Maplin has more stores Nationwide than ever before. See the maps at the front of the catalogue for the nearest one to you.

### Funtronics 1

A set of projects ideal for the absolute beginner, requiring no soldering and the minimum of tools to construct. A small screwdriver, pliers and wire cutters are normally all that is needed. The components and connecting wire are held in place by self-tapping screws which fit into holes in the plastic 'peg-board' supplied. A component guide-sheet is supplied with each kit and this is cut-out and stuck to the plastic board. The kits include all the parts necessary except the battery and tools.

#### Optional Items

The following items, not included in the kits, may also be required.

PP3 Battery	As Req.	(JY60Q)
PP3 Alkaline	As Req.	(FK67X)
Snip Cutter	1	(JH20W)
Pliers	1	(FV55K)
Screwdriver	1	(JG98G)

There are 10 projects in the range:

#### 1. Bulb & Fuse Tester

This is a very simple project indeed, it is intended to allow testing of bulbs, fuses, switches etc. If the device under test is good, then an LED lights up. See Maplin Magazine Issue 48.

#### 2. Transistor Tester

As well as showing you how a transistor works, this handy kit allows you to test diodes or any small or medium NPN or PNP power transistors you may use in your own projects.

See Maplin Magazine Issue 49.

#### 3. Water Indicator

This little project is ideal for detecting water in the soil of house plants and will give a visible indication, an LED will light, when the soil is dry.

See Maplin Magazine Issue 50.

#### 4. Light-Dark Indicator

This project simply switches on an LED if it detects the absence of light. With a simple change to the circuit, this project will do the opposite, i.e. it will operate the LED indicator if the light level is above a certain amount. A useful purpose for a project of this type is a photographic darkroom indicator.

See Maplin Magazine Issue 51.

#### 5. The Flasher

This is an astable circuit that switches on and off two LEDs alternately. The LEDs flash every two or three seconds. Such a project will be of great use to model makers, for example. In its present form, the Flasher is ideal for flashing warning lights on a model level crossing.

See Maplin Magazine Issue 52.

#### 6. Electronic Siren

This little unit is ideal for use with model cars and similar applications. It provides a sound that varies in pitch; you can control this pitch, enabling a useful range of siren sounds to be produced.

See Maplin Magazine Issue 53.

## 7. Pet Communicator

This project uses an astable multivibrator loaded by a small loudspeaker. At low-light levels the frequency is very low, but in daylight the frequency is very high and will probably not be heard by most humans – but will be heard by your pets. A simple modification will allow this project to operate as an alarm. See Maplin Magazine Issue 54.

## 8. Decision Maker

Simple multivibrator circuit that is started by holding two prods together. Two LEDs will flash very fast so that they appear to be on all the time. When the prods are disconnected, a simple 'memory' action holds on one of the LEDs which can be labelled 'yes/no', 'in/out', 'heads/tails' or whatever. See Maplin Magazine Issue 55.

## 9. Morse Code Communicator

An astable multivibrator circuit that operates at several hundred pulses per second and produces an audio tone and lights an LED when the 'key' is pressed. This project will help you to learn Morse Code and communicate with others using this special 'language', the circuit is not any form of radio transmitter. See Maplin Magazine Issue 56..

## 10. Music Maker

A simple electronic organ that plays 10 notes, enough to play a range of simple tunes. The unit is 'monophonic'; this means it can only play one note at a time. It uses a stylus type 'keyboard'; in other words, you hold a stylus (prod) and play notes by touching it on to the 'keys', which are actually just screw terminals. The circuit is an astable multivibrator that can oscillate at several different frequencies, so as to provide a reasonable range of notes. See Maplin Magazine issue 57.

Retail Unit Price each (inc. VAT).

## Solar Cell Educational Kits

### Basic Kit

An educational kit to help you explore solar energy power. The kit includes a solar panel (0.45V 400mA), a small DC motor, connecting wire, plastic fan spinner and turntables, coloured spinner disks, coloured paper models, screws and nuts. An interesting kit for children to enjoy. A very informative booklet is included describing solar power in detail.

### Advanced Kit

A more advanced kit that includes eight solar panels that produce 0.4V at 100mA each, and can be configured to produce 0.4V at 800mA or 3.2V at 100mA by connecting the cells in parallel or series, or a combination of both. It is possible to power small appliances, i.e. radios, personal cassettes, calculators, from sunlight. A detailed booklet is included in the kit that explains how to connect up the cells. A small electric fan along with connecting straps and wire are included in the kit to demonstrate the use of solar power.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2092	Price each exc. VAT 10+	25+	100+	1+	inc. VAT each 1+

### Applications

- ★ Guitar practice sessions
- ★ Concerts and gigs

Simple, low cost 'passive' volume controls are readily available, but they have drawbacks. One obvious disadvantage is that, being mechanical, they soon wear out and become 'noisy'. To avoid the wear and tear of a mechanical potentiometer and its eventual but inevitable demise, this project uses an optical system for the control. This ensures longevity, as there is nothing to wear out, and a rugged specifically designed pedal casing complements the design.

Another advantage of an 'active' volume control is that it acts as a buffer with zero (unity) gain, high input and low output impedances. Most electric guitars do not contain any active electronic circuitry within them. The delicate pickup signal is unbuffered, and the guitar will have a relatively high output impedance. The cable to the amplifier will then have a marked influence on the sound quality, which is not ideal. By using a shorter cable to a buffer circuit such as this unit incorporates, this situation can be alleviated. Because a buffer has a low output impedance, a much longer cable to the amplifier can be 'driven' with less influence on the sound.

### Specification

Power supply:	2 x 9V PP3 cells or external 9.5-18V DC regulated PSU
Operating current:	15mA @ 9.5V, 20mA @ 18V
Input level:	1.4V rms
Output level:	1.4V rms
Overall gain:	1 (approximately)
PCB dimensions:	77 x 74mm
Boxed unit dimensions:	238 x 101 x 104mm maximum

### Optional Items

The following optional items, not included in the kit, may also be required.

Alkaline PP3 Battery	1	(JY49D)
AC Adaptor Unregulated 300mA	1	(XX09K)
1/4in. Plastic Mono Jack Plug	1	(HF85G)

### Kit and Special Parts

A complete kit of parts is available (excluding the optional items), including the PCB, the Instruction Leaflet, and the Constructors' Guide. The PCB, beam breaker blade, and panel labels are available separately. Full constructional details may be found in Maplin Magazine/Projects Book 99 XA99H, and instruction leaflet XV83E.

## Psychedelic Wah Wah Pedal 2

### Features

- ★ Powered from 9V PP3 battery or regulated power supply
- ★ Regulated reference to prevent low battery voltage drift
- ★ Built in compander to minimise noise
- ★ Traditional Wah Wah sound (without the crackle)
- ★ Rich warm harmonic content
- ★ Minimal adjustment
- ★ IC design, no laborious coils to wind
- ★ Adjustable resonance and range
- ★ Economically priced with unbelievable performance

### Applications

- ★ Ideal for both Guitars, Bass and other instruments

This sophisticated Wah Wah pedal uses the LM13700 transconductance op amp. Unlike other designs, the Psychedelic Wah Wah has a number of advantages which include adjustable resonance, which determines the subtlety of the effect and adjustable range, used for both guitar and bass guitar, in fact, on any electric music instruments such as keyboards and electric violins. The circuit also features a compander that reduces noise in the circuit and improves the harmonic content of the output which makes for a very warm rich sound. The Wah Wah acts as a kind of tone boost control, and moving the pedal adjusts the frequency point at which the boost occurs. Rhythm or lead guitar usually play through the device. When playing rhythm, the pedal is moved in time with the 'strum', and when playing lead, extra expressive abilities become available enabling almost 'infinite sustain' without screaming feedback.

### Specification

Power supply:	+9V DC
Current consumption:	14.7mA
Maximum boost @ 1kHz:	20dB
Minimum frequency:	90Hz
Maximum frequency:	20kHz

### Kit and Special Parts

A complete kit of parts (including the PCB) is available. The PCB and front panel is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 82 XA82D, and instruction leaflet XU89W.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LT43W 3	Wah-Wah Pedal Kit	£34.030	£39.990
GH88V	Wah Wah Pedal PCB	£2.970	£3.490
KP70M	Wah Wah Pedal Front Panel	£2.110	£2.490
XU89W	Wah-Wah Pedal Lift	£0.800	£0.800 NV

## Auto-Waa Effects Unit 3

A Waa-Waa Unit for guitars where the filter frequency is automatically controlled by the input signal amplitude, as opposed to a foot operated pedal, for example. Very easy to use whilst giving a

good range of various effects. The filter frequency is adjustable, and a sweep depth control is also included. Positive feedback is used to give a peak in the response just above the cut-off frequency to obtain the best 'waa' effect, or alternatively operate as a 12dB/octave lowpass filter for more subtle effects.

### Kit and Special Parts

A kit is available (excluding case, battery, feet and fixings) and the PCB (included in the kit) is also available separately. Full construction details may be found in the Best of Maplin Projects Book 6 XC06G.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LK36P	Auto-Waa Kit	£18.710	£21.990
GB54J	Auto-Waa PCB	£2.970	£3.490

## Noise Gate 2

This useful project has the following features: Provides automatic shutdown of unwanted noise during 'pause' conditions. Compander technique eliminates 'signal snapping'. User adjustable characteristics for high or low level network insertion. Allows the use of otherwise 'too noisy to use' effects units. Can effectively cancel crosstalk in multi-microphone set-ups. Can be used in multi-instrument layouts for instant unit shutdown on changeovers. Will eliminate 'beehiving' in older type 'spaghetti' wired organs. No circuit trimming required or tight specification devices used. Can be used in its own right as an effect to create soft attack bowing characteristic. Uses only two low-cost and readily available ICs. Self contained, jack-in jack-out unit allows instant in-line connection.

### Kit and Special Parts

Complete kit of all parts excluding the case and front panel. Full construction details may be found in Maplin Magazine/Projects Book 40 XA40T, and instruction leaflet XK52G. PCB dimensions: 59 x 70mm.

Retail Unit Price each (inc. VAT).

## MIDI 2

### E510 MIDI Keyboard Scanning Module

### Features

- ★ Scans up to 128 keys
- ★ Velocity (touch) sensitive
- ★ Transmit channel selectable
- ★ On-board regulator
- ★ AC or DC supply
- ★ Compact
- ★ Versatile

### Applications

- ★ MIDI keyboard
- ★ MIDI pedal-board
- ★ Basis of a MIDI master keyboard
- ★ MIDI retrofit for non-MIDI keyboards

The Musical Instrument Digital Interface (MIDI) has been adopted as a worldwide serial interface standard by manufacturers of electronic musical instruments and ancillary equipment; providing unparalleled possibilities for control and communication. MIDI allows a diverse range of devices to be interconnected; almost regardless of manufacturer or type. MIDI devices include; synthesizers, MIDI guitars, MIDI 'wind' instruments, drum machines, effects processors, mixers, computers and lighting equipment. Commonly, MIDI is used by keyboard players to interconnect synthesizers, allowing a range of 'instruments' to be played and controlled from one master keyboard. Conventionally, generation of serial MIDI data requires a microprocessor-based scanning system, comprising CPU, ROM, RAM, and both serial and parallel I/O. The use of such a system is costly and is a 'sledgehammer to crack a nut' solution. This module is a compact and versatile building block, around which a MIDI keyboard, pedal-board or master keyboard can be constructed. The module utilises a dedicated IC to perform scanning. For maximum versatility, an on-board supply regulator is provided, along with various inputs and outputs routed to strategically grouped connectors. The module only requires the addition of an AC or DC supply, some address decoding and a keyboard with changeover contacts to operate. It must be realised that the module does not produce any sound of its own, just MIDI data. A MIDI sound module or synthesizer is required to interpret the MIDI codes and generate the required sounds.

### Ideas and Expansion

The module has been designed with flexibility in mind, to this end, all signals have been brought out to connectors. The module is ideally suited to a wide variety of keyboard and pedal-board applications, such as: Portable guitar-style 'performance' keyboards; Bass pedal-board for guitar and keyboard soloists. With the addition of a processor board, a wide variety of master keyboard functions can be added; keyboard split, pitch bend and modulation wheels, patch change, data entry sliders, foot pedals, transposition, arpeggiator, etc.

### Specification

Module dimensions:	101 x 35 x 69mm (WHD)
Power requirements:	6-0-6V to 15-0-15V AC
AC:	+7 to +25V DC
or DC:	20mA quiescent
Current:	TTL/HC compatible
Logic connections:	MIDI standard 5mA current loop
Serial data output:	MIDI format TTL compatible
Auxiliary output:	128 notes
Scanning range:	128 steps/256µs
Velocity resolution:	

### Kit and Special Parts

A complete kit of parts (including the PCB) is available. The PCB is also available separately. Full

construction details may be found in Maplin Magazine/Project Book 69 XA69A, and instruction leaflet XU25C.

**Miscellaneous Electro-Music**

**Guitar Headphone Amplifier 2**

- ★ Low-cost
- ★ Separate volume and distortion controls
- ★ Practise in privacy
- ★ Authentic rockin' sounds

An electric guitar produces very little sound if not plugged into an amplifier. One advantage of this is that it is possible to practise without annoying the family or neighbours! The disadvantage, of course, is that it just doesn't sound the same. Especially when aiming for those screaming lead solos! This low-cost, compact, battery-operated amplifier will drive a pair of headphones and offer a realistic distortion effect. It conveniently fits into a clip-on box with battery compartment (KC95D), has the minimum of components and a low current consumption to prolong battery life.

**Specification**

Supply voltage:	9V nominal
Quiescent current drain:	9mA
Maximum current drain:	67mA
Input sensitivity:	<5mV to give full output
Maximum voltage gain:	55dB
Output power:	600mW
Output load:	8Ω or higher
PCB dimensions:	63 x 55mm
Dimensions of finished unit:	103 x 69 x 39mm (inc. knobs)

- Optional Items**
- The following items, not included in the kit, may also be required.

**Phantom Guitar Power Supply**

2

- Features**
- ★ Enables 'active' guitars to be powered via the signal cable
  - ★ Turns a non-active guitar into an active guitar
  - ★ Buffers the signal enabling long cable runs to be made with low signal loss
  - ★ Provides a regulated 9V DC output to power active circuitry in the guitar
  - ★ Short circuit protected
  - ★ Guitar PCB is only the size of a PP3 battery
  - ★ Optional 'Power' LED can be fitted into guitar

**Application**  
★ Gigging bands or solo musicians  
Guitars with factory fitted active pickups generally have a battery compartment, easily accessible from the outside the guitar. However, many guitars are bought with only 'passive' pickups and, at a later date, 'active' pickups are often retrofitted. The majority of retrofits involve milling out the guitar woodwork under the scratchplate to allow for the active electronics and battery. However, whenever you want to replace the battery, the scratchplate must be removed (which may also involve de-stringing, re-stringing and re-tuning the guitar) – an extremely laborious process!

This project comprises of a PP3 battery sized module that fits in place of the 9V battery and negates the need to ever remove the scratchplate again! For guitars fitted with active pickups, the project acts as a battery eliminator. However, if your guitar is not fitted with 'active' pickups, then this project will buffer the output signals from your passive pickups, effectively turning them into 'semi-active' pickups. Connections from the Guitar Module to the Interface Box and from the Interface Box to the amplifier are made using standard 1/4in. mono jack leads.

**Kit and Special Parts**  
A complete kit including a pre-punched case, front and rear panel labels, and the PCB is available. Note that the PCB has provision for up to four Guitar Modules to be constructed however, the kit only includes enough components to make one Guitar Module. Full construction details may be found in Maplin Magazine/Projects Book 104 XD04E, and instruction leaflet XZ18U.

**Earth Lift Box**

1

- Features**
- ★ Removes annoying 'hum' from PA set-ups
  - ★ Enables two 'Earthed' audio products to be connected
  - ★ Compact, rugged casing
  - ★ Easy to build and use
  - ★ Configurable for stereo/multi-channel systems

**Applications**

- ★ Electronic musical instrument and amplifier setups
- ★ Stage PA and recording
- ★ Safe eradication of earth hum loops

The almost standard way of avoiding earth loop 'hums' is to disconnect the earth from the offending item (usually a power amplifier). This is a very dangerous practice to adopt as it leaves the equipment user with little or no protection against electric shock or 'fault' hazards!

Many pieces of rack equipment are designed for use without an earth conductor and many of those that do have an earth lead have a built-in ground lift, but there will always be one that gives you a problem. The solution is to break the DC path through the signal 0V lead, by either a 'ground lift' resistor of about 180Ω or, in more extreme cases, total disconnection of the signal 0V.

The Earth Lift Box has been designed as an invaluable addition to any musicians/PA engineers kit box. It is fitted with a three-position switch: 'Direct' hardwires the earth of the input to the earth of the output, 'Float' totally disconnects the earth of the input from the output through a low value resistor and AC 'bypass' capacitor. In addition to the 'Earth lift' output, a 'Link' output is provided, allowing the unit to be inserted in-line with existing cabling. Boxed unit size: 120 x 65 x 40mm

**Kit and Special Parts**  
A complete kit of parts including PCB, stick-on label and pre-punched box is available. The PCB, panel and box are available separately. Full construction details may be found in Maplin Magazine/Projects Book 102 XD02C, and instruction leaflet XZ17T.

## Passive DI Box

1

### Features

- ★ Does not require a power source
- ★ Allows line-level signals to be fed into microphone-level inputs
- ★ Earth-lift facility
- ★ Link output for easy connection
- ★ 1/4in. Jack Input and XLR output
- ★ Rugged construction

### Applications

- ★ Stage PA and recording
- ★ Eliminating hum loops safely
- ★ Direct injecting keyboards and other electro-music equipment

To the uninitiated, a direct inject box is simply an impedance/level matching unit that is designed to allow unbalanced line level signals to be fed into a low level balanced microphone input on a mixing desk.

Many mixers intended for 'on the road' PA use are provided with balanced-line microphone inputs only, often this is because more microphone inputs are required than line inputs. However, microphone inputs are highly unsuitable for anything other than microphone level signals, and feeding an electronic keyboard into such is likely to result in severe distortion.

This DI box serves to translate the unbalanced line level signal into a balanced microphone level signal. Its input is relatively high impedance – suitable for connecting to the output of a keyboard or other line level output, and its output is low impedance and suitable for connecting to a microphone input.

### Specification

Input signal:	+18dBu maximum
Distortion:	<0.05% @ 1kHz
Frequency response:	10Hz to 20kHz ±0.5dB
Input impedance:	20kΩ
Output impedance:	600Ω
Case dimensions:	120 x 65 x 40mm
Input connectors:	1/4in. mono jack socket
Link output:	1/4in. mono jack socket
Balanced output:	3-pin XLR plug

### Kit and Special Parts

A complete kit of parts including PCB, stick-on label and pre-punched box is available. The PCB, panel and box are available separately. Full constructional details may be found in Maplin Magazine/Projects Book 102 XD02C, and instruction leaflet XZ13P.

Retail Unit Price each (inc. VAT).

## Active Transformer DI Box

1

### Features

- ★ Active design
- ★ Battery or PSU operation
- ★ Low battery and power on indicators
- ★ 6.35mm (1/4in) Jack Inputs and XLR output
- ★ Pre-punched silk-screened front and rear panels
- ★ Sturdy and compact
- ★ Power-on and low battery indicator LEDs
- ★ Automatic power switch-on when input lead is inserted

### Applications

- ★ Matches unbalanced lines into balanced inputs
- ★ Break earth loops
- ★ Impedance matching

This DI (direct injection) box is intended to match unbalanced line level signals into low level balanced inputs such as the microphone inputs found on mixing desks and amps. The unit can be effectively used to eliminate hum produced by earth loops in audio systems by providing a break in the ground path.

This active DI box has a much higher input impedance than passive types. It is therefore suited for use with instruments that have high impedance pickups, which would otherwise suffer from attenuation of treble if used with low impedance inputs. A buffered link output is provided so that on-stage amplification may be driven. Earth carry-through and earth-lift inputs provided. True transformer-based balanced output (some other designs use lower cost 'electronically balanced' outputs).

The unit is powered by an internal alkaline PP3 battery (not included) or by an optional regulated mains PSU (YB23A).

Kit includes box and pre-punched & silk-screened panels (please note: photo shows non-screened panels).

### Specification

Supply voltage:	+7V to +15V DC (+9V nominal)
Supply current:	8.5mA @9V DC
Input impedance:	500kΩ
Output impedance - Link:	200Ω
Balanced:	150Ω (suits 600Ω microphone inputs)

Dimensions (approx.): 109 x 52 x 93mm

### Kit and special parts

A complete kit of parts is available. The PCB and pre-punched & screened panels are also available separately. Full constructional details may be found in Maplin Magazine/Projects Book 106 XD06G, and instruction leaflet XV98G.

## Simple 4-to-1 Audio Mixer

1

### Features

- ★ Overload, power on and low battery indicators
- ★ Pre-punched, silk screen printed front and rear panels
- ★ Battery or external PSU operation
- ★ Compact and rugged construction

### Applications

- ★ Gigging bands
- ★ PA systems
- ★ Karaoke systems

This Simple 4-to-1 Audio Mixer is a functionally basic yet extremely useful unit that can accept up to four (mono) audio inputs and mixes them into one output for feeding into an audio amplifier, tape recorder or PA system, etc.

The mixer is ideal for gigging musicians, who wish to easily link the outputs from four instruments so that the resulting combined signal can be fed into, for example, single channel on a mixing desk. The mixer also has uses in PA systems, allowing music to be combined with speech, or even for use at karaoke sessions, enabling wannabe pop singers to sing along to a backing track. The unit could additionally be used for sound recording, allowing up to four tracks/samples to be combined into one.

### Specification

Supply voltage:	7 to 15V DC (9V nominal)
Current consumption:	8mA @ 9V
Input impedance:	100kΩ approx.
Output impedance:	200Ω approx.
Bandwidth:	20Hz to 130kHz
Distortion:	<0.01% within audio bandwidth

PCB dimensions:	101 x 82mm
Boxed unit dimensions:	108 x 50 x 93mm

### Optional Items

The following items are not included in the kit, but may also be required.

PP3 Battery	1	(JY49D)
9V Regulated PSU	1	(BZ84F)

### Kit and Special Parts

A complete kit of parts (including the PCB and pre-punched & printed front and rear panels) is available (excluding optional items). The PCB and panels are available separately. Full constructional details may be found in Maplin Magazine/Projects Book 105 XD05F, and instruction leaflet XZ26D.

by 5pm

FAX: 01702 554001

overcome the hum and noise pickup problems that inevitably crop up with unbalanced (single-ended) cables over long runs. The situation does not exist when using a balanced line because any external introduced noise component will be equally induced on both the in-phase and out-of-phase signal lines keeping the signal difference voltage the same, which effectively cancels any common-mode noise. In addition, this project may be used to 'bridge' two mono amplifiers together. Further details on the construction and use of the balanced line TX can be found in Maplin Magazine Issue 49.

**Specification**

Supply voltage:	9V min. 35V max.
	Quiescent current
	@ 9V: 8.2mA
	@ 35V: 9.5mA
Maximum input signal	
	@ 9V: 1.4V rms
	@ 35V: 10V rms
Frequency response	
	@ -3dB: 1.5Hz to 100kHz

**Optional Items**

The following, not included in the kit, may also be required.

22µF 16V Tantalum	4	(WW72P)
Box CCN80	1	(YN50E)

**16-Way Audio Patchbay**

**Features**

- ★ **Balanced, unbalanced or 'insert point' versions**
- ★ **Normalised or non-normalised operation**
- ★ **One PCB for all options**
- ★ **Low loss signal path**

**Applications**

- ★ **Recording studios**
- ★ **Theatres**
- ★ **Home recording**
- ★ **P.A. systems**

Used extensively in radio, TV and recording studios, the most commonly used inputs and outputs are taken to a patchbay where they can be simply connected together using short cables. This patchbay is configured as two rows of sockets, one above the other. It is conventional to designate the lower sockets as signal inputs to a device, while the sockets above will often be the output from the same device. Often a patchbay is 'normalised', which means the top socket is normally wired to the bottom socket and the path is broken when a jack is inserted. In this case the top socket will be the output from one piece of equipment that is normally fed to the input of another, e.g. the output from a tape deck fed to the input of a mixer. The ability to easily break this feed allows the use of an additional piece of equipment to be inserted in the path, i.e. noise reduction equipment. A PCB is available allowing a single channel patchbay module to be constructed. By fitting a combination of stereo and mono 6.35mm (1/4in.) jack sockets, balanced, unbalanced or insert point versions can

be constructed on the same PCB. There is NO kit of parts for this project, but the Maplin 'Get-You-Working' Service is available.

**Parts List**

<b>Unbalanced Module:</b>			
Mono PCB 6.35mm (1/4in.) J/Skt	4	(FJ00A)

**Home & Office**

## Door Chime

**Features**

- ★ **Dual tone bell sound**
- ★ **Adjustable pitch**
- ★ **Ni-Cd charge and back up facility**
- ★ **Compact and attractive design**
- ★ **Can be powered from AC bell transformer, or batteries**

**Applications**

- ★ **Homes, shops and offices**
- ★ **Theatre productions**
- ★ **Shop door announcer**

Construct this simple-to-build, compact and pleasant sounding two-tone door chime.

The two-tone chime, which is adjustable in pitch, is triggered from your existing bell push, or by another suitable switch of your choice. The circuit can be operated from either batteries (which will last a long time, due to the low power consumption), or from an AC mains transformer, or even both if you wish, since built-in charging circuitry is incorporated to accommodate nickel-cadmium back-up cells, so that your door chime will still operate during power cuts.

**Specification**

Maximum AC current consumption:	130mA
Standby AC current consumption:	8mA
Maximum DC current consumption:	95mA
Standby DC current consumption:	1µA
AC voltage range:	8 to 16V
DC voltage range:	3 to 25V
Battery requirement:	4 x 'AA' 1.2V Ni-Cd or 1.5V dry cells
PCB dimensions:	50 x 50mm

**Optional Items**

The following optional items, not included in the kit, may also be required.

8Ω 0.3W Miniature Loudspeaker		
Type 668	1	(WB13P)
Bell Push	1	(FS17T)
'AA' 500mAh Ni-Cd Battery	4	(AG13P)
'AA' Alkaline Battery	4	(ZB47B)
4 x 'AA' Battery Box	1	(HF29G)

PP3 Battery Clip	1	(HF28F)
White ABS Box Type BM11	1	(CC81C)
Bell Transformer	1	(FL37S)
4 Pairs of 1in. Velcro Squares	1 Pkt	(FE45Y)
M2.5 x 10mm Pozi-drive Screw	1 Pkt	(JC68Y)
M2.5 Steel Nut	1 Pkt	(JD62S)
Zip Wire	1m	(XR39N)
Bell Push	1	(FS17T)

**Kit and Special Parts**

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 95 XA95D, and instruction leaflet XV68Y.

**Retail Unit Price each (inc. VAT).**

Order Code	Type	Price each exc. VAT	inc. VAT each
LU16S	Door Chime Kit	£8.500	£9.990
GJ27E	Door Bell PCB	£1.690	£1.990
XV68Y	Door Bell Lift	£0.800	£0.800 NV

**Multi-Tone Chime**

A versatile multi-tone chime unit for use in door bells, toys and annunciators. One, two or three tones triggered by 3 different push buttons. This unit also features adjustable tone, volume, an output power of 0.3W and a standby current of only 10µA. Operation is possible from either 6 to 9V AC at 0.2A or from a 4.5V (3 x 1.5V) power source. Supplied with full operating, construction and installation instructions.

**Retail Unit Price each (inc. VAT).**

## Telephone Bell Repeater 2

### Features

- ★ Easy to build and install
- ★ No direct connections to telephone
- ★ LED and sound annunciators
- ★ Can be used with 418MHz Encoded Radio Tx/Rx (LT87U and LT88V)

### Applications

- ★ Telephone repeater
- ★ Whistle switch

Quite often, the telephone cannot be heard in other parts of the house, or in the garden, shed or garage. This is where this simple Phone Repeater is very useful, to those people with only a single phone socket (or even a hard-wired phone). The Telephone Bell Repeater 'sits' beside the telephone, and a piezo buzzer is remotely wired from the Telephone Bell Repeater (using zip wire) to the required 'repeat' position. When the telephone rings, the LED illuminates and the buzzer beeps in time with the ringing pattern. A purely audible connection is all that is required since direct connection of non-approved apparatus to the public telephone network is strictly prohibited.

The applications are not limited to this sole purpose, as it can be used equally well as a whistle switch, or possibly a baby alarm.

The Telephone Bell Repeater requires a stabilised supply (preferably regulated), a 12V battery pack will not suffice, as a change in supply voltage will cause variations in the oscillator frequency.

### Specification

Power supply voltage:	12 to 24V DC
Current consumption	
Quiescent current @ 12V:	10.5mA
Operating current @ 12V:	19.4mA
Operating current @ 24V:	39mA
Input nominal frequency measured at 12V:	240Hz to 1400Hz

### Optional Items

The following items, not included in the kit, may also be required.

ABS Box Type MB1	1	(LH20W)
9.5mm Standard Grommet	1	(JX63T)
M3 Insulated Spacer	1	(FS36P)
Chassis Phono Socket	1	(YW06G)
Phono Plug Black Screw Cap	1	(HQ54J)
2.5mm Panel Mount Power Socket	1	(JK10L)
Regulated AC Adaptor	1	(YB23A)
Zip Wire	As Req	(XR39N)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 83 XA83E, and instruction leaflet XU91Y.

### Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LT67X	Telephone Bell Repeater	£11.050	£12.990
GH83B	Tel Bell Repeater PCB	£2.970	£3.490
XU91Y	Phone Bell Rptr Lft	£0.800	£0.800 NV

## Mains Power Conditioner 2

- ★ High-grade filtering in both directions
- ★ Passive operation, no power required by circuit
- ★ Up to 1.44kW continuous load
- ★ Direct in-line connection to equipment
- ★ Includes over-voltage spike suppressors

Safeguard your sensitive mains powered electronic equipment, enhance their operating performance, and lengthen their life span, by using this project to filter out all the noise and voltage fluctuations that may be present on the domestic mains supply. This can arise as a result of inconsiderate neighbours using electric power tools, triac-switched devices and the like. This filter is particularly effective for use with computers, Hi-Fi, and TV/satellite sets – every home should have one (or several)!

### Specification

Operating voltage range:	230 to 250V AC domestic mains
Continuous load:	6A @ 240V AC max.
Continuous power:	1.44kW @ 240V AC
Visual indicators:	'Power on' neon lamp
Overcurrent protection:	T6-3A time-delay fuse
Insulation classification:	7A/10A mains plug fuse Class 1, earth to equipment, plastic casing
PCB dimensions:	189 x 101mm
Case dimensions:	197 x 110 x 56mm

### Kit and Special Parts

A complete kit of parts (including the PCB) is available. The stick-on front panel and PCB are available separately. Full construction details may be found in Maplin Magazine/Projects Book 91 XA91Y, and instruction leaflet XV28F.

### Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LT81C	Mains Power Condtr	£31.480	£36.990
GJ19V	Mains Pwr Cond.PCB	£5.520	£6.490
KP89W	Mains Cond Label	£2.110	£2.490
XV28F	Mains Pwr Cond Lf	£0.800	£0.800 NV

## Mains Failure Alarm 2

### Features

- ★ Easy to build and use
- ★ Compact, self-contained unit within wall plug-type casing
- ★ Visual and audible indication of mains failure
- ★ Built-in Ni-Cd battery backup and charging circuitry

### Applications

- ★ Kitchens and catering areas
- ★ Computer rooms
- ★ Factories, warehouses, offices

A corruption in the normally dependable mains power supply can cause disruption, nuisance and expensive damage to equipment used within the home and at work. Using this project gives an immediate warning of failures in the supply of mains electricity. The unit gives both an audible alarm, and visual indication, by means of a flashing LED, of a

mains supply failure. When the mains supply is re-established, the sounder will be muted, whilst the 'Fail' LED remains flashing to alert you to the fact that there was a power cut. Reset the tripped alarm by unplugging the unit, then replugging the unit back into the 13A outlet socket. Battery back-up, comprising of an internal Ni-Cd rechargeable battery, and maintained by a built-in charging circuit, powers the circuitry during the mains supply failure. The alarm is built into a self-contained, compact housing, which incorporates a 3-pin wall plug, allowing direct connection to the mains via any convenient wall socket. A second LED (non-flashing) indicates that mains power is being supplied during the standby state, confirming that the unit is ready and waiting for a mains supply failure.

### Specification

Power supply:	UK domestic mains 230V, 50Hz AC, and 7.2V Ni-Cd PP3 back-up cell
(standby; mains power):	5.5mA
(activated; battery power):	10mA Battery trickle charge current:
Case dimensions:	68 x 85.5 x 61.5mm
PCB dimensions:	143 x 49mm
Mains failure indicators:	Flashing LED and piezo-ceramic sounder

### Kit and Special Parts

A complete kit of parts is available, including the PCB and the front panel label. The PCB and front panel Labelare also available separately. Full construction details may be found in Maplin Magazine/Projects Book 95 XA95D, and instruction leaflet XV70M.

### Retail Unit Price each (inc. VAT).

XV70M	Mains Fail Alm Lft	£0.800	£0.800 NV

## Meteorology

### Weather Satellite Reception

## Mapsat 2 Weather Satellite Receiver

A superb VHF weather satellite receiver, covering the 137 to 138MHz band. This fully synthesised receiver has many features including 24 memories, scanning, LCD display showing frequency, signal strength, AFC lock, and 'mode'. With a suitable antenna (LM00A), the unit will receive transmissions directly from the polar orbiting weather satellites, such as the Russian Meteor series or the American NOAA series. In addition, it will receive transmissions from the geostationary weather satellites (Meteosat for the UK & Europe) via a suitable down-converter and antenna. This ready built mains powered unit has connections on the rear for two antenna, and each antenna socket also has +12V DC to power pre-amps such as LT73Q (as featured in Electronics – The Maplin Magazine issue 81) and/or a down converter. An output is provided for a monitor loudspeaker, and an audio output, via phono connector, for a suitable interface to a PC (AQ50E). A review of this receiver will be found in issue 85.

## Weather Satellite Receiver PC Interface

NEW LOW PRICE

This PC interface and software for the Weather Satellite Receiver (AQ49D) will decode and produce images on a suitable PC that can be saved and printed. Easy-to-use, the menu driven software requires an IBM AT or compatible (286 12MHz processor minimum), with at least a VGA monitor and a minimum of 1Mb of free space on a hard drive. In addition, space will be required for stored images which can be up to 1Mb each in the highest resolution mode. The interface is designed to convert weather satellite transmissions from APT format into a high resolution PC display (a SVGA display will be required for the full 256 colour display). The interface accepts the Audio WEFAX (APT format) standard and provides RS232 data via a standard 25-way D-type connector. A suitable lead for connecting to a computer is supplied. The software will allow 'auto-capture' (scheduled by time) or 'free capture' (all images that are transmitted). The received black and white pictures can be saved and 'coloured', and then converted to a standard format (TIF, GIF), displayed and even printed.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
AQ50E 1	Mapsat 2 PC Interface	£85.090	£99.990

## Satellite/VHF Aerial

3

A very important part of any radio communication system is the aerial and, although there are many different types, the easiest to use for weather satellite work on the VHF band is a crossed dipole aerial. Since such an aerial has a horizontally polarised omnidirectional polar pattern it means that, once in place, it is not necessary to align the aerial to the satellites passing overhead. A highly recommended accessory to boost the received signal, is the VHF/UHF preamp as covered in Electronics Issue 81. The VHF/UHF preamp is easily fitted, and of course can be used with the MAPSAT2 Receiver, or any other type of receiver that covers the VHF/UHF spectrum. The preamp should be mounted on the mast itself. All the parts required for the construction of the aerial are provided in the kit, with the exception of a wooden broom handle for the support pole. This item should be available from most hardware stores. The broom handle, if not already varnished or painted, should receive such treatment before the construction of the aerial begins.

### Optional Items

The following items, not included in the kit, may also be required.

Wooden Pole 25.4mm dia.	1
Wood Screw	1

### Kit and Special Parts

A complete kit of parts is available (excluding optional items). The aerial rods (four required) are

available separately. Full construction details may be found in Maplin Magazine/Projects Book 85 XA85G, and instruction leaflet XT94C.

Retail Unit Price each (inc. VAT).

YM58N	Aerial Rod	£2.110	£2.490
XT94C	Sat Aerial Leaflet	£0.500	£0.500 NV

## Weather Monitoring

### Weather Monitoring System

3

Be your own Bill Giles with this superb meteorological monitoring system. This project is in two halves, an outside unit which gathers data on wind speed and wind direction and an indoor unit which displays the data gathered. An analogue meter shows the wind speed in mph and knots, and a 16 point LED compass display shows the wind direction. Wind speed meter can be set to 22 knots (25 mph) or 87 knots (100 mph) full scale reading. Wind direction may be electronically damped (4 settings) to counter effects of turbulence. Additionally an optional digital temperature module gives a readout of inside and outside temperatures. Note: hardware (i.e. mechanics) and electronics are ordered separately.

## Display Unit Kit

### Optional Items

The following items are not included in the display unit kit, but may also be required.

Contact adhesive	1 off	(FL44X)
Temp/clock module	1 off	(FE33L)
Ext probe for temp/clock module	1 off	(FE34M)
Min/max temp module	1 off	(FP64U)
Ext low temp min/max probe	1 off	(FP65V)

## PC Weather Station 2

25

- ★ Intended for use with the Wind Speed and Direction Sensor outdoor units ('Electronics' Issue 31)
- ★ Easy to build and set up
- ★ Can be used on any PC or compatible – minimum requirements: 8086, 512k RAM, mono text, single floppy drive.
- ★ Upgrading the existing Weather Station project (Electronics Issue 33) – both systems can be run from the outdoor units.
- ★ Expandable – up to 8 extra sensors may be added (add-on board LT51F, using an inexpensive analogue-to-digital converter (ADC) chip)
- ★ Accessible via easy-to-write BASIC routines (listings supplied)
- ★ All signal inputs/outputs via optoisolators for minimum risk of ESD damage to the host computer

Using the existing Wind Speed (LM87U) and Direction Sensor (LM88V) kits ('Electronics' issue 31), the PC Weather Station Card has been designed to either complement the Weather Station indoor unit (LM96E), which was covered in 'Electronics' Issue 33, or to present a computer-based alternative capable of monitoring, displaying and recording the wind speed and direction. The addition of the vast level of computing power that modern PCs provide allows data logging to be easily achieved with suitable software, enabling the information to be processed (e.g., trends in wind speed to be followed over a 24-hour period). The power of the PC will also be useful when other devices are connected and options on the PCB allow for this expansion. In addition, control systems can be implemented which could be used to operate, for example, a gale alarm.

### Optional Items

The following items, not included in the kit, may also be required.

R2,R9	1k	8	(M1K)
R11,R12	560Ω	2	(M560R)
RN2	10k	1	(RA30H)

C6	100nF 16V Minidisc	4	(YR75S)
C7	10µF 16V Tantalum	3	(WW68Y)
IC8	74HC4051	1	(UF06G)
IC9	4094BE	1	(QW54J)
OP1,2	ILQ74 Quad Optoisolator	2	(YY63T)
FS1	Fuse 20mm 1A	1	(WR19V)
FS2	Fuse 20mm 250mA	1	(RA06G)
	20mm Fuseholder with Cover	2	(KU29G)
	6-Core Screened Cable	As req.	(XR26D)
	37-Way 'D' Plug	1	(FV71N)
	37-Way 'D' Hood	1	(JB66W)
	16-Pin DIL Socket	4	(BL19V)
	PC Weatherstation s/w	1	(LW11M)

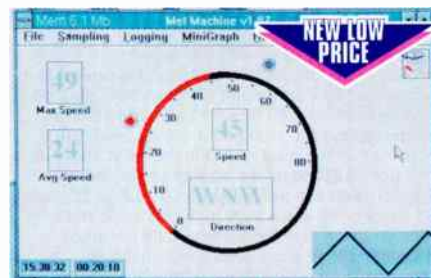

### Kit and Special Parts

A complete kit of parts (including the PCB and software) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 70 XA70M, and instruction leaflet XU31J.

Retail Unit Price each (inc. VAT).

Order Code	Type 3404	Price each exc. VAT	inc. VAT each
LT28F	PC Weather Station	£32.330	£37.990
GH53H	PC Weather Stn PCB	£14.030	£16.490

## PC Weather Station Software

### Features

- ★ Analogue and digital display
- ★ Selectable graphical display
- ★ Adjustable logging rate
- ★ Average and maximum wind speed display
- ★ Real-time clock and elapsed logging time displays

### Applications

- ★ PC Weather Station
- ★ PC Weather Station emulation software

This software was developed specifically for use with the PC Weather Station project (LT28F), as featured in Maplin Magazine Issue 70, and will run on any IBM compatible PC operating under Windows™ 3.x or Windows™ 95. Easy to use, the software enables the simultaneous analogue and digital displaying of wind speed and direction, within an attractive window on your PC's monitor. Additionally, the software computes and displays a real-time clock, elapsed monitoring time, average and maximum wind speeds, and both instantaneous and selectable graphical representation of the variables being measured by the PC Weather Station hardware, with features including adjustable monitoring (logging) rate. Supplied on a 3.5in. floppy disk.

### Optional Items

The following items may also be required.

PC Weather Station Card	1	(LT28F)
Wind Direction Kit	1	(LM88V)
Wind Speed Kit	1	(LM87U)
Wind Hardware Kit	1	(LM90X)

Retail Unit Price each (inc. VAT).

LW11M	Weather Station	£4.240	£4.990

## TLC548 8-Bit Analogue-To-Digital Converter 2

### Features

- ★ Cost effective with high performance
- ★ Low power consumption
- ★ Conversion time 17µs (max)
- ★ Differential reference input voltages

### Applications

- ★ Interface sensors to the PC Weather Station
- ★ 8-bit resolution Analogue-to-Digital converter
- ★ Serial interface with tri-state data output

The TLC548 is a very powerful IC, suitable for a multitude of tasks, and is based on an 8-bit, successive approximation sample-and-hold, Analogue-to-Digital (A-to-D) converter, which makes 8-bit A-D conversion easy, cost effective and usable. The device is capable of up to 45,500 conversions per second, and needs only one external control signal. The specially designed PCB can be tailored for any task within the IC's specification, but the module was developed mainly for use with the PC Weather Station project. The IC is a complete data acquisition system on a single chip, designed for serial interfacing with a microprocessor or computer via a tri-state, TTL compatible data output port and an analogue input port. It includes versatile control logic and on-chip sample-and-hold that can operate automatically or under microprocessor control. Voltage requirements for the IC are between -3V and +6V DC with, typically, a low power consumption of 6mW. The differential high impedance reference inputs provide circuit isolation from logic and supply noise. The analogue input can be any voltage within the range of 0 to 5V DC; the corresponding digital output is a value between 0 and 255, proportional to the input voltage. The kit instructions include details of applications for a light sensor, temperature sensors and potentiometer position sensor. Details for an external clock oscillator circuit, which is required if the module is not used with the PC Weather Station project, is also given. In addition, modules can be cascaded using a 'master/slave' system (the 'master' board has the clock and power supply connected). Up to eight modules can be used in this way, but you will need suitable multi-way inputs, such as the 24-Line I/O Expansion Kit (Order Code LP12N). An ABS box type MB1 (Order Code LH20W) can be used to house up to three TLC548 boards.

### Optional Items

300mA Unregulated AC Adaptor	1	(XX09K)
ABS Box MB1	1	(LH20W)

### Kit and Special Parts

A complete kit of parts, including the PCB, is available (but excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 75 XA75S, and instruction leaflet XU56L. The Maplin 'Get-You-Working' Service is not available for this project.

Retail Unit Price each (inc. VAT).

## Model Railways

### Train Controllers

#### Digital Multi-Train Controller 4

- ★ 14 locomotives individually controlled on the same track
- ★ Any 4 locos controlled simultaneously
- ★ Automatic short circuit protection
- ★ Supply always present for carriage lighting, etc.
- ★ Remote control and computer interfacing
- ★ Low-cost, two wire system
- ★ Receiver has modern microprocessor technology

Railway enthusiasts have for many years appreciated the need for a control system that enables trains to be driven as if the operator were in the driving cab of the locomotive. This not only means the control of speed and direction of the locomotive, but also the ability to move anywhere on the layout without the need for track isolation or switching, thus making the wiring of the layout much simpler.

This system fulfils all these needs by producing a constant 18V DC on the track with digital information superimposed on it, to which only a selected train or trains will respond. The permanent track voltage also means that locomotives' headlights, carriage lighting and many accessories may be used unaffected by the speed of the trains. This system can control up to 14 locomotives all on the same track, and any four of these may be driven independently at one time. Provision is also made for any or all of the four control units to be operated by a 7-bit digital input, thus enabling remote control either from hand-held units (using wire or radio) or from a home computer, giving full control of direction and speed.

The completely redesigned receiver module uses the very latest PIC16C54 IC which replaces most of the components used in the original design.

Other advantages are a smaller PCB that has a 'breakable' power section, allowing the controller to be fitted in restricted spaces such as, such as Scalectrix, trams etc.

The common/PSU kit includes all the parts to build the common board and PSU. A suitable punched and painted aluminium case with sloping front is also available.

#### Kits and Special Parts

A complete kit of parts for the common board and PSU (including the PCB, PSU, and front panel, but not the case) is available. Additionally, a kit of parts for one train controller (up to four will fit in the case) is available. The common board, controller and receiver PCBs are all available separately.

Full construction details may be found in Maplin Magazine/Projects Book 71 XA71N, and instruction leaflets XK83E and XU40T.

## Control-A-Train

1

- ★ Pulse width modulated for excellent low speed performance
- ★ Inertia control of momentum and braking
- ★ Box or panel mounted
- ★ Easy to build
- ★ Low cost

Things have moved on from the days when model train controllers were little more than a rectifier and a high power potentiometer (called a 'rheostat'), and using modern electronic devices it is possible to produce a simple controller that has quite advanced facilities. This design is based on just two operational amplifiers but it has a pulsed output for good starting and low speed performance, plus simulated inertia, momentum and braking. It also has output current limiting which protects the circuit when the inevitable overloads and short circuits occur. The unit is designed to operate from the 15V AC output from a train transformer or from the 15V AC auxiliary output of a train controller, or it could easily be built as a self-contained unit having its own built-in mains transformer if desired although details are not given for this. It should also operate from the 12V DC output of a train controller or transformer unit.

This controller uses the method of pulse control; the idea is to provide a series of output pulses that drive the motor at full power. The average output voltage (and thus the speed of the train) is varied by altering the mark-space ratio of the output signal. A must for all serious model train enthusiasts looking for a lifelike, hands-on-throttle feel for their models.

#### Kit and Special Parts

A complete kit, excluding case and 4mm wander plugs is available. The PCB, printed stick-on front panel and heatsink bracket are also available separately. Full construction details may be found in the Best of Maplin Projects Book 6 XC06G, and instruction leaflet XT50E  
PCB dimensions: 112 x 51mm.

## Signalling

### Model Train Signal Lights 2

In response to customer requests for more model train projects, we have developed a simple 2, 3 or 4-aspect signal light system for single direction or dual track systems. Different signal aspects may be required for different applications and situations, so built in is the ability to select aspects with a single PCB link.

In normal operation, sensors, which are embedded in the track, will be triggered by the train travelling over them. If reed switches are used, a small magnet may be required to activate each switch. This can be achieved by fixing the magnet to the underside of the train or carriages. As long as the distance between the magnet and the reed switch is small enough to allow correct switching, the control unit takes care of the rest. In some cases the reed switches operate normally due to the close proximity of the magnets in the train's electric motor.

#### Optional Items

The following items, not included in the kit, may also be required.

ABS Box PX4	1	(YU55K)
10-way Ribbon Cable	As Req	(XR06G)
Magnet Small	1	(FX71N)
Magnet Large	1	(FX72P)

#### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 86 XA86T, and instruction leaflet XV13P.

## Sound Effects

### Model Train Chuffer

2

- ★ Realistic chuff and hiss of steam
- ★ Chuffer automatically changes with speed
- ★ Hiss of escaping steam when train stationary
- ★ Adjustable chuff rate
- ★ Adjustable tonal quality

One effect that is normally missing from a model steam train set so making it less realistic, is the sound of a chuffing engine. The Chuffer project produces a realistic 'chuff' whilst the train is in motion, and also produces a hissing sound which emulates escaping steam whilst the train is at a standstill. An external amplifier and a power supply of up to +36V DC (absolute maximum) are required for use with the Chuffer. Adjustment of the 'chuff' rate can be made to match the train speed. Once in operation the changes in track voltage will be picked up and the Chuffer rate will alter automatically and lend realism to the model steam train set-up.

#### Specification

Supply voltage DC:	+15.5 to 36V DC
Supply current	
quiescent:	15.3mA
operating:	17.1mA
Output signal level (nominal):	1V rms
Track control voltage range:	16V maximum

#### Optional Items

The following items, not included in the kit, may also be required.

Multi-purpose ABS Box Type MB3	1	(LH22Y)
Chassis Phono Socket	1	(YW06G)
2.5mm Power Socket	1	(JK10L)
Red Terminal Posts Small	2	(FD72P)
M3 x 10mm Insulated Plastic Spacer	2	(FS36P)
2A Hookup Wire Black	10m	(BL00A)

#### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 79 XA79L, and instruction leaflet XU71N.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LT39N	Train Chuffer Kit	£11.050	£12.990
GH80B	Train Chuffer PCB	£3.390	£3.990
XU71N	Train Chuffer Lift	£0.800	£0.800 NV

### Model Train Horn/Whistle

2

#### Features

- ★ Two digital sound samples
- ★ Three trigger inputs
- ★ Two trigger modes
- ★ Power on reset

- ★ Playback LED
- ★ Variable playback speed
- ★ Signal mixing for linked module playback operation
- ★ High level and low impedance output
- ★ Superior sound quality

#### Applications

- ★ Model train sound effects
- ★ Novelty doorbell
- ★ Alarm siren

What train layout would be complete without a realistic train horn/whistle generator? This project uses actual recordings of a two-tone train horn and steam train whistle, digitally sampled and stored on an EPROM. Playback of each sound can be triggered from push switches or even reed switches embedded in the track. In addition, an audio mixer is provided on the PCB, allowing the signal outputs of additional playback modules or the Model Train Chuffer kit (LT39N) to be combined.

#### Specification

Supply voltage:	+8V to +15V DC
Supply current at 12V	
quiescent:	6mA
operating:	19mA
Regulated output voltage:	+5V DC
+5V DC output current:	50mA maximum
Output signal level:	1V rms (nominal)
Output impedance load:	1k
Mixer input level:	1V rms (nominal)
Mixer input impedance:	100k
D/A sampling rate:	6kHz
Playback cut-off frequency:	3kHz
Clock frequency range:	4kHz to 10kHz
Trigger input 1:	Two-tone diesel horn (2-73s)
Trigger input 2:	Steam whistle (2-73s)
Trigger input 3:	Diesel horn and steam whistle (5-46s)

Trigger modes:	One-shot or repeat
External reset input:	+5V DC to reset system
Playback status output:	+5V DC low during playback
Assembled module dimensions:	94 x 85 x 15mm

If you only require a small low power amplifier, the TDA7052 1W Amplifier kit (LP16S) is well suited for this purpose. However, it will require a small modification to make it compatible with the rest of the system; this involves increasing the value of its input attenuator resistor R1 from 1kΩ to 100kΩ.

#### Optional Items

The following items, not included in the kit, may also be required.

Reed Switch	As Req.	(FX70M)
Small Magnet	As Req.	(FX71N)
Large Magnet	As Req.	(FX72P)
Push Switch	As Req.	(FH59P)
Sub-Miniature Push Switch	As Req.	(JM47B)
Sub-Miniature Toggle A Switch	As Req.	(FH00A)
Sub-Miniature Toggle B Switch	As Req.	(FH01B)
AC Adaptor Regulated	1	(YB23A)
Model Train Chuffer Kit	1	(LT39N)
TDA7052 Kit	1	(LP16S)
100k Miniature Resistor	1	(M100K)
1.5W Low Cost Speaker	1	(YT25C)
127mm (5in.) Plastic Horn	1	(XQ73Q)
Single-Core Lapped Screen Cable	As Req.	(XR13P)

#### Kit and Special Parts

A complete kit of parts (including the PCB and programmed EPROM) is available (excluding optional items). The PCB and programmed EPROM are also available separately. Full construction details may be found in Maplin Magazine/Projects Book 83 XA83E, and instruction leaflet XU79L.

## Train Effects Generator Kit

This module uses a single HT82113 chip, which is directly bonded and linked to the PCB and protected in a resin seal. The IC can synthesise four different train sounds: 3 whistles, chuffing, level crossing bell and crossing a bridge. Each of the four sounds are selected by one of four active-low, edge triggered inputs. The IC also generates up to three active-low trigger pulses for cascading other modules. Circuit standby current is 100µA, including automatic power-down to 1µA. Speaker and output driver transistor are provided in the kit.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
WEB4U	Train Sounds Kit	£5.940	£8.990

## Novelty & Seasonal

## Sirens & Sound Effects

### Siren Sound Generators

1

#### Features

- ★ Simple construction - ideal for beginners
- ★ Three different sounds available
- ★ Many novel and amusing uses
- ★ Flexible PCB allows simple option selection
- ★ Automatic power off to prolong battery life

#### Applications

- ★ Add sound to models and toys
- ★ Audible warning devices
- ★ Amusing gifts

These kits provide a choice of three different siren sounds and are ideal for novelty, toy and alarm applications. LU85G produces a car alarm siren sound, LU88V produces a USA police car siren sound and LU89W produces a wailing police car siren sound. Various options are offered, the simplest using only two components and a piezo sounder which are all provided. An optional speaker can be used for louder sounds. For simple applications, power can be provided by 2 x 1.5V cells. To cater for a wide range of applications, a regulator IC is supplied with each kit so that, when fitted to the PCB, allows supply voltages up to 24V DC to be used. Triggering can be realised using touch pads, TTL/CMOS logic or standard switches.

#### Specifications

Operating voltage	2.4V to 24V DC
Stand by current	1µA at 3V DC

#### Optional Items

Loudspeaker 8Ω Type 388	WB04E
Plastic 5in. Horn Speaker	XQ73Q
Triangular Touch Pad	HY01B

#### Kit and special parts

A complete kit of parts is available. A PCB, which is the same for all 3 kits is available separately. Full constructional details may be found in Maplin Magazine/Projects Book 112 XD12N, and instruction leaflet XZ42V.

Retail Unit Price each (inc. VAT).

## HT2860 Siren Sound Generator

1

### Features

- ★ Single Power Supply 2.4V to 4.5V
- ★ Low stand-by current (1µA typically at 3V)
- ★ Auto power-off
- ★ Six different sounds
- ★ Variable pitch control
- ★ Speaker or piezo sounder outputs
- ★ Current limited LED output

### Applications

- ★ Source sounds for security devices
- ★ For use in model toys
- ★ For use in local alarm systems

The HT2860 is a CMOS LSI IC capable of six different alarm sounds and is specially designed for sound effect applications. Each of the six sounds can be either played independently by triggering one of the key inputs, or can be cascaded, according to the key priorities, by triggering more than one key simultaneously. The device can directly drive a piezo transducer, or a loudspeaker driven through a driver transistor. Additionally, the IC can source enough current to drive an LED via a suitable series resistor. The information given in the article that appeared in issue 90 of Electronics – The Maplin Magazine should be enough to allow you to tailor the specially designed PCB for any task within the device's specification. The applications for the HT2860, as described, are mainly in the context of providing source sounds for security devices or model projects.

### Optional Items

The following items, not included in the kit, may also be required.

Loudspeaker	1	(WB04E)
Piezo Sounder	1	(FM59P)
AA Cells	1 Pkt	(YU65V)
AA Battery Box	1	(YR60Q)
Battery Clip	1	(HF28F)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is available separately. Full construction details may be found in Maplin Magazine/Projects Book 90 XA90X, and instruction leaflet XV51F.

Retail Unit Price each (inc. VAT).

## HT82231 Sound Generator

1

- ★ 12 different animal sounds
- ★ Compact, snap-off PCB design
- ★ On-board amplifier
- ★ Low operating voltage
- ★ Very low standby current
- ★ Alternately flashing LEDs

This easy-to-build project captures the realistic sounds of an elephant, and eleven different farm animals, in one handy unit! Use it to add another dimension to toys and games or theatre productions, films, etc., or simply for fun whenever the mood takes you! Alternatively, the unit could be adapted for use as a novel doorbell or door announcer – great for pet shops, farm produce stores and such like! Sounds include an elephant, dog, bird, duck, hen, frog, pig, sheep, cow, cat, cock and a horse.

### Specification

DC power supply:	2.4 to 5.3V (3V nominal)
DC standby current:	30mA
DC maximum current:	200mA
Output impedance:	8Ω
Battery requirement:	2 x 1.5V ('AA' cells)
PCB dimensions:	45 x 75mm

### Optional Items

The following items, not included in the kit, may also be required.

8Ω Min Loudspeaker Type 578	1	(WB09K)
Sub-min PCB Switch Type 105B	1	(KR90X)
2/3 'AA' size Battery Box	1	(YR60Q)
PP3 Battery Clip	1	(HF28F)
Duracell 'AA' Alkaline Batteries	1	(JY48C)
Ribbon Cable	1	(XR07H)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is available separately. Full constructional details may be found in Maplin Magazine/Projects Book 93 XA93B, and instruction leaflet XV48C.

Retail Unit Price each (inc. VAT).

## K4401 Sounds Generator

1

### Features

- ★ 10 different sounds
- ★ Drives 8Ω loudspeakers
- ★ Adjustable pitch/speed
- ★ Reverse polarity protection

### Applications

- ★ Sound effects

- ★ Disco jingles
- ★ Games and toys
- ★ Alarms

This pre-programmed sound generator is ideal for use in sound effects production, disco jingles, games and toys. The sounds that the completed unit generate are:

1. Tune: 'Wild Charge Tune'.
2. Mortar shot and explosion.
3. Explosion.
4. Car tyre screech.
5. Tune: 'Snake Charmers Tune'.
6. Car engine (up/down rpm).
7. Phasor gun.
8. European siren.
9. Machine-gun and bullet impact.
10. USA siren.

The tempo of each effect is adjustable, so increasing the unit's versatility. The sounds are created using a peripheral interface controller (PIC), microprocessor-based IC, and the finished unit has provision for direct connection to an 8Ω loudspeaker. Additionally, a line level output is provided for connection to a mixer or amplifier.

### Specification

Power requirements:	8V to 10V DC
Standby current:	11mA
Maximum current:	100mA
Output	
Loudspeaker:	1W into 8Ω
Line:	1V rms

### Optional Items

The following items, not included in the kit, may also be required.

Sub-Min Toggle Switch (Type A)	1	(FH00A)
Hook-up Wire	As Req	(BL00A)
Single-core Screened Cable	As Req	(XR12N)
Low-cost Loudspeaker	1	(YW53H)
300mA Unreg DC Power Supply	1	(XX09K)

## Christmas

### Christmas Star

1

- ★ 4 different LED colours
- ★ Easy to build
- ★ 9V cell or DC supply option

A novelty project brings life to the top of your Christmas tree. This unit is built around the CMOS 4060 IC, a 14 stage ripple counter and oscillator. Synchronised flashing is provided by a bank of LEDs, which can be mounted on to a glittered star. The project can be run from a 9V PP6 cell or a 9V voltage regulator.

Current consumption of 70mA occurs when all LEDs are on, making the life of a PP6 cell approx. 20 hours. A DC mains adaptor able to deliver 300mA, is recommended for prolonged use.

The star itself is not supplied, but this project can be used for other applications.

#### Optional Item

The following item, not included in the kit, may also be required.

PP7 Battery 1 (FM04E)

#### Kit and Special Parts

A complete kit is available and the PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 41 XA41U, and instruction leaflet XK37S. PCB dimensions: 67 x 43mm.

Retail Unit Price each (inc. VAT).

Order Code	Type 3537	Price each exc. VAT	inc. VAT each
LP54J	LED Xmas Star	£9.350	£10.990
GE72P	LED Controller PCB	£1.690	£1.990
XK37S	LED Star Leaflet	£0.500	£0.500 NV

### Christmas Tree

1

- ★ 21 LEDs in 3 different LED colours
- ★ Easy to build
- ★ 9V battery or DC supply option

An easy to build festive project, decorated with 21 low-current LEDs in three different colours, which light in random patterns. The LEDs can be made to light at different rates/patterns which change slowly, quickly or twinkle. The tree can be powered from a battery or a mains adaptor in the range of +9V to +15V. If an unregulated mains adaptor is used, e.g.

XX09K, it should be set to 7.5V or 9V. The nominal current consumption at 9V is only 12mA with all LEDs illuminated, while at 15V it is 36mA.

Supplied with the kit is a full size template of the tree which can be cut out and stuck on a piece of thick card, plywood, hardboard, aluminium laminate or perspex. The holes for the LEDs can then be drilled, cut or punched out, and the tree finally cut out.

#### Optional Items

The following items, not included in the kit, may also be required.

Battery PP3 Alkaline	1	(JY49D)
Power Pack PP7 9V	1	(FM04E)
AC Adaptor Unrg: 300mA	1	(XX09K)
Aluminium Laminate Small	1	(XY19V)

#### Kit and Special Parts

A complete kit of parts (including the PCB and instruction leaflet) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 48 XA48C, and instruction leaflet XT25C. PCB dimensions: 51 x 41mm.

Retail Unit Price each (inc. VAT).

### Christmas Lantern And Flickering Candle

1

#### Features

- ★ Realistic flicker effect
- ★ Easy to build
- ★ Low cost

#### Applications

- ★ Amateur theatrics
- ★ Home video productions
- ★ Nativity scenes
- ★ Carol singing
- ★ Christmas tree light(s) with a difference!

A Christmas project with a difference! Using modern technology, this lantern has several advantages over the traditional wax candle. Not only doesn't it melt away, but you won't burn yourself or set anything alight because a tiny bulb replaces the flame. Neither, of course, will it be extinguished by the slightest breeze! Details are provided with the kit for building a lantern housing for the 'candle', using stiff, painted card. Such materials can safely be used as there is no risk of fire from this particular candle! Materials for constructing the candle and lantern are not included in the kit. The circuit could be used to drive more powerful light bulbs for greater effect; handy for Christmas tree lights or the large nativity scenes that adorn your local church at Christmas time. For greater realism arrays of lights should really be driven from several 'flickering candle' PCBs. Up to 250W of

lighting can be driven when used in conjunction with the Mains Opto Switching kit (LP55K).

Supply Voltage:	9V DC
Peak Operating Current:	166mA
Logic Supply Current:	1.6mA
Size of PCB:	49 x 43mm

#### Optional Items

The following items, not included in the kit, may also be required.

Power Socket 2.5mm	1	(JK10L)
Unregulated AC/DC Adaptor 300mA	1	(XX09K)
Battery Box 3 x AA	2	(YR61R)
PP3 Clip	1	(HF28F)
Duracell PP3 Battery	1	(JY49D)
Duracell AA Cell	6	(JY48C)
Epoxy Resin Sachet	1	(FL45Y)
Card (for constructing candle and lantern)		

#### Kit and Special Parts

A complete kit of parts, excluding optional items, is available. The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 72 XA72P, and instruction leaflet XU41U.

Retail Unit Price each (inc. VAT).

Order Code	Type 3313	Price each exc. VAT	inc. VAT each

## Electronic Games

### Priority Quiz Buzzer

3

#### Features

- ★ Easy to build
- ★ Low cost
- ★ Caters for eight contestants
- ★ Versatile and expandable
- ★ Can drive relays, buzzers, lamps or opto-isolated triacs

#### Applications

- ★ Family fun nights
- ★ Pub quiz nights
- ★ Charity trivia competitions
- ★ Team games
- ★ Reaction testing

Fed up with the incessant arguments over who was the first to answer a question during a quiz? Then this project is for you. Up to eight players can use the Priority Quiz Buzzer, expandable to 16 or 24 contestants if chained to a second or third PCB. Each contestant is equipped with a push-button and accompanying lamp. This is switched on at the moment the button is pressed, while a buzzer attracts the attention of the quizmaster. The circuit uses high-speed latches to record the closure of any one of the eight switches, at which point a self-resetting monostable will lock-out all other buttons. The speed of the system makes it virtually impossible for two buttons to be simultaneously pressed and recorded. The identifying lamp is lit for the duration of the time-out period. Up to eight lamps are driven by open-collector buffers, each able to switch up to 500mA. For higher currents relays can be used (protection diodes are provided). An on-board 5V regulator is included for the circuit logic; the optimum supply for the module is 12V DC to suit most 12V lamps, relays and buzzers.

#### Optional Items

The following items, not included in the kit, may also be required.

MES Batten Holder	8	(RX86T)
MES Lampholder	8	(JX87U)
LES Lampholder	8	(UJ72P)

**Simple Dice Kit**

**Features**

- ★ Ideal for beginners
- ★ Low power consumption - long battery life
- ★ Beeps as dice roll
- ★ Cascadable to replace two or more dice

**Applications**

- ★ Replaces dice in dice based games
- ★ Excellent for travelling games
- ★ Replaces lost dice!

This compact board uses a handful of components to simulate the rolling of dice before showing the 'result' on an attractive led display. The display is arranged in an 'H' to mimic the layout of a typical dice. A dice roll can be started by touch pads supplied in the kit and will generate a random result. Triggering can also be by CMOS/TTL logic or mechanical switch. Automatic power down occurs after a few seconds to extend battery life. Quiescent current is only 1µA at 3.3V DC. Unit requires two 1.5V batteries to operate (not included).

**Optional items**

AA battery box	YR60Q
PP3 Battery Clip	HF28F
Duracell AA x 2	JY48C
Box PB1 Black	LH14Q

**Kit and special parts**

A complete kit of parts is available. The PCB is available separately. Full construction details may be found in Maplin Magazine/Projects Book 112 XD12N, and instruction leaflet XZ43W.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LU78K	Simple Dice Kit	£5.940	£6.990
GJ82D	Simple Dice Kit PCB	£2.970	£3.490
XZ43W	Simple Dice Kit Lft	£0.500	£0.500 NV

**Electronic Digidice**

Most games incorporate a degree of chance in the rules; this random element can take a variety of forms but in many cases it is obtained using dice. With ordinary dice, as long as they are manufactured properly there are unlikely to be any problems with obtaining a random result, however with an electronic version of the die, producing a truly random result can be a problem. The DigiDice uses a high frequency temperature controlled oscillator, a binary counter and a D-type latch to produce a pseudo-random result that should be for all practical purposes comparable with that obtained from a real die. The result is displayed by seven large (8mm) LEDs which are arranged in the traditional dice pattern.

**Optional Items**

The following items, not included in the kit, may also be required.

ABS box	1 off	(LH21X)
Insulated spacer M3 x 25mm	1 Pkt	(FS39N)
Stick-on feet large	1 Pkt	(FW38R)

**Kit and Special Parts**

A complete kit is available. The adhesive front panel is not included in the kit and must be ordered separately. The PCB is also available separately. Full construction details may be found in instruction leaflet XV07H. PCB dimensions 67 x 77mm.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LM89H	Elec Die Kit	£12.750	£14.990

XV07H	Digi-Dice Leaflet	£0.500	£0.500 NV

**K3400 Dual Electronic Dice**

**Features**

- ★ Two independent dice; may be used in 'single die' mode if required
- ★ Displays are switched off after approx. 30 seconds to conserve battery power
- ★ Bright LED display
- ★ Powered by a PP3 battery

**Applications**

- ★ Ideal for playing dice-based games in limited spaces, or on the move!

Board games can be fun, but real dice can be a problem, they fall off the table, allow cheating, and sometimes a player may not see the result. There can be no doubt at all about the result on the display of this electronic dice, and cheating is out of the question! With this modern equivalent, a button is simply pressed and then released, the result being indicated by a pattern of 3mm red LEDs mimicking the standard die's number patterns. Using two fully independent dice, you can choose to play with one or both. Displays are switched off automatically after 30 seconds to conserve battery life. Requires 8V to 12V DC.

**Optional Items**

The following items, not included in the kit, may also be required.

Centre-Off DPDT Toggle	1	(FH05F)
Push-to-Make Switch	1	(FH59P)
Alkaline PP3	1	(AQ48C)
PP3 Battery Clip	1	(HF28F)

**Kit and Special Parts**

## Super Electronic Roulette 2

This Super Electronic Roulette is an electronic version of the well known game played in such places as Las Vegas! The traditional roulette wheel is essentially a random number generator where a ball is thrown over the spinning wheel, which eventually comes to rest at a number. The chances of landing on any one number is approx.  $\frac{1}{37}$  to  $\frac{1}{38}$ . In this version, the wheel is produced by a ring of LEDs which flash in succession producing a spinning effect; this rate eventually slows down and stops. Although the real game is played for very high stakes, this project is intended to be used purely for the fun of playing the game. The kit comes complete in every detail including a plastic front panel and printed circuit board.

### Kit and Special Parts

A complete kit of all parts is available. Full construction details may be found in the Maplin Magazine/Projects Book 29 XA29G.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LM67X	Roulette Kit	£14.450	£16.990

## Live Wire Game 2

### Features

- ★ 'Lives' indicator
- ★ Low voltage operation
- ★ Easy to build

### Applications

- ★ Fund-raising events
- ★ Family fun
- ★ Reducing stress
- ★ Improving hand/eye co-ordination

The traditional 'live-wire' game often suffers from a few shortcomings. Firstly, there is often no clear indication when the loop has just made momentary contact. Secondly, because the contact between loop and wire usually carries the bell current directly, if there is any appreciable contact resistance the bell may not sound properly. Thirdly, differing abilities can mean that it is difficult to provide an interesting game for a wide range of contestants. This project will stop the controversy over whether the 'live' wire was actually touched or not. The design includes a monostable that will positively sound the buzzer for a short period, and a 'lives' counter that permits the contestant a set number of attempts to reach the end before they are all consumed. Once all 'lives' have been lost, an indicator illuminates and a buzzer sounds continuously. The design allows the number of lives to be set (with links during construction) between one and five, and the output can drive LEDs or filament lamps.

The finished unit can be powered from any supply between 9 and 16V DC, and a car battery for outdoor events is ideal. Maximum current consumption at 12V is only 50mA. Alternatively, internal batteries may be added.

### Optional Items

The following items, which are not included in the kit, may also be required.

Battery Box 8 x AA	1	(RK44X)
PP3 Clip	1	(HF28F)
Alkaline AA Cell	8	(FK64U)
Power Plug 2.5mm	1	(HH62S)
Unregulated AC Adaptor 300mA	1	(XX09K)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB and labels are also available separately. Full construction details may be found in Maplin Magazine/Projects Book 78 XA78K, and instruction leaflet XU69A.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LT57M	Live Wire Game Kit	£21.260	£24.990
GH75S	Live Wire Game PCB	£2.970	£3.490

## Opto Electronic Laser Pointer Kit 2

A simple and cost effective kit that forms a handy Class IIIa laser pointer for teachers, lecturers and demonstrators. The kit comprises a moulded plastic box, press button, laser diode, battery connections and two 'AAA' type cells. Simple assembly is involved, the most difficult part being the soldering of the battery contacts. Includes full operating instructions. Also available is a line generating lens (WC98G) for providing a single line of intense light as opposed to a single spot.

CAUTION: Do not stare directly or indirectly into the laser output aperture or retinal damage may occur.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
WC97F	Laser Pointer Kit	£29.770	£34.990
WC98G	Line Generating Lens	£2.540	£2.990

## 12V Fluorescent Tube Driver Module 2

For 12V fluorescent lamps used in caravans, boats, for camping etc, this driver module is of a higher quality than the usual 'starter' circuit normally supplied with such lamps. Although intended to drive one 12V 8W fluorescent tube, it will operate two such tubes with negligible reduction in light output. Final light output strength can be chosen

during construction, and is adjustable to a degree. Nominally consumes about 12W of power, and can be run for up to fifteen hours continuous use from the average car battery. Details of a suitable fluorescent tube can be found in the Opto Electrical section of this Catalogue.

### Kit and Special Parts

A complete kit is available. Full construction details may be found in the Best of Maplin Projects Book 6 XC06G, and instruction leaflet XK66W. PCB dimensions: 56 x 33mm.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LK35Q	Fluor Tube Drvr Kit	£12.750	£14.990
GB62G	Tube Driver PCB	£2.280	£2.690
XK66W	Tube Driver Leaflet	£0.500	£0.500 NV

## Light Level Switch 1

- ★ Adjustable trigger threshold
- ★ Wide supply voltage
- ★ Selectable output state
- ★ Switches currents up to 500mA

The light level switch is a simple light operated switching circuit which operates a relay when the ambient light level rises above or falls below a preset threshold. The module uses an on-board reed relay which is capable of switching currents up to 500mA. For current levels exceeding this the reed can be used to switch an external relay suitable for higher power applications. The reed itself must not be used to switch voltages exceeding 50V or power levels exceeding 10VA. A sensitivity control allows different switching thresholds to be set to allow for a diverse range of lighting conditions. The module can run from a supply of 9 to 12V DC, with a maximum current drain of 19mA max. at 12V. The circuit uses a Schmitt trigger to change state, and the reed relay switching stage can be hard wired or switched to be either normally off, or, with the help of an inverter stage, normally on. In this way the response to light level can also be either way around where either dark or light is a 'normal' condition.

### Kit and Special Parts

A complete kit of parts is available. The PCB measures 44 x 63mm and is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 37 XA37S. PCB dimensions: 63.5 x 44.5mm.

Retail Unit Price each (inc. VAT).

**Panel Meters/Modules**

**Temperature & Humidity Measurement**

**Small Temperature Module FM-880LPEX**

- ★ 11mm High Digital Temperature Display
- ★ 0.1°C Temperature Resolution
- ★ Low Current Consumption
- ★ Buzzer Output
- ★ External Temperature Sensor Probe

A compact and highly accurate temperature module ideal for use in applications where external/remote temperature sensing is required. The module covers temperatures in the range -40°C to +50°C in 0.1°C steps, sampling period is 15 seconds. The external probe is supplied pre-connected to the module, cable length is 3 metres. Provision is made for either internal (silver oxide watch type battery, provided) or external power supply (nominally 1.5V), current consumption is 10µA. Connections are provided for display/setting enabling maximum and minimum temperature points, which are used to trigger a buzzer output. Connections may be made to the module using a 7-way minicon housing (female) and terminals (not supplied).

**Specification**

Temperature measuring range: -40 to +50°C  
 Resolution: 0.1°C  
 Supply current: 10µA (average)  
 Sample period: 15 seconds  
 Operating voltage: Min. 1.25V  
 Nom. 1.5V  
 Max. 1.65V  
 Accuracy: -40 to +25°C, ±1%  
 +25 to +50°C, ±2%  
 External probe length: 3m  
 Battery type: SG13  
 Battery life: 1 year  
 Storage temperature: -20 to +60°C  
 Dimensions: 49 x 29 x 15.2mm

**Pin Functions**

- Pin 1 - +V (1.5V)
- Pin 2 - 0V
- Pin 3 - Buzzer output
- Pin 4 - Display lower temperature limit
- Pin 5 - Lower/higher limit set/reset
- Pin 6 - Advance lower/higher limit
- Pin 7 - Display higher temperature limit

Retail Unit Price each (inc. VAT).

Order Code	Type 3258	Price each exc. VAT			inc. VAT each
		1+	25+	100+	1+
YU07H	Small Temp Mod Ext	£9.350	£7.090	£6.380	£10.990

**Temperature Module**

A very versatile digital thermometer module with the LCD display and circuitry on a small pcb with a 16-way solder edge connection.

The pcb is fixed to a small plastic bracket that houses the battery. The module has an on-board temperature sensor or an external probe or probes may be fitted. By making the appropriate connections to the module the following functions are available:

- ★ Temperature display in °C or °F.
- ★ 12-hour clock display.
- ★ Set minutes and hours of clock.
- ★ Temperature sampling rate once per second or once per 10 seconds.
- ★ Set high and/or low temperature detector.
- ★ Output goes high when high temperature set point exceeded.

- ★ Separate output goes high when below low temperature set point.
- ★ Pulse output when either set point reached.
- ★ 4kHz alarm output for 6 seconds after either set point reached.

The module also has a serial data output and a 13-bit code is sent at every sample-time containing the current temperature in BCD format. A further output transmits the data clock. A comprehensive operations manual is supplied with the module.

It shows how to connect relays to the temperature set point outputs, how to connect a buzzer to the alarm output, and how to connect external probes to the module. Details are also given on the serial data output and how to read it.

**Specification**

Range: -19.9°C to 69.8°C  
 0°F to 159.8°F  
 Resolution: 0.1°C, 0.1°F  
 Accuracy: -10°C to +40°C  
 ±1°C at 1.5V  
 -20°C to -10°C  
 ±2°C at 1.5V  
 +40°C to +70°C  
 ±2°C at 1.5V  
 1° steps  
 Temperature set points: 3 1/2-digit 12.7mm high LCD display  
 Display: 12-hour clock  
 Clock: ±0.5s/day  
 Clock accuracy: 1.5V (1.25V to 1.65V)  
 Working voltage: 15µA approx.  
 Average current: >1 year  
 Battery life: 68 x 35 x 23mm deep  
 Overall size: A plastic bezel is also available for use with the module, size 68 x 35mm and increases overall depth of module to 27mm.  
 External probes are also available:  
 Probe length: 40mm  
 Probe diameter: 7mm at base, 4mm at tip.

The probe is supplied connected to 3m approx, of miniature 2 core cable 2mm diameter with open end. Note that the accuracy of the meter decreases by ±2.5°C per 3m of cable and may be unstable with long wires or cable different from that supplied with probe.

The meter itself will only operate in the temperature range -5°C to +50°C mainly because of the LCD display so for temperatures outside this range, the external probe will be required. Shortening the cable will improve the accuracy. The module requires a 1.5V AA cell (not supplied).

**Applications Information**

Further applications information on using this module may be found in issue 71 of *Electronics - The Maplin Magazine* (XA71N). The article *Using Temperature Modules* gives details of how to interface this module to a PC to measure temperature. Requires Temperature Module Expansion Converter Kit (LM36P) and Programmable PC I/O Card (LP12N) - article includes BASIC program listing. Also, details of how to control relays and a buzzer are included. Requires Temperature Module Relay Card Kit (LM37S).

3

- ★ Serial to Parallel Conversion of Temperature Data
- ★ Hi-Lo Set Point, Switched Relay Outputs and Alarm Sounder
- ★ 1.3V DC Output Eliminates Battery
- ★ Requires 9 to 12V DC Supply

Two versatile temperature modules are currently available from Maplin, known as 'Temperature Module' (FE33L) and 'Min-Max Temperature Module' (FP64U). Both of these modules although similar in appearance have very different specifications. For example, the Min-Max Temperature version has a recall function which stores the highest and lowest temperatures recorded. The Temperature Module is different by having a real time clock and serial data output of the temperature scale. This expansion system comprises two projects, a relay switching card, which may be used with both modules and a serial to parallel converter which can only be used with the Temperature Module. Relay contacts on the switching module are rated at 3A 24V DC and could be used for controlling alarms, bells and buzzers or perhaps be interfaced to a computer. The converter has been designed with tri-state outputs for use with computers with a 1 or 2 byte I/O availability. Either integer or full decimal values of temperature are available along with a few extra items of data. All is explained in the construction notes.

**Optional Items**

The following items not included in the kits may also be required.

AA Battery	1	(AG13P)
Temperature Module	1	(FE33L)
25-Way D Range Socket	1	(YQ49D)
25-Way D Range Socket IDC	1	(FV82D)
Bezel	1	(FE35Q)
External Probe	1	(FE34M)
Min-Max Temperature Module	1	(FP64U)
Low Temp. Probe	1	(FP65V)
High Temp. Probe	1	(FP66W)

**Kit and Special Parts**

Complete kits of parts for both modules excluding the optional items are available. The pcbs are also available separately. Full construction details may be found in the Maplin Projects Book 25.

**Applications Information**

Further applications information on using these modules may be found in issue 71 of *Electronics - The Maplin Magazine* (XA71N). The article *Using Temperature Modules* gives details of how to interface the Converter Kit to a PC to measure temperature. Requires Temperature Module (FE33L) and Programmable PC I/O Card (LP12N). Article includes BASIC program listing. Also, details on using Relay Card Kit are included. Depending on application, requires Temperature Module (FE33L), Min/Max Temperature Module (FP64U), Wide Range Temperature Module (YT99H) or Min/Max Dual Display Temperature Module (YU00A).

Retail Unit Price each (inc. VAT).

## Min/Max Temperature Module

NEW LOW PRICE

A maximum/minimum digital thermometer module with the LCD display and circuitry on a small pcb with a 16-way solder edge connection. The pcb is fixed to a small plastic bracket that houses the battery. The module has an onboard temperature sensor or an external probe or probes may be fitted. By making the appropriate connections to the module the following functions are available:

- ★ Temperature display in °C or °F.
- ★ Set high or low temperature detector.
- ★ Output goes high when set points are exceeded.
- ★ Display high or low temperature settings.
- ★ Set sample rate to once every second or once per 15 seconds.
- ★ Pulse output when either set point is reached.
- ★ 2kHz alarm output for approximately 1 minute when high or low temperature point is reached.
- ★ Recall the lowest or highest temperature reached since last reset.

A comprehensive manual is supplied with the module, it shows how to connect relays to the temperature set point outputs, how to connect a buzzer to the alarm output, and how to connect external probes to the module.

### Specification

Internal Probe:	-5°C to +50°C 23°F to 122°F
Resolution:	0.1°C (0.1°F)
Accuracy:	-5°C to 30°C ±1°C at 1.5V +31°C to +50°C ±2°C at 1.5V
External Probe, White (low range):	-40°C to +50°C -40°F to 122°F
Accuracy	
3 metre cable:	-40°C to -21°C ±2°C at 1.5V -20°C to +25°C ±1°C at 1.5V +26°C to +50°C ±2°C at 1.5V
External Probe, Grey (high range):	+20°C to +110°C 68°F to 230°F
Accuracy	
3 metre cable:	+20°C to +34°C ±2°C at 1.5V +35°C to +75°C ±1°C at 1.5V +76°C to +110°C ±2°C at 1.5V
Sampling Rate:	1 second or 15 seconds
Working Voltage:	1.5V (1.25V to 1.65V)
Average Current:	10µA approx. (at 15 second sample rate)
Battery Life:	>1 year
Overall Size:	68 x 35 x 23mm deep

A plastic bezel (FE35Q) is available for use with the module, size 68 x 35mm and increases the overall depth of the module to 27mm.

External probes are also available:

Probe Length: 40mm.

Probe Diameter: 7mm at base, 4mm at tip.

The probes are supplied connected to approximately 3 metres of miniature 2 core cable 2mm diameter with open end. Note that the accuracy of the meter decreases by ±2.5°C per 3m of cable and may be unstable with long wires or cable different from that supplied with the probes. The meter itself will only operate in the range -5°C to 50°C mainly because of the LCD display so for temperatures outside this range, the external probes will be required. Shortening the cable will improve the accuracy. The module requires a 1.5V AA cell (not supplied).

### Applications Information

Further applications information on using this module may be found in issue 71 of *Electronics - The Maplin Magazine* (XA71N). The article *Using Temperature Modules* gives details of how to control relays and a buzzer. Requires Temperature Module Relay Card Kit (LM37S).

Retail Unit Price each (inc. VAT).

## Wide Range Min/Max Temperature Module

A very versatile minimum/maximum temperature module with the LCD display and circuitry on one small PCB mounted on a battery holder, with a 17-way edge connection. The module uses an external probe to display temperatures in the range -10°C to +110°C with a resolution of one tenth of a degree, in centigrade or fahrenheit. The module records both the highest and lowest temperatures (maximum and minimum) measured by the probe, which are stored and updated in memory, and the max./min. values in memory can be displayed showing the highest lowest temperature reached since the memory was last cleared. The maximum/minimum threshold values are fully programmable. Also included is a 12 hour digital clock, a 4kHz max./min. alarm output, separate outputs for relay drivers or similar which go high for 1 minute if the relevant programmed temperature threshold is reached, and a further output which pulses at 4kHz for 1 minute if either threshold is reached and then remains high until reset. There is a separate connection for a complete system reset. The external probe is included.

### Specification

Range:	-10°C to +110°C
Resolution:	0.2°C, 0.2°F
Accuracy:	-10°C - 0°C ±1.5°C @ 1.5V 0°C - 60°C ±1°C @ 1.5V 60°C - 110°C ±1.5°C @ 1.5V
Sampling rate:	1 or 10 seconds switchable
Alarm output:	4kHz for 1 minute
Temperature set points:	1° steps
Display measuring range:	°C or °F
Clock accuracy:	±0.5s/day
Working voltage:	1.5V DC (1.25V to 1.8V)
Average current:	10µA approx. @ 10s sample rate
Battery life:	>1 year
Overall size:	68 x 35 x 23mm

A comprehensive manual is supplied with the module showing how to connect a buzzer circuit to the alarm output and relay drivers to the high/low threshold outputs, and connections for the various functions and programming modes. The plastic bezel (FE35Q) can be fitted and increases the overall depth of the module to 27mm. Note that the meter itself and mainly the LCD display will only operate in the range of -5°C to +50°C. The module requires a 1.5V AA cell (not supplied).

### Applications Information

Further applications information on using this module may be found in issue 71 of *Electronics - The Maplin Magazine* (XA71N). The article *Using Temperature Modules* gives details of how to control a buzzer and an LED. Requires Temperature Module Relay Card Kit (LM37S).

YT99H	Temp Mod Wide Range	£11.900	£9.130	£7.400	£13.990

## Min/Max Dual Display Temperature Module

NEW LOW PRICE

A minimum/maximum digital thermometer module with the LCD display and circuitry complete on a small pcb with an 11-way solder edge connection and integral battery holder. In operation the module records both the highest and lowest of external temperatures as measured by the module's own external probe. Maximum and minimum temperatures are stored and updated internally until reset. A max./min. temperature alarm function can be set to output a 2kHz tone upon either threshold being reached for external measurements. Especially useful is the module's ability to display both internal and external temperatures at once, ideal for example for providing at a glance a comparison between indoors and outdoors temperature differences. Temperatures displayed in degrees centigrade. The external probe is included.

### Specification

Internal sensor range:	-5°C to +50°C
External probe range:	-40°C to +50°C
Resolution:	0.1°C
Accuracy:	-20°C - +30°C ±1°C @ 1.5V -40°C - -20°C ±2°C @ 1.5V +30°C - +50°C ±2°C @ 1.5V
Sampling rate:	15 seconds
Alarm output:	2kHz for 1 minute
Temp. set points:	1° steps
Working voltage:	1.5V (1.25V to 1.65V)
Average current:	20µA approx.
Battery life:	>1 year
Overall size:	68 x 35 x 23mm deep

A comprehensive manual is supplied with the module showing how to connect a buzzer circuit to the alarm output and switches for the various functions and programming modes. The plastic bezel (FE35Q) can be fitted and increases the overall depth of the module to 27mm. Operating environment temperature range of module -5°C to +50°C.

The module requires a 1.5V AA cell (not supplied).

### Applications Information

Further applications information on using this module may be found in issue 71 of *Electronics - The Maplin Magazine* (XA71N). The article *Using Temperature Modules* gives details of how to control a buzzer. Requires Temperature Module Relay Card Kit (LM37S) to control a buzzer.

		1+	25+	100+	
YU00A	Dual Disp T Module	£11.900	£9.440	£7.750	£13.990

## Min/Max Humidity Module

A small module in the same style as our temperature modules and specifically designed to measure the relative humidity of air and record the minimum and maximum levels reached at any time since last reset. The module covers the range of 25%RH to 95%RH in 1% steps with a sampling rate of 1 second, and can be placed in a fixed location to monitor humidity, but must only be used indoors. The sensor is internal and no external probe is required. The display normally shows the current humidity value continuously, but will show the minimum and maximum values stored through the use of two momentary action push buttons (not supplied), which are identified by the word 'MIN' or 'MAX' in the display. Both memories can be cleared by holding both buttons down. The display also shows

the words, 'DRY' or 'WET' depending on the humidity. 'DRY' is approximately <53% and 'WET', >67%. There are a total of 11 connections to the module, four of which enable the module to output the currently measured value of either of the two stored values in the form of 4-bit parallel, packed BCD (Binary Coded Decimal). Each line of the 4-bit data packet begins with a pair of sync pulses, followed by its part of a bit pattern that informs the destination device whether the data is the current real-time, min. or max. reading, followed by two bits of binary data making up the two digits (most significant first), interleaved with sync pulses. The remaining data trains are specialised manufacturers codes and can be ignored. Similarly the specialised 'K' terminals can be ignored for most normal applications.

**Specification**  
Measuring range: 25%RH to 95%RH  
Operating range of module: 32%RH to 90%RH, 0°C to 50°C  
Resolution: 1%RH  
Supply current: 20µA (average)  
Sample rate: 1 second

Operating voltage: Min. 1.25V  
Nom. 1.5V  
Max. 1.65V  
Accuracy: ±5%RH between 40 to 80%RH @ 25°C  
±7%RH below 40% or above 80%RH @ 25°C  
Battery type: Single AA cell (not supplied)  
Battery life: >1 year  
Dimensions: 67 x 34 x 26mm

**Pin Functions**  
Pin 1 – display upper humidity limit  
Pin 2 – display lower humidity limit  
Pin 3 – +V (1.5V)  
Pin 4 – BCD output bit 0  
Pin 5 – BCD output bit 1  
Pin 6 – BCD output bit 2  
Pin 7 – BCD output bit 3  
Pin 8 – K1 Not used  
Pin 9 – K2 Not used  
Pin 10 – K3 Not used  
Pin 11 – 0V

Price each shown, but sold only in multiples of 1.

Order Code	Type	Price each exc. VAT	inc. VAT each
ZA38R	Humidity Module	£13.010	£15.290

## Event Counter Counter Module

An electronic Counter Module with 5-digit LCD display. The display increases by 1 every time a positive-going edge is applied to pin 3. A reset is available, and a tone output which can drive a piezo sounder directly and bleeps on every count and on reset. Square wave outputs at 512Hz and 32768Hz are also provided.

**Specification**  
Working voltage: 1.5V DC  
Current: 2µA standby  
8µA average when counting  
Count range: 00000 to 99999 (resets to 00000 after count 99999)

Max. input frequency: 7Hz  
Input voltage range: 1V to 1.5V  
Min. duration pulse: <100µs  
Overall size: 68 x 35 x 24mm  
A plastic bezel (FE35Q) is available for use with this module, size 68 x 35mm and increases the overall depth of the module to 27mm. The module requires a 1.5V AA cell (not supplied).

Retail Unit Price each (inc. VAT).

## Digital Panel Meters

### ICL7106CPL, ICL7107CPL Analogue to Digital Converter/Display Drivers

Harris

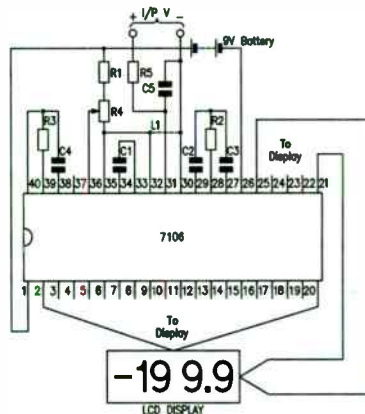

These two ICs are high performance, low power 3 1/2 digit A/D converters. The input requires about 1pA typically. Other features are guaranteed zero reading for 0 volts input on all scales; true polarity at zero for precise null detection; true differential input and reference; low-noise; on chip clock and reference; low supply current 0.8mA typical. The output of the 7106 will drive LCD displays directly and a +9V supply is required at pin 1 and ground at pin 26. This IC is ideally suited for battery operation since it requires only 0.8mA supply current. The output of the 7107 will drive LED displays directly and a +5V supply is required at pin 1, -5V at pin 26 and ground at pin 21. Accuracy ±1 count in ±2000 counts guaranteed.

#### Display Driver and Thermometer PCB

A printed circuit board is available for use with the 7106 or 7107. The same printed circuit may be used to produce a ±1.999V (2V) voltmeter, a ±0.1999

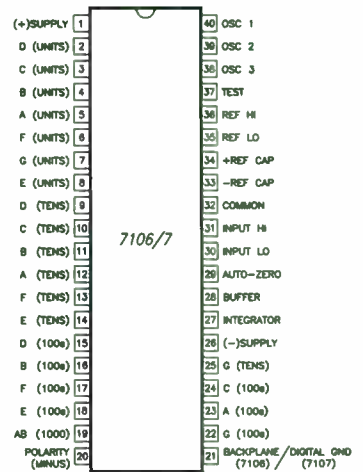

**LCD Digital Panel Meter**  
200mV/2V Full Scale Deflection  
(200mV) voltmeter or a thermometer using the LM35CZ or LM35DZ ICs shown on page XXX, with either an LED or LCD. A leaflet is supplied with every PCB, which shows how to build and calibrate all four projects.

VF15R 1	Velleman Kit K7201	£37.430	£43.990

## Digital LCD Panel Meter

A compact, low cost digital panel meter which consists of a PCB based module for mounting in existing equipment, behind a front panel or for making a dedicated voltmeter type instrument.

The LCD is 3 1/2 digits with a digit height of 13mm.

The input is up to 200mV with a full scale at  $\pm 199.9\text{mV}$  with an accuracy of  $\pm 0.1\% + 1$  digit.

The module is capable of performing both digital voltmeter and ammeter functions, depending on how the input is configured with extra resistor chains (examples are shown in the instructions supplied).

Applications can include custom power supply monitoring and other specialised voltmeter and ammeter uses. Input power is in the range of 9 to 12V DC and can be from battery or power supply. The panel meter OV rail must not be the same OV rail as the voltage being measured.

The panel meter uses 7106 IC which is a high performance, low power CMOS device and specifically designed as a 3 1/2-digit analogue to digital converter. Input impedance is extremely high, making it very easy to calculate resistor chain values without any danger of neglected input impedance introducing errors. An on-board preset can be used to precisely calibrate the circuit against incoming voltage levels.

### Specification

Input impedance:	1.000M $\Omega$
Accuracy:	$\pm 0.1\% + 1$ digit
Measurement range:	$\pm 199.9\text{mV}$
Resolution:	100 $\mu\text{V}$
Indication method:	LCD
Power supply:	9 to 12V DC
Current drain:	1mA typical
Operating temperature range:	0°C to 60°C

The module measures just 70 x 50 x 15mm high and has four M3 fixing holes at the corners on 58 x 39mm.

Retail Unit Price each (inc. VAT).

Order Code	Type 5845	Price each exc. VAT	inc. VAT each
GW01B	DVM Meter Module	£11.050	£12.959

## LED Type

A compact low-cost LED Digital Panel Meter having a high brightness display. The meter is fitted with high efficiency 11mm LEDs and is supplied with a circularly polarised red filter and bezel giving a high contrast display. Auto-zero, auto-polarity, programmable decimal points and 200mV fsd are standard features and the meter may be easily programmed by the user to read volts, current etc. May be used in single-ended or differential mode, or to measure floating inputs.

### Specification

Accuracy ( $\pm 1$ count):	0-05% typical (0-1% max.)
Linearity:	$\pm 1$ count
Sample rate:	3 per second
Temp. stability:	150ppm/°C
Temp. range:	0°C to 50°C
Supply voltage:	5V (5-5V max.)
Supply current:	100mA (200mA max.)
Max. DC input voltage:	$\pm 20\text{V}$
Input impedance:	100M $\Omega$

Overall dimensions: 72 x 36 x 27mm deep  
Panel cut-out: 68 x 33mm  
Supplied with connectors, bezel, mounting hardware and full instruction sheet.

Retail Unit Price each (inc. VAT).

Order Code	Type 5846	Price each exc. VAT	inc. VAT each
FM85G1	LED Panel Meter	£30.370	£35.690

## 10mm LCD Type

A uniquely compact LCD DPM with pins designed to plug directly into a 28-pin DIL socket. The meter may be panel mounted using the separate snap-in bezel (supplied). The low profile bezel incorporates a flat reverse-printed window giving a superb appearance. The meter features auto-zero, auto-polarity, 200mV FSD, 10mm digit height and programmable decimal points. On board solder pads for essential interconnections make selection of operating mode quick and easy with the minimum of external wiring. Very low current consumption allows long battery life. A whole range of useful annunciators are available on separate pins.

### Specification:

Accuracy ( $\pm 1$ count):	0-05% (0-1% max)
Linearity:	$\pm 1$ count
Sample rate:	3 per second
Temperature stability:	100ppm/°C
Temperature range:	0°C to 50°C
Supply voltage:	7-5V to 15V (9V nom.)
Supply current:	150 $\mu\text{A}$
Max DC input voltage:	$\pm 20\text{V}$
Input leakage current:	1pA (10pA max.) ( $V_{in} = 0\text{V}$ )
Low battery threshold:	7-5V
Overall dimensions:	40 x 20 x 7mm thick
Pin length:	4mm
Display area:	33 x 13mm
Bezel dimensions:	48 x 24mm
Panel cut-out:	45 x 22-2mm

Supplied with detailed instructions.

Order Code	Type 5847	Price each exc. VAT	inc. VAT each
FD89W	10mm LCD DPM	£23.390	£27.490

## 12.5mm LCD Type

A uniquely compact LCD DPM designed to plug directly into a 40-pin DIL socket. The unit is pin-compatible with the 7106/26/36 range of ICs and can be used to directly replace the separate parts otherwise required. The meter may be panel mounted using the separate snap-in bezel supplied. The low profile bezel incorporates a flat reverse-printed window giving a superb appearance. The meter features auto-zero, auto-polarity, 200mV FSD, 12.5mm digit height and programmable decimal points. On-board solder pads for essential interconnections make selection of operating mode quick and easy with the minimum of external wiring. Very low current consumption allows long battery life. A whole range of useful annunciators are available on separate pins.

Electrical specification as 10mm type left except:  
Overall dimensions: 52 x 25 x 7mm thick  
Pin length: 4mm

Display area: 45 x 16mm  
Bezel dimensions: 60 x 30mm  
Panel cut-out: 57 x 27mm  
Supplied with detailed instructions.

Retail Unit Price each (inc. VAT).

FD88V	12.5mm LCD DPM	£23.390	£27.490

## Alpha-Numeric Displays

### LCD Character Display Modules

Htachi

A range of dot matrix LCD modules that contain a HD44780 LSI controller for character display. The modules can be interfaced to 4-bit or 8-bit MPU directly, and can display 192 standard characters plus 8 user programmable symbols. Character generator RAM is also built-in (80 x 8 bits, 80 characters maximum), which can be read from the MPU. The modules feature low power consumption, and are powered from a single +5V supply. Their light weight and compactness make them ideal for a wide range of applications including telephone, typewriters, portable computers, industrial equipment etc. The displays are either of the 'twisted nematic' or 'supertwist' type. Type LM09XMLN features LED backlighting which is also 5V powered.

### Optical

Specification	'Twisted Nematic'	'Supertwist'
Viewing angle:	20°	40°
Contrast ratio:	2	3
Typical response time (rise):	250ms	400ms
Typical response time (fall):	250ms	450ms

## LM020L 16 Character x 1 Line

### Specification

## Photography

### Slave Flash Trigger

### Features

- ★ Remote triggering of secondary flash guns
- ★ Compact PCB
- ★ Suitable for use with modern flash guns
- ★ Dramatic improvement to photographic lighting

An essential project for 'serious' photographers, this circuit enables additional slave camera flash units to be triggered without direct electrical connection to the camera outfit itself, but merely by being within 'sight' of the light from the main flash unit - which can be several metres away, even in a brightly lit room. A phototransistor is used as the sensor, which

is very sensitive to sudden changes of light, despite being 'detuned' in this application, to prevent spurious triggering from unintentional light level changes - caused for example, by shadows from someone moving around in the vicinity.

### Specification

Supply voltage:	6 to 15V DC (12V nominal, from 12V battery, type GP23A)
Operating current (quiescent @ 12V):	690µA to 3.2mA, dependent on light level
Operating current (activated @ 12V):	15mA maximum
PCB dimensions:	32 x 56mm

### Optional Items

The following items, not included in the kit, may be required.

GP23A 12V Photographic Battery	1	(ZB56L)
3.5mm Mono Jack Plug	1	(HF80B)

### Kit and Special Parts

A complete kit of parts (excluding optional items) including the front panel label is available. The PCB and front panel Label are also available separately. Full constructional details may be found in Maplin Magazine/Projects Book 98 XA98G, and instruction leaflet XV86T.

Retail Unit Price each (inc. VAT).

Order Code	Type 11398	Price each exc. VAT			inc. VAT each

## Sound Activated Flash Trigger

### ★ Easy to build

### ★ Easy to use

Have you ever wondered how it is possible to take photographs of bullets passing through light bulbs, or darts through balloons? One method is to use a high-speed film camera costing many hundreds of pounds. A cheaper method is to use a standard single frame camera in conjunction with a sound-activated flash trigger.

In this design, the microphone is directly coupled, so that it can be used in the 'pressure mode'. This is where the sensitivity of the microphone is such, that it can be used to register pressure waves not normally heard; for example those caused by a door opening or closing. This project need not be limited to using it with a flash gun. Other uses, such as in security applications, where a trigger is required to activate the alarm recording equipment.

### Specification

Supply voltage range:	+5 to 18V
Quiescent current	
5V:	1.7mA
9V:	2.1mA
18V:	2.1mA
Operating current	
5V:	5.3mA
9V:	9.8mA
18V:	23.2mA

### Optional Items

The following items, not included in the kit, may also be required.

Alkaline PP3	1	(ZB52G)
Cable Single Black	As Req.	(XR12N)

### Kit and Special Parts

A complete kit of parts (including the PCB and front panel) is available (excluding optional items). The PCB and front panel are available separately.

Full construction details may be found in Maplin Magazine/Projects Book 88 XA88V, and instruction leaflet XV36P.

Retail Unit Price each (inc. VAT).

## Power & Lighting Controllers

### 1.2kW Power Controller

### ★ Lighting

### ★ Power tools

### ★ Soldering iron temperature

This versatile power controller is suitable for use as a lamp dimmer, power tool speed controller (not for use with 'electronic control' power tools) or for varying the temperature of a mains powered soldering iron.

It can handle loads of up to 1.2kW which is more than sufficient for most normal domestic applications. The controller is easy and convenient to use, simply plug the appliance into the controller, plug the controller into a mains socket, switch on and set the required power level.

Full constructional details may be found in Maplin Magazine Issue 40.

### Specification

Input Voltage:	240V AC
Maximum Output Current:	5A
Maximum Output Power:	1.2kW

### Optional Items

The following optional items, not included in the kit, may also be required.

Rubber 13A Plug	1	(HL58N)
Plug Fuse 5A	1	(HQ33L)

### Kit and Special Parts

A complete kit of parts is available.

The PCB and front panel are also available separately.

Full construction details may be found in Maplin Magazine 40.

PCB dimensions: 74 x 57mm.

## ZAX27 Isolated Mains Power Controller

Abbey Electronic Controls

### Features

- ★ Accurate and precise mains control
- ★ Choice of Phase Angle or Burst Fire control modes
- ★ Full electrical isolation of 5kV between low voltage input and the mains
- ★ High output power of 600W
- ★ Can drive external triac for increased output power capability
- ★ Can be parallel controlled for 3-phase applications
- ★ Provision for output overload protection
- ★ Control input of 0V to +1V or 0V to +5V for 0% to 100% power control
- ★ Adjustable time-base in burst fire control mode
- ★ Input inhibit function
- ★ Soft-start for reliable power-up
- ★ Uncommitted comparator/op-amp
- ★ 4.0V to 6.0V DC supply
- ★ Hermetically sealed for operation in harsh environments
- ★ Very small size and footprint of 28mm x 28mm x 21mm
- ★ Plugable pin-out construction for ease of replacement
- ★ Backward compatibility with ZAX15 and ZAX16

### Applications

- ★ Lamp dimming
- ★ Motor speed control
- ★ Heater temperature control
- ★ Regulated ac and dc power supplies
- ★ Industrial power control
- ★ Domestic power control

The ZAX27 is a fully isolated and elegant device for accurate control of ac voltage of up to 300V rms – it achieves this through a dc control voltage.

The device can be operated in two modes: Phase Angle or Burst Fire control mode; depending on the application. Selection of modes is achieved by means of a logic level on the MODE pin. The mode is 'hot selectable', that is, the mode may be changed at any time during operation under control of the logic level applied to the MODE pin.

The ZAX27 embodies all of the functions of its predecessors, the ZAX15 (Phase) and ZAX16 (Burst), plus many enhancements. The ZAX27 is backward compatible in applications using the ZAX15 or ZAX16.

An ingenious scheme allows certain pins to perform more than one function, simply by applying different voltage levels to the appropriate pin. This has allowed the extra functionality of the ZAX27 without adding extra pins.

An EMI Mains Inlet Filter ZFM23/2k5 (CK24B) has been specifically designed for use with the ZAX27.

### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

### Specifications

#### General

Isolation voltage: 5kV  
 Operating Temperature: -10°C to +70°C  
 Overheat shutdown: 90°C  
 Overheat reset: 60°C  
 Dimensions: 28mm x 28mm x 21mm

#### Low voltage side

Supply voltage (V<sub>S</sub>): +5V DC ±1V  
 Supply current: 30mA  
 Control input range: 0V to +1V or 0V to +5V  
 High level logic input: >+4.0V  
 Low level logic input: <+3.0V  
 Supply voltage rejection: ≤0.5%/V  
 Temperature coefficient: ≤0.25%/°C  
 Maximum input (all pins): ≤2 x V<sub>S</sub>

#### Error amplifier

Input offset voltage: ±5mV  
 Bias current: 250nA  
 Input offset current: ±50nA  
 Common mode input range: 0 to 5V  
 Output range: 0 to 4.5V @ 5mA  
 Gain: ≥2.5 x 10<sup>4</sup>

#### High Voltage Side

Mains supply range: 100V to 300V AC rms  
 Mains supply frequency: 50Hz  
 Maximum load current: 3A  
 Non-repetitive surge: 30A for 10ms  
 Maximum load: 600W  
 Minimum load: 10W

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each

CK23A	ZAX27 Module	£25.520	£24.250	£23.000	£29.990

## ZFM23/2k5 EMI Mains Inlet Filter

Abbey Electronic Controls

This compact filter has been specifically designed for use with the ZAX27 (CK23A) as an EMI filter; it will however, prove useful in other applications with similar requirements. Such a filter is often required to reduce emissions from equipment for compliance with EMC standards.

Connection to the filter is by means of PCB-mounted screw-terminals, allowing quick installation. Input and output terminals are clearly marked. In use, the incoming Live, Neutral and Earth are connected to the corresponding terminals on the 'IN' side. The Live, Neutral and Earth terminals on the 'OUT' side are then taken to the appliance to be filtered/protected.

Mechanical fixing is via 4 x 4mm corner fixing holes on a pitch rectangle of 70mm x 30mm.

### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

### Specifications

Corner frequency: 2.5kHz  
 Rate of attenuation: 20dB/decade  
 Attenuation at 150kHz: 38dB  
 Current rating: 2.5A  
 Operating voltage: 100V to 300V AC rms  
 Overall dimensions: 80mm x 40mm x 35mm  
 Fixing holes: 4 x 4mm

## Zero Crossing Opto Switch 3

- ★ Switches 240W resistive load
- ★ Limits switching surges

Primarily designed for the Christmas Star project, this module can also be used in other applications

which require a noise free, zero crossing opto-isolator switch, able to handle a 250W load (resistive). The unit avoids inherent interference problems associated with switching the 240V mains supply across a load, while part way through a mains voltage cycle. A snubber network suppresses any unwanted noise generated by the unit. This project is not recommended for absolute beginners as it involves working with mains circuitry directly. The output switch is isolated from the input by an opto-coupler.

### Specification

Max control voltage: 12V DC  
 Max mains voltage: 240V DC  
 Max power rating: 250W Resistive

### Optional Items

The following items are not included in the kit but may also be required.

ABS Box MB2	1	(LH21X)
Europlug	1	(FT64U)
Eurosocket	1	(FT63T)
Terminal Block 2A	1	(FE78K)
Safuseholder 20	1	(RX96E)
Fuse A/S 1A	1	(WR19V)

## Mains Power Switch 2

### Features

- ★ Switched ground and switched supply inputs
- ★ Zero standby current
- ★ Low trigger current
- ★ Reverse supply protection
- ★ Fuse protected output
- ★ Switching of DC and AC resistive loads
- ★ LED relay activated indicator
- ★ Compact, versatile design

### Applications

- ★ Add-on unit for existing low-voltage projects
- ★ Radio/remote control receiver outputs
- ★ Security floodlight controller – alarm or PIR sensor input
- ★ Safety switching of mains via low voltage switch

This project has been designed in response to the demand for a general-purpose unit that is capable of switching high current resistive loads at mains supply potential (or lower voltage DC), and which can be easily added to other low-voltage controller circuits, to provide convenient switching of resistive output loads.

### Specification

Operating voltage range: 9 to 15V DC  
 Current consumption at

9V: 40mA  
 12V: 58mA (nominal)  
 15V: 70mA

Trigger current: 1.3mA  
 Relay operating time: 15ms (release time, 7ms)

Maximum switching loads: 230V AC mains, 5A (resistive)  
120V AC, 5A max. (inductive)  
30V DC, 5A max. (resistive)  
Visual indicators: LED to show relay activation

Retail Unit Price each (inc. VAT).

LU10L	Mains Relay Switch	£7.650	£9.990
GJ20W	Mains Pwr Sw.PCB	£2.970	£3.490

## PWM DC Motor Speed Controller

2

### Features

- ★ High-current power rating
- ★ Short-term overload proof
- ★ Optional foot pedal control

### Applications

- ★ Hobby drills
- ★ Model train sets
- ★ Remote-controlled model cars/boats

Many of us who own mini drills for making PCBs and drilling project-boxes, only have a general-purpose low-current variable-voltage bench PSU to power it up. More often than not, the PSU voltage collapses when asked for more than an amp or two. The drill PSU project presented here, is short-term overload proof (3 seconds maximum) and provides 100W of power for even the most current-hungry drills. The PWM (pulse width modulated) PSU even has an on-board 'current limit' LED indicator. The drill speed is variable from zero to the maximum RPM of the drill. The project even has the option of a foot speed controller, allowing for fine control of the speed and for hands-free operation.

The PWM drill speed controller can be used (when suitably modified) for controlling the speed of model trains or even remote-controlled model cars or boats.

### Specification

Power supply voltage: 12 to 18V AC or DC, 15V (nominal)  
Supply current max: 15A 8-5A (nominal)  
Maximum rated power: 125W

### Optional Items

The following items not included in the kit may also be required.

1/4in. Stereo PCB Socket	1	(FJ05F)
Metal Box Type AB15	1	(XB71N)
120VA 15V Toroidal	1	(DH63T)
K01 Bridge Rectifier	1	(BH47B)
5mm Convex LED Clip	1	(UK14Q)

## DC to Pulse Width Modulator

3

This compact project can be used to convert a DC voltage into a Pulse Width Modulated signal. Ideal for controlling heaters, lighting and other non-inductive loads. Very little power is dissipated from the control circuitry as the load is either switched full on or full off. A simple to assemble kit containing all the parts required to make the control circuit excluding the enclosure.

Retail Unit Price each (inc. VAT).

WC76H	4-12V Var Reg Module	£9.770	£11.490

## K8003 Voltage Controlled Dimmer

This small but handy switch is ideal for replacing an existing dimmer or switch, so as to be able to control a light, set of lights or motor via an adjustable control voltage. One obvious application is to control it from the computer interface card K8000, since it uses an optically isolated input.

### Specification

Mains supply: 110V, or 220-240V, 50 or 60Hz.  
Max load current: 3-5A  
Infinitely variable control: Control voltage from 0 to 10V DC  
Dimensions: 50 x 75mm.

## Slow On/Slow Off Dimmer 3

### Features

- ★ Ideal for children's bedrooms, etc.
- ★ Two working modes, slow dimmer, timer/dimmer
- ★ 110 to 125V and 220 to 240V mains voltage compatible
- ★ Can also operate with 24V AC
- ★ Power supply included
- ★ Drives loads up to 400W

The Slow On/Off Dimmer provides dimming of lamps, or the power up of lamps, by means of a timer rather than by manual control. Ideal for use in children's bedroom as the light intensity can be automatically reduced gradually as your child falls asleep. Dimming times are adjustable within a wide range while the number of possible applications is increased by the following two working modes:

A. Dimming slowly. The lamp goes on or off slowly, in response to a simple switch or relay contact. Both on and off times are independently adjustable from 2 seconds to 1 hour. Useful for bedrooms, slide/film shows, aquariums, etc.

B. Timer/Dimmer mode. In this case a push-button can be operated to switch the lamp on at full brightness immediately. After staying on for a while, it will fade away slowly. Both the on-time and the dimming duration are adjustable independently by 1 second to 30 minutes. This is suitable for use in garages, on stairways, passages, and as a 'slumber switch', etc.

The device can also run at either 24V, 110V or 240V, depending on the value of certain resistor values which will also determine operating mode.

### Specification

#### Times

Slow dimmer mode: 2 seconds up to 1 hour, adjustable  
 Timer/dimmer mode: 1 second up to 30 minutes, independently adjustable

Mains voltage: 110 to 125V 60Hz 220 to 240V 50Hz

Low tension voltage: 24V AC 50 or 60Hz

Maximum load: 2A resistive, or 400W at 220V  
 200W at 110V

Dimensions of unit: 95 x 70 x 30mm

### Optional Items

The following items, not included in the kit, may also be required.

Push-Button Switch	1	(FH59P)
Miniature Toggle Switch	1	(FH00A)
Rotary Mains Switch	1	(FH57M)
Knob K14 B	1	(FK39N)
M3 Insulated Spacers	1 Pkt	(FS36P)
ABS Box Type MB3	1	(LH22Y)
Patress Blanking Plate	1	(HL86T)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available. Full construction details may be found in Maplin Magazine/Projects Book 87 XA87U, and instruction leaflet XV26D.

Retail Unit Price each (inc. VAT).

Order Code	Type 334	Price each exc. VAT	inc. VAT each
VE51F	Velleman Kit K2657	£14.450	£16.990
XV26D	Slow On/Off Dim Lft	£0.800	£0.800 NV

## K5001 Suppressed 3·5A Dimmer 2

Owing to its small size this compact dimmer can replace an existing switch (but check depth of pattern), allowing you to vary the brightness of a light or group of lights. The dimmer may also be used to adjust the speed of a motor, vacuum cleaner, portable electric drill, or any other motor with carbon brushes.

A mains suppressor is provided, eliminating undesirable radio interference. The dimmer is not suitable for halogen lighting. Isolated triac. Dimensions of PCB: 45 x 47mm.

Retail Unit Price each (inc. VAT).

Order Code	Type 334	Price each exc. VAT	inc. VAT each
VF41U	3.5A Dimmer Suprsd	£10.200	£11.990

## K5002 Halogen Lamp Dimmer 3

This small circuit may be used to vary the brightness of lights, or as a dimmer for induction current, such as transformer voltage for halogen lighting, motor power, etc. The dimmer can easily replace an existing switch, without additional wiring. The dimmer switch may be controlled by means of an ordinary push-button. It is also acceptable to connect an unlimited number of push-buttons in parallel to control the dimmer switch from different places. Three different dimming functions are provided:

### A: Same direction dimmer function.

- short repeated pressure: start/stop
- long pressure: dims light
- repeated long pressure: dimming in same direction

### B: Memory function.

- short repeated pressure: continues in previous dimmer state
- long pressure: dims light
- repeated long pressure: backward dimming

### C: Identical to A but dims backwards with repeated long pressure.

### Specification

Mains voltage: 110 or 220/240V AC 50Hz to 60Hz

Maximum power: 750W at 250V or 380W at 110V

Dimming duration: 3-5 seconds

Dimensions: 48 x 45mm

Retail Unit Price each (inc. VAT).

Order Code	Type 364	Price each exc. VAT	inc. VAT each
VF37S	Halogen Lamp Dimmer	£15.310	£17.990

## Power Supplies & Battery Chargers

### Battery Chargers

## Intelligent Ni-Cad Battery Charger 3

### Features

- ★ 1hr or 12hr charge time with subsequent trickle charge
- ★ Battery temperature and contact monitoring
- ★ Charging interrupt for overvoltage or excessive temperature
- ★ Automatic pre-discharge cycle
- ★ Constant current charge and discharge
- ★ Charge pulse width modulation for battery capacity matching
- ★ LED status for output mode indication
- ★ Timer clock via internal oscillator

### Applications

- ★ Charging/Discharging Ni-Cad cells
- ★ Reviving damaged or misused cells

The use of this charger can improve the performance of cell or cells with 'reduced capacity' by providing constant current discharge to a flat condition first before the constant current charging cycle commences. Once the charge cycle is completed (giving 95% charge), the battery is then (by pulse width modulation) 'trickle charged' for 100ms every 16-8s, which equates to a 'form factor' of 0.6%. This 'intelligent' Ni-Cad battery charger is based around the U2400B IC which has been specifically designed to handle the needs of Ni-Cad batteries. The IC itself contains much of the electronics required, which include a processor unit, battery voltage and temperature monitoring comparators, PWM comparator, open collector charge and discharge outputs, LED status output, an oscillator, voltage reference and mains synchronisation. To enable different voltage and lower capacity batteries than 2Ah to match the charger, two rotary switches are provided. The voltage select switch divides the battery potential terminal voltage to provide the correct level for the voltage comparators, while the battery capacity switch alters the pulse width modulation of the charge circuit, thus preventing overcharging.

### Specification

Power supply:	230V AC 50Hz
Power consumption:	45W maximum
Overall dimensions:	205 x 106 x 197mm (WHD)
Battery voltages:	Any combination of 1 to 12 cells
Battery capacity:	100, 200, 300, 400, 500, 600, 800mAh, 1, 1-2, 1-5, 1-7, 2Ah
Charge time:	1 or 12-hour
Charge current:	2A, pulse width modulated
Discharge current:	500mA

### Kit and Special Parts

A complete kit of parts (including the PCB, case and front panel) is available.

The PCB and front panel are also available separately. Full constructional details may be found in Maplin Magazine/Projects Book 100 XD00A, and instruction leaflet XV76H.

Retail Unit Price each (inc. VAT).

## Sealed Lead-Acid Battery Chargers

2

- ★ 2 kits available for 6V or 12V
- ★ Charge current up to 500mA
- ★ Current foldback
- ★ Charge indicator
- ★ Power on indicator

These mains-powered chargers are ideally suited for charging batteries from the wide range of sealed lead acid batteries, that are rated at between 1Ah and 8Ah. The kits are based on either the 6V charger module (JY65V) or the 12V module (JY64U), and are very easy to build. The chargers feature a regulated output and current foldback, and may be used for cyclic or trickle charging. The Chargers have mains and output fuses, 'power on' and 'charge' indicators, and the kits include a suitable mains step-down transformer.

### Specification

	6V Charger	12V Charger
Supply voltage:	Mains (240V AC rms)	
Output current max:	700mA	525mA
DC max. continuous load current:	525mA	375mA
Charge LED cut-off current:	245mA	175mA
Suitable battery range:	1Ah to 8Ah	
Dimensions:	71(max 78) x 45 x 25mm	

### Optional Items

The following items, not included in the kit, may also be required.

16/0-2 Wire 10m Red	1 Pkt	(FA33L)
16/0-2 Wire 10m Black	1 Pkt	(FA26D)
4mm Croc Clip Black	1	(H-F23A)
4mm Croc Clip Red	1	(HF24B)
Charger Clip	2	(HF26D)
Large Battery Clip Red	1	(FS86T)
Large Battery Clip Black	1	(FS87U)
13A Nylon Plug	1	(RW67X)
2A Fuse Plug	1	(HQ31J)

### Kit and Special Parts

A complete kit to build either a 6V or 12V charger is available, including the mains transformer and box, but excluding optional items. Full construction details may be found in Maplin Magazine/Projects Book 53 XA53H, and instruction leaflet XT73Q.

## Power Supplies

### 100mA Fixed Voltage Regulators

1

A range of 100mA, fixed voltage regulator kits available in +15V, +12V, +5V, -5V, -12V, and -15V variants. All kits are supplied complete with on-board rectification and smoothing, and only require the addition of a suitable transformer and mains fuse.

### Optional Items

The following items, not included in the kit, may also be required.

<b>LU42V 100mA +15V Regulator</b>		
250mA Tr 12V	1	(YN16S)
T50mA Fuse	1	(CZ85G)
<b>LU41U 100mA +12V Regulator</b>

## ±15V 50mA Regulator 1

### Features

- ★ Low component count
- ★ ±50mA output current
- ★ Short circuit protection
- ★ Thermal shutdown

This is a ±15V 50mA regulator built around the RC4195, a dual-polarity 'tracking' regulator designed to provide balanced positive and negative 15V output voltages.

### Optional Items

The following items, not included in the kit, may also be required.

22-Turn Cermet 50k	1 (UH26D)
20-0/20-0 Transformer	1 (WB16S)
Time Lag Glass T50mA	1 (CZ85G)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available. The PCB is also available separately. Full constructional details may be found in Maplin Magazine/Projects Book 106 XD06G, and instruction leaflet XZ33L.

Retail Unit Price each (inc. VAT).

## L200 Adjustable Voltage/Current Regulator 1

- ★ Adjustable output current
- ★ Adjustable output voltage
- ★ Short circuit protection
- ★ Thermal over-load protection

The L200 is a monolithic IC designed for programmable voltage and current regulation. Voltages of 2.85V to 36V, and currents up to 2A, can be achieved. Internal protection in the L200 cuts down the risk of possible damage.

This comprises current limiting, power limiting, thermal shut-down and input over-voltage protection (up to 60V for 10ms). The unit can be used for different applications such as a battery charger, power supply or DC-DC converter.

### Specification

Supply voltage:	40V max
Current @ 20V:	4.2mA
Voltage range:	2.85V to 36V
Temperature range:	-5°C to +150°C (max)
Line regulation:	60dB (nominal)
Dropout voltage:	2V (nominal) 2.5V (max)

Reference voltage: 2.77V (nominal)

Note: As this board is intended as a 'building block' project it is not eligible for our 'Get-you-working' service.

### Kit and Special Parts

A complete kit is available and the PCB is also

available separately. Full construction details may be found in Maplin Magazine/Projects Book 46 XA46A, and instruction leaflet XT00A.

## 1.5A Positive & Negative Variable Voltage Regulators 1

### Features

- ★ Suitable for beginners if power supply is pre-built unit
- ★ Variable output voltage
- ★ Low noise output
- ★ Virtually indestructible

### Applications

- ★ Power supply for higher current uses
- ★ Bench PSU for designers
- ★ Combine both kits for a dual supply

Two kits are available, one providing a positive supply and the other a negative supply. Both are supplied without enclosures as this will depend upon application. A transformer or mains adaptor is required. Full wiring options for single and complementary supplies from one transformer are given in the leaflet. Protected against wrong input polarity, output overcurrent, back-voltage and thermal overload.

### Specification

Input voltage:	28V AC max. (24V AC for full rated output)
Input/output differential:	6V DC maximum for full rated current
Output voltage:	2V to 30V DC
Output current:	1.5A DC maximum (Min load 5mA for stability) Dropout voltage 4V DC

The above figures are to assist the constructor choosing suitable transformer. AC voltages are RMS, DC input voltages are measured at the regulator input. Higher differential voltages are possible if less current is required or additional heatsinking for the regulator is provided. The regulator can be mounted off the board if required.

### Kit and special parts

A complete kit of parts is available. The PCBs are available separately. Full constructional details may be found in Maplin Magazine Issue 113 XD13P and in instruction leaflet XZ40T.

## K1823 1A Power Supply 1

This small power supply provides a stable voltage adjustable between 1.5 and 35V at 1A. Its LM317 floating regulator provides markedly better ripple and regulation characteristics than standard regulators.

Current limiter and thermal overload protection are on the chip. Input voltage: 28V AC max. Line reg: typ. 0.01%. Load reg: typ. 0.1%. Ripple rejection: 80dB

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VE58N	Velleman Kit K1823	£7.650	£8.990

## K2570 Universal Power Supply 5 to 14V DC/1A 1

Suits all Velleman kits which need a regulated power supply between 5 and 14V DC rated at no more than 1A.

Input voltage: 7 to 16V AC, 1A (depending on the application)  
Output: 5 to 14V DC, stabilised, 1A max.  
Ripple rejection: typ. 78dB  
Temperature stability: 0.025%/°C  
Thermal overload protected.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VE59P	Velleman Kit K2570	£8.500	£9.990

## Bench Power Supplies

### K7202 30V 5A Laboratory Power Supply 4

A laboratory power supply is indispensable for both the professional and amateur electronics engineer. This power supply is short-circuit protected and variable from 0 to 30V and from 0 to 5A. A connection is supplied for both voltage meter and ampere-meters, such as K7201. A front foil and matching buttons are supplied. The heatsink, case, and transformer are not included.

Output voltage variable from 0 to 30V  
Fine control over 1V  
Output current limit variable from 0 to 5A.  
Fine tuning between 0 and 1A  
LED (light emitting diode) – indication of current limitation  
Output current: 4A continuous/5A peak  
Short-circuit protected

Ripple maximum: 0.5mV rms  
Input voltage 2 x 15V AC 5-3A  
Connection for K7201 digital volt/ampere-meter

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VF16S	Velleman Kit K7202	£50.200	£58.990

### K7200 30V 10A Laboratory Power Supply 4

#### Features

- ★ Digital voltage meter: 3 digit 0.1V accuracy
- ★ Digital ampere meter: 3 digit 0.01A accuracy
- ★ Output voltage variable from 0V to +30V (fine adjustment over 1V)
- ★ Variable current limit from 0 to 10A
- ★ LED current limit indicator
- ★ Output short circuit protected
- ★ Maximum output ripple 0.5V rms
- ★ Cooling fan for prolonged usage at full power

#### Applications

- ★ Laboratories and test benches
- ★ Powering mobile radio equipment
- ★ Precision charging of batteries

This extremely flexible laboratory PSU is capable of supplying a well-regulated continuously variable DC voltage up to 30V at currents up to 8A continuous, 10A peak. As a result, there is a wide range of potential applications for the hobbyist, service department and educational establishments. It is ideal for testing prototypes, and with the current limiting function, suitable for the more sensitive circuits. In addition, it is suitable for the running of CB and amateur radio equipment, and even the charging of batteries. A digital voltage meter and a separate digital ammeter are supplied as indicators. With the built-in fan, the power supply is able to cater for long-term full loads. It is supplied complete with housing, buttons and transformers.

#### Specification

Output voltage: 0V to 30V variable with fine control over 1V  
Output current: 8A continuous, 10A peak, variable limit from 0 to 10A, LED indication when limiting. Short-circuit protected  
Maximum ripple: 0.5mV rms  
Digital voltmeter: 3-digit, 0.1V accuracy  
Digital ammeter: 3-digit, 0.01A accuracy  
Consumption: 300W maximum  
Dimensions: 330 x 90 x 215mm

#### Optional items

The following items, not included in the kit, may also be required.

Nylon Mains Plug 13A	1	(RW67X)
Fuse 3A	1	(HQ32K)
Insulating Boot for Fuseholder	1	(FT35Q)
Insulating Boot for Chassis plug	1	(JK66W)
Heat Transfer Compound	1 syringe	(FL79L)
BC Lampholder	1	(FQ02C)
Mains Lamp Bulb 40W	1	

#### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). Full construction details may be found in Maplin Magazine/Projects Book 58 XA58N, and instruction leaflet XT91Y.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VF14Q	Velleman Kit K7200	£195.730	£229.990
XT91Y	Velleman 10A PSU	£C.800	£D.800NV

## The Maplin Minilab 4

#### Features

- ★ Wide variety of power supplies – ±5V, ±12V, –15V and +1.25 to 24V variable
- ★ Eight LED TTL-logic state indicator
- ★ Eight TTL-logic test outputs
- ★ 1Hz/1kHz TTL-level oscillator
- ★ Debounced TTL-level switch with complementary outputs

#### Applications

- ★ Education
- ★ Servicing analogue and digital equipment
- ★ Project development

The Minilab is a very useful piece of test equipment, for repairing and developing both digital and analogue circuits. Features of the Minilab include fixed DC voltage supplies at ±5V at 500mA continuous (1A peak), ±12V at 500mA continuous (1A peak), and –15V at 100mA continuous (200mA peak). There is also a variable positive DC voltage supply that can be adjusted to give between 1.25V and 24V; the current available from this supply depends upon the output voltage. However, the current drawn by the +5V and +12V rails combined must not exceed a total of 1A – the same comment applies for the ±5V and ±12V rails.

Other features of the Minilab include eight TTL-level outputs, and eight TTL-level inputs – each fitted with an LED that indicates a logic 1 ('high') condition when illuminated. There is also a TTL-level oscillator switchable between approximately 1Hz and 1kHz, and a debounced TTL-level 'one-shot' switch with complementary (Q and –Q) outputs, which is very useful for single-stepping through digital circuits that use sequential logic. Debouncing is, as the name suggests, a 'cleaning up' of the switching action – the complementary outputs are always either high or low.

#### Specification

Power Supply Voltages:	+5V*, +12V*, +1.25V to 24V variable (refer to Figure 2 for output characteristic)
Power Supply Ripple:	–5V*, +12V*, +15V (100mA continuous, 200mA peak)
Oscillator Output:	Less than 5mV per rail TTL compatible – frequency 1Hz or 1kHz
Octal Logic Input:	TTL compatible – indication by LED (On = High)
Octal Logic Output:	TTL compatible
'One Shot' Switch:	TTL compatible – debounced

\* The total load on the +5V and +12V supplies must not exceed a peak value of 1A, since the 5V supply is sourced from the +12V supply's regulator. The same is true of the –5V and –12V supplies.

#### Optional items

The following items, not included in the kit, may also be required.

Steel Case 2108	1	(XJ30H)
13A Plug Nylon	1	(RW67X)
Plug Fuse 2A	1	(HQ31J)

#### Kit and Special Parts

A complete kit of parts (including the PCB and instruction leaflet) is available (excluding optional items). The PCB and the front panel are also available separately. Full construction details may be found in Maplin Magazine/Projects Book 66 XA66W, and instruction leaflet XU18U.

## DC/DC Converters

### Miniature PCB Mounting DC/DC Converters

#### Newport Components

A range of miniature and sub-miniature, high-efficiency DC/DC converters, the outputs of which are isolated to 1000V DC relative to the input, made possible through the use of tiny toroidal ferrite transformers. With efficiencies of up to 80% and a physical bulk down to the scale of a logic IC, these devices are ideal for eliminating complex power busses on PCBs, or special (and inconvenient) provisions for extra odd supply lines from the main PSU, by providing them anywhere where the additional or isolated power rail is required locally. Furthermore any number of them can be used together in a system. All converters are 100% 'burned-in' and triple tested. They feature a high power to density ratio equivalent to 1.4W per cm<sup>3</sup>, which is probably the highest currently available. Derating at temperatures above 70°C is required. The operating temperature range is -50°C to +125°C. In all cases a switched mode method is employed at a typical frequency of 100kHz, with a no-load power consumption of 100mW. This efficiency makes them compatible with battery powered applications.

The packages are SIP (Single Inline Pin) with full epoxy encapsulation rated to UL94-VO within a flame retardant, polyurethane case. Any converter can be soldered into place just like any other IC or SIL array, and no heatsinks are necessary for the rated performance. Input voltages are 5V or 12V DC depending on type. Pin '1' is marked with a dot. Pins are spaced 2.54mm (0.1in.) and are 3mm long on all types.

#### Single Output Types

The NME range operate from a 5V or 12V DC input, and provide an isolated single positive output of 5V, 12V or 15V DC, depending on type. The delivered power is 1W total and up to 200mA is available from a 5V output, 84mA from a 12V output, and 67mA from a 15V output. Each device is contained in a 4-pin inline package measuring only 11.5 x 6 x 10mm high.

Type	Input voltage	Output voltage	Output current mA	Load regulation
NME05055V (7 max.)	5V	5V	200	10%
NME05125V (7 max.)	12V	12V	84	10%
NME12055V (7 max.)	5V	5V	200	10%
NME12125V (15 max.)	12V	12V	84	10%
NME12155V (15 max.)	15V	15V	67	10%
NME0515 5V (7 max.)	15V	5V	67	10%

#### Dual Output Types

Each of the NMA range provides dual ±5V, ±12V or ±15V DC supply rails with centre-tapped 0V from a single 5V or 12V DC input, depending on type, with a total power throughput of 750mW. Up to 100mA is available from the 5V output type, 42mA from each of the 12V outputs and 25mA from each of the 15V. The device is contained in a 6-pin inline package (pin 3 is excluded, not used) measuring only 19.5 x 7 x 10mm high.

Type	Input voltage	Output voltage	Output current mA	Load regulation
NMA0512S	5V(7 max)	±12V	42	10%
NMA0515S	5V(7 max)	±15V	34	10%

NMA1205S	12V(15 max)±5V	100	10%
NMA1212S	12V(15 max)±12V	42	10%
NMA1215S	12V(15 max)±15V	25	10%

## Inverters

### 250W 12/24V DC to Mains Inverters

A very compact 12/24V DC to 230V AC mains inverter having a quartz controlled 50Hz 'modified' sine wave output frequency. The inverters have a continuous power output of 250W but are capable of handling peak outputs of up to 500W. Other features include short circuit and overload protection, temperature protection of output transistors, V DC inverse polarity protection and low battery voltage protection – the unit will shut down if battery power becomes too weak. It is possible to modify the inverter to produce an output of 110V AC at 60Hz that will give 150W. The inverter is not suitable for capacitive loads. K3507 (VF35Q) is the 12V version. K3509 (VF42V) is the 24V version.

#### Specification

Input voltage:	10-5V to 15V DC or 20V to 28V DC
Current consumption:	25A (12V) or 13A (24V)
No-load consumption:	0.2A
Output voltage:	230V AC at 26V DC input
Continuous output power:	250W
Peak output power:	500W
Output frequency:	50Hz
Efficiency:	80% max.
Battery protection:	±20V
Thermal limit:	90°C
Dimensions:	270 x 85 x 60mm
Weight:	1.4kg

## K3501 12V/24V DC to 220V AC Converter

4

For use in cars, trucks, boats, caravans or other places where only 12 or 24 volt battery power is available to supply mains powered audio equipment such as video recorders, TV, computer, electric shaver, etc. It will be necessary to buy a transformer to suit 12V or 24V separately.

- ★ 300 W output power at 24 VDC input or 160 W output power at 12 VDC input
- ★ 50 Hz crystal oscillator
- ★ FET power transistors (including cooling fin)
- ★ Output voltage monitor
- ★ Battery voltage monitor
- ★ Quiescent current 0.5A
- ★ Not suitable for electric motors
- ★ PCB dimensions: 82 x 110 mm.

## Radio Receivers

### Crystal Set Radio

1

A novel mini project that is easy to build and ideal for construction for all ages. A Crystal Set was an early design for a radio receiver, our design incorporates modern components in place of difficult or impossible to obtain old style components. For example, what once would have been a 'cat's whisker' detector has been replaced by a germanium point contact diode. Original designs would have driven a pair of high impedance headphones, but its modern counterpart uses an inexpensive crystal earpiece, etc. Please note that this project is not eligible for repair under our 'Service' rules. Full construction details are available on leaflet XU01B.

## Beginners AM Radio

1

- ★ On board attenuator
- ★ Compact design
- ★ Integral aerial
- ★ Headphone operated on/off

This project is ideal for the total beginner to radio electronics. Based around a ZN415 IC the unit has a limited amount of components, including a 'wind-it-yourself' aerial. The small compact project uses basic electronics techniques to receive local stations. The device is tuned by a knob on the box, varying the frequency between 540 and 1600kHz depending on the aerial winding. An attenuator is provided to reduce the AM signal. The receiver is designed to be used with personal stereo headphones of 32Ω impedance.

A power supply of 1.5V is delivered by an N type cell fitted into the box LL12N. The box, knob, battery and screws are not supplied in the kit.

### Optional Items

The following items, not included in the kit, may also be required.

Verobox 301	1	(LL12N)
Alkaline N Battery	1	(JY51F)
Knob K7A	1	(YX01B)
Spacer 4BA x 6.35mm (1/4in.)	1 Pkt	(FW31J)
Poziscrew M2.5 x 12mm	1 Pkt	(BF40T)
Isoshake M2.5	1 Pkt	(BF45Y)
Isonut M2.5	1 Pkt	(BF59P)

### Kit and Special Parts

A complete kit is available and the PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 42 XA42V, and instruction leaflet XK22Y.

## TDA7000 Radio Mk 1

3

- ★ No alignment equipment needed
- ★ Easy to build
- ★ Ready wound RF coils
- ★ Onboard power amplifier
- ★ Headphone/earpiece jack socket

This design is based on the TDA 7000 IC which contains essentially a complete FM receiver on a chip. With only the core of one coil to be adjusted, building and aligning this radio is no more difficult

than the simple ZN414 AM radio! The frequency coverage is 88 to 108MHz and uses a telescopic six section aerial. The receiver also incorporates a power amplifier IC, the TDA820M delivering 250mW RMS to an internal 8Ω speaker. Four small batteries provide the power with a maximum current drain of just 80mA, making this radio truly portable.

### Optional Items

The following items, not included in the kit, may also be required.

Battery AA x 4	1 Pkt	(ZB36P)
Mag Earpiece 3.5mm	1	(LB24B)

### Kit and Special Parts

A complete kit is available separately, as well as a PCB and front panel. Full construction details may be found in Maplin Magazine Issue 27.

Retail Unit Price each (inc. VAT).

## Transmitters/Receivers

### K1771 FM Oscillator

2

A Mini FM transmitter that operates on the range 100 to 108 MHz. Featuring an integrated pre-amplifier (sensitivity 4mV), which is suitable for use with most types of microphone. Power requirements: 9 to 12V DC. Suitable for family broadcasts, babyphone, security, etc. May be received by any portable FM radio or tuner.

PCB dimensions: 45 x 70mm. Not licensed for use in the U.K.

Retail Unit Price each (inc. VAT).

## Morse, Packet & RTTY

## K2659 Morse Decoder With Liquid Crystal Display

**2**

Velleman

- ★ LCD readout
- ★ Adjustable centre frequency
- ★ Adjustable sensitivity and lock range
- ★ Low voltage operation
- ★ Compact size

If you have problems trying to decode those mysterious Morse Code signals, or keeping up with experienced signallers or automatic stations, then this decoder is the ideal solution. It will keep up with fast signallers, and conveniently 'notates' everything on a clear alphanumeric LCD readout. The decoder operates over a wide range of audio frequencies and picks up the Morse from the speaker of a suitable receiver using an on-board electret microphone. Sensitivity, centre frequency and maximum frequency deviation are adjustable. To achieve good results a 'clean' signal is required.

### Specification

Display: Alphanumeric LCD, 1 line of 16 characters  
Power supply voltage: +9V to +12V DC  
Power supply current: 100mA DC  
Centre frequency: Variable 700Hz to 1.9kHz

Dimensions: 105 x 70 x 28mm

### Kit and Special Parts

A complete kit of parts (including the PCB) is available. Full construction details may be found in Maplin Magazine/Projects Book 53 XA53H, and instruction leaflet XT81C.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VE89W 1	Velleman Kit K2659	£52.750	£61.990
XT81C	Morse Dec Leaflet	£0.800	£0.800 NV

## Packet Radio Kit

### Ramsey Kit

- ★ Free Software
- ★ IBM Compatible
- ★ VHF/UHF Packet
- ★ Powered from Radio TNC RS232 Socket

This must be one of the most remarkable kits to be offered. You get a kit of parts to build a complete Packet Radio terminal and also free software for IBM computers. In just a few hours you could be sending and receiving Packet Radio at a fraction of the cost of any ready built unit. Full instructions are supplied and the unit is powered directly from the serial port of your computer. Ideal for those that have not yet tried Packet Radio and want a simple, no nonsense unit that will work first time. Ideal for schools and club projects. Amazing value!!! For a suitable case, order C-IBM.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
CP36P 1	P-IBM	£51.020	£59.950
CP37S	C-IBM	£12.720	£14.950

## Preamplifiers, Active Aerials & Tuning Unit

### VHF/UHF Preamplifier

**2**

### Features

- ★ Multi-range VHF/UHF preamplifier
- ★ Low power consumption
- ★ Power supply through co-ax cables
- ★ High gain
- ★ No tuning required
- ★ Surface mount components

### Applications

- ★ VHF satellite bands
- ★ UHF TV
- ★ FM radio broadcasts
- ★ Amateur radio bands
- ★ Aircraft transmissions

This preamplifier was originally intended for use with the MAPSAT VHF Weather Satellite Receiving System; it was designed to be a replacement for the previous Maplin VHF preamplifier kit. However, the new design is based around a MAR-6 MMIC (Monolithic Microwave Integrated Circuit), which is unconditionally stable across its entire range (DC-2GHz). The gain is at least 16dB over this range, and may rise up to a maximum of 19dB for certain applications. Note that the MAR-6 is actually usable up to 4GHz, with a typical gain of around 9dB at this frequency. This means that the preamplifier is highly versatile, and can be used for any number of different applications. The power supply for this preamplifier can be fed via the co-ax cable that carries the signal to a receiver. If your receiver does not supply 12V DC through the co-ax cable, then a power supply can

be either purchased ready made (PU1 stock code BW50E suitable for 40-1000MHz), or built very easily from a few stock components. Surface mount components are used in this project but do not be put off, as the component count is very low and there is a way to solder these tiny components using only 'ordinary' equipment.

### Specification

Power supply: +12V DC  
Power source: External PSU or via co-ax cables  
Power consumption: 16mA  
Gain: up to 19dB  
Frequency range: DC-2GHz

### Optional Items

The following items, not included in the kit, may also be required.

16.5mm Heatshrink Sleeving 1m (BA01B)  
Gasket CAN 1 (FE40T)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is available separately. Full construction details may be found in Maplin Magazine/Projects Book 81 XA81C, and instruction leaflet XU88V.

Retail Unit Price each (inc. VAT).

## 'Super-Scan Mk II' – A HF/VHF/UHF Wideband Active Aerial for Scanning Receivers

**2**

### Features

- ★ Indoor or outdoor use
- ★ Wideband HF/VHF/UHF preamplifier
- ★ Low power consumption
- ★ Power supply through coaxial cable
- ★ High gain
- ★ No tuning required
- ★ Surface mount components

Receiving applications  
★ Ideal for scanning receivers

- ★ 160, 80, 40, 20, 15, 10m HF amateur radio bands
- ★ 6, 4 and 2m VHF amateur radio bands
- ★ 70cm and 23cm UHF amateur radio bands
- ★ VHF FM broadcast band
- ★ UHF TV band
- ★ 27MHz and 93MHz CB bands
- ★ VHF/UHF aircraft bands
- ★ VHF and UHF PMR bands
- ★ VHF marine band
- ★ VHF taxi band

A radio receiver or scanner will only perform within the operating restrictions of its aerial system. Nearly all scanners are supplied with a small telescopic aerial. Although this is adequate for local reception, for long distance (DX) or weaker signals an outside aerial mounted as high as possible is required. With the increasing frequency range of modern VHF/UHF scanners, a very broadband aerial is needed. The cable, or feeder connecting it to the scanner must have good low loss signal characteristics if the advantages of an outdoor aerial are to be fully realised. All cable will have some losses which increase with feeder length and frequency. To compensate for this the aerial must have signal gain. The best method is to use a wideband masthead signal amplifier. The DC voltage used to power this amplifier is fed up through the centre core of the coaxial cable, which is introduced by using a PSU interface at the receiver end. The aerial described in this article has a weatherproof housing for outdoor use, with four ground radials to aid performance.

### Specification

Power supply: +9V to +14V DC  
Supply current: 17mA (at +12V)

Frequency range: 1MHz to 2000MHz  
Gain: 19dB (maximum)  
Impedance: 50Ω  
Connectors: N/BNC  
Length: 75cm  
Weight: 0.25kg

**Optional Items**

The following items, not included in the kit, may also be required.

50Ω cable	As Req.	(XS51F)
UR67 RF Cable	As Req.	(XR63T)
Plug N-050	2	(FJ77J)
Plug N-011	2	(FJ78K)
BNC Plug 50	2	(HH17T)
N Male to BNC Adapt	1	(FJ82D)
Adaptor 259	1	(YW05F)
AC Adaptor Regulated	1	(YB23A)

**Kit and Special Parts**

A complete kit of parts (including the PCB's, label and all hardware) is available. The PCB's, label and hardware are available separately. A ready assembled version is also available. Full constructional details may be found in Maplin Magazine/Projects Book 106 XD06G, and instruction leaflet XZ27E.

Retail Unit Price each (inc. VAT).

## Aerial Activator

**Features**

- ★ Gain of over 15dB
- ★ Six wavebands
- ★ Usable with a wide range of radio receivers
- ★ Low power consumption
- ★ On-board voltage regulator
- ★ Signal input protection
- ★ Power input polarity protection
- ★ Internal battery or external power supply

**Applications**

- ★ Improve radio reception
- ★ Indoor active aerial
- ★ aerial tuner

The Aerial Activator is designed as an add-on device for your LW/MW/SW receiver. It is designed to increase the strength of the radio signals received over a wide range of frequencies. For LW/MW broadcasts and shortwave listeners using a general coverage receiver, the unit offers an improvement in reception even when used in conjunction with a small aerial system. The RF amplifier used in this design is based upon the SL560C data file first seen in the February 1994 issue of Electronics. The SL560C is a monolithic Integrated Circuit (IC) which contains three very high performance transistors and associated biasing components held in an eight-pin package. In this application it is configured as a 50Ω line driver circuit, with a gain of approximately 15dB.

**Specification**

Frequency range:	150kHz to 30MHz (six wavebands)
1.	150kHz - 300kHz
2.	300kHz - 600kHz
3.	600kHz - 1.5MHz
4.	1.5MHz - 4MHz
5.	4MHz - 10MHz

RF gain: 15dB  
Noise figure: 2dB  
Input impedance: Variable  
Output impedance: 50Ω  
Internal power: Four AA cells (+6V DC)  
External DC power: +10 to +16V DC  
Supply current: 20mA (internal batteries)  
28mA (external +12V DC)

**Optional Items**

The following items, not included in the kit, may also be required.

Metal Panel Box M4005	1	(WY02C)
M3 x 16mm Steel Screw	1 Pkt	(JY24B)
M3 Steel Washer	1 Pkt	(JD76H)
M3 Shakeproof Washer	1 Pkt	(BF44X)

## Audio Filters

### CW Filter

- ★ Sharp audio peak filter
- ★ Low power consumption
- ★ Reverse polarity protection
- ★ Ideal novice project

Although many homebrew or kit receivers are generally adequate for continuous wave reception under normal conditions, this is not always so, especially during contest or openings on the bands. It becomes increasingly difficult to pick out the DX as the number of stations tend to seemingly overlap. One method to overcome this is to have a CW notch filter fitted into the receiver.

**Specification**

DC power supply voltage:	11 to 15V DC
Overall gain:	0dB
Input level:	8V pk-to-pk
Input impedance:	>1kΩ
Centre frequency:	775Hz
Bandwidth:	100Hz @ -3dB, 150Hz @ -6dB

**Kit and Special Parts**

A complete kit of parts is available, including the PCB, the Instruction Leaflet, and the Constructors

Guide. The PCB is available separately. Full constructional details may be found in Maplin Magazine/Projects Book 93 XA93B, and instruction leaflet XV67X.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LU13P	1 CW Filter Kit	£6.800	£7.990
GJ26D	1 CW Filter PCB	£1.690	£1.990
XV67X	1 CW Filter Lit	£0.500	£0.500 NV

## SSB Filter

**Features**

- ★ 8-pole Chebyshev filter
- ★ Reverse polarity protection
- ★ Low power consumption
- ★ Ideal novice project

Although many homebrew or kit receivers are generally adequate for SSB reception under normal conditions, this is not always so, especially during contest or openings on the bands. It becomes increasingly difficult to pick out the DX as the number of stations tend to seemingly overlap. One method to overcome this is to have an SSB filter fitted into the receiver, this is similar to the CW filter except that it is used over a limited bandwidth rather than a single frequency.

**Specification**

DC power supply voltage:	11 to 15V DC
Filter type:	Active 8-pole Chebyshev
Passband ripple:	±0.5dB maximum
Bandwidth:	-3dB points approx 250Hz and 3200Hz -6dB points approx 240Hz and 3400Hz
Input impedance:	24kΩ
Overall gain:	0dB

**Kit and Special Parts**

A complete kit of parts is available, including the PCB. The PCB is also available separately. Full constructional details may be found in Maplin Magazine/Projects Book 94 XA94C, and instruction leaflet XV79L.

Retail Unit Price each (inc. VAT).

## Remote Control/Telemetry

### Radio

## 173MHz FM Transmitter Module

Radiometrix

- ★ Complete PCB mounting transmitter modules
- ★ Up to 1500bps data bit rate
- ★ CMOS / TTL compatible inputs
- ★ 10mW RF output power
- ★ Up to 1km range (direct line of sight).
- ★ Single +5V DC supply
- ★ DTI MPT1344 approved, WT licence exempt

This 173.225MHz transmitter module is a PCB mounting low power VHF narrowband FM transmitter module, designed for general purpose telemetry applications. The transmitter is directly compatible with the FM 173.225MHz receiver module GT45Y. When combined a short range telemetry link may be achieved up to 1km in direct line of sight.

#### Technical data

## 173MHz FM Receiver Module

Radiometrix

- ★ Selective single conversion superhet
- ★ Suitable for direct PCB mounting
- ★ High sensitivity
- ★ Uses SAW filter for high immunity from interference
- ★ Open collector, true data output
- ★ Low power consumption
- ★ Signal strength output

This 173.225MHz receiver is a single conversion PCB mounting NBFM superhet receiver using Surface Acoustic Wave (SAW) technology. It is designed for general purpose telemetry applications and is compatible with 173.225MHz FM Transmitter (GT44X).

The unit incorporates antenna tamper detection circuitry which detects if the antenna has been removed, and a signal strength output. The module may be operated from from +3.3V to +5V logic supplies.

#### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

## 173MHz Antennae

Two high performance antennae for use at 173MHz. These will provide optimum range and reliability when used in conjunction with the 173MHz transmitters and receivers elsewhere in this section.

#### 90mm (3 1/2in.) Helical Antenna (GT42V)

- ★ 1/4 wavelength helical antenna
- ★ 4BA mounting screw thread
- ★ Easy to install/remove
- ★ Rugged plastic finish

#### +3dB Gain 5/8 Wave Antenna (GT43W)

- ★ +3dB gain base loaded 5/8 wavelength whip antenna
- ★ Supplied with waterproof panel mounting base (requires 9mm (3/8in.) hole)
- ★ Easy to install/remove
- ★ Rugged ABS plastic moulded base coil mounted onto black stainless steel whip

Please note: in order to comply with UK DTI Regulations, an antenna with gain may only be used on a 173MHz receiver and not the transmitter

## 418MHz AM Transmitter and Receiver Modules

RF Solutions

#### Applications

- ★ Pagers
- ★ Car alarms
- ★ Domestic alarms
- ★ Garage door openers
- ★ Nurse-call systems

## Transmitter (GT39N)

#### Features

- ★ Transmitting range up to 100 metres
- ★ SAW controlled frequency stability
- ★ No adjustable components
- ★ Only two connections
- ★ Single supply voltage +3V to +12V DC
- ★ DTI MPT1340 approved, WT licence exempt

A complete AM RF transmitter module (GT39N), which can be used to transmit data from any standard CMOS/TTL source up to 600bps.

The module is very simple to operate, requiring only two connections. The module is also low power, using only 2.5mA (typ) which means that it may be driven directly from an encoder IC or microcontroller. The module requires a simple antenna such as a tuned loop or short whip. The module is compatible with the AM Receiver Module (CR75S) below.

#### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

#### Specification

Supply voltage:	+3V to +12V DC
Current Consumption:	2.5mA when transmitting
Output Power:	250µW
Frequency:	418MHz
Range:	100 metres max
Operating temperature:	-10°C to +40°C
Dimensions (WHD):	7 x 11.5 x 4mm
Lead Pitch:	5mm
Approvals:	MPT1340

## Receiver (CR75S)

#### Features

- ★ Hybrid SIL module.
- ★ RF sensitivity typically -105 dBm
- ★ Extremely high accuracy laser trimmed inductor

## A Guide to Choosing the Right RF Solution for Radio-based Telemetry and Control Applications

- RF systems can be supplied in either AM or FM, in many different frequencies, ranges and sizes
- Our standard range of products have been designed around the general purpose frequency of 418MHz this frequency has been set by the Radiocommunications Agency to enable a manufacturer of an RF product to gain a licence exemption for a product, therefore allowing anyone to use this product without requiring a radio broadcasting licence
- Products may be supplied as either AM or FM. They are modular in design enabling an easy switch between the two
- The following table highlights the basic features of AM and FM systems, helping you determine the most suitable system for your application

FEATURE	AM	FM
Range (optimum)	-30 metres typically	up to 200 metres
Cost	Least	Most
Transmitter Physical size	Standard keyfob style	Hand held remote control
Transmission Frequency	418MHz	418MHz
Transmitter Battery	27A-type, 12V	PP3-type, 9V
Transmitter Battery Life	1,000 operations	>1,000,000 operations

#### Glossary of terms

<b>Transmitter</b>	A device which transforms electrical signals into electromagnetic waveforms
<b>Receiver</b>	A device which transforms electromagnetic waveforms into electrical signals
<b>Encoder</b>	A device which encrypts a signal into suitable format ready for RF transmission
<b>Decoder</b>	A device which translates an encoded signal into understandable message
<b>Transceiver</b>	A bidirectional Transmitter and receiver

- ★ Receiving range 30 metres typically
- ★ No adjustments required
- ★ CMOS/TTL compatible output
- ★ Single +5V supply
- ★ Current consumption 2.5mA
- ★ EMC/CE compliant
- ★ No licence requirements

This AM radio receiver module, can be used to pick up data from any 418 MHz AM transmission source including AM Transmitter Module (GT39N) above. The receiver is a SIL packaged module for mounting on a PCB.

The module has no moving or adjustable components thanks to an advanced laser trimming process which provides a very accurate trimming of the RF components.

This means that the module is highly stable and very robust, particularly when used in applications, such as automotive, where there is a high level of vibration, and a wide temperature range.

The module is suitable for any AM telemetry system, and provides digital data out at standard CMOS/TTL voltage levels. The module requires no special interfacing, the user need only to connect an antenna to the input and data out may be fed directly into a microprocessor or micro-controller I/O input.

Specification	
Supply voltage:	+5V DC
Current consumption:	2.5mA
Frequency:	418MHz
Operating temperature:	-25°C to 85°C
Max data rate:	2Kbps
RF Sensitivity:	-105dBm (typically)
Dimensions:	38mm x 14mm x 2mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
GT39N	418MHz AM250W ErcTx	£14.450	£13.700
CR75S	AM Hybrid Rx 418	£14.450	£13.010

## 418MHz AM Transmitter and Superhet Receiver Modules

### LPRS

#### Applications

- ★ Pagers
- ★ Car alarms
- ★ Domestic alarms
- ★ Garage door openers
- ★ Nurse-call systems

### Transmitter (NV08J)

- ★ Transmitting range up to 100 metres
- ★ SAW controlled frequency stability
- ★ No adjustable components
- ★ Only two connections
- ★ Single supply voltage +2.5V to +13.1V DC
- ★ DTI MPT1340 approved, WT licence exempt

A complete AM RF transmitter module (GT39N), which can be used to transmit data from any standard CMOS/TTL source up to 1200bps. The module is very simple to operate, requiring only two connections. The module is also low power which means that it may be driven directly from an encoder IC or microcontroller. The module requires a simple antenna such as a tuned loop or short whip.

The module is compatible with the AM Receiver Module (NV09K) below.

#### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

#### Specification

Supply voltage:	+2.5V to +13.1V DC
Current consumption - Mark:	3mA to 3.6mA
Space:	0mA
RF output:	-6dBm ERP
Frequency:	418MHz ±75kHz
Range:	150 metres max

Operating temperature: -10°C to +40°C  
Dimensions (WHD): 7 x 11.5 x 4mm  
Lead Pitch: 5mm  
Approvals: MPT1340

### Receiver (NV09K)

#### Features

- ★ SIL PCB module.
- ★ RF sensitivity typically -104 dBm
- ★ Crystal controlled synthesised receiver
- ★ Receiving range 150 metres typically
- ★ No adjustments required
- ★ Data and audio outputs
- ★ Single +5V supply
- ★ Current consumption 2.5mA
- ★ EMC compliant
- ★ No licence requirements

This AM superhet receiver provides greatly improved sensitivity and bandwidth over super regenerative receivers. It is ideal for upgrading car alarm, domestic or other low cost applications that require improved range (up to 150 metres) and more consistent operation. The receiver can be duty cycled to reduce average current consumption to below 200µA which is ideal for 'pager' receivers.

The audio output can be easily processed to provide a signal strength output (RSSI) allowing radio link reliability to be dynamically assessed. Low radiated emissions ensure compliance with EMC requirements. The receiver operates from a single +5V DC supply and is compatible with AM Transmitter Module (NV08J) above.

#### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

#### Specification

Supply voltage:	+4.75 to +5.25V DC
Current consumption:	2.5mA
Frequency:	418MHz
Operating temperature:	0°C to 70°C
LF passband:	50Hz to 5kHz
RF passband:	250kHz
RF Sensitivity:	1.4µV/-104dBm (typ.)
Data output -	Low 0.5V max High 4.5V min

Dimensions: 20 x 40 x 6mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
NV08J	418MHz AM Tx Module	£8.500	£7.220
NV09K	418MHz AM SuperhetRx	£17.010	£14.460

## 418MHz Transmitter and Receiver Modules

### Radiometr

AM27E

AM28F

GT48C

GT49D

CR82D

#### Features

- ★ Ready made and tested modules
- ★ DTI approved to MPT 1340
- ★ Inherent ESTI 300-339 conformity (GT48C & GT49D only)
- ★ High stability
- ★ Small size (SMD-Based)
- ★ Ease of use
- ★ Wide supply range
- ★ Low current

#### Applications

- ★ Domestic and commercial security
- ★ Guard patrol protection
- ★ Lone worker protection
- ★ Medical alert
- ★ Nurse call systems
- ★ Mobile panic attack
- ★ Site paging receivers
- ★ Paging car alarms
- ★ Fire alarms
- ★ Remote control systems
- ★ Door bell

The TXM-418-A (AM27E) radio transmitter and matching SILRX-418-A (AM28F) receiver are low cost PCB mounting modules capable of reliably transferring analogue and digital data over distances of 50m in buildings, and over 200m under open field conditions. The modules can transmit data at speeds up to 5kbit/s. The transmitter is type approved to DTI (RA) specification MPT 1340, thus avoiding the need to submit the finished product for further approvals. Optimised for battery powered operation, both modules are designed for reliability and performance. They perform well with very small antennas, and require no complicated RF alignment. The modules are suitable for general purpose telemetry/telecommand, where their small size and high data rates may be used to advantage. Typical applications include: domestic and commercial security, guard patrol/lone worker protection, medical alert, nurse call systems, mobile panic attack, site paging receivers, paging car alarms, fire alarms, remote control etc.

The transmitter has a DC to 10kHz modulation bandwidth and will accept direct analogue (AFSK) or digital data. A modulation lowpass filter (10kHz @ -6dB, 1st order) is used internally. Data input, pin 5, is normally driven directly by CMOS logic levels from a data encoder IC, such as a UM3750 (UK77J), which should be powered from the same power supply as the transmitter module.

The positioning of the receiver antenna is very important and will determine the system range. The antenna should be kept clear of other metal in the system, and ideally should protrude directly out of the case in which it is enclosed.

Specification MPT 1340 requires that the transmitter

must only be used with an integral antenna. Three types of integral antenna are approved for use with the TXM-418-A transmitter module: the helical aerial, which is a wire coil connected directly to pin 2 at one end, and left free at the other; the loop aerial which consists of a loop of PCB track, tuned by a fixed or variable capacitor, and fed from pin 2 and the ground end, pin 1; the whip aerial, which can be a wire, rod, PCB track or combination that is connected directly to pin 2 of the module. Optimum total length is 17cm (a quarter-wavelength of 418MHz).

The choice of antenna and its position will greatly influence the effective range of the transmitter.

Antenna parameters	Type of Antenna		
	Helical	Loop	Whip
Ultimate performance	Good	Fair	Excellent
Ease of design set up	Good	Fair	Excellent
Size	Excellent	Good	Fair
Immunity to proximity detuning	Good	Excellent	Fair

#### Specification - Transmitter

Power supply voltage: 6V to 12V DC  
 Current consumption: 6mA (6V) to 14mA (12V)  
 Effective Radiated Power (ERP): -10dBm (6V) to -6dB (12V)  
 Initial frequency accuracy:  $\pm 50$ kHz  
 Overall frequency accuracy:  $\pm 80$ kHz  
 Spurious radiation: To MPT 1340  
 FM deviation:  $\pm 25$ kHz  
 Modulation bandwidth (analogue): DC to 10kHz (-3dB)  
 Pulse width (digital modulation): 100 $\mu$ s

#### Specification - Receiver

Operating supply range (VCC): 4.5V to 9V DC  
 Supply current: 13mA  
 Overall frequency accuracy:  $\pm 100$ kHz  
 Sensitivity: 0.5 $\mu$ V for 20dB S/N  
 Carrier detector threshold: 1 $\mu$ V  
 RF input impedance: 50 $\Omega$   
 LO leakage: -54dBm  
 IF bandwidth: 250kHz  
 AF output level: 500mV pk to pk  
 AF bandwidth: DC to 5kHz (-3dB)  
 Frequency to voltage conversion: 10mV/kHz  
 Data output - logic low: 0.2V  
 Data output - logic high: 3.8V  
 Data bit duration: 0.2ms to 30ms  
 Data mark/space ratio: 5% to 66%  
 Data settling time: 10ms  
 Enable time: 1.5ms  
 Signal detect time: 1ms

#### Transmitter

- Pin 1: RF GND - internally connected to pin 4 and should be connected to the ground plane against which the integral antenna radiates.  
 Pin 2: RF out - connects to the integral antenna with an output impedance of 50 $\Omega$ .  
 Pin 3: Positive supply.  
 Pin 4: 0V connection for the modulation and supply.  
 Pin 5: Data In - should be driven directly by a CMOS logic device powered from the same supply voltage as the module.

7 Holes of 0.7mm dia. Per SMD208 2.54mm

#### Receiver

- Pin 1: RF in - nominal impedance 50 $\Omega$   
 Pin 2: RF ground - internally connected to pin 4, and should be connected to any ground plane against which the antenna works.  
 Pin 3: Detect - may be used to drive a carrier detect to enable external circuits when a signal is being used, other wise a 10k $\Omega$  pull up resistor to pin 5 should be connected  
 Pin 4: 0V  
 Pin 5: +4.5V to 9V DC supply.  
 Pin 6: AF - FM demodulated output which can be

used to drive analogue data decoders.  
 Pin 7: DATA - a digital output derived from an internal data slicer and is a squared version of the AF output.

DM52G

A DIL version of the receiver (CR82D), with extra functions, is also available.

To assist OEMs with ensuring that end products comply with the requirements of the EMC directive, two enhanced, completely re-engineered, versions of the TXM transmitter and RXM receiver modules are available with inherent EMC conformity. The transmitter is GT48C and the receiver is GT49D, these modules include screening cans and employ new construction technology to intrinsically meet the requirements of the directive. These new versions, when incorporated into a design using sound engineering practice, will greatly assist in reducing the effort involved in meeting the requirements of the EMC directive.

#### Applications Information

Experimental circuits and explanations for using modules AM27E and AM28F are described in Maplin Magazine/Projects Book 73 XA73Q, and applications leaflet XU65V.

#### Technical Data

Technical data is available from Maplin MPS Technical Sales and is also downloadable in Adobe<sup>®</sup> Acrobat<sup>®</sup> PDF format from the Maplin Website:  
<http://www.maplin.co.uk>

#### Evaluation Kit DM52G

A comprehensive evaluation kit (DM52G) is available, this kit comprises: application notes, pre-built transmitter, receiver and signal strength PCBs, plus 1 x AM27E, 1 x AM28F and 1 x CR82D modules.

## BiM-418F FM Transceiver Module

Radlometrix

#### Features

- ★ Miniature transceiver module
- ★ Half duplex data transmission up to 40Kbps
- ★ Up to 120m open field range
- ★ Reliable 30m in-building range
- ★ Single 5V supply
- ★ CMOS/TTL interface
- ★ On-board data slicer, supply switches and antenna changeover
- ★ Double conversion superhet receiver
- ★ -107dBm receiver sensitivity
- ★ SAW controller FM transmitter at -6dBm ERP
- ★ Fast power-up enable(1ms) for duty cycle

#### power saving

- ★ DTI approved to MPT1340
- ★ Meets I-ETS-300 220
- ★ Licence exempt operation in UK

#### Applications

- ★ Medium speed computer networks
- ★ Lap-top - PC - printer links
- ★ High integrity wire-free fire/security alarms
- ★ Building environmental control/monitoring
- ★ Vehicle alarm systems
- ★ Remote metering
- ★ Authorisation/access control

This miniature transceiver module is a miniature UHF radio module; ideal for high speed two way data communication links. The module is capable of communicating at up to 40Kbps in half duplex. Supplied in a miniature PCB mounting module, the unit provides a low cost solution to implement a Bi-directional short range radio data link.

The transceiver integrates a low power UHF FM transmitter and matching superhet receiver together with the data recovery and Tx/Rx change over circuits.

The high data rates (up to 40Kbit/s) and fast Tx/Rx changeover (<1ms) make the BiM-418-F transceiver ideal for high integrity one-to-one links/multi-node packet switch networks. Rapid Rx power up (<1ms) allows effective duty cycle power saving of the receiver for battery powered applications. Full technical data and applications information available.

#### Technical data

Full technical data is available on request and is also downloadable in Adobe<sup>®</sup> Acrobat<sup>®</sup> PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

#### Specification

Supply Voltage:	+5V DC $\pm$ 0.5V
Current Consumption -	
Quiescent (standby):	1 $\mu$ A
Minimum:	8mA
Typical:	12mA
Maximum:	25mA
Radiated Power (transmitting):	-6dBm
Frequency:	418MHz
Range -	
in-building:	30 metres
Open-field:	120 metres
Operating temperature:	-20°C to +55°C
Approval:	MPT1340

#### BiM Transceiver Evaluation Kit

#### Features

- ★ Two-way transceiver interface kit
- ★ Allows testing in the target environment
- ★ Interface identification
- ★ Antenna evaluation
- ★ Can link to external hardware

This comprehensive BiM transceiver evaluation kit enables the user to realise a system for generating Two way communications in the shortest possible time. The kit may interface directly to the users circuit, and can operate in four modes to achieve the desired system.

The kit is supplied in a protective case and includes two matching transceivers with micro-controller based interface, whip aerials and full technical data.

## 418MHz FM Radio Packet Controller

Radiometrix

GT37S

- ★ Radio transceiver with host interface
- ★ 27 byte packet buffer
- ★ CMOS-TTL Interface
- ★ Packet framing and error checking are user transparent
- ★ SAW controlled FM transmitter and superhet receiver
- ★ Reliable 30 meter in-building range, 120m open ground
- ★ Built-in self-test / diagnostics / status LEDs
- ★ Complies with ETSI 300-220 regulations
- ★ Single rail +5V DC supply @ <20mA
- ★ 40Kbit/sec half duplex
- ★ Collision avoidance (listen before transmit)
- ★ Direct interface to 5V CMOS logic
- ★ Power save mode

### Radio Packet Controller

The Radiometrix RPC-418A provides a easy to implement solutions to a local area radio link or network. The Radio Packet Controller (RPC) consists of a UHF transceiver front end with host interface controller. The unit is capable of up to 40Kbps data rate (under ideal conditions). The RPC is supplied as a self-contained module which requires only a simple antenna, 5V supply and an 8-bit interface to a host microcontroller or bi-directional PC port.

The module provides packet formatting and packet recovery functions to realise a number of host microcontrollers or PCs in a radio network. A data packet of 1 to 27 bytes downloaded by the connected host into the RPC's packet buffer is transmitted out as RF signal by the RPC and will 'appear' in the receive buffer of all the other RPCs within radio range.

A data packet received by the RF stage of the RPC is decoded, stored in a packet buffer and the Host controller is informed of a packet is waiting to be uploaded.

Generating a local area radio network couldn't be easier!

### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

### Specification

Supply Voltage: +5V DC  
 Current Consumption: <20mA  
 Frequency: 418MHz  
 Radiated Power (Tx): -6dBm (typ)  
 Range: 30m within buildings  
 120m in direct line of sight  
 Operating Temperature: 0°C to 60°C

### Radio Packet Controller Evaluation Kit

GT38R

To aid system design, the RPC Evaluation kit provides a development platform for easy integration of the packet controller within an

application. Supplied with PC communications software the system provides all the user needs to develop an embedded packet control communications system. The system has several different operating modes as well as providing hardware for a peripheral microcontroller.

## 418MHz AM Key-fob Transmitters

RF Solutions

CR71N & CR73Q

CR72P & CR74R

### Features

- ★ 418MHz SAW controlled transmitter
- ★ Unique transmission data code from one in over 16,000,000 combinations
- ★ High security 'anti-scan' models transmit one unique code from one in over 16,000,000 combinations on each key-press then 'hop' onto another code.
- ★ Tough water-resistant ABS plastic enclosure.
- ★ Battery low indicator
- ★ MPT1340 license exempt
- ★ EMC/CE compliant

These radio transmitter keyfobs available as either one switch, single channel, or two switch, three channel versions.

These keyfobs are used in conjunction with the AM Receiver Module (CR75S) or Receiver Decoders (GT35Q, GT36P, CR76H, CR77J, CR78K & CR80B) listed elsewhere in this section, to provide a complete remote control system.

On depression of a switch, the unit transmits a unique pattern data stream. The algorithm of transmitted data is controlled by on-board micro-controller.

A SAW resonator is used to ensure accurate transmission frequency. A low power LED is used to indicate code transmission and low battery status (blinking).

Each unit is supplied complete with a battery (replacement, ZB55K), in a water-resistant plastic housing with split-ring attached for easy fixing on to a key-ring etc.

The transmitter is fully approved for use in The UK and requires no licence.

The transmitters are available in either 'Standard' data transmission format or as 'High Security Code Hopping' versions.

### Standard Versions

Each transmitter keyfob has a unique signature code designated during manufacture, from one in >16 million possible combinations. The signature code is part of the data transmitted each time the keyfob is operated.

- 1 Button, 1 Channel, Standard: CR71N
- 2 Button, 3 Channel, Standard: CR72P
- Code Hopping Versions

The data transmitted is a pseudo-random number from over 16 million possible combinations and changes on each keypress. Once transmitted, the same data is guaranteed never to be repeated even if the batteries are changed (the data stream appears as a random number).

A code hopping system provides the ultimate security remote control, preventing any third party from scanning the code and replaying it in order to defeat the security system.

- 1 Button, 1 Channel, Code Hopping: CR73Q
- 2 Button, 3 Channel, Code Hopping: CR74R

### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

### Specification

Supply Voltage: 12V DC (27A battery)  
 Current Consumption: 8.5mA when transmitting  
 Output Power: 250µW  
 Frequency: 418MHz  
 Range: 30 metres typically  
 Operating temperature: 0°C to 60°C  
 Approval: MPT1340  
 EMC: meets ETS 300-220

## 418MHz FM Transmitter-Encoders

RF Solutions

**NEW LOW PRICE**

CR85G

CR87U

### Features

- ★ Compact transmitter-encoder
- ★ Integral antenna
- ★ Range up to 200m open field
- ★ High security anti-scanning 'code hopping' data encoding as standard on all versions
- ★ Transmission code changes on each key press from over 16,000,000 combinations
- ★ Available in 1 and 4 channel versions
- ★ Available cased or as a bare board
- ★ Over 1 year operation from a single Alkaline PP3 battery
- ★ MPT1340 License exempt
- ★ EMC/CE compliant

These compact FM transmitter-encoders are intended to be paired with matching FM receiver-decoders (CR88V, CR89W or CR90X). The Tx/Rx pair will provide a highly secure, reliable telemetry link, with long range and low power operation – such cannot be achieved with AM systems.

The data transmitted is a pseudo-random number from over 16 million possible combinations and changes with each transmission. Once transmitted, the same number is guaranteed never to be repeated even if the batteries are changed (the data stream appears as a random number).

A code-hopping system provides the ultimate security remote control, preventing any third party from scanning the code and replaying it in order to defeat the security system.

Three versions are available: 4-channel bare-board (CR85G), 1-switch cased (CR86T) and 4-switch cased (CR87U). The bare board version is supplied with switches *unmounted* on the PCB, to facilitate ease of use in applications where the transmitter is controlled by dry-contacts (e.g. from relays, reed switches, remotely mounted switches, etc.). The bare board is ideal for use in 'remote reporting' systems, security alarms, etc.

4-Channel bare board: CR85G  
1-switch cased: CR86T  
4-switch cased: CR87U

### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

## 418MHz AM Receiver-Decoder Hybrid Module

RF Solutions

### Features

- ★ Complete decoder for AM Transmitter keyfobs (CR71N-CR74R).
- ★ Laser trimmed inductor gives very high stability with no moving or adjustable parts.
- ★ Learns codes from up to 16 unique transmitters (8 high-security code-hopping)
- ★ 4 data channel outputs
- ★ CMOS outputs programmable as momentary or latching.
- ★ Data reception output signal (direct drive of LED)
- ★ Single rail supply +5V DC
- ★ Low power consumption

### Applications

- ★ Garage door openers
- ★ Car, motorcycle, caravan domestic alarms
- ★ General purpose remote control
- ★ Gate entry systems

These miniature SIL hybrid modules are a complete three channel RF Receiver/Decoder which can be used to generate a complete remote telemetry system.

These modules consists of a front end super-regenerative receiver with an embedded controller providing all decoding functions. When used in conjunction with the transmitter keyfobs (CR71N-CR74R) a remote control 'front end' may easily be added to any application.

These modules show a very high frequency stability thanks to a unique laser trimming process which has been patented to give a very accurate on board inductor removing the need for any moving components.

These modules have an easy-to-use 'LEARN' facility. GT35Q is capable of learning up to 16 standard (CR71N & CR72P) RF Solutions Key-fob Transmitters. GT36P is capable of learning up to 8 high-security code-hopping unique (CR73Q & CR74R) RF Solutions Key-fob Transmitters.

Modules require connection to the power supply, and provides four data outputs. The outputs may be programmed for momentary or latching configuration via a link input, a data reception direct LED drive is also provided

### Technical data

## 418MHz AM and FM Receiver-Decoders – PCB Mounting

RF Solutions

CR76H & CR77J

CR88V

### Features

- ★ Complete receiver-decoder modules
- ★ PCB mounting with relay
- ★ Available in 3 channel AM & 4 channel FM versions
- ★ Available in standard and high-security code-hopping versions
- ★ AM range 30 metres typically
- ★ FM range up to 200 metres
- ★ Receiver-decoders 'learn' up to 16 standard transmitter-encoders or up to 8 code-hopping transmitter-encoders

These receiver-decoder modules mount on a PCB as a complete component, providing RF receiver and decoder functions with built-in intelligent 'easy learn' feature. The modules are taught to recognise the codes from transmitter-encoders.

These modules are very easy to design-in, adding remote control has never been easier! The modules have the same footprint as a standard 40-pin DIL integrated circuit, plus a relay section – the module simply plugs into the end application.

These modules are very versatile: having the capacity to learn up to 8 standard transmitter-encoders or 16 high-security code-hopping transmitter-encoders. An LED provides indication of data reception. Four high current digital outputs and an on-board relay are provided – which can be set to momentary or latching operation. The relay section can be 'snapped off' to reduce the size of the module if it is not required.

The modules are available in a number of configurations:

### AM Standard Receiver-Decoder (CR76H)

- ★ 3-channel
- ★ 1-relay on-board
- ★ Four outputs
- ★ 30m range typically
- ★ For use with 1 button, 1 channel, standard AM Key-fob transmitter (CR71N) or 2 button, 3 channel, standard AM Key-fob transmitter (CR72P)

### AM High-Security Code-Hopping Receiver-Decoder (CR77J)

- ★ High security
- ★ 3-channel
- ★ 1-relay on-board
- ★ Four outputs
- ★ 30m range typically
- ★ For use with 1 button, 1 channel, Code-Hopping AM Key-fob Transmitter (CR73Q) or 2 button, 3 channel, Code-Hopping AM Key-fob Transmitter (CR74R)

### FM High-Security Code-Hopping Receiver-Decoder (CR88V)

- ★ High security
- ★ 4-channel
- ★ 1-relay on-board
- ★ Four outputs
- ★ Up to 200m range
- ★ For use with 4-Channel Bare-Board FM Transmitter-Encoder (CR85G), 1-Switch Cased FM Transmitter-Encoder (CR86T) or

**4-Switch Cased FM Transmitter-Encoder (CR87U)**

**418MHz AM & FM Receiver-Decoders – Cased**

**RF Solutions**

CR78K, CR80B

CR89W

**Features**

- ★ Complete cased receiver-decoders
- ★ Available in 3 channel, 4 relay AM & 4 channel, 4 relay FM versions
- ★ Available in standard and high-security code-hopping versions
- ★ AM range 30 metres typically
- ★ FM range up to 200 metres
- ★ Receiver-decoders 'learn' up to 16 standard transmitter-encoders or up to 8 code-hopping transmitter-encoders

These cased receiver-decoders provide an easy way of adding a remote control system to virtually any application. The receiver-decoders are self-contained and provide 3-channel (AM) or 4-channel (FM) remote control with relay outputs (see specification table for relay contact ratings). A host of applications can be switched remotely; e.g. garage doors, domestic appliances, garden lights, alarm systems, etc.

Installation simply requires connections to be made to the receiver-decoder's power input and control outputs via PCB screw terminals. These receiver-decoders are very versatile: having the capacity to learn up to 8 standard transmitter-encoders or 16 high-security code-hopping transmitter-encoders.

Full data available.

These receiver-decoders are available in a number

of configurations in ready built form only:

**AM Standard Receiver-Decoder (CR78K)**

- ★ 3-Channel
- ★ 4-Relays
- ★ 30m range typically

**418MHz High-Speed Transparent RS232 Radio Data Modem**

**LPRS**

**Features**

- ★ Wireless RS232 operation
- ★ Half-duplex data transmission at up to 19.2Kbps
- ★ Hardware (CTS/RTS) or software (Xon/Xoff) flow control
- ★ LED transmit and receive status indicators
- ★ User selectable host data rate
- ★ Selectable internal or external antenna
- ★ MPT1340 approval

**★ Licence exempt operation**

**★ Range up to 100 metres open-field**

**Applications**

- ★ PC to PC link
- ★ Laptop PC to PC/Mainframe links
- ★ Remote printer
- ★ Remote data acquisition/logging
- ★ Stock/inventory control systems
- ★ EPOS systems

This radio data modem provides a reliable transparent asynchronous RS232 data link using a miniature UHF radio transceiver. Data can be transmitted at user selectable baud rates of 4800, 9600 or 19200bps. The radio transceiver is Type Approved for licence exempt use in the UK (MPT1340)

The unit requires a DC supply voltage in the range +8V to +12V. The unit will operate from a simple three-wire RS232 connection using Tx, Rx and Gnd, however, flow control can be implemented, if required, using the CTS and RTS control lines.

Please note that units are supplied individually - two units will be required to establish a radio data link.

**Operation**

The quiescent state of the unit is receive. In this condition the unit is continually looking for either RS232 data from the host or the RF carrier from another unit. When the unit receives RS232 data from the host, the transmitter is turned on and the data is then transmitted in packets preceded by a header block. This block contains a synchronisation word, the number of bytes in the packet and a checksum. The header does not degrade the overall performance of the link and provides good data integrity and security. When the unit detects the RF carrier from another unit, it checks the header block and data for the synchronisation word, the correct number of data bytes and a valid checksum. If all three are correct, the header block is discarded and the original data is output via the RS232 port.

**Range**

As will all radio systems, range will vary according to the environment. In open field conditions a range of up to 100 metres may be achieved. In-building range may reduce this distance considerably.

**Specification**

**General**

Supply voltage:	+8V to +12V DC
Supply current:	45mA typical
Host interface:	Half duplex asynchronous RS232, 9-way D-type connector

Data rate:	4800, 9600, 19200bps jumper selectable
Data bits:	8 (or 7 with parity)

Stop bits:	1
Parity:	None
Tx/Rx switchover time:	<1ms

**RF Parameters**

Frequency:	418MHz
Frequency stability:	±95kHz
RF power output:	-6dBm typical ERP
FM Deviation:	20kHz
Modulation:	GMSK
Spurious emissions:	meets ETS 300-220
Receiver sensitivity:	-107dBm
Local osc leakage:	-57dBm
IF Bandwidth:	200kHz
AFC lock range:	200kHz

**Mechanical & Environmental**

Size:	114 x 63 x 17mm
Weight:	55 grams
Operating temp:	-20°C to +55°C

## 418MHz Antennae

A range of three high performance antennas for use at 418MHz. These will provide optimum range and reliability when used in conjunction with the 418MHz transmitters and receivers elsewhere in this section.

CR95D

- +3dB Gain 5/8 Wave Antenna (CR95D)
- ★ +3db Gain base loaded 5/8 wavelength whip antenna
- ★ Supplied with waterproof panel mounting base (requires 9mm (3/8in. hole)
- ★ Easy to install
- ★ Rugged ABS plastic moulded base coil mounted onto black stainless steel whip.

Please note: in order to comply with UK DTI Regulations, an antenna with gain may only be used on a 418MHz receiver and not the transmitter.

### Helical Stub Antenna (CR94C)

- ★ 1/4 wavelength helical antenna
- ★ 4BA mounting screw thread
- ★ Easy to install
- ★ Rugged plastic finish

CR94C

### 150mm (6in.) Flexible Antenna (CR93B)

- ★ 1/4 wavelength flexible whip antenna
- ★ 4BA mounting screw thread
- ★ Easy to install
- ★ Rugged plastic finish

## 458MHz FM 10mW Fixed Frequency Transmitter & Receiver Modules

Circuit Design Inc.

GT17T

GT18U

- ★ Crystal controlled fixed frequency
- ★ Narrow band FSK (NBFSK) modulation
- ★ 10mW transmitter
- ★ Sensitive double conversion superhet receiver
- ★ Up to 1km range, direct line of sight
- ★ Fully screened
- ★ DTI MPT1329 and MPT1361 approved, WT licence exempt
- ★ ETSI 300-220 compliance for EMC
- ★ Transmitter supplied with flexible antenna (can be removed and fitted with rigid antenna or have coax-connected antenna attached)
- ★ Easy to use

This pair of transmitter and receiver modules are designed for longer range applications and use the 458MHz band. They are approved to MPT1329 and MPT1361 for use in the UK. The modules comply with ETSI 300-220 and are thus intrinsically compliant with the requirements of the EMC directive. Both modules are CMOS/TTL compatible and include all functions that are necessary for the transmission of digital data by radio. They are suited for general purpose telemetry and telecommand such as industrial machine control systems, security, surveillance, as well as general data transmission. In combination, these modules will typically provide an operating range of between 800m and 1km, direct line of sight.

The transmitter is supplied with a flexible antenna, attached to the transmitter by means of a miniature coax connector. This antenna can be unplugged and either a rigid antenna substituted (GT25C) or an external 458MHz antenna connected by means of 50Ω coax using miniature coax plug (GT24B).

### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

### Specifications

**General:**  
 Operating frequency: 458.650MHz  
 Frequency response: 100Hz to 3kHz  
 BAUD rate: 1200 to 2400 BAUD  
 (async serial data with start and stop bit)  
 4800 BAUD (selected data protocols and applications)  
 Operating temperature: -10°C to +60°C

**Transmitter:**

RF output power: 10mW ±3dB @50Ω  
 Frequency stability: <2.5kHz (0°C to +50°C)  
 Modulation: Narrow band FM  
 Data input: CMOS or TTL  
 Supply voltage: +5.5V to +10V DC  
 Supply current: 18mA, typ. 25mA max  
 Size (WHD): 36 x 26 x 10mm  
 Weight: 9.8g

### Receiver:

Type: Double conversion superhet  
 Sensitivity: 200µV, typ. 300µV max (for 12dB SINAD)  
 Selectivity: ±5kHz at -6dB point  
 Demodulation: Narrow band FM  
 Distortion: <5% at 1kHz  
 S/N ratio: 50dB overall  
 Data output: Open collector (digital)  
 Other outputs: RSSI (field strength)  
 AF (analogue)  
 Supply voltage: +4.5V to +14V DC  
 Supply current: 10mA, typ. 15mA max.  
 Size (WHD): 50 x 30 x 7mm  
 Weight: 19.3g

## 458MHz FM 10mW PLL Synthesised Transmitter & Receiver Modules

Circuit Design Inc.

GT22Y

GT23A

- ★ 16 Channels in 458MHz band (25kHz channel step) - DIL switch selectable
- ★ PLL controlled VCO with fast settle time (<70ms)
- ★ Narrow band FSK (NBFSK) modulation
- ★ 10mW transmitter
- ★ Sensitive double conversion superhet receiver
- ★ Up to 1km range, direct line of sight
- ★ Fully screened
- ★ DTI MPT1329 and MPT1361 approved, WT licence exempt
- ★ ETSI 300-220 compliance for EMC
- ★ Transmitter supplied with flexible antenna (can be removed and fitted with rigid antenna or have coax-connected antenna attached)
- ★ Easy to use

This pair of transmitter and receiver modules are designed for longer range applications and use the 458MHz band. The frequency is selectable by means of a DIL switch, this allows a number of similar transmitter/receiver pairs to be used in proximity without mutual interference. Additionally, a

channel may already occupied and thus being able to select the frequency allows a 'free' channel to be used. These modules are approved to MPT1329 and MPT1361 for use in the UK. The modules comply with ETSI 300-220 and are thus intrinsically compliant with the requirements of the EMC directive. Both modules are CMOS/TTL compatible and include all functions that are necessary for the transmission of digital data by radio. They are suited for general purpose telemetry and telecommand such as industrial machine control systems, security, surveillance, as well as general data transmission. In combination, these modules will typically provide an operating range of between 800m and 1km, direct line of sight.

The transmitter is supplied with a flexible antenna, attached to the transmitter by means of a miniature coax connector. This antenna can be unplugged and either a rigid antenna substituted (GT25C) or an external 458MHz antenna connected by means of 50Ω coax using miniature coax plug (GT24B).

**Technical data**

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

<http://www.maplin.co.uk>

**Specifications**

**General:**

Operating frequency: 458MHz band/16 channels  
 Frequency response: 100Hz to 3kHz  
 BAUD rate: 1200 to 2400 BAUD  
 (async serial data with start and stop bit)  
 4800 BAUD (selected data protocols and applications)  
 Operating temperature: -10°C to +60°C

**Transmitter:**

RF output power: 10mW +0dB -3dB @50Ω  
 Transmitter start-up: 60ms  
 Frequency stability: <2.5kHz (0°C to +50°C)  
 Modulation: Narrow band FM  
 Data input: CMOS or TTL  
 Supply voltage: +3V to +12V DC  
 Supply current: 30mA, typ.  
 Size (WHD): 36 x 26 x 10mm  
 Weight: 11g

**Receiver:**

Type: Double conversion superhet  
 Sensitivity: 200µV, typ. 300µV max (for 12dB SINAD)  
 Selectivity: ±7.5kHz at -6dB point  
 Demodulation: Narrow band FM  
 Distortion: <5% at 1kHz  
 S/N ratio: 35dB overall  
 Data output: Open collector (digital)  
 Other outputs: RSSI (field strength)  
 AF (analogue)

Supply voltage: +3.6V to +12V DC  
 Supply current: 30mA, typ.  
 Size (WHD): 50 x 30 x 9mm  
 Weight: 18g

Low Power Radio Solutions

GT26E

GT27F

- ★ Up to 800m range, direct line of sight
- ★ FM modulation – high integrity operation
- ★ LED transmit indicator
- ★ 255 codes, DIL switch selectable
- ★ 4-button, 4-channel operation
- ★ Ideal for lighting control, non-critical process control, remote switching and general purpose telecommand
- ★ Hand-held transmitter
- ★ DTI MPT1329 & MPT1361 approved, WT licence exempt

When used as a pair, this hand held transmitter and receiver provide a remote control system with a range of up to 800m (direct line of sight). The system can be set to operate on 1 of 255 codes by means of a DIL switch, thus allowing several pairs to be used in close proximity, although not simultaneously. 4 buttons on the transmitter operate 8 separate outputs on the receiver (inverted and non inverted). Transmitter is powered by a 9V PP3 Alkaline battery (JY49D), providing power for up to 5000 1.5 second operations over 2 years. Receiver has open collector outputs which can sink up to 500mA max (each). Supply voltage of the receiver is +8 to +24V DC, 20mA quiescent. Receiver dimensions are 120 x 45mm.

Please note that the receiver board IS NOT supplied with the RF Receiver Module, this item must be purchased separately (GT18U).

- ★ Up to 20km range direct line of sight
- ★ 1 to 3km range through buildings
- ★ Fixed frequency 458.850MHz
- ★ RF output power 500mW
- ★ Data rate up to 9,600bps
- ★ Single rail supply voltage
- ★ Low power consumption
- ★ DTI MPT1329 approved, WT licence exempt

Crystal controlled data radio transmitter and receiver modules. These miniature modules are supplied ready to operate, using the MPT1329 license exemption which enables up to 500mW of RF output power. This gives a range of up to 20km in direct line of sight with up to 1 to 3km within buildings. All units are licence exempt and EMC compliant thus requiring no user licensing. Both transmitter and receiver have CMOS/TTL or analogue data input/output interface to their host controller. The data rate which can be transmitted is up to 9,600bps. Connections are made via gold plated pins on the module base. Each module may be socket mounted and easily interchanged.

## 458MHz FM Synthesised 500mW Transceiver

WEI

- \* Up to 20km range direct line of sight
- \* 1 to 3km range through buildings
- \* Frequency range 458.50MHz to 458.95MHz
- \* 15 user selectable channels
- \* RF power output 5mW to 500mW
- \* Data rate up to 9,600bps
- \* Serial digital data or DIL switch configurable
- \* Single rail supply +12V DC
- \* Low power consumption
- \* DTI MPT1329 approved, WT licence exempt

This miniature module is complete synthesised radio data transceiver module. It makes use of the 458MHz general purpose telemetry band providing up to 20km range of data transmission in direct line of sight, and up to 1 to 3km through buildings, at up to 9600bps data rate.

Both transmitter and receiver have CMOS/TTL or analogue (this can be GMSK or FSK) data in/out interface to their host controller. Connection is via a 26 way PCB connector, protruding from the module underside.

Configuration of the module can be from either DIL switches or from the host sending serial commands. The frequency of operation may be set from 458.500 - 458.950MHz (15 channels available for general purpose use) to ensure that an available channel can be used within the application environment. Please note that frequencies 458.825MHz (ch. 13) and 458.900MHz (ch. 16) are reserved for use by the emergency services only and must not be used under any circumstances (15 other channels are available for use). The module is supplied ready to operate and is DTI MPT1329 approved for licence free use.

## 458MHz Synthesised Multi-Mode Transparent RS232 Radio Data Modem

LPRS

### Features

- \* UHF FM synthesised radio transceiver
- \* Transparent 1200bps serial data transmission
- \* RS232 serial data interface
- \* Four modes of operation
- \* User selectable RF channel and address
- \* LED indicators for radio functions, signal strength and serial line status
- \* Digital input and relay output port
- \* Automatic repeat request
- \* 1km to 10km range depending on antenna and conditions
- \* Licence exempt operation
- \* MPT1329 and ETSI approval

### Applications

- \* Alarm systems
- \* Remote metering
- \* Video surveillance control
- \* Traffic information systems
- \* Utility control, logging and diagnostics
- \* PC to PC link
- \* Laptop PC to PC/Mainframe links
- \* Remote printer
- \* Remote data acquisition/logging
- \* Stock/inventory control systems
- \* Warehousing and dispatch
- \* EPOS systems
- \* Robotics
- \* Process control and monitoring
- \* Intelligent buildings
- \* Environment control and monitoring

This unit is a UHF multi-channel transceiver, incorporating FFSK baseband modem, serial data interface and digital input and relay (n.c. & n.o.) output ports. It provides fully transparent operation regardless of the serial data protocol. An over-air speed of 1200bps provides excellent data integrity and range whilst on-board buffering permits serial data to be input at various baud rates up to 19200bps. Access to all user configurable parameters is possible using on-board switches and operational status is easily monitored using the standard LED indicators.

The unit includes addressing capability, user selectable frequency of operation, automatic repeat request (ARC) and MODBUS compatibility (ASCII & RTU).

The unit requires a +12V DC supply which should be well filtered and regulated. On-board voltage regulator circuits will maintain a constant supply voltage to the radio and logic circuits, however, excessive noise, fluctuations and interference on the DC supply may cause data loss.

Please note that units are supplied individually - two units will be required to establish a radio data link.

### Modes of Operation

Asynchronous Mode

Synchronous Mode

Modem Mode

ARQ (error corrected) Mode

Please refer to Technical Data Sheet for full explanation of operating modes.

### Antenna and Range

As with all radio systems, range will vary according to the environment and antenna used. The antenna should be designed for use at 458MHz. The radio range achieved will be dictated by the land topography between nodes. In many cases increasing antenna height can greatly improve signal strength. Typical range: 1km with 1/2 wave whip, 5km with end-fed dipole, 10km with 8-element yagi

### Specification

#### General

Supply voltage: +10.5V to +15V DC

Supply current: 80mA Rx, 100mA Tx with relay on add 30mA

Host interface: RS232, 9-way D-type connector

I/O data rate: 150 to 19200bps

RF bit rate: 1200bps

Mode: Half duplex

Data bits: 7, 8 or 9

Stop bits: 1 or 2

Parity: Odd, Even or None

Data buffer: 2K bytes

#### RF Parameters

Frequency: 458.5125 to 458.9500MHz

RF power output: 10mW

Modulation: FFSK

Receiver sensitivity: -110dBm

Intermodulation: -70dBm

Adj channel rejection: -70dBm

RSSI threshold: -110dBm

#### Mechanical & Environmental

Size: 130 x 109 x 32mm

Weight: 154 grams

Operating temp: -25°C to +60°C

Operating humidity: 20% to 75% RH

## Miniature Key-fob Case

RF Solutions

### Features

- ★ Miniature transmitter case
- ★ Available as single switch or two switch versions
- ★ Tough ABS enclosure
- ★ Supplied with mylar membrane panel sticker
- ★ Supplied with battery contacts for type 27A 12V battery
- ★ Supplied with split-ring attachment and case screws
- ★ Integral PCB guides
- ★ LED view window

These cases are ideal for miniature RF transmitters, supplied ready marked with MPT Licence Exempt and the CE Mark. Supplied complete with a mylar membrane sticker which fits in a recess of the top pane, thus lending itself to easy OEM customisation. Ergonomically styled from tough ABS plastic, the case may be completely sealed by inserting a 1mm rubber gasket (not supplied).

### Technical data

## 418MHZ Encoded Transmitter And Receiver

### Features

- ★ Easy to build and use
- ★ Wide supply range
- ★ Low current consumption
- ★ Ready-made and aligned RF module
- ★ 4,096 codes
- ★ FM operation
- ★ DTI approved to MPT1340

### Applications

- ★ Domestic/commercial security
- ★ Guard patrol protection
- ★ Lone worker protection
- ★ Medical alert
- ★ Nurse call systems
- ★ Site paging receivers

1 TX

2 RX

- ★ Paging car alarms
- ★ Fire alarms
- ★ Remote control systems
- ★ Doorbell

### Important Note

Commercial use of the transmitter may require additional type approval; in case of doubt contact the Radio Communications Agency at the Department of Trade and Industry at: Radio Communications Agency, Waterloo Bridge House, Waterloo Road, London, SE1 8UA. Switchboard, Tel: 0171 215 5000 Radio Communications, Tel: 0171 215 2150 MPT1340 Enquiries. Tel: 0171 215 2129 Copies of MPT1340 are available from the Radio Communications Agency.

Previously, it had been difficult for the electronics enthusiast to build, and legally use, UHF radio transmitters and receivers. Fortunately, this situation has now changed. These projects are based on the TMX-418-A transmitter module (AM27E), and the matching, ready-built and aligned radio receiver module SILRX-418-A (AM28F). With ideal antennae, these modules are capable of transferring data reliably up to a distance of 50m in buildings and over 200m under open field conditions. The transmitter is type approved to Department of Trade and Industry (DTI) Radio Communications Agency (RA) specification MPT1340, thus avoiding the need to submit the finished project for further approval. The modules have been optimised for battery powered operation and both are designed for reliability and performance in the field. They perform well with very small antennas and require no alignment whatsoever.

The projects are a boon for security and other applications. Using these projects means that stand alone or wire-interconnected equipment can now be linked to good effect by totally wireless means. The Telephone Bell Repeater project LT67X is an ideal candidate for wireless operation. With the 418MHz transmitter interfaced to the Telephone Bell Repeater, when the telephone rings, the Telephone Bell Repeater activates and keys the transmitter. This then transmits an encoded signal on 418MHz, and is received by the 418MHz receiver. The signal is decoded, and a piezo buzzer and LED then activate on the 418MHz receiver, informing the person with the receiver that the telephone is ringing. The receiver, when housed in the optional case, is a very compact unit, and can be clipped onto a pocket or belt and carried around. These transmitter/receiver projects could be used as a means of connecting a remote sensor to an alarm system without having to run wires. A remote sensor can be connected to the transmitter by means of normally open contacts, such that when the sensor is triggered, the transmitter is activated. Interfacing the receiver to an alarm system can be achieved by connecting a low-current low-voltage relay in place of the piezo buzzer. The relay contacts would be connected to either a normally open or normally closed loop on the alarm system so that when a valid code is received, the relay is operated and the alarm system triggered. This principle could be applied to provide a 'nurse/relative call' system for an elderly relative. The transmitter, fitted with a latching button could be carried in the relative's pocket, so it could be operated in case of emergency. The receiver could be connected to a telephone communicator, such as GL03D, by means of a low-current low-voltage relay connected in place of the piezo buzzer. Activating the transmitter would cause the receiver to operate the relay, which in turn would cause the

telephone communicator to dial the pre-programmed number and relay the pre-recorded emergency message. The GL03D unit mentioned stores the emergency message in battery backed-up RAM and can be programmed with up to four telephone numbers.

By connecting the transmitter to a car or house alarm system, a paging system would be created such that when the alarm is triggered, the transmitter is activated. When a valid code is received, the piezo buzzer on the receiver would sound, alerting the owner to a theft attempt. The transmitter and receiver could also form the basis of a wireless doorbell.

With a total of 4,096 codes to choose from there is plenty of scope for using multiple units in many different applications. In all cases it is wise to perform range tests to ensure adequate coverage is obtained. With security applications or emergency call systems, correct operation should be checked regularly and batteries replaced as a matter of course.

### Specification

#### Transmitter

Power supply voltage: 16 to 35V DC  
 Current consumption  
 Quiescent current: 3-8mA  
 Operating current: 14-5mA

#### Receiver

Power supply voltage: 3.5 to 9V (PP3 battery)

Current consumption  
 Supply current average: 1.2mA  
 Supply current peak: 160mA @ 800µs  
 20mA @ 4ms  
 0mA @ 49ms

#### Optional items

The following items, not included in the Receiver kit, may also be required.

Pocket Clip Case	1	(KC95D)
9V PP3 Alkaline Battery	1	(FK67X)

## Radi-Call System

2

### Features

- ★ Easy to build and use
- ★ Compact and lightweight
- ★ Ready-made and aligned RF modules
- ★ 4,096 possible codes
- ★ FM operation
- ★ DTI approved to MPT 1340

### Applications

- ★ Domestic/commercial security
- ★ Guard patrol protection
- ★ Lone worker protection
- ★ Medical alert
- ★ Nurse call systems
- ★ Site paging receivers
- ★ Paging car alarms
- ★ Fire alarms
- ★ Remote control systems

The 418MHz Radi-Call transmitter and receiver projects are a boon for the frail, infirm, sick and the elderly and their carers. However, the system may also be used for many other security and remote-control applications – enabling stand-alone or wire-interconnected equipment to be linked to good effect by totally wireless means.

The transmitter features very low power consumption, giving long battery life. The operation of the transmitter is such that when activated, it will briefly transmit an encoded 418MHz signal.

Transmission will then cease, but an LED will continue to flash and a buzzer will sound in piercing bleeps until the reset button is pressed. The panic button is a large 'activation pad' on the front panel of the unit, whereas the reset button is concealed, so that the activated transmitter can only be reset by persons notified of its position, eliminating the possibility of it being prematurely switched off before help has been summoned.

The receiver is designed to be directly compatible with telephone auto-diallers (such as our GL03D). Activating the transmitter would cause the receiver to operate a relay, which in turn, would cause the telephone communicator to dial the pre-programmed number(s) and relay the pre-recorded emergency message.

Other applications include connecting a remote sensor to an alarm system without having to install wiring in a building. By connecting the transmitter to a car or house alarm system, a paging system would be created such that when the alarm is triggered, the transmitter is activated, triggering the relay on the receiver and activating an alarm, thereby alerting the owner to a theft attempt. In addition, as long as the range of the system is not exceeded, it is also possible to use the system secure a boat, caravan, garage, shed, etc. (protect your tools and ladders - burglars find them very useful!)

### Specification

#### Transmitter

Supply voltage: 6 to 12V DC (9V nominal)  
 Quiescent current: <0.5µA  
 Operating current: <25mA  
 Sound output: 75dB @ 30cm  
 PCB dimensions: 55 x 62mm

#### Receiver

Supply voltage: 9V DC (230V AC with optional transformer)  
 Current consumption: 14mA Quiescent  
 35mA Operating  
 PCB dimensions: 49 x 57mm

#### Optional items

The following items, not included in the kit, may also be required.

PP3 9V Battery	1	(JY49D)
R/A Phono Plug	1	(FE74R)
ABS Box Type H2851	1	(BE74R)

## K6706/K6707 Two Channel Codelock Transmitter and Receiver

2

Velleman

VF65V/VF84F

VF66W

A two channel transmitter K6706 (VF65V) and K6706A (VF84F) and a single channel receiver K6707 (VF66W). The K6706 is *not* approved for use in the UK. The K6706A operates on 433MHz (I-ETS 300 220) and can be used for automotive telemetry *only* in the UK and general purpose telemetry in continental Europe. If two channel operation is required, two receivers are required; one programmed to respond to button one, the other programmed to respond to button two. The system is ideal for alarm and remote control applications. The keyfob features two buttons and an LED which illuminates when the unit is activated. When the receiver picks up the transmitted signal it can either toggle the outputs or perform a momentary action – ideal for door releases! The receiver can be operated by any K6706/6A type keyfob after first programming in its unique signature. Kits are supplied separately, with operating, construction and installation instructions.

## Infra-Red

### K6708/K6709 Infra-Red Transmitter and Receiver

2

Velleman

These two kits, when used together, provide an effective short range infra-red controlled switch for use in applications such as access control systems, alarm arm/disarm, etc. The transmitter and receiver are single channel. The transmitter and receiver can be set to operate on one of 8,748 codes. Operating distance is approx 7m. LEDs are provided on both transmitter and receiver to indicate transmission and reception of code.

Transmitter is powered by a 12V 'lighter' type battery type GP23A. The receiver is powered from a +12V to +16V DC or 2 x 9V AC supply @ 100mA. Receiver's switched output can be set to operate momentarily or with toggle action. Relay is rated at 10A @ 12V DC.

### K6710 15-Wire Infra-Red Transmitter

2

- ★ 15 channels
- ★ Remote control of light dimmer
- ★ 21 keys
- ★ 'Click-touch' keypad
- ★ Robust aluminium case

This infra-red transmitter can be used with the universal 15-channel receiver K6711 and/or the one-channel receiver K6712. One key will reset all the outputs at once. The keypad features a superb 'click-touch' design which has a characteristic responsive feel, unlike other membrane designs which offer no tactile feedback whatsoever. Additionally, 'click-touch' offers a high degree of protection against moisture ingress. The transmitter is housed in an attractive and robust aluminium case.

### Specification

Range:	30m maximum
Tx carrier frequency:	38kHz
Identification codes:	6
Independent channels:	15
Power supply voltage:	9V (PP3 battery)
Current consumption standby:	0.1µA

transmit: 10mA average  
Dimensions: 175 x 50 x 23mm

**Kit and Special Parts**

A complete kit of parts (including the PCB) is available (excluding optional items). Full construction details may be found in Maplin Magazine/Projects Book 59 XA59P.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VE72P 1	Velleman Kit K6710	£34.880	£41.990

**K6711 15-Channel Infra-Red Receiver**

**2**

**Features**

- ★ Controls up to 15 separate open collector outputs
- ★ Each output can have 'pulse' or 'toggle' operation modes
- ★ 'Rotary' switching or independent channels
- ★ Two memories for storing commonly-used output combinations

**Applications**

- ★ Lighting
- ★ Stage effects
- ★ Home automation
- ★ Adding infra-red remote control to logic-controlled VCRs and cassette decks
- ★ Security systems

The receiver has 15 independent outputs, each of which can be operated separately, and for every single output there is the option of using it as a changeover switch or as a pulse contact. The receiver is built around a modern microcontroller, allowing two output states to be stored in memory, which can be called at any time. A reset function allows the resetting of ALL outputs at once using only one key (could be adapted for use as a panic alarm).

**Specification**

Number of open collector outputs: 15 outputs at 50V  
500mA maximum  
Output status monitoring: LED for every output  
Emitting/receiving area: 30m maximum  
Supply voltage: 8 to 14V DC, or 2 x 6 to 2 x 12V AC, 150mA

**Optional Items**

The following items, not included in the kit, may also be required.

15-channel Infra-red Transmitter Kit	1	(VE72P)
250mA Transformer 9V-0-9V	1	(YN15R)
Relays	As Req	
1N4001	As Req	(QL73Q)

**Kit and Special Parts**

A complete kit of parts (including the PCB) is available (excluding optional items). Full construction details may be found in Maplin Magazine/Projects Book 69 XA69A.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VE73Q 1	Velleman Kit K6711	£28.920 5+ £25.090 10+ £24.820	£33.990 1+

**K6714 Universal Relay Card**

**3**

If you want an electronic controller to be able to switch higher currents and at the same time provide isolation between the controller and the controlled items, then this relay module is for you. It is very well suited to be connected to our kits K6711 (15 channel IR receiver) and one or two times K6701 (8 channel 2 wire receiver). For those two kits power can be taken direct from the relay module. The module can also be used together with the open collector interface module K2609. In its standard version the module contains 8 relays, but it can be extended up to a maximum of 16 relays.

Relay switch-over contact: 5A at 220V max.  
12V/250mA for feeding K6701/K6715  
Power supply: 220 or 125V AC/12VA  
Dimensions: 150 x 212mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VF10L 1	Velleman Kit K6714	£34.880	£40.990

**K6712 IR Remotely Controlled Dimmer**

**4**

This one-channel IR-receiver/dimmer works together with the 15-channel IR-transmitter (K6710). The receiving code can be set to one of the 15 transmitting codes so that you can operate up to 15 receivers (K6712 and/or K6713) independently of each other. Can be fitted to a standard light switch wall box by using ZB40T with the back knocked out.

Emitting/receiving area up to 30m.  
Max. load: 2A (4A with cooling).  
Not suitable for use with halogen lamps.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VE74R 1	Velleman Kit K6712	£27.220	£31.990

**Infra-Red Remote Control Switch**

**3**

- ★ Ranges in excess of 10 metres
- ★ Relay output
- ★ Latched or momentary output

In many situations it may be impractical to use direct manual switching, especially when switches are located in inaccessible places or where it is inconvenient to operate them. A useful option for short range is the use of infra-red remote control. This has the advantage of needing no extra wiring to a control unit and is relatively free from interference associated with radio control. This project will provide remote switching of a single pole changeover relay with the provision of either selecting a latched output or momentary output. LEDs on both the transmitter and receiver flash when they are operating. A purpose made case is provided for the transmitter although the receiver needs to be housed, preferably in a metal enclosure.

**Specification**

Receiver Supply Voltage: 9V to 12V  
Standby Current: 35mA @ 12V  
Operating Current (relay switched): 120mA @ 12V  
Transmitter Power Supply: 9V battery (PP3 alkaline)  
Operating Current: Dependent on required range, but between 35mA to 180mA

Carrier Frequency: 18-5kHz to 23-5kHz

**Kit and Special Parts**

A complete kit of parts for the transmitter and receiver is available. Full construction details may be found in Maplin Magazine/Projects Book 33 XA33L.

Retail Unit Price each (inc. VAT).

## Miscellaneous Remote Control/Telemetry

### UM3750 Encoder/Decoder 2

#### Features

- ★ Wide supply voltage range
- ★ Same chip and PCB can be used as encoder and decoder
- ★ Up to 4096 unique codes

#### Applications

- ★ Alarm control systems
- ★ Security systems
- ★ Automatic door openers
- ★ Remote control

The UM3750 encoder/decoder IC is a complete digital code transmit and receive system. A high quality PCB is available on which can be built an infra-red transmitter or a receiver (but not both sharing the same board). In the transmit mode 12-bit data, offering up to 4096 unique values, can be presented in parallel to the IC which is provided with internal pull-up resistors, thus greatly reducing component count and enabling simple, single pole switches or buttons to be used. Using the suggested component values, a clock frequency of 100kHz will generate 43.4 coded 12-bit words per second. The PCB has provision for two infra-red emitter LEDs and an indicator LED if desired. For receiving the addition of a dual op-amp as a preamplifier for an infra-red photo-diode is made instead, and the incoming signal is in serial bit form when received, which is sequentially compared with a local programmed 12-bit word pattern which should be identical for a single signal output to go active low. Several decoders can be cascaded, each simultaneously attempting to match words; in this way two or more 'channels' can be accommodated for simple remote control applications.

#### Specification

Supply voltage range: +3 to 11V DC

For  $V_S = 9V$ :

Receive input

low: +0.5V max.  
high: 8.5V min.

Transmit/signal output level

low: 1V, 2mA sink  
high: 8.5V, 5µA source

Full information is given in the 'Data File' in Maplin Magazine Issue 36. See end of this section.

A PCB only is available for the UM3750 application circuit.

Note: as these projects are intended as 'building block' projects only, they are not eligible for our 'Get-you-working' service.

PCB dimensions: 76 x 63mm.

Retail Unit Price each (inc. VAT).

Order Code	Type 3468	Price each exc. VAT	inc. VAT each
GE33L	UM3750 PCB	£2.970	£3.490

### K6700/1 2-Wire 8-Channel Communication Transmitter And Receiver 2

#### Features

- ★ 8-channel communication
- ★ Expandable to 16 channels
- ★ Power supply through data line
- ★ 2-wire communication between transmitter and receiver
- ★ LED status indication of each output

#### Applications

- ★ Part of a security system
- ★ Signal and control systems
- ★ Railway modelling
- ★ Data logging

These modules enable up to eight individual switching devices to be operated from a distance of 50m or more. Further expansion using more modules is also possible. There are only two connecting wires between the transmitter and receiver, with power for the transmitter obtained from the data line. It is also possible to connect several receivers to one transmitter, to receive switching connections in several places. There are many more uses for this project, using a combination of switching devices for controlling models, lighting, motors, alarms, locks, various theatrical on-stage applications, and indication wiring in cars and caravans. The hobbyist can control lighting in individual rooms in a doll's house, or houses and street lighting in a model village, where the houses may be situated remotely. Model train enthusiasts can use pairs of transmitters and receivers to cut down on the wiring between the control panel and the layout. Other possibilities include data logging where contacts embedded in remote machinery can be checked to see if the particular piece of equipment is on. Similarly, machinery interfaced, with suitable switching arrangements, such as heavy duty relays, could be switched on remotely.

#### Specification

Power supply: +9 to +16V DC  
Current quiescent: 80mA  
Current maximum (full load): 480mA  
Channels: 8 channels expandable to 16

#### Optional items

The following items, not included in the kit, may also be required.

Micro-Min Relay 12V	As Req	(BK47B)
Micro-Min 12V 1A 200mW	As Req	(DC52G)

## Security

### Touch Key Technology

#### Features

- ★ Ultra high security - over 200,000 billion key differs
- ★ Laser etched codes - no code numbers ever repeated, so there will never be two keys the same
- ★ Keys are passive - no battery required
- ★ Keys are virtually indestructible
- ★ System can learn up to eight keys at any one time
- ★ Lost keys can be 'locked out' by authorised personnel - without any specialised equipment
- ★ Replacement keys can be taught by authorised personnel - without any specialised equipment
- ★ Since Touch Keys are a contact device - not radio or infra-red - they are not 'grabbable'
- ★ Hybrid provides easy entry route for OEMs and individuals to utilise Touch Key Technology with minimal development work
- ★ System remembers and returns to last state when power is disconnected/reconnected
- ★ Hybrid incorporates full spec. alarm system!
- ★ System provides selectable passive arming
- ★ System can 'slave arm' - hybrid follows a master system arm command and provides an alternative method of disarm.

#### Applications

- ★ Vehicle alarms and immobilisers
- ★ Public service vehicle (PSV) equipment protection
- ★ Home/business security systems
- ★ Personal computer (PC) locking/protection devices
- ★ Electronic door locks
- ★ Electronic cabinet/safe/deposit box locks
- ★ Cash register access
- ★ Security access of control panel functions
- ★ Almost any application requiring high security electronic switching or control

The Dallas DS19xx Touch Key devices are miniature, low cost, coin shaped data carriers that can be read by a micro with momentary contact. The electrical interface has been reduced to a minimum: one data line, plus ground. Packaged in a stainless MicroCan, the durable package is highly resistant to environmental hazards and makes a virtually indestructible key. ERD have developed a custom chip to decode these Touch Key devices and have produced a hybrid circuit incorporating the chip, with many outstanding features, to utilise this exciting technology. The ERD Touch Key Decoder Hybrid, Dallas DS1990A Touch Key and support products are now available from Maplin.

### Pre-Taught Touch Hybrid with Master Touch Key

ERD & Dallas

This compact and highly versatile hybrid is ideal for a wide range of security applications and forms the 'kernel' around which complete systems can be developed.

The hybrid contains processor-based circuitry and on-board E<sup>2</sup> memory, enabling it to be taught the codes of User Touch Keys. Under control of the Master Touch Key supplied. User Touch Keys, once taught, can then be used to arm/disarm or lock/unlock whatever security or access control system the hybrid is incorporated into.

If desired the program contained within the hybrid's processor can be used to provide a complete alarm system in its own right, requiring a relatively small number of external components to realise this function.

For minimum development/installation time the ERD Touch Hybrid is supplied with a Master Touch Key

factory pre-taught. The hybrid can be taught up to eight User Touch Keys, these must be purchased separately (CK42V); please note that the Master Touch Key supplied with the hybrid cannot be used as a User Touch Key.

Suitable Touch Key Receptacles (CK43W and CK44X) are also available to facilitate 'reading' of the touch keys by the hybrid. Connection to the hybrid is by means of a 15-way 2.54mm (0.1in.) spaced pin-strip. 2-ways are missing so that 'keying' can be provided to prevent incorrect insertion. The hybrid can be directly soldered into a circuit board (requires 1mm dia holes) or connected by means of a suitable PCB connector (e.g. 2 x YW30H cut down to provide 15 ways).

The hybrid can be configured to operate in a number of different ways by means of on-board programming links.

Links: passive arm enable/disable; passive arm time 30 secs/1 sec; and user keys 8/4.

Interfacing to the hybrid is very straightforward using standard 5V logic - inputs and outputs are either high or low - no complicated clocked serial data streams! A dedicated flashing status LED output is also provided.

Inputs pins: touch key receptacle input (2-wire); user touch key learn enable input; trig. 1 & tng. 2 alarm inputs; and slave arming input.

Output pins: LED status indicator output (2-wire); siren control output; beep control output; and arm disarm output.

Supply pins: +5V and 0V.

**Specifications**

Supply voltage: +5V DC ± 0.5V DC  
 Supply current (typical):  
 Armed: 1.2mA (excluding LED)  
 Disarmed: 1.0mA  
 Output drive current:  
 Source: 10mA  
 Sink: 15mA  
 Operating temperature: -10°C to +60°C

**Technical data**

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

**Low Cost Home Alarm**

- ★ Tamper and panic button loop
- ★ Adjustable exit/entry delay
- ★ Extremely low stand-by current

This project contains many of the facilities normally found on more expensive alarm systems. These include entrance/exit delay, security loop trigger, siren entry delay, tamper and panic loop trigger, as well as switches for these controls. A small buzzer mounted on the PCB sounds when the entry/exit loop is activated, indicating the alarm is armed.

All usual protection accessories can be connected to the home alarm. A siren can be connected to the PCB as well as switches, panic buttons and arm/disarm key. Indication LEDs show the state of the unit, whether active, intruder, or help sections have been activated.

**Specification**

Supply voltage: 6V to 12V DC  
 Current (12V): Standby 1.3µA

Active 3mA  
 Intruder 7.5mA  
 Help 4.5mA

Siren switching current: 1A max  
 Entry/exit delay time: 1 to 60 seconds  
 Security loops: Normally open

Tamper loop: Normally closed  
 Panic button loop: Normally open

## Cycle Alarm

2

- ★ Loud sounder with 2 minute time-out
- ★ Vibration and movement sensing
- ★ Warning and anti-tamper switch facilities
- ★ Keyswitch arming delay

Help protect your expensive custom-designed or mountain bike from theft, with this easy to construct vibration cycle alarm. The unit is completely self-contained in a 129 x 64 x 44mm case, which is simply attached to one of the 'V' frame tube uprights. A special keyswitch 'arms' the system and after a short delay period the alarm will become active. Should the bicycle be tampered with, movement and vibration sensors will trigger the alarm and the sounder will give off a very loud 110dB 'screech' for 2 minutes (depending on the condition of the battery). The case can also be made tamper-proof, and a flashing red LED indicates that the alarm is in an armed state. In addition, an input is provided for connecting a push-to-make handlebar switch (not supplied) which can be used to operate the siren independent of the alarm. The PP3 type 9V battery used to power the unit should have a long operational life.

### Optional Items

The following optional items are not included in the kit, but may also be required.

Battery PP3	1	(ZB44X)
Min Lever Micro Sw	1	(FP42V)

### Kit and Special Parts

A complete kit of parts (including the PCB and instruction leaflet) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in instruction leaflet XT27E.

Retail Unit Price each (inc. VAT).

## K2655 Electronic Watchdog

1

- ★ Choice of two different barks
- ★ Reacts to environmental noise
- ★ External trigger input
- ★ Loudspeaker and audio output
- ★ AC and DC power supply input

The Electronic Watchdog generates two selectable, different dog barks when triggered by environmental noise. Such a loud, furious, barking dog sound should deter even the most determined burglars! The circuit features a highly sensitive electret microphone, with a sensitivity control, to pick-up environmental noise. The barking sounds are held in a non-volatile memory IC that is supplied with the kit. The unit requires either a 6V-0-6V step down mains transformer or a non-stabilised DC power supply. Any 2W, 4Ω or 8Ω loudspeaker can be used, but XQ73Q, a horn speaker, is

recommended, as it offers a high sound output without the need for an enclosure.

### Specification

Loudspeaker output:	2W at 4Ω
Supply current	
Standby:	75mA
Barking:	400mA maximum

### Optional Items

The following items, not included in the kit, may also be required.

Horn Speaker 10W	1	(XQ73Q)
AC Unregulated Adaptor 300mA 1		(XX09K)
Transformer 6V-0-6V 500mA 1		(WB06G)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). Full construction details may be found in Maplin Magazine/Projects Book 53 XA53H, and instruction leaflet XT80B.

Retail Unit Price each (inc. VAT).

XT80B	Watchdog Leaflet	£0.500	£0.500 NV

## Loop Alarm

1

### Features

- ★ Low-Cost
  - ★ Easy to build
  - ★ Needs no complicated adjustment, or test equipment to set up
  - ★ Long standby time from 1 set of alkaline batteries – typically 3 years or more
- ### Applications
- ★ Shop loop alarm – protect display items
  - ★ Office/school loop alarm – protect computers, monitors etc.
  - ★ Home loop alarm – protect ladders, garden tools, bicycles, etc. when left in back gardens
  - ★ Could be adapted for use with a back garden gate or garden shed.

This little gadget was developed in response to a growing problem – the pilfering of items from shops, and as the crime rate is increasing, so shopkeepers need to provide some kind of investment to protect their stock. In the case of this simple but effective Loop Alarm, this investment need not be too great. Also vulnerable are householders. Leaving aside obvious targets like bicycles, surprisingly large objects like ladders (and in one case, a 1.83m satellite dish!), have not been unknown to go missing. This situation has developed to the point that some insurers will not provide cover for such items; even where cover is provided, in some cases (garden tools, for example) it is simply not economically viable to pursue claims – but the annoyance and expense of replacement are still there. Again, the Loop Alarm will help considerably at home – it can be used to protect a garden shed, and/or even alarm a back gate – and is priced at a fraction of the cost of a new set of 12m aluminium ladders!

### Kit and Special Parts

A complete kit of parts (including the PCB) is available. The PCB is also available separately. Full construction details may be found in instruction leaflet XU32K.

Retail Unit Price each (inc. VAT).

XU32K	LOOP ALARM LEAFLET	£1.000	£1.000 NV

## Infra-Red Proximity Detector

1

### Features

- ★ Uses latest pyro-electric device
- ★ Short-range, heat/movement detector
- ★ Low power consumption for long battery life

### Applications

- ★ Doorways, stairs and similar proximity systems

This I/R Proximity Detector has been designed as a simple, low-cost system for detecting heat changes, movement of a warm body, etc., such as those emitted from the human body. The unit responds to a definite change or disturbance in ambience – or background – heat levels and could be placed across a doorway or stairs to register movement in those areas.

Supply requirements for the module are 9V DC at 2 to 3mA. With such low current consumption, long periods of use from a PP3 battery are possible. The module is not capable of switching heavy loads and should only be used with external systems up to 12V DC and current levels below 100mA. Relays could be used for controlling larger voltage/current devices. Any battery supplying the electronics should NOT also be used for supplying the external devices as well (if more than a simple LED arrangement is to be used).

Sensing range is 4 to 5 feet, depending upon the sensor's field of view and variations in the light/heat background levels. A whole room could not adequately be covered by this system, but doorways, narrow hallways and corridors are suitable areas.

### Kit and Special Parts

A complete kit of parts (including the PCB and instruction leaflet) is available. The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 54 XA54J, and instruction leaflet XT72P.

## µA3730 Electronic Code Lock

1

### Features

- ★ Low power consumption
- ★ Key-pad entry
- ★ 3 different outputs
- ★ 10<sup>12</sup> unique codes
- ★ Programmable up to 12 digits

### Applications

- ★ Security systems
- ★ Electronic locks

The µA3730 is a single chip electronic code-lock IC

utilising CMOS technology. The IC can handle passcodes of up to 12 digits, allowing the use of up to 1 million million unique codes. If an incorrect code is entered three times or more, an output is activated allowing a burglar alarm to be triggered. The code may be changed as many times as required by the user providing additional security. The IC requires a battery back-up to prevent the code being lost if the main power supply fails. There are three outputs which are activated from the keypad. OUT1 activates for two seconds when the correct code followed by 'K'(#). OUT2 changes state when the correct code followed by 'K' is entered providing a toggle action. OUT activates for 1 minute if an incorrect code is entered three times or more. All outputs are open drain types and require a pull-up resistor; the total load current should not exceed 40mA at any time as irreparable damage could occur. The module requires a regulated and well decoupled 4V to 6.5V DC power supply, that is capable of supplying at least 20mA. Outputs are provided for 3 LED indicators to show the state of the outputs OUT1 to OUT3.

**Note:** this is intended as a 'building block' project and not eligible for our 'Get-You-Working' Service.

**Specification**

Power supply voltage:	4V to 6.5V
Back-up battery voltage:	3.7V to 2V
(<supply voltage - 0.5V)	
Power supply current at 5V stand-by:	220nA
operating (without LEDs):	310µA
operating (LEDs active):	17mA
PCB size:	71 x 51mm
Output sink current:	40mA (absolute max.)

**Optional Items**

The following items, not included in the kit, may also be required.

LED Red 5mm 2mA	1	(UK48C)
LED Green 5mm 2mA	1	(UK49D)
LED Yellow 5mm 2mA	1	(UK50E)

**Kit and Special Parts**

A complete kit of parts (including the PCB, numeric keypad and instruction leaflet) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 56 XA56L, and instruction leaflet XT75S.

Retail Unit Price each (inc. VAT).

**K6400 Keycode Lock**

2

- ★ More than 3,000 possible codes
- ★ Relay output
- ★ LED active indicator
- ★ Pulse or switched output
- ★ Nine keys for four digit code

Are you tired of losing your keys? Would you like a high tech way of locking up your valuables? Then the Keycode Lock is the answer. A small numerical keypad is placed by the door, and to open it, the correct code must be entered. However, it doesn't have to be confined to doors, as it could be used on cupboards, filing cabinets, desks, cars, caravans, trailers, lock-ups, garages, equipment, etc. Anything in fact that would normally require a conventional lock to secure a door or lid, and room enough for a door solenoid lock, the number of applications are endless.

The PCB mounted connector and track are not suitably spaced for voltages above 50V, and if mains voltages are switched then use an off-board mains rated relay. The external relay may require a diode to protect the circuit from the induced emf produced by the relay when it de-energises. Using the optional Mains Opto Switch kit (LP55K) with the Keycode Lock enables switched resistive mains loads of up to 250W (maximum). The actual details for the Mains Opto Switch are in Electronics Issue 41 (December 1990/January 1991).

**Specification**

Power supply:	9 to 15V DC or
	8 to 12V AC

Current consumption  
 off: 0.3µA  
 on: 40mA  
 Time limit for code input: 5s (only in pulse mode)  
 Dimensions: 80 x 80 x 40mm

**Kit and Special Parts**

A complete kit of parts (including the PCB) is available. Full construction details may be found in Maplin Magazine/Projects Book 80 XA80B, and instruction leaflet XU94C.

**K7105 & HHS5 Handheld LCD Scope**

Velleman

- ★ True RMS or peak-to-peak read-out
- ★ Markers for voltage and time
- ★ Auto range function for input sensitivity
- ★ DC readout with zero-reference function
- ★ Frequency readout through markers
- ★ Dot-join function
- ★ Screen-hold function
- ★ Grid or ruler function
- ★ Adjustable trigger function
- ★ Waveform memory
- ★ RS232 data output to computer
- ★ Auto power off (can be disabled)
- ★ Sine wave generator
- ★ Rechargeable battery option

At last - a portable LCD oscilloscope that is within reach of everybody! Available as a kit or ready built & tested. This compact unit has all the functions (and more besides!) of a 'traditional' oscilloscope, and is fitted with a high contrast, wide viewing angle, LCD display. All operations are performed through a handy keypad. The oscilloscope is equipped with a sinusoidal oscillator in order to make measurements and repairs to audio equipment easier. To round off its application potential, it also has a serial output for loading the most recently stored data onto computer for use in documents or other applications. Ideal for repair and testing of audio equipment, TV, automotive, digital and analogue circuits, RS232 signals, pulse circuits, sensors, etc.

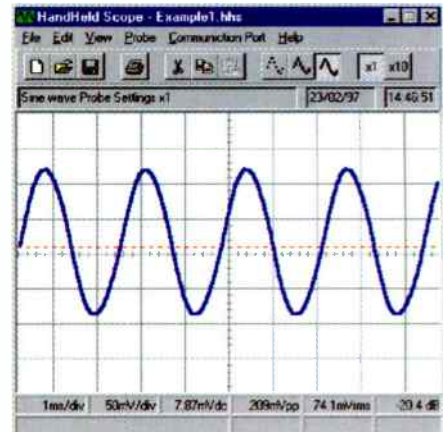

Available as a kit K7105 (VF82D) or ready built and tested HHS5 (VM79L).

**Specifications**

Maximum sample rate:	5MHz (repetitive signals) 0.5MHz (single shot events)
Input impedance:	1MΩ // 20pF
Maximum input voltage:	100V AC + DC
Input coupling:	DC, AC & GND
Vertical resolution:	8-bit (6-bit on LCD)
Linearity:	±1 bit
LCD:	64 x 128 pixels
Timebase:	2µs/div to 20s/div
Trigger mode:	normal, auto or single
Trigger edge:	rising or falling
Input sensitivity:	5mV/div to 20V/div
Sine wave output:	400Hz 1V rms
Square wave output:	400Hz 3.5V pk-pk
Supply voltage:	+9V DC @ 200mA
Rechargeable Battery:	6 x AA 900mAh NiCd
Charge current:	90mA
Charging time:	14 hours

Operating temp: 0°C to +50°C  
 Dimensions: 130 x 230 x 43mm

Opto-Isolated RS232 interface cable and Windows™ 95 software (VF86T)

Optically isolated link allows data captured on K7105/HHS5 to be downloaded and displayed on an IBM compatible PC, 386 or above (Windows™ 95 or later only), without risk of electrical discharge to the PC's serial (COM) port. Functions include: Displays time/div and volt/div settings

Readout for DC, peak-to-peak, true RMS and dB value

## Servicing, Test & Measurement

### K7103 Digital Storage PC Oscilloscope 4

Velleman

Use your IBM compatible computer as an oscilloscope. This kit presents a very good, and cheap, way to convert your computer into a piece of test equipment.

The K7103 is a digital memory oscilloscope that can be used on an IBM compatible computer. It is operated from the computer using the computer screen as the oscilloscope display. All standard oscilloscope functions are available from the DOS program supplied. Operation seems like a normal oscilloscope, with the one difference that most operations are performed using the mouse. Connection is via the parallel port of the computer. The PC oscilloscope uses a sampling frequency of 32MHz and can drive up to two completely independent channels. The components for the second channel are an optional extra. Any waveform on the screen can be stored in TIFF format so that it may be later retrieved for use in documentation or for comparison to other waveforms. The kit comes complete with housing.

#### Oscilloscope Specifications

##### Minimum system requirements

- IBM compatible PC
- VGA display
- Free Printer port LPT1
- Mouse
- 400Kb free conventional memory

##### Technical data

Vertical deflection	
Sensitivity:	10mV to 5V/DIV
Frequency range:	DC to 16MHz
Input impedance:	1MΩ // 30pF
Input coupling:	DC - AC - Gnd
Input voltage:	100V max (DC + peak AC)
Horizontal deflection	
Timebase	100ns to 100ms/DIV
Triggering	
Trigger mode:	single, automatic or free running
Slope:	positive or negative
Level:	adjustable in steps of 1/2 division
Trigger channel:	channel 1 or channel 2
Digital storage	
Resolution:	8-bit
Sampling rate:	32MHz (max)
Memory size:	4Kb/channel
Interpolation:	linear or smoothed

#### Demo Disk

A Digital PC 'Scope Demonstration Disk is available (VF78K), the demonstration software is also downloadable *free of charge* from the Maplin website, the following URL will take you directly to the correct page of the site:

<http://www.maplin.co.uk/velleman/k7103.htm>

#### Software

Software supplied with the K7103 (VF75S) kit is DOS-based (requires '286 or better PC) and provides 'Scope functions. A software upgrade US7103 (VF79L) which offers Spectrum Analyser (FFT) & Transient Recorder functions is also available. Software is compatible with Windows™ 3.x and Windows™ 95).

#### Windows 95 Software

Dedicated software for Windows™ 95 is also available (VF87U), as an upgrade, which provides oscilloscope and spectrum analyser functions in an

integrated Windows™ 95 environment.

#### Kit and Special Parts

A complete kit of parts (including the PCB) to build a single channel unit is available. The kit for the 2nd channel is K7104 (VF77J).

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	2+	4+

### PCS32 Mk II Dual Channel Digital Storage PC 'Scope

Velleman

A ready built, tested and aligned *dual* channel slimline version of the K7103 Digital Storage PC Oscilloscope (described above).

This latest version is supplied with manual, PC connecting cable and software. Requires +9V to +12V DC @ 700mA supply to operate. Power supply and probes are not included.

#### Software

Software supplied is DOS-based (requires '286 or better PC) and provides Scope, Spectrum Analyser (FFT) & Transient Recorder functions (software is compatible with Windows™ 3.x and Windows™ 95)

#### Windows 95 Software

Dedicated software for Windows™ 95 is also available (VF87U), as an upgrade, which provides oscilloscope and spectrum analyser functions in an integrated Windows™ 95 environment.

**YOUR GUARANTEE OF QUALITY & SERVICE**

### SCOPE-IT Software for K7103 and PCS 32

Omnix & Nedon

This comprehensive software package for use with K7103 and PCS32 Digital Storage PC Oscilloscopes with full Windows™ integration.

It features two-channel oscilloscope and spectrum analyser functions, both can be displayed simultaneously. Displays can be save to disk, printed or copied to other applications. Lots of options such as zooming, colour, cross-hairs, voltage and time readouts, math channel (Ch1 + Ch2, Ch1 - Ch2, Ch2 - Ch1), plus much more. Supplied on 3 1/2 in floppy disk.

#### Downloadable Demo

A demonstration version of this software is also downloadable *free of charge* from the Maplin website, the following URL will take you directly to the correct page of the site:

<http://www.maplin.co.uk/velleman/k7103.htm>

#### System Requirements

Velleman K7103 or PCS32 PC 'Scope  
IBM compatible PC, min 386SX or above  
Microsoft Windows 3.1, 3.11, 95 or later  
Free parallel printer port (LPT1 to 4)  
Math co-processor is not necessary but highly recommended

### Temperature Controlled Soldering Iron Station 3

#### Features

- ★ Temperature range 70°C to 450°C
- ★ Minimal noise emission
- ★ Negligible element leakage current
- ★ LED indication of heating

#### Applications

- ★ Precision soldering
- ★ Thermal fault location
- ★ Pyro-graphic pen

Because of the high price of adjustable temperature

soldering irons, the home hobbyist is often resigned to having a 'standard issue' 17 to 25W mains powered iron. Although often adequate for most tasks, a fixed temperature iron suffers from several drawbacks. It may be too hot for delicate soldering operations involving thin PCB tracks, signal diodes and small polystyrene capacitors for example, or, at the other extreme, not powerful enough to solder something onto a piece of brass or tin-plate more than 50mm square. The Soldering Station is ideal for hobbyists on a budget, who cannot afford the expensive ready built units. This kit version offers a considerable saving over commercially available units, and includes the 50W XSD iron as used with the TCSU-D Solder Station.

The temperature of the iron can be adjusted over a range from 70°C to 450°C, making the unit very versatile and having more applications than just soldering, e.g., sealing plastic bags, a pyro-graphic pen, and even a controllable heat source for checking 'thermal faults' in semiconductors.

N.B. This project is designed to operate with the 50W XSD iron, and other irons of this type are NOT suitable for use with this project.

**Optional Items**

The following items not included in the kit, may also be required.

13A Plug Nylon	1	(RW67X)
2A Plug Fuse	1	(HQ31J)

**Kit and Special Parts**

A complete kit of parts (including the PCB) is available (excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects 59 XA59P, and instruction leaflet XT90X.

*Retail Unit Price each (inc. VAT).*

**Live Wire Detector**

1

- ★ Gives visual and audible warning of the presence of 240V AC mains live
- ★ Does not require wires under test to be connected to a load
- ★ Adjustable for sensitivity

The Maplin Live-Wire Detector will detect the presence of mains electricity whether there's a current flowing or not. It's better than neon screwdrivers or multimeters because you do not have to make contact with the wire – it signals the presence of mains better than metal detectors, because it only indicates if the wire is live; also, it's considerably cheaper.

It's the sort of device every household should own and anyone can use it because you don't have to actually touch dangerous points with any part of the Live-Wire Detector. Even if the wires are not connected to anything at one end, Live Wire will tell you if they're live. You could use it to find buried wires in dry plaster or plastic conduit or under floor or ceiling boards up to a distance of 50mm. Other uses of Live Wire include detecting breaks in cables or appliance leads. If a fuse blows, Live Wire will indicate mains present up to all the 'uses, and mains presence on the wires leaving the fuses

except the dead one. Before doing any work on your house wiring use Live Wire to make sure the circuit really is safe after pulling out what you think are the relevant fuses. Uses one PP3 battery.

**Kit and Special Parts**

A complete kit of all parts is available, excluding PP3 battery. The case and pcb are also available separately. Full construction details may be found in the Maplin Magazine/Projects Book 48 XA48C, and instruction leaflet XK07H. PCB dimensions: 25 x 46mm.

*Retail Unit Price each (inc. VAT).*

Order Code	Type	Price each exc. VAT	inc. VAT each
LK63T	Live Wire Det Kit	£5.940	£7.260
GB85G	Live Wire Detect PCB	£0.842	£1.010

XK07H	Live Wire Detctr Ins	£0.500	£0.500 NV

**K7101 Mains Voltage Detector**

Now you easily check for mains wiring in or behind walls or to trace breaks in wiring. A flashing LED indicates whether or not a mains voltage is present. The detection distance is adjustable upto 100mm. Requires PP3 battery (JY49D).

*Retail Unit Price each (inc. VAT).*

Order Code	Type	Price each exc. VAT	inc. VAT each
VF63T	K7101 Mains Det Kit	£7.650	£9.190

**Mini Metal Detector**

1

- ★ 25mm search range dependent upon size of object
- ★ Finds partition studs from nailheads or screws
- ★ Complements the live wire detector
- ★ Simple to build and use

If you have ever had to fit cupboards or shelving to partition walls then you will know how 'hit and miss' it can be when trying to find the studding. With this Mini Metal Detector you can detect the presence of ferrous or various non-ferrous metals within the search area. Along with the Live Wire Detector project, this is a must for DIYers of all ages.

**Optional Item**

The following item, not included in the kit, may also be required.

Battery PP3 9V1	(ZB34M)
-----------------	---------

**Kit and Special Parts**

A complete kit is available. The PCB and box are also available separately. Full construction details may be found in the Maplin Magazine/Projects Book 48 XA48C, and instruction leaflet XT34M. PCB dimensions: 29 x 29mm.

## Metal Detectors

Celtic Electronics

Whether you are looking for the pleasures of unearthing evidence of the past or for profit from your metal detector, any of the low cost, high performance models in the Celtic range will give you an excellent start in your new hobby. Every model incorporates the best circuitry and runs for hours on a single PP3 battery (supplied) while being lightweight enough to allow users to take advantage of the extended searching time without arm fatigue. They are constructed from high impact ABS lightweight plastic and include 2D coils for greater sensitivity and fast response to thin gold and silver - all models are able to discriminate against small pieces of iron, nails etc. Output is via a speaker or a stereo output socket for headphones (not supplied) Choice of four models available. CE marked for EMC compliance. Manufactured in Wales.

### TRX (FN34M)

A non-automatic detector that's sensitive to small coins and excels in certain field conditions and iron contaminated sites. Good on beaches.

### D2 (FN35Q)

A good all round non-automatic detector with selectable fixed discrimination against iron and small pieces of aluminium foil.

### TRX Automatic (FN36P)

An automatic detector with fixed discrimination and non-motion pinpointing action and a switch to allow searching in automatic or non-automatic mode. Threshold searching as standard. Good on small hammered silver and gold coins.

### D2 Automatic (FN37S)

An automatic detector with variable discrimination (against iron, aluminium foil and ring-pull tabs) and non-motion pinpointing action. Threshold searching as standard. Good on beaches, riverbanks and battlefields.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT 1+	inc. VAT each 1+
FN34M	TRX N/Auto Detector	£46.800	£54.990
FN35Q	D2 N/Auto Detector	£59.560	£69.990

FN37S	D2 N/Auto Detector	£93.600	£109.990

## K7000 Signal Tracer/Injector 2

### Features

- ★ Low cost
- ★ 1kHz sine wave oscillator (signal injector)
- ★ 40dB gain amplifier with 1W output (signal tracer)
- ★ Battery or mains operation

### Applications

- ★ Servicing audio equipment
- ★ 'Hands-on' learning
- ★ Can be used as simple amplifier/oscillator

This low-cost signal tracer/injector is a very useful piece of test equipment that will help to quickly find

faults in low-frequency analogue equipment. It will also be an invaluable addition to anyone's toolbox. The module can be used as a simple amplifier/oscillator, making it ideal for Morse Code practice, or just as a general-purpose amplifier. The signal tracer/injector will work from a standard 9V battery, and requires a small low impedance loudspeaker. Total power consumption under full load conditions is 170mA.

### Optional Items

The following items, not included in the kit, may also be required.

9V PP3 Alkaline Battery	1	(JY49D)
PP3 Battery Clip	1	(HF27E)
Low-Z 778 Speaker	1	(YW53H)
PX-3 ABS Box	1	(YU54J)

### Kit and Special Parts

A complete kit of parts (including the PCB) is available (excluding optional items). Full construction details may be found in Maplin Magazine/Projects Book 54 XA54J.

Retail Unit Price each (inc. VAT).

## Low-Cost Audio Waveform Generator 3

### Features

- ★ Four frequency ranges
- ★ Three output waveforms
- ★ Push-button switching
- ★ High and low outputs
- ★ Minimal wiring
- ★ Battery powered

### Applications

- ★ Testing projects
- ★ Setting filters
- ★ Bandwidth testing

This simple, low-cost, easily constructed, audio waveform generator is ideal for the hobbyist working on a restricted budget. The generator can be used for a range of applications including test tape production; testing projects; gain and phase measurement; setting filters and bandwidth testing. All the components are mounted on one PCB, keeping internal wiring to a minimum. Long term reliability is excellent due to the use of electronic switching; just two push-to-make non-locking PCB mounted switches. Power is provided by two PP6 9V batteries, not included in the kit, which will provide several hours of continuous use. To give your generator a professional finish, an optional front panel is available.

### Specification

Power supply input:	±6V to ±9V DC
Current @ ±9V:	±25mA
Standby current:	<±1µA
Waveforms:	Sine, Triangle, Square
Frequency ranges:	
10 to 100Hz:	9Hz to 105Hz
0.1 to 1kHz:	100Hz to 1.1kHz
1 to 10kHz:	895Hz to 10kHz
10 to 100kHz:	9.2kHz to 106kHz
Output amplitude full:	9V (PK-to-PK)
attenuated:	400mV (PK-to-PK)
Output impedance:	600Ω
Sinewave distortion:	
10Hz to 10kHz:	<1%
10kHz to 100kHz:	<4%
Triangle linearity:	
10Hz to 40kHz:	<0.1%
40kHz to 100kHz:	<1%
Square rise/fall time:	<2µs

### Optional Items

The following items, not included in the kit, may also be required.

Metal Panel Box	1	(WY02C)
PP6 9V Battery	2	(FM03D)
Screw-Cap Phono Black	1	(HQ54J)
Cable Single Black	1	(XR12N)
Red Croc Clip	1	(FM37S)
Black Croc Clip	1	(FK34M)
100µF 63V PC Elect	2	(FF12N)
Front Panel	1	(KW56L)

### Kit and Special Parts

A complete kit of parts (including the PCB and instruction leaflet) is available (excluding optional items). The PCB and Front Panel are also available separately. Full construction details may be found in Maplin Magazine/Projects 48 XA48C, and instruction leaflet XT16S.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT 1+	inc. VAT each 1+
LP01B	Lo Cost Wave Gen	£21.260	£24.990
GE87U	Lo Cost Wave Gen PCB	£6.540	£7.690

XT16S	LC Gen Leaflet	£1.000	£1.000 NV

## Audio Frequency Sine/Square Wave Generator 3

### Features

- ★ Excellent performance at low-cost
- ★ 3 frequency ranges
- ★ Low distortion
- ★ Single 9V DC power requirement
- ★ Precision attenuator

### Applications

- ★ Testing and designing low-frequency circuits
- ★ Setting up audio systems
- ★ Producing test tapes
- ★ Scientific experiments

An audio frequency (AF) oscillator is an essential piece of test apparatus for the construction and servicing of audio products, such as Hi-Fi, PA and disco equipment. Because of the very low distortion sine wave output from this oscillator, it is suitable for use with even the most sophisticated Hi-Fi equipment. In conjunction with an oscilloscope, problems such as crossover distortion (incorrectly biased amplifier output stage), intermodulation by hum (power supply smoothing capacitors suspect) and the effects of clipping (overdriving) can all be investigated. This essential piece of test equipment can also be switched to produce square waves; these, being rich in harmonics, are useful for evaluating the frequency response and phase shift characteristics of an amplifier.

The unit may be used to make test tapes for the alignment or evaluation of tape recorders. In conjunction with a suitable amplifier, this unit could also be used to drive various transducers; this may be of benefit in certain types of scientific experiment - physics, structural engineering etc.

### General Specification

Frequency Range:	17.5Hz to 22.8kHz in 3 ranges
Sine wave distortion (1kHz, maximum output):	<0.05%
Sine wave distortion (1kHz, 2/3 max. output):	<0.042%
Attenuator:	3 ranges; continuously variable
Sine wave output:	4V pk-to-pk
Square wave output:	2V pk-to-pk
Off-load current consumption:	8mA (square wave setting)

### Optional Items

The following items, not included in the kit, may also be required.

Verobox 213	1	(LL10L)
PP6 9V Battery	1	(FM03D)
AC Adaptor Regulated	1	(YB23A)

### Kit and Special Parts

A complete kit of parts (including the PCB, front panel and instruction leaflet) is available (excluding optional items). The PCB and front panel are also available separately. Full construction details may be found in Maplin Magazine/Projects Book 63 XA63T, and instruction leaflet XU08J.

## Logic IC Tester

3

It is often necessary to check the operation of logic ICs, new or used. When dealing with simple gate circuits, this can be done without too much trouble. However, as the operating mode of the ICs becomes more complex, then checking out circuits, using simple tools such as switches and LEDs, becomes much more troublesome. The Logic IC Tester has been developed to bring about quick and simple testing of the operating mode of these standard devices. Nearly all devices in the standard TTL and CMOS families, up to 20-pin DIL package size, can be tested. ICs are simply inserted into the 'ZIF' test socket. This project is used in conjunction with an IBM PC-XT-AT or compatible clone, the Logic IC Tester card simply plugging into a vacant expansion slot. Software is supplied, ready-to-run on 133mm (5 1/4in.) floppy disk. Disk contains READ ME files for additional information. Software is compatible with all standard video cards, i.e. Hercules, EGA, etc. The cost of the Logic IC Tester compares favourably with other commercial systems and finds many applications in servicing, test and other areas.

### Kit and Module

A complete kit and a ready-built version are available. Full construction details for the kit may be found in Maplin Best of Projects Book 8 XC08J.

Retail Unit Price each (inc. VAT).

Order Code	Type 3620	Price each exc. VAT 1+	inc. VAT each 1+

## Video Line Selector

3

This extremely useful project, which is aimed at television engineers and experimenters, enables the waveforms of individual lines of television video information signals to be viewed on a standard oscilloscope, allowing for the easy and rapid diagnosis of faults and/or adjustments, improvements and exploratory work to be undertaken. This device allows any single line out of the 625 possible to be displayed on the scope screen: the sync separator part of the Line Selector now consists of one 8-pin chip and five passive components. One very useful application of a line selector, is to take a look at the information transmitted in the vertical interval of just about every off-air or satellite channel you can pick up.

### Specification

Operating voltage: 7.5 to 12V DC  
 Operating current: ±75mA @ 12V  
 Video input impedance: 75Ω  
 Video output impedance: 75Ω  
 Box dimensions: 175 x 130 x 58mm

### Optional Items

The following optional items, not included in the kit, may also be required.

BNC Chassis Sckt 75Ω	4	(FE31J)
Plastic Instrument Case	1	(KC61R)
AC Adaptor Regulated	1	(YB23A)
No.4 1/4in. S/Tap Screws	1 Pkt	(FE68Y)
Large Stick-on Feet	1 Pkt	(FW38R)

### Kit and Special Parts

A complete kit of parts (including the PCB and the front and rear panel labels) is available (excluding optional items). The PCB and the Front and Rear Panel Labels are also available separately. Full construction details may be found in Maplin Magazine/Projects Book 95 XA95D, and instruction leaflet XV74R.

Retail Unit Price each (inc. VAT).

LU03D	Video Line Selector	£34.030	£39.990
GU28F	Video Line Sctr PCB	£6.800	£7.990
XV74R	Video Line Sctr Lft	£1.000	£1.000 NV

## Infra-Red Remote Control Tester

1

This handy little project is an infra-red (IR) detector. The unit checks to see if a remote control unit (or any other pulsed infra-red source) is transmitting an infra-red carrier or data stream. The unit ignores ambient infra-red energy, so it can be used in full sunlight.

An indication LED shows when a signal is detected and is used for checking the internal battery. The strength of the transmissions from a control unit can be measured by the distance from which the remote control is able to operate.

TV and Video repair engineers will find this infra-red tester an invaluable addition to their toolbox. It is also cheaper and more versatile than IR sensitive cards that attempt to serve the same purpose.

### Specification

Supply voltage range: 6 to 12V  
 Battery type: 12V lighter battery 23A  
 Operating current: 11-4mA  
 Operating frequency: 10Hz to 100kHz  
 Minimum pulse width: 1µs  
 Detector peak spectral response: 940nm

### Optional Item

The following item, not included in the kit, may also be required.

12V Lighter Battery 23A	1	(ZB56L)
-------------------------	---	---------

### Kit and Special Parts

A complete kit is available. A pcb, keyring remote case and panel are also available separately. Full construction details may be found in Maplin Magazine/Projects Book 44 XA44X, and instruction leaflet XK33L.

Retail Unit Price each (inc. VAT).

## Audio Lead Checker

3

### Features

- ★ Rapidly and clearly identifies connections on most audio cables
- ★ Will test very long cables
- ★ Clear LED readout
- ★ Robust design
- ★ High quality, wear-resistant membrane label

### Applications

- ★ PA/Sound engineers
- ★ Gigging bands
- ★ Fault diagnosis

This unit accepts phono, 3.5mm and 6.35mm (1 1/4in) jacks, XLR, 5- and 3-pin DIN connectors in any combination. Plug any one connector into the input and the other connector into the output to instantly identify which pin connects to which pin. Will accept mono or stereo connectors and unusual combinations where pins are cross-connected. Can also be used to confirm continuity when the connection is known. Requires an alkaline PP3 battery JY49D (not included).

### Kit and special parts

A complete kit of parts is available. The PCB and pre-punched & pre-printed front panel label are available separately. Full construction details may be found in Maplin Magazine/Projects Book 114 XD14Q, and instruction leaflet XZ20W.

Retail Unit Price each (inc. VAT).

## Low Resistance Continuity Tester

2

### Features

- ★ Provides 3 ranges of resistance indication
- ★ Buzzer indicates continuity

### Applications

- ★ Tracking faults
- ★ Continuity testing
- ★ Testing components

This compact, fast, easy to use, continuity tester is a combined low resistance and continuity tester. It is different from the more familiar type of instrument because it indicates, at a glance, one of three ranges in which the value of the resistance falls. A multicoloured LED is used as the visual indicator together with a continuity bleep when the resistance is below 0.5Ω. The LED glows red to indicate very high 'leakage' resistance, and this range is ideal for testing insulation, capacitor dielectrics and even skin. When the resistance across the probes is around 5kΩ, or less, the LED appears to glow orange. This range is ideal for indicating dry joints, the resistance of switch contacts and connectors, semiconductor junctions etc. In the lower range 0.5Ω to 300Ω, the LED glows green, and below 0.5Ω the buzzer simultaneously beeps (the LED stays green). The continuity tester is powered by one 9V PP3 battery, and a push-to-make type switch ensures that the unit is not left on by accident.

### Kit and Special Parts

A complete kit of parts (including the PCB and instruction leaflet) is available (excluding the battery). The PCB and box label are also available separately. Full construction details may be found in Maplin Magazine/Projects 53 XA53H, and instruction leaflet XT57M. PCB dimensions: 89 x 25mm.

### Retail Unit Price each (inc. VAT).

## Continuity Tester

1

### Features

- ★ Discriminates between short circuits and semiconductor junctions
- ★ Audible continuity indicator
- ★ Pocket size

### ★ Suitable for beginners

### Applications

- ★ Fault tracing
- ★ Locating shorts or testing continuity
- ★ Component testing

A very useful continuity tester invaluable for testing fuses, connectors, cables, etc. This device can even tell the difference between a short circuit and a forward biased junction. Use it to test transistors, diodes and LEDs for short or open circuit. Unit draws zero current when not measuring and discriminator is not used. Audible indication makes fault tracing easy. Requires an alkaline PP3 battery JY49D (not included).

NOTE. The speaker included in the kit is fixed with impact adhesive or similar. Adhesive is not supplied.

### Kit and special parts

A complete kit of parts is available. The PCB and front panel label are available separately. Full constructional details may be found in Maplin Magazine/Projects Book 111 XD11M, and instruction leaflet XZ39N.

### Retail Unit Price each (inc. VAT).

## Discriminating Continuity And Leakage Tester

3

### Features

- ★ Uses the latest LinCMOSTM technology
- ★ Uses Wheatstone Bridge principle
- ★ Internal fuse protection
- ★ 9V portable operation
- ★ Minimal current consumption
- ★ Watchdog function

### Applications

- ★ Continuity testing
- ★ Leakage and earth leakage testing
- ★ Checks both passive and active components

When servicing a piece of electronic gear, electrical equipment such as a vacuum cleaner, or even the car, a continuity tester is almost essential. Some continuity testers will indicate a connection as good even if it has a resistance of several or many ohms. This is misleading at best, and in many

circumstances worse than useless; a good continuity tester should indicate clearly whether a connection is well under 1Ω or not. The project does just this, and also provides useful information at the other extreme – indicating leakage in the range 1 to 10MΩ. In fact, it can check out a multiway screened cable, or a rack backplane, in less than half the time needed to test it using separate leakage and continuity testers. It achieves this by an ingenious arrangement of several overlapping bridge circuits. The Wheatstone Bridge is one of the earliest and still a fundamental example of the arrangements used in electrical measurements.

This project owes its advanced performance to the use of the latest LinCMOSTM technology, the TLC2714CN quad opamp featuring exceedingly low bias current. This enables it to work from a source impedance of 1MΩ without incurring offset errors. In addition to testing for continuity, leakage and earth leakage, the completed unit checks components of all sorts both passive and active, and is safe to use on all normal semiconductor devices. It is protected against accidental connection to voltage sources up to and including 240V AC mains.

Please note that the kit is supplied complete with 4mm Test Lead Kit (FK21X), which is different from the test leads shown in the photograph.

### Important Note

This is a general purpose test instrument for checking continuity and leakage. It is not designed to test earth continuity, earth loop impedance or insulation on 240V AC mains installations systems or equipments for compliance with British IEE Wiring Regulations, nor on installations systems or equipments for this or any other mains voltage for compliance with any other specifications or regulations.

The internal F100mA fuse protects against permanent damage due to accidental connection to DC or AC sources up to 240V.

### Specification

Supply voltage: Internal 9V battery type PP3  
Supply current: 530μA quiescent,  
13mA operating

### Typical battery life

- on but not sounding: 800+ hours
- sounding leakage tone – intermittent use: 150+ hours
- sounding continuity tone – intermittent use: 25+ hours

### Optional items

The following items, not included in the kit, may also be required.

- Patch Lead Black 1 (BZ23A)
- 4mm Crock Clip 1 (HF23A)
- 9V Alkaline PP3 Battery 1 (JY49D)

### Kit and Special Parts

A complete kit of parts (including the PCB and front panel) is available (excluding optional items). The PCB and front panel are available separately. Full construction details may be found in Maplin Magazine/Projects Book 87 XA87U, and instruction leaflet XV25C.

## Low Cost 10MHz Counter

3

- ★ Functions as frequency, period and unit counter
- ★ 8-digit display
- ★ Low cost design

**★ 10/100/1000 cycle gate times**

Most multi-function generators are quite expensive, but this three function counter has been designed to be low cost. It is designed around the Intersil ICM7216A, allowing measurements of frequency, periodic time or a totalising count. Maximum frequency is 10MHz in frequency and unit counter modes and 2MHz in periodic time mode. For period measurement there is a 0.1µs resolution whilst frequency modes have gating periods of 0.1, 1 or 10 seconds, and display to an accuracy of 0.1Hz. Four 14mm high contrast, double digit displays are used, multiplexed at 500Hz with a 12.5% duty cycle. A low cost design, replacing three vital test bench facilities at a fraction of the price!

**Specification**

Supply voltage:	10V to 15V
Average current @ 12V:	110mA
Input impedance (nominal):	1MΩ
Input signal amplitude	
10kHz to 1MHz:	30mV
1MHz to 5MHz:	45mV
5MHz to 10MHz:	90mV
Gate times:	0.1, 1, 10 seconds (frequency)
	10, 100, 1000 cycles (period)
Resolution:	0.1Hz (frequency)
	0.1µs (period)
Indicators:	8 seven-segment LEDs
	2 range LEDs
Timebase:	10MHz high-stability crystal

**Optional Items**

The following items, not included in the kit, may also be required.

Box M4005	1(WY02C)
Red display filter	1(FR34M)
Regulated adaptor	1(YB23A)

**Kit and Special Parts**

A complete kit is available and the PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 45 XA45Y, and instruction leaflet XK31J.

**Retail Unit Price each (inc. VAT).**

**UHF Prescaler**

**Features**

- ★ Part surface-mount technology
- ★ Compact and efficient design
- ★ No calibration required
- ★ Wide operating voltage range
- ★ AC or DC operation

**Applications**

- ★ Extends the measuring range of Digital Frequency Meters (DFMs)
- ★ For hobbyists, educational and development laboratories

This easy-to-build project has been designed to provide a simple, effective and economical means of extending the upper frequency measuring capability of older or lower-priced basic Digital Frequency Meters (DFMs), by as much as a factor of ten. This means, for example, that if you have a DFM with an upper frequency limit of 50MHz, the addition of this circuit to the input stage, will increase this limit to 500MHz, which would enormously increase the usefulness of the instrument in one move, allowing you to measure previously uncharted territory within the frequency spectrum! The UHF Prescaler would be particularly beneficial for use with some of the 'new generation' Digital Multimeters (DMMs), many of which now incorporate a frequency-measuring function, albeit usually with a very limited range, only covering up to around 20MHz at best. The UHF Prescaler has additional uses other than purely for DFMs, for

example, it could be used to obtain reduced output frequency from an oscillator or 'clock' stage, to give a more useful frequency signal for another section of a circuit. It could also be used in conjunction with an oscilloscope, to extend the measuring range when observing square or rectangular waveforms of logic circuits.

The circuit is compact, to facilitate its easy fitment into an existing instrument's casing, and gives both a taster of surface-mount construction and an insight into ultra high-frequency (UHF) circuit design. The project may be operated from a wide choice of power supplies, both AC and DC, and twin LEDs indicate the presence of an input signal, and that power is being applied.

**Specification**

Power supply:	9V rms AC or 5 to 15V DC
Current consumption:	150mA maximum
Sensitivity:	350mV pk-to-pk @ 650MHz, 600mV pk-to-pk @ 40MHz
Maximum input voltage:	2.5V pk-to-pk
Output voltage:	TTL levels (5V)
Minimum input frequency:	40MHz (10MHz typical)
Maximum input frequency:	650MHz (800MHz typical)
Prescale ratio:	F <sub>OUT</sub> :F <sub>IN</sub> = 1:10
Visual indicators:	Power on and Clocking LEDs

**Kit and Special Parts**

A complete kit of parts is available, including the PCB. The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 94 XA94C, and instruction leaflet XV78K.

**Retail Unit Price each (inc. VAT).**

Order Code	Type 11401	Price each exc. VAT	inc. VAT each
LU14Q	UHF Pre-Scaler Kit	£29.770	£34.990

**K2645 Geiger-Müller Counter**

This Geiger-Müller counter provides an 'acoustic' measurement of radiation levels – the higher the radiation level, the 'faster' the audible output. The counter is most sensitive to high energy gamma and beta radiation. The counter is self-contained, compact, and may be mounted in a small box, together with the 9V battery (not supplied). The battery should provide about two months of continuous use with normal radiation levels. PCB dimensions: 99 x 54 x 25mm.

**Retail Unit Price each (inc. VAT).**

VF34M	Velleman Kit K2645	£65.520	£76.990

**Call and Collect**

Maplin has more stores Nationwide than ever before. See the maps at the front of the catalogue for the nearest one to you.

**TV & Video**

**Monochrome Flat CRT Video Monitor Module**

**Features**

- ★ Self contained open-frame design
- ★ 95mm (diagonal) white phosphor screen
- ★ Single +12V DC supply
- ★ Compact
- ★ Easy to use
- ★ 50Hz CCIR composite video compatible
- ★ Contrast, brightness, line, frame and picture geometry controls

**Applications**

- ★ Security and surveillance systems
- ★ Video door entry systems

This compact monochrome (black & white) cathode ray tube (CRT) video monitor module is self contained and requires only a +12V DC @ 400mA (approx.) supply, a 1V pk-to-pk video source and two external potentiometers (brightness and contrast) to operate. The module comprises flat CRT, high-voltage power-supply, time-base and deflection circuits and video drive electronics. Since it is of open-frame construction, the unit must be fitted into a suitable enclosure to avoid user contact with hazardous voltages. The are two PCB mounted connectors: one is for the video input and power supply connections; and the other is off-board brightness and contrast controls. Pre-terminated fly-leads are supplied to facilitate connection. There is an on-board fuse, but the module is *not* reverse polarity protected. Two potentiometers are required for off-board brightness and contrast control, these should be 50kΩ (or 47kΩ) and 1kΩ respectively. On board preset controls are provided for: line frequency (horizontal hold), field frequency (vertical hold), horizontal size, vertical size and geometry, sub brightness and focus. Supplied with information leaflet.

**Warning:** Whilst this module operates from a low voltage supply, the on-board power supply generates potentially hazardous 8kV EHT for the CRT. After power has been removed from the module, hazardous residual charge may remain present for some time. Safe installation and use is dependent on skill and knowledge of the installer, if in doubt, seek advice from a suitably qualified engineer.

**Specifications**

Supply voltage:	+12V DC
Supply current:	375mA nominal
EHT voltage:	6kV
Overall size:	203 x 36 x 103mm approx.
Video input:	1V pk-to-pk composite CCIR

**Retail Unit Price each (inc. VAT).**

VF88V	Mono Flat CRT Module	£85.090	£99.990

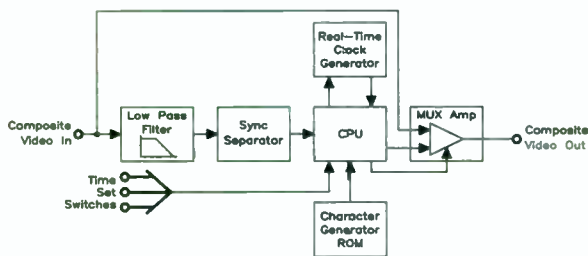

## Time & Date Video Graphics Module for Video Surveillance Systems

### Features

- ★ PCB mounting, space-saving SIL design
  - ★ Minimum of external components required
  - ★ Easily integrated into existing video systems
  - ★ In-built real-time clock
  - ★ Automatic day-of-month and leap-year correction
  - ★ Optional battery back-up for continuous time-keeping
  - ★ Semi-closed caption graphics for greater text definition
  - ★ Wide operating voltage range +7V to +20V DC
  - ★ Particularly suited for use with CCD and CMOS camera modules
  - ★ PAL, NTSC and SECAM compatible
  - ★ Capable of driving 75Ω loads directly
- ### Applications
- ★ Security and surveillance systems
  - ★ General video processing
  - ★ Ideal for professional and hobbyist use

The time and date graphics module splices self-generated time and date information onto standard PAL, NTSC and SECAM composite video signals producing a small digital clock display on the monitor picture image. The module is designed to work with standard composite video with negative-going sync. Composite video signals with amplitude between 500mV and 2V pk-to-pk are compatible with the module. An optional rechargeable backup-battery enables continuous operation of the real-time clock if power is removed from the module.

### Technical Data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:  
<http://www.maplin.co.uk>

### Pin Designations

- Pin 1: Time/Date adjust up
- Pin 2: Time/Date adjust down
- Pin 3: Time/Date adjust select
- Pin 4: Composite video output
- Pin 5: Composite video input
- Pin 6: V<sub>CC</sub> (+V)
- Pin 7: V<sub>SS</sub> (0V)
- Pin 8: Backup battery (+V)
- Pin 9: V<sub>SS</sub> (0V)

### Electrical Characteristics

Parameter	Minimum	Typical	Maximum
DC Supply voltage:	+7V	+9V	+20V
Supply current:	55mA	68mA	75mA
Backup battery voltage:	+2V	+2.4V	+2.8V
Battery charge current (V <sub>batt</sub> = 2.4V):	1.4mA	1.6mA	2.8mA
Backup time (110mAh battery):	6 months	-	-
Video input signal level (pk-to-pk):	500mV	1V	2V
Video input resistance:	-	10 <sup>11</sup> Ω	-
Input offset voltage:	-	2mV	5mV
Video output signal level (pk-to-pk):	500mV	1V	2V
Output impedance: (f = 100kHz):	-	2Ω	-
Bandwidth (-3dB, R <sub>L</sub> = 75Ω):	30MHz	50MHz	-
Overall signal gain:	-	0dB	-

- Note 1: Back-up battery must be re-chargeable type. 2.4V recommended. Module charge current feed is limited to less than 3mA.  
 Note 2: RI is an optional video input resistor and may be required to match the video source impedance. 75Ω typical.

## Colour And Monochrome CCD TV Camera Modulator

Note: appearance may differ to that shown.

### Features

- ★ Low-cost
- ★ Easy to build
- ★ Gives boost to upper video frequencies
- ★ Reverse polarity protection
- ★ On-board regulator

### Applications

- ★ View CCD pictures on a normal TV with no modification
- ★ CCTV security systems
- ★ Interface video only devices to TV sets

The video output from either the colour or black-and-white CCD camera modules (CJ75S and ZA35Q) cannot be connected directly to the majority of domestic TV sets. Some TVs have a direct video input socket (Peritel, or SCART), but many only have a UHF aerial input socket. This add-on project is based around a low cost UHF colour modulator which superimposes the video signals from the CCD camera, or a wide range of other units, onto a high frequency carrier wave. A pre-tuned modulator module is used to simplify the construction and alignment of the project. The RF output from this modulator is suitable for connection to the aerial input of UK UHF TV sets.

### Specification

DC power supply voltage:	10.5V to 17V
Supply current at 12V:	8mA
Video input level:	1V pk to pk
Video input impedance:	600Ω (no termination) 75Ω (R1 terminated)
RF TV output:	Channel 36 (591.5MHz)
Output socket:	UHF Coax

### Optional Items

The following items, not included in the kit, may also be required.

Unregulated 300mA Mains Adaptor	1	(XX09K)
Monochrome CCD Video Camera	1	(ZA35Q)
Colour CCD Camera	1	(CJ75S)

### Kit and Special Parts

A complete kit of parts, including the PCB, is available (but excluding optional items). The PCB is also available separately. Full construction details may be found in Maplin Magazine/Projects Book 75 XA75S, and instruction leaflet XU55K.

## Infra-Red Video Link

4

### Features

- ★ Range up to 100m
- ★ 12V operation
- ★ Replaces long video cables

### Applications

- ★ Point-to-point video link
- ★ Security
- ★ General communications

The Infra-red Video Link allows the transmission of monochrome composite video over a distance of up to 100 metres. The system makes use of large fresnel lenses to focus the infra-red energy at much greater distances than are possible using standard techniques.

The Infra-red Video Link has many varied applications, but is particularly suited to security, e.g. to link a security camera to a video monitor. This is particularly useful between two buildings on the same premises. In this case, the infra-red link obviates the need for long external cable runs. Clearly, the system is only practical where the buildings are close enough together, and there is a direct line-of-sight between the Transmitter and Receiver. Under typical environmental conditions, a range of up to 100m may be expected from the link; however, if the optical path is attenuated (for example, by fog or heavy rain), reduced range can be expected.

The quality of picture is not as good as that from a TV receiver, or a direct connection to a video monitor, due to the reduced bandwidth. However, it is sufficient for general-purpose surveillance applications where fine detail is less important.

### Specification

Supply voltage:	12V to 14V DC
Supply current:	150mA Tx (quiescent @ 12V) 200mA Rx Up to 100m 4MHz approx.

Range:	Up to 100m
Video bandwidth:	4MHz approx.
Peak infra-red	
Wavelength:	270mm approx.
Comp. video input:	1V pk-to-pk Tx
video output:	1V Pk-to-Pk Rx

### Kit and Special Parts

The Transmitter and Receiver are available as two separate complete kits, excluding any power supply. The kits include a case, PCB, fresnel lens, suitable mounting bracket and construction details. Full construction details may be found in Maplin Magazine/Projects Book 51 and 52.

Tx PCB: 83 x 94mm.  
Rx PCB: 109 x 94mm.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LP59P	21 IR Video Link Tx	£21.260	£24.990
LP99H	1 IR Video Link Rx	£21.260	£24.990

## UHF TV Tunerhead Module

Philips

The U943 is a high quality varicap tuned TV receiver front-end having three tuned circuits, three stages of amplification including post-I.F. amplifier, and covering the UHF TV channels E21 to E69 (471.25 to 855.25MHz picture carrier frequency). Aerial input is via a phono socket, normally this is linked to a standard 75Ω coaxial chassis socket with coaxial feeder. Output is TV I.F. comprising luminance, chrominance, F.M. sound I.F. and NICAM sound I.F. if present. This output should be processed with an S.A.W. (Surface Acoustic Wave) filter to separate the sound and vision signals. The module is designed for vertical mounting onto a PCB and is provided with five PCB pins and can securing tags at each end.

### Specification

Supply voltage:	+12V DC ±10%
Current consumption:	57mA max.
R.F. input impedance:	75Ω
R.F. bandwidth:	20MHz typ.
Voltage gain into I.F. load of 1200Ω/15pF:	40-42dB max., E21-E69
A.G.C. level for gain of 10dB:	+1V min.
A.G.C. voltage range:	+0.85 to 9.2V ±0.5V
A.G.C. current drawn:	15µA max.
Tunable R.F. range:	471-25MHz (E21) to 855-25MHz (E69)

Tuning voltage range:	+1 to 28V
Tune slope characteristic:	4MHz/V
Current drawn from tuning circuit:	0.6µA max.
I.F. components -	
Vision:	39-5MHz
Sound:	35-5MHz
Bandwidth:	9MHz
Output impedance:	100Ω
I.F. rejection:	80dB min.
Image rejection:	60dB typ.
Cross modulation:	1% typ.

Dimensions of screening can: length 66.2mm, height 38mm (not including PCB pins), width 20.1mm. Length of pins, 5mm.

With input phono socket (A) at top lefthand side, lead connections are:

5	A.G.C. input	16	Earth
6	Supply +V	17	I.F. output
11	Tuning voltage		

The case must be connected to ground.

Retail Unit Price each (inc. VAT).

JR59P	UHF Tuner Module 943	£11.050	£12.990

## Audio/Video RF Modulator

Aips

A high quality, compact audio/video RF modulator with integral 'through' RF mixer/booster and IEC connectors that is suitable for PCB direct rear panel mounting. The modulator has an RF phono output for connection to a UHF tuner. There is an in-built test signal for receiver tuning that is activated by an

integral mounting slide switch. Suitable for a wide range of applications including VCRs, satellite receivers, video disk, etc. Only suitable for use in UK (PAL-I system).

### Connections

A:	Channel selector
B:	Test switch
C:	Antenna out
D:	Antenna in
E:	RF phono out to tuner

1:	Video in
2:	Audio in
3:	+V for modulator
4:	NC
5:	+V for booster

### Specification

Supply voltage:	5V at 160mA max.
Video input:	1V pk-pk
Audio input:	1.23V pk-pk
Output channel:	30 to 39
Output level:	75dBµV ±3dBµV
Video modulation:	75% ±6%
Audio modulation:	100% ±24
S/N audio:	40dB min
Audio distortion:	3% max.
Video carrier stability:	<±600kHz (0°C to 60°C)
Audio carrier accuracy:	<±15kHz (0°C to 60°C)

### Technical data

Full technical data is available on request and is also downloadable in Adobe® Acrobat® PDF format from the technical data archive area of the Maplin website:

WC20W	UHF Modulator 6MHz	£9.350	£10.990

## Audio Video Modulator 2

### Features

- ★ Simple construction. No alignment required
- ★ Multiple inputs - SCART or BNC/Phono
- ★ Silk-screened, pre-punched case
- ★ Built in test signal for TV tuning

### Applications

- ★ Allows video equipment such as camcorders to be connected directly to the RF input of any TV
- ★ Low cost security monitoring using our range of CCD cameras
- ★ Provides a SCART input to your TV (Composite video and audio only)
- ★ Allows two videos to be linked without disconnecting the TV

A redesign of the Audio and Video Modulator kit LM79L offering a superior specification. The unit features simple connection to video sources via a BNC connector with a selectable termination resistor. The audio signal is connected via a phono connector and can be used to mix stereo signals. Alternatively a SCART connector can be used for either or both inputs. Output is PAL UK standard for connection to any UK television receiver, video or other equipment with a RF input.

### Specification

Operating voltage: +8V to +15V DC via 2.5mm power socket  
 Supply current: 144mA @ 12V DC  
 Audio input: 150mV to 3V pk-to-pk into 50kΩ  
 Video input: 200mV to 3V pk-to-pk into 1MΩ or 75Ω  
 RF channels: 30 to 39 adjustable

### Optional items

Regulated Mains adaptor YB23A  
 Aerial Extension Cable GW61R  
 2 to 1 Phono Adaptor YW39N  
 Single Phono to Phono Plug RW48C  
 Peritrel (SCART) Plug to Plug connecting cable JW36P

### Kit and special parts

A complete kit of parts is available. The PCB and case are available separately. Full constructional details may be found in Maplin Magazine/Projects Book 108 XD08J, and instruction leaflet XZ10L.

### Retail Unit Price each (inc. VAT).

## Active SCART Splitter/Selector 2

### Features

- ★ SCART, Composite and S-Video compatible
- ★ Separate phono audio outputs
- ★ Can be daisy chained for more outputs
- ★ Low power consumption - leave plugged in
- ★ Easy to build and use

### Applications

- ★ Connecting a single TV, VCR or cable/satellite unit to two other units
- ★ Buffering of signals to reduce degradation

### ★ Simple Input selection of audio and video source

The Active Scart Splitter is a video and audio signal buffer that enables the SCART signal from a TV, VCR or cable/satellite receiver to be split to two SCART compatible inputs with virtually no signal degradation. Separate phono connectors are provided that allow connection to a stereo amplifier or Hi-Fi. Switches are provided on the front panel that allow the composite video and audio source to be independently selected. The unit can thus be used as a source selector. Additional units can be cascaded or daisy chained with little signal loss or degradation.

### Specification

Operating voltage: 230V AC 50Hz  
 Power consumption: 1.84W  
 Video bandwidth: DC to 100MHz (-3dB)  
 Audio bandwidth: DC to 3MHz (-3dB)  
 Audio input: 10V pk-to-pk  
 Video input: 3V pk-to-pk  
 Audio/video gain: 0dB

### Kit and special parts

A complete kit of parts is available. The PCB and silk-screened box are available separately. Full constructional details may be found in Maplin Magazine/Projects Book 107 XD07H, and instruction leaflet XZ36P.

## Video Distribution Amplifier 1

### Features

- ★ Simple construction suitable for beginners
- ★ Cascadable for increased output
- ★ Neat, compact design
- ★ Lower cost alternative to TV splitters

### Applications

- ★ Improved video recording
- ★ Video signal distribution - connects up to 4 separate units
- ★ Buffering and boosting video signals for longer cable runs

This simple-to-build kit allows successful splitting of a video signal into four separate outputs. Alternatively, the unit may be constructed as a high current driver for relaying video signals. All connections are made using pins on the PCB allowing the user to specify the input and output connectors. A video gain and high frequency boost are provided allowing adjustment of the video signal for improved picture quality. A regulated power supply of +11 to +16V DC at 50mA is required.

### Optional items

Chassis Phono socket YW06G  
 BNC chassis socket FE31J  
 75Ω cable XS52G  
 Box MB2 LH21X  
 Knob RN15 Blue FE74R  
 Knob RN15 Red FE76H  
 Mains adaptor regulated YB23A  
 Vaned Heatsink TO126 (for high current driver alternative) JX21X

### Kit and special parts

A complete kit of parts is available. The PCB is available separately. Full constructional details may be found in Maplin Magazine/Projects Book 111 XD11M, and instruction leaflet XZ38R.

### Retail Unit Price each (inc. VAT).

LU79L	Video Pre-Amp Kit	£12.750	£14.990
GH72P	Video Distr Amp PCB	£2.280	£2.690
XZ38R	Video Distr Amp Lft	£0.500	£0.500 NV

## VCR Dubbing and Changeover Kit 2

- ★ Eliminates constantly changing leads
- ★ Amplifies the video signal
- ★ Connections for three video recorders

With video cameras becoming more and more popular, a need arises for a simple way of editing tapes. This high quality kit permits two video recorders to be permanently connected together via special video relays in the unit. A switch on the front panel transposes all the connections so that the playback machine becomes the recorder and the VCR that was recording becomes the playback machine. Thus tapes can be edited backwards and forwards, completely eliminating the laborious task of transferring all the connections each time. The unit also incorporates an amplifier to eliminate losses in the video signal. A further feature is that a third VCR can be connected, which can record the final output to make the finished master. Connections are via scart sockets for all three machines (the plugs are not included in the kit), duplicated on 6-pin DIN sockets for machines 1 and 3 and for machine 2 on phono sockets for right and left audio and BNC socket for the video.

N.B. Not S-VHS compatible.

### Kit and Assembled Unit

A complete kit, including case and pcbs, is available. The plugs and interconnecting leads are not supplied and must be made up according to the particular connectors on your VCRs. Full construction details may be found in Maplin Magazine/Projects Book 30 XA30H.

### Retail Unit Price each (inc. VAT).

Order Code	Type 3058	Price each exc. VAT	inc. VAT each
LM71N 1	Video Dubber Kit	£29.770	£34.990
XM16S 2	Video Dubber Assmbld	£42.540	£49.990

## Video Box 3

- ★ Composite colour video in/out
- ★ Sync in/out
- ★ Fade to black
- ★ Normal or negative picture
- ★ DC video control
- ★ Picture synchronised switch functions

The main function of this excellent design is to provide the ability for fading the picture information down to a blank screen. This effect can be used as a 'fade-in' or 'fade-out' on dubbed recordings (e.g. camcorder to VCR), lending a more professional appearance to your video productions. The Video Box permits the reduction in amplitude of picture information, while maintaining the level of the timing signals used to synchronise it. To achieve this, the incoming composite video signal must be split up into its component parts, each of which undergo selective processing. Following this, these components are re-assembled, to produce the final composite output. An additional video inverter has been included, allowing the option for a negative picture to be displayed (useful for home video and long distance/satellite TV enthusiasts!). Apart from

its own function as a video fader, the system timing signals have been made available, and as a result the finished unit can be used as a versatile building block for use within other video projects. Two additional video effects have been provided. When operated, the picture inverse switch produces a 'negative' image. The colour burst defeat switch should have the effect of turning off the colour circuits within your video equipment. This function is commonly referred to as the 'colour-killer' circuit, and when activated has the effect of producing a black-and-white picture.

It is strongly recommended that the Video Box is powered from a regulated power supply e.g. 12V 300mA type (YB23A). Note: the Video Box is NOT reverse-polarity protected, so damage will occur to the circuit if the power supply connections are reversed.

**Specification**  
DC power requirement: +12V  
DC current: 120mA  
Video system: Comp. PAL colour video; 1V Pk-to-Pk  
Video gain: 0dB  
Frequency bandwidth: 10MHz  
Input impedance: 75Ω (nominal)  
Output impedance: 75Ω (nominal)  
Video control: Fade to black  
External control

Synchronised switches: Video normal or inverted  
Video defeat  
Colour burst defeat  
Output defeat  
Composite sync: On/off

**K4600 Video And RGB Processor**

Velleman

To process a PAL colour video signal it first has to be converted back into the original Red, Green and Blue signals. In this way the colours can be adjusted separately, along with the colour intensity, brightness and contrast. After processing, the signal can then be converted back into the PAL video

signal.

A choice can be made between PAL Video or RGB outputs. In addition a place has been provided on the PCB for a UHF modulator, such that the antenna input of the TV or video can also be used. It is also possible to connect an S-VHS input signal. The RGB output is highly suitable for controlling our K8100 video digitizer card, so that PAL video signals can also be digitized in colour.

**Specification**

Colour system: PAL (CCIR standard)  
Composite video input: Phono sockets (RCA)  
S-VHS input: 4-pin mini DIN socket  
RGB input (as an option) 1Vtt  
Input level: 75  
Input impedance: Phono sockets (RCA)  
Composite video output: 9-pin D-type (suitable for K8100 digitizer board)  
RGB output: 1Vtt

Output level: 1Vtt  
Output impedance: 75  
Supply: 16V DC/0.5A un stabilised (adaptor connection)  
Dimensions: 200 x 67 x 170mm

Contrast, brightness and colour saturation control. Separate controls for Red, Green and Blue. RF antenna input/output. Housing included.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VF74R 1	K4600 Vid/RGB Proc	£106.370	£124.990

**TVFX Unit**

- ★ Displays full colour
- ★ Video and TV outputs
- ★ Internal/external triggering

A 'partyLite' for your TV, the TVFX is a sound to light system with patterned or single coloured screens. The circuit uses the TEA2000, SAA1043 and an array of logic circuits to produce each screen. TVFX can be connected in two ways, either from the preamp to power amp link or from the power amp to speakers link. A switch for low and high sensitivity and a variable sensitivity control on the front panel allows different power levels to be selected. In addition to an audio input, internal triggering with a variable clock speed can change the screen patterns. Outputs to PAL TVs and videos display 64 different patterns, 8 plain screens and 8 different colours.

**Specification**

Supply voltage: 12V  
Supply current: 100mA  
Power: 1.2W

**RF (UHF)**

Carrier output: Channel 36, 591.5MHz

**Video (composite)**

Output level: 1V pk-pk  
Impedance: 75Ω

**Audio**

Input attenuator: -30dB (Low sensitivity)  
140kΩ (high)  
1.2MΩ (low)  
Filter response: 15Hz to 90Hz at -6dB  
Trigger sensitivity: 100mV (high) max sensitivity  
1.5V (low) max sensitivity

**Pattern control**

Clock speed: Max 12 screens per second  
Min 1 screen every 3 seconds  
Audio trigger: Max 9 screens per second

**Optional Items**

The following items, not included in the kit, may also be required.

Case 3502	1	(YN33L)
Self-Tapping Screw No.4 x 6.35mm (1/4in.)	1 Pkt	(FE68Y)
TVFX Front Panel	1	(JR68Y)
TVFX Back Panel	1	(JR69A)
AC Adaptor Regulated	1	(YB23A)
Phono/Coaxplg Vid Lead	1	(FV90X)

**Kit and Special Parts**

A complete kit is available. The main PCB, LED PCB, front and back panels are also available separately. Full construction details may be found in Maplin Magazine/Projects Book 42 XA42V, and instruction leaflet XK23A.

XH69H	Magazine Binder	£5.940	£6.990

## Magazine Index

A comprehensive index to *Electronics and Beyond* and *Electronics - The Maplin Magazine*: it covers every issue from December 1981 to October 1996. Included are details of every article, series and project published during that period. Conveniently arranged, sectionally and alphabetically, it'll take minutes instead of hours to find the exact issue number and page you need. You'll be able to rediscover a wealth of information you never knew you had! A list of all of the Corrigenda published is also included so you will be able to find details of changes or amendments. You'll find the index an invaluable addition to the issues of *Electronics and Beyond* and *Electronics - The Maplin Magazine* that you have. If your collection is incomplete, many issues are still available as back issues.

The index is available as a 16-page A4-format printed booklet (XU87U) and also in 'electronic' Adobe® Acrobat® PDF format (version 2.1 and 3.0). The 'electronic' version is available on 3 1/2 in. floppy disk (NV12N) and for those with access to the internet the index is downloadable free of charge from the Maplin Website. The following URL will take you directly to the Magazine Index web page:

<http://www.maplin.co.uk/majindex/magindex.htm>

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
XU87U	Magazine Index	£0.990	£0.990 NV
NV12N	Mag Index on Disk	£0.842	£0.990

Note: Where issues are out of print, details of projects that are still current can be found in Maplin Projects Books, Maplin Best of Projects Books and Project Instruction Leaflets (see catalogue entry for order code and price of instruction leaflets). Photocopies of articles (projects, features, series, etc.) from out of print issues are available; a charge will be made dependent on the size of the article to be copied - please contact Customer Services for details, Tel: (01702) 554002.

**Maplin Magazine Subscription**

**United Kingdom**  
Please clearly mark your order with the following:

6 Month/6 Issue Maplin Magazine Subscription	£14.10
1 Year/12 Issue Maplin Magazine Subscription	£28.20
2 Year/24 Issue Maplin Magazine Subscription	£56.40

Credit Card and Direct Debit Subscriptions are also available with added benefits!  
For further details, call the Maplin Magazine Subscriptions Hotline, Tel: (01702) 554155

**Europe - Air Mail**  
Please clearly mark your order Europe - Air Mail Subscription - plus the following:

6 Month/6 Issue Maplin Magazine Subscription	£20.00
1 Year/12 Issue Maplin Magazine Subscription	£40.00
2 Year/24 Issue Maplin Magazine Subscription	£80.00

**Outside Europe - Surface Mail**  
Please clearly mark your order Outside Europe - Surface Mail Subscription - plus the following:

6 Month/6 Issue Maplin Magazine Subscription	£20.00
1 Year/12 Issue Maplin Magazine Subscription	£40.00
2 Year/24 Issue Maplin Magazine Subscription	£80.00

**Outside Europe - Air Mail**  
Please clearly mark your order Outside Europe - Air Mail Subscription - plus the following:

6 Month/6 Issue Maplin Magazine Subscription	£25.00
1 Year/12 Issue Maplin Magazine Subscription	£51.75
2 Year/24 Issue Maplin Magazine Subscription	£103.00

## Radio Communications Equipment Prices

Due to the volatile nature of the radio communications market and in order to remain competitive, some prices shown in this section may change during the life of this catalogue. Please call to check the latest price on any item listed.

### Scanners, Aerials & Accessories

#### Scanners

### Alinco Scanner DJ-X1D AM NFM/WFM 200kHz - 1300MHz

### Alinco DJ-X10 Handheld Scanner 100kHz to 2GHz Continuous Coverage

Alinco

- ★ No gaps
  - ★ 1200 memories
  - ★ Modes AM, NFM/WFM, SSB (LSB/USB), CW
  - ★ Ultra sensitive
  - ★ Computer control capability
  - ★ Rugged and compact
  - ★ Dual frequency display
- This replacement for the very popular and highly regarded DJ-X1D now boasts coverage to 2GHz, while still maintaining the excellent specification. With computer control and 'cloning' capability, this superb scanner ranks amongst the best. Supplied complete with NiCds and charger.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
NV37S 1	DJ-X10 H-Hand Rcvr	£254.460	£298.000

### AOR AR-8000 Hand-held Scanner 500kHz - 1.9GHz AM/FM/USB/LSB

AOR

- ★ Spectrum Display
- ★ Band Scope
- ★ 4 Display Modes

- ★ Dual Frequency Display
- ★ Computer Control
- ★ Data Storage
- ★ High Sensitivity
- ★ 1000 Memories
- ★ Alpha-Numeric Store
- ★ SSB Filter
- ★ Password Protection

The AOR-8000 offers you true computer control. You can store both frequency and station name in its database. A data port enables it to be used for cloning, external computer control, or for computer logging with one of the growing number of software packages.

For the ultimate in portable scanning and data storage, the AOR-8000 has no rivals.

Technical data sheet available.

#### Specification

Supply: Internal Ni-Cad or 12V Battery  
Consumption: 160mA (20mA battery save)  
Size: 66 x 39 x 155mm  
Weight: 345g

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
RLJ98G 2	AR-8000 Scanner	£297.020	£349.000
YE60Q	SC-8000 Case	£15.270	£17.950

### Optoelectronics Scout Frequency Counter 10MHz to 2.8GHz

The Optoelectronics Scout in complete control of our AOR-8000 scanning receiver listed earlier in this section. Use it alone with its internal ni-cad pack and aerial to lock onto any radio transmission between 10MHz and 1.4GHz. Connect its data port to the AOR-8000 and it instantly tunes the receiver to the same frequency! Typical ranges are between 35m and 61m for handheld radios.

The Scout can store up to 400 different frequencies and record the number of repeated 'hits' (250 max.) on the same channel. An internal buzzer or body vibrator alerts the user of a 'hit'. Memories can be recalled and scrolled through and an internal filter eliminates random noise responses. Unit is supplied with AC charger and aerial.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YE57M 2	OPT-400 Freq Counter	£297.820	£349.950

Just complete form at back of catalogue

- ★ No gaps
- ★ 100 memories
- ★ Battery save
- ★ Ultra sensitive
- ★ Rugged and compact
- ★ Programmable
- ★ Helical whip

The ideal scanner for those who need a rugged unit that is both compact and sensitive. This superb unit is proving very popular with aircraft enthusiasts due to its excellent UHF performance. Supplied complete with Ni-Cds and charger. This scanner is available in Maplin Stores only, while stocks last.

Sensitivity: 12dB SINAD 0.5µV  
Antenna: BNC 50Ω  
Supply: Ni-Cds or 12V DC  
Steps: 5-100kHz  
Dimensions: 110 x 53 x 37mm  
Weight: 370g

**Commтел COM112 20-channel Hand-held Scanner**

Commтел

**NEW LOW PRICE**

A highly user-friendly scanner offering 20 channels with 7 preprogrammed frequency bands, direct up or down search and direct programming from search. It has a scan speed of 12 channels per second and a search speed of 12 steps per second. Other features include channel lockout, 2 second scan delay and a key-lock function. The LCD display shows channel number, lockout and frequency. The unit is powered by 5 'AA' cells (not included). Includes its own Ni-Cd battery charger circuit (requires external +12V DC PSU). This scanner is available in Maplin Stores only, while stocks last.

## Commtel COM104 20-channel Hand-held Scanner

Commtel

A fully programmable 20-channel scanner that is able to receive a variety of communications. It features a search option to find new unpublished frequencies which can then be stored, temporarily, in the monitor channel. The bright display can show channel number, frequency and mode of operation. The scanner requires 6 'AA' Cells (not included). Includes its own Ni-Cd battery charger circuit (requires external +9V DC PSU).

## Commtel COM212 30-channel Hand-held Scanner

Commtel

This cost-effective scanner will give you access to most communications in the VHF-low, VHF-high and UHF-low bands. It offers six programmable search bands that allows the user to explore new, unpublished frequencies. The display shows frequency and channel numbers as well as active functions. The lock out facility allows unwanted frequencies to be skipped. The built-in time delay of two seconds allows for any possible reply after communication on a particular frequency. The unit is powered by 4 'AA' Cells (not included). Includes its own Ni-Cd battery charger circuit (requires external +12V DC PSU).

## Commtel COM202 50-channel Hand-held Scanner

Commtel

A stylish unit with 50 programmable channels and a search function to explore new frequencies. These are automatically stored in the monitor channel and can be transferred to one of the 50 normal channels if you wish. It also includes a 'lockout' function, to skip stored frequencies which you do not wish to listen to. Includes its own Ni-Cd battery charger circuit (requires external PSU). An external PSU is available for mains operation and charging batteries (BA56L).

## Commtel COM213 100-channel Hand-held Scanner

Commtel

A high specification scanner offering 100 channels in 10 banks, with 1 priority channel in each bank. For speed and ease of use it offers Jetscan, which can scan 100 steps per second. It also features programmable band search, lockout for up to 10 frequencies, channel lockout, 2 second scan delay, data noise/birdies skip, a key-lock and a green backlit display. It uses 4 'AA' Cells (not included). Includes its own Ni-Cd battery charger circuit (requires external +12V DC PSU).

## Commtel COM203 200-channel Hand-held Scanner

Commtel

This scanner offers 200 channels in 10 banks which means you can group similar frequencies together for ease of use, and each bank can be included or excluded when scanning. It allows you to receive public services, civil air bands and also cellular phone bands. Further functions include a priority channel, very high scanning speed of 25 channels per second and a search function with 10 monitor channels for storing new frequencies. Includes its own Ni-Cd battery charger circuit (requires external PSU). An external PSU is available for mains operation and charging batteries (BA56L).

## Commtel COM216 400-channel Full Coverage Hand-held Scanner

Commtel

This top-of-the-range scanner covers the full frequency range from 25MHz to 1300MHz without gaps. Now you can pick-up almost anything from

CB and portable phones to FM radio, TV sound HAM radio and much more. Favourite frequencies can be stored in 400 channels, which can be grouped in 10 banks for convenience. 10 channels can be assigned as 'priority' channels. Scanning speed is extremely fast at 100 channels per second, and with the special search mode that has 100 memories for lock-out of known frequencies or birdies, makes this scanner extremely easy to use. It uses 4 'AA' Cells (not included). Includes its own Ni-Cd battery charger circuit (requires external +12V DC PSU).

### ICOM IC-R10 Hand-held Scanner 500kHz to 1.3GHz

icom

- ★ 1000 memories in 18 banks
- ★ Manual rotary tuning option
- ★ 15 preset tuning steps or user programmable
- ★ F/WAM/WFM/USB/LSB/CW
- ★ 16.7 channels/sec scan speed
- ★ Data cloning
- ★ Sleep timer function
- ★ Backlight illumination
- ★ Variable display contrast
- ★ Priority channel

A lightweight scanner with excellent sensitivity and selectivity, plus the option of manual rotary tuning. A data port allows the IC-R10 to be controlled from a PC, or transfer data to the PC. Receiver-to-receiver data cloning is possible allowing the programmed contents of one IC-R10 to be copied into another. Comes complete with Ni-Cds and 230V AC mains charger.

**Specification**  
Supply: Internal Ni-Cds or external +12V DC supply/charger  
Consumption: 180mA typ., 110mA typ stand-by  
Steps: 0.1, 0.5, 1, 5, 6.25, 8, 9, 10, 12.5, 15, 20, 25, 30, 50, 100kHz or user programmable  
Size: 58.5 x 130 x 31.3mm  
Weight: 310g

### Icom IC-R8500 Communications Receiver 100kHz to 1.999GHz

icom

- ★ FM (wide/narrow), AM (wide/narrow), SSB (USB/LSB), CW
- ★ 1,000 memories plus 20 scan edges and 1 priority channel
- ★ 40 channels/sec scan speed
- ★ Auto memory write scan
- ★ Programmed scan
- ★ Memory select scan
- ★ Memory editing
- ★ Audio peak filter
- ★ Data communications
- ★ Tape output and remote record
- ★ Sleep timer

A sophisticated communications receiver for the enthusiast who wants only the best. There are 1,000 regular memory channels, plus 20 programmable scan edge channels and one priority channel. The 5-digit bank names are programmed into 20 user banks for convenient recall and organisation of frequencies. In addition, memory channels can store mode information, tuning step and ATT (attenuation) information. A useful feature is the 'auto memory write scan'. When a signal is received, the received frequency is automatically written into a memory channel in the auto write bank. Supplied with 230V AC mains power adaptor and comprehensive instruction manual.

**Specification**  
Power supply: 13.8V dc 1.8A standby, 2A audio

**Yupiteru MVT-7000**  
200kHz - 1300MHz AM/FM  
Hand-held Scanner

Yupiteru

- ★ Direct up/down tuning
- ★ Variable steps
- ★ 200 memories
- ★ 10 programmable bands
- ★ AM/FM/WBFM
- ★ Variable contrast display
- ★ Signal strength meter
- ★ High speed scanning
- ★ Backlight illumination
- ★ Battery sver
- ★ Attenuator
- ★ Superb sensitivity
- ★ 12V DC charge lead

The Yupiteru is a very advanced hand-held scanner. Indeed it is now in use in many professional applications. Unlike many of its cheaper rivals, the Yupiteru bears the hallmark of sound engineering that instills confidence. Engineers enthuse over it and hobbyists are equally complimentary about its ease of operation and versatility. The receiver covers every conceivable service including marine, aircraft, military, emergency services and lots more! Its fast scanning rate means rapid searching and its easy to use memory enables you to store up to 200 frequencies. Keypad entry adds to its versatility and provides the means of accessing its many different functions.

**Specification**

Sens: 10dB SINAD 0.23µV (FM)

100kHz - 1650MHz

Yupiteru

- ★ Direct Keypad Entry
- ★ Variable Steps
- ★ 100 Memories
- ★ 10 Programmable Bands
- ★ AM/NFM/WFM/LSB/USB
- ★ Search pass (500 ch.)
- ★ Backlight LCD
- ★ 30 ch. per sec. scan
- ★ 50Hz accuracy
- ★ Battery Saver Function
- ★ Attenuator & S-meter
- ★ Product detector
- ★ Rugged construction
- ★ 240V AC charger/supply

One of the most exciting handheld scanner ever to be produced and what a performer it is! Not only do you get a top performance VHF/UHF scanner, you also get a powerful short wave communications receiver all in one packaged. The scan and search speeds are a blistering 30 steps per second and it has a proper SSB detector. This means easy tuning and clear reception. Take it with you on holiday, on walks, in the garden, in fact anywhere and keep in touch with the world. With this scanner you will receive military and civil aircraft, commercial transmissions, all the emergency services, long distance marine and aeronautical broadcasts from as far away as Australia. No wonder everybody is talking about the MVT-7100.

## Super Scan Mk II - An HF/VHF/UHF Wideband Active Aerial for Scanning Receivers

Fully assembled and ready for use!

### Features

- Indoor or outdoor use
- Wideband HF/VHF/UHF preamplifier
- Low power consumption
- Power supply through coaxial cable
- High gain
- No tuning required
- Surface mount components
- Integral mast clamp

### Applications

- Ideal for scanning receivers
- 160, 80, 40, 20, 15, 10m HF amateur radio bands
- 6, 4 and 2m VHF amateur radio bands
- 70cm and 23cm UHF amateur radio bands
- VHF FM broadcast band
- UHF TV band
- 27MHz and 934MHz CB bands
- VHF/UHF aircraft bands
- VHF and UHF PMR bands
- VHF marine band
- VHF taxi band

### Specifications

Aerial	
Power supply:	+9V to +14V DC
Supply current:	17mA (at +12V)
Frequency Range:	1MHz to 2,000MHz (2GHz)
Gain:	+19dB (maximum)
Impedance:	50Ω
Connector:	N-type
Length:	75cm
Weight:	0.25kg
Mast clamp:	Twin fixing hoops for masts up to 51mm (2in.) diameter

### PSU Interface

Power supply:	+9 to +14V DC
RF insertion loss:	-1dB (500kHz to 1.000MHz)
Impedance:	50Ω
DC input connector:	2.5mm power socket
RF connectors:	N-type and BNC

A radio receiver or scanner will only perform within the operating restrictions of its aerial system. Nearly all scanners are supplied with a small telescopic aerial, whilst adequate for local reception, such aerials are not suitable for reception of long distance (DX) or weaker signals. To achieve best performance an outside aerial, mounted as high as possible, is required.

With the increasing frequency range of modern VHF/UHF scanners, a very broadband aerial is needed. The feeder cable connecting it to the scanner must have good low loss signal characteristics if the advantages of an outdoor aerial are to be fully realised. All cables will have some losses, which increase with feeder length and frequency. To compensate for this the aerial must have signal gain. The best method is to use an aerial with an integral wideband masthead signal

Maplin is opening new stores all the time. Call for latest details

amplifier, such as the Super Scan Mk II. The DC voltage used to power this amplifier is fed up through the centre core of the coaxial cable, which is introduced by using a PSU interface at the receiver end. The aerial has a weatherproof housing for outdoor use, with four ground radials to aid performance.

The Super Scan Mk II Aerial comes fully assembled and includes the following items:

- 1 Super Scan Mk II active receiving aerial with integral mast clamp
- 1 Super Scan Mk II PSU interface.
- 1 mains adaptor
- 15m (approx) pre-terminated RG58U coaxial cable for interconnection between PSU interface and aerial
- 1m (approx) pre-terminated RG58U coaxial cable for interconnection between receiver and PSU interface
- 1 instruction manual

Retail Unit Price each (inc. VAT).

### Scanner Whips 25MHz - 1.9GHz

Watson

Purpose designed whips that will enhance the performance of your scanner. They are specifically designed to provide the widest possible frequency coverage together with signal gain characteristics that will improve the receiving range of your scanner. All models are fitted with BNC plugs.

**W-801 REGULAR GAINER**  
A flexible whip that provides a wide frequency response, and worthwhile improvement in signal strength. Length is 21cm.

**W-889 TELE GAINER**  
A telescopic aerial with base knuckle joint that enables you to adjust its length and angle for optimum reception.

**W-881 SUPER GAINER**  
The ultimate flexible whip for long distance reception. It provides significant gain over normal antennas and will considerably enhance your listening. The flexible design ensures that it cannot be accidentally broken.

Retail Unit Price each (inc. VAT).

AB88V 1	Mobile Scan-K	£16.970	£19.950

### Scan King Base Aerial 500kHz - 1300MHz

The one major improvement you can make to your scanner is to install an outside aerial. This will improve your scanner's range tremendously. You will hear distant signals that before were inaudible when using the whip antenna. The Scan King is recommended by us as the ideal answer at a very reasonable price. It is fibreglass encapsulated and supplied with all mounting hardware for masts up to 2in. diameter.

Length: 110cm  
Radials: 4 x 20cm  
Connector: 'N' type

Retail Unit Price each (inc. VAT).

## WRP-1300 Wideband Pre-Amp (25MHz to 1300MHz) for Scanners

Watson

**NEW**

For improved reception on those difficult frequencies, this in-line wideband pre-amp, with a minimum of 13dB of gain over the frequency range, is hard to beat. It can be powered from a 9V PP3 Alkaline battery (not included), or an external +9V to +15V DC @ 20mA supply. The 2.1mm power socket requires a positive centre power input. The small metal housing is fitted with a on/off slide switch and BNC connectors. A 0.5m (approx) BNC-BNC patch lead is included.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
NV43W 1	WRP-1300 W/B Preamp	£34.000	£39.950

## SAA20

**NEW LOW PRICE**

If your antenna is mounted on the roof, then weak signals can be lost in the cable between it and the scanner. This amplifier and filter boosts even the weakest signal, along aerial cables up to 50m long, giving you so much more to listen to.

Retail Unit Price each (inc. VAT).

BA10L	SAA20 Antenna Amp	£25.520	£29.990

## Airband Receivers, Aerials & Accessories

### Airband Receivers

#### SAB-11 VHF Airband Monitor

A dedicated civil airband monitor that you can afford to take anywhere. Although the price makes it ideal for youngsters, it is a great little performer in its own right. Now you can listen to the pilots and the ground controllers at your local airport or airshow.

Covers 88 - 136MHz VHF and 540 - 1600kHz medium wave.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
AG99H	SAB-11 VHF Monitor	£11.020	£12.950

#### Airband/Marine Broadcast Monitor Receiver SAB-9 MK II

Ideal for those on a budget, this receiver is one of our best sellers. It covers airband, marine, emergency and FM broadcast. You'll be able to tune into all the action. This is a great entry level monitor and is widely used at air displays, etc. Power is from 4 x 'AA' cells (JY48C, not supplied). It has its own speaker and telescopic aerial and an earpiece is provided. SAB-12 is same but with squelch control.

Retail Unit Price each (inc. VAT).

**WAF-125 Tuneable Airband Filter 85MHz to 175MHz**

Watson

NEW

Receivers can suffer from overload or breakthrough from strong unwanted signals, this passive tuneable antenna filter can greatly reduce this interference, and in some cases completely eliminate it. The filter covers the 85MHz to 175MHz range and is particularly suited for screening out Band II (FM) broadcasts, and VHF paging transmitters. The unit includes a fixed high pass filter which reduces SW and MW interference. Connections to aerial and receiver are via BNCs. Supplied with calibration graph and 0.5m (approx) BNC-BNC patch lead.

Retail Unit Price each (inc. VAT).

## LOWE HF-150 Communications Receiver

- ★ Professional Performance
- ★ Coverage 30KHz-30MHz
- ★ Synchronous Detection on AM
- ★ Narrow & Wide Filters
- ★ 60 Memories
- ★ Dual Conversion
- ★ USB/LSB/CW/AM

Now selling across the world, this British design has won glowing reports about its performance. Compact dimensions and solid construction enclose an electronic design that performs better than some receivers costing much more. It is also finding wide applications in the commercial field. Thoroughly recommended for the serious DX listener who demands good sensitivity and the ability to cope with strong adjacent channel signals.

Aerial: 600 ohm/50 ohm/whip

## Roberts R861 Multi-Band Digital PLL RDS World Radio with SSB

Roberts

- ★ Continuous AM coverage 153kHz to 29.999MHz
- ★ RDS auto clock set
- ★ SSB (LSB/USB) 40Hz tuning steps
- ★ Dual conversion IF on SW
- ★ Direct frequency input
- ★ Rotary tuning
- ★ Auto scan
- ★ 307 memory presets
- ★ 29 page SW station name memory

A sophisticated FM-stereo/MW/LW/SW digital RDS radio with a host of features to make using the radio extremely easy. The radio comes with 28 of the 29 available pages of SW memory pre-programmed with the BBC, European and North American stations and many more. A numeric keypad allows direct frequency keying with a priority button for direct access to your favourite station. This compact radio is supplied with a 230V AC mains adaptor, shortwave aerial, earphones and soft carrying pouch. The radio can be operated from 4 x 'AA' alkaline cells (not supplied) providing approximately 16 hours of normal use.

Retail Unit Price each (inc. VAT).

## CT400 Antenna Coupling Transformer

Lake

**NEW**

A 'broad-band' inductively-coupled transformer intended for coupling a receiver's 50Ω antenna connector, via a screened coaxial downlead feeder, to a conventional end-fed or long wire antenna. The transformer covers all the HF bands with wire antennas of virtually any length, but ideally between 10m and 30m. It can provide effective screening from radiated pulse (ignition) type interference and so improve weak signal readability.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
NV48C	CT400 Ant Cpl Xfmr	£6.760	£7.950

## Shortwave Accessories

### Watson WAT2 Antenna Tuning Unit for SW Receivers

Watson

**NEW**

The WAT2 has been designed for 500kHz to 30MHz listening, and will peak an antenna for maximum efficiency. The variable 'Q' control is used to increase the selectivity of the tuner for better interference rejection and cross modulation prevention. The unit can be used with a wide range of aerial types including coaxial feeds, long wires, tuned feeder and loop antennas.

Retail Unit Price each (inc. VAT).

### NRF2 Noise Reduction Filter

Lake

**NEW**

This passive audio filter is intended to enhance the selectivity of a receiver by limiting the audio response at the headphone or loudspeaker stage. Modern receivers tend to have a much wider bandwidth to cater for broadcast stations as well as SSB, FAX and similar utility signals. This filter is excellent at reducing, or removing, noise, sideband splatter and high pitched whistles that can accompany 'narrow band' reception on a 'wide band' receiver. Connection is via 3.5mm mono plug and socket. Supplied with 1/4in to 3.5mm and 3.5mm to 1/4in adaptors.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
NV48D	NRF2 NR Filter	£15.270	£17.950

## 49MHz 'Licence Free' Transceivers

### 49MHz 'Licence Free' Transceivers

- Low cost
- Ideal for short range use
- Simply purchase, fit batteries and use
- No licence needed in UK
- Typical range 300m to 400m (depending on conditions)

These 49MHz transceivers are ideal for commercial and leisure activities. The low cost and absence of licence requirements makes it ideal for a wide range of uses.

### PC-50 Hand-held 5-channel 49MHz Walkie-Talkie

Maxon

**NEW**

A 5-channel, 49MHz FM 2-way radio with a 1/4mile range (depending on conditions) and designed for security, school, church, team sports or other group related activities. The walkie talkie is portable, lightweight and compact. Can also be used with the detachable headset with boom mic supplied which offers 'hands-free' operation, with a choice of PTT or VOX. Can be clipped to belt or slipped into a backpack, etc. Requires 3 x 'AA' alkaline cells (not supplied). No licence required to own or use.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each

## CB Aerials

### 27MHz Flexible CB Aerial

A flexible antenna for the 27MHz band, ideal for use with CB radios. Excellent SWR when fitted to handheld equipment and offering small size, virtually unbreakable durability and gain approaching quarter wave. Overall length: 355mm. Terminated in a PL259 UHF plug. For CBs fitted with BNC socket, use adaptor YW04E.

Retail Unit Price each (inc. VAT).

**Short Range Business Radio**

**Motorola Handie-Com Short Range Business Radios (SRBR)**

Motorola

Handie-Com two-way radios are a new range of business radios. Being inexpensive to purchase and simple to operate, they are the ideal solution to many professional communications problems.

- ★ Immediate use after purchase
- ★ Half the cost of previous business radios
- ★ Range of up to one mile with superb voice clarity
- ★ Lightweight and simple to operate with easy channel selection
- ★ Wide range of accessories available
- ★ Nominal licence fee with 'no hassle' application
- ★ 3 channels (UHF)
- ★ 5 CTCSS tones (selectable)

S-200 comes complete with Ni-Cad battery charger and belt clip.

S-240 has the same features as the S-200 plus

hands-free voice activated voice transmit (VOX) operation when used with the optional headset microphone.

Accessories available:

- Extra Ni-Cad
- One Hour Fast Charger
- Carry Case
- Extra Charger
- VOX Headset
- Speaker/Microphone

NB: 3 year licence fee £30, for any number of units. Application form in each radio.

YE92A 8	Alinco DX-70 Tx/Rx	£592.290	£685.950

## Icom IC-706 MkII HF/2m/6m All-mode Mobile Transceiver

Icom

This very popular HF/2m/6m mobile transceiver operates on all modes (SSB/CW/RTTY/AM/FM), yet measures only 167 x 58 x 200mm. Power output is 100 watts on HF & 6m and 10 watts on 2m. Features 102 alpha-numeric memories, 2 scan edges, 1 call channel and built-in electronic keyer. Requires +13.8 volts DC at 20 amps. This updated version has an enhanced 30kHz to 200MHz broadband receive mode with slots for two optional crystal filters. The band stacking register memorises preamp/attenuator settings and tuner on/off

condition as well as frequency and mode. Output is increased to 20 watts on 2m. The narrow FM deviation has been set for 2.5kHz - ideal for the new 12.5MHz channels.

**Watson VSWR Meters**  
W-220: 1.7 to 200MHz  
W-420: 118 to 530MHz  
W-620: 1.6 - 530MHz

Watson

Three VSWR meters that you'll find hard to beat! Designed for ham radio or professional use, each has a sealed calibrated sensor providing a typical accuracy of 5% and a large analogue meter that makes for quick and easy measurements.

**Specifications:**

Power: 5/20 and 200W FSD

Mode: Average or VSWR  
VSWR: 1:1 to 10:1  
Accuracy: 5%  
Sensitivity: 3W FSD for VSWR  
Connectors: UHF SO-239 type  
Dimensions: 155 x 63 x 103mm

Retail Unit Price each (inc. VAT).

Order Code	Type 11900	Price each exc. VAT	inc. VAT each
MB64U 1	W-220 VSWR Meter	£59.530	£69.950
MB65V 1	W-420 VSWR Meter	£59.530	£69.950
MH73Q 1	W-620 VSWR Meter	£110.590	£129.950

**Diamond VSWR/Power Meters**

Diamond

**NEW LOW PRICE**

A range of professional quality meters that will read VSWR plus forward and reflected power in Watts. They will measure RMS power or approximate PEP power when running SSB. When reading SWR a single adjustment for full scale deflection is needed which is taken care of automatically on SX-2000. Each one measures 155 x 63 x 103mm.

<b>Specification SX-100</b>	<b>SX-200</b>
Range: 1.8 to 60MHz	1.8 to 200MHz
Power: 30W/300W/3kW	5W/20W/200W
Accuracy: ±10%	±7%
FSD: 3W	1W
Connectors: SO-239	SO-239
<b>Specification SX-400</b>	<b>SX-600</b>

**VSWR & Aerial Matcher 140-150 & 430-450MHz**

Measures VSWR and power up to 60W and can be left in circuit continuously. This dual band unit has a built-in antenna tuner for each band and is supplied

with a preset adjusting tool. There are two power ranges, 0 to 15W and 0 to 60W.

Retail Unit Price each (inc. VAT).

Order Code	Type 11799	Price each exc. VAT	inc. VAT each
MB59P 1	SWR-50RM Matcher	£51.320	£59.950

**VHF & UHF Wavemeters**  
WA1 120 - 450MHz  
WA2 50 - 210MHz  
WA3 1.8 - 92MHz

Designed to meet the UK Amateur Radio Licence requirements, these units will measure the presence and frequency bands of RF. DC amplifier is included plus a whip aerial.

Size: 120 x 60 x 45mm  
Power: PP3 Battery

Retail Unit Price each (inc. VAT).

Order Code	Type 728	Price each exc. VAT	inc. VAT each

## Watson WPL-70 High-quality Patch-lead

Watson

**RECENTLY INTRODUCED**

At last a real high-quality low-loss patch lead! This 70cm long lead uses 5D-FB 50 ohm cable and is terminated in 2 x PL-259 plugs. It will handle up to 2kW and has a unique 'stay-put' feature - this lead will stay in the position you put it!

Retail Unit Price each (inc. VAT).

Order Code	Type 13271	Price each exc. VAT	inc. VAT each
VND5F	Watson WPL-70	£5.910	£6.950

## WPL-50 Patch Lead

Watson

- ★ 50Ω
- ★ RG-58 cable (coax)
- ★ PL-259 plug each end

Retail Unit Price each (inc. VAT).

Order Code	Type 13513	Price each exc. VAT	inc. VAT each
JV42V	WPL-50 Patch Lead	£1.690	£1.990

## Coax Sealer

A waterproof, flexible, moldable, covering designed for coax fittings. Stays flexible at any temperature. Sufficient for 9 plugs.

Retail Unit Price each (inc. VAT).

Order Code	Type 9970	Price each exc. VAT	inc. VAT each
YS18U	Coax Seal	£4.210	£4.950

## HP4A TVI Filter

The HP4A is a combined braid breaker and high pass filter. Fully encapsulated and fitted with Belling Lee connectors, it can be plugged directly into the TV receiver. The high measure of

rejection ensures that transmitter RF is prevented from reaching the TV receiver via the coaxial aerial cable.

UHF TV use  
HF rejection 70dB  
VHF rejection (144MHz) 30dB  
Insertion loss 2dB

Retail Unit Price each (inc. VAT).

Order Code	Type 707	Price each exc. VAT	inc. VAT each
ZA11M	HP-4A TVI Filter	£8.460	£9.950

## Ferrite EMC Filters

Cure Radio Interference

One of the easiest ways of curing interference is with these special ferrite rings selected for the purpose. Simply wind a few turns of any hi-fi lead, TV down lead, or mains lead, around the ring. Interfering radio signals are then prevented from travelling into the equipment. As supplied by us to BBC, DTI and TV rental companies etc.

Retail Unit Price each (inc. VAT).

Order Code	Type 7115	Price each exc. VAT	inc. VAT each
AM35Q	Ferrite Filter	1+ £2.540 10+ £2.490 25+ £2.290	1+ £2.990

## MFJ-704 Low Pass Filter

- ★ 1.8 to 30MHz
- ★ 1.5kW
- ★ Low Loss

Dramatically reduces the chance of TV interference from ham radio and CB. Low pass filters are recommended by the DTI.

**NEW LOW PRICE**

Retail Unit Price each (inc. VAT).

Order Code	Type 998	Price each exc. VAT	inc. VAT each
CP29G 1	MFJ-704 LowPass Ftr	£34.000	£39.950

## Optoelectronics Scout Frequency Counter 10MHz to 2.8GHz

The Optoelectronics Scout in complete control of our AOR-8000 scanning receiver listed earlier in this section. Use it alone with its internal ni-cad pack and aerial to lock onto any radio transmission between 10MHz and 1.4GHz. Connect its data port to the AOR-8000 and it instantly tunes the receiver to the same frequency! Typical ranges are between 35m and 61m for handheld radios. The Scout can store up to 400 different frequencies and record the number of repeated 'hits' (250 max.) on the same channel. An internal buzzer or body vibrator alerts the user of a 'hit'. Memories can be

recalled and scrolled through and an internal filter eliminates random noise responses. Unit is supplied with AC charger and aerial.

Retail Unit Price each (inc. VAT).

Order Code	Type 9996	Price each exc. VAT	inc. VAT each
YE57M 2	OPT-400 Freq Counter	£297.820	£349.950

## Opto-M1 10 to 28 Mhz

Optoelectronics

**RECENTLY INTRODUCED**

Similar in style to the 3300 counter but with some additional features including RF signal strength bargraph, noise input filter, 3 memories and data output port.

Retail Unit Price each (inc. VAT).

Order Code	Type 10076	Price each exc. VAT	inc. VAT each
JM39N 2	OPTO-M1	£204.210	£239.950

## Opto-Cub Frequency Counter 1MHz - 2.8GHz

- ★ LCD readouts
- ★ Ranges of 30-60m
- ★ Internal Ni-Cads
- ★ AC chargers
- ★ Helical aeriels
- ★ 50Ω BNC inputs
- ★ Digital filter
- ★ Auto capture

Specification

Sensitivity: <3mV  
Impedance: 50Ω, 1MHz - 2.8GHz  
1MΩ, 1MHz - 20MHz  
Gates: 8 (0.0001 - 10 seconds)  
Resolution: 0.1Hz (1MHz - 250MHz)  
10Hz (250MHz - 2.8GHz)  
Dimensions: 85 x 65 x 29mm

Retail Unit Price each (inc. VAT).

JM38R 2	OPT-CUB Counter	£119.100	£139.950

**Watson FC-128 Hand-held Frequency Counter**

Watson

This 1MHz to 2.8GHz coverage hand-held frequency counter is probably the best value ever! Supplied complete with Ni-Cds, charger and telescopic whip. Features 50 ohm input, 10-digit LCD display, 16-segment bar-graph of RF signal strength and a low battery indicator. Low-power consumption means long battery life in operation - 6 hours of normal use.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VN08J	Watson FC-128	£68.040	£79.950

**Aerials & Accessories**

**Flexible Aerial 2m**

A flexible antenna for the 2m band. Excellent SWR when fitted to handheld equipment and offering small size, virtually unbreakable durability and gain approaching quarter wave. Overall length: 175mm. Terminated in a BNC plug.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YG15R	2m Rubber Duck	£7.720	£9.080

**WHX-7000 2m/70cms Dual Band Rubber Duck Antennas**

Watson

"Boost the power of your handheld"  
2m/70cms dual band rubber duck antenna for use with handheld transceivers.

- ★ BNC plug
- ★ 205mm long
- ★ Weight 36g

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
ME90X	WHX-7000 Rubber Duck	£16.970	£19.950

**WSM-270 2m/70cms Mobile Antenna on Micro Mag Mount**

Watson

- ★ 2.75m coax
- ★ 460mm long
- ★ BNC plug
- ★ Weight 60g

This is the answer to those who use a dual-band handheld in the car but need an external antenna for optimum performance.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
ME61R	WSM-270 Mobile Ant	£21.230	£24.950

**'On-Glass' Mobile Aerials**

- GM-144**

RU79L	W-2LE Mobile Whip	£8.460	£9.950

**Watson Mobile Mount**

Watson

W-3CK comprises a 5m 5D 50Ω coaxial cable terminated in a PL-259 plug and SO-239 connector to match the W-3HM. Rated to 13000MHz.

W-3HM is an adjustable hatch mount that easily fits most car boots or hatch doors. Adjustable in two planes.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MB60Q	W-3CK Cable Kit	£16.120	£18.950
MB61R	W-3HM Mobile Mount	£12.720	£14.950

**Free delivery for all Maplin MPS Business Account Holders!**

(Additional Charge for Guaranteed Next Day Delivery see front of catalogue.)

**Call and Collect**

Maplin has more stores Nationwide than ever before. See the maps at the front of the catalogue for the nearest one to you.

## Gutter Mount(SO-239)

W-ECH cable kit is 5m long and fitted with PL-259 and SO-239 bases. W-ECH can be used for direct body mounting.

AML gutter mount in cast alloy with adjustable PL-259 - SO-239. For use as a direct body mount or with gutter mount. Supplied with mounting hardware and sealing cap.

Retail Unit Price each (inc. VAT).

Order Code	Type 4812	Price each exc. VAT	inc. VAT each
XP76H	W-ECH Cable Kit	£11.020	£12.950
ZA02C	AML Gutter Mount	£12.720	£14.950

## Magnetic Bases

Two models available. WMM-7 is the standard unit with SO-239 socket, 4m cable and PL259 plug. KTSM 3.5 is similar but with a thin rubber skirt that provides amazing adhesion, even for the longest whips.

Retail Unit Price each (inc. VAT).

Order Code	Type 4814	Price each exc. VAT	inc. VAT each
RU82D	WMM-7 Mag Mount	£9.310	£10.950
ZA04E 1	KTSM-3.5 Mag Mount	£19.530	£22.950

## Watson Amateur 2m/70cm Dual Band Base Antennas

Watson

These are fibre glass encapsulated with stainless steel fittings and are fully weatherproofed. They have been specifically designed for the UK amateur radio bands and are pretuned for optimum VSWR. All are provided with 50mm mast clamps and SO-239 sockets.

### W-30 Dual Band

Length: 1.15m  
Gain: 3/6dB

## AR-300XL Aerial Rotator Suitable for VHF Beams

Ideal for VHF ham radio or TV aerials with boom lengths up to 4m. Comprises 240V control box with compass bearings and low voltage rotator. Requires 3-core control

cable and motor accepts mast size 28 - 44mm diameter. Maximum vertical load 220kg.

Retail Unit Price each (inc. VAT).

Order Code	Type 4812	Price each exc. VAT	inc. VAT each
RU72P 8	AR-300XL Rotator	£51.020	£59.950

## Alignment bearing for above

For larger aerial systems.

Retail Unit Price each (inc. VAT).

Order Code	Type 7100	Price each exc. VAT	inc. VAT each
AS79L 1	AR-201 Bearing	£16.970	£19.950

## Delta-C Wire Dipole Kit

Delta-C comprises two high voltage RF insulators (75mm long) and a centre insulator (100mm wide) with replaceable static discharge tube, SO-239 socket and stainless steel fittings.

Retail Unit Price each (inc. VAT).

Order Code	Type 9347	Price each exc. VAT	inc. VAT each
YE43W	Alpha C Dipole Kit	£25.480	£29.950

## Copper Antenna Wire

Watson

Three type available, each in 50m (169ft) lengths  
ECW (YE58N) - pre-stretched copper wire 16 gauge (1.6mm dia.) ideal for SW receive aerials.  
HDCW (NV59P) - pre-stretched hard drawn copper wire 16 gauge (1.6mm dia.) ideal for transmit aerials, strong, will support traps, etc.  
Flexweave (NV60Q) - pre-stretched 168 stranded copper wire 14 gauge (2mm dia.) easy to solder and extremely strong, suitable for constructing receive and/or transmit aerials. It can be tied for a secure termination and will not twist, knit or stretch.

Retail Unit Price each (inc. VAT).

Order Code	Type 99142	Price each exc. VAT	inc. VAT each
YE58N 2	ECW Copper Wire 50m	£11.020	£12.950

NV60Q	FLEXWEAVE CuWire 50m	£21.230	£24.950

### B1-2K HF Balun

A 1:1 50 Ohm balun covering 3-5 - 30MHz rated at 2kW. Can be used as centre section of dipole antenna. Fitted SO-239 socket.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
AB84F	B1-2K Balun	£22.080	£25.950

### Ribbed Aerial Insulators

Black, ribbed polypropylene insulators. Ideal for wire transmitting aerial. 8cm long.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
AS74R	INSUL-8 Insulator	£0.842	£0.990

### Aerial Dipole Centre Insulators

Aerial wire is secured with crimps and/or soldering. DC-50 is for use with coax fed aeriels and has an SO-239 socket. DC-300 is for use with 300 or 450 ohm feeder and has feeder clamp and crimps.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
AS77J	DC-50 Dipole Ins	£3.820	£4.490
AS80B	DC-300 Dipole Ins	£3.360	£3.950

### RF Duplexers

These units enable a single coaxial cable to carry both an HF-VHF signal and a UHF signal or two aeriels to be connected to similar sources. Order 'D24' if both transceivers are SO239 or 'D24N' if UHF socket is 'N' type.

Pass Band: 1.6-150MHz,400-450MHz  
Impedance: 50 ohms  
Power: 50W CW or 100W PEQ  
Loss: 0-3dB  
VSWR: Less than 1.2  
Isolation: 50dB

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
ZA08J	D24 Duplexer	£28.040	£32.950
ZA09K	D24N Duplexer	£30.590	£35.950

Order £30 or above?

Account holder or not, your order will be sent carriage paid.

(Guaranteed next day delivery charges as stated in our Terms & Conditions in the back of the catalogue)

### RF Duplexer

Provides common feed for 2m and 70cms signals. PL-259 plugs, SO 239 socket.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS19V	RF Duplexer	£21.230	£24.950

### Coaxial Switches

**CX-201G-N /CX-201-239**  
A robust die-cast 2 way switch for use from DC to 1GHz. Provides 70dB isolation at 200MHz, 50dB at 1GHz. CX-201G has 'N' socket, CX-201 has SO-239 sockets. Insertion loss is less than 0.2dB.

### MFJ401

Similar design to '201' but provides 4 outputs. In addition, the centre position provides an earth position and is fitted with static discharge protector.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
CM55K	CX-201N Coax Switch	£18.680	£21.950
CP30H	CX-201 Coax Switch	£14.420	£16.950
CM56L	MFJ-401 Coax Switch	£55.270	£64.950

### RF Amplifiers

### Microset VHF/UHF Amplifiers

These low cost amplifiers are ideal for use with our ham radio handhelds. All feature GaAsFET receiver amplifiers and have built-in RF switching.

### 2m Mobile 30W Amplifier P-335

- ★ RF sensing
- ★ 1 to 6W input
- ★ Ideal for FM

Here's a way to boost your handheld power so that you can compete with the high power modules. The P335 represents excellent value and is suitable for all 2m handhelds.

Frequency: 144-148MHz  
Mode: FM  
Supply: 13-8V  
Size: 74 x 50 x 24mm

Retail Unit Price each (inc. VAT).

### Morse & Packet Radio

### MFJ-411 Morse Trainer

- ★ 5-50 wpm
- ★ 12 Modes
- ★ Random characters
- ★ Random words
- ★ Self contained
- ★ Built-in speaker
- ★ Simulated Ham Radio contacts

Just the thing for learning Morse code quickly. Take it with you, use it for student tuition or club use, this trainer is the most comprehensive we have seen.

You can vary speed, tone, modes, character combinations and even select beginner or advanced options. The LED display and menu system allows instant adjustment of modes as you progress with your learning.

## MFJ-784 Tuneable DSP Filter

- ★ Bandpass
- ★ Lowpass
- ★ Highpass
- ★ Multi-notch
- ★ Noise reduction
- ★ AGC

This is the latest form of digital signal processor from the USA. It is unique in that it is the only one of its kind that is fully tuneable and has 16 programmable memories for storing your chosen control settings. Analogue signals are digitised, filtered, processed, and then turned back to analogue signals again. This filter has the ability to offer 60dB rejection just 75Hz away from centre frequency. You'll hear signals no other combination can resolve. Simply connect between receiver and speaker or headphone. It's that simple. The built-in 2W amplifier provides more than enough output.

Filter ranges: 200-3,500Hz  
 Bandwidth: 3,500-100Hz  
 Audio out: 2W  
 Sockets: 3-5mm  
 Supply: 12V @ 500mA  
 Size: 230 x 63 x 152mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
AS89A 1	MFJ-784B Filter	£204.210	£239.950

## Watson Senda Multi-mode Radio Modem

Watson

This multi-mode modem operates 1200bps Packet Radio, 300bps Packet Radio (receive only), FAX, SSTV, RTTY, ASCII, AmTOR, ARO/FEC, CW, NAVTEX and SYNOP. It is compatible with most public domain software. Requires a 286 or better IBM PC compatible computer with an RS232 serial port.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VN11M	Watson Senda	£59.530	£69.950

## MFJ-462B Data Decoder

Simply plug this unit into the headphone output of any short wave receiver to decode CW, RTTY and AmTOR signals. The text comes up on the internal LCD readout. Amazing fun in reading all those mystery signals on short wave. Great value. Requires external 12V DC.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS21X 2	MFJ-462B Data Reader	£153.140	£179.950

## BP-2 Packet Radio Modem Including Software

A completely self contained Packet Radio modem for use on VHF radio. Operates at 1200 Bauds and plugs directly into the RS-232 port of a standard PC; no external power being necessary. Simply connect supplied lead to audio and mic sockets of your VHF transceiver for instant Packet communications.

Software is included on 5 1/4 in. and 3 1/2 in. disk.  
 Connector: RS232  
 Software: Baycom and Baypack  
 Dimensions: 60 x 55 x 18mm

Retail Unit Price each (inc. VAT).

## Power Supplies

### Watson High Current Radio Communications Power Supplies

Watson

Widely used for powering 12V DC transmitting equipment and power amplifiers. Ideal for ham radio transceivers and the like. Supply voltage 230V AC 50Hz (nominal). Power supplies are fully protected. Variable outputs and meters are available on some models.

These products are due to be re-introduced during the life of this catalogue, please call to check availability.

#### W-30 AM - 30A Fan Cooled Variable Voltage PSU (AS75S)

Output: +3V to +15V @ 30A (35A peak)  
 Regulation: Better than 1% at rated output  
 Ripple: Better than 1mV at rated output  
 Connections: Binding posts, spring clips & cigar socket  
 Meters: 1 x current & 1 x voltage  
 Protection: Over-voltage/current & short-circuit  
 Size: 240 x 155 x 245mm  
 Weight: 8.7kg

#### W-20 AM - 20A Variable Voltage PSU (RU99H)

Output: +3V to +15V @ 20A (25A peak)  
 Regulation: Better than 1% at rated output  
 Ripple: Better than 1mV at rated output  
 Connections: Binding posts, spring clips & cigar socket  
 Meters: 1 x current & 1 x voltage  
 Protection: Over-voltage/current & short-circuit  
 Size: 250 x 155 x 245mm  
 Weight: 7.8kg

#### W-10 AM - 10A Variable Voltage PSU (YE56L)

Output: +3V to +15V @ 10A (12A peak)  
 Regulation: Better than 1% at rated output  
 Ripple: Better than 1mV at rated output  
 Connections: Binding posts & spring clips  
 Meters: Combined current/voltage  
 Protection: Over-voltage/current & short-circuit  
 Size: 195 x 125 x 225mm  
 Weight: 5.5kg

#### W-10A - 10A Fixed Voltage PSU (MB66W)

Output: +13.8V @ 10A (12A peak)  
 Regulation: Better than 1% at rated output  
 Ripple: Better than 1mV at rated output  
 Connections: Binding posts  
 Protection: Over-voltage/current & short-circuit  
 Size: 195 x 125 x 225mm  
 Weight: 5.3kg

#### W-5A - 5A Fixed Voltage PSU (MB67X)

Output: +13.8V @ 5A (7A peak)  
 Regulation: Better than 2% at rated output  
 Ripple: Better than 3mV at rated output  
 Connections: Binding posts  
 Size: 140 x 88 x 180mm  
 Protection: Over-current & short-circuit  
 Weight: 3.0kg

#### W-3A - 3A Fixed Voltage PSU (MB68Y)

Output: +13.8V @ 3A (5A peak)  
 Regulation: Better than 2% at rated output  
 Ripple: Better than 3mV at rated output

Connections: Binding posts  
 Protection: Over-current & short-circuit  
 Size: 140 x 88 x 165mm  
 Weight: 2.2kg

## RELAYS

### MINIATURE RELAYS

#### Micro Miniature Relay

This micro miniature relay which is only a little larger than a TO5 transistor package is designed for direct PCB mounting. Available in single-pole change-over style only with silver contacts. Dimensions: 9.7 x 6.8 x 8.7mm high excluding pins. Pin length: 3.8mm.

#### Contact details:

Max current: 2A DC, 2A AC resistive  
1A AC inductive  
Max voltage: 2V DC, 100V AC  
Life: >100,000 operations  
Max contact resistance: 50mΩ  
Operate time: 3-5ms  
Release time: 1-8ms

#### Coil details:

Nominal voltage:	6V DC	12V DC	24V DC
Coil resistance:	80Ω	320Ω	1000Ω
Operate voltage range:	4.8V to 7.2V	9.6V to 14.4V	19.2V to 28.8V
Must release voltage:	>0.6V	>1.2V	>2.4V

#### High Frequency SPCO Relay

Matsushita

A highly sensitive, sealed SPCO relay with excellent high frequency characteristics, offering >60dB isolation loss at 1.5GHz, and <0.3dB insertion loss at 900MHz. The relay is designed for PCB mounting and has gold on silver contacts, offering a long electrical and mechanical life. Ideal for a wide range of applications in a/v equipment, satellite tuners, VCRs, TVS, communications equipment and instrumentation test equipment.

#### Specification

Nominal coil voltage: 12V DC (13.2V max.)  
Nominal coil current: 17mA  
Coil resistance: 720Ω  
Nominal operating power: 200mW  
Contact resistance: 100mΩ  
Switching power: 10W max.  
Switching voltage: 30V DC max.  
Switching current: 10mA max.  
Nominal switching capacity: 10mA at 24V DC (10W at 1.2GHz, 50W system)  
Dimensions: 20.2 x 11.2 x 9.1mm (excluding pins)

#### 2A PCB Mounting Miniature Relays

Matsushita

A sealed PCB mounting 2-pole C/O miniature relay with a nominal operating power of 200mW, designed to fit a standard 16-pin DIP socket. Available with 5V, 12V and 24V DC coils.

#### Specification

Switching voltage: 220V DC, 250V AC max.  
Switching current: 2A max.  
Carrying current: 3A max.  
Switching power: 60W max.  
Contact resistance: 50mΩ

Contact material: gold plated silver  
FCC surge voltage: 1500V (contacts/coils)  
Dimensions: 20 x 9.9 x 9.3mm (excl. pins)

Retail Unit Price each (inc. VAT).

#### 1A PCB Mounting Polarized Relays - TQ2 Series

Matsushita

Sub-miniature polarized PCB mounting 2 pole changeover relays incorporating Gold clad Silver contacts ensuring maximum reliability in all switching conditions. These relays have very low power consumption and have applications from telecommunications to instrumentation switching.

Contact arrangement: DPCO  
Max switching voltage: 110Vdc, 125Vac  
Max switching current: 1A  
Max switching power: 30W, 62.5VA

## BABT Approved Relay

Matsushita

A 5V miniature relay designed with reinforced insulation between coil and contacts giving a breakdown voltage of 4kV. This relay is UL, CSA and BABT approved (BABT CR No. 0104)

### Specification

Nominal switching capacity: 2A, 30Vdc  
 Max switching voltage: 220Vdc, 250Vac  
 Max switching current: 2A  
 Max switching power: 60W, 125VA  
 Coil resistance: 69.5mΩ  
 Contact material: Gold clad silver

Retail Unit Price each (inc. VAT).

## PCB Mounting Miniature 4 Pole Changeover Relay

Meisler

An enclosed miniature low profile PCB mounting 12v relay. This 4 pole changeover device is designed for low level signal switching with significant savings on board space and is fully sealed for board washing.

### Specification

Switching Voltage: 220VDC/250VAC  
 Switching Current: 2A DC/AC  
 Switching Power: 60WDC/120VAC  
 Contact Resistance: 100mOhm  
 Contact Material: Gold plated Silver  
 FCC Surge Voltage: 1500V  
 Dimensions mm: 30 x 24 x 11.3 (excl pins)

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
CL77J	4P C/O 12V Relay	£4.920	£5.790

## 1A Microminiature Low-Power PCB Relay

Fujitsu

Fully enclosed microminiature PCB mounting relays that have a typical power consumption of less than 200mW. The relays have gold over silver palladium, single-pole contacts, and have a minimum life of 100,000 operations.

### Specification

Maximum current: 0.5 AC or 1A DC  
 Maximum voltage: 28V DC, 120V AC  
 Life: >100,000  
 Maximum contact resistance: 100mΩ  
 Operate time: 5ms maximum  
 Release time: 3ms maximum  
 Pickup voltage: 75% max. of rated coil voltage  
 Drop-out voltage: 10% min. of rated coil voltage  
 Dimensions: 7.6(W)mm, 10(L) x 10(H) x 1.7g approx.

Manufacturer's Code	Coil voltage V DC	Coil resistance Ω	Rated current approx. mA
FBR21H05	5	125	40
FBR21H12	12	720	17

Retail Unit Price each (inc. VAT).

DC52G	12V Mic-Min 1A 200mW	£2.130	£2.510

## 1A Microminiature PCB Relay

Fujitsu

A fully enclosed microminiature PCB mounting relays that are capable of switching currents up to 1A DC and AC (resistive load). The relay has gold over silver palladium, single-pole, contacts with a minimum life of 100,000 operations.

### Specification

Maximum current: 0.5 AC or 1A DC  
 Maximum voltage: 28V DC, 120V AC  
 Life: >100,000  
 Maximum contact resistance: 100mΩ  
 Operate time: 5ms maximum  
 Release time: 5ms maximum  
 Pickup voltage: 80% max. of rated coil voltage  
 Drop-out voltage: 5% min. of rated coil voltage  
 Dimensions: 10(L) x 10(H) x 7.6(W)mm, 1.7g approx.

## S1A PCB Mounting Relay

Fujitsu

A range of enclosed PCB mounting relays that are capable of switching currents up to 2A DC and AC (resistive load). The relays are available with either gold on silver (Ag/Au) or gold on silver palladium (Ag/Au/Pd) contacts. The relays are only available with single-pole double-throw contacts.

### Specification

Maximum current: 0.5 AC or 1A DC  
 Maximum voltage: 28V DC, 120V AC  
 Life: >100,000  
 Maximum contact resistance: 100mΩ  
 Operate time: 5ms maximum  
 Release time: 3ms maximum  
 Pickup voltage: 70% max. of rated coil voltage  
 Drop-out voltage: 10% min. of rated coil voltage  
 Dimensions: 15.6(L) x 11(H) x 10.6(W)mm, 4g approx.

## 3 Amp Miniature Relay

A sub-miniature relay with silver contacts capable of switching up to 3A DC and AC (resistive). The relay is fully enclosed on the top and sides and there is an insulation sheet on the bottom. Available with a single-pole changeover silver contact. Designed for direct printed circuit mounting.

Dimensions: 19.3 x 15.6 x 19mm high excluding pins. Pin length: 3.5mm.

## 10A Compact PCB Power Relays - JW1 Series

Matsushita

Compact PCB mounting relays offering high switching capacity, 10A, coupled to a high surge protection, minimum 10kV (between coil and contact).

Typical applications are in home appliances (TVs, VCRs and microwave ovens), office machinery and industrial equipment (NC machines, robots, temperature controllers etc)

**Specification**

Max switching voltage 250Vac, 100Vdc  
Nominal switching current 10A, 250Vac; 10A, 30Vdc  
Max switching power 2550VA, 300W  
Coil operating power (material) 530mW  
Contact material Silver alloy  
Dims (excl pins) 28.6x12.8x20.4mm

## 10A Ultra-Miniature Power Relays - JS1 Series

Matsushita

**RECENTLY INTRODUCED**

Ultra-miniature, high power, general purpose PCB mounting relays with excellent shock (10G) and vibration resistance (10-55Hz @ double amplitude of 1.6mm). The relays offer high contact capacity, 10A whilst being housed in an ultra-miniature case utilising a universal terminal footprint.

**Max current:** 10A DC, 10A AC resistive  
3A AC inductive  
**Max voltage:** 30V DC, 240V AC  
**Life at 120V AC:** >150,000 operations  
**Life at 240V AC:** >75,000 operations  
**Max contact resistance:** 50mΩ  
**Operate time:** 6ms  
**Release time:** 2ms

**Coil Details:**  
**Nominal voltage:** 12V DC  
**Coil resistance:** 320Ω  
**Operate voltage range:** 9V to 19.2V  
**Must release voltage:** >1.2V

Retail Unit Price each (inc. VAT).

## Miniature Double Pole Mains Relay

Mors Components

A miniature relay with contacts capable of switching 5A at 240V AC resistive. The relay is fully enclosed and designed for direct printed circuit mounting. Contacts are silver cadmium oxide. Dimensions: 28.9 x 12.6 x 25mm high excluding pins. Pin length: 4mm.

## 6 and 12V 6A Miniature Relays

Double pole double throw changeover relays with either 6V or 12V coils, and which are also used in our PWM Motor Drive Module. Construction is similar to 12V 16A relay above. Dimensions: 30 x 13 x 27mm high excluding pins. Pin length: 3.5mm.

**Contact Details:**

**Max current:** 6A AC/DC max  
**Max voltage:** 250V AC, 30V DC

**Coil details:**  
**Nominal voltage:** 6V DC 12V DC  
**Coil resistance:** 70Ω 250Ω  
**Operate voltage range:** 4-7 to 10.8V 8-6 to 20.5V

Retail Unit Price each (inc. VAT).

## Ultra Miniature High Power Mains Relay

An ultra-miniature relay capable of switching 10A resistive at 240V AC. The relay is fully enclosed and is designed for direct printed circuit mounting. Available with a single-pole changeover silver cadmium oxide contact. Dimensions: 22 x 17.4 x 11.6mm high excluding pins. Pin length: 3mm.

**Contact Details:**

## 12V DC 16A Miniature Relay

A miniature relay especially suitable for use in automobile applications. It can switch 16A at 12V DC. The relay is enclosed in a plastic case and may be directly mounted on a PCB. Contacts are SPDT silver cadmium oxide. Dimensions: 30 x 13 x 27mm high excluding pins. Pin length: 3.5mm.

### 5A Miniature Relay

A fully enclosed relay capable of carrying 5A and having pins for direct pcb mounting or for use with socket available separately. The relay is available with double-pole or 4-pole changeover contacts, with 6V DC, 12V DC or 24V DC coils.

### 8A Relay

A printed circuit mounting power relay with one changeover contact with cadmium oxide flashed silver contacts. The relay is fully enclosed in a plastic case suitable for electrical devices in control systems e.g. heating controls, servo motors solenoid valves etc. Size: 28.0 x 24.7 x 11.0mm + 3.3mm pin length.

**Contact Details:**  
 Max current: 8A (resistive load)  
 5A (inductive load)  
 Max voltage: 250V AC, 18-5V DC  
 Max contact resistance: 30mΩ  
 Life: >100,000 operations at 8A  
 Operating time: 8ms  
 Release time: 4ms

**Coil Details:**  
 Nominal voltage: 12V DC  
 Coil resistance: 330Ω

Retail Unit Price each (inc. VAT).

Order Code	Type 2546	Price each exc. VAT		inc. VAT each
		1+	25+	100+
HY20W	Relay Flat 12V	£2.400	£1.840	£1.650
				£2.820

### 8A PCB Mounting IC Driveable Relays- ST1 Series

Matsushita

Sub-miniature, high power, general purpose PCB mounting relays with excellent shock (20G) and vibration resistance (10-55Hz double amplitude of 2mm). The relays feature one NO and one NC contact and are ideally suited for car alarms, security systems etc.

12V version also available in 2 coil latching format.  
 Max switching voltage: 380Vac  
 Max switching current: 8A  
 Max switching power: 200VA, 150W  
 Contact material: Gold flash over Silver alloy  
 Dims (excl pins): 31x14x11.3mm  
 Monostable

Max coil voltage	5V	12V	24V	12V

### AUTOMOTIVE RELAYS

#### Automotive Ultra-Miniature Power Relay

Matsushita

A sealed construction low pick-up voltage power relay for use in electric windows, car aerials, central locking, electric sunroofs etc. Although housed in an ultra-miniature package with a universal footprint this relay offers a high switching current of 15A and can be used in high temperature environments.

#### Specification

Max switching voltage	16Vdc
Max switching current	15A (inrush 50A)
Max switching power	240W
Initial contact resistance, max	100mW
Ambient temperature	-40°C to +85°C
Contact material	Silver alloy
Dimensions	22x16x16mm

Retail Unit Price each (inc. VAT).

Order Code	Type 13794	Price each exc. VAT		inc. VAT each
		1+	5+	10+
SD83E	Auto Accessory	£1.230	£1.160	£1.100
				£1.450

### 16A Relay for Automotive Applications

A PCB mounting heavy duty relay primarily intended for automotive applications e.g. switching horns, lights etc. The contacts are rated at 16A at 125V AC/24V DC. Contact configuration is single pole change over. Coil is rated at 12V.

Overall dimensions: 32 x 27 x 20mm (excluding pins). Pin length: 3mm.

#### Contact details

Max current:	16A 125V AC/24V DC
Max Voltage:	125V AC/24V DC

#### Coil Details

## 40A Relay for Automotive Applications

Designed with automotive applications in mind, this high power relay is capable of switching loads up to 40A at 12V. Suitable for controlling spotlights, heater systems, wiper motors, compressor driven air horns, tailgate lifts etc. Electrical contact is made with push on 6-35mm (1/4in.) blade connectors. The relay configuration is SPCO, with silvered contacts.

### Specification

Coil details	
Nominal voltage:	12V
Coil resistance:	90Ω ±9Ω
Coil current:	133mA ±12mA (at 12V)
Operating voltage:	7.2 to 20.5V DC
Contact details	
Maximum current:	40A
Maximum voltage:	24V DC
Approximate weight:	30g
Nominal power cons.:	1.6W

## Trailflash Relay

Make sure that your caravan or trailer's indicators flash when they should with this top quality trailflash relay. The trailflash will provide a visible warning of inoperative trailer indicators if used in conjunction with a warning lamp (not supplied). Compatible with all 12V negative earth vehicles, full wiring instructions included. Supplied with ready wired cables.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
WD82D	Trailflash Relay	£9.540	£11.210

## Combi Master Split Charge/Fridge Relay

The Combi Master is a combination relay that manages the power supply for a fridge and the charging of an auxiliary battery, while on the move. The Combi Master is suitable for all 12V negative and positive earth vehicles. The pack contains the Combi Master unit, blade fuse holder with fuse, cables and connectors and easy to follow fitting instructions.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
WD23A	Split/Fridge Relay	£13.010	£15.290

## Relay Master

The Relay Master is the comprehensive three-in-one answer to towing electrics for all negative earth vehicles. A simple to install unit that provides all of the following features:

Electronic towing relay giving an audible signal that the trailer indicators are working, whilst towing (there is an additional output for a warning lamp if preferred).

A fridge power supply relay, and a split charge relay.

The pack contains the Relay Master unit, blade fuse holder and fuse, cables and connectors, and easy to follow fitting instructions.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
WD25C	Relay Master	£17.350	£20.390

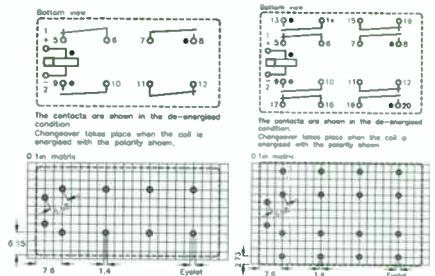

## SAFETY RELAYS

### Forced Operation Safety Relays

Matsushita

A range of polarised, monostable, PCB mounting safety relays with forced operation' technology, (complies with safety specification ZH 1/457) to meet the demanding requirements of industrial machine safety. Forced operation means that in the case of welding of one of the contacts, an associated open contact cannot close. Additionally, in the case of the 4-pole (8 relay contacts) type it is not only possible to recognise a fault, but also to determine the type of fault and to identify the location of the fault. Suitable applications include machine guards, emergency lighting, signalling equipment etc. Available with 12V or 24V DC coils with either 2-pairs of NO/NC contacts or 4-pairs, each pair with NO/NC contacts.

### Specification

Switching voltage: 440V max.  
Switched load: 150W resistive max.  
Maximum current make: 20A  
rated: 6A 4-pairs, 10A 2-pairs  
break current: 6A  
Switching frequency: 10Hz max.  
Coil resistance  
12V: 288Ω  
24V: 1152Ω  
Coil inductance  
12V: 240mH  
24V: 1000mH

### Dimensions

2-pairs: 53 x 25 x 16.5mm (excl. pins)  
4-pairs: 53 x 33 x 16.5mm (excl. pins)

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
AR32K	12V 40A Car Relay	£4.710	£5.540

## Audible Signal Master

The Signal Master is an electronic warning relay designed to give the driver an audible (buzzer) signal that the trailer indicators are operating, whilst towing. Suitable for all 12V negative earth vehicles with a single flasher relay for both hazard and indicator lamps (there is no need to replace existing flasher units).

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
WD24B	Audible Signal Ind	£7.800	£9.170

## Call and Collect

Maplin has more stores Nationwide than ever before. See the maps at the front of the catalogue for the nearest one to you.

## SOLID STATE RELAYS

### Single Phase AC - G Series

Crouzet

A range of surface mounting, optically coupled solid state relays in the industry standard "hockey puck" housing.

These relays have a sealed construction, with no moving parts, giving a long life and high reliability. The switching is silent and is not affected by vibration. The relays have a N/O output circuit and can be used for switching single phase resistive loads or motors where the power factor is greater than 0.7.

These relays must be mounted on an adequate heat sink to dissipate the heat generated within the relay, caused by internal volt drop across the output circuit. A cut out thermal pad (MG42V) is available to interface between the relay and heatsink to help dissipate excess heat

- Features**
- ★ Surface mounting
  - ★ Protection by RC filter
  - ★ Zero volt switching
  - ★ Back to Back Thyristor
  - ★ UL and CSA approved

## PLUG IN RELAYS

### High Current Relays

Fujitsu

A range of high quality, high switching current relays that are available with either single- or double-pole contacts. The single-pole version is available with a choice of contact arrangement (see drawing).

The relays are capable of switching 240V AC 10A (5A double-pole version), and have a minimum life of 100,000 operations. Single-pole relays with a suffix K are BT approved. Conform to UL-508 and CSA standards.

**Specification**

Maximum current single-pole: 10A AC or DC resistive load  
 double-pole: 5A AC or DC resistive load  
 Maximum voltage: 30V DC, 240V AC  
 Life: >100,000  
 Maximum contact resistance: 100mΩ  
 Operate time: 15ms maximum  
 Release time: 5ms maximum  
 Pickup voltage: 70% max. of rated coil voltage  
 Drop-out voltage: 10% min. of rated coil voltage  
 Dimensions: 29(L) x 25(H) x 13(W)mm excluding pins  
 Weight: 16g approx.

## Round-base Relays

High power standard industrial relays with DPDT contacts on an octal base and 3PDT contacts on an 11-pin base. The relay is fully enclosed and will plug in to any standard 8-pin or 11-pin round base. It is a direct replacement for all standard industry types. It is available in both double-pole and 3-pole with a choice of three coil voltages: 12V, 24V DC, and 240V AC.

### Contact details

Max current: 10A  
 Max voltage: 240V AC, 28V DC  
 Max switching power: 2400V A resistive 280W resistive  
 Contact resistance: <math><50\text{m}\Omega</math>  
 Operate time: 15ms max  
 Release time: 15ms max  
 Insulation resistance: 100M $\Omega$  at 500V DC  
 Mechanical life: >10 million operations  
 Electrical life: >100,000 operations at full load

### Contact material:

Silver cadmium oxide

### Coil details

Nominal voltage	Operate range (V)	Coil resistance	Current at nominal voltage
12V DC	9.6 to 13.2	120 $\Omega$ $\pm$ 5%	100mA
24V DC	19.2 to 26.4	472 $\Omega$ $\pm$ 5%	51mA
240 AC	192 to 264	9110 $\Omega$ $\pm$ 5%	9mA

Size of base: 35 x 35mm  
 Height of body: 52.5mm  
 Overall height: 70mm

Sockets are available which will clip onto 35mm DIN rail and have a screwdriver-operated quick-release clip. Connections are now made to the relays via screw-terminals. Screws are in recesses 7mm wide.

Size of base: 51 x 40mm (8-pin)  
 51 x 43mm (11-pin)  
 Height: 21mm (8-pin)  
 30mm (11-pin)  
 Fixing centres: 33mm x 4mm clear (8-pin)  
 34mm x 4.5mm clear (11-pin)

## Plug-in Power Relays

IMO

A range of high power, two or three pole, plug-in relays with a 10A switching capacity at 24V DC. The 2-pole type has an 8-pin base, and the 3-pole type has an 11-pin base. The relays feature a manual test push-button and a 'flag indicator', which appears when the relay is operated. The relays are available with either AC or DC rated coils, and have BS, CSA, VDE, UL and SEMKO approvals.

### Specification

Contact material: Gold/Nickel  
 Rated load: 10A @ 250V AC or 24V DC  
 (resistive)  
 Rated current: 10A  
 Maximum switching voltage: 250V AC/125V DC  
 Maximum switching capacity: 240W @ 24V DC, 50W @ 125V DC (resistive)  
 Contact resistance: 30m $\Omega$   
 Operate time: 20ms  
 Release time: 20ms  
 Voltage range: 80% to 110%  
 Dimensions: 51 x 38.2 x 32.5mm (excluding pins)  
 64.2 x 38.2 x 32.5mm (including pins)

## Relay Sockets with Terminal Screw Connections for Plug-in Relays

IMO

Suitable sockets for either 8-pin (octal) or 11-pin base plug-in relays described on this page. The bases feature finger-proof, 'box style' terminals fitted with captive Posidrive/slotted screws.

### Specification

Rating: 10A 250V  
 Cable size  
 rigid: 1 x 4mm<sup>2</sup> or 2 x 2.5mm<sup>2</sup>  
 flexible: 1 x 2.5mm<sup>2</sup> or 2 x 1.5mm<sup>2</sup>  
 Moulding material: Self-extinguishing NORYL GFN2 SE1  
 Terminal material: Nickelled CuZn37  
 A suitable relay retaining clip is also available.

### Relay Status Module with Noise Immunity Diode

IMO

A small compact module that has 'quick' connect terminals and is designed to be inserted into the screw terminal socket, in parallel with the coil leads. The module has an LED indicator and a noise immunity diode. The LED is useful for checking relay operation and detecting any problems quickly. Suitable for use with 24V DC relays only.

Retail Unit Price each (inc. VAT).

### 3.5/5mm DIN RAIL SOCKETS FOR PCB RELAYS

Camden

Din rail EN50 022 or single bolt chassis fixing relay sockets for 2 and 3 pole PCB type power relays. Connections is by screw terminals with self rising washers which accept 2 x 1.5mm cables.

RECENTLY INTRODUCED

The sockets feature a screw driver release clip for rail mounting and provision for chassis mounting by one M3 screw. Rated at 10A, 380Vac the sockets are made from UL94 V1 flame retardant material with insulated relay retention clip.

Retail Unit Price each (inc. VAT).

### 4 Pole (14-Pin) DIN Relay Socket

Camden

Compact 14 pin relay socket for 2.2/2.6 mm blade terminal 4 pole relays. Suitable for DIN rail or chassis moulded with rising clamp type terminals and moulded in UL94 V1 self extinguishing PA6 with contacts rated at 7A, 300Vac. The socket terminals are finger proof to IP20.

RECENTLY INTRODUCED

Retail Unit Price each (inc. VAT).

Order Code	Type 13621	Price each exc. VAT	inc. VAT each
SD81C	DIN 14 Pin 4P Skt	1+ £2.220 5+ £2.120 10+ £2.010	1+ £2.620

### REED RELAYS

#### Sealed Reed Relays

A sealed reed relay suitable for use at voltages from 3-8V to 22V with single-pole make or double-pole make actions. The high resistance coil enables the relay to be driven directly by 74 series ICs and most logic buffers. At the same time the relay can switch up to 10VA.

Contact Details (per contact)

Max current: 1A  
Max voltage: 100V  
Max switching power: 10VA  
Contact resistance: 150mΩ max  
Operate time: 1ms max including bounce time  
Release time: 0.5ms max including bounce time  
Life: >1 million operations at full load

Coil details	Nominal voltage	Operate range(V)	Coil resistance	Current at nominal voltage
5V DC	3-8 to 11	500Ω ±10%	10mA	
12V DC	8-8 to 22	1050Ω ±10%	11.4mA	

Coil temperature rise:

30°C max  
Insulation resistance: >100MΩ at 500V DC between coil and contact  
Size SPST: 24 x 8 x 9mm high  
DPST: 25 x 11 x 9mm high  
Pin length: 4mm

Retail Unit Price each (inc. VAT).

MAPLIN PROFESSIONAL

We will deliver your order with no postal charge!

Every order £30 or above will be sent with carriage paid.

Approved business account holders are not charged carriage for any order but still pay guaranteed next day delivery. (Guaranteed next day delivery charges as stated in our Terms & Conditions at the back of the catalogue)

## SIP Relays

CP Clare

A range of miniature single-pole relays in an epoxy moulded single-in-line package. The relays can be immersed during board cleaning operations, and are available with optional internal suppression diode.

The diode cathode is connected to pin 3.

### Specification

Maximum contact rating  
 switching power: 10VA  
 switching voltage: 100V DC or peak AC  
 switching current: 0.5A  
 carry current: 1A  
 Contact material: Ruthenium  
 Contact resistance: 150mΩ maximum  
 Operate time: 0.5ms  
 Release time: 0.5ms  
 Dimensions: 19(L) x 7.62(H) x 5(W)mm, excluding pins

Manufacturer's Code	Nominal voltage and power	Coil resistance Ω	Min. operate voltage V DC	Max. release voltage V DC
DSS41A05	5V DC 50mW	500	3.75	0.8
DSS41A05B	5V DC 50mW (with diode)	500	3.75	0.8
DSS41A12	12 144mW	1000	8.60	1.5
DSS41A12B	12 144mW (with diode)	1000	8.60	1.5

## DIL Reed Relays

A reed relay with single pole or double pole make contacts moulded in a standard 14-pin dual-in-line package.

### Contact Details:

	1 pole make	2 pole make
Max power	10W	3W
Max current	0.5A	0.11A
Max voltage	100V	28V
Contact capacitance	2pF	2pF
Max contact resistance	100mΩ	100mΩ
Life (millions of operations)	100	100
Operate time	0.25ms	0.25ms
Release time	0.15ms	0.15ms
Insulation resistance	10 <sup>9</sup> Ω	10 <sup>9</sup> Ω

### Coil Details:

Type	Nominal coil voltage	Operate voltage range	Must release voltage	Coil resistance
1 pole make	5V DC	3.7-7.5V	0.5V	500Ω
2 pole make	5V DC	3.7-7.5V	0.5V	200Ω

2 pole type has an internal diode connected across the coil to protect the driver. The 5V type may be driven directly from TTL.

Retail Unit Price each (inc. VAT).

Order Code	Type 2013	Price each exc. VAT	inc. VAT each
FX88V	DIL Reed Relay 1p 5V	£1.790	£2.110
FX90X	DIL Reed Relay 2p 5V	£4.800	£5.650

## 14-Pin DIL Reed Relays

CP Clare

A range of miniature, moulded DIL reed relays that are available in various contact arrangements, and with optional internal suppression diode.

## SOLENOIDS

### Miniature 12V Solenoid

A miniature 12V DC solenoid suitable for light high-speed duty and capable of operating in excess of 300 cycles per minute (5Hz). The plunger has a maximum stroke of 16mm, 5.5mm dia. and the end is 6BA tapped. The hard brass push-rod has a diameter of 1.8mm diameter and an effective maximum stroke of 12.7mm. Single hole fixing, 6.35mm panel cut-out. With 300mm flying leads.

### Specification

Dimensions of body 38.5 x 18 x 16mm  
 Pull force at 10mm 28g  
 Pull force at 3mm 56g  
 Nominal coil voltage 12V DC

**D3 and D5 Solenoids**

A range of DC and AC solenoids for industrial and mechanical systems. The D3 series are capable of producing a magnet force in excess of 15N with a maximum plunger stroke of 18mm, while the D5 series can exceed 40N with a stroke of 24mm. Available in a variety of voltages to suit most requirements.

Part Number	Voltage	Order Code
SD133A4P6	12V DC	BN81C
SD133A4P5	24V DC	BN82D
SD133A2P1	230V AC 50Hz	BN83E
SD135A4P6	12V DC	BN84F
SD135A4P5	24V DC	BN85G
SD135A2P1	230V AC 50Hz	BN86T

**Holding Magnets**

Two low voltage holding magnets with armature plates. Used for holding doors open, e.g., hospitals. The armature plate is fixed to the door and the solenoid fitted to the floor or other area next to the armature. It is very easy to secure the door in an emergency or when the door is required as a safety barrier such as in case of a fire. Electroplated Nickel finish. Armature plates for each magnet are available separately. Phone for details. Coils rated at 24VDC.

Retail Unit Price each (inc. VAT).

## Resistors

### Resistor Colour Code

#### Resistor Colour Codes

Note: On all of the colour-coded resistors, the band at one end will be spaced further apart than the others; the resistor should be viewed with this band to the right to correspond with the chart and examples.

#### 4-band codes

Reading from the left, bands 1 & 2 are the significant digits [1st green = 5, 2nd blue = 6].

Band 3 is the multiplier [orange = x1000].

Therefore the value of our example is 56 x 1000 ohms or 56k.

The 4th band indicates the Tolerance [gold = ±5%].

#### 5-band codes

Reading from the left, bands 1, 2 & 3 are the significant digits [1st yellow = 4, 2nd violet = 7, 3rd black = 0].

Band 4 is the multiplier [red = x100].

Therefore the value of our example is 470 x 100 ohms or 47k.

The 5th band indicates the Tolerance [brown = ±1%].

Please note that our Min Res resistors are usually supplied with the 4-Band Code, but with an additional red band to indicate the 50ppm temperature coefficient after the brown 1% tolerance band. This additional band prevents the code being read backwards accidentally, since no value begins red, brown (21→), in the event that the extra large space between the third and fourth bands is hard to identify.

### How To Order Resistors (use only if ordering via "Keycall" tone dial system)

To each range of resistors we stock, we have allocated a code letter and in addition for use with the MPS key call system a special five digit code for any type or value of fixed resistor is determined from the following tables. Table 1 gives the two digit code that determines the type of resistor being ordered. Table 2 selects the three digit number that indicates the value of the resistor in ohms.

NOTE: All Starter Packs are ordered by standard order codes.

Table 1  
Type

Type	Description	Code Letter	Digit Code
Carbon Film 1/8 Watt	Micro Res	U	80
Carbon Film 1/3 Watt	Econ Res	B	81
Metal Film 0.6 Watt	Min Res	M	82
Metal Film 2 Watt	2W Res	D	91
Carbon Film 1 Watt	W Res	C	84
Wirewound 2.5 Watt	2.5W W/W	S	92
Wirewound 3 Watt	W/W Min	W	85
Wirewound 7 Watt	7W W/W	L	86
Wirewound 10 Watt	10W W/W	H	87
Wirewound 25 Watt	25W W/W	P	88
High Voltage Resistor	HV Res	V	89

NOTE: All resistor Starter Packs are coded as standard order codes.

Table 2.

Value	Code	Value	Code	Value	Code

10Ω	124	110Ω	149	1.2kΩ	174	13kΩ	199
15kΩ	200	62kΩ	215	270kΩ	230	1-2MΩ	245
16kΩ	201	68kΩ	216	300kΩ	231	1-5MΩ	246
18kΩ	202	75kΩ	217	330kΩ	232	1-8MΩ	247
20kΩ	203	82kΩ	218	360kΩ	233	2-2MΩ	248
22kΩ	204	91kΩ	219	390kΩ	234	2-7MΩ	249
24kΩ	205	100kΩ	220	430kΩ	235	3-3MΩ	250
27kΩ	206	110kΩ	221	470kΩ	236	3-9MΩ	251
30kΩ	207	120kΩ	222	510kΩ	237	4-7MΩ	252
33kΩ	208	130kΩ	223	560kΩ	238	5-6MΩ	253
36kΩ	209	150kΩ	224	620kΩ	239	6-8MΩ	254
39kΩ	210	160kΩ	225	680kΩ	240	8-2MΩ	255
43kΩ	211	180kΩ	226	750kΩ	241	10MΩ	256
47kΩ	212	200kΩ	227	820kΩ	242		
51kΩ	213	220kΩ	228	910kΩ	243		
56kΩ	214	240kΩ	229	1MΩ	244		

To order a particular resistor simply write the code letter followed by the value, or if using the MPS key call system use the digit codes.

#### Examples:

Type	Value	Code	Digit Code
Min Res	4.7Ω	M4R7	82 120
Min Res	47kΩ	M47K	82 212
Min Res	4.7MΩ	M4M7	82 252
Wirewound 7W	0.47Ω	L0-47	86 108

### Surface Mount Resistors

A range of surface mounted resistors that are packaged in the industry standard 1206 format (3-1 x 1.55 x 0.55mm). These high quality resistors are marked with the normal 3-digit resistance code.

Sold in packs of 25 (price per 25).

#### Specification:

Power rating: 0-25W at 70°C  
 Operating voltage: 200V max  
 Resistance tolerance: ±5%  
 Temperature coefficient: ±200ppm/°C  
 Operating temperature range: -55°C to +155°C

The following values are available:

10Ω	100Ω	1k	10k	100k	1MΩ
22Ω	220Ω	2k2	22k	220k	
33Ω	330Ω	3k3	33k	330k	
47Ω	470Ω	4k7	47k	470k	
68Ω	680Ω	6k8	68k	680k	

Price each is shown. Order quantities less than 4 will be sold at the one off inc. VAT price.

## Carbon & Film

### Carbon Film 1/8W

High Stability, Low Noise  
Working Voltage (max): 150V  
Tolerance: ±5%  
Power Rating: 1/8W at 70°C  
Temperature coefficient: -300ppm/°C up to 100kΩ rising to -500ppm/°C at 1MΩ  
Noise Level: <0.5µV/V  
Dimensions of body: 4.1mm long, 1.8mm dia.

The following values (Ω) only are available:

10Ω	100Ω	1k	10k	100k	1M
15Ω	150Ω	1k5	15k	150k	
2.2Ω	22Ω	220Ω	2k2	22k	220k
3.3Ω	33Ω	330Ω	3k3	33k	330k
4.7Ω	47Ω	470Ω	4k7	47k	470k
6.8Ω	68Ω	680Ω	6k8	68k	680k

To order write 'U' and then the value.

E.g. U4R7, U15R, U330R, U1K, U22K, U680K, etc.

Price each is shown. Order quantities less than 100 will be sold at the one off inc. VAT price.

Order Code	Type 2185	Price each exc. VAT	inc. VAT each
U+Value	1/8W Res	£0.042 £0.022 £0.015	£0.070

### Low Cost Metal Film 0.25W Resistors

High stability, low noise. This range of resistors is ideal for use in manufacturing of electronic products where ±5% tolerance is sufficient.

**Specification:**  
Working Voltage (max.): 250V  
Tolerance: ±5%  
Power Rating: 0.25W @ 70°C  
Temperature Coefficient: ±200ppm/°C  
Dimensions of body: 6.8mm long x 2.5mm dia.

The following values (Ω) only are available:

1Ω	10Ω	100Ω	1k0	10k	100k	1M
1.2Ω	11Ω	110Ω	1k1	11k	110k	
1.5Ω	12Ω	120Ω	1k2	12k	120k	
	13Ω	130Ω	1k3	13k	130k	
1.8Ω	15Ω	150Ω	1k5	15k	150k	
	16Ω	160Ω	1k6	16k	160k	
2.2Ω	18Ω	180Ω	1k8	18k	180k	
	20Ω	200Ω	2k0	20k	200k	
2.7Ω	22Ω	220Ω	2k2	22k	220k	
	24Ω	240Ω	2k4	24k	240k	
3.3Ω	27Ω	270Ω	2k7	27k	270k	
	30Ω	300Ω	3k0	30k	300k	
3.9Ω	33Ω	330Ω	3k3	33k	330k	
	36Ω	360Ω	3k6	36k	360k	
4.7Ω	39Ω	390Ω	3k9	39k	390k	
	43Ω	430Ω	4k3	43k	430k	
5.6Ω	47Ω	470Ω	4k7	47k	470k	
	51Ω	510Ω	5k1	51k	510k	
6.8Ω	56Ω	560Ω	5k6	56k	560k	
	62Ω	620Ω	6k2	62k	620k	
8.2Ω	68Ω	680Ω	6k8	68k	680k	
	75Ω	750Ω	7k5	75k	750k	
	82Ω	820Ω	8k2	82k	820k	
	91Ω	910Ω	9k1	91k	910k	

To order write 'G' and then the value.

E.g. G1R2, G12R, G1K2, G12K, G120K, G1M, etc.

Price each is shown. Order quantities less than 100 will be sold at the one off inc. VAT price.

Order Code	Type 2185	Price each exc. VAT	inc. VAT each
G+Value	MF 1/4W Res	£0.015 £0.007 £0.006	£0.060

### Metal Film 0.6W

A 'Universal Resistor' with a superb specification. It may be used as a superior replacement wherever carbon film 1/4W, 1/3W or 1/2W are specified since

its size is the same as 1/4W types, yet it can be run continuously at 0.6W with ambient temperatures up to 70°C, thanks to the highly even thermal characteristics of the ceramic substrate. It is also a superior replacement to most metal oxide and thick film resistors due to its very tight tolerance, ±1%, and its low temperature coefficient, only 50ppm.

Working voltage max: 250V  
Tolerance: ±1%  
Power rating: 0.6W at 70°C  
Temperature coefficient: 50ppm/°C  
Noise level: Typically 0.01µV/V  
Dimensions of body: 6.5mm long, 2.5mm diameter

Note that to make up 'odd' values not stocked, resistor networks may be built and if all the resistors in the network have a 1% tolerance, then the tolerance of the whole network will still be 1% tolerance.

The following values (Ω) only are available:

1Ω	10Ω	100Ω	1k0	10k	100k	1M
	11Ω	110Ω	1k1	11k	110k	
1.2Ω	12Ω	120Ω	1k2	12k	120k	1M2
	13Ω	130Ω	1k3	13k	130k	
1.5Ω	15Ω	150Ω	1k5	15k	150k	1M5
	16Ω	160Ω	1k6	16k	160k	
1.8Ω	18Ω	180Ω	1k8	18k	180k	1M8
	20Ω	200Ω	2k0	20k	200k	
2.2Ω	22Ω	220Ω	2k2	22k	220k	2M2
	24Ω	240Ω	2k4	24k	240k	
2.7Ω	27Ω	270Ω	2k7	27k	270k	2M7
	30Ω	300Ω	3k0	30k	300k	
3.3Ω	33Ω	330Ω	3k3	33k	330k	3M3
	36Ω	360Ω	3k6	36k	360k	
3.9Ω	39Ω	390Ω	3k9	39k	390k	3M9
	43Ω	430Ω	4k3	43k	430k	
4.7Ω	47Ω	470Ω	4k7	47k	470k	4M7
	51Ω	510Ω	5k1	51k	510k	
5.6Ω	56Ω	560Ω	5k6	56k	560k	5M6
	62Ω	620Ω	6k2	62k	620k	
6.8Ω	68Ω	680Ω	6k8	68k	680k	6M8
	75Ω	750Ω	7k5	75k	750k	
8.2Ω	82Ω	820Ω	8k2	82k	820k	8M2
	91Ω	910Ω	9k1	91k	910k	10M

To order write 'M' and then the value.

E.g. M1R2, M15R, M180R, M2K2, M27K, M330K, M3M9, etc.

Price each is shown. Order quantities less than 100 will be sold at the one off inc. VAT price.

Order Code	Type 2185	Price each exc. VAT	inc. VAT each
M+Value	M1R-M2M2	£0.034 £0.010 £0.008	£0.070

### Starter Pack E12

A development pack of Min Resistors containing ten of each of the following values: 10, 12, 15, 18, 22, 27, 33, 39, 47, 56, 68 and 82Ω, plus all the decades up to 1MΩ. 610 resistors in all.

Price each is shown. Order quantities less than 5 will be sold at the one off inc. VAT price.

Order Code	Type 2185	Price each exc. VAT	inc. VAT each
FA08J	E12 Resistor Pack	£8.600 £5.990 £4.860	£12.990

### Starter Pack E24

A development pack of Min Resistors containing ten of each of the values 1Ω to 1MΩ as shown in the 'Min Res' table left. 1330 resistors in all.

Price each is shown. Order quantities less than 5 will be sold at the one off inc. VAT price.

Order Code	Type 2184	Price each exc. VAT	inc. VAT each
FA09K	E24 Resistor Pack	£14.990 £11.990 £9.990	£27.990

### Starter Pack MΩ Values

A pack of Min Resistors containing ten of each of the following values: 1.2M, 1.5M, 1.8M, 2.2M, 2.7M, 3.3M, 3.9M, 4.7M, 5.6M, 6.8M, 8.2M and 10MΩ. 120 resistors in all.

Price each is shown. Order quantities less than 5 will be sold at the one off inc. VAT price.

Order Code	Type 2185	Price each exc. VAT	inc. VAT each
FA10L	Mega Resistor Pack	£4.990 £4.490 £3.990	£7.990

### GCSE Component Pack

An assortment of electronic components housed in a quality storage box intended for students following the GCSE courses in Electronics. The pack includes a wide selection of capacitors, resistors, transistors, diodes ICs, LEDs and a stripboard for assembling projects. It is also suitable for any beginner to electronics who requires a good selection of components, as the pack represent excellent value, offering a considerable saving over individual prices.

## Call and Collect

Maplin has more stores Nationwide than ever before. See the maps at the front of the catalogue for the nearest one to you.

## Carbon Film 1W

High stability, low noise.

**Specification:**

Working voltage: 500V maximum  
 Tolerance:  $\pm 5\%$   
 Power rating: 1W at 70°C  
 Temperature coefficient:  $-180$  to  $-300$ ppm/°C  
 Noise level:  $<0.3\mu V/V$   
 Dimensions of body: 16mm long x 5.5mm dia.  
 The following values ( $\Omega$ ) only are available:  
 10, 22, 27, 33, 47.

To order write 'C' and then the value.  
 E.g. C22R, C47R, etc.

Price each is shown. Order quantities less than 100 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
C+Value	1W Res	10+	50+	2000+	1+
		£0.048	£0.040	£0.035	£0.080

## Metal Film 2W

A very high quality metal film resistor that is physically the same size as the 1W resistor, yet has a superior specification.

**Specification:**

Working voltage: 500V  
 Tolerance:  $\pm 1\%$   
 Power rating: 2W at 70°C  
 Temperature coefficient:  $\pm 50$ ppm/°C  
 Noise level: Typically 0.01 $\mu V/V$   
 Dimensions of body: 16mm long, 5.5mm dia.

The following values ( $\Omega$ ) only are available:

100 $\Omega$	1k	10k	100k	1M
120 $\Omega$		12k	120k	
150 $\Omega$	1k5			
180 $\Omega$				
220 $\Omega$	2k2	22k	220k	
270 $\Omega$				
330 $\Omega$				
390 $\Omega$		39k		
470 $\Omega$	4k7	47k	470k	
68 $\Omega$	680 $\Omega$			
82 $\Omega$				

To order write 'D' and then the value.

E.g. D68R, D120R, D1K5, D12K, D470K, D1M, etc

Price each is shown. Order quantities less than 100 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
D+Value	2W Res	10+	50+	1000+	1+
		£0.119	£0.077	£0.060	£0.160

## High Voltage Resistor

High stability, low noise metal film resistors.

Working voltage 1M to 33M: 2500V AC, 3500V DC  
 Working voltage 1M to 47M: 7000V AC, 10,000V DC

Tolerance:  $\pm 5\%$   
 Power rating 1M to 33M: 1/2W at 70°C  
 47M: 1W at 70°C  
 Temperature coefficient:  $\pm 200$ ppm/°C  
 Noise level:  $<0.5\mu V/V$   
 Dimensions of body,  
 1M to 33M: 10mm long x 3.7mm dia.  
 47M: 18mm long x 6.8mm dia.

The following values ( $\Omega$ ) only are available:

1M	2M2	4M7
10M	15M	22M
33M	47M	

To order write 'V' and then the value.  
 E.g. V1M, V4M7, V22M, V47M, etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
V+Value	V1M-V33M	25+	100+	1000+	1+
		£0.155	£0.145	£0.120	£0.370
	V+Value V47M	£0.360	£0.325	£0.285	£0.490

## Resistor Colour-Code Calculator

Simply set the three colours on the calculator in the same order as on the resistor and read the value directly. The calculator can be used with any colour-coded resistor and full instructions for use are printed on the reverse of the calculator.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2171	Price each exc. VAT			inc. VAT each
XL05F	Colour Calculator	10+	25+	100+	1+
		£0.790	£0.740	£0.690	£1.190

## High Power Resistors

### 2.5 Watt Silicone Coated

Meggit

A very rugged and high quality wire wound resistor with ceramic former and non-flammable silicone cement coating. Ruggedised welded cap and lead method of construction ensure a high resistance to damage. Meggit ER74 series.

**Specification:**

Power rating at 70°C: 2.5W (3W at 20°C)  
 Resistance tolerance:  $\pm 5\%$   
 Temperature coefficient: 200ppm/°C (max.)  
 Maximum element voltage: 100V  
 Ambient temperature range:  $-55^\circ\text{C}$  to  $+200^\circ\text{C}$

The following values ( $\Omega$ ) are available:

0.1 $\Omega$	1 $\Omega$	10 $\Omega$	100 $\Omega$
0.22 $\Omega$	2.2 $\Omega$	22 $\Omega$	
0.27 $\Omega$			
0.33 $\Omega$			
	3.9 $\Omega$		
0.47 $\Omega$	4.7 $\Omega$	47 $\Omega$	
0.05 $\Omega$			

6.8 $\Omega$	8.2 $\Omega$
--------------	--------------

To order write 'S' and then the value.

E.g. S0R03, S0R47, S2R2, S100R, etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
S+Value	2.5W Sil Res	25+	100+	250+	1+
		£0.350	£0.310	£0.290	£0.690

### 3 Watt

A range of high quality wirewound resistors sealed in a high insulation cement box. The box is heat and moisture resistant and non-flammable. The resistors

are low noise, very stable and have an overload capability of ten times the rated power for 5 seconds. Values over 500 $\Omega$  are metal oxide film and these have an overload capability of five times the rated power for 5 seconds.

Power rating: 3W @ 70°C  
 Tolerance:  $\pm 5\%$   
 Temperature coefficient:  $\pm 300$ ppm/°C  
 Working voltage: 200V (400V peak)  
 Dimensions of body: 22 x 9 x 10mm (max)

The following values ( $\Omega$ ) are available:

0.1 $\Omega$	1 $\Omega$	10 $\Omega$	100 $\Omega$	1k	10k
		15 $\Omega$	150 $\Omega$	1k5	15k
		18 $\Omega$	180 $\Omega$		
0.22 $\Omega$	2.2 $\Omega$	22 $\Omega$	220 $\Omega$	2k2	22k
0.27 $\Omega$	2.7 $\Omega$	27 $\Omega$			
0.33 $\Omega$	3.3 $\Omega$	33 $\Omega$	330 $\Omega$	3k3	
	3.9 $\Omega$				
0.47 $\Omega$	4.7 $\Omega$	47 $\Omega$	470 $\Omega$	4k7	
0.68 $\Omega$	6.8 $\Omega$	68 $\Omega$			
	8.2 $\Omega$				

To order write 'W' and then the value.  
 E.g. W0.47, W8.2R, W10R, W100R, etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
W+Value	WW Min	25+	100+	1000+	1+
		£0.165	£0.145	£0.110	£0.370

### 7 Watt

A range of high quality wirewound resistors sealed in a high insulation cement box. The box is heat and moisture resistant and non-flammable. The resistors are low noise, very stable and have an overload capability of ten times the rated power for 5 seconds.

Power rating: 7W @ 70°C  
 Tolerance:  $\pm 5\%$   
 Temperature coefficient:  $\pm 300$ ppm/°C  
 Working voltage: 350V (700V peak)  
 Dimensions of body: 35 x 10 x 9mm

The following values ( $\Omega$ ) are available:

0.1 $\Omega$	1 $\Omega$	10 $\Omega$	100 $\Omega$	1k
		15 $\Omega$		
0.22 $\Omega$	2.2 $\Omega$	22 $\Omega$	220 $\Omega$	
0.27 $\Omega$				
0.33 $\Omega$				
	3.9 $\Omega$			
0.47 $\Omega$	4.7 $\Omega$	47 $\Omega$	470 $\Omega$	
	5.6 $\Omega$			
0.68 $\Omega$	6.8 $\Omega$			
	8.2 $\Omega$			

To order write 'L' and then the value.

E.g. L0.47, L8R2, L10R, L100R, etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
L+Value	7W WW	25+	100+	1000+	1+
		£0.215	£0.185	£0.125	£0.370

**Businesses and Government Establishments – open a Maplin MPS Account**

Just complete form at back of catalogue

## 10 Watt

A range of high quality wirewound resistors sealed in a high insulation ceramic block. The block is heat and moisture resistant and non-flammable. The resistors are low noise, very stable and have an overload capability of ten times the rated power for 5 seconds. Value 4k7 is metal oxide film and has an overload capability of five times the rated power for 5 seconds.

Power rating: 10W @ 70°C  
Tolerance: ±5%  
Temperature coefficient: ±300ppm/°C  
Working voltage: 500V (1kV peak)  
Dimensions of body: 49 x 10 x 9mm

The following values (Ω) are available:

0.1Ω	1Ω	10Ω	100Ω	1k
		15Ω		
0.22Ω	2.2Ω	22Ω		
	3.3Ω	33Ω		
	3.9Ω			
0.47Ω	4.7Ω	47Ω	470Ω	4k7
0.56Ω	5.6Ω			
	6.8Ω	68Ω		
	8.2Ω			

To order write 'H' and then the value.  
E.g. H0.47, H8.2R, H10R, H100R, etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
H+Value	10W WW	25+	100+	1000+	1+
		£0.265	£0.230	£0.160	£0.460

## 25 Watt Wirewound

ArcoI

A range of high quality, high stability aluminium housed wirewound resistors designed for direct heatsink attachment. The resistive element is wound onto high thermal conductivity ceramic formers ground to a close tolerance finish ensuring maximum contact for rapid heat transfer.

**Specification**  
Power rating: 25W at 25°C  
Working voltage: 550V max. (DC/AC rms)  
Tolerance: ±5%  
Temperature coefficient  
<1Ω: 100ppm/°C  
1Ω to 50Ω: 50ppm/°C  
>50Ω: 25ppm/°C  
Operating temperature: -55°C to +200°C  
Dimensions  
L x W x D: 27.3 x 28 x 14.6mm  
fixing centres: 18.3 x 19.8mm  
hole diameter: 3.2mm  
Weight: 14g

The following values (Ω) are available:

0.1Ω	1Ω	10Ω	100Ω	1kΩ
0.22Ω	2.2Ω	22Ω	220Ω	
		33Ω	330Ω	
	3.9Ω	39Ω		
0.47Ω	4.7Ω	47Ω	470Ω	
		50Ω		
		68Ω	680Ω	
	8.2Ω	82Ω	820Ω	

To order write 'T' and then the value.  
E.g. T0R1, T2R2, T47R, T330R, etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
T+Value	25W WW	25+	100+	1000+	1+
		£1.120	£0.950		£1.790

## 25 Watt Wirewound

Meggitt

A high quality, high power, wirewound resistor in an aluminium case to aid dissipation, and can be screwed to a chassis or heatsink.

**Tolerance:** ±5%  
**Power rating at 70°C:** 25W  
**Power rating without heatsink:** 12.5W  
**Minimum heatsink for 25W at 25°C:** 4.5°C/W  
**Working voltage (max):** 550V AC/DC  
**Temperature coefficient**  
0.47Ω: 90ppm/°C  
coefficient 1Ω to 47Ω: 50ppm/°C  
coefficient 100Ω: 25ppm/°C  
**Dimensions:** Length: 28mm  
Width: 28mm  
Height: 14.5mm  
Fixing centres: 18.3 x 19.8mm

x 6BA (M3) (2 holes)

The following values (Ω) are available:

0.47Ω	1Ω	10Ω	100Ω
	2.2Ω		
	3.9Ω		
	4.7Ω	47Ω	
	8.2Ω		

(3.9Ω and 8.2Ω are stocked for use as dummy load resistors to replace supplement loudspeakers in 4Ω and 8Ω systems. They may be built up in series/parallel networks to suit any power system.)

To order write 'P' and then the value.  
E.g. P0.47, P8.2R, P10R, P100R, etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
P+Value	25W WW	25+	100+	1000+	1+
		£1.290	£1.210	£1.080	£1.990

## 50 Watt Wirewound

ArcoI

A range of high quality, high stability aluminium housed wirewound resistors designed for direct heatsink attachment. The resistive element is wound onto high thermal conductivity ceramic formers ground to a close tolerance finish ensuring maximum contact for rapid heat transfer.

**Specification**  
Power rating: 50W at 25°C  
Working voltage: 1250V max. (DC/AC rms)  
Tolerance: ±5%  
Temperature coefficient  
<1Ω: 100ppm/°C  
1Ω to 50Ω: 50ppm/°C  
>50Ω: 25ppm/°C  
Operating temperature: -55°C to +200°C  
Dimensions  
L x W x D: 49.1 x 29.3 x 14.8mm  
fixing centres: 39.7 x 21.4mm  
hole diameter: 3.2mm  
Weight: 32g

The following values (Ω) are available:

0.1Ω	1Ω	10Ω	100Ω	1kΩ
0.22Ω	2.2Ω	22Ω	220Ω	
		33Ω	330Ω	
	3.9Ω	39Ω		
0.47Ω	4.7Ω	47Ω	470Ω	
		50Ω		
		68Ω	680Ω	
	8.2Ω	82Ω	820Ω	

To order write 'X' and then the value.  
E.g. X0R1, X4R7, X47R, X470R etc.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2165	Price each exc. VAT			inc. VAT each
X+Value	50W WW	25+	100+	1000+	1+
		£1.420	£1.210		£1.990

## Resistor Networks

### SIL Arrays

Eight equal value, discrete thick film resistors in a narrow Single in-Line package, with 9 pins spaced at 2.54mm (0.1in.). Ideal for use as pull-up/pull-down arrays for a parallel 8-way data bus etc, or anywhere where several commoned resistors are required, but must fit in a very confined PCB layout.  
Dimensions of package: 23mm long x 2.5mm thick

Height from PCB: 5.1mm  
Working voltage: 100V max  
Tolerance: ±2%  
Temperature coefficient: ±200ppm/°C  
Power rating (one resistor): 125mW @ 70°C (whole Package): 1W

The following values are available:

220Ω, 330Ω, 470Ω, 1k, 2k2, 4k7, 10k, 47k, 100k.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2166	Price each exc. VAT			inc. VAT each

RA32K	SIL Resistor 100k	£0.090	£0.085	£0.080	£0.190

## In-Line Bussed Resistors

BI Technologies

A range of thick film resistor networks that are available with eight resistors, of the same value, in an in-line package. The resistor bus is connected to pin 1 of the package (indicated by a dot on the body), and the pins are a standard 2.54mm (0.1in.) spacing for PCB mounting etc.

**Specification:**  
Tolerance at 25°C: ±2Ω up to 100Ω (max ±5%), ±2% above 100Ω  
Operating temperature range: -55°C to +125°C  
Temperature coefficient of resistance  
33Ω to 100Ω: ±250ppm/°C  
100Ω to 100kΩ: ±100ppm/°C  
Resistor voltage rating: 50V  
Maximum power rating (per resistor): 0.18W (up to 25°C)  
Size: 22.61mm long x 2.413mm thick  
Height from PCB: 5.50mm

The following values are available:  
47Ω, 100Ω, 220Ω, 330Ω, 470Ω, 1k, 3k3, 4k7, 10k, 22k, 47k, 100k.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## In-Line Isolated Resistors

BI Technologies

A range of thick film single in-line resistor networks that contain four isolated resistors, of the same value, in an 8-pin package. The pins are a standard 2.54mm (0.1in.) spacing for PCB mounting etc. Configured with the first resistor connected to pins 1 and 2, the second to pins 3 and 4, etc. Pin 1 is indicated by a dot on the body.

### Specification:

Tolerance at 25°C: ±2% up to 100kΩ (max ±5%), ±2% above 100kΩ

Operating temperature range: -55°C to +125°C

Temperature coefficient of resistance

33kΩ to 100kΩ: ±250ppm/°C

100kΩ to 1kΩ: ±100ppm/°C

Resistor voltage rating: 50V

Maximum power rating

per resistor: 0.200W (up to 25°C)

Size: 20.07mm long x 2.413mm thick

Height from PCB: 5.50mm

### The following values are available:

33kΩ, 100kΩ, 220kΩ, 330kΩ, 470kΩ, 1k, 2k2, 3k3, 4k7, 10k, 22k, 47k, 100k.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Dual In-Line Isolated Resistors

BI Technologies

A range of thick film resistor networks that are available in a 16-pin DIL package. The first of the 8 resistors is connected to pins 1 and 16. The second resistor to pins 2 and 15, and so on.

### Specification:

Tolerance at 25°C: ±2% up to 100kΩ (max ±5%), ±2% above 100kΩ

Operating temperature range: -55°C to +125°C

Temperature coefficient of resistance

33kΩ to 100kΩ: ±250ppm/°C

100kΩ to 100kΩ: ±100ppm/°C

Maximum operating voltage: 100V DC or √PR

Power rating per resistor: 0.250W at 70°C

Manufacturer's Number of pins

898-3 16

Number of resistors 8

### The following values are available in the 898-3 Series:

33kΩ, 47kΩ, 100kΩ, 220kΩ, 470kΩ, 1k, 2k2, 3k3, 4k7, 10k, 22k, 47k, 100k.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Resistance Wire

### 28swg Resistance Wire

A 28.35g (1oz.) reel of 28swg Constantan (55-60% copper, 45-40% nickel) wire suitable for making rheostats etc. Can be used as a thermocouple when twisted with copper wire. A temperature difference between the wires of approx 25°C gives around 1mV with temperatures in the range 0°C to 50°C. Resistance: 4-2Ω per metre.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2196	Price each exc. VAT			
		10+	25+	100+	1+

## PRESET RESISTORS

### Preset Pots

## Sub-Miniature Fully Enclosed Carbon Presets

Meggit

A new range of sub-miniature horizontal and vertical mounting linear track presets fully enclosed in a flame retardant plastic housing. The insulated

slider can be adjusted from either side by tool with blade 1 to 2.3mm wide. Power rating 0.15W at 40°C. Tolerance ±20% (±30% 2.2MΩ and 4.7MΩ). Enclosure is dust and splash proof. Dimensions 10 x 10.3 x 4.5mm. Vertical type fits flush to PCB (12.1mm overall height from PCB), horizontal type sits 1.5mm proud of PCB (6mm overall height from PCB). Pins require 1.3mm dia. PCB holes. Pin length 4.5mm.

The following values are available in horizontal types:

100kΩ, 220kΩ, 470kΩ, 1k, 2k2, 4k7, 10k, 22k, 47k, 100k, 220k, 470k, 1M, 2M2, 4M7.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Control Potentiometer Modular System

Meggit

A range of horizontal or vertical 10mm carbon control potentiometers featuring plug-in accessories for additional flexibility. Top, bottom or side actuation with edgewise operation and stereo (dual) units can be assembled. The carbon on polyester technology ensures stability and durability with a life of 10,000 track operations.

### Specification

Resistive element:	Carbon on polyester
Power rating:	0.15W at 40°C
Maximum voltage:	200V DC
Resistance tolerance:	±20%
Contact resistance variation:	5% or 3Ω

whichever is greater

Nominal rotation electrical: 2200  
mechanical: 2350  
Rotational life: 10,000 operations  
Operating temperature: -250C to +700C  
Dimensions (w x d x h)  
vertical type: 10.3 x 10 x 4.5mm  
horizontal type: 10.3 x 4.5 x 12.1mm  
Vertical Top adjust Horizontal Side Adjust

**Available in the following values**  
vertical: 1k, 2.2k, 4.7k, 10k, 47k, 1M  
horizontal: 1k, 2.2k, 4.7k, 10k, 22k, 100k

**Accessories available** Order Code  
long shaft DT47B  
short shaft DT48C  
dual gang DT49D  
18mm edgewise DT50E  
21mm edgewise DT51F

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Cermet Preset

Meggit

A miniature horizontal mounting cermet preset featuring high stability and excellent resolution. It has an integral dust cover, fits 2.54mm (0.1in.) matrix directly, and may be adjusted by a screwdriver from either side. Linear track only. Tolerance: ±20%. Power rating: 0.3W at 70°C. Max volt: 100V DC or AC. Temperature coefficient: ±200ppm/°C. Dimensions 7.8mm diameter, stands 7.4mm high from PCB. Value is marked on case as shown in brackets.

**The following values are available:**  
100Ω (101), 500Ω (501), 1k (102), 5k (502), 10k (103), 50k (503), 100k (104), 1M (105).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## 18-Turn Cermet Preset

Meggit

An 18-turn cermet preset with slipping clutch (23 mechanical turns), end stops and infinite electrical resolution. Power rating 0.75W at 70°C. Max working voltage 315V. Tolerance: ±10%. Temperature coefficient: ±100ppm/°C max.

**Values available:**  
500Ω, 1k, 5k, 10k, 50k, 100k, 1M.  
The dustproof and immersion-proof case measures 19.3 x 5 x 6.6mm high and the terminal pins are at 7.62mm (0.3in.) and 5.08mm (0.2in.) spacing, the centre pin being offset by 2.54mm (0.1in.).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## 9.5mm (3/8in.) Square 22-Turn Cermet Preset

Meggit

A 22-turn cermet preset with slipping clutch (25 mechanical turns) and an audible click at each end of travel to define the ends. This professional quality trimmer is designed for applications where reliability and small size are major considerations. Infinite electrical resolution. Power rating 0.5W at 70°C. Tolerance ±10%. Max working voltage 300V. Temperature coefficient: ±100ppm/°C max.

**Values available:**  
1k, 5k, 10k, 50k, 100k, 1M.  
The dustproof and immersion-proof case measures 9.6 x 4.8 x 10mm high. Drive head stands a further 1.5mm high. Lead length 6.2mm. Pins are in-line on 2.54mm (0.1in.) centres.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## POTENTIOMETERS

### ROTARY

#### Miniature Type

A range of miniature rotary carbon track potentiometers with printed circuit board mounting terminals.

Fixing hole required: 7mm. Power rating: 0.2W linear, 0.1W log. Max voltage: 200V linear, 150V log. Overall shaft length 25mm.

Linear types are marked 'B' and log types are marked 'A'.

**The following values are available with a linear track:**

1k, 4k7, 10k, 22k, 47k, 100k, 470k, 1M

**The following values are available with a logarithmic track:**

10k, 47k, 100k, 1M

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Conductive Polymer Track Type

Omeg

The 'Eco' range of 16mm conductive polymer track potentiometers feature a semi-sealed plastic housing, and offer lower noise compared to standard carbon track types. The potentiometers feature a 40mm long x 6mm diameter shaft with a 300° rotation.

**Specification**  
 Rotation angle: 300°  
 Rated dissipation @ 40°C  
 linear: 0.25W  
 log: 0.12W  
 Limiting element voltage: 350V DC  
 Insulating voltage: 500V AC  
 Insulating resistance: ≥4GΩ  
 Tolerance: 20%  
 Noise (ENR)  
 linear: 2%  
 log: 2%

## 16mm Conductive Polymer With Push Switch

Omeg

A range of Eco potentiometers with a SPDT push switch primarily intended for vertical PCB mounting. The 16mm conductive polymer track potentiometers feature a semi-sealed plastic housing, and offer lower noise compared to standard carbon track types. The potentiometers feature a 40mm long x 6mm diameter shaft with a 5 x 10mm flat and 300° rotation.

**Specification**  
 Rotation angle: 300°  
 Rated dissipation @ 40°C: 0.25W  
 Limiting element voltage: 350V DC  
 Insulating voltage: 500V AC  
 Insulating resistance: ≥4GΩ  
 Tolerance: 20%  
 Noise (ENR): 2%  
 Switch rating: 250V AC 10A resistive  
 Switch travel: 3mm linear

FP07H	M10 Pot Washer 10 Pk	£0.390	£0.340	£0.330	£0.790

## Standard Dual-Gang Type

A range of rotary dual-gang carbon track potentiometers with printed circuit mounting terminals. Fixing hole required: 10.5mm (13/32in.). Power rating: 0.4W linear, 0.2W log. Max. voltage: 500V DC. Tolerance: ±20%. Overall shaft length 50mm.

The following values are available with a linear track: 4k7, 10k, 22k, 47k, 100k, 220k, 470k, 1M, 2M2

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## 16mm Modular Conductive Plastic - 91 Series

Bourns

RECENTLY INTRODUCED

A range of 16mm modular potentiometers featuring a one-piece moulded plastic shaft and rotor, and a conductive plastic track. This form of construction results in virtually infinite electrical circuit isolation. Connections are by 0.81mm diameter pins on 2.54mm spacing. 100,000 cycle life (no load).

### Specification

Angle of rotation: 300°  
 Tolerance: ±20%  
 Linearity: ±5%  
 Power rating single: 1W (lin), 0.5W (log)  
 dual (per section): 0.5W (lin), 0.25W (log)  
 Insulation resistance: 1000MΩ min.

The following values are available with a linear track - single:

1k, 5k, 10k, 50k, 100k

The following values are available with a logarithmic track - single:

1k, 10k, 50k, 100k

The following values are available with a linear track - dual:

1k, 5k, 10k, 50k, 100k

The following values are available with a logarithmic track - dual:

1k, 10k, 50k, 100k

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## HIGH POWER

### 10-Turn Wirewound Potentiometers

Spectrol

A range of precision 10-turn wire wound potentiometers that feature excellent linearity and a resistance tolerance of ±5%. The internal tracking surfaces and terminals are gold-plated, whilst the 6-35mm (1/4in.) shaft is stainless steel and has a screwdriver slot. Supplied with suitable fixing nut (3/8 - 32 UNEF - 2A). Overall size: 22mm dia. x 40mm.

### Specification:

Linearity: ±0.25%  
 Noise: 100Ω ENR  
 Power rating: 2W  
 Insulation resistance: 1000MΩ min 500V DC  
 Dielectric strength: 1000V RMS min 60Hz  
 Temperature coefficient: 20ppm/°C

## Cermet Type

Meggitt

A high quality cermet element rotary potentiometer for panel mounting. The cermet element gives excellent electrical and thermal stability, reliability, low noise and long life. Linear track.

Power rating: 2W at 70°C  
 Tolerance: ±10%  
 Working voltage: 315V max  
 Dimensions: Body diameter 21mm, height 12.7mm max. Bush 9.5mm (3/8in.) diameter, flattened on opposing sides to 8.6mm, 10mm long. Requires 9.5mm (3/8in.) diameter panel cut-out. Spindle: standard 6.35mm (1/4in.), 15mm long. Pins 4mm long. Centre pin is wiper.

The following values are available: 47Ω, 100Ω, 470Ω, 1k, 4k7, 10k, 47k, 100k, 1M.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## Loudspeaker Volume Controls

Wirewound controls with 6.3mm (1/4in.) dia. shaft, 9.5mm long. Standard 9.5mm (3/8in.) hole mounting. Ideal for use as a loudspeaker volume control. Available in four values: 20Ω, 50Ω, 100Ω, and 200Ω. Power rating: 3.5W.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## SLIDE

### Miniature Dual Gang

A range of dual miniature slide track carbon potentiometers with printed circuit board mounting terminals. Potentiometer measures 60mm long x 9mm wide with a 45mm track length. Height above PCB (excluding slide tang) 6.5mm. The pin spacing is not compatible with 2.54mm (0.1in.) matrix board. The potentiometer may be attached to a front panel using two M2 bolts, fixing centres 56mm. Slide tang is 15mm long. Slide Knobs YG09K and CH21X (low profile) fit the tang on these sliders. Linear types are marked 'B' and log types are marked 'A'.

The following values are available with a linear track: 10k, 100k

The following values are available with logarithmic track: 10k, 100k

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2215	Price each exc. VAT			inc. VAT each

## THERMISTORS

### Negative Temperature Coefficient Thermistors

A range of negative temperature coefficient thermistors. The resistance  $R_{T_1}$  of a thermistor at a temperature  $T_1$  °K can be found by inserting the resistance  $R_{T_2}$  at a given temperature  $T_2$  °K in the following equation:

$$R_{T_1} = R_{T_2} \cdot e^{\left(\frac{B}{T_1} - \frac{B}{T_2}\right)}$$

$$\log_{10} R_{T_2} + B \left(\frac{T_2 - T_1}{T_1 \times T_2}\right) \log_{10} e$$

where B is the characteristic temperature for any given thermistor in °K and e is the exponential factor (= 2.7183). °K = °C + 273.

### Disc Thermistor

**Philips**  
Disc type lacquer coated thermistor suitable for use in temperature measurement, control and compensation applications.

Diameter: 5.0mm (±0.3mm)  
Power (max): 0.5W Tamb = 25°C  
Dissipation factor: 8.5mW/°C  
Temperature range: -25°C to +125°C reducing to 0°C to +55°C at max. power 10%

Tolerance:	B (°K)	R at 125°C (approx)	Equivalent
R at 25°C (±20%)			
1500Ω	3975	52.5Ω	VA1098

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2217	Price each exc. VAT			inc. VAT each
		25+	100+	500+	1+
UL82D	Thermistor 1500R	£0.390	£0.290	£0.260	£0.690

### Bead Thermistors

Bead type thermistors for general applications including temperature measurement and compensation.

Tolerance: ±5%  
Power (max): 250mW  
Dissipation factor: 7mW/°C  
Response time: 1-2 secs  
Thermal time constant: 11 secs  
Temperature range: -40°C to +125°C reducing to 0° to 55°C at max power

R at 25°C	B (°K)	R at 100°C (approx)	R at 0°C (approx)
4k7	3977	318.4Ω	15.28kΩ
15k	3740	1.19kΩ	45.13kΩ
47k	4090	2.94kΩ	155.6kΩ
150k	4370	7.73kΩ	534.9kΩ

#### Colour code

Order Code	Type 2218	Price each exc. VAT			inc. VAT each
		25+	100+	1000+	1+
FX21X	Thermistor 4k7	£0.367	£0.338	£0.314	£0.790
FX22Y	Thermistor 15k	£0.440	£0.370	£0.290	£0.860
FX42V	Thermistor 47k	£0.440	£0.360	£0.290	£0.890
FX43W	Thermistor 150k	£0.440	£0.360	£0.290	£0.890

### 100k Bead Thermistor

**Siemens**  
A 100k bead thermistor for general applications, in particular, accurate temperature measurement. The case has a black epoxy resin coating and tinned leads.

Tolerance: ±2%  
Power (max.) 350mW at 25°C 220mW at 60°C  
Dissipation factor: 3.5mW/K

Heat capacity: 40mJ/K approx.  
Thermal time constant (air): 12secs approx.  
Temperature range: -55°C to +155°C  
B value: 4450°K  
Approx. resistance at 25°C: 100kΩ  
at 100°C: 4.77kΩ  
at 0°C: 352.4kΩ

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2220	Price each exc. VAT			inc. VAT each
		25+	100+	1000+	1+
CR05F	Thermistor 100k	£0.367	£0.338	£0.314	£0.790

### Bead Thermistor Type R53

Directly heated bead type thermistor housed in evacuated glass bulb, designed for operation at very low power levels owing to its exceptionally high sensitivity and is thus particularly suitable for use in transistor circuits.

Length: 25.4mm (max)  
Diameter: 4mm (approx)  
Power at 20°C max: 3mW  
Power sensitivity: 62.5°C/mW  
Dissipation factor: 0.016mW/°C  
Max. operating temperature: 175°C (ambient), 220°C (bead)  
R at 20°C (±20%): 5000Ω  
R at 25°C (±20%): 4200Ω  
B (°K): 3100  
Typical resistance at 3mW dissipation in free air at 20°C: 63Ω.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## Personal Attack Alarms

### Personal Emergency Alarm

This very compact and light personal electronic alarm can be used as a 'life saver' to summon help in an emergency, as a 'help caller' for elderly people in difficulties or as an effective security alarm for doors and personal property. The extremely loud 120dB alarm is sounded at the press of a button or when the cord is yanked free, releasing the safety pin. Water resistant. Requires two 1.5V 'AAA' batteries (JY50E, not supplied).

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YE22Y	Emergency Alarm	£4.240	£4.990

### Personal Protector

A very compact personal alarm, in a tough black plastic case. Due to its slim size, it can be easily slipped into a pocket or handbag. The 110dB alarm is activated by pulling the rip cord, which removes a plastic plug from its socket.

The unit is powered by two 1.5V 'N' size batteries (supplied). Overall dimensions: 80 x 60 x 18mm. Weight: 66g including batteries.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
DM37S	Personal Protector	£5.940	£6.990

### Personal Attack Alarm

This alarm uses a gas cartridge to produce an ear-piercing shriek, just a firm push of the top will set off the alarm, which can be either a short burst or continuous. The continuous deafening sound will last for about two minutes - enough to frighten off the most determined attacker. Once locked on, the noise will continue even if dropped. The Alarm is small enough to fit easily into a pocket or handbag, or clipped into a blouse or jacket pocket.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
KR18U	Personal Alarm	£5.940	£6.990
KR19V	Cartridge x 2	£5.090	£5.990

### Key-fob Attack Alarm

A compact gas-powered personal attack alarm that you can carry with you everywhere. It produces an ear-splitting 130dB at source. Attaching it to your keys means it is easy to find when you need it.

Supplied complete with spare cartridge.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
GG57M	Key-fob Attack Alarm	£4.240	£4.990

### Mugger Buster

A handy but reliable device for personal protection, combining a flashlight with a high-powered alarm built into a rugged case. The alarm is provided with a belt clip and a slide switch on one edge. It is finished in mat black with an orange lamp-cover. Sliding the switch toward the lamp provides a steady beam of light. Sliding the switch away from the lamp will sound the alarm and provide a flashing beam of light to attract attention. To de-activate the alarm simply insert the de-activate pin, attached to the wrist-strap, into the de-activate gap. The alarm is powered by three 'AA' size batteries, supplied.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each

### Child Tracking System

A unique system that ensures your child cannot wander off even while you are busy with other tasks. Simply attach the small transmitter to your child and switch it on. Now place the receiver in your pocket or on your belt and activate it. You will hear a series of beeps to signal that the unit is working correctly, then the siren will silence and the unit starts to listen for the transmitters signal. When your child goes out of range the signal deteriorates and the receiver will sound. Even if you are busy the siren is loud enough to alert you. Battery condition is constantly monitored and when the battery begins to run low a long beep signal will sound. Can also be used to keep track of luggage, bags and personal items. The transmitter unit operates from a 12V (23A type) cell provided, while the receiver utilises a 9V PP3 (JY49D cell, not provided). Operates over a range up to 15 to 23 feet before alarm sounds.

Retail Unit Price each (inc. VAT).

YS77J	Child Tracking Syst	£15.310	£17.990

### Touch Sensitive Electronic Alarm

The 'Sensor' gives you effective low cost security at home and on the move and it couldn't be simpler to use. Just switch it on, hang it from a door handle or place it on your luggage and it's guarded.

The 'Sensor' is extremely sensitive, so any vibration (just touching the door handle on either side of the door is enough) will sound the very loud high pitched alarm.

Can be fixed with velcro pads or screwed in place for more permanent fixing.

Supplied with velcro pads and security warning stickers. Requires an alkaline PP3 battery (JY49D, not supplied).

Retail Unit Price each (inc. VAT).

CN63T	Watchman Alarm	£11.050	£12.990

### Window/Door Entry Alarm

An ultra-miniature window and door alarm that can be installed quickly and easily. Simple stick-on installation means you can install this device in under a minute! Once installed the alarm protects against entry with a powerful 95dB siren that will warn away burglars and prowlers while alerting you instantly. Operation is from three LR44 button cells (provided). Simple ON/OFF switch allows virtually anybody to operate this alarm. Supplied with full operating instructions, self adhesive pads and window stickers.

## Portable PIR Alarm/Chime Unit

A compact passive infra-red detector and alarm unit that is completely self contained. The unit, finished in smart white plastic, measures 35.5 x 108.5 x 68mm. The unit may be used free-standing on a desk, shelf, etc, or using the integral swivel bracket, mounted on a wall either horizontally or vertically. A slide switch on the side of the unit selects chime/off/alarm modes. In the chime mode, when the detector is triggered, a 'ding-dong' chime sounds, ideal for use as an automatic door or shop bell. In the alarm mode, triggering the detector will sound an ear piercing 90dB siren, the alarm will reset and re-arm after 30 seconds. Exit delay after arming is 10 seconds. Power requirements 9V PP3 alkaline battery (ZB46A) not supplied, standby current is 90µA, expected battery life 6 months. Detector coverage angle 60°. Operating temperature range -10 to +40°C.

Retail Unit Price each (inc. VAT).

YU17T	Portable PIR Alarm	£16.160	£10.550	£9.440	£18.990

## Programmable PIR Alarm

This smart PIR alarm is the compact Passive Infra Red sensor alarm that you can use anywhere – at home or in your office, shop or warehouse. You can

even take it with you for extra security when travelling.

Once armed, the sensor will trigger a piercing siren for 90 seconds if it detects any movement or body heat within its 10 meter, 130o range. It then resets itself automatically and triggers the siren again if further movement is detected. For added security, the alarm can only be disarmed with a four digit (programmable) code.

The alarm also has an intrusion memory – pushing the 'LATCH' button will light a small LED if the alarm has been triggered in your absence.

Can be used free standing or wall mounted. Requires a single PP3 battery or suitable 9V power adaptor (not supplied).

Retail Unit Price each (inc. VAT).

## Security Markers

### UV Security Marker

To maximise the chances of getting your stolen property returned, the police recommend that you mark your possessions with your postcode and house number. This pen uses discrete invisible ink that only shows up when illuminated by ultra violet light. The police routinely use UV light when examining recovered goods for this very purpose.

## Security Marker Wallet

This handy wallet contains the following items for security marking your property:

- ★ Permanent black marker - for visibly marking valuables around the home, e.g. furniture, books, etc.
- ★ UV security marker - for discrete marking of property such as paintings, antiques, electrical goods, etc.
- ★ China/glass marker - specially designed for writing on porcelain, china and glass without scratching or cutting the surface. Permanently marks and should be used with stencil for neatness. Ideal for marking car registration numbers on car windows.
- ★ Diamond tipped scriber - for permanently marking most hard surfaces at home and in the office. For neatness use the stencil. Uses include marking machinery, office equipment, PCs, bicycles, etc.
- ★ Security labels - a selection which will act as a visible deterrent. Includes vehicle, premises, equipment and general labels.
- ★ Stencil - for use with the above markers.

## FREE HOME MONITORING

REMOTE MONITORING STATION

FREE monitoring for the first year and thereafter from less than **12<sup>p</sup>** per day

\* based on a five year contract for the 3 star service with three keyholders and twelve test calls, of approximately 75 seconds each, per annum. All calls made by the subscriber unit to the arms system are on a premium rate line charged at £1.50 per minute. Average length of emergency calls is two minutes.

**arms** - professional monitoring and notification of not only intruder, fire and personal attack activations, but also mains failure, frozen pipes, water leaks, carbon monoxide and natural gas leaks.

Audio verification - 20 seconds of audio recording from your property before the activation and 10 seconds after the activation - keyholders can arrange immediate emergency service response.

Mailed confirmation of event and response details.

REGISTRATION FORM CONTAINED IN SUBSCRIBER UNIT BOX

### \* FREE ONGOING MONITORING?

A substantial discount to the home buildings and contents insurance premium is made possible by subscribing to arms.

In many cases, the reduced cost of insurance can more than repay the annual monitoring charge, enabling customers to enjoy the protection and peace of mind offered by arms for free.

## Building Alarms

### Wired Systems

#### AJ 400 Burglar Alarm Kit

- ★ 1 x Exit/entry zone
- ★ 1 x Detection zone
- ★ 1 x 24-hour/personal attack zone

A complete low cost alarm kit. Simple to install and easy to use.

The control panel is mains operated by use of the low voltage mains adaptor with the facility of battery back-up in the event of mains failure.

An on-board keypad is used to set and un-set the system with the added benefit of 2-button press panic alarm. This will activate the siren whether the system is set or un-set.

The unit, which is microprocessor based, provides:- Fault indicators for each zone and will flash the zone first activated.

Monitoring of 24-hour circuits to protect against tampering with any device.

Personal attack buttons (purchased separately), can be added to activate the alarm whether the system is set or un-set.

#### Kit Contents:

- 1 x AJ400 microprocessor control panel
- 1 x Passive Infra Red detector
- 2 x Magnetic door contacts
- 1 x External siren and cover
- 1 x Mains adaptor

Back up batteries for control panel

50m 4-core alarm cable

Fitting instructions

Bag of fixings

Most of the detection devices available in this catalogue can be added to the system, and up to 2 additional passive infra-red detectors can be fitted to the control panel.

## Omnicon 8000 Control Panel

- ★ 1 x Entry/exit zone
- ★ 4 x Detection zones (1 programmable as a designated fire zone)
- ★ 1 x Personal attack zone monitored 24 hours
- ★ 1 x 24-hour tamper monitoring zone
- ★ 3 x Communicator outputs

The Omnicon 8000 is a 5-zone microprocessor control panel. It is designed primarily for domestic and small commercial applications and has a large number of programmable features.

The microprocessor has a non-volatile memory, this protects all programming if the power is interrupted. A watchdog circuit, which is found in many expensive commercial panels, has also been introduced to this control panel to protect the processor from any mains borne interference. The unit can be easily programmed by use of the onboard keypad, the display of 8 LEDs will indicate the status whilst programming the unit or whilst in use.

Dimensions: H 214mm W 298mm D 80mm  
Outputs: Internal speaker, External sounder, Latching strobe, Positive set for latching PIRs, Auxiliary 12V supply, 1A power supply.

YS04E 1	MSS8000 Panel	£48.500			£56.990

## Intruder and Fire Alarm

A1 Security

The MSS3500 is a 9 zone microprocessor control panel, ideally suited for use in large domestic and small, or medium, commercial installations.

The MSS3500 provides:

- ★ 1 x Delay zone for entry/exit
- ★ 1 x 24 hour zone for personal attack monitoring
- ★ 1 x 24 hour tamper monitoring (with the added benefit of a tamper indication being shown by an LED on each separate zone)
- ★ 5 x Detection zones
- ★ 1 x Fire zone

**Specification**

Construction: Polycarbonate  
Dimensions: Height 214, width 298, depth 80 (mm)  
Outputs: Internal speakers  
External speakers: Positive set for latching PIRs  
Latching strobe: Auxiliary 12V supply  
Dedicated fire output: 1A power supply.

## Advantage ZX6 Alarm

A1 Security

- ★ 1 x Entry/exit zone, designated zone 1
- ★ 5 x Detection zones
- ★ 1 x Personal attack zone monitored 24 hours
- ★ 1 x 24-hour tamper monitoring zone
- ★ 2-button easy-set facility

The Advantage is a 6-zone microprocessor control panel, designed primarily for domestic and small commercial applications.

The microprocessor has a non-volatile memory, this protects all programming if the power is interrupted. A watchdog circuit, which is found in many expensive commercial panels has also been introduced to this control panel to protect the processor from any mains borne interference. The operation of the control panel can be either by the backlit digital keypad, which has the option of 2-button easy setting, full and part guard, or by the use of a remote backlit keypad or keyswitch, available separately in this catalogue.

Dimensions: H 185mm W 250mm D Top 30mm Bottom 50mm

Outputs: Internal speakers, External sounder, Latching strobe, Positive set for latching PIRs, Auxiliary 12V supply, 1A power supply.

## Wireless Systems

### Wireless Home Alarm Kit

The Maplin Fox Wireless Home Alarm is a technically advanced house alarm system that uses radio waves instead of direct cable connections between the sensors and the central alarm panel. This greatly simplifies the installation and any further expansion of the system. The basic system includes the following features:

- ★ 4 detection zones, part or full arming capability
- ★ Remote control panic alarm
- ★ Easy to fit, simple installation
- ★ No ugly wiring between detectors and the control panel
- ★ DTI approved transmitters
- ★ Full remote control operation, via key-fob transmitter
- ★ Built-in extra loud 120dB siren
- ★ Fully expandable — just add more detectors
- ★ Output for external siren, for extra attention
- ★ Optional battery back-up for protection during mains failures
- ★ Intrusion history display shows where the alarm was triggered
- ★ Unique code-learning feature eliminates tedious manual programming of the control panel and key-fob transmitters

The basic Wireless Home Alarm System includes a Control Panel, Wireless PIR Intruder Detector, Wireless Contact Transmitter, 2-button Key-fob Transmitter, Instruction Manual and wall fixings. An expanded kit, CN10L, is also available (see below) which includes extra PIR sensor, extra contact transmitter and external siren/strobe unit.

Retail Unit Price each (inc. VAT).

### Wireless Alarm Kit

- ★ Easy to install and operate
- ★ Fully expandable
- ★ Low battery indicators for sensors
- ★ Piercing 120dB Siren & strobe
- ★ Up to 4 keyfob transmitters can be used
- ★ Any number of sensors may be used
- ★ Includes wireless doorbell

An expanded version of the XS57M system containing the following components:  
Control panel; 2 wireless PIR detectors; 2 contact

transmitters; doorbell transmitter; external siren with strobe light; remote control key fob; magnetic contact switches; and full instructions. The system requires 5 x PP3 batteries (JY49D not included) for the detectors and doorbell. An optional lead-acid back-up battery is available (YJ69A) for continued protection during power failures.

Retail Unit Price each (inc. VAT).

		1+	10+	25+	
FR69A	Siren/Strobe	£21.260	£17.350	£15.290	£24.990

**Cordless Alarm System**

A1 Security

- ★ Cordless system, very easy to install, requires minimum wiring
- ★ Sophisticated anti-jamming protection
- ★ 5 detection zones with a maximum of 15 cordless detectors/sensors
- ★ Complies with requirements of BS6707 – intruder alarm systems for consumer installations
- ★ Conforms to wireless standard BS6799 Pt 4A and to MPT 1340 wireless exemption standard
- ★ Up to 6 remote control units can be used, each providing a personal attack alarm facility
- ★ 115dB external siren and flashing strobe unit

The RF8200 is a sophisticated cordless alarm system. A unique feature of this system is the anti-jamming protection. To enhance the system further, the movement detectors send out several signals if they detect an intruder. This combined with the anti-jamming protection makes the system virtually impossible to beat. The system is very easy to install, requiring minimal wiring. The remote control unit, movement detector and door/window sensor are already programmed and ready to use. It is only necessary to fit the batteries and site the units in suitable positions.

The advanced control panel incorporates five detection zones. Each zone can accept three types of cordless detector such as a PIR movement detector, smoke detector, or door or window sensor. The siren unit houses a powerful 115dB siren and flashing strobe light. Both the housing and the cable connecting the unit to the control panel are protected from tampering. The PIR movement detector, door/window sensor and remote control are available separately. A smoke detector is also available separately that will provide 24-hour protection from smoke and fire even if the alarm is disarmed.

The control panel has provision for a sealed lead-acid battery (YJ69A, not supplied) to provide battery back-up in the event of a mains power failure.

**Contents of Kit**

- Control panel: 1
- PIR detector: 2
- Door/window sensor: 1
- Remote control: 1
- External bell box: 1
- Connecting cable: 20m
- All detector batteries
- Assorted clips, fixings and instructions

**Cordless Shock Sensor RF8007**

- ★ LED indication
- ★ Adjustable sensitivity
- ★ PP3 type battery

The state of the art impact and vibration detector is an accessory to add to the RF8200 system. The detector can be fitted to most window and door frames to detect any sudden impact. The detector operates on a 9V PP3 battery and sends a signal to the control unit identifying if the unit is being tampered with or a forcible entry is being attempted (when the system is armed).

**Solar, Cordless Alarm Kit**

A1 Security

- ★ Solar bell box - no cable to run to control panel
- ★ Cordless detectors - easy to install
- ★ Sophisticated Anti-jamming system
- ★ System can take up to 3 bellboxes
- ★ System is fully expandable
- ★ Extensive programmable features
- ★ Conforms to BS6799 IV Part A and MPT 1340 Exemption standard

A sophisticated solar, cordless alarm system with anti-jamming circuitry to prevent tampering. All sensors are wireless and easily installed without the need for running cables. The bellbox is solar powered with full battery backup and also requires no wiring. Up to three bellboxes can be installed on this system.

**Kit Contents**

- Control Panel 1
- PIR Detector 1
- Door/Window sensor 1
- Solar Bellbox with Siren/strobe 1
- Rechargeable battery 1
- All detector batteries
- Assorted clips & fixings
- Full fitting instructions

Up to a total of 3 solar powered bellboxes may be connected to this system. Additional bellboxes are available (order code VJ74R).

## Security Auto-dialler

**NEW**

A very advanced and useful addition to any security system, the auto-dialler connects to any alarm panel and will relay your pre-recorded message to up to 4 different personally programmed telephone numbers when the alarm system has been triggered. These can be any standard BT, Mercury or cellular numbers, such as for your home, office, or mobile phone so that you may be contacted if on the move. The unit plugs into a standard BT phone socket and is fully BABT approved. A simple programming sequence means that the contact numbers can be changed as often as required.

**Do not use to ring the emergency services directly.** Full instructions for the use and installation of the unit are supplied. Overall dimensions: 214 x 298 x 80mm.

## Bell Boxes

### Assembled Low Profile Polypropylene Siren Housing

A1 Security

- ★ Rechargeable 6V power cell included
- ★ Varnished printed circuit board to withstand adverse weather conditions
- ★ Available in White

Attractive low profile siren housing complete with siren, timer, rechargeable self-contained bell module (RSCB) and strobe light. The siren will emit an ear piercing 115dB two tone sound when activated. The RSCB protects the unit and the connecting cable, if the unit is tampered with, by opening the front cover, pulling the unit from the wall or cutting the cable. The RSCB will cut in and sound the siren from its own built-in battery, automatically recharged by the control panel.

### Polypropylene Low Profile Siren Housing

- ★ Attractive lasso proof design
- ★ Will accommodate most low profile sirens and SCBs
- ★ Anti-foam unit (no vents)

Eye pleasing low profile siren housing made from polypropylene plastic, this product has been manufactured to withstand the weather elements and needs no maintenance. The siren box has no vents, this prevents attack from the would-be thief using foam to limit the noise. Comes complete with back-plate, with numerous cable access holes.

		1+	1+	
YS08J	Low Profile Bellbox	£7.220		£8.490

## Large External Alarm Box

A large well-made external alarm box in polypropylene. The box has a strong rear panel with various fixing holes and a shelf for a battery etc. The front part of the box is coloured and has three vents moulded in each side. The two parts clip together after fixing the back plate to an outside wall and then one screw locks the box together. A plate is provided for fixing a microswitch, e.g., FP45Y or FP42V etc. which would be held operated by the long thread on the screw. Anyone attempting to unscrew the screw to get into the box will operate the microswitch long before the screw is removed. Overall size 405 x 273 x 140mm deep. Box is available in red, white, or yellow.

## Alarm Siren with Battery Backup

A 12V siren for car alarm systems, etc. that has a built-in rechargeable battery that will activate the siren in the event that the car or main battery is disconnected. The siren can be triggered from either a positive or negative pulse. The siren can be disabled for servicing by a keyswitch that has a protective rubber cover. Requires 12V DC 1.2A supply. Dimensions: 92mm(dia) x 112mm(h) x 95mm (d)

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YE76H	Siren With Backup	1+ £17.610	1+ £19.990

## Twin Sounder in Housing

An extremely loud 126dB (at 1m) twin warbling piezo sounder in a tough black plastic housing. Requires 12V DC 650mA supply.

Dimensions: 127 x 68 x 90mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YE68A	Twin Sounder	1+ £12.75	1+ £14.99

## Low Profile Xenon Flasher Unit

Weatherproofed xenon tube-based flasher designed primarily as an alarm beacon. Gives off two bright, attention-grabbing pulses of light every second. The translucent acrylic cover lens of the unit is marked with Fresnel rings and the sides are striated to maximise light dispersal. Flashers with lenses in four different colours are available; red, clear, amber and blue. The body itself is manufactured from durable black ABS plastic. This unit is not suitable for continuous flashing use. Tube life approx. 1 million flashes.

Working voltage: 12V DC  
 Supply current: 180mA  
 Power Output: 1W  
 Flash Rate: 2Hz (approx)  
 Overall size: 70mm dia. x 44mm high  
 Fixing: 1 x 6mm dia. centre fixing  
 Supplied with approx 0.5m red and black cable and mounting gasket.

Retail Unit Price each (inc. VAT).

## Alarm Accessories

### Reed Switch Recessed

A reed switch and magnet encapsulated in identical white plastic mouldings designed to be recessed into door or window frames. Reed moulding has four wires, two form a security loop, the other two are connected to the reed. Reed contact makes when subjected to a magnetic field.

Operate distance: 9.5mm  
 Release distance: 11mm  
 Flange dimensions: 19mm dia x 1mm thick  
 Main body dimensions: 27.5 x 8mm dia.

Retail Unit Price each (inc. VAT).

Order Code	Type 4757	Price each exc. VAT			inc. VAT each
		1+	25+	100+	
YW46A	Door Contact Reed	£1.690	£1.260	£1.110	£1.990

## Five Terminal Flush Contact Reed Switch

A magnet and reed switching sensor for burglar alarms, normally to be recessed into doors or windows and their frames. One part contains the magnet, while the other part contains the reed switch which is normally closed in the presence of the magnet. Opening the door/window will cause the reed to open. The reed switch terminates in a pair of screw terminals, and there are a further three terminals for the security loop. Operating distance, reed to magnet: Reed closes at 13mm, and opens at 15mm. Dimensions, magnet or reed: Length 35mm, width 22mm. Requires a recess at rear in door or frame 19mm diameter (3/4in.), by 15mm deep. Fixing centres 27mm. Screws supplied. Conforms to BS4737.

Retail Unit Price each (inc. VAT).

Order Code	Type 3076	Price each exc. VAT			inc. VAT each
		1+	25+	100+	
FK77J	Flush Contact Reed	£1.690	£0.859	£0.636	£1.990

## Panel Pin Fixing Five Terminal Contact Switch

Magnet and reed contact switch identical to the above, except parts are retained in the door or window frame by a pair of 15mm long panel pins. Ideal where dimensions of the wooden frame are limited. Each surrounding lip is 26mm diameter.

Retail Unit Price each (inc. VAT).

MM08J	Min Contact Switch	£1.690	£1.350	£1.190	£1.990

## Reed Switch Surface

A surface mounting reed switch and magnet in similar plastic mouldings. Reed unit has five screws, three for making security loops and two are connected to the reed. Reed contact makes when subjected to a magnetic field.

Available in white (YW47B) and brown (MM18U).

Operate distance: 14mm  
 Release distance: 15.5mm  
 Dimensions: (both parts) 66 x 14 x 12mm  
 Fixing centres: 52mm

Retail Unit Price each (inc. VAT).

## UPVC Window Contact

An alarm contact switch especially designed for UPVC windows where drilling or screw fixings may invalidate manufacturers warranty. This device is affixed by means of a self adhesive pad on both the switch and the magnet. As it is so easy to fit, it may also be used in place of conventional contact switches in most locations indoors.

Retail Unit Price each (inc. VAT).

## Window Foil

A self-adhesive aluminium foil with a strong adhesive on one side and a shiny finish on the other. As the window foil has a backing paper only remove as much as is necessary as you fix the foil around the window.

To form a neat mitred fold proceed as follows: Lay the foil about 25mm (1in.) from the window frame. At the first corner fold the foil back over itself, adhesive side upper most. Now fold the foil back on itself turning it through 90° so that the adhesive is now on the under side. This will result in a corner being formed at right angles to the original direction. Also a neat mitred 45° fold is made.

Continue to lay the foil parallel to the frame and repeat the process for any other remaining corners. Leave enough foil at the beginning and the end so that the Window Foil Termination Block (YW51F available separately) can be connected. It is advisable to practice with a small amount of the foil first before attempting to complete the major project.

**DO NOT CUT THE FOIL AT THE CORNERS AS THIS WILL BREAK THE CONTINUITY. THE ONLY TIME IT IS CUT IS AFTER LAYING THE FOIL AND CONNECTING IT TO THE WINDOW FOIL TERMINATION BLOCK (YW51F).**

If the glass cracks the foil will break. Supplied on reel 33m x 9mm.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	10+	25+	
YW50E	Window Foil	£2,340	£1,600	£1,470	£2,750

## Window Foil Terminations

Two self-adhesive terminating blocks which clamp onto the ends of the window foil and provide a screw terminal connection to the foil. Moulded in clear acrylic plastic.

## Push Action Panic Button

A large red rectangular plastic button housed in a quality white plastic box. The button is normally flush with the top of the box and requires minimum effort to activate. Once pushed and the loop is broken (by reed switch), a supplied key is used to reset the button. The lid has a single screw fixing, and a tamper contact is provided that is made when the lid is screwed into place.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each

MM06G	T/O Panic Button	£3.020	£2.420	£2.200	£3.550

## Metal Panic Button

A red button housed in a metal case. The button requires a positive push to activate alarm. It is push-to-break and should be used in normally closed loop circuits. Once depressed, the alarm can only be disarmed by resetting with the key provided and resetting the control panel. The unit is of a sturdy metal construction and ideally suited to heavy duty applications.

Retail Unit Price each (inc. VAT).

		1+	10+	25+	1+
MM07H	Metal Panic Button	£5.520	£4.800	£4.350	£6.490

## Vibration Sensor

A simple mechanical vibration sensor comprising a weighted moving contact which can be adjusted by a set-screw for varying degrees of sensitivity. Usually the screw setting is chosen for the contacts to be normally closed; physical displacement of the unit causing the contacts to open since the weighted movable portion remains inert relative to the body of the unit. The detector reacts best to a displacement in the same direction as the moving contact's natural direction of movement (it will operate with a displacement applied at right-angles, but to a lesser degree). Greatest sensitivity can be achieved by mounting the unit vertically with the bob-weight of the movable contact uppermost (cable entry hole at top). To ensure equal sensitivity in both directions two such units may be used mounted vertically with one turned 90° to the other. The two units are then wired together in series. In addition, a second contact is provided in series with the movable contact which is normally held closed by the cover so that the cover cannot be removed without triggering the alarm. Readily applicable to automotive security systems, for example.

Dimensions: 60mm long x 15mm wide x 22mm deep.

Retail Unit Price each (inc. VAT).

FK78K	Vibration Detector	£3.390	£2.420	£1.970	£3.960

## Glass Break Detector

A sensitive glass-break detector which uses a strong adhesive pad to fix to the glass. The sensor may be positioned to give a make or break action. The sensor must be mounted at least 75mm from a corner or edge of the pane. The sensor is first fixed to the glass, then adjustments can be made which allow the sensor to be rotated to the desired position in accordance with the enclosed instructions for use. The two-core cable which is approx. 250mm long can then be terminated on a junction box mounted on the window-frame for example. Dimensions 34mm diameter x 21mm high.

Retail Unit Price each (inc. VAT).

FP11M	Glass Break Sensor	£2.540	£1.800	£1.440	£2.990

## Single Beam Break Detector

A single beam Infra Red detector with a range of up to 10 metres, suitable for indoor protection. It detects intruders when the beam is broken. The detectors each require a 12v DC power supply. TTL output.  
Note: Infra red beam break detectors work best in low light levels and are least effective in sunlight.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	5+	10+	1+
YD81C	Beam Break Detector	£21.260	£20.250	£16.650	£24.990

## Twin Beam Break Detector

A synchro twin beam infra-red detector with a range of 30 metres, suitable for indoor protection. It detects intruders when both the upper and lower beams are simultaneously broken. The detectors each require a 12V to 20V DC supply and the transmitter has a green LED in transmitting mode and the receiver has a red LED in alarm mode. A reed relay output is provided with normally closed contacts.

### Specification

Recommended range: 30 metres (indoor use)  
Beam characteristics: 950nm modulated 700Hz (wavelength)  
Beam response time: 50 to 100msec.  
Alarm period: 1sec.  
Relay output: Reed relay NC 20W 0-5A

Power requirement: 250V DC  
Current consumption at 12.5V DC: 20mA Tx 15mA Rx  
Rx alignment adjustment: 180° (±90°) horiz.  
Environment: -25°C to +50°C  
Case material: Infra-red transmissive polycarbonate 260g

## Miniature Infra-red Detector

### A1 Security

A compact, 90° indoor passive infra-red detector as used in our existing range of Maplin alarm kits.

The unit can be fitted for normal range (up to 12m) or tilted down by 8° for a reduced range. The pulse count can be set for either 1, 2 or 3 counts, and it is suggested that at the recommended height, a count of 2 is selected. This will require an intruder to move a few paces before triggering the alarm. False triggering due to insects etc., will be greatly reduced. In addition to the normal alarm contacts, the device has tamper contacts as well. Requires 12V DC.

### General Specification

Detection system: Passive infra-red dual element sensor  
Range: 12m approx. over 90°  
Recommended mounting height: 2.2m  
Alarm signal: Normally closed contacts 30V DC 75mA maximum  
Tamper output: Normally closed 24V 50mA  
Supply voltage: 9 to 14V DC 50mA  
Ambient temperature: -10°C to +50°C  
Weight: 50g  
Case dimensions: 68 x 58 x 43mm, white ABS

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	10+	25+	1+
DM12N	Miniature PIR	£19.560	£16.630	£12.480	£22.990

## Indoor Pulse-Count Type 180°

A very high quality passive infra-red detector using the very latest technology to provide extremely high immunity to false alarms. The alarm will only be triggered if two consecutive signals are detected within about half a minute. This very small and unobtrusive unit can mount on a flat wall, in the corner between two walls or between the ceiling and a wall. An anti-tamper switch is incorporated which can be connected to the alarm system's 24-hour circuit along with smoke detectors, heat sensors etc. to set off the alarm even while the system is not set.

### Specification

Detection method: Dual pyroelectric passive infra-red  
Detection angle: 110° (fan shape)  
Coverage: 12m x 12m  
Detection angle: 180° (left - right)  
Coverage: 3m  
Detection beams: 38  
Detection rows: 2  
Mounting height: 1-8 to 2m

Adjustable angle: 30o Vertical  
 Operating voltage: 12V DC  
 Operating current: 20mA  
 Relay output: 30V at 0.5A N.C. max. (AC/DC)  
 Pulse count: Switchable 1 or 2.  
 In 2 count mode second pulse must occur within 40 secs for alarm to trigger  
 Alarm display: Red LED monitor  
 Alarm period: 2 (±1) seconds  
 Sensitivity: Adjustable  
 Tamper switch: Internal microswitch  
 Weight: 60g (Net)  
 Dimensions: 65mm dia x 43mm deep

		1+	10+	25+	1+
AJ96E	Pulse Count PIR	£20.410	£17.350	£12.480	£23.990

## High Immunity Indoor Pulse-Count Detector

A compact indoor PIR sensor for use with intruder alarm systems. This detector has superior immunity from white light, EMI and RFI, and exceeds the industry standards by 200%. Once installed, the unit gives highly effective intruder detection to BS4737. The detector is supplied with a volumetric lens, which has an adjustable range up to 12m (40ft.) over a 104° arc of coverage, producing a maximum width of 18.9m (62ft.). There are 3 alternative lenses available offering different ranges and coverage for specific applications. The pet lens (AG82D), if positioned above the reach of pets, prevents them from triggering the alarm accidentally. The curtain lens (AG83E) enables the detector to be hidden in a small gap between two curtains. The long-range lens (AG84F) is ideal for long corridors and passageways.

### Specification

Pyro-electric detector: dual-element, low-noise  
 Voltage: 9 to 16V DC  
 Current: 17mA typically at 12V DC  
 Alarm output: normally closed relay contacts rated at 24V DC 50mA  
 Tamper output: normally closed switch contacts rated at 24V DC 50mA  
 Alarm period: 2s to 3s  
 False Alarm Protection  
 Electrostatic discharge: no false alarm up to 8kV, complies with IEC 801-2 and BS6667 Pt 2  
 RF immunity: no false alarm from 150kHz to 1GHz at 30V/m modulated, complies with IEC 801-3 and BS 6667 Pt 3  
 Transient immunity: no false alarm up to 4kV, complies with IEC 801-4 and BS 6667 Pt 4  
 Operating temperature: -10°C to 55°C  
 Temperature tolerance: no false alarms up to 1.7°C/m  
 Maximum humidity: 95% non-condensing  
 Mounting: up to 4.1m (13.6ft.) with

Casing: adjustment range ±30°  
 flame retardant ABS  
 Dimensions: 90 x 63 x 40mm

## 360° PIR Detector

This versatile PIR detector can be ceiling mounted to provide 360° coverage. Ideal for homes, storage areas and shops. To allow the unit to be serviced, cleaned or replaced easily, the sensor can be removed from the ceiling bracket by simply pulling it downward. The power connections, tamper and alarm contacts will be disconnected automatically when the unit is removed.

### Specification

Installation height: 3 to 4m  
 Power source: 10-5 to 15V DC  
 Activated current: <30mA  
 Continued alarm time: 1 to 3 seconds

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	10+	25+	1+
YE18U	360 Deg PIR Detector	£21.260			£24.990

## Outdoor PIR Light Control Device

A light control device with a 180° motion sensor and the ability to switch up to 1100 watts, attractively styled for indoor use but is also suitable for outdoor use. The unit uses a built-in passive infra-red (PIR) detector that reacts instantly to body heat and switches on a lamp(s). After an adjustable period of time, the lamp is automatically switched off. A built-in, variable light level, photocell deactivates the motion sensor during the day.

### Specification

Detection method: Passive infra-red  
 Power requirements: 220/240V AC 50Hz  
 Standby current: 30mA (max.)  
 Operating current: 35mA (max.)  
 Lighting load: 1100W (max.) incandescent 500W (max.) fluorescent  
 Detection range: 12m min. at 20°C  
 Detection angle: 180°  
 Adjustable angle: Vertical 180°  
 Lux level: 0 to 1000 lux  
 Housing design: Water resistant  
 Lamp-on time: 5 secs ±3 to 12 mins ±3

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	10+	25+	1+
BZ18U	Indoor/Outdoor PIR	£21.260	£18.890	£14.090	£24.990

## Passive Infra Red Module

An extremely compact passive infra red detector which can be incorporated into a variety of housings depending on the nature of the application required. This unit will work from a power supply of between 4.5 - 13.5V DC and is ideal for use with most burglar alarm systems which work from a 12V DC supply.

Viewed from above

The three connections are: Output, V+ and Gnd. The output is a logic signal that pulses high when movement is detected and is otherwise low. The output can be interfaced directly with other logic circuits, or used to switch an external load via a triac, opto-coupler or relay. The impedance is less than 35Ω, enabling it to directly drive a small (100Ω) pulse relay through a 150µF series capacitor.

The detection range is approximately 8 metres. Dimensions: 34 x 24 x 16mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	10+	25+	1+

## Combined PIR and Smoke Detector

A space saving combined PIR and smoke detector in a compact white ABS case that is suitable for any intruder alarm system with 12V detector system. The PIR has an operational angle of 90° and a range of approximately 15 metres. The ionisation type smoke detector conforms to BS5446 Part 1. There are separate connections for use with control panels with fire and intruder outputs. To utilise all the functions, either one 8-way cable or two 4-way cables will be needed to connect to the control panel; two for the power connections, two each for the smoke detector and PIR and two for the anti-tamper function. Size 110 x 66 x 41mm.

## Combined PIR and Break Glass Detector

A1 Security

The PIR/Break glass detector is a twin detection device which can be fitted in conjunction with any alarm system control panel. The unit will activate the alarm system if, either movement is detected, or if the intruder breaks a window or glass door panel to gain entry.

### Specification:

**PIR detector**  
 Range 15 metres  
 Operational angle 90°  
 10 long range zones  
 10 intermediate zones  
 5 short range zones  
 Pulse count 1 or 3

**Break glass detector**  
 Range 15 metres  
 Electret microphone  
 Detection freq. 2 to 8KHz

## Smoke Alarms

### Smoke Alarm Test Match

It is recommended that you clean and test your smoke alarm regularly. These matches are specially designed to produce dense smoke that simulates a genuine blaze. Merely strike the match and hold below your smoke alarm to hear whether it sounds promptly. Average contents 12.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
GG60Q	Smoke Test Match	£1.060	£1.250

### Smoke & Fire Alarm

- ★ Operating indicator
- ★ Low battery warning
- ★ Test button
- ★ Loud piezo electric alarm
- ★ Battery included

The Micro 300 smoke & fire alarm is of compact design, easy to install with a battery life of

approximately 1 year. It complies to BS5446 Part One, comes complete with battery and five year manufacturer's guarantee. Twin pack also available (YD54J).

Retail Unit Price each (inc. VAT).

### Lithium Powered Smoke & Fire Alarm

Dicon

- ★ 10 year battery life
- ★ Easy test & silence feature
- ★ Loud piezo electric alarm
- ★ Operating indicator
- ★ Lithium battery included

The SA900 long life smoke & fire alarm is ideal for applications where changing batteries is either inconvenient or impractical. A lithium battery is included with a life expectancy of approximately 10 years under normal operating conditions. The alarm complies with BS5446 Part One and comes with a ten year comprehensive manufacturer's guarantee.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YD57M	Smoke Alarm 10Y Batt	£11.050	£12.990

### Mains Powered Smoke & Fire Alarm

- ★ 220/240 V AC Hardwired
- ★ No batteries required
- ★ Interconnectable
- ★ Alarm pause feature
- ★ Sensitivity test button

The 670M smoke & fire alarm is mains powered and linkable to up to eleven similar alarms for simultaneous operation. It complies to BS5446 Part one and comes with a five year manufacturer's guarantee. Battery backup version also available (YD59P).

Retail Unit Price each (inc. VAT).

YD59P	Smoke Alarm B-BUp	1+ 10+ 25+ £17.010 £15.200 £14.550	1+ £19.990

## Low Voltage Smoke & Fire Alarm with Relay

- ★ Low voltage 12V to 28V DC powered
- ★ Linkable to up to eleven other systems
- ★ Compatible with Warden Call or remote telemetry systems
- ★ Form C normally open/close relay
- ★ Contacts can be configured as momentary or latching

The 440SRIM smoke & fire alarm has a working voltage range of between 12V and 28V DC and is ideal for linking to fire alarm systems. It comes with form C normally open/close relay contacts which can be configured as momentary or latching, and carries a five year manufacturer's guarantee.

## Carbon Monoxide Detector

A1 Security

A high quality carbon monoxide detector designed to keep you and your family safe at all times. Simply plugs into a standard 3-pin power socket providing

portability and fast, versatile installation. Complies with BS7860 standard to provide a high level of protection and security. Suitable for use in the vicinity of vehicles, domestic appliances and burning fuels such as oil, coal, natural/bottled gas, paraffin, wood, charcoal, etc. Supplied with full operating and installation instructions. Hard wired version for permanent installation also available which is ideal for landlords, etc.

### Specification

Power source 220-240V AC @ 50Hz  
Alarm trigger point 150ppm  
Alarm output 85dB @ 3m  
LED status indicators Power/alarm  
Dimensions 70 x 147 x 63mm

Retail Unit Price each (inc. VAT).

## Propane/Butane Detector

A1 Security

Propane and Butane are extensively used as domestic and commercial fuels. They are both colourless but have distinctive odours. Both are highly flammable and have densities higher than that of air, so may not be noticed until built up to a dangerous level. This electronic alarm is designed to detect the presence of these gases before they reach high levels. Under normal conditions a green light shows. As the level of gas builds up a red light will show followed shortly afterwards by a piercing audible alarm. There is an amber light which will show should any fault occur. The unit must be hard wired.

### Specification

Power source 240V AC, 50Hz Mains  
Power Consumption 4.32W  
Operating Temp. 0°C - 40°C (32°F - 104°F)  
Sensor Type SP-11 Gas Sensor  
Audible Alarm 100dB at 3 Metres

Retail Unit Price each (inc. VAT).

YD63T	Prop/But Alarm HW	1+ 5+ 10+ £36.580 £32.950 £31.000	1+ £42.990

## Carbon Monoxide Detector Patches

These patches could be life-savers. Carbon Monoxide (CO) gas is an invisible, odourless killer. Place a patch near to suspect appliances, which include gas water-heaters and fires, solid fuel fires, etc. If CO is detected then the patch changes colour, giving a visible warning. The patches should be replaced every 6 months. Supplied in packs of 2.

Retail Unit Price each (inc. VAT).

Order Code	Type 18027	Price each exc. VAT	inc. VAT each
GG65V	CO Detector Patches	1+ £4.240	1+ £4.990

## Fenceguard

A1 Security

★ Ideal protection against intruders & trespassers

★ Water & rustproof

★ Easy to install - supplied in 0.5 metre lengths

★ High impact plastic construction

Your first line of defence against crime should be perimeter protection. The Fenceguard provides versatile, low cost security which is quick and easy to install, and provides a very effective deterrent. Fenceguard can be used in a variety of different applications. Typical examples include prevention of access via flat roofs, fences, brick walls and drain pipes. The high impact plastic construction means no maintenance is required. Available in 2m or 8m packs.

Retail Unit Price each (inc. VAT).

Order Code	Type 12096	Price each exc. VAT	inc. VAT each
YD95D	Fenceguard 2 Metres	1+ 5+ 10+ £12.750 £11.450 £10.750	1+ £14.990
YD96E	Fenceguard 8 Metres	£42.540 £37.250 £34.550	£49.990

## Rotaguard

A1 Security

The Rotaguard adaptor kit transforms Fenceguard into an effective rotating deterrent suitable high security applications.

Rotaguard is ideal for properties with high parameter walls and is cheap and easy to install.

Retail Unit Price each (inc. VAT).

Order Code	Type 12098	Price each exc. VAT	inc. VAT each

YE03D	Brass Door Viewer B3	£2.540	£2.990

## Door Guards

### Brass Door Guard

A simple and effective device for preventing intruders from forcing open your door from the adjacent position. Ideally suitable when opening a door to strangers as the strong design makes it virtually impossible for them to force their way in. Cutting equipment suitable for disabling conventional door chains will prove useless against the Door Guard! Simply slide across the bar before opening the door. To unlatch the bar you must first fully close the door. Ruggedly designed using brass for strength and looks.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YE09K	Brass Door Guard	£5.090 £4.250 £3.950	£5.990

## Portable Door Guard

When you want to ensure that the door is kept closed, this ingenious portable door lock solves the problem. Simply position the Door Guard around the door frame and push the ratchet mechanism forward. The door is securely fastened for peace of mind, especially when you are travelling away from home. Comes in a handy travel pouch that will slip into your pocket.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
GG63T	Portable Door Lock	£6.800	£7.990

## Door Access Systems

### Door Entry Systems

Door entry systems are an effective method of controlling access to offices, homes, factories, etc. They also help to protect the elderly or infirm by allowing them to identify callers before letting them into their homes. Other applications include operation of shared entrance doors in flats or office buildings, and remote door opening allowing secretaries and disabled or elderly people to admit visitors, doctors, etc., at the press of a button.

### Door Access System

- ★ Programmable 1 to 12-digit access code
- ★ Code can be easily changed by main user
- ★ Adjustable entry time from 3 to 99 seconds
- ★ Backlit keypad
- ★ Alarm system compatible
- ★ Anti-tamper protected
- ★ Keypad fits into standard single light switch pattern (not supplied)

A low-cost system, ideal to protect a single door point from unauthorised access. Suitable for use in domestic or small commercial applications. The system comes complete with main controller unit/power supply, remote flush fitting keypad and electronic lock release.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS12N 1	Door Access System	£50.560	£60.990

## Call and Collect

At all our stores nationwide.  
See the maps at the front of the catalogue for the nearest one to you.

## Electric Door Catch Release

A strong and secure electrically operated door catch release mechanism, which operates from 12V AC or DC, current 1-5A. Ideal for use in security, doorphone and restricted access systems. Please note the lock mechanism itself is not supplied and this should be purchased from a good hardware store or locksmith. Connection to solenoid coil is via two screw terminals. Mechanism requires a cavity of 102 x 21 x 29mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YU89W	Electric Door Lock	£14.450 £9.850 £8.740	£16.990

## P151C Doorphone

A mains operated doorphone system with flush mounted door station and free standing or wall mounted internal handset. The room station has high/low volume switch and electric door lock release button. Separate D.C. power supply required – see battery section.

Effective distance	150m
Power	230V AC 50Hz
Dimensions:	
Handset	225 x 110 x 75mm
Door Station	140 x 98 x 38mm

Retail Unit Price each (inc. VAT).

## Video Doorphone

Now you can have an in-house security system that is technically sophisticated, easy to use, practical and attractively styled. The Video Doorphone allows you to view and communicate with your visitors while remaining in the privacy and safety of your home. The system consists of a camera and intercom which is housed in a strong polypropylene box with a weatherproof, aluminium front panel. A call button activates the monitor and chime alerting

you and showing a picture of your visitor automatically. The video monitor is complete with a handset and door release button which can be used to operate an electric door catch. The CCD camera has infra-red LEDs to allow you to view your visitors regardless of the lighting conditions. It will be necessary to purchase the required length of coaxial cable (XS52G) to complete the installation.

## CCTV

### Systems

## Security Camera for use with standard television

A low-cost CCD security camera based on one of our sub-miniature board camera modules. The camera is very easy to install and offers an affordable TV security for the old, infirm, single people or anyone desiring additional security. The camera has a built-in UHF modulator and can be connected directly to any domestic TV, so when there is a caller it is simply a matter of selecting the relevant channel to actually see the caller. The housing can be swivelled and angled to meet most viewing requirements. Supplied complete with 12V mains adaptor, cables, and connectors.

DN48C	CCD Camera	£127.650	£149.950

## Domineye CCTV System

- ★ Connects directly into domestic TV/VCR
- ★ Weatherproof camera housing
- ★ Discreet and vandal resistant
- ★ Easy to install and operate
- ★ Complete with cables and connectors
- ★ Will work in total darkness

The Domineye is a versatile and easy to use system. It connects directly into standard TVs and VCRs and can be installed inside or outside the home or workplace.

It can be used to detect bogus callers, keep a watchful eye on babies rooms, monitor visitors in a business environment, and for many other applications. It has a powerful built in microphone to aid detection of intruders and will work in low light

or total darkness (with a range of approx. 2 Metres). Supplied with vandal resistant, weatherproof dome, modulator, camera, cable and connectors. Extra cables are available in 10m, 15m, 25m, 50m and 100m lengths. An in line connector is also available for the joining of two cables.

## Domineye Pro

- ★ Supplied with 2 cameras
- ★ Connects up to 4 cameras
- ★ Automatic switching
- ★ Two way speech
- ★ Connects directly into domestic TV/VCR
- ★ Weatherproof camera housing
- ★ Discreet and vandal resistant
- ★ Easy to install and operate
- ★ Complete with cables and connectors
- ★ Will work in total darkness

The Domineye Pro is a versatile and easy to use system. It connects directly into standard TVs and VCRs and can be installed inside or outside the home/workplace. Two cameras are supplied but the switching unit will switch up to four so additional cameras may be added.

It can be used to detect bogus callers, keep a watchful eye on babies rooms, monitor visitors in a business environment, and for many other applications. It has a powerful built in microphone to aid detection of intruders and has two way speech facility enabling you to speak to callers without necessarily letting them in. The cameras will work in low light or total darkness (with a range of approx. 2

Metres). Supplied with vandal resistant, weatherproof domes, modulator, 4 way switcher, 2 cameras, cables and connectors.

Extra cameras are available. Extension cables are also available in 10m, 15m 25m, 50m and 100m lengths. In line connectors are also available for joining two cables together.

## Plug-in Observation System (Universal)

A1 Security

**NEW**

- ★ Works with all standard domestic TVs and VCRs
- ★ Built in movement detector and internal sounder
- ★ Built in microphone - listen as well as view
- ★ Low light operation
- ★ Record activity on your VCR
- ★ Weatherproof camera housing
- ★ Observe callers/intruders at the touch of a button
- ★ All cables and connectors provided
- ★ Simple to install and use

This observation system provides not just the ability to observe callers/intruders but will also provide a security warning tone when someone enters the area being observed. The camera has a built in movement detector which when triggered will cause an audible warning tone from the control unit.

The system which simply plugs in to standard domestic TVs and VCRs can be used to monitor babies or young children at home, observing callers at the door or even to keep an eye on shop or warehouse stock. Camera sensitivity 0.2 lux.

Kit contents:-

- 1 x 90° External/ Internal Camera with:-
  - built in audio
  - built in movement detector
- 1 x Modulator (control) unit with
  - mains adapter
  - RF modulator
  - internal sounder
- 1 x 15m Camera lead & connector
- 1 x 2m RF lead
- Clips and fixings
- Full installation Instructions

Accessories to expand the system:-

## CCTV System with 2 Channel Monitor System

A1 Security

**NEW**

- ★ 110mm Monitor with 2 way switching
- ★ Weatherproof camera housing
- ★ Built in microphone - listen as well as view
- ★ Low light operation
- ★ Manual or Scan camera selection
- ★ Record activity on your VCR
- ★ Observe callers/intruders at the touch of a button
- ★ All cables and connectors provided

★ Simple to install and use

This compact observation system comes with one camera but an additional camera can be added to expand the system. The monochrome monitor has a built in two way switching unit which allows manual selection of either camera or automatic scan operation. The monitor also has an output that allows the pictures to be recorded on to a standard VCR. Camera sensitivity 0.2 lux.

Contents:

- 1 x 2 Channel Monitor with VCR facility
- 1 x 90° External/ Internal Camera with built in audio
- 1 x 15m Camera lead
- 1 x Plug top mains adapter
- Clips and fixings
- Full Instructions

Accessories to expand the system:  
**GG71N** Extra 90° camera with built in audio

## ATC12 Observation System

A1 Security

**NEW**

- ★ Suitable for use with standard domestic TVs and VCRs
- ★ Observe callers/intruders at the touch of a button
- ★ Record activity on your VCR
- ★ Listen as well as view
- ★ High picture resolution
- ★ Audible warning when activity is detected
- ★ Camera can be used indoors or outdoors

The ATC12 observation system offers a flexible and effective monitoring system. Due to the compact design and ease of use, the ATC12 is suitable for a wide range of applications ranging from monitoring babies or young children at home to keeping an eye on warehouse stock. The control unit plugs directly into a standard TV and/or VCR. The camera has a built in movement detector, which when triggered, will emit an audible warning tone from the control unit which will indicate activity in the observation area. A plug-in Mains Relay Switch is available that can be used to switch on a mains appliance (e.g. lighting) when movement is detected.

Kit consists of :-

- 1 x Modulator (control) unit
- 1 x ATC2B Camera unit
- 1 x 2m RF Coaxial cable
- 1 x 15m Camera cable
- 1 x Clips & fixings
- 1 x Installation & operation manual

There are a number of accessories available to expand your observation system :-

- YD88V** Extra Camera with sound & PIR
- YD89W** 15m Camera cable
- VD09K** 50m Camera cable
- YD92A** 15m Camera extn.cable & connectors

## ATC 4 Observation System

A1 Security

- ★ Movement detecting camera
- ★ Programmable infra red control of TV, VCR, HiFi and most other remote controlled devices
- ★ Audible indication of movement
- ★ Internal & external lighting control
- ★ Automatic recording of activity
- ★ Automatic view from active camera
- ★ On screen programming display
- ★ Views & records in complete darkness
- ★ Up to 4 internal/external cameras can be connected
- ★ Time & date on view and record

This highly advanced, unique observation system is ideal for domestic and light commercial applications. There is no need to buy expensive additional equipment, the ATC4 has been designed to work with most domestic TV's and VCR's. The control unit offers an advanced user friendly, on screen display menu system giving full access to all the information and programming features needed to fully customise and operate your system.

The ATC4 system has 5 programming modes:-

**Manual mode** - to select which camera to view manually.

**Scan mode** - which will scan through the cameras at a pre determined rate.

**Home mode** - which enables the system to follow a set of pre programmed instructions when a camera has been triggered.

**Away mode** - also enables the system to follow pre programmed instructions when the owner is out. System can be programmed to activate VCR, TV, HiFi, lights, Etc...

**Beep mode** - in order to alter the duration of the alert tone produced by the control unit when a camera is activated.

**Kit consists of:-**

- 1 x ATC7 Control unit with lead & plug
- 1 x ATC2 Camera unit
- 1 x 20m Infra red transmitter, cable & holder
- 1 x 2m Coaxial cable
- 1 x 15m Camera connection cable
- 1 x Clips & fixings
- 1 x Installation & operation manual

There are a number of accessories available to expand your observation system:

- YD88V Extra Camera with Audio & PIR
- GG72P Colour Camera with Audio & PIR
- YD89W 15m Camera Cable
- VD09K 50m Camera Cable
- YD92A 15m Camera Extn.Cable & Connectors

## Mini CCTV System

The Mini CCTV system is the ideal portable 'watching' system for use in a commercial environment or within the home. In fact, it's adaptable and affordable enough to be used in a wide variety of situations - from a shop security system to monitoring activity on a production line or simply keeping an eye, literally, on the baby! The sensitive fixed lens camera supplied has a built-in hypersensitive infrared LED for night viewing (at 0.2 lux) and a high speed auto-iris function for a constantly clear image in daylight or bright artificial light (at 20 lux). The built-in microphone ensures that you can hear as well as see everything that's going on. The pack includes a 115mm (4 1/2 in.) black and white monitor, clip holder, desk top stand, 12V power adaptor and 20m connecting cable.

**Specification**

## CCTV System

- ★ 10" Monitor with 4 way switching
- ★ Easy to install and operate
- ★ Compact, lightweight and versatile
- ★ High resolution picture
- ★ Low lighting capability
- ★ Manual or auto camera selection
- ★ 2 way audio monitoring
- ★ Can be connected to VCR

This compact, versatile system comes with one camera but can be used with up to 4 cameras without the need for expensive, additional hardware. The 10" monitor has a built in 4 way switching unit which allows manual switching or automatic scanning of selected cameras with an adjustable switching speed. There is an intercom facility to allow two way speech which also makes this system ideal for access control. The camera comes with a choice of universal bracket or clamp and connecting cable. Supplied complete with full operating instructions and 12 month guarantee. Additional cameras available separately (VD01B).

## Cameras

### Monochrome CCTV Camera

- ★ Compact and robust
- ★ Highly sensitive
- ★ Excellent, clear image
- ★ Easy to install and use
- ★ Easy to conceal
- ★ Accepts standard C-mount or CS-mount lenses

This camera is a compact, high performance, general purpose security camera. It features a highly sensitive 9mm interline transfer CCD (Charge Coupled Device) which produces a sharp, clear black & white image in a wide range of lighting conditions. This camera also features a connection for lenses with auto-iris.

Although this camera is a highly sophisticated device it's actually very simple to use. Just fit a suitable lens (not included), plug in a 12V DC regulated power supply (not included), mount in a convenient location and connect to a monitor or VCR. This unit is supplied with C-mount ring adaptor, mounting block for optional top mounting, fixing screws and allen key.

**Specifications**

Pickup device	9mm interline transfer CCD
Resolution	500(H) x 582(V) Pixels
Horizontal resolution	420 TV lines
Sensitivity	0.02 lux / f1.2
Lens mount	C or CS type

Power source 12V DC, 120mA Regulated  
Dimensions 42(h) x 47(w) x 100(l)mm  
Operating Temp. -10°C to +50°C

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	4+	10+	1+
YD66W 1	CCD Camera Mono	£119.140	£116.000	£98.990	£139.990

## Colour CCTV Camera

- ★ High quality, full colour image
- ★ Compact and robust
- ★ Highly sensitive
- ★ Easy to install and use
- ★ Accepts standard C-mount or CS-mount lenses

As with the camera above, this camera gives a crystal clear image at low light level. The difference being that this camera gives a superb full colour image. The output is a standard composite video signal via a BNC connector. There is also a connector for lenses with auto iris.

### Specifications

Pickup device 9mm interline transfer CCD  
Resolution 500(H) x 582(V) Pixels  
Horizontal resolution 380 TV lines  
Sensitivity 1.0 lux / f1.2  
Lens mount C or CS type  
Power source 12V DC, 150mA Regulated  
Dimensions 42(h) x 47(w) x 100(l)mm  
Operating Temp. -10°C to +50°C

## C-Mount Lenses

**NEW EXTENDED RANGE**

A range of fixed-iris lenses suitable for cameras with standard lens C-Mounts. These lenses range from wide angle to telephoto. Wide angle gives maximum coverage at the expense of detail. Telephoto lenses are ideal for observing distant objects in high detail. These lenses are colour corrected and suitable for both colour and black & white cameras.

Code	Focal length	Viewing Angle	Typical Coverage

## Miniature CCTV Camera

- ★ Integral high performance lens
- ★ Compact, modern design
- ★ Highly sensitive
- ★ Excellent, crystal clear image
- ★ Easy to install and use
- ★ Ideal for a range of applications

This very compact and robust general purpose security camera features a highly sensitive 9mm interline transfer CCD (Charge Coupled Device) which guarantees a sharp, clear black & white image in a range of lighting conditions. Tough and very compact, it is suitable for installation in a wide variety of locations including shops, offices, warehouses, pubs or the home. This camera is ideal for situations where discrete observation is desired. It is small enough to be inobtrusive and can be easily concealed. Supplied with integral lens, mounting bracket, screws and fixings. This unit is supplied complete with the necessary 12V DC regulated power supply.

### Specifications

Pickup device 9mm interline transfer CCD  
Power source 12V DC regulated  
Operating Temp. -10°C to +50°C

## External Camera Housing

An extruded aluminium, weatherproof camera housing with adjustable/removable cowl. The front and back panels are plastic with a glass insert at the front and two water tight grommets at the rear for cable entry. An adjustable mounting plate inside and choice of fixings on the outside makes it suitable for most applications.

## Quad Processor

A range of 3 quad processors that allow four separate camera images to be displayed simultaneously on one monitor.

### Basic B&W (MU75S)

- ★ Option to watch a full or quadrant picture
- ★ Provides an auto sequential switching function and the dwell time is adjustable (1-15 seconds)
- ★ Auto video loss and alarm detection, producing two different alarm sounds
- ★ The alarm can be connected to existing alarm systems
- ★ Adjustable Gain controls for each camera input

### Specifications

Digital Memory 512 x 512 pixels, 256 grey scale  
Display Rate 25 fields / Second

### Real Time B&W with Time & Date(CD07H)

- ★ High resolution quad picture with real time refresh rate
- ★ Built-in Time & Date generator plus 8 character camera title
- ★ Setup menus, easy to operate
- ★ Looping camera outputs for use with other accessories
- ★ Auto video loss detection and alarm indication
- ★ Records time, date and channel of video loss

### Specifications

Digital memory 1024 x 512 pixels (full screen)  
512 x 512 (quadrant screen)  
Sampling rate 14.318 MHz  
Refresh rate 50 frames / Second

### Real Time Colour (MU76H)

- ★ Real time refresh rate with 16 million colours
- ★ Auto sequencing function with adjustable dwell time (1 - 15 seconds)
- ★ Option to watch full screen or quadrant picture
- ★ Auto video loss and alarm detection, producing two different alarm sounds

### Specifications

Digital Memory 512 x 512 pixels  
Refresh rate 50 fields / Second

All units share the following:

## Board Cameras

### Standard Camera Module (B&W)

A small board camera, ideal for security and covert surveillance. The Camera PSU and Cable kit, MU45Y, is recommended for easy installation and operation of this camera. The camera comes with a

3 way miniature pre-wired plug and socket with the following connections:

1. +12V (denoted by angled corner)
2. Gnd
3. Video Out

### Specification

Image sensor 1/3in CCD, 320,000 pixels  
Scanning system 2:1 Interlace  
Resolution 500(H) x 582(V) pixels  
Horizontal Resolution 380 TV lines  
Scanning Freq. H: 15.625 KHz±1%  
V: 50Hz±1%

Min Illumination 1 lux, f2.0  
lens 3.6mm, f2.0  
Power Supply 12V DC±1V, <100mA  
Dimensions 37(w) x 38(h) x 25(d)mm  
Weight 30g

Retail Unit Price each (inc. VAT).

Order Code	Type 18403	Price each exc. VAT	inc. VAT each
MS06G 1	Cam Mod B/W	£63.820	£74.990

### B & W Camera Module with Infra Red LEDs

A small CCD video camera capable of producing a monochrome picture from both normal light and infra-red light with good resolution and detail. The infra-red capability makes the camera ideal for security applications. It includes six IR LEDs which together act as an infra-red lamp for IR illumination in the dark with a range of 2 to 3 metres.

### Specification

Image sensor 1/3in CCD, 320,000 pixels  
Scanning system 2:1 Interlace  
Resolution 500(H) x 582(V) pixels  
Horizontal Resolution 380 TV lines  
Scanning Freq. H: 15.625 KHz±1%  
V: 50Hz±1%

Min Illumination 1 lux, f2.0  
lens 3.6mm, f2.0  
Power Supply 12V DC±1V, <160mA  
Dimension 54(w) x 38(h) x 25(d)mm  
Weight 33g

The Camera PSU and Cable kit, MU45Y, is recommended for easy installation and operation of this camera. The camera comes with a 3 way miniature pre-wired plug and socket with the following connections:

1. +12V (denoted by angled corner)
2. Video Out
3. Gnd

Retail Unit Price each (inc. VAT).

Order Code	Type 23013	Price each exc. VAT	inc. VAT each
MS05F 1	Cam Mod B/W w IREDS	£63.820	£74.990

### High Quality Extra Small B & W Camera

An extra small board camera, ideal for security and covert surveillance. The Camera PSU and Cable kit, MU45Y, is recommended for easy installation and operation of this camera. The camera comes with a 4 way

miniature pre-wired plug and socket with the following connections:

1. +12V (pin 1 nearest lens)
2. Gnd
3. Video Out
4. Not connected

### Specification

Image sensor 1/3in CCD, 320,000 pixels  
Scanning system 2:1 Interlace  
Resolution 500(H) x 582(V) pixels  
Horizontal Resolution 380 TV lines  
Scanning Freq. H: 15.625 KHz±1%  
V: 50Hz±1%

Min Illumination 1 lux, f2.0  
lens 3.6mm, f2.0

### HQ B & W Camera Module with Infra Red LEDs

A small, high quality board camera, ideal for security and covert surveillance. This board replaces our popular AY16S camera. The Camera PSU and Cable kit, MU45Y, is recommended for easy installation and operation of this camera. The camera comes with a 3 way miniature pre-wired plug and socket with the following connections:

1. +12V (denoted by angled corner)
2. Video Out
3. Gnd

### Specification

Image sensor 1/3in CCD, 320,000 pixels  
Scanning system 2:1 Interlace  
Resolution 500(H) x 582(V) pixels  
Horizontal Resolution 380 TV lines  
Scanning Freq. H: 15.625 KHz±1%

MS37S 1	HQ Cam B/W w IREDS	£85.090	£99.990
MU45Y	SCART+PSU Kit	£21.260	£24.990

### High Quality Pinhole Camera

The ultimate high security camera – a tiny, good quality monochrome video camera that can be effectively incorporated into security/access systems without being seen by the people you are watching. The unit is discrete, very easy to conceal and operates well in poorly lit locations. This board

replaces our popular MB20W.

Specification	
Image sensor	1/3in CCD, 320,000 pixels
Scanning system	2:1 Interlace
Resolution	500(H) x 582(V) pixels
Horizontal Resolution	380 TV lines
Scanning Freq.	H: 15.625 KHz±1% V: 50Hz±1%
Min Illumination	1 lux, f2.0
lens	3.6mm, f2.0
Power Supply	12V DC±1V, <100mA
Lens:	f= 5.5mm/F2.0
Dimensions:	38 x 37 x 17mm

The Camera PSU and Cable kit, MU45Y, is recommended for easy installation and operation of this camera. The camera comes with a 3 way miniature pre-wired plug and socket with the following connections:

1. +12V (denoted by angled corner)
2. Gnd
3. Video Out

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MS38W 11	Pinhole Camera	£85.090	£99.990
MU45Y	SCART+PSU Kit	£21.260	£24.990

## High Quality C-Mount Camera Module

A small CCD video camera capable of producing crystal clear pictures in low light conditions. This board is a replacement for our popular YD65V. The unit takes a standard C-Mount lens (not supplied). Select one from our range to suit your particular application.

Specification	
Image sensor	1/3in CCD, 320,000 pixels
Scanning system	2:1 Interlace
Resolution	500(H) x 582(V) pixels
Horizontal Resolution	380 TV lines
Scanning Freq.	H: 15.625 KHz±1% V: 50Hz±1%
Min Illumination	1 lux, f2.0
Power Supply	12V DC±1V, <100mA

The camera comes with a 4 way miniature pre-wired plug and socket with the following connections:

1. +12V (denoted by angled corner)
2. Gnd
3. Video Out

The Camera PSU and Cable kit, MU45Y, is recommended for easy installation and operation of this camera.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MS39N 11	CCD Camera C-Mount	£85.090	£99.990
MU45Y	SCART+PSU Kit	£21.260	£24.990

means fast  
service and best  
value for money

## Sub-Miniature Colour CCD Video Camera

A miniature CCD camera capable of producing a superb full-colour picture in normal and reduced lighting conditions. This board replaces our popular AR59P. The fixed focus lens allows the CCD element to show a high degree of detail without the need for any special optics. This is because all the focusing is controlled by the in-built electronic iris. All the electronics of the camera are mounted on three press-out printed circuit boards. The three small sub-assemblies are interconnected by ribbon cable so that the module can be arranged to fit into a small enclosure. These sub-assemblies reduce the overall width to 42mm. The module requires a nominal 12V DC at 200mA and because it has an on-board regulator this voltage can vary from +11V to +13V DC.

Specification	
Area image sensor:	1/4 in interline transfer type CCD, 290,000 pixels
Resolution	752(H) x 582(V) pixels
Scanning system:	625 lines, 2:1 interlace
Scanning Freq.	H: 15.625 KHz±1% V: 50Hz±1%
Horizontal Resolution	380 TV lines
Standard illuminance:	1,000 Lux, f4.0, (3,200°K)
Minimum illuminance	2.5 Lux, f1.4
Power supply voltage:	11 to 13V DC
Current consumption:	200mA or less
Operating temp. range:	-10 to +45°C
Dimensions	
Image Board	42(w) x 42(h) x 33(l)mm
Main Board	42(w) x 42(h) x 44(l)mm
Power	42(w) x 42(h) x 12(l)mm
Weight:	Approximately 52g

There are several feature connectors that give access to white balance manual over-ride, manual iris shutter speed over-ride and 8 character camera title generator. The Camera PSU and Cable kit, MU45Y, is recommended for easy installation and operation of this camera.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MS40T 11	CCD Colour Camera	£212.750	£249.990
MU45Y	SCART+PSU Kit	£21.260	£24.990

## Camera PSU and Cable Kit

A total solution for powering and connecting to our range of board camera modules and covert cameras. The kit contains a quality plug-in mains adaptor and a 20m pre-wired cable. One end of the cable has a SCART plug, an audio phono plug, a video phono plug and a DC power socket. The lead from the mains adaptor is plugged into the DC socket and either the SCART plug or audio and

video phono plugs are plugged into your TV, monitor or VCR.

The other end of the cable has four tinned wires which attach to the camera:

Red	+12V DC
Yellow	Video
Black	Common Ground (-)
Blue	Audio

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MU45Y	SCART+PSU Kit	£21.260	£24.990

## Covert Cameras

### Covert PIR Camera with and without Sound

This innocent-looking PIR hides a secret: a highly miniaturised camera! This non-working internal PIR comes fitted with a low light, mono CCD camera incorporating an electronically built-in auto iris shutter. Excellent coverage is achieved by the built-in wide angle lens ensuring discrete surveillance. This unit is also available with a super-sensitive built-in microphone to transmit sound as well as pictures. Connections are made using a simple screw terminal block. 3 wires are required for the video only model, 4 wires for the audio/video model.

The Camera PSU and Wiring Loom (MU45Y) is designed specially to power this camera and allows easy connection to TVs, Monitors and VCRs.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MU24B 1	Covert PIR Camera	£110.620	£129.990
MU25C 1	PIR Cam with Audio	£127.650	£149.990
MU45Y	SCART+PSU Kit	£21.260	£24.990

## Covert 'Smoke Detector' camera with/without Sound

An innocent looking Fire Detector? No! This working smoke detector is fitted with a highly miniaturised pinhole camera. You can discreetly monitor rooms and corridors with this low light mono CCD camera that incorporates an electronic auto iris shutter that adjusts automatically to a wide range of light levels.

Excellent coverage of the designated area is achieved by the built-in wide angle lens. The unit is also available with super-sensitive built-in microphone to transmit sound as well as pictures. 3 core cable for the video model and 4 core cable for the audio/video model is connected at the rear of the smoke detector using a simple screw terminal connecting block.

The Camera PSU and Wiring Loom (MU45Y) is designed specially to power this camera and allows easy connection to TVs, Monitors and VCRs.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MU26D 1	Smoke Det Camera	£127.650	£149.990
MU27E 1	Smoke Det Cam/ Audio	£144.670	£169.990
MU45Y	SCART+PSU Kit	£21.260	£24.990

## Covert 'Clock' Camera

Discreetly monitor your living room, reception, office or any such area. This attractive, working, battery-operated clock houses a low-light, mono CCD camera incorporating a built-in electronic auto iris shutter to cope with wide variances in lighting conditions. Excellent coverage of the designated area is

achieved by the built-in wide angle lens. Connections are made at the rear of the clock using 3 core cable to a simple screw terminal connecting block.

The Camera PSU and Wiring Loom (MU45Y) is designed specially to power this camera and allows easy connection to TVs, Monitors and VCRs.>

MU23A 1	Covert Clock Camera	£127.650	£149.990
MU45Y	SCART+PSU Kit	£21.260	£24.990

## Dummy Cameras

### Dummy Camera

A dummy camera based on our security camera housing AG00A, offering additional protection to an existing installation, or to provide a low-cost alternative. Flashing LED requires 1 x pp3 battery (order code JY49D)

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
BJ61R	Dummy Camera WLED	£21.260	£24.990
JY49D	Duracell PPS	£2.800	£3.290

### Dummy Camera

This very realistic dummy camera can be used as an addition to your existing security system or on its own as a deterrent where the cost of a CCTV system is prohibitive. Its robust metal case and life like lens coupled with a BNC and DC socket on the back make it indistinguishable from the real thing. The unit comes in black with CCTV markings clearly displayed in bold white lettering.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YD69A 1	Dummy Camera	£29.770	£34.990

## Dummy Camera Set

Ultra realistic dummy camera, utilising a genuine mini security camera housing and mounting bracket. Supplied complete with coaxial cable and professional f connectors for a totally convincing installation. In-built flashing LED requires optional power adaptor, e.g. XX09K.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MS11M	Dummy Camera	£21.260	£24.990

## Accessories

### Infra Red Security Lamp

All CCD mono cameras operate well into the infra-red spectrum. This makes them ideal for use at night and for covert surveillance. This infra red spotlight emits a strong beam of infra red light that is invisible to the naked eye yet brightly illuminates an area when viewed through a camera. The unit has a threaded mount on the back which allows it to be attached to standard CCTV camera mounting brackets and an on/off switch. Supplied complete with 24V AC mains adaptor.

Specification:

Light source	168 Infra Red LEDs
Wave Length	890nm
Light Angle	30°
Range	15m
Power	24V AC (from PSU)/ 3W
Operating Temp	-10°C to 40°C (14 F-104 F)
Dimensions	17(W) x 115(H) x 40(D)mm

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
MU28F 1	IR Security Lamp	£127.650	£149.990

## External Infra Red Spotlight

A superb, high quality infrared illuminator that is much more efficient than conventional IR lamps that merely filter out the visible part of the spectrum from a standard tungsten filament bulb. This lamp uses the latest solid state IR technology to produce illumination that is virtually invisible to the human eye yet is directly matched to the spectral response of CCD cameras.

Ideal for both commercial and domestic applications with extremely low running costs. This mains-powered device is supplied with a universal pan and tilt mounting bracket.

Operating ranges of up to 50m are obtainable depending upon camera performance. This unit is sealed to IP65 (totally dustproof and protected from low pressure water from all directions).

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
GG74R 1	Ext IR Light	£144.670	£169.990

**All Customers**  
No additional freight charges for heavy items

## Event Capture Recorder

The Event Capture recorder is a low-cost alternative to the professional 'time-lapse' recorder, offering its own unique combination of features. Its advantages include real time recording with sound and maintenance free standby operation - no routine tape changing. With low power consumption, it is designed to offer affordable protection and many years of trouble-free service.

The Event Capture Recorder will record the output from any security or surveillance camera. It may be triggered by virtually any existing alarm system or by a dedicated detector device, e.g. PIR, door switch, etc. Once activated, it records for a pre-programmed time and then waits for another trigger. Recording begins within 2 seconds of the trigger signal. The record time may be set from 1 minute to continuous and up to 8 hours of total record time is available by selecting 'Long Play'. The VHS tape can store up to 480 'events'

### Rear Panel Connections:

**PIR Detector** - This comprises a 12V output and a Normally Closed trigger input, designed to allow any standard PIR to trigger the recording.

**Trigger** - A general purpose Normally Open trigger input that will accept a variety of inputs including connection to the auxiliary output of an existing alarm.

**Aux Power** - This provides power for external devices. This is primarily designed to power cameras at 12V DC 500mA.

**Relay** - This is output which is an uncommitted Normally Open relay contact. The maximum load is 125V 500mA. You must not connect mains devices directly to this relay. The relay closes during record, which allows other devices to be triggered or powered at this time. E.g. this can be used to switch the power to a 12V camera such that it operates only when required.

**Mains 240V AC or 12V DC operation.** Supplied complete with remote control. Don't let them get away with it, capture the event!

Retail Unit Price each (inc. VAT).

AG00A 1	Security Camera Case	£19.560	£22.990

## Security Lighting

### Floodlight Security System with PIR

A high-powered floodlight, controlled by a built-in passive infra-red intruder sensor. This practical outdoor security system offers outstanding value for money and at the flick of a switch it can also double as illumination for outdoor events, such as parties and barbecues. When installed, the infra-red sensor provides detection over a wide 110° degrees of arc with a range of 15m.

### Specification

Power requirements: 240V AC 50Hz at 2-1A

Maximum lamp rating: 500W  
Detection range: 15m (50ft.) at 20°C  
Horizontal detection angle: 110°

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS99H 5	IR Halogen Lamp+Tube	£13.600	£15.990

## Replacement Halogen Tubes

Halogen tubes to fit YS99H, rated 300W or 500W. Full details can be found in the opto-electrical section of this catalogue.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
KP50E	300W Halogen Tube	£2.540	£2.990
JX53H	500W Halogen Tube	£2.540	£2.990

## Mini Floodlight with PIR

A compact high-powered floodlight, controlled by a built-in passive infra-red intruder sensor, similar to our popular standard security floodlighting system (GK05F). Like its bigger brother, this outdoor security system offers outstanding value for money, and at the flick of a switch can also double as a source of general illumination for outdoor events. The lamp is not only a useful deterrent against intruders at night, it is also a handy automatic welcoming light for you, your family and friends. The lamp is prevented from operating wastefully during daylight hours.

Tube not supplied, requires tube: DM51F

### Specification

Operating voltage: 240V AC 50Hz  
Maximum lamp rating: 150W  
Detection range: 12m (39ft.) at 20°C  
Horizontal detection angle: 110°

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
DM50E 2	Mini Halogen Lamp	£16.160	£18.990

## 150W Halogen Tube

A halogen tube rated at 250V AC, 150W, for use with the mini halogen lamp DM50E.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
DM51F	150W Halogen Tube	£2.540	£2.990

## Call and Collect

Maplin has more stores Nationwide than ever before. See the maps at the front of the catalogue for the nearest one to you.

## Twin Spot PIR and Lamps

### ★ Bulbs Included

A stylish twin spot PIR activated wall lamp. Ideal for conservatories and hallways, etc. Automatically triggered when approached by the built in PIR sensor with a range of approximately 90° by 6m. Designed to work with PAR38 Edison Screw Floodlights (supplied). Fully adjustable sensor direction for both lamps and the sensor ensure the unit will illuminate the required area when required.

Supplied with full operating and installation instructions. Spare bulbs available (RZ26D).

Retail Unit Price each (inc. VAT).

## Outdoor Carriage Lamp with PIR Sensing

This stylish and elegant carriage lamp with an in-built PIR sensor is the ideal way to offer a warm welcome to your visitors at night and help to deter night-time intruders. The PIR sensor can be rotated through 330° horizontally to set up the ideal detection angle for your chosen location. The lamp is wall mounted and requires connection to the household mains supply. It takes ordinary domestic light bulbs (up to 100W, not supplied) with bayonet-type connector.

Retail Unit Price each (inc. VAT).

		1+	10+	25+	1+
DN14Q3	Outdoor Lantern	£23.820			£27.990

## PIR Automatic Lamp

Eliminate the need to fumble around for a light switch in all those dark spaces – stairways, basements, storage areas, garages, car park entrances etc – with this Passive Infra Red automatic lamp. It will detect any movement/body heat within its 6 metre range (90° detection angle), light the area with its extra bright krypton bulb (supplied) and keep the area lit until 20 seconds after all movement has ceased within its range. Can be used free standing or wall mounted. Requires 4 'AA' type batteries or a suitable 6V power adaptor (not supplied).

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	10+	25+	1+
YE24B	PIR Auto Lamp	£8.500			£9.990

## Photo-Electric Control

A photo-electric control especially designed for use in both industrial and domestic installations. The photocontrol is manufactured from high quality materials to give a long and reliable performance. The housing is moulded from polycarbonate, for excellent mechanical strength and high impact resistance. The opaque housing eliminates false operation due to light feedback from within the fixture. A clear ultra-violet stabilised window prevents cracking or clouding due to sunlight. A bimetallic switch provides time delay to prevent turn-off due to temporary ambient light conditions, i.e. car headlights. Overall size 52 x 26 x 41mm (includes 'eye', excludes cables).

### Specification

Off Light Level:	200Lux
Photocell:	19.05mm <sup>2</sup> (0.75in <sup>2</sup> ) cadmium sulphide (surface passivated)
Switch:	Single pole, single throw normally closed
Temp. range:	-40°C to +60°C

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	5+	10+	1+
KR47B	PhotoElectric Control	£9.350	£6.640	£7.520	£10.390

## SS4 Photo Electric Switch

This photo electric control unit is designed to switch on at dusk and off at dawn and incorporates a standard photo electric switch and a translucent plastic dome.

Screws and wall plugs for mounting the unit are supplied.

### Specification

Light switching levels:	70 Lux On, 210 Lux Off
Voltage range:	240V AC, 50Hz
Max current switchable:	5A
Max power rating:	1200W
Standby current:	30mA

Retail Unit Price each (inc. VAT).

## Security Timers

## Programmable Security Light Switch

Smiths-Timeguard

RECENTLY INTRODUCED

- ★ Easy to install
- ★ Replaces standard lightswitch
- ★ Concealed programming panel
- ★ Easily programmed
- ★ Light sensor prevents operation during day light hours

Designed to operate when you are away from home, this light switch will turn a light on automatically when it gets dark and can be programmed to turn off again up to 8 hours later. It can also act as a normal on/off or 2 way light switch.

Bulb size 40W minimum, 300W maximum.

Rated at 240V AC 50Hz

Can only be used with Fluorescent lighting if used in conjunction with the Strip Light Adaptor -VJ65V. Not suitable for low energy bulbs.

Retail Unit Price each (inc. VAT).

## Passive Infra Red Lightswitch

Smiths

- ★ Simple to use
- ★ Replaces existing lightswitch.
- ★ Turns light on when movement is detected.
- ★ Light level control for dusk-till-dawn switching.
- ★ Light on time adjustable.
- ★ Full instructions included.

This Passive Infra-Red Lightswitch is for indoor use and designed to automatically switch on when it detects body heat turning off again after a preset length of time from 5 seconds to 5 minutes. The lightswitch works in conjunction with a light level control which provides a dusk-till-dawn switching operation in response to body movement. It can also act as a normal On/Off or 2-way lightswitch. Bulb size : 40W minimum / 300W maximum.

## 24-Hour Segment Timeswitch

Smiths-Timeguard

- ★ Simple to program & operate
- ★ Plug in control for all 13A appliances and lamps
- ★ Switches on and off at preset times.
- ★ Manual override.

Easily set by its captive segment dial this 24Hour plug in time controller will automatically switch appliances On and Off at preset times during the day over a 24-Hour cycle. With a minimum On/Off switching of 15 minutes the unit can switch up to 96 times per day. You can switch your appliance On and Off at any time by using the self cancelling switching rider on the top left of the unit. Rated at 240V AC 50Hz.

Retail Unit Price each (inc. VAT).

## Vehicle Alarms

### Vixen Vehicle Alarm Systems

A range of low-cost, high quality, vehicle alarm systems, that includes a compact, easy to install, basic model; a compact expandable model, and a top-of-the-range, battery backed-up, fully expandable system. All the alarms include a small remote control that has an in-built dedicated code. This code can be one of 59,000, programmed into the alarm system during installation. This makes it virtually impossible for another remote control to arm/disarm your alarm. An additional feature of the alarm is a 'self learning' ability, where, on set-up, the alarm memorises the code from the remote transmitter. The alarm can be armed/disarmed from a maximum of two different codes, from two transmitters. Should one of the transmitters be lost or stolen, the alarm can be reprogrammed to accept a replacement transmitter's code, and in the process rendering the lost unit incapable of operating the alarm. Additionally, the remote control also provides a 'panic' facility, this allows the alarm to be activated if you are personally attacked within 30-5m (100ft.) of your vehicle. All the alarms feature a very loud 115dB siren, which should deter the most determined thief, and a fully adjustable shock sensor - any attempt to break into the vehicle by breaking a window, will trigger the alarm. Additionally, opening any door, the boot or bonnet resulting in a courtesy light coming on, will also trigger the alarm. Also, all the alarms feature a 'warn away' facility, where a slight disturbance to the vehicle will result in a subdued response, making any potential thief aware an alarm is fitted. This feature also greatly helps reduce false alarms. Should the tampering or disturbance continue after the warn away has sounded, then the full alarm response will be triggered. The alarms can be set to operate with vehicles that have an electric cooling fan that can operate when the ignition is switched off. By cutting one wire, this facility will not cause the alarm to trigger. A range of accessories is also available and includes a remote receiver that can be used to operate house lights or possibly an automatic garage door, if this facility is fitted.

### Remote Vehicle Alarm Model 6650

- ★ Remote Keyfob Operation
  - ★ Choice of 5 Siren Sounds plus Multi-tone
  - ★ Remote Shock Sensitivity Setting
- This low cost alarm is an easy to install one piece design, connected to your vehicle by two (or three) wires. When programmed with the remote control code, the alarm is installed and is ready for use. When armed, any forced entry into the vehicle which will turn on an interior light, or any sudden 'shock' to the vehicle (if used) is a Ground Trigger input for use with optional add-on accessories like boot and bonnet switches or ultrasonic sensors. The alarm is supplied complete with comprehensive fitting instructions, fixing kit, warning stickers and one keyfob transmitter. Additional keyfob transmitters are available separately, as a spare, or for a second user of the vehicle.

### Expandable Remote Vehicle Alarm Model 6652

- ★ Remote Keyfob Operation
  - ★ Choice of 5 Siren Sounds plus Multi-tone
  - ★ Remote Shock Sensitivity Setting
  - ★ Car Locator Facility
- An expandable version of the basic model (ME67X) that includes two pin switches, to provide protection for the boot and bonnet. An LED status indicator is included which, when mounted on the dash, provides a very visible indication that the alarm is active. Additionally, the alarm has a high-current pulsed output that is used to 'flash' sidelights, indicator lights or dipped beam headlights, in fact any lighting load up to 10A. The alarm has a grounded trigger input that can be used with an ultrasonic detector or the very sensitive motion detector. Additionally, an output is provided to operate the remote door lock interface. The alarm remote control features two buttons - the upper button is used to arm/disarm the system, activate the 'warn away' facility and for personal attack. The second button is used to deactivate the in-built shock sensor circuit. The alarm is supplied complete with comprehensive fitting instructions, fixing kit, warning stickers and one keyfob transmitter. Additional keyfob transmitters are available separately, as a spare, or for a second user of the vehicle.

### Expandable Remote Vehicle Alarm with Battery Back-up facility Model 6645

- ★ Remote Keyfob Operation
  - ★ Choice of 5 Siren Sounds plus Multi-tone
  - ★ Ignition Disable Facility
  - ★ Dual Flashing Lights Output
  - ★ Remote Shock Sensitivity Setting
  - ★ Car Locator Facility
- A top-of-the-range vehicle alarm system that incorporates all the features of MM36P including LED status indicator, built-in parking light flasher, plus an in-built engine ignition disable facility. When the alarm is armed, the ignition coil is disabled, the engine will turn, but will not start. An alkaline 9V PP3 back-up battery JY49D (not included) provides additional security. When armed, if the main power, or earth connection to the alarm, is broken, the alarm will be triggered. A key operated switch is provided on the alarm that will bypass all the alarm functions when operated; this is convenient when

the vehicle is being serviced or valeted. Inputs and outputs are also provided for connection to the range of optional extras that can be used with this alarm to produce a very comprehensive and sophisticated vehicle alarm system. The alarm is supplied complete with comprehensive fitting instructions, fixing kit, warning stickers and one keyfob transmitter. Additional keyfob transmitters are available separately as a spare or for a second user of the vehicle.

## Compact Ultrasonic Detector

A compact one-piece unit that will detect the breaking or removal of glass, and will sense intrusion or movement within the vehicle. The unit incorporates adjustable sensitivity and an LED that is used for testing the unit. The small size makes it ideal for siting the unit on a parcel shelf or dash providing a very visible deterrent. The detector is easy to install requiring just three leads to be connected, one to a positive (+) 12V DC, one to earth and one to the alarm system. Supplied with 1m of 3-core cable. Size 85 x 60 x 30mm.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT			inc. VAT each
		1+	10+	25+	1+
CR38R	Comp U/Sonic Detct	£17.010			£19.990

## Ultrasonic Detector with Separate Sensors

An ultrasonic detector with detached sensors attached to the control box by leads 2.5m long. The small control box can be fixed in any convenient position such as under the dash or in the boot. The two sensors can be mounted at suitable positions inside the vehicle. The control box is fitted with a test LED and adjustable sensitivity, and requires three leads (5m long) to be connected; two to the battery supply and one to the alarm system.

		1+	10+	25+	1+
CR40T	Motion Detector	£4.240	£3.640	£3.230	£4.990

## Remote Door Lock Interface

This device is intended to interface the alarm system with a vehicles central door locking system. When the alarm is armed the doors will automatically be locked and unlocked when the alarm is disarmed. The door lock pulse time can be increased from 0.6 to 3.6 seconds, for cars that require a longer pulse time. It is

important to ascertain the type of door locking mechanism fitted to your vehicle e.g., plungers, vacuum, relay etc., so that the module can be installed correctly. Some vehicles may require extra external relays to suit the vehicles requirements.

Retail Unit Price each (inc. VAT).

## Push Switch with Cover

A push-to-open switch with weatherproof cover for use in motor vehicles. Suitable for use with alarm systems as a door/boot/bonnet sensing switch, or simply as a courtesy light switch operated by a door or the boot lid. The switch is provided with a standard 6.35mm (1/4in.) blade terminal for accepting push-on receptacles, such as HF10L, and notches in the push rod as a guide for cutting to fit any installation. Maximum throw is 6mm.

## Starter Immobiliser

A simple to install starter immobiliser that provides additional protection for your car. When the unit is activated, the LED status indicator flashes when the ignition is turned off. To start the car the driver must briefly activate a designated switch to disarm the unit - the driver will have 15 seconds to start the car. The process can be repeated if the car does not start within 15 seconds. A valet switch is included to override the unit for servicing.

Retail Unit Price each (inc. VAT).

AG89W	Interrupt Starter	£12.750	£10.350	£9.340	£14.990

## Remote Receiver

This receiver can be used to control an electric garage door opening system, exterior house lights etc., by pressing the button on your remote transmitter, as supplied with the Vixen car alarm systems. Alternatively, a second transmitter can be purchased if preferred (CR43W). The receiver can switch up to 10A, and can be programmed to provide a momentary pulsed output, a latching output, a 60 second timed output or a 3 minute timed output. The receiver has a range up to 45-7m (150ft.) and requires a 12V DC power supply (not included). Please note that the remote receiver is NOT supplied with a transmitter. Maximum switching voltage is 50V. A suitable rated slave relay will have to be used if mains operated devices are to be used in conjunction with this device.

## Remote Alert Paging Alarm

Nowadays alarms sounding in the street are a common occurrence. So much so that most people simply ignore them. This paging alarm is different. If your alarm goes off you know about it immediately. The pager can be worn using the belt-clip or slipped into a pocket of handbag. If the alarm is activated then the pager emits an urgent warning sound alerting you to the fact that your car is under threat. The pager operates upto 100m and is fully DTI approved. The pager incorporates automatic range checking and will sound the alarm if it is out of range, tampered with or subject to interference (jamming).

Manufactured in the UK, the Remote Alert protects cars, vans, trucks, motorcycles, garages, sheds, outbuildings, etc. The basic kit monitors the voltage drop caused by the courtesy light operating in the vehicle. There are inputs to interface to existing alarm systems and a complete upgrade kit is available that includes ultrasonic detectors.

Basic kit (MU20) contains:  
**Alarm unit** - fitted in vehicle or building to be protected. Trigger input and outputs available to extend capabilities of alarm and a disable input that can be connected to offer automatic dis-arming with ignition or hidden valetting switch, etc. Operates on 12-24V DC.

**Pager** - carried with you.  
**Plug-in fused power lead** - designed to fit a cigar lighter socket for instant plug and go use.

Upgrade kit (MU21) contains:  
**Wiring loom** for permanent installation; generous 3m length with all fuses and connectors.  
**Ultrasonic movement sensors** complete with fitted leads and mounting stalks, range 5m.

Retail Unit Price each (inc. VAT).

YE73D	Plug In LED	£2.540			£2.990

## Sparkrite Car Alarms

Sparkrite is the largest manufacturer of car alarms in the UK and their long history of design and innovation has resulted in a range of products that brings the highest level of security to your vehicle. All products are manufactured to the highest standards using superior quality components and the latest in microchip technology.

The four Sparkrite alarm systems offered here are all microprocessor controlled and will sense any signals which indicate that the car has an intruder and warning them off with an ear-piercing 128dB siren. The SR-100 also includes an immobiliser that will prevent the intruder from simply driving away. All Sparkrite alarms also include an automatic reset that re-activate the alarm once intruders have been repelled.

Every car alarm in the Sparkrite range is easy to fit and features remote control arming and disarming. To help deter car thieves they all come complete with a set of warning stickers and a dashboard mounted LED that flashes when the alarm is armed.

All car alarms in the Sparkrite range can be fitted to any vehicle with a 12V negative earth. Some cars have a fan which runs after the engine has stopped but Sparkrite alarms are programmed to ignore the fan and therefore avoid false alarms.

**Easy Fit Car Alarm  
SR-60**

Sparkrite

- ★ Easy two wire installation
- ★ Radio remote control
- ★ Current sensing & built in shock sensor
- ★ Optional flashing LED

The ultimate Easy fit car alarm. No drilling, No mess, Fitted in 10 minutes. Comes complete with bracket, securing strap and self adhesive pad to give you the choice of fixing method. The self adhesive pad or the securing strap can be used to affix alarm directly onto the car battery if desired, minimising the length of wiring necessary, or if preferred, the bracket may be used as with conventional car alarms. Supplied with full fitting and operating instructions, alarm warning stickers and remote control. A flashing LED is available separately should a further deterrent be required (order code YD23A).

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YD20W 1	Easy Fit Car Alarm	£29.778	£34.990

**Warning Light**

Sparkrite

This LED is designed as a visual deterrent to be used in conjunction with the Easy Fit Car Alarm (order code YD20W). It is easy to fit and an ideal add on for added protection. This LED will flash when used with Easy Fit Alarm (YD20W).

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YD23A	Add On Flashing LED	£2.540	£2.990

**Sparkrite SR-75**

The Sparkrite SR-75 is a simple to fit yet technically advanced alarm system that can be fitted in minutes. It has two sensors systems – a built in shock sensor (with adjustable sensitivity) that will detect any interference with the vehicle and an electronic current sensor that will trigger the alarm if an interior light turns on or the ignition is started.

Once activated, the alarm's high power siren will emit a 128dB ear-piercing tone that is intolerable within the passenger compartment. The alarm system is armed and disarmed with an individually coded remote control transmitter (there are 4 billion individual codes) and the siren will 'chirp' to confirm that an instruction has been received. This remote transmitter can also serve as a remote 'panic' alarm.

The SR-75 includes a socket for an optional plug-in ultrasonic sensor (SR-913 or SR-915) for added security and a door locking control wire suitable for connection to the optional SR-911 Central Door Locking Interface.

Refer to the comparison table for a complete breakdown of the SR-75's key features. The pack contains the compact alarm unit with built-in siren and shock sensor, LED warning light, window stickers, one remote control transmitter, all wiring and components and comprehensive fitting instructions.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS27E 1	Remote Car Alarm	£34.034	£39.990

**Sparkrite SR-85**

The SR-85 compact remote car alarm system incorporates the latest microprocessor technology, offering the ultimate in product reliability and performance. Its unique, easy to fit design ensures easy DIY installation and guarantees many years of trouble free operation.

Like the SR-75, this model has a built-in shock sensor and current sensors but extra security is provided by the addition of a switch sensor that detects the opening of a door (and the boot or bonnet if the optional switches, SR-910, are fitted). The SR-85 includes a socket for an optional plug-in ultrasonic sensor (SR-913 or SR-9015) for added security and a door locking control wire suitable for connection to the optional SR-911 Central Door Locking Interface.

Refer to the comparison table for a complete breakdown of the SR-85's key features. The pack contains the compact alarm unit with built-in siren and shock sensor, LED warning light, window stickers, one remote control transmitter, all wiring and components and comprehensive fitting instructions.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS28F 1	Remote Alarm Plus	£42.540	£49.990

**Sparkrite SR-90SD**

Like the SR-85, this model has current sensors and a switch sensor that detects the opening of a door (and the boot or bonnet if the optional switches,

SR-910, are fitted).

The SR-90SD can also be set up for passive arming – this automatically begins the arming sequence 10 seconds after the last door is closed and the alarm will then be fully armed after a further 20 seconds. The vehicle's hazard lights will flash and the siren will 'chirp' to indicate that passive arming is taking place.

A special feature of the SR-90SD is the addition of a free SR-915 ultrasonic detector in the pack. This unit simply plugs into the car alarm system and provides added protection by detecting entry via the windows or sun-roof. Once armed, the ultrasonic detector fills the interior of the vehicle with invisible sound waves, setting up a steady pattern. Any movement within the vehicle or tampering with the windows or roof will bring about a change in the pattern and set off the alarm.

The SR-90SD includes a door locking control wire suitable for connection to the optional SR-911 Central Door Locking Interface. Refer to the comparison table for a complete breakdown of the SR-90SD's key features.

The pack contains the compact alarm unit with built-in siren, LED warning light, window stickers, one remote control transmitter, all wiring and components and comprehensive fitting instructions. The pack also includes a free ultrasonic sensor.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS29G 1	Remote U/Sonic Alarm	£55.310	£64.990

**Sparkrite SR-100**

The top of the range SR-100 has all of the features and sensors of the SR-90 (including the SR-913 ultrasonic sensor as standard) and also features a starter motor immobiliser – any tampering with the vehicle that sets off the alarm will also completely disable the motor.

Like the SR-90SD, the SR-100 can be set up for passive arming – this automatically begins the arming sequence 10 seconds after the last door is closed and the alarm will then be fully armed after a further 20 seconds. The vehicle's hazard lights will flash and the siren will 'chirp' to indicate that passive arming is taking place.

The SR-100 includes the SR-915 ultrasonic detector as standard. This unit simply plugs into the car alarm system and provides the added protection of detecting entry via the windows or sun-roof. Once armed the ultrasonic detector fills the interior of the vehicle with invisible sound waves, setting up a steady pattern. Any movement within the vehicle or tampering with the windows or roof will bring about a change in the pattern and set off the alarm.

The SR-100 includes a door locking control wire suitable for connection to the optional SR-911 Central Door Locking Interface. Refer to the comparison table for a complete breakdown of the SR-100's key features.

The pack contains the compact alarm unit with built-in siren and shock sensor, LED warning light, window stickers, two remote control transmitters, all wiring and components and comprehensive fitting instructions.

## Sparkrite Central Door Locking Interface SR-911

The central door locking interface can be used in conjunction with any of the car alarms in the Sparkrite range to automatically lock all doors when arming the alarm and open all doors when disarming the system with the remote control transmitter (your car must already feature electrical or pneumatic central locking for this system to work). It is not suitable for use as a stand-alone unit.

The pack includes the interface unit with fixing screws, all necessary cabling and comprehensive fitting and wiring instructions.

It is important to ascertain the type of door locking mechanism fitted to your vehicle, e.g., plungers, vacuum, relay, etc., so that the module can be installed correctly. Some vehicles may require extra external relays to suit the vehicles requirements.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS31J	CLocking Interface	£21.260	£24.990

## SR-913 Ultrasonic Detector Unit

This unit simply plugs into the socket fitted to the SR-75 and SR-85 car alarm systems to provide added protection, by detecting attempted entry via the windows or sun-roof. It is not suitable for fitting as a stand-alone unit.

The ultrasonic detector is adjustable for sensitivity and features a highly visible scanning LED array – designed to deter intruders while the unit is armed. The pack contains the ultrasonic detector with scanning LED array, mounting bracket with fixing screws, a plug-in connector and full installation and operating instructions.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS32K	U/Sonic T-Bar	£23.820	£27.990

## SR-915 Professional Ultrasonic Sensors

The SR-915 is a more discrete ultrasonic alarm system offering the same protection as the SR-913 but without 'advertising' its presence to potential intruders. It simply plugs into the socket provided in the SR-75 and SR-85 car alarm systems or can be used to upgrade the unit provided with the SR-90 and SR-100.

The pack contains two ultrasonic sensors, a central control unit with sensitivity control, all connectors and components for simple installation and full instructions.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS33L	Professional U/Sonic	£23.820	£27.990

## SR-910 Door/Boot/Bonnet Switches

These quality switches are ideal for use in conjunction with the SR-85, SR-90 and SR-100 car alarm systems (and most major brands of car alarm) to provide the added protection offered by detecting the opening of the vehicle's boot or bonnet. If your vehicle does not already feature door switches to operate an internal courtesy light these switches will be needed for your doors too. The pack contains a pair of switches, two fixing brackets with screws and two crimp terminals for wiring.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
YS34M	Door Pin Switch Kit	£4.240	£4.990

## Engine Immobilisers SR-190 & SR-190/2

Sparkrite

### SR-190

- ★ Easy 4 wire installation
- ★ Enable & disable by coded key
- ★ Red/green LED indication
- ★ 2 Digital keys supplied

This easy-fit electronic car immobiliser has been designed for simple installation. The single circuit SR (cuts a single electrical circuit) only 4 wires to connect. It is armed and disarmed by a digitally coded key which is simply touched onto a small, dash mounted receiver. Red and green warning LEDs confirm whether armed or disarmed. Comes complete with full fitting and operating instructions, 2 coded keys and warning stickers.

### SR190/2

- ★ Disables two main electrical circuits for maximum security.
- ★ Enable & disable by coded key
- ★ Red/green LED indication
- ★ 2 Digital keys supplied

This system is designed for easy installation, requiring only two connections to the vehicle's battery, four wires to the immobiliser circuits and one wire for the safety circuit to prevent accidental arming. When armed a red LED illuminates on the dashboard as a visible deterrent. Disarming can only be achieved using the specially coded digital keys (two supplied), indicated by a green LED.

Retail Unit Price each (inc. VAT).

## Motorcycle Alarm

- ★ Motion detection
- ★ Piercing 115dB siren
- ★ Automatic arming and disarming
- ★ Easy to hide
- ★ Easy to install

The MA-100 is a miniature alarm that is very easy to hide and easy to install. Any motion of the bike (the sensitivity is adjustable) will set off the piercing 115dB alarm, alerting everyone nearby that your bike has been disturbed and warning the

## Kryptolok Cycle U-Lock

The Kryptolok originates from the USA, where bike theft is a big problem – particularly in the crime-ridden streets of the big cities. In New York alone, for example, around 100,000 bikes are said to disappear. Kryptonite's locks take a no-compromise attitude to security, and this is reflected in the

massive build quality of the Kryptolok. Short of a direct bomb blast, there's little that the Kryptolok cannot cope with. The shackle and crossbar are resistant to bolt cutters, hacksaws, prying and smashing, and are aided by a patented overhead cam which stops hammers and prybars. With 10,000 possible key/lock combinations, the alternative to brute force is a non-starter as well. This lock comes with a £500 guarantee from the manufacturer against theft. Two keys are supplied.

**IMPORTANT NOTE:** The prices of the products in this section were correct as of September 1997. However, owing to the volatile nature of the semiconductor industry, we cannot guarantee these prices during the lifetime of this catalogue. We therefore urge you to telephone the sales line for the latest pricing information.

## BASE NUMBERS

### An Explanation of the Indexing of Integrated Circuits.

We have now combined all semiconductor devices into one easy to use index, based on the numerical part of each device number. Given the basic part number for a device, such as "4001" for example, it is a simple matter to find the part and look up its Maplin order code and the page number in the catalogue where further details may be found. The main advantages of this index system are that no technical knowledge of the device is required. Nor do you need to know the letter suffix for the part, which varies from one manufacturer's version to another in any case.

#### What is a "Base Number", and how do I use the index?

Whether the device you want to find is a transistor, a diode, an IC or any other semiconductor (also called an active device), all you need to look it up, is to decide what is the base number of the part. The base number part of a full device number is simply the first number you come to when reading through that device number, up to when you encounter another letter (or the end of the device number if there is no letter). So, for example, the base number of "P-80C52" is "80", that of "BC108C" is "108", for both "UA741C" and "LM741" it is "741".

Devices are often referred to by their base numbers anyway, like "6502", "40106" and "7407".

It is only if that number is split by a letter, such as "80C52" (a CMOS version of "8052") that you just have to remember the basic "first number you come to" rule. Hence the base number then becomes "80" and not "8052", because you don't read further than the end of the first number you find before hitting another letter.

The layout of this index is in numerical decade sequence (1's 10's 100's, etc., then 2's, 20's, 200's, etc. and so on to 90's and 900's). This breaks the list down into convenient sections. So for base number "80", go straight to the "Base Number 80" section, for 108, go to the "Base Number 100" section and look down that short list, which is in numerical order.

## IMPORTANT NOTE

Please note that the application circuits which appear within this catalogue are usually extracts or derivatives of information originally provided by the device manufacturers in their data sheets or data books. Circuits are provided on a purely experimental basis for more experienced constructors and should not be considered as complete projects. We are able to supply copies of the manufacturers full data sheets for almost all integrated circuits and for some discrete devices.

We are now able to provide selected data sheets on 3.5 inch disks (for PC's only) in Adobe's Portable Document Format (PDF files). These may be displayed or printed by any Windows PC with Adobe Acrobat reader (V3.0) installed. All of the new semiconductors featured in this catalogue are available in this format, as are all of the most popular IC's from our original range. The price for these is £1.99 inclusive of VAT. Photocopied data sheets are also available, priced at £1.20 NV.

To order a data sheet for a given IC, proceed as follows: In the Descriptions box on your order coupon write "Data sheet for" and the number of the device you want data for, EG, "Data sheet for NE555". If you require the data on disk in PDF format, add "PDF" after the part number, EG, "Data sheet for NE555 PDF". In the Order Code column, write DS00A and then the quantity, price, etc. as usual. Please note that we are usually unable to provide data sheets for smaller devices such as transistors, diodes, etc. We will have included any information we have for such a device in this catalogue. See also the semiconductor data books in this section and in the Books section.

## Maplin Glossary and Acronyms for Computers

- ACIA** Asynchronous Communications Interface Adaptor
- ALU** Arithmetic and Logic Unit
- ANSI** American National Standards Institute
- API** Applications Programming Interface
- ASCII** American Standard Code for Information Interchange
- ASIC** Application-Specific Integrated Circuit
- AT** Advanced Technology – Term used for IBM computers launched in 1984.
- BASIC** Beginners' All-purpose Symbolic Instruction Code
- BIN** Binary
- BIOS** Basic Input/Output System
- BIT** Binary digit
- BPS** Bits Per Second
- BYTE** A group of eight binary digits
- CAD** Computer-Aided Design
- CAM** Computer-Aided Manufacture
- CD-I** Compact Disc Interactive
- CD ROM** Compact Disc Read Only Memory
- CENTRONIC** Centronic – Generic name given to parallel printer system after company that devised it
- CGA** Colour Graphics Adaptor
- CGM** Computer Graphics Metafile
- CISC** Complex Instruction Set Computer
- CMOS** Complementary Metal Oxide Semiconductor
- CMYK** Cyan, Magenta, Yellow, black
- CNC** Computerised Numerical Control
- COBOL** COmmon Business-Orientated Language
- CP/M** Control Program for Micros
- CPS** Characters Per Second
- CPU** Central Processing Unit
- CRC** Cyclic Redundancy Check
- CRISC** Complex Reduced Instruction Set
- DAT** Digital Audio Tape
- DCE** Data Communications Equipment
- DCT** Discrete Cosine Transform
- DD** Double Density
- DDE** Dynamic Data Exchange
- DLL** Dynamic Link Library
- DMA** Direct Memory Access
- DOS** Disk Operating System
- DOT** Digital Optical Tape
- DP** Data Processing
- DPI** Dots Per Inch
- DTP** Desk Top Publishing
- DRAM** Dynamic Random Access Memory
- DRDOS** Digital Research Disk Operating System
- DS** Double Sided
- DSP** Digital Signal Processor
- DTE** Data Terminal Equipment
- DVI** Digital Video Interactive
- EBCDIC** Extended Binary Coded Decimal Interchange Code
- EDI** Electronic Data Interchange
- EDP** Electronic Data Processing
- EDORAM** Enhanced Data-Out Ram
- EGA** Enhanced Graphics Adaptor
- ETA** Electrical Industries Association
- EISA** Enhanced Industry Standard Architecture
- E-MAIL** Electronic Mail
- EMC** ElectroMagnetic Compatibility
- EMI** ElectroMagnetic Interference
- EMM** Expanded Memory Manager
- EMS** Expanded Memory Specification
- EPS** Encapsulated Postscript
- ERLL** Enhanced Run Length Limited
- ESDI** Enhanced Small Device Interface
- EVGA** Enhanced Video Graphics Array
- FAT** File Allocation Table
- FM** Frequency Modulation – Method of storing data on a floppy disk
- FMV** Full Motion Video
- FORTRAN** FORmula TRANslation
- FPU** Floating Point Unit
- FSFMV** Full-Screen, Full Motion Video
- FTP** File Transfer Protocol
- Gb** Gigabyte
- GEM** Graphics Environment Manager
- GIF** Graphics Interchange Format
- GUI** Graphical User Interchange
- GW-BASIC** Gee Whizz Beginners All-purpose Symbolic Instruction Set
- HD** Hard Disk
- HDD** High Density Disk
- HGC** Hercules Graphics Card
- HLL** High-Level Language
- HMA** High Memory Area
- HPGL** Hewlett-Packard Graphics Language
- HTML** HyperText Markup Language
- IDE** Intelligent Drive Electronics
- IFF** Interchange File Format
- ISA** Industry Standard Architecture
- ISDN** Integrated Services Digital Network
- ISO** International Standards Organisation
- JPEG** Joint Photographic Expert Group
- JPG** File extension for compressed image form
- LAN** Local Area Network
- LCD** Liquid Crystal Display
- LIFO** Last In First Out
- LIM** Lotus, Intel Microsoft
- LQ** Letter Quality
- Mb** Megabyte
- MCA** Micro Channel Architecture
- MCGA** Multi-Colour Graphics Array
- MFM** Modified Frequency Modulation
- MIPS** Millions of Instructions Per Second
- MOV** File extension for video format
- MPC** Multimedia PC
- MPEG** Moving Picture Expert Group
- MPG** File extension for compressed video format
- MSDOS** Microsoft Disk Operating System
- NLQ** Near Letter Quality
- OCR** Optical Character Recognition
- OD** Over Drive
- ODA** Open Documents Architecture
- OEM** Original Equipment Manufacturer
- OOP** Object-Orientated Programming
- OS** Operating System
- OS/2** Operating System 2
- OSI** Open Systems Interconnections
- PC** Personal Computer
- PC-DOS** Personal-Computer Disk Operating System
- PCI** Peripheral Component Interconnect
- PCL** Printer Control Language
- PCMCIA** Personal Computer Memory Card International Association
- PCX** PiCture eXchange format
- PD** Public Domain
- PIC** PiCture format
- QIC** Quarter Inch Cartridge
- RAM** Randon Access Memory
- RGB** Red, Green Blue
- RISC** Reduced Instruction Set Computer
- RLL** Run Length Limited
- ROM** Read Only Memory
- SCSI** Small Computer Systems Interface
- SD** Single Density
- SGML** Standard Generalised Markup Language Method of coding text for storage on CD Rom
- SIMM** Single Inline Memory Module
- SIP** Single Inline Package
- SPOOL** Simultaneous Periferal Operation OnLine
- SS** Single Sided – Refers to a disk using only one side of media
- SVGA** Super Video Graphics Array – Upgrade of the VGA display system
- TIF, TIFF** Tagged Image Format – Bitmap graphics file format
- TPI** Tracks Per Inch
- TSR** Terminate and Stay Resident
- UMB** Upper Memory Block
- UNIX** UNiplexed Information and Computing Service
- UPS** Uninterruptible Power Supply
- VESA** Video Electronics Standards Association
- VGA** Video Graphics Adaptor
- VLBUS** Vesa Local BUS
- VM** Virtual Memory
- VR** Vitual Reality
- WAV** Sound File Format
- WIMP** Windows, Icons, Mice, Pointers
- WMF** Windows Metafile Format
- WORM** Write Once. Read Many Times
- WPG** Word Perfect Graphic
- WYSIWYG** What You See Is What You Get
- XGA** eXtended Graphics Array
- XMS** eXtended Memory Specification
- XT** eXtended Technology – Term used for IBM computers launched in 1983
- ZIF** Zero Insertion Force – Chip socket with lever on side

The abbreviations under the heading 'Type No. and Manufacturer' are identified as follows:

FA-Fagor    GI-General Instruments    HIT-Hitachi    ME-Microelectronics    MOT-Motorola    NEC-NEC    NSC-National Semiconductor    PC-Philips  
SEM-Semelab    SIE Siemens    SLX-Siliconix    ST-SGS-Thomson    TFK-Telefunken    TI-Texas Instruments    ZET-Zetex

Table 1 Small Signal Low Frequency Silicon Transistors

## Gain Groups (BC107, BC108, BC109, BC168, BC169)

The above transistor types are all available in different gain ( $h_{FE}$ ) groups. For example, if the design parameter calls for the transistor to have a gain of between 110 and 800, this will be divided into groups e.g. group A – 110 to 220; group B – 200 to 450; group C – 420 to 800. The transistors are then marked with their gain group after the type number (e.g. BC108C). Transistors of the above types that have no suffix letter are ungraded and therefore where the plain-numbered device is specified a graded transistor will always, without qualification, do exactly the same job.

Table 2 Medium Power Low Frequency Silicon Transistors

Order Code	Type No. and Manufacturer	Price each exc. VAT			Price each inc. VAT	Case Style	Material	VCEO (max) V	VCBO (max) V	VEBO IC (max)		PTOT (max) mW	Typ hFE @ IC	Typ fT (MHz)	Application

**Table 9 N and P Channel Lateral Power MOSFETs**

For high quality audio amplifier applications and designed for use as complementary pairs. Lateral structure for high resistance to electrical destruction, ultra-fine architecture for uniform power distribution, excellent frequency characteristics and having an integral reverse polarity protection diode.

P6KE types are rated at 600W peak pulse power, while 1.5KE types are rated at 1500W peak pulse power. All types are unidirectional and should be connected with the band on the body to positive; choose the type with VR equal to or above the voltage in the circuit. Clamping voltage is maximum voltage at maximum peak pulse current and this and peak pulse power is for a current waveform where the peak is reached in 10µs and has decayed to 50% of its peak value in 1ms. Devices may be connected in series to increase the voltage and in parallel to increase the peak pulse handling.

Note: In most cases, a thyristor having a higher PIV than the one specified can be used. Many thyristors use a suffix letter to indicate the PIV and the international standard is as follows:  
Note: A = 100V; B = 200V; C = 300V; D = 400V; E = 500V; F = 50V; M = 600V; N = 800V; P = 1000V; S = 700V; Y = 30V.

# Now available ex-stock

**Digital Real Time Oscilloscopes from Tektronix at an Analogue Cost**

**The TDS 210 (Maplin Stock Code KV56L) & TDS220 (Maplin Stock Code KV57M) have set new standards in performance, functionality, portability and value.**

- 1 Giga samples per second per channel
- Auto triggering
- Zoom facility
- Automatic measurements
- Save and recall waveforms
- Maths functions
- Crisp LCD display

**The compact design that saves space without compromising screen size**

## Semiconductor Data

Please note that, although we have listened to your feedback regarding the omission of IC pinouts from previous issues of the Maplin catalogue and have put the 7400 and 4000 logic series pinouts back into this section, commercial constraints have forced us to make the decision to reduce the amount of pinout or application information for some semiconductors, especially where older products are no longer used by manufacturers in quantities sufficient to warrant that level of support. We have however considered the criteria behind this decision with the customer in mind, as we are aware that many customers have always used the Maplin catalogue as a combination of designers' reference and supply source book. As a general rule, we are omitting pinout information only where the device concerned is complex to use to the extent of needing a full data sheet for successful applications to be realised (microprocessors are a typical example).

It is our policy to continue to improve the availability of application data for our customers through our provision of copies of manufacturers' data sheets upon request through our sales staff, as well as by the support provided by our Technical Sales department, who will be pleased to clarify any technical matters related to semiconductors in this section.

Wherever possible, we also support the introduction of new ranges by endeavouring to secure supplies of the original manufacturers' data books for our customers. Please be aware that some semiconductor manufacturers are not used to supplying bulk deliveries of their data books to mail order suppliers such as ourselves and therefore supply of these very useful references may be somewhat erratic. Please bear with us if the data book you require is temporarily unavailable, and we will do our best to supply your data as soon as we can.

## The TTL Data Book, Volume 1

**Texas Instruments**

Full data sheets covering Tis very large range of TTL, Schottky and Low Power Schottky ICs. Contains internal circuits, pin-out diagrams and specifications of over 400 device types. 1989. 1184 pages. 210 x 148mm, illustrated. American book.

Retail Unit Price each (inc. VAT).

Order Code	Type 774	Price each exc. VAT 1+	inc. VAT each 1+
WA14Q 3	TI TTL Data Vol 1	£14.950	£14.950 NV

## The TTL Data Book, Volume 2

**Texas Instruments**

Packed with the design data, internal circuit and pin-out diagrams, and dynamic parameters information for some 400 Advanced Low-Power Schottky (ALS) and Advanced Schottky (AS) logic ICs. Included in this volume is a functional index to all types of bipolar digital devices available or under development showing the available technologies for each type, TTL, Schottky, AS, ALS etc. There is also a short explanatory section on logic symbols for new circuit diagrams. 1989. 1278 pages. 210 x 150mm, illustrated.

Retail Unit Price each (inc. VAT).

Order Code	Type 753	Price each exc. VAT 1+	inc. VAT each 1+
WP31J 3	TI TTL Data Vol 2	£14.950	£14.950 NV

## Programmable Logic

### PEEL / PAL Devices

## PEEL Devices

ICT

This range of 5 volt programmable electrically erasable logic devices from ICT provide an attractive alternative to ordinary low density PLDs, offering the convenience of instant reprogramming. This not only aids product development, but minimises the impact of programming updates on stock inventory compared with the wastage involved with scrapping large numbers of preprogrammed one-time programmable PLAs. ICT PEEL device architecture allows for super-set replacement of many earlier PALs, GALs and PLDs, and the powerful ICT PLACE development software available separately (GS90X) provides JEDEC file translation software that instantly converts PEEL devices to other PLDs, without the need to rework the existing design. Once the design process is complete, these devices may be easily programmed or reprogrammed using the Speedmaster or Micromaster programmers shown elsewhere in this catalogue.

**Device Specification:**

Part No.	Input pins	I/O pins	Array size	Macrocells/Configs	Max speed	Package	Order Code

## ISP Synario System (VR36P)

Lattice Semiconductor

The Synario System from Lattice Semiconductors is a low-cost, easy-to-use kit that contains everything needed to design and program with Lattice ispLSI and GAL devices. The kit contains a full featured version of Data I/O's Synario Entry tools for schematic capture and ABEL-HDL language logic design. The Synario Entry Tools also includes a functional simulator with wave form viewer and and DATA I/O's powerful Project Navigator for easy design and logic debugging. The Lattice innovative in-system programmability (ISP) enables device programming and reprogramming on the PCB. There are several advantages with this;

- It accelerates board and system level debug and enables the user to define board layout earlier in the design process.
- ISP eliminates bent leads caused by extra handling and socket insertions made during the device programming.
- Systems incorporating ISP are reconfigurable with the devices already soldered to the PCB, minimising board rework expense.
- Field upgrades become easy by downloading a new configuration file to the end equipment by a floppy disk or modem

The tools included will support the full range of Lattice industry standard ispGAL and GAL devices including the ISP GAL22V10, GAL16V8, GAL20V8 and GAL6001, and others. The System includes device samples as well as an ispDOWNLOAD Cable to download designs to the PC board. Documentation on CD Include in the Synario Development System are:

### Software

DATA I/O's Synario Entry and Functional Simulation software.

pDS+ Synario Filter for ispLSI devices

ispGDS (Generic Digital Switch) compiler software

ISP programming software

### Samples and Hardware

ispLSI 2032 Device in 44-pin PLCC package

ispGAL22V10 Device in 28-pin PLCC

ispGDS14 Device in 20-pin PLCC package

ispDOWNLOAD cable

## isp Download Adaptor (VR35Q)

Lattice Semiconductor

- Allows all isp devices to be programmed via an IBM compatible PC
- Supports ispLSI 1016/E and 2032 devices when used with isp Starter/Encyclopedia CD
- Supports industry standard 22V10 architecture
- Supports ISP Generic Digital Switch
- Enables low cost entry to programmable logic

When used with the software provided on the isp Starter/Encyclopedia CD-ROM, this combined connection cable and RS232 Com port adaptor allows you to start programming Lattice in system programmable devices at a very modest cost.

The cable/adaptor assembly is terminated with the usual 25 way D socket for connection to the host PC, and the flying lead will connect to your development/prototype PCB via an RJ-45 eight way connector. Suitable sockets are already fitted to the ispLSI development board GS13P (also supplied with unpopulated version GS14Q).

## ispLSI Development Board (GS13P, GS14Q)

Lattice Semiconductors

The Development Board is intended to be used with the Lattice In-System Synario Kit, or the isp Download Adaptor/cable and CD software, to enable designers to quickly explore the features and benefits of In-System Programmability (ISP). The board will accept either an ispLSI1016 (as fitted) or an ispLSI2032, in their 44-pin PLCC package option. A scratch pad area is included consisting of a grid 5 x 10 of plate through hole pads arranged on a standard 0.1in pad. The pads can accept wire wrap pins and sockets etc. 0V and +5V power rails are provided.

The populated board includes:-

- A 5V regulator, which is connected to a 7.5V to 9V DC unregulated supply, rated at least 200mA
- RJ45 ISP connector which connects to a PC parallel port using the VR35Q ISP DOWNLOAD cable.
- 44-pin PLCC socket - fitted with a programmed ispLSI1016-60LJ device, which can easily be 'in-system programmed
- Displays and switches - includes one bank of 8 DIP switches, one bargraph display and two 7-segment displays

A reset button and various monitor points are included on the board.

An unpopulated version of the board is available that is fitted with just the RJ45 ISP connector, PLCC and power sockets

## Data Book (VR40T)

Lattice Semiconductor

Written especially for system designers, this 1996 Databook provides full specification for Lattice's entire range of high performance E<sup>2</sup>CMOS devices and design tools. Packed with datasheets and architectural descriptions for the ispLSI range. Also included are package outlines for the new high pin-count TQFPF and MQFP packages as well as the latest information on thermal management and handling moisture-sensitive packaging.

## ISP Starter Software & ISP Encyclopedia CD (VR37S)

Lattice semiconductor

This CD-ROM from Lattice includes the ISP Encyclopedia which contains the most recent edition of the Lattice Data Book, the revised and updated ISP Manual, the Lattice Handbook, product selection guide and ISP cost analysis spreadsheets that allow the user to compute their own cost-savings when using Lattice ISP products. All documents may be accessed on a PC or Sun workstation using Adobe's Acrobat software - included on the CD-ROM. The ISP Starter System software supports Lattice's ispLSI 2032 and 1016 high-density devices and all GAL devices (boolean entry only, use Synario for schematic entry). The software can easily be upgraded to support all or part of Lattice's high-density families.

Retail Unit Price each (inc.VAT)

## ispLSI High Speed Programmable Logic Devices (VR41U-VR45Y)

Lattice Semiconductor

This family of programmable logic devices are the first to combine the performance and ease of use of PLD's with the density and flexibility of FPGA's. From registers to counters, multiplexers to complex state machines, these devices with high-density programmable logic will address your high-performance system logic needs. Each device contains multiple Generic Logic Blocks (GLBs) designed to maximise system flexibility and performance. A generous supply of registers and I/O cells provide the optimum balance of internal logic and external connections. A global interconnect scheme ties everything together, enabling high logic utilisation. The 1000 series implements high integration functions such as controllers, LASNs and encoders at high speeds. The high performance 2000 series, with their large number of I/Os, handle timers and counters, (as well as timing critical interfaces) to high speed RISC/CISC microprocessors. The family incorporates the innovative in-system programmable (ISP) technology which allows for real-time programming direct from a PC and simple in circuit manufacturing and end-user feature reconfiguration.

Device	Macrocells	PLD Gates	I/Os	Speed MHz	Propagation Speed ns	Package PLCC
ispLSI2032-80LJ	32	1000	32	84	15	44-pin
ispLSI2064-80LJ	64	2000	64	81	15	84-pin
ispLSI1016-60LJ	64	2000	32	60	20	44-pin
ispLSI1024-60LJ	96	4000	48	60	20	68-pin
ispLSI1032-60LJ	128	6000	64	60	20	84-pin

In addition the devices have dedicated input and clock input pins, and a Global Routing Pool (GRP).

The GRP provides complete interconnectivity between all of the elements. Also, there is a 5V in-system programming and in-system diagnostic capability. These are the first devices to offer non-volatile 'on-the-fly' reprogrammability of the logic as well as the interconnection to provide truly reconfigurable systems.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## Call and Collect

Maplin has more stores Nationwide than ever before. See the maps at the front of the catalogue for the nearest one to you.

## High Speed PAL Devices

AMD

This range of programmable logic devices are some of the fastest on the market today. With operating speeds equivalent to 142MHz possible on some devices, you may be sure that these devices will be an excellent choice for any logic design, no matter how demanding.

This selection from the AMD range includes the 'half power' CE16V8H, CE20V8 and CE22V10 CMOS electrically erasable devices, as well as the standard OTP bipolar versions for established designs unlikely to change.

## PAL Device Data Book and Design Guide

AMD

A book of application notes and data providing a survey of AMD's CMOS PLDs (Programmable Logic Devices). This includes both PAL (Programmable Array Logic) devices and the more general realm of PLDs, to which PAL devices belong. With the proliferation of parts the selection of the best PLD for your application may seem difficult. If you are a new PLD user, this overview will guide you through the wide variety of different device architectures, speed, and power grades. This tutorial should increase your understanding of the basic characteristic features that make a device appropriate for a given application. 1993. 754 pages. 230 x 180mm, illustrated.

Retail Unit Price each (inc. VAT)

AR15R	Databook-PAL DTA/DSN	£6.990 NV	£6.990 NV

## MACHXL V2.0

This software allows the logic device designer to compile a source program written for the AMD MACH series devices, in order to generate a standard JEDEC file. The JEDEC file may be used by any device programmer which supports the programming of MACH 1100/210 logic devices, such as the Speedmaster LV (with programming adaptor AR16S). MACH device design programs may be written using a standard text editor, or from within the MACHXL program using the special MACH design file language (details not supplied with this version which is distributed by AMD as freeware. Our charge for this item covers only handling and distribution/duplication costs).

## MACH CMOS PLDs

AMD

The Macro Array CMOS High-density family of programmable logic arrays offers the designer of large and complicated logic circuits a choice of compact devices with several times the capacity of the PEELS and PALs shown earlier in this section.

Each MACH device consists of a number of PAL blocks interconnected by a programmable switch matrix, based around AMD's advanced electrically erasable CMOS technology. The MACHXL design software provides a low cost tool which also allows the user to easily upgrade designs when required. Data books are also available.

The devices featured here are the MACH 110 which has approximately three times the logic macrocell capacity of the PAL22V10 and the MACH 210, which has about six times the capacity of the 22V10. Both are offered with 15 or 20ns propagation delay times, making operating speeds up to 80MHz possible. I/O pins may be configured to be input, output, combined in/out or tri-state outputs.

Part No.	Input pins	I/O pins	Array size	Macrocells	Max speed	Package	Order Code

## MACH™ 1 and 2 Family Data Book High-Density EE CMOS Programmable Logic

AMD

This book introduces you to the new MACH (Macro Array CMOS High-density) 1 and MACH 2 families of programmable logic ICs from Advanced Micro Devices (AMD). These provide programmable logic capabilities from around 900 PLD (Programmable Logic Device) gates to 3,600 PLD gates. Included in this book is a general discussion, and final data sheets, for the MACH 1 and 2 family members.

The general discussion deals with those issues that affect the entire device family, including a brief discussion of design software used in configuring the devices. Because of the common architecture, most of the understanding of the device can come from a look at the family as a whole. Individual devices differ only in the number of resources. The data sheets discuss items that are specific to each device. They contain the basic DC and switching specifications. Other general specifications, such as switching waveforms and endurance, follow the data sheets since they are the same for all devices. The book concludes with the MACH device design planning guide. This section introduces you to the methodology of designing with MACH devices. It will help you select the right device and show you how to structure your designs for successful fitting within a MACH device. 1993. 176 pages. 230 x 180mm, illustrated.

## Microcontrollers 8 Bit Based

### Microchip Pic Devices

#### PIC Microcontrollers

Arizona Microchip

This range of microcontrollers includes some of the best known and most widely used devices in today's market. The complete family of EPROM based CMOS products offers a solution to practically any design problem with features such as automatic reset circuitry, watchdog protection, code protection, low power versions and sleep modes as well as a broad range of input and output options including serial (including I<sup>2</sup>C) and parallel ports, PWM outputs, external interrupts, analogue to digital converters and analogue comparators.

The high speed RISC architecture and instruction set is unique to the PIC range of microcontrollers and is fully supported by a range of affordable data books and development tools to help you to learn and develop your skills in fitting these versatile building blocks into your circuits.

The tables below are intended to show just some of the basic features of each of the selected devices featured in the Maplin catalogue. If you need more information about these devices or their programming support, you may order any of the books shown after the tables for full and comprehensive data regarding the devices themselves or to help you choose the right development system. We can now also offer the latest project kits and software packs (ideal for breadboarding your experimental circuits) which are designed by the author of the excellent *Beginners Guide to the Microchip PIC*.

Guide to suffix coding.

Suffix code	Basic device options
RC	resistor/capacitor clock speed selection may be used where cost is a design factor and precise timing control is not required
XT	crystal clock speed control for applications where event timing is critical
LP	the device is a low power version with a maximum clock speed of 200KHz
JW	the device has a windowed EPROM package and may therefore be erased after use and reprogrammed. This is not the case for any other suffix based on an EPROM as the others have no windows and are one time programmable (OTP) devices. The only exception is the 16C84 series which is electrically erasable (EEPROM)

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

#### PIC12C508

Arizona Microchip

This latest addition to the PIC microcontrollers are 8-bit data/12-bit instructions devices housed in an 8-pin DIL package, and are based on the Enhanced PIC16C5x family. The device requires only 33 single word instructions to learn, and all instructions are single cycle (1µs), except for program branches which are two-cycle. Other features include:

- 512 words in EPROM; 25 bytes of RAM
- Operating speed DC to 4MHz clock input DC to 1µs instruction cycle
- Seven special function hardware registers
- Two-level deep hardware stack
- Direct, indirect and relative addressing modes for data and instructions
- Internal 4MHz RC oscillator with programmable calibration
- In-circuit serial programming
- 8-bit real time clock/counter (TMRO) with 8-bit programmable prescaler
- Power-on reset
- WDT with its own on-chip RC oscillator for reliable operation
- Device reset timer (DRT)
- Internal pull-ups on I/O pins
- Programmable code-protection

Based on low power high speed CMOS EPROM technology, these fully static designed micros will work from 2.5V to 5.5V power rails, and consume

less than 2mA at 5V and at 4MHz.

These micros are suitable for personal care appliances, security systems, remote transmitters/receivers etc. The EPROM technology makes customising application programs (TX codes, appliance settings, RX frequencies etc.) extremely fast and convenient.

The PIC12C508-04/P (VQ98G) is a one-time programmable device; PIC12C508/JW (VQ99H) is an erasable, reprogrammable device

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

#### Device Programming Service

One of the most prohibitive aspects of using programmable logic and memory devices is often the price of the specialised programmers needed to store your design in the blank device.

In order to assist our customers with prototyping and with one off projects where the cost of a programmer cannot be justified, we now offer a programming service for any devices supplied by us.

If, at time of order, you supply us with a floppy disk (3.5 inch, PC XT/AT format), containing the device data to be programmed in Binary, Hex or similar recognised file format, we will undertake the programming of the ordered devices prior to dispatch. The initial set up charge for this service will be £10, with an additional charge of £1 for each device programmed (Bulk rates available, please ask for a quotation). Prices exclude VAT

Order £30 or above?  
Account holder or not, your order will be sent carriage paid.  
(Guaranteed) next day delivery charges as stated in our Terms & Conditions in the back of the catalogue)

#### PICSTART Plus Development System

Arizona Microchip

This development system provides the development engineer with a highly flexible, low-cost Microcontroller design tool set for all PIC14000, PIC16C5x, PIC16Cxx and PIC17xx 8-bit OTP devices in standard 40-pin DIL packages. The system operates on any PC-compatible computers running under Windows 3, and is very easy to use, and features the highly acclaimed MLAB Integrated Development Environment from Microchip. This provides for full interactive control over the programmer. The MPASM macro assembler provides programmable memory data files, listing files and special files required for symbolic debug. The MPLAB-SIM software simulator allows the user to isolate code problems and debug firmware designs on PIC16/17 devices. It simulates the core functions as well as most of the peripherals of the PIC16/17 families. It is particularly suitable for optimising algorithms where real-time emulation is not required.

The programmer features a moulded plastic enclosure and special circuit design techniques to enhance ESD protection. Sample software programs are provided to help the development engineer to quickly become familiar with the PIC microcontrollers. A CD-ROM containing a complete databook and Embedded Control Handbook along with PIC16/17 device samples. Supplied with RS-232 cable 9V power supply and power cable.

## PIC 16C6X Series

This range of microcontrollers offers the designer a number of enhanced I/O facilities such as multiple timers (TMR), serial I/O and PCM output, programmable event capture and external interrupts. All members have a 35 single (14-bit) word instruction set and an eight level deep stack for interrupt handling.

Note that I/O pins are configurable as basic I/O or special functions such as Interrupt (IRQ) or Serial ports (SPI/I2C/SCI).

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## PIC16C64

A low-cost, high performance CMOS, fully static, EPROM based 8-bit microcontroller that employs an advanced RISC-like architecture. The device has several peripheral features that are useful in many high performance applications. These features include: three timer/counters, capture, compare, PWM features and serial ports. The synchronous serial ports can be configured as either a 3-wire SPI or I<sup>2</sup>C. An 8-port parallel slave port is also provided. Special features are included that reduce external component count and enhance system reliability, such as four oscillator options, a highly reliable WDT with on-chip RC oscillator, SLEEP mode etc. There are 33 special function hardware registers, eight-level deep hardware stack and direct, indirect and relative addressing modes.

## PIC 16C62X Series

To aid designers in interfacing their microcontroller circuits with an essentially analogue world, we are now able to offer a short range of the latest PICs which have built in analogue comparator circuits with input switching/multiplexing control and programmable voltage references. Comparator interrupts signal changes in comparator output level to the MCU and a set of registers allows control

and monitoring of each of the two comparators in each device.

The instruction set is the same as that for the 16C6X series already described, although these devices do not feature serial I/O.

They are equipped with single 8-bit timers and timer prescalers as well as featuring 'brownout' protection for added security in electrically noisy environments.

Oscillator type selection is programmable.

## PIC14000 Mixed Signal Controller

Arizona Microchip

RECENTLY INTRODUCED

PIC14000

The PIC14000 is a low-cost, high-performance, CMOS, fully-static, mixed signal, factory calibrated, 8-bit microcontroller. It features a medium to high resolution A/D converter (10 to 16 bits), temperature sensing, closed loop charge control, serial communication and low power operation. The PIC14000 is based on the high performance PIC16C74 core and uses a RISC-like Harvard architecture CPU with separate 14-bit instruction and 8-bit data buses. A two-stage instruction pipeline allows all instructions to execute in a single cycle, except for program branches which require two cycles. A total of 35 instructions are available, and a large register set is included.

The device is a 28-pin DIL package with the following features:

- Operating speed: DC to 20MHz clock input
- 4k of EPROM
- 192 bytes of RAM
- 20 I/O pins
- 38 special function hardware registers
- 6 internal/5 external interrupt sources
- Two 8-bit logarithmic D/As
- 8 external analog input channels, including 2 current sense input channels
- 6 internal analog input channels
- 2 charge-control channels with comparators
- A band gap reference
- An internal temperature sensor
- A programmable current source for dynamic range control of the A/D conversion

Additionally, the I<sup>2</sup>C serial port through a multiplexer supports two separate I<sup>2</sup>C channels. A special oscillator option allows either an internal 4MHz oscillator or an external crystal oscillator. The internal band-gap reference is used for calibrating the measurements of the analog peripherals. The calibration factors are stored in EPROM and can be used to achieve high measurement accuracy. The WDT includes its own on-chip RC oscillator providing protection against software lock-up. The TMR0 timer is a general purpose 8-bit timer/counter with an 8-bit prescaler, which can be clocked externally using the RC3/TOCK1 pin. The device fits perfectly in applications for battery charging, capacity monitoring uninterruptible power supply controllers, data logging etc. The PIC14000-04/SP (VR00A) is an OTP device, and PIC14000/JW (VR01B) is erasable and can be reprogrammable.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

### PIC16C7x Series

This family of PIC16C7x devices is equipped with an 8-bit analogue to digital converter connected to multiplexed inputs and three 8-bit timers (one on PIC16C71). This makes the family ideally suited for any application where a change in voltage or actual voltage level over fixed or variable periods of time needs to be monitored to make process control decisions. It uses the 35 member RISC instruction set. Oscillator type selection and code protection are set via a special configuration register. The 73 and 74 series feature a synchronous serial port (SSP) with SPI and I2C, and a USART/SCI. In addition, the 74 series has a 8-bit wide parallel slave port. The family of PIC16C7x devices is based on a fully static designed, low power, high speed CMOS EPROM technology, with enhanced core features, eight-level deep stack and multiple internal and external interrupt sources.

### PIC16C84

This device is based on an electrically erasable ROM and may therefore be reprogrammed as many times as required. It is equipped with a single 8-bit timer/prescaler. The LC version is a low power device with an extended voltage range. A special configuration register allows the user to select oscillator type (RC, XT, LP or HS) as well as setting code protection.

### ICEPIC16CXX Real Time Emulator System For PIC16CXX / 12C50X

R.F Solutions

- Emulates all PIC16CXX & PIC12C50X devices
- Full speed, real time emulation to 20MHz
- Microchip emulation chip inside
- 8k (expandable to 16k) of 16CXX emulation memory
- High speed RS232 interface (57.6kbits/s)
- Source level debug in assembler or 'C'

The ICEPIC16CXX is a fully modular in-circuit emulator for use with Microchip's 16CXX or 12C50X microcontrollers. It has been designed to be a very comprehensive, but simple to use tool to get the target application working as quickly as possible.

Other salient features include: single step, Microsoft Windows compatible, same user interface for all PIC processors, 8k hardware break points, custom watch points and watch and modify multi-byte registers.

The system is supplied as a complete package comprising the emulator (requires separate daughter board- see below), power supply, RS232 cable, probe header, cable(s) to connect to the

application circuit, plus full supporting software including Microchip's MPASM. The emulator pod comprises the main emulator board which contains all the logic circuitry and serial communications. The personality daughter board contains the relevant emulation chipset, and the connections which feed through the front panel to the DIP header(s). In addition, each daughter board contains a 14-pin XTAL module that can be replaced with an equivalent type at any specific frequency the user desires within the frequency

range 32kHz to 20MHz. A kit containing six different frequency modules (32k, 1MHz, 2MHz, 8MHz, 16MHz and 20MHz) is available separately (order code GS40T). A jumper link is included which pulls the MCLR input of the emulator high so that the emulator can be used without a target application circuit being present.

The software has a simple to use toolbar with full context sensitive help and will display, and work, in HEX, Decimal or Binary. The minimum computer requirements are a 286 with EGA/VGA monitor, 4M RAM, mouse, free serial port, at least 4Mbytes of hard disk space and Windows 3.1 or DOS 3.3 or higher.

**Note:** The ICEPIC Emulator (VN99H) is supplied without a personality daughter board, which should be selected from the following list and ordered separately (only one daughter board may be fitted at any time).

Personality daughter board

## PIC16C57XT/SO

Arizona Microchip

A low-cost OTP high-performance 8-bit microcontroller with RISC-like instruction set consisting of 33 single word instructions. Supports direct, indirect and relative addressing modes. Features 7 special function hardware registers, 2-level deep stack, I/O ports with individual direction control, an 8-bit counter with 9-bit programmable prescaler, power-on reset, watchdog timer, sleep modes, security fuse for code protection and low-power CMOS architecture. 2K x 12 bytes of EPROM, 80 x 8 bytes of SRAM and 21 I/O lines. Maximum operating frequency 4MHz. 28-pin SOIC package.

**Specification** (typical VDD=5V, fosc=4MHz, 25°C)  
 Supply voltage, VDD: 5V  
 RAM data retention voltage: 1.5V (SLEEP mode)  
 Supply current: 3.3mA  
 Oscillator frequency: DC to 4MHz  
 Instruction cycle time: 200ns

## PIC Books & Information

### A Beginner's Guide to the Microchip PIC - Revised Edition

by Nigel Gardner

This book describes how to get to grips with PIC devices and is intended for somebody who has never used such a device before. The reader is guided through the rudiments of selecting the correct device for a job, and how to begin programming it; together with a basic knowledge of how to debug source code, and a guide to the instruction set. The use of headers, look-up tables, reset vectors, real-time clock, watchdog timer, interrupts and development practices are covered with examples and diagrams along the way. This edition provides additional information on the A/D, E<sup>2</sup> and other devices in the 16Cxx family. The book is accompanied with an IBM/compatible 89mm (3.5-in.) DSHD disk (with compressed files) containing an assembler, simulator and various source code examples.

## PIC Cookbook - Volume 1

by Nigel Gardner and Peter Birnie

This collection of working application ideas is a natural progression from the Beginner's Guide to the Microchip PIC (order code AD31J), and includes a wide range of practical suggestions for using the Microchip PIC - 38 in all. Each idea includes a general description, circuit diagram and a flow chart, with all source code supplied on a 89mm (3.5mm) disk. All the applications have been graded from relatively simple (1) to more advanced (3). The authors are well versed in the use of PIC chips and this book will be a valuable addition to the PIC user and developers library. 1996. 210 x 155mm. 170 pages, illustrated.

## PIC Cookbook Volume 2

by Nigel Gardner and Peter Birnie

The second book in the series of working applications, provides the reader with a general description of the application, circuit diagrams and flowcharts. The source code for all of the applications is provided on a 89mm/3.5in. disk that accompanies the book. The book covers in detail: square and pulse generator, 1200 baud modem, greenhouse watering system, electronic lock using the 16C84, program conversion between the 16C5x and the 16Cxx families and interfacing to DTMF encoders and decoders. Continuing the style of Volume 1, each application is graded for complexity. 1997. 150 ringbound pages approx., illustrated.

## The Greatest Little PIC Book

by Gordon MacNee

This informative work covers the PIC12C5xx 8-pin microcontroller family from Microchip, and centres around applications requiring limited I/O. The book has been written to guide the reader through the device architecture and software modes, to show the benefits from using this family. Additionally, development tools device options and worked examples are covered and include: timers, sound generators, water descaler project, data logger, motor controls and light controls. Written by a very experienced design engineer who has worked with Microchip for many years, this book is an ideal training aid for any design engineer just starting to use the PIC12C5xx family. 1997. Ringbound pages, illustrated.

## Device Programming Service

One of the most prohibitive aspects of using programmable logic and memory devices is often the price of the specialised programmers needed to store your design in the blank device.

In order to assist our customers with prototyping and with one off projects where the cost of a programmer cannot be justified, we now offer a programming service for any devices supplied by us.

If, at time of order, you supply us with a floppy disk (3.5 inch, PC XT/AT format), containing the device data to be programmed in Binary, Hex or similar recognised file format, we will undertake the programming of the ordered devices prior to dispatch.

The initial set up charge for this service will be £10, with an additional charge of £1 for each device programmed (Bulk rates available, please ask for a quotation). Prices exclude VAT

## Microchip CD-ROM Technical Library

Arizona Microchip

- ★ PIC16/17 MCU data sheets and programming specifications
- ★ Serial/parallel EEPROM and EPROM data
- ★ Packaging diagrams and parameters
- ★ Development systems user's guides
- ★ Application specific standard products data sheets
- ★ Application notes

This dual medium (PC/Mac) CD-ROM contains a wealth of information on Microchip's products, and is easy to install and use. A menu screen offers a choice of product selection guide, data sheets, programming development systems and more. The desired topic is selected and a sub-menu appears that identifies the information in that section or goes to the technical document. Once in the selected document, the Adobe™ Acrobat™ Reader Quick Reference assists in navigating through the opened technical document.

### System Requirements

#### Windows PC

386, 486, or Pentium based PC with Windows 3.1, Windows 95, or Windows NT 3.5 or later. 4MB application RAM, 4MB hard disk space and a CD-ROM.

#### Macintosh:

68020 - 68040: Apple System 7.0 or later, 2MB application RAM, 4MB hard disk space and a CD-ROM

Power Macintosh: Apple System 7.0 or later, 4.5MB application RAM, 4MB hard disk space and a CD-ROM.

Note: This item is manufactured in limited runs and allocation of product world wide may result in shortages from time to time. Maplin will endeavour to supply the latest version.

## PIC Starter Kit 54/55

**Bluebird Electronics**

- ★ Contains a ready made PCB
- ★ Includes components to get PIC's running
- ★ Kit 54 Works with 16C54/56/58/61/71/84
- ★ Kit 55 Works with 16C55/57

The hardware starter kit is intended to get PIC based projects up and running in a fraction of the time it takes to build a circuit from scratch. Once the board construction is completed, software development can begin in the sure knowledge that the hardware core is functional. A suitable programmer for use with this board is the PICSTART 16B1 (order as DM 79L) and the user will need some reprogrammable version of the chosen PIC for development purposes

Retail Unit Price each (inc VAT)

## PIC16C64/74 Hardware Starter Kit

**Bluebird Electronics**

This low-cost hardware kit has been designed to make prototyping, evaluation and development quick and easy for the 40-pin 16C64 and 16C74 family of PIC microcontrollers. The PCB contains all the necessary components

and is overlaid with component and port identification. There is on-board regulation for battery operation, RS232 interface, 8 LEDs, push buttons and a 200 hole patch area. A PIC software disk is included.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

## PIC Software

**Bluebird Electronics**

This 89mm, 31/2in. high density disk contains the Microchip Simulator, Assembler, a Windows text editor and the majority of the application note source codes from the Microchip 'Embedded Control Handbook'. Additional software examples are included to run on the PIC16C64/74 Hardware Starter Kit (VP05F).

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
VP07H	PIC Software 2	£11.990	£14.990

## PIC Project Board and Software

**Bluebird Electronics**

**Project Board**

- ★ Contains circuit diagrams, PCB layout, etc.
- ★ Ready made PCB includes battery holder
- ★ Includes all project components (except PIC)
- ★ PIC programming and pinout date included
- ★ Works with 16C54/56/71/84 Software
- ★ Contains five different projects
- ★ Software and flowcharts included
- ★ Wiring instructions on disk supplied
- ★ Possible software modifications explained

The PIC Project Board is intended to show how the PIC Microcontroller works and how to interface it with the outside world. The board is supplied in a pack containing approximately 50 components including LEDs and a miniature sounder to monitor outputs as well as switch and potentiometer input components. A suitable programmer for use with this board is the PICSTART 16B1 (order as DM79L). The user will need some reprogrammable versions of the chosen PIC for development purposes.

The software pack supports the Project Board and details five possible applications, which will help to understand PICs. Projects include a timer counting in one second intervals; an A/D converter displaying in binary on LEDs; a two channel A/D based temperature sensor; a signal generator and electronic dice with sound effects. The five projects provide a flowchart, ready written software (provided on 3.5in. HD disk only, for PCs with PIC assembler programs) and wiring information. **Please note the Software Pack is not supplied with the Project Board.**

## Atmel AVR

## AT90S1200 8-Bit AVR® Microcontroller with 1kbytes Flash

Atmel

AT90S1200

The AT90S1200 is a low-power CMOS 8-bit Microcontroller based on the AVR® enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the device achieves throughputs approaching 1,000,000 ips per MHz, allowing the system design to optimise power consumption versus processing speed. The AVR® core combines an excellent instruction set with the 32 general purpose working registers. All the 32 registers are directly connected to the ALU, allowing two independent registers to be accessed in one single instruction, executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to 10x faster than conventional CISC microcontrollers.

The diagram shows a typical application, a motor/power controller.

The microcontroller has the following features: 1kbytes of Downloadable Flash, 64-bytes of EEPROM, 15 general purpose I/O lines, 32 general purpose working registers, internal and external interrupts, programmable watchdog timer with internal oscillator, an SPI serial port for program downloading and two software power saving modes. The 'idle mode' stops the CPU while allowing the registers, timer/counter, watchdog and interrupt system to continue functioning. The power-down mode' saves the register contents but freezes the oscillator, disabling all other chip functions until the next external interrupt or hardware reset. The AT90S1200 has a fully static operation from 0 to 16MHz, and requires a 4V to 6V supply rail. Supplied in a 20-pin package.

Retail Unit Price each (inc VAT)

Order Code	Type	Price each exc. VAT	inc. VAT each

## AT89S8252 Microprocessor with Flash/EEPROM Memory

Atmel

The AT89S8252 is a low-power, high performance CMOS 8-bit microcomputer with 8kbytes of downloadable programmable and erasable read only memory (PEROM) and 2kbytes of EEPROM. The device is manufactured using Atmel's high density non-volatile memory technology and is compatible with the industry standard 80C51 instruction set and pinout. The on-chip downloadable Flash allows the program memory to be reprogrammed in-system through an SPI serial interface or by a conventional non-volatile memory programmer. As well as the Flash and EEPROM memory, there is 256 bytes of RAM, 32 I/O lines, programmable watchdog timer, two data pointers, three 16-bit timers/counters, a six vector two-level interrupt architecture, a full duplex serial port, on-chip oscillator and clock circuitry.

The device is designed with static logic for operation down to zero frequency and supports two software selectable power saving modes. The idle mode stops the CPU while allowing the RAM, timer/counters, serial port, and interrupt system to continue functioning. The power-down mode saves the RAM contents but freezes the oscillator, disabling all other chip functions until the next interrupt or hardware reset. The downloadable Flash can be changed a single byte at a time and is accessible through the SPI serial interface. Holding RESET active forces the SPI bus into a slave input mode and allows the program memory to be written-from or read-to unless LOCK Bit 3 has been activated. The device requires a 4V to 6V power supply and is supplied in either a 44-pin PLCC package (NR39N) or 40-pin PDIP package (NR40T).

Retail Unit Price each (inc VAT)

## Atmel Nonvolatile Memory Databook

Atmel

With the nonvolatile memories available from Atmel, designers and engineers are given the ability to program devices late in a system's development cycle, or even after the system is complete. This feature allows the flexibility for meeting changing market conditions. The main products offered by Atmel are EPROMs, EEPROMs and Flash devices. This databook provides a comprehensive overview of such devices from Atmel.

NR23A	Atmel Micro Databook	£11.750NV	£11.750NV

## Atmel AVR<sup>®</sup> Microcontroller Databook

Atmel

The AVR enhanced RISC microcontrollers from Atmel are based on a new RISC architecture that has been developed to take advantage of semi-conductor integration and software capabilities. This has resulted in microcontrollers offering the highest MIPS/milliwatt capability available in the 8-bit MCU market. Atmel's Flash-based microcontroller families incorporate advanced single-voltage Flash memory technology in the industry's broadest line of Flash and EEPROM based products. This comprehensive databook provides an excellent insight into the AVR enhanced RISC microcontrollers from Atmel.

## Explorer Training System

Kanda

The Explorer Training System is designed to allow you to quickly master a new microcontroller and includes the Explorer module which can be used to try out examples and exercises on 'real live' hardware.

The complete package includes training manuals and the Explorer Module, and is available in two versions - the Microchip PIC series (order code NR24B) and the Atmel AVR series (order code NR41U). The training system does not assume any previous knowledge of microelectronics or programming, but you should be computer literate. Where possible, the electronics required is covered, but additional reading might be required. The system is designed to cover as many sections of the BTEC and GNVQ Microelectronics syllabi as possible, and includes subjects such as the fetch-execute cycle, memory mapping, address decoding, addressing methods, subroutines and program design methods are covered as they naturally occur. In addition, seven segment displays, keypads, BCD, binary, decimal, hexadecimal, logic, timers, interrupts etc are all covered. The hardware module is intended for connection to

the parallel (printer) port. Software supplied on 3.5in high density disk.

Retail Unit Price each (inc VAT)

Order Code	Type	Price each exc. VAT	inc. VAT each
NR24B	PIC Explorer	£98.990	£116.320
NR41U	AVR Explorer	£98.990	£116.320

## Atmel CD ROM

Atmel

A CD-ROM giving comprehensive information on Atmel's range of non-volatile memory, microcontrollers and configurable logic devices. A copy of Adobe Acrobat Reader is included which is needed to view, print and search the information contained on the CD-ROM. System requirements are a 386 processor, or better, Windows 3.1, Windows 95 or Windows NT 3.5 or better, 4Mb of RAM and a CD-ROM drive. Includes AVR Risc Data.

Retail Unit Price each (inc VAT)

NR21X	Atmel CD Rom	£11.750NV	£11.750NV

## Zilog Z8

### Z8 Microcontrollers

Zilog

Those of you familiar with the venerable Z80 series CPUs and their assembly language need look no further for an entry into the modern world of microcontrollers. Zilog support this range of devices with software and hardware which make the transition from the older 'discrete' microprocessor technology to microcontrollers (which are practically a complete computer on a small chip) as painless as it could possibly be.

The Z8 series of microcontrollers from Zilog are a family of CMOS EPROM based compact devices with built in I/O and timing functions. They offer programmable low EMI (electromagnetic interference) operating modes for commercial applications coming under the scope of the new EMC/EMI regulations, as well as the flexible range of interfacing options you would expect from the industry's longest established and respected manufacturer. These low cost devices are based around a compact processor core incorporating two on-chip counter/timers with a number of selectable user modes, as well as two analogue comparators allowing easy interfacing with sensor circuits for process monitor and control applications where standard logic levels are not available. They have built in power-up reset circuits and are watchdog timer protected against software crashes. The devices are fully internally memory mapped in a similar fashion to the older Z80 series, in that the initial program memory locations contain the reset jump vector, followed by the interrupt vectors in familiar low byte/high byte order. Clock speed may be set by crystal, ceramic resonator, LC, or external clock drive. Six levels of interrupts are supported.

**Note that all program and data memory is internal except for the Z86E40, which can access up to 60k of external data memory.**

Full device data is available for these MCUs, including circuit diagrams for the adaptors allowing a standard EPROM programmer to program the E30/E40 devices. See below for details of ready built programming adaptors and the development kits/emulators for this range.

Price each shown, but sold only in multiples of 25.

Order Code	Type	Price each exc. VAT	inc. VAT each
LE27F	Z86E04	£2.440	£2.390
LE28G	Z86E08	£2.440	£2.390

LE30H	Z86E40	£11.080	£9.860

## Z86Exx Emulator/OTP Programmer

The Zilog Z86CCP00ZEM emulator contains all you will need to use any AT compatible PC (min system 286@12MHz with DOS 5.0 or above, Windows 3.0 or above, and 720k of hard disk free) to write and develop software for the Zilog range of processors and microcontrollers. Cross assembler software is provided for Z8, Z80 and Z8000 CPU cores allowing easy conversion from older assembly language source codes, or for those who are most comfortable writing for Z80.

This development system also includes a combined emulator/programmer board with RS232 interface for a standard PC Com port, and the 18-pin ZIF socket for programming the smaller MCUs. The board is pre-drilled to accept 28 and 40-pin ZIF sockets for programming the E30 and E40 MCUs, and an accessory kit (Z86CCP00ZAC) is available which contains all of the necessary ZIF sockets, emulation, power and Com leads. PSU requirement is 8V DC @ 1A.

The package contains very comprehensive data, including the full Z8 series databook and technical manual, emulator and cross assembler user guides, and other instruction guides.

## Z86E04/E08 Application Board

This assembled circuit board is an ideal learning tool for those interested in using the Z86E04 or E08 MPUs for the first time. It includes a preprogrammed device, keypad and 4-digit LED display to demonstrate the versatility of these devices and their special functions, as well as showing how low cost A to D and D to A conversion techniques may be achieved. A 5V DC supply @ 50mA will be required.

The application board is supplied with application source code, Z8/Z80/Z8000 cross assembler, MOBJ link loader and full documentation.

## SGS Thomson

### ST62 Microcontrollers

#### SGS Thomson

This range of HCMOS microcontrollers have been designed to monitor a large number of analogue voltage or sensor levels and are ideally suited to appliance, automotive and industrial control circuit applications where many process feedback sensors need to be monitored by the processor to formulate a control decision. I/O pins may be configured under software control as logic inputs with or without internal pull up resistors, interrupt generating inputs with pull up resistors or open drain or push-pull outputs. Many of the I/O pins may instead be programmed as analogue inputs for the internal 8-bit A-to-D converter.

The devices have built-in oscillator circuits requiring an external crystal or ceramic resonator @ 8MHz, digital watchdog circuits (hardware driven if the part no. includes the letters 'HWD' or software driven if the part no. includes 'SWD') to protect connected hardware from system crashes in electrically noisy environments and programmable timer facilities. Five interrupt levels are provided and selected I/O lines will sink up to 20mA for direct triac or LED driving.

Many dedicated control circuits will be used in harsh environmental conditions and one of the most variable is the ambient temperature, especially in control circuits housed outdoors or in automotive applications. Note that each device in the range with the letters B6 following the main part number is suitable for use in temperatures ranging from -40 to +85°C.

Note that the ST62T/E45 devices incorporate a full LCD display interface with 24 segment outputs and four backplane outputs, allowing up to 96 LCD segments to be independently driven.

Supplied in a 52-pin quad flat pack package (windowed for the EPROM version), and also including the versatile A-to-D and other I/O options included in the rest of the range, but with dual timers and counters, this device forms an almost complete control and display system on a single chip ideally suited to burglar alarm circuits or other complex monitor/control/display systems in both home and industrial applications.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Discrete Z8 Microcontrollers

### Zilog

This comprehensive data book from Zilog includes full specifications and information on the applications for their Z8 family of discrete Z8 microcontrollers for peripherals and consumer electronics and includes the Z86xxx series. The book takes the reader through the features, characteristics and applications of these versatile chips and the data is extensively supported by clear explanatory diagrams. Includes sections on applications and technical articles, support products and third party vendors, a Superintegration™ products guide and literature guide. 1994. Over 400 pages. 228 x 180mm. Illustrated.

**ST6 Hardware Starter Kit**

This kit consists of a single-sided PCB with all the components necessary (except micro) to quickly and easily help develop projects based on the 20- and 28-pin DIL ST6 microcontrollers. The PCB provides access to all I/O lines including NMI, RESET and TIMER, and includes regulator, 8 LEDs for indication, 6MHz ceramic resonator, reset button and pin sockets.

**Matra Harris (MHS)**

**80C31 Series Microcontrollers**

MHS

This range of microcontrollers maintain full software and hardware compatibility with the earlier and very popular 8031 MCUs, but is fabricated using CMOS technology to provide very substantial power savings over the older part. In addition to this, the 80C31 series incorporate two software invoked power saving modes which reduce power consumption in idle mode to approximately 15% of operating consumption, and "power down" mode which drops consumption to less than 10µA until the MPU is reawakened by interrupt. The 80C31 and 80C32 are ROMless devices which can separately address up to 64k of external program and data memory. The 80C52 has 8k of onboard mask ROM, which contains a Tiny Basic compiler, and the ability to address external memory. Each MCU is equipped with 32 I/O lines, a full duplex serial port, on chip oscillator and clock circuits. Note that clock speeds may run down to DC without loss of data.

Part No.	Data RAM	Timers	Interrupts	Max speed	Package	Order Code
80C31	128	2x16-bit	5/2 level	12MHz	40 DIP	AH46A

**Motorola**

**MC68HC11A1P 8-Bit Microcontroller**

Motorola

The MC68HC11A1P is a high performance microcontroller unit based on the M68HC11 family. This high-speed, low power consumption chip has multiplexed buses and a fully static design. It can operate at frequencies from 3MHz down to DC. The device includes power saving 'STOP' and 'WAIT' modes, 512 bytes of on-chip EPROM, and 256 bytes of on-chip static RAM (all saved during standby). It also has a 16-bit timer featuring 3 input capture channels and 5 output compare channels; an 8-bit pulse accumulator, real-time interrupt circuit and a Computer Operating Properly (COP) watchdog timer. I/O comprises a synchronous serial peripheral interface, asynchronous NRZ serial communications interface, an 8-channel, 8-bit A/D converter, 38 general-purpose I/O pins, of which 15 are bidirectional and 11 are input only and 12 are output only.

There are two operating modes. In single-chip mode, the device behaves as a microcontroller without external address or data buses. In expanded multiplexed mode, the MCU can access a 64K-byte address space. This space includes the same on-chip memory addresses used in single-chip mode, but also external peripheral and memory devices. The expansion bus is made up from ports B and C and control signals AS and R/W. These signals are active and valid for all bus cycles including accesses to internal memory locations. A recommended method for implementing multiplexed addressing and data access is to use PB0-PB7 for address lines A8 to A15, and PC0-PC7 giving the lower A0 to A7, which is latched into a 74373 non-inverting octal latch by AS, and then PC0-PC7 becomes a bidirectional data bus. Memory maps are the same for both single-chip

and expanded multiplex modes with 256 bytes of on-chip RAM initially located at \$0000, and the 64-byte register block at \$1000. This or the RAM can be relocated at any other 4K boundary after RESET. A 512-byte OTPROM is at \$B600 through to \$B7FF at RESET and an 8K-byte ROM is at \$E000 to \$FFFF. Hardware priority is built into the memory remapping. In special bootstrap mode, a boot loader ROM is enabled at \$BF40 to \$BFFF. The operating mode and memory map can be configured in a special OTPROM register programming mode. The chip is encapsulated in a 48-pin DIL package. Operating temperature range is -40 to +85°C.

## Digital Signal Processing DSP

### Analog Devices

## ADDS-21xx-EZLITE Development System

Analog Devices

The EZLITE Development System fulfils the need for a full-featured, low-cost DSP design tool, as this comprehensive kit lets the designer evaluate, develop, debug and prototype their DSP application. The kit includes a development board with 16-bit stereo audio I/O capability, assembler, linker and simulation software, PC host software, DSP algorithm source code and accessories. Preprogrammed demonstration programs, including MPEG audio decode and echo cancellation, highlight the performance of the ADSP-2100 architecture, and provides DSP designers with a clear insight as to the suitability of the DSP system. The board requires only a power source, an analogue input, a pair of amplified speakers to be able to run audio applications and demos. The board features a 16-bit stereo audio I/O capability, so making it ideal for evaluating and developing a wide range of audio applications from basic digital filtering to high performance MPEG

audio decode. Stereo audio input is provided by the on-board AD1847 codec which has the added flexibility of programmable gain and sample rates from 5.5kHz to 48kHz. The 16-bit ADSP-2181 DSP featured on the board has 32k words of RAM, DMA ports and power management on chip. Running the MPEG audio decode demonstration, the device plays approximately 7secs of audio without the need for external RAM, and with a glueless EPROM connection. Additional demonstrations include echo cancellation, ADPCM speech compression, FFT and DTMF tone generation. Code compatibility with the ADSP-2100 family means the board can be used to develop software applications for any of the devices in the family. The board can be connected to the RS-232 port of a PC, and a Windows based monitor program lets you interactively download programs and interrogate the ADSP-2181. The board comes with a socketed EPROM so that the monitor program, or demonstrations, can be run, or alternatively, a EPROM with your own code can be plugged in.

Price each is shown. Order quantities less than 5 will be sold at the one off inc. VAT price.

## SHARC™ EZ-Kit Lite

Analog Devices

Now with this easy-to-use development kit designers with no DSP experience, can soon master Analog Devices SHARC 32-bit floating point DSPs. The SHARC EZ-KIT Lite is a complete package for DSP evaluation and prototyping, containing all the essential tools for the development of a DSP design.

The DSP development board includes:

- ★ ADSP21061 SHARC processor running at 40MHz
- ★ UART - RS232 interface
- ★ AD1847 SoundPort audio CODEC
- ★ Line-in/out with stereo jacks
- ★ MIC in with stereo jack
- ★ Socketed EPROM - firmware includes a power on self-test with audio report and an RS232 based boot strap loader
- ★ Power regulator
- ★ Power LED and 4 flag LEDs

The powerful software and the SHARC's large on-chip memory allows the designer to run very sophisticated programs. Code development and prototyping tools included are:

- ★ Assembler, linker, instruction level simulator, C compiler with numerical C extensions
  - ★ C source level debugger, and C runtime library
  - ★ A kernel for the SHARC for power on self-test and host interface
  - ★ A host-based Windows 3.1 uploader/downloader to allow the user to perform data uploads and downloads from/to the target SHARC EZ-KIT Lite
  - ★ Diagnostic utilities to control program operation and access DSP memory
- Supplied with RS-232 cable and 9V DC power supply with SHARC users manual and a comprehensive CD-ROM with SHARC development tools, EZ-KIT Lite manual and tutorial.

## ADSP-2104KP-80 Low-Cost DSP Microcomputer

Analog Devices

### Features

- ★ 16-bit fixed-point micro with on-chip memory
- ★ 512 words program RAM, 256 words data RAM
- ★ On-chip interval timer and two serial ports
- ★ 20MIPS, 50ns maximum instruction rate
- ★ Separate on-chip buses for program and data memory
- ★ Integrated I/O peripherals: serial ports and timers
- ★ Single cycle instruction execution and multifunction instructions

The ADSP-2104 is a single-chip microcontroller that is optimised for digital signal processing (DSP), and other high speed numeric processing applications. The processor combines the core DSP architecture - computation units, data address generators and program sequencer - with differential features such as on-chip program and data memory RAM, a programmable timer and two serial ports.

The ADSP-2100 family's flexible architecture and comprehensive instruction set support a high degree of parallelism. In one cycle the ADSP-2104 can perform all the following operations:

- Generate the next program address
- Fetch the next instruction
- Perform one or two data moves
- Update one or two data address pointers
- Perform a computation
- Rx and Tx data via one or two serial ports

The device requires a 5V supply and is housed in a 68-lead PLCC package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**ADSP-2181KS-133 DSP  
Microcontroller**

Analog Devices

**Features**

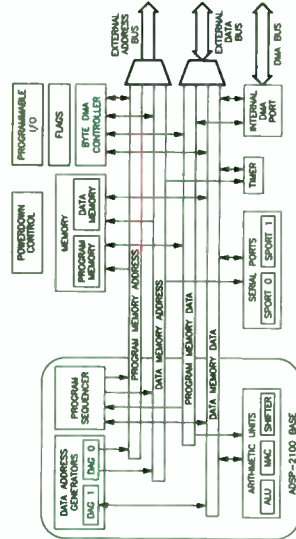

- ★ 30ns instruction cycle time
- ★ 3-bus architecture
- ★ Single-cycle instruction execution
- ★ Multifunction instructions
- ★ Power-down mode
- ★ 80k bytes of on-chip RAM
- ★ 16-bit internal DMA port
- ★ Six external interrupts

The ADSP-2181 is a single chip microcomputer optimised for digital signal processing (DSP), and other high speed numeric processing applications. The device combines the ADSP-2100 family base architecture (three computational units, data address generators and a program sequencer) with two serial ports, a 16-bit internal DMA port, a byte DMA port, a programmable timer, Flag I/O,

extensive interrupt capabilities and on-chip program and data memory.

The device has 80k bytes of on-chip memory configured as 16k words (24-bit) of program RAM, and 16k words (16-bit) of data RAM. Power down circuitry is provided to meet the low power needs of battery operated portable equipment.

In addition, the device supports new instructions which include bit manipulations - bit set, bit clear,

bit toggle, bit test - new ALU constants, new manipulation instruction (x squared), biased rounding, result free ALU operations, I/O memory transfers and global interrupt masking for increased flexibility. Fabricated in a high speed, double metal, 0.5µm CMOS process, the ADSP-2181 operates

with a 30ns instruction cycle/33.3MHz instruction rate. Every instruction is executed in a single processor cycle. The flexible architecture and comprehensive instruction set allows the processor to perform multiple operations in parallel. In one processor cycle the IC can:

- generate the next program address
- fetch the next instruction
- perform one or two data moves
- update one or two data address pointers
- perform a computational operation

This take place while the processor continues to:

- Rx and Tx data through the two serial ports
- Rx and/or Tx data through the internal DMA port
- Rx and/or Tx data through the byte DMA port
- decrement timer

The device requires a 5V supply and is housed in a 128-pin plastic quad flatpack (PQFP).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**Texas Instruments**

**TMS320 Digital Signal Processors**

The Texas Instruments TMS320 range of digital signal processors are without a doubt the best known DSPs in today's market, having been around since 1983 when they were awarded the "Product of the Year" award by Electronic Products magazine.

The versions selected for inclusion in the Maplin catalogue require no specialised programming or development system as they are designed to be used with external EPROM program memory with 50ns access time, organised as 4096 x 16 bits (2 x 2732), although programs used for commercial applications in large quantities may be ordered mask programmed by the manufacturer once the software is proved. Slower EPROMS may be used provided that the system clock is slowed to compensate for the increased access times (for example, a pair of 2732s with 150ns access time may be used with a DSP clocked at 4MHz). The devices contain a 32-bit arithmetic logic unit (ALU) and accumulator for supporting double precision two's complement arithmetic. The multiplier performs a 16x16-bit, 32-bit result multiplication in a single instruction cycle. The devices are also equipped with a hardware stack and PUSH/POP instructions. The instruction set has 60 members (84 for TMS320C25).

## CPU's & Support Devices

### DS1231 CPU PSU Monitor

Dallas Semiconductors

The DS1231 power monitor detects out of tolerance power supply conditions, and warns a processor based system of impending power failure by halting the processor to prevent spurious cycles and asserts Reset as Vcc falls below a selectable 5% (TOL to ground) or 10% (TOL to Vcc) threshold. When power returns, the processor is held inactive until well after power conditions have stabilised, safeguarding any memory in the system from inadvertent data changes.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 11871	Price each exc. VAT	inc. VAT each
LE13P	CPU PSU Mon	10+ £3.290 25+ £3.090 100+ £2.990	1+ £3.990

### DS1232 CPU PSU Monitor/ Watchdog Timer

Dallas Semiconductors

The DS1232 power monitor detects out of tolerance power supply conditions and warns a processor based system of impending power failure by halting the processor, and asserts Reset as Vcc falls below a selectable 5% (TOL to ground), or 10% (TOL to Vcc), threshold. When power returns, the processor is held inactive until well after power conditions have stabilised. It also incorporates a watchdog timer circuit which forces the processor to a Reset state if the strobe input is not driven low prior to timeout (normally connected to an address decoder, MREQ or ALE signal in the system which would only become inactive in case of processor crashes. A separate push-button input is provided. Grounding this input by means of a push-button generates a clean reset signal at the Reset outputs (both active high and active low outputs are provided).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

### DS1233 Econo Reset

Dallas Semiconductors

This compact device provides a complete CPU power monitor and Reset circuit with push-button override facility for 5V microprocessors and microcontrollers. It will generate a reset signal either upon closure of a connected push-button, which will be debounced and a 350ms signal generated, or upon Vcc dropping 10% below 5V. When power returns to normal levels, the Reset output will remain active for 350ms to allow the system to stabilise.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

### DS1233A Econo Reset

Dallas Semiconductors

This compact device provides a complete CPU power monitor and Reset circuit with push-button override facility for 3-3V microprocessors and microcontrollers. It will generate a reset signal either upon closure of a connected push-button, which will be debounced and a 350ms signal generated, or upon Vcc dropping 10% below 3-3V. When power returns to normal levels, the Reset output will remain active for 350ms to allow the system to stabilise.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 11852	Price each exc. VAT	inc. VAT each
LE16S	EconoReset 3.3V	25+ £0.971 100+ £0.907 300+ £0.850	1+ £1.790

### DS1236 MicroManager

The DS1236 not only monitors CPU power supply to generate a Reset output in case of failure, but gates the system Chip Enable signal for RAM and controls 3V battery switching to effectively convert CMOS SRAM into non-volatile memory, which will retain its contents after the main power supply is removed. This makes it ideal for laptop or other portable processor based equipment as 'wake-up/sleep' controls with less than 100nA battery current consumption are also provided.

This device also provides the watchdog facility offered by the other members of the range as well

as a Non Maskable Interrupt output which can warn the processor of impending power failure before shutdown. In addition to these features, external power switching is also possible for high power applications and a 'freshness seal' may be invoked to electrically disconnect a back-up battery prior to any system failure.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 11863	Price each exc. VAT	inc. VAT each
LE17T	DS1236	25+ £4.720 100+ £4.410 300+ £4.130	1+ £5.640

### DS1239 MicroManager

The DS1239 offers the highest level of PSU monitoring, control and system protection for any microprocessor or microcontroller based equipment. It monitors CPU power supply to generate a Reset output in case of failure or fluctuation, and also gates the system Chip Enable signal to protect RAM. It controls 3V battery switching to retain memory contents after the main power supply is removed. This makes it ideal for use with laptop or other portable processor based equipment - as 'wake-up/sleep' controls with less than 100nA battery current consumption are also provided.

This device also provides the hardware watchdog monitor facility offered by the other members of the range to restart the system after processor lock up and a Non Maskable Interrupt output which can warn the processor of impending power failure before shutdown. External power switching output control is provided for high power applications and a 'freshness seal' may be invoked to electrically disconnect a back up battery prior to any system failure.

In addition to this very comprehensive range of features, the power switching output may be toggled by a keypad or similar button to control an external mains power supply connection, via a low current opto-triac isolator and triac.

## DP8421A/22A Programmable DRAM Controllers

DP8421A

DP8422A

### Features

- ★ On chip high precision delay line to guarantee critical DRAM access timing parameters
  - ★ microCMOS process for low power operation
  - ★ High capacitance drivers for refresh lines and DRAM address on chip
  - ★ On-chip support for nibble, page and static column DRAMs
  - ★ Byte enable signals on-chip allow byte writing in a word size up to 32 bits with no external logic
  - ★ Selection controller speeds of 25MHz
  - ★ On-board Port A/Port B (DP8422A only) refresh arbitration logic
  - ★ Direct interface to all major microprocessors
  - ★ 4 RAS and 4 CAS drivers (all programmable)
- A choice of two Dynamic RAM Controller ICs for use in low cost, single chip interfaces between dynamic RAM and all 8-, 16- and 32-bit systems. Each chip generates all the required access control signal timing for DRAMs. All refreshes and accesses are arbitrated on chip. If necessary active low WAIT and DTACK outputs insert wait states into system access cycles, including burst mode accesses. All the usual refresh signals are supplied for DRAMs including on-chip precharge counters for each refresh output, thus avoiding delayed back to back accesses because of precharge. The DP8422A has two access ports to simplify dual accessing, can work with 4Mb DRAM, and as a direct drive memory capacity of 64Mb. Arbitration among these ports and refresh is done on-chip. The DP842A can work with 1Mb DRAM, and as a direct drive capacity of 16Mb.

## EF6821P (6521) Peripheral Interface Adaptor (PIA)

SGS Thomson

6821

The IC provides a universal means of interfacing parallel data to a microprocessor. One chip is capable of interfacing the 8-bit data bus of the MPU to two 8-bit peripheral buses. Data is able to flow in either direction to and from either peripheral bus under the control of the microprocessor. The two peripheral bus output/inputs are slightly different from one another in that I/O A will drive TTL or the base of a transistor up to 1mA at 1.5V in output mode while i/o B has 3-state capability allowing interface with another MPU.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
WQ46A	EF6821P	£1.490	£1.440

## EF6850P Asynchronous Communications Interface Adaptor

SGS Thomson

6850

This IC will interface the microprocessor data bus to serial asynchronous data, both for input and output. The parallel data of the MPU bus is serially transmitted and received by this IC with proper formatting and error checking. A programmable control register provides variable word lengths (8 or 9-bit), clock division (/16, /64), transmit, receive and interrupt control. The device has optional even or

odd parity, and performs parity, overrun and framing error checking. Transmissions up to 500k bauds (kbps) are possible and three control lines are provided for control of a modem for line transmission (e.g. to cassette recorder or amateur radio transceiver).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
WQ48CE	EF6850P	£1.490	£1.440

## 8251A Programmable Communication Interface

8251A

This USART chip is programmed by the MPU to operate using virtually any serial data transmission technique presently in use. It interfaces the MPU's parallel data bus with any peripheral requiring serial data (e.g. cassette recorder, modem etc.). Features are: synchronous mode - 5- to 8-bit characters, internal or external character synchronisation and automatic sync insertion; asynchronous mode - 5- to 8-bit characters, clock rate (/16, /64), break character generation, 1, 1/2 or 2 stop bits, false start bit detection, automatic break detect and handling; up to 64k baud (kbps); full duplex double buffered transmitter and receiver; error detection-parity, overrun and framing; all inputs and outputs fully TTL compatible.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## 8255A Peripheral Interface Adaptor

8255A

A general purpose I/O device having 24 I/O pins which may be individually programmed in two groups of 12 and used in 3 major modes of operation. In mode 0 each group of 12 I/O pins may be programmed in sets of four to be input or output. In mode 1 each group may be programmed to have 8 lines of I/O, and of the remaining 4, three are used for handshaking and interrupt control signals. Mode 2 is a bidirectional bus mode which uses 8 lines for the bus and 5 lines (one borrowed from the other group) for handshaking.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## 8279 Keyboard/Display Interface

8279

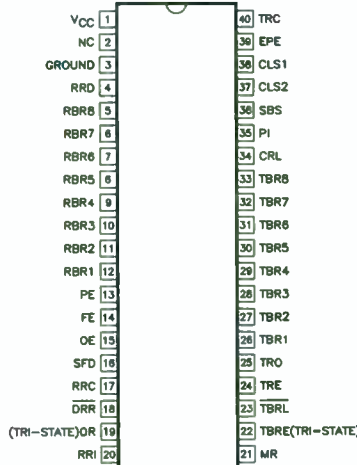

This IC is a general purpose keyboard and display I/O interface device for use with microprocessors. The IC will scan a 64-contact key matrix and perform 2-key lockout and N-key roll-over. Keyboard entries are debounced and strobed in an 8-character FIFO and if more than 8 characters are entered, overrun status is set. Key entries set the interrupt output line to the MPU. The display part of the IC provides a scanned interface for LED and other types of displays. Numeric and alphanumeric displays and simple indicators may be used. The IC has a 16x8 display RAM which can be organised into two 16x4. The RAM can be loaded or interrogated by the MPU. Right entry calculator and left entry typewriter display formats are possible. Both read and write of the RAM can be done with auto-increment of the RAM address.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## CDP6402CE Universal Asynchronous Receiver/Transmitter

Harris

6402

This industry standard UART will interface computers or microprocessors to asynchronous serial data channels. The receiver converts serial start, data parity and stop bits to parallel data, verifying proper code transmission, parity and stop bits. The transmitter converts parallel data into serial form and automatically adds start, parity and stop bits. The data word length can be 5, 6, 7 or 8-bits. Parity may be odd or even. Parity checking and generation can be inhibited. The stop bits may be one or two, or one and a half if transmitting 5-bit code. This IC is sometimes supplied coded CDP1854ACE. These two parts are identical.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## RC6522P Versatile Interface Adaptor (VIA)

Rockwell

6522

A very flexible I/O device that contains a pair of very powerful 16-bit interval timers, a serial-to-parallel/ parallel-to-serial shift register and input data latching on the peripheral ports. Expanded handshaking capability allows control of bi-directional data transfers between VIAs in multiple processor systems. Control of peripheral devices is handled primarily through two 8-bit bi-directional ports. Each line can be programmed as either an input or an output. Several peripheral I/O lines can be controlled directly from the interval timers for generating programmable frequency square waves

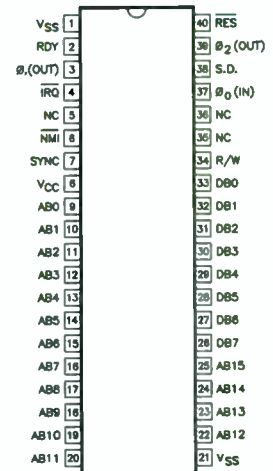

or for counting externally generated pulses. To facilitate control of the many powerful features of this chip, an interrupt flag register, an interrupt enable register and a pair of function control registers are provided.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Z80180

Zilog

The Zilog Z80180 Microprocessor/Microcontroller provides an ideal upgrade path for those designers who are already familiar with the Z80 instruction set, but have found that time and tide have passed the Z80 by and those hard learned assembly language skills and techniques seem obsolete unless a whole new set of mnemonics and addressing modes are memorized. The Z80180 maintains full software compatibility with the Z80, but offers the designer a complete computer system in one 64-pin device. The device incorporates the following features:

- ★ It generates the system clock (internal and external) from an external crystal. The clock speed is 10MHz which provides a five times speed increase over the most popular version of the Z80.
- ★ The Memory Management Unit allows the user to map the processors nominal 64k address range over an external 1Mbyte banked area.
- ★ The Asynchronous Serial Communications Interface provides two individual full-duplex UARTs with programmable baud rate and modem control signals.
- ★ Programmable Reload Timer - this logic consists of two separate 16-bit timers with count reload register.
- ★ The Clocked serial I/O channel provides a simple half-duplex serial transmitter and receiver.

In addition to these hardware features, the extended

Z80 instruction set includes 8-bit multiply and block I/O instructions, sleep mode and several other useful non-destructive test instructions. The device provides 8-bit refresh addresses and allows many instructions to execute in fewer machine cycles. An evaluation/development kit is available.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
LE36P	Extended Z80 10 Mhz	£7.560	£9.990

## Z80180 Evaluation Kit

Zilog

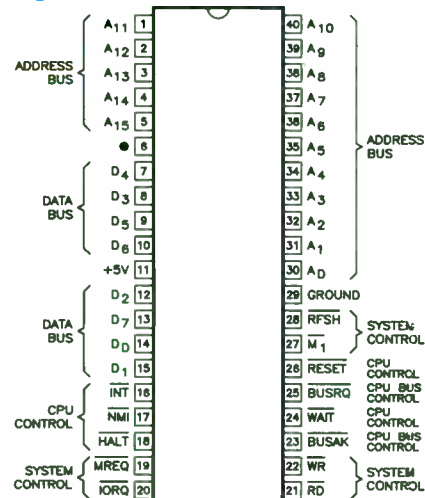

This kit is intended to provide all of the tools needed to develop, program and use the Zilog Z80180 extended microprocessor. The kit contains an assembled circuit board complete with Z80180 MPU, 8Kx8 EPROM containing Debug Monitor and Download software, 8Kx8 Static RAM, sockets for expansion connections and RAM/ROM, RS232 interface (9600 baud), NMI and Reset switches. The kit is provided with Z8/Z80/Z8000 Cross Assembler software (for IBM AT compatibles), Loader/Link software, Z80181 example software and the board Debug/Monitor source code. Full technical manuals and software user guides are included, as is a 25 pin RS232/Com cable. The package allows software to be written in standard Z80 code, assembled and downloaded to the RAM on the Evaluation PCB. The software may then be run and debugged via the monitor software on the board. The unit requires a regulated 5VDC power supply @ 0.65A.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
LE37S	Z80181 Dev Kit	£119.140	£139.990

## Z80-CPU Microprocessor

Zilog

### Z80-CPU

This 40-pin DIL IC is an extremely powerful 8-bit microprocessor having 158 instructions including all of the 8080 instructions giving total software compatibility. Thus programs written for the 8080 may be run on the Z80 and later updated to make use of the powerful Z80 instruction set. Typically the Z80 requires 25% to 50% less memory space than the 8080 and gives 5 times the throughput of the 8080. There are 17 internal registers including two real index registers, and three modes of fast interrupt response. Static memories can be interfaced using only an external address decoder to provide the appropriate chip select signals. Another advantage of the Z80 is that it can provide all of the refresh control for dynamic memories up to 64K bytes directly, and will interface directly with most 18-pin and 22-pin 4K dynamic RAMs with virtually no additional external logic (16-pin types require only an external address multiplexer). The

Z80 requires only a single 5V supply as do all its support chips described below and a single-phase TTL clock operating from a suitable crystal.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
QW00A	Z804004PSC	£2.600	£4.490

## DS1213 SmartSockets

The Dallas range of SmartSockets accepts standard CMOS static RAMs and monitor Vcc for an out of tolerance condition. When such a condition is detected, an internal lithium energy source is switched on and write protection is unconditionally enabled to protect RAM contents. Using a SmartSocket for memory protection saves PCB space since the combination of socket and RAM uses no more area than the memory alone. Data retention time is greater than 10 years with the correct RAM selection.

The DS1213B (LE24B) is suitable for use with 2K x 8 or 8K x 8 RAMs, the DS1213C (LE25C) is suitable for 32K x 8 RAMs and the DS1213D (LE26D) is for 32K x 8 or 128K x 8 RAMs.

## Dataline Drivers/Receivers

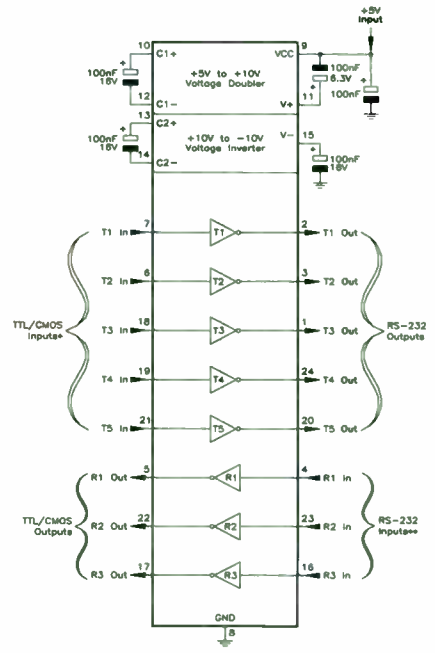

### ADM207AN RS-232 Drivers/Receivers

Analog Devices

The ADM207 is a 5-line drivers/3-receivers IC intended for all EIA-232-E and V.28 communications interfaces, especially in applications where ±12V is not available. The device includes two internal charge pump voltage converters to allow operation from a single +5V supply. These converters produce the ±10V required for the RS-

232 output levels from the single +5V. The device requires just four external capacitors to produce the ±10V supplies. Supplied in a 24-pin DIL package.

### Specification

- Power supply: 5V, 5mA, no load
- I/P logic threshold low: 0.8V max
- high: 2V min
- Logic pull-up current: 10µA typ
- RS-232 input voltage range: -30V to +30V
- threshold low: 1.2V typ
- threshold high: 1.7V typ
- resistance: 5kΩ typ
- TTL/CMOS output voltage low: 0.4V max
- voltage high: 3.5V min
- leakage current: 0.05µA
- Propagation delay: 0.5µs
- Slew rate: instantaneous: 25V/µs
- transition region: 6V/µs
- O/P resistance: 300Ω
- RS-232 o/p s/c current: ±12mA typ, ±60mA max

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## ADM1485JN Low Power EIA RS-485 Transceiver

Analog Devices

The ADM1485 is a differential line receiver suitable for high speed bi-directional data communications on multipoint bus transmission lines. It is designed for balanced data transmission and complies with both EIA RS-485 and RS-422 standards. The IC contains a differential line driver and differential receiver, both being enabled independently, and when disabled, the outputs go to a tristate mode. Up to 32 transceivers may be connected simultaneously on a bus, but only one driver should be enabled at any time. Disabled drivers should not load the line, and the ADM1485 driver features high output impedance when disabled, and powered down. Additionally, the receiver goes to a logic high output state if the inputs are floating.

The device has extremely fast switching speeds, and with minimal driver propagation delays, allows data transmission rates of up to 30Mbits/s. Low skew minimises EMI interference.

The ADM1485 is suitable for low-power RS-485 systems, packet switching, LANs, data multiplexers, ISDN applications etc. Supplied in an 8-pin DIL package

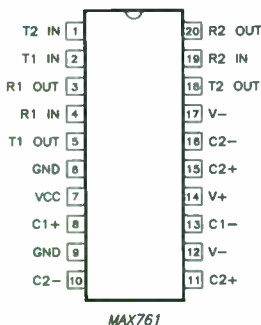

**Specification**  
 Power supply: 5V, 2.2mA max  
 Propagation delay driver: 10ns typ  
 receiver: 25ns typ  
 Skew: 5ns max  
 Diff o/p voltage: 5V max  
 Diff i/p threshold voltage:  $\pm 0.2V$   
 I/P resistance: 12k $\Omega$  min

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MAX233CPP + 5V Powered RS-232 Driver/Receiver

Maxim

The MAX233 is a 2-line driver/receiver IC intended for all EIA/TIA-232E and V.28/V.24 communication interfaces, especially where no  $\pm 12V$  supply is available. The device includes on-board voltage converters that require no external capacitors which makes the IC suitable for battery-powered systems, and applications where PCB space is critical. Data transfer rate is 120kbps. Supplied in a 20-pin DIL package.

**Specification**  
 Power supply: 5V, 5mA typ  
 Rx i/p voltage range: -30V to +30V  
 RS232 i/p resistance: 5k $\Omega$  typ  
 Tx output resistance: 300 $\Omega$   
 TTL/CMOS output voltage low: 0.4V max  
 high:  $V_{CC} - 0.4V$   
 Transition slew rate: 4V/ $\mu s$  typ  
 Typical propagation delay RS232 in-TTL/CMOS out: 6 $\mu s$  typ

## MAX483CPA Low-Power RS-485/RS-422 Transceiver

Maxim

The MAX488 is a low power transceiver for RS-485 and RS-422 communications, containing one drive and one receiver. The device features a reduced slew-rate driver that minimises EMI and reduces reflections caused by improperly terminated cables. This allows error-free data transmission up to 250kbps. The device requires a single +5V supply and draws 120 $\mu A$  quiescent current, in 'shutdown' mode this drops to only 0.1 $\mu A$ .

The driver is short-circuit current limited and is protected against excessive power dissipation by thermal shutdown circuitry that places the driver outputs into a high impedance state. The receiver input has a fail-safe feature that guarantees a logic-high output if the input is open-circuit. Supplied in an 8-pin DIL package.

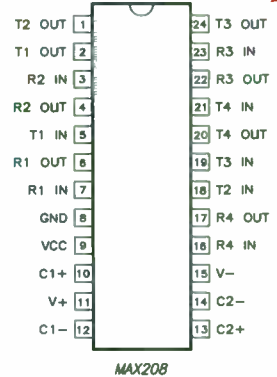

**Specification ( $V_{CC} = 5V$ )**  
 Supply voltage: 5V nom, 12V max  
 Differential driver output RS-422: 2V min  
 RS485: 1.5V min, 5V max  
 Driver common mode output: 3V max  
 Input voltage high: 2V min  
 low: 0.8V max  
 Rx diff. threshold voltage: -0.2V to +0.2V  
 Rx input impedance: 12k $\Omega$   
 I/P to O/P driver: 800ns typ  
 receiver: 250ns min to 2ms max  
 Driver o/p skew to o/p: 100ns  
 Driver rise/fall time: 250ns min, 2ms max  
 Max. data rate: 250kbps

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MAX208CNG + 5V RS-232 Transceiver

Maxim

The MAX208 transceiver is designed for RS-232 and V.28 communication interfaces where  $\pm 12V$  supplies are not available. On-board charge pumps convert the +5V input to the  $\pm 10V$  needed for RS-232, and require only four external 0.1 $\mu F$  capacitors for the conversion circuit. The four drivers and four receivers meet all EIA/TIA 232E and CCITTV.28 specifications at a data rate of 20kbts/sec. The drivers maintain the  $\pm 5V$  EIA/TIA-232E output signal levels at data rates in excess of 120kbts/sec when loaded in accordance with the EIA/TIA-232E specification. Supplied in a 24-pin DIL package.

**Specification (+5V supply)**  
 O/P voltage swing:  $\pm 8V$  typ  
 Supply current: 11mA typ  
 I/P logic threshold low: 0.8V max  
 high: 2V min  
 RS-232 i/p voltage: -30V to +30V  
 Receiver input threshold low: 1.2V typ  
 high: 1.7V typ  
 TTL/CMOS output voltage low: 0.4V max  
 high: 3.5V min  
 Rx propagation delay: 0.5 $\mu s$   
 Tx o/p resistance: 300 $\Omega$   
 Transition region slew rate: 5.5V/ $\mu s$   
 RS232 o/p short circuit current:  $\pm 10mA$

## DS1275

Dallas Semiconductor

The DS1275, line powered, three line RS232 transceiver provides a low cost, very low power interface to RS232 com ports, translating TTL levels to RS232 and vice versa. It employs a unique circuit which steals power from the incoming RS232 signal when the line is in a negative (mark) state. Since most com ports remain in the negative state when not actively transmitting data, this greatly reduces the DS1275's power consumption in comparison with the negative charge-pump system employed by other RS232 devices.

The device requires a single 5V power supply. The supply current of 5mA maximum (as little as 15µA in static mode) means that the DS1275 is ideally suited to battery powered applications where the line length is no greater than 3m, especially where a low cost, low component count solution is required.

## MAX202 RS232 Transceivers

Maxim

MAX202

The MAX202 transceiver is designed for RS232 and V.28 communication interfaces where a ±12V supply is not available. On-board charge pumps convert the +5V input to the ±10V needed for RS232 output levels. The drivers and receivers meet all EIA/TIA-232E and CCITT V.28 specifications at a data rate of 20kbits/sec. The device requires just four external capacitors to provide the voltage conversion.

Supplied in either a 16-pin DIL package (MAX202CPE0) or a narrow small outline package (MAX202CPE).

### Specification

Input voltage:	+5V
Supply current:	8mA typical no load
Output voltage swing:	±8V typical
RS232 input voltage operating range:	-30V to +30V
Input logic threshold low:	0.8V max
high:	2V min
Receiver input threshold low:	1.2V typ
high:	1.7V typ
TTL/CMOS output voltage low:	0.4V max
high:	3.5V min

## MAX232CPE RS-232 Transmitter/Receiver

Maxim

A dual RS-232 receiver/transmitter that meets all the EIA RS-232C specifications while requiring only a single +5V supply. This significantly simplifies system design by removing the need to provide power supply voltages other than +5V. The IC has two on-board charge pump voltage converters which generate +10V and -10V power supplies from the single +5V supply.

The IC contains four level translators, two of which convert TTL/CMOS input levels into  $\pm 9V$  RS-232 outputs ready for transmission, and two of which convert RS-232 inputs to 5V TTL/CMOS levels. The receivers have a nominal threshold of 1.3V, a typical hysteresis of 0.5V, and can operate with up to  $\pm 30V$  inputs.

232

### Characteristics

- Supply voltage:  $5V \pm 10\%$
- Output voltage swing:  $\pm 9V$
- RS-232 input voltage:  $\pm 30V$  max
- Propagation delay:  $0.5\mu s$
- Output resistance:  $300\Omega$  min
- RS-232 output short circuit current:  $\pm 10mA$

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MAX3232CPE 3V/5V RS232 Transceiver

Maxim

MAX3232CPE

The MAX3232CPE has a proprietary low-dropout transmitter stage enabling true RS232 performance from 3V to 5.5V DC supplies. The internal power

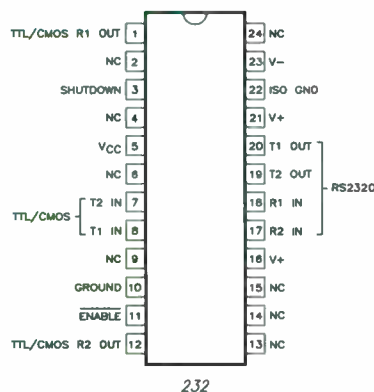

supply consists of a regulated dual charge pump that produces output voltages of +5.5V and -5.5V, from an input voltage range of 3V to 5.5V. Requiring only four  $0.1\mu F$  external capacitors, (for use with the charge pump circuitry) the device is guaranteed to run at data rates of 120kps while maintaining RS232 output levels. The MAX3232CPE has two receivers and two drivers and is ideal for 3.3V systems, mixed 3.3V/5V systems, or 5V systems that require true RS232 performance. The device consumes only  $250\mu A$ , has a  $4V/\mu s$  slew rate and is pin and functionally compatible with the industry standard MAX232. Applications include computers, notebooks, palmtops battery powered equipment, hand-held equipment and peripherals. Supplied in an 18-pin DIL package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## NM232DD Isolated Dual EIA-232D Transmitter and Receiver

Newport Components

232

An electrically isolated dual transmitter and receiver designed for use between standard UARTs and RS232 lines. The device provides two data receive and two data transmit channels, with no external components and one +5V supply. Each channel is EIA-232D and CCITT-V28 compatible at the interface and TTL/CMOS compatible at the logic connections. A low power shutdown mode and high impedance state for receiver outputs are effected via pins 3 and 11. Isolation is 1500V rms for 1 second.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**Specification** (typical at  $V_{CC} = +5V$ )  
 Supply voltage:  $+5V \pm 10\%$   
 Input voltage at receivers:  $\pm 30V$  max  
 Output voltage at transmitter:  $\pm 15V$  max  
 Output voltage ( $R_L = 3k\Omega$ ):  $\pm 7V$   
 Transmission rate:  $>9600$  baud  
 Supply current:  $<110mA$   
 Supplied in a 24-pin package measuring  $32.3 \times 14.7 \times 7.2mm$  high with pins on a 2.54mm spacing in two rows 16.7mm apart.

## DS26LS31CN

National Semiconductor

RECENTLY INTRODUCED

DS26LS31CN

A quad differential line driver IC designed for digital data transmission over balanced lines. Meets all the requirements of EIA Standard RS-422. The circuit provides an enable and disable function common to all four drivers. Other features include tri-state outputs and logically ANDed complementary outputs. The inputs are all LS compatible and are all one unit load. Supplied in a 16-pin DIL package.

### Features

- ★ Output skew 2ns typ.
- ★ Input to output delay 10ns typ.
- ★ Operation from single 5V supply

- ★ Outputs won't load line when Vcc=0V
- ★ Four line drivers in one package for maximum device density
- ★ Output short-circuit protection
- ★ Complementary outputs
- ★ Pin compatible with AM26LS31 devices

**Specification**

Supply voltage: 7V max.  
Supply current: 35mA typ.  
Maximum input voltage: 7V  
Maximum output voltage: 5.5V  
Maximum power dissipation: 1476mW

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## DS26LS32CN

National Semiconductor

DS26LS32CN

A quad differential line receiver IC designed to meet the RS-422 Standards for balanced and unbalanced digital data transmission. High input sensitivity of 200mV over an input voltage range of ±7V. Provided with an enable and disable function common to all four receivers and features tri-state outputs with 8mA sink capability. Constructed using low power Schottky design. Supplied in a 16-pin DIL package.

**Features**

- ★ High differential or common-mode input voltage ranges of ±7V
- ★ ±0.2V sensitivity over the input voltage range
- ★ Meets all the requirements of RS-422
- ★ 6KΩ input impedance
- ★ 100mV input hysteresis
- ★ Operation from a single 5V supply
- ★ Tristate outputs with choice of complementary outputs enables for receiving directly onto a data bus

**Specification**

Supply voltage: 7V max.  
Supply current: 52mA typ.  
Input sink current: 50mA  
Common-mode range: ±25V  
Differential input voltage range: ±25V  
Power dissipation: 1362mW

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MAX485 Low Power RS485/RS422 Transceivers

Maxim

The MAX485 is a half duplex, low power transceiver for RS485 and RS422 communications, and contains one driver and one receiver. The driver slew rate is not limited allowing the device to transmit upto 2.5Mbps.

The device draws 300µA of supply current when unloaded or fully loaded with disabled drivers. Drivers are short-circuit current limited and are protected against excessive power dissipation by thermal shutdown circuitry. The receiver input has a fail-safe feature that guarantees a logic high output if the input is open circuit. MAX485CNA is supplied in a 8-pin DIL package, and MAX485CSA is 8-pin SO package.

**Specification**

Supply voltage: 12V DC max.  
Differential driver output no load: 5V max  
load R=50Ω:(RS422): 2V  
load R=27Ω (RS485): 1.5V to 5V  
Input current (A,B): 1mA (VIN=12V)  
Receiver input resistance: 12kΩ

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## SN75172N & SN75174N Quad Differential Line Drivers

Texas Instruments

75172

75174

A pair of quad differential line drivers with tri-state output, meeting EIA Standards RS-422-A and RS-485 and CCITT Recommendations V.11 and X.27. The devices have been optimised for balanced multipoint communications up to 4Mbps. Amongst their many features are positive and negative common-mode output voltage in the range of -7V to 12V, and therefore makes them ideal for supporting party-line applications in noisy environments. Both positive and negative current limiting are supported to guard against faulty conditions on the transmission bus line. The 75172 supports both active low and active high enables, which can be used to control data flow out of the device as well as the tri-state capability (by holding both enables in the inactive state gives high impedance outputs). The 75174 device offers separate active high enables, one for inputs 1 & 2, and another for inputs 3 & 4. This means that each pair of inputs can be controlled totally independently of the other. Optimum performance is offered when used in conjunction with devices SN75173 & SN75175, both

quad differential line receivers.

**Specification**

Supply voltage, VCC: 4-7.5V to 5-25V, 5V typ  
High-level input voltage, VIH: 2V  
Low-level input voltage, VIL: 0-8V  
Common-mode output voltage: -7V to 12V  
High-level output current, IOH: -60mA  
Low-level output current, IOL: 60mA  
Ambient operating temperature: 0°C to 70°C

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## SN75173N & SN75175N Quad Differential Line Receivers

Texas Instruments

A pair of quad line receivers with tri-state outputs, designed to meet the requirements of EIA Standards RS-422-A, RS-423-A, RS-485 and several CCITT recommendations. These devices are optimised for communications up to 10Mbps and perform optimally when used with devices SN75172 or SN75174, quad differential line drivers. The 75173 device has both active high and active low enables, which can be used to both control the flow of data out of the device and also its high impedance state. On the 75173, all the four receivers in the package share a common pair of control lines. In the 75175 device there are two active high enables, one controlling inputs 1 & 2, the other controlling inputs 3 & 4. This makes the 75175 more versatile in a control aspect, but removes the ability to control the device with positive and negative logic enables.

75173

75175

**Specification**

Supply voltage, VCC: 4-7.5V to 5-25V, 5V typ  
High-level enable-input voltage, VIH: 2V  
Low-level enable-input voltage, VIL: 0-8V

## SN75176B & SN75LBC176 Bidirectional Transceiver

Texas Instruments

Two bidirectional transceiver ICs meeting with EIA Standards RS-422/RS-485/CCITT V.11/CCITT V.27 and EIA Standards RS-485/ISO 8482:1987(E) respectively. Designed for bidirectional data communications on balanced multipoint transmission lines. Each device combines a tri-state differential line driver and differential input line receiver operating from a single 5V supply. The driver and receiver have active-high and active-low enables, respectively, which can be connected together to act as a direction control. The driver and receiver are connected in such a way as to minimise bus loading when the driver is disabled or VCC=0V. A wide positive and negative common-mode range makes these devices ideal for party-line applications.

The 75LBC176 device offers the same features with high-speed low-power operation and a very low disabled supply current of 200µA. Both devices offer thermal shutdown protection, driver positive and negative current limiting, operate from a single 5V supply and have a driver output capacity of ±60mA.

SN75LBC176

SN55LBC176

### Specification

Supply voltage, V<sub>CC</sub>: 4.75V to 5.25V, 5V typ

## ISO485P

Burr-Brown

The ISO485 is a differential, isolated bus RS485/RS422A transceiver using capacitively coupled isolation to provide high speed low cost isolation rated to 1500Vrms. It uses high voltage 0.4pF capacitors with Faraday shielding to couple data with a maximum throughput of 35M-bit/s typical. The device represents one unit load, conforms to the EIA standards and is recommended for use in control and monitoring instrumentation to be used in close proximity to heavy electrical supply switching.

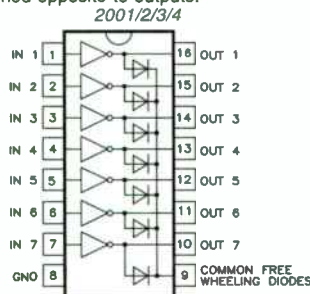

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## ULN2001A, ULN2002A, ULN2003A & ULN2004A Darlington Arrays

SGS Thomson

A range of high-current Darlington arrays for driving a number of families of logic and loads. These versatile devices can be used for driving loads including solenoids, motors, LEDs, thermal printheads, etc. Each device contains seven separate Darlington pairs with common emitters. Each pair is rated at 500mA continuous, and can withstand surges up to 600mA. Suppression diodes are also provided so that inductive loads like motors and relays can be driven without the need for extra protective components. The ULN2001A is designed for use with general purpose, DTL, TTL, PMOS and CMOS loads. The ULN2002A is used with 14V to 25V PMOS, the ULN2003A with 5V TTL and CMOS, and the ULN2004A is used with 6V to 15V CMOS and PMOS. All devices are supplied in standard 16-pin DIP packages. Other features include: withstanding output voltages of 50V; outputs can be paralleled to give higher output current; TTL/CMOS/PMOS/DTL compatible inputs; and inputs pinned opposite to outputs.

### Specification (All figures are absolute maximums)

Output voltage, V<sub>O</sub>: 50V  
 Input voltage, V<sub>I</sub>: 30V  
 Continuous collector current, I<sub>C</sub>: 500mA  
 Continuous base current, I<sub>B</sub>: 25mA  
 Operating temperature ambient range, T<sub>A</sub>: -20°C to 85°C  
 Junction temperature, T<sub>J</sub>: 150°C  
 Thermal resistance junction-ambient, R<sub>thj-amb</sub>: 70°C/W

## ULN2801A/3A Octal Darlington Driver Arrays

SGS Thomson

2801

Eight separate Darlington amplifiers in one 18-pin package, each capable of supplying 500mA at up to 50V. Outputs may be paralleled to give up to 4A at 50V (at 23% duty cycle and 25°C). Internal diodes are provided for inductive loads. Type 2801 may be used with standard bipolar digital logic or CMOS, while type 2803 has a 2k7 base resistor to enable direct connection to TTL and 5V CMOS.

**NON VOLATILE SRAM**

**MK48T02B20 16384 Bit CMOS Timekeeper SRAM**

SGS Thomson

MK48T02B20

An ultra low power 16384 bit (2K x 8) SRAM IC that features a real time clock, crystal, power-fail control circuit and a long life lithium battery. The device is a non-volatile pin, and function, equivalent to any JEDEC standard 2K x 8 SRAM. Also, it will fit in to many EPROM and EEPROM sockets and will provide the non-volatility of PROMs without the need for special write timing, or the limitations on the number of writes that can be performed. Access to the clock is simple. 'Timekeeper' registers are located in the upper eight RAM locations. The registers contain year, month, date, day, minutes and seconds data in 24-hour BCD format. Corrections for 28, 29, 30 and 31 day months are made automatically. These registers are not the actual clock counters but read/write Static RAM memory locations. A clock control circuit is included, that once every second transfers the counters into RAM. Updates to the 'Timekeeper' registers should be halted before clock data is read to prevent reading data that is in transition. The device includes a power-fail detect circuit. The circuit deselected the device whenever VCC is out of range (4.75V ≥ VPFD ≥ 4.50V), and write protects itself, providing a high degree of data security. Below 3V, the device switches to internal battery back-up. A mid-write cycle power failure may corrupt data at the currently addressed location, but does not affect the rest of the RAM's content. Normal operation is resumed when VC exceeds 4.5V. The device is driven by a quartz controlled oscillator with a normal frequency of 32768Hz, and provides an accuracy of ±1m per month. Clock calibration can be software controlled, to allow the end-user to calibrate the clock to suit the working environment. If necessary, the oscillator can be turned off if the device is to spend a significant amount of time 'on the shelf'. The predicted worst case battery life is 11 years at 70°C.

**Specification**  
Voltage supply: 4.75V to 5.5V  
Average power supply

current: 80mA  
TTL standby current: 5mA  
CMOS standby current: 3mA  
Read cycle time: 200ns  
Write cycle time: 200ns  
Power-fail deselect voltage: 4.5V to 4.75V, 4.6V typical  
Battery back-up switchover voltage: 3V

**MK48Z02B25 16384 Bit SRAM with Battery Back-up**

SGS Thomson

MK48Z02B25

An ultra low power 16384 bit (2K x 8), non-volatile, static RAM IC that features a power-fail control circuit and a long life lithium battery. The device has the characteristics of a CMOS static RAM, with the added advantage of data being retained in the advent of power failure. The IC can replace existing 2K x 8 static RAMs and also has the same pin configuration as a 2716 EPROM and 2K x 8 EEPROMs. As with other static RAMs, there is no limit to the number of write cycles that can be performed. The access time, read cycle and write cycle is 250ns, and no additional support circuitry is needed to interface to the microprocessor. The device includes a power-fail detect circuit. The circuit deselected the device whenever VCC is out of range (4.75V ≥ VPFD ≥ 4.50V), and write protects itself, providing a high degree of data security. Below 3V, the device switches to internal battery back-up. A mid-write cycle power failure may corrupt data at the currently addressed location, but does not affect the rest of the RAM's content. Normal operation is resumed when VC exceeds 4.5V. The predicted worst case battery life is 11 years at 70°C.

**Specification**  
Voltage supply: 4.75V to 5.5V

## SIMM MEMORY MODULES

### Memory Modules

A range of DRAM modules for use as memory expansion in computers, including PCs, Apple MAC, Amiga, etc. The range offers the latest high speed technology at the lowest possible cost. SIMMs supplied by Maplin will be original (branded) manufacturers chips on selected third party boards. Modules are available in SIMM (edge connector type) only. The following types are available:

Please note that most modern motherboards require that each memory bank in use is completely filled with SIMMs. Memory banks are usually configured in blocks of one, two or four SIMM sockets. It is not usually possible to fit a single 9-pin SIMM, or an odd number of 9-pin SIMMs, to a motherboard. Many modern motherboards will only accept 72-pin SIMMs, although some of them will also accept the older SIMMs, which have 30 pads on the edge connector. It is advisable to use faster SIMM modules on PCs running at 50MHz or above. Please check your motherboard booklet before ordering SIMMs for memory expansion as various restrictions usually apply to combining SIMM types and sizes on a motherboard.

**MicroROM EPROM Emulator**

- ★ Replaces standard 27xx series EPROMs
- ★ Programs in approx 2 seconds
- ★ Non-volatile program storage
- ★ Connects directly to host PC

The MicroROM EPROM Emulator is a simple and easy to use economic development tool which avoids time wasting on testing and erasing EPROMs when developing EPROM data. It is a very effective assistance to the tedious task of writing and debugging microprocessor software. The MicroROM is a module only 11mm high, it plugs into the EPROM socket and is compatible with standard EPROMs.

There is no need to remove, erase and reprogram an EPROM each time data is changed. Simply plug the module into the EPROM socket, downloading data from any IBM PC or compatible printer port, via a 4mm diameter cable which plugs into the emulator. Downloading is very fast, a typical downloading time for a 27512 file is 2 seconds. Command line arguments are used to define EPROM size, data type, offsets, printer port number and other options.

The device accepts industrial file formats such as Intel Hex, Motorola S-records, Hex and Binary. A positive or negative reset signal is also provided, which can be used to reset a microprocessor during downloading. Once programming is completed and computer connection removed, the Emulator can remain in circuit like a standard EPROM due to its non-volatile storage capability. Comes complete in its own box together with software and cable – ready to plug in and go.

**Specification**

Logic compatibility: CMOS and TTL  
 Access time: 120ns  
 Power: 5V 100mA  
 EPROM emulated: 2764, 27128, 27256 and 27512

Retail Unit Price each (inc. VAT).

**All Customers**  
 No additional freight charges for heavy items

**AMD EPROM Databook**

Advanced Micro Devices (AMD) are at the forefront of non-volatile memory technology, and manufacture a wide range of high performance memory products. This databook covers the traditional windowed EPROMs, plastic OTP EPROMs and AMD's ExpressROM devices.

(OE - access time 35ns).

The flash memory is pin and command set compatible with JEDEC standard 4Mbit EEPROMs, with commands written to the command register using standard microprocessor write timings. Register contents serve as input to an internal state-machine which controls the erase and programming circuitry. Write cycles also internally latch addresses and data needed for the programming and erase operations. Reading data out of the device is similar to reading from 12V flash or EPROM devices. The entire chip, or any individual sector is typically erased and verified in 1.5s (if already completely preprogrammed).

**MBM29F400BA-90PF**  
**4M CMOS Flash Memory**

Fujitsu

- ★ Single 5V read, write, erase
- ★ Compatible with JEDEC-standard commands
- ★ Minimum 100,000 write/erase cycles
- ★ Sector erase architecture - 1 x 16k byte, 2 x 8k bytes, 1 x 32k byte, 7 x 64k bytes.
- ★ Bottom sector boot code architecture
- ★ Embedded erase algorithms
- ★ Embedded program algorithms
- ★ Low power consumption

The MBM29F400BA-90PF is a 4Mbit, 5V flash memory organised as 512kbytes of 8-bits each, or 256k words of 16-bits each, and is supplied in a 44-pin small outline package. The device is designed for in-system programming with the standard 5V V<sub>CC</sub> supply. A 12V V<sub>pp</sub> supply is NOT required for write or erase operations. The device can be reprogrammed in a standard EPROM programmer. With an access time of 90ns, it can be used with high speed microprocessors without the need for wait states. To avoid bus conflict problems, the device has separate chip enable (CE - access 90ns), write enable (WE) and output enable

## DV243001 Serial EEPROM Designer's Kit

Artizona Microchip

Now designers of Serial EEPROM-based applications can enjoy the increased productivity, reduced time to market, and the ability to create a rock-solid design that only a well thought out development system can provide. Microchip's new Serial EEPROM Designer's Kit includes everything necessary to quickly develop a robust and reliable Serial EEPROM-based design and greatly reduces the time required for system integration and hardware/software debug. The Total Endurance Software Model enables designers to quickly choose the best Serial EEPROM for the specific application and perform

trade-off analysis with voltage, temperature, write cycle and other system parameters in order to achieve the desired Erase/Write endurance (specific ppm rate) or product lifetime. Total Endurance is the new standard of excellence in understanding and predicting the Erase/Write endurance of Serial EEPROMs. An online endurance tutorial is included, along with hypertext help files. SEEVAL (the support software) also provides the following advanced features to aid in system integration and debugging:

- ★ Program special user function like Smart Serial configurations
- ★ Hexadecimal display of array contents
- ★ Pre-set or user-definable functions like continuous read/write, programmable delay, etc.
- ★ Upload/download files between the Serial

EEPROM and disk. Supplied with a Serial EEPROM Handbook giving information about Microchip the company, product specifications for 24, 93 and other series of device, information on application and development tools, qualification reports for products, article reprints and full sales information together with contact lists. The kit comprises a power supply unit, serial cable, application development board, a range of 24 and 93 series devices (to get you going immediately), with Total Endurance and SEEVAL software supplied on 89mm (3 1/2in.) disk.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

**BIPOLAR PROMS**

**82S1XX Series Bipolar PROMs**

Philips

A range of TTL bipolar field programmable PROMs with many applications including prototyping, volume production, sequential controllers, format conversion, hardwired algorithms, random logic and code conversion. Supplied with all outputs low, and programmable in accordance with the Signetics Generic I Fusing procedure, by fusing the Ni-Cr link matrix. Features include tri-state outputs, no separate fusing pins, fully TTL compatible, on-chip address decoding, one chip-enable input for memory expansion with unprogrammed outputs defaulting to low level.

**PROGRAMMERS**

**EPROM Programmer EPP1-F**

- ★ Low cost
- ★ Integral 240V AC 50Hz PSU
- ★ Connects to any computer with RS232 port and terminal software

An EPROM programmer that will program PROMs, EPROMs and EEPROMs up to 1M-bit (128kx8). The EPROMs are programmed by inserting them into the 28-pin Zero Insertion Force socket on top of the case. The Programmer contains a single chip microcomputer which can be controlled easily from a terminal connected over an RS232 serial link at seven different baud speeds up to 19200. The Programmer has just 9 commands which are used to control it. The EPROM type and programming command is selected from a simple pop up menu screen. IBM PC compatible software is included, and an 89mm (3 1/2in.) disk containing text files with a comprehensive range of EPROMs listed with their 16-bit selection codes. The source code files are sent from the host computer to the Programmer which supports Motorola s1f, s2f and s3f data formats. A simple program for writing to EPROMS is supplied on the disk, and allows for editing and file storage. The software allows most EPROMs to be selected and programmed very easily. Options for checking the EPROMs are empty are also supported through the programmer software. The Programmer supports the 27 series EPROMs up to 1M-bit (27C010/27C1001), as well as the EEPROM type 2864. Instructions are included as part of the software, and from this an EPROM from a manufacturer not mentioned in the disk text file can easily be programmed. Just determine its programming characteristics and select the correct 16-bit code to be sent. Leads are not supplied; the stock number for a suitable mains lead is BW99H and a 13A plug RW67X, the serial lead required is JC13P.

**Specification**

- Supply voltage: 230V AC
- Power consumption: 4.5W
- Power connector: IEC Euro connector
- Fuses: 2 x 225mA, slow blow
- Interface: RS232
- Interface connector: DB25 (female)
- EPROM socket: ZIF-28
- Memory: up to 1M-bit
- Data formats: Motorola s1f, s2f, s3f
- Baud rate: 300, 600, 1200, 2400, 4800, 9600, 19200 (9600 def)
- Data bits: 8 (bit 7 = 0)
- Parity: None, Even, Odd (Default None)
- Flow control: None, RTS/CTS, XON/XOFF (Default RTS/CTS)
- Start/Stop bits: 1
- Enclosure: Anodised aluminium
- Dimensions: 175 x 103 x 65mm (L x W x H)
- Weight: 630g

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

## EPROM Programmer 'EPP-2'

### Features

- ★ **Extended device support to 8Mbit**
- ★ **RS232 comms for connection to any computer**

An EPROM programmer that will program PROMs, EPROMs from 2K-bytes to 512K-bytes (8Mbit) and all current EEPROMs up to 8 Mbit. The EPROMs are programmed by inserting them into the 32-pin ZIF socket on the front panel. The programmer supports either 'Motorola.s1f', '.s2f' or '.s3f' files being used and they can be both up or downloaded to the PROM. The unit contains a single chip microcontroller and therefore is an intelligent device, which can be controlled easily from a terminal connected over an RS232 serial link.

In addition to a simple to use menu driven control program which makes programming of most devices very simple, the EPP-2's command line interpreter enables the user to enter single character commands, or even multiple commands and has 16 commands which are used to communicate with it. Execution begins after a carriage return is received. The EPP-2 can program the 27 and 28 series PROMs up to 512K-bytes (EG 27C4001).

Software is included for IBM PCs and compatibles, and the EPP-2 can operate from RS232 at baud speeds of up to 19200.

Dimensions: 175 x 103 x 65mm; weight, 780g. Leads are not supplied. Use mains lead BW99H and 13A plug RW67X, and serial comms lead JC13P.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type 2821	Price each exc. VAT	inc. VAT each

## EPMaster LV EPROM Programmer

- ★ **Full 8/16-bit support upto 8Mbit with no additional modules**
- ★ **Interfaces to standard printer port (LPT1-3) 25-pin M/M Centronics cable supplied**
- ★ **Works from batteries or adapter/charger supplied**
- ★ **Supports low voltage devices with real 1.3V 3.3V and 5V logic levels**
- ★ **User friendly software works under DOS or Windows**
- ★ **High speed programme/verify**

This low-cost programmer is supplied with intelligent software that can interrogate the device in the socket and select the correct manufacturer and part number automatically. In addition it is intelligent enough to select the correct voltage

(1.8V, 3.3V or 5V) for the particular part and verify the device at its nominal operating voltage. The programmer is capable of programming any part on its support list without the need for add-on modules adapters etc. All devices upto and including 40-pin DIL are supported i.e. 8/16-bit EPROMs upto 8Mbit, paged EPROMs, serial and parallel EEPROMs, FPGA configured serial PROMs and FLASH types.

The programmer will work from 8 x 'AA' batteries (standard or rechargeable) or the adapter / recharger supplied, and comes with built-in recharging circuit. The programmer automatically powers down during periods of inactivity, and powers up only during active operations - ideal for use with laptops

The programmer is very fast

Device	Type	Time
27C256	32k x 8 EPROM	5 secs
27C010	128k x 8 EPROM	21 secs
27C040	512k x 8 EPROM	84 secs

## EPROM Eraser

A neatly styled and compact EPROM eraser with built in safety interlock and timer. The unit requires +12V DC to operate (3.5mm jack socket) and incorporates a 4W UV tube. The unit can erase two EPROMs simultaneously. The timer can be adjusted by rotating a front panel preset using a small screwdriver. The erasing cycle is initiated by pressing the start switch. A green LED indicates power ON-Stand by and Power ON-Erasing, when in standby the LED glows at half brightness and when erasing the LED glows at full brightness. Dimensions 75 x 42 x 155mm (excluding feet and controls).

**WARNING:** As this unit produces UV light, read safety instructions before use. When this unit is used in accordance with instructions, user will not be exposed to UV light.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

## S4 PROM Programmer

### Features

- ★ **RS232 ready**
- ★ **Ni-Cd battery powered, charger included**
- ★ **Battery backed internal data memory**
- ★ **PROM emulator lead for target system development**
- ★ **Programs 27 series EPROMs, and 28, 52, 55, 98 series FLASH EPROMs and EEPROMs**

The S4 is a battery powered PROM programmer for microsystem designers, that fits into a pocket. The programmer contains 1M of RAM (upgradable to 4M) which retains data and configuration even when switched off. The RAM can be downloaded with data and manipulated either remotely from a computer via RS232 interface or directly from the keypad. The S4 can program EPROMs of the 27 series, FLASH EPROMs and most (E)EPROMs, including 28, 52, 55 & 98 series. Choose the manufacturer and device from a menu and S4 will select the algorithm to use. S4's software program comes in a supplied library ROM, which is simply placed into the 32-pin ZIF socket and then loaded. There are two ways of using S4, either by entering commands by pressing keys on the 45 colour coded rubber keypad, and reading the LCD, or by entering commands from your computer via a RS232 interface lead (not supplied). Terminal software and utilities are not supplied for use with an IBM PC and S4. The S4 DRIVER program has online help and will work at speeds up to 115200 baud. The S4 can also function as a memory emulator, and if used with a cross-assembler and a computer will give you a complete microprocessor development system.

S4 continuously monitors battery voltage and temperature, and can display battery charge. If the battery charger is connected and turned on, S4 will charge the batteries as necessary as internal circuitry prevents the batteries overcharging. Recharge time is about one hour, although a reasonable working capacity will be restored in much less time. Supplied with comprehensive manual, write lead (2mm plug to minihook 500mm overall length), EMU lead (ribbon cable with 32-pin DIL plug 500mm overall length), library ROM, disk with terminal driver program and utilities, and mains charger. Size: 185 x 112 x 46mm. Weight 500g.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

## Portable EPROM Copier (Leaper 3)

This powerful, fast and handy EPROM programmer can copy EPROMs by pressing just one button. The built-in clear display shows the relevant information

of the inserted EPROM. The ROMs (Master & Slave) are installed in ZIF sockets. The copier automatically recognises the EPROM of the 2732B - 27080 series. The programmer automatically sets the burn in voltage and time. The Leaper 3 is very fast: copying a 27512 EPROM takes only 9.6 seconds. The copier provides different program algorithms which can be automatically or manually selected. Due to its portable design it is possible to copy EPROMs anywhere.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
CE61R 1	Portable EPROM Copier	£280.840	£329.990

## Micromaster LV & LVE PC Based Programmers

ICE Technology

★ Supports full range of memory devices, PLDs and over 130 micros

★ Connects directly to PCs parallel port

★ Operates from battery or mains

★ Test 74 series, 4000 series, DRAM and SRAM devices

★ LVE supplied with 128k x 8 ROM/RAM emulator

★ Free software updates via BBS/Internet

★ Supports 1.8V, 3.3V and 5V devices

The Micromaster LV is a professional programmer which provides all the facilities you need at a fraction of the cost. The programmer supports the full range of EPROMs, EEPROMs, flash NVRAMs, serial PROMs, BPROMs, PALs, GALs, EPLDs, PEELs, high density logic and over 130 microcontrollers including PICs, ST6, Motorola MC68XXX, Intel MCS-51 and MCS-96 families, Philips 87CXXX, Zilog Z86, Atmel 89C5X etc. In addition, the programmer supports 1.8V and 3.3V devices, with verification at 3V. The unit plugs directly into the parallel port of a PC and works from either the mains or batteries, making it extremely versatile and portable. A chipset for 74 series, 4000 series, SRAM and DRAM is built-in, and the LVE version comes complete with a 128k x 8bit ROM/RAM 100ns emulator. Note that two emulator formats are also available separately as GS17T and GS18U.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
ADH5D	Micromaster LV	£576.000-£508.000	£735.000
ADH6E	Micromaster LVE	£690.000-£610.000	£879.000

## Speedmaster LVE PC Based Programmer

★ Supports full range of memory devices, PLDs and 8748/51 micros

★ Connects directly to PCs parallel port

★ Operates from battery or mains

★ Test 74 series, 4000 series, DRAM and SRAM devices

★ Supplied with 128k x 8 bit ROM/RAM emulator

★ Free software updates via internet

The Speedmaster LVE is a low-cost universal programmer supporting a comprehensive range of devices. The programmer supports both 3.3V and 5V parts fully with verification at the correct voltage for the part. It connects to the parallel port of any PC and works from the mains or batteries. This makes the Speedmaster LVE ideal for off-site applications and for use with laptops and notebooks. Supplied with 128k x 8bit emulator for 3.3V/5V ROM/RAMs. Software updates are free for life on BBS/Internet.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
ZF57M 2	Speedmaster LVE	£599.000	£729.990

## Emulators For Single Socket Programmers

ICE Technology

These emulators are designed to fit inside the ICE PC based single socket programmers (EPMasterLV, SpeedmasterLV, and Micro-masterLV) and come with plug-in emulator card, ROM/RAM emulator cable with 34-pin IDC connector and 32-pin DIL header plus two special function flying leads, software and manuals. The 16-bit option is supplied with an additional cable and 40-pin adapter.

Type	Emulates ROMs upto	Emulates RAMs upto
EMUL-8	128k by 8	128k by 8
EMUL-16	128k by 16 256k by 8 2 x 128 by 8	128k by 8

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
GS17T	128K X 8 Emulator	£109.000	£139.000
GS18U	128/16 Or 256/8 Emul	£159.000	£199.000

## LV40 Portable Universal Programmer

ICE Technology

- ★ Universal device support
- ★ Built-in 40 x 2 LCD display
- ★ 30-button keypad
- ★ 4Mbit of data memory - upgradeable to 8Mbit
- ★ Supports low voltage devices with real 1.8V 3.3V and 5V logic levels
- ★ User friendly PC software works under DOS or Windows
- ★ Works from battery or adapter/recharger supplied
- ★ Interfaces to printer port (LPT1-3) 25-pin M/M Centronics cable provided. Serial port connection provided for file download

A powerful portable universal programmer with LCD display and keypad which works of batteries and supports all devices upto and including 40-pin DIL types. The programmer supports:

8/16bit memory: EPROM, Paged EPROM, parallel & serial EEPROM, FPGA, configuration serial PROM and Flash up to 8Mbit

Bipolar memory

Programmable logic: PAL & GAL, PALCE, PEEL etc.

Complex PLDs: AMD MACH, Altera MAX, Xilinx EPLD, etc.

Peripheral devices: PSD

Microcontrollers: over 180 including MCS-48/51/196, 8951, PIC, COP8, ST6, H8, Z86, TMS320/370, MC705/711 etc.

All on-chip features are supported including security, oscillator settings, watch-dog timer, RAM size, brown-out etc. In addition to the standard supported devices, user defined parts can be added to a custom database providing the device uses a supported algorithm.

The programmer will work from 8 x 'AA' batteries (standard or rechargeable) or the adapter / recharger supplied, and comes with built-in recharging circuit. The programmer automatically powers down during periods of inactivity, and powers up only during active operations - ideal for use with laptops

The programmer is very fast

Device	Type	Time
27C256	32k x 8 EPROM	5 secs
27C010	128k x 8 EPROM	21 secs
27C040	512k x 8 EPROM	84 secs
29F040	4-bit Flash	90 secs
93C46	Serial EEPROM	2 secs
PSD311	Peripheral	28 secs

The LV40 is not just a fully portable professional programmer but also a tester for TTL, CMOS, DRAM and SRAM devices

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
GS16S	LV40 Portable	2+ £899.000	1+ £1,099.000

## Speedmaster GLV-32

Ice Technology

- ★ 8-way gang/set programmer
- ★ 32-pin sockets as standard
- ★ Supports EPROMs and FLASH (28 and 29 series) up to 8Meg
- ★ True 3.3V and 5V support
- ★ PC or standalone (copying) operation
- ★ PC based software as standard
- ★ Connects to parallel port of PC
- ★ Free software updates

The Speedmaster GLV-32 gang/set programmer supports EPROMs and Flash (28 and 29 series) devices up to 8Meg. Like our other LV series programmers, the GLV-32 has full support for 3.3V as well as 5V devices. This is so important when programming devices in a production environment, as programming and verifying 3V devices at 5V places potential damaging stresses on the silicon which can return and cause problems later in the product's life. The GLV-32 is the only true 3.3V and 5V gang programmer on the market.

This is a high-speed programmer with full editing capabilities, set programming features, reading, verifying and programming functions. In standalone mode, operation is done using only two buttons, making the programmer easy to use in production. In addition, free batch software is available to allow you to setup user defined screens. In addition to its excellent device support, the GLV-32 flies through device programming so fast you will scarcely believe your eyes! Programming cycle times for the 27256 of only five seconds for eight devices include download, program and verify. This low-cost production programmer really gets down to business!

Adaptor (AW50E) is an add-on device to the GLV-32 to allow 40-pin EPROMs to be programmed.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
RC74R	Speedmaster GLV-32	2+ £599.000	1+ £759.990

## DS1920 Touch Thermometer

Dallas Semiconductor

- ★ Digital Thermometer measures -55°C to +100°C in typically one second
- ★ ±0.5°C accuracy within 0°C to +70°C
- ★ No calibration or reference required
- ★ Zero stand-by power
- ★ 0.5°C resolution
- ★ Two bytes of EEPROM to be used either as alarm triggers or user memory
- ★ Alarm search directly indicates which device senses alarming temperature
- ★ Supplied in F5 package

The Touch Thermometer provides 9-bit temperature readings which indicate the temperature of the device. Information is sent to/from the DS1920 over the Dallas 1-wire interface system. Power for reading, writing, and performing temperature conversion is derived from the data line itself. Because each DS1920 contains a unique silicon serial number, multiple DS1920s can exist on the same 1-wire bus. This allows for placing temperature sensors in many different places Applications where this feature is useful include HVAC environmental controls, sensing temperatures inside buildings, equipment or machinery, and in process monitoring and control.

Specification

Pullup voltage $V_{PUUP}$ :	5V typical
Logic 1:	2.2V to $V_{PUUP} + 0.3$
Logic 2:	-0.3V to +0.8V
Temperature conversion:	1.2 seconds
Operating temperature:	-55°C to +100°C
Temperature error	
0°C to 70°C:	±0.5°C
-40°C to +0°C:	±1°C
70°C to 85°C:	±1°C
-55°C to -40°C:	±2°C
85°C to 100°C:	±2°C

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## DS9092K Touch Memory Starter Kit

Dallas Semiconductor

This Starter Kit is the ideal way to quickly evaluate (and program where necessary) any of the Dallas Touch memory family using a PC compatible DOS computer. The kit includes Touch memory

devices, a DS9092 and DS9092GT Touch Probe, a PC serial port adaptor, an assortment of attachment accessories, demonstration software and utility programs. (on 89mm/3.5in disk). The demonstration programs can be executed to read or write a Touch Memory device through the serial port via a 25-pin adapter which connects to the DS9092 probes. The utility disk allows quick and easy development of Touch Memory programs from the code provided. Also included are data sheets, application notes, and a book of DS191xx Touch Memory standards. Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
VR38R	DS9092KIT	1+ £72.3000	1+ £84.9900

## DS9091K MicroLAN Starter Kit

Dallas Semiconductor

This MicroLAN Evaluation Kit provides hardware, software and documentation for evaluation of Dallas 1-Wire MicroLAN technology using ICs and Touch Memories. The software included in the Kit runs under Windows on a PC and includes C++ source code listings and is supplied on 89mm (3 1/2in) disks. Five hands-on experiments are included which interactively demonstrate typical MicroLAN applications:

1. Window/door monitor with DS2401.
2. Window/door monitor with DS2405.
3. Temperature logger with DS1820.
4. Simulated room temperature control with DS1820 and DS2405.
5. Burglar alarm with simulated room temperature control.

The kit includes all special electrical and mechanical components required for the experiments. Not included are unshielded twisted pair cable, mechanical switches and battery (3V to 6V). Experiments 4 & 5 allow controlling an electric heater and air conditioning equipment via suitable power switching relays (not supplied). For demonstration and electrical safety, these applications are represented by battery operated LEDs.

Detailed manuals explain experiments, communication protocol, MicroLAN components, theory of operation, network optimisation and interfacing. Also included is a book of DS91xx Touch Memory standards, automatic identification data book and Touch connections catalogue, plus an assortment of LEDs, resistors and capacitors.

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

## DALLAS TOUCH MEMORY

### Touch Memory Technology

Dallas Semiconductor

#### Applications

- ★ Vehicle alarms and immobilisers
- ★ Public service vehicle (PSV) equipment protection
- ★ Home/business security systems
- ★ Personal computer (PC) locking/protection devices
- ★ Electronic door locks
- ★ Electronic cabinet/safe/deposit box locks
- ★ Cash register access
- ★ Security access of control panel functions
- ★ Almost any application requiring high security electronic switching or control

The Dallas range of Touch Memory devices are miniature, low cost, coin shaped data carriers that can be read by a micro with momentary contact. The electrical interface has been reduced to a minimum: one data line, plus ground. Packaged in a stainless MicroCan, the durable package is highly resistant to environmental hazards and makes a virtually indestructible key. Each Touch Memory has an internal ROM with a unique, factory-lasered and tested 64-bit registration number that is accessed via a single data line. The 64-bit number is made up of an 48-bit serial number, a 8-bit family code, and 8-bit CRC.

The range includes read/write non-volatile memory types with in-built lithium battery and 'add-on' types that feature EPROMs with various amounts of extra memory for additional data to be programmed in, without disturbing the existing data

Type	Memory	Size	Order Code	Features
DS1990A	64-bit ROM	F3	GS89W	
DS1990A	64-bit ROM	F5	VR31J	
DS1991L	1152-bit	F5	VR32A	Secure read/write non-volatile memory 3 x 384-bit blocks
DS1992L	10214-bit	F5	VR65V	Read/write non-volatile memory with 256-bit scratchpad
DS1993L	4096-bit	F5	VR66W	Read/write non-volatile memory with 256-bit scratchpad
DS1994L	4096-bit	F5	VR67X	As above plus time keeping functions
DS1995L	16384-bit	F5	VR68Y	Read/write non-volatile memory with 256-bit scratchpad
DS1996L	65536-bit	F5	VR69A	Read/write non-volatile memory with 256-bit scratchpad
DS1982	1024-bit EPROM	F5	VR70M	Allows additional data to be programmed, 4 x 256-bit
DS1985	16384-bit EPROM	F5	VR71N	Allows additional data to be programmed, 64 x 256-bit

Scratchpad is an additional page that acts as a buffer when writing to memory. Data is first written to the scratchpad where it can be read back. After the data has been verified, a copy scratchpad command will transfer the data to memory. This process insures data integrity when modifying the memory. DS1994L with the additional time keeping function includes real time clock/calender, interval timer, cycle counter and programmable interrupts are available. the internal clock can be programmed to deny memory access based on absolute time/date, total elapsed time or the number of accesses. These features allow the DS1994 to be used to create a stop-watch, alarm clock, time and date stamp, logbook, hour meter, calender, system power cycle timer, interval timer and event scheduler.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
GS89W	DS1990A-F3	£1.970	£2.570
VR31J	DS1990A-F5	£1.970	£2.570
VR32K	DS1991L-F5	£8.470	£11.150
VR65V	DS1992L-F5	£5.190	£6.740
VR66W	DS1993L-F5	£6.250	£8.170
VR67X	DS1994L-F5	£5.890	£7.670
VR68Y	DS1995L-F5	£9.970	£13.220
VR69A	DS1996L-F5	£12.450	£16.270
VR70M	DS1982-F5	£2.650	£3.490
VR71N	DS1985-F5	£5.850	£7.580

#### Features

- ★ Ultra high security - over 200,000 billion key differs
- ★ Laser etched codes - no code numbers ever repeated, so there will never be two keys the same
- ★ Digital identification by momentary contact
- ★ Data can be accessed while affixed to an object
- ★ Memories are passive - no battery required
- ★ Memories are virtually indestructible
- ★ Standard 16mm diameter and 1-wire protocol ensures compatibility with Touch Memory family
- ★ Button shape is self-aligning with cup-shaped probes
- ★ Communicates to bus via a single digital signal at 16.3Kbits/s
- ★ Since Touch Memories are a contact device - not radio or infra-red - they are not 'grabbable'
- ★ Durable stainless steel case engraved with registration number withstands harsh environments.
- ★ Presence detector acknowledges when reader first applies voltage
- ★ Easily attached using self-adhesive backing, latched by its flange or locked by a ring pressed onto its rim.

### DS9097 Touch COM Port Adaptor

Dallas Semiconductor

This Adaptor provides a simple, low-cost interface to a RS232C COM port for reading and writing Touch Memory devices. The DS9097E has the additional feature of supplying the 12V necessary to program the EPROM based Touch Memory products. The Adaptors are connected to a serial port that must support a data transmission rate of 115,200 bits/s in order to create the 1-Wire time slots correctly. A selection of software examples illustrates how to communicate with Touch Memories using the DS9097 and DS9097E is provided in the DS9092K Touch Memory Starter Kit. The adaptors are powered from the RS232 interface and have a standard DB-25 connector and a RJ-11 connector for easy attachment to a Touch Memory probe. When DS9097E is combined with the appropriate software the Adaptor can be used in a stand alone mode where all the programming current is supplied

by the serial port. The maximum number of EPROM bits that can be programmed simultaneously is four. By using an auxiliary regulated 12V supply, that is plugged in to power jack on the adaptor, then up to eight EPROM bits can be programmed simultaneously (using the appropriate software).

Price each is shown. Order quantities less than 2 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
VR33L	DS9097	£15.990	£18.990
VR34M	DS9097E	£23.990	£29.000

### DS9092 Touch Memory Probe

Dallas Semiconductor

This Touch Memory Probe provides the electrical contact necessary for the transfer of data to/from the DS19xx family of Touch Memories. The round probe shape provides a self-aligning interface that readily matches the circular rim of the Touch Memory Metal contacts resist wear and are easy to keep clean. The probe is pre-wired and easy to install.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
VR77J	DS9092	£5.200	£7.050

### Touch Key Receptacles

These receptacles provide a neat, durable and easy-to-install single-hole solution in Touch Systems. Intended for use with ERD's Touch Key Hybrid (CK41U) and Dallas' Touch Key (CK42V). Available in two versions: without LED (CK43W) and with LED (CK44). Supplied complete with pre-attached leadouts and mounting hardware.

Retail Unit Price each (inc. VAT).

Order Code	Type	Price each exc. VAT	inc. VAT each
CK43W	Touch Key Receptacle	£6.510	£7.650
CK44X	Touch Key ReceptLED	£7.870	£9.250
NV11M	Touch Key ReceptLED	£7.870	£9.250

Export carriage charges (1.2 etc.) and price information see back of catalogue. † symbol in price block indicates While Stocks Last.

## Touch Memory Accessories

Dallas Semiconductor

A range of accessories for use with the Touch Memory and Touch Thermometer system.

**DS9096P:** A double-sided adhesive pad that is pre-cut to match the diameter of Touch Memory devices. The pads can be attached to virtually any smooth surface, to provide a permanent attachment method.

**DS9101:** A multi-purpose clip that offers a low-cost method of fixture to a plastic badge or, using an additional wire/tie wrap, any object that provides a hole for strap mounting. This allows Touch Memories to be attached to bags or other soft surface objects. Using a DS9093RA Lock Ring the clip can hold a Touch Memory permanently and still allow the flexibility of strap mounting.

**DS 9093RA:** A stainless steel lock ring fastener which provides an inexpensive method for firmly attaching a Touch Memory to any item with a pre-punched hole.

**DS9093A** An angled plastic fob with recess for holding a standard touch memory device

**DS9093F:** This plastic snap-in fob offers the simplest way to mount a Touch Memory for applications that require only momentary contact. The fob can be attached to a keyring.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## Touch Key Technology

### Features

- ★ Ultra high security - over 200,000 billion key differs
- ★ Laser etched codes - no code numbers ever repeated, so there will never be two keys the same
- ★ Keys are passive - no battery required
- ★ Keys are virtually indestructible
- ★ System can learn up to eight keys at any one time
- ★ Lost keys can be 'locked out' by authorised personnel - without any specialised equipment
- ★ Replacement keys can be taught by authorised personnel - without any specialised equipment
- ★ Since Touch Keys are a contact device - not radio or infra-red - they are not 'grabbable'
- ★ Hybrid provides easy entry route for OEMs and individuals to utilise Touch Key Technology with minimal development work
- ★ System remembers and returns to last state when power is disconnected/reconnected
- ★ Hybrid incorporates full spec. alarm system!
- ★ System provides selectable passive arming
- ★ System can 'slave arm' - hybrid follows a master system arm command and provides an alternative method of disarm.

### Applications

- ★ Vehicle alarms and immobilisers
- ★ Public service vehicle (PSV) equipment protection
- ★ Home/business security systems
- ★ Personal computer (PC) locking/protection devices
- ★ Electronic door locks
- ★ Electronic cabinet/safe/deposit box locks
- ★ Cash register access
- ★ Security access of control panel functions
- ★ Almost any application requiring high security electronic switching or control

The Dallas DS19xx Touch Key devices are miniature, low cost, coin shaped data carriers that can be read by a micro with momentary contact. The electrical interface has been reduced to a

minimum: one data line, plus ground. Packaged in a stainless MicroCan, the durable package is highly resistant to environmental hazards and makes a virtually indestructible key. ERD have developed a custom chip to decode these Touch Key devices and have produced a hybrid circuit incorporating the chip, with many outstanding features, to utilise this exciting technology. The ERD Touch Key Decoder Hybrid, Dallas DS1990A Touch Key and support products are now available from Maplin.

## Pre-Taught Touch Hybrid with Master Touch Key

ERD & Dallas

This compact and highly versatile hybrid is ideal for a wide range of security applications and forms the 'kernel' around which complete systems can be developed.

The hybrid contains processor-based circuitry and on-board E<sup>2</sup> memory, enabling it to be taught the codes of User Touch Keys under control of the Master Touch Key supplied. User Touch Keys, once taught, can then be used to arm/disarm or lock/unlock whatever security or access control system the hybrid is incorporated into.

If desired the program contained within the hybrid's processor can be used to provide a complete alarm system in its own right, requiring a relatively small number of external components to realise this function.

For minimum development/installation time the ERD Touch Hybrid is supplied with a Master Touch Key factory pre-taught. The hybrid can be taught up to eight User Touch Keys, these must be purchased separately (CK42V); please note that the Master Touch Key supplied with the hybrid cannot be used as a User Touch Key.

Suitable Touch Key Receptacles (CK43W and CK44X) are also available to facilitate 'reading' of the touch keys by the hybrid.

Connection to the hybrid is by means of a 15-way 2.54mm (0.1in.) spaced pin-strip. 2-ways are missing so that 'keying' can be provided to prevent incorrect insertion. The hybrid can be directly soldered into a circuit board (requires 1mm dia holes) or connected by means of a suitable PCB connector (e.g. 2 x YW30H cut down to provide 15 ways).

The hybrid can be configured to operate in a number of different ways by means of on-board programming links.

Links: passive arm enable/disable; passive arm time 30 secs/1 sec; and user keys 8/4.

Interfacing to the hybrid is very straightforward using standard 5V logic - inputs and outputs are either high or low - no complicated clocked serial data streams! A dedicated flashing status LED output is also provided.

Inputs pins: touch key receptacle input (2-wire); user touch key learn enable input; trig.1 & trig. 2 alarm inputs; and slave arming input.

Output pins: LED status indicator output (2-wire); siren control output; beep control output; and arm disarm output.

Supply pins: +5V and 0V.

### Specifications

Supply voltage: +5V DC ± 0.5V DC  
 Supply current (typical):  
 Armed: 1.2mA (excluding LED)  
 Disarmed: 1.0mA  
 Output drive current:  
 Source: 10mA  
 Sink: 15mA  
 Operating temperature: -10°C to +60°C  
 Full data available.

## SGS Op-Amps and Comparators

**LM308N (NP82D)** - A single precision op-amp featuring extremely low input currents, and very low power requirements, ideal for battery operation.

**LM741CN (NP83E)** - Industry standard general purpose op-amp with internal frequency compensation.

**LF347N (NP84F)** - Quad J-FET op-amps with low distortion, high slew rate and wide bandwidth.

**LF353N (NP85G)** - Dual J-FET op-amps with low distortion, high slew rate and wide bandwidth.

**MC33171N (NR62S)** - A single bipolar op-amp featuring low-power, single supply operation with wide bandwidth and high slew rate.

**MC33172N (NR63T)** - A dual bipolar op-amp featuring low-power, single supply operation with wide bandwidth and high slew rate.

**MC33174N (NR64U)** - A quad bipolar op-amp featuring low-power, single supply operation with wide bandwidth and high slew rate.

**LM2901N (NR65V)** - A quad low offset voltage comparator featuring low-power and single supply rail operation.

**LM2902N (NR66W)** - A quad low-power op-amp with internal frequency compensation, wide bandwidth, large voltage gain and designed to operate from a single supply rail.

**LM2903N (NR67X)** - A dual low offset voltage comparator featuring low-power and single supply rail operation.

**LM2904N (NR68Y)** - A dual low-power op-amp with internal frequency compensation, wide bandwidth, large voltage gain and designed to operate from a single supply rail.

**LM239N (NR69A)** - Four independent precision low power voltage comparators designed to operate from a single supply rail, and will directly interface with TTL and CMOS.

**MC33078N (NR70M)** - A dual low noise bipolar op-amp designed for high quality audio and data signal processing. Features include low input voltage noise, high gain bandwidth products and high slew rate.

**MC33079N (NR71N)** - A quad low noise bipolar op-amp designed for high quality audio and data signal processing. Features include low input voltage noise, high gain bandwidth products and high slew rate.

## EL2020CN

Elantec

A fast settling, wide bandwidth amplifier optimised for gains between -10 and +10. The amplifier will drive two double terminated 75Ω co-ax cables to video levels with low distortion (it can deliver  $\pm 2.4V$  at  $\pm 33mA$  into 75Ω). The device is short circuit protected and settles to 1% in 50ns for a 10V step.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## EL2044CN

Elantec

The EL2044C is a high-speed, low power, low-cost monolithic op amp built using a complementary bipolar process. It is unity-gain stable and features a 325V/μs slew rate and a 60MHz gain-bandwidth product while requiring only 5.2mA of supply current. Supply operating range is from  $\pm 18V$  down to as little as  $\pm 2V$ . For single supply operation, the device operates from 36V down to 2.5V. The excellent power supply range makes the device an obvious choice for a single +5V supply.

The EL2044C also features an extremely wide output voltage swing of  $\pm 13.6V$  with a supply of  $\pm 15V$  and a load of 1kΩ. At  $\pm 5V$ , output voltage swing is a wide  $\pm 3.8V$  into 500Ω and 3.2V into 150Ω. With a single-ended 5V supply output swing is an excellent 0.3V to 3.8V into a 500Ω load. With unity gain the EL2044C has a -3dB bandwidth of 120MHz with a phase margin of 50°. It can drive unlimited load capacitance, and because of its conventional voltage feedback topology, it allows the use of reactive or non-linear elements in its feedback network. This versatility, combined with 75mA of output drive capability, makes it ideal for applications requiring low power consumption with high-speed.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## EL2045C

Elantec

The EL2045C is a low power, wideband, gain-of-2 stable monolithic op amp built using a high-speed complementary bipolar process. It uses a classical voltage-feedback topology which allows it to be used in a variety of applications where current-feedback amplifiers are not appropriate because of restrictions placed upon the feedback element used with the amplifier. It allows, for example, a capacitor to be placed in the feedback path, making it an excellent choice for applications such as active filters, sample-and-holds, or integrators. Similarly, because of the ability to use diodes in the feedback network the device is an excellent choice for applications such as fast log amplifiers.

The EL2045C has a gain-bandwidth product of 100MHz while using only 5.2mA of supply current. For gains greater than 4, its closed loop -3dB bandwidth is approximately equal to the gain-bandwidth product divided by the noise of the

circuit. For gains less than 4, higher-order poles in the amplifier's transfer function contribute to even higher closed loop bandwidths. The EL2045C has a -3dB bandwidth of 100MHz at a gain of +2, dropping to 20MHz at a gain of +5. This does not come at the expense of stability.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LM301AN

SGS Thomson

301

A general purpose op-amp featuring low input currents and low temperature drift on input currents. The amp is overload protected on input and output with no latch-up when the common mode range is exceeded. External compensation capacitor (33pF approx) is required for stability, but this value can

be varied depending on application such that slew rates of 10V/μs and bandwidths of 10MHz can be achieved.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2853	Price each exc. VAT	inc. VAT each
QH36P	LM301AN	25+ £0.408 100+ £0.327 300+ £0.314 1+ £0.740	1+

## LM308N

SGS Thomson

308

A precision op-amp featuring extremely low input currents. The circuit is directly interchangeable with the LM301AN in low frequency circuits and incorporates the same protective features. In addition it has very low power consumption making it suitable for battery operation and owing to its very high input resistance operates with less error on 10MΩ sources than a 709C with 10KΩ source.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LM324N

SGS-Thomson

National Semiconductor

324

Four independent, high gain, internally frequency compensated op-amps specifically intended to operate from a single power supply over a wide range of voltages. Application areas include transducer amplifiers, DC gain blocks and all conventional op-amp circuits which are designed for single power supply systems. The device will work from standard +5V rails found in digital systems and provide the required 'interface' electronics. Additionally, the device features a large DC voltage gain (100dB), 1MHz unity gain bandwidth, 120dB channel separation, and class AB outputs with virtually no crossover distortion. The device will operate from a +3 to +32V DC rail, or from a dual  $\pm 1.5V$  to  $\pm 16V$  DC supply.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## Call and Collect

Maplin has more stores Nationwide than ever before.

See the maps at the front of the catalogue for the nearest one to you.

## LM348N

National Semiconductor  
SGS-Thomson

348

A low power, quad version of the 741 op-amp featuring high gain, and internal compensation with a total supply current requirement for the IC that is less than a single conventional 741. Each op-amp has a class AB output stage and so has virtually no crossover distortion. Additional features include a low input offset voltage (1mV), low input offset current (typically 4nA), low input bias current (typically 30nA) and a unity gain bandwidth of 1MHz. Channel separation is 120dB with a maximum operating voltage of  $\pm 18V$  DC.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LM837N

National Semiconductor

837

A quad op-amp designed for low noise, high speed and wide bandwidth performance. The output can

drive a 600Ω load and is ideal for digital audio, graphic equalisers, pre-amplifiers and professional audio applications. It can be used to upgrade existing systems with little or no change to the circuit. The amps feature low noise 4.5nV/√Hz typically, total harmonic distortion of 0.0015% from 20Hz to 20kHz, output drive capability  $\pm 40mA$ , and channel separation 120dB from 20Hz to 20kHz.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT			inc. VAT each
		25+	100+	300+	1+
UL33L	LM837N	£2.080	£1.600	£1.560	£2.890

## LM1709CN

National Semiconductor

1709

A general purpose op-amp featuring wide flat frequency response capabilities at reasonably high gains owing to the input and output compensation capacitors being able to be varied.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT			inc. VAT each

QL20W	LM1709CN	£0.699	£0.559	£0.538	£1.040

## LM3900N

National Semiconductor

3900

Four dual input, internally compensated amplifiers designed primarily for single power rail operation. These current differencing amplifiers use a current mirror to achieve the non-inverting function. When driving from a low impedance source a resistor should be placed in series to limit the peak input current to less than 20mA.

### Absolute max ratings

Supply voltage range: 4V to 32V or  $\pm 2V$  to  $\pm 16V$   
Power dissipation max: 570mW  
Input current max: 20mA

### Typical ratings at 25°C

Open loop voltage gain: 70dB  
Input resistance: 1MΩ  
Out resistance: 8Ω  
Unity gain bandwidth: 2.5MHz  
Input bias current: 30nA  
Slew rate positive output swing: 0.5V/μs  
Slew rate negative output swing: 20V/μs  
Supply current: 6-2mA  
Output voltage swing: 29-4V  
Output current capability

Source: 1-8mA  
Sink: 1-3mA  
Power supply rejection ratio: 70dB  
Mirror gain: 1μA/μA  $\pm 10\%$   
Mirror current: 10μA (500μA max)  
Negative input current: 1mA  
Full power bandwidth: 35kHz

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT			inc. VAT each

## MC33078 & MC33079

Motorola

A pair of high-quality bipolar op amps featuring high performance for quality audio and data signal processing applications. These amplifiers exhibit low input voltage noise with high gain bandwidth products and high slew rate. The output exhibits no dead band crossover distortion, large output voltage swing, excellent phase and gain margins, low open-loop high-frequency output impedance and symmetrical source and sink AC frequency performance. The MC33078 is a dual device, while the MC33079 is a quad device.

33078

33079

### Specification

Supply voltage  $V_{CC}$  to  $V_{EE}$ ,  $V_S$ : +36V max  
 Input differential voltage range,  $V_{IDR}$ :  $V_{EE}$  min,  $V_{CC}$  max  
 Power dissipation,  $P_D$ : 1.2W max at 25°C  
 Slew rate, SR: 7V/ $\mu$ s  
 Gain bandwidth product, GBW: 16MHz typ  
 Total harmonic distortion, THD: 0.002%  
 Equivalent input noise voltage,  $e_n$ : 4.5nV/ $\sqrt$ Hz

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

		300+ £0.582	1+ £1.890

## NE531N

Philips

531

A high performance op-amp with a very high slew rate capability yet keeping the DC performance of the 741. External compensation capacitor (100pF) is required for stability, but this can be reduced to very low values (1.8pF) to give wide flat frequency responses at very high gains.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2897	Price each exc. VAT	inc. VAT each
WC54J	NE531N	25+ £1.270 100+ £0.978 300+ £0.954	1+ £2.120

## NE5532N

Philips

NE5532

A dual op-amp designed for use in high quality and professional audio equipment. The IC has a typical input noise voltage at 1kHz of 5nV/ $\sqrt$ Hz. In addition it has better output drive capabilities and much higher small signal and power bandwidths than most other dual op-amps, yet is a direct pin-for-pin replacement for a 1458.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2893	Price each exc. VAT	inc. VAT each
UH35Q	NE5532N	25+ £0.536 100+ £0.467 300+ £0.436	1+ £0.670

## NE5534AN

Philips

5534

A high performance, low noise op-amp especially suited for professional and high quality audio equipment, as well as instrumentation and control circuits, and telephone channel amplifiers. Compared to standard 741/TL081 op-amps, the device offers better noise figures, improved output drive capability and considerably higher small signal and power bandwidths. The op-amp is internally compensated, and the frequency response can be optimised with an external compensation capacitor, to suit specific applications.

### Specification

Typical input noise voltage: 3.5nV/ $\sqrt$ Hz  
 Slew rate: 13V/ $\mu$ s

Order £30 or above?

Account holder or not, your order will be sent carriage paid.

(Guaranteed next day delivery charges as stated in our Terms & Conditions in the back of the catalogue)

Business Account Holders  
 No Delivery Charges for any order

Small signal bandwidth: 10MHz  
Power bandwidth: 200kHz  
Output drive capability (600Ω): 10V rms ( $V_S = \pm 18V$ )

### Tone Control Circuit

Turnover frequency is 1kHz:  
Treble  $\pm 20dB$  at 20kHz  
Bass  $\pm 20dB$  at 20Hz

## NJM4558

JRC

NJM4558D

A pair of 741 op-amps on a monolithic chip with closely matched characteristics and tracking, and offering excellent channel separation. Especially suited for differential amplifiers, as well as potentiometric amplifiers and applications where gain and phase matched channels are particularly required. Supplied in an 8-pin DIL package (DT32K), or single in-line (DT33L).

### Specification

Supply voltage:  $\pm 18V$  DC  
Supply current: 3.5mA typical  
Differential input voltage:  $\pm 30V$   
Input offset current: 5nA typical  
Input bias current: 25nA typical  
Common mode rejection: 90dB  
Supply voltage rejection: 90dB  
Slew rate: 1V/ $\mu s$   
Equivalent input noise voltage: 1.4µV rms  
Unity gain bandwidth: 3MHz

## OP-177GP Ultra-Precision Op-amp

Analog Devices

OP-177

This low-cost, high performance, precision op-amp with exceptionally low offset voltage and drift ensures accurate performance in high closed-loop gain applications. The low noise, bipolar input allows the op-amp to be used as a cost effective alternative to chopper-stabilised amplifiers. The OP-177 provides chopper-type performance without the usual problems of high noise, low frequency chopper spikes, large physical size, limited common-mode input voltage range and bulky external storage capacitors. Supplied in an 8-pin DIL package.

### Specification

Supply voltage:  $\pm 22V$  max.  
Differential i/p voltage:  $\pm 30V$   
I/P voltage:  $= \pm V_S$   
Supply current: 1.6mA typ ( $V_S = \pm 15V$ )  
Offset voltage: 10µV max  
Offset voltage drift: 0.1µV/ $^{\circ}C$  max  
CMRR: 130dB min  
PSRR: 120dB min  
Open loop gain: 12V/ $\mu V$   
Slew rate: 0.1V/ $\mu s$   
Closed loop bandwidth: 600kHz

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## OP184EP Precision Rail-to-Rail Input/Output Op-Amp

Analog Devices

OP184

A single 4MHz bandwidth amplifier featuring rail-to-rail inputs and outputs, and designed to operate from a +3V to +36V (or  $\pm 1.5V$  to  $\pm 18V$ ) rail. The IC will function from a single supply as low as +1.5V, making it ideal for battery powered applications. The op-amp is ideally suited for single supply applications requiring both AC and precision DC performance. The combination of bandwidth, low noise and precision makes the device useful in a wide variety of applications including filters and instrumentation.

Other applications include portable telecom equipment, power supply control and protection, and as amplifiers or buffers for transducers with wide output ranges. Sensors that require a rail-to-rail input amplifier include Hall effect, piezo electric and resistive transducers. This ability to swing rail-to-rail at both the input and output enables designers to build multistage filters in single-supply systems and still maintain high S/N ratios.

### Specification ( $V_S = 5V$ )

Supply current: 1.45mA max  
Large signal voltage gain: 240V/mV  
PSRR: 76dB typ  
CMRR: 60dB typ  
Slew rate: 2.4V/ $\mu s$   
Noise: 3.9nV/ $\sqrt{Hz}$   
Offset voltage: 65µV

## OP-27GNB

Analog Devices

OP-27

An instrumentation grade op-amp featuring very low noise, wide bandwidth, high slew rate and ultra-low offset voltage. The op-amp is ideal for professional quality audio systems giving a performance adequate for the most demanding high fidelity applications. The OP-27 has an undistorted power bandwidth of 34kHz and at 8V peak-to-peak is undistorted to 100kHz. Input noise levels are typically less than 3.8nV/ $\sqrt{Hz}$  at 10Hz and less than 3.3nV/ $\sqrt{Hz}$  from 30Hz upwards.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## OP-275GP Butler Front-End Op-Amp

Analog Devices

OP-275

This is the first amplifier to feature the Butler amplifier front-end. This front-end design combines both bipolar and JFET transistors to produce amplifiers with the accuracy and low noise of bipolar transistors, and the speed and sound quality of JFETs. Distortion and noise is very low, as previous audio amplifiers, but at much lower supply currents. The JFET portion of the input stage gives the device its high slew rate (22V/ $\mu s$ ), even when large output swings are required. This low noise and high speed are achieved using less than 5mA of supply current.

Bias and offset currents are greatly reduced over purely bipolar designs with offset voltage typically less than 200µV. This allows the OP-275 to be used in many DC coupled or summing applications without the need for special selections or the added noise of additional offset adjustment circuitry. The output is capable of driving 600Ω loads to 10V rms while maintaining low distortion - at 3V rms this is typically 0.0006%.

Typical applications include high performance audio, active filters, fast amplifiers, integrators etc. Supplied in an 8-pin DIL package.

### Specification

Supply voltage:  $\pm 4.5V$  to  $\pm 22V$  max  
Supply current: 4mA typ at  $\pm 18V$   
PSRR: 111dB typ  
CMRR: 106dB typ  
Slew rate: 22V/ $\mu s$   
Bandwidth: 9MHz  
Noise: 6nV/ $\sqrt{Hz}$   
Distortion: 0.0006% typ  
Offset voltage: 1mV  
Offset current: 2nA

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## OP-279GP Dual Rail-to-Rail High Output Current Op-Amp

Analog Devices

A dual rail-to-rail, high output current, single supply amplifier that is designed for low voltage applications requiring either current or capacitive load drive capability. The device can sink and source currents of typically  $\pm 80\text{mA}$ , and is stable with capacitive loads to  $10\text{nF}$ . This makes the IC ideal for driving headphones, displays, transformers and power transistors. The powerful output is combined with a unique input stage that maintains very low distortion with wide common-mode range, even in single supply designs. The device can be used as a buffer to provide much greater drive capability than can be provided by CMOS outputs. The excellent specifications - bandwidth, slew rate, noise and distortion - make the OP-279 suitable for single supply, audio bandwidth applications with high gain configurations. e.g. multimedia, telecom, DAA transform driver, LCD driver, low voltage servo control etc.

### Suggested Parts List

## OP281 Ultralow Power Rail-to-Rail Output Op-Amp

Analog Devices

The OP281 is a dual ultralow power, single-supply amplifier featuring rail-to-rail outputs. The device will operate from supplies as low as 2V, and features a precision bipolar input and an output that swings to within millivolts of the supplies, and continues to

sink/source current all the way to the supplies. This feature allows the IC to be used as comparators in very low power systems, with the added advantage of a very fast recovery time, with propagation delays of just 250 $\mu\text{s}$ .

Applications include safety monitoring, portable equipment, battery and power supply control and signal conditioning and interface for transducers in very low power systems.

The circuit shows the OP218 used as a two-way amplifier in a telephone headset. The mic amp has a gain of 29dB (x28) which yields a -3dB roll-off at 3.4kHz - acceptable for telephone audio. The speaker should have an impedance of 600 $\Omega$ . The circuit draws around 250 $\mu\text{A}$  of current so small 3V lithium battery (ZB74R) could run this circuit continuously for 640 hours!

Supplied in an 8-pin DIL package.

## OP-400GP Quad Low-Offset, Low-Power Op-Amp

Analog Devices

The OP-400 quad op-amp offers the excellent features of the OP-77 but with a total current consumption of only 2.9mA. On-chip zener-zap trimming is used to obtain a low input offset voltage of 150 $\mu\text{V}$ , and a drift of under 1.2 $\mu\text{V}/^\circ\text{C}$ , which eliminates the need for offset nulling. The IC can be used to upgrade systems using similar devices (OP-11, LM148, HA4741, LT1014 and RM4156) and is an ideal choice for applications requiring multiple precision op-amps where low power consumption is critical. Supplied in a 14-pin DIL package.

### Specification ( $V_S = \pm 15V$ )

Supply voltage:	$\pm 20V$ max
Supply current:	775 $\mu\text{A}$ /amp max

**OP295GP Dual Rail-to-Rail Op-Amp**

Analog Devices

This dual op-amp features rail-to-rail output swing, excellent DC accuracy, a bipolar front-end and low noise. All these features make the IC superior to standard CMOS designs, and with the added advantage of both input and output ranges including the negative supply, provides the user with 'zero-in/zero-out' capability.

The OP295 can supply 15mA into a load making it an ideal driver for power transistors and 'H' bridges. This allows designs to achieve higher efficiencies and to transfer more power to the load without the use of discrete components. For applications that require driving inductive loads, i.e. transformers, increases in efficiency are also possible.

Additionally, the IC can drive capacitive loads such as co-ax cable or large FET transistors. The OP295 is stable with loads in excess of 300pF. Typical applications include battery operated instrumentation, servo amplifiers, actuator drives, sense conditioners and power supply control. Supplied in an 8-pin DIL package.

**Specification (V<sub>S</sub> = +5V)**

- Power supply: +3V to +36V or up to ±18V max
- Supply current: 150µA/amplifier
- Offset voltage: 30µV typ
- Offset voltage drift: 1µV/°C
- CMRR: 110dB typ
- PSRR: 110dB typ
- Noise: 51nV/√Hz
- Slew rate: 0.03V/µs
- GBP: 75kHz
- Open loop gain: 1000V/mV

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**OPA177GP**

Burr-Brown®

634

The OPA177 is a precision bipolar op amp which features very low offset voltage of 20µV typical, and low drift of 1-2µV/°C. The high performance and low cost make it ideally suited to a wide range of precision instrumentation, test equipment, bridge and thermocouple amplifiers.

The low quiescent current of 2mA, dramatically reduces warm-up drift and errors due to thermoelectric effects in input connections. It provides an effective alternative to chopper-stabilised amplifiers. The low noise of the OPA177 maintains accuracy.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**OPA650P/OPA2650P**

650

2650

The OPA650 (LE67X) is a low power, wideband voltage feedback op-amp with a unity gain bandwidth of 560MHz and a settling time of 20ns to 0-0.1%. The low input bias current and true

differential inputs, combined with low power consumption of just 50mW make it suitable for high resolution video amplification, active filter circuits or other applications requiring high speed and accuracy, such as ultrasound signal processing. Minimum closed loop bandwidth at G=10 is 18MHz. The OPA2650 (LE65V) contains two OPA650 amplifiers in a single 8-pin package. Both types require a ±5V supply.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**OPA658P/OPA2658P**

Burr-Brown

The OPA658 (LE68Y) is an ultra-wideband low power current feedback op-amp with a unity gain bandwidth of 750MHz and a very high slew rate of 2000V/µs. The gain is flat to within 0.1dB up to 200MHz and gain/phase errors amount to no more than 0.01%/0.01°. This device is suitable for high resolution video, or pulse amplification, ADC/DAC gain amplifiers or any application where high frequency signals must be accurately amplified. Minimum closed loop bandwidth at G=10 is 195MHz, making this device suitable for use where op-amps were previously considered as too slow.

The OPA2658 (LE66W) contains two OPA658 amplifiers in a single 8-pin package. Both types require a ±5V supply and dissipate 47mW per amplifier.

## RC4136N

Raytheon

A high performance circuit containing four op-amps in one 14-pin DIL package. The amp features low noise input transistors making it specially suitable for use in audio preamplifiers and signal processing applications.

The outputs are class AB with a very low crossover distortion.

Channel separation: 123dB at 1kHz, >100dB at 20Hz to 25kHz.

Total harmonic distortion typically <0.5%.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

CP87U	TLE2037P	£0.977 100+ £0.837 300+ £0.782	1+ £2.650

## TS512AIN

SGS-Thomson

TS512

The TS512 is a high performance dual op-amp with frequency and phase compensation built-in. The device has low distortion and noise, excellent channel separation and high gain bandwidth product, and includes internal ESD protection. Ideal for professional and telecom applications. Supplied in a 8-pin DIL package.

### Specification (V<sub>SS</sub> = ±15V)

Supply voltage: ±18V max  
 Supply current: 0.7mA typ  
 I/P offset voltage: 0.5mV typ  
 I/P offset voltage drift: 5µV/°C  
 I/P resistance: 1MΩ  
 GBP: 3MHz  
 Large signal voltage gain: 100dB typ  
 Noise: 8nV/√Hz  
 THD: 0.03% typ  
 Slew rate: 1.5V/µs  
 CMRR: 90dB min  
 PSRR: 90dB min  
 Channel separation: 120dB typ

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## TS925IN

SGS-Thomson

TS925IN

The TS925 is a rail-to-rail quad BiCMOS op-amp designed to operate at 3V or 5V in low power and battery operated applications. It includes a high output current and low impedance 'phantom ground' (V<sub>CC</sub>/2) that requires no external reference.

The device features very low noise and distortion, with high output current capability, and is ideal for high quality audio applications. The IC is stable into a 100pF capacitive load.

The TS925 can be used as a headphone amplifier, soundcard amplifier, MPEG boards, multimedia systems, cordless telephones and portable communications equipment, and low noise instrumentation applications.

### Specification (V<sub>CC</sub> = 3V)

Supply voltage: 2.7V to 12V, 14V max  
 Supply current: 5mA typ, no load  
 I/P offset voltage: 3mV  
 I/P offset voltage drift: 2µV/°C  
 Large signal; voltage swing: 200V/mV  
 GBP: 4MHz  
 CMRR: 80dB typ  
 PSRR: 85dB typ  
 Slew rate: 1.3V/µs  
 Noise: 9nV/√Hz  
 THD: 0.01%  
 Channel separation: 120dB

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NP86T	TS925IN	£1.360 100+ £1.130 500+ £1.040	1+ £1.990

## TS514AIN

SGS-Thomson

TS514

The TS514 is a high performance quad op-amp with frequency and phase compensation built-in. This allows for very stable operation as a voltage follower, and still maintain a high gain-bandwidth product (GBP). Combined with low distortion and noise, high channel separation, this IC is particularly suited for professional and telecom applications. Supplied in a 14-pin DIL package.

### Specification

Supply voltage: ±15V  
 Supply current: 1.4mA typ  
 I/P offset voltage: 1.5mV  
 I/P offset voltage drift: 5µV/°C  
 Large signal voltage gain: 100dB typ  
 GBP: 3MHz  
 Noise: 18nV/√Hz R<sub>S</sub> = 10kΩ  
 THD: 0.03% typ  
 Slew rate: 1.5V/µs  
 CMRR: 90dB min  
 PSRR: 90dB min  
 Channel separation: 120dB typ

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## TSH150IN

SGS-Thomson

TSH150IN

The TSH150 is a wideband monolithic op-amp with internal compensation for unity-gain stability, and short circuit protection. The low noise and distortion, plus excellent linearity and slew rate, make this op-amp particularly suited for RF and video applications. Supplied in an 8-pin DIL package.

### Specification

Supply voltage: ±5V - 30mA max no load  
 I/P offset voltage: 0.3mV typ  
 I/P offset voltage drift: 10µV/°C  
 Large signal voltage gain: 650V/V 50Ω load  
 CMRR: 100dB  
 PSRR: 70dB  
 GBP: 150MHz  
 Full power bandwidth: 30MHz 100Ω load  
 Slew rate: 190V/µs  
 Noise: 6.2nV/√Hz at 100kHz  
 THD: 0.02%

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NP99H	TSH150IN	£3.420 100+ £2.850 500+ £2.630	1+ £5.020

## POWER AND BUFFER OP AMPS

### LM12CLK

National Semiconductor

A 150W power op-amp capable of driving ±25V at ±10A while operating from ±30V supplies. The monolithic IC can deliver 150W of sine wave power

into a 4Ω load with 0.01% distortion. The IC features input protection, controlled turn on, thermal limiting, overvoltage shutdown, output current limiting and dynamic safe area protection.

**Absolute max ratings**

Voltage supply range: ±8V to ±40V  
Power dissipation: 150W with 400in<sup>2</sup> heatsink

Differential input voltage: 60V  
Output current: 10A

**Typical ratings at 25°C with V<sub>S</sub> = ±30V**

Input offset voltage: 2mV  
Input offset current: 0.03μA  
Input bias current: 0.15μA  
Common mode rejection ratio: 86dB  
Supply voltage rejection ratio: 90dB  
Large signal voltage gain: 94dB  
Slew rate: 9V/μs  
Full power bandwidth: 60kHz  
Supply current (no load): 60mA

**Audio Amplifier Parts List**

- R1 Min Res 1k1 (M1K1)
- R2 Min Res 1k (M1K)
- R3 Min Res 3k3 (M3K3)
- R4 7W W/W 2-2Ω (L2R2)
- C1 Polystyrene 1500pF (BX58N)
- C2,3 Snap-in 4700μF 50V (CW74R)
- D1,2 MR751 (YH96E)
- L1 25 turns of 18swg enamelled copper wire wound side-by-side approx. 8mm diameter.

**BUF634 250mA High-Speed Buffer**

Burr-Brown®

The BUF634 is a high-speed, unity gain, open-loop buffer recommended for a wide range of applications, which can include valve, solenoid and motor drivers, add-on output current booster stages for op-amps, audio line and headphone drivers, and video and test equipment applications. It can be used inside the feedback loops of op-amps to increase output current, eliminate thermal feedback and improve capacitive load drive.

For low-power applications, the BUF634 can operate at a quiescent current of 1.5mA with a 250mA output capability and a slew rate of 2,000V/μs. Bandwidth can be increased from 30MHz to 180MHz by connecting pin 1 (BW or bandwidth control) to pin 4 (-V) with a corresponding increase in quiescent current; extra care is also required in layout to prevent an increased tendency to RF instability.

The output circuitry is fully protected by internal current limiters and thermal shutdown, making the device rugged and easy to use. This device is supplied in an 8-pin DIL package, and should preferably be soldered directly into a PCB to allow heatsinking via the pins, instead of using a DIL socket.

**Specification**

	Narrow Band Mode	Wide Band Mode

## CA3130E

**Harris**

A MOS-FET input, CMOS output op-amp that will operate from a single or dual power supply, and input terminals can be swung up to 0.5V below negative rail. An external compensation capacitor between pins 1 and 8 permits adjustment of frequency/gain characteristic (typically 47pF).

3130

Offset null is achieved with 100kΩ pot between pins 1 and 5 with slider to pin 4. Max input-terminal current is 1mA. The output can be strobed.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2318	Price each exc. VAT	25+	100+	300+	1+	inc. VAT each
QH28F	CA3130E	£0.636	£0.551	£0.517	£1.390		

## CA3140E & CA3240E

**Harris**

A MOSFET input, bipolar output op-amp that will directly replace the 741 in most applications. It will operate from single or dual supply rails and input terminals can be swung up to 0.5V below negative rail. Internally compensated. Max input terminal current is 1mA. The output can be strobed. 3240 is a dual version of 3140. Both are in an 8-pin DIL package.

## ICL7611, 7621

**Harris**

7611

7621

Monolithic CMOS op amps providing the designer with high performance operation at low supply voltages and selectable quiescent currents, and having ultra-low input and low power dissipation where required.

The basic amplifier will operate at supply voltages ranging from ±1V to ±8V, and may be operated from a single lithium cell. ICL7611 has a programming pin which can be used to set the quiescent current to 1mA, 100µA or 10µA, while ICL7621 is factory set to 100µA.

Both devices feature extremely low input current (1pA), input noise current and impedance of 1012Ω. All inputs are internally protected, and outputs are short-circuit protected. Both types are encapsulated in 8-pin plastic DIL packages.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LF351N, LF353N & LF347N

**SGS-Thomson**

**National Semiconductor**

351

353

347

Low-cost high performance J-FET input op-amps that will directly replace, and out perform, the 741 in most applications. The devices are low noise, have distortion figures of less than 0.02% over the audio band, high slew rate (13V/µs), high input impedance (10<sup>12</sup>Ω) and wide bandwidth. For the 353 and 347, internal amplifier isolation is 120dB. Additionally, the accurately matched JFET inputs provide very low input bias and offset currents. It is most important that input voltages never go more negative than the negative supply voltage or the device will be

destroyed. The ICs are ideal for audio circuits, as well as fast D/A converters, high speed integrators and sample-and-hold circuits. The 351 is supplied in an 8-pin DIL package as is the 353 which is a dual version and the 347 is supplied in a 14-pin DIL package and is a quad version. Note that since the inputs are J-FETs not MOS-FETs no special handling is required.

Cut & Boost: Bass 20Hz ±20dB  
Mid 1kHz ±20dB  
Treble 20kHz ±20dB

## LF355N, LF356N & LF357N

**SGS-Thomson**

**National Semiconductor**

LF355/356/357

These JFET input op-amps feature low input bias current (30pA), low input offset current (3pA), very high input impedance and a large DC voltage gain (106dB). The 355 has a very low supply current typically 2mA, compared to the 356/357 of 5mA. The 356/357 have wide gain bandwidths of typically 4.5MHz for the 356 and 20MHz for the 357, and low input noise voltage of 12nV/√Hz. With extremely fast settling times the ICs are suitable for precision high speed integrators, and fast D/A and A/D converters. Additionally, they can be used as high impedance buffers, and in wideband, low noise, low drift amplifiers. Note that the 357 is not internally compensated. Supplied in an 8-pin DIL package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LF411CN and LF412CN

National Semiconductor

LF411

LF412

High performance J-FET input op-amps similar to 351 and 353 respectively, offering high speed, very low input offset and guaranteed input offset voltage drift of less than  $10\mu\text{V}/^\circ\text{C}$ . The ICs require low supply current yet maintain a large gain bandwidth product (4MHz), fast slew rate ( $>10\text{V}/\mu\text{s}$ ) and low distortion ( $\leq 0.02\%$ ). LF411CN is a single op-amp in an 8-pin DIL package, LF412CN is the dual version in 14-pin DIL package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LF441CN, LF442CN & LF444CN

National Semiconductor

LF441

LF442

LF444

Low power J-FET input op-amps may be used as direct replacements for the  $\mu\text{A}741\text{C}$ , 1458C and 3403 respectively. They offer improved DC characteristics, the same bandwidth, slew rate and gain yet only draw one tenth of the supply current (one fifth for LF444). In addition they offer extremely low input offset voltages and currents and very low bias currents.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LPC661, LMC/LPC662, 660

National Semiconductor

661

662

660

Low power, single (661), dual (662) and quad (660) CMOS operational amplifiers, each encapsulated in an 8-pin DIL package. The devices are ideal for single supply rail operation, which can range from +5V to +15V. Output has a full rail-to-rail voltage swing, and input common mode range includes ground. Input drift and broadband noise performance is equal to or better than widely accepted bipolar equivalents, while quiescent supply current is in the range of 55 to 200 $\mu\text{A}$  per amplifier (depending on type). LMC662 and 660 have an operating temperature range of  $0^\circ\text{C}$  to  $+70^\circ\text{C}$ , while LPC661, 662 and 660 have a range of  $-40^\circ\text{C}$  to  $+85^\circ\text{C}$ .

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MC33171, MC33172 & MC33174

Motorola

A range of low-power, single supply op amps. Features include wide operating voltage range, wide bandwidth, high slew rate, large capacitance drive capability, low total harmonic distortion and output short circuit protection. The MC33171 device has a single amplifier, while the MC33172 is a dual equivalent and the MC33174 a quad equivalent.

Specification

Supply voltage,  $V_{CC}$ : 3-0V to 44V, or  $\pm 1.5\text{V}$  to  $\pm 22\text{V}$   
 Bandwidth: 1-8MHz  
 Slew rate: 2-1V/ $\mu\text{s}$   
 Input offset voltage: 2-0mV

Capacitance drive capability: 0 to 500pF  
 Total harmonic distortion, THD: 0-03%  
 Phase margin: 60%  
 Gain margin: 15dB

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## OPA124P

Burr-Brown

OPA124P

The OPA124P is a precision monolithic dielectrically isolated FET (DIFET®) operational amplifier. Outstanding performance characteristics allow its use in the most critical instrumentation applications. Low noise  $6\text{nV}/\sqrt{\text{Hz}}$  (10kHz), low bias current, 1pA (maximum), high open-loop gain of 106dB (minimum), and high common-mode rejection, 100dB (minimum) make it superior to BIFET® and CMOS amplifiers. Extremely low noise is achieved with patented circuit design techniques. A cascode design allows high precision input specifications.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

AD59P	OPA124P	£4.440	£4.070	£3.490	£5.840	

## OPA129P

Burr-Brown

The OPA129 is an ultra low bias current op-amp with Burr-Brown's Difet input fabrication, which reduces input bias current by a factor of 10 to 100 over conventional FET input op-amps, to a typical figure of just 30fA (0-00003pA). It may be used to amplify small signals from very high impedance transducers such as pH probes (typically 500M impedance), or other applications where the device offers excellent sensitivity such as spectrometry or other photodetection circuits. The device is internally laser trimmed to balance offset voltage and requires no external trimming in use.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

LE64U	OPA129P	£3.550	£3.080	£2.880	£5.690	

## OPA445P

Burr-Brown

445

This FET input op-amp features a wide supply voltage range from  $\pm 10\text{V}$  to  $\pm 40\text{V}$ , making it suitable for use in a wide variety of applications requiring high output voltage or large common-mode voltage

swings. Cost savings may be made by using this where output current required is no more than 15mA, as previously a high power op-amp would have been used to achieve the high voltage requirement. The OPA445 has a high slew rate of 10V/ $\mu$ s and in input bias current of 50pA max.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## OPA604AP

Burr-Brown®

OPA604AP

The OPA604AP is a FET-input operational amplifier designed for enhanced AC performance. Very low distortion 0.0003% at 1kHz, low noise 10nV/ $\sqrt$ Hz, and wide gain-bandwidth of 20MHz. It provides superior performance in high-quality audio and other applications requiring excellent dynamic performance. The OPA604AP has a wide supply range of  $\pm$ 4.5 to  $\pm$ 24V.

The low-noise FET input of the OPA604AP provides wide dynamic range, even with a high source impedance, and drives a 600 $\Omega$  load.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## OPA606

Burr-Brown

177

The OPA606 is a wideband dielectrically isolated Difet op-amp featuring a 12MHz small signal bandwidth (470kHz full power bandwidth) as well as laser trimmed thin film resistors for improved offset voltage and noise performance. This amplifier is ideally suited to high quality audio amplification tasks. THD is typically 0.0035% @ 10kHz, bias current is 10pA max @ 25°C, offset voltage is 0.5mV max.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## OPA627AP

Burr-Brown

27

This FET input op-amp combines the very best of AC and DC characteristics for top end audio and instrumentation applications. High frequency complementary transistors allow increased circuit bandwidth, attaining dynamic performance not possible with previous precision FET op-amps. Burr-Brown's Difet fabrication achieves extremely low input bias current without compromising input voltage noise performance. THD+noise is typically 0.00003% and slew rate is typically 55V/ $\mu$ s. The input bias current is 5pA max, drift 0.8 $\mu$ V/ $^{\circ}$ C max and offset voltage (laser trimmed) 0.1mV max.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## RC4200N Analogue Multiplier

Raytheon

4200

An analogue multiplier combining three op-amps specially designed for multiplier logging circuits and offering complete compensation for non-linearity. As a result, four quadrant multiplication, two quadrant division, square rooting, squaring and rms conversion can all be implemented with predictable accuracy. The nominal relationship between the three inputs and the output is  $I3 = I1 \times I2 \div I4$ .

The circuit is ideal for use in low distortion audio modulation circuits, voltage controlled active filters, and precision oscillators.

### Specification (typical at $V_S = -15V$ )

Supply voltage: -9V to -18V  
Supply current: <4mA  
Input current range: 1 $\mu$ A to 1mA  
Input offset voltage: < $\pm$ 10mV  
Input bias current: <500nA  
Output current range: 1 $\mu$ A to 1mA  
Frequency response: 4MHz  
Total error as multiplier: < $\pm$ 3% untrimmed  
with external trim:  $\pm$ 0.2%  
Non-linearity: < $\pm$ 0.3%

## TSM221N

SGS-Thomson

TSM221

The TSM221 contains two differential input CMOS rail-to-rail op-amps (amps 1,4), and two push-pull CMOS comparators (amps 2,3). This mixed circuit is a general purpose analogue block for auto-motive, telecom and consumer applications. The device will operate from a single supply rail of 2.7V to 16V, and at 5V requires just 500 $\mu$ A of current. Supplied in a 14-pin DIL package.

### Specification ( $V_{SS} = 5V$ )

Supply voltage: 18V max  
Supply current: 500 $\mu$ A total  
I/P offset voltage op-amp: 10mV max  
comparator: 5mV  
I/P offset voltage drift: 5 $\mu$ V/ $^{\circ}$ C (op-amp)  
I/P offset current op-amp: 1pA typ  
comparator: 1pA  
I/P bias current op-amp: 1pA  
comparator: 1pA  
Large signal voltage gain: 40V/mV (op-amp)  
GBP: 1MHz typ  
CMRR op-amp: 85dB typ  
comparator: 82dB typ  
PSRR op-amp: 80dB typ  
comparator: 90dB typ  
Slew rate: 0.7V/ $\mu$ s  
Noise: 30nV/ $\sqrt$ Hz  
Channel separation: 120dB typ  
Response time overdrive = 5mV  
low to high: 1.5 $\mu$ s  
high to low: 2.2 $\mu$ s  
Fall time: 30ns

## TSH321IN

SGS-Thomson

The TSH321 is a wideband monolithic op-amp with extremely high input impedance, typically  $>10^{12}\Omega$ , that can be directly interfaced with high impedance sources. Low distortion, wide bandwidth and high linearity make this device suitable for RF and video applications. Short circuit protection is provided by an internal current-limiting circuit. Note that to maintain stability, the device requires a minimum closed loop gain of 2. Supplied in an 8-pin DIL package.

### Specification

Supply voltage:  $\pm 3V$  to  $\pm 6V$ , typ  $\pm 5V$   
 Supply current: 40mA max ( $\pm 6V$ )  
 I/P offset voltage: 0.5mV typ  
 I/P offset voltage drift:  $10\mu V/^\circ C$  typ

## TL061CN/CP, TL062CN/CP & TL064CN

SGS Thomson  
Texas Instruments

TL061

TL062

TL064

The TL06x series of J-FET-input operational amplifiers are designed as low-power versions of the TL08x series, and feature high input impedance, wide bandwidth, high slew rate (3.5V/ $\mu s$ ), output short-circuit protection and low input offset (100pA) and bias (200pA) currents. They are pin compatible with the TL07x and TL08x series and contain well-matched, high-voltage J-FET and bi-polar transistors in a monolithic IC package. All the devices have internal frequency

compensation. TL061 is an 8-pin DIL package containing one amplifier, TL062 is an 8-pin DIL package containing two individual amplifiers and TL064 is a 14-pin DIL package with four individual amplifiers

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## TL071CN/CP, TL072CN/CP & TL074CN

SGS Thomson  
Texas Instruments

TL071

TL072

TL074

The J-FET input operational amplifiers in the TL07x series are designed as low-noise versions of the TL08x series with low input bias and offset currents and fast slew rates (typically 13V/ $\mu s$ ). The low harmonic distortion (0.003%) and low noise (18nV/ $\sqrt{Hz}$ ) make the TL07x series ideal for amplifiers in high quality audio applications. Each amplifier features J-FET inputs coupled with bi-polar output stages integrated on a single monolithic chip. All the devices have internal frequency compensation. TL071 is an 8-pin DIL package containing one amplifier, TL072 is an 8-pin DIL package containing two individual amplifiers and TL074 is a 14-pin DIL package with four individual amplifiers.

## TLC27L2CN, 27L4CN, 27M2CN, 27M4CN

SGS Thomson  
Texas Instruments

27L2, 27M2

27L4, 27M4

Dual and quad operational amplifiers that are low power (M) and very low power (L) versions of TS272 and TS274. Types 27M2CN and 27M4CN each have a quiescent current consumption of 150 $\mu A$  per amplifier, for 27L2CN and 27L4CN, 10 $\mu A$  per amplifier. All other characteristics are as TS272 and TS274. Encapsulated in 8-pin plastic DIL packages. Silicon gate technology provides offset voltage stability far exceeding that of conventional

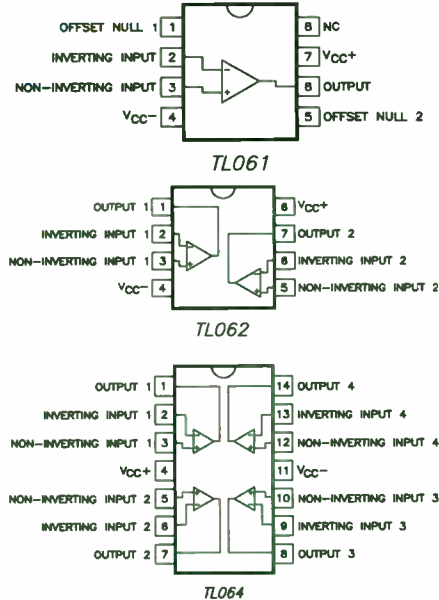

metal gate processes. This and other features make this series an excellent cost-effective choice for new state-of-the-art designs as well as excellent upgrade for existing designs.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## TS271, 272, 274

SGS Thomson

Low cost, low power op amps designed to operate with single or dual rail supplies. All types use a silicon gate LIN-MOS process giving them an excellent current consumption to speed ratio. Single (271), dual (272) and quad (274) versions are available, each encapsulated in an 8-pin plastic DIL package. Type 271 includes offset null connections. The devices offer very high input impedances and extremely low input currents, with very low input current drift versus temperature compared with JFET devices.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## TRANSCONDUCTIVE OP-AMPS

### CA3080E

Harris

This 8-pin DIL IC is an op-amp whose output current is proportional to the voltage difference between its input pins. In addition the IC has a bias input which may be used either for gating or for linear gain control. The amplifier has an excellent slew rate and in addition when gated off the amp uses only a minute 10µW making it ideal in

multiplex applications. For technical specification see LM13700N below.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
YH58N	CA3080E	£0.560	£0.960

## LM13700N

National Semiconductor

The 13700 is a dual operational transconductance amplifier with linearising diodes and buffers. It consists of two current controlled transconductance amplifiers each with different inputs and a push pull output. The two amplifiers share common supplies but otherwise operate independently. Linearising diodes are provided at the inputs to reduce distortion and allow higher input levels. The result is a 10dB signal-to-noise improvement referenced to 0.5% THD. High impedance buffers are provided which are specially designed to complement the dynamic range of the amplifiers.

The IC has many useful applications such as voltage controlled amplifiers, voltage controlled resistors, voltage controlled filters, voltage controlled oscillators, phase locked loop, Schmitt trigger tachometer (f to v), peak detector and hold, sample and hold, ramp and hold, true RMS converter, variable temperature coefficient voltage reference, pulse width modulator, log current source, multiplexer, zero standby power timer, four quadrant multiplier, amplitude monitor and stereo volume control. A data sheet is available which shows circuit details of all the above applications.

## INSTRUMENTATION ISOLATION

### MAX430CPA ±15V Chopper Stabilised Op-Amp

Maxim

MAX430

The MAX430 is a ±15V chopper stabilised op-amp designed for high accuracy signal conditioning, amplification and instrumentation applications. The IC offers an input offset and drift specification superior to previous precision bipolar op-amps and monolithic chopper amplifiers.

The device requires no external chopper capacitors, and with its standard op-amp pin configuration allows for direct replacement in to almost any OP07/OP77/LM106/741 socket. This is regardless of any offset balancing or frequency compensation circuitry that might be present. In addition, the MAX430 features a maximum supply current of just 2mA and a unity gain bandwidth of 500kHz. Supplied in an 8-pin DIL package.

#### Specification

Power supply:	±2.5V to ±16.5V
Supply current:	1.3mA typ
I/P offset voltage:	1µV typ
I/P offset voltage drift:	0.02µV/°C
Large signal voltage gain:	150dB
CMRR:	140dB
PSRR:	140dB
I/P noise current:	0.01pA/√Hz
GPB:	500kHz
Slew rate:	0.5V/µs

## INA114 Precision Instrumentation Amplifier

**Burr-Brown**

A low cost, general purpose instrumentation amplifier offering excellent accuracy in a versatile 3-opamp design ideal for a wide range of applications. A single external resistor sets any gain between 1 and 10,000. Internal input protection can withstand up to  $\pm 40V$  without damage, even without a supply voltage present.

The INA114 is laser trimmed for very low offset voltage ( $50\mu V$ ), drift ( $0.25\mu V/^\circ C$ ) and high common-mode rejection ( $115dB$  at  $G = 1000$ ). It operates with power supplies as low as  $\pm 2.5V$ , allowing its use in battery powered and single 5V supply systems. Quiescent current is 3mA maximum. Using the device with noisy or high impedance power supplies may require decoupling capacitors close to the device pins. In use, the output is referred to the output reference terminal (Ref, pin 5) which is normally grounded. This must be a low impedance connection to 0V to assure good common-mode rejection. The gain of the INA114 is set by connecting a single external resistor,  $R_G$ , between pins 1 and 8 where:

$$\text{gain } (G) = 1 + 50k \Omega / R_G$$

The  $50k\Omega$  term in the equation comes from the sum of the two internal feedback resistors, and values for  $R_G$  can range from none, giving a gain of 1,  $50k\Omega$  giving x2 down to  $5\Omega$  giving 10,000. Applications include bridge amplifiers, thermocouple amplifiers, RTD sensors, medical instrumentation and data acquisition.

### Specification

Input offset voltage:	$\pm 25+30/G \mu V$
Input impedance, differential common mode:	$10^{10} \Omega \parallel 6pF$
Input common mode range:	$\pm 13.5V$
Common mode rejection, $G = 1$ :	90dB
$G = 1000$ :	110dB
Bias current:	$\pm 5nA$ max. $\pm 8pA/^\circ C$
Offset current:	$\pm 5nA$ max. $\pm 8pA/^\circ C$
Noise voltage, $G = 1000$ :	$15nV/\sqrt{Hz}$ @ 10Hz $11nV/\sqrt{Hz}$ @ 100Hz and 1kHz
Gain range:	1 to 10,000
Gain error:	$\pm 2\%$ max.
Output voltage:	$\pm 13.7V$ ( $V_S = \pm 15V$ )
Frequency response, $G = 1$ :	1MHz
$G = 10$ :	100kHz
$G = 100$ :	10kHz
$G = 1000$ :	1kHz
Slew rate:	$0.6V/\mu s$ ( $V_S = \pm 10V$ , $G = 10$ )
Overload recovery:	20 $\mu s$
Power supply voltage:	$\pm 2\mu 25V$ to $\pm 15V$
Quiescent current:	3mA

## INA117KP High Common-Mode Difference Amplifier

**Burr-Brown**

The INA117KP is a precision unity-gain difference amplifier with a very high common-mode input voltage range. It is a single monolithic IC consisting of a precision op amp and integrated thin-film resistor network. It can accurately measure small differential voltages in the presence of common-mode signals up to  $\pm 200V$ . The INA117 inputs are protected from momentary common-mode or differential overloads up to  $\pm 500V$ .

In many applications where galvanic isolation is not essential, the device can replace isolation amplifiers, eliminating costly isolated input side

power supplies and their associated ripple, noise and quiescent current. The IC's 0.001% non-linearity and 200kHz bandwidth are superior to those of conventional isolation amplifiers. Applications include current monitors, battery cell voltage monitors, ground breakers, input protection, signal acquisition in noisy environments and factory automation.

### Specification

Initial gain:	1V/V
Gain error:	0.01%
Rated output voltage:	12V, $I_O = +20mA$ , -5mA
Input impedance, differential:	10k $\Omega$
common-mode:	110k $\Omega$
Common-mode rejection:	100dB
Initial offset voltage:	120 $\mu V$
Noise voltage:	25 $\mu V$ pk-pk, 0.01Hz to 10Hz 550nV/Hz @ 10kHz -3dB @ 200kHz 30kHz @ 20V pk-pk
Gain bandwidth:	2V/ $\mu s$
Full power bandwidth:	30kHz @ 20V pk-pk
Slew rate:	2V/ $\mu s$
Supply voltage:	$\pm 15V$
Quiescent current:	1.5mA

## INA118P Precision Low Power Instrumentation Amplifier

**Burr-Brown**

The INA118P is a low power, general purpose instrumentation amplifier offering excellent accuracy. Its versatile 3 op-amp design and small size make it ideal for a wide range of applications. Current-feedback input circuitry provides wide bandwidth even at high gain (100kHz at  $G = 100$ ). A single external resistor sets any gain from 1 to 10,000. Internal input protection can withstand up to  $\pm 40V$  without damage. The device operates with power supplies as low as  $\pm 1.35V$ , and quiescent current is only 280 $\mu A$ , ideal for battery powered systems.

In use, the output is referred to the output reference terminal (Ref, pin 5) which is normally grounded. This must be a low impedance connection to 0V to assure good common-mode rejection. The gain of the INA118 is set by connecting a single external resistor,  $R_G$ , between pins 1 and 8 where:

$$\text{gain } (G) = 1 + 50k \Omega / R_G$$

Applications include bridge amplifiers, thermocouple

### Specification

Input offset voltage:	$\pm 25+100/G \mu V$
Input impedance, differential common mode:	$10^{10} \Omega \parallel 5pF$
Input common-mode range:	$\pm V_S \pm 0.9V$
Common-mode rejection,	

$G = 1$ :	90dB
$G = 1000$ :	110dB
Bias current:	$\pm 5nA$ max. $\pm 20pA/^\circ C$
Offset current:	$\pm 5nA$ max. $\pm 20pA/^\circ C$
Noise voltage, $G = 1000$ :	$12nV/\sqrt{Hz}$ @ 10Hz $10nV/\sqrt{Hz}$ @ 100Hz
and 1kHz	
Gain range:	1 to 10,000
Gain error:	$\pm 0.5\%$ max.
Output voltage:	+14.2V, -14.6V ( $V_S = \pm 15V$ )

## INA2128PA

**Burr-Brown**

The INA2128 instrumentation amplifier offers an accurate low power design with an input bias current of 2nA max. This makes it ideal for micropower sensor amplification in environmental or medical monitoring systems. A quiescent current of around 1mA and wide supply range of  $\pm 2.25V$  to  $\pm 18V$  means that the device is well suited to battery powered applications. A single external resistor sets any gain from 1 to 10,000 and current feedback circuitry provides wide bandwidth even at high gain settings (200kHz at  $G=100$ ). Inputs are protected to  $\pm 40V$  and drift/offset voltage are both low.

2128

## ISO122 Precision Isolation Amplifier

**Burr-Brown**

A precision isolation amplifier incorporating a novel duty cycle modulation-demodulation technique to transmit the signal digitally across a 2pF isolation barrier. With digital modulation the barrier characteristics do not affect signal integrity, resulting in excellent reliability and good high-frequency transient immunity across the barrier. Both barrier capacitors (1pF each) are embedded in the plastic body of the package. The device is very easy to use, no additional external components are needed for operation. All

that is required is to provide separate  $\pm$  supply rails and a ground reference for both the input and output sides of the device, as the internal input and output circuits are completely isolated. The isolation barrier can handle 1,500V AC rms continuously and is 100% tested. The configuration has a gain of unity and for all intents and purposes a ground referenced, DC or AC signal is passed through to the output unchanged. However, small signal bandwidth should be limited to 50kHz or less, due to the internal modulation frequency being 500kHz.

A power supply range of  $\pm 4.5V$  to  $\pm 18V$  at each end, with quiescent currents of  $\pm 5mA$  and  $\pm 5.5mA$  respectively make the device ideal for a wide range of applications, including industrial process control, ground loop elimination, motor and SCR control, PC based data acquisition, etc.

**Specification**

Isolation rating: 1,500V AC @ 60Hz  
2,400V AC max. for 1s  
Isolation mode rejection: 140dB @ 60Hz  
Leakage current: 0-18 $\mu$ A rms @ 60Hz  
Nominal gain: 1V/V  
Gain error:  $\pm 0.05\%$  FSR  
Gain drift:  $\pm 10$ ppm/ $^{\circ}C$   
Non-linearity: 0-0.16% FSR  
( $\pm 0.025\%$  FSR ISO122J)  
Input offset voltage:  $\pm 20mV$   
Input offset drift:  $\pm 200\mu V/^{\circ}C$   
Noise: 4 $\mu V/\sqrt{Hz}$   
Input voltage range:  $\pm 12.5V$  ( $V_S = \pm 15V$ )  
Input resistance: 200k $\Omega$   
Output voltage range:  $\pm 12.5V$  ( $V_S = \pm 15V$ )  
Output current drive:  $\pm 15mA$   
Capacitive load drive: 100nF  
Ripple voltage: 20mV pk-pk  
Small signal bandwidth: 50kHz  
Slew rate: 2V/ $\mu s$   
Overload recovery time: 150 $\mu s$   
Supply voltage range:  $\pm 4.5$  to  $\pm 18V$  each section  
Quiescent current:  $\pm 5mA$  input side,  $\pm 5.5mA$  output side

Note that version ISO122J has a non-linearity figure of  $\pm 0.025\%$  FSR.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## ISO130P

The ISO130 is a high isolation-mode rejection amplifier suited for precise and stable monitoring of motor currents in high noise motor control environments or any other signal isolation application requiring a high degree of linearity under severe noise conditions. The input signal is transmitted digitally across the isolation barrier which provides 10kV/ $\mu s$  isolation-mode rejection using a high speed AlGaAs LED and Sigma-Delta A/D converter. The output section converts this digital signal back into an analogue voltage and filters it to produce the final output. The device conforms with UL1577 and VDE0884 barrier voltage and discharge test requirements. No external components are required for operation, provided that power supplies of +5V are available on each side of the isolation barrier. The large signal bandwidth of the ISO130 is typically 85kHz.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## AD622AN Instrumentation Amplifier

Analog Devices

AD622

A low-cost, quality instrumentation amplifier that requires no external resistor for a gain of one, and only one external resistor to set any gain from 2 to 1000. The device is a complete difference or subtracter amplifier 'system', providing superior linearity and common-mode rejection by using precision laser trimmed resistors. The IC will operate from a wide supply voltage ( $\pm 2.6V$  to  $\pm 15V$ ) and has a maximum supply current requirement of just 1.5mA.

Supplied in an 8-pin DIL package.

**Specification**

Supply voltage:  $\pm 2V$  to  $\pm 18V$  max  
Supply current: 1.5mA max  
Gain range: 1 to 1000  
Gain error  
G = 1: 0.05% typ  
G = 1000: 0.2% typ  
Nonlinearity: 10 ppm for G = 1 to 1000  
Input offset: 60 $\mu V$  typ  
Input offset drift: 250 $\mu V/^{\circ}C$  max  
CCMR  
G = 1: 78 typ  
G = 1000: 118dB  
Dynamic response -3dB bandwidth  
G = 1: 1MHz  
G = 1000: 12kHz  
Slew rate: 1.2 $\mu s$   
Settling time: 10 $\mu s$  (to 0.1%)  
Noise: 12nV/ $\sqrt{Hz}$

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

NP37S	AD622AN	£3.210	£2.360	£5.170

## PGA204/5 Programmable-Gain Instrumentation Amplifiers

Burr-Brown

204/205

The PGA204 and PGA205 are low cost, general purpose programmable-gain instrumentation amplifiers offering excellent accuracy. Gains are digitally selected: PGA204 has options for gains of 1, 10, 100 and 1000, while PGA205 has 1, 2, 4 and 8V/V. The precision, versatility and low cost of the PGA204 and 205 make them ideal for a wide range of applications.

The gain is selected by two TTL or CMOS compatible address lines,  $A_0$  and  $A_1$ . Internal input protection can withstand up to  $\pm 40V$  on the analogue inputs without damage. Both devices are laser trimmed for very low offset voltages (50 $\mu V$ ), drift (0.25 $\mu V/^{\circ}C$ ) and high common-mode rejection ratio (115dB at G = 1000). They can operate from supply voltages as low as  $\pm 4.5V$ , allowing them to be used in battery powered systems. Quiescent current is 5mA.

In use the output is referred to the output reference (Ref, pin 10) which is normally grounded. This must be a low impedance connection to assure good common-mode rejection. The output feedback connection, pin 12, must be connected to the output, pin 11, for proper operation, but can be used to sense the output voltage directly at the load for best accuracy.

The digital inputs  $A_0$  and  $A_1$  are not latched; a change in the logic immediately selects a new gain. Logic switching time is approximately 1 $\mu s$ . Typical applications for these devices include data acquisition, general purpose analogue boards and medical instrumentation.

**Specification**

Input offset voltage:  $\pm 25+30/G$   
Input impedance, differential:  $10^{10}\Omega$  || 6pF  
common-mode:  $10^{10}\Omega$  || 6pF  
Common-mode rejection: 75dB min., 123dB max.  
Input offset current:  $\pm 2nA$   
Noise voltage: 16nV/ $\sqrt{Hz}$  max.  
Gain error:  $\pm 0.05\%$  to  $\pm 0.1\%$   
Output voltage:  $\pm V_S - 1.3V$  pk-pk  
Supply voltage range:  $\pm 4.5V$  to  $\pm 18V$

## XTR101AP

The XTR101 is a microcircuit, 4-20mA, two wire transmitter containing a high accuracy instrumentation amplifier, a voltage controlled output current source and dual matched precision current reference. This combination is ideally suited for remote signal monitoring of a wide variety of transducers such as thermocouples, RTDs, thermistors and strain gauge bridges.

The two wire transmitter allows signal and power to share the same single wire pair by modulating the power supply current with the input signal source. The transmitter is immune to voltage drops caused by long cable runs and noise from motors, relays, actuators, switches, transformers and industrial equipment.

The XTR101 requires a single rail supply from 11-6V to 40V, and features low offset voltage (30 $\mu V$  max), low drift (0.75 $\mu V/^{\circ}C$  max) and low non-linearity (0.01% max).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## SGS Op-Amps and Comparators

**LM308N (NP82D)** - A single precision op-amp featuring extremely low input currents, and very low power requirements, ideal for battery operation.

**LM741CN (NP83E)** - Industry standard general purpose op-amp with internal frequency compensation.

**LF347N (NP84F)** - Quad J-FET op-amps with low distortion, high slew rate and wide bandwidth.

**LF353N (NP85G)** - Dual J-FET op-amps with low distortion, high slew rate and wide bandwidth.

**MC33171N (NR62S)** - A single bipolar op-amp featuring low-power, single supply operation with wide bandwidth and high slew rate.

**MC33172N (NR63T)** - A dual bipolar op-amp featuring low-power, single supply operation with wide bandwidth and high slew rate.

**MC33174N (NR64U)** - A quad bipolar op-amp featuring low-power, single supply operation with wide bandwidth and high slew rate.

**LM2901N (NR65V)** - A quad low offset voltage comparator featuring low-power and single supply rail operation.

**LM2902N (NR66W)** - A quad low-power op-amp with internal frequency compensation, wide bandwidth, large voltage gain and designed to operate from a single supply rail.

**LM2903N (NR67X)** - A dual low offset voltage comparator featuring low-power and single supply rail operation.

**LM2904N (NR68Y)** - A dual low-power op-amp with internal frequency compensation, wide bandwidth, large voltage gain and designed to operate from a single supply rail.

**LM239N (NR69A)** - Four independent precision low power voltage comparators designed to operate from a single supply rail, and will directly interface with TTL and CMOS.

**MC33078N (NR70M)** - A dual low noise bipolar op-amp designed for high quality audio and data signal processing. Features include low input voltage noise, high gain bandwidth products and high slew rate.

**MC33079N (NR71N)** - A quad low noise bipolar op-amp designed for high quality audio and data signal processing. Features include low input voltage noise, high gain bandwidth products and high slew rate.

## LM311N

SGS Thomson

A voltage comparator that has input currents more than a hundred times lower than the 710. It will operate on ±14V or +5V supplies and will drive RTL, DTL, TTL, MOS and switch voltages up to 40V at currents as high as 50mA. Both input and output can be isolated from system ground and the output can drive loads referred to ground, positive or negative. Offset balancing and strobe capability are provided and outputs can be wire-OR'ed.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
QY09K	LM311N	£0.215 25+ £0.200 100+ £0.175 300+ £0.620 1+	

## LM319N

SGS Thomson

A precision, high speed dual comparator designed to operate over a wide voltage range including +5V and ground. It has a faster response, though higher power dissipation than the 311. It is capable of driving outputs up to 25mA.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UH33L	LM319N	£0.646 25+ £0.600 100+ £0.525 300+ £2.100 1+	

## LM339N

SGS Thomson

Four independent precision voltage comparators with a typical input offset voltage of 2mV, and designed to operate from a single power supply. The input common-mode voltage range includes ground, even though operated from a single power supply voltage. Identical to the 3302, but offering improved supply voltage range and voltage gain (typically 200). Designed to directly interface with TTL and CMOS, and when used with a +/- supply will directly interface with MOS logic, where the low power drain of the LM339 is a distinct advantage over standard comparators.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UH31J	LM339N	£0.190 25+ £0.129 100+ £0.113 300+ £0.610 1+	

**LM392N**

National Semiconductor

392

This device contains a precision voltage comparator and an op-amp in one 8-pin DIL package. They operate from the same supply and will work with a +5V supply and the output of the comparator will interface directly with TTL or CMOS. The very low supply current makes the device ideal for use in battery powered equipment. The following data applies to the op-amp stage only (see main table for rest of data).

**Specification**

- Common mode rejection ratio: 70dB
- Supply voltage rejection ratio: 100dB
- Large signal voltage gain: 100dB
- Output voltage swing:  $V+ - 1.5V$
- Output current source: 40mA
- Output current sink: 20mA

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UH32K	LM392N	25+ £0.801 100+ £0.743 300+ £0.651	1+ £1.060

**LM393N**

SGS Thomson

LM393

Two independent precision voltage comparators designed specifically to operate from a single power supply over a wide range of voltages operation from split rails is possible and the low power supply current drain is independent of the magnitude of the power supply voltage. Unique to the LM393 is that the input common-mode voltage range includes ground, even though operated from a single power supply voltage. Designed to directly interface with TTL and CMOS, and when operated from a +/- supply will directly interface with MOS logic. The device is similar to the 392, but offers much lower input offset voltage and draws only half the supply current.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UH30H	LM393N	25+ £0.240 100+ £0.147 300+ £0.129	1+ £0.620

**LM2901N and LM2903N**  
Voltage Comparators

NSC

LM2901N

LM2903N

**Features**

- ★ Wide supply voltage range, 2V to 28V or  $\pm 1V$  to  $\pm 14V$  (2V to 36V or  $\pm 2V$  to  $\pm 18V$  for dual version)
- ★ Very low power consumption (0-8mA)
- ★ Low input biasing current, 25nA
- ★ Low input offset current,  $\pm 5nA$
- ★ Input common-mode range includes ground
- ★ Differential input voltage range equal to the power supply voltage
- ★ Low output saturation voltage
- ★ Output voltage compatible with TTL, DTL, ECL, MOS and CMOS logic systems

**Applications**

- ★ High precision comparators
  - ★ Reduced VOS drift over temperature
  - ★ Eliminates need for dual supplies
  - ★ Allows sensing near GND
  - ★ Compatible with all forms of logic
  - ★ Power drain suitable for battery operation
- A low power, low offset voltage comparator consisting of two or four independent precision voltage comparators with an offset voltage specification as low as 2mV maximum for all comparators. Designed specifically for operation from a single power supply with low power consumption. Features include operation down to ground, even from a single power supply. Available in a dual (AX75S) or quad (AX73Q) configuration.

**Specification**

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
AX75S	Comparator LM2903N NSC	£0.269 £0.250 £0.219	£0.650

**LM2902N and LM2904N**  
Operational Amplifiers

NSC

LM2902N

LM2904N

A low-power operational amplifier consisting of either two or four independent, high-gain, internally frequency compensated operational amplifiers which were designed specifically to operate from a single power supply. Available in dual (AX76H) and quad (AX74R) configurations.

**Unique Characteristics**

- ★ In the linear mode the input common-mode voltage range includes ground and the output voltage can also swing to ground, even though operated from only a single power supply voltage
- ★ The unity gain cross frequency is temperature compensated
- ★ The input bias current is also temperature compensated

**Features**

- ★ Large DC voltage gain of 100dB
- ★ Wide unity gain bandwidth (1MHz)
- ★ Wide power supply range, 3V to 32V or  $\pm 1.5V$  to  $\pm 16V$
- ★ Very low supply current drain 700µA
- ★ Low input biasing current
- ★ Low input offset voltage
- ★ Input common-mode voltage range includes ground
- ★ Differential input voltage range equal to the power supply voltage
- ★ Large output voltage swing

**Specification**

- Supply voltage: 3V to 32V or  $\pm 1.5V$  to  $\pm 16V$
- Supply current: 1-5mA typ
- Input offset voltage:  $\pm 2mV$
- Input bias current: 45nA
- Input offset current:  $\pm 5nA$
- Input common-mode voltage range:  $V+$
- Large signal voltage range: 100V/mV
- Common-mode rejection ratio: 70dB
- Power supply rejection ratio: 100dB
- Output current, sourcing: 40mA
- Output current, sinking: 20µA
- Short circuit to ground: 40mA
- Output voltage swing: 24V typ

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MAX 931CPA Low-Power Comparator with Reference

Maxim

The MAX931 is a low voltage comparator with an on-board 2% accurate reference, and one of the lowest power consumption available - less than 4µA. The voltage reference is set at 1.182V, and the IC also has a programmable hysteresis, and TTL/CMOS outputs will sink and source current. The device is ideal for 3V or 5V single supply applications, but will operate from a single +2.5V to +11V rail (or a ±1.25V to ±5V dual supply). The comparators input voltage range extends from the negative supply rail to within 1.3V of the positive supply.

The unique output stage will continuously source as much as 40mA. By eliminating power supply glitches that commonly occur when comparators change logic states, the device minimises parasitic feedback which makes it easier to use. Hysteresis can be very easily added by using the HYST pin and two resistors. Supplied in an 8-pin DIL package.

### Specification (V<sub>SS</sub> = 5V)

Power supply: 2V to 11V, 5V at 2.5µA typ  
 Input offset voltage: ±10mV  
 CMRR: 0.1mV/V typ  
 PSRR: 0.1mV/V typ  
 Voltage noise: 20µV rms  
 Response time: 12µs  
 Reference voltage: 1.182V 2% tolerance

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NR60Q	MAX931CPA	10+ £1.380 50+ £1.150 200+ £0.986	1+ £1.720

## MC3302P

Texas Instruments

339MC3302

Four independent precision voltage comparators designed specifically to operate from a single power supply. These comparators have a unique characteristic in that the input common-mode voltage range includes ground even though operated from a single power supply. Typical applications include limit comparators; simple A/D converters; pulse, square wave, and time delay generators; wide range VCO; MOS clock timers; multivibrators and high voltage digital logic gates. Will directly interface with TTL and CMOS, and MOS logic when used with +/- supply rails.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
QH48C	MC3302P	25+ £0.385 100+ £0.358 300+ £0.313	1+ £0.940

## TSM221N

SGS-Thomson

TSM221

The TSM221 contains two differential input CMOS rail-to-rail op-amps (amps 1,4), and two push-pull CMOS comparators (amps 2,3). This mixed circuit is a general purpose analogue block for auto-motive, telecom and consumer applications. The device will operate from a single supply rail of 2.7V to 16V, and at 5V requires just 500µA of current. Supplied in a 14-pin DIL package.

### Specification (V<sub>SS</sub> = 5V)

Supply voltage: 18V max  
 Supply current: 500µA total  
 I/P offset voltage  
 op-amp: 10mV max  
 comparator: 5mV  
 I/P offset voltage drift: 5µV/°C (op-amp)  
 I/P offset current  
 op-amp: 1pA typ  
 comparator: 1pA  
 I/P bias current  
 op-amp: 1pA  
 comparator: 1pA  
 Large signal voltage gain: 40V/mV (op-amp)  
 GBP: 1MHz typ  
 CMRR  
 op-amp: 85dB typ  
 comparator: 82dB typ  
 PSRR  
 op-amp: 80dB typ  
 comparator: 90dB typ  
 Slew rate: 0.7V/µs  
 Noise: 30nV/√Hz  
 Channel separation: 120dB typ  
 Response time overdrive = 5mV  
 low to high: 1.5µs  
 high to low: 2.2µs  
 Fall time: 30ns

## LM12CLK

National Semiconductor

A 150W power op-amp capable of driving  $\pm 25V$  at  $\pm 10A$  while operating from  $\pm 30V$  supplies. The monolithic IC can deliver 150W of sine wave power into a  $4\Omega$  load with 0.01% distortion. The IC features input protection, controlled turn on, thermal limiting, overvoltage shutdown, output current limiting and dynamic safe area protection.

### Absolute max ratings

Voltage supply range:  $\pm 8V$  to  $\pm 40V$   
 Power dissipation: 150W with 400in<sup>2</sup> heatsink  
 Differential input voltage: 60V  
 Output current: 10A

### Typical ratings at 25°C with $V_s = \pm 30V$

Input offset voltage: 2mV  
 Input offset current: 0-03 $\mu A$   
 Input bias current: 0-15 $\mu A$   
 Common mode rejection ratio: 86dB  
 Supply voltage rejection ratio: 90dB  
 Large signal voltage gain: 94dB  
 Slew rate: 9V/ $\mu s$   
 Full power bandwidth: 60kHz  
 Supply current (no load): 60mA

### Audio Amplifier Parts List

- R1 Min Res 1k1 (M1K1)
- R2 Min Res 1k (M1K)
- R3 Min Res 3k3 (M3K3)
- R4 7W W/W 2-2 $\Omega$  (L2R2)
- C1 Polystyrene 1500pF (BX58N)
- C2,3 Snap-in 4700 $\mu F$  50V (CW74R)
- D1,2 MR751 (YH96E)
- L1 25 turns of 18swg enamelled copper wire wound side-by-side approx. 8mm diameter.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2216	Price each exc. VAT	inc. VAT each
UL32K	LM12CLK	£24.990 £19.200 £14.770	£39.990

## LM380N

National Semiconductor

380

An audio amp in a 14-pin DIL package that requires very few external components to make a complete 2-5W power amplifier. In most cases, however, it is advisable to add a Min Res 2-7 $\Omega$  and Polyester 0-1 $\mu F$  in series from pin 8 to ground and an Axial 4-7 $\mu F$  from pin 1 to ground.

### High-Output-Crystal-Cartridge Power Amp

A 2-5W rms power amp the 380 is shown in the circuit driven by a high output crystal pickup. The IC requires only 4 other components (without tone control only two other components! — simply omit C1 and RV1).

### Component list

- RV1: Pot Lin 2M2 (FW09K)
- RV2: Pot Log 2M2 (FW29G)
- C1: Polystyrene 3300pF (BX38R)
- C2: Axial 470 $\mu F$  35V (FF16S)
- IC: LM380 (QH40T)

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2232	Price each exc. VAT	inc. VAT each
QH40T	LM380N	£0.855 £0.684 £0.641	£2.110

## LM383T

National Semiconductor

A high quality, cost effective audio op amp that is suited to automotive applications. A high current capability (3.5A) enables the device to drive low impedance loads with low distortion, the amp is supplied in a 5-pin TO220A package and is pin for pin compatible with the TDA2002A, but offering lower noise and improved frequency response. The device will work with a supply voltage of 5V to 20V DC (transient peak 25V) and is current limited, thermally protected and requires no insulating washer between the metal tab in single rail operation.

11W output with  $V_D = 20V$  DC  
 7W output with  $V_D = 16V$  DC  
 5W output with  $V_D = 14.4V$  DC

Note R3 & C4 should be mounted as near as possible to pins 3 & 4.

### Suggested Parts List

- R1 Min Res 220 $\Omega$  (M220R)
- R2 Min Res 2.2 $\Omega$  (M2R2)
- R3 Min Res 1 $\Omega$  (M1R)
- C1 GenElect 10 $\mu F$  50V (AU08G)
- C2,4 Monores 0.22 $\mu F$  (RA50E)
- C3 GenElect 470 $\mu F$  35V (AT62S)
- C5 PC Elect 2200 $\mu F$  35V (JL28F)

### 16W Bridge Amplifier

#### Suggested Parts List

- R1,5 Min Res 220 $\Omega$  (M220R)
- R2,6 Min Res 2.2 $\Omega$  (M2R2)
- R3,4 Min Res 1 $\Omega$  (M1R)
- R7 Min Res 1M (M1M)
- VR1 Log Pot 100k (FW25C)
- C1,8 GenElect 10 $\mu F$  50V (AU08G)
- C2,4,5,6 Monores 0.22 $\mu F$  (RA50E)
- C3,7 GenElect 470 $\mu F$  35V (AT62S)

## LM386N-1

National Semiconductor

386

A power amp designed for use in low voltage, especially battery-operated, applications, such as AM-FM radios, portable tape cassettes, intercoms, power inverters etc. For minimum parts count, C1 and C2 can be omitted. With pins 1 and 8 open circuit the gain is internally set to 20dB. With a 10µF capacitor between pins 1 and 8 the gain is increased to 200dB and the gain can be set to anything between these limits by placing a resistor in series with this capacitor. For example a 1k2 resistor here, sets the gain to 50dB. The capacitor on pin 7 sets the power supply rejection ratio from 6dB with no connection to 50dB at 1kHz with 10µF. The inputs are referenced to ground, while the output is automatically biased to half the supply voltage.

386

### Specification

Maximum supply voltage: 15V DC  
 Quiescent current: 4mA  
 Output power with 8Ω load: 325mW (6V supply)  
 THD at 125mW with 8Ω load: 0.2% (6V supply)  
 Bandwidth: 300kHz  
 Input resistance: 50kΩ

## LM1875N

National Semiconductor

A very high quality audio amp in a 5-pin TO-220 package that does not require insulating washers between the tab and the heatsink in single rail supply applications. The amp will deliver 20W into 4Ω or 8Ω loads with a 50V supply. The device uses advance circuit techniques to achieve extremely low distortion levels even at high output levels (only 0.015% at 1kHz and 0.05% at 20kHz into 8Ω and 0.07% at 20kHz into 4Ω all with 20W output). Care must be taken with the pcb layout and the data sheet shows suitable layouts for the circuits shown. Note that if using a dual supply the IC's tab must be insulated from the heatsink and since this increases the thermal resistance a larger heatsink will be required.

20W Amplifier Dual Supply

## LM3876 50W Audio Power Amplifier

National Semiconductor

A high performance audio power amplifier capable of delivering up to 56W of continuous average power in to an 8Ω load with only 0.1% distortion, over 20Hz to 20kHz. The amplifier is fully protected against overloads, shorts, thermal runaway etc., and includes an input mute function. Under voltage protection ensures that no 'transients' are heard at switch-on/off. The amplifier will work from either split or single power supplies, and the circuits are capable of producing 40W with less than 0.06% distortion over the audio spectrum, and a S/N ratio exceeding 95dB. Single point earthing should be used to avoid earth loop problems - input, output and supply earth returns should be separate and connected to the power supply earth using heavy-duty cable. The device is ideal for self-powered speakers, active loudspeakers, surround-sound amplifiers and compact stereo systems. Contained in an 11-pin plastic package with the tab connected to the -V rail. An insulation washer must be used in split-rail applications.

### Specification

Max. supply voltage: ±42V DC

## TDA1020

Philips

A monolithic integrated 12W audio amplifier in a 9-pin SIL plastic package primarily intended for car radio amplifiers although the maximum supply voltage of 18V makes the IC suitable for mains-fed radio receivers, tape recorders and record players. At a supply voltage of 14.4V, and 1% distortion, the IC can deliver 6W into a 4 $\Omega$  load and 9.5W into a 2 $\Omega$  load. The device has separate pre and power amplifiers that can be easily accessed and an overall voltage gain of 47dB. To avoid interference and car ignition signals coming from the supply lines, frequency limiting is used beyond the audio spectrum in both the preamplifier and power amplifier. The device will work down to 6V and incorporates a 'load dump' which protects the device if the voltage increases above 18V (<45V). Also short-circuit and thermal protection are built-in. At 14V the device has a quiescent current drain of 30mA.

1. Negative supply (substrate)
2. Output power stage
3. Positive supply
4. Bootstrap
5. Ripple rejection filter
6. Input power stage
7. Output preamplifier
8. Input preamplifier
9. Negative supply

**Specification**

Supply voltage range: 6V to 18V DC  
Repetitive peak output current: 4A  
Output at 14.4V, 1% distortion  
2 $\Omega$  load: 9.5W (10% dist. @ 12W)  
4 $\Omega$  load: 6W (10% dist. @ 7W)  
8 $\Omega$  load: 3W (10% dist. @ 3.5W)

Frequency response: 50Hz to 25kHz  
Typical voltage gain  
pre-amp: 17.7dB  
power amp: 29.5dB  
total: 47dB  
Input impedance: 40k $\Omega$  (pre and power)  
Ripple rejection: 44dB

**Suggested Parts List**

- R1 Min Res 330k (M330K)
- R2 Min Res 4.7 $\Omega$  (M4R7)

## TDA1514A-N-7

Philips

A very high quality audio amp in a 9-pin flat package. The heatsink must be insulated from ground. The amp will deliver 40W into an 8 $\Omega$  load with a  $\pm$ 27.5V power rail or 40W into a 4 $\Omega$  load with a  $\pm$ 21V power rail. The device is designed to meet the requirements of digital sound sources such as Compact Disc. The total harmonic distortion at 32W is less than 0.0032%. An output mute circuit prevents switch-on and switch-off clicks, and the device is totally protected against short-circuits and thermal runaway. The device will deliver 25W into 8 $\Omega$  with a  $\pm$ 22V supply or 12.5W into 8 $\Omega$  with a  $\pm$ 16V supply. The metal plate on the package is connected to pin 4.

**Parts List**

## TDA2003V/H

SGS Thomson

The TDA2003 has improved performance but with the same pin configuration as the TDA2002. The additional features of the TDA2002 - very low number of external components, ease of assembly, space and cost saving - are maintained. The device provides a high output current capability of up to 3.5A, and very low harmonic and crossover distortion. The device is designed for single-ended supply operation in the range 8 to 18V and applications include in-car stereos and radios. It can output 6W into a 4Ω load from a 14.4V supply, and up to 12W into loads down to 1.6Ω. Two can be used to form a bridge delivering 18W into 4Ω from a 14.4V supply.

Completely safe operation is guaranteed due to protection against DC and AC short-circuit between all pins and ground, with thermal overrange, load dump voltage surge up to 40V and fortuitous open ground. No electrical insulation is required between the mounting tab and the heatsink, but lead lengths should be as short as possible. Two variations are available: TDA2003V has pins arranged for vertical PCB mounting, while TDA2003H is arranged for horizontal mounting.

### Specification

- Operating supply voltage: 8 to 18V DC
- Max. DC supply voltage: 28V
- Peak supply voltage: 40V for 50ms
- Repetitive peak output current: 3.5A
- Non-repetitive peak output current: 4.5A
- Max. power dissipation: 20W (90°C)
- Frequency response: 40Hz to 15kHz -3dB @ 1W into 4Ω
- Distortion: 0.15% @ 4.5W into 4Ω, 1kHz
- Input impedance: 150kΩ
- Open loop gain: 80dB @ 1kHz
- Closed loop gain: 40dB @ 1kHz
- Input noise: 5µV max.
- Supply voltage rejection: 36dB
- Efficiency: 69%

$$R_x = \frac{20 \times R_2}{1 - 2\pi B R_1}$$

## TDA2005M

SGS Thomson

A 20W power booster IC for use in cars. The integrated circuit is fully protected against damage in use. It is protected against output short circuits across the speaker or to ground (AC or DC) and it

### Bridge Amplifier

protects the loudspeaker under this condition as well. It is protected against voltage surges up to 40V and it can withstand polarity reversal for longer than it would take a 2A quick blow fuse to blow. The IC consists of two power amps internally connected in a bridge configuration to achieve the high power, low voltage operation.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## TDA2030AV

SGS Thomson

A high quality audio amp in a 5-pin TO220 package that does not require insulating washers between the metal tab and heatsink in single rail supply applications. The amp will operate with single or split supplies. The distortion up to 12W into 4Ω is less than 0.2% typically (less than 0.5% up to 14W) and up to 8W into 8Ω is less than 0.1% (less than 0.5% up to 9W). The circuits shown for the 2006 are suitable for use with this IC, but the supply voltage should be increased to +14V and -14V (or 28V for the single supply circuit). In addition the bridge amplifier will deliver 24W into 8Ω (or with 2006 and power supplies of +12V and -12V it will deliver 20W into 8Ω).

### Parts List

## TDA2040V

SGS Thomson

A monolithic power amplifier IC intended for use as a high quality, class AB audio power amplifier. Typically it provides 22W output power into 4Ω with 0.5% distortion, from a 32V supply. The device is designed to operate from a split power supply and no electrical isolation is needed between the mounting tab and its heatsink. It provides a high output current and has very low harmonic and crossover distortion. The device incorporates a patented short circuit protection system comprising an arrangement for automatically limiting the dissipated power so as to keep the working point of the output transistors within their safe operating area. Thus the TDA2040V is protected against temporary overloads or short-circuit. A thermal shutdown system is also included, and should the short-circuit exist for a longer time the thermal shutdown protection keeps the junction temperature within safe limits. The device's pins are arranged for vertical PCB mounting.

**Specification**

Supply voltage range:	±2.5V min. to ±20V DC
Quiescent current drain:	30mA
Max. differential input voltage:	±15V
Input offset voltage:	<±20mV
Peak output current:	4A
Output power:	22W into 4Ω, 12W into 8Ω

Power bandwidth: 8Ω, V<sub>SS</sub> = ±16V  
 100kHz (1W into 4Ω)  
 Open loop gain: 80dB  
 Closed loop gain: 30dB  
 Total harmonic distortion: 0.08% @ 0.1 to 10W into 4Ω, f = 40Hz to 15kHz  
 Input noise: <10μV (3μV typical)  
 Input impedance: 5MΩ (500kΩ min.)  
 Supply voltage rejection: 50dB  
 Efficiency: 66%  
 Thermal shutdown junction temperature: 145°C  
 Max. power dissipation: 25W (75°C)

## TDA2050V

SGS Thomson

A high quality audio amp in a 5-pin TO220 package that does not require insulating washers between the metal tab and heatsink in single rail supply applications. The amp will operate with single or split supplies. The amp can provide 32W rms into a 4Ω load and 25W rms into 8Ω. The device features low harmonic and crossover distortion and a low external component count. The device includes short circuit protection and thermal shutdown.

**Specification**

Supply voltage range:	±25V
Output power (0.5% THD)	25W rms
8Ω (±22V):	25W rms
4Ω (±18V):	28W rms
Typical THD	
8Ω (0.1W to 20W):	0.02%
4Ω (0.1W to 24W):	0.03%
Supply voltage rejection:	45dB
Slew rate:	8V/μs
Open loop voltage gain:	80dB
Closed loop gain:	31dB
Power bandwidth:	20Hz to 80kHz

Typical application gives 25W into 8Ω. 32W into 4Ω, with single voltage rail.

## TDA7052

Philips

A power amp designed for use in low voltage battery operated equipment, where a high output power is still required. By using the Bridge Tied Load principle in the amp an output power of 1.2W into 8Ω is achieved from a 6V supply. The gain of the amplifier is fixed internally at 40dB and almost no external components are required. The amp is short-circuit proof, requires no external heatsink and there are no switch-on or switch-off clicks.

### AUDIO PREAMPLIFIERS

## SSM2017P Audio Preamplifier

Analog Devices

A state-of-the-art audio preamplifier that requires just one external resistor or potentiometer to set the gain between x1 and x3500. The value of the gain setting resistor  $R_G$  can be found from the formula:

$$R_G = \frac{10,000}{G-1}$$

where G is the gain.

For example: for a gain of 100 times (=40dB),  $R_G$  is equal to 100Ω. For x1 gain, pins 1 and 8 should be left open circuit and for maximum gain use Min Res 1.8Ω and Min Res 1.2Ω in series. The very low noise mixer amplifier circuit shows how to connect the amplifier so that pins 1 and 8 are true dc virtual ground allowing almost perfect summing of the circuits connected to the input. With its superb noise performance of just 950pV/√Hz, and its ultra low total harmonic distortion over the full audio bandwidth of <0.01% and 1MHz bandwidth at x100 gain, this low cost device is suitable for the most demanding hi-fi applications.

Basic Amplifier

## SL6270CDP Microphone Preamplifier/VOGAD

GEC-Plessey

The IC combines the functions of audio amplifier and voice operated gain adjusting device (VOGAD). It is designed to accept signals from a low sensitivity microphone and provide an essentially constant output signal for a 50dB range of input. The application circuit shows a radio transmitter microphone with constant output.

### Gain controlled microphone preamplifier

### Specification (Typical at $V_S = 6V$ )

Supply voltage:	4.5V to 10V (12V max.)
Supply current:	5mA
Input impedance:	150Ω (pin 4 or 5)
Differential input Impedance:	300Ω
Voltage gain:	52dB (72μV rms at pin 4)
Output level:	90mV rms (4mV rms at pin 4)
Distortion:	2% (90mV rms at pin 4)
Input noise:	1μV (300Ω source)

### Parts List

## SSM2165 Microphone Pre-amp

Analog Devices

A low-cost microphone pre-amplifier IC with variable compression and noise gating intended for computer audio systems, but ideal for improving vocal clarity in communications and PA systems. A low noise voltage controlled amplifier (VCA) provides a gain that is dynamically adjusted by a control loop to maintain a set compression characteristics. The compression ratio is set by a single resistor and can be varied from 1:1 to 10:1 relative to a 'rotation point' of 300mV rms. The pre-amp has a fixed gain of 10dB for 1:1 compression, and the gain is in addition to the variable gain in other compression settings. A noise gate prevents amplification of noise or hum. Compression ratio and time constants are set externally. Supplied in an 8-pin DIL plastic package.

### Specification

Supply voltage:	5V
Supply current:	6mA
PSRR:	60dB
Equivalent input noise:	2μV rms
Voltage noise density:	14nV/√Hz typical
THD + N (1:1 comp):	0.25% typ
Gain range:	60dB
Compression ratio:	1:1 to 10:1
Input impedance:	100kΩ
Output impedance:	<100Ω
Load drive:	2kΩ/50pF
Output voltage swing high:	4V typical
low:	1V typical
Gain bandwidth:	20MHz

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## SSM2166P Microphone Pre-amp

Analog Devices

SSM2166

A low-cost microphone pre-amplifier IC with variable compression and noise gating intended for computer audio systems, but ideal for improving vocal clarity in communications, PA systems, mixers, musical effect units telephone conferencing etc.

A low noise voltage controlled amplifier (VCA) provides a gain that is dynamically adjusted by a

control loop to maintain a set compression characteristics. The compression ratio is set by a single resistor and can be varied from 1:1 to over 50:1 relative to a user defined 'rotation point'. Signals above the rotation point are limited to prevent overload and eliminate 'popping'. The pre-amp can be programmed with a fixed gain of up to 20dB for 1:1 compression, and the gain is in addition to the variable gain in other compression settings. The input buffer can be configured for front-end gains of 0dB to 20dB. A noise gate prevents amplification of noise or hum. Compression ratio and time constants are set externally, and a high degree of flexibility is provided by the VCA gain, rotation point and noise gate adjustment pins. Supplied in a 14-pin DIL plastic package.

**Specification**

Supply voltage:	5V
Supply current:	7.5mA
Power down:	100µA max.
PSRR:	50dB
Noise:	-109dBu
Voltage noise density:	17nV/√Hz typical
THD + N (1:1 comp):	0.25% typ
VCA - gain range dynamic:	60dB
fixed:	-60dB to +19dB
Compression ratio:	1:1 to 15:1
Input impedance:	180kΩ
Output impedance:	75Ω
Load drive:	5kΩ/2nF
Buffer - voltage range (1% THD) input:	1V rms
output:	1V rms
VCA - voltage range (1% THD) input:	1V rms
output:	1.4V rms
Gain bandwidth product:	30MHz

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**LM387N Low Noise Dual Preamplifier**

National Semiconductor

A stereo pre-amp designed for the amplification of low level signals and offering excellent noise performance. The two pre-amps are completely independent with an internal power supply decoupler/regulator providing 110dB supply rejection, and 60dB channel separation. The IC has internal compensation, high gain (104dB), large output voltage swing, wide power bandwidth and is designed to operate from a single supply rail. Supplied in an 8-pin DIL package.

**Specification**

Power supply:	9V to 30V DC
Typical supply current:	140mA
Unity gain bandwidth:	15MHz
Supply rejection ratio:	110dB
Channel separation:	60dB
THD (60dB gain):	0.1% typical at 1kHz
Total input equivalent noise:	1.0µV rms

**BALANCED LINE DRIVERS & RECEIVERS**

**SSM2142P Balanced Line Driver**

Analog Devices

NEW LOW PRICE

2142

A differential output buffer amplifier that converts a single-ended input signal to a balanced output with high drive capability. The IC helps to maintain audio quality on long cable runs by eliminating mains hum, rf interference, voltage drops and noise. It is capable of driving a 10V rms signal into 600Ω loads, or even extremely long cables, with a very low distortion performance. The 0.1µF capacitors shown in the application circuit must be connected close to the IC. For optimal performance Reversolytic 10µF capacitors can be connected between pins 1 and 2, and between pins 7 and 8, otherwise pin 1 should be connected to pin 2, and pin 7 should be connected to pin 8.

**Specification (typical at V<sub>S</sub> = ±15V)**

Supply voltage:	±4V to ±18V
Supply current:	5.5mA
Input impedance:	10kΩ
Input current:	750µA
Differential gain:	5.98dB
Total harmonic distortion:	0.006%
Signal to noise ratio:	-109dB

## SIGNAL PROCESSING & ROUTING

### AD1845JP Parallel-Port 16-Bit SoundPort Stereo Codec

Analog Devices

- ★ Microsoft and Windows sound system compatible
- ★ MPC Level-2+ compliant mixing
- ★ 16mA bus drive capability
- ★ On-chip capture and playback FIFOs
- ★ Supports two DMA channels for full duplex operation

The AD1845 integrates key audio data conversion and control functions into a single IC, and provides a complete single chip computer audio solution for business audio and multimedia applications. The codec includes stereo audio converters, complete on-chip filtering, MPC Level-2 compliant mixing, programmable gain, attenuation and mute, a variable sample frequency generator, FIFOs and supports power-down modes. The device provides a direct byte-wide interface to both ISA and EISA computer buses for simplified implementation on a computer motherboard or add-in card.

the ISA/EISA bus. Also included are user selectable 8/16mA bus drivers and a stereo pair of sigma-delta ADCs and matching DACs.

The AD1845 mixer surpasses MPC Level-2 recommendations, with inputs to the ADC selectable from four stereo pairs of analog signals: line (LINE), microphone (MIC), auxiliary line #1 (AUX1), and post-mixed DAC output. A software-controlled programmable gain stage allows independent gain for each channel going into the ADC.

External circuit requirements are limited to a minimal number of low-cost support components. Anti-imaging DAC output filters are incorporated on-chip. Dynamic range exceeds 80dB over the 20kHz audio band, and sample rates from 4kHz to 50kHz are supported from a single external crystal or clock source. Supplied in a 68-lead PLCC package.

#### Specification

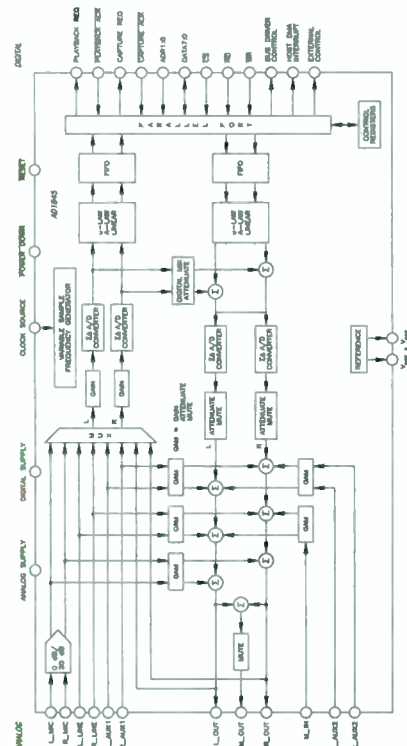

- Supply voltage: 5V for digital and analogue
- Supply current: 120mA
- Power dissipation: 600mW
- Clock frequency: 33MHz
- Resolution: 16-bits
- Dynamic range
- ADC: 81dB
- DAC: 82dB
- THD+noise
- ADC: 0.025%
- DAC: 0.022%
- Signal to intermodulation distortion
- ADC: 85dB
- DAC: 90dB
- Crosstalk
- ADC: -90dB typical
- DAC: -80dB
- Analogue input
- line: 1V rms, 2.83V pk-pk
- MIC: 0.1V rms with 20dB gain
- 1V rms with 0dB gain
- i/p impedance: 17kΩ

NP43W	AD1845JP	£8.960	£14.420

### AD1847JP Serial-Port 16-Bit SoundPort Stereo Codec

Analog Devices

- ★ Supports the Microsoft Windows sound system
- ★ Single chip integrated sigma-delta digital audio stereo codec
- ★ Sample rates from 5.5kHz to 48kHz
- ★ Analogue and digital stereo mixing
- ★ Programmable gain and attenuation
- ★ Multichannel stereo inputs
- ★ Operates from a single 5V supply
- ★ On-chip signal filters

The AD1847 integrates key audio data conversion and control functions into a single IC, and provides a complete single chip computer audio solution for business audio and multimedia applications. It provides a serial interface for implementation on a computer motherboard, add-in or PCMCIA card. The diagram shows an example system.

The device has built-in anti-imaging DAC output filters, and has a dynamic range in excess of 70dB over the 20kHz audio band. Sample rates from 5.5kHz to 48kHz are supported from external crystals.

The Codec includes stereo pairs of sigma-delta ADCs and DACs, with inputs to the ADCs selectable from one of four stereo pairs of analogue signals. These include line 1, line 2, auxiliary ('aux') line #1, and post-mixed DAC output. A software-controlled programmable gain stage allows independent gain for each channel going into the ADC. The ADCs' output can be digitally mixed with the DACs' inputs

The pair of 16-bit outputs from the ADCs is available over a serial interface that also supports 16-bit digital input to the DACs and control/status information. The AD1847 can accept and generate 16-bit 2's complement PCM linear digital data, 8-bit unsigned magnitude PCM linear data, and 8-bit  $\mu$ -law or A-law companded digital data. The sigma-delta DACs are preceded by a digital interpolation filter. An attenuator provides independent user volume control over each DAC channel. Nyquist images are removed from the DACs' analogue stereo output by on-chip switched-capacitor and continuous-time filters. Two stereo pairs of auxiliary line-level inputs can also be mixed in the analogue domain with the DAC output.

The AD1847 serial data interface uses a Time Division Multiplex (TDM) scheme that is compatible with DSP serial ports configured in Multi-Channel Mode with 32 x 16-bit time slots.

#### Specification

- Voltage supply: 5V typ
- Supply current: 140mA max
- I/P clock frequency: 25kHz max
- Analogue inputs
- voltage: 1V rms
- impedance: 10kΩ
- capacitance: 15pF
- Analogue outputs
- voltage: 0.707V rms
- impedance: 600Ω max
- o/p capacitance: 15pF max
- Converters resolution: 16-bit
- Dynamic range
- ADCs: 70dB min
- DACs: 76dB min
- THD+N
- ADCs: 0.040%
- DACs: 0.025%
- Crosstalk
- ADCs: -80dB typ
- DACs: -80dB typ
- Interchannel gain mismatch
- ADCs:  $\pm 0.2$ dB
- DACs:  $\pm 0.2$ dB
- DAC attenuator and digital mix attenuator
- step size: 1.5dB typ
- o/p range span: -93dB to +95.5dB
- Supplied in a 44-lead PLCC package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NP44X	AD1847JP	£10.410	£16.970

The device includes dual DMA count registers for full duplex operation enabling the IC to capture data on one DMA channel and playback data on a separate channel. The on-board FIFOs reduce the risk of losing data when making DMA transfers over

## Dallas Digital Potentiometer IC's

This selection from Dallas Semiconductors new range of Digital Potentiometer IC's brings analogue signal level control into the digital age, with no moving parts to wear and become noisy. The devices simulate the action of both linear or, in the case of DS1666, logarithmic potentiometers for electronic audio level or balance control, analogue voltage control generation or any other application where low power potentiometers would normally be used.

The devices may simply be controlled by means of up and down pulse inputs, either by connecting push buttons directly to the inputs, or by stepping them with a train of pulses generated by an oscillator or other control circuit.

However, those designers who wish to interface audio control with microcontroller circuits for preset position storage and retrieval as used in electronic mixing desks, or any other application where the exact position of the potentiometer needs to be read, or written to, will find these devices ideal. Selected devices are provided with a serial port which may be connected to a host controller to give full remote control and monitor facilities.

a select line. The resistor array (track) inputs are capable of handling input voltages between  $\pm 5V$ . The power supply required is  $+5V$  at 5mA max, and the device defaults to the 10% wiper position at power-up..

DS1666

## DS1802 Dual Digital Log Pot

Dallas Semiconductors

This ultra low power consumption device offers two digitally controlled 65 step 10k $\Omega$  potentiometers in a 20 pin DIP package. The unit may be configured to operate in independent mode where each potentiometer may be adjusted separately, or stereo mode where both potentiometers will track together with a single input control pin. Balance inputs are also provided.

Control can be either via the push-button inputs, or via the clocked serial port by a host microcontroller. The device control response is logarithmic (1dB per step) and an internal signal zero crossing circuit may be enabled in audio applications to minimise any noise during control changes. A pulse controlled mute input is also provided, with settings being returned to their previous levels after the mute is switched off by a second pulse. Initial potentiometer settings on power-up are at position 63, which is the low end of each track.

The DS1802 requires a 3V to 5V power supply and typically consumes just 10 $\mu A$ . The circuit above shows a stereo volume and balance control with push-button inputs.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## DS1666 Log Pot

Dallas Semiconductors

The DS1666 is a 128 position 10k $\Omega$  potentiometer with a logarithmic control response. The lower half of the potentiometer advances 1% of the total resistance with each control input step, providing for precise amplification of low level signals.

The upper half of the potentiometer advances 3% for each control step, providing for the lower resolution gain required for high level signals. The control inputs are TTL compatible and are gated by

## DS1869 Electronic Potentiometer

Dallas Semiconductors

This push-button controlled linear potentiometer is available in either 10k $\Omega$  or 50k $\Omega$  values. It differs from other members of the range in several aspects. Firstly, the push-button inputs are scanned for a closure greater than one second duration. If this condition is detected, the DS1869 will auto increment (or decrement) on 100ms intervals until the push-button is released or the track limit is reached. Secondly, this device is equipped with an EEPROM memory which will store the current wiper setting, even after power is removed.

The combination of single press button closure control and stored control settings during power off makes this device an ideal choice for up/down front panel controls on any equipment. The DS1869 will operate from 3V or 5V supplies and requires no external debounce components. It may be used in single or dual push button modes, or controlled by remote digital signals.

The diagram below shows the single button control mode where the direction of wiper movement reverses for each successive press of the button after a period of one second or more of inactivity.

## MC3340 Electronic Attenuator

Motorola

The MC3340 is a simple, but effective electronic attenuator offering up to 80dB of attenuation control for frequencies up to 1MHz. Distortion is below 1% for attenuation up to 15dB, and below 3% for attenuation up to 40dB. The device is controlled from either a DC voltage or an external potentiometer, and works from an 18V DC (max.) power supply. Typical uses include instrumentation control, remote control audio amplifiers, electronic games, and similar applications requiring a DC operated volume control or compression/expansion amplifier circuits. Supplied in 8-pin DIL package.

MC3340

### Specification

Power supply voltage: 18V DC max.  
Input voltage: 0.5V rms  
Voltage gain: 13dB  
Pin 2 sink current: 2mA DC  
Attenuation range: 80dB typical  
Voltage gain: 13dB  
THD (pin 2 gnd): 0.6dB typical  
Typical DC remote volume control

## LMC1983 Digitally Controlled Stereo Selector, Tone and Volume Block

National Semiconductor

The LMC1983 is a 28-pin DIL, CMOS/bipolar building block IC intended for Hi-Fi audio that provides volume, balance, tone (bass and treble) and loudness controls with a 3-way stereo input selector between three pairs of stereo inputs, and a mute function. These functions are digitally controlled through an INTERMETAL bus 3-wire communication interface from a microprocessor or similar controlling logic. There are in addition two digital inputs for easy interfacing to other audio peripherals such as stereo decoders. The IC is designed for line level input signals (300mV to 2V) and has a maximum gain of -0.5dB. Volume is set at minimum and tone controls are set flat when supply voltage is first applied.

Low noise and distortion performance results from the use of analogue switches and polysilicon resistor networks in the signal path, and, while the chip is basically manufactured in CMOS, NPN transistors are added to build low noise op amps. The combination of CMOS switches, bipolar op amps and polysilicon resistors make it possible for the IC to achieve a quality of reproduction which is substantially superior to other bipolar circuits that use analogue multipliers to accomplish gain adjustment. In fact the noise floor is low enough for DNR and Dolby processed signals to retain maximum effect. The volume controls are adjustable in 40 steps and left and right volume levels can be separately programmed to achieve the balance function.

The device has internal decoding logic that allows a microprocessor or microcontroller to communicate directly with the audio control circuitry via a standard INTERMETAL bus interface. This consists of a bidirectional, serial data line (DATA), a clock input line (CLK) and an identity line (ID). Address and function selection data bytes, each 8 bits long, are serially shifted into the LMC1983. Data present in the internal shift register is latched and the instruction executed.

### Specification

Supply voltage:	15V
Power dissipation:	500mW
Signal input voltage:	2V rms max.
Total harmonic distortion, $V_{IN} = 300mV @ 100Hz,$ 1kHz, 10kHz:	0.008%
$V_{IN} = 2V @ 100Hz, 1kHz:$	<0.5%
Input impedance:	50k $\Omega$
Selector stage output impedance (pins 7, 22):	150 $\Omega$
Main outputs impedance (pins 13, 16):	26 $\Omega$
Volume attenuator range:	-0dB to -80dB
Total volume steps:	40
Volume step size:	2dB
Channel balance, all volume settings:	0.2dB
Mute attenuation:	-105dB
Bass gain range @ 100Hz:	$\pm 12dB$
Total bass steps:	$\pm 6$
Bass step size:	2dB
Treble gain range @ 10kHz:	$\pm 12dB$
Total treble steps:	$\pm 6$
Treble step size:	2dB
Channel-to-channel tracking error, all functions:	$\pm 0.1\%$

Loudness boost:	11-5dB @ 100Hz, 6-5dB @ 10kHz
Frequency response:	$\pm 0.1dB @ 20Hz$ to 20kHz
Signal to noise ratio:	95dB
Channel separation:	80dB
Between inputs isolation:	95dB
Supply rejection ratio:	32dB
Clock frequency:	1MHz

## NE571N Compressor

Philips

Versatile, low cost, two channel (stereo) gain control circuits in which either channel may be used as a dynamic range compressor or expander. Each channel has a full wave rectifier to detect the average value of a signal, a linearised temperature compensated variable gain block and an operational amplifier.

### Basic input to output characteristics.

## SSM2120P Dynamic Range Processor

Analog Devices

The IC consists of two VCAs and two level detectors, a combination that allows construction of compressors, expanders, limiters, AGC circuits, voltage controlled filters, noise reduction systems

and stereo noise gates. Detailed information about how to use this IC can be found in Maplin Magazine Issue 47.

### Specification (typical at $V_s = \pm 15V$ )

Supply voltage:	$\pm 5V$ to $\pm 15V$ ( $\pm 18V$ max.)
Positive supply current:	8mA
Negative supply current:	6mA
Max. input current (pins 8 and 16):	$\pm 400\mu A$
Gain control range:	-100dB to +40dB
Control sensitivity:	6mV/dB
Frequency response:	250kHz
Off isolation:	100dB
Total harmonic distortion:	0.005%
Noise:	-80dB
Level detector dynamic range:	110dB
Input current (pins 9 and 15):	0.03 $\mu A$ to 3mA pk-pk
Output drive (pins 3 and 14):	7.5mA sink
This device is supplied in a 22-pin 7.62mm (0.3in.) DIL package.	

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## SSM2024P Quad Current Controlled Amplifier

Analog Devices

A quad class A current controlled amplifier with signal to noise better than 82dB at 0.3% distortion. The four VCAs are completely independent and the control lines are ground referenced linear current inputs for easy and direct interfacing. In most applications, few external components are required.

### Specification (typical at 25°C, $V_s = \pm 15V$ )

Supply voltage:	$\pm 9V$ to $\pm 18V$
Positive supply current:	2.5mA
Negative supply current:	1mA
Gain:	4085 $\mu S$
Input offset voltage:	$\pm 0.4mV$
Output leakage:	0.1nA
Control rejection (untrimmed):	41.5dB

## RC4200N Analogue Multiplier

Raytheon

An analogue multiplier combining three op-amps specially designed for multiplier logging circuits and offering complete compensation for non-linearity. As a result, four quadrant multiplication, two quadrant division, square rooting, squaring and rms conversion can all be implemented with predictable accuracy. The nominal relationship between the three inputs and the output is  $I3 = I1 \times I2 \div I4$ . The circuit is ideal for use in low distortion audio modulation circuits, voltage controlled active filters, and precision oscillators.

### Specification (typical at $V_{S} = -15V$ )

Supply voltage:  $-9V$  to  $-18V$   
 Supply current:  $<4mA$   
 Input current range:  $1\mu A$  to  $1mA$   
 Input offset voltage:  $<\pm 10mV$   
 Input bias current:  $<500nA$   
 Output current range:  $1\mu A$  to  $1mA$   
 Frequency response:  $4MHz$   
 Total error as multiplier:  $<\pm 3\%$  untrimmed  
 with external trim:  $\pm 0.2\%$   
 Non-linearity:  $<\pm 0.3\%$

## UAF42AP

Burr-Brown

This device is a universal active filter which may be configured for a wide range of low pass, high pass and band pass filters. It uses a classic state variable analogue architecture with an inverting amplifier and two integrators, which include on chip 1000pF capacitors trimmed to 0.5%. This solves one of the most difficult problems of active filter design, that of obtaining tight tolerance, low loss capacitors. The UAF42 is pin compatible with the UAF41, but slew rate has been increased to  $10V/\mu s$  and the useful natural frequency extended by a factor of four to 100kHz.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## FilterPro™ Filter Design Program

Burr-Brown

Active filters are an important part of modern electronics but their design and verification can be tedious and time consuming. FilterPro™ is a collection of computer aided design programs intended to make life easier in calculating active filters. Using the 'Filter42' program and the UAF42 it is easy to design and implement all kinds of active filters. Filters that use the UAF42 are time-continuous, free from switching noise and aliasing problems of switched capacitor filters. Simple two-pole filters can be made with a UAF42 and just two external resistors. The DOS compatible program guides you through the design process and automatically calculates component values. Low-pass, high pass, band-pass and notch filters can be designed. 'Filter42' supports the most commonly used all-pole filter types i.e Butterworth, Chebyshev and Bessel, as well as the less familiar inverse Chebyshev. Additionally, the program supports Sallen-Key low-pass filter design if a two-pole band-pass, or notch, filter is selected, the program defaults to a resonant circuit response. Two application booklets are supplied containing detail information and suggested circuits. Supplied on one 89mm (3.5in.) 720k disk. The software will run from a floppy disk drive.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MF10CCN Universal Monolithic Switched Capacitor Filter

National Semiconductor

Two independent general purpose CMOS active filter building blocks each requiring just the addition of 3 to 4 resistors and an external clock to produce various 2nd order functions. Each block has three output pins. One of the outputs can be configured to perform either an allpass, highpass, or a notch function. The other two pins perform lowpass and bandpass functions. The centre frequency of the lowpass and bandpass 2nd order functions can be either directly dependent on the clock frequency or they can depend on both clock frequency and external resistor ratios. The centre frequency of the notch and allpass functions is directly dependent on the clock frequency while the highpass centre frequency depends on both resistor ratio and clock. Up to 4th order functions can be performed by cascading the two 2nd order building blocks in each MF10C. Higher than 4th order functions can be obtained by cascading MF10C packages. Any of the classic filter configurations (such as Butterworth, Bessel, Causer and Chebyshev) can be formed.

### Characteristics (typical)

Recommended supply voltage:  $+5V$  ( $+4V$  to  $+7V$  max)  
 Frequency range: 30kHz  
 Clock to centre frequency ratio: 49-94 (pin 12 high) 99-35 (pin 12 at mid  $V_S$ )  
 Q accuracy:  $\pm 2\%$

Centre frequency temperature:  $\pm 10pm/^{\circ}C$  (pin 12 high)  
 Coefficient:  $\pm 100ppm/^{\circ}C$  (pin 12 at mid  $V_S$ )  
 Q temperature coefficient:  $\pm 500ppm/^{\circ}C$   
 DC low pass gain accuracy:  $\pm 2\%$  max  
 Crosstalk: 50dB  
 Clock feedthrough: 10mV  
 Maximum clock frequency: 1.5MHz  
 Power supply current: 8mA  
 Voltage swing (pins 1,2,3,9,18,20):  $\pm 3.7V$   
 Output short circuit current: 3mA source, 1.5mA sink  
 Op-amp unity gain bandwidth: 2.5MHz  
 Op-amp slew rate: 7V/ $\mu s$   
 Full data sheet available.

## MAX293/7

Maxim

The MAX293/297 8th-order, low-pass, elliptic, switched-capacitor filters are easy to use and can be set up with corner frequencies from 0.1Hz to 25kHz in the case of the MAX293, or from 0.1Hz to 50kHz for the MAX297.

The transmission ratio of both is 1.5:1 and provides a sharp roll-off and a -80dB of stopband rejection. These filters have fixed responses, so the design task is limited to selecting the clock frequency that controls the filter's corner frequency.

An external capacitor is used to generate a clock using the internal oscillator, or an external clock signal can be used. An uncommitted op amp, with non-inverting input grounded, is provided for building a continuous time low-pass filter for post-filtering or anti-aliasing. Steep roll-off and high-order make these filters ideal for anti-aliasing applications that require maximum bandwidth, and for communication applications that require filtering signals in close proximity within the frequency domain.

Both devices are packaged in 8-pin DIL with the same pin numbering.

### Specification

Supply voltage: 12V C  
 Corner frequency range  
 MAX293: 0.1Hz to 25kHz  
 MAX297: 0.1Hz to 50kHz  
 Clock to corner frequency ratio  
 MAX293: 100:1  
 MAX297: 50:1  
 Clock to corner frequency temperature coefficient  
 MAX293: 8ppm/ $^{\circ}C$   
 MAX297: 4ppm/ $^{\circ}C$

## G200, 300, 400 and 500 Series Analogue Switches/Multiplexers

Siliconix

A range of high quality solid state analogue switches and multiplexers designed specifically for switching wide voltage ranges coupled with low through resistances. Typical applications include servo control switching, programmable gain amplifiers, audio switching, programmable filters, video switching, sample/hold, guidance/control systems, aerospace, disk drives, test equipment, etc.

### Features

- ★ Reduced external component count
- ★ Reduced power consumption
- ★ Simple interfacing
- ★ TTL and CMOS compatibility

★ Wide dynamic range

### Analogue Switches

The DG4XX family supports the most popular analogue switching functions including SPST and SPDT etc., in single and dual switch configurations, along with several SPST quad packages available. The DG6XX series of devices takes the same technology a step further with faster switching times and low on-resistance versions available. The DG2XX, DG3XX and DG5XX series provide slightly less specification devices when compared with DG4XX and DG6XX types, but at a reduced cost while being suitable for many general purpose applications.

### Multiplexers

Single ended multiplexers are good for general purpose applications where the input signals are close to full scale range and referencing is close to ground. Differential multiplexers are suited to signals with small signal amplitude. When using differential multiplexers, the input signals can quite often be conditioned with operational amplifiers to provide the maximum resolution in A/D or D/A type circuitry.

The DG4XX series of multiplexers has been designed to reduce switching errors, glitching and high power consumption while providing improved data throughput and increased ruggedness. For data acquisition, high reliability, and battery operated systems, the rugged DG408/9 are the answer for designs requiring low on-resistance, low charge injection, fast transition time, and single-supply capability. DG535 and DG538 are both wideband/video multiplexers featuring high-density, high-speed CMOS logic and latches to hold all the necessary address selection data and control logic to facilitate connection into larger arrays, matrixes and multiplexers.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LM1037N Dual 4-Channel Analogue Switch

**National Semiconductor** Dual electronically controlled, four channel analogue switch with internal muting facility. It is ideal for use as a stereo source selector or in multiplexing or sampling applications. An additional pin is included to allow parallel connection of two or more integrated circuits. Channel selection is achieved by taking one of the four control lines high (>2V and up to 50V). Each signal should be connected to one of the eight inputs via an 0.47µF capacitor. Also a Min Res 100k should be connected to each input with the other end of the resistor connected to a common point. This common point should then be connected to pin 12 and via a 100µF 40V capacitor to earth. Decouple the supply voltage close to the chip with a 10µF 63V capacitor. Each output should be connected via a 1µF 63V capacitor. Two or more devices can be connected together by directly coupling all pin 7s and the output pins 9 and 10. Only one output capacitor is required for each common output.

### Channel Selection

## SSM2412P Dual Audio Analogue Switch

Analog Devices

2412

A dual analogue switch designed for high performance audio applications. Distortion and noise are negligible over the full operating range of 20Hz to 20kHz and with signals up to 10Vrms. The IC provides superb fidelity with no clicks during switching. It can be controlled by standard TTL or CMOS logic and pull-up resistors are not required. The switches provide superb off-isolation and true bilateral operation. The analogue inputs and outputs are protected against overload and overvoltage. The switches are guaranteed to break before make even in multiple systems. A logic 0 (less than 0.8V) turns the switch off, whilst a logic 1 (greater than 2V) turns the switch on.

**Specification (typical at  $V_S = \pm 18V$ )**  
 Supply voltage:  $\pm 7.5V$  to  $\pm 18V$  ( $\pm 20V$  max.)

Positive supply current: 6mA  
 Negative supply current: 4-8mA  
 Ground current: 0-6mA  
 Logic input current: 1µA  
 Analogue voltage range:  $\pm 14.2V^*$   
 On resistance: 60Ω  
 On resistance matching: 1%  
 Turn on time: 3.5ms  
 Turn off time: 1.5ms  
 Break before make time delay: 2ms  
 On-state input capacitance: 12pF  
 Off-state input capacitance: 4pF  
 Off isolation: 120dB  
 Crosstalk: 96dB

\*With  $V_S$  lower than  $\pm 18V$ , the analogue voltage ( $V_A$ ) must not exceed 3.5V less than the rail voltage. E.g. with  $V_S = \pm 7.5V$ ,  $V_A$  must be  $< \pm 4V$ , with  $V_S = \pm 12V$ ,  $V_A$  must be  $< \pm 8.5V$ .

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## SSM200 HUSH® Stereo Noise Reduction System

Analog Devices

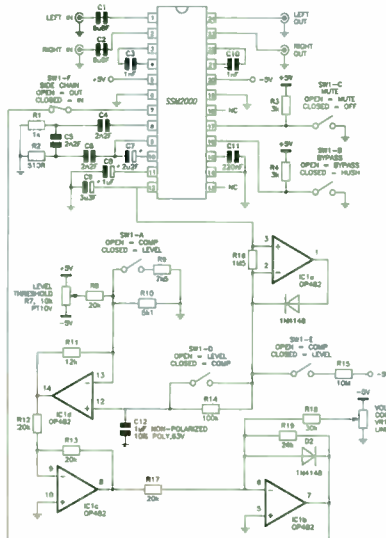

### Features

- ★ Up to 25dB of noise reduction
- ★ Effectively decodes Dolby B® encoded sources
- ★ 'Single-ended' operation eliminates need for encode-decode process
- ★ Logic controllable bypass and muting
- ★ 100dB dynamic range (noise reduction off)

### Applications

- ★ Professional audio
- ★ Multimedia PC sound cards
- ★ Television sound processing
- ★ Cassette tape players
- ★ AM/FM receivers
- ★ Telephone and wireless links

The SSM2000 is an advanced audio noise reduction system based on proprietary HUSH® circuitry. HUSH® combines a dynamic filter and downward expander to provide a high level of effectiveness without the sonic problems associated with normal noise reduction systems. Additionally, an adaptive threshold circuit detects nominal signal levels and dynamically adjusts both thresholds, thereby providing optimal results regardless of program source. Since it is a single-ended system, HUSH® can be used on virtually any audio source, including audio and video tapes, radio and television broadcasts, or any source with objectionable noise. The IC can be used with Dolby B encoded sources with excellent results. Since the VCA port can be directly accessed, then additional functions such as DC volume control, automatic levelling, compression etc., can be implemented with minimal external circuitry.

## AUDIO & MUSICAL EFFECTS

### MN3004 512-Stage BBD

Panasonic

A 512-stage bucket-brigade delay line (BBD) that can delay audio signals by up to 25.6ms. Applications include reverberation and echo effects, tremolo, vibrato and chorus effects.

### Specification (typical)

Drain supply voltage ( $V_{DD}$ ): -15V (-14V to -16V)  
 Gate supply voltage ( $V_{GG}$ ): -14V ( $V_{DD} + 1V$ )  
 Clock high voltage: 0V (max -1V)  
 Clock low voltage:  $V_{DD}$   
 Clock input capacitance:  $< 350pF$   
 Clock frequency: 10kHz to 100kHz  
 Signal delay time: 2.56 to 25.6ms  
 Input signal frequency:  $0.3 \times f_c$  (e.g. 12kHz at  $f_c = 40kHz$ )  
 Input voltage swing:  $> 1.8V$  rms  
 Insertion loss: 1.5dB  
 Input DC bias: -5 to -10V  
 Total harmonic distortion: 0.4%  
 Noise voltage: 0.21mV rms  
 Signal to noise ratio: 85dB

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UM64U	MN3004	£5.800	£6.990

## Urgent Requirement?

Call and collect from your local Maplin store.

## MN3011 3328-Stage BBD with 6 Taps

Panasonic

3011

A 3328-stage bucket-brigade delay line (BBD) that can delay audio signals by up to 166.4ms. Six outputs are available with different non-related delay times so that a natural reverberation effect can be achieved by mixing these signals. Can be used to create a chorus effect in electronic musical instruments.

### Specification (typical)

Drain supply voltage ( $V_{DD}$ ): -15V  
 Gate supply voltage ( $V_{GG}$ ): -14V ( $V_{DD} + 1V$ )  
 Clock high voltage: 0V (max -1.3V)  
 Clock low voltage:  $V_{DD}$   
 Clock input capacitance: <math><2300\text{pF}</math>  
 Clock frequency: 10kHz to 100kHz  
 Input DC bias: -5V to -10V  
 Signal delay time (pin 9): 1.98 to 19.8ms

(pin 8): 3.31 to 33.1ms  
 (pin 7): 5.97 to 59.7ms  
 (pin 6): 8.63 to 86.3ms  
 (pin 5): 13.95 to 139.5ms  
 (pin 4): 16.64 to 166.4ms

Input signal frequency:  $0.25 \times f_c$  (e.g. 10kHz at  $f_c = 40\text{kHz}$ )  
 Input voltage swing: >1V rms  
 Insertion loss: 0dB  
 Total harmonic distortion: 0.4%  
 Noise voltage: <math><0.4\text{mV rms}</math>  
 Signal to noise ratio: 76dB

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MN3101 Clock Generator/Driver for BBDs

Panasonic

Suitable for driving the 3004 and 3011 BBDs, this IC generates a two phase low impedance clock and the most suitable VGG when driven from the same VDD as the BBD. The chip can drive up to 8192 stages and operates from a single power supply.

3101

### Specification (typical at $V_{DD} = -15V$ )

Drain supply voltage ( $V_{DD}$ ): -8V to -16V  
 Drain current: 3mA  
 Power dissipation: 45mW  
 Voltage at  $V_{GG}$  out: -14V ( $V_{DD} \times 14/15$ )

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MN3207 1024-Stage Low Voltage BBD

Panasonic

3207

A 1024-stage bucket-brigade delay line that can provide an audio delay of up to 51.2ms. Applications include reverberation and echo effects in portable radios etc. and for echo microphones and karaoke units.

### Specification (typical)

Drain supply voltage ( $V_{DD}$ ): +5V (+4 to +10V)  
 Gate supply voltage ( $V_{GG}$ ):  $V_{DD} \times 14/15$   
 Clock high voltage:  $V_{DD}$   
 Clock low voltage: 0V (max +1V)  
 Clock input capacitance: <math><700\text{pF}</math>  
 Clock frequency: 10kHz to 200kHz  
 Signal delay time: 2.56 to 51.2ms  
 Input signal frequency:  $0.25 \times f_c$  (e.g. 10kHz at  $f_c = 40\text{kHz}$ )

Input voltage swing: >0.36V rms  
 Insertion loss: 0dB  
 Total harmonic distortion: 0.4%  
 Noise voltage: <math><0.25\text{mV rms}</math>  
 Signal to noise ratio: 73dB

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each

## HT8955A Voice Echo

Holtek

8955

The HT8955A is a CMOS digital audio signal delay processor designed for applications such as voice echo generators, Karaoke systems and sound effect

generators. This device contains a built-in preamplifier, an on-chip oscillator, a DRAM interface, a 10-bit A/D converter, a 10-bit D/A converter and all the necessary control logic. Designed for use with 41256 and 4164 DRAMs, a delay time of up to 0.8s and 0.2s, respectively, is possible. When comparing the HT8955 with conventional BBD units, the HT8955 exhibits low distortion, high S/N ratio and long delay times. Due to the high sampling rate (25kHz or 50kHz, depending on the DRAM used), sophisticated low-pass filtering is not required. Other features of the device are 5V working voltage, a wide frequency response and continuously variable delay time.

### Specification

Operating voltage,  $V_{CC}$ : 4.5V to 5.5V, 5V typ (6V abs max)  
 Operating current,  $I_{op}$ : 2.5mA typ at  $V_{CC}=5V$  (max)

8mA)

Preamplifier voltage gain,  $A_V$ : 2000 typ at  $V_{CC}=5V$

High-input voltage,  $V_{IH}$ : 0.3V

Low-input voltage,  $V_{IL}$ : 0.7V

Maximum output voltage,  $V_{omax}$ : 1.5V typ (min 1V)

Signal to noise ratio, S/N: 55dB

Total harmonic distortion, THD: 0.5%

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
AZ17T	HT8955A	£2.510 10+ £2.140 25+ £1.560 100+ £3.980 1+	

## HT8950 Voice Modulator

Holtek

A single chip voice modulator used for pitch shifting. This chip integrates a built-in microphone preamplifier with internal biasing, an 8-bit A/D converter, internal SRAM, an 8-bit D/A converter, and all operating from a single rail power supply. Pitch shifting is selected by either momentarily connecting one of four pins (with a push-button, etc.), signifying Pitch UP, Pitch DN, Robot or Vibrator, or according to the state of three pins on the device specifically designed for interfacing to electronic equipment. Altering the inputs selects between normal and either higher or lower pitches. In addition the 'Robot' and 'Vibrato' functions can be used to dramatically alter the nature of the output. Due to the high level of integration, very few external components are necessary to produce a working design. Applications include toys, mixers, voice recorders, audio systems and other forms of speech systems.

8950

### Specification

Operating voltage,  $V_{CC}$ : 2.4V to 4V, 3V typ (5.5V abs max)

Operating current (No load),  $I_{op}$ : 2mA typ (10mA)

Input signal level,  $V_{in}$ : max), at 3V

Lamp sink current,  $I_{lamp}$ : 5mA min, 9.5mA typ

OPA gain value,  $A_V$ : 2000 typ

High-input voltage,  $V_{IH}$ : 0.7V

Low-input voltage,  $V_{IL}$ : 0.3V

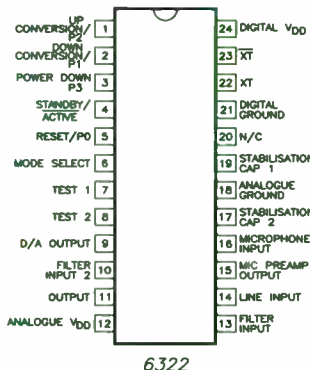

System operation frequency: 512kHz typ

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MSM6322GSK Speech Pitch Controller

OKI

Note: This device is only available in small outline 24-pin plastic SOP style package. A speech pitch converter IC that operates in real time and requires very few external components. It has a microphone preamplifier and line level input and the output requires only a single transistor to directly drive a loudspeaker. As well as the microphone preamplifier, the IC contains a 4th order low pass filter on input and a 3rd order low-pass filter on output. In addition there is a built-in 8-bit A/D converter and 9-bit D/A converter. The pitch of the speech is alterable in 17 steps over a range of one octave up and one octave down, and there are two modes of operation. In the 'up/down' mode two inputs are provided which when pulsed, move the pitch up or down sequentially through the pitches available. In the 'binary' mode four inputs are provided from which 16 of the available pitches can be directly selected. In the example circuit, an application using the 'up/down' mode is shown. Note that pins 1 and/or 2 could be continuously cycled using an electronic counter to produce an interesting effect. The following table shows the pitches available.

### Pin functions (high = +5V, low = 0V digital)

- Pin 1. In 'up/down' mode, pulse high to move the pitch up one step. In 'binary' mode, taking this pin high sets bit 3.
- Pin 2. In 'up/down' mode, pulse high to move the pitch down one step. In 'binary' mode, taking this pin high sets bit 2.
- Pin 3. In 'up/down' mode, setting this pin high initiates power down, where all internal clocks are stopped and pin 9 goes low. On reverting to low on pin 3, the clocks take 10ms to restabilise. In 'binary' mode, taking this pin high sets bit 4, the most significant bit.
- Pin 4. When taken high, all internal clocks are stopped except the main 4MHz oscillator. On reverting to low, pin 9 outputs a 2.5V ( $1/2$  of  $V_{DD}$ ) level for about 15ms.
- Pin 5. In 'up/down' mode, pulse high to set the pitch to stage 8, no pitch change. In 'binary' mode, taking this pin high sets bit 1, the least significant bit.
- Pin 6. Set high to select 'binary' mode; set low to select 'up/down' mode.
- Pin 7. Manufacturers test pin. Must be fixed low.
- Pin 8. Manufacturers test pin. Must be fixed low.
- Pin 9. Output of the digital to analogue converter.
- Pin 10. Input to the output stage's low-pass filter.
- Pin 11. Final output.
- Pin 12. Analogue supply +5V.
- Pin 13. Output of the line amplifier and input to the input stage's low-pass filter. The gain of this amplifier is set by the value of resistance between here and pin 14.
- Pin 14. Input to the line amplifier. Must be capacitively coupled to input signals.
- Pin 15. Output of the microphone preamplifier.
- Pin 16. Input to the microphone preamplifier. Must be capacitively coupled to the microphone.
- Pin 17. Stabilisation capacitor for the internal analogue reference voltage +2.5V ( $1/2$  of  $V_{DD}$ ).

- Pin 18. Analogue ground. Microphone and line inputs and the output must be referenced to this ground.
- Pin 19. Stabilisation capacitor for the internal analogue reference voltage +2.5V ( $1/2$  of  $V_{DD}$ ).
- Pin 20. No connection.
- Pin 21. Digital ground. Logic low.
- Pin 22. Crystal oscillator. If using an external clock, it should be connected here.
- Pin 23. Crystal oscillator. If using an external clock, leave this pin open.
- Pin 24. Digital supply +5V. Logic high.

Supply voltages: 4V to 6V (7V max.)

'Binary' mode settings				Scale stage	D/A sampling cycle/frequency	Low-pass filter cut-off	Pitch change

## HT8656 Voice Repeat Recorder

Holtek

A 16 second voice repeat IC primarily intended for toys, amusements, disco sound effects etc. with a motor drive output to operate mechanical devices i.e. animal mouth etc. The device supports either a 64k or 256k bit DRAM with sampling rates of either 16k or 32k bits. The maximum record time of 16 seconds is obtained with a 256k DRAM and a 16k bit sampling rate. With built-in sound triggered record/play, the IC will start recording when sound is detected and stops to play back when there is 0.5 seconds of silence. Other features include auto power-off either after 2 minutes of silence or after 64 repeat cycles and a built-in two-stage microphone amplifier. Designed to operate from a 5V DC supply rail with a typical operating current of 1.5mA. Supplied in a 28-pin DIL package.

## HT8658 Voice Recorder

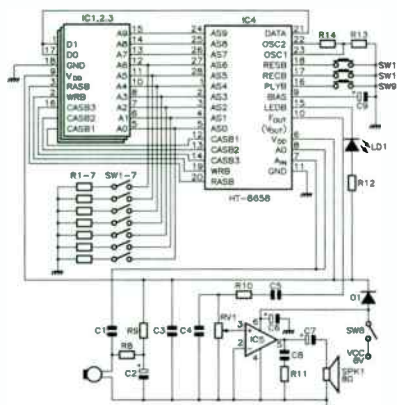

Holtek

A comprehensive voice recorder chip that has a recording time up to a maximum of 4.5 minutes, using three 1Mbit DRAMs and a 11kbit sampling rate. To improve sound quality, 16k, 22k or 32kbit sampling rates can be selected, but with a reduced recording time. The chip has an on-board two stage microphone amplifier, built-in low pass filter and status indicator. In addition, an auto play back function is included. The device is designed to operate from a 5V DC supply rail and with no load has a typical operating current of 0.8mA (40µA, standby). Supplied in a 28-pin DIL package.

## ISD1110P 10-Second Voice Record/Playback

ISD

A high quality, single-chip record/playback device for short duration messaging applications. The device includes an on-chip oscillator, microphone preamplifier, AGC, anti-aliasing filter, smoothing filter, and speaker amplifier. A minimum system can be configured with a microphone, a speaker, a few

passive components, two push-button switches and a power source.

Recordings are stored in non-volatile memory cells requiring no power. This unique solution is made possible through new technology whereby voice and audio signals are stored directly, in their natural analogue form, into an EEPROM memory. Such direct analogue storage allows natural voice reproduction in a single IC. The device is supplied in a 28-pin DIL package.

**Specification**

Supply voltage: 7V max.  
Supply current: 30mA max., operating  
2µA max., standby  
Output load impedance: 16Ω min.  
Output power: 12.2mW into 16Ω  
Harmonic distortion: 1%  
Mic. input level: 20mV pk-pk  
Mic. input impedance: 10kΩ  
AGC output impedance: 5kΩ  
Sampling frequency: 6.4kHz max.  
Bandwidth: 2.7kHz max.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## ISD1016A/20A Single-Chip Voice Record/Playback

ISD

The ISD1016 and ISD1020 devices are designed to record and playback audio and voice information entirely on the one chip, with a minimum of added circuitry. A non-volatile analogue array consists of 128K cells, the equivalent of 1M-bits of storage. The devices eliminate the need for complex digital conversion, compression or voice synthesis techniques, which often compromise voice quality and are more complicated to use. Signal conditioning circuits are included, and control functions which enable a complete, high-quality recording and playback system to be realised in a single device. The two versions offer total recording times of 16 or 20 seconds respectively. A noise cancelling microphone preamplifier with AGC can record both low and high volume sounds. A fifth order anti-aliasing filter in the output path ensures all digital components are removed, and the device is able to drive an 8 or 16Ω speaker directly through differential outputs. This boosts power output by four times compared with single ended operation, and eliminates the need for a series blocking capacitor and an output amplifier. The device will operate from a single 5V supply or from batteries, and includes a power down function for applications where minimum power consumption is critical.

Digital addresses are provided for more sophisticated message addressing and control. The storage arrays are organised into 160 segments, and addresses A0 to A7 provide access to each segment, providing the capability to construct messages by linking stored phrases and sounds.

**Specification**

Supply voltage: 7V max.  
Supply current: 30mA max., operating  
10µA max., standby  
Output load impedance: 8 to 16Ω  
Output power: 50mW into 16Ω  
Harmonic distortion: 1%  
Mic. input level: 20mV pk-pk  
Mic. input impedance: 10kΩ

AGC output impedance: 5kΩ  
Sampling frequency: 8kHz, ISD1016A  
6.4kHz, ISD1020A  
Bandwidth: 3.4kHz, ISD1016A  
2.7kHz, ISD1020A

The devices are available in a 28-pin DIL package (suffix P) or as 28-pin SMD (suffix G).

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## Voice Record/Playback Evaluation System

ISD

**ISD-ES002**

A hand-held demonstration board with a built-in socket allowing easy and immediate record and playback of ISD devices. Messages can be recorded on the ICs and saved, due to the non-volatile storage of the devices. A library of recordings can be created using either of the ISD devices. Simple operation is assured through just three switches: On/Off, Play/Record and Start/Stop. Push-button play and automatic power down are also supported. The system includes a speaker, a 9V battery with supply regulation and an ISD1016A DIL IC.

## A/D D/A CONVERTERS

### AD421 Loop-Powered 4-20mA D/A Converter

Analog devices

**Features**

- ★ HART Compatible
- ★ 16-bit resolution and monotonicity
- ★ ±0.01% integral non-linearity
- ★ 750µA max quiescent current
- ★ Flexible high speed

The AD421 is a complete, loop-powered, digital to 4-20mA converter, designed to meet the needs of smart transmitter manufacturers in the industrial control industry. It provides a high precision, fully integrated, low cost solution in a compact 16-pin DIL plastic package. The AD421 is ideal for

extending the resolution of smart 4-20mA transmitters at very low cost.

The device includes a selectable regulator that is used to power itself and other devices in the transmitter. This regulator provides either a +5V, 3.3V or 3V regulated output voltage. Additionally, there are 1.25V and 2.5V precision reference voltages, so the device eliminates the need for a discrete regulator and voltage reference. Few external components are required.

The AD421 can be used with standard HART FSK protocol communication circuitry without any degradation in specified performance. The high speed serial interface is capable of operating at 10Mbps and allows for simple connection to commonly used microprocessors and microcontrollers via a standard 3-wire serial interface.

The sigma-delta architecture of the D/A converter guarantees 16-bit monotonicity while the integral non-linearity for the device is ±0.01%. The IC provides a zero scale 4mA output current with ±0.1% offset error and a 20mA full-scale output current with a ±0.2% gain error.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## AD1859 Stereo 18-Bit Integrated DAC

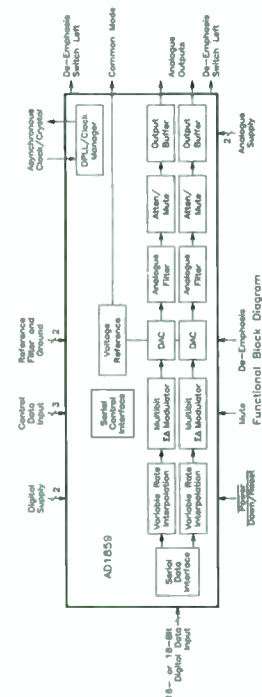

Analog Devices

The AD1859 is a complete 16/18-bit single-chip stereo digital audio playback subsystem, requiring a single 5V supply. The device comprises a variable rate-digital interpolation filter, a revolutionary multibit sigma-delta modulator with dither, a jitter tolerant DAC, switched capacitor and continuous time analogue filters, and analogue drive output circuitry. In addition, there is an on-chip stereo attenuator and mute, that are programmed through an SPI-compatible serial control port.

The digital PLL feature allows the master clock to be asynchronous which gives the device an unprecedented jitter rejection feature. An on-chip oscillator is included, so that only an inexpensive quartz crystal, or ceramic resonator, is required for an external time base. A result of using a multibit sigma-delta modulator is that the AD1859 generates dramatically lower amounts of out-of-band noise energy, which greatly reduces the requirement on post DAC filtering. The required post-filtering is integrated on the device.

The simple, very flexible serial data input port allows for glueless interconnections to a variety of ADCs, DSP chips, AES/EBU receivers and simple rate converters. The serial data input port can be configured in left-justified, I<sup>2</sup>S-justified, right-justified and DSP serial port compatible modes. The AD1859 accepts 16-/18-bit serial audio data in MSB-first, two's complement format. Supplied in a 28-pin SOIC package

**Specification**  
 Supply voltage: 5V analogue & digital  
 Typical supply current analogue: 36mA  
 digital: 30mA  
 Resolution: 18-bits

Dynamic range: 94dB (A-weighted)  
 THD + noise: -88dB (0.004%)  
 Gain error: ±1%  
 Crosstalk: 101dB  
 Attenuator step size: 1dB  
 Attenuator range span: -62.5dB  
 Mute attenuation: -74.2dB

## AD7391AN 10-Bit Micro-Power DAC

Analog Devices

The AD7391AN is a 10-bit DAC that works from a single supply voltage in the range +2.7V to +5.5V, and consumes less than 100µA, making it ideal for battery operated applications. In addition to a DAC, the device features rail-to-rail output op-amps, serial-input register and a DAC register. The external reference input has constant input resistance independent of the digital code setting of the DAC. Also, the reference input can be tied to the same voltage supply as V<sub>DD</sub> resulting in a maximum output voltage span of 0 to V<sub>DD</sub>. The PSI compatible, serial-data interface consists of a serial data input (SDI), clock (CLK), and load (LD) pins. A CLR is available to reset the DAC register to zero-scale, and is a useful function for power-on reset or system failure recovery to a known state. Supplied in a 8-pin DIL package.

**Specification**  
 Power supply: +2.7V to +5.5V  
 Supply current: 55µA typ, 100µA max  
 Resolution: 10-Bits  
 relative accuracy: ±1.75 LSB max  
 Diff nonlinearity: ±0.9 LSB max  
 O/P slew rate: 0.05V/µs  
 Settling time: 60µs typ  
 DAC glitch: 65nVs typ  
 Digital feedthrough: 15nVs typ

## AD7715 16-Bit Sigma Delta A/D Converter

Analog Devices

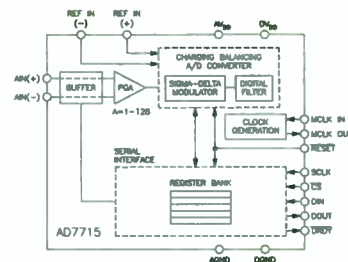

**Features**  
 ★ Charge balancing ADC  
 ★ Programmable gain front end  
 ★ 3-wire serial interface  
 ★ Low-pass filter with programmable o/p update  
 ★ Very low power dissipation 5.3mW  
 The AD7715 is a complete analog front end for low frequency measurement applications. The device can accept low-level input signals from a transducer and outputs a serial digital word. It employs a sigma-delta conversion technique to realise up to 16 bits of no missing codes performance. The input

signal is applied to a programmable gain front end based around an analogue modulator, whose output is processed by an on-chip digital filter. The first notch of this digital filter can be programmed via the on-chip control register allowing adjustment of the filter cut-off and output update rate.

The device features a differential analogue input as well as a differential reference input, and performs all signal conditioning and conversion for a single-channel system.

The AD7715 is ideal for use in smart, micro-controller or DSP based systems, and features a serial interface that can be configured for three-wire operation. Gain settings, signal polarity and update rate selection can be configured in software using the input serial port.

CMOS construction ensures very low power dissipation, and the power-mode reduces the standby power consumption to typically 50µW. Available in 16-pin plastic DIL package.

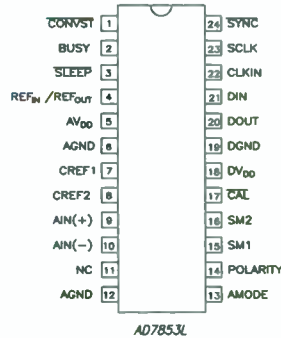

**Specification**  
 Voltage supply: 5V (digital and analogue)  
 Current supply: 1.9mA max.  
 PSR: 95dB typical - depends on gain  
 Integral nonlinearity: ±0.0015% of FSR max.  
 CMR analogue i/p: 95dB min  
 Logic input current: ±10µA max.  
 Voltage i/p except MCLK IN i/p low voltage: 0.8V max.  
 i/p high voltage: 2.0V  
 MCLK IN only i/p low voltage: 0.8V max.  
 i/p high voltage: 3.5V max.  
 Logic o/p o/p low voltage: 0.4V max.  
 o/p high voltage: V<sub>DD</sub> - 0.6V min.

## AD7853L High Speed 12-Bit Sampling ADC

Analog Devices

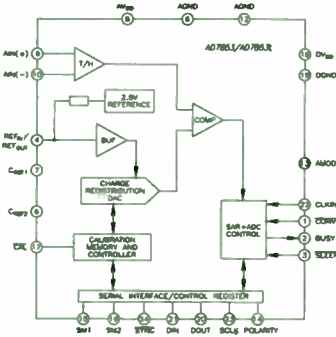

**Features**  
 ★ 100k samples/sec  
 ★ Automatic calibration on power-up  
 ★ Self and system calibration  
 ★ Versatile serial I/O port (SPI/QSPI/8051/µP)  
 ★ Flexible power management options include automatic power-down after conversion  
 ★ 3V supply voltage  
**Applications**  
 ★ Battery powered systems e.g. personal digital assistants, medical instruments, mobile communications

- ★ Pen computers
- ★ Instrumentation and control systems
- ★ High speed modems

The AD7853L is a high speed, low power, 12-bit ADC that operates from a single 3V power supply. The ADC powers up with a set of default conditions at which time it can be operated as a read-only ADC. The ADC contains self-calibration and system calibration options to ensure accurate operation over time and temperature, and a number of power-down options for low power applications.

The device is capable of a 100kHz throughput rate. The input track-and-hold acquires a signal in 500ns and features a pseudo-differential sampling system. The device voltage range is 0 to  $V_{REF}$  with both straight binary and 2's complement output coding. Input signal range is up to the supply voltage and is capable of converting full power signals to 100kHz. Supplied in a 24-pin DIL package.

**Specification**

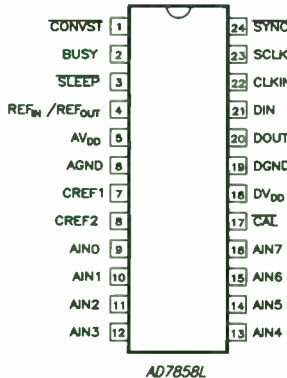

Supply voltage:	3V digital and analogue
Current:	1.9mA
Power dissipation:	6.85mW
SNR:	70dB
THD:	-78dB
Resolution:	12-bits

## AD7896AN 12-Bit 8µs ADC

Analog Devices

- ★ Complete 12-bit ADC in 8-pin mini-DIP package
- ★ Low power, single supply operation - ideal for battery powered/portable applications
- ★ High speed, easy-to-use serial interface
- ★ 100kHz throughput

The AD7896 is a fast 12-bit ADC which operates from a single +2.7V to 5.5V supply and is housed in a small 8-pin mini-DIP package. The IC contains an 8µs successive approximation A/D converter, an on-chip track/hold amplifier, an on-chip clock and a high speed serial interface.

Output data from the device is provided via a high speed, serial interface port. This two-wire serial interface has a serial clock input and a serial data output with the external serial clock accessing the

serial data from the IC.

The device has excellent linearity and S/N ratio as well as very low harmonic distortion, and accepts an analogue input range of 0V to  $V_{DD}$ . The  $V_{DD}$  input is also used as the reference for the IC so that no external reference is required.

The AD7896 features a high sampling rate mode and, for low power applications, a proprietary automatic power down mode. The IC will automatically go into power down once conversion is complete and 'wakes up' before the next conversion cycle.

**Specification**

Voltage supply:	+2.7 to +5.5V
Power dissipation:	10.8mW max, typically 9mW with 2.7V supply
S/N+D ratio:	70dB min
THD:	-80dB max

## AD7945BN Multiplying 12-Bit DACs

Analog Devices

The AD7945 is a fast 12-bit multiplying DAC that operates from a single +5V supply, and has a fast 12-bit parallel interface (write pulse width of 40ns). It will replace the industry standard AD7545 in many applications, and offer superior speed and power consumption performance. The low power requirements make this device suitable for battery-powered instrumentation and laptop computers etc.

**Specification**

Power supply:	4.5V to 5.5V
Current:	5µA max
Resolution:	12-bits
Relative accuracy:	±0.5 LSB max
Differential nonlinearity:	±0.5 LSB max
THD:	-83dB
O/P noise:	35nV/√Hz typ
Settling time:	600ns typ to 0.01%
D-to-A glitch impulse:	60nV-s typ

## AD8300AN 12-Bit, 3V Serial Input DAC

Analog Devices

AD8300

The AD8300 is a complete 12-bit, voltage output DAC designed to operate from a single +3V supply - ideal for battery operated applications. The 2.0475V full-scale voltage output is laser trimmed to maintain accuracy over the operating temperature of the device. The binary input data format of 0.5mV/bit can be programmed using software, and the voltage outputs are capable of sourcing 5mA. The double buffered serial data interface offers high speed, three-wire, DSP and microcontroller compatible inputs using data in (SDI), clock (CLK), and load strobe (LD) pins. A chip select (CS) pin simplifies connection of multiple DAC packages by enabling the clock input when active low. In addition, an asynchronous CLR pin will set all DAC registers bits to zero causing the  $V_{OUT}$  to become 0V - useful for power on reset, or system failure recovery to a known state. Supplied in an 8-pin DIL package.

### Specification (+3V operation)

Supply voltage: +2.7V to +5.5V

## ADC0804LCN 8-Bit A/D Converter

National Semiconductor

0804

A CMOS 8-bit analogue to digital converter with output latches that can directly drive a microprocessor data bus. The IC looks like a memory location or I/O port to the microprocessor so no interfacing logic is required. The analogue input voltage range is 0V to 5V with a single 5V supply, and 2.5V applied to pin 9. However, the voltage reference on 9 can be any voltage under 2.5V so that any voltage span can be converted with a full 8 bits of resolution. In addition, by connecting pin 7 to a voltage other than ground the span need not start at 0V. For example if the span was 0.5V to 3.5V (a span of 3V) 0.5V would be applied to pin 7 and 1.5V to pin 9 (i.e. 1/2 of 3V). No zero adjustment is needed with this IC.

### Specification

Supply voltage: +5V ( $V_{CC}$ )  
 Max error:  $\pm 1$  bit  
 Input resistance at pin 9: 1.3k $\Omega$   
 Analogue input voltage range: Ground to  $V_{CC}$   
 Conversion rate: 8770/second max  
 Supply current: 1.3mA

## ADS7804P

Burr-Brown

7804

The ADS7804 is a 12-bit sampling CMOS A/D converter circuit with built-in sample and hold, clock oscillator, voltage reference and tristate CPU bus output port. It requires just six external passive components to operate, including supply decoupling, and will sample at 100kHz. With a single 5V power supply requirement @ <100mW dissipation, the device allows a  $\pm 10$ V signal input range and provides a signed 12-bit parallel output, or two 8 bit result bytes for 8-bit bus based systems. The input is protected to  $\pm 25$  V, eliminating the need for external protection circuitry in most instances.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## ADS7806 Low-Power 12-Bit Sampling CMOS ADC

Burr-Brown

A low-power, 12-bit sampling A to D converter using state-of-the-art CMOS structures and powered from a single 5V supply. It contains a complete 12-bit capacitor-based successive approximation register with sample and hold, internal clock, reference, microprocessor interface and parallel and serial output drivers. It can acquire and convert to full 12-bit accuracy in 25 $\mu$ s maximum while consuming only 35mW. Laser trimmed scaling resistors provide industry standard input ranges of  $\pm 10$ V and 0V to 5V. In addition a 0V to 4V range allows development of complete single rail supply systems. It also has a 50 $\mu$ W power down mode,  $\pm 1/2$  LSB resolution and 72dB minimum dynamic range.

### Specification

Resolution: 12 bits  
 Input voltage ranges:  $\pm 10$ , 0 to 5, 0 to 4  
 Input impedances: 45-7k $\Omega$  ( $\pm 10$ V), 20k $\Omega$  (0 to 5V), 21.4k $\Omega$  (0 to 4V)  
 Input capacitance: 35pF  
 Conversion time: 20 $\mu$ s  
 Complete cycle time (acquire and convert): 25 $\mu$ s  
 Throughput rate: 40kHz  
 Transition noise: 0.1 LSB  
 Spurious free dynamic range: 90dB ( $\pm 10$ V input)  
 Total harmonic distortion: -90dB  
 Signal to noise ratio: 73dB  
 Full power bandwidth: 50kHz  
 Aperture delay: 40ns  
 Transient response: 5 $\mu$ s  
 Overvoltage recovery: 750ns  
 Internal reference: 2.5V  
 Parallel data format: 12 bits in two bytes  
 Serial data format: two's complement or straight binary

## ADS7807 Low-Power 16-Bit Sampling CMOS ADC

Burr-Brown

A low-power, 16-bit sampling A to D converter using state-of-the-art CMOS structures and powered from a single 5V supply. It contains a complete 16-bit capacitor-based successive approximation register with sample and hold, internal clock and reference, microprocessor interface and parallel and serial output drivers. It can acquire and convert a full 16 bits to within  $\pm 1.5$  LSB in 25 $\mu$ s maximum while consuming only 35mW. Laser trimmed scaling resistors provide industry standard input ranges of  $\pm 10$ V and 0V to 5V. In addition a 0V to 4V range allows development of complete single rail supply systems. It also has a 50 $\mu$ W power down mode,  $\pm 1.5$  LSB resolution and 86dB minimum dynamic range, and is pin-for-pin compatible with the ADS7806.

**Specification**

Resolution: 16 bits  
 Input voltage ranges:  $\pm 10, 0$  to  $5, 0$  to  $4$   
 Input impedances:  $45\text{-}7\text{k}\Omega$  ( $\pm 10\text{V}$ ),  $20\text{k}\Omega$  ( $0$  to  $5\text{V}$ ),  $21\text{-}4\text{k}\Omega$  ( $0$  to  $2$

$4\text{V}$ )  
 Input capacitance:  $35\text{pF}$   
 Conversion time:  $20\mu\text{s}$   
 Complete cycle time (acquire and convert):  $25\mu\text{s}$   
 Throughput rate:  $40\text{kHz}$   
 Transition noise:  $0\text{-}8$  LSB  
 Spurious free dynamic range:  $100\text{dB}$  ( $\pm 10\text{V}$  input)  
 Total harmonic distortion:  $-100\text{dB}$   
 Signal to noise ratio:  $88\text{dB}$   
 Full power bandwidth:  $50\text{kHz}$   
 Aperture delay:  $40\text{ns}$   
 Transient response:  $5\mu\text{s}$   
 Overvoltage recovery:  $750\text{ns}$   
 Internal reference:  $2\text{-}5\text{V}$   
 Parallel data format: 16 bits in two bytes  
 Serial data format: two's complement or straight binary

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

AD68Y	ADS7807P	£34.400	£46.880

**ADS7809P**

Burr-Brown

The ADS7809 is a complete 16-bit sampling CMOS A/D converter circuit with built in sample and hold circuit, clock oscillator, voltage reference and serial data interface. Data can be output using the internal clock or synchronised to an external data clock. The ADS7809 also provides an output synchronisation pulse for use with standard digital signal processors.

The device requires a single 5V supply and will dissipate less than  $100\text{mW}$  and is capable of a  $100\text{kHz}$  sampling rate suitable for the most demanding digital audio applications. Six different input voltage configurations are possible, ranging from ( $0\text{V}$  to  $4\text{V}$ ) to  $\pm 10$  Volt span, with  $\pm 25\text{V}$  protection on all inputs.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

LE55K 1	16 Bit 100kHz A/D	£31.900	£46.990

**ZADS7831P**

Burr-Brown

The ADS7831 is a very fast 12-bit sampling CMOS A/D converter with full parallel tri-state outputs for connection to a CPU bus. It requires only a few resistors and capacitors for operation as it incorporates all necessary sample and hold, oscillator and reference circuitry. This device can operate at an impressive  $600\text{kHz}$  sample rate, allowing input signals of up to  $250\text{kHz}$  to be accurately converted. The input signal may be  $\pm 2\text{-}5\text{V}$  and the output data will be in signed (two's complement) binary. A  $\pm 5\text{V}$  supply is required and the device will dissipate a maximum of  $250\text{mW}$ .

LE57M	12 Bit 600kHz A/D	£15.520	£23.490

**CA3306 Video Speed 6-Bit Flash A/D**

Harris

A family of CMOS parallel (flash) analogue to digital converters designed for low power, high speed applications. The CA3306CE operates at sampling rates up to 10 million samples per second and the CA3306E up to 15 million samples per second permitting analogue signals with bandwidths up to  $5\text{MHz}$  or  $7\text{-}5\text{MHz}$  to be fully digitised to 6-bit accuracy. An overflow output allows two devices to be connected in series to produce a 7-bit converter. Alternatively, two devices connected in parallel will permit conversion speed to be doubled.

**Specification**  
 (typical  $V_{DD} = 5\text{V}$ ,  $V_{REF} = +4\text{-}8\text{V}$ ,  $25^\circ\text{C}$ )  
 Supply voltage:  $3\text{V}$  to  $7\text{-}5\text{V}$

Linearity error:  $\pm 0\text{-}5\text{LSB}$   
 Full scale input range:  $0\text{V}$  to  $+4\text{-}8\text{V}$   
 Input capacitance:  $15\text{pF}$   
 Input current:  $< \pm 500\mu\text{A}$   
 Resistor ladder impedance:  $1100\Omega$   
 Maximum conversion speed:  $13\text{MS/s}$  (CA3306CE),  $20\text{MS/s}$  (CA3306E)  
 Supply current:  $11\text{mA}$  (CA3306CE),  $14\text{mA}$  (CA3306E)  
 Digital output current:  $> -1\text{-}6\text{mA}$  source,  $> 3\text{-}2\text{mA}$  sink  
 Zener voltage:  $6\text{-}2\text{V}$  at  $10\text{mA}$

## DAC714P

Burr-Brown

714

The DAC714 is a digital audio compatible 16-bit resolution D/A converter. It has a built-in temperature compensated voltage reference, output amplifier and serial interface, all in a compact 16-pin package. The data inputs to this device consist of a fast 60ns write pulse width serial digital interface, which will accept positive true two's complement binary codes for a bipolar output producing a  $\pm 10V$  span, a  $\pm 5V$  span or a unipolar 0 to 10V span. THD at the output is typically 0.005% for an 0dB output signal @ 1kHz, with a conversion frequency of 100kHz. The device requires a dual rail power supply of either  $\pm 12V$  or  $\pm 15V$  at a maximum dissipation of 600mW.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## DAC813 Microprocessor Compatible 12-Bit DAC

Burr-Brown

813

The DAC813 is a complete 12-bit digital-to-analogue converter with a flexible digital interface. It includes a precision +10V reference, interface control logic, double-buffered latch and a 12-bit D/A converter with voltage output op amp. Fast current switches and laser-trimmed thin-film resistors provide a highly accurate, fast D/A converter. Digital interfacing is facilitated by a double buffered latch. The input latch consists of one 8-bit byte and one 4-bit nibble to allow interfacing to 8-bit (right justified) or 16-bit data buses. Input gating logic is designed so that the last nibble or byte to be loaded can be got simultaneously with the transfer of data to the D/A latch, saving computer instructions. A reset control allows the DAC813 D/A latch to asynchronously reset the D/A output to zero, a feature useful for power-up reset, recalibration or for system re-initialisation upon system failure. The device is specified to  $\pm 1/4$  LSB maximum linearity error.

### Specification

Digital input resolution:	12 bits
Linearity error:	$\pm 1/4$ LSB
Differential linearity error:	$\pm 1/4$ LSB
Gain error:	$\pm 0.05\%$
Settling time:	3.3 $\mu s$ 10V range, 4.5 $\mu s$ 20V range
Output voltage range:	0 to 10V unipolar mode $\pm 5V, \pm 10V$ bipolar mode
Output current:	$\pm 5mA$
Output impedance:	0-2 $\Omega$ @ DC
Short circuit duration:	indefinite
Reference voltage:	+10V
Power supply:	$\pm 15V$

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## DAC7800/1/2 Dual CMOS 12-Bit Multiplying DACs

Burr-Brown

The DAC 7800, 7801 and 7802 are members of a new family of monolithic dual 12-bit CMOS multiplying digital-to-analogue converters. The digital interface speed and the AC multiplying performance are achieved by using an advanced CMOS process optimised for data conversion circuits. High stability on-chip resistors provide true 12-bit integral and differential linearity over the wide industrial temperature range of 240°C to 185°C. The DAC7800 features a serial interface capable of clocking in data at a rate of at least 10MHz. Serial data is clocked (edge triggered) MSB first into a 24-bit shift register and then latched into each D/A separately or simultaneously as required by the application. An asynchronous CLEAR control is provided for power-on reset or system calibration functions.

The DAC7801 has a 2-byte (8 1/4) double-buffered interface. Data is first loaded (level transferred) into the input registers in two steps for each D/A, then both D/As are updated simultaneously. DAC 7801 features an asynchronous CLEAR control. The DAC7802 has a single-buffered 12-bit data word interface. Parallel data is loaded (edge

triggered) into the single D/A register for each D/A. All versions operate from a single 5V supply.

### Specification

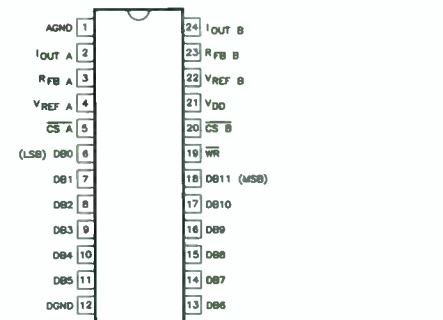

Resolution:	12 bits minimum
Relative accuracy:	$\pm 1$ LSB
Differential non-linearity:	$\pm 1$ LSB
Gain error:	$\pm 3$ LSB
Digital input impedance:	10k $\Omega$
Digital input capacitance:	10pF
Digital input levels:	2V min. 0-8V max. TTL compatible
Output current settling time:	0.4 $\mu s$
D-to-A glitch impulse:	0.9nV/s
AC feedthrough:	-75dB @ 10kHz
Output capacitance:	30 to 70pF
Channel to channel isolation:	-95dB
Digital crosstalk:	0.9nV

## DAC8043P

Burr-Brown

This device offers 12-bit D/A accuracy in a compact 8-pin DIP package, with a serial three wire interface to a host microprocessor. It incorporates 2500V electrostatic discharge protection on digital inputs and 1000V protection on analogue pins along with a low 5ppm/ $^{\circ}C$  gain temperature coefficient, making it ideal for use in processor control systems or motion control applications in industrial environments. Inputs are TTL/CMOS compatible, and the device requires a single +5V supply.

## DF1700 Dual Channel 8 x Oversampling Digital Filter

Burr-Brown

The DF1700 is a high-performance, 8 times oversampling CMOS digital filter which accepts 16-bit input data and is user selectable to output 16, 18 or 20-bit data, according to a 2-bit binary code applied to pins 16 and 17. The 8 x oversampling feature converts the input data frequency (fs) to an output data frequency of 8 x fs by digital interpolation. By providing 8 x oversampled data to an audio DAC, lower order analogue filters can be used at the DAC's output, thus reducing filter phase non-linearities. Oversampling with the DF1700 simultaneously improves the fidelity of the analogue reconstruction and reduces analogue filter complexity at the output of the DAC.

The most common application for this IC is in high-performance digital audio playback, such as compact disc players. Digital information from a compact disc is often formatted using a Digital Interface Format Receiver Chip (DIFRC). The DF1700 can be interfaced directly to the output of many popular DIFRCs able to provide the Left/Right Channel Input multiplex clock (LRCI), the serial Data INput stream (DIN), and the timing clock for serial input data (BCKI).

The fs data stream, which has been formatted by the DIFRC, is 8 times oversampled by the DF1700 and separated into left and right channel data for input to the PCM1700 DAC (AD64U). The analogue stereo outputs from the PCM1700 should then each pass through a three-pole Generalised Intermittence Converter (GIC) low-pass filter, which has extremely low distortion and negligible phase shift.

The frequency of the DF1700's master clock oscillator can be selected as 192, 384, 256 or 512 times fs according to a 2-bit binary code applied to CKSL and CKDV (pins 3 and 4). The IC also needs a crystal, or an external clock signal, to operate at 16.9344MHz (e.g. crystal UL00A).

Specification	CKSL	CKDV	x	fs
Oscillator frequency range:	H	H	192	1 to 13MHz
	H	L	384	2 to 26MHz
	L	H	256	1 to 13MHz

## MAX138/139 3<sup>1</sup>/<sub>2</sub>-Digit A/D With Display Driver

Maxim

RECENTLY INTRODUCED

The MAX138/MAX139 ICs are 3<sup>1</sup>/<sub>2</sub>-digit A/D converters with on-board LCD (MAX138) and LED (MAX139) display drivers. The devices contain a charge pump voltage inverter that allows the ICs to measure both positive and negative input voltages while operating from a single power supply. The operating circuits for the devices are similar to those of the ICL7136 and ICL7137, but the MAX devices have an internal oscillator and require an external charge-pump capacitor connected to pins 38 and 40.

Supplied in a 40-pin DIP package.

Specification	MAX138	MAX139
Supply voltage:	+7.5V	+6V
Supply current:	500µA max	500µA max
Power dissipation:	1.33W	1.33W
CMRR:	50µV/V	50µV/V
Linearity:	±0.2 counts	±0.2 counts
Scale factor		
temp coefficient:	1ppm/°C	1ppm/°C

## MAX152CPP 3V 8-Bit A/D Converter

Maxim

RECENTLY INTRODUCED

A high-speed, microprocessor (µP) compatible 8-bit A/D converter that uses a 'half-flash' technique to achieve a 1.8µs conversion time. The device digitises at a rate of 400k samples per second, will accept either unipolar or bipolar inputs, and will operate from either a single +3V or dual ±3V supplies. A POWERDOWN pin reduces current consumption to a typical low value of 1µA. The IC will power up and acquire an input signal in less

than 900ns, providing large reductions in supply current in applications with burst-mode signals. The µP interface appears as a memory location or input/output port that requires no external logic interface. The data outputs use latched, three-state buffered circuitry for direct connection to a µP data bus or system input port. The A/D's input/reference arrangement enables ratiometric operation. The device is suitable for cellular phones, portable radios, battery-powered systems, burst-mode data acquisition, digital signal processing, telecommunications and high speed servo loops. Supplied in a 20-pin DIP package.

### Specification

Power requirements:	3.0V to 3.6V
Negative supply voltage	
unipolar operation:	ground
bipolar operation:	-3.6V to -3.0V
Typical positive supply current	
3.6V supply:	2.5mA
3V supply:	1.5mA
Resolution:	8 bits
S/N + D ratio:	45dB
THD:	-50dB
Full power bandwidth:	300kHz
Power up time:	0.9µs
Conversion time:	1.8µs
Data access time:	400ns

## MAX153CPP 8-Bit A/D

Maxim

RECENTLY INTRODUCED

The MAX153 is a high-speed microprocessor compatible 8-bit A/D converter using a half-flash technique to achieve a 660ns conversion time, and digitise at a rate of 1Mps. The POWERDOWN pin reduces current consumption to a typical value of 1µA with a 5V supply. The device will power-up in less than 200ns.

Its microprocessor interface appears as a memory location, or input/output port, that requires no external interface logic. The data outputs use latched, three-state buffered circuitry for direct connection to a microprocessor data bus or system input port. The A/D's input/reference arrangement enables ratiometric operation. The device requires no external clock, will work from a single +5V rail or ±5V rails and is supplied in 20-pin DIP package.

### Specification

Power requirements:	+5V or ±5V DC (VSS=-5V)
Supply current:	8mA typical
Resolution:	8 bits
Differential non-linearity:	±1LSB
S/N +DR:	45dB

## MAX7524JN 8-Bit Multiplying D/A

Maxim

RECENTLY INTRODUCED

MAX7524 is a CMOS 8-bit D/A converter that will interface directly with most microprocessors. On-chip input latches make the D/A interface similar to a RAM write cycle where **CS** and **WR** are the only control inputs required. Linearity up to  $\pm 1/8$  LSB is available, and power consumption is less than 10mW. TTL +5V and CMOS logic compatibility is guaranteed when using a +5V power rail. Over the supply range +5V to +15V all logic inputs are high voltage CMOS compatible. The device is suitable for function generators, bus structure instruments, automatic test equipment, digital control systems etc. Supplied in a 16-pin DIL package.

### Specification

Power requirements: 5V/15V at 2mA max  
 Resolution: 8-bits min  
 Non-linearity:  $\pm 1$ LSB  
 Gain error  
 at 5V:  $\pm 2.25$  LSB  
 at 15V:  $\pm 1.25$  LSB  
 Maximum output current settling time to 0.5 LSB  
 at 5V: 500ns  
 at 15V: 350ns  
 Output capacitance: 120pF max  
 Input high voltage  
 at 5V: 2.4V min  
 at 15V: 13.5V min  
 Input low voltage  
 at 5V: 0.8V max  
 at 15V: 1.5V max  
 Input current: 10 $\mu$ A max.  
 Input capacitance: 20pF max

## PCM69A Advanced 1-Bit BiCMOS Dual 18-Bit DAC

Burr-Brown

PCM69C

The PCM69A dual 18-bit DAC is a low cost, dual output 18-bit BiCMOS digital-to-analogue converter utilising a novel architecture to achieve excellent low level performance. By combining a conventional thin-film R-2R ladder DAC, a digital offset technique with analogue correction and an advanced 1-bit DAC using a first order noise shaping technique, the device achieves high resolution, minimal glitch and low zero-crossing distortion.

The PCM69A digital offset occurs at bit 4, making it an excellent choice for digital musical instruments and audio DSP. Capable of 16 times oversampling, it has excellent THD performance and very high signal to noise ratio. Left and right channel analogue outputs are current drives for direct connection to the inverting inputs of operational amplifiers with single gain setting feedback resistors. Logical inputs are TTL and CMOS compatible, and the device requires only a single 5V supply and consumes 75mW typically.

### Specification

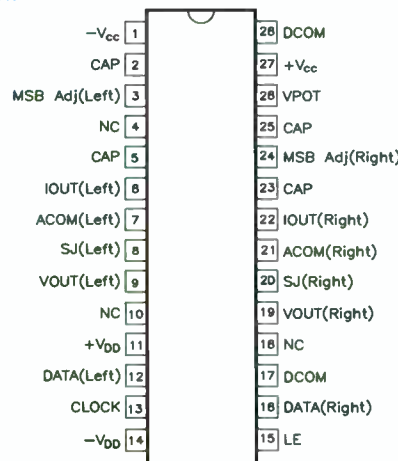

Resolution: 18 bits  
 Dynamic range: 106dB  
 Logic input data format: serial MSB first  
 Input system clock frequency: 16.9344 MHz  
 Total harmonic distortion: -86dB @ 0dB output  
 Channel separation: 106dB @ 1kHz  
 Level linearity:  $\pm 1$ dB @ -90dB signal level  
 Gain error:  $\pm 3\%$   
 Gain mismatch, channel-to-channel: P1%  
 Gain drift: 95ppm/ $^{\circ}$ C  
 Warm-up time: 1 minute  
 Idle channel signal to noise ratio: 110dB, 20Hz to 40kHz  
 Analogue output range:  $\pm 1.2$ mA  $\pm 3\%$   
 Output impedance: 1.8k $\Omega$   $\pm 30\%$   
 Supply voltage range: +4.75 to +5.25V (5V nominal)  
 Combined supply current: 15mA  
 Power dissipation: 75mW

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

AD62S	PCM69AP	£15.710	£19.990

## PCM1700 Dual 18-Bit Audio DAC

Burr-Brown

A low cost, high-performance, dual (stereo) 18-bit digital-to-analogue converter specifically for recovering high-fidelity music from a digital storage medium, primarily compact disc. The PCM1700 features true glitch-free, 'co-phase' current and voltage outputs and only requires  $\pm 5$ V supply rails to operate. It comes complete with an internal reference and optional MSB adjustability for even greater THD performance, over and above the -92dB achievable without the external adjustment. This low maximum harmonic distortion figure, plus noise, is 100% tested. The IC is also very fast, capable of 16 times oversampling rates on both channels simultaneously, allowing very simple output filters to be used which will introduce the minimum additional distortion and phase shift. For compact disc reproduction, this IC is intended to be driven by the DF1700, which will expand the 16-bit CD data stream to 18 bits with 8 times oversampling added. The PCM1700 includes on-chip op-amps to convert the left and right channel current outputs to signal voltages. Alternatively the current outputs can be accessed directly for externally added op-amp ICs of the designer's choice. Total power dissipation is less than 400mW

maximum and the IC runs from  $\pm 5$ V supply rails. (See also DF1700.)

### Specification

Resolution: 18 bits  
 Dynamic range: 108dB  
 Input data format: serial BTC  
 Input clock frequency: 16.9MHz  
 Total Harmonic Distortion, + noise: -88dB @ 0dB output  
 Channel separation: 108dB  
 Signal to noise ratio: 108dB  
 Gain error:  $\pm 1\%$   
 Gain mismatch:  $\pm 1\%$   
 Bipolar zero error: 10mV  
 BPZ error mismatch: 5mV  
 Gain drift: 100ppm/ $^{\circ}$ C  
 Bipolar zero drift: 20ppm of FSR/ $^{\circ}$ C  
 Warm-up time: 1 minute  
 Voltage output range:  $\pm 3$ V (using internal op-amps)  
 Voltage output impedance: 0.1 $\Omega$   
 Voltage output current:  $\pm 8$ mA max.  
 Current output range:  $\pm 670\mu$ A  $\pm 2\%$   
 Current output impedance: 1.67k $\Omega$   $\pm 2\%$   
 Supply voltage:  $\pm 4.75$  to 5.25V (plus  $\pm 15$ V for external op-amp filters)  
 Supply current: +40mA and -16mA

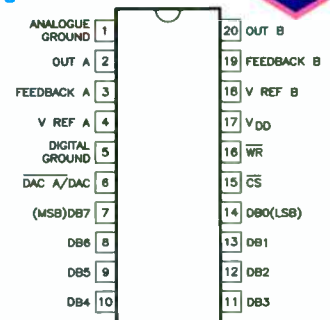

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## PM7528HP Dual 8-Bit D/A Converter

Analog Devices

NEW LOW PRICE

Two 8-bit multiplying digital to analogue converters in one package. Excellent DAC to DAC matching and tracking is achieved. Digital input data is directed into the latches of one of the DACs according to the condition on pin 6. The chip is TTL and CMOS compatible and the data load cycle is similar to the write cycle of a RAM.

### Specification (typical at 25 $^{\circ}$ C)

Supply voltage: +5V to +15V  
 Non-linearity:  $\pm 1$  LSB max  
 Settling time: 350ns at 5V, 180ns at 15V  
 Supply current: 1mA

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each

## TLC548IP A to D Peripheral With Serial Control

Texas Instruments

TLC548

The TLC548 is an A/D peripheral IC built around an 8-bit, switched-capacitor, successive-approximation ADC. It is designed for serial interface with a microprocessor or peripheral through a 3-state data output and an analogue input. The device uses only the I/O clock input, along with the Chip Select (CS) input for data control. The maximum clock I/O frequency is guaranteed to be up to 2.048MHz. Operation is very similar to that of more complex ADCs, however, the TLC548 provides an on-chip system clock allowing internal device operation to proceed independently of serial input/output data timing, and permits manipulation of the device as desired for a wide range of software and hardware requirements. The I/O clock, together with the internal system clock, allows high-speed data transfer and conversion rates of 45,500 conversions per second.

Additional features include versatile control logic, an on-chip sample-and-hold circuit that can operate automatically or under microprocessor control, and a high-speed converter with differential high-impedance reference voltage inputs that ease ratiometric conversion, scaling and circuit isolation from logic and supply noise. The design of the totally switched-capacitor successive-approximation converter circuit allows conversion with a maximum total error of  $\pm 0.5$  least significant bits (LSB) in less than 17 $\mu$ s. Operating temperature range is  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . The device is encapsulated in an 8-pin DIL package.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

GX06G	TLC548IP	£1.940 10+ £1.610 25+ £1.500 100+	£3.870 1+

## ZN425E8 8-Bit D/A and A/D Converter

GEC-Plessey

425

An 8-bit D/A converter also containing a counter and a 2.5V precision voltage reference. By including an 8-bit counter, analogue to digital conversion can be obtained simply by adding an external comparator and clock inhibit gating (7400). By simply clocking the counter, the IC can be used as a self-contained precision ramp generator.

### Characteristics (typical)

Supply voltage	4.5 to 5.5V
Settling time	1 $\mu$ s
Voltage reference	2.55V
Non-linearity	$\pm 0.5$ LSB
Analogue output resistance	10k $\Omega$
Counter clock frequency	5MHz max
Supply current	25mA

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UF38R	ZN425E-8	£5.050 10+ £4.620 25+ £4.310 100+	£7.790 1+

## A/D CONVERTER DISPLAY DRIVERS

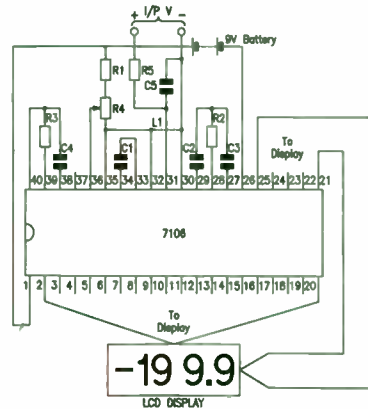

### ICL7106CPL, ICL7107CPL Analogue to Digital Converter/Display Drivers

Harris

These two ICs are high performance, low power  $3\frac{1}{2}$  digit A/D converters. The input requires about 1pA typically. Other features are guaranteed zero reading for 0 volts input on all scales; true polarity at zero for precise null detection; true differential input and reference; low-noise; on chip clock and reference; low supply current 0.8mA typical. The output of the 7106 will drive LCD displays directly and a +9V supply is required at pin 1 and ground at pin 26. This IC is ideally suited for battery operation since it requires only 0.8mA supply current. The output of the 7107 will drive LED displays directly and a +5V supply is required at pin 1, -5V at pin 26 and ground at pin 21. Accuracy  $\pm 1$  count in  $\pm 2000$  counts guaranteed.

### Display Driver and Thermometer PCB

A printed circuit board is available for use with the 7106 or 7107. The same printed circuit may be used to produce a  $\pm 1.999\text{V}$  (2V) voltmeter, a  $\pm 0.1999$

LCD Digital Panel Meter  
200mV/2V Full Scale Deflection

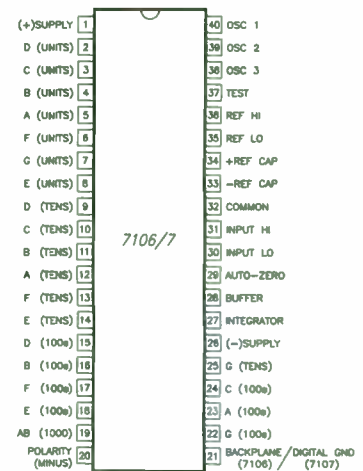

(200mV) voltmeter or a thermometer using the LM35CZ or LM35DZ ICs shown on page XXX, with either an LED or LCD. A leaflet is supplied with every PCB, which shows how to build and calibrate all four projects.

## MAX7219CNG Serial 8-Digit LED Display Driver

MAXim

MAX7219

The MAX7219 is a compact, serial input/output common-cathode driver that will interface microprocessors ( $\mu$ Ps) to 7-segment numeric LED displays of upto 8-digits, bargraph displays or 64 individual LEDs. The device has a BCD code-B decoder, multiplex scan circuitry, segment and digit drivers, and an 8 x 8 static RAM that stores each digit. The segment current for all LEDs is set by just one external resistor.

A 10MHz 3-wire serial interface connects to all common  $\mu$ Ps, and allows individual digits to be updated without rewriting the entire display. Code-B decoding or no-decode can be selected for each digit.

A 150 $\mu$ A low-power shutdown mode is included that will retain data, as well as analog and digital brightness control, a scan-limit register which allows from 1 to 8 digits to be displayed, and a test mode which forces all LEDs on. Supplied in a 24-pin narrow plastic DIP package.

### Specification

Power supply: 5V/300mA all segments and decimal point on  
Shutdown supply current: 150 $\mu$ A max  
Display scan rate: 2kHz max  
Digit drive sink current: 320mA min  
Clock/serial output propagation delay: 2.25ms

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## F/V & V/F CONVERTERS

### RC4152N Voltage to Frequency Converter

Raytheon

A simple analogue to digital (A/D) converter which is very low cost yet has precision linearity typically  $\pm 0.05\%$  with e.g. LF351 used as an integrator, or a linearity or typically 1% on its own. The output of

the 4152 is a series of pulses of constant duration whose frequency is proportional to the applied input voltage. Supply voltage range is +7V to +18V, temperature stability is  $\pm 75$ ppm/ $^{\circ}$ C and the device has a high noise rejection ratio. Max output sink current: 20mA, open collector output. Supply current 2.5mA.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2404	Price each exc. VAT	inc. VAT each
UR17T	RC4152N	£3.650 10+ £3.510 25+ £3.410 100+	£5.780 1+

### LM331N Voltage to Frequency Converter

National Semiconductor

A voltage to frequency converter IC which is ideally suited for use in simple low-cost circuits for A/D conversion, F/V conversion, linear frequency modulation or demodulation and many other functions.

The output when used as a V/F converter is a pulse train at a frequency precisely proportional to the applied input voltage. Features include: full scale frequencies from 1Hz to 100kHz attainable; dynamic range of 100dB at 10kHz full scale; non-linearity typically  $\pm 0.003\%$  full scale; and excellent temperature stability typically  $\pm 30$ ppm/ $^{\circ}$ C.

### Specification (typical at 25 $^{\circ}$ C)

Supply voltage: 4.5V to 40V  
Scale factor: 1kHz/V  
Output current: 136 $\mu$ A  
Operating range of current: 10 to 500 $\mu$ A  
Reference voltage (pin 2): 1.89V  
Supply current: 3mA at  $V_S = 5$ V  
4mA at  $V_S = 40$ V

### LM2917N Frequency to Voltage Converter

National Semiconductor

This 14-pin DIL IC is extremely easy to use since  $V_{OUT} = F_{IN} \times V_{CC} \times VR1 \times C2$  where VR1 is the resistance between pin 3 and ground and C2 is the capacitor (in Farads) between pin 2 and ground. Features include ground referenced tachometer whose input interfaces directly with magnetic variable reluctance pick-ups; 2917 op-amp comparator with floating relays, solenoids, meters or LEDs etc; frequency doubling with low ripple; tachometer with built-in hysteresis for either differential or ground referenced input; built-in zener for accurate and stable frequency to current conversion and linearity typically  $\pm 0.3\%$ . Applications include over/under speed sensing, tachometers, speedometers, breaker point dwell meters, hand-held tachometers, speed governors, cruise control, touch or sound switches etc.

## HT3015 Latin Rhythm Generator

**Hoitek**

A low-cost 15-latin rhythm generator IC that is based on eight percussion instruments, and is triggered by 16-keys - KEY1 being a sequential select key. The device is ideal for toys and sound effects generators as it requires very few external components and includes a 3Hz flash rate LED driver output. The audio output will directly drive a single transistor amplifier for driving a small 8Ω loudspeaker. The IC features an in-built oscillator, that is set by one external resistor, and a typical standby current of 1µA. Requires a 2.4V to 5V DC supply rail. Supplied in 24-pin DIL package.

## HT3421A 41-Key Multi Function Piano with Memory

Holtek

A 41-key (G2 to B5) musical instrument CMOS IC that provides eight rhythms, eight instruments, four drum, 12-demo songs and a 62-note memory function. The 'input' is via a 12 x 7 matrix keypad/keyboard that will control basic keys and functions. Vibrato and sustain effects can also be selected. A 16-level tempo is included which is controlled by the 'Tmp up/down' keys, and at power-on, the tempo is set to level 8. An output is provided to flash an LED in time with the selected tempo. In memory mode (indicated by an LED) the device can replay a stored 62-note song by pressing the 'replay key' or by pressing OKP1 (or OKP2) to replay the song note by note. In 'Demo' mode, one of 12 demonstration songs can be played using any of the eight instruments. The IC will operate from a 2.4V to 5V DC supply, and other features include a 512kHz system frequency, a power ON/OFF toggle input and power-down if there is no key input after 5 minutes. Supplied in a 40-pin DIL package

## OHT82142/HT3090 Drum/Rhythm Generators

Holtek

A pair of CMOS LSI devices especially designed for drum/rhythm generator applications. HT82142 generates the drum sounds and provides the audio output while HT3090 creates various timing signals and demonstration rhythms. When used together, the combination will produce four drum sounds, nine demonstration rhythms, with seven levels of tempo speed, and an audio output that will drive a single transistor amplifier. The ICs will operate from a 2.4V to 4.5V DC supply and have a very low stand-by current, typically 1μA with a 3V DC supply. Two LED outputs are provided - LED1 will flash at the tempo rate and LED2 will flash at a constant 4Hz. HT8142 is supplied in a 16-pin DIL package, and HT3090 is supplied in a 24-pin DIL package.

## E510 Keyboard Scanner for Touch Sensitive Keyboards

A fully polyphonic, fast keyboard scanner with serial data output to MIDI specifications. Up to 128 keys (>10 octaves) can be scanned, each touch sensitive with a resolution of 128µs (256µs with a 4MHz clock). The speed is measured on pressing or releasing each key and the chip incorporates debounce circuitry. The IC is HCMOS compatible, has integrated oscillator, FIFO, and can select MIDI channel number, and only a few external components are required. With a clock rate of 4MHz, the output baud rate is 31250 baud. Every time a key is pressed or released, the velocity is calculated by measuring the time with a 7-bit reverse-counting counter. At the same time every press and release is tested for validity. The key is only recognised if it goes from pin 10 to pin 11 or vice versa and thus key bounce is eliminated. An internal FIFO register allows fully polyphonic playing and thus several keys can be pressed simultaneously. The output transmits according to the MIDI specification, the key number, the key velocity, whether the key is on or off and which MIDI channel it is to go to. Close SW1 to transmit to channel 1.

An external clock between 4MHz and 8MHz can be connected to pin 15, in which case pin 14 is left open circuit. If an 8MHz crystal is used, the output rate will be 62500 baud.

**Specification**  
Supply voltage: 5V ±5%  
Supply current: 5mA  
Max clock rate: 8MHz

## HT3490 49-Key, 8-Channel Tone Generators

Holtek

A 49-key CMOS keyboard IC covering octaves C3 to C7 with the addition of eight independent tone generators, four instruments and vibrato function. The IC can easily be interfaced with other circuits to include rhythm and chord functions. The device uses an external 3.575945MHz resonator which gives very accurate and stable tone generator outputs and will operate from a 2.4V to 5V DC supply. A warning sound is emitted after 140s if there is no key entry. Supplied in a 48-pin DIL package.

### Key Name Description

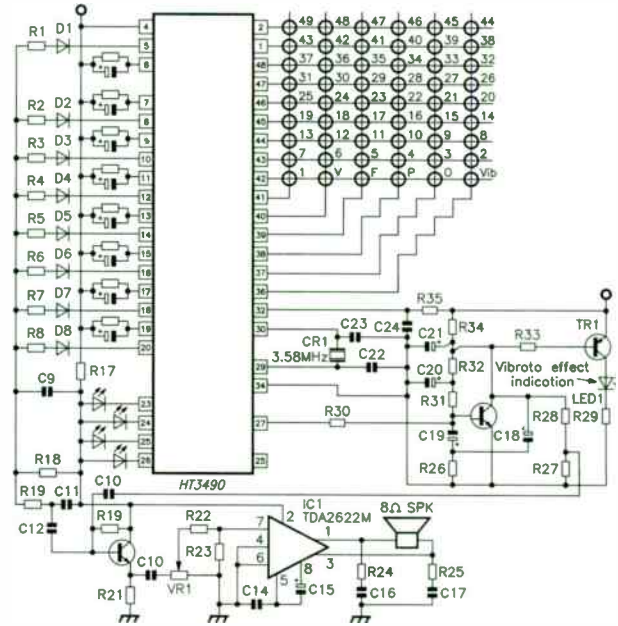

K1 to K49	Scale from C3 to C7 for flute. There are 29 full-scale and 20 chromatic scale keys
V	Violin instrument
F	Flute instrument
P	Piano instrument
O	Organ instrument
Vib	Vibrato effect ON/OFF toggle select. Set OFF at power-on

### Suggested Parts List

## HT381xx Series Melody Generators

Holtek

Bottom view

A range of melody generator ICs in a standard 3-pin TO-92 plastic package - ideal for greetings cards, toys and other novelty devices. The ICs can directly drive a small piezo electric sounder, although higher quality sound can be obtained by using a small 8Ω speaker driven by a NPN transistor. Designed to operate from a 2.4V to 5V DC power supply.

## M66T Simple Melody Generator

A low power CMOS LSI device for generating tunes for melody cards, toys and other novelty devices. The built-in oscillator and powerful driving capability

minimises the number of external components required, in fact, all that is additionally needed is a 1.5V battery, a switch and an 8Ω speaker. The device can be powered from a wide range of supply voltages from 1.2V to 3.6V with low power consumption (note that the internal oscillator needs 1.3V to start).

One of five different tunes or tune combinations are available in a single device, as follows:

Type	Tune	Duration,
M66T-02B	Twinkle Twinkle Little Star	16.4sec
M66T-36	Old McDonald Had a Farm	24.8sec
M66T-205	I'd Like To Teach The World To Sing	20.4sec
M66T-214	White Christmas	49.5sec
M66T-215	Warning Tone	10.8sec

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## UM66 Melody Generator

UMC

A simple melody generator IC as used in musical greetings cards. A complete melody generator can be made by adding just a piezo transducer and a 1.5V battery. After connecting the battery, the tune will play once and stop. The voltage must be disconnected then reconnected to retrigger the IC.

### Specification (V<sub>SS</sub> = 0V)

Operating voltage (V <sub>DD</sub> )	1.3V to 3.3V
Standby current	<1µA
Operating current	<60µA (no load)
Output current	±1.5mA
Type	UM66T09
Tune	Wedding March

## HT82231 Sound Effects Generator

Holtek

A PCM speech synthesis chip with a variety of programmed sound effects including various animal and farmyard sounds - elephant, cock, hen, frog, dog, sheep, cat, horse, duck, bird, pig and cow. Outputs are also provided for two LEDs for indicating audio output level and a 2Hz flash signal while in the busy state. Many applications in novelty and children's toys, etc. Other features include low stand-by current of 1µA, minimum of external components and simple

operation.

### Specification

Operating voltage, V <sub>CC</sub> :	2.4V to 5V, 3V typ
Operating current (No load), I <sub>op</sub> :	100µA to 300µA
(at V <sub>CC</sub> =3V)	
Audio output, I <sub>o</sub> :	2mA typ
High-input voltage, V <sub>IH</sub> :	0.7V
Low-input voltage, V <sub>IL</sub> :	0.3V
Active-low input pulse width:	200µs min
Operating temperature, T <sub>A</sub> :	0°C to 70°C

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## HT282xx Series 2-Sound Generators

Holtek

A range of simple two-sound generator ICs offering low-cost sound effects for toys, novelties etc. The sounds are selected via a simple two transistor amplifier driving a small 8Ω loudspeaker. Additionally, the HT2821E can drive a small piezo electric sounder, if preferred, and has an LED driver output. Operating from a 2.4V to 4.5V (3.3V for HT2821E) DC power supply, these devices have a typical stand-by current of just 1µA at 3V, auto power-off and built-in envelope circuit. Supplied in a 14-pin DIL package.

Order Code	Device	Sound Effect
AZ44X	HT28201	2 x Motor Cycle
AZ45Y	HT2821E	1 x Brake, 1 x Explosion

Note that LED1 and R3 are only required for the HT2821E.

### Suggested Parts List

## HT281x Series Sound Generators

**Holtek**

A range of low cost single sound ICs providing a selection of typical sounds. Easy to use, these ICs require a minimum of external components to make a compact system including a small loudspeaker. The devices will operate from a 2.4V to 3.3V DC supply and have a typical stand-by current of 1µA at 3V. If required, the ICs can drive a small piezo electric sounder direct. Featuring a built-in envelope control and auto power-off, these devices are ideal for toys and novelties. Supplied in a 8-pin (HT2810) or 14-pin (HT2812) DIL package.

Order Code	Device	Generated Sound

## HT2844P 4-Jet Sounds Generator

**Holtek**

This simple, fun 4-jet sounds generator IC has a output that will directly drive a small piezo sounder or a small loudspeaker via a single transistor amplifier. The different sounds are selected by four push switches, and an LED can be made to flash when the device is generating a sound. The IC is designed to operate from a 3V DC supply with a typical standby current of only 1µA, and features auto power-off. Supplied in a 16-pin DIL package.

### Suggested Parts List

## HT2830C Train Sound Generator

**Holtek**

A CMOS LSI train sound generator chip with variable speed and the added advantage of either a bell or horn sound effect that can directly drive a piezo sounder (FM59P). The device will work from a 3V supply and has a typical standby current of 1µA. Two LEDs can be driven by a suitable series resistor, with a flash rate dependent on the speed selected. An audio output is provided to drive a small loudspeaker via a simple, single transistor amplifier. If an amplified output is not required, then a piezo sounder can be connected across pins 15 and 16. SW2 and 3 are used to increase or decrease the train sound speed. The device has a very low external component count, making it ideal for model railways and sound effects generators. Supplied in an 18-pin DIL package.

### Suggested Parts List

R1	Min Res 82k	(M82K)

## HT2883 Series Sound Generators

**Holtek**

Each device in this range of low cost sound generator ICs produce eight different sounds, such as tunes, explosions etc., based on a specific theme. Working from a typical DC supply of 3V, each device has a very low stand-by current of 1µA, and features auto power-off. The eight sounds can be keyed independently with the option of either a 'one-shot' or continuous for each key press. Alternatively, the sounds can be scanned sequentially. The output can directly drive a small piezo electric sounder, or with just one transistor and one resistor, can drive a small loudspeaker. Supplied in a 16-pin DIL package.

### Order Device Sounds

AZ49D	HT2883E	8 Types of Submarine War Sounds

## HT2884 8-Sounds Generator with 5-LED Outputs

Holtek

A low-cost eight sound (five different sounds plus variations) generator IC with five LED indicators in a 16-pin DIL package. The sounds are selected by two push button switches either 'serially' or 'automatically'. The five LEDs will flash sequentially in synchronism with the five different sounds. The device can directly drive a small piezo sounder if required. Operating from a 2.2V to 5V DC power supply, the device has a typical stand-by current of just 1µA at 3V, auto power-off and built-in oscillator.

### Types of Sounds

- 2 x Laser Gun
- 1 x Dual Tone
- 2 x Bombs
- 2 x Machine Guns
- 1 x Rifle

## MC34217P Tone Ringer

Motorola

RECENTLY INTRODUCED

The MC34217P provides a simple and effective alternative to a telephone bell, requiring few external components. The IC features on-chip diode bridge, internal transient protection and a differential output feed for a piezo sounder. The Base and warble frequencies can be independently adjusted. Power is derived from the line and any 'hook switch' or 'rotary dial' transients are automatically rejected. Supplied in an 8-pin DIL package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
GS12N	MC34217P	£0.750	£0.600

## HT-2811

Holtek

The HT-2811 is a CMOS LSI chip specifically designed to provide the 'ding dong' chime of a doorbell. It produces a high quality dual tone sound and requires little in the way of external components to produce a compact, low cost door bell. Features include CMOS metal-gate process, operating voltage in the range of 2.4 to 3.3V with low stand-by current and excellent sound quality with an envelope adjustable by external RC.

## HT-2860 Alarm Sounds Generator

A versatile sound chip capable of six different alarm sounds, including 4 various alarm sounds, a horn and an ambulance sound. Each of the six sounds can either be played independently by triggering one of the keys (K1 to K6), or can be cascaded, according to the key priorities (K1 to K6 from high to low), by triggering more than one key simultaneously. The device can directly drive a piezo transducer connected to pins 17 and 18, or can be modified for loudspeaker output on pin 17 (see diagram). Only a few components are needed to produce a working design. Simply connect a 120kΩ resistor between pins 1 and 2, and a 560kΩ resistor between pins 2 and 5. Similarly, connect a 1000pF capacitor between pins 13 and 14. Pins 7 to 12 trigger the different alarm sounds, with power to pin 6 and ground to pin 13.

A suitable piezo sounder can now be connected between pins 17 and 18 for sound output. Additionally, pin 4 can source enough current to drive an LED via a suitable series resistor.

The device requires a 2.4V to 4.5V DC supply and has a typical 1µA standby current with a 3V supply, and features auto power. Supplied in 18-pin DIL package.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
AE15R	HT2860B	£0.619	£0.495

## UM3561 Sound Effects Generator

UMC

A simple sound generator IC that can produce four sound effects. Designed for use in toys, the effects are selected by varying the connections to pins 1 and 6 as follows:

3561

Pin 1	Pin 6	Sound effect
No connection	No connection	Police siren
No connection	VDD	Fire engine siren
No connection	VSS	Ambulance siren
VDD	Anything	Machine gun

### Specification

Supply voltage	3V (2.4V to 3.6V)
Operating current	150µA
Output current	>3mA

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each

## HT281x Series Sound Generators

Holtek

A range of low cost single sound ICs providing a selection of typical sounds. Easy to use, these ICs require a minimum of external components to make a compact system including a small loudspeaker. The devices will operate from a 2.4V to 3.3V DC supply and have a typical stand-by current of 1µA at 3V. If required, the ICs can drive a small piezo electric sounder direct. Featuring a built-in envelope control and auto power-off, these devices are ideal for toys and novelties. Supplied in a 8-pin (HT2810) or 14-pin (HT2812) DIL package.

## ICL8038CCPD Waveform Generator

Harris

A 14-pin DIL IC capable of producing sine, square, triangular, sawtooth and pulse waveforms of high accuracy and stability. The frequency may be selected to be from 0.001Hz to 1MHz, Frequency modulation and sweeping can be accomplished with an external voltage and the frequency can be programmed digitally by resistors or capacitors. Sweep range can be up to 40:1 or 1000:1 with a little less quality.

The circuit shows a sine, triangle and square wave generator. SW1 is the range switch, SW2 sets the waveshape, VR4 sets the output level and VR3 is the frequency control. VR1 and VR2 should be adjusted to give minimum distortion of sine wave.

**Specification**

Supply voltage: 5-0.5V to 10-0.10V (e.g. 2 x PP3 batteries)

Output impedance: 600Ω  
Output levels max peak-to-peak:  
sinewave: (V<sub>S</sub> = 7.5-0.7-5V)  
triangle: 3V  
square: 5V  
12V

## MAX038CPP

Maxim

The MAX038CPP is a high frequency, precision function generator producing accurate, high frequency triangle, sawtooth, sine, square and pulse waveforms with the minimum of external components. The output frequency can be controlled over a frequency range of 0.1Hz to 20MHz by an internal 2.5V bandgap voltage reference and an external resistor and capacitor. The duty cycle can be varied over a wide range by applying a ±2.3V control signal, facilitating pulse width modulation and frequency sweeping are

achieved in the same way. The duty cycle and frequency controls are independent. Sine, square and triangle waveforms are selected by setting the appropriate code at two TTL-compatible select pins. The output signal for all waveforms is a 2V pk-pk signal that is symmetrical about ground. The low impedance output can drive up to ±20mA. The TTL compatible 'SYNC' output from the internal oscillator maintains a 50% duty cycle, regardless of the duty cycle of the other waveforms. This allows synchronisation with other devices in the system. The internal oscillator can be synchronised to an external TTL clock connected to pin 13. Supplied in 20-pin DIL plastic package.

**Specification**

Power supply: ±5V DC typical  
Typical supply current: +35mA, -45mA  
Operating frequency: 40MHz max.  
Frequency temperature coefficient (V<sub>FADJ</sub>=-3V): 200ppm/°C  
Output amplifier symmetry: ±4mV  
resistance: 0.1Ω  
short circuit current: 40mA to gnd  
Waveform output: 2V pk-pk  
Square wave rise time 10% - 90%: 12ns  
fall time 90% to 10%: 12ns  
Duty cycle: 50%  
Triangle nonlinearity: 0.5%  
duty cycle: 50%  
Sinewave THD 50% duty cycle: 0.75%  
unadjusted duty cycle: 1.5%  
Simple sinewave generator 50% duty cycle

## NE566N Function Generator

Philips

### Features

- ★ Wide range of operating voltage (10 to 24V or  $\pm 5V$  to  $\pm 12V$ )
- ★ Very high linearity of modulation
- ★ Extremely stable frequency (200ppm/°C typical)
- ★ Highly linear triangle wave output
- ★ High accuracy square wave output
- ★ Frequency determined by resistor, capacitor, voltage or current
- ★ Frequency adjustable over 10 to 1 range with same capacitor

### Applications

- ★ Tone generators
- ★ Frequency shift keying
- ★ FM modulators
- ★ Clock generators
- ★ Signal generators
- ★ Function generators

566

The control voltage  $V_C$  must be between  $3/4V^+$  and  $V^+$ . The modulating signal should be applied to pin 5 via a suitable capacitor C2 or directly if the bias voltage remains within the limits. The frequency is given by:

$$f = \frac{2[(V^+) - (V_C)]}{R1 \cdot C1 \cdot V^+}$$

and R1 should be in the range 2k to 20k.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## AD8013AN Low Power Triple Video Amplifier

Analog Devices

AD8013

### Features

- ★ Drives large capacitive loads
- ★ Excellent video specification
- ★ Low power - +5V to +13V supplies, 4mA/amp max
- ★ High speed 140MHz unity gain bandwidth
- ★ Fast settling time

### Applications

- ★ Broadcast and professional video
- ★ RGB amplifier in component systems
- ★ Video line driver
- ★ Computer video plug-in boards
- ★ Consumer video
- ★ LCD displays

The AD8013 is a low power triple video amplifier, with each amplifier capable of delivering 30mA of output current, and optimised for driving one back terminated video load (150Ω). Each amplifier is a current feedback type and offers a gain flatness of 0.1dB to 60MHz, a differential gain of 0.02% and phase error of 0.06%. The device is ideal for broadcast and professional video electronics.

The IC is unique in that it can drive large capacitive loads and still maintain rapid settling times. It can settle in 18ns driving resistive loads, and achieve 40ns (0.1%) settling

while driving 200pF loads.

The outstanding bandwidth of 140MHz, along with 1000V/μs slew rate, make the AD8013 extremely useful in many general purpose high speed applications where a single +5V or dual supplies are required. The high speed disable function can be used to power down the amplifier, or to put the output in to a high impedance state - this can be useful in video multiplexing applications.

### Specification

## MAX455CPP CMOS Video Multiplexer/Amplifier

Maxim

The MAX455 is an 8-channel multiplexer with a unity gain stable, 50MHz video amplifier capable of driving a 75Ω load directly. Into a 75Ω load, the amplifier will swing  $\pm 1V$ , and into 150Ω load will

swing  $\pm 2V$ . The amplifier is unity gain stable and does not require any external frequency compensation components. Gain is set by two external resistors. Since the device is connected as a non-inverting amplifier, the minimum closed-loop gain is 0dB, which is the normal mode of operation. With a closed-loop gain of 0dB or +6dB (1V/V or 2V/V) the guaranteed minimum bandwidth is 25MHz. The device operates from a  $\pm 5V$  supply and typically consumes only 250mW.

Supplied in an 20-pin DIL package.

### Specification

Power supply:	$\pm 5V$ typ
Input voltage range amplifier:	-2V to +2V
Input voltage range multiplexer:	-2V to +2V
Input offset voltage:	2mV typ
Offset voltage drift:	20μV/°C
Open-loop voltage gain 75Ω load:	38V/V
150Ω load:	70V/V
CMRR:	80dB
PSRR:	66dB

## ADV471KP50 Monolithic 256 x 18 Colour Palette RAM-DAC

Analog Devices

### Features

- ★ Personal System/2 compatible
- ★ 50MHz pipelined operation
- ★ Triple 6-bit DACs
- ★ 15 x 18 overlay registers
- ★ 256 x 18 colour palette RAM
- ★ RS-343A/RS-170 compatible outputs
- ★ Standard MPU interface
- ★ Sync on all three channels

### Applications

- ★ High resolution colour graphics
- ★ CAE/CAD/CAM applications
- ★ Image processing
- ★ Instrumentation
- ★ Desktop publishing

The ADV471 is a pin and software compatible RAM-DAC specifically designed for Personal System/2 compatible colour graphics. The device features a 256 x 18 colour lock-up table with triple 6-bit video

DACs, programmable pedestal (0 or 7.5 IRE) and the ability to use an external voltage or current reference. Voltage reference has the advantage of temperature compensation, simplicity, lower cost, and provides excellent power supply rejection. The 15 overlay registers provide for overlaying cursors, grids, menus, EGA emulation etc., and also supported is a pixel read mask register and sync generation on all three channels.

The ADV471 will generate RS-343A compatible video signals into a doubly terminated 75Ω load, and RS-170 compatible signals into a singly terminated 75Ω load - without the need for external buffering. Supplied in a 44-pin PLCC package.

**Specification**

Power supply: +5V at 180mA typ  
Power dissipation: 900mW typ  
Resolution: 6-bits each DAC

## ADV476KN35 256 x 18 Colour Palette RAM-DAC

Analog Devices

**Features**

- ★ Personal System/2 and VGA compatible
- ★ 35MHz pipelined operation
- ★ Three 6-bit DACs
- ★ 256 x 18 colour palette RAM
- ★ RS-343A/RS-170 compatible outputs
- ★ Standard MPU interface.
- ★ Plug-in replacement for INMOS 171/176
- ★ Blanking on all three channels

**Applications**

- ★ High resolution colour graphics
- ★ CAE/CAD/CAM applications
- ★ Image processing
- ★ Instrumentation
- ★ Desktop publishing

The ADV476 is a pin and software compatible,

single monolithic RAM-DAC designed specifically for VGA and Personal System/2 colour graphics.

The device contains a 256 x 18 colour lookup table, a pixel mask register and a triple 6-bit video DAC. It is capable of simultaneously displaying up to 256 colours, from a total colour palette of 262,144 addressable codes. The on-chip asynchronous MPU bus allows access to the colour lookup table without affecting the input video data via the pixel port. The pixel read mask register provides a convenient way of altering the displayed colours without updating the colour lookup table. The device can generate RGB video output signals which are compatible with RS-343A and RS-170 video standards, without the need for external buffering. Supplied in a 28-pin DIL package

**Specification**

Power supply: 5V typ, 220mA max  
Resolution: 6-bits each DAC  
Accuracy each DAC  
integral nonlinearity: ±0.5 LSB max (monotonic)  
full scale error: ±5% max

## AD9300KQ 4 x 1 Wideband Video Multiplexer

Analog Devices

- ★ 34MHz full power bandwidth
- ★ ±0.1dB gain flatness to 8MHz
- ★ 72dB crosstalk rejection at 10MHz
- ★ Excellent differential gain and phase

This monolithic, high-speed video signal multiplexer is suitable for a wide range of applications including video routing, medical imaging, electro-optics, radar systems, data acquisitions etc.

The four video input signal channels can be randomly switched at megahertz rates to the single output. Additionally, multiple devices can be configured in either parallel or cascade arrangements to form switch matrices. The device goes into

a high impedance state when not enabled, and when enabled, the IC acts as a buffer with high input impedance and low output impedance.

An advanced bipolar process provides fast, wideband switching capabilities, while maintaining excellent crosstalk and full power bandwidth figures. The device can operate from ±10V to ±15V supplies and is housed in a 16-pin ceramic DIP (Cerdip) package.

**Specification**

Power supply: ±12V typ, ±16mA max  
I/P offset voltage: 14mV max  
I/P offset voltage drift: 75μV/°C  
DC linearity: 0.01% typ

## AD810AN Low-Power Video Op-Amp

Analog Devices

AD810

The AD810 is a composite and HDTV compatible, current feedback, video op-amp that is ideal for use in multimedia, digital tape recorders, video cameras and broadcast quality video systems.

The device requires only 8mA max, and in the disable mode this drops to 2.1mA, making the IC particularly suited to battery power applications. The IC requires a power supply in the range ±5V to ±15V, and works well as an ADC or DAC buffer in video systems due to its unity gain bandwidth of 80MHz. The AD810 is a transimpedance amplifier. so this bandwidth can be maintained over a wide range of gains, and features a low noise of 2.9nV/√Hz for wide dynamic range applications. Supplied in a 8-pin DIL plastic package.

**Specification (V<sub>S</sub> = ±15V, R<sub>L</sub> = 150Ω)**

Power supply: ±2.5V to ±18V  
Supply current: 8mA max  
CMRR: 64dB typ  
PSRR: 72dB typ

## LM1201 Video Amplifier IC

A wideband video amplifier system intended for high resolution monochrome or RGB monitor applications. Features include a gated differential input black level clamp comparator for brightness control and an attenuator circuit for contrast control. The device also contains an internal voltage reference for the video input.

### Features

- ★ Wide video bandwidth 200MHz @ -3dB
  - ★ Attenuator circuit for contrast control (>40dB range)
  - ★ Externally gated comparator for brightness control
  - ★ Provisions for external gain set and peaking of video amplifier
  - ★ Video input voltage reference
  - ★ Low impedance output driver
- Typical Applications**
- ★ CRT video amplifiers
  - ★ Video switches
  - ★ High frequency video preamplifiers
  - ★ Wideband gain controls
  - ★ PC monitors
  - ★ Workstations
  - ★ Facsimile machines
  - ★ Printers

### Specification

Supply voltage:	13.5V DC
Supply current:	45mA typ.
Video input reference voltage:	2.65V typ.
Video input bias current:	5µA
Video amplifier gain:	8V/V
Video amplifier distortion:	0.3%
Video amplifier bandwidth:	200MHz typ.

## LM1203 Video Amplifier IC

The LM1203 is a wideband video amplifier system intended for high resolution RGB colour monitor applications. In addition to three matched video amplifiers, the LM1203 contains three gated differential input black level clamp comparators for brightness control and three matched attenuator circuits for contrast control. Each video amplifier contains a gain set or 'Drive' node for setting maximum system gain (between 4 and 10), as well as providing trim capability. The LM1203 also contains a voltage reference for the video inputs.

### Features

- ★ Three wideband video amplifiers (70MHz @ -3dB)
- ★ Inherently matched (0.1dB or 1.2%) attenuators for contrast control

- ★ Three externally gated comparators for brightness control
- ★ Provisions for independent gain control (Drive) of each video amplifier
- ★ Video input voltage reference
- ★ Low impedance output driver

### Typical Applications

- ★ CRT video amplifiers
- ★ Video switches
- ★ High frequency video preamplifiers
- ★ Wideband gain controls
- ★ PC monitors
- ★ Workstations
- ★ Facsimile machines
- ★ Printers

### Specification

## EL4089CN Low Power DC Restore Amplifier

Elantec

4089

A complete monolithic, DC-restored video amplifier sub-system containing a high quality video amplifier and a nulling, sample-and-hold amplifier specifically designed to stabilise video performance. When the HOLD logic level input is set to a TTL/CMOS logic 0 during a horizontal synchronisation pulse, the sample-and-hold amplifier can be used to null the DC offset of the video amplifier. When the HOLD input goes to a TTL/CMOS logic 1, the correcting voltage is stored on the video amplifier's input coupling capacitor. The correction voltage can be further corrected as need be, at the sync pulse of each line. The device is optimised for video performance and low power consumption and its current feedback design allows essentially the same bandwidth over a gain range of nearly 10:1 to be maintained. It is capable of driving back-terminated 75Ω lines.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2535	Price each exc. VAT			inc. VAT each
		10+	25+	100+	1+

## EL4094CN 8-Pin Video Fader/Gain Control

Elantec

4094

A complete two-input video gain control/fader IC which combines its two inputs according to the equation  $V_{OUT} = V_{INA} (0.5V + V_G) + V_{INB} (0.5V - V_G)$ , and where  $V_G$  is the difference between the non-inverting and inverting  $V_{GAIN}$  pin voltages, which can range from -0.5V to +0.5V. The device has a wide 65MHz bandwidth at -3dB, and is designed for

excellent video distortion performance. The EL4094CN is the same circuit as that of the EL4095CN, but with feedback resistors included on-chip to implement unity-gain connection. An output buffer is included and the gain control input is also very fast with a 30MHz small-signal bandwidth and 100ns recovery time. The device is compatible with power supplies from ±5V to ±15V and a supply current of 14mA.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## EL4095CN Fader Gain Control with Switches

Elantec

4095

A versatile video gain control/fader/multiplexer block with at its core a fader which can variably blend two inputs together, and an output amplifier that can drive heavy loads. Each input appears as the input of a current-feedback amplifier, and with external resistors, can separately provide any gain required. The output is defined as  $V_{OUT} = A \times V_{INA} (0.5V + V_{GAIN}) + B \times V_{INB} (0.5V - V_{GAIN})$ , where A and B are the feedback gains of each channel. Additionally, two logic inputs are provided each of which overrides the analogue  $V_{GAIN}$  control, and forces 100% gain for one input and 0% for the other. The logic inputs switch in only 20ns and provide high attenuation to the 'off' channel, while generating very small glitches. Signal bandwidth is 65MHz and gain-control bandwidth is 30MHz. The gain control recovers from overdrive in only 100ns. The device can operate from a ±5V to ±15V supply with a current drain of only 16mA typical.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## OPA678AP

Burr-Brown

OPA678AP

This device is a wideband op-amp with two independent differential inputs. Either input may be selected by means of an external TTL or ECL compatible signal. Fast input switching times (4ns) and low distortion and crosstalk make this amplifier suitable for seamless RF and video switching and multiplexing operations. Unity gain bandwidth is 200MHz (70MHz with G=5). Voltage output into 75Ω is better than 1.7V. Power supply should be ±5V.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## EL2099CT Video Distribution Amplifier

Elantec

2099

The EL2099C is a high-speed, monolithic operational amplifier featuring excellent video performance and high output current capability. Built using a dielectric isolation process, it uses current mode feedback to achieve wide bandwidth, and is stable in a unity gain configuration.

The device can deliver  $\pm 12.5V$  into a  $25\Omega$  load at slow rates of  $900V/\mu s$ . Its speed and output current make it ideal for line driver and automatic test applications. Operation from power supplies ranging from  $\pm 5V$  to  $\pm 15V$  makes the EL2099C extremely versatile. Case style is 5-pin TO220.

### Specification

Bandwidth: 20MHz -0.1dB, 70MHz -3dB

Differential gain: 0-0.2%

Differential phase: 0-0.3°

Output short-circuit current: 1A

Fan-out: Up to 6 x 75 $\Omega$  double-terminated cables in parallel @  $\pm 12.5V$

Slew rate: 900V/ $\mu s$

Supply voltage:  $\pm 5V$  to  $\pm 15V$

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## EL4581CN Video Sync Separator

Elantec

A video sync separator which extracts timing information, including composite sync, burst/back porch timing and odd/even field information from standard negative going sync NTSC, PAL and SECAM video signals. It will detect video signals from 0.5 to 2V pk-to-pk. The 50% slicing feature provides precise sync edge detection even in the presence of noise and variable signal amplitudes. A built-in linear phase, third order, colour burst filter minimises spurious timing information and reduces external components. The device is also capable of providing sync separation for non-standard, faster horizontal rate video signals by changing an external horizontal scan rate setting resistor. The vertical output is produced on the rising edge of the first serration in the vertical sync period. A default vertical output is produced after an internally generated time delay in the event that serration pulses may be missing, for example, in the case of a non-standard video signal. All outputs are active low.

The device is packaged in 8-pin DIL and is an improved version of the LM1881.

### Specification

Supply voltage: 5V (7V max.) DC

Supply current: 1.5mA

Pin 2 clamp voltage: 1.5V

Pin 2 discharge current: 10 $\mu A$

Pin 2 clamp charge current: 500 $\mu A$

Pin 6 reference voltage: 1.7V

Video output voltage swing: 800mV min., 4V max. dependent on load

Vertical sync width: 230 $\mu s$

Burst gate width: 3-2 $\mu s$

Vertical default time: 60 $\mu s$

Filter attenuation: 24dB  
Propagation delay: 400ns  
Input signal dynamic range: 2V  
Sync slice level: 60% typical  
Operating temperature range: 0°C to +75°C

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2562	Price each exc. VAT	inc. VAT each

## LM1881N Video Sync Separator

National Semiconductor

The IC can extract the timing information from PAL, SECAM or NTSC encoded video signals having standard negative going sync and amplitudes from 0.5V to 2V. The IC outputs the composite sync, vertical sync, burst/back porch timing and an odd/even field identifier. By changing the value of R2, non-standard faster horizontal rate video signals can also be stripped. The vertical sync output is produced on the rising edge of the first serration in the vertical sync period, but if the rising edge does not occur within the internally set period, a default vertical output is produced, permitting use with video games and home computers. The IC can be used as a master gen-lock; to providing timing references for the extraction of data on specific scan lines; to restore the original video waveform for remodulation or retrieve the colour burst and decode into R.G.B. components; or to identify individual scan lines in the video signal.

### Parts List

- R1 Min Res 620 $\Omega$  (M620R)
  - R2 Min Res 680k $\Omega$  (M620K)
  - R3 Min Res 2k7 (M2K7)
  - C1,3 Poly Layer 0.1 $\mu F$  (WW41U)
  - C2 Ceramic 330pF and Ceramic 180pF in parallel (WX59P/WX62S)
  - C4 Mylar 0.001 $\mu F$  (WW15R)
  - C5 Minidisc 0.1 $\mu F$  16V (YR75S)
- C5 is connected between pins 4 and 8.

### Specification (typical)

Supply voltage: 5V to 12V (13.2V max.)  
Supply current: 5.5mA  
DC input voltage: 1.5V  
Input threshold voltage: 70mV  
Sync outputs (pins 1 & 3): Logic 1:4.5V @ 40 $\mu A$  ( $V_{CC} = +5V$ )  
Logic 1:3.6V @ 1.6mA ( $V_{CC} = +5V$ )  
Logic 0:0.2V @ -1.6mA ( $V_{CC} = +5V$ )  
Logic 1:>11V @ 40 $\mu A$  ( $V_{CC} = -12V$ )

## AD630JN Balanced Modulator/Demodulator

Analog Devices

- Can be configured for balanced modulation and demodulation, synchronous detection, phase detection, quadrature detection, phase sensitive detection, lock-in amplification and square wave multiplication
- 45V/ $\mu s$  slew rate
- 2MHz channel bandwidth
- Pin programmable closed loop gains of  $\pm 1/\pm 2$
- 100dB dynamic range
- 100dB at 10kHz channel separation

The AD630 is a high precision balanced modulator that combines a flexible commutating architecture with the accuracy and temperature stability achieved by using laser wafer thin-film resistors. A network of on-board resistors provides precision closed loop gains of  $\pm 1$  and  $\pm 2$ . These resistors can be configured to accurately configure multi-plexer gains of +1, +2, +3 or +4. Alternatively, external feedback can be employed to produce high gain or complex switched feedback circuits.

The device can be considered as a precision op-amp with two independent differential input stages, and a precision comparator which is used to select the active front end. The rapid response time of this comparator coupled with the high slew rate and fast settling of the linear amplifiers minimise switching distortion. When used as a synchronous demodulator in a lock-in amplifier configuration, it can recover a small signal from 100dB of interfering noise. Although optimised for operation up to 1kHz, the circuit is useful at frequencies up to several hundred kilohertz. Other features include pin programmable frequency compensation, optional input bias current compensation resistors, common-mode and differential offset voltage adjustment, and a channel status output. This will indicate which of the two differential inputs is active.

The circuit shows the AD630 configured as a gain of one balanced modulator. Supplied in a 20-pin DIL package.

### Specification (at 25°C, $\pm 15V$ )

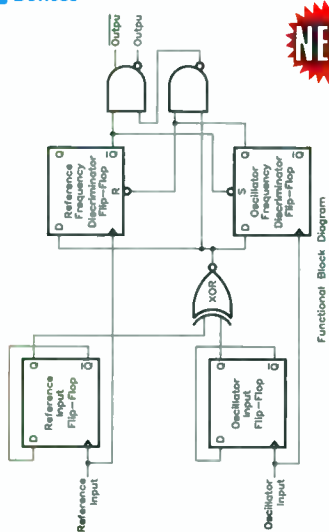

Supply voltage:  $\pm 5V$  to  $\pm 16.5V$   
Supply current: 5mA max  
Open loop gain: 110dB typ  
Closed loop gain error: 0.1% (Gain  $\pm 1, \pm 2$ )  
I/P offset voltage: 500 $\mu V$  max  
Channel separation: 100dB typ at 10kHz  
Unity gain bandwidth: 2MHz  
Slew rate: 45V/ $\mu s$   
Settling time: 3 $\mu s$  (to 0.1%)

## AD9901KQ Ultra High Speed Phase/Frequency Discriminator

Analog Devices

The AD9901 is a digital phase/frequency discriminator capable of directly comparing phase - frequency inputs up to 200MHz. The device has the advantage of a linear detection range, which results in no indeterminate phase detection zones often found in similar devices. With a single 5V supply, the device can be configured to operate with TTL or CMOS logic levels, but can operate with ECL inputs when operate with a -5.2V supply. The AD9901 has the ability to compare phase/frequency inputs at standard IF frequencies without prescalers. Excessive 'phase uncertainty' is eliminated with the device - a problem which is common with standard PPL design. Supplied in a 14-pin ceramic DIP package.

**Specification**  
 Power supply current  
 TTL (+5V): 43.5mA typ  
 ECL (-5.2V): 42.5mA typ

## TDA8341-N6 TV IF Amp and Demodulator

Philips

An integrated IF amplifier and demodulator for colour and black and white TV sets, with wide bandwidth and excellent intermodulation performance making it suitable for use in teletext and NICAM applications. The IC is designed for use with tuners requiring a decreasing positive bias (a.g.c.) with increasing signal strength. The IC contains a full range, gain-controlled, wide band IF amp, a linear synchronous demodulator, white spot inverter, wide band video amp with noise protection, AFC with on/off switching and sample and hold function, AGC with noise gating, external video switch for switching off video output, and an integrated filter to limit second harmonic IF signals. A typical circuit is shown in Maplin Magazine issue 36.

**Specification (typical)**  
 Supply voltage: 12V (9.4 to 13.2V)  
 Supply current: 42mA  
 IF input sensitivity: 40µV rms  
 IF gain control range: 67dB  
 Video output voltage: 2-7Vp-p  
 Signal to noise ratio: 58dB  
 AFC output voltage swing: 10Vp-p  
 Bandwidth of output: 7.5MHz  
 Intermodulation: -60dB

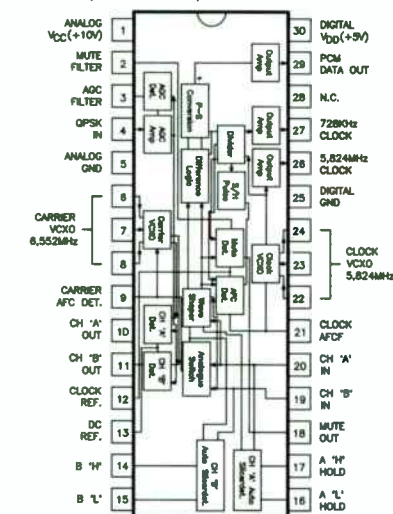

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## TA8662N, TC6011N, TD6710N NICAM Decoder Chip Set

Toshiba

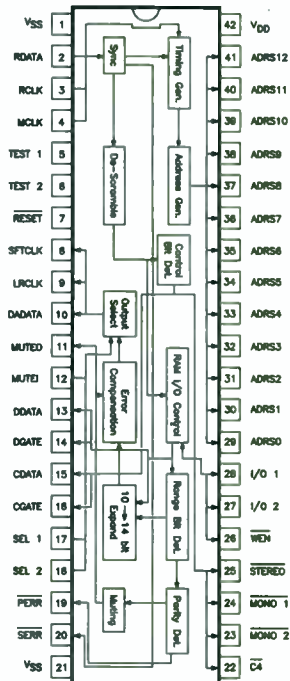

The NICAM decoder chip set used in the NICAM receiver project published in the Maplin Magazine issue 35. The TA8662 is a Quadrant Phase Shift Keying (QPSK) decoder that demodulates the data in the 6.552MHz sub-carrier and provides all the necessary timing information. It is supplied in a 30-pin shrink DIP package with pin spacing 1.778 x 10-16mm (0.07 x 0.4in.).

**TA8662N**  
 Analogue supply voltage: 10V (9V to 11V)  
 Analogue supply current: 40mA

Digital supply voltage: 5V (4.5V to 5.5V)  
 Digital supply current: 24mA  
**TC6011N**  
 Supply voltage: 5V (4.75V to 5.25V)  
 Supply current: 35mA

The TC6011N converts the demodulated data into a 14-bit serial data stream for input to the D/A converter. It is supplied in a 42-pin shrink DIP package with pin spacing 1.778 x 15.24mm (0.07 x 0.6in.). The TD6710AN is a 14-bit D/A converter with stereo outputs. It is supplied in a 24-pin non-standard shrink DIP package with pin spacing 1.778 x 7.62mm (0.07 x 0.3in.).

**TD6710AN**  
 Supply voltage: 5V (4.5V to 7V)  
 Analogue supply current: 10mA  
 Digital supply current: 8-5mA  
 Total harmonic distortion: -82dB  
 Signal to noise ratio: 83.5dB  
 Crosstalk: 83dB  
 Operating frequency: 16.9MHz

Please note that these ICs are only available in sets

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

BH75S	SAA5246	£14.450	£16.990

encoding matrix, two filters limit the bandwidth of the U and V colour difference signals to 1.2MHz prior to quadrature modulation of the colour subcarrier. A third filter at 3.6MHz (NTSC) or 4.4MHz (PAL) follows the modulators to limit the harmonic content of the output. U and V chroma filter delays are matched by an on-chip sampled data delay line in the Y signal path - overall delay is about 170ns, which precompensates for delays in the filters used to decode the NTSC/PAL signal in a television receiver. The chip requires ±5V supplies. Supplied in a 28-pin PLCC package.

Specification	NTSC	PAL

**AD721P RGB to NTSC/PAL Encoder**

Analog Devices

**MC13077P Advanced PAL/NTSC Encoder**

Motorola

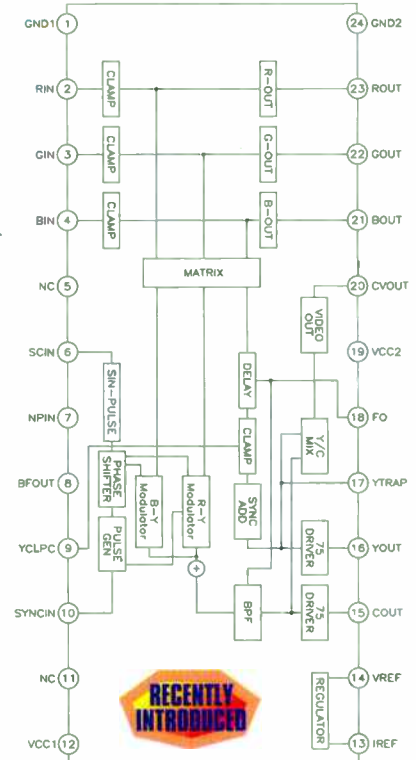

The MC13077P is an economical, high quality, RGB to composite video encoder for PAL or NTSC protocols. Useful where video signal conversion is required, and especially for recombining separate RGB video signals which are best processed individually (by digital means, for example) in a video editing environment or studio. It accepts red, green, blue and composite sync inputs and delivers either composite PAL or NTSC standard video complete with luminance and chrominance components incorporating all the synchronisation and chroma regeneration signals. The device is manufactured using a high density bipolar process and is contained in a single 20-pin DIL package. Features include a single 5V supply, PAL or NTSC switchable composite output, PAL square wave output, PAL sequence resettable, internal or external colour burst flag, digitally determined modular angles, and a selectable subcarrier reference drive.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

**CXA1645P RGB Encoder**

Sony

An encoder IC that converts analog RGB signals into a composite video signal and is suitable for both PAL and NTSC systems. The device requires composite sync pulses, subcarrier and RGB signals and will produce composite video output, separate luminance and chroma components, and clamped RGB outputs. The IC features 75Ω drivers, a band pass filter, delay line, R-Y and B-Y modulator circuits, PAL alternating line circuit, and burst flag generator circuit. The device is suitable for image processing in video games and personal computers and works from a single 5V rail. Supplied in a 24-pin DIL plastic package.

**Specification (100% Colour Bar Input 1V pk-pk)**

Supply voltage:	5V DC

## TEA2000-V1 PAL Colour Encoder

Philips

A PAL colour encoder and video summer which requires just composite sync and composite blanking inputs, and a 6-bit binary coded input giving the colour information. The inputs are organised as 2 bits per primary colour with gamma correction automatically applied to the resultant luminance and chrominance levels. Each of the equally spaced intensity levels for each primary colour is combined with those of the other primary colours. This produces 64 output colours comprising a wide range of saturated and desaturated colours, black, white and two levels of grey. The output is a composite video signal with PAL standards. The composite sync input, pin 16, requires a negative logic signal (TTL format) and must include field and line sync information. The blanking input (TTL format) must be high during sync and colour burst, unless all colour inputs are low at this time. The colour inputs are also TTL compatible. A +12V supply  $\pm 10\%$  is required on pin 11. If pin 14 is connected to ground an NTSC signal is produced, but different external components would be required. Leave pin 14 open for normal PAL operation.

## SAA1043P Universal Sync Generator

Philips

1043

This IC generates the synchronising waveforms required in all types of video source equipment e.g. video cameras, film scanners, video games, computer displays etc. The device is programmable to suit standards SECAM1, SECAM2, PAL/CCIR, NTSC1, NTSC2 and PAL-M; the video game 624 and 524 line standards; and can be synchronised to an external sync signal.

### Specification

Supply voltage:	5.7 to 7.5V
Supply current:	<10 $\mu$ A
Load resistance at $V_{DD} = 5.7V$ :	1.4k $\Omega$ min
at $V_{DD} = 7.5V$ :	820 $\Omega$ min

## OM2045 Wideband VHF/UHF Amp

Philips

A one-stage hybrid wideband amplifier for aerial amplifiers for FM radios and UHF TVs. It is ideal for overcoming losses when more than one TV is operated from one antenna (MATV).

Supply voltage:	12V $\pm 10\%$ (15V max.)
Frequency range:	40 to 860MHz
Gain:	12dB
Frequency response within band:	$\pm 1$ dB
Source and load impedance:	75 $\Omega$
Input VSWR:	2.0
Output VSWR:	1.4
Back attenuation @ 100MHz:	22dB
@ 860MHz:	19dB
Output voltage:	99dB $\mu$ V
Noise figure:	3.6dB
Supply current:	11.5mA

### Pin Connections

Pin 1:	Input 75 $\Omega$
Pins 2,3:	Common
Pin 4:	+12V supply
Pin 5:	Output 75 $\Omega$

The module should be mounted on double-sided pcb with a ground plane on the top as shown in the diagram. The connections to the common pins must be as close to the 'seating plane' as possible.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

LJL77J	DM2045	£4.850 10+ £4.440 25+ £3.810 100+ £7.680 1+	

## MSA-0685

Hewlett Packard

The MSA-0685 is a high performance silicon bipolar monolithic microwave integrated circuit (MMIC) housed in a low cost plastic package. It is designed for use as a general purpose 50 $\Omega$  gain block and typical applications include narrow and broadband IF and RF amplifiers. Features include low operating voltage (3.5V typical), 3dB bandwidth, high gain and a low noise figure (3.0dB typical at 0.5GHz). Excellent uniformity, performance and reliability. Please note that the device should not be stressed or overheated when fitting.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## CA3189E FM IF Subsystem

Harris

### Features

- ★ Exceptional limiting sensitivity: 10µV (typical) at -3dB
- ★ Low distortion: 0.1% (with double-tuned coil) typical
- ★ Single-coil tuning capability
- ★ High recovered audio: 500mV (typical)
- ★ Internal supply-voltage regulators
- ★ AGC threshold controlled externally
- ★ Low signal or frequency changed muting option
- ★ Mute - centre channel detect

The CA3189E is a comprehensive FM-IF system designed for high-fidelity FM tuners. It includes a three stage FM-IF amplifier/limiter configuration with level detectors for each stage, a double-balanced quadrature FM detector and an audio amplifier that features the optional use of a muting circuit. The advanced circuit design includes desirable special features such as delayed AGC for the RF tuner, an AFC drive circuit, and an output signal to drive a tuning meter and/or provide stereo switching logic. In addition, internal power supply regulators maintain a nearly constant current drain over the voltage supply range of +8V to +16V. Distortion is primarily a function of the phase linearity characteristic of the external detector coil.

### Absolute maximum ratings

Supply voltage (Pin 11 to 4/14)	18V
DC current out of pin 15	2mA
Max dissipation	600mW

CA3189E

### Characteristics (typical at V+ = 12V)

Quiescent current drain:	28mA
DC voltage at pin 1 (IF input):	1.9V
at pin 2 (AC return to input):	1.9V
at pin 3 (DC bias to input):	1.9V
at pin 7 (AFC):	5.6V
at pin 10 (DC reference):	5.6V

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MC1496P Double-Balanced Modulator

Motorola

The MC1496P is a double-balanced modulator/demodulator. The circuit produces an output voltage which is the product of an input voltage (signal) and a switching function (carrier). Communications applications include modulation and demodulation of AM, SSB, DSB, FSK, FM and phase encoded signals. Signal conditioning techniques possible include frequency doubling and halving, linear mixing and chopping, with additional uses as phase detectors in phase locked loops and as differentiators in NRZ and phase encoded digital tape and disk memories.

## MC13175/6 UHF FM/AM Transmitter

Motorola

MC13175/6

The MC13175 and MC13176 are one chip AM/FM transmitter subsystems designed for AM/FM communication systems. They include a Colpitts crystal reference oscillator, UHF oscillator, ÷ 8 (MC13175) or ÷ 32 (MC13176) prescaler and phase detector forming a versatile PLL system. Typical applications are in the 260 to 470MHz and 902 to 928MHz bands, as well as local oscillator sources in UHF and 900MHz receivers, UHF and 900MHz video transmitters, and RF local area networks. The ICs can use readily available 3rd overtone or fundamental crystals for reference, and have a differential output for loop antenna or balun transformer networks. ASK modulation is possible by switching the output on and off. Other useful features include low operating supply voltage, UHF current controlled oscillator, adjustable power output (upto +10dBm) and power down feature. Supplied in 16-pin SO-16 surface mount package.

### Specification (f<sub>0</sub> = 320MHz, I<sub>mod</sub> = 2mA)

Power supply range:	1.8V to 5V DC, 7V DC max.
Total supply current:	14mA typical
Diff output power:	+4.7dBm typical -45dBm (I <sub>mod</sub> = 0mA)
Typical hold-in range	
MC13175:	6.5MHz
MC13176:	8MHz
Typical phase detector output error current	
MC13175:	25µA
MC13176:	27µA
Osc. enable time:	4ms
AM bandwidth:	25MHz

Maximum divider input frequency:	950MHz
Maximum output frequency:	950MHz

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## ZN416E AM Radio With Amplifier

GEC-Plessey

The ZN416E is a higher audio output version of the ZN414E in an 8-pin DIL package. Connect pin 6 to 1-3V approx., and between pin 1 and 8 connect as close as possible the two AM gangs in parallel of our AM/FM Varitune. In parallel with this connect a 5cm

416

ferrite rod aerial with about 80 turns of 30swg enamelled copper wire wound on it. Connect 0.01µF disc capacitors between pins 8 and 4, and pins 7 and 4. Connect 0.1µF disc capacitors between pins 2 and 4 and pins 2 and 3. Connect the battery negative to pin 4. This will form a complete AM radio. The output, pin 5, may be connected to the tip of our Personal Stereo Headphones and pin 4 to the ring (leave the sleeve unconnected) to provide the required 64Ω load.

### Characteristics (typical where different from ZN414)

Supply current	4mA (5mA with strong signal)
Voltage gain of output stage	18dB
Output	>170mV rms into 64Ω load

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## TDA1072A AM Receiver

**TeMic**

A complete AM receiver on a chip, the TDA1072A only requires comparatively few peripheral components to complete a high quality AM radio circuit. Unlike some other AM radio ICs, a minimum number of external tuned inductors are used to preserve reasonable performance, selectivity and quality of output. Only two of these, an RF input transformer and a single winding oscillator coil need be tuned either capacitively or inductively. The device includes a controlled RF preamplifier, multiplicative balanced mixer, separate local oscillator with gain control, a balanced full-wave detector, an audio preamplifier, internally linked AGC drive to RF and IF stages, a display amplifier for a field-strength indicator meter, and an electronic stand-by on/off switching input. The device is encapsulated in a single 16-pin DIL package.

### Specification

Supply voltage range:	7.5 min. to 18V typical
Supply current, no load:	23mA
RF DC bias input:	+V <sub>S</sub> /2
RF input impedances:	5.5kΩ (pins 14, 15)
Maximum RF input voltage:	2.5V pk-pk
Mixer output impedance:	500kΩ min. (pin 1)
Maximum conversion conductance:	6.5mA/V
Mixer output current:	1.2mA
Oscillator frequency range:	600kHz to 60MHz
Oscillator circuit impedance:	0.5kΩ to 200kΩ
Controlled oscillator amplitude:	130mV typical
Oscillator output DC:	6V
Oscillator output load current:	20mA max.
Oscillator output impedance:	25kΩ typical
IF amplifier DC input voltages:	2V (pins 3, 4)
IF amplifier input impedance:	3kΩ (pin 3)
Maximum IF input voltage:	90mV (pin 3)
IF amp. gain control range:	61dB
Audio output voltage:	310mV (pin 6)
Audio output impedance:	3.5kΩ
Meter driver output:	140mV max. (pin 9)
Meter driver current:	2mA min. (pin 9)
RF input for signal noise ratio	
= 6dB:	1.5µV
= 26dB:	15µV
= 46dB:	150µV
RF input for AGC operation:	30µV
Maximum RF input for 3% distortion:	500mV @ 80% modulation
Total distortion of recovered audio @ RF in = 1mV:	0.5%, 80% modulation
Signal to noise ratio of recovered audio @ RF in = 1mV:	50dB
IF bandwidth:	4.6kHz (-3dB)
IF selectivity:	60dB @ Δf = ±36kHz

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each

## TDA7000 FM Radio

**Philips**

An FM radio on a single chip requiring only a few simple peripheral components. In particular the chip requires only one simple coil and alignment is very easy. The chip includes an RF input stage, mixer, local oscillator, IF amplifier/limiter, phase demodulator, mute detector and mute switch. The output will directly drive a crystal earpiece or could be used with a TBA820M to form a complete portable FM radio.

### Specification

Supply voltage:	2.7V to 10V (4.5V typical)
Supply current:	8mA at 4.5V

Frequency range: 1.5MHz to 110MHz (The part of this range attainable on any finished design is determined by the components on pins 5/6)

Sensitivity: 1.5µV (for -3dB limiting, muting disabled)  
6µV (for -3dB muting)  
5.5µV (for 26dB signal to noise ratio)

Signal handling: 200mV  
Signal to noise ratio: 60dB

Total harmonic distortion: 0.7% (±22.5kHz modulation)  
2.3% (±75kHz modulation)  
50dB

AM suppression: 50dB  
Oscillator voltage pin 6: 250mV rms

Variation of oscillator frequency with supply voltage: 60kHz/V  
Selectivity: 45dB  
AFC range: ±300kHz  
Audio bandwidth: 10kHz  
AF output voltage: 75mV rms

Load resistance at: V<sub>S</sub> = 4.5V: ≥22kΩ  
V<sub>S</sub> = 9V: ≥47kΩ  
Note that the muting system can be disabled by feeding 20µA into pin 1. The interstation noise level can be decreased by choosing a low-value capacitor at pin 3. Omit this capacitor to achieve silent tuning.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## REMOTE CONTROL IC'S

### HT12A, HT12B Remote Control Encoders with 38kHz IR Carrier

**Holttek**

RECENTLY INTRODUCED

These devices feature 12 bit encoding consisting of 8 address bits and 4 data bits. HT12A has positive data code polarity and HT12B has negative data code polarity. The ICs have a built-in oscillator and provide a 38kHz carrier for infra-red systems. In addition, they have a low power and stand-by current requirement, and have a high noise immunity. Ideal for burglar and car alarm systems, garage door controllers, smoke and fire alarm systems, cordless telephones etc.

### Specification

Operating voltage:	2.4V to 5V DC
Stand-by current:	1µA max.
Operating current:	800µA max (5V)
'H' input voltage:	0.8V <sub>DD</sub> to V <sub>DD</sub>
'L' input voltage:	0 to 0.2V <sub>DD</sub>
Operating temp:	-20°C to +75°C

### Suggested Parts List

## HT12E, HT12D & HT12F Remote Control Encoder/Decoders

**Holttek**

The HT12E encodes 12 bits of information and then serially transmits it upon receipt of a transmit enable signal to its active low TE pin. The data is transmitted on the pin marked DOUT, and can be easily interfaced to work with RF or infra-red transmission networks. Complementing the encoder are two decoder ICs, the HT12F and HT12D. The HT12F takes the encoded signal and decodes the whole of the 12 bits as being address data. If the received address matches with the address preset on the decoder IC then the decoder IC will make its valid transmission pin go high (VT). Using the HT12D device is very similar with the single exception that it decodes the first 8 bits of information and checks them against the first 8 bits of address preset on its pins. When both addresses match it makes available the last 4 bits of the received data word, on its four output pins. At the same time the decoder IC will send high its VT pin. This means that data can be sent from the encoder IC and only be decoded and therefore received by those decoder ICs with a matching 8-bit address. Features of the devices are low power, high noise immunity, low stand-by current of 1µA, wide operating voltage, 212 address code (28 for the HT12D), built-in oscillator requiring only a 5% resistor, four times transmission with three times receive check, and a minimum of external components. Applications include burglar alarm systems, smoke and fire alarm systems, car door controllers, car alarm systems, security systems, cordless telephones, and many remote control systems.

### Specification

Operating voltage, V <sub>DD</sub> :	2.4V to 12V, 5V typ (13V abs max)
Output drive current (sink), I <sub>O</sub> :	1.6mA typ, 1mA min (V <sub>DD</sub> =5V)

address and 4 data lines (match with HT6034). Each encoder address/data input is externally 'trinary' programmable. The programmable address/data is transmitted together with the header bit via an infra-red or RF system. The ICs feature a built-in oscillator, low power and stand-by current, high noise immunity, and require minimal external components.

The devices are suitable for a wide range of applications including: burglar alarm systems, smoke and fire alarm systems, car alarms, security systems, garage door and car door controllers, cordless telephones etc. Supplied in an 18-pin DIL package.

**Specification**

Operating voltage: 2.4V to 12V DC (5V typical)  
 Stand-by current:  $4\mu A$  max.  
 Operating current:  $500\mu A$  max. (3V supply)  
 1.2mA max. (12V supply)  
 Oscillator frequency: 3kHz  
 'H' input voltage:  $0.8V_{DD}$  to  $V_{DD}$   
 'L' input voltage: 0 to  $0.2V_{DD}$   
 Operating temp:  $-20^\circ C$  to  $+75^\circ C$   
 Oscillator resistor is 1M $\Omega$  for frequency of 3kHz.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
JA34M	HT6010	25+ £0.763	100+ £0.610
JA35Q	HT6014	300+ £0.509	1+ £1.830
		100+ £0.610	1+ £1.830

(match with HT6014).

The decoders receive serial address/data information from the encoders via an infra-red or RF system. It then compares the serial input information twice with its local address. If no errors or unmatched codes are encountered, the input data codes are decoded and transferred to the output pins. The VT pin goes high to indicate a valid transmission.

The ICs feature a built-in oscillator, low power and stand-by current, high noise immunity, and require minimal external components. The devices are suitable for a wide range of applications including: burglar alarm systems, smoke and fire alarm systems, car alarms, security systems, garage door and car door controllers, cordless telephones etc. Supplied in an 18-pin DIL package.

**Specification**

Operating voltage: 2.4V to 12V DC (5V typical)  
 Stand-by current:  $4\mu A$  max.  
 Operating current:  $500\mu A$  max.  
 Oscillator frequency: 100kHz  
 'H' input voltage: 3.5V to 5V (5V supply)  
 'L' input voltage: 0 to 1V (5V supply)  
 Operating temp:  $-20^\circ C$  to  $+75^\circ C$   
 The oscillator resistor is 91k $\Omega$  for 100kHz oscillator frequency

## M145026B-1 Remote Control Encoder

SGS Thomson

An encoder which can generate up to 19,683 codes from 9 address lines by detecting 1, 0, or open circuit. To initiate the transmit sequence, pin 14 should be pulsed low. The encoder will now output on pin 15 a data stream representing the condition on each of the address/data pins in turn and then repeat the operation, so that two complete identical words are transmitted. If pin 14 is held low, the output will be continuous, otherwise two identical words are output for each pulse on pin 14. A 1 is transmitted as two long pulses, a 0 as two short pulses, and an open circuit as a long pulse followed by a short pulse. The device is constructed in CMOS and all characteristics are as the standard 4000B devices. If an external oscillator is used, it should be connected to pin 11 and pins 12 and 13 left open. The output can drive rf, ultrasonic or infra-red transmitters.

**Specification**  
 Supply voltage 4.5V to 15V (18V absolute max.)  
 Clock frequency 2MHz max at 5V,  
 5MHz max over 10V

Overall system propagation delay 182 clock cycles  
 Tolerance on timing components ±25%  
 Quiescent current 5nA at 5V, 10nA at 10V,  
 15nA at 15V  
 Operating current 100µA at 5V, 200µA at 10V,  
 300µA at 15V

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UJ49D	M145026B-1	£1.280	£1.120

## M145027/8B-1 Remote Control Decoders

SGS Thomson

The 145027 receives the data from the 145026 and checks it for errors by comparing the two words which should be identical. If the first five bits match the address set up on pins 1 to 5, then the data contained in the last four bits is latched on pins 12 to 15, and pin 11 goes high to indicate that a valid transmission has been received. Note that pin 11 goes high on the rising edge of the second pulse in

the ninth bit of the second word. The data bits must be either 1 or 0. If an open circuit is transmitted it will be decoded as a 1. Thus data could be sent to up to 243 different receivers simultaneously, but will only be received by the one designated by the address.

The 145028 is the same but all the received data is regarded as address and the only output is the valid transmission pin 11 going high. Since pin 11 goes high before the second pulse in the ninth bit of the second word is completed, only a 1 or 0 can be received here, so the number of codes which can be detected is reduced to 13,122.

The system with the 145027 is suitable for use in remote controlled toys, low-speed data transmissions, paging systems, and the M145028 is for use in garage door openers, security monitoring, anti-theft devices etc.

### Parts List

f <sub>osc</sub> kHz	RTC	CTC	RS
362	10kΩ	120pF	20kΩ
181	10kΩ	240pF	20kΩ

## HT640 18-Bit Encoder

Holtek

A CMOS remote control IC capable of encoding 18 bits of information consisting of 10 address and 8 data bits. Each address/data input is externally 'trinary' programmable. The encoded signal can easily interfaced with an infra-red or RF transmission system. The device features a built-in oscillator, low stand-by current, low power and high noise immunity, and requires minimal external components.

The IC is suitable for a wide range of applications including: burglar alarm systems, garage door controllers, car alarm system, smoke and fire alarm systems etc.

### Specification

Operating voltage: 2.4V to 12V DC  
 Standby current: 1µA max. (3V supply)  
 4µA max. (12V supply)  
 Operating current: 2.4mA max at 12V

Oscillator frequency: 100kHz (Rosc = 330kHz)  
 'H' input voltage: 0.8V<sub>DD</sub> to V<sub>DD</sub>  
 'L' input voltage: 0 to 0.2V<sub>DD</sub>  
 Operating temp: -20°C to +75°C  
 R1 oscillator resistor is typically 330k for a frequency of 100kHz

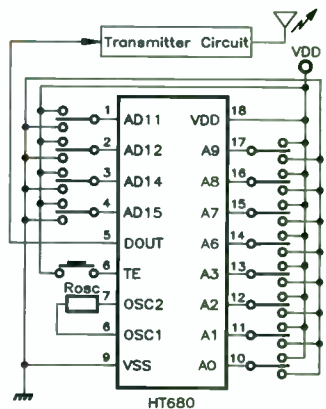

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each

## HT680 Encoder

Holtek

The HT680 is a basic 18-bit encoder that is designed to complement the HT691 (JA39N). The device has 8 address bits and 4 address/data bits. The remaining 'unpacked' bits, or dummy codes, are treated as floating. During an information transmission these bits are still located in their original position. The address pins are usually preset to transmit data codes with particular security codes selected by DIP switches or PCB wiring. Data bits are selected by push button or electronic switches.

The device features an in-built oscillator, low power and stand-by current requirements and high noise immunity. Minimal external components are required and the IC can easily be interfaced with an infra-red or RF transmission system. Ideal for burglar and car alarm systems, smoke and fire alarm systems, garage door controllers, security systems, cordless phones etc.

Supplied in a 18-pin DIL package.

**Specification**

Operating voltage: 2.4V to 12V DC (5V typical)  
 Stand-by current: 4µA max.  
 Operating current: 500µA max. (3V supply)  
 2.4mA max. (12V supply)  
 Oscillator frequency: 100kHz  
 'H' input voltage: 0.8V<sub>DD</sub> to V<sub>DD</sub>  
 'L' input voltage: 0 to 0.2V<sub>DD</sub>  
 Operating temp: -20°C to +75°C  
 Oscillator resistor is 330kΩ for frequency of 100kHz.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## HT691 Decoder

Hoitek

This basic 18-bit decoder is designed to complement the HT680 (JA38R), but only uses 12 address bits, the remaining 6 bits, or dummy codes, are left open. The received serial input data is compared twice to the local address, and if no errors or unmatched codes are encountered, the input data codes are decoded and then transferred to the output pins. The VT pin goes high to indicate a valid transmission.

The ICs feature a built-in oscillator, low power and stand-by current, high noise immunity, and require minimal external components. The devices are suitable for a wide range of applications including: burglar alarm systems, smoke and fire alarm systems, car alarms, security systems, garage door and car door controllers, cordless telephones etc. Supplied in a 18-pin DIL package.

**Specification**

Operating voltage: 3V to 12V DC (5V typical)  
 Stand-by current: 4µA max.  
 Operating current: 1mA max.  
 Oscillator frequency: 100kHz  
 'H' input voltage: 3.5V to 5V (5V supply)  
 'L' input voltage: 0 to 1V (5V supply)  
 Operating temp: -20°C to +75°C  
 Oscillator resistor is 330kΩ for frequency of 100kHz.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## HT6160 Programmable Decoder

Hoitek

An address programmable 3-word, 18-bit decoder designed to pair with the HT680 (JA38R), to form a programmable address remote control system. There are two modes of operation - program mode and normal mode. With MODE=0, the device is in program mode and encodes the data on the DIN pin as local address. The initial 12 bits of an 18 bit code are interpreted as the device address. With

MODE=1 (or floating), the device is in the normal mode and decodes the address and data on the DIN pin from the matching encoder. If the received address code matches the local programmed address code VT goes high and the data codes are placed on the output pins. Combination of the data output type and functions of the IC are controlled by the signals CTL1 and CTL2.

Initially the device is programmed by connecting the MODE pin to Vss and allowing the DIN to receive address code from the continuously transmitting encoder. The LED will flash at a 2Hz rate, and will stop at the end of the programming operation. The device will then check the input address code 7 times, and if no errors are detected the input address code is written to the internal memory. Note: this will be lost if power is removed. After programming, the device is returned to the normal operation mode (MODE pin left open, or connected to V<sub>DD</sub>). The decoder can now receive a data word transmitted from the encoder and interprets the initial 12 bits as address and the last 6 bits as data. The decoder then checks twice the receive address against the address stored in memory, and if matched, the VT pin goes high and the 6 data bits are decoded to activate the output pins, whose functions are listed below.

**CTL1 Connection**

	D12	D13	D14	D15	D16
V <sub>DD</sub>	M	M	N	N	N
V <sub>SS</sub>	L	L	N	N	N
RC	D	D	N	N	N

**CTL2 Connection**

	D12	D13	D14	D15	D16
V <sub>DD</sub>	N	N	M	M	M
V <sub>SS</sub>	N	N	L	L	L

TD17 is toggled by a 'HIGH' on D17 of encoder  
 N = no effect, M = momentary, L = latched.

**Specification**

Operating voltage: 2.4V to 5V DC  
 Stand-by current: 10µA max.  
 Operating current: 600µA  
 Oscillator frequency: 100kHz  
 'H' input voltage: 0.8V<sub>DD</sub> to V<sub>DD</sub>  
 'L' input voltage: 0 to 0.2V<sub>DD</sub>

## HT6280 Car Alarm Decoder

Hoitek

The HT6280 is an 18-bit decoder designed for use in remote control car alarm systems. It can be used with the 18-bit encoder HT640 (JA45Y). After receiving the the 18-bits of data, the IC interprets the first 12 bits as address, and the last 6 bits as control signal data. If these 12 bits of address matches that of the locally set address (compared twice, successively) then the 6 data bits are latched and the control function executed. Three types of control function are incorporated in the device- arm/disarm, panic and power on/off. The device also provides 3 momentary data outputs for other user defined special purposes. The device will easily interface with an infra-red or RF system, and has low power dissipation and high noise immunity. A LED output is provide to indicate a valid transmission.

At power on the IC is in the arm state, and an ARM signal toggles the arm/disarm condition of the IC. If the IC is in the arm state, and a signal is received on the the ARM pin, the car lights can be made to flash twice, and the 'chirp' sounds twice. The alarm system will enter the disarm state. Similarly, if the ARM signal is received again, the car lights can be made to flash once, the 'chirp' sounds once, and the alarm system enters the armed state. Supplied in a 40-pin DIL package.

**Specification**

Supply voltage: 3V to 5V DC  
 Stand-by current: 4µA max.  
 Operating current: 400µA max.  
 System frequency: 100kHz  
 'H' input voltage: 0.8V<sub>DD</sub> to V<sub>DD</sub>  
 'L' input voltage: 0 to 0.2V<sub>DD</sub>

## UM3750 Encoder/Decoder

UMC

A single chip which includes both the encoder and decoder for a coded transmission system. When the code preset on the decoder matches the code transmitted from the encoder pin 17 goes low for 128ms. If a further match is received within that time, the output stays low for a further 128ms and so on. A total of 4096 different codes are possible making the device suitable for use in alarm control systems, security systems, garage door openers, and remote control. The system is protected against false transmissions because it only switches after receiving four valid codes and each valid one must be received within 64ms of the previous one. The system can be used with rf, ultrasonic or infra-red modulators and demodulators. A Min Res 100k and Ceramic 180pF are required with each chip.

### Specification

Supply voltage: 3V to 11V  
 Receive output: Active low, can sink 2mA  
 Clock frequency: 100kHz with components shown

## HT9205A/HT9212A Tone/Pulse Diallers

Holtek

RECENTLY INTRODUCED

HT9205A/12A

A choice of two DTMF/Pulse dialler ICs with memories featuring 'Last Number' and 'Save' redial. In addition, the HT9205A has three one-touch memories, and the HT9212A has 10 additional memories for those numbers most frequently used. The ICs will work from a 2V to 5.5V DC power supply and have a maximum retention current of 0.2µA. Supplied in an 18-pin DIL package.

## HT9170 DTMF Decoder

Holtek

RECENTLY INTRODUCED

HT9170

This DTMF receiver IC offers excellent performance, and provides a tri-state data output for connection to suitable external devices and circuits. Digital counting techniques are used to detect and decode all the 16 DTMF tone pairs into a 4-bit code

## HT6350/HT6320 Encoder/Decoder

Holtek

RECENTLY INTRODUCED

A matched pair of CMOS encoder/decoder ICs specially designed for radio control of toy cars etc. There are five control functions available - forward (50% duty cycle), turbo forward (100%), backward, left and right turn. The HT6350 encodes an 8-bit (2-bit address, 6-bits data) message and serially outputs to the transmitting media, such as RF or infra-red. The HT6320 decodes the data from the receiver and checks that the 2-bit address matches the decoder address, and if correct, provides the feeds to control the motors etc. These low power, high noise immunity devices will operate from a 2.4V to 12V power supply, and have a typical stand-by current of 1µA. The decoder IC has a high output

## LM567CN Tone Decoder/Phase Locked Loop

National Semiconductor

**Features**

- ★ Wide frequency range (0.01Hz to 500kHz)
- ★ High stability of centre frequency
- ★ Independently controllable bandwidth (0 to 14%)
- ★ High out-band signal and noise rejection
- ★ Logic compatible output with 100mA current sinking capability
- ★ Inherent immunity to false signals
- ★ Frequency adjustment over a 20 to 1 range with an external resistor

**Applications**

- ★ Carrier current remote controls
- ★ Ultrasonic controls (remote TV etc.)
- ★ Communications paging
- ★ Frequency monitoring and control
- ★ Wireless intercom
- ★ Precision oscillator

**Characteristics**

Max operating voltage:	10V
Positive voltage at input:	0.5V above supply
Negative voltage at input:	-10V DC
Output voltage:	15V DC
Operating current range:	7mA (12mA activated)

**Design Formulae**

$f_0 = 1.1/R_1.C_1$  where R1 is between 2kΩ and 20kΩ and f<sub>0</sub> is the centre frequency.  
 Bandwidth =  $1070\sqrt{V_i/f_0.C_2}$  where V<sub>i</sub> is the input rms voltage. C3 = 2(C2).

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## TDA3047/N4 Infrared Receiver

Philips

Infrared receiver IC featuring low power consumption and an HF amplifier with 66dB control range. In addition the IC contains a synchronous demodulator and reference amplifier, an AGC detector, pulse shaper, input voltage limiter, and a Q factor killer controlled by the AGC. The output from pin 9 is active high.

**Specification (typical at 25°C, VS = +5V)**

Supply voltage:	4.65 to 5.35V
Supply current:	2.1mA
Min input signal:	15μVp-p
Max input signal:	200mVp-p
Output current:	120μA

## TBA2800 Infrared Preamplifier

ITT Semiconductor

An infrared preamplifier consisting of a first gain-controlled amplifier featuring a wide dynamic range to ensure interference-free operation even with bright ambient light from the sun or 50Hz lamps including fluorescents. This amplifier can also reject

other intense infra-red transmissions, yet it is possible to bring the infra-red transmitter close to the receiver TBA2800 without malfunction from receiver overdrive. Amplifier 2 provides further amplification, whilst amplifier 3 separates the pulse-shaped signal from any noise and other unwanted signals. A final inverter provides both a positive and negative pulse output for ease of use. A resistor can be inserted between pin 6 and 0V to increase the sensitivity, but the input sensitivity is reduced.

**Specification (typical)**

Supply voltage:	+5V (4.5V to 5.5V)
Supply current:	1mA
Gain:	>70dB
Output pins 7 and 8:	1.6mA at 0.4V

**Parts List**

## LM1893N Mains Carrier Transceiver

National Semiconductor

A chip designed to transfer data over the mains between remote locations within one site on the same phase. The chip performs as a power line interface for half duplex (bi-directional) communication of serial bit stream. In transmission mode, a sinusoidal carrier is FSK modulated and impressed on almost any power line via a rugged on-chip driver. In reception mode a PLL-based demodulator and impulse noise filter combine to give maximum range. Data speeds up to 4800 baud are possible with carrier frequencies in the range 50 to 300kHz. A full data sheet is available.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## CS212 Security Detector

Cherry Semiconductor

A 16-pin IC designed for data transmission over a simple 2-wire circuit. The IC is particularly suited to alarm systems but could have other applications. Up to 30 ICs can be used on one circuit and any one can look after two detectors (magnetic sensors, smoke alarms, movement detectors, pressure mats etc.) or one detector and its anti-tamper loop (or the loop could be a window foil etc.) Thus between 30 and 60 detectors are possible on one circuit. Each IC also has two outputs which (via relays etc) can operate the main alarm bell or siren, or door locks and so on.

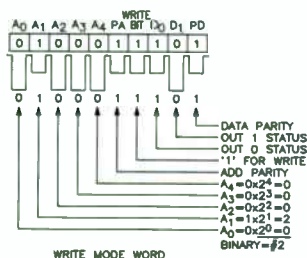

The controller must supply 15V to the circuit and the total maximum current which a full complement of 212's would draw from the circuit at any one time is about 20mA. The resistance of the line (which could be very long) must be taken into account and the ICs will function correctly from line voltages between 18V and 10V, which effectively sets the line length limit.

Each IC on one circuit must have its pins 2 to 6 connected differently from every other IC in the range 0 to 29. Pin 2 is binary 16 down to pin 6 which is binary 1. Used pins (for example if IC is 24th in the chain then pins 2 and 3) should be connected via a 10k resistor (R1) to the positive side of the circuit and all unused address pins must be connected to the ground side of the circuit. If the IC is being used to look after two sensors, then they should be connected between pin 7 and ground and pin 8 and ground. Sensors can be normally open or normally closed provided the control circuit can interpret the returned data correctly. If pin 7 is being used then pins 13 and 14 should be left open circuit. If the anti-tamper loop is being used then pin 7 should be connected to pin 9 and the anti-tamper loop connected in parallel with a diode (D1) if loop normally open, or in series with D1 if loop normally closed. Note that the IC must be close to the detector and particularly the anti-tamper wires must be short.

The two outputs pins 1 and 16 can also be controlled from the control circuit giving a maximum possibility of 60 outputs from a fully equipped loop. In security applications they could be used to set off the main bell, open door locks or whatever. These items will need a power source to run them. Pin 15 could be used in conjunction with the outputs so that up to four possible functions could be implemented depending on the state of the two outputs. Pin 15 provides a strobe pulse in turn when each output is updated and it too can sink about 1mA. All three pins are Darlington type open collector outputs.

Data is transmitted over the line by pulling the voltage down to half rail (7.5V) to indicate a logic 1 and to 0V to indicate a logic 0. The controller must first send a synchronisation word which consists of ten bits, a 0 followed by eight 1's followed by a 0. The clock rate can be anything up to 20kHz. The next five bits transmitted by the controller are the address bits, with the least significant bit first. The IC whose code on its pins 2 to 6 matches the received address now becomes active. The next bit sent by the controller is a parity bit. Odd numbered ICs expect to see a 1, even numbered ICs expect to see a 0. If the seventh bit transmitted by the controller is a 0 (read mode) then the IC reads the conditions on its pins 7,8,13 and 14. After transmitting this seventh bit, the controller must pull the line down to 7.5V and hold it there for three cycles.

The active 212 now transmits to the controller during these three cycles. If the 212 pulls the line down to 0V the controller interprets this as a 0 and if there is no change on the line, this indicates a 1. The first bit transmitted by the 212 will be a 1 if pin 8 is open circuit and a 0 if pin 8 is connected to ground. The second bit transmitted will be a 1 if pin 7 is open or

connected to pin 9 and the anti-tamper loop is open or short circuit, and a 0 if pin 7 is grounded or there is a diode between pins 13 and 14. The third bit is a parity bit which is a 1 if either of the preceding two bits were 1 or a 0 if both were 1 or both were 0. If the 212 had received an incorrect parity bit at bit 6 it would not read its input lines and transmit three 1's during its three cycle transmission slot. Thus if two 212's switch together, the controller simply will not see the incorrect one, but if only one switched, the controller must interpret the three 1's (i.e. no response) as a fault and repeat the address after a synchronisation word. The system is thus tolerant to a one bit fault in any address or data transmission. After the three cycle slot for the 212, the controller must pull the voltage back up to 15V and then send a synchronisation word and then continue as before. If the controller wishes to talk to the outputs of a particular 212, then it must send a 1 as its seventh bit (write mode). If the 212 activated by the preceding address in bits 1 to 5 of this word, sees a 1 in bit 7 and assuming the parity bit 6 was correct, it prepares to accept three more bits from the controller. The first of these bits will turn pin 1 on if it is a 1 (or off if it's a 0) and the second controls pin 16 in the same way. The third bit again is a parity bit, 1 if either of the preceding two bits were 1, and 0 if both were 1 or both were 0. If the 212 detects a wrong parity at any time, it will not update pins 1 or 16 and it will not be possible to activate it again until it has received a signal with correct parity in bit 6 and a 0 in bit 7. After a few retries, the fault should be interpreted as an alarm condition as it may mean the line has been cut. The IC will function correctly from line voltages up to 28V during fault conditions.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## UA3730 Security Lock with Alarm

UMC

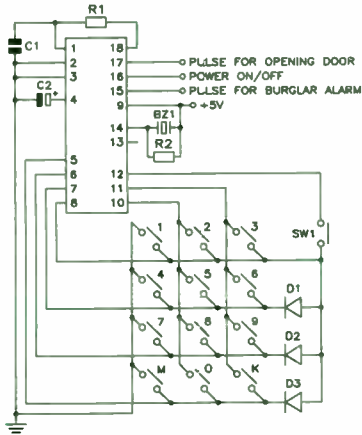

An electronic lock which can accept passwords of up to 12 digits, offering a million, million (1012) possible combinations. If a wrong password is entered three times, the alarm is triggered. The password can be easily changed at any time.

### Application Circuit

Whenever power is connected, the password is reset to zero, so battery back-up must be provided. Standby current is only 5µA so even a small battery will last a long time. To set up a password or change an existing one (with pin 13 connected to pin 14), first enter the current password (zero when first switched on) then press M, key in the new password - any number up to 12 digits long - and press M again. The buzzer will sound for a tenth of a second each time a key press is recognised. One minute after the last key is pressed, the circuit reverts to standby mode, unless SW1 is closed. If required, a door contact, SW1, can be fitted so that the switch makes when the door is open. If the door is opened without the correct password entry, the external burglar alarm is triggered. (Leave pin 12 open if SW1 not required.) When the correct password is entered - then press K to signify entry complete - pin 17 pulses low for 2 seconds to activate an electronic lock if fitted. Pin 16 also goes low and could be used for example, to turn the power on. If an incorrect password is entered and K pressed, the buzzer sounds for a fifth of a second. A second incorrect entry gives the same result. On the third occasion, however, pin 15 goes low for 1

minute to trigger an external burglar alarm. This output can be reset by entering the correct password and pressing K. If pin 13 is connected to ground, any entry followed by M will become the new password.

**Parts List**

R1	Min Res 12kΩ	(M12K)
R2	Min Res 4k7	(M4K7)
C1	1% Polystyrene 270pF	(BX50E)
C2	PC Elect 1µF 100V	(FF01B)
D1-3	1N4148	(QL80B)
BZ1	Buzzer	(JH24B)

**Specification (typical at V<sub>DD</sub> = 5V)**

Supply voltage: 3V to 6V  
 Standby current: 5µA  
 Operating current: <4mA  
 Input voltage (pins 15,16,17): 3.5V to 13.5V  
 Input current (pins 15,16,17): <15mA  
 Applications include door locks for homes, cars etc; electronic locks for computers, burglar alarm systems etc.

## MOTOR SOLENOID DECODER / DRIVER

### SAA1027 Stepper Motor Driver

**Philips**  
 A 16-pin IC designed to drive 4-phase unipolar stepping motors. The IC has a bi-directional 4-state counter, and a code converter so that the four outputs switch in the right order. Supply voltage 9-5V to 18V (typically 4.5mA at 12V). Output current possible is 350mA per output (500mA absolute max. at 25°C).

The motor will run clockwise when pin 3 is low (<4.5V), and counter-clockwise when pin 3 is high (>7.5V). The motor will step once for each low to high transition on pin 15. Pin 2 should be connected to pin 13 unless a reset function is required. Taking pin 2 low sets output pins 6 and 9 low, and pins 8 and 11 high.

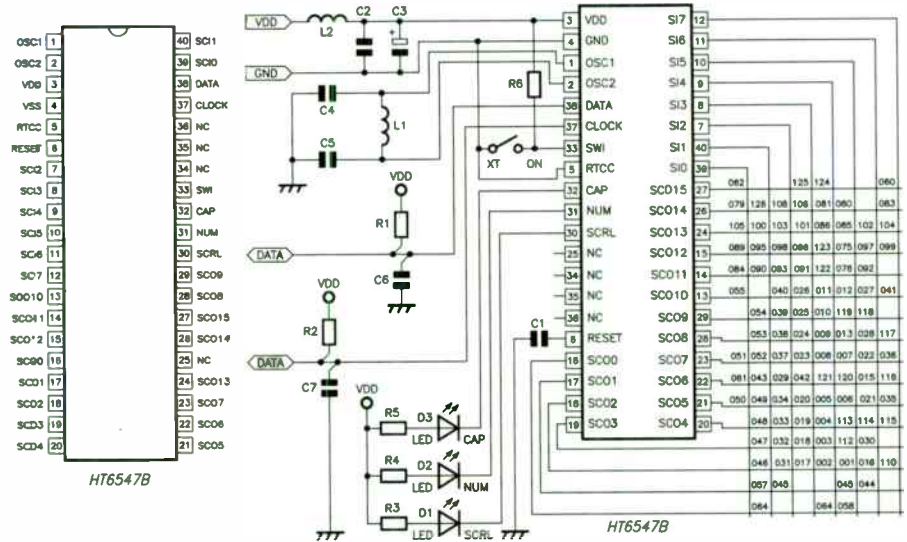

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## HT6547B Keyboard Encoder

Holtek

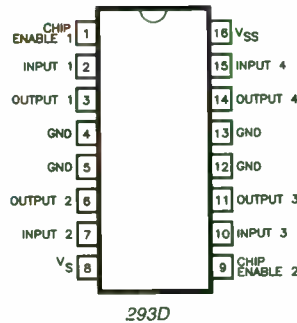

This fully compatible IBM PC XT/AT keyboard encoder IC uses very reliable CMOS technology to produce a device requiring the minimum of external components. Keyboard input data is held in a 16-character first-in/first-out buffer. The IC uses an external 3.58MHz system clock which can be generated from either a crystal, RC or LC oscillator circuit. The device supports both XT and AT type keyboards with either 101 or 102-key operation, and includes the outputs for the three standard LED indicators - Num Lock, Caps Lock and Scroll Lock. Supplied in a 40-pin DIL package.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## L293D Stepper Motor Driver

SGS Thomson

The L293D is a monolithic integrated high voltage, high current, 4-channel driver designed to accept standard DTL or TTL logic levels and drive inductive loads such as relays, solenoids, DC and stepping motors, and for switching power transistors. To simplify use as two bridges, each pair of channels is equipped with an enable input. A separate supply input is provided for the control logic, allowing operation of this at a lower voltage than the output stage. Inductive clamp diodes for the output stage are provided internally. This device is suitable for use in switching applications at frequencies up to 5kHz. It is encapsulated in a 16-pin DIL package.

**Specification**

Output stage supply voltage:	Logic level supply (V <sub>SS</sub> ) to 36V
Control logic supply voltage:	4-5V to 36V
Total quiescent output supply current:	2mA inhibit low, 16mA inhibit high
Total quiescent logic supply current:	16mA

## L293E Stepper Motor Driver

SGS Thomson

The L293E is a quad push-pull driver capable of delivering output current up to 1A per channel. Each channel is controlled by a TTL compatible logic input, and each pair of drivers, making a full bridge, is equipped with an inhibit input which if low turns off all four transistors forcing the output to float, and if high, enables normal output. A separate supply input is provided for the logic so that it may be run from a lower voltage supply to reduce dissipation. Additionally, the L293E has external connections for sensing resistors for switch-mode control by external measurement of resistor voltage drop. These comprise the 0V ends of all output stages (the emitters of the lower output switching transistors) being open-ended (not connected); these are pins 4, 7, 14, 17. The sensing resistors should be connected between these and 0V. If not required then connect pins 4, 7, 14, 17 directly to 0V. This device is suitable for use in switching applications at frequencies up to 5kHz. It is encapsulated in a 20-pin DIL package.

### Specification

Output stages supply voltage:	Logic supply level ( $V_{SS}$ ) to 36V max.
Control logic supply voltage:	4.5V to 36V max.
Total quiescent output supply current:	2mA inhibit low, 16mA inhibit high
Total quiescent logic supply current:	16mA
Input low voltage:	-0.3 to 1.5V
Input high voltage:	2.3 to $V_{SS}$ , 7V abs. max.
Inhibit low voltage:	-0.3 to 1.5V
Inhibit high voltage:	2.3 to $V_{SS}$ , 7V abs. max.
Low voltage inhibit current:	30µA
High voltage inhibit current:	10µA
Source output saturation voltage:	1.4V @ 1A out
Sink output saturation voltage:	1.2V @ 1A out

## L6202 Stepper Motor Driver

SGS Thomson

A push-pull DMOS full bridge driver for motor control applications realised in multi-power BCD technology which combines isolated DMOS power transistors with CMOS and bipolar circuits on the same chip. This makes it possible to optimise the logic circuitry and the power stages to achieve the best possible performance. The DMOS output transistors can operate at supply voltages up to 48V, and efficiently at high switching speeds, and have inductive clamp diodes supplied on-chip. All the logic inputs are TTL, CMOS and microcomputer compatible. Each channel (half bridge) of the device is controlled by a separate logic input, while a common enable input controls both channels, and will force both outputs floating if taken low. The

device is encapsulated in a 20-pin DIL package and includes thermal shutdown.

### Specification

Supply voltage:	12V min. to 48V max.
Reference voltage:	13.5V
Quiescent supply current:	10mA
Commutation frequency:	up to 30kHz (100kHz max.)
Thermal shutdown temperature:	150°C
Dead time protection:	100ns
Source-drain leakage current:	1mA max. @ $V_S = 42V$
Source-drain on resistance:	0.3Ω typical
Sensing voltage:	-1V to 4V
Source-drain diode forward voltage drop:	0.9V @ $I_{DS} = 1.2A$
Reverse recovery time:	300ns
Forward recovery time:	200ns
Input low voltage:	-0.3 to 0.8V
Input high voltage:	2 to 7V max.
Turn-off delay:	300ns
Turn-on delay:	400ns

## L6203 DMOS Full Bridge Driver

SGS Thomson

An 11-pin flat package IC with mixed bipolar, CMOS and DMOS technology. The IC can deliver 3A output current at supply voltages up to 52V with very high efficiency and fast switching speed. Each side of the bridge is controlled by a separate logic input, while a common enable input controls both sides. All inputs are TTL and CMOS compatible. The motor current can be controlled from pin 10. The other input pins control the motor according to the following table:

Pin	11	5	7	Function
1	1	0	0	Turn right
1	0	1	1	Turn left
1	1	1	1	Fast motor stop
1	0	0	0	Fast motor stop
0	1	1	1	Free running motor stop
0	0	0	0	Free running motor stop
0	1	0	0	No function

### Specification

Supply voltage:	12V to 52V
Reference voltage:	10.5V
Quiescent supply current:	10mA
Input (High) voltage:	2 to 7V
$R_{DS\ on}$ :	0.3Ω
Saturation	

voltage at 1A: 0.3V

## POWER CONTROL IC'S

### MAX4427CPA Dual High-Speed MOSFET Driver

Maxim

The MAX4427 is a dual non-inverting monolithic power MOSFET driver, designed to convert TTL/CMOS inputs to high voltage/current outputs. Delay times are virtually independent of V<sub>DD</sub>, and the high current output drivers rapidly charge and discharge the gate capacitance of even the largest power MOSFETS to within millivolts of the supply rails. This produces the power MOSFETS minimum on resistance. The high speed device is ideal for switching power supplies and DC/DC converters because as it minimises power losses.

The device has easy-to-drive inputs that should be connected to ground if unused. Drivers can be paralleled by connecting both inputs and outputs together. Supplied in an 8-pin DIL package.

**Specification**

Power supply:	+4.5V to 18V
Supply current:	2.5mA typ, 8mA max.
Peak o/p current:	1.5A at 18V
Output voltage high:	V <sub>DD</sub> - 25mV min
low:	25mV max
Output resistance:	5Ω typ, 12Ω max

### AD815AY High Output Current Differential Driver

Analog Devices

The AD815 consists of two high speed amplifiers capable of supplying a minimum of 500mA, and when configured as a differential driver, can

produce an output signal of 40V pk-pk from ±15V supplies. This can be increased further with a coupling transformer with a turns ratio greater than 1:1. The low harmonic distortion combined with the wide bandwidth and high current drive, make the device ideal for communication applications such as subscriber line interfaces for ADSL, HDSL and VDSL.

The excellent differential slew rate and high load drive make the AD815 suitable for fast dynamic control of coils or transformers such as CRT convergence and astigmatism control. The video performance is also very good, and allows the device to be used as a video distribution amplifier or twisted pair cable driver.

The circuit diagram is for a 12-way video distribution amplifier. The 75Ω back termination ensures that all outputs are relatively independent of each other with any small disturbances on one cable not affecting the other cables. Each amplifier is configured with a gain of two to compensate for this 'double termination' effect. When driving six video cables, the load seen by each amplifier output is resistive and is equal to 150Ω/6 or 25Ω. The differential gain is 0.05% and the differential phase is 0.45°.

**Suggested Parts List**

### High-Side Smart-Power Solid State Relays

SGS Thomson

- ★ 5V Logic level compatible input
  - ★ Thermal and under-voltage shut-down
  - ★ Load open-circuit warning
  - ★ Very low stand-by power consumption
- These monolithic devices are made using a 'Vertical Intelligent' Power MOS technology and are intended

for driving resistive or inductive loads with one side grounded. They typically provide power switching for microprocessor controlled automotive applications for driving motors and lamps. Two versions are available; VN05N can switch 12A continuously, while VN20N can switch up to 28A. Built-in thermal shut-down protects the chip from over-temperature and short-circuit conditions, and the input control is 5V logic level compatible.

The device has a diagnostic output which indicates open circuit (no load) and over-temperature conditions, which is derived from internal logic. To protect the device against short-circuit and over-current conditions over the full range of supply voltages and temperatures, the thermal protection section turns off the MOS power output switch at a minimum junction temperature of 140°C. When the temperature falls to about 125°C the switch is automatically turned on again. For short-circuits the response time is virtually instantaneous as the sensor is located in the region of the die where the heat is generated. The 'status' or diagnostic output is of open drain configuration. The positive going control input is internally clamped to 6V max.; if the input exceeds this level a series resistor must be included to limit the input current to not more than 10mA. The input stage is a Schmitt trigger with a hysteresis of 0.5V. Case style is TO220 and the tab is electrically connected to VCC and must be fitted with an insulating kit if bolted to a heatsink.

Specification	VN05N	VN20N
Continuous output current:	12A	28A
Power dissipation @ T <sub>C</sub> ≤ 25°C:	52W	80W
On-state resistance @ T <sub>j</sub> = 25°C:	0.18Ω	0.05Ω
Junction operating temperature:	-40 to 150°C	
Drain-source breakdown voltage:	60V	
Supply voltage:	26V max.	
Supply current, off-state:	50μA	
on-state:	15mA	
Signal input low:	0.8V	
Signal input high:	5V max. (see above)	
Status output current:	10mA max.

## U880B Double Flasher

Termic

The U880B is a double lamp flasher with its own internal oscillator followed by a frequency divider to produce a clock running at a nominal frequency of 3.3Hz. The 4-pin device flashes a pair of lamps alternately at this speed, operating from a supply in the range 4.75V to 20.4V maximum. Low current filament lamps or LEDs use the positive supply as a common connection, and the two polarity protected output stages can sink up to 55mA nominally. No other external components are required as the device is entirely self-contained. An on-chip supply voltage monitor prevents normal operation until the supply is at least 4.2V, and the output stages are switched off when the supply falls to 3.8V. It is contained in a round, four-leaded encapsulation. To identify pin numbering, orient the device top-side up such that the longest lead points down. Pin 1 is then at the top and all others are numbered anti-clockwise (left = 2, bottom = 3, right = 4).

### Specification

Supply voltage range: 4.75 to 20.4V  
Supply current range: 3.2 to 6.5mA depending on +V<sub>S</sub>

Output stage 'on' saturation: 700mV max. @ I<sub>out</sub> = 25mA

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## U6047B

Termic

A timer for motor vehicles with a wide ranging adjustable delay time from 3.7 seconds to up to 20 hours. From small value capacitors this is made possible by all time sequences being determined by an RC oscillator and a frequency divider. The relay driver is integrated and, with the corresponding external circuitry, the circuit is resistant to load dump and interference voltages in accordance with DIN40839.

To prevent interference and help protect the device the supply (pin 8) should be buffered with an RC

filter, suggested values are 510Ω and 47µF. There is an internal 14V Zener diode between pins 8 and 1 (GND) as overvoltage protection, and with 510Ω in series the device can be operated over a wide supply range from 6V to 16V. It can also be supplied from a regulated 5V source, in which case the RC supply filter is not necessary. A time function can be started or interrupted by the three inputs TOG, ON and OFF. If the time function is triggered the relay is active, the relay contact dropping out after expiry of the delay time. There are two possible applications, use of the toggle (TOG) input or of the ON or OFF inputs. When the TOG input is taken high for the first time the relay is switched on by pin 2 after a debounce period has elapsed. If triggered again the relay is switched off, and thereafter each actuation of the TOG input changes the state of the relay. If left on, it is switched off after the time delay period.

Alternatively ON and OFF controls can be realised as a rocker switch since both must not be activated simultaneously. ON leads to activation of the relay after the debounce period, while OFF immediately switches it off. If OFF is not activated, the relay is switched off after the time delay expires. In practice a common commercial application for this device is as a window demister heater control, which will 'switch itself off' after the chosen delay time (in minutes) should the driver forget.

All timing sequences are derived from an internal oscillator which uses external RC components R<sub>osc</sub> and C<sub>osc</sub> to set a fundamental frequency f<sub>o</sub>. The oscillator not only produces the delay time but also the debounce time period. The delay time will be 73728 x 1/f<sub>o</sub> while the debounce period will be 6 x 1/f<sub>o</sub>. R<sub>osc</sub> can range from 59kΩ to 650kΩ and C<sub>osc</sub> from 1nF to 4.7µF, giving oscillator frequencies from 20kHz down to 1Hz (delay times of 3.7s to 1,229m). The relay driver output is an open collector Darlington transistor with integral 23V Zener diode for limitation of the inductive pulse from the relay winding at switch-off. Maximum collector current must not exceed 300mA. The remainder of the IC is protected as described above, and all inputs are protected by a series resistor, integral Zener diode and RF capacitor.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## ULN2455M Automotive Lamp Monitor

Allegro

An IC capable of monitoring all types of automotive (motor vehicle) lamps, providing multiple LED outputs to pinpoint the area in which a lamp has failed. Type 2455 is a quad version capable of monitoring eight individual lamps or groups of lamps. The device can be used to monitor lamps, multiple low-voltage power supplies, or, with appropriate sensors, industrial processes.

Installation and operation has no effect on normal lamp operation and does not involve cutting any wires to insert resistors and such. The comparators sense the normal voltage drop in the supply wiring (approximately 20mV or so) for each of the lamps being monitored. Little additional wiring is necessary for installation because the system can be completely integral to the wiring assembly. No standby power is required as the operating voltage is obtained from the sensing leads of the device, which is only active when the lamp power is on. In principle the operation of the monitor is similar to that of a simple bridge circuit, where the top two legs of the bridge are formed by the wiring assembly resistance or through the use of discrete low value resistors. The bottom legs of the bridge

are the monitored lamps.

The two sensing inputs of each comparator are connected via separate connections to each end of the lamp's supply so that it can observe the voltage drop along the length of the lamp supply wire. Sense input #1 is attached to the supply source (as it is also the chip circuit supply) while sense input #2 connects to the lamp 'live side'. When the circuit detects a difference in voltage due to an open-filament, the appropriate open collector output driver is turned on.

Both devices are designed for use in the severe automotive environment. Lateral PNP transistors provide high-frequency noise immunity and differential transient-voltage protection. Reverse polarity protection, internal regulators and temperature compensation are all embodied in the circuit designs. A device failure will not affect lamp operation.

Supplied in a 14-pin DIL package.

### Specification

Supply voltage:	30V absolute max., 80V for 100ms
Peak reverse supply voltage:	30V
Output switch current sink (ON):	35mA max.
Output leakage current (OFF):	100µA max.
Output saturation voltage:	0.8V @ IC = 5mA
Differential switch voltage:	13mV typical
Sense input #1 current + supply:	1.7mA
Sense input #2 current:	300µA
Operating temperature range:	-40°C to +85°C

## HT2040A Christmas Lights Controller

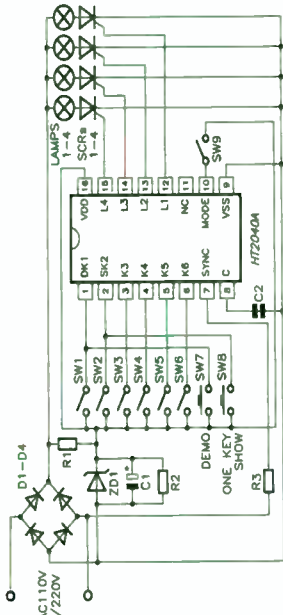

Hoitek

A low-cost, low power CMOS LSI device for controlling Christmas lights, or similar low wattage mains lamps. The IC has four outputs that directly drive the SCRs controlling the lamps. The lamps can be displayed in 10 different groups which are selected by input switches. Within each group, each lamp has an individual display pattern of which there are 12. Each group can be selected by using the DK1, SK2 and K3 to K6 pins, with each pin having two functions depending on the condition of the MODE pin. In addition, all groups can be displayed automatically by momentarily connecting DK1 to VDD with MODE connected to VSS. The groups can be selected sequentially by momentarily connecting pin SK2 to VDD with MODE connected to VSS. The device is designed to operate from a 5V DC supply, and has a built-in PLL circuit that can be synchronised to either 50Hz or 60Hz mains.

Select Pin	MODE open	Mode connected to VDD
DK1 active high	————	Show group 5
DK1 momentarily closed to VDD	Demo Function MODE to VSS	————
SK2 active high	————	Show group 6
SK2 momentarily closed to VDD	Sequential group display MODE to VSS	————

- K3 active high Show group 1 Show group 7
- K4 active high Show group 2 Show group 8
- K5 active high Show group 3 Show group 9
- K6 active high Show group 4 Show group 10

With the suggested components lamp rating for each SCR is 250W

## HT7704B Touch Dimmer

Hottek

The HT7704B is an 8-pin DIL IC designed to control the brightness of an incandescent lamp by changing the triggering angles of a suitable triac. A touch sensitive input is used to turn the lamp on/off and provide four steps of brightness. The device is very stable and tolerant, and will work with a highly

capacitive, highly resistive input line. Few external components are required. In use the first 'touch' turns the light on to its initial brightness level. The next three 'touches' will bring the lamp up to full brightness in stages. The fifth touch will turn the light off.

- Operating voltage: 4V to 10V (7V typical)
- Operating current: 200µA typical, 400µA max.
- Input high voltage: 0.8V<sub>DD</sub> min.
- Input low voltage: 0.2V<sub>DD</sub> Max.

\*Only required if remote unit is built. A digital electronic dimmer IC which can turn lights etc. on and off and set the required brightness via a single sensor. Operation can also take place from remote sensors (or by infrared remote control with a suitable receiver circuit) or switched by an on/off switch connected between neutral and the 'Remote Input'. If remote sensor or switch is not required R4 and R5 are omitted and pin 6 linked to pin 7. If the sensor is tapped (touched) for between 50 and 400ms the light will be switched on and off successively. Three different dimming modes are

possible according to the connection of pin 2. If pin 2 is left open circuit then at switch on, lamp brightness will be at same level as it was when last switched off. If the sensor is held, brightness will increase to maximum or decrease to minimum, then rise or fall cyclically until the sensor is released. On successive dimming operations the brightness will increase if it was previously decreasing and vice versa. If pin 2 is connected to pin 7 then at switch on (if the sensor is tapped), lamp brightness will be at maximum. If the sensor is held, the lamp switches to minimum brightness at switch on, and then starts to increase to maximum then fall again and will continue to cycle until the sensor is released. On successive dimming operations (providing it has not been switched off in the meantime) the brightness will continue to increase or decrease in the direction it was previously moving.

If pin 2 is connected to pin 1, operation is the same as for connection to pin 7 except that on successive dimming operations, the brightness will move in the opposite direction from the way it was previously moving.

**Caution.** The circuits shown above are at 240V potential. They should be built on a Blanking Plate and then used to replace conventional light switches. Always switch the mains off at the main fuse box before unscrewing any blanking plate or switch plate and do not switch on again until all plates have been screwed back in position.

**Specification (typical at 25°C)**

- Supply voltage: -5.3V DC
- Supply current: 0.45mA
- Remote input current: 0.5µA
- Output current: >25mA

## HT7630 PIR Controller

Holtek

RECENTLY INTRODUCED

## HT7606 Low Power PIR Controller

Holtek

RECENTLY INTRODUCED

A low power PIR controller IC with an output that can directly drive a suitable triac for switching on mains lamps. The device features a built-in amplifier and comparator and has an adjustable output duration of 4 to 128 seconds. An external cadmium sulphide cell is used to set the ambient light at which the device will operate. Please note that R18 will need to be selected on test to suit individual requirements. The suggested PIR offers high sensitivity, low noise and uses a ceramic ferroelectric dual sensing element. The IC is designed to operate from a 4.5V to 12V DC supply rail and has a low stand-by current of only 30µA max. There is 'beep' facility to indicate when the system is going active. Supplied in a 28-pin DIL package.

The HT7630 is a low power PIR controller IC designed for battery operated door bell or alarm applications. The device contains an op-amp, comparators, a timer, voltage regulator, oscillator and control circuits. When the PIR detects human movement the IC will output an active low signal to trigger a sound generator IC (AZ44X or AZ45Y, but others in the range can be used if slight modification to circuit is made.). The output duration is 4s for a door bell and 32s for an alarm applications (set by MODE pin). The IC also provides an LB input pin for low battery detection during PIR warm-up. An EN input pin for output enable/disable control and a BZ pin for status indication. A LED or piezo buzzer can be connected to BZ to indicate PIR warm-up, triggering, alarm triggered memory and low battery.

### Specification (V<sub>DD</sub> = 9V)

Operating voltage: 5V to 12V DC  
 Regulated output: 4V DC typical (9V DC supply)  
 Stand-by current: 30µA max.  
 Operating current: 75µA max.  
 Oscillator frequency: 8kHz typ. (R6=910k, C4=100pF)  
 Operating temperature: -25°C to +75°C

## U2401B Battery Charger

Temtec

A Ni-Cd battery charger control IC in a single 8-pin DIL package which features charging time selection performed through the connection of pin 1 to either supply +V, 0V or floating. An internal divider by 32768 divider provides the fundamental time period from the internal oscillator, with extra divisions being added depending on pin 1. If pin 1 is connected to +V the fundamental time n is further divided by 60, if left floating n is divided by 36, and if connected to 0V the time is n (divided by 1). The clock oscillator frequency is set by a single capacitor between pins 5 and 6. The clock frequency can be derived by:

$$f_{osc}(Hz) = \frac{10^4}{2C_X(nF)}$$

Or the time delay T<sub>d</sub>, and period duration, T, in seconds by:

$$T_d(s) = \frac{2 \times C_X(nF)}{10^4} K$$

Where C<sub>X</sub> ≥ 100pF and K = 32768 x 1, 36 or 60. The output from pin 3 is short circuit protected and limited to a current of typically 150mA and includes a Zener diode. The output pulse width is 1024 times the period duration, T, of the oscillator frequency. Pin 4 can be used to override the timer to reset it or start again. If open circuit (floating) the charger is enabled. If connected to +V the timer is reset and the output pulse is stopped, and if connected to 0V, the maximum time duration is 16 x T of the oscillator frequency. An internal power-up monitor allows the circuit to operate at up to 3.6V, but a 4.5V minimum supply is recommended against voltage fluctuations. It has an internal voltage limitation of typically 15V which allows +12V to be directly connected to the supply pin, although it is recommended that a series resistor be included with a decoupling capacitor.

### Specification

DC supply current  
 at 5V: 1.2mA  
 at 12V: 2mA  
 during output pulse  
 5V: 2.6mA min.  
 during output pulse

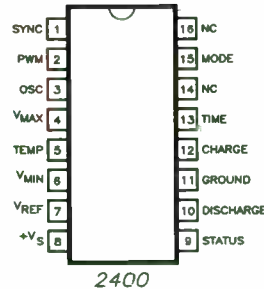

12V: 7.5mA min.  
 Minimum supply voltage: 4.5V

## U2400B Battery Charger

Temtec

A Ni-Cd battery charging and control device in a single 16-pin DIL package which particularly supports the fast charging of Ni-Cd cells. One of three charging times can be selected simply by connecting pin 13 to supply +V for a 12 hour pulsed charge, to 0V for a 1 hour continuous charge, or left floating for a fast 1/2 hour charge. Before charging begins the device first discharges the cell completely to preserve long life for the cell. A central control block monitors time, temperature and voltage during charging, and switches the output off when the specified charge is attained. It includes an LED signal lamp driver and when switched on, a red LED connected between the display output pin 9 and +V (via 330Ω) is lit if no battery is connected. When a battery is inserted, presenting a minimum voltage of 180mV approx. at pin 4 (after a potential divider as appropriate for multiple cells), the predisharge phase is started with a 2 second delay. The positive going discharge output at pin 10 is activated for switching an NPN discharge transistor, accompanied by the red LED flashing. The discharge procedure is stopped when a voltage at pin 6 falls below 530mV. The charge phase follows with an output from pin 12 indicated by the flashing of a green LED between pin 9 and 0V (with 330Ω resistor).

After the programmed charging period as set by pin 13, trickle charge mode is selected, indicated by a constantly lit green LED. Battery temperature can be monitored by a thermistor based sensing network connected to pin 5. The display, charge and discharge outputs will be made inactive by overtemperature or overvoltage, and the timer clock interrupted during all three phases and in each mode, when the limits at pins 4 or 5 are exceeded.

### Specification

Supply voltage range: 5 to 25V DC  
 Current consumption: 1.5 to 5mA without load  
 Discharge output drive current: 100mA min.  
 Charge output drive current: 100mA min.  
 Reference voltage output (pin 7): 3V nominal  
 Oscillator frequency: 200Hz with 15nF between pin 3 and 0V, and 430kΩ between pins 3 and 7  
 Charge times, 200Hz oscillator: 12hrs, 1hr or 30m (set by pin 13)  
 LED (status) drive current: 15mA max. (8mA min.)

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MAX712/3 Fast Charge Controllers

Maxim

The MAX712 and MAX713 are nickel cadmium (Ni-Cd) battery fast charge controllers which will fast charge batteries from a DC source at least 1V higher than the maximum battery voltage. 1 to 16 series cells can be charged at rates up to 4C. A voltage-slope detecting analogue-to-digital converter, timer, and temperature window comparator determine charge completion. The MAX712 or 713 are powered by the DC source via an on-chip +5V shunt regulator, and draw a maximum of 5µA from the battery when not charging. A low-side current-sense resistor allows the battery charge current to be regulated while still supplying the power to the battery's load. The MAX712 terminates fast charge by detecting zero voltage slope, while the MAX713 uses a negative voltage-slope detection scheme. Both devices are identically packaged as 16-pin DIL and share the same pin numbering and basic functions. An external power PNP transistor, blocking diode, three resistors and three capacitors are all the extra components required.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## HT7470 Fast NiCd Charger

Holtek

A sophisticated NiCd battery charger IC to maximise life and performance of expensive NiCd batteries. The IC features a high resolution differential voltage detector to determine peak charging voltage with automatic switching from fast to trickle charge. The fast charge rate can be set from C/2 to 4C with a trickle rate of C/10. The device is designed to operate from a 3.5V to 5.5V DC power rail and features auto cut-off for defective battery, adjustable thermal protection, built-in safety timer, battery warm-up option, maximum voltage protection, auto-start function and direct drive LED displays and piezo alarm buzzer.output. Supplied in a 16-pin DIL

Charge rate is set by switch S1 & S0, and the device adjusts the internal parameters such as safety timer, trickle charge duty cycle and warm-up interval by referring to these charge rate inputs to make the system safe. The warm-up function improves battery efficiency, and during warm-up discharge is inhibited. During battery warm-up, full charge detection and abnormal charge detection are always enabled. Warm-up time is indicated in the following table.

Charge Rate	4C	2C	1C	C/2
S1/S2	1/1	1/0	0/1	0/0
Charge Count	150	300	600	1200
Time (min)	3.5	7	14	28

0 = closed, 1 = open

The HT7470 is a universal fast charge controller, and can be adjusted to charge most rated voltage cells by adjusting the RC network and the integral time constant of the A/D converter. The RC network is configured as shown (R4,R6,C3) and the R5 resistance is listed in the table. Note that the integral time constant of the A/D converter is 38.54ms, and the minimum battery voltage is 2.4V, then:

$$R5 = ((\text{Battery voltage} - 2.4) \times 2k) / 2.4$$

Battery Voltage	R5
2.4V	0
3.6V	1k
4.8V	2k
6.0V	3k
7.2V	4k
8.4V	5k
9.6k	6k
ditto	

Battery state is indicated by LED1, LED2 and the buzzer, each state being represented in the following table

Mode	LED1	LED2	Buzzer
Charging	on	off	off
Warming	on	off	off
Discharge	on	on	off
Full charge	slow flash	off	off
Warm-up (wait period)	fast flash	off	off
Abnormal	flash	flash	tone (1min)
Standby	off	off	off

To calculate R16 & R18 use the following example that is based on a 7.2V/0.6Ah battery, charge rate 2C.

$$R16 = (12V - 7.2V \times Ka) / (0.6 \times 2) = 2.4\Omega (5W)$$

$$R18 = 7.2 / (0.6 \times 2) = 6\Omega (5W)$$

where Ka is given by the following table:

Charge Rate	4C	2C	1C	C/2
Ka	1.5	1.25	1.125	1.063

Note the thermistor should be mounted against the battery for temperature monitoring.

**VOLTAGE REFERENCES**

**AD680JN LoW-Power 2.5V Reference**

Analog Devices

AD680

A bandgap voltage reference that provides a fixed 2.5V output from a voltage input between 4.5V to 36V, and operates from a very low quiescent current (typically 250µA). Laser trimming of both initial accuracy and temperature coefficients results in low errors over the specified temperature range - without the need for external components. The device has a maximum variation of 10mV between 0°C and +70°C. The very low noise (typically 8µV pk-pk from 0.1Hz to 10Hz), and spectral density noise (typically 250nV√Hz), make the IC suitable for use as a reference for DAC which require an external precision reference source. The device is also ideal for ADC, and in general, can offer better performance than the standard on-chip reference. The temperature output pin enables the AD680 to be configured as a temperature transducer. Supplied in a 8-pin DIL package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NP38R	AD680JN	£1.930 25+ £1.410 100+	£3.100 1+

**TL431CZ Programmable Voltage Reference**

SGS-Thomson

TL431

The TL431 is a programmable shunt voltage reference with guaranteed temperature stability over the entire operating temperature of 0°C to +70°C. The output voltage may be set to any voltage between  $V_{ref}$  (2.5%V approx.) and 36V with just two external resistors. The device has a sink current capability of 1 to 100mA, and a typical output impedance of 0.22Ω. Supplied in a TO92 package.

$V_{KA} = V_{ref}(1 + R1/R2) + I_{ref} \cdot R$   
For  $V_{ref} = V_{KA}$  connect directly pin 3 to 1

**Specification**

- Cathode/anode voltage:  $V_{ref}$  to 36V
- Cathode current: 1 to 100mA
- $V_{ref}$ : 2.495V
- $V_{ref}$  deviation over temperature range: 3mV typ
- Min cathode current for regulation: 0.5mA typ
- Dynamic impedance: 0.22Ω typ

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**LPR30N Low Dropout Regulator Controller**

SGS-Thomson

LPR30N

The LPR30 is a very low dropout voltage regulator controller designed to be used with an external N-channel power MOSFET to provide a very high current, low dropout linear voltage regulator. The dropout voltage of the device is as low as the  $R_{DS(on)}$  of the external power MOSFET multiplied by the output current. The output current is only limited by the capability of the MOSFET. The device requires an additional separate supply to provide the control voltage for the external MOSFET gate input.

The output voltage can be set from as low as 1V to over 50V and can be constant-current limited when the controller detects 50mV across an external sense resistor. Supplied in an 8-pin DIL package

**Specification**

- Supply voltage  $V_{CC}$ : 5V to 30V max
- Supply current: 4mA max
- $V_{REF}$ : 2.5V
- Ref o/p current: 20mA min
- PSRR: 70dB
- O/P noise: 50µV
- Open loop gain error amp block: 80dB
- current limit block: 50dB

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**ICL8211CPA Voltage Detector**

Harris

A highly accurate micropower integrated circuit intended primarily for precise voltage detection and generation. The IC provides a 7mA current limited output sink when the voltage applied to 'Threshold' is less than 1.15V - the internal reference. A low current output 'Hysteresis' is also turned on at this point and may be used to provide positive and noise free output switching using a simple feedback network.

8211

Applications include low battery indicators, power supply malfunction detectors for volatile memory systems etc. Supply voltage 2V to 30V at 22µA supply current.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## ZN423 Precision Voltage Reference Source

GEC-Plessey

A monolithic IC using the energy bandgap voltage of a base-emitter junction to produce a precise, stable, reference source of 1.26V. This is derived via an external dropping resistor for supply voltages of 1.5V and above. Unlike conventional Zener diodes, the temperature coefficient remains constant with reference current.

### Specification

Output voltage:	1.26V
Reference current:	1.5mA to 12mA
Slope resistance:	1.5Ω
	(reference current 5mA)
Temperature coefficient:	30ppm/°C
External resistor:	100Ω minimum
RMS noise voltage:	6µV
Power supply ratio:	60dB

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 3006	Price each exc. VAT			inc. VAT each
		10+	50+	300+	1+
GS86T	ZN423	£1.040	£0.867	£0.743	£1.410

## ZN458/B 2.45V Precision Reference Regulator

GEC-Plessey

A monolithic IC that provides a stable reference source of 2.45V in a two lead package without the need for an external shaping capacitor. The device has excellent long term stability (10ppm), low noise (10µV), and is available with a maximum change in reference voltage of either 17mV or 5mV.

### Specification ZN458 ZN458B

Maximum change in reference voltage:	17mV	5mV
Maximum dissipation:	300mW	300mW
Typical output voltage (2mA):	2.45V	2.45V
Maximum slope resistance:	0.2Ω	0.2Ω
Reference current:	2.0mA to 120mA	
Temperature coefficient (-20°C to +70°C):	99ppm/°C	
RMS noise voltage:	10µV	10µV

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

DB55K	ZN458B	£1.660	£1.380	£1.180	£2.540

## REF-02CP +5V Precision Reference

Analog Devices

NEW LOW PRICE

A precision bandgap reference giving 5V ±1%. The device has short circuit protection, an adjust pin for up to ±6% adjustment and excellent stability with large changes in temperature, load current and input voltage. The circuits shown for the 10V Ref can be used with this device. In addition, this device has an output on pin 3 whose voltage changes linearly with temperature, from 577.5mV at 0°C to 724.5mV at 70°C. The current on this pin must not exceed 50nA and capacitance must be less than 30pF.

### Specification (typical at 25°C)

Output voltage:	5V ±0.05V
Adjustment range:	±6%
Supply voltage:	7V to 30V
Output voltage noise:	12µV peak-to-peak
Line regulation:	0.009%/V
Load regulation:	0.006%/mA
Supply current:	1mA
Load current:	21mA
Sink current:	-0.5mA
Short circuit current:	30mA
Temperature coefficient:	20ppm/°C
Voltage output:	630mV at 25°C ±2.1mV/°C

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

DB59P	REF50Z	£1.190	£0.999	£0.856	£2.010

## REF-03CNB +2.5V Precision Reference

Analog Devices

NEW LOW PRICE

A precision bandgap reference giving 2.5V ±1%. The device has short circuit protection, an adjust pin for up to ±6% adjustment and excellent stability with large changes in temperature, load current and input voltage. The circuits shown for the 10V Ref can be used with this device except that in addition a 330pF capacitor must be connected between pins 3 and 4.

### Specification (typical at 25°C)

Output voltage:	2.5V ±0.025V
Adjustment range:	±6%
Supply voltage:	4.5V to 30V
Output voltage noise:	5µV peak-to-peak
Line regulation:	0.001%/V
Load regulation:	0.01%/mA
Supply current:	1mA
Load current:	20mA
Sink current:	-0.5mA
Short circuit current:	30mA
Temperature coefficient:	0.7ppm/°C

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## AD584JN Pin Programmable Precision Voltage Reference

Analog Devices

A precision voltage reference device that is pin-programmable to give four outputs: 10.000V, 7.500V, 5.000V and 2.500V. Other output voltages that can be above, between or below the four standard voltages are available by using external resistors.

Programming (power is applied to pins 8 and 4 and output is between pins 1 and 4.):

- 10.0V: All other pins open
- 7.5V: Join pins 2 and 3
- 5.0V: Join pin 2 to the output pin 1
- 2.5V: Join pin 3 to the output pin 1

By buffering each voltage programming pin with

a unity gain non-inverting op-amp, multiple outputs are available.

The strobe pin can be used to turn the device off and on. When used as a power supply reference, the supply can be switched off with a single, low power signal. The output is configured to sink or source currents, so small reverse currents can be tolerated in circuits using the device without damage to the reference, and without disturbing the 10V, 7.5V and 5.0V outputs. Housed in an 8-pin DIP package.

#### Specification

- Output voltage tolerance
  - 10.000V: ±30mV maximum
  - 7.500V: ±20mV maximum
  - 5.000V: ±15mV maximum
  - 2.500V: ±7.5mV maximum
- Output voltage change: 30ppm/°C
- Quiescent current: 0.75mA
- Output current with  $V_{in} \geq V_{out} + 2.5V$ 
  - source @ +25°C: 10mA
  - source 0°C to +70°C: 5mA
  - sink 0°C to +70°C: 5mA

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## LM334N Adjustable Current Source

SGS Thomson

This IC in a TO92 package is a 3-terminal adjustable current source with a 10,000 to 1 range in operating current, excellent current regulation and a wide dynamic voltage regulation of 1V to 40V. Current is established with one resistor connected between pins 1 (R) and 3 (V-), and no other parts are required. The current is equal to 0.0677V divided by the resistor in ohms (i.e. for 1mA, R = 68Ω) at 25°C. Currents may be set in the range 1µA to 10mA and regulation is 0.02% per volt. Initial current accuracy is ±3% typical. Reverse voltages of up to 20V will draw only a few microamps allowing the device to act as a rectifier and current source in AC applications. The current is also directly proportional to the temperature at the rate +0.33% per °C. Zero drift operation can be obtained by adding one resistor and one diode. Applications include bias networks, surge protection, low power reference, ramp generation, LED driver, and temperature sensing.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2588	Price each exc. VAT			inc. VAT each
		10+	50+	300+	1+
WQ32K	LM334N	£0.700	£0.583	£0.500	£1.410

## TLE2425CLP Precision Virtual Ground

Texas Instruments

Comprising a high performance precision op amp and precision micropower voltage reference, this IC eliminates the separate resistors, capacitors, op

amps, and voltage references that have typically been used to provide the reference voltage in signal-conditioning circuits to terminate signal grounds and in interfacing A/D and D/A converters. The IC gives increased dynamic signal range, improved signal-to-noise ratio, lower distortion and improved signal accuracy. Both input and load regulation exceed 12 bits of accuracy on a single 5V system.

#### Specification (typical at $V_{IN} = 5V, 25°C$ )

- Input voltage: 4V to 40V
- Output voltage: 2.5V ±0.8%
- Output current: 20mA sink and source
- Bias current: 170µA
- Input regulation: 1.5µV/V
- Output impedance: 0.0075Ω
- Output regulation source: 45µV (0 to -10mA), 150µV (0 to +20mA), 65µV (0 to +10mA)
- Sink: 55mA sink, -50mA source
- Ripple rejection: 80dB

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## VOLTAGE REGULATORS

### MAX743CPE Dual Output Switch-Mode Regulator

Maxim

power supplies. From a +5V supply the device can provide either a  $\pm 12V$  or  $\pm 15V$  dual supply with switching between output voltages under logic control. Output current is typically  $\pm 100mA$  or  $\pm 125mA$ . The device relies on simple inductors and will regulate both outputs, independently, to within  $\pm 4\%$  over all conditions of line voltage, temperature and load current. Efficiency is typically 75% to 82% over most of the load range.

Operating at 200kHz with current mode feedback allows the IC to be used with small, low-cost external components. Thermal shutdown and cycle-by-cycle current sensing prevents overheating and offers excellent power switching transistor protection. With undervoltage lock-out and programmable soft-start, the MAX743 is an inherently reliable and easy-to-use device. Supplied in 16-pin DIL package.

#### Specification

Supply voltage: +5V  
 Output voltage:  $\pm 12V$  (125mA) or  $\pm 15V$  (100mA)  
 Efficiency: 82% typ  
 Line regulation: 0.05%

Load regulation: 1%  
 Reference voltage: 2V  
 Oscillator frequency: 200kHz typ  
 Undervoltage lock-out: 3.8V min, 4.2V max  
 Thermal shutdown: 190°C

## LE50CD Surface Mount 5V 100mA Very Low Dropout Regulator

SGS-Thomson

A surface mount 5V, 100mA regulator with a very low dropout voltage of typically 0.2V, and a low quiescent current. The device is ideal for low power, low noise applications, in particular battery powered systems. In addition, there is a logic control inhibit input which can be used to put circuitry, that the regulator supplies, into a stand-by mode to further reduce system power consumption. Supplied in an 8-pin SO-8 package.

low noise applications, in particular battery powered systems.

### Specification

- Output voltage: 5V
- Input voltage: 18V
- Output current limit: 150mA
- Line regulation: 4mV typ
- Load regulation: 3mV typ
- Quiescent current: 1.5mA typ
- PSRR: 76dB
- Dropout voltage: 0.2V at 100mA typ
- O/P noise voltage: 50µV
- O/P bypass capacitance: 10µF

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NP93B	LE50CZ	25+ £0.580 100+ £0.483 500+ £0.446	1+ £0.650

## LD1117V50 5V 800mA Very Low Dropout Regulator

SGS-Thomson

A TO-220 5V, 800mA regulator with a very low dropout voltage of typically 1V, and a low quiescent current. The device has a very tight output tolerance - within ±1% at 25°C, and has internal current and thermal limiting.

### Specification

- Output voltage: 5V
- Input voltage: 15V
- Output current: 800mA min
- Line regulation: 1mV typ
- Load regulation: 1mV typ
- Quiescent current: 5mA typ
- PSRR: 75dB
- Dropout voltage: 1V at 100mA typ  
1.15V at 800mA typ
- O/P noise voltage: 50µV

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NP91Y	LD1117V50	25+ £1.040 100+ £0.867 500+ £0.800	1+ £1.290

### Specification

- Output voltage: 5V
- Input voltage: 18V
- Output current limit: 150mA
- Line regulation: 4mV typ
- Load regulation: 3mV typ
- Quiescent current on mode: 1.5mA typ
- off mode: 50µA typ
- PSRR: 76dB
- Dropout voltage: 0.2V at 100mA typ
- O/P noise voltage: 50µV
- O/P bypass capacitance: 10µF

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## L4931CV50 5V 250mA Very Low Dropout Regulator

SGS-Thomson

A TO-220 packaged 5V, 250mA regulator with a very low dropout voltage of typically 0.4V, and a low quiescent current. The device is ideal for low power, low noise applications, in particular battery powered systems.

### Specification

- Output voltage: 5V
- Input voltage: 20V
- Output current limit: 300mA
- Line regulation: 3.5mV typ
- Load regulation: 3mV typ
- Quiescent current: 4mA typ
- PSRR: 70dB
- Dropout voltage: 0.4V at 250mA typ
- O/P noise voltage: 50µV
- O/P bypass capacitance: 10µF

## LF50CDT Surface Mount 5V 500mA Very Low Dropout Regulator

SGS-Thomson

A surface mount 5V, 500mA regulator with a very low dropout voltage of typically 0.4V, and a low quiescent current. The device is ideal for low power, low noise applications, in particular battery powered systems. Supplied in a 3-pin surface mount DPAK package.

**Specification**

Output voltage:	5V
Input voltage:	16V
Output current limit:	1A
Line regulation:	3mV typ
Load regulation:	2mV typ
Quiescent current:	0.5mA typ
PSRR:	76dB
Dropout voltage:	0.2V at 200mA typ 0.4V at 400mA typ
O/P noise voltage:	50µV
O/P bypass capacitance:	10µF

## Low Dropout Regulators

Hoftek

A range of fixed voltage regulators that offers very low dropout voltage (100mV) and negligible power consumption. This, combined with a space saving TO92 package, makes them suitable for any battery powered application up to a maximum input of 24V (depending on device). All have an output tolerance of 5% and a low temperature coefficient, typically 0.015%/oC for the HT7xxx series.

Order Code	Type	O/P V/I	Max. I/P	Power

## LP2950C 5V Micropower Voltage Regulator (Top view)

National Semiconductor

A micropower voltage regulator with a very low quiescent current (75µA typical) and a very low dropout voltage, typically 40mV for light loads, and 360mV at 100mA. The device is ideally suited for battery powered equipment, and the quiescent current increases only slightly in dropout, prolonging battery life. A tight initial tolerance of typically 0.5%, extremely good load and line regulation and a very low output voltage temperature coefficient also makes the device useful as a low power voltage reference. The TO92 package is pin compatible with other similarly encapsulated 5V regulators, and so the device can directly replace them.

**Specification**

Input supply voltage range:	-0.3 to +30V max.
Output voltage:	5V
Output temperature coefficient:	20ppm/°C typical
Line regulation:	0.03% max.
Load regulation:	0.04% max.
Input/output dropout voltage:	380mV @ 100mA output
Current limit:	160mA
Thermal regulation:	0.05%/W
Output noise:	430µA into 1µF
Reference voltage:	1.235V typical (1.25V max.)

## Top Value Regulators

This range of three terminal standard voltage regulators provides an economical and attractive alternative to branded manufacturers products. In a market where the increasing demand for all semiconductors is driving prices ever higher, our experienced team are committed to sourcing new products which offer good solid value for money, backed up by the quality and service you have come to expect from Maplin.

Output voltages for the three devices are +5V, +12V and +15V, with an output regulation figure of ± 4%. Maximum input voltage is 35 Volts and the devices are supplied in the standard TO-220 package (see pinout P1d), which does require a heatsink if high power dissipation is required. Note that the devices are all internally short circuit and thermal overload protected and will shut down when such conditions occur. Data sheets are available.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## HV3-2405-5 Single Chip Power Supply

Harris

A single chip power supply that can supply up to 50mA at 5V to 24V regulated DC when the input is anything between 28V and 264V AC rms. Thus the

unit may be connected directly to the mains (via a current limit resistor) anywhere in the world and will supply the same regulated output. The IC eliminates the need for a mains transformer, bridge rectifier and separate voltage regulator. Note however, that if mains isolation is required, an isolation transformer (LW33L) should be used.

The output voltage is +5V regulated if pins 5 and 6 are linked. Output voltages from 5V up to 24V are possible by modifying the output circuit as shown in Figures 1, 2 and 3. Figure 1 is the simplest circuit, where R3 = 1000 (VOUT - 5). E.g., for 12V output, R3 = 1000(12 - 5) = 7kΩ (2k7 and 4k3 in series). The circuit of Figure 2 will improve the accuracy of the output voltage. In this case R5 should be 1kΩ.

$$R4 = \frac{1000 (V_{OUT} - 5)}{6}$$

E.g., for 12V output,

$$R3 = \frac{1000(12-5)}{6} = \frac{7200}{6} = 1k2$$

Figure 3 shows how to set the output voltage using a zener diode. In this case the output voltage is 5V plus the zener voltage. This circuit has the added advantage that 5V is also available at pin 5, but ensure that the total of the currents on pins 5 and 6 does not exceed 50mA, and note that the current from pin 5 flows through the zener, so be careful not to exceed the zener's power rating.

**Specification**

Input voltage range:	18V rms to 264 V rms
Input frequency range:	48Hz to 440Hz
Output current:	at least 50mA
Output voltage:	5V DC to 24V DC
Line and load regulation:	<5%

Typical for circuit shown  $V_{IN} = 240V$  AC 50Hz,  $V_{OUT} = +5V$  DC,  $I_{OUT} = 50mA$ , 25°C.

Output voltage:	5V ±2%
Output ripple:	22mV
Line regulation (80V rms to 264V rms):	10mA
Load regulation (5mA to 50mA):	<20mV
Output current:	50mA max
Short circuit current:	95mA
Dropout voltage (pin 2 to 6):	2-2V
Current into pin 5:	1mA

## HIP5600IS High Voltage Linear Regulator

Harris

An adjustable positive linear voltage regulator capable of operating up to either 400V DC or 280V AC. The output voltage is adjustable from 1.2V DC to within 50V of the peak input voltage with just two external resistors. The chip has thermal shutdown and output current limiting, and can withstand an input to output voltage as high as 400V peak. As well as normal regulator applications, the device can be used as an AC/DC converter and start-up circuits for switch mode power supplies.

Nominal V <sub>OUT</sub>	RF1	RF2
3.3V	3.6k	5.6k
4.9V	2.7k	7.5k
12V	1.8k	15k
14.8V	1.1k	12k

The output can be set by using a Zener diode which results in improved ripple rejection ratio. An optional 10µF bypass capacitor from V<sub>ADJ</sub> to ground will also improve the ripple rejection by preventing the ripple at the adjust pin from being amplified.

### Regulator with Zener

V <sub>OUT</sub>	V <sub>Z</sub>
3.7V	2.5V
5.1V	3.9V
10.3V	9.1V
12.2V	11V
16.2V	15V

Note that V<sub>OUT</sub> = 1.18 + V<sub>Z</sub>  
RF1 = 10k

A 10µF minimum output capacitor is required for stability and, depending on the source impedance, a 0.022µF input capacitor may be required. A minimum load current of 1mA is required to maintain output voltage regulation. Housed in a TO220 package. Note that the device does not provide isolation from AC.

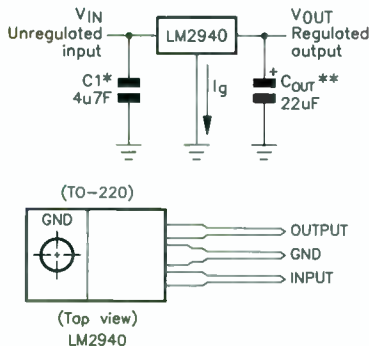

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
DT24B	HIP5600IS	£1.550	£3.380

## LM2940CT 1A Low Dropout Regulator

National Semiconductor

A positive voltage regulator that can source 1A of output current with a dropout voltage of typically, 0.5V and a maximum of 1V, over the entire temperature range. A quiescent current reduction circuit has been included which reduces the ground current when the differential between the input voltage and the output voltage exceeds approximately 3V. The quiescent current with 1A of output current and an input-output differential of 5V is therefore only 3mA. Higher quiescent currents only exist when the regulator is in the dropout mode (V<sub>IN</sub> - V<sub>OUT</sub> = 3V).

Also designed for vehicular applications, the device, and all regulated circuitry, is protected from reversed battery installation, or double-battery 'jump-start' scenarios. During line transients, such as load dump where the input can temporarily exceed max. V<sub>IN</sub>, the device will shut down to protect its internal circuits and the load. It cannot be harmed by temporary mirror-image insertion. Thermal overload and short-circuit protection is included.

### Specification

Output voltage:	5V typical ±0.15V max.
Line regulation:	20mV
Load regulation:	35mV
Output impedance:	35mΩ
Quiescent current:	10mA max.
Output noise:	150µV rms
Ripple rejection:	72dB min.
Long term stability:	20mV/1000 hrs
Dropout voltage:	0.5V min.
Maximum input voltage:	26V
Operating temperature range:	0°C to +125°C

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
AV22Y	Reg LM2940CT-50 NSC	£0.800	£1.710

## LM2930A

SGS Thomson

A very low voltage drop 5V regulator which features an output current rating of 400mA with a dropout voltage of 0.4V typical. At 150mA the dropout voltage

falls to 0.2V. Moreover, the device includes a ±40V input overvoltage protection, plus reverse polarity protection, thermal shutdown and foldback current limiting. It is designed primarily for automotive applications and protects both itself and the load from load dump field decays, transients and incorrect battery connection. The low voltage drop of this device allows correct operation even during starting, when the battery voltage can fall below 6V. The LM2930A is encapsulated in a TO220 3-pin package.

An output decoupling capacitor of 100µF minimum is required for stability, not allowing for actual value variations (larger values are preferred). However, output capacitors may be increased in size to any desired value above the minimum; one possible advantage of this would be to maintain the output voltages during brief conditions of negative input transients that might be characteristic of a particular system.

### Specification

Maximum DC input voltage:	35V
Maximum reverse input voltage:	-18V
Load dump:	+40V for >5ms
Field decay:	-40V for >5ms
Output voltage:	5V
Line regulation:	5mV (50mV max.)
Load regulation:	15mV
Output impedance:	200mΩ
Quiescent current:	22mA, I <sub>OUT</sub> = 150mA
Output noise voltage:	140µVrms
Long term stability:	20mV/1000hrs
Supply voltage rejection:	60dB
Dropout voltage:	0.4V @ I <sub>OUT</sub> = 400mA
Output short circuit current:	230mA (foldback active)

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

AH87U	LM2930A	£1.260	£1.960

## L387A Voltage Regulator

SGS Thomson

The L387A is a very low drop voltage regulator in a 5-pin TO220 package specially designed to provide stabilised 5V supplies in consumer and industrial applications. Due to its very low input/output voltage drop, this device is very useful in battery powered equipment, reducing consumption and prolonging battery life. A reset output makes the L387A particularly suitable for microprocessor systems. This output provides a reset signal when power is applied, after an external programmable delay, and goes low when power is removed, inhibiting the microprocessor. Hysteresis is built into the response to the reset delay capacitor which raises the immunity to ground noise.

### Specification

Output voltage:	5V nominal (4-8 min. to 5-2 max.)
Output current:	500mA max.
Maximum operating input voltage:	26V
Line regulation:	5mV @ V <sub>IN</sub> = 6 to 26V, I <sub>OUT</sub> = 5mA

This symbol beside an order code in the price block indicates WHILE STOCKS LAST

Load regulation: 15mV @  $I_{out} = 50$  to 500mA  
 Dropout voltage: 0.6 @  $I_{out} = 500$ mA  
 Quiescent current: 100mA @  $I_{out} = 500$ mA,  $V_{in} = 6$ V  
 Supply voltage rejection: 60dB @  $I_{out} = 350$ mA into 100 $\mu$ F  
 Output short-circuit current: 1.2A  
 Reset output low voltage: 0.8V max.  
 Reset output leakage current: 50 $\mu$ A

## LM317 3-Terminal Adjustable Voltage Regulators

Various

The LM317 is an adjustable, positive, 3-terminal voltage regulator capable of supplying 100mA (LZ type), 500mA (MP type) or 1.5A (T type) over a 1.2V to 37V output range. Both line and load regulation are better than standard fixed regulators. Full overload protection is included on-chip with current limiting, thermal and safe area protection. This remains fully functional even if the adjustment terminal is disconnected.

### Specification

Output voltage: 1.2V to 37V  
 Input/output differential voltage: 40V max.  
 Operating junction temperature: -25°C to +125°C  
 Line regulation: 0.01%/V  
 Load regulation: 0.1%  
 Adjustment pin current: 50 $\mu$ A  
 Reference voltage: 1.25V typical  
 Output noise: 0.003% of  $V_{out}$   
 Ripple rejection ratio: 65dB  
 Long term stability: 0.3% @ 125°C

## LM337 3-Terminal Negative Adjustable Regulator

National Semiconductor

An adjustable, 3-terminal, negative voltage regulator capable of supplying 100mA (LM337LZ) or 1.5A (LM337T) over a range of -1.2V to -37V. It is exceptionally easy to use and requires only two external resistors to set the output voltage. Besides having a higher performance compared with fixed regulators, the LM337 offers full overload protection with current limiting, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustment terminal is disconnected. The adjustment terminal can be bypassed with a capacitor to ground to achieve very high ripple rejection ratios that are difficult to achieve with standard 3-terminal regulators.

Output voltage is set by connecting a twin resistor divider between output and circuit ground and connecting the adjustment pin to the junction. A precision current regulator can also be made by connecting a fixed resistor only between the adjustment and output pins, and connecting the load to the adjustment pin. The device is available in TO92 package (LM337LZ) and TO220 package (LM337T).

### Specification

Output voltage: -1.2V to -37V  
 Input/output differential voltage: -40V max.  
 Operating junction temperature: -25°C to +125°C

## L200C Adjustable Voltage and Current Regulator

SGS Thomson

A monolithic IC for adjustable voltage (up to 36V) and current (up to 2A) regulation. It has current and power limiting, thermal shutdown and input over voltage protection up to 60V. The device can be used to replace fixed voltage regulators where high output-voltage precision is required, eliminating the need to stock a range of fixed voltage regulators. Type L200CV has straight pins for vertical mounting onto a PCB, while L200VH has angled pins for mounting flat onto a PCB.

### Specification

DC input voltage: 40V max.  
 Peak input voltage: 60V max. for 10ms  
 Output voltage range: 2.85 to 36V  
 Output current range: 0.1A to 2A  
 Quiescent current: 4.2mA  
 Load regulation: 0.15% @ 2A  
 Line regulation: 60dB  
 Supply voltage regulation: 60dB @ 100Hz  
 Dropout voltage between pins 1 & 5: 2V typical

## LM338K 5A Adjustable Regulator

National Semiconductor

An adjustable, 3-terminal, positive voltage regulator capable of supplying 5A over a range of +1.2V to +37V. It is exceptionally easy to use and requires only two external resistors to set the output voltage.

Time dependent current limiting allows peak currents up to 12A to be drawn for short periods, enabling the device to be used with heavy transient loads and speeding start-up under full-load conditions. If sustained, current limit decreases to a safe value to protect the regulator.

Specification

Reference voltage:	1.24V
Line regulation:	0.02%/V
Load regulation:	0.1%
Adjustment pin current:	45µA
Temperature stability:	1%
Current limit:	1A typical
Output noise:	$V_{in} - V_{out} = 30V$
Ripple rejection ratio:	0.003% of $V_{out}$
	60dB

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## RC4194N Dual Tracking Regulator

Raytheon

The RC4194 is a dual tracking voltage regulator giving balanced output voltages between  $\pm 50mV$  and  $\pm 35V$ , at an output current of  $\pm 200mA$ . Designed mainly for on-card regulation applications to eliminate problems of single point regulation. Other features include overcurrent shut-down, 3W power dissipation and simultaneous adjustment of both output rails from a single resistor. An ideal regulator for use with dual rail operation amplifiers.

4194

Specification

Supply voltage, $V_S$ :	$\pm 35V$ max, $\pm 9.5V$ min
Output voltage range:	0.05V to $\pm 35V$
Ripple rejection, dB:	70dB
Short-circuit current:	300mA
Operating temperature, $T_A$ :	0°C to 70°C

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MAX665

Maxim

665

Voltage Inverter

Positive Voltage Doubler

The MAX665 charge-pump inverter converts a +1.5V to +8V input to a corresponding -1.5V to -8V output. Using only two low-cost capacitors to produce 100mA, the MAX665 replaces switching regulators, eliminating inductors and their associated cost, size and EMI. Greater than 90% efficiency over most of its load-current range, combined with a 200µA typical operating current provides ideal performance for both battery-powered and PCB level voltage conversion applications. It can also double the output of an input power supply or battery, providing +9.35V at 100mA from a +5V input. A frequency control pin (FC) selects either 10kHz or 45kHz operation to optimise capacitor size and quiescent current. The oscillator frequency can also

**KEY CALL**  
01702 556751

be adjusted with an external capacitor or driven with an external clock. The MAX665 is encapsulated in an 8-pin DIL package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

AY39N	MAX665	25+ £4.790 100+ £4.110 300+ £3.830	1+ £7.770

## MAX666 5V/Adjustable Micropower Voltage Regulator

Maxim

A dual-mode, micropower regulator that can function either as a fixed 5V regulator, or as an adjustable output regulator according to the level on 'Vset'. If 'Vset' is 0V, the device behaves as a fixed 5V regulator. If 'Vset' > 50mV then this pin becomes a feedback connection point for a twin resistor divider, which can be used to set the actual output voltage as a ratio above 'Vset', as follows:  $V_{out} = V_{set} \times (R1 + R2)/R1$ , where  $V_{set} = 1.3V$  or, to simplify resistor selection:  $R2 = R1 \times (V_{out}/1.3V - 1)$ . The fixed 5V option allows simple installation in 5V only applications. The MAX666 also includes on-chip low-battery detection circuitry. An open drain output, 'LBO', switches on if a sensing pin, 'LB1', falls below 1.3V. A 'SHUTDOWN' input, pin 5, can be taken high to make the output high impedance. User adjustable current limiting is also possible by inserting a resistor between 'Vout' and 'SENSE', and taking the output from 'SENSE'. Limiting begins when the voltage drop across the resistor exceeds 0.5V.

Specification	Value
Input voltage:	2.2V to 16.5V
Quiescent current:	6µA
Output voltage:	5V (fixed mode)
Line regulation:	0.03%/V
Load regulation:	3.0W typical
Reference voltage:	1.3V
Reference temp. coefficient:	±100ppm/°C
Vset input current:	±0.01nA
Shutdown input voltage:	1.4V
Shutdown input current:	±0.01nA
SENSE input threshold:	0.5V
SENSE input impedance:	3MΩ
Output current (Vout pin):	40mA
Minimum load current:	5.0µA

## SI7660CJ Voltage Converter

Siliconix

Simple Negative Converter

A voltage converter that will provide a negative voltage output numerically equal to the positive voltage input in the range 1.5V to 10V. Pin 6 should be tied to ground for supply voltages below 3.5V

and for supply voltages in excess of 6.5V a diode should be connected in series with the output. The output is like an ideal voltage source in series with 70Ω so for a load current of -10mA and a supply voltage of +5V, the output voltage will be -4.3V.

Specification	Value
Supply current ( $R_L = \infty$ ):	170µA
Supply voltage:	1.5V to 10V
Power dissipation:	300mW max
Max load current:	Supply V - Min $V_{out}$ < 40mA
	70

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2967	Price each exc. VAT	inc. VAT each

## ICL7660CPA Switched Capacitor Voltage Converter

Maxim

The ICL7600 is a monolithic, CMOS switched-capacitor voltage convert that will invert, double, divide, or multiply the input voltage. The device combines low quiescent current with high efficiency - typically 98%, plus on-chip oscillator control circuitry and four power MOSFET switches. Typical applications include producing a -5V supply from a +5V supply, generating a 6V supply from a 3V lithium battery, or 3V from a 1.5V alkaline battery. Supplied in an 8-pin DIL package.

Specification	Value
Supply voltage $R_L = 10k\Omega$	
LV open:	3V to 10V
LV to gnd:	1.5V to 3.5V
Supply current:	110µA typ with no load
Power dissipation:	727mW max continuous
O/P resistance:	55Ω typ 20mA load
Oscillator frequency:	10kHz typ
Efficiency	
power:	98%
voltage conversion:	99.9%

## MAX680CPA Voltage Doubler

Maxim

A voltage converter that can provide ±10V outputs from a single +5V supply or ±6V outputs from a +3V lithium battery. The surrounding circuit requires just four low cost capacitors to provide positive and negative output voltages with both numerically equal

to double the supply voltage. Output currents up to 10mA simultaneously are possible although the output voltage will be reduced as the source impedance is around 150Ω for V+ and 90Ω for V-. All four capacitors can be PC Elect 22µF 25V or Minelect 22µF 16V for space saving.

Positive and negative converter

Positive and Negative Converter

The following equations show how to calculate the output voltage for different output currents and as an example, the values are shown if the supply voltage is +5V and 10mA is drawn from both outputs.

$$V_{DROPO-} = I_{L-} \times R_{S-} = 0.01 \times 90 = 0.9V$$

$$V_{DROPO+} = (I_{L+} + I_{L-}) \times R_{S+} = (0.01 + 0.01) \times 150 = 3V$$

$$V_{+} = 2V_S - V_{DROPO-} = (2 \times 5) - 0.9 = 9.1V$$

$$V_{-} = -(2V_S - V_{DROPO+} - V_{DROPO-}) = -(2 \times 5) - 3 - 0.9 = -6.1V$$

The output resistance can be reduced by paralleling devices (i.e. pins 4,5,6 and 8 are commoned). The effective output resistance is then 150Ω divided by the number of devices. Each device needs its own C1 and C2, but all can share a single set of C3 and C4.

Specification (typical 25°C)	Value
Supply voltage:	2V to 6V
Supply current:	0.5mA ( $V_S = 3V$ ), 1mA ( $V_S = 5V$ )
Positive output source resistance:	150Ω
Negative output source resistance:	90Ω
Oscillator frequency:	8kHz
Power efficiency:	85%

## L4904A

SGS Thomson

The L4904A is a monolithic, low voltage drop, dual 5V regulator designed mainly for supplying microprocessor systems. Reset and data save functions during switch on and switch off can be used to generate appropriate signals for the microprocessor.

In the case of power supplies for such systems, it is necessary to provide power continuously to avoid loss of data in volatile memories and time-of-day clocks, or to save data when the primary supply is removed. The L4904A makes it very easy to supply such circuits as it provides two voltage regulators, both of which are high precision 5V types, with separate inputs, plus a reset output for the data save function.

Output VO1 features a 5V internal reference without the need for a voltage divider between the output and the error amplifier, a very low drop series regulator element utilising current mirrors, and permits high output impedance and then very low leakage current even in power-down conditions. This output may then be used to supply circuits continuously, such as volatile RAMs, allowing the use of a back-up battery. It also features low current consumption (0.6mA typical) to minimise battery drain.

The VO2 output can supply other non-essential 5V circuits which may be powered down when the system is inactive, or that must be powered down to prevent incorrect operation for supply voltages below the minimum value.

The reset output can be used as a 'power-down interrupt', permitting RAM access only in correct power conditions, or as a 'back-up enable' to transfer data into a non-volatile shadow memory when the supply is interrupted.

### Specification

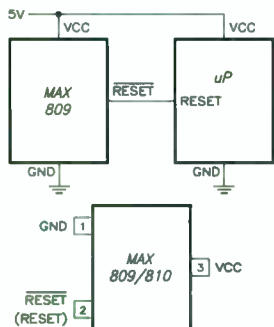

Input voltage range:	>6V to 20V max.
Input threshold voltage:	6.4V
Output voltage 1:	4.95 to 5.15V
Output current 1:	50mA
Output leakage current 1:	1µA
Output 1 drop-out voltage:	0.7V
Output voltage 2, high:	5V
Output voltage 2, low:	0.1V
Output current 2:	100mA
Line regulation, 1 & 2:	5 to 50mV
Load regulation 1:	5 to 20mV
Load regulation 2:	10 to 50mV

## MAX809/810 3-pin Microprocessor Reset Circuit

Maxim

The MAX809/810 are microprocessor supervisory circuits used to monitor the power supplies in microprocessor and digital systems. They are low

cost devices providing excellent circuit reliability, and requiring no external components or adjustment when used with 5V powered circuits.

The device will produce a reset signal whenever the V<sub>CC</sub> supply falls below 4.6V, and will continue to produce the reset pulse until at least 140ms after V<sub>CC</sub> has risen above 4.6V. The MAX809 produces an active low RESET output, which is guaranteed to be in a correct state for V<sub>CC</sub> down to 1V. MAX810 produces an active high RESET output. The reset comparator is designed to ignore fast transients on V<sub>CC</sub>. The device requires only 24µA approx. of supply current so is suitable for portable or battery powered equipment and is supplied in a 3-pin SOT package.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## MAX700/2CPA Power Supply Monitor with Reset

Maxim

The MAX700 and MAX702 are supervisory ICs used to monitor the power supplies in microprocessor (µP) and digital systems. The RESET/RESET outputs of the device are guaranteed to be in the correct state for V<sub>CC</sub> voltages down to +1V. The ICs provide excellent reliability and low cost by eliminating the need for many external components and adjustments when used with +5V powered circuits.

The MAX702 produces a low on RESET when V<sub>CC</sub> falls to 4.65V, and also provides a debounced manual reset input. The MAX700 provides preset or adjustable voltage detection so thresholds other than the nominal 4.65V can be selected, as well as adjustable hysteresis. The primary function of the two RESETs is to provide a system reset.

Accordingly, an active reset signal is supplied for low supply voltages and for at least 200ms after the supply voltage reaches its operating value.

Supplied in an 8-pin DIL package.

### Specification

Monitor voltage range:	3V to 15V
Min V <sub>CC</sub> for valid reset output declining supply:	1V typ
Supply current:	100µA
Reset threshold power up:	4.65V
power down:	4.62V
Reset o/p pulse width:	350ms

## MAX691CPE Microprocessor Supervisor

Maxim

The MAX691 supervisor IC is designed for power supply monitoring and battery control functions for microprocessor (µP) systems. It includes µP reset and back-up battery changeover, watchdog timer, CMOS RAM write protection, and failure warning. The MAX691 provides the following functions:

1. A reset output during power-up/down and brown conditions.
2. Battery backup switching for CMOS RAM, CMOS µP, or other low power logic.
3. Write protection of CMOS RAM or EEPROM.
4. A reset pulse if the optional watchdog timer has not been toggled within a specified time.
5. Adjustable reset and watchdog timeout periods.
6. A 1.3V threshold detector for power fail warning, low battery detection, or to monitor a power supply other than +5V.
7. Separate outputs for indicating a watchdog, backup-battery switchover, and low V<sub>CC</sub>.

System reliability and accuracy is significantly improved with the MAX691 compared to comparable circuits using ICs and discrete components. Supplied in a 16-pin DIL package.

### Specification

Operating voltage range	V <sub>CC</sub> : 4.75V to 5.5V
	V <sub>BATT</sub> : 2.0V to 4.25V
Quiescent current operating:	3.5mA with I <sub>OUT</sub> = 50mA
battery back-up:	0.6µA typ
Battery switchover threshold V <sub>CC</sub> - V <sub>BATT</sub> power up:	70mV
power down:	50mV
Reset voltage threshold:	4.65V typ
Reset timeout delay:	50ms

## DS1233 Econo Reset

Dallas Semiconductors

This compact device provides a complete CPU power monitor and Reset circuit with push-button override facility for 5V microprocessors and microcontrollers. It will generate a reset signal either upon closure of a connected push-button, which will be debounced and a 350ms signal generated, or upon Vcc dropping 10% below 5V. When power returns to normal levels, the Reset output will remain active for 350ms to allow the system to stabilise.

## DS1232 CPU PSU Monitor/ Watchdog Timer

Dallas Semiconductors

The DS1232 power monitor detects out of tolerance power supply conditions and warns a processor based system of impending power failure by halting the processor, and asserts Reset as Vcc falls below a selectable 5% (TOL to ground), or 10% (TOL to Vcc), threshold. When power returns, the processor is held inactive until well after power conditions have stabilised. It also incorporates a watchdog timer circuit which forces the processor to a Reset state if the strobe input is not driven low prior to timeout (normally connect to an address decoder, MREQ or ALE signal in the system which would only become inactive in case of processor crashes. A separate push-button input is provided. Grounding this input by means of a push-button generates a clean reset signal at the Reset outputs (both active high and active low outputs are provided).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
LE14Q	CPU PSU Mon+Rst	25+ £2.070 100+ £1.930 300+ £1.810 1+ £4.490	

## DS1236 MicroManager

The DS1236 not only monitors CPU power supply to generate a Reset output in case of failure, but gates the system Chip Enable signal for RAM and controls 3V battery switching to effectively convert CMOS SRAM into non-volatile memory, which will retain its contents after the main power supply is removed. This makes it ideal for laptop or other portable processor based equipment as 'wake-up/sleep' controls with less than 100nA battery current consumption are also provided.

This device also provides the watchdog facility offered by the other members of the range as well as a Non Maskable Interrupt output which can warn the processor of impending power failure before shutdown. In addition to these features, external power switching is also possible for high power applications and a 'freshness seal' may be invoked to electrically disconnect a back-up battery prior to any system failure.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
LE17T	DS1236	25+ £4.720 100+ £4.410 300+ £4.130 1+ £5.640	

## DS1239 MicroManager

The DS1239 offers the highest level of PSU monitoring, control and system protection for any microprocessor or microcontroller based equipment. It monitors CPU power supply to generate a Reset output in case of failure or fluctuation, and also gates the system Chip Enable signal to protect RAM. It controls 3V battery switching to retain memory contents after the main power supply is removed. This makes it ideal for use with laptop or other portable processor based equipment - as 'wake-up/sleep' controls with less than 100nA battery current consumption are also provided.

This device also provides the hardware watchdog monitor facility offered by the other members of the range to restart the system after processor lock up

and a Non Maskable Interrupt output which can warn the processor of impending power failure before shutdown. External power switching output control is provided for high power applications and a 'freshness seal' may be invoked to electrically disconnect a back up battery prior to any system failure.

In addition to this very comprehensive range of features, the power switching output may be toggled by a keypad or similar button to control an external mains power supply connection, via a low current opto-triac isolator and triac.

## TL7702/5A Voltage Supply Supervisors

SGS Thomson

7702/5

Supply voltage supervisor ICs specifically designed for use as reset controllers in microcomputer and microprocessor systems. During power-up, the device tests the supply voltage and keeps both the active high and active low RESET outputs active as long as the supply voltage has not reached its nominal voltage value. Taking RESIN low has the same effect. To ensure that the microcomputer system has reset, the device then initiates an internal time delay that delays the return of the reset outputs to their inactive states. Since the time delay for most microcomputers and microprocessors is in the order of several machine cycles, the device internal time delay is determined by an external capacitor connected to the CT input pin 3. Delay time,  $t_d$ , is found by:  $t_d = 1.3 \times 104 \times CT$ , where CT is in farads and  $t_d$  in seconds. In addition, when the supply voltage drops below the nominal value, the outputs will be active until the supply voltage returns to the nominal value. An external capacitor (typically 100nF) must be connected to the REF output pin 1 to reduce the influence of fast transients in the supply voltage.

Three types are available: in TL7702ACP/A the sense input threshold is +VS -1V, or 6V, whichever is less, whereas for TL7705ACP/A the sense threshold is 10V, and the operating temperature range of both is 0 to 70°C, and both are packaged as 8-pin DIL. The TL7705ACD1/A is as TL7705ACP/A but packaged as 8-pin SO8 (surface mount).

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MAX1232CPA Microprocessor Monitor

Maxim

An 8-pin DIP packaged microprocessor supervisory IC, used for power supply monitoring and housekeeping functions. Whenever the power supply falls below either 5% or 10% (programmable), software execution ceases or manual reset is performed, and the IC sends a reset pulse of at least 250ms duration, for processor reset. The watchdog timer can be set for timeouts of 150ms, 600ms or 1-2s. Whenever one of these conditions holds true the reset lines are held active for at least 250ms. Applications include computers, controllers, intelligent instruments, automotive systems and critical microprocessor power monitoring.

### Specification

Supply voltage,  $V_{CC}$ : 4.5V to 5.5V, 5V typ  
 Input high-level,  $V_{IH}$ : 2V to  $V_{CC} + 0.3V$  max  
 Input low-level,  $V_{IL}$ : -0.3V to 0.8V  
 Output current  $R_{ST}$ ,  $I_{OH}$ : 1mA min, 12mA typ  
 Operating current,  $I_{CC}$ : 50µA to 200µA max  
 $V_{CC}$  5% trip point,  $V_{CCTP}$ : 4.50V to 4.74V, 4.74V typ  
 $V_{CC}$  10% trip point,  $V_{CCTP}$ : 4.25V to 4.49V, 4.37V typ

Note that the active low reset pin is internally pulled up to  $V_{CC}$  with an internal impedance of typically 40kΩ. The active low push-button reset must be held low for longer than 20ms to guarantee a reset. Tolerance is set by grounding the TOL pin for 5% or connecting it to  $V_{CC}$  for 10%. Similarly the watchdog timer is set to 150ms by connecting the TD pin to ground, 600ms by leaving it floating or 1-2s by tying it to  $V_{CC}$ . Software strobes are applied to the active low ST pin.

## MAX690A Microprocessor Supervisor

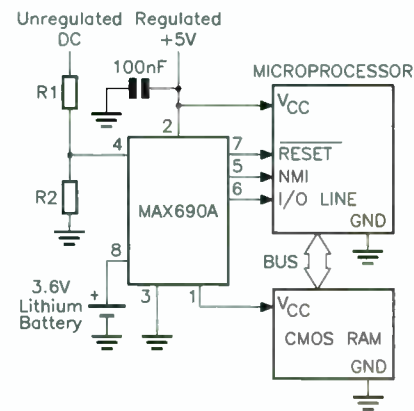

Maxim

The MAX690A reduces the complexity and number of components required for power-supply monitoring and battery-control functions in microprocessor systems. Significantly improves system reliability and accuracy compared to an arrangement of separate ICs and discrete components.

The chip performs four basic functions: it generates a RESET output during power-up for the CPU, and also during power-down and 'brown-out' conditions. This is complemented by a 1.25V threshold detector or Power Failure Input (PFI) for low battery detection, or to monitor a power supply other than +5V. It also handles all battery back-up switching for CMOS RAM and will trickle charge the back-up battery during normal power-up time. In addition a RESET pulse will be generated by a 'watchdog' timer if the WDI input has not been toggled within 1.6 seconds. In the application shown below this is used to monitor the I/O line to ensure that normal processor activity is happening; if the processor should hang up or its software crash, then it will automatically be re-booted from start by the MAX690A. Also in the example shown the PFI is used to monitor the unregulated supply and generate an NMI upon power failure; this interrupt could be used to initiate data-preserving software. To conserve battery power, the power failure detector is turned off and PFO is forced low when VBATT connects to VCC. The device is encapsulated in an 8-pin DIL package and replaces

several chips, which together serve supply monitoring and memory back-up functions very simply, with the absolute minimum number of additional external components.

### Specification

Operating voltage,  $V_{CC}$ : 1.0V min., 5-5V max.  
 $V_{BATT}$ : 1.0V min., 5-5V max.  
 Supply current  
 Run mode: 200µA  
 Battery back-up mode: 0.05µA  
 $V_{OUT}$  voltage drop  
 Run mode:  $V_{CC} - 0.25V @ 50mA$   
 Battery back-up mode:  $V_{BATT} - 0.02V @ 250µA$   
 Absolute maximum  
 $V_{OUT}$  current  
 Run mode: 250mA  
 Battery back-up mode: 50mA  
 Current sink, RESET, PFO: 3-2mA typical, 20mA absolute max.

## SWITCHING REGULATORS

### 1A Power Controller (PC1R)

Designed primarily for use as a light dimmer, the PC1R is a completely integrated thick film hybrid circuit that can control up to 250W at 240V AC. The IC requires only the addition of a Pot Lin 220k to give full control. If required suppression components may be added as shown: (C = IS Cap 0.1µF, L = RF Supp Choke 1A).

### Characteristics

Max RMS on-state current: 1.1A  
 Peak on one cycle surge current: 120A  
 Off state leakage current: 1.5mA max  
 Minimum holding load current: 25mA  
 Input voltage 50Hz: 240V RMS  
 Repetitive peak voltage: 600V  
 Forward volts drop at max current: 1.5V

Hysteresis: 5% (typical)  
 Total conduction phase angle: 0 to 160° (typical)  
 Controlled conduction phase angle: 30 to 160° (typical)  
 Power transfer at max current: 99%  
 Insulation withstand capability: 2000V for 1 minute  
 Ambient operating temperature: -40 to +70°C

## 78SR1 Series Step-Down Switching Regulators

Power Trends

Pin 1 = Input  
 Pin 2 = Common  
 Pin 3 = Output

78SR105 HC/VC  
 78SR112 HC/VC

High efficiency (>85%) 3-terminal integrated switching regulators (ISRs) that are as easy to use as conventional linear 3-terminal regulators. They have a maximum output current of 1.5A and an output voltage accuracy laser trimmed to industry standard. Excellent line and load regulation is combined with internal short-circuit and over-temperature protection.

The device comprises a miniature DC-DC converter incorporating a ferrite step-down inductor, and can be used to power a diversity of circuits in a variety of industrial applications.

Type 105 has a 5V output, and type 112 has a 12V output. Each type is available as either vertical (VC) or horizontal (HC) PCB mounting.

### Specification

Output current: 0.1 to 1.5A  
 Current limit: 3A  
 Short-circuit current: 3-5A  
 Input voltage range: 7 to 30V DC, 5V type  
 14.5 to 30V DC, 12V type

type

Static voltage tolerance: ±1.0% $V_o$   
 Ripple rejection: 45dB @ 120Hz  
 Line regulation: ±0.2% $V_o$   
 Load regulation: ±0.1% $V_o$   
 Ripple/noise: 50mV<sub>pp</sub> 5V type  
 80mV<sub>pp</sub> 12V type

Transient response: 100µs (load change)  
 Efficiency: 85% 5V type  
 90% 12V type

Switching frequency: 650kHz typical  
 meets FCC Class B  
 Operating temperature: +60°C max.  
 Weight: 7g

Price each is shown. Order quantities less than 5 will be sold at the one off inc. VAT price.

## RC4190N Micropower Switching Regulator

Raytheon

A versatile low power switch mode regulator for DC to DC conversions with load powers up to 400mW or 10W with external power transistor. Applications include on-card circuits where a non-standard voltage is needed or in battery operated instruments where the IC can be used to extend battery life.

In the Step-up Regulator circuit, the output will deliver 15V at 25mA from a 5V supply. In the Battery Life Extender circuit, the output falls to 7V as the battery runs down and is then held at 7V until the battery voltage reaches 2.2V, at which time pin 8 goes low and LED1 will light until the battery voltage reaches 1.8V.

### Specification (typical at $V_s = 6V$ )

- Supply voltage: 2.2V to 24V
- Reference voltage: 1.31V
- Switch current: 200mA
- Supply current: 215µA
- Efficiency: 85%
- Line regulation: 0.04%
- Load regulation: 0.2%
- Operating frequency: 25kHz (100Hz to 75kHz)
- Reference set current: 5µA
- Low battery output current: 1.5mA

### Parts List

#### Step-up Regulator

## MAX631ACPA 5V/Adjustable Step-Up Switching Regulator

Maxim

The MAX631 is a fixed 5V, or adjustable, step-up DC/DC converter for use in low power, high efficiency switching regulator applications. The only external components required are an output filter capacitor and a low-cost inductor. A low battery detection circuitry is included on the IC. Although primarily a fixed 5V output device, by adding an external voltage divider, (R3 & R4) other output can be set. If R4 is in the range 10kΩ to 10MΩ range (typically 100kΩ), then:

$$R3 = R4 \left( \frac{V_{out}}{1.31V} - 1 \right)$$

Additionally, a charge pump output is included to generate a negative voltage which will normally be  $(V_{out} - 1.2V)$ , where 1.2V is the forward voltage drop of two silicon diodes. Two capacitors will also be required to produce the negative voltage. The device has a typical efficiency of 80%.

The inductor should be about 330µH (order code AH35Q), and decoupling capacitor is 100µF 16V low ESR capacitor (order code RA55K). Supplied in an 8-pin DIL package.

### Specification

- Operating voltage range: 2V to 16.5V
- Start-up voltage: 1.3V typical
- Supply current: 0.135mA typical
- Vout Voltage: 5V (±5% tolerance)
- Efficiency: 80%
- Oscillator frequency: 45kHz typically
- LX output current: 450mA peak
- LBO output current: 50mA

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
VQ43W	MAX631ACPA	£3.250 25+ £3.120 100+ £2.480 1+	£3.940

## MAX638ACPA 5V/Adjustable Step-Down Switching Regulator

Maxim

MAX638

The MAX638 is a fixed 5V, or adjustable, step-down DC/DC converter for use in low power, high efficiency switching regulator applications. The only external components required are an output filter capacitor, a fast recovery Schottky diode, a low-cost inductor and two capacitors. A low battery detection circuitry is included on the IC.

Although primarily a fixed 5V output device, by adding an external voltage divider, (R3 & R4) other output voltages can be set. If R4 is in the range 10kΩ to 10MΩ range (typically 100kΩ), then:

$$R3 = R4 \left( \frac{V_{out}}{1.31V} - 1 \right)$$

The device has a typical efficiency of 85%.

The inductor should be about 150µH (order code AH33L), and decoupling capacitor is a 100µF 16V low ESR capacitor (order code RA55K). The Schottky diode is a 1N5817 (order code JA46A). Supplied in an 8-pin DIL package.

### Specification

- Operating voltage range: 5V to 16.5V
- Reference voltage: 1.31V typical
- Supply current: 0.135mA typical
- Vout Voltage: 5V (±5% tolerance)
- Efficiency: 85%
- Oscillator frequency: 65kHz typically
- LX output current: 525mA peak

## MAX639CPA Step Down DC/DC Converter

Maxim

The MAX639 is a step down switching regulator that can provide a 5V output (VFB = GND) from an input voltage 4V to 11.5V DC. Or, by using an external voltage divider connected to VFB, the output can be user adjusted from 1.3V to the input voltage. The device is very efficient (>90%) over a wide range of load currents, and will deliver upto 225mA. The device uses only 10µA of supply current. There is an internal 1A power MOSFET switch making the IC ideal for minimum component, and low/medium power applications.

For a user defined output voltage, then R3 and R4 are determined by the following equation:

$$R3 = R4((V_{out}/V_{FB \text{ threshold}}) - 1)$$

where R4 is any resistance in the 10kΩ to 1MΩ range (typically 100kΩ), and the VFB threshold is typically 1.28V.

Similarly, for the low-battery detector, R1 and R2 are determined from the following equation:

$$R1 = R2((V_{LB}/LBI \text{ Threshold}) - 1)$$

where R2 is any resistance in the 10kΩ to 1MΩ range (typically 100kΩ). The LBI threshold is typically 1.28V, and VLB is the desired low-battery detection voltage.

If the fixed 5V output is required and no low battery detection is needed then the relevant pins (VFB and LBI) are connected to ground. The inductor is typically a 100µH low resistance type (order code AH32K), C1 and C2 can be 100µF electrolytics (order code RA55K). D1 needs to be a high speed type - for load currents upto 100mA a 1N4148 (order code QL80B) will perform well for higher currents use a

Supplied in an 8-pin DIL package.

### Specification

- Supply voltage: 4V to 11.5V
- Supply current: 10µA typical no load
- Dropout voltage: 0.5V (I<sub>out</sub> = 100mA)
- Fixed output: 5V
- Efficiency: 91% (Load = 100mA, L = 100µH)
- Switch on-time: 12.5µs (V<sub>out</sub> = 5V)
- Switch-off time: 11.7µs (V<sub>out</sub> = 5V)

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

VQ45Y	MAX639CPA	£3.340	£4.490

## MAX756/757 3.3V/5V Step-Up DC/DC Converter

Maxim

A pair of CMOS DC/DC switching regulators for small, low input voltage, or battery powered systems. Both devices will work down to 0.7V and

provide a pin-selectable output voltage of 3.3V or 5V (MAX756), or an adjustable output from 2.7V to 5.5V (MAX757). Typical full load efficiencies are greater than 87% at 200mA. A low battery detector output is provided on pin 4.

The output of the MAX757 is set by two resistors R1 & R2 which form a voltage divider between the output and the FB pin (2). Output is set by the equation

$$V_{OUT} = V_{REF} ((R2 + R1)/R2) \text{ where } V_{REF} = 1.25V$$

FB has a maximum input bias current of 100nA so large values of resistor can be used (10kΩ to 200kΩ)

The low battery monitor is set by two resistors R3 & R4 which form a voltage divider between the input voltage and the LBI pin (5). Values are determined by the equation

$$R3 = ((V_{IN}/V_{REF}) - 1)R4 \text{ where } V_{REF} = 1.25V$$

Again, LBI current is less than 100nA, so large values of resistor are acceptable (10kΩ to 200kΩ) The devices are ideal for palmtop computers, portable data collection equipment, medical instrumentation, 2/3 cell battery operated equipment etc. Supplied in an 8-pin DIL package.

### Specification

- Output voltage and load for V<sub>IN</sub> >2V and <3V.
- MAX756 Pin 2=0V: 5V at 200mA max.
- MAX756 Pin 2=3V: 3.3V at 300mA max.
- MAX757: 5V at 200mA max.
- Start-up voltage: 1.1V typical 10mA load
- Min operating supply: 0.7V (20mA load)
- Quiescent current: 60µA no load, 20µA typical in shutdown

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
VQ40T	MAX756CPA	£2.640	£3.290
VQ41U	MAX757CPA	£2.640	£3.290

## MAX761CPA 5V to 12V DC/DC Converter

Maxim

The MAX761 is a high efficiency DC/DC converter that will provide a 12V, 150mA output from a 5V input. The device has a low supply current require-

ment, fast start-up time, shutdown capability, and small size which makes this device ideal for flash memory programming, PCMCIA cards or battery powered applications.

The IC features an internal 1A power MOSFET, high frequency switching (up to 300kHz), and a unique current limited pulse-frequency modulated (PFM) control circuit. This provides the benefits of a pulse-width modulated converter (high efficiency with heavy loads), but requires less than 110µA of supply current. In shutdown mode this drops to only 5µA. The device requires very few external components and is supplied in an 8-pin DIL package.

### Specification

- Supply voltage: 2V to 16.5V
- Output voltage: 12V ±0.48V at 150mA
- Supply current: 110µA max non-bootstrapped
- Max switch-on time: 8µs
- Min switch-off time: 1.3µs
- Load regulation: 0.0042%/mA
- Line regulation: 0.08%/V
- Efficiency: 86%
- Ref voltage: 1.5V

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NR61R	MAX761CPA	£3.280	£4.100

## MAX777/779CPA Step-Up DC/DC Converters

Maxim

The MAX777/779 are pulse-skipping DC/DC converters that step-up from low-voltage inputs (1V guaranteed). They require only three external components - an inductor typically 22µH, (AH28F) and two capacitors (22µF - DT57M, and 100µF - DT61R). The MAX777 delivers 5V output and the MAX779 output is adjustable from 2.5V to 6V through an external resistive divider. In shut-down mode, the device disconnects the output from the source which eliminates current drain normally associated with similar devices when off or in shut-down. Because the device operates at high frequency (upto 150kHz), small value inductors can be used i.e. surface mount. With a 2V input, the ICs will deliver 200mA at 5V.

The MAX779 output is set by two resistors R1 and R2 which form a voltage divider between the output and the FB pin (8). The output can be set from 2.5V to 6V by the equation

$$V_{out} = (0.2025)((R1 + R2)/R2)$$

Since FB is 4nA maximum, then large values of R2 (10kΩ to 50kΩ) can be used. For 1% error the current through R2 should be at least 100 times FB's bias current. For values of R1 > 50kΩ, can create large ripple on the output, to reduce ripple track and leads lengths around Fb should be as short as possible. C3 (100pF to 50nF) across R1 will help to reduce ripple.

**Specification**

Operating voltage range: 1V to 6.2V DC  
Output voltage: 5V typical  
Output voltage range: 2.5V to 6V DC (MAX779)  
Efficiency: 82% (load = 100mA)  
Supply current: 190µA typ (no load)  
Output current: upto 240mA

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
VQ42V	MAX777LCPA	£3.140	£4.740
VQ56L	MAX779LCPA	£3.140	£4.740

**ST662AN 5V to 12V DC/DC Converter**

SGS-Thomson

The ST662 is a regulated charge-pump DC/DC converter providing +12V 30mA output from an input supply as low as 4.75V - without the need for an inductor. The device is primarily intended to supply programming voltage for byte-wide flash memories and features a programmable shut-down pin that reduces the supply current to just 1µA.

The circuit requires just four capacitors - C1,2 are 0.22µF (DT99H), C3,4 are 4.7µF 16V (AN93B), and C5 is a 0.1µF (DT98G). Supplied in an 8-pin DIL package.

**Specification**

Output voltage: 12V typ from 4.75V to 5.5V input supply  
Output current: 30mA max.  
Quiescent current: 100µA typ  
Shutdown current: 1µA typ  
Shutdown input threshold  
low: 0.4V max  
high: 2.4V min  
Oscillator frequency: 400kHz  
Power efficiency: 72%

NP97F	ST662AN	£1.120	£1.640

**TSM101CN Voltage/Current Controller**

SGS-Thomson

The TSM101 IC features a high stability series band-gap voltage reference, two OR-ed op-amps and a current source. The device compares the DC voltage and the current level at the output of a

switching power supply to an internal reference. Feedback is provided through an optocoupler to the PVM controller IC in the Primary circuit. The controlled current generator can be used to modify the level of current limitation by offsetting the information coming from the current sensing resistor. The device is designed to be used in battery chargers with a constant voltage and limited output current, but other applications include voltage supervisors, overvoltage protection etc. Supplied in an 8-pin DIL package.

**Specification**

Supply voltage: 4.5v to 32V  
Total supply current: 2mA  
I/P offset voltage: 1mV typ  
O/P sink current: 15mA typ  
Voltage gain: 15V/mV  
PSRR: 90dB  
CMRR: 80dB  
GBP: 1MHz

current: 500ppm/°C

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
NP90X	TSM101CN	£0.654	£0.960

**MAX877/8/9CPA Step-Up/Step-Down, DC/DC Converters**

Maxim

A range of pulse-skipping, step-up/step-down DC-DC converters that provide a regulated output from inputs that can be above or below the output. The devices require just three external components- an inductor (typically 22µH) and two filter capacitors. A unique high-power, internal synchronous rectifier design enables the device to regulate in a switched linear mode if the input voltage is higher than the desired output voltage. When the input voltage falls

below the output voltage the device will smoothly switch into a pulse-skipping boost mode and step up from input voltages as low as 1V. In shutdown, the device disconnects the output from the source. This stops the current drain from input to output associated with conventional step-up converters. Typical applications include 2/3 NiCd cells to 3V/3.3V conversion, 3/4 alkaline cells to 5V conversion, lithium cell to 3V/3.3V conversion, pagers, palmtop and notebook computers, battery powered and hand-held instruments.

Type	Output	Input
MAX877	5V	2.5V to 6.2V
MAX878	3.0V or 3.3V	1.5V to 6.2V
MAX879	2.5V to 6.2V	2.5V to 6V

The MAX 878 output is pin selectable. The MAX 879 requires two additional resistors to set the output voltage (voltage divider). The output voltage can be set from 2.5V to 6.0V by the equation

$$V_{OUT} = V_{REF}(R1 + R2)/R2$$

where  $V_{REF} = 0.02025V$ , simplified this becomes:  
 $R1 = R2 ((V_{OUT}/V_{REF}) - 1)$   
Since the input current at FB has a maximum of 40nA, large values (10k to 50k for R2) can be used without significant accuracy loss.

**Suggested Parts List**

- R1,2 See Text
- C1 Tant 22µF 16V (WW72P)
- C2 Tant 100µF 10V (WW79L)
- C3 100pF to 50nF see text
- L1 Inductor 22µH (AH28F)

C3 is a 'lead' compensating capacitor used to reduce ripple.

**Specification**

Output current: 210mA  
Minimum start-up voltage  
877/879 (output 5V): 2.5 (<180mA)  
878/879 (output 3.3V): 1.5V (<120mA)

## TL494CN Switch Mode Power Supply

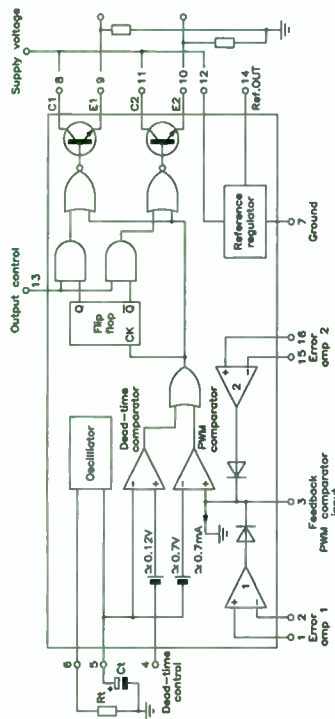

### Texas Instruments

A fixed frequency, pulse width modulation control circuit designed primarily for switch mode power supply control. The chip contains two error amplifiers, an adjustable oscillator, a dead-time control comparator, pulse-steering control flip-flop, a 5V 1% precision regulator and output control circuits.

### Specification

Supply voltage: 7V to 40V  
 Collector output voltage: 40V max  
 Collector output current: 200mA each max  
 Current into pin 3: 0.3mA max  
 Timing capacitor Ct: 470pF to 10µF  
 Timing resistor Rt: 1.8kΩ  
 Oscillator frequency: 1kHz to 300kHz

### Characteristics (with $V_S = 15V, f = 10kHz$ ) typical

#### Reference section

Output voltage at 1mA: 5V  
 Input regulation 7 to 40V: 2mV  
 Output regulation 1 to 10mA: 1mV

#### Oscillator section

Frequency  
 Ct = 0.01µF, Rt = 12kΩ: 10kHz

#### Amplifier sections

Input offset voltage: 2mV  
 Input offset current: 25nA  
 Input bias current: 0.2µA  
 Open-loop voltage gain: 95dB  
 Common mode input voltage: -0.3V to  $V_S - 2V$   
 Unity gain bandwidth: 800kHz  
 Output source current: >-2mA

#### Output section

Collector-emitter saturation voltage  
 (common emitter):  $V_E = 0V, I_C = 200mA: 1.1V$   
 (emitter follower):  $V_C = 15V, I_E = -200mA: 1.5V$

Output control input current  
 ( $V_{IN} = V_{REF}$ ): 3.5mA max

#### Dead-time control section

Input bias current  
 ( $V_{IN} = 0$  to 5.25V): -2µA  
 Max duty cycle ( $V_{IN} = 0V$ ): >45%  
 Input threshold voltage  
 (Zero duty cycle): 3V  
 (Max duty cycle): 0V

#### PWM comparator section

Input threshold voltage  
 (Zero duty cycle): 4V

#### Whole device

Supply current: 7.5mA average

## L78S40 Switching Regulator

### National Semiconductor

A versatile switching regulator subsystem consisting of a temperature-compensated voltage reference, an oscillator whose duty-cycle is controllable and having an active current limit circuit, an error amplifier, a high current, high voltage output switch, a power diode and an uncommitted op-amp. It may be used to generate higher or lower regulated voltage supplies or even ones of opposite polarity from the power rail available. The output is adjustable from 1.3V to 40V and will directly supply currents up to 1.5A or drive external transistors for larger currents.

### Characteristics (typical)

Supply voltage: 2.5V to 40V  
 Supply current: 1.8mA @  $V_{IN} = 5V$   
 2.3mA @  $V_{IN} = 40V$   
 Op-amp supply current: 2.2mA max @  $V_{IN} = 5V$   
 3.2mA max @  $V_{IN} = 40V$

40V  
 Reference voltage: 1.245V  
 $V_{REF}$  line regulation: 0.04mV/V  
 $V_{REF}$  load regulation: 0.2mV/mA  
 Oscillator voltage swing: 0.5V  
 Oscillator max frequency: 75kHz  
 Current limit sense voltage: 250mV min/350mV max  
 Output transistor  $h_{FE}$ : 70

Power diode:  
 forward voltage drop: 1.25V @ 1A

Comparator:  
 input offset voltage: 1.5mV  
 input bias current: 35nA  
 input offset current: 5nA

Op-amp:  
 input offset voltage: 4mV  
 input bias current: 30nA  
 input offset current: 5nA  
 voltage gain: 108dB  
 output source current: 150mA  
 output sink current: 35mA  
 slew rate: 0.6V/µs

## L4960 2.5A Power Switching Regulator

### SGS Thomson

A switch-mode voltage regulator capable of delivering between 5.1V and 40V at 2.5A maximum. The device features soft start, internal current limiting and thermal shutdown. Very few external components are required and because of the very high switching frequencies a reduction in the size and cost of them is achieved. The device has a close tolerance on-chip reference  $\pm 2\%$ . The unregulated voltage on pin 1 should be designed to fall to about 4V above the output voltage at maximum current. Under these conditions a heatsink of 6°C/W is required.

### Specification

Output voltage range: 5.1V to 40V  
 Input voltage range: 9V to 46V  
 Line regulation: 15mV  
 Load regulation: 10mV  
 Internal reference voltage: 5.1V  $\pm 0.1V$   
 Dropout voltage: 1.4V  
 Maximum current: 2.5A  
 Current limit threshold: 3 to 4.5A  
 Switching frequency: 100kHz

The output voltage is 5.1V with R4 short circuit. For higher voltages R4 should be set according to the following table:

$V_{out}$	R4	
9V	3k6	(M3K6)
12V	6k2	(M6K2)
15V	9k1	(M9K1)
18V	12k	(M12K)
24V	18k	(M18K)
30V	23k (11k+12k)	(M11K)+(M12K)

## LM2574/75/76 Step-Down Voltage Regulators

### National Semiconductor

These families of devices provide step-down regulation in a range of output currents to suit a great number of power supply and regulation applications. Providing 1.0A and 3.0A respectively, a realistic balance between cost and output power can be achieved. All devices are supplied in 5-pin straight lead TO220 packages and offer a high-efficiency replacement for popular three-terminal linear regulators. One of the main features of these devices is that they are very efficient and therefore most applications need no form of heatsink, as dissipated power is very low. The 2575 series consists of a 5V, 12V, 15V and adjustable version (between  $\approx 1.23V$  and 37V from a 40V supply). The 2576 series is essentially identical to the 2575 series except that it can deliver a higher output current of 3A. These devices also have a TTL active low control line so that the regulators may be switched between a low current 'Standby' mode and the 'On' state. If remote control is not required the appropriate pin needs to be tied to ground. Only four other components are necessary in order to produce a working design, using widely available values of inductor.

2574/75/76

### Parts list for a typical 5V regulated PSU using the 1A LM2575T-5 device

- C<sub>IN</sub>: 100µF Elect 63V (FF12N or JL49D)
- C<sub>OUT</sub>: 330µF Elect 50V/25V (JL24B or FB68Y)
- L<sub>1</sub>: 330µH Inductor (AH23A or BU57M)
- D<sub>1</sub>: 1N5822 Schottky (GX30H)

### Specification

- Supply voltage: LM2575T-5 & LM2576T-5: 8V to 40V; LM2575T-12 & LM2576T-12: 15V to 40V; LM2575T-15: 18V to 40V; LM2575T-ADJ & LM2576T-ADJ: 1.2V to 37V (typ from 40V supply)
- Maximum output current: LM2575 series: 1.0A; LM2576 series: 3.0A
- ON/OFF pin input voltage (NB. operates active low): V<sub>IL</sub> < 0.8V, V<sub>IH</sub> > 2.4V
- Efficiency: LM2575T-5 & LM2576T-5: 77%; LM2575T-12, LM2576T-12, LM2575T-15: 88%

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## LM2577 Step-Up Voltage Regulator

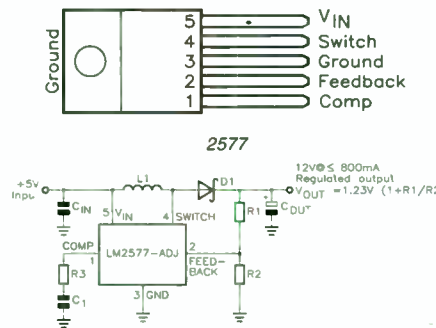

Order £30 or above?

Account holder or not, your order will be sent carriage paid.

(Guaranteed next day delivery charges as stated in our Terms & Conditions in the back of the catalogue.)

### National Semiconductor

The 2577T is a step-up regulator device finding many applications in flyback and forward converter switching regulation. A typical arrangement requires only a few external components to realise a working design. Using existing value inductors and flyback transformers simplifies circuit design. Output currents up to 3A are possible with this device, from a wide range of input voltages (3.5V to 40V). Output voltages up to  $\approx 60V$  can be developed, depending on the output current required. Step-up is achieved using the internal 52kHz fixed frequency oscillator and developing a voltage across an inductor or transformer. The current from the device charges the output capacitor and feedback maintains it at a constant voltage. A load can then be connected to the output, which is regulated to the desired voltage. Other features of the device are a soft start mode, internal protection against overcurrent limit, thermal limiting and undervoltage lock-out. Applications include simple boost regulators, flyback and forward regulators, and multiple output regulators.

### Parts list

- C<sub>IN</sub>: 0.1µF Ceramic (BX03D or RA49D)
- C<sub>OUT</sub>: 470µF Elect (FF15R or FF16S)
- C<sub>1</sub>: 0.47µF Monores (RA52G)
- R<sub>1</sub>: 17.4k (15k+2k4) (E15K & E2K4)
- R<sub>2</sub>: Min Res 2k (E2K or M2K)
- R<sub>3</sub>: Min Res 2k2 (E2K2 or M2K2)
- L<sub>1</sub>: 100µH Inductor (BU55K or AH32K at I<sub>OUT</sub> < 0.5A)
- D<sub>1</sub>: 1N5820 Schottky (GX29G or GX30H)

### Specification

- Supply voltage: 3.5V to 40V
- Output switch voltage: 0V to 60V
- Output switch current:  $\geq 3A$
- Efficiency: 80%

## LM2577T-12 Step-Up Voltage Regulator

### National Semiconductor

The LM2577 is a monolithic IC that provides all the power and control functions for a step-up converter deriving 12V DC from a 5V DC supply in one package. It requires a minimum number of components to operate and can even form the basis of simple flyback and forward converter switching power supplies. An NPN switching transistor capable of up to 3A is provided on chip with its associated protection circuitry, comprising current and thermal limiting and under-voltage lock-out. The load inductor is directly connected to its collector at pin 4. Other features include a fixed, internal 52kHz oscillator requiring no external timing components, a soft-start mode to reduce in-rush current during start-up, and current mode control for improved rejection of input voltage and output load transients. Case style is 5-pin TO220.

### Specification

- Input voltage: 5V to 10V DC (45V max.)
- Line regulation: 20mV
- Output voltage: 12V fixed
- Load regulation: 20mV
- Efficiency: 80%
- Under-voltage lock-out level: 2.9V
- NPN switch VCE max: 65V
- NPN switch IC max: 3A
- Switch current limit: 4.5A (flyback or forward converter modes only)
- Oscillator frequency: 52kHz

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## L296P 4A Power Switching Regulator

SGS Thomson

A switch-mode voltage regulator capable of delivering between 5.1V and 40V at 4A maximum. The device features soft start, programmable current limiting, thermal protection, remote inhibit, a reset output for microprocessors and a PWM comparator input for synchronisation in multichip configurations. Very few external components are required and because of the very high switching frequencies a reduction in the size and cost of them is achieved. The device has a close tolerance on-chip reference  $\pm 2\%$ . A voltage sense input and SCR drive output are provided for optional crowbar overvoltage protection with an external SCR. The unregulated voltage on pin 1 should be designed to fall to about 4V above the output voltage at maximum current. Under these conditions a heatsink of 4°C/W is required.

The crowbar input triggers the SCR when  $V_{out}$  exceeds nominal by 20%. Pin 4 can be left unconnected to provide normal current limiting, but this can be lowered by connecting a resistor between here and ground, and for example a 33k resistor sets the current limit to 2.5A. The sync input allows several L296's to work together. Simply link all the pin 7's together and omit the oscillator RC network on all but one device. A logic high level on pin 6 disables the L296. The open collector reset output generates an output signal when the supply voltage exceeds a threshold and goes low immediately the supply voltage falls below the

threshold generating a reset signal for microprocessors. If reset is not used, omit R6. The values of some of the components depend on the output voltage according to the table below:

$V_{out}$	R1	R6	R7
5V	82k	100 $\Omega$	Short circuit
9V	160k	180 $\Omega$	3k6
12V	220k	240 $\Omega$	6k2
15V	270k	300 $\Omega$	9k1
18V	330k	360 $\Omega$	12k
24V	470k	470 $\Omega$	18k
30V	560k	620 $\Omega$	23k (11k + 12k)

### Specification

Output voltage range: 5.1V to 40V  
 Input voltage range: 9V to 46V  
 Line regulation: 15mV  
 Load regulation: 15mV  
 Internal reference voltage: 5.1V $\pm 0.1$ V  
 Dropout voltage: 2V  
 Maximum current: 4A  
 Current limit threshold: <math>-8A</math>  
 Switching frequency: 100kHz  
 Pin 1 threshold voltage: 6V  
 Pin 15 source current: 100mA

For remote on-off a TTL level is needed on pin 6. A high on pin 6 disables the chip, but if not required, R4 can be omitted and pin 6 connected directly to ground. If the output voltage is set to 5V, then C6 can be omitted, but it is necessary for all other output voltages.

## Miniature PCB Mounting DC/DC Converters

### Newport Components

A range of miniature and sub-miniature, high-efficiency DC/DC converters, the outputs of which are isolated to 1000V DC relative to the input, made possible through the use of tiny toroidal ferrite transformers. With efficiencies of up to 80% and a physical bulk down to the scale of a logic IC, these devices are ideal for eliminating complex power buses on PCBs, or special (and inconvenient) provisions for extra odd supply lines from the main PSU, by providing them anywhere where the additional or isolated power rail is required locally. Furthermore any number of them can be used together in a system. All converters are 100% 'burned-in' and triple tested. They feature a high power to density ratio equivalent to 1.4W per cm<sup>3</sup>, which is probably the highest currently available. Derating at temperatures above 70°C is required. The operating temperature range is -50°C to +125°C. In all cases a switched mode method is employed at a typical frequency of 100kHz, with a no-load power consumption of 100mW. This efficiency makes them compatible with battery powered applications.

The packages are SIP (Single Inline Pin) with full epoxy encapsulation rated to UL94-VO within a flame retardant, polyurethane case. Any converter can be soldered into place just like any other IC or SIL array, and no heatsinks are necessary for the rated performance. Input voltages are 5V or 12V DC

depending on type. Pin '1' is marked with a dot. Pins are spaced 2.54mm (0.1in.) and are 3mm long on all types.

### Single Output Types

The NME range operate from a 5V or 12V DC input, and provide an isolated single positive output of 5V, 12V or 15V DC, depending on type. The delivered power is 1W total and up to 200mA is available from a 5V output, 84mA from a 12V output, and 67mA from a 15V output. Each device is contained in a 4-pin inline package measuring only 11.5 x 6 x 10mm high.

Type	Input voltage	Output voltage	Output current mA	Load regulation
NME0505S5V (7 max.)	5V	5V	200	10%
NME0512S5V (7 max.)	12V	5V	84	10%
NME1205S12V (15 max.)	5V	12V	200	10%
NME1215S12V (15 max.)	12V	12V	84	10%
NME1215S12V (15 max.)	15V	12V	67	10%
NME0515 5V (7 max.)	15V	5V	67	10%

### Dual Output Types

Each of the NMA range provides dual  $\pm 5V$ ,  $\pm 12V$  or  $\pm 15V$  DC supply rails with centre-tapped 0V from a single 5V or 12V DC input, depending on type, with a total power throughput of 750mW. Up to 100mA is available from the 5V output type, 42mA from each of the 12V outputs and 25mA from each of the 15V. The device is contained in a 6-pin inline package (pin 3 is excluded, not used) measuring only 19.5 x 7 x 10mm high.

Type	Input voltage	Output voltage	Output current mA	Load Regulation
NMA0512S	5V(7 max)	$\pm 12V$	42	10%
NMA0515S	5V(7 max)	$\pm 15V$	34	10%
NMA1205S	12V(15 max) $\pm 5V$	100	10%	
NMA1212S	12V(15 max) $\pm 12V$	42	10%

**TIMERS / COUNTERS**

**ICM7240/2 Fixed and Programmable Counters**

Maxim

The ICM7240IPE is an 8-bit programmable counter that can generate delays from 1 to 255 RC time constants, while consuming only 120µA current. The ICM7242IPA is an 8-bit fixed counter and can generate a time delay of 1 and 128 RC time constants. The IC combines a counter with an internal oscillator whose period is controlled by an external resistor and capacitor. The oscillator can be inhibited by an external clock applied to the TB I/O pin. Programming for the ICM7240 can be achieved by hard wiring, DIP switches or standard thumbwheel switches. By cascading the devices, delays up to days in duration can be achieved. ICM7240 (NR52G) is supplied in an 16-pin DIL package. ICM7242 (NR51F) is supplied in an 8-pin DIL package.

**Specification**  
Supply voltage: +2V to 16V

**NE555N Timer**

SGS-Thomson  
Phillips Components

The 555 is a highly stable device for generating accurate time delays or oscillation. Additional terminals are provided for triggering or resetting if desired. In the time delay (monostable) mode of operation the time is precisely controlled by one external resistor and one capacitor. For stable operation as an oscillator, the free running frequency and the duty cycle are both accurately

controlled with two external resistors and one capacitor. The circuit may be triggered and reset on falling waveforms and the output structure can source or sink up to 200mA or drive TTL directly. This IC may also be correctly supplied marked as MC1455P1. Supply decoupling must be provided close to the IC to counter the 'crowbar' effect of the device's internal discharge switch, a suitable value is 10 to 100µF as shown in the accompanying diagrams.

**Monostable Mode**

Time Delay vs RA and C

On time after triggering (i.e. applying a voltage to pin 2 less than 1/3 supply voltage) is equal to 1.1RA C. The load may be connected to VCC for normally-on operation or between pin 3 and ground for normally-off. Connecting reset to ground during on time, drives the output low until a new trigger pulse occurs. Additional trigger pulses during on time have no effect. If reset is not being used, connect it to VCC.

**Astable Mode (Oscillator)**

Free Running Frequency vs RA, RB and C

The frequency is equal to 1.44/[(RA + 2RB)C]. The charge time (output high) is given by t1 = 0.693 (RA + RB)C and the discharge time (output low) is given by t2 = 0.693(RB)C.

**Characteristics (typical)**

Supply voltage: 4.5V (min), 16V (max)  
Supply current: 3mA (VCC = 5V), 10mA (VCC = 15V)  
Threshold voltage: VCC x 0.667  
Trigger voltage: 5V (VCC = 15V), 1.67V (VCC = 5V)  
Trigger current: 0.5µA

Threshold current: 0.1µA  
Control voltage level: 10V (VCC = 15V), 3.33V (VCC = 5V)

AV71N is supplied by Phillips Components

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

**TS555/6CN Low Power Timer**

SGS Thomson

A low-power pin-for-pin replacement for the 555, but requiring only about one fiftieth of the supply current. The device has extremely low trigger, threshold and reset current, typically 20pA, and a very wide supply voltage range 2V to 18V. Supply decoupling close to the device is not required. The outputs are fully CMOS, TTL and MOS compatible. Choose high values for timing resistors to keep supply currents low and low values for capacitance which should be low leakage types, not ceramic. Also available in a dual version, AV73Q.

**Specification**

Supply voltage: 2V to 18V  
Supply current: 170µA at 5V, 360µA at 15V  
Threshold current (VDD = 5V): 10pA  
Trigger current (VDD = 5V): 10pA  
Reset current (VDD = 5V): ±10pA  
Reset voltage level: 0.7V  
Output sink current: 100mA max  
Output source current: 10mA max  
Max frequency in astable mode: 2.1MHz

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## ICM7555IPA Low Power Timer

Harris

A low power timer designated 7555 is a direct pin-for-pin replacement for the 555 bipolar timer, but requires only around a hundredth of the supply current required by the 555. The CMOS device has extremely low trigger threshold and reset currents – typically 10nA; a very wide supply voltage range from 2V to 18V and the reset does not crowbar the supply during output transitions. The device can operate from microseconds up to several hours. The output can drive at least two standard TTL and CMOS and all inputs and outputs are fully protected against static discharge and no special handling is required at all. Supply decoupling is normally not required close to the IC unlike the 555, nor is the control voltage decoupling capacitor usually required as it is with the 555, thus there is a saving in external components. To keep the total power supply requirements low, choose high values for RA and RB and low values for C which should be a low leakage type and not ceramic.

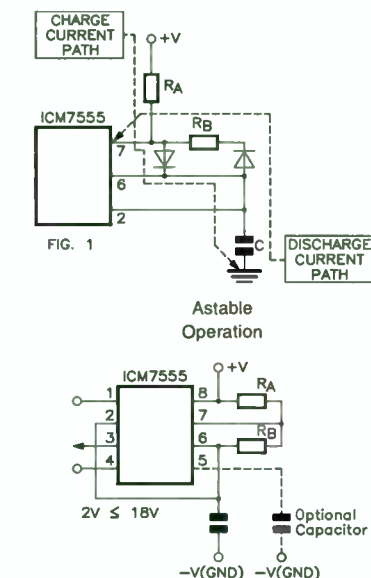

7555

Free running frequency as a function of RA, RB and C.  
Time delay in the monostable mode as a function of RA and C.  
Free running frequency as a function of RA, RB and C

### Specification

Supply voltage: Minimum 2V, maximum 18V  
Supply current: 60µA typical  
Threshold current: 10nA at V+ = 15V  
Max frequency in astable mode: At least 500kHz  
Trigger current: 10nA at V+ = 15V  
Reset current: 10nA at V+ = 15V  
Reset voltage: +0.4V to 1.0V  
Temperature stability: 50ppm/°C at 25°C  
Output sink current: 100mA max at V+ = 18V  
Monostable Operation

In astable mode the frequency of operation is given by:

$$f = 1.46 / [(R_A + 2R_B)C] \text{ Hz.}$$

Fig. 1 shows how to achieve duty cycles of 50% and less. In a monostable mode the period time is given by:

$$t = 0.69RC \text{ sec.}$$

(In both equations R is in ohms and C is in Farads.)

## LM322N Precision Timer

NSC

A high quality timer device providing great versatility and high accuracy. A logic reverse function allows the output pin to be reversed during the timing period, making it very easy to interface to existing systems. An internal regulator is derived for referencing purposes, and is capable of driving external loads up to 5mA. Timing periods of up to 50:1 can easily be achieved by a voltage divider method into the VADJ pin, from an external source. A boost terminal allows the user to increase the comparator operating current for periods less than 1ms, allowing the device to be used over a 3µs to multi-hour range with excellent repeatability.

- Features**
- ★ Floating transistor output with internal current limiting
  - ★ Immune to change in trigger voltage during timing period
  - ★ Immune to power supply ripple during timing period
  - ★ Input protected to ±40V
  - ★ Internal logic reversal
  - ★ Internally regulated reference
  - ★ Operates from 4.5V to 40V
  - ★ Output drive up to 50mA
  - ★ Timing period can be voltage divider controlled
  - ★ TTL compatible input and output

### Specification

Comparator current: 0.3nA (30nA with boost)  
Trigger voltage: 1.2V to 2V  
Trigger current: 25µA typical, 4.5mA max  
Supply current: 0.61 min, 0.654 max  
Timing ratio: 50:1  
Comparator input current: -2nA to 2nA  
Trigger voltage: 0.8V min, 2.5V max  
Trigger current: 200µA max  
Output leakage current: 5µA max  
Reset resistance: 150Ω typical  
Reference voltage: 3V min, 3.3V max  
Reference regulation: 20mV to 50mV max  
Collector saturation voltage: 0.25V min to 1.4V  
Emitter saturation voltage: 1.8V to 3V  
Minimum trigger width: 0.25µs  
Power dissipation: 500mW

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## HT2014M LED Flash Driver

**Holttek**

A simple low-cost, 3-pin LED flasher with a fixed flash rate of 2Hz. It can be operated without any external components, and will drive directly a suitable LED from a small battery. The device has a large drive capability of 10mA at 3V, with a 1/8 duty cycle. Will work with a 1.2V to 4.5V DC supply with a typical stand-by current of 1µA (3V) Ideal for simple novelties, such as flashing badges etc. Supplied in a TO92 package.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
AZ24B	HT2014M	£0.790	£2.290

## LM3909N LED Flasher/Oscillator

**National Semiconductor**

With the addition of a 1.5V battery and capacitor this IC will deliver pulses of over 2V to an LED to flash it brightly, with a current drain of less than 0.5mA. It has a powerful output and can directly drive an 8Ω speaker. Applications include flasher to locate torch

3909

or boat mooring floats at night, sales and advertising gimmicks, emergency locators for 1.4V to 200V (see data sheet).

In this circuit there is an audible difference between short circuits, coils and resistances of a few ohms etc.

### Continuity Tester Parts List

## HT2050 Five LED Flash Driver

**Holttek**

A low-cost, low power CMOS IC designed for flashing five LEDs (or suitable low current lamps). The five outputs can individually sink up to 10mA and can implement random or sequential flashing which is selected by just one switch. The device requires very few external components, and features a built-in oscillator, 1/10 duty cycle output and a low stand-by current - typically 1µA at 3V. Ideal for Christmas decorations, toys, novelties disco effects etc. The oscillator resistor can be in the range 150kΩ to 300kΩ, and will determine the flash rate.

## U6047B

**Temic**

6047

A timer for motor vehicles with a wide ranging adjustable delay time from 3.7 seconds to up to 20 hours. From small value capacitors this is made possible by all time sequences being determined by an RC oscillator and a frequency divider. The relay driver is integrated and, with the corresponding external circuitry, the circuit is resistant to load dump and interference voltages in accordance with

DIN40839.

To prevent interference and help protect the device the supply (pin 8) should be buffered with an RC filter, suggested values are 510Ω and 47µF. There is an internal 14V Zener diode between pins 8 and 1 (GND) as overvoltage protection, and with 510Ω in series the device can be operated over a wide supply range from 6V to 16V. It can also be supplied from a regulated 5V source, in which case the RC supply filter is not necessary.

A time function can be started or interrupted by the three inputs TOG, ON and OFF. If the time function is triggered the relay is active, the relay contact dropping out after expiry of the delay time. There are two possible applications, use of the toggle (TOG) input or of the ON or OFF inputs. When the TOG input is taken high for the first time the relay is switched on by pin 2 after a debounce period has elapsed. If triggered again the relay is switched off, and thereafter each actuation of the TOG input changes the state of the relay. If left on, it is switched off after the time delay period.

Alternatively ON and OFF controls can be realised as a rocker switch since both must not be activated simultaneously. ON leads to activation of the relay after the debounce period, while OFF immediately switches it off. If OFF is not activated, the relay is switched off after the time delay expires. In practice a common commercial application for this device is as a window demister heater control, which will 'switch itself off' after the chosen delay time (in minutes) should the driver forget.

All timing sequences are derived from an internal oscillator which uses external RC components  $R_{osc}$  and  $C_{osc}$  to set a fundamental frequency  $f_0$ . The oscillator not only produces the delay time but also the debounce time period. The delay time will be  $73728 \times 1/f_0$  while the debounce period will be  $6 \times 1/f_0$ .  $R_{osc}$  can range from 59kΩ to 650kΩ and  $C_{osc}$  from 1nF to 4.7µF, giving oscillator frequencies from 20kHz down to 1Hz (delay times of 3.7s to 1,229m). The relay driver output is an open collector Darlington transistor with integral 23V Zener diode for limitation of the inductive pulse from the relay winding at switch-off. Maximum collector current must not exceed 300mA. The remainder of the IC is protected as described above, and all inputs are protected by a series resistor, integral Zener diode and RF capacitor.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## PHASE LOCKED LOOP

### LM565N Phase Locked Loop

National Semiconductor

A 14-pin DIL IC containing a voltage controlled oscillator, phase detector and amplifier. The IC is very stable typically 200ppm/°C with high linearity: 0.2% and only 100ppm/% frequency drift with change of supply voltage which can be between ±5V and ±12V. Centre frequency set by resistor between pin 8 and V+ and capacitor between pin 9 and V- is  $f = 1/2.4RC$  where R is in ohms, C is in Farads and f is in Hertz. There is a TTL compatible square wave output, a very linear triangular wave output and a reference output for addition of comparator or frequency discriminator. Bandpass is adjustable from <±1% to >±60% and centre frequency is adjustable over a 10 to 1 range with the same capacitor. Applications include frequency shift keying, modems, tone decoders, wideband FM

discriminators, data synchronisers, tracking filters, signal restoration and frequency multiplication and division. The lock range will be  $\pm 8f_0/VCC$  Hz where VCC is the total supply voltage (i.e. if V+ is +6, V- is -6 then VCC = 12V).

$$\text{Capture range} = \pm \frac{1}{2\pi} \sqrt{\frac{2\pi f_L}{\tau}}$$

where  $f_L$  is the lock range and  $\tau = 3600C_2$  where  $C_2$  is the capacitor between pin 7 and V+ in Farads.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

### LM567CN Tone Decoder/Phase Locked Loop

National Semiconductor

#### Features

- ★ Wide frequency range (0.01Hz to 500kHz)
- ★ High stability of centre frequency
- ★ Independently controllable bandwidth (0 to 14%)
- ★ High out-band signal and noise rejection
- ★ Logic compatible output with 100mA current sinking capability
- ★ Inherent immunity to false signals
- ★ Frequency adjustment over a 20 to 1 range with an external resistor

#### Applications

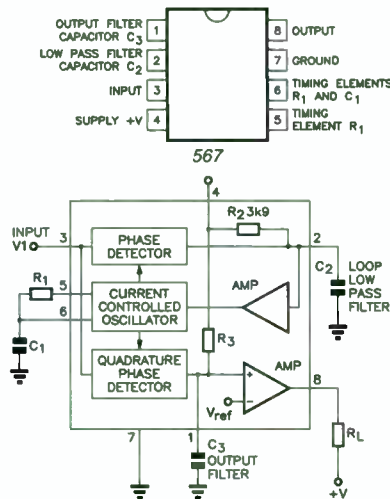

- ★ Carrier current remote controls
- ★ Ultrasonic controls (remote TV etc.)
- ★ Communications paging
- ★ Frequency monitoring and control
- ★ Wireless intercom
- ★ Precision oscillator

#### Characteristics

Max operating voltage:	10V
Positive voltage at input:	0.5V above supply
Negative voltage at input:	-10V DC
Output voltage:	15V DC
Operating current range:	7mA (12mA activated)

#### Design Formulae

$f_0 = 1.1/R_1.C_1$  where  $R_1$  is between 2kΩ and 20kΩ and  $f_0$  is the centre frequency. Bandwidth =  $1070\sqrt{V_i/f_0.C_2}$  where  $V_i$  is the input rms voltage.  $C_3 = 2(C_2)$ .

### RC221N FSK Demodulator/Tone Decoder

Raytheon

A monolithic phase locked loop for data communications. The IC contains a basic phase locked loop for tracking an input signal within the pass band, a quadrature phase detector which provides carrier detection and an FSK voltage comparator which provides FSK demodulation. In the circuit shown, the IC is used as an FSK demodulator such as would be found in the receiver circuit of a modem. The table below shows the component values required for a modem demodulator using standard European tones on the public switched network.

#### Characteristics (typical)

Supply voltage:	4.5V min to 20V max
Supply current:	5mA

Frequency accuracy: ±1%  
Stability: ±20ppm/°C  
Upper frequency limit: 300kHz  
Lowest practical operating frequency: 0.01Hz  
Timing resistor ( $R_2 + RV_1$ ): 5kΩ min, 2MΩ max.  
recommended: 15kΩ min, 100kΩ max.  
Input impedance: 20kΩ  
Input signal voltage: 2mV rms min, 3V rms max.  
Internal reference voltage: 5.3V and 100Ω impedance.

## SENSORS

### ACCELEROMETERS

#### ADXL05/50 Monolithic Accelerometer

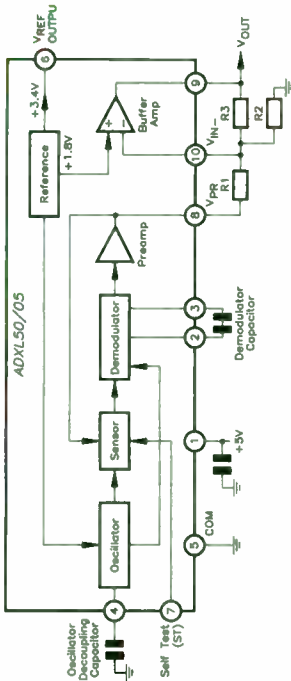

Analog Devices

These devices offer a complete accelerating measuring system on a single monolithic IC, and require just three external capacitors and a +5V supply. The ADXL05 will measure accelerations with full-scale ranges of ±5g to ±1g or less, and with a typical noise floor figure of 500μg/√Hz, allows signals below 5mg to be resolved. The ADXL50 will measure accelerations up to ±50g, and comes with a factory trimmed sensitivity of 19mV/g. This results in a full-scale output swing of ±0.95V for a ±50g applied acceleration. The zero g output level is +1.8V.

The devices include an output buffer whose sensitivity can be set by using three external resistors. Capacitors can be added to this external resistor network to provide 1- or 2-poles of filtering. No external active components are required to directly interface to most ADC or microcontrollers. Additionally, there is a TTL compatible self-test function that can electrostatically deflect the sensor beam at any time to verify that the sensor and its electronics are functioning correctly. Supplied in a 10-pin TO-100 metal can for operation over the 0°C to +70°C temperature range.

An evaluation board is available for the ADXL05 and includes a PCB, surface mount resistors and capacitors, and a datasheet. The board allows designers to set the gains and filter BW to suit individual requirements.

## TEMP / AIRFLOW SENSOR

### TMP12FP Airflow and Temperature Sensor

Analog Devices

#### Features

- ★ Temperature sensor with 100kΩ heater
- ★ Single 5V operation
- ★ Accuracy ±3% typ. from -40°C to +100°C
- ★ 20mA open-collector set point outputs

#### Applications

- ★ System airflow sensor
- ★ Equipment over-temperature sensor
- ★ Over temperature protection
- ★ Power supply thermal sensor
- ★ Low-cost fan controller

The TMP12 is a silicon-based airflow and temperature sensor designed to be placed in the same airstream as heat generating components that require cooling. An internal voltage is generated that is linearly proportional to °C, nominally

+5mV/°C. The linearised output is compared with voltages from an external resistive divider connected to the 2.5V precision reference. The divider sets up one or two reference voltages, as required by the user, providing one or two temperature set points. An on-board hysteresis generator, programmed by the external resistor chain, speeds up the temperature set point output transitions, and also reduces erratic output transitions in noisy environments.

An on-board, precision, low temperature coefficient 100Ω heater resistor can be used to raise the die temperature in the DIP package by approximately 20°C above ambient (in still air). This will emulate a power IC, such as a regulator or Pentium CPU, which as a high internal dissipation. The temperature rise produced by the resistor will be proportional to the air flow, so any interruption in the airflow will produce an additional temperature rise. When the chip temperature exceeds a user-defined setpoint limit, then a system controller can be made to take corrective action e.g. reducing clock frequency, shutting down peripherals, additional cooling fans, or even shutting down the system.

#### Specification

Power supply:	5V 400µA system current
Heater resistance:	100Ω 60mA typ
Temperature coeff:	100ppm/°C
Accuracy at 25°C

### OPT101P

Burr-Brown

This device is a photodiode with on-chip transimpedance amplifier on a single chip, in a transparent 8-pin DIP package. This combination eliminates the problems commonly encountered in discrete designs such as noise pick-up, leakage

current errors and gain peaking due to stray capacitance. The photodiode is operated in the photoconductive mode for excellent linearity and low dark current. The OPT101 operates from +2.7V to +36V single rail supplies and quiescent current is only 120µA. Bandwidth is 14kHz when using the internal 1M feedback resistor. Note that the device should be stored under dry warm conditions prior to soldering.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
LE73Q	Light To V Converter	£3.320	£3.080

### OPT211P

Burr-Brown

Rf (Ω)	Cf (pF)	Bandwidth (kHz)
330k	5.6	86
1M	3	50
10M	1 <sup>(1)</sup>	16
100M	0.3 <sup>(1)</sup>	5

The OPT211 is a monolithic photodiode and on chip FET input op-amp combination that provides wide bandwidth at very high gain levels with stable and noise free operation. Full access to feedback points is provided to allow a variety of feedback options for maximum versatility. The large area photodiode is designed to be operated in the photoconductive mode for very linear operation. The OPT211 operates from ±2.25V to ±18V and supply current is 400µA. Bandwidth may be as high as 150kHz with a 1M feedback resistor and bootstrap buffer. Note that the device should be stored under dry warm conditions prior to soldering.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## TSL220 Light to Frequency Converter

Texas Instruments  
Not For New Design

A large area (4.13mm<sup>2</sup>) photodiode and current to frequency converter combined in a clear plastic 8-pin DIL package. The output is a pulse train whose frequency is directly proportional to the light intensity. The output is CMOS compatible (use a 3k3 pull-down resistor to drive LS TTL) and the frequency can be measured by pulse counting, period timing, or integration techniques. The photodiode has a wide dynamic range, high sensitivity and high noise immunity. The output frequency range is determined by a capacitor in the range 10pF to 100µF, which permits the output frequency to fall within some suitable range for any given light intensity.

### Specification (typical at V<sub>S</sub> = 5V, 25°C)

Supply voltage: 4V to 10V  
Max output frequency: 750kHz  
Operating temperature: -25°C to +70°C  
Peak output voltage: 4V (50kΩ load)  
Supply current: 7.5mA (when dark)  
Output frequency  
125µW/cm<sup>2</sup> (880nm), C=100pF: 50kHz (min), 150kHz (typical), 250kHz (max)  
no light, C = 100pF:  
0Hz (min), 1Hz (typical), 50Hz (max)  
Output pulse duration: 1µs (C = 470pF)  
Output pulse rise time: 20ns (C = 100pF)  
Output pulse fall time: 120ns (C = 100pF)

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
CP93B	TSL220	£4.300	£5.880

## UGN3503U Ratiometric Linear Hall Effect Sensors

Allegro

A Hall effect sensor which accurately tracks extremely small changes in magnetic flux density, changes generally too small to operate Hall effect switches. As a motion detector, gear tooth sensor and proximity detector, it is a magnetically driven mirror of mechanical events. It can effectively measure a system's performance with negligible system loading while providing isolation from contaminated and electrically noisy environments. The device contains a Hall sensing element, linear amplifier and emitter follower output stage. Problems associated with handling tiny analogue signals are minimised by having the Hall cell and amplifier on the same chip.

### Specification

Supply voltage range: 4.5 to 6V (8V absolute max.)  
Magnetic flux density: Unlimited  
System frequency response: Flat to 23kHz  
Operating temperature range: -20°C to +85°C

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
GX09K	UGN3503U	£0.677	£1.770

## CS209A Proximity Detector

Cherry Semiconductor

An electro-magnetic proximity sensor IC which could be used to detect metal pipes, nails, conduit, etc., in walls, floors, etc. The IC contains an on-chip regulated supply, oscillator, demodulator, level detector and output stages. The oscillator with its external LC network, provides controlled oscillations where the amplitude is highly dependent on the Q of the LC network. During low Q conditions, a variable low-level feedback is applied to maintain oscillation. The peak demodulator detects the negative portion of the oscillator envelope and the demodulated waveform is then compared to an internal reference by the level detector. Two outputs are provided, one normally high (pin 4) and one normally low (pin 5) both of which can supply up to about 120mA.

In the circuit shown, if the search coil is passed over a wall surface, nails or screws under the surface change the Q of the coil and the device detects this and lights the LED and sounds the

buzzer. To set up, adjust VR1 till the LED is on when the coil is clear of any metal objects. Now back off VR1 until the LED is just extinguished. Repeat the adjustment until metal moved toward and away from the coil does not cause the LED to lock on.

### Parts List

R1	Min Res 220Ω	(M220R)
R2	Min Res 750Ω	(M750R)
R3,4	Min Res 4k7	(M4K7)
VR1	18-turn Cermet 10k	(WR49D)
C1	Monores Cap 2200pF	(RA40T)

S1	Push Switch	(FH59P)
B1	PP3 Battery	(ZB44X)

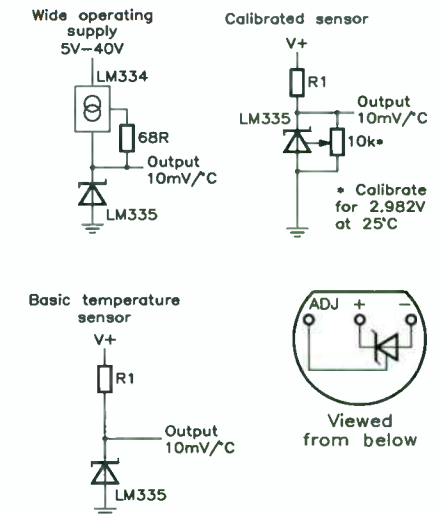

The IC requires a 4V to 24V power supply and draws about 4-5mA

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UH59P	CS209A	£1.460	£3.200

## LM335Z Precision Temperature Sensor

SGS Thomson

An easily calibrated, precision temperature sensor whose operation is similar to a zener diode. The device has a breakdown voltage directly proportional to absolute temperature and has a linear output equal to 10mV/°C. The device operates over a current range of 400µA to 5mA (1mA recommended) and even when uncalibrated has a typical temperature error of only 2°C over its operating range. When calibrated the error is 1°C.

### Characteristics

Output voltage at 25°C: 2.98V  
Dynamic impedance: 0.6Ω  
Time constant in still air: 80 secs  
T in 30.5m/min air: 10 secs  
T in stirred oil: 1 sec  
Operating range: -10°C to 100°C extending to 125°C intermittently.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## LM35 Precision Centigrade Temperature Sensors

National Semiconductor

Precision integrated circuits whose output voltage is linearly proportional to the Centigrade temperature. The advantage over the LM335Z is that it is not necessary to subtract a large constant voltage from the output to obtain the Centigrade scale. The chip does not require any external calibration to achieve accuracies of  $\pm 4/10^\circ\text{C}$  at room temperature and  $\pm 8/10^\circ\text{C}$  over full temperature range. The device draws only 56 $\mu\text{A}$  from voltage supplies in the range 4V to 30V so it has very low self-heating  $< 0.1^\circ\text{C}$  in still air. The LM35CZ will operate in the range  $-40^\circ\text{C}$  to  $+110^\circ\text{C}$  whilst the LM35DZ operates in the range  $0^\circ\text{C}$  to  $100^\circ\text{C}$ .

### Characteristics (typical)

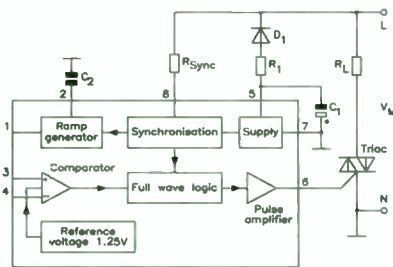

Accuracy at $+25^\circ\text{C}$	$\pm 0.4^\circ\text{C}$ (CZ), $\pm 0.6^\circ\text{C}$ (DZ)
$-40^\circ\text{C}$ to $+110^\circ\text{C}$	$\pm 0.8^\circ\text{C}$ (CZ)
$0^\circ\text{C}$ to $+100^\circ\text{C}$	$\pm 0.9^\circ\text{C}$ (DZ)
Non-linearity	$0.2^\circ\text{C}$
Sensor slope	$+10\text{mV}/^\circ\text{C}$
Load regulation	$0.4\text{mV}/\text{mA}$
Line regulation	$0.01\text{mV}/\text{mA}$
Quiescent current	$56\mu\text{A}$ at $V_S = 5\text{V}$ $56.2\mu\text{A}$ at $V_S = 30\text{V}$
Temperature co-efficient of quiescent current	$+0.39\mu\text{A}/^\circ\text{C}$
Output impedance	$0.1\mu$ with $1\text{mA}$ load

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## U217B Temperature Controller

Temec

A triac controller for switching resistive loads directly from the mains supply using the zero crossing technique. The device is powered directly from the mains via a diode and dropper resistor, and the IC has its own regulator to limit its supply to 9.25V. To ensure that no switching occurs outside of the zero crossing point, full-wave logic is employed to guarantee that complete mains cycles only are switched to the load. A ramp generator with a freely selectable ramp duration (as determined by a timing capacitor), together with the full-wave logic block, synchronised to the AC supply at pin 8 via a dropper resistor  $R_{\text{sync}}$ . The ramp generator not only provides symmetrical trigger pulse control by itself but can have proportional offsets added to it by additional external components, for example for temperature control with monitoring thermistor. To obtain a 'flicker-free' output, the ramp duration is adjusted according to the load control required. In practice interference generation should be avoided for temperature control applications, therefore in such cases a straight on-off control is preferred to proportional control. The internal reference voltage can be used instead of the ramp generator output for simple applications. The value of  $R_{\text{sync}}$  controls the trigger pulse width to a large extent; the higher the value the greater the width. This should be chosen according to the TRIAC used.

### Specification

Supply voltage (pin 5):	Limited to 9.25V nominal
Supply current drawn:	500 $\mu\text{A}$
Supply current input:	30mA absolute max.
Sync current input (pin 8):	0.12mA min., 5mA absolute max.
Ramp generator output current (pin 1):	3mA max.
Ramp generator charge current (pin 2):	17 $\mu\text{A}$ nominal
Maximum power dissipation:	400mW @ $45^\circ\text{C}$

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MPX100AP Pressure Sensor

Motorola

A low-cost silicon piezoresistive pressure sensor providing a very accurate and linear voltage output, directly proportional to the applied pressure. The unit has a built-in reference vacuum of approximately 0kPa. The output voltage increases with increasing pressure relative to ambient pressure (approx 100kPa) applied to the pressure side. Care should be taken to limit positive pressure to about 300kPa relative to ambient so that the total differential overpressure range of 400kPa is not exceeded. Conversely the output voltage will decrease as vacuum, relative to ambient, is drawn. Vacuum down to the 0kPa reference can be measured.

Note: 1kPa = 0.145 PSI.

### Characteristics

Supply voltage:	3V (6V max)
Supply current:	6mA
Full scale span:	60mV
Zero pressure offset:	20mV
Sensitivity:	0.6mV/kPa
Linearity:	$\pm 0.05\%$ of full scale
Range:	0 to 100kPa
Temperature hysteresis:	$\pm 0.5\%$ of full scale
Temperature coefficient of full scale span:	$-0.19\%/^\circ\text{C}$
Temperature coefficient of offset:	$\pm 15\mu\text{V}/^\circ\text{C}$
Temperature coefficient of resistance:	$0.24\%/^\circ\text{C}$
Input resistance:	400 to 550 $\Omega$
Response time:	1ms (10% to 90%)

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## LM1830N Fluid Level Detector

National Semiconductor

The IC is ideal for detecting the presence, absence or level of water or other conducting liquids. A detector determines the presence or absence of fluid by comparing the resistance of the fluid with the IC's internal reference resistance. An AC signal is used to prevent plating of the probe. When the probe resistance increases the loudspeaker will emit a 500Hz tone. Alternatively an LED could be connected.

Supply voltage range: +9V to +25V  
 Supply current: 5.5mA (at 16V)  
 Output sink current: 20mA max  
 Internal ref resistor: 13kΩ

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

### DISPLAY DRIVER IC'S

## HT2014M LED Flash Driver

Holtek

A simple low-cost, 3-pin LED flasher with a fixed flash rate of 2Hz. It can be operated without any external components, and will drive directly a suitable LED from a small battery.

The device has a large drive capability of 10mA at 3V, with a 1/8 duty cycle. Will work with a 1.2V to 4.5V DC supply with a typical stand-by current of 1µA (3V) ideal for simple novelties, such as flashing badges etc. Supplied in a TO92 package.

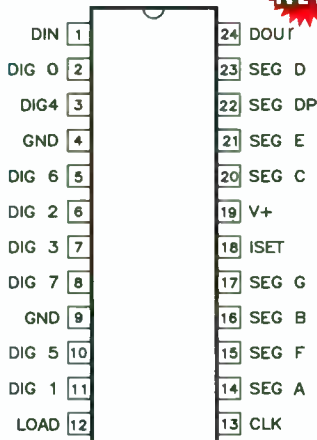

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

## MAX7219CNG Serial 8-Digit LED Display Driver

MAXim

MAX7219

The MAX7219 is a compact, serial input/output common-cathode driver that will interface micro-processors (µPs) to 7-segment numeric LED displays of upto 8-digits, bargraph displays or 64 individual LEDs. The device has a BCD code-B decoder, multiplex scan circuitry, segment and digit drivers, and an 8 x 8 static RAM that stores each digit. The segment current for all LEDs is set by just one external resistor.

A 10MHz 3-wire serial interface connects to all common µPs, and allows individual digits to be updated without rewriting the entire display. Code-B decoding or no-decode can be selected for each digit.

A 150µA low-power shutdown mode is included that will retain data, as well as analog and digital brightness control, a scan-limit register which allows from 1 to 8 digits to be displayed, and a test mode which forces all LEDs on. Supplied in a 24-pin narrow plastic DIP package.

### Specification

Power supply: 5V/300mA all segments and decimal point on  
 Shutdown supply current: 150µA max  
 Display scan rate: 2kHz max  
 Digit drive sink current: 320mA min  
 Clock/serial output propagation delay: 2.25ms

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## LM3909N LED Flasher/Oscillator

National Semiconductor

With the addition of a 1.5V battery and capacitor this IC will deliver pulses of over 2V to an LED to flash it brightly, with a current drain of less than 0.5mA. It has a powerful output and can directly drive an 8Ω speaker. Applications include flasher to locate torch

3909

or boat mooring floats at night, sales and advertising gimmicks, emergency locators for 1.4V to 200V (see data sheet).

In this circuit there is an audible difference between short circuits, coils and resistances of a few ohms etc.

### Continuity Tester Parts List

## LM3914/5/6N Bargraph Displays

National Semiconductor

An LED driver that will sequentially light ten LEDs when a gradually increasing voltage is applied to pin 5, (dot mode) or in bar mode all LEDs indicating voltages below input are lit. In dot mode there is a slight overlap so that at no point are all LEDs extinguished. A brightness control will set LED current between 2mA and 30mA. The drivers are stackable and displays with 100 or more LEDs are possible. Supply voltage 3V to 18V. The driver that sets the indication points can be referenced to a wide range of voltages.

Three different chips are available:

- LM3914: linear steps
- LM3915: 3dB steps (logarithmic scale)
- LM3916: VU scale (e.g. -10dB, -7dB, -5dB, -3dB, -1dB, 0dB, 1dB, 2dB, 3dB)

A pcb is available for use with these ICs and information on how to construct and set up this pcb along with circuits and applications can be found in the Maplin Best of Projects Book 6 (XC06G). See end of Projects and Modules section for details.

## HT2070-Lotto/Dice Chip

Hoitek

The HT2070 contains all of the circuitry necessary to simulate the action of a 'lotto' or die. In lotto mode (pin 11, OPT, to ground) the chip provides a single running sequence driving LEDs. 6 to 1 with 7 flashing to indicate state of play. In die mode (pin 11 OPT floating) the seven outputs form the dot pattern of a normal die. The device also features direct drive for a piezo sounder (order code YU87U) and is triggered by pressing one push-button (order code FH91Y) The HT2070 will auto power down after use and requires a 3V supply. Suitable LEDs are 5mm Red type (order code UK48C).

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## HT2050 Five LED Flash Driver

Hoitek

A low-cost, low power CMOS IC designed for flashing five LEDs (or suitable low current lamps). The five outputs can individually sink up to 10mA and can implement random or sequential flashing which is selected by just one switch. The device requires very few external components, and features a built-in oscillator, 1/10 duty cycle output and a low stand-by current - typically 1µA at 3V. Ideal for Christmas decorations, toys, novelties disco effects etc. The oscillator resistor can be in the range 150kΩ to 300kΩ, and will determine the flash rate.

### Suggested Parts List

- R1 Min Res 220k (M220K)
- R2 Min Res 68Ω (M68R)
- C1 Met Polyester 0.1µF (CX00A)
- LED1-55mm LED Red (WL27E)
- SW1 Square Locking (YW41U)
- SW2 Push Button Switches (FY96E)

## M5450B7 LED Display Driver

SGS Thomson

An LED display driver that can drive up to 34 segments at up to 15mA without external resistors. Constant current sources in the IC control the segment current, and this can be set by adjusting the current into pin 19. Data is clocked into pin 22 (when pin 23 is low) by sending a 1 as the first bit, then the 34 data bits and ensuring that there is at least one further clock pulse. This 36th clock pulse loads the 34 bits of serial data into the segment latches, each logical 1 turning on the appropriate segment. The 36th clock pulse also generates a reset signal which clears the register ready to receive a further set of data following the next 1

detected on pin 22. Segments are directly driven and not multiplexed. Common anode displays are required with the anodes connected to VDD.

### Specification

Supply voltage	5V (4.75V to 13.2V)
Supply current	<7mA
Output sink current	15mA with 750µA in pin 19 2.7mA with 100µA in pin 19
Input clock frequency	DC to 500kHz

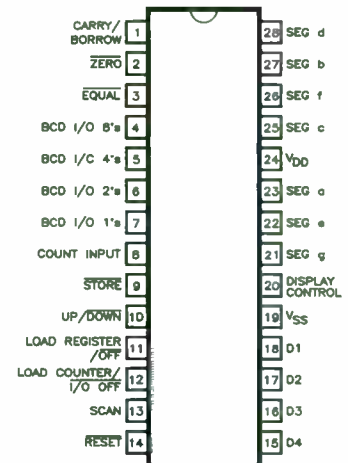

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2017	Price each exc. VAT	inc. VAT each
UJ53H	M5450B7	£2.650 10+ £2.460 25+ £2.300 100+	£6.550 1+

## ICM7217AIP1 4-Digit Programmable Counter Driver

Harris

An up/down counter containing a register that can be preset with thumbwheel switches. The register is continuously compared with the count and a signal generated when they are equal. The circuit will directly drive four common cathode 7-segment displays. The input frequency is guaranteed up to 2MHz, but will typically operate up to 5MHz. Counting and comparing will run at 750kHz maximum.

### Specification (typical at V<sub>S</sub> = 5V, 25°C)

Supply voltage:	4.5V to 5.5V
Supply current:	300µA standby 100mA operating 35mA peak
Digit driver output:	-12.5mA peak
Segment driver output:	>4.4V
BCD I/O input high:	<3.2V
BCD I/O input low:	5MHz
Count input frequency:	<0.4V
Count input low:	<3.5V
Count input high:	2.5kHz
Display scan frequency:

## 74C925 4-Digit Counter Driver

National Semiconductor

74C925

A 4-digit counter with 7-segment multiplexed outputs capable of driving a 4-digit common cathode display. The multiplexing circuit has its own free-running oscillator and requires no external clock. The counters advance on the negative edge of the clock applied to pin 11. A high signal on pin 12 will reset the counter to zero. A low signal on pin 5 will latch the number in the counters into the internal output latches.

### Characteristics (typical at 25°C)

Supply voltage pin 16: 5V (3V min, 6V max)  
 Supply current: 20µA  
 Max input frequency: 4MHz  
 Multiplex frequency: 1kHz  
 Logical '1' input voltage: 3.5V min  
 Absolute max: 15V  
 Logical '0' input voltage: 1.5V max  
 Logical '1' input current: 5nA  
 Logical '0' input current: -5nA

## ICM7224IPL 4 1/2-Digit Counter

Harris

7224

A 4 1/2-digit counter capable of directly driving an LCD display. Applications data can be found in the Maplin Magazine 55. The maximum count is 19,999, and the input frequency can be up to 25MHz typically. Chips can be cascaded to provide higher maximum counts.

### Specification

Supply voltage: 5V (3V to 6V)  
 Operating current: 10µA  
 Oscillator frequency: 16kHz  
 Backplane frequency: 125Hz  
 Count frequency: >15MHz

## 74C917 6-Digit Hex Display

National Semiconductor

74C917

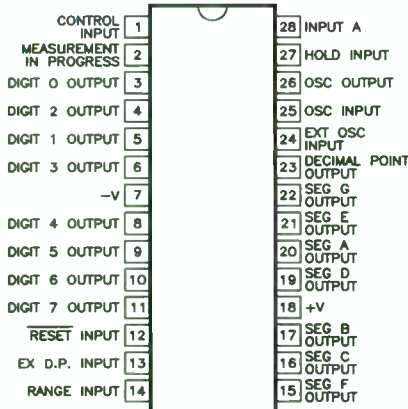

A display controller interface element with memory that will directly drive six 8-segment LED displays (i.e. 7-segment and decimal point). The controller receives data information through 5 data inputs (A, B, C, D and DP) and digit information through 3 address inputs (K1, K2, K3). The input data is written into the register selected by the address information when 'chip enable' (CE) and 'write enable' (WE) are low and is latched when either (CE) or (WE) go high again. A self-contained oscillator sequentially presents the stored data to a decoder where four data bits control the displayed character and one bit controls the decimal point. The oscillator is normally operational and tied low (OSE), but at high level this input prevents the automatic refresh of the display. Segment outputs have up to 100mA capability and digit outputs have up to 20mA capability. Use three of our 2-digit common cathode displays with seven Min Res 68Ω in series with IC pins 17 to 19 and 21 to 25 for direct drive. The digit outputs (pins 9 to 14) require a BC337 connected to each: base to IC; collector to display; and emitters commoned to ground. The drivers are active when output enable (SOE) is low, and high impedance when SOE is high. This feature enables a brightness control to be used. Normally SOE and OSE are tied to ground. All inputs are TTL compatible and nominal supply voltage is 5V at 0.5mA with output off (SOE high). The registers are addressed like ordinary RAM.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## ICM7216DIPI 10MHz Frequency Counter

Harris

7216DIPI

An 8-digit frequency counter IC operating from DC to 10MHz. Decimal point and leading zero blanking may be externally selected. The IC will directly drive two

4-digit multiplex common cathode displays, and requires only one +5V DC supply and a 1MHz or 10MHz crystal.

### Specification

Supply voltage: +5V at 2mA (display off)  
 Maximum frequency (pin 28): 10MHz  
 Time between measurements: 200ms  
 Digit driver output current: 75mA  
 Segment driver output current: 15mA  
 Input voltage low/high: 1V max/3.5V min

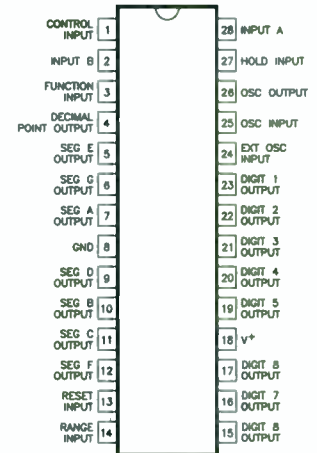

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2935	Price each exc. VAT	inc. VAT each
YY94C	ICM7216DIPI	10+ £18.230 25+ £12.180 100+ £11.370	1+ £29.990

## ICM7216AJI 10MHz Universal Counter

Harris

An 8-digit universal counter IC operating from DC to 10MHz in frequency counter mode and DC to 2MHz in unit counter modes. The IC will directly drive 8 common anode seven-segment displays. It requires only one +5V supply and 10MHz or 1MHz crystal timebase. In addition to being a frequency counter, the IC can be used as a period counter, frequency ratio counter, time interval counter or as a totalising counter.

7216AJI

### Specification (typical)

Supply voltage: +5V (4.75V to 6V)  
 Supply current: 2mA (display off)  
 Max. frequency (pin 28): 10MHz (frequency, ratio, unit)  
 2.5MHz (period, time interval)  
 Max. frequency (pin 2): 2.5MHz  
 Min. time interval: 250ns  
 Time between measurements: 200ms  
 Digit driver output current: -180mA  
 Segment driver output current: 35mA  
 Input voltage low/high: 1V max/3.5V min

## TRANSISTOR ARRAYS

### SSM 2210P Audio Dual Matched NPN Transistors

Analog Devices

2210

An ultra low noise, matched dual monolithic transistor for use in input stages of high quality amplifiers. The electrical characteristics approach those of an ideal transistor when operated over a collector current range of 1µA to 10mA.

**Specification (typical at 25°C, V<sub>CB</sub> = 15V, I<sub>C</sub> = 10µA)**

Collector-emitter voltage:	40V max
Collector-base voltage:	40V max
Collector-collector voltage:	40V max
Emitter-emitter voltage:	40V max
Collector current:	20mA max
Total power dissipation:	500mW
Current gain (h <sub>FE</sub> ):	550 @ 10µA
Current gain matching:	0.5%
Gain-bandwidth product (f <sub>T</sub> ):	200MHz
Offset voltage:	10µV
Bulk resistance:	0.3Ω
Noise density:	0.85nV/√Hz at 1kHz (I <sub>C</sub> = 1mA)

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

UL79L	SSM2210P	£3.000	£3.690

### CA3046 Five Transistor Array

SGS Thomson

The 3046 consists of five silicon NPN transistors on a common monolithic substrate in a 14-lead dual in-line plastic package. Two transistors are internally connected to form a differential amp. The transistors of the 3046 are well suited to low noise general purposes and to a wide variety of applications in low power systems in the DC through VHF range. They may be used as discrete components in conventional circuits, in addition they provide the very significant inherent integrated circuit advantages of close electrical and thermal matching.

3046

#### Absolute Maximum Ratings

Each transistor
V <sub>CEO</sub> : 15V
V <sub>CB0</sub> : 20V
V <sub>CB1</sub> : 20V
V <sub>EBO</sub> : 5V
I <sub>C</sub> : 50mA
Total power dissipation: @ TA = 55°C: 300mW (750mW total package)
h <sub>FE</sub> : 100 @ 10mA
f <sub>T</sub> : 550MHz

\*The collector of each transistor of the CA3046 is isolated from the substrate by an integral diode. The substrate (terminal 13) must be connected to the most negative point in the external circuit to maintain isolation between transistors and to provide for normal transistor action.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## VALVES

### Valves

A range of high quality valves primarily for use in high fidelity and other audio applications. A booklet containing comprehensive data and typical circuits is also available

### Double Triodes

All these types feature identical pin numbering and have their heaters configured for either 6.3V or 12.6V operation.

### ECC81

A miniature 9-pin (B9A), high-µ, high current RF double triode with separate cathodes. It can be used in a variety of audio amplifier, mixer, and frequency changer applications as well as for RF. For audio it is typically used in RC coupled voltage amplifier configurations.

#### Heater Series Parallel

V <sub>h</sub>	12.6V	6.3V
I <sub>h</sub>	150mA	300mA

#### Characteristics (each section)

V <sub>a</sub>	200V	250V
V <sub>g</sub>	-1.0V	-2.0V
I <sub>a</sub>	11.5mA	10mA
g <sub>m</sub>	6.7mA/V	5.5mA/V
µ	70	60

### ECC82

A miniature 9-pin (B9A), low-µ, high current double triode with separate cathodes. It is primarily intended for use as an amplifier or oscillator, and can be employed in both RC coupled voltage amplifier and cathode follower (buffer) configurations, or as a phase splitter. Useful in audio applications requiring low microphony.

#### Heater Series Parallel

V <sub>h</sub>	12.6V	6.3V
I <sub>h</sub>	150mA	300mA

#### Characteristics (each section)

V <sub>a</sub>	100V	250V
V <sub>g</sub>	0V	-8.5V
I <sub>a</sub>	11.8mA	10.5mA
g <sub>m</sub>	3.1mA/V	2.2mA/V
µ	19.5	17

### ECC83

A miniature 9-pin (B9A), high-µ, low current double triode primarily intended for RC coupled, small signal voltage amplifiers. Its low anode current and controlled low noise, hum and microphony characteristics, together with its high gain, make it ideal for high quality, small signal preamplifier applications. It is equally at home as a higher level voltage amplifier, phase splitter or cathode follower. Especially suitable for Hi-Fi applications.

#### Heater Series Parallel

V <sub>h</sub>	12.6V	6.3V
I <sub>h</sub>	150mA	300mA

#### Characteristics (each section)

V <sub>a</sub>	100V	250V
V <sub>g</sub>	-1.0V	-2.0V
I <sub>a</sub>	0.5mA	1.2mA
g <sub>m</sub>	1.25mA/V	1.6mA/V
µ	100	100

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

CR27E	ECC83	£2.600	£3.220

## ECF82

A miniature 9-pin (B9A) triode/pentode valve used in the 'Newton' Stereo Valve Preamplifier project (LT77J), offering high gain with low noise.

Heater		Characteristics	
$V_h$	6.3V	Triode	Pentode
$I_h$	450mA	$V_a$ 300V	$V_a$ 300V
		$V_g$ -1V	$V_{g2}$ 300V
		$R_k$ 56Ω	$R_k$ 68Ω
		$I_{g2}$ 18mA	$I_{g2}$ 3.5mA
		$g_m$ 8.5mA/V	$g_m$ 5.2mA/V
		$R_a$ 4.7kΩ	$R_a$ 400kΩ
		$P_{out}$ 2.7W	$P_{out}$ 2.8W

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT		inc. VAT each
ST30H	ECF82	10+	25+	100+
		£2.000	£1.710	£1.600
				£7.130

## Pentode EF86

A low noise, AF voltage amplifying pentode specifically for very small signal preamplifier applications. It features an all enclosing, outer screen or shield around all electrodes, special measures for extra mechanical stability against microphony, and a bifilar wound heater element to reduce hum injection to the absolute minimum. Open loop gain can exceed 40dB, with both white noise and hum down to typically 2μV at the anode (heater supply must be balanced and centre tapped to 0V near the valve, or DC). Especially suited to first stage amplification of magnetic cartridge (phono) and playback tape head inputs. Pins 2 or 7 (screen) should be grounded to 0V.

Heater		Characteristics	
$V_h$	6.3V	$V_a$	250V
$I_h$	200mA	$V_{g3}$	0V
		$V_{g2}$	140V
		$V_{g1}$	-2.0V
		$I_a$	3.0mA
		$I_{g2}$	600μA
		$g_m$	2.0mA/V
		$\mu_{g1-g2}$	38

### Mullard recommended circuits

There is basically just one recommended circuit configuration for the EF86 (shown in more detail in the data booklet). In this only two variations for resistor values are advised, as follows:

	Option 1	Option 2
Anode load resistor	100kΩ	220kΩ
Screen grid ( $g_2$ ) resistor	390kΩ	1MΩ
Cathode bias resistor	1kΩ	2k2Ω

In each case the cathode bias resistor should be boot-strapped to 0V with a 47μF 50V electrolytic. The grid leak resistor ( $g_1$ ) can be 1MΩ or less (usually chosen to match the sending transducer). The suppressor grid ( $g_3$ ) normally connects directly to the cathode.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT		inc. VAT each
DMS6L	EF86	10+	25+	100+
		£7.250	£7.070	£6.600
				£9.130

## EL84

A miniature 9-pin (B9A), power output pentode designed for low to medium output audio power amplifiers. Push-pull 'ultra linear' (class AB1) can be up to 17W. Also often used for single-ended class A operation in small low power amplifiers of a few watts. Maximum rated anode dissipation is 12W.

Heater		Characteristics	
$V_h$	6.3V	$V_a$	250V
$I_h$	760mA	$V_{g2}$	250V
		$R_k$	135Ω
		$I_a$	48mA
		$I_{g2}$	5.5mA
		$g_m$	11.3mA/V
		$R_a$	4.5kΩ
		$P_{out}$	5.7W

Also available in matched pairs.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT		inc. VAT each
CR29G	EL84	10+	25+	100+
		£1.560	£1.340	£1.250
				£6.130

## EL34/6CA7

### Svetlana

This high performance EL34 is manufactured as the original Mullard valve in the Svetlana factory in Russia, and is designed to be a direct replacement for any EL34/6CA7, or equivalent. It is intended for ultra-linear audio power amplifiers in either pentode or triode connection and single or push-pull/parallel configuration. The valve has an indirectly heated oxide cathode which can be operated from a suitable DC supply for the best hum/noise performance. The anode is made from a laminated material that improves heat transfer and has superior performance under overload conditions - often found in guitar amplifiers. The quality manufacturing and processing provides enhanced reliability and superior sonic performance. The high sensitivity of a pair, or quad, Svetlana EL34's is an economical method to achieve high quality sound with a minimum of driving stage components. The valve can be operated in any position.

### Specification

Heater:	6.3V at 1.6A
Anode voltage:	800V max.
Anode dissipation:	25W max.
Maximum voltage grid 1:	-100V
grid 2:	500V
cathode/heater:	100V
DC cathode current:	150mA max.
Transconductance:	12.2mA/V
$R_a$ :	2kΩ

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

DT91Y	Svetlana EL34	10+	25+	100+
		£9.990	£8.420	£7.860
				£14.990

## Power Output Pentodes EL34

EL34

A power output pentode with the international octal (8-pin) base, primarily for the output stages of audio power amplifiers. The valve was especially designed with push-pull 'ultra-linear' (distributed load) operation in mind. Given the appropriate output transformer, pure class A up to 15W and 'ultra-linear' up to 20 or 30W is possible, or class B up to 100W. The valve is able to cope with peak anode voltages of up to 800V, and connections between the glass envelope and pins on the bonded octal base are carefully arranged to prevent flash-over. Several application circuits for different output powers are shown in the booklet. Although highly rated, the EL34 is of a comparatively small physical size compared with contemporary equivalents. Maximum rated anode dissipation is 25W.

Heater		Characteristics	
$V_h$	6.3V	$V_a$	250V
$I_h$	1.5A	$V_{g2}$	250V
		$V_{g3}$	0V
		$R_k$	106Ω
		$I_a$	100mA
		$I_{g2}$	15mA
		$g_m$	11mA/V
		$R_a$	2.0kΩ
		$P_{out}$	11W

Also available in matched pairs / quads

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT		inc. VAT each
CR28F	EL34	10+	25+	100+
		£6.200	£5.310	£4.960
				£12.990

## Power Output Tetrode KT88

A power output beam tetrode, where beam forming plates are employed to overcome secondary emission problems as an alternative to the use of a suppressor grid, as in a pentode valve. The KT88 has a metal-shell wafer octal base, and was specifically designed for quality audio frequency amplifiers. Two valves operating in class AB1 can give a continuous output of up to 100W with fixed bias. At reduced power, used in 'ultra-linear' anode push-pull, maximum distortion can be limited to 2% at 70W (fixed bias), or 1% at 30W (cathode bias) output before negative feedback is applied. The device is readily adaptable to triode mode operation for best fidelity, producing 31W in push-pull with cathode bias and the screen grid connected to the anode. This type is a popular choice for Hi-Fi and stage PA usage. The valves can be mounted vertically or horizontally. If vertical, it is recommended that pins 4 and 8 of each valve are in line. If horizontal, pins 4 and 8 of each valve should be vertically aligned and one valve should not be mounted directly over the other. The base sockets must not be mounted less than 100mm apart and good free air circulation is desirable.

### Heater

$V_h$	6.3V
$I_h$	1.6A

### Characteristics

#### Tetrode connected:

$V_a$	250V
$V_{g2}$	250V
$I_a$	140mA
$I_{g2}$	3mA (approx.)
$-V_{g1}$	15V (approx.)
$g_m$	11.5mA/V
$R_a$	12kΩ

$\mu_{g1-g2}$  8  
**Triode connected:**  
 $V_{a,g2}$  250V  
 $I_{a,g2}$  143mA  
 $V_{g1}$  15V (approx.)  
 $g_m$  12mA/V  
 $r_a$  670 $\Omega$   
 $\mu$  8

(b) = biased (quiescent). (o) = operating.  $P_a$  = anode power

$D_{tot}$  = distortion total  
 It is essential to use two separate cathode bias resistors, and provide separately adjustable bias having a voltage adjustment range of  $\pm 25\%$ .

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

## Greaseless Semiconductor Insulators

Power semiconductor insulating washers that give excellent heat conduction without the need for silicone grease. The heat transfer capability without silicone grease is marginally better than mica or plastic with silicone grease, yet they offer similar electrical resistance (at least 1G $\Omega$ ). They are exceptionally easy and clean to use and make assembly extremely fast. Four types are available, TO3, TO3P, TO218 and TO220.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UL74R	Insulator TO218	£0.160	£0.280

## Semiconductor Mounting Kits

TTI (Thurby-Thandar)

For mounting TO3 case transistors on heatsinks. Kit comprises one mica washer and two insulating bushes.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
WR24B	Kit TO3	25+ £0.160 100+ £0.089 1000+ £0.083	1+ £0.290

## TO220 Insulating Cover

A plastic cover for TO220 packaged devices. The cover encloses the metal heatsink mounting tab of the device and includes a spigot for locating the hole in the tab, so that the device is entirely secured by the cover which is itself attached to the heatsink by one nut and screw, no other screws are necessary. This has the added advantage that there is no bolt anywhere near the tab and no risk of short circuit. For complete insulation of the tab, the addition of an insulator is required, such as UL74R, beneath which, a bolt hole is not needed. Made from white nylon 66 approved to UL94V-0. Overall size: 15.75 x 13 x 5.3mm.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
UL92A	TO220 Cover	25+ £0.060 100+ £0.040 1000+ £0.030	1+ £0.120

## TO3 Insulating Cover

A clip-on plastic insulating cover for TO3 case transistors. Prevents short circuits and provides insulation up to 30kV.

Price each is shown. Order quantities less than 50 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
FL56L	TO3 Cover	50+ £0.100 100+ £0.076 1000+ £0.070	1+ £0.180

## IC SOCKETS

### Modular Connectors

Single row modular 2.54mm pitch sockets, and matching plugs, which are intended for mother-daughter board applications. The shrouded socket is fitted with a highly reliable four leaf gold on beryllium copper contact, and is also suitable for use with ICs. The unshrouded tin/lead finished brass plugs are also suitable for cable wiring applications. The 32-way connector strip can be easily cut to size using suitable hand tools. Insulator material: glass filled polyester UL94V-0.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type	Price each exc. VAT	inc. VAT each
DC17T	32 Socket Strip	25+ £0.490 100+ £0.470 500+ £0.400	1+ £1.060
DC18U	32 Plug Strip	25+ £1.370 100+ £1.140 500+ £0.979	1+ £2.020

## Dual-In-Line Sockets

A range of high quality low-profile dual-in-line sockets with black glass-reinforced polyester bodies and tin-plated phosphor-bronze contacts. The contact makes against the flat face of the IC leg for maximum contact area and low insertion pressure. Sockets may be mounted end to end to achieve longer continuous runs of 2.54mm (0.1in.) spaced sockets. Sockets have chamfered side walls to assist insertion. The ultra-reliable, precision-stamped dual-wipe contacts offer an anti-overstress feature to prevent contact spring damage. One end is indented for polarisation.

### Dimensions:

Pin size: 3.3 x 0.6 x 0.15mm  
PCB hole required: 0.8mm  
Overall height above pcb: 5.1mm  
Height above pcb to base of IC: 4.1mm  
Distance between sockets (lengthwise): 2.54mm (0.1in.)

The following types are available:

Type	Pin spacing (mm)	Pin spacing (in.)	Overall length (mm)	Overall length (in.)	Overall width (mm)	Overall width (in.)
6-pin	7.62	0.3	7.62	0.3	10.16	0.4
8-pin	7.62	0.3	10.16	0.4	10.16	0.4
14-pin	7.62	0.3	17.78	0.7	10.16	0.4
16-pin	7.62	0.3	20.32	0.8	10.16	0.4
18-pin	7.62	0.3	22.86	0.9	10.16	0.4
20-pin	7.62	0.3	25.4	1.0	10.16	0.4
24-pin	15.24	0.6	30.48	1.2	17.78	0.7
28-pin	15.24	0.6	35.56	1.4	17.78	0.7
40-pin	15.24	0.6	50.8	2.0	17.78	0.7

Price each is shown. Order quantities less than 50 will be sold at the one off inc. VAT price.

## Open Frame Dual-In-Line Sockets

An Open Frame designed line of standard low profile IC-Sockets with turned pins. Advantages include increased space beneath the IC for improved heat dissipation, PCB cleaning and inspection.

Plating Sleeve (Pin): 5µmSn  
Plating Contact (Clip): 0.25µmAu

## 1.778mm High Density Shrink DIP IC Sockets

Dual Inline Pin IC sockets as used in the NICAM project, for use with ICs featuring the narrow ('shrink DIP') spacing of 1.778mm (0.07in.) between pins along each side. Two types are available, 30-pin and 42-pin; the two rows of pins are spaced 10.16mm apart in the case of the 30-pin version, and 15.24mm in the 42-pin version. Insulator material is glass filled P.B.T., and contacts are tin-plated phosphor bronze. Current rating 1A per pin max., contact resistance 20mΩ max.

Dimensions of body -  
30-pin: 26.95mm long x 12.65mm wide x 4.8mm high.  
42-pin: 37.62mm long x 17.33mm wide x 4.8mm high.

Price each is shown. Order quantities less than 50 will be sold at the one off inc. VAT price.

Order Code	Type 2544	Price each exc. VAT	inc. VAT each
JM97F	Shrink DIP Skt 30Pin	£0.650	£0.590
JM98G	Shrink DIP Skt 42Pin	£0.890	£0.790

We endeavour to hold stocks at all Maplin and Maplin Mondo stores, but to be sure, please phone before travelling. See front of catalogue for addresses and telephone numbers

## Turned Pin Dual-In-Line Sockets

Harwin

A good quality 64-way turned-pin open frame shrink dip IC socket. The contacts are 4-leaf beryllium copper contact for maximum reliability.

### Material

Contact Spacing: 1.778mm (0.070in.) in each row

Insulator: 30% glass filled polyester UL94V-0

Shell: Precision machined brass

Contact: Beryllium Copper

Number of operations: 1,000 insertions

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2543	Price each exc. VAT	inc. VAT each
FJ69H	64pin Shrink DIP Skt	£4.380	£3.860

## 28-Way Wire Wrap DIL Socket

A very high quality DIL socket with wire wrapping pins. Features include: four leaf gold-plated beryllium copper contacts, contact life 1000 insertions, low profile (4.9mm). Insulation glass reinforced polyester to UL 94 V0. Pin material turned brass. Pin Spacing 2.54mm (0.1in.) x 15.24mm (0.6in.). Frame Size 35.62 x 17.78mm.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.

Order Code	Type 2512	Price each exc. VAT	inc. VAT each
JF75S	WWrap 28p DIL Skt	£1.480	£1.240

## Zero Insertion Force IC Socket

Harwin

A range of DIL sockets ideally suited for programming EPROMs where different ICs must be inserted in one socket. With the lever in the unlocked position, ICs may be inserted or withdrawn with no force. When the IC has been inserted, push the lever over to the locked position and the IC will be held firmly in position with excellent contact to all leads.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2540	Price each exc. VAT	inc. VAT each
YX50E	ZIF Socket 24-Way	£5.280	£4.400
FT14Q	ZIF Socket 28-Way	£4.700	£3.920
FT15R	ZIF Socket 40-Way	£8.150	£6.790

## Universal Test Socket

Artes

A zero insertion force socket which can accept ICs of any size up to 32 pins, because its wide sockets permit 7.62mm, 10.2mm and 15.2mm (0.3in., 0.4in. and 0.6in.) wide ICs to be inserted. With the lever up, ICs can be inserted or removed with no force. Throw the lever down to lock the IC and firmly clamp the pins.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2550	Price each exc. VAT	inc. VAT each
JK75S	Universal Tst Socket	£6.990	£6.300

## IC Extraction Tool

A pair of plastic-coated, chrome-plated sprung steel tweezers with hooked ends for lifting and placing ICs without touching the pins. Overall length 102mm.

Price each is shown. Order quantities less than 10 will be sold at the one off inc. VAT price.

Order Code	Type 2555	Price each exc. VAT	inc. VAT each
FD54J	Extraction Tool	£0.409	£0.341

## Vertical Twisted Vane PCB Mounting

### Redpoint Thermalloy

Low profile, low cost vertical PCB mounting twisted vane design with a good thermal rating for TO220 and TO126 devices etc. A central device fixing slot of 3.8 x 9mm is provided 15.2mm from the bottom edge. The complete assembly occupies only 30 x 13mm of PCB space. Height above PCB, 30.2mm. Thermal rating = 14°C/W. Black anodised finish.

Price each is shown. Order quantities less than 25 will be sold at the one off inc. VAT price.
