

# PRACTICAL ELECTRONICS TRANSISTOR GUIDE

Over 200 transistors are listed in this booklet. An attempt has been made to include most of the types that are readily available through the usual retail channels. While this list is obviously not exhaustive, it should satisfy the majority of normal amateur requirements.

*All possible care has been taken in the preparation of this booklet and no responsibility can be accepted for any errors or omissions that may have occurred inadvertently.*

Presented free with the May 1966 Issue of PRACTICAL ELECTRONICS

## Type No.

Apart from the many house codes which exist, there are two main systems for numbering transistors in use at present:

**JEDEC.** This system is a sequential one, instigated in America, with a 2N prefix, and the numbers represent the transistor specifications which have been registered with the body known as the "Joint Electron Device Engineering Council".

**PRO-ELECTRON.** This is a system used on the Continent, and becoming widely accepted by users and manufacturers in this country. The letters and figures are all representative of a feature of a device.

The first letter could be **A**, meaning germanium, or **B** silicon.

The second letter indicates the construction or application of the device—for example: **C**—audio, **D**—power transistor for audio applications, **F**—for r.f., **L**—a power transistor for r.f. applications, **R**—a switching device, **S**—a transistor for switching applications, **U**—a power transistor for switching applications.

The figures are serial numbers of one of two groups. Devices primarily for entertainment applications (radio and television receivers, audio amplifiers, etc.), use three digits. In the case of other devices, for

example, those intended for industrial or professional use, the remaining three characters consist of a letter **Z**, **Y**, **X**, etc. followed by two figures.

## I<sub>c</sub> (max)

Collector current in mA, except where "A" indicates amperes.

## V<sub>CE</sub>

Collector-to-emitter voltage; base and emitter short circuited.

## V<sub>CB</sub> (max)

Collector-to-base voltage; emitter open circuit.

## P<sub>tot</sub>

Maximum total dissipation in the transistor. In mW, except where "W" indicates watts.

## T<sub>j</sub> (max)

Junction temperature in degrees C.

## α', β, or h<sub>FE</sub>

Small current gain in common emitter circuit at specified collector current. Letters "FE" against particular entries indicate d.c. current gain, i.e. h<sub>FE</sub>.

## f<sub>a</sub>, f<sub>i</sub> or f<sub>hfb</sub>

Common base cut-off frequency in Mc/s unless otherwise indicated.

## Case

Component outlines are given on the last page of this booklet and are recognisable from the alphabetical code. (This coding A-T has no significance apart from in this booklet.)

Further code numbers appear against some of these outline drawings.

TO-1, TO-5, etc. are JEDEC codes.

British VASCA equivalents are indicated by SO-3, SO-12A, etc.

Outlines identified by a single letter code only are individual manufacturer's special outlines.

## Comparables

The word used as the heading for this column has been chosen advisedly. Types listed here may generally be used as satisfactory substitutes. It is not however implied that such types are necessarily exact or even close equivalents. When any doubt exists, compare all relevant parameters as given in columns 2 and 9.

## Style

First letter:

g = germanium } material  
s = silicon }

Second letter:

n = npn } polarity  
p = pnp }

Third letter:

a = alloy } method of fabrication  
d = diffused  
e = epitaxial  
m = micro alloy  
p = PADT  
g = grown }

## Make

A Thorn-A.E.I.	N Newmarket
E A.E.I. (obsolete)	R Sinclair Radionics
F Ferranti	S S.T.C.
M Mullard	T Texas

The absence of a code letter means either that the manufacturer cannot be established, or that the transistor is made by more than one company. Those transistors coded according to the JEDEC and PRO-ELECTRON systems are, in many instances, manufactured by a number of companies, although only one maker has been quoted in the table.
