*"The Results
are Astounding"*

30, Kingscote Road,
Bedford Park, London, W.4.
21st March, 1928.

Siemens Brothers & Co., Ltd.,
WOOLWICH.

Gentlemen,
I feel I must write you concerning my
experience with your Super Radio H.T.
Batteries.

I have a four-valve set using two Power
Valves in the L.F. side. Previous to using
your Super Radio Batteries I was using
two 60-volt H.T. batteries in series.
These were useless after six weeks' ser-
vice, and cost (then) 24/-. Indeed, an
expense, and something had to be done.
Eliminators did not appeal to me, and I
decided to purchase two of your Super
Radio Batteries at 25/- each.

The results are astounding, inasmuch
that they have supplied my set with H.T.
for at least an average of four hours per
day since the 14th of April, 1927—
twelve months all but a few days. What
is more, they seem inexhaustible, for on
testing them to-night with an accurate
voltmeter they show a reading of
95 volts—a drop, therefore, of only
5 volts after 12 months' continuous use.

In my opinion, they solve, and inci-
dentally cut the expense out of, the H.T.
problem.

Yours very truly,
(Signed) A. MAXWELL.

Darkies singing- banjoes ringing!

There's something plaintive about those old plantation folk songs. If you would clearly hear the twanging of banjo strings and the peculiar strident tone in the voices of singing minstrels, you must have pure H.T. current. The Lissen New Process Battery will give you this. Its new process and new chemical combination yields clean, pure energy which is steady, noiseless, sustained throughout the longest programme, and it is long lasting. You can get no smoother current. The Lissen Battery has big cells with a remarkably large oxygen content. They have a low internal resistance which remains low. There is no ripple in the current anywhere, there is no hum, no noise of any kind. That is why you hear everything so very clearly and distinctly all the time. You keep your loud speaker utterance natural and true always if you use a Lissen New Process Battery in your set.

Ask for it at any one of 10,000 radio dealers. Say "Lissen New Process Battery" and show plainly by the way you ask for it that you mean to take no other.

Poland's New Station in Wilno

POLAND promises to rank as one of the most enterprising of the European countries in the matter of broadcasting, five efficient transmitting stations having been erected during the course of the last two years, under by no means easy conditions. Two of these — Warsaw and Kattowitz—operate on high power. All the stations were erected by the Government Department of Posts and Telegraphs and are under the direction of the Polish Broadcasting Company, "Polskie Radio," who possess the exclusive broadcasting rights in Poland. The first station, Warsaw, was opened in the spring of 1926; the last, Wilno, in the autumn of 1927.

M. Roman Pikiel, the Director of Wilno station.

Wilno is the largest city in North-Eastern Poland, some 25 miles from the Lithuanian frontier and 65 miles from that of Russia. Its position during the strife between Poland and Russia in 1920 was not an enviable one. The district is gradually recovering from the devastating effects of the Great War, but it has yet much to do. The level of education and the standard of living among the peasants are very low—here perhaps the power of broadcasting may do much. The country suffers generally from inadequate means of communication, such as bad roads and few railway

lines. But broadcasting eliminates the question of transport. All the leading associations concerned with educational and artistic activities were unanimous as to the desirability of a broadcasting station for the dissemination of knowledge and the maintenance of the higher ideals of the nation.

Plans were put into operation in the summer of last year. The station was completed with expedition, the first transmission taking place on December 4. The official opening took place on January 15 of this year, and already Wilno's licensed listeners number over five thousand. M. Pikiel, the station director, and his assistants have been greatly encouraged by the numerous letters of support received from listeners.

The station buildings are situated in a suburb of the city, on the right bank of the river Wilja. The studio has been modelled on the style of that at Warsaw. A wavelength of 435 metres has been adopted, and at present the aerial power amounts to about 0.5 kw., but this is to be increased in the near future to 5 kw. In spite of the comparatively low power, a simple crystal set brings in the programme at 35 miles, while a one or two-valve receiver is efficient for reception at a distance of 65 miles.

The daily transmissions extend usually from 3 p.m. till 10 or 11 p.m. (G.M.T.). Talks, concerts and current topics receive their due share of attention, while special agricultural courses are given for the benefit of villages and farms. Relays are regularly and frequently made from the other stations at Warsaw, Posen, Kattowitz and Cracow. Sunday morning service is relayed from the Posen Cathedral and operatic performances are enjoyed *via* the same station. A relay from Warsaw is effected almost every day. Wilno does not take an item from its colleagues without return, and the other Polish transmitters come to this city from time to time for a part of their programme. A series of talks has been arranged on the very interesting history of Wilno, with its great store of legend and tradition. The University of Wilno plays its part in the new work and the Professors extend their assistance in the broadcasting of lectures. The students send out once a week their quarter of an hour, usually an enlivening transmission of poetry and humour.

An excellent literary side has

been organised and great interest is taken in the talks, recitals, and dramatic performances.

Like every border city, Wilno has to deal with the problem of mixed populations, which in this case includes a considerable proportion of Lithuanians, Russians, Jews, and White Ruthenians. Wilno must of

"Polski Radio" string orchestra (frequently relayed by Wilno), consisting of 35 members with M. Emil Mlynarski, Director of the Warsaw Opera House, known in the British musical circles for his debuts in London, Edinburgh and Newcastle.

necessity be a polyglot station and caters for the various nationalities within her walls by transmitting in several languages.

The station directors are enthusiastic as to the international possibilities of broadcasting and take the opportunity whenever possible of giving their listeners relays of concerts from Prague, Vienna, Berlin and other main European stations.

The interior of the Wilno studio, Miss Tokarczyk, the announcer, is seen seated in the background in front of the microphone.

Wilno transmitting station, showing aerial masts.

Viâ Ether

POTTERING around Europe, at odd times, in my opinion is a pastime of which the interest can never pall. To make a tour of "easy" stations nightly may prove wearisome on certain nights, but the capture of a new transmission always provides a thrill which amply compensates for the time spent with the wireless set, just adding that extra dose of enjoyment which raises radio above the plane of more ordinary hobbies. Now and again it is interesting to concentrate one's energies on portions of the wave-band which are not so crowded with regular telephony transmissions—namely, in that region of 1,400 to 2,500 metres, which, as a rule, we do not explore so frequently.

As you may have discovered for yourselves by now, these casual excursions bring their own rewards. It was on one such occasion a few nights ago that I picked up a strong carrier wave, and much to my delight heard a call which prompted me to shout for pen, ink, and paper. It was Lahti, the new Finnish high-power station, and great was my pleasure to hear its first test transmissions. Atmospheric conditions on that evening were not very favourable, but most of the announcements made in what I took to be the Finnish and Swedish languages—the former of which is quite unfamiliar to me—were confirmed by a German translation.

The station was stated to be broadcasting on 10 kw. on a wavelength of 1,525 metres, or, as the speaker tersely put it: "auf funfzuehnhundertfunfundzwanzigmeter." Followed then, a broadcast of those popular classical items so closely associated with broadcasts from restaurant orchestras, the items being interspersed with calls of: "Huomio! Huomio! Achtung! Achtung!" and references to Lahti and Tampere (Tammerfors). Now, comparison with the programme of Helsingfors proved that the transmission was a special one, and although I cannot confirm it, I am under the impression that the high-power transmitter was not being fed by the capital, to which it will act eventually as a relay, but was receiving its entertainment from the Tammerfors studio.

During the last week or so reports have reached me that broadcasts from the new P.T.T. station recently erected at Rabat (French Morocco) have been heard in the North of France. If this is the case there appears to be no reason why these signals should not be heard in Great Britain. A few details, therefore, regarding the transmissions may be of interest to our DX-hounds, and others, Rabat is situated on the Western coast of Morocco, some one hundred and ten miles west of Fez, of which it is the port. According to information gathered in France, the power of the new transmitter installed in that city approaches two kilowatts, and although at present the wavelength used is not definitely fixed, it has been carrying out tests on 412 metres or slightly above that of Berne. The call is the usual one adopted by the French official stations, namely: "Allo! Allo! Ici le poste radiotéléphonique des P.T.T. de Rabat," and at intervals between items it is curtailed to: "Ici Radio Maroc." Similarly

to Radio Toulouse and other provincial studios in France, it has adopted a metronome as an interval signal. So far, I have not seen any details of a complete programme, but my informant tells me that a news bulletin is sent out at 8 p.m., followed by a concert at 8.45 p.m. G.M.T. I understand that some of the entertainments may be supplied by native talent, and that arrangements are being made to relay dance music from the local Casino as did the private "Omega" transmitter, which operated for a short time at Casablanca.

During the summer months, in all French garrison towns, military bands perform on the Grand Place; the Chasseurs d'Afrique, the Spahis, and the Zouaves provide regular concerts. It may therefore be expected that advantage will be taken by the authorities to relay these performances to the transmitter. Personally, for the moment I doubt whether we shall meet with success in any search carried out whilst Berne is transmitting, but as, similarly to Spain, amusements in the French North African colonies start at a later hour, attempts to pull in broadcasts from Rabat after the Swiss station has closed down may prove encouraging. Anyhow, it is worth a trial.

With the arrival on the scene of Zeesen's sister, as the new super-power Rosenhügel transmitter is already affectionately termed, the Austrian capital is now putting forward ambitious schemes to be carried out during the coming summer and autumn seasons. The magnitude of the entertainments is to be in keeping with the new toy. During the period July 16-26, Vienna contemplates a monster fête on the occasion of the convention in Austria of a large number of German *Sängervereinen* (choral societies). To present these concerts it will be necessary to erect a temporary hall of gigantic proportions; an idea of the size will be realised if I mention that it must accommodate an audience of 30,000 spectators. As a site it is probable that the neighbourhood of the famous Prater—the Coney Island of Vienna—will be selected. As it is stated that over 125,000 members of choral societies from Germany have already signified their intention to compete, the concert platform will be planned to take massed choirs of some 20,000 singers, the orchestra alone numbering over 400 musicians. Thousands of visitors from neighbouring and even distant countries are expected to throng to the Austrian capital this summer, and it is stated that 4,000 German-speaking Americans will cross the Atlantic with a view to assisting at the festival.

The Ravag authorities are fully alive to the possibilities offered by this great event to give Europe, through the intermediary of their new station, an insight into the artistic activities of their capital, and it is expected that during July many of the concerts will be broadcast. This year Austria celebrates the Schubert Centenary, the 100th anniversary of this great composer's death; throughout the season, concerts are being dedicated to him, and special entertainments on a large scale will be organised for November next; they will be relayed to the giant transmitter.

The advent of the new Rosenhügel station brings Vienna to our threshold.

To-day (Friday, April 13) brings us from the Continent several excellent entertainments. At Frankfurt (relayed by Stuttgart) at 7 p.m. we find a concert of which the main feature consists of Gustav Mahler's Second Symphony in C minor, with soloists, choir, and augmented symphony orchestra. At 7.15 p.m. Leipzig offers us a performance of Flotow's three-act opera *Alessandro Stradella*, based on a French libretto; it was first produced at Hamburg in 1844. The real Stradella was actually an Italian musician, born about 1645—the exact year is not known. He composed some one hundred and fifty works, and six operas, of which the best known is *Il Floridoro*. To Naples at 7.50 p.m. we may turn for Leoncavallo's *Zaza*, of which the book is taken from P. Berton's play of that name. It was first heard at Milan in 1900, but has achieved more popularity in the United States than in Italy. Rome at 7.45 p.m. gives us a light operetta: *Il Re de Chez Maxim*, by Costa, which may be taken as the companion to *The Girl* from that well-known Paris night resort. At 7.30 p.m. if you are a good German scholar you may care to listen to Lion Feuchtwanger at Berlin; he will lecture on "Pep, an American song book." Finally, Radio Paris, at 8.30 p.m., on that evening will broadcast from its studio excerpts from Wagner's *Tannhäuser*.

In to-morrow's programme from Warsaw, I find an announcement to the effect that the 4.45 p.m. transmission will be devoted to a concert given by canaries; such broadcasts have already been carried out by German stations. The nightingale apparently remains faithful to England; there are but few of them found in other European countries. From Brünn at 6.30 p.m. we are promised *Jacobin*, an opera by Dvorák, which was first performed in 1889. The Polish stations at 7.30 p.m. relay, from their capital, Lehár's *Count of Luxembourg*, and Oslo at that hour presents the *Spring Revue*, which is being played at the Chat Noir cabaret in the Norwegian capital.

From Sunday, April 15, for the next few evenings, we shall do well to tune in to Kalundborg almost nightly, for, with the advent of the Italian Company at the Royal Danish Opera House, Copenhagen, we are to be given broadcast performances of some of Verdi's most famous works. *Aida* is down for transmission on Sunday at 7 p.m., *Rigoletto* on Monday, *Il Trovatore* on Wednesday, and *Un Ballo in Maschera* on Friday, April 20.

Sunday, April 15, at 7 p.m., also brings us, via Munich, a concert from the famous Sängerkirche at Augsburg; the entertainment will illustrate Spring in Vienna. From the Bavarian stations on Tuesday, April 17, at 5.30 p.m. we are also to receive a performance of *Der Rosenkavalier* (Richard Strauss) as presented by the National Theatre at Munich. Produced at Dresden in 1911, it depicts a love comedy of Vienna in the picturesque days of the Empress Maria Theresa.

JAY COOTE.

Holidays Abroad: Ways and Means

II.—Castile and Northern Spain

By GERALD BRENAN*

CASTILE is a country deprived by nature of almost all the qualities that in other countries attract tourists. You climb up on to a plateau lying two or three thousand feet above the sea, crossed in its centre by a broad moor-like range of mountains. Granite boulders crop out of the sides of the mountains, more boulders are scattered along the valleys, and smaller stones or pebbles make up the surface of the plain.

Then, your train, which has been travelling at about eight miles an hour across this monotonous landscape, will draw up outside a grey town built, most likely, upon a rock and overhanging a river with below it, perhaps, a grove of thick trees. You will give a sigh of relief at having at last arrived somewhere and begin to climb up the hill towards the inn where you expect your lunch.

After lunch you will visit the churches recommended by Baedeker, prowl about the convents and kitchen gardens and clamber down to the steep, shady bank of the river, ending up at nightfall on a chair in front of the principal café to watch the women walking up and down, parading their beauty, and the men staring critically at them. Then a cold blast of mountain air will rush down the street, whirling the dust into eddies, and you will very sensibly retire to your hotel and to bed.

Coming by train from Paris the first Castilian town that you get to is Burgos. Its great attraction is its French Gothic cathedral, and it has become a rule that no tourist visiting Spain shall miss it. Unfortunately, the railway timetable makes this rather difficult, and I advise you, therefore, unless you have ample time at your disposal, to pass it by.

In Valladolid there is no object in stopping at all; keep therefore straight on to Madrid, which contains, at all events, the Prado, where there are some of the greatest masterpieces of painting in a better state of preservation than in any other European gallery. You can also look at the Royal Palace, a fine Renaissance building, and at that quiet, English-looking square where many hundreds of men and women were burned by the Inquisition.

Forty miles to the south-west (and nearly three hours by train) lies Toledo, which is undoubtedly the most interesting town in the Peninsula. It stands surrounded by its Visigothic and Moorish battlements looking down on a yellow, treeless plain. The Tagus flows by on two sides in a deep gorge. The city itself is a labyrinth of narrow streets which, in spite of many alterations and rebuildings, still retain a Moorish and altogether un-Castilian appearance. The place is rich in works of art. First of all there are the pictures of El Greco, then three of the most beautiful churches in the country—Christo de la Luz, built apparently in the eighth century by the Visigoths; Santa Maria La Blanca and the old synagogue of the Transito, two Mudejar works dating from the early Middle Ages. No building has ever made on me such an impression of absolute harmony and perfection as this little synagogue. Last of all there is the magnificent Gothic cathedral, itself stuffed with all sorts of *objets d'art*. If you take walks out into the plain and across the river, as you certainly ought to do, you will find two days to be the shortest time that you can give to Toledo.

On your way back to Madrid contrive to stop a few hours at Aranjuez to see the Royal gardens, so famous for their fountains, their tall trees, and their chorus of nightingales.

To the north-west of Madrid lies the broad and uninhabited waste of the Sierra Guadarrama, and immediately beyond that are the two towns

A Spanish Garden.

of Avila and Segovia. On the way to Avila you pass the Escorial, a vast and sombre palace built by Philip II. in a desert of granite and straggling pine-trees; you should certainly stop a few hours here, for this is one of the most impressive sights in Spain. Avila is an extraordinary place, the most uncompromising and Castilian of all. It is encased in a complete

Toledo: the Tagus and the Alcazar.

Photos by courtesy of the Spanish Travel Bureau.

armour of sharply-toothed Moorish walls, and looks out upon a vast and sterile landscape—a broad valley sown with granite boulders and merging at a great distance into the whitish flanks of the Sierra de Gredos.

Segovia, which you can reach by motor-bus across a rolling country covered in May with scarlet poppies and blue anchusa, is very different. There is the usual rock, the usual river at its foot, the usual bare landscape, but a thickly-wooded ravine, with nightingales that sing on almost every tree give it a gay and almost lyrical air. There is also a large Roman aqueduct, and the sixteenth-century cathedral built in a Gothic style has unexpected merits.

Just above Segovia, near the summit of the ridge, is the charming Royal Palace of La Granja, a rococo building, surrounded by waterfalls and thick pine woods. It is the chief summer resort of the people of Madrid, and a good centre for exploring the mountains. In the opposite direction, on a bare, muddy plain, stands the large and romantic castle of Coca.

You cannot say that you have really seen Castile until you have been to Salamanca, the Spanish Oxford, which lies fifty miles to the west at the end of a tedious railway journey across a plain that seems absolutely barren and uninhabited. The two Cathedrals, the Plaza Mayor and the University buildings require perhaps a visit of two days.

Various courses now offer themselves. You can go on to Ciudad Rodrigo, a charming place on the Portuguese frontier which I recommend strongly, or you can turn south to Plasencia, on the borders of Estremadura, through a wild and little-visited country. The hermitage of Yuste, where the Emperor Charles V. ended his life, is worth visiting for the beauty of its scenery. From this point you can either return to Madrid by way of Talavera, or go on to Lisbon.

I have tried to give you an idea how you may best spend a fortnight in Castile. About Aragon I have not time to say much. The most fascinating part of it, between its not very interesting capital Saragossa and Teruel, and Cuenca is rather inaccessible. I will only say that some parts of this country are so dry that it does not rain more than once in three years.

Beyond Aragon you come to Catalonia, inhabited by a different race, speaking a different language and having little in common with the rest of Spain. Its capital, Barcelona, is the largest town in the Peninsula. The Catalans have what is called to-day an inferiority complex, and in consequence of this they have laid out their city upon the vastest scale and decorated it in the most ostentatious manner.

It is well worth paying a visit to the new unfinished Cathedral in the suburbs or to the Parque Guell, where the rich magnates live in villas built in the form of grottoes or sponges, or drive their motors up inclined planes to the garages on the roof. The quarter of Mont Juich is a kind of night-town like Montmartre, with cabarets where one often sees good flamenco dancing. The most interesting expeditions in the neighbourhood are to the monastery of Montserrat and to the beautifully situated town of Tarragona. Then, about forty miles from the French frontier, at San Feliu and Palamos, there are some small summer resorts with particularly good bathing.

Castile and Aragon become too hot for comfort in July. As to the cost of living, Spain is not one of the cheapest countries to travel in. A moderately comfortable hotel or a good fonda will charge from 6s. to 10s. a day. The large hotels are more expensive.

* In a Talk broadcast from London, through Dayentry on April 10.

From the Swiss Alps

A Review of the March European Programmes

By YODELLER.

MARCH has now left us behind and officially spring is here, but since its advent the weather, in Switzerland, at any rate, has been far from spring-like. As I write these notes it is snowing hard, and for nearly a week it has been as cold as winter, whilst the valley and mountains opposite us have been hidden from view by mist. Curious to relate, the light dry fog seems to have a beneficent effect on listening-reception conditions.

For programmes, the month has been excellent, and seldom has it been difficult to find something well worth hearing from one of the multitude of broadcasting stations so easily captured out here.

Thursday, March 1.—Opened up the month by switching on Motala, which was putting out a splendid chamber-music concert. Then turned over to Daventry for the Welsh National Dinner, relayed from Cardiff, Mr. Lloyd George's speech coming through perfectly.

Friday, March 2.—Heard a most interesting broadcast from Breslau in the shape of relays from different Continental studios. First of all they gave us a few minutes at Toulouse, then we were taken over to London, and the next moment came the strains of "Bonnie Dundee" and other Scotch airs at tremendous strength; in fact, on changing over to Daventry direct, I found the Breslau retransmission

quite as pure and a little louder. Next we were given short visits to Kiel and Hamburg, and, lastly, a military-band concert from Moscow, this last relay simply roaring in on my loud-speaker.

Tuesday, March 6.—Picked up a splendid rendering of Wagner's *Das Rheingold*, from Berlin via Zeesen.

Thursday, March 8.—Again turned to the long-wave German transmitter, which this time was doing *Die Perlen der Cleopatra*, an operetta hitherto unknown to me, but which proved to be immensely enjoyable.

Friday, March 9.—Commenced the evening at Brünn, listening to the singing of a magnificent choir. This ended, changed up to Langenberg, which was relaying a concert from Cologne. Morse, however, was so terrific I had to change down to 283 metres, and succeeded in obtaining perfectly pure reception from Cologne direct. This concert was particularly noteworthy in that the star performer was Jan Kiepora, the marvellous young Polish tenor.

Tuesday, March 13.—The "Continental Programme" page of *World-Radio* gave me the following list to select from: *Madame Butterfly*, *Tannhäuser*, *La Bohème*, Mendelssohn's *Elijah*, and *Faust*, from Kattowitz, Königsberg, Motala, Munich and Madrid, respectively. What a wonderful selection! And I wonder what my readers made of the evening? This is how I

managed it. Seven-thirty p.m., Kattowitz, for Act I of *Madame Butterfly*, then changed to Königsberg for an hour of *Tannhäuser*, after which moved up to Munich for the last half of the *Elijah*. Then at 10 p.m. tuned in Madrid for *Faust*.

Thursday, March 15.—Stayed in Switzerland, listening to a splendid symphony concert from Lausanne, the executants being the Neuchatel Symphony Orchestra.

Wednesday, March 21.—This was a night of celebrities. First of all, picked up a speech by Dr. Stresemann from Berlin, on the occasion of the International Press Congress from that city. Then from Daventry I heard the addresses of both Mr. Baldwin and the Prince of Wales which were being relayed from the Guildhall, London, following the annual banquet of the Company of Master Mariners. Ended the evening listening to the Sullivan concert.

Sunday, March 25.—This was a night to be remembered. With no hesitation whatever, after the first glance at *World-Radio*, set my dials for Munich, which was playing Wagner's masterpiece, *The Flying Dutchman*. The storm effects came over remarkably well, and the magnificence of this broadcast held me enthralled through every moment.

The month came to a fitting close with what must be the most popular events of the year from the Englishman's point of view, namely, the running commentary on the Grand National from Aintree, and the next day, Saturday, the Boat Race. I wonder how many people outside the British Isles listened to these last two events? Their number must be legion!

Wireless Step by Step

By "DICTRON"

LI.—H.T. from the Mains

IN our last instalment we turned our attention to the provision of the necessary supply of high tension voltage to the anodes of the valves of the receiving apparatus and discussed the alternatives of the dry and wet battery of cells for the purpose. Both are satisfactory within certain limits. The former requires no attention, but must be renewed at considerable cost and with a frequency which depends upon the amount of current which is taken from it, thereby limiting to some extent the power which may be employed to operate the amplifier valves; and furthermore, the dry cell deteriorates when not in use. The wet cell gets over most of these difficulties, but at the expense of a good deal of trouble and care, and if the batteries cannot be charged in the house there is the cost of repeated charging to be considered.

Now if the listener is fortunate enough to have a supply of electricity laid to his house, he can dispense with either type of cell and operate the set from the lighting or power mains, preferably the latter, because the cost per unit is very much less. The initial cost of the apparatus required to obtain H.T. supply from the mains is admittedly somewhat high, particularly if the current from the mains is alternating, but the cost of maintenance is practically negligible, amounting to only a few shillings a year for the current consumed.

The Generator "Ripple."

The supply from the mains must be either direct current or alternating current. If the former, it is generally supplied from a direct current generator at the power station, and cannot be applied direct to the receiver because the commutator ripple of the generator will be present. The generator consists in principle of a coil or coils fixed in a slot cut in a soft iron core called the armature. The armature with its attached coil is rotated at a high rate between the poles of a permanent magnet. The ends of the coil are connected to segments of a circular

commutator. Each segment is insulated from the next, and brushes are arranged to make contact with the segments as they rotate. Obviously, as the coil rotates between the poles of the magnet the polarity of its two ends will be reversed with every half revolution of the armature. By having two brushes 180 degrees apart making contact with the segments, one brush must always be picking up a positive voltage while the other is picking up a negative one. Thus the current in a circuit having its two ends connected one to each brush is a unidirectional current, but the current is not steady because the coils are changing polarity

Fig. 45

through zero, and consequently the voltage must rise and fall with each half revolution. This will produce a rippling sound in the set if the mains, the terminal points of which are connected to the brushes of the generator at the power station, are connected directly to the set. The frequency of the ripple will obviously be proportional to the speed at which the armature of the generator is rotated. To get rid of this ripple we must use what is called a smoothing or filter circuit. This circuit consists of a combination of capacity and inductance.

The Smoothing Circuit.

We know from our earlier studies that the resistance of a condenser varies according to the frequency of any alternating or fluctuating current which it may be required to pass. To put it another way, we may say that a condenser is capable of choosing between high and low frequencies according to its capacity. The lower the frequency of the ripple, the greater must

be the capacity of the condenser, because its resistance to a frequency of, say, 50 cycles gets lower and lower as its capacity is increased. For the mathematically-minded reader we may break the rule against formulae which we made at the beginning of this series, and give the following very simple one. The resistance to the flow of an alternating current which will be afforded by a condenser is expressed by

$$\frac{1}{2\pi f.c.}$$

when π is 3.14159, f is the frequency of alternation of the supply and c is the capacity of the condenser in microfarads. Supposing that the ripple we want to filter has a frequency of 50 cycles, let the reader who is sufficiently interested work out the resistance of a condenser of .001 microfarad and of another of 8 microfarads and observe the difference. The resistance of the latter is almost negligible. If, then, we connect a large condenser across the mains and earth one side of them, we are providing an easy path to earth for the unwanted voltage variation, and the result will be to smooth the supply.

But this is not enough in itself for practical purposes. We must also connect an inductance in series with one or both leads from the mains. The inductance has to deal with a very low frequency, and we want it to afford the maximum possible resistance to the unwanted frequency. It must therefore have a very high value of inductance, and generally takes the form of an iron cored choked coil. The most usual arrangement of a complete filter unit is that shown diagrammatically in Fig. 45. It is of little use to describe the values of the choke and condensers, since these will vary with the frequency of the supply ripple. For a rough guide, however, and as many mains have a frequency of about 50 cycles, it may be stated that a choke having an inductance of some 50 henries and condensers of 4 microfarads each will be satisfactory. Before installing apparatus to provide H.T. from D.C. mains it is as well to ascertain which side of the supply is earthed. If the positive side is earthed, the supply company should be approached and requested to change over. To discover the polarity of the mains, attach one wire to each terminal and hold the ends of the two wires in a glass of water. The wire which gives off bubbles is attached to the negative terminal.

The DX Man's Note-Mag

MOST long distance enthusiasts probably are interested in two quite different sides of wireless reception: first of all, that which is concerned with the medium and long waves, and secondly, that which deals with the ultra short wavelengths from 100 metres downwards. No single receiving set can be used with complete satisfaction for both purposes. For the medium and long waves at least one stage of high-frequency amplification is required in order to give sufficient signal strength and the necessary degree of selectivity. On the short waves no high-frequency amplification is needed for ordinary reception purposes and a special circuit, usually some modification of the Reinartz, is desirable. Not a few readers probably go even further than to provide two receiving sets; they have also a third which is used entirely for the reception of the local station, 5XX and 5GB, and is therefore designed mainly with the idea of obtaining the purest possible reproduction of powerful transmissions at comparatively short range.

Now though the rectifying and high-frequency circuits (if any) of these three sets are all specialised for the purposes in view, there is one portion of the receiving set which is not in the least affected by the wavelength or by the degree of efficiency existing in the high-frequency and rectifying portions. This is the department devoted to low-frequency amplification. Whatever the valves or the circuits preceding it, the input to the first note-magnifying stage consists invariably of uni-directional impulses at audio frequency. A moment's thought will show that it is thus possible to have a common note-magnifier for all kinds of receiving sets. The receiving set proper, in fact, may end at the rectifying valve. It may be made with output terminals connected to the plate of the rectifier and high tension positive. The note-magnifier has corresponding input terminals and when the two pieces of apparatus are connected together by means of brass straps or of short lengths of wire a complete receiving apparatus is obtained. Provided that the note-magnifier is so designed that it is capable of giving high amplification without distortion, it will serve excellently whether connected to a super-heterodyne receiver, a "straight" receiver using screened grid valves, a receiver with neutralised high-frequency stages, or a rectifier with special short-wave circuits.

Before we can design a suitable note-magnifier we must first consider what it will have to do. In the short-wave receiving set gridleak-and-condenser rectification will almost certainly be used, for the anode bend system is not efficient when dealing with weak signals. On the other hand, a medium-wave set will most likely contain an anode bend rectifier for this gives much sharper tuning of its grid circuit than one utilising a leaky grid-condenser, and where there is ample H.F. amplification the anode detector is actually rather the more efficient of the two. If there is a special short-range set designed for pure reception it will certainly not incorporate gridleak-and-condenser rectification. It is not always realised that a leaky grid-condenser detector should be coupled to the following note-magnifying valve by means of a low-frequency transformer in order to produce the best results. Excellent though it is in many respects, resistance capacity coupling is not in this case suitable. An anode bend rectifier, however, should invariably be followed by resistance coupling, and this system is essential in any receiver that is intended to enable perfectly pure reproduction to be obtained.

The first problem that presents itself, therefore, is so to design the common note-magnifier that either resistance or transformer coupling may be used at will between the output of the

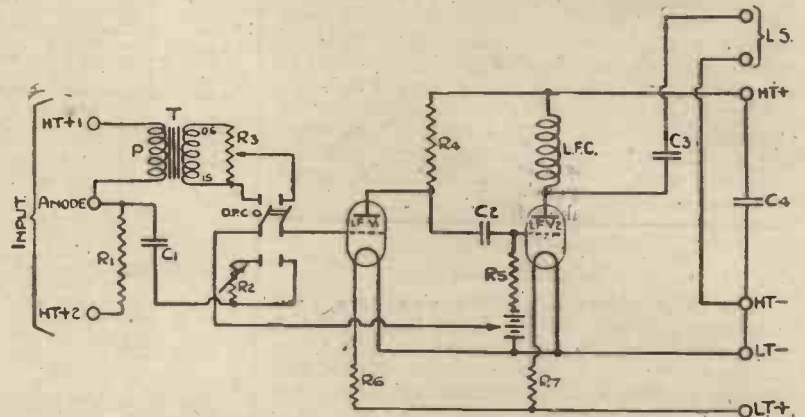

rectifier and its first valve. The next consideration is concerned with the number of low-frequency valves. If we wish, as naturally we do, to obtain loud-speaker reproduction from a number of stations, one valve will not be sufficient. Two, however, if suitable for the work, will give the necessary magnification. Next we have to bear in mind that to work a loud-speaker properly the output valve, that is the second valve of the note-magnifier, must be of the low impedance type. We cannot profitably use such a valve in the first low-frequency stage, since low impedance unfortunately means a small magnification factor. This means that we are debarred from cutting out the last valve by means of a jack if the strength of a received signal is too great when both are in use. If a jack were used the output to the loud-speaker would be from the first low-frequency valve, whose impedance is too great to allow of pure and undistorted reproduction. Can we cut out the first valve, delivering the output of the rectifier directly to the second? It is possible to do this, but it is not advisable in most cases owing to the complications, such as altering the grid bias and the like, which follow in its wake. On the whole, it is better to keep both valves always in circuit and to arrange an effective form of volume control which will allow a loud signal to be toned down until it can be dealt with comfortably by the last valve. In this way we are always working with something in hand, and the reserve amplification that is available enables signals from many stations to be reproduced at equal strength.

The accompanying diagram shows a simple way in which a note-magnifying unit suitable for use with any kind of receiving set may be arranged. There are three input terminals marked respectively "Anode," "H.T.+1" and "H.T.+2." If we desire to use transformer coupling, as we shall when, say, the short-wave set is in use, the output terminals for the rectifier connected to "Anode" and "H.T.+1." At the same time the double-pole change over switch is turned over to the "up" position. On tracing out the circuit the reader will see that the transformer T is thus brought into action. Its primary is connected across the two terminals mentioned, whilst its secondary is wired to the upper pair of contacts of the switch. The grid of the first note-magnifying valve L.F.V1. is connected to one of the middle contacts of the switch, whilst a lead from a suitable negative tapping of the grid battery goes to the other. In order to use resistance coupling when an anode bend rectifier precedes the note-magnifying unit the output terminals of the detector are connected to "Anode" and "H.T.+2," the switch being turned downwards. The transformer is now out of circuit and the plate of the rectifier is connected through C1 and one of the arms of the switch to the grid of L.F.V1. It is also connected through the resistance R1 to high tension positive. The gridleak R2 is connected to the grid battery by way of the second contact arm of the switch.

Both the transformer and the components of the resistance capacity coupling must be chosen with care. The leaky grid-condenser rectifier of the short-wave set, or of the medium-

wave set, if this method of detection is used in it, will naturally be a valve of the medium impedance class, with a plate impedance that is to say, of the order of some 20,000 ohms. For the best results with such a valve a transformer with a high inductance value in its primary is required. This means that the step-up ratio between primary and secondary must be small. Various considerations definitely limit the number of turns of wire that can be placed upon the secondary, from which it is clear that a step-up ratio can be obtained only by reducing the number of primary turns. What is required is a transformer of large and heavy type with a step-up ratio between 2.5 and 3.5 to 1. In the resistance capacity portion the value of the anode resistance will depend upon the class of valve used as rectifier. Following a medium impedance valve a resistance with a value in the neighbourhood of 100,000 ohms will be suitable. If the rectifier is a high impedance valve the value of the anode resistance may be 500,000 ohms. A coupling condenser, C1, with a capacity of the order of .1 microfarad will answer well. Resistances of the values mentioned may be obtained in the wirewound type, whilst paper dielectric condensers of .1 microfarad are standard and not very costly components.

It must always be borne in mind that the gridleak and anode resistance are in parallel so far as oscillating currents are concerned. From the plate of the rectifying valve coupled by the resistance capacity system there are alternative paths to earth. The first is by way of the anode resistance and the condenser shunting the high tension battery; the second *via* the grid condenser and the gridleak. Clearly the magnitude of the potential changes across the anode resistance, and therefore of those reaching the grid of the first low-frequency valve, will depend largely upon the value of the gridleak. For this reason the leak R2 in the circuit diagram is not fixed but variable. By reducing its value signal strength is cut down

and the volume therefore becomes easily controllable. With an anode resistance of 100,000 ohms the gridleak may be a 0 to 1 megohm variable resistance. Where an anode resistance of 500,000 ohms is used after a high impedance valve a 0 to 5 megohm variable gridleak will be suitable. The volume control when transformer coupling is in use is obtained by means of another variable high resistance, this time of potentiometer form, which is connected across the secondary terminals. A value of from 0 to 1 megohm is suitable here. It is most important that the variable resistances used should be of the very best as regards both quality and design, for, if they are not, noisiness and faulty action may be expected.

The first and second note-magnifying valves are resistance capacity coupled, the values of R4 and R5 depending upon the impedance of L.F.V1. This last will usually be a "First L.F." valve with an impedance of the order of 8,000 to 10,000 ohms. Here a 50,000 ohm

Practical Searching Hints

DIRECT PICK-UP

IT not infrequently happens that a set, either made at home or purchased, proves rather disappointing, owing to its failure to eliminate the local station when it is desired to reach out for others further afield. In many instances this apparent lack of selectivity is due to what is known as direct pick-up. The coils, acting as miniature frame aerials, collect energy from the local station on their own account and a wipe-out effect is therefore noticeable over a fairly wide band of wavelengths. Where direct pick-up is experienced a great improvement can usually be made by substituting astatic or "fieldless" coils for those of plain solenoid or honeycomb type. The astatic coil is generally recommended for use in sets containing two or more stages of high-frequency amplification since, owing to its small field, it minimises stray couplings between circuits. But a coil that is a poor radiator is also a poor collector; hence the astatic inductance is exceedingly useful in reducing direct pick-up effects.

Any reader who suffers from the local station's wipe-out can make up astatic coils for trial with very little trouble or expense. Obtain a tubular former of ribbed ebonite, paxolin or even waxed millboard, scribe a line across it and drill holes on this, one close to either end and one in the middle. In each of the first mentioned mount a small terminal. In the middle hole place a 4B. A. screw and secure it loosely with a nut. The number of turns required will be about forty per cent. greater than is the case with solenoid or honeycomb coils. Attach the end of the wire to one of the terminals and wind on half the number of turns. Then take it round the middle screw, turn the former over in your hands and wind on the remaining turns outwards from the middle, attaching the end when all the turns are on to the second terminal. Tighten up the nut on the middle screw. You now have a coil one-half of whose windings are clockwise and the other anti-clockwise. The field of one-half of the coil is in opposition to that of the other, and the two almost cancel out. In order to keep the HF resistance as low as possible it is best to use Litz cable for the windings. The type known as 9/40 is very suitable. For trial coils, however, No. 26 double cotton covered wire may be used.

(Continued from col. 3.)

Short Waves

On short waves conditions also have been uncertain, 2XAF having been more or less regular and at fair strength, whilst 2XAD on 21.96 metres has been extremely variable, and at the present time is spoiled by high-speed fading. Rather below 2XAD one can hear what I take to be two-way telephone work between Java and, presumably, Holland. The latter is not very well heard, but the other transmission, though weaker, is quite clear. I have a note that "Radio Victoria" was heard just below 2XAD, but I regret that at the moment I cannot recollect whether this is correct, or should refer to 2XAF, since a figure, 29.5, alongside rather indicates that the wavelength had been given. The note was made in a hurry, and should have been amplified later, but I remember that an address was given to which to send reports, the language being French.

Owing to the holidays I am writing before having an opportunity of tuning for the Carillon from Cologne Cathedral. This was to be heard last New Year's Eve, if I remember rightly, but the transmission was not entirely a success. There is no doubt that there are very great difficulties in transmitting sounds from heavy bells, and of those I have heard no transmission of any bell, from any country, has ever approached the relay of Great Peter from York Minster at midnight on December 31 last.

Last Week's Log

By NORTHERNER

WE appear now to have reached the part of the year when reception conditions definitely fall away from their winter-time efficiency. Throughout the last ten days or so I have noticed that some of the "certain" transmissions have not been quite so certain as one usually experienced. Fading has become more pronounced, at least on the medium wave-band, and at the present time I should describe conditions as satisfactory only to a point, variability being a great trial. Possibly the phases of the moon are not entirely unconnected with these conditions, but at any rate the lighter evenings and the period of the year make reception from a distance less happy than of late.

Even short-wave reception has been irregular, and variable in results. As in some way connected with the reception of transmissions, the ostensible subject of this article, I might perhaps be allowed to mention that of late I have been using my short-wave receiver on the normal broadcast wave-bands, both medium and long.

Medium Wavelengths on S.W. Receiver

Lest this be considered a retrograde step, it is, I think, clear that a tuner, set up specially for receiving on the very high frequencies met with on short waves, will be very efficient, so far as lay-out is concerned, on, say, 200 to 500 metres, and the convenience in quickly changing over is certainly a point for consideration.

On the long waves, Radio-Paris, which I have not mentioned recently, has a very good quality of reproduction, and is frequently well worth hearing, remarks which no doubt are common knowledge to Southern readers. Motala shows more variation in strength, but is still a good signal, and Königswusterhausen reception fluctuates from day to day. The interference on this station, to which reference was made in a paragraph in *World-Radio* a few weeks ago, is very pronounced at times. Kalundborg and Warsaw remain fairly steady, whilst Hilversum is, and I hope will remain, a reliable stand-by programme.

I noted a bad heterodyne on Kalundborg on March 28, and although I did not identify the station, I ascertained that French was the language used. Hilversum appears to be very close to what I think must be the Continental beacon signals, which can be frequently overheard. These signals are of similar type to those from the British beacons, which can be picked up a little lower at 1,000 metres.

Many Summer Programmes Available

On the medium wave-band matters have been more or less normal, with the reservation that signals fade more, and in general are weaker than for some time past. This I think is to be expected, but, fortunately, as time goes on receiving methods improve, and with the very numerous transmissions in existence, we need not fear the loss of more than a part of our alternative programmes through the summer season of the year. Radio Wien (Rosenhügel) I have picked up again, and as "The Searcher" heard that station when I missed it a short time ago, it certainly does appear that locality alone has marked effect in giving good or bad results in reception.

I find that one very successful transmission on this band is from Huizen on 340.9 metres (up to 5.40 p.m.). This station is easily heard during the hours of daylight and at much greater strength than at night, at which time the wavelength reverts to 1,870 metres. Under the latter conditions I have never found the transmission really good, owing to the preponderance of static and morse when the station was brought up to the necessary strength.

GERMAN GRAMMAR AIDS

LONG AND SHORT VOWELS.

Now that we have discussed the pronunciation of all the long and short vowels I should like to devote a few minutes to the problem of when to use a short vowel and when to use a long vowel.

All diphthongs are long, so we can rule them out at once. There is only one pronunciation for each diphthong: *ei*, *au* and *eu*.

Apart from a few exceptions which we need not consider here, vowels in unstressed syllables are short. Let us take the past participle of the verb to be: *sein*. The participle is *gewesen*. The second syllable carries the stress so that the first and last syllable could on no account be long: *gewesen* or *gewesèn* are quite impossible.

We have now narrowed down our field of enquiry; we are concerned merely with simple vowels in stressed syllables. Is there any way in which we can tell whether such a vowel should be long or short? The length is sometimes indicated by an "h" as in the following words: *Lehrer*: teacher; *Sahne*: cream; *Sohn*: son; *Kuhle*: pit. But this "h" by no means occurs always, and how are we to tell when?

I am afraid I must now introduce two technical terms, namely, open syllable and closed syllable. To put the cart before the horse, stressed vowels in open syllables are long; stressed vowels in closed syllables are short. An open syllable is a syllable which ends in a vowel; a closed syllable, however, is closed by a consonant. Let us take an English example. We will, for a moment, consider the words "able" and "apple." In the word "able" the "a" is in an open syllable; the "b" belongs to the second syllable. You can prove this to yourselves by giving an extra length to the "a." If you say: But is he a—ble to do this? the effect may be curious, but there is nothing wrong with the English. Let us do the same with the word "apple." Did he really steal the a—pple? The effect is ridiculous; apples pronounced like that are no longer apples. Why? Because the "a" in "apple" is in a closed syllable. You will notice that when you say "apple" the vowel is cut short by the mouth assuming the position for a "p."

Now let us apply this rule to German. If the stressed vowel is followed by one consonant only that consonant belongs to the next syllable and the vowel is therefore long: *haben* (to have); *Bogen* (bow); *sie schlugen* (they hit). If the stressed vowel is followed by two consonants the first consonant belongs to the first syllable, which is, therefore, closed; then the vowel is short: *Apfel* (apple); *Eltern* (parents); *unter* (under).

There is a rule which cuts right across this scheme. This rule says that in words where both long and short vowels can occur in different forms only one form shall be used. Let us take an example. The verb to hear: *hören*, the vowel is long. *Ich höre, wir hören, sie hören*, the vowel is long. *Er hört, ihr hört* are therefore lengthened, too. The same applies to the past tense of this verb, *ich hörte*. According to our first rule this should be short, according to our second rule it should be long, and the second rule wins every time. This lengthening by analogy, as it is called, occurs in all words which can be inflected, i.e., in verbs, nouns and adjectives. One more example: *der Tag* (the day) has an accusative, *den Tag*. Both forms have a closed syllable. But all other forms must have a long syllable: *Tages, Tage, Tagen*. So there are six forms with open syllables and only two with closed; the open win and the nominative and accusative of *Tag* are long by analogy.

(Continued on page 546.)

The awkwardness of having to depend upon a phrase book on your visits abroad disappears when you have learnt to speak Foreign Languages by the new Pelman method. A book describing this method will be sent, gratis and post free, to every reader using the coupon printed below.

How to Become an Expert Linguist.

WONDERFUL SUCCESS OF NEW PELMAN METHOD OF LEARNING FOREIGN LANGUAGES.

COULD you pick up a book, written in some Foreign Language of which you do not know a syllable, and read it through correctly without once referring to a dictionary?

Most people will reply "No. It would be impossible!"

Yet this is just what the new method of learning French, Spanish, Italian and German taught by the famous Pelman Institute, now enables you to do.

The present writer can speak with knowledge on this subject.

Calling at the Institute to inquire into this new method he was asked whether he knew any Spanish. He replied that with the exception of a few words like "primavera," which he knew meant "Spring," he was entirely unacquainted with the language.

He was then handed a little book of 48 pages, printed entirely in Spanish, and asked to read it through.

There was not a single English word in this book, yet, to his utter amazement, he was able to read it from cover to cover without a mistake.

This is typical of the experiences of the thousands of people who are learning French, Spanish, Italian, or German by this new method. Here are a few examples of letters received from those who are following it:—

"I have learnt more French during the last three months from your Course than I learnt during some four or five years' teaching on old-fashioned lines at school." (S. 382.)

"I have spent some 100 hours on German studying by your methods; the results obtained in so short a time are amazing." (G.P. 136.)

"I can read and speak Spanish with ease, though it is less than six months since I began." (S.M. 181.)

"I have obtained a remunerative post in the City solely on the merits of my Italian. I was absolutely ignorant of the language before I began your Course eight months ago." (I.F. 121.)

MATRICULATION PASSED.

"I was able to pass London matriculation (in Spanish) last June with minimum labour and no drudgery, although I was always reckoned a 'dud' at languages." (S.B. 373.)

"My grateful thanks to you for making so attractive the learning of French. I am 40 next week and am delighted to be able to say I accomplished at 40 what I turned aside from at 20 as too difficult." (T. 636.)

This new method enables you to learn French in French, Spanish in Spanish, German in German, and Italian in Italian.

It enables you to learn a language as a Spaniard, Italian, Frenchman, or German learns it. There is no translation from one language into another.

It enables you to think in the particular language in question.

It thus enables you to speak without that hesitation which arises from the habit of mentally translating English phrases into their foreign equivalents.

There are no vocabularies to be memorised. You learn the words you need by using them and so that they stay in your mind without effort.

BOREDOM ELIMINATED.

Grammatical complexities are eliminated. You pick up the grammar almost unconsciously as you go along.

This makes the new method extremely interesting. The usual boredom of learning a Foreign Language is entirely eliminated.

There are no classes to attend. The whole of the instruction is given through the post.

This new method of learning languages is explained in four little books entitled respectively "How to Learn French," "How to Learn Italian," "How to Learn Spanish," and "How to Learn German."

You can have a free copy of any one of these books by writing for it to-day to the Pelman Institute (Languages Dept.), 87, Pelman House, Bloomsbury Street, London, W.C. 1.

State which book you want, and a copy will be sent you by return, gratis and post free. Write or call to-day.

FREE APPLICATION FORM.

To THE PELMAN INSTITUTE (Languages Dept.), 87, Pelman House, Bloomsbury Street, London, W.C. 1.

Please send me a free copy of:

- "HOW TO LEARN FRENCH"
 - "HOW TO LEARN SPANISH"
 - "HOW TO LEARN GERMAN"
 - "HOW TO LEARN ITALIAN"
- Cross out three of these

and full particulars of the new Pelman method of learning Foreign Languages without using English.

for the last time!**

FOR a small initial outlay you can obtain permanent H.T. supply! This is the wonderful news now on the lips of every listener. You can install in your home, at a cost lower than ever before, the Standard Self-generating Leclanché Battery, giving abundant, permanent, steady H.T. supply that reduces distortion to a minimum. Whenever you want it, it is there. Never any worry as to whether there is enough "juice" for the set—this battery recharges itself overnight. Take the first step by sending for FREE Booklet, describing every detail for installing and maintaining this super-efficient and money-saving battery.

2-valve sets, A.4, 90 volts	3-5 valve sets, D.6, 108 volts	Super sets, F.6, 126 volts
24/10	38/6	69/3

Single units of 1½ volts from 4½d. each.

CASH ORDERS CARRIAGE PAID.

For convenience Woolworth's Stores are distributing No. 2 cell completely assembled at 6d. each. Also "Standard" Electrolyte chemical in 6d. bottles. **IMPORTANT.**—See the name "STANDARD" on every jar. All types of the battery are also obtainable from Halford's Cycle Stores and Wireless dealers.

(Continued from Page 545.)

I am not going to pretend that the rules which I have given will solve the question of length in every instance. Words that have "sz" are particularly troublesome. If they are spelt with "ss" in the genitive the vowel is short: der Kusz, des Kusses; if they are spelt with "sz" in the genitive, the vowel is long: der Grusz, des Grusztes. But we shall not bother about such minor exceptions. Instead of that let us take some examples from the story of Kaiser Napoleon broadcast on April 2.

Kam: double consonant: short; **ich:** closed syllable: short. A word which contains one syllable only and which ends in a consonant must have a short vowel, unless it belongs to the inflected class. **Hier:** the vowel tells us that it is long. **Erfrischung:** not **Erfri-schung**, but **Erfrischung**; therefore closed, therefore short. **Haben:** the "b" belongs to the second syllable, therefore long. **Frage:** this is undoubtedly a closed syllable. The "g" belongs to the first part, and the "t" to the second part. However, it is a verb, and the infinitive is **fragen** with a long vowel: therefore the vowel in **frage** is long by analogy. **Der:** closed syllable, short. **Kaiser:** diphthong. **Ja:** open syllable, long. **Gewisz:** closed syllable, short. **Erwiderte:** open syllable, long. **Die:** **ie** is always long; moreover, it is an open syllable. **Frau:** diphthong. **Und:** closed syllable, short. **Sie:** long. **Holte:** here we have a similar case as in **frage**. As the word stands, the first syllable is closed by the "l" and the vowel ought to be short; but the infinitive is **holen**, and there the vowel is long because the consonant belongs to the second syllable; therefore the vowel is long in any part of the verb. **Eine:** diphthong.

Those of you who may have been alarmed at my theoretical introduction will have seen that it is quite simple when you apply the theory to practice.

SPANISH**Aids and Hints for Students—XIV.**

By W. F. BLETCHER

The translation into Spanish of "more than," "less than" gives considerable trouble to the majority of students.

Of course, before a numeral, *más de* and *menos de* are correct, but in the negative form, when "not more than" is equivalent to "only," as in: "I have *only* (not more than) twenty" the correct translation is "No tengo *más que* veinte" (in French: *je n'ai que vingt*). This could also be rendered in Spanish by *Sólo tengo veinte*.

Some time ago I was asked by a listener whether: *El tiene más dinero que yo tengo* was good Spanish for: "He has more money than I have." It certainly is not. It would be quite correct to say: *El tiene más dinero que yo*; but if another verb follows and the noun *dinero* is the object of *both* verbs, then *del que* must be used. Otherwise *de lo que* is required. The following examples will make this quite clear:—

El tiene más dinero *del que* tengo yo.Ellos han cobrado más dinero *del que* yo les debía.Vino más gente *de la que* él había invitado. Vd. me ha devuelto más libros *de los que* le presté.Hemos entregado más piezas *de las que* Vds. nos ordenaron (pidieron).

In all these cases the comparison is with the noun in the first clause, the object of *both* verbs. This is not so in the sentences which follow, in which there is no noun, the comparison being with a statement or idea:—

Ella es más lista *de lo que* parece.Vd. ha venido más temprano *de lo que* nos dijo en su carta.Le pagan menos *de lo que* merece.El tiene más *de lo que* Vd. cree.

Now, in the last two sentences let us add the noun *dinero* after *menos* and *más* respectively, and see what happens. In the first of the two

de lo que would become *del que*, because *dinero* would be the object of both verbs *pagar* and *merecer*, thus: "Le pagan menos dinero *del que* merece." In the last sentence, however, *de lo que* would remain unaltered, because *dinero* would not be the object of the verb *cree*.

In the same category as "than" is "but" used adverbially. Take the sentence: "In my garden there are *but* three rose bushes." This could be rendered in three ways:—

En mi jardín *sólo* (solamente) hay tres rosales.En mi jardín no hay *más que* tres rosales.En mi jardín no hay *sino* tres rosales.

In a sentence like: "He goes *but* rarely to the theatre" *sino* is used, thus: "El no va *sino* rara vez—or raramente—al teatro."

In the sense of "except" or "than" *but* is generally rendered as follows:—

"I have no friend *but* you," or "except you.""No tengo *más* amigo *que* Vd.""I have no other course *but* to accept your offer.""No tengo *más* remedio *que* aceptar su ofrecimiento."

Una anécdota española:—

El tiro (shot) por la Culata (breach)

"The Biter Bitten."

Una señora tenía dos convidados (*guests*) en su casa. Uno de ellos, que se las daba de chistoso (*fancied himself as a humorist*) le dijo:—

—¿Y su marido?

—Aún no ha venido. Tendremos que esperarle un ratito (*little while*).

—Pues vamos a darle una sorpresa. Nosotros nos esconderemos (*will hide*) en la habitación inmediata, y Vd., cuando él llegue, le dice que no hemos podido venir, ¿sabe?

Lo hacen así, y al cabo de unos momentos llega el marido.

—¿Y los convidados?—pregunta a su mujer.

—No vienen; los dos me han escrito excusándose (*apologising*).

—¡Gracias a Dios!—gritó—¡cuánto me alegro! ¡Vaya un par de latosos aquellos! (*What bores those two are!*)

Europe and Summertime

(From our Paris Correspondent.)

British long-distance listeners must be on their guard during the next few days not to search for foreign transmissions, which, owing to the summer-time changes about to take place, may "not be there."

Diverse reasons—geographical, technical, economic, and even political—cause the time of the change over to differ in the various European countries.

Europe is divided into three "timebelts"—the Occidental (Greenwich), Central (Berlin), and Oriental (Leningrad), the nations being divided as follows:—

Occidental: Algeria, Belgium, the Faroe Islands, Spain, France, Great Britain, Ireland, Morocco, and Portugal.

Central: Germany, Austria, Denmark, Malta, Hungary, Italy, Luxembourg, Norway, Sweden, Switzerland, Czechoslovakia, Tunis.

Oriental: Bulgaria, Egypt, Finland, Greece, Poland, Rumania, Eastern Russia, and Turkey.

Holland prefers to have its own time, which is twenty minutes in advance of Greenwich time.

This year summer-time in France will be made by putting the clocks on one hour during the night of April 14-15, and the same times will apply in Belgium. Algeria will not alter her clocks.

Great Britain, as is now generally known, will bring summer-time into being during the night of April 21-22.

Among all these changes it is noteworthy that during the week April 14-22, British time will be an hour behind that of France, catching up on April 22, and that from April 14 Germany and Denmark will have the same time as that in France,

Dominion and Foreign Broadcasting Intelligence

SOUTH AFRICA

(From our Cape Town Correspondent.)

Wonderful Reception of 5SW.

5SW, which has been coming through with remarkable clarity of late, provided on Wednesday night, March 21, the biggest relay sensation ever experienced in South Africa. The speeches of the Prince of Wales and the Prime Minister during the Banquet proceedings of the Company of Master Mariners at the Mansion House were heard almost word perfect, and despite the late hour (it was 11.15 p.m. in Cape Town when the Prince was announced) the morning paper published a pretty full account of this remarkable reception. In view of the lateness of the hour nobody expected the relay would be a success, for 5SW has a nasty habit of fading badly about 10 o'clock and remaining unintelligible from that time onwards, but the unexpected happened. It was a night in a thousand, and fading was hardly noticeable even at midnight. Dr. Lunt of Kenilworth managed the pick-up perfectly and passed along his reception by phone to the Cape Town station about ten miles distant. The whole Peninsula is talking to-day of what they heard, and short-wave enthusiasts are on the increase.

French "Mystery Station."

But to-night I have received reports about a mysterious French station on 31 metres which has been heard for several nights in the Cape Peninsula and at Mossel Bay. The Frenchman's signals are remarkably loud and clear, but he does not disclose his identity. He repeats "Allô, Radiophonie," a dozen times, and then counts up to five in French, after which he vanishes, leaving everybody guessing.

(From our Johannesburg Correspondent.)

The New JB Transmitter.

In the near future broadcasting in South Africa will be greatly improved. Part of the plan for the erection of a new station has already arrived and work will be proceeded with as rapidly as possible. This is in accordance with the plans formed when the A.B.C. (African Broadcasting Corporation) took over the present station. The new set will give 15 kw. in the aerial and provide much better broadcasting for the Rand, Pretoria, and the rural district. The present JB set will probably be removed to Bloemfontein, which will obtain perfectly good service from the new transmitter and render unnecessary the provision of a local station, as was at one time contemplated.

AUSTRIA

(From our Vienna Correspondent.)

Stubenring and Rosenhügel.

About the end of April the new 60 kw. Rosenhügel station will be ready for steady work, but from Easter Tuesday the old Stubenring station will have to do all the work, using 517.2, the Rosenhügel wavelength, instead of its normal 577. The new Rosenhügel station has been erected without disturbing the existing station, which is going to Graz. The gymnastic lessons per radio, announced for Sunday mornings, beginning April 1, have been postponed till the 15th at the earliest.

Operatic Evenings.

On Saturday, April 14, a special musical programme will be transmitted from Vienna to Zürich, and on Tuesday, April 17, a similarly arranged programme will be sent to Prague. Monday, April 16, with its Italian programme (that being the date of the International Italian evening) will comprise works of Verdi, Rossini, Mascagni, and others. The Vienna Symphony Orchestra will be directed by Prof. Robert Heger. On Thursday, April 19, will be relayed from the Vienna State Opera Donizetti's

Daughter of the Regiment, and on the 21st will be given in the Ravag studio Franz Lehár's operetta, *Where the Lark Sings*.

DENMARK

(From our Copenhagen Correspondent.)

Italian Opera Broadcasts.

From Sunday, April 15, to Sunday, April 22, the Italian Opera Company will give a short season at the Royal Theatre, and the Danish State Broadcasting Co. have arranged to broadcast five performances, as follow:—

Sunday, April 15, *Aida*; Monday, April 16, *Rigoletto*; Wednesday, April 18, *Il Trovatore*; Friday, April 20, *The Masked Ball* (Verdi); Sunday, April 22, *The Somnambulist* (Bellini). The Royal Theatre orchestra, with which will co-operate the Royal Opera Chorus and the Royal Ballet, is under the direction of Maestro Egisto Tango.

FRANCE

(From our Paris Correspondent.)

Another "Mystery" Station.

A mystery broadcaster who announces "Ici Radio ABCDEFGHIJK" is intriguing French listeners. It is "on the air" from 9.30 p.m. or 10.45 p.m. to 11 p.m. on from 1,100 metres to 1,170 metres wavelength with good power, for it is heard in the capital on small valve receivers. Many reports of reception come from the north of France.

Radio "Aces."

The two "aces" of French amateurs, M. Leon Deloy (8AB at Nice) and M. Pierre Louis (8BF), both of whom must be well known to British amateurs, will get the Legion of Honour if the petition now being launched by the French Amateurs' League is successful. The League and their paper *Journal des 8* draw attention to the fact, now that the short waves are being used so much for commercial and other purposes, that it was 8AB and 8BF, who, in 1921-2, with improvised apparatus and on low power, and much to the astonishment of the experts, established contact with America on 190 metres and 100 metres respectively. This was at a time when an international committee had abandoned the bands below 200 metres to amateurs "for their amusement." A stir was caused among amateurs in America from which country Mr. Schnell, secretary of the A.R.R.L., wrote "To-night we have written a page in history . . ."

In April, 1924, M. Pierre Louis (8BF) was received in Eastern U.S.A., and subsequently established communication on 44 metres with Morocco, Syria, Indo-China and the Philippines, on 84 metres with Australia, and on 90 metres with New Zealand. In launching their petition the League quotes the fine tribute paid to amateurs by General Ferrié, the chief of military wireless in France.

A Listeners' Congress.

Wireless "fans" here are appealed to by the technical Press this week for the holding of a congress to formulate a plan of action in view of the Government's Radio Bill, which will be introduced as soon as the new Chamber of Deputies meets. They point out that there are more than 1,500,000 listeners and some 300 radio clubs here, and that new wireless organisations are being formed every week.

A Sports Tribute from Listeners.

Coming on top of the general demand for sports relays, the annual six-days' cycle race at the Velodrome d'Hiver is being "covered" this week by M. E. Dehorter, "le Parleur Inconnu," and broadcast from the State stations. A special prize for the contestants is being arranged for by listeners.

MODEL C.12.

- ☐ Even response.
- ☐ Extreme sensitivity.
- ☐ Adjustment.

Ability to produce weak as well as very heavy signals without readjustment.

- ☐ Improves with age.
- ☐ Distinctive appearance.

"POPULAR WIRELESS," dated 31.3.28, praises warmly:—

"We found 'Celestion' Model C.12 perfectly satisfactory on each of the several sets with which it was tested, ranging from two valves to a multi-valver of the super kind."

"It is some time since we have experienced so much pleasure during a loud-speaker test and WE HAVE NO HESITATION IN SAYING THAT WE CONSIDER THIS 'CELESTION' A LONG WAY AHEAD OF ITS CLASS. Those of our readers who have the opportunity should endeavour to hear it in operation. We are sure they will agree with us when we say it is a revelation in what sound design and construction mean to such an instrument."

"P.W.," 31.3.28.

Let your dealer convince you that "CELESTION," most excellent of loud-speakers, passes all these tests readily.

Write for "Celestion" illustrated folder and also for new Gramophone Pick-up leaflet.

Government and Surplus Stock Bargains

VARLEY DOUBLE-WOUND IRON CORE CHOKE COILS are the best smoothers. Carry 80 m/a, are D.P., and fitted ebonite panel and terminals for H.T. eliminator filter circuit from mains A.C. or D.C. Bargain at 4/6. Small Iron-shod Chokes, 1/-; or with centre tap for new design choke-anode coupling, 1/6.

W.D. OSRAM SUPER-POWER BRIGHT VALVES. Emit 40 m/a. Unused, in original cartons. Not the type without valve legs offered by junk shops. Fully guaranteed, 2/-. Valve-holders, 4d. and 6d.

TERMINALS. Double MIII Govt. 4B.A., 2/6 doz. Extra heavy O.B.A., 3/9 doz.

MARCONI WAVE TRAPS, at a quarter of cost. High-grade. For tuning out unwanted stations; variable; 250 to 2000 metres. 1/6 (post 1/-).

GRAMO PICKUP PARTS. Magnetic Earpiece Units for making your own 40/- reproducer. Adapted with a little work. Only 1/2 each.

FEW ONLY. Cleartron Die-cast .002 mfd. new Varia, Sq. Law Condensers, only 1/9 each. Vernier or Neutrodyne Kraft Condensers, 1/6.

MICROPHONE AMPLIFIER for Loud-speaking or Gramo amplifying without valves. In Oak Cabinet, 25/-. Solo unit, consisting of laminated Receiver fitted with highly sensitive microphone attachment. Alone is worth 8/-. The wonderful little units are used in the "A.W." system for amplifying without valves, speech magnification, sound detection, 3/- each (post 6d.). Micro-Stethoscope fitting, 5/-. Reed Micro Receiver, 2/-.
MICROPHONE BUTTONS, as used in the service, solid back inset type, 10d. each. Genuine Skinderviken in original boxes, 2/- each, book on "Wonders of the Microphone" with illustrations and diagrams, 6d.

PHONES for 3/- pair; Sullivan's Double Headphones, Royal 2,000 ohm make, tone brand new, 5/- per pair. Hear Easy phone pads, 2/6 per dozen. Brown's double headbands, 2/- per pair.

PANEL POTENTIOMETERS. High grade; wire wound; silent action; 400 ohms. 2/6 (post 6d.).

GOVT. LOUD-SPEAKER, H.T. OR L.T. BATTERY CORDS. Twin conductor with eyes at end, 4ft long, 6d. each.

FIXED CONDENSERS. Mansbridge Wireless Mains, 500 v. type, 2mfd., 1/8 each. Mica .001 for H.T., 6d. each

VARIABLE. Panel mounting Square Law, with Vernier new in cases, .601 mfd. Reduced to 2/3. Polar 3-gang panel triple. Controls aerial and 2 H.F. circuits, dust proof, only 8/-. Polar .0005 3/6, .0003 2/6.

INDOOR "UNDER CARPET" AERIALS are the latest. 5/- size for 1/-. Hovey Indoor Cage Aerials, 2/6 each.

FIVE GUINEA CABINET LOUD-SPEAKERS for 25/-. The famous Violina whilst they last. Can be heard all day at Electradix Showrooms.

WESTERN ELECTRIC 2000 ohms TABLE TALKER. 15/-. cost 35/-. Texas Cone 25/-. Dr. Nesper 12/-.
ELECTRIC GEYSERS, for hot water from 220 volts. New nickelled cylinder body. Wall Plugs Flex, and Adaptor, 10/-. Electric Hot and Cold Hair Blowers, 30/-. Flat Irons, 10/-. Electric Two-plate Cooker, 12/-. Single Hotplates, 7/6 and 5/-. Immersion Heaters, spiral, 7/6. Tube, 5/-. Both plugs and cord. Fine Cabinet Set Home Massage Vibrator. Cost £4. Brand new, 25/6. Electric Soldering Irons, all sizes, from 7/6 to 15/-. Glass Boring Outfit for lead-in holes in window, 10/6.

A.C. TO D.C. BATTERY CHARGERS for your accumulators. Work off any lampholders and give 2 to 6 amps. A £5 set for £2 10s.

TELEVISION PARTS.—Arc Lamps, as used in America, 60/-. Powerful Projectors, four lenses and fitted 100 watt focus lamp, 39/6. 24 x 2½ in. Gun Telescope with 6 lenses, 17/6. Torpedo Type Spring-driven Gyroscopes, 15/-. Neon Tubes, 2/6. Holders, 8d. Osram B.E. Power Valves, 8/6. Selenium Cells up to 200 v., ratio 30-1, 15/-. Double Scale Taylor-Hobson Projectors for discs, 5/6. 3-valve Amplifiers, 50/-. A.C. or D.C. Motors for Disc Drive, 35/-. Wonderful 200-watt Alternators, Watford A.C. Self-exciting. Cost £30. Great bargain, £3. As used by Baird.

"New Ventures in Broadcasting"

UNDER the above title the B.B.C. have published, at the price of one shilling, "a study in Adult Education"—a term which is described as "the widening of experience and the cultivation of new interests." The book is the result of the findings of a Committee of Inquiry, under the chairmanship of Sir Henry Hadow, set on foot jointly by the B.B.C. and the British Institute of Adult Education. The comprehensiveness of its field of inquiry may be gathered from the following chapter headings: "The Growth of Broadcasting," "The Listening Public," "Broadcasting and Adult Education," "The Broadcast Programme," "The Listener and his Difficulties," "The Broadcast Lecturer," "The Needs of the Moment," "Future Organisation," and "Finance."

Among the useful Appendices there are two of special interest to readers of *World-Radio*—namely, "Notes on the Choice and Use of Constructed Sets" and "Notes on Educational Broadcasting in Other Countries." In the chapter entitled "The Broadcast Programme" some remarks of Professor Noel Baker, Cassel Professor of International Relations, University of London, are quoted. In his evidence, given at the inquiry, he says:—

"Broadcasting must have a powerful effect of one kind or another on general opinion with regard to international affairs. There is already a large amount of listening to foreign stations; such listening means that the listeners hear foreign news and sometimes foreign speeches, which inevitably affect their attitude to other countries. Every broadcasting authority has already, therefore, a direct responsibility which, with every technical improvement, must obviously increase."

In the same chapter the subject of Empire Broadcasting is referred to, and we cannot do better than quote from the book:—

"The aim of the B.B.C. is to link together the various national systems for the benefit of the Empire; in other words, to make it possible for Great Britain and the Dominions and Colonies to listen to each other's programmes. It is scarcely necessary to emphasize the important bearing this development will have on the relations of the different communities within the British Commonwealth, nor the interest it will have for those who are thinking of making their homes overseas, and will thus be able to learn something at first hand, through broadcasting, of the country to which they may be going."

The Appendix on Educational Broadcasting in Other Countries, previously referred to, gives a summary of those parts of foreign stations' programmes which are devoted either to language lessons or to some other form of educational talk. Although, in general, readers of *World-Radio* will be familiar with the facts given, yet concentration of them in the present form will be found both helpful and instructive.

The difficult subject of an international language for broadcasting is referred to:—

"The question of using broadcasting for the teaching of an international language raises many difficult problems. It is undoubtedly true that broadcasting does for the first time provide a chance for a living international language, since the universal character of broadcasting would provide a safeguard against the tendency toward national differences of usage and pronunciation. But it is difficult to make any recommendation until such time as agreement has been reached amongst the various claimants."

French Talks.

Owing to the great success which attended M. E. M. Stéphan's experiment on February 13 in giving a practical demonstration with an English student on "How to Pronounce French," M. Stéphan has decided to repeat this experiment twice during his summer session French talks. The two pronunciation demonstrations will be on May 14 and June 25.

Radio and International Relations

By Dr. E. E. FOURNIER d'ALBE, F.Inst.P.
(the eminent scientist and radio inventor)

WITH the formation, in March, 1925, of the Union Internationale de Radiophonie, having its permanent seat in Geneva, international relations entered upon a phase hitherto unknown.

Not only has the International Broadcasting Union agreed upon a scheme of distributing wavelengths in proportion to the area, population, and activity of the various States concerned, and with a view to preventing mutual interference, but it has established the principle of active co-operation, based on mutual respect and good will.

The main difficulty in the way of the creation of a sense of unity among European nations is the linguistic one. It is by no means true, as is sometimes contended, that all international disputes are due to misunderstandings attributable to differences of language. Some of the bloodiest wars, even in modern times, have been fought between people speaking the same language.

The best way to stop men killing each other is to preserve harmony among their ideals. It is in this direction that broadcasting can exercise an influence making for peace. The national wireless programmes give a faithful picture of the national taste, the opinions, the hopes, and the aspirations of the people. This is particularly noticeable in countries which, like Great Britain, Germany, Austria, Italy, and Scandinavia, have adopted the system of indirect State ownership, and the international listener who roams through Europe with the aid of his four-valve receiving set gradually acquires a sense of comforting familiarity, of being at home in a larger world beyond the frontier, among people different from his own, and interesting in proportion to that difference.

In becoming familiar with the various European stations, the listener finds that the linguistic difficulty gradually disappears. He learns to understand the semi-military *Achtung!* of the German stations, the punctilious *Bonsoir, Mesdames; bonsoir, Mesdemoiselles; bonsoir, Messieurs* of France, and the *Buona notte a tutte* of Rome. He learns that *Lahku noc* is Serbian for "Goodnight," and that the Dutch *Wel te rusten* is intended to wish him happy slumbers. He becomes acquainted with quite a number of unfamiliar national anthems, and acquires a vivid impression of a "Concert of Europe" where all is harmony and benevolence.

One must not build too many hopes on this beginning. Some of us remember that until just before the War the Eiffel Tower was in the habit of sending out most affectionate greetings to *tous les chers amis de FL*. But we can hardly compare a small number of morse-readers who understood and felt the warmth of these messages with the millions affected by modern broadcasting. The constant daily experience of international sympathy and co-operation must have a lasting effect on the mutual attitude of nations.

We need not look forward to a reduction in the number of languages to a minimum in order to break down the barriers between nations. The world loses by the death of every language which has been used and cultivated by great thinkers and writers for expressing their thoughts. The European listener has one great advantage over the American. He lives in a garden of the most choice and varied flowers, each carefully cultivated and having a perfume of its own. America offers us only English and Spanish.

Greece owes the success of its struggle for independence to Europe and the love inspired by Homer and Plato. The debt we owe to Greece has been paid back a hundredfold. Broadcasting makes it possible for every nation to make a free gift of its cultural treasures to all. Such gifts make enmity difficult.

Correspondence

Crystal Reception.

To the Editor of WORLD-RADIO.

SIR,—Given an unscreened position with a good aerial and earth, the following coils tuned with a good .0003 condenser, and with bornite-zincite detector will bring in a number of English and foreign stations. Former, 8 in. in diameter of presahn or skeleton, with clear 4 in. in length for winding of 44 turns of 16 gauge wire, tapped at 14th turn from earthed end for aerial, and 36th turn for crystal.

This coil is probably the most efficient that can be made economically for broadcast wavelengths. Tuned to 500 m. the calculated H.F. resistance is 2.12 ohms, and magnification 710. At 300 m. these figures are improved. As a comparison a 3-in. diameter coil with 26 gauge wire will have a resistance of 6½ ohms and magnification of only 300 at 300 m.

For 5XX and Radio-Paris, etc., 150 turns of 25 gauge wire can be wound on a 6-in. former to give a magnification of 300. Resistance 13.93. Few, if any, plug-in coils have a magnification greater than 100 for these wavelengths.—Yours faithfully,

G. L. H. DORE.

Cricklewood, London, N.W. 2.
2nd April, 1928.

To the Editor of WORLD-RADIO.

SIR,—Having spent much time on the above, I am glad to see the letters recently published, and particularly to note that the "re-radiation" hypothesis is challenged by Mr. Rochester.

With so many powerful stations it is even easier to-day than a few seasons back. At N.E. London, four miles from 2LO, Aberdeen was often heard with London cut out by means of a wavetrap. With London not working, most other B.B.C. stations and some foreign stations were repeatedly heard in darkness. An exception was Birmingham. This could often be heard by day, and always by night, at poor but constant strength. Scarcely ever could more than a few words be made out. But other stations, though fading badly, were "at maximum" clear and easily readable (Aberdeen once or twice was R3 for a few seconds). Surely if "re-radiation" is the explanation, the same should have occasionally happened to the Birmingham transmissions. I was constantly referring to Birmingham for setting the crystal, and (using the wavetrap) often listened to it for a half-an-hour at a time.

At present when London 2LO closes down at 11 p.m. and 5GB at 11.15, I often get Langenburg, Frankfurt and Hamburg, without specially setting the crystal contact.—Yours faithfully,

E. F. FULLFORD.

Clapton, London, E. 5.

Listening to Canada

To the Editor of WORLD-RADIO.

SIR,—Regarding your article in *World-Radio* on "High-Power Broadcasting in Canada," I wish to tell you that I picked up the opening programme of the station you write about—CKGW., 312.3 m. This was on Monday, March 5, at about 9 p.m. American time, or 2 a.m. G.M.T. When I tuned in on this station a band was playing the well-known march, "Colonel Bogey." Songs followed sung by a Miss Mabel Griffiths (Soprano). A great many reports regarding the reception of the station in many parts of Canada and U.S.A. were read by the announcer. I also heard this station on the following night and on both occasions it was very strong and clear. I wonder if any other *World-Radio* reader heard this? Wishing *World-Radio* every success.—Yours faithfully,

JAS. J. PRENDERGAST.

Clonmel, Co. Waterford,
Ireland.

"Crystal Truth"

IT must not be imagined that the magic crystal set of the correspondent, "Veritas Veritatum," who recently described the performance of his crystal set will escape severe competition. I can beat him into fits at getting "distance," having accomplished two-way intelligible communication with far-off Mars.

While "Veritas" carefully guards the secret of his hook-up, pending patent rights, mine is fully published to an enquiring world.

Previous protoplasmic-brained experimenters failed to get the planets because they used terrestrial components, whereas, for Star-radio, stellar material is plainly indicated, and of such my crystal set exclusively consists.

For three hundred years the Martians sent us unanswered signals, until final exasperation prompted them to wake up our dullards with a shower of stones and mud. Scientists christened them "meteorites" and "cosmic dust"—hard words coined to clothe their own naked ignorance. One of these missiles fell in my front garden; here was my opportunity to achieve immortal fame. With the aid of the family blacksmith and two sledge hammers, I reduced the boulder to workable proportions for the construction of my Stellar Crystal Set.

My idea of transmission was adapted from an obsolete telegraph set. In that instrument a clock-face was engraved with the alphabet. You pointed the needle at your end of the wire to the letters you wished to send; the other chap's needle moved in sympathy to the same letters on his dial, and thus the message was received.

Adopting this principle, I selected a meteorite crystal of smooth fracture, and using a small microscope and microtome cutter, engraved the alphabet on its polished surface. After the manner of the announcers who say "Vabre" and "Vagner" for "Weber" and "Wagner," the W was rejected as a useless letter except for patriotic Britons who prefer their own language.

With a tellurium cat's whisker I commenced to spell out my message for Mars, hoping my magnetic crystal would fraternise with its relatives in the country of its origin. It did. The Martians responded at once. Their super-human intelligence is untold eras ahead of ours, being evolved from super-men, while we, I suppose, are only ascended from the anthropoid ape.

The official diplomatic language is nautical English, a tongue appropriate to all climes and seasons. They explained its acquisition as follows:—Seafaring speech is so powerful, explosive, and free that it sets up oscillation in their Heavyside Layer, sulphiding the electric ions into a galaxy of rectifying crystals. Beyond this is an air-exhausted space—the whole forming a gigantic thermionic valve, our layer being the grid, and the Martian layer the plate, to their receivers. The so-called "canals" of Mars are merely the shadows of their multi-purpose aerials, one use of which is to convey vapourised snow from the Polar ice-caps for distribution over the fields as warm and gentle showers. Nor is the red colour associated with Mars due to crimson vegetation. It is only the glow of their dull-emitters, diffused by a humid atmosphere.

Jupiter and Saturn will come in when I have ascertained their wavelengths, but, being a bachelor of fixed principles, I leave Venus severely alone.

To bring Mars to Earth, earth wires are essential. Horizontal aerials are worse than useless. They must be directional. I use the lightning-conductor tipped with Meteorite and shellacked with Cosmic dust.

S.K.W.

Over £1,740 was raised by the recent Berlin Radio Ball, and after taxes had been deducted approximately £1,267 was available for distribution among various charities.

Read what a recent
customer says about the
Langham 5-Valve Port-
able Radio Receiver:

"I feel I must write to express my complete astonishment at what this compact little Set does. Last night at about 12.30 a.m. to my great surprise I tuned in both to WEA and WGY (America), both quite distinct on the loud speaker.

"The loud speaker contained in the set is the most perfect of its kind I have ever heard, the reproduction of even the most distant stations being extremely pure and mellow."

You can try this self-contained set in your own home for a week; if you are not satisfied we will refund your money.

Which Station Was That?

ANSWERS TO CORRESPONDENTS

Olderney (Cambridge): Yes, Stuttgart (gramophone record) see first paragraph in "Via Ether." **Bonzo (Streatham):** Dublin (A Sunshine Shower), see programme in *World-Radio*. **Old Blue (Northumberland):** Lahti (Finland) testing on 1,525 m. **Ajax (York):** Kalundborg frequently relays London and Daventry, but this fact is not always advertised in programmes. **Solidyne (Lasswade):** Yes, this was Motala, relaying *Fidelio* (Beethoven) from the Royal Opera House at Stockholm. **Milkman (Leytonstone):** 2PX advertised as amateur transmitter, East Ham. **R. Lawrie (Aberdeen):** 5NW, amateur at Dundee. **Anti-Phonic (Blackpool):** Leipzig, giving dance music until midnight (11 p.m. G.M.T.). **Searcher (Cambridge):** Kalundborg, relaying Copeuhagen. **O. Campbell McCallum, English lesson:** "The Art of Conversation." **Wash (Inverness):** Possibly WEAF (New York) on 491.5 m. **Rio Tinto (Reading):** Kattowitz (Poland). 9 p.m. time signal and news bulletin. **W. J. Salter (Maida Hill):** Yes, Moscow Comintern (RDW). **A. O. W. (E.C. 4):** 5RB advertised as amateur at Camberley. **Variactor Two (Gordon):** (1) WPG (Atlantic City) on 272.6 m.; (2) WEAF (New York) 491.5 m. **L. Tanmer (Scarborough):** (1) Göteborg relaying opera *Fidelio* (Beethoven) from the Royal Opera House at Stockholm; (2) Possibly Notodden relaying Oslo. **Dorinda (Richmond, Surrey):** Lahti (Finland) testing on 1,525 m. **BM/OVKR (Sutton):** This was Bordeaux, Radio-Sud-Ouest, apparently testing on lower WL. **Reigate (Surrey):** Apparently Motala relaying Stockholm, but cannot trace dance music in any programme on or about that WL at that time. **E. G. Block (Rustington):** Kalundborg, relaying Copenhagen. Chimes are from the Town Hall at midnight (11 p.m. G.M.T.). **Amplifier (Islington):** 2PX advertised as amateur, East Ham. **Wireless Fan (Manchester):** An amateur transmission, but cannot trace as you give no call sign. **T. B. (Gorleston):** Yes, 2XG (Rocky Point, Long Island, New York), on 16.02 m. **London Calling (Norfolk):** It is very difficult to estimate WL from your condenser readings; possibly Naples (interval signal: Metronome) which was giving a concert of light music at that time. **Gibbie (Kings Lynn):** Madrid (EAJ7) relaying concert from the National Hotel in that city. **C. Roney (Clapham Park):** Milan (Vigentino) relay of opera, *La Gioconda* (Ponchielli). **Hyacinth (Atherstone):** (1) This was Kalundborg, relaying children's hour from Copenhagen; (2) Radio Toulouse, relaying opera from the Théâtre de la Capitale. **V. E. B. Leix (Ballickmoyler):** You must have misunderstood the call sign, as we know of no station of this name; it is impossible to trace without some estimate of WL. **Signal Box (Eastbourne):** Moscow Popoff (675 m.) advertised a relay of the opera *Mignon* (Thomas); it is quite possible that this was changed, and taken by Moscow Comintern (RDW). **D. P. C. (Leeds):** An amateur transmission but cannot trace call sign. **Piscator (Grantham):** (1) Details would tally with Madrid (EAJ7); recitations by Luis Medina, but this was not an outside relay; (2) PTT Lille. **Binks (E. 17):** Stuttgart, relaying Berlin. See first paragraph in "Via Ether." **RTZ/O. V. 2./J.W.F. (Gromer):** 2XG, Rocky Point, Long Island, New York (16.02 m.). **Mollie (Preston):** (1) 2XAA (Houlton, Maine) transatlantic telephony; (2) An amateur transmission, but cannot trace call sign. **School Boy (Alderley Edge):** (1) Berne (a lady announcer), concert of the works of Beethoven for violin, cello and piano; (2) If your estimate of WL is correct, Reval (Esthonia), *The Messiah* (Handel); (3) Aachen (Aix-la-Chapelle), relaying Cologne; (4) Rather vague, but possibly Madrid (EAJ7), children's hour. **Questor (Hawick):** (1) Moscow Comintern (RDW); (2) Madrid (EAJ7); (3) Geneva, The St. Matthew Passion (Bach) relayed from the St. Joseph's Church. **Jacko (Gerrards Cross):** (1) A U.S.A. station; possibly WOWO (Fort Wayne, Ind.); (2) possibly WORD (Batavia, Ill.), but cannot confirm; (3) U.S.A. station but your details are too vague to trace; (4) WBZ (Springfield); (5) possibly Oslo, which on one or two occasions has relayed U.S.A. transmissions, in which case you would have received this through Fredrikstad, but no foreign relay was advertised in the programme; (6) WJZ (Boundbrook); (7) Details are too vague; regret, cannot trace; (8) possibly WPG (Atlantic City); (9) U.S.A. station, but regret, cannot trace; (10) regret, cannot trace. **New Starter (N. 20):** 2PX advertised as amateur transmitter, East Ham. **Slim (Goudhurst):** (1) Langenberg, relaying classical and dance music from Cologne. The German National Anthem is played to the melody of the old Austrian Hymn; (2) Kalundborg, relaying dance music from the Restaurant Nimb at Copenhagen. **Curious (Southampton):** Yes, this was Berlin (Witzleben) gramophone record; see first paragraph in "Via Ether." **Jokey (Swindon):** Munich relaying the St. Matthew Passion (Bach) from the Odeon. **2 Valve (Taunton):** Leeds (277.8 m.), talk for Scouts: "Birds in Spring." **Barcelona (EAJ1), S. G. E. W. (Glasgow):** (1) 5NW amateur transmitter at Dundee; (2) yes, if WL correct, Breslau testing, but no, we cannot confirm; (3) yes, Posen (a lady announcer) giving light concert until 1 a.m. G.M.T. **Tommar (Sutton):** Apparently one of the Swedish relays of Stockholm, but cannot confirm as no details were advertised in the programme. **Kitten (Hartlepool):** This was a German station, as the National Anthem of that country is played to the melody of the old Austrian Hymn; your estimate of WL is surely wrong, we cannot say which as most of the German stations closed down at 11 p.m. G.M.T. on that date. **O. A. (Alnwick, Northumberland):** 5NW amateur transmitter at Dundee. **H. K. M. (N. 16):** Your details are too vague, regret, cannot trace; possibly an amateur transmission. **BM/BBTS (The Mount):** Nürnberg is now on 241.9 m., and Münster on 303 m. **R. W. A. K. (Liverpool):** (1) Yes, WEAF (New York); (2) Berne, relaying orchestral concert from the Gundeldinger Casino; (3) Yes, Brünn, relaying popular concert from Prague; (4) PTT Lille, relaying dance music from the Lilliana Dance Hall. **R. S. W. (Andover):** (1) 5SW B.B.C. experimental station at Chelmsford (Essex). **I Woodno (Thorpe Bay):** An amateur transmission but cannot trace as you give no call sign. **Longcliffe (Yeovil):** Nürnberg and Kaiserslautern taking the Munich programme. **Whey Rizit (Annan):** This was Königs wusterhausen, relaying Berlin. See first paragraph in "Via Ether." *World-Radio* issue April 6. **Robin (Kent):** Apparently Bordeaux (Radio-Sud-Ouest), but cannot confirm as no programmes are available. **Master Three (Stroud Green):** Cologne, giving a concert of classical and dance music. **5 Valve (Ely):** Stockholm relaying 5GB (working later than advertised in programme). **Interested (Sunderland):** Milan (Vigentino), see wavelenghts page. **Wamphray: Motala** (working later than advertised in programme) relaying 5GB,

E. C. H. (Kingston): (1) Posen (gramophone records); (2) All German stations close down by playing a few bars from this hymn, which is the melody of the National Anthem for that country, but we cannot say which transmitter you heard as you give no estimate of WL. **L. Thomson (Tufnell Park):** PTT Rennes, relaying PTT Paris; English lesson given by the Berlitz School. **Birdie (Stoke-on-Trent):** Regret, cannot trace. **BM/GEKW (Swindon):** PTT Paris, relaying dance music from the Coliseum in that city. **Tabletalk (Gambuslang):** From the last word heard, we should say that this was a Russian station, the nearest being Moscow Popoff (675 m.), but cannot confirm as no programmes are available. **Amorphous Q:** Would appear to be an official station, but regret, cannot trace. **Kitten (Hartlepool):** Correction—This was Döberitz (105 m.) relaying Berlin. **Angus (Leeds):** PTT Lille, relaying dance music from the Lilliana Dance Hall. **BM/BAHG (W.C. 1):** Brünn (Czecho-Slovakia). **Reinartz (Sunderland):** This was Posen, giving light concert until 1 a.m. G.M.T. **Wantem (Retford):** (1) More likely to be 2XAF (Schenectady); (2) Apparently 2BL (Sydney) on 32.5 m. **BM/PWM4 (Edinburgh):** Yes, Bergen and Madrid (EAJ7). **Mew (Mythe):** Brünn (Czecho-Slovakia); Call: "Hallo! Brno." **Sunnyside (Ipswich):** 5NW, amateur transmitter at Dundee. **Nighthawk (Ely):** This was the reception of Colonel Lindbergh at Washington on his return from his flight to Mexico and other South American States, relayed by many U.S.A. stations and also rebroadcast by most of the German transmitters; possibly heard through Langenberg. **Station Finder (Oxford):** WJZ (Boundbrook). **Two Dials (Boscombe):** Regret, cannot trace. **Dinic Four (Cornwall):** This was Warsaw, working later than advertised in programme. **3 Valve (Chatham):** PTT Lyons, relaying concert from the Theatre Mogador at Paris. **Rundfunksender (Headingly):** (1) WAMD (Minneapolis) 222.1 m.; (2) WEBH (Chicago) 365.6 m.; (3) We know of no station on a WL between that of Dublin and Breslau. **Avonia (Blaenavon):** Posen (a lady announcer) giving light concert until 1 a.m. G.M.T. **F. A. B. (Peruvian):** Porsgrund, relaying Oslo. **Beam (Chertfield):** (1) WL, apparently wrong; regret, cannot trace; (2) Königs wusterhausen, relaying Berlin; (3) Kalundborg, relaying dance music from the Restaurant Nimb at Copenhagen. **Tom's Box:** Belfast, relaying church service from St. Cuthbert's Parish Church at Edinburgh. **Gas (Luton):** An amateur transmission, but cannot trace as you give no call sign. **J. D. (Portsmouth):** Kaiserslautern relaying Munich; *The Passion*, according to St. Matthew. **Margaret (Shropshire):** Hamburg, weather and shipping news, followed by dance music. **H. J. H. G. (Dereham):** Kalundborg; this station often relays London and Daventry, but this is not always advertised in programmes. **J. E. Lee (Farncombe):** Possibly relayed by 2NM, amateur at Caterham (Surrey). **G. Satchwell (King's Heath):** Kalundborg, relaying dance music from the Restaurant Nimb at Copenhagen. **R. C. C. (Durham):** Apparently a U.S.A. station, but WL too vague, regret, cannot trace. **Tri Valve (Wye):** 5NW, amateur transmitter at Dundee. **H. F. (Brighton):** Details are too vague; regret, cannot trace. **Orpheon (Burnley):** PTT Lyons, relaying PTT Paris. **Vladimir (E. 14):** 2BL (Sydney) on 31.5 m. Cannot understand your coils; presumably this station was relayed by some other transmitter. **Mersey (Stockport):** Presumably an amateur transmission (gramophone records), but cannot trace as you give no call sign. **BM/KVCP (Derby):** Cannot trace any transmitter on that WL, presumably a harmonic. **Drahtlose (Downham):** Yes, WGY (Schenectady); dinner concert from the Hotel Onondaga at Syracuse.

NOTE.—Those who wish to take advantage of our free service by means of these columns must give a **NOM DE PLUME**, in addition to their own name and address. **PROPRIETARY TRADE NAMES MUST NOT BE USED AS NOMS DE PLUME.**

WORLD-RADIO (No. 142)

For replies to questions concerning the identity of stations heard, this coupon should be cut out and forwarded, together with particulars, written on a separate sheet of paper, to Editor, *World-Radio*, Savoy Hill, London, W.C.

Particulars should include: Date and time, approximate frequency (or wavelength), call (if heard), fading or not, signal strength, and details of programme. **N.B.—**Each inquiry must be accompanied by a separate coupon.

The Alternative Postal Service.

Whilst retaining in *World-Radio* the usual free published service of "Which Station Was That?" we have instituted a paid postal service, which enables a reply to be posted within forty-eight hours of receipt of details and a stamped addressed envelope. Each enquiry must be accompanied by a coupon and 6d. in stamps or P.O.

(Continued from Page 543.)

anode resistance and a .25 or .5 megohm grid-leak will answer. If a medium impedance valve is used the values already given will again do well. The value of C₂ may again be of order of .1 microfarad. In the plate circuit of the output valve a filter circuit is used, consisting of a choke, L.F.C., with an inductance of about 30 henries and a condenser, C₃, with a capacity of 2 microfarads or more. C₄ is a condenser of similar capacity shunting that portion of the high tension battery which serves the low-frequency valves. **R. W. H.**

Continental Programme Events

Sunday, April 15.

- 6 p.m. Frankfurt, Stuttgart.—"Boris Godunov" (Mussorgsky).
7 " Copenhagen.—"Aida" (Verdi).
7 " Hamburg.—"Old Heidelberg" (Meyer-Forster).
7 p.m.—Langenberg.—
"The Armourer of Worms" (Lortzing).
7.30 " Warsaw.—
Festival concert.
7.55 " Hilversum.—
"Faust" (Gounod).

Monday, April 16.

Special Italian programmes will be given by the following stations: Hamburg; Stockholm (7 p.m.); Königsberg (7.5 p.m.); Frankfurt, Stuttgart (7.15 p.m.); Berlin, Italian Operas in Co-Breslau (7.30 p.m.); 7 p.m. Copenhagen.—
"Rigoletto" (Verdi).

Maestro Egisto Tango, who is conducting the Italian Operas in Co-Breslau, Copenhagen.

- 7.30 p.m. Munich.—Symphony concert.
11.5 " Barcelona.—Goya festival programme.

Tuesday, April 17.

- 5.30 p.m. Munich.—"Der Rosenkavalier" (Strauss).
7 " Radio Paris.—"Aida" (Verdi).
7 " Oslo.—"A Doll's House" (Ibsen).
8 " Rome.—"The Pearl Fishers" (Bizet).

Wednesday, April 18.

- 6.30 p.m. Stettin.—"Fra Diavolo" (Scribe).
7 " Copenhagen.—"Il Trovatore" (Verdi).
7 " Hamburg.—"The Black Domino" (Auber).
7 " Stockholm.—"Turandot" (Puccini).
7.15 " Langenberg.—"Der Jäger vom Königssee" (Adolf Klages).
7.30 " Radio-Paris.—Mozart festival.
8.15 " Brussels.—"Carmen" (Bizet).

Thursday, April 19.

- 6.30 p.m. Vienna.—"The Daughter of the Regiment."
7.15 " Langenberg.—Symphony concert.
7.30 " Warsaw.—"Enfin seuls" (Lehár).
7.45 " Rome.—"La Bajadera" (Kalmán).
7.50 " Milan.—"Faust" (Gounod).
8.45 " Hilversum.—Symphony concert.

Friday, April 20.

- 7 p.m. Copenhagen.—"A Masked Ball" (Verdi).
7.10 " Berlin.—"The Devil's Share" (Auber).
7.15 " Stuttgart.—"The Maid of Orleans" (Schiller).
7.50 " Naples.—"Don Pasquale" (Donizetti).
8.5 " Hilversum.—Selections from "The Messiah" and "Acis and Galatea" (Handel).

Saturday, April 21.

- 6.30 p.m. Königsberg.—"Marriage of Figaro" (Mozart).
9 " Dublin.—"Lucia de Lammermoor"

ASTOUNDING HEALTH DISCOVERY

SCIENTIST'S MARVELLOUS ELECTRICAL INVENTION

Brings Back Lost Youth, Wipes Out the Tell-Tale Marks of Old Age, Banishes Constitutional Diseases, and Builds Health in Every Body-Cell.

Fascinating FREE BOOK for every "World Radio" Reader.

Remarkable History of an Amazing Invention.

If ever an inventor and scientific thinker has had a right to congratulate himself on the triumphant issue of his lifelong researches, assuredly that man is Mr. O. OVERBECK, F.R.S.A., F.P.S., F.P.C.(Lond.), etc., the English analytical chemist who has devoted such a large portion of his time in the national interest to so many branches of scientific research.

For Mr. Overbeck is to-day the living witness to the scientific accuracy of his conclusions and their splendid practical application in an invention that has begun a new epoch in curative science.

A few years ago Mr. Overbeck was a dying man. To-day he is a miracle of untiring energy, bubbling over with enthusiasm, alert to his finger tips, with the muscles of an athlete, the appetite of a hunter, and sufficient physical vitality to laughingly tire out a whole party of sturdy youths.

This remarkable recovery of health and vigour Mr. Overbeck attributes entirely to the rejuvenating electrical instrument he has invented, patented, and appropriately named Overbeck's Rejuvenator.

The Secret of Youth.

In an interview with representatives of the Press Mr. Overbeck said:—

"The root idea of my rejuvenating electrical instrument is that human life is governed by electrical energy. The brain is the accumulator of the body, and if the brain can be filled artificially with electricity, the artificial electricity will make up for the loss of natural electrical energy. I have tried my invention during the past two years and I am a new man.

"My age is sixty-four years, but I feel like a man of thirty and I am mentally more alert than ever. My muscles and skin are those of a young man. I once

had little hair, but now, as you see, I have a plentiful supply, and it is turning from grey to brown.

"My heart was so weak four years ago that my doctor told me to make my will. The heart disease is gone, and so has the kidney trouble from which I was a chronic sufferer. My spectacles are no longer needed."

Mr. Overbeck traces all diseases, other than those produced by germ attacks, to Electrical Unbalance.

A particularly noteworthy fact about the Rejuvenator is that it accomplishes its astonishing results without producing any sensation during treatment.

Mr. Overbeck has written a descriptive book, with illustrations, which fully explains in simple language how to use the Rejuvenator, and arrangements have been made for this to be sent free to every reader of "World-Radio" who forwards the Application Form below, enclosing threepence in stamps to cover postage.

What Doctors Say:

"Mr. Overbeck's system introduces a new note into Electro-Therapeutics."

"I can confidently recommend it for the treatment of constitutional disorders, such as Rheumatism and Gout, which are amenable to electro-therapeutic treatment, for Nervous Disorders, Loss of Vitality, and a General Run-Down Condition."

.....M.B., Ch.B.

"This instrument with its various fittings, is a perfectly safe means of applying medical electricity to the treatment of a variety of disorders, provided the very simple instructions are carried out."

.....M.B.

"It has been beneficial in a case of muscular atrophy of the legs after severe illness, and personally I have used it on my bald head and am certainly gradually getting a good crop of hair for which I am very thankful and pleased."

SignedM.D., M.B., C.M., F.R.C.S.

What the Press Says:

The Press, not only of the Empire, but of many foreign countries, has drawn attention to Mr. Overbeck's remarkable invention for prolonging life and banishing disease.

The following extracts are from British journals:—

"Health and Efficiency" (the leading health magazine) says:—"The Overbeck Rejuvenator is well so called because the extraordinary difference in his own and other people's appearances, palpable to everybody, has been so marked after using the process."

The "Sunday Pictorial" says:—"Doctors in Australia, India, Germany, France, Austria, Poland, Rumania and America are experimenting with the machine and reporting, it is stated, remarkable cases of rejuvenation and relief of suffering."

The "Daily News" describing a demonstration of the Rejuvenator given by Mr. Overbeck at the Savoy Hotel, London, says:—"Mr. W. J. Womersley, M.P., who presided, said that he had known Mr. Overbeck for many years, and during the last two or three years his health and appearance had improved wonderfully."

World-Wide Demand.

Orders for Overbeck's Rejuvenator have been received from such far-asunder lands as Canada, Australia, New Zealand, U.S.A., France, Italy, Norway, Germany, Liberia, West Indies, South Africa, Argentine, Siam, Malay States, Newfoundland.

A New Electronic Theory of Life

The original electronic theory By O. OVERBECK, F.R.S.A., F.P.S., F.P.C.(Lond.), etc.

2nd Library Edition. 6th Thousand.

6s. net.

At the request of the MINISTRY OF EDUCATION

two copies of this most sensational and remarkable book have been supplied to the SCIENCE LIBRARY at South Kensington.

The book is written in simple non-technical language that everyone can understand, and contains information which is the basis of glorious health for everyone who cares to follow it.

Obtainable through any bookseller, all W. H. Smith & Sons' establishments, and the Times Book Co., Ltd. 42, Wigmore Street, London, W. 1, at 6/- net, or post free for 6/6 from O. OVERBECK, CHANTRY HOUSE, GRIMSBY.

The following are briefest extracts from the reports of progress received from hundreds of users of Overbeck's Rejuvenator:—

HEART TROUBLE.—"I suffered with valvular lesion of the heart that incapacitated me from all laborious work, but after using your machine a very short while I began to feel great benefit and my breathing became more normal."

CHEST TROUBLE.—"I have received great benefit to my chest by the use of your instrument. I used to cough all night until I fainted, but now sleep well."

AGONISING SCIATICA.—"I used to suffer very much from sciatica and could scarcely walk 100 yards without feeling agonies of pain. This has now almost entirely disappeared and I am now able to walk miles and play golf the whole day long without feeling the slightest pain."

NEURITIS.—"I can testify to complete cure of Neuritis in the arm, absolute disappearance of periodical nervous headaches, enormous benefit to the eyes."

RHEUMATIC GOUT.—"I have just cured a patient of rheumatic gout, severe form, and surprised three doctors."

LOST HAIR COLOUR.—"My hair, white but a few weeks ago, is gradually returning to its normal shade of brown."

To every reader seeking Health and Vigour who forwards this "World Radio" APPLICATION FORM.

To O. OVERBECK, F.R.S.A., etc., Chantry House, Grimsby.

Please send me a copy of the FREE BOOK which fully explains "OVERBECK'S REJUVENATOR" and contains overwhelming proof of its power to banish Constitutional Diseases, restore Lost Youth and Build Health in every Body Cell. I enclose threepence in stamps to cover postage.

In all these cases Overbeck's Rejuvenator has proved amazingly successful.

A Little Beauty

This title, of course, well befits our illustration, and is equally applicable to the "HART" 'COMPARTO' High Tension Wireless Accumulator, which has been acclaimed by trade and public alike.

The "HART" 'COMPARTO' High Tension Accumulator is assembled in a compact 12-volt unit (as standard), and forms an ideal method of high tension supply, increasing the power and improving the tone of reception.

Higher voltages, as required, are obtained by connecting, in series, the necessary number of 12-volt units, each of which is self-contained, with a capacity of 1,500/3,000 milli-ampere hours.

"HART" 'COMPARTO' HIGH TENSION WIRELESS ACCUMULATOR.

Indispensable to users of multi-valve Receiving Sets.

Price :: 12-VOLT UNIT :: 8/8

HART BATTERIES

FOR ALL WIRELESS CIRCUITS

Write to-day (Dept. 'W.R.') for full particulars and for FREE copy of illustrated booklet of interest to all wireless users.

Greyhead

By MICHAEL STRANNY

OLD women said that Greyhead had lived from time immemorial and belonged to the devil himself; that he was an *oboroten* (were-wolf) and could change his shape at will. No bullet, they said, not even one with the sign of the Cross on it, could kill him.

But Marpha, the witch, declared that Greyhead could be killed—on a Christmas Eve—if three avengers, after crossing themselves three times, together fired three successive bullets at the son of the evil one.

Men believed Marpha, the witch. Was she not a white witch—not evil as other witches? Always they crossed themselves three times before they fired, three times, at Greyhead. But they always missed—even on Christmas Eve. The best shots in the district could not hit the old wolf.

The fame of Greyhead and his pack spread far and wide. An evil fame. At his name men crossed themselves—three times, if the name was spoken between October and April, for during those months, when almost all Russia lies under deep snow, when the temperature drops below zero and the air itself seems to be possessed of fangs waiting to bite, the wolves can travel fast over the crisp, dry snow.

In summer a wolf will slink away like a beaten dog on meeting a man, but in winter . . . the pack will come close to a village and lie in wait in the shadow of the forest edge. If a man leave his hut after nightfall, he may never be seen again. Emboldened by hungry bellies, the pack may even make a raid on the village in the early hours of the morning . . . a child may stray from the protecting threshold . . . an affronted dog may make a foolish rush . . .

In common with thousands of others all over Russia, the peasants of Peski, having finished their harvest labours and the storing of pine logs for fuel, resigned themselves to the meagre comforts of their low, tumble-down *izbas*, grateful for shelter and warmth for their families and what they had of poultry and cattle. The *moujik* would seldom be out after dusk, unless, as sometimes happened, he was delayed on the road when returning with his horse-drawn sleigh with supplies from the distant town. Then, God preserve him from the terrors of the night . . . when the impenetrable shadows take lean, fearsome forms, when a howl like no other pierces the distance, when at any moment the blackness may be studded by hundreds of pairs of red-hot, hunger-maddened eyes.

This winter, tedium was banished from the long nights in the village of Peski. The village schoolmaster had become an "amateur." He was immensely proud of his "station." True, he could not transmit far, but with the schoolmaster at Tchijovo, only fifteen miles away, and one at Striji, there was more than enough of interest in the exchange of "local news," even when there was no official broadcasting to be received. In the matter of reception there was no limit to the possibilities. Moscow was brought to Peski every evening, and sometimes far-away foreign stations also, as certificates displayed upon the wall certified.

Even the menace of wolves could not keep the villagers at home, and to-night, Christmas Eve, an impatient assembly filled the village school, eagerly awaiting the return of four peasants who had taken two sleighs to the nearest town for Christmas fare and who were to bring with them valves, batteries and some fresh literature for the schoolmaster.

Presently there would be music and song from Moscow: nothing of Christmas import, of course. There were strange ideas abroad nowadays . . . but Moscow was far, far away, and, despite numerous decrees, Peski had changed very little . . . Christmas Eve was still charged with religious significance.

Meantime, the schoolmaster sat, telephones over his ears, waiting for a sign from one or other of his distant friends.

As the condenser dial crept round, a sound was heard, persistent, but faint . . . then clearer. . . . It developed. . . . "PSK . . . PSK . . . PSK . . ." The schoolmaster threw over his switch and replied to the call. . . . Switched over again. He alone of the company understood Morse. . . . Dash, dash, dot . . . dot, dash, dot . . . dot . . . dash, dot, dash, dash . . . dot, dot, dot . . . dot . . . dot, dash . . . dash, dot, dot . . . "G-R-E-Y-H-E-A-D . . ." Greyhead has just passed Tchijovo with his pack. . . . A man and two dogs have been killed. . . . The pack went in the direction of Peski. . . . Warn everybody. . . . End of transmission." The schoolmaster felt his blood running cold. . . . Greyhead leading his pack across the lake towards Peski, and the four villagers still on the road. . . .

Within a few seconds the whole village seethed with excitement. Doors were opening and shutting everywhere. . . . A crowd of *moujiks* emerged, armed with rifles, hunting knives, pitchforks and axes, and, with the schoolmaster leading, hurried off in the direction of the main road, while their women-folk, frenziedly crossing themselves, secured the doors and the windows of their huts. Mercifully, there was a full moon, and one could see a long way off across the glistening white snow.

Greyhead was grey all over, grey on account of his great wolfish age, and for that same reason so lean that one could count his ribs through the numerous bald patches in his shaggy hide—that is, provided one stopped long enough to do the counting.

But, in spite of his great age, Greyhead was still strong and could cover many miles without hanging his tongue out very far. Greyhead had a taste for human flesh, he found it better, much better, than the flesh of horse or sheep; more tender, more tasty than even the flesh of pig, but much more difficult to get.

The human male had no fangs and no claws for defence, but he was full of tricks. He carried a stick that roared and killed . . . also a long tooth that bit deeply into the flesh. . . . he could surround himself with dead wood and make it alive and crackling, glowing like a wolf's eyes in darkness, and agonising to touch! . . . But nevertheless humans were worth trailing. Sometimes they left their roaring sticks behind, and forgot to bring with them their long tooth; and if they were not given time to collect the dead wood, or the wood happened to be wet, they became an easy prey. Humans could not run fast enough to escape the pack, even when they had long pieces of wood attached to their feet; they soon became tired and breathless. They seemed to have no senses to warn them of the pack's approach, provided the young and inexperienced wolves did not begin to howl too soon in the heat of the chase. Greyhead scented the horses of the returning Peski villagers soon after the pack left Tchijovo. He growled quietly and wheeled to his right, taking a short cut instead of the turns and twists in the road. The pack followed the leader and the dark shadows became somewhat longer as the pace of the wolves increased with the scenting of the prey.

Greyhead's heart was thumping joyfully against his ribs. . . . What luck! . . . Four men and six horses with heavily laden sleighs. Their scent was shifting slowly. . . . This meant that they were travelling at a leisurely pace. Greyhead's hair bristled at the back of his neck and he instinctively increased his stride. He did not like to take risks. Experience had taught him to make sure of his prey without delay. . . . The humans must be overtaken before they had a chance to reach their lairs. . . .

They were quite near . . . perhaps a little more effort . . . Suddenly Greyhead stopped. He could now see the belated travellers, but there came to his nostrils a new scent, the scent of numerous sheepskins, dead sheepskins worn by men . . . there were men on his left . . . still, there might be time yet . . . a loud howl escaped Greyhead and was echoed by the pack . . . the wolves flew over the crisp, dry snow.

At the howl the horses on the road shied, recognising the presence of their dread enemy, and, with a mighty effort, changed their leisurely trot into a mad gallop despite the heavy loads.

The startled travellers had barely time to grasp the ropes binding the bales of goods to the sleighs and so avoid being thrown out. One of the men, who had been fast asleep, woke with a start, saving himself from a fall with great difficulty, and swore. "What is the matter with our accursed grass bags? . . . Have they gone mad?" "Wolves," muttered his companion, and crossed himself.

Four white-faced men held on grimly to the flying sleighs, praying fervently to be permitted to reach their village before the wolves caught them, praying in spite of the decree of Moscow that religion was "dope" for human reason.

One of the men fired at the shadowy, rapidly moving pack, but the sleigh jerked and his shot went wide. . . .

The wolves increased their pace, but the terrified horses still managed to keep their speed on the hard, frozen road. . . . Peski appeared in view. The wind changed . . . Greyhead lost the scent of the dead sheepskins and in the heat of the chase forgot all about it.

And suddenly the night was rent by thunder and lightning. . . . Thirty rifles roared together . . . roared again and again. . . . The pack stopped. Another instant and the infuriated peasants were right in the middle of the pack, firing at close range, stabbing . . . hacking. . . .

The pack turned tail. . . . But they left half of their number in the crimsoned snow. And they had lost their leader.

Greyhead, the wily old Greyhead, whom no bullet could kill, was feebly kicking his legs in the air. Pitchforks held him down . . . three bullets had bitten deep into his side, six others had scored his hide. . . .

Three men had fired, three times each, after crossing themselves three times, as Marpha had predicted. The end of Greyhead had come at last—on the eve of Christmas. Greyhead was dying . . . another would lead the pack. . . . But Greyhead's dimming brain feebly tried to piece together a mystery. How had humans, with no sense of scent, got warning of the pack's approach? Life was going to be harder for wolves in the future—it were well to die and leave the puzzle for a younger leader.

A New Use for Loud speakers.

The loud speaker as a labour and time saver has recently been installed in two important buildings here—a large hotel and the Patent Office. In the former it is being used as a means of calling customers to the telephone, the telephone clerk speaking through a microphone attached to loud speakers in the public rooms. The Patent Office has the microphone in the Council Chamber where inventors have to appear to justify their claims, the loud speaker being in the waiting-room.

On the initiative of the Federal Council of the Churches of the United States, eight radio stations are putting out simultaneous Bible readings every day, reaching from Boston to San Francisco and from the Great Lakes to the Gulf of Mexico. In this way the Gospel according to St. Matthew was read through during January, and St. John's Gospel during February. It is interesting to note the two facts which are thus indicated: first, the general desire of the public to participate in this daily reading, and secondly, the sympathetic attitude of the broadcasting stations.

PROGRAMMES FOR SUNDAY (April 15)

NOTE: THE HOURS OF TRANSMISSION ARE REDUCED TO GREENWICH MEAN TIME.

BARCELONA (Spain) Radio Barcelona (EAJ1). WL. 344.8 m. (870 kc.); 1.5 kw. 10.0 a.m.—Chimes and Weather. 12.30 p.m.—Variety Concert. 5.30 p.m.—Orchestral Selections. 6.0 p.m.—Soprano Songs. 6.0 p.m.—Recitations. 6.20 p.m.—Orchestral Selections. 6.50 p.m.—Soprano Songs. 7.20 p.m.—Orchestral Selections. 7.40 p.m.—Sports Notes.

7.0 p.m.—"Der Weibsteufel"—Play. Followed by Light Music.

Exide BATTERIES IN AUSTRALIA

The following tribute to Exide batteries appeared recently in an Australian wireless trade periodical:—

WORLD-WIDE REPUTATION

There is no battery better known throughout the radio and electrical world than Exide. These batteries are used at the La Perouse Receiving Station, which handles the reception from 2LO (London) of the programmes which are rebroadcast to Australian listeners. 2FC also uses Exide batteries in the apparatus which is assigned for the rebroadcasting of the London programmes. Most of the Marconi systems throughout the world are also equipped with Exide batteries.

The continued use of these well-known batteries for the above purposes, and in hundreds of other enterprises where good batteries are essential, is ample tribute to the permanent efficiency of Exide.

Exide

THE LONG LIFE BATTERY

Advertisement of The Chloride Electrical Storage Co., Ltd., Clifton Junction, near Manchester.

TYPE WH. 10-VOLT.

CAPACITY 5,000 milli-amp. hrs.

PRICE 7/6 without acid

Supplied in 10 volt and 24 volt units, and in 40 volt and 60 volt assemblies (in polished wood crate with detachable wire carrying handle).

EXIDE H.T. BATTERY Type WH	Capacity 5,000 milli-ampère hours
24 volt unit	£1 4 0
10 volt unit	0 7 6
Complete in Case with detachable wire handle.	1 17 6
60 volts	2 14 0

MASS TYPE CELLS FOR LOW TENSION.

These cells will stand for long periods on open circuit without detriment and give an exceptionally steady discharge. The most satisfactory and economical type of cell to use for the average receiver, and they are an enormous improvement on the ordinary Leclanche battery for the operation of electric bells in houses, offices, factories, etc.

Type	DTG	DFG	DHG
Capacity on slow intermittent discharge	20 a.h.	45 a.h.	100 a.h.
Price per cell	4/6d.	8/6d.	16/-

PROGRAMMES FOR MONDAY (April 16)

NOTE: THE HOURS OF TRANSMISSION ARE REDUCED TO GREENWICH MEAN TIME.

NO VALVE LIKE IT

BALANCE

Everything depends upon getting the Valves in your wireless set to pull together.

You would not suddenly put Jack Hobbs, excellent cricketer though he be, into the Cambridge boat and expect him to pull stroke.

Why, then, buy an assortment of valves of different makes for your set and expect them to give balanced reproduction?

It is balance first and balance every time that you require amongst your valves, that is why you should fit a set of SIX-SIXTY Valves to your receiver without delay.

Ask your dealer for SIX-SIXTY Valves by name, and accept no other.

SIX-SIXTY
GLOWLESS VALVES

THE ELECTRON CO. LTD., 122-124, Charing Cross Road, London, W.C.2.

Reliability

SURE-A-LITE Batteries are an outstanding success because they are absolutely reliable. Install a SURE-A-LITE and your troubles disappear.

SURE-A-LITE means smooth and silent working, exceptional powers of recuperation, fully maintained voltage.

SURE-A-LITE cells are larger than any other. Every SURE-A-LITE incorporates Grid Bias.

You can't have any trouble with SURE-A-LITE. They are supplied sealed in dust-proof covers, and the seal is your guarantee of perfect condition.

SURE-A-LITE

BRINGS MOST IN — GIVES MOST OUT

 9.10 p.m.—Gramophone Selections.

Short Wave Reception for Everyone

With this revolutionary set every member of the family can tune in the American and Australian short-wave broadcast stations clearly on the loud-speaker almost as easily as they receive the local station.

The Igranic Neutro-Regenerative Short Wave Receiver is the first and only receiver to employ high-frequency amplification on the short waves below 100 metres. The development of an entirely new neutralising principle in the Igranic laboratories has made this possible. The practical result is enormously increased sensitivity, improved purity, and considerably simplified control. There is no other short wave set with these features.

You cannot realise the thrill there is in hearing the programmes in the English language from the distant parts of the Empire and America until you have had this set. Send now for List No. J534. It gives full particulars.

149, QUEEN VICTORIA STREET, LONDON, E.C.4.

Works: Bedford.

Branches: Manchester, Birmingham, Cardiff, Leeds, Newcastle, Glasgow, Bristol.

Igranic Neutro-Regenerative Short Wave Receiver.

Supplied with transformers for 15-40 metres and 30-70 metres, but without valves and batteries.

Four Valve Model.

In mahogany cabinet. Price £26 15 0
 Without cabinet. Price £22 5 0
 Marconi Royalties £2 10 0 extra.

Three Valve Model.

In mahogany cabinet. Price £24 0 0
 Without cabinet. Price £20 0 0
 Marconi Royalties £1 17 6 extra.

NOTE.—This set is also obtainable in kit form for those who prefer to build their own sets and thus save expense. Full instructions are supplied.

IGRANIC SHORT WAVE COILS.

Many existing sets of the detector and low frequency amplifier type can easily be adapted to short wave reception by merely plugging in Igranic Short Wave Coils. While not being as efficient as the Igranic Neutro-Regenerative Short Wave Receiver, a set, so converted, gives good results owing to the outstanding efficiency of Igranic Short Wave Coils. Ask your dealer.

GET BETTER RESULTS WITH EDISWAN WIRELESS EQUIPMENT

Ediswan Vacuum Anode Resistances.
 (The only British-made glass-enclosed Vacuum Anode Resistance)
 Made in values of 40,000 to 250,000 ohms. Constant resistance—no heating—noiseless.
 Price 2/6 each.

Ediswan Vacuum Grid Leaks.
 (The only British-made glass-enclosed Vacuum Grid Leak.)
 Steady resistance under working conditions. Low capacity—noiseless—accurate. In values of 0.5 to 5 megohms.
 Price 2/6 each.

Cartridge Condenser (glass-enclosed) and clip.
 The Ediswan Cartridge Condenser, available in values of .0001/2/3/4/5 and .001, fits into the standard Clips for Grid Leaks, offering a simple method of changing values.
 Condenser: Price 1/6 each.
 Clips: Price 1/- each.

"UNUSUALLY IMPRESSIVE REPRODUCTION"

READ THIS EXCEPTIONAL TESTIMONY

Dear Sirs, 9-9-27.

I would like to inform you that I have had 2 Ediswan Valves now working for exactly 3 years on an average of 5 nights per week and have experienced no trouble whatsoever from them.

They have only been taken from set for cleaning purposes, and they are still giving excellent results.

G.W.C.J., Portsmouth.

The ultra-efficiency of Ediswan Valves effects an immediate improvement in a set which is already good. Ediswan Valves ensure more volume; crystal clear reproduction; and bring in those other stations with unflinching power.

says Prof. A. M. LOW, A.C.G.L., M.I.A.E., etc.

Dear Sirs,—I am able to report to you very satisfactorily concerning the ONE-DER Loudspeaker. It is virtually impossible to reproduce every frequency on any mechanical apparatus, and it is therefore necessary to design a Loudspeaker in such a manner that with ordinary room surroundings the tones are such as will undergo reflection and absorption, without distortion being normally apparent.

The ONE-DER Loudspeaker is particularly good in this respect and can be used with excellent results for the reproduction of both orchestral and vocal music, in such a manner that accuracy is well maintained.

It is unusual to find a Loudspeaker which is capable of such characteristic and impressive reproduction.

The importance of pure reproduction cannot be over-estimated now that wireless has become a matter of general service to the public for both business and pleasure.—Believe me, yours faithfully,

(Signed) (Professor) A. M. LOW,
 A.C.G.L., M.I.A.E., etc.
 Woodstock Road, London, W.A.

THE NEW EDISWAN ONE-DER LOUDSPEAKER

EDISWAN VALVES

A type for every purpose

THE EDISON SWAN ELECTRIC CO., LTD., 123/5, QUEEN VICTORIA STREET, LONDON, E.C.4.

Inside a Mullard P.M. Valve

Inside no other valve whatsoever is the wonderful Mullard P.M. Filament: the filament that does its job as no other filament does it, consuming only 0.075 ampere filament current, and possessing a length of life and quality of performance that is unequalled.

For improvement in any radio receiver demand
