. An earth terminal is provided. Available individually and in packs of 20.

Order Code	Type	Price each
JG31J	Metal Box 16mm	89p
XJ88V B3	Metal Box 16mm 20pk	£9.99

Single 25mm

For all socket outlets and plateswitches. 25mm deep with one adjustable lug and 20mm round knockouts. An earth terminal is provided. Available individually and in packs of 10.

Order Code	Type	Price each
JG32K	Metal Box 25mm	99p
XJ89W A1	Metal Box 25mm 10pk	£6.49

COMPARE OUR PRICE & QUALITY – SAVE MONEY TODAY!

Single 35mm

35mm deep flush metal wall box. Suitable for use with the 45A shower wall switch or Shower Pull Switch BS4662. Includes brass earth terminal.

Order Code	Type	Price each
ZB75S	Shower Box 35mm	89p

Double 25mm

For all double panels except cooker and shaver. 25mm deep with one adjustable lug and 20mm round knockouts. An earth terminal is provided. Available individually and in packs of 5.

Order Code	Type	Price each
JG33L	Metal Box 2-way 25mm	£1.39
XJ90X A1	Metal Bx 2w 25mm 5pk	£4.49

Double 47mm

For cooker panels and shaver adaptor. 47mm deep with one adjustable lug and 20mm and 25mm round knockouts. An earth terminal is provided.

Order Code	Type	Price each
JG34M	Metal Box 2-way 47mm	£1.89

Triple 35mm

35mm deep flush mounting triple metal wall box. Includes two earth terminals and 20mm knockouts.

Order Code	Type	Price each
KC73Q	Metal Box 3-way 35mm	£2.99

Plastic Wall Box Cover

A plastic cover that is clipped over wall boxes before plastering to stop plaster hardening in the box. When the plaster has dried, the plaster is cleaned back to the edges and a small screwdriver is inserted into one of the slots and the cover is removed, revealing a totally clean box. Even if covered completely with plaster the cover can easily be located by gently tapping the area with a small hammer. Inexpensive, re-usable, the cover is available in two sizes for single and double boxes.

Order Code	Type	Price each
KR39N	Pattress Cover Sngl	39p
KR38R	Pattress Cover Dble	49p

Surface Mounting

A range of surface mounting boxes, to BS 1363.

Single 20mm

RPP

For all light switches. 20mm deep with earth terminal. Available individually and in packs of 10.

Order Code	Type	Price each
YB14Q	Sur Patt 20mm Sngl	£1.29
YP99H A1	Patt 20mm Sngl 10pk	£9.99

Single 29mm

RPP

For all socket outlets. 29mm deep. Available individually and in packs of 10. Unsuitable for lighting circuits.

Order Code	Type	Price each
YB15R	Sur Patt 29mm Sngl	£1.39
XJ91Y A1	Patt 29mm Sngl 10pk	£10.49

Single 40mm

RPP

Single white plastic surface mounting pattress. Suitable for use with the 45A pull cord ceiling shower switch or shower wall switch. Internal depth is 40mm.

Order Code	Type	Price each
ZB40T	Shower Box 40mm	£2.19

Double 29mm

RPP

For all double panels except cooker and shaver units. 29mm deep. Available individually and in packs of 5.

Order Code	Type	Price each
YB16S	Sur Patt 29mm Dble	£2.15
XJ92A A1	Patt 29mm Dble 5pk	£9.49

Double 47mm

For cooker and shaver panels. 47mm deep.

Order Code	Type	Price each
YB17T	Sur Patt 47mm Dble	£3.59

Conversion Unit Double

May be fitted onto a single flush mounting box so that a double plate may be fitted. Available individually and in packs of 5.

Order Code	Type	Price each
YB18U	Conversion Pattress	£3.79
XJ93B A2	Conv Pattress 5pk	£15.99

Triple 29mm

For all triple socket outlets 29mm deep.

Order Code	Type	Price each
KC72P	Surf Patt 3-way 29mm	£6.79

Conversion Unit Triple

A safe and convenient way to convert a single flush box to provide three sockets. The single socket is removed, the conversion unit fitted and triple unswitched socket outlet plate JG35Q screwed onto that. Available individually and in packs of 5.

Order Code	Type	Price each
JG36P	3-way Conv Pattress	£4.99
XJ95D B2	3w Conv Pattress 5pk	£22.99

Dry Lining Flush Mounting

Two flush mounting plastic boxes for hollow walls and partitions. A suitable hole is cut in the wall lining and the box inserted. Two retractable plastic pillars with lugs and brass threaded inserts, are pushed out. The socket is screwed on to the pillars which are pulled up on to a ratchet, the screws are tightened until the box and socket are held securely on the wall. The socket can be removed leaving the box securely fixed in the wall. Two knockouts are provided.

Single 36mm

Requires a cut-out 74 x 74mm and a depth of 36mm. Suitable for socket outlets and plate switches. Finished in white, overall size 83 x 83mm.

Order Code	Type	Price each
KC70M	Dry Line Single	£1.39

Double 36mm

Requires a cut-out 135 x 74mm and a depth of 36mm. Suitable for all double panels except cooker and shaver. Finished in white, overall size 145 x 83mm.

Order Code	Type	Price each
KC71N	Dry Line Double	£2.49

Spare Screws for Electrical Fittings

Spare screws as replacements for those supplied with single and double switch plates, blanking plates, sockets etc. The 3.5mm thread is standard for all electrical pattresses and wall boxes, but impossible to match from normal BA or metric sizes! Two lengths are available, a standard 30mm (to replace lost originals for example), and a 50mm, long reach type for deep or recessed pattresses. Sold in packs of ten.

Order Code	Type	Price each
JZ38R	Slot Screw M3.5 30mm	£1.10
JZ39N	Slot Screw M3.5 50mm	£1.40

TRUNKING

Coiled Mini-trunking

A new attractive alternative to standard trunking, that is easy to store, easy to install and economical to use. Supplied in bubble packs, in 3m coils, as a coil of white PVC trunking with a coil of white PVC click-on covering. Available in two sizes, 16 x 16mm and 25 x 16mm.

Order Code	Type	Price each
AP05F	3m 16mm Trunking	£4.99
AP07H	3m 25mm Trunking	£6.99

Switch and Socket Box

Grawater

Surface-mounted white moulded box suitable for use with switches or sockets. The 32mm deep box is fitted with 'pressouts' for conduit and trunking entry. To BS 1363.

Order Code	Type	Price each
RZ25C	Sw-Skt Box	£1.39

5 Amp Multipurpose Connector Blocks

Grawater

A pack of four 5 amp connector blocks for joining two core cables. Base can be surface mounted, and the screw terminals are protected by a press fit cover.

Order Code	Type	Price each
AP92A	4pk 5 Amp Conn Block	£1.99

LIGHT FITTINGS

BC Lampholder

A standard BC lampholder to BS5042. With cord-grip and sprung plungers, plus wide skirt. White. Available individually and in packs of 10.

Order Code	Type	Price each
FQ02C	BC Lampholder	£1.49
YP98G	Lampholder 10pk	£11.99

Switched BC Lampholder

A standard BC lampholder to BS5042 with on/off switch, cord grip and sprung plungers plus wide skirt. White.

Order Code	Type	Price each
KC68Y	BC Lampholder Sw	£2.39

Ceiling Pendant

Lampholder type FQ02C and ceiling rose type FQ05F pre-wired together with 6in. (150mm) approx. of white flex. Available individually and in packs of 5.

Order Code	Type	Price each
JG37S	Rose and Pendant 6in	£3.79
YT00A A1	Rose/Pendant 6in 5pk	£15.99

Battenholder

A standard BC lampholder to BS5042 in a plastic mount with wide skirt. This battenholder has sprung plungers and is finished in white. Diameter of base 63.5mm. Fixing centres 51mm. Overall height 47mm. Available individually and in packs of 10.

Order Code	Type	Price each
LB63T	Bayonet L/Hldr	99p
XJ87U A1	Battenholder 10pk	£7.99

Angled Battenholder

An angled BC lampholder to BS5042 in a plastic mount with a wide skirt. The battenholder has sprung plungers and is finished in white. Diameter of base is 63.5mm. Fixing centres 51mm. Overall length 100mm.

Order Code	Type	Price each
KC69A	Angled Battenholder	£3.99

Force Fit Switched BC Lampholder

A standard BC lampholder to BS5042 with integral on/off switch and 2m of white flex. The base of the lampholder has a plastic adaptor to force fit into a suitable opening e.g. a bottle, to make an attractive and individual lamp. The flex is side entry into the lampholder so it is not necessary to drill holes in the bottle for the flex. The lampholder is screwed onto the plastic adaptor, so it can be removed for maintenance. A 60W lamp is the maximum permissible, depending on the shade used and adequate ventilation. Suitable for an opening 17mm to 23mm approx.

Order Code	Type	Price each
KR35Q	Force Fit Lamp Holdr	£1.49

Clip-on Light

A handy 240V AC mains lamp that is ideal for temporary lighting at home, in the office or studio. The standard white BC lampholder has an on/off switch and is attached to a large spring loaded clip for fixing to the edge of a desk, picture rail etc. The lampholder comes complete with 2m of white twin flex and a 13A plug (fitted with a 5A fuse). The lampholder must be used with a suitable shade, and a lamp not exceeding 60W (neither supplied). NB. This item is not recommended as an inspection lamp.

Order Code	Type	Price each
KR36P	Clip-on Lamp Holder	£3.29

Ceiling Rose

RPP

A white satin-finish ceiling rose that does not need a separate backplate or pattress. Designed to BS67 1969 with three separate terminals with captive screws housed in a transparent shield providing individual loop-in facilities. A separate earth terminal is also provided. Positive cable restraint. Diameter of base 82.5mm. Fixing centres 51mm. Available individually and in packs of 10.

Order Code	Type	Price each
FQ05F	Ceiling Rose	£1.79
XJ86T	A1 Ceiling Rose 10pk	£15.99

Ceiling Rose Lampholder

A white satin-finish ceiling rose with easy-wiring terminals as FQ05F, but with a BC lampholder integral with it. Ideal for bathrooms and kitchens. Available individually and in packs of 10.

Order Code	Type	Price each
JG38R	Rose Lampholder	£3.79
XJ96E	A2 Rose Lampholder 10pk	£31.99

Fluorescent Tube Starters

Two fluorescent tube starters suitable for use with most domestic fluorescent tubes and having standard 2-pin pygmy connectors. Fitted with radio interference suppressors and enclosed in white nylon case.

BS3772. Two differently rated types are available, 80W max. and 125W max.

Order Code	Type	Price each
FQ07H	Starter 80W	49p

Electronic Starter

An electronic fluorescent tube starter which can replace conventional starters that have a standard 2-pin pygmy connection and is designed for use with most fluorescent fittings. Suitable for tubes rated from 30W to 125W. The EFS600 starter is rated at 200/260V AC, 50/60Hz.

Order Code	Type	Price each
RZ29G	Elec Starter	£4.99

Brass BC Lampholders

A pair of smart brass bayonet connecting lamp holders with bases threaded for a lamp stem. The bodies are joined by a solid brass threaded collar and another threaded ring is provided for anchoring a lampshade. The base

includes a screw terminal for an earth wire. One type is plain unswitched and the other has an integral push-bar on-off switch. These lampholders must be earthed, therefore a 3-core mains cable is required.

Order Code	Type	Price each
ZB84F	Sw Brass BC Holder	£1.80
ZB85G	Brass BC Holder	99p

E.S. Bulb Holder

Bulgin

A chassis mounting ES bulb holder ideal for use in disco light show units. The holder has 1/4 in. blade connectors on the rear. Moulded in tough phenolic, max. working temperature 200°C.

Max. working voltage: 250V AC
 Max. dissipation: 150W
 Fixing centres: 46mm x 3-8mm dia.
 Panel cut out: 38mm dia.
 Overall depth: 49mm

Order Code	Type	Price each
JK70M	ES Panel Lampholder	£1.49

E.S. to B.C. Adaptor

An adaptor to convert Edison screw lampholder to bayonet fitting. Brown bakelite moulding, suitable for 250V AC.

Order Code	Type	Price each
BK69A	ES to BC Adaptor	£3.49

B.C. to E.S. Adaptor

An adaptor to convert a bayonet lampholder to Edison screw fitting. Black bakelite moulding, suitable for 250V AC. Max 60W.

Order Code	Type	Price each
BK70M	BC to ES Adaptor	£2.15

Downlighter 60W

A high quality recessed, circular downlight for mounting flush into apertures within false ceilings. The fitting is of pressed steel construction with a double-insulated Edison screw

lampholder of porcelain. A high temperature plastic cover protects the terminals, a length of high temperature cable is attached. Two fixing clips retain the fitting in the aperture. The fitting is supplied either in white or polished brass. Complete with fitting and safety instructions, which should be followed carefully, and a 60W 250V AC spotlight. Diameter 115mm. Overall height without lamp 130mm.

Order Code	Type	Price each
RZ32K	Downlight White 60W	£11.99
RZ33L	Downlight Brass 60W	£13.99

Downlighter 100W

A high quality recessed, circular downlight for mounting flush into apertures within false ceilings. The fitting is of pressed steel construction with a double-insulated porcelain Edison screw

lampholder. A high temperature plastic cover protects the terminals, a length of high temperature cable is attached. Two fixing clips retain the fitting in the aperture. The fitting is supplied finished either in white, or polished brass. Complete with fitting and safety instructions, which should be followed carefully, and a 100W 250V AC spotlight. Diameter 135mm. Overall height without lamp 136mm.

Order Code	Type	Price each
RZ34M	Downlight White 100W	£12.49
RZ35Q	Downlight Brass 100W	£14.49

**TOP QUALITY PRODUCTS
AT SUPER LOW PRICES!**

Economy Floodlamp

A tungsten Edison screw PAR38 economy floodlamp, designed for optimum efficiency, for use in recessed downlighters. These lamps provide a 20% cost saving over conventional floodlamps. Rating 250V AC 80W. Diameter 125mm. Overall depth 135mm.

Order Code	Type	Price each
RZ26D	Econ FloodLamp	£4.99

EMERGENCY LIGHTING Emergency Bulkhead Fitting

A range of indoor 6W maintained and non-maintained emergency fluorescent lighting suitable for illuminating stairways, corridors, small workshops and similar sized areas. The maintained fitting is designed to remain illuminated at all times, whilst the non-maintained version will only be illuminated when a mains failure occurs. The bulkhead fitting is manufactured from impact resistant polycarbonate and the gear tray from pressed steel. The opaque cover is retained by two lugs; removal is achieved by squeezing the sides. The electronics and battery pack are assembled on a single gear tray, easily removable for installation and servicing. Battery charging is indicated by an LED attached to the gear tray. Supplied with 6W fluorescent tube, and full installation and maintenance instructions. Base colour white. A spare 9in. 6W fluorescent tube (RZ31J) is available separately. Overall dimensions 275 x 140 x 95mm.

Order Code	Type	Price each
RZ27E	A1 Bulkhead Maint	£59.99
RZ28F	A1 Bulkhead NonMaint	£74.99
RZ31J	Bulkhead 6W Tube	£1.99

PIR LIGHT SWITCH NEW

This in-door light switch features an integral PIR which detects body movement and switches on a light for a pre-determined length of time, which is adjustable from 5s to 5m. The unit can also act as a normal ON/OFF or 2-way light switch. A slide switch is used to set the mode of operation. The PIRs light level sensitivity and the operational range are individually adjustable - the detection distance has a maximum of 8m in front of the unit, and 5m to the sides. Easy to install, the unit requires a minimum load of 40W and a maximum of 300W. NOT suitable for fluorescent lights.

SUPERB VALUE!
£29.99
AQ23A

THERMOSTATS

Room

A room thermostat with an easy-to-use control for all kinds of heating systems. Mounted on the wall, this thermostat, once set to the required temperature, will automatically trigger the heating system to come on and go off in order to maintain that temperature. Can be linked to any pump to control gas, solid fuel or oil fired central heating, warm-air and electric underfloor or ceiling systems. Includes an 'accelerator' which reacts quickly to changes in room temperature so as to maintain an even level. Fits a standard pattress. Knob marked 5° to 30°C. Rated 20A resistive, 4A inductive, 240V AC. Switch SPST. Supplied with instructions.

Order Code	Type	Price each
YB20W	Room Thermostat	£10.99

Plug-In Thermostat

A thermostat that will plug straight into a 13A socket outlet and will provide thermostatically controlled power to its 13A mains into which a heater or fire can be plugged. The unit can supply a load up to 13A and thermostatically switch at eight temperature settings from frost to 35°C. The unit has two neon indicators; one illuminates when the mains power is supplied to the unit, and the other when the power is being supplied to the load.

Order Code	Type	Price each
AQ20W	Plug-In Thermostat	£16.99

Fax your orders to:
01702 553935

Frost

A wall mounting, pattress style frost thermostat designed to operate remotely from the heat source. A bi-metal strip is the sensing element and trips at approx 0°C to switch on the heating or other appliances before the temperature falls below freezing. Thermal 'feed forward' is provided by low powered heating resistors adjacent to the thermostat and switched with the load. Maximum switching capacity is 16A @ 250V AC. Connections are to heavy duty copper screw terminals. Both earth and neutral must be connected. Grills in the top and bottom of the cover ensure air circulation over the thermostat for realistic room temperature sensing, and the cover has two break-outs provided in the bottom left-hand corner if required. Attached to wall by four 3mm screws in base (not provided). Overall dimensions 86mm square x 38mm deep.

Order Code	Type	Price each
ZB86T	Frost Thermostat	£19.99

7 Day Programmable Thermostat Timer

NEW

A 7 Day programmable room thermostat that features presettable comfort and economy temperatures plus a defrost setting (7°C). Suitable for use with heating or cooling systems.

Specification

Control Range: 5 to 30°C
 Temperature Accuracy: ± 1°C
 Programs: 6 Preset, 3 User defined
 Switching: 230V AC 50Hz, 5A resistive
 Power: 2x AA alkaline cells (not supplied).
 Dimensions: 154(W) x 80(H) x 30(D)

Order Code	Type	Price each
DK62S	7 Day Thermo Timer	£29.99

TIMESWITCHES

Immersion Heater Timer

A 24-hour immersion heater timer that is designed to provide programmable on/off times, and fit directly to a suitable wall surface. Each switching 'rider' provides an on period of 15 minutes minimum, so that the heater can be on for as long as desired, and as often as required, during the course of a day. If 'Economy 7' is available, this enables consumers to make use of cheap rate electricity overnight. A three position switch enables the immersion heater to be on continuously, timed, or off. The timeswitch must be used with a localised isolation point (fused spur). Supplied with full mounting hardware and fitting instructions. Size: 86 x 86 x 84mm. Rated at 240V 50Hz 13A.

Order Code	Type	Price each
CY35Q	Heater Timer	£22.99

24 Hour Plug-In Timer

NEW

Plugging this timer into your existing 13A socket outlet gives automatic control over a 24 hour period to any electrical appliance. Simply plug the appliance that you wish to be controlled, up to 13A resistive or 2A inductive loading, into the 13A socket outlet of the unit and set the time interval. The unit is switchable in 15 minute intervals with a minimum time between settings of 30 minutes.

Available singularly, (RZ81C) or as a twin pack, (RZ83E).

Order Code	Type	Price each
RZ81C	24h Plug-In Timer	£16.99
RZ83E	Twin Pk 24h Timer	£26.99

7-Day Immersion Heater Controller

A wall mounted, 7-day electronic immersion heater time controller providing economical and convenient control of electric immersion heater systems. Easily programmable, the controller allows up to 7 ON/OFF switching programmes with automatic everyday allocation, providing up to 49 ON/OFF settings per week. An optional 'boost' facility enables instant override for one or two hour periods.

In addition it features a 24-hour, digital clock/timer display, self cancelling override, a shortest switching time of 1 minute, day or days 'omit' facility, programme review, and an internal memory back-up battery retains programmes in the event of a power failure.

Specification

Switching load: 13A or 3kW max. resistive
 Supply: 240V AC @ 50Hz
 Battery (supplied): 1 x SR44 1.5V button cell
 Operating temperature: 0°C to 50°C
 Connecting cable required: 1.5mm² to 2.5mm² conductor size, heat resistant HOFR type.

Dimensions: 140 x 90 x 40mm. Fitting instructions supplied. Must not be used with a load greater than 3kW resistive.

Order Code	Type	Price each
MK43W	Immersion Controller	£27.99

24 Hour Programmable Light Switch

This 24 hour programmable light switch can be programmed for up to 4 pairs of ON/OFF switch settings per day or for random switching which turns the load ON/OFF for 10 - 30 minute periods throughout the programmed times.

Order Code	Type	Price each
AQ22Y	24H Prog Lightswitch	£24.99

Programmable Lightswitch

NEW

This unit is designed to replace a conventional lightswitch and can be programmed to copy up to 9 switch settings of the previous 24 hour's switching pattern and repeat the programme daily until it is altered. The unit can be used as a normal lightswitch and is able to switch a minimum load of 40 Watts and a maximum load of 200 Watts. Please note: Unit not designed for switching fluorescent lighting.

Order Code	Type	Price each
AQ21X	Copy Lightswitch	£19.99

24 Hour Slimline Digital Timer

This timer is a slimline digital controller that can be plugged straight into your existing 13A socket outlet and can be programmed to switch loads of up to 13A resistive or 2A inductive. The timer can switch up to 4 ON/OFF programmes per day, with a minimum of 1 minute between switch settings, each of which can be manually overridden. The override function is cancelled at the next automatic ON or OFF switching time. The unit has a back up battery in order that timing is kept accurately, even during a power cut.

Order Code	Type	Price each
RZ84F	24h Digital Timer	£18.99

Weekly Plug-in Timer

NEW

A compact, digital plug-in timer with up to four programmes per day, that is ideal for domestic appliances, lighting, heating and similar applications. The timer can operate one set of four daily programmes for weekdays, and a different set of daily programmes for the weekends. The unit has battery back-up

Order Code	Type	Price each
RZ30H	Digital Weekly Timer	£16.99

24-Hour Programmable Timer

A 24-hour programmable timer with many security and energy saving uses. Lights and radios can be timed to switch on and off throughout the day and night for security purposes, and a random program mode allows lights to be switched at random for better protection of your home. When used in conjunction with economy 7, washing machines, dishwashers and tumble driers can be timed to operate at the most economical times. An accurate clock with LCD allows precise timing to the nearest minute. Up to 8 switch actions can be set in one 24-hour period, 4 ON, and 4 OFF, but ON times are restricted to a period between 18:00 and 05:59 the next morning, and OFF times between 00:00 and 05:59. When in random mode the timer will operate lights at random between the hours of 18:00 and 05:59 the next day. The timer will switch on for short random periods in the OFF set times. Manual override provides for continuously ON or continuously OFF. The LCD clock is powered by a button battery, supplied.

Specification

Rated voltage:	240V @ 50Hz
Maximum operating current:	13A
Maximum load:	3kW
Dimensions:	125 x 65 x 58mm deep excluding pins

Order Code	Type	Price each
RC57M	Electronic Timer	£27.99

7 Day Plug-In Timer

This timer can be plugged into your existing 13A socket outlet and gives automatic control of an electrical appliance over a 7 day period. The time controller can switch up to 13A resistive or 2A inductive loads. The minimum time interval is 2 hours with a minimum time between settings of 4 hours. The timer can be extremely useful as a security device turning on such appliances as radios and table lamps to give a potential intruder an impression that your home is occupied.

Order Code	Type	Price each
RZ82D	7 Day Plug In Timer	£16.99

Electric Shower

Heatstore

An elegant and efficient shower unit, that complies with the very stringent British Standards for safety, including water splashproofing, enabling the unit to be mounted inside the showering area or positioned for a hair wash facility. However, the unit must not be positioned where it could be subjected to the continuous direct spray from the shower head. The unit is rated at 8.5kW and has an energy saving feature that allows the power setting to be reduced to 4.7kW for summer use. The unit must have its own separate 240V AC supply, 6mm square cable being suitable for most installations, providing that the total length of the run does not exceed 23m. The supply circuit must be protected by its own fuse or miniature circuit breaker, rated at 35A for a cartridge fuse, or 40A for a miniature circuit breaker.

A 40A double pole isolating switch with a contact separation of at least 3mm in each pole should be incorporated in the wiring. The unit is designed for direct connection to a cold water mains supply. It is recommended that a UK W.F.B.S. listed isolating valve be fitted between the mains water supply and the shower unit. In use the water control knob is turned anticlockwise to obtain water flow. The required temperature is obtained by continuing to turn anticlockwise for cool water or clockwise for hot water. When at the desired temperature, the number displayed in the window can be remembered for future setting. This control also adjusts the flow stabilisation valve, which ensures that a constant water temperature is received at the shower head. The valve automatically compensates for water pressure fluctuations. An additional feature is a solenoid valve which gives push button 'on/off' operation. The shower unit comes complete with handset, hose, rise rail, soap dish and full fitting instructions.

Specification

Power rating (240V AC):	4.7/8.5kW
Water connections:	15mm connection to rising main
Pressure min:	11.8psi/0.8bar
max:	145psi/10bar
Installation:	Splashproof tested cover allows for installation in the shower area
Dimensions:	255 x 209 x 110mm (H x W x D)
Casings:	White/grey high impact thermoplastic

Order Code	Type	Price each
KC75S	H6 Heatstore Plus	£99.99

EXTRACTOR FANS

4 Inch Type

Two 100mm (4in.) diameter extractor fans for bathrooms, toilets, showers, kitchens etc. Each comprises a kit which includes the interior fan housing and grille, a 400mm long, flexible aluminium wall ducting and an external wall grille with gravity controlled non-return shutters. The interior housing surround is 160 x 160 x 30mm deep. The cover is removable to reveal the synchronous fan motor and connecting terminal block. Requires only mains Live and Neutral since assembly is double insulated. The motor is rated at 20W and the fan is a positive displacement airscrew type shifting up to 90m³ per hour. Colour of interior side is white, exterior shutter grille is light grey. Can be fitted in walls up to 4 1/2 inches thick, partition walls and ceilings. Needs eight additional wall fixing screws (not supplied). Two types are available: the first is a basic, remotely switched (by separate switch or by splicing into lighting supply) extractor fan; while the second can be connected to a permanent supply and energised by a control wire connection. On the lamp switching off, a built in electronic delay timer system will keep the fan running for several minutes. Fitting instructions included.

Order Code	Type	Price each
GK70M	C4 Remote Fan 4in	£26.99
GK71N	B2 Permanent Fan 4in	£34.99

6 Inch Type

A 150mm (6in.) diameter extractor fan for kitchens, laundry rooms, bathrooms, toilets, etc. The complete fan housing, with external, gravity controlled back draught shutters, can be mounted directly in a window pane requiring a 184mm (7 1/4 in.) diameter cut-out (probably best provided by a professional glazier), and a length of rubber gasket material is provided for sealing. The housing is 203 x 203 x 115mm deep. Fitted with 1.5 metres of 3A twin core mains cable, using only Live and Neutral since assembly is double insulated. Cable entry is from above. Contains integral on-off switch controlled by a one metre long pull cord. The motor is rated at 25W and the fan is a positive displacement airscrew type displacing 230m³ per hour. Colour white. Supplied with fitting instructions.

Order Code	Type	Price each

HOT TIP

To peel back the insulation on 'twin & earth' PVC cable, take hold of the copper earth wire using a pair of pliers and pull this backwards. This has a similar effect to that of a cheese cutter and will slice open the cables outer sheath.

CONSUMER UNITS

1-Way 45A Switched Consumer Unit

Proteus

A fully-insulated consumer unit in a dove-grey plastic case 155 x 93 x 100mm deep. The unit is fitted with a 45A isolator switch and has space for one MCB (NOT supplied). A self-adhesive label is included that can be written on to identify the circuit. Only suitable for indoor use. Conditional short-circuit capacity is 16kA, based on the assumption that short-circuits are unlikely to occur in the first three metres of the cable connected to the over-current devices.

Order Code	Type	Price each
CY34M	Consumer Unit 1W	£14.99

2-Way 60A Switched Consumer Unit

Proteus

A fully insulated consumer unit in a white plastic case 170 x 100 x 130mm deep overall. The unit includes a 60A isolator switch at the right-hand side and up to two MCBs can be accommodated in the remaining positions. A self-adhesive paper label printed with the numbered positions can be attached and on which you can write the identity of each circuit. Only suitable for indoor use. Conditional short-circuit capacity is 16kA, based on the assumption that short-circuits are unlikely to occur in the first three metres of the cable connected to the over-current devices. Supplied with full instructions. MCBs must be ordered separately.

Order Code	Type	Price each
ZB78K	Consumer Unit 2W	£16.99

2-Way Steel 63A ELCB Distribution Board

Proteus

A consumer unit in a light grey painted, steel case measuring 220 x 160 x 110mm deep overall, including a smoked perspex front cover protecting the ELCB unit and MCBs against dust and dirt. The ELCB (Earth Leakage Circuit Breaker) at the right hand end is provided as the main isolator switch to give maximum safety, and will carry up to 63A total. The ELCB trips out if there is a discrepancy between live and neutral of $\pm 30\text{mA}$, e.g. a current flow to earth of 30mA or more. Circuit breaker is 2-pole and isolates neutral also. Two MCBs can be accommodated. A self-adhesive paper label printed with the numbered positions can be attached and on which you can write the identity of each protected circuit. Ideal for use in outhouses, garages, sheds etc.

The unit is not waterproof. The steel case must be earthed, and earth continuity to the lid proven on installation. Conditional short-circuit capacity is 16kA, based on the assumption that short-circuits are unlikely to occur in the first three metres of the cable connected to the over-current devices. Supplied with instructions. MCBs must be ordered separately.

Order Code	Type	Price each
ZB64U	2W ELCB	£64.99

4-Way 100A Switched Consumer Unit

Proteus

A fully insulated consumer unit in a white plastic case 160 x 195 x 110mm deep overall including the smoked perspex front cover over the main switch and MCBs. The unit includes a 100A isolator switch at the right-hand side and up to four MCBs can be accommodated in the remaining positions. A self-adhesive paper label printed with the numbered positions can be attached and on which you can write the identity of each circuit. Only suitable for indoor use. Conditional short-circuit capacity is 16kA, based on the assumption that short-circuits are unlikely to occur in the first three metres of the cable connected to the over-current devices. Supplied with full instructions. MCBs must be ordered separately.

Order Code	Type	Price each
ZB79L	Consumer Unit 4W	£19.99

8-Way 100A Switched Consumer Unit

Proteus

A fully insulated consumer unit in a white plastic case 230 x 195 x 110mm deep overall including the smoked perspex front cover protecting the main switch and MCBs. The unit includes a 100A isolator switch at the right-hand side and up to eight MCBs can be accommodated in the remaining positions, and there is a blanking plate provided for

any unused position. A self-adhesive paper label printed with the numbered positions can be attached and on which you can write the identity of each MCB protected circuit. Only suitable for indoor use. Conditional short-circuit capacity is 16kA, based on the assumption that short-circuits are unlikely to occur in the first three metres of the cable connected to the over-current devices. Supplied with full instructions. MCBs must be ordered separately.

Order Code	Type	Price each
GK07H	Consumer Unit 8W	£29.99

MCB's

A range of miniature circuit breakers (MCB's) with type 2 time/current characteristics to BS3871 Part 1 for use with Consumer Units.

The following types are available:

- 6A for lighting circuits.
- 16A for immersion heater etc.
- 20A for radial circuits etc.
- 32A for ring mains.
- 40A for cookers and showers up to 9.6kW etc.

The MCB breaks when the current exceeds its rating and can be reset as soon as the overload is removed, and eliminates the need for fuses and fuse wire.

Order Code	Type	Price each
ZA22Y	6A MCB	£6.99
ZA23A	16A MCB	£6.99
ZA24B	20A MCB	£6.99
ZA25C	32A MCB	£6.99
ZA26D	40A MCB	£6.99

Safety Electrical Earthing Straps

Electrical earthing straps specifically intended to connect system earths to real earth via a grounding rod or to provide for crossbonding to metal gas and water pipes as required by IEE regulations. Type A-E is intended as a main earth connection to a grounding rod and has a wire clamp which can take a single conductor up to 7mm thick (e.g. 68A earth bonding wire XS13P). Type A-D is for close coupled applications, It has a single screw terminal around which the wire is wrapped. Will take high current wire up to 4mm thick, e.g. XR57M etc. Both are fitted by wrapping the strap around the earthed member, passing the free end through the clamp body and pulling tight with strong pliers. Then a clamping screw is used to lock the strap in place, a locknut is attached to secure the screw and prevent tampering. Will take a tube or rod from 20 to 30mm diameter. Strap carries an alloy 'Do not remove' label. Constructed from brass and other non-ferrous alloys and will not rust.

Order Code	Type	Price each
JZ27E	Earth Strap A-D	£1.39
JZ28F	Earth Strap A-E	£1.99

10-Way 80A ELCB Distribution Board

Proteus

A fully insulated consumer unit in a white plastic case measuring 300 x 195 x 110mm deep overall, including the smoked perspex front cover which protects the ELCB unit and MCBs against dust. The ELCB (Earth Leakage Circuit Breaker) at the right-hand end is provided as the main isolator switch giving maximum safety throughout the house, and will carry up to 80A total. The ELCB trips out if there is a discrepancy between live and neutral of $\pm 30\text{mA}$, e.g. a current flow to earth of 30mA or more. Circuit breaker is 2-pole and isolates neutral also. It includes a test button which can be used to ensure that the ELCB is fully functional at the recommended six-monthly intervals. Up to ten MCBs can be accommodated and there are two blanking plates for unused positions. A self-adhesive paper label printed with the numbered positions can be attached and on which you can write the identity of each protected circuit. Only suitable for indoor use. Conditional short-circuit capacity is 16kA, based on the assumption that short-circuits are unlikely to occur in the first three metres of the cable connected to the over-current devices. Supplied with instructions. MCBs must be ordered separately.

Order Code	Type	Price each
GK08J	H3 Consmr Unit wth ELCB	£79.99

4-Way Consumer Unit with 4-Way 63A ELCB Distribution

Proteus

A fully insulated consumer unit in a light grey plastic case measuring 300 x 195 x 110mm deep overall, including a smoked perspex front cover over the isolator, ELCB unit and MCBs. A 100A isolator switch is at the right-hand end, and up to four MCBs and their associated circuits can be run from it. A 63A ELCB is at the centre, and a further four MCBs and their associated circuits can be connected to this. The advantage of this type of split distribution system is that relatively hazardous circuits can be connected to the ELCB-controlled MCBs (such as ring mains with washing machines, electric cookers, outdoor circuits etc.) whilst circuits where it can be more hazardous if they fail when the ELCB trips (such as indoor lighting circuits), or relatively non-hazardous circuits where it's important that power is maintained at all times (such as circuits connected to freezers) can be connected to the switch-controlled MCBs. The ELCB trips out if there is a discrepancy between live and neutral of $\pm 30\text{mA}$, e.g.

a current flow to earth of 30mA or more. The ELCB circuit breaker is 2-pole and isolates neutral also. It includes a test button which can be used to ensure that the ELCB is fully functional at the recommended test intervals. Up to eight MCBs can be accommodated in total. Self-adhesive paper labels, printed with the numbered positions, can be attached and on which you can write the identity of each protected circuit. Only suitable for indoor use. Conditional short-circuit capacity is 16kA, based on the assumption that short-circuits are unlikely to occur in the first three metres of the cable connected to the over-current devices. Supplied with instructions. MCBs must be ordered separately.

UV FLY TRAPS Ultra-Violet Insect Killer

NEW

Use this ultra-violet insect trap to help you control the number of flying insects around your home, office or workplace. Simply plug the fly trap into an existing 13A socket outlet, suspend it approximately 1.8m above floor level, making sure that it is out of the reach of children and turn on the power. It's that easy. For optimum performance suspend the trap above entrances or windows where insects may be intercepted. The ultra-violet light, which is effective for approximately 2 metres around the trap, attracts light sensitive insects towards the high voltage grid of the trap and electrocutes them. Supplied with small dusting brush and approximately 1.5m of mains cord.

Order Code	Type	Price each
RZ45Y	A3 UV Insect Killer	£12.99

FUSE HOLDERS

Flush Fitting 20mm Type

A flush-mounting 20mm panel fuseholder with screw-driver release to meet the latest safety regulations. Rated 10A at 250V. Overall length 33mm (plus 5.5mm tag). Bezel diameter 16mm. Panel cut-out 12mm diameter flattened to 11mm on opposing sides to provide anti-twisting lock.

Order Code	Type	Price each
KU33L	Fuseholder 20 Flush	70p

Fuseholder Insulating Boot

Bulgin

A pliable PVC insulating boot for enclosing and covering cables connected to the terminals at the rear of any of our panel mounting cartridge fuseholders.

Order Code	Type	Price each
FT35Q	Fuseholder Boot	48p

20mm Type

A panel mounting 20mm fuseholder with screwdriver release to meet the latest safety regulations. Rated 10A at 250V AC. Contact resistance 10m Ω at 1A. Insulation resistance 100M Ω at 500V DC. Insulation will withstand 1500V AC for 1 minute between terminals. Overall length 40mm (plus 6mm tag). Bezel diameter 15mm. Panel cut-out 12.5mm diameter flattened to 11.5mm on opposing sides to provide anti-twisting lock.

RX96E	Safuseholder 20	81p

20mm Panel Mount Fuseholder

Bussmann

A panel mount fuseholder that has a threaded cap fuse carrier, and has SEMKO, UL and CSA approval.

General Specification

Electrical rating:	250V, 6-3A, 2-5W
Contact resistance:	$\leq 10\text{m}\Omega$
Insulation resistance:	$\geq 10\text{M}\Omega$
Dielectric strength:	$\geq 2000\text{V AC}$
Flammability rating:	UL94VO
Panel cut-out:	12.7mm diameter flattened to 11mm on one side.
Overall length:	37mm

Manufacturer's Code HTC 35M.

Order Code	Type	Price each
DA59P	20mm P/Mount F/Hold	47p

20mm Vertical PCB Type Fuseholder

A PCB mounting fuseholder that has Semko, UL and CSA approval. The fuseholder has a bayonet fixing cap fuse carrier, and is available in vertical PCB mounting style.

Specification

Electrical rating:	250V, 6.3A, 2.5W
Contact resistance:	$\leq 10\text{m}\Omega$
Insulation resistance:	$\leq 10\text{M}\Omega$
Dielectric strength:	$\leq 2000\text{V AC}$
Flammability rating:	UL94VO
Fixing pin spacing:	10mm
Overall length:	33.1mm (excluding pins)
Diameter:	13mm, flattened on one side to 11.3mm

6A 1 1/4 in Type

A panel mounting 1 1/4 in fuseholder with a flush fitting, square red coloured cap bearing the legend 'FUSE' in black. Fuse cartridge is simply inserted into the cap which pushes into the body, but the latch must align with slot in bevel.

Only a small narrow screwdriver or similar tool can be pushed down into the slot to release the latch in order to gain access to the fuse. Restrain the cap to prevent it flying out of the body. Complies with BS standards.

Max rating 6A @ 250V AC.
Length: 50mm. Bezel 16mm x 16mm square. Panel cut-out 15mm (5/8 in.)

Order Code	Type	Price each
FA39N	1.1.4 Clickcatch F/H	79p

10A 1 1/4 in. Type

A panel mounting 1 1/4 in. fuseholder with screw-driver release to meet the latest safety regulations. Rated 10A at 250V AC. Contact resistance 10mΩ at 1A.

Insulation resistance 100MΩ at 500V DC. Insulation will withstand 1500V AC for 1 minute between terminals. Overall length 48mm (plus 6mm tag). Bezel diameter 18mm. Panel cut-out 15mm diameter flattened to 13.5mm on opposing sides to provide anti-twisting lock.

Order Code	Type	Price each
FD77J	10A Fuseholder 1.1.4	87p

Chassis Mounting 1 1/4 in. Fuseholders Lugged Type

Heavy duty 1 1/4 in. fuseholder with 1/4 in. spade lugs. Nickel-plated clips rated at 30A. There is a 4mm dia. recessed fixing hole and two 3mm dia. plugs on the underside of the holder to locate the holder onto additional holes drilled in the chassis, which prevents unwanted movement. Overall size: 66mm long, 22mm high, 12mm wide.

Order Code	Type	Price each
KU30H	1.25 F/H with Lugs	48p

Screw Type

Chassis mounting moulded 1 1/4 in. fuseholder with tinned phosphor-bronze clip. Single 6BA clear fixing hole. Size: 41mm long, 16mm high, 12mm wide.

Order Code	Type	Price each
RX50E	1.25 F/H with Screws	99p

20mm PCB Type with Cover

A high quality PCB-mounting fuseholder for 20mm fuses equipped with a snap-fitting transparent cover, so that although the live contacts are screened safely, the state of the fuse can be seen clearly. Contacts rated at 6-3A; lead pitch 23.5mm; overall dimensions with cover (excluding lugs): 27mm long x 16mm high x 9mm wide.

Order Code	Type	Price each
KU29G	PCB F/H with Cover	24p

20mm Fuse Block

A quality PCB mounting fuse block for 20mm fuses with an optional protective cover.

General Specification

Electrical rating:	250V, 6-3A, 1-6W
Contact resistance:	≤10mΩ
Insulation resistance:	≥10MΩ
Dielectric strength:	≥2000V AC
Flammability rating:	UL94V1, cover UL94VO
Fixing pin spacing:	23mm
Overall length:	24mm, 26.5mm with cover
Height (excluding lugs):	13mm, 15mm with cover
Width:	8mm, 9mm with cover

Fuse Clips

Bulgin

20mm Type 1

Tinned brass clips for 20mm fuses. The lugs are on a 2.54 x 2.54mm (0.1 x 0.1 in.) matrix and will fit into 1.5mm dia. holes.

Two clips are required per fuse.

Order Code	Type	Price each
WH49D	20mm Fuse Clip Type1	5p

20mm Type 2

Tin-plated spring brass fuse clips rated for currents up to 10A. Two required per fuse. The lugs have a lead pitch of 5mm (0.18 in.) and will fit into 1.5mm dia. holes.

Overall dimensions (excluding pins): 10mm high x 4.5mm x 5.5mm.

Order Code	Type	Price each
KU27E	20mm Fuse Clip Type2	5p

1 1/4 in. Fuse Clip

Tin-plated spring brass fuse clips rated for currents up to 15A. Two required per fuse. The lugs have a lead pitch of 7mm (0.28 in.) and will fit into 2mm dia. holes. Overall dimensions (excluding pins): 11.5mm high x 7mm x 8mm.

Order Code	Type	Price each
KU28F	1.25 Fuse Clip	5p

FOR TOP QUALITY & VALUE!

Plug-in In-Line Fuse Holder

A black nylon in-line fuseholder suitable for use with the plug-in type fuses becoming increasingly common in vehicle electrical systems. To use, cut the red wire connected between both terminals to give lead-outs to each terminal. Access to the fuse is by means of a snap-fit lid on the top of the holder, and several of these holders can be fitted together by virtue of a tongue and groove moulded into opposite sides of the casing. The tinned brass contacts are rated for currents up to 30A. Dimensions of body (lid closed): 27mm long, 37.5mm high, 18mm wide.

Order Code	Type	Price each
KU34M	Plug-in Fuseholder	69p

In-Line Type

Bayonet-action in-line car type fuseholder with moulded body, suitable for 1 1/4 in fuses. Length 52mm, diameter 14mm.

RX51F	F/H Car	25p

In-Line 1 1/4 in. Fuseholder

Bulgin

In-car type fuseholder moulded from clear plastic in two parts. These screw-together items house two collars and a spring. Accepts 1 1/4 in. long fuses. Length: 62mm, diameter: 15mm.

Order Code	Type	Price each
RC70M	In-line F/H	£1.10

THE BEST OF SERVICE

FUSES

Electronic Fuses

An overcurrent protection device offering significant advantages over normal fuses, PTC resistors, bimetal strips etc. The device operates in a similar way to a slow-blow fuse yet is solid state and can be simply soldered into the circuit. It latches into a safe high resistance state under overload conditions yet returns to normal operation as soon as the fault is removed.

Dimension D = 3.0mm.

Dimension C = 5.1mm.

In all versions E = 7.6mm except MFR020 = 12mm.

Type	Vmax	Style	A (mm)	B (mm)
MFR020	60	1	6	12.2
MFR030	60	1	7.4	13.0
MFR050	60	1	7.9	13.7
MFR090	60	1	11.7	15.7
MFR110	30	1	8.9	14.5

MFR160	30	1	11.2	15.5
MFR400	30	2	16.0	21.1

Max operating voltage (rms) @ 20°C.

Current and resistance ratings

Ratings @ 20°C; I_h = hold current, fuse will not trip;

R_{nom} = nominal resistance; I_{trip} = typical trip current; Pd = typical power dissipation in tripped state.

Type	I _h A rms	R _{nom} Ω	I _{trip} A rms	Pd W
MFR020	0.20	2.67	0.30	0.40
MFR030	0.30	1.27	0.45	0.50
MFR050	0.50	0.75	0.75	0.75
MFR090	0.90	0.34	1.35	1.00
MFR110	1.10	0.09	1.98	0.70
MFR160	1.60	0.06	2.88	0.90
MFR400	4.00	0.02	7.20	2.50

Absolute maximum interrupt current = 40A RMS.

Resistance in tripped state = V²/PdΩ. Maximum surface temperature in tripped state = +125°C. Typical reset time = <20 seconds @ 20°C.

CP62S	MFR160	£3.59
CP63T	MFR400	£4.50

20mm Quickblow Type

Glass tube fuses with nickel-finish brass end caps overall size 20 x 5mm diameter. Fuses rupture within 2 minutes max (1s typical) at 25°C at twice the rated current.

Rupture capacity 35A or 20 times the rated current whichever is greater.

Available in the following ratings:

50mA, 63mA, 80mA, 100mA, 125mA, 160mA, 200mA, 250mA, 315mA, 400mA, 500mA, 630mA, 800mA, 1A,

Thermal Fuses

A range of thermal fuses which will protect any equipment or appliance from excessive temperature rise by cutting off the supply, since they are connected into a circuit in the same way as an 'ordinary' fuse would be. These thermal fuses offer a low impedance when operational, but will go open circuit if their temperature range threshold is exceeded. They will serve to protect equipment from heat damage if the source of excess heat originates within the equipment itself as the result of a fault, cutting off the power where the ordinary fuse fails to do so because the current load is not great enough, yet there is enough power being converted to heat to start a fire. These devices are extensively applied in industry in the manufacture of sandwich toasters, water heaters, hair curlers etc. They are not resettable and must be replaced if 'blown'. NOTE: when installing any of these devices never solder directly to the wire leads - you must use screw terminals, terminal blocks or crimped on connectors. Size of body: 14mm long x 4mm dia. Lead length (each end): 34mm. Rating: 240V @ 10A max. Rupture current: 40A (resistive), 20A (inductive). Open circuit breakdown voltage: 1200V AC. Opening threshold temperature tolerance: +0°C -4°C.

General Purpose Range

A range of thermal fuses covering a wide range of operating temperatures, available as follows: 91°C, 128°C, 152°C, 167°C, 184°C, 192°C, 228°C, 240°C

Order Code	Type	Price each
RA14Q	Thermal Fuse 91C	60p
RA15R	Thermal Fuse 128C	60p
RA17T	Thermal Fuse 152C	60p
RA18U	Thermal Fuse 167C	60p
RA19V	Thermal Fuse 184C	60p
RA20W	Thermal Fuse 192C	60p
RA22Y	Thermal Fuse 228C	60p
RA23A	Thermal Fuse 240C	60p

Audio Range

A range of thermal fuses formulated especially for applications in audio equipment, test instruments etc. Temperature ratings available are: 72°C and 110°C.

Order Code	Type	Price each
RA61R	Thermal Fuse 72C	60p
RA64U	Thermal Fuse 110C	60p

Thermal Cut-outs Cliff

A range of low-cost, one-shot, thermal cut-outs for circuit protection applications, that are available with either radial or axial leads. They can be used to prevent overheating of electrical components such as motors, transformers and solenoids, and electronic equipment such as computers, switching power supplies etc. The cut-outs are manufactured using tin/lead-plated soft copper wire leads that are welded to a fusible alloy with a specific melting point. To prevent surface oxidation and to ensure complete cut-off function at melting point, the alloy is coated with special resins. The fusible alloy is completely insulated within the case by sealing the leads and the case with a special resin compound. The radial lead type is available in a PCB/hard wiring (H type) or screw mounting version (H-A type), and the axial lead (V type) is additionally available in a subminiature version (VS type). Rated at 2A 250V AC (axial subminiature rated at 1A 250V AC). Approved (or in some cases pending) by UL, CSA, VDE and JEAML. A simple plug-in holder for

mounting H type cut-outs is available that is made from PBT and does not require an insulation tube. Note: IEC specifications state that thermal cut-outs when conducting the detection current, and subject to the increasing rate of temperature designated by the specification, must function in the tolerance range +0°C to -10°C of the nominal operating temperature.

Type	Dimensions mm

Auto-Reset Circuit Breaker

A useful range of compact circuit breakers with an auto-reset facility. Designed to withstand overload but to trip quickly on short circuits, the circuit breaker latches into an 'off' state under fault conditions and automatically returns to the 'on' state after a set period of time. If the fault condition still exists the unit will immediately latch 'off' again. This process of checking the circuit will continue until the fault is cleared. The range is suitable for working at voltages up to 250V AC, and offers seven rated 'holding-current' values. Connections are via two solder tags 7mm long. Overall dimensions: 29 x 12.5 x 6mm. Range available: 1.0A, 1.6A, 2.2A, 3.0A, 5.0A, 7.0A, 10.0A.

Order Code	Type	Price each
AK07H	Auto Breaker 1.0A	99p
AK08J	Auto Breaker 1.6A	99p
AK09K	Auto Breaker 2.2A	99p
AK10L	Auto Breaker 3.0A	99p
AK11M	Auto Breaker 5.0A	99p
AK12N	Auto Breaker 7.0A	99p
AK13P	Auto Breaker 10.0A	99p

Fuse Wire

A card on which is wound three pieces of fuse wire. 5A, 15A and 30A.

Order Code	Type	Price each
HB51F	Fuse Wire	32p

TEMPERATURE INDICATOR LABELS

A range of non-reversible temperature labels that are designed for monitoring rises in temperature, operating temperatures, or the failure to reach a particular temperature. Each label has 8 temperature levels which turn from grey/white to black when the indicated temperature has been reached. A black label would clearly indicate that a component or product has failed due to excessive heat, and a white label would indicate that a product has failed due to insufficient heat e.g., a fusing process. Up to 100°C, the label has

an accuracy of $\pm 1^\circ\text{C}$, and $\pm 1\%$ of its rating above 100°C. Sold in packs of 5, the labels are self-adhesive and very easy to use.

Temperature ranges °C								
	40	43	46	49	54	60	66	71
Level A	40	43	46	49	54	60	66	71
Level B	77	82	88	93	99	104	110	116
Level C	121	127	132	138	143	149	154	160

Order Code	Type	Price each
KR17T	Level A Temp Label	£2.25
BT41U	Level B Temp Label	£2.25
BT42V	Level C Temp Label	£2.25

SUPPRESSORS

RF Suppressor Chokes

Designed for use at 250V AC these small heavy current rf chokes are ideal for the suppression of motor-driven appliances and in input circuits of power units. Inductance is approximately 6µH. PVC sleeve is colour coded. Three types are available.

Rating	Length	Diameter	Colour code
1 Amp	15mm	5.1mm	White
2 Amp	19mm	5.1mm	Yellow
3 Amp	23mm	7.6mm	Black

Order Code	Type	Price each
HW04E	RF Supp Choke 1A	38p
HW05F	RF Supp Choke 2A	42p
HW06G	RF Supp Choke 3A	52p

Contact Suppressor

A 120Ω resistor ($\pm 30\%$ tolerance) and 0.1µF ($\pm 20\%$ tolerance) capacitor connected in series. Connect directly across switch or relay contacts etc. to suppress interference when switching reactive loads. Also useful as a snubber network in SCR and triac protection. Max voltage 250V AC.

Order Code	Type	Price each
YR90X	R-C Network	£1.99

Transient Suppressors

These devices are simply connected directly across the power supply. They have a very high resistance up to the V_m voltage shown in the table below and therefore usually may be ignored, but the moment a transient spike appears on the supply line which exceeds V_m , the impedance of the device drops immediately to a very low level while it dissipates the unwanted energy. Choose the suppressor to have a V_m voltage equal to or above the voltage of the power supply it is to be connected across. For example, Suppressor 5-5V DC is ideal for 5V logic power supplies, while both Suppressor 250V AC and Suppressor 275V AC can be connected directly across the UK mains supply.

Type	Device marking	Continuous voltage (max) V_m	Continuous voltage (max) V_m	Peak current*	Clamping voltage*
5-5V DC	08Z1	4V	5-5V	100A	22V @ 5A
14V DC	18Z1	10V	14V	250A	42V @ 5A
18V DC	22Z1	14V	18V	250A	47V @ 5A
22V DC	27Z1	17V	22V	250A	57V @ 5A
26V DC	33Z1	20V	26V	250A	68V @ 5A
31V DC	39Z1	25V	31V	250A	79V @ 5A
38V DC	47Z1	30V	38V	250A	92V @ 5A
56V DC	68Z2	40V	56V	250A	127V @ 5A

Type	Device marking	Continuous voltage (max) V_m	Continuous voltage (max) V_m	Peak current*	Clamping voltage*
130V AC	1305	130V	175V	2500A	340V @ 25A
250V AC	250L	250V	330V	2500A	650V @ 25A
275V AC	275L	275V	369V	2500A	710V @ 25A

DC types: Average power dissipation 0.25W max
Diameter 8.25mm ± 0.75 mm
Lead pitch 4.5mm ± 1.5 mm

AC types: Average power dissipation 0.4W max
Diameter 11.25mm ± 1.25 mm
Lead pitch 7.5mm ± 1 mm

Please note that the use of DC and AC in the description is simply an indication of its most likely use. All types can be used equally in AC or DC circuits up to the V_m stated.

* Current ratings are for a typical transient pulse where peak current is reached in 8µs and the pulse has decayed to 50% of its peak value after a further 12µs. It is a standard method of rating these devices and is usually described as an 8/20µs current wave rating.

For voltage transient suppressors with low clamping voltages, and near instantaneous response times (≈ 1 ps) see Table 21 in Semiconductors Section.

Order Code	Type	Price each
CP67X	Suppressor 5.5VDC	48p

FOR TOP QUALITY & VALUE!

Motor Suppressor

For radio suppression of small electric motors and domestic appliances. 250V AC. Connect as close as possible to the source of interference. 0.1µF + 0.005µF + 0.005µF.

Order Code	Type	Price each
HW07H	Delta Cap	£1.20

Six different designs to choose from to suit those special occasions.

Each Gift Card is approximately 15cm (6in.) x 20cm (8in.) and is printed in full colour and costs just 30p each (with envelope).
 Maplin GIFT TOKENS are available in £5 and £10 denominations and can be ordered by mail or purchased direct from one of our many shops.
 Please Note: There is no handling or

postage charge when ordering cards or tokens, normal charges apply when tokens are redeemed.
 Maplin GIFT TOKENS cannot be refunded for cash. The voucher is not transferable to any other retail outlet other than Maplin Electronics.

All prices include VAT. Valid in the UK only.

"Thank You for solving my present buying problem!"

PLASTIC BOXES

Potting Boxes

A range of Potting Boxes for use with our Potting Compound (see end of Tools section). Boxes are moulded in black ABS.

Internal dimensions (mm):

Type	Length	Width	Height
Cube	23	23	24
Miniature	28	18	14
Small	38	38	19
Medium	48	48	29
Large	73	48	34
Extra Large	98	58	24

Wall thickness is 1mm (except Extra Large where it is 1.3mm). Length and width are a fraction less at base of box as sides taper slightly. Dimensions shown are measured at top of box.

Order Code	Type	Price each
FD96E	Potting Box Cube	32p
LH56L	Potting Box Min	25p
LH57M	Potting Box Small	35p
FD97F	Potting Box Medium	39p
LH59P	Potting Box Large	49p
FD98G	Potting Box Ex Large	59p

Small Plastic Boxes

Small plastic box available in black or white. Size: 114 x 76 x 38mm.

Order Code	Type	Price each
LF01B	Box PB1 White	£1.39
LH14Q	Box PB1 Black	£1.39

Small Narrow Box

This small box conveniently fills the gap between matchbox sized plastic cases and the more 'conventionally' sized hand-held boxes where the latter may be too unwieldy for certain uses. The moulded black plastic box is 124mm long by 33mm wide by 30mm deep, internal; 120mm long by 30mm wide by 25mm deep. It has a removable lid which forms a good seal, and is secured with four self-tapping screws, supplied. Ideal for small, hand-held probes, miniature circuits or even as a housing for the protection of a block of screw terminals serving as a junction box for a number of cables etc.

Order Code	Type	Price each
FT31J	Small Narrow Box	89p

Probe Box

Union Brothers

A small box designed for use as logic probes etc. The black injection moulded box comes in a total of seven parts, comprising left and right shell halves, a top panel, a pair of internal fixing pillars which join both shells together, and a moulded probe boss and fixing grommet. A metal probe is included. The top panel includes a rectangular cutout 17 x 10mm, 33mm from one end, which has recessed edges on the underside into which a piece of coloured display filter or celluloid can be glued. The shell halves have a central hole in each end, 5mm diameter for the probe boss, and 4mm for cable entry. Four countersunk screws are provided for fitting. The box has rounded edges and corners.

External dimensions, 130 x 34 x 30mm.
Internal, 126 x 26 x 26mm.

Order Code	Type	Price each
JX57M	Logic Probe Box	£1.60

9 Way D-type Box

Union Brothers

A small plastic box designed to house two 9 way D-type connectors. Small circuits may be built into the box, there is a 27.5 x 14.5mm area between the connectors which can accommodate items up to 12mm high. The box is in two parts that clip together. Both parts of the case have 16 x 9.5mm recesses, through which LEDs etc may be mounted. The box is supplied with two pairs of jack screws and posts. Connectors type RK60Q, RK61R, JB39N and JB42V from our range of connectors will fit this box.

15 Way D-type Box

Union Brothers

A small plastic box designed to house two 15 way D-type connectors. Small circuits may be built into the box, there is a 37 x 21.5mm area between the connectors which can accommodate items up to 12mm high. The box is in two parts that clip together. Both parts of the case have 15.8 x 25.8mm recesses through which LED's etc. may be mounted. The box is supplied with two pairs of jack screws. Connectors type BK58N, BK59P, JB30H and JB34M from our range of connectors will fit this box.

Order Code	Type	Price each
JW53H	15W Plastic D Box	69p

25 Way D-type Boxes

A novel plastic case designed so that a 25-way D connector will fit in each end. Small circuits may be built into the box which has a useful internal size of 38mm between connectors, 36mm wide and 11mm deep. Boxes snap together with interlocking clips. Two

types of box are available. One has a 33 x 21.5mm window cut in one side for access to wiring panel, switches, LED's or whatever. The boxes are a very versatile means of making small in-line testers or projects on RS232 circuits. The boxes are supplied with two pairs of screws and washers which will mate with standard jack posts. Connectors type YQ48C, YQ49D, FS82D and FS84F from our range will fit in these boxes.

Miniature Sloping Case

A highly adaptable miniature case ergonomically designed for desk, dashboard, pocket etc. that can be used either way up for the desired application. The case is made from high-impact ABS with a matt finish on all

surfaces except for a polished recessed panel on the largest flat surface. The two halves of the case are held together by a single self-tapping screw and a cable knock-out is provided for flying lead applications. Overall dimensions (mm): 71 x 44 x 28 at highest, 22mm and 17mm at the ends.

Order Code	Type	Price each
KC96E	Min Sloping Case	69p

Boxes with Base and Matrix Board

Union Brothers

A range of neat black plastic boxes with aluminium base plates. Boxes are supplied with 0.1 inch pitch matrix board for circuit assembly. The boxes have extra mounting pillars for fixing the board in place.

Supplied complete with screws for base plate and board. The matrix board has rows of circular copper pads, to which component leads are soldered, connection between components may be made using the wiring system described in the PCB Equipment Section of this catalogue. Clearance from the wiring side of the board is 5mm, care should be taken to ensure that there are no protruding wires to short against the base plate.

Dimensions (mm):

Type	Internal	Base

Transparent Box

A transparent box manufactured in smoked plastic. The two halves of the box slide together and guides are provided to hold a PCB in place. There is sufficient room for a 9V PP3 type battery. Additionally the two halves may be cut-down lengthways to make the box shorter. Ideal for hand held devices such as infra-red remote controls and other similar projects.

External Dimensions (mm)

141.5 x 57 x 23.5

Order Code	Type	Price each
YU94C	Transparent Box	£5.49

Small Remote Control Box

A small, flat box with a smart recessed panel and surround at one end, readily suitable as a hand-held transmitter/sender as part of a remote control system. The box includes a battery compartment with removable slide-on lid, particularly suitable for PP3 etc. The box is split in two halves using a tongue and groove type joint, secured by two screws. The 'front panel' surround is removable as a unit, allowing access to the plastic panel itself, which is then free to allow hole-cutting for ultrasonic/infra-red transmitting devices, cables etc. The box is 119mm long x 67mm wide x 32.5mm deep. Front panel area is 62 x 27mm. The box is moulded in matt black finish plastic. Two fixing screws supplied.

Order Code	Type	Price each
LH90X	Small Remote Cntrl Bx	£3.99

Plain Hand-Held Boxes

Retex

Injection moulded black rectangular boxes ready to be drilled or cut to your own design, having no preformed apertures or panels unlike many other boxes of this type. Each comprises top and bottom halves with lipped joint. Each includes a battery compartment which can contain one PP3 battery, with a removable door with quick release catch and lipped edges.

Type HH1

Type HH1 has four PCB mounting pillars in the base and the two halves are attached with just two screws. Supplied with four short and two long self-tap screws. Outer dimensions: 105 x 61 x 28mm. PCB space (absolute max.): 66 x 50mm x height 15mm. Battery space: 55 x 29 x 19mm.

Type HH2

Type HH2 has five PCB mounting pillars in the base and the two halves are attached with four screws. Supplied with five short and four long self tap screws. Outer dimensions: 145 x 80 x 34mm. PCB space (absolute max.): 94 x 74mm x height 18.5mm. Battery space: 74 x 30 x 28mm.

Order Code	Type	Price each
ZB17T	Plain HH1 Box	£2.49
ZB16S	Plain HH2 Box	£4.29

Assessed Capability
**YOUR GUARANTEE OF
QUALITY & SERVICE**

Hand Held Case with Pocket Clip Option

A moulded, high-impact ABS case with integral PP3 battery compartment that is accessible by a separate removable cover. Clip-in battery terminals are supplied as standard, and the pocket clip, if required, can be easily fixed to the case by the two self-tapping screws supplied. The two main halves of the case are held together by the two self-tapping screws supplied, which are concealed by the battery cover. Four integral location pegs and sockets will hold a PCB in place without further fixing. The overall finish of the case is matt with highlighted feature panels making it ideal for personalised products.

Overall dimensions: 103 x 62 x 23mm (without clip).

Order Code	Type	Price each
KC95D	Pocket Clip Case	£3.29

Calculator-Style Hand-Held Box

An attractive calculator-style hand-held box moulded in black ABS plastic with a textured finish. A battery compartment is moulded into the case and has its own clip-on cover. The compartment will accept two PP3 batteries. Three pillars are provided in the base to which a PCB measuring 105 x 56mm may be fixed using No. 4 self-tapping screws. A PCB (107 x 71mm) can also be mounted in the top section using the pillar next to the battery compartment. The box is supplied with four self-tapping screws for holding the two parts together. In the top section of the case (window end) there is a removable insert to facilitate cable entry.

Overall size: 154 x 81 x 37.5/33mm.

Window size: 49 x 20mm.

Order Code	Type	Price each
YK24B	Calc-Style Box	£4.99

Grey ABS Plastic Box

A plastic box moulded in grey ABS with brass inserts. Lid is lipped to ensure a good fit and fixing screws are supplied. The box has guide slots for holding 1.5mm thick pcb's.

Type	Internal (mm)	External (mm)
2002	96 x 46 x 21	100 x 50 x 25

A slotted plastic strap is supplied with this box so that boards mounted lengthwise are supported at the top in the middle. However, if this strap is used the height available will be reduced to 50mm.

Order Code	Type	Price each
WY03D	ABS Box 2002	£1.89

ABS Plastic Boxes

A range of matt black, mottled finish plastic boxes moulded in ABS. The lid is lipped to ensure a good fit and fixed by four recessed, self-tapping screws. All boxes have slotted walls inside, to accept PCBs etc. The walls of the box have a slight slant from top to bottom of the box.

Two Part ABS Plastic Boxes

Two boxes are available, the smaller has a mottled black finish including the front and back panels. The larger box has the top and bottom parts in a light grey mottled finish and the front and back panels in a black mottled finish. The top and bottom sections are held together by two screws. Both boxes have slotted sections inside to accept PCBs etc., and numerous mounting pillars for fixing boards in place. It is possible to have a combination of vertical and horizontally mounted boards. The larger box has ventilation slots along the edges of the top and bottom sections, the bottom section also has a circular slotted area that would be suitable for a small loudspeaker.

Dimensions:

Type	Internal	External

Free Standing PSU Box

Union Brothers

A neatly styled black plastic box, moulded in two parts and held together by four screws. The box is primarily intended to house a free standing power supply. Both case parts have ventilation slots to facilitate cooling of transformer/regulator etc. For cable entry grommet use JM16S, see page 578.

External dimensions: 129.5 x 91.5 x 70mm.

Order Code	Type	Price each
YU32K	Free Stndng PSU Box	£2.99

PSU Box

A power supply style case with an attractive rugged appearance, moulded in black ABS. The case will house E154, S35 or S147 size transformers with space for other components. The top and base are normally glued together although it is possible to drill the base and use self-tapping screws (not supplied) to hold them together. The inside of the box is moulded to hold the specified transformer and our types YJ50E and WB11M fit quite snugly. Overall dimensions: 117 x 63 x 62mm. See picture above.

Order Code	Type	Price each
YN38R	Power Supply Case	£1.59

Small PSU Box with Plug

A moulded plastic case in a matt stone-colour finish designed to house power supplies for low voltage equipment. The case has a plastic earth pin and brass live and neutral pins so that it plugs directly into a 13A socket.

An extra moulding is provided to separate the mains and low-voltage parts of the circuit. A shallow recess in the lid is provided for a label. The two parts of the box fit tightly together and two screws are supplied for firm fixing. External dimensions: 76 x 49 x 43mm.

Order Code	Type	Price each
YN18U	Small PSU Box	£1.99

PSU Box with Plug

West Hyde

A moulded black plastic case specifically designed to house power supplies for low voltage equipment. The case features a plastic earth pin and brass live and neutral pins to allow the unit to plug directly into a 13A socket. It will accommodate the components of a power supply including the transformer, and safety is assured with the inclusion of a special internal moulding which, as well as retaining the earth pin, separates the mains input from the low voltage output circuitry and transformer laminations. The case is in impact resistant ABS in two screw together sections and incorporates a shallow recess intended for a label. External dimensions: 56.5 x 92 x 62.5mm.

Order Code	Type	Price each
FG41U	PSU Box and Plug	£2.99

PSU Boxes with Plug

Union Brothers

A range of three plastic boxes with integral plug pins to suit a 13A 240V AC mains socket. The boxes are intended to house power supplies for low voltage equipment. The matt black plastic case is in two parts which should be glued together after the components have been fitted. The base part houses the plug pins; the earth is plastic and the live and neutral are brass. The live and neutral pins also incorporate plastic shrouds for safety. The top part has a shallow recess provided for a label. Dimensions are given excluding pins, which protrude 23mm from the base.

JP42V	Small PSU Grommet	7p

Cable Exit Grommet

Union Brothers

A neat, flexible cable exit grommet, moulded in black plastic. Although intended for use with the above Medium and Large PSU boxes (YU30H and YU31J), the grommet will find uses in many other applications. Requires a 9 x 5mm rectangular slot.

Order Code	Type	Price each
JM16S	PSU Grommet	10p

Plastic Project Boxes

Two-tone grey plastic project boxes in three different sizes. Each box has PCB mounting pillars with M3 brass inserts on the base. The lid and base are held together using four M3 screws for the smaller sizes, M4 screws for the large sizes.

Each box has a removable plastic panel at each end which can be entirely removed to make a window for displays, I/R senders/receivers, or for easy working while drilling holes for cable entry or exit, switches or controls. Tongue and groove joints are used throughout. Both lid and base include raised ribs at the midway position to support the longest sides of a PCB.

Veroboxes

Vero

A range of high quality moulded boxes featuring a tongue and groove construction to ensure a perfect fit.

200 Series

Type 200 boxes are moulded in two-tone grey high impact ABS. Top and bottom sections which include fixing points for circuit boards or chassis plates are held together by four screws entering through the base concealed by plastic feet through which they pass. Anodised aluminium front and rear panels are automatically retained in position when the two halves of the box are screwed together. Moulded guide slots are provided to allow circuit boards to be mounted

vertically. On 210 types, the boxes clip together and therefore have no screws, though four self-adhesive feet are provided. Type 217 is different in that the front panel is fixed with four screws and vertical guide slots are not provided.

300 Series

These boxes are moulded in high impact ABS and are supplied with lid and four self-tapping screws. All types are black.

401 Box

This box is moulded in white high impact ABS. It is designed as a hand-held plastic control box and will find many applications including model control, car racing controllers, ultrasonic controllers etc.

601 Box

A box with hinged snap-shut lid. Moulded in black matt finish polypropylene. A clear anodised aluminium alloy front panel is supplied which clips into box. Pillars are moulded into base and a pcb may be mounted on

these using self-tapping screws (supplied). A flat area is located at the back of the box, designed for mounting sockets etc.

Tilt Leg Assembly

Vero

A tilt leg which fits Veroboxes type 201, 202 and 203. Supplied with four rubber feet and a tilt leg which hinges up when not in use.

Order Code	Type	Price each
HQ47B	Tilt Leg Large	£2.99

ABS Plastic Instrument Case

A high-quality black ABS plastic two-part instrument case with matching front and back panels. The two parts are held together by four recessed screws, and the parts are tongued and grooved to make the box rigid when assembled. Both parts have six pillars, 4mm high, for fixing PCBs, and ventilation grills. Finished in matt mottled black. Internal size: 170 x 122 x 50mm. External size: 175 x 130 x 58mm

Order Code	Type	Price each
KC61R	Plastic Instrm Case	£3.99

Instrument Cases

Boss

A range of instrument cases with built-in fixing points for various size Eurocards. The boxes have pre-punched metal side-chassis supports to which are screwed 1mm thick brushed satin-finish aluminium front and rear panels. Dark grey ABS top and bottom covers screw together around the chassis and front and rear panel assembly ensuring a very stylish and rigid unit.

On the larger unit, tilt legs are supplied which can be fitted to the front or rear of the bottom cover, the rubber feet supplied being used in the alternative positions. Both the rear and base panels have ventilation slots.

Type	Overall size (w x d x h mm)	Panel aperture (mm)
3501	90 x 145 x 41	71 x 25
3502	171 x 145 x 56	152 x 40

YN32K	Case 3501	£8.99
YN33L	Case 3502	£11.99

Foot Switches

Re-An

A pair of tough moulded plastic foot switches that are extremely robust and reliable. Available in double and single switch format, they also form the ideal basis for effects units, as they include PCB mounting bosses, a 0.25in jack socket, and one or two switches. The single switch box also has a built-in battery compartment suitable for a PP3 size battery. Dimensions: 125 x 87 x 47mm (max).

Order Code	Type	Price each
YK74R	Single Foot Switch	£8.99
YK75S	Double Foot Switch	£9.99

Waterproof Boxes

A range of external waterproof boxes in a self-extinguishing, light-grey thermoplastic material which is highly resistant to impact, heat and chemical and atmospheric agents. The medium size is also available with a transparent polycarbonate cover. All boxes are sealed with a neoprene washer. The large box has ball-headed fixing screws which when removed on one side and partially unscrewed on the other form a hinge to flap down the lid.

Internal dimensions:

Small	100 x 100 x 50mm
Medium	150 x 110 x 70mm
Large	240 x 190 x 90mm

Order Code	Type	Price each

Steel Instrument Cases

A very attractive range of superbly finished instrument cases with a 1mm thick galvanised steel base which has ventilation slots and 4 fixing holes for mounting a PCB. The 1mm thick steel cover is powdercoated and baked in an attractive dark grey leatherette polyester finish. There are ventilation slots in the top rear of the cover. A 1mm thick front panel in anodised aluminium is supplied along with a 1mm thick zinc-passivated steel rear panel. A set of screws and 4 self adhesive feet are provided.

The following sizes are available (mm)

Model	Width	Depth	Height

XJ30H	B3 Steel Case 2108	£9.99

HOT TIP

Aluminium chassis and boxes look much nicer painted. However, most paints will not bond to aluminium very well and generally you will get best results using cellulose paints (not metallic) from car colour spray cans. Even so you must always put on a white or grey cellulose primer undercoat as well. It is also a good idea, after removing the protective plastic film from the aluminium, to leave it for several days or more to oxidise naturally. This will then form a strong bond with the primer and produce the most durable finish, without any need to roughen the surface with sand paper.

Instrument Case with Handle

A range of steel instrument cases which incorporate an adjustable handle. The handle may be set at the desired angle and locked in position using the knobs on each side of the case. The case has ventilation slots and is finished in matt black. The back panel is flush with the edges of the case whilst the front is recessed, so as to protect controls, switches etc. Knobs protrude by approximately 11mm either side of the case.

Type	External Dimensions (excluding handle)
Small	92 x 60 x 150mm
Medium	137 x 60 x 150mm
Large	137 x 92 x 225mm
Very large	200 x 93 x 250mm
Extra large	300 x 300 x 110mm

Order Code	Type	Price each
YZ01B	Tilt Inst Case Small	£8.99
YZ02C	Tilt Inst Case Med	£9.99
YZ00A	Tilt Inst Case Large	£12.99

MJ63T	Tilt Inst Case ELg	£19.99

Instrument Case with Carrying Handles

A range of general purpose instrument cases with fold away carrying handles. The top and bottom panels are semi-matt black coated steel, whilst the front and rear panels are cream plastic. The two carrying handles and side mouldings are made from black plastic. Handles protrude by 10mm on either side of the cases.

Type	External dimensions
IB-1	210 x 60 x 112mm
IB-2	180 x 92 x 116mm
IB-3	210 x 60 x 212mm
IB-4	180 x 92 x 217mm

YU97F	Instrument Case IB-2	£9.49
YU98G	Instrument Case IB-3	£9.99
YU99H	Instrument Case IB-4	£10.99

Shoulder Strap

A shoulder strap terminated at both ends with karibina type hooks, which can be clipped to the folding carrying handles of the general purpose instrument cases above. For this purpose the strap also comes with a pair of replacement handles for the case, having V shaped extensions to locate the hooks centrally whilst carried by the strap. The actual strap can be varied in length from 450mm to 350mm.

Order Code	Type	Price each
JR30H	Shoulder Strap	£5.49

Steel Instrument Case with Handle

A smart, superbly finished, large instrument case in grey and black painted steel, covers with 1mm thick anodised aluminium end panels. The ventilated steel covers can be removed to leave the side and end panels intact for inspection. The side panels are of two-part construction, consisting of a black painted support strap attached to a galvanized side-plate. The handle, constructed of plastic side pieces and square cross-section anodised aluminium tube, is attached to the support straps. The base is fitted with feet. External dimensions 355 x 355 x 138mm. The handle protrudes a further 16mm from each side and 76mm (maximum) from the front.

Order Code	Type	Price each
MJ65V	Inst Case Large	£37.99

Diecast Boxes

Aluminium alloy diecast boxes finished in grey hammertone. The boxes have close-fitting flanged lids to provide fully screened enclosures. The box has guide slots for holding 1.5mm thick pcb's. Fixing screws are supplied.

Type	Internal (mm)	External (mm)

Extruded Aluminium Interlocking Boxes

A very versatile new range of boxes which can interlock with one another to form racks of separately cased and screened circuits. Printed circuit boards slide into grooves inside the boxes and power transistors may be fitted to the special heatsinks and the pcb, and both then slide into the box together in their own slots. The special heatsink then dissipates the heat through the outer box. Five different size boxes are available and any side on one will interlock with any side on any other size. Accessories available include the slide-in heatsinks (mentioned above) in two widths, angle brackets which slide onto the sides of the boxes for permanent fixing, rubber foot in continuous lengths which slides into the grooves in the boxes, and gaskets to make the boxes waterproof.

Boxes

The CAN style box is available in two lengths 40mm for circuit boards 55 x 40mm and 80mm for circuit boards 55 x 80mm. The CCN style box is available in three lengths, 80mm, 160mm and 220mm, to suit circuit boards 100 x 80mm, 100 x 160mm and 100 x 220mm. Up to 30mm space above circuit board gives room for transformers etc. Supplied in natural aluminium with two end plates and eight self-tapping screws.

Thermal resistance case to air:

CAN40	8.3°C/W
CAN80	6.5°C/W
CCN80	3.7°C/W
CCN160	2.9°C/W

Mounting Lugs

Extruded aluminium mounting bracket for fixing housings to walls, panels etc. The bracket slides into any external slot on the boxes and is retained by the end plates. Supplied in natural aluminium in two lengths: 40mm and 80mm. A 5.2mm diameter hole is drilled in the middle of one face.

Order Code	Type	Price each
FE36P	Lug 40	49p
FE37S	Lug 80	59p

Heatsinks

Extruded aluminium heatsink bracket for mounting power semiconductors, including those with T03, T0220

cases (but not high-top T03 types – in our range these are: 2SJ48-50 and 2SK133-135). The heatsink slides into the special receiving slots on the inside of every box. It can be both pcb mounted and in thermal contact with the box if correctly mounted. Heatsink is drilled to suit T03 case. Fix transistor with mounting kit and 6BA bolts. Supplied in natural aluminium in two lengths: 20mm and 40mm (note 20mm is not wide enough to seat whole T03 transistor).

Order Code	Type	Price each
FE38R	Sink 20	£1.79
FE39N	Sink 40	£2.15

Gaskets

Oil resistant nitrile bonded cork gaskets to BS F66 and ASTM F104. Coated one side with a pressure sensitive adhesive. Thickness 1mm. Supplied in pairs in two sizes to suit CAN or CCN boxes. Please note, gaskets may be supplied with centre removed.

Order Code	Type	Price each
FE40T	Gasket CAN	79p
FE41U	Gasket CCN	£1.39

Fax your orders to:
01702 553935

Rubber Foot

Black extruded rubber foot which slides into any external slot on any box. It is retained when the end plates are attached. Sold in 1m lengths.

Order Code	Type	Price each
XR93B	Rubber Foot	£2.10

Sloping Front Cases

High quality sloping front all aluminium construction cases. Top is finished in a matt black stove enamel with a narrow brushed aluminium trim at the front (which could be lettered with a name for example). Base is finished in a textured light stone colour. The control area slopes at 15° from the horizontal. Self-adhesive feet are supplied.

The following sizes are available (mm).

Model	Width	Height Rear	Height Front	Length of Front	Length of Top	Base
103	165	76	33	160	56	211
108	431	76	33	160	56	213

Order Code	Type	Price each
XY59P	A1 Console 103	£10.99
XY60Q	A2 Console 108	£15.99

Steel Sloping Front Case

A sloping front case with a 1mm thick steel base epoxy painted in dark grey and baked at 190°C. The top part is made in 1mm thick anodised aluminium. The control area slopes at 15° from the horizontal. The box is supplied with aluminium handles and self-adhesive feet. An internal chassis is also available and must be ordered separately. The chassis is 0.8mm thick galvanised steel and supplied with fixing screws.

Dimensions (mm)	
Width	300
Depth	205
Height at front	60
Height at rear	100
Length of top	40
Length of front	165
Chassis	280 x 190
Chassis height	20

Order Code	Type	Price each
XJ36P	A2 Sloping Case 3020	£17.99
XJ35Q	Sloping Case Chassis	£3.99

Wallbox

A large, plain undrilled case, measuring 250mm square by 100mm deep. The flanged lid is hinged along the length of one side, and is secured in the closed position by two 2BA round-head screws, not supplied. Although primarily intended to be mounted on a wall, the case may find applications in many other areas where a tough, durable enclosure is required, but it is not really suitable for use outdoors. The case is finished in grey enamel.

Order Code	Type	Price each
YJ11M	C6 Wallbox Plain	£13.99

G-Range Cases

Vero

A range of beautifully finished cases featuring a black PVC clad aluminium alloy upright front panel surrounded by a sloping visor. The case top which slides on over the front and rear panels and is fixed by four screws through the feet on the base is 14swg (2mm thick) solid aluminium alloy etched and anodised to give a superb hard glistening silver finish. The front and rear panels are also removable and although the working surfaces, front, rear and base are totally accessible for drilling and component assembly, the fastenings that hold the box together are completely hidden when the box is assembled.

The boxes are available in two sizes:

FOR TOP QUALITY & VALUE!

Steel Instrument Cases with Handles

Very attractive, high quality instrument cases manufactured in 1mm thick sheet steel. The case is made as two half-cases, with ventilation holes punched in each half, then painted in dark grey epoxy and baked at 190°C. The front panel is 1mm thick anodised aluminium and the rear panel is 1mm thick zinc passivated steel. All models are supplied with natural-finish aluminium handles and self-adhesive feet. Chassis are also available and must be ordered separately. They are manufactured in 0.8mm galvanised steel and are supplied with fixing screws.

The following sizes are available (mm).

19 Inch Rack Mounting Instrument Cases

A range of high quality rack mounting cases, fabricated mild steel and finished in a hard wearing semi-matt black epoxy coating. The base plate is punched with a matrix of holes for securing PCBs, transformers etc. and the top cover is provided with ventilation slots to assist cooling. The black anodised aluminium front panel has two handles and there are four holes punched to facilitate fixing the case in a rack. The cases are supplied flat packed and are easy to assemble.

Available in 1U, 2U, 3U and 4U standard sizes.

Dimensions (mm):

Type	External	Internal	Front panel
1U	437 x 42 x 305	432 x 40 x 293	483 x 44
2U	437 x 80 x 305	432 x 78 x 293	483 x 88
3U	437 x 122 x 305	432 x 120 x 293	483 x 132
4U	437 x 168 x 305	432 x 166 x 293	483 x 177

Order

XM71N	F12 19in Rack Case 4U	£41.99

19 Inch Rack Style Instrument Cases

A range of high quality heavy-duty instrument cases for mounting in 19in. equipment racks, with fixing slots pre-punched in the ends of the front panel. The case is manufactured from 1mm thick sheet steel painted with high grade black epoxy and baked at 190°C. Ventilation holes are punched in the front and rear of the top and base panels. The front panel is 3mm thick anodised aluminium to which natural-finish aluminium handles are fitted. A 1mm thick galvanised steel sub-panel is fitted approx. 9mm behind the rear of the aluminium front panel to provide extra rigidity, and for fixing front panel components so that fixing-nuts and bushes do not show. The top and base panels can be removed separately for easy access to the interior.

Three sizes available (dimensions in mm).

Type	Width	Depth	Height	Front panel Width	Front panel Height
4809	440	250	80	483	88

19 Inch Rack Mounting Rail

A 1.5m long, plain steel rail which is punched to accept the mounting 'ears' of 19in. rack frames. Rails may be fitted into an enclosure or attached to a frame, producing a free standing assembly which can contain up to eleven 3U racks. The front rails should have the special captive nuts attached for anchoring the front panels at their edges. Additional adaptor brackets are available which will enable non-standard items to be included in the structure, such as cassette tape decks and similar equipment, or shelves made for these. Fitting hardware comprising 4 x M6 caged nuts, 4 x M6 x 12mm zinc plated pan-head slotted bolts, and 4 x nylon safety washers, are also required for fitting 19in. style cases.

ZA99H	A1 Front Panel 4U	£11.99

19 Inch Rack Jackfield

A 482mm wide x 89mm (2U) high black painted, front panel which will fit into a 19in. racking system. The panel includes 32, 11mm diameter holes for jack sockets, signal lamps, switches etc. Each location has an adjacent rectangular, white printed label area for writing its identity. Made from 1.7mm thick steel and includes 13mm deep folded edges top and bottom for strength.

YOUR GUARANTEE OF QUALITY & SERVICE

19 INCH MODULAR EUROCARD SUB-RACK SYSTEM (DIN 41494)

A very high quality modular sub-rack system (conforming to DIN 41494) for housing Eurocard modules and cards. The user can tailor the layout of the sub-rack to suit a particular application. As well as the sub-rack units themselves, a wide range of accessories are available, including mounting plates for DIN 41612 connectors.

Sub-Rack Frames & Enclosures

A range of 19 inch, 84E, 3U/single height eurocard sub-racks. All three types are modular and are constructed from anodised aluminium panels and extrusion. A wide range of accessories, such as guide rails, handles, plates, covers, etc. are available separately. The basic version is a 'skeleton sub-rack', which has four horizontal fixing bars, two side plates and 19 inch rack mounting 'ears'. The 'free standing sub-rack' is as the 'skeleton sub-rack', but also has two rear panel fixing bars, two extra mounting 'ears' and two carrying handle/end cheeks.

The 'enclosed sub-rack' is as the 'free standing sub-rack', but also has top and bottom panels. These panels are punched to assist ventilation.

Type	Dimensions (mm):
Skeleton Sub-rack	483 x 132 x 237
Free Standing Sub-rack	486 x 136 x 243
Enclosed Sub-rack	486 x 136 x 243

Sub-racks are supplied flat packed and assembly fixings are supplied.

Order Code	Type	Price each
XM74R	B2 19in Skeleton Rack	£25.99
XM76H	C3 19in Free Std Rack	£36.99
XM75S	D5 19in Enclosed Rack	£64.99

Sub-rack Accessories

The following sub-rack accessories are available, as indicated in the exploded drawings.

Item

1. Horizontal Mounting Rail, 84E/17 inch extruded anodised aluminium, punched with 84 holes, for use as an extra mounting rail, to allow extra panels, etc. to be fitted to the sub-rack.

2. Connector Mounting Plate, 84E/17 inch punched anodised aluminium plate, for mounting DIN 41612 connectors on horizontal support rails. Two are required.

3. Case Handles, manufactured from silver/grey ABS plastic, these handles, which may be fitted to the sub-rack mounting 'ears', provide a convenient way to lift the sub-rack or remove it from an enclosure. Supplied in pairs with fixing screws.

4. Front Panel 4E (0.8 in.) wide x 3U high anodised aluminium panel.

5. Front Panel 5E (1 in.) wide x 3U high anodised aluminium panel.

6. Front Panel 10E (2 in.) wide x 3U high anodised aluminium panel.

7. Front Panel 20E (4 in.) wide x 3U high anodised aluminium panel.

8. Front/Rear Panel 84E (17 in.) wide x 3U high anodised aluminium panel.

9. M3 Square Nut, zinc coated square nut tapped to accept M3 bolts, intended to fit the aperture in horizontal mounting rail. Supplied in packs of 100.

10. Eurocard Guide Rail, black plastic eurocard guide rails which clip into the assembled sub-rack. Sub-racks are supplied without guides, therefore must be ordered separately. Guides are supplied in pairs.

11. Threaded Panel Mounting Rail, 84E/17 inch steel rail with 84 holes tapped to accept M3 bolts, may be used in place of individual M3 square nuts. Panel mounting rail slides into the aperture on horizontal mounting rail.

12. Metal Fixing Attachment, fixing bracket for attaching eurocards to front panels. Supplied in pairs.

13. Plastic Fixing Attachment, fixing bracket for attaching eurocards to front panels.

14. Panel Locking Posts, metal locking posts for use with front panels as a quick release panel fixing. Post is fitted to panel and engages with a slot in the horizontal mounting rail, the outer collar is then tightened to secure the panel. Supplied in pairs. One pair required for 4E and 5E panels, two pairs required for 10E and 20E panels.

15. Sub-rack Tilt Leg, plastic folding leg (front) and rubber foot (rear). Intended for use with enclosed sub-rack to ensure good airflow through sub-rack and to allow front of sub-rack to be tilted upward at a convenient angle. Two required per sub-rack.

Rack Cabinets

A range of high quality stylish rack cabinets fabricated in mild steel and suitable for a wide range of 19in. racking equipment. The main panels are formed from steel sheet, coated and finished in matt black. The corners of these cabinets are protected by moulded plastic corner pieces and recessed moulded plastic carrying handles are provided in each side panel. The unit consists of top, base and side panels with smaller rear panels to increase rigidity and provide ventilation. Rack mounting framework is built into the side panels. The cabinets are supplied as flatpacks, and are easy to assemble, with the kit including all fixtures and plastic fixings.

Order Code	Rack Height	Overall Dimensions

Heavy-Duty Strap Handle

Cliff

A heavy duty strap-type flexible carrying handle. Moulded in a smart, ribbed black flexible plastic with an internal steel reinforcement strip. The end pieces are moulded in a tough black plastic and each should be fixed with two 5mm diameter counter-sunk screws or bolts. Rectangular snap-in covers are supplied to hide the screw heads for a nice clean appearance. Provided that the fixing method chosen – taking care to select suitably large wood screws or nuts and washers as appropriate – is adequate, the handle will lift up to 15kg. Overall length when fitted: 250mm. Overall width 30.3mm.

Order Code	Type	Price each
FW82D	HD Strap Handle	£1.59

Heavy-Duty Strap Handle

A heavy duty strap-type flexible carrying handle. Moulded in a smart black ribbed flexible PVC with a strong heat treated sprung steel carrier strip. End pieces are black painted steel. Fixing is by means of two countersunk M5 steel bolts or screws (not supplied). Overall length with handle fully retracted: 255mm. Fixing centres: 213 x 5mm dia.

Order Code	Type	Price each
JY70M	Black Strap Handle	£1.69

Leather Strap Handle

A very strong 12 to 15mm thick leather strap handle with chrome-plated fixing cleats. Handle size 165 x 28mm.

Order Code	Type	Price each
FS27E	Strap Handle Leather	£4.79

Flexible Handle

Cliff

A flexible handle in matt black glass filled nylon for extra strength despite its slim and stylish appearance. Rated at 60lbs loading capacity. It is provided with two recessed screw holes suitable for self tapper No.8, 2BA etc. Length 179mm, width 25mm, height 20mm. Fixing centres: 155 x 5.4mm diameter.

Order Code	Type	Price each
FG79L	Flex Handle	99p

Recess Handle

Re-An

A flush fitting cabinet handle made from tough black impact and shatterproof material ideal for amplifier cabinets and other heavy casings. Cut-out required: 48 x 105mm. Total depth in cabinet: 75mm. Bezel dimensions: 134 x 68mm. Fixing centres: 118.5 x 54mm.

Order Code	Type	Price each
LH08J	Recess Handle	69p

Large Cabinet Handle

Cliff

A heavy duty bar handle, which is designed for use on large, heavy, wood or metal cabinets. It comprises a front and back-plate which are snapped together prior to fixing into the cabinet. The mounting flange is provided with a moulded sealing rib which will give a reasonable airtight seal on cloth or plastic covered cabinets. If a watertight seal is required, then a sealing compound should be used under the flange. A moulded recess in the bar can accept a name plate or trade logo.

Overall size 210 x 165mm. Cut-out 164 x 122mm. Depth 50mm maximum. Nameplate 73 x 16mm approx., and 1.5mm deep.

Order Code	Type	Price each
CW30H	Large Cab Handle	£2.79

Heavy Duty Handle

A metal heavy duty flush fitting black cabinet handle with a strong 25.4mm bar. Ideal for speaker cabinets and other very heavy casings. Cut-out required: 235 x 120mm. Total depth in cabinet: 70mm. Bezel dimensions: 161 x 280mm. Fixing centres: 85 x 85 x 85 x 140mm (5.5mm clear).

Order Code	Type	Price each
LH11M	Heavy Duty Handle	£3.99

Flight Case Handle

A heavy-duty flip handle as used on flight cases. Fits cut-out size 128 x 75 x 10mm deep. Overall size 154 x 100mm. A matching backing plate to provide an extra strong fixing is also available.

Order Code	Type	Price each
YL05F	Flip Handle	£2.99

MITRE BOX & SAW

A quality, precision engineered tool, this mitre box and saw is designed for making accurate joints in wood, plastic and alloys. It is the ideal tool for the enthusiast, useful for making picture frames, door frames, and in fact, all types of mitre work, enabling four, five, six, and eight-sided frames to be made up accurately, using the readily located preset angles. Alternatively, provision is made for those odd angles to be set up. The mitre box is manufactured as an aluminium pressure casting with a precision ground finish. It carries an arm of similar manufacture, having four saw guides attached. This swings about a graduated scale marked out in degrees on the mitre box. The arm carries a sprung-loaded lever that locates in any one of nine preset positions to lock the guide rods to a selected angle. The bow saw frame is a pre-tensioned

GREAT VALUE!

£29.99
RJ08J
[F3]

assembly of aluminium and steel with a comfortable cast aluminium handle at one end. The blade is of high tensile steel and provided with adjustment at the handle. An adjustable clamp is supplied to restrain the workpiece and an end stop or depth guide is supplied to enable identical work to be repeated. A spare saw blade is available, RJ09K price £3.99.

Trim and Corner

An attractive extrusion and separate corner piece for use on cabinet corners. Extrusion is 40 x 40mm by 3mm thick and sold in 1m lengths. Corner height is 93mm.

Skirted and Unskirted Pair Cliff

An identical pair of knobs except that one has a skirt and one has not. Both are fitted with a spun aluminium cap and have serrated sides. They have a recess for control fixing nut. Skirted M2 version has a white indicator spot on the skirt.

M1: Diameter 19mm.
Height 16mm.
M2: Diameter 25mm.
Height 16mm.

Order Code	Type	Price each
RW88V	Knob M1	59p
RW89W	Knob M2	59p

Mirror Finished Pair Cliff

A matching pair of knobs with a mirror-finish chrome insert and white pointer spot on the skirt. Sides are wide ridged and both types have a recess for control fixing nuts.

M3: Diameter 26mm. Height 15mm.
M4: Diameter 36mm. Height 17mm.

Order Code	Type	Price each
RW90X	Knob M3	49p
RX00A	Knob M4	79p

Pointer Knob

Standard pointer knob with white line. Length 32mm.
Width (max) 19mm.
Height 13mm.

Order Code	Type	Price each
RW75S	Knob BK12	35p

Heavy Duty Pointer Knob

A pointer knob with white line giving a very firm grip for heavy switches etc. Diameter: 27mm. Height: 16mm. Has recess for control fixing nut.

Order Code	Type	Price each
FD76H	Knob HDP	40p

Pointer Knobs with Coloured Caps

A range of attractive knobs with pointer bar with a white line. Knobs have serrated sides and coloured cap. Knobs are available in two sizes with blue, green, red or yellow caps.

RN15: Length 15mm.
Width 13mm.
Height 13mm.
RN18: Length 23mm.
Width 19.3mm.
Height 16.5mm.

Order Code	Type	Price each
FE74R	Knob RN15 Blue	39p
FE75S	Knob RN15 Green	39p
FE76H	Knob RN15 Red	39p
FE77J	Knob RN15 Yellow	39p
FD65V	Knob RN18 Blue	44p
FD66W	Knob RN18 Green	44p
FD67X	Knob RN18 Red	44p
FD68Y	Knob RN18 Yellow	44p

Calibrated And Pointer Pair

A matching pair of knobs with a spun aluminium skirt. Sides are serrated. Type PK2 has a black arrowhead on the skirt and type NK2 is numbered 0 to 10 on the skirt. Both types have recess for control fixing nut. Both types: Diameter 37mm. Height 15mm.

Order Code	Type	Price each
RX01B	Knob NK2	69p
RX02C	Knob PK2	69p

Calibrated and Pointer Pair

A matching pair of knobs with a spun aluminium insert and a wide aluminium skirt. Sides are serrated. Type F11 has a black indicator line on the skirt and type F10 is calibrated 0 to 9.8. Both types have recess for control fixing nut. Both types: Diameter 30mm. Height 18mm.

Order Code	Type	Price each
RW78K	Knob F10	79p
H26D	Knob F11	79p

Fluted Range

A range of black fluted knobs with white indicator line, narrow skirt and spun aluminium insert. All types have recess for control fixing nut except K7A.

K7A: Diameter 19mm. Height 12mm.
K7C: Diameter 33mm. Height 16mm.
K7B: Diameter 27mm. Height 16mm.
K7D: Diameter 45mm. Height 21mm.

Order Code	Type	Price each
YX01B	Knob K7A	49p
YX02C	Knob K7B	59p
YX03D	Knob K7C	69p
YX04E	Knob K7D	79p

Matt Finish Range

An attractive range of matt black finish knobs with serrated finger-grip sides and a narrow skirt. The top of the knob features a shallow channel which matches in with the serrated finger-grip pattern. One end of the channel has a square, white pointer dot which complements a square cut-out or recess in the skirt. Knob K14D has a recess for a control fixing nut.

K14A: Diameter 15mm. Height 14mm.
K14C: Diameter 24mm. Height 20mm.
K14B: Diameter 19.5mm. Height 15mm.
K14D: Diameter 35mm. Height 17mm.

JZ84F	28mm Cap Red	15p
JZ85G	28mm Cap Black	15p

Nut Covers for 10mm and 15mm Knobs

Re-An

These plug into the base of the knob and hide the potentiometer fixing nut. Three types are available: black with white line, for 10 and 15mm knobs (JZ56L and JZ57M respectively) and black, for 15mm knobs only (JZ58N).

Order Code	Type	Price each
JZ58N	No Line 15mm Cover	16p
JZ57M	Lined 15mm Cover	24p
JZ56L	Lined 10mm Cover	24p

Numbered Skirts and Stator for 15mm Collet Knobs

Re-An

These plug into the base of the knob, and have on them black numerals set against a clear background. There are two versions available: one is numbered from 1 to 10 (JZ54J); the other 1 to 12 (JZ53H). A stator is also available (JZ55K). This is a black, adhesive-backed disc with one white segment which is fitted to the panel, allowing the figure dial to rotate over it. Thus only one of the numbers on the figure dial stands out clearly against the white segment of the stator whilst the remaining numbers 'disappear' against the black background.

Order Code	Type	Price each
JZ54J	Skirt 1 - 10	26p
JZ53H	Skirt 1 - 12	26p
JZ55K	Stator	38p

Low Cost 'Collet' Knobs

Re-An

An attractive black silk-finish plastic knob in a style similar to true collet knobs, but having grub-screw fixing for standard 1/4in. shaft. The knob has an integral nut-cover, and seven different colour caps are available separately to plug in the top of the knob body. Has recess for control fixing nut.

Diameter: 19mm.
Height: 21mm (with cap).
Caps are engraved with white indicator line. (White cap has black line.)

Order Code	Type	Price each
YG40T	Low-Cost Collet Knob	49p
QY00A	LC Cap Black	10p
QY01B	LC Cap Blue	10p
QY02C	LC Cap Green	10p
QY03D	LC Cap Grey	10p
QY04E	LC Cap Red	10p
QY05F	LC Cap White	10p
QY06G	LC Cap Yellow	10p

KNOBS FOR SLIDE POTS

Type A

A matt finish, black knob with white line. Knob will only fit with line at right angles to the length of the pot. Flared sides. Size of base: 20 x 14mm. Size at top: 16 x 8mm. Height: 13.5mm. Shaft depth: 8mm.

Order Code	Type	Price each
RX22Y	Slide Knob A	24p

Type B

A miniature version of our Type A knob. Size of base: 12 x 8.5mm. Size at top: 9 x 4.5mm. Height: 9mm. Black with a white line. Shaft depth: 6mm.

Order Code	Type	Price each
YG09K	Slide Knob B	24p

Type F

A matt finish knob with serrated top and white line. Knob will only fit with line at right angles to the length of the pot. Size of base: 22.5 x 10.5mm. Height: 11mm. Shaft depth: 8.5mm. Available in the following colours:

Order Code	Type	Price each
RX24B	Slide Knob F Blk	22p
RX25C	Slide Knob F Blue	22p
RX26D	Slide Knob F Green	22p
RX27E	Slide Knob F Grey	22p
RX28F	Slide Knob F Red	22p

DIALS AND ACCESSORIES

Spindle Coupler

Brass spindle coupling. Precision turned from brass rod for extending all types of 1/4 in. spindles. Four flush-fitting grub screws ensure non-slip trouble-free operation. Length 15mm. Outer diameter 9.5mm.

Order Code	Type	Price each
RX29G	Spindle Coupler	£1.99

Extension Spindle

Brass extension spindle that fits all 6.35mm (1/4 in.) spindles. Spindle retainer has two 6BA screws and extension spindle is 64mm long x 6.35mm (1/4 in.).

Order Code	Type	Price each
RX30H	Ext Spindle	£1.79

Nylon Rod

1/4 in. (6.35mm) dia. rod for extending spindles. Strong and slightly flexible. It is supplied in 6in. (152mm) lengths (nominal).

Order Code	Type	Price each
RX38R	Nylon Rod	39p

Steel Cord Drive

Jackson

A brass bush (panel cut-out 3/8 in.) through which a standard 1/4 in. shaft revolves in a ball race. Spindle extends at rear of bush to allow flywheel to be fitted. Total length: 62mm. Length from front of bush: 36mm.

Order Code	Type	Price each
RX46A	Cord Drive Steel	£4.49

Brass Bush

Jackson

A brass bush (panel cut-out 3/8 in.) to support long spindle in front panel or guide spindle fixed in sub-chassis through front panel. Suits standard 1/4 in. spindles. Overall length: 13.5mm.

Order Code	Type	Price each
RX31J	Brass Bush	60p

Drive Cord

A nylon covered spun-glass-cored drive cord. Non-stretch and non-slip. Diameter: 0.56mm. Breaking strain: 10lb. Sold per metre.

Order Code	Type	Price each
BL73Q	Drive Cord	12p

Aluminium Dial

Jackson

Dial incorporates a ball drive type 4511F. Output shaft fits standard 6.3mm (1/4 in.) shaft. Unit has an aluminium scale printed 0 to 100 in 180° and a 25.4mm (1 in.) solid aluminium diamond knurled knob. Dial diameter: 44mm (1 3/4 in.).

Order Code	Type	Price each
HB45Y	Aluminium Dial	£12.99

Epicyclic Ball Drive Type 4511F

Jackson

A powerful friction drive with a reduction ratio of approx 6:1. Fits standard 6.3mm (1/4 in) shafts and knobs. Two grub screws for fixing shaft. Base of shaft tapped with two 8BA threaded holes for direct fixing of Rotary Pointer. Shaft length: 26.7mm. Overall length: 47mm. Output torque: 1.8kgm.cm.(26oz.in) to 2.7kgm.cm.(38oz.in). Input torque: <216gm.cm. (3oz. in.)

Order Code	Type	Price each
RX42V	Ball Drive	£4.69

Miniature Type Ball Drive

Jackson

A small friction drive with a reduction ratio of approx 10:1. Fits standard 6.3mm (1/4 in.) shafts and knobs. Two grub screws for fixing shaft. Mounting bracket has two 8BA clearance holes on 20mm centres. Shaft length: 17mm. Overall length: 32.5mm. Output torque: 570gm.cm. (8oz.in.) minimum.

Order Code	Type	Price each
HB42V	Mini Ball Drive	£3.10

Vernier Dials

Heavy black phenolic base and black printed aluminium scale. Moulded knob has fluted grips and internal parts are phosphor bronze and brass for long life. No backlash, positive logging, 'large' dial can be read to a tenth of each scale division. Planetary slow motion drive. Fits standard 6.3mm (1/4 in.) shaft. Scale marked 0 to 100 in 180°. Please note that only the 'large' dial has a true vernier scale.

Type	Dial diameter	Reduction ratio (approx.)
Vernier Dial Small	36mm	6.3:1
Vernier Dial Medium	50mm	7.5:1
Vernier Dial Large	70mm	8.1:1

Order Code	Type	Price each
RX39N	Vernier Dial Small	£5.10
RX40T	Vernier Dial Medium	£6.65
RX41U	Vernier Dial Large	£11.49

Ball Drive Pointer

Jackson

A perspex pointer, transparent with a crimson hair line. Fits the ball drive type 4511F. Length of pointer: 86mm.

Order Code	Type	Price each
HB47B	Ball Drive Pointer	£1.99

Cord Tension Springs

Jackson

Springs have 3.2mm (1/8 in.) inside diameter loops at each end. Three sizes are available.

Length (between loop centres)	Number of coils
8mm (5/16 in.)	6
12.7mm (1/2 in.)	14
21.4mm (27/32 in.)	26

Order Code	Type	Price each
HB48C	Spring Short	20p
HB49D	Spring Medium	20p
HB50E	Spring Long	20p

Metric Brass Full Nut

Ewan James

Nickel-plated brass M3 full nut. Supplied in packs of ten.

Order Code	Type	Price each
BF58N	Isonut M3	20p

SCREW SIZES

The size of a metric screw is defined by the numbers M5, M4, M3, M2.5 etc, where the number after the M is the overall diameter of the thread in mm., and by the length in mm.

6mm = 1/4 in. approx, 9mm = 3/8 in. approx, 12mm = 1/2 in. approx and 40mm = 1 1/2 in. approx. For comparison the overall diameter of the thread in BA sizes is as follows:
 8BA = 2.25mm, 6BA = 2.85mm, 4BA = 3.68mm, 2BA = 4.78mm, 0BA = 6.12mm.
 In No. screws:
 No.8 = 4.25mm, No.6 = 3.6mm, No.4 = 3mm, No.2 = 2.25mm.

Metric Steel Washers

Ewan James

Zinc-plated steel plain washers available in the following sizes:

BF12N	C/S Screw 6BA 1/2in.	12p
BF13P	C/S Screw 6BA 1in.	32p
LR00A	C/S Screw 8BA 1/2in.	18p

Panel Bolts

Nickel-plated steel bolts. Supplied individually.

Two types are available: 4BA 1/2in. slotted panel headed (BF14Q). 4BA 1in. slotted domed countersunk (LR75S).

Order Code	Type	Price each
BF14Q	Panel Screw	6p
LR75S	C/S Panel Screw	10p

BA Full Nuts

Ewan James

Nickel-plated brass full nuts available in the following sizes.

2BA, 4BA, 6BA, 8BA

All types supplied in packs of ten.

Order Code	Type	Price each
BF16S	Nut 2BA	30p
BF17T	Nut 4BA	20p
BF18U	Nut 6BA	18p
BF19V	Nut 8BA	18p

BA Washers

Ewan James

Nickel-plated brass washers available in the following sizes.

2BA, 4BA, 6BA, 8BA

All types supplied in packs of ten.

Order Code	Type	Price each
BF20W	Washer 2BA	16p
BF21X	Washer 4BA	12p
BF22Y	Washer 6BA	12p
BF23A	Washer 8BA	12p

Cup Washer

Ewan James

A chrome-plated steel cup washer for use with our domed countersunk panel screw.

Sold in packs of ten.

Order Code	Type	Price each
JX78K	Cup Washer	29p

Spring Clip

A black finish 4BA panel-fixing spring clip for use where it would be impractical or impossible to hold a nut still while turning the screw. Supplied in packs of ten.

Order Code	Type	Price each
JX59P	Spring Clip	89p

BA Shakeproof Washers

Zinc-plated steel shakeproof washers available in the following sizes.

2BA, 4BA, 6BA, 8BA

All types supplied in packs of ten.

Order Code	Type	Price each
BF24B	Shake 2BA	12p
BF25C	Shake 4BA	12p
BF26D	Shake 6BA	12p
LR01B	Shake 8BA	12p

BA Solder Tags

A heavily tinned solder tag available in the following sizes.

2BA, 4BA, 6BA, 8BA

All supplied in packs of ten.

Order Code	Type	Price each
BF27E	Tag 2BA	28p
BF28F	Tag 4BA	28p
BF29G	Tag 6BA	28p
LR02C	Tag 8BA	28p

Nylon BA Bolts

An ivory finish nylon cheese-head bolt available in the following sizes.

2BA x 1/2in. 4BA x 1in.
2BA x 1in. 6BA x 1/2in.
4BA x 1/2in. 6BA x 1in.

All types supplied in packs of ten.

Order Code	Type	Price each
BF70M	Nyl 2BA 1/2in.	86p
BF71N	Nyl 2BA 1in.	£1.16
BF72P	Nyl 4BA 1/2in.	89p
BF73Q	Nyl 4BA 1in.	99p
BF75S	Nyl 6BA 1/2in.	92p
BF76H	Nyl 6BA 1in.	99p

Nylon BA Nuts

Ivory finish nylon nuts available in the following sizes.

2BA, 4BA, 6BA

All types supplied in

Order Code	Type	Price each
BF78K	Nyl Nut 2BA	80p
BF79L	Nyl Nut 4BA	80p
BF80B	Nyl Nut 6BA	80p

Nylon BA Washers

Ivory finish nylon washers available in the following sizes.

2BA, 4BA, 6BA

All types supplied in packs of ten.

Order Code	Type	Price each
BF82D	Nyl Washer 2BA	32p
BF83E	Nyl Washer 4BA	32p
BF84F	Nyl Washer 6BA	32p

Nylon Metric Nut and Bolt

An ivory finish M3 metric-thread nylon full nut and M3 x 12mm countersunk bolt. Supplied in packs of ten.

Order Code	Type	Price each
JX79L	Nyl C/S Bit M3x12nm	69p
JX80B	Nylon Nut M3	60p

Self-Tapping Screws

Steel self-tapping screws available in the following sizes.

Order Code	Type	Price each
No. 2 x 3/16 in.	No. 2 x 3/8 in.	No. 4 x 1/4 in.
No. 8 x 3/8 in.	No. 6 x 3/8 in.	No. 4 x 3/8 in.
No. 8 x 1/2 in.	No. 6 x 1/2 in.	No. 4 x 1/2 in.

All types supplied in packs of ten.

Order Code	Type	Price each
BF68Y	Slf-Tpr No. 8 x 3/8 in	20p
BF69A	Slf-Tpr No. 8 x 1/2 in	20p
LR67X	Slf-Tpr No. 6 x 3/8 in	20p
BF67X	Slf-Tpr No. 6 x 1/2 in	20p
FE68Y	Slf-Tpr No. 4 x 1/4 in	20p
BF65V	Slf-Tpr No. 4 x 3/8 in	20p
BF66W	Slf-Tpr No. 4 x 1/2 in	20p
BF64U	Slf-Tpr No. 2 x 3/16 in	20p
LR68Y	Slf-Tpr No. 2 x 3/8 in	20p

Japanned Woodscrew

A No 4 x 1/2 in. black japanned woodscrew with a slotted round head. Supplied in packs of ten.

Order Code	Type	Price each
LB99H	Blk Wdscrw No 4 1/2"	20p

Small Handwheel Bolt

A six sided scolloped handwheel bolt, ideal for fixing portable frames or legs, etc. Supplied with T-nut. Matt black knob with M6 x 20mm bc.ft. Knob diameter 40mm.

Order Code	Type	Price each
JU48C	Hand Wheel M6x20mm	69p

Large Handwheel Bolt

A handwheel bolt ideal for fixing portable frames or legs etc. Matt black knob with 35mm long bolt is supplied with T-nut internally threaded to fit bolt. Nut requires a 10mm hole in the woodwork and spikes pull into wood when bolt first tightened to ensure secure

Order Code	Type	Price each
YL23A	Hand Wheel Bolt	79p

Brass Studding

A 6in. length of screwed brass rod. Available in 2BA, 4BA and 6BA.

Order Code	Type	Price each
FW13P	Studding 2BA	69p
FW14Q	Studding 4BA	79p
FW15R	Studding 6BA	89p

SPACERS Round Clearance

Harwin

Circuit board mounting spacers, 4BA, 6BA, M3 or M4 clearance nickel-plated brass tubes. Available in the following sizes.

4BA x 1/8 in.	6BA x 1/8 in.	M3 x 1/8 in.
4BA x 1/4 in.	6BA x 1/4 in.	M3 x 1/4 in.
4BA x 1/2 in.	6BA x 1/2 in.	M3 x 1/2 in.
		M4 x 1/2 in.

Supplied in packs of ten.

Order Code	Type	Price each
FW30H	4BA Spacer 1/8 in.	99p
FW31J	4BA Spacer 1/4 in.	£1.05
FW32K	4BA Spacer 1/2 in.	£1.39
FW33L	6BA Spacer 1/8 in.	92p
FW34M	6BA Spacer 1/4 in.	89p
FW35Q	6BA Spacer 1/2 in.	£1.10
FG32K	M3 Spacer 1/8 in	99p
FG33L	M3 Spacer 1/4 in	89p
FG34M	M3 Spacer 1/2 in	£1.09
FG37S	M4 Spacer 1/2 in	£1.39

Hex Clearance

Harwin

A rigid grey PVC spacer, 12.7mm long, with a hexagonal cross-section. Spacer is 6.35mm (approx) across flats and the central hole is 2.8mm diameter. 6BA or M2.5 screws will pass through the hole or No.4 self-tappers may be used for direct fixing. Supplied in packs of ten.

Order Code	Type	Price each
FE69A	Hex Clear Spacer	79p

Round Threaded

Harwin

Nickel-plated brass spacers with the centre hole tapped to accept a 4BA, 6BA, M3 or M4 screw. Length of the 4BA and 6BA types, is 1/2 in., the M3 and M4 types is 14mm. Overall diameter of 4BA, 6BA and M4 is 6.35mm (1/4 in.) and M3 is 4.75mm.

Supplied in packs of ten.

Order Code	Type	Price each
LR71N	Threaded Spacer 4BA	£1.25
LR72P	Threaded Spacer 6BA	99p
FG38R	Threaded Spacer M3	99p
FG39N	Threaded Spacer M4	£1.40

Hex Threaded

Harwin

Nickel-plated brass spacers with the centre hole tapped to accept a 6BA screw. Supplied in packs of ten. Two lengths available: 1/4 in.: 6.35mm long. 7/8 in.: 22.23mm long. Width across flats 4.9mm.

Order Code	Type	Price each
FD10L	6BA Tapped Spacr 1/4	80p
JG20W	6BA Tapped Spacr 7/8	£1.49

Insulated

A range of insulated spacers with brass inserts and cross-head M3 bolts with spring washer at both ends. Bolts are 5mm long. Spacers are available in seven lengths 10mm, 15mm, 20mm, 25mm and 30mm. Overall diameter 8mm. Sold in packs of four.

Order Code	Type	Price each
FS36P	M3 Insultd Spacer 10	99p
FS37S	M3 Insultd Spacer 15	£1.09
FS38R	M3 Insultd Spacer 20	£1.19
FS39N	M3 Insultd Spacer 25	£1.20
FS40T	M3 Insultd Spacer 30	£1.29

Rubber Coupling

For use with spring-lines, the coupler drastically reduces transmission of acoustic shocks and vibrations to the springs. The coupler has an M4 stud on each end.

Dimensions in mm:
 Rubber length: 9
 Rubber diameter: 9.5
 Overall length: 29

Order Code	Type	Price each
FB98G	Rubber Coupling	£1.49

Stand-Offs

A range of plastic snap-in stand-offs which eliminate the need for nuts and bolts when mounting printed circuit boards etc. The bottom snaps permanently into a chassis hole 5mm dia. in any chassis with a thickness 1mm to 2.5mm. The top snaps into a 4mm dia. hole in the circuit board which can be removed and re-fitted as required. These stand-offs provide mechanically secure, insulated mounting, yet boards can be quickly removed.

Short and medium types are also available in packs of 40.

Type	Dimension X (mm)	Overall length (mm)
Short	9	22
Medium	15	28
Long	20	33

Order Code	Type	Price each
JK44X	Standoff Short	8p
AQ05F	Stand Off-Short 40Pk	£2.20
JK45Y	Standoff Medium	8p
AQ06G	Stand Off Med 40Pk	£2.20
JK46A	Standoff Long	8p

GROMMETS

Strain Relief Grommets

A range of moulded black nylon strain-relief grommets which eliminate the need for knot tying, screw-down cable clamps etc. Simply place cable in grommet, squeeze closed and snap into chassis cut-out. Five sizes are available.

All Dimensions in mm:

B - to stop twisting

C - max chassis thickness

Type	To fit cable	B	A	C	D
F31	Twin Mains DS	9.9	11.0	1.6	10.3
5R2	Min Mains	11.5	12.7	2.5	11.0
6W2	Twin 6A Mains/ Cotton Mains	11.8	12.7	2.3	11.0
6R1	C6A Mains	14.0	15.9	1.6	14.8
7R3	HD Mains/ 4-Core Mains	16.5	19.8	3.2	19.0

Supplied individually.

Order Code	Type	Price each
LR47B	SR Grommet F31	7p
LR48C	SR Grommet 5R2	8p
LR49D	SR Grommet 6W2	9p
JH23A	SR Grommet 6R1	10p
LR50E	SR Grommet 7R3	15p

Waterproof Cable Glands

A range of four high quality cable glands which offer both mechanical anchorage and environmental sealing. Fixing is by means of a hexagonal nut fitted on the inside of the enclosure. The gland is tightened externally and facilitates cable removal/fitting when the gland is fitted. The two bigger sizes feature a dual-sized gland so that two ranges of cable diameter can be accommodated. (For the larger sizes, the inner gland is removed, but for smaller cables it is left in place.) The body is manufactured from a very tough grey nylon.

Comparison chart for cable glands

All Dimensions in mm:

Order Code	Panel Cut-out	Max. Panel Thickness	Hex Nut Size	Cable dia. range	Overall length (before tightening)
JR76H	15.2	5	19 A/F	5 to 8mm	30mm
JZ40T	20.4	6	24 A/F	9 to 12.5mm	40mm
JZ41U	28.3	7	32 A/F	8 to 10mm (S) 17 to 20mm (L)	50mm
JZ42V	37	7	41 A/F	13.5mm to 15mm (S) 21 to 26mm (L)	55mm

S-smaller gland within larger gland;
L-larger gland only.

Order Code	Type	Price each
JR76H	Gland 5 - 8mm	49p
JZ40T	Gland 9 - 12.5mm	50p
JZ41U	Gland 8 - 20mm	75p
JZ42V	Gland 13.5 - 26mm	99p

Grommets

A range of black PVC grommets for preventing cables chaffing when passing through panels.

Order Code	Hole Dia (mm)	Chassis Hole dia (mm)	Thkns (mm)	Overall Dia (mm)	Overall Thkns (mm)
JX64U	4.0	6.4	1.6	9.5	6.4

JX63T	9.5	12.5	1.6	17.0	7.0
JX66W	15.5	20.0	1.6	24.0	7.5

Supplied in packs of ten.

Order Code	Type	Price each
JX64U	Std Grommet 4.0mm	28p
JX65V	Std Grommet 6.4mm	36p
JX62S	Thk Grommet 6.4mm	36p
JX63T	Std Grommet 9.5mm	48p
JX66W	Std Grommet 15.5mm	65p

Flexible Grommet Strip

A unique continuous grommet strip ideal for all shapes and sizes of holes in panels. Easily cut with scissors and fitted without the aid of tools or adhesives, it can be used on any type of panel material. Available in white polythene in three sizes:

Size	Dimensions (mm)				For panel thickness	
	A	B	C	D	mm	swg
A	1.4	3.8	4	2.5	0.4 to 1.3	27 to 18
B	2.3	4.5	4	2.5	1.3 to 2.1	16 and 14
C	3.3	5.6	4	2.5	2.1 to 3.3	12 and 10

Order Code	Type	Price each
BL74R	Flexigrommet A	39p
BL75S	Flexigrommet B	49p
BL76H	Flexigrommet C	52p

Cable Sealing Grommets

PVC grommets for providing a seal around cables when passing through panels.

Type	Cable Size (mm)	Chassis Hole Dia (mm)	Panel Thkns (mm)	Overall Dia (mm)	Overall Thkns (mm)
JX77J	up to 11	16	1.5	19	6.4

JX73Q	up to 19	25.5	2.4	36.5	9.5

Supplied in packs of ten.

Order Code	Type	Price each
JX77J	Seal Grommet 16.0mm	99p
JX72P	Seal Grommet 19.0mm	89p
JX73Q	Seal Grommet 25.5mm	£1.19

FOR CASHTEL
Phone 01702 552941

THE BEST OF SERVICE

Cable Exit Grommet with Sleeve

A cable exit grommet with protective sleeve, ideal to prevent chafing when cables exit an enclosure. The grommet will accept cables up to 5.1mm diameter. Panel hole diameter 8.7mm, panel thickness 1.6mm.

Order Code	Type	Price each
JX71N	Siv Grommet 5.1mm	79p

Blanking Grommets

A range of black PVC grommets for blanking-off holes in panels.

Type	Chassis Hole Dia (mm)	Panel Thkns (mm)	Overall Dia (mm)	Overall Thkns (mm)
JX67X	15.5	1.6	22.0	7.5
JX68Y	20.0	1.6	25.5	9.3
JX69A	25.4	1.6	32.0	9.0

Supplied in packs of ten.

Order Code	Type	Price each
JX67X	Blnk Grommet 15.5mm	85p
JX68Y	Blnk Grommet 20.0mm	85p
JX69A	Blnk Grommet 25.4mm	£1.10

MISCELLANEOUS HARDWARE

Cabinet Assembly Block

A white plastic cabinet assembly block that provides a convenient and easy way of fixing wooden cabinet panels together. The 30 x 14 x 14mm block has two countersunk 4.5mm holes on one face and one countersunk 4.5mm hole on the other face. Ideal for use in loudspeaker cabinets. Supplied in packs of ten.

Order Code	Type	Price each
JX74R	Modesty Block White	65p

Metal 'L' Bracket

A plated, right-angled steel 'L' shaped bracket which can be used in a variety of different roles including that of a cabinet corner protector. Each side is 31mm long with a 5mm dia. hole at 21.5mm away from the angle, and a half-round end. Width is 18mm. Colour silver.

Order Code	Type	Price each
JP12N	L Corner	20p

Cabinet Shelf Support

A white plastic shelf support, as used with self-assembly furniture. Spigot diameter, 5.9mm. Spigot length, 6.9mm. Supplied in packs of ten.

Order Code	Type	Price each
JX75S	Shelf Support	39p

Graphic Transfers

A range of very high quality rub-down letters, numbers and symbols. Letter sheets are available in 2.5mm and 4.2mm heights and each sheet contains capital and lower-case letters as well as punctuation marks and a few numerals.

The number sheets contain 54 of each numeral 0 to 9 and are 3.5mm high. The symbols sheet contains several of each of 24 different front and rear panel symbols commonly used on electronic equipment. All types are available in black and in white.

Sheet size: 210 x 94mm.

Order Code	Type	Price each
XH73Q	Trnsfr Ltr 2.5mm; Blk	75p
XH74R	Trnsfr Ltr 2.5mm; Wht	75p
XH77J	Trnsfr Ltr 4.2mm; Blk	75p
XH78K	Trnsfr Ltr 4.2mm; Wht	75p

XH76H	Transfer Number; Wht	75p
XH71N	Transfer Symbol; Blk	75p
XH72P	Transfer Symbol; Wht	75p

High Voltage Warning Label

A self adhesive label with the legend 'DANGER: High Voltage' in black on a yellow background. Size: 50mm.

Order Code	Type	Price each
DM55K	HV Warning Label	95p

Mains Warning Label

A self-adhesive label bearing the legend "WARNING Disconnect the mains supply before removing this cover" printed in black on a yellow background. Size 50 x 25mm.

Order Code	Type	Price each
WH48C	Mains Warning Label	19p

Cable Exit Gland with Sleeve

A sealed cable exit gland combined with a coiled strain relief sleeve designed to prevent chafing when cables exit an enclosure. The gland contains a rubber grommet which will accept cables up to 5mm diameter, but this may be removed so that the whole gland will accommodate a 10mm diameter loom. The threaded sleeve part screws into the gland and squeezes a separate plastic collet ring to grip the cable. The gland body has a 12mm long thread and is attached to the enclosure with a nut, and includes a neoprene sealing washer. Requires a panel hole diameter of 15mm (5/8 in.). Maximum panel thickness is 4mm. Sleeve length is 50mm. Colour black.

Order Code	Type	Price each
JZ43W	Cable Exit Gland	89p

Cable Exit Grommet Large

A cable exit grommet for use with large diameter cables. The grommet is tapered and should be trimmed to accommodate the cable it is protecting. Suitable for cable diameters 8 to 16mm. Panel hole diameter 20mm, panel thickness 1.8mm. Supplied in packs of ten.

Order Code	Type	Price each
JX70M	Tpr Grommet 8-16mm	85p

Hole Plugs

Moulded nylon plugs which snap-lock with finger pressure into holes in chassis which are to be blanked off. Two sizes are available. Colour: black.

Dimensions in mm:

Type	Fits hole dia.	Head dia.	Overall height	Max chassis thickness
1/4 in.	6.35	7.94	7.94	1.57
3/8 in.	9.53	11.91	10.32	3.18

Supplied in packs of ten.

Order Code	Type	Price each
JX60Q	Hole Plug 1/4 in.	56p
JX61R	Hole Plug 3/8 in.	69p

Quality Control' Write-on Labels

A range of write-on labels designed for quality control processes such as BS5750, ISO9000 etc. The peel off, self-adhesive, labels are made from vinyl cloth, and are primarily designed for indoor use.

Label Size	Label Size (in.)	Number Per Card
Code B	1 1/2 x 5/8	14
Code C	1 1/2 x 15/32	18

Maplin Code	Description	Size Code

CY44X	Serviced By Label	69p
CY47B	Tested Elect Safety	69p

'Warning' Labels

A range of self-adhesive, electrical warning labels that are made from vinyl cloth, and are suitable for use on a wide range of electrical and electronic equipment, and apparatus. The labels are primarily intended for indoor use.

Label Size	Label Size (in.)	Maplin Code	Description (on label)	Size Code	Number Per Card
Code A	1 1/2 x 3/4	CY52G	Warning - This equipment must be earthed	A	11
Code B	2 1/4 x 1	CY53H	Danger - Isolate mains supply before removing cover	B	8

Sold per card.

Order Code	Type	Price each
CY52G	Earth Warning Label	99p
CY53H	Isolated Mains Label	£1.32

PCB Guide

A moulded nylon support and guide for vertically mounted PCB's. Guide is push fixed and requires an 8 x 4mm mounting slot. Overall height: 39mm, width: 8mm, thickness: 4.5mm. The guide has a slot for a PCB on each side & slots are 3mm deep.

Order Code	Type	Price each
XX31J	PCB Guide	39p

PVC Beading

A flexible, black PVC beading of slotted section intended to provide a protective edging to metal panels, chassis and covers etc, will also protect persons coming into contact with metal edges, for example. May have to be glued in position if firm fixing is required. Sold per metre.

Order Code	Type	Price each
XR78K	PVC Beading Section	29p

Self-Adhesive Pads

A small foam pad 25 x 12mm (1mm thick) with a strong adhesive coating on both sides. Adhesive will bond to most materials. Supplied in strips of ten pads.

Order Code	Type	Price each
HB22Y	Quickstick Pads	20p

Snap Rivets

Small plastic rivets which may be used as a quick and cheap alternative to screws and nuts for holding together panels, PCB's onto brackets and chassis etc, providing the fixture is reasonably permanent. The rivet comes in two parts, the head and sleeve. The sleeve pushes through holes in the items to be attached, and the pin is pushed into the sleeve. The insertion of the pin makes the sides of the sleeve splay out, providing a secure grip.

Requires 3mm minimum hole diameter.

Supplied in packs of ten.

Order Code	Type	Price each
BK87U	Snap Rivet	69p

Terry Clip

Available in 1/2 in. diameter. Supplied in packs of ten.

Order Code	Type	Price each
JX76H	Terry Clip 1/2 in.	£1.20

Velcromounts

A versatile self-adhesive mounting and fixing system consisting of two nylon tapes, one covered in thousands of tiny loops, the other in thousands of tiny hooks. When pressed together, the hooks grip the loops forming a tight secure closure capable of resisting very strong lateral pulls. Yet to separate the strips, you simply peel them apart. The strips have a strong pressure-sensitive adhesive backing and are ideal for securing the grille in front-loading loudspeaker cabinets for example. The strips are 25mm (1 in. approx.) wide and sold in separate 1m lengths of hooks and loops or in packs of four pairs of 1 in. squares. Colour of both parts is black.

Order Code	Type	Price each
FE45Y	4prs 1 in. Velcro	29p
FE46A	Velcro Hooks 1m	£1.10
FE47B	Velcro Loops 1m	£1.10

FANS

Brushless 12V DC Axial Fans

A range of 12V DC axial fans with plastic housings and blades to UL49V-0. These fans have brushless motors for long life. Slimline style. Connection is by 300mm flying leads, red is positive, blue is negative.

Specification

Type:	40mm
Operating Voltage:	10-2V to 13-8V
Rated Voltage:	12V
Current:	160mA
Noise Level:	35dBA
Max Airflow:	210 litres/min
Continuous Life:	20000 hrs @ 40°C
Operating Temperature:	-10°C to +70°C
Insulation Resistance:	10MΩ @ 500V DC
DC Dielectric Strength:	5mA @ 500V AC
Weight:	40g
Overall Size:	40 x 40 x 20mm
Fixing Centres:	32 x 32 x dia 3.5mm

 Continuous Life: 60000 hrs @ 25°C
 Operating Temperature: -10°C to +70°C
 Insulation Resistance: 10MΩ @ 500V DC
 DC Dielectric Strength: 5mA @ 500V AC
 Weight: 140g
 Overall Size: 80 x 30 x 25.5mm
 Fixing Centres: 71.5 x 71.5 x dia 4.5mm

Specification
 Type: 92mm
 Operating Voltage: 10-2V to 13-8V
 Rated Voltage: 12V
 Current: 300mA
 Noise Level: 35dBA
 Max Airflow: 1200 litres/min
 Continuous Life: 60000 hrs @ 25°C
 Operating Temperature: -10°C to +70°C
 Insulation Resistance: DC 10MΩ @ 500V DC
 DC Dielectric Strength: 5mA @ 500V AC
 Weight: 150g
 Overall Size: 92 x 92 x 25.5mm
 Fixing Centres: 82.5 x 82.5 x dia 4.5mm

Specification
 Type: 120mm
 Operating Voltage: 10-2V to 13-8V
 Rated Voltage: 12V
 Current: 700mA
 Noise Level: 42dBA
 Max Airflow: 2200 litres/min
 Continuous Life: 60000 hrs @ 25°C
 Operating Temperature: -10°C to +70°C
 Insulation Resistance: 10MΩ @ 500V
 DC Dielectric Strength: 5mA @ 500V AC
 Weight: 200g
 Overall Size: 119.5 x 119.5 x 25.5mm
 Fixing Centres: 104.8 x 104.8 x dia 4.5mm

Order Code	Type	Price each
YZ41U	40mm 12V Fan	£9.99
YZ38R	60mm 12V Fan	£9.99
YP40T	80mm 12V Fan	£9.99
YZ39N	92mm 12V Fan	£9.99
YZ40T	120mm 12V Fan	£9.99

240V Mains

A 240V AC mains axial fan for cooling, extraction, intake, ventilation etc. Available in two standard sizes 80mm (3in.) and 120mm (4 1/2 in.). The fans feature an impedance protected shaded-pole motor with a sintered iron sleeve bearing. The frame is diecast aluminium with steel impeller all finished in black epoxy paint. The 120mm unit has five blades and the 80mm has nine blades. The 120mm fan has solder tag connections and one fixing hole is 2BA (M5) clear for earth connection. The 80mm fan has 280mm flying leads for connection inside equipment only, and a hole in the chassis is tapped M4 for earth connection.

Specification	80mm	120mm
Power consumption	13W	22W
Continuous life	20,000 to 40,000 hours at 40°C	
Motor current	85mA	140mA
Stall current	105mA	180mA
Noise level	33dBA	45dBA
Max. airflow	28CFM	80CFM
Speed	2700rpm	2650rpm
Overall size	80 x 80 x 38mm	119 x 119 x 38mm
Fixing centres	71.5 x 71.5 4.5mm clear	105 x 105 4.5mm clear
Operating temp	-10°C to +60°C	

Order Code	Type	Price each
YP46A	Standard 80mm Fan	£12.99
WY08J	Standard 120mm Fan	£12.99

Plastic Finger Guards

Plastic finger guards that press-fit onto the above fans. Available to suit 80 and 120mm fans.

Order Code	Type	Price each
JU26D	80mm Plastic Guard	89p
JU27E	120mm Plastic Guard	99p

Chromed Steel Finger Guards

Heavily chromed steel finger guards that fit any standard fan. Available to suit 40, 60, 80, 92 and 120mm types.

Order Code	Type	Price each
JU25C	40mm Fan Guard	85p
JU23A	60mm Fan Guard	99p
FS19V	80mm Fan Guard	£1.10
JU24B	92mm Fan Guard	£1.20
FS20W	120mm Fan Guard	£1.30

LOCKS

Cam Lock

A quality product containing parts manufactured from brass, steel and alloy materials. The body is finished in chrome with a polished bezel. Suitable for use with metal cabinets, tool boxes and drawers with a panel thickness of up to 4mm. The body is 12.5mm diameter across the threads and 10mm across the flat surfaces. Diameter of bezel is 15mm. The blade is 19mm long from the centreline by 10mm wide. Overall length of lock is 22mm. Two keys provided.

Order Code	Type	Price each
CJ13P	Cam Lock	£1.85

Tumbler Lock

A quality product containing parts manufactured from brass, steel and alloy materials. The barrel is finished in chrome with a polished bezel. The lock is a separate item with a chrome finished body that fits into the barrel, after mounting, in any one of four positions. The tumblers of the lock are made from brass, steel and bronze. Suitable for use with metal cabinets, tool boxes and drawers with a panel thickness of up to 5mm. The barrel is 19.5mm diameter across the threads and 16mm across the flat surfaces. Diameter of bezel is 21.5mm. The blade is 32mm long from the centreline by 15.5mm wide. Overall length of lock when assembled is 29mm. Two keys provided.

Order Code	Type	Price each
CJ14Q	Tumbler Lock	£1.60

BULBS AND BULB HOLDERS

MES Lampholders

Miniature

Optum

A miniature MES lampholder with two solder tags for making the connections. Overall size 19mm across tags, 10mm diameter, 13mm high.

Order Code	Type	Price each
JX87U	Min MES Lampholder	27p

Batten Holder

An MES bulb holder in a bakelite base, with screw terminals.

Dimensions:
Dia. of base: 31mm.
Fixing centres: 23mm.
Total height: 18mm

Order Code	Type	Price each
RX86T	MES Batten Hldr	39p

LES Lampholders

Miniature

Optum

A miniature LES lampholder with two solder tags for making the connections. Overall size 15mm across tags, 6mm diameter, 9mm high.

Order Code	Type	Price each
UJ72P	LES Lampholder	27p

Domed Type

Optum

A panel lampholder with smart chromed bezel and domed translucent polycarbonate cap available in five colours. Panel fixing requires 10mm dia. cut out and, when fixed, lamp can be removed from either side of panel. Dia. of bezel: 12mm. Colours available Blue, Green, Red, White and Yellow.

Order Code	Type	Price each
RX76H	Dmd LES Lhldr Blue	63p
RX77J	Dmd LES Lhldr Green	63p
RX78K	Dmd LES Lhldr Red	63p
RX79L	Dmd LES Lhldr White	63p
RX80B	Dmd LES Lhldr Yellow	63p

Flat Top Type

Optum

A panel lampholder with smart chromed bezel and flat topped, transparent red polycarbonate cap. Panel fixing requires 11mm dia cut-out and, when fixed, lamp can be removed from either side of panel. Dia. of bezel: 14mm.

Order Code	Type	Price each
RX69A	Flat-Tp LES Lhldr Red	67p

LES Lamp Covers

Optum

High temperature, coloured translucent, silicone rubber covers for 5mm diameter bulbs. The covers stretch over the glass bulb on LES types and our Wire Bulb and will withstand the high temperature reached by the bulb. The covers also offer a very inexpensive method of mounting the bulb to a panel (up to 18swg thickness). Panel cut-out required 6.3mm (1/4 in.). Overall size 12.5 x 9mm dia. Available in Amber, Blue, Green, Red and Yellow.

Order Code	Type	Price each
YY00A	LES Cover Amber	30p
YY01B	LES Cover Blue	30p
YY02C	LES Cover Green	30p
YY04E	LES Cover Red	30p
YY06G	LES Cover Yellow	30p

Bulbs

Wire-Ended Neon Type

Wire-ended neon indicator lamp. For 250V operation use a series 270kΩ 1/4W resistor. Bulb diameter 5.95mm. Bulb length 21.5mm (max).

Order Code	Type	Price each
RX70M	Wire Neon	16p

Wire-Ended Filament Type

A wire-ended filament type bulb, dia. 5mm, 12V, 0.08A, 0.96W, 2 Lumens (nom). Nominal life: 5000 hours.

Order Code	Type	Price each
WQ13P	Wire Bulb 12V	52p

Wire Terminal Type

A small wire terminal type, 3.17mm dia. and 6.35mm long (excl. wire), two voltages available; 12V, 60mA average life 16000 hours and 28V, 24mA average life 5000 hours.

Order Code	Type	Price each
BT43W	Wire Lamp 12V	32p
BT44X	Wire Lamp 28V	49p

Bi-Pin Type

This 28V bulb has a pin spacing of 2.54mm. Current consumption is 24mA with a light output of 1.8 lumens, size is 3.8 x 9.65mm approx. (excl. pins).

Order Code	Type	Price each
BT46A	Bi-Pin Bulb Wide	89p

Sub-Midget Flange Type

Size 9.15 x 3.9mm, one voltage available, 28V, 24mA, 1.8 lumens and average life of 5000 hours.

Order Code	Type	Price each
BT49D	Submidget Flange 28V	£1.15

Miniature Krypton Bulbs

A miniature 'krypton' bulb with 4mm leadouts, producing a bright light for its size. Rated at 3V and 310mA.

Order Code	Type	Price each
JX48C	Krypton 3V 310mA	39p

Krypton Bulbs

These offer a much increased light output and greater efficiency when compared to standard types. As a result, they make enhanced substitute bulbs for applications such as cycle lamps, torches and security products. However, because they are much brighter than standard bulbs, life is reduced to between 15 and 20 hours. Available only with a miniature flanged (P9) base. There are 6 bulbs in the range: 2.4V 0.7A (KU00A), 2.4V 0.95A (KU01B), 3.6V 0.8A (KU02C), 4.8V 0.7A (KU03D), 6V 0.65A (KU04E) and 7.2V 0.7A (KU05F). Overall dimensions: length 30mm, dia. 13mm.

BT54J	Lilliput Lamp 12V	56p
BT55K	Lilliput Lamp 24V	62p
BT56L	Lilliput Lamp 60V	70p

Low Voltage Dichroic Lamps

A range of 12V low voltage dichroic lamps in a variety of wattages and beam angles with bi-pin single ended GX 5.3 caps. The dichroic reflector has the advantage that it radiates the majority of the heat in the opposite direction to the light beam, meaning that little infra-red is radiated forward. This makes the lamps particularly suitable for illumination of heat sensitive material, such as transparencies in slide projectors for example. Further advantages of using dichroic lamps are the higher light output (a 50W lamp has the same light intensity of a 150W PAR lamp), longer life and superior colour rendition when compared to standard PAR lamps.

Available in the following wattages and beam angles:

Part No.	Watts	Beam Angle	Order Code
ESX/CG	20W	13°	AB73Q
BAB/CG	20W	40°	AB74R
EXT/CG	50W	12°	AB75S
EXZ/CG	50W	26°	AB76H
EXN/CG	50W	40°	AB77J
FNV/CG	50W	55°	AB78K
EYF/CG	75W	14°	AB79L
EYC/CG	75W	42°	AB81C

Diameter: 50mm
Length: 45mm

Order Code	Type	Price each
AB73Q	ESX/CG	£4.99
AB74R	BAB/CG	£4.99
AB75S	EXT/CT	£4.99

AB81C	EYC/CG	£4.99

240V 300W and 500W Halogen Lamps

High-powered halogen tubes with a brilliant white light (colour temp. 2900°K) which can provide 9000 lumens of illumination for 500W tube and 5000 lumens for 300W tube. To fit standard R7S base, these tubes are suitable for any application where a very bright light is required (for example, video work). Also suitable as replacement bulbs for our Security Light (GK05F). Important note: please avoid touching the glass itself with bare fingers as the grease will reduce the life of the tube. Average life 2000 hours. Overall dimensions: 119.6mm long x 10mm dia.

Order Code	Type	Price each
KP50E	300W Halogen Tube	£3.99
JX53H	500W Halogen Tube	£3.99

150W Halogen Tube

A halogen tube rated at 250V AC, 150W, for use with the mini halogen lamp DM50E.

Order Code	Type	Price each
DM51F	150W Halogen Tube	£3.99

NEON INDICATORS

Miniature Round Panel Type

Moulded body with built-in resistance for 250V use, Red, Green or Amber lens. Requires a 7mm mounting cut-out in panel. Overall dimensions: 33mm long, 8mm diameter round lens.

Order Code	Type	Price each
BK52G	Min Neon Red	79p
BK53H	Min Neon Green	79p
BK54J	Min Neon Amber	79p

Small Square Panel Type

Optum

Moulded body with built-in resistance for 250V use. Red, Green or Amber lens. Requires a 10mm mounting cut-out in panel. Overall dimensions: 38mm long, 12mm square lens.

Order Code	Type	Price each
RX82D	Pan Neon Amber	75p
RX83E	Pan Neon Red	75p
BK51F	Pan Neon Green	75p

Square Panel Type

Optum

Moulded body with built-in resistance for 250V use. Green or Red lens. Requires a 10mm dia. mounting hole in panel. Lens size 15 x 12mm, overall length 43mm.

Order Code	Type	Price each
RX81C	Square Neon Red	75p
RX98G	Square Neon Green	75p

**TOP QUALITY PRODUCTS AT SUPER
LOW PRICES!**

Snap-In Plastic Type

Moulded body with integral retaining ears which lock onto the edge of a panel when the lamp is snapped-in. The lamp has integral resistance for 240V use. Available in red, green or amber. Panel cutout required is 10mm diameter. Connections are a pair of 1/4in. push-on blades separated by plastic insulator. Overall dimensions: 56 long x 12mm diameter lens.

Order Code	Type	Price each
MK78K	Red Snap-In Neon	65p
MK79L	Green Snap-In Neon	69p
MK80B	Orange Snap-in Neon	69p

Chrome Bezel Type

Optum

Chrome-plated metal body with built-in resistance for 250V use. Red or Green lens. Requires a 9mm mounting cut-out in panel. Overall dimensions: 41mm long, 11mm diameter round chrome bezel.

Order Code	Type	Price each
BK55K	Chrome Neon Red	£1.55
BK56L	Chrome Neon Green	£1.55

LIGHT EMITTING DIODES

3mm Diameter LEDs

A range of high quality 3mm LEDs available in various colours and light outputs. Suitable panel mounting clips are sold separately. The cathode is denoted by a flat on the body and by the short lead.

▶ IT'S A FACT! ◀

LED FACTS

Light emitting diodes (LED) are made from semiconductor type materials such as gallium arsenide (GaAs) or gallium arsenide phosphide (GaAsP). The LED emits light when it is forward biased, that is, the anode of the diode is positive with respect to the cathode. As electron and hole combine near the junction of the diode, sufficient energy is released in the form of light. A current limiting resistor is used in series with the LED to limit the current flow through the LED, preferably less than 20mA, and to prevent the LED overheating.

3mm Bi-Coloured LED

A two-lead LED with a red and green die connected in inverse parallel. Only one series resistor is required. The positive is connected to the short lead and the negative is connected to the long lead for green and vice versa for red. The viewing angle is 120°.

	Red	Green
Peak wavelength:	665nm	565nm

THE BEST OF SERVICE

5mm Continuous/Flashing LED

A 5mm red LED that can be switched to flashing or continuous mode and has a wide viewing angle. Within the supply voltage range no series resistor is required. By applying 5V to the lead denoted by the flat on the body, the LED may be made to stop flashing. Connect the LED supply voltage to the longest outer lead and negative to the centre lead. Fits YY40T clip.

Specification

Peak wavelength: 660nm
 Voltage range: 4.75V to 7V
 Supply current: 12mA typical
 Light output at V_S=5V: 1.6mcd typical
 Reverse voltage: 0.4V maximum
 Switch current at V_{SW}=5V: 25µA
 Power dissipation: 200mW maximum
 Flash rate: 1.3Hz to 5.2Hz (3Hz typical)

Order Code	Type	Price each
QY98G	Swth Flshng LED Red	99p

5mm Continuous Green/Flashing Red LED

A 5mm red flashing and continuous green LED that fits clip YY40T. Within the supply voltage range the red LED requires no series resistor. The green LED does require a series resistor. The LEDs have a common cathode, the centre lead. The green anode is denoted by the flat on the body. The supply voltage for the flasher IC and the red LED is applied to the longest lead. The LED has a wide viewing angle.

Specification

Supply voltage (red): 4.75V to 7V
 Forward voltage green: 20mA at I_F=20mA
 Supply current red: 12mA
 Forward current green: 30mA
 Typical light output red: 6mcd (V_S=5V)
 green: 6mcd (I_F=20mA)
 Peak wavelength red: 630nm
 green: 560nm
 Maximum reverse voltage red: 0.4V
 green: 5V
 Power dissipation: 200mW total
 Flash rate red: 1.3Hz to 5.2Hz (3Hz typical)

IT'S A FACT!

LED CURRENT LIMITING RESISTOR CHART

The correct resistance value is given by the formula:

$R_L = (V_S - V_F) / I_F \Omega$
 where I_F is in amps, V_S is the applied voltage, V_F is the forward voltage as shown in the tables and I_F is the forward current.

The following chart gives the preferred value of resistor, assuming an LED with a voltage drop of 2.1V. The values are NOT suitable for the blue LEDs (3V voltage drop), the super bright LEDs (1.8V voltage drop) and the low current LEDs (2mA current).

LED Forward Current

	10mA	20mA	30mA	40mA	50mA
3V	91	47	30	22	18
5V	300	150	100	75	62
6V	390	200	130	100	82
9V	680	360	220	180	150
12V	1000	510	330	240	200
15V	1300	680	430	330	270

All values in Ohms

5mm Bi-Coloured LED

A two-lead LED with a red and green die connected in inverse parallel. Only one series resistor is required. The positive is connected to the short lead and the negative is connected to the long lead for green and vice versa for red. The viewing angle is 120°. The LED fits YY40T clip.

UK52G	Superbri LED Red 8mm	60p
UK24B	Ultrabri LED Red 8mm	69p

8mm Flashing LEDs

A range of LEDs which flash approximately twice a second when a voltage between 3.5V and 13V is applied to them. Within the supply voltage range no series resistor is required. The cathode is denoted by a flat or chamfer on the body and the short lead.

Specification	
Voltage range:	3.5V to 12V (13V maximum)
Maximum reverse voltage:	0.5V
Flash frequency:	2Hz ($\pm 1\text{Hz}$) at 9V

Standard Type	Red Hibri	Green	Yellow
Peak wavelength:	625nm	565nm	595nm
Light output typical at $V_F=9\text{V}$:	12.5mcd	8mcd	12.5mcd
Forward current at 9V:	8.5mA	9mA	9.5mA
Power dissipation:	200mW	200mW	200mW
Diffused viewing angle:	140°	140°	140°
Stock code:	UK38R	UK39N	UK40T

Super Brightness Type	Red Super	Red Ultra
Peak wavelength:	625nm	660nm
Light output typical at $V_F=9\text{V}$:	120mcd	800mcd
Forward current at 9V:	9.5mA	16.5mA
Power dissipation:	240mW	240mW
Viewing angle:	140°	90°
	Diffused	Water Clear
Stock code:	UK41U	UK42V

Order Code	Type	Price each
UK38R	Hibri Flash Red 8mm	£1.20
UK39N	Flashing LED Grn 8mm	£1.20
UK40T	Flashing LED Ylw 8mm	£1.20
UK41U	Super Flash Red 8mm	£1.28
UK42V	Ultra Flash Red 8mm	£1.28

▶ IT'S A FACT! ◀

FLASHING LED FACT

A flashing 5V LED draws 10mA approximately when 'ON' and less than 1mA when 'OFF'. This makes the device suitable to 'pulse' devices. Typical applications include using a continuous piezo buzzer, such as KU56L, to produce a pulsed beep, and to pulse a suitable small reed relay, such as JH12N, JH15R, FX88V or FX90X.

LED SHAPES

Rectangular Shaped LED's

A rectangular shaped LED that gives a bright, evenly lit, solid bar of colour over the area 5.6 x 3.2mm. The lamps may be easily stacked to form bargraph meters. Overall dimensions: 6.4 x 3.8 x 6.7mm deep. Available in Red, Green and Yellow. A panel mounting clip to suit these LED's is available. Panel cut-out 8 x 6mm (5/16 x 7/32in.). Bezel: 9.4 x 6.9mm. The cathode is the left hand lead when the package is placed with the indented circle in the package facing you. Forward voltage at $I_F = 20\text{mA}$ is 2V. Light output at $I_F = 20\text{mA}$ is 4mcd for all colours. Viewing angle is 120°.

10mm Tri-Colour LED

A single LED with three leads that can be made to emit light of any colour of the spectrum from green through to red. The LED is encapsulated in a diffused white package. The central, longest, lead is the common cathode. The red anode is the medium length lead and the green anode is the shortest lead.

	Red	Green

10mm Flashing LEDs

A range of LEDs which flash approximately twice a second when a voltage between 3.5V and 13V is applied to them. Within the supply voltage range no series resistor is required. The cathode is denoted by a flat or chamfer on the body and the short lead.

Giant Red LED

Kingbright

A giant round red LED made up from a group of six LEDs in a matrix with separate anodes and cathodes brought out to 12 PCB pins on a DIL matrix. Pins are placed at 0.1in. intervals in two rows of 6 pins each, spaced 0.6in. apart. LED body is 23mm in diameter with a dome 10mm high. Material is diffused red. Luminous intensity is 10 to 21.8mcd @ 10mA for each diode.

Rectangular Tri-Colour LED

A single LED with three leads that can be made to emit light of any colour of the spectrum from green through to red. The LED is encapsulated in a diffused white rectangular 5 x 2mm package. The central, longest, lead is the common cathode. The red anode is the medium length lead and the green anode is the shortest lead.

Dimensions in mm

	Red	Green
Peak wavelength:	665nm	565nm
Forward voltage at $I_F=20mA$:	2V	2.2V
Forward current max:	30mA	30mA
Reverse voltage max:	5V	5V
Power dissipation max:	105mW	105mW

Diffused viewing angle:	100°	

Order Code	Type	Price each
QR54J	Multicolour LED Rect	59p

Panel Indicator LED's

Kingbright

A range of panel indicator LED's with flat tops moulded in various shapes: rectangular, square, cylindrical, triangular and arrowhead. The LED's are designed to press-fit into panels etc.

All shapes (typical ratings)

Colour	Light output at $I_F = 20mA$	Forward voltage at $I_F = 20mA$	Peak wavelength
Red	6mcd	2V	625nm
Green	4mcd	2.2V	565nm
Yellow	6mcd	2.1V	595nm

All colours:

Forward current (max):	30mA
Reverse voltage (max):	5V
Power dissipation (max):	105mW

The LED's have a diffused top to the lens which gives a viewing angle of 70° for arrowhead and triangular, 100° for cylindrical, and 120° for square and rectangular.

Shapes available:	Code	Size of top
Rectangular	R1	5x2.5mm
Square	S3	5x5mm
Cylindrical	C2	3mm diameter
Triangular (equilateral)	T4	5.6mm per side
Arrowhead (isosceles)	A5	5.1mm long sides, 2mm short side

LED CLIPS AND COVERS

LED Clips

Panel mounting clips to suit 3mm, 5mm, 8mm and 10mm round LED's. The following types are available:

	Panel cut-out (diameter)	Bezel size (diameter)	Overall length
3mm Clip	4.4mm	6mm	5mm
5mm Clip	6.35mm	8mm	6.8mm
5mm Clip Convex	8mm	9.5mm	12.5mm
5mm Clip Concave	8mm	9.5mm	15mm
8mm Clip	12mm	14mm	16.5mm
10mm Clip	14mm	16mm	18mm

Order Code	Type	Price each
YY39N	LED Clip 3mm	6p
YY40T	LED Clip 5mm	8p
UK14Q	LED Clip Convex 5mm	15p
UK15R	LED Clip Concave 5mm	15p
UK16S	LED Clip 8mm	18p
UK17T	LED Clip 10mm	20p

THE BEST OF SERVICE

LED Covers

Attractive coloured covers for LED's which also serve to clip the LED on the front panel. Suitable for use with 3mm and 5mm dia LED's the covers increase the viewing angle up to 180° and give a finished appearance. The cover has a flat top marked with Fresnel rings and striated lines for maximum light dispersion. The 5mm covers simply clip into a 6.35mm (1/4in) panel cut-out while 3mm types need a 4.4mm (0.171in.) cut-out and the LED then clips in from the rear. Suits panels 1.6mm to 3.2mm thick for 5mm types and 0.8mm to 1.6mm for 3mm types. Overall diameter: 7mm for 5mm types, 5mm for 3mm types. Overall length: 11mm for 5mm types and 7.3mm for 3mm types. Available in four colours: Clear, Green, Red and Yellow.

Order Code	Type	Price each
UF91Y	Min Cliplite Clear	16p
UF92A	Min Cliplite Green	16p
UF93B	Min Cliplite Red	16p
YH54J	Cliplite Clear	20p
YH55K	Cliplite Green	20p
YH56L	Cliplite Red	20p
YH57M	Cliplite Yellow	20p

PANEL MOUNTING LEDs

LED Chrome Bezel

A smart, panel mounting chrome bezel for standard 5mm (0.2in) size round LED's. The bezel requires a single hole 7.5mm (5/16in) diameter, and is secured by a nut and lock-washer. The bezel has a removable PVC grommet at rear which has two holes to take the twin leads of the LED. The grommet is then pushed down onto the base of the LED before soldering, and the assembly pressed into the body of the bezel until the flange of the LED is hard against the internal step with the grommet flush. The bezel is 10mm diameter and 5mm deep. Total length 15.5mm.

Order Code	Type	Price each
FM38R	Chrome LED Holder	50p

Panel Mounting LEDs

A very attractive panel-mounting LED available in a large or small chromed bezel or a black bezel. All three types are available with red or green LED's. Forward voltage 2V at 20mA.

Dimensions	Small chrome	Large chrome	Black
Panel fixing hole	5mm	8mm	8mm
Bezel dia. front	5mm	8mm	9mm
rear	6mm	10mm	10mm
Bezel length	3mm	4mm	5mm
Overall length	18mm	24mm	25mm
Lead length	6mm	6mm	9mm
Cathode denoted by	Thicker wire	Short lead	Short lead

Order Code	Type	Price each
YY59P	Chrome LED Small	£1.20
QY46A	Chrome LED Small Gn	£1.20
YY60Q	Chrome LED Large Red	£1.40
QY47B	Chrome LED Large Gn	£1.40
QY48C	Black Bezel LED Red	£1.29
QY49D	Black Bezel LED Gn	£1.29

Miniature Round Panel Mounting LED

A miniature red or green LED in a red or green polycarbonate package with a flat round display. The front is engraved with Fresnel rings to give maximum dispersion. Cathode is denoted by the thicker wire. Dimensions 21mm long. Front face 6mm diameter. Mounting hole required 5mm diameter. Forward voltage 2.2V at 20mA for red and 2V at 20mA for green.

Order Code	Type	Price each
UF79L	Min Pan LED Red	86p
UF80B	Min Pan LED Green	99p

Miniature High-Top Panel Mounting LED

A miniature red or green LED in a red or green polycarbonate package with a high-top round display. The front is engraved with Fresnel rings and the sides are striated to give maximum dispersion. Cathode is denoted by the thicker wire. Dimensions 22mm long. Front diameter 5mm at front, 5.5mm at rear. Mounting hole required 5mm diameter. Forward voltage 2.2V at 20mA for red and 2V at 20mA for green.

Order Code	Type	Price each
UF81C	Hi-top Pan LED Red	99p
UF82D	Hi-top Pan LED Green	99p

Panel Mounting 12V LED with Plastic Bezel

A red or green LED in a red or green polycarbonate package with a round slightly domed front face. The package has an internal resistor so that it may be connected directly to 12V. The anode is denoted by a white spot. Dimensions 30.5mm long. Front face 8.5mm diameter. Mounting hole required 7mm diameter. Forward current approx. 15mA at 12V.

Order Code	Type	Price each
UF83E	12V Pan Plas Red LED	92p
UF84F	12V Pan Plas Gm LED	98p

Panel Mounting 12V LED with Chrome Bezel

This LED is identical to the one above, but has an attractive chromed bezel around the front face. Dimensions 31mm long. Front face 10mm diameter. Mounting hole required 7mm diameter.

Order Code	Type	Price each
UF85G	12V Pan Chrm Red LED	£1.10
UF86T	12V Pan Chrm Gm LED	£1.20

BAR GRAPH ARRAYS

10 Segment Display

Kingbright

A 10-segment LED ladder encapsulated in a 20-pin DIL package. Designed for use as solid state level indicators, each LED is completely separate from the others in the package. The LED's may be driven from the LM3914, LM3915 or LM3916 bargraph driver IC's. The displays are available in red or green and may be stacked end to end.

	Red	Green
Max forward current per segment	30mA	30mA
per package	200mA	160mA
Light output at I _F = 20mA	4.0mcd	3.0mcd
Forward voltage at I _F = 20mA	2.0V	2.2V
Peak inverse voltage	5V	5V
Package size:	25 x 10 x 8mm high excluding pins.	
Pin length:	6mm	
Pin spacing:	0.3in x 0.1in (standard 20-pin DIL IC spacing).	

The anodes are denoted by product code marks printed on that side of the package.

Order Code	Type	Price each
BY65V	Red Bargraph Dslpy	£2.35
YG33L	Green Bargraph Dslpy	£2.35

10-Segment LED Bar Array

Kingbright

An attractively finished 10-segment bar red display which is suitable for either front or rear panel mounting. The LED's are bright and evenly illuminated. The display is common anode connected to pins 1 and 12 and the board has a gold plated edge connector with 0.1in. centres.

Light output typical at $I_F = 10\text{mA}$	2mcd
Forward voltage at $I_F = 10\text{mA}$	2V
Forward current (max)	30mA
Reverse voltage (max)	5V
Power dissipation (max)	120mW
Peak wavelength	665nm

Dimensions

Overall size:	68 x 14 x 6.65mm deep
Bezel size:	66 x 6 x 2mm deep
Fixing holes in pcb:	60mm centres x 2.4mm dia.
Fixing holes in bezel:	62.4mm centres x 1.6mm dia
LED size:	5.1 x 1.6mm

Order Code	Type	Price each
YH76H	Red 10-Seg Bargraph	£1.99

Multi-LED Arrays

Kingbright

A unique range of 2-way and 3-way end-stackable LED arrays available in red, green and yellow, enabling multiple arrays of any number of segments with the same or various colours to be assembled. The housings are black and designed to push fit into a panel cut-out 4.76mm ($\frac{3}{16}$ in.) high and 7mm per LED long. The LED windows are diffused to give a wide viewing angle. Cathode denoted by short lead.

	Red	Green	Yellow
Light output typical at $I_F = 20\text{mA}$	1.2mcd	1.1mcd	1.5mcd
Forward voltage at $I_F = 20\text{mA}$	2V	2.2V	2.1V
Forward current (max)	30mA	30mA	30mA
Reverse voltage (max)	5V	5V	5V
Power dissipation (max)	120mW	105mW	105mW
Peak wavelength	665nm	565nm	585nm

FE26D	Multicolour Bargraph	£1.99

ALPHANUMERIC DISPLAYS

Bi-Colour Dot Matrix Display

Kingbright

A large 8 x 8 LED dot matrix display with an effective illuminated area of 58mm high x 53mm wide. The complete ASCII character set can be shown on it, and the package has slots and tongues in the sides so that rows of displays for moving messages, etc., can be precisely aligned. The display has 64 diffused, circular 5mm windows for the LEDs set into a neutral grey background. Each location actually contains a bi-colour LED and can show red or green or a combination of the two colours. The LEDs are high brightness types, and while the row connections are common to each colour, the column connections are duplicated so that each colour is individually accessible. any single location can be a specific colour. To achieve this the package has 24 PCB pins organised into two rows on a 0.1in. matrix; each row of 12 is spaced 1.8 inches apart.

It will be seen from the connection diagram that the column pins are arranged in adjacent pairs, where each pin in the pair provides for red and green

Order Code	Type	Price each
GW63T	Bi-Colour Dot Matrix	£12.99

Large Dot Matrix Display

Kingbright

A 5 by 7 red dot matrix array on which the complete ASCII character set could be displayed. The package has slots and tongues in the sides so that rows of displays for moving messages etc., may be precisely aligned. The display has 35 diffused round 5mm circles flat with a grey plastic surround. The matrix is shown in the drawing; the cathodes are connected to the column pins. Pins 4/11 and 5/12 are commoned. For example, to light the centre LED connect pin 5 or 12 through a series resistor to +V and pin 4 or 11 to negative. The display has a wide viewing angle and high, even brightness. With the display

Continued on next page.

Continued from previous page.

vertical, pin 1 is at the lower left looking from the front. This is still true even if display is rotated through 180° top to bottom.

Light output typical at $I_F = 20\text{mA}$: 1.5mcd
 Forward voltage at $I_F = 20\text{mA}$: 2V
 Forward current (max): 30mA
 Forward current peak: 150mA at 10% duty cycle (100Hz to 1kHz)
 Reverse voltage (max): 5V
 Power dissipation (max): 100mW
 Peak wavelength: 635nm
 Dimensions: 53 x 38 x 8.5mm deep excluding pins.

Order Code	Type	Price each
FT61R	5 x 7 LED Array	£3.99

Small Dot Matrix Display

Kingsbright

Similar to Large Display opposite, but pins are not symmetrical. LED's are 2mm diameter and the anodes are connected to the column pins.

Overall size: 17.8 x 12.7 x 6.3mm deep. All other specifications as FT61R.

Order Code	Type	Price each
FE25C	Small 5 x 7 LED Array	£3.59

SEVEN-SEGMENT LED DISPLAYS

0.3in Display

High brightness 0.3in LED display featuring highly legible, bold, solid segments, fast switching, low power consumption, and compatibility with integrated circuits. Available in three types in Red only.

Type 1: Common anode, Right-hand decimal point.
 Type 4: Common cathode, Right-hand decimal point.

Luminous intensity: 1.3mcd at $I_F = 20\text{mA}$ (per segment).
 Forward voltage: 2V at $I_F = 20\text{mA}$ (per segment).
 A low current version of the Type 4 (common cathode) display is also available.
 Luminous intensity: 800µcd at $I_F = 5\text{mA}$ (per segment).
 Forward voltage: 1.7V at $I_F = 5\text{mA}$ (per segment).
 Pins will fit a standard 14-pin DIL IC socket.

Pin No.	Type 1	Type 4	Low Current
1	Cathode A	Anode F	Cathode
2	Cathode F	Anode G	Anode F
3	Anode*	No pin	Anode G
4	No pin	Cathode*	Anode E
5	No pin	No pin	Anode D
6	NC	Anode E	Cathode
7	Cathode E	Anode D	Anode DP
8	Cathode D	Anode C	Anode C
9	Cathode DP	Anode DP	Anode B
10	Cathode C	No pin	Anode A
11	Cathode G	No pin	
12	No pin	Cathode*	
13	Cathode B	Anode B	
14	Anode*	Anode A	

*Signifies that the connection designated is internally connected to all other connections so noted.

Order Code	Type	Price each
FR36P	7-Seg Red Type 1	£1.29
FR38R	7-Seg Red Type 4	£1.29
QY54J	Low Current Disp	£3.65

0.5in Display

Kingsbright

High brightness 0.5in display featuring highly legible, bold, solid segments, fast switching, low power consumption, and compatibility with integrated circuits.

Available in two types in Red only.

Type 1: Common anode: Right-hand decimal point.
 Type 4: Common cathode: Right-hand decimal point.

Characteristics:
 Luminous intensity: 1.3mcd at $I_F = 20\text{mA}$ (per segment).
 Forward voltage: 2V at $I_F = 20\text{mA}$ (per segment)

Order Code	Type	Price each
FR39N	1/2" Display Type 1	£1.15
FR41U	1/2" Display Type 4	£1.15

Double Digit Display

A 2-digit display available in red or green. Digits are 0.56in high with high contrast and wide viewing angles. All types have a right-hand decimal point.

Ratings per segment:

Luminous intensity: 1.3mcd at $I_F = 20\text{mA}$
 Forward voltage: 2V at $I_F = 20\text{mA}$
 Max forward current: 30mA

Type 'A': 2-digit (8.8.) Common anode. Type 'AF': 1 1/2-digit (±1.8.) Common anode. Type 'C': 2-digit (8.8.) Common cathode. Overall dimensions: 25 x 19 x 8mm. Pin spacing: 0.6 x 0.1in (18-pin).

These displays may be used with direct drive or multiplexing type drivers.

Order Code	Type	Price each

Stockist of Assessed Capability
YOUR GUARANTEE OF QUALITY & SERVICE

One Inch Display

Kingbright

A very large display with an overall character height of 26mm (1in.). Available with common anode or common cathode in red.

Light output typical at $I_F = 20\text{mA}$: 2.4mcd
 Forward voltage: 2.2V per diode (i.e. 4.4V for all segments except DP)
 Max forward current: 30mA
 Overall dimensions: 32.9 x 22.4 x 8.5mm
 Pin length: 6mm
 Pin spacing: 0.6 x 0.1in (14-pin)

Order Code	Type	Price each
FA03D	1" Display Com: Anode	£2.29
FA04E	1" Display Com: Cathode	£2.29

1.8 inch. Bi-Colour Display

Kingbright

A high brightness, 1.8in. high 7-segment display with bold, legible and solid segments which can be lit in either red or green, or a combination of the two.

This is achieved through the use of two common anodes, one for red and the other for green. The individual segments can be activated by an open collector 7-segment driver in the normal way, and multiplexed displays are also possible, switching the relevant colour's anode pin. The package has 10 PCB pins, two of which are the anodes, and the remainder the segment and decimal point connections, organised into two rows of 5 pins on a 0.1in. matrix, with the rows spaced 1.9in. apart.

FOR TOP QUALITY & VALUE!

Luminous intensity: Red 30000 μcd Green 30000 μcd @ $I_F 10\text{mA}$
 Dimensions: 56 x 38 x 11mm deep not including pins

GW64U	1.8in. Bi-Colour	£4.99

Four Inch Display

Kingbright

An extremely large display with an overall character height of 100mm (4in.) Display colour is red. Available with common anode.

Light output typical at $I_F = 20\text{mA}$ 21mcd
 Forward voltage at $I_F = 20\text{mA}$ 7.4V segment 3.7V decimal point
 Forward current (max) 60mA segment 30mA decimal point
 Overall dimensions 122mm x 90mm x 15mm
 Pin length approx 9mm
 Pin Spacing 5.08mm (0.2in.)

Order Code	Type	Price each
JX86T	4in Display	£19.99

Display Filters

Anti-reflection filters for data displays which greatly improve the contrast. Suitable for use with LED displays, incandescent filament displays, neon gas discharge displays and gas discharge displays. For optimum effectiveness use the filter whose colour is as close as possible to that of the display or the neutral density can be used with any colour. Sold only in pieces 105 x 35 x 0.76mm. Suits up to eight 1/3in. displays or up to six 1/2in. displays, but may be cut with scissors to size required.

Available in Green, Red and Neutral Density.

Order Code	Type	Price each
FR33L	Filter Green	£1.10
FR34M	Filter Red	£1.10
JE16S	Filter Neutral Dnsty	£1.10

LIQUID CRYSTAL DISPLAYS

3 1/2 -Digit

A 3 1/2 digit field effect liquid crystal display suitable for use in panel meters, digital multimeters and 12-hour clocks. With all segments on the current is typically 10 μA at 5V rms and the display is thus ideal for battery operation. The digits are 12.7mm (1/2in.) high and give a solid black appearance on a silvered, reflective background. The display has a centre colon for use in clocks, and decimal points, plus and minus signs and overflow indicator for use in panel meters. The device is supplied in a 40-pin DIL package 33 x 2.54mm (1.3 x 0.1in) spacing. The device is only guaranteed if it has not been soldered and the device will only be replaced for scratched front face if the protective coat has not been removed - (after checking that there is no damage the protective coat should be removed before use).

Specification (at 25°C and 5V rms)

	Min	Typical	Max
Operating voltage (V_{rms})	3	5	9
Allowable DC drive component (mV)			50
Operating frequency (Hz)	30	32	100
Current all segments on (μA)		2.5	5
Capacitance all segments on (pF)		500	1000
DC resistance all segments on (M Ω)	32	100	
Response time to 90% on (msec)		75	150
Decay time to 10% on (msec)		150	300
Contrast ratio		20:1	
Operating temperature range (°C)	-15	25	55
Viewing angle at 4V rms		± 45	
5V rms		± 60	
6V rms		± 75	
Expected life (hours)		50,000	

Overall dimensions: 51 x 30.5 x 3.5mm
 Pin length: 6.4mm

Order Code	Type	Price each
FY89W	Lqd Crystal Display	£6.15

4 1/2-Digit

A 4 1/2-digit field effect liquid crystal display suitable for use in panel meters, digital multimeters and particularly with the ICM7224 IC. The digits are 10.2mm (0.4in.) high and give a solid black appearance on a silvered, reflective background.

LCD Character Display Modules

Hitachi

A range of dot matrix LCD modules that contain a HD44780 LSI controller for character display. The modules can be interfaced to 4-bit or 8-bit MPU directly, and can display 192 standard characters plus 8 user programmable symbols. Character generator RAM is also built-in (80 x 8 bits, 80 characters maximum), which can be read from the MPU. The modules feature low power consumption, and are powered from a single +5V supply.

Their light weight and compactness make them ideal for a wide range of applications including telephone, typewriters, portable computers, industrial equipment etc. The displays are either of the 'twisted neumatic' or 'supertwist' type. Type LM09XMLN features LED backlighting which is also 5V powered.

Optical specification	'Twisted Neumatic'	'Supertwist'
Viewing angle:	20°	40°
Contrast ratio:	2	3

LCD Graphic Display Modules

Hitachi

A range of high quality, very reliable, graphic display modules that have a wide visibility and a high contrast ratio. These thin, lightweight, modules have a low power consumption, and include an in-built controller. The modules are capable of displaying graphics, kanji, alphanumeric, kana etc., very clearly and legibly. The CMOS LSI controller stores display data from an 8-bit microcomputer in RAM to generate the dot matrix liquid crystal driving signals. The 7360-bit, internal character generator ROM, provides a total of 192 font types - 160 types of 5 x 7 dot, and 32 types of 5 x 11 dot fonts.

The modules are suitable for a wide range of applications including: portable data terminal equipment, laptop computers, word processors, etc. Two of the modules feature electroluminescent (EL) backlighting.

Specification	
Viewing angle:	40°
Contrast ratio:	3
Maximum response time rise:	400ms
Maximum response time fall:	450ms
EL contrast ratio:	47cd/m ²

LM213XB 256 x 64 dot display

Specification	
Display colour tone:	Yellow/green
Module size:	184 x 75 x 12mm
Effective display area:	149.6 x 43mm
Number of dots:	256 wide x 64 high
Dot pitch:	0.56 x 0.56mm
Typical logic supply:	5V
Typical LCD drive:	-10.5V
Logic supply current:	35mA
LCD supply current:	2mA

One power supply of 16V maximum is tapped accordingly to provide a 'GND'.

Message Display System

A 16-character liquid crystal 5x7 dot-matrix display and microprocessor driven controller supplied complete, ready to connect up and be fully operational in minutes. A good quality 5V 250mA power supply is required. A set of 16 pre-programmed messages are instantly available from on-board ROM, each being displayed by simply connecting the appropriate input to ground via a mechanical or electronic switch or logic output. By using the on-board hexadecimal switches, users may write five of their own messages up to one line of 16 characters. A spare socket is provided into which a 2716 (not supplied) may be plugged to provide additional messages. Further expansion is possible thanks to all relevant signal lines being brought out to a 32-way 0.1in. double-sided edge connection. 190 standard characters are available for use in messages, which may be flashed.

The module is supplied as two boards, interconnection cable, display bezel and mounting hardware.

Size of control board: 138 x 84 x 20mm deep. display board: 80 x 37 x 21mm deep.

Interconnection cable: 280mm long.

Bezel size: 86 x 25mm.

Panel cut-out: 82 x 21mm.

YJ49D	A1 Message Display System	£79.99

HOT TIP

It is not possible to check whether an infra-red diode is working with the naked eye. One possibility is to use a camcorder, if one is available. The lens is set to the macro position and the diode is placed very close to the lens, and brought into sharp focus. Because camcorders are able to see the infra-red light and reproduce it, then you should be able to see the output on a TV screen. Try it initially with your TV or video remote control handset to see the effect.

OPTO-ISOLATORS Opto Transistor Isolator

Siemens

Optically coupled infra-red emitting diodes and phototransistors in dual-in-line packages. Single type is in a 6-pin DIL package, dual type is in an 8-pin DIL package and quad type is in a 16-pin DIL package.

On the single type, a base lead is provided so that the device may be biased in the conventional manner.

Absolute maximum ratings

Input to output voltage:	1500V
Collector-base voltage (V_{CBO}):	70V
Collector-emitter voltage (V_{CEO}):	30V
	(dual and quad 20V)
Emitter-base voltage (V_{EBO}):	7V
Input diode reverse voltage:	3V
Input diode continuous forward current:	100mA
Continuous power dissipation:	

LED:	150mW
Phototransistor:	150mW
Total:	250mW (quad 450mW)

Electrical characteristics (typical)

Input diode static reverse current (at $V_R = 3V$):	<10 μ A
On state collector current ($V_{CE} = 0.4V, I_F = 16mA$):	
Phototransistor operation ($I_B = 0$):	7mA
Photodiode operation ($I_E = 0$):	20 μ A
Off-state collector current ($V_{CE} = 10V, I_F = 0$):	
Phototransistor operation ($I_B = 0$):	1nA
Photodiode operation ($I_E = 0$):	0.1nA
h_{FE} ($V_{CE} = 5V, I_C = 10mA, I_F = 0$):	300
Input diode forward voltage at $I_F = 16mA$:	1.2V
Collector-emitter saturation voltage ($I_C = 2mA, I_F = 16mA, I_B = 0$):	0.25V
Input to output resistance (diode leads shorted to transistor leads shorted at V_{in} to $V_{out} = 1.5kV$):	10 ¹¹ Ω
Input to output capacitance:	1pF
Max operating frequency	
Phototransistor operation:	>125kHz
Photodiode operation:	>250kHz
Min transfer ratio:	13%

Order		
Code	Type	Price each
WL35Q	Opto-Isolator	69p
YY62S	Dual Opto-Isolator	£1.29
YY63T	Quad Opto-Isolator	£1.99

High Sensitivity, High Voltage Opto Transistor Isolator

Q.T.C.

This opto-isolator is similar to WL35Q above, except that it has a min transfer ratio of 100% and a 7500V peak isolation voltage (5300V rms). Pin-out is the same as WL35Q.

Absolute maximum ratings:

Input to output voltage:	7500V peak, 5300V RMS
Collector-base voltage (V_{CBO}):	70V
Collector-emitter voltage (V_{CEO}):	70V
Emitter-base voltage (V_{EBO}):	7V
Input diode reverse voltage:	3V
Input diode continuous forward current:	90mA
Continuous power dissipation:	
LED:	135mW
Phototransistor:	200mW
Total:	260mW

Electrical characteristics (typical)

h_{FE} ($V_{CE} = 5V, I_C = 100\mu A$):	500
Input diode forward voltage at $I_F = 10mA$:	1.2V
Input to output capacitance:	0.5pF
Max operating frequency:	>100kHz
Min transfer ratio: 100% at $I_F = 10mA$

Opto Triac Isolator

Motorola

An optically coupled gallium arsenide infra-red emitting LED and triac in a 6-pin DIL package. The triac has a 400V rating (suitable for 240V AC mains) and I_T rms of 100mA maximum.

Characteristics

Forward voltage (V_F) at $I_F = 30mA$:	1.3V
Continuous forward current:	60mA max
LED current needed to latch output:	15mA
Holding current:	200 μ A
Reverse voltage:	3V max
PIV triac:	400V
I_T (rms) triac:	100mA
Isolation voltage:	7500V peak, 5300V rms

Order Code	Type	Price each
QQ10L	Triac Isolator	£1.19

Opto Zero-Crossing Triac Isolator

Motorola

An optically coupled gallium arsenide infra-red emitting LED and zero-voltage crossing triac in a 6-pin DIL package. The triac has a 400V rating (suitable for 240V AC mains) and I_T rms of 100mA maximum.

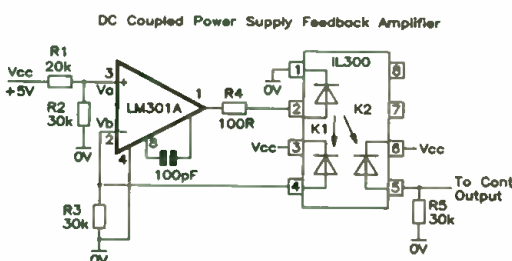

Forward voltage (V_F) at $I_F = 30mA$:	1.3V
LED current required to latch output:	7mA
Max forward current:	60mA
Reverse voltage (max):	6V
Isolation voltage:	7500V peak, 5300V RMS
PIV triac:	400V
I_T triac:	100mA

Order Code	Type	Price each
RA56L	Optotriac + Zero Crs	£1.49

IL300 Linear Optocoupler

Siemens

A linear optocoupler that consists of an AlGaAs infra-red LED, an isolated feedback photodiode and an output PIN photodiode, housed in a standard 8-pin DIL package. The feedback photodiode captures a percentage of the LED's flux and generates a control signal that can be used in a servo control system to provide the LED drive current. The technique compensates for the LED's nonlinear, time and temperature characteristics. The output PIN photodiode produces a signal that is linear related to the servo controlled, optical flux, generated by the LED. Time and temperature stability is insured by using matched PIN photodiodes that accurately track the output flux of the LED. Typical applications include power supply voltage/ current feedback loops, audio sensor interfacing, isolated process control transducers and digital telephone isolation.

Specification

LED Emitter

Forward voltage:	1.5V max	Forward current: 60mA
best linearity with drive	current between 5mA and 20mA	
Reverse current:	10 μ A max	
Power dissipation:	200mW max (ambient temp = 25°C)	

Detector

Power dissipation:	50mW max (ambient temp = 25°C)
Reverse voltage:	50V
Dark current:	25nA max ($V_F = 15V$)
Noise equivalent power:	4×10^{-14} W/Hz
Input/output capacitance:	1pF typical
Common mode rejection ratio:	130dB
Operating temperature range:	-55°C to 100°C

Order Code	Type	Price each
CY92A	IL300	£2.99

Low-Current Optocoupler SFH618-2

Siemens

NEW

A transistor optocoupler in a DIP-4 package with a low current input and a very high coupling transfer ratio (CTR), typically 120%. The device has good CTR linearity relative to forward current and a high V_{CEO} of 55V DC. The device can be 'end stacked' if necessary (2.54mm spacing).

Specification

Emitter - maximum ratings

Reverse voltage:	6V
DC forward current:	50mA
Surge forward current ($\leq 10\mu$ s):	2.5A
Total power dissipation:	70mW

Detector - maximum ratings

Voltage	
V_{CEO} :	55V
V_{ECO} :	7V
Collector current:	50mA
Surge collector current ($\leq 1ms$):	100mA
Total power dissipation:	150mW
Coupling capacitance:	0.25pF
Coupling transfer ratio	
$I_F = 1mA, V_{CE} = 0.5V$:	63% to 125%
$I_F = 0.5mA, V_{CE} = 1.5V$:	75% ($\pm 32\%$)

Order Code	Type	Price each
CY94C	SFH618-2	90p

Low-Current Optocoupler SFH628-2

Siemens

NEW

A transistor optocoupler housed in a DIP-4 package with a low current input, and a very high coupling transfer ratio (CTR), typically 160%. Two infra-red GaAs emitters are wired in parallel, but opposite polarity, to allow the device to operate with an AC input. The optocoupler has good CTR linearity relative to forward current and a high V_{CEO} of 55V DC. The device can be 'end stacked' if necessary (2.54mm spacing).

Specification

Emitter - maximum ratings

Forward voltage $I_F = \pm 5mA$:	$\pm 1.1V$ ($\leq 1.5V$)
DC forward current:	$\pm 50mA$
Surge forward current ($\leq 10\mu$ s):	$\pm 2.5A$
Total power dissipation:	70mW

Detector – maximum ratings

Voltage V_{CE0} :	55V
V_{ECO} :	7V
Collector current:	50mA
Surge collector current ($\leq 1\text{ms}$):	100mA
Total power dissipation:	150mW
Coupling capacitance:	0.25pF
Coupling transfer ratio	
$I_F = 1\text{mA}$, $V_{CE} = 0.5\text{V}$:	63% to 200%
$I_F = 0.5\text{mA}$, $V_{CE} = 1.5\text{V}$:	100% ($\pm 32\%$)

CY93B	SFH628-2	£1.10

HCPL-2731 Dual Input, High Gain Optocoupler

Hewlett-Packard

NEW

A dual low input current, high gain, optocoupler that provides an extremely high current transfer ratio (CTR) and excellent input-output common mode transient immunity. The device contains a separated pair of GaAsP LEDs optically coupled to a pair of integrated high gain photo detectors. Additional features include: a low input current requirement (0.5mA), low output saturation voltage (0.1V typical) and a minimum CTR of 400% with an input current of 0.5mA. This makes the device ideal for use in low input current applications such as MOS, CMOS and low power logic interfacing or RS232C data transmission systems.

Specification

Current transfer ratio	
$I_F = 0.5\text{mA}$, $V_O = 0.4\text{V}$, $V_{CC} = 4.5\text{V}$:	1800 typical
Supply and output voltage:	7V maximum
Average input current:	20mA each channel
Reverse input voltage:	5V maximum
Input power dissipation:	35mW max. per channel
Output current:	60mA max. per channel
Output power dissipation:	100mW per channel

Order Code	Type	Price each
CZ64U	HCPL-2731	£3.69

HCPL-7100 High-Speed CMOS Optocoupler

Hewlett-Packard

NEW

An optocoupler that combines CMOS IC technology, a high-speed high-efficiency AlGaAs LED and an optimised light coupling system to achieve low power requirements – just 10mA including the LED. The device requires just two bypass capacitors for complete CMOS/TTL compatibility. A CMOS or TTL logic signal controls the LED driver IC. The detector IC incorporates an integrated photodiode, a high-speed transimpedance amplifier and a voltage comparator with hysteresis. The 3-state output is controlled by the output enable pin V_{OE} .

INFRA RED TRANSCEIVERS

Miniature Infra-Red Source

A gallium arsenide infra-red LED. With a peak spectral wavelength of 940nm. Encapsulated in a 3mm water-clear resin package. Cathode denoted by flat on package/shorter lead. Similar to TIL32

Absolute maximum ratings

Power dissipation:	80mW
Forward current:	60mA
Reverse voltage:	5V

Electrical characteristics

Forward voltage:	1.6V ($I_F = 40\text{mA}$)
Light output:	3.5mW ($I_F = 40\text{mA}$)
Peak wavelength:	940nm

Order Code	Type	Price each
YY65V	Infra-Red Source	69p

Infra-Red Phototransistor

A low cost, high quality NPN silicon phototransistor, having high illumination sensitivity fast response time and low dark current. Encapsulated in a 3mm water clear resin package. The collector is denoted by a flat on the package and the shorter of the two leads; there is no access to the base terminal. Similar to TIL78.

Absolute maximum ratings

V_{CE} :	20V
P_{TOT} :	75mW

Electrical characteristics

Light current ($V_{CE} = 3\text{V}$, 880nm, 1000Lux)	
Min:	1.0mA
Max:	20mA
Dark current ($V_{CE} = 10\text{V}$)	
Max:	0.1µA
Peak spectral response	880nm

Order Code	Type	Price each
YY66W	Infra-Red Sensor	65p

High Power Infra-Red Emitting Diode

A high power infra-red emitter, intended primarily for remote control applications. Encapsulated in a 5mm water-clear resin package. Cathode denoted by flat on package/shorter lead. Similar to TIL38.

Absolute maximum ratings

Power dissipation:	100mW
Forward current:	100mA
Reverse voltage:	5V

Electrical characteristics

Forward voltage:	1.7V ($I_F = 100\text{mA}$)
Light output:	20mW ($I_F = 100\text{mA}$)
Peak wavelength:	940nm

Order Code	Type	Price each
YH70M	Infra-Red Emitter	69p

Photodiode

A high speed PIN photodiode designed to operate in the reverse bias mode. It offers low capacitance with high speed and high photosensitivity. The photodiode chip is moulded in a 5mm half round black infra-red transmissive plastic package. This device is intended for remote control applications. Cathode denoted by shorter lead. Similar to TIL100, in different package.

Absolute maximum ratings

Reverse voltage:	20V
Power dissipation:	150mW

Electrical characteristics

Dark current:	30nA (max) $V_R = 10\text{V}$
Light current:	60µA (950nm, 1000Lux)
Peak spectral response:	950nm

Order Code	Type	Price each
YH71N	Infra-Red Photodiode	99p

GaAs Infra-Red Photo Emitter

Telefunken

A photo emitting diode in the near infra-red range, suitable for remote control, light barrier and telecommunication. The device features a metal base with a clear plastic lens and extremely high radiation power, and is suitable for pulse operation to 10A. The anode is the leg adjacent to the tag.

Characteristics (max. ratings)

Reverse voltage:	5V
Forward current:	250mA
Forward peak current:	10A
Power dissipation:	300mW
Junction temperature:	100°C
Forward voltage $I_F = 250\text{mA}$, $t_p \leq 100\text{ms}$:	1.2V
Forward voltage (pulse) $I_m = 10\text{A}$:	4.2V max.
Radiant power $I_F = 250\text{mA}$, $t_p \leq 100\text{ms}$:	20mW
Radiant power (pulse) $I_m = 10\text{A}$:	500mW
Radiant intensity $I_F = 250\text{mA}$, $t_p \leq 100\text{ms}$:	40mW/sr
Radiant intensity (pulse) $I_m = 10\text{A}$:	1W/sr
Peak wavelength emission $I_F = 100\text{mA}$:	950nm
Spectral half bandwidth $I_F = 100\text{mA}$:	50nm
Angle of half intensity:	$\pm 20^\circ$

Order Code	Type	Price each
KW66W	I/R Photo Emitter	£4.99

Photo Reflective Infra-Red Sensor

This device consists of an infra-red emitting diode and an NPN silicon phototransistor mounted side by side on parallel axes in a black plastic housing. Both emitting diode and phototransistor are moulded in infra-red transmissive plastic, which reduces ambient light noise. The phototransistor responds to radiation from the LED only when a reflective object passes within its field of view.

Absolute maximum ratings

IR LED ratings

Forward DC current: 50mA
Peak forward current: 3.0A (Pulse width 1µs, 300pps)
Reverse voltage: 2.0V
Power dissipation: 75mW

Phototransistor ratings

Collector-emitter voltage: 30V
Emitter-collector voltage: 5V
Collector current: 25mA
Power dissipation: 75mW

Electrical characteristics

IR LED ratings

Forward voltage: 1.7V, $I_F = 20\text{mA}$
Reverse current: 100µA, $V_F = 2\text{V}$

Phototransistor ratings

Dark current: 100nA, $V_{CE} = 5\text{V}$
On-state current: 350µA (min) 700µA (typ)
 $I_F = 20\text{mA}$, $V_{CE} = 5\text{V}$, $d^* = 1.27\text{mm}$
Saturation voltage: 0.4V
 $I_F = 20\text{mA}$, $I_C = 100\mu\text{A}$, $d^* = 1.27\text{mm}$

UK81C	Sensor OPB706B	£2.99

LIGHT RESPONSIVE DEVICES

Phototransistor BPX25

Zetex

A high sensitivity silicon planar NPN phototransistor for general purpose use. Top of package (TO 18) is lensed

Absolute maximum ratings

V_{CBO} : 32V
 V_{CEO} : 32V
 V_{EBO} : 5V
 I_C : 100mA
 P_{TOT} : 300mW

Electrical characteristics

(open-circuit base, except for h_{FE} typical)
Light current ($V_{CE} = 6\text{V}$ @ 1000 lux): 13mA
Dark current ($V_{CE} = 24\text{V}$): 100nA
 h_{FE} ($V_{CE} = 6\text{V}$, $I_C = 2\text{mA}$): 500
Peak spectral response: 800nm
Cut-off frequency (Note 1): 200kHz

Note 1: Improved switching times can be obtained by connecting the base lead to give a quiescent bias current.

Order Code	Type	Price each
QF30H	BPX25	£3.25

Photo-Darlington Transistor MEL12

A very high sensitivity silicon planar NPN photo-darlington transistor featuring a very high light current and low dark current.

Absolute maximum ratings

V_{CBO} : 60V
 V_{CEO} : 40V
 V_{EBO} : 10V
 I_C : 150mA
 P_{TOT} : 200mW

Electrical characteristics

(open-circuit base typical).
Light current ($V_{CE} = 5\text{V}$ @ $H = 2\text{mW/cm}^2$): 3mA
Dark current ($V_{CE} = 5\text{V}$): 100nA

Order Code	Type	Price each
HQ61R	MEL 12	£1.39

Photoconductive Cell

A cadmium sulphide photoconductive cell sensitive to visible light. It has a maximum sensitivity in the green, yellow, orange and red parts of the spectrum (wavelengths: 480-690nm). Resistances quoted are those measured when the cell is illuminated by a lamp of colour temperature 2854°K. For other light sources the cell resistance should be multiplied by the following approximate factors.

Source of illumination	Multiplication Factor
------------------------	-----------------------

Incandescent radiation at colour temperature of: 1500°K	x0.5
2000°K (oil-fired burner-yellow flame)	x0.66
Sunlight	x1.33
White fluorescent light	x2

Where cell is operated from a 50Hz AC source the resistance values are between 1 and 1.3 times those for DC.

Type	Incidence of illumination	Cell resistance at 50 lux	Min. dark resistance
ORP12	End-on	6000Ω	1MΩ

Type	Min bright resistance	Max. power dissipation	Max. cell voltage
ORP12	80Ω*	250mW	320V

Order Code	Type	Price each
HB10L	LDR ORP12	£1.20

Infra-Red Detector E100SV1

This device is a sensitive, low noise, pyroelectric infra-red detector, which uses a ceramic ferroelectric dual sensing element, a silicon optical filter reduces the effect of RF interference.

Characteristics at 25°C

Sensitivity (500°K, 1Hz, 1Hz): 1860V/W
Specific detectivity: $1.0 \times 10^8 \text{cmHz}^{1/2}/\text{W}$
Wavelength range: 1 to 20µm
Rise time: <25msec
Field of view: 38°
Supply voltage: +3 to +15V
Operating temperature range: -25 to +55°C

Order Code	Type	Price each
UR69A	I/R Detector E100SV1	£5.99

SOLAR POWER

Solar Cells

A range of solar cells that develop various voltages and currents and can be easily connected together to suit individual requirements. The output connections are threaded posts with nuts, and a metal strip is provided to connect the cells together. The cells are mounted in a rigid black plastic case. BZ47B includes a small electric motor that can be driven from the solar cell supplied.

Specification

All outputs are quoted for full sunlight.

Type	V DC	mA	Size mm
BZ43W	0.45	200	55 x 35 x 12
BZ44X	0.45	400	75 x 45 x 12
BZ45Y	0.45	700	95 x 65 x 12

Solar Cell Modules

Additional or replacement solar cell modules for the solar cells BZ43W to BZ47B. Can be added to make larger panels if desired. Each module can output 0-45V at 100mA and can be stacked in series or in parallel.

Order Code	Type	Price each
CJ36P	Solar Cell Module	£1.35

Solar Cell Educational Kits

Basic

An educational kit to help you explore solar energy power. The kit includes a solar panel (0-45V 400mA), a small DC motor, connecting wire, plastic fan spinner and tumblers, coloured spinner disks, coloured paper models, screws and nuts. An interesting kit for children to enjoy. A very informative booklet is included describing solar power in detail.

Advanced Kit

A more advanced kit that includes eight solar panels that produce 0.4V at 100mA each, and can be configured to produce 0.4V at 800mA or 3.2V at 100mA by connecting the cells in parallel or series, or a combination of both. It is possible to power small appliances, i.e. radios, personal cassettes, calculators, from sunlight. A detailed booklet is included in the kit that explains how to connect up the cells. A small electric fan along with connecting straps and wire are included in the kit to demonstrate the use of solar power.

Order Code	Type	Price each
BZ48C	Basic Solar Kit	£5.99
BZ52G	Advanced Solar Kit	£10.99

Solar Panels

Each solar panel contains rectangular shaped silicon solar cells connected so as to supply 9V or 12V at 30mA

when the incident light is about 100mW/sq. cm. The cells are mounted in an attractive and sturdy black plastic case. The plastic faceplate comprises hundreds of bubble magnifiers which maximise cell performance as they enhance the light striking the solar cells. The cells are internally connected to a 2.5mm jack socket and a 2.5mm jack plug and approx 1m of twin flex is supplied with each panel.

Dimensions: Panel size 98 x 128mm.
Case size 146 x 105 x 13mm.

Order Code	Type	Price each
RK23A	Solar Panel 9V	£11.99
RK24B	Solar Panel 12V	£14.99

Solar Panels

A choice of two solar panels configured to give a nominal 12V, that are laminated in special resin with an ultra violet inhibited poly-carbonate surface. The panels are epoxy sealed into an aluminium frame, to withstand the rigors of weather. A suggested use for the solar panels is for charging sealed lead acid batteries, a blocking diode is built into the circuit to prevent the reverse flow of current from the battery to the solar panel during poor lighting conditions. Four hooks are provided on the back of the panels for easy mounting, and 2m of connecting cable with medium size crocodile clips are included, for connecting to a device or circuit. It is recommended that the panels be mounted in a position where they will receive maximum sunlight. The panels can be connected together either in parallel or series to increase the current or voltage output. The smaller panel produces an output current of 200mA approx. and can be configured to produce two outputs of 6V at 250mA each, by removing a link on the back of the panel. The larger panel produces 12V at 500mA approx.

Specification (bright sun)	250mA	500mA
Voltage output:	12 to 16V DC max.	
Dimensions:	292 x 239 x 17mm	360 x 285 x 17mm
Weight:	500g	700g

Order Code	Type	Price each
BZ50E	A1 Solar Panel 250mA	£41.99
BZ51F	B3 Solar 12V 500mA	£71.99

Waterproof Solar Panels

A range of waterproof and corrosion resistant solar panels for outdoor use. The panels are weatherproof and resistant to wind, rain, humidity, snow, ice, sand, sea air and deterioration by ultra-violet light. These panels are intended to be used as battery chargers and lead acid battery trickle chargers. A reverse blocking diode is built-in to prevent battery discharge and protect the panel cells. A tilt stand, made up from supplied parts, can be assembled and mounted on a vertical or horizontal surface, or can be free-standing, to catch the sun (screws supplied). Each panel is provided with red and black leads terminated in either insulated crocodile clips or car battery style clamps. The mechanical construction is extremely strong and able to withstand heavy weights. These panels have been especially designed for recreational activities involving boats, cars, tents, motorvans, portable TVs, radios, tape players, etc. Four different types are available.

Code	Nominal voltage	Max. voltage	Nominal current	Max. current	Dimensions mm
CJ43W	3V	4.5V	120mA	140mA	90 x 175 x 17
CJ42V	6V	8.5V	120mA	140mA	159 x 175 x 17

CJ40T	A 12V 120mA Panel	£34.99

'AA' Solar Battery Charger

A small, neat solar powered battery charger which will accommodate up to four AA size Ni-Cd cells. Very simple to use; simply place your AA batteries into the battery compartment of the charger, and set the lid, which carries the solar panel, to face the sun rays. A single battery can be charged in 2 to 3 hours, 2 batteries, 4 to 6 hours; 3 batteries, 7 to 10 hours; 4 batteries, 10 to 14 hours. Times will vary depending on the strength of the sunlight and/or the depth of discharge of the batteries. For best results, batteries should be recharged at the first sign of 'weakness'. Batteries will last up to 4 times longer if charged after only 50% discharge. Dimensions of unit (closed): 95 x 65 x 28mm.

Order Code	Type	Price each
CJ35Q	4AA Solar Charger	£6.99

3V Solar Charger Panel

A solar battery charger panel which will output approximately 3V DC at up to 80mA. It has 2m of twin core cable attached to the panel terminated in both a 2.3mm DC power jack and insulated crocodile clips. The device can be used to directly power a personal stereo player which will normally operate from a 3V supply (2 x 1.5V batteries), via the power jack or by connecting the clips across the player's main battery terminals. The solar panel has a hinged stand and can be pointed in the direction of sunlight. Size of panel 95 x 65 x 8mm.

Order Code	Type	Price each
CJ37S	3V Charger Panel	£5.99

Variable Voltage Charger Panel

A solar battery charger panel which will output 3V, 6V and 9V DC according to the position of a selector slide switch. Output current is up to 100mA at 3V (this position can also be used as 4.5V), and 50mA for both 6 and 9V settings. It has 2m of detachable twin core cable which is terminated in both a 4-way power jack adaptor and a pair of insulated crocodile clips. The 4-way adaptor has 2.5 and 3.5mm jack plugs and 2.5 and 3.5 DC power plugs. The retractable and adjustable stand can also be used as a carry handle or for hanging the panel. It can be used to directly power a personal stereo player which will normally operate from a 3V or 4.5V supply via the power jack or by connecting the clips across the player's main battery terminals. Two AA size rechargeable Ni-Cd batteries can also be charged by fitting them into the battery compartment on the rear of the panel. Charging time will vary depending upon the strength of sunlight available. Two batteries may take 7 to 10 hours to recharge. Overall size of panel 165 x 98 x 20mm including battery compartment. Depth of handle 30mm.

Order Code	Type	Price each
CJ38R	Variable V Panel	£9.99

SOLAR POWERED PLANT TURNER

A practical application for solar power, this 'Plant Turner' will support up to 30lbs weight and slowly turn the plant during the day. This will help to promote healthier, well-developed plants, and no more lopsided plants! The small solar panel is attached to a 1m. long flying lead, so the cell can be positioned for maximum sunlight. The Turntable is 155mm in diameter and has a raised edge, and is finished in two-tone green plastic. Other possible uses include displays in shop windows or to create an eye-catching display inside cabinets. Bright incandescent light will also operate the 'Plant Turner'. Supplied with a multi-angle stand that can be attached to the solar panel to provide flexible mounting. Dimensions: 161 x 65mm.

GREAT VALUE!
£8.99
BZ49D

FIBRE OPTICS Light Guide

A rugged polymethyl methacrylate fibre with a polymer cladding and black protective sheath which may be bent and handled in the same way as insulated wires without damage. Ideal for use in equipment to provide several light sources possibly in confined spaces from a single lamp some distance away. The fibre as supplied has a roughly cut end and this should be cleanly sliced off using a razor blade or a very sharp knife. Light transmission can be increased by typically 33% by polishing the ends of the fibre after cutting.

Overall diameter:	2.2mm (0.1in.)
Fibre diameter:	1mm (0.04in.)
Refractive index:	1.49
Nominal aperture:	0.53
Acceptance angle:	±32° max
Transmission attenuation:	1.2dB/m (20 - 25% per metre)
Spectral response (3dB):	385 to 880nm
Temperature range:	-40°C to +80°C
Flammability:	Supports combustion 75mm per minute
Bending:	Min radius 20mm
Chemical resistance:	Attacked by organic solvents

Sold in continuous lengths in multiples of 1 metre. Max length in one piece 100m

Order Code	Type	Price each
XR56L	1mm Light Guide	99p

Fibre Optic Couplers

Low cost sender and receiver devices which mate directly with our fibre optic cable. Typical applications include high voltage isolation interconnections, data communication in noisy environments, light interrupt sensors etc. Level of performance is dependent on the finish of the prepared ends of plastic fibre, but in ideal conditions the maximum practical length of fibre may not exceed much more than 20 metres. Fibre is prepared by carefully removing 2.5 to 5mm of cladding from the end, which is then very finely polished, after having been cleanly cut at right-angles with a sharp knife. The fibre is inserted fully home into the device, and the locknut is tightened up only enough to secure the fibre. The detector is a fast PIN photodiode used in reversed biased mode and featuring a response time of <1ns. All devices can be mounted directly to a pcb and include a securing tag for an 8BA x 1/4in. bolt and nut.

Specifications

Sender MFOE71	Power output:	3.5mW @ 100mA
	Response time:	25ns
	Wavelength:	850nm
Sender MFOE76	Power output:	3.5mW @ 100mA
	Response time:	250ns
	Wavelength:	660nm
Detector MFOD71	Responsivity:	0.2µW
	Bandwidth:	70MHz
	Response time:	1ns
	Reverse voltage:	100V max

Order Code	Type	Price each
FD14Q	MFOE71 F/optc Emitt	£3.25
UL31J	MFOE76 F/optc Emitt	£3.25

LENSES

Plastic Lens

Optum

A cost effective, simple red plastic lens for opto-electronic applications. The lens proper is 30mm diameter but also has a flat rim for mounting purposes making the overall diameter 37mm. Overall thickness 3.5mm. The lens has a focal length of approx 80mm in the infra-red band.

Order Code	Type	Price each
FA95D	Plastic Lens	72p

Glass Lens

A 1in. focal length semi-precision glass lens. Size: 9.1mm diameter.

Order Code	Type	Price each
HQ63T	Lens	£4.49

Lensholder

Optum

A black anodised aluminium lensholder, drilled to accept our 9mm lens in one end and photodarlington MEL12 in the other end. Outside dia. 12.7mm.

Order Code	Type	Price each
HQ64U	Lensholder	£1.99

XENON TUBES

Optum

Linear

Two general purpose high quality flash tubes with straight sealed glass envelopes. One tube is designed to give high energy flashes at a low rate and the other to give low energy flashes at a fast rate. (On both types, faster flash rates are possible with lower energy and life will be considerably extended).

Specification

	High energy	Fast rate
Minimum anode voltage	220V	180V
Maximum anode voltage	350V	400V
Nominal anode voltage	320V	350V
Maximum energy input per flash	25Ws	0.3Ws
	(Ws = Watt seconds)	
Maximum flash rate at maximum input power	6/min	60/min
Life with max energy and max flash rate	5000 flashes	1 million flashes
Minimum trigger voltage	4kV	4kV
Dimensions	35mm long x 3.7mm dia.	

Order Code	Type	Price each
YQ62S	Xnn Tube High Energy	£1.39
FS77J	Xnn Tube Fast Flash	£1.59

Strobe

A U-shaped high quality flash tube designed for use in stroboscopic applications. Flash rates up to 100 flashes per second are possible at maximum energy. At lower energies the life of the tube will be considerably extended.

Specification

Minimum anode voltage	200V
Maximum anode voltage	400V
Nominal anode voltage	300V
Maximum energy input per flash	4 Watt seconds
Maximum flash rate at maximum input power	6000/min
Life with max energy and max flash rate	1 million flashes
Minimum trigger voltage	4kV
Diameter of tube	6mm
Width of whole unit	16mm
Length of unit (excl. glass seal)	32mm plus 15mm pins

Order Code	Type	Price each
FS78K	Xenon Tube Strobe	£1.99

Beacon

A U-shaped high quality flash tube designed for use in warning and alarm beacons. Flash rates up to 100 flashes per minute are possible at high energy. At lower energies the life of the tube will be considerably extended.

Specification

Minimum anode voltage	250V
Maximum anode voltage	500V
Nominal anode voltage	400V
Maximum energy input per flash	45W seconds
Maximum flash rate at maximum input power	100/min
Life with max energy and max flash rate	2 million flashes
Minimum trigger voltage	6kV
Diameter of tube	6mm
Width of whole unit	22mm
Length of unit (excl. glass seal)	53mm plus 40mm pins

Order Code	Type	Price each
FS79L	Xenon Tube Beacon	£2.29

Trigger Transformers

Trigger transformers for use with our xenon tubes. The 6kV type is for use with the Beacon tube.

Specification

Secondary volts	4kV	6kV
Primary volts nominal	170V	190V
Trigger capacitor	0.033µF	0.047µF
Energy	0.6mj	0.9mj
Primary turns	10	15.5
Secondary turns	500	700
Primary inductance	2.5µH ±25%	4µH ±25%
Secondary inductance	3mH ±20%	6.5mH ±20%
Primary resistance	80mΩ	85mΩ
Secondary resistance	70Ω	90Ω
Dimensions	14.5 x 8.3mm dia.	11 x 13mm dia.

Order Code	Type	Price each
YQ63T	4kV Trigger Transfmr	69p
JE15R	6kV Trigger Transfmr	86p

LASER TUBE

A helium-neon laser tube having a typical output power of 2mW. A complete kit including this laser and power supply is also available (order code LM72P). The laser is capable of making small holograms and is ideal for use in school physics laboratories as the laser can be used to demonstrate many of the properties of light. The laser emits randomly polarised red light at 632.8nm wavelengths and at a power which makes it completely safe provided that you do not stare directly into the beam, when retinal damage may result. Therefore never use in the presence of children unless a diverging lens is fitted to the beam. The laser is incapable of burning, cutting or drilling and may be directed at the skin when no harm whatsoever will result.

Specification:

Typical power:	2mW
Overall size:	260 x 37mm dia.
Beam exit diameter:	0.75mm
Full angle divergence:	1.43mRad
Starting voltage:	8kV
Supply voltage:	1.5kV
Tube voltage drop:	1.15kV ±100V
Ballast resistor:	68kΩ 4W
Operating current:	5mA
Wavelength:	632.8nm (red light at 4.741 x 10 ¹⁴ Hz)
Operating mode:	TEM ₀₀ (Gaussian intensity distribution)

Order Code	Type	Price each
XL11M C1	Laser Tube	£69.99

**YOUR
GUARANTEE
OF QUALITY
& SERVICE**

LASER DIODES

Two laser diodes of different outputs which feature built-in power stabilisation, built-in slow start and heatsink. The devices are complete with optics and electronics, yet each unit is only 22mm long and 12mm in diameter. Operating mode is continuous wave with small beam divergence and excellent far-field beam quality. Most popular commercial applications for these devices include laser pointers, bar-code readers and laboratory and educational uses. So simple to use, each unit only requires a 3V DC supply to operate.

Specification

Diode laser type:	Gain guided LD
Operating mode:	Continuous wave
Beam divergence:	<0.5mrad
Wavelength:	670 ±10nm (red)
Output power:	1mW or 3mW
Operating temperature range:	-10°C to +50°C
Power supply:	+3V DC
Dimensions:	22mm long x 12mm dia.
Weight:	12g

CAUTION

These devices generate a visible beam of red light that will not burn or cut. However, it is moderately hazardous and should not be viewed by the naked eye on the same axis as the beam. CJ51F conforms to Class II for laser products, while CJ52G conforms to Class IIIA. Suitable warning labels to this effect should be attached to any equipment using these devices.

Order Code	Type	Price each
CJ51F	1mW Diode Laser	£59.99
CJ52G	3mW Diode Laser	£79.99

Laser Diode

A class IIIa laser diode capable of delivering an output power of 5mW (nominal), at 670nm (red). The beam is index guided, which gives a clearer spot than gain guided devices, and can operate from a battery. These devices are suitable for general purpose laboratory and field applications.

Specification

Dimensions:	10.5mm(dia) x 29.5mm(L)
Wavelength:	670nm
Power supply:	3V DC
Operating current:	80mA
Output power:	<5mW
Angular divergence:	1 minute
Beam divergence:	1m rad

Order Code	Type	Price each
AQ27E	5mW Laser	£79.99

Alignment Laser

A powerful and convenient 3mW (nominal) laser, that has uses in surveying, machine alignment, and other similar applications. The laser is class IIIa and features a multi quantum well (MQW) laser structure, and can operate from a battery. The laser has built-in slow start, and is internally regulated, which means it can operate from a mains adaptor supplying 6-12V DC. Due to the 633nm wavelength, the output will look considerably brighter, when compared with 670nm types. An adjustable lens allows the beam to be accurately focused.

Specification

Dimensions:	10.5mm(dia) x 42.5mm(L)
Wavelength:	633nm (red)
Power supply:	6 to 12V DC
Current consumption:	100mA
Power consumption:	1200mW
Output power:	<3mW
Beam divergence:	1.5m rad

Order Code	Type	Price each
AQ28F	3mW Laser	£129.99

Sub-Miniature Monochrome CCD Video Camera

A tiny CCD video camera capable of producing a monochrome picture from both normal light and infra-red light with good resolution and detail. The infra-red capability makes the camera ideal for security applications. The lens is a universal fixed focus type so no special optics are required. The complete module includes the actual camera which only occupies some 4cm² of the PCB which measures just 95 x 60mm. It includes six IR LEDs which together act as an infra-red lamp for IR illumination in the dark with a range of 2 to 3 metres; illumination can be down to 0.2 lux (F18), and the camera includes automatic aperture control. The module can be converted to operate in a rectangular box with the lens looking out at one end by 'cracking' the PCB in half; this is provided for in the design and the two halves are already coupled together with ribbon cable.

Specification

Image sensor:	TSL type MID solid state
Effective pick-up area:	H384 x V291mm
Image pick-up area:	H434 x V329mm
Image output:	1V pk-to-pk into 75Ω, negative sync
Scanning system:	2:1 interlace
Scanning frequency, horizontal:	15.625kHz ±1%
vertical:	50Hz ±1%
Synchronisation system:	Internal
Horizontal resolution:	280 lines
Signal to noise ratio:	>42dB
Gamma characteristics:	γ=0.45
Aperture sensitivity:	= 1/60 to 1/10,000
Supply voltage range:	12V to 15V DC

Current consumption:	<170mA
Lens:	f = 4.48mm/F1.8
Lens angle:	74° horizontal, 55° vertical, OA = 92°

Operating temperature range: -10°C to +50°C
 Weight of module: 60g
 Connections are via a 4-way PCB plug for supply DC and ground, and a video signal and common earth. To prevent RF leakage a good quality screened cable of 75Ω impedance is preferred.

Order Code	Type	Price each
ZA35Q	H1 CCD Video Camera	£129.99

Security Camera Housing

Camera housing for the ZA35Q CCD Mono camera and suitable for internal and sheltered external applications. Designed to be mounted on any vertical wall, the unit is adjustable in both horizontal and vertical axes, giving a coverage of +10° to -30° (from 90° horizontal) and 160° left to right.

Order Code	Type	Price each
AG00A	A1 Security Camera Case	£18.99

Sub-miniature Colour CCD Video Camera

A tiny CCD camera capable of producing a full colour picture from normal and reduced light illumination conditions. The 8mm diameter fixed focus lens allows the CCD element to show a fair amount of detail without any special optics being required, because all focusing is controlled by an electronic iris. All the electronics, and the camera, are contained on both sides of a single printed circuit board measuring only 80mm by 115mm to form the complete module, of which the camera only occupies 6.4cm². The PCB is slotted to form three small sub-assemblies, inter-connected by ribbon cable, so that as an alternative, the module can be arranged to fit into a small enclosure with the camera looking out of one end. These sub-assemblies reduce the overall width to 60mm. The module requires a nominal 12V DC at 200mA and because it has an on-board regulator this voltage can vary from +11V to +15V DC. A short length (190mm) of 4-way ribbon cable is provided to carry the video signal, standardised at 1V peak-to-peak, and supplies. To prevent RF signal loss, good quality screened cable is advised.

Order Code	Type	Price each

STRIPBOARD

SRBP Matrix Boards

A range of SRBP boards punched with holes on a 2.54mm (0.1in) matrix. Plain board and boards with copper strips on one side are available in various sizes.

Type	Overall size (mm)	Number of copper strips	Number of holes in each strip
Plain 3962	160 x 100	none	39 x 62
Plain 3929	100 x 75	none	39 x 29
Plain 39117	300 x 100	none	39 x 117
Strip 1039	100 x 25	10	39
Strip 2939	100 x 74.1	29	39
Strip 2958	150 x 74.1	29	58
Strip 3939	100 x 100	39	39
Strip 3962	160 x 100	39	62
Strip 39117	300 x 100	39	117

All boards have 1mm dia. holes and are 1.6mm thick.

Order Code	Type	Price each
JP53H	Plain Board 3962	£1.29
JP54J	Plain Board 3929	69p
JU37S	Plain Board 39117	£2.35
JP46A	Strip Board 1039	49p
JP47B	Strip Board 2939	£1.45
JP48C	Strip Board 2958	£1.80
JP49D	Strip Board 3939	£1.56
JP50E	Strip Board 3962	£1.99
JP51F	Strip Board 39117	£3.85

Tripad Board

This board is specifically designed to mount dual-in-line integrated circuits and a great number of these and any other kind of component may be easily mounted. The board has 39 copper strips each with 62 holes and each strip is divided into 20 3-hole segments so that track cutting is virtually eliminated. The board is punched on a 0.1 x 0.1in matrix with a 1mm diameter hole. Overall size 160 x 100mm.

Order Code	Type	Price each
JP52G	Tripad Board 3962	£2.99

DIP Board

This board is specifically designed to mount dual-in-line integrated circuits and to assist in this two power rails run between the copper pad format to facilitate easy link-up of ground and voltage rail. Up to 20 14-pin or 28 8-pin DIL packages can be accommodated. A paper layout sheet is included. The board is punched on a 0.1 x 0.1in matrix with a 1mm dia. hole. Overall size 157 x 114mm.

Order Code	Type	Price each
FL19V	DIP Board	£9.99

Stripboard

Vero

Suitable for all applications where a conventional tag strip or group board might be used, with the advantage that small or large components are neatly accommodated. Components can be mounted across or along the strips. Copper strips run across the board with a break through the centre equal to the width of one hole (0.1in), over the full length of the board.

Overall size:	213 x 38mm
Number of strips:	81
Number of holes in coppered part of each strip:	14
Total number of holes in each strip:	15
Hole size:	1mm dia.

Order Code	Type	Price each
FL17T	Stripboard	£2.69

PC, PC-XT and PC-AT series Prototyping Boards

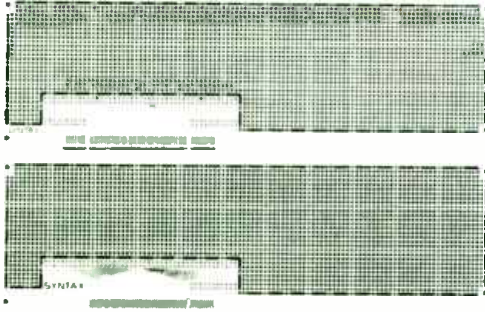

Prototyping boards for the IBM PC, PC-XT and PC-AT series of computers, which features a large prototyping area of independent 1mm dia plated-through holes on a 0.1in. matrix. The fibreglass boards incorporate a gold plated 0.1in edge connector and provision for fitting a 25-way D-type connector. Three versions are available: two are for use with PC and PC-XT machines, having 2 x 31-way edge connector and either half (JU12N) or full (JU13P) length card. The other is for use with PC-AT machines, having 2 x 31-way and 2 x 18-way edge connectors (JU14Q). Dimensions: 333 x 110 x 1.6mm (full length), 216 x 110 x 1.6mm (half length).

Order Code	Type	Price each
JU12N	A1 Protobd XT1/2	£18.99
JU13P	A1 Protobd XT1/1	£22.99
JU14Q	A1 Protobd AT1/1	£24.99

HOT TIP

To add extra strength to connecting wires which leave the veroboard, thread them through one (or more) holes before soldering. Remember to always thread the wires along the line of track you intend soldering the wires on.

PS/2 Prototyping Boards

Prototyping boards for the IBM PS/2 series of computers, which features IBM microbus compatibility and a large prototyping area of independent 1mm diameter plated-through holes on a 0.1in. matrix. The fibreglass boards incorporate a top-surface groundplane and gold plated 0.05in. edge connector. The +5V contacts are shortened to ensure all other connections are made before power is introduced. Two versions are available, one with a video expansion connector having 45 x 2-way, 11 x 2-way and 10 x 2-way edge connectors (JU10L) and one without having 45 x 2-way and 11 x 2-way edge connectors (JU11M). Suitable for IBM PS/2 Models 50, 60, 70 and 80. (Note: Model 30 uses PC AT type boards.)
Dimensions: 292 x 88 x 1.6mm.

Order Code	Type	Price each
JU10L	A1 PS/2 Proto-Board+VC	£24.99
JU11M	A1 PS/2 Proto-Board	£24.99

Single Eurocard Size VME-Bus Prototyping Card

A fibre-glass prototyping card for use with equipment based on the Eurocard VME-Bus standard. This prototyping board is suitable for use in racks that accept single Eurocard size boards, which includes our Modular Rack System (see Enclosures). The board is single sided and has independent 1mm holes on a 0.1in. matrix. The board will accept a 32, 64 or 96-way DIN 41612 PCB connectors and also a 25-way D-type connector (for suitable connectors see Connectors).
Dimensions: 100 x 160 x 1.6mm.

Order Code	Type	Price each
JU15R	VME-Bus Board	£7.99

Printed Circuit Board Clamps

A plastic moulded clamp for holding printed circuit boards of up to 3mm max. thickness. The clamp can also be screwed onto a board as part of a jig assembly for testing purposes. The clamp has been designed to be used with the various contact probes, so the PCB sitting on the probes with the clamps holding the board in place. A lever with a thumb platform allows the PCBs to be removed with ease, whilst a wide base enables the user to screw the clamp into the desired position.

Base measures: 34 x 25mm
Height to PCB level: 12mm
Total height: 30mm

Order Code	Type	Price each
KU16S	PCB Clamps	99p

THE BEST OF SERVICE

TOOLS FOR MATRIX BOARDS

Spot Face Cutter

Vero

Designed for accurate and clean breaking of the copper strips on Stripboard. For best results use a light pressure.

Order Code	Type	Price each
FL25C	Tool 2022	£3.79

Pin Insertion Tool

Vero

A tool to help in the insertion of PCB pins into pcb's. The tool is suitable for 1mm dia. pins type 2144 and 2145, and has an orange handle to aid identification.

Order Code	Type	Price each
FL27E	Tool 2151	£4.99

PCB PINS

Type 2140

Double-ended pin 1.3mm (0.052in.) dia. Supplied in packs of 100.

Pins below are shown twice size.

Order Code	Type	Price each
FL20W	Pin 2140	£1.99

Type 2141

Single-ended pin 1.3mm (0.052in.) dia. Supplied in packs of 100.

Order Code	Type	Price each
FL21X	Pin 2141	£1.82

Type 2144

Double-ended pin 1mm (0.04in.) dia. Supplied in packs of 100.

Order Code	Type	Price each
FL23A	Pin 2144	£1.65

Type 2145

Single-ended pin 1mm (0.04in.) dia. Supplied in packs of 100.

Order Code	Type	Price each
FL24B	Pin 2145	£1.65

Gold Plated PCB Terminals (Eyelet)

Calvyn Industrial

Miniature gold plated PCB terminals designed to be fitted to circuit boards to provide test points for voltage and waveform measurement. The terminal consists of a gold plated wire eyelet and a coloured heatproof ceramic insulating spacer. The leadouts from the terminal are sprung and therefore the terminal will not dropout when the PCB is turned over for soldering. The terminal will stand 5mm above the PCB and the eyelet has an inside diameter of 2.6mm. The terminal requires a 1mm diameter hole in the PCB. Terminals are supplied in packs of ten, one each of the following colours; black, brown, red, orange, yellow, green, blue, purple, light-green and white.

Order Code	Type	Price each
JM02C	PCB Eyelet Terminal	99p

HOT TIP

By covering the top surface of stripboard with white plastic 'Fablon', or similar, not only do you hide all the unused holes, but it gives you a surface on which to write the names and values of components. It enhances the appearance of the board, and component wires can simply be pushed through the plastic covering when mounting.

Gold Plated PCB Terminals (Pin)

Calvyn Industrial

Miniature gold plated PCB terminals designed to be fitted to circuit boards to provide test points for voltage and waveform measurement. The terminal consists of a pin with protruding rings to position the terminal at the correct height and to prevent test clips from dropping off. The terminal is 9mm long overall and will stand 5.5mm above the PCB. The terminal requires a 0.8mm diameter hole in the PCB. Terminals are supplied in packs of ten.

Order Code	Type	Price each
JM03D	PCB Pin Terminal	99p

FOR TOP QUALITY & VALUE!

Gold Plated PCB Terminals (Solder Bucket)

Calvyn Industrial

Miniature gold plated PCB terminals designed to be fitted to circuit boards to provide an anchorage point for lead-out wires. The terminal consists of a pin with a protruding ring to position the terminal at the correct height and a solder bucket for attaching a lead-out wire. The terminal is 11mm long overall and will stand 8mm above the PCB. The terminal will accept wires up to 1.2mm in diameter and requires a 1.62mm diameter hole in the PCB. Terminals are supplied in packs of ten.

Order Code	Type	Price each
JM04E	PCB Solder Bucket	£1.89

Gold Plated PCB Terminals (Plain Pin)

Calvyn Industrial

Miniature gold plated PCB terminals designed to be fitted to circuit boards to provide a test point, lead-out, etc. The terminal consists of a plain pin with a protruding ring to position the terminal at the correct height. The terminal is 10.5mm long overall and will stand 7.5mm above the PCB. The terminal requires a 0.65mm diameter hole in the PCB. Terminals are supplied in packs of ten.

Order Code	Type	Price each
JM05F	PCB Plain Terminal	99p

Gold Plated PCB Terminals (Long Tapered Pin)

Calvyn Industrial

Miniature gold plated PCB terminals designed to be fitted to circuit boards to provide a test point, lead-out, etc. The terminal consists of a tapered pin with protruding ring to position the terminal at the correct height. The terminal is 22.5mm long overall and will stand 13.5mm above the PCB. The terminal requires a 1.1mm diameter hole in the PCB. Terminals are supplied in packs of ten.

Order Code	Type	Price each
JM06G	PCB Long Terminal	£1.36

Through-PCB Pins

Harwin

Pins to provide a connection between tracks on opposite sides of printed circuit boards without the need for through-hole plating. Pins are inserted by hand then soldered on both sides. Pins fit 0.04in (1mm) dia holes and are suitable for 1/16 in. (1.6mm) thick board. Pins are brass, tin/lead plated. Overall pin length: 0.137in (3.5mm). Supplied in packs of 50 approx.

Order Code	Type	Price each
FL82D	Track Pin	99p

Wirewrapping Pin

Vero

The pin is suitable for wire wrapping and fits holes of 1mm (0.04in.) dia. Single-sided Pin 0266 is sold in packs of 100.

Order Code	Type	Price each
FL80B	Pin 0266 Pk of 100	£4.45

WIRE WRAPPING SYSTEM

Vero

The wiring system enables fast construction of pcb's etc., requiring large numbers of wire links. It is very simple to use and the end result is neat, even when a large number of wires are packed into a small space. Simply wrap the wire around the terminal pin or component wire, set the tension on the Verowire pen and take the pen to the next component and wrap the wire there. The wire is insulated with a polyurethane coat, which is mechanically tough. Now simply solder the connections: under the extreme heat of the tip of the soldering iron, the polyurethane coat melts and the solder completes the joint.

Prototyping Pen

A plastic wiring tool supplied complete with one spool of wire as described below. Pen has an integral spring wire clamp for wire retention, advancement and retraction.

Order Code	Type	Price each
HY16S	Wiring Pen	£8.49

Replacement Spools for Pen

Vero

A spool of 30swg copper wire with an 0.005mm coating of self-fluxing polyurethane. Max. voltage 600V DC. Current rating 100mA. Resistance: 0.86Ω per metre at 20°C. Length of wire on spool: 40m. Available in Red.

Order Code	Type	Price each
HY17T	Spool Red	£1.89

Wiring Combs

Vero

Plug-in wiring combs can be fitted to any circuit board that has 0.04in (1mm) diameter holes on a 0.1in x 0.1in matrix. The combs are fitted to the wiring side of the board between the leads of the integrated circuits. They provide a guide and the pegs control and hold the wire ensuring a neat, stable layout. Sold individually and in packs of 100.

Order Code	Type	Price each
FY33L	Comb For Wiring Pen	20p
FP39N	Wiring Combs Pk 100	£15.49

TAG BOARD

Miniature SRBP base with 36 solder tags in two rows. Overall size: 117 x 38 x 7.5mm.

Order Code	Type	Price each
FL11M	Tag Board	£1.23

PLUGBLOCK SOLDERLESS BREADBOARDS

A system for constructing circuits in such a way that the components can be used over and over again. Component wires are simply pushed into the boards where they are firmly held by double leaf spring contacts. To modify the circuit simply pull the components out and plug in again in the correct position.

Euro Breadboard

This plugblock has a total of 600 contacts arranged in four blocks of 25 rows of five interconnected sockets on a 0.1 x 0.1in. matrix and four other rows of 25 interconnected sockets arranged around the edges of

the main matrix for use as bus-bars. The distance between the two centre rows of sockets is 0.6in., the spacing between the leads on a 24, 28 or 40-pin IC and the distance between the centre rows of sockets of both end blocks of contacts is 0.3in., the spacing between leads on an 8, 14 or 16-pin IC package. Thus the block will hold up to six 14-pin and two 24-pin DIL packages for example. A non-slip rubber backing is fixed to the board and fixing is by four holes in the corners of the block into which will screw a No.4 self-tapper. The holes are 8BA clear. Horizontal rows are designated 1 to 25 whilst the four matrixed blocks are labelled A, B, C and D and the four bus-bar rows are labelled X1, X2, Y1 and Y2.

Specification

Contacts:	Nickel silver
Contact resistance:	<10mΩ
Contact rating:	1A
Contact life:	>5000 insertions
Accepts wire dia:	0.25 to 0.85mm
Dimensions:	92 x 82 x 10mm
Fixing holes:	78.5 x 68mm

Order Code	Type	Price each
YR83E	Eurobreadboard	£9.99

Breadboard For Microprocessors

A large version of the Eurobreadboard. In addition this plugblock has 5 large screw terminals -5V, +5V, -12V, +12V and Earth and colour-coded black, red, black, red and green respectively for connection to power supply. The plugblock has a total of 1422 contacts arranged in four blocks of 47 rows of four interconnected sockets, and two blocks of 47 rows of five interconnected sockets on a 0.1 x 0.1in. matrix and six other rows, four of 30 and two of 40 interconnected sockets arranged around the edges of the main matrix for use as bus-bars. A non-slip rubber backing is fixed to the board. Boards may be clipped together horizontally to form larger arrays and they will clip to the Professional Plugblock (YR84F) and the Bus Strip (YR85G). All contact positions are clearly identified on an alpha-numeric grid.

Specification

Contacts:	Nickel silver
Contact resistance:	<10mΩ
Contact rating:	1A
Contact life:	>5000 insertions
Accepts wires dia:	0.25 to 0.85mm
Dimensions:	159 x 100 x 21mm

Order Code	Type	Price each
XX42V	MP Urobreadboard	£32.99

Professional Plugblock

This plugblock has a total of 550 contacts arranged in two blocks of 47 rows of five interconnected sockets on a 0.1 x 0.1in. matrix and two other rows of forty interconnected sockets on either side of the length of the main matrix for use as bus-bars. The distance between the two centre rows of sockets is 0.3in., the spacing between the leads on an 8, 14 or 16-pin DIL package. Thus the block will hold up to six 14-pin or nine 8-pin DIL packages for example. The rear plastic panel unclips to allow the contact arrangements to be seen and any contact strip to be changed should it ever be damaged. Boards may be clipped together horizontally or vertically to make larger arrays for more complex circuits. All contact positions are clearly identified on an alpha-numeric grid. A component support bracket is supplied with the block. It will fit onto any outside edge or down the centre with cut-outs in the bottom of the bracket allowing it to sit over IC's. The bracket has ten 5mm dia. holes and three tapered holes from 4mm to 12.7mm dia. punched into it, enabling mounting of potentiometers, rotary and toggle switches, lamp-holders, push-button switches and other components normally mounted on panels.

Specification

Body material:	Thermoplastic polyester
Temperature range:	-50 to +125°C
Contact resistance:	<10mΩ
Contact rating:	1A
Contact to contact capacity:	0.5pF
Contacts:	Nickel silver
Contact life:	>5000 insertions
Accepts wires dia:	0.25 to 0.85mm
Dimensions:	150 x 50 x 10mm

Order Code	Type	Price each
YR84F	Prof Plugblock	£11.49

Bus-Strip Plugblock

For use with our Professional Plugblock this block clips on to any side to provide additional bus-bars. The block has a total of 80 contacts arranged in two strips of forty interconnected sockets. The rear plastic panel unclips to allow the contact arrangement to be seen and any contact strip to be changed should it ever be damaged. Other details as Professional Plugblock.

Order Code	Type	Price each
YR85G	Bus-Strip Plugblock	£4.29

Contact Strip

A single strip of five interconnected contacts for replacement in our Professional Plugblock and Bus-Strip Plugblock.

Order Code	Type	Price each

HOT TIP

The number of 'non-earthed' connections on the 14-way tag strip (FL29G), can be increased by two or three if heavy-duty side-cutters are used to cut away the metal as shown in the drawing.

Professional Plugblock PCB

An SRBP circuit board printed and punched in the same layout as our Professional Plugblock with tinned copper strips. When a prototype circuit is working properly it may be transferred lead for lead from the plugblock to the pcb for permanence.

Order Code	Type	Price each
YR87U	Plugblock PCB	£2.49

Multi-Board

A novel plugblock having four separate strips which may be clipped together to form various configurations. For example the strips can be clipped together to form a 0.6in. or a 0.3in. centre channel for different size IC's. The pack consists of two strips each having 64 rows of 5 interconnected strips and two strips each having 4 rows of 25 interconnected strips. Further boards may be clipped on to make even larger arrays. Sockets are on a 0.1in. x 0.1in. matrix. The plugblock provides a total of 840 contacts making this board exceptional value for money. The bracket described below fits onto this board.

Specification	
Body material:	ABS polymer
resistance:	<10mΩ
Contact rating:	1A
Contacts:	Nickel-silver
Contact life:	>5000 insertions
Accepts wires:	0.3 to 0.8mm diameter
Dimensions	
Large block:	172 x 21.5mm
Small block:	172 x 12.7mm
All plugged together:	172 x 68.5mm
Thickness:	8.5mm

Order Code	Type	Price each
FD29G	Multiboard Plugblock	£8.99

Silver Plated Plugblock Type RH-10S

A high quality plugblock with silver-plated contacts for low contact resistance. The plugblock has a total of 640 contacts arranged in two blocks of 64 rows of 5 interconnected sockets on a 0.1in. x 0.1in. matrix. The distance between the two centre rows of sockets is 0.3in. and the block will hold up to nine 14-pin DIL packages for example. These boards will clip onto the Silver-Plated Bus Strips described below, and a clip-on component support bracket is also available separately. All contact positions are clearly marked on an alpha-numeric grid. Fixing is by self-adhesive foam insulating strip on the base of the block.

Specification	
Body material:	ABS polymer
Contact resistance:	<1mΩ
Contact rating:	1A
Contacts:	Silver-plated nickel-silver
Contact life:	>5000 insertions
Accepts wires:	0.3 to 0.8mm diameter
Dimensions:	172 x 38.5 x 8mm thick

Order Code	Type	Price each
FD31J	Plugblock RH10S	£4.99

Silver Plated Bus Strip Type RH-5DS

For use as a bus strip with the RH-10S plugblock. This strip clips onto either side of RH-10S. Further blocks RH-10S can be clipped onto the far side of each RH-5DS. The block has a total of 100 contacts arranged in 4 interconnecting strips of 25 sockets. Specification as RH-10S. Dimensions: 172 x 12.5 x 8mm thick.

Order Code	Type	Price each
FD30H	Plugblock RH5DS	£1.79

Component Bracket EP-3

A clip-on component support bracket for use with the RH-10S plugblock. It clips onto either edge in place of the RH-5DS bus strip. The bracket has ten 4mm diameter holes, two 4mm x 6mm slots, two 6mm x 15mm slots, one 11mm diameter hole and two tapered holes 4mm to 19mm diameter. This enables potentiometers, rotary and toggle switches, lampholders and other components normally mounted on panels to be used with the plugblock. Dimensions 172 x 65 x 1.75mm.

Order Code	Type	Price each
FD33L	Bracket EP-3	75p

Silver Plated Plugblock Type RH-21B

A plugblock comprising one RH-10S and two RH-5DS plugblocks mounted on an attractive blue base with three terminal posts and a component bracket. This unit thus provides a total of 840 contacts. Specification as RH-10S above. Dimensions 190 x 118 x 19mm thick.

Order Code	Type	Price each
YU79L	Plugblock RH21B	£9.99

Silver Plated Plugblock Type RH-32S

A plugblock comprising two RH-10S and three RH-5DS plugblocks mounted on an attractive blue base with three terminal posts and a component bracket. This unit thus provides a total of 1580 contacts. Specification as RH-10S above. Dimensions 190 x 168 x 19mm thick.

Order Code	Type	Price each
FD32K	Plugblock RH32S	£16.99

Silver Plated Plugblock Type RH-53S

A plugblock comprising three RH-10S and five RH-5DS plugblocks mounted on an attractive blue base with four terminal posts and a component bracket. This unit thus provides a total of 2420 contacts. Specification as RH-10S above. Dimensions 190 x 250 x 19mm thick.

Order Code	Type	Price each
YU57M	Plugblock RH53S	£24.99

Silver Plated Plugblock Type RH-74S

A plugblock comprising four RH-10S and seven RH-5DS plugblocks mounted on an attractive blue base with four terminal posts and a component bracket. This unit thus provides a total of 3260 contacts. Specification as RH-10S above. Dimensions 245 x 270 x 19mm thick.

Order Code	Type	Price each
YU23A	A1 Plugblock RH74S	£29.99

Silver Plated Interface Plugblock Type RH-34

A plugblock comprising three RH-10S and four RH-5DS plugblocks mounted on an attractive blue base with four terminal posts, a component bracket and two 25 way D-connectors one male, one female. The two 25 way D-connectors are mounted on a removable plate, in place of which a Centronics type connector plate (not supplied) may be fitted, see below. This unit provides a total of 2320 contacts. Specification as RH-10S above. Dimensions 230 x 255 x 19mm thick.

Order Code	Type	Price each
YU58N	A1 Interface Plugblock	£39.99

Centronics Connector Plate

A 36 way female Centronics type connector mounted on a fixing plate specifically intended for use with the above interface plugblock.

Order Code	Type	Price each
JM29G	Centronics Connector	£8.99

Breadboard Module

A universal breadboard module that has been designed for students and professionals who need to perform analogue and digital experiments, and development work. The unit consists of two AD-01 (BZ13P) breadboards which have silver-coated spring terminals, and are designed to accept solid wire of 0.3mm to 0.8mm diameter. A 40-pin ZIF type socket allows the breadboard to be used with large ICs such as RAM, ROM etc. Next to the ZIF socket there are two banks of 40 sockets, and every pin of the ZIF socket is connected to two of these sockets. These clearly marked banks of 40 sockets can be used to connect to the breadboards, or for taking measurements etc. The module has six independent 2mm power supply sockets (see Connectors Section for suitable plugs), marked $\pm 5V$, $\pm 12V$ and $\pm V$, and a matching 0V socket. The $\pm 5V$ and $\pm 12V$ rails have reverse protection diodes and decoupling and filtering capacitors fitted, and the $\pm V$ rails have reverse protection diodes. All the rails are connected to their own bank of ten sockets for connection to the breadboards or to the ZIF connecting sockets. Each breadboard has four power buses and provision for accepting MSI, LSI, and all DIP size chips in CPU bus connection. The module is housed in a durable, scratch-proof, plastic case with four rubber feet. Size 254 x 164 x 40mm.

Order Code	Type	Price each
CK50E	B1 Breadboard + Zif	£59.99

Advanced Solderless Breadboard System

A range of solderless breadboard modules that can interconnect to suit individual requirements. The basic board AD-01 consists of four blocks of six columns of 28 rows, the sockets in each row being interconnected. The blocks are a standard DIP size apart, although MSI and LSI type chips can be used. At both ends of the blocks, there are two power busses, the 'Red' bus is made up of two separate rows of 12 connecting sockets, and the 'Black' bus is one row of 24 connecting sockets. There is an additional matrix of 30 by 6 sockets for non-dip type components, the six sockets in the vertical plane are interconnected. Each socket will accept solid wire from 20 to 30 swg (0.3 to 0.8mm). The base has a 'sticky' covering to hold the board firm on a workbench or

surface. The AD-10 power block has 5 individual screw terminals that will accept 4.5mm Y-terminal, stripped wire or 4mm banana plug. Each terminal is connected to two sockets. The power block will snap lock onto the AD-01 base board to allow connections to the required power bus. The

power block has the same 'sticky' base. After use the modules can be unlocked and remade into a different configuration.

AD-10 is 80 x 30mm. AD-01 is 117 x 80mm. AD-11 is one AD-01 and one AD-10. Size: 147 x 80mm. AD-12 is two AD-01 and one AD-10 mounted on a blue base board. Size: 183 x 168mm.

AD-13 is three AD-01 and one AD-10 mounted on a blue base board. Size: 265 x 168mm.

AD-14 is four AD-01 and one AD-10 mounted on a blue base board. Size: 335 x 168mm.

Order Code	Type	Price each
BZ13P	Breadboard AD-01	£5.75
BZ12N	Power Block AD-10	£3.65
BZ14Q	Breadboard AD-11	£8.95

Silver Plated Bus Strip AD-4D

A high-quality silver plated Bus strip, type AD-4D. The contacts are arranged in two rows, 24 black and two sets of 12 red. Can be clipped to breadboards AD-01(BZ13P), AD-10(BZ12N), AD-100(AG08J), AD-101(AG09K) and AD-102(AH10L), or other blocks of AD-4D.

The blocks can be attached to a suitable clean flat surface with the self-adhesive pad on the base of the block.

Dimensions: 81 x 12 x 10mm.

Order Code	Type	Price each
AG07H	AD4D Plugblock	99p

AD-102 Breadboard

This breadboard is constructed from two of AD-4D(AG07H) and one of AD-100(AG08J) in between. A self-adhesive pad is attached to the rear of the breadboard. Can also be connected to AD-01(BZ13P), AD-4D(AG07H), AD-10(BZ12N), AD-100(AG08J), AD-101(AG09K), or other AD-102 blocks.

Dimensions: 62 x 83 x 10mm.

Order Code	Type	Price each
AG10L	AD102 Plugblock	£2.99

Jump Wire Kit

A kit containing 14 different length jumper wires for use with our plugblocks. Wires are stripped and formed at 90° at each end. There are 25 wires of each length:

0.1in.(2.54mm) uninsulated, 0.2in.(5.08mm), 0.3in.(7.62mm), 0.4in.(10.16mm), 0.5in.(12.7mm), 0.6in.(15.24mm) 0.7in.(17.78mm), 0.8in.(20.32mm), 0.9in.(22.86mm) 1in.(25.4mm), 2in.(50.8mm), 3in.(76.2mm), 4in.(101.6mm), 5in.(127mm).

Wires are supplied in various colours and are 23swg solid tinned copper wire, and supplied in an attractive plastic case with a blue base and clear hinged lid with each length wire in a separate compartment. Overall size of box 270 x 124 x 30mm high.

Order Code	Type	Price each
FS65V	Jump Wire Kit	£9.99

Flexible Jumper Wires

Packs of flexible jumper wires for use with our plugblocks. Wires are terminated in hard pins at each end except Spade pack where each wire has a spade terminal on one end for use with terminal posts such as those on XX42V and FD32K. Wires are insulated 11 strands of 0.16mm copper conductor with a 7mm long, 0.6mm diameter pin.

Type	Colour	Flexible length	Overall length
50	Brown	50mm	75mm
70	Grey	70mm	95mm
100	Orange	100mm	125mm

150	Violet	150mm	175mm
200	Blue	200mm	225mm
Spade	*	100mm	128mm

*Spade pack contains 4 wires coloured red, yellow, green and black.

All packs except spade pack contain 10 wires.

Order Code	Type	Price each
FS66W	10pk Jump Lead 50	£2.49
FS67X	10pk Jump Lead 70	£2.49
FS68Y	10pk Jump Lead 100	£2.49
FS69A	10pk Jump Lead 150	£2.49
FS70M	10pk Jump Lead 200	£2.49
FS71N	4pk Spade Jump Lead	£1.80

PCB EQUIPMENT

PCB Component Mounting and Soldering Frame

An ingenious and flexible solution to component insertion and soldering problems. The extruded aluminium frame will hold a PCB with dimensions up to 185 x 235mm. The first stage of PCB assembly is to clamp the board in position using the adjustable clamp bars. The PCB is held firmly by 8 spring clips and the components can now be inserted. Once insertion is complete, the foam padded lid is fitted, which holds the components in position. The frame is then turned over and the underside of the board can be soldered and leads cropped without components falling out. Overall size 260 x 240 x 50mm. Supplied unassembled.

Order Code	Type	Price each
XM72P B2	PCB Assembly Frame	£39.99

Bubble Etching Tank

An ingenious and easy to use bubble etch tank. Ideal for development work in laboratories, schools, colleges and universities. The bubble etching tank consists of a smoked acrylic plastic tank, with integral air distribution

Continued on next page.

AD-100 Breadboard

This breadboard consists of two sections; one section of 30 blocks of six rows labelled 'A' to 'F', and an identical section labelled 'G' to 'L'.

Can be connected to AD-01(BZ13P), AD-4D(AG07H), AD-10(BZ12N), AD-101(AG09K) and AD-102(AG10L), or other blocks of AD-100(AG08J).

Dimensions: 42 x 83 x 10mm

Order Code	Type	Price each
AG08J	AD100 Plugblock	£1.99

AD-101 Breadboard

This breadboard is constructed from one of AD-4D(AG07H) and one of AD-100(AG08J) complete with a self-adhesive pad for attaching to a suitable surface. The breadboard can also be attached to AD-01(BZ13P), AD-4D(AG07H), AD-10(BZ12N), AD-100(AG08J) and AD-102(AG10L), or other blocks of AD-101.

Dimensions: 83 x 52 x 10mm.

Order Code	Type	Price each
AG09K	AD101 Plugblock	£2.49

FOR CASHTEL

Continued from previous page.

channel, the PCB being etched may be clearly observed whilst in the tank. Supplied with the tank are two supporting feet which simply clip into place on the tank, a thermometer, air-tube, tank lid and lengths of titanium wire to support the PCB during etching (titanium wire will not be attacked by normal ferric chloride etching solution). Pump and heater are not supplied with the tank and must be purchased separately. Suitable pump and heater are (YZ69A) and (JU66W) are available.

Order Code	Type	Price each
YZ34M C1	Etch Tank	£34.99
YZ69A	Etch Tank Pump	£11.99
JU66W	Etch Tank Heater	£8.99

Bubble Etching System

An ingenious and easy to use bubble etch system that will greatly increase the throughput of small scale PCB production. Ideal for development work in laboratories, schools, colleges and universities. The bubble etching system consists of a durable rigid PVC frame to which the component parts are fitted. These are a glass etching tank, a thermostatic heater, a thermometer, an air distribution pipe and a diaphragm pump. A PCB holder, which can accommodate boards up to 180 x 260mm, allows easy insertion and removal of the board to be processed. A drip tray is provided to guard against spillages and a cleaning rod is also supplied to facilitate tank cleaning. The air flow circulates the etchant and this ensures that the temperature is maintained evenly and prevents coldspots. The etchant circulation results in fast and even etching over the surface of the board. The etching process can be continually monitored through the clear glass tank. The frame has provision for a second identical tank to be added and this could be used for photo-resist developing, washing or as another etching tank. Accessories and spare parts are available separately, see below. Overall dimensions (excluding drip tray) 100 x 340 x 340mm. Power requirements 240V AC 50Hz mains, pump 5W, heater 100W.

Order Code	Type	Price each
XM67X E10	Bubble Etch Unit	£119.99

Bubble Etch Spare Parts and Accessories

The following items are available as spare parts and also for adding a second tank to the main unit. A PCB holder; a glass tank; a 100W thermostatic heater; a diaphragm pump and an air distribution pipe.

Order Code	Type	Price each
YZ05F	Bble Etch PCB Holder	£10.99
YZ06G D6	Bble Etch Glass Tank	£39.99
YZ07H	Bble Etch Heater	£24.99
YZ08J	Bble Etch Pump	£18.99
YZ09K	Bble Etch Air Dist	£9.99

UV Photo-Etch System

The UV photo-etch system of making pcbs has many advantages over any other system for prototypes or production in very small quantities.

1. The original artwork can be produced using a professional method, because it does not have to be made on the pcb.
2. The production run can be made from the same artwork as the prototype is not destroyed during the etching process.
3. Alterations can be made without having to remake the whole artwork.
4. The artwork may be filed and additional copies of the original pcb made at any time.
5. Magazine artworks could be turned into a positive transparency by a professional photographer at very little cost, saving hours of time making new artworks.
6. The system is very simple to use and does not require a darkroom. Full instructions are supplied with the ultra-violet light exposure unit.

Ultra-Violet Light Exposure Unit

An attractive metal case finished in brown and containing two 8W ultra-violet tubes. Case size 406 x 177 x 102mm. The lamps are covered by a 4mm glass sheet masked to give a maximum exposure area of 254 x 157mm. The metal lid is hinged and clips down firmly at the front. A pressure pad fixed to the lid ensures an even and firm pressure on the pcb to keep it in good contact with the glass over the whole exposure area. The box incorporates a mains switch and indicator and is connected to the mains (240V AC) via mains lead supplied. The unit must be used with our Photo-etch board and after exposure the board must be developed using sodium hydroxide solution (caustic soda) available from most chemists (e.g. Boots) before etching in ferric chloride in the normal way. Full instructions for use are supplied with the exposure unit.

Order Code	Type	Price each
XY10L F13	UV Exposure Box	£74.99

Replacement UV Tubes

Spare tubes are available should replacements be required, for UV Exposure Box (XY10L).

Order Code	Type	Price each
FJ55K	Spare UV Tube Exp Bx	£9.99

Ultra-Violet Light Exposure Box

A large ultra-violet light exposure box for PCB production work. The exposure box is constructed from anodised aluminium and has a hinged laminated wood lid with side locks. The inside of the lid has a foam pressure pad to ensure the artwork and PCB are held firmly. The exposure box is equipped with four 15W 17inch ultra violet tubes which are controlled by an electronic exposure timer (adjustable via a front panel slot). The tubes are covered by 4mm glass which provides an exposure area of 369 x 241mm. Overall size: 495 x 95 x 320mm. Power requirements 240V AC 50Hz mains.

Replacement UV tubes are available

Order Code	Type	Price each
XM66W H16	Lge UV Exposure Box	£199.99
YZ04E B1	UV Tube 15W/17inch	£22.99

Pre-Sensitised Copper-Clad Boards

Single and double-sided copper-clad SRBP and glass fibre boards coated with a positive photo-resist suitable for use with our UV exposure box. The boards are covered with light-proof protective film; this should not be removed until the board is used. The PCB should be exposed using our UV exposure box and a circuit overlay transparency. Exposure time will be 8 to 15 minutes. Mix together 1 pint of cold water and 1 teaspoonful of sodium hydroxide (available from most chemists) and pour into a tray. Gently rock the exposed PCB in the tray until the unwanted photo-resist is dissolved away. Etch the PCB in a bath of ferric chloride. Expose the PCB in the UV box for a further 10 mins. then wash off all remaining etch resist in the tray of sodium hydroxide solution. Three sizes are available in SRBP: Small 100 x 75; Medium 160 x 100 and Large 300 x 210. Six sizes are available in single or double-sided fibreglass: 75 x 100mm (Size 1); 100 x 160mm (Size 2); 100 x 220mm (Size 3); 233.4 x 160mm (Size 4); 233.4 x 220mm (Size 5); and 210 x 300mm (Size 6).

Drafting Film Pack

A pack containing 5 sheets of polyester drafting film and one sheet of 0.1 x 0.1in (2.54mm) grid. Lay one sheet of film on the grid which then assists in exact placing of the tracks and pads that make up the artwork. The piece of film with artwork on it is then placed on the UV exposure unit with the coppered photoresist board on top of it and the lid closed. The artwork may be altered or re-used whenever required. Sheet size: 248 x 150mm.

Order Code	Type	Price each
BW20W	Phot-Etch Drftg Pk	£3.49

Positive Photoresist Aerosol Spray

Electrolube

An aerosol can of positive photoresist for coating copper-clad board. To use, first use a fine grade emery cloth or polishing block to remove dust, dirt, grease, fingernails and oxide from the copper surface. Rinse well and dry thoroughly. The coating must be applied in subdued light. Shake the can, place the board horizontally in a dust-free area, then holding the can at a 30° to 45° angle, from a distance of 20 to 30cm spray with smooth strokes in a zig-zag pattern. Leave in low light for 5 minutes until touch-dry. Move to a dark well-ventilated area and leave for 24 hours (or heat to 80°C for 15 minutes, but do NOT use an open flame or incandescent element). The board may now be used in the normal way, with our UV Light Box. Available in 200g cans.

Order Code	Type	Price each
YM62S	Pos Photores 200g	£7.55

Photoresist Developer

Electrolube

For use with positive photoresist pcb's, the developer must be diluted 4:1 with water before use. Place the prepared board in the solution for 30 to 90 seconds at 20°C. Development is complete when the shiny copper shows through on the non-image areas. Rinse the board thoroughly with water to halt the development process. When the board is dry it is ready for etching. Supplied in 250ml bottle.

Order Code	Type	Price each
YJ38R	Photoresist Develop	£3.49

Universal PCB Developer

A sodium-hydroxide free PCB developer that is supplied in free flowing odourless granules and is ready for dilution with water. Suitable for single or double sided PCBs, and all applications such as prototype work is 10g of granules with 100ml of water, or the full 250g would make up to 2.5l of developer. The ideal temperature for dilution and developing is room temperature i.e. approximately 20°C. Development time will depend on the complexity of the board design, dilution ratio of the solution and the temperature. After development, the board should be rinsed thoroughly and dried either in air or an oven. Always wear protective gloves and goggles and avoid contact with the eyes and skin., but in case of contact, flush liberally with water. Ensure all containers and utensils used with this product are made from strong chemical resistant plastics or glass. Do not use any equipment made from metal.

Order Code	Type	Price each
AP01B	PCB Developer	£5.99

Clear Protective Lacquer

Electrolube

A transparent plastic coating which can be used to protect printed circuit boards and sensitive electronic circuitry from the effects of humidity and corrosion. Ideal for sealing EHT and high voltage conductors, and can be used for additionally insulating automotive HT circuits against the weather, for example. Does not crack or discolour, conforms to international specifications. Disappears quickly and easily on the application of a soldering iron, hence the circuit is not difficult to service or modify afterwards. Supplied in a 400ml aerosol can.

Order Code	Type	Price each
DM82D	Acrylic Conf Coating	£5.75

PCB Cleaner

Electrolube

An aerosol solvent especially for removing contaminants and oxidation from printed circuit board conductors, and removing flux residues that result from soldering operations. Before using on plastics, test a small area first. Supplied in 300g aerosol can.

Order Code	Type	Price each
DM83E	Fluxclene	£3.79

Acrylic Conformal Coating

Electrolube

A flexible transparent acrylic coating specially formulated for the protection of electronic circuitry to meet the highest defence and aerospace industry requirements. Possesses excellent adhesion under all climatic conditions. It is resistant to mould growth and has a temperature range of -60 to +130°C. It has excellent dielectric properties and is fluorescent under ultra-violet light as an aid to inspection. Can be soldered through without fear of highly toxic gases being produced e.g. isocyanates. It is non-corrosive to cadmium and zinc plate (contains no phenols). It can be totally removed with 1.1.1 trichloroethane. Supplied in 200ml aerosol can.

100%
ENVIRONMENTALLY
SAFE

Order Code	Type	Price each
YT50E	HPA Conformal Coat	£6.29

Very High Temperature Conformal Coating

Electrolube

A flexible, transparent modified silicone resin conformal coating specially formulated for the protection of electronic circuitry to meet the highest defence and aerospace industry requirements. Possesses excellent adhesion under all climatic conditions and is resistant to a wide range of solvents. Excellent resistance to mould growth and ultra violet light. Wide temperature range from -70 to +200°C. The coating produces a high gloss finish, exceptionally low oxygen permeativity and high surface resistivity. It has good dielectric properties at all frequencies, and is fluorescent under ultra-violet light as an aid to subsequent inspection. Can be soldered through without fear of highly toxic gases being produced, e.g. isocyanates. Non-corrosive to cadmium and zinc plate (contains no phenol). Supplied in 250gm aerosol can.

100%

QUALITY AND VALUE

Peelable Coating Mask

Electrolube

A flexible, solvent resistant latex for masking components, connectors and other items prior to applying a conformal coating, to ensure that sensitive items, and areas requiring further processing are not coated. The mask can be applied to adjustable pots, IC sockets etc. to prevent ingress of coating. The high film strength of the mask means that it can be peeled away by hand without breaking or leaving residues. Note that this product contains ammonia and therefore must be applied and allowed to dry in a well-ventilated area. Supplied in 250ml bottles.

Order Code	Type	Price each
YT48C	Peelable Coat 250ml	£4.99

ETCHING AIDS

Ferric Chloride Crystals

A pack of Ferric Chloride (FeCl₃) crystals for etching copper clad boards. Packet contains sufficient crystals to make one pint of solution. Dissolve in 250ml of warm water. Store and etch in plastic or glass vessels. With regular stirring, etching will take about 20 minutes or longer depending on how many times solution has been used before. One pint will etch about 350 square inches (0.226 square metres).

Order Code	Type	Price each
XX12N	Etch Crystals	£4.49

Etching Fluid

A plastic bottle containing 250cc of high concentration ferric chloride etching fluid. The fluid should be diluted with 250cc of water before use (i.e. one part etchant, one part water).

Order Code	Type	Price each
WF10L	Etcher Fluid	£4.99

Printed Circuit Board Etch Resist Marker Pen

A nylon tipped pen for fast fabrication of perfect printed circuit boards. The ink adheres perfectly to copper and is completely resistant to ferric chloride and other usual etchant solutions. Draw the planned circuit onto a thoroughly cleaned copper laminated board and allow to dry. Then immerse the board in etching fluid until the copper is dissolved. The ink can then be removed with Degreasing Solvent or PCB Cleaner, and the circuit board is then ready to be drilled and assembled. This pen is capable of producing thin, delicate lines allowing for quite a condensed track layout if required. It can also be used as an indelible marker felt tip pen for an enormous range of materials especially metals.

Order Code	Type	Price each
HX02C	PCB Pen	£1.49

Dalo Etch Resist Marker Pen

An etch-resist marker pen similar to the one above, but having better adhesion to the board if it is not perfectly clean of grease and oxides.

Order Code	Type	Price each
FP40T	Dalo Pen	£2.75

Polishing Block

Block is ultrafine non-metallic polishing compound bonded in an elastic material which wears evenly. It cleans, degreases and polishes in one clean simple procedure, totally eliminating the need for abrasive pastes, water washes and solvent washes. It has been designed primarily for cleaning copper-clad boards prior to application of resist inks, or finished circuits prior to tin/silver/gold plating. It is equally useful for cleaning contacts, switch gears, potentiometers, connectors, adjustable transformers etc. Supplied individually.

Order Code	Type	Price each
HX04E	Polish Block	£2.19

Etch Resist Remover

A cloth made damp with this isopropanol remover will dissolve Etch Pen ink after etching and leave copper tracks clean. Bottle contains 100ml.

Order Code	Type	Price each
HX03D	Resist Remover	£3.79

Copper-Clad Boards

A range of copper-clad boards suitable for making your own printed-circuit boards.

The following types and sizes are available:

Single-sided SRBP:

- 203 x 102mm (8 x 4in) (Small single)
- 254 x 152mm (10 x 6in) (Medium single)
- 305 x 203mm (12 x 8in) (Large single)

Double-sided SRBP:

- 203 x 102mm (8 x 4in) (Small double)
- 254 x 152mm (10 x 6in) (Medium double)
- 305 x 203mm (12 x 8in) (Large double)

Single-sided Fibreglass:

- 203 x 102mm (8 x 4in) (Small single)
- 254 x 152mm (10 x 6in) (Medium single)
- 305 x 203mm (12 x 8in) (Large single)

Double-sided Fibreglass:

- 203 x 102mm (8 x 4in) (Small double)
- 254 x 152mm (10 x 6in) (Medium double)
- 305 x 203mm (12 x 8in) (Large double)

WF42V	PCB F.Glass Med Dbl	£1.99
FA59P	PCB F.Glass Lrg Dbl	£3.29

HOT TIP

Used PCB marker pens can be given a second life as test prod holders, light guides on optical projects, or sawn into smaller pieces and used as PCB spacers.

ETCH RESIST DRAFTING AIDS

A range of professional etch resist drafting aids for use directly on the pcb or in making 1:1 artwork for use with photo resist pcbs or 2:1 artwork for masters for professional pcb manufacturers.

Black Tapes

A black crepe tape with a matt finish for high quality photographic reproduction. The crepe tape can be made into tight curves without distortion at the edges. A good adhesion is obtained even on irregular surfaces. Tapes are on 16-46m rolls.

The following types are available.

0.031 in		0.100 in.	
0.040 in		0.125 in	
0.050 in		0.150 in	
0.062 in		0.200 in.	
0.080 in.			

Order Code	Type	Price each
BW21X	Track Tape 31	£1.56
BW22Y	Track Tape 40	£1.56
BW23A	Track Tape 50	£1.56
BW24B	Track Tape 62	£1.98
BW25C	Track Tape 80	£1.98
BW26D	Track Tape 100	£1.98
BW27E	Track Tape 125	£2.15
BW28F	Track Tape 150	£2.65
BW29G	Track Tape 200	£2.65

Black Circles

Die-cut circles manufactured in black crepe and supplied in the form of a roll with half of each symbol stuck to a clear carrier tape. To apply, separate the circles from the carrier, release the film from its protective backing paper and position carrier with circle on the artwork or pcb. Then having applied pressure to the circle, gently pull away the carrier film at an angle leaving the circle securely in position. This method is undoubtedly the most simple, accurate and speedy way to make pcb artwork.

Circles are supplied in rolls of 250 circles. The following sizes are available.

Outside dia. (in)	Inside dia. (in)	Outside dia. (in)	Inside dia. (in)
0.075	0.02	0.15	0.04
0.100	0.03	0.2	0.04
0.125	0.03		

Order Code	Type	Price each
BW30H	Pad 075	£2.75
BW31J	Pad 100	£2.75
BW32K	Pad 125	£2.75
BW33L	Pad 150	£2.75
BW34M	Pad 200	£2.75

Dual-In-Line IC Clusters

Sixteen circles arranged in a 0.1 x 0.3in pitch (1:1) or a 0.2 by 0.6in pitch (2:1), to suit IC's up to 16-pin DIL. Symbols can be laid end to end and/or split to make them wider to suit any size IC package. These pads offer a considerable time saving over using individual pads. Supplied in rolls of 100 16-pin DIL grouped symbols. These pads are not suitable for use directly on pcb's, only for artwork

Order Code	Type	Price each
BW39N	IC Pads 100	£6.99
BW40T	IC Pads 200	£8.99

Drafting Template

Calvyn Industrial

A clear plastic template to speed the job of placing pads for pcb artworks. Holes are laid out over the template in various patterns and pitches; simply lay the template over the artwork or pcb, put a pin through the appropriate holes to lightly mark the position, remove the template and put the pads down centred on the marks. The following patterns are marked on the template. DIL packages up to 40-pin at 0.3in and 0.6in pitch as applicable, TO5, TO18 and TO3 transistor packages including fixing holes for TO3, 8-pin, 10-pin and 12-pin round IC packages. In addition there are a series of precision holes to check drill sizes between 0.6mm and 2mm where drills are often too small to be marked on the shank. Manufactured in clear plastic. Overall size: 64 x 51mm.

Order Code	Type	Price each
BW41U	Drafting Template	£1.99

MAPLIN KEY CALL

PCB Transfers

A range of high quality rub-down black symbols suitable for making printed circuit boards. Available as individual sheets or one of each in a starter kit of fourteen sheets. All symbols are acid resistant, have a clear sharp outline and are fully lightproof. The specially designed transparent symbol carrier prevents stresses being imparted to the symbol during application and eliminating symbol edge tearing. The carrier retains its shape even during heavy handed application or the use of unsuitable rub-down tools. The customised symbol adhesive prevents unwanted side-effects and guarantees optimum symbol adhesion. Sheet size 210 x 94mm.

How to use

Rub down the printed circuit board with Polish Block or fine abrasive paper to give a good finish to the copper surface. Do not use liquid cleaners or water and keep the board dry and clean whilst you are working. Mask the unwanted symbols on the transfer card being used, with the release paper backing, or cut out the required symbol place in position on the printed circuit board (tacky side down), then rub the reverse side of the symbol with a ball pen or soft pencil lead. Lift off the clear film and smooth over by rubbing the release paper over the symbol to make sure there is no lift at the edges. The printed circuit board may now be etched to remove the unwanted copper. When complete, wash under water and rub the transfer away with Polish Block, fine wire wool or scouring powder. You will then have a professional looking printed circuit board, ready to drill and assemble.

Sheet details

- Sheet 1 2176 circle pads 1.6 x 0.38mm.
- Sheet 2 20 straight lines 170 x 1.61mm.
- Sheet 3 480 circle pads 2.54 x 0.45mm.
- Sheet 4 351 circle pads 3.6 x 0.79mm.
- Sheet 5 210 transistor pad sets, each circular pad is 2.4 x 0.32mm.
- Sheet 6 45 16 pad DIL IC's spaced at 0.3 x 0.1 inch, each circular pad is 2.16 x 0.38mm.
- Sheet 7 90° bend lines, fifteen bends 2.25mm wide, twelve bends 3.0mm wide.
- Sheet 8 8 rows of 68 pairs of pads with 'between-pad' tracks, pads are 2.54mm diameter.
- Sheet 9 77 sets of 8 pads 1.6 x 0.34mm with through tracks for DIL IC's.
- Sheet 10 0.1 inch spaced edge connector fingers, 12 rows of 32 fingers.
- Sheet 11 21 straight lines 170 x 0.65mm.
- Sheet 12 90° bend lines, 24 bends 0.65mm thick, 24 bends 1.61mm thick.
- Sheet 13 33 sets of DIL IC pads with leads and offset holes.
- Sheet 14 7 straight lines 170 x 3.0mm, 8 straight lines 170 x 2.25mm.

The kit contains one each of all of the 14 sheets listed.

DRAWING EQUIPMENT

Templates

Type 116: A template for circles from 1 to 5mm in 0.5mm steps and circles from 5 to 35mm in 1mm steps. The template is made from transparent tinted plastic and is marked with metric and imperial units, and centre guide lines. Size 240 x 120 x 1.2mm.

Type 175: Flowcharting template incorporates 32 of the most commonly used computing/data preparation symbols and is made from transparent tinted plastic. Size: 190 x 100 x 1.2mm.

A range of green-transparent, 1mm thick butyrate, templates with raised bosses on the underside, to prevent ink spread.

Type 1139S: Electronic: Containing logic and electronic symbols in two sizes to suit 0.1 or 0.2in. grids. Size 165 x 95mm.

Type 1173S: Square: With 34 squares from side length 2 to 35mm, with centre lines. Size 242 x 125mm.

Type 7857: Lettering: Upper case, numbers and arrow heads in 3.5, 5 and 7mm heights. Size: 250 x 60mm.

Type 1170S: Combination: A useful collection of circles, hexagons, squares, and triangles for layouts. Size: 130 x 87mm.

Order Code	Type	Price each
RC22Y	116 Circle	£3.65
RC23A	175 Flowchart	£2.99
RC36P	1139S Electron	£10.95
RC37S	1173S Square	£10.45
RC38R	7857 Letter	£10.49
RC39N	1170S Combi	£6.95

Protractor

Linex

A 180° protractor, made of transparent tinted plastic, with clockwise and anti-clockwise markings and accessible centre point. 100mm diameter.

Order Code	Type	Price each
RC24B	Protractor	89p

Set Squares

A range of high quality squares made from transparent tinted plastic

Type	Angle	Rule length (cm)	Thickness (mm)
625	60°	23.5	2.5
628	60°	26.5	2.752
632	60°	30.5	2.75
425	45°	16.5	2.5
428	45°	18.5	2.75
432	45°	21.5	2.75

Type 216: A 45° set square with a 7-0-7cm rule and 180° protractor, the central zero position of the rule is coincident with the centre of the protractor. Dimensions: longest side: 160mm, thickness: 1.6mm.

Type 1120/10B: An adjustable set square, made from glass-clear Dunilon, with a bevel edge and adjustable from 0 to 45°. The angle can be read from the graduated arch which is precision divided into half-degrees, tangent and secant.

Order Code	Type	Price each
RC26D	Square 625	£1.69
RC27E	Square 628	£1.85
RC28F	Square 632	£1.99
RC29G	Square 425	£1.69
RC30H	Square 428	£1.85
RC31J	Square 432	£1.99
RC25C	Square 216	£1.05
RC40T	1120/10B	£9.99

Rulers

Linex

Type 130 and 140: Transparent tinted plastic rulers with metric scale and hanging hole. Type 130 has a 30cm scale and type 140 has a 40cm scale.

Type S30M1: A 30cm ruler made from crystal-clear acrylic, with metric and imperial scales and a built in non-slip rubber strip.

Order Code	Type	Price each
RC32K	Ruler 130	85p
RC33L	Ruler 140	£1.45
RC41U	Rule S30M1	£4.79

Multipurpose Ruler

A versatile multipurpose ruler with a host of useful features. Convenient for use at school, in the office or the home, for applications that involve the accurate measurement of distances or angles. This ruler is not only for measuring it enables you to draw perfect straight lines due to its unique roller action. The ruler may be moved up or down a fixed distance which, together with its rectifying lines, allows you to draw perfectly parallel lines of any length and distance apart. The ruler section is marked with both metric and imperial graduations. The fixed circle template allows circles of between 1 and 10mm to be easily and quickly drawn. Larger circles are also possible by use of the compass feature. The many features of this compact ruler include ruler, compass, set-square, fixed circle template, protractor and rectifying lines. Various spirograph functions are also possible, which are described in the manual supplied. Overall dimensions of ruler: 150 x 65 x 15mm.

Order Code	Type	Price each
RJ74R	Multipurpose Ruler	£4.99

Pencil Compasses

Linex

Type 76C: For circles up to 390mm, fast acting adjustment screw, supply of leads.

Type 72: Strong, good quality, 140mm compass with knee joint and supply of leads. Suitable for 3.5mm diameter inserts.

Order Code	Type	Price each
RC34M	76C Compasses	£7.75
RC35Q	72 Compasses	£4.99

SPRAY ADHESIVES

Permaglu

A permanent spray adhesive for paper, cardboard, film, wood, metal, glass, rubber, polystyrene and polyurethane. Ideal for exhibition material and layout presentation as it does not age, yellow, stain or soak through documents. Ozone friendly: contains no CFCs. 400ml.

Order Code	Type	Price each
RC42V	Permaglu	£9.89

Softglu

A repositionable spray adhesive for mounting all types of artwork. Does not stain or age. Ideal for most supports: film, paper, bromides, textiles etc. Ozone friendly: contains no CFCs. 400ml.

Order Code	Type	Price each
RC43W	Softglu	£9.89

This process will also allow image transfer directly to film, the result being artwork that can be used with the standard UV photo-etch process. Multiple copies could be produced so that the simultaneous processing of several boards could be achieved if small batch manufacture is intended. The circuit diagram program is similarly easy to use, and offers superb results of publishable standard, although as with the PCB design software the overall quality would depend on the printing device used.

System Requirements

The hardware required to run this software is an IBM PC/XT/AT/386, or a true compatible, running DOS 2.0 (or later), with a minimum of 512k memory and having at least CGA graphics capability.

A maths co-processor is not required. A mouse (Microsoft or equivalent) is not essential but is highly recommended. If a printer is to be used, this should have a 9 or 24-pin print head and compatibility with IBM graphics systems.

The Easy-PC package includes comprehensive instruction manual/tutorial, 5 1/4 in. and 3 1/2 in. program disks, a large symbol library, unlimited free telephone support and any software updates issued within 6 months of the date of purchase.

Order Code	Type	Price each
GL01B B2	Easy PC CAD	£115.99

Seetrex Ranger 1

Features

- ★ Schematic (Circuit Diagram) Entry
- ★ Automatic Net List Generation
- ★ Optional Manual Net List Entry
- ★ Multi-Layer PCB Component and Track Layout
- ★ High Resolution Component Placement
- ★ 16 Track Widths and Pad Sizes
- ★ Expandable Component Outline Library

Ranger 1 is a powerful software package aimed at designing complex printed circuit boards with the greatest of ease. The package consists of two modules: Schematic Capture, including simulation; and PCB Layout. These two packages are designed to use a consistent database structure, ensuring 100% compatibility for data transfer between both modules.

The sophistication of this software does demand somewhat more than basic hardware to operate. You will need an IBM XT/AT, PS2 or equivalent, with 640K-bytes of continuous RAM (not separate 512K blocks); and a fixed or hard drive is essential. The software is supplied on 4x5 1/4 in disks and 2x3 1/2 in disks. The computer also requires the minimum of an EGA graphics card and compatible monitor. A mouse or graphics tablet is also required.

The software is designed to operate in an MS/DOS or OS/2 environment. The output device can be a penplotter emulating HP-GL (Hewlett Packard Graphics Language), a disk file, dot-matrix printer or Gerber file.

Ranger 1 offers the user the means to design printed

circuit boards in a way that is both easy to learn and fast to use. Extensive use is made of menus to lead the operator through the design cycle, menu selection being acted on through either the mouse or a graphics tablet.

A complete spectrum of designs can be produced, from simple, single-sided boards using leaded components, through to multi-layer designs going as far as 13 copper layers and surface mounted devices on both sides.

Specification

Schematic Capture Software

1. Macro generation for commonly used circuits.
2. 2,300 symbols per drawing.
3. Five standard drawing sheet sizes from A5 to A1.
4. Up to 8 drawing sheets per whole drawing.
5. More than 750 symbols per library volume.
6. Up to 100 library volumes.
7. 256 pins per symbol.
8. 3,500 signals per drawing sheet.
9. Signal connectivity retained through all drawing sheets.
10. Automatic generation of net list.
11. Part codes and pin numbers automatically allocated.

PCB Design Software

1. Macro generation for commonly used circuits.
2. 1,400 components per board.
3. Multilayer design up to 16 layers.
4. Extensive component outline library.
5. Complex true component shapes.
6. True track width representation.
7. Component flip for placement on other side of double sided board.
8. Input from ASCII or Futurenet not possible.
9. Imperial or metric scales with a resolution to one thousandth of an inch or 0.01mm.
10. Board can be up to 32 x 32 inches in size.
11. Automatic clearance checking of space between tracks to one thousandth of an inch resolution.
12. Up to 256 pins per component.
13. Interactive component renaming, back annotated to circuit schematic.
14. Automatic security data dump.
15. Silkscreen legends for both sides of board with part code flip-over can be made.
16. Automatic check of artwork against net list.
17. Automatic net reconnection for minimum connection length.
18. Powerful window function for mass editing.
19. 8,000 connections per board.

GL02C B	Ranger 1 PCB CAD	£115.99

THE BEST OF SERVICE

PCB COMPUTER AIDED DESIGN SOFTWARE

Easy-PC

Number One Systems

An extensive Computer-Aided Design (CAD) software package that will produce superb PCB artworks and circuit diagrams. Easy-PC provides very comprehensive features, is very fast and yet using its main features can be learnt within an hour. It is aimed at those who already own an IBM PC/XT/AT or equivalent, still use manual design methods or have been put off changing to a CAD system by the cost of existing software.

Easy-PC permits the design of PCBs of up to 17in. square, with up to 8 track layers and 2 silk screen layers. Drill templates and solder-resist artwork can also be produced with precision and accuracy. Many major component types (including surface mount) are stored in a 'library' and new symbols can be defined if required. Interconnecting tracks of eight different widths and pads of many different shapes and sizes are stored in the library, and can be extracted at any time. Suitable tracks and pads can be found for all major applications, which include signal, logic and power circuits. Components, pads and edge connectors are 'placed' onto a grid (with a resolution of 0.05mm), and interconnecting tracks are 'laid' between them. Track angles can be fixed at 45°, 90° or any user-defined value. The software is menu-driven and can be used with the cursor keys or a mouse. The final design can be output to a penplotter or a dot-matrix printer, and may be reduced or enlarged in scale. If enlarged, then the artwork can be 'photo-reduced' to the correct size with a great improvement in quality, particularly if a dot-matrix printer is used.

RESISTORS Colour code chart on page 639

How To Order Resistors

To each range of resistors that we stock, we have allocated a code letter and in addition for use with the Maplin key call system a special five digit code for any type or value of fixed resistor is determined from the following tables. Table 1 gives the two digit code that determines the type of resistor being ordered. Table 2 selects the three digit number that indicates the value of the resistor in ohms.

NOTE: All Starter Packs are ordered by standard order codes.

Table 1

Type	Description	Code Letter	Digit Code
Carbon Film 1/8 Watt	Micro Res	U	80
Carbon Film 1/3 Watt	Econ Res	B	81
Metal Film 0.6 Watt	Min Res	M	82
Metal Film 0.6 Watt in packs of 10	Min Res in 10's	A	83
Metal Film 2 Watt	2W Res	D	91
Carbon Film 1 Watt	W Res	C	84
Wirewound 2.5 Watt	2.5W W/W	S	92
Wirewound 3 Watt	W/W Min	W	85
Wirewound 7 Watt	7W W/W	L	86
Wirewound 10 Watt	10W W/W	H	87
Wirewound 25 Watt	25W W/W	P	88
High Voltage Resistor	HV Res	V	89
Econ Res 1/4 Watt in packs of 10	Econ Res in 10's	F	93
Econ Res 1/4 Watt in packs of 100	Econ Res in 100's	E	90

NOTE: All resistor Starter Packs are coded as standard order codes.

Table 2

Value	Code	Value	Code	Value	Code	Value	Code
0.1Ω	100	11Ω	125	120Ω	150	1.3kΩ	175
0.12Ω	101	12Ω	126	130Ω	151	1.5kΩ	176

6.8Ω	122	91Ω	147	1kΩ	172	11kΩ	197
8.2Ω	123	100Ω	148	1.1kΩ	173	12kΩ	198
10Ω	124	110Ω	149	1.2kΩ	174	13kΩ	199

Value	Code	Value	Code	Value	Code	Value	Code
15kΩ	200	62kΩ	215	270kΩ	230	1.2MΩ	245
16kΩ	201	68kΩ	216	300kΩ	231	1.5MΩ	246
18kΩ	202	75kΩ	217	330kΩ	232	1.8MΩ	247
20kΩ	203	82kΩ	218	360kΩ	233	2.2MΩ	248
22kΩ	204	91kΩ	219	390kΩ	234	2.7MΩ	249
24kΩ	205	100kΩ	220	430kΩ	235	3.3MΩ	250
27kΩ	206	110kΩ	221	470kΩ	236	3.9MΩ	251
30kΩ	207	120kΩ	222	510kΩ	237	4.7MΩ	252
33kΩ	208	130kΩ	223	560kΩ	238	5.6MΩ	253
36kΩ	209	150kΩ	224	620kΩ	239	6.8MΩ	254
39kΩ	210	160kΩ	225	680kΩ	240	8.2MΩ	255
43kΩ	211	180kΩ	226	750kΩ	241	10MΩ	256
47kΩ	212	200kΩ	227	820kΩ	242		
51kΩ	213	220kΩ	228	910kΩ	243		
56kΩ	214	240kΩ	229	1MΩ	244		

To order a particular resistor simply write the code letter followed by the value, or if using the Maplin key call system use the digit codes.

Examples:

Type	Value	Order Code	Digit Code
Min Res	4.7Ω	M4R7	82 120
Min Res	47kΩ	M47K	82 212
Min Res	4.7MΩ	M4M7	82 252
1 Pack of 10 Min Res	470Ω	A470R	83 164
Wirewound 7W	0.47Ω	L0.47	86 108
100 Econ Res	470kΩ	E470K	90 236

Carbon Film 1/8W

High Stability, Low Noise

Working Voltage (max): 150V
 Tolerance: ±5%
 Power Rating: 1/8W at 70°C
 Temperature coefficient: -300ppm/°C up to 100kΩ rising to -500ppm/°C at 1MΩ

Noise Level: <0.5µV/V
 Dimensions of body: 4.1mm long, 1.8mm dia.

The following values (Ω) only are available:

Value	Code	Value	Code	Value	Code	Value	Code
10Ω	100	100Ω	1k	10k	100k	1M	
15Ω	150	150Ω	1k5	15k	150k		
2.2Ω	220	220Ω	2k2	22k	220k		
3.3Ω	330	330Ω	3k3	33k	330k		
4.7Ω	470	470Ω	4k7	47k	470k		
6.8Ω	680	680Ω	6k8	68k	680k		

To order write 'U' and then the value.

E.g. U4R7, U15R, U330R, U1K, U22K, U680K etc.

Order Code	Type	Price each
U+ Value	Micro Res	3p

Low Cost Metal Film 0.25W Packs of 10/100 Resistors

High stability, low noise. This range of resistors is ideal for use in manufacturing of electronic products where ±5% tolerance is sufficient. Available in packs of 10 or 100 of any 1 value, at a very low price.

Specification

Working Voltage (max.): 250V
 Tolerance: ±5%
 Power Rating: 0.25W @ 70°C
 Temperature Coefficient: ±200ppm/°C
 Dimensions of body: 6.8mm long x 2.5mm dia.

The following values (Ω) only are available:

Value	Code	Value	Code	Value	Code	Value	Code
1Ω	100	100Ω	1k0	10k	100k	1M	
		11Ω	110Ω	1k1	11k	110k	
1.2Ω	120	120Ω	1k2	12k	120k		
		13Ω	130Ω	1k3	13k	130k	
1.5Ω	150	150Ω	1k5	15k	150k		
		16Ω	160Ω	1k6	16k	160k	
1.8Ω	180	180Ω	1k8	18k	180k		
		20Ω	200Ω	2k0	20k	200k	
2.2Ω	220	220Ω	2k2	22k	220k		
		24Ω	240Ω	2k4	24k	240k	
2.7Ω	270	270Ω	2k7	27k	270k		
		30Ω	300Ω	3k0	30k	300k	
3.3Ω	330	330Ω	3k3	33k	330k		
		36Ω	360Ω	3k6	36k	360k	
3.9Ω	390	390Ω	3k9	39k	390k		
		43Ω	430Ω	4k3	43k	430k	
4.7Ω	470	470Ω	4k7	47k	470k		
		51Ω	510Ω	5k1	51k	510k	
5.6Ω	560	560Ω	5k6	56k	560k		
		62Ω	620Ω	6k2	62k	620k	
6.8Ω	680	680Ω	6k8	68k	680k		
		75Ω	750Ω	7k5	75k	750k	
8.2Ω	820	820Ω	8k2	82k	820k		
		91Ω	910Ω	9k1	91k	910k	

To order write 'F' and then the value for a pack of 10, or 'E' and then the value for a pack of 100. E.g. E1R2, E12R, E1K2, E12K, E120K, E1M, etc.

Order Code	Type	Price per pack
F+Value	MF 10 Res Pk	18p
E+Value	MF 100 Res Pk	£1.69

THE BEST OF SERVICE

▶ IT'S A FACT! ◀

For resistors combined in series i.e. R_1 , R_2 , R_3 , etc., the resultant value R is the sum of the value of each resistor i.e.

$$R = R_1 + R_2 + R_3 \text{ etc.}$$

For resistors combined in parallel, the resultant value R is given by the formula:

$$R = \frac{1}{\frac{1}{R_1} + \frac{1}{R_2} + \frac{1}{R_3} + \dots}$$

For two resistors in parallel:

$$R = \frac{R_1 \times R_2}{R_1 + R_2}$$

Carbon Film $\frac{1}{3}W$

High stability, low noise. This much reduced range is maintained to make available a low-cost miniature resistor. For all other values, use our Metal Film 0.6W range for a superior product.

Working voltage (max): 250V
 Tolerance: $\pm 5\%$
 Power rating: $\frac{1}{3}W$ at 70°C
 Noise level: Typical 0.5 $\mu V/V$
 Dimensions of body: 8mm long, 2.8mm dia.
 Only available in 10M Ω .

Order Code	Type	Price each
B10M	Econ Res 10M	3p

Metal Film 0.6W

A 'Universal Resistor' with a superb specification. It may be used as a superior replacement wherever carbon film $\frac{1}{4}W$, $\frac{1}{3}W$ or $\frac{1}{2}W$ are specified since its size is the same as $\frac{1}{3}W$ types, yet it can be run continuously at 0.6W with ambient temperatures up to 70°C, thanks to the highly even thermal characteristics of the ceramic substrate. It is also a superior replacement to most metal oxide and thick film resistors due to its very tight tolerance, $\pm 1\%$, and its low temperature coefficient, only 50ppm. These resistors are also available in packs of ten of any one value at a considerable cost saving.

Working voltage max: 250V
 Tolerance: $\pm 1\%$
 Power rating: 0.6W at 70°C
 Temperature coefficient: 50ppm/°C
 Noise level: Typically 0.01 $\mu V/V$
 Dimensions of body: 6.5mm long, 2.5mm diameter

Note that to make up 'odd' values not stocked, resistor networks may be built and if all the resistors in the network have a 1% tolerance, then the tolerance of the whole network will still be 1% tolerance.

The following values (Ω) only are available:

1 Ω	10 Ω	100 Ω	1k0	10k	100k	1M
	11 Ω	110 Ω	1k1	11k	110k	
1.2 Ω	12 Ω	120 Ω	1k2	12k	120k	1M2

Starter Pack E12

A development pack of Min Resistors containing ten of each of the following values, 10, 12, 15, 18, 22, 27, 33, 39, 47, 56, 68 and 82 Ω , plus all the decades up to 1M Ω . 610 resistors in all.

Order Code	Type	Price each
FA08J	E12 Resistor Pack	£12.99

Starter Pack E24

A development pack of Min Resistors containing ten of each of the values, 1 Ω to 1M Ω as shown in the 'Min Res' table left. 1330 resistors in all.

Order Code	Type	Price each
FA09K	E24 Resistor Pack	£24.99

Starter Pack M Ω Values

A pack of Min Resistors containing ten of each of the following values 1.2M, 1.5M, 1.8M, 2.2M, 2.7M, 3.3M, 3.9M, 4.7M, 5.6M, 6.8M, 8.2M and 10M Ω . 120 resistors in all.

Order Code	Type	Price each
FA10L	Mega Resistor Pack	£6.99

Metal Film 2W

A very high quality metal film resistor that is physically the same size as the 1W resistor, yet has a superior specification.

Specification

Working voltage: 500V
 Tolerance: $\pm 1\%$
 Power rating: 2W at 70°C
 Temperature coefficient: $\pm 50\text{ppm}/^\circ\text{C}$
 Noise level: Typically 0.01 $\mu V/V$
 Dimensions of body: 16mm long, 5.5mm dia.

The following values (Ω) only are available:

100 Ω	1k	10k	100k	1M
120 Ω		12k		
150 Ω	1k5			
180 Ω				
220 Ω	2k2	22k	220k

390 Ω		39k		
470 Ω	4k7	47k	470k	
	5k6			
68 Ω	680 Ω			
82 Ω				

To order write 'D' and then the value.

E.g. D68R, D120R, D1K5, D12K, D470K, D1M, etc.

Order Code	Type	Price each
D+Value	2W Res	10p

Carbon Film 1W

High stability, low noise

Specification

Working voltage: 500V maximum
 Tolerance: $\pm 5\%$
 Power rating: 1W at 70°C
 Temperature coefficient: -180 to -300ppm/°C
 Noise level: <0.3 $\mu V/V$
 Dimensions of body: 16mm long x 5.5mm dia.

The following values (Ω) only are available: 10, 22, 27, 33, 47.

To order write 'C' and then the value.

E.g. C22R, C47R, etc.

Order Code	Type	Price each
C+Value	1W Res	7p

Resistor Colour-Code Calculator

Simply set the three colours on the calculator in the same order as on the resistor and read the value directly. The calculator can be used with any colour-coded resistor and full instructions for use are printed on the reverse of the calculator.

Order Code	Type	Price each

High Voltage Resistor

High stability, low noise metal film resistors.
 Working voltage 1M to 33M: 2500V AC, 3500V DC
 47M: 7000V AC, 10,000V DC
 Tolerance: $\pm 5\%$
 Power rating 1M to 33M: $\frac{1}{2}$ W at 70°C
 47M: 1W at 70°C
 Temperature coefficient: ± 200 ppm/°C
 Noise level: < 0.5 μ V/V
 Dimensions of body,
 1M to 33M: 10mm long
 x 3.7mm dia.
 47M: 18mm long
 x 6.8mm dia.

The following values (Ω) only are available:

1M 2M2 4M7
 10M 15M 22M 33M 47M

To order write 'V' and then the value.

E.g. V1M, V4M7, V22M, V47M etc.

Order Code	Type	Price each
V+Value	V1Mto V33M	20p
V+Value	V47M	49p

HIGH POWER RESISTORS

2.5 Watt Silicone Coated

A very rugged and high quality wire wound resistor with ceramic former and non-inflammable silicone cement coating. Ruggedised welded cap and lead method of construction ensure a high resistance to damage.

Specification
 Power rating at 70°C: 2.5W (3W at 20°C)
 Resistance tolerance: $\pm 5\%$
 Temperature coefficient: 200ppm/°C (max.)
 Maximum element voltage: 100V
 Ambient temperature range: -55°C to +200°C

The following values (Ω) are only available:
 0.03 Ω 0.05 Ω 0.1 Ω 0.22 Ω 0.27 Ω 0.33 Ω 0.47 Ω

To order write 'S' and then the value.

E.g. S0R03, S0R1, S0R47, etc.

Order Code	Type	Price each
S+Value	2.5W W/W Silicone	46p

3 Watt

A range of high quality wirewound resistors sealed in a high insulation cement box. The box is heat and moisture resistant and non-flammable. The resistors are low noise, very stable and have an overload capability of ten times the rated power for 5 seconds. Values over 500 Ω are metal oxide film and these have an overload capability of five times the rated power for 5 seconds.

Power rating: 3W @ 70°C
 Tolerance: $\pm 5\%$
 Temperature coefficient: ± 300 ppm/°C
 Working voltage: 200V (400V peak)
 Dimensions of body: 22 x 8 x 8mm

The following values (Ω) only are available:

0.1 Ω 1 Ω 10 Ω 100 Ω 1k 10k
 15 Ω 150 Ω 1k5 15k
 18 Ω 180 Ω
 0.22 Ω 2.2 Ω 22 Ω 220 Ω 2k2 22k
 0.27 Ω 2.7 Ω 27 Ω
 0.33 Ω 3.3 Ω 33 Ω 330 Ω 3k3
 3.9 Ω
 0.47 Ω 4.7 Ω 47 Ω 470 Ω 4k7
 0.68 Ω 6.8 Ω 68 Ω
 8.2 Ω

To order write 'W' and then the value.

E.g. W0.47, W8.2R, W10R, W100R, etc.

Order Code	Type	Price each
W+Value	W/W Min	23p

7 Watt

A range of high quality wirewound resistors sealed in a high insulation cement box. The box is heat and moisture resistant and non-flammable. The resistors are low noise, very stable and have an overload capability of ten times the rated power for 5 seconds.

Power rating: 7W @ 70°C
 Tolerance: $\pm 5\%$
 Temperature coefficient: ± 300 ppm/°C
 Working voltage: 350V (700V peak)
 Dimensions of body: 35 x 10 x 9mm

The following values (Ω) only are available:

0.1 Ω 1 Ω 10 Ω 100 Ω 1k
 15 Ω
 0.22 Ω 2.2 Ω 22 Ω 220 Ω
 0.27 Ω
 0.33 Ω
 3.9 Ω
 0.47 Ω 4.7 Ω 47 Ω 470 Ω
 5.6 Ω
 0.68 Ω 6.8 Ω
 8.2 Ω

To order write 'L' and then the value.

E.g. L0.47, L8R2, L10R, L100R, etc.

Order Code	Type	Price each
L+Value	7W W/W	30p

10 Watt

A range of high quality wirewound resistors sealed in a high insulation ceramic block. The block is heat and moisture resistant and non-flammable. The resistors are low noise, very stable and have an overload capability of ten times the rated power for 5 seconds. Value 4k7 is metal oxide film and has an overload capability of five times the rated power for 5 seconds.

Power rating: 10W @ 70°C
 Tolerance: $\pm 5\%$
 Temperature coefficient: ± 300 ppm/°C
 Working voltage: 500V (1kV peak)
 Dimensions of body: 48 x 10 x 9mm

The following values (Ω) only are available:

0.1 Ω 1 Ω 10 Ω 100 Ω 1k
 15 Ω
 0.22 Ω 2.2 Ω 22 Ω
 3.3 Ω 33 Ω
 3.9 Ω
 0.47 Ω 4.7 Ω 47 Ω 470 Ω 4k7
 0.56 Ω 5.6 Ω
 6.8 Ω 68 Ω
 8.2 Ω

To order write 'H' and then the value.

E.g. H0.47, H8.2R, H10R, H100R, etc.

Order Code	Type	Price each
H+Value	10W W/W	37p

25 Watt Wirewound

A high quality, high power, wirewound resistor in an aluminium case to aid dissipation, and can be screwed to a chassis or heatsink.

Tolerance: $\pm 5\%$
 Power rating at 70°C: 25W
 Power rating without heatsink: 12.5W
 Minimum heatsink for 25W at 25°C: 4.5°C/W
 Working voltage (max): 550V AC/DC
 Temperature coefficient
 0.47 Ω : 90ppm/°C
 1 Ω to 47 Ω : 50ppm/°C
 100 Ω : 25ppm/°C
 Dimensions: Length: 28mm
 Width: 28mm
 Height: 14.5mm
 Fixing centres: 18.3 x 19.8mm
 x 6BA (M3)
 (2 holes)

The following values (Ω) only are available:

1 Ω 10 Ω 100 Ω
 2.2 Ω
 3.9 Ω
 0.47 Ω 4.7 Ω 47 Ω
 8.2 Ω

(3.9 Ω and 8.2 Ω are stocked for use as dummy load resistors to replace supplement loudspeakers in 4 Ω and 8 Ω systems. They may be built up in series/parallel networks to suit any power system.)

To order write 'P' and then the value.

E.g. P0.47, P8.2R, P10R, P100R etc.

Order Code	Type	Price each
P+Value	25W W/W	£1.65

RESISTOR COLOUR CODE

Note: On all of the colour-coded resistors, the band at one end will be spaced further apart than the others; the resistor should be viewed with this band to the right to correspond with the chart and examples.

4-band codes

Reading from the left, bands 1 & 2 are the significant digits [1st green = 5, 2nd blue = 6].

Band 3 is the multiplier [orange = x1000].

Therefore the value of our example is 56 x 1000 ohms or 56k.

The 4th band indicates the Tolerance [gold = ±5%].

5-band codes

Reading from the left, bands 1, 2 & 3 are the significant digits [1st yellow = 4, 2nd violet = 7, 3rd black = 0].

Band 4 is the multiplier [red = x100].

Therefore the value of our example is 470 x 100 ohms or 47k.

The 5th band indicates the Tolerance [brown = ±1%].

Please note that our Min Res resistors are usually supplied with the 4-Band Code, but with an additional red band to indicate the 50ppm temperature coefficient after the brown 1% tolerance band. This additional band prevents the code being read backwards accidentally, since no value begins red, brown (21--), in the event that the extra large space between the third and fourth bands is hard to identify.

RESISTOR NETWORKS

SIL Arrays

Eight equal value, discrete thick film resistors in a narrow Single In-Line package, with 9 pins spaced at 0.1in. Ideal for use as pull-up/pull-down arrays for a parallel 8-way data bus etc, or anywhere where several commoned resistors are required, but must fit in a very confined PCB layout.

Dimensions of package: 23mm long x 2.5mm thick

Height from PCB: 5.1mm

Working voltage: 100V max

Tolerance: ±2%

Temperature coefficient: ±200ppm/°C

Power rating

(one resistor): 125mW @ 70°C

(whole package): 1W

The following values are available:-

220Ω, 330Ω, 470Ω, 1k, 2k2, 4k7, 10k, 47k, 100k.

Order Code	Type	Price each
RA24B	SIL Resistor 220F	20p

RESISTANCE WIRE

A 1oz reel of 28swg Constantan (55-60% copper, 45-40% nickel) wire suitable for making rheostats etc. Can be used as a thermocouple when twisted with copper wire.

A temperature difference between the wires of approx 25°C gives around 1mV with temperatures in the range 0°C to 50°C. Resistance: 4-2Ω per metre.

Order Code	Type	Price each
BL64U	Constantan 28 swg	£2.99

PRESETS

Sub-Miniature Fully Enclosed Carbon Presets

Citec

A new range of sub-miniature horizontal and vertical mounting linear track presets fully enclosed in a flame retardant plastic housing. The insulated slider can be adjusted from either side by tool with blade 1 to 2.3mm wide. Power rating 0.15W at 40°C. Tolerance ±20% (±30% 2.2MΩ and 4.7MΩ). Enclosure is dust and splash proof. Dimensions 10 x 10.3 x 4.5mm. Vertical type fits flush to pcb (12.1mm overall height from pcb), horizontal type sits 1.5mm proud of pcb (6mm overall height from pcb). Pins require 1.3mm dia. pcb holes. Pin length 4.5mm.

The following values are available in horizontal types: 100Ω, 220Ω, 470Ω, 1k, 2k2, 4k7, 10k, 22k, 47k, 100k, 220k, 470k, 1M, 2M2, 4M7.

Cermet Preset

Citec

A miniature horizontal mounting cermet preset featuring high stability and excellent resolution. It has an integral dust cover, fits 0.1in matrix directly, and may be adjusted by a screwdriver from either side. Linear track only.

Tolerance: $\pm 20\%$. Power rating: 0.3W at 70°C. Max volt: 100V DC or AC. Temperature coefficient: $\pm 200\text{ppm}/^\circ\text{C}$. Dimensions 7.8mm diameter, stands 7.4mm high from pcb. Value is marked on case as shown in brackets.

The following values are available:

100 Ω (101), 500 Ω (501), 1k (102), 5k (502), 10k (103), 50k (503), 100k (104), 1M (105).

WR45Y	Cermet 1M	45p

18-Turn Cermet Preset

Citec

An 18-turn Cermet preset with slipping clutch (23 mechanical turns), end stops and infinite electrical resolution. Power rating 0.75W at 70°C. Max working voltage 315V. Tolerance: $\pm 10\%$. Temperature coefficient: $\pm 100\text{ppm}/^\circ\text{C}$ max.

Values available:

500 Ω , 1k, 5k, 10k, 50k, 100k, 1M

The dust proof and immersion proof case measures 19.3mm x 5mm x 6.6mm high and the terminal pins are at 7.62mm (0.3in) and 5.08mm (0.2in) spacing, the centre pin being offset by 2.54mm (0.1in).

3/8 in. Square 22-Turn Cermet Preset

Citec

A 22-turn cermet preset with slipping clutch (25 mechanical turns) and an audible click at each end of travel to define the ends. This professional quality trimmer is designed for applications where reliability and small size are major considerations. Infinite electrical resolution. Power rating 0.5W at 70°C. Tolerance $\pm 10\%$. Max working voltage 300V. Temperature coefficient: $\pm 100\text{ppm}/^\circ\text{C}$ max

Values available:

1k, 5k, 10k, 50k, 100k, 1M.

The dust proof and immersion proof case measures 9.6 x 4.8 x 10mm high. Drive head stands a further 1.5mm high. Lead length 6.2mm. Pins are in-line on 0.1in. centres.

ROTARY POTENTIOMETERS

Miniature Type

A range of miniature rotary carbon track potentiometers with printed circuit board mounting terminals. Fixing hole required: 7mm. Power rating: 0.2W linear, 0.1W log. Max voltage: 200V linear, 150V log. Overall shaft length 25mm. Linear types are marked 'B' and log types are marked 'A'.

The following values are available with a linear track:

1k, 4k7, 10k, 22k, 47k, 100k, 470k, 1M

The following values are available with logarithmic track:

10k, 47k, 100k, 1M

Order Code	Type	Price each
JM69A	Min Pot Lin 1k	58p
JM70M	Min Pot Lin 4k7	58p
JM71N	Min Pot Lin 10k	58p
JM72P	Min Pot Lin 22k	58p
JM73Q	Min Pot Lin 47k	58p
JM74R	Min Pot Lin 100k	58p
JM75S	Min Pot Lin 470k	58p

JM78K	Min Pot Log 47k	58p
JM79L	Min Pot Log 100k	58p
JM80B	Min Pot Log 1M	58p

Dual Miniature Type

A range of dual miniature rotary carbon track potentiometers with printed circuit board mounting terminals. Fixing hole required: 7mm. Power rating: 0.125W linear, 0.06W log. Max voltage: 200V linear, 150V log. Overall shaft length 20mm. Linear types are marked 'B' and log types are marked 'A'.

The following values are available with a linear track:

10k, 100k

The following values are available with logarithmic track:

10k, 100k

Order Code	Type	Price each
JM81C	Min Dual Pot Lin 10k	99p
JM82D	Min Dual Pot Lin 100k	99p
JM83E	Min Dual Pot Log 10k	99p
JM84F	Min Dual Pot Log 100k	99p

Standard Type

A range of carbon track potentiometers with printed circuit board mounting terminals. Fixing hole required: 10.5mm ($13/32$ in.). Power rating: 0.4W linear, 0.2W log. Max. volt: 500V DC. Tolerance: $\pm 20\%$. Overall shaft length 50mm.

The following values are available with a linear track:

1k, 4k7, 10k, 22k, 47k, 100k, 220k, 470k, 1M, 2M2

Order Code	Type	Price each

Spare Nuts and Washers

Spare nuts and washers to suit the above rotary potentiometers. Available in packs of 10. Size M10.

Order Code	Type	Price each
FP06G	M10 Pot Nut 10 Pk	56p
FP07H	M10 Pot Washer 10 Pk	56p

HIGH POWER POTENTIOMETERS

Cermet Type

Citec

A high quality cermet element rotary potentiometer for panel mounting. The cermet element gives excellent electrical and thermal stability, reliability, low noise and long life. Linear track.

Power rating: 2W at 70°C
Tolerance: ±10%
Working voltage: 315V max

Dimensions: Body diameter 19mm, height 12.7mm max. Bush 3/8 in. (9.5mm) diameter, flattened on opposing sides to 8.6mm, 10mm long. Requires 3/8 in. (9.5mm) diameter panel cut-out. Spindle: standard 1/4 in. (6.35mm), 15mm long. Pins 4mm long. Centre pin is wiper.

The following values are available: 47Ω, 100Ω, 470Ω, 1k, 4k7, 10k, 47k, 100k, 1M.

Order Code	Type	Price each
YP02C	High Power Pot 47R	£3.89
YP03D	High Power Pot 100R	£3.89
YP04E	High Power Pot 470R	£3.89
YP05F	High Power Pot 1k	£3.89
YP06G	High Power Pot 4k7	£3.89
YP07H	High Power Pot 10k	£3.89
YP08J	High Power Pot 47k	£3.89
YP09K	High Power Pot 100k	£3.89
YP10L	High Power Pot 1M	£3.89

Loudspeaker Volume Controls

Wirewound controls with 6.3mm (1/4 in.) dia. shaft, 9.5mm long. Standard 3/8 in. hole mounting. Ideal for use as a loudspeaker volume control. Available in four values: 20Ω, 50Ω, 100Ω, and 200Ω. Power rating: 3.5W.

Order Code	Type	Price each
FX40T	L/S Control 20R	£1.50
FX97F	L/S Control 50R	£1.50
FX98G	L/S Control 100R	£1.50
FX99H	L/S Control 200R	£1.50

SLIDE POTENTIOMETERS

Miniature Dual Gang

A range of dual miniature slide track carbon potentiometers with printed circuit board mounting terminals. Potentiometer measures 60mm long x 9mm wide with a 45mm track length. Height above PCB (excluding slide tang) 6.5mm. The pin spacing is not compatible with 0.1 inch matrix board. The potentiometer may be attached to a front panel using two M2 bolts, fixing centres 56mm. Slide tang is 15mm long. Slide Knob B (YG09K) fits the tang on these sliders. Linear types are marked 'B' and log types are marked 'A'.

The following values are available with a linear track: 10k, 100k

The following values are available with logarithmic track: 10k, 100k

Order Code	Type	Price each
JM85G	Min Slide Lin 10k	99p
JM86T	Min Slide Lin 100k	99p
JM87U	Min Slide Log 10k	99p
JM88V	Min Slide Log 100k	99p

THERMISTORS

A range of negative temperature coefficient thermistors. The resistance R_{T_1} of a thermistor at a temperature T_1 °K can be found by inserting the resistance R_{T_2} at a given temperature T_2 °K in the following equation:

$$R_{T_1} = R_{T_2} \exp\left(B \left(\frac{1}{T_1} - \frac{1}{T_2} \right)\right)$$

where B is the characteristic temperature for any given thermistor in °K and e is the exponential factor (= 2.7183). °K = °C + 273.

Disc Thermistor

Philips

Disc type lacquer coated thermistor suitable for use in temperature measurement, control and compensation applications.

Diameter: 5.0mm (±0.3mm)
 Power (max): 0.5W $T_{amb} = 25^\circ\text{C}$
 Dissipation factor: 8.5mW/°C
 Temperature range: -25°C to +125°C reducing to 0°C to +55°C at max. power

Tolerance: 10%

R at 25°C (±20%)	B(°K)	R at 125°C (approx)	Equivalent
1500Ω	3975	52.5Ω	VA1098

Order Code	Type	Price each
UL82D	Thermistor 1500R	60p

Bead Thermistors

Philips

Bead type thermistors for general applications including temperature measurement and compensation.

Tolerance: ±5%
 Power (max): 250mW
 Dissipation factor: 7mW/°C
 Response time: 1.2 secs
 Thermal time constant: 11 secs
 Temperature range: -40°C to +125°C reducing to 0° to 55°C at max power

R at 25°C	B(°K)	R at 100°C (approx)	R at 0°C (approx)
4k7	3977	318.4Ω	15.28kΩ
15k	3740	1.19kΩ	45.13kΩ
47k	4090	2.94kΩ	155.6kΩ
150k	4370	7.73kΩ	534.9kΩ

150k	Brown	Green	Yellow	Gold

Order Code	Type	Price each
FX21X	Thermistor 4k7	69p
FX22Y	Thermistor 15k	69p
FX42V	Thermistor 47k	69p
FX43W	Thermistor 150k	69p

Bead Thermistor Type R53

Directly heated bead type thermistor housed in evacuated glass bulb, designed for operation at very low power levels owing to its exceptionally high sensitivity and is thus particularly suitable for use in transistor circuits.

Length: 25.4mm (max)
 Diameter: 4mm (approx)
 Power at 20°C max: 3mW
 Power sensitivity: 62.5°C/mW
 Dissipation factor: 0.016mW/°C
 Max. operating temperature: 175°C (ambient), 220°C (bead)
 R at 20°C (±20%): 5000Ω
 R at 25°C (±20%): 4200Ω
 B (°K): 3100

Typical resistance at 3mW dissipation in free air at 20°C: 63Ω.

Order Code	Type	Price each
FX62S	Thermistor R53	£12.99

100k Bead Thermistor

Siemens

A 100k bead thermistor for general applications, in particular, accurate temperature measurement. The case has a black epoxy resin coating and tinned leads.

Specification

Tolerance: ±2%
 Power (max.): 350mW at 25°C 220mW at 60°C
 Dissipation factor: 3.5mW/K
 Heat capacity: 40mJ/K approx.
 Thermal time constant (air): 12secs approx.
 Temperature range: -55°C to +155°C
 B value: 4450°K
 Approx. resistance at 25°C: 100kΩ
 100°C: 4.77kΩ
 0°C: 352.4kΩ

The Entire Maplin Stock Range At Your Fingertips!

Yes, the state-of-the-art Maplin key call system means that you can now place your orders directly into our computer, 24 hours a day, seven days a week by simply using your telephone keypad or a pocket tone dialler.

See back pages of this catalogue for more details . . .

Six different designs to choose from to suit those special occasions.

Each Gift Card is approximately 15cm (6in.) x 20cm (8in.) and is printed in full colour and costs just 30p each (with envelope).
 Maplin GIFT TOKENS are available in £5 and £10 denominations and can be ordered by mail or purchased direct from one of our many shops.

Please Note: There is no handling or

postage charge when ordering cards or tokens, normal charges apply when tokens are redeemed.

Maplin GIFT TOKENS cannot be refunded for cash. The voucher is not transferable to any other retail outlet other than Maplin Electronics.

All prices include VAT. Valid in the UK only.

"Thank You for solving my present buying problem!"

Transistor Cases (all viewed from below unless stated)

IMPORTANT NOTE

With many of the ICs shown in this section of the catalogue we include an application circuit taken from the manufacturer's data sheet. These circuits are *not* intended to be complete projects in any way, but are to give the *experienced* constructor a basis on which to design circuits for his own application. The only assistance we can provide regarding these application circuits is to supply the customer with the relevant

data sheet for that particular IC.

We can supply data sheets for any of the ICs we stock, priced 80p each. Although some of these may only be a couple of sheets giving electrical specifications, the vast majority will usually contain a good deal of information on the use of the IC, including example application circuits. To order a data sheet for a particular IC, proceed as follows: in the descriptions box on your Order Coupon write 'Data Sheet for' and then the device number of

the IC you want information for, e.g. 'Data Sheet for NE555'. In the Order Code column write 'DS00A', and then the quantity, price, etc. as usual.

In addition, please note that we cannot provide data sheets for smaller devices such as diodes, transistors, triacs, etc. We will have included any relevant information we have for such a device in this catalogue. The only other source of information for these will be semiconductor data books, see Books section.

The abbreviations under the heading 'Type No. and Manufacturer' are identified as follows:

FA—Fagor GI—General Instruments HIT—Hitachi ME—Microelectronics MOT—Motorola NEC—NEC NSC—National Semiconductor PC—Philips
SEM—Semelab SIE—Siemens SLX—Siliconix ST—SGS-Thomson TFK—Telefunken TI—Texas Instruments ZET—Zetex

Gain Groups (BC107, BC108, BC109, BC168, BC169)

The above transistor types are all available in different gain (h_{FE}) groups. For example, if the design parameter calls for the transistor to have a gain of between 110 and 800, this will be divided into groups e.g. group A – 110 to 220; group B – 200 to 450; group C – 420 to 800. The transistors are then marked with their gain group after the type number (e.g. BC108C). Transistors of the above types that have no suffix letter are ungraded and therefore where the plain-numbered device is specified a graded transistor will always, without qualification, do exactly the same job.

Table 2 Medium Power Low Frequency Silicon Transistors

Order Code	Type No. and Manufacturer	Price Each	Case Style	Material	V_{CE0} (max) V	V_{CB0} (max) V	V_{EB0} (max) V	I_C (max) mA	P_{TOT} (max) mW	Typ h_{FE} @ I_C	Typ f_T (MHz)	Application

Table 11 Programmable Unijunction Transistor, S.C.S. and Thyristor Tetrode

Order Code	Type No. and Manufacturer	Price Each
QF31J	BRY39 ME	£1 16

BRY39 (equivalent to 2N6027 and D:3T1) may be used in any of three modes.

1. Programmable Unijunction Transistor: Applications include motor control, oscillators, relay replacement, timers, pulse shaper, trigger device and other switching applications. When used as a P.U.T. the cathode gate (G_k) is not used.

V _{GAA} (max)	Anode gate to anode voltage:	70V
I _A (max)	Anode current DC:	250mA
I _p	Peak point current (V _S = 10V, R _G = 10kΩ):	<5μA
I _v	Valley point current (V _S = 10V, R _G = 10kΩ):	>50μA
I _{ARM} (max)	Repetitive peak anode current:	2.5A
I _{GAAO} (max)	Anode gate to anode leakage current @ V _{GAA} = 70V:	10nA
I _{GAKS} (max)	Anode gate to cathode leakage current @ V _{GAK} = 70V:	100nA

2. Silicon Controlled Switch: It is an integrated PNP-NPN transistor pair, with all electrodes accessible. Applications include numerical indicator tube drivers and other switching applications.

	PNP transistor	NPN transistor
V _{CEO} (max)	-70V	70V★
V _{CBO} (max)	-70V	70V★
V _{EBO} (max)	-70V★	5V★

I _E (max)	DC emitter current:	175mA I _{ERM}
Max repetitive peak emitter current:		2.5A
P _{TOT}	Max total dissipation:	275mW
V _{AK}	Forward on-state voltage:	<1.4V
I _H	Holding current:	<1mA
t _{on}	Turn on time:	<0.25μs
t _q	Turn off time:	<5μs
h _{FE}		>0.25 @ I _E = 1mA; >50 @ I _C = 10mA
f _T		300MHz (typ)

3. Thyristor Tetrode: Applications include relay and lamp drivers, sensing network for temperature and other switching applications. Anode to cathode DC off-state voltage (V_D) and instantaneous total value of reverse voltage (V_R): 70V max.

Max DC on-state current:	205mA	
On-state voltage:	1.4V	
Peak reverse current @ V _R = 70V:	1nA (typ); 100nA (max)	
Holding current (max):	250μA	
	Cathode gate to cathode	Anode gate to anode
Voltage that will trigger all devices (V _D = 6V):	V _{GkT} : 0.5V (min)	V _{GAT} : 1V (min)
Reverse peak voltage:	V _{GkM} : 5V (max)	V _{GAM} : 70V (max)
Current that will trigger all devices (V _D = 6V):	I _{GkT} : 1μA (min)	I _{GAT} : 100μA (min)
Forward peak current:	I _{GkM} : 100mA (max)	I _{GAM} : 100mA (max)

★ Higher voltages are permissible in numerical indicator tube driver circuits.

Table 12 Signal Diodes

Order Code	Type No. and Manufacturer	Price Each	Construction	Case Style	PIV V	Max I _F (average)	Max reverse current I _R (μA @ V)	Application			
QQ13P	BAR28 ST	45p	Schottky barrier	D035	70V	15mA	<200nA @ 50V	Low forward voltage (V _F = 410mV at 1mA), suitable replacement for germanium, very fast >10GHz

Transient Suppressor

SA40A - For this product see P6KE47A
 (Order Code QY71N) under Table 21.

Table 21 Transient Voltage Suppressors

Order Code	Type No. and Manufacturer	Price Each	Case Style	V _R	V _{BR} (min)	V _{BR} (max)	Clamping Voltage (max)	Peak Pulse Current (max)
CP77J	P6KE6.8 ST	68p	TS7	5.8V	6.45V	7.48V	10.5V	57A
CP78K	P6KE15 ST	56p	TS7	12.8V	14.3V	16.5V	21.2V	28A
QY71N	P6KE47A ST	48p	TS7	40.2V	44.7V	49.4V	64.8V	9.3A
CP79L	1.5KE6.8 ST	£1.12	TS1	5.8V	6.45V	7.48V	10.5V	143A
CP80B	1.5KE16 ST	£1.36	TS1	13.6V	15.2V	17.6V	22.5V	67A
CP81C	1.5KE18 ST	£1.36	TS1	15.3V	17.1V	19.8V	25.2V	59.5A

P6KE types are rated at 600W peak pulse power, while 1.5KE types are rated at 1500W peak pulse power. All types are unidirectional and should be connected with the band on the body to positive; choose the type with V_R equal to or above the voltage in the circuit. Clamping voltage is maximum voltage at maximum peak pulse current and this and peak pulse power is for a current waveform where the peak is reached in 10µs and has decayed to 50% of its peak value in 1ms. Devices may be connected in series to increase the voltage and in parallel to increase the peak pulse handling.

Note: In most cases, a thyristor having a higher PIV than the one specified can be used. Many thyristors use a suffix letter to indicate the PIV and the international standard is as follows:
 A = 100V; B = 200V; C = 300V; D = 400V; E = 500V; F = 50V; M = 600V; N = 800V; P = 1000V; S = 700V; Y = 30V.

74 and 74LS Series TTL

The newer 74LS series offers a superior performance to standard 74 series in most respects. However, both ranges are now gradually being superseded by the 74HC series. All inputs on 74 and 74LS have clamping diodes which stop voltages exceeding -1.5V, providing current into the input does not exceed -12mA (74 series) or -18mA (74LS series). Unused inputs should be connected to Logic '1' level (V_{CC}) via a 1k resistor. Up to 25 unused inputs may be connected to the one resistor. A 0.1µF ceramic capacitor should be connected between V_{CC} and ground close to the IC. If several IC's are in use one capacitor is required for every five IC's approx. and they should be distributed evenly amongst the IC's. Counters and shift registers should have one 0.1µF capacitor for every two IC's connected very close to the IC's. Buffers and line drivers may require even more decoupling.

4000 Series CMOS

This range is now gradually being superseded by the 74HC series.

Handling

Although all CMOS devices have input protection diodes the protection only operates up to around 4000V (800V for 4016 and 4066) and since for example the static voltage generated in the human body by walking on a nylon carpet can easily exceed 10,000V, it is obvious that it is extremely easy to totally destroy CMOS devices just by touching the pins. Therefore never remove the short circuit on the pins of the device as delivered to you until it is to be used; then work on a metal tray with the tray connected to earth and put a metal strap on your wrist and connect this to earth. Do not wear nylon clothing when handling CMOS. Always use DIL sockets; never solder directly to the IC.

B and UB Types

B types have buffered outputs whilst UB types are unbuffered and therefore ideal for analogue applications.

B Types

AC gain (gates)
68dB approx

UB Types

28dB (V_{CC} = 5V)
23dB (V_{CC} = 10V)
18dB (V_{CC} = 15V)

AC bandwidth (gates)

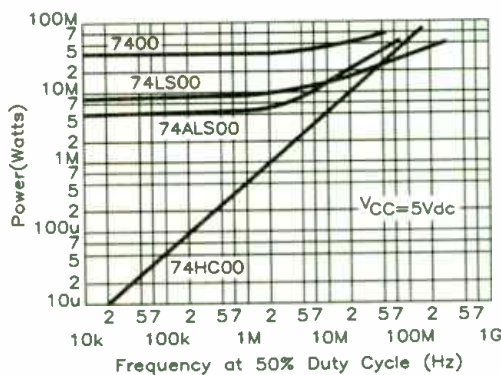

230kHz (V_{CC} = 5V) 710kHz (V_{CC} = 5V)
280kHz (V_{CC} = 10V) 885kHz (V_{CC} = 10V)

295kHz (V_{CC} = 15V) 2.8MHz (V_{CC} = 15V)

In addition 'UB' (unbuffered output) gates have lower propagation delay times than 'B' types. They have a slightly worse noise immunity margin, but they do not suffer from output oscillations when the input is a slow ramp voltage unlike the 'B' types. Unused inputs must be connected to V_{CC} or V_{SS} depending on logic function and not left floating.

74HC and 74HCT Series

The 74HC series is recommended for all new designs. It is pin-for-pin compatible with respective types in other ranges. For example 74HC00 is a direct replacement for 7400 or 74LS00, and 74HC4016 is a direct replacement for 4016B. The fan-out table shows how families may be mixed, but note that the input transition levels on 74HC are different from TTL. Therefore if you are driving 74HC devices from TTL connect a Min Res 4k7 pull-up resistor between the TTL output and V_{CC}. Alternatively you can directly connect a 74HCT device. These devices have input characteristics identical to TTL. However, in order to obtain these characteristics the ultra high input noise immunity of 74HC devices is much reduced and maximum operating frequencies are also lower.

Fan-out

Driving device	Number of IC's that can be driven			
	74	74LS	74S	CMOS 74HC(T)
74LS	5	20	4	∞
74LS buffers	15	60	12	∞
74	10	40	8	∞
74 buffers	30	60	24	∞
74HC(T) buffers	4	15	4	∞
CMOS (15V)	-	1	-	50

∞ = unlimited number of devices

In general, connect a 0.01µF ceramic capacitor between V_{CC} and ground as close as possible to each

Continued on next page.

Five ranges of Digital IC's are available: standard TTL, low-power LSTTL, CMOS, High Speed (HC) CMOS and Advanced High Speed (AC) CMOS. For all new designs we recommend 74HC CMOS which combines the best qualities of the other ranges. It has an operating speed as high as LSTTL. For even higher speeds 74AC CMOS is recommended. It has operating speeds faster than ALS TTL and FAST, and both HC and AC have power consumption similar to 4000-series CMOS.

Comparison of Digital IC Families

In the following table (a) is the power dissipation per gate (mW) at static and (b) is at 100kHz. The propagation delay time (ns) is shown in (c). Maximum clock frequency (MHz) is row (d) whilst the speed power product (pJ) at 100kHz is row (e). The minimum output drive (mA) for standard outputs when (V_O = 0.4V) is shown in (f) and for high current outputs it is shown in (g). Fan-out (LS loads) for standard outputs are in row (h) and for high current outputs in row (i). And finally, the maximum input current (mA) when (V_{IN} = 0.4V) is given in row (j).

	74AC	74HC	CMOS	TTL	LSTTL
(a)	0.0000025	0.0000025	0.001	10	2
(b)	0.17	0.17	0.1	10	2
(c)	5	10	105	10	10
(d)	120	40	12	35	40

★ All prices include VAT. A, B etc. indicates there is an additional carriage charge for this item: see end of catalogue for details. ★

Continued from previous page.

IC and a 0.1µF ceramic capacitor every 20 IC's, evenly distributed across the board. All 74HC and 74HCT devices should be very carefully handled. The details given in 'Handling' for 4000 series CMOS applies to this range also.

Unlike the other logic ranges, the current drawn by 74HC(T) devices from the power supply is almost directly proportional to the operating frequency. When quiescent, the current is almost 0, but at frequencies of about 5MHz and over, the current is about the same as 74LS devices.

Note: In the following, tables show only those major parameters that differ from those given in the General Parameters table, or those that permit comparison between types. Propagation delays are for load capacitances of 15pF unless stated. All values are typical at 25°C.

General Parameters (at 25°C)

	74 Series			74LS Series			4000B Series				4000UB Series

SUBSECTION 25 NAND GATES

Quad 2-Input

A range of ICs with four 2-input NAND gates in a single package. The '00' has a standard totem-pole output, whilst the '03' has open-collector outputs. A CMOS version is available in buffered and unbuffered styles. The '00' type is also available in the 74HC and 74HCT series.
Note: In table where LS differs from standard types, values are shown thus: standard/LS.

74 and 74LS Types

	00	LS03
High level output current (max)	-400µA	250µA/100µA
Low level output current (max)	16mA/3mA	16mA/8mA
Supply current avge per gate	2mA/0.4mA	2mA/0.4mA
Propagation delay low to high	11ns/9ns	35ns/17ns
high to low	7ns/10ns	8ns/15ns

The maximum input currents of the 74S03 also differ from standard TTL as follows:
High level input current: 50µA
Low level input current: -2mA

CMOS and 74AC Types

	4011B	4011UB	74AC00
Propagation delay at 5V	125ns	90ns	5ns
10V	50ns	50ns	
15V	40ns	40ns	

HC and HCT Types

	74HC00	74HCT00
Propagation delay at 5V:	8ns	12ns

Also available in SMD: type 74HC00M1R (AE83E)
type 74HCT00M1R (AE40T)
type HCF4011BM1 (AB26D)

4011B, 4011UB

7400, 74LS00, 74HC00, 74HCT00, 74LS03

SUBSECTION 26 AND GATES

Quad 2-Input

A range of ICs with four 2-input AND gates in a single package. The '08' has standard totem-pole outputs. A CMOS version is available and type '08' is available in 74HC and 74HCT series.

74 and 74LS Types

	7408	74LS08
High level output current (max)	-800µA	-400µA
Low level output current (max)	16mA	8mA
Supply current avge per gate	3.88mA	0.85mA
Propagation delay low to high	17.5ns	8ns
high to low	12ns	10ns

7408, 74LS08, 74HC08, 74HCT08

4081B

CMOS 74HC, HCF and 74HCT Types

	4081B	74HC08	74HCT08
Propagation delay at 5V	160ns	7ns/12ns	13ns
at 10V	65ns	(low to high/ high to low)	
at 15V	50ns		

Also available in SMD: type M74HC08M1R (AE43W)
type M74HCT08M1R (AE86T)
type HCF4081BM1 (AB07H)

SN=Ti HCF/M=ST

Order Code	Type	Price each
QY59P	T74LS260B1N	38p

Triple 3-Input

Three 3-input NOR gates in a single package available in LS, CMOS and HC types.

High level output current (max) -400µA
Supply current avg per gate 0.9mA
Propagation delay low to high/high to low 5V 10ns/10ns
Propagation delay at low to high/high to low 5V 160ns 8ns
10V 65ns
15V 50ns

4025B

74LS27, 74HC27

Also available in SMD: type HCF4025BM1 (AB41U)

SN=Ti HCF=ST

Order Code	Type	Price each

UB13P	SN74HC27N	50p
QX14Q	HCF4025BEY	39p
AB41U	HCF4025BM1	36p

8-Input

One 8-input NOR gate in a 14-pin CMOS package.

Propagation delay 5V 200ns
10V 80ns
15V 60ns

4078B

HCF=ST

Order Code	Type	Price each
QX28F	HCF4078BEY	39p

SUBSECTION 28 OR GATES

Quad 2-Input

Four 2-input OR gates in a single package available in standard TTL, LS, CMOS, HC and HCT types.

	7432	74LS32
High level output current (max)	-800µA	-400µA
Supply current avg per gate	4.75mA	1mA
Propagation delay low to high/high to low 5V	10ns/14ns	14ns/14ns
Propagation delay low to high/high to low 10V	160ns	10ns
15V	65ns	13ns

Also available in SMD: type M74HCT32M1R (AE91Y)
type M74HC32M1R (AE56L)
type HCF4071BM1 (AB57M)

7432, 74LS32,
74HC32 Standard
74HCT32

SUBSECTION 29 COMPLEX GATES

Quad Exclusive-OR

Four 2-input exclusive-OR gates in a single package. Type '86' has standard totem-pole outputs. CMOS and HC types are also available.

74LS Type	74LS86
High level output current (max)	-400µA
Supply current avg	6.1mA
Propagation delay low to high	20ns
high to low	13ns

CMOS and 74HC Types

	4070B	74HC86
Propagation delay at 5V	175ns	8ns/9ns
at 10V	75ns	(low to high/ high to low)
at 15V	50ns	

4070B is a direct pin-for-pin replacement for 4030B

74HC86 Standard

4070B Standard

74LS86

Also available in SMD: type M74HC86M1R (AE81C)
type HCF4070BM1 (AB04E)

SN=Ti MHCF=ST

Order Code	Type	Price each

Quad Exclusive-NOR

Four 2-input exclusive-NOR gates in a single package. Available in CMOS and HC types. The 74HC266 has open drain outputs.

	4077B	
Propagation delay at 5V	175ns	
10V	75ns	
15V	50ns	
	74HC266	
Propagation delay at 5V	8ns/9ns	(low to high/ high to low)

74HC266 Open-drain

4077B

Also available in SMD: type HCF4077BM1 (AB06G)

SN=Ti HCF=ST

Order Code	Type	Price each
UB71N	SN74HC266N	£1.38
QW47B	HCF4077BEY	39p
AB06G	HCF4077BM1	36p

4-Bit AND-OR Selector

A multi-function 16-pin package which may be used as a 4-bit AND-OR selector, a quad 2-channel data selector or a quad exclusive-NOR gate. With pins 9 and 14 at 0, the outputs will be 0. With pin 9 at 0 and pin 14 at 1, the level on pins 1, 3, 5, 7 will appear on pins 13, 12, 11, 10 respectively. With pins 9 and 14 both at 1, the device will perform an exclusive-NOR function.

4019B

	4019B
Propagation delay at 5V	250ns
10V	115ns
15V	90ns

The 4019B is a plug-in replacement for the 4519B in most applications.

Also available in SMD: type HCF4019BM1 (AB27E) HCF=ST

Order Code	Type	Price each
QW17T	HCF4019BEY	49p
AB27E	HCF4019BM1	45p

SUBSECTION 30 SCHMITT TRIGGERS

Quad 2-Input NAND

Four 2-input NAND Schmitt triggers in a single package, available in LS, CMOS and HC types.

	74LS132	
Positive going threshold voltage 5V	1.6V	
Negative going threshold voltage 5V	0.8V	
Supply current avge per gate	1.76mA	
Propagation delay at 5V	15ns	
	4093B	74HC132
Positive going threshold voltage 5V	2.7V	2.9V
10V	4.43V	
15V	6.03V	
Negative going threshold voltage 5V	2.44V	1.7V
10V	4.05V	
15V	5.53V	
Propagation delay at 5V	125ns	13ns
10V	50ns	
15V	40ns	

74LS132, 74HC132

4093B

Also available in SMD: type M74HC132M1R (AE72P) type HCF4093BM1 (AB08J)

Order Code	Type	Price each
YF51F	SN74LS132N	60p

Order Code	Type	Price each
QX45Y	SN7413N	£1.65

Hex Inverters

7414, 74LS14, 74HC14, 40106B,

Six Schmitt trigger inverters in a single package, available in standard TTL, LS, CMOS and HC types.

	7414	74LS14
Positive going threshold voltage 5V	1.7V	1.6V
Negative going threshold voltage 5V	0.9V	0.8V
Supply current avge per gate	5.1mA	1.72mA
Propagation delay at 5V	15ns	15ns
	40106B	74HC14
Positive going threshold voltage 5V	2.9V	2.8V
10V	5.9V	
15V	8.8V	
Negative going threshold voltage 5V	1.9V	1.7V
10V	3.9V	
15V	5.8V	
Propagation delay at 5V	140ns	12ns
10V	70ns	
15V	60ns	

The high level output current (max) for 7414 is -800µA.

Also available in SMD: type M74HC14M1R (AE46A) type HCF40106BM1 (AB34M)

SN=Ti M/HCF=ST

Order Code	Type	Price each

SUBSECTION 31 HEX BUFFERS

Inverting

A range of ICs with six inverting buffers in a single package. The '04' has standard totem-pole outputs whilst the '05' and '06' have open-collector outputs. In addition the '06' output can handle voltages up to 30V and has buffer-type outputs permitting higher output currents. The HCU04 is a unique device in the HC range as it is unbuffered and designed primarily for linear applications requiring a high input impedance amplifier, and for high-speed oscillators. The HCT04 combines LSTTL speed with true CMOS low power consumption. The 4069 has standard inputs and outputs while the 4049 has high current outputs and on both the 4049 and HC4049 voltages up to 15V may be applied to the inputs regardless of the supply voltage. The 4502 has a strobe facility and 3-state outputs. The 4049 is capable of driving two TTL inputs.

74 and 74LS Types

Note: Where LS differs from standard types, values are shown thus standard/LS.

	04
High level output voltage	3.4V
High level output current (max)	-400µA
Low level output current (max)	16mA/8mA
Supply current avge per gate	2mA/0.4mA
Propagation delay low to high	12ns/9ns
high to low	8ns/10ns

Fax your orders to:

Non-Inverting

A range of ICs with six non-inverting buffers in a single package. The '07' has open-collector outputs. The '07' can handle voltages on the output up to 30V and has buffer-type outputs permitting higher output currents. The LS365 has 3-state outputs, and has all six inverter outputs controlled from a single 2-input AND gate. The 4050 has high current outputs and on both the 4050 and HC4050 voltages up to 15V may be applied to the inputs regardless of the supply voltage. The 4503 has two separate 3-state control inputs, one controlling four and one controlling the other two outputs.

74 Type	7407
High level output voltage	30V
High level output current (max)	250µA
Low level output current (max)	40mA
Supply current avg per gate	4-17mA
Propagation delay low to high	6ns
high to low	20ns

74LS Type	LS365
High level output current (max)	2.6mA
Low level output current (max)	24mA
Supply current avg	14mA
Propagation delay low to high	10ns
high to low	9ns

SUBSECTION 33 OCTAL BUFFERS

Buffers and Line Drivers

74LS240

74HC241

A range of octal buffers. Type '240' is inverting whilst '241' and '244' are non-inverting. In these three devices, the eight buffers are divided into two groups of four with a separate output-enable input for each group. In the '240' and '244' the outputs are enabled when pins 1 and 19 are low whilst in the '241' the outputs are enabled with pin 1 low and pin 19 high. Type '541' has all eight buffers controlled from one active-low 2-input AND gate. The '541' is non-inverting. All types have buffer-type outputs to permit higher output currents.

Continued on next page.

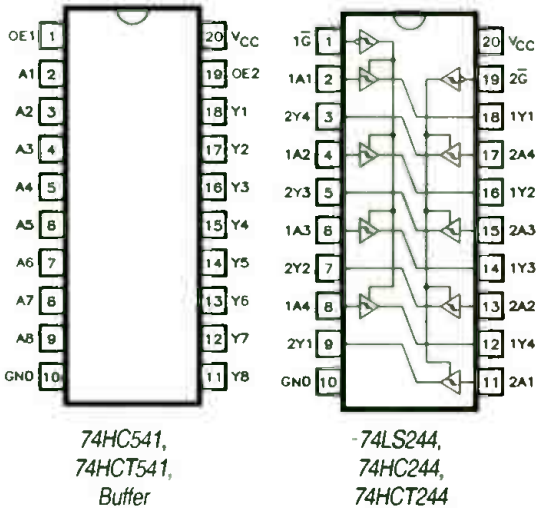

Continued from previous page.

74LS Types

	LS240	LS244
High level output current (max)	15mA	15mA
Low level output current (max)	24mA	24mA
Supply current avge	29mA	32mA
Propagation delay low to high	9ns	12ns
high to low	12ns	12ns

74HC Types

Dual J-K Type

A range of ICs each containing two separate J-K flip-flops. Types '76' and 4027 offer preset (set) and clear (reset) inputs whilst type '73' has only clear (reset). All are negative-edge-triggered except 4027.

SUBSECTION 36 LATCHES AND REGISTERS

Set-Reset Latches

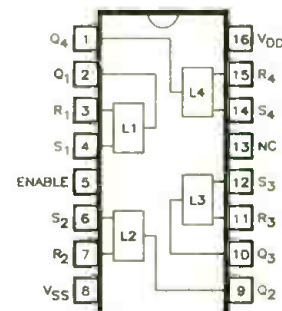

Four set-reset latches in a single package. Types '279' and 4044 have NAND inputs whilst the 4043 has NOR inputs, i.e. 4043 input is inverted with respect to 4044. The '279' has two latches with two set inputs each and both must be high for inactive (negative logic) and one or both low for active. CMOS types have 3-state outputs. A 1 on pin 5 enables the outputs.

74LS279 Standard

Quad D-Type Latches and Register

The 4042B contains four latches controlled by a common clock and a polarity input. With the polarity input low the chip is negative-edge-triggered and when high, positive-edge-triggered. The 4076B contains four D-type positive-edge-triggered flip-flops with 3-state outputs. Gated enable inputs control the entry of data into the flip-flops. When both pins 9 and 10 are low, data is loaded on the next positive clock transition. When pins 1 and 2 are both low, the outputs function normally, but if either or both are high, the outputs present a high impedance. A reset, pin 15, is also provided.

	4042B	4076B
Max clock frequency	5V 3.6MHz 10V 9MHz 15V 12MHz	
Propagation delay low to high/ high to low	5V 220ns 10V 90ns 15V 60ns	300ns 125ns 90ns

4-Bit Bistable Latches

This device comprises four bistable latches organised as two 2-bit bistable latches. The data on the inputs is transferred to the output when pins 4 or 13 are high on the '75'. A low on these pins locks the data on the output.

Octal D-Type Latches

74LS373, 74HC373, 74HCT373
74HCT533, 74HCT573, 74HCT574

Eight D-type latches in a single package. When the enable (or LE) input is high, the outputs follow the inputs and when low, the outputs are latched. The outputs may be set to high impedance by applying a high to the output control pin 1. Type '533' has inverted outputs while the '373' is non-inverted. Types '573' and '574' are high-speed CMOS implementations, combining LS TTL equivalent performance with the low power consumption of CMOS. Type '573' behaves as the '373', while type '574' is controlled by a clock input (CK, pin 11) as well as the output enable (OE); the logic states set up on the D inputs are transferred to the Q outputs on the positive transition of the clock.

SUBSECTION 38 COUNTERS

Decade (and ÷12)

Type '90' is arranged as ÷5 and ÷2 with separate inputs and outputs. To use it as a symmetrical ÷10 counter the QD output must be connected to the 'A' input. The input is then applied to 'B', and the output is available at QA. The '4510' has up-down counting capability and is programmable. The '4518' is a dual up-counter. The '4017' has ten separate outputs offering a completely decoded count, i.e. each output pulses sequentially repeating every 10 counts. The '4018' is presettable to ÷10, 8, 6, 4 or 2.

4-Bit Binary (and Octal)

Type '93' is arranged as +8 and +2 with separate inputs and outputs. The '393' is a dual version of the '93'. Type '4520' also has two separate 4-bit counters. The '4022' is an octal counter with eight separate outputs offering a completely decoded count, i.e. each output pulses sequentially repeating every eight counts. All other types are programmable. Type '161' is synchronous with asynchronous clear while the '163' is fully synchronous. Type '193' is also a synchronous up-down counter, but programming is asynchronous and it has a dual clock and clear. Type '4516' and programmable and '4516' is up-down.

7-Segment

All types have outputs suitable for driving seven-segment displays. Type '4026' has 'display enable input', 'display enable output', and an 'ungated c segment' output. Type '4033' is identical to the '4026' except that in place of the inputs and outputs listed above, the '4033' has a 'lamp test input', 'ripple-blanking input' and a 'ripple-blanking output'. 'Display enable' permits the count to continue whilst the display is off for power saving and in this mode the 'ungated c segment' together with 'carry' are needed for some divide functions e.g. ÷60 and ÷12. 'Ripple blanking' permits leading zeros to be extinguished in seven-segment arrays and the 'lamp test', when set high, lights all segments simultaneously. Type '40110' is an up/down counter and pins that differ from the other devices are 'borrow' (like 'carry' but operates on down counts), 'latch enable', and 'toggle enable'. Taking 'latch enable' high permits the count to continue while the display remains fixed. Taking 'toggle enable' high inhibits the count and locks the display. The 40110 can drive common cathode displays directly.

$$R = \frac{V_+ - V_F}{I_F}$$

Where V_+ = +5V to +15V
 V_F = Display forward voltage Δ 2V
 I_F = Display forward current.

HT12E, HT12D & HT12F Remote Control Encoder/Decoders

Holtek

NEW

The HT12E encodes 12 bits of information and then serially transmits it upon receipt of a transmit enable signal to its active low TE pin. The data is transmitted on the pin marked DOUT, and can be easily interfaced to work with RF or infra-red transmission networks. Complementing the encoder are two decoder ICs, the HT12F and HT12D. The HT12F takes the encoded signal and decodes the whole of the 12 bits as being address data. If the received address matches with the address preset on the decoder IC then the decoder IC will make its valid transmission pin go high (VT). Using the HT12D device is very similar with the single exception that it decodes the first 8 bits of information and checks them against the first 8 bits of address preset on its pins. When both addresses match it makes available the last 4 bits of the received data word, on its four output pins. At the same time the decoder IC will send high its VT pin. This means that data can be sent from the encoder IC and only be decoded and therefore received by those decoder ICs with a matching 8-bit address. Features of the devices are low power, high noise immunity, low stand-by current of 1µA, wide operating voltage, 2¹² address code (2⁸ for the HT12D), built-in oscillator requiring only a 5% resistor, four times transmission with three times receive check, and a minimum of external components. Applications include burglar alarm systems, smoke and fire alarm systems, car door controllers, car alarm systems, security systems, cordless telephones, and many remote control systems.

HT12E, ($F_{osc}=3kHz$): 40µA typ, 80µA max (at $V_{DD}=5V$)
100µA typ, 200µA max (at $V_{DD}=10V$)

HT12D & HT12F, ($F_{osc}=200kHz$): 200µA typ, 400µA max (at $V_{DD}=5V$)
400µA typ, 800µA max (at $V_{DD}=10V$)

Recommended oscillator parameters:

	HT12E	HT12D & HT12F
	1.1MΩ (3kHz)	62kΩ (150kHz)
	750kΩ (4.3kHz)	33kΩ (240kHz)

Operating temperature, T_A : 0°C to 70°C

Order Code	Type	Price each
AE17T	HT12E	£1.49
AE18U	HT12D	£1.49
AE19V	HT12F	£1.49

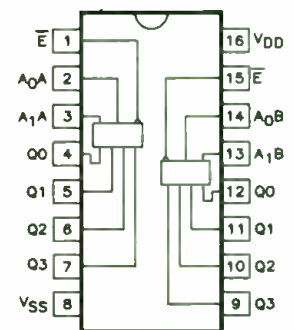

SUBSECTION 40 DECODERS AND DEMULPLEXERS

Dual 2-Line to 4-Line

The '139' and '4555' each have two fully independent 2-line to 4-line decoders where a specific code on the 'select' inputs will drive one of the four outputs on (low on '139', high on '4555') providing enable is low. The enable input can be used as a data input for demultiplexing.

74LS139, 74HC139

4555B

The 4555B is a dual 1-of-4 decoder/demultiplexer. Each has two address inputs (A₀ and A₁), an active LOW enable input (E) and four mutually exclusive outputs which are active HIGH (0₀ to 0₃). When used as a decoder, E when HIGH, forces 0₀ to 0₃ LOW. When used as a demultiplexer, the appropriate output is selected by the information on A₀ and A₁ with E as data input. All unselected outputs are LOW.

4-Line to 16-Line

On all types a specific code on the four input pins will switch one of the 16 output lines on. On type '154' there are two strobe inputs which must both be low. If one or both are high then all outputs are high. For demultiplexing operation, hold one strobe line low and connect data to the other strobe input. The outputs of the 4514 are active high, whilst on the '4515' they are active low. On the '4514' and '4515', an inhibit is provided which when high switches all outputs off. Only one strobe line is provided which when taken from high to low latches the input code. Changes on the inputs will have no effect while strobe is low. Note that two '138' ICs offer higher speed operation than one '154'.

4514, 4515

74LS154, 74HC154

3-Line to 8-Line

74HC137

74LS138, 74HC(T)138

In the '137' there are two enable inputs and an address latch, whilst in the '138' there are three enable inputs. On the '137' when pin 4 goes from low to high, the address present on the 'select' inputs is stored in the latches and further changes ignored while pin 4 remains high. All outputs are high unless pin 6 is high and pin 5 is low. On the '138' all outputs are high unless pin 6 is high and pins 4 and 5 are low. This enables easy expansion. For demultiplexing an enable input can be used as a data input. On all devices with the chip enabled, a specific code on the three select inputs will drive one of the four outputs on (low on '137' and '138').

BCD to 7-Segment

On all types a specific code on the four input lines generates an output for driving a 7-segment display. Illegal inputs are suppressed on the '4511' and '74HC4543', and on the other ICs the display is as shown below.

Type '47' has active-low open-collector outputs for driving common anode LED displays or incandescent indicators whilst the '48' has active-high (2kΩ pull-up) outputs for driving common cathode LED displays or lamp buffers. Types '4056' and '74HC4543' are designed for driving liquid crystal displays, and types '4511' and '74HC4511' will directly drive common cathode LEDs via a series resistor. Types '47' and '48' have ripple blanking inputs and outputs for leading zero suppression in lamp arrays and these and the '4511' have a lamp test input which lights all segments simultaneously. Types '4056', '4511' and '74HC4543' have 'strobe', 'latch enable' and 'latch disable' respectively which freezes the display regardless of changes on the input. In addition, types '47', '48', '4511' and '74HC4543' have a display blanking input for power saving. The '74HC4543' requires the LCD backplane frequency connected to pin 6. Alternatively the device can drive LED displays: for common cathode connect pin 6 to 0V and for common anode connect pin 6 to pin 16.

DG508ACJ 8-Channel CMOS Analogue Multiplexer

Siliconix

An 8-channel single-ended analogue multiplexer, that is designed to connect 1 of 8 inputs to a common output as determined by a 3-bit binary address (A₀, A₁, A₂). Break-before-make switching actions is used to protect against momentary shorting of the input signals. A channel in the ON state conducts current equally well in both directions (bi-directional switches). In the OFF state, each channel will block voltages up to the power supply rails, normally 30V pk to pk. An enable (EN) function allows the user to reset all the switches OFF. All control inputs, address and enable are TTL or CMOS compatible over the full specified operating temperature range. Applications include communication systems, multiplexing reference signals, data acquisition systems, audio signal routing and multiplexing. Supplied in a 16-pin DIL plastic package.

DG508A

Specification

Voltage referenced to -V	
+V:	44V
GND:	25V
Digital inputs:	(-V) -2V to (+V) +2V or 20mA, whichever occurs first.
Current (any terminal except S or D):	30mA
Continuous current (S or D):	20mA
Peak current (S or D):	40mA
Power dissipation:	470mW
Transition time:	0.6µs

Order Code	Type	Price each
DB31J	DG508ACJ	£5.75

SUBSECTION 42 ANALOGUE SWITCHES

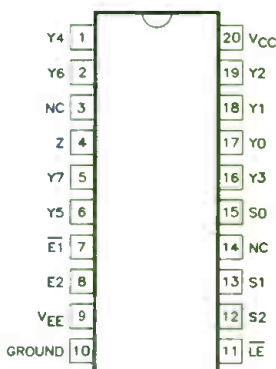

1-Pole 8-Way

A bidirectional 8-way switch where any one of 8 signals will be connected to a common pin depending on the code on the three control pins. No switch is made if the inhibit pin is high on the '4051'. On the '4351' pin 7 must be low and pin 8 high for any switch to be on. The '4351' contains a latch for the 'channel select' data. When 'latch enable' is low, the switches cannot change state regardless of changes on the 'channel select' pins. Analogue signals with peak-to-peak voltages up to the difference between V_{DD}/V_{CC} and V_{EE} may be transmitted through the switch. Note that V_{EE} must not be connected to a voltage higher than V_{SS}/Ground . For analogue signals it is usually preferable to make V_{EE} equal in magnitude to V_{DD} , e.g. $V_{DD}/V_{CC} = 5V$, $V_{EE} = -5V$.

3-Pole 2-Way

Three separate bidirectional 2-way switches in one package where either of two signals will be connected to a common pin depending on the level on the control wire for that 2-way switch. 'Select' pin A controls switch X0, X1, pin B controls Y0, Y1 and pin C controls Z0, Z1. When the select wire is low the 0 input is connected to the common (X, Y or Z) and when high the 1 input. No switch is made if the inhibit pin is high on the '4053'. When 'latch enable' is low, the switches cannot change state regardless of changes on the 'channel select' pins. Analogue signals with peak-to-peak voltages up to the difference between V_{DD}/V_{CC} and V_{EE} may be transmitted through the switch. Note that V_{EE} must not be connected to a voltage higher than $V_{SS}/$ Ground. For analogue signals it is usually preferable to make V_{EE} equal in magnitude to V_{DD} , e.g. if $V_{DD}/V_{CC} = 5V$ then make $V_{EE} = -5V$.

4-Pole 1-Way

Four separate bidirectional off/on switches in one package each with its own control input. A switch is off with its control wire at low level and on at high level. For analogue signals, V_{DD} and V_{SS} may be set at equal magnitudes up to $V_{DD} = +7.5V$, $V_{SS} = -7.5V$ for CMOS 'B' types and up to $\pm 6V$ for 74HC. Type '4066' has a lower 'on' resistance than '4016' type, but type '4016' is recommended for sample and hold circuits.

4016B, 74HC4016, 4066B, 74HC4066

SUBSECTION 43 COMPARATORS

4-Bit

74LS85,
4063BE

Four-bit magnitude comparators that determine whether the binary code on the four 'A' inputs is greater than, equal to, or smaller than the binary code on the four 'B' inputs. A separate output is available for each possible condition. Words of greater length may be compared by simply connecting the corresponding outputs on a stage handling less significant bits to the cascade inputs of the next stage handling more significant bits. The final output comes from the most significant comparator.

On the least significant comparator and where only one comparator is in use, the A=B cascade input must be connected to logic 1 and the other two cascade inputs to logic 0.

SUBSECTION 44 ARITHMETIC

4-Bit Full Adders

These devices will add together two four bit binary numbers and generate a carry if applicable. A fast internal look-ahead allows the carry to be generated very quickly keeping the total summing time relatively low even when large numbers of these devices are cascaded. To connect together, simply join the carry output of a stage handling less significant bits to the carry input of the next stage handling more significant bits. The carry input of the least significant device and where only one is in use, must be connected to logic 0.

Crosspoint MC145100 BCP Motorola

16 Crosspoint bi-directional switches organised in four rows and four columns. To turn a switch on or off, apply the appropriate code to address pins A, B, C, and D e.g. for switch 15, apply binary 15 where A is LSD and D is MSD. At the same time pulse 'strobe' high and if 'data in' is also high, the switch will turn on. If 'data in' is low the switch will turn off. In addition turning on one switch will automatically turn off all others in that row e.g. switching switch 5 on will turn off switches 4, 6 and 7. Analogue signals with peak-to-peak voltages up to the difference between V_{DD} and V_{SS} may be transmitted through the switches. For analogue signals it is usually preferable to make V_{DD} and V_{SS} equal magnitudes up to V_{DD} = +7.5V, V_{SS} = -7.5V.

SUBSECTION 45 MULTIVIBRATORS

The table below shows the basic differences between the different types available.

	121	123	221	4047	4098	4538
Single	*			*		
Dual		*	*		*	*
Schmitt inputs	*		*			
Retriggerable		*		*	*	*
Precision pulse width						*
Basic type			121			4098

74 and 74LS Types

On types 74121 and 74LS221 external capacitance is limited to values between 10pF and 10µF or up to 1000µF if pulse cut-off is not critical. A1 and A2 (or A on '221') are negative-edge triggered logic inputs and will trigger the monostable when either or both go to logic 0 with B at logic 1. B is a positive Schmitt trigger input for slow edges or level detection and will trigger the monostable when it goes to logic 1 with A1, A2 at logic 0. With no external capacitor, and pin 9 connected to pin 14 ('121' only), pulse width is about 30ns. Instead a resistor in the range 1k4 to 40k (or 100k on LS221) may be connected between pin 11 and pin 14. Pulse width is equal to $0.695R_T C_T$, where R_T is in ohms and C_T in Farads. With electrolytic capacitors, connect the negative to C_{EXT} and positive to R_{EXT}/C_{EXT} . The resistor is connected between R_{EXT}/C_{EXT} and V_{CC} . On type '123' there is no restriction

CMOS Types

Type 4047B may be used in astable and monostable modes. To obtain the various functions available, make connections as follows:

Function	Connect these pins to V_{DD}	Connect these pins to V_{SS}	Connect input to	Output at pins	Output period or pulse width
Astable operation					
Free running	4,5,6,14	7,8,9,12		10,11,13	4.4RC secs
True gating	4,6,14	7,8,9,12	5	10,11,13	4.4RC secs
Complement gating	6,14	5,7,8,9,12	4	10,11,13	4.4RC secs
Monostable operation					
Pos-edge trigger	4,14	5,6,7,9,12	8	10,11	2.48RC secs
Neg-edge trigger	4,8,14	5,7,9,12	6	10,11	2.48RC secs
Retriggerable	4,14	5,6,7,8,9	12	10,11	2.48RC secs
External countdown*	14	5,6,7,8,9,12		10,11	2.48RC secs

*Connect the input pulse to reset on an external counting chip and the output of the counter to pin 4 on 4047B.

on external capacitance value and the external resistor can be between 5k and 50k (or 260k in LS types). Once triggered, the basic pulse width may be extended by retriggering at one of the inputs, or shortened by using the clear input. The pulse width is non-linear for values of C_{EXT} lower than 1000pF, but otherwise the pulse width for the '123' is as follows:

$$R_T C_T K(1 + (0.7/R_T))$$

here R_T is in ohms and C_T in Farads. When using electrolytic capacitors, a 1N4148 diode should be connected between R_{EXT}/C_{EXT} and the junction of the external resistor and capacitor, cathode to IC terminal. In this condition K is equal to 0.25 for 74123.

$$R_T C_T K$$

where R_T is in ohms and C_T in Farads. For 74LS123, K is determined from the graph in the next column.

	121	LS221
Propagation delay A to		
Q high to low	50ns	50ns
Q low to high	45ns	45ns
Propagation delay B to		
Q low to high	35ns	35ns
Q high to low	40ns	40ns
Duty cycle $R_T = 2k$	67%	50%
$R_T = \text{max}$	90%	90%
Supply current quiescent	13mA	4.7mA
triggered	23mA	19mA

	LS123
Propagation delay A to	
Q low to high	23ns
Q high to low	32ns
Propagation delay B to	
Q low to high	23ns
Q high to low	34ns
Supply current quiescent	12mA
triggered	12mA

The C_{EXT} terminal must be connected to ground. A diode is not required when using electrolytic capacitors. These types must have a 0.0047F ceramic capacitor connected between V_{CC} and ground as close as possible to the IC.

External timing components

74123 with electrolytic capacitor

74LS123 Value of K

Frequency shown is available from pin 10 and its inversion on pin 11. In astable mode only, double the frequency of pin 10 is available at pin 13. R is any value between 10k and 1M and C is any practical value over 100pF for astable or 1000pF for monostable. Only non-polarised, low leakage capacitors are suitable. R is connected between pins 2 and 3, and C between pins 1 and 3. **Caution:** Pin 3 on this device does not have internal static protection circuitry. Extreme care must be taken when handling this device.

	5V	10V	15V
Propagation delay:			
pins 4, 5 to 13	200ns	100ns	80ns
pins 4, 5 to 10, 11	350ns	175ns	125ns
pins 6, 8 to 10, 11	500ns	225ns	150ns
pin 12 to 10, 11	300ns	150ns	100ns
pin 9 to 10, 11	250ns	100ns	70ns

Type 4098B is a dual monostable multivibrator. To obtain the various functions available, make connections as shown in Table 1 below.

Table 1

Function	Connect V_{DD} to pins		Connect V_{SS} to pins		Connect input pulse to		Also join together	
	Mono 1	Mono 2	Mono 1	Mono 2	Mono 1	Mono 2	Mono 1	Mono 2
Trigger on leading edge and retriggerable	3,5	11,13			4	12		
Trigger on leading edge and not retriggerable	3	13			4	12	5 to 7	11 to 9
Trigger on trailing edge and retriggerable	3	13	4	12	5	11		
Trigger on trailing edge and not retriggerable	3	13			5	11	4 to 6	12 to 10
One section unused: unused section	5	11	3,4	12,13				

V_{DD} must also be connected to pin 16 and V_{SS} to pin 8 for all applications.

The output pulse width is equal to $R_x C_x / 2$ where R_x is any value between 5k and 10M (1M 4528BE) connected between pins 16 and 2 (14), and C_x is between 0.01 μ F and 100 μ F connected between pins 2 (14) and 1 (15). Capacitors between 10pF and 0.01 μ F may be used but the pulse width is non-linear in this area. Electrolytic capacitors are not recommended, but if used negative should be connected to pin 1 (15) and a 1N4148 connected in parallel with R_x , cathode to V_{DD} . A reset pin is provided to immediately terminate the pulse or prevent output pulses when power is first switched on.

74121

74LS123, 74HC123, 74LS221, 74HC221

4047B

4098B, 74HC4538

Propagation delay trigger to output	5V	10V	15V
	250ns	125ns	100ns

4098BE is pin-for-pin compatible with type 4528BE in most applications.

74HC Types

The minimum external resistance is 1.4k, but there is no restriction on the maximum value. There is no restriction on capacitance value either, but with very large values over 1 μ F connect a diode in parallel with R_x , cathode to V_{CC} . The pulse width on types HC123 and HC221 is equal to $R_x C_x$ and on type HC4538 it is $0.7R_x C_x$.

SUBSECTION 46 OSCILLATORS

74LS629

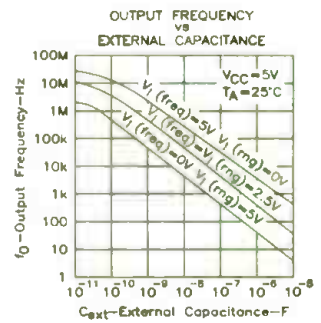

Two fully independent voltage controlled oscillators in a single package. Pins 15 and 16, and 8 and 9 may be connected together, but where high precision is required and always where frequencies over 10MHz are involved, pins 15 and 8 should be connected to a separate high stability supply. When the enable input is high, the oscillator is disabled. The output frequency is determined by the capacitor connected between pins 4 and 5 (12 and 13) and the voltage on pin 2 (1) and pin 3 (14). The smaller the voltage on 'range', the greater the frequency change when the voltage is varied on 'frequency'.

Output frequency (min)	1Hz
Output frequency (max)	20MHz
Supply current	35mA

SN=Ti

Order Code	Type	Price each
WH02C	SN74LS629N	£3.25

HCF4541B

This chip comprises an oscillator and programmable divider. The oscillator frequency is determined by the RC network on pins 1, 2 and 3. $R_T C_T$ should be between 5k and 1M and R_S should be twice $R_T C_T$. $C_T C$ should be in the range 100pF to 0.1 μ F. All three components are connected to their appropriate pins and the other ends simply all connected together. The frequency is equal to $1/(2.3R_T C_T C)$ between 1kHz and 100kHz. A code set up on inputs A and B determines the division ratio of the counter stage as follows:

A	B	Count
0	0	8192
0	1	1024
1	0	256
1	1	65536

A 0 on pin 9 will set the output at 0 during reset or 1 if pin 9 is at 1. Pin 6 when set to 1, resets the counter regardless of counter state and the output goes to the

Continued on next page.

Continued from previous page.

condition set on pin 9. Set pin 6 to 0 for counting to commence. With pin 10 set to 1 the count is continuous, but with a 0 on pin 10, after one complete cycle on the output, the count will stop until pin 6 is pulsed. With a 0 on pin 5, the IC is reset when power is turned on, but if this is not required connect pin 5 to logic 1 for low power consumption. With pin 5 low, the supply current, which otherwise would be less than 15nA (quiescent), will be 30µA at 10V and 82µA at 15V (typical). An external frequency may be connected to pin 3 (and pins 1 and 2 left open) if desired.

Propagation delay:	5V	10V	15V

SUBSECTION 47 PHASE LOCKED LOOPS

4046B,
74HC4046

The '4046' consists of a voltage controlled oscillator, source follower, two phase comparators having a common signal-input amplifier and a common comparator input, and a 5.2V zener diode for supply regulation if required. Resistor R1 connected between pin 11 and 8 and in the range 5k to 1M, and C1 connected between pins 6 and 7 and in the range 50pF to 0.01µF, together determine the frequency range of the VCO. R2 enables the VCO to have a frequency offset if required and is connected between pin 12 and 8 and is in the range 5k to 1M. The VCO frequency range as set by R1, R2 and C1 is as follows:

$$f_{\min} = 1/(R2(C1+32pF)) \text{ when VCO input} = V_{SS}$$

$$f_{\max} = (R1(C1+32pF))^{-1} + f_{\min} \text{ when VCO input} = V_{DD}$$

A low pass filter connected between comparator output (pin 2 or 13) determines the frequency capture range and because of the very high input impedance at pin 9 (19¹²Ω), the filter is simple to design. Connect R3 between pin 2 or 13 and 9 and C2 between pin 9 and 8. The frequency capture range (2f_c) is determined as follows:

$$2f_c = (1/\pi) \sqrt{((2\pi f_L)/(R3.C2))} \text{ where } 2f_L = f_{\max} - f_{\min}$$

In order not to load the low-pass filter, a source follower output of the VCO is available at pin 10. If in use connect a load resistor of 10k or more between pin 10 and 8. The VCO can be connected directly or via frequency dividers to the comparator inputs. A logic 0 on pin 5 enables the VCO and source follower, while a logic 1 turns off both to minimise stand-by power consumption.

SUBSECTION 48 TIMER/COUNTER ICs

SP8680BDG 600MHz Counter Divider

GEC-Plessey

An ECL counter with both ECL 10k and TTL compatible outputs. The IC can operate from ECL or TTL supplies and can divide by 10 or 11. The counter will divide by 10 when either pin 2 or 3 are high and by 11 when both pins are low. A high on pin 14 sets all outputs high and a high on pin 1 holds the current output state. The counter will typically operate up to around 650MHz.

8680

Characteristics

Supply voltage:	5V
Power consumption:	420mW
Max frequency sinewave input:	575MHz
Power supply current inc. TTL stage (max):	111mA
TTL output high voltage:	>2.3V
TTL output low voltage:	<0.5V
Input high voltage pins 2 and 3:	>3.9V
Input low voltage pins 2 and 3:	<3.5V

Order Code	Type	Price each
QY18U	SP8680BDG	£11.00

LM565N Phase Locked Loop National Semiconductor

A 14-pin DIL IC containing a voltage controlled oscillator, phase detector and amplifier. The IC is very stable typically 200ppm/°C with high linearity: 0.2% and only 100ppm/% frequency drift with change of supply voltage which can be between ±5V and ±12V. Centre frequency set by resistor between pin 8 and V⁻ and capacitor between pin 9 and V⁻ is f = 1.2/4RC where R is in ohms. C is in Farads and f is in Hz. There is a TTL compatible square wave output, a very linear triangular wave output and a reference output for addition of comparator or frequency discriminator. Bandpass is adjustable from <±1% to >±60% and centre frequency is adjustable over a 10 to 1 range

The frequency range is 0.001Hz to 500kHz.

with the same capacitor. Applications include frequency shift keying, modems, tone decoders, wideband FM discriminators, data synchronisers, tracking filters, signal restoration and frequency multiplication and division. The lock range will be ±8f_o/V_{CC} Hz where V_{CC} is the total supply voltage (i.e. if V⁺ is +6, V⁻ is -6 then V_{CC} = 12V).

$$\text{Capture range} = \pm \left(\frac{1}{2\pi} \sqrt{\frac{2\pi f_L}{\tau}} \right)$$

where f_L is the lock range and τ = 3600C₂ where C₂ is the capacitor between pin 7 and V⁺ in Farads.

NE555N Timer

SGS-Thomson

The 555 is a highly stable device for generating accurate time delays or oscillation. Additional terminals are provided for triggering or resetting if desired. In the time delay (monostable) mode of operation the time is precisely controlled by one external resistor and one capacitor. For stable operation as an oscillator, the free running frequency and the duty cycle are both accurately controlled with two external resistors and one capacitor. The circuit may be triggered and reset on falling waveforms and the output structure can source or sink up to 200mA or drive TTL directly. This IC may also be correctly supplied marked as MC1455PI. Supply decoupling must be provided close to the IC to counter the 'crowbar' effect of the device's internal discharge switch, a suitable value is 10 to 100µF as shown in the accompanying diagrams.

Monostable Mode

Time Delay vs RA and C

On time after triggering (i.e. applying a voltage to pin 2 less than 1/3 supply voltage) is equal to 1.1RA.C. The load may be connected to VCC for normally-on operation or between pin 3 and ground for normally-off. Connecting reset to ground during on time, drives the output low until a new trigger pulse occurs. Additional trigger pulses during on time have no effect. If reset is not being used, connect it to VCC.

Astable Mode (Oscillator)

Free Running Frequency vs RA, RB and C

The frequency is equal to $1.44/[(R_A + 2R_B)C]$. The charge time (output high) is given by $t_1 = 0.693(R_A + R_B)C$ and the discharge time (output low) is given by $t_2 = 0.693(R_B)C$.

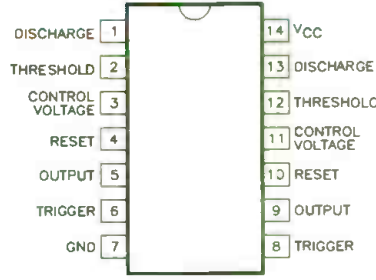

Characteristics (typical)

- Supply voltage: 4.5V (min), 16V (max)
- Supply current: 3mA (VCC = 5V), 10mA (VCC = 15V)
- Threshold voltage: VCC x 0.667
- Trigger voltage: 5V (VCC = 15V), 1.67V (VCC = 5V)
- Trigger current: 0.5uA
- Threshold current: 0.1uA
- Control voltage level: 10V (VCC = 15V), 3.33V

SGS-Thomson

The 556 is a single 14-pin DIL package containing two 555 timers.

Order Code	Type	Price each
QH67X	NE556N	60p

ICM7555IPA Low Power Timer

Harris

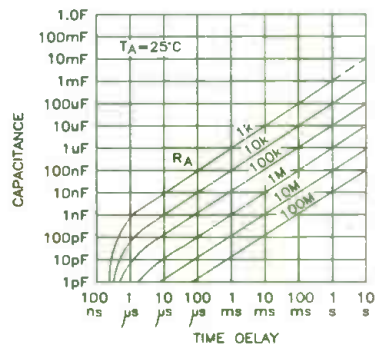

A low power timer designated 7555 is a direct pin-for-pin replacement for the 555 bipolar timer, but requires only around a hundredth of the supply current required by the 555. The CMOS device has extremely low trigger threshold and reset currents – typically 10nA; a very wide supply voltage range from 2V to 18V and the reset does not crowbar the supply during output transitions. The device can operate from microseconds up to several hours. The output can drive at least two standard TTL and CMOS and all inputs and outputs are fully protected against static discharge and no special handling is required at all. Supply decoupling is normally not required close to the IC unlike the 555, nor is the control voltage decoupling capacitor usually required as it is with the 555, thus there is a saving in external components. To keep the total power supply requirements low, choose high values for RA and RB and low values for C which should be a low leakage type and not ceramic.

Free running frequency as a function of RA, RB and C.

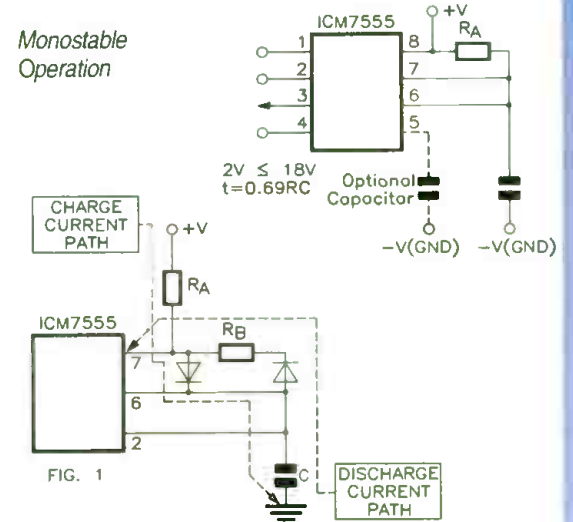

Time delay in the monostable mode as a function of RA and C.

Specification

- Supply voltage: Minimum 2V, maximum 18V
- Supply current: 60uA typical
- Threshold current: 10nA at V+ = 15V
- Max frequency in astable mode: At least 500kHz
- Trigger current: 10nA at V+ = 15V
- Reset current: 10nA at V+ = 15V
- Reset voltage: +0.4V to 1.0V
- Temperature stability: 50ppm/°C at 25°C
- Output sink current: 100mA max at V- = 18V

Monostable Operation

Astable Operation

In astable mode the frequency of operation is given by: $f = 1.46/[(R_A + 2R_B)C]$ Hz.

Fig. 1 shows how to achieve duty cycles of 50% and less. In a monostable mode the period time is given by:

$t = 0.69RC$ sec.
(In both equations R is in ohms and C is in Farads.)

ICM7556IPD

Harris

A single 14-pin DIL package containing two 7555 timers. The IC is pin-for-pin compatible with 555 timers.

Order Code	Type	Price each
CP96E	ICM7556IPD	£1.38

TS555CN Low Power Timer

SGS-Thomson

A low-power pin-for-pin replacement for the 555, but requiring only about one fiftieth of the supply current. The device has extremely low trigger, threshold and reset current, typically 20pA, and a very wide supply voltage range 2V to 18V. Supply decoupling close to the device is not required. The outputs are fully CMOS, TTL and MOS compatible. Choose high values for timing resistors to keep supply currents low and low values for capacitance which should be low leakage types, not ceramic.

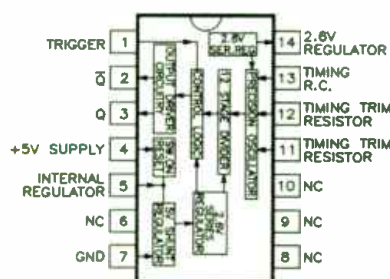

Specification

Supply voltage:	2V to 18V
Supply current:	170µA at 5V, 360µA at 15V
Threshold current	
($V_{DD} = 5V$):	10pA
Trigger current	
($V_{DD} = 5V$):	10pA
Reset current	
($V_{DD} = 5V$):	±10pA
Reset voltage level:	0.7V
Output sink current:	100mA max
Output source current:	10mA max
Max frequency in astable mode:	2.1MHz

ZN1034E Precision Counter Timer

GEC-Plessey

ZN1034E

A precision timer which with the addition of suitable resistors and capacitors can generate time periods from 16ms to several days. For periods of 2 seconds and greater, the timing components R_T and C_T can be determined from the equation $T = C_T \cdot R_T$, where $R_T > 12k\Omega$ and $C_T > 33nF$ and $K = 2800$. R_T is connected between pin 13 and 14 and C_T between pins 13 and 7. A trim pot may be connected between pins 11 and 12 (typical values 50k to 500k) to provide a fine adjustment though this will affect the timing constant e.g. for $R_{TRIM} = 50k$, K becomes 3700.

Characteristics (typical)

Timing resistor	3k3 to 5MΩ
Timing capacitor	>1nF
Trim range	±50% ($R_{TRIM} = 0$ to 500k) ±25% ($R_{TRIM} = 0$ to 100k) ±12% ($R_{TRIM} = 0$ to 50k)

Supply voltage	5V
Supply current	3.5mA
Reference voltage	2.6V
Output voltage high	3.6V at 25mA (max current)

Order Code	Type	Price each
UF32K	ZN1034E	£2.84

µA2240CN Programmable Timer/Counter

Texas Instruments

2240

The IC comprises a time-base oscillator, 8-bit counter, trigger and reset controls, and a voltage regulator. The frequency of the time-base oscillator is set by an external resistor and capacitor where $t = CR$ seconds and C is in farads and R is in ohms. The oscillation can be synchronised or modulated by signals applied to pin 12. For example, the open circuit voltage at pin 12 is around $0.7 \times V_S$; if a voltage of around $0.95 \times V_S$ is applied to pin 12, the frequency will double. The time-base output is internally connected to the counter input. The counter can be used separately by applying the input to pin 14 (in the application circuit R3 will not be needed) and stopping the time-base oscillator running by connecting V_S to pin 15 instead of pin 16. (R1 and C1 not used). Reset stops the oscillator and sets pins 1 to 8 and 14 to a high level. Trigger restarts the oscillator and is then inoperative until after another reset. Each stage of the counter is a square wave, half the frequency of the previous stage (pin 1 is first and pin 8 last). Two or more of the outputs can be connected together to generate complex pulse patterns or all used separately to provide eight output frequencies. Accurate timing is available from microseconds to days and with two ICs cascaded, precise time delays up to three years are possible. If V_S is over 7V and $C1$ less than $0.1\mu F$, connect a Ceramic 330pF between pin 14 and ground to ensure reliable operation of the first counter. If the supply voltage is less than 4.5V, pins 15 and 16 should be shorted together.

Specification (typical $V_S = 5V, 25^\circ C$)

Supply voltage:	4V to 14V
Timing resistor (R1):	1kΩ to 10MΩ
Timing capacitor (C1):	0.01µF to 1000µF
Counter input frequency:	1.5MHz
Pins 10,11 input pulse:	>3V
Pins 10,11 input pulse length:	>2µs
External clock input pulse:	>3V
External clock pulse length:	>1µs
Regulator output (pin 15):	4.4V
Temperature coefficient of time-base period:	-200ppm/°C

NE566N Function Generator

Signetics

Features

- ★ Wide range of operating voltage (10 to 24V or ±5V to ±12V)
- ★ Very high linearity of modulation
- ★ Extremely stable frequency (200ppm/°C typical)
- ★ Highly linear triangle wave output
- ★ High accuracy square wave output
- ★ Frequency determined by resistor, capacitor, voltage or current
- ★ Frequency adjustable over 10 to 1 range with same capacitor

Applications

- ★ Tone generators
- ★ Frequency shift keying
- ★ FM modulators
- ★ Clock generators
- ★ Signal generators
- ★ Function generators

566

The control voltage V_C must be between $\frac{3}{4}V^+$ and V^+ . The modulating signal should be applied to pin 5 via a suitable capacitor $C2$ or directly if the bias voltage remains within the limits. The frequency is given by:

$$f = \frac{2[(V^+) - (V_C)]}{R1 \cdot C1 \cdot V^+}$$

and $R1$ should be in the range 2k to 20k.

Order Code	Type	Price each
QH68Y	NE566N	£1.39

LM567CN Tone Decoder/Phase Locked Loop

National Semiconductor

Features

- ★ Wide frequency range (0.01Hz to 500kHz)
- ★ High stability of centre frequency
- ★ Independently controllable bandwidth (0 to 14%)
- ★ High out-band signal and noise rejection
- ★ Logic compatible output with 100mA current sinking capability
- ★ Inherent immunity to false signals
- ★ Frequency adjustment over a 20 to 1 range with an external resistor

Applications

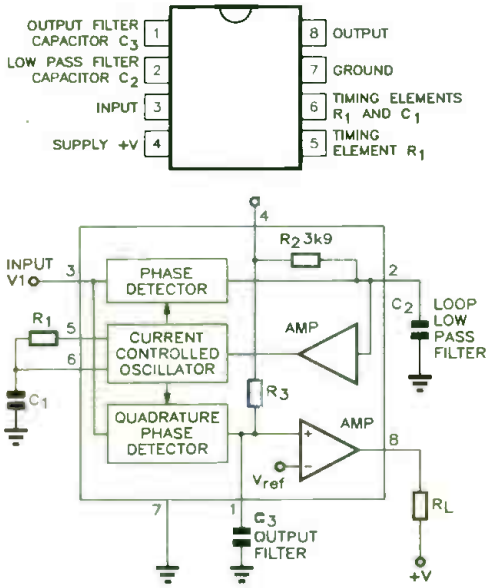

- ★ Carrier current remote controls
- ★ Ultrasonic controls (remote TV etc.)
- ★ Communications paging
- ★ Frequency monitoring and control
- ★ Wireless intercom
- ★ Precision oscillator

Characteristics

Max operating voltage: 10V
 Positive voltage at input: 0.5V above supply
 Negative voltage at input: -10V DC
 Output voltage: 15V DC
 Operating voltage range: 7mA (12mA activated)

Design Formulae

$f_0 = 1.1/R_1.C_1$ where R_1 is between 2k Ω and 20k Ω and f_0 is the centre frequency.
 Bandwidth = $1070\sqrt{V_i/f_0.C_2}$ where V_i is the input rms voltage. $C_3 = 2(C_2)$.

Order Code	Type	Price each
QH69A	LM567CN	£1.75

LM3909N LED Flasher/Oscillator

National Semiconductor

With the addition of a 1.5V battery and capacitor this IC will deliver pulses of over 2V to an LED to flash it brightly, with a current drain of less than 0.5mA. It has a powerful output and can directly drive an 8 Ω speaker. Applications include flasher to locate torch

or boat mooring floats at night, sales and advertising gimmicks, emergency locators for 1.4V to 200V (see data sheet).

In this circuit there is an audible difference between short circuits, coils and resistances of a few ohms etc.

SUBSECTION 49 MICROPROCESSORS, MICROCOMPUTER AND SUPPORT ICs

PT86C268

Picopower

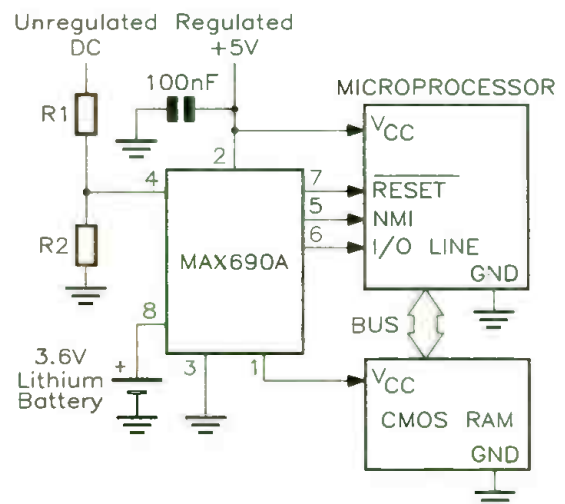

The PT86C268 is a high performance, highly integrated single core chip with active power management for portable and notebook PCs. A system using this can support a 386DX, 486 or future CPUs planned by AMD, IBM, Intel or Cyrix. It also supports system speeds up to 33MHz. The design integrates battery and power management providing 3.3/5V hybrid or pure 3.3 or 5V system design with a proprietary, open-loop heat regulator circuit to provide extended battery life and to prevent heat build-up. The active power management modes supported by the device allow power reduction while the system is in full operation, featuring fine grain 'Power On Demand' to supply

power only when required by the CPU. This device's support of future processors enhances system power management. The PT86C268 supports advanced 32-bit CPUs including the 386DX, 486DX, 486DX2, 486DLC, and S-Series M6 to 33MHz, has an advanced burst/page mode DRAM controller and a VESA local bus. Design application draft is also available separately.

MAX690A Microprocessor Supervisor

Maxim

The MAX690A reduces the complexity and number of components required for power-supply monitoring and battery-control functions in microprocessor systems. Significantly improves system reliability and accuracy compared to an arrangement of separate ICs and discrete components. The chip performs four basic functions: it generates a RESET output during power-up for the CPU, and also during power-down and 'brown-out' conditions. This is complemented by a 1.25V threshold detector or Power Failure Input (PFI) for low battery detection, or to monitor a power supply other than +5V. It also handles all battery back-up switching for CMOS RAM and will trickle charge the back-up battery during normal power-up time. In addition a RESET pulse will be generated by a 'watchdog' timer if the WDI input has not been toggled within 1.6 seconds. In

the application shown above this is used to monitor the I/O line to ensure that normal processor activity is happening; if the processor should hang up or its software crash, then it will automatically be re-booted from start by the MAX690A. Also in the example shown the PFI is used to monitor the unregulated supply and generate an NMI upon power failure; this interrupt could be used to initiate data-preserving software. To conserve battery power, the power failure detector is turned off and PFO is forced low when V_{BATT} connects to V_{CC} . The device is encapsulated in an 8-pin DIL package and replaces several chips which together, serve supply monitoring and memory back-up functions very simply, with the absolute minimum number of additional external components.

Micromaster 1000 & 1000/E PC Based Programmers

NEW

ICE Technology

- ★ Program EPROMs, micros, programmable logic, etc.
- ★ Connects directly via the parallel printer port
- ★ Built-in chip tester
- ★ Full menu-driven software
- ★ EMS software
- ★ Additional micro-controllers available as standard
- ★ Programs over 80 different micro-controllers without adaptors
- ★ Allows programming of large devices in one pass

The Micromaster 1000 & 1000/E are extremely versatile development tools, designed and developed in the UK with the design engineer in mind. They offer all the facilities of truly universal programmers, each in a self-contained unit.

Programming features

Extremely fast programming times using manufacturer's approved algorithms. All chip insertion and removal via ZIF (Zero Insertion Force) sockets. Auto-program command performs test, chip erase (where applicable), program and verify all in a single keystroke. Actions can be repeated with a single keystroke. JEDEC test vectors can be edited or created and applied to the chip. Test vectors are applied automatically during programming if they are present. Also support is provided for security features of devices including checking security status, verifying

encryption and programming lock bits. Failsafe checks are performed to ensure that device selection and position in the socket are correct, preventing damage to chips. Supports on-chip features like oscillator type selection and watchdog timer settings on PIC and similar devices.

Comprehensive device coverage

Covers EPROMs, PROMs, EEPROMs, Flash EPROMs, NVRAMs, Micro-controllers, PALs, GALs, PEELs, PLUS, PLS, EPLDs, MACHs, MAX, MAPLs, etc. Also programs over 80 different types of micro-controller including their custom options.

Fast, unrivalled operation

Extremely fast programming of devices, with manufacturer's approved programming algorithms, including chip insertion and power test, download, bit test, program and verify. Below are programming times for the Micromaster 1000/E programmer.

Type	No. of bytes	Pulse width	
		100ms	500ms
2764	8k	2s	5s
27256	32k	5s	20s
27512	64k	11s	38s
27010	128k	21s	1m20s
27020	256k	41s	2m30s
27040	512k	1m21s	5m
27080	1M	2m42s	10m

In addition to all of these features the Micromaster 1000/E has a built-in ROM/RAM emulator to allow the user to read and write to an imaginary device without the need for its presence. Emulation also allows fast interaction between the imaginary device and the PC, allowing firmware to be created in a fraction of the time normally necessary.

Physical Characteristics

Dimensions:	40 x 210 x 130mm (H x W x D)
Power supply:	Mains adaptor supplied. Input 240V AC.
Connection to PC:	25-way M-M parallel cable supplied. Operates from any standard IBM parallel port.
Software:	Supplied with programmer and emulator (1000/E). Runs on any IBM PC under DOS or Windows 3.1.

Order Code	Type	Price each
AD95D	MICROMASTER 1000	£725.00
AD96E	MICROMASTER 1000E	£799.99

MAX1232CPA Microprocessor Monitor

Maxim

NEW

An 8-pin DIP packaged microprocessor supervisory IC, used for power supply monitoring and housekeeping functions. Whenever the power supply falls below either 5% or 10% (programmable), software execution ceases or manual reset is performed, and the IC sends a reset pulse of at least 250ms duration, for processor reset. The watchdog timer can be set for timeouts of 150ms, 600ms or 1-2s. Whenever one of these conditions holds true the reset lines are held active for at least 250ms. Applications include computers, controllers, intelligent instruments, automotive systems and critical microprocessor power monitoring.

Specification

Supply voltage, V_{CC} :	4.5V to 5.5V, 5V typ
Input high-level, V_{IH} :	2V to $V_{CC} + 0.3V$ max
Input low-level, V_{IL} :	-0.3V to 0.8V
Output current RST, I_{OH} :	1mA min, 12mA typ
Operating current, I_{CC} :	50 μ A to 200 μ A max
V_{CC} 5% trip point, V_{CCTP} :	4.50V to 4.74V, 4.74V typ
V_{CC} 10% trip point, V_{CCTP} :	4.25V to 4.49V, 4.37V typ

Note that the active low reset pin is internally pulled up to V_{CC} with an internal impedance of typically 40k Ω . The active low push-button reset must be held

low for longer than 20ms to guarantee a reset. Tolerance is set by grounding the TOL pin for 5% or connecting it to V_{CC} for 10%. Similarly the watchdog timer is set to 150ms by connecting the TD pin to ground, 600ms by leaving it floating or 1-2s by tying it to V_{CC} . Software strobes are applied to the active low ST pin.

MC68HC705C8P

Microcontroller Unit

Motorola

The MC68HC705C8P microcontroller unit is a member of the M68HC05 family built in HCMOS and contains its own OTP/programmable read-only memory (EPROM) and data RAM. This amazing, high performance, low-power MCU also has parallel I/O capability with individual pins programmable as either input or output. Basic features include an on-chip oscillator which only requires the addition of an external crystal or ceramic resonator or external clock signal, memory mapped I/O, selectable memory configurations, a watchdog timer for detecting MPU hang-ups or crashes, a clock monitor, a total of 24 bi-directional I/O lines and 7 input only lines, a serial communications interface, serial peripheral interface, boot-strap capability, power saving STOP, WAIT and data retention modes, software programmable external interrupt sensitivity, and a single supply requirement ranging from 3 to 5.5V.

68HC705

The 24 I/O lines are organised into three 8-bit ports (A, B, C) where any pin is programmable as either an input or an output under software control, while port D is a fixed input port of 7 input only lines (PD0 to PD5, PD7) that monitors the external pins whenever the serial port is disabled. The serial port also uses the port D pins for its functions.

The MCU is capable of addressing 8192 bytes of memory and I/O registers. The locations consist of user programmable read-only memory (EPROM), user RAM, boot-strap ROM, control registers and

I/O. The 12 user defined reset and interrupt vectors are located at the top of the boot ROM area. The shared stack area can be 64 bytes deep, and the memory map as a whole can be configured 4 different ways through altering the option register. The boot-up default is option 0, offering 176 RAM bytes and 7744 ROM bytes. RAM can be extended up to 304 bytes, versus 7600 ROM bytes in option 3. CPU registers provided are an accumulator, index X, program counter, and stack pointer registers, and a Condition Code Register (CCR) containing the half-carry, carry/borrow, interrupt, negative and zero flags. The MCU can be reset in one of four ways: internally by power-up; by an external, active-low RESET input; a COP ('Computer Operating Properly') watch-dog timer time-out condition, or an internal clock monitor reset condition. There are five sources of interrupt including IRQ and external interrupts have priority over internal ones. There are also three low power modes; STOP which places the MCU in its lowest power consumption mode; WAIT, where all CPU activity is suspended but the timer, SCI or SPI or interrupts can cause the MCU to exit; and data retention mode. There is a timer comprising a 16-bit, free-running counter driven by a fixed divide-by-four prescaler which can be used for many purposes. Other useful features include timer output compare input capture registers. The full-duplex, asynchronous serial communications interface has a standard Non-Return to Zero (NRZ) format and a variety of 32 different baud rates. A serial peripheral interface is implemented in the MCU allowing several MCUs or MCUs with peripherals to be interconnected within the same system.

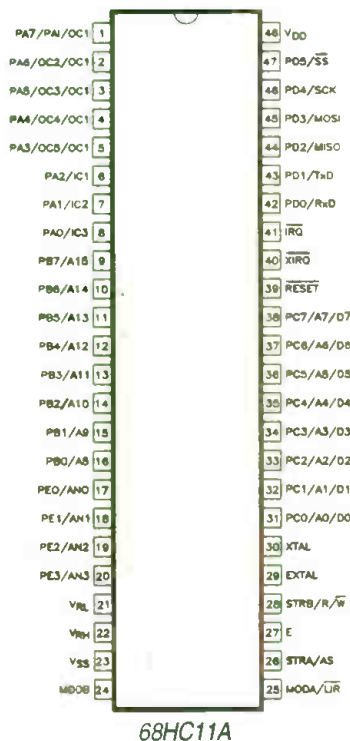

The MC68HC705C8 has a vocabulary of 64 instructions and a total of 16 addressing modes; many of these are similar or identical to existing 68XX/65XX instructions. The MPU is encapsulated in a 40-pin DIL package, and has an operating temperature range of 0 to 70°C and runs from a single 5V supply.

Order Code	Type	Price each
GX24B	MC68HC705C8P	£17.99

MC68HC11A1P 8-Bit Microcontroller

Motorola

The MC68HC11A1P is a high performance microcontroller unit based on the M68HC11 family. This high-speed, low power consumption chip has

68HC11A

multiplexed buses and a fully static design. It can operate at frequencies from 3MHz down to DC. The device includes power saving 'STOP' and 'WAIT'

modes. 512 bytes of on-chip EEPROM, and 256 bytes of on-chip static RAM (all saved during standby). It also has a 16-bit timer featuring 3 input capture channels and 5 output compare channels; an 8-bit pulse accumulator, real-time interrupt circuit and a Computer Operating Properly (COP) watchdog timer. I/O comprises a synchronous serial peripheral interface, asynchronous NRZ serial communications interface, an 8-channel, 8-bit A/D converter, 38 general-purpose I/O pins, of which 15 are bidirectional and 11 are input only and 12 are output only. There are two operating modes. In single-chip mode, the device behaves as a microcontroller without external address or data buses.

In expanded multiplexed mode, the MCU can access a 64K-byte address space. This space includes the same on-chip memory addresses used in single-chip mode, but also external peripheral and memory devices. The expansion bus is made up from ports B and C and control signals AS and R/W. These signals are active and valid for all bus cycles including accesses to internal memory locations. A recommended method for implementing multiplexed addressing and data access is to use PB0-PB7 for address lines A8 to A15, and PC0-PC7 giving the lower A0 to A7, which is latched into a 74373 non-inverting octal latch by AS, and then PC0-PC7 becomes a bidirectional data bus.

Memory maps are the same for both single-chip and expanded multiplex modes with 256 bytes of on-chip RAM initially located at \$0000, and the 64-byte register block at \$1000. This or the RAM can be relocated at any other 4K boundary after RESET. A 512-byte EEPROM is at \$B600 through to \$B7FF at RESET and an 8K-byte ROM is at \$E000 to \$FFFF. Hardware priority is built into the memory remapping. In special bootstrap mode, a boot-loader ROM is enabled at \$BF40 to \$BFFF. The operating mode and memory map can be configured in a special EEPROM register programming mode. The chip is encapsulated in a 48-pin DIL package. Operating temperature range is -40 to +85°C.

Order Code	Type	Price each

80C31 Series Single Chip 8-Bit Microcontrollers

MHS

P-80C31-1

The basic 80C31 is an extremely powerful and useful CMOS version of the 8051 8031 NMOS single chip 8-bit microcontrollers, and is manufactured using a

self-aligned silicon gate CMOS process. The fully static design of the 80C31 allows a reduction of system power consumption by bringing the clock frequency down to any value, even DC, without any loss of data.

The 80C31 retains all the features of the 8051, having 128 bytes of on-chip working RAM, a total of 32 I/O lines (4 x 8-bit ports), two 16-bit timers, a 5-source, 2-level interrupt structure, a full duplex serial port, and on-chip oscillator and clock circuits and operates from a single 5V supply. In addition to the internal RAM and 28 control and I/O registers, up to 64K-bytes of external memory can be addressed using ports 0 and 2 as buses, where port 0 is multiplexed to first output the lower 8 address bits, which is then latched by an external chip under ALE control

P-80C31-L

(Address Latch Enable – exactly like e.g., the 8085 MPU), before becoming a bidirectional 8-bit data bus. (This takes place during one external read/write operation.) In fact the 80C31 must access external memory to read a program ROM, and this means therefore that software can be provided very easily through normal EPROM making methods as opposed to more awkward, specialised programming techniques and hardware often required by most microcontrollers with on-chip program ROM.

There are two software-selectable modes of reduced activity for further reduction in power consumption. In Idle Mode the CPU is frozen while the RAM, the timers, the serial port and the interrupt system continue to function. In the Power Down mode the RAM is saved and all other functions are operative. The very comprehensive instruction set includes all the usual microprocessor instructions to implement sophisticated software, for example it includes multiply and divide operations, with indirect addressing, relative conditional branches and subroutine calls and jumps, and the mnemonics will be very familiar to 8080, 8085 and Z80 programmers.

Of the three types available, P-80C31 has a maximum clock speed of 12MHz, P-80C31-1 of up to 16MHz, while P-80C31-L has the ability to operate from a supply ranging from 2.7 to 6V without disruption.

Order Code	Type	Price each
AH46A	P-80C31	£3.99
AH47B	P-80C31-1	£4.09
AH48C	P-80C31-L	£4.09

80C32/80C52 Single Chip 8-Bit Microcontrollers

MHS

The 80C32 and 80C52 are high performance, single chip 8-bit microcontrollers extending the 80C31 range (above). The fully static design allows the reduction of system power consumption by lowering the clock frequency to low levels, even DC, without data loss. The 80C52 has 8K-bytes of on-chip ROM, 256 bytes of RAM, 32 I/O lines, three 16-bit timers, a 6-source, 2-level interrupt structure, a full duplex serial port, and on-chip oscillator and clock circuits and operates from a single 5V supply. In addition the 80C52 has two software selectable modes of reduced activity for further reduction in power consumption, Idle Mode and Power Down Mode. All other features as 80C31 series above, including the 64K external memory addressing capability and the instruction set.

P-80C32/52

The 80C32 is as 80C52 but does not have the internal ROM. Both the 80C52 and 80C32 can operate at clock speeds up to 12MHz. The 80C32-1 has no internal ROM but can have a clock speed up to 16MHz.

Order Code	Type	Price each
AH49D	P-80C32	£5.07
AH50E	P-80C32-1	£5.45
AH51F	P-80C52-100	£5.95

RC6502AP Microprocessor

Rockwell

An 8-bit microprocessor in a 40-pin DIL package. The device requires only one +5V supply and the bus is directly compatible with MC6800 series IC's. The IC can address up to 64K bytes of memory directly with its 16-bit address lines. There are 13 addressing modes, 56 instructions and 7 internal registers. The 6502A requires a single phase TTL clock operating from a 2MHz crystal.

Order Code	Type	Price each
QQ02C	RC502AP	£4.72

EF6821P (6521) Peripheral Interface Adaptor (PIA)

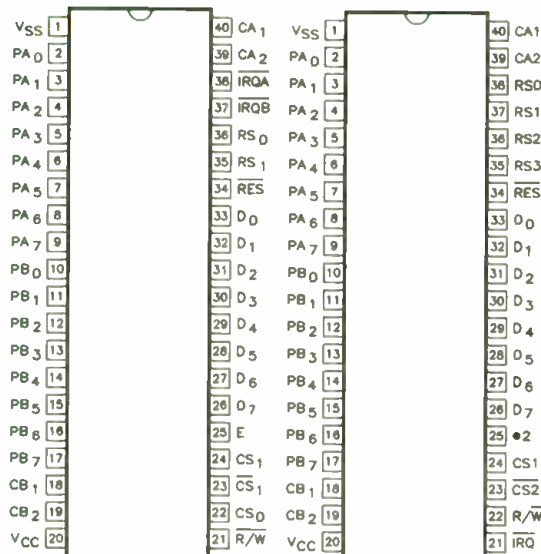

SGS-Thomson

The IC provides a universal means of interfacing parallel data to a microprocessor. One chip is capable of interfacing the 8-bit data bus of the MPU to two 8-bit peripheral buses. Data are able to flow in either direction to and from either peripheral buses under the control of the microprocessor. The two peripheral bus output/inputs are slightly different from one another in that i/o A will drive TTL or the base of a transistor up to 1mA at 1.5V in output mode while i/o B has 3-state capability allowing interface with another MPU.

Order Code	Type	Price each
WQ46A	EF6821P	£1.99

RC6522P Versatile Interface Adaptor (VIA)

Rockwell

6821

6522

A very flexible I/O device that contains a pair of very powerful 16-bit interval timers, a serial-to-parallel/parallel-to-serial shift register and input data latching on the peripheral ports. Expanded handshaking capability allows control of bi-directional data transfers between VIA's in multiple processor systems. Control of peripheral devices is handled primarily through two 8-bit bi-directional ports. Each line can be programmed as either an input or an output. Several peripheral I/O lines can be controlled directly from the interval timers for generating programmable frequency square waves or for counting externally generated pulses. To facilitate control of the many powerful features of this chip, an interrupt flag register, an interrupt enable register and a pair of function control registers are provided.

Order Code	Type	Price each
UF25C	R6522P	£3.89

EF6850P Asynchronous Communications Interface Adaptor

SGS-Thomson

This IC will interface the microprocessor data bus to serial asynchronous data, both for input and output. The parallel data of the MPU bus is serially transmitted and received by this IC with proper formatting and error checking. A programmable control register provides variable word lengths (8 or 9-bit), clock division (/16, /64), transmit, receive and interrupt control. The device has optional even or odd parity, and performs parity, overrun and framing error checking. Transmissions up to 500k bauds (kbps) are possible and three control lines are provided for control of a modem for line transmission (e.g. to cassette recorder or amateur radio transceiver).

Order Code	Type	Price each
WQ48C	EF6850P	£1.99

8251A Programmable Communication Interface

This USART chip is programmed by the MPU to operate using virtually any serial data transmission technique presently in use. It interfaces the MPU's parallel data bus with any peripheral requiring serial data (e.g. cassette recorder, modem etc.). Features are: synchronous mode - 5- to 8-bit characters, internal or external character synchronisation and automatic sync insertion; asynchronous mode - 5- to 8-bit characters, clock rate (/16, /64), break character generation, 1, 1½ or 2 stop bits, false start bit detection, automatic break detect and handling; up to 64k baud (kbps); full duplex double buffered transmitter and receiver; error detection-parity, overrun and framing; all inputs and outputs fully TTL compatible.

8255A Peripheral Interface Adaptor

A general purpose I/O device having 24 I/O pins which may be individually programmed in two groups of 12 and used in 3 major modes of operation. In mode 0 each group of 12 I/O pins may be programmed in sets of four to be input or output. In mode 1 each group may be programmed to have 8 lines of I/O, and of the remaining 4, three are used for handshaking and interrupt control signals. Mode 2 is a bidirectional bus mode which uses 8 lines for the bus and 5 lines (one borrowed from the other group) for handshaking.

PIC16C71 8-Bit CMOS OTP Microcontrollers with A/D Converter

Arizona Microchip

NEW

A range of low-cost, high-performance 8-bit microcontrollers with an on-board A/D converter, all on a single chip. The RISC-like microprocessor has only 35 single-word instructions, each 14 bits wide with direct, indirect and relative addressing modes. The data path is 8 bits wide and operating speeds range between 4MHz and 16MHz (although they will work down to DC when externally clocked). The chips have 1K x 14 of on-chip OTP EPROM program memory, 36 x 8 general-purpose registers (static RAM), 15 special-function hardware registers, four interrupt sources (external, TMR0 timer, A/D conversion complete, and PortB<7:4> interrupt on change), and an 8-level deep hardware stack. There are 2 I/O ports with a total of 13 pins, each with individual direction control, an 8-bit counter with 8-bit timer and programmable prescaler, power on reset and a watchdog timer with its own RC oscillator. The A/D converter has four inputs that are multiplexed into one sample and hold, with 8-bit resolution and an accuracy of ± 1 LSB. With their power-saving sleep mode, security fuse for code protection and low-power CMOS architecture, these devices deliver a performance that is an order of magnitude higher than its competitors in a similar price category. These devices are easily programmed into any one of four states: low power

(LP), reduced cost using an RC oscillator (RC), a standard crystal/resonator (XT) or high speed (HS) modes. RC types work well between DC and 4MHz, XT at 1kHz to 4MHz, and LP between DC and 200kHz. All devices will work down to DC if an external clock is supplied. The LC versions have extended V_{DD} ranges, making them useful in battery applications, etc. In addition there is also a ceramic dual in-line package (CERDIP), a device available with a window so that the contents of the chip may be erased (JW), which operates up to 20MHz. Erasable devices are very useful for code development and testing. The above devices are also available in small outline integrated circuit (SOIC) packages, for applications that require the most efficient use of space.

Specification (typical $V_{DD}=5V$, $f_{osc}=4MHz$, $25^{\circ}C$)
 Supply voltage, V_{DD} : 3V to 6V
 Supply current: 3.3mA
 Oscillator frequency: DC to 16MHz
 Instruction cycle time: 250ns

PIC16C5X 8-Bit CMOS OTP Microcontrollers

Arizona Microchip

NEW

A family of low-cost OTP, high-performance 8-bit microcontrollers with up to 640 bits of RAM and up to 24K-bits of one-time-programmable ROM. The RISC-like microprocessor has only 33 single-word instructions, each 12 bits wide with direct, indirect and relative addressing modes. The data path is 8 bits wide and operating speeds range between DC and 4MHz. The chips have between 512 and 2K x 12 of on-chip OTP EPROM program memory, 25 to 72 x 8 general-purpose registers (static RAM), 7 special-function hardware registers, and a 2-level deep hardware stack. There are 2 or 3 I/O ports with a total of 12 to 20 pins,

each with individual direction control; an 8-bit counter with 9-bit programmable prescaler; power on reset; and a watchdog timer with its own RC oscillator. With their power-saving sleep mode, security fuse for code protection and low-power CMOS architecture, these devices deliver a performance that is an order of magnitude higher than their competitors in a similar price category. These devices are available in low power (LP), reduced cost using an RC oscillator (RC) and a standard crystal/resonator (XT). RC types work well between DC and 4MHz, XT at 1kHz to 4MHz, and LP between DC and 200kHz. All devices will work down to DC if an external clock is supplied. In addition there is also a ceramic DIP device available with a window so that the contents of the chip may be erased (JW), which operates up to 20MHz. Erasable devices are very useful for code development and testing. The above devices are also available in small outline integrated circuit (SOIC) packages, for applications that require the most efficient use of space.

PIC16C84 8-Bit CMOS EEPROM Microcontrollers

Arizona Microchip

NEW

A low-cost, high-performance, CMOS, fully static 8-bit microcontroller with 1K x 14 EEPROM program memory and 64 bytes of EEPROM data memory. The RISC-like instruction set is easy to learn as there are only 35 commands. All instructions are single cycle (400ns), except for program branches which are two cycle. Operating speeds between DC and 10MHz. Employs 14-bit wide instructions with an 8-bit data path. 36 x 8-bit general-purpose registers and 15 special-function hardware registers. Eight-level deep hardware stack with direct, indirect and relative addressing modes. Four sources of interrupt including external, timer, PortB<7:4> interrupt on change, and data EEPROM write complete. This device is capable of typically 1,000,000 erase/write cycles, with data retention greater than 40 years. Among the many peripheral features of the device there are 13 I/O pins with individual direction control, high-current sink/source for direct LED drive and an 8-bit real-time clock/counter with 8-bit programmable prescaler.

16C84

Special microcontroller functions include a power-on reset, power-up timer, oscillator start-up timer, watchdog timer with its own on-chip RC oscillator for reliable operation, security EEPROM fuse for code-protection, power saving SLEEP mode, and user definable oscillator configurations. This device is also serially programmable and may be programmed on the application by using only two pins. This means that production runs of an application can occur before software is available, or if software becomes obsolete finished applications can be reprogrammed, saving time, money and inconvenience.

These devices are available in plastic 18-pin DIP and surface mount SOIC style packages. Options include 4MHz or 16MHz devices, with an LC version which has extended V_{DD} limits down to 3V instead of the usual 4V.

Specification

PIC16C64 EPROM Based 8-Bit CMOS Microcontrollers

Arizona Microchip

NEW

A range of 8-bit EPROM microcontrollers featuring a RISC-like instruction set with 35 easy to learn commands. On-board memory is available as 2K x 14 bits of on-chip EPROM program memory and 128 x 8 bits of general-purpose registers (SRAM). With these microcontrollers there is an interrupt capability (up to eight sources) and 33 special-function hardware registers. Other features include an eight-level deep hardware stack, direct/indirect and relative addressing modes, 33 I/O pins with individual direction control, high-current sink/source for direct LED drive, one pin that can be configured as capture input, PWM output or compare output (capture is 16-bit, 200ns with PWM resolution 1 to 10 bits giving 80kHz at 8-bit resolution). A 16-bit timer/counter with 8-bit period register (for PWM and time base), and two 8-bit timers are available for use under software control. The device also has a parallel slave port which is 8 bits wide and has external read, write and chip select controls for forming microprocessor bus interfaces. A synchronous serial port with two modes of operation is implemented for 3-wire SPI and I²C Access bus compatibility. All the features of other families of programmable device are also implemented on the 16C64 series, like power-on reset, power-up timer, oscillator start-up timer, watchdog timer with its own on-chip RC oscillator for reliable operation, security EPROM fuses for code-protection, power-saving SLEEP mode, and user definable oscillator configuration. For versatility these devices can also be programmed in the application, with only two connections to the device being necessary. This device is supplied in 40-pin, plastic DIP.

PIC16C84-04P 8-Bit Microcontroller

Arizona Microchip

PIC16C84-04P

A high-performance, low-cost, CMOS, fully-static 8-bit microcontroller which includes EEPROM for programs (1K x 14 bits), 64 bytes of non-volatile data 'RAM' (also built in EEPROM technology), 8 levels of stack space, ports and interrupt control in one 18-pin DIL package. It is the second member of an enhanced family of PIC16CXX microcontrollers, and its high performance is due to the use of single word instructions 14 bits wide, which execute in a single cycle (except for program branches which take two cycles). Clock speed can be up to 4MHz, offering instruction-cycle times down to 400ns. What sets such a microcontroller apart from other processors are special circuits to deal with the needs of real time applications. The PIC16C84 has a host of such features intended to maximise system reliability, minimise cost through elimination of external components, provide power saving operating modes and off code protection. The peripherals include an 8-bit real-time clock timer/counter with an 8-bit prescaler, effectively making a 16-bit divider, and 13 bidirectional I/O pins divided into 4 port A pins and 8 port B pins with optional 'weak pull-up' inputs. The high drive current from these pins (in output mode) is up to 25mA for sink (0 out) and 20mA for source + out). This greatly helps to reduce the number of additional external buffers and drivers thus reducing the size and cost of the overall system.

Direct, indirect and relative addressing modes are possible, and there are four interrupt sources: external INT input, timer count overflow, data changes on the upper four port B inputs 4 to 7, and if the data RAM is filled up. Special microcontroller features consist of a power-up reset, oscillator start-up timer, a 'watchdog' timer with its own on-chip RC oscillator for reliable operation. Typical current consumption of the device is at most only 5mA, typically 1.8mA at 4MHz and only 35 μA at 32kHz. In SLEEP mode the main processor is effectively powered down leaving only the watchdog timer to consume 1 μA typically, so that, unlike the majority of conventional microprocessors, the device readily lends itself to battery powered applications. The user can wake up from SLEEP mode through external reset, watchdog timer time-out or via an interrupt. Several oscillator options are also made available to allow the device to fit the application.

The PIC16C84 has an easy to learn, RISC type instruction set having only 35 single word instructions, each of which is a 4-bit word divided into an opcode, which specifies the instruction type, and one or more operands, which further specify the operation of the instruction.

The 64 x 8-bit EEPROM data memory is readable and writable during normal operation, and there are a total of 11 special function registers at the 'file' addresses which handle port and data EEPROM addressing, with their equivalent control registers (if applicable). Indirect addressing of file registers can be performed, and there are a further 36 spare locations for general-purpose uses, which can be treated like ordinary volatile static RAM.

The device is programmed using one of two methods, serial or parallel. The serial mode will allow the device to be programmed while in the user's system using only five pins; VDD, VSS, MCLR/VPP, RB6 and RB7. The parallel mode will provide faster programming since the data is loaded into the device faster. In either mode, both program and data memory can be programmed, and also overwritten afterwards thanks to the use of EEPROM memory. This product is supported by an in-circuit emulator and software development package (see below), which runs on IBM PC and compatible machines.

PIC17C42-16/P RISC Architecture 8-Bit Micro

Arizona Microchip

17C42-161

This 8-bit micro is based upon an advanced RISC architecture core that provides one of the fastest 8-bit microcontrollers available, and is designed to meet the needs of the most demanding 8-bit real time embedded control applications. The device has a 2K x 16 on-chip one time programmable (OTP) EPROM program memory with a total addressable program memory of 64K x 16, so for applications requiring larger program memory, external memory can be used. There is 232 x 8 of on-chip RAM for data memory and the entire 256 byte of static CMOS RAM is directly addressable.

There are two very fast PWM outputs which offer a selectable resolution of 8-bit (62.5kHz) or 10-bit (15.6kHz). The period is also selectable. These high speed, high resolution, PWM outputs allow for more precise control of motors and actuators in real-time control applications.

Two very fast capture inputs are provided, each with a 16-bit capture register, a prescaler and a resolution of 250ns. The inputs are ideal for monitoring a motor shaft encoder output for motor control or other applications with a fast bit stream.

The three 16-bit timer/counters can be configured as two 16-bit and two 8-bit timer/counters. The 16-bit RTCC has an 8-bit prescaler which in effect makes a very long count, 24-bit counter.

An on-chip USART (with baud rate generator) allows fast serial communications, and is full duplex asynchronous (up to 250Kbit/s) and half duplex synchronous (up to 4Mbit/s).

Other features include 33 I/O pins; three 8-bit, one 16-bit and one 3-bit ports; two pins with high sink current of 60mA for direct LED and relay interface; a low current drain typically 15mA at 16MHz and 10µA in 'sleep mode'. This 16MHz device is housed in a 40-pin plastic DIP package.

Electrically Erasable and Programmable Serial ROMs for PIC Microcontrollers

Arizona Microchip

NEW

These serial EEPROMs support a bidirectional two-wire bus and data transmission protocol. A device that sends data via the bus is defined as a transmitter, and a device receiving data as a receiver. The bus has to be controlled by a master device which generates the serial clock (SCL), controls the bus access, and generates the START and STOP conditions, while the EEPROM operates as a slave. Both master and slave can operate as transmitter or receiver, but the master device determines which mode is activated.

These devices are all 2-wire serial interface (I²C) bus compatible, and will operate in the standard 100kHz or fast 400kHz modes. When using such devices having a serial protocol with a microcontroller that does not have a dedicated protocol specific port, the designer must generate the specific code routines to accomplish the several memory access functions that the microcontroller will perform. The PIC microcontrollers are versatile and efficient to program and can be made to interface with I²C protocol EEPROMs easily.

24C16B 16K 2.5V CMOS Serial EEPROM

Arizona Microchip

NEW

A 16K-bit electrically erasable PROM organised as 8 blocks of 256 x 8-bit bytes with a 2-wire serial, I²C bus compatible interface. Low power CMOS technology permits operation down to 2.5V with standby and active currents of only 5µA and 1mA respectively. It also has page write capability for up to 16 bytes of data.

The device includes Schmitt trigger, filtered inputs for noise suppression, output slope control to eliminate ground bounce, 100kHz serial speed at a supply of 2.5V and 400kHz at 5V. self-timed write cycle (including auto-erase), a page-write buffer for up to 16 bytes, a typical page-write cycle time of 2ms, a hardware write protect facility for the entire memory contents, and it can be operated as a serial ROM. It has a life of 1,000,000 ERASE/WRITE cycles, ESD protection > 4,000V and data retention exceeding 40 years.

24C16B

Order Code	Type	Price each
AD23A	24C16B/P	£3.40

24C32 32K 5V CMOS Serial EEPROM

Arizona Microchip

NEW

A 4K x 8 (32K-bit) serial electrically erasable PROM developed for advanced, low-power applications such as personal communications or data acquisition. The device features an input cache for fast write loads with a capacity of eight 8-byte pages, or 64 bytes. It also features a fixed 4K-bit block of ultra-high endurance memory for data that changes frequently. It is capable of both random and sequential reads up to the 32K boundary. Functional address lines allow up to eight 24C32 devices on the same bus, making 256K-bits of address space.

A low-cost, high performance, CMOS, fully static EPROM-based 8-bit micro with on-chip analogue to digital converter. The device uses an advanced RISC-like architecture and features a reduced set of 35 instructions, with all single word instructions (14-bit wide) executed in a single cycle (program branches take two cycles). Additionally, there are four interrupt sources and an eight level hardware stack. Other features include an 8-bit timer/counter with 8-bit prescaler, 13 bidirectional I/O pins, an 8-bit A/D converter and 36 x 8 general purpose registers (SRAM). The high current drive of the I/O pins helps reduce external drivers - 25mA maximum sink and 20mA maximum source. The A/D converter module has four analogue input channels multiplexed into one sample-and-hold and an A/D that has 8-bit resolution with a ±1LSB accuracy.

The microcontroller features: power on reset; power up timer; oscillator start-up timer; watchdog timer; security EPROM fuse for code-protection; serial, in-system programming (ISP) of EPROM program memory (1K x 14) using only two pins; user selectable oscillator options.

The device operates from a 5V supply with a typical power consumption of <2mA and <1µA in standby mode (@ 3V). Designed to run at 4MHz, the device is housed in an 18-pin plastic DIL package.

Order Code	Type	Price each
DC19V	PIC16C71-04/P	£6.90

Continued on next page

Continued from previous page

Advanced CMOS technology makes this device ideal for low-power, non-volatile code and data applications. The device includes Schmitt trigger, filtered inputs for noise suppression, output slope control to eliminate ground bounce, 100kHz and 400kHz modes, self-timed write cycle (including auto-erase), a typical page or byte-write cycle time of 2ms, and power on/off data protection circuitry.

Specification

Voltage operating range: 4.5 to 5.5V
 Peak write current: 3mA @ 5.5V
 Max. read current: 150µA @ 5.5V
 Standby current: 5µA typical
 Endurance, 60K block: 20,000 ERASE/WRITE cycles
 4K block: 1,000,000 ERASE/WRITE cycles
 ESD protection: > 4,000V
 Data retention: > 40 years

24LC65 64K 2.5V CMOS 'Smart' Serial EEPROM

Arizona Microchip

A 'smart' 8K x 8-bit serial electrically erasable PROM, developed for advanced, low-power applications such as personal communications, and providing systems designers with flexibility, through the use of many new user-programmable features. The 24LC65 offers a relocatable 4K-bit block of ultra-high endurance memory for data that changes frequently. The remainder of the array, or 60K-bits, is rated at 10,000 ERASE/WRITE cycles typical. The device features an input cache for fast write loads with a capacity of eight pages, or 64 bytes. It also has programmable security options for ERASE/WRITE protection of critical data and/or code of up to fifteen 4K blocks. Functional address lines allow the connection of up to eight 24LC65s on the same bus for up to 512K-bits contiguous EEPROM memory. Advanced CMOS technology makes this device ideal for low-power, non-volatile code and data applications.

The device includes Schmitt trigger, filtered inputs for noise suppression, output slope control to eliminate ground bounce, 100kHz and 400kHz modes, self-timed write cycle, a typical page or byte-write cycle time of 2ms, and power on/off data protection circuitry.

Specification

Voltage operating range: 2.5 to 6.0V
 Peak write current: 3mA @ 6.0V
 Max. read current: 150µA @ 6.0V
 Standby current: 5µA typical
 Endurance, 60K block: 10,000 ERASE/WRITE cycles
 4K block: 1,000,000 ERASE/WRITE cycles
 ESD protection: > 4,000V
 Data retention: > 40 years

24AA65 64K 1.8V CMOS 'Smart' Serial EEPROM

Arizona Microchip

A 'smart' 8K x 8-bit serial electrically erasable PROM, developed for advanced, low-power applications such as personal communications, and providing systems designers with flexibility, through the use of many new user-programmable features. It is capable of operations down to 1.8V, the end-of-life voltage for 2 'AA' battery cells for most popular battery technologies. The 24AA65 offers a relocatable 4K-bit block of ultra-high endurance memory for data that changes frequently. The remainder of the array, or 60K-bits, is rated at 10,000 ERASE/WRITE cycles typical. The device features an input cache for fast write loads with a capacity of eight pages, or 64 bytes. It also has programmable security options for ERASE/WRITE protection of critical data and/or code of up to fifteen 4K blocks. Functional address lines allow the connection of up to eight 24AA65s on the same bus for up to 512K-bits contiguous EEPROM memory. Advanced CMOS technology makes this device ideal for low-power, non-volatile code and data applications.

The device includes Schmitt trigger, filtered inputs for noise suppression, output slope control to eliminate ground bounce, 100kHz and 400kHz modes, self-timed erase and write cycles, a typical page or byte-write cycle time of 2ms, and power on/off data protection circuitry.

Specification

Voltage operating range: 1.8 to 6.0V
 Peak write current: 3mA @ 6.0V
 Max. read current: 150µA @ 6.0V
 Standby current: 5µA typical
 Endurance, 60K block: 10,000 ERASE/WRITE cycles

High-Performance, Universal In-Circuit Emulator System

Arizona Microchip

The PICMASTER universal in-circuit emulator system is intended to provide the designer with a complete microcontroller design tool set for all microcontrollers in the PIC16CXX and PIC17CXX families. This system currently supports the PIC16C84 described on page.

The emulator system is designed to operate on low-cost IBM PC and compatible machines ranging from 80286-AT class ISA-bus systems through to the new 80486 EISA-bus machines. The development software runs in the Microsoft Windows 3.1 environment, allowing the operator access to a wide range of supporting software and accessories. Provided with the PICMASTER system is a high performance real-time in-circuit emulator, a programmer unit and a macro assembler program. Coupled with the user's choice of text editor, the system is ready for development of products containing a PIC16C84. A 'Quick Start' PIC product sample pack containing user programmable parts is included for additional convenience.

The system has been designed as a real-time emulation system with advanced features generally found on more expensive development tools. The AT

platform and Windows 3.X environment was chosen to make these features available to the end user.

To properly take advantage of these features, PICMASTER requires installation on a system having the following minimum configuration: PC AT 80286, 386SX, 386DX or 80486 with ISA or EISA bus; EGA, VGA, 8514/A, or Hercules graphics card (EGA or higher recommended); MS-DOS/PC-DOS 3.1 or higher; Microsoft Windows 3.0 or higher operating in either standard or 386 enhanced mode; 1Mb of RAM (2M recommended); and at least one 5.25in. floppy disk drive; 10Mb of hard disk space (1Mb for PICMASTER, remainder for Windows 3.X); one available 8-bit PC AT (ISA) I/O expansion slot (half-size), and, preferably, a Microsoft mouse or equivalent.

The PICMASTER system comprises four major components:

Host-Interface Card

Connects the emulator system to the PC. This high-speed parallel system card plugs into the 8-bit expansion slot and connects to the external emulator control pod via a 37-way cable.

Emulator Control Pod

Contains all the emulation and control logic which matches the PIC16CXX microcontroller. Emulation memory, trace memory, event and cycle timers and trace/break-point logic are all included. The pod controls and interfaces to the target-specific emulator probe which actually stands in for the real microcontroller chip via a ribbon cable.

Target Specific Emulator Probe

This probe is specific to the microcontroller family to be emulated and configures the universal system for emulation of a particular microcontroller device.

PC Host Emulation Software

Necessary to control and provide a working user interface. The emulation software provides the user with full display, alteration, and control of the system under emulation. It is also universal to other microcontrollers in the family and not just the PIC16C84.

With Windows 3.X, PICMASTER emulation can operate in one window while a text editor is running in a second window. Dynamic Data Exchange (DDE), a feature of Windows 3.X, will be available in this and future versions of the software. DDE allows data to be dynamically transferred between two or more Windows programs. With this feature, data collected with PICMASTER can be automatically transferred to a spreadsheet or database program for further analysis. Under Windows 3.X, two or more PICMASTER emulators can be run simultaneously on the same PC making development of multi-microcontroller systems possible.

PICSTART-16B Development System

Arizona Microchip

A development system for the entire range of PIC16SX family of microcontrollers, as well as the PIC16C71 and the PIC16C84 (with EEPROM). The development system provides the product development engineer with a low-cost introductory design tool, that will work with any PC compatible computer running the MS-DOS/PC-DOS operating system.

The system comes with an MS-DOS based software simulator program (PICSIM), a microcontroller EPROM programmer, and a macro assembler program (MPALC). Sample software programs to run on the simulator are provided to help the engineer quickly become familiar with the development system and the PIC micro-controller. The user has only to provide a text editor, for the system to be operational. A full screen, user-friendly, software program is provided for full interactive control over the programmer. Parts may

be read, programmed, blank checked and verified, and all fuses and ID locations may be specified. A large screen buffer editing facility allows the user to change and program locations in either hexadecimal or ASCII (text) modes. The MPSIM simulator program provides the developer with an instruction and limited simulator

software program for debugging PIC16C5x assembler code. The macro assembler provides translation of assembler source codes to object code for all PIC microcontrollers, as well as providing object files, listing files, and special files required for symbolic debug with the PIC emulator system. Also included is a compact 3 x 5 in. development programmer board and a copy of Microchip's new Embedded Controller Handbook, which contains 30 PIC and serial EEPROM application notes. PICSTART-16B's programmer board connects to a PC and accepts 18- and 28-lead OTP PDIP PIC16Cxx devices. The kit includes software to read and program all PIC16Cxx microcontroller products. This unit uses a serial interface, not parallel, and is supplied with an RS232 lead. To connect a 25-way RS232 port to this unit, cable JC13 will be required (see Computers, section).

AD22Y	Picstart 17A	£192.50

Pro Master Programmer Kit

Arizona Microchip

The 'Pro Master' programmer is a production quality programmer capable of operating in stand alone mode, as well as PC-hosted mode. It supports both the PIC16C and PIC17C series of microcontrollers. The programmer has an LCD display for displaying error messages, keys to enter commands, and a separately available socket module. In stand alone mode, the programmer can read, verify or program a device, and can set fuse configuration and code-protect in this mode. The EEPROM memory can hold data and parametric information, even when power is removed. The programmer can be connected to a PC via one of the COM (RS232) ports, and the supplied PC based user interface software makes using the programmer simple and efficient. The user interface is full screen and menu driven. The software allows editing of data,

selection of fuse configuration and type, selection of the various voltage levels, load and store to and from disk files as well as a full screen display. Essential commands such as read, verify, program and blank check can all be issued from the screen. The kit includes the programmer, a RS232 interface cable, Pro Master software, Pro Master documentation and power supply unit. The socket module has to be purchased separately. Supplied with the socket modules; are suitable devices that can be used with the programmer.

Socket Module

Code	Description
AC164001	PIC16C54 to C57; 18 & 28 LD PDIP socket module.
AC164002	PIC16C54 to C57; 18 & 28 LD SOIC socket module.
AC164004	PIC16C71; 18 lead PDIP socket module.
AC164005	PIC16C71; 18 lead SOIC socket module.
AC174001	PIC17C42; 40 lead PDIP socket module.

The Pro Master is ideal for low to moderate volume production.

Microchip Data Book

A comprehensive data book covering 8-bit microcontrollers, microcontroller programming, product and logic product specifications. Also covers development systems and software tools. A useful section on packaging shows all the variations of device package available. Full breakdowns of manufacturers' part numbers including custom versions of devices are given, enabling the end user to check exactly which device they have. Graphs and timing diagrams are numerous and are displayed in a clear and concise format making them easy to read and interpret. As the book covers such a large range of products, some of the specifications are so new they have been marked 'Preliminary', ready for the newest of products, when they hit the market. A truly vast source of information. 1994. Over 1350 pages. 230 x 180mm, illustrated.

Order Code	Type	Price each
AD29G	Microchip databook	£9.50 NV

PICStart Application Guide

Contains a compilation of ideas and designs submitted to Microchip Technology, in response to the recent introduction of their low-cost programmable logic ICs and development hardware kits. The applications are varied and range from communications and computer peripherals to consumer electronics and industrial control processes. The idea of the book is to show the types of applications for which the programmable logic devices they manufacture can be used. The book is divided into 5 sections: Introduction; Communications Market Entries; Consumer Market Entries; Office Automation Market Entries; and Industrial Market Entries. The introduction covers very quickly, in three pages, a résumé of the PIC16C5X, PIC16C71 and PIC16C84 families of devices, and is enough information to allow selection of the most appropriate device. The rest of the book is full of typical applications that have been designed and manufactured; some in volume. Circuit diagrams and block diagrams help to describe the applications. 1993. 90 pages. 230 x 175mm, illustrated.

Order Code	Type	Price each
AD27E	Picstart App Guide	£1.99 NV

Embedded Control Handbook

A comprehensive guide to applications and devices in the PIC16C5X, PIC16CXX and PIC17CXX families of devices, and the development tools required to produce the applications detailed. There are application notes for all the above families, as well as interfacing diagrams and articles, to show how easy the devices can be used to interact with other systems. Tutorials and application notes specifically geared towards serial EEPROMS are supplied, showing exactly how to design and make complex circuits for problem solving and meeting with applications requirements. In addition to the detailed articles and hardware and system diagrams, there are software listings for each application. So whether you are implementing a four-channel digital voltmeter, or a fast Fourier transform algorithm, this book shows you how to go about it. Split into eight sections for easy reference. 1993. Over 800 pages. 230 x 175mm, illustrated.

Order Code	Type	Price each
AD28F	Embed Control Hbook	£9.50 NV

PICStart Development System Ordering Guide

A guide to buying the correct piece of hardware, best suited to your needs. The guide covers all the programmers available for the PIC16/17 families of microcontroller. Details at the back of the guide show how all of the programmers can be upgraded by adding new items, as all the programmers work on a universal development platform. If you subsequently decide that you need a more advanced programmer or decide to work with more complex devices, you can just upgrade to the level that enables you to do it. The guide covers high-performance emulator systems, low-cost development kits, programmers, probe kits and all the sockets and software accessories available.

Order Code	Type	Price each
AD30H	Picstart Dev Guide	£1.99 NV

A Beginner's Guide to the Microchip PIC

This book describes how to get to grips with PIC devices and is intended for somebody who has never used such a device before. The reader is guided through the rudiments of selecting the correct device for a job, and how to begin programming it; together with a basic knowledge of how to debug source code, and a guide to the instruction set. The use of headers, look-up tables, reset vectors, real-time clock, watchdog timer, interrupts and development practices are covered with examples and diagrams along the way. The book is accompanied with a 3 1/2 in. disk containing an assembler, simulator and various source code examples.

The prices of the products in this section were correct as of July 1994. However, due to the volatile nature of the semiconductor industry we cannot guarantee these prices during the lifetime of this catalogue. We therefore urge you to telephone the sales line for the latest pricing information.

ST6220 Starter Kit

SGS-Thomson

A starter kit providing a quick entry to using the ST62 series of microprocessors. It provides a basic development system that can be used by every design engineer, and is particularly useful for evaluation of the ST6210/15 and ST6220/25 microcontrollers, as well as for development of simple applications.

The ST6 software tools provided include the ST6 Assembler, the ST6 Linker, the ST6 Simulator and the interface to drive the Basic Programmer board. The application software comprises documented modules that you may copy or link into your applications. The documentation includes a kit guide, ST621x/2x Users Manual, and an ST62/ST63 Software Development Tools Users Manual.

The Users Manual gives an extensive description of the hardware and software aspects of the ST6210, ST6215, ST6220 and ST6225 microcontrollers. It contains all the information hardware and the ST6210/15 source software.

The enclosed ST6 Assembler enables the transformation of the ASCII source file into an executable file. The assembler documentation is included in the Development Tools Users Manual. 'Smart' programming implies the use of several modules, each of which performs an elementary task. Because each module can be quickly and individually tested and debugged, the overall debug time is drastically reduced, thus speeding the development of bug-free application software. The ST6 Linker is used to produce one program from several modules. The associated documentation is also included in the Development Tools Users Manual.

Each module, and the linked program, may be tested and debugged using the ST6 Simulator, also described in the Users Manual. Once debugged, the application software can then be regarded as functionally working. It can then be programmed into an EPROM device using the Basic Programmer, described later in the guide.

Once successfully simulated, application software must be tested in-circuit in order to check that there are no errors due to differences between the functional description of the environment, and the real operating conditions. This test can be made by plugging an EPROM into the application hardware, and performing standardised hardware debugging.

The last step in developing an ST62 application is to make the prototype, and the One Time Programming (OTP) devices in the ST62 family are well suited for this.

To be able to use the starter kit and its software you will also need an IBM or compatible PC AT with hard disk and 5 1/4" floppy drive, 640K of conventional memory, a parallel centronics (printer) port, and running MS-DOS V3.1 or higher.

Order Code	Type	Price each
DC32K	ST6 Kit	£149.99

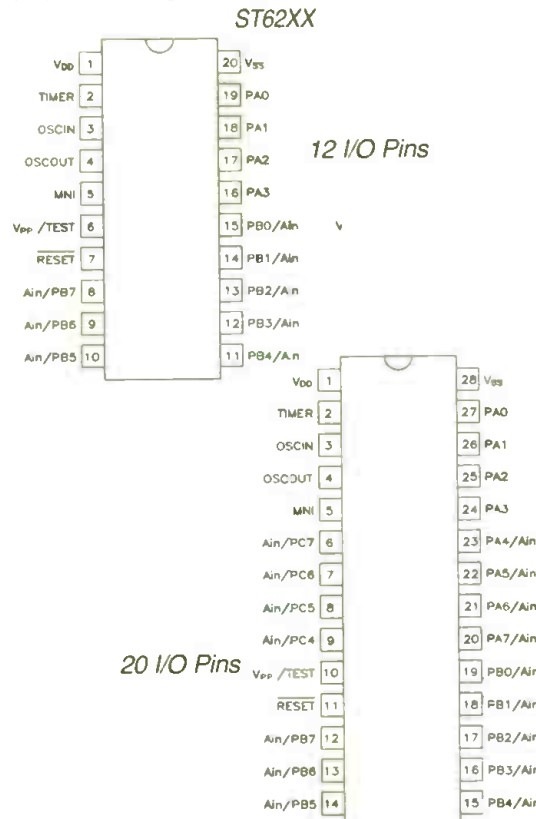

ST6 Series 8-Bit Microcontrollers

SGS-Thomson

A range of 8-bit HCMOS with an in-built 8-bit A/D converter and either 12 or 20 programmable I/Os. Four I/O lines can sink up to 10mA for direct LED driving. Types ST62T10 and ST62B15 have 2K of OTP (One Time Programmable) ROM, all others having 4K of OTP or EEPROM. The device will operate from a 3V to 6V power supply and at a frequency up to 8MHz. Other features include: an 8-bit counter with a 7-bit programmable prescaler (timer); on-chip clock oscillator; digital watchdog timer; one external non-maskable interrupt and power-up reset.

The core of the IC is implemented independently of the I/O or memory configuration, and can be treated as an independent central processor communicating with I/O and memory via internal address, data and control buses. The digital

watchdog timer consists of a down counter that can be used to provide a controlled recovery from a software disturbance. If the hardware version is selected, the watchdog is automatically initialised after reset so that this function does not need to be activated by the user program. Since the watchdog function is always activated, this counter cannot be used as a timer. For the software version, watchdog activation can be controlled by the user software so that the watchdog can be used as a simple 7-bit timer for general purpose counting.

TMS77C82 Microcontroller

Texas Instruments

A 40-pin 8-bit CMOS microcomputer with 8K bytes of EPROM on chip. Programming procedure is the same as for 27C64 EPROM's. The chip also includes 256 bytes of RAM, three timers, and a serial port. There are a total of 32 CMOS compatible I/O pins of which 24 are bidirectional and 8 are outputs. The unique serial port can operate in asynchronous, isosynchronous or synchronous I/O modes with selectable parity and number of data bits and stop bits. Baud rate generation can be internal or external. The 16-bit timers, with their 5-bit prescale, 16-bit capture latch and timer outputs, simplify A/D conversions, pulse width measurements and other time critical applications. Where accuracy over long periods is required, a 42-bit timer can be effected. There are six prioritised interrupt levels all routed through a user-defined vector to the appropriate service routine. When power consumption is critical, the IC can idle selectable sections of itself and use power only where needed. In addition the entire processor can be halted whilst the RAM contents are maintained. The EPROM version (UL66W) is fully erasable. A one time programmable (OTP) version of this chip is also available (UL62S) which can be used for small production runs after the program has been verified on the EPROM. The OTP version is supplied in a low cost standard plastic package that does not have the window and therefore cannot be erased. This version also includes a security device (in software) which, when implemented, allows the user-installed program to run, but prevents it being read out. Thus it is impossible for anyone to copy your program.

Specification (typical)

Supply voltage (pin 25):	5V (3V to 6V)
Supply voltage (pin 36):	12.5V (12V to 13V)
Supply current (pin 25):	11.2mA @ 1MHz
	14.4mA @ 4MHz
	16.1mA @ 6MHz
	<20µA halt mode
Crystal frequency:	500kHz min.
	1MHz at V _s = 3V
	3MHz at V _s = 4V
	6MHz at V _s = 5V ± 10%
	6MHz at V _s = 6V

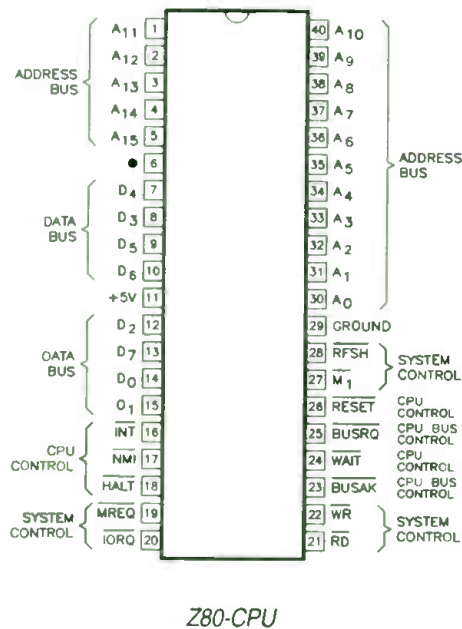

A book entitled "TMS7000 Assembly Language Programmer's Guide" is available for use with this IC. The book contains 210 pages divided into eight sections and covering the entire instruction set in detail.

Order Code	Type	Price each
UL66W	TMS77C82JDL	£59.99

WS91Y	TMS77C82 Ass Lang Bk	£4.95 NV

Z80-CPU Microprocessor

Zilog

Z80-CPU

This 40-pin DIL IC is an extremely powerful 8-bit microprocessor having 158 instructions including all of the 8080 instructions giving total software compatibility. Thus programs written for the 8080 may be run on the Z80 and later updated to make use of the powerful Z80 instruction set. Typically the Z80 requires 25% to 50% less memory space than the 8080 and gives 5 times the throughput of the 8080. There are 17 internal registers including two real index registers, and three modes of fast interrupt response. Static memories can be interfaced using only an external address decoder to provide the appropriate chip select signals. Another advantage of the Z80 is that it can provide all of the refresh control for dynamic memories up to 64K bytes directly, and will interface directly with most 18-pin and 22-pin 4K dynamic RAM's with virtually no additional external logic (16-pin types require only an external address multiplexer). The Z80 requires only a single 5V supply as do all its support chips described below and a single-phase TTL clock operating from a suitable crystal. This amazing MPU outperforms any other microcomputer in 4, 8 or 16-bit applications. Available in 4MHz (A) or 6MHz (B) versions.

Order Code	Type	Price each
QW00A	Z0840004PSC	£3.65
UF74R	Z0840006PSC	£3.25

Z80-PIO Parallel Interface Controller

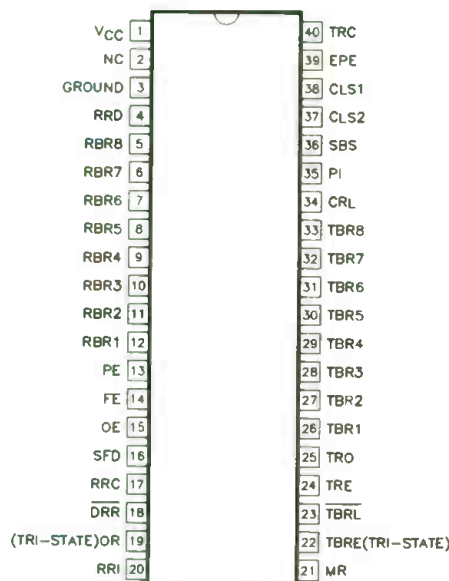

SGS-Thomson

This IC provides a universal means of interfacing parallel data to a microprocessor. It can interface the 8-bit data bus of the MPU to two 8-bit peripheral buses e.g. keyboard, VDU, printer etc. Data are able to flow in either direction to and from the peripheral buses under the control of the microprocessor. Features include interrupt driven "handshake" for fast response; byte output, byte input, byte bidirectional bus (port 'A' only), and bit modes of operation; programmable interrupts on peripheral status conditions; daisy chain priority interrupt logic included to provide automatic interrupt vectoring without external logic; eight outputs capable of driving Darlington transistors (-1.5mA at 1.5V); and all inputs and outputs fully TTL compatible.

Order Code	Type	Price each
QW03D	Z80A-PIO	£3.25

CDP6402CE Universal Asynchronous Receiver/Transmitter

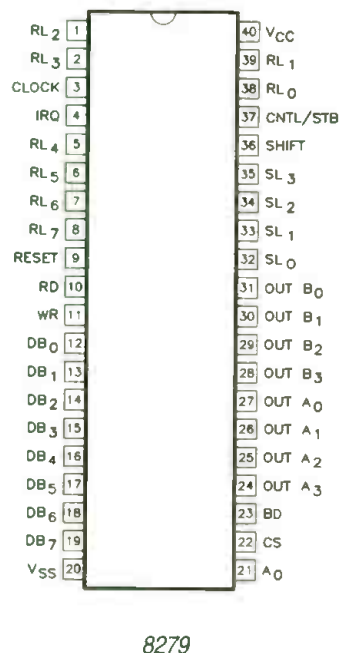

Harris

This industry standard UART will interface computers or microprocessors to asynchronous serial data channels. The receiver converts serial start, data parity and stop bits to parallel data, verifying proper code transmission, parity and stop bits. The transmitter converts parallel data into serial form and automatically adds start, parity and stop bits. The data word length can be 5, 6, 7 or 8-bits. Parity may be odd or even. Parity checking and generation can be inhibited. The stop bits may be one or two, or one and a half if transmitting five bit code. This IC is sometimes supplied coded CDP1854ACE. These two parts are identical.

Order Code	Type	Price each
QQ04E	CDP6402CE	£5.50

8279 Keyboard/Display Interface

8279

This IC is a general purpose keyboard and display I/O interface device for use with microprocessors. The IC will scan a 64-contact key matrix and perform 2-key lockout and N-key roll-over. Keyboard entries are debounced and strobed in an 8-character FIFO and if more than 8 characters are entered, overrun status is set. Key entries set the interrupt output line to the MPU. The display part of the IC provides a

scanned interface for LED and other types of displays. Numeric and alphanumeric displays and simple indicators may be used. The IC has a 16x8 display RAM which can be organised into two 16x4. The RAM can be loaded or interrogated by the MPU. Right entry calculator and left entry typewriter display formats are possible. Both read and write of the RAM can be done with auto-increment of the RAM address.

Order Code	Type	Price each
YH51F	8279	£4.50

Numeric Co-processors

Cyrix

A range of high performance numeric co-processors that offer superior performance than their Intel counterparts yet are software and socket compatible. The Cyrix 287XLT co-processor executes applications up to two times faster than the Intel 287XL. By combining CMOS technology with advanced power management features, the Cyrix 287XLT is ideal for battery-powered applications such as portable computers. Similarly, the 387SX/DX range is up to three times faster than the Intel equivalent in application performance with instruction times reduced by five times or more for 50% of instructions. Automatic idle mode cuts current drain and ensures efficient low power operation - typical current consumption in the 387SX is 0.05mA in standby mode and 75mA when operating in a 16MHz system. Being fully software compatible with the Intel equivalents, many applications software benefit from the use of a maths co-processor, these include financial spreadsheets, CAD/CAM, scientific programming, presentation graphics and postscript emulation for desktop publishing. The co-processors are designed to work at speeds up to their stated maximum and will work in systems at lower operating speeds i.e. the 287XLT will work in 286 CPU systems that operate at 6, 8, 10, 12, 16 and 20MHz.

Package

287XLT:	DIL
387SX:	68-pin J-lead chip carrier
387DX:	Ceramic 68-pin grid array
387DX+:	Ceramic 68-pin grid array

THE BEST OF SERVICE

SUBSECTION 50 MEMORY ICs

2114 4K Static Random Access Memory

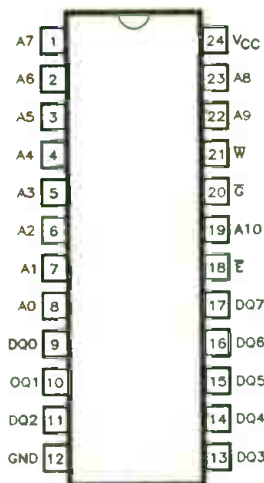

2114

A 4096-bit static random access read/write memory (RAM) organised in 1024 x 4-bit words. The IC operates from a single 5V supply at typically 80mA. Access time is <math><450\text{ns}</math> and thus the chip is suitable for use with all our microprocessors. The input/outputs are 3-state and TTL compatible and there is chip enable input for memory expansion.

Order Code	Type	Price each
QW12N	2114 450ns	£3.69

MK48Z02B25 16384 Bit SRAM with Battery Back-up SGS-Thomson

MK48Z02B25

An ultra low power 16384 bit (2K x 8), non-volatile, static RAM IC that features a power-fail control circuit and a long life lithium battery. The device has the characteristics of a CMOS static RAM, with the added advantage of data being retained in the event of power failure. The IC can replace existing 2K x 8 static RAMs and also has the same pin configuration as a 2716 EPROM and 2K x 8 EEPROMs. As with other static RAMs, there is no limit to the number of write cycles that can be performed. The access time, read cycle and write cycle is 250ns, and no additional support circuitry is needed to interface to the microprocessor.

The device includes a power-fail detect circuit. The circuit deselects the device whenever V_{CC} is out of range ($4.75V \geq V_{PFD} \geq 4.50V$), and write protects itself, providing a high degree of data security. Below 3V, the device switches to internal battery back-up. A mid-write cycle power failure may corrupt data at the currently addressed location, but does not affect the rest of the RAM's content. Normal operation is resumed when V_C exceeds 4.5V. The predicted worst case battery life is 11 years at 70°C.

Specification	
Voltage supply:	4.75V to 5.5V
Average power supply current:	80mA
TTL standby current:	5mA
CMOS standby current:	1mA
Read cycle time:	250ns
Write cycle time:	250ns
Power-fail deselect voltage:	4.5V to 4.75V, 4.6V typical
Battery back-up switchover voltage:	3V

Order Code	Type	Price each
DC02C	MK48Z02B25	£6.99

MK48T02B20 16384 Bit CMOS Timekeeper SRAM SGS-Thomson

MK48T02B20

An ultra low power 16384 bit (2K x 8) SRAM IC that features a real time clock, crystal, power-fail control circuit and a long life lithium battery. The device is a non-volatile pin, and function, equivalent to any JEDEC standard 2K x 8 SRAM. Also, it will fit in to many EPROM and EEPROM sockets and will provide the non-volatility of PROMs without the need for special write timing, or the limitations on the number of writes that can be performed. Access to the clock is simple. 'Timekeeper' registers are located in the upper eight RAM locations. The registers contain year, month, date, day, minutes and seconds data in 24-hour BCD format. Corrections for 28, 29, 30 and 31 day months are made automatically. These registers are not the actual clock counters but read/write Static RAM memory locations. A clock control circuit is included, that once every second transfers the counters into RAM. Updates to the 'Timekeeper' registers should be halted before clock data is read to prevent reading data that is in transition. The device includes a power-fail detect circuit. The circuit deselects the device whenever V_{CC} is out of range ($4.75V \geq V_{PFD} \geq 4.50V$), and write protects itself, providing a high degree of data security. Below 3V, the device switches to internal battery back-up.

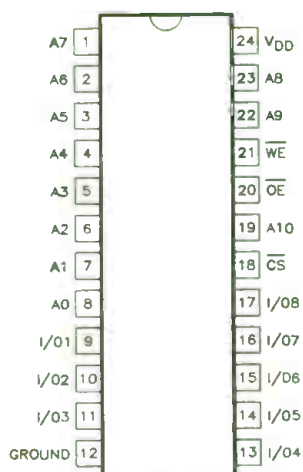

A mid-write cycle power failure may corrupt data at the currently addressed location, but does not affect the rest of the RAM's content. Normal operation is resumed when V_C exceeds 4.5V. The device is driven by a quartz controlled oscillator with a normal frequency of 32768Hz, and provides an accuracy of $\pm 1\text{m}$ per month. Clock calibration can be software controlled, to allow the end-user to calibrate the clock to suit the working environment. If necessary, the oscillator can be turned off if the device is to spend a significant amount of time 'on the shelf'. The predicted worst case battery life is 11 years at 70°C.

Specification	
Voltage supply:	4.75V to 5.5V
Average power supply current:	80mA
TTL standby current:	5mA
CMOS standby current:	3mA
Read cycle time:	200ns
Write cycle time:	200ns
Power-fail deselect voltage:	4.5V to 4.75V, 4.6V typical
Battery back-up switchover voltage:	3V

-------	-------------	--------

4116 16K Dynamic Random Access Memory

A 16,384-bit random access read/write memory (RAM) organised as 16,384 x 1-bit words. The IC operates from three voltage supplies: V_{DD} = +12V (at 45mA max) V_{CC} = +5V (the current depends on output load and is virtually nil when chip is not selected) and V_{BB} = -5V (at 200µA max) (V_{SS} = 0V). When chip is not selected V_{DD} current falls to 2mA max. Access time is <200ns, and a refresh cycle is required every 2ms, thus the chip is directly suitable for use with the Z80 and indirectly with our other microprocessors. The output is 3-state to enable memory expansion. Complete address decoding is performed on-chip and there are on-chip latches for address and data-in.

Order Code Type Price each

QW93B	4116 200ns	£1.99
-------	------------	-------

164 64K Dynamic Random Access Memory

A 65,536-bit dynamic random access read/write memory (RAM) organised as 65,536 x 1-bit words. The IC operates from a single +5V supply at less than 45mA. When chip is not selected, current falls to less than 5mA. Access time is <150ns and the output is 3-state.

Order Code Type Price each

QQ06G	4164 150ns	£3.99
-------	------------	-------

41256 256K Dynamic Random Access Memory

A 262,144-bit D-RAM organised as 262,144 x 1 bits. Available in DIP, ZIP and SOJ packages, the access time of the DIP version is 100ns, 70ns for the other versions. The chip operates from a single +5V supply and the output is 3-state TTL compatible.

Order Code Type Price each

AD15R	DRAM 512k x 8 ZIP	£16.99
AD16S	DRAM 512k x 8 SOJ	£16.99

A 4,194,304-bit D-RAM having an access time of 80ns. Operation is from a single +5V supply at less than 85mA with standby current less than 2mA. The output is 3-state and all inputs and outputs are TTL compatible. The device is supplied in a standard 20-pin zig-zag package. 44100 is organised as 4,194,304 x 1 bit.

Order Code	Type	Price each
UM68Y	44100	£35.99

Memory Modules

A range of DRAM modules for use as memory expansion in computers, including PC's, Apple Mac, Amiga, etc. The range offers the latest high speed technology at the lowest possible cost. Modules are available in SIMM (edge connection type) and SIP (with pins) to suit the different types of sockets found on mother boards in computers. The following types are available.

Please note that most modern motherboards require that each memory bank in use is completely filled with SIMMs. Memory banks are usually configured in blocks of two or four SIMM sockets. It is not usually possible to fit a single SIMM, or an odd number of SIMMs to a motherboard. Most modern motherboards will only accept 9-bit SIMMs, although some of the latest boards do require 36-bit SIMMs, which have 72 pads on the edge connector. It is advisable to use faster SIMM modules on PCs running at 50MHz or above. Please check your motherboard booklet before ordering SIMMs for memory expansion.

Code	Size	Package	Speed

ST93C06B1 Serial Access EEPROM

SGS-Thomson

A 256-bit, Electrically Erasable Programmable Read Only Memory (EEPROM) fabricated with a high endurance, single polysilicon CMOS technology. The memory is accessed by a simple serial interface for machines which support the microwire bus topology. The 256-bit memory is divided into either 16 x 16-bit words or 32 x 8-bit bytes. This organisation may be selected by a signal on the ORG input.

The memory is accessed by a set of instructions which includes Read, Write, Erase All and Write All. A Read instruction loads the address of the first word/byte to be read into an internal address pointer. The data is then clocked out serially. The address pointer is automatically incremented after the data is output and it is possible, if the Chip Select input is

Continued on next page

Continued from previous page

held high, to output a sequential stream of data words/bytes. In this way the memory can be read as a continuous data stream from 16 to 256 bits long. Programming is internally self-timed and does not require an erase cycle prior to the Write instruction.

The Write instruction writes 16 or 8 bits at one time into one of the 16 words or 32 bytes. After the start of the programming cycle a Busy/Ready signal is available on the Data Output when Chip Select is High. A Power-on Data Protection feature inhibits operation when the supply is too low and is particularly useful when powering up the chip. The DU ('Don't Use') pin does not affect the function of the memory and is only provided for the manufacturer's own test sequences. For normal operation it should be left floating or connected to any voltage between V_{SS} and V_{CC} . This device offers a minimum of 1,000,000 erase/write cycles and data retention up to 10 years.

Order Code	Type	Price each
AH58N	ST93C06B1	98p

ST93C46AB1 Serial Access EEPROM

SGS-Thomson

A 1K-bit, serial access EEPROM for microwire buses divided into either 64 x 16-bit words or 128 x 8-bit bytes. The organisation may be selected by a signal on the ORG input. The memory is accessed by a set of instructions which includes Read, Write, Erase, Erase All and Write All. A Read instruction loads the address of the first word/byte to be read into an internal address pointer. The data is then clocked out serially. The address pointer is automatically incremented after the data is output and it is possible, if the Chip Select input is held high, to output a sequential stream of data words/bytes.

In this way the memory can be read as a continuous data stream from 16 to 1024 bits long. Programming is internally self-timed and does not require an erase cycle prior to the Write instruction. The Write instruction writes 16 or 8 bits at one time into one of the 64 words or 128 bytes. After the start of the programming cycle a Busy/Ready signal is available on the Data Output when Chip Select is High.

A Power-on Data Protection feature inhibits operation when the supply is too low and is particularly useful when powering up the chip. The DU ('Don't Use') pin does not affect the function of the memory and is only provided for the manufacturer's own test sequences. For normal operation it should be left floating or connected to any voltage between V_{SS} and V_{CC} . This device offers a minimum of 1,000,000 erase/write cycles and data retention up to 10 years.

AH59P	ST93C46AB1	£1.10

ST24C02AB1 Serial Access EEPROM

SGS-Thomson

A 2K-bit, serial access EEPROM for microwire buses organised as 256 x 8-bit bytes. The advanced CMOS technology guarantees an endurance of more than 1,000,000 erase/write cycles with a data retention up to 10 years. The memory is compatible with the I2C standard 2-wire, serial interface which uses a bi-directional data bus and serial clock. The I2C protocol defines any device that sends data onto the bus as a transmitter and any device that reads the data as a receiver. The device that controls the data transfer is known as the master, and the other as the slave. The ST24C02 carries a built-in 4-bit, unique-device identification code corresponding to the I2C definition. This is used with a 3-bit chip enable input to form a 7-bit memory select signal. In this way up to 8 ST24C02A's may be attached to the I2C bus and selected individually.

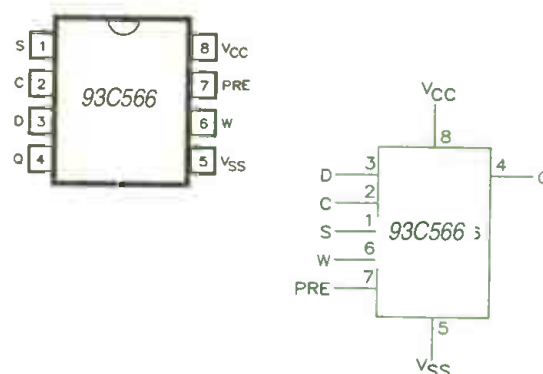

The device behaves as a slave in the I2C protocol with all memory operations synchronised by the serial clock. Read and write operations are initiated by a START condition generated by the bus master. This is followed by a stream of 7 device select bits plus one read/write bit, and terminated by an acknowledge bit. When writing data to the memory, it responds to the 8 bits received by asserting an acknowledge bit during the 9th bit time. When data is read by the bus master, it acknowledges the receipt of the data bytes in the same way. Data transfers are terminated with a STOP condition. There are three basic modes for both read and write operations: byte write, multi-byte write and page write; current address read, random access read and sequential read.

Order Code	Type	Price each
AH60Q	ST24C02AB1	£1.65

ST93C566B1 Serial Access EEPROM

SGS-Thomson

A 4K-bit, serial access EEPROM for microwire buses organised as 256 x 16-bit words. The memory is accessed by a set of instructions which includes Read, Write, Page Write and Write All and other instructions used to manage memory protection. A Read instruction loads the address of the first word to be read into an internal address pointer. The data is then clocked out serially. The address pointer is automatically incremented after the data is output and it is possible, if the Chip Select input is held high, to output a sequential stream of data words. In this way the memory can be read as a continuous data stream from 16 to 4096 bits long. Up to 4 words may be written in a single program cycle using the Page Write instruction. The memory may be 'erased', or set to a predetermined pattern by using the Write All instruction. An external signal control Write Enable and a user defined area of the memory may be write protected. An external signal (PRE) enables access to the Protect Register which stores the lowest address to be write protected. Data may be permanently protected by programming an OTP bit which prevents further changes to the write protect starting address and the protect flag.

Programming is internally self-timed and does not require an erase cycle prior to the Write instruction. The Write instruction writes 16-bits at one time into one of the 256 words, the Page Write instruction writes up to 4 words of 16 bits to sequential locations, both providing that all addresses are outside the write protected area. After the start of the programming cycle a Busy/Ready signal is available on the Data Output when Chip Select is High. This device offers a minimum of 1,000,000 erase/write cycles and data retention up to 10 years.

AH61R	ST93C566B1	£2.55

ST24C08B1 Serial Access EEPROM

SGS-Thomson

An 8K-bit serial access EEPROM organised as four blocks of 256 x 8-bit bytes. It is manufactured in an advanced CMOS technology which guarantees an

THE BEST OF SERVICE

endurance of more than one million erase/write cycles with a data retention of over 10 years. The memory is compatible with the I²C bus standard, 2-wire serial interface which uses a bi-directional data bus and serial clock. The ST24C08 carries a built-in 4-bit, unique device identification code corresponding to the I²C bus definition. This is used together with a chip enable input to form a 5-bit memory select signal. In this way up to 2 ST24C08's may be attached to the I²C bus and selected individually.

The device behaves as a slave in the I²C protocol with all memory operations synchronised by the serial clock. Read and write operations are initiated by a START condition generated by the bus master. This is followed by a stream of 7 device select bits plus one read/write bit, and terminated by an acknowledge bit. When writing data to the memory, it responds to the 8 bits received by asserting an acknowledge bit during the 9th bit time. When data is read by the bus master, it acknowledges the receipt of the data bytes in the same way. Data transfers are terminated with a STOP condition.

Data in the upper block of the memory may be write protected, and this area may be programmed to start on any 16 byte boundary. Protection is enabled by setting a memory bit flag and the PRE signal input. There are three basic modes for both read and write operations: byte write, multi-byte write and page write; current address read, random access read and sequential read.

AH62S	ST24C08B1	£3.35

MSM16811RS 1024 Bit Serial EEPROM

OKI

An electrically erasable and programmable read only memory (EEPROM or E²PROM). The user can select a memory organisation of 128 x 8 bits by connecting pin 6 to ground, or 64 x 16 bits with pin 6 open or connected to V_{CC}. The device has 7 operating modes: read; erase individual byte or word; write individual byte or word; enable programming; disable programming; erase who chip; and program whole chip. Instructions, address and data bits are input at pin 3 in serial format and data can be read from pin 4 also in serial format. Pin 4 is 3-stated when no data is being output.

Specification (typical at V _{CC} = +5V)	
Supply voltage:	5V ±10%
Supply current:	3mA max
Standby current:	100µA max
Input voltage low:	<0.8V
Input voltage high:	>2V
Output voltage low:	<0.4V (TTL); <0.1V (CMOS)
Output voltage high:	>2.4V (TTL); >4.9V (CMOS)
Chip select time:	200ns
Data in set-up time:	400ns
Data in hold time:	400ns
Output delay:	2µs
Output delay to 3-state:	400ns
Erase/Write pulse width:	10ms
Maximum clock frequency:	250kHz

XLS93C43P 1024 Bit Serial EEPROM

Exel

XLS93C43P

A low-cost 1024-bit, non-volatile serial EEPROM arranged as 64 registers of 16-bits each. Seven 9-bit instructions control the operation of the device, which include read, write and mode enable functions. The data output pin (DO) indicates the status of the device during the self-timed non-volatile programming cycle. The self-timed write cycle includes an automatic erase-before-write capability. Data is written in 16-bits per write instruction into the selected register. The device has full TTL compatible inputs and outputs, a 2V read capability and a typical current consumption of 1mA.

Specification	
Supply voltage:	5V ±10%
Maximum operating current	
CMOS input levels:	2mA
TTL input levels:	5mA
Standby current:	2µA maximum
Input voltage low:	<0.8V
Input voltage high:	>2V
Output voltage low:	<0.4V (TTL); <0.2V (CMOS)
Output voltage high:	>2.4V (TTL); >4.8V (CMOS)
Chip select time:	200ns
Data in set-up time:	400ns
Data in hold time:	400ns
Output delay:	2µs
Output delay to 3-state:	400ns
Write cycle time:	10ms
Maximum clock frequency	
2V supply (read only):	250kHz
5V supply:	1MHz

UM62S	28C64 250ns	£7.95

XLS28C256AP-15 32K x 8 Bit EEPROM

Exel

XLS28C256AP-15

A 32K x 8-bit CMOS EEPROM, that is operationally compatible with industry standard 256K devices, but with read access times of 150ns, and a stand-by current consumption of less than 100µA. The device features a page-wide input buffer and improved protection against inadvertent writes. By providing complete and automatic control of the non-volatile write cycle, the need for external timers, latches, high voltage generators etc. is eliminated. The fully automatic 64-byte page write allows the entire memory to be programmed in less than 0.65s. To add to system performance, internal latches for address and data, free the system bus during the 5ms self-timed, non-volatile write period. The device fits standard SRAM sockets and responds to typical SRAM write commands.

Specification

Supply voltage: 5V ±10%
 Supply current: 2mA max. (CMOS); 60mA max. (TTL)
 Standby current: 150µA
 Input voltage low: <0.8V
 Input voltage high: >2V
 Output voltage low: <0.4V (TTL); <0.2V (CMOS)
 Output voltage high: >2.4V (TTL); >4.8V (CMOS)
 Chip select time: 200ns
 Data in set-up time: 400ns
 Data in hold time: 400ns
 Output delay: 2µs
 Output delay to 3-state: 400ns
 Read cycle time: 150ns
 Write cycle time: 5ms

M2716-1F1 16K Erasable, Programmable Read Only Memory

SGS-Thomson

A 16,384-bit electrically programmable and ultra-violet erasable read only memory (EPROM) organised as 2048 x 8-bit words. The IC operates on a single +5V supply in read mode. Access time is 350ns and the IC is fully static. The

outputs are 3-state and inputs and outputs are TTL compatible. Programming is achieved by applying +25V to pin 21 and with the address and data lines stable apply a +5V pulse to pin 18. Note that only one pulse is required for each location. A transparent window on top of the IC allows the user to erase the bit pattern by exposing the chip to ultraviolet light at 253.7nm with an incident energy of 15W-seconds/cm². Thus with a 12mW/cm² UV tube and the device positioned one inch from it and with no intervening filter or glass, the IC will be completely erased in about 20 minutes.

Order Code	Type	Price each
QQ07H	M2716-1F1 350ns	£6.99

M2732A-2F1 32K Erasable, Programmable Read Only Memory

SGS-Thomson

A 32,768-bit electrically programmable and ultra-violet erasable read only memory (EPROM) organised as 4096 x 8-bit words. The IC operates on a single +5V supply in read mode. Access time is 200ns and the IC is fully static. The outputs are 3-state and inputs and outputs are TTL compatible. Programming is achieved by applying +21V to pin 20 and with the address and data lines stable apply a +5V pulse to pin 18. Note that only one pulse is required for each location. A transparent window on top of the IC allows the user to erase the bit pattern by exposing the chip to ultraviolet light at 253.7nm with an incident energy of 15W-seconds/cm². Thus with a 12mW/cm² UV tube and the device positioned one inch from it and with no intervening filter or glass, the IC will be completely erased in about 20 minutes.

Order Code	Type	Price each
UH88V	M2732A-2F1 200n	£7.35

M2764AF1 64K Erasable, Programmable Read Only Memory

SGS-Thomson

A 65,536-bit electronically programmable and ultra-violet erasable read only memory (EPROM) organised as 8192 x 8-bit words. The IC operates on a single +5V supply in read mode. Access time is 250ns and the IC is fully static. The outputs are 3-state and inputs and outputs are TTL compatible. Programming is achieved by applying +12.5V to pin 21 and with the address and data lines stable apply an active low pulse to pin 27. Note that only one pulse is required for each location. A transparent window on top of the IC allows the user to erase the bit pattern by exposing the chip to ultra violet light at 253.7nm with an incident energy of 15W-seconds/cm². Thus with a 12mW/cm² UV tube and the device positioned one inch from it and with no intervening filter of glass, the IC will be completely erased in about 20 minutes.

Order Code	Type	Price each
QQ09K	M2764AF1 250ns	£5.85

M27C64A-2F1 64K CMOS EPROM

SGS-Thomson

Identical to the 2764 above, but offering a much lower power supply current, and very low standby current. 200ns access time.

UH95D	TMS27C128-15JL	£4.95

M27C256B-12XF1 256K CMOS EPROM

SGS-Thomson

Similar to the 27256, but offering a much lower power supply current (30mA max) and very low standby current. Access time is 120ns.

Order Code	Type	Price each
UH44X	M27C256B-12F1	£5.25

M27512 F1 512K Erasable, Programmable Read Only Memory

SGS-Thomson

A 65,536 x 8-bit ultra-violet erasable PROM, featuring 250ns access time and high performance programming at only 12.5V. Inputs and outputs are TTL compatible in read and program modes. For read operation V_{CC} and V_{PP} must be +5V ±5%. Supply current is 90mA, standby 20mA typical. For programming mode, V_{CC} must be taken to 6V ±0.25V and V_{PP} to 12.5V ±0.3V. With address and data stable (2µs) a 1ms ±5% active low pulse is applied to pin 20. An average program time is 6 minutes per chip. The erase procedure and timings are the same as for the 128K EPROM.

Order Code	Type	Price each
UH42V	M27512F1 250ns	£8.45

M27C512-15XF1 512K CMOS EPROM

SGS-Thomson

Similar to the 27512, but offering a much lower power supply current (30mA max) and very low standby current. Unlike the 27512 the programming voltages are V_{PP} = 12.75V ±0.25V and V_{CC} = 6.25V ±0.25V. Access time is 150ns.

Order Code	Type	Price each
UM57M	M27C512-15XF1	£6.45

M28F101 1M-bit Flash Memory

SGS-Thomson

A non-volatile memory which may be electrically erased at chip level, and is organised into 128K bytes of 8 bits. It uses a command register architecture to select the operating modes, thus providing a simple microprocessor interface. It is suitable for applications where the memory has to be reprogrammed while installed in the equipment. The IC operates from a single 5V supply and has an access time of 150ns, making it suitable for high speed microprocessor systems.

The M28F101 employs a technology similar to a 1M-bit EPROM, but includes electrical erase and programming, managed by a command register. These depend on a V_{PP} program voltage, if this is less than 6.5V then the command register is disabled and the device behaves as a ROM. When V_{PP} is raised to 12V the command register is enabled and both read and write operations may be performed. Commands may be written to the register to set-up then execute erase, erase verify, program, program verify and reset operations. Each mode begins with a write operation to set-up the command, followed by either read or write operations. The device always expects first cycle to be a write operation to the register and does not corrupt data in the memory. Read mode can be set-up with one cycle and followed by any number of read cycles to output the data. Electronic Signature Read mode is also set-up with one cycle, followed by a read cycle to output the manufacturer or device codes. For erase mode, the memory should first be programmed with 00H, then erased with FFH. The Erase Verify command can then be used to read the memory byte by byte for a content of FFH. Erasure of the whole chip can be done within 1 second. Typical byte programming time is 10µs (or a succession of 10µs pulses, up to a maximum of 25). Two versions are available, suffix K1 is supplied in PLCC package, while P1 is in 32-pin DIL package.

Programmable Electrically Erasable Logic Arrays

Ami-Gould

Programmable electrically erasable logic arrays, also known as PEELs, that provide a high performance, low power, reprogrammable and architecturally flexible alternative to conventional programmable logic devices (PLDs). Designed in advanced CMOS E²PROM technology, the performance of PEEL rivals the speed parameters of standard bipolar PLDs with a dramatic improvement in power consumption. Three different devices are available.

18CV8P-15

18CV8-15

The 18CV8 is similar to earlier PLDs to the extent that it utilises a sum-of-products logic array in a programmable-AND fixed-OR structure. This familiar logic arrangement allows user defined output functions to be created by programming the connection of input signals into the array. What makes the architecture of the PEEL 18CV8 different, however, is the increased capability and flexibility it provides resulting in a higher level of equivalent gate integration and a simplification of design. The 18CV8 provides up to 18 inputs and 8 outputs for use. At the core is a programmable electrically

erasable 'AND array' of 36 input lines by 74 product terms. The 36 input lines are derived from the true and complements of the 18 possible input pins.

The 74 product terms are made up of 1 synchronous preset term, 1 asynchronous clear term, 8 output enable terms and 64 terms divided into groups of 8, each feeding into an OR function.

Each OR function is directly associated with one of eight macro cells and I/O pins. An individual macro cell can be programmed into one of twelve different configurations. Depending on the configuration, the output of the macro cell can be fed back into the array or output via its associated I/O pin. The configurations include various arrangements for bidirectional I/O, registered or combinational feedback, registered or combinational output and output polarity control. The output enable term of each I/O pin can be used to force a high impedance state for bidirectional I/O operations or for dedicated input usage. The synchronous preset and asynchronous clear terms and clock, are globally routed to all macro cells.

The logic array of the 18CV8 can be organised into 36 input lines comprising: 10 true and complement inputs, and 8 true and complement inputs/feedbacks. The 74 product terms can form 64 product terms (8 x 8 sum-of-products form), 8 output enable product terms, 1 synchronous preset term and 1 asynchronous clear term all at the same time.

Order Code	Type	Price each
GX44X	18CV8P-15	£2.35

20CG10P-25

The 20CG10 has twelve dedicated inputs and 10 I/Os providing up to 22 inputs and 10 outputs for the creation of logic functions. At the core of the device is the programmable electrically erasable AND array which drives a fixed OR array. With these the 20CG10 can implement up to 10 sum-of-products logic expressions.

Associated with each of the 10 OR functions is an I/O macro cell which can be independently programmed to one of 12 different configurations. The programmable macro cells allow each I/O to create sequential or combinational logic functions of active-high or active-low polarity, while providing three different feedback paths into the AND array.

This array allows 44 input lines, of which 24 can carry the true and complement of the signals applied to the 12 input pins, 20 additional lines carrying the true and complement values of feedback or input signals from the 10 I/Os, and 92 product terms, comprising 80 (8 per I/O) used to form logical sums, 10 output enable terms, one for each I/O, 1 global synchronous preset term and 1 global asynchronous clear term.

EPROM Programmer EPP1-F

Features

- * Low cost
- * Integral 240V AC 50Hz PSU
- * Connects to any computer with RS232 port and terminal software

An EPROM programmer that will program PROMs, EPROMs and EEPROMs up to 1M-bit. The EPROMs are programmed by inserting them into the 28-pin Zero Insertion Force socket on top of the case. The Programmer contains a single chip microcomputer which can be controlled easily from a terminal connected over an RS232 serial link at seven different baud speeds up to 19200. The Programmer has 9 commands which are used to communicate with it. The EPROM type is selected by sending the Programmer a 16-bit number to inform it about the type of EPROM. IBM PC compatible software is included, and a 3½in. disk containing text files with a

comprehensive range of EPROMs listed with their 16-bit selection codes. The source code files are sent from the host computer to the Programmer which supports Motorola s1f, s2f and s3f data formats. A simple program for writing to EPROMs is supplied on the disk, and allows for editing and file storage. The software is certainly equipped enough to get you programming devices straight away. Options for checking the EPROMs are empty are also supported through the programmer software. The Programmer supports the 27 series EPROMs up to 1M-bit, as the 2864 type. Instructions are included as part of the

software, and from this an EPROM from a manufacturer not mentioned in the disk text file can easily be programmed. Just determine its programming characteristics and select the correct 16-bit code to be sent. Leads are not supplied; the stock number for a suitable mains lead is BW99H and a 13A plug RW67X, the serial lead required is JC13P.

Specification

Supply voltage:	230V AC
Power consumption:	45W
Power connector:	IEC Euro connector
Fuses:	2 x 225mA, slow blow
Interface:	RS232
Interface connector:	DB25 (female)
EPROM socket:	ZIF-28
Memory:	up to 1M-bit
Data formats:	Motorola s1f, s2f, s3f
Baud rate:	300, 600, 1200, 2400, 4800, 9600, 19200 (9600 def)
Data bits:	8 (bit 7 = 0)
Parity:	None, Even, Odd (Default None)
Flow control:	None, RTS/CTS, XON/XOFF (Default RTS/CTS)
Start/Stop bits:	1
Enclosure:	Anodised aluminium
Dimensions:	175 x 103 x 65mm (L x W x H)
Weight:	630g

Order Code	Type	Price each
YT58N	A2 EPP-1F	£158.99

EPROM Programmer 'EPP-2'

Features

- * Mains powered
- * RS232 comms for connection to any computer

An EPROM programmer that will program PROMs, EPROMs from 2K-bytes to 512K-bytes and also (E)EPROMs. The EPROMs are programmed by inserting them into the 32-pin ZIF socket on the front panel. The programmer supports either 'Motorola.s1f', '.s2f' or '.s3f' files being used and they can be both up or downloaded to the PROM. The unit contains a single chip microcontroller and therefore is an intelligent device, which can be controlled easily from a terminal connected over an RS232 serial link. The EPP-2's command line interpreter enables the user to enter single character commands, or even multiple commands and has 16 commands which are used to communicate with it. Execution begins after a carriage return is received. The EPP-2 can program the 27 and 28 series PROMs up to 512K-bytes. Software is included for IBM PCs and compatibles, and the EPP-2 can operate from RS232 at baud speeds of up to 19200. Dimensions: 175 x 103 x 65mm; weight, 780g. Leads are not supplied. Use mains lead BW99H and 13A plug RW67X, and serial comms lead JC13P.

Order Code	Type	Price each
ZF38R	B3 EPP-2	£199.99

EPROM Eraser

A neatly styled and compact EPROM eraser with built in safety interlock and timer. The unit requires +12V DC to operate (3.5mm jack socket) and incorporates a 4W UV tube. The unit can erase two EPROMs simultaneously. The timer can be adjusted by rotating a front panel preset using a small screwdriver. The erasing cycle is initiated by pressing the start switch. A green LED indicates power ON-Stand by and Power ON-Erasing, when in standby the LED glows at half brightness and when erasing the LED glows at full brightness. Dimensions 75 x 42 x 155mm (excluding feet and controls).

WARNING: As this unit produces UV light, read safety instructions before use. When this unit is used in accordance with instructions, user will not be exposed to UV light.

Order Code	Type	Price each
YU95D	A1 Eprom Eraser	£64.99

EPROM Eraser UV Tube

A replacement 4W UV tube is available for the above EPROM Eraser.

S4 PROM Programmer

Features

- * RS232 ready
- * Ni-Cad battery powered, charger included
- * Battery backed internal data memory
- * PROM emulator lead for target system development
- * Programs 27 series EPROMs, and 28, 52, 55, 98 series FLASH EPROMs and EEPROMs

The S4 is a battery powered PROM programmer for microsystem designers, that fits into a pocket. The programmer contains 1M of RAM (upgradable to 4M) which retains data and configuration even when switched off. The RAM can be downloaded with data and manipulated either remotely from a computer via

Continued on next page

Continued from previous page

RS232 interface or directly from the keypad. The S4 can program EPROMs of the 27 series, FLASH EPROMs and most (E)EPROMs, including 28, 52, 55 & 98 series. Choose the manufacturer and device from a menu and S4 will select the algorithm to use. S4's software program comes in a supplied library ROM, which is simply placed into the 32-pin ZIF socket and then loaded. There are two ways of using S4, either by entering commands by pressing keys on the 45 colour coded rubber keypad, and reading the LCD, or by entering commands from your computer via a RS232 interface lead (not supplied). Terminal software and utilities are supplied for use with an IBM PC and S4. The S4 DRIVER program has online help and will work at speeds up to 115200 baud. The S4 can also function as a memory emulator, and if used with a cross-assembler and a computer will give you a complete microprocessor development system. S4 continuously monitors battery voltage and temperature, and can display battery charge. If the battery charger is connected and turned on, S4 will charge the batteries as necessary as internal circuitry prevents the batteries overcharging. Recharge time is about one hour, although a reasonable working capacity will be restored in much less time. Supplied with comprehensive manual, write lead (2mm plug to minihook 500mm overall length), EMU lead (ribbon cable with 32 pin DIL plug 500mm overall length), library ROM, disk with terminal driver program and utilities, and mains charger. Size: 185 x 112 x 46mm. Weight 500g.

CR11M H1	S4 Programmer	£579.99

Speedmaster 1000E PC Based Programmer

Ice Technology

- ★ Programs EPROMs, micros, programmable logic etc.
- ★ Plugs directly into standard parallel port
- ★ Emulates ROM/RAM up to 512K
- ★ Development and small/medium production
- ★ Major manufacturer approval
- ★ UK design and manufacture

The Speedmaster 1000E is an extremely versatile development tool, developed in the UK with the design engineer in mind. It offers all the facilities of a truly universal programmer Plus full ROM/RAM emulation capabilities all in one unit.

Programming features:

Extremely fast programming times, major manufacturer approval, 40-pin universal ZIF (Zero Insertion Force) socket, easy-to-use menu-driven software, supports all major file formats including Intel Hex, TekHex, extended TekHex, Motorola S records etc.

Emulation features:

Emulates ROM/RAM up to 128K (expandable up to 512K), 8 bit wide EPROMs from 2716 through to 27010 as standard (27C020,040 optional), EEPROM and RAM up to 128K RAM. Access to Speedmaster centronics control port allows a target system to access the PC (example control software

is provided). Built-in protection allows the target system to be powered down. Extremely fast download times. Hex files can be Intel Hex, Motorola S1, S2, S3, Tektronik, Extended TekHex or TI Tag.

Devices supported:

EPROMs, EEPROMs, Flash EPROMs, Serial EPROMs, NVRAMs, 8748/51 family Microprocessors, PALs, GALs, EPLDs, PEELs, AMD MACHs, National Semiconductor MAPLs, and more.

Physical Characteristics

Dimensions: 210 x 130 x 40mm
 Power supply: Mains adaptor supplied. Input 240V AC, output 17V AC, 800mA.
 Connection to PC: 25-way M-M parallel cable supplied. Operates from any standard IBM parallel port.
 Emulator cable: 34-way ribbon cable connects to programmer via IDC connector. 32-pin DIL plug connects to target system.
 Software: Supplied with programmer/emulator. Runs on any IBM compatible PC under DOS or Windows 3.1.

Order Code	Type	Price each
ZF57M	1000E Prog	£615.00

Speedmaster 8000 Gang/Set Programmer

Ice Technology

- ★ Programmes up to 8 devices simultaneously
- ★ Medium to large production runs
- ★ PC or stand-alone operation
- ★ Fast programming times
- ★ 32-pin devices as standard
- ★ Easy-to-use menu-driven software
- ★ Fail-safe device and position checking

The Speedmaster 8000 is an extremely fast gang/set EPROM programmer, which can be operated from a PC or in stand-alone mode and is a low-cost, speedy solution for the professional programming of large quantities of EEPROMs and EPROMs up to 8M-bits. The use of a PC means that there are no limitations caused by programmer memory size.

Typical programming times

8 x 2764: 2 seconds
 8 x 27010: 22 seconds

Physical Characteristics

Dimensions: 210 x 130 x 40mm
 Power supply: Mains adaptor supplied. Input 240V AC, output 17V AC, 800mA.
 Connection to PC: 25-way M-M parallel cable supplied. Operates from any standard IBM parallel port.

SUBSECTION 51 PROGRAMMABLE LOGIC DEVICES

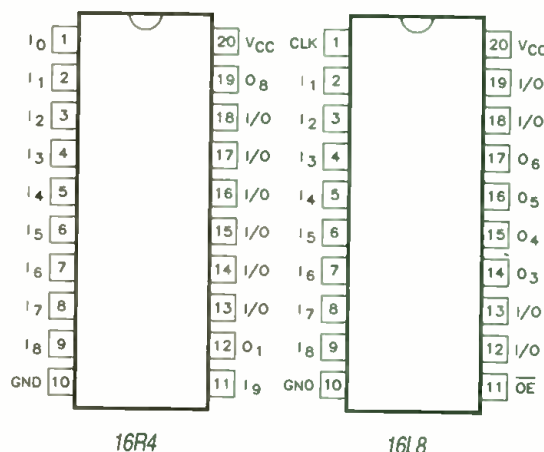

PAL16L8/R4 20-Pin TTL Programmable Array Logic

AMD

NEW

The PAL16L8 and PAL16R4 are members of AMD's standard 20-pin PAL device family. The devices provide user-programmable logic for replacing conventional SSI/MSI gates and flip-flops at a reduced chip count.

The devices allow the systems engineer to implement the design on-chip, by opening fuse links to configure AND and OR gates within the device, according to the desired logic function. Complex interconnections between gates, which previously required time-consuming layout, are lifted from the PCB and placed on silicon, where they can be easily modified during prototyping or production.

The PAL device implements the familiar Boolean logic transfer function, the sum of products. The PAL device is a programmable AND array driving a fixed OR array. The AND array is programmed to create custom product terms, while the OR array sums selected terms at the outputs. Product terms with all connections opened assume the logical HIGH state; product terms connected to both true and complement of any single input assume the logical LOW state. Registers consist of D-type flip-flops that are loaded on the LOW-to-HIGH transition of the clock. Unused input pins should be tied to V_{CC} or 0V. The PAL16L8 has 10 dedicated inputs, 6 combinatorial outputs with 7 product terms and a further 2 combinatorial outputs also with 7 product terms and I/O feedback. The PAL16R4 has 8 dedicated inputs with 4 registered outputs with 8 product terms, and 4 combinatorial outputs with 7 product terms.

Type PAL16L8ACN has a propagation delay of 25ns. Two versions of type PAL16R4 are available; PAL16R4ACN has a propagation delay of 25ns while PAL16R4BCN is 15ns.

Order Code	Type	Price each
AR00A	PAL16L8ACN	£1.29

AR02C	PAL16R4ACN	£1.29

PAL22V10 15ns TTL Versatile 10-Output PAL

AMD

NEW

The PAL22V10 provides user-programmable logic for replacing conventional SSI/MSI gates and flip-flops at a reduced chip count.

The device implements the familiar Boolean logic transfer function, the sum of products. It comprises a programmable AND array driving a fixed OR array. The AND array is programmed to create custom product terms, while the OR array sums selected terms at the outputs.

The product terms are connected to the fixed OR array with a varied distribution from 8 to 16 across the

10 outputs and the OR sum of the products feeds the output macrocell. Each macrocell can be programmed as registered or combinatorial, and active high or active low. The output configuration is determined by two fuses controlling two multiplexers in each macrocell. The device is encapsulated in a slimline 24-pin DIL package with row spacing of 0.3in. (instead of 0.4in.), and in use has a propagation delay of 15ns.

AR03D	PAL22V10-15PC	£8.99

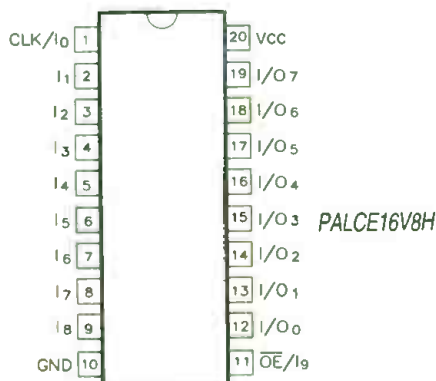

PALCE16V8H Universal Programmable and Erasable Array Logic

AMD **NEW**

The PALCE16V8 is an advanced PAL (Programmable Array Logic) device built with low-power, high-speed, electrically erasable CMOS technology. It is functionally compatible with all 20-pin GAL devices. The macrocells provide a universal device architecture, and the PALCE16V8 will directly replace other 20-pin PAL devices.

The IC utilises the familiar sum-of-products (AND/OR) architecture that allows users to implement complex logic functions easily and efficiently. Multiple levels of combinatorial logic can always be reduced to sum-of-products form, taking advantage of the very wide input gates available in PAL devices. The equations are programmed into the device through floating gate cells in the AND logic array, which can then be electrically erased prior to alterations. The erasure is much faster than that for ultraviolet erasable devices, and when a PAL is being programmed with the proprietary software and hardware, the erasing is completely transparent to the user.

The fixed OR array allows up to eight data product terms per output for logic functions. The sum of these products feeds the output macrocell. Each macrocell can be programmed as registered or combinatorial with active high or low output. The output configuration is determined by two global bits and one local bit controlling four multiplexers in each macrocell. In use, current consumption is 90 to 125mA, and the device is available with propagation delays of 15 or 25ns in a standard DIL package.

Order Code	Type	Price each
AR04E	PALCE16V8H-15PC/4	£1.49

PALCE20V8H Universal Programmable and Erasable Array Logic

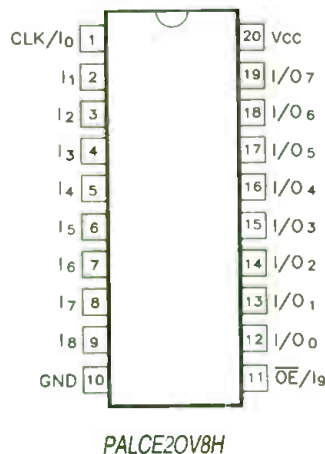

AMD **NEW**

An advanced PAL device built in low-power, high-speed, electrically erasable CMOS technology. Its macrocells provide a universal device architecture and it is fully compatible with most 24-pin combinatorial PAL devices.

Device logic is automatically configured according to the user's design specification. A design is implemented using any of a number of popular software packages, allowing automatic creation of a programming file based on Boolean or state equations. The software also verifies the design and can provide test vectors for the finished device. Programming can be accomplished on standard PAL device programmers.

The PALCE20V8 utilises the familiar sum-of-products (AND/OR) architecture that allows users to implement complex logic functions easily and efficiently. Multiple levels of combinatorial logic can always be reduced to sum-of-products form, taking advantage of the very wide input gates available in PAL devices. The equations are programmed into the device through floating gate cells in the AND logic array, which can be erased electrically.

The fixed OR array allows up to eight data product terms per output for logic functions. The sum of these products feeds the output macrocell. Each macrocell can be programmed as registered or combinatorial with an active high or low output. The output configuration is determined by two global bits and one local bit controlling four multiplexers in each macrocell. The device is encapsulated in a slimline 24-pin DIL package with row spacing of 0.3in. (instead of 0.4in.), and in use has a propagation delay of 25ns.

Order Code	Type	Price each
AR06G	PALCE20V8H-25PC/4	£1.49

PALCE22V10H Versatile Programmable and Erasable Array Logic Device

AMD **NEW**

The PALCE22V10 provides user-programmable logic for replacing conventional SSI/MSI gates and flip-flops at a reduced chip count.

The PAL device implements the familiar Boolean logic transfer function, the sum of products. The PAL device is a programmable AND array driving a fixed OR array. The AND array is programmable to create custom product terms while the OR array sums selected terms at the outputs.

The product terms are connected to the fixed OR array with a varied distribution from 8 to 16 across the outputs. The OR sum of the products feeds the output macrocell. Each macrocell can be programmed as registered or combinatorial, and be active high or low. The output configuration is determined by two bits controlling two multiplexers in each macrocell.

The device is encapsulated in a slimline 24-pin DIL package with row spacing of 0.3in. (instead of 0.4in.). Two versions are available, having propagation delays of 15ns and 25ns respectively.

MACH110-15/20 High-Density Programmable Logic Array

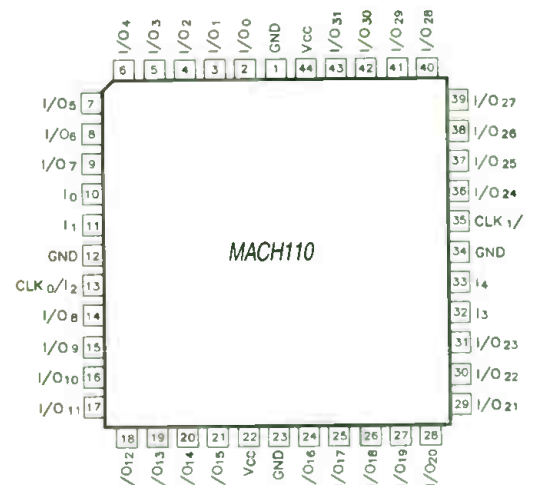

AMD **NEW**

The MACH110 is a member of AMD's high-performance, electrically programmable and erasable CMOS MACH 1 family. This device has approximately three times the logic macrocell capability of the popular PAL22V10 with no loss of speed.

The MACH110 consists of two PAL blocks interconnected by a programmable switch matrix. The two PAL blocks are essentially 'PAL22V16' structures complete with product-term arrays and programmable macrocells. The switch matrix connects the PAL blocks to each other and to all input pins, providing a high degree of connectivity between the fully-connected PAL blocks. This allows designs to be placed and routed efficiently.

The MACH110 macrocell provides either registered or combinatorial outputs with programmable polarity. If a registered configuration is chosen, the register can be configured as D-type or T-type to help reduce the number of product terms. The register type decision can be made by the designer or by the software. All macrocells can be connected to an I/O cell. If a buried macrocell is desired, the internal feedback path from the macrocell can be used, which frees up the I/O pin for use as an input.

The device is encapsulated in a 44-pin PLCC package. Two versions are available, with propagation delays of 15ns and 20ns respectively.

Order Code	Type	Price each
AR09K	MACH110-15JC	£9.99
AR10L	MACH110-20JC	£9.99

MACH210-15/20 High-Density Programmable Logic Array

AMD

NEW

The MACH210 is a member of AMD's high-performance, electrically programmable and erasable CMOS MACH 2 device family. It has approximately six times the logic macrocell capability of the popular PAL22V10 with no loss of speed. The MACH210 consists of four PAL blocks interconnected by a programmable switch matrix. The four PAL blocks are essentially 'PAL22V16' structures complete with product-term arrays and programmable macrocells, including additional buried macrocells. The switch matrix connects the PAL blocks to each other and to all input pins, providing a high degree of connectivity between the fully-connected PAL blocks. This allows designs to be placed and routed efficiently.

The MACH210 has two kinds of macrocell: output and buried. The MACH210's output macrocell provides registered, latched or combinatorial outputs with programmable polarity. If a registered configuration is chosen, the register can be configured as D-type or T-type to help reduce the number of product terms. The register type decision can be made by the designer or by the software. All output macrocells can be connected to an I/O cell. If a buried macrocell is desired, the internal feedback path from the macrocell can be used, which frees up the I/O pin for use as an input.

The device is encapsulated in a 44-pin PLCC package. Two versions are available, with propagation delays of 15ns and 20ns respectively.

PAL Device Data Book and Design Guide

AMD

NEW

A book of application notes and data providing a survey of AMD's CMOS PLDs (Programmable Logic Devices). This includes both PAL (Programmable Array Logic) devices and the more general realm of PLDs, to which PAL devices belong. With the proliferation of parts the selection of the best PLD for your application may seem difficult. If you are a new PLD user, this overview will guide you through the wide variety of different device architectures, speed, and power grades. This tutorial should increase your understanding of the basic characteristic features that make a device appropriate for a given application. 1993. 754 pages. 230 x 180mm, illustrated.

MACH™ 1 and 2 Family Data Book High-Density EE CMOS Programmable Logic

AMD

NEW

This book introduces you to the new MACH (Macro Array CMOS High-density) 1 and MACH 2 families of programmable logic ICs from Advanced Micro Devices (AMD). These provide programmable logic capabilities from around 900 PLD (Programmable Logic Device) gates to 3,600 PLD gates. Included in this book is a general discussion, and final data sheets, for the MACH 1 and 2 family members.

The general discussion deals with those issues that affect the entire device family, including a brief discussion of design software used in configuring the devices. Because of the common architecture, most of the understanding of the device can come from a look at the family as a whole. Individual devices differ only in the number of resources.

The data sheets discuss items that are specific to each device. They contain the basic DC and switching specifications. Other general specifications, such as switching waveforms and endurance, follow the data sheets since they are the same for all devices.

The book concludes with the MACH device design planning guide. This section introduces you to the methodology of designing with MACH devices. It will help you select the right device and show you how to structure your designs for successful fitting within a MACH device.

1993. 176 pages. 230 x 180mm, illustrated.

Programmable Logic Design Software

PALASM® 4 Version 1-4

AMD

NEW

PALASM 4 is a baseline PLD compiler enabling designers to configure AMD PAL® and MACH™ devices quickly, easily and effectively. PALASM offers text design entry, compilation and functional simulation of AMD PAL and MACH devices.

Easy to use, standard features include a menu-driven interface to simplify design work, on-line help to assist users in debugging designs and resolving problems, and rich documentation providing users with software and device references, recommended design strategies for MACH devices, and tutorials.

Design flexibility allows you to create your design with Boolean or state equations, use the optional capture interface for MACH-based designs, merge multiple PALASM text-based files and allow JEDEC generation for all AMD devices. The automated logic reduction and fitting feature provides automatic synthesis of user's logic, device specific optimisation routines, and automated fitting options for AMD's MACH family.

The event driven logic simulator has familiar commands to allow you to describe functions easily and generate vectors from test input.

The software supports all AMD PAL, PLS and MACH device families, and runs on an IBM PC-XT/AT or compatible having PC or MS-DOS 3.1 or higher, with 6MB of free hard disk space, and 540K or more of available conventional memory. A minimum of 1MB of extended memory is recommended for more complex designs, particularly MACH.

ANALOGUE/LINEAR DEVICES

SUBSECTION 52 BIPOLAR OP-AMPS

EL2044CN

Elantec

The EL2044C is a high-speed, low power, low-cost monolithic op amp built using a complementary bipolar process. It is unity-gain stable and features a 325V/μs slew rate and a 60MHz gain-bandwidth product while requiring only 5.2mA of supply current. Supply operating range is from ±18V down to as little as ±2V. For single supply operation, the device operates from 36V down to 2.5V. The excellent power supply range makes the device an obvious choice for a single +5V supply.

The EL2044C also features an extremely wide output voltage swing of ±13.6V with a supply of ±15V and a load of 1kΩ. At ±5V, output voltage swing is a wide ±3.8V into 500Ω and 3.2V into 150Ω. With a single-ended 5V supply output swing is an excellent 0.3V to 3.8V into a 500Ω load.

With unity gain the EL2044C has a -3dB bandwidth of 120MHz with a phase margin of 50°. It can drive unlimited load capacitance, and because of its conventional voltage feedback topology, it allows the use of reactive or non-linear elements in its feedback network. This versatility, combined with 75mA of output drive capability, makes it ideal for applications requiring low power consumption with high-speed.

AJ55K	EL2044CN	£3.25

EL2244CN

Elantec

The EL2244C is a dual version of the EL2044C and has all of the same electrical characteristics. Total supply current consumption is 10.4mA and the package is 8-pin DIL.

Order Code	Type	Price each
AJ56L	EL2244CN	£5.10

EL2045C

Elantec

The EL2045C is a low power, wideband, gain-of-2 stable monolithic op amp built using a high-speed complementary bipolar process. It uses a classical voltage-feedback topology which allows it to be used in a variety of applications where current-feedback amplifiers are not appropriate because of restrictions placed upon the feedback element used with the amplifier. It allows, for example, a capacitor to be placed in the feedback path, making it an excellent choice for applications such as active filters, sample-and-holds, or integrators. Similarly, because of the ability to use diodes in the feedback network the device is an excellent choice for applications such as fast log amplifiers.

The EL2045C has a gain-bandwidth product of 100MHz while using only 5.2mA of supply current. For gains greater than 4, its closed loop -3dB bandwidth is approximately equal to the gain-bandwidth product divided by the noise of the circuit. For gains less than 4, higher-order poles in the amplifier's transfer function contribute to even higher closed loop bandwidths. The EL2045C has a -3dB bandwidth of 100MHz at a gain of +2, dropping to 20MHz at a gain of +5. This does not come at the expense of stability.

EL2001CN

Elantec

A low cost, high slew rate buffer amplifier for video applications. The buffer has a -3dB bandwidth of 70MHz, and can deliver 100mA yet draws only 1.3mA supply current. The device is short circuit protected, stable with capacitive loads and does not suffer from thermal runaway.

Order Code	Type	Price each
UR07H	EL2001CN	£3.99

EL2020CN

Elantec

A fast settling, wide bandwidth amplifier optimised for gains between -10 and +10. The amplifier will drive two double terminated 75Ω co-ax cables to video levels with low distortion (it can deliver ±2.4V at ±33mA into 75Ω). The device is short circuit protected and settles to 1% in 50ns for a 10V step.

Order Code	Type	Price each
UR06G	EL2020CN	£4.65

EL2232CN

Elantec

A dual version of the EL2020CN with similar AC performance yet consuming no more power. The amplifier has a unity gain bandwidth of 60MHz and is ideal for use in video applications. The outputs can each supply 30mA and are short circuit protected.

Order Code	Type	Price each
UR10L	EL2232CN	£6.99

LM301AN

SGS-Thomson

A general purpose op-amp featuring low input currents and low temperature drift on input currents. The amp is overload protected on input and output with no latch-up when the common mode range is exceeded. External compensation capacitor (33pF approx) is required for stability, but this value can be varied depending on application such that slew rates of 10V/μs and bandwidths of 10MHz can be achieved.

Order Code	Type	Price each
QH36P	LM301AN	60p

LM308N

SGS-Thomson

A precision op-amp featuring extremely low input currents. The circuit is directly interchangeable with the LM301AN in low frequency circuits and incorporates the same protective features. In addition it has very low power consumption making it suitable for battery operation and owing to its very high input resistance operates with less error on 10MΩ sources than a 709C with 10KΩ source.

Order Code	Type	Price each
QH37S	LM308N	98p

LM324N

SGS-Thomson

A high performance circuit containing four op-amps in one 14-pin DIL package. The amp features very low input offset and bias currents compared with μA741C. The outputs are class AB with no crossover distortion. Channel separation: 120dB at 1kHz to 20kHz.

Order Code	Type	Price each
UF26D	LM324N	45p

LM358N

SGS-Thomson

Two independent high gain internally frequency compensated op-amps designed specifically to operate from a single power supply. The output voltage can swing to ground even on single rail power supplies. Channel separation 120dB.

Order Code	Type	Price each
UJ34M	LM358N	42p

LM833N

National Semiconductor

A dual op-amp designed specifically for use as sensitive pre-amps in audio circuits. The amps feature very low noise characteristics, typically 4.5nV/Hz, total harmonic distortion of 0.002% from 20Hz to 20kHz and dynamic range >140dB. Channel separation 120dB from 20Hz to 20kHz.

Order Code	Type	Price each
UF49D	LM833N	£1.40

LM837N

National Semiconductor

A quad op-amp designed for low noise, high speed and wide bandwidth performance. The output can drive a 600Ω load and is ideal for digital audio, graphic equalisers, pre-amplifiers and professional audio applications. It can be used to upgrade existing systems with little or no change to the circuit. The amps feature low noise 4.5nV/Hz typically, total harmonic distortion of 0.0015% from 20Hz to 20kHz, output drive capability ±40mA, and channel separation 120dB from 20Hz to 20kHz.

Order Code	Type	Price each
UL33L	LM837N	£2.50

LT1028CN8

Linear Technology

A high performance op-amp that sets a new standard of excellence in noise performance only 0.9nV/Hz with low source resistances. Total harmonic distortion is less than 0.01%. The op-amp is suitable for use in high quality audio, low noise frequency synthesisers, infrared detectors etc. particularly where the source resistance is under 1kΩ.

Magnetic Cartridge Pre-amplifier Parts List

R1	Min Res 10Ω	(M10R)
R2	Min Res 47kΩ	(M47K)
R3	Min Res 750Ω	(M750R)
R4	Min Res 36Ω	(M36R)

MC33078 & MC33079

Motorola

NEW!

A pair of high-quality bipolar op amps featuring high performance for quality audio and data signal processing applications. These amplifiers exhibit low input voltage noise with high gain bandwidth products and high slew rate. The output exhibits no dead band crossover distortion, large output voltage swing, excellent phase and gain margins, low open-loop high-frequency output impedance and symmetrical source and sink AC frequency performance. The MC33078 is a dual device, while the MC33079 is a quad device.

33079

Specification

Supply voltage V_{CC} to V_{EE} , V_S :	+36V max
Input differential voltage range, V_{IDR} :	V_{EE} min, V_{CC} max
Power dissipation, P_D :	1.2W max at 25°C
Slew rate, SR:	7V/μs
Gain bandwidth product, GBW:	16MHz typ.
Total harmonic distortion, THD:	0.002%
Equivalent input noise voltage, e_n :	4.5nV/Hz

Order Code	Type	Price each
AE02C	MC33078P	99p
AE03D	MC33079P	£1.89

NE531N

Signetics

A high performance op-amp with a very high slew rate capability yet keeping the DC performance of the 741. External compensation capacitor (100pF) is required for stability, but this can be reduced to very low values (1.8pF) to give wide flat frequency responses at very high gains.

Order Code	Type	Price each
WQ54J	NE531N	£2.49

NE5532N

Signetics

A dual op-amp designed for use in high quality and professional audio equipment. The IC has a typical input noise voltage at 1kHz of 5nV/Hz. In addition it has better output drive capabilities and much higher small signal and power bandwidths than most other dual op-amps, yet is a direct pin-for-pin replacement for a 1458.

Order Code	Type	Price each
UH35Q	NE5532N	98p

NE5534AN

Signetics

Designed for use in high quality and professional audio equipment where low noise is of prime importance. The op-amp has a typical input noise voltage at 1kHz of 3.5nV/Hz. In addition it has better output drive capabilities and much higher small signal and power bandwidths than most other op-amps, yet is a direct pin-for-pin replacement for a 741.

Order Code	Type	Price each
YY68Y	NE5534AN	£1.35

OP-07 OP-27
OP-37 OP-47
OP-77

OP-07CNB Raytheon

A precision instrumentation grade op-amp featuring ultra-low offset voltage and very low bias currents. Low frequency noise is minimised.

Order Code	Type	Price each
RA73Q	OP-07CNB	£1.72

OP-77GP Analog Devices

An improved version of the OP-07. It can be used as a direct replacement upgrade for the OP-07, 308 and 741.

Order Code	Type	Price each
UL05F	OP-77GP	£2.70

OP-27GNB Analog Devices

An instrumentation grade op-amp featuring very low noise, wide bandwidth, high slew rate and ultra-low offset voltage. The op-amp is ideal for professional quality audio systems giving a performance adequate for the most demanding high fidelity applications. The OP-27 has an undistorted power bandwidth of 34kHz and at 8V peak-to-peak is undistorted to 100kHz. Input noise levels are typically less than 3.8nV/√Hz at 10Hz and less than 3.3nV/√Hz from 30Hz upwards.

Order Code	Type	Price each
RA74R	OP-27GNB	£3.35

OP-37GP Analog Devices

The op-amp provides the same performance as the OP-27, but with slew rate and gain-bandwidth product improved for gains greater than 5. Noise levels are also improved down to 3.5nV/√Hz at 10Hz and 3.0nV/√Hz from 30Hz upwards. Applications include microphone, tape-head and magnetic pick-up pre-amplifiers, data acquisition systems, and wide bandwidth instrumentation.

Order Code	Type	Price each
UL04E	OP-37GP	£3.95

OPA177GP

Burr-Brown®

NEW

The OPA177 is a precision bipolar op amp which features very low offset voltage of 10 μ V maximum, and low drift of 0.1 μ V/ $^{\circ}$ C. The high performance and low cost make it ideally suited to a wide range of precision instrumentation, test equipment, bridge and thermocouple amplifiers.

The low quiescent current of 1.5mA, dramatically reduces warm-up drift and errors due to thermoelectric effects in input connections. It provides an effective alternative to chopper-stabilised amplifiers. The low noise of the OPA177 maintains accuracy.

OPA177

Order Code	Type	Price each
AD56L	OPA177GP	£1.52

Large signal closed-loop bandwidth (-3dB), $V_o = 2.8V_{p-p}$:

Gain = +1V/V:	340MHz
Gain = +2V/V:	350MHz
Gain = +5V/V:	260MHz
Gain = +10V/V:	210MHz
Gain = -1V/V:	360MHz
Gain = -2V/V:	330MHz

Small signal bandwidth, $V_o = 0.2V_{p-p}$:

Gain = +2V/V:	290MHz
Slew rate, gain = +2V/V, risetime = 2ns:	
$V_o = 0.2V_{p-p}$:	140V/ μ s
$V_o = 5.0V_{p-p}$:	2,100V/ μ s

Order Code	Type	Price each
AD66W	OPA623AP	£9.20

RC4227GN

Raytheon

4227

Two OP-27 op-amps in one package. It provides a superior performance for audio applications and input noise is a very low 3nV/ \sqrt Hz. Channel separation is typically 155dB.

Order Code	Type	Price each
UR18U	RC4227GN	£2.99

TLE2027CP

Texas Instruments

A precision op-amp offering outstanding performance, with superior specifications in almost every parameter. This competitively priced op-amp allows upgrades for systems that use lower-precision devices. The amp features low noise 2.5nV/ \sqrt Hz and total harmonic distortion <0.002%.

Order Code	Type	Price each
CP86T	TLE2027CP	£2.60

TLE2037CP

Texas Instruments

2027/2037

A decompensated version of 2027, offering a much wider frequency response and stable to a close-loop gain of 5. All other parameters are the same as 2027.

Order Code	Type	Price each
CP87U	TLE2037P	£2.60

LM1709CN

National Semiconductor

1709

A general purpose op-amp featuring wide flat frequency response capabilities at reasonably high gains owing to the input and output compensation capacitors being able to be varied.

Order Code	Type	Price each
QL20W	LM1709CN	89p

LM741CN

SGS-Thomson

741 8pin DIL

The industry standard general purpose op-amp featuring internal frequency compensation. The amp is overload protected on input and output with no latch-up if common mode range is exceeded.

Order Code	Type	Price each
QL22Y	LM741CN	39p

LM747CN

National Semiconductor

Two 741 op-amps in one 14-pin DIL package. The two amps share a common bias network and power supply leads, but otherwise are completely separate. Channel separation: 98dB at 1kHz.

Order Code	Type	Price each
QL24B	LM747CN	90p

747

748

LM748CN

National Semiconductor

A general purpose op-amp very similar to the 741, but with external frequency compensation required allowing best high frequency performance to be achieved for any gain.

Order Code	Type	Price each
QL25C	LM748CN	71p

OPA623 Wideband Current-Feedback Op amp

Burr-Brown®

NEW

The OPA623 is a current-feedback op-amp designed for precision wide bandwidth signal processing for high-resolution video, RF, IF and communications equipment. The new circuit design, using complementary bipolar devices, achieves a performance previously unattainable in monolithic IC technology.

The current-feedback op-amp (an OTA block) is optimised for wide bandwidth, excellent pulse response, flat gain, low distortion and operation at a low quiescent supply current of ± 4 mA. It provides a large signal bandwidth of up to 350MHz at 2.8V pk-pk output, as well as a 2,100V/ μ s slew rate, and a gain flatness of 0.05dB over 30MHz making it suitable for HDTV designs. The output stage is capable of currents up to ± 70 mA, enabling it to drive two back-terminated 75 Ω cables when using the device as a line driver in video routers, distribution amplifiers and analogue and digital communications equipment. For most circuit configurations the device can be used like a conventional op-amp, where the feedback network connected between the output and the inverting input controls the gain, except that in the case of a current-feedback op-amp the resistor values in the network also control the open-loop gain and frequency response. These values can be selected to provide nearly constant closed-loop bandwidth over a wide adjustment range of gain versus frequency. For example, if both resistors are 300 Ω then the gain will be 6dB (2 times) and the bandwidth 350MHz.

OPA623

Specification

Supply voltage:	± 5 V
Quiescent current:	± 4 mA
Common mode input voltage range:	± 3.2 V
Common mode rejection:	50dB
Input impedance:	2.74M Ω 1pF
Input bias current:	-1.2 μ A
Input offset voltage:	± 30 mV max.

01702 553935

MC1458CN

SGS-Thomson

Two 741 op-amps in one 8-pin DIL package. The two amps share a common bias network and power supply leads, but otherwise are completely separate. Channel separation: 98dB at 1kHz.

Order Code	Type	Price each
QH46A	MC1458CN	35p

1458, 4559

3403, 4156

MC3403N

SGS-Thomson

A high performance circuit containing four op-amps in one 14-pin DIL package. The amp features a wide full power bandwidth and slew rate better than 741. The outputs are class AB with no crossover distortion. Channel separation: 120dB at 1kHz to 20kHz.

Order Code	Type	Price each
QH51F	MC3403N	59p

RC4136N

Raytheon

4136

A high performance circuit containing four op-amps in one 14-pin DIL package. The amp features low noise input transistors making it specially suitable for use in audio preamplifiers and signal processing applications. The outputs are class AB with a very low crossover distortion.

Channel separation: 123dB at 1kHz, >100dB at 20Hz to 25kHz. Total harmonic distortion typically <0.5%.

Order Code	Type	Price each
XX01B	RC4136N	86p

RC4156N

Raytheon

Four independent op-amps whose performance far exceeds that of 741 type amplifiers. With an input noise level of just 1.4µV rms, this device is the ideal choice for audio and filter applications. Channel separation is typically 108dB.

Order Code	Type	Price each
UR20W	RC4156N	£1.25

RC4559N

Raytheon

Two independent op-amps whose performance far exceeds that of 741 type amplifiers. With an input noise level of just 1.4µV rms, this device is ideal for use in low noise audio preamplifiers. The outputs can drive 600Ω loads. Total harmonic distortion is typically 0.05% and channel separation is 90dB.

Order Code	Type	Price each
UR19V	RC4559N	62p

MAX406/409

Maxim

The MAX409 is a low voltage, micropower, precision op amp designed for battery operated systems. It features a 1.2µA maximum quiescent current, which represents an improvement of 15 to 20 times in supply current over industry standard micropower op amps. A unique design technique allows the device to operate at ultra-low quiescent current while maintaining linearity under loaded conditions. The output is capable of sourcing 2mA when powered by a 9V battery and drives smaller loads from a 3V battery. The total supply voltage can range from 2.5V to 10V.

The common-mode input voltage range extends from the negative rail to within 1.1V of the positive supply, and the output stage swings from rail-to-rail. The device maintains good DC characteristics, minimising the input referred errors. The output can source 2mA.

The MAX406 is a single op amp with two modes of operation: compensated mode and decompensated mode. Connecting BW (pin 8) to -V, or leaving it floating, internally compensates the amplifier. In this mode, the MAX406 is unity-gain stable with a 5V/ms typical slew rate and an 8kHz gain bandwidth. Connecting BW to +V puts the MAX406 into decompensated mode with a 20V/ms typical slew rate and a 40kHz gain bandwidth.

The MAX409 is a single op amp featuring 150kHz gain bandwidth and a 75V/ms slew rate, and is stable for gains of 10V/V or greater.

Order Code	Type	Price each
AY40T	MAX406	£3.99
AY38R	MAX409	£3.99

LM3900N

National Semiconductor

3900

Four dual input, internally compensated amplifiers designed primarily for single power rail operation. These current differencing amplifiers use a current mirror to achieve the non-inverting function. When driving from a low impedance source a resistor should be placed in series to limit the peak input current to less than 20mA.

Absolute max ratings
Supply voltage range: 4V to 32V or ±2V to ±16V

Power dissipation max: 570mW
Input current max: 20mA

Typical ratings at 25°C
Open loop voltage gain: 70dB
Input resistance: 1MΩ
Out resistance: 8Ω
Unity gain bandwidth: 2.5MHz
Input bias current: 30nA
Slew rate positive output swing: 0.5V/µs
Slew rate negative output swing: 20V/µs
Supply current: 6.2mA
Output voltage swing: 29 4V

Output current capability
Source: 1.8mA
Sink: 1.3mA
Power supply rejection ratio: 70dB
Mirror gain: 1µA/µA±10%
Mirror current: 10µA (500µA max)
Negative input current: 1mA
Full power bandwidth: 35kHz

Order Code	Type	Price each
QH42V	LM3900N	£1.20

SUBSECTION 53 POWER OP-AMPS L165V

SGS-Thomson

A power op-amp for use in servo amplifiers and power supplies. The high gain and high output power capability provide superior performance wherever an op-amp and power booster combination is required.

Absolute max ratings
Voltage supply range: ±6V to ±18V
Power dissipation: 20W
Differential input voltage: ±15V
Output current: 4A

Typical ratings at 25°C with V_S = ±15V
Input offset voltage: ±2mV
Input offset current: ±20nA
Input bias current: 0.2µA
Input resistance: 500kΩ
Common mode rejection ratio: 70dB
Supply voltage rejection ratio: 60dB
Large signal voltage gain: 80dB
Output voltage swing: 24V p-p
Slew rate: 8V/µs
Full power bandwidth: 50kHz
Supply current (no load): 40mA

Order Code	Type	Price each
UK66W	L165V	£2.65

L272M

SGS-Thomson

A dual power op-amp for use in a wide range of applications including servo amplifiers and power supplies, compact disc, VCR etc. Channel separation 60dB.

Absolute max ratings	272
Voltage supply range	4V to 28V
Power dissipation	1W
Differential input voltage	$\pm V_S$
Output current	1A

Typical ratings at 25°C with $V_S = 24V$	
Input offset voltage	15mV
Input offset current	50mA
Input bias current	0.3µA
Input resistance	>500kΩ
Common mode rejection ratio	75dB
Supply voltage rejection ratio	70dB
Large signal voltage gain	50dB
Output voltage swing	23V
Slew rate	1V/µs
Unity gain bandwidth	350kHz
Supply current (no load)	8mA

Order Code	Type	Price each
UJ36P	L272M	£1.56

LM12CLK

National Semiconductor

A 150W power op-amp capable of driving $\pm 25V$ at $\pm 10A$ while operating from $\pm 30V$ supplies. The monolithic IC can deliver 150W of sine wave power into a 4Ω load with 0.01% distortion. The IC features input protection, controlled turn on, thermal limiting, overvoltage shutdown, output current limiting and dynamic safe area protection. Applications include operational power supplies, high voltage regulators, high quality audio amplifiers, tape-head positioners and servo control systems.

Absolute max ratings	
Voltage supply range:	$\pm 8V$ to $\pm 40V$
Power dissipation:	150W with 400in ² heatsink
Differential input voltage:	60V
Output current:	10A

Typical ratings at 25°C with $V_S = \pm 30V$	
Input offset voltage:	2mV
Input offset current:	0.03µA
Input bias current:	0.15µA
Common mode rejection ratio:	86dB
Supply voltage rejection ratio:	90dB
Large signal voltage gain:	94dB
Slew rate:	9V/µs
Full power bandwidth:	60kHz
Supply current (no load):	60mA

SUBSECTION 54 FET INPUT OP-AMPS CA3130E

Harris

A MOS-FET input, CMOS output op-amp that will operate from a single or dual power supply, and input terminals can be swung up to 0.5V below negative rail. An external compensation capacitor between pins 1 and 8 permits adjustment of frequency/gain characteristic (typically 47pF). Offset null is achieved with 100kΩ pot between pins 1 and 5 with slider to pin 4. Max input-terminal current is 1mA. The output can be strobed.

Order Code	Type	Price each
QH28F	CA3130E	95p

CA3140E & CA3240E

Harris

3130

3140

3140 & 3240
Offset Null

A MOSFET input, bipolar output op-amp that will directly replace the 741 in most applications. It will operate from single or dual supply rails and input terminals can be swung up to 0.5V below negative rail. Internally compensated. Max input terminal current is 1mA. The output can be strobed. 3240 is a dual version of 3140. Both are in an 8-pin DIL package.

3240

SGS-Thomson

National Semiconductor

351/411/
441/041/081

353/412/
442/072/
082

Low-cost high performance J-FET input op-amps that will directly replace the 741 in most applications. The devices are low noise and have distortion figures of less than 0.02% over the audio band. It is most important that input voltages never go more negative than the negative supply voltage or the device will be destroyed. The 351 is supplied in an 8-pin DIL package as is the 353 which is a dual version and the 347 is supplied in a 14-pin DIL package and is a quad version (see page 714). Note that since the inputs are J-FET'S not MOS-FET'S no special handling is required.

MC33171, MC33172 & MC33174 NEW

Motorola

A range of low-power, single supply op amps. Features include wide operating voltage range, wide bandwidth, high slew rate, large capacitance drive capability, low total harmonic distortion and output short circuit protection. The MC33171 device has a single amplifier, while the MC33172 is a dual equivalent and the MC33174 a quad equivalent.

Specification

Supply voltage, V_{CC} : 3.0V to 44V, or $\pm 1.5V$ to $\pm 22V$
 Bandwidth: 1.8MHz
 Slew rate: 2.1V/ μs
 Input offset voltage: 2.0mV
 Capacitance drive capability: 0 to 500pF
 Total harmonic distortion, THD: 0.03%
 Phase margin: 60%
 Gain margin: 15dB

Order Code	Type	Price each
AD99H	MC33171P	£1.19
AE00A	MC33172P	£1.29
AE01B	MC33174P	£1.59

OPA124P NEW

Burr-Brown®

The OPA124P is a precision monolithic dielectrically isolated FET (*DIFET*) operational amplifier. Outstanding performance characteristics allow its use in the most critical instrumentation applications. Low noise 6nV/ \sqrt{Hz} (10kHz), low bias current, 1pA (maximum), high open-loop gain of 106dB (minimum), and high common-mode rejection, 100dB (minimum) make it superior to BIFET and CMOS amplifiers. Extremely low noise is achieved with patented circuit design techniques. A cascode design allows high precision input specifications.

Order Code	Type	Price each
AD59P	OPA124P	£6.20

OPA604AP NEW

Burr-Brown®

The OPA604AP is a FET-input operational amplifier designed for enhanced AC performance. Very low distortion 0.0003% at 1kHz, low noise 10nV/ \sqrt{Hz} , and wide gain-bandwidth of 20MHz. It provides superior performance in high-quality audio and other applications requiring excellent dynamic performance. The OPA604AP has a wide supply range of ± 4.5 to $\pm 24V$. The low-noise FET input of the OPA604AP provides wide dynamic range, even with a high source impedance, and drives a 600 Ω load.

Order Code	Type	Price each
AD57M	OPA604AP	£1.68

OPA2604AP NEW

Burr-Brown®

The OPA2604AP is a dual FET-input operational amplifier designed for enhanced AC performance. Very low distortion 0.0003% at 1kHz, low noise 10nV/ \sqrt{Hz} , and wide gain-bandwidth of 20MHz. It provides superior performance in high-quality audio and other applications requiring excellent dynamic performance. The OPA2604AP has a wide supply range of ± 4.5 to $\pm 24V$. The low-noise FET input of the OPA2604AP provides wide dynamic range, even with a high source impedance, and drives a 600 Ω load.

Order Code	Type	Price each
AD58N	OPA2604AP	£2.70

LF441CN, LF442CN and LF444CN

National Semiconductor

Low power J-FET input op-amps may be used as direct replacements for the μ A741C, 1458C and 3403 respectively. They offer improved DC characteristics, the same bandwidth, slew rate and gain yet only draw one tenth of the supply current (one fifth for LF444). In addition they offer extremely low input offset voltages and currents and very low bias currents.

LF347/LF444
TL064/TL074/TL084

Order Code	Type	Price each
QY29G	LF441CN	99p
QY30H	LF442CN	£1.85
QY31J	LF444CN	£2.45

TL064CN

SGS-Thomson

A low-power version of the TL084C J-FET op-amp. It features high input impedance, wide bandwidth, high slew rate and low input offset and bias currents. The package contains four op-amps and pin-out is the same as LM324.

Order Code	Type	Price each
RA66W	TL064CN	95p

TL071CN, TL072CN & TL074CN

SGS-Thomson

Low noise versions of the TL081-series J-FET op-amps. These amplifiers feature low input bias and offset currents and a fast slew rate. Their low harmonic distortion, 0.01% typical, and low noise make them suitable for use in hi-fi preamps. The TL071CN is supplied in an 8-pin DIL package, as is the TL072CN which is a dual version, and the TL074CN is supplied in a 14-pin package and is a quad version.

Order Code	Type	Price each
RA67X	TL071CN	67p
RA68Y	TL072CN	85p
RA69A	TL074CN	95p

TL081CN, TL082CN & TL084CN

SGS-Thomson

Low cost general purpose J-FET op-amps featuring high slew rates, low input bias and offset currents and low offset voltage temperature coefficient. The TL081CN is supplied in an 8-pin DIL package, as is the TL082CN which is a dual version, and the TL084CN is supplied in a 14-pin package and is a quad version.

Order Code	Type	Price each
RA70M	TL081CN	69p
RA71N	TL082CN	67p
RA72P	TL084CN	97p

MAX438CPA

Maxim

The MAX438CPA is a micropower op amp combining high-speed performance with low-power operation. It is compensated for stability in applications with a closed loop gain of 5V/V or greater. It requires less than 75 μ A of supply current while delivering 6MHz gain bandwidth with 10V/ μ s slew rate. It has excellent output drive capability, driving a 10k Ω load to \pm 3.6V, and will operate from supply voltages in the range \pm 3V to \pm 5V.

Specification

Supply voltage range:	\pm 3V to \pm 5V
Absolute maximum supply voltage:	12V DC
Quiescent current:	50 μ A typical
Input offset voltage:	0.5mV
Input bias current:	\pm 2nA
Input voltage range:	\pm 3.8V
Differential input impedance:	90M Ω
Common-mode input impedance:	1G Ω
Common-mode rejection ratio:	95dB
Supply rejection ratio:	65dB
Large signal gain:	75dB
Output voltage swing:	\pm 3.9V into 10k Ω
Short-circuit output current:	3mA
Slew rate:	10V/ μ s
Gain bandwidth:	6MHz
Minimum closed loop gain:	\pm 5V/V
Operating temperature range:	0°C to +70°C

Order Code	Type	Price each
AY43W	MAX438CPA	£4.49

SUBSECTION 55 INSTRUMENTATION AMPLIFIER IC's

INA114 Precision Instrumentation Amplifier

Burr-Brown

A low cost, general purpose instrumentation amplifier offering excellent accuracy in a versatile 3-opamp design ideal for a wide range of applications. A single external resistor sets any gain between 1 and 10,000. Internal input protection can withstand up to \pm 40V without damage, even without a supply voltage present. The INA114 is laser trimmed for very low offset voltage (50 μ V), drift (0.25 μ V/ $^{\circ}$ C) and high common-mode rejection (115dB at G = 1000). It operates with power supplies as low as \pm 2.25V, allowing its use in battery powered and single 5V supply systems. Quiescent current is 3mA maximum. Using the device with noisy or high impedance power supplies may require decoupling capacitors close to the device pins. In use, the output is referred to the output reference terminal (Ref, pin 5) which is normally grounded. This must be a low impedance connection to 0V to assure good common-mode rejection. The gain of the INA114 is set by connecting a single external resistor, R_G , between pins 1 and 8 where:

$$\text{gain (G)} = 1 + \frac{50k \Omega}{R_G}$$

The 50k Ω term in the equation comes from the sum of the two internal feedback resistors, and values for R_G can range from none, giving a gain of 1, 50k Ω giving x2 down to 5 Ω giving 10,000. Applications include bridge amplifiers, thermocouple amplifiers, RTD sensors, medical instrumentation and data acquisition.

Specification

Input offset voltage:	\pm 25+30/G μ V
Input impedance, differential common mode:	10 ¹⁰ Ω // 6pF
Input common mode range:	\pm 13.5V

INA118P Precision Low Power Instrumentation Amplifier

Burr-Brown

The INA118P is a low power, general purpose instrumentation amplifier offering excellent accuracy. Its versatile 3 op-amp design and small size make it ideal for a wide range of applications. Current-feedback input circuitry provides wide bandwidth even at high gain (100kHz at G = 100). A single external resistor sets any gain from 1 to 10,000. Internal input protection can withstand up to \pm 40V without damage. The device operates with power supplies as low as \pm 1.35V, and quiescent current is only 280 μ A, ideal for battery powered systems.

In use, the output is referred to the output reference terminal (Ref, pin 5) which is normally grounded. This must be a low impedance connection to 0V to assure good common-mode rejection. The gain of the INA118 is set by connecting a single external resistor, R_G , between pins 1 and 8 where:

$$\text{gain (G)} = 1 + \frac{50k \Omega}{R_G}$$

Applications include bridge amplifiers, thermocouple amplifiers, RTS sensor amplifiers, medical instrumentation and data acquisition.

Specification

Input offset voltage:	\pm 25+100/G μ V
Input impedance, differential common mode:	10 ¹⁰ Ω // 5pF
Input common-mode range:	\pm V_S \pm 0.9V
Common-mode rejection, G = 1:	90dB

INA117KP High Common-Mode Difference Amplifier

NEW

Burr-Brown®

The INA117KP is a precision unity-gain difference amplifier with a very high common-mode input voltage range. It is a single monolithic IC consisting of a precision op amp and integrated thin-film resistor network. It can accurately measure small differential voltages in the presence of common-mode signals up to ±200V. The INA117 inputs are protected from momentary common-mode or differential overloads up to ±500V.

In many applications where galvanic isolation is not essential, the device can replace isolation amplifiers, eliminating costly isolated input side power supplies and their associated ripple, noise and quiescent current. The IC's 0.001% non-linearity and 200kHz bandwidth are superior to those of conventional isolation amplifiers. Applications include current monitors, battery cell voltage monitors, ground breakers, input protection, signal acquisition in noisy environments and factory automation.

Specification

Initial gain: 1V/V

Gain error: 0.01%

Rated output voltage: 12V, $I_O = +20mA, -5mA$

Input impedance, differential: 10kΩ

common-mode: 110kΩ

Common-mode rejection: 100dB

Initial offset voltage: 120μV

Noise voltage: 25μV pk-pk, 0.01Hz to 10Hz
550nV/√Hz @ 10kHz

Gain bandwidth: -3dB @ 200kHz

Full power bandwidth: 30kHz @ 20V pk-pk

Slew rate: 2V/μs

Supply voltage: ±15V

Quiescent current: 1.5mA

Order Code	Type	Price each
AD76H	INA117KP	£8.99

PGA204/5 Programmable-Gain Instrumentation Amplifiers

NEW

Burr-Brown

The PGA204 and PGA205 are low cost, general purpose programmable-gain instrumentation amplifiers offering excellent accuracy. Gains are digitally selected: PGA204 has options for gains of 1, 10, 100 and 1000, while PGA205 has 1, 2, 4 and 8V/V. The precision, versatility and low cost of the PGA204 and 205 make them ideal for a wide range of applications.

The gain is selected by two TTL or CMOS compatible address lines, A_0 and A_1 . Internal input protection can withstand up to ±40V on the analogue inputs without damage.

Both devices are laser trimmed for very low offset voltages (50μV), drift (0.25μV/°C) and high common-mode rejection ratio (115dB at $G = 1000$). They can operate from supply voltages as low as ±4.5V, allowing them to be used in battery powered systems. Quiescent current is 5mA.

In use the output is referred to the output reference (Ref, pin 10) which is normally grounded. This must be a low impedance connection to assure good

common-mode rejection. The output feedback connection, pin 12, must be connected to the output, pin 11, for proper operation, but can be used to sense the output voltage directly at the load for best accuracy.

The digital inputs A_0 and A_1 are not latched; a change in the logic immediately selects a new gain. Logic switching time is approximately 1μs. Typical applications for these devices include data acquisition, general purpose analogue boards and medical instrumentation.

Specification

Input offset voltage: ±25+30 μV

Input impedance, differential: $10^{10} \Omega \parallel 6pF$

common-mode: $10^{10} \Omega \parallel 6pF$

Common-mode rejection: 75dB min., 123dB max.

Input offset current: ±2nA

Noise voltage: 16nV/√Hz max.

Gain error: ±0.05% to ±0.1%

Output voltage: ± $V_S - 1.3V$ pk-pk

Supply voltage range: ±4.5V to ±18V

Order Code	Type	Price each
AD77J	PGA204AP	£11.29
AD78K	PGA205AP	£11.29

PGA103 Programmable-Gain Amplifier

NEW

Burr-Brown®

The PGA103 is a programmable-gain amplifier for general purpose applications. Gains of 1, 10 or 100 are digitally selected by two CMOS compatible address lines. The device is ideal for systems that must handle wide dynamic range signals, and high-speed circuitry provides fast settling time, even at $G = 100$ (8.2μs to 0.01%). Bandwidth is 250kHz at $G = 100$, yet quiescent current is only 2.4mA from ±15V supplies. The IC operates from supplies in the range of ±5V to ±18V.

Specification

Input offset voltage: ±600 to ±1,500μV max.
±7μV/°C max.

Input impedance: $10^9 \Omega \parallel 2pF$

Bias current: ±20nA ±100pA/°C

Noise voltage, $G = 100$: 20nV/√Hz @ 10Hz
18nV/√Hz @ 100Hz-1kHz

Gain error, $G = 1, 10$: ±0.01% ±2.5ppm/°C
 $G = 100$: ±0.02% ±2.5ppm/°C

Frequency response, $G = 1$: 1.5MHz -3dB
 $G = 10$: 750kHz
 $G = 100$: 250kHz

Overload recovery: 2.5μs

Supply voltage range: ±5V to ±18V

Quiescent current: 2.4mA

Order Code	Type	Price each
AD79L	PGA103P	£6.29

INA106KP Precision Gain of 10 Differential Amplifier

Burr-Brown®

NEW

The INA106KP is a fixed 10 x gain differential amplifier consisting of a precision op amp with on-chip metal film resistors. The resistors are laser trimmed for accurate gain and high common-mode rejection. Excellent TCR tracking of the resistors maintains gain accuracy and common-mode rejection over temperature variations.

The differential amplifier is the foundation of many commonly used circuits and the INA106 provides this precision circuit function without the additional need of an expensive resistor network. In use the output is referred to the output reference terminal (pin 1) which is normally grounded; this potential will be summed with the output signal. Otherwise the connections can be configured in various ways to produce differentiators, summing amplifiers and adders.

Specification

Initial gain: 10V/V

Gain error: 0.01%

Related output voltage: 12V, $I_O = +20mA, -5mA$

Input impedance, differential: 10kΩ

common-mode: 110kΩ

Common-mode rejection: 100dB

Initial offset voltage: 50μV

Noise voltage: 1μV pk-pk, 0.01Hz to 10Hz +30nV/√Hz @ 10kHz

Small signal dynamic response: -3dB @ 5MHz

Full power bandwidth: 50kHz @ 20V pk-pk

Slew rate: 3V/μs

Supply voltage range: ±5 to ±18V

Quiescent current: ±1.5mA

AD75S	INA106KP	£8.29

ISO122 Precision Isolation Amplifier

Burr-Brown

NEW

A precision isolation amplifier incorporating a novel duty cycle modulation-demodulation technique to transmit the signal digitally across a 2pF isolation barrier. With digital modulation the barrier characteristics do not affect signal integrity, resulting in excellent reliability and good high-frequency transient immunity across the barrier. Both barrier capacitors (1pF each) are embedded in the plastic body of the package.

The device is very easy to use, no additional external components are needed for operation. All that is required is to provide separate \pm supply rails and a ground reference for both the input and output sides of the device, as the internal input and output circuits are completely isolated. The isolation barrier can handle 1,500VAC rms continuously and is 100% tested. The configuration has a gain of unity and for all intents and purposes a ground referenced, DC or AC signal is passed through to the output unchanged. However, small signal bandwidth should be limited to 50kHz or less, due to the internal modulation frequency being 500kHz.

A power supply range of $\pm 4.5V$ to $\pm 18V$ at each end, with quiescent currents of $\pm 5mA$ and $\pm 5.5mA$ respectively make the device ideal for a wide range of applications, including industrial process control, ground loop elimination, motor and SCR control, PC based data acquisition, etc.

Specification

Isolation rating: 1,500V AC @ 60Hz
2,400V AC max. for 1s
Isolation mode rejection: 140dB @ 60Hz
Leakage current: 0.18 μ A rms @ 60Hz
Nominal gain: 1V/V
Gain error: $\pm 0.05\%$ FSR
Gain drift: $\pm 10ppm/^{\circ}C$
Non-linearity: 0.016% FSR
($\pm 0.025\%$ FSR ISO122J)

Input offset voltage: $\pm 20mV$
Input offset drift: $\pm 200\mu V/^{\circ}C$
Noise: 4 $\mu V/\sqrt{Hz}$
Input voltage range: $\pm 12.5V$ ($V_S = \pm 15V$)
Input resistance: 200k Ω
Output voltage range: $\pm 12.5V$ ($V_S = \pm 15V$)
Output current drive: $\pm 15mA$
Capacitive load drive: 100nF
Ripple voltage: 20mV pk-pk
Small signal bandwidth: 50kHz
Slew rate: 2V/ μ s
Overload recovery time: 150 μ s
Supply voltage range: ± 4.5 to $\pm 18V$ each section
Quiescent current: $\pm 5mA$ input side, $\pm 5.5mA$ output side

Note that version ISO122J has a non-linearity figure of $\pm 0.025\%$ FSR.

SUBSECTION 56 OPERATIONAL TRANSCONDUCTANCE AMPLIFIERS

CA3080E

Harris

This 8-pin DIL IC is an op-amp whose output current is proportional to the voltage difference between its input pins. In addition the IC has a bias input which may be used either for gating or for linear gain control. The amplifier has an excellent slew rate and in addition when gated off the amp uses only a minute 10 μ W making it ideal in multiplex applications. For technical specification see LM13700N below.

Order Code	Type	Price each
YH58N	CA3080E	72p

LM13700N

National Semiconductor

The 13700 is a dual operational transconductance amplifier with linearising diodes and buffers. It consists of two current controlled transconductance amplifiers each with different inputs and a push pull output. The two amplifiers share common supplies but otherwise operate independently. Linearising diodes are provided at the inputs to reduce distortion and allow higher input levels. The result is a 10dB signal-to-noise improvement referenced to 0.5% THD. High impedance buffers are provided which are specially designed to complement the dynamic range of the amplifiers.

The IC has many useful applications such as voltage controlled amplifiers, voltage controlled resistors, voltage controlled filters, voltage controlled oscillators, phase locked loop, Schmitt trigger tachometer (f to v), peak detector and hold, sample and hold, ramp and

hold, true RMS converter, variable temperature coefficient voltage reference, pulse width modulator, log current source, multiplexer, zero standby power timer, four quadrant multiplier, amplitude monitor and stereo volume control. A data sheet is available which shows circuit details of all the above applications.

SUBSECTION 57 VOLTAGE COMPARATORS

LM311N

SGS-Thomson

1311

A voltage comparator that has input currents more than a hundred times lower than the 710. It will operate on $\pm 14V$ or $+5V$ supplies and will drive RTL, DTL, TTL, MOS and switch voltages up to 40V at currents as high as 50mA. Both input and output can be isolated from system ground and the output can drive loads referred to ground, positive or negative. Offset balancing and strobe capability are provided and outputs can be wire-OR'ed.

Order Code	Type	Price each
QY09K	LM311N	45p

LM319N

SGS-Thomson

A precision, high speed dual comparator designed to operate over a wide voltage range including +5V and ground. It has a faster response, though higher power dissipation than the 311. It is capable of driving outputs up to 25mA.

Order Code	Type	Price each
UH33L	LM319N	£1.34

LM339N

SGS-Thomson

Identical to the 3302, but offering improved supply voltage range and voltage gain.

Order Code	Type	Price each
UH31J	LM339N	36p

LM392N

National Semiconductor

This device contains a precision voltage comparator and an op-amp in one 8-pin DIL package. They operate from the same supply and will work with a +5V supply and the output of the comparator will interface directly with TTL or CMOS. The very low supply current makes the device ideal for use in battery powered equipment. The following data applies to the op-amp stage only (see table above for rest of data).

Common mode rejection ratio:	70dB
Supply voltage rejection ratio:	100dB
Large signal voltage gain:	100dB
Output voltage swing:	V ⁺ - 1.5V
Output current source:	40mA
Output current sink:	20mA

Order Code	Type	Price each
UH32K	LM392N	£1.46

LM393N

SGS-Thomson

Two independent precision voltage comparators designed specifically to operate from a single power supply. The device is similar to the 392, but offers much lower input offset voltage and draws only half the supply current.

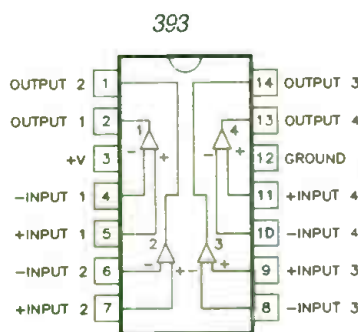

Order Code	Type	Price each
UH30H	LM393N	38p

SUBSECTION 58 POWER AMP IC's

MSC1191 Bi-CMOS Amplifier

OKI

NEW

The MSC1191 has been developed for use with music synthesiser LSI chips which can be operated at low voltages. This Bi-CMOS amplifier circuit essentially comprises two operational amplifiers, a bias circuit and a stand-by detector provision. It can

be connected directly to a speaker without a coupling capacitor to achieve an audio power of 0.3W maximum into 8Ω. A flexible power supply range from +2V to +6V and a low current requirement of typically 1.5mA are essential characteristics for battery operation. The IC is encapsulated in an 8-pin DIL package.

Order Code	Type	Price each
AY27E	MSC1191	£1.80

LM386N-1

National Semiconductor

A power amp designed for use in low voltage, especially battery-operated, applications. For minimum parts count, C1 and C2 can be omitted. With pins 1 and 8 open circuit the gain is internally set to 20dB. With a 10µF capacitor between pins 1 and 8 the gain is increased to 200dB and the gain can be set to anything between these limits by placing a resistor in series with this capacitor. For example a 1kΩ resistor here, sets the gain to 50dB.

The capacitor on pin 7 sets the power supply rejection ratio from 6dB with no connection to 50dB at 1kHz with 10µF.

Continued on next page.

TBA820M

SGS-Thomson

A very useful audio amp in an 8-pin DIP package. The IC features a very low minimum working supply voltage of 3V, low quiescent current, good ripple rejection, no crossover distortion and low power dissipation. Maximum supply voltage is 16V into 16Ω speaker, 12V into 8Ω and 9V into 4Ω.

up to 12W into loads down to 1.6Ω. Two can be used to form a bridge delivering 18W into 4Ω from a 14.4V supply.

Completely safe operation is guaranteed due to protection against DC and AC short-circuit between all pins and ground, with thermal overrange, load dump voltage surge up to 40V and fortuitous open ground. No electrical insulation is required between the mounting tab and the heatsink, but lead lengths should be as short as possible. Two variations are available: TDA2003V has pins arranged for vertical PCB mounting, while TDA2003H is arranged for horizontal mounting.

$$R_x = 20 \times R_2$$

$$C_x = \frac{1}{2\pi BR_1}$$

Specification

Operating supply voltage range:	8 to 18V DC
Max. DC supply voltage:	28V
Peak supply voltage:	40V for 50ms
Repetitive peak output current:	3.5A
Non-repetitive peak output current:	4.5A
Max. power dissipation:	20W (90°C)
Frequency response:	40Hz to 15kHz -3dB @ 1W into 4Ω
Distortion:	0.15% @ 4.5W into 4Ω, 1kHz
Input impedance:	150kΩ
Open loop gain:	80dB @ 1kHz
Closed loop gain:	40dB @ 1kHz
Input noise:	5µV max.
Supply voltage rejection:	36dB
Efficiency:	69%

AH53H	TDA2003H	£1.15

TDA2040V

SGS-Thomson

A monolithic power amplifier IC intended for use as a high quality, class AB audio power amplifier. Typically it provides 22W output power into 4Ω with 0.5% distortion, from a 32V supply. The device is designed to operate from a split power supply and no electrical isolation is needed between the mounting tab and its heatsink. It provides a high output current and has very low harmonic and crossover distortion. The device incorporates a patented short circuit protection system comprising an arrangement for automatically limiting the dissipated power so as to keep the working point of the output transistors within their safe operating area. Thus the TDA2040V is protected against temporary overloads or short-circuit. A thermal shutdown system is also included, and should the short-circuit exist for a longer time the thermal shutdown protection keeps the junction temperature within safe limits. The device's pins are arranged for vertical PCB mounting.

Specification

Supply voltage range:	±2.5V min. to ±20V DC
Quiescent current drain:	30mA
Max. differential input voltage:	±15V
Input offset voltage:	<±20mV
Peak output current:	4A
Output power:	22W into 4Ω, 12W into 8Ω, V _{SS} = ±16V
Power bandwidth:	100kHz (1W into 4Ω)
Open loop gain:	80dB
Closed loop gain:	30dB
Total harmonic distortion:	0.08% @ 0.1 to 10W into 4Ω, f = 40Hz to 15kHz
Input noise:	<10µV (3µV typical)
Input impedance:	5MΩ (500kΩ min.)
Supply voltage rejection:	50dB
Efficiency:	66%
Thermal shutdown junction temperature:	145°C
Max. power dissipation:	25W (75°C)

TDA7052

Philips

A power amp designed for use in low voltage battery operated equipment, where a high output power is still required. By using the Bridge Tied Load principle in the amp an output power of 1.2W into 8Ω is achieved from a 6V supply. The gain of the amplifier is fixed internally at 40dB and almost no external components are required. The amp is short-circuit proof, requires no external heatsink and there are no switch-on or switch-off clicks.

TDA2003V/H

SGS-Thomson

The TDA2003 has improved performance but with the same pin configuration as the TDA2002. The additional features of the TDA2002 – very low number of external components, ease of assembly, space and cost saving – are maintained. The device provides a high output current capability of up to 3.5A, and very low harmonic and crossover distortion. The device is designed for single-ended supply operation in the range 8 to 18V and applications include in-car stereos and radios. It can output 6W into a 4Ω load from a 14.4V supply, and

LM1877N-9 National Semiconductor

A stereo amplifier in a 14-pin DIL package that requires very few external components to make a complete 2W per channel power amplifier. The IC is suitable for use with 8Ω or 16Ω speakers.

LM3876 40W Audio Power Amplifier National Semiconductor

The LM3876 is a high performance audio power amplifier with an output mute function which can be used to eliminate switch-on and switch-off 'thumps' to the loudspeaker load. It is capable of delivering 40W continuously into an 8Ω load, and is fully protected using established techniques. The output stage is protected against short circuit to ground or either supply rail. Protection against transients from inductive loads is also provided at the output stage via internal clamp diodes.

The device also contains thermal shut-down protection which comes into operation if the chip temperature exceeds its safe operating range, and under-voltage shut-down in the event that there is not sufficient supply voltage to enable it to operate properly.

The LM3876 is internally compensated and stable for gains ≥ 10 . In the application circuit shown, the three earth points for input, supply and output should have separate return paths to the power supply earth (both capacitors 'C' share the supply earth point). When S1 is closed switch-on/switch-off muting is enabled. Applications include self-powered speakers, surround-sound amplifiers and compact stereo systems. Contained in an 11-pin plastic package.

Specification

Output power, continuous:	40W
Instantaneous output power:	100W
Signal to noise ratio:	95dB
Total harmonic distortion:	0.05%

Order Code	Type	Price each
GX49D	LM3876	£12.49

LM380N National Semiconductor

An audio amp in a 14-pin DIL package that requires very few external components to make a complete 2.5W power amplifier. In most cases, however, it is advisable to add a Min Res 2.7Ω and Polyester 0.1μF in series from pin 8 to ground and an Axial 4.7μF from pin 1 to ground.

High-Output-Crystal-Cartridge Power Amp

A 2.5W rms power amp the 380 is shown in the circuit driven by a high output crystal pickup. The IC requires only 4 other components (without tone control only two other components! — simply omit C1 and RV1).

Component list

RV1:	Pot Lin 2M2	(FW09K)
RV2:	Pot Log 2M2	(FW29G)
C1:	Polystyrene 3300pF	(BX38R)

Order Code	Type	Price each
QH40T	LM380N	£1.48

LM383T National Semiconductor

A high quality audio op amp that is pin for pin compatible with the TDA2002A, but offering lower noise and improved frequency response. The amp is supplied in a 5-pin TO220 package that does not require insulating washers between the metal tab and the heatsink in single rail applications. The IC will supply up to 11W into 1.6Ω loads with $V_S = 20V$, but take care that power dissipation limits are not exceeded and that transients on the supply do not take V_S above 25V.

Order Code	Type	Price each
WQ33L	LM383T	£3.49

TBA810 SGS-Thomson

The TBA810S is a monolithic audio amp IC in a 12-lead quad inline package, and intended for use as an audio frequency class B power amplifier. It can provide 7W power output at 16V supply into 4Ω, 6W at 14.4V into 4Ω, 2.5W at 9V into 4Ω, 1W at 6V into 4Ω and operates with a wide range of supply voltages from 4 to 20V. It gives a high output current up to 2.5A, a high efficiency of 75% at 6W output, and low harmonic and crossover distortion. In addition, the circuit is provided with a thermal protection circuit.

The TBA810P is an updated version of the TBA810S, having a higher output, lower noise, protection against polarity inversion, and a higher supply voltage rejection. It can provide 7W into a 2Ω load at 14.4V supply voltage with very low harmonic and crossover distortion.

TDA2030AV

SGS-Thomson

Bridge Amplifier with split-rail power supply.

A high quality audio amp in a 5-pin TO220 package that does not require insulating washers between the metal tab and heatsink in single rail supply applications. The amp will operate with single or split supplies. The distortion up to 12W into 4Ω is less than 0.2% typically (less than 0.5% up to 14W) and up to 8W into 8Ω is less than 0.1% (less than 0.5% up to 9W). The circuits shown for the 2006 are suitable for use with this IC, but the supply voltage should be increased to +14V and -14V (or 28V for the single supply circuit). In addition the bridge amplifier will deliver 24W into 8Ω (or with 2006 and power supplies of +12V and -12V it will deliver 20W into 8Ω).

Parts List

YY70M	TDA2005M	£2.79

MAPLIN KEY CALL

Phone 01702 556751

LM1875N

National Semiconductor

A very high quality audio amp in a 5-pin TO-220 package that does not require insulating washers between the tab and the heatsink in single rail supply applications. The amp will deliver 20W into 4Ω or 8Ω loads with a 50V supply. The device uses advance circuit techniques to achieve extremely low distortion levels even at high output levels (only 0.015% at 1kHz and 0.05% at 20kHz into 8Ω and 0.07% at 20kHz into 4Ω all with 20W output). Care must be taken with the pcb layout and the data sheet shows suitable layouts for the circuits shown.

Note that if using a dual supply the IC's tab must be insulated from the heatsink and since this increases the thermal resistance a larger heatsink will be required.

TDA1514AN-7

Philips

A very high quality audio amp in a 9-pin flat package. The heatsink must be insulated from ground. The amp will deliver 40W into an 8Ω load with a ±27.5V power rail or 40W into a 4Ω load with a ±21V power rail. The device is designed to meet the requirements of digital sound sources such as Compact Disc. The total harmonic distortion at 32W is less than 0.0032%.

An output mute circuit prevents switch-on and switch-off clicks, and the device is totally protected against short-circuits and thermal runaway. The device will deliver 25W into 8Ω with a ±22V supply or 12.5W into 8Ω with a ±16V supply. The metal plate on the package is connected to pin 4.

SUBSECTION 59 PRE-AMPLIFIER IC's

INA103KP

Burr-Brown®

NEW!

The INA103KP is a very low noise, 1nV/√Hz, low distortion, 0.0009% at 1kHz, monolithic instrumentation amplifier. Wide supply range of ±9V to ±25V. Its current-feedback circuitry achieves very wide bandwidth, 100MHz at G = 1000, and excellent dynamic response. It is ideal for low-level audio signals, such as balanced low-impedance microphones. The INA103KP provides near-theoretical limit noise performance for 200Ω source impedances. Unique distortion cancellation circuitry reduces distortion to extremely low levels, even in high gain. Its balanced input, low noise and low distortion provide superior performance compared to transformer-coupled microphone amplifiers.

INA103KP

Specification (typical at V_s = 15V)

Supply voltage:	±9 to ±25V
Supply current:	9mA
Input impedance:	60MΩ
Input voltage range:	±12V
Output impedance:	R _L = 600Ω
Output voltage:	12V typical
Equivalent input noise figure:	1pA/√Hz at 1kHz
Dynamic response G = 1	—3dB bandwidth: 6MHz

INA103KP

Output stage with Gain = 10

Output Stage Gain =
 $(R1 \parallel 12k) + R1 + R3 / (R2 \parallel 12k)$

INA105KP

Burr-Brown®

NEW

The INA105KP is a monolithic Gain = 1 differential amplifier, consisting of a precision op amp and on-chip metal film resistors. Excellent TCR tracking of the resistors maintains gain accuracy and common-mode rejection 86dB over temperature.

The differential amplifier is the foundation of many commonly used circuits. The INA105KP provides this precision circuit function without using an expensive precision resistor network, thus is easy to use and with low cost.

1NA105KP

LM387N Low Noise Dual Pre-amplifier

National Semiconductor

A stereo pre-amplifier in an 8-pin DIL package similar to the now obsolete 381, but it will only operate up to 30V and the input noise is slightly higher.

Order Code	Type	Price each
WQ35Q	LM387N	£2.10

SL561CDP Ultra Low Noise Pre-amplifier

GEC-Plessey

A high gain, low noise preamplifier designed for use in audio and video systems up to 6MHz. Noise performance is optimised for source impedances between 20 Ω and 1k Ω , making the device suitable for use with a number of transducers including photoconductive IR detectors, magnetic tape heads and dynamic microphones. With pin 1 open circuit, the device has a typical gain of 60dB. The gain can be adjusted by connecting a suitable resistor between pin 6 and the output i.e. a 1k Ω results in a gain of approximately 28dB. The upper cut-off frequency can be reduced by connecting a suitable capacitor from pin 6 to ground. A 47nF capacitor produces a cut-off frequency of approximately 10kHz. Similarly the lower cut-off frequency can be determined by C_2 and C_3 .

Specification

Supply voltage:	+5V typical, 10V maximum
Supply current:	2.0mA typical, 3.0mA maximum
Power consumption:	10mW
Output voltage:	3V typical
Output resistance:	50 Ω
Input resistance:	3k Ω
Input capacitance:	15pF
Equivalent input noise figure:	0.8nV/ \sqrt{Hz}

Order Code	Type	Price each
DB47B	SL561CDP	£3.15

SSM2015P Microphone Pre-amplifier

Analog Devices

An ultra low noise audio preamplifier particularly suited to microphone preamplification including balanced microphones. The IC features wide bandwidth, low distortion only 0.007% at a gain of 100, and very low noise only 1.3nV/ \sqrt{Hz} for source impedances up to 4k Ω .

Specification (Typical at $V_s = \pm 15V, 25^\circ C, Gain = 100$)	
Supply voltage:	$\pm 15V (\pm 12V \text{ to } \pm 17V)$
Supply current:	12mA
Supply voltage rejection ratio:	100dB

Common mode

rejection ratio:	95dB
Input offset voltage:	0.3mV
Input offset current:	0.5 μA
Input bias current:	4.5 μA
Output voltage swing:	$\pm 12.5V (R_L = 2k\Omega)$
Bandwidth:	700kHz
Slew rate:	6V/ μs

Microphone Amplifier with Gain = 100
 (Microphone impedance $\approx 600\Omega$)

SL6270CDP Microphone Pre-amplifier/VOGAD

GEC-Plessey

The IC combines the functions of audio amplifier and voice operated gain adjusting device (VOGAD). It is designed to accept signals from a low sensitivity microphone and provide an essentially constant output signal for a 50dB range of input. The application circuit shows a radio transmitter microphone with constant output.

6270

Gain controlled microphone pre-amplifier

Specification (Typical at $V_s = 6V$)

Supply voltage:	4.5V to 10V (12V max.)
Supply current:	5mA
Input impedance:	150 Ω (pin 4 or 5)
Differential input Impedance:	300 Ω
Voltage gain:	52dB (72 μV rms at pin 4)
Output level:	90mV rms (4mV rms at pin 4)
Distortion:	2% (90mV rms at pin 4)

SM2016P Differential Audio Preamplifier

Analog Devices

2016

An ultra low noise preamplifier for use as a microphone preamplifier, differential line receiver or low gain balanced input stage. The noise is 0.8nV/√Hz with 150Ω source impedance. The output can source and sink >40mA allowing a jack-field to be driven directly. The special package can dissipate 1.5W.

Specification (Typical at 25°C, V_S = ±18V, Gain = 100)

Supply voltage:	±9V to ±36V
Supply current:	12mA
Supply voltage rejection ratio:	100dB
Common mode rejection ratio:	95dB
Input offset voltage:	1.5mV
Input offset current:	1.5µA
Input bias current:	9 µA
Output voltage swing:	±17V (R _L = 2kΩ)
Total harmonic distortion:	0.003% (R _L = 2kΩ)
Bandwidth:	1MHz
Slew rate:	10V/µs

SSM2017P Audio Preamplifier

Analog Devices

A state-of-the-art audio preamplifier that requires just one external resistor or potentiometer to set the gain between x1 and x3500. The value of the gain setting resistor R_G can be found from the formula:

$$R_G = 10,000 \text{ where } G \text{ is the gain.}$$

$$G-1$$

For example: for a gain of 100 times (=40dB), R_G is equal to 100Ω. For x1 gain, pins 1 and 8 should be left open circuit and for maximum gain use Min Res 1.8Ω and Min Res 1.2Ω in series. The very low noise mixer amplifier circuit shows how to connect the amplifier so that pins 1 and 8 are true dc virtual ground allowing almost perfect summing of the circuits connected to the input. With its superb noise performance of just 950pV/√Hz, and its ultra low total harmonic distortion over the full audio bandwidth of <0.01% and 1MHz bandwidth at x100 gain, this low cost device is suitable for the most demanding hi-fi applications.

Basic Amplifier

Specification (Typical at V_S = ±15V, 25°C)

Supply voltage:	±15V (±6V to ±22V)
Supply current:	±10.6mA
Input voltage range:	±8V
Input offset voltage:	100µV
Input offset current:	±2nA
Input bias current:	6µA
Output voltage swing:	±12.3V
Minimum load:	2kΩ
Max capacitive load:	50pF

Gain	1	10	100	1000

SSM2142P Balanced Line Driver

Analog Devices

A differential output buffer amplifier that converts a single-ended input signal to a balanced output with high drive capability. The IC helps to maintain audio quality on long cable runs by eliminating mains hum, rf interference, voltage drops and noise. It is capable of driving a 10V rms signal into 600Ω loads, or even extremely long cables, with a very low distortion performance. The 0.1µF capacitors shown in the application circuit must be connected close to the IC. For optimal performance Reversolytic 10µF capacitors can be connected between pins 1 and 2, and between pins 7 and 8, otherwise pin 1 should be connected to pin 2, and pin 7 should be connected to pin 8.

Specification (typical at V_S = ±15V)

Supply voltage:	±4V to ±18V
Supply current:	5.5mA
Input impedance:	10kΩ
Input current:	750µA
Differential gain:	5.98dB
Total harmonic distortion:	0.006%
Signal to noise ratio:	-109dB
Output voltage swing:	±14V
Output impedance:	50Ω

2142

Order Code	Type	Price each
UM54J	SSM2142P	£7.25

SSM2143P Balanced Line Receiver

Analog Devices

2143

A differential amplifier designed to receive balanced line inputs in audio applications requiring a high level of immunity from common-mode noise. Total harmonic distortion is less than 0.004% over the full audio band

even while driving low impedance loads. The input stage is designed to handle input signals as large as +28dBu (0dBu = 0.775V) when the gain is x0.5. With gain = 0.5 the SSM2142/SSM2143 combination provides a fully integrated, unity gain solution to driving high quality audio signals over long cable runs.

Specification (typical at $V_s = \pm 15V$)

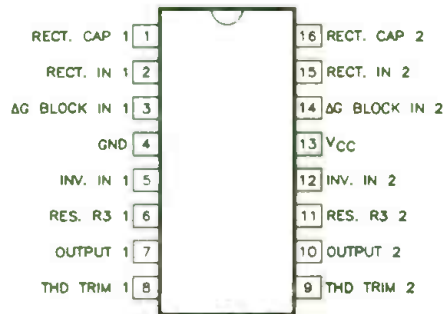

Supply voltage:	$\pm 6V$ to $\pm 18V$
Supply current:	$\pm 2.7mA$
Gain:	0.5 (-6dB)
Total harmonic distortion + noise:	0.0006% (at 1kHz, $V_{in} = 10V_{rms}$)
Signal to noise ratio:	-107.3dB
Headroom:	+28dBu
Bandwidth:	7MHz
Output voltage swing:	$\pm 14V$
Minimum resistive load drive:	2k Ω
Maximum capacitive load drive:	300pF

Order Code	Type	Price each
CP90X	SSM2143P	£4.35

NE571N Compaider

Signetics

Versatile, low cost, two channel (stereo) gain control circuits in which either channel may be used as a dynamic range compressor or expander. Each channel has a full wave rectifier to detect the average value of a signal, a linearised temperature compensated variable gain block and an operational amplifier.

571

SSM2120P Dynamic Range Processor

Analog Devices

2120

The IC consists of two VCA's and two level detectors, a combination that allows construction of compressors, expanders, limiters, AGC circuits, voltage controlled filters, noise reduction systems and stereo noise gates. Detailed information about how to use this IC can be found in Maplin Magazine Issue 47.

Specification (typical at $V_s = \pm 15V$)

Supply voltage:	$\pm 5V$ to $\pm 15V$ ($\pm 18V$ max.)
Positive supply current:	8mA
Negative supply current:	6mA
Max. input current (pins 8 and 16):	$\pm 400\mu A$
Gain control range:	-100dB to +40dB
Control sensitivity:	6mV/dB
Frequency response:	250kHz
Off isolation:	100dB
Total harmonic distortion:	0.005%
Noise:	-80dB
Level detector dynamic range:	110dB
Input current (pins 9 and 15):	0.03 μA to 3mA p-p
Output drive (pins 3 and 14):	7.5mA sink

This device is supplied in a 22-pin 0.3in DIL package.

LM1035N Dual DC Operated Tone/Volume/Balance Circuit

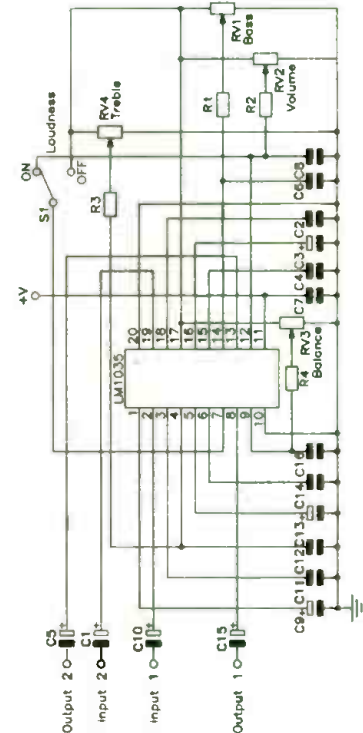

National Semiconductor

A stereo, DC controlled bass, treble, volume and balance circuit that can be operated by remote control or from four potentiometers which may be biased from a zener regulated supply provided on the chip. Each tone response is defined by a single capacitor chosen to give the desired characteristic. An additional control input is provided to effect loudness compensation.

Features

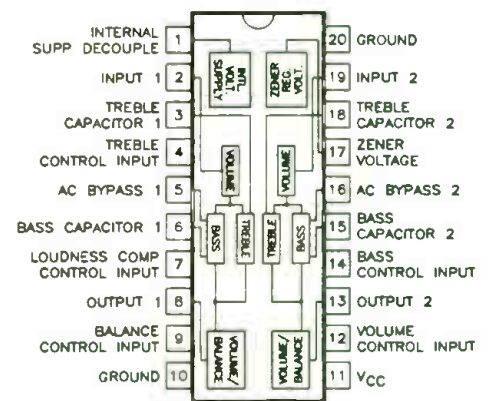

- Wide supply voltage range, 8V to 18V
- Large volume control range, 80dB typical

- Tone controls, $\pm 15dB$ typical
- Channel separation, 75dB typical
- Low distortion, 0.05% typical at 1V rms input
- High signal to noise ratio, 80dB typical at 1V rms input

Characteristics (typical)

Supply current:	35mA
Zener output:	5.4V @ 5mA (max)
Output voltage max:	1.3V rms ($V_{CC} = 8V$) 2.5V rms ($V_{CC} = 12V$) 3.5V rms ($V_{CC} = 18V$) 1V rms ($V_{CC} = 8V$) 2V rms ($V_{CC} = 12V$)
Input voltage max:	2V rms ($V_{CC} = 12V$)
Maximum gain:	0dB
Volume control range:	80dB
Balance control range:	$\pm 1dB$ to -26dB
Bass control range:	$\pm 15dB$ @ 40Hz ($C = 0.39\mu F$)
Treble control range:	$\pm 15dB$ @ 16kHz ($C = 0.01\mu F$)
Frequency response:	30Hz to 16kHz, flat 20Hz to 250kHz, -1dB
Input resistance:	30k Ω
Output resistance:	20 Ω
Total harmonic distortion:	0.05%
Control input current:	-0.6 μA

LM1037N Dual 4-Channel Analogue Switch

National Semiconductor

Dual electronically controlled, four channel analogue switch with internal muting facility. It is ideal for use as a stereo source selector or in multiplexing or sampling applications. An additional pin is included to allow parallel connection of two or more integrated circuits. Channel selection is achieved by taking one of the four control lines high (>2V and up to 50V). Each signal should be connected to one of the eight inputs via an 0.47µF capacitor. Also a Min Res 100k should be connected to each input with the other end of the resistor connected to a common point. This common point should then be connected to pin 12 and via a 100µF 40V capacitor to earth. Decouple the supply voltage close to the chip with a 10µF 63V capacitor. Each output should be connected via a 1µF 63V capacitor. Two or more devices can be connected together by directly coupling all pin 7's and the output pins 9 and 10. Only one output capacitor is required for each common output.

Channel Selection

Taking control pin high	Connects this pin to pin 10	pin 9
1	11	13
3	17	15
16	2	4
18	6	8

Characteristics

Supply voltage range:	5V to 28V
Supply current:	V _S = 12V 6.4mA; V _S = 30V 10mA
Signal handling:	V _S = 12V 2.9V rms
Total harmonic distortion:	(1V rms) 0.04%
Noise voltage at output:	5µV
Channel separation:	-95dB
Relative unselected output:	-90dB

QY33L	LM1037N	£4.85

DG211CJ 4-Channel SPST Analogue Switch

Siliconix

A 4-Channel single-pole single-throw analogue switch for use in communications, instrumentation and process control. The device is completely bi-directional in the on condition and will block 30V peak-to-peak signals when off. A logic 0 on the inputs turns the appropriate switch on and logic 1 turns it off.

211

Characteristics

Analogue signal range:	±15V
On resistance:	115Ω
Turn on time:	460ns
Turn off time:	360ns
Continuous current through switch:	20mA max
Supply voltage:	±20V max
recommended:	±15V
minimum:	±8V
Logic voltage (pin 12):	+5V
Positive supply current:	0.35mA
Negative supply current:	0.3mA
Logic supply current:	0.5mA

Order

UH57M	DG211CJ	£1.60

SSM2412P Dual Audio Analogue Switch

Analog Devices

2412

A dual analogue switch designed for high performance audio applications. Distortion and noise are negligible over the full operating range of 20Hz to 20kHz and with signals up to 10Vrms. The IC provides superb fidelity with no clicks during switching. It can be controlled by standard TTL or CMOS logic and pull-up resistors are not required. The switches provide superb off-isolation and true bilateral operation. The analogue inputs and outputs are protected against overload and overvoltage. The switches are guaranteed to break before make even in multiple systems. A logic 0 (less than 0.8V) turns the switch off, whilst a logic 1 (greater than 2V) turns the switch on.

Specification (Typical at V_S = ±18V)

Supply voltage:	±7.5V to ±18V (±20V max.)
Positive supply current:	6mA
Negative supply current:	4.8mA
Ground current:	0.6mA
Logic input current:	1µA
Analogue voltage range:	±14.2V*
On resistance:	60Ω
On resistance matching:	1%
Turn on time:	3.5ms
Turn off time:	1.5ms
Break before make time delay:	2ms
On-state input capacitance:	12pF
Off-state input capacitance:	4pF
Off isolation:	120dB
Crosstalk:	96dB
Total harmonic distortion:	0.003%
Noise (20Hz to 20kHz):	1nV/√Hz
	0.2µV p-p

*With V_S lower than ±18V, the analogue voltage (VA) must not exceed 3.5V less than the rail voltage. E.g. with V_S = ±7.5V, VA must be <±4V, with V_S = ±12V, VA must be <±8.5V.

Order

Code	Type	Price each
UL81C	SSM2412P	£8.75

MF10CCN Universal Monolithic Switched Capacitor Filter

National Semiconductor

Two independent general purpose CMOS active filter building blocks each requiring just the addition of 3 to 4 resistors and an external clock to produce various 2nd order functions. Each block has three output pins. One of the outputs can be configured to perform either an allpass, highpass, or a notch function. The other two pins perform lowpass and bandpass functions. The centre frequency of the lowpass and bandpass 2nd order functions can be either directly dependent on the clock frequency or they can depend on both clock frequency and external resistor ratios. The centre frequency of the notch and allpass functions is directly dependent on the clock frequency while the highpass centre frequency depends on both resistor ratio and clock.

Up to 4th order functions can be performed by cascading the two 2nd order building blocks in each MF10C. Higher than 4th order functions can be obtained by cascading MF10C packages. Any of the classic filter configurations (such as Butterworth, Bessel, Cauer and Chebyshev) can be formed.

Characteristics (typical)

Recommended supply voltage:	+5V (+4V to +7V max)
Frequency range:	30kHz
Clock to centre frequency ratio:	49.94 (pin 12 high) 99.35 (pin 12 at mid V _D)
Q accuracy:	±2%
Centre frequency temperature:	±10ppm/°C (pin 12 high)
Coefficient:	±100ppm/°C (pin 12 at mid V _D)
Q temperature coefficient:	±500ppm/°C
DC low pass gain accuracy:	±2% max
Crosstalk:	50dB
Clock feedthrough:	10mV
Maximum clock frequency:	1.5MHz
Power supply current:	8mA
Voltage swing (pins 1,2,3,9,18,20):	±3.7V
Output short circuit current:	3mA source, 1.5mA sink
Op-amp unity gain bandwidth:	2.5MHz
Op-amp slew rate:	7V/µs

SUBSECTION 60 MUSIC AND SOUND GENERATOR IC's

PCM69A Advanced 1-Bit BiCMOS Dual 18-Bit DAC

Burr-Brown

NEW

The PCM69A dual 18-bit DAC is a low cost, dual output 18-bit BiCMOS digital-to-analogue converter utilising a novel architecture to achieve excellent low level performance. By combining a conventional thin-film R-2R ladder DAC, a digital offset technique with analogue correction and an advanced 1-bit DAC using a first order noise shaping technique, the device achieves high resolution, minimal glitch and low zero-crossing distortion.

The PCM69A digital offset occurs at bit 4, making it an excellent choice for digital musical instruments and audio DSP. Capable of 16 times oversampling, it has excellent THD performance and very high signal to noise ratio. Left and right channel analogue outputs are current drives for direct connection to the inverting inputs of operational amplifiers with single gain setting feedback resistors. Logical inputs are TTL and CMOS compatible, and the device requires only a single 5V supply and consumes 75mW typically.

PCM69A

Specification

Resolution:	18 bits
Dynamic range:	106dB
Logic input data format:	serial MSB first
Input system clock frequency:	16.9344 MHz
Total harmonic distortion:	-86dB @ 0dB output
Channel separation:	106dB @ 1kHz
Level linearity:	±1dB @ -90dB signal level
Gain error:	±3%
Gain mismatch, channel-to-channel:	P1%
Gain drift:	95ppm/°C
Warm-up time:	1 minute
Idle channel signal to noise ratio:	110dB, 20Hz to 40kHz
Analogue output range:	±1.2mA ±3%
Output impedance:	1.8kΩ ±30%
Supply voltage range:	+4.75 to +5.25V (5V nominal)
Combined supply current:	15mA
Power dissipation:	75mW

DF1700 Dual Channel 8 x Oversampling Digital Filter

Burr-Brown

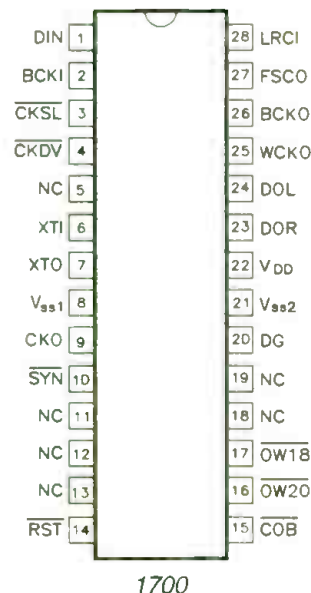

NEW

The DF1700 is a high-performance, 8 times oversampling CMOS digital filter which accepts 16-bit input data and is user selectable to output 16, 18 or 20-bit data, according to a 2-bit binary code applied to pins 16 and 17. The 8 x oversampling feature converts the input data frequency (fs) to an output data frequency of 8 x fs by digital interpolation. By providing 8 x oversampled data to an audio DAC, lower order analogue filters can be used at the DAC's output, thus reducing filter phase non-linearities. Oversampling with the DF1700 simultaneously improves the fidelity of the analogue reconstruction and reduces analogue filter complexity at the output of the DAC.

The most common application for this IC is in high-performance digital audio playback, such as compact disc players. Digital information from a compact disc is often formatted using a Digital Interface Format Receiver Chip (DIFRC). The DF1700 can be interfaced directly to the output of many popular DIFRCs able to provide the Left/Right Channel Input multiplex clock (LRCI), the serial Data INput stream (DIN), and the timing clock for serial input data (BCKI).

The fs data stream, which has been formatted by the DIFRC, is 8 times oversampled by the DF1700 and separated into left and right channel data for input to the PCM1700 DAC (AD64U). The analogue stereo outputs from the PCM1700 should then each pass through a three-pole Generalised Intermittence Converter (GIC) low-pass filter, which has extremely low distortion and negligible phase shift.

The frequency of the DF1700's master clock oscillator can be selected as 192, 384, 256 or 512 times fs according to a 2-bit binary code applied to CKSL and CKDV (pins 3 and 4). The IC also needs a crystal, or an external clock signal, to operate at 16.9344MHz (e.g. crystal UL00A).

1700

Specification	CKSL	CKDV	x fs
Oscillator frequency range:	H	H	192 1 to 13MHz

PCM1700 Dual 18-Bit Audio DAC

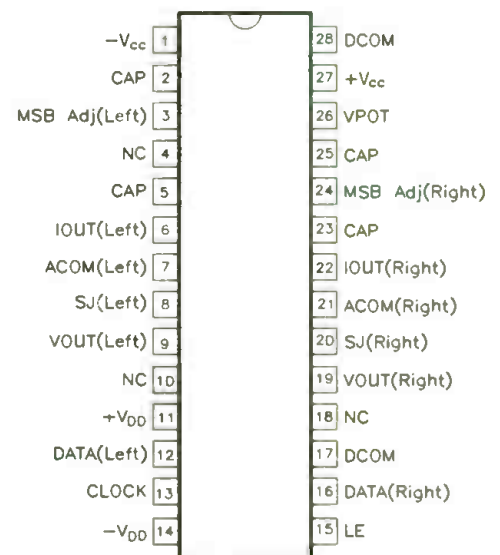

Burr-Brown

NEW

A low cost, high-performance, dual (stereo) 18-bit digital-to-analogue converter specifically for recovering high-fidelity music from a digital storage medium, primarily compact disc. The PCM1700 features true glitch-free, 'co-phase' current and voltage outputs and only requires ±5V supply rails to operate. It comes complete with an internal reference and optional MSB adjustability for even greater THD performance, over and above the -92dB achievable without the external adjustment. This low maximum harmonic distortion figure, plus noise, is 100% tested. The IC is also very fast, capable of 16 times oversampling rates on both channels simultaneously, allowing very simple output filters to be used which will introduce the minimum additional distortion and phase shift.

For compact disc reproduction, this IC is intended to be driven by the DF1700, which will expand the 16-bit CD data stream to 18 bits with 8 times oversampling added. The PCM1700 includes on-chip op-amps to convert the left and right channel current outputs to signal voltages. Alternatively the current outputs can be accessed directly for externally added op-amp ICs of the designer's choice.

Total power dissipation is less than 400mW maximum and the IC runs from ±5V supply rails. (See also DF1700.)

Specification

Resolution:	18 bits

ISD1212 Single-Chip Record/Playback

ISD

NEW

The ISD1212 is controlled by a single REC signal, with either of two push-button controlled playback control signals PLAYE and PLAYL. The IC is configured for simplicity of design in a single message playback application. Using the address lines will allow multiple message applications.

Patented technology provides a natural record and playback of sound. The input voice signals are stored directly in non-volatile EEPROM cells, and are played back without the synthetic effect so often heard with digital speech storage methods. A complete sample is stored in a single cell, minimising the memory necessary to store a recording of a given duration, up to a total recording time of 12s. At the end of a playback or record cycle, the device automatically returns to a low power standby mode, consuming typically only 0.5µA, so is ideal for battery powered applications. During a playback cycle, the device powers down automatically at the end of the message. During recording, the device powers down immediately after REC is released.

In addition to providing simple message playback, the ISD1212 also provides full addressing capability. Six address lines allow it to be directly controlled by a microprocessor. Alternatively these modes can be hard-wired to provide the desired system operation. With few peripheral components the device can drive a 16Ω speaker directly, and accept input from an electret microphone. The device is available as a 28-pin DIL package (suffix P), or as an SMD (suffix G).

Specification

Supply voltage:	7V max.
Supply current:	30mA max., operating 2µA max., standby
Output load impedance:	16Ω min.
Output power:	12.2mW into 16Ω
Harmonic distortion:	1%
Mic. input level:	20mV pk-pk
Mic. input impedance:	10kΩ
AGC output impedance:	5kΩ
Sampling frequency:	5.3kHz max.
Bandwidth:	2.3kHz max.

ISD1110P 10-Second Voice Record/Playback

ISD

NEW

A high quality, single-chip record/playback device for short duration messaging applications. The device includes an on-chip oscillator, microphone preamplifier, AGC, anti-aliasing filter, smoothing filter, and speaker amplifier. A minimum system can be configured with a microphone, a speaker, a few passive components, two push-button switches and a power source. Recordings are stored in non-volatile memory cells requiring no power. This unique solution is made possible through new technology whereby voice and audio signals are stored directly, in their natural analogue form, into an EEPROM memory. Such direct analogue storage allows natural voice reproduction in a single IC. The device is supplied in a 28-pin DIL package.

Specification

Supply voltage:	7V max.
Supply current:	30mA max., operating 2µA max., standby
Output load impedance:	16Ω min.
Output power:	12.2mW into 16Ω
Harmonic distortion:	1%
Mic. input level:	20mV pk-pk
Mic. input impedance:	10kΩ
AGC output impedance:	5kΩ
Sampling frequency:	6.4kHz max.
Bandwidth:	2.7kHz max.

KU92A	ISD1110P	£12.99

ISD1016A/20A Single-Chip Voice Record/Playback

ISD

NEW

The ISD1016 and ISD1020 devices are designed to record and playback audio and voice information entirely on the one chip, with a minimum of added circuitry. A non-volatile analogue array consists of 128K cells, the equivalent of 1M-bits of storage. The devices eliminate the need for complex digital conversion, compression or voice synthesis techniques, which often compromise voice quality and are more complicated to use. Signal conditioning circuits are included, and control functions which enable a complete, high-quality recording and playback system to be realised in a single device. The two versions offer total recording times of 16 or 20 seconds respectively.

A noise cancelling microphone preamplifier with AGC can record both low and high volume sounds. A fifth order anti-aliasing filter in the output path ensures all digital components are removed, and the device is able to drive an 8 or 16Ω speaker directly through differential outputs. This boosts power output by four times compared with single ended operation, and eliminates the need for a series blocking capacitor or an output amplifier. The device will operate from a single 5V supply or from batteries, and includes a power down function for applications where minimum power consumption is critical.

Digital addresses are provided for more sophisticated message addressing and control. The storage arrays are organised into 160 segments, and addresses A0 to A7 provide access to each segment, providing the capability to construct messages by linking stored phrases and sounds.

Specification

Supply voltage:	7V max.
Supply current:	30mA max., operating 10µA max., standby
Output load impedance:	8 to 16Ω
Output power:	50mW into 16Ω
Harmonic distortion:	1%
Mic. input level:	20mV pk-pk
Mic. input impedance:	10kΩ
AGC output impedance:	5kΩ
Sampling frequency:	8kHz, ISD1016A 6.4kHz, ISD1020A
Bandwidth:	3.4kHz, ISD1016A 2.7kHz, ISD1020A

The devices are available in a 28-pin DIL package (suffix P) or as 28-pin SMD (suffix G).

Voice Record/Playback Evaluation Systems

ISD

ISD-ES001

NEW

A multi-purpose evaluation and development tool for use with ISD single chip voice record/playback devices. As an evaluation tool, the ISD-ES001 enables designers to record and playback recordings using simple front-end controls. The system's easy to use features facilitate comparisons of speech and sound quality relative to the record time duration of the device tested.

Used as a development tool, the system supports a wide range of features, including addressing, fast forwarding, message-indexing mode configuration and looping. The system has a built-in socket to allow the archiving of different messages on devices. A cable connector is included for microprocessor and micro-controller based applications.

Documentation includes a system schematic diagram, application design manual, instructions, and explanations of operational modes. The unit uses a standard telephone microphone/speaker interface.

ISD-ES002

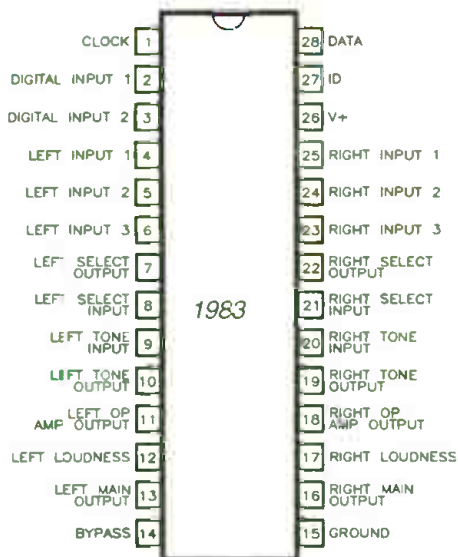

A hand-held demonstration board with a built-in socket allowing easy and immediate record and playback of ISD devices. Messages can be recorded on the ICs and saved, due to the non-volatile storage of the devices. A library of recordings can be created using either of the ISD devices. Simple operation is assured through just three switches: On/Off, Play/Record and Start/Stop. Push-button play and automatic power down are also supported. The system includes a speaker, a 9V battery with supply regulation and an ISD1016A DIL IC.

KU69A	ISDES001	£249.99
KU70M	ISDES002	£139.99

LMC1983 Digitally Controlled Stereo Selector, Tone and Volume Block

National Semiconductor

The LMC1983 is a 28-pin DIL, CMOS/bipolar building block IC intended for Hi-Fi audio that provides volume, balance, tone (bass and treble) and loudness controls with a 3-way stereo input selector between three pairs of stereo inputs, and a mute function. These functions are digitally controlled through an INTERMETAL bus 3-wire communication interface from a microprocessor or similar controlling logic. There are in addition two digital inputs for easy interfacing to other audio peripherals such as stereo decoders. The IC is designed for line level input signals (300mV to 2V) and has a maximum gain of -0.5dB. Volume is set at minimum and tone controls are set flat when supply voltage is first applied.

Low noise and distortion performance results from the use of analogue switches and polysilicon resistor networks in the signal path, and, while the chip is basically manufactured in CMOS, NPN transistors are added to build low noise opamps. The combination of CMOS switches, bipolar op amps and polysilicon resistors make it possible for the IC to achieve a quality of reproduction which is substantially superior to other bipolar circuits that use analogue multipliers to accomplish gain

adjustment. In fact the noise floor is low enough for DNR and Dolby processed signals to retain maximum effect. The volume controls are adjustable in 40 steps and left and right volume levels can be separately programmed to achieve the balance function.

The device has internal decoding logic that allows a microprocessor or microcontroller to communicate directly with the audio control circuitry via a standard INTERMETAL bus interface. This consists of a bidirectional, serial data line (DATA), a clock input line (CLK) and an identity line (ID). Address and function selection data bytes, each 8 bits long, are serially shifted into the LMC1983. Data present in the internal shift register is latched and the instruction executed.

Specification

E510 Keyboard Scanner for Touch Sensitive Keyboards

A fully polyphonic, fast keyboard scanner with serial data output to MIDI specifications. Up to 128 keys (>10 octaves) can be scanned, each touch sensitive with a resolution of 128 μs (256 μs with a 4MHz clock). The speed is measured on pressing or releasing each key and the chip incorporates debounce circuitry. The IC is HCMOS compatible, has integrated oscillator, FIFO, and can select MIDI channel number, and only a few external components are required. With a clock rate of 4MHz, the output baud rate is 31250 baud.

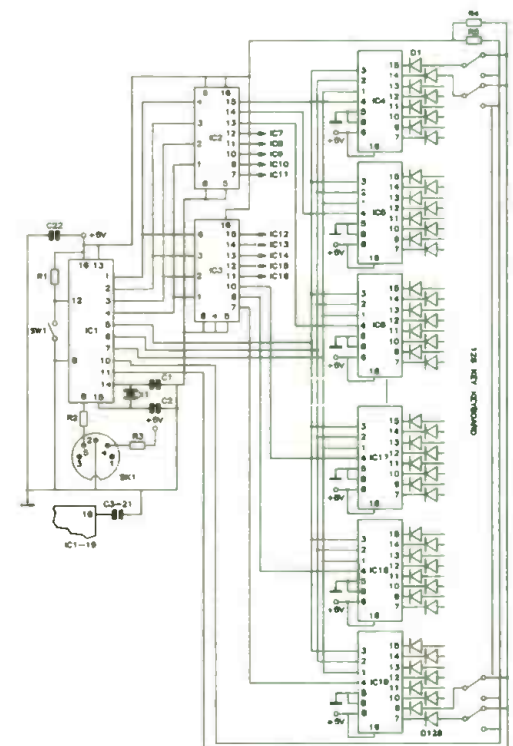

Every time a key is pressed or released, the velocity is calculated by measuring the time with a 7-bit reverse-counting counter. At the same time every press and release is tested for validity. The key is only recognised if it goes from pin 10 to pin 11 or vice versa and thus key bounce is eliminated. An internal FIFO register allows fully polyphonic playing and thus several keys can be pressed simultaneously. The output transmits according to the MIDI specification, the key number, the key velocity, whether the key is on or off and which MIDI channel it is to go to. Close SW1 to transmit to channel 1.

An external clock between 4MHz and 8MHz can be connected to pin 15, in which case pin 14 is left open circuit. If an 8MHz crystal is used, the output rate will be 62500 baud.

Specification

Supply voltage:	5V $\pm 5%$
Supply current:	5mA
Max clock rate:	8MHz

SSM2024P Quad Current Controlled Amplifier

Analog Devices

A quad class A current controlled amplifier with signal to noise better than 82dB at 0.3% distortion. The four VCA's are completely independent and the control lines are ground referenced linear current inputs for easy and direct interfacing. In most applications, few external components are required.

Specification (typical at 25°C, Vs = ±15V)

Supply voltage: ±9V to ±18V
 Positive supply current: 2.5mA
 Negative supply current: 1mA
 Gain: 4085μS
 Input offset voltage: ±0.4mV
 Output leakage: 0.1nA
 Control rejection (untrimmed): 41.5dB

SSM2044P Voltage Controlled Filter

Analog Devices

2044

A 4-pole voltage controlled filter designed for electronic music applications. On-chip voltage control of resonance allows direct and easy interfacing with programmers and controllers. The IC features extended control range, low noise, and high control rejection. The filter can also be used as a low distortion sine wave oscillator. No external ladder network is required making the device ideal in polyphonic applications.

Specification (typical at 25°C, Vs = ±15V)

Supply voltage: ±5V to ±18V
 Positive supply current: 1.4mA

Negative supply current: 6.2mA
 Frequency control range: 50,000
 Frequency control feedthrough: -36dB
 Q Control input impedance: 900Ω
 Q current at oscillation: 500μA
 Q Control feedthrough: -30dB
 Q Control threshold voltage: 500mV
 Max available control current: 1.7mA (V_{PIN 13} = -120mV)
 Freq control input range: -120 to +180mV
 Max output signal current: ±400μA
 Signal to noise ratio: 70dB
 Dynamic range: 90dB

MAX293/7

Maxim

The MAX293/297 8th-order, low-pass, elliptic, switched-capacitor filters are easy to use and can be set up with corner frequencies from 0.1Hz to 25kHz in the case of the MAX293, or from 0.1Hz to 50kHz for the MAX297.

The transmission ratio of both is 1.5:1 and provides a sharp roll-off and a -80dB of stopband rejection. These filters have fixed responses, so the design task is limited to selecting the clock frequency that controls the filter's corner frequency.

An external capacitor is used to generate a clock using the internal oscillator, or an external clock signal can be used. An uncommitted op amp, with non-inverting input grounded, is provided for building a continuous time low-pass filter for post-filtering or anti-aliasing. Steep roll-off and high-order make these filters ideal for anti-aliasing applications that require maximum bandwidth, and for communication applications that require filtering signals in close proximity within the frequency domain.

Both devices are packaged in 8-pin DIL with the same pin numbering.

RC4200N Analogue Multiplier

Raytheon

An analogue multiplier combining three op-amps specially designed for multiplier logging circuits and offering complete compensation for non-linearity. As a result, four quadrant multiplication, two quadrant division, square rooting, squaring and rms conversion can all be implemented with predictable accuracy. The nominal relationship between the three inputs and the output is I3 = I1 x I2 ÷ I4.

The circuit is ideal for use in low distortion audio modulation circuits, voltage controlled active filters, and precision oscillators.

Specification (typical at V_s = -15V)

Supply voltage: -9V to -18V
 Supply current: <4mA
 Input current range: 1μA to 1mA
 Input offset voltage: <±10mV
 Input bias current: <500nA
 Output current range: 1μA to 1mA
 Frequency response: 4MHz
 Total error as multiplier:
 with external trim: ±0.2%
 Non-linearity: <±0.3%

UM34811A Multi-Instrument Melody Generator

UMC

34811

A pre-programmed multi-instrument melody generator containing a 512-note memory capable of generating 16 tunes. The comprehensive control facilities enable playing – all tunes repeatedly or stopping at the end – or one tune repeatedly or stopping at the end. Tunes are preprogrammed with one of three instruments' sounds: the piano, mandolin or organ using the on-chip envelope generator.

Pin Functions

- 1 TSP Melody auto-stop flag, not normally connected.
- 2 CE Chip enabled if connected to V_{DD} , in standby mode if connected to V_{SS} .
- 3 LP If connected to V_{DD} only one tune plays, and if connected to V_{SS} all tunes play.
- 4 SL A positive-going transition on this pin makes the chip jump to the next tune.
- 5 AS If connected to V_{DD} the tune(s) repeat continuously and if connected to V_{SS} the tune(s) stop at the end (whether it is one tune or all tunes depends on pin 3).
- 6 NC No connection.
- 7 ENV Envelope circuit. Capacitor/resistor network connected between here and V_{DD} can alter the charge/discharge time of the pre-programmed envelope.
- 8 V_{SS} Negative of battery/power supply.
- 9 MTO Modulated tone signal output.
- 10 OP1 Pre-amplifier output 1.
- 11 OP2 Pre-amplifier output 2.
- 12 MT1 Pre-amplifier input. Pins 10, 11 and 12 form a completely separate pre-amplifier.
- 13 OSC3 See 14.
- 14 OSC2 Connect a series resistor and capacitor between here and pin 13 to set internal oscillator to 100kHz.

- 15 OSC1 An external oscillator can be connected here (pins 13 & 14 open), or connecting a resistor from here to junction of RC on pins 13 & 14 makes the internal oscillator less sensitive to psu voltage fluctuations.
- 16 V_{DD} Positive of battery/power supply.

Specification ($V_{DD} = 1.5V$, $V_{SS} = 0V$)

Supply voltage	1.5V (1.35V to 3V)
Standby current	<12µA (0.1µA min)
Input current high	3µA
Input current low	<0.1µA
ENV pin drive current	>500µA (0.8V)
Output current (OP1)	>200µA, <1.2mA
Output current (OP2)	>200µA, <1.2mA

Tunes List

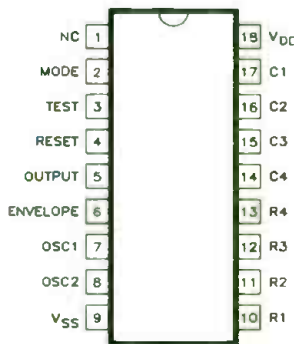

- 1 Twinkle, Twinkle, Little Star
- 2 Cuckoo Waltz (1)
- 3 Eency Weency Spider
- 4 Lullaby
- 5 Santa Lucia
- 6 Oh My Darling Clementine
- 7 Are You Sleeping
- 8 Rock-A-Bye Baby
- 9 London Bridge Is Falling Down
- 10 Little Brown Jug
- 11 Butterfly
- 12 Long Long Ago
- 13 Cuckoo Waltz (2)
- 14 Mary Had A Little Lamb
- 15 The Train Is Running Fast
- 16 Dream of Home and Mother

UJ44X	UM34811A	£1.10

UM3511A Organ with Memory

UMC

3511

An organ that can play 15 notes G3 to G5, has 15 songs pre-recorded in its 512-note ROM, and can replay up to 47 notes from RAM. When in "play" mode, pressing one of the 16 keys (except replay) initiates one of the 15 pre-recorded tunes. The replay key plays all the tunes from 1 to 15 in sequence. In "compose" mode, up to 47 notes can be stored in memory and replayed later. A single tone is generated whilst the user is pressing a key. The interval between two keys is memorised up to a maximum interval of 4 seconds.

The pre-recorded songs are:

- Hush Little Baby
- Twinkle Twinkle Little Star
- London Bridge is Falling Down
- Dream of Home and Mother
- Christmas Carol
- Are You Sleeping
- Farmer in the Dell
- In a Persian Market
- Mary Had a Little Lamb
- Long Long Ago
- Santa Lucia
- Little Brown Jug
- Butterfly
- The Train is Running East
- Close Encounters of the Third Kind

Specification (typical at $V_s = 3V$)

Supply voltage:	2.4V to 5V
Standby current:	<10µA
Output current:	>200µA (at 0.8V)

HT-2860 Alarm Sounds Generator

NEW

A versatile sound chip capable of six different alarm sounds, including 4 various alarm tones, a horn and an ambulance. Each of the six sounds can be triggered by pressing the corresponding switch. The device can directly drive a piezo transducer, or can be modified for loudspeaker output. Only two other components are needed to produce a working design. Simply connect a 120kΩ resistor between pins 16 & 17, and a 560kΩ resistor between pins 17 and 2. Similarly connect a 1000pF capacitor between pins 10 and 11. Pins 4 to 9 trigger the different alarm sounds, with power to pin 3 and ground to pin 10.

A suitable piezo sounder can now be connected between pins 14 and 15 for sound output. In addition pin 1 sources enough current to drive an LED, with a suitable series resistor.

HT82207 & HT82231 Sound Effects Generators

Holtek

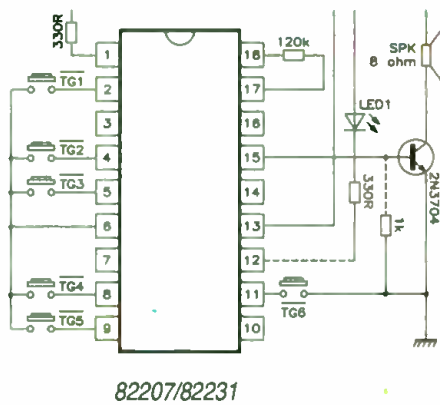

NEW

Two PCM speech synthesis chips with a variety of programmed sound effects. The 82207 comprises various 'American Western' type sounds, ie. Bugle, Horse Neigh, Horse Running, Pistol, Rifle and Cannon. The 82231 IC contains various animal and farmyard sounds including elephant, cock, hen, frog, dog, sheep, cat, horse, duck, bird, pig and cow. Outputs are also provided for two LEDs for indicating audio output level and a 2Hz flash signal while in the busy state. Many applications in novelty and children's toys, etc. Other features include low stand-by current of 1µA, minimum of external components and simple operation.

M66T Simple Melody Generator

Micro-E

A low power CMOS LSI device for generating tunes for melody cards, toys and other novelty devices. The built-in oscillator and powerful driving capability minimises the number of external components required, in fact, all that is additionally needed is a 1.5V battery, a switch and an 8 Ω speaker. Up to 128 notes can be programmed and the device can be powered from a wide range of supply voltages from 1.2V to 3.6V with low power consumption (note that the internal oscillator needs 1.3V to start).

One of six different tunes or tune combinations are available in a single device, as follows:

Type	Tune	Duration, seconds
M66T-02B	Twinkle Twinkle Little Star	16.4
M66T-11	Rock-a-Bye Baby	12.5
M66T-36	Old McDonald Had a Farm	24.8
M66T-205	I'd Like To Teach The World To Sing	20.4
M66T-214	White Christmas	49.5
M66T-215	Warning Tone	10.8

UM66 Melody Generator

UMC

A simple melody generator IC as used in musical greetings cards. The internal ROM can hold 64 notes and four pre-programmed melodies are available. A complete melody generator can be made by adding just a piezo transducer and a 1.5V battery. After connecting the battery, the tune will play once and stop. The voltage must be disconnected then reconnected to retrigger the IC.

Specification ($V_{SS} = 0V$)

Operating voltage (V_{DD}): 1.3V to 3.3V
 Standby current: <1 μ A
 Operating current: <60 μ A (no load)
 Output current: $\pm 1.5mA$

Type	Tune

MN3004 512-Stage BBD

Panasonic

A 512-stage bucket-brigade delay line (BBD) that can delay audio signals by up to 25.6ms. Applications include reverberation and echo effects, tremelo, vibrato and chorus effects.

Specification (typical)

Drain supply voltage (V_{DD}): -15V (-14V to -16V)
 Gate supply voltage (V_{GG}): -14V ($V_{DD} + 1V$)
 Clock high voltage: 0V (max -1V)
 Clock low voltage: V_{DD}
 Clock input capacitance: <350pF
 Clock frequency: 10kHz to 100kHz
 Signal delay time: 2.56 to 25.6ms
 Input signal frequency: $0.3 \times f_c$ (e.g. 12kHz at $f_c = 40kHz$)
 Input voltage swing: >1.8V rms
 Insertion loss: 1.5dB
 Input DC bias: -5 to -10V
 Total harmonic distortion: 0.4%
 Noise voltage: 0.21mV rms
 Signal to noise ratio: 85dB

Order Code	Type	Price each
UM64U	MN3004	£7.85

MN3207 1024-Stage Low Voltage BBD

Panasonic

3207

A 1024-stage bucket-brigade delay line that can provide an audio delay of up to 51.2ms. Applications include reverberation and echo effects in portable radios etc. and for echo microphones and karaoke units.

Specification (typical)

Drain supply voltage (V_{DD}): +5V (+4 to +10V)
 Gate supply voltage (V_{GG}): $V_{DD} \times 14/15$
 Clock high voltage: V_{DD}
 Clock low voltage: 0V (max +1V)
 Clock input capacitance: <700pF
 Clock frequency: 10kHz to 200kHz
 Signal delay time: 2.56 to 51.2ms

Input signal frequency: $0.25 \times f_c$ (e.g. 10kHz at $f_c = 40kHz$)
 Input voltage swing: >0.36V rms
 Insertion loss: 0dB
 Total harmonic distortion: 0.4%
 Noise voltage: <0.25mV rms
 Signal to noise ratio: 73dB

Order Code	Type	Price each
UR67X	MN3207	£8.50

MN3011 3328-Stage BBD with 6 Taps

Panasonic

3011

A 3328-stage bucket-brigade delay line (BBD) that can delay audio signals by up to 166.4ms. Six outputs are available with different non-related delay times so that a natural reverberation effect can be achieved by mixing these signals. Can be used to create a chorus effect in electronic musical instruments.

Specification (typical)

Drain supply voltage (V_{DD}): -15V
 Gate supply voltage (V_{GG}): -14V ($V_{DD} + 1V$)
 Clock high voltage: 0V (max -1.3V)
 Clock low voltage: V_{DD}
 Clock input capacitance: <2300pF
 Clock frequency: 10kHz to 100kHz
 Input DC bias: -5V to -10V
 Signal delay time (pin 9): 1.98 to 19.8ms
 (pin 8): 3.31 to 33.1ms
 (pin 7): 5.97 to 59.7ms
 (pin 6): 8.63 to 86.3ms
 (pin 5): 13.95 to 139.5ms
 (pin 4): 16.64 to 166.4ms

Input signal frequency: $0.25 \times f_c$ (e.g. 10kHz at $f_c = 40kHz$)
 Input voltage swing: >1V rms
 Insertion loss: 0dB
 Total harmonic distortion: 0.4%
 Noise voltage: <0.4mV rms
 Signal to noise ratio: 76dB

Order Code	Type	Price each
UM65V	MN3011	£32.99

MN3101 Clock Generator/Driver for BBDs

Panasonic

Suitable for driving the 3004 and 3011 BBDs, this IC generates a two phase low impedance clock and the most suitable V_{GG} when driven from the same V_{DD} as the BBD. The chip can drive up to 8192 stages and operates from a single power supply.

Specification (typical at $V_{DD} = -15V$)
 Drain supply voltage (V_{DD}): -8V to -16V
 Drain current: 3mA
 Power dissipation: 45mW

Order Code	Type	Price each
UM66W	MN3101	£1.32

MN3102 Clock Generator/Driver for Low Voltage BBDs

Panasonic

Suitable for driving the MN3207 BBD, this IC generates a two phase low impedance clock and the most suitable V_{GG} when driven from the same V_{DD} as the BBD. The chip can drive up to 4096 stages of low voltage BBDs and operates from a single power supply.

Specification (typical at $V_{DD} = +5V$)
 Drain supply voltage: +4V to +10V
 Drain current: 0.5mA
 Power dissipation: 2.5mW

Order Code	Type	Price each
UR68Y	MN3102	£2.25

UM3561 Sound Effects Generator

UMC

A simple sound generator IC that can produce four sound effects. Designed for use in toys, the effects are selected by varying the connections to pins 1 and 6 as follows:

Pin 1	Pin 6	Sound effect
No connection	No connection	Police siren
No connection	V_{DD}	Fire engine siren
No connection	V_{SS}	Ambulance siren
V_{DD}	Anything	Machine gun

Specification
 Supply voltage: 3V (2.4V to 3.6V)
 Operating current: <150µA
 Output current: >3mA

Order Code	Type	Price each
UJ45Y	UM3561	92p

UM5100 Digital Voice Recorder and Playback

UMC

The IC can record speech into a digital memory and then play it back. The device is designed to be used directly with static RAM's up to 256K bits, or with EPROM's or ROM's for playback only. High quality voice reproduction is possible and note that it is not a "computer-voice", it is the original speaker's voice played back. The bit rate is adjustable from 10kbs to 28kbs with higher quality at faster bit rates. Thus the maximum length of recording can be between about 9 and 26 seconds. At low frequencies the auxiliary outputs should be used to avoid distortion, whilst for high frequencies, an internal amplifier intensifies the voice loudness.

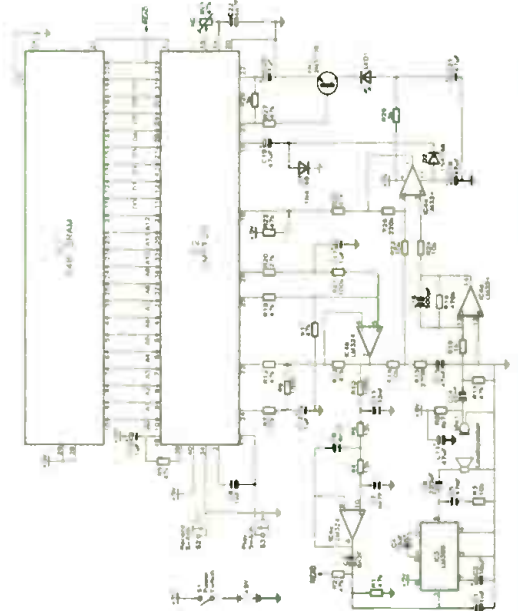

Specification
 Supply voltage: 3V to 6V
 Standby current: 1µA
 Clock drive current: ±16mA min.
 Input voltage high: 3.5V to 5V
 low: 0V to 1.5V
 Output current: ±4mA
 Reset pulse: >1µs
 Write pulse width: 200ns to 10µs

Pin Functions

1 WRITE PULSE	Active low output. Generates a pulse each time the clock advances eight cycles in "record" mode. 2-10 Address bus (part of). Data bus (part of).
11-13	C1 R1 Connect a resistor between the pins and a capacitor from pin 14 to ground to set clock rate. For example with a 7.2kΩ resistor and a 4700pF capacitor, the internal oscillator will run at 40kHz (10kbs).
14,15	
16 RESET	Active high input. When activated, all internal counters are cleared and the chip is disabled.
17 PLAY	Active low input. Trigger this pin to enter "playback" mode.
18 COMPDATA	Input. Detects the delta slope which is generated from the comparison of the input and feedback signals.
19 CLOCK DRIVER	Negative voltage generator.
20 V_{SS}	Ground.
21 FILTER	Output. Produces envelope waveform with external integrator circuit.
22 ENVELOPE	Input. Envelope signal goes in here to modulate voice.
23 ANG	Analogue voice output with opposite phase to pin 25.
24 TD	Auxiliary output with opposite phase to pin 26.

25 ANG	See pin 23.
26 TD	See pin 24.
27-31	Data bus (part of).
32 READ	Active low output. Provides an output control signal for the external memory and is active only in "playback" mode.
33	Address bus (part of).
34 RECORD	Active low input. Trigger this pin to enter "record" mode.
35-39	Address bus (part of).
40 V_{DD}	+5V supply.

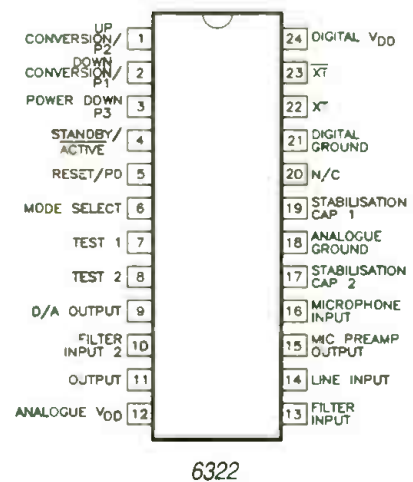

Applications include voice message pads, security systems, telecommunications, etc.

Order Code	Type	Price each
UJ48C	UM5100	£3.78

MSM6322GSK Speech Pitch Controller

OKI

Note: This device is only available in small outline 24 pin plastic SOP style package. A speech pitch converter IC that operates in real time and requires very few external components. It has a microphone preamplifier and line level input and the output requires only a single transistor to directly drive a loudspeaker. As well as the microphone preamplifier, the IC contains a 4th order low pass filter on input and a 3rd order low pass filter on output. In addition there is a built-in 8-bit A/D converter and 9-bit D/A converter. The pitch of the speech is alterable in 17 steps over a range of one octave up and one octave down, and there are two modes of operation. In the 'up/down' mode two inputs are provided which when pulsed, move the pitch up or down sequentially through the pitches available. In the 'binary' mode four inputs are

Continued on next page.

Continued from next page

provided from which 16 of the available pitches can be directly selected.

In the example circuit, an application using the 'up/down' mode is shown. Note that pins 1 and/or 2 could be continuously cycled using an electronic counter to produce an interesting effect. The following table shows the pitches available.

Pin functions (high = +5V, low = 0V digital)

- Pin 1. In "up/down" mode, pulse high to move the pitch up one step. In "binary" mode, taking this pin high sets bit 3.
- Pin 2. In "up/down" mode, pulse high to move the pitch down one step. In "binary" mode, taking this pin high sets bit 2.
- Pin 3. In "up/down" mode, setting this pin high initiates power down, where all internal clocks are stopped and pin 9 goes low. On reverting to low on pin 3, the clocks take 10ms to restabilise. In "binary" mode, taking this pin high sets bit 4, the most significant bit.
- Pin 4. When taken high, all internal clocks are stopped except the main 4MHz oscillator. On reverting to low, pin 9 outputs a 2.5V ($\frac{1}{2}$ of V_{DD}) level for about 15ms.
- Pin 5. In "up/down" mode, pulse high to set the pitch to stage 8, no pitch change. In "binary" mode, taking this pin high sets bit 1, the least significant bit.
- Pin 6. Set high to select "binary" mode; set low to select "up/down" mode.
- Pin 7. Manufacturers test pin. Must be fixed low.
- Pin 8. Manufacturers test pin. Must be fixed low.
- Pin 9. Output of the digital to analogue converter.
- Pin 10. Input to the output stage's low-pass filter.
- Pin 11. Final output.
- Pin 12. Analogue supply +5V.
- Pin 13. Output of the line amplifier and input to the input stage's low-pass filter. The gain of this amplifier is set by the value of resistance between here and pin 14.
- Pin 14. Input to the line amplifier. Must be capacitively coupled to input signals.
- Pin 15. Output of the microphone preamplifier.

- Pin 16. Input to the microphone preamplifier. Must be capacitively coupled to the microphone.
- Pin 17. Stabilisation capacitor for the internal analogue reference voltage +2.5V ($\frac{1}{2}$ of V_{DD}).
- Pin 18. Analogue ground. Microphone and line inputs and the output must be referenced to this ground.
- Pin 19. Stabilisation capacitor for the internal analogue reference voltage +2.5V ($\frac{1}{2}$ of V_{DD}).
- Pin 20. No connection.
- Pin 21. Digital ground. Logic low.
- Pin 22. Crystal oscillator. If using an external clock, it should be connected here.
- Pin 23. Crystal oscillator. If using an external clock, leave this pin open.
- Pin 24. Digital supply +5V. Logic high.

Specification

Supply voltages:	4V to 6V (7V max)
Supply current:	<10mA
Standby current:	<7mA
Power down current:	<1mA
Logic high:	>3.6V
Logic low:	<0.8V
Logic input current:	$\pm 10\mu\text{A}$ max.
Output impedance	pin 15: 5k Ω
	pin 9: 10k Ω
	pin 11: 15k Ω
	pin 13: 15k Ω
Input impedance	pin 16: 100M Ω
	pin 14: 100M Ω
	pin 10: 30M Ω
Max. frequency pins 1,2,5 in "up/down" mode:	16Hz
Max. operating frequency pin 22:	4.5MHz
Low pass filters characteristics:	
Gain 300Hz to f_c :	$\pm 3\text{dB}$ at worst
Gain at f_c :	-3dB
Gain at $2 \times f_c$:	-20dB

f_c is the cut-off frequency.

HT8950 Voice Modulator

Holtek

A single chip voice modulator used for pitch shifting. This chip integrates a built-in microphone preamplifier with internal biasing, an 8-bit A/D converter, internal SRAM, an 8-bit D/A converter, and all operating from a single rail power supply. Pitch shifting is selected by either momentarily connecting one of four pins (with a push-button, etc.), signifying Pitch UP, Pitch DN, Robot or Vibrator, or according to the state of three pins on the device specifically designed for interfacing to electronic equipment. Altering the inputs selects between normal and either higher or lower pitches. In addition the 'Robot' and 'Vibrato' functions can be used to dramatically alter the nature of the output. Due to the high level of integration, very few external components are necessary to produce a working design. Applications include toys, mixers, voice recorders, audio systems and other forms of speech systems.

Specification

Operating voltage, V_{CC} :	2.4V to 4V, 3V typ (5.5V abs max)
Operating current (No load), I_{op} :	2mA typ (10mA max), at 3V
Input signal level, V_{in} :	580mV max at 3V
Lamp sink current, I_{lamp} :	5mA min, 9.5mA typ
OPA gain value, A_v :	2000 typ
High-input voltage, V_{IH} :	0.7V
Low-input voltage, V_{IL} :	0.3V

HT8955A Voice Echo

Holtek

The HT8955A is a CMOS digital audio signal delay processor designed for applications such as voice echo generators, Karaoke systems and sound effect generators. This device contains a built-in preamplifier, an on-chip oscillator, a DRAM interface, a 10-bit A/D converter, a 10-bit D/A converter and all the necessary control logic. Designed for use with 41256 and 4164 DRAMs, a delay time of up to 0.8s and 0.2s, respectively, is possible. When comparing the HT8955 with conventional BBD units, the HT8955 exhibits low distortion, high S/N ratio and long delay times. Due to the high sampling rate (25kHz or 50kHz, depending on the DRAM used), sophisticated low-pass filtering is not required. Other features of the device are 5V working voltage, a wide frequency response and continuously variable delay time.

Specification

Operating voltage, V_{CC} :	4.5V to 5.5V, 5V typ (6V abs max)
Operating current, I_{op} :	2.5mA typ at $V_{CC}=5\text{V}$ (max 8mA)
Preamplifier voltage gain, A_v :	2000 typ at $V_{CC}=5\text{V}$
High-input voltage, V_{IH} :	0.3V
Low-input voltage, V_{IL} :	0.7V
Maximum output voltage, V_{omax} :	1.5V typ (min 1V) at $V_{CC}=5\text{V}$
Signal to noise ratio, S/N:	55dB

SUBSECTION 61 RADIO AND TV IC's EL4089CN Low Power DC Restore Amplifier

Elantec

A complete monolithic, DC-restored video amplifier sub-system containing a high quality video amplifier and a nulling, sample-and-hold amplifier specifically designed to stabilise video performance. When the HOLD logic level input is set to a TTL/CMOS logic 0 during a horizontal synchronisation pulse, the sample-and-hold amplifier can be used to null the DC offset of the video amplifier.

When the HOLD input goes to a TTL/CMOS logic 1, the correcting voltage is stored on the video amplifier's input coupling capacitor. The correction voltage can be further corrected as need be, at the sync pulse of each line.

The device is optimised for video performance and low power consumption and its current feedback design allows essentially the same bandwidth over a gain range of nearly 10:1 to be maintained. It is capable of driving back-terminated 75Ω lines.

Order Code	Type	Price each
AJ59P	EL4089CN	£9.95

ULN3846A AM Noise Blankers

Allegro

This single channel noise blanker IC contains all the necessary circuitry for adding an extremely efficient noise blanking technique to any type of AM tuner or receiver with RF input frequencies (or first IF) up to 30MHz.

A high input impedance, high gain, broadband RF amplifier permits this device to be directly connected to the RF stage of a tuner. The internal automatic gain control circuitry insures that the noise detection threshold remains constant with changes in input level. The response time of the RF gate is sufficiently fast to blank the noise pulse at the output of the mixer before the IF filter. Very short blanking times will effectively suppress most of the interfering noise. Residual audio noise is removed by an audio sample-and-hold gate. The RF blanking time, audio delay time and audio gate blanking time can all be independently adjusted to suit the particular application.

Blanking in the RF or mixer sections of the receiver removes most of the noise pulse, but a small amount still remains due to the 'hole punched' in the carrier. This residual noise is theoretically somewhere between the peak audio and 100% negative modulation, but is significantly smaller and narrower than that which the impulse would normally produce

without blanking. An audio delay, 'one-shot' and audio gate(s) are included to eliminate this residual signal.

The MOSFET audio gates also include charge-balancing circuits to eliminate switching transients. The device can also be used in dual conversion AM receivers. The blanker RF input would then be connected at the first IF amplifier input and the blanker RF gate connected at the second mixer output. Since the first IF bandwidth is usually relatively wide, the noise pulses are narrower, and the RF blanking time will be correspondingly less.

Specification

Supply voltage range:	7.5 to 12V
Quiescent supply current:	12 to 20mA
RF input amplifier, trigger threshold:	100μV
modulation threshold:	85%
detector risetime:	500ns
RF switch, 'on' resistance:	50Ω
'off' resistance:	100kΩ
time delay:	1.5μs
Audio switches, attenuation:	80dB
noise:	1.5 to 6mV pk-pk
crosstalk:	60dB
gain:	-0.5dB
total harmonic distortion:	<0.1%
input impedance:	100kΩ
output impedance:	1kΩ
Blanking timers, RF blanking:	55μs
audio delay:	50μs
audio blanking:	290μs

Order Code	Type	Price each
GX54J	ULN3846A	£2.95

OM2045 Wideband VHF/UHF Amp

Philips

A one-stage hybrid wideband amplifier for aerial amplifiers for FM radios and UHF TV's. It is ideal for overcoming losses when more than one TV is operated from one antenna (MATV).

Supply voltage:	12V±10% (15V max.)
Frequency range:	40 to 860MHz
Gain:	12dB
Frequency response within band:	±1dB
Source and load impedance:	75Ω

Input VSWR:	2.0
Output VSWR:	1.4
Back attenuation @ 100MHz:	22dB
@ 860MHz:	19dB
Output voltage:	99dBμV
Noise figure:	3.6dB
Supply current:	11.5mA

Pin Connections

Pin 1:	Input 75Ω
Pins 2,3:	Common
Pin 4:	+12V supply
Pin 5:	Output 75Ω

The module should be mounted on double-sided pcb with a ground plane on the top as shown in the diagram. The connections to the common pins must be as close to the 'seating plane' as possible.

UL77J	OM2045	£5.65

MC13077P Advanced PAL/NTSC Encoder

Motorola

13077

The MC13077P is an economical, high quality, RGB to composite video encoder for PAL or NTSC protocols. Useful where video signal conversion is required, and especially for recombining separate RGB video signals which are best processed individually (by digital means, for example) in a video editing environment or studio. It accepts red, green, blue and composite sync inputs and delivers either composite PAL or NTSC standard video complete with luminance and chrominance components incorporating all the synchronisation and chroma regeneration signals. The device is manufactured using a high density bipolar process and is contained in a single 28-pin DIL package.

Features include a single 5V supply, PAL or NTSC switchable composite output, PAL square wave output, PAL sequence resettable, internal or external colour burst flag, digitally determined modular angles, and a selectable subcarrier reference drive.

ZNA234E TV Pattern Generator

GEC-Plessey

234

The IC makes available all the waveforms necessary to produce the crosshatch, dot and greyscale test patterns on a television screen. The composite video output can be injected directly into the video input of a receiver or used to drive a modulator for connection to the aerial socket. The circuit shown can be connected to a standard UHF TV set with 625 lines (CCIR standard), but by connecting pin 2 to ground instead of +5V, the output will produce 525 lines (EIA standard)*. In the circuit shown RV1 sets the vertical line width, RV2 sets the grey scale, RV3 sets the video/sync ratio, and RV4 sets the modulation depth.

*Note that the crystal needs to be 2.52MHz which we cannot supply.

Specification (typical)

Supply voltage:	5V
Supply current:	135mA
Clock frequency:	2.5MHz (for 625 lines) 2.52MHz (for 525 lines)

EL2099CT Video Distribution Amplifier

Elantec

The EL2099C is a high-speed, monolithic operational amplifier featuring excellent video performance and high output current capability. Built using a dielectric isolation process, it uses current mode feedback to achieve wide bandwidth, and is stable in a unity gain configuration.

The device can deliver ±12.5V into a 25Ω load at slew rates of 900V/μs. Its speed and output current make it ideal for line driver and automatic test applications. Operation from power supplies ranging from ±5V to ±15V makes the EL2099C extremely versatile. Case style is 5-pin TO220.

2099

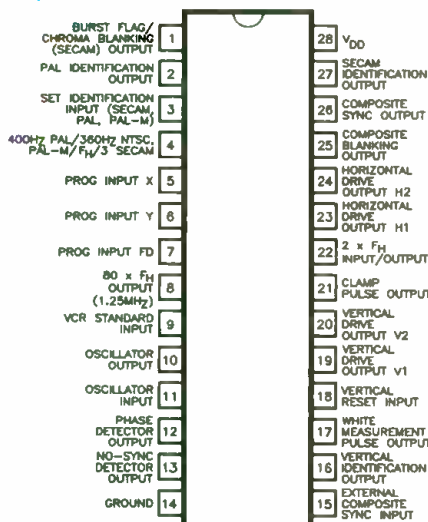

Specification

Bandwidth:	20MHz -0.1dB, 70MHz -3dB
Differential gain:	0.02%
Differential phase:	0.03°
Output short-circuit current:	1A
Fan-out:	Up to 6 x 75Ω double-terminated cables in parallel @ ±12.5V
Slew rate:	900V/μs
Supply voltage:	±5V to ±15V

SAA1043P Universal Sync Generator

Philips

1043

This IC generates the synchronising waveforms required in all types of video source equipment e.g. video cameras, film scanners, video games, computer displays etc. The device is programmable to suit standards SECAM1, SECAM2, PAL/CCIR, NTSC1, NTSC2 and PAL-M; the video game 624 and 524 line standards; and can be synchronised to an external sync signal.

Specification	
Supply voltage:	5.7 to 7.5V
Supply current:	<10μA
Load resistance at V _{DD} = 5.7V:	1.4kΩ min
at V _{DD} = 7.5V:	820Ω min
Oscillator frequency:	>5.1MHz (5MHz for PAL)

Order Code	Type	Price each
UK85G	SAA1043P	£11.99

EL4094CN 8-Pin Video Fader/Gain Control

Elantec

4094

A complete two-input video gain control/fader IC which combines its two inputs according to the equation $V_{OUT} = V_{INA} (0.5V + V_g) + V_{INB} (0.5V - V_g)$, and where V_g is the difference between the non-inverting and inverting V_{GAIN} pin voltages, which can range from -0.5V to +0.5V. The device has a wide 65MHz bandwidth at -3dB, and is designed for excellent video distortion performance. The EL4094CN is the same circuit as that of the EL4095CN, but with feedback resistors included on-chip to implement unity-gain connection. An output buffer is included and the gain control input is also very fast with a 30MHz small-signal bandwidth and 100ns recovery time. The device is compatible with power supplies from ±5V to ±15V and a supply current of 14mA.

Order Code	Type	Price each
AJ60Q	EL4094CN	£13.95

EL4095CN Fader Gain Control with Switches

Elantec

4095

A versatile video gain control/fader/multiplexer block with at its core a fader which can variably blend two inputs together, and an output amplifier that can drive heavy loads. Each input appears as the input of a current-feedback amplifier, and with external resistors, can separately provide any gain required. The output is defined as $V_{OUT} = A \times V_{INA} (0.5V + V_{GAIN}) + B \times V_{INB} (0.5V - V_{GAIN})$, where A and B are the feedback gains of each channel. Additionally, two logic inputs are provided each of which overrides the analogue V_{GAIN} control, and forces 100% gain for one input and 0% for the other. The logic inputs switch in only 20ns and provide high attenuation to the 'off' channel, while generating very small glitches. Signal bandwidth is 65MHz and gain-control bandwidth is 30MHz. The gain control recovers from overdrive in only 100ns. The device can operate from a ±5V to ±15V supply with a current drain of only 16mA typical.

EL4581CN Video Sync Separator

Elantec

A video sync separator which extracts timing information, including composite sync, burst/back porch timing and odd/even field information from standard negative going sync NTSC, PAL and SECAM video signals. It will detect video signals from 0.5 to 2V pk-to-pk. The 50% slicing feature provides precise sync edge detection even in the presence of noise and variable signal amplitudes.

A built-in linear phase, third order, colour burst filter minimises spurious timing information and reduces external components. The device is also capable of providing sync separation for non-standard, faster horizontal rate video signals by changing an external horizontal scan rate setting resistor. The vertical output is produced on the rising edge of the first serration in the vertical sync period. A default vertical output is produced after an internally generated time delay in the event that serration pulses may be missing, for example, in the case of a non-standard video signal. All outputs are active low. The device is packaged in 8-pin DIL and is an improved version of the LM1881.

Specification

Supply voltage:	7V DC
Supply current:	1.5mA
Pin 2 clamp voltage:	1.5V
Pin 2 discharge current:	10µA
Pin 2 clamp charge current:	500µA
Pin 6 reference voltage:	1.7V
Video output voltage swing:	800mV min., 4V max. dependent on load
Vertical sync width:	230µs
Burst gate width:	3.2µs
Vertical default time:	60µs
Filter attenuation:	24dB
Propagation delay:	400ns
Input signal dynamic range:	2V
Sync slice level:	60% typical
Operating temperature range:	0°C to +75°C

LM1881N Video Sync Separator

National Semiconductor

The IC can extract the timing information from PAL, SECAM or NTSC encoded video signals having standard negative going sync and amplitudes from 0.5V to 2V. The IC outputs the composite sync, vertical sync, burst/back porch timing and an odd/even field identifier. By changing the value of R2, non-standard faster horizontal rate video signals can also be stripped. The vertical sync output is produced on the rising edge of the first serration in the vertical sync period, but if the rising edge does not occur within the internally set period, a default vertical output is produced, permitting use with video games and home computers. The IC can be used as a master gen-lock; to providing timing references for the extraction of data on specific scan lines; to restore the original video waveform for remodulation or retrieve the colour burst and decode into R.G.B. components; or to identify individual scan lines in the video signal.

Parts List

R1	Min Res 620Ω	(M620R)
R2	Min Res 680kΩ	(M620K)
R3	Min Res 2k7	(M2K7)
C1,3	Poly Layer 0.1µF	(WW41U)
C2	Ceramic 330pF and 180pF in parallel	(WX59P/WX62S)
C4	Mylar 0.001µF	(WW15R)
C5	Minidisc 0.1µF 16V	(YR75S)

C5 is connected between pins 4 and 8.

Specification (typical)

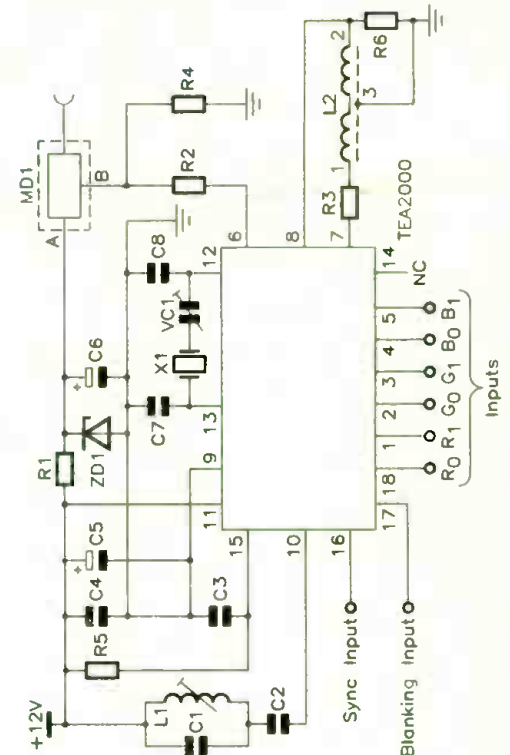

Supply voltage:	5V to 12V (13.2V max.)
Supply current:	5.5mA
DC input voltage:	1.5V
Input threshold voltage:	70mV
Sync outputs (pins 1 & 3):	Logic 1:4.5V @ 40µA (V _{CC} = +5V) Logic 1:3.6V @ 1.6mA (V _{CC} = +5V) Logic 0:0.2V @ -1.6mA (V _{CC} = +12V) Logic 1:>11V @ 40µA (V _{CC} = +12V) Logic 1:>10V @ 1.6mA (V _{CC} = +12V)
Outputs (pins 5 & 7):	Logic 1:4.5V @ 40µA (V _{CC} = +5V) Logic 1:>11V @ 40µA (V _{CC} = +12V) Logic 0:0.2V @ -1.6mA (V _{CC} = +12V)
Vertical sync width:	230µs
Burst gate width:	4µs (with R3 = 2k7)
Vertical default time:	65µs

Order Code	Type	Price each
UL75S	LM1881N	£5.85

TEA2000-V1 PAL Colour Encoder

Philips

A PAL colour encoder and video summer which requires just composite sync and composite blanking inputs, and a 6-bit binary coded input giving the colour information. The inputs are organised as 2 bits per primary colour with gamma correction automatically applied to the resultant luminance and chrominance levels. Each of the equally spaced intensity levels for each primary colour is combined with those of the other primary colours. This produces 64 output colours comprising a wide range of saturated and desaturated colours, black, white and two levels of grey. The output is a composite video signal with PAL standards. The composite sync input, pin 16, requires a negative logic signal (TTL format) and must include field and line sync information. The blanking input (TTL format) must be high during sync and colour burst, unless all colour inputs are low at this time. The colour inputs are also TTL compatible. A +12V supply ±10% is required on pin 11. If pin 14 is connected to ground an NTSC signal is produced, but different external components would be required. Leave pin 14 open for normal PAL operation.

Adjust VC1 and L1 for best picture.

Parts List

R1	Min Res 680Ω	(M680R)
R2	Min Res 510Ω	(M510R)
R3	Min Res 1k	(M1K)

LM1044N Analogue Video Switch

National Semiconductor

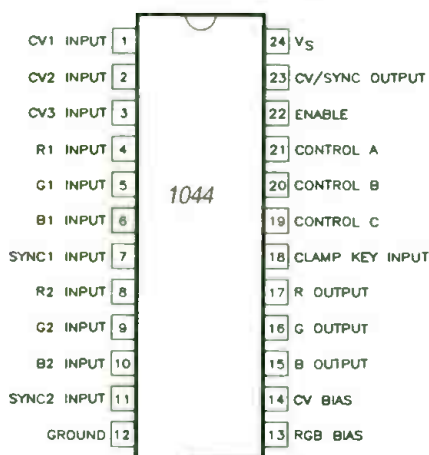

The IC can switch up to five inputs to one output. Up to three inputs can be composite video and up to two can be RGB and sync. Channel selection is via three latched TTL compatible logic inputs and a similar chip enable input. To select a different input, pin 22 must be at logic high. The composite video amps have a 5MHz bandwidth and 6dB gain, whilst the RGB and sync amps have a 30MHz bandwidth and 0dB gain. The RGB inputs can be used for composite video and with two chips it is possible to devise a video switcher for security applications where up to 12 cameras can be sequentially switched to one monitor. Composite video and sync inputs, and the four outputs should be connected via 470µF 16V capacitors (+ve to chip). RGB inputs should be connected via 0.33µF Poly Layer capacitors. Pins 13 and 14 should each be connected via separate 100µF 25V capacitors to ground (-ve to ground). A positive going pulse on pin 18 activates the RGB input bias clamps. The pulse (>3µs) is applied when all six RGB inputs are at black reference level. Use a Disc 0.1µF to decouple the supply voltage close to pin 24.

Continued on next page.

Continued from previous page.

The following table shows the logic levels are required on pins 19, 20, 21 and 22 to select the input required.

22	19	20	21	Channel selected
1	0	0	0	CV1, RGB outputs muted
1	0	0	1	CV2, RGB outputs muted
1	0	1	0	CV3, RGB outputs muted
1	0	1	1	RGB1 with Sync 1
1	1	1	1	RGB2 with Sync 2
1	1	1	0	Mute
1	1	0	1	Mute
1	1	0	0	Mute
0	X	X	X	Previous selection retained

Specification (typical at $V_s = 12V$)

Supply voltage: 8V to 16V
 Supply current: 42mA
 Logic high: >2V
 Logic low: <0.8V

Composite video channels

Max. input voltage: 1.2Vp-p
 Input impedance: 1.5k Ω
 Voltage gain: 5.8dB
 Bandwidth: 5MHz
 Signal to noise ratio: 60dB
 Channel isolation: 60dB
 Crosstalk: -60dB

RGB channels

Clamp on voltage (pin 18): >9V
 Clamp off voltage (pin 18): <5V
 Max input voltage: 3Vp-p
 Voltage gain: 0dB
 Bandwidth: 30MHz
 Signal to noise ratio: 60dB
 Channel isolation: 60dB
 Crosstalk: -50dB

Sync channels

Max input voltage: 3Vp-p
 Input impedance: 2.3k Ω
 Voltage gain: -0.4dB
 Bandwidth: 24MHz

TDA8341-N6 TV IF Amp and Demodulator

Philips

An integrated IF amplifier and demodulator for colour and black and white TV sets, with wide bandwidth and excellent intermodulation performance making it suitable for use in teletext and NICAM applications.

The IC is designed for use with tuners requiring a decreasing positive bias (a.g.c.) with increasing signal strength. The IC contains a full range, gain-controlled, wide band IF amp, a linear synchronous demodulator, white spot inverter, wide band video amp with noise protection, AFC with on/off switching and sample and hold function, AGC with noise gating, external video switch for switching off video output, and an integrated filter to limit second harmonic IF signals. A typical circuit is shown in Maplin Magazine issue 36.

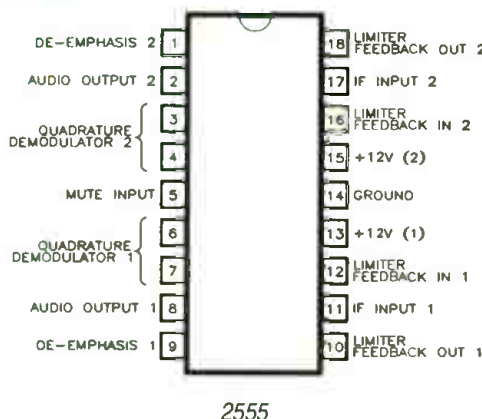

Specification (typical)

Supply voltage: 12V (9.4 to 13.2V)
 Supply current: 42mA
 IF input sensitivity: 40 μ V rms
 IF gain control range: 67dB
 Video output voltage: 2.7Vp-p
 Signal to noise ratio: 58dB
 AFC output voltage swing: 10Vp-p
 Bandwidth of output: 7.5MHz
 Intermodulation: -60dB

Order Code	Type	Price each
UL27E	TDA8341-N6	£2.25

TDA2555-V2 Dual TV Sound Demodulator

Philips

The IC contains two FM sound demodulators and is primarily designed to demodulate the stereo sound broadcast with TV in some European countries (not UK). However it can be used to demodulate standard mono UK sound on one channel, and European mono sound on the other (from countries using PAL but with different sound carriers e.g. Holland). The IC contains an eight-stage limiting amplifier, quadrature demodulator, de-emphasis stage, output amplifier, and mute function. For typical circuit see Maplin Magazine issue 36.

Specification (typical)

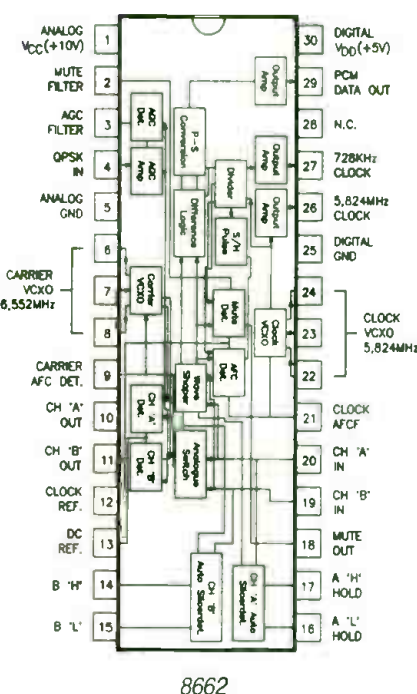

Supply voltage: 12V
 Supply current: 24.5mA
 Audio output: 600mV rms
 Total harmonic distortion: <0.1%
 Signal to weighted noise: 70dB
 Input voltage for start of limiting: 50 μ V
 AM suppression: >50dB

Order Code	Type	Price each
UL28F	TDA2555-V2	£3.25

TA8662N, TC6011N, TD6710N NICAM Decoder Chip Set

Toshiba

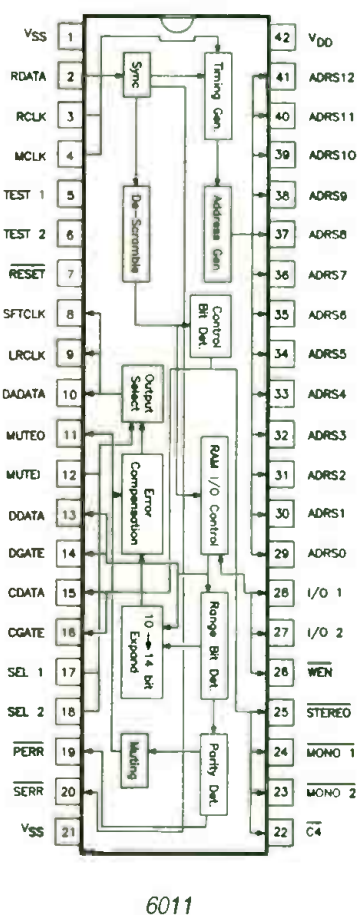

The NICAM decoder chip set used in the NICAM receiver project published in the Maplin Magazine issue 35. The TA8662 is a Quadrant Phase Shift Keying (QPSK) decoder that demodulates the data in the 6.552MHz sub-carrier and provides all the necessary timing information. It is supplied in a 30-pin shrink DIP package with pin spacing 0.07in. x 0.4in.

TA8662N
 Analogue supply voltage: 10V (9V to 11V)
 Analogue supply current: 40mA
 Digital supply voltage: 5V (4.5V to 5.5V)
 Digital supply current: 24mA

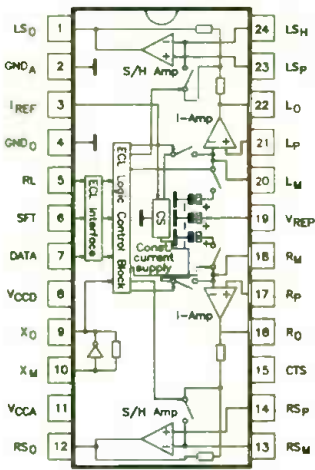

TC6011N
 Supply voltage: 5V (4.75V to 5.25V)
 Supply current: 35mA

The TC6011N converts the demodulated data into a 14-bit serial data stream for input to the D/A converter. It is supplied in a 42-pin shrink DIP package with pin spacing 0.07in. x 0.6in. The TD6710AN is a 14-bit D/A converter with stereo outputs. It is supplied in a 24-pin non-standard shrink DIP package with pin spacing 0.07in. x 0.3in.

TD6710AN
 Supply voltage: 5V (4.5V to 7V)
 Analogue supply current: 10mA
 Digital supply current: 8.5mA
 Total harmonic distortion: -82dB
 Signal to noise ratio: 83.5dB
 Crosstalk: 83dB
 Operating frequency: 16.9MHz

Please note that these IC's are only available in sets of three.

CA3189E FM IF Subsystem

Harris

Features

- ★ Exceptional limiting sensitivity: 10µV (typical) at -3dB
- ★ Low distortion: 0.1% (with double-tuned coil) typical
- ★ Single-coil tuning capability
- ★ High recovered audio: 500mV (typical)
- ★ Internal supply-voltage regulators
- ★ AGC threshold controlled externally
- ★ Low signal or frequency changed muting option
- ★ Mute - centre channel detect

CA3189E

The CA3189E is a comprehensive FM-IF system designed for high fidelity FM tuners. It includes a three stage FM-IF amplifier/limiter configuration with level detectors for each stage, a double-balanced quadrature FM detector and an audio amplifier that features the optional use of a muting circuit. The advanced circuit design includes desirable special features such as delayed AGC for the RF tuner, an AFC drive circuit, and an output signal to drive a tuning meter and/or provide stereo switching logic. In addition, internal power supply regulators maintain a nearly constant current drain over the voltage supply range of +8V to +16V. Distortion is primarily a function of the phase linearity characteristic of the external detector coil.

Absolute maximum ratings
 Supply voltage (Pin 11 to 4/14) 18V
 DC current out of pin 15 2mA
 Max dissipation 600mW

Characteristics (typical at V+ = 12V)
 Quiescent current drain: 28mA
 DC voltage at pin 1 (IF input): 1.9V
 at pin 2 (AC return to input): 1.9V
 at pin 3 (DC bias to input): 1.9V
 at pin 7 (AFC): 5.6V
 at pin 10 (DC reference): 5.6V

Order Code	Type	Price each
WQ20W	CA3189E	£1.05

MC1496P Double-Balanced Modulator

Motorola

The MC1496P is a double-balanced modulator/demodulator. The circuit produces an output voltage which is the product of an input voltage (signal) and a switching function (carrier). Communications applications include modulation and demodulation of AM, SSB, DSB, FSK, FM and phase encoded signals. Signal conditioning techniques possible include frequency doubling and halving, linear mixing and chopping, with additional uses as phase detectors in phase locked loops and as differentiators in NRZ and phase encoded digital tape and disk memories.

SL560CDP 300MHz Low Noise Amplifier

GEC-Plessey

8629

A monolithic IC that contains three very high performance transistors, and associated biasing components, to form a 300MHz low noise amplifier. The device is suitable for radar IF preamplifiers, low power wideband amplifiers, 50Ω line drivers, aerial preamplifiers for FM radio, instrumentation preamplifiers etc.

Specification
 Supply voltage: +15V maximum
 Supply current: 20mA approx. with 6V supply voltage
 Small signal voltage gain: 14dB typical
 Typical noise figure
 R_s=200Ω: 1.8dB
 R_s=50Ω: 3.5dB

Order Code	Type	Price each
DB46A	SL560CDP	£2.35

ZN416E AM Radio With Amplifier

GEC-Plessey

The ZN416E is a higher audio output version of the ZN414E in an 8-pin DIL package. Connect pin 6 to 1.3V approx., and between pin 1 and 8 connect as close as possible the two AM gangs in parallel of our AM/FM Varitone. In parallel with this connect a 5cm

416

ferrite rod aerial with about 80 turns of 30swg enamelled copper wire wound on it. Connect 0.01µF disc capacitors between pins 8 and 4, and pins 7 and 4. Connect 0.1µF disc capacitors between pins 2 and 4 and pins 2 and 3. Connect the battery negative to pin 4. This will form a complete AM radio. The output, pin 5, may be connected to the tip of our Personal Stereo Headphones and pin 4 to the ring (leave the sleeve unconnected) to provide the required 64Ω load.

Characteristics (typical where different from ZN414)
 Supply current 4mA (5mA with strong signal)
 Voltage gain of output stage 18dB
 Output >170mV rms into 64Ω load

Order Code	Type	Price each
UR70M	ZN416E	£2.36

ZN414Z AM Radio

GEC-Plessey

A 10-transistor TRF receiver in a 3-pin TO18 package. The IC contains an RF amplifier, detector and AGC circuit and requires only a few external components to form a complete high quality AM radio. Excellent audio quality can be achieved and current consumption is extremely low. No setting-up is required and the circuit is completely stable in use.

ZN414Z

Characteristics (typical)
 Supply voltage: 1.2 to 1.6V (1.3V recommended)
 Supply current: 300µA (500µA with strong input signal)
 Frequency range: 150kHz to 3MHz
 Input resistance: 4MΩ
 Threshold sensitivity: 50µV
 Audio distortion: <2% THD
 Selectivity: 4kHz bandwidth can be achieved
 Power gain: 72dB
 AGC range: 20dB
 Output: >30mV rms under correct operating conditions

Layout Requirements

- As with any high gain RF device, certain basic layout rules must be adhered to if stable and reliable operation is to be obtained. These are listed below:
1. The output decoupling capacitor must be soldered as close as possible to the output and ground pins on the IC. Its value and that of R_{AGC} should be calculated from the formula C(µF) = 40/R_{AGC}.
 2. All leads should be kept as short as possible, especially those near the IC.
 3. Keep the tuning assembly some distance from the battery, loudspeaker and their associated leads.
 4. Connect the 'earthy' side of the tuning capacitor to the junction of the 100k resistor and the 0.01µF capacitor.

Order Code	Type	Price each
QL41U	ZN414Z	£1.28

TDA7000 FM Radio

Philips

An FM radio on a single chip requiring only a few simple peripheral components. In particular the chip requires only one simple coil and alignment is very easy. The chip includes an RF input stage, mixer, local oscillator, IF amplifier/limiter, phase demodulator, mute detector and mute switch. The output will directly drive a crystal earpiece or could be used with a TBA820M to form a complete portable FM radio.

Specification

Supply voltage:	2.7V to 10V (4.5V typical)
Supply current:	8mA at 4.5V
Frequency range:	1.5MHz to 110MHz (The part of this range attainable on any finished design is determined by the components on pins 5/6)
Sensitivity:	1.5µV (for -3dB limiting, muting disabled) 6µV (for -3dB muting) 5.5µV (for 26dB signal to noise ratio)
Signal handling:	200mV
Signal to noise ratio:	60dB
Total harmonic distortion:	0.7% (±22.5kHz modulation) 2.3% (±75kHz modulation)
AM suppression:	50dB
Oscillator voltage pin 6:	250mV rms
Variation of oscillator frequency with supply voltage:	60kHz/V
Selectivity:	45dB
AFC range:	±300kHz
Audio bandwidth:	10kHz
AF output voltage:	75mV rms
Load resistance at:	
$V_s = 4.5V$:	≥22kΩ
$V_s = 9V$:	≥47kΩ

Note that the muting system can be disabled by feeding 20µA into pin 1. The interstation noise level can be decreased by choosing a low-value capacitor at pin 3. Omit this capacitor to achieve silent tuning.

Order Code	Type	Price each
YH87U	TDA7000	£2.64

TDA1072A AM Receiver

Telefunken

A complete AM receiver on a chip, the TDA1072A only requires comparatively few peripheral components to complete a high quality AM radio circuit. Unlike some other AM radio ICs, a minimum number of external tuned inductors are used to preserve reasonable performance, selectivity and quality of output. Only two of these, an RF input transformer and a single winding oscillator coil need be tuned either capacitively or inductively. The device includes a controlled RF preamplifier, multiplicative balanced mixer, separate local oscillator with gain control, a balanced full-wave detector, an audio preamplifier, internally linked AGC drive to RF and IF stages, a display amplifier for a field-strength indicator meter, and an electronic stand-by on/off switching input. The device is encapsulated in a single 16-pin DIL package.

Specification

Supply voltage range:	7.5 min. to 18V typical
Supply current, no load:	23mA
RF DC bias input:	+ $V_s/2$
RF input impedances:	5.5kΩ (pins 14, 15)
Maximum RF input voltage:	2.5V pk-pk
Mixer output impedance:	500kΩ min. (pin 1)
Maximum conversion conductance:	6.5mA/V

Mixer output current:	1.2mA
Oscillator frequency range:	600kHz to 60MHz
Oscillator circuit impedance:	0.5kΩ to 200kΩ
Controlled oscillator amplitude:	130mV typical
Oscillator output DC:	6V
Oscillator output load current:	20mA max.
Oscillator output impedance:	25kΩ typical
IF amplifier DC input voltages:	2V (pins 3, 4)
IF amplifier input impedance:	3kΩ (pin 3)
Maximum IF input voltage:	90mV (pin 3)
IF amp. gain control range:	61dB
Audio output voltage:	310mV (pin 6)
Audio output impedance:	3.5kΩ
Meter driver output:	140mV max. (pin 9)
Meter driver current:	2mA min. (pin 9)
RF input for signal noise ratio	
= 6dB:	1.5µV
= 26dB:	15µV
= 46dB:	150µV
RF input for AGC operation:	30µV
Maximum RF input for 3% distortion:	500mV @ 80% modulation
Total distortion of recovered audio @ RF in = 1mV:	0.5%, 80% modulation
Signal to noise ratio of recovered audio @ RF in = 1mV:	50dB
IF bandwidth:	4.6kHz (-3dB)
IF selectivity:	60dB @ $\Delta f = \pm 36kHz$

Order Code	Type	Price each
AH45Y	TDA1072A	£2.53

SL6652CDE Low Power IF Stage for FM Cellular Radio

GEC-Plessey

A very low power, high performance IC for IF amplification and demodulation in FM radio receivers, particularly FM cellular radios, cordless telephones etc. The device features a mixer stage for use up to 100MHz, a quadrature detector with differential AF output, and a very stable 'received signal strength indicator' (RSSI). The device will work with a supply as low as 2.5V and draws less than 2mA.

Specification

Supply voltage:	2.5V to 7.5V DC
Typical sensitivity:	5µV (20dB SINAD)
AM rejection:	40dB (rf input <500µV)
Mixer osc. frequency:	100MHz
IF amplifier gain:	90dB

IF frequency:	455kHz to 1500kHz
Detector audio output level:	75mV to 125mV
Ultimate S/N ratio:	60dB
Typical THD:	0.5%

Order Code	Type	Price each
DB49D	SL6652CDE	£7.81

SUBSECTION 62 TRANSISTOR ARRAYS

SSM 2210P Audio Dual Matched NPN Transistors

Analog Devices

An ultra low noise, matched dual monolithic transistor for use in input stages of high quality amplifiers. The electrical characteristics approach those of an ideal transistor when operated over a collector current range of 1µA to 10mA.

Specification (typical at 25°C, $V_{CE} = 15V$, $I_C = 10\mu A$)

Collector-emitter voltage:	40V max
Collector-base voltage:	40V max
Collector-collector voltage:	40V max
Emitter-emitter voltage:	40V max
Collector current:	20mA max
Total power dissipation:	500mW
Current gain (h_{FE}):	550 @ 10µA
Current gain matching:	0.5%
Gain-bandwidth product (f_T):	200MHz
Offset voltage:	10µV
Bulk resistance:	0.3Ω
Noise density:	0.85nV/√Hz at 1kHz ($I_C = 1mA$)

Order Code	Type	Price each
UL79L	SSM2210P	£3.70

SSM2220P Audio Dual Matched PNP Transistors

Analog Devices

An ultra low noise, matched dual monolithic transistor for use in input stages of high quality amplifiers. The device features outstanding parametric matching and high frequency performance.

Specification (typical at 25°C, $V_{CE} = 15V$, $I_C = 10\mu A$)

Collector-emitter voltage:	36V max
Collector-base voltage:	36V max
Collector-collector voltage:	36V max
Emitter-emitter voltage:	36V max
Collector current:	20mA max
Total power dissipation:	500mW
Current gain (h_{FE}):	120 @ 10µA
Current gain matching:	0.5%
Gain-bandwidth product (f_T):	150MHz
Offset voltage:	40µV
Bulk resistance:	0.3Ω
Noise density:	0.7nV/√Hz at 1kHz ($I_C = 1mA$)

CA3046 Five Transistor Array

SGS Thomson

The 3046 consists of five silicon NPN transistors on a common monolithic substrate in a 14-lead dual in-line plastic package. Two transistors are internally connected to form a differential amp. The transistors of the 3046 are well suited to low noise general purposes and to a wide variety of applications in low power systems in the DC through VHF range. They may be used as discrete components in conventional circuits, in addition they provide the very significant inherent integrated circuit advantages of close electrical and thermal matching.

3046

Absolute Maximum Ratings

Each transistor

V_{CE0} max:	15V
V_{CBO} max:	20V
C_{CIO} max:	20V
V_{EBO} max:	5V
I_C max:	50mA
Total power dissipation: @ $T_A = 55^\circ\text{C}$:	300mW (750mW total package)
h_{FE} :	100 @ 10mA
f_T :	550MHz

*The collector of each transistor of the CA3046 is isolated from the substrate by an integral diode. The substrate (terminal 13) must be connected to the most negative point in the external circuit to maintain isolation between transistors and to provide for normal transistor action.

SUBSECTION 63 MODEL AND REMOTE CONTROL IC's SL490 Transmitter

GEC-Plessey

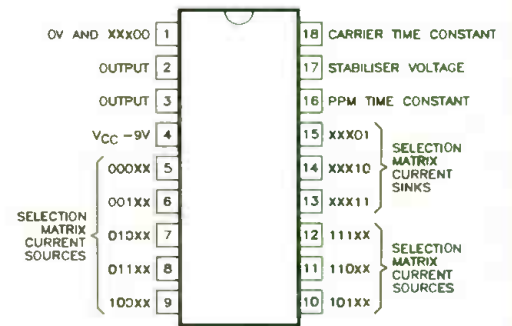

A 32-channel pulse position modulation transmitter for use with ultrasonic, infra-red, cable or radio links. Applications include remote control of toys and models, radios, tuners, tape and record decks, lamps and lighting, TV's, industrial control etc. The IC is ideally driven from a PP3 9V battery and can generate carrier frequencies of up to 200kHz so that for example an ultrasonic transmitter may be directly driven. Alternatively transmission may be achieved without a carrier for example for infra-red. Each of the 32 channels is initiated by one of 32 simple push-to-make switches directly connected to the IC in a 4 by 8 matrix. Only four or five external components are required to complete the circuit.

Specification (typical)

Supply current (operating)	8mA
Supply current (standby)	6µA
Supply voltage	+7V to +9.5V
Output current	1mA

An application circuit is shown for an ultrasonic transmitter. If an infra-red link is required make C1 a Carbonate 0.22µF remove C2 and R2 and connect pin 18 via a Min Res 2k2 to ground. Connect pin 3 to the input of the infra-red driver circuit and leave pin 2

unconnected.

LM1872N Radio Control Receiver Decoder

National Semiconductor

A complete RF receiver decoder for radio control applications. The device is suitable for use in the 27MHz band. The crystal controlled superhet design offers both good sensitivity and selectivity. When used in conjunction with 1871 it provides four independent outputs, two are analogue pulse width modulated suitable for driving a 544 servo driver and two are simple on/off digital channels with 100mA drive capability.

1872

Specification

Supply voltage:	2.5V to 7V (6V recommended)
Supply current:	(chan A & B off): 13mA (chan A & B on): 27mA
V_{BIAS} (pin 4):	2.1V
RF sensitivity:	22µV
Bandwidth:	3.2kHz

Order Code	Type	Price each
YY72P	LM1872N	£3.05

BS 5750 Part 2 1987 Level B: Quality Assurance RS12750

YOUR GUARANTEE OF QUALITY & SERVICE

M145027/8B-1 Remote Control Decoders

SGS-Thomson

The 145027 receives the data from the 145026 and checks it for errors by comparing the two words which should be identical. If the first five bits match the address set up on pins 1 to 5, then the data contained in the last four bits is latched on pins 12 to 15, and pin 11 goes high to indicate that a valid transmission has been received. Note that pin 11 goes high on the rising edge of the second pulse in the ninth bit of the second word. The data bits must be either 1 or 0. If an open circuit is transmitted it will be decoded as a 1. Thus data could be sent to up to 243 different receivers simultaneously, but will only be received by the one designated by the address.

The 145028 is the same but all the received data is regarded as address and the only output is the valid transmission pin 11 going high. Since pin 11 goes high before the second pulse in the ninth bit of the second word is completed, only a 1 or 0 can be received here, so the number of codes which can be detected is reduced to 13,122.

The system with the 145027 is suitable for use in remote controlled toys, low-speed data transmissions, paging systems, and the M145028 is for use in garage door openers, security monitoring, anti-theft devices etc.

Parts List

f _{osc} kHz	RTC	CTC	RS
362	10kΩ	120pF	20kΩ
181	10kΩ	240pF	20kΩ

1.71	51kΩ	5100pF	100kΩ

f _{osc} kHz	R1	C1	R2	C2
362	10kΩ	470pF	100kΩ	910pF
181	10kΩ	910pF	100kΩ	1800pF
88.7	10kΩ	2000pF	100kΩ	3900pF
42.6	10kΩ	3900pF	100kΩ	7500pF
21.5	10kΩ	8200pF	100kΩ	0.015μF
8.53	10kΩ	0.02μF	100kΩ	0.02μF
1.71	51kΩ	0.02μF	100kΩ	0.1μF

Use 1% polystyrene capacitors in series or parallel to get to within ±5% of value shown, and for 0.1μF use a Poly Layer capacitor. All resistors are Min Res.

Specification

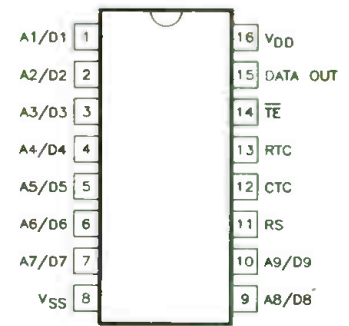

As 145026 except:

Max decoder frequency	240kHz at 5V, 410kHz at 10V, 450kHz at 15V
Quiescent current	30μA at 5V, 60μA at 10V, 90μA at 15V
Operating current	200μA at 5V, 400μA at 10V, 600μA at 15V

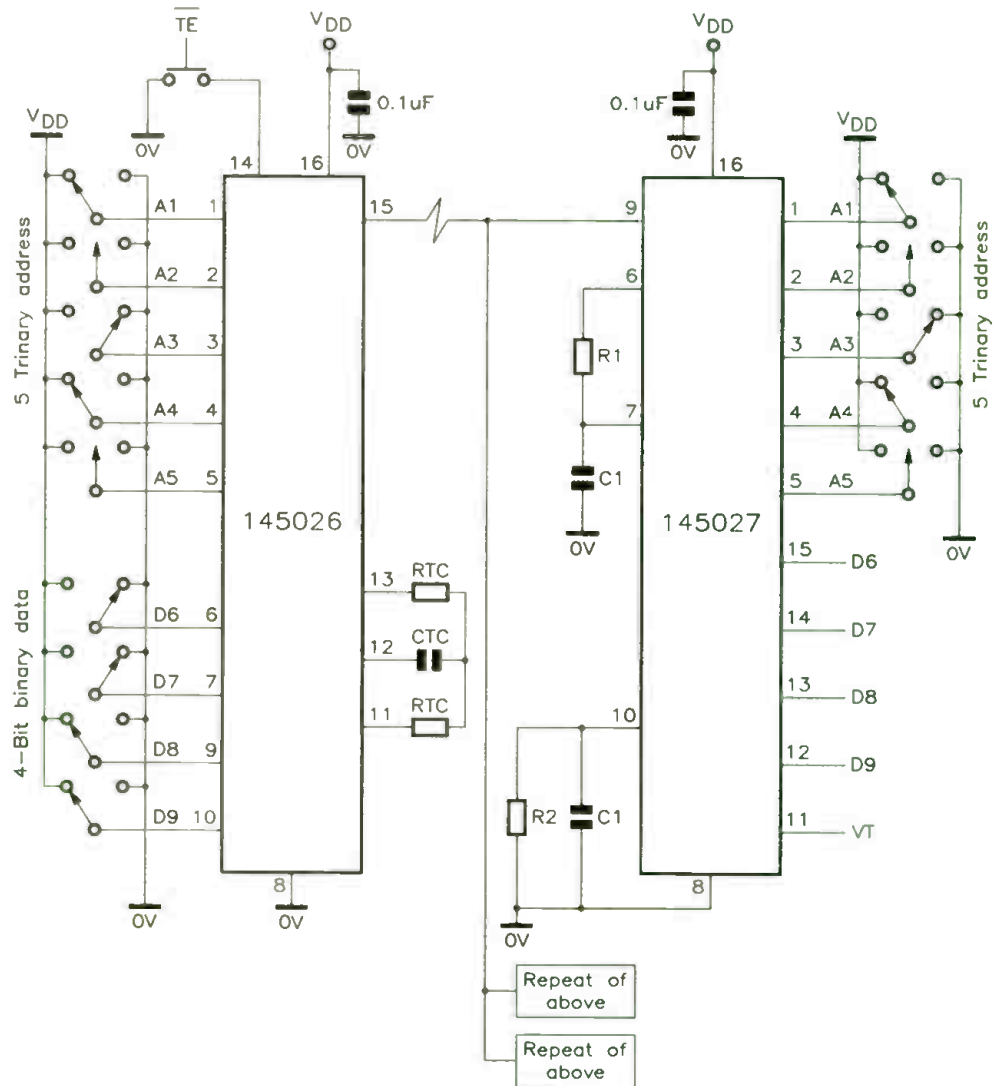

M145026B-1 Remote Control Encoder

SGS-Thomson

An encoder which can generate up to 19,683 codes from 9 address lines by detecting 1, 0, or open circuit. To initiate the transmit sequence, pin 14 should be pulsed low. The encoder will now output on pin 15 a data stream representing the condition on each of the address/data pins in turn and then repeat the operation, so that two complete identical words are transmitted. If pin 14 is held low, the output will be continuous, otherwise two identical words are output for each pulse on pin 14. A 1 is transmitted as two long pulses, a 0 as two short pulses, and an open circuit as a long pulse followed by a short pulse. The device is constructed in CMOS and all characteristics are as the standard 4000B devices. If an external oscillator is used, it should be connected to pin 11 and pins 12 and 13 left open. The output can drive rf, ultrasonic or infra-red transmitters.

145026

Specification

Supply voltage	4.5V to 15V (18V absolute max.)
Clock frequency	2MHz max at 5V, 5MHz max over 10V

Overall system propagation delay	182 clock cycles
Tolerance on timing components	±25%

Quiescent current	5nA at 5V, 10nA at 10V, 15nA at 15V
Operating current	100μA at 5V, 200μA at 10V, 300μA at 15V

FOR TOP QUALITY & VALUE!

HT12E, HT12D & HT12F Remote Control Encoder/Decoders

Holtek

NEW!

The HT12E encodes 12 bits of information and then serially transmits it upon receipt of a transmit enable signal to its active low TE pin. The data is transmitted on the pin marked DOUT, and can be easily interfaced to work with RF or infra-red transmission networks. Complementing the encoder are two decoder ICs, the HT12F and HT12D. The HT12F takes the encoded signal and decodes the whole of the 12 bits as being address data. If the received address matches with the address preset on the decoder IC then the decoder IC will make its valid transmission pin go high (VT). Using the HT12D device is very similar with the single exception that it decodes the first 8 bits of information and checks them against the first 8 bits of address preset on its pins. When both addresses match it makes available the last 4 bits of the received data word, on its four output pins. At the same time the decoder IC will send high its VT pin. This means that data can be sent from the encoder IC and only be decoded and therefore received by those decoder ICs with a matching 8-bit address. Features of the devices are low power, high noise immunity, low stand-by current of 1µA, wide operating voltage, 2¹² address code (2⁸ for the HT12D), built-in oscillator requiring only a 5% resistor, four times transmission with three times receive check, and a minimum of external components. Applications include burglar alarm systems, smoke and fire alarm systems, car door controllers, car alarm systems, security systems, cordless telephones, and many remote control systems.

UM3750 Encoder/Decoder

UMC

A single chip which includes both the encoder and decoder for a coded transmission system. When the code preset on the decoder matches the code transmitted from the encoder pin 17 goes low for 128ms. If a further match is received within that time, the output stays low for a further 128ms and so on. A total of 4096 different codes are possible making the device suitable for use in alarm control systems, security systems, garage door openers, and remote control. The system is protected against false transmissions because it only switches after receiving four valid codes and each valid one must be received within 64ms of the previous one. The system can be used with rf, ultrasonic or infra-red modulators and demodulators. A Min Res 100k and Ceramic 180pF are required with each chip.

Specification

Supply voltage: 3V to 11V

Receive output: Active low, can sink 2mA

Clock frequency: 100kHz with components shown
f ≈ 2/RC

M708L PCM Remote Control Transmitter

SGS-Thomson

A remote control encoder that can generate 30 different codes and four different addresses. The transmission code has a capacity of 1024 different bit streams, but this IC can only encode 120 of them. Primarily designed for use with the M491B, in which case 30 different codes are used and the address lines locked to address 9 (pin 16 high, pin 17 low). The receiver accepts the decoded command only if the address matches. The complete transmitted code is made up of four address bits and six command bits. Using a 455kHz resonator, the output pulses are about 11µs long and the time between each pulse determines the transmitted code. After operating a key (SW1630) there is a debounce pause of about 27.5ms then a preliminary pulse is transmitted, followed 400µs later by a start pulse and 110µs after that by the first pulse of the address. In the receiver the time between these last two pulses is stored and used as the reference to decode the remaining bits.

Thus the transmitter and receiver do not have to be synchronised allowing the use of cheap master timing components instead of crystals. However the chip can be used in 'carrier' mode by connecting pin 1 to pin 18 instead of pin 20, when a 38.43kHz is transmitted to synchronise the receiver.

The code itself is now transmitted with logic 0's causing a 110µs pause between pulses and logic 1's causing a 220µs pause when they occur in odd numbered positions in the code and a 330µs pause when they occur in even numbered positions in the code. After the tenth pulse, a parity pulse is transmitted 110µs later if the number of 1's transmitted is an even number. There is then a delay of 440µs before there is a stop pulse. Thus when used with the 491 the transmission time can vary between 2.65ms and 3.41ms.

Continued from previous page.

This data stream is transmitted every 112ms whilst the key is held pressed. When it is released there is a delay of 19.8ms and then an end of transmission code is sent which comprises six 0's in the command bits position. This encoding system provides a high degree

of immunity from errors.

M491BB1 Voltage Synthesis Tuning System

SGS-Thomson

A tuning IC for TV sets that can memorise up to 16 stations in the internal non-volatile memory. The tuning voltage is synthesised by an internal 13-bit (8192-step) D/A converter, and a further 4-bit (16-step) D/A converter for fine tuning. Alternatively this second D/A can be used to control brightness for example. In addition there is a 6-bit D/A converter to control the sound volume. The IC can decode the information transmitted via infra-red from the M708L.

The non-volatile memory has a guaranteed 10-year data retention specification and is 304 bits organised as 16 words of 19 bits each. The IC can directly drive common anode 7-segment LED displays for displaying the station number from 1 to 16. Direct memory addressing is only possible from remote control, but up/down scanning is possible on the IC itself. A typical application is shown in the NICAM receiver project in Maplin Magazine issue 38. Automatic station search is possible with additional circuitry and the memory can be divided into four bands to cover for example Band I, Band III, UHF and CATV which would be required in some countries.

Specification (typical)

Supply voltage:	+5V (4.75 to 5.25V)
Supply current:	<100mA

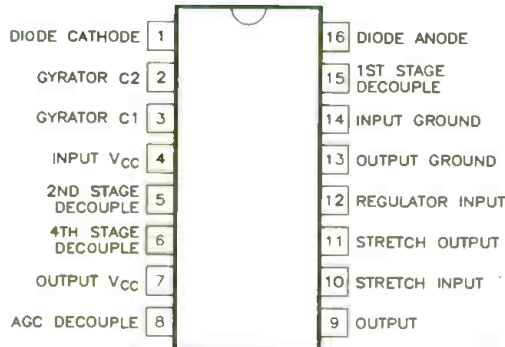

Memory supply voltage:	+25mA (24V to 26V)
Memory supply current:	<12mA average (write) <5mA average (erase) <2.5mA average (read)

UL60Q	M491BB1	£9.95

SL486 I/R Remote Control Pre-amp

GEC Plessey

SL486

A high gain preamplifier designed to interface an infra-red receiving diode with the digital input of a remote control receiver. The device contains two other elements, one to provide a stretched output pulse facility, and a voltage regulator to allow operation from a wide range of supply voltage levels.

The receiving diode is simply connected in reversed bias mode between pins 1 and 16, which are provided with common mode input rejection to improve the stability of the device and greatly reduces sensitivity to electrical noise. The diode bias is 'dynamic', a DC feedback loop being employed to find the optimum current according to the ambient light level. Gyrator based filtering is included to provide LF roll-off to keep this loop stable. For the AC (signal) component, AGC is included having a fast initial response time and a long decay, so that immediately I/R pulses are detected the gain is reduced to exclude any weaker noise pulses. This allows data to be received more accurately in noisy environments. The slow decay keeps the AGC level intact during data reception, and provides a delay before any received noise may become present at the output when transmission ceases. The stretched pulse output capability is provided for the benefit of microprocessor based decoder

systems which often require pulse lengths greater than 15µs. Stretched pulse output is taken from pin 11 instead of the normal output pin 9, with a capacitor connected between pins 9 and 10. It is normally high, pulsing low for each received I/R pulse.

The SL486 can be operated from supplies of between 4.5V and 9V directly, connected between input/output ground pins 13 and 14, and input/output supply pins 4 and 7. For supply rails in excess of 9V can be catered for by utilising the on-chip regulator. The main supply (9V minimum) is connected to pin 12, a 6-4V output appears at the output stage supply pin 7.

Specification

Supply voltage:	4.5V min. to 9.5V max.
Supply current:	6.5 to 8.5mA
Internal regulator voltage:	6.2V typical
Differential input sensitivity:	168nA, I _{DIODE} = 0.5mA, min.
Common mode rejection:	35dB
Maximum signal input:	4mA peak
AGC range:	68dB
Stretched output pulse width:	2.4ms, 10nF between pins 9 & 10.
Output low, pin 9:	0.35mV, 0.2mA sink max.
pin 11:	0.35mV, 1.6mA sink, max.
Output high, pin 9:	V _{CC} -0.5V, 5µA source
pin 11:	V _{CC} -0.1V, 5µA source
Internal output pullups:	55kΩ nominal
Supply ripple rejection:	0.8V peak, pins 13 & 14 grounded

Order Code	Type	Price each
KU71N	SL486DP	£1.99

TBA2800 Infrared Preamplifier

ITT Semiconductor

An infrared preamplifier consisting of a first gain-controlled amplifier featuring a wide dynamic range to ensure interference-free operation even with bright ambient light from the sun or 50Hz lamps including fluorescents. This amplifier can also reject other intense infra-red transmissions, yet is it possible to bring the infra-red transmitter close to the receiver TBA2800 without malfunction from receiver overdrive.

Amplifier 2 provides further amplification, whilst amplifier 3 separates the pulse-shaped signal from any noise and other unwanted signals. A final inverter provides both a positive and negative pulse output for ease of use. A resistor can be inserted between pin 6 and 0V to increase the sensitivity, but the input sensitivity is reduced.

Specification (typical)

Supply voltage: +5V (4.5V to 5.5V)
 Supply current: 1mA
 Gain: >70dB
 Output pins 7 and 8: 1.6mA at 0.4V

SAA1027 Stepper Motor Driver

Philips

A 16-pin IC designed to drive 4-phase unipolar stepping motors. The IC has a bi-directional 4-state counter, and a code converter so that the four outputs switch in the right order. Supply voltage 9.5V to 18V (typically 4.5mA at 12V). Output current possible is 350mA per output (500mA absolute max. at 25°C).

The motor will run clockwise when pin 3 is low (<4.5V), and counter-clockwise when pin 3 is high (>7.5V). The motor will step once for each low to high transition on pin 15. Pin 2 should be connected to pin 13 unless a reset function is required. Taking pin 2 low sets output

Order Code	Type	Price each
QY76H	SAA1027	£5.75

L6203 DMOS Full Bridge Driver

SGS-Thomson

An 11-pin flat package IC with mixed bipolar, CMOS and DMOS technology. The IC can deliver 3A output current at supply voltages up to 52V with very high efficiency and fast switching speed. Each side of the bridge is controlled by a separate logic input, while a common enable input controls both sides. All inputs are TTL and CMOS compatible. The motor current can be controlled from pin 10. The other input pins control the motor according to the following table:

Pin	11	5	7	Function
1	1	0	0	Turn right
1	0	1	1	Turn left
1	1	1	1	Fast motor stop
1	0	0	0	Fast motor stop
0	1	1	1	Free running motor stop
0	0	0	0	Free running motor stop
0	1	0	0	No function

CS212 Security Detector

Cherry Semiconductor

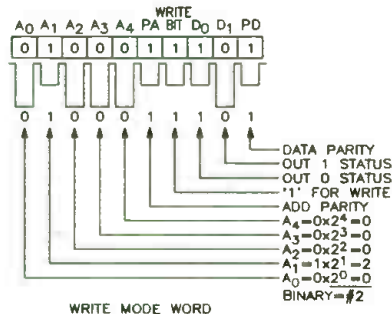

A 16-pin IC designed for data transmission over a simple 2-wire circuit. The IC is particularly suited to alarm systems but could have other applications. Up to 30 IC's can be used on one circuit and any one can look after two detectors (magnetic sensors, smoke alarms, movement detectors, pressure mats etc.) or one detector and its anti-tamper loop (or the loop could be a window foil etc.) Thus between 30 and 60 detectors are possible on one circuit. Each IC also has two outputs which (via relays etc) can operate the main alarm bell or siren, or door locks and so on. The controller must supply 15V to the circuit and the total maximum current which a full complement of 212's would draw from the circuit at any one time is about 20mA. The resistance of the line (which could

be very long) must be taken into account and the IC's will function correctly from line voltages between 18V and 10V, which effectively sets the line length limit. Each IC on one circuit must have its pins 2 to 6 connected differently from every other IC in the range 0 to 29. Pin 2 is binary 16 down to pin 6 which is binary 1. Used pins (for example if IC is 24th in the chain then pins 2 and 3) should be connected via a 10k resistor (R1) to the positive side of the circuit and all unused address pins must be connected to the ground side of the circuit.

If the IC is being used to look after two sensors, then they should be connected between pin 7 and ground and pin 8 and ground. Sensors can be normally open or normally closed provided the control circuit can interpret the returned data correctly. If pin 7 is being used then pins 13 and 14 should be left open circuit. If the anti-tamper loop is being used then pin 7 should be connected to pin 9 and the anti-tamper loop connected in parallel with a diode (D1) if loop normally open, or in series with D1 if loop normally closed. Note that the IC must be close to the detector and particularly the anti-tamper wires must be short.

The two outputs pins 1 and 16 can also be controlled from the control circuit giving a maximum possibility of 60 outputs from a fully equipped loop. In security applications they could be used to set off the main bell, open door locks or whatever.

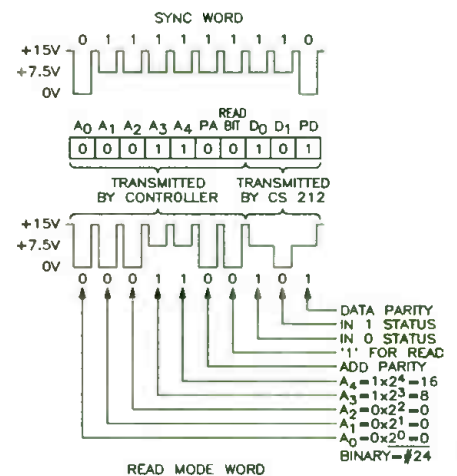

These items will need a power source to run them. Pin 15 could be used in conjunction with the outputs so that up to four possible functions could be implemented depending on the state of the two outputs. Pin 15 provides a strobe pulse in turn when each output is updated and it too can sink about 1mA. All three pins are Darlington type open collector outputs.

Data is transmitted over the line by pulling the voltage down to half rail (7.5V) to indicate a logic 1 and to 0V to indicate a logic 0. The controller must first send a

synchronisation word which consists of ten bits, a 0 followed by eight 1's followed by a 0. The clock rate can be anything up to 20kHz. The next five bits transmitted by the controller are the address bits, with the least significant bit first. The IC whose code on its pins 2 to 6 matches the received address now becomes active. The next bit sent by the controller is a parity bit. Odd numbered IC's expect to see a 1, even numbered IC's expect to see a 0. If the seventh bit transmitted by the controller is a 0 (read mode) then the IC reads the conditions on its pins 7,8,13 and 14. After transmitting this seventh bit, the controller must pull the line down to 7.5V and hold it there for three cycles.

The active 212 now transmits to the controller during these three cycles. If the 212 pulls the line down to 0V the controller interprets this as a 0 and if there is no change on the line, this indicates a 1. The first bit transmitted by the 212 will be a 1 if pin 8 is open circuit and a 0 if pin 8 is connected to ground. The second bit transmitted will be a 1 if pin 7 is open or connected to pin 9 and the anti-tamper loop is open or short circuit, and a 0 if pin 7 is grounded or there is a diode between pins 13 and 14. The third bit is a parity bit which is a 1 if either of the preceding two bits were 1 or a 0 if both were 1 or both were 0. If the 212 had received an incorrect parity bit at bit 6 it would not read its input lines and transmit three 1's during its three cycle transmission slot. Thus if two 212's switch together, the controller simply will not see the incorrect one, but if only one switched, the controller must interpret the three 1's (i.e. no response) as a fault and repeat the address after a synchronisation word. The system is thus tolerant to a one bit fault in any address or data transmission.

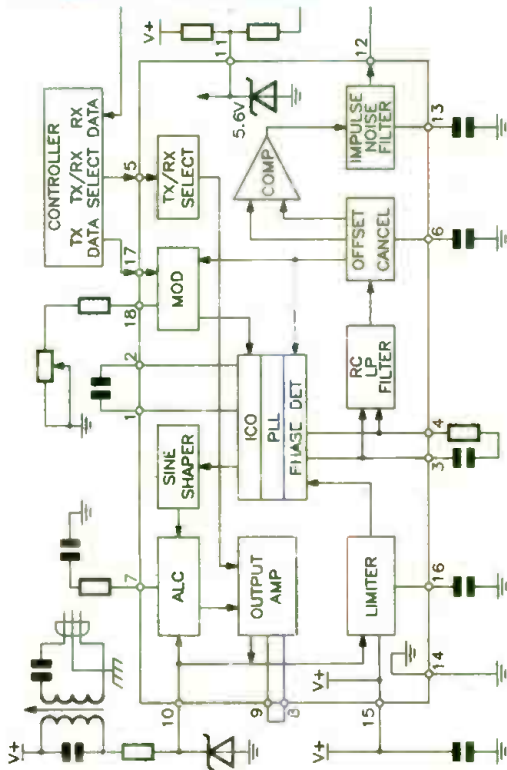

After the three cycle slot for the 212, the controller must pull the voltage back up to 15V and then send a synchronisation word and then continue as before. If the controller wishes to talk to the outputs of a particular 212, then it must send a 1 as its seventh bit (write mode). If the 212 activated by the preceding address in bits 1 to 5 of this word, sees a 1 in bit 7 and assuming the parity bit 6 was correct, it prepares to accept three more bits from the controller. The first of these bits will turn pin 1 on if it is a 1 (or off if it's a 0) and the second controls pin 16 in the same way. The third bit again is a parity bit, 1 if either of the preceding two bits were 1, and 0 if both were 1 or both were 0. If the 212 detects a wrong parity at any time, it will not update pins 1 or 16 and it will not be possible to activate it again until it has received a signal with correct parity in bit 6 and a 0 in bit 7. After a few retries, the fault should be interpreted as an alarm condition as it may mean the line has been cut. The IC will function correctly from line voltages up to 28V during fault conditions.

LM1893N Mains Carrier Transceiver National Semiconductor

A chip designed to transfer data over the mains between remote locations within one site on the same phase. The chip performs as a power line interface for half duplex (bi-directional) communication of serial bit stream. In transmission mode a sinusoidal carrier is FSK modulated and impressed on almost any power line via a rugged on-chip driver. In reception mode a PLL-based demodulator and impulse noise filter combine to give maximum range. Data speeds up to 4800 baud are possible with carrier frequencies in the range 50 to 300kHz. A full data sheet is available.

Order Code	Type	Price each
UF50E	LM1893N	£6.99

SUBSECTION 64 SENSOR IC's

UGN3503U Ratiometric Linear Hall Effect Sensors

Allegro

A Hall effect sensor which accurately tracks extremely small changes in magnetic flux density, changes generally too small to operate Hall effect switches. As a motion detector, gear tooth sensor and proximity detector, it is a magnetically driven mirror of mechanical events. It can effectively measure a system's performance with negligible system loading while providing isolation from contaminated and electrically noisy environments. The device contains a Hall sensing element, linear amplifier and emitter follower output stage. Problems associated with handling tiny analogue signals are minimised by having the Hall cell and amplifier on the same chip.

Specification
Supply voltage range: 4.5 to 6V (8V absolute max.)
Magnetic flux density: Unlimited
System frequency response: Flat to 23kHz
Operating temperature range: -20°C to +85°C

Order Code	Type	Price each
GX09K	UGN3503U	96p

634SS2 Linear Output Hall-Effect Device

A 4-lead IC whose output voltage varies in response to a change in magnetic flux in a linear fashion. The IC has two outputs, one of which increases in voltage with increasing gauss and one of which decreases in voltage with increasing gauss. The sensitivity is fairly

linear over the range -400 to +400 gauss at between 0.75mV to 1.06mV per gauss, but non linear outside this range as shown in the table.

Note that positive gauss represents the South pole of the magnet facing the sensing area and negative gauss represents the North pole of the magnet facing the sensing area.

UGN3132U/UGN3133U Ultra-Sensitivity Bipolar Hall Effect Switches

Allegro

These Hall effect switches are designed for magnetic actuation using a bipolar magnetic field, i.e., a north-south alternating field. They combine extreme magnetic sensitivity with excellent stability over varying temperatures and supply voltages. The high sensitivity permits their use with multipole ring magnets over relatively large distances. Each device includes a voltage regulator, reversed supply protection, quadratic Hall voltage generator, temperature stability circuit, signal amplifier, Schmitt trigger and open-collector output on a single chip. The on-chip regulator permits operation with supply voltages of 4.5 to 24V. The switch output can sink up to 25mA. With suitable output pull-up, they can be used directly with TTL or MOS logic.

Specification

Supply voltage range: 4.5 to 24V DC
Output on saturation voltage: 145mV @ 20mA
Output off leakage current: <1µA
Supply current: 4.3mA @ 24V
Output risetime: 0.04µs (V_{CC} = 12V, R_L = 820Ω)

Magnetic characteristics

Operate point: 32G, 95 max. 3132, 75 max. 3133
Release point: -20G, 95 min. 3132, 75 min. 3133

MAPLIN KEY CALL

Phone 01702 556751

CS209A Proximity Detector

Cherry Semiconductor

An electro-magnetic proximity sensor IC which could be used to detect metal pipes, nails, conduit etc. in walls, floors etc. The IC contains an on-chip regulated supply, oscillator, demodulator, level detector and output stages. The oscillator with its external LC network, provides controlled oscillations where the amplitude is highly dependent on the Q of the LC network. During low Q conditions, a variable low-level feedback is applied to maintain oscillation. The peak demodulator detects the negative portion of the oscillator envelope and the demodulated waveform is then compared to an internal reference by the level detector. Two outputs are provided, one normally high (pin 4) and one normally low (pin 5) both of which can supply up to about 120mA.

In the circuit shown, if the search coil is passed over a wall surface, nails or screws under the surface change the Q of the coil and the device detects this and lights the LED and sounds the buzzer. To set up, adjust VR1 till the LED is on when the coil is clear of any metal objects. Now back off VR1 until the LED is just extinguished. Repeat the adjustment until metal moved toward and away from the coil does not cause the LED to lock on.

Parts List

R1	Min Res 220Ω	(M220R)
R2	Min Res 750Ω	(M750R)
R3,4	Min Res 4k7	(M4K7)
VR1	18-turn Cermet 10k	(WR49D)
C1	Monores Cap 2200pF	(RA40T)
C2	Ceramic 2200pF	(WX72P)
C3	Minidisc 0.01μF	(BX00A)
L1	Choke 100μH	(JC25C)
LED1	Red LED	(WL27E)
BZ1	Min Piezo Sounder	(JH24B)
S1	Push Switch	(FH59P)
B1	PP3 Battery	(JY60Q)

The IC requires a 4V to 24V power supply and draws about 4.5mA

Order Code	Type	Price each
UH59P	CS209A	£1.90

LM35Z Precision Temperature Sensor

SGS-Thomson

An easily calibrated, precision temperature sensor whose operation is similar to a zener diode. The device has a breakdown voltage directly proportional to absolute temperature and has a linear output equal to 10mV/°C. The device operates over a current range of 400μA to 5mA (1mA recommended) and even when uncalibrated has a typical temperature error of only 2°C over its operating range. When calibrated the error is 1°C.

Characteristics

Output voltage at 25°C:	2.98V
Dynamic impedance:	0.6Ω
Time constant in still air:	80 secs
in 100ft/min air:	10 secs
in stirred oil:	1 sec
Operating range:	-10°C to 100°C extending to 125°C intermittently.

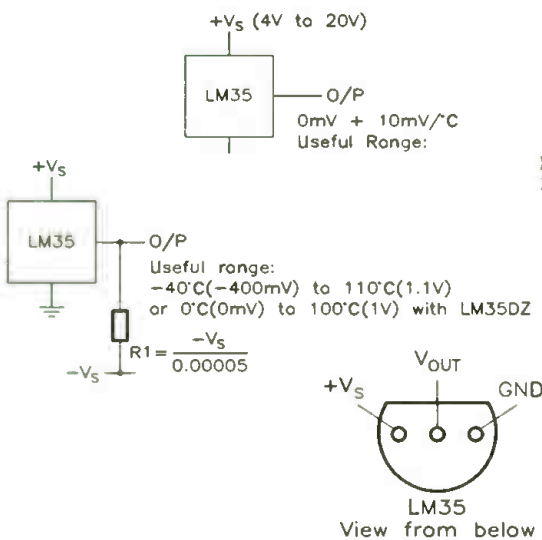

Order Code	Type	Price each
YY73Q	LM335Z	£1.49

LM35 Precision Centigrade Temperature Sensors

National Semiconductor

Precision integrated circuits whose output voltage is linearly proportional to the Centigrade temperature. The advantage over the LM35Z is that it is not necessary to subtract a large constant voltage from the output to obtain the Centigrade scale. The chip does not require any external calibration to achieve accuracies of ±4/10 °C at room temperature and ±8/10 °C over full temperature range. The device draws only 56μA from voltage supplies in the range 4V to 30V so it has very low self-heating <0.1°C in still air. The LM35CZ will operate in the range -40°C to +110°C whilst the LM35DZ operates in the range 0°C to 100°C.

Characteristics (typical)

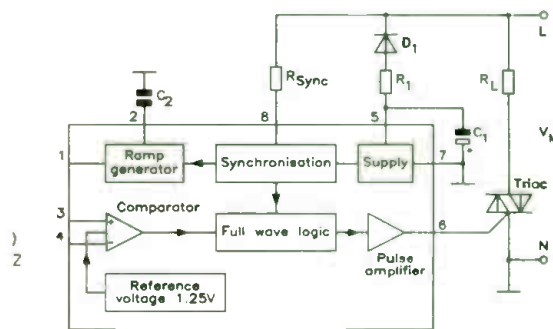

Accuracy at +25°C	±0.4°C (CZ), ±0.6°C (DZ)
-40°C to +110°C	±0.8°C (CZ) ±0.9°C (DZ)
0°C to +100°C	±0.9°C (DZ)
Non-linearity	0.2°C
Sensor slope	+10mV/°C
Load regulation	0.4mV/mA
Line regulation	0.01mV/mA
Quiescent current	56μA at V _s = 5V 56.2μA at V _s = 30V
Temperature co-efficient of quiescent current	+0.39μA/°C
Output impedance	0.1μ with 1mA load

Order Code	Type	Price each
UF51F	LM35CZ	£5.99
UF52G	LM35DZ	£3.49

U217B Temperature Controller

Telefunken

A triac controller for switching resistive loads directly from the mains supply using the zero crossing technique. The device is powered directly from the mains via a diode and dropper resistor, and the IC has its own regulator to limit its supply to 9.25V. To ensure that no switching occurs outside of the zero crossing point, full-wave logic is employed to guarantee that complete mains cycles only are switched to the load. A ramp generator with a freely selectable ramp duration (as determined by a timing capacitor), together with the full-wave logic block, synchronised to the AC supply at pin 8 via a dropper resistor (R_{sync}). The ramp generator not only provides symmetrical trigger pulse control by itself but can have proportional offsets added to it by additional external components, for example for temperature control with monitoring thermistor.

To obtain a 'flicker-free' output, the ramp duration is adjusted according to the load control required. In practice interference generation should be avoided for temperature control applications, therefore in such cases a straight on-off control is preferred to proportional control. The internal reference voltage can be used instead of the ramp generator output for simple applications. The value of R_{sync} controls the trigger pulse width to a large extent; the higher the value the greater the width. This should be chosen according to the TRIAC used.

Specification

Supply voltage (pin 5):	Limited to 9.25V nominal
Supply current drawn:	500μA
Supply current input:	30mA absolute max.
Sync. current input (pin 8):	0.12mA min., 5mA absolute max.
Ramp generator output current (pin 1):	3mA max.
Ramp generator charge current (pin 2):	17μA nominal
Maximum power dissipation:	400mW @ 45°C

Order Code	Type	Price each
AH39N	U217B	£1.49

LM3911N Temperature Controller

National Semiconductor

This IC is a highly accurate temperature measurement and/or control system having a temperature sensor, stable voltage reference and an op-amp all on the chip. The output voltage is directly proportional to the temperature at the rate of 10mV/°C. Using the op-amp with external resistors, any temperature scale factor is easily obtained. By connecting the op-amp as a comparator, the output will switch as the temperature transverses the set-point making the device useful as an on/off temperature controller.

Order Code	Type	Price each
WQ40T	LM3911N	£1.99

LM1830N Fluid Level Detector

National Semiconductor

The IC is ideal for detecting the presence, absence or level of water or other conducting liquids. A detector determines the presence or absence of fluid by comparing the resistance of the fluid with the IC's internal reference resistance. An AC signal is used to prevent plating of the probe. When the probe resistance increases the loudspeaker will emit a 500Hz tone. Alternatively an LED could be connected.

Supply voltage range: +9V to +25V
 Supply current: 5.5mA (at 16V)
 Output sink current: 20mA max
 Internal ref resistor: 13kΩ

Order Code	Type	Price each
YY99H	LM1830N	£4.49

MPX100AP Pressure Sensor

Motorola

A low-cost silicon piezoresistive pressure sensor providing a very accurate and linear voltage output, directly proportional to the applied pressure. The unit has a built-in reference vacuum of approximately 0kPa. The output voltage increases with increasing pressure relative to ambient pressure (approx 100kPa) applied to the pressure side. Care should be taken to limit positive pressure to about 300kPa relative to ambient so that the total differential overpressure range of 400kPa is not exceeded. Conversely the output voltage will decrease as vacuum, relative to ambient, is drawn. Vacuum down to the 0kPa reference can be measured.

Note: 1kPa = 0.145 PSI.

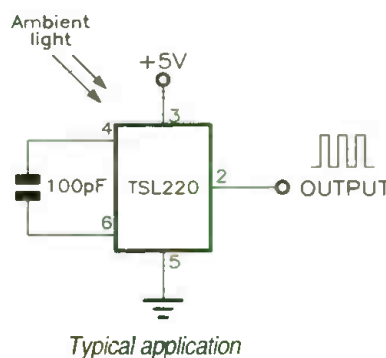

Characteristics

Supply voltage: 3V (6V max)
 Supply current: 6mA
 Full scale span: 60mV
 Zero pressure offset: 20mV
 Sensitivity: 0.6mV/kPa
 Linearity: ±0.05% of full scale
 Range: 0 to 100kPa
 Temperature hysteresis: ±0.5% of full scale
 Temperature coefficient of full scale span: -0.19%/°C
 Temperature coefficient of offset: ±15µV/°C
 Temperature coefficient of resistance: 0.24%/°C
 Input resistance: 400 to 550Ω
 Response time: 1ms (10% to 90%)

Order Code	Type	Price each
UH37S	MPX100AP	£17.49

TSL220 Light to Frequency Converter

Texas Instruments

A large area (4.13mm²) photodiode and current to frequency converter combined in a clear plastic 8-pin DIP package. The output is a pulse train whose

frequency is directly proportional to the light intensity. The output is CMOS compatible (use a 3k3 pulldown resistor to drive LS TTL) and the frequency can be measured by pulse counting, period timing, or integration techniques. The photodiode has a wide dynamic range, high sensitivity and high noise immunity. The output frequency range is determined by a capacitor in the range 10pF to 100µF, which permits the output frequency to fall within some suitable range for any given light intensity.

Specification (typical at V_s = 5V, 25°C)

Supply voltage: 4V to 10V
 Max output frequency: 750kHz
 Operating temperature: -25°C to +70°C
 Peak output voltage: 4V (50kΩ load)
 Supply current: 7.5mA (when dark)
 Output frequency
 125µW/cm² (880nm), C=100pF: 50kHz (min), 150kHz (typical), 250kHz (max)
 no light, C = 100pF: 0Hz (min), 1Hz (typical), 50Hz (max)
 Output pulse duration: 1µs (C = 470pF)
 Output pulse rise time: 20ns (C = 100pF)
 Output pulse fall time: 120ns (C = 100pF)

Order Code	Type	Price each
CP93B	TSL220	£5.40

ULN3390T Twilight Switch

Allegro Microsystems

An optoelectronic switch specially designed for outdoor and emergency lighting. The output transistor turns on when illumination falls below 10µW/cm² at 880nm, and off again when illumination exceeds 20µW/cm². The special design includes temperature compensated trip points, protection against damage from direct sunlight and hysteresis suitable for outdoor lighting. It is more stable over time than cadmium sulphide cells, requires fewer components and has calibrated switching characteristics.

Specification (typical at V_s = 6V, 25°C)

Supply voltage: 4V to 16V
 Supply current: 3mA (output off)
 Saturation voltage: 300mV (I_{OUT} = 15mA)
 Output leakage current: 0.1µA
 Turn on threshold level: 10µW/cm²
 Turn off threshold level: 20µW/cm²

Order Code	Type	Price each
CP94C	ULN3390T	£1.20

SUBSECTION 65 DISPLAY DRIVER IC'S

ST6240 LCD Display Starter Kit

SGS-Thomson

The ST6240 Starter Kit can be used for evaluation, simulation and emulation and experimental purposes to demonstrate or develop applications for the ST62E40 microcontroller.

The ST62E40 is a member of the 8-bit HCMOS ST62xx family, a series of devices oriented to low or medium complexity applications. This is an EPROM version of the basic ST6240 ROM device and is suitable for product prototyping, low volume production and one-offs. The microcontroller is based on a building-block approach, a common core is associated with a combination of on-chip peripherals (macro-cells). The macro-cells of the ST6240 include a high performance LCD controller/driver with 45 segment outputs and 4 backplanes, able to drive up to 180 segments. Also included are two timers each including an 8-bit counter with a 7-bit software programmable prescaler, a digital watchdog timer, an 8-bit A/D converter with up to 12 analogue inputs, a power supply supervisor and an 8-bit synchronous serial peripheral interface. In addition 128 bytes of EEPROM is included for the storage of non-volatile data. Thanks to these many features the ST6240 is well suited to general purpose, automotive, security, appliance and industrial applications.

The ST62E40 has 8192 EPROM program memory, all of which is available to the user and which is ultra-violet erasable via the encapsulation top window. An additional mode is used to configure the chip for programming of the EPROM, set by applying +12.5V to the TEST/V_{pp} pin.

In use it is only necessary to connect the supply to the Starter Kit board and load the demonstration software provided with the kit into the ST62E40 sample provided; LCD and keypad interfacing can be immediately seen.

The same board can be used as a hardware interface to the software simulator when connected to a PC, allowing display values from the simulator to be displayed directly on the LCD. Analogue or digital values from the ST62E40 I/O pins can also be loaded directly to the simulator.

Once the program is successfully simulated, it can be loaded into the ST62E40 sample via the on-board programmer. The application environment can be connected to the Starter Kit via the I/O connector to perform a full evaluation of the user application. In addition, since the LCD is connected to the PCB via a socket, it can easily be removed and replaced by a customised LCD.

The ST62E40 microcontroller comes in an 80-pin, QFP (Quad Faced Plastic) surface mount encapsulation (QFP80) and these packages are difficult to handle manually, so an in-circuit programming facility is provided with the kit to enable programming, via the Starter Kit board, of any ST62Exx (EPROM) or ST62T4xx (OTP - One Time Programming) already soldered into an application board.

The kit PCB includes a QFP80 socket, a 16-key keyboard, a 32 segment x 4 LCD, an ST62E40 microcontroller chip and connecting cables for a host PC etc., and a power supply for operation from the UK mains. Pins are available for direct connection to an application circuit. The board is connected to the PC via the PC's parallel port.

The software is provided on a diskette and includes an enhanced simulator including control of the external LCD display and I/O read/write, an assembler, linker, debugger, EPROM/OTP ST6 programming facilities and demonstration examples. A full set of documentation is provided with the kit and includes the ST62 LCD drive data book, a kit guide and the ST62/63 Software Development Tools

user manual.

To operate the Starter Kit you will also need an IBM PC AT or compatible with a hard disk and 5¹/₄in. floppy drive, 640K of conventional memory, one parallel centronics port and MS-DOS version 3.10 or higher.

Order Code	Type	Price each
AH69A C	ST6240-Kit/UK	£293.75

LM3914/5/6N Bargraph Displays

National Semiconductor

An LED driver that will sequentially light ten LED's when a gradually increasing voltage is applied to pin 5, (dot mode) or in bar mode all LED's indicating voltages below input are lit. In dot mode there is a slight overlap so that at no point are all LED's extinguished. A brightness control will set LED current between 2mA and 30mA. The drivers are stackable and displays with 100 or more LED's are possible. Supply voltage 3V to 18V. The driver that sets the indication points can be referenced to a wide range of voltages.

Three different chips are available:

LM3914:	linear steps
LM3915:	3dB steps (logarithmic scale)
LM3916:	VU scale (e.g. -10dB, -7dB, -5dB, -3dB, -1dB, 0dB, 1dB, 2dB, 3dB)

A pcb is available for use with these IC's and information on how to construct and set up this pcb along with circuits and applications can be found in the Maplin Best of Projects Book 4. See end of Projects and Modules section for details.

DS75491N MOS to LED Driver

National Semiconductor

Four independent drivers designed to interface low current MOS outputs to LED's. Each output has up to 50mA source or sink capability.

Characteristics (typical)		
Supply voltage	10V max	
Input voltage range	-5V to V _{SS}	
Input current	2.2mA	
Supply current	<1mA	75491

Order Code	Type	Price each
UF53H	DS75491N	88p

74C917 6-Digit Hex Display

National Semiconductor

A display controller interface element with memory that will directly drive six 8-segment LED displays (i.e. 7-segment and decimal point). The controller receives data information through 5 data inputs (A, B, C, D and DP) and digit information through 3 address inputs (K1, K2, K3). The input data is written into the register selected by the address information when "chip enable" (CE) and "write enable" (WE) are low and is latched when either (CE) or (WE) go high again. A self-contained oscillator sequentially presents the stored data to a decoder where four data bits control the displayed character and one bit controls the decimal point. The oscillator is normally operational and tied low (OSE), but at high level this input prevents the automatic refresh of the display. Segment outputs have up to 100mA capability and digit outputs have up to 20mA capability. Use three of our 2-digit common cathode displays with seven Min Res 68Ω in series with IC pins 17 to 19 and 21 to 25 for direct drive. The digit outputs (pins 9 to 14) require a BC337 connected to each; base to IC; collector to display; and emitters commoned to ground. The drivers are active when output enable (SOE) is low, and high impedance when SOE is high. This feature enables a brightness control to be used. Normally SOE and OSE are tied to ground. All inputs are TTL compatible and nominal supply voltage is 5V at 0.5mA with output off (SOE high). The registers are addressed like ordinary RAM.

Order Code	Type	Price each
YH30H	74C917	£19.99

74C925 4-Digit Counter Driver

National Semiconductor

A 4-digit counter with 7-segment multiplexed outputs capable of driving a 4-digit common cathode display. The multiplexing circuit has its own free-running oscillator and requires no external clock. The counters advance on the negative edge of the clock applied to pin 11. A high signal on pin 12 will reset the counter to zero. A low signal on pin 5 will latch the number in the counters into the internal output latches.

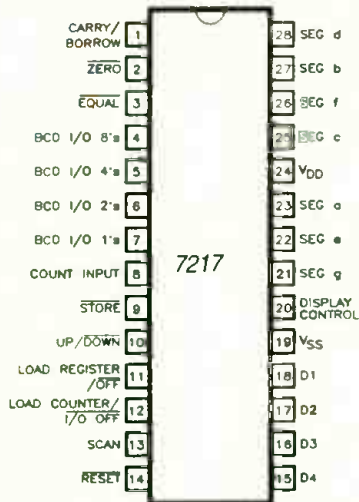

Characteristics (typical at 25°C)

Supply voltage pin 16:	5V (3V min, 6V max)
Supply current:	20μA
Max input frequency:	4MHz
Multiplex frequency:	1kHz
Logical '1' input voltage:	3.5V min
Absolute max:	15V
Logical '0' input voltage:	1.5V max
Logical '1' input current:	5nA
Logical '0' input current:	-5nA

Order Code	Type	Price each
QY08J	74C925	£19.99

ICM7217AIP1 4-Digit Programmable Counter Driver

Harris

An up/down counter containing a register that can be preset with thumbwheel switches. The register is continuously compared with the count and a signal generated when they are equal. The circuit will directly drive four common cathode 7-segment displays. The input frequency is guaranteed up to 2MHz, but will typically operate up to 5MHz. Counting and comparing will run at 750kHz maximum.

Specification (typical at $V_s = 5V, 25^\circ C$)

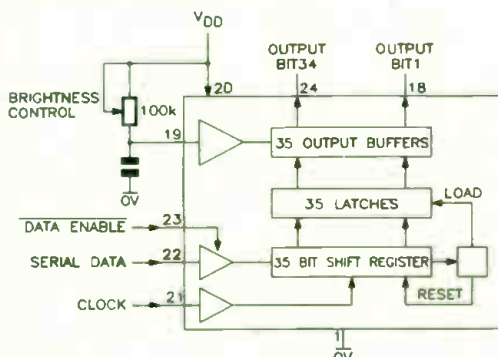

Supply voltage:	4.5V to 5.5V
Supply current:	300µA standby 100mA operating
Digit driver output:	35mA peak
Segment driver output:	-12.5mA peak
BCD I/O input high:	>4.4V
BCD I/O input low:	<3.2V
Count input frequency:	5MHz
Count input low:	<0.4V
Count input high:	>3.5V

Order Code	Type	Price each
CP95D	ICM7217AIP1	£8.99

M5450B7 LED Display Driver

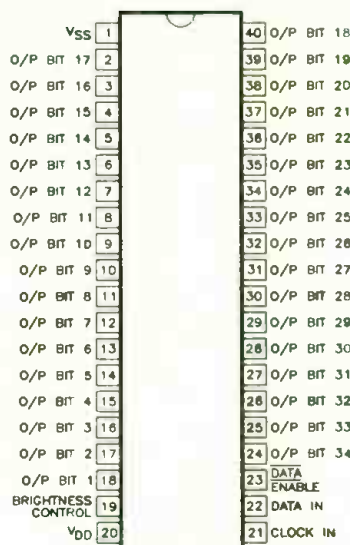

SGS-Thomson

An LED display driver that can drive up to 34 segments at up to 15mA without external resistors. Constant current sources in the IC control the segment current, and this can be set by adjusting the current into pin 19. Data is clocked into pin 22 (when pin 23 is low) by sending a 1 as the first bit, then the 34 data bits and ensuring that there is at least one further clock pulse. This 36th clock pulse loads the 34 bits of serial data into the segment latches, each logical 1 turning on the appropriate segment. The 36th clock pulse also generates a reset signal which clears the register ready to receive a further set of data following the next 1 detected on pin 22. Segments are directly driven and not multiplexed. Common anode displays are required with the anodes connected to V_{DC} .

Supply voltage	5V (4.75V to 13.2V)
Supply current	<7mA
Output sink current	15mA with 750µA in pin 19 2.7mA with 100µA in pin 19

Input clock frequency DC to 500kHz

ICM72241PL 4 1/2-Digit Counter

Harris

A 4 1/2-digit counter capable of directly driving an LCD display. Applications data can be found in the Maplin Magazine 55. The maximum count is 19,999. The input frequency can be up to 25MHz typically. Chips can be cascaded to provide higher maximum counts.

Supply voltage	5V (3V to 6V)
Operating current	10µA
Oscillator frequency	16kHz
Backplane frequency	125Hz
Count frequency	>15MHz

Order Code	Type	Price each
FP62S	ICM72241PL	£8.99

ICM7216DIPI 10MHz Frequency Counter

Harris

An 8-digit frequency counter IC operating from DC to 10MHz. Decimal point and leading zero blanking may be externally selected. The IC will directly drive two 4-digit multiplex common cathode displays, and requires only one +5V DC supply and a 1MHz or 10MHz crystal.

Specification

Supply voltage:	+5V at 2mA (display off)
Maximum frequency (pin 28):	10MHz
Time between measurements:	200ms
Digit driver output current:	75mA
Segment driver output current:	15mA
Input voltage low/high:	1V max/3.5V min

Order Code	Type	Price each
YY94C	ICM7216DIPI	£19.99

ICM7216AIJI 10MHz Universal Counter

Harris

An 8-digit universal counter IC operating from DC to 10MHz in frequency counter mode and DC to 2MHz in unit counter modes. The IC will directly drive 8 common anode seven-segment displays. It requires only one +5V supply and 10MHz or 1MHz crystal timebase. In addition to being a frequency counter, the IC can be used as a period counter, frequency ratio counter, time interval counter or as a totalising counter.

7216AIJI

Specification (typical)

Supply voltage:	+5V (4.75V to 6V)
Supply current:	2mA (display off)
Max. frequency (pin 28):	10MHz (frequency, ratio, unit) 2.5MHz (period, time interval)
Max. frequency (pin 2):	2.5MHz
Min. time interval:	250ns
Time between measurements:	200ms
Digit driver output current:	-180mA
Segment driver output current:	35mA
Input voltage low/high:	1V max/3.5V min

SUBSECTION 66 POWER CONTROL AND VOLTAGE REFERENCE IC's

L293D Stepper Motor Driver SGS-Thomson

The L293D is a monolithic integrated high voltage, high current, 4-channel driver designed to accept standard DTL or TTL logic levels and drive inductive loads such as relays, solenoids, DC and stepping motors, and for switching power transistors. To simplify use as two bridges, each pair of channels is equipped with an enable input. A separate supply input is provided for the control logic, allowing operation of this at a lower voltage than the output stage.

Inductive clamp diodes for the output stage are provided internally. This device is suitable for use in switching applications at frequencies up to 5kHz. It is encapsulated in a 16-pin DIL package.

Specification

Output stage supply voltage:	Logic level supply (V_{SS}) to 36V
Control logic supply voltage:	4.5V to 36V
Total quiescent output supply current:	2mA inhibit low, 16mA inhibit high
Total quiescent logic supply current:	16mA
Input low voltage:	-0.3 to 1.5V
Input high voltage:	2.3 to V_{SS} , 7V abs. max.
Inhibit low voltage:	-0.3 to 1.5V
Inhibit high voltage:	2.3 to V_{SS} , 7V abs. max.
Low voltage inhibit current:	30 μ A
High voltage inhibit current:	10 μ A
Source output saturation voltage:	1.4V @ 1A out
Sink output saturation voltage:	1.2V @ 1A out
Clamp diode forward voltage drop:	1.3V
Rise and fall times:	250ns
Turn-on delay:	750ns
Turn-off delay:	200ns

Order Code	Type	Price each
AH80B	L293D	£2.99

L293E Stepper Motor Driver SGS-Thomson

The L293E is a quad push-pull driver capable of delivering output current up to 1A per channel. Each channel is controlled by a TTL compatible logic input, and each pair of drivers, making a full bridge, is equipped with an inhibit input which if low turns off all four transistors forcing the output to float, and if high, enables normal output. A separate supply input is provided for the logic so that it may be run from a lower voltage supply to reduce dissipation. Additionally, the L293E has external connections

for sensing resistors for switch-mode control by external measurement of resistor voltage drop. These comprise the 0V ends of all output stages (the emitters of the lower output switching transistors) being open-ended (not connected); these are pins 4, 7, 14, 17. The sensing resistors should be connected between these and 0V. If not required then connect pins 4, 7, 14, 17 directly to 0V. This device is suitable for use in switching applications at frequencies up to 5kHz. It is encapsulated in a 20-pin DIL package.

Specification

Output stages supply voltage:	Logic supply level (V_{SS}) to 36V max.
Control logic supply voltage:	4.5V to 36V max.
Total quiescent output supply current:	2mA inhibit low, 16mA inhibit high
Total quiescent logic supply current:	16mA
Input low voltage:	-0.3 to 1.5V
Input high voltage:	2.3 to V_{SS} , 7V abs. max.
Inhibit low voltage:	-0.3 to 1.5V
Inhibit high voltage:	2.3 to V_{SS} , 7V abs. max.
Low voltage inhibit current:	30 μ A
High voltage inhibit current:	10 μ A
Source output saturation voltage:	1.4V @ 1A out
Sink output saturation voltage:	1.2V @ 1A out
Sensing voltage (pins 4,7,14,17):	2V
Rise and fall times:	250ns
Turn-on delay:	750ns
Turn-off delay:	200ns

AH81C	L293E	£3.49

L6114 Stepper Motor Driver SGS-Thomson

Manufactured with the multi-power BCD mixed bipolar/CMOS/DMOS process, the L6114 is a monolithic, quad 100V DMOS switch designed for high current, high voltage switching applications. Each of the four switches is controlled by a logic input, and all four are further controlled by a common

enable input. All DMOS transistors have source as well as drain isolated and brought out to separate pins for sensing resistors if required, otherwise they should be connected to 0V. The common enable input, when taken to logic 0, will force all outputs off regardless of the state of the input control pins. Furthermore all DMOS transistors have parallel inductive clamping diodes provided internally. All inputs are TTL/CMOS compatible for direct connection to logic circuits. The device is encapsulated in a 20-pin DIL package.

Specification

Drain-source breakdown voltage:	100V
Continuous drain current:	1.5A @ 90°C
Pulsed drain current:	5A
Continuous source-drain diode current:	1.5A
Pulsed source-drain diode current:	5A
Static drain-source on resistance:	0.7 Ω @ $V_{CC} \geq 14V, I_D = 1.5A$
Control logic supply voltage:	14 to 48V
Supply current:	9mA
Input low voltage:	-0.3 to 0.8V
Input high voltage:	2 to 7V max.
Turn-on delay time:	300ns
Rise and fall times:	100ns
Turn-off delay time:	400ns
Source-drain diode forward voltage drop:	1.5V max.
Source-drain forward voltage:	1.2V @ $I_{SD} = 1.5A$

Order Code	Type	Price each
AH82D	L6114	£3.49

L6202 Stepper Motor Driver

A push-pull DMOS full bridge driver for motor control applications realised in multi-power BCD technology which combines isolated DMOS power transistors with CMOS and bipolar circuits on the same chip. This makes it possible to optimise the logic circuitry and the power stages to achieve the best possible performance. The DMOS output transistors can operate at supply voltages up to 48V, and efficiently at high switching speeds, and have inductive clamp diodes supplied on-chip. All the logic inputs are TTL, CMOS and microcomputer compatible. Each channel (half bridge) of the device is controlled by a separate logic input, while a common enable input controls both channels, and will force both outputs floating if taken low. The device is encapsulated in a 20-pin DIL package and includes thermal shutdown.

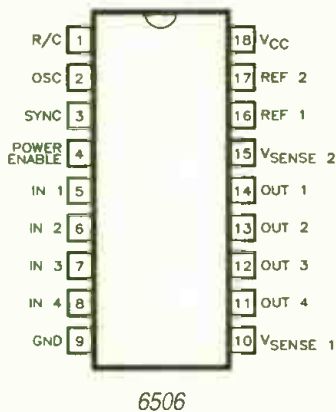

Specification

Supply voltage:	12V min. to 48V max.
Reference voltage:	13.5V
Quiescent supply current:	10mA
Cummutation frequency:	up to 30kHz (100kHz max.)
Thermal shutdown temperature:	150°C
Dead time protection:	100ns

Source-drain leakage current: 1mA max. @ $V_S = 42V$
 Source-drain on resistance: 0.3 Ω typical
 Sensing voltage: -1V to 4V
 Source-drain diode forward voltage drop: 0.9V @ $I_{DS} = 1.2A$
 Reverse recovery time: 300ns
 Forward recovery time: 200ns
 Input low voltage: -0.3 to 0.8V
 Input high voltage: 2 to 7V max.
 Turn-off delay: 300ns
 Turn-on delay: 400ns

Order Code	Type	Price each
AH83E	L6202	£5.49

L6506 Stepper Motor Driver

The L6506 is a linear IC designed to sense and control the current in stepping motors and similar devices. When used in conjunction with the L293 and L6114 etc. driver ICs, the chip set forms a constant current drive for an inductive load, and performs all the interface functions from the control logic through to the power stage.

Two or more devices may be synchronised using the 'sync' pin. In this mode of operation the oscillator in the master IC sets the operating frequency in all chips. The controller is intended for use with dual bridge drivers including quad DMOS arrays such as the 6114, or discrete power transistors. A common on-chip oscillator drives the dual chopper and sets the operating frequency for the pulse width modulated drive. An RC network on pin 1 sets the operating frequency.

The oscillator produces pulses to set two internal flip-flops which in turn cause the outputs to activate the drive. When the current in the load winding reaches the programmed peak value, the voltage across the sense resistor is equal to V_{ref} and the corresponding comparator resets its flip-flop, interrupting the drive current until the next oscillator pulse occurs. The peak current in each winding is programmed by selecting the value of the sense resistor and V_{ref} . Since separate inputs are provided for the chopper, each of the loads can have different settings.

Specification

Supply voltage range: 4.5 to 7V max.
 Quiescent supply current: 25mA max.
 V_{sense} input voltage range: $\pm 5.0mV$
 Input offset current: $\pm 200nA$
 Input bias current: 1 μA
 Response time: 0.8 μs , $V_{ref} = 1.4V$, $V_{sense} = 0$ to 5V
 Logic input high: 2V to supply level
 Logic input low: 0.8V max.
 Logic output high: 3.5V typical (2V min., $V_{CC} = 4.75V$)
 Logic output low: 0.25V ($V_{CC} = 4.75V$)
 Oscillator frequency range: 5kHz to 70kHz

AH84F	L6506	£2.90

High-Side Smart-Power Solid State Relays

SGS-Thomson

★ 5V Logic level compatible input

★ Thermal and under-voltage shut-down

★ Load open-circuit warning

★ Very low stand-by power consumption

These monolithic devices are made using a 'Vertical Intelligent' Power MOS technology and are intended for driving resistive or inductive loads with one side grounded. They typically provide power switching for microprocessor controlled automotive applications for driving motors and lamps. Two versions are available; VN05N can switch 12A continuously, while VN20N can switch up to 28A. Built-in thermal shut-down protects the chip from over-temperature and short-circuit conditions, and the input control is 5V logic level compatible.

The device has a diagnostic output which indicates open circuit (no load) and over-temperature conditions, which is derived from internal logic. To protect the device against short-circuit and over-current conditions over the full range of supply voltages and temperatures, the thermal protection section turns off the MOS power output switch at a minimum junction temperature of 140°C. When the temperature falls to about 125°C the switch is automatically turned on again. For short-circuits the response time is virtually instantaneous as the sensor is located in the region of the die where the heat is generated. The 'status' or diagnostic output is of open drain configuration. The positive going control input is internally clamped to 6V max.; if the input exceeds this level a series resistor must be included to limit the input current to not more than 10mA. The input stage is a Schmitt trigger with a hysteresis of 0.5V. Case style is TO220 and the tab is electrically connected to V_{CC} and must be fitted with an insulating kit if bolted to a heatsink.

Specification	VN05N	VN20N
Continuous output current:	12A	28A
Power dissipation @ $T_C \leq 25^\circ C$:	52W	80W
On-state resistance @ $T_J = 25^\circ C$:	0.18 Ω	0.05 Ω
Junction operating temperature:	-40 to 150°C	
Drain-source breakdown voltage:	60V	
Supply voltage:	26V max.	
Supply current, off-state:	50 μA	
Supply current, on-state:	15mA	
Signal input low:	0.8V	
Signal input high:	5V max. (see above)

SLB0586A Electronic Dimmer

Siemens

A digital electronic dimmer IC which can turn lights etc. on and off and set the required brightness via a single sensor. Operation can also take place from remote sensors (or by infrared remote control with a suitable receiver circuit) or switched by an on/off switch connected between neutral and the "Remote Input".

*Only required if remote unit is built.

If remote sensor or switch is not required R4 and R5 are omitted and pin 6 linked to pin 7. If the sensor is tapped (touched for between 50 and 400ms) the light will be switched on and off successively. Three different dimming modes are possible according to the connection of pin 2.

If pin 2 is left open circuit then at switch on, lamp brightness will be at same level as it was when last switched off. If the sensor is held, brightness will increase to maximum or decrease to minimum, then rise or fall cyclically until the sensor is released. On successive dimming operations the brightness will increase if it was previously decreasing and vice versa. If pin 2 is connected to pin 7 then at switch on (if the sensor is tapped), lamp brightness will be at maximum. If the sensor is held, the lamp switches to minimum brightness at switch on, and then starts to

Continued on next page.

Continued from previous page.

increase to maximum then fall again and will continue to cycle until sensor released. On successive dimming operations (providing it has not been switched off in the meantime) the brightness will continue to increase or decrease in the direction it was previously moving. If pin 2 is connected to pin 1, operation is the same as for connection to pin 7 except that on successive dimming operations, the brightness will move in the opposite direction from the way it was previously moving.

Caution. The circuit shown is at 240V potential. It should be built on a Blanking Plate and then used to replace conventional light switches. Always switch the mains off at the main fuse box before unscrewing any blanking plate or switch plate and do not switch on again until all plates have been screwed back in position.

Specification (typical at 25°C)

Supply voltage: -5.3V DC

U880B Double Flasher

Telefunken

The U880B is a double lamp flasher with its own internal oscillator followed by a frequency divider to produce a clock running at a nominal frequency of 3.3Hz. The 4-pin device flashes a pair of lamps alternately at this speed, operating from a supply in the range 4.75V to 20.4V maximum. Low current filament lamps or LEDs use the positive supply as a common connection, and the two polarity protected output stages can sink up to 55mA nominally.

No other external components are required as the device is entirely self-contained. An on-chip supply voltage monitor prevents normal operation until the supply is at least 4.2V, and the output stages are switched off when the supply falls to 3.8V. It is contained in a round, four-leaded encapsulation. To identify pin numbering, orient the device top-side up such that the longest lead points down. Pin 1 is then at the top and all others are numbered anti-clockwise (left = 2, bottom = 3, right = 4).

Specification

Supply voltage range: 4.75 to 20.4V
 Supply current range: 3.2 to 6.5mA depending on +V_S
 Output stage 'on' saturation: 700mV max. @ I_{out} = 25mA

Order Code	Type	Price each
AH42V	U880B	£1.36

U6047B

Telefunken

A timer for motor vehicles with a wide ranging adjustable delay time from 3.7 seconds to up to 20 hours. From small value capacitors this is made possible by all time sequences being determined by an RC oscillator and a frequency divider. The relay driver is integrated and, with the corresponding external circuitry, the circuit is resistant to load dump and interference voltages in accordance with DIN40839.

To prevent interference and help protect the device the supply (pin 8) should be buffered with an RC filter, suggested values are 510Ω and 47µF. There is an internal 14V Zener diode between pins 8 and 1 (GND) as overvoltage protection, and with 510Ω in series the device can be operated over a wide supply range from 6V to 16V. It can also be supplied from a regulated 5V source, in which case the RC supply filter is not necessary.

A time function can be started or interrupted by the three inputs TOG, ON and OFF. If the time function is triggered the relay is active, the relay contact dropping out after expiry of the delay time. There are two possible applications, use of the toggle (TOG) input or of the ON or OFF inputs. When the TOG input is taken high for the first time the relay is switched on by pin 2 after a debounce period has elapsed. If triggered again the relay is switched off, and thereafter each actuation of the TOG input changes the state of the relay. If left on, it is switched off after the time delay period.

Alternatively ON and OFF controls can be realised as a rocker switch since both must not be activated simultaneously. ON leads to activation of the relay after the debounce period, while OFF immediately switches it off. If OFF is not activated, the relay is switched off after the time delay expires. In practice a common commercial application for this device is as a window demister heater control, which will 'switch itself off' after the chosen delay time (in minutes) should the driver forget.

All timing sequences are derived from an internal oscillator which uses external RC components R_{OSC} and C_{OSC} to set a fundamental frequency f₀. The oscillator not only produces the delay time but also the debounce time period. The delay time will be 73728 x 1/f₀ while the debounce period will be 6 x 1/f₀. R_{OSC} can range from 59kΩ to 650kΩ and C_{OSC} from 1nF to 4.7µF, giving oscillator frequencies from 20kHz down to 1Hz (delay times of 3.7s to 1,229m). The relay driver output is an open collector Darlington transistor with integral 23V Zener diode for limitation of the inductive pulse from the relay winding at switch-off. Maximum collector current must not exceed 300mA. The remainder of the IC is protected as described above, and all inputs are protected by a series resistor, integral Zener diode and RF capacitor.

AH44X	U6047B	£1.48

ULN2453M/ULN2455M

Automotive Lamp Monitors

Allegro

2455

This range of devices is capable of monitoring all types of automotive (motor vehicle) lamps, providing multiple LED outputs to pinpoint the area in which a lamp has failed. Type 2455 is a quad version capable of monitoring eight individual lamps or groups of lamps. Type 2453 is a dual circuit comparator. All devices can be used to monitor lamps, multiple low-voltage power supplies, or, with appropriate sensors, industrial processes. Installation and operation of these lamp monitors has no effect on normal lamp operation and does not involve cutting any wires to insert resistors and such. The comparators sense the normal voltage drop in the supply wiring (approximately 20mV or so) for each of the lamps being monitored. Little additional wiring is necessary for installation because the system can be completely integral to the wiring assembly. No standby power is required as the operating voltage is obtained from the sensing leads of the device, which is only active when the lamp power is on.

In principle the operation of these monitors is similar to that of a simple bridge circuit, where the top two legs of the bridge are formed by the wiring assembly resistance or through the use of discrete low value resistors. The bottom legs of the bridge are the

monitored lamps.

2453

The two sensing inputs of each comparator are connected via separate connections to each end of the lamp's supply so that it can observe the voltage drop along the length of the lamp supply wire. Sense input #1 is attached to the supply source (as it is also the chip circuit supply) while sense input #2 connects to the lamp 'live side'. When the circuit detects a difference in voltage due to an open-filament, the appropriate open collector output driver is turned on. Both devices are designed for use in the severe automotive environment. Lateral PNP transistors provide high-frequency noise immunity and differential transient-voltage protection. Reverse polarity protection, internal regulators and temperature compensation are all embodied in the circuit designs. A device failure will not affect lamp operation. Type 2453 is 8-pin DIL while 2455 is a 14-pin DIL package.

Specification

Supply voltage: 30V absolute max., 80V for 100ms
 Peak reverse supply voltage: 30V
 Output switch current sink (ON): 35mA max.
 Output leakage current (OFF): 100µA max.
 Output saturation

voltage: 0.8V @ IC = 5mA
 Differential switch voltage: 13mV typical
 Sense input #1 current + supply: 1.7mA
 Sense input #2 current: 300µA
 Operating temperature range: -40°C to +85°C

GX53H	ULN2455M	£2.99

ICL8211CPA Voltage Detector

Harris

A highly accurate micropower integrated circuit intended primarily for precise voltage detection and generation. The IC provides a 7mA current limited output sink when the voltage applied to 'Threshold' is less than 1.15V – the internal reference. A low current output 'Hysteresis' is also turned on at this point and may be used to provide positive and noise free output switching using a simple feedback network.

Applications include low battery indicators, power supply malfunction detectors for volatile memory systems etc. Supply voltage 2V to 30V at 22µA supply current.

Order Code	Type	Price each
YH43W	ICL8211CPA	£1.75

ICL8069CCZR Voltage Reference

Harris

A 1.2V temperature compensated voltage reference with excellent stability and reverse currents down to 50µA.

For use with A/D, D/A converters, threshold detectors etc. Stability of V_R with change in I_R from 50µA to 5mA is excellent, the change in V_R being <20mV. Reverse dynamic impedance is typically 1Ω. Temperature coefficient: 0.005%/°C.

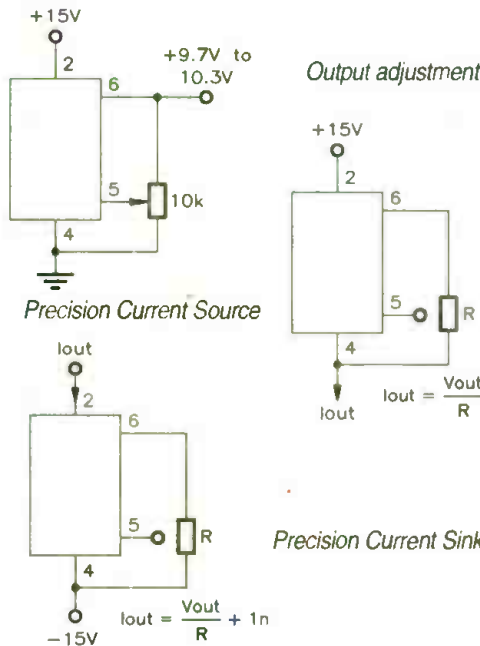

Order Code	Type	Price each
YH39N	ICL8069CCZR	£1.53

REF-01CP +10V Precision Reference

Analog Devices

A precision bandgap voltage reference giving 10V ±1%. The device has short circuit protection, an adjust pin for up to ±3% adjustment and excellent stability with large changes in temperature, load current and input voltage.

Specification (typical at 25°C)

Output voltage: 10V ±0.1V
 Adjustment range: ±3.3%
 Supply voltage: 12V to 30V
 Output voltage noise: 25µV peak-to-peak
 Line regulation: 0.009%/V
 Load regulation: 0.006%/mA
 Supply current: 1mA
 Load current: 21mA
 Sink current: -0.5mA
 Short circuit current: 30mA
 Temperature coefficient: 20ppm/°C

Order Code	Type	Price each
UL08J	REF-01CP	£3.95

REF-02CP +5V Precision Reference

Analog Devices

A precision bandgap reference giving 5V ±1%. The device has short circuit protection, an adjust pin for up to ±6% adjustment and excellent stability with large changes in temperature, load current and input voltage. The circuits shown for the 10V Ref can be

used with this device. In addition, this device has an output on pin 3 whose voltage changes linearly with temperature, from 577.5mV at 0°C to 724.5mV at 70°C. The current on this pin must not exceed 50nA and capacitance must be less than 30pF.

Specification (typical at 25°C)

Output voltage: 5V ±0.05V
 Adjustment range: ±6%
 Supply voltage: 7V to 30V
 Output voltage noise: 12µV peak-to-peak
 Line regulation: 0.009%/V
 Load regulation: 0.006%/mA
 Supply current: 1mA
 Load current: 21mA
 Sink current: -0.5mA
 Short circuit current: 30mA
 Temperature coefficient: 20ppm/°C
 Tempco voltage output: 630mV at 25°C ±2.1mV/°C

Order Code	Type	Price each
UL09K	REF-02CP	£5.35

REF-03CNB +2.5V Precision Reference

Analog Devices

A precision bandgap reference giving 2.5V ±1%. The device has short circuit protection, an adjust pin for up to ±6% adjustment and excellent stability with large changes in temperature, load current and input voltage. The circuits shown for the 10V Ref can be used with this device except that in addition a 330pF capacitor must be connected between pins 3 and 4.

Specification (typical at 25°C)

Output voltage: 2.5V ±0.025V
 Adjustment range: ±6%
 Supply voltage: 4.5V to 30V
 Output voltage noise: 5µV peak-to-peak
 Line regulation: 0.001%/V
 Load regulation: 0.01%/mA
 Supply current: 1mA
 Load current: 20mA
 Sink current: -0.5mA
 Short circuit current: 30mA
 Temperature coefficient: 0.7ppm/°C

SL441CDP Zero Voltage Switch

GEC-Plessey

A symmetrical burst control IC in an 8-pin DIL package for use with a triac in AC power control systems. When used with a triac, AC power may be regulated by varying the number of mains cycles applied to the load in a fixed timing period. The device features a 'balanced zero voltage point crossing detector',

spike filter and pulse generator for reliable triggering of the triac, and minimum radio frequency interference. A period pulse generator and bistable are arranged to provide symmetrical burst control and eliminate 1/2 wave firing. The period of the internal ramp generator is defined externally and may be chosen to limit 'lamp flicker'. The device is particularly suited to room temperature control applications, including panel heaters, fan heaters etc.

Specification

Shunt regulating voltage (pin 3 @ 16mA): 14.7V
 Supply voltage trip (pin 3): 12.2V
 Supply current: 7.5mA maximum
 Typical regulated voltage (pin 5): 8.5V
 Triac gate drive
 open circuit ON: 8.5V
 open circuit OFF: 0.1V
 output current: 200mA (into short circuit)
 Control input working voltage range: 0 to 12V

TOP QUALITY PRODUCTS AT SUPER LOW PRICES!

ZTK33B Varicap Voltage Stabiliser

ITT Semiconductor

A voltage stabiliser for varicap diodes. Stabilised voltage 33V ±1V. Pin 1 is connected to case.

Specification:

Temperature coefficient: -2.3mV/°C.
 Supply current: 5mA.
 Differential internal resistance: 9Ω.
 Supply voltage must be greater than 34V. In circuit R1 is equal to the supply voltage minus 33V divided by 0.005, in ohms. E.g. for supply V = 40V, R1 = 1k5, R2 = 22Ω, C1 = Ceramic 1000pF, C2 = 4.7µF 63V.

Order Code	Type	Price each
UF29G	ZTK33B	61p

LM334N Adjustable Current Source

SGS-Thomson

This IC in a TO92 package is a 3-terminal adjustable current source with a 10,000 to 1 range in operating current, excellent current regulation and a wide dynamic voltage regulation of 1V to 40V. Current is established with one resistor connected between pins 1 (R) and 3 (V), and no other parts are required. The current is equal to 0.0677V divided by the resistor in ohms (i.e. for 1mA, R = 68Ω) at 25°C. Currents may be set in the range 1µA to 10mA and regulation is 0.02% per volt. Initial current accuracy is ±3% typical. Reverse voltages of up to 20V will draw only a few microamps allowing the device to act as a rectifier and current source in AC applications. The current is also directly proportional to the temperature at the rate +0.33% per °C. Zero drift operation can be obtained by adding one resistor and one diode. Applications include bias networks, surge protection, low power reference, ramp generation, LED driver, and temperature sensing.

TLE2425CLP Precision Virtual Ground

Texas Instruments

Comprising a high performance precision op amp and precision micropower voltage reference, this IC eliminates the separate resistors, capacitors, op amps, and voltage references that have typically been used to provide the reference voltage in signal-conditioning circuits to terminate signal grounds and in interfacing A/D and D/A converters. The IC gives increased dynamic signal range, improved signal-to-noise ratio, lower distortion and improved signal accuracy. Both input and load regulation exceed 12-bits of accuracy on a single 5V system.

View from above

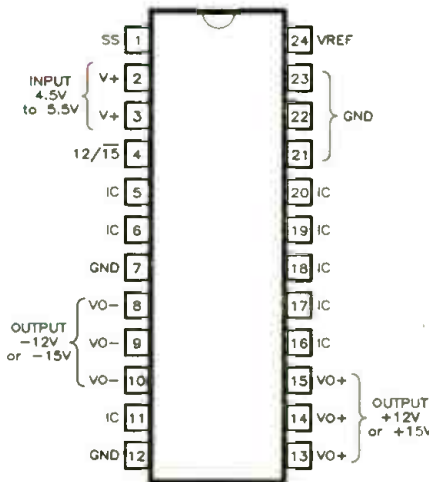

Specification (typical at V_{IN} = 5V, 25°C)

Input voltage: 4V to 40V
 Output voltage: 2.5V ±0.8%
 Output current: 20mA sink and source
 Bias current: 170µA
 Input regulation: 1.5µV/V
 Output impedance: 0.0075Ω
 Output regulation source: 45µV (0 to -10mA), 150µV (0 to -20mA), 15µV (0 to +10mA), 65µV (0 to +20mA)
 Sink: 55mA sink, -50mA source
 Short circuit output current: 80dB
 Ripple rejection: 80dB

GR12N	TLE2425CLP	£1.75

MAX1743/DC-DC Converter

Maxim

The MAX1743 converts +5V to ±12V or ±15V with no external components required. It supplies 125mA at ±12V or 100mA at ±15V. Pin strapping selects either ±12V or ±15V operation. If pin 4 is connected to pin 3 (+V) 12V is selected, otherwise if it is connected to 0V then 15V is selected. The device

regulates both its positive and negative outputs independently to within ±4% over all specified conditions of line voltage, load current and temperature. On-chip cycle-by-cycle current sensing, soft-start and under-voltage lock-out ensure reliable operation.

The device is encapsulated in a standard 24-pin DIL package.

Specification

Input voltage range: 4.5 to 5.5V
 Output voltage: ±11.52 to ±12.48V or ±14.55 to ±15.45V @ 25°C
 Device supply current: <30mA
 Under-voltage lock-out: 3.8V min. to 4.2V max.
 Internal oscillator frequency: 200kHz
 Line regulation: 0.1%
 Load regulation: 0.5%
 Output ripple: 0.3%

Order Code	Type	Price each
AY35Q	MAX1743	£39.99

MAX665

Maxim

The MAX665 charge-pump inverter converts a +1.5V to +8V input to a corresponding -1.5V to -8V output. Using only two low-cost capacitors to produce 100mA, the MAX665 replaces switching regulators, eliminating inductors and their associated cost, size and EMI. Greater than 90% efficiency over most of its load-current range, combined with a 200µA typical operating current provides ideal performance for both battery-powered and PCB level voltage conversion applications. It can also double the output of an input power supply or battery, providing +9.35V at 100mA from a +5V input. A frequency control pin (FC) selects either 10kHz or 45kHz operation to optimise capacitor size and quiescent current. The oscillator frequency can also be adjusted with an external capacitor or driven with an external clock. The MAX665 is encapsulated in an 8-pin DIL package.

Order Code	Type	Price each
AY39N	MAX665	£7.99

SI7660CJ Voltage Converter

Siliconix

A voltage converter that will provide a negative voltage output numerically equal to the positive voltage input in the range 1.5V to 10V. Pin 6 should be tied to ground for supply voltages below 3.5V and for supply voltages in excess of 6.5V a diode should be connected in

series with the output. The output is like an ideal voltage source in series with 70Ω so for a load current of -10mA and a supply voltage of $+5\text{V}$, the output voltage will be -4.3V .

Simple Negative Converter

Specification

Supply current ($R_L = \infty$):	170µA
Supply voltage:	1.5V to 10V
Power dissipation:	300mW max
Max load current:	$\frac{V - \text{Min } V_{\text{out}}}{70} < 40\text{mA}$

Order Code	Type	Price each
YY75S	SI7660CJ	£1.99

MAX680CPA Voltage Doubler

Maxim

A voltage converter that can provide $\pm 10\text{V}$ outputs from a single $+5\text{V}$ supply or $\pm 6\text{V}$ outputs from a $+3\text{V}$ lithium battery. The surrounding circuit requires just four low cost capacitors to provide positive and negative output voltages with both numerically equal to double the supply voltage. Output currents up to 10mA simultaneously are possible although the output voltage will be reduced as the source impedance is around 150Ω for V_+ and 90Ω for V_- . All four capacitors can be PC Elect $22\mu\text{F}$ 25V or Minelect $22\mu\text{F}$ 16V for space saving.

Positive and Negative Converter

The following equations show how to calculate the output voltage for different output currents and as an example, the values are shown if the supply voltage is $+5\text{V}$ and 10mA is drawn from both outputs.

$$V_{\text{DROPP-}} = I_{\text{L-}} \times R_{\text{S-}} = 0.01 \times 90 = 0.9\text{V}$$

$$V_{\text{DROPP+}} = (I_{\text{L+}} + I_{\text{L-}}) \times R_{\text{S+}} = (0.01 + 0.01) \times 150 = 3\text{V}$$

$$V_+ = 2V_{\text{S}} - V_{\text{DROPP+}} = (2 \times 5) - 3 = 7\text{V}$$

$$V_- = -(2V_{\text{S}} - V_{\text{DROPP+}} - V_{\text{DROPP-}}) = -((2 \times 5) - 3 - 0.9) = -6.1\text{V}$$

The output resistance can be reduced by paralleling devices (i.e. pins 4,5,6 and 8 are commoned). The effective output resistance is then 150Ω divided by the number of devices. Each device needs its own C1 and C2, but all can share a single set of C3 and C4.

Specification (typical 25°C)

Supply voltage:	2V to 6V
Supply current:	0.5mA ($V_{\text{S}} = 3\text{V}$), 1mA ($V_{\text{S}} = 5\text{V}$)

Positive output source resistance: 150Ω
 Negative output source resistance: 90Ω
 Oscillator frequency: 8kHz
 Power efficiency: 85%

ICL7673CPA Automatic Battery Back-up Switch

Harris

An 8-pin DIL IC designed to simplify the switching between two power supplies, main and battery back-up. Logic outputs are provided that can be used to indicate which supply is connected, and can also be used to increase the power switching capability of the circuit by driving external PNP transistors.

Characteristics

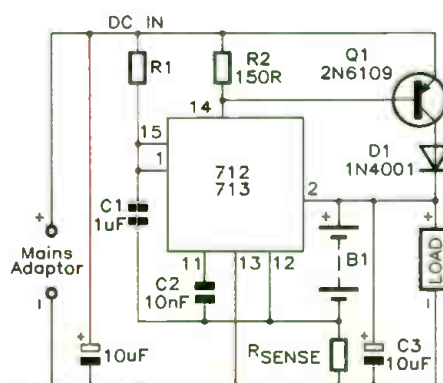

Input voltage:	2.5V to 15V
Quiescent supply current:	$1.5\mu\text{A}$
Switch resistance:	$8\Omega (V_{\text{S}} = 5\text{V}, I = 15\text{mA})$

Order Code	Type	Price each
UH36P	ICL7673CPA	£1.49

MAX712/3 Fast Charge Controllers

Maxim

The MAX712 and MAX713 are nickel cadmium (Ni-Cd) battery fast charge controllers which will fast charge batteries from a DC source at least 1V higher than the maximum battery voltage. 1 to 16 series cells can be charged at rates up to 4C . A voltage-slope detecting analogue-to-digital converter, timer, and temperature window comparator determine charge completion. The MAX712 or 713 are powered by the DC source via an on-chip $+5\text{V}$ shunt regulator, and draw a maximum of $5\mu\text{A}$ from the battery when not charging. A low-side current-sense resistor allows the battery charge current to be regulated while still supplying the power to the battery's load.

The MAX712 terminates fast charge by detecting zero voltage slope, while the MAX713 uses a negative voltage-slope detection scheme. Both devices are identically packaged as 16-pin DIL and share the same pin numbering and basic functions. An external power PNP transistor, blocking diode, three resistors and three capacitors are all the extra components required.

Order Code	Type	Price each
AY36P	MAX712	£5.99
AY37S	MAX713	£5.99

U2400B Battery Charger

Telefunken

A Ni-Cd battery charging and control device in a single 16-pin DIL package which particularly supports the fast charging of Ni-Cd cells. One of three charging times can be selected simply by connecting pin 13 to supply $+V$ for a 12 hour pulsed charge, to 0V for a 1 hour continuous charge, or left floating for a fast 0.5 hour charge. Before charging begins the device first discharges the cell completely to preserve long life for the cell. A central control block monitors time, temperature and voltage during charging, and switches the output off when the specified charge is attained. It includes an LED signal lamp driver and when switched on, a red LED connected between the display output pin 9 and $+V$

(via 330Ω) is lit if no battery is connected. When a battery is inserted, presenting a minimum voltage of 180mV approx. at pin 4 (after a potential divider as appropriate for multiple cells), the predischage phase is started with a 2 second delay. The positive going discharge output at pin 10 is activated for switching an NPN discharge transistor, accompanied by the red LED flashing. The discharge procedure is stopped when a voltage at pin 6 falls below 530mV . The charge phase follows with an output from pin 12 indicated by the flashing of a green LED between pin 9 and 0V (with 330Ω resistor). Battery temperature can be monitored by a thermistor based sensing network connected to pin 5. The display, charge and discharge outputs will be made inactive by overtemperature or overvoltage, and the timer clock interrupted during all three phases and in each mode, when the limits at pins 4 or 5 are exceeded.

Specification

Supply voltage range:	5 to 25V DC
Current consumption:	1.5 to 5mA without load
Discharge output drive current:	100mA min.
Charge output drive current:	100mA min.
Reference voltage output (pin 7):	3V nominal
Oscillator frequency:	200Hz with 15nF between pin 3 and 0V , and $430\text{k}\Omega$ between pins 3 and 7
Charge times, 200Hz oscillator:	12hrs, 1hr or 30m (set by pin 13)
LED (status) drive current:	15mA max. (8mA min.)

Order Code	Type	Price each
AH40T	U2400B	£3.49

U2401B Battery Charger

Telefunken

A Ni-Cd battery charger control IC in a single 8-pin DIL package which features charging time selection performed through the connection of pin 1 to either supply +V, 0V or floating. An internal divide by 32768 divider provides the fundamental time period from the internal oscillator, with extra divisions being added depending on pin 1. If pin 1 is connected to +V the fundamental time n is further divided by 60, if left floating n is divided by 36, and if connected to 0V the time is n (divided by 1). The clock oscillator frequency is set by a single capacitor between pins 5 and 6. The clock frequency can be derived by:

$$f_{osc}(Hz) \approx \frac{10^4}{2C_x(nF)}$$

Or the time delay T_d , and period duration, T , in seconds by:

$$t_d(s) \approx \frac{2 \times C_x(nF)}{10^4} K$$

Where $C_x \geq 100pF$ and $K = 32768 \times 1, 36$ or 60 .

The output from pin 3 is short circuit protected and limited to a current of typically 150mA and includes a Zener diode. The output pulse width is 1024 times the period duration, T , of the oscillator frequency. Pin 4 can be used to override the timer to reset it or start again. If open circuit (floating) the charger is enabled. If connected to +V the timer is reset and the output pulse is stopped, and if connected to 0V, the maximum time duration is $16 \times T$ of the oscillator frequency.

An internal power-up monitor allows the circuit to operate at up to 3.6V, but a 4.5V minimum supply is recommended against voltage fluctuations. It has an internal voltage limitation of typically 15V which allows +12V to be directly connected to the supply pin, although it is recommended that a series resistor be included with a decoupling capacitor.

Specification

DC supply current	
at 5V:	1.2mA
at 12V:	2mA
during output pulse	
5V:	2.6mA min.
during output pulse	
12V:	7.5mA min.
Minimum supply voltage:	4.5V
Supply voltage limitation:	13.2V min. to 16.3V max.

AH41U	U2401B	£1.36

ULQ2436M Countdown Power Timer

Allegro

A rugged, long duration countdown timer specifically designed to operate in an automotive or industrial environment. An internal RC oscillator is used to drive a digital countdown circuit for timing periods of typically $2\frac{1}{2}$ to 5 minutes, multiplying the oscillator period by 4064. Internal logic can automatically cause the time-out to be halved for successive time-outs. I²L technology is used for the countdown and logic circuitry, and conventional linear bipolar

devices for the oscillator and output functions. This combination results in a very economical power timer suitable for a wide range of applications. The Darlington connected, open collector output driver is capable of switching loads up to 400mA and is on during the timing period. The device is encapsulated in a standard 8-pin DIL package.

Specification

Regulator voltage:	8V
Output switch saturation voltage:	<2.5V @ $I_C = 400mA$
Output off leakage current:	<100µA @ $V_{CC} = 12V$
Toggle input threshold voltage:	1 to 5V with series 10kΩ resistor
Oscillator tolerance:	3%
Initial time-out count:	4064
Subsequent count:	2032

The timer has an integral Zener diode regulator between the supply pin 5 and ground, hence a current limiting resistor must be used at the supply input and the current must not exceed 15mA. A decoupling capacitor is also necessary between pins 5 and 2. An external resistor in the range 200kΩ to 2MΩ and an external capacitor in the range 1nF to 1µF determine the frequency of the internal oscillator with a cycle period of nominally $R_1 C_T$, giving an overall countdown time period of $t = 4064 \times R_1 C_T$. With the MODE SELECT pin 8 grounded, the first countdown will run for the initial time, and all subsequent counts for half of the initial time. This sequence will be repeated from the initial value again each time the supply is interrupted. With MODE SELECT connected to pin 5, the timer will repeat the full initial count every time it is activated. The TOGGLE input (pin 4) toggles the timer between the ON and OFF states. If the timer is OFF, the oscillator and countdown is restarted on the falling edge of TOGGLE. If the timer is ON and counting, it will be turned OFF on the rising edge of TOGGLE. Internal debounce is included.

AD584JN Pin Programmable Precision Voltage Reference

Analog Devices

A precision voltage reference device that is pin-programmable to give four outputs: 10.000V, 7.500V, 5.000V and 2.500V. Other output voltages that can be above, between or below the four standard voltages are available by using external resistors. Programming (power is applied to pins 8 and 4 and output is between pins 1 and 4):

- 10.0V: All other pins open
- 7.5V: Join pins 2 and 3
- 5.0V: Join pin 2 to the output pin 1
- 2.5V: Join pin 3 to the output pin 1

By buffering each voltage programming pin with a unity gain non-inverting op-amp, multiple outputs are available.

The strobe pin can be used to turn the device off and on. When used as a power supply reference, the supply can be switched off with a single, low power signal. The output is configured to sink or source currents, so small reverse currents can be tolerated in circuits using the device without damage to the reference, and without disturbing the 10V, 7.5V and 5.0V outputs. Housed in an 8-pin DIP package.

Specification	
Output voltage tolerance	
10.000V:	±30mV maximum

RC4190N Micropower Switching Regulator

Raytheon

A versatile low power switch mode regulator for DC to DC conversions with load powers up to 400mW or 10W with external power transistor. Applications include on-card circuits where a non-standard voltage is needed or in battery operated instruments where the IC can be used to extend battery life. In the Step-up Regulator circuit, the output will deliver 15V at 25mA from a 5V supply. In the Battery Life

Extender circuit, the output falls to 7V as the battery runs down and is then held at 7V until the battery voltage reaches 2.2V, at which time pin 8 goes low and LED1 will light until the battery voltage reaches 1.8V.

Specification (typical at $V_s = 6V$)	
Supply voltage:	2.2V to 24V
Reference voltage:	1.31V
Switch current:	200mA
Supply current:	215μA
Efficiency:	85%

L78S40 Switching Regulator

National Semiconductor

A versatile switching regulator subsystem consisting of a temperature-compensated voltage reference, an oscillator whose duty-cycle is controllable and having an active current limit circuit, an error amplifier, a high current, high voltage output switch, a power diode and an uncommitted op-amp. It may be used to generate higher or lower regulated voltage supplies or even ones of opposite polarity from the power rail available. The output is adjustable from 1.3V to 40V and will

directly supply currents up to 1.5A or drive external transistors for larger currents.

Characteristics (typical)

Supply voltage:	2.5V to 40V
Supply current:	1.8mA @ $V_{in} = 5V$ 2.3mA @ $V_{in} = 40V$
Op-amp supply current:	2.2mA max @ $V_{in} = 5V$ 3.2mA max @ $V_{in} = 40V$
Reference voltage:	1.245V
V_{REF} line regulation:	0.04mV/V
V_{REF} load regulation:	0.2mV/mA
Oscillator voltage swing:	0.5V

L387A Voltage Regulator

SGS-Thomson

The L387A is a very low drop voltage regulator in a 5-pin TO220 package specially designed to provide stabilised 5V supplies in consumer and industrial applications. Due to its very low input/output voltage drop, this device is very useful in battery powered equipment, reducing consumption and prolonging battery life. A reset output makes the L387A particularly suitable for microprocessor systems. This output provides a reset signal when power is applied, after an external programmable delay, and goes low when power is removed, inhibiting the microprocessor. Hysteresis is built into the response to the reset delay capacitor which raises the immunity to ground noise.

Specification

Output voltage:	5V nominal (4.8 min. to 5.2 max.)
Output current:	500mA max.
Maximum operating input voltage:	26V
Line regulation:	5mV @ $V_{in} = 6$ to 26V, $I_{out} = 5mA$
Load regulation:	15mV @ $I_{out} = 50$ to 500mA
Dropout voltage:	0.6 @ $I_{out} = 500mA$
Quiescent current:	100mA @ $I_{out} = 500mA$, $V_{in} = 6V$
Supply voltage rejection:	60dB @ $I_{out} = 350mA$ into 100µF
Output short-circuit current:	1.2A
Reset output low voltage:	0.8V max.
Reset output leakage current:	50µA
Reset delay time:	25ms, $C_d = 100nF$

Order Code	Type	Price each
AH85G	L387A	£2.99

L4904A

SGS-Thomson

The L4904A is a monolithic, low voltage drop, dual 5V regulator designed mainly for supplying microprocessor systems. Reset and data save functions during switch on and switch off can be used to generate appropriate signals for the microprocessor.

In the case of power supplies for such systems, it is necessary to provide power continuously to avoid loss of data in volatile memories and time-of-day clocks, or to save data when the primary supply is removed. The L4904A makes it very easy to supply such circuits as it provides two voltage regulators, both of which are high precision 5V types, with separate inputs, plus a reset output for the data save function.

Output V_{O1} features a 5V internal reference without the need for a voltage divider between the output and the error amplifier, a very low drop series regulator element utilising current mirrors, and permits high output impedance and then very low leakage current even in power-down conditions. This output may then be used to supply circuits continuously, such as volatile RAMs, allowing the use of a back-up battery. It also features low current consumption (0.6mA typical) to minimise battery drain.

The V_{O2} output can supply other non-essential 5V circuits which may be powered down when the system is inactive, or that must be powered down to prevent incorrect operation for supply voltages below the minimum value.

The reset output can be used as a 'power-down interrupt', permitting RAM access only in correct power conditions, or as a 'back-up enable' to transfer data into a non-volatile shadow memory when the supply is interrupted.

Specification

Input voltage range:	>6V to 20V max.
Input threshold voltage:	6.4V
Output voltage 1:	4.95 to 5.15V
Output current 1:	50mA
Output leakage current 1:	1µA
Output 1 drop-out voltage:	0.7V
Output voltage 2, high:	5V
Output voltage 2, low:	0.1V
Output current 2:	100mA
Line regulation, 1 & 2:	5 to 50mV
Load regulation 1:	5 to 20mV
Load regulation 2:	10 to 50mV
Supply voltage rejection:	84dB
Quiescent current 1:	0.6mA
Total quiescent current:	4.5mA
Reset threshold voltage:	4.9V
Reset pulse delay:	11ms max.
Thermal shutdown:	@ 150°C

AH86T	L4904 A	£1.75

LM2930A

SGS-Thomson

A very low voltage drop 5V regulator which features an output current rating of 400mA with a dropout voltage of 0.4V typical. At 150mA the dropout voltage falls to 0.2V. Moreover, the device includes a ±40V input overvoltage protection, plus reverse polarity protection, thermal shutdown and foldback current limiting. It is designed primarily for automotive applications and protects both itself and the load from load dump field decays, transients and incorrect battery connection. The low voltage drop of this device allows correct operation even during starting, when the battery voltage can fall below 6V. The LM2930A is encapsulated in a TO220 3-pin package.

An output decoupling capacitor of 100µF minimum is required for stability, not allowing for actual value variations (larger values are preferred). However, output capacitors may be increased in size to any desired value above the minimum; one possible advantage of this would be to maintain the output voltages during brief conditions of negative input transients that might be characteristic of a particular system.

Specification

Maximum DC input voltage:	35V
Maximum reverse input voltage:	-18V
Load dump:	+40V for >5ms
Field decay:	-40V for >5ms
Output voltage:	5V
Line regulation:	5mV (50mV max.)
Load regulation:	15mV
Output impedance:	200mΩ
Quiescent current:	22mA, I _{out} = 150mA
Output noise voltage:	140μVrms
Long term stability:	20mV/1000hrs
Supply voltage rejection:	60dB
Dropout voltage:	0.4V @ I _{out} = 400mA
Output short circuit current:	230mA (foldback active)

LM2574/75/76 Step-Down Voltage Regulators

National Semiconductor

These three families of devices provide step-down regulation in a range of output currents to suit a great number of power supply and regulation applications. Providing 0.5A, 1.0A and 3.0A respectively, a realistic balance between cost and output power can be achieved. All devices are supplied in 5-pin straight lead TO220 packages and offer a high-efficiency replacement for popular three-terminal linear regulators. One of the main features of these devices is that they are very efficient and therefore most applications need no form of heatsink, as dissipated power is very low. The 2574 series comprises a single 5V fixed output device, while the 2575 series consists of a 5V, 12V, 15V and adjustable version (between ≈1.23V and 37V from a 40V supply). The 2576 series is essentially identical to the 2575 series except that it can deliver a higher output current of 3A. These devices also have a TTL active low control line so that the regulators may be switched between a low current 'Standby' mode, and the 'On' state. If remote control is not required the appropriate pin needs to be tied to ground. Only four other components are necessary in order to produce a working design, using widely available values of inductor.

LM2577 Step-Up Voltage Regulator

National Semiconductor

The 2577T is a step-up regulator device finding many applications in flyback and forward converter switching regulation. A typical arrangement requires only a few external components to realise a working design. Using existing value inductors and flyback transformers simplifies circuit design. Output currents up to 3A are possible with this device, from a wide range of input voltages (3-5V to 40V). Output voltages up to ≈60V can be developed, depending of the output current required. Step-up is achieved using the internal 52kHz fixed frequency oscillator and developing a voltage across an inductor or transformer. The current from the device charges the output capacitor and feedback maintains it at a constant voltage. A load can then be connected to the output, which is regulated to the desired voltage. Other features of the device are a soft start mode, internal protection against overcurrent limit, thermal limiting and undervoltage lock-out. Applications include simple boost regulators, flyback and forward regulators, and multiple output regulators.

FOR TOP QUALITY & VALUE!

LM2577T-12 Step-Up Voltage Regulator

National Semiconductor

The LM2577 is a monolithic IC that provides all the power and control functions for a step-up converter deriving 12V DC from a 5V DC supply in one package. It requires a minimum number of components to operate and can even form the basis of simple flyback and forward converter switching power supplies. An NPN switching transistor capable of up to 3A is provided on chip with its associated protection circuitry, comprising current and thermal limiting and under-voltage lock-out. The load inductor is directly connected to its collector at pin 4. Other features include a fixed, internal 52kHz oscillator requiring no external timing components, a soft-start mode to reduce in-rush current during start-up, and current mode control for improved rejection of input voltage and output load transients. Case style is 5-pin TO220.

Specification

Input voltage:	5V to 10V DC (45V max.)
Line regulation:	20mV
Output voltage:	12V fixed
Load regulation:	20mV
Efficiency:	80%
Under-voltage lock-out level:	2.9V
NPN switch V _{CE} max.:	65V
NPN switch I _C max.:	3A
Switch current limit:	4.5A (flyback or forward converter modes only)
Oscillator frequency:	52kHz

GX47B	LM2577T-12	£6.75

L4962/A Switching Regulator

SGS-Thomson

The L4962 is a monolithic stepdown switching regulator providing output voltages from 5.1V to 40V and delivering up to 1.5A. The regulation loop consists of a sawtooth oscillator, error amplifier, comparator and an output stage. An error signal is produced by comparing the output voltage with a precise 5.1V on-chip reference. This is then compared with the sawtooth signal to generate the fixed frequency, pulse-width modulated pulses which drive the output stage.

The gain and frequency stability of the loop can be adjusted by an external RC network connected to pin 11. Closing the loop directly gives an output voltage of 5.1V. Higher voltages are obtained by inserting a voltage divider.

Continued on next page.

Continued from previous page.

Output overcurrents are prevented by the soft-start function. The error amplifier output is initially clamped by the external capacitor at pin 15 being allowed to rise linearly. Output overload protection is provided in the form of a current limiter. The load current is sensed by an internal metal resistor connected to a comparator. When the load current is exceeded this sets a flip-flop to disable the output stage and discharge the soft-start capacitor. The flip-flop is reset when the soft-start voltage has fallen to 0.4V. Continuous overload will re-trip the flip-flop, a safe short-circuit current value being maintained by the dead-time period of the soft-start network. A thermal overload circuit disables circuit operation when the junction temperature reaches approximately 150°C.

Specification

Input voltage range: 9 to 46V
 Output voltage range: 5.1 to 40V
 Line regulation: 15mV @ 5.1V out, 1A
 Load regulation: 8mV (20mV max.) @ 5.1V out, 0.5 to 1.5A

Internal reference voltage: 5.1V
 Dropout voltage: 1.5V, $I_{OUT} = 1A$
 Maximum operating load current: 1.5A
 Current limiting threshold: 2 to 3.3A max.
 Efficiency: 70% @ 100kHz
 Supply voltage ripple rejection: 56dB
 Switching frequency range: 85kHz to 115kHz

AH74R	L4962 A	£2.80

L4975A Switching Regulator

SGS-Thomson

A 5A stepdown switching regulator operating in continuous mode manufactured in a new BCD technology allowing the integration of isolated, vertical DMOS power transistors with mixed CMOS/bipolar transistors. The device can deliver 5A at an output voltage adjustable from 5.1V to 40V and contains diagnostic and control functions that make it particularly suitable for microprocessor based systems. Integrated functions include a reference voltage of 5.1V $\pm 2\%$, soft-start, under-voltage lockout, an oscillator with feed-forward control, pulse by pulse current limit, thermal shutdown and a reset and power failure circuit. The latter provides an output signal for a microprocessor indicating the status of the system.

Device turn-on is around 11V with a typical 1V hysteresis; this threshold ensures the correct driving voltage for the DMOS gate, developed from an internal 12V source. The driving circuit is able to source and sink peak currents of around 0.5A to the gate of the DMOS transistor, resulting in typical current switching times of 50ns. Due to the fast commutation switching frequencies up to 500kHz are possible.

The PWM control loop comprises a sawtooth oscillator, an error amplifier, comparator, latch and

the output stage. Fixed frequency pulses of variable width are generated from the sawtooth waveform and an error signal derived by comparing the output with the 5.1V reference. The PWM latch eliminates multiple pulsing within a period even in noisy environments. Gain and stability of the loop can be adjusted by an external RC network. Voltage feed-forward is added to the oscillator maintaining superior line regulation over a wide input voltage range. A closed loop gives an output equal to the 5.1V reference; higher voltages are obtained by inserting a voltage divider.

Output over-currents are prevented at turn-on by the soft-start function, and output overload protection is provided by a current limiter which, if the output exceeds the threshold, sets a flip-flop to turn off the power DMOS. The next clock pulse, from an internal 40kHz oscillator, resets the flip-flop which will be re-tripped again if the overload still exists at the next gating pulse. This method ensures a constant current output during an overload or short-circuit condition, limited to a switching frequency of 40kHz. The reset and power failure circuitry generates an output when the supply voltage exceeds a threshold set by an external voltage divider, and the reset can have a delay time determined by an external capacitor. The reset output is open-collector active-low, and goes low immediately the output falls below 5V, or the input voltage falls below the threshold. Thermal protection disables circuit operation when the junction temperature reaches approximately 150°C.

Specification

Input voltage range: 15V to 50V max.
 Output voltage range: 5V to 40V

L4960 2.5A Power Switching Regulator

SGS-Thomson

A switch-mode voltage regulator capable of delivering between 5.1V and 40V at 2.5A maximum. The device features soft start, internal current limiting and thermal shutdown. Very few external components are required and because of the very high switching frequencies a reduction in the size and cost of them is achieved. The device has a close tolerance on-chip reference $\pm 2\%$. The unregulated voltage on pin 1 should be designed to fall to about 4V above the output voltage at maximum current. Under these conditions a heatsink of 6°C/W is required.

Specification

L296P 4A Power Switching Regulator

SGS-Thomson

A switch-mode voltage regulator capable of delivering between 5.1V and 40V at 4A maximum. The device features soft start, programmable current limiting, thermal protection, remote inhibit, a reset output for microprocessors and a PWM comparator input for synchronisation in multichip configurations.

Very few external components are required and because of the very high switching frequencies a reduction in the size and cost of them is achieved. The device has a close tolerance on-chip reference $\pm 2\%$. A voltage sense input and SCR drive output are provided for optional crowbar overvoltage protection with an external SCR. The unregulated voltage on pin 1 should be designed to fall to about 4V above the output voltage at maximum current. Under these conditions a heatsink of 4°C/W is required. The crowbar input triggers the SCR when V_{out} exceeds nominal by 20%. Pin 4 can be left unconnected to provide normal current limiting, but this can be lowered by connecting a resistor between here and ground, and for example a 33k resistor sets the current limit to 2.5A. The sync input allows several L296's to work together. Simply link all the pin 7's together and omit the oscillator RC network on all but one device. A logic high level on pin 6 disables the L296. The open collector reset output generates an output signal when

the supply voltage exceeds a threshold and goes low immediately the supply voltage falls below the threshold generating a reset signal for microprocessors. If reset is not used, omit R6.

The values of some of the components depend on the output voltage according to the table below:

V_{out}	R1	R6	R7
5V	82k	100 Ω	Short circuit
9V	160k	180 Ω	3k6
12V	220k	240 Ω	6k2
15V	270k	300 Ω	9k1
18V	330k	360 Ω	12k
24V	470k	470 Ω	18k
30V	560k	620 Ω	23k(11k + 12k)

Specification

Output voltage range:	5.1V to 40V
Input voltage range:	9V to 46V
Line regulation:	15mV
Load regulation:	15mV
Internal reference voltage:	5.1V \pm 0.1V
Dropout voltage:	2V
Maximum current:	4A
Current limit threshold:	<8A
Switching frequency:	100kHz
Pin 1 threshold voltage:	6V
Pin 15 source current:	100mA

For remote on-off a TTL level is needed on pin 6. A high on pin 6 disables the chip, but if not required, R4 can be omitted and pin 6 connected directly to ground. If the output voltage is set to 5V, then C6 can be omitted, but it is necessary for all other output voltages.

TL7702/5A Voltage Supply Supervisors

SGS-Thomson

Supply voltage supervisor ICs specifically designed for use as reset controllers in microcomputer and microprocessor systems. During power-up, the device tests the supply voltage and keeps both the active high and active low RESET outputs active as long as the supply voltage has not reached its nominal voltage value. Taking RESIN low has the same effect. To ensure that the microcomputer system has reset, the device then initiates an internal time delay that delays the return of the reset outputs to their inactive states. Since the time delay for most microcomputers and microprocessors is in the order of several machine cycles, the device internal time delay is determined by an external capacitor connected to the C_T input pin 3. Delay time, t_d , is found by: $t_d = 1.3 \times 10^4 \times C_T$, where C_T is in farads

and t_d in seconds. In addition, when the supply voltage drops below the nominal value, the outputs will be active until the supply voltage returns to the nominal value. An external capacitor (typically 100nF) must be connected to the REF output pin 1 to reduce the influence of fast transients in the supply voltage.

Three types are available; in TL7702ACP/A the sense input threshold is $+V_S - 1V$, or 6V, whichever is less, whereas for TL7705ACP/A the sense threshold is 10V, and the operating temperature range of both is 0 to 70 $^\circ\text{C}$, and both are packaged as 8-pin DIL. The TL7705ACD1/A is as TL7705ACP/A but packaged as 8-pin SO8 (surface mount).

HV3-2405-5 Single Chip Power Supply

Harris

A single chip power supply that can supply up to 50mA at 5V to 24V regulated DC when the input is anything between 28V and 264V AC rms. Thus the unit may be connected directly to the mains (via a current limit resistor) anywhere in the world and will supply the same regulated output. The IC eliminates the need for a mains transformer, bridge rectifier and separate voltage regulator. Note however, that if mains isolation is required, an isolation transformer (LW33L) should be used.

The output voltage is +5V regulated if pins 5 and 6 are linked. Output voltages from 5V up to 24V are possible by modifying the output circuit as shown in Figures 1, 2 and 3. Figure 1 is the simplest circuit, where $R3 = 1000(V_{\text{OUT}} - 5)$. E.g., for 12V output, $R3 = 1000(12 - 5) = 7k\Omega$ (2k7 and 4k3 in series). The circuit of Figure 2 will improve the accuracy of the output voltage. In this case R5 should be 1k Ω and

$$R4 = \frac{1000(V_{\text{OUT}} - 5)}{6}$$

E.g., for 12V output,

$$R3 = \frac{1000(12.2 - 5)}{6} = \frac{7200}{6} = 1k2$$

Figure 3 shows how to set the output voltage using a zener diode. In this case the output voltage is 5V plus the zener voltage. This circuit has the added advantage that 5V is also available at pin 5, but ensure that the total of the currents on pins 5 and 6 does not exceed 50mA, and note that the current from pin 5 flows through the zener, so be careful not to exceed the zener's power rating.

Specification

Input voltage range:	18V rms to 264 V rms
Input frequency range:	48Hz to 440Hz
Output current:	at least 50mA
Output voltage:	5V DC to 24V DC
Line and load regulation:	<5%

Typical for circuit shown $V_{\text{IN}} = 240V$ AC 50Hz, $V_{\text{OUT}} = +5V$ DC, $I_{\text{OUT}} = 50mA$, 25 $^\circ\text{C}$.
Output voltage: 5V $\pm 2\%$

Continued on next page.

Continued from previous page.

Output ripple:	22mV
Line regulation (80V rms to 264V rms):	10mA
Load regulation (5mA to 50mA):	<20mV
Output current:	50mA max
Short circuit current:	95mA
Dropout voltage (pin 2 to 6):	2.2V
Current into pin 5:	1mA

RC4195N ±15V Dual-Tracking Regulator

Raytheon

4195

A dual polarity tracking regulator designed to provide balanced positive and negative 15V output voltages at currents up to 100mA per rail. The IC is fully protected against short circuit and shuts down if the internal temperature exceeds 175°C. For operation from the mains only six additional components are required. A centre-tapped 15V mains transformer, a bridge rectifier, two 1000μF 25V capacitors (one for each input to earth) and two 10μF 25V capacitors (one on each output to earth). In use take care to ensure that the power dissipation in the IC does not exceed 600mW. Power dissipation = (input V - 15) × load current. Add both rails together. For instance with the components mentioned above the absolute max, current that could be drawn is 60mA per rail because with a 15V transformer the output of the bridge will be around 20V.

Electrical Characteristics

Line regulation:	2mV
Load regulation:	5mV
Output V temp stability:	0.005%/°C
Standby current drain:	+1.5mA

Input voltage range:	Min: 18V, Max 30V
Output voltage tracking:	+50mV
Ripple rejection:	75dB
Input/Output V differential:	Minimum 3V
Short-circuit current:	220mA
Output noise voltage:	60μV rms

Order Code	Type	Price each
XX02C	RC4195N	£1.94

RC4194N Dual Tracking Regulator

Raytheon

NEW

The RC4194 is a dual tracking voltage regulator giving balanced output voltages between ±50mV and ±35V, at an output current of ±200mA. Designed mainly for on-card regulation applications to eliminate problems of single point regulation. Other features include overcurrent shut-down, 3W power dissipation and simultaneous adjustment of both output rails from a single resistor. An ideal regulator for use with dual rail operation amplifiers.

LM723C Variable Voltage Regulator

National Semiconductor

Formulae for Various Output Voltages

Outputs from +2 to +7 Volts
(Figure 1)

$$V_{OUT} = \left[V_{REF} \times \frac{R_2}{R_1 + R_2} \right]$$

Outputs from +7 to +37 Volts
(Figures 2,4)

$$V_{OUT} = \left[V_{REF} \times \frac{R_1 + R_2}{R_2} \right]$$

Current Limiting

$$I_{LIMIT} = \frac{V_{SENSE}}{R_{SC}} \quad V_{SENSE} = 0.7V.$$

Outputs from -6 to -250 Volts
(Figure 3)

$$V_{OUT} = \left[\frac{V_{REF}}{2} \times \frac{R_1 + R_2}{R_2} \right]; R_3 = R_4$$

Figure 1

Basic Low Voltage Regulator

($V_{OUT} = 2V$ to $7V$)

$R_3 = (R_1 \times R_2) / (R_1 + R_2)$ for min temp drift

Figure 2

Basic High Voltage Regulator

($V_{OUT} = 7V$ to $37V$)

R_3 is as Fig. 1 but can be omitted

Figure 3

Negative Voltage Regulator

For metal can applications where V_Z is needed connect a 6.2V zener in series with V_{OUT}

YQ55K	0.5/1A Vareg -V PCB	£1.49

SUBSECTION 68 DRIVER & BUFFER IC's

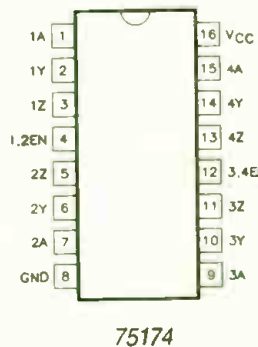

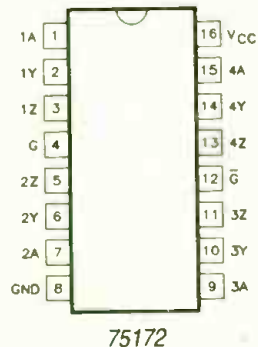

SN75172N & SN75174N

Quad Differential Line Drivers

Texas Instruments

A pair of quad differential line drivers with tri-state output, meeting EIA Standards RS-422-A and RS-485 and CCITT Recommendations V.11 and X.27. The devices have been optimised for balanced multipoint communications up to 4Mbps. Amongst their many features are positive and negative common-mode output voltage in the range of -7V to 12V, and therefore makes them ideal for supporting party-line applications in noisy environments. Both positive and negative current limiting are supported to guard against faulty conditions on the transmission bus line.

The 75172 supports both active low and active high enables, which can be used to control data flow out of the device as well as the tri-state capability. The 75174 device offers separate active high enables, one for inputs 1 & 2, and another for inputs 3 & 4. This means that each pair of inputs can be controlled totally independently of the other. Optimum performance is offered when used in conjunction with devices SN75173 & SN75175, both quad differential line receivers.

Specification

Supply voltage, V_{CC} : 4.75V to 5.25V, 5V typ
 High-level input voltage, V_{IH} : 2V
 Low-level input voltage, V_{IL} : 0.8V

Order Code	Type	Price each
AE05F	SN75172N	£2.89
AE06G	SN75174N	£2.89

SN75173 & SN75175 Quad Differential Line Receivers

Texas Instruments

A pair of quad line receivers with tri-state outputs, designed to meet the requirements of EIA Standards RS-422-A, RS-423-A, RS-485 and several CCITT recommendations. These devices are optimised for communications up to 10Mbps and perform optimally when used with devices SN75172 or SN75174, quad differential line drivers. The 75173 device has both active high and active low enables, which can be used to both control the flow of data out of the device and also its high impedance state. On the 75173, all the four receivers in the package share a common pair of control lines. In the 75175 device there are two active high enables, one controlling inputs 1 & 2, the other controlling inputs 3 & 4. This makes the 75175 more versatile in a control aspect, but removes the ability to control the device with positive and negative logic enables.

Specification

Supply voltage, V_{CC} : 4.75V to 5.25V, 5V typ
 High-level enable-input voltage, V_{IH} : 2V
 Low-level enable-input voltage, V_{IL} : 0.8V
 Common-mode input voltage, V_{IC} : ±12V
 Differential input voltage, V_{ID} : ±12V
 High-level output current, I_{OH} : -400µA
 Low-level output current, I_{OL} : 16mA
 Ambient operating temperature: 0°C to 70°C

Order Code	Type	Price each
AE07H	SN75173N	£2.89
AE08J	SN75175N	£3.29

SN75176B & SN75LBC176

Bidirectional Transceiver

NEW!

Texas Instruments

Two bidirectional transceiver ICs meeting with EIA Standards RS-422/RS-485/CCITT V.11/CCITT V.27 and EIA Standards RS-485/ISO 8482:1987(E) respectively. Designed for bidirectional data communications on balanced multipoint transmission lines. Each device combines a tri-state differential line driver and differential input line receiver operating from a single 5V supply. The driver and receiver have active-high and active-low enables, respectively, which can be connected together to act as a direction control. The driver and receiver are connected in such a way as to minimise bus loading when the driver is disabled or $V_{CC}=0V$. A wide positive and negative common-mode range makes these devices ideal for party-line applications.

The 75LBC176 device offers the same features with high-speed low-power operation and a very low disabled supply current of $200\mu A$. Both devices offer thermal shutdown protection, driver positive and negative current limiting, operate from a single 5V supply and have a driver output capacity of $\pm 60mA$.

SN75LBC176

Specification

Supply voltage, V_{CC} : 4.75V to 5.25V, 5V typ
 Voltage at any bus terminal (separately or common-mode):
 V_I : 12V
 V_{IC} : -7V
 High-level input voltage, V_{IH} : 2V
 Low-level input voltage, V_{IL} : 0.8V
 Differential input voltage, V_{ID} : $\pm 12V$
 High-level output current, I_{OH} :
 Driver: -60mA
 Receiver: -400 μA
 Low-level output current, I_{OL} :
 Driver: 60mA
 Receiver: 8mA
 Operating temperature, T_A : 0°C to 70°C

MC1488P Quad RS232 Line Driver

SGS-Thomson

A quad line driver IC which converts standard TTL levels through one stage of inversion to output levels which meet EIA standard RS232C and CCITT standard V24. The package contains three NAND functions and one inverter.

1488

Characteristics

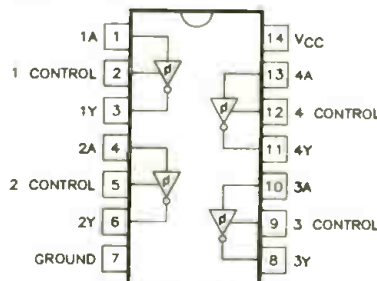

Supply voltage (max): +15V, -15V
 Input voltage (min/max): -15V, +7V
 Output voltage (max): $\pm 15V$
 Power dissipation (max): 800mW
 Input current ($V_{in} = 0V$): -1mA
 ($V_{in} = +5V$): 5mA
 Output voltage ($V_{in} = 0.8V$, $R_L = 3K$, $V_S = \pm 9V$): +7V
 ($V_S = \pm 13.2V$): +10.5V
 ($V_S = \pm 9V$): -6.8V
 ($V_S = \pm 13.2V$): -10.5V
 Short-circuit current ($V_{out} = 0V$, $V_{in} = 0.8V$): -10mA
 ($V_{in} = 1.9V$): 10mA
 Output resistance: 300 Ω

Order Code	Type	Price each
YH89W	MC1488P	48p

MC1489P Quad RS232 Line Receiver

SGS-Thomson

A quad line receiver IC designed to interface data terminal equipment with data communications equipment. The devices meet the EIA standard RS232C specification.

1489

Characteristics (typical)

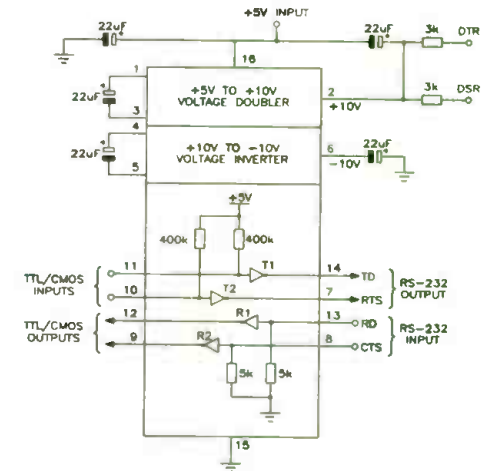

Supply voltage (max): 10V (5V typical)
 Input voltage (max): $\pm 30V$
 Output load current (max): 20mA
 Power dissipation (max): 800mW
 Input high threshold voltage ($V_{out} < 0.45V$, $I_{out} = 10mA$): 1V min, 1.5V max
 Input low threshold voltage ($V_{out} < 2.5V$, $I_{out} = -0.5mA$): 0.75V min, 1.25V max
 Input current ($V_{in} = +25V$): +5.6mA
 ($V_{in} = -25V$): -5.6mA
 ($V_{in} = +3V$): +0.53mA
 ($V_{in} = -3V$): -0.53mA
 Output high voltage ($V_{in} = 0.75V$, $I_{out} = -0.5mA$): 3.8V
 ($V_{in} = \text{Open}$, $I_{out} = -0.5mA$): 3.8V
 Output low voltage ($V_{in} = 3V$, $I_{out} = 10mA$): 0.33V
 Output short-circuit current ($V_{in} = 0.75V$): 3mA
 Supply current ($V_{in} = 5V$): 20mA
 Power dissipation ($V_{in} = 5V$): 100mW

Order Code	Type	Price each
YH90X	MC1489P	45p

MAX232CPE RS-232 Transmitter/Receiver

Maxim

A dual RS-232 receiver/transmitter that meets all the EIA RS-232C specifications while requiring only a single +5V supply. This significantly simplifies system design by removing the need to provide power supply voltages other than +5V. The IC has two on-board charge pump voltage converters which generate +10V and -10V power supplies from the single +5V supply.

The IC contains four level translators, two of which convert TTL/CMOS input levels into $\pm 9V$ RS-232 outputs ready for transmission, and two of which convert RS-232 inputs to 5V TTL/CMOS levels. The receivers have a nominal threshold of 1.3V, a typical hysteresis of 0.5V, and can operate with up to $\pm 30V$ inputs.

232

Characteristics

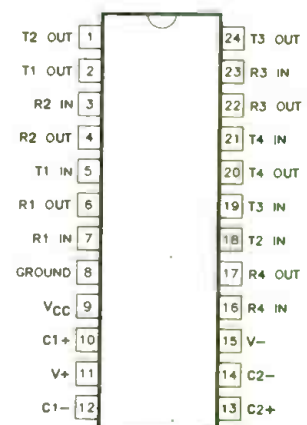

Supply voltage: 5V $\pm 10\%$
 Output voltage swing: $\pm 9V$
 RS-232 input voltage: $\pm 30V$ max
 Propagation delay: 0.5 μs
 Output resistance: 300 Ω min
 RS-232 output short circuit current: $\pm 10mA$

Order Code	Type	Price each
FD92A	MAX232CPE	£2.99

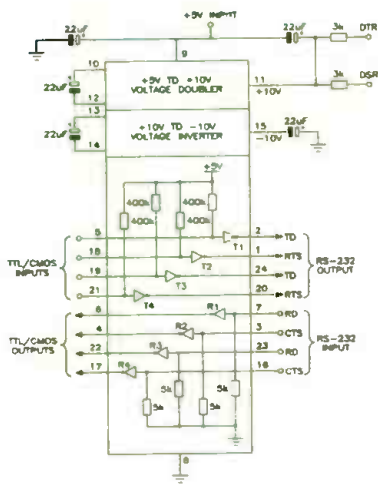

MAX238CNG Quad RS232 Transmitter/Receiver

Maxim

A quad version of MAX232CPE described previously. All the data given are identical for both IC's except pin outs.

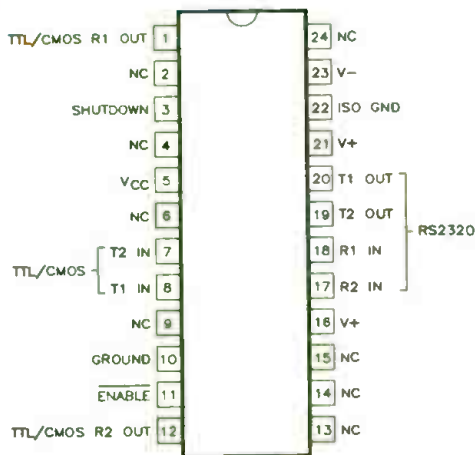

238

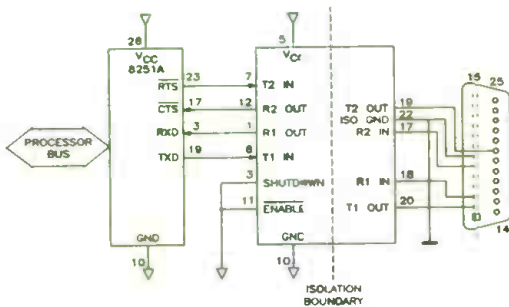

Order Code	Type	Price each
CR21X	MAX238CNG	£6.30

NM232DD Isolated Dual EIA-232D Transmitter and Receiver

Newport Components

232

An electrically isolated dual transmitter and receiver designed for use between standard UARTs and RS232 lines. The device provides two data receive and two data transmit channels, with no external components and one +5V supply. Each channel is EIA-232D and CCITT-V28 compatible at the interface and TTL/CMOS compatible at the logic connections. A low power shutdown mode and high impedance state for receiver outputs are effected via pins 3 and 11. Isolation is 1500V rms for 1 second.

Specification (typical at $V_{CC} = +5V$)

Supply voltage:	+5V $\pm 10\%$
Input voltage at receivers:	$\pm 30V$ max
Output voltage at transmitter:	$\pm 15V$ max
Output voltage ($R_L = 3k\Omega$):	$\pm 7V$
Transmission rate:	>9600 baud
Supply current:	<110mA

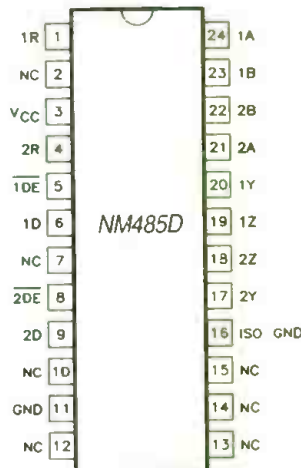

Supplied in a 24-pin package measuring 32.3 x 14.7 x 7.2mm high with pins on a 2.54mm spacing in two rows 16.7mm apart.

Order Code	Type	Price each
UL96E	NM232DD	£21.99

NM485D Isolated Dual Differential EIA-485 Driver and Receiver

Newport Components

An electrically isolated dual differential driver and receiver designed for balanced multipoint bus transmissions at rates up to 1M-bits per second. The device provides two receive channels and two driver channels, with the two driver channels having an active low enable. No external components are needed and a single 5V input supply powers all functions either side of the isolation boundary. The driver outputs provide limiting to positive and negative currents and thermal shutdown protection from line fault conditions on the transmission bus line. The receiver outputs will always be low if the receiver inputs are open. The isolation voltage between input and output is 1000V rms.

Specification (recommended operating conditions)

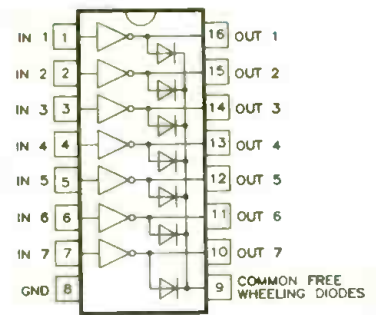

Supply voltage:	+5V $\pm 5\%$
DE and D inputs	
high level input voltage:	2V min
low level input voltage:	0.8V max
Driver	
common mode output voltage:	-7V min, 12V max
high level output current:	-60mA
low level output current:	60mA
Receiver	
common mode input voltage:	$\pm 12V$
differential input voltage:	$\pm 12V$
high level output current:	-400 μ A
low level output current:	16mA

Order Code	Type	Price each
BU39N	NM485D	£34.99

ULN2001N, ULN2002N, ULN2003N & ULN2004N Darlington Arrays

SGS-Thompson

A range of high-current Darlington arrays for driving a number of families of logic and loads. These versatile devices can be used for driving loads including solenoids, motors, LEDs, thermal printheads, etc. Each device contains seven separate Darlington pairs with commoned emitters. Each pair is rated at 500mA continuous, and can withstand surges up to 600mA. Suppression diodes are also provided so that inductive loads like motors and relays can be driven without the need for extra protective components. The ULN2001N is designed for use with general purpose, DTL, TTL, PMOS and CMOS loads. The ULN2002N is used with 14V to 25V PMOS, the ULN2003N with 5V TTL and CMOS, and the ULN2004N is used with 6V to 15V CMOS and PMOS. All devices are supplied in standard 16-pin DIP packages. Other features include: withstanding output voltages of 50V; outputs can be paralleled to give higher output current; TTL/CMOS/PMOS/DTL compatible inputs; and inputs pinned opposite to outputs.

2001/2/3/4

Specification (All figures are absolute maximums)

Output voltage, V_o :	50V
Input voltage, V_{in} :	30V
Continuous collector current, I_c :	500mA
Continuous base current, I_b :	25mA
Operating temperature ambient range, T_A :	-20°C to 85°C
Junction temperature, T_j :	150°C
Thermal resistance junction-ambient, $R_{th(amb)}$:	70°C/W

BUF634 250mA High-Speed Buffer

Burr-Brown

NEW!

The BUF634 is a high-speed, unity gain, open-loop buffer recommended for a wide range of applications, which can include valve, solenoid and motor drivers, add-on output current booster stages for op-amps, audio line and headphone drivers, and video and test equipment applications. It can be used inside the feedback loops of op-amps to increase output current, eliminate thermal feedback and improve capacitive load drive. For low-power applications, the BUF634 can operate at a quiescent current of 1.5mA with a 250mA output capability and a slew rate of 2,000V/ μ s. Bandwidth can be increased from 30MHz to 180MHz by connecting pin 1 (BW or bandwidth control) to pin 4 (-V) with a corresponding increase in quiescent current; extra care is also required in layout to prevent an increased tendency to RF instability. The output circuitry is fully protected by internal current limiters and thermal shutdown, making the device rugged and easy to use. This device is supplied in an 8-pin DIP package, and should preferably be soldered directly into a PCB to allow heatsinking via the pins, instead of using a DIP socket.

634

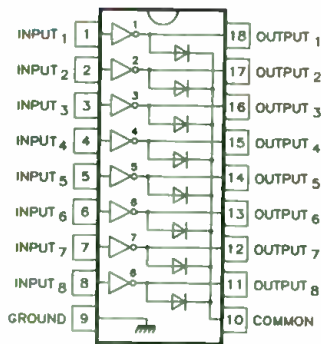

Specification

	Narrow Band Mode	Wide Band Mode
Supply voltage range (V_S):	± 2.25 to $\pm 18V$	
Quiescent current:	1.5mA	15mA
Bandwidth, -3dB, $R_L = 1k\Omega$:	30MHz	180MHz
$R_L = 100\Omega$:	20MHz	160MHz

ULN2801A/3A Octal Darlington Driver Arrays

SGS-Thomson

2801

Eight separate darlington amplifiers in one 18-pin package, each capable of supplying 500mA at up to 50V. Outputs may be paralleled to give up to 4A at 50V (at 23% duty cycle and 25°C). Internal diodes are provided for inductive loads. Type 2801 may be used with standard bipolar digital logic or CMOS, while type 2803 has a 2k7 base resistor to enable direct connection to TTL and 5V CMOS.

Order Code	Type	Price each
QY78K	ULN2801A	99p
QY79L	ULN2803A	99p

UCN5801A Latching Octal Driver

Sprague

A high current, high voltage driver IC comprising eight CMOS data latches, a bipolar darlington transistor driver for each latch, and CMOS control circuitry. Inputs are CMOS, PMOS and NMOS compatible, and a pull-up resistor is required for TTL. Input speeds up to 5MHz are possible with 5V supply, and much higher rates with 12V supply. Outputs are open collector with integral diodes for inductive loads, and are capable of sinking 500mA at 50V at 25°C. If more than two maximum loads are connected at once, then the duty cycle must be reduced (to 23% for all eight loads at 25°C). Outputs can be paralleled for higher currents.

Specifications:

Supply voltage (V_{DD}):	5V to 12V
Input voltage high (min):	$V_{DD} - 1.5V$ (V_{DD} max.)
Input voltage low (max):	1V (-0.3V min.)
Supply current:	5.6mA @ $V_{DD} = 5V$ 8mA @ $V_{DD} = 12V$

5801

Data present at an input is transferred to its latch when pin 2 is high. A high on pin 1 sets all latches to output off regardless. A high on pin 22 sets all outputs off regardless. When pin 22 is low, the output depends on the state of its latch.

Order Code	Type	Price each
QY77J	UCN5801A	£6.75

SUBSECTION 69 FREQUENCY GENERATOR IC's ICL8038CCPD Waveform Generator

Harris

8038

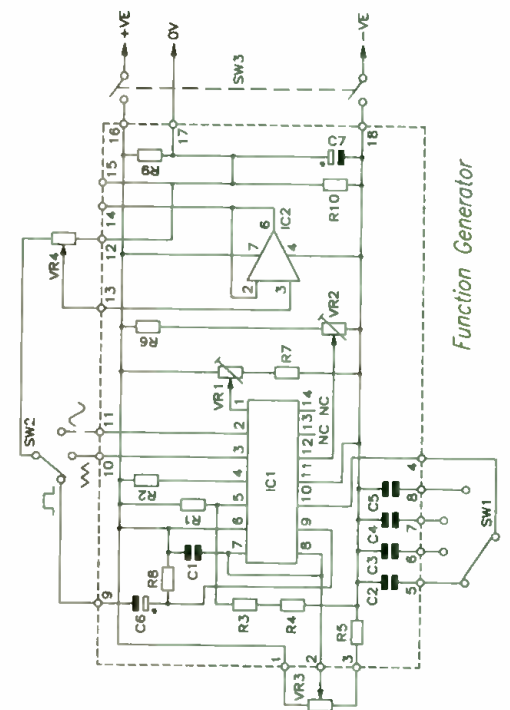

A 14-pin DIL IC capable of producing sine, square, triangular, sawtooth and pulse waveforms of high accuracy and stability. The frequency may be selected to be from 0.001Hz to 1MHz, Frequency modulation and sweeping can be accomplished with an external voltage and the frequency can be programmed digitally by resistors or capacitors. Sweep range can be up to 40:1 or 1000:1 with a little less quality. The circuit shows a sine, triangle and square wave generator. SW1 is the range switch, SW2 sets the waveshape, VR4 sets the output level and VR3 is the frequency control. VR1 and VR2 should be adjusted to give minimum distortion of sine wave.

Specification

Supply voltage:	5.0-5V to 10.0-10V (e.g. 2 x PP3 batteries)	
Output impedance:	600Ω	
Output levels max peak-to-peak sinewave:	($V_S = 7.5-0-7.5V$) 3V	
triangle:	5V	
square:	12V	
Distortion sinewave <10kHz:	<1%	
10kHz to 100kHz:	<4%	
100kHz to 200kHz:	<7%	
Linearity triangle <40kHz:	<0.1%	
40kHz to 100kHz:	<1%	
100kHz to 200kHz:	<8%	
Square Wave <100kHz:	Rise time 2μs	Fall time 2μs
100kHz to 200kHz:	1μs	1μs
Frequency range Range 1:	10Hz to 400Hz	
Range 2:	100Hz to 4kHz	
Range 3:	1kHz to 40kHz	
Range 4:	6.25kHz to 200kHz

SUBSECTION 70 D/A & A/D CONVERTER

IC's RC4152N Voltage to Frequency Converter

Raytheon

A simple analogue to digital (A/D) converter which is very low cost yet has precision linearity typically $\pm 0.05\%$ with e.g. LF351 used as an integrator, or a linearity of typically 1% on its own. The output of the 4152 is a series of pulses of constant duration whose frequency is proportional to the applied input voltage. Supply voltage range is +7V to +18V, temperature stability is $\pm 75\text{ppm}/^\circ\text{C}$ and the device has a high noise rejection ratio. Max output sink current: 20mA, open collector output. Supply current 2.5mA.

RC2211N FSK Demodulator/ Tone Decoder

Raytheon

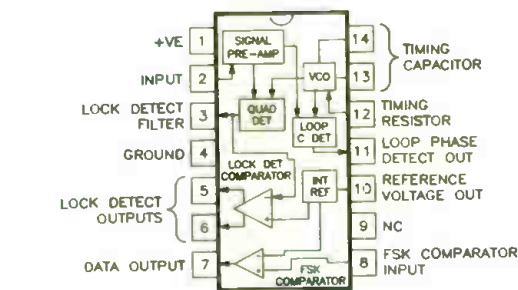

A monolithic phase locked loop for data communications. The IC contains a basic phase locked loop for tracking an input signal within the pass band, a quadrature phase detector which provided carrier detection and an FSK voltage comparator which provides FSK demodulation. In the circuit shown, the IC is used as an FSK demodulator such as would be found in the receiver circuit of a modem. The table below shows the component values required for a modem demodulator using standard European tones on the public switched network.

Characteristics (typical)

Supply voltage:	4.5V min to 20V max
Supply current:	5mA
Frequency accuracy:	$\pm 1\%$
Stability:	$\pm 20\text{ppm}/^\circ\text{C}$
Upper frequency limit:	300kHz
Lowest practical operating frequency:	0.01Hz
Timing resistor (R2 + RV1):	5k Ω min, 2M Ω max.
recommended:	15k Ω min, 100k Ω max.
Input impedance:	20k Ω
Input signal voltage:	2mV rms min, 3V rms max.
Internal reference voltage:	5.3V and 100 Ω impedance.

CA3306 Video Speed 6-Bit Flash A/D

Harris

A family of CMOS parallel (flash) analogue to digital converters designed for low power, high speed applications. The CA3306CE operates at sampling rates up to 10 million samples per second and the

CA3306E up to 15 million samples per second permitting analogue signals with bandwidths up to 5MHz or 7.5MHz to be fully digitised to 6-bit accuracy. An overflow output allows two devices to be connected in series to produce a 7-bit converter. Alternatively, two devices connected in parallel will permit conversion speed to be doubled.

Specification

(typical $V_{DD} = 5V$, $V_{REF} = +4.8V$, 25°C)

Supply voltage:	3V to 7.5V
Linearity error:	$\pm 0.5\text{LSB}$
Full scale input range:	0V to +4.8V
Input capacitance:	15pF
Input current:	$< \pm 500\mu\text{A}$
Resistor ladder impedance:	1100 Ω
Maximum conversion speed:	13MS/s (CA3306CE) 20MS/s (CA3306E)
Supply current:	11mA (CA3306CE) 14mA (CA3306E)

ADC0804LCN 8-Bit A/D Converter

National Semiconductor

A CMOS 8-bit analogue to digital converter with output latches that can directly drive a microprocessor data bus. The IC looks like a memory location or I/O port to the microprocessor so no interfacing logic is required. The analogue input voltage range is 0V to 5V with a

Continued on next page.

Continued from previous page.

single 5V supply, and 2.5V applied to pin 9. However, the voltage reference on 9 can be any voltage under 2.5V so that any voltage span can be converted with a full 8-bits of resolution. In addition, by connecting pin 7 to a voltage other than ground the span need not start at 0V. For example if the span was 0.5V to 3.5V (a span of 3V) 0.5V would be applied to pin 7 and 1.5V to pin 9 (i.e. $\frac{1}{2}$ of 3V). No zero adjustment is needed with this IC.

Specification

Supply voltage:	+5V (V_{CC})
Max error:	± 1 bit
Input resistance at pin 9:	1.3k Ω
Analogue input voltage range:	Ground to V_{CC}
Conversion rate:	8770/second max
Supply current:	1.3mA

Order Code	Type	Price each
QQ00A	ADC0804LCN	£4.49

ADS7806 Low-Power 12-Bit Sampling CMOS ADC

Burr-Brown®

NEW!

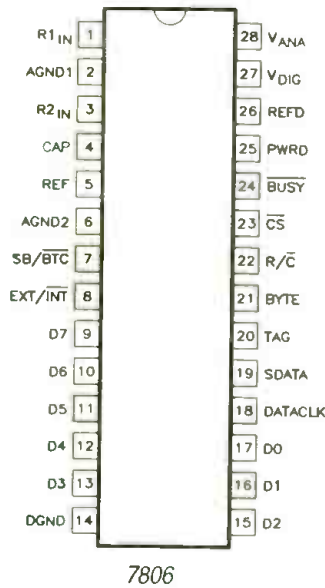

A low-power, 12-bit sampling A to D converter using state-of-the-art CMOS structures and powered from a single 5V supply. It contains a complete 12-bit capacitor-based successive approximation register with sample and hold, internal clock, reference, microprocessor interface and parallel and serial output drivers. It can acquire and convert to full 12-bit accuracy in 25 μ s maximum while consuming only 35mW. Laser trimmed scaling resistors provide industry standard input ranges of ± 10 V and 0V to 5V. In addition a 0V to 4V range allows development of complete single rail supply systems. It also has a 50 μ W power down mode, $\pm 1/2$ LSB resolution and 72dB minimum dynamic range.

Specification

Resolution:	12 bits
Input voltage ranges:	± 10 , 0 to 5, 0 to 4
Input impedances:	45.7k Ω (± 10 V), 20k Ω (0 to 5V), 21.4k Ω (0 to 4V)
Input capacitance:	35pF
Conversion time:	20 μ s

Complete cycle time

(acquire and convert):	25 μ s
Throughput rate:	40kHz
Transition noise:	0.1 LSB
Spurious free dynamic range:	90dB (± 10 V input)
Total harmonic distortion:	-90dB
Signal to noise ratio:	73dB
Full power bandwidth:	50kHz
Aperture delay:	40ns
Transient response:	5 μ s
Overvoltage recovery:	750ns
Internal reference:	2.5V
Parallel data format:	12 bits in two bytes
Serial data format:	two's complement or straight binary

ADS7807 Low-Power 16-Bit Sampling CMOS ADC

Burr-Brown

NEW!

A low-power, 16-bit sampling A to D converter using state-of-the-art CMOS structures and powered from a single 5V supply. It contains a complete 16-bit capacitor-based successive approximation register with sample and hold, internal clock and reference, microprocessor interface and parallel and serial output drivers. It can acquire and convert a full 16-bits to within ± 1.5 LSB in 25 μ s maximum while consuming only 35mW. Laser trimmed scaling resistors provide industry standard input ranges of ± 10 V and 0V to 5V. In addition a 0V to 4V range allows development of complete single rail supply systems. It also has a 50 μ W power down mode, ± 1.5 LSB resolution and 86dB minimum dynamic range, and is pin-for-pin compatible with the ADS7806.

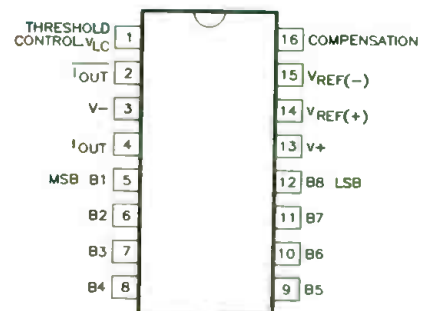

Specification

Resolution:	16 bits
Input voltage ranges:	± 10 , 0 to 5, 0 to 4
Input impedances:	45.7k Ω (± 10 V), 20k Ω (0 to 5V), 21.4k Ω (0 to 4V)
Input capacitance:	35pF
Conversion time:	20 μ s
Complete cycle time (acquire and convert):	25 μ s
Throughput rate:	40kHz
Transition noise:	0.8 LSB
Spurious free dynamic range:	100dB (± 10 V input)
Total harmonic distortion:	-100dB
Signal to noise ratio:	88dB
Full power bandwidth:	50kHz
Aperture delay:	40ns
Transient response:	5 μ s
Overvoltage recovery:	750ns
Internal reference:	2.5V
Parallel data format:	16 bits in two bytes
Serial data format:	two's complement or straight binary

DAC0801LCN 8-Bit D/A Converter

National Semiconductor

An 8-bit digital to analogue converter with a full scale error of less than $\pm 0.39\%$. The DAC has high compliance complementary current outputs to allow differential output voltages of 20V peak-to-peak with simple resistor loads.

Specification

Supply voltage:	± 4.5 V to ± 18 V
Settling time:	100ns (typical)
Output voltage compliance:	-10V to +18V
Full scale current ($V_{ref} = 10$ V, $R_{14,15} = 5$ k Ω):	1.99mA
Output current range ($V^- = -5$ V):	0 to 2.1mA
($V^- = -8$ V to -18 V):	0 to 4.2mA
Reference bias current (Pin15):	-1 μ A
Reference input slew rate:	8mA/ μ sec
Power supply current ($V_S = \pm 5$ V, $I_{ref} = 1$ mA)	I ⁺ : 2.3mA I ⁻ : 4.3mA
Power supply current ($V_S = \pm 15$ V, $I_{ref} = 2$ mA)	I ⁺ : 2.5mA I ⁻ : -6.5mA

DAC813 Microprocessor Compatible 12-Bit DAC

Burr-Brown

NEW!

The DAC813 is a complete 12-bit digital-to-analogue converter with a flexible digital interface. It includes a precision +10V reference, interface control logic, double-buffered latch and a 12-bit D/A converter with voltage output op amp. Fast current switches and laser-trimmed thin-film resistors provide a highly accurate, fast D/A converter.

Digital interfacing is facilitated by a double buffered latch. The input latch consists of one 8-bit byte and one 4-bit nibble to allow interfacing to 8-bit (right justified) or 16-bit data buses. Input gating logic is designed so that the last nibble or byte to be loaded can be got simultaneously with the transfer of data to the D/A latch, saving computer instructions. A reset control allows the DAC813 D/A latch to asynchronously reset the D/A output to zero, a feature useful for power-up reset, recalibration or for system re-initialisation upon system failure. The device is specified to $\pm 1/4$ LSB maximum linearity error.

Specification

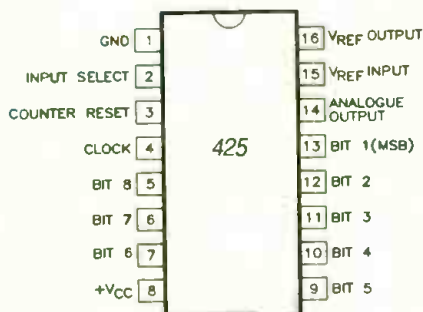

Digital input resolution:	12 bits
Linearity error:	$\pm 1/4$ LSB
Differential linearity error:	$\pm 1/4$ LSB
Gain error:	$\pm 0.05\%$
Settling time:	3.3 μ s 10V range, 4.5 μ s 20V range
Output voltage range:	0 to 10V unipolar mode $\pm 5V$, $\pm 10V$ bipolar mode
Output current:	$\pm 5mA$
Output impedance:	0.2 Ω @ DC
Short circuit duration:	indefinite
Reference voltage:	+10V
Power supply:	$\pm 15V$

Order Code	Type	Price each
AD72P	DAC813KP	£20.99

ZN425E8 8-Bit D/A and A/D Converter

GEC-Plessey

An 8-bit D/A converter also containing a counter and a 2.5V precision voltage reference. By including an 8-bit counter, analogue to digital conversion can be obtained simply by adding an external comparator and clock inhibit gating (7400). By simply clocking the counter, the IC can be used as a self-contained precision ramp generator.

Characteristics (typical)

Supply voltage	4.5 to 5.5V
Settling time	1 μ s
Voltage reference	2.55V
Non-linearity	± 0.5 LSB
Analogue output resistance	10k Ω
Counter clock frequency	5MHz max

Order Code	Type	Price each
UF38R	ZN425E-8	£5.29

ZN426E-8 8-Bit D/A Converter

GEC-Plessey

An 8-bit D/A converter also containing a 2.5V precision voltage reference. Binary weighted voltages are produced at the output, the value depending on the digital number applied to the input bits.

Characteristics (typical)

Supply voltage	4.5 to 5.5V
Settling time	1 μ s
Voltage reference	2.55V
Non-linearity	± 0.5 LSB
Analogue output resistance	10k Ω
Supply current	5mA

Order Code	Type	Price each
UF39N	ZN426E-8	£3.20

ZN427E-8 8-Bit A/D Converter

GEC-Plessey

An 8-bit A/D converter with 3-state outputs to permit easy interfacing to a common data bus. The IC contains a voltage switching DAC, a fast comparator, successive approximation logic and a 2.56V precision voltage reference.

Characteristics (typical)

Supply voltage	4.5 to 5.5V
Max error	± 0.5 LSB
Conversion time	10 μ s
Clock frequency	1MHz
Supply current	25mA

Order Code	Type	Price each
UF40T	ZN427E-8	£10.99

ZN428E-8 8-Bit D/A Converter

GEC-Plessey

An 8-bit D/A converter with input latches to facilitate updating from a data bus. A 2.5V reference is also included. Complementary to ZN427E.

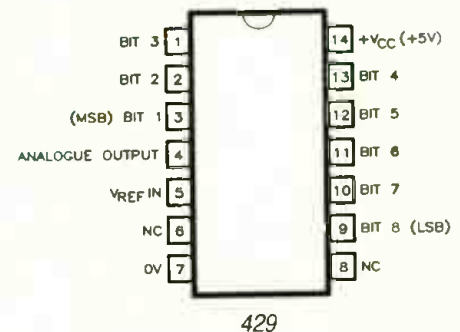

Characteristics (typical)

Supply voltage	4.5 to 5.5V
Linearity error	± 0.5 LSB
Settling time	800ns
Voltage reference	2.55V
Analogue output resistance	4k Ω
Supply current	20mA

Order Code	Type	Price each
UF41U	ZN428E-8	£6.30

ZN429E-8 8-Bit D/A Converter

GEC-Plessey

A low-cost 8-bit D/A converter that contains an advanced design of R-2R ladder network and an array of precision bipolar switches on a single monolithic chip. The special design of the ladder network results in full 8-bit accuracy using normal diffused resistors.

Specification

Supply voltage:	4.5V to 5.5V
Voltage reference:	3.0V
Linearity error:	± 0.5 LSB
Analogue output resistance:	10k Ω
Settling time:	1 μ s
Typical supply current:	5mA

Order Code	Type	Price each

TLC548IP A to D Peripheral With Serial Control

Texas Instruments

The TLC548 is an A/D peripheral IC built around an 8-bit, switched-capacitor, successive-approximation ADC. It is designed for serial interface with a microprocessor or peripheral through a 3-state data output and an analogue input. The device uses only the I/O clock input, along with the Chip Select (CS) input for data control. The maximum clock I/O frequency is guaranteed to be up to 2.048MHz. Operation is very similar to that of more complex ADCs, however, the TLC548 provides an on-chip system clock allowing internal device operation to proceed independently of serial input/output data timing, and permits manipulation of the device as desired for a wide range of software and hardware requirements. The I/O clock, together with the internal system clock, allows high-speed data transfer and conversion rates of 45,500 conversions per second. Additional features include versatile control logic, an on-chip sample-and-hold circuit that can operate automatically or under microprocessor control, and a high-speed converter with differential high-impedance reference voltage inputs that ease ratiometric conversion, scaling and circuit isolation from logic and supply noise. The design of the totallyswitched-capacitor successive-approximation converter circuit allows conversion with a maximum total error of ± 0.5 least significant bits (LSB) in less than 17 μ s. Operating temperature range is -40°C to $+85^{\circ}\text{C}$. The device is encapsulated in an 8-pin DIL package.

Order Code	Type	Price each
GX06G	TLC548P	£3.99

ZN558 8-Bit Latched Input D/A

GEC-Plessey

A monolithic 8-bit D/A converter with input latches which allow updating from a data bus. The latch is transparent when enable is LOW, and data is held when enable is taken HIGH. The device contains a 2.5V reference output and a separate reference input, thus allowing the device to be used with an external fixed or varying reference or its internal reference. The device is guaranteed monotonic over the full operating temperature range (0°C to $+70^{\circ}\text{C}$), and is microprocessor, TTL and 5V CMOS compatible. Housed in a 16-pin MP-16W package.

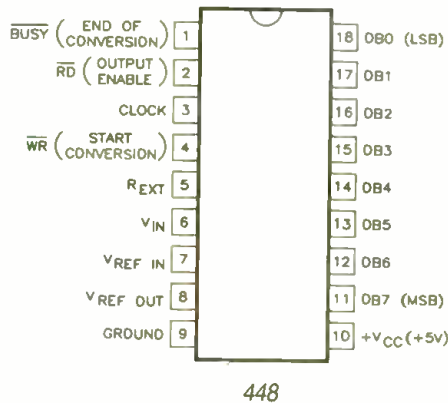

Specification
 Supply voltage: 4.5V to 5.5V
 Voltage reference: 2.5V
 Linearity error: ± 0.5 LSB
 Analogue output resistance: $4\text{k}\Omega$
 Settling time: 800ns
 Typical supply current: 20mA

Order Code	Type	Price each
DB51F	ZN558	£4.99

ZN448E 8-Bit A/D Converter

GEC-Plessey

An 8-bit A/D converter designed for easy interfacing to microprocessors. The chip contains a 2.5V precision reference, comparator, clock generator, interface and control logic and 3-state output buffers. Only a reference resistor and capacitor, clock resistor and capacitor and input resistors are required for operation with either uni- or bipolar input voltages.

Characteristics (typical)
 Supply voltage: 4.5 to 5.5V
 Max error: ± 0.5 LSB
 Voltage reference: 2.55V
 Clock frequency: 1MHz (max)
 Clock resistor: $<2\text{k}\Omega$
 Conversion time: 9 μ s
 Supply current: 25mA

UF43W	ZN448E	£8.49

PM7528HP Dual 8-Bit D/A Converter

Analog Devices

Two 8-bit multiplying digital to analogue converters in one package. Excellent DAC to DAC matching and tracking is achieved. Digital input data is directed into the latches of one of the DAC's according to the condition on pin 6. The chip is TTL and CMOS compatible and the data load cycle is similar to the write cycle of a RAM.

Specification (typical at 25°C)
 Supply voltage: +5V to +15V
 Non-linearity: ± 1 LSB max
 Settling time: 350ns at 5V, 180ns at 15V
 Supply current: 1mA

Order Code	Type	Price each
UL11M	PM7528HP	£8.65

DAC-8840FP 8-Bit, 4-Quadrant Multiplying D/A Converter

Analog Devices

A device that contains eight, general-purpose, digitally controlled, voltage adjustment devices, thus allowing the device to replace trimming potentiometers, especially in new designs. The device is ideal for AC and DC gain control of signals up to 1MHz bandwidth, and is particularly useful for signal inversion and modulation, that is often found in video convergence circuitry. Internally, there are eight voltage output CMOS D/A converters, each with separate reference inputs. Each converter has its own register, which is updated from an internal serial-to-parallel shift register, which in turn is loaded from a 3-wire serial input interface. A 12-bit data word is used, and when decoded, the first 4-bits determine the address of the D/A converter register to be loaded, and the remaining 8-bits are the control data. A serial data output is provided to allow simple daisy-chaining in multiple converter applications, without additional external decoding logic.

Specification
 Supply voltage: $\pm 5\text{V}$
 Supply current: $\pm 19\text{mA}$
 Nonlinearity: ± 1 LSB maximum
 DAC output voltage range: $\pm 3\text{V}$ min ($10\text{k}\Omega$ load)
 Multiplying gain bandwidth: 2.5MHz
 Slew rate: 1.3V/ μ s minimum
 THD: 0.01%

Order Code	Type	Price each
DC11M	DAC-8840FP	£23.79

DAC7800/1/2 Dual CMOS 12-Bit Multiplying DACs

Burr-Brown

NEW!

The DAC 7800, 7801 and 7802 are members of a new family of monolithic dual 12-bit CMOS multiplying digital-to-analogue converters. The digital interface speed and the AC multiplying performance are achieved by using an advanced CMOS process optimised for data conversion circuits. High stability on-chip resistors provide true 12-bit integral and differential linearity over the wide industrial temperature range of -40°C to $+85^{\circ}\text{C}$. The DAC7800 features a serial interface capable of clocking in data at a rate of at least 10MHz. Serial data is clocked (edge triggered) MSB first into a 24-bit shift register and then latched into each D/A separately or simultaneously as required by the application. An asynchronous CLEAR control is provided for power-on reset or system calibration functions. The DAC7801 has a 2-byte (8 + 4) double-buffered interface. Data is first loaded (level transferred) into the input registers in two steps for each D/A, then both D/As are updated simultaneously. DAC 7801 features an asynchronous CLEAR control.

The DAC7802 has a single-buffered 12-bit data word interface. Parallel data is loaded (edge triggered) into the single D/A register for each D/A. All versions operate from a single 5V supply.

Specification

Resolution: 12 bits minimum
 Relative accuracy: ± 1 LSB
 Differential non-linearity: ± 1 LSB
 Gain error: ± 3 LSB
 Digital input impedance: $10k\Omega$
 Digital input capacitance: $10pF$
 Digital input levels: 2V min. 0-8V max. TTL compatible
 Output current settling time: $0.4\mu s$
 D-to-A glitch impulse: $0.9nV/s$
 AC feedthrough: $-75dB @ 10kHz$
 Output capacitance: 30 to $70pF$
 Channel to channel isolation: $-95dB$

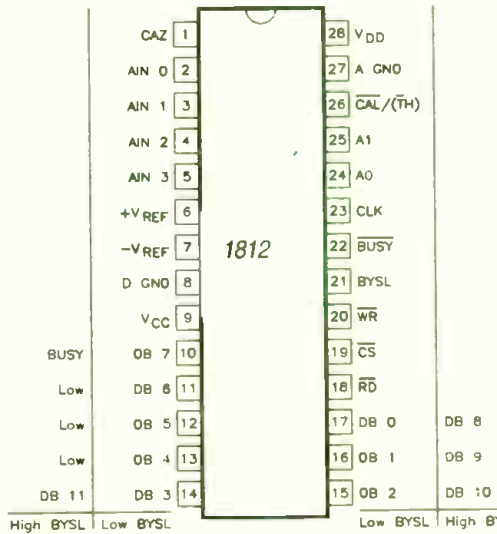

Digital crosstalk: $0.9nV$

Order Code	Type	Price each
AD69A	DAC7800KP	£14.99
AD70M	DAC7801KP	£15.25
AD71N	DAC7802KP	£15.65

device uses the standard control signals, \overline{CS} , \overline{RD} and \overline{WR} , while the 4-channel input multiplexer is controlled via address inputs A0 and A1. Two converter busy flags are available to facilitate polling of converter status.

The full differential, auto-zeroed comparator has a high power supply rejection ratio, and very low offset voltages. The SDA1812D uses a binary weighted capacitor network that makes it suitable for digitising AC signals, as well as DC signals. The device has a maximum sampling rate of 100kHz.

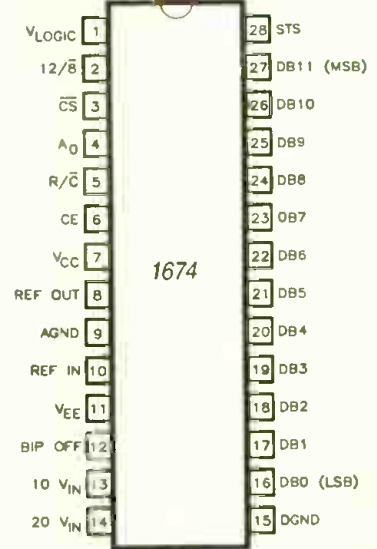

Specification

Supply voltage: 5V
 Maximum supply current: 2.5mA
 Resolution: 12 bit
 Total unadjusted error SDA1812D: $\pm 3/4$ LSB
 Differential non-linearity: $\pm 1/2$ LSB
 Conversion time: 2.5 μs
 Typical clock frequency: 2MHz

Dynamic performance

S/N ratio (includes THD): 71dB (1kHz sine wave i/p)
 Full power bandwidth (-3dB): 4MHz
 Aperture delay time: 5ns

Order Code	Type	Price each
DB28F	SDA1812D	£24.99

A complete multipurpose 12-bit, 10 μs , A/D converter, consisting of an on-board sample-and-hold amplifier (SHA), 10V reference, clock and tri-state output buffers for microprocessor interface. The SHA has a wide bandwidth input capable of 12-bit accuracy over the full Nyquist bandwidth of the converter.

The device is suitable for use with AC signals making it ideally suited for use in signal processing as well as DC measurement applications. The device will accept a 10V span on input pin 13 (0 to 10V unipolar mode, $\pm 5V$ bipolar mode) or a 20V span on input pin 14 (0 to 20V unipolar mode, or $\pm 10V$ bipolar mode). Housed in a plastic 28-pin DIP package.

Specification

Supply voltage logic: +5V (pin 1)
 analogue: ± 12 to $\pm 15V$ (+ on pin 7, - on pin 11)
 Typical supply current pin 1: 5mA
 pin 7: 10mA
 pin 11: 14mA

SDA1812D 12-Bit A/D Converter with 4-Channel Multiplexer

Siemens

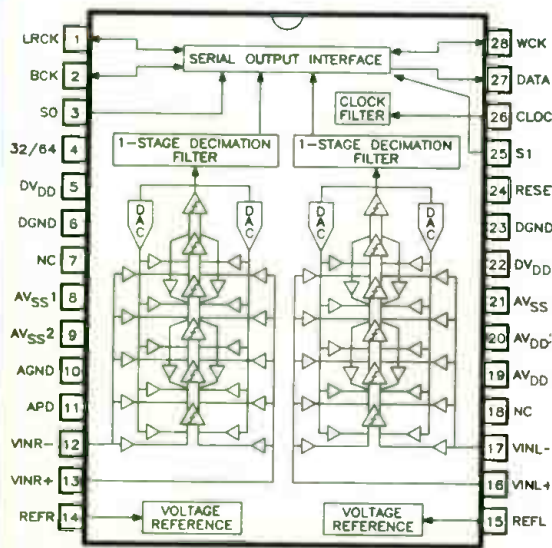

CMOS analogue-to-digital converter with a 4-channel analogue multiplexer and a conversion time of 6 μs plus 2.5 μs sample time. The device requires a single 5V power supply, and uses a 'capacitor network successive approximation' technique to obtain a low conversion time. An auto-calibration technique guarantees a total unadjusted error within $\pm 3/4$ LSB for the SDA1812D. The converter requires no external offset or gain adjustments and features a temperature stabilised differential comparator, a sample-and-hold function and a 12-bit data output in a 2-byte format. Designed for easy microprocessor interface, the

AD1879N Stereo 18-Bit Oversample ADC

Analog Devices

A two-channel, 18-bit oversample digital audio A/D converter, in which each channel features a high performance one-bit noise shaping modulator and a digital filter. The A/D converter output data is transmitted from a flexible serial data port. The device includes an on-board reference voltage, and has an excellent low level signal performance, requires no S/H circuits, and has full differential analogue inputs. Using an external master clock, the one-bit modulators operate at $64 \times F_s$ oversampling ratio. This ratio permits the antialias filters to be simple resistor-capacitor combinations, and results in linear phase throughout the passband. Housed in a plastic 28-pin DIP package.

Specification

Supply voltage:	±5V
Power dissipation:	900mW maximum
Oversampling ratio:	$64 \times F_s$
Resolution:	18 bits
Dynamic range (0 to 20kHz, no A-Weight filter)

LM331N Voltage to Frequency Converter

National Semiconductor

A voltage to frequency converter IC which is ideally suited for use in simple low-cost circuits for A/D conversion, F/V conversion, linear frequency modulation or demodulation and many other functions. The output when used as a V/F converter is a pulse train at a frequency precisely proportional to the applied input voltage. Features include: full scale frequencies from 1Hz to 100kHz attainable; dynamic range of 100dB at 10kHz full scale; non-

linearity typically ±0.003% full scale; and excellent temperature stability typically ±30ppm/°C.

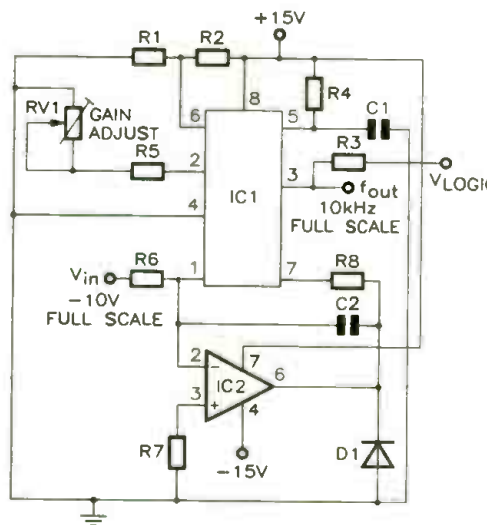

Specification (typical at 25°C)

Supply voltage:	4.5V to 40V
Scale factor:	1kHz/V
Output current:	136µA
Operating range of current:	10 to 500µA
Reference voltage (pin 2):	1.89V
Supply current:	3mA at $V_s = 5V$ 4mA at $V_s = 40V$

LM2917N Frequency to Voltage Converter

National Semiconductor

2917

This 14-pin DIL IC is extremely easy to use since $V_{out} = f_{in} \times V_{CC} \times R1 \times C1$ where R1 is the resistor between pin 3 and ground and C1 is the capacitor (in Farads) between pin 2 and ground. Features include ground referenced tachometer whose input interfaces directly with magnetic variable reluctance pick-ups; op-amp comparator with floating relays, solenoids, meters or LED's etc; frequency doubling with low ripple; tachometer with built-in hysteresis for either differential or ground referenced input; built-in zener for accurate and stable frequency to current conversion and linearity typically ±0.3%. Applications include over/under speed sensing, tachometers, speedometers, breaker point dwell meters, hand-held tachometers, speed governors, cruise control, touch or sound switches etc.

Application Circuits

Frequency to Voltage Converter

20-LED Display Rev Counter

A printed circuit board is available to make a frequency to voltage converter building block using the LM2917. A particular application is shown for a 20 LED display rev counter where this pcb is connected to the LM3914 pcb.

Order Code	Type	Price each
WQ38R	LM2917N	£3.99
YQ67X	LM2917 PCB	£1.49

ICL7106CPL, ICL7107CPL

Analogue to Digital Converter/Display Drivers

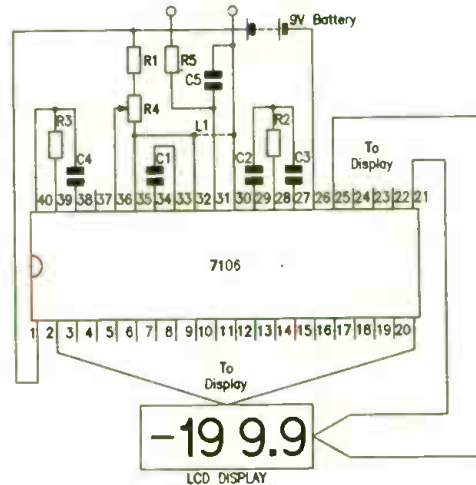

Harris

These two IC's are high performance, low power 3 $\frac{1}{2}$ digit A/D converters. The input requires about 1pA typically. Other features are guaranteed zero reading for 0 volts input on all scales; true polarity at zero for precise null detection; true differential input and reference; low-noise; on chip clock and reference; low supply current 0.8mA typical. The output of the 7106 will drive LCD displays directly and a +9V supply is required at pin 1 and ground at pin 26. This IC is ideally suited for battery operation since it requires only 0.8mA supply current. The output of the 7107 will drive

LED displays directly and a +5V supply is required at pin 1, -5V at pin 26 and ground at pin 21. Accuracy ± 1 count in ± 2000 counts guaranteed.

Display Driver and Thermometer PCB

A printed circuit board is available for use with the 7106 or 7107. The same printed circuit may be used to produce a $\pm 1.999V$ (2V) voltmeter, a ± 0.1999

LCD Digital Panel Meter
200mV/2V Full Scale Deflection

(200mV) voltmeter or a thermometer using the LM35CZ or LM35DZ IC's shown on page 748, with either an LED or LCD. A leaflet is supplied with every PCB, which shows how to build and calibrate all four projects.

AD7711AN Signal Conditioning A/D Converter with RTD Excitation Currents

Analog Devices

7711

An LC²MOS device that is a complete analogue front end for low frequency measurement applications. The device accepts low level signals directly from a transducer and outputs a serial digital word. It employs a sigma-delta conversion technique to produce up to 21 bits with a 'no missing codes' performance. The input signal is applied to a programmable gain front end, based around an analogue modulator, whose output is processed by an in-built digital filter. The first notch of this filter is programmable via the in-built control register. This allows adjustment of the filter cut-off and settling time. The device features one differential analogue input, one single ended analogue input and a differential reference input. Additionally, two current sources are provided that can be used to provide excitation in three and four wire RTD (resistance temperature detection) configurations. Ideal for use in intelligent, microcontroller based systems, as gain settings, signal polarity, input channel selection and RTD current control can all be configured by software, using the bidirectional serial port. The device contains self-calibration, system calibration and background calibration operations and includes in-built calibration registers that the user can read and write to. Available in a 24-pin DIP package with low power consumption requirements, and a software programmable power down mode that reduces the standby power consumption to 50 μ W.

Continued from previous page.

Specification

Power supply voltages	
V_{DD} to V_{SS} :	+5V to +10V
DV_{DD} :	+5V
Power supply currents	
AV_{DD} :	3mA max.
DV_{DD} :	4mA max.
V_{SS} :	1.5mA max.
Power dissipation	
Normal mode:	40 to 45mW max.
Standby mode:	100µW max., 50µW typical
Analogue/reference inputs	
50Hz or 60Hz rejection:	100dB min.
Sampling capacitance:	20pF max.
Source impedance:	10kΩ max.
Analogue input voltage range:	0V to + V_{REF}
Input sampling rate:	$f_{CLK IN}/512$ for gain of 1 $2 \times f_{CLK IN}/512$ for gain of 2 $4 \times f_{CLK IN}/512$ for gain of 4 to 128.
Reference inputs	
REF IN(+) to REF IN(-):	+2.5V to +5V
input sampling rate:	$f_{CLK IN}/512$
Logic inputs	
low:	0.8V max.
high:	2.0V min. (MCLK=3.5V min.)
Logic outputs	
low:	0.4V max.
high:	4.0V min.
Reference output voltage:	2.5V nominal
RTD excitation currents	
Output:	200µA nominal
Drift:	35ppm/°C typical
Initial tolerance:	±20%

Order Code	Type	Price each
DC07H	AD7711AN	£34.52

SUBSECTION 71 VALVES

Chelmer Valve

A range of high quality valves primarily for use in high fidelity and other audio applications. A booklet containing comprehensive data and typical circuits is also available.

Double Triodes

All these types feature identical pin numbering and have their heaters configured for either 6.3V or 12.6V operation.

ECC81

A miniature 9-pin (B9A), high- μ , high current RF double triode with separate cathodes. It can be used in a variety of audio amplifier, mixer, and frequency changer applications as well as for RF. For audio it is typically used in RC coupled voltage amplifier configurations.

Heater	Series	Parallel
V_h	12.6V	6.3V
I_h	150mA	300mA

Characteristics (each section)

V_a	200V	250V
V_g	-1.0V	-2.0V
I_a	11.5mA	10mA
g_m	6.7mA/V	5.5mA/V
μ	70	60

ECC82

A miniature 9-pin (B9A), low- μ , high current double triode with separate cathodes. It is primarily intended for use as an amplifier or oscillator, and can be employed in both RC coupled voltage amplifier and cathode follower (buffer) configurations, or as a phase splitter. Useful in audio applications requiring low microphony.

Heater	Series	Parallel
V_h	12.6V	6.3V
I_h	150mA	300mA

Characteristics (each section)

V_a	100V	250V
V_g	0V	-8.5V
I_a	11.8mA	10.5mA
g_m	3.1mA/V	2.2mA/V
μ	19.5	17

ECC83

A miniature 9-pin (B9A), high- μ , low current double triode primarily intended for RC coupled, small signal voltage amplifiers. Its low anode current and controlled low noise, hum and microphony characteristics, together with its high gain, make it ideal for high quality, small signal preamplifier applications. It is equally at home as a higher level voltage amplifier, phase splitter or cathode follower. Especially suitable for Hi-Fi applications.

Heater	Series	Parallel
V_h	12.6V	6.3V
I_h	150mA	300mA

Characteristics (each section)

V_a	100V	250V
V_g	-1.0V	-2.0V
I_a	0.5mA	1.2mA
g_m	1.25mA/V	1.6mA/V
μ	100	100

Order Code	Type	Price each
CR25C	ECC81	£5.99
CR26D	ECC82	£4.65
CR27E	ECC83	£6.49

Pentode EF86

A low noise, AF voltage amplifying pentode specifically for very small signal preamplifier applications. It features an all enclosing, outer screen or shield around all electrodes, special measures for extra mechanical stability against microphony, and a bifilar wound heater element to reduce hum injection to the absolute minimum. Open loop gain can exceed 40dB, with both white noise and hum down to typically 2µV at the anode (heater supply must be balanced and centre tapped to 0V near the valve, or DC). Especially suited to first stage amplification of magnetic cartridge (phono) and playback tape head inputs. Pins 2 or 7 (screen) should be grounded to 0V.

Heater	Series	Parallel	Characteristics
V_h	6.3V	200mA	V_a 250V
I_h			V_g 0V
			V_{g3} 140V
			V_{g2} -2.0V
			V_{g1} 3.0mA
			I_a 600µA
			I_{g2} 2.0mA/V
			g_m 38
			H_{g1-g2}

Mullard recommended circuits

There is basically just one recommended circuit configuration for the EF86 (shown in more detail in the data booklet). In this only two variations for resistor values are advised, as follows:

	Option 1	Option 2
Anode load resistor	100kΩ	220kΩ
Screen grid (g_2) resistor	390kΩ	1MΩ
Cathode bias resistor	1kΩ	2k2Ω

In each case the cathode bias resistor should be bootstrapped to 0V with a 47µF 50V electrolytic. The grid leak resistor (g_1) can be 1MΩ or less (usually chosen to match the sending transducer). The suppressor grid (g_3) normally connects directly to the cathode.

Order Code	Type	Price each
DM56L	EF86	£4.99

Power Output Pentodes EL34

A power output pentode with the international octal (8-pin) base, primarily for the output stages of audio power amplifiers. The valve was especially designed with push-pull 'ultra-linear' (distributed load) operation in mind. Given the appropriate output transformer, pure class A up to 15W and 'ultra-linear' up to 20 or 30W is possible, or class B up to 100W. The valve is able to cope with peak anode voltages of up to 800V, and connections between the glass envelope and pins

**PHONE BEFORE 5PM

Access, Visa, American Express**

on the bonded octal base are carefully arranged to prevent flash-over. Several application circuits for different output powers are shown in the booklet. Although highly rated, the EL34 is of a comparatively small physical size compared with contemporary equivalents. Maximum rated anode dissipation is 25W.

Heater		Characteristics	
V_h	6.3V	V_{a1}	250V
I_h	1.5A	V_{a2}	250V
		V_{a3}	0V
		R_{k1}	106Ω
		I_a	100mA
		I_a	15mA
		g_{m1}	11mA/V
		R_{m1}	2.0kΩ
		P_{out}	11W

Order Code	Type	Price each
CR28F	EL34	£8.99

EL84

A miniature 9-pin (B9A), power output pentode designed for low to medium output audio power amplifiers. Push-pull 'ultra linear' (class AB1) can be up to 17W. Also often used for single-ended class A operation in small low power amplifiers of a few watts. Maximum rated anode dissipation is 12W.

Heater		Characteristics	
V_h	6.3V	V_{a1}	250V
I_h	760mA	V_{a2}	250V
		R_{k1}	135Ω
		I_a	48mA
		I_a	5.5mA
		g_{m1}	11.3mA/V
		R_{m1}	4.5kΩ
		P_{out}	5.7W

Order Code	Type	Price each
CR29G	EL84	£4.75

Valve Booklet

Contains comprehensive data and typical circuits.

Order Code	Type	Price each
XL52G	Valve Data Booklet	£1.25 NV

Valve Bases

Chelmer Valve

Bases are available for the above valves. The octal type is chassis-mounting with tin-plated solder tags in a thermoplastic housing. Overall size 47 x 32mm fixing holes 38mm x M4. Two types are available for B9A base valves. Both types have silver-plated contacts, pins and tags in a ceramic base.

One has pcb pins and the other is chassis-mounting with solder tags. Chassis-mounting type, overall size 35 x 27mm, fixing holes 28mm x M3.

Order Code	Type	Price each
CR30H	Base Octal	£1.99
CR31J	Base Chass	£1.80
CR32K	Base PCB	£1.80

SUBSECTION 72 HEATSINKS AND ACCESSORIES

Transistor Sockets

PCB mounting low-profile sockets with contacts on a 0.1in pitch. Glass filled nylon body with gold-plated phosphor-bronze contacts. Current rating: 1A per contact. Types are available for 3-lead and 4-lead TO18 transistors and 3-lead TO5 transistors. Overall height 9.1mm. Pin length 3.5mm. Body dia: TO18 types 7.1mm, TO5 types 10.9mm.

Order Code	Type	Price each
WR29G	3L TO18	32p
WR30H	4L TO18	42p
WR31J	3L TO5	32p

Semiconductor Mounting Kits TO3

For mounting TO3 case transistors on heatsinks. Kit comprises one mica washer and two insulating bushes.

Order Code	Type	Price each
WR24B	Kit TO3	15p

TO66

For mounting TO66 case transistors on heatsinks. Kit comprises one mica washer and two insulating bushes.

Order Code	Type	Price each
WR25C	Kit TO66	15p

Plastic Bush TO66 (short)

Packs of plastic bushes for use with TO66 package semiconductor devices. Supplied in packs of 20 bushes.

Order Code	Type	Price each
JR78K	Bush TO66	99p

Plastic Bush TO66 (long)

Packs of plastic bushes for use with TO66 package semiconductor devices. Supplied in packs of 20 bushes.

Order Code	Type	Price each
UL69A	Bush TO66L	£1.99

TO126

For mounting TO126 case transistors on heatsinks. Kit comprises one mica washer and one large washer to cover plastic side of transistor.

Order Code	Type	Price each
WR26D	Kit TO126	9p

PHONE BEFORE 5PM FOR SAME DAY DESPATCH

Access, Visa **01702 554161** American Express

Plastic TO66 (P)

For mounting plastic TO66 case (P1, P2 and P3) semiconductors one mica washer and one insulating bush.

Order Code	Type	Price each
WR23A	Kit P Plas	16p

Greaseless Semiconductor Insulators

Power semiconductor insulating washers that give excellent heat conduction without the need for silicone grease. The heat transfer capability without silicone grease is marginally better than mica or plastic with silicone grease, yet they offer similar electrical resistance (at least 1GΩ). They are exceptionally easy and clean to use and make assembly extremely fast. Four types are available, TO3, TO3P, TO218 and TO220.

Order Code	Type	Price each
QY44X	Insulator TO3	12p
UK86T	Insulator TO3P	10p
UL74R	Insulator TO218	22p
QY45Y	Insulator TO220	7p

TO220 Insulating Cover

A plastic cover for TO220 packaged devices. The cover encloses the metal heatsink mounting tab of the device and includes a spigot for locating the hole in the tab, so that the device is entirely secured by the cover which is itself attached to the heatsink by one nut and screw, no other screws are necessary. This has the added advantage that there is no bolt anywhere near the tab and no risk of short circuit. For complete insulation of the tab, the addition of an insulator is required, such as UL74R, beneath which, a bolt hole is not needed. Made from white nylon 66 approved to UL94V-0. Overall size: 15.75 x 13 x 5.3mm.

Order Code	Type	Price each
UL92A	TO220 Cover	9p

TO3 Insulating Cover

A clip-on plastic insulating cover for TO3 case transistors. Prevents short circuits and provides insulation up to 30kV.

Order Code	Type	Price each
FL56L	TO3 Cover	15p

Modular Connectors

Single row modular 2.54mm pitch sockets, and matching plugs, which are intended for mother-daughter board applications. The shrouded socket is fitted with a highly reliable four leaf gold on beryllium copper contact, and is also suitable for use with ICs. The unshrouded tin/lead finished brass plugs are also suitable for cable wiring applications. The 32-way connector strip can be easily cut to size using suitable hand tools. Insulator material: glass filled polyester UL94V-0.

Order Code	Type	Price each
DC17T	32 Socket Strip	79p
DC18U	32 Plug Strip	£1.49

Dual-In-Line Sockets

A range of high quality low-profile dual-in-line sockets with black glass-reinforced polyester bodies and tin-plated phosphor-bronze contacts. The contact makes against the flat face of the IC leg for maximum contact area and low insertion pressure. Sockets may be mounted end to end to achieve longer continuous runs of 0.1in spaced sockets. Sockets have chamfered side walls to assist insertion. The ultra-reliable, precision-stamped dual-wipe contacts offer an anti-overstress feature to prevent contact spring damage. One end is indented for polarisation.

Dimensions:

Pin size: 3.3 x 0.6 x 0.15mm
PCB hole required: 0.8mm
Overall height above pcb: 5.1mm
Height above pcb to base of IC: 4.1mm
Distance between sockets (lengthwise): 0.1in (2.54mm)

The following types are available

Type	Pin spacing (mm)	Pin spacing (in)	Overall length (mm)	Overall length (in)	Overall width (mm)	Overall width (in)
6-pin	7.62	0.3	7.62	0.3	10.16	0.4

Turned Pin Dual-In-Line Sockets

Harwin

A good quality 64-way turned-pin open frame shrink dip IC socket. The contacts are 4-leaf beryllium copper contact for maximum reliability.

Material
Contact Spacing: 1.778 (0.070") in each row
Insulator: 30% glass filled polyester UL94V-0
Shell: Precision machined brass
Contact: Beryllium Copper
Number of operations: 1,000 insertions

Order Code	Type	Price each
FP99H	64pin Shrink DIP Skt	£6.49

1.778mm High Density Shrink DIP IC Sockets

Dual In-line Pin IC sockets as used in the NICAM project, for use with IC's featuring the narrow ('shrink DIP') spacing of 1.778mm (0.07in) between pins along each side. Two types are available, 30-pin and 42-pin; the two rows of pins are spaced 10.16mm apart in the case of the 30-pin version, and 15.24mm in the 42-pin version. Insulator material is glass filled P.B.T., and contacts are tin-plated phosphor bronze. Current rating – 1A per pin max., contact resistance 20mΩ max.

Dimensions of body –

30-pin: 26.95mm long x 12.65mm wide x 4.8mm high.
42-pin: 37.62mm long x 17.33mm wide x 4.8mm high.

Order Code	Type	Price each
JM97F	Shrink DIP Skt 30Pin	99p
JM98G	Shrink DIP Skt 42Pin	£1.29

Zero Insertion Force IC Socket

Harwin

A range of DIL sockets ideally suited for programming EPROM's where different IC's must be inserted in one socket. With the lever in the unlocked position, IC's may be inserted or withdrawn with no force. When the IC has been inserted, push the lever over to the locked position and the IC will be held firmly in position with excellent contact to all leads.

Order Code	Type	Price each
YX50E	ZIF Socket 24-Way	£7.99
FT14Q	ZIF Socket 28-way	£6.99
FT15R	ZIF Socket 40-way	£9.99

Universal Test Socket

Aries

A zero insertion force socket which can accept IC's of any size up to 32 pins, because its wide sockets permit 0.3in, 0.4in and 0.6in wide IC's to be inserted. With the lever up, IC's can be inserted or removed with no force. Throw the lever down to lock the IC and firmly clamp the pins.

Order Code	Type	Price each
JK75S	Universal Tst Socket	£9.99

IC Pin Straightening Tool

A universal tool for quickly and easily straightening the pins of all sizes of dual in-line ICs. The tool operates like a vice and has two sprung, outer 'jaws' which close upon a centre portion. To use, simply drop the IC pins into the two slots and squeeze both sides of the tool together. The tool is double sided, with the centre portion being 0.3in. wide on one side for 8, 14, 16, 18 and 20-pin DIL ICs, and 0.6in. wide for 24, 28, 40, 42 and 48-pin ICs on the other side. To protect CMOS devices, an earth wire may be attached to the screw provided on one face, to neutralise static. Made in moulded black plastic. Dimensions: 81mm long x 37mm wide x 12mm thick.

Order Code	Type	Price each
KU42V	Straightening Tool	£3.99

IC Extraction Tool

A pair of plastic-coated, chrome-plated sprung steel tweezers with hooked ends for lifting and placing IC's without touching the pins. Overall length 102mm.

Order Code	Type	Price each
FD54J	Extraction Tool	80p

IC Insertion Tool

A high quality tool which makes inserting integrated circuits one simple operation. No more complicated alignment of pins or handling problems.

Order Code	Type	Price each
FR25C	Insertion Tool	86p

HEATSINKS

Bonded IC Heatsink

Thermalloy

A black anodised finned heatsink designed for 14 and 16 pin dual-in-line ICs. The heatsink may be attached using contact adhesive or similar at each end, and for best results it should be smeared with heatsink compound in between. Temperature rise in centre of heatsink: 68°C per watt. Dimensions: length 19.05mm, width 6.35mm, height 4.83mm. Fins are orientated longitudinally.

Order Code	Type	Price each
KU44X	Bonded Heatsink	34p

Large Bonded IC Heatsink

Thermalloy

A black anodised finned heatsink for 24, 28, and 40 pin dual-in-line ICs. Requires no extra board space. The heatsink may be attached using contact adhesive or similar at each end, and for best results it should also be smeared with heatsink compound in between. Temperature rise in centre of heatsink: 38°C per watt. Dimensions: length 31.75mm, width 13.46mm, height 4.83mm. Fins are longitudinal.

Order Code	Type	Price each
KU49D	Lrg Bonded Heatsink	52p

Choosing a Heatsink

The generation of heat by electronic devices is an unavoidable consequence of Ohm's Law and the Second Law of Thermodynamics. Heat will always need to be removed from electronic equipment, however in many cases the fact that the equipment stands in air and loses heat to same is in many cases quite sufficient if power levels are low. But if the number of functions in a confined space (e.g. many LSI chips) or the power output is increased, the heat generated also increases due to the greater demand on the system, and must not be allowed to reach too high a level. Electronic components may need to be cooled for three basic reasons:

1. Silicon semiconductor junctions will fail at 175°C, although the plastic package (if used) will fail before this.
2. The life expectancy of such junctions is inversely proportional to temperature, and typically at up to 150°C the life expectancy halves for every 10 to 15°C increase. Between 150°C and 175°C it halves for every 5 – 10°C increase.
3. The properties of semiconductors change with temperature, and it may be necessary to control the temperature of key devices, or to maintain several devices at the same temperature to maintain a function. Electrical noise, for instance, increases with temperature.

MAPLIN
KEY CALL
Phone 01702 556751

For power devices, always ensure that an adequately sized heatsink is selected. A clue is in the quoted °C per Watt rating. Very roughly you can determine the maximum power dissipation by Ohm's Law, and multiply this by the rating to obtain an indication of the device's temperature. Assume, to be on the safe side, that say 100°C is too much and select a bigger heatsink or separate heatsinks for separate devices.

Always ensure that the heatsink is adequately ventilated. In practice good thermal conductivity is difficult to achieve between device and heatsink, as this joint offers high thermal resistance. An application of proper heatsink compound or paste before bolting the device down will drastically improve the efficiency - try a 'before and after' test for yourself!

For Case Style TO92

Redpoint

Push-fit brass radiator suitable for TO92 and E-line transistor packages. The heat is partly radiated and partly conducted back into the PCB through the location pegs being soldered to the PCB on 10.16mm (0.4in.) centres. The heatsink may be inverted if PCB fixing is not required.

Overall size: 13.7mm wide, 13.8mm high plus mounting lugs, 11.4mm deep.
Temperature rise in free-standing mode: 50°C/W
Temperature rise fixed to PCB: 36°C/W

Order Code	Type	Price each
HQ79L	Heatsink 92F	28p

For Case Style TO18

Redpoint

Push-fit, lobed radiation fin in black anodised finish. Outside dimensions: 15mm diameter, 12.7mm high.

Temperature rise: 55°C/W.

Order Code	Type	Price each
HQ80B	Heatsink 18F	38p

For Case Style TO5

Thermalloy

Push-fit, lobe finned radiators in a black anodised finish for TO5 style devices. Two sizes are available, low profile and high profile. Outside diameter is 15.8mm; height of low profile type is 6.5mm, high profile type, 12.7mm. Temperature rise: low profile, 80°C per watt; high profile, 48°C per watt.

Order Code	Type	Price each
KU43W	Low Profile TO5	25p
FL78K	High Profile TO5	25p

For Case Style TO3 - Basic Radiator

Redpoint

A basic fin radiator in matt black finish. Pre-drilled to accept a standard TO3 transistor. Overall size: 44.5 x 31.5 x 14mm high. Temperature rise: 11°C/W

Order Code	Type	Price each
FG50E	Basic TO3 Fin	52p

Low Profile TO3

Thermalloy

Space saving black anodised vaned heatsink for TO3 style devices.

The design conforms to the diamond TO3 case style, using very little extra space on the board.

Temperature rise in centre of heatsink: 6.9°C per watt. Overall dimensions: length 47.76mm, width 35.56mm, height 25.4mm.

Order Code	Type	Price each
KU45Y	Low Profile TO3	60p

High Power Twisted Vane For TO3

Redpoint

A vaned radiator in matt black finish, pre-drilled to accept a standard TO3 transistor.

Overall size: 47mm long, 43mm wide x 50mm high. Temperature rise: 4.2°C/W.

Order Code	Type	Price each
FG51F	Powerfin TO3	£1.10

For Plastic Package Devices - Clip On

A low-cost clip-on heatsink for TO220 style devices. The TO220 package is inserted into the clip as far as the dimple and is then retained by the pressure applied directly above the device junction, thus providing optimum thermal transfer. Black anodised finish. Overall size: 25. x 19.05 x 8mm. Temperature rise: 23°C/W.

Order Code	Type	Price each
FG52G	Clip on TO220	40p

Clip-On TO220

Thermalloy

A clip-on black anodised heatsink for vertically mounted TO220 devices, with slotted side vanes. A strong, reinforced clip allows maximum heat transfer and an integral locking tab secures the device in position. Temperature rise in centre of heatsink: 25°C per watt. Dimensions: height 18mm, width 22.86mm, thickness including vanes, 9.52mm.

Order Code	Type	Price each
KU50E	Clip on TO220	28p

Clip-On Vaned TO220

Thermalloy

Labour saving, clip-on black anodised vaned heatsink for TO220 devices. It can be mounted vertically or horizontally. A strong, reinforced clip allows maximum heat transfer

and an integral locking tab secures the device in position. Temperature rise in centre of heatsink: 13.6°C per watt. Dimensions: height 29.44mm, width 25.53mm, thickness including vanes, 15.5mm.

Order Code	Type	Price each
KU51F	Clip on Vaned TO220	40p

Slotted Heatsink for Plastic Packages

Thermalloy

A black anodised radiator pre-drilled to accept almost any flat plastic packaged device, with slotted side vanes. Overall size: 19 x 17 x 20.5 high. Temperature rise: 22°C per watt.

Order Code	Type	Price each
FL58N	Slotted Heatsink	32p

TO126 Style

Redpoint

A miniature extruded heatsink with matt black finish for use with TO126 style packages. A 3.66mm device mounting hole is drilled in the heatsink and a slot is cut where the device leadouts are positioned.

Overall size: 7.9 x 19 x 25.4mm
Temperature rise: 28°C/W

Order Code	Type	Price each
JR93B	Heatsink TO126	£1.60

TOP QUALITY PRODUCTS AT SUPER LOW PRICES!

Twisted Vane for TO126

Redpoint

Twisted vane heatsink suitable for one TO126 etc. style device. Base is 19 x 22mm. One hole provided in the centre of 4mm diameter. Height of fins, 19mm. Thermal rating 21°C/W. Black anodised finish.

Order Code	Type	Price each
JX21X	Vaned Heatsink TO126	52p

TO202 Style

Redpoint

A twisted vane radiator in matt black finish, pre-drilled to accept TO202 style devices e.g. C106D. Overall size: 30 x 12.7 x 45mm long plus mounting lugs. Temperature rise: 13°C/W.

Order Code	Type	Price each
FG53H	Vaned Heatsink TO202	65p

Top Mounting TO220

Thermalloy

Can be added to a TO220 packaged device fitted to the low profile heatsink above to provide heatsinking on the top side as well. A special cut out makes space for the plastic encapsulation leaving a flat strip which lies flat on top of the heatsink tab giving the device double-sided cooling. Shaped to mate with low profile heatsink above. Temperature rise in centre of heatsink: 15°C per watt. Dimensions: length 17.78mm, width 44.45mm, height 12.7mm. Channel 12.7mm. Cutout: width 10.67mm, depth 13.46mm.

Order Code	Type	Price each
KU47B	Top Mount TO220	28p

TO220 5-Lead Style

Redpoint

A twisted vane radiator in matt black finish, pre-drilled to accept 5-lead TO220 (Pentawatt) style devices e.g. LM383. Overall size: 38 x 28 x 22mm high. Temperature rise: 9.9°C/W.

Order Code	Type	Price each
FG54J	Vaned Heatsink Penta	£1.30

Twisted Vane PCB Mounting

Redpoint

Low profile, low cost PCB mounting twisted vane design with a good thermal rating for TO220 and TO126 devices etc. A central device fixing slot of 3.8 x 9mm is provided 15.2mm from the bottom edge. The complete assembly occupies only 30 x 13mm of PCB space. Height above PCB, 30.2mm. Thermal rating = 14°C/W. Black anodised finish.

Order Code	Type	Price each
JW29G	Vert Vaned HSk TO220	56p

High Power Twisted Vane

Redpoint

A twisted vane radiator in matt black finish, pre-drilled to accept almost any flat plastic package device. Overall size: 38 x 28 x 22mm high. Temperature rise: 9.9°C/W.

Order Code	Type	Price each
FG55K	Powerfin plastic	65p

Twin Device Horizontal Twisted Vane PCB Mounting

Redpoint

Designed to accept one or two plastic packaged devices of TO220 etc. style. Base is 38 x 42mm. Two holes provided each 14mm from each end, of 4mm diameter. Height of fins, 25mm. Thermal rating 7.1°C/W. Black anodised finish.

Order Code	Type	Price each
JW30H	Hor Vaned HSk TO220	90p

Low Profile TO220

Thermalloy

Low profile, black anodised pre-drilled heatsink, large enough for up to two TO220 devices, with slotted side vanes. Designed for mounting flat onto a PCB and can be used with the top mounting part described previously. Temperature rise in centre of heatsink: 7.1°C per watt. Dimensions: length 36.83mm, width 44.45mm, height 9.52mm. Channel 17.78mm. Each mounting hole is 13.21mm from each end.

Order Code	Type	Price each
KU48C	Low Profile TO220	48p

Low Profile High Performance TO220

Thermalloy

A low profile, black anodised pre-drilled heatsink for up to two TO220 devices, having folded slotted side vanes. Designed for mounting flat onto a PCB. Temperature rise in centre of heatsink: 6.5°C per watt. Dimensions: length 50mm, width 50mm, height 9.52mm. Channel 24.28mm. Each mounting hole is 10.52mm from each end.

Order Code	Type	Price each
KU53H	Hi Performance TO220	45p

High Performance TO220

Redpoint

Very high performance 4-sided heatsink pre-drilled for TO220 style devices in black anodised finish. Has a 45.2mm square base. Height of fins 25.4mm. Temperature rise 6°C/W.

Order Code	Type	Price each
FG61R	Heatsink TO220 EHP	65p

Vertical High Power PCB Solderable

Redpoint

A very professional looking heatsink for TO220, TO128, TO3P and TO202 etc. devices. The heatsink is not symmetrical and has a 'narrow' mounting surface on one side for TO220 size devices, and a 'wide' surface on the other for larger TO3P style devices. The device's pins do not need to be folded to accommodate a flat fixing version, but instead the device remains vertical as the fixing tab is attached to the flat centre of the vertical heatsink. The heatsink has a pair of 2.6mm diameter pins spaced 25.4mm apart at the bottom end, for insertion through a pair of PCB holes and soldering. In addition longitudinal, round section channels on each side are accessible at both ends for a pair of self-tap screws for further

anchoring. The final completed assembly takes up very little board space (12.5 x 34.5mm). Height (excluding pins) is 25mm for SW25-24 and 38mm for SW38-2. Type SW25-4 has a 2mm diameter bolt hole ready-drilled in the mounting surface, while type SW38-2 is plain undrilled, to which a device is attached using the special retaining clip supplied, obviating fiddly screw attachment. Thickness at centre is 2mm.

Thermal rating = 13°C/W (SW25-4), 10°C/W (SW38-2). Black anodised finish.

Order Code	Type	Price each
JW27E	SW25-4 Vert HSink	80p
JW28F	SW38-2 Vert HSK Pln	80p

8-Fin TO220 Heatsinks

Pre-drilled for one TO220 package. Available in two versions:

Length	Overall height	Overall width	No. of semi. packages	Thermal rating	Colour
25mm	12.3mm	35mm	1	13°C/W	Matt black
40mm	12.3mm	35mm	1	9°C/W	Matt black

Order Code	Type	Price each
KW41U	8 Fin TO220 25mm	45p
KW42V	8 Fin TO220 40mm	60p

Centrally Mounting Heatsink for TO220 Semiconductor Packages

Available for a single TO220 package which mounts in the centre of the heatsink, the main areas of heat dissipation being concentrated at the ends. Overall dimensions: 50mm length x 12.5mm height x 43mm width. Manufactured from matt black anodised aluminium alloy, the thermal rating of the heatsink is 6.8°C/W. Pre-drilled for one TO220 package.

Order Code	Type	Price each
KW43W	Central Mount TO220	86p

High Power Types - Type 2E

Redpoint

Plain undrilled aluminium heatsink. Dimensions: Width: 80mm (3.15in); Length: 51mm (2in); Thickness: 30mm (1.2in). Temperature rise in centre of heat sink: 2.4°C/W.

Order Code	Type	Price each
HQ70M	Heatsink 2E	£3.75

6-Fin TO3 Heatsinks (Type V)

Available in two versions. Pre-drilled for one or two TO3 package devices.

Length	Overall height	Overall width	No. of semi. packages	Thermal rating	Colour
50mm	18.4mm	66mm	1	5.4°C/W	Black
100mm	18.4mm	66mm	2	3.4°C/W	Black

Order Code	Type	Price each
KW44X	6 Fin TO3 50mm	£1.48
KW45Y	6 Fin TO3 100mm	£2.49

Type 4Y

Redpoint

Plain undrilled aluminium heatsink. Dimensions: Width: 60mm (2.4in). Length: 102mm (4in). Thickness: 16mm (0.63in). Temperature rise in centre of heatsink: 3.3°C/W.

Order Code	Type	Price each
FL41U	Heatsink 4Y	£2.45

8W Hi-Fi Heatsink

Dimensions in mm unless otherwise stated. All holes ø3.5

Designed to bolt to a pcb, the power amp IC then bolts onto this heatsink and a further heatsink may be bolted to it. It is therefore an ideal method of transferring heat from an on-board plastic power device to a large finned heatsink easily. Manufactured in aluminium angle 4.76mm (3/16in.) thick and black anodised.

Order Code	Type	Price each
HQ81C	8W Hi-Fi Heatsink	£1.99

50W Hi-Fi Heatsink

Dimensions in mm unless otherwise stated. Holes: A: ø4.2 B: ø3.2

As 8W Heatsink, but longer and designed for two plastic power transistors or power ICs.

Order Code	Type	Price each
HQ69A	50W Hi-Fi Heatsink	£2.99

Centrally Mounting TO3 Heatsinks (Type X)

The semiconductor(s) are mounted centrally and horizontally. The base of the heatsink will fit flush against a flat surface and as a result is suitable for PCB mounting, the leads from the package being soldered on the other side. Available in three versions. Pre-drilled for one, two, or three TO3 package devices.

Length	Overall Height	Overall Width	No. of semi. packages	Thermal rating	Colour
50mm	25mm	86mm	1	2.90°C/W	Black
100mm	25mm	86mm	2	1.85°C/W	Black
150mm	25mm	86mm	3	1.30°C/W	Black

Order Code	Type	Price each
KW46A	Central TO3 50mm X	£1.99
KW50E	Central TO3 100mm X	£3.49
KW54J	Central TO3 150mm X	£5.99

PHONE BEFORE 5PM FOR SAME DAY DESPATCH

01702 554161

Centrally Mounting TO3 Heatsinks (Type Y)

A range of heatsinks where the semiconductor(s) are mounted centrally and horizontally. From a side view the heat dissipating device is centrally mounted, sufficient clearance for its lead-outs being provided when the heatsink is chassis mounted. Available in two versions. Pre-drilled for one or two TO3 package devices.

Length	Overall Height	Overall width	No. of semi. packages	Thermal rating	Colour
50mm	36mm	91.4mm	1	2.75°C/W	Black
100mm	36mm	91.4mm	2	1.75°C/W	Black

Order Code	Type	Price each
KW47B	Central TO3 50mm Y	£1.99
KW51F	Central TO3 100mm Y	£4.75

Flat Type

Redpoint

Plain undrilled aluminium heatsink ideal for printed circuit boards and suitable for external mounting on equipment.

Dimensions: Width: 94mm (3.7in); Length: 152mm (6in.); Thickness: 14mm (0.6in).
Temperature rise in centre of heatsink: 1.8°C per watt.

Order Code	Type	Price each
FL42V	Flat Heatsink	£4.95

High Power 'T' Slotted

Redpoint

An efficient, general purpose symmetrically finned heatsink where the two outer pairs of fins, on both sides, feature integral 'T' slots 4.7mm wide for locating screw heads. With these the heatsink can be attached to panels, supported on pillars or carry PCB's.

One side of the central device mounting section has a pair of thick longitudinal fins 22.2mm apart. Holes are provided for two TO3 devices to be mounted upon the other side. Centre of heatsink is 6.4mm thick. Width 130.2mm, length 101.6mm, depth 31.8mm. Thermal rating 1.2°C/W. Black anodised finish.

Order Code	Type	Price each
JW31J	Scw Slotted HtSink	£6.99

Type 6W-1

Redpoint

Plain undrilled aluminium heatsink. Dimensions: Width: 130mm (5.1in); Length: 152mm (6in); Thickness: 32mm (1.25in). Temperature rise in centre of heatsink: 1.1°C/W.

Order Code	Type	Price each
FL77J	Heatsink 6W-1	£7.65

10-Fin TO3 Heatsink (Type Z)

There are 10 fins on this heatsink. 9 are devoted to dissipating heat while the tenth, which is mounted at 180° to the rest, accommodates the semiconductor package(s). Three versions are available. Pre-drilled for one, two, or three TO3 package devices.

Height	Overall Length	Overall Width	No. of semi. packages	Thermal rating	Colour
50mm	75mm	69.4mm	1	2.20 C/W	Black
100mm	75mm	69.4mm	2	1.39 C/W	Black
150mm	75mm	69.4mm	3	1.00 C/W	Black

Order Code	Type	Price each
KW48C	10 Fin TO3 50mm	£2.99
KW52G	10 Fin TO3 100mm	£5.95
KW55K	10 Fin TO3 150mm	£6.95

Heatsinks for Multiple TO3 Packages (Type W)

The semiconductors are mounted on the two end panels, the main area of heat dissipation being in the middle section. Available in two versions. Pre-drilled for two, or four TO3 package devices.

Length	Overall height	Overall width	No. of semi. packages	Thermal rating	Colour
50mm	44mm	130mm	2	2.1°C/W	Black
100mm	44mm	130mm	4	1.33°C/W	Black

SUBSECTION 73 TECHNICAL BOOKS

D.A.T.A Books

NEW

The D.A.T.A technical library covers over 240,000 semiconductors from diodes to microprocessors. For each device all the relevant electrical and physical parameters are listed, as well as the manufacturer.

The volumes listing Integrated Circuits have a cross reference listing pin for pin compatible devices.

The ten volumes are listed under 'Integrated Circuits' and 'Discrete Devices'.

TOGGLE SWITCHES

Ultra Miniature Toggle Switches

A range of ultra miniature toggle switches. Rated 3A 125VAC, 1A 250VAC. Chrome plated brass dolly. Mounting hole: 5.2mm (0.2in). Available in SPST, SPDT and DPDT types.

Insulation resistance: >100MΩ
Contact resistance: 20mΩ max.

Dimensions	Single-pole	Double-pole
Body	8 x 5 x 7mm	8 x 9 x 7mm
Bush length	5.6mm	5.6mm
Dolly length	9.5mm	9.5mm
Tag length	5mm	5mm

Order Code	Type	Price each
FH97F	SPST Ultra Min Toggle	89p
FH98G	SPDT Ultra Min Toggle	89p
FH99H	DPDT Ultra Min Toggle	£1.05

Sub-Miniature Toggle Switches

A range of toggle switches in SPDT and DPDT with a variety of switching actions. Switches have chrome-plated brass dolly and silver-plated contacts.

Rated:	2A	250V AC
	5A	125V AC
	5A	30V DC
Contact resistance:	<20mΩ	
Insulation resistance:	>100MΩ	
Life:	50,000 make/break cycles at full load	
Mounting hole:	6.35mm dia.	

Single-pole double-throw (SPDT) types are available in the following switching actions. Non-locking indicates biased or momentary action.

Type	Action	Description
A	ON-ON	Locking both ways
J	ON-(ON)	Locking one way, non-locking one way
B	ON-OFF-ON	Locking both ways, centre off
C	ON-OFF-(ON)	Locking one way, non-locking one way, centre off
D	(ON)-OFF-(ON)	Non-locking both ways, centre off

Similarly double-pole double-throw (DPDT) types are available in the following switching actions.

Type	Action	Description
E	ON-ON	Locking both ways
K	ON-(ON)	Locking one way, non-locking one way

FH08J	4-Pole SM Toggle	£2.79

Right-Angled PCB Mounting Type

Sub-miniature toggle switches rated at 250V AC 3A, 125V AC 6A, 30V DC 5A. Silver-plated alloy contacts. Nickel-plated brass dolly. The switches have extended right-angled terminals and a pair of pins at the edge of the toggle pivot plate for insertion in a pcb. The switches are not threaded for front panel fixing. Two styles are available for up/down and left/right operation and both are available in single- and double-pole double-throw versions. All other dimensions are as panel mounting types.

Miniature PCB Mounting Toggle Switches

A range of miniature toggle switches for direct PCB mounting, available in both single and double pole changeover, both vertical or right-angled mounting. Right-angled types have two extra PCB pins at front near the toggle for secure fixing. Suitable for use with 0.1in. matrix board. All types are rated at 0.3A at 125V DC. Contact resistance is 20mΩ. Insulation resistance, 100MΩ at 500V DC. Insulation strength, 1000V AC for 1 minute. Chrome toggle dolly is 6mm long on all types.

Sub-Miniature Waterproof Toggle Switch Cover

A waterproof toggle switch cover for use with sub-miniature toggle switches having 1/4-40 UNS threaded mounting bushes. This cover fits the 'Sub-Miniature Toggle Switch' range. The cover comprises of a polychloroprene boot with a knurled nickel-plated brass nut. To provide sealing between the panel and the cover, an O-ring is also supplied. When this toggle switch cover is used, the switch locating plate and outer fixing nut are not required.

Order Code	Type	Price each
JR79L	Small Toggle Cover	£1.36

DPDT Toggle Calvyn Industrial

A standard DPDT toggle switch rated 2A 250V AC, 6A 125V AC. Supplied with on/off plate.

Body size: 27.5 x 17 x 14.5mm high
 Tag length: 5.5mm
 Bush: M12 x 8.5mm long
 Dolly: 14mm long, 5mm dia.
 Panel cut-out: 12.7mm dia.
 Contact resistance: <50mΩ
 Insulation resistance: >100MΩ

ROCKER SWITCHES Round-Faced Miniature Rocker Switches

A range of three miniature round faced rocker switches with single round hole fixing and solder terminals. Mounting hole: 18mm. Current rating: SPST and SPDT 240V AC 3A; DPDT 240V AC 1.5A.

Order Code	Type	Price each
FG47B	Round Rocker SPST	£1.39
FG48C	Round Rocker SPDT	£1.65
FG49D	Round rocker DPDT	£1.99

Snap-in Miniature Round Rocker Switches

A range of miniature round faced rocker switches which snap-in a 20.4mm diameter hole. Body has a 2mm wide locating lug for which a slot must be provided in the edge of the hole, to prevent rotation.

Available in SPST, SPDT, DPST and DPDT contact configurations with red or black rocker. All buttons have a white spot to indicate the 'on' direction. Connections are 4.8mm push-on style terminals which can be soldered. Contacts are rated at 125V AC @ 5A, 250V AC @ 3A. Contact resistance is 20mΩ max. as measured with 2.5V @ 1A DC. Insulation resistance 100MΩ @ 500V DC. Insulation strength is > 1,500V AC.

Order Code	Type	Price each
JR96E	Round Rocker SPST Bk	£1.06
JR97F	Round Rocker SPST Rd	£1.06

JU03D	Round Rocker DPDT Rd	£1.65

Miniature Rocker Switches

A very attractive single hole fixing miniature rocker switch available in SPST and DPDT styles. Switch has a white rocker in a matt finish black frame.

Rating:	6A/125V AC, (2A/250V AC)
Contact resistance:	<20mΩ
Panel cut-out:	18mm diameter
Overall depth behind front of panel:	14mm
Overall height in front of panel:	12mm (including rocker) 7.5mm (frame only)
Frame size:	30 x 20mm.

Order Code	Type	Price each
YX64U	Min Rocker SPST	79p
YX65V	Min Rocker DPDT	£1.05

Double-Pole Rocker Switch

A range of slim aesthetically styled, double-pole, single-throw, rocker switches that are mains rated and available with or without a neon indicator. Moulded in self-extinguishing thermoplastic these switches are supplied with either a black rocker or a red illuminated rocker and snap-fit into a cut-out 19 x 13mm in a panel 0.7 to 1.25mm thick. Rated at 6A/250V AC for resistive loads or 2A/250V AC for inductive loads.

Order Code	Type	Price each
RD17T	DP Neon Rocker Sw	£1.65
RD19V	Rocker Switch	99p

Single-Pole Rocker Switch

A slim aesthetically styled, single-pole, change-over, illuminated rocker switch that is mains rated and uses a neon indicator. Moulded in self-extinguishing thermoplastic this switch is supplied with a red illuminated rocker and snap-fits into a cut-out 19 x 13mm in a panel 0.7 to 1.25mm thick. Rated at 10A/250V AC for resistive loads or 4A/250V AC for inductive loads.

Order Code	Type	Price each
RD18U	SP Neon Rocker Sw	99p

Illuminated Rocker Switch

A smart, snap-in rocker switch with concave, red, neon illuminated rocker. Contacts are single pole single throw rated at 125V at 10A, 250V at 6A AC. Connectors are push-on style terminals which can be soldered. The snap-in switch requires a panel cut out of 22 x 18mm. Overall depth from front of panel is 23.5mm. Contact resistance is 50mΩ max. Insulation resistance is 100MΩ at 500V DC. Insulation strength is 1500V AC for 1 minute.

Order Code	Type	Price each
KU99H	Red Neon Switch	£1.25

Rocker Switches

A range of 10A 250V AC rocker switches having a black polycarbonate body and white rocker, or green (with white body) or red lens. The switches are snap-mounting and require a panel cut-out 29 x 12.5mm for single-pole types and 29 x 25mm for double-pole types, except for YR70M/FE64U which require a cutout of 30 x 22mm. Types available are: Single-pole make (SPST); Single-pole changeover (SPDT); Single-pole make with integral neon indicator with red or green lens (Neon); Double-pole make (DPST); Double-pole changeover (DPDT); Double-pole make

with integral neon indicator with red or green lens (Dual Rocker Neon).

Slimline Tri-State Switch

A PCB mounting switch in a dual-in-line package with tri-state switching. The eight outputs can be either 'high', 'indeterminate', or 'low'. The switch is manufactured from UL94V0 plastics with gold plated contacts, to ensure low resistance and long operating life. Designed to fit a standard IC socket or can be directly mounted on the pcb. Ideally suited for encoding/decoding circuitry in digital and computer circuits.

Contact rating
non-switching: 100mA, 50V DC
switching: 25mA, 24V DC
Contact resistance
initial: 50mΩ max.
after life test: 100mA max.
Insulation resistance: 1,000MΩ min at 100V DC
Dielectric strength: 500V DC min for 1 minute
Capacitance between adjacent switches: 5pF max.
Operating life: > 2,000 operations per pole
Acceptable soldering temperature: 260 ±5 °C for 5 ±1 second

Dimensions
width: 7.62mm
length: 21.92mm
height: 4.1mm
pin spacing: 2.54mm (0.1in.)
pin length: 3.5mm

Order Code	Type	Price each
GW74R	8W Tri-State DIL Sw	£1.35

Piano Type SPST

Subminiature switches in a dual-in-line package with right-angle piano-style levers, designed for PCB mounting. Pin spacing 0.3in x 0.1in. Body is made from glass reinforced Polyester resin to UL 94 VO. Contacts gold plated phosphor bronze. Available in 4-way and 8-way versions.

Specifications
Mechanical Life: 5000 operations (min)
Electrical Life: 2000 operations (min) @ 50mA 24V DC
Operating Force: 400g ±200g
Non-switching Rating: 100mA, 50V DC
Switching Rating: 50mA, 24V DC
Switch Action: SPST ('down' is ON)

ROTARY SWITCHES Sub-Miniature PCB Mounting 'Hex' Encoded Rotary Switches

Extremely compact, PCB mounting, sub-miniature switch arrays which can produce any 4-bit hexadecimal number from 0 to F by simply turning the integral slotted actuator with a screwdriver, to one of 16 click-stop positions. The switches are 10mm square and 11mm high overall excluding pins. The five pins are spaced for a 0.1in. matrix, comprising one common pin and four 'output' pins for hex 0 to 3.

Switch QY68Y is arranged so that any pin output 'bit 0' in hex is connected to the common pin. For identification purposes, the actuator is white. Switch QY69A has the complementary arrangement in that any pin output 'bit 0' in hex is open circuit, or not connected to the common pin. For identification purposes, the actuator is red.

Specification
Contact rating: 100mA @ 50V DC non-switching
100mA @ 5V DC switching
Contact resistance: 100mΩ
Dielectric strength: 250V AC for 1 minute
Insulation resistance: >1000MΩ @ 100V DC
Life: 10000 operations
Acceptable soldering temperature: 260°C ±5°C for 10 min.

Decimal Rotary DIL Switch

A PCB mounting, sealed, dual-in-line, 10-position, BCD rotary programming switch with 1-2-4-8 binary coding. The switch is easily operated by means of the screwdriver slot on top of the body and has a positive click action. The switch provides compliment coding and is suitable for use in pre-programming of digital circuits and computers.

Specification

Contact rating
Non-switching: 100mA, 50V DC
Switching: 25mA, 24V DC resistive
Contact resistance: 100mΩ max. at 5V DC, 10mA
Insulation resistance: 1000MΩ min at 100V DC
Dielectric strength: 240V x 10² operations without load
Acceptable soldering temperature: 230 ±5°C for 3 ±0.5 secs - (75% coverage)

Order Code	Type	Price each
CJ89W	DIL SW Dec	£1.70

DIL Rotary Switch

A choice of two DIL flat rotary switches for PCB mounting with a 2.54mm pitch. The switches have a mounting bush (M10 x 0.75) with a 25mm shaft, and are fitted with a stop position. 1P 12W or 2P 6W are available.

Specification

Contact material: Silver plate
Maximum switching power: 5VA
Maximum switching current: 150mA
Maximum current: 5A
Contact resistance: <150mΩ

Right Angle PCB Mounting Rotary Switch

Lorlin

A right-angle PCB mounting rotary switch which features single line PCB insertion pins on a 0.1in. spacing. Two mounting pillars and fixing screws are provided under the switch body to ensure rigid support to the PCB, in addition to the usual 3/8 in. spindle bush and nut fitting for front panel mounting, and adjustable end stop. The switch contacts are an integral part of a PCB at rear of the switch and are brought out to the insertion pins at the bottom. Available as break before make in 1 x 12 way.

Order Code	Type	Price each
FT56L	PCB R/A Rotary 1x12	£3.99

Stackable PCB Mounting Wafer

Lorlin

A 1-pole, 12-way rotary wafer switch designed to be added behind any of the main PCB switch units above.

The main switch couples to a number of secondary wafers via a nylon shaft, which inserts into a keyed recess at rear of the main switch. The shaft will pass through up to 11 stackable wafers, forming one complete, pcb mounted multi-pole rotary switch assembly. Shaft is 76mm in length x 4.5mm dia. Wafers available as 1-pole 12-way only.

Order Code	Type	Price each
FA97F	Wafer 1 pole 12 way	£2.35
FA98G	Wafer Shaft Plastic	49p

Rotary Mains Switch

Lorlin

A double-pole single-throw (DPST) rotary mains switch moulded in flame retardant plastic. Recommended for use in circuits where heavy switching current surges occur. Indexing 45°. 6.3mm (1/4 in) spindle. 9.5mm (3/8 in) bush.

Bush length: 8mm
Spindle length: 25mm (with flat)
Overall length: 47mm
Contact rating: 4A at 250V AC
Current surge: 80A for 10msec.
Contact resistance: 20mΩ

Order Code	Type	Price each
FH57M	Rotary Mains	£1.39

FOR TOP QUALITY & VALUE!

THUMBWHEEL EDGE SWITCHES

A thumbwheel edge switch in a black plastic housing. This high quality switch has gold plated contacts on both the PCB and wiper to ensure reliable operation. The numbers 0 to 9 appear in the aperture in the front as the aperture is revolved, and the operation is smooth and positive. The switches are front panel mounting with snap-in fixings, and can be snapped together to form a bank of switches if desired. Connections are made as follows:

No.	Pin numbers
0	C and 0 None
1	C and 1 C and 1
2	C and 2 C and 2
3	C and 3 C, 1 and 2
4	C and 4 C and 4
5	C and 5 C, 1 and 4
6	C and 6 C, 2 and 4
7	C and 7 C, 1, 2 and 4
8	C and 8 C and 8
9	C and 9 C, 1 and 8

Switch resistance: 100mΩ max
Current carrying capacity: 1A max
Contact rating: 150mA at 50VAC or 28VDC

Character height: 5.8mm
 Width of switch: 8mm
 Overall height: 33mm
 Overall depth: 43mm

CAR IONISER

NEW

GREAT VALUE!

£9.99
RZ54J

This compact ioniser is designed to improve the quality of the air in your car. The ioniser generates a copious stream of negative ions into the air that combine with the positively charged pollution particles. Airborne particles and odours are removed from the atmosphere by a process of electrostatic precipitation which results in a 'after a rainstorm freshness'. The device may help to relieve colds and similar respiratory problems, as well as benefiting headache and hayfever sufferers. Easy to install, just connects to a cigarette lighter socket. Supplied with plug and 1m of connecting lead.

round key for extra high security. The switch has two solder buckets at the rear. Supplied with two keys. The key may be withdrawn in either position.

Bezel diameter: 15mm
 Panel cut-out: 12mm (the bush is flattened to 10.25mm on opposing sides to prevent twisting)

Bush length: 20mm
 Indexing: 90°
 Contact rating: 1/2 A at 250V AC

FOR TOP QUALITY & VALUE!

Plastic Body SPDT

An SPDT rotary switch operated with a non-reversible flat key, in a tough black plastic body. Three solder tags at rear. Barrel has a white pointer dot. Panel cut-out 19.9mm (3/4 in.). Supplied with 2 keys. The key may be withdrawn in either position.

Bezel diameter: 22mm
 Bush length: 19.5mm
 Indexing: 90°
 Contact rating: 3A 125V AC
 1A 250V AC

Contact resistance: <20mΩ
 Insulation resistance: @ 500V DC >100MΩ
 Insulation Strength: 1 minute @ 1000V AC

Order 2458		
Code	Type	Price each
FV42V	Plas Key Switch	£6.99

Miniature Round Type SPDT

A single-pole, double-throw, key switch with a zinc-alloy die-cast housing and chrome-plated bezel. The key switch uses a round key for extra security; the key can be withdrawn from either position. The switch has four solder bucket terminals at the rear. Supplied with two keys with a range of 200 combinations.

Specification

Bezel diameter: 15mm
 Panel cutout: 12mm diam, 10.8mm across the flats (provided to prevent twisting)
 Bush length: 21.5mm
 Indexing: 90°
 Contact rating: 1A 125V AC
 0.5A 250V AC

Order Code	Type	Price each
CJ94C	Min SPDT Key	£3.99

Miniature Four Position

A single-pole, four-position, key switch with a zinc-alloy die-cast housing and stainless steel bezel. This key switch is ideal for specialist alarm systems where there is a need for separate arming and testing positions; the key can be withdrawn from any of the four positions. At the rear, the switch has four pin terminals and one solder bucket terminal. Supplied with two keys, with a wide range of combinations.

Specification

Bezel diameter: 15.5mm
 Panel cut-out: 12mm diam, 10.8mm across the flats (provided to prevent twisting)
 Bush length: 23.5mm
 Indexing: 0°, 90°, 180°, 270°

Key Switch Cover

Calvyn Industrial

An attractive chrome-plated cover for use with our Key Switch FH40T. Cover is spring loaded and provides weather-proof protection.

Order Code	Type	Price each
FE43W	Key Switch Cover	£1.09

MAKA-SWITCH

Lorlin

Switches may be made up using the various accessories to suit individual requirements. Available only in 'miniature' size. 1/4 in spindle, 3/8 in bush.

Shaft Assembly

Switch mechanism (shafting assembly) accommodates up to 4 wafers.

Indexing: 30°
 6.3mm (1/4 in.) spindle. 9.5mm (3/8 in.) bush
 Spindle length: 41mm (with flat).
 Bush length: 8mm
 Overall length: 90mm
 With adjustable rotation limit stop.

Order Code	Type	Price each
FH46A	Maka Shaft	£2.49

Wafers

Glass filled dialyl phthalate stators, acetal rotors and silver-plated contacts.

Max working voltage: 300V AC or DC
 Max current: 5A continuous
 Contact resistance: 10mΩ
 Contact rating: 150mA at 250V AC or DC
 350mA at 110V AC or DC

The following types are available:

Break before Make action

1 pole 12 way: FH47B. 2 pole 6 way: FH48C. 2 pole 9 way: FF81C. 4 pole 3 way: FH50E. 6 pole 2 way: FH51F.

Order Code	Type	Price each
FH47B	Maka Wafer 1p 12w	£1.89
FH48C	Maka Wafer 2p 6w	£1.89
FF81C	Maka Wafer 2p 9w	£1.89
FH50E	Maka Wafer 4p 3w	£1.89

FH55K	Maka Screen	15p

MICROSWITCHES

Sub-Miniature

A low-cost range of subminiature microswitches produced to an internationally accepted standard size and operating characteristics. These switches are manufactured from glass-reinforced thermoplastic to give rugged performance. Switches are single-pole double-throw and available in the basic style, or with an actuator attached. Terminals are suitable for PCB mounting at a standard pitch.

The actuator is of stainless steel and is a 13mm long lever.

Specification
 Contact rating: 3A 125V AC
 Body size: 12.8 x 6.5 x 5.8mm
 Fixing centres: 6.5mm
 Fixing hole: 1.2mm diameter (for M1 screws)

Order Code	Type	Price each
GW66W	Sub-Microsw	59p
GW67X	Sub-Microsw/Lever	65p

Fax your orders to:
01702 553935

Sub Miniature

Crouzet

A sub-miniature microswitch of internationally accepted size and operating characteristics. It is manufactured to the highest standards using glass-reinforced thermoplastic with inlaid silver contacts. Switches are single-pole double-throw. Post Office approved.

Contact rating: 5A 250VAC
 Body size: 19.84 x 6.35 x 9.6mm high
 Fixing centres: 9.53mm, 2.3mm clear
 Actuator: 2.4mm above body, 2.26mm square

The switch is also available with an 18mm long lever or with a 16.8mm long lever with roller. Solder tag connections.

Order Code	Type	Price each
FP41U	Min Microswitch	99p
FP42V	Min M-Sw with Lever	£1.19
FP43W	Min M-Sw with Roller	£1.29

Low Cost Miniature

A low-cost range of miniature microswitches produced to an internationally accepted standard size and operating characteristics. These switches are manufactured from glass-reinforced thermoplastic to give rugged performance.

Switches are single-pole double-throw and available in the basic style, or with a choice of actuators attached. Terminals are standard solder lugs. The actuators are of stainless steel and either a 16.5mm long lever, or a 18.5mm long lever carrying a roller.

Specification
 Contact rating: 3A 250V AC
 Body size: 19.8 x 10.2 x 6.4mm
 Fixing centres: 9.5mm
 Fixing hole: 2.35mm diameter (for M2.3 screws)

Order Code	Type	Price each
GW68Y	Min-Microsw	59p
GW69A	Min-Microsw/Lever	65p
GW70M	Min-Microsw/Roller	69p

Miniature

Crouzet

A miniature microswitch of standard size with internationally accepted operating characteristics. Constructed in glass-reinforced thermoplastic to give strength and good temperature performance. Switches are single-pole double-throw.

Contact rating: 16A 250VAC
 Body size: 27.76 x 10.3 x 15.9mm high
 Fixing centres: 22.2 x 10.31mm, 3.16mm clear
 Actuator: 2.76mm above body

The switch is also available with a 28.3mm long lever, or with a 27mm long lever with roller. Standard 1/4in. blade connections.

Order Code	Type	Price each
FP44X	Microswitch	£1.15
FP45Y	Lever Microswitch	£1.35
FH95D	Roller Microswitch	£1.39

Low Cost Standard

A low-cost range of standard microswitches produced to an internationally accepted standard size and operating characteristics. These switches are manufactured from glass-reinforced thermoplastic to give rugged performance. Switches are single-pole double-throw and available in the basic style, or with a choice of actuators attached. Terminals are 1/4in. blade type that can either be soldered or used with push-on connectors (e.g., HF10L). The actuators are of stainless steel and either a 27.5mm long lever, or a 27.5mm long lever carrying a roller.

Specification
 Contact rating: 15A 250V AC
 Body size: 27.8 x 15.9 x 10.3mm
 Fixing centres: 22.2 x 10.3mm
 Fixing hole: 3.1mm diameter

Order Code	Type	Price each
GW71N	Std-Microsw	79p
GW72P	Std-Microsw/Lever	85p
GW73Q	Std-Microsw/Roller	89p

Heavy Duty

Crouzet

A heavy duty microswitch with internationally accepted dimensions and operating characteristics and a particularly rugged construction. Switches are single-pole double-throw.

Contact rating: 16A 250VAC
 Body size: 46.4 x 16.3 x 18.7mm high
 Fixing centres: 25.4mm, 3.78mm clear
 Actuator: 5.26mm above body

The switch is also available with a 60mm long lever, or a 60mm long lever with roller, or a panel-mounting bush and push-button. Bush requires 9.5mm panel cut-out and is 8mm long, flattened to 8.1mm on opposing sides. Button is 8mm long. Standard 1/4in. blade connections.

Order Code	Type	Price each
FP48C	HD M-Sw with Lever	£1.89
FP49D	HD M-Sw with Roller	£2.49
FP50E	HD M-Sw with Button	£2.69

SLIDE SWITCHES

Single Pole Sub-Miniature

Sub-miniature SPDT slide switch suitable for use as replacements in calculators, clocks etc. Can be PCB mounted.

Dimensions: Body: 11 x 5 x 6mm
Front plate: 19 x 5mm
Tang: 3.8mm long (throw 3mm)
Tags: 4mm long x 1.5mm wide
Fixing centres: 15mm x M2 tapped
Rating: 125V AC 0.3A

Order Code	Type	Price each
FF77J	SP Slide	29p

Single-Pole Right-Angled

Calvyn Industrial

A sub-miniature right-angled SPDT slide switch for pcb mounting. Ideal for horizontal left/right action on edge of pcb etc.

Dimensions of body: 16mm wide x 6.5mm deep
Height above pcb: 9.5mm
Toggle: 8mm (throw 3mm)

Order Code	Type	Price each
FV01B	R/A SPDT Slide	52p

Double Pole Sub-Miniature

A sub miniature DPDT slide switch with wiring tags.
Dimensions: Body: 15 x 7 x 7.5mm
Front plate: 23 x 7mm
Tang: 7.5mm long (throw 3.5mm)
Tags: 3mm long x 1.5mm wide
Fixing centres: 19mm x M2 clear
Rating: 125V AC 0.3A

Order Code	Type	Price each
FH35Q	Sub-Min Slide	49p

Double Pole Sub-Miniature Chrome Tang

Calvyn Industrial

A sub-miniature DPDT slide switch with wiring tags and a long tubular turned aluminium tang.

Dimensions: Body: 15 x 7 x 7.5mm
Front plate: 23 x 7mm
Tang: 13.5mm long (throw 3.5mm)
Tags: 3mm long x 1.8mm wide
Fixing centres: 19mm x M2 tapped
Rating: 125V AC 0.3A

Order Code	Type	Price each
FF79L	Long Chrome Slide	35p

Double Pole Miniature

A miniature DPDT slide switch with wiring tags.
Dimensions: Body: 22 x 12.5 x 8mm
Front: plate: 35 x 12.5mm
Tang: 10mm long (throw 5.5mm)
Tags: 5mm long x 2.5mm wide
Fixing centres: 28mm x M3 tapped
Rating: 125V AC 0.3A

Order Code	Type	Price each
FH36P	Std Slide Switch	39p

Right-Angled 2-Pole 3-Position

A 2-pole 3-way switch with a horizontal slider with left/right action for pcb edge mounting.
Dimensions of body: 25mm wide x 10mm
Height above pcb: 14mm

Order Code	Type	Price each
FV02C	R/A DT3T Slide	79p

4-Pole 3-Position

Calvyn Industrial

Miniature 4-pole 3-position.
Rated 125V AC 0.3A.

Order Code	Type	Price each
FH38R	4-Pole Slide	79p

PUSH SWITCHES

Sub-Min Push Switch

A sub-miniature push-to-make switch with non locking action. Available with red and black actuating button.
Overall size: 20.5mm long, 7mm dia. Rated 0.5A 125V. Panel cut-out 5mm dia.

Order Code	Type	Price each
JM01B	Sub Min Push Sw Blk	45p
JM47B	Sub Min Push Sw Red	45p

Push to Make Low Cost

Miniature low cost push to make switch non-locking with red button.
Overall size: 28mm long, 10.5mm dia. Rated 1A 125V AC.
Panel cut-out 7mm dia.

Order Code	Type	Price each
FH59P	Push Switch	42p

Push to Break

Miniature non-locking push to break switch with black button. Rated 1A 250V AC.

Order Code	Type	Price each
FH60Q	Break Push	49p

HOT TIP

Use an empty 35mm film container to house suitable push-buttons, switches and potentiometers, by refitting in the end cap. They make ideal hand-held controllers.

Round Push Switch SPST

A large circular, momentary contact, push-to-make switch that is ideal for use in games machines and similar equipment. The switch is available in a choice of five bright colours and is provided with a threaded ring for mounting into a panel. The switch bezel is 36mm diameter, the body is 30mm deep and requires a 28mm diameter hole. The locking ring is 39mm diameter. Two solder tags on the rear are connected to low-voltage, gold-plated, switch contacts that have a current rating of 100mA

Order Code	Type	Price each
CJ84F	Large Push Red	79p
CJ85G	Large Push Green	79p
CJ86T	Large Push Blue	79p
CJ87U	Large Push Yellow	79p
GW93B	Large Push Orange	79p

Miniature Push-Button Switches

Miniature PCB mounting push-button switches having square buttons with identical dimensions to the body, 11.6mm square, so that any number of switches can be stacked horizontally or vertically with ease, and all buttons will mate together side-by-side.

The four pins are on a 7.62 x 5.08mm matrix, which includes a 1.6mm diameter locating peg on the body itself, offset 5.4mm from centre. Total height above PCB, 17.7mm; to base of button, 12mm. Contacts are rated at 3A at 125V AC. Contact resistance is 20mΩ. Insulation resistance, 100MΩ at 500V DC; insulation strength, 1,000V AC for 1 minute. Two types are available, SPST push-on/push-off locking, and SPST push-on/release-off momentary action. Each type is also available with either a Black or White button.

Order Code	Type	Price each
JX94C	Min Sw Locking Black	£1.99
JX95D	Min Sw Locking White	£1.99
JX98G	Min Sw Momntry Blk	£1.79
JX99H	Min Sw Momntry Wht	£1.79

Square Push-Button Switches

Smart push-button switches featuring a silver coloured square bezel 14 x 14mm, and a silver square button 10 x 10mm. Remainder of body is threaded for a 10mm dia. panel hole, and a lockwasher and fixing nut are included. Single pole single throw only with two solder terminals. Overall depth from front of panel is 20mm. Rated at 125V at 3A, 250V at 1A AC. Two types are available, push-on/push-off locking, and momentary push-on/release-off non-locking.

Order Code	Type	Price each
FG46A	PB Silver Alternate	99p
FG45Y	PB Silver Momentary	99p

Table Light Switch

Calvyn Industrial

A push-on push-off single pole make/break switch with a white push button.

Panel cut-out: 10mm.
Max panel thickness: 4mm
Switch body dimensions: 24 x 13 x 8.5mm
Rated: 2A at 250V AC.
Connections by screw terminals.

Order Code	Type	Price each
FH94C	Table Light Switch	42p

Large Push to Make

A push button switch with a large red dimpled button and smart chromed bezel. Action is non-locking push to make single pole. Panel fixing requires 12mm dia. cut-out. Rated 1A at 50V AC.

Order Code	Type	Price each
FH91Y	Motor-Start Press	85p

Miniature Momentary Action

A miniature momentary action, panel mounting, push button switch with a separate 10mm cap. Fitted with solder terminals. Initial contact resistance: <math><10\text{m}\Omega</math>

Dimensions: Length (overall) 39.5mm
Diameter (behind panel) 22mm
Cut-out 6.4mm
Body size 10 x 13.2mm
Button diameter 4mm

Order Code	Type	Price each
BK68Y	SPCO Nonlock Switch	£3.29
BK71N	10mm Cap Green	17p

Miniature Illuminated Push-Button Switches

Miniature PCB mounting push-button switches as above, but also having a square LED indicator inset into the button. Again both the body and button are 11.6mm square, so that switches can be stacked. The four pins are on a 7.62 x 5.08mm matrix, which includes a 1.6mm diameter locating peg on the body itself, offset 5.4mm from centre. Two of these are the connections for the integral LED which does not include a dropper resistor. Total height above PCB, 17.7mm; to base of button, 12mm. Contacts are rated at 3A at 125V AC. Contact resistance is 20mΩ. Insulation resistance, 100MΩ at 500V DC; insulation strength, 1,000V AC for 1 minute. Two types are available, SPST push-on/push-off locking, and SPST push-on/release-off momentary action, and both types available with either a red or green LED within a black button. Forward current of LED must not exceed 40mA, nor power dissipation exceed 80mW (Red) or 100mW (Green). Voltage drop is 1.7V for Red type, and 2.1V for Green at $I_f = 20\text{mA}$.

Order Code	Type	Price each
JX92A	Min Sw Locking Red	£2.49
JX93B	Min Sw Locking Green	£2.49
JX96E	Min Sw Momntry Red	£2.29
JX97F	Min Sw Momntry Green	£2.29

Large Push Button

A large push button switch in an attractive modern styling. Available with SPST non-latching contact, in red only. Rated at 10A/250V AC, and has snap-in fixing for panels between 0.7mm & 2.5mm thickness.

Order Code	Type	Price each
RK82D	Lge Red Push Button	£1.10

Square Push to Make Switch

Push to make non-locking switch with large square button available in Black or Red.

Splashproof Push Switch

An attractively styled, single-pole, momentary action, circular push-button switch that is mains rated, with normally-open silver contacts. The switch is moulded in black self-extinguishing thermoplastic, with a white push-button, and snap-fits into a 16mm diameter hole in panels 0.7 to 2.5mm thick. Supplied with a waterproof cap and bezel. Rated at 3A/250V AC for resistive loads and 1A/250V AC for inductive loads.

Order Code	Type	Price each
RD20W	Splashproof Sw	£1.85

Square Locking

Push to make locking switch with large square button available in Black and Red. Rated 250V AC 3A.

Panel cut-out:	12.7mm dia.
Overall length:	39mm
Length behind bezel:	29mm
Button:	10mm square
Bezel:	14mm square

Order Code	Type	Price each
YW41U	Square Psh Lck Black	79p
YW43W	Square Psh Lck Red	79p

Round Locking

Miniature push button switches with 3A 250V AC contacts. Single-pole changeover (SPCO) and double pole changeover (DPCO) types are available. Both are locking (i.e. press-press). Fitted with red plastic button with dimpled top.

Panel cut-out:	6.2mm
Bush length:	8.5mm
Body size (excl tags):	17.5 x 9.2 x 13mm (SPCO); 17.2 x 11 x 11.5mm (DPCO)
Button size:	8 x 10mm dia.

Order Code	Type	Price each
FH41U	Pushlock SPCO	£2.15
FH66W	Pushlock DPCO	£2.85

Foot Switches

Hard-wearing push-on push-off switch with strong metal shaft and knob for use as foot operated switch. Requires a 12.7mm (1/2 in) dia. panel cut-out and has a 12mm long threaded bush.

2A Type

SPDT switch. Rated 2A at 250V AC. Body size: 36 x 12 x 15mm. Bush and knob length: 28mm. The common terminal is the centre one.

Order Code	Type	Price each
FH92A	Press Toe SPDT	£3.69

6A Type

Calvyn Industrial

DPDT switch. Rated 6A at 250V AC, 10A at 120V AC. Body: 28 x 18 x 23mm. Bush and knob length: 24mm.

Order Code	Type	Price each
FH93B	Press Toe DPDT	£4.49

Cassette Recorder Remote Control Footswitch

For cassette recorders and dictation machines having a start/stop remote control 2.5mm jack socket. Upon plugging in the footswitch, the machine will be able to play tape while the switch is held down, and pause while the footswitch is released. Fitted with 1.4m of lead terminated in a mono 2.5mm jack plug. Dimensions of switch housing: 77 x 75 x 28mm deep. Has a non-slip rubber pad underneath and a ribbed rocking top face. Colour black.

Order Code	Type	Price each
KW02C	Remote Footswitch	£2.79

Illuminated Click Effect Push Switches

A very smart click effect push switch for direct PCB mounting. The rectangular black button has a dimple over the switch end, and a rectangular window for the LED indicator lamp at the other end. The switch mechanism is of the conductive rubber contact type with a smooth, positive click action, and is single pole push to make connecting a pair of PCB pins underneath. The body is 15.5 x 10.1mm rectangular with support feet at the corners to ensure it stands firm and square on the PCB surface. The switches are stackable side by side and include locating pegs and sockets on the sides for this purpose. A very professional, neat array of switches can be made up in this way. The LED is electrically accessible via a further pair of pins (four in total), with the polarity marked on the switch base. Available with red or green LED's.

Contact rating:	1A @ 125V AC
Contact resistance:	20mΩ max.
Insulation resistance:	100MΩ (as measured at 500V)
Max. voltage:	1000V AC for 1 minute
Life:	100,000 operations
Button size:	15.3 x 9.8 x 5.1mm
Button travel:	1.5mm
Gap between stacked buttons:	0.5mm
LED reverse voltage:	4V max.
LED forward drop:	2.1V @ 20mA
Max. current:	25mA
Overall height from PCB:	14.1mm
Height of body from PCB:	9mm
Pin length:	3.8mm
Pin diameter:	Switch 0.6mm, LED 0.45mm
Pin spacing:	'T' pattern, 0.2in. between switch pins, 0.2in. between middle switch pin and both LED pins, which are 0.1in. either side of switch pins' axis.

Order Code	Type	Price each
JU04E	Click Sw+LED Red	£1.29
JU05F	Click Sw+LED Green	£1.29

Illuminated Push Button Switch

Switch Assembly

Attractive square push button switches in push/push locking or non-locking styles, with a double pole make function, using two pairs of solder tags at rear. The switches include a sprung metal snap-in-plate which makes installation simply a process of pressing the switch into a $\frac{1}{8}$ in. square (12.7 x 12.7mm) hole. The buttons are 9.8mm square in a 14mm square escutcheon. Overall length 23mm less tags. Contact rated 100mA at 30V DC.

Note Lens cap and bulb must be ordered separately. The switch can be used without the bulb if desired.

Order Code	Type	Price each
FA78K	Illuminatd Momtry Sw	£2.35
FA79L	Illuminated Latch Sw	£2.65

Lens and Diffuser

A lens and diffuser cap for the above switches, is available in red, white, yellow, blue and green. The diffuser provides an even illumination.

Order Code	Type	Price each
UF54J	Lens + Diffuser Red	32p
UF55K	Lens + Diffuser Wht	32p
UF56L	Lens + Diffuser Yel	32p
UF57M	Lens + Diffuser Blu	32p
UF58N	Lens + Diffuser Grn	32p

Bulbs and Holders

Twin-pin filament bulbs which, using a special holder, plug into the switch body and so illuminate the coloured cap. The bulbs are available in:

Voltage	6V	12V	28V
Current	65mA	50mA	24mA
Average life	10,000h	10,000h	5000h
Colour coded	Red	Green	White

Order Code	Type	Price each
UF59P	6V Lamp + Holder	£1.29
UF60Q	12V Lamp + Holder	£1.29
UF61R	28V Lamp + Holder	£1.55

Bulb Extractor

A tool required to remove the twin-pin filament bulbs.

Order Code	Type	Price each
FA80B	Extraction Tool	15p

Modular Switch

A switch available in momentary and latching types which may be used on its own or in various combinations with its accessories. Possible combinations are switch with button, switch with button and bezel, and switch with button, bezel and LED. Buttons are available in blue, grey or red; bezels are black, one type being plain and the other having a hole in the top right-hand corner for an LED; and the LED's are available in red or green. Momentary and latching switches are identical except that momentary type has

silver-flashed, nickel-coated beryllium-copper.

Specification
 Contact rating: 250mA and 120V subject to 9W AC max, 6W DC max.
 Max non-switching current: 500mA
 Contact resistance: 35mΩ
 Contact bounce: <5ms
 Insulation resistance: 5 x 10¹³Ω

Dimensions
 Switch body size: 12.6 x 12.6 x 10.1mm high
 Plunger size: 3.3 x 3.3 x 5.6mm high
 Pins: 0.7 x 0.3 x 4mm long
 Button size: 12.3 x 6 x 4.8mm high (with button fitted overall switch height is increased by 1.1mm)
 Bezel size: 15.1 x 15.1 x 14.5mm high (when fitted to switch height from base of switch is 16mm and button protrudes by a further 0.8mm)

LED
 Forward voltage at I_F = 20mA, 1.6V red, 2.7V green
 Max forward current: 50mA red, 30mA green

Order Code	Type	Price each
FP51F	Mod Sw Momentary	£1.69
FP52G	Mod Sw Latching	£1.85
UH58N	Mod Sw Button Red	24p
UH74R	Mod Sw Button Grey	24p
UH75S	Mod Sw Button Blue	24p
FP53H	Mod Sw Plain Bezel	24p
FP54J	Mod Sw LED Bezel	24p
UH76H	Mod Sw LED Red	92p
UH77J	Mod Sw LED Green	92p

Tactile Switches

A range of high quality PCB surface mounting click-effect switches with a positive click action in miniature and sub-miniature sizes. The switches are single-pole push-to-make non-locking and each contact is connected to two pins for ease of track layout.

Sub-Miniature

Specification
 Rating: 12V DC 50mA
 Operating force: 120 ± 30gF
 Travel: 0.25mm ± 0.1mm
 Contact resistance: 50mΩ max
 Life: 100,000 cycle min.
 Type Knob height Colour (dim. a)

105	4.3mm	Black
105A	5.0mm	Beige
105B	9.5mm	Black
105T	7.3mm	Black

Miniature

Specification
 Rating: 12V DC 30mA
 Operating force: 150 ± 40gF
 Travel: 0.30mm ± 0.1mm
 Contact resistance: 100mΩ at 1mA 5V DC
 Life: 300,000 cycle min.
 Type Knob height Colour (dim. b)

12F	4.3mm	Blue
12J	7.3mm	Black

Order Code	Type	Price each
KR88V	Switch 105	32p
KR89W	Switch 105A	36p
KR90X	Switch 105B	36p
KR91Y	Switch 105T	36p
KR92A	Switch 12F	42p
KR93B	Switch 12J	42p

Click-Effect Push Switch

A neat, small low cost push switch in a matt grey finish for direct pcb mounting. Smooth, gentle and positive action with a click-effect so that you know switch has operated. Action is single-pole push-to-make non-locking. Switch has a small square button fitted to a circular base. Each contact is connected to two pins for ease of track layout on pcb. Contact is self-cleaning laminated silver.

FOR TOP QUALITY & VALUE!

Continued from previous page.

Contact rating:	10mA at 35V DC
Contact resistance:	≤50mΩ
Bounce:	1ms
Insulation resistance:	>10 ⁹ MΩ
Life:	10 ⁶ operations
Inter-contact capacity at 1MHz:	<1pF
Key travel:	0.8mm
Size of button:	7.7 x 7.7mm
Height of button:	4mm
Overall diameter:	11.5mm
Overall height from pcb:	10.8mm
Pin length:	2.8mm
Pin diameter:	0.8mm
Pin spacing:	5 x 5mm

Order Code	Type	Price each
FF87U	Click Switch	55p

Caps For Click Switch

Two different colour caps which may be snapped on to our click-effect push switches. (See FF87U)

Size of cap:	12.4 x 12.4mm
Height of cap:	5.5mm
Overall height from pcb:	12.3mm
Available in Black and White.	

Order Code	Type	Price each
FF88V	Click Cap Black	36p
FF94C	Click Cap White	36p

Key Switch with Integral Button

A single-pole, momentary, black key switch that has been designed for digital electronic control. The switch has self-cleaning silver contacts and is available with either an integral black square button (DC72P) or an integral round button (DK83E). Additionally, the switch is available with a plunger head, measuring 3.3 x 3.3mm (DK84F).

Specification	
Maximum voltage:	100V AC
Maximum breaking current:	100mA
Maximum breaking power:	6VA
Contact resistance:	<100mΩ
Life expectancy at maximum power:	250,000 operations

Order Code	Type	Price each
DC72P	Square Key Switch	85p
DK83E	Round Key Switch	65p
DK84F	Plunger Key Switch	65p

Rocker Action Key Switch

An impulse push-button with a single change-over contact that features a 'click' action. The switch has been designed for switching digital signals, and has sealed, dustproof silver contacts. A matching black button is also available.

Specification	
Maximum switching voltage:	60V DC
Maximum switching current:	100mA
Maximum operating life:	>500,000 operations
Initial contact resistance:	<50mΩ
Distance between button centres:	
horizontal:	12.7mm
vertical:	17.78mm

Order Code	Type	Price each
DC73Q	Rock Action Switch	£1.85
DC74R	Rock Action Button	18p

Keyboard Switch

A low-cost non-locking push switch designed for making up keyboards and key pads etc. The keytops must be ordered separately. Designed to be mounted directly on the pcb, the centre of each switch should be 19mm distant from its neighbour. The keytops will then butt up to one another to avoid having a complicated front panel cut-out.

Specification:	
Rating:	1mA at 24V DC
Bounce:	10ms max. (4ms typical)
Contact resistance:	200mΩ
Stroke:	2.5mm
Life:	10 ⁶ operations
Overall size:	15 x 15mm
Height:	17mm (excluding 3mm pins)
Height with key-top:	19mm (excluding pins)
Switches are non-locking push-to-make	

Order Code	Type	Price each
DM76H	Keyboard Switch	39p

Keyboard Switch Keytop

A two-part key-top which snaps on to the switch. The top is in two parts, the upper part being transparent. Thus the lower part may be engraved, marked with Letraset, or a piece of printed card may be placed on it, then when the top part is snapped on the key-top appears to have a legend printed on it. Available in: 1 x 1: size 18 x 18 x 9mm.

Order Code	Type	Price each
DM77J	Keytop 1 Position	36p

Numeric Press Button Keypad

A numeric keypad comprising twelve square, double moulded white buttons with black legend, on a black ABS escutcheon. Legends are 0 to 9, asterisk and hash (#). The buttons operate conductive silicon rubber pads and have a click effect. The single pole make switches are arranged on a four by three X/Y matrix. Overall dimensions 51 x 64 x 13mm. Fixing centres 46 x 59.

Specification	
Contact rating:	24V DC 5mA
Contact resistance:	200Ω (max)
Bounce:	5ms (max)
Actuating force:	140g ±40g
Key travel:	1.8mm
Key life:	1,000,000 operations

Order Code	Type	Price each
JM09K	Numeric Keypad	£2.59

MAPLIN KEY CALL

Phone 01702 556751

MODULAR MEMBRANE KEYPAD KITS

A range of membrane keypads and keyboards designed to provide you with exceptional reliability, performance and extended life, and, most importantly of all, are supplied with blank keys, a set of coloured key overlays and rub-down lettering. Now at last you can make up your own keypads with your own individual key legends! From these basic units many different types of keypad switches may be easily created for your one-offs and prototypes with professionally finished, custom legends. The flexible membranes are built up from wafer-thin assemblies consisting of an array of normally open

FOR TOP QUALITY & VALUE!

contact switches, produced by printing a conductive substrate onto plastic films. The two contact layers, one above the other, are separated by a spacer layer, and the whole laminated together. When the switch area is depressed, the top contact closes with the bottom one to make the connection, and then opens when the pressure is released. Connection to the membrane's switch array is made through a ribbon cable which is simply an extension of the conductive layers, and terminated with an inline, multi-way PCB terminal which plugs onto the end. The ribbon can be easily disconnected and re-inserted into this terminal during service if required.

the terminal is compatible with 0.1in. matrix and stripboard. Supplied with 8 White, 4 Blue, 4 Red, 4 Green, 12 Grey and 4 Yellow self-adhesive transfer pads and a sheet of alpha-numeric rub-down characters

Order Code	Type	Price each
JY01B	4 Way Keypad	£4.79

HOT TIP

If you have to bend the wires of a reed switch, grip each wire with a pair of pliers beforehand, in order to safeguard the glass envelope of the switch. Failure to do this will often result in the glass shattering under the strain.

8-Way Keypad

An 83 x 49mm keypad with eight keys 13.5mm square with rounded corners. Keys are arranged in two 2 x 4 rows and are spaced 3mm apart. The connecting ribbon cable is 70mm long and 21mm wide. An 8-way PCB terminal is supplied unattached. Pins are spaced 0.1in. apart and the terminal is compatible with 0.1in. matrix and stripboard. Supplied with 8 White, 4 Blue, 4 Red, 4 Green, 12 Grey and 4 Yellow self-adhesive transfer pads and a sheet of alpha-numeric rub-down characters.

Order Code	Type	Price each
JY02C	8 Way Keypad	£5.49

FOR SAME DAY DESPATCH**

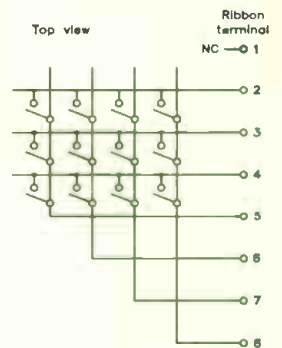

01702 554161

Access, Visa, American Express

12-Way Keypad

An 85 x 65mm keypad with twelve keys 13.5mm square with rounded corners. Keys are arranged in three 4 x 3 rows and are spaced 3mm apart. The connecting ribbon cable is 70mm long and 21mm wide. An 8-way PCB terminal is supplied unattached. Pins are spaced 0.1in. apart and the terminal is compatible with 0.1in. matrix and stripboard. Supplied with 8 White, 4 Blue, 4 Red, 4 Green, 12 Grey and 4 Yellow self-adhesive transfer pads and a sheet of alpha-numeric rub-down characters.

Order Code	Type	Price each
JY03D	12 Way Keypad	£5.99

16-Way Keypad

Each membrane keypad kit contains the main basic keypad switch and connector array; a textured, hard wearing top template with a black border surrounding the keys to finish the keypad, protecting the keys and legends; and the single inline connector which can be directly soldered into a PCB and is compatible with 0.1in. spaced matrix and strip-board. All these parts are supplied separately in the package. The custom overlay system includes a set of pre-cut, self-adhesive transfer pads, designed to fit over each switch key area and fill the key space. The keys are surrounded with a double-sided adhesive film (for the top template) protected by a backing sheet, both of which leave the key areas free. There is a choice of six colours for the transfer pads and enough of them to entirely fill whichever size of keypad chosen with keys of the same colour.

To assemble, the desired coloured pad is placed over the key position which, when stuck down, will lie flush with the backing sheet of the adhesive border. It will be helpful to leave the pad attached at one corner to the edge of its carrier sheet while positioning it over the key area. The pads will accept marks from felt tip pens, but better results will be produced by using the rub-down transfer lettering.

**A B C D E F G H I J K
L M N O P Q R S T U
V W X Y Z
0 1 2 3 4 5 6 7 8 9
+ , - \$ @ = ~**

These are specially developed letter transfers for use with the coloured pads. To apply, place the desired character over the pad and rub over with a blunt point, e.g. blunt pencil, tip of an artist's brush, cap of ballpoint pen etc., do this carefully to prevent cracking the character. Only alpha-numeric characters with capital letters are provided, with a selection of other symbols.

When the legends are finished, the surrounding backing sheet is carefully peeled off and then the top template applied, making sure that the textured surface is outermost. Six styles of keypad are available.

4-Way Keypad

An 80 x 32mm keypad with four keys 13.5mm square with rounded corners. Keys are arranged in one row and spaced 3.5mm apart. The connecting ribbon cable is 70mm long and 23mm wide. An 8-way PCB terminal is supplied unattached. Pins are spaced 0.1in. apart and

Continued from previous page.

An 85 x 85mm keypad with sixteen keys 13.5mm square with rounded corners. Keys are arranged in four 4 x 4 rows and are spaced 3mm apart. The connecting ribbon cable is 70mm long and 22mm wide. An 8-way PCB terminal is supplied unattached. Pins are spaced 0.1in. apart and the terminal is compatible with 0.1in. matrix and stripboard. Supplied with 8 White, 4 Blue, 4 Red, 4 Green, 12 Grey and 4 Yellow self-adhesive transfer pads and a sheet of alpha-numeric rub-down characters.

Order Code	Type	Price each
JY04E	16 Way Keypad	£6.99

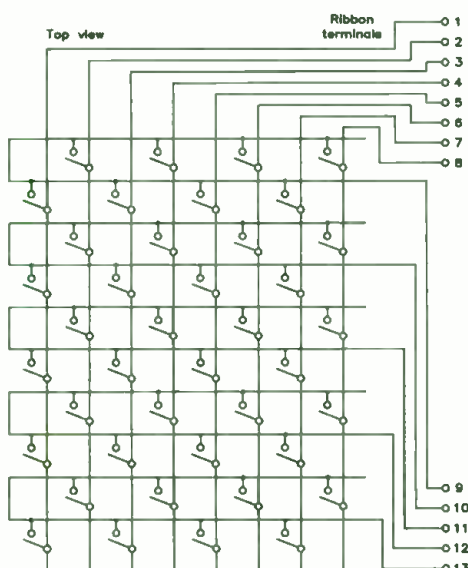

20-Way Keypad

An 85 x 65mm keypad with twenty keys 13.5mm square with rounded corners. Keys are arranged in four 4 x 5 rows and are spaced 3mm apart. The connecting ribbon cable is 70mm long and 27mm wide. A 10-way PCB terminal is supplied unattached. Pins are spaced 0.1in. apart and the terminal is compatible with 0.1in. matrix and stripboard. Supplied with 8 White, 4 Blue, 4 Red, 4 Green, 12 Grey and 4 Yellow self-adhesive transfer pads and a sheet of alpha-numeric rub-down characters.

40-Way Keypad

An 87 x 188mm keypad with forty keys 13.5mm square with square corners. Keys are arranged in four 4 x 10 rows and are spaced 4mm apart. The connecting ribbon cable is 70mm long and 32mm wide. A 13-way PCB terminal is supplied unattached. Pins are spaced 0.1in. apart and the terminal is compatible with 0.1in. matrix and stripboard. Supplied with 2 sets of 8 White, 4 Blue, 4 Red, 4 Green, 12 Grey and 4 Yellow self-adhesive transfer pads and a sheet of alpha-numeric rub-down characters.

Order Code	Type	Price each
JY06G	40 Way Keypad	£9.99

INTERLOCKING PUSH-BUTTON SWITCH SYSTEM

A very high quality, low-cost range of push-button switches, each of which is capable of operating as either push-on/push-off (locking), momentary push only (non-locking), or as part of an inter-locked group (push-on any one to latch and release others). The push-on/push-off action is provided by a wire detent, which is simply removed to provide the momentary or inter-locking action. An almost infinite variety of configurations are possible using the latch brackets, so that these switches fulfil practically all the likely requirements of a quality push-button switch installation.

Signal Switches

Moving contacts are spring-loaded and contoured to achieve constant pressure, a positive self-cleaning action and long-term low contact resistance. The housing has printed circuit pins fixed on the bottom face and solder terminals on the top face.

Rated:	0.5A, 100V AC 0.2A, 250V AC 1A, 25V DC
Max. contact resistance:	<50mΩ after 20,000 operations
Max. insulation resistance between adjacent contact or frame and any contact:	100MΩ at 500V DC
Working temperature range:	-20°C to +70°C
Action:	Break before make

PCB pins are on a 4 x 6mm matrix. Four different button styles are available. These switches are available in the following types: 2-pole changeover, 4-pole changeover and 6-pole changeover.

Length of body:	
2-pole changeover:	24.5mm
4-pole changeover:	36.5mm
6-pole changeover:	48.5mm

Order Code	Type	Price each
FH67X	Latchswitch 2-pole	45p
FH68Y	Latchswitch 4-pole	55p
FH69A	Latchswitch 6-pole	75p

Mains Switch

Double pole single throw latchswitch especially designed for use as an on/off mains power switch.

Rated:	4A, 250V AC
Contact resistance:	<20mΩ
Max. voltage:	1500V AC

Order Code	Type	Price each
KU79L	Latch Switch Mains	89p

Mounting Brackets

A range of mounting brackets for mounting the latchswitches and providing interlocking action where required. The switches have no other means of fixing except by their PCB pins. Latchbrackets are available for mounting up to 10 switches, any group of which can be interlocked, and any switch may be locking or non-locking (if not interlocked). The single version is only a mounting frame for one switch, whereas the others include a latching bar and a latch return spring for the interlocking function. The length of the latch bar is matched to the frame, but it can be cut down for only those switches in the whole group which are required to be interlocked, and the return leafspring can be located at any switch position. See below for latchswitch mounting details.

Order Code	Type	Price each
FH75S	Latchbracket Single	19p
FH76H	Latchbracket 2-way	25p
FH78K	Latchbracket 4-way	29p
FH80B	Latchbracket 6-way	35p
FH84F	Latchbracket 10-way	49p

Rectangular Buttons

Width, 15mm; height, 7.5mm; length, 11mm. Button can be mounted horizontally or vertically. Available in Black and Grey.

Order Code	Type	Price each
FH61R	Rct Latchbutton Blk	19p

TOUCH PAD

Calvyn Industrial

Matt finish chrome-flashed steel touch pad with bevelled edges. An 18.5mm long 6BA threaded stud is welded centrally to the back of the pad. Suitable for mounting on plastic or any insulating material. Pad is triangular. Width of base 21mm. Height: 22mm

Order Code	Type	Price each
HY01B	Touch Pads Tri	49p

KNIFE SWITCH

Calvyn Industrial

Ideal for educational and demonstration purposes, the switch is double-pole changeover, having four sets of spring contacts, along with the fulcrums of the moving contacts, fixed to a base-board. Uses should be restricted to switching voltages not exceeding about 24VDC. A safe maximum current rating is about 10 to 15A. The base board is 60mm long x 43mm wide and 6mm thick

Order Code	Type	Price each
FK31J	Knife Switch	£1.15

SOLENOID

A miniature solenoid suitable for light high speed duty and capable of operating in excess of 300 cycles per minute (5Hz). The plunger has a maximum stroke of 16mm, 5.5mm dia. and the end is 6BA tapped. The hard brass push-rod has a diameter of 1.8mm

ANALOGUE CLOCK WITH MSF DECODER

An ingenious, very accurate, analogue alarm clock that incorporates a radio receiver tuned to the MSF time-code transmitter at Rugby. An internal quartz oscillator keeps the clock running should the MSF reception be lost, or goes out of range. The clock has an alarm with 'snooze', and a backlight which is operated by a switch on the side. Setting the clock is very simple. A thumb-wheel on the rear of the clock is used to set the hour and minute hand to the top of the current hour (e.g. if the current time is 7:45, then the hour hand is set to 7 and the minute hand to 12). Two AA batteries (not supplied) are inserted and the 'SNOOZE' button is pressed until the seconds hand reaches the top of the minute. After approximately 2m the clock hands will automatically adjust to the correct time. Housed in an attractive black case measuring 88 x 98 x 56mm, the clock requires two AA batteries to operate.

NEW

RELAYS

Micro Miniature Relay

This micro miniature relay which is only a little larger than a TO5 transistor package is designed for direct PCB mounting. Available in single-pole change-over style only with silver contacts.

Dimensions: 9.7 x 6.8 x 8.7mm high excluding pins. Pin length: 3.8mm.

Contact details:	
Max current:	2A DC, 2A AC resistive 1A AC inductive
Max voltage:	2V DC, 100V AC
Life:	>100,000 operations

1A Microminiature Low-Power PCB Relay

A fully enclosed microminiature PCB mounting relay that has a typical power consumption of less than 200mW. The relay has gold over silver palladium, single-pole contacts, and has a minimum life of 100,000 operations.

Specification	
Maximum current:	0.5 AC or 1A DC resistive load
Maximum voltage:	28V DC, 120V AC
Life:	>100,000

High Current Relay

NEW!

A high quality, high current switching relay that is available with double pole contacts. This relay is capable of switching 240V AC 5A, and has a minimum life of 100,000 operations. Conforms to UL-508 and CSA standards.

Specification

Maximum current double pole: 5A AC or DC resistive load
Maximum voltage: 30V DC, 240V AC
Coil rating: 12V DC
Coil resistance: 285Ω
Coil current: 42mA approx.
Life: >100,000

Maximum contact resistance: 100mΩ
 Operate time: 15ms maximum
 Release time: 5ms maximum
 Pickup voltage: 70% max. of rated coil voltage
 Drop-out voltage: 10% min. of rated coil voltage
 Dimensions: 29(L) x 25(H) x 13(W)mm excluding pins
 Weight: 16g approx.

Order Code	Type	Price each
DC58N	12V DP Hi-Curr Relay	£2.49

Power Relay

Open construction relay with two-pole changeover pure silver contacts.

Contact Details:

Max ratings:

- 7.5A at 250V AC
- 3A at 440V AC
- 7.5A at 6V DC
- 7A at 12V DC
- 4.5A at 24V DC
- 1.5A at 48V DC
- 0.3A at 100V DC
- 0.15A at 200V DC

Life: >20 million operations

Operate and release time: 10 to 20ms

Nominal coil voltage	Operate voltage range	Coil resistance
12V DC	9.6 to 13.2V	120Ω
230V AC	184 to 253V	7300Ω

Order Code	Type	Price each
FX48C	Power Relay 12V	£4.65
FX49D	Power Relay 230V AC	£4.75

Round-base Relays

High power standard industrial relays with DPDT contacts on an 8-pin base and 3PDT contacts on an 11-pin base. The relay is fully enclosed and will plug in to any standard 8-pin or 11-pin round base. It is a direct replacement for all standard industry types. It is available in both double-pole and 3-pole with a choice of four coil voltages: 6V, 12V and 24V DC, and 240V AC.

Contact details

Max current: 10A
 Max voltage: 240V AC, 28V DC
 Max switching power: 2400VA resistive, 280W resistive
 Contact resistance: <50mΩ
 Operate time: 15ms max
 Release time: 10ms max
 Insulation resistance: 100MΩ at 500V DC
 Mechanical life: >10 million operations
 Electrical life: >100,000 operations at full load
 Contact material: Silver cadmium oxide

Coil details

Nominal voltage	Operate range (V)	Coil resistance	Current at nominal voltage
6V DC	4.8 to 6.6	32.1Ω ±5%	187mA
12V DC	9.6 to 13.2	120Ω ±5%	100mA
24V DC	19.2 to 26.4	472Ω ±5%	51mA
240V AC	192 to 264	9110Ω ±5%	9mA

Size of base: 35 x 35mm
 Height of body: 52.5mm
 Overall height: 70mm

Sockets are available which will clip onto 35mm DIN rail and have a screwdriver-operated quick-release clip. Connections are now made to the relays via screw-terminals. Screws are in recesses 7mm wide.

Size of base: 51 x 40mm (8-pin), 51 x 43mm (11-pin)
 Height: 21mm (8-pin), 30mm (11-pin)
 Fixing centres: 33mm x 4mm clear (8-pin), 34mm x 4.5mm clear (11-pin)

Order Code	Type	Price each
JG57M	Power Rly 6VDC DPDT	£4.49
JG58N	Power Rly 12VDC DPDT	£4.49
JG59P	Power Rly 24VDC DPDT	£4.49
JG60Q	Power Rly 240VAC DPDT	£4.69

JG54J	Rly Skt 10A 8-Pin	£2.25
JG53H	Rly Skt 10A 11-Pin	£2.45

250V AC 16A Relay

An ultra high reliability power relay with pivoted armature and bifurcated contacts providing extremely low operating power. The DPDT contacts are virtually bounce-free giving extended life over conventional power relays. The relay has pcb pins and silver tin oxide contacts.

Contact details

Max current: 16A
 Max voltage: 250V AC
 Max switching power: 4000VA
 Operate time: 20ms max
 Release time: 13ms max

Coil details

Nominal voltage: 12V DC
 Coil resistance: 480Ω
 Current at nominal voltage: 25mA
 Size of base: 50 x 36.8mm
 Height: 22mm (+pin 3.5mm)

Order Code	Type	Price each
JG22Y	Relay 16A 250V AC	£24.99

IT'S A FACT!

SELECTING A RELAY

When selecting a relay, it is important to pay special attention to the material used in the contacts.

SILVER - This should not be used for voltages under 6V because of problems associated with sulphur.

SILVER-NICKEL - This has the same characteristics as silver but is able to cope with higher switching currents.

SILVER-CADMIUM OXIDE - This does

not weld easily and is therefore suitable for switching mains powered equipment with high initial current peaks. Less suitable for voltages below 12V.

TUNGSTEN - This is suitable for switching large power levels, resists arcing and welding, but has a tendency to oxidise, so cannot be used in unfriendly environments. Not suitable for 24V or less.

GOLD - Suitable for low current and low voltages. It has low contact resistance which also makes it suitable for switching signals etc.

Fax your orders to:

Reed Relays

A sealed reed relay suitable for use at voltages from 3.8V to 22V with single-pole make or double-pole make actions. The high resistance coil enables the relay to be driven directly by 74 series IC's and most logic buffers. At the same time the relay can switch up to 10VA.

Contact Details (per contact)

Max current: 1A
 Max voltage: 100V
 Max switching power: 10VA
 Contact resistance: 150mΩ max
 Operate time: 1ms max including bounce time
 Release time: 0.5ms max including bounce time
 Life: >1 million operations at full load

0.1 inch matrix
Holes Ø0.8mm

Coil details

Nominal voltage	Operate range(V)	Coil resistance	Current at nominal voltage
5V DC	3.8 to 11	500Ω ±10%	10mA
12V DC	8.8 to 22	1050Ω ±10%	11.4mA

Coil temperature

rise: 30°C max
 Insulation resistance: >100MΩ at 500V DC between coil and contact

Size SPST: 24 x 8 x 9mm high
 DPST: 25 x 11 x 9mm high
 Pin length: 4mm

Order Code	Type	Price each
JH12N	Reed Relay 5V SPST	£1.45
JH13P	Reed Relay 12V SPST	£1.45
JH15R	Reed Relay 5V DPST	£1.80
JH16S	Reed Relay 12V DPST	£1.80

DIL Reed Relays

A reed relay with single pole or double pole make contacts moulded in a standard 14-pin dual-in-line package.

Contact Details:

	1 pole make	2 pole make
Max power	10W	3W
Max current	0.5A	0.11A
Max voltage	100V	28V
Contact capacitance	2pF	2pF
Max contact resistance	100mΩ	200mΩ
Life (millions of operations)	100	100
Operate time	0.25ms	0.25ms

Release time 0.15ms 0.15ms
 Insulation resistance 10⁹Ω 10⁹Ω

Coil Details:

Type	Nominal coil voltage	Operate voltage range	Must release voltage	Coil resistance
1 pole make	5V DC	3.7-7.5V	0.5V	500Ω
2 pole make	5V DC	3.7-7.5V	0.5V	200Ω

2 pole type has an internal diode connected across the coil to protect the driver. The 5V type may be driven directly from TTL.

Order Code	Type	Price each
FX88V	Dil Reed Relay 1p 5V	£1.60
FX90X	Dil Reed Relay 2p 5V	£4.65

Reed Switches

A dry-reed switch with rhodium plated contacts for long life. When a magnet or electromagnet is brought near the reed, magnetism is induced into both halves of the reed in the same direction. Thus, of the overlapping ends, one becomes a north pole and one a south pole and the attraction of the poles causes the switch to close. When the operating magnet is removed, the springiness of the reed enables the switch to break.

Type	Standard	Compact	Miniature
Glass length (mm)	52	38.8	20.3
Glass diameter (mm)	5.4	5.5	3.2
Overall length (mm)	79	88	57.2
Contact arrangement	Single pole make	Single pole changeover	Single pole make
Max power	25W	10W	15W
Max current AC or DC	2A	0.5A	0.5A
Switching voltage DC	800V	100V	200V
Switching voltage AC rms	250V	125V	125V
Operate ampere-turns	75-95	50-90	20-50
Contact capacitance	0.8pF	3pF	0.2pF
Max contact resistance	80mΩ	100mΩ	150mΩ
Life (millions of operations)	100	100	100
Operate time	4ms	2ms	1ms
Release time	0.2ms	4ms	0.2ms
Insulation resistance	10 ¹¹ Ω	10 ¹⁰ Ω	10 ¹¹ Ω

Order Code	Type	Price each
FX68Y	Reed SW Standard	£1.36
FX69A	Reed SW Compact	£2.79
FX70M	Reed SW Miniature	69p

Magnets

Magnets for use with our Reed Switches.

Approximate sizes:
 Small: 18 x 3 x 3mm.

Large: 25 x 5 x 5mm. In the table below the distance in mm is that when the reed just operates and just releases when the wide face of the reed is parallel to a long face of the magnet and is measured from the centre of the reed to the nearest face of the magnet. In practice reduce the operate distance and increase the release distance by 25% to ensure reliable operation.

Magnet Large	Standard	Compact	Miniature
Operate distance	22mm	19mm	26mm
Release distance	36mm	29mm	36mm
Magnet Small	Standard	Compact	Miniature
Operate distance	6mm	5mm	10mm
Release distance	12mm	9mm	15mm

Order Code	Type	Price each
FX71N	Magnet Small	80p
FX72P	Magnet Large	£1.75

MERCURY SWITCHES

These mercury switches comprise an encapsulation containing a pair of contacts, bridged by a ball of mercury which is free to roll about the interior. Thus the on/off state of the switch is dependent on the attitude of the switch relative to gravity. The encapsulations are sealed and filled with an inert, arc suppressing gas.

Tilt Switches

A sealed encapsulated mercury tilt switch which finds applications in sensing angles of position for machine control, angular movement detectors, etc. The switch is finished in black and includes a mounting clip. It is fitted with a pair of 14cm long leads terminated in 4BA (M5) crimped ring tags.

Specifications:

Type	G5Z-003
Included angle*	11° max.
Contact rating	13A @ 240V AC 10A @ 240V DC

Insulation Strength:

Contact to contact, off state	1500V
Encapsulation	5000V

Dimensions:

Length	46mm
Diameter	13mm

*Max included angle = degree of movement from position to guarantee an 'off' state through horizontal to position to guarantee an 'on' state.

Order Code	Type	Price each
FA74R	13A Mercury Tilt Sw	£9.99

**YOUR GUARANTEE OF
 QUALITY & SERVICE**

Encapsulated Mercury Switch

A surface mounted mercury tilt switch encapsulated in a plastic housing. Slotted screw holes are incorporated in the casing to allow fine adjustments to be made. The switch is supplied with 300mm of 2 core cable.

Specifications

Included Angle: 25° about the horizontal
 Contact Rating: 1A @ 240V AC
 Contact Resistance: 300mΩ
 Dimensions 47mm long x 12mm wide x 11mm high

Order Code	Type	Price each
FS99H	Encap Merc Switch	£4.49

Miniature Tilt Switch

A miniature tilt switch which because of its low cost is ideal as a position sensor. The contacts and their mercury conductor are completely sealed and encapsulated within an outer metal can. When mounted horizontally, contact is made when device is tipped up and broken when tipped down. Typically changeover occurs within 15°, but contact is always broken when device is 5° below horizontal and always made when device is 20° above horizontal.

Specification

Max. tilt angle: 20°
 Contact rating: 0.25mA @ 5V
 Contact resistance: <150Ω
 Body length: 10.2mm
 Body diameter: 4.8mm
 Lead length: 17mm
 Flange diameter: 5.5mm

Order Code	Type	Price each
FE11M	Min Tilt Switch	£1.35

Vibration Switch

A mercury loaded switch which can be mounted at any angle. The contacts are normally open, but when vibrated the switch pulses on to set off an alarm. Applications include mobile security units for bikes, cars etc. or as a safety device in machinery. The fact that the switch is always off when stationary, regardless of its orientation, makes it particularly useful with items which might be left in any position, but need to alarm when moved. Nickel-plated steel case.

Contact rating: 1A at 120V AC
 Can size: 9.5 x 8.2mm dia.
 Flange size: 9.3mm dia.
 Pin size: 11.2 x 1mm dia.

Order Code	Type	Price each
UK57M	Vibration Switch	£2.50

**Fax your orders to:
 01702 553935**

Tip-Over Break Contact Switches

A pair of mercury switches in nickel plated steel encapsulations. These switches are designed to be installed such that they are normally 'on' whilst 'upright', and break contact if tilted off vertical.

Safety Supply Breaker Type

The T03-1016 finds applications in free standing electric heaters for example, and will turn off the appliance should it fall over. The switch is terminated with a right-angled 'Lucar' blade at top and a 'Lucar' terminal at the side, suitable for use with our push-on connectors in the Connectors Section.

Motion Break Contact Switch

The 4539 is a tip-over switch which can be used in security applications to detect vibration or for detecting motion. It is quite sensitive to side-ways and vertical displacement, and will break contact if moved or knocked sharply. The switch remains closed for gentle movements. The break angle ensures 'normal' operation of the sensing circuit for any angle up to >79° relative to absolute vertical. The vertical terminals are 7mm long pins spaced at 2.5mm.

Specifications:

Type	T03-1016	4539
Break angle	45°	79°
Contact rating	6A @ 240V AC	1.7A @ 120VAC
Insulation strength:		
Contact to contact, open	1240V	500V
Overall height	23mm inc. tag	16mm inc. pins
Overall diameter	23mm	15mm
	excluding side connector	

Order Code	Type	Price each
FA76H	45deg Tipover Switch	£3.99
FA77J	79deg Tipover Switch	£2.75

COIL FORMERS

Bakelite with Moulded Base Calvyn Industrial

A bakelite coil former having an integral mounting base, with 8BA clear fixing holes. Iron dust core must be purchased separately if required.

Dimensions in mm.

Type	L	D	C	T	Suitable Core
351/8BA	21	7	20	6	Type 6

Order Code	Type	Price each
LB17T	Former 351	99p

Bakelite

Two different length coil formers. 4.8mm diameter and may be fitted into our Former Base LB44X. Iron dust core Type 4 fits both types.

Type	Length
722/1	14mm
722/2	20.5mm

Order Code	Type	Price each
LB20W	Former 722/2	£1.40
LB19V	Former 722/1	£1.10

Iron Dust Core

Iron dust core which is threaded and may be adjusted by our Trim TT5, (iron grade 500).

Type	Diameter	Length	Suits former
6	6mm	12.7mm	351/8BA

Order Code	Type	Price each
LB42V	Dust Core Type 6	£1.06

Base Plate

Calvyn Industrial

An SRBP base plate for use with our type 722 coil formers. Fitted with six pins. Overall size: 12.7mm square x 7mm high.

Order Code	Type	Price each
LB44X	Former Base	60p

ANTI-PARASITIC BEADS

Small ferrite beads which may be threaded on to wires to add impedance for the suppression of unwanted parasitic oscillations or to provide screening. Max. dia. 4.2mm. Max. length 5.5mm. Min. hole dia. 1.8mm. Packed in tens.

Order Code	Type	Price each
LB62S	A/P Beads	50p

POT CORES

Pot Core (Type 2) Core (Type 2) (LA4345)

Pot core dia. 23mm, height 17mm. Printed circuit board mounting former (with pins on 0.1in. grid) and clips supplied separately. Specific inductance: 400nH.

Order Code	Type	Price each
HX06G	Core Type 2	£2.29

Bobbin (Type 2) (DT 2470)

Single section bobbins for use with Core Type 2.

Order Code	Type	Price each
HX07H	Bobbin Type 2	99p

Clips (Type 2) (DT 2396)

Tinned sprung steel clips for use with Core Type 2 (2 clips required).

Order Code	Type	Price each
HX08J	Clips Type 2	16p

FOR TOP QUALITY & VALUE!

THE BEST OF SERVICE

IT'S A FACT!

NOTES ON WINDING INDUCTORS

The following range of pot cores allow inductances from about 10mH to 10H to be wound with a high degree of accuracy. In general it is best to use as thick enamelled copper wire as possible bearing in mind that the thicker the wire the fewer the number of turns that can be contained on the former within the core. Using thicker wire will have negligible effect on the value of inductance, but it will lower the DC resistance which makes the Q higher.

To calculate the number of turns required to make a particular inductance use the formula:

$$n = \sqrt{L/A_L} \text{ or } L = n^2 A_L$$

where n is the number of turns. L is the inductance in Henry's and A_L is the specific inductance.

The specific inductance of our cores is given in nanoHenry's and it is necessary to convert this to Henry's (i.e. $\times 10^{-9}$) to obtain the inductance in Henry's.

Example:

Using Core Type 2 find the number of turns required to give 0.1 Henry's (100mH).

$$\begin{aligned} \text{For core LA4345, } A_L &= 400\text{nH. } n = \sqrt{L/A_L} = \sqrt{0.1/400 \times 10^{-9}} \\ &= \sqrt{0.00025 \times 10^9} \text{ turns} \\ &= \sqrt{250,000} \text{ turns} \\ &= 500 \text{ turns.} \end{aligned}$$

Pot Core (Type 3) Core (Type 3) (LA4543)

Pot core dia. 28mm, height 19mm, printed circuit board mounting former (with pins on 0.1in. grid) and clips supplied separately. Specific inductance: 1000nH.

Order Code	Type	Price each
HX09K	Type 3 Core	£3.40

Clips (Type 3) (DT2406)

Tinned sprung steel clips for use with Type 3 Core (2 clips required).

Order Code	Type	Price each
HX11M	Type 3 Clips	15p

Bobbin (Type 3) (DT 2534)

Single section with 5 pins for use with Type 3 Core.

Order Code	Type	Price each
HX10L	Type 3 Bobbin	99p

CHOKES Search Coil

A 100µH inductor designed for use as a search coil in our Mini Metal Detector Kit. Overall size 29mm long x 10mm diameter.

Order Code	Type	Price each
JC25C	100uH Search Coil	49p

R.F. Choke

An axial lead, lacquer-coated radio frequency choke, featuring high inductance and small size.

Inductance: 4.7mH
 Q_{min} : 35 (Test frequency: 252kHz)
 Rated current: 55mA
 Dimensions: 9.2 x 4mm dia.

Order Code	Type	Price each
UK80B	4.7mH Choke	65p

Very High Inductance Choke

A small audio choke inductance 10H (with no DC current present or 3H with 12mA DC). DC resistance: 750Ω. Size: 20 x 16 x 16mm.

Order Code	Type	Price each
HW27E	Choke 10H	£3.49

General Purpose Axial Lead Inductor

Newport Components

A general purpose inductor with axial lead terminations. The high permeability wound ferrite rod is finished with a flame-retardant heat-shrink sleeve.

Type	Inductance (@ 1kHz) (µH ±10%)	D.C. Resistance (Ω)	D.C. Current (A)	Q at frequency (kHz)	Diameter (mm)	Price each
1200/15	1000 (1mH)	0.77	1.0	55	10	£1.99
1200/15	0.8	12.0				

Bobbin Type Inductors

Newport Components

These inductors use a novel bobbin core manufactured from a material with a high saturation flux density. The high current capability makes these devices suitable for power-line applications, and they are ideal for use in switching regulators and filters. They have low temperature dependence and can be used at high currents. Each component is finished with a flame retardant heat shrink sleeve. For additional mechanical stability, these inductors may be mounted using an M4 non-magnetic bolt (e.g nylon).

Miniature Radial Lead Inductors

Newport Components

A range of general purpose inductors with radial leads. Their small size makes them particularly suitable for power-line decoupling and low-power switching regulator applications.

This series offers lower DC resistance and a higher current rating than its counterparts. All parts are protected by a flame retardant sleeve. Size is 6.5mm diameter by 11mm high, with leads spaced at 4mm. (680µH is 2.73mm)

High Current Toroids

High current chokes wound on toroids designed primarily for use in switched mode power supplies. Two types are available:

Inductance: 150µH. Max current: 5A intermittent, 3A continuous.
 Inductance: 300µH. Max current: 8A intermittent, 5A continuous.

Order Code	Type	Price each
JL72P	5A 150uH Choke	£3.20
JL73Q	8A 300uH Choke	£4.99

**Fax your orders to:
01702 553935**

High Current Toroidal Inductors Newport Components

A range of high current vertically mounted toroidal inductors, designed for use in switching power supply and power line filtering circuits. Suitable for any application requiring high current handling with minimal EMI emissions.

The inductors are mounted on a plastic base having UL94-VO rating and secured by a cable tie.

Type	Inductance (@ 1kHz) ($\mu\text{H} \pm 10\%$)	DC Resistance ($\text{m}\Omega$ max.)	DC Current (Continuous) (A max.)

BU57M	Toroid 19334	£2.75
BU58N	Toroid 19474	£2.75

Delay Line

The delay consists of two parallel coils which are astatically wound to decrease the influence of magnetic fields from other parts of the receiver. The delay line is in a plastic housing. Three pins enable the unit to be soldered directly to a printed circuit board.

Electrical Data (measured at 25°C)
 Delay: 270ns $\pm 10\%$
 Characteristic impedance: 0.9k Ω $\pm 10\%$
 Group Delay (with respect to 0.5 MHz)
 at 3.5MHz max: 30ns
 at 5.0MHz max: 60ns
 Bandwidth at -3dB: 5MHz
 Ripple with 2r-pulse on pin 2 max: 2.5%
 Breakdown voltage between pins 2 and 3 min: 50V DC

Order Code	Type	Price each
UH84F	DL270 Delay Line	£1.40

Miniature Tapped Passive Delay Lines

Newport Components

A range of passive, lumped constant L/C delay lines forming a delay ladder with up to 10 equally spaced delay taps, and all contained in one low profile 14-pin DIL package no larger than a logic IC and particularly suitable for high-density board layouts. No termination resistor is included, allowing for series connection of two or more units for unequal tap designs. In addition the line can be directly driven from TTL logic very easily with no calculation required. For analogue applications the recommended termination impedance should be 100 Ω . Six types with different delay times are available.

Type	Total delay ns $\pm 5\%$	Tap to tap delay ns $\pm 10\%$	Rise time ns	Attenuation max.
1001	10	1	3.0	5%
2001	20	2	4.5	5%
5001	50	5	8.5	5%
1011	100	10	17	5%
2011	200	20	34	5%
2511	250	25	42	5%

General specification
 Operating voltage: 50V DC
 Insulation resistance: 1000M Ω at 50V DC
 Characteristic impedance: 100 Ω $\pm 10\%$
 Distortion: 10%
 Total delay/risetime ratio: 6:1
 Min. pulse width as % of total delay: 40%
 Repetition rate: 3 x min. pulse width
 Operating temperature range: 0 to 70°C

Order Code	Type	Price each
BU59P	Delay Line 1001	£4.99
UM09K	Delay Line 2001	£4.99
UM11M	Delay Line 5001	£4.99

Digital Delay Line Modules

Newport Components

A range of miniature digital delay line modules having Schottky TTL buffered delay lines providing precise delay times and direct compatibility with TTL. Five equally spaced delay taps are also provided and the whole packaged in one low profile, 14-pin DIL configuration with standard 0.1in. spaced pinouts. Internal termination of the delay line and compensation for propagation delays are incorporated and no additional external components are necessary. Especially suitable for high density board layouts. Five types with different delay times are available.

Type	Total delay ns $\pm 5\%$	Tap to tap delay ns	Output risetime ns
5250	25	5 ± 2	3
5500	50	10 ± 2	3
5750	75	15 ± 2	3
5101	100	20 ± 2	3
5251	250	50 ± 5	4

General specification
 Supply voltage: 5V DC (7V max.)
 Min. pulse width as % of total delay: 80%
 Input pulse repetition rate: 3 x min. pulse width
 Operating temperature range: 0 to 70°C
 TTL output load capability: 10 per tap max.

Order Code	Type	Price each
UM21X	Delay Line 5250	£3.49
UM23A	Delay Line 5500	£3.49
BU62S	Delay Line 5750	£3.49
UM20W	Delay Line 5101	£3.49
UM22Y	Delay Line 5251	£3.49

FX4054 Ferrite Toroid

A general purpose nylon coated toroid made from 3E2 grade high permeability manganese-zinc ferrite material; suitable for use in a wide range of applications, including interference suppression, inductors, transformers, etc.

Mechanical Specifications	
Inside diameter:	13.4mm
Outside diameter:	23.6mm
Thickness:	7.6mm

Magnetic Specifications	
Initial inductance factor:	3472nH
Residual plus eddy loss factor:	<15 x 10 ⁻⁶
Curie point:	>130°C
Effective length of magnetic path:	57.0mm
Core factor:	1.81mm ⁻¹
Effective volume of core:	1790mm ³
Effective area of core:	31.5mm ²
μ_{or} at +25 to +70°C:	>5000

Order Code	Type	Price each
JR84F	FX 4054	£1.59

10-Tap Digital Delay Lines

Newport Components

Schottky TTL buffered delay lines providing precise delay times, compatible with TTL logic. The package has been designed into a low profile 14 pin dual-in-line configuration, with ten equally spaced fixed delay taps. The module is capable of handling internal termination, thermal drift and will compensate for propagation delays, all of which are incorporated into the design so that no external components are needed. These delay line packages are designed to be used on high density board designs.

Specification
 Supply voltage V_{CC}: 7V
 Input voltage: 5-5V
 Min. pulse width as % of delay: 40%
 Input pulse repetition rate: 3 x pulse width min.
 Operating free-air temperature: 0°C to 70°C
 Logic 0 output: 10 TTL loads per tap max.

PHONE BEFORE 5PM FOR SAME DAY DESPATCH

01702 554161

Drive capabilities

Logic 0 output: 10 TTL loads per tap max.
20 TTL loads per unit max.

Logic 1 output: 20 TTL loads per unit max.

Moulded RF Coils

A range of small moulded coils with ferrite cores for designers. A special nylon trim tool is also available to suit these cores – a metal tool must not be used. The coils are available in 1½ to 8½ turn types and are particularly suited to use at frequencies between 40 and 170MHz.

Inductance in µH	Turns	Q at 100MHz	Colour code
0.04	1½	150	White
0.066	2½	150	Red
0.114	3½	150	Orange
0.180	4½	170	Yellow
0.230	5½	140	Green
0.297	6½	130	Blue
0.389	7½	140	Violet

15µH Adjustable Coil

Type 119ANA5873HM.

Specification

Q: 80
Turns between Pins 1 & 3: 25
Inductance: 15µH
Identification Colour: Pink

Order Code	Type	Price each
UH86T	15uH Adjustable Coil	60p

Coil for Mains Tx/Rx Project

Centre frequency: 125kHz
Q (pins 3, 4) unloaded: 25 min at 125kHz
Adjustment range (pins 3, 4) at 125kHz: 33,000pF ±6%
External tuning cap: 33,000pF
Winding pin 4 to 3: 49½ turns
pin 5 to 6: 7 turns
pin 5 to 2: 3½ turns
pin 5 to 1: 4½ turns

Order Code	Type	Price each
FT55K	Tank Coil AO42YUK	99p

15kHz Lowpass Filter

A multiple inductor low-pass filter with a cut-off frequency at 15kHz which will find uses for the output stage filtering of F.M. audio receivers and stereo decoders.

Specification
Input and output impedances: 3.3kΩ
Attenuation: -2.5 to 3dB @ 15kHz
-43dB @ 36.4kHz max.
Group delay time: 12µs @ 30kHz
Dimensions of can: length 18mm, width 6.1mm, height 9.5mm. Pin length 3mm.

Order Code	Type	Price each
JM94C	15KHz L.P.F	£2.99

R.F. Chokes

A range of r.f. chokes having a triple barrier against moisture, & high termination strength & reliability. Colour code (as resistors) gives value in µH.

Rating: ⅓W at 70°C
Insulation resistance: >10⁹Ω

Value (µH)	Test freq. (MHz)	Self-resonant frequency	Q (min) at 20°C	D.C. resistance (max) at 70°C	D.C. current (max)

HIGH FREQUENCY TRANSFORMERS

TV Sound IF Coil

A TV sound I.F. coil with one single winding of 8 turns, which should be tuned externally with 560pF for a resonant frequency of 6MHz, tunable with adjustable ferrite core. Q = 75. Colour: black.

Order Code	Type	Price each
UL56L	Toko TV Sound	52p

TV Video IF Coil

A TV I.F. coil which will tune to 38.9MHz using a 100pF capacitor in parallel. Adjustable ferrite core. Q = 50 (f = 38.9MHz, C_{ext} = 100pF).

Order Code	Type	Price each
UL55K	Toko TV IF	55p

Sub-Miniature I.F. Transformers

Low-cost sub-miniature i.f. transformers. Overall size of screening can: 10mm square x 12mm high.

Specification

THE BEST OF SERVICE

1000 Series Pulse Transformers

Newport Components

The fully encapsulated 1000 series pulse transformers with moulded cases, are intended to be used in wide band and pulse applications including thyristor/triac triggering circuits. Each winding has been voltage tested to withstand 2000V rms, 50Hz.

Type 1001 is a four pin package comprising primary and secondary windings.

Types 1002 and 1003 are six pin packages comprising one primary and two secondary windings.

Specification

	1001	1002	1003
Turns ratio $\pm 2\%$:	1:1	1:1:1	2:1:1
Primary inductance mH (min.):	3	3	12
Primary Et constant $V_{\mu s}$:	200	200	400
Leakage inductance μH :	22	9	35
Capacity pF (max.):	23	28	30
DC resistance of windings Ω (max)			
Primary:	1.2	1.4	4.0
Secondary 1:	1.0	1.3	1.8
Secondary 2:		1.7	2.4

Order

Code	Type	Price each

766 Series Pulse Transformers

Newport Components

These ferrite cored transformers are fully encapsulated in a high grade moulded case. They are widely used in digital and data processing applications, and for line coupling, matching and isolating. Linking the secondaries together can produce an alternative ratio.

Types 76601/1, 76601/2 and 76601/3 are four pin packages and comprise a single primary and secondary winding.

Types 76602/1, 76602/2 and 76602/3 are six pin packages and comprise a single primary and two secondary windings.

Specification

Type	76601/1	76601/2	76601/3
Turns ratio $\pm 2\%$:	1:1	1:1	1:1
Primary inductance μH (min):	2060	492	219
Primary Et constant $V_{\mu s}$:	17.5	8.5	5.5
Capacity pF (max):	45	20	12
Leakage inductance μH (max):	0.6	0.3	0.25
DC resistance of windings Ω (max):	1.5	0.8	0.5

Type	76602/1	76602/2	76602/3
Turns ratio $\pm 2\%$:	1:1:1	1:1:1	1:1:1

772 Series Pulse Transformers

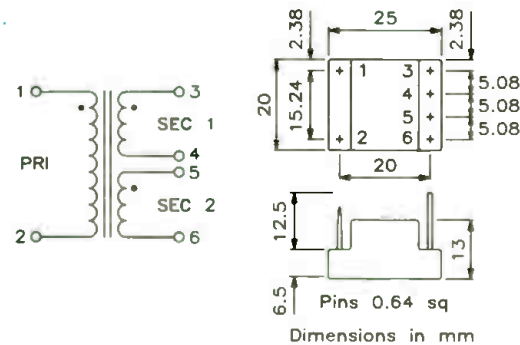

Newport Components

Designed for thyristor/triac triggering applications these pulse transformers are fully encapsulated in a moulded case. The windings have been tested to withstand 2500V rms at 50Hz. The windings may be linked together to obtain alternative turns ratios.

Type 77207 is a six pin package with a single primary (pins 1 and 2) and secondary winding (pins 3 and 4 (pins 5 and 6 may be removed if required)).

Type 77208 is a six pin package with a single primary winding and two secondary windings.

Type 77209 is a six pin package with a double wound primary and two secondary windings.

Specification

Type	77207	77208	77209
Turns ratio $\pm 2\%$:	1:1	1:1:1	2:1:1

TRANSFORMERS

Our range of laminated core transformers is organised as follows:

Standard Transformers: a new range has been added comprising 6VA to 100VA, twin secondary chassis mounting transformers with single 240V primaries.

PCB Mounting Transformers: the 6VA size is now joined by a 12VA PCB range.

Auto-Transformers: two new types increase this range, which now offers 50VA to 450VA ratings.

US Mains Auto-Transformers: this range has been expanded to cover 100VA to 450VA ratings.

Public Address Transformers: a new range of 100V line matching transformers offering power matching from $\frac{1}{4}W$ through to 30W in many useful steps.

Isolation Transformers: 240V to 240V isolation transformers available in 20, 50 and 100VA versions.

MAINS TRANSFORMERS

Sub-Miniature

A range of very small transformers that are wire ended. All types have 100mA output. Overall size: 37 x 31 x 30mm. Fixing centres: 45mm. All primaries tapped 0 to 240V.

Type	Secondary
3V	3.0-3V
6V	6.0-6V
9V	9.0-9V
12V	12.0-12V
15V	15.0-15V

Order Code	Type	Price each
YN12N	Sub-Min Tr 3V	£2.99
WB00A	Sub-Min Tr 6V	£2.99
WB01B	Sub-Min Tr 9V	£2.99
WB02C	Sub-Min Tr 12V	£2.99
YN13P	Sub-Min Tr 15V	£3.29

Miniature 250mA

A range of small transformers that are wire ended. All types have a 250mA output, centre-tapped. All primaries are 0 to 240V. Available in 6V, 9V, 12V and 15V types.

Type	Secondary	Size(wxhxd)*	Fixing Centres
6V	6.0-6V	36 x 31 x 34mm	46mm
9V	9.0-9V	43 x 35 x 34mm	51mm
12V	12.0-12V	43 x 35 x 36mm	51mm
15V	15.0-15V	43 x 35 x 38mm	51mm

*Size excludes fixing feet which protrude 10mm on each side.

Order Code	Type	Price each
YN14Q	250mA Tr 6V	£3.29
YN15R	250mA Tr 9V	£3.65
YN16S	250mA Tr 12V	£3.99
YN17T	250mA Tr 15V	£4.29

Standard Range

A range of high quality mains transformers, all with single 240V primary windings and twin secondaries, wound on double-section safety bobbins. The secondaries can be connected in parallel to double the current capacity, or in series to double the voltage or form a centre-tapped secondary. Available for either chassis or PCB mounting. Chassis mounting types will have either 2-hole clamps or mounting frames; connections are by solder tags. PCB mounting types have PCB pins in place of solder tags.

6VA Chassis Mounting

With 2-hole fixing clamp and solder tags.

Dimensions:	
Size (W x D x H):	45 x 40 x 37mm
Fixing centres:	54mm

Outputs:

Code	Secondaries	Maximum Current
WB06G	2 x 6V	500mA
DH24B	2 x 9V	333mA
WB10L	2 x 12V	250mA
WB15R	2 x 15V	200mA
WB16S	2 x 20V	150mA
WB20W	2 x 24V	125mA

12VA Chassis Mounting

With 2-hole fixing clamp and solder tags.

Dimensions:	
Size (W x D x H):	59 x 50 x 49mm
Fixing centres:	70mm

Code	Secondaries	Maximum Current
YJ50E	2 x 6V	1A
WB11M	2 x 9V	666mA
DM27E	2 x 12V	500mA
DM28F	2 x 15V	400mA
DH25C	2 x 20V	300mA

20/25VA Chassis Mounting

With 2-hole fixing clamp and solder tags.

Dimensions:	
Size (W x D x H):	69 x 57 x 57mm
Fixing centres:	80mm

Code	Secondaries	Maximum Current
YJ51F	2 x 6V	2A
DH26D	2 x 9V	1.38A
WB25C	2 x 12V	1A
DH27E	2 x 15V	830mA
DH28F	2 x 20V	625mA

50VA Chassis Mounting

With 2-hole fixing clamp and solder tags.

Dimensions:	
Size (W x D x H):	78 x 63 x 65mm
Fixing centres:	92mm

Code	Secondaries	Maximum Current
DH29G	2 x 6V	4A
DH30H	2 x 9V	2.78A
WB26D	2 x 12V	2A
DH31J	2 x 15V	1.66A
DH32K	2 x 20V	1.25A

100VA Chassis Mounting

With multi-hole fixing frames and solder tags.

Dimensions:	
Size (W x D x H):	91 x 70 x 77mm
Fixing centres:	4 holes @ 57 x 45mm

Code	Secondaries	Maximum Current
DH33L	2 x 6V	8.33A

Twin Secondary and Multi-Tapped Mains Transformers

A useful range of 240V mains transformers mostly with twin, tapped secondary windings, providing a varied choice of secondary combinations. Mechanical fixing is either by clamps or multi-hole frames. In the following table, 2-hole fixing clamps are indicated by a single number in the 'fixing centres' column, or else multi-hole frames are fitted, and the dimensions of the centres of four holes are given. Dimensions in mm.

Code	VA Rating	Secondary Windings	Maximum Current	Dimensions W x D x H (mm)	Fixing Centres
WB03D	24	(1) 0-8-9V (2) 0-8-9V	1.5A 1.5A	69 x 63 x 57	80

FOR TOP QUALITY & VALUE

PCB Mounting Transformers

Two ranges of 6 and 12VA PCB mounting transformers, identical to their chassis-mounting equivalents but having PCB pins instead of solder tags, and no hardware fixing clamps. The pins require PCB holes of 1.6mm diameter. Due to the extra weight of the 12VA types, these have three additional 'dummy' PCB pins for extra security. The actual PCB may also need extra hardware support fixings in the area close to the transformer.

6VA PCB Mounting

With six PCB pins.

Dimensions:
Size (W x D): 45 x 37mm
Height above PCB: 35mm

Outputs:

Code	Secondaries	Maximum Current
YJ52G	2 x 6V	500mA
YJ53H	2 x 9V	333mA
YJ54J	2 x 12V	250mA
YJ55K	2 x 15V	200mA
DH39N	2 x 20V	150mA
DH40T	2 x 24V	125mA

12VA PCB Mounting

With six terminated PCB pins and three non-connected support pins.

Outputs:

Code	Secondaries	Maximum Current
DM11M	2 x 6V	1A
DM26D	2 x 9V	660mA
DM13P	2 x 12V	500mA
DH41U	2 x 15V	400mA
DH42V	2 x 20V	300mA

Dimensions:
Size (W x D): 58 x 48mm
Height above PCB: 45mm

Order Code	Type	Price each
YJ52G	PCB 6VA 6V	£4.99
YJ53H	PCB 6VA 9V	£4.99
YJ54J	PCB 6VA 12V	£4.99
YJ55K	PCB 6VA 15V	£4.99
DH39N	PCB 6VA 20V	£4.99
DH40T	PCB 6VA 24V	£4.99
DM11M	PCB 12VA 6V	£5.49
DM26D	PCB 12VA 9V	£5.49
DM13P	PCB 12VA 12V	£5.49
DH41U	PCB 12VA 15V	£5.49
DH42V	PCB 12VA 20V	£5.49

Inverter Transformer

A high quality inverter transformer as used in our 12V/240V, 60W Inverter Kit LW95D, and suitable for similar inverter circuits. Winding details, primary: centre-tapped to suit 12V DC, 50Hz inverter driver at 3A. Secondary: single winding for 240/260V AC output at a nominal 500mA maximum (120W). Turns ratio: 1+1:32. Fitted with multi-hole mounting frames.

Dimensions:
Size (W x D x H): 100 x 88 x 100mm
Fixing centres: 63.5 x 67mm

Order Code XG29G **Type** Inverter Transformer **Price each** £24.99

Stereo Amplifier Transformer

A very high quality transformer designed primarily for use with our 50W Amplifier.

Primary: 120-0-120V
Secondary 1: 22-0-22V at 1 1/2 A
Secondary 2: 22-0-22V at 1 1/2 A
Secondary 3: 15-0-15V at 1 A
Rating: 162VA
Size: 85 x 100 x 80mm
Fixing centres: 63 x 55mm
Style: Similar to TR 20V 1A etc.

Order Code LW34M **Type** 15/22V Power Tran **Price each** £18.99

Isolation Transformers

A range of 240V to 240V AC mains isolation transformers, wound on double-section safety bobbins. Four sizes are available; 12, 25, 50 and 100VA. The three smaller sizes have two-hole fixing clamps. The 100VA type has multi-hole frames for chassis mounting and solder tag connections.

Code	VA Rating	Maximum Current	Dimensions (W x D x H)	Fixing Centres
LW33L	12	50mA	59 x 50 x 49mm	70mm
DH50E	25	100mA	69 x 57 x 57mm	80mm
DH51F	50	200mA	78 x 63 x 55mm	92mm
DH52G	100	400mA	91 x 70 x 77mm	4 holes @ 57 x 45mm

Order Code	Type	Price each
LW33L	12VA Isotran	£6.49
DH50E	25VA Isotran	£8.99
DH51F	50VA Isotran	£9.99
DH52G	100VA Isotran	£19.99

Terminal Covers

Terminal covers for standard transformer styles with solder tags. These covers fit over the terminals and hold on to the plastic bobbin cover beneath. Wires exit through the top of the cover. Three sizes are available: 5-way for 6VA transformers with up to 5 solder tags, 5-way for 20/25VA size and 6-way for 50 to 100VA sizes. These covers are particularly suitable for use with isolation transformers.

Order Code	Type	Price each
DM29G	5-Way 6VA Cover	16p
DM30H	5-Way 25VA Cover	18p
DM31J	6-Way 100VA Cover	21p

Auto-Transformers

A range of auto-transformers which provide step-up or step-down to adapt 120V American equipment to British 240V AC mains and vice versa. Six different power ratings are available from 50VA to 450VA, all with steel shrouds and having screw terminal connections. All types tapped at 0-120-240V.

WARNING: auto-transformers DO NOT provide safety isolation from the 240V mains supply and, despite the lower output voltage, the output should be treated with the same respect as the mains supply proper. These units are NOT intended for outdoor use, neither should they be used with portable tools. Mounting is by four single hole brackets at the base.

Code	VA Rating	Maximum Current (120V out)	Dimensions (W x D x H) (mm)	Fixing Centres (mm)
YJ56L	50	400mA	64 x 84 x 78	48 x 45
YJ57M	100	830mA	64 x 84 x 78	48 x 45
YJ58N	150	1.25A	72 x 94 x 88	57 x 51
YJ59P	250	2A	80 x 110 x 97	63.5 x 54
DH43W	350	2.9A	80 x 123 x 97	63.5 x 67
DH44X	450	3.75A	80 x 123 x 97	63.5 x 67

Order Code	Type	Price each
YJ56L	Auto 50VA	£13.99
YJ57M	Auto 100VA	£15.99
YJ58N	Auto 150VA	£22.99
YJ59P	Auto 250VA	£28.99
DH43W	Auto 350VA	£32.99
DH44X	Auto 450VA	£41.99

TOP QUALITY PRODUCTS AT SUPER LOW PRICES!

US Mains Type Auto-Transformers

Step-down transformers of 100, 250 and 450VA ratings to adapt UK 240V mains supply to American standard 110/120V appliances. All types have enclosing steel shrouds and come complete with UK mains lead and standard American 3-pin outlet socket in the cover. Mounting is by four single hole brackets at the base.

Code	VA Rating	Maximum Current (120V out)	Dimensions W x D x H (mm)	Fixing Centres (mm)
YM50E	100	830mA	80 x 120 x 97	63.5 x 67

DH46A	H10 US Mains 450VA	£49.99

AUDIO TRANSFORMERS

Two miniature transformers for audio matching. Dimensions 20 x 16 x 15mm. (CT = Centre tapped). Output type 200mW.

Type No. Application

Primary	Secondary	impedance	impedance
LT44	Driver	20k Ω	1k Ω CT
LT700	Output	1.2k Ω CT	3.2 Ω

Order Code	Type	Price each
HX82D	Min Tr LT44	99p
LB14Q	Min Tr LT700	99p

Microphone Transformer

A transformer specially designed to match low impedance balanced or unbalanced microphones into unbalanced high impedance inputs.

Turns ratio:	7:1
Input impedance:	300-0-300 Ω (600 Ω)
Output impedance:	20k Ω
Frequency response:	50Hz to 18kHz (-1dB)

The transformer is suitable for direct pcb mounting. Overall dimensions: 30 x 30 x 30mm high including 5mm long pcb mounting pins.

Order Code	Type	Price each
FD23A	Mic Xfmr 600:20	£6.99

600-600 Ω Line Isolating Transformer

A 1:1 ratio isolating transformer for use on 600 Ω systems. Low insertion loss and good linearity over a wide signal level range coupled with a high proof voltage make this transformer ideally suited for such applications as telephony, general data transfer, audio and holding coil circuits.

Please Note, this product is not approved for connection to the public switched telephone network.

Order Code	Type	Price each
BK57M	600 Ohm Isotran	£7.49

100V Line-Matching Transformers

A range of line-matching transformers for multiple loudspeaker and Public Address systems. The range offers a choice of power outputs from 1/4W to 30W. Universal types can drive 4, 8 or 16 Ω loads, all others are matched to 8 Ω only. The function of these transformers is to match the 100V line output of PA (Public Address) amplifiers to all loudspeakers in the system. They MUST NOT be connected to amplifiers or systems other than those designed for 100V line operation. Operating in the medium frequency range, the transformers are designed for typical commercial PA speech and music applications. The outputs quoted do not include input losses.

Universal Types 15/30W

Input: standard 100V line. Output power: 1, 2, 5 or 15/30W, selected by connecting the 100V line to the appropriate primary taps. Impedance matching: 4, 8 or 16 Ω , selected by connecting the loudspeaker to the appropriate secondary taps.

WARNING: DO NOT adjust the primary taps of these transformers without first disconnecting the 100V line input or switching off the equipment. High voltages can be found on the adjacent primary tags of this type where only 100V would be expected. Mounting is by 2-hole clamps.

Code	Maximum Power	Dimensions W x D x H	Fixing Centres
DH47B	15W	69 x 57 x 57mm	80mm
YJ60Q	30W	78 x 63 x 65mm	92mm

Order Code	Type	Price each
DH47B	15W 100V Line Tx	£9.49
YJ60Q	A2 30W 100V Line Tx	£11.49

Tapped Output Types

Line transformers with fixed 100V line inputs and outputs for 8 Ω loudspeakers only. Adjustable output taps provide a range of 4 power levels from each type; two different power ranges are available. Mounting is by 2-hole clamps.

Code	Output Taps, Watts	Dimensions W x D x H	Fixing Centres
DH49D	1/4, 1/2, 1, 2W	45 x 40 x 37mm	54mm
DH48C	1, 2, 4, 10W	59 x 50 x 49mm	70mm

Order Code	Type	Price each
DH49D	2W 100V Line Tx	£6.49
DH48C	10W 100V Line Tx	£8.65

Low Power Step-up Transformer

This transformer may find applications where a low power step-up transformer is required. Transformer is wound on a LA4343 pot core.

Specifications

Primary:	10 turns, 24 swg
Secondary:	600 turns, 40 swg
Turns ratio:	1:60

Order Code	Type	Price each
JL94C	Ioniser Transformer	£10.99

Valve Transformer

A transformer with HT and heater secondaries for powering valve circuits. The HT secondary is 0-240V @ 100mA, and the AC heater secondary is the standard 6.3V up to 1.5A max. Dimensions 78x65x65mm. 34VA.

Order Code	Type	Price each
XP27E	B2 Tr 240/0.1 & 6.3/1.5	£11.99

High Power Valve Mains Transformer

NEW

A mains transformer for high power valve circuits such as audio power amplifiers with a single primary winding, and separate single-ended HT and centre-tapped heater secondaries. It was developed for use in our 'Millennium 4-20' valve amplifier project. The transformer is intended for mounting on top of a chassis where one side of the former, carrying all primary and secondary connections, pass through a rectangular cutout, and the top side of the former is shielded by a steel top cover. The core therefore seats flat on the chassis and 4 x M5 mounting hardware is included. Due to the heavy gauge of wire used, the heater secondaries are not terminated at solder tags.

Specification

Input voltage:	240V AC @ 50Hz
HT secondary output voltage:	350V AC max.*
HT secondary output current:	250mA max.*
HT secondary winding impedance:	300 Ω approx.
Heater secondary voltage:	6.3V AC centre-tapped (3.15-0-3.15V)
Heater secondary current:	7A max.
Power consumption, $I_{HT} = 125mA, I_h = 3.5A$:	70W ($V_{HT} = 313V$ AC (350-300 Ω x 125mA))
$I_{HT} = 250mA, I_h = 7A$:	140W ($V_{HT} = 275V$ AC (350-300 Ω x 250mA))

Switch-on input surge current, HT into 68 μ F and fully loaded heater:	>800mA
Nominal continuous primary input current at full load:	>600mA
Overall dimensions:	96 x 80 x 85mm
Fixing centres:	79.3 x 63.5mm
Former cutout:	68 x 62mm min.

* Due to the internal winding impedance, max. voltage and current are not available simultaneously.

**FOR TOP
QUALITY & VALUE!**

24-PIECE RATCHET SCREWDRIVER SET

A high quality ratchet screwdriver socket and bit set in chrome vanadium. The screwdriver ratchet is controlled by a small spring loaded knob that is rotated to select forward or reverse. This versatile screwdriver is fitted with a latched pivoting mechanism that allows the handle to be bent at any angle, up to a right angle from the straight line, to increase the leverage. The handle is of tough plastic and provided with a pliable, comfortable grip. The screwdriver is designed to accept the 1/4 in. hex bits and an adaptor is supplied to accept the 1/4 in. square sockets.

GREAT VALUE!
£9.99
GW44X
[A2]

1/4 in. hex bits:

3, 4, 5 and 6mm flat blade.
No's. 1, 2 and 3 Posidriv blade.
No's. 1, 2 and 3 Phillips blade.

1/4 in. sockets:

5, 6, 7, 8, 9 and 10mm
1/4, 5/16, 11/32, 3/8, 7/16 and 1/2 in. AF.

Valve Output Transformer

A push-pull output transformer suitable for class A/B and B valve output stages at powers up to 20W rms. Screen grid taps are provided for distributed-load ('ultra-linear') designs, but need not be used. It was developed for use in our 'Millennium 4-20' valve amplifier project.

The transformer is intended for mounting on top of a chassis where one side of the former, carrying all primary and secondary connections, pass through a rectangular cutout, and the top side of the former is shielded by a steel top cover. The core therefore seats flat on the chassis and 4 x M5 mounting hardware is included.

NEW!

Specification

Primary anode-to-anode impedance (Ra/a):	6.6kΩ
Screen grid taps:	43% from CT
Winding distribution:	Five sections of interleaved primary and secondary windings
Usable frequency range:	25Hz to 75kHz ±3dB @ 20W rms, <10Hz to >90kHz ±1dB @ 1W rms
Low frequency cut-off:	25Hz @ 20W throughput
Natural resonance frequency of primary winding:	80kHz approx.
Max. Power throughput:	20W rms (30W rms absolute max.)
Speaker load matching:	8Ω only
Output impedance:	0.2Ω approx.
Damping factor:	50 approx.
Overall dimensions:	85 x 71 x 84mm
Fixing centres:	71.5 x 57mm
Former cutout:	60 x 56mm min.

Note that this transformer must only be used in push-pull modes with HT supply connected to CT, and never in single-ended mode.

Order Code	Type	Price each
DM53H C5	20W O/P Transformer	£25.99

IT'S A FACT!

REACTANCE

The reactance of an inductor is given by the formula:

$X_L = 2\pi fL$ ohms, where f = frequency in Hertz and L = inductance in Henries.

The total resistance of an inductance and a capacitor in series is $X_L - X_C$, where X_C is given by:

$X_C = 1/(2\pi fC)$ ohms, where C = capacitance in Farads.

The resonant frequency of a tuned circuit is given by:

$f = 1/(2\pi \sqrt{LC})$

TOROIDAL MAINS TRANSFORMERS

A range of high quality, toroidal mains transformers whose main features include a low magnetic field, small size and weight, low noise and excellent regulation. A mounting kit is supplied with each, allowing easy mounting to a chassis by placing one neoprene washer below, and the other above the transformer, and bolting the dished washer down on top. DO NOT over-tighten, also ensure that both ends of the bolt do not make contact with the chassis (e.g., top of bolt touches lid of case). Because the bolt is aligned in the same direction as the primary and secondary turns, this will effectively create a short-circuit winding. Either shorten the bolt if too long, or provide some insulation, such as plastic, so the bolt does not make contact.

Note that an antisurge fuse should always be used as the mains fuse for toroidal transformers, as they exhibit a very high initial surge current at switch on.

All types have a single 240V primary and two separate identical secondaries, except YZ23A, YK33L and XJ65V. All connections are approximately 20cm long sleeved leads, and primaries are always colour coded as orange.

The types available are shown in the following list. Dimensions include mounting kit. The start/finish colour codes of the secondary windings are also shown. All types are approved to EN60742/BS3535, VDE0551 and ISO9003.

Note that both DH53H and DH54J are 240V mains isolation transformers.

TRANSFORMER KITS

At last you can wind your own mains transformers to your specification. Some power supply requirements might include an unusual secondary winding, which can be easily catered for by building a transformer kit, thereby obviating the tedious process of searching through the catalogues and adverts for a transformer to meet your needs, and having to settle for one having a higher specification or additional secondary taps which are expensive and which you don't really want. As an example, a digital frequency counter using a fluorescent multi-digit display will require +5V for its logic circuits, and then a 3 volts AC heater feed for the display. Or you may want a +5V, +12V and -5V supply for your home made microprocessor system, plus an additional 25V tap for programming EPROMS. The only other recourse would be to use two separate transformers, which use up space and money.

NOTE: Under no circumstances should you attempt to modify or rewind the mains primary winding if the transformer is to remain safe to use. The primary windings have been properly assembled and tested during manufacture and should not be interfered with.

Output Current Calculation Table

Wire Gauge	Wire Dia. s.w.g	Max Current	Max number of turns for -		
	mm.	Out	20VA	50VA	100VA
36	0.2	100mA	1664	2394	3300
34	0.224	150mA	1363	1938	2652
32	0.25	200mA	1092	1581	2135
30	0.315	300mA	714	1025	1421
26	0.4	500mA	459	660	897
24	0.56	1A	228	336	476
22	0.71	1.5A	150	209	286
21	0.8	2A	104	160	240
20	1.0	3A	77	104	144
18	1.25	5A	40	60	96
16	1.5	7.5A	28	40	60

Note that the total number of turns that can be accommodated on the former are reduced in proportion to increasing wire sizes and therefore to increasing wire current. Thus, you will not be able to achieve a high current high voltage output from a transformer kit that is too small.

NEVER attempt to use tinned copper wire in place of enamelled copper wire, regardless of how small the winding.

240 volt isolation transformers can easily be made (provided the factory wound primary windings are not used as the secondary), as follows:-

For 20VA 1,450 turns of 34 s.w.g. enamelled copper wire (80mA out).

For 50VA 1,150 turns of 31 s.w.g. enamelled copper wire (200mA out).

For 100VA 1,000 turns of 28 s.w.g. enamelled copper wire (400mA out).

20VA Transformer Kit

This 20VA transformer kit comprises a double section bobbin ready wound with a 120-240V mains primary winding, electrical steel core 'E' and 'I' laminations, end mounting 'frames' and clamping bolts. The number of secondary turns required can be found by multiplying the required secondary output in volts by 6.04 turns per volt, +1% for each multiple of 10VA loading. The maximum current output depends on the wire cross section of the secondary winding (see table left). The total power output of all secondaries must not exceed 20VA. Enamelled copper wire for winding the secondaries is not supplied with the kit.

Dimensions: Width 69mm x Depth 55mm x Height 58mm.

Weight: 660 gms.

Order Code	Type	Price each
YJ61R	A1 Transformer Kit 20VA	£7.99

50VA Transformer Kit

A transformer kit having a ready wound 120-240V mains primary winding, 'E' and 'I' laminations and end frames. Secondary windings can be wound for a total output not exceeding 50VA. The number of secondary turns required can be found by multiplying the voltage output required by 4.8, +1% for each multiple of 10VA loading.

To find wire gauge for current output required see table above. Wire for winding the secondaries is not supplied in the kit.

Dimensions: Width 79mm x Depth 62mm x Height 65mm.

Weight: 950 gms.

Order Code	Type	Price each
YJ62S	A2 Transformer Kit 50VA	£9.99

100VA Transformer Kit

A transformer kit having a ready wound 120-240V mains primary winding, 'E' and 'I' laminations, end frames and clamping bolts. Secondary windings can be wound using enamelled copper wire for a total power output not exceeding 100VA. To find the number of secondary turns required multiply output voltage required by 4.16 turns per volt, +1% for each multiple of 10VA loading. To find wire gauge for the output current required see table left. Wire for winding the secondaries is not supplied in the kit.

Dimensions: Width 89mm x Depth 68mm x Height 75mm.

Weight: 1400g.

Order Code	Type	Price each
YJ63T	A3 Transformr Kit 100VA	£13.49

TOP QUALITY PRODUCTS AT SUPER LOW PRICES!

ETD39 Ferroxcube Transformer Core

A high performance ferroxcube core with performance optimised for switched mode power supply use. The 3C8 ferroxcube core is suitable for use at frequencies ranging from 20kHz to 150kHz. Maximum power throughout depends on operational frequency and construction of windings. Figure 1 shows power throughout versus operating frequency. Figure 2 shows the maximum working flux versus frequency. Figure 3 shows PCB mounting information. Former is manufactured from polyteraphthalate and designed for PCB mounting. Assembly of the core and former is very easy due to the use of sprung stainless steel clips. Dimensions of assembled transformer (overall including pins): 44.5 x 47.5 x 41.25mm. Core halves, former and assembly clips are available separately. Note: to make one transformer two core halves, one former and two clips are required.

Core Specifications (pair)

Absolute maximum power throughput at 150kHz:	500W
Absolute maximum power throughput at 25kHz:	150W
Effective total loss at 25kHz:	<2.2W
Ambient operating temperature:	60°C
Maximum operating temperature:	100°C
Length of the mean turn:	69mm
Effective magnetic path length:	92.2mm
Effective Area of magnetic path:	125mm ²
Effective magnetic volume:	11500mm ³
Minimum centre pole area:	117mm ²
Nominal Specific Inductance:	2700nH
Saturation limit at 100°C:	320mT
Maximum working flux:	see Figure 2

Former Specification

Material:	Glass fibre filled polyteraphthalate
Terminations:	16 copper nickel alloy pins
Minimum window area:	177mm ²

Length of mean turn: 69mm
 Flammability: UL94-V0
 Solderability: 400°C for 4 seconds

Order Code	Type	Price each
JR81C	HFXfmr 3C8 Core	£1.35
JR82D	HFXfmr Former	£1.55
JR83E	HFXfmr Clip	29p

Variable Transformers

A range of three robust, open style variable auto-transformers which enable a 250V AC 50Hz voltage supply to be varied between 0 and 270V AC. These units are ideal for testing over- and under-voltage operation of mains equipment, as the range 240V ±10% can be covered. Three units are available, each with a different rating, to provide a cost-effective and versatile range. They can be used for reducing AC voltages for testing continental equipment, and as lighting controllers, for stage use. All feature smooth operation with single layer non-saturating windings and a toroidal iron core. The 0.75A version features 0 to 100% and 0 to 110% ranges that can be hard-wired depending on which is required. All units are specifically designed for panel mounting. Please note that these units have exposed live parts and must therefore be used in a suitable enclosure, and are only suitable for connection to a 250V AC 50Hz supply.

0.75A Version

	Terminal	Connection
0 to 240V AC operation:	1:	Input & output negative
	2:	Input positive 240V AC
	3:	Output positive 0 to 240V AC
0 to 270V AC operation:	1:	Input & output negative
	4:	Input positive 240V AC
	3:	Output positive 0 to 270V AC

Dimensions: 90 x 84 x 97mm (H x Dia x L)
 Two 4mm holes on 28mm PCD,
 3mm hole for shaft

2A and 8A Versions

Rated input voltage:	250V AC 50Hz
Rated output voltage:	0 to 270V AC
Ratings:	2A and 8A continuous
Dimensions	
2A unit:	120 x 107 x 128mm 92 x 92mm / 4-hole fixing centres
8A unit:	185 x 145 x 155mm 146 x 146mm / 4-hole fixing centres

Order Code	Type	Price each
GL42V	CS 0.75A Variac	£29.99
DM96E	B4 2A Variac	£39.99
DM97F	G3 8A Variac	£79.99

MOTORS

Stepper Motor

A 12V 4-phase, unipolar stepping motor suitable for small robots and all kinds of applications requiring medium torque at low current drains. A suitable driver is the SAA1027 and a kit is available which contains the motor, the IC and the passive components required, together with a pcb.

Specifications:

Step angle:	7.5°
Current per phase:	130mA
Resistance per phase:	94Ω
Inductance per phase:	43mH
Dynamic torque, @ 10pps:	80gm/cm (8mNm)
Response frequency:	300pps
Rotor inertia:	4gm/cm ²
Weight:	57gm
Dimensions:	35 dia. x 25mm deep.
Drive Shaft:	3mm dia x 11mm long
Max width across mounting tabs:	50mm.
Fixing centres:	42mm x 6BA/M3.

The motor is provided with six colour coded wires 230mm long.

Order Code	Type	Price each
FT73Q	Stepper Motor Size 1	£16.99

Stepper Motor Kit

A kit comprising the Stepper Motor FT73Q, SAA1027 stepper motor driver IC (see Semiconductors) and all passive components required to make a working module, together with a pcb. The pcb is also available separately. Full construction details may be found in Best of Maplin Projects Book 5.

Order Code	Type	Price each
LK76H	Stppr Mtr + Dvr Kit	£22.99
GD14Q	Stepper Motor PCB	£1.39

Small Motor

A small 20mm diameter motor with a 2mm dia shaft. Overall length: 30mm excluding shaft. Shaft length: 7.5mm. The motor casing is flattened for easy mounting. Distance across flats 15mm.

Operating voltage:	1.5 to 3V
No load speed:	8700rpm
No load current:	320mA
Speed at max efficiency:	5800 rpm
Current at max efficiency:	760mA
Torque at max efficiency:	5.3gm cm
Output at max efficiency:	310mW
Efficiency:	32%
Stall torque:	16gm cm

Order Code	Type	Price each
YG13P	Small Motor	£1.69

STAR REASONS WHY MAPLIN MUST BE YOUR FIRST CHOICE FOR COMPONENTS EVERY TIME

- ★ Always low prices right through the catalogue.
- ★ Top quality components, no rejects, no re-marks.
- ★ Same day service on all stock items.
- ★ Excellent stock levels – over 9 million pounds worth in stock. Usually over 97% of all our lines in stock too.
- ★ Simple carriage charge. £1.50 per order plus a small additional charge for heavy, large or delicate items up to a maximum of £7.50 total.
- ★ All goods sent by first class post up to 1kg. Fast parcel service over 1kg.
- ★ Post paid ordering. First class reply paid envelope with every order.
- ★ Honest prices. All our prices include VAT where applicable.
- ★ Easy complaints procedure – if we do get something wrong just fill in the form on the reverse of your packing advice and return it post-paid. We will correct our error immediately.
- ★ Large range. Probably everything you need from one source.
- ★ Security. We are a reputable company. You can be confident your money is safe with Maplin.
- ★ 24-hour telephone sales – with same day despatch on orders received by 5 p.m.

HOW TO ORDER IN THE UK

Use our order form whenever possible. The blank one returned with your previous order will have your customer number and your name and address already printed on it. Please keep a note of your customer number and always use it on any order or correspondence. Send all mail to Maplin Electronics, P.O. Box 3, Rayleigh, Essex SS6 8LR. Keep an accurate copy of your order so that you can check that we have sent you exactly what you have ordered. We will send an itemised invoice with your order which shows exactly where your money has been used.

Please do not write queries or anything other than your order on the order form unless the query is about something you are ordering this time. If you have any other enquiry, write it on a separate piece of paper with your name and address and customer number if known.

Please use the Order Code

Using our order codes helps us to deal with your order quickly and efficiently. Each item has its own code number which (except for resistors) is a five character code in the format: Two letters, two numbers then one letter. No further description is necessary, but if you wish, to assist you identify the codes, you can also write a brief description of the item, and to help you we have put this description in brackets after the five character code. Details of how to order resistors are given at the beginning of the Resistor Section.

Prices

All prices shown in this catalogue are valid until 28th February 1995, excluding the Computer and Semiconductor sections. After this date please write or phone for a free copy of our Price Change Leaflet (CA99H).

Prices shown in this catalogue include VAT at 17.5% where applicable and are for the quantity shown, i.e. each, per pack, per metre etc. Items marked NV are rated at 0% (at the time of going to press – see note below) and the price shown applies both to inland and export orders. Overseas customers please see 'How to Order if You Live Outside the UK' on page 827.

All prices are the same in our shops and by mail order. A £1.50 charge is levied on every mail order to go towards the cost of handling and packing. On large, fragile or heavy items a charge is made to contribute towards the cost of carriage, up to a maximum of £6.00 per order. For example, if an item is marked A next to its order code, then the carriage charge is £1.55.

The carriage charges are as follows:

A	£1.55	B	£2.20	C	£2.80	D	£3.30
E	£3.90	F	£4.45	G	£5.35	H	£6.00

Maximum charge per order for carriage is £6.00, in addition to the £1.50 handling charge. If there are numbers, or numbers and letters in the box, please ignore the numbers; they are for overseas customers only.

Note: VAT will be applied at whatever rate is legislated by the government at the time we receive your order.

Trade Prices

Bona fide trade customers should contact our sister company Maplin Professional Supplies, P.O. Box 777, Rayleigh, Essex SS6 8LU. Tel: 01702 554171.

Price Change List

The price change list for 1995, will be available from 1st March to 31st August. For a free copy of this list, write CA99H on your order. Copies are also available in our shops.

Despatch

All orders having a total weight of less than 1kg are despatched by first class letter post. Orders having a total weight over 1kg are despatched by 48-hour fast service. For faster delivery services, please see page 6.

Payment

Payment may be made by Cheque, Credit Card, Postal Order, Giro transfer or Transcash. Cheques and postal orders should be made payable to "Maplin Electronics plc". In your own interest cross all cheques or postal orders sent in the post with two straight lines across the centre. For details of the Credit Cards we accept and details of Transcash and Giro transfers, see Credit Cards below.

Do not send cash unless the envelope is registered at the Post Office. If you send cash in an ordinary envelope the Post Office may compulsorily register it and we regret that we cannot accept such letters.

Remember to enclose with your order the numbered credit note if you are claiming credit.

Please remember to add the £1.50 handling charge on every order. See 'Prices' for details or charges for heavy, large or delicate items.

Telephone Your Order

If you intend to pay for your order by credit card, you

can telephone your order to us. We shall require your credit card number, the expiry date of your credit card and the cardholder's address and full name. We shall normally be able to despatch on the same day all orders received by telephone before 5 p.m. subject to approval by the credit card company.

When you telephone be as brief as possible. Please give your order in the following manner: state the five digit order code only and then the quantity you require. If possible always quote your customer number.

Please ensure you know the order codes for the goods you wish to order before phoning. If you are having difficulty finding an order code please ask for Customer Services not Sales.

Please note that the moment you ring off, your order is accepted by the system and it is no longer possible for the sales staff to reconnect with it. It will have joined thousands of other orders passing through the system that day and it is simply impossible to manually find it again within a reasonable time. So please do not ring back to add to or delete items from that order as this is impossible for us to do.

The Maplin Sales Desk is available Monday to Friday from 9 a.m. to 5.15 p.m. For orders only (no enquiries please) ring 01702 554161. For enquiries or orders with enquiries ring 01702 552911. Please do not call our shops; they will not be able to help you with a mail order enquiry or order.

Methods of Payment for UK Customers

Payment may be made by Cheque, Postal Order, Cash in a Registered Envelope, Credit Card, Giro Transfer, Transcash or Credit Terms.

Credit/Direct Debit Cards

We are pleased to accept orders with payment by any of the following credit/direct debit cards: Access, American Express, Barclaycard, Connect, Eurocard, Mastercard, Visa and Switch (by mail order later in the year). NEVER send your card to us. Simply write the number and expiry date of your credit card on your order, sign it and send it to us. Do not include any money.

Place your Order in your Post Office

If you're fed up with having to buy Postal Orders then you'll be pleased to hear about TRANSCASH – a service from the National Girobank. Simply ask for a form in your Post Office and write your order on it along with our TRANSCASH number. You then pay

the amount due to us to the cashier at the Post Office (plus a small fee to the Post Office) and that's it. No stamps to buy, no letters to post, no fiddly Postal Orders. We receive your order within four to five days and can despatch it immediately. Please do not include enquiries; orders only.

National Girobank looks after your money safely and simply. Next time you go to buy Postal Orders – don't! Use TRANSCASH instead. It's a great service from your National Girobank. Take a note of Maplin's TRANSCASH number now – TRANSCASH 308 8065. Use it at your local Post Office now!

Paying by Giro Transfer

You can transfer money from your Giro account directly into our Giro account by completing and sending to the National Giro Centre, in one of your National Giro postage paid envelopes, one of your own National Giro transfer/deposit forms. Write your order and your customer number (if you know it) on the back of the form. We receive your order in three to four days and can despatch it immediately. National Girobank looks after your money safely and simply.

Make a note of Maplin's National Girobank account number now. It's shown in the panel above. Please do not send Giro transfers to us as this will cause considerable delay. Use a crossed Girocheque if you wish to send money directly to us.

Special Note for Customers in the Channel Isles

Customers in the Channel Isles do not have to pay British VAT, and should mark their orders "Export", or if using our order form, tick the Export box. To calculate the value of your order, total all items except those marked *NV*, divide by 1.175, add the *NV* total, add the £1.50 handling charge, and any carriage charge if applicable.

How To Order From BFPO Addresses

If your BFPO address is in Northern Ireland you must use the ordinary inland prices, but if your BFPO address is elsewhere in the world you do not have to pay VAT and there are no additional postage charges unless you require air mail – see table, note 4 on page 828.

However if any item is too large or heavy for despatch by BFPO you must supply a civilian address and pay extra for carriage at cost.

Channel Isles and BFPO Customers

Should the rules pertaining to VAT change due to government legislation, VAT will be charged at whatever rate is in force at the date we receive your order.

Credit

When we are out of stock of an item that you have ordered we may issue a numbered credit note. If you do not want to buy anything further from us, simply put the credit note with your name and address and your request for a refund in the reply paid envelope and we will send a cheque refund by return of post. We regret that we cannot refund by Postal Order and we can only refund cash if you provide a Post Office registered envelope prepaid with the correct stamp. If you do not have a bank account, you can pay cheques made out to you into P.O. savings accounts or anyone who has a bank account will be able to cash the cheque for you.

If any item on your invoice is marked 'to follow' then we will automatically send it to you as soon as it comes into stock. As before, however, if you wish to cancel then you can do so at any time until we despatch the goods and we will refund your money as described above.

Business Reply Envelopes

Our prepaid envelopes are provided for your convenience when ordering. If you are returning small faulty goods or goods sent in error, please do not send them in the envelope, but pack them carefully in a padded bag and attach the envelope to the outside. (We have heard, from several customers, that Post Offices have refused to accept packets under 750 grammes paid with the Business Reply Envelope. If you encounter this problem, let us have the address of the Post Office at once and we will inform their local Operations Branch so that matters can be corrected immediately.)

If a box is used or the total weight of the packet is over 750 grammes, please pay for 2nd class parcel post and we will refund the charge, or ask us for a special pre-paid label, to be sent to you, for you to use on the package. Please do not return goods by carrier. Authorisation must be given by our Returns Manager before goods can be returned by any method other than by the Royal Mail.

Returns

You may return damaged goods or goods sent in error, but please do not return goods otherwise, without advising us first in writing and waiting for our consent. Damaged goods or goods sent in error will be replaced as soon as we receive them, provided that they have been carefully packed (see Business Reply Envelopes above) and provided that we have stock. If you have to pay for postage then we will refund it.

We do not operate an "on approval" system, therefore if goods purchased by you from mail-order or one of our stores, are not damaged and were not supplied in error, and you return them to us, we will make a charge to cover our administration costs. The charge is normally 10% of the value of the goods, subject to a minimum charge of £1. Please do not return goods under £1 as we will not refund. Providing the condition of the goods, when we receive them, is as new, we will normally refund the remainder.

VAT

All our prices include VAT and zero rated items are marked *NV* in our price lists to help our overseas customers. See note under 'Prices' on page 824.

TERMS OF BUSINESS

Every order placed is subject to the following terms and conditions.

Method of Payment

Payment is by cash with order, credit card, Transcash, Giro transfer or 30 days net account to approved trade customers only. Cheques, Post Office Giro Cheques, Postal Orders and Money Orders should be crossed and made payable to "Maplin Electronics plc". Do not send banknotes in the reply paid envelope.

Carriage & Packing

There is a £1.50 handling charge on all mail orders. On all items marked with a letter next to the order code, e.g. **A**, there is a charge to contribute towards the cost of carriage. The charge levied is in accordance with the following table.

A £1.55	B £2.20	C £2.80	D £3.30
E £3.90	F £4.45	G £5.35	H £6.00

The maximum charge per order for carriage is £6.00, in addition to the £1.50 handling charge.

Guarantee

Maplin Electronics plc guarantees that all goods described in this catalogue are brand new and meet the manufacturer's published specifications. Goods returned to us faulty will normally be replaced at the discretion of Maplin Electronics plc provided that the goods have not been misused or damaged in any way. Maplin Electronics plc shall not be liable in respect of defects in goods supplied for any injury, loss or damage resulting from such defects. At our discretion goods returned to us faulty (especially integrated circuits) may be referred to the manufacturer for their decision. Integrated circuits are not guaranteed if they have been soldered (excluding quad-in-line types and types where we recommend direct soldering). If you wish to take advantage of the guarantee you must use sockets.

This statement does not affect your statutory rights.

Guarantee for Kits

All the components in our kits carry the guarantee that they meet the manufacturer's specifications. We guarantee that the kits, correctly built, using components supplied by us, will work to the specifications published in our advertising and construction details. The guarantee does not cover damage caused during construction or errors in construction. We have no control over the constructor's ability and recommend that if after studying the construction details you feel that the project is more complicated than you expected, please contact our sales department who will arrange for you to return the kit for a refund subject to our 10% handling charge. This offer only applies to kits where construction has not started.

This statement does not affect your statutory rights.

Returns

Except for faulty goods or goods sent in error, none may be returned without our prior consent in writing.

Lien

We shall have a general lien in respect of all sums due from you upon all goods to be supplied to you or upon which work has been done on your behalf and upon twenty-eight days, written notice to you, may sell such goods and apply the proceeds towards the satisfaction of the sums due to us.

Despatch

Orders will normally be dealt with on the day of receipt. Items out of stock will normally be considered cancelled and a credit note issued to the full value (but see "Credit" on this page). Credit notes are redeemable on demand and repaid by cheque.

Specifications & Illustrations

Specifications and illustrations in this catalogue are given in good faith, but they should be regarded as for guidance only as goods are subject to alteration without notice in order to maintain delivery or price levels.

Prices

The price charged will be that ruling on the day your order is entered on our computer. In general prices are reviewed every six months, at which time some may change. In between review dates prices are as shown in this catalogue, or on the current Price List after 1st March 1995.

CASHTEL ON 01702 552941

How To Use Cashtel

Once you have the appropriate hardware and software, simply dial 01702 552941 and listen for the tone. When you hear it, switch the modem to "online" and replace the telephone handset. Our modem sorts out which speed you are sending at automatically.

1. Your TV screen will now display the welcome message.
2. Enter your customer number and the FIRST line as displayed on your last address label. This must match exactly the details on file. A command menu is then displayed.
3. Option 1 enables you to place orders. You will be asked for the stock number and quantity of the item you require, then the description, unit price and total price will be displayed. You are then asked for the next stock code and so on until you type 'END', as shown in Screen C. Your whole order is then displayed line by line and you choose to order or not by typing 'Y' or 'N' (Yes or No). You are also told at this time if any item is unavailable and if you still leave the order for the item outstanding, then it will be sent on to you by the computer as soon as it becomes available.

When all items on order have been displayed, and you do not want to add to this the screen displays the total value of all the items ordered. Only if you key 'Y' (Yes) to the whole order will the order actually be sent. You now enter your Access, Visa or American Express card number (or account number for trade customers only) and the order is printed out by the computer ready to be collected and despatched.

4. Option 2 allows you to check the price and availability of any item.
5. Option 3 allows you to search for any consecutive group of letters through a list of stock descriptions.
6. Option 4 allows you to check your previous orders (whether placed by mail, phone or Cashtel).
7. The other options are for regular users, who will find them clearly explained as they use them.
8. If you enter option 9, the call is terminated – you may leave a message with any suggestions or explaining any problem you have had.
The system then disconnects and awaits the next call.

The full system is available continuously, 24 hours a day except when the main computer is closed for essential maintenance. During shutdowns you will receive a message explaining why the system is closed and our estimate of when it will be open again.

Repairs and Get-You-Working Service

We will undertake to repair or get working any of the complete projects published in our constructional articles, Heathkits, and Velleman Kits, providing that they are built on our ready-etched printed circuit boards, and use a majority of components that we have supplied. Items marked "Datafile Project", Circuit Maker ideas and Mini Circuits in this catalogue and in our magazine are excluded because they are essentially technical information articles for 'building block' type circuit and IC applications, and their correct functioning depends on the surrounding circuitry over which we have no control and probably cannot easily reproduce. Therefore we cannot offer the service on such projects. Also we cannot offer the repairs and get-you-working service for magazine projects, other than those in our own publications, even if we are mentioned as suppliers of the parts or supply a pcb for

the project. Please return the whole completed project, not just the faulty board (if it is a large project), as faults on one board are often caused by problems on another board in the project. Enclose a cheque or P.O. based on the retail price of the kit as shown in the table (subject to minimum cost of £17). If the boards arrive damaged by the Post Office, they will be returned to you with a refund after deducting the return postage. Under no circumstances will we be liable for damage to goods sent to us. In addition we will not attempt a repair if the quality of construction is so poor that the only answer is a complete rebuild. Again the package will be returned to you with your money after deducting the return postage. If the fault is due to faulty components, or incorrect instructions or any error on our part which could have led to the fault, we will repair the project free of charge and return it to you carriage paid with a refund of your postage to us.

If the fault is due to an error or errors you have made we will charge you for our time at a reasonable rate (see table below) and for the cost of any parts replaced. If this is less than the amount you sent, we will refund the difference after deducting the cost of postage to you. If the cost including return postage is more than the amount you sent, we will ask you to pay the difference before the goods are returned. But remember that it can take our engineer up to an hour (or much more on large projects) to set up the necessary test jig that will enable him to start testing your particular project and then take him some time to find the fault. So if you are not actually prepared to pay our very reasonable charges then please do not return your projects for repair!

Kit Retail Price	Standard Servicing Cost
Up to £24.99	£17.00
£25 to £39.99	£24.00
£40 to £59.99	£30.00
£60 to £79.99	£40.00
£80 to £99.99	£50.00
£100 to £149.99	£60.00
Over £150	£60 min.

If no fault can be found with the project, a charge of £17 will be raised to cover the cost of setting up any equipment needed and the subsequent testing. All repairs are carried out by skilled technicians at our Head Office. Please note that staff at our shops are unable to undertake repairs, however products for repair can be handed in at the shop for transfer to our Head Office Service Centre. We will carry out the repair as fast as we possibly can, but please allow up to four weeks. We will acknowledge receipt of your returned kit by return of post.

Ready-made goods which are faulty should be returned to us immediately and providing we have stocks we will either repair or replace them as quickly as possible.

Technical Enquiries and Fault Finding

If you have a technical problem with one of our projects or components, please telephone 01702 556001. Between 9 a.m. and 5.30 p.m. each day (Mon to Fri) an

engineer will be available to try to help. It will save time if you have all relevant details to hand, e.g. catalogue page number for components, project book number for kits, and if replacement or additional parts are required, your customer number and post code. If you write, please keep technical enquiries separate from any other enquiry or order. Address your letter Technical Dept.,

Maplin Electronics plc, P.O. Box 3, Rayleigh, Essex. We will do our utmost to answer your enquiry within 2 working days of our receiving it. We cannot answer queries which do not relate to items in our catalogue or 'Electronics – The Maplin Magazine'. Also we are unable to offer the service on projects where the kit has been discontinued for over one year. Priority will be given to those enquiries accompanied by an sae. Enquiries about projects appearing in magazines must be addressed to the magazine concerned. Before you write try to narrow down the fault; it's hard to help you if you just say it doesn't work, since in most cases the fault could be almost anything. Most designs follow a logical sequence, so if possible check to see if any parts of the circuit are operating correctly, and make a note of every test you make. You will undoubtedly require a multimeter and in audio circuits a crystal earpiece can be useful as only the tip need be connected to enable you to hear what is happening throughout the circuit and the extremely high impedance of this monitor will not cause the existing conditions to change. Always check the power supply voltages and voltage rails in the circuit, and check that all points that should be at earth potential are correct, especially when you have several seemingly unconnected faults. Hums and buzzes are almost always caused by incorrect earthing, poor layout or interconnecting wires that are too long. Poor soldering is one of the most common causes of faults. Keep the soldering iron tip clean and free from build-ups of flux by wiping it on a damp rag or sponge, but ensure that it is always tinned (covered with a layer of molten solder – with a new iron, tin the new bit by wiping the molten solder over it with a piece of card or rag). It is most important that both sides of a joint are heated together by the iron. If one side is cold the flux from the solder will flow around it and insulate it from the other side, exactly the opposite to what is wanted.

EXPORT TERMS OF BUSINESS FOR MAPLIN ELECTRONICS PLC

Maplin Electronics plc referred to hereinafter as "Maplin" All export business is subject to the following terms and conditions, unless otherwise agreed in writing or by specific contract.

Offers and Acceptance

No obligation on Maplin shall arise as a result of a catalogue quotation or any other offer until Maplin accepts a purchaser's order. Maplin reserves the right to cancel or amend orders without penalty depending on stock availability.

In the event of any inconsistency between Maplin and the purchaser's terms and conditions, the Maplin terms and conditions of sale shall prevail, unless and until variation by express agreement is accepted in writing by both parties.

Prices

Maplin reserves the right to change prices at any time without prior notice. In general, prices are reviewed every six months, at which time some prices may change. The price charged for all goods will be that ruling at the date of acceptance of the order by Maplin. No changes to prices will be made following acceptance of an order by Maplin.

Whilst every effort has been made to ensure accuracy of prices quoted, Maplin does not accept responsibility for any error or omissions. Written quotations shall be valid for a period of thirty days.

Payment Terms

Export orders must be paid for in advance by one of the following methods:

1. Internationally recognised credit card, stating type of card, card number and expiry date.
2. Bank draft or cheque in Pounds Sterling, with order, drawn on a UK bank.
3. Where approved and established with Maplin, net monthly account terms.
4. Letter of Credit (for order value exceeding £2,000), provided that it conforms to the following conditions:

- (i) Irrevocable and confirmed on a major UK bank
- (ii) Negotiable for payment, at sight in Sterling.
- (iii) Must conform exactly in detail for price, description of contents, despatch method etc., as given in Maplin quotation or pro-forma invoice.
- (iv) All bank charges, commissions, etc. are to be to the account of the customer.
- (v) Transshipment and part-shipment must be allowed.
- (vi) Must be open for a period of six months.
- (vii) Must allow reasonable time for despatch of goods and subsequent preparation and presentation of documents.
- (viii) Must specify if Country(ies) of Origin are to be shown.
- (ix) Must be subject to the uniform Customs and Practice for Documentary Credits (1993 Revision ICC Publication UCP500) or as the same may be amended from time to time.

Small Orders

A handling charge of £2.00 will be applied to credit account customers' orders having an ex-works value of less than £20.00.

Delivery, Insurance, Importation

In general, Maplin delivery terms are CIF.

Freight/Insurance charges are at cost and estimated as separate items on quotations and pro-forma invoices.

All duties, importation and other costs related to import legislation in the destination country are the responsibility of the customer. The customer shall indemnify Maplin against any expenses or losses incurred by Maplin in connection with the importation of goods into the destination country. The customer is responsible for obtaining any necessary import licences.

Delivery Discrepancies and Returns

Any queries regarding non-delivery or incorrect delivery should be made in writing to Maplin within twenty-one days of the date of despatch, quoting all relevant details, otherwise Maplin cannot accept liability.

No goods may be returned to Maplin, for whatever reason, without prior written consent, unless they were sent by Maplin in error or received by the purchaser in damaged or faulty condition. If goods are under guarantee, refer to section entitled "Warranty" for correct procedure.

Despatch

Maplin reserves the right to handle or transport goods by any means or method available to us, and that gives best service to our customer. However, Maplin will endeavour to meet the customer's specific requests regarding transportation of goods, but does not guarantee to do so. Special courier services are available at cost, as and when requested.

Certificates of Origin

Maplin undertakes, as necessary, to obtain, complete and submit Certificates of Origin to Chambers of Commerce and overseas consulates for certification and legalisation. Maplin cannot arrange for certification or obtain other documentation from outside the UK.

Documentation

Maplin standard documentation comprises an invoice and a despatch note. Other documentation which, from time to time, may be required to accompany or support entry of orders into certain countries, e.g., Chamber of Commerce or Consular Certification of Legislation, will be charged at cost unless previously specified on Maplin quotation or pro-forma invoice. Maplin will quote such charges, if requested to do so, at the time of any quotation. All such charges will be detailed separately.

Additional Documentation - Charges

The following handling and administration charges for additional documentation will apply:

* Confirmed Irrevocable Letter of Credit:
(Minimum order value £2,000) Bank charges to the account of the customer.

Order value £2,000 to £4,999: Charged at £125
Order value £5,000 and over: Charged at £100

* Certificate of Origin:

Charged at £50 (in addition to Consular Legalisation charge)

* Hazardous Goods Document:

Charged at £30

VAT

UK Value Added Tax at the standard rate of 17.5% is normally added to catalogue prices, quotations or pro-forma invoices for all customers resident in EC member states. Goods to EC customers may be zero rated provided that the customer's VAT registration number is indicated on the sales invoice.

In order to zero rate goods supplied to UK addresses for onward shipment overseas, e.g., to freight forwarders, a "Proof of Shipment" certificate and other necessary evidence of shipment may be required. Goods for export to areas outside the EC and including the Channel Islands are VAT zero rated.

Patents and Copyright

Products offered for sale by Maplin may be covered by patent or copyright in relation to a manufacturer or publisher.

Maplin maintains full copyright protection in respect of its catalogues, price details and other literature, which may not be reproduced wholly or partially without Maplin prior consent in writing.

Warranty

Maplin will, at its discretion, repair or replace a product in which, under proper use within 12 months of despatch, defects appear due to faulty materials or workmanship.

All products should be returned at the purchaser's risk, suitably packaged, carriage paid within 12 months of despatch, accompanied by an advice note stating the original invoice number against which the goods were supplied, the nature of the fault and any other supporting information Maplin may require. If any of these requirements are not complied with, Maplin shall be discharged from all liabilities arising from the supply of faulty goods, and our warranty shall not apply.

Liability

Maplin shall have no liability in respect of damage, expense or consequential loss resulting from the failure or delay in delivery or in performance of any obligations under any contract, due to any cause within or beyond Maplin control. This shall be considered Force Majeure and shall include, but not be limited to, Act of God, fire, floods, war, civil disturbances and industrial disputes.

Law

Any business transacted by Maplin, subject to the foregoing terms and conditions, shall be governed solely by English law and be within the exclusive jurisdiction of English courts.

HOW TO ORDER IF YOU LIVE OUTSIDE THE UK

Whenever possible, please use our order form and send your order to Maplin Electronics, P.O. Box 3, Rayleigh, Essex, United Kingdom SS6 8LR. To order an item, write the quantity you require and the five character code shown for that item, printed under the heading Order Code. If a number is shown beside the five character code (ignore any letters), multiply this number by the quantity you are buying and then write the result in the Carriage Charge column. For resistors, write the code letter for the type you require and the resistance value – for more information see Resistors Section.

All prices in this catalogue (except items marked NV beside their price) include British VAT. Since January 1st 1993, all customers within the E.C. have to be charged VAT, unless the purchaser has a VAT number. This will normally be at the British rate, which is currently 17½%, although in some cases VAT will be applied at the rate ruling in the country of import. When the goods arrive in your country, no duty on those goods should have to be paid. VAT will be applied at whatever rate is legislated by the government of the appropriate E.C. state at the time we receive your order. If you have a VAT number, please make sure it is clearly visible on your purchase order form. VAT will not be applied in these cases.

Carriage will be charged at a standard rate in accordance with the table on page 828. All goods are despatched by airmail except for one or two countries where a full air service is not available. Full details are shown in the table below.

The carriage you have to pay is calculated as follows:

- i) If you have not had to write any numbers in the Carriage Charge column, the carriage charge you have to pay is the minimum charge shown in the table for your country. For example, if you are ordering from the Republic of Ireland, you will use rate A, and the charge is £3.00.
- ii) If you had to write numbers in the Carriage Charge column, add up the numbers and multiply the total by the multiplication factor shown in the table for your country. For example, if you live in the Republic of Ireland and the Carriage Charge column adds up to say, 5; then the amount you have to pay for carriage is 5 x £1.00 = £5.00 plus the minimum charge, so total is £8.00.
- iii) If the value of goods in your order is over £100.00, please add a minimum 20% only to the cost of your goods. Postage will be charged at cost. If the amount you send exceeds the cost, we will refund the difference, or contact you if it is insufficient. If you are just ordering one of one item which costs over £100, use the table to calculate the correct postage.

Continued on next page.

Continued from previous page.

Rate	Minimum charge	Multiplication factor in addition to minimum charge	Handling charge
A	£3.00	£1.00	—
B	£3.75	£1.50	—
C	£4.50	£1.80	—
D	£5.00	£3.00	—
E	£5.00	£3.50	—
F	£5.00	£4.20	—
G	£1.25	£1.00	—
H	—	—	£1.50

You do not have to pay the £1.50 handling charge applicable in the UK. All goods are sent by AIR MAIL unless shown in the notes at the foot of the table. Please note that hazardous goods such as aerosols and lead-acid batteries, cannot be sent by air parcel post. Extra charges will be made if air freight is requested. Carriage for catalogues and magazines are charged as follows:

Europe (including Republic of Ireland) and Surface Mail			
Outside Europe			
Catalogue	Single Magazine	Magazine Subscription	
£7.30 or 18 IRC's	£3.00 or 7 IRC's	£15.00 or 37 IRC's	
Catalogue (only) outside Europe by surface mail			
£6.50 or 16 IRC's.			
Air Mail Outside Europe			
Catalogue	Single Magazine	Magazine Subscription	
£12.30 or 30 IRC's	£4.00 or 10 IRC's	£22.50 or 55 IRC's	

IRC - International Reply Coupon

Methods of payment

There are basically seven different ways in which you can send the money for your order to us. In all cases, cheques etc., should be made payable to Maplin Electronics plc.

1. Uniform Eurocheques

If you have a Eurocheque book, then simply write the amount in pounds sterling and sign the cheque. You must write your Eurocheque guarantee card number on the back of the cheque.

2. Bank Draft

Go to any local bank and buy a bank draft drawn on a British bank for the exact amount in pounds sterling. We shall be able to despatch your goods on the day we receive your order because our money is guaranteed by the British bank printed on the draft.

3. Credit Card

If you have a Eurocard/Mastercard/Access, Visa/ Carte Bleue or American Express Card, then simply write your card number on your order also stating which type of card it is and its expiry date and sign the order. Do not send your card with the order. We will be able to despatch your order immediately.

4. Postal Orders and International Reply Coupons

We can accept postal orders provided they are in pounds sterling and issued in one of the following countries only:

Anguilla, Antigua, Ascension, Bahamas, Barbados, Belize, British Antarctic Territory, British Virgin Isles, Brunei, Chatham Isles, Cook Isles, Dominica, Falkland Isles and Dependencies, Fiji, Gambia, Gibraltar, Grenada, Hong Kong, Malaysia, Malta, Montserrat, New Zealand, Niue Isle, Penrhyn Isle, Pitcairn Isle, St. Helena, St. Kitts & Nevis, St. Lucia, St. Vincent, Seychelles, Singapore, Tonga, Trinidad and Tobago, Tristan da Cunha, Turks and Caicos Isles, Western

1. Parcels over 2kg to Ascension, Falkland Islands and Dependencies, Spitzbergen and St. Helena are despatched by Surface Mail.
2. Maximum weight of packets to Cambodia and Tibet is 1kg. Customers must send an import licence with order.
3. Maximum weight of parcels to the Lebanon is 5kg.
4. Outside Northern Ireland, goods over 1/2kg are despatched by Surface Mail. If you require Air Mail, use the standard rate for the country you are in.
5. Maximum weight of packets to the French Southern and Antarctic Territories is 2kg and goods are despatched by Surface Mail.
6. Customers from Bangladesh and the Ivory Coast must send an import licence with orders over £50.

International Telephone No. + 44 1702 554000
for enquiries and orders

Samoa, Yemen (except Kamaran Isles). Do not affix extra stamps to Postal Orders as the stamps have no value in the UK, unless they are actually current British Post Office issues. For very small orders, catalogues and magazines

we can accept International Reply Coupons (IRC). Each IRC is worth 40p.

5. Currency

We can accept currency (but no coins) only if sent by registered post at your risk.

6. C.O.D.

We can send goods (but not catalogues or magazines, unless included with goods) Cash on Delivery to the following countries only: Austria, Azores, Balearic Isles, Belgium, Corsica, Cyprus, Czechoslovakia, Denmark, Farøe Isles, Finland, France, Gibraltar, Germany, Hungary, Iceland, Italy, Liechtenstein, Luxembourg, Madeira, Malta, Monaco, Montserrat, Netherlands, Norway, Portugal, San Marino, Sweden and Switzerland. You will be charged for the goods despatched, the standard carriage charge and the C.O.D. charge at cost. At present the C.O.D. charge is £5.00 per £200, but if the order is under £100, the charge is £9.00. Thus for example in addition to any other charges due, the additional amount you have to pay for C.O.D. is as follows:

Order Value	C.O.D. Charge
Up to £100	£9.00
£100 to £200	£5.00
£200 to £400	£10.00

You must write C.O.D. in large letters across your order.

7. Letter of Credit

If you cannot use any of the above methods, then usually the only other method we can accept is the "irrevocable Letter of Credit". Again, this can be arranged through any bank, part-shipment and trans-shipment must be allowed and you must pay all charges. Using this system, we do not receive payment until the goods are despatched. But it is a very slow system and because of the large amount of documentation, we cannot accept it with orders worth less than £750.

Please do not use any other form of payment without our prior consent. In particular, we cannot accept Money Orders or personal cheques except Uniform Eurocheques. In any event, please write on your order which method of payment you are using.

COMMENT PASSER UNE COMMANDE SI VOUS HABITEZ EN DEHORS DU ROYAUME-UNI

Dans la mesure du possible, il convient d'utiliser notre formulaire de commande. Pour commander un article, inscrire la quantité dont vous avez besoin ainsi que le code à cinq caractères qui se rapporte à l'article en question. Si la petite case située à côté du code à cinq caractères contient un nombre (ne pas tenir compte de toutes lettres pouvant se trouver dans la case), multiplier ce nombre par la quantité que vous desirez acheter en ensuite inscrire le résultat dans la colonne "Carriage Charge" (frais de port). Pour des résistances, inscrire la lettre code du type dont vous avez besoin ainsi que la valeur de la résistance – pour de plus amples renseignements, voir le chapitre Résistances.

Tous les prix indiqués dans le présent catalogue (à l'exception des articles portant la mention "NV" à côté de leur prix) comprennent la T.V.A. britannique. Depuis le premier janvier 1993, tous les pays de la C.E. doivent faire l'objet de T.V.A. sauf si l'acheteur possède un numéro de T.V.A. Cela sera normalement au taux appliqué au Royaume-Uni, qui est actuellement de 17,5%, bien que dans certains cas, la T.V.A. soit appliquée au taux en vigueur dans le pays d'importation. Lorsque les marchandises arrivent dans votre pays, aucun droit sur ces marchandises ne doit être payé. La T.V.A. sera appliquée au taux adopté par le gouvernement de l'état de la C.E. approprié lors de la réception de votre commande. Si vous avez un numéro de T.V.A., veuillez vous assurer de l'indiquer clairement sur votre bordereau d'achat. La T.V.A. ne sera pas appliquée dans ces cas.

Le port que vous devrez payer se calcule comme suit.

- i) Si vous n'avez pas eu à inscrire un nombre quelconque dans la colonne "Carriage Charge" les frais de port que vous devrez payer sont les frais minimaux indiqués sur la table de la page 828 pour votre pays. A titre d'exemple, si vous habitez en France, les frais sont de 3.75 livres sterling.
- ii) Si vous aviez inscrit des nombres dans la colonne "Carriage Charge", additionner les nombres et multiplier leur total par la facteur de multiplication indiqué sur la table de la page 828 pour votre pays. A titre d'exemple, si vous habitez en France, et la colonne "Carriage Charge" de votre formulaire de commande indique un total de, disons, 5; le montant que vous devrez payer pour le port est de 5×1.5 livre sterling = 7.5 livres sterling + (i) 3.75 livres sterling = 11.25 livres sterling.

Vous n'aurez pas à payer le montant de £1.40, frais de manutention, applicable au Royaume-Uni.

Toutes les marchandises sont expédiées par avion sauf dans le cas d'un ou deux pays ne disposant pas d'un service aérien complet. (En Europe, les colis dépassant 1,5 kg à destination du Spitzberg sont expédiés par voie de terre). Pour tous renseignements, consultez le tarif page 828.

Les catalogues et magazines commandés séparément des marchandises sont facturés et expédiés à part. Veuillez vous référer à la page 828.

Il existe essentiellement sept manières différentes de nous régler le montant de votre commande. Dans tous les cas, le chèques et autres documents doivent être rédigés à l'ordre de Maplin Electronics plc.

1. Eurochèques Uniformes

Si vous avez un carnet d'Eurochèques, inscrivez simplement le montant en livres sterling et signez le chèque. Vous devez inscrire le numéro de votre carte de garantie Eurochèque au dos de votre chèque.

2. Traite Bancaire

Achetez dans la banque la plus proche une traite bancaire prélevée sur une banque britannique pour le montant exact en livres sterling. Nous pourrions vous envoyer vos marchandises le jour même où nous recevons votre commande parce que notre argent se trouve garanti par la banque britannique dont le nom figure sur la traite.

3. Carte de Crédit

Si vous avez l'une des cartes de crédit suivantes, Eurocard/Mastercard/Access, Visa/Carte Bleue ou American Express, il vous suffit d'indiquer le numéro de votre carte sur votre commande ainsi que le nom de la carte et la date d'expiration et de signer la commande. N'envoyez pas votre carte avec la commande. Nous pourrions vous adresser immédiatement vos marchandises.

4. Mandats Postaux et Coupon-Réponse Internationaux

Nous acceptons les Mandats Postaux à conditions qu'ils soient exprimés en livres sterling et proviennent d'un pays listé sous l'en tête Mandats Postaux à cette page 828. Nous vous renvoyons à cette Section pour un complément d'information. Pour de très petites commandes, de catalogues ou magazines, nous acceptons les Coupon-Réponse Internationaux (CRI). Ceux-ci valent 40 pence pièce.

5. Argent Liquide

Nous acceptons l'argent liquide (mais pas les pièces) à condition qu'il soit envoyé en recommandé et à vos risques.

6. Paiement à la Livraison

Nous pouvons envoyer des marchandises avec Paiement à la Livraison dans la plupart des pays d'Europe. Vous serez redevables du montant de

la commande, de frais de port standard et des frais de livraison contre remboursement à prix coûtant. Actuellement ces derniers frais s'élèvent à £5.00 par £200. Vous devrez inscrire les lettres "C.O.D." (cash on delivery) en grands caractères en travers de votre commande. Le régime de Paiement à la Livraison ne s'applique pas aux pays européens suivant: l'Albanie, Andorre, la Bulgarie, les Iles Canaries, les Iles du Cap Vert, l'Allemagne de l'Est, la Grèce, le Groenland, la Pologne, la Roumanie, l'Espagne, le Spitzbergen, la Turquie, l'URSS, l'Etat du Vatican et la Yougoslavie.

7. Lettre de Crédit

Si vous ne pouvez pas utiliser les solutions indiquées ci-dessus, il reste une dernière possibilité acceptable qui est la "Lettre irrévocable de Crédit". Là encore, vous pourrez utiliser n'importe quelle banque comme intermédiaire. La Lettre de Crédit doit être ouverte pour six mois, confirmée par une banque Londonienne, le transbordement doit être prévu et vous devez vous acquitter de tous les frais bancaires. Avec ce système nous ne recevons notre paiement qu'à l'envoi des marchandises, mais c'est une solution très lente et en raison des frais de documentation élevés, nous ne l'acceptons que pour des commandes de plus de £750.

Nous vous prions de ne pas utiliser d'autres formes de versement sans nous consulter au préalable. En particulier, nous ne pouvons pas accepter de mandat ni de chèque personnel à l'exception d'Eurocheques. Quel que soit votre mode de règlement, veuillez l'indiquer sur votre commande.

SO MACHEN SIE IHRE BESTELLUNG, WENN SIE AUSSERHALB GROSSBRITANNIENS WOHNEN

Benutzen Sie möglichst unser Auftragsformular. Um einen Artikel zu bestellen, tragen Sie die von Ihnen benötigte Menge und den für diesen Artikel angeführten Fünf-Zeichen-Code ein. Ist in dem kleinen Kästchen neben dem Fünf-Zeichen-Code eine Zahl angegeben (alle Buchstaben in dem Kästchen außer Acht lassen), diese Zahl mit der Menge multiplizieren, die Sie kaufen, und sodann das Ergebnis in die Spalte "Carriage Charge" (= Frachtkosten) eintragen Für Widerstände den Kennbuchstaben für den von Ihnen benötigten Typ und den Widerstandswert eintragen – weitere Informationen siehe Abschnitt 'Widerstände'. Alle in diesem Katalog aufgeführten Preise (ausgenommen Artikel, die neben ihrem Preis mit "NV" bezeichnet sind) verstehen sich einschließlich britischer Mehrwertsteuer (VAT). Seit dem 1. Januar 1993 muß allen Ländern innerhalb der EG MwSt berechnet werden, es sei denn, der Käufer hat eine MwSt-Nummer. Diese MwSt wird gewöhnlich zum britischen Satz – gegenwärtig 17,5% – berechnet, obgleich MwSt in einigen Fällen zu dem im Einfuhrland geltenden Satz berechnet wird. Wenn die Waren in Ihrem Land eintreffen, sollte auf diese Waren kein Zoll bezahlt werden müssen. MwSt wird zu jeglichem Satz berechnet, der durch die Regierung des jeweiligen EG-Staates zu dem Zeitpunkt, zu dem wir Ihren Auftrag erhalten, durch Gesetzgebung vorgeschrieben ist. Falls Sie eine MwSt-Nummer haben, stellen Sie bitte sicher, daß sie auf Ihrem Bestellformular deutlich lesbar ist. In diesen Fällen wird keine MwSt berechnet. Die von Ihnen zu zahlenden Frachtkosten errechnen sich folgendermaßen:

- i) Falls Sie keinerlei Zahlen in die Spalte "Carriage Charge" (= Frachtkosten) eintragen mußten, sind die von Ihnen zu zahlenden Frachtkosten die in der Tabelle auf Seite 769 für Ihr Land aufgeführten

Mindestkosten. Wohnen Sie beispielsweise in Deutschland, beträgt die Mindestgebühr £3.75.

- ii) Falls Sie doch Zahlen in die Spalte "Carriage Charge" (= Frachtkosten) eintragen mußten, die Zahlen zusammenrechnen und die Gesamtzahl mit dem in der Tabelle auf Seite 828 für Ihr Land angegebenen Multiplikationsfaktor multiplizieren. Wohnen Sie beispielsweise in Deutschland, und addiert sich die Spalte "Carriage Charge" (= Frachtkosten) auf – sagen wir – 5, beträgt der von Ihnen für Fracht zu zahlende Betrag $5 \times £1.50 = £7.50 + (i) £3.75 = £11.25$.

Die in Großbritannien geltende Bearbeitungsgebühr in Höhe von £1.50 brauchen Sie nicht zu zahlen.

Alle Waren werden mit Luftpost versandt; eine Ausnahme bilden ein oder zwei Länder, in denen kein voller Luftpostdienst besteht. (In Europa werden Pakete nach Spitzbergen, deren Gewicht 1,5kg übersteigt, mit gewöhnlicher Post versandt.) Nähere Einzelheiten finden Sie in der Tabelle auf Seite 828.

Von Waren getrennt bestellte Kataloge und Magazine werden auf andere Weise berechnet und versandt. Bitte auf Seite 828 Bezug nehmen.

Es gibt grundsätzlich sieben verschiedene Arten, auf die Sie das Geld für Ihren Auftrag an uns senden können. In allen Fällen sind Schecks usw. an Maplin Electronics plc zahlbar zu machen.

1. Einheitliche Euroschecks

Wenn Sie ein Euroscheckbuch haben, schreiben Sie einfach den Betrag in Pfund Sterling auf und unterzeichnen den Scheck. Sie müssen Ihre Euroscheck-Garantiekartenummer auf die Rückseite des Schecks schreiben.

2. Bankwechsel

Gehen Sie zu irgendeiner Bank am Platze und kaufen Sie einen auf eine britische Bank für den genauen Betrag in Pfund Sterling gezogenen Bankwechsel. Wir können Ihre Waren dann an dem Tag zum Versand bringen, an dem wir Ihren Auftrag erhalten, da unser Geld durch die auf den Wechsel aufgedruckte britische Bank garantiert ist.

3. Kreditkarte

Falls Sie eine Eurocard/Mastercard/Access, Visa/Carte Bleue oder American Express Karte haben, schreiben Sie einfach Ihre Kartennummer auf Ihre Bestellung, die Art der Karte und ihr Verfalldatum, und unterzeichnen den Auftrag. Nicht Ihre Karte mit der Bestellung mitschicken. Wir können Ihre Bestellung sofort zum Versand bringen.

4. Postanweisungen und Internationale Postantwortscheine

Wir können Postanweisungen mit der Maßgabe annehmen, daß sie in Pfund Sterling und in einem Land ausgestellt sind, das unter der Überschrift Postal Orders auf Seite 828 aufgeführt ist. Wegen weiterer Informationen bitte ebenfalls auf diesen Abschnitt Bezug nehmen. Für sehr kleine Aufträge, Kataloge und Magazine können wir internationale Postantwortscheine (IRC) annehmen. Jeder IRC hat einen Wert von 40 Pence.

5. Zahlungsmittel

Wir können Zahlungsmittel (jedoch keine Münzen) nur dann annehmen, wenn sie auf Ihr Risiko per Einschreiben geschickt werden.

6. Zahlung bei Lieferung

Wir können Waren gegen Zahlung bei Lieferung an die meisten europäischen Länder versenden. In Rechnung gestellt werden Ihnen die zum Versand gebrachten Waren, die normale Transportgebühr und die Nachnahmegebühr zum Selbstkostenpreis. Gegenwärtig beträgt die Nachnahmegebühr £5,00 pro £200. Sie müssen C.O.D. in großen Buchstaben über Ihre Bestellung schreiben. Wir können keine

Nachnahmesendungen zu folgenden europäischen Ländern vornehmen: Albanien, Andorra, Bulgarien, Kanarische Inseln, Kap Verdische Inseln, Ostdeutschland, Griechenland, Grönland, Polen, Rumänien, Spanien, Spitzbergen, Türkei, Sowjetunion, Vatikanstadt und Jugoslawien.

7. Akkreditiv

Können Sie keine der vorstehenden Methoden benutzen, bleibt gewöhnlich als einzige andere, für uns akzeptable Methode das "unwiderrufliche Akkreditiv", das wiederum durch jede beliebige Bank eröffnet werden kann. Das Akkreditiv muß sechs Monate lang offen sein, durch eine Londoner Bank bestätigt sein, Teillieferungen und Umladungen müssen erlaubt sein, und Sie müssen alle Gebühren bezahlen. Bei Anwendung dieses Zahlungsmodus erhalten wir das Geld erst nach erfolgtem Versand der Waren. Es ist jedoch ein überaus langsames Verfahren, und wegen des großen Umfangs von Dokumenten können wir diese Zahlungsart nur für Bestellungen im Werte von mehr als £750 annehmen.

Bitte ohne unsere vorherige Zustimmung keine andere Zahlungsart benutzen. Insbesondere können wir keine Postanweisungen oder persönliche Schecks, ausgenommen einheitliche Euroschecks, annehmen. Schreiben Sie bitte in jedem Fall auf Ihre Bestellung, welche Zahlungsart sie benutzen.

MODALITA DI ORDINAZIONE PER I RESIDENTI FUORI DALLA GRAN BRETAGNA

Quando sia possibile, usare il nostro modulo di ordinazione. Per ordinare un articolo, scrivere la quantità richiesta e il codice di cinque caratteri indicato per quell'articolo. Se, oltre al codice di cinque caratteri, nella casella è riportato un numero (ignorare eventuali lettere contenute nella casella), moltiplicare questo numero per la quantità che si desidera acquistare e poi scrivere i risultati nella colonna "Carriage Charge" (addebito per trasporto). Per i resistori, scrivere la lettera di codice del tipo richiesto e il valore della resistenza, per maggiori informazioni, vedere la sezione Resistori.

Tutti i prezzi riportati nel presente catalogo (ad eccezione degli articoli recanti il contrassegno NV accanto al prezzo), sono comprensivi di IVA britannica. Dal 1 gennaio 1993, tutti i prodotti esportati nell'ambito della Comunità europea sono soggetti ad IVA, a meno che l'acquirente non abbia già un numero di partita IVA. In linea di massima, l'IVA viene addebitata al tasso vigente in Gran Bretagna, attualmente del 17,5%, sebbene in certi casi venga applicato quello vigente nel paese di importazione. Nessun dazio è quindi imponibile all'arrivo delle merci a destino. L'IVA viene calcolata al tasso in vigore nel paese Cee competente al momento del ricevimento dell'ordine del cliente. Qualora il cliente fosse già in possesso della partita IVA, il relativo numero di codice fiscale deve essere chiaramente indicato sull'ordine di acquisto, nel qual caso l'IVA non verrà applicata.

Il costo del trasporto da pagare viene calcolato come segue.

- i) Se nella colonna "Carriage Charge" non è stato necessario scrivere alcun numero, l'addebito per il trasporto da pagare è il costo minimo indicato nella tabella a pagina 828 per il proprio paese. Per esempio, per i residenti in Italia, il costo è di £st3,75.
- ii) Se nella colonna "Carriage Charge" è stato necessario scrivere dei numeri, sommarli e moltiplicare il totale per il fattore di moltiplicazione indicato nella tabella a pag. 828 per il proprio paese. Per esempio, se si vive in Italia e la colonna "Carriage Charge" sull'ordine raggiunge un totale di 5, l'importo da pagare per il trasporto è $5 \times £st1,50 = £st7,50 + (i) £st3,75 = £st11,25$.

Non occorre pagare l'addebito fisso di £st1,50 in

vigore per la Gran Bretagna.

Tutte le merci vengono spedite via aerea ad eccezione di quelle destinate ad uno o due paesi per i quali non esiste un servizio aereo completo. (In Europa i pacchi di peso superiore a Kg 1,5 destinati a Spitzbergen vengono spediti via terra.) Troverete tutti i particolari a pagina 828.

I cataloghi e le riviste ordinate separatamente dalle merci sono soggette a tariffe e tipo di spedizione differenti. Vedasi pagina 828.

Ci sono sette modi diversi per inviarcì il denaro relativo al vostro ordine. In ogni caso, assegni ecc devono essere emessi a favore di Maplin Electronics plc.

1. Eurocheques Uniformi

Se siete in possesso di un libretto di Eurocheques, basterà scrivere la somma in lire sterline e firmare l'assegno. Dovrete scrivere sul retro dell'assegno il numero della carta di garanzia degli Euroassegni.

2. Cambiale Bancaria

Recatevi in una banca qualsiasi e acquistate una cambiale bancaria spiccata su una banca britannica per l'ammontare esatto in sterline.

Potremo spedirvi la merce il giorno stesso in cui riceveremo l'ordine, in quanto il pagamento è garantito dalla banca britannica il cui nome figura sul documento.

3. Carta di Credito

Se siete in possesso di una Eurocard/Mastercard/Access, Visa/Carte Bleue o American Express Card, scrivete semplicemente il numero della vostra carta sull'ordine, precisando anche di quale tipo di carta si tratta e la data di scadenza, e firmate l'Ordine. Non spedite la carta con l'ordine. Potremo spedirvi la merce immediatamente.

4. Vaglia Postali e Cuponi Internazionali di Risposta

Possiamo accettare vaglia postali a condizione che siano in sterline e emessi in un paese il cui nome compaia in un elenco intitolato "POSTAL ORDERS" a pagina 828. Consultate quella parte per ulteriori informazioni. Per ordini di valore molto esiguo, cataloghi e riviste, possiamo accettare cuponi internazionali di risposta (IRC) ognuno dei quali vale 40p.

5. Valuta

Possiamo accettare valuta (ma non monete) solo se spedita per raccomandata, e a vostro rischio.

6. Pagamento Alla Consegna

Possiamo spedire merci con pagamento alla consegna nella maggior parte dei paesi europei. Vi addebiteremo il costo delle merci, la tariffa tipo per il trasporto, e la spedizione contrassegno a prezzo di costo. Al momento attuale la tariffa è di £st 5,00 per £st 200. Non possiamo spedire con pagamento alla consegna nei seguenti paesi europei: Albania, Andorra, Bulgaria, Isole Canarie, Isole del Capo Verde, Germania Orientale, Grecia, Groenlandia, Polonia, Romania, Spagna, Spitzbergen, Turchia, URSS, Stato Città del Vaticano e Jugoslavia.

7. Lettera di Credito

Se non avete la possibilità di usare uno dei modi sopra menzionati, l'unico altro modo che generalmente possiamo accettare è una "lettera di credito irrevocabile". Anche questo potrà farsi a mezzo di qualsiasi banca. La Lettera di Credito deve rimanere valida per sei mesi, confermata da una banca di Londra, deve consentire la spedizione parziale e il trasbordo, e sarete tenuti a pagare tutte le spese. Con questo sistema non riceviamo il pagamento fino a dopo la spedizione delle merci, ma si tratta di un sistema molto lento, e dato il gran numero di documenti occorrenti non potremo accettarlo per ordini di valore inferiore a £st 750.

Siete pregati di non usare altra forma di pagamento, senza nostra previa autorizzazione. In particolare non

possiamo accettare mandati di pagamento né assegni personali, eccetto Eurocheques Uniformi. In ogni caso, siete pregati di scrivere sull'ordine il modo di pagamento scelto.

BESTELPROCEDURE ALSU BUITEN HET VK WOONT

Indien mogelijk, altijd ons bestelformulier gebruiken. Een artikel bestellen door de vereiste hoeveelheid en de vermelde uit vijf karakters bestaande code op te schrijven. Als een getal staat aangegeven in het kleine rechthoekje naast de uit vijf karakters bestaande code (eventuele letters in het rechthoekje negeren), dit getal vermenigvuldigen met het aantal dat u aanschaf en het resultaat in de kolom "Carriage Charge" (transporttarief) vermelden. Voor weerstanden, de codeletter opschrijven voor het door u gewenste type en ook de weerstandswaarde. Voor aanvullende informatie het hoofdstuk over Weerstanden raadplegen.

Alle prijzen in deze catalogus (behalve de artikelen met "NV" naast de prijs), inclusief Britse BTW. Sinds 1 januari 1993 zal in alle landen binnen de EG BTW in rekening worden gebracht, tenzij de koper over een BTW-registratienummer beschikt. Dit zal gewoonlijk geschieden tegen het Britse tarief dat momenteel 17,5% bedraagt, hoewel in bepaalde gevallen BTW zal worden berekend tegen het tarief dat geldt in het land van import. Als de goederen in uw land arriveren, dienen geen tarieven op die goederen te zijn betaald. BTW zal worden berekend tegen het tarief dat wettelijk is vastgesteld door de regering van het betreffende EG land dat geldt op het moment dat wij uw bestelling ontvangen. Als u beschikt over een BTW-registratienummer, wordt u verzocht om ervoor te zorgen dat dit duidelijk zichtbaar is op uw bestelformulier. In dergelijke gevallen zal geen BTW worden berekend.

De transportkosten die u dient te voldoen, worden als volgt berekend:

- Als in de kolom "Carriage Charge" (transporttarief) geen getallen moesten worden opgeschreven, dan zijn de door u te betalen transportkosten gelijk aan het minimum tarief vermeld in de tabel op pagina 769, van toepassing op uw land. Voorbeeld: als u in Nederland woont, dan bedraagt het tarief £3,75.
- Als in de kolom "Carriage Charge" (transporttarief) wel een getal moest worden opgeschreven, tel de afzonderlijke cijfers dan bij elkaar op en vermenigvuldig het totaal met de vermenigvuldigingsfactor in de tabel op pagina 828 voor uw land. Voorbeeld: als u in Nederland woont terwijl de kolom onder de titel "Carriage Charge" (transporttarief) op uw bestelling in totaal, bijvoorbeeld 5 bedraagt, dan bedraagt het bedrag aan transportkosten dat door u moet worden voldaan: $5 \times £1,50 = £7,50 + (i) £3,75 = £11,25$.

Het hanteringstarief van £1,50, dat van toepassing is in het VK, hoeft door u niet te worden voldaan.

Alle goederen worden per luchtpost verzonden, behalve naar één of twee landen die niet altijd overal door de lucht kunnen worden bereikt (in Europa worden pakketten zwaarder dan 1,5 kg naar Spitzbergen verzonden per oppervlaktepost). Complete details staan vermeld op de tabel op pagina 828.

Catalogi en tijdschriften die afzonderlijk worden besteld worden anders in rekening gebracht en verzonden. U wordt verwezen naar pagina 828.

Er zijn eigenlijk zeven verschillende manieren waarop u het bedrag voor uw order aan ons kunt overmaken. In alle gevallen moeten de cheques enz. uitgemaakt worden aan Maplin Electronics plc.

1. Normale Eurocheques

Als u in het bezit bent van een Eurochequeboek, schrijf dan het bedrag in Pond Sterling en teken de cheque. U wordt verzocht om het nummer van uw Eurocheque kaart achterop de cheque te vermelden.

2. Bankwissel

Bij een lokale bank koopt u een ankwissel getrokken op een Britse bank voor het juiste bedrag in Pond Sterling. Wij kunnen dan uw goederen versturen op de dag dat wij uw order ontvangen want ons geld is gegarandeerd door de Britse bank die op de wissel vermeld staat.

3. Kredietkaart

Bent u in bezit van een Eurocard/Mastercard/Access, Visa/Carte Bleue of American Express kaart, dan schrijft u het nummer van uw kaart op uw order plus het type kaart en de vervaldag ervan en teken de order. Niet uw kaart met de order verzenden. Wij kunnen uw order meteen versturen.

4. Postwissels en Internationale Antwoordcoupons

Wij accepteren postwissels als ze in Pond Sterling zijn uitgemaakt en uitgegeven in een land vermeld onder het opschrift Postal Orders op pagina 828. Zie de verdere informatie in dat deel. Voor heel kleine orders, catalogi en tijdschriften accepteren wij ook Internationale Antwoordcoupons. Ieder coupon is 40p waard.

5. Valuta

Wij accepteren valuta (maar geen munten) uitsluitend indien verzonden op uw risico per aangetekende post.

6. Rembours

Wij kunnen de goederen naar de meeste landen van Europa onder rembours verzenden. Voor de verzonden goederen zullen u het standaard verzendtarief en het C.O.D. tarief, tegen kostprijs, in rekening worden gebracht. Momenteel bedragen de rembourskosten £5,00 per £200. Schrijf C.O.D. in grote letters dwars over uw order. Rembourssending is mogelijk naar de volgende Europese landen: Albanie, Andorra, Bulgarije, Canarische Eilanden, Griekenland, Groenland, Joegoslavië, Kaap Verde Eilanden, Oost Duitsland, Polen, Roemenie, Spanje, Spitsbergen, Turkije, U.S.S.R en de Vaticaanse Stad.

7. Kredietbrief

Als het niet mogelijk is een van de bovenstaande methoden te gebruiken, dan is gewoonlijk de enige andere voor ons accepteerbare manier de "onherroepelijke kredietbrief". Dit kan door iedere bank geregeld worden. De kredietbrief moet een looptijd van zes maanden hebben, bevestigd door een bank in Londen, Gedeeltelijke verzending en overlading moet geoorloofd zijn en u bent verantwoordelijk voor alle kosten. Als u dit systeem gebruikt, ontvangen wij geen betaling totdat de goederen verzonden zijn, maar het is een uiterst langzaam systeem en vanwege de grote hoeveelheid documentatie, kunnen wij dit systeem niet accepteren voor orders beneden de £750.

Gelieve geen andere vorm van betaling te gebruiken zonder onze voorafgaande toestemming. Vooral postwissels of persoonlijke cheques met uitzondering van de Normale eurocheques, kunnen wij niet accepteren. Schrijft u in ieder geval uw methode van betaling op uw order.

SLIK BESTILLER DU HVIS DU BOR UTENFOR STORBRITANNIA

Bruk vårt beställingsformulär hvis mulig. For å bestille en artikkel, skriver du ønsket mengde og koden på fem tegn som står vist for aktuell artikkel. Hvis det står et tall i den vesle ruten ved siden av koden på fem tegn (se bort fra eventuelle bokstaver i ruten), multipliserer du dette tallet med det kvantum du kjøper, deretter skriver du resultatet i "Carriage Charge" (frakt) spalten. For motstander skriver du kodebokstaven for den type du ønsker, samt motstandsverdien – se

Motstandsavsnittet for nærmere opplysninger.

Alle priser i denne katalogen (unntatt dem som er merket "NV" ved siden av prisen) inkluderer VAT (britisk m.v.a.). Fra 1. januar 1993 må alle land innen EF betale merverdiavgift medmindre kjøperen har et mva-nr. (VAT nr.). Denne avgiften er normalt den britiske satsen, som for tiden er 17 1/2%, selv om den i noen tilfeller vil være den sats som gjelder i importlandet. Når varer ankommer Norge skal det ikke være nødvendig å betale avgift på varene. Mva vil pålegges med den sats som er bestemt av regjeringen i det aktuelle EF-land på det tidspunkt vi mottar Deres ordre. Hvis De har et mva-nr. må dette være lett og klart synlig på ordreskjemaet. I så fall bortfaller merverdiavgiften.

Frakten du må betale regnes ut slik:

- Hvis du ikke måtte skrive noe tall i "Carriage Charge" spalten, er frakten det minstebeløp som står vist i tabellen på side 828 for aktuelt land. For Norge er frakten £4,50.
- Hvis du måtte skrive tall i "Carriage Charge" spalten, legger du disse sammen og multipliserer så totalen med den multiplikasjonsfaktor som står vist i tabellen på side 828 for aktuelt land. Hvis du f.eks. bor i Norge og "Carriage Charge" spalten på din bestilling beløper seg til 5, så er frakten $5 \times £1,80 = £9,00 + (i) £4,50 = £13,50$.

Du behøver ikke betale håndteringsavgiften på £1,50 som bare gjelder i Storbritannia. Alle varer sendes med luftpost, unntatt noen meget få land hvor dette ikke er mulig. (I Europa sendes pakker over 1,5 kg til Svalbard ikke som luftpost). Nærmere opplysninger står i tabellen på side 828.

Kataloger og tidsskrifter som bestilles helt adskilt fra varer, er underlagt andre avgifter og sendes på en annen måte. Se side 828.

Stort sett kan De betale en bestilling på syv forskjellige måter. Alle sjekker e.l. gjøres betalbare til Maplin Electronics plc.

1. Vanlige Eurosjekker

Hvis De benytter Eurosjekker, skriver De ganske enkelt beløpet i pund sterling og underskriver sjekken. De må skrive Deres Eurocheque garantinummer på baksiden av sjekken.

2. Banktratte

Kjøp en banktratte hos Deres egen bank, trukket på en britisk bank, som lyder på det nøyaktige beløp i pund sterling. Vi kan da sende varene samme dag vi mottar Deres bestilling, fordi beløpet er garantert av den britiske banken som står oppgitt på tratten.

3. Kredittkort

Hvis De har Eurocard/Mastercard/Access, Visa/Carte Bleue eller American Express Card, skriver De ganske enkelt Deres kortnummer på ordren, med opplysning om korttype og kortets utløpsdato. Skriv så under ordren. Vi kan da sende varene omgående.

4. Postanvisninger og Internasjonale Svarkuponger

Vi tar i mot postanvisninger, forutsatt at disse er utstedt i pund sterling, og utstedt i et land som står oppført under overskriften Postal Orders på side 828. Se det avsnittet for nærmere opplysninger. For meget små bestillinger, kataloger og tidsskrifter tar vi i mot internasjonale svarkuponger. Hver slik kupong er verd 40 pence.

5. Penger/Valuta

Vi kan ta i mot penger/valuta (men ikke mynter) - men utelukkende hvis disse sendes rekom mendert og på Deres risiko.

6. Kontant ved Levering

Vi kan sende varer kontant ved levering (pr. etterkrav) til de fleste europeiske land. De vil bli belastet for de varer som sendes, fraktavgiftene og C.O.D. (kontant ved levering). For tiden er disse

omkostningene £5,00 pr. £200. De må skrive C.O.D. med store bokstaver tvers over bestillingen. Vi kan ikke sende varer mot etterkrav til følgende land i Europa: Albania, Andorra, Bulgaria, Kanariøyene, Kapp Verdeøyene, Øst-Tyskland, Hellas, Grønland, Polen, Romania, Spania, Svalbard, Tyrkia, Sovjet, Vatikanstaten og Jugoslavia.

7. Remburs

Hvis De ikke kan benytte noen av betaling småtene nevnt over, er den eneste alternative betalingsmåte vi normalt kan akseptere den som kalles "ugjenkallelig remburs". Dette ordnes også gjennom Deres bank. Rembursen må gjelde i seks måneder, være bekreftet av en bank i London, og del-forsendelse og omskipning kan komme på tale, og De må betale alle omkostninger. Ved remburs får vi ikke betaling før varene er levert, men på grunn av alt papirarbeidet forbundet med denne betaling småten, og fordi det tar lang tid å få pengene, kan vi dessverre ikke akseptere remburs i f.m. ordrer til et beløp under £750.

Vi ber Dem om ikke å betale på noen annen måte, uten at vi er blitt enige om det på forhånd. Vi ber Dem huske at vi ikke kan ta i mot det som på engelsk kalles Money Order, eller private sjekker – unntatt vanlige Eurosjekker. Vi ber Dem skrive på bestillingen hvilken betalingsmåte De ønsker å benytte.

HUR MAN BESTALLER, OM MAN BOR UTANFOR UK

Använd alltid vår orderblankett, när så är möjligt. Vid beställning av en artikel skall den erforderliga kvantiteten antecknas jämte koden med fem tecken för ifrågasvarande artikel. Om det finns en siffra i den lilla rutan bredvid femte teckenkoden (eventuella bokstäver i rutan ignoreras) skall denna siffra multipliceras med kvantiteten som inköps och resultatet antecknas i kolumnen "Carriage Charge" (fraktavgift). För motstånd skall kodbokstaven för den önskade typen och resistansvärdet antecknas. För utförligare upplysningar hänvisas till motståndsavsnittet. I samtliga priser i denna katalog (utom poster märkta "NV" intill priset) ingår brittisk moms. Sedan den 1 januari 1993 måste samtliga länder inom EG debiteras moms, såvida inte köparen har ett momsnummer. Denna skatt utgår vanligen efter brittisk taxa, som f.n. är 17,5%, men i vissa fall kommer moms att utgå enligt den i importlandet gällande taxan. När varorna anländer till Ert land, bör ingen skatt på dessa varor behöva erläggas. Moms påläggs efter den taxa som fastställts av statsmakten i ifrågasvarande EG-land vid det tillfälle då vi mottar Er order. Om Ni har ett momsnummer, ombeds Ni tillse att detta är klart synligt på Er inköpsorder. I dylika fall kommer VAT ej att debiteras. Frakten som skall betalas uträknas på följande sätt.

- Om Ni inte behövt anteckna några siffror i kolumnen "Carriage Charge" är fraktavgiften som skall betalas den minimiavgift som anges i tabellen på sidan 828 för Ert land. För den som bor i Sverige t.ex. är avgiften £4,50.
- Om Ni behövt anteckna siffror i kolumnen "Carriage Charge", skall dessa läggas ihop och summan multipliceras med den multiplikationsfaktor som framgår av tabellen på sidan 828 för Ert land. För den som bor i Sverige t.ex. och om kolumnen "Carriage Charge" i ordern sammanlagt uppgår till exempelvis 5, utgör beloppet som skall betalas för frakt $5 \times £1,80 = £9,00 + (i) £4,50 = £13,50$.

Den expeditionsavgift på £1,50, som gäller i UK, behöver ej erläggas.

Alla varor sänds med flygpost utom ifråga om en eller två länder med ofullständig flygtrafik. (I Europa skickas paket vägande över 1,5 kg och adresserade till Spetsbergen ytledes.) Utförliga upplysningar återfinns i tabellen på sidan 828.

Kataloger och tidskrifter, vilka beställts separat från andra artiklar, debiteras och expedieras på annat sätt. Se sidan 828.

Det finns sju olika sätt att skicka in betalningen. Checker

etc. ska alltid vara ställda på Maplin Electronics plc.

1. Enhetliga Eurochecker

Om kunden har en Eurocheckbok, så var vänlig och skriv helt enkelt summan i pund Sterling och skriv under checken. På baksidan av checken måste köparen anteckna numret på sitt Eurocheque-kort.

2. Bankcheck

Gå till närmaste bank och köp en bankcheck dragen på en brittisk bank och med det exakta beloppet utskrivet i pund Sterling. Vi kan då expediera beställningen samma dag vi erhåller den, eftersom våra pengar garanteras av den brittiska bank som finns på checken.

3. Kreditkort

Om kunden har Eurocard/Mastercard/Access, Visa/Carte Bleue eller American Express, så var vänlig och skriv helt enkelt kortnumret på beställningen och ange vilken sorts kort det är samt "expiry date" och skriv under beställningen. Skicka inte kortet med beställningen. Vi kan expediera beställningen genast.

4. Postanvisningar och Internationella Svarkuponger

Vi godtar postanvisningar förutsatt att de är utskrivna i pund Sterling och att de har utfärdats i ett land som finns med i listan under överskriften Postal Orders på sid 828. Se även den sektionen för ytterligare information. För mycket små beställningar, kataloger och tidskrifter kan vi godtaga internationella svarkuponger (IRC). Varje IRC är värd 40 pence.

5. Kontanter

Vi kan godtaga sedlar (men inga mynt) bara om de skickas rek på kundens egen risk.

6. Postförskott

Vi kan sända beställningar mot postförskott till de flesta europeiska länder. Köparen kommer att debiteras avsant gods, normalfraktavgift och postförskott till kostnadspris. För närvarande är postförskottsavgiften £5,00 per £200. Kunden måste skriva C.O.D. med stora bokstäver tvärs över beställningen. Vi kan inte sända mot postförskott till följande europeiska länder: Albanien, Andorra, Bulgarien, Kanarieöarna, Cap Verde-öarna, Osttyskland, Grekland, Grønland, Polen, Rumänien, Spanien, Spitzbergen, Turkiet, USSR, Vatikanstaten och Jugoslavien.

7. Kreditiv

Om ingen av ovanstående metoder kan användas, är "oäterkalleligt kreditiv" vanligtvis den enda annan metod vi kan acceptera. Detta kan också arrangeras genom en lokal bank. Kreditivet måste stå öppet i sex månader, det måste bekräftas av en Londonbank, dellastning och omlastning måste medges och alla avgifter betalas. Med detta system erhåller vi inte betalning, förrän varorna har expedierats, men det tar mycket lång tid och på grund av dokumentkostnaderna kan vi inte godta detta system för beställningar som understiger £750.

Var vänlig och använd ingen annan betalningsmetod utan att först ha fått tillstånd av oss. I synnerhet kan vi inte godta penningförsändelser eller privata checker annat än enhetliga Eurochecker. I vilket fall som helst var vänlig och ange på beställningen vilken betalningsmetod som används.

TILAAMINEN ISON-BRITANNIAN ULKOPUOLELTA

Tilaamiseen on mahdollisuuskien mukaan aina käytettävä tilauslomaketta. Jonkin tuotteen tilaamiseksi kirjoitetaan lomakkeelle haluttu lukumäärä sekä ko. tuotteen kohdalla annettu viisimerkkinen koodi. Jos viisimerkkisen koodin vieressä olevassa pienessä ruudussa on jokin numero (ruudussa mahdollisesti olevat kirjaimet jätetään huomiotta), kerro tämä luku

tilaamallasi määrällä ja kirjoita saatu tulo sarakkeeseen "Carriage Charge" (toimitusmaksu). Vastusten tapauksessa kirjoitetaan halutun tyyppin koodikirjain sekä vastusarvo – lisätietoja osassa Vastukset. Kaikki hinnat tässä luettelossa (paitsi artikkelit jotka merkitty NV) sisältävät Britannian arvonlisäveron. Tammikuun 1. päivästä 1993 alkaen on kaikissa EY-maissa ollut pakollista lisätä laskuihin arvonlisävero (VAT), paitsi siinä tapauksessa, että ostajalla on oma VAT-numeronsa. Normaalisti arvonlisävero perustuu Isonsa-Britanniassa voimassa olevaan veroprosenttiin, joka on tällä hetkellä 17,5 %, mutta on myös tapauksia, joissa sovelletaan tuontimaan veroprosenttia. Kun tavarat tulevat perille, niistä ei pitäisi veloittaa mitään tullimaksuja. Arvonlisävero veloitetaan ko. EY-maassa voimassa olevien määräysten mukaisesti tilauksen vastaanottoajankohtana käytössä olevan prosentin perusteella. Jos Teillä on oma VAT-numero, pyydämme huolehtimaan siitä, että se on nähtävissä selvästi ostotilauslomakkeessa. Silloin emme veloita Teiltä arvonlisäveroa.

Suoritettava toimitusmaksu lasketaan seuraavasti:

- Jos et ole joutunut kirjoittamaan mitään numeroita sarakkeeseen "Carriage Charge", silloin toimitusmaksu, jonka joudut suorittamaan, on se minimiveloitus, joka oman maasi osalta mainitaan taulukossa sivulla 828. Esimerkiksi Suomen osalta tämä veloitus on £4,50.
- Jos olet jo kirjoittanut numeroita sarakkeeseen "Carriage Charge", laske kyseiset luvut yhteen ja kerrp summa oman maasi osalta sivun 828 taulukossa mainitulla kertoimella. Jos asut esim. Suomessa ja sarakkeessa "Carriage Charge" olevat luvut ovat yhteissummaltaan vaikkapa 5, silloin on toimitusmaksuna suoritettava $5 \times £1,80 = £9,00 + (i) £4,50 = £13,50$.

Tällöin ei tarvitse maksaa pelkästään Isoa-Britanniaa koskevaa yhden punnan (£1,50) palvelumaksua. Kaikki tuotteet lähetetään lentopostitse lukuunottamatta joitakin maita joihin lentopostipalvelua ei ole käytettävissä (Euroopassa yli 1½ kg:n painoiset paketit Spitzbergeniin lähetetään maapostitse). Tarkemmat tiedot löytyvät sivulla 828 olevasta taulukosta.

Ilman tuotteita tilatuista luetteloista ja lehdistä veloitetaan erikseen ja ne myös lähetetään erikseen. Tarkemmat tiedot löytyvät sivulta 828.

On olemassa kaikkiaan seitsemän eri tapaa, joilla voit toimittaa meille tilaustasi kiskevän maksusuorituksen. Kaikissa tapauksissa šekkeihin ynnä muihin on maksun saajaksi merkittävä Maplin Electronics plc.

1. Yksimuotoiset Euroškit

Jos sinulla on Eurošekkivihko, voit yksinkertaisesti kirjoittaa summan puntamääräisenä ja allekirjoittaa šekin. Muistakaa kirjoittaa Eurošekki-kortin numero šekin kääntöpuolelle.

2. Pankkiasete

Mene johonkin paikalliseen pankkiin ja osta pankkila jollekin brittiläiselle pankille asetettu tratta tarkalleen oikealle summalle, puntamääräisenä. Me lähetämme tilaamasi tavarat heti kun saamme tilauksesi, sillä trattaan painettu brittiläinen pankki takaa maksusuorituksen.

3. Luottokortti

Jos sinulla on Eurocard/Mastercard/Access, Visa/Carte Bleue tai American Express luottokortti, voit kirjoittaa pelkästään korttisi numeron tilaukseen, mainiten samalla mistä kortista on kysymys ja mihin asti se on voimassa, ja allekirjoittaa tilauksen. Älä lähetä korttiasi tilauksen mukana. Me toimitamme tilauksesi välittömästi.

4. Postiosoitukset ja Kansainväliset Vastauskupongit

Me hyväksymme postiosoitukset edellyttäen että ne ovat puntamääräisiä ja peräisin jostakin sivulla 770 olevassa, otsikolla "Postal Orders"

varustetussa luettelossa mainitusta maasta. Samassa kohdassa on annettu myös lisätietoja. Hyvin pienien tilausten, kuten luetteloiden ja lehtien osalta me hyväksymme myös kansainväliset vastauskupongit (IRC). Kunkin IRC-kupongin arvo on 40p.

5. Ulkomaan Valuutat

Me hyväksymme ulkomaan valuuttaa (ei kolikoita) vain jos se lähetetään kirjattuna ja lähettäjän omalla vastuulla.

6. Postiennakko

Me voimme lähettää tavaraa postiennakkolla useimpiin Euroopan maihin. Postitse lähetettävien tuotteiden lähetysmaksu on vakio, rahtiteitse kuljetettavista tuotteista maksu määräytyy toimituksen mukaan ja se peritään tavarantoimituksen yhteydessä. Tällä hetkellä postiennakkomaksu on 5,00 puntaa 200 punnalta. Sinun on kirjoitettava suurin kirjaimin poikittain tilauksesi yli kirjaimet 'C.O.D.'. Me emme toimita tavaraa postiennakkolla seuraaviin Euroopan maihin: Albania, Andorra, Bulgaria, Espanja, Grönlanti, Huippuvuoret, Jugoslavia, Kanarian saaret, Kap Verde, Kreikka, Neuvostoliitto, Puola, Romania, Saksan demokraattinen tasavalta, Turkki ja Vatikaanivaltio.

7. Remburssi

Jos et pysty käyttämään mitään yllä mainituista maksutavoista, silloin on yleensä käytettävissä ainoastaan "peruuttamaton luottokirje", joka myös voidaan järjestää minkä tahansa pankin välityksellä. Luoton on oltava auki kuusi kuukautta ja jonkin lontoolaisen pankin vahvistama; osatoimitusten ja kauttakuljetusten on oltava luovallisia, ja sinun on maksettava kaikki kulut. Tällä järjestelyllä me saamme maksun vasta, kun tavarat on lähetetty, mutta menetelmä on kovin hidas ja suuren asiapaperimäärän vuoksi me hyväksymme sen käytön vain, jos tilaus on arvoltaan vähintään 750 puntaa.

Älä käytä mitään muuta maksutapaa ennen kuin olet saanut meidän suostumuksemme. Me emme hyväksy varsinkaan maksuosoituksia emmekä henkilökohtaisia šekkejä yksimuotoisia Eurošekkejä lukuun ottamatta. Mainitse aina tilauksessasi mitä maksutapaa käytät.

COMO EFECTUAR PEDIDOS SI VIVE FUERA DEL REINO UNIDO

Siempre que sea posible, por favor utilice el formulario de pedidos. Para encargar un artículo, escriba la cantidad que desea y el código de cinco caracteres para ese artículo. Si un número aparece en el pequeño recuadro al lado del código de cinco caracteres (ignore cualquier letra que pueda aparecer en el recuadro) multiplique este número por la cantidad que desea comprar y escriba el resultado en la columna "Carriage Charge" (gastos de envío). Para resistores, escriba la letra del código para el tipo que requiere y el valor de la resistencia – para más información, vea la sección Resistores.

Todos los precios en este catálogo (excepto los marcados "NV" al lado del precio) incluyen el IVA británico (Impuesto al Valor Añadido). Desde el 1º de enero de 1993, todos los países de la C.E. deberán imponer I.V.A., a menos que el comprador posea un número de I.V.A. Este será normalmente al valor Británico, que actualmente es de 17,5%, aunque en algunos casos el I.V.A. será aplicado según el valor establecido en el país importador. Cuando las mercaderías arriben a su país, no debería pagarse derechos aduaneros sobre esas mercancías. El I.V.A. será aplicado conforme a cualquier porcentaje que fuere legislado por el gobierno del estado de la C.E. pertinente en el momento en que recibamos su pedido. Si usted tiene un número de I.V.A., por favor

asegúrese de que esté claramente visible en su formulario de orden de compra. El I.V.A. no será aplicado en estos casos.

Los gastos de envío son calculados como sigue:

- i) Si no ha tenido que escribir ningún número en la columna de "Carriage Charge", los gastos de envío que debe pagar son el mínimo cargo indicado en la tabla en página 828 para su país. Por ejemplo, si vive en España, el cargo es 3,75 libras esterlinas.
- ii) Si ha tenido que escribir números en la columna de "Carriage Charge", sume los números y multiplique el total por el factor multiplicativo mostrado en la tabla en página 828 para su país. Por ejemplo, si vive en España y la columna de "Carriage Charge" en su pedido suma, digamos, 5, entonces la cantidad que debe pagar en gastos de envío es $5 \times 1,50 = 7,50 + (i) 3,75 = 11,25$ libras esterlinas.

No tiene que pagar el cargo de £1.50 para gastos de manejo que es aplicable en el Reino Unido.

Toda la mercadería se despacha por vía aérea salvo para uno o dos países donde no existe todavía un servicio aéreo completo. (En Europa los paquetes para Spitzbergen que pesen más de 1½ kg son despachados por encomienda postal terrestre o marítima).

Los catálogos y revistas que se pidan por separado de la mercadería, se facturan y despachan de manera diferente. Ver detalles en la página 828.

Fundamentalmente hay siete maneras diferentes en las que usted nos puede enviar su dinero. En todos los casos, cheques etc., deben de hacerse pagaderos a Maplin Electronics plc.

1. Eurocheques

Si usted posee un talonario de Eurocheques, simplemente escriba la cantidad en libras esterlinas y firme el cheque. Sírvase escribir al dorso de su Eurocheque el número de su tarjeta de garantía.

2. Letras de Cambio

Vaya usted a cualquier banco en su localidad y compre una letra de cambio librada en un banco inglés por la cantidad exacta de libras esterlinas. nos será así posible enviar su pedido el mismo día que recibamos su orden porque nuestro dinero está garantizado por el banco inglés impreso en la letra de cambio.

3. Tarjetas de Crédito

Si usted posee una Eurocard/Mastercard/ Access, Vias/Carte Blue o American Express Card, entonces simplemente escriba el número de su tarjeta en su pedido declarando qué tarjeta es y la fecha de caducidad, y firme el pedido. No envíe su tarjeta con el pedido. Su pedido será despachado inmediatamente.

4. Giro Postal y Cupones Internacionales

Aceptamos Giros Postales siempre que sean hechos en libras esterlinas y emitidos en un país que aparezca en la sección Postal Orders en la página número 828. Véase esa sección para más información. Para pedidos pequeños, catálogos y revistas aceptamos Cupones Internacionales. Cada Cupón vale 40 peniques.

5. Pago en Metálico

Aceptamos dinero (no monedas) sólo si se manda por correo certificado bajo su responsabilidad.

6. Páguese contra Reembolso

Podemos mandar artículos cobrando a reembolso a la mayoría de los países europeos. Se le cobrará a usted el importe de la mercadería despachada, la tarifa de porte normal establecida, o si es encomienda para pago contra entrega, el porte al costo. En este momento, el precio de envío es 5,00 libras esterlinas y veinte peniques

por cada 200 libras esterlinas. Debe usted escribir C.O.D. en letras de molde en su pedido. No podemos hacer envíos contra reembolso a los siguientes países europeos: Albania, Andorra, Bulgaria, I. Canarias, I. de Cabo Verde, Alemania Oriental, Grecia, Groenlandia, Polonia, Rumania, España, Archip. de Spitzbergen, Turquía, U.R.S.S., Ciudad del Vaticano, y Yugoslavia.

7. Carta de Crédito

Si usted no puede usar ninguno de los métodos anteriores, en ese caso normalmente el único método que aceptamos es "La Carta de Crédito Irrevocable". De nuevo, esto se puede arreglar por medio de un banco. La Carta de Crédito debe de permanecer abierta por seis meses, confirmada por un banco inglés, permitiendo transbordo, pagando usted todos los gastos. Usando este sistema, nosotros no recibimos el pago hasta que el pedido se envíe, pero es un sistema muy lento y debido a la gran cantidad de documentación no lo podemos aceptar con órdenes que valgan menos de 750 libras esterlinas.

Por favor no use ninguna otra forma de pago sin permiso previo. En particular, no podemos aceptar giros o cheques excepto Eurocheques. En cualquier caso, por favor escriba en su pedido qué forma de pago va usted a usar.

Shop Enquires: Please call our Customer Services Department on (01702) 552911 for shop enquiries as in most cases they will be able to answer your enquiry more efficiently.

Shopping the Easy Way

When you next pop out . . . pop into a Maplin store and take a look at our amazing range of electronic products and components.

In our regional stores you'll find the personal service that has become synonymous with Maplin Electronics, and by using one of our many stores nationwide, you will be able to save on postage costs and enjoy the benefit of viewing the products before you purchase.

We make every effort to ensure that the majority of our product range is constantly available, but some items may need to be ordered specially by our staff at customer request. By giving your local store a quick telephone call prior to making a trip, our staff will not only be able to tell you if a particular item is in stock, but also reserve an item or two for you. Alternatively, an order can be collected in readiness for your visit, but in this instance customers need to provide a credit card number before orders can be prepared.

Since the introduction of our Electronic Point of Sale system (EPOS), it would help us to serve you more quickly if you are able to provide the stock codes for each item you need. This requirement is useful at all our stores, but is essential at those locations which operate a catalogue shop style of service. Your assistance with this request will help us to process your order smoothly and efficiently.

Our stores are pleased to accept Access, Mastercard, Visa, Barclaycard, Connect, Switch, American Express and cheques up to a value of £5,000 with a cheque guarantee card.

We'll even accept ordinary money as well! If you do pay by cheque, we shall require you to provide your name and address on the back of the cheque so that we can contact you if your cheque is returned for whatever reason by the bank. Your personal details are guaranteed confidential and will not be used for any other purpose.

Company cheques for trade customers can be accepted at weekends, but goods can only be provided using an account facility on a Saturday or Sunday by prior agreement.

To receive free product information literature and special offers, just leave your name and address with our staff and your details will be added to our mailing list.

Sunday Opening

The opportunity to browse at leisure is seen as a real benefit by many (after struggling through a busy Saturdays shopping). In addition, parking is easier and our staff are able to spend more time providing you with technical advice.

Naturally, we are closely following legislation regarding Sunday opening and we only open provided there is no opposition from the local authorities. There are currently six stores operating on Sundays, they are; Brighton, Edinburgh, Gateshead, Glasgow and Manchester (Cheetham Hill and Oxford Road). If you would prefer to visit us on a Sunday, please keep in touch with your local branch who can keep you updated on the Sunday opening situation.

Opening Times

All Maplin stores are open 9am to 5.30pm Monday to Saturday (9.30am Friday). Plus! As stated above, subject to local authority rulings, there are four stores opening Sundays. For Sunday store opening details please telephone your local store. Closed on Public Holidays.

Maplin Electronics . . . The easy way to shop. A fast, friendly service can be found at all Maplin stores nationwide and our helpful staff may often be able to help you with a technical problem or construction difficulty with a Maplin kit.

Next time you pop out . . . Pop in! You won't be disappointed!

BELFAST

357-359 Lisburn Road,
Belfast, BT9 7EP.
Tel: 01232 683929.
Opening hours:
9 to 5.30 Monday to Saturday.
Closed till 9.30 a.m. Friday for staff
training. Closed all Public Holidays.

The new Belfast store provides a service for all our Northern Ireland customers. It is suitably located on the busy Lisburn Road (A1) in an area where there is plenty of on-street parking. If travelling by train, the Botanic Avenue Station is two minutes from Shaftesbury Avenue Station, two minutes from Shaftesbury Square at which point the Number 59 Citybus Link is available. The Oxford Street Bus Station is directly opposite the Central Railway Station from where buses 23, 38, 51 and 103 depart, all of which pass the door. Alternatively, travellers can change at Central Station, which is just 300 yards from the store. (Note: exit this station to the left; it is also important to remember that this station is a "stop on request" only). Following the familiar catalogue style of operation, our staff look forward to providing both product and technical advice.

BIRMINGHAM

Junction of Sutton New Road and
Summer Road, Erdington,
Birmingham, B23 6TH.
Tel: 0121 384 8411.
Opening hours:
9 to 5.30 Monday to Saturday.
Closed till 9.30 a.m. Friday for staff
training. Closed all Public Holidays.

Our Birmingham store is located in Erdington on the main roundabout at the junction of Sutton New Road and Summer Road. We're on the A5127 just 3 minutes north of Spaghetti Junction (junction 6) on the M6. Our private free car park has over 50 spaces so there's always plenty of room for you. If you are travelling by bus the 11, 28, 68, 102, 104, 110, 112, 115, 165, 901A and 966 all stop close to the store. This store features a self-service area where you can browse through our large range, whilst counter service is available as well.

BRIGHTON

65 London Road, Brighton, BN1 4JE.
Tel: 01273 620930.
Opening hours:
9 to 5.30 Monday to Saturday.
10 to 2.00 Sunday. Closed till
9.30 a.m. Friday for staff training.
Closed all Public Holidays.
Note: open Sundays if local
conditions permit.

The Brighton store is ideally located for ease of access from all around the Sussex area. Parking is not difficult, either in the street or in the large multi-storey London Road car park at the rear of the store. Street parking is by vouchers which are available in the store. Many bus routes serve the area with the 5, 5A, 5B, 5C, 107, 770 and 773 stopping at the London Road Co-op just 100 yards away. Also the 35, 44, 44A, 58, 59, 59A, 82 and 83 stop nearby at Preston Circus. The shop is only a few minutes' walk from the railway station, down Trafalgar Street, left into York Place and a short distance up London Road. This new style catalogue shop provides all the benefits of large displays plus the personal attention of technical assistants.

BRISTOL

302 Gloucester Road, Horfield, Bristol, BS7 8PD.
Tel: 0117 923 2014.
Opening hours:
9 to 5.30 Monday to Saturday.
Closed till 9.30 a.m. Friday for staff training. Closed all Public Holidays.

Serving the West country is our well-established shop in Bristol. We're on the main Gloucester Road about halfway between the city centre and Filton Airfield opposite the Esso Garage 'Premier Service Station'. Car parking is free for one hour in front of the shop or there is limited parking space just around the corner in Thomleigh Road. Buses which travel up Gloucester Road are the 72 to 78. This shop features a self-service area where you can browse through our large range, whilst counter service is available as well.

6 DAY OPENING

CARDIFF

29-31 City Road, Cardiff, CF2 3BH.
 Tel: 01222 464554.
 Opening hours: 9 to 5.30
 Monday to Saturday.
 Closed till 9.30 a.m.
 Friday for staff training.
 Closed all Public Holidays.

Providing a service to our customers in South Wales, our Cardiff shop is conveniently located on City Road about 200 yards from its junction with Newport Road. The shop is easily accessed from the M4, either from Junction 29 to the East, or Junction 32 from the West. On arrival there is plenty of parking in the streets or in our private car park at the end of Bedford Place and to the rear of the shop. The City Centre shopping area is only a short distance away. By train the shop is about ten minutes' walk from Cardiff Queen Street which is one stop away from Cardiff Central on the valley line. Buses which pass the door are the 8 and 9. In addition, buses 19, 30, 61, 62 and 65 travel down Newport Road from Central Station.

This catalogue shop has some interesting displays and a friendly team of technical sales staff.

N.B. SHOPS CANNOT HELP WITH MAIL ORDER ENQUIRIES

CHATHAM

2 Luton Road, Chatham, Kent, ME4 5AA.
 Tel: 01634 818588.
 Opening hours: 9 to 5.30 Monday to Saturday. Closed till 9.30 a.m. on Friday for staff training.
 Closed all Public Holidays.

Ideally located, the Chatham shop can be found alongside the Luton Arches at its junction with the High Street and Chatham Hill. Being only a short drive from the M2, this site is easily accessed from anywhere in the Medway Towns, Maidstone or North Kent. There is plenty of free parking at the rear of the store, either in a car park or side roads. The main shopping centre is only a short walk up the High Street and the shop is a little over ten minutes' from Chatham railway station by walking up New Road. Buses which travel up Luton Road are the 166, 181 and 186. In addition, the 132 and 183 travel along Chatham Hill. There are plenty of displays in this catalogue style shop with friendly staff ready to provide any technical advice.

N.B. SHOPS CANNOT HELP WITH MAIL ORDER ENQUIRIES

COVENTRY

12 Bishop Street, Coventry,
CV1 1HU.

Tel: 01203 550504.

Opening hours: 9 to 5.30 Monday
to Saturday. Closed till 9.30 a.m.

Friday for staff training.

Closed all Public Holidays.

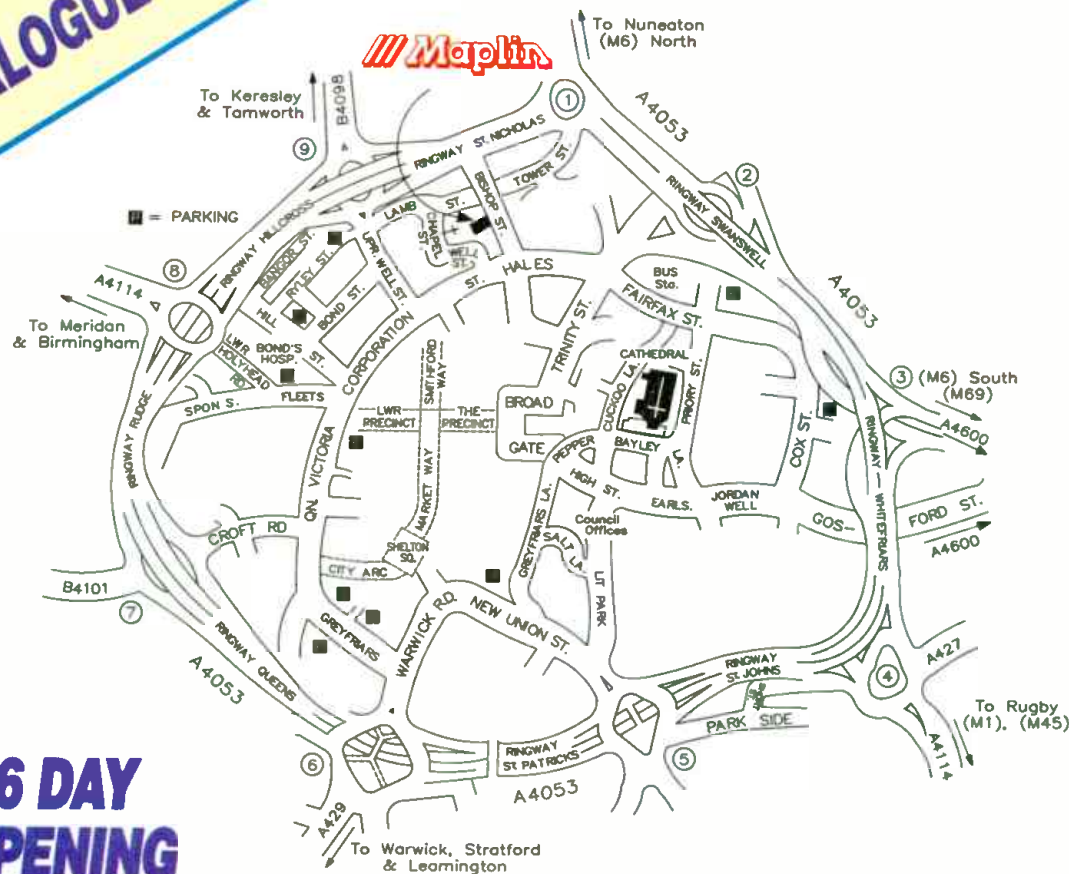

The shop is situated inside the ring road, just to the north of the West Orchard shopping centre.

If you're coming by car, there's one hour on-street parking in Bishop Street and a Pay & Display car park 50 yards away on the corner with Tower Street. In addition, there is free car parking to the side of the Maplin store in a private road.

Bus travellers can use numbers 20, 20A, 20W, 37, 40, 47, 50, 57, 58, 157, 158 and 535, all having stops within a few yards of our front door; whilst the main bus terminals of Pool Meadow and Broadgate are both about 5 minutes walk away.

If you use the train, the station is about a 20 minute walk, though buses run frequently from the station into the city centre. In the store there are plenty of informative displays and helpful technical staff to assist you.

DUDLEY

Unit 7, Sterling Park,
Pedmore Road, Dudley, DY5 1TB.
Tel: 01384 485051.

Opening hours:

9 to 5.30 Monday to Saturday.

Closed till 9.30 a.m. Friday for staff training.

Closed all Public Holidays.

This new store can be found within the Sterling Business Park, which is a prominent location on the Pedmore Road A4036 in the Brierley Hill District. Access by car is very easy and on arrival there is plenty of free on-site parking. Buses which pass down Pedmore Road on the Metro West route are 264 and 265. In addition there are numerous buses to the Merryhill shopping centre which is located immediately alongside and only a few minutes walk from the Sterling Business Park. As with all other catalogue stores, the full range of products are available in addition to interesting displays. Our staff look forward to meeting new customers and providing whatever technical assistance is required.

Opening hours: 9 to 5.30
Monday to Saturday, 10 to 4.30
Sunday. Closed till 9.30 a.m. on
Friday for staff training.
Closed all Public Holidays.

The Edinburgh store is located on Dalry Road approximately a quarter of a mile from the Haymarket Railway Station. This is an excellent location, being easily found alongside a Comet and Gateway supermarket. One of the benefits associated with this store is the large free car park which is immediately behind the premises. The buses which pass the door, approximately every 10 minutes, are 2, 3, 4, 20, 22, 25, 30, 33, 43, 65, X66, 74 and 79. In addition, all the airport buses pass the end of the road by the Haymarket. This store follows the catalogue style of operation with plenty of interesting displays and technical staff to assist when required.

GLASGOW

264-266 Great Western Road,
Glasgow, G4 9EJ. Tel: 0141 353 3323.
Fax: 041 353 1838. Opening hours:
9 to 5.30 seven days a week. Closed
till 9.30 a.m. on Friday for staff
training. Closed all Public Holidays.

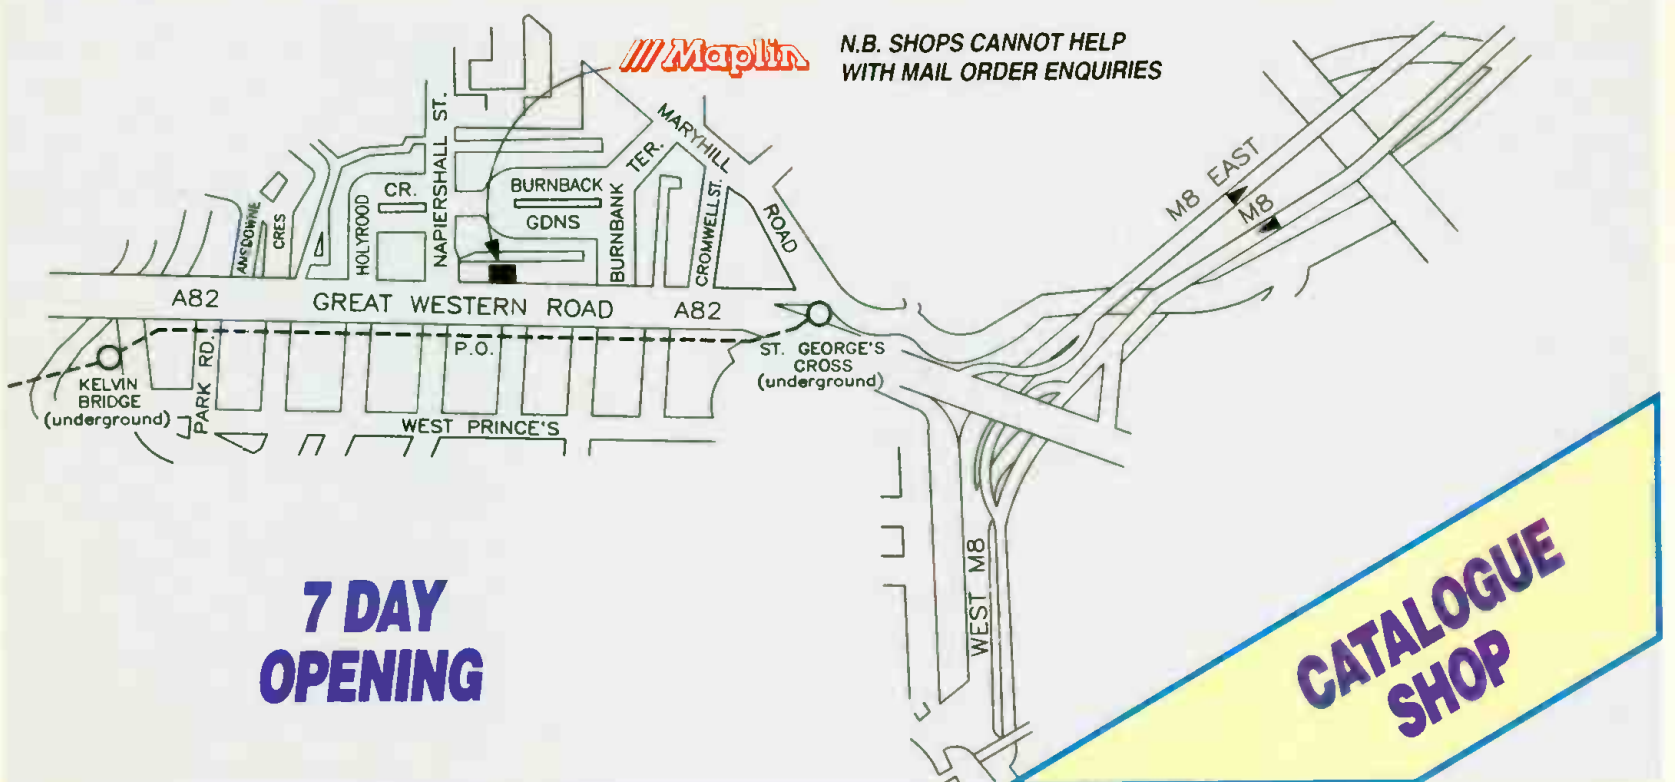

Our Glasgow shop benefits by being in one of the few areas in Glasgow where on-street parking is reasonable. There is also a small amount of parking to the rear of the shop. Our shop can be easily found on the

Great Western Road, only a short distance from the M8. Buses which travel up the Great Western Road are the 3B and 18. Alternatively, the shop is only a few minutes' walk from St. George's Cross underground station.

In Glasgow, too, our shop follows the Maplin tradition by providing interesting displays and technical sales staff to assist customers with our products.

LEICESTER

Office World Building, Burton
Street, Leicester, LE1 1TE.
Tel: 0116 262 3288.
Opening hours: 9 to 5.30 Monday
to Saturday. Closed till 9.30 a.m.
Friday for staff training.
Closed all Public Holidays.

Conveniently located by the roundabout at the junction of Humberstone Road (A47), St. George's Way (A594) and St. Matthew's Way (A47) on the inner ring road, opposite St. George's Retail Park. It is midway between St. Margaret's Bus Station and the Railway Station and is a few minutes' walk from the City centre. There is ample on-site parking with over 20 spaces immediately in front of the shop in the Office World Building car park.

If travelling from the M1 via Junction 21 or 22, follow the signs to the City centre and then the A47 towards Peterborough on the eastern side of the City centre using the inner ring road. From the A1, the A47 brings you directly to the shop.

27 different bus services allow access to the shop – numbers 9, 12, 12A, 17, 19, 20, 21, 23, 32, 33, 36, 36B, 38, 38A, 39, 47, 52, 53, 55, 56, 57, 58, 62, 94, 96, 141 and 253.

You can relax and browse through the interesting displays in this catalogue shop and technical staff are available to assist with all enquiries.

LIVERPOOL

354 Edge Lane, Fairfield,
Liverpool, L7 9LG.
Tel: 0151 230 0366.
Opening hours:
9 to 5.30 Monday to Saturday.
Closed till 9.30 a.m. Friday for staff
training.
Closed all Public Holidays.

Many customers within the Merseyside area will be pleased to see the new Liverpool store, located on the busy A5047 which is an extension of the M62 motorway from Manchester. The store is on the north side of Edge Lane opposite the GPT site (formerly Plessey) and about 100 yards west of the Retail Park. Customers travelling towards Liverpool City Centre will need to drive past the store and do a "U" turn at one of the following intersections. There is plenty of free on-site car parking. Buses which pass the door are numbers 6 and 40. These buses travel from the centre of Liverpool and are therefore suitable for any customers travelling from either Lime Street or Central railway stations. Alternatively, Edge Hill Station is on the local line from Lime Street; this is a walk of approximately 20 minutes from the store. Our technical sales staff look forward to welcoming you.

LONDON (HAMMERSMITH)

120-122 King Street, Hammersmith, London, W6 0QU.
 Tel: 0181 748 0926.
 Opening hours: 9 to 5.30 Monday to Saturday. Closed till 9.30 a.m. on Friday for staff training.
 Closed all Public Holidays.

Situated just to the west of the pedestrian shopping centre in Hammersmith, the shop is within easy walking distance of Hammersmith Underground Station, for District, Piccadilly and Metropolitan lines. Buses No. 27, 91, 260, 267 and 290 pass the door. By car we're just 2 miles from the end of the M4. Continue straight along the Great West Road, turning left just before the Hammersmith flyover. On the roundabout, turn left into King Street and Maplin is approx. 300 yards on the right, past the Kings Mall Shopping Centre. There is metered parking close by. The shop features a catalogue shop style of service with the benefit of large displays and friendly staff to assist with product advice.

N.B. SHOPS CANNOT HELP WITH MAIL ORDER ENQUIRIES

LONDON (ILFORD)

302-304 Green Lane, Ilford, IG1 1XT.
 Tel: 0181 599 0100.
 Opening hours: 9 to 5.30 Monday to Saturday. Closed till 9.30 a.m. Friday for staff training. Closed all Public Holidays.

This super store is easily found on the busy Green Lane, about half a mile from the Ilford shopping centre. The shop is easily accessed from all round the East side of Greater London whether by road, train or bus. There is plenty of free car parking either immediately outside the shop, or in the adjoining side streets. There is also a limited number of spaces in a car park to the side of the premises. By train, the store is about 5 minutes from Seven Kings station, by walking a short way up the High Road and then down Highbury Gardens to Green Lane. Several buses pass the door including the 25, 129 and 148. This is a catalogue shop with many interesting displays and technical sales staff are on hand to assist.

MIDDLESBROUGH

Unit 1, The Forbes Building,
 309-321 Linthorpe Road,
 Middlesbrough, TS1 4AW.
 Tel: 01642 242900.
 Opening hours:
 9 to 5.30 Monday to Saturday.
 Closed till 9.30 a.m. on Friday for staff training.
 Closed all Public Holidays.

The store is centrally situated on the corner of Linthorpe Road and Gresham Road. This is only a short distance from the A66 at its junction with the A1032. From the A66 the store can be reached by travelling down Heywood Street and then Ayresome Street to Linthorpe Road. It is only a short walk from the busy shopping centre and yet this location benefits from on-street parking and a customer car park directly behind the store. The Railway Station is on the other side of the shopping centre just under a mile away. Buses frequently pass the store, but it will be necessary to check locally as there are several bus companies. Again, this store is a catalogue style operation with plenty of interesting displays and helpful staff to assist when required.

Winter Hill,
Milton Keynes, MK6 1BH.
Tel: 01908 692720
Opening hours: 9 to 5.30
Monday to Saturday.
Closed till 9.30 Friday for staff
training.
Closed all Public Holidays.

Maplin is pleased to announce that its Hi-Tech range of products will now be available from a new store in the Hi-Tech City of Milton Keynes. Prominently located alongside Office World, the new store sits between Grampian Gate and Snowdon Drive. This central position is located only a few hundred yards from the Winterhill Retail Park and just over half a mile from both the Central Railway and Bus stations. Like most of Milton Keynes, parking is made easy in the large car park adjoining the store. The new store provides a vast range of products and knowledgeable sales staff to assist with technical enquiries.

NEWCASTLE-UPON-TYNE

Unit 4, Allison Court (beside The Metro Centre), Gateshead, NE11 9YS.
Tel: 0191 488 9555.
Opening hours: 9 to 5.30 Monday to Saturday. 10 to 4.30 Sunday.
Closed till 9.30 a.m. Friday for staff training. Closed all Public Holidays.
Note: open Sundays if local conditions permit.

Serving the North East this shop could not be easier to find, being within sight of the A1 and alongside the A1 exit which leads to the Metro Centre. There is a car park adjoining the shop. If travelling from the South and East, leave the A1 at the Metro Centre exit, turn right at the first set of lights then across the next set of lights and left at the following set. From the North, as you enter the slip road towards the Metro Centre keep in the right hand lane up the slope towards the traffic lights, turn left, go past the left hand slip lane and turn left again at the next set of lights which leads towards the Allison Court entrance. There is a railway station and bus terminal at the Metro Centre Mall which is between five and ten minutes' walk from Allison Court. Trains are at regular intervals to Newcastle Central and the following buses stop at the Centre — 7, 51, 63, 66, 100, 183, 188, 301, 305, 602, 605, 606, 608, 609, 640, 641, X12, X36, M1-9.

Public Holidays.

Our shop in Nottingham is easily found on the north-east corner of the city's ring-road just a few minutes' walk from the city centre. The shop is about ten minutes' drive from the M1, take junction 25 if coming from the south or junction 26 from the north. Parking is quite good, free outside the shop or in the adjoining streets, or alternatively there is a car park nearby in Brook Street alongside Lower Parliament Street. If you are coming by train, you will find us just over half a mile north of the railway station and by bus the shop is only a short walk from Victoria shopping centre. This shop is the favoured catalogue style of operation and boasts numerous displays featuring many products.

PORTSMOUTH

98-100 Kingston Road,
Portsmouth, PO2 7PA.
Tel: 01705 654411.
Opening hours: 9 to 5.30 Monday
to Saturday. Closed till 9.30 a.m. on
Friday for staff training.
Closed all Public Holidays.

The Portsmouth store is easily found within Kingston Road on the corner of Binstead Road. This is very central and only a short distance from the M275. Kingston Crescent links the M275 to the junction of London Road and Kingston Road in North End, Portsmouth. Car parking is reasonably good in this area with on-street parking both outside the shop and in the adjoining side streets. There are also several free car parks behind the shops on the opposite side of Kingston Road (west side), Kingston Road leads into Fratton Road at the end of which is Fratton Railway Station, a distance of just under a mile. Buses which pass the door are 1, 3, 3A, 12, 19, 40, 42, 43, 44, 44D, 65 and 67. The bus stops are located approximately 100 yards away in either direction. The friendly staff will be pleased to answer any enquiries or you can browse among the interesting and varied displays which this catalogue shop provides.

PRESTON

Unit 1, Corporation Street,
Preston, PR1 2UQ.
Tel: 01772 258484.
Opening hours:
9 to 5.30 Monday to Saturday.
Closed till 9.30 a.m. Friday for
staff training.
Closed all Public Holidays.

Centrally located, the new Preston store can be found on Corporation Street immediately beside Globus Office World which is sited at the Penwortham Bypass/Ring Way junction and close to the Corn Exchange. Ease of access is complemented by excellent parking facilities in the adjoining free customer car park. Preston Railway station is only 3 minutes walk down Corporation Street. The Central Bus Terminus is less than 5 minutes walk along the Ring Way and buses include the 158 from Blackpool, 152/163 from Blackburn, 125/6 from Chorley, 109/111 from Leyland and 100/102 from Southport. A warm welcome awaits customers at this catalogue style shop which boasts interesting product displays and sales staff who are able to provide technical advice.

READING

129-131 Oxford Road, Reading, RG1 7UU. Tel: 01734 566638.
 Opening hours: 9 to 5.30 Monday to Saturday. Closed till 9.30 a.m. Friday for staff training. Closed all Public Holidays.

The Reading shop follows the traditional Maplin self selection format with technical assistance at hand. Located on the Oxford Road the shop is only a few minutes' walk from the centre of town. There is limited on-street parking, but parking is easiest in the multi-storey car park in Eaton Place about 200 yards from the shop. Alternatively, there is a car park on top of the Broad Street shopping mall. Conveniently positioned on the A329 to the west of the town centre, access to the shop from the north is via Bridge Street which leads over the River Thames. From the west the shop can be reached either down the Oxford Road or from junction 12 on the M4 and then up the A4. From the south the A33 crosses the M4 at junction 11 and from the east the A329M links the M4 junction 10 with the town centre.

The shop is situated between Reading Central and Reading West railway stations although Reading West is slightly nearer, being about a half mile to the west down Oxford Road. The following buses pass the door: Reading Transport 17, 18, 35 and 36;

and B Line 5 and 100. This shop features a self-service area where you can browse through our large range, whilst counter service is available as well.

6 DAY OPENING

SHEFFIELD

413 Langsett Road, Hillsborough, Sheffield, S6 2LL.
 Tel: 0114 285 5492.
 Opening hours: 9 to 5.30 Monday to Saturday. Closed till 9.30 a.m. Friday for staff training. Closed all Public Holidays.

Our shop in Sheffield can be found in Hillsborough on the busy Langsett Road (B6079) opposite the Hillsborough Barracks shopping centre. From the West the shop can be reached by leaving the M1 on Junction 34 and travelling down to the A6102 and heading towards Hillsborough. Note that some temporary one-way systems have been introduced during work on the new tram system. Please telephone the store staff for further advice. Parking is excellent, including forecourt parking in front of the shop. Sheffield station is just south of the city centre which is about two miles away. Local buses are the 13, 14, 57, 65, 81, 83, 84, 86, 87, 88 and 487. We hope our South Yorkshire customers will enjoy the catalogue style shop with informative displays, and technical staff to provide that personal service.

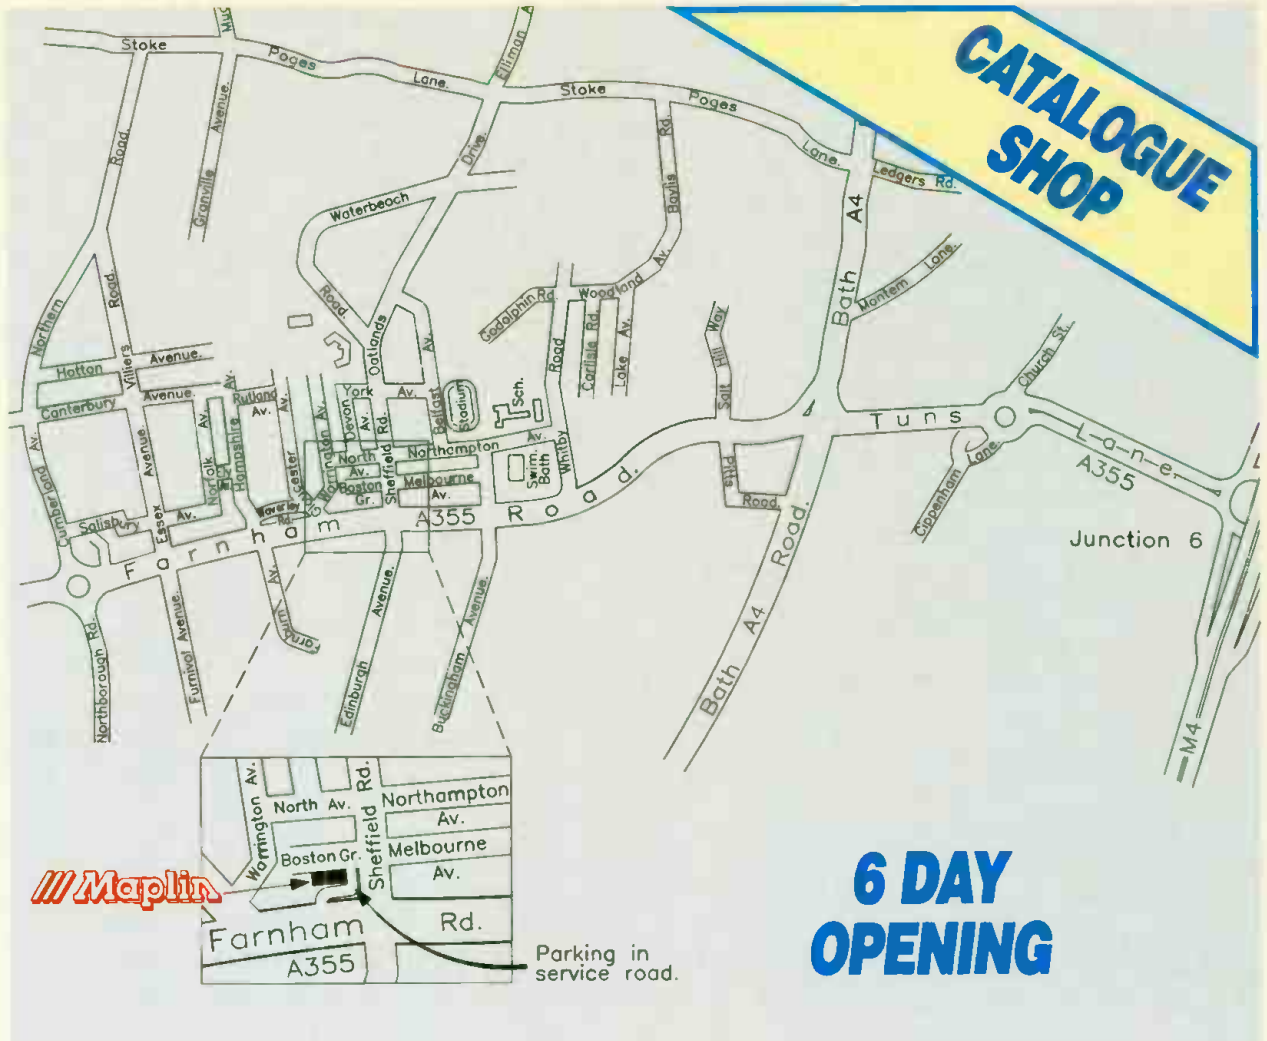

6 DAY OPENING

N.B. SHOPS CANNOT HELP WITH MAIL ORDER ENQUIRIES

SLOUGH

216-218 Farnham Road,
Slough, SL1 4XE
Tel: 01753 551419.
Opening hours: 9 to 5.30
Monday to Saturday. Closed till
9.30 Friday for staff training.
Closed all Public Holidays.

We are pleased to announce the opening of our new store in Slough. Located on the busy A355, the store can be easily found on the Farnham Road at the junction with Edinburgh Avenue and Sheffield Road. Parking is either to the front or at the side of the store. Several buses pass the shop which is a little over 1½ miles from the Slough railway station. Conveniently located and easily accessed, this new branch displays many of the Maplin products. And, like all the other branches, this store boasts friendly sales staff with the ability to assist with technical enquiries.

N.B. SHOPS CANNOT HELP WITH MAIL ORDER ENQUIRIES

SOUTHAMPTON

46-48 Bevois Valley Road,
Southampton, SO2 0JR.
Tel: 01703 225831.
Opening hours: 9 to 5.30 Monday
to Saturday. Closed till 9.30 a.m.
Friday for staff training.
Closed all Public Holidays.

Situated in the Bevois Valley area in Southampton, we are conveniently placed for easy access from all parts of Hampshire and surrounding counties. The A33 needs to be followed if travelling from London, then continue down The Avenue, turning left into Lodge Road. Turn right at the next traffic lights and the shop is 400 yards on the left. From the East or West leave the M27 at Junction 5 (signed to Portswood and Swaythling). Travel down Stoneham Way and then left at the second set of traffic lights to the City Centre. At the end turn left into Bevois Valley Road and our shop is approximately 200 yards on the left. There is a small car park in Earls Road opposite the shop. There is also on-street parking available about 100 yards along Earls Road, but as this is one way, it needs to be accessed from Lodge Road. From Southampton railway station, a No. 10 bus will bring you to the shop or from the city centre take the No. 13. This shop features a self-service area where you can browse through our large range, whilst counter service is available as well.

N.B. SHOPS CANNOT HELP WITH MAIL ORDER ENQUIRIES

SOUTHEND

282-284 London Road,
Westcliff-on-Sea, Essex, SS0 7JG.
Tel: 01702 392000.
Opening hours: 9 to 5.30 Monday
to Saturday. Closed till 9.30 a.m.
Friday for staff training. Closed all
Public Holidays.

Serving Essex, our Southend shop is situated on the A13 (London Road), within easy walking distance of Westcliff and Southend Victoria stations. By road we're only 30 minutes from the M25 (junction 29). There is free parking outside the shop (except during Clearway times) or in the road opposite. Buses which pass the shop are the 1, 2, 3, 3A, 4, 5, 25, 27, 28 and the X1. This store features a selfservice area where you can browse through our large range, whilst counter service is available as well.

6 DAY OPENING

**N.B. SHOPS CANNOT HELP
WITH MAIL ORDER ENQUIRIES**

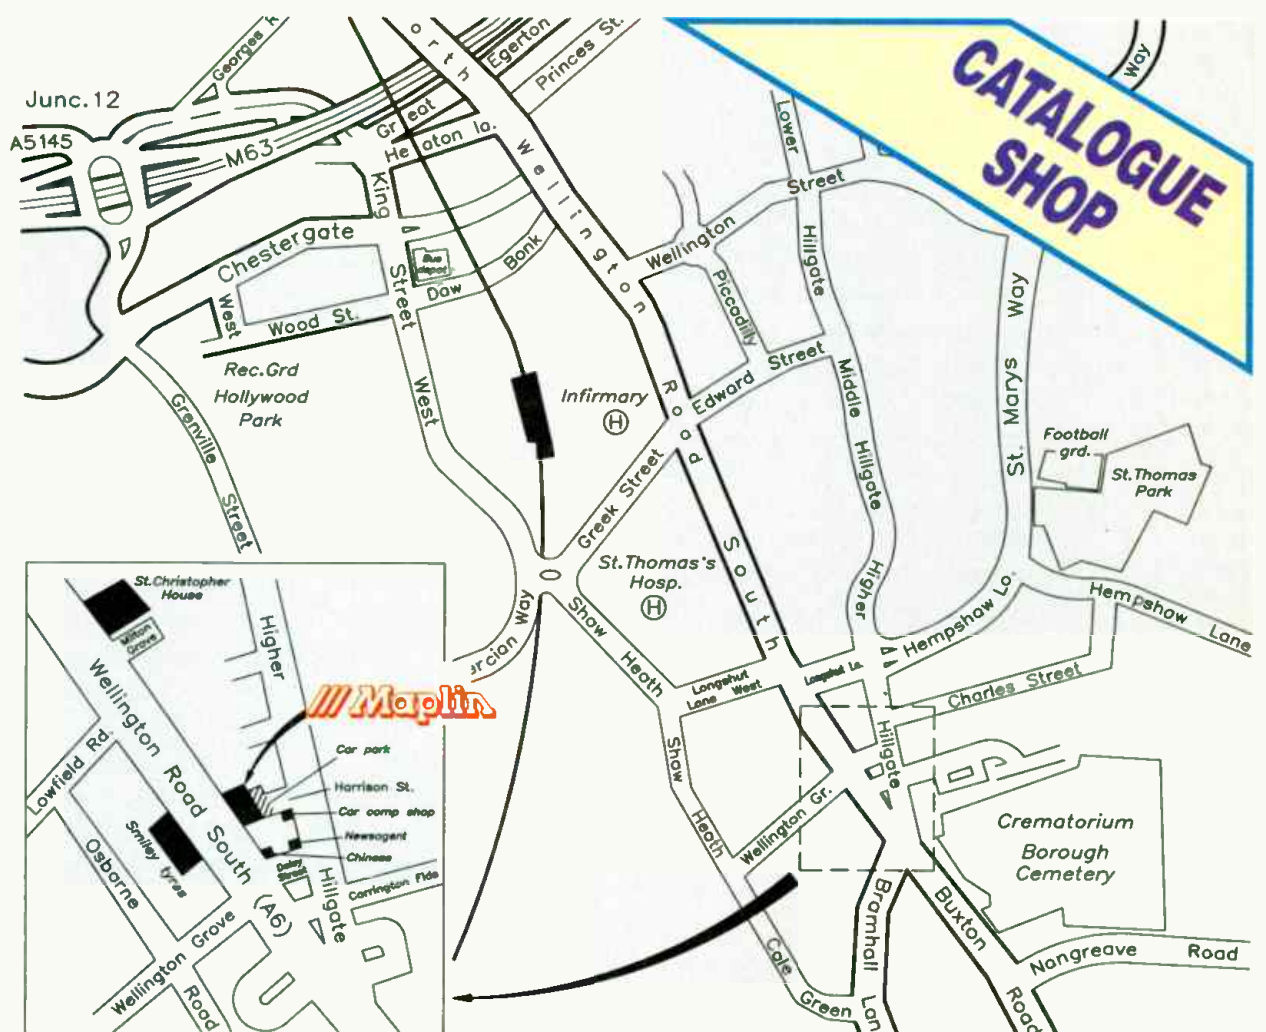

STOCKPORT

259-261 Wellington Road South,
Stockport, SK2 29NG.
Tel: 0161 480 4900.
Opening hours: 9 to 5.30
Monday to Saturday. Closed till
9.30 Friday for staff training.
Closed all Public Holidays.

The new Stockport store is centrally located on the busy A6 (Wellington Road South). It can be found approximately 100 yards north of the junction with Buxton Road and Bramhall Lane. The store is a little over half a mile from the centre of Stockport and the railway station. Junction 12, on the M63 is a little more than 1 mile away. Parking is plentiful, either outside the front of the shop, or in the large private car park which is accessed from Higher Hillgate at the rear of the store. Many buses pass the door. Again this store follows the catalogue shop style providing interesting displays and supported by technical sales staff to assist with enquiries.

6 DAY OPENING

**N.B. SHOPS CANNOT HELP
WITH MAIL ORDER ENQUIRIES**

STOKE-ON-TRENT

39-45 London Road,
Stoke-on-Trent,
Staffordshire, ST4 1NB.
Tel: 01782 749947.

Opening hours: 9 to 5.30 Monday
to Saturday. Closed till 9.30 a.m.
Friday for staff training.
Closed all Public Holidays.

The latest store to open is located just off the A52 on the B5041 in the centre of Stoke-on-Trent. This unit is easily found opposite the Royal Doulton factory on the London Road at its junction with Fleming Road. Although this store is close to the busy retailing area, there is an adjoining private car park for MPS customers which is accessed via Spark Street.

6 DAY OPENING

**N.B. SHOPS CANNOT HELP
WITH MAIL ORDER ENQUIRIES**

THE ENTIRE MAPLIN STOCK RANGE AT YOUR FINGERTIPS!

Yes, the new state-of-the-art Maplin key call system means that you can now place your orders directly onto our computer, 24 hours a day, seven days a week by simply using your telephone keypad or a pocket tone dialler (see card inside back cover).

Anyone with a tone dial (DTMF) telephone can use this system. The majority of exchanges in this country will accept tone dial telephones which are readily available from Maplin and other telecomms retailers. An alternative is to use our pocket tone dialler which is the size of a key-ring fob and may be easily carried with you. When you dial 01702 556751, our computer will speak to you and ask you various questions to which you reply using your telephone keypad. The digits 1 through to 0 are used as well as the * and # buttons. You will be given several opportunities to abort an order so feel free to make a few trial orders without the risk of actually ordering any goods.

To make it easier, and save your telephone call charges, a removable order card is provided at the rear of this catalogue (see card inside back cover), please photocopy this and use it to prepare your order before making your call. A space is provided on this card for you to write down the order confirmation number, which is given at the end of an order. You should quote this number if you contact us with any queries regarding that order.

To use this system, Maplin alpha-numeric stock codes have to be converted into all digit form and details of how to do this are shown below. When you call this system you will first be asked for your customer number and personal identification number (PIN). If you have previously used our mail order service, you will find your customer number on the invoice/delivery note sent with each order. Phone us on 01702 552911 or 01702 554161, quote your customer number and you will be given your PIN number. Future invoice/delivery notes will show both numbers. If you are a new customer or are unable to find your existing customer number, simply phone us on 01702 552911 to obtain your customer and PIN numbers. Payment for orders placed on this system is by

credit card. Orders will only be accepted if the credit card holder's address is the same as the delivery address associated with the customer number. You will be asked to enter your credit card number and expiry date each time you place an order, so have it to hand before you make the call.

The Seven Steps To Placing Your Fingertip Order

1. Write your customer number, PIN number and credit card details on your copy of the order preparation card.
2. Select the items you wish to order from the catalogue, write down the order codes and quantities. Remember to ignore the last letter of standard order codes, but not fixed resistors (see Resistors Section).
3. Using the charts, convert the order codes into digital format and write these down. Don't forget that fixed resistors use a special conversion chart.
4. Dial 01702 556751 and enter your order details from the preparation card when prompted by the voice; it may help to tick each item once ordered.
5. When you have finished entering all your order codes and quantities, the computer will read each item back to you with its standing order code, the quantity you have ordered and the price. Check these items are correct and re-enter or delete any that have been entered in error.
6. When you are happy that all the items you have ordered are correct and you have accepted them, the computer will give you the total amount that will be charged to your credit card, make a note of this for your reference in the space provided on the card.
7. When you have finally accepted the order, you will be given an order confirmation number, write this on your card and quote this number if you ever need to contact us regarding the order.

MAPLIN KEY CALL STOCK CODE CONVERSION TABLE

Standard Order Codes

To use the Maplin key call system, standard Maplin alpha-numeric order codes must be converted into an all digit format. The following table enables each letter of the alphabet to be replaced by a two digit number. *The last letter of the order code is always ignored when converting to digital form.*

NOTE: Fixed resistors use a separate coding system, see RESISTORS on page 636 for a breakdown of the special codes required. All resistor Starter Packs are ordered by the standard order codes shown here.

Order Code	Digit Code
RW 67 X	28 33 67
ZA 11 M	36 11 11

R converts to number 28, W converts to number 33, 67 is the number from RW67X and don't forget to ignore the last letter, in this case it's the X. So, the final digital code will be 28 33 67.

A = 11
B = 12
C = 13
D = 14
E = 15
F = 16
G = 17
H = 18
I = 19
J = 20
K = 21
L = 22
M = 23
N = 24
O = 25
P = 26
Q = 27
R = 28
S = 29
T = 30
U = 31
V = 32
W = 33
X = 34
Y = 35
Z = 36

The Pocket Tone Dialler that's made to order!

Now you can place your orders at any time of the day or night, in or out of hours. The Maplin key call tone dialler is the ideal ordering solution for people who do not have or have access to a tone dial (DTMF) telephone. Powered by two AG-12 batteries (included), the dialler emits DTMF tones for accessing remote equipment, i.e. answering machines or computer services, etc.

Designed to hang on your key-ring, the Maplin tone dialler is unobtrusive enough to carry about with you all day, everyday.

Your order is just a tone call away!

YOUR FIRST 2 ISSUES OF THE MAPLIN MAGAZINE FREE

Because we're so certain that once you've seen the Maplin Magazine you'll want to continue to receive it, we're offering to send you the next two issues free of charge with absolutely no obligation to continue. Just fill in the details below and if after receiving two issues you do not wish to continue, just let us know at least one month before the next issue is due and we will cancel your subscription. The two free issues will be yours to keep whatever you decide. If you already have a subscription, fill in the details below and we'll add two issues free of charge to your current subscription. **SEND NO MONEY NOW.** About 2 weeks before the third issue is due, we will charge you £10.98 for the next six issues, unless you have cancelled. **This offer is open to customers with U.K. addresses only.** Overseas Subscribers Tel: +441702 554155, Ext. 326 or 351. This offer is not available to those already paying by Direct Debit or Continuous Credit Card or those who have stopped payment by either method within the last year. **This offer is open until 31st July 1995.**
