However, I recently witnessed an incident on a London bus that opened my eyes, because the dramatic conflict in it was politeness versus impoliteness, and the whole thing hinged upon fluency. We were approaching Sloane Square in a crowded bus (only five standing inside, please). We stopped, and some got off, others got on, including a stout woman in a floppy hat. Then the conductor came along, and she asked for some piece of information to which he replied in an accent so vile that I could not understand it. Neither could she, so she said to the conductor: 'Why do you men mangle your own language so?' To which he replied—and a beautiful reply it was, since it was both truthful and insulting at the same time: 'My friends all know what I say.' Then she said: 'You're very crude, my man,' and the fight went on from there. At last she ostentatiously searched for a pencil to write down the conductor's number, and she was actually handed one by the woman beside her, who said: 'And when you've finished writing his number down I'll write it too, and give him my name and address.' A man across the aisle leaned forward and said: 'You've lost the argument, lady.' And a standing passenger said: 'Talk about rude!'

'Someone Had Broken the Code'

Shortly after, she got off; and then in the bus there was the most elaborate demonstration of politeness. Men got up to offer ladies their seats, the conductor asked a woman if she was nicely settled before he rang the bus off—everyone began demonstrating how polite he could be, although five minutes earlier they had tripped one another up with feet in the aisle, jockeyed for seats, scowled at one another. What made the difference was this: that someone had broken the code, and it really shocked the passengers. It was, to speak quite precisely, an outrage. It struck me particularly, because in Canada, had such an exchange taken place the passengers would not have drawn together so publicly, because the woman's behaviour would have seemed tiresome rather than outrageous. She was actually being punished by an impromptu tribunal.

Setting aside her quite evident rudeness for a moment, she too had been outraged: outraged by the stream of ugly and shapeless syllables that issued from the conductor's lips. I venture to say that if she had had the wit or the good humour to make her protest in a different way she would have had the whole bus with her, against the conductor, for his mangling of his own tongue. This really matters to the British. Along the main street of the borough where I am staying I have seen three signs in shops, reading 'Well-spoken Boy Wanted.'

I used to think that 'well-spoken' meant having that subservient politeness required in certain places or at certain times. A Canadian journalist friend of mine was introduced to a Press officer in London, and in the course of their first chat together my friend kept calling the other man 'sir.' Later on he was puzzled by the coldness of his new acquaintance. I found out the reason by asking the man who made the introduction. He said that because the Canadian continually said 'sir,' he was admitting that he sensed an inequality in their positions. He was, therefore, rejecting an opportunity for friendship. Now this is a subtlety that I cannot grasp, although I can understand it. In Canada, 'sir' is a word used between equals, and has roughly the same force as 'old boy.' The Press officer expected to be called Mr. Blank, but the poor Canadian shied away from that, because in Canadian eyes that would suggest an inferiority.

I pursued this—in an academic spirit, by the way—and learned that if these two men were to work together they would use unadorned surnames. Later on, at some indescribable moment of union, they would use Christian names. These matters of protocol can scarcely be learned: they must be experienced; one's system must be impregnated with them, as it were. But this has nothing to do with fluency, which is what really lies behind the phrase 'well-spoken.'

To speak quite personally, I have always been astonished at the flair, the gift for language which the English have: the gift for their own language. They are conscious of the language as a plastic thing, a malleable and changing material. I have often told friends of my meeting with a man who lived out his working life in a room far below the ground. His work was to collect cartons, cardboard boxes, and used wrapping paper, and to feed this into an enormous press which disgorged it as a tightly packed bale, wrapped with wire. He had no work-mates, no contact with the outside except at morning and night. He

even ate his solitary lunch beside his hydraulic press. 'A typical lower-class working man,' is the usual description.

I was sent there to look for a carton of a certain size which I needed. I spoke to him, and he spoke to me about his work. His language was, in the circumstances, extraordinary. He had thought about his work, about the bales he made, about the defects or advantages of his particular machine, of the noises that came to him through a ventilator, of the solitude. People say he was an exceptional man. I ask: why is an exceptional man content with solitary confinement for a few pounds a week? No, he was not exceptional. It is not impossible that he would be incapable of an extended conversation on a subject about which he knew little. But on his own subject he was observant and fluent: well-spoken.

I wonder if both the politeness that I detect and the fluency which I enjoy both stem from the English reliance on models. This is, for example, an adult-orientated society (where in the United States, and increasingly in Canada, it is a child-orientated society). Here the adult is important, the child less so. Children are kept as children much longer: the long trousers are withheld, the girls' long locks are cut only with ceremony, there is discipline and routine of extraordinary elaboration. Even the picture-books for colouring give the blank drawing on one page with the suggested, or model, coloration on the opposite page. Always the adult model is held up, in work and in manners. This is a society where old age, and the wisdom supposed to be inherent in that state, are valued in a way difficult for a North American to grasp. There are examples held up, patterns, models, on which the eye must be kept fixed.

English politeness seems to me to have two forms. One is the due consideration to another—an active politeness, as it were. The other is the example-setting one that says: 'I too am a keeper of the model.'

The model of language is held up, too. The phrase 'by precept and example' is so English. Pupils write imitative exercises, pattern their behaviour and speech on their fathers, or on those who stand in place of their fathers. This is not the way things go at all in the New World, which, of course, owes its existence to the great abandonment of a traditional society. Most people say that the pioneers simply had no time for politeness, manners, and pretty speeches. I have always thought it was much more deliberate a breaking of the mould. The greatest rebellion against one's own society is one that overturns the habits of manners and of speech. (*Broadcast in the BBC's General Overseas Service*)

The Two Partnerships

Continued from page 3

Today with our greater understanding there is humility in the minds of scientists. The further we penetrate into nature's secrets the more clearly we see the ever-receding frontiers of knowledge, those illimitable vistas of the unknown, the great complexities of nature and her marvels. In this century man's swift progress has demanded constant changes of the concepts through which we interpret the behaviour of matter, of energy, and of the living cell.

Each generation, therefore, will have its own concepts which express its experience of the physical world, and there is an essential similarity of those concepts with those of the spiritual life which again express the pattern of human experience. Is there not a deeper unity that binds these two together?

I would remind you, too, that some of the great landmarks of understanding like the Quantum Theory have come in moments of inspiration, not by conscious reasoning but by one of those flashes of intuitive perception which are common to spiritual and material revelation—to Wordsworth and Blake as well as to the saints and prophets of every great religion.

Now whatever our ideas may be about the origin of the universe, of which our planet is a microscopic part, I do not believe that anyone with some understanding of the marvels of its creation can in his heart regard it as a purposeless accident. Whatever our ideas may be, the events of the past half century have brought us face to face with the problem of human destiny. Never before has man had it in his power to destroy in a fraction of a second all that those centuries of human effort have achieved; never before has he known so clearly the limitations of those human efforts and his inevitable dependence on nature and her ways. There are the material needs of mankind and there are the spiritual needs of the human soul. And it seems to me inevitable, with the dilemma that mankind is facing, that these two should be drawn closer together, and that the path of human destiny must lead to some reconciliation between them. (*Broadcast in the BBC's General Overseas Service*)

In one of the few places in London where only pedestrians are allowed it is pleasant to loiter at shop windows or to make leisurely purchases from a barrow

Shepherd Market Mayfair

CYRIL RAY takes you into a little-known corner of London's West End, where, away from the roar of traffic, something of a village atmosphere survives in streets of small houses, shops, and taverns

TUCKED away between Piccadilly, with its clubs and great hotels and motorcar showrooms of the most glittering kind, and the stately streets of Mayfair, where the great aristocratic mansions are becoming flats or embassies or office blocks but still looking large and rich and well cared for, is Shepherd Market—just three or four little streets too narrow for cars, and a few shops and old houses and pubs, but with a character and a personality all its own.

The fact that it is called Shepherd Market has nothing to do with flocks of sheep and that kind of shepherd. It is named after an eighteenth-century architect, Edward Shepherd, who built grand houses for rich people in these parts. But there is a rural ancestry to the district, all the same, because this is where the May Fair was held that gives the aristocratic surroundings their name: Mayfair, applied now to the big houses just around and outside Shepherd Market, but so called because for a hundred years or so, from about 1660 to 1760, there was a fair here every May. And a great nuisance it was, with noise, and people getting drunk, and pickpockets and footpads about, and shrill women of the town—a great nuisance to the great houses round about.

From the Mansions Round the Corner

So the fair got stopped, but all round the tiny area where it used to be a sort of little village had grown up—taverns and little shops—and this is the Shepherd Market we still know today. There were shops where a duke's chef could send out in a hurry from the Mayfair mansion round the corner for herbs and vegetables he had forgotten to order from the market; and perhaps the butler would slip out for a pint of ale at the tavern at the corner.

As recently as fifty years ago a London essayist wrote about Shepherd Market: 'Gentlemen's gentlemen, such as one meets about here, remain very much the same; the coachmen and butlers and footmen who today emerge from the ancient inn, wiping their mouths, are not, save for costume, very different from those that emerged wiping their mouths from the same inn in the days of Walpole and Charles James Fox.'

Times change. Some of the little shops are espresso-coffee bars; some of the little pubs sell far more cocktails than old English ale; the descendants of the duke who talked about, who lived in a Mayfair mansion, would be glad to have a little flat in one of the old eighteenth-century houses, and perhaps sell antiques in the little shop on the ground floor, facing the narrow street where only pedestrians can go, where there is room to loiter at shop windows. But you will notice I talk about little shops, little pubs, little flats. This is still a little corner of London, with everything on a village scale, and you can still see the eighteenth century in a fanlight here, a pedimented window there, and in the warm colour of 200-year-old brick. (Broadcast in the BBC's General Overseas Service)

In the days when the great mansions round the Market were aristocratic homes 'gentlemen's gentlemen' could slip out for a drink at the corner tavern

This year, after a lapse of 200 years, the May Fair was revived: programme-sellers wore period clothes, and King Charles strolled with Nell Gwyn

Groundnuts are the territory's chief export: the nuts are loaded into barges at wharves along the length of the Gambia river for shipment down to Bathurst

The Gambia

LADY SOUTHORN, speaking in the 'I Remember Africa' series, told of the warm-hearted people among whom she lived for nearly six years in Britain's oldest and smallest west African territory. 'We who, alas, cannot return to the Coast,' she says, 'will watch with the keenest interest and sympathy its future and progress'

WHEN we left Africa fourteen years ago on my husband's retirement a young African boy on our domestic staff wrote me a letter of farewell expressing in moving terms his regret at our departure. Letters of this kind, handed to one under one's own roof, are customary both in the East and in Africa, and are considered more valuable than a verbal expression of regret. This letter, however, ended with an unusual and surprising postscript: 'Had I the wings of a dove I would fly with thee.' It is therefore natural that when I was asked to speak to the theme 'I Remember Africa' my thoughts should turn nostalgically to the warm-hearted people among whom we lived for nearly six years.

Africa is so diverse and complex in its peoples and problems, and I can claim to know well only one very small area of the great continent, and that area a very small portion of the West Coast itself—the Gambia. My husband and I have very pleasant memories of places and peoples during visits to Sierra Leone, the Gold Coast, and Nigeria, but we were only able to get a real knowledge of the small colony in which our lot was cast. To us, after all these years, there is still the vivid remembrance of the charm of the Gambia, of the friendliness of its peoples, of their calm and dignity, and of the peace which seemed to flow into them from the great river at their doors.

After so many years of life spent among many races and of warm friendships built upon firm foundations I am more than ever convinced of the truth of Dr. Leakey's expression: 'The essential oneness of human beings.' The Eastern sage said: 'Within the seven seas all men are brothers.' In these distracted days one might perhaps qualify this and say all men could be brothers if they would. I am certain, however, that in their basic attitude to life and in their reaction to other women 'all women are sisters.' I have found this in all types of women, from the highly educated women of Ceylon, China, Africa, and many other countries to the domestic worker or the peasant woman in all lands.

I recall one of many amusing incidents from our time in the Gambia which may help to prove my theory. In this case the wives of chiefs were concerned. We were on tour up-river where my husband was visiting the chiefs in their home towns. We had anchored off a very small and rather desolate little wharf-town which boasted only one store containing some household goods, a few dusty lengths of cotton material, and some faded head-ties. The chief came on board and was sipping sweet lemonade with us when my husband asked him if all was well in his district. The chief replied:

'Your Excellency, most things are well. As you will see later, the crops are good. The cow doctor has visited us, and we have no disease among the herds. But there is one thing, Your Excellency, that troubles me. It is the store here. Your Excellency will see that there is

nothing to buy in it, and my wives make much palaver about it. They say they know that the women of Bathurst wear what it is now the custom to wear whereas my wives are going about in the colours of two years ago. This is giving them much sorrow and myself plenty of trouble. You know, Your Excellency, the strange ways of women. I beg that you will ask the firm in Bathurst to send some new supplies so that my wives may cease from troubling me.'

'All women are sisters,' I said to myself, as my husband sympathetically promised to mention the matter to the appropriate person in the firm's headquarters office in Bathurst.

Turning to another aspect of our life in Africa, memories of the quick response in so many ways from the English-speaking women and girls come crowding upon me. When we arrived in the Gambia twenty years ago from Hong Kong, a place brimming with activities and recreation, it seemed to me that there was nothing in Bathurst to provide interest and amusement for the girls. With the encouragement of my husband and the help of women who entered eagerly into my suggestion the Busy Bees Club was started. In a short time we had a thoroughly 'live' affair going. A small house was found for the club, and there we met and got to know one another. Men and women gave talks on their special subjects, or led community singing; the girls got up plays, and the smaller girls came up to Government House to learn to play games in the lovely garden.

Providence and Ingenuity Come to the Rescue

To my amazement I found that none of the younger girls could knit. A supply of wool was obtained, and in a short time a knitting mania spread, till one day I was met by the news that the wooden knitting needles had been reduced to half-size and in some cases to mere stumps. The children were chewing up their needles as tooth-sticks. We sent for a supply of bone needles from England, but meanwhile some of the young knitters were sadly depressed till Providence and their ingenuity came to the rescue. I heard the news through one of the older Bees.

'I have some good news for you,' she said one morning. 'My sister has been very unhappy—she used to sit up in bed at five o'clock in the morning and knit, but at last she had only half a needle and a broom-handle. Then yesterday the Bees saw a man taking a dead porcupine to throw in the river. They all ran after him, and he gave them the quills, and now they are all able to knit again with porcupine needles.'

When the dark shadow of the war fell across the world even knitting took on a more serious aspect in the scheme of things. Once again in the Gambia the response of all—men and women—was heart-stirring. On the women's side many in Bathurst will still hold memories of the activities of the Gambian women war workers—African, British, French, and Syrian—who met at Government House from the first week of the war and worked intensively at knitting comforts for the troops and making garments for the numbers of torpedoed sailors who reached the Gambia in open boats.

The highlight of their work came when supplies did not arrive for the troops stationed in the colony and those out in the bush found their uniforms rapidly wearing to rags. This critical situation came to our knowledge through our asking the commanding officer, stationed in the bush about eighteen miles from Bathurst, to allow some of his men in to tea and progressive whist. He wrote that nothing would please them better but he feared his men were too ragged to appear outside the bush. When I told the women war workers about it they rose to the occasion. Within a short time we had bought up all the available khaki material in the town, and intensive cutting out and machining produced a quantity of bush shirts and shorts within a very little time. These made the party possible.

Peace and Beauty of the Great River

There is no end to the memories of those African days as I look back upon them. Our West Coast friends are so often in the thoughts of my husband and myself. Ill health and distance have prevented our having closer contact with them in the past years. But as we watch the river Thames flowing past our house we often speak of the peace and beauty of the great river Gambia, the miles of golden sands, the little villages set among their oranges and mangoes behind their fences, and the waving grasses in their delicate shades of pink and green, and the welcoming people. An otherwise unemotional district officer once said to us: 'This place winds itself round your heart.'

We who, alas, cannot return to the Coast will watch with the keenest interest and sympathy its future and progress in the new order. We hope that the peoples of Africa and of Britain will continue to be closely interwoven in work for the common good. May our watchword be 'Combine and Prosper' both materially and spiritually.

One of the most moving memories of the West Coast is walking in the groundnut fields in the evening, when the crop had been gathered and the wide level stretches were a waving sea of pink oldenlandia flowers lit by the glowing rays of the setting sun. The farmers strolling along would meet us on the paths, and, smiling in their friendly way, greet us with 'Heraby,' which means 'Peace.' We would reply 'Heraby derong' (Peace only). Could there be a more desirable wish with which to close? (Broadcast in the BBC's Regional Programme for West Africa)

THE CITY OF HULL

SAM POLLOCK visits Hull—or Kingston-upon-Hull, to give the city its proud, full name—lying on the southern edge of the county of Yorkshire, where the tiny river from which it takes its name flows into the Humber: a city where 'you cannot get away from reminders that Hull's business lies in great and distant waters'

Hull is one of Britain's greatest ports and its greatest centre for the fishing trade: the docks spread along seven miles of waterfront, and more than five million cwts of fish, valued at nearly £12-million, are unloaded there each year

AMONG the cities of Britain Hull—or Kingston-upon-Hull, to give it its full and proper name—is what we would call in Ireland a 'queer fellow'—a bit of a character, a bit of an odd man out. Take the everyday business of the telephone. The first time you use a public telephone in Hull you think perhaps it is just inefficiency, just out-of-dateness which causes the printed notice to read 'Place two pennies in the box' when everywhere else in Britain the two pennies became three a couple of years ago. But it is nothing of the sort. An ordinary local call in Hull still costs only twopence, for the Yorkshire city, alone of all the cities of Britain, still runs its own telephone system—and, incidentally, runs it at a comfortable profit despite its bargain prices.

It is a small thing, but it is a symbol, I think, of Hull's position in other matters. I called it a Yorkshire city, but that description requires some qualification, for Hull even stands apart from Yorkshire. Lying there on the southern edge of the county, where the tiny river Hull from which it takes its name flows into the Humber, the city is separated from all its landward neighbours by 'thirty miles of grass,' as one of its citizens put it to me.

Beyond the grass lies the great manufacturing conurbation of the West Riding, but you might almost say that Hull's only link with Bradford and Huddersfield and the rest is seawise rather than landwise—in the bales of wool which are landed at the Humber docks to feed the looms of the West Riding. Southwards, to cross into Lincolnshire, the man from Hull has practically to go to sea across the wide estuary of the unbridged Humber by ferry. 'So,' we can imagine him saying, 'if I've got to go to sea, I might as well make a job of it.' Hence all the bent of the city, you might say, is towards the sea, towards the great ports of Europe and the world. Even in the city centre you cannot get away from reminders that Hull's business lies in great and distant waters.

As I said, the proper, but in conversation rarely used, name of the city is Kingston-upon-Hull. There are several Kingstons in Britain, but Hull has more reason than most of them to remember that it was a king's town. It owed its start in life to the favour of one of the greatest of our kings, Edward I, who noticing its natural advantages made it a port and granted it a royal charter. His Majesty was no loser by the arrangement. One of our earliest and greatest merchant princes, William de la Pole, was a native of Hull, and made his fortune trading from the port. That fortune helped to finance King Edward's costly wars, and helped William's son, Michael de la Pole, to become Duke of Suffolk and a member by marriage of the royal family itself.

One reason perhaps why the citizens do not stress the Kingston part of their city's name may be that in the Civil War they sided with Parliament against King Charles: that war practically began when Hull slammed its gates in the royal face. But, favoured by king or fighting for Parliament, Hull kept growing in prosperity and importance as a port, and today claims to be the third port in Britain by virtue of the volume of its trade, though the claim is disputed by Manchester on other calculations. But there can be no dispute that Hull—now a city of some 300,000 inhabitants—is one of Britain's great ports, whose docks, which today spread themselves over seven miles of waterfront, receive and despatch vital cargoes from and to every quarter of the globe, amounting to an annual total of more than 5,000,000 tons inward and nearly 4,000,000 tons outward.

A sixth of its working population earns its living directly from transport and communications, which means, in effect, directly from the port: dock and railway workers, seamen, fishermen, harbour workers, and so forth. And, although Grimsby is perhaps better known for its fish, Hull is Britain's greatest fishing port in the quantity of the fish landed by its highly modern fleet of trawlers: 5,250,000 hundredweights last year, valued at nearly £12-million.

Most of Hull's other industries owe their existence to some extent to the importance and the convenience of the port. For example, next to London Hull is our greatest timber port and has, therefore, become one of the country's most important centres for the manufacture of floorings and other woodwork. It is an important grain port, so it is also one of the country's largest centres of flour milling. At one time its landward skyline was regularly broken by the sails of the windmills which ground the flour; but today the job is done by the great modern mills of world-famous concerns like Spillers and Ranks.

Every housewife in Britain, I suppose, knows the name of Reckitt and Colman, who began in Hull as makers of starch and 'blue' and mustard—again, depending largely on imported materials—but who now have many other activities: for example, in the manufacture of pharmaceuticals. In the same way it is not surprising to find that Hull is one of Britain's leading chemical towns, or that cod-liver oil and other fish products are listed amongst its important manufactures together with oil cake and vegetable oil obtained from imported oil-seeds. The 'outward bound' note is struck again by engineering firms like Priestmans, whose 'grabs' and excavators are operating in every continent. The first Priestman grab was used for dredging operations in Vigo Bay, searching for a sunken Spanish treasure ship! Then, many imported materials require packaging, so Hull has become a leading centre of metal-box manufacture.

There might be risks and dangers in this heavy dependence of the city on its position as a port. But out of that dependence has grown a great variety of industries which in these days can function without the port. (Broadcast in the BBC's General Overseas Service)

An 'outward bound' note is struck by firms like Priestmans, whose 'grabs' work all over the world

Books from Britain

This Feminine World

MRS ROBERT HENREY ranges, with her natural vitality, from Suzy Volterra, the Begum Aga Khan, Mme Jacques Fath, Christian Dior and the Paris fashion world, to a moving description of work done for women in a great London hospital. Penetrating, colourful, realistic and feminine. 18s. DENT

Conspiracy Among Generals

WILHELM VON SCHRAMM. The first full account of the extraordinary events which took place in the German High Command and in Paris following the unsuccessful attempt on Hitler's life. *Illustrated.* 16s. ALLEN & UNWIN

Heritage of England in Colour

A. F. KERSTING and JOHN BLEDLow. Here in 40 specially taken coloured photographs is an epitome of the English scene—famous buildings and splendid prospects. With introduction and full notes—for less than the price of postcards, and bound in cloth. 16s. BATSFORD

Jesting Apostle

STEPHEN WINSTEN. The life of Bernard Shaw. A centenary study by the author of *Shaw's Corner*. This book is remarkable for the amount of unpublished material it contains, letters from Tolstoy, T. E. Lawrence, Virginia Woolf, Sir Osbert Sitwell and Sir Henry Wood among others. 33 *illus.* 21s. HUTCHINSON

This Delicious Land - Portugal

MARIE, LADY KELLY. In this description of Portugal—illustrated by her photographs—she hopes to portray a country full of memorials of splendour, and of a tradition of kindness and serenity, a land where the old virtues seem still to be the fashion. 36 *pages of illus.* 25s. HUTCHINSON

New Lines

Compiled by ROBERT CONQUEST. The contributors to this anthology of recent poetry are: Kingsley Amis, Robert Conquest, Donald Davie, D. J. Enright, Thom Gunn, John Holloway, Elizabeth Jennings, Philip Larkin and John Wain. 12s. 6d. MACMILLAN

Theatre in the East

FAUBION BOWERS. A comprehensive work on the dance and drama of the East, in which the author describes the Four Schools of Indian Dance, the plays of U Nu of Cambodia, Chinese opera and Japanese Kabuki, and other dance forms of Eastern countries. 42s. NELSON

The Phoenix Book of Modern American Humour

Edited by MICHAEL BARSLEY: A tonic of a book drawn from twenty-six famous modern American humorists ranging from Benchley and Runyon to Perelman, Thurber and Woolcott. *With many line illustrations.* 12s. 6d. PHOENIX HOUSE

In a Great Tradition

Tribute to Dame Laurentia McLachlan, Abbess of Stanbrook, by the BENEDICTINES OF STANBROOK. In telling the story of one nun this book is also an account of the Benedictine tradition. It contains the remarkable correspondence between the Abbess and Bernard Shaw. *Illustrated.* 25s. JOHN MURRAY

Obtainable at all good booksellers. In case of difficulty write to the publisher, c/o The Publishers Association, 19 Bedford Square, London, W.C.1. (Prices are net)

THE manners and morals of the nineteenth century, which thirty years ago were a stock subject for derision, now have a powerful attraction for us. We smile still, but with affection, or with an irony in which there is more envy than malice. Our great-grandfathers, or at any rate those of them who had the luck to be born into the upper or upper-middle class, lived in a safe, a comfortable world, taking the established social order for granted. And, perhaps most important of all, they had (with few exceptions) a firm, unquestioning hold on the dogmas of religion. E. M. Forster, in *Marianne Thornton*, a biography of his great-aunt, remarks that it is the belief in personal immortality, conceived as a changeless background for continuing family life, that makes the Clapham Sect seem remote today even to Christians. The Clapham Sect, to which the Thorntons belonged, was a group of Evangelical Anglicans; and William Wilberforce, the anti-slavery man, was its leading light, and their intimate friend.

In 1797, Marianne was born. When she died, at the age of ninety, her great-nephew Edward Morgan Forster was seven or eight years old. Seldom can a biographer and his subject have been so eminently worthy of each other, and perhaps never has a biographer been so plentifully provided with material. Marianne was not only a copious letter-writer, she also left a manuscript volume of personal recollections; and a great part of Mr. Forster's book consists of quotations from these and other sources.

It is, let me say at once, an entrancing book. The author calls it 'a domestic biography.' It is that, and more than that; for it gives us an intimate picture not only of a high-spirited, strong-minded, lovable woman, but of the whole numerous family and of the period in which they lived.

* * *

The English Sense of Humour is a collection of seven essays by Harold Nicolson that takes its title from the first of them. Sir Harold begins, as all who treat of this subject must do, by drawing a distinction between humour in its pure essence on the one hand and such manifestations of the comic spirit as wit, irony, and satire. One seldom finds any of these in isolation, unmixed with one or more of the others: nevertheless, under analysis they are seen to be distinct. Wit, which often but not always takes the form of irony, is an intellectual activity; satire is necessarily cruel, in greater or less degree, because punitive in intention; but humour, of the specifically English kind, is essentially tolerant, good-natured, amiable, a delighted sense of the incongruous. Because it provides a key to the national character, always a difficult thing to judge without prejudice, such an inquiry has much more than an academic interest. No one is less insular, more free from nationalist self-complacency, than Harold Nicolson; he approaches his subject objectively, with no patriotic axe to grind; and a special authority, therefore, attaches to his carefully argued view that the English sense of humour is, as the phrase implies, peculiarly English, something that, considered as a whole, a mixture of diverse components, we share with no other nation.

* * *

Two hundred years ago, to be exact on November 1, 1755, beginning at about half-past nine in the morning, the city of Lisbon suffered a series of three earthquake shocks: the first a shuddering that made men and buildings tremble, the second a nightmare of devastation lasting over two minutes. The third, less violent shock was followed by the appearance of a dark cloud of dust that settled like fog on the ruins of the city, turning a bright day into night. To complete the disaster, many fires broke out, and the river Tagus swelled and overflowed its banks in three towering waves. Some 15,000 people lost their lives. Sir Thomas Kendrick's book on the subject, *The Lisbon Earthquake*, is not a detailed history of the event itself, but something much more interesting: an account of its shattering impact on the minds and hearts of men throughout the western hemisphere.

Though not on so great a scale as some later seismic convulsions it was nevertheless a colossal and terrifying affair, sudden, unpredictable, and unexplained. If such a thing could happen in Lisbon why not in Paris or London? The ignorant majority, who saw it as a divine visitation, God's punishment for sin, were encouraged in that savage superstition by people who ought to have known better. The few scientists who were so rash as to declare that an earthquake is a natural, not a supernatural event, were looked askance at, as little better than atheists. Indeed, seen in retrospect, neither scientists nor theologians show to advantage. But amid all the confusion of tongues one thing is clear to us now: man's blithe confidence that the universe existed for his convenience had received a shattering blow. The Lisbon earthquake, in Sir Thomas Kendrick's view, put an end to the age of optimism.

Sunday's Children, by James Knox, is the story of his childhood, the spotlight being directed upon his father, the Methodist minister. Mr. Knox senior is a delightful character: shrewd, innocent, unworldly, and as full of charity as of piety. This is an affectionate, unpretentious record—written with unobtrusive art—of a happy family life half a century or more ago.

The chief aim of this season's excavations at Stonehenge was to find out more about the bluestones which stand within the circle of larger sarsen stones

Excavating at Stonehenge

R. J. C. ATKINSON, of the Department of Prehistoric Archaeology at Edinburgh University, outlines some of the aims of the field party from his university which has been spending the summer in a study of the origins of the mysterious groups of large stones which were carefully arranged on Salisbury Plain, no one can be quite certain when, or by whom

ALMOST every summer during past years archaeologists have been at work at Stonehenge, trying to find out more about the origin of those extraordinary groups of large stones which were carefully arranged on Salisbury Plain, no one can be quite certain when, or by whom. A new season of excavations is in progress with the permission and help of the Ministry of Works, who are the official guardians of Stonehenge.

This year the chief aim of the investigators has been to try to find out more about what are known as the Stonehenge bluestones. These are the smaller pillars of blueish rock, about as high as a man, which stand inside the much larger sarsen stones. For me they are the most interesting part of Stonehenge, because they were brought there in prehistoric times

all the way from Pembrokeshire. Even today it would be quite a job to fetch more than eighty of these stones, weighing several tons apiece, from south Wales. To the prehistoric builders of Stonehenge, who had only the most primitive equipment, it must have been quite the most difficult and dangerous undertaking of their lives.

By digging at Stonehenge we cannot hope, of course, to find out much about how the bluestones were brought there, but we can expect to learn something of their history after their arrival; and this turns out to be almost as complicated as the problem of their transport from Wales. Already in 1953 we suspected that the present arrangement of bluestones at Stonehenge was not the original one. A year later, after further studies, we knew we were right, and that the bluestones had arrived long before

The 'dig' was given an international flavour by students from abroad who were helping the Edinburgh party: Julianne Roumiree (centre) from California, and Antonio Arribas from Barcelona, share a trench with Elizabeth Burley

the great sarsen stones with their lintels on top that we see there today. Originally the bluestones were set up as unhewn pillars in a double circle with an entrance pointing towards the midsummer sunrise. But nothing of this circle remains except the hole through the stones, because it was dismantled about 1500 B.C. to make way for the great sarsen stones brought from north Wiltshire.

We know, too, that a little later some of the larger bluestones were carefully dressed to shape with stone hammers and re-used in a new arrangement, probably at the centre of the circle of sarsen stones which had been erected meanwhile. This new arrangement, in its turn, was pulled down, and finally all the bluestones, shaped and unshaped alike, were re-erected in the circle and horseshoe whose ruins we see today.

So far we have only the outlines of this complicated story, and we hope that this year's work will fill in some of its details. We expect to find the answers to at least some of our problems. But, as so often happens in excavation, we shall probably find ourselves faced with a lot of quite new and unsuspected questions as well. (Broadcast in 'Radio Newsreel')

Students carried out a contour survey under Professor Stuart Piggott (second from left)

Loading sugar on to lighters at Albion Dock, Port Louis, for ferrying out to ships which lie half a mile off-shore: cane sugar accounts for ninety per cent. of exports

Government House, Port Louis, seat of the Legislative Council. The Governor lives on the central plateau at Le Reduit (below), where Princess Margaret is to stay

A fishing boat—or 'pirogue,' as they are called—returning to harbour

THIS IS

SIR HILARY BLOOD, whose talk on Mauritius on Friday at 15.45 and Saturday at 00.30 and 01.00 on 'The Indian Ocean' which H.R.H. Princess Margaret is to attend

WHEN H.R.H. the Princess Margaret visits Mauritius this week she will find a number of points of resemblance between 'the Star and Key of the Indian Ocean' and certain of the West Indian islands which she visited last year. As in Barbados, Antigua and St. Kitts-Nevis the main export of Mauritius is sugar: the inhabitants include European families whose ancestors settled in Mauritius 200 or more years ago, as did emigrants from England in the Caribbean islands; there are the descendants of persons of African origin who came originally as slaves, and also of Indian immigrant labourers. And in the shaded bays of Mauritius where the sun, slanting through to coral reefs, awash, stains the sea jade, emerald, and blue, Her Royal Highness will again find some of the most exquisite beauty which nature has to offer a visiting Princess.

But Mauritius has a flavour, a 'foreign' flavour, very much of its own. The hundred years—roughly the span of the eighteenth century—during which the island was French—'Ile de France,' in fact—have left deep etched impressions than any of the foreign occupations in the Caribbean.

When the capital of Ile de France was moved from Grand Port on the east coast to Port Louis on the west, and the great Mahé de Labourdonnais, most famous of all the Governors of Mauritius, had laid out the new town and seen to it that his plans were being followed, there gradually arose in the island a replica of French life and French society as it existed in pre-revolutionary France.

The Governor and his entourage were the King of France and his Court in miniature; houses were built on the French chateau model; French culture, French food, French wines, and French sport all combined to re-create a little France in this lovely island hard by the Tropic of Capricorn. To serve this way of life the slave population existed. They had no hope of ever taking part in such a life: they saw it as an unattainable paradise, observing it like Alice in Wonderland through a keyhole.

In 1810 the island was captured by the British, but such were the terms of the capitulation that most of the French residents remained in Mauritius, secure in the knowledge that they could retain their religion, their language, and their customs. And to this day they have retained them, while the descendants of the slaves to some extent share in them as well.

Nowhere is French influence on architecture and planning more marked than at Le Reduit, the residence of the Governor, where Her Royal Highness will stay during her visit. The house was built during the second half of the eighteenth century by the French Governor David as a retreat where he could find peace for work and recreation, away from the heat and noise

A market selling piles of

Maube: most Mauritian fishermen are Creoles, descendants of slaves freed in 1834

MAURITIUS

sets the scene of 'the Star and Key of the Indian
at the start of her second Commonwealth tour

of Port Louis and the interruptions caused by the tiresome English. It was a very charming house which David built: later additions made it roughly E-shaped with the centre bar missing. The whole length of the E is occupied by the large drawing room or ballroom from which you look north-west across the private golf course to the sea. A lovely room, this, designed for formal receptions, for smart Parisian dresses, for uniforms and decorations. At the western end, and at right angles, is the dining room, large and well proportioned. The arms of Governor David are cut in the stonework of the large fireplace, and on the panelled walls hang contemporary portraits of a number of French and early British Governors. There is also a fine portrait by de Laszlo of the late Sir Hesketh Bell in the robes and insignia of a G.C.M.G. At night, with concealed lighting and spot lamps illuminating the pictures, the room is considered one of the most beautiful of all Government House dining rooms in the Colonial territories.

Upstairs the suite of four rooms usually occupied by the Governor and his lady are to house Her Royal Highness, and from the large be-mirrored bedroom there is a lovely view west and north-west over the extensive grounds. These cover some 300 acres of forest, golf course, and gardens—a triangular area bounded on the south-east by the road rising to the central plateau of the island and narrowing in the north-west to a point where two deep ravines converge at Bout du Monde. From these beautiful surroundings the Princess will come out to see and to be seen.

by his orderly little
, and ginger

Mauritius is a small island, so although Her Royal Highness's stay is short she will be able to form a general impression of the 750 or so square miles which make up the country and of the half-million people who live in it. She will see cane being cut and transported by lorry to the factories; the gardens will be full of flowers, for September is spring in Mauritius; she will see the curious hills—Pieter Both, Puce, Corps du Garde, Le Morne, and the others—which rise from the coast or the central plain suddenly and with a sheer, rocky grandeur which gives them a mountain-like quality.

And what a mixture of races Her Royal Highness will see! For every single European there are two Chinese, five Coloured, and sixteen Indians. At times these various sections of the Mauritian community seem far apart—it is taking a long time to create an all-Mauritian front out of the competing racial and cultural elements of which the population is composed. On this occasion all such tensions will be resolved in the excitement of seeing so charming and distinguished a visitor, and in the desire to welcome to their much-loved island the sister of the Queen.

Bertrand Mahé de Labourdonnais, a Governor of Mauritius when it belonged to France: he did much for its prosperity by reintroducing the sugar cane in 1737

The main street of Curepipe, the second largest town: it is 1,800 feet above sea-level and was originally settled by Europeans trying to escape from the malarial lowlands

In days gone by Le Morne Brabant was the mountain stronghold of runaway slaves

ROBERT REID visits a research station in Berkshire where Britain is solving for the benefit of the world some of the basic physical problems in one of the newer and constantly developing sciences

Hydraulics Research for the World's Water-ways

A BOTTLE of water stands on a desk in one of the rooms of an old red-brick mansion which overlooks the rolling Berkshire downs in the south of England. It is a far cry from that bottle of water to the economic future of East Pakistan, but there is a direct link between the two. And by the time the contents of that bottle have yielded a number of secrets one of East Pakistan's economic problems will be that much nearer solution.

This old mansion, which was once the home of a wealthy London merchant, is now the headquarters of an organisation which goes under the rather prosaic title of the Hydraulics Research Station: it is at Wallingford, a very small country town. But that description covers a really adventurous and stimulating battle which is being waged all the time against the oceans—against mighty rivers, and gales, and floods. Part of the battle is also scientific detective-work of the highest order, probing the mysteries of tides and puzzling out the secrets of river-beds.

This sort of research work is one of the newer and constantly developing sciences in which Britain is specialising, and the possibilities arising out of hydraulic research are incalculable when you think what the results can mean to the world in the harnessing of rivers for the development of navigable water-ways, and for irrigation schemes which could open up vast tracts of undeveloped territories for food production. But these sort of things cannot be done just by waving a magic wand. First of all somebody has to solve many basic physical problems, and this is where the Hydraulics Research Station at Wallingford comes in.

Work Under the Colombo Plan

Take that East Pakistan business as an example. As a result of the partition of the Indian sub-continent East Pakistan has only one port to serve it. That is the port of Chittagong, which is ten miles up-stream from the mouth of the Karnaphuli river. And if the growing needs of East Pakistan are going to be met and the country is going to be developed economically a first-class port which is easily accessible to all types of shipping is an essential requirement. Under the Colombo Plan the Hydraulic Research Station has been given the job of studying the problem and suggesting how deep-water channels can be made.

I met the young engineer who is in charge of this investigation. He has just returned from a trip to East Pakistan, where he spent days and nights studying the rise and fall of the river, making elaborate calculations about tidal flows and the volume of water passing down the Karnaphuli, taking samples of the river-bed—and, incidentally, bringing back with him that bottle of water which is being analysed for its sediment content.

He took me into a huge building which has been erected in what is the private park which surrounds the house. It is bigger than the biggest aeroplane hangar in the world, and there, laid out on the floor, is the beginning of an exact model of a twenty-mile stretch of the Karnaphuli river, right down to the bay of Bengal—twenty miles of it scaled down

Research for a deep-water channel: a model taking shape of a twenty-mile stretch of the Karnaphuli river, in East Pakistan, complete in every detail

Research for a harbour: a model designed to solve the problems of tropical tides for what will be one of the biggest ports on the Gold Coast at Tema

to 200 feet—complete in every detail, every twist and turn, every sand-bank. When it is finished the miniature river-bed will be made up of material which is of the same consistency as the bed of the Karnaphuli.

Special electronic apparatus will regulate the flow of water in the model river so that the speed of flow and the various tidal surges and other pressures are exactly the same as the real thing. This will show why silting occurs at the harbour of Chittagong. Engineers will then work out plans for preventing it and providing deep-water channels.

Now let us look at another project. One of the engineers took me out into the grounds to a big concrete structure like a tank and about the size of a couple of tennis courts. The greater part of the surface of this structure lay under water. The arms of miniature sea-walls and breakwaters ran out into what was obviously the sea. There were a few small model buildings on the landward side of the model, where we were standing. At the far side of the model, out at sea, a row of mechanical devices like paddles, half submerged in the water, were working rhythmically, propelling miniature waves shorewards.

The model I was looking at was a sort of bird's-eye view, in advance, of what will eventually be one of the biggest ports on the Gold Coast. At present it is a fishing village called Tema, but brand-new harbour works are being built there as an outlet for cocoa and timber. Once again Wallingford has been called in to solve the problems of tropical tides. And once again local conditions have been exactly reproduced on this model—storms, surges, normal tides, the long Atlantic rollers—to show the effect on different designs of breakwaters.

Studies for New Zealand and Trinidad

These miniature breakwaters, by the way, are constructed with very great care. They are made up of small rocks, each weighing roughly half a pound, but they represent blocks of quarried stone weighing anything from five to eight tons. These half-pounders are hand picked for shape, size, and weight, so that they fit into the mathematical picture and react just as the five- or eight-ton blocks would do when pounded by the sea.

Studies of silting are also being carried out for the Harbour Board of Lyttelton, in New Zealand, where they are planning to increase shipping facilities. And another important project is now under way for Trinidad. Water is scarce in south Trinidad. To remedy this state of affairs a local river—the river Navet—is going to have a dam thrown across it. This will call for the creation of what is technically known as a spillway, a channel to take any surplus flood water away from the dam and feed it safely back into the river at some point farther down its course. The designing of this spillway is a tricky technical job, and the Wallingford people have been given the task of solving the problem.

One very interesting aspect about all this research work is that Britain itself is the real laboratory—a full-scale model. Most of the basic problems of hydraulics are to be found along the river-courses of Britain and around her shores. Scientists tossing about in small boats off the east coast—in small harbours, at the mouths of estuaries, often drenched to the skin—are studying tidal and silting problems which provide information which is applicable to hydraulic problems anywhere in the world. What is more, these research scientists are taking full advantage of the very latest resources of the atomic age.

Radio-active isotopes have been lowered into the mud on the bottom of the river Thames, and the course of their travels along with the mud has been traced by geiger counters. The first results are now being studied. (Broadcast in the BBC's General Overseas Service)

This Week's Listening

NEW ZEALAND DAY

TO mark New Zealand Day a concert will be given by Schola Cantorum, Wellington. This fine choral organisation was founded in 1936 for the performance of good music, and has become part of the musical life of New Zealand. Stanley Oliver, its conductor, began with high ideals, and has maintained them. Membership of the choir is by invitation only. Five months after its formation it broadcast its first performance under Dr. Malcolm Sargent (as he then was).

Its wide-ranging repertoire now includes some of the best choral music in existence. After eighteen months' work Schola Cantorum presented for the first time in New Zealand a performance of Bach's *Mass in B minor*, regarded by many as the greatest choral work ever written. The members of Schola, professional or amateur, give their services free, and pianist and conductor are unpaid.

G.O.S.: Tuesday 01.00; Wednesday 07.15

TRIBUTE TO ERIC COATES

THE famous light-music composer, Eric Coates, who celebrated his seventieth birthday last month, is the recipient of a musical tribute by the BBC Midland Light Orchestra and the BBC Concert Orchestra on Tuesday at 18.30. Stanford Robinson and the composer are the conductors, and two singers join in the birthday salutations: Vanessa Lee (soprano) and Frederick Harvey (baritone).

Coates is a Nottingham man and devoted his early career to the viola. He won a scholarship to the Royal Academy of Music, where he was a pupil of Lionel Tertis. He joined Sir Henry Wood's Queen's Hall Orchestra as principal viola. Seven years later, he decided to give all his time to writing music, instead of playing it. His *London Suite* is one of the strongest links between him and the BBC, since it was in 1933 that his *Knightsbridge March* was chosen as the signature tune for 'In Town Tonight.' His songs, such as *Bird Songs at Eventide*, are as popular as his orchestral music.

'THE AMERICAN ADVENTURE'

THE discovery of the American continent in 1492 by Christopher Columbus led during the next century to the Spanish and Portuguese conquest and settlement of large areas of central and southern America. Meanwhile the many voyages of exploration by English sailors culminated in the landing of the Pilgrim Fathers in 1620, and in a predominantly British settlement of north America.

No two phases in the history of colonisation could have been more different. There were contrasts of sailing motive, culture, religion, and temperament, nowhere seen more strongly than in the treatment of the indigenous American Indians. In Peru, Mexico, and elsewhere, the Spaniards grafted their own culture on to that of the Indians. Freedom, on Christian principles, was guaranteed by 'The Laws of the Indies.'

In the north, the Anglo-Saxons had to deal with Indians who were either nomadic or not firmly settled on their land. The Indians were driven back, and their numbers dwindled; there was only a slight fusion of culture; European communities were organised largely 'unhindered by any consideration of what share was reserved for the Indian.'

These and some other contrasts between north and south will be the subject of a talk on 'The American Adventure' by Don Salvador de Madariaga in the G.O.S. series 'The Story of Colonisation.'

G.O.S.: Monday 15.45; Tuesday 00.30 and 05.00

ABOUT BRAZIL

IN 'From the Third' this week V. S. Pritchett, the author and critic, continues his series of talks on his travels in South America. After crossing from Panama over the Andes into Chile, and staying for a while in Bolivia, he flew to Rio de Janeiro—he describes arriving in the Brazilian capital by night as one of the major experiences of travel.

Brazil is the only Portuguese-speaking country in South America. In 1492 when Christopher Columbus discovered America the rivalry between Spain and Portugal to discover new lands and new trade-routes was so strong that the news of Columbus's

September 23—29

discovery was a heavy blow to the Portuguese. In 1493, both Spaniards and Portuguese having appealed to Pope Alexander VI, the matter was settled by assigning to each a zone of influence.

By the Treaty of Tordesillas Spain granted Portugal sovereign rights over all the territory that might be discovered 370 leagues west of Cape Verde and the Azores, so that the frontiers of Brazil were laid down even before the country was discovered. In 1500 the navigator Alvares Cabral first landed on what is today Brazilian territory.

G.O.S.: Monday 14.45; Friday 23.15

'CARIBBEAN HORIZON'

WHEN one travels through the islands of the British West Indies one gets the impression that they were all moulded in the same matrix. Yet many of them tend to retain an insular outlook, and one of the important tasks at present is that of bringing them into a closer association, in order to get the utmost benefit from the political federation which was agreed upon earlier this year.

There are already many historical and cultural links that join the islands together, and as they all possess similar administrative systems practical steps towards federation will not be difficult. Then there are the many conferences, at a professional level, which provide an opportunity for discussing problems of common interest. This can be done more easily today as the region is very well served by air services which are gradually narrowing the distance between the islands.

In 'Bridges Between the Islands,' Willy Richardson will give an account of some of the unifying factors which are helping to bring the islands closer together.

G.O.S.: Monday 17.30 and 23.15; Wednesday 10.00

ORGANISING THE FIGHT GAME

FROM time to time even those who regard boxing as a healthy pastime and as the original 'noble art of self-defence' pause to consider the extent to which it has been commercialised. Glyn Hardwicke, a young writer with a keen interest in the sport, has made a thorough examination of the organisation of boxing in Britain, and in 'The Making of a Boxer,' will report frankly and impartially on what he found.

Public interest in boxing has rarely been higher, or questions more pertinent and searching. How does a typical youngster enter the sport, what happens to him, whom does he come into contact with, and, above all, what protections and safeguards, if any, are there to prevent him from being exploited? What does the British Boxing Board of Control really do to run things? Does it sit in an Olympian fastness considering itself above the criticisms levelled at this much abused sport? All these questions will be asked and answered in a programme which will be broadcast in the General Overseas Service.

G.O.S.: Tuesday 13.15 and 23.45; Friday 20.15

THREE SPEAKERS ON THE AMERICAS

Don Salvador de Madariaga (left) talks about 'The American Adventure,' Alistair Cooke sends his 'Letter from America' (Tuesday at 12.30), and V. S. Pritchett (right) continues his travel series on South America

Dora Bryan, the character actress, stars in Compton Mackenzie's 'Lucy Arnold' on Thursday this week

'THE ARMED FORCES'

IN the G.O.S. series of talks on the Soviet Union in 'This Day and Age,' J. M. Mackintosh will speak about the Soviet armed forces. He will give listeners some indication of the size and strength of Soviet military, naval, and air power. As well as describing the role the forces play in the life of the country, the speaker will assess the influence of their leaders on the course of Russian policy.

Mr. Mackintosh was British liaison officer with the Soviet High Command in Rumania and Bulgaria from 1944 to 1946, and was an interpreter for Marshal Bulganin and Mr. Khrushchev during their visit to Britain earlier this year. He is also part-author of a forthcoming book on the Soviet Army.

G.O.S.: Tuesday 15.45; Wednesday 00.30 and 05.00

'THE DEVIL'S DISCIPLE'

SHAW wrote *The Devil's Disciple* while he was still seeking fame as a dramatist. It is therefore one of his most straightforward and easily assimilated plays. He insisted that it was a popular melodrama without any novelty. Whatever the formula, it is infallibly effective in the theatre.

Kenneth More, the star of many popular British films, plays Dick Dudgeon, the man who has reacted violently against the severe repression of his puritan upbringing by turning vagabond and smuggler but who redeems himself by an act of quixotic heroism.

G.O.S.: Sunday 07.30; Monday 20.15; Friday 10.00

Radio Theatre presents

'WHAT'S BECOME OF WARING?'

THE title derives from a poem by Robert Browning which begins: 'What's become of Waring, since he gave us all the slip, Chose land-travel or seafaring, Boots and chest or staff and scrip.'

The Waring with whom everybody is concerned in this play might well (and I will not give away the plot by revealing how well) have taken those lines as his guide. This T. T. Waring is one of the most famous living travel-writers, an authority on out-of-the-way places, and the main financial prop to the publishing house of Judkins and Judkins.

But is 'T. T.' still living? News is received of his death, but nobody knows how or exactly where. In fact—the dreadful thought occurs—was he ever living? Was he really the original writer and traveller, as has been assumed? The unpleasant and disconcerting questions arise when Judkins and Judkins seek to perpetuate their profitable association with his work by commissioning a 'Life of T. T. Waring,' and the young soldier chosen for the job, Captain Hudson, starts to turn up some extraordinary answers to innocuous-seeming questions.

Anthony Powell's cheerful 'take-off' of publishing (amongst other things) was first published in 1939. Mr. Powell is a witty chronicler of society. PETER FORSTER

A programme for children
15.00 **Radio Se Angrezi** (English by Radio) 'Listen and Speak' Lesson 101
15.15-15.30 NEWS and News Talk

ASIAN CLUB. Professor C. H. Philips, the speaker on Sunday, will talk about 'How History is Written.' He will talk from personal experience: his department—he is at present University Professor of Oriental History at the School of Oriental and African Studies—is at work writing about Indian history. Later this year Professor Philips takes up the post of Head of the School.

STARS LOOK BACK. In Monday's programme, the last of the present series, Sir Carol Reed, the distinguished British film director, will discuss with Roger Manvell how he has made some of his many outstanding films. These include *The Fallen Idol*, *Odd Man Out*, *The Third Man*, and more recently *Trapeze*. Sir Carol will illustrate his discussion with excerpts from the sound-tracks of these and other films.

THE WORLD OF SCIENCE. Sir John Cockcroft, F.R.S., Director of Britain's Atomic Energy Research Establishment at Harwell, will conclude the special series of talks on atomic energy on Saturday. Previous speakers have dealt with the fundamentals of nuclear energy, the principles of nuclear reactors, and the use of radioactive isotopes. This week Sir John will sum up, and discuss the future of this important new science. In 1932 he shared with E. T. S. Walton the achievement of breaking up for the first time an atomic nucleus by artificial means. In 1951 they were jointly awarded the Nobel Prize for Physics.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

Your New G.O.S. Programmes

The Head of the BBC's General Overseas Service outlines the new programmes which listeners will be able to hear during the next three months. (Further programme details are given on pages 16 and 17)

FOR the past six months the pattern of overseas programmes has been dictated by the need to give adequate coverage to the Test Matches between England and Australia. The new quarter beginning this week offers an opportunity to return to less rigid planning and, at the same time, to bring in a number of changes.

You will find that there are no more plays of over an hour's duration. The space freed has mostly been given over to music. I hope listeners in South America and the West Indies in particular will find that they have a wider choice than before.

Three events between now and Christmas call for special coverage. The first is the East African tour now being undertaken by Her Royal Highness Princess Margaret, including her visits to the islands of Zanzibar and Mauritius.

A producer from the General Overseas Service has been in East Africa to collect material on the territories Her Royal Highness will visit, and his reports will be broadcast in the course of the tour.

The second event is the opening by Her Majesty the Queen of Calder Hall, the first major atomic power station in the world to produce electricity on a commercial scale. The ceremony itself will be broadcast on October 17. There will be a documentary programme made on the spot in the plant, including interviews with the scientists and technicians who run it. A series of talks by leading atomic scientists will explain the processes involved.

Thirdly, there is the journey His Royal Highness the Duke of Edinburgh will undertake to the southern hemisphere. That part of it which concerns us this quarter is closely bound up with the Olympic Games in Melbourne. These will be reported on daily between 07.30 and 08.00 GMT (in this period we shall have live commentaries on some of the principal events); and there will be fifteen-minute reports later in the day. Before the Games, Roger Bannister in 'This Day and Age' will each week interview athletes who competed in past Olympics.

The opening of the new Transatlantic telephone cable will be marked by a feature on the work of Her Majesty's Telegraph Ship *Monarch* which has completed the long task of laying the lines.

The series on British Prime Ministers continues with programmes on Bonar Law, Ramsay MacDonald, and Baldwin; they are built up from that new historical source—the magnetic tape on which men and women who knew these politicians in public and private life have recorded their memories and impressions. The same methods have been used to build a programme on Maynard Keynes—an attempt, ten

years after his death, to assess the validity of his social and economic thinking.

Among music programmes this quarter are 'Time for Opera' and 'Encore,' which includes music from current West End productions. There will be a series of ballad operas ranging from Balfe's *Bohemian Girl* to *The Devil Take Her* by Arthur Benjamin.

The tastes of our parents and grandparents will be recalled in two programmes on Victorian song and in a weekly series 'Ballads of Yesterday.' In 'This Modern Stuff,' on the other hand, we hope to take you from Debussy to Hindemith and prove that modern music is neither as difficult nor as painful to hear as some people imagine.

In our chamber-music series each programme will contain a contemporary British work: com-

posers represented will include Tippett, Rawsthorne, Wordsworth, and Rubbra. For those interested in organ music there will be a fortnightly recital illustrating different types of organs and the repertoire most suitable for each.

Variety programmes for the next three months are described in detail elsewhere; I shall therefore limit myself to drawing your attention to 'Two in One,' a new and to my mind very amusing panel game. For Christmas, Spike Milligan has agreed to take part in a special show which will (in part at least) be addressed to the Forces abroad and to the members of expeditions which will be spending Christmas in the Antarctic.

There are some changes affecting programmes for special audiences. 'For Children' will be repeated at 21.30 GMT on Mondays for listeners in the western hemisphere. 'Ulster Magazine' will be extended to half an hour once a fortnight. On alternate weeks the space will be filled by music from Northern Ireland preceded by a short bulletin of local news.

A new programme which will, I hope, build up a following of its own is 'Can I Help You?' in which Celia Irving will answer practical questions on life in Britain: 'How does the Health Service work?' 'What is the General Certificate of Education?' 'How do I get my child into a Grammar School?'

The more concrete the question the better Celia Irving will be pleased. Queries should be sent to her care of Head of General Overseas Service, BBC, London.

By now, of course, the Association Football season is in full swing, and we will move the news on Saturdays from 16.00 to 17.00 GMT so as to make room for the big matches. This season we aim to give rather more coverage to matches in the Scottish Cup. There will be eye-witness accounts of games played by the Rugby League team from Australia and commentaries on the second half of the Test Matches in the series. From South Africa we shall have reports on the MCC tour.

In this quarter there fall Trafalgar Day, celebrated with a programme on Nelson, and St. Andrew's Day, for which we shall have a programme of Scottish music. On Remembrance Sunday you will hear the service of homage at the Cenotaph to the dead of two wars. Christmas Day will bring, besides the ceremony of the Nine Lessons and Carols from King's College, Cambridge, the Christmas programme which the BBC's Head of Features, Laurence Gilliam, plans and compiles annually. This year he has chosen as his theme the inter-dependence of the Commonwealth, which he sees as a great field of opportunity in which its citizens can find outlets for their skills.

Stuart Hood

C. H. PHILIPS

The Indian Drive East

IN the heart of the small island of Ceylon are to be found the massive ruins of an ancient city civilisation: a civilisation which first came from India and which some 500 years ago was finally destroyed by Indian invaders. I have journeyed from India across the straits to study these ruined cities in the jungle. Gigantic foundations of Buddhist monasteries stretch on every side, great domes of Buddhist

shrines with tapering white spires dominate the landscape. Standing there, you can easily imagine the life of those semi-rural cities, girt round with the monastic orders of Buddhism. But right in the middle of the largest city of all, in Polonnaruwa, you find the remnant of what can only have been a Hindu temple in the Tamil style of south India, and it is borne in on you that the story of Indian colonisation outside India is complex.

In this picture of old Ceylon we have the main elements of a story of India reaching eastwards until she meets China. The fact of the expansion is well known but how far did it take the form of political and cultural colonisation as in the example of Ceylon, and how far was it purely cultural? The people who founded the early civilisation of Ceylon came from western India, perhaps forming part of that great steady movement of the Aryan peoples who in the first millennium B.C. colonised northern India and filtered through the plains and valleys of the south.

We know that they gradually created the way of life called Hinduism, along with a unique and immensely strong caste society, with a priestly class of Brahmans in a position of social and religious control. The dominance of the Brahmans was not achieved without challenge, and at about the same period in the sixth century B.C. a number of sects—the Jains, the Ajivikas, and above all the Buddhists—asserted their independence and began to preach a more egalitarian and ethical way of life. When these sects obtained the support of the merchant groups or of the ruling families they prospered, building monasteries and converting the people, leaving a record of their deeds in stone and sometimes, less frequently, in chronicle. It was in this manner, at the time of Asoka's rule in India in the third century B.C., that Buddhism took its hold on Ceylon which has lasted down to the present day.

At the same period north-west India in the region of Gandhara became a Buddhist stronghold, astride the main trade routes into central Asia, and thus the source of Buddhist teaching which was slowly transmitted into Turkestan and Tibet, reaching into China and even to Korea and Japan. Wherever it went it carried the material forms of Indian culture, Sanskrit literature, and distinctive styles of sculpture and painting, and naturally as times and regions varied these were adapted with Buddhism itself to suit the cultures of the newly converted peoples.

In the Indian motherland itself the Brahmanical environment finally absorbed Buddhism, which vanished from India as an independent religion, but outside India Buddhism continued to flourish.

Movement of Culture—or of Population?

There is no doubt that the spread of Indian influence across the land mass of central Asia had nothing to do with colonisation in the sense of settlement and political domination. But Indian influence passed also across the ocean eastwards to South-East Asia, to Burma, Thailand, Malaya, Indonesia, and to the area of Indo-China where it met the culture and political power of China. Whether this influence took the form of a movement primarily of culture or of population is something of a mystery, a mystery which at present gives rise to controversy among scholars.

The first persons to investigate the nature of Indian influence in South-East Asia were European administrators who took its significance for granted; writers like the Englishmen Crawford and St. John who in the early nineteenth century simply called the whole area from Burma to Borneo 'The Indian Archipelago' and its people 'The Indians.' But later in the century Dutch scholars studying the history of the peoples of the Netherland Indies modified this view. Hendrik Kern and the great Krom drew attention to the indigenous peoples, but because they pursued their subject from the side of Sanskrit philology and Indian Buddhism they attributed the undoubted greatness of early South-East Asian culture entirely to the work of Hindu colonisers from India.

Indian scholars promptly seized on this aspect; almost as if it were an expression of their own country's modern nationalist movement. In 1926 a Greater India Society was founded at Calcutta, and Indian writers have from that time emphasised the view that an Indian empire once existed, stretching from India across to South-East Asia, and that Hindu colonies were built up in Java and elsewhere by waves of emigrants from India, assisted from time to time by naval expeditions from Indian ports. Tamil writers from south India and Bengali writers from further north have claimed for their peoples the honour of having colonised in the first ten

centuries of the Christian era what they call 'Greater India.' These hypotheses strike the great difficulty, however, that the peoples of South-East Asia have a character of their own, with distinctive art and literary forms which, while showing Indian influence, undoubtedly have their own individuality. To other scholars, therefore, especially in Europe and Indonesia, this India-centric approach seems hopelessly wrong. It springs from the fact that Hindu-dominated empires, the greatest of which was Svivijaya, grew up between the second and the fourteenth centuries in the East Indies and on the mainland.

It is true that their ruling groups professed Hindu or Buddhist cults, their literary forms were Sanskritic, their mythology was Indian in origin. Sanskrit inscriptions on stone are found throughout the islands, and, most striking of all, there are still standing magnificent religious buildings, the Buddhist Borobudur in Java and the Hindu Angkor Wat in Cambodia, both covered with sculptures of Indian origin. But it is quite unjustifiable to argue from this sort of evidence that India deliberately colonised South-East Asia.

Alternatively it has been suggested that Indian influence had a pre-eminently commercial origin. Contacts between the Mediterranean world and India led to a trade in the early centuries of the Christian era in luxury articles, for which South-East Asia provided gold, spices, scented woods, and perfumed resins. We know that the Indonesians were seafarers, with trading posts in Bengal and south India. The voyage from the Coromandel coast to the Straits of Malacca was comparatively short and at the right time of year easy and safe even for small vessels.

Influence of Commercial Contacts

Indian trading centres grew up in the East Indies, and very likely from these commercial contacts political and cultural changes began to emerge. Along the trade routes went also pilgrims, men of letters, priests, Buddhist missionaries. We know that travels of the most extensive kind took place in this period.

Under a Hindu or Buddhist veneer the older local society in these ways preserved the indigenous character which is known to have existed before Indian culture arrived. On the material side there existed the cultivation of irrigated ricefields, along with an associated form of social organisation; and the people were skilful in metal work and in sailing the seas. Socially there existed an emphasis on the place of women and on descent by the maternal line; and in religion, an acceptance of a mythology of dualism, the men of the mountains posed against the men of the sea, beings with wings against beings of the water. All this was distinctively not Indian by origin.

This kind and level of culture existed widespread through the islands. Early Chinese writings refer to native societies that had adopted Indian culture, not to Indian colonies implanted from India. Hinduism was aristocratic, its influence limited to the ruling groups and the circles gathered around the court. It made little impression on the rural population. Not until many centuries later when Buddhism and Islam were propagated as popular religions did these external influences begin to affect the villagers and then, in the process of coming to terms with the indigenous cultures, both religions were forced to change their character.

After this fashion the great eastward extension of Indian culture into the East Indies and along the Indo-Chinese mainland may be explained consistently with what we know of the rest of Indian history. We can understand why, in the area of Indo-China, the Hinduised kingdoms gave way so easily to Chinese political power. We know, moreover, that India has never shown much inclination politically to move outside her natural boundaries of sea and mountain. Great political empires in India itself, such as the Maurya and the Gupta, have not long persisted.

India's strength and genius has been shown not in political but in social and cultural forms, in the development of a caste society, in the growth of Brahmanical literature, in the religions of Hinduism and Buddhism with their accompanying modes of artistic expression. The explanation of India's movement into South-East Asia as mainly a cultural and to some extent perhaps commercial, not a political, expansion therefore fits neatly into this picture. In almost precisely the same way from the tenth century onwards the religion and culture of Islam spread along the trade routes from south Arabia and India into South-East Asia, bringing into existence a number of Muslim ruling families who displaced or succeeded their Hindu predecessors. It was these Muslim rulers whom the Portuguese met when they arrived in the East Indies. But the present-day sense of community and identity of interest between the peoples of India, Ceylon, Laos, Cambodia, Thailand, and Indonesia, which does not rest merely on a vague sense of Asianism, shows that in the history of mankind cultural perhaps more than political colonisation is a process of deep significance. The Stars Look Back

ROGER MANVELL introduces a series of programmes opening in the General Overseas Service this week in which some of Britain's most famous film stars look back over their careers to uncover the secrets of their success. The programmes will be illustrated with extracts from the sound tracks of films the stars have appeared in

Tuesday 06.30 and 18.30. and Wednesday 10.00

WE invited a number of our best-known and most successful screen actors and actresses to come to the BBC studios and look back over their careers: what made them want to act; whether they had any formal training in dramatic school or not; whether they went through a hard period on the stage before getting their chance to work on the screen; whether their stage work was a help or a hindrance to their screen work; and, above all, what they themselves thought their acting talent amounted to, what stardom (and the opportunities and privileges it has brought) means to them.

We asked them to illustrate what they had to say by extracts from the sound tracks of films they had made—films of importance in their careers though not necessarily films they themselves have liked. Above all, we said, be quite frank. Do not treat this as an ordinary interview—half gossip and half publicity. Your success is universally recognised: you can afford to be frank about yourself and about the profession of film-acting.

I hope you will agree with me that the results of these radio interviews are more than just interesting. A great deal of time and thought went into these programmes: we only started recording after prolonged discussion with the producer, Philip Daly. In effect, we invited these actors and actresses to discover through their discussions with us the ideas and the values they had developed during their long experience as artists. Once these ideas and values seemed to have been established and we felt ready to start recording, I aimed to keep as much in the background as possible. The result is that you will find the stars are talking intimately to you through me. I am just listening to them with you.

Did we abolish the myth that the film star is just an ordinary person with the good fortune to become a highly paid public pet? I hope so. People who pursue a regular job with regular hours of work are apt to envy what they regard as the excessive leisure of these actors and actresses

—all pay and no work, they think; just posing for the picture papers. We recorded our programmes during the spring and summer periods, and not one of the stars we met had more than a fortnight's holiday, and three had no holiday at all. Some, like Margaret Lockwood, Margaret Leighton, and Celia Johnson, were working all the time in the theatre. Those who were not at the studio filming were working on publicity for their most recent films, like Kenneth More, whose picture *Reach for the Sky* was released during his work with us.

All the stars, you will find, show how important to them is the climb towards independence, which is one of their chief objectives: the achievement of sufficient status to choose for themselves the parts they will play. Kenneth More, for example, is very emphatic about this: he did not want to remain typed in the kind of parts in which he first established his reputation on the screen. But when a star reaches this status he most constantly studies new scripts or treatments for films which producers, writers, and his agent want him to consider.

Some stars, like John Mills, become producers themselves, and constant reading of new novels, plays, and scripts is as important to a producer as reading new writing is to a publisher.

Lastly, we invited a film director, Sir Carol Reed—a man who himself started his career as an actor—to discuss the work of direction particularly from the point of view of the relationship of the director to his actors. The successful performances we see on the screen are normally the result of a close artistic partnership, the gradual building up of a character by the actor under the exact but sympathetic guidance of his director. We gave Sir Carol the last word on this aspect of the work, for his success with actors of many nationalities (as well as with very young children), in films like *Odd Man Out*, *The Fallen Idol*, and *The Third Man*, is unique in British films.

KENNETH MORE

JOHN MILLS

SIR CAROL REED

Douglas Bader (Kenneth More) examines his aircraft for damage—a scene from 'Reach for the Sky,' based on the life of the famous Battle of Britain pilot

With fierce determination the now legless Bader learns to walk again; he enters the ward of his fellow casualties for the first time under his own steam

In 'Smiley,' set in the Australian bush, Colin Petersen (right) brings to the name part a vivid, expressive face, a cager personality, and skilful timing

Bader, both his hands otherwise engaged with his crutches, uses his mouth to retrieve a lost pencil to the pretty waitress, Thelma (Muriel Pavlow), at a country tea

New British

DILYS POWELL contributed this talk to the G.O.S. review of new films released in the United Kingdom. (There will be another review next week on Wednesday at 16.15 and Thursday at 00.30 and 05.00)

OFTEN in the cinema some commonplace tale is given life by the way it is handled. With *Reach for the Sky*, the first film I want to tell you about, I should say the opposite: the film succeeds because its story is so splendid. For this is the life of Douglas Bader, the airman who crashed in 1931, lost both legs, and yet became one of the greatest of Britain's fighter pilots.

The film is based on the book by Paul Brickhill: its theme is human fortitude. Douglas Bader was a fine athlete before his crash, and a brilliant flyer. He was told that he would never walk again without a stick. But he not only learnt to walk on his artificial legs without a stick: he actually learnt to play golf. And he never gave up the hope of getting back into the air. Almost as soon as he could walk he proved that he could fly, too, as well as any man with legs of flesh and bone. But in the 'thirties the Royal Air Force had no place for him as a flyer. It was not until war came that Douglas Bader was needed again.

Fantastic Story with a Happy Ending

The story does not stop even there. Not only was Bader a brilliant fighter-pilot: he became a tactician and a great leader. In the last of his fantastic adventures he baled out over occupied France and was taken prisoner—a prisoner who was forever trying to escape; the film shows us the most audacious of these attempts. This true story even has a happy ending: after the war Bader came back to lead the Victory Fly-past over London.

Perhaps one cannot expect a film to live up to this extraordinary truth: *Reach for the Sky*, to be frank, is not quite as good as its subject. But, as I say, the subject carries it, and the performers carry it. This is an extremely well-acted film. There is a great deal of good playing in secondary parts: by Muriel Pavlow as the girl whom Bader marries; by Alexander Knox as a surgeon; by Sydney Tafler as the specialist who fits Bader with his artificial legs; and, in particular, by Dorothy Alison as a nurse who gives him courage at a crucial moment.

Douglas Bader is played by Kenneth More, who has had great success during the past few years in comedy—*Genevieve*, *Doctor in the House*—and both on the stage and on the screen he has triumphed in a part with serious undertones—the unreliable lover in *The Deep Blue Sea*. But in *Reach for the Sky* his range had to be wider. He always gives the impression of being an easy actor; he looks as if he were playing a part which is merely an extension of his own personality. But he is really a very skilled, a very professional actor. And here he looks a long way beneath the surface of the character: he looks into pain and into resolution; and he shows us not only the off-hand, breakneck flyer, he shows us a man with command.

You may wonder why, when I have so much to praise, I should feel that the film itself is not quite on the level of its subject. The fact is that *Reach for the Sky* occasionally lacks authority. The scenes of action in the war are a little thin; the story of the attempted escape is told in a rather half-hearted manner. Perhaps the director, Lewis Gilbert, who also wrote the screen-play, has tried to cram in too much; the film does not move in one piece: it meanders a little, it falters now and then. But

From 'Yield to the Night' Jim Lancaster (Michael Craig) at the flat of Mary Hilton (Diana Dors): 'I took off his shoes. He fell asleep in the chair. Jim had come back'

Mary Hilton fires five shots into Lucy . . . and is eventually hanged for murder

Films To See

in its emotional passages it is extremely successful; in these Mr. Gilbert and his players have worked finely together. When all is said and done the film is stirring. It excites admiration for spiritual as well as physical courage; respect for endurance; and the feeling of a great human victory.

The second film on my list this month has created a stir for two reasons: first, because Diana Dors, who has up to now been regarded as a curvaceous actress rather than a tragic one, plays the part of a condemned murderess; and, second, because the theme is capital punishment. The title is *Yield to the Night*. The film is based on a book by Joan Henry, and directed by J. Lee Thompson. The story is about a shop-girl whose lover leaves her for another woman; in the end the woman throws him over and drives him to suicide; and in cold blood the girl kills her. The setting of the film is the condemned cell. We see in flashback the events which have gone before: the girl's infatuation, her despair, her cold and senseless crime; but we are always brought back to the bare room with the two wardresses, the light always burning over the bed, and the door with no handle on the inside which leads to the execution shed. And there is no happy ending to this story.

The central character would not be an easy part for any actress. Miss Dors has a very good shot at it, and she does succeed in conveying a far greater range of feeling than one has hitherto expected from her. However, the best acting comes from secondary players. There is an exquisite performance from Yvonne Mitchell as a sympathetic wardress. Indeed, all the prison officials are finely played.

People sometimes say there is too much understatement in British acting, and now and then I am inclined to agree with them. But here the understatement is beautifully calculated to convey the nature of capital punishment in Britain.

Good Acting in a Beautiful Setting

Among the pleasant memories there is a film with an Australian setting: a piece in CinemaScope and colour and based on Moore Raymond's novel, *Smiley*. It is an engaging story of a little boy in a settlement on the edge of the bush who decides to save up to buy a bicycle. That means a lot of money for a boy, especially when there is the temptation of the sweet-shop; specially when there are fines to pay for broken windows and one's savings may be raided by a drunken father.

Smiley is involved in adventure as well as in finance. There are opium-smugglers in the district; there are snakes. But basically this is a tale about character of a boy. A number of experienced players take a hand in the acting, among them Chips Rafferty, John McCallum, and the distinguished Ralph Richardson. But everything really depends on the acting of the boy; and Colin Petersen's vivid, expressive face, his eager personality, and his extremely skilful timing give the whole story exactly what it needs. The Australian setting is both fascinating and beautiful.

Last, *The Long Arm*, which comes from Ealing; and this is last in another sense, too, for the studios which have turned out such famous films as *The Cruel Sea* and *Passport to Pimlico* are now to be used for television; Ealing Films will go on, of course, but not at Ealing. *The Long Arm* is a good, workmanlike job, a story of Scotland Yard detection in the manner of *The Blue Lamp*, skilfully and plausibly written by Janet Green and Robert Barr, and well directed by Charles Frend, with nice solid playing from Jack Hawkins and John Stratton as the Scotland Yard men, and a beautiful little sketch of a Welsh garage proprietor by Meredith Edwards. (Broadcast in the BBC's General Overseas Service)

In the death cell: 'Will you be there when it happens?'—Mary Hilton puts the awful question to the chief wardress (Yvonne Mitchell)

Supt. Halliday (Jack Hawkins) and a detective sergeant (John Stratton) in a scene from 'The Long Arm'—a story of the C.I.D. versus a safecracker

J. L. PUTMAN

J. L. PUTMAN, Head of the Industrial Research Group of the Isotopes Division of Britain's Atomic Research Establishment at Harwell, contributes the third talk in a special series of four: he explains what radio-active isotopes are and outlines some of their practical uses. The talk is introduced by C. L. Boltz'

Radio-active Isotopes

I EXPECT you remember the case of the West African Siamese twins brought to London two years ago and separated by a famous British surgeon. I talked to the surgeon at the time, and what struck me most, I think, was that in the preliminary examination of these unfortunate babies an entirely new device was used, one that did not exist in Britain even ten

years ago. I mean a chemical called a radio-active isotope, sometimes called for short a radio-isotope.

In the case of the Siamese twins a radio-isotope was used to trace the blood circulation between the two children, so that the surgeon knew exactly how much the blood was shared between the two. It was the result of this test that told the surgeon what to expect when he started to operate. As a result, though one baby died, the other survived and is alive, hale and healthy today. Instead of being part of a freak, a monster, useless for normal life, the baby Boko can live a normal life.

This use of a radio-active isotope is entirely modern. It could not have been done even, say, ten years ago. We were not making radio-isotopes in Britain until 1948. Yet today we export them to some fifty-nine countries all over the world. In fact we export more radio-isotopes than any other country.

They are the new tool of medicine and industry and agriculture and a dozen different branches of scientific research. You may remember that Professor Diamond told you that isotopes of any one element have all the same number of protons but have different numbers of neutrons. If any isotope is unstable—and most isotopes made in nuclear reactors are unstable—it gives out radiation. It is then a radio-isotope.

J. L. Putman has been in the business of isotopes since the beginning, and grown up with it, so to speak. He is going to tell you about radio-active isotopes.

It is interesting to reflect that the last cigarette you smoked and the foil in the cigarette packet may have been tested with radio-activity. These are examples of the use of radiations to measure the thickness or the density of materials. What are radio-isotopes? In a previous talk it was explained that isotopes are atoms of an element having different numbers of neutrons in their nuclei. The result of this is that isotopes of an element have the same chemical properties but different weights. Radio-isotopes are produced artificially, generally by placing ordinary chemicals in a nuclear reactor. They differ from their more natural neighbours only in that they emit radiations of one kind or another. These radiations are invisible, of course, but we can detect and measure them with Geiger counters and other devices. Different radiations have different penetrating powers: alpha particles, for example, are completely stopped by two or three inches of air. Beta particles can penetrate up to a few feet of air, or can pass through thin sheets of paper or metal. Gamma rays can pass through steel sheets up to several inches thick.

How Beta Particles Can 'Measure'

It is the beta particles which are used for measuring cigarettes. In passing through a thickness of material the number of beta particles in a beam is steadily reduced as some of them are absorbed. The amount of material through which the beam has passed can be gauged by the number of radiations which get through. So a machine has been made in which beta particles from a radio-active source pass through cigarettes as they are manufactured. The response of a detector on the other side shows how tightly the tobacco is packed. Automatic controls now adjust the tobacco packing so that it is kept at just the right level.

Obviously a technique like this is not confined to measuring cigarettes. Thickness gauges using beta particles are used for measuring and controlling all sorts of sheet materials, especially paper, plastics, and metal foils, and when gamma rays are used sheet steel up to two or three inches thick can be measured in the same way. Other radio-active thickness gauges can measure the thickness of tinplate or paint on a surface, or the thickness of tube walls from the outside.

Photographic films can also be used to detect the radiations. If you place your hand between an X-ray tube and a photographic film it casts a shadow because it absorbs some of the X-rays. The bones absorb more than the rest of the hand, so the film when developed shows a shadow picture or radiograph of the bony structure of the hand. But although X-ray films are cheap, and easy to carry about, X-ray sets are not. A relatively cheap radio-active source weighing a few grams and emitting gamma rays can do the same job as an expensive X-ray equipment, though more slowly. Radio-active thulium emits gamma rays about as penetrating as the X-rays from a normal medical equipment, and these can be screened with lead so effectively that quite a strong source can be safely

carried in a jacket pocket. With a source like this some of my colleagues have taken quite good radiographs of a man's hand in less than a minute. This can be tremendously useful for treating accidents in places where highly equipped hospitals are few and far between.

Some other radio-isotopes give off more penetrating gamma rays. Those from radio-cobalt, for example, are used routinely to make radiographs of steel castings up to six inches thick in order to test for flaws. Here the radio-active source must be kept for safety in a thick lead container when not in use. But it is still very much cheaper than an X-ray machine to perform the same job—more convenient, too, for the source, even with its standard holder, is less than an inch long and can be used in places quite inaccessible to a large X-ray tube.

So far we have dealt only with the penetrating power of the radiations. The fact that radio-isotopes are atoms with the same chemical properties but different weights at once puts a powerful tool into our hands—the so-called radio-active tracer technique. Although radio-isotopes behave chemically exactly like their more natural neighbours we can detect and identify them because of their radiations. Also we can measure the quantity of a substance by the rate at which it emits radiations, and often the quantity which can be measured is very small.

Medical research workers use radio-active iodine to study the behaviour of the thyroid gland. Water containing a tiny quantity of radio-active iodine (far too small to do any harm) is drunk by a patient and a Geiger counter held near the patient's neck then records the rate with which iodine is taken up by the thyroid. The shape of the gland can be mapped out too from its radio-activity.

Diagnosis and Treatment of Disease

Much has been learned about the working of the body in the past ten years by methods such as these, especially about the use it makes of minerals present in such tiny quantities in the body that they cannot be measured by other means. From this information great strides have been made in the diagnosis and treatment of diseases.

Some radio-active methods have themselves been used for diagnosis. Radio-iodine has been used for some years to test for diseases of the thyroid. A radio-active form of common salt is used to label the bloodstream for measuring its rate of circulation in an arm or a leg. The radio-isotopes used for these tests are short-lived and leave the body free of radio-activity soon after the tests.

Larger doses of radio-isotopes are also used in the treatment of some diseases, but that is another story. In agriculture the tracer method is used to measure how plants make use of fertilisers, by making a constituent of the fertiliser radio-active and later measuring its distribution in the body of the plant. Similarly when insecticides are made radio-active their distribution on a growing crop, their behaviour in the plants, and their effect on an insect can all be studied in detail by measurement of their radiations. Knowledge of the migration of insects is in some parts of the world a vital aspect of public health, and we are now able to use the radio-active tracer technique to get information about this.

The tracer technique is used in chemical industries for quick analysis, and often avoids the need for difficult chemical separations. In a more mundane fashion we have used short-lived radio-sodium and manganese to check the efficiency of mixing in gramophone records, pig-food, and even chocolate by checking the relative amounts of radio-active tracer in various samples after mixing.

On a large scale the technique can be used for tracing sand movements under the sea or mud on the beds of rivers. Last year we used about two pounds of radio-active powdered glass to trace the movements of mud in the estuary of the Thames. With our colleagues of the Hydraulics Research Station and the Port of London Authority we followed its movements for about six months over twenty miles of the river. The results are being used as a guide to dredging operations.

For the future increasing quantities of radio-activity are becoming available as by-products of atomic power. We can now study the effects of radiations from really large sources of radio-activity. At present this work is in a research phase, but the results already obtained show great promise. Drugs and foodstuffs can be sterilised and preserved for long periods of time by the radiations; rubber can be vulcanised without heating; some chemical processes can be speeded up and new materials produced which may be of the greatest importance to engineers of the future.

Now, Mr. Putman, there is one thing worrying everybody about the future, and that is: are these radio-active isotopes dangerous to use?

No, they are not dangerous if used with the proper precautions. Careful tolerance levels have been laid down now as to what levels may be safely dealt with, under what conditions, and provided these are conformed with, there is no danger in using them in most industrial and medical applications.' (Broadcast in 'London Calling Asia')

The bush plane takes over from the stern-wheeler at Dawson City, of 'Gold Rush' fame

A TRIP TO THE YUKON

ROSEMARY GILLIAT, an Englishwoman who has spent several years in Canada as a freelance photographer, describes a trip to the Yukon to take pictures for the Hudson's Bay Company—those on this page among them

LIKE everyone else I had read about the Yukon Gold Rush, and so, having been swept thousands of miles across Canada by air, it seemed strange that evening to be walking on board an ancient stern-wheeled ship moored at Whitehorse in the Yukon Territory, while the Northern Lights fingered the sky overhead. And stranger still, next morning, to be steaming down the Yukon river, driven by the shuddering, orange paddle-wheel, in the wake of all those treasure-hunters of 1898.

Since that date stern-wheelers have run this river highway, and my ship, the *Whitehorse*, was the last freighter to do the regular trip between the town of Whitehorse and Dawson City, 300 miles downstream; now that land highways link these two centres supplies are carried by road instead of by water. The only ship left on the upper river is the *Klondike*, and she has been luxuriously reconditioned for the more expensive sort of summer tourist.

'Magnificent Wild Country'

The voyage to Dawson took three days, and every twisting mile of it lay through magnificent wild country. It was September, and the hills were brilliant with the heraldic black and gold of evergreen and poplar. The river rushed towards the Behring Sea, some 2,000 miles away, passing rare settlements, Indian camps, or solitary trappers' cabins. A small white box, like a kite on a castle, was the wheelhouse, ornamented with fanciful fretwork eaves that would have gladdened the heart of Emmett, the cartoonist. This was dominated by a very tall, thin, yellow smokestack with a black stripe. Inside the turret my eye was caught by a shining brass spittoon of noble dimensions, obviously dating from the time when men were men.

From here, high above the river, one could appreciate the wicked speed of the current and the skill with which the pilot, himself a ship's master, gave his quiet orders to the helmsman, who in turn spun the wheel, shaving the overhanging cliffs ahead as close as you'd peel an apple—to use Mark Twain's phrase. Every soul on board appeared on deck to watch our unerring passage between the grasping rocks of five single rapids. And again I was amazed at the thought of the thousands of hand-made boats and scows that shot these same rapids fifty-odd years ago.

Two of my six fellow passengers were returning from a holiday in the United States, which they had found unsettling: 'Everyone is in such a doggone hurry,' exclaimed Mr. Mulloy. He was a prospector, and his wife often accompanied him on trips. But it was hard to imagine this quiet woman, in her neat fur coat, being a crack shot and in winter driving a dog team. As the ship came in sight of a clearing, and the trim log-cabin that was their home, we became aware of a terribly mournful high-pitched sound. It was the prospector's minute dog, leader of his dog team. With muzzle raised to heaven the dog was keeping his welcome, his bushy white tail sweeping in ecstatic arcs. Somehow he knew his master was home, and soon all the other dogs joined in the chorus.

Red and yellow dahlias grew around the cabin, and the window-sills flamed with geraniums. A matchless pair of bleached moose-antlers hung over the door of an older and smaller log house. Their old caretaking

Miles Canyon, on the Yukon river: 'I was amazed at the thought of thousands of hand-made boats that shot these rapids fifty-odd years ago'

neighbour, wakened by all this racket, came down to the shore to greet the Mulloys, while their supplies for one year were being unloaded on to the beach—crates and packages of every size: a hat-box and a pack-board, a radio and spare batteries, and a geiger counter.

As the ship drew away from the shore there was a faint calling overhead; flocks of cranes were already flying south. Further on we dropped mail and stores at a pre-arranged spot on a deserted river-bank; men from a surveying camp would pick them up in due course. Later, a soft-voiced Welshman, a local prospector and trapper, joined us. He had had a bad time the previous winter; having partly frozen a lung in sixty-below-zero weather, he got so ill that he had to radio for help, and a plane from Whitehorse picked him up from his lonely cabin on Thistle creek, and flew him back to hospital.

Then we came to Dawson City, said to have had a population of 30,000 at the height of the Gold Rush, but now little more than a ghost town. Only a handful of Indians met the boat; in the old days the whole town would have turned out. The chief engineer said a little wistfully: 'Somehow it's time they took the old boats off the river. You used to feel you were part of something alive. But I hate to think of the *Whitehorse* being laid up on the river-bank to moulder away with all the other old stern-wheelers.'

However, a new and prosperous time lies ahead for Yukon Territory. The engineers of the Frobisher Plan will dam the river to provide hydro-electric power on a scale that will make the great power scheme of Kitimat look like small beer. And then fortune-hunters of a different kind will be pouring into the country. (*Broadcast in the BBC's General Overseas Service*)

OUR WAY OF LIFE: 11

A Nation of Townspeople

DR. EVA TAYLOR reflects on the special tendency she discerns in the British to forsake the countryside and become town-dwellers, and, so far as Britain itself is concerned, to move into 'Metropolitan England'—that is, into Greater London and its adjacent counties

FOUR out of five Englishmen—and Scotsmen and Welshmen—are town-dwellers. It seems to be a special tendency among Britishers—for in spite of their 'wide open spaces' more than half the people of New Zealand live in towns—so do two out of three Australians and Canadians. One might even call it a world tendency: young people always seem to long for city life—and that is easy to understand, for it is in towns that 'opportunity knocks.'

And in a country like Britain, which depends for its prosperity on industry and commerce, the towns are bound to grow, for its pretty obvious that factories and offices and warehouses are best placed in towns. Business people have to get together, and they must be where rail and road and air transport are good. All of which means that it is in towns that there is also the widest choice of a job. That is not true of every town, of course; some of our towns—and that was particularly the case before the war—specialised in one particular direction, with all their factories doing the same thing, so that when there was a slump in that line (as happened over cheap cotton goods) everyone suffered at once.

Influence of the Motor-bus

In between the two wars—which was a time when there was no housing shortage—people streamed into the most prosperous of the towns not only from the countryside—from Wales, the Highlands of Scotland, the English farming counties—but also from these one-industry towns where business had gone. But quite apart from the matter of jobs one of the things that made us change so quickly into a nation of townsmen was the coming, within the past fifty years, of the motor-bus. That did more than anything else to empty the villages.

I am old enough to remember the old-time pattern of an English village, with the squire in the big house, his elderly kinsfolk in the dower house, the parson with seven or eight children at the vicarage, the pub, the mill, the general shop, the blacksmith's forge, the scattered farms and labourers' cottages. The only way to get to the market town was by carrier's cart once a week, and the only alternative to 'going on the land' was to get into service with the gentry. The country bus altered all that. It brought the country folk in to the better shops, the better services, and the pleasures and jobs of the town.

But, in fact, the more you look into it the more complicated the changes seem to be. At a meeting of the British Association last autumn one of the speakers showed a migration map he had based on the 1951 census. And it appears that the greatest ambition people have nowadays is to move into what is called 'Metropolitan England': that is to say, into Greater London with the counties immediately round about it. There is also a migration, it is true, into Midland cities, like Coventry and Birmingham, where there has been a boom in engineering jobs, but that is quite small by comparison with the huge movement towards London. But here is the curious thing. In London itself—that is to say the area under the London County Council—the population has actually got smaller since the war. The tremendous increase is in the suburbs.

'Where All the Big Things Happen'

I believe it is true to say that the bigger a city is the faster it will grow, for the simple reason that in a monster city there is absolutely everything you can want or think of. And if it is also the capital city, as London is, then it is the place where all the big things happen.

But the trouble is that our love for great cities is a worry to the authorities. They are getting too big, they say, and country life is better for you, or at any rate for the children. In the country you can have a garden, and a house to yourself. Unluckily most people work in factories or shops or offices, so they cannot be scattered in villages, even if they wanted to be. And we are nearly all used to town life, with its crowds, and big shops and cinemas. So now they are building New Towns out in the country, with the idea that we can eat our cake and have it.

In the New Towns factories are built at the same time as houses, and the houses are allotted to workers brought out from the great cities. Where there were once fields and hedges and copses, concrete roads are laid out, with curbs and lamp standards. So the birds and the flowers disappear. Ask New Town dwellers how they like it. They always say: 'It's very quiet.'

Old people, of course, like to be quiet, but they do not want to be lonely, and that is why so many of them when they retire go to live on the south-east coast, in Kent, Sussex, or Hampshire where it is warm and sunny. There is an almost continuous built-up area all along that shore, joining up big towns like Brighton, with plenty of amusements and comforts. It looks as though we are all townspeople at heart. (Broadcast in the BBC's General Overseas Service.)

Kendal—a Town of Mellowed Dignity

ALAN DIXON takes you on a brief visit to a charming town in the northern county of Westmorland: it was here, more than 600 years ago, that England's great woollen industry had its beginnings

THIS charming town is the biggest in the county of Westmorland. By English standards it is a small town, for the population is only a little over 20,000. If it were larger it would blanket the fine hills of Westmorland, and no doubt the fine old buildings which can be found beside the river Kent, some of them with their overhanging upper storeys, would have been swallowed up or at best been relegated to a slum area.

Instead, Kendal has retained the dignity that has mellowed since the time of the Norman Conquest. The area was made a barony by Richard the Lionheart before he set off to the Crusades. Some say that this was the reward for Kendal's offerings to the fighting King's war chest. It seems more likely that it was a thanks-offering to the sturdy men of Westmorland who won distinction in many a warlike fray. Today it is hard to imagine that the yeomen of this peaceful town were once the masters of the long bow and the sword. But history and environment made them so. As early as the twelfth century they were constantly at war with the Scots invaders.

Even today the old buildings of the town with their narrow windows and their unusual arrangement of courts and yards are a reminder of that turbulent period. The men of Kendal built their houses as more peaceful folk would build a castle. The yards were so designed that they could be barricaded and defended against any marauder. The burghers of old were trained in military service, and their ability in the art of war has

Even today the old buildings of the town with their narrow windows and their unusual arrangement of courts and yards are a reminder of a more turbulent past

A typical stone bridge over the Kent, the river running through Kendal: the town is a favourite centre for those exploring the hills of the Lake District

been remembered by more than one poet. On the field of Flodden the valour of these yeomen archers is remembered in these words:

With milk-white coats and crosses red,
These were the bows of Kendal bold,
Who fierce did fight and never fled.

In *The Lay of the Last Minstrel* Sir Walter Scott says of them:

Behind, in close array and fast,
The Kendal Archers all in green,
Obedient to the bugle blast
Advancing from the woods were seen.

That remark of Scott's about the green suits of the Kendal men restores the balance. So far it might seem that the people of the town were merely professional soldiers. Nothing could be further from the truth, for willing as they were to take time off to meet a Scotsman they were essentially yeoman stock who made a profitable livelihood from their own industry. It has been almost forgotten that the great woollen industry of England started in Kendal over 600 years ago. At that time Edward III granted letters of protection to John Kemp, a weaver of Flanders. For 500 years the trade flourished, and the heavy woollen green cloth mentioned by Sir Walter Scott and Will Shakespeare was just as famous as the fighting qualities of the townsfolk. It is not surprising, then, that the motto of the town is 'Wool Is my Bread.'

Tobacco arrived in Kendal from America as early as 1623, and later Kendal snuff became the choice of the dandies. The firm that was started by a go-ahead young man named Thomas Harrison in 1792 is still in existence, and once inside the snuff-mill at Sandes Avenue the world appears to move backwards a couple of centuries. The grinding plant was installed over 260 years ago, and the giant cogwheels, the oaken mortars, and their pestles might seem to be ready for the museum. That is far from true, because engineering experts admit that the old craftsman produced snuff-making machinery which cannot be improved on today.

But the gentle art of snuff-making does not truly reflect the industrial tempo of Kendal. Engineering works, woollen mills, and clothing mills send the products of this prosperous town to all parts of the world. (Broadcast in the BBC's General Overseas Service)

DR. KENNETH LITTLE, Head of the Department of Social Anthropology, Edinburgh, contributed this talk to the series 'I Remember Africa.' The Africa he recalls is West Africa, where, he says, there exists a family sentiment that 'could be the means of creating the nearest approximation to a truly classless society the world has so far seen'

Social Changes in West Africa

I AM very glad to have this opportunity of reminiscing about West Africa because I am going to use it to greet my friends in Sierra Leone, the Gambia, the Gold Coast, and Nigeria. Actually, among a great many happy and interesting experiences of Africa and of African people the most outstanding occurred not in West Africa itself but during my undergraduate days at Cambridge. It was there that I made my first West African friend. He was from the Gold Coast, and he and I, along with another Gold Coastian and a Nigerian, who now holds ministerial rank, were members of the same college. Until that time I had never met, much less spoken to, any African.

My Gold Coast friend and I were both somewhat older than most of the other undergraduates, and the first interest we had in common was in economics and in passing our Tripos. However, it was not long before I got into the habit of dropping in at his rooms for a chat after my own evening's work was done. Quite often we would work over the questions of previous examination papers together, quizzing each other in turn. But invariably the conversation would move on to one topic—West Africa—and then we would settle down to it for the night.

It was thus that I gradually began to find my way around in all sorts of matters that I had never heard of or dreamed of before: indirect rule; British colonial policy compared with French policy; the work of the missions; the need for hospitals and schools; and many other matters. All these were thoroughly argued over and threshed out, although I myself was the merest amateur in such things. It was an exciting and vast and complicated scene to which I was introduced, not unlike a voyage of discovery into a new world.

Passionate Concern for the Future

I was impressed at the time by the extent of my friend's knowledge, but it was only later that I realised how much I owed to those nightly talks and discussions. Quite apart from their pleasures, they provided, in effect, the gist of a whole library of books on colonial affairs. What mainly struck me at the time was my friend's complete absorption in this one topic—West Africa—and his passionate concern for the future of his country and its people. It was so great that I could not but be fired by such enthusiasm, and so I decided to complete my degree by reading what seemed the most relevant subject: social anthropology.

My objective was to get out to West Africa myself as soon as possible. However, the war came. Research overseas was ruled out for the time being, and so I did the next best thing. I went to Cardiff in South Wales, where there is a small community of West Africans and West Indians. I studied their relationships with the local British inhabitants: the results are contained in my book, *Negroes in Britain*. Then at the end of 1944 the opportunity came at last of going to Sierra Leone. I spent about eighteen months there, living up country and carrying on my research among the Mende in the towns and villages of the Protectorate. I was able to pay a short visit to the Gambia quite soon afterwards, and I have made more recent tours of Western Nigeria and the Gold Coast, as well as paying further visits to Sierra Leone.

I mention these journeys and the fact that my main sociological and research interests are firmly rooted in West Africa because they all hark back to my Gold Coast friend's room in that Cambridge college. I am in no way exaggerating the situation when I say that but for him and the talks we had together there would have been none of this for me. I should have taken up some quite different career, perhaps in psychology or in school teaching. I would not, I am certain, have ever thought of West Africa. I would have missed all the rich store of friends made, and experiences gained, in all four West African countries. These things I owe directly or indirectly to my Gold Coast friend, and they have led, I think, to certain discoveries in the sociological field that interest me most: that which concerns the social changes taking place in West Africa today.

Very briefly, what I have discovered is that West Africans are intent on making their own particular contribution to world culture, something which is quite distinct from what

Westerners are teaching them and from what has been brought into African lands by European administrators, businessmen, settlers, and missionaries. Africans—particularly educated Africans—are anxious, of course, to absorb all the technical know-how that the Western world can provide. They are eager for scientific and medical knowledge, to acquire engineering skills, to organise efficient civil and diplomatic services, and to run their businesses on modern lines. But there is also a very large area in social and family life which remains stubbornly immune to Westernisation.

I am not referring to the fairly obvious fact that many people who would previously have worn European clothes nowadays prefer African dress. That certainly shows an interest in being and remaining African. But it is superficial compared with the basic texture of African society which consists of the wide circle of kinsfolk and relatives who make up the family. The persistence of that family sentiment and of its obligations to a very large number of distant relatives as well as to a person's immediate kin is very impressive.

In Britain, for example, relatively few of us know the names or even the existence of relatives beyond first cousin. We are often very devoted to our wives, our children and parents, quite often to our brothers and sisters, and sometimes to an uncle or an aunt; but there are very many of us who never see or hear of other relatives from one end of the year to another.

This African family sentiment is the more remarkable from our point of view because it apparently overrides what in Britain would represent considerable differences in social class. From my observation it would be rare for any African, however well off, and whatever his professional or educational standing, to make any kind of discrimination. He would certainly not turn away a relative, however distant and however poor or illiterate. The likelihood is that such a person would be as welcome as anyone else and would also be accepted, if the occasion arose, as a member of the household.

Similarly, my impression is that personal relationships in general—quite irrespective of family and kinship—are much warmer and less formal on the whole than in Britain. In West Africa you drop in at your friend's house when you are passing or whenever you feel the inclination to see him; nor does the time of the day or the length of your visit matter very much.

In Britain such a thing would be almost impossible except among the very closest friends and relatives. You are expected to let your friends know in advance, either by writing or by telephone, and even that can only be done with people you have known for quite some time. More generally, you must wait until your friends themselves take the initiative, unless, of course, it is a matter of business. Time and length of visit again are all strictly prescribed. All this, in effect, is further evidence of the consciousness of social status which in British middle-class circles, at any rate, demands a family being on its best behaviour for visitors in terms of a tidy room and food and drink to offer them. The necessary preparations have to be made; hence the need of giving one's friends due warning lest you cause everyone embarrassment.

I have pointed out this family sentiment and relative lack of social consciousness among West Africans because I, personally, hope that it will be maintained and continue. In West Africa today there are many serious problems—political, economic, and social—and very many of them hinge upon diversities of ethnic origin and differences of cultural and educational attainment. There is the task of welding peoples of quite different tradition and outlook together into a single nation so that they will be willing to acknowledge a common citizenship.

Family sentiment, and the ties of personal loyalty and obligation that go with it, could be a powerful cement in these matters if this family spirit could be enlarged and carried into still broader fields than kinship. It could be the means of creating in West Africa the nearest approximation to a truly classless society that the world has so far seen. (Broadcast in 'Calling West Africa')

A Gold Coast market run by the local authority which lets out stalls and pitches to the traders

'An Army Marches on its Stomach'

PHILIP HARBEN, the famous TV chef, gives an expert's report on the finals of the British Army Cooking Championship which he went to see at the Army Catering Corps' Aldershot training centre

A budding Harben in the competition: 'I could not blame them for getting butterflies in the tummy . . . but they were doing a remarkably good job'

Do you remember the song that goes: 'Ma, I miss your apple pie, Ma, I miss your stew'? It dates back to a time when the horrors of war definitely included Army food, and people who were called up by the Army dreaded its cooking almost more than the bullets and shrapnel. But it is not true now: the whole thing, the whole picture, has changed completely. I know that for a fact, because I went to Aldershot to watch the finals of the Army cooking competition. The fact that there are such things as cooking competitions in the Army, the enormous keenness with which they are entered, and the enormous number of entries prove that catering and cooking in the Army is taken very seriously indeed.

I would like to tell you a bit about this Army Catering Corps because it is a really remarkable organisation. It was founded in 1941 when the Army in its wisdom called in the catering trade to solve its catering problem; and the man, the real king-pin, who was really responsible for founding it was Sir Isadore Salmon, whose name is a household word, and who was the head of just about the biggest catering organisation in Britain. The Army Catering Corps is housed at Aldershot in barracks called St. Omer, and the present commandant is Colonel Peck, who gave me facilities for seeing everything—in fact, the place was wide open, and I saw a great deal there which fascinated me.

The improvement in cooking—and I was told by people who were there last year and the year before that it is improving sharply every year—is not just confined to the Army: it extends to a very large amount of institutional catering.

The Cream of Army Cooking

Now, I will tell you about this competition I went to see. It starts off by cooks being selected in the various parts of the world where they are serving—mostly in the United Kingdom and the British Army of the Rhine: the far-flung theatres, of course, are too far away, and they cannot come in. It starts at district and division levels respectively; the winners go forward to the command competitions; and the successful competitors then come to the Army Catering Corps training centre at Aldershot for the Army finals. The great day was when the finals were being held. And all these people who had been selected from hundreds and hundreds of competitors were the cream of the Army cooking. Believe me, what they did was pretty good.

The first cooks I looked at were the military hospital team, and they had cooked three different meals. First of all, an ordinary diet, and the menu for that was cream of chicken soup, braised beef and vegetables—fondant potatoes and French beans—fruit pie and custard. The fondant potatoes were beautifully done.

The next meal was for a light solid diet, and that was a clear soup *Juhenne*; minced chicken and poached eggs, *Duchesse* potatoes, mashed carrots; and caramel cream. That menu interested me particularly from a technical point of view! I was fascinated to note the exquisite precision with which the *Juhenne* had been done.

'Catering and cooking in the British Army are taken very seriously indeed'—and that is equally true of both sides of the cookhouse counter!

I saw there were poached eggs on the menu, and I waited to see them. They were some time coming up, so I went away and saw something else, but I insisted on coming back to see the poached eggs, because it is a theory of mine that poached eggs are just about the most advanced work in cooking there is. In my opinion it is a really difficult thing to do, and these poached eggs were perfect, even though they had to be held back a bit waiting for the judges to be ready. And with their *Duchesse* potatoes—which are really advanced work—beautifully piped, they were a really lovely job.

That was the first team we saw—the military hospital team. Then there was a team of W.R.A.C. cooks—women cooks. They had to do tomato soup, Lancashire hotpot, roast lamb and mint sauce, roast potatoes, buttered peas, open fruit tart, twelve rock cakes or scones, and twelve assorted yeast buns—and a very good job they were making of it, too.

Stage Fright Rearing its Ugly Head

After that I went and had a look at the individual competition which is for N.C.O.s, each man working on his own. In the previous competitions I have been telling you about they work as a team—a team of three, usually, an N.C.O. and two privates—but these chaps were working all on their own; and while there I saw stage fright rearing its ugly head. I must say I had a fellow feeling for them: I could not blame them for getting butterflies in the tummy at all. I know what it is like when you have got all those people staring at you. But nevertheless they were doing a remarkably good job.

The thing which interested me most was the last competition I looked at: it is called the Unit Competition, and it is done out of doors on improvised equipment. First of all, I will tell you what the menu was, and then I will tell you the equipment they had on which to cook it. They had to cook tomato soup, steak-and-kidney pie, parsley potatoes, mixed vegetables, stewed fruit with rice, and twenty-four yeast buns. The equipment they had was supposed to be anything they could scrounge under conditions of warfare: bricks, bits of wood, old oil drums—anything like that which they could lay hold of—and they had to make these cookers themselves. And, indeed, they had made the most remarkable contraptions out of bricks, pitted with clay, with a flue going right round the back to heat the oven.

There they had done this remarkable meal which you or I might be only too pleased to cook with a proper, well-fitted kitchen. One thing that did strike me as a little odd was that they made their yeast buns with fresh yeast, and, frankly, I would have thought that if you were cooking under conditions where you had to scrounge odd bricks in corners of farmyards you would be rather unlikely to find yourself in the possession of fresh yeast.

Mind you, all Army catering is not up to that standard: they are quite realistic about it. This is the cream, this is the best, and some of the amazing things I saw—that beautiful exhibition work, potato baskets and sponge sugar and fondants and things like that—are not ordinary Army cooking, of course. But doing that sort of thing encourages the men and keeps up their standards.

Now, not only is this food in the Army so good: it is a part of the improvement in all British food. You know, it is a fact that the food in Great Britain now is reckoned to be the best in the world. I was in America earlier this year—I went there to do some propaganda for British food, to tell them how good it is—and they said: 'But, dear chap, don't you know your cooking is the best in Europe?' (*Broadcast in the BBC's General Overseas Service*)

Rope-making is a thriving cottage industry. Pictured below is a party of villagers spinning strong, durable rope in the shade of tall palms and fanned by cool sea breezes

The palace of the Sultan of Zanzibar on the waterfront road of Zanzibar town

Part of Zanzibar's waterfront seen from the Secretariat building Ngambe

Zanzibar: 'an Old bu

HAROLD INGRAMS tells something of the fame of the late H.R.H. Princess Margaret this week when she arrives in Zanzibar. Listeners will hear a programme about Zanzibar on

THE island of Zanzibar is too often described as a picturesque survival, with little more than a museum interest. It is true that the people on the lakes no longer dance to the flute that is played in Zanzibar, but the people of that island and of the sister-island of Pemba dance to it as vigorously as they did when its echoes reached further; the seeds of culture and civilisation regularly sown on these coral islands by the Arabs of south Arabia for several thousand years still flourish, and crossed with those of Western varieties, continue to bring forth an increasing harvest.

Zanzibar itself does not look back and dream about its past: romantics from the West do that for it. The Zanzibaris do not give much thought to the loss of past glories: they are more busily concerned with their present and their future.

Colonisers through the Centuries

From some unknown date B.C.—perhaps a thousand years, but no less than seven centuries—Zanzibar was increasingly colonised by Arabs from south-west Arabia. They developed trade there and eventually they ruled it, a dependency of the kingdoms which grew up in the Lands of Sheba. Other outside influences—Ancient Egyptian and Greek, for example—also made their way there. From early times the Hindus also developed a widespread sea-trade, and in friendly co-operation with the Arabs built up commerce. Indeed they made better merchants than the Arabs.

The Persians, the Portuguese came and went, and gradually the dominant power in Zanzibar and on the mainland coast fell to the Arabs of Oman in south-east Arabia. In 1832 Seyyid Said made Zanzibar the capital of an extensive empire in south-east Arabia and East Africa. It was in his days, and in those of two of his sons who succeeded him, that Zanzibar achieved the height of its fame and influence, conducting relations with many foreign powers and becoming the metropolis of the western part of the Indian Ocean.

At the beginning of the nineteenth century Arab influence was making itself felt in the region of the lakes, and even beyond, and to this day there are communities of Arab traders, from the Yemen, the Hadhramaut and Oman in many towns of the distant interior.

From Zanzibar the interior of East Africa was opened up to the West—men like Livingstone, Burton, Speke, and Krapf owed some of the success to the Sultan's influence. Much missionary endeavour was based on Zanzibar, and early British proconsular activity was directed thence in co-operation with the Sultan. Seyyid Said was far-seeing: he seems to have appreciated the changes that must come about in East Africa. He trusted the British, and supported them, even when he knew that co-operation with them, as in the matter of the abolition of the slave trade, must bring him into conflict with his very individualistic fellow countrymen. On the other hand consular representatives like Colonel Atkins Hamerton, and, at a later date in the time of his son Seyyid

Barghash, Sir John Kirk, keenly watched over Zanzibar interests in the
 face of expanding German activities. These in the end became too potent
 or all the Sultan's interests to be protected, but it is probably the case
 that if it had not been for the rulers of Zanzibar the extent of British
 interests in East Africa would not have been so wide.

Modern Zanzibar really dates from Seyid Said's time. He believed in
 free trade, encouraged foreign traders, mostly Indians, and made the city
 of tall white houses the entrepot of East Africa. He was a coloniser in
 the modern sense. He introduced and compelled the cultivation of the
 crops on which Zanzibar still largely lives. He administered the African
 population by indirect rule and he reigned in the practice and spirit of
 Islam. In any time or place he would have ranked as a statesman.

It is to the Arab outlook and the spirit of Islam—in particular it is to
 Seyid Said—that Zanzibar owes its racial harmony and tolerant spirit.
 He protected the Indians and established them as a free community in
 the comity of Zanzibar. He encouraged the Europeans, and they
 developed a tradition of respect and affection for the ruling people. The
 Africans were well treated and readily accepted Arab control. These
 things have lasted, and if there have been slight rifts in the lute in late
 years they have been due to the influx of people untouched by the
 traditions of Zanzibar.

A Self-Governing City State?

Zanzibar was so friendly that it became too easy to administer and
 people no longer bothered to keep awake an awareness of inner feelings
 common to all Arabs. For years there were too many European officials,
 though now the number of the Sultan's subjects in senior posts is becom-
 ing impressive. The unwisely handled dispute with the Arab nationalists
 as happily come to an end, and the Arab Association has demanded a
 common electoral roll, a move in conformity both with Western idealism
 and the spirit of Islam. Zanzibar may soon be self-governing again, this
 time as a city state which may well have a contribution to make to
 Commonwealth civilisation.

So it is a little kingdom with an old, yet developing, civilisation which
 the Princess will be visiting. She will see that when she lands and sees
 the large Arab houses which line the water-front. In the narrow, shady
 streets of the city, in villages over which tall coconut palms raise their
 feathery tops against the blue sky, in the scented clove groves, where
 Arabs have their country homes, everywhere, she will meet friendly,
 smiling, well-mannered, and civilised people.

Her Royal Highness will also meet people from the sister-island of
 Pemba—the Green Island, as the Arabs call it: indeed they are to enter-
 tain the Princess themselves on Zanzibar soil. But of all those who
 are privileged to entertain her she will have no nobler or more gentle host
 than the well-loved Sultan, great-grandson of Seyid Said, who has so
 long reigned in the hearts and minds of all who dwell in Zanzibar.

Zanzibar's 'Beit el Agaib,' a one-time palace which is now used as the Secretariat

A wharf in the harbour: 'The Zanzibaris do not give much thought to the loss of past glories: they are more busily concerned with their present and their future'

CHRISTMAS GIFTS For Friends and Relations IN GREAT BRITAIN

Wherever you live in the world why not let us do your Christmas Shopping for you? The JOHN LYLE GIFT SERVICE specialises in packing and posting a complete range of Gifts carefully selected from Britain's foremost manufacturers. No worry about your parcel reaching England in time—it's posted in England. All gifts are stored in our own warehouse and delivery is guaranteed before Christmas and the recipient does not have to pay any Duty. It's all so simple. All you have to do is to send us your order, remittance and greetings card, we do the rest.

Write NOW for our magnificent fully
★ illustrated FREE Christmas catalogue ★
showing over 150 different presents to suit all
ages at all prices.

BERYL REID

Two of the stars who will be heard this week in 'Curiouser and Curiouser,' an anthology of Anglo-American off-beat humour starting in the General Overseas Service on Wednesday at 10.30, Thursday at 19.00, Friday at 01.00

New Variety Shows

GALE PEDRICK introduces some of the Variety programmes which have been planned for the entertainment of listeners to the General Overseas Service during the last quarter of 1956

CYNICS can say what they like (and, of course, they constantly do) but the radio panel game has become one of the most popular diversions known to man. It would seem that there is a special kind of exaltation to be experienced when the panel cannot find the answer and you (sometimes surprisingly) can. Again, if many people are never happier than when listening to 'the experts' making a hash of it, there are others nearly as happy when celebrities are persuaded to talk intimately about the lives they lead in private and the careers they follow in public. It is not surprising, then, that these reflections concern two if not three out of the new Variety shows planned for the closing months of 1956.

They are 'Top of the Pops,' a kind of hit parade with a different approach; and 'Two in One,' which, as its title suggests, is in fact two programmes—a pair of ingenious panel games—in one.

'Yours Sincerely—Vera Lynn'—and if ever a title may be said to speak for itself, this is it!—and 'These Radio Times,' a series specially designed for overseas listening, are also included in the autumn and late-autumn schedules.

Joan Clark, the Variety Department's only woman producer—with her husband, John P. Wynn—are past masters in the art of inventing radio panel games. They share a talent for exploiting the public's appetite for 'knowing the answers.' The first of the 'Two-In-One' panel games is 'Plot the Spot' and the other is 'Figure It Out.'

The quest for hidden treasure is, I suppose, among the safest half-dozen subjects for this type of entertainment. Where is it hidden? On the bed of the ocean, the summit of a mountain-peak, an oasis in the desert? Naturally this is what the 'Plot the Spot' panel must find out—mainly, Miss Clark tells me, from sound-clues.

The clues themselves may, or may not, be misleading. What, for instance, does the sound of a grunting camel suggest? The inventive panellist may before he is finished be on the trail of that treasure in the tent of an Arabian Sheik. The melody of *Too Young* (to fall in love, of course) might send one of his rivals on a journey to the blacksmith's anvil in Gretna Green. He will have to be pretty nippy, as the time allowed for the brainwaves to materialise is two and a half minutes!

With the whole world to draw upon for place clues, the advantages of this as an overseas radio idea are obvious. 'Figure It Out' is by way of being a general-knowledge contest with entertainment value. Here the panel must guess phrases like 'three sheets in the wind,' and have more than a rough idea as to the number of a centipede's legs.

For the rest, 'Top of the Pops' will each week introduce a different star in popular music—artists of the stamp of Bryan Johnson, Alma Cogan, and David Hughes—and from each we shall learn the background of their rise to fame.

Vera Lynn will introduce the songs in her own new series. She will be accompanied by an orchestra of hand-picked musicians, and will include at least one brand-new number in every programme.

Commonwealth artists have had a considerable hand in the story of broadcasting, and it has always seemed to me that a special series of 'These Radio Times'—this 'light-hearted history of entertainment'—might find a welcome in the General Overseas Service. So listeners will now have an opportunity of hearing famous broadcasters talk entertainingly of their approach to life and work.

A core of already-popular shows will be included in the plans—Ted Ray, for example, with his own effervescent, quick-fire comedy; 'The Goons,' casting their crazy spell; 'Educating Archie,' 'Commonwealth of Song,' 'Variety Calls the Tune,' and many others.

Bryan Johnson takes part in 'Top of the Pops'

This Week's Listening

September 30—October 6

TEN YEARS OF 'THE THIRD'

TEN years have passed since the inauguration of the BBC's Third Programme, and it is now possible to consider what impact this remarkable experiment has made both in England and elsewhere. Listeners to the G.O.S. have, of course, long had the opportunity of hearing 'From the Third Programme' and other programmes taken from the same source.

Two speakers in 'This Day and Age' contribute talks to mark this tenth anniversary. Sir George Barnes, who was Head of the Third Programme from 1946 to 1948, will recall the objectives with which the service started. Sir Harold Nicolson will assess the first ten years of its operation. Sir Harold was a member of the BBC's Board of Governors when it was originally decided to launch the Third Programme.

In 'From the Third Programme' V. S. Pritchett will give the last of his series of talks on South America in which he will describe his visit to the Amazon region.

Sir George Barnes: Monday 17.00; Tuesday 02.15 and 09.30
Sir Harold Nicolson: Thursday 16.15; Friday 00.30 and 05.00
V. S. Pritchett: Monday 14.45; Friday 23.15

EMPTY SPACES

GRAIN, fruit, and root would flourish here were they once brought hither, planted and cultivated by the hands of industry, and here are provender for more cattle than ever can be brought into the country.

So wrote Captain Cook after looking for the first time at a very few—to use round figures—of the 3-million square miles of Australia.

He was writing about one of the greatest of the then almost empty spaces of the world on the threshold of its colonisation by the British. He might have written no less prophetically about such other considerably under-populated lands as New Zealand or the southernmost part of Africa.

C. E. Carrington, Professor of British Commonwealth Relations at the Royal Institute of International Affairs and author of *The British Overseas*, will talk about 'Empty Spaces' in the G.O.S. series 'The Story of Colonisation.'

G.O.S.: Monday 16.15; Tuesday 00.30 and 05.00

THE SOVIET UNION

THE rapid expansion of the Soviet Union as an industrial power is one of the major events of the twentieth century. In the G.O.S. series on the Soviet Union in 'This Day and Age' Tom McKitterick will describe this growth and examine the system of five-year plans under which it has been achieved. He will assess the present economic strength of the Soviet Union and indicate the likely developments in Russian industry in the next few years.

Mr. McKitterick compiled and wrote the text for the recently published Oxford Regional Atlas of *The U.S.S.R. and Eastern Europe*.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

HOW WE GOT THE BIBLE

THE first of a series of three talks on 'Printing and the Bible' will be given by the Rev. Eric Fenn, Editorial Secretary of the British and Foreign Bible Society. Under the title 'How We Got the Bible' he will deal with the origin of the early written Bible up to the time a small edition of the Latin Bible was first printed in 1456 by Johann Gutenberg of Mainz, Germany.

Mr. Fenn will also describe the events leading up to the first English editions, the spreading throughout Europe of printed editions in various languages, and the formation in 1804 of the British and Foreign Bible Society which has since distributed some 600-million copies in about 836 different languages.

G.O.S.: Monday 19.00; Tuesday 23.15

MUSIC AND THE FILM

MANY people associate music entirely with the concert-hall and the operatic theatre. They overlook the magnificent contribution that composers in many parts of the world—and especially in Europe and America—have made to the film.

In many films there is as much as forty or fifty minutes of original music; when it is well done it

can play a most significant part in the total dramatic effect. Many distinguished composers, among them Dr. Vaughan Williams, Sir Arthur Bliss, Sir William Walton, Darius Milhaud, Aaron Copland, Virgil Thomson, William Alwyn, and Sir Arnold Bax, have written scores for films.

In the new G.O.S. series of programmes which I have planned in collaboration with John Huntley I shall tell the story of the long association of music with both the silent and the sound film, and discuss, with the help of many illustrations from the sound-tracks of famous productions, the important place music has come to assume in the presentation of films of every kind.

The film compositions of many celebrated composers will be played during the course of these weekly programmes, and I intend to prove that some of the best descriptive and dramatic music of this century has been created specifically for the cinema.

ROGER MANVELL

G.O.S.: Sunday 00.30; Monday 07.30; Wednesday 15.15

A VARIETY OF MUSIC

THE appeal of the ballad is perennial, and in a new series, 'Ballads of Yesterday,' the well-known tenor, John Carolan, accompanied at the piano by Josephine Lee, sings Irish ballads. Ireland, like Scotland and Wales, has always been faithful to this nostalgic realm of vocal art.

Lennox Berkeley's Sextet for clarinet, horn, and string quartet, played by the Melos Ensemble, is introduced by critic John Amis in 'An Intimate Kind of Music' on Sunday at 21.30 and Thursday at 13.15. Berkeley, a brilliant representative of British contemporary composers, has written chamber music of consummate taste and skill.

Franklin Engelmann introduces the first of a series of concerts by children's choirs from many parts of Britain. This week two Buckinghamshire choirs are involved.

'Ballads of Yesterday': Sunday 07.45; Wednesday 15.45; Thursday 21.00

'Let the Children Sing': Monday 18.30; Friday 02.30 and 14.45

CITIZENS OF TOMORROW

BY far the most important instrument in welding the separate islands of the British Caribbean into a single entity will be the education of West Indian children. The schools can help to give these children an attitude to the region and an

Willy Richardson interviewing undergraduates at the University College of the West Indies

Earl Alexander of Tunis will unveil the memorial at Cassino, Italy, Lt.-Gen. Sir Brian Horrocks will recall memories of the campaign, and Brian Johnston will describe the scene at the ceremony in the G.O.S. on Sunday 21.00 and Monday 10.00 and 15.15

understanding of the common ground on which they stand.

In 'Citizens of Tomorrow,' Willy Richardson continues the story of the islands on the eve of federation. He gives an account of the primary and secondary schools in the area with their emphasis on examinations and the competitive spirit which these excite. The programme ends with an account of the University College of the West Indies and its role in creating a federal consciousness in the area. Among those taking part will be Philip Sherlock, Vice-Principal of the University College; William Gocking, the Librarian of the University College; Clifford Palmer, the Education Officer of Grenada; and John Hammond, Headmaster of Harrison College, Barbados.

G.O.S.: Monday 17.30 and 23.15; Friday 10.00

MUSIC-HALL MEMORIES

THE boy I love is up in the gallery,' sang Marie Lloyd to the delighted ears and eyes of all the Victorian gallery-ites. And the title of the song itself has been aptly chosen for a series of six programmes which begins this week in the General Overseas Service. Introduced by Colin MacInnes, and with a linking commentary by him, the programmes will set out to present the British attitude to life as shown by the Music Hall, and will include records of many of the stars whose names and songs contributed so much to it.

Of some, of course, there are no records at all, and the recordings of others would make difficult listening because they were made so long ago. Where this is the case some of the old songs will be sung by Clarence Wright, accompanied by Alan Paul. Each week there will be a definite theme, the first being 'love,' and the boy in the gallery can be assumed to be all the boys or girls who have found in the old traditional Music Hall something essentially British and eternal.

G.O.S.: Sunday 23.15; Friday 14.15 and 20.30

'MATE IN THREE'

A FAMOUS and still very attractive novelist, Leonora Dorn, decides that she wishes to marry again. But having reached the age of discretion she is disinclined to break fresh ground, and since she had already been married three times she decides to give one of her former husbands another chance. Accordingly she invites them all to her country cottage for the week-end: Sir John Baslow, the millionaire industrialist; Noel Lytton, the famous painter; and James Fothergill, who was her first and of whom her memories are indistinct.

All three conserve the pleasantest memories of their marriages to Leonora. They see her still as the most charming, elegant, adorable of women, just as they each see themselves in the heroes of her novels. But then Leonora's secretary lets the cat out of the bag, and faced with Leonora's intention to re-enlist one of them in matrimony, they agree that it is one thing to adore Leonora in distant retrospect but quite another to contemplate being married to her again.

PETER FORSTER

G.O.S.: Sunday 01.00 and 18.30; Wednesday 14.15

A preview of the week's programmes
with recorded extracts
13.45-14.00 The World of Science
A weekly survey
of the latest developments

WHAT I BELIEVE. Sunday's speaker will be Colin Wilson, a young writer who became a 'best-seller' earlier this year with his first published work, *The Outsider*. This is a philosophical work of comparison on artists and thinkers who have known themselves to possess qualities which put them outside the crowd of their fellow-beings. In the book Mr. Wilson makes a claim that such people are the necessary yeast to leaven the heaviness of mankind but that they are, because of their questing nature, generally unhappy and even tragic.

* * *
STANDARDS OF LIVING. A new series starts on Monday which will investigate and report changes in Britain. In the first programme Stephen Black will investigate the changes in the coal industry. He will question Sir Andrew Bryan of the National Coal Board, and Sam Watson, former coal-miner and now Secretary of the Durham Miners' Association.

* * *
THINK OF A NUMBER. In the past five years English musical comedy and revue have begun to win back some of the ground they occupied before the war with the Charlot and Cochran revues and the operettas of Noël Coward. The songs are quieter and more intimate than those of the high-powered Broadway musicals, but yield nothing to them in the way of vitality, wit, and charm. On Wednesday the first of a new series of interlude programmes will present specimens of music from the English musical stage of today.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

SOURCES OF POWER

The Tides

Man, who knows how small a stream will drive his mill or his loom, cannot but dream when he looks at those monstrous masses of moving water, the tides. Now that he knows how to turn water power into electricity, the notion of harnessing tidal power has grown into an obsession. "Only think," this obsession reiterates. "Only think of unlimited power, at no fuel cost whatsoever!" Now, thanks to vast improvements in building and mechanical techniques, this ambitious dream may well be a fact of the near future. Before tidal power could be seriously considered, Crompton Parkinson were developing and making machines and equipment to transmit and regulate, measure and control electricity everywhere from the generator to the switch. And whatever means be used in the future to produce electrical power, Crompton Parkinson, still pioneers, will be there equipped to put it through its paces.

LONDON CALLING

OVERSEAS JOURNAL OF THE BBC

Choosing a New Receiver

The 'London Calling' series of articles by BBC engineers led to an increase in listeners' questions about short-wave reception, and here advice is proffered in solving a problem that often arises

WE think the publication of a selection of listeners' problems and answers will be of help to those who perhaps do not feel inclined to write to us themselves. Nevertheless, we invite all listeners who are experiencing reception difficulties to write to us direct, and we will do our best to help them. Only letters of general interest will be answered in print, whilst those of more particular interest will, as usual, be answered by letter. Letters should be addressed to: The Senior Superintendent Engineer, External Broadcasting, BBC, London.

One of the questions most frequently asked, particularly by listeners about to invest in new receiving equipment, is: 'What is the best type of receiver to buy to get good reception of the BBC's short-wave services?' This is not a question to which one can give a direct answer, since good reception does not depend upon the receiver alone. Such things as aerials, earth connections, and correct handling of the set can make an enormous difference: in fact the performance of a high-grade domestic receiver may be little better than that of the cheapest radio set if it is not coupled to an efficient aerial-and-earth system.

It is true, of course, that a good receiver will operate quite well with just a scrap of wire for an aerial—providing the incoming signal is a strong one—but such results can easily be duplicated on a cheap receiver with a good outdoor aerial. The superiority of a good receiver and aerial is most noticeable when transmission conditions are at their poorest. With its improved selectivity and sensitivity, an efficient receiving installation will still give results long after the poorer-quality receiver has given up the struggle.

Now, what is a good receiver—and who makes them? Listeners will appreciate that the BBC cannot give advice on, or recommend, any specific makes of radio receivers. However, we can give you general advice on the things to look for—as well as some of the pitfalls to avoid—when replacing your present set.

Waveband Coverage: At various times the BBC Overseas Services use wavelengths in the short-wave broadcasting bands between 11.5 and 50.4 metres, and the receiver should preferably cover this complete range. Many sets are calibrated in kilocycles or megacycles and not metres, and the equivalent frequency range then becomes 5950-26100 kilocycles, or alternatively 5.95-26.1 megacycles. The coverage of many receivers does not extend beyond the 13-metre band. Nevertheless, the G.O.S. will continue to use the 11-metre band, with its outstanding freedom from interference, for several years to come, although a supporting wavelength in the 13-metre band will usually be scheduled.

Tuning and Band-spreading: As most listeners will know, tuning-in to a short-wave signal can be a very touchy affair. There may be many stations within a very small compass of the dial, and any backlash in the tuning mechanism can be most aggravating. Do, therefore, check the tuning arrangements for backlash. In recent years tuning has been made much easier by 'band-spreading.' This is a device whereby some or all of the short-wave-broadcasting bands are extended to occupy the full length of the scale. For example, the 13-metre band, which covers a frequency range of 21450 to 21750 kilocycles—i.e., 13.99 to 13.79 metres—may be extended

to occupy a scale six or more inches in length. Band-spreading simplifies tuning considerably, and all wavebands shorter than 31 metres should preferably be band-spread.

The Radio Frequency Stage: The majority of domestic receivers do not have a radio-frequency amplifier in front of the frequency-changing stage; nevertheless, it is important that such an amplifier be fitted. The R.F. amplifier fulfils two very important functions. Firstly, the noise generated within the receiver itself tends to increase as the wavelength is decreased, and below about twenty metres the performance is often limited by this effect. The addition of an R.F. amplifier improves the signal-to-noise ratio considerably, particularly on the shorter wavebands—i.e., 16, 13, and 11 metres—and is well worth fitting on this score alone. Secondly, the selectivity of the receiver is improved, and image—or second-channel—interference is reduced.

Other Considerations: Most of the receiver manufacturers include in their export range sets incorporating all the above points, and often less important ones are included, too. Practically all modern sets are equipped with automatic-gain-control circuits (A.G.C.) which help to combat changes in signal strength by maintaining the output from the loudspeaker at a reasonably constant level. Unfortunately this system makes tuning slightly more difficult, since the action of the A.G.C. tends to mask slight mistuning of the receiver with a consequent increase in distortion. A useful, but not essential, refinement is the 'magic-eye' tuning device, which enables one to tune-in to the signal with a much greater degree of certainty.

A further refinement which can be extremely useful is the fitting of terminals or sockets on the aerial panel at the back of the receiver to allow connection to a 'dipole' aerial. (Information on dipole aerials is contained in a BBC pamphlet on the subject, a copy of which is available free on request.)

The Final Choice: To decide which of several suitable models is likely to give the best results, particular attention should be paid to the performance at the lower end of the wave-range, say on the 13-metre band, for it is there that the greater differences in performance will be found. Receivers should be tested out on weak signals in this part of the band and not only on stronger ones. If the performance on the shortest wavebands is good then satisfactory results will almost certainly be obtained at the other end of the range.

The best thing to do is to obtain and study all the available literature that your dealer can give you, and with his help and advice make your final choice after thorough listening tests.

SIR JOHN COCKCROFT

SIR JOHN COCKCROFT, Director of Britain's Atomic Energy Research Establishment at Harwell, ends a series of four talks with an authoritative glimpse of the rapid developments that may be expected from an amazing new industry as yet barely ten years old. His talk is introduced by C. L. Boltz

The Atom and the Future

YOU may remember that Professor Diamond, who started the series off, has been in nuclear physics ever since it began to develop after the war. You may also remember that the two other speakers, Mr. Grout and Mr. Putman, both came from Britain's Atomic Energy Research Establishment at Harwell. Now I have to introduce someone who was in at the very beginning of it all, long before the war. Right back in 1932 he and a colleague did the very first splitting of an atomic nucleus by means of particles given high energy artificially by an accelerating machine—an atom-smashing machine, as it is sometimes called: it was the first completely artificial transmutation, and he did it twenty-four years ago. Today that same scientist is the Head of Harwell. I mean, and you may have guessed it already, Sir John Cockcroft.

'Ten Wonderful Years'

Sir John took over Harwell ten years ago when it was nothing but a disused airfield, and he has built it into one of the foremost atomic-energy research establishments in the world. He is one of the few that have led Britain forward to its present pre-eminent position in the use of nuclear power—in ten wonderful atom years, as I called them the other day. There is really no need for me to say more. Sir John Cockcroft's reputation is world wide, one of the few outstanding names in the world of atomic energy. He is going to sum up and look into the future.

You have heard from Professor Diamond, Mr. Grout, and Mr. Putman about the basic principles of nuclear fission and how it is being applied to the production of electrical power, and the radioactive isotopes which are now being used so widely in medicine, industry and biological research. In Britain we are using the gas-cooled graphite-moderated reactor, which Mr. Grout described, as the source of heat for our first nuclear power stations.

One of these reactors has begun to operate at Calder Hall in Cumberland, and we expect that by early 1957 it will be delivering more than 65,000 kilowatts of electricity to Britain's national Grid—enough electricity for a town of 200,000 people.

We are already building three more of these power stations, and after that we expect to build a further twelve of greatly increased outputs. This programme will be completed by 1965, and after that we expect the construction of nuclear power stations to proceed still more rapidly, so that by 1970 practically all new power stations may be of the nuclear type.

The cost of electricity from these power stations is expected to be about the same as the cost of power from coal. We are building them because our requirements for energy are rapidly growing, and we do not seem likely to be able to increase our coal production substantially. So if our industries are to have the additional power and heat they need we must fill the gap from imported coal and oil and from nuclear energy.

Example of Calder Hall

Oil and coal and nuclear energy are not in competition: they are supplementing each other in our economy. The gas-cooled graphite-moderated reactor of the Calder Hall type is a good way for Britain to start its programme, since it uses as fuel uranium in its natural proportions. We do not have to rely on the so-called enriched fuel in which the proportion of light uranium is increased. It also uses commercially available graphite as its main structural material. And the system operates at low pressure and has a minimum of corrosion and other technical problems.

In other countries different types of reactors are being developed for nuclear power. I was one of the founder-members and the first Director of the Chalk River Atomic Energy Laboratory in Canada. And we built there a powerful reactor using heavy water to surround the uranium rods. With the experience gained from this reactor Canada has decided to start its power programme by building in Ontario an experimental power unit using a heavy-water reactor as a source of heat. This type of reactor should make it possible to obtain a very high efficiency use of natural uranium fuel.

In the United States their large-scale nuclear power development is being based mainly on reactors using enriched fuel and ordinary water to surround the fuel elements. So they save in the cost of the moderator but use a more expensive fuel.

For many countries—and particularly in remote mining areas such as the Canadian North and in some Far Eastern areas—power is required in much smaller blocks, and diesel generators producing 1,000 to 5,000 kilowatts are often used. In such areas the cost of electrical power may be about four times the cost of power from large coal-fired stations in

Britain. Nuclear power units for remote areas would have the advantage of reducing the transport costs of fuel. However, small nuclear power units would certainly require expensive enriched fuel, and the capital costs are likely to be high at first. So we do not yet know whether nuclear power would be competitive. Experience during the next five years will show what is possible.

Radioactive isotopes produced in the British reactors or in the Canadian and U.S. reactors are now being extensively used in medicine, particularly for radio-therapy. Their use in Far Eastern countries is increasing steadily, and last year we despatched forty-five consignments from Harwell to Japan and eighty-five to India. The powerful Canadian research reactor has been a fruitful source of radioactive cobalt for the strong sources of radiation used in many hospitals today. Next year the supplies will be increased by a still more powerful Canadian reactor. One of these powerful heavy-water reactors is being presented by the Canadian Government to India, and is being erected near Bombay.

Biological research institutes throughout the world are using radioactive carbon and other isotopes as tracers to study the marvellously intricate processes of living organisms, and much new knowledge is being obtained which cannot fail to be helpful in understanding and overcoming diseases. The Radio Chemical Centre at Amersham in England is one of the principle sources of compounds incorporating radioactive carbon.

The application of radiation to food preservation appears to be promising. For example, the sprouting of potatoes and onions can be prevented by quite modest doses of radiation, and the cost of treatment in large quantities could be as low as three shillings per ton.

In the United States it has been demonstrated that the shelf-life of meat can be increased from three to fifteen days by small doses of radiation. As an example of its importance one large manufacturer of meat foodstuffs lost £1,000,000 in one year through deterioration of his products. So a large-scale application of this method of preservation would effect great savings. It might in particular be a great boon to tropical countries. However, large-scale tests on this method of preservation are required, and are proceeding.

Applications to Insect Control

Another helpful field of application is to insect control. In Great Britain joint studies by the Forest Products Research Laboratory and the Atomic Energy Authority have shown that the life of insects infecting wood can be markedly shortened, and their ability to lay fertile eggs prevented by doses much smaller than those needed to kill the beetles and larvae. An attack on insect control problems of the Far East might be possible if detailed studies are made of the problems of the local areas by competent local scientists.

Radiation can also be used as a new kind of catalyst to promote chemical reactions. It can change the properties of plastics and promote their production. And it can be used to vulcanize rubber. Many of these applications are being studied by industrialists who are beginning to install powerful sources of radiation for their own use. We in Britain are already training staff for national laboratories for work with radioactive isotopes and for nuclear power.

This atomic-energy industry is barely ten years old, and it is quite certain that during the next ten years there will be a very rapid development of ideas and other applications.

BOLTZ: You did mention that the twelve atomic power stations which are more or less the same as Calder Hall in principle are going to have a greatly increased output. Could you tell us a little about how this is going to be achieved?

SIR JOHN: It is likely to be achieved by a combination of a number of fairly straightforward engineering steps which have resulted from the experience of building the first Calder Hall reactor and the research and development which has been going on.

BOLTZ: One last question, which worries so many people. In the atomic age there is a lot of radioactive waste which some say may be dangerous. Could you tell us something about that?

SIR JOHN: The problems of disposal and control of radioactive waste only arise at the central chemical processing plant where one can keep a very tight control of what is going on. It is not the intention to dispose of these radioactive wastes by dumping in the sea. They can be concentrated into very small volumes and safely stored. In all this we have the very great advantage that the methods of measurement of radioactivity are extremely sensitive, and so we believe that this new industry can be made safer than most of the existing industries of the world.—*Broadcast in 'London Calling Asia'*

Oban, Scotland: the U.K. end of the cable being pulled ashore by the s.s. 'Glenaray'

Opening of the First Transatlantic Telephone Cable

BERTRAM MYCOCK tells the story behind 'the most important advance in international telecommunications since Marconi first spanned the Atlantic with radio signals in 1901.' The new telephone cable was the subject of a G.O.S. documentary programme

TWO submarine telephone cables have now been laid from the west coast of Scotland to the east coast of Newfoundland, and from there they have been linked across to the Canadian mainland and so into telephone services all over the North American continent. Britain's Postmaster-General, Doctor Charles Hill, described this as 'the most important advance in international telecommunications since Marconi first spanned the Atlantic with radio signals in 1901.'

Instead of the twelve radio circuits to the United States and the four to Canada which have done duty until now, thirty-six telephone conversations can now go on at once—thirty-six each way across the Atlantic. For each telephone call a line can be used to take several telegraphed messages. The British end of the line can be linked into the telephone systems of the European continent, while the Canadian end will be tied through Vancouver to telephone and telegraph services in Australia and New Zealand. Telecommunications in a great area of the Western world will therefore be transformed, at a cost of roughly £15-million.

Cable across the Atlantic is not new: the first telegraph cable was lowered on to the ocean bed nearly a century ago, and it was made by the very firm which has now made most of the new submarine cable. What is new is the cable to take telephone conversations. Two things have contributed to this development. One is the discovery that a plastic film called polythene can act as a waterproof insulating material in the cable. The second—the more vital point—is the construction of a repeater, a device to amplify the signals and to boost them along a cable which, although it is only a few inches in diameter, will stand a pressure of five tons to the square inch. It needs this immense strength at a depth of nearly three miles in the deepest part of the North Atlantic.

These repeaters are tied into the cable about every forty nautical miles.

The 'Monarch' laying a repeater in the Atlantic. Never before has a telephone cable been laid in such deep water, nor over such a great stretch of sea

Those that have been sunk in the Atlantic are a well-tried American type which are expected to serve without breakdown for at least twenty years. Their design is such that they will pass impulses only in one direction. And because of this two cables had to be strung across the Atlantic, one taking telephone conversation from east to west and the other from west to east.

When the cables come ashore on the coast of Newfoundland they are merged into a single cable which first crosses sixty miles of land and then plunges under water again for about 300 miles to the Canadian mainland. On this last underwater stretch British repeaters are being used; and because they are of a type that will take impulses in both directions the cable can be single, taking all seventy-two messages. These British repeaters are extremely complex.

It has been no easy task to make and to lay 4,500 miles of cable. Most of the Transatlantic section was made in a new factory at Erith in Kent. The bed of the river Thames had to be dredged out to make a loading berth alongside the factory. To make the repeaters new factories had to be built in the United States and in Britain. Buildings had to be erected at the points where the cable passes from land to sea and also for the microwave link from the Canadian end of the cable down to the United States border.

Last summer the British cable ship *Monarch*—the largest of its type in the world—laid the first cable in the Atlantic; and she put down the second cable this summer. She also laid the section between Newfoundland and Canada. Never before has a telephone cable been laid in such deep water as the North Atlantic nor over such a great stretch of sea.

This £15-million project is shared by Britain, the United States, and Canada. Britain's half share is being paid in kind and services—the making of most of the cable and the laying of all of it in the ocean sections. The United States' share is rather less than half, while Canada will pay something under £2-million.

(Above) The British Post Office type of rigid deep-sea repeater used in the section between Newfoundland and Nova Scotia: it is connected at intervals of twenty nautical miles and provides sixty circuits. (Below) inside the repeater

PROF. BERNARD LEWIS

BERNARD LEWIS, Professor of History of the Near and Middle East at London University, contributed this talk to the G.O.S. series on 'The Story of Colonisation.' It deals with the vast expansion of Islam during the early Middle Ages. This week's talk in the series is by C. H. Philips (see note on page 19)

The Expansion of Islam

WHEN the Prophet Muhammad died in the year 632 the faith he had brought, Islam, was still known only in the country of its birth; the Arab people, to whom he had brought it, and the Arabic language, in which his holy book was revealed, were still confined to the arid Arabian peninsula and the desert approaches to Syria, Palestine, and Iraq.

A century after his death the Muslim Arabs ruled over a vast empire of many lands and races, stretching from the Pyrenees and the Atlantic in the west, across Spain, North Africa, the Middle East, and Central Asia to the borders of India and China. In it Islam was the state religion, and the Arabic language was rapidly displacing others to become the sole instrument of commerce, culture, and government.

Today, more than thirteen centuries after the Prophet's death, the Arab empire of the Caliphs has long since passed away. But in all the countries that the Arabs conquered, except in Europe and Iran, Arabic has become and still is the language of the people and the Islamic faith has spread far beyond the limits of Arab conquest into many lands in Asia and Africa that never knew Arab rule.

In the west the Berbers, after at first resisting the Arabs, joined with them in the conquest and colonisation of Spain, and later themselves colonised and converted some of the Negro lands south of the Sahara. In the east the Persians, once converted to Islam, helped to bring the new faith to the mixed Iranian and Turkish populations of Central Asia. At a time when Islamic civilisation in its homelands was beginning to falter the Turks gave it fresh power and life, and carried it triumphantly to new and far-flung lands. From Ghazna in Afghanistan the Turkish general and statesman Mahmud, in the early eleventh century, led an army of frontiersmen and settlers into India, where the seeds they planted have grown into the great republic of Pakistan. In the west, later in the same century, the Seljuk Turks wrested new territories from the Byzantine Empire in Asia Minor, and began the process of migration, settlement, and assimilation which in time gave that country the name of Turkey. Later, under the Ottoman dynasty, the Turks continued their advance far into Europe.

The Kipchak and Mongol people colonised much of the great Eurasian steppe, reaching northward and westward as far as Finland and Poland.

In some areas, as in East Africa, to which Islam was brought by Arabian slave-traders, and South-East Asia, to which it came with Indian and other spice-merchants, the process of conversion and colonisation has been in the main peaceful.

The statement is sometimes made that the Islamic religion was spread by conquest. This is not strictly true, though the spread of Islam and of Arabism was to a large extent made possible by the parallel processes of conquest and colonisation.

Skilful Use of Desert Power

The Arab conquerors were mainly a desert people. And so the strategy of the Arabs in their campaigns of conquest was based on the skilful use of desert power, in a way that shows striking resemblances to the use of the sea-power in the more recent empires built up by the maritime peoples of the West.

The Arabs were at home in the desert; their enemies were not. To them it was friendly, familiar, and accessible; to their enemies a remote and terrible wilderness, full of hardship and danger, which they feared as the landsman fears the sea. The Arabs could use it as a route of communication, for messages, supplies, and reinforcements; as a retreat in times of emergency, safe from molestation or pursuit—and as a road to victory in times of success. The Arab Empire had its Suez Canal, too—the desert trail through Suez, from Asia to Africa. In each of the countries they conquered the Arabs established their main base and seat of government in a town on the edge of the desert. Where suitably placed cities already existed, such as Damascus, the Arabs made them their capitals. More frequently they had to build new cities to meet their strategic and imperial requirements.

These garrison towns were the Gibraltars, Calcuttas, and Singapores of the early Arab empire. These cities—the Amsar, as they are known in Arab history—played a vital role in the establishment and consolidation of Arab influence in the conquered lands. A small ruling minority in the provinces as a whole, the Arab colonists predominated in the Amsar, where Arabic became the chief language. Soon, around each of the Arab garrison cities, there grew up an outer town of artisans, shopkeepers, and workers drawn from the native population, who ministered to the needs of the Arab ruling class, as well as of native civil servants, employed

in increasing numbers in the service of the Arab state. All these perforce learned the Arabic language, and were influenced by Arab tastes, attitudes, and ideas.

The primary war aim of the conquerors was not to impose the Islamic faith but to establish and extend the power of the Islamic state. The conquered peoples were given various inducements to adopt Islam, such as lower rates of taxation, but were not compelled to do so. Still less did the Arab try to assimilate the subject-peoples and turn them into Arabs. On the contrary, they maintained strict social barriers between Arab and non-Arab, discouraged marriages between Arab women and non-Arab men—though not the converse—and did not admit even the non-Arab converts to Islam to full social, economic, and political equality with themselves until after a successful revolution had ended Arab privilege.

Yet in spite of this—or perhaps in part because of it—the conquered provinces of the Arab empire were not only Islamised: they were also Arabised so thoroughly that today little or no trace remains of their previous religions, languages, and cultures. Of all the lands conquered by the Arabs only their European provinces—Portugal, Spain, and Sicily—are not Muslim today, but reverted to their Christian faith and Roman civilisation. And even there the period of intensive Arab and Berber colonisation has left many traces—in irrigation and agriculture, in architecture and decoration, in language, music, and the dance.

Persia's Enormous Contribution

Of the remainder, only Persia, though converted to Islam, retained its ancient language—and even that is deeply marked by Arabic influences.

The Persians, within Islam, were able to create a new synthesis between their ancient civilisation and their new faith. Though they played a comparatively minor role in the military expansion of Islam their contribution to its institutional and cultural development and extension is enormous. In India, Central Asia, Turkey—in fact in almost all the Islamic countries apart from the Arab lands and Africa—Persia rather than Arabia provided the source of inspiration in all but strictly religious and legal matters. In the new lands won for Islam by the Turkish sword it was Persian statecraft and administrative practices that guided the new régimes—and often Persian statesmen and administrators that ran them.

In the countries originally conquered by the Arabs it was the Arabisation and Islamisation of the people rather than their simple military conquest that is the true wonder of the Arab empire. The period of Arab political and military supremacy was very brief, and soon the Arabs were compelled to relinquish the control of the empire they had created to other peoples, notably the Turks. But their language, their faith, and their law remained as an enduring monument of their rule.

How was it done? Mainly by the parallel processes of colonisation and assimilation. One of the main driving forces of the Arab conquests was the pressure of over-population in the barren Arabian peninsula, and in the early years of the Arab kingdom many Arabs overflowed past the fallen defences of the ancient empires into the fertile lands they had conquered. At first they came only as a ruling minority—an army of occupation, with a dominant class of soldiers, senior officials, and landowners. The Arab state took over the state lands of the previous régimes, and also the lands of enemies of the new order and of refugees who had fled before the conqueror. The Arab government thus disposed of extensive lands, many of which were granted or leased on favourable terms to Arabs. These paid a much lower rate of taxation. The great Arab landowners generally cultivated their estates through native labour, and themselves resided in the garrison cities.

It was from the garrison cities that Arab influence radiated into the surrounding countryside, both directly and through the growing native population that flocked into these cities. Though the claims of the native converts to economic and social equality were haughtily rejected by the Arabs, more and more of them accepted the faith of the conquerors, and with it their language.

The prestige of the idiom of an aristocracy of conquerors; the practical value of the language of government and commerce; the richness and diversity of an imperial civilisation; and perhaps most of all the immense reverence accorded to the sacred language in which the new revelation was written: all these helped in different ways to further the assimilation by the Arabs of their subject peoples. What really completed the process was the establishment, from the tenth century onwards, of a new ruling race—the Turks, who inaugurated the second great age of Islam and carried the work of conquest, conversion, and colonisation into vast new lands in Asia and Europe.

In Central Asia and India, in Asia Minor and the Balkans, Turkish

The site of the proposed dam at Ajena, Gold Coast, looking upstream

Progress Report on the Volta River Scheme

COLIN LEGUM, in 'Commentary,' emphasised the enormous importance to the Commonwealth as a whole as well as to the Gold Coast itself of a £230-million project upon which a team of international experts has published 'a glowingly optimistic report'

AFTER centuries of wasteful neglect the great rivers of Africa are one by one being harnessed to industrial production. On the Congo the Belgians and the French have started several large industrial projects. The Niger has already been surveyed for irrigation and power projects. Further down in central Africa the Zambesi is to feed the Kariba hydro-electric plants that will bring much-needed power to the Rhodesian Copperbelt. Recently, too, the Queen Elizabeth hydro-electric plant was opened on the Nile in Uganda. And whatever the ultimate fate of Egypt's High Dam it is inevitable that even greater use will be made of the waters of the Nile.

The latest of the African river projects affects one of West Africa's great rivers—the Volta, in the Gold Coast. Politically and economically the Volta scheme is as important as Egypt's High Dam. Whether its ultimate development will prove to be less explosive remains to be seen.

A team of international experts who have been investigating the project for the past three years has now published a glowingly optimistic report. The scheme, they say, would cost £230-million to complete, and its primary purpose is to enable the Gold Coast to work the vast bauxite deposits that occur fairly close to the river.

An essential requirement to transferring bauxite into aluminium is a powerful electric smelter. The power for this smelter would come from a hydro-electric plant using the dammed-up waters of the Volta. When dammed the Volta would cover an area of 3,500 square miles, the largest

A test bank of local clay—needed for the water-imperious core of the dam

The dam at Ajena would create a lake of 3,500 square miles, and a power station would serve the big-scale production of aluminium from local bauxite

Blasting operations at Ajena to test the rock's suitability for building the dam

man-made lake in the world. This vast lake would also provide important sources of irrigation and a large-scale fishing industry.

The whole project has been planned on the lines of the famous T.V.A. scheme—the United States Tennessee Valley Authority. It envisages extensive reorganisation of rural community life in the Volta region, with modern towns and transport facilities; extensive railway communications; and the building of a modern harbour at Tema. As a result of the scheme the Gold Coast, which is already the largest world producer of cocoa, would produce about one-tenth of the world's present output of aluminium.

The fulfilment of the Volta scheme is of enormous importance, too, for the Commonwealth. Not only does it envisage a partnership between three Commonwealth countries—the Gold Coast, Britain, and Canada—but it also means a saving of 100-million dollars a year in convertible currency because of the supply of aluminium from a sterling source.

Now that the preparatory commission of experts has pronounced on the technical soundness of the Volta project the next stage is to find the necessary capital. The World Bank has already agreed to send a team to the Gold Coast to decide if it is willing to participate in the Volta project. Provided financial agreement can be reached work is expected to start in 1957 (the scheme will take seven years to complete). But no work will begin until the Gold Coast has achieved its independence within the Commonwealth.

The successful implementation of the Volta Scheme could have enormous political significance not only for the Gold Coast but for the rest of Africa as well. For if the Gold Coast can become a model state, combining efficient agricultural production with industrial development, it could become a guiding light for the other African states now struggling towards their independence.

Volta has therefore become more than just an important economic scheme for the Gold Coast: it has become the symbol of political independence as well. (Broadcast in the BBC's General Overseas Services)

LORD SAMUEL

LORD SAMUEL, the distinguished elder statesman, reflects on the question of liberty in relation to the four distinct political creeds offered today—Conservatism, Liberalism, Socialism, and Communism. And as one whose own belief is in Liberalism he goes on to explain why he cannot accept any of the other three

What I Believe

MANKIND has always been living in an age of transition. But never has the transition been so universal and so rapid as now. There can be little doubt that future historians will regard this twentieth century as one of the most interesting periods in all the records of mankind. For us, who are living in it, it is perhaps too interesting. Too many things are happening, all at once. And this is so now in Asia, even more than in Europe or America. Liberty is on the march. And liberty is not one thing but many. No aspect is more important than the emancipation of women. One half of the population of the world is directly affected; and indirectly it affects the health and education of the next generation of children, and of all the generations that will come after. The movement for the intellectual, political, and economic liberation of women has been carried to success in Europe and America within a single century, and is having a profound effect on the character of their civilisation. Now in Asia and Africa also—where the subjection of women had been made most complete by the customs imposed by ancient religions—the freer life for women now beginning is enlarging personal happiness, and at the same time liberating the energies and talents of hundreds of millions of people.

Freedom from Foreign Rule

Besides liberty for both sexes there is also national liberty—the freedom of a nation from foreign rule. If a people is primitive and uncivilised it is true that it may be worth while for such a people to submit for a time to be educated in civilised ways, even if it is at the hands of some foreign and perhaps distant state. But this should only be a stage in its history. The surrender of national liberty should be only temporary; while law and order and a just and uncorrupt government are being established; education and public-health services provided; wealth and prosperity developed through roads, railways, engineering works, and the founding of industries. When all that has been set going that people—with the consent and active assistance of the dominant power, and preferably by gradual and easy stages—should acquire national liberty; and constitutional liberty as well.

We see this process—the ending of the imperial or colonial stage, and the establishment of democracy—going on now, before our eyes, in southern and eastern Asia, and over vast regions of Africa. Ultimately this is all to the good. But the process is always attended by difficulties and dangers. All who have been engaged in the tasks of government in the Western countries realise that the successful working of democracy does not come of itself, but is very difficult. It is the outcome of hard study and long training. Everywhere democratic governments are tempted to spend more money than they have got, with the result that their paper currency loses its value, and their industry and commerce suffer, and may even be ruined. And financial corruption easily creeps into the government offices, the police, and the courts of law—and corruption is a deadly disease in the body politic.

There is the danger also that liberty may be destroyed by its own friends. Impatient at delays, when faced by opposition, or maybe by armed resistance, the movement for liberty and progress may become revolutionary. Fearing to lose all that it has gained or seen in prospect, it imitates and repeats the violent methods of its predecessors whom it had denounced and overthrown. We have seen how, for example, under Stalin, a great part of the globe has had imposed upon it the crude theories of Karl Marx, enforced violently by methods of tyranny not very different from those that Russia had endured under the Tsars.

In the opinion of almost the whole of the intelligentsia of the Western world those Communist theories are unsound and unacceptable. The young easily become enthusiastic for some idea that is novel, which may have some element of good in it but which, on the whole, may be harmful. It is well to remember that movements so disastrous as Fascism and Nazism began with the eager support of a great part of the youth of Italy and Germany. So also did Communism in Russia and elsewhere. It is a strange kind of brotherhood which says: 'Be my brother or I will kill you.'

We have, in this age, four different political creeds offered to us to choose from—Conservatism, Liberalism, Socialism, and Communism. I have been asked to speak to you on 'What I Believe.' My own belief is Liberalism. I am not a Conservative because I have always felt convinced that the miseries, the sufferings, and the dangers of a large part of the people in even the most advanced countries, and of the majority of the populations in the more backward ones, make it impossible for us to be content with things as they are. There is urgent need for active effort to overcome the stubborn obstacles to every kind of progress. Conservatism—under various names in various places—is inclined to that folly which says: 'This is old, therefore it is good.'

Nor am I a Socialist, because Socialists look upon the public ownership or control of land and capital, industry and commerce, as the main cure for poverty and our other economic evils. Sometimes, indeed, state action may play a useful, or even an indispensable, part. Liberals in England in the nineteenth century did not always realise this; and were inclined, as a matter of political principle, to reject state action wherever possible. But the Liberals of the present century have not continued in that error. In England the work of the Liberal Government of Campbell-Bannerman and Asquith of fifty years ago—of which I am now one of the very few survivors—was proof of our readiness to use the machinery of state action not as a cure-all in every case but as a useful method in a number of cases.

And I cannot support Communism: first because I do not accept its belief in the socialist theory of the nationalisation of industry and commerce carried indeed to its furthest extreme; and secondly because I detest its suppressions of political and personal liberty, its destruction of freely elected parliaments, and its establishment of mock-parliaments in which only one party—its own—is allowed to have control; a police state, with arbitrary arrests and punishments, only a minority state as well, and based not upon persuasion and conviction but on armed force.

I am a Liberal because I believe in the Liberal principles of peace, liberty, and social justice—and in their active promotion for the benefit of both sexes, all ages, and in all occupations, in all the countries of the world. I believe, too, like all Liberals, in the United Nations as the keystone of the whole democratic system—the Parliament of Man: the most comprehensive and noblest effort ever made by the human race to promote its own well being. I feel no doubt that, things being as they now are in China, the present Chinese Government—in spite of its having supported the armed aggression of the North Koreans against the South Koreans, should, at the proper time, be admitted to the United Nations Organisations, and to the seat allotted to China on the Security Council.

But we have also to decide in this age what shall be our belief in matters of religion. Again, not accepting doctrines as good merely because they have prevailed for generations in the country in which we happen to have been born; nor, on the other hand, rejecting customary beliefs merely because rejection is something new and therefore must be better. The subject of religion opens up, however, a different and even wider issue, not to be approached in a few sentences. It needs ample time and careful thought; and it needs to be considered in conjunction with some study at least of both philosophy and science before attempting to arrive at conclusions that may affect our fundamental ideas.

For men's actions are governed by their ideas. If their ideas are wrong their actions will be bad, and the result will be evil, perhaps disastrous. If their ideas are right their actions will be good, and the result will be welfare—their own welfare and other people's. Let us be careful, then, in forming our beliefs, for at bottom everything depends upon them. (*Broadcast in 'London Calling Asia'*)

The Expansion of Islam

Continued from page 6

colonisation followed the same basic pattern. First the march-warriors, the frontiersmen, conquered new lands for Islam from the infidel; then came the dervish and the nomad to convert and to colonise, sometimes with fiscal and other privileges from the state to assist them in this work; finally came the Muslim jurists and theologians, bureaucrats, scholars, and literati, merchants and artisans, who brought with them and stamped on the new territories the classical pattern of Islamic government and society. Thus did Konya, Constantinople, and Edirne, Samarkand and Kazan, Lahore and Delhi, become centres of Muslim life and culture, decked with all the panoply of orthodox Islam. And when this happened the frontiersmen and the colonists moved on—westward into Europe, northward into Russia and Siberia, southward into the Deccan and beyond, seeking new lands to conquer and colonise, new peoples to bring into the Muslim fold.

Turkish domination over most of the lands of Islam lasted for a thousand years. And in the old Muslim lands first conquered by the Arabs, in common subjection to the new masters, the social and other distinctions between the descendants of the Arab conquerors and the Arabised natives ceased to have much significance to either of them, and the fusion of the two proceeded rapidly.

The Arabs had ceased to rule; but like the Romans before them and the Spaniards and British after them, they had given birth to a group of new sister-nations, eventually maturing to independence, but bound together by bonds of language, religion, and the memory of a great and shared past. (*Broadcast in the BBC's General Overseas Service*)

Audience and platform for the 'London Forum' discussion at the Royal Institute of International Affairs, Chatham House, and (right) Frank Byers, the chairman

Defence Bases and Colonial Policy

Recent events in the Suez Canal Zone, Cyprus, Aden, Malta, and Singapore have highlighted problems of British Commonwealth communications and defence. An edited recording of a discussion on this subject by distinguished speakers at Chatham House, London, under the chairmanship of Frank Byers, was broadcast in the G.O.S. programme 'London Forum,' from which we print the extracts below

WE are going to discuss a question which has been highlighted in recent months by news from many parts of the world, for strategic bases have cropped up both in disputes and discussions in places as far apart as Singapore and Iceland, and in territories as widely dissimilar as Ceylon and Cyprus. This discussion is a rather unusual one in that it is being recorded at a meeting of members of the Royal Institute of International Affairs. As a rule their meetings are private, and the proceedings are treated as confidential. On this occasion, however, you will have an opportunity of hearing some of the members contributing to this discussion which is going to be opened by two distinguished British statesmen, both members of the House of Lords. They are the Rt. Hon. the Earl Attlee, Prime Minister from 1945 to 1951 and the Leader of the British Labour Party for twenty years—in fact until last year. And the Rt. Hon. the Earl of Swinton, a former Service Minister, and Secretary of State for the Colonies, who was Commonwealth Relations Secretary in Sir Winston Churchill's Government from 1952 to 1955. The question is this: can the maintenance of strategic bases at this present time be regarded as either necessary or justifiable?

SWINTON: That bases are necessary I have no doubt at all, and the first proposition I would put is that readiness—preparedness in Allied defence of the free world—is the indispensable insurance of peace. And my second proposition, which follows from it, is that if that is true the bases all round the world are as essential to defence as they are to Commonwealth communications. All Services or Forces need bases to operate from, but they are most important of all for the Allied air forces. Obviously the bombers—the deterrent—with their fighter defences have got to have bases. You have to have bases for air transport, which is going to become increasingly important, and you have to have bases for the mobility of the air forces, because if air forces are not mobile they lose at least half and probably more than half their value. Therefore I think a chain of bases along and round the Mediterranean through the Middle East and the Far East and across the Pacific is necessary. That is the straightest and the shortest route linking the free world. But that alone, I think, is not enough. Alternative routes are a necessary insurance, and so I would say, as an introduction to this discussion, that bases in use or ready for instant use are vitally important to the defence of the free world today.

ATTLEE: I think there are certain qualifications needed to that statement. I think we are all prone to think in terms of the past instead of the future. I am not a technical expert, but I understand that with the hydrogen bomb any small base can be destroyed utterly, and the range of delivery, whether by aeroplane or whether by some guided missile, is extensive. It does not seem to me that you can effectively have bases within the range of operation of the hydrogen bomb from a potential enemy. And then the further ques-

tion is what sort of base you need. I think an effective base today must be backed with a good deal of technical personnel and machinery and all the rest of it. I do not think you get that in the bases to which we are accustomed—those small island coaling stations. And, therefore I think, while I agree with the need for bases, you have got to take a new look at them altogether, and see where they are and how they are to be effective. I mentioned that with regard to the hydrogen bomb.

There is, of course, the question of bases for what is called orthodox warfare or something of that kind. Well, you may need that—what I should call rather the policing of the less-developed parts of the world. And that again is a different matter altogether. But I think there is an awful lot of confusion of thought as to what you can have in a base and what you cannot have in a base today.

SWINTON: Of course, it is perfectly true that in a hydrogen-bomb age if the bomb falls upon an air base it destroys it and destroys the country within fifty or perhaps a hundred miles round it. And it is also true that if you can bomb a man from your base and he can get there he can bomb you too. But, after all, isn't Lord Attlee ignoring the deterrent? Of course, we know that if we get into another war it is going to be the end of all of us, but surely the deterrent, to which he was as much a party as I was, was the deterrent of having bases from which, though they could be bombed, you could bomb the enemy, so that it would not be worth while his starting.

ATTLEE: Quite obviously if you have got to have deterrents you have got to have a base from which they can operate, and it is a very unpleasant

The Rt. Hon. the Earl of Swinton

Defence Bases and Colonial Policy

Continued from preceding page

choice. You have got to do it, but another point naturally arises. How far are you justified in putting bases in other people's territory where they are exposed to danger?

CHAIRMAN: We have with us Marshal of the Royal Air Force Sir John Slessor, who was Chief of the Air Staff from 1950 to 1952.

SLESSOR: I think the really important thing to decide—as I believe it is the really important thing in all defence policies—is what sort of war you are preparing for, and I entirely agree with Lord Attlee that if it comes to a total war these bases may be irrelevant. That is an important thing in defence policy—are we preparing for a prolonged war on the lines of the last war, or are we preparing for what I believe, if it ever did happen, could only be a very short war? But I think the more practical thing is this: that rightly or wrongly we have undertaken certain obligations. We have undertaken the obligation of the Baghdad Pact, we have joined SEATO, and those two things mean that in certain circumstances we shall fight; and it seems to me that when we are talking about whether we want bases or whether we do not want bases the question we have got to answer is: could we fulfil our obligations under the Baghdad Pact, for example, if we had not got a base in the Middle East? Or could we fulfil our obligations under SEATO if we had not got a base in the Far East? And it seems to me when you have answered that question satisfactorily you have said about all there is to be said about it.

CHAIRMAN: Field-Marshal Sir Claude Auchinleck, I should very much like to hear a word from you on this subject.

Bases and Operations

AUCHINLECK: Lord Attlee did mention what we used to call coaling stations—or refuelling points or revictualling points—which of course were very necessary in the old days, but to a soldier—or to me, anyway—a base is a thing on which you base something, and in the Army, and I think in the Air Force, too, and in the Navy, you base on a base some operation, and that is what I regard as a base; and to my mind to refer to places like Gibraltar, Malta, Cyprus, and even Singapore today as bases from which operations can be conducted is pure rubbish, because they are completely out of date. And as a case in point I should like to say that the recent agitation in some quarters about the retention of a base in Egypt was to me completely unreal, because nobody could tell me for what that base was required. It was certainly no use for operations in the Middle East. It might have been of use for operations in the event of another attack on Africa from the west, but that does not seem quite likely at the moment. That is by the way, and I think that when we are approaching this subject we do want to clear our minds as to what we are really talking about.

CHAIRMAN: Well, Lord Swinton, it is quite obvious that Field-Marshal Sir Claude Auchinleck does not like some of your bases. What have you to say about that?

SWINTON: I think he is thinking a little bit in the past. I am not suggesting as bases what were coaling stations when he was a young man. I am thinking, like my old friend Sir John Slessor, that the one thing that matters to an air force is mobility and flexibility, and you cannot have either of those things unless you have the staging points through which your air force can move.

Sir John Slessor speaking. In front of him is Professor Carrington

Field-Marshal Sir Claude Auchinleck contributed 'a soldier's view'

CHAIRMAN: Lord Attlee, have you anything to say on the contributions which we have heard so far?

ATTLEE: I like Lord Auchinleck's distinction: I think there is a lot of truth in it. The development of the Egyptian base was very largely due to the fact that at that time we held India and Pakistan which was our second big place for arms. But that is not now our base. That is why I think you want a careful reconsideration. We find so much of what Lord Swinton calls bases—although Lord Auchinleck says they are not really bases—were built up on totally different considerations; of the Indian Empire, of naval warfare, and so on.

CHAIRMAN: I think we have got a straight clash of views there. And now Professor Blackett.

BLACKETT: I think the West will probably have to make up its mind what it wants its bases for—whether as staging points to take out troops, to stop rush-fire wars and so on, or as atomic-bomb bases. Now that we must plan militarily for atomic parity I think we must expect bases that can be attacked from Russia or counter-attacked as being 'out' for atomic-bomb purposes, unless we make them a complete highly defended citadel with our own people. We cannot expect people to take that. It would be an interesting point to work out in military and political terms, and even economically, what bases we could forgo if we could double the range of our transport aircraft, so that in many parts of the world we did the same job with fewer stops, and therefore with fewer bases, and therefore with fewer political complications.

CHAIRMAN: And now, Professor Carrington.

CARRINGTON: Almost everybody has been saying we ought to do this and we ought to do that, and I have a notion that a good many of them meant the English. When I talk about 'we' in this connection I like to think that I am talking about the Commonwealth. The Commonwealth I conceive as a world-wide network of very complex nature, with commercial links and strategic links and cultural links. That network has in it certain essential nodal points which will always be there and which are of the greatest importance to the whole. A typical example of that kind of a place is Singapore, which was brought into existence by the Commonwealth for the use of the Commonwealth and can only continue to exist as an important place for the Commonwealth as a whole. I should like to ask Lord Attlee whether he thinks that the people who happen at the present time to be dwelling in such a place as that have a moral right to cut out of the system and thereby wreck the whole world-wide system.

CHAIRMAN: I am sure Lord Swinton and Lord Attlee would like an opportunity of commenting on some of the contributions and answering one or two of the questions.

New Use for the Aircraft Carrier?

SWINTON: I was greatly interested in what Professor Blackett said. Though you will have a longer range for the bombers you must also maintain the mobility, I think, of your fighters, and, as he will agree, the faster the fighter becomes the shorter almost its endurance in the air. There may come a time—it certainly is not yet—when fighters are obsolete, and guided missiles will take their place. I do not know whether I shall irritate the Air Marshals and the Admirals if I suggest—never having thought that an aircraft carrier was the best base from which to operate aircraft—that with the reduction of bases there might be a new and valuable use of an aircraft carrier in the literal sense of carrying aircraft and ferrying fighters. Just one more thing: never forget that the Communists will always have the bases and will always have vast internal lines of communications, and I would not readily contemplate a future—I think it would be hopeless—in which we had not got bases, and I think therefore we must concentrate on deciding what are the bases we have to have for the interdependence and safety of us all, and then as wisely as we can to get the conditions in which these would be accepted.

ATTLEE: I think what has emerged is that within this problem there is a vast number of factors applying to different places. I agree you have got to look at them all specially, and you have got to weigh the advantages of one and the other. The last question put to me was about the rights of a people of a place like Singapore, which we made for us. Well, I am looking for a practical point of view, and the practical point of view is that it is no good having a base if all your people are occupied with internal security and dealing with troubles there. And that seems really the answer, quite apart from the abstract question of rights. You have got to have some bases and the more those bases can serve the whole Commonwealth—and, I hope, the United Nations—the better for the world, and the more likely you are to get the goodwill of the people where there is of necessity some kind of a sacrifice. But do not let us imagine that it is all sacrifice. Some of the people benefit very much from these bases, and would resent it very much if you cleared out.

CHAIRMAN: I think what has come out of this discussion is the need for constant review of our strategic requirements, the hope that we shall require fewer bases as time goes on, and the principle that we must, if possible, have the fullest co-operation of those on whose territory these bases are. (Broadcast in the BBC's General Overseas Services)

Tom Salmon (right) interviewing members of the crew of the British ketch 'Moyana' which foundered in the worst summer gale on record in the last stretch of the homing after gaining victory in the race. All the crew were saved

The giant Portuguese training ship 'Sagres' in line with vessels of various countries dressed in bunting for the Dartmouth regatta before the ocean race

International Yacht Race from Torbay to Lisbon

TOM SALMON describes a unique ocean race in which twenty-two vessels from eleven nations, crewed entirely by cadets or seamen under training, sailed some 800 miles from England to Portugal

HE was a small man of about fifty, with broad, square shoulders and big, strong hands; his eyes were blue, his face browned by the sun and the wind. He showed me a piece of paper: 'Sailing orders,' he said. I looked at the first paragraph: 'All vessels will proceed to Lisbon, Portugal—approximately 780 miles.' The blue eyes smiled; and the captain of the square-rigged Norwegian ship *Sorlandet* (for that was who he was) walked out of the little bar in a narrow Dartmouth street to return to his ship.

The *Sorlandet* was one of the twenty-two vessels from eleven nations waiting in the quiet estuary of the river Dart for the start of one of the most fascinating races of the century: a sail race from Torbay to the Tagus. There they were, moored down the middle of the estuary: towering three-masted sailing ships that seemed to have sailed off the pages of a Conrad novel; sleek, modern, specially designed, ocean-racing yachts; a converted Brixham trawler; even a former Bristol Channel pilot cutter.

But they all had one thing in common: in this race they were being crewed by cadets and seamen under training—by young men who in a few years' time will be the captains of the fleets of many nations.

The entries in the race were divided into two classes: one class for those over 100 tons, and the other for those of under 100 tons; but even so a complex system of handicapping had to be worked out to equalise the chances of the widely differing types of ships entered in each class. For instance, in the 'over-100-tons' class the little British ketch *Moyana*, manned by Merchant Navy cadets from the School of Navigation at Southampton and rated a mere 103 tons, was competing against the giant Portuguese training ship *Sagres* of 2,000 tons, and against *Creole*, the biggest sailing yacht in the world.

So before the start measurers went aboard all the competing ships; they took careful note of such factors as length, tonnage, beam, and area of sail; and then calculated mathematically a rating for each ship. The working out of these handicaps was a very complicated business. Indeed, never before in the history of sail have ratings had to be worked out for ships as big as some of the entries in this race, and one navigation officer, busy with his slide-rule checking the rating of his ship, was heard to remark in exasperation to his captain: 'If my figures are right, sir, provided we cross the starting line, we've won the race!'

Generally speaking, the rules governing the race were much as same as those applied to international ocean-yacht racing: they were rules designed to make this the sort of race which could have been held in the days when the use of sail was the only method of crossing the oceans of the world. Nowadays, of course, most ships are fitted with radar, but in this race the use of radar was not permitted unless the captain felt that the safety of his ship was imperilled. It could not be used as an aid to navigation.

The use of engines was not permitted either; but whereas many nations

OUR WAY OF LIFE: 12

PROF. K. B. S. SMELLIE

K. B. S. SMELLIE, Professor of Political Science at the London School of Economics, explains the conventions that make the British system of government workable—conventions that depend for their success on qualities which are fundamental to the British people themselves

The British System of Government

GOVERNMENTS are so important in our shrinking world that many of us do try to find out how they really work. There have been many students of the British system. Some of them have given it high praise and some parts of it have had the compliment of imitation. But it has bewildered many observers because like the language of a primitive tribe it had no clear written guide to its structure and its use. The British system of government is a Cabinet system, and the Cabinet system rests almost entirely on convention. One might almost say that the Cabinet system is the convention of the constitution. The Cabinet system is unique in its concentration of power. The group of men (and, if necessary, women) who are in the Cabinet will, because of their standing in a political party (or, more rarely, parties), control a majority of the elected House of Commons. They may do whatever it is in the power of a government of Britain to do.

Legislative and Executive Powers

The Cabinet determines the policies which are submitted to Parliament; the Cabinet has supreme control of the executive organs of government which help to prepare those policies and also make it possible that they shall be carried out once they have been approved by Parliament. The Cabinet, in fact, has control of both the legislative and the executive powers which may be needed to do what is necessary to be done, in internal and in external affairs in war and in peace.

The members of the Cabinet are members of the House of Commons or the House of Lords; they are servants of the Queen; they are masters of the time and of the procedure of the legislature to the extent that may be necessary for the Queen's government to be carried on. All this is no doubt common knowledge.

But what is equally important to what I understand by the British Cabinet system is that the duration of any particular government will depend upon the continued support of the House of Commons and that the government in power may at any time advise the Queen to dissolve the existing parliament, which being done a General Election will give the electors the opportunity to return it to power or to return the Opposition which it may now wish to try. That an election may be held whenever it would appear to be in the public interest that it should is a real source of strength in British political life.

These are two great merits of the British system—namely that the government in office has the tools for the job: the control both of the legislature and of the administrative machine; and that should it falter in doing well it can be replaced by an alternative government which under the Leader of the Opposition has in the Commons and the Lords been aching for precisely this chance. And that we have good government and a change of government in our political wardrobe we owe to the conventions of our constitution.

Conventions are the rules of the political game and of the administrative art which have been worked out since our last revolution in 1689. They are not the letter of any law but the spirit in which some of the most important laws will be observed. It is a convention that the Queen will

never exercise the power, which the revolution of 1689 had not removed, of vetoing a law which has been passed by the Commons and the Lords. It is a convention that the man or woman whom the Queen may ask to be her Prime Minister (or chief servant) will be the leader of a party which has a majority or will be supported by a majority of the House of Commons. It is a convention that the Queen will agree to the membership of the Cabinet which the Prime Minister will propose. It is a convention that the members of the Cabinet will be members of one or other of the Houses of Parliament, so that it has been said that in Britain the executive is in the legislative as the yoke is in the egg. It is a convention, too, that the Queen's power to dissolve a parliament will be exercised on the advice of her Prime Minister.

The word 'convention' first came to be used in connection with the political fact that the prerogative powers—the residuary powers—of the King, which had been left to him in 1689, would in fact be exercised by the men who could control Parliament. The prerogatives of the King became the privileges of the people. But these understandings at the top—at the very centre of power—have permeated the whole political system. It is really by convention that the procedure of the Commons in fact allows the Opposition all the opportunities which it may need to criticise the government in power and to prepare itself to be the next government in power.

It is by convention too that the distinction between those servants of the King who form the Cabinet and those other servants—the Civil servants—who form the bureaucracy of our modern state is maintained.

There are many subtle aspects of this pattern of conventions which it would need a book to display. But there are two points of general interest which we may note. The British have not had a revolution since the end of the seventeenth century. Their insular position off the coast of Europe has allowed them to enjoy a comparatively simple political life. Their dangerous frontiers have usually been in some other land. For this reason they have had the opportunity to find out how you can change your government without destroying your state.

Appearance and Reality

And my other point. In all governments there will be a difference between appearance and reality. It is almost certain, human nature being what it is, that the powers that be should not be identical with the powers that seem to be. There must be some mystery in government, but the mystery should help and not impede the work which must be done. That the legal powers which at the end of the seventeenth century were not taken from the King should have come to be used so that the legislature and the executive power, the party in power and the party in opposition, the elected Commons and enfranchised citizens, all play a useful part in our political life—this we owe to our system of conventions.

And those very conventions depend for their success upon qualities which are fundamental to the British people: the acceptance of a tacit understanding, an unwritten code; and their long experience that the rules of the game must be observed—even in the great game of politics. (Broadcast in the BBC's General Overseas Service)

International Yacht Race

Continued from page 11

insist that engines should be sealed before the start of a race, that has never been done in Britain, and it was not done for the Torbay-to-Lisbon event. In fact, the captain of each ship is put on his honour to abide by the rules; because it is obviously impossible to put a judge aboard every competing ship.

And what ships they were! The 2,000-ton Portuguese square-rigger *Sagres*, with 200 cadets aboard—a former cargo-vessel sailing around Cape Horn, now a floating university of the sea, but still bearing on her sails the scarlet crosses borne by the Portuguese fleets of the fifteenth century; the luxury yacht *Creole*, owned by the Greek millionaire, Mr. Stavros Niarchos, lent to Britain for the race, and crewed by Royal Navy and Merchant Navy cadets.

And then the Swedish *Flying Clipper* (originally Lord Runciman's yacht *Sunbeam*), perhaps the most graceful of them all, built in Scotland by the firm which fashioned the *Cutty Sark*; the twin schooners *Falken* and *Gladan*, built since the war for the Royal Swedish Navy; the square-rigger *Mercator*, from Belgium, which has covered 250,000 miles in training cruises to all parts of the world; the *Sorlandet*, sunk during

the war by bombing but salvaged and restored to all her glory; the Norwegian *Christian Radich*, the black-hulled Dane *Georg Stage*.

There they were at the three-mile-long start line in Torbay; a fleet surrounded by bobbing, brightly coloured pleasure-boats crammed with spectators; a fleet of silent sail beneath the scream of jet-engined aircraft overhead. The boom of the starting gun—and the Torbay-to-Lisbon race was on. A fresh south-westerly breeze, a swish of bow-waves, the glorious set of sail, and within an hour the horizon-mists had folded them all into the Channel.

So to Lisbon—and so accurately had the handicaps been worked out that the first three ships were separated by less than eighty minutes, and only ten minutes separated the second and third. The race was a triumph for Britain, for the main trophy—given by the President of Portugal for the winner of the race on corrected time—was won by the *Moyana*. *Moyana* won the 'over-100-tons' class with a corrected time of five days, six hours, twenty-one minutes; next came *Christian Radich* (Norway), five days, seven hours, twenty-four minutes; and third *Ruyam* (Turkey), five days, seven hours, thirty-four minutes.

In the 'under-100-tons' class, *Artica II* (Italy) was first with a corrected time of five days, ten hours, twenty-three minutes; second came *Juanna* (Argentina), five days, nineteen hours, twenty-eight minutes; and third *Marabu* (Britain), six days, twelve hours, fifty-three minutes. (Expanded from a broadcast in the BBC's General Overseas Service)

'Ranji,' a famous champion beagle who has himself sired many present-day champions

Out with the Aldershot Beagles: 'These little dogs have unlimited stamina, and are capable of amazing speed'

Beagling—'the Most Democratic Sport on Earth'

BRIAN VESEY-FITZGERALD speaks in praise of the beagle—the cheery-looking little dog itself—and about the folk who go beagling—and, that, he says, means almost everybody

WE English are a nation of dog-lovers, and proud of it: so proud of it that a good many of us seem to think that most of the breeds of domestic dog are English in origin, that we gave them to the world. We talk about the British bulldog, for instance. It has become a symbol, in fact. Well, the British bulldog came from Spain. There were bulldogs in Spain long, long before there was ever one in England. And the old English mastiff came from Syria or somewhere round there, and the old English sheepdog from the plains of central Europe, and so on. Indeed, of all the breeds of domestic dog probably only one is truly British in origin—and that is the beagle.

Lots of people think that the beagle is only a foxhound in miniature. That is because, superficially at any rate, it looks much the same—it is a tricolour, black and white and tan, like the foxhound. But the foxhound is a manufactured breed that has been evolved within the past 200 years, mostly in France. There were beagles in England in Saxon times—and they were probably here when the Saxons came.

A good beagle must not stand more than sixteen inches at the shoulder. In other words, it is quite small enough to make a household pet. And, as a matter of fact, lots of beagles do not stand more than fourteen inches, which is a good deal smaller than a fox terrier. Yet these little dogs have unlimited stamina, and are capable of quite amazing speed. There are packs of fifteen-inch beagles which on a good scent will soon leave their followers out of sight.

Why the Different Sizes?

Why the different sizes: sixteen-inch, fifteen-inch, fourteen-inch? Well, it depends on the sort of country. In hilly country, or where there is a lot of heather or bracken, you have to have bigger dogs. In nice level country, arable and grass, the smallest ones are ideal. If you had the bigger dogs on level country the hare would not stand a chance.

And who goes beagling? Absolutely everybody. This is the most democratic sport on earth. I know you will find that said of every sport. You will even find it said of foxhunting. But the fact of the matter is foxhunting is a rung on the social ladder, and it is also a fact that you cannot hunt in England unless you have a good deal of money—or a great deal of credit. And you have got to have a horse, and once you are on a horse you look down on those that are not.

But beagling is not like that. It is not fashionable. It is not a rung on the social ladder. There is no snobbery about it. There are no horses. You are mounted not on what money can buy but on what God gave you in the way of feet and muscles. You are down to earth—literally.

So at a meet of beagles you will find every possible social grade in

'A green van brings the beagles, and they come bundling out, tails wagging like fury, and rush around meeting their friends'

Britain. Take a normal Wednesday meet in our village—Wednesday is early closing day in the village and the neighbouring town. A green van brings the beagles, and they come bundling out, tails wagging like fury, and rush round meeting their friends. And waiting for them will be old and young—school boys and girls, a retired admiral, the curate, several officers from the nearby camp, and several other ranks too, the lady of the manor and the girl who works in the chemist's, two girls who work in the drapery and the manager of a chain stores, one of the local electricians, the organist, and our Viscount, who runs the beagles but is generally a long way behind them.

Now you might think that this could be a bit cliquy—you know, the officers sticking together and only speaking to the gentry and all that. Not a bit of it! The admiral has been pulled out of more than one ditch—by the drapery, and you cannot be snobbish after that has happened. The stiffest Guards officer unbends more than somewhat when he has got a stitch. And the great thing about beagling is that the camaraderie it engenders does not die when the day is over. You cannot work the 'great-lady' act next time you go into the grocer's when you know jolly well that it was Joe behind the counter who unhitched you from the barbed wire the day before.

No, indeed! I honestly think that if you want to see the English at their very best and friendliest you should go beagling, or anyway go to a meet. (Broadcast in the BBC's General Overseas Service)

The hare is sighted: 'You are mounted not on what money can buy but on what God gave you in the way of feet and muscles. You are down to earth—literally'

Government House at Dar es Salaam, the principal port and capital of Tanganyika

At Dar es Salaam the Princess will open deep-water berths (above) built at a cost of £1,000,000 apiece to speed the loading and unloading of ships. Her Royal Highness will also visit the Arnavutglu Community Centre (below)

In Moshi the Princess will meet members of the Chugga Council, whose Head is Chief Thomas Marealle II

Warrior of the Masai, 'handsome, proud nomads, scornng work except that connected with their beloved cattle'

From Lake Daluti the Princess will see 'one of the most superb views in'

Princess Marga

J. P. MOFFETT sets the scene of H.R.H. Princess Margaret's visit to Tanganyika, where African, Asian, and European leaders provide for the natural abilities and aspirations of the Princess, heard on Tuesday at 10.30.

WHEN H.R.H. Princess Margaret steps ashore at Dar es Salaam, the capital of Tanganyika, she will be entering the most picturesque of all the colourful harbours on the east coast of Africa. The 'Haven of Peace' is entered by a narrow channel, where the blue waters of the Indian Ocean penetrate into a deep pool, ringed by coconut palms, against a background of whitewashed, red-roofed houses, church steeples, and the modern 'skyscrapers' of the town.

Here live as cosmopolitan a lot of people as can be found anywhere in the Commonwealth: Africans from every tribe in East Africa, Arab, Sikhs, Hindus, Pakistanis, Goans, Somalis, Europeans from almost every country of Europe, Americans, even a few Chinese. For Dar es Salaam is not only the capital of Tanganyika, it is its principal port as well, through which passes most of the country's trade. Hitherto its sisal, coffee, cotton, grain, hides and skins, minerals, and all its other products have had to be loaded into lighters and taken in them to the ships lying at anchor in the harbour, and in the same laborious way its imports have had to be unloaded. The first thing the Princess will do on arrival will be to open the three deep-water berths which have been built, at a cost of about £1,000,000 apiece, to enable ships to be rapidly loaded and unloaded at the quayside. One of these berths has been built by the Belgians, at their own expense—an indication of the value attached to them to the traffic through Dar es Salaam to the Congo.

Dar es Salaam has not always been the capital and principal port. In the old days ('old,' that is, by local standards, for Dar es Salaam was founded as a country seat by the Sultan of Zanzibar in 1864), Bagamoyo was the place on the coast where dhows arrived from Zanzibar to trade in slaves and ivory and whence the great African explorers, Livingstone, Stanley, Burton, Speke, Grant, Cameron, and others set off into darkest Africa to find the source of the Nile and the Mountains of the Moon.

Cradled Between the Great Lakes

From Bagamoyo they followed the slavers' route to Tabora, where the Arabs had established a considerable settlement at the parting of the ways, one route going northwards from there to Lake Victoria and the other westwards to Lake Tanganyika, on whose shores Stanley met Livingstone at Ujiji.

Tanganyika lies cradled between the Great Lakes, for the third, Lake Nyasa, forms part of the boundary to the south. Within its borders the country so diverse that it is impossible to describe any one part of it as 'typical'—certainly it contains very little of the lush jungle associated in the popular imagination with the tropics. The coastline is low and flat, studded with towering coconut palms, whispering casuarina trees, and, in places, almost impenetrable mangrove swamps. Here it is hot and humid for about half the year, but between May and October the climate is delightful: the sun is still hot but there is a cool breeze.

As one travels inland the land rises until, almost imperceptibly, one reaches the great central plateau, 3,000 to 4,000 feet above the sea, open places, wooded in others, where live some of the better-known tribes of the Masai, handsome, proud, aristocratic, independent nomads, scornng

aerial view of the capital, Dar es Salaam, looking towards the colourful harbour

Arab dhows moored at Tanga, the second largest port of Tanganyika, which will be the first place to be visited by Her Royal Highness during her tour of the territory

in Tanganyika

Princess Margaret's next 'port of call' on her East African tour: visiting Zanzibar, then heading to build up a multi-racial society 'which will be a model for the world.' A G.O.S. programme on Tanganyika can be seen on Wednesday at 23.45, and Friday at 18.30

work of any kind except that connected with their beloved cattle; the Nyamwezi (around Tabora), well known to the early explorers as reliable porters; the picturesque Gogo; the industrious Sukuma; with many others whose names (for Tanganyika has 120 different tribes) are not perhaps so well known. North and south of this great plateau lie ranges of mountains. On the borders of Kenya lies Kilimanjaro, 19,350 feet, Africa's highest mountain, perpetually snow-covered, on the slopes of which lives one of Tanganyika's most progressive tribes, the Chagga, whose coffee brings them in an income of some £3,000,000 a year.

Princess Margaret will meet their leaders in the magnificent new headquarters building of the Kilimanjaro Native Co-operative Union, the largest co-operative society of its kind in Africa.

One of the Settled Areas

Nearby is Mount Meru, at the foot of which the Princess will stay in the Governor's lodge, amongst the gaily-coloured Arusha people, cousins of the Masai, who will be only too pleased to bedeck themselves in their traditional finery for her visit. Here, too, the Princess will be in the middle of one of the settled areas, where Europeans, including a considerable number of Greeks and South Africans, have made their homes and grow coffee, wheat, seed beans, pyrethrum, and other crops. From the rim of Lake Duluti, a little crater lake a few miles from Arusha, she will see one of the most superb views in Africa: to her left the towering peak of Meru, below, the waters of this gem-like lake, and across the waters the immense snow-covered dome of Kilimanjaro. Within a few miles is another crater, accessible only on foot or by jeep, where, from the rim hundreds of feet above, she can watch the elephant, rhino, and buffalo which make the crater floor their home. The Princess is likely to see other examples of game during her visit—for Tanganyika is, of course, famous for its game—but this crater is one of the few places where one can be almost certain of seeing game at all times of the year.

In the south of the territory Princess Margaret will visit Mbeya, a nestling at the foot of a hill in mountainous country near the head of Lake Nyasa. This country wears a somewhat different aspect: in parts it is sufficiently well watered for tea to be grown, elsewhere there are miles of rolling downland country, in the middle of which the Princess will stay for a night at the home of Lady Chesham, whose husband opened up this area for farming. Further south, the country near Lake Nyasa is scenically magnificent—and contains some excellent trout streams.

The Princess will visit Mwanza on Lake Victoria, the headquarters of the thickly populated Lake Province, and from there will go to the Williamson Diamond Mine, potentially one of the richest in the world, and the mine which produced the superb pink diamond presented to Her Majesty the Queen at her Coronation. The mine is situated in the middle of the so-called 'cultivation steppe,' a vast area, denuded of trees, where the people of the Sukuma tribe grow cotton, another important export.

At Tabora, Princess Margaret will see traces of the old Arab slave

(Continued overleaf)

Tanganyika is famous for its big game: a herd of elephants unconcerned at being photographed from a plane flying only eighty feet above them

The Government African Boys' School will be visited by the Princess during her stay in Tabora, 'one of the most important scholastic centres in the territory'

Books to Read

Reviewed by
John Connell

NOT a particularly good book, but endearingly simple and straightforward, *The Bridgeburn Days*, by Lucy Sinclair, is a document, whose real and durable veracity illumines every page, about a little world within our greater world. Miss Sinclair in the years between the two world wars was a child boarded out in a foster home, called Bridgeburn, in the north of England. Here she tells the story of thirteen years, from 1920 to 1933 when, at the age of eighteen, she was sent to London to go into domestic service. Bridgeburn, a small village of foster-home cottages on their own, was not a bad or horrifying place: indeed there was much kindness and goodness, nobility even, about the life led there. But, of course, there was something missing—the naturalness of a natural home.

There is a robust common sense, mingled with a deep nostalgia, about Miss Sinclair's writing; and there is the recognition—harsh yet fortifying—that the quality bred and beaten into her by her life at Bridgeburn was hardness, that hardness was the foundation of her character and the cornerstone of all her thoughts and behaviour. It is a stern verdict, and to someone like myself, who for many years has been a governor of a similar sort of home for boys, it is deeply disturbing. That admitted, I urge you to read it.

Mr. Lyward's Answer, by Michael Burn, is about a very different kind of background for the young. Mr. Lyward, who was once a master at my father's old school, has been for a good many years the head of a small, highly individual school for maladjusted boys, called Finchden Manor, in Kent. It is a careful, highly detailed study of the working out of an educational system which appears to be no system at all. The form and style of the book, however, do not quite match in diligence the thought, the preparation, the dedicated labour which have obviously gone into it. There is some lazy, slapdash writing, and there are too many repetitions. Yet even with these faults it is a formidable account of a noble and generous experiment in the difficult task of making men—honourable, courageous, and trustworthy men—out of boys who, in their adolescence, were on the verge of spiritual shipwreck.

In *Coote Bahadur* Major E. W. Sheppard has performed a considerable service to the reputation of General Sir Eyre Coote, who was Clive's colleague—sometimes comrade, sometimes rival—in the crucial campaign which decided

the fate of India in the middle years of the eighteenth century. It is a painstaking, thoroughly meritorious biography of a man who perhaps has deserved better of history than he got. But though it is clear that his soldiers, in those arduous campaigns, followed him faithfully, and loved and admired him, he does not emerge in Major Sheppard's portraiture as particularly lovable.

I must be frank and admit to some prejudice too about the matter of my next book, *Mutiny at the Curragh*, by A. P. Ryan. From 1910 onwards until the outbreak of the first world war in August, 1914, Mr. Asquith's Liberal Government was engaged in two closely related political campaigns: first, there was a series of great social and fiscal reformist budgets, and second there was a measure to confer self-government on Ireland. The fulfilment of both these aims was doubtfully resisted by the Conservative and Unionist Opposition; and over the second the Government, and their allies the Irish Nationalists, encountered the stubborn, rock-like obstinacy of the majority of the people of Ulster.

In the spring of 1914, when it seemed that Ulster would offer armed resistance to the implementation of Home Rule, the Government took some curious, rather panicky steps, whose real purpose was never candidly admitted. There were considerable British regular forces stationed at the Curragh, just outside Dublin; these—together with some ships of the Home Fleet—were ordered up to Belfast in circumstances that made many of their officers believe that fighting was to be expected. British regular officers have never mixed in politics; but many of these men were either Ulster-born or sons of the Anglo-Irish Protestant ascendancy. They did not, however, mutiny; and to that extent Mr. Ryan's title is a bad misnomer. I can warmly urge everybody who is interested in the real stuff of politics to get and read the book.

I can make the same recommendation for the same reason about *Diaries 1924-1932*, by Beatrice Webb. Mrs. Webb, who, with her husband, was one of the great pioneering leaders of radical socialist reform in Britain, was a remarkable and complex woman. Of a wealthy middle-class family and background, beautiful, sensitive and intelligent, she married Sidney Webb, an industrious and talented but minor civil servant. This is the third volume of her diaries to be published; it has been edited with the utmost skill and elegance by Mrs. Margaret Cole; and it is absorbing reading. It was the years of the first two—minority—Labour Governments, in both of which Sidney Webb held office; it is vigorously outspoken, tough, uncharitable, and unerringly readable, and an enormous, invaluable source of knowledge about the history of its time.

The Bridgeburn Days, by Lucy Sinclair (Victor Gollancz, 16s.)
Mr. Lyward's Answer, by Michael Burn (Hamish Hamilton, 21s.)
Coote Bahadur, by Major E. W. Sheppard (T. Werner Laurie, 25s.)
Mutiny at the Curragh, by A. P. Ryan (Macmillan, 18s.)
Beatrice Webb's Diaries, 1924-1932, edited by Mrs. Margaret Cole (Longmans, 25s.)

'Films to See,' a monthly review of current British films, will take the place of 'Books to Read' in the G.O.S. on Wednesday 16.15, and Thursday 09.30 and 05.00

Royal Visit to Tanganyika

Continued from page 15

traders' settlement most noticeably perhaps the thousands of mango trees which cover the countryside for miles around—and will visit the house where Livingstone lived, a house which has now been turned into a museum and memorial to the greatest of all African explorers. But Tabora's claim to fame does not rest only on its interesting past: it is one of the more important scholastic centres in the territory, and here the Princess will see, in particular, how the African's demand for education—a growingly insistent demand—is being met, and the fine schools which have been built to cope with it.

Whatever other impressions she carries away with her, Princess Margaret cannot fail to be struck by the way in which members of the three main races—African, Asian, and European—are striving to build up a multi-racial society which will provide scope for the natural abilities and aspirations of all three. The Princess will meet the members of the Legislative Council and will find, for example, that the non-official members are made up of ten Africans, ten Asians, and ten Europeans. The country is fortunate in that there is a broad basis of goodwill and tolerance amongst the various communities which makes up its population. Much of the credit for this happy state of affairs goes to its able and energetic Governor.

Tanganyika has suffered a series of setbacks during its short but somewhat chequered history: it was ravaged by the slave-traders; when it became a German colony there was, of course, no more slave-raiding, but many of the tribes, and the coastal Arabs as well, refused to submit to the Germans and fought against them, with disastrous results to themselves when famine followed defeat; during the first world war the country was a battlefield for four years; between the wars, when Tanganyika was a Mandate of the League of Nations, uncertainty about its future and the possibility of its return to Germany put a brake on progress. After the last war the country became a Trust Territory of the United Nations, responsibility for its administration remaining with Great Britain, and with more buoyant revenues and assistance from outside sources the country began to go ahead and to develop its resources.

Great strides have been made, especially in improving communications, schools and hospitals have been built, agricultural and mineral wealth better exploited. Princess Margaret will find a contented, colourful country, of infinite contrasts and great charm, all of whose inhabitants will be more than delighted to welcome her.

STORIES FROM 'RADIO NEWSREEL'

Here and There

GIANT TANKER LAUNCHED

THE recent launching at Barrow in Newcastle of the giant 47,000-ton tanker *Eugenia Niarchos* marked the completion of a £13-million order placed with Vickers-Armstrong by the Greek ship-owner, Mr. Stavros Niarchos. In five years ten tankers have been built by the firm in their Barrow yards. The *Eugenia Niarchos*, with her sister ship, the *Spyros Niarchos*, launched at Barrow last December, are the two biggest merchant ships built in Britain since the war. When the new vessels have been fitted out they will share the distinction of being the largest single-purpose tankers in service.

The crews will find in both ships the last word in sea-going comfort—large single rooms which even boast a shower for senior officers and engineers, roomy single or two-berth cabins, with even a settee for crew members—a far cry indeed from the old days of hammocks. Watched by a huge crowd of shipyard workers, many of them standing with their wives and families under the towering grey sides of the ship, the launching ceremony was performed by Mrs. Dunphie, wife of the chairman and the managing director of Vickers-Armstrong, saying: 'I name this ship *Eugenia Niarchos*. May God bless her, and all who sail in her.'

What is the future of big tankers such as the *Eugenia Niarchos*? I was told they have certain advantages, including economies in construction as well as in harbour and turn-round costs. But no one was eager to comment on whether, even with bigger tankers, it might be possible to by-pass Suez. In a speech after the launching, however, Major-General Dunphie made this point: 'The super-tanker has come to stay,' he said, 'and recent events in Egypt, whatever their eventual outcome, could only turn more and more attention to the place which the fast super-tanker is likely to play in the transport of oil in bulk in the future.'

TOM GERMAN

STAINED-GLASS TRADITION

STAINED glass is a department of the arts in which England can boast a long and honourable tradition, and examples of modern English stained glass could be seen recently in London alongside examples from other countries, in an exhibition at the Building Centre just off the Tottenham Court Road.

There were about seventy artists showing work in this exhibition—young and old: most of them showed drawings, designs done to scale, some in black and white, some in colour. These were interesting enough—glimpses as they are of the artists' conception of the job to be done. And I soon discovered that there is no predominant trend in design from which you can recognize the young from the old. Some designs were very bold with imaginative use of colour, like the cartoons by Peter White. Others were subtle, intricate, and ornate, like some of the drawings by Gordon Webster.

But the style seems so often to depend upon the building in which the glass window will be fixed, and although the artist today has far more colours to use than the medieval artist had, he is always restricted by the requirements of the building.

If a building needs a lot of light letting in it is no good producing a window in rich dark-coloured glasses.

So, interesting though the drawings were, naturally far more interesting were the windows and panels of stained glass themselves, and there were forty of them, some aiming at lightness, as in the rather pure crystalline design of Aldred L. Wilkinson's *David* for a church at Gidea Park, and Donald B. Taunton's *Venerable Bede*. Although this is in brown there is a suggestion of clarity. Others use darker, richer colours, like Howard Martin's *Throne of Grace* for a church in Ontario—a dove descending upon a throne, suggestions of a crown, two figures beneath: the effect is more a mosaic of colour.

Two of the designers of the windows for Coventry Cathedral were represented: Lawrence Lee and Keith New. Mr. Lee showed a portion of a window for Jesmond Parish Church. The design is abstract but it is based upon a cross; dark reds and blues, haloed by lighter greens, give a fine effect of

The 47,000-ton tanker '*Eugenia Niarchos*,' launched at Barrow. She and the '*Spyros Niarchos*' will be the largest single-purpose tankers afloat

richness and almost a changing texture in the glass itself. Mr. New has broken with tradition completely; a narrow panel called *Angel* showed behind a pale amber glass a black-lined figure rather like the fantastic little drawings of Paul Klee. I do not believe Mr. New's very unconventional angel was meant to be serious minded. Wherever it was placed it would bring a touch of fancy and gaiety.

There was a traditional window by Robert L. Hendra of St. George slaying a richly red dragon which makes remarkable use of a tall narrow shape. And a window by Hubert P. Thomas which uses submarine blues, wine reds, and golds with considerable subtlety. Most of the work of these artists, of course, is for churches, and war damage has provided them with much of it. But there were also heraldic panels and designs for civic buildings. Certainly with British stained glass among the finest in the world, and the range of colours greater than ever before, there is scope for even more imaginative work in an art and craft for which England has always been renowned.

HARDIMAN SCOTT

PRIMROSE AND BLUEBELL LINE

AT half past nine one recent morning an engine pulling two coaches left the county town of Lewes in Sussex on a seventeen-mile run. That was its daily routine until last year. Then in May, 1955, the Transport Commission closed down the local line to East Grinstead because it was losing money. A group of local people objected strenuously. They have been using the Primrose and Bluebell Line, as they call it, for many years. Their campaign was backed by certain legal arguments which in the end prevailed on the Transport Commission to reverse its decision. And so, with an air of triumph, the train and its passengers have been travelling together again through that familiar stretch of countryside.

Crowding the carriage seats and leaning out of the windows were railway enthusiasts, railway officials, and a great company of the objectors who had persuaded the Transport Commission to put this train back into service. As we steamed into stations on the way—Newick and Chailey, Sheffield Park, Horstead Keynes, and West Hoathley—crowds of people cheered and waved us on.

At Newick we took on board Miss R. Bessemer, who has been 'commander' of the objecting 'troops.' She told me about the legal grounds for her fight.

'I discovered,' she said, 'that there was an Act of Parliament in 1877-78 which included a provision that not less than four trains each way daily should be run on this line. And it was made binding on the railways to continue permanently for the benefit of the public. They were not complying with their statutory obligations unless that Act had been repealed, which apparently it never had been. Now the railways say they are going to apply for amending legislation in Parliament, and that the Government has already given it their blessing.'

This Week's Listening

October 7 — 13

ASIA TODAY

IN Asia today colonisation carries two broad meanings, one with national the other with international significance. In Pakistan, India, and Ceylon—and indeed in most Asian countries—great efforts demanding a colonising spirit, capital, and technical skill are being made to plant groups of settlers on newly cleared and irrigated land.

In some places, as at Polonnaruwa in Ceylon, this land has not been occupied for centuries, in other places the land has never before been brought under the plough. This sort of colonisation is, of course, highly regarded as part of community development.

But by Asian peoples colonisation is more generally equated with European dominance and attempts at settlement, and is held to be suspect. Capitalist development, which is associated with this phase, is therefore tarred with the same brush so that even capital provided internationally and used within Asia for community development may be condemned as a form of colonisation or imperialism.

'Asia Today' is the title given to this week's talk in the G.O.S. series on 'The Story of Colonisation.' The speaker will be C. H. Phillips, who was recently appointed Director of the School of Oriental and African Studies in London.

G.O.S.: Monday 16.15; Tuesday 00.30 and 05.00

'THE LAND IS BRIGHT'

THE final programme of the G.O.S. series 'Caribbean Horizon' will deal with the cultural scene in the West Indies. In 'The Land Is Bright' Willy Richardson gives an account of the writers, actors, singers, and dancers who are now gaining recognition not only in their own communities but in a wider sphere.

Since the war several West Indian novelists have had their work published in the United Kingdom and America; the new literature of the Caribbean is another reflection of a rapidly emerging society. In dancing and the theatre, too, West Indians are beginning to take a lively interest, and these arts will in turn help to transform the rising generation.

Willy Richardson will illustrate how the region has developed from the early days when the folk tale and folk song were the only means of expression to the intellectual ferment of the present. The self-awareness will ensure an easier communication of ideas between the islands and help to create a basis for mutual understanding in the region.

G.O.S.: Monday 17.30 and 23.15; Friday 10.00

OLYMPIC INTERVIEWS

MANY listeners will remember the G.O.S. series, 'The Ashes,' earlier in the year, when famous Test cricketers recalled notable matches between England and Australia. To mark the forthcoming Olympic Games in Melbourne a similar series, 'The Olympics,' can now be heard in the General Overseas Service.

In these programmes Dr. Roger Bannister will talk to famous British athletes who have competed in previous Olympic meetings about the great performances and personalities of the past. Roger Bannister is famed as the first middle-distance runner to cover the mile in under four minutes. This he did at Oxford in 1954. Before he retired from the track, Dr. Bannister went on to defeat John Landy of Australia in the Empire Games at Vancouver in one of the finest mile races ever run.

Roger Bannister Gilbert Murray
The famous miler visits the famous classical scholar in this week's new G.O.S. series, 'The Olympics'

June Whitfield 'Hutch'
Two stars who will be heard with Ted Ray (left) in 'Spice of Life,' a new series of Variety shows opening in the G.O.S. this week on Friday 11.45 and Saturday 18.30

In the series all the Olympic meetings since that at Stockholm in 1912 will be mentioned. For the first programme, though, Dr. Bannister visited the Oxford home of Professor Gübert Murray, the famous classical scholar. Listeners will be able to hear Professor Murray talking about the spirit and ideals of the Olympic Games which, after being a feature of the ancient world, lapsed for 1,500 years until they were revived by the first meeting of the modern series at Athens in 1896.

G.O.S.: Monday 17.00; Tuesday 02.15 and 09.30

FROM THE THIRD PROGRAMME

ONE of the broadcasts chosen to mark last week's tenth anniversary of the BBC Third Programme was a talk by Sir Harold Nicolson on 'The Intellectual in the English World.' The choice of speaker was an obvious one for an anniversary talk. Sir Harold Nicolson is not only a distinguished writer and broadcaster—his fortnightly talks in 'This Day and Age' are well known to G.O.S. listeners—but he was also a member of the BBC Board of Governors at the time it was decided to launch the Third Programme.

It is true, of course, that the term 'intellectual' has almost ceased to be a term of praise in England and has become very nearly a term of abuse. But Sir Harold does not bewail the lot of the English intellectual. He argues that if the general public become too interested in the creative arts, the artist may be forced to play down to their level. Above all, he believes that a country with a contempt for aesthetic and artistic values is at least spared the 'horror of the sham intellectual.'

Sir Harold Nicolson's talk can be heard in 'From the Third Programme.'

G.O.S.: Monday 15.15; Friday 23.15

THE SOVIET UNION

ONE of the policies most closely associated with Stalin's name was collectivisation of the land. In the G.O.S. series on the Soviet Union in 'This Day and Age,' Alexander Nove will explain how this policy has worked out in practice. He will also tell listeners of the present state of Russian agriculture, and will examine future trends, both technical and organisational, in this field. Finally, Mr. Nove will talk about the balance between the land and industry, peasant and industrial worker, in a country which though traditionally rural, has been rapidly industrialised. Mr. Nove, himself of Russian origin, is a leading authority on Soviet agriculture, and was a member of the British Agricultural Delegation to the Soviet Union in 1955.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

FOR THE CHILDREN

THE story of *Rough Water Brown* was the result of Henry Garnett's having been obliged to read a rather dull book about the changes in industry in the Midlands in the past three centuries. His interest was aroused by one short paragraph that mentioned the lives of men who sailed flat-bottomed boats called trows on the river Severn. And he began looking for information about these men. He found one old book, printed about a

hundred years ago, that told how these men used to steal from their cargoes and poach, especially when the railways took away their trade. He also found a roofing expert who showed him timbers from these old ships which had been built into the roofs of riverside houses.

All this formed the background of his story, of which the first episode will be heard this week in the General Overseas Service, of the adventures of Benny, the trowboy, his friend Elizabeth, and the Quaker merchant, Cornelius Beale.

G.O.S.: Sunday 13.15, Monday 21.30; Saturday 09.45

THE WEEK'S PLAYS

'SUDDENLY I rejoiced in the great security of the sea; in my choice of a life presenting no disquieting problems, infused with an elementary moral beauty by the absolute straightforwardness of its appeal and the singleness of its purpose.'

So muses the Captain of a sailing ship in Eastern waters, and it needs no great inspiration to guess that the author (whose own thoughts this might be assumed to represent) was that Polish sailor who was born Joseph Korzeniowski in 1857, and who later became one of the greatest English novelists under the name of Joseph Conrad.

The Captain in question tells the Conrad short story which Sybil Clarke has made into a radio play, *The Secret Sharer*. It is the Captain's first command; he is anchored in the Gulf of Siam in a lonely place when one of his crew spots another ship nearby, and shortly afterwards a man swims secretly across to his ship, is taken aboard by the Captain without the crew noticing, and confesses to a murder aboard the other ship.

Something strange yet familiar about the refugee impresses the Captain, until he realises that this man is virtually his own double; and Conrad charts the curious relationship between the two men against the obtruding background of the sea.

Another unusual and somewhat macabre tale, though longer and with a totally different setting, is told in Janet McNeill's play for broadcasting, *Miss Whittaker*. The lady of the title is the elderly and uncommunicative paying guest of Andrew Bennett, a schoolmaster, and his wife, Dorothy.

It is when Miss Whittaker disappears without warning or apparent cause that for the first time the Bennetts begin to find out about her, about her few friends and small family, about the way she has given to these others a most misleading account of her life in the Bennett household.

So that gradually in their worry over what has happened to Miss Whittaker the Bennetts are forced to face a good many unpalatable and unpleasant facts about themselves, and the influence of Andrew's first wife, killed in a street accident.

PETER FORSTER

'The Secret Sharer': Monday, 11.30; Thursday 19.00; Friday 01.30
'Miss Whittaker': Sunday 01.00, 18.30; Wednesday 14.15

- 13.45-14.00 The World of Science A weekly survey of the latest developments

ASIAN CLUB. The speaker on Sunday will be Sir James Shelley, and his subject 'Education and the Arts.' He was Professor of Education first at Southampton and then at Christchurch, New Zealand. He then spent thirteen years as Director of the New Zealand Broadcasting Service where he established a high artistic and professional standard. Art and craft, poetry and drama, all come within his range.

STANDARDS OF LIVING. Monday's programme will deal with the changes that have taken place over the last thirty years in Britain in the care of children. Richard Gould-Adams will be the investigator, and will discuss the changes with Dr. Miriam Florentin, Senior Medical Officer in a large working-class district of London; Mr. Kenneth Brill, who is Children's Officer for the County of Devon; and Mrs. Peggy Jay, housewife and worker on many committees dealing with various aspects of child care.

PLAY STUDIO. A new fortnightly series of drama programmes will start on Tuesday. Instead of scenes from famous full-length plays it is intended to present complete half-hour plays. Some of these will be classics of the amateur theatre where the one-act play has maintained a vigorous life long after the professional theatre had abandoned it. Others will be adaptations from short stories. It is hoped also to include new half-hour plays specially written for the radio medium. Manuscripts should be addressed to London Calling Asia, BBC, London.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

LONDON CALLING

THE OVERSEAS JOURNAL OF THE BRITISH BROADCASTING CORPORATION

No. 884. PUBLISHED WEEKLY

PRICE SIXPENCE

SUBSCRIPTION 25s. A YEAR

CALDER HALL

Her Majesty the Queen this week will open the first major atomic-power station in the world to produce electricity on a commercial scale, and G.O.S. listeners will hear a commentary on the ceremony on Wednesday at 11.55 (edited versions on Wednesday at 18.30 and Thursday at 00.15). A programme on Calder Hall will be broadcast on Monday at 13.15 in the General Overseas Service and 'London Calling Asia,' repeated for G.O.S. listeners on Monday at 23.45 and on Tuesday at 18.30. Arthur Haslett discusses the implications of Calder Hall on page 3, and there is a note on the programme on page 17

AFRICA TOMORROW

Philip Mason gives this week's talk in the G.O.S. series, 'The Story of Colonisation'

'THIS MODERN STUFF'

Lawrence Leonard opens a series of six illustrated talks on music of our times

THE OLYMPICS

Roger Bannister continues his G.O.S. series with an interview with the Rt. Hon. Philip Noel-Baker, M.P.

THE 1956 MOTOR SHOW

Bertram Mycock offers a preview on page 10; the show will be reported in the G.O.S. on Friday and Saturday

HARVEST FESTIVAL

A Thanksgiving Service on Sunday from the Hatfield Parish Church, Herts.

A Story of Progress

Colin Wills, on pages 14 and 15, contributes an illustrated feature on Kenya, which welcomes H.R.H. Princess Margaret this week when she arrives at Nairobi by air from Tanganyika

Stephen Black at the Calder Hall atomic-power station in Cumberland: he will be heard as the interviewer in this week's feature programme on the station, broadcast in the G.O.S. and 'London Calling Asia'

Special applications:
**Monitoring,
 Field Tests,
 Laboratory
 purposes —**

The **EDDYSTONE 770** **V.H.F**
&
U.H.F
**Communications
 Receivers**

Superbly engineered and of advanced design, the two models offered possess excellent electrical characteristics and are robustly constructed for service in any climate. The "770 R" has continuous AM/FM coverage from 19 Mc/s to 165 Mc/s; the "770 U" from 150 Mc/s to 500 Mc/s. Both incorporate six-position turret tuning assemblies of unique design and giving high reliability. Fully illustrated literature with performance curves on request.

Manufactured by STRATTON & CO. LTD. BIRMINGHAM 31

CABLES: STRATNOID, BIRMINGHAM

Beyond Calder Hall

ARTHUR HASLETT tells how when Her Majesty the Queen opens Britain's nuclear power station at Calder Hall she will inaugurate a new stage in the peaceful development of atomic energy: 'Beyond the achievement of Calder Hall,' he says 'there lies not only a ten-year programme of construction but another—of research and decision—which stretches far into the future'

WHEN Her Majesty the Queen opens the Calder Hall nuclear power station this week she will inaugurate a new stage in the peaceful development of atomic energy. Calder Hall is not only an achievement in its own right: it is also the model for the first nuclear power stations to be planned in any country as part of a considered programme of electricity generation from the atom.

There is a reason for this distinction. Of those countries which so far are most advanced in atomic energy, Great Britain alone has no cheap source of energy, and a need, already urgent, for more electricity.

So it is that, while the United States and the U.S.S.R. are building many different types of nuclear power stations experimentally, Britain is committed to a programme planned by stages.

In its own right, Calder Hall will be the first nuclear power station in the world to feed electricity in substantial quantities into a national electricity network. This in itself will be a landmark; and it will be this service which the Queen will inaugurate. The output of electricity from Calder Hall will reach about 65,000 kilowatts. But it has not been built with the sole object of producing electricity. It has a second object: to produce the nuclear fuel, plutonium, of which stocks are being accumulated.

'A Preliminary'

A ten-year programme of nuclear power was announced in February, 1955. Calder Hall is a preliminary to this programme rather than part of it. Whereas Calder Hall has been built for the United Kingdom Atomic Energy Authority and is a two-purpose station, the new stations will be built for the Central Electricity Authority and will have no other purpose but to produce electricity. It has been said of them that they may be the first in the world to generate electricity from nuclear energy 'on a strictly commercial basis.'

Twelve of them are to be built. For the design of the first eight, and probably of all twelve, the Calder Hall station will serve as a model for development. They will generate more electricity at greater efficiency.

The programme is keeping well up to its timetable. According to the programme, work on the first two stations was to be begun about the middle of 1957, and they were to come into operation in 1960-61. In the event, sites for both stations have been chosen, and tenders for their construction invited. These will be already under examination at the time when the Calder Hall station is opened.

Of the first two sites, one is on the east coast of England, some sixty miles from London, and the other on the Severn estuary. The plans envisaged an output from these stations of up to 200,000 kilowatts each. For a third station, to be built by the South of Scotland Electricity Board, an output of 300,000 kilowatts has been mentioned. The impression is that the outputs originally proposed will be exceeded, but definite figures will not be known until contracts for construction have been signed.

The Scottish station already mentioned will

be one of a second pair, due to follow eighteen months after the first two. The whole of these twelve stations are to be completed by 1965, and their combined output may well exceed 3-million kilowatts. Large as this figure is it represents less than a quarter of the extra generating capacity expected to be needed by that time.

In all estimates of the contribution to be made by nuclear energy to the generation of electricity in Great Britain by 1965 and later dates it has been assumed that coal output will have been increased—by more than fifty per cent. Nuclear energy will certainly reduce the gap, but cannot bridge it quickly.

By the early 1970s it is hoped to meet all extra requirements for electricity from nuclear power stations. By 1975 the electricity so produced should be the equivalent of that produced by burning about 40-million tons of coal a year.

'Stage-One Station'

The British programme does not, therefore, stop at ten years. On a longer time-scale the Calder Hall type of station is described as a 'stage-one' nuclear power station.

Two further stages are envisaged, and research on both is proceeding. The object is to develop the smallest number of reactor types consistent with final efficiency.

Here the Atomic Energy Research Establishment at Harwell occupies a key position. The problem is to carry research on selected types of reactors to the point when sound decisions can be made—and to do so as economically as possible.

The characteristic of the Calder Hall type of station is the use of a gas, carbon-dioxide, to remove heat from the reactor. A choice of a 'stage-two' reactor is expected to be made by the end of the present year. A prototype station will then be designed. This will be in the same relation to 'stage-two' production stations as is Calder Hall to the stations now to be built. According to the recent annual report of the Atomic Energy Authority, cooling by a molten metal, sodium, was the most likely choice.

In the third stage of development at least two more types of power station will be needed. The prototype of one of them—which, however, will take some long time to develop—is being built at Dounreay, in northern Scotland. Various possibilities for the other are being studied at the Harwell Research Establishment.

Beyond the achievement of Calder Hall there lies, therefore, not only a ten-year programme of construction but another—of research and decision—which stretches far into the future.

MARTIN WIGHT, Reader in International Relations at the London School of Economics, discusses the motives that lead some countries to adopt the legal and political institution of neutrality, and he quotes precedents that suggest that though neutrality is possible within certain limits it has seldom been a successful policy in the long run

The Idea of Neutrality

INTERNATIONAL politics have always been a dangerous struggle or a precarious balance of power; neutrality is the attempt to keep out of them. A wise man avoids other people's quarrels—this is the argument, at its simplest, of the neutral. You cannot be neutral between right and wrong—this is the argument, at its simplest, of the critic of neutrality. The history of neutrality, as a legal and political institution, has swung between the two arguments.

In the sixteenth and seventeenth centuries, when international law was in its earliest development, and the very word 'neutrality' was a new coinage, the right of neutrality was limited by the doctrine of the just war. Thus Grotius laid down that a state which wishes to be impartial in a conflict must not hinder the belligerent whose cause is just nor help the belligerent whose cause is unjust.

In the eighteenth and nineteenth centuries the rights of neutrality reached their theoretical zenith. This period seems in retrospect (perhaps deceptively) like a classical age in international relations, when politics were free from fanaticism and the balance of power was regulated, on the whole, without violent convulsions. The conception of the just war now grew faint, and it became agreed that neutrals had the duty to remain impartial between belligerents, who themselves had the corresponding duty to respect the territory and property of neutrals.

Doctrine of Collective Responsibility

In the nineteenth century the prestige of neutrality was enhanced by the growing influence of the United States; the permanent neutrality of Switzerland, Belgium, and Luxembourg was written into the public law of Europe; and the international law of neutrality was clarified and advanced by the Declaration of Paris in 1856 and the second Hague Conference in 1907. But in the twentieth century the pendulum has swung back. The conception of neutrality has once more become complicated and limited by the doctrine of the just war, in its new version of collective responsibility for restraining aggression.

One might almost say that the swing began with the second Hague Conference itself. For not only did the conference produce a series of conventions elaborating what we might call the classical rules of neutrality: it also declared that in a dispute neutral powers have a right to offer good offices or mediation and that this is not an unfriendly act. This meant that a dispute was no longer the affair exclusively of the disputants but was a matter of legitimate concern for the whole community of states. The two world wars encouraged this trend. They seemed to involve such tremendous causes, transcending mere issues of national interest, that among the belligerents (who in each case were the majority of the members of international society) the view became prevalent that neutrality was no longer morally justifiable.

The three great international constitutional instruments of the twentieth century—the League Covenant, the Kellogg-Briand Treaty for the Renunciation of War, and the United Nations Charter—have not abolished the institution of neutrality but they have transformed it back into something resembling the status outlined by Grotius—they have transformed it back from a duty of absolute impartiality into a neutrality that must not be indifferent to the moral issues involved.

Broad Lesson of International History

But it might seem that these fluctuations in the theory of neutrality have never had much effect on the practice of neutrality; neither on the desire for neutrality of some states nor on the respect for neutrality by others. It is the broad lesson of international history that if a state lacks strength to defend its neutrality that neutrality will be violated whenever a belligerent can use the argument of military necessity. When Gustavus Adolphus invaded Germany in 1630 his brother-in-law, the Elector of Brandenburg, pleaded a right to neutrality. 'What kind of a thing is that?' said Gustavus in his blunt way. 'Neutrality?—I don't understand it. It is nothing to me.' And he appeared outside Berlin with his artillery and compelled the unhappy Elector to sign an alliance with him.

Nor was it different in the period when the rights of neutrality were being fully formulated. In the eighteenth century Frederick the Great began the Seven Years War by overrunning Saxony without a declaration of war and refusing an offer of Saxon neutrality guaranteed by hostages and surrender of fortresses. It was in the nineteenth century, perhaps, that the rights of neutrals were most generally respected, but in the world wars they were once more generally overridden by military necessity. Not only were there famous and flagrant violations of neutrality by Germany: the Allies violated Greek neutrality in the first war, and Britain and Russia violated Persian neutrality in both wars. If there was a moral distinction it was that the violations of neutrality by the Allies were plainly not intended to lead to a permanent deprivation of independence, though this was small consolation to Greeks and Persians at the time.

If neutrality is so hard to maintain, what are the motives that lead countries to adopt it? We might distinguish between those countries which seek neutrality purely from considerations of external policy, and those which adopt it as the corollary of a concentration upon domestic policy. The distinction is not exact, and in any particular case both motives are likely to be at work.

Neutrality of the first kind is seen in states which avoid international alignments because they are preoccupied with a special, even a private, problem of external relations. Thus Irish neutrality flows logically from the continued inability of Irish opinion to accept the partition of the island; and the neutrality of the Arab countries is a qualified neutrality—a neutrality between the Western and Communist blocs—in order to concentrate upon the more immediate problems of Israel and eradicating colonialism. But neutrality for reasons of foreign policy is more generally conceived simply as the best way in the circumstances of seeking security.

Neutrality was the most reasonable foreign policy for Turkey or Argentina during the second world war; General Franco pursued such a policy with an adroitness that has conferred ample benefits on Spain. Of this kind also is neutrality as a mode of political retirement, inspired by the desire for repose after having tasted the anxieties of military and imperial glory. Such a motive may be seen in the advocates of neutrality both in France and in Germany since the last war. It is perhaps the deepest motive of all neutrals which have formerly been great powers: of Austria today, of Holland in the nineteenth century, of Sweden and of Switzerland, which we sometimes forget was once a military power.

Switzerland and Sweden are Europe's senior neutrals: their neutrality has been maintained unbroken now for 146 years. They illustrate how neutrality as a security policy, if it is to be successful, requires both military strength and geographical invulnerability.

The other kind of neutrality derives, I suggested, from a preoccupation with domestic affairs. The principle of the primacy of foreign policy was formulated by the great German historian Ranke, and an American scholar has described it as underlying all modern political philosophy. Yet there are still countries which have the courage to repudiate it, and regard neutrality not as a kind of security policy but as an alternative to one.

India's Attitude to Power Politics

Mr. Nehru has repeatedly described India's neutrality policy in this way: that India is so busy with her task of internal development that she cannot allow herself to become entangled in the web of power politics. In this he speaks for all those Asian countries which regard economic failure at home as a graver danger than military assault from without. It is not a new position. American isolationism up to 1941, and British non-intervention in the nineteenth century, were based on the same principle of absorption in internal welfare and economic expansion.

Yet these precedents suggest the limits of possible neutrality. America began by repudiating the balance of power; then found herself, in two world wars, compelled to rectify the balance; and at last, about 1947, recognised with consternation that she had become one of the scales in the balance. In other words, if the neutrality policy of a small power may come to an end with the neutrality being violated by stronger powers the neutrality of a great power usually ends because the great power finds that its vital interests would be endangered if it continued to stand aloof. Mr. Nehru's neutrality has always been an active neutrality, a neutrality which mediates between the Western and Communist powers, and which is therefore committed in some sense to holding the balance of the world. The policy of Yugoslavia since her break with the Cominform in 1948 has tended in the same direction.

'Neutrality,' a word implying something more dynamic and realistic than neutrality, is sometimes used to describe such a policy as India's. The mediatory role of Mr. Krishna Menon in the Geneva Conference on the Indo-China question in 1954 illustrates a more positive contribution to international relations than mere neutrality.

Seldom in international affairs has neutrality proved a successful policy in the long run; but then in the long run alternative ways of avoiding war have seldom been successful either. Success is not the exclusive criterion of political judgment, and the pursuit of neutrality may have encouraged other social arts besides those of national defence. There are states whose foreign policy has been traditionally connected with the defence of the rule of law in international politics, with the maintenance of the balance of power and the defeat of aggression; and such states deserve respect. But the end of every great war has posed the question: 'Quis custodiet ipsos custodes?'—who shall police the policeman? It is a question to which international society, by its very nature, can provide no satisfactory answer, but a provisional answer has not infrequently been found in the critical conscience of the neutrals. In the Regent's Park parade: a horse-drawn bus of 1856 and London Transport's Routemaster

An 'Ole Bill' bus of the type which was used for troop-carrying in France and Flanders during the first world war

Centenary of the London Bus

CYRIL RAY picks out some of the highlights in the hundred years of history that mark the evolution of the horse-drawn bus plying the London streets in the 1850s into the familiar bright-red, diesel-engined monster seen in its thousands today

IT is only recently that London was celebrating the centenary of the Victoria Cross, with a parade of stout-hearted happy warriors in Hyde Park; and now there has been a parade of London buses to celebrate their centenary, and an exhibition at Charing Cross Underground Station. It is a hundred years since the various little bus services of London began to become amalgamated and organised in the London General Omnibus Company—the direct ancestor of London Transport.

Not much connection, you might say, between Victoria Crosses and London buses, between anything so heroic and anything so commonplace. Well, no—except that one of the motor-buses on parade was there to represent the thousand London buses that served in France and Flanders in the first world war, carrying British infantry up to the long lines of trenches, and bringing some of them back. Upon this bus were the words: 'Ypres, the Somme, Antwerp,' and there must have been some people watching the parade whose memories were touched for a moment in much the same way as they had been touched when they watched the V.C.s on parade.

But that was a motor-bus, and there were much earlier buses on parade than that. In the 1850s the 800 or so buses on the streets of London were drawn by a couple of horses apiece, or three at the most; the top was open, and passengers on top faced outwards, sitting back to back on what was called a knifeboard seat. Strictly for the gentlemen, that was: ladies could not ride outside unless there were 'decency boards' to hide their ankles and their petticoats. Every route had a different colour, and London must have seemed very gay when you looked for a white or a green or a red bus according to where you were going.

Steep Steps, Hard Seats, Solid Tyres

The knifeboard gave way to the 'garden seat,' where the seats were set across the bus, at right-angles to the sides, facing forward. 'Open air to everywhere!' some of the conductors of those roofless buses used to shout, and passengers those days did not seem to mind the steep steps, the hard seats, and the solid tyres.

Nowadays, those 800 horse-drawn buses of a hundred years ago, all different colours, have given way to something like 7,000 oil-driven monsters, all bright red, each taking about sixty passengers against the couple of dozen apiece in the old days. Seats are upholstered, there is heating and ventilation; and giant pneumatic tyres, of course.

And this is not to mention the special Green Line buses, run by London Transport right out into the country; the sightseeing buses, with special perspex tops and loudspeakers; and the highly specialised vehicles such as breakdown lorries and mobile canteens—even a special tree-logging bus, which takes experts out to cut the overhanging branches that slap against windows, scratch the paint, and frighten passengers.

There was a veteran conductor taking the salute at the London bus

parade who had worked on horse-drawn buses in 1892, when London traffic was all cluttered up with donkey-carts and brewers' drays, he told us. But buses—in Central London, anyway—cannot move faster now than they did then, in spite of having an engine of 125 horsepower in place of the old couple of horses.

That is what traffic congestion means: we might just as well be stuck behind a donkey cart. The same idea struck the Minister of Transport, and after the parade he promised to get London traffic moving a bit faster. We shall see!

Meanwhile, even if the buses are not much faster than their ancestors they are a good deal cleaner and more comfortable and more frequent. And in some cases—not all, by any means—even cheaper, thanks to millions more passengers. A hundred years ago it cost ninepence to go from Kew to Kensington by bus, and now it costs eightpence, and that is a sort of economic miracle. (*Broadcast in the BBC's Overseas Service*)

'Open air to everywhere!' cried the conductors of these 'garden-seat' buses

PROF. R. R. BETTS

PROFESSOR REGINALD BETTS, in his contribution to 'The Story of Colonisation,' tells of the armies of nomadic tribesmen from central Asia—mainly Tartars and Turks—which at intervals throughout the Middle Ages invaded and colonised the countries on the eastern fringe of Europe

The Hammering Hordes

IN the history of colonisation Europe has recently been the active partner, the coloniser which has sent its adventurers and merchants and missionaries, its misfits, convicts, and surplus poor to conquer and colonise other continents. But Europe has itself been often the victim, or the beneficiary, of invasion and settlement from outside. The invaders of Europe came almost all from Asia, and their settlements were made in the eastern half of Europe. That is why we in the West know little about them and tend to underestimate their importance. But they are worth looking at, for the invaders from the east have profoundly influenced the history and present condition of every European country east of Germany. There are today whole nations such as the Hungarians, the Finns and Estonians, the Turks of eastern Thrace, and the Tartar peoples of southern and eastern Russia who still speak languages which are of non-European origin. Also there is much Asiatic stock in countries like Russia, Bulgaria, and Roumania.

An Easy Highway for Invaders

Europe is a peninsula, and invaders can approach it only from the south, the west, or the north by sea. But it has no secure eastern frontier. The great north-European plain widens towards the east with no insuperable geographical obstacle, for the Ural mountains are by no means impassable and at their southern end they peter out into the grassland and semi-desert which provide an easy highway between central Asia and southern Russia. Until the formation of the strong state of Muscovy in the fifteenth and sixteenth centuries, that highway was open to a succession of invading Asiatic nomads whose incursions and settlement constitute the most important chapter in the history of the colonisation of Europe.

The series of invasions of Europe from the east began in the fourth century and was not finally checked until the sixteenth. It had its origin in a reservoir in the vast plains which lie north of the mountains of central Asia, around Lake Baikal and the upper courses of the great rivers which flow north to the Arctic sea: here pastoral nomads—tent-dwelling, horse-riding owners of flocks and herds—have again and again coalesced into great tribal hordes, sweeping now into China, now into India or Persia, now into Europe, in search of new grazing grounds, booty, and slaves.

The history of the first of these central Asian empires is typical. Towards the beginning of the Christian era a great tribal confederation was created in east-central Asia. The Chinese, who called these people Huns, eventually repelled their attacks, and therefore the Huns turned westwards, swept through the desert lands north of the Caspian Sea, overthrew the Iranian and Gothic monarchies in southern Russia, and pushed on to the grasslands of the middle Danube, from where in the fourth century they raided and ravaged into Gaul and central Italy.

The Hun terror in Europe lasted some sixty or seventy years, but when their greatest leader, Attila, died in A.D. 453 his empire fell to pieces. His Asiatic followers scattered, but remained in Europe, many of them in south-west Russia, the first of the Turco-Tartar settlers in Europe. It was probably part of these remnants of Attila's horde who, in the latter part of the seventh century, under the name of Bulgars, forayed part of them across the Danube delta to found the Bulgarian state amid the Slavs of the north-eastern Balkans, part of them north-eastwards to establish a second and flourishing Bulgar community on the middle Volga.

Little more than a century after the collapse of Attila's empire a second flood of Turkic nomads followed the same route from Asia into Europe. They were the Avars or Obri, invaders so fierce and terrible that today some Slavs still use the word 'obri' to mean 'giants.' The Avars, like the Huns before them, swept over the Russian steppes, up the Danube, and into the grasslands of Hungary. As the Avars advanced up the Danube they had to meet in battle not ill-armed and ill-led rabble of uncivilised Slavs but the armoured legions of Byzantium and the experienced armies of Teutons in northern Italy and southern Germany; moreover, being few, the Avars were cautious of the losses which might occur if they flung their precious horsemen against such foes too often or too recklessly. Therefore they sought a mass of infantry to use as a screen, to absorb the shock of the first assault, regardless of the loss of life, and such a source they found in the conquered Slavs.

The fact that the Avars took masses of Slavs with them in their extensive raids was a most important factor in colonising much of central and south-eastern Europe with these Avar-Slav hordes. In the seventh century the Avar empire was broken up by revolts of its Slavonic subjects, and ultimately shattered by Charlemagne.

During the Middle Ages the succession of Asiatic invasions of Europe continued. The first followers of the Avars were the Khazars who in the seventh and eighth centuries established a flourishing state in south Russia.

The Khazars, invaders of Turkish race, ruled over a mixed population of Slavs, Goths, Greeks, and the remnants of earlier Asiatic invading tribes. Khazaria flourished by trading with the Greeks, Arabs, Slavs, and Scandinavians. One of its most interesting features was its religious tolerance. The pagan khans of the Khazars welcomed missionaries, whether they were Christian, Moslem, or Jewish. Some of the later khans and many of their subjects embraced the Jewish faith, so that Khazaria became a great reservoir from which flowed one of the broader streams of east-European Jewry.

It was the usual fate of these Asiatic colonies in eastern Europe to become themselves the victims of later incursions. The Khazar state was overthrown in the tenth century by a fourth incursion of Asiatic Turkish-speaking nomads, the Pechenegs, who in their turn created a loosely organised empire over what is today the Ukraine and Roumania: some of the Pechenegs invaded and settled in the eastern Balkans. In its turn the Pecheneg hegemony was, in the eleventh century, destroyed by yet another wave of invaders, those whom the Russians called Polovtzi and their other victims Cumans. The Russian princes and the rulers of Hungary and Poland were involved in a long struggle to confine the Cumans to the steppe. Hardly had the Cuman peril been scotched when the most terrible of all the invading hosts, the Mongol Tartars, swept across Europe's eastern frontier. They came about the year 1230, not as groups of casual marauders but as the vast, organised army of one of the greatest empires.

During the previous half-century a Mongolian chieftain, the famous Jenghis Khan, had built up a vast empire of Mongol and Tartar tribes around Lake Baikal. Jenghis had set himself to conquer the world. China, Korea, the south-west-Asian empire of Kwarasmia, northern India, Persia—all were sooner or later overrun by the victorious hordes of Jenghis and his son, Ogdai Khan. And now it was the turn of Europe. In the course of a dozen years the Tartar prince, Batu Khan, overran Russia, destroyed all its cities except Novgorod, and swept through Galicia and Poland; he drove the Cumans out of the Ukraine to take refuge in Hungary, where their descendants live to this day. The Hungarian army was swept aside by the Tartars, and Batu Khan reached Austria.

It seemed that nothing could prevent Bohemia, Germany, or even Italy from falling under the barbarian yoke. But a miracle happened, for suddenly, in the year 1241, Batu marched his hordes back to the distant Tartar capital of Karakoram, for Ogdai Khan was dead, and Batu wanted to make his bid for the throne. But though Poland and Hungary were for the moment relieved, the Tartar host returned to dwell in the rich grasslands of the European steppe. There the Khan of the Golden Horde held sway over a vast dominion which stretched from the borders of Poland to Astrakhan on the Caspian Sea; to him the Russian princes and towns long paid tribute. For 300 years the Tartars ruled in southern Russia until, divided amongst themselves, they were conquered in part by the tsars of Russia and in part by the Ottoman Turks.

The Most Successful Horde of All

The Ottoman Turks were the last of the 'hammering hordes' to invade Europe from Asia, and their invasion was the most successful, the longest lasting, and the most dangerous to Christendom of all. The Ottoman invasion, also, was Turkish, but it came not by the Russian steppes but from Asia Minor. As early as the latter half of the eleventh century a group of Turkish tribes, known to history as the Seljuks, had overrun the Middle East and Asia Minor. For a time the Crusades, the Byzantine emperors, and the Golden Horde had been able to keep the Seljuks out of Europe, but by the fourteenth century the Crusades had failed and the might of Byzantium had been broken; the Balkan rulers, Serbian, Bulgarian and Greek, were at each other's throats, and Christian princes did not hesitate to employ Turkish mercenaries from Asia Minor.

Here was an opportunity which was eagerly seized by the most powerful of the Turkish military chiefs, the sons and grandsons of Otman of Brusa. During the hundred years from 1350 to 1450 the Ottoman Turks poured into Europe; they overthrew the empires of Serbia and Bulgaria; and in 1453 they captured Constantinople. Within another hundred years they were masters of the whole of the Balkan peninsula, of the Roumanian principalities, and of most of Hungary.

The establishment of this enormous and obstinately enduring Ottoman Turkish Empire in the south-east completes the long tale of Asiatic colonisation in Europe. It had begun with Attila in the fifth century; it did not end until the last Ottoman sultan was deposed in 1918. It is a chapter in the history of colonisation not unworthy of comparison in interest and importance with its sequel, the expansion of Europe—of Russians, Portuguese, Dutch, British, and French—into Asia. 'The Story of Colonisation.' *Africa Tomorrow*, by Philip Mason (see page 17)

This panel has monograms 'ES,' 'EC,' and 'WC,' for Elizabeth Shrewsbury, Elizabeth Cavendish, and William Cavendish: tears fall on quicklime, illustrating a Latin motto

A square with an emblem of Mary, Queen of Scots

Tapestries that Enshrine a Tragic Queen's Life

HARDIMAN SCOTT tells the story of the Oxburgh hangings which include almost the only known signed examples of the embroidery prowess of Mary, Queen of Scots. The hangings, after being repaired at the Victoria and Albert Museum, are now back in Norfolk

MARY, QUEEN OF SCOTS was considered one of the most accomplished needlewomen of her time, and happily specimens of her work are still preserved. Back in the sixteenth century, when she was in the custody of the Earl of Shrewsbury, she and the Countess of Shrewsbury worked together on the same tapestries. The Oxburgh Hangings, as they are called, were presented to London's Victoria and Albert Museum by the National Art Collections Fund in 1953, and there has since been much delicate repair work on them. They were put on exhibition at the museum for two months, and now they are back in their permanent home at Oxburgh Hall, Norfolk, which has been their home since the eighteenth century.

I have been to see the tapestries which tell so much about the life of the tragic Queen. She must have been working on these with the Countess of Shrewsbury just before she was removed to Sheffield Castle, where she spent fourteen years, and just before the plotting of the invasion of England by Spain. Although there is an inevitable tranquillity about embroidery one cannot say these hangings exactly show peace of mind.

There are three of them on view—there must have been four, but the other is still in fragments—and a valance, which would have gone round the top of a bed. They were, in fact, used as bed-hangings, although originally designed as wall-hangings. In the centre of the largest there is a square, worked by Mary, showing a hand coming down from the clouds, clutching a sickle and pruning vines: It bears the motto: 'Virtue is strengthened by wounds.' It was a favourite emblem of Mary's, and she sent the Duke of Norfolk, who was involved in the invasion conspiracy, a cushion bearing the same subject and motto.

Surrounding this central square there are some thirty-six panels with the figures of birds, plants, and animals worked in coloured silks.

Surrounding the central square shown in the top-right-hand picture are some thirty-six panels with the figures of birds, plants, and animals worked in coloured silks: one is a bird—'Byrde America'—signed by Mary 'MR'

At least twenty-five of them are signed by Mary—'MR'—or with a complicated monogram; and one octagonal panel, in the form of a monogram, shows all the letters of the names Maria Stewart. Other panels bear the monogram of the Countess of Shrewsbury.

Each of the other two hangings also has a central motif in an embroidered square. One bearing the Countess of Shrewsbury's monogram shows tears falling into quicklime with the motto: 'Tears bear witness that the quenched flame lives'—perhaps a reference to the death of her third husband, Sir William Cavendish.

On these hangings, and on the valance, too, there are panels of crocodiles, boars, starlings, frogs, and even spiders. It has taken an expert needlewoman over two years to repair them. I saw her at work on one of the remaining fragments. Many of the silks were just hanging loose, and she was replacing them so skilfully that I could not see the stitches. And now we have this most beautiful needlework as evidence of Mary's pleasure in small things, and of the consolation it must have given to—quote herself—'a body and a heart which must endure pain and dishonour in a life unsure.' (Broadcast in the BBC's General Overseas Service)

Oxburgh Hall, in Norfolk, a late-fifteenth-century house owned by the National Trust, and the permanent home of the Oxburgh hangings

The Bristol 173, a twin-rotor helicopter designed to carry twelve to fourteen passengers. It is being used by British European Airways for development flying

Development of the Helicopter

O. L. FITZWILLIAM, Chief Engineer of the Westland Aircraft Company, outlines some of the problems involved in the design of the helicopter, the specialised type of aircraft which in the past ten years—particularly for military purposes—has made a big advance. The speaker is introduced and subsequently questioned by C. L. Boltz

IT is quite a common thing nowadays to pick up a newspaper and read that somewhere or other a special type of aircraft called the helicopter has been in action. Owing to this machine's ability to rise vertically and descend vertically and to hover at any chosen height without moving backwards or forwards it can do lots of things that the usual type of fixed-wing aircraft cannot do at all. The helicopter needs no more than a few square yards of landing ground: it can spot a clearing in a forest or jungle and land in it, as has been done often enough in the jungle of Malaya. It can hover and let down a container of food to people marooned by floods or hostile siege, or let down a rope on which a shipwrecked sailor or isolated mountaineer can be hauled up. For rescuing wounded men and taking medical supplies it proved its worth in Korea.

You have a rough idea how a helicopter is made to move. The aircraft most of us know has fixed, more or less horizontal, wings, and engines that make a backwards thrust of air by jets or by airscrews. But the helicopter has no wings: it has an enormous windmill, so to speak, with the arms rotating in a horizontal plane; as this rotates it draws the body of the helicopter upwards. By tilting it, forward or backwards, drive can be had as well.

The pioneers of this sort of flight—apart from Leonardo da Vinci—were Juan de la Cierva, who was accidentally killed in 1936, Igor Sikorsky, who is now working in America, and Raoul Hafner, busy designing in Britain. Hafner designs for the Bristol Aeroplane Company. Sikorsky has designed very successful helicopters, and I think it is safe to say that most of the practical military and civil helicopters now flying are Sikorsky-type machines.

Fascinating Possibilities Ahead

Helicopters offer fascinating possibilities. Obviously, they are just the thing for huge countries where there is not a very advanced road or rail system—large parts of Asia, for instance. But, as you can guess, there are problems involved—helicopters are very specialised machines. In Britain the Westland Aircraft Company make Sikorsky-type helicopters, the most widely used, as I said, and Mr. O. L. Fitzwilliam, their Chief Engineer, is going to discuss some of the problems involved in design.

The past ten years have seen a big advance in the engineering development of helicopters. In this period the size and power and lifting capacity of the helicopter have all increased tremendously. Their speed and range have about doubled, and there has been a big improvement in reliability even under very severe operating conditions. These advances have greatly increased the military importance of the helicopter. Consequently, production has increased in England as well as in the United States, and this has enabled us to increase the staff and facilities available for helicopter development.

The growth of the helicopter industry has so far been almost entirely due to military needs, but this growth is also very important for the future development of helicopters for the civil market. Modern design

and testing requirements are now so extensive that only a large and experienced and well-co-ordinated team can hope to deal with them. We have in our firm just over 200 people in the technical department, and with the commitments now facing us we could do with a great many more really highly qualified staff. It takes time to build up such teams, and the fact that this is being done is perhaps the most hopeful assurance for the future.

Our own team, and those of other helicopter manufacturers, have so far been occupied almost exclusively with urgent military requirements. We have had little time to spare for the problems of the purely civil market. Nevertheless, some civil and military applications are very similar, and we have made extensive studies of these cases. This applies particularly to multi-engined helicopters suitable for both civil airlines and Army transport duties.

As a private venture we are at present designing a helicopter of this class to carry about forty-five passengers. It will be driven by two turbine engines with sufficient power to give a large reserve of performance even with one engine out of action. The operating costs of this helicopter are expected to be low enough to meet airline requirements for inter-city operation on some of the main high-density European traffic-routes; so acceptable operating costs are thus already within reach for the large helicopters suitable for European conditions.

For the small helicopters required elsewhere in the world the problem is more difficult, partly because the smaller engines tend to be less efficient. In most under-developed countries this difficulty is further aggravated

A helicopter in action spraying potatoes in Norfolk with an anti-blight fungicide: the machine operates only three to four feet from the ground

How the Royal Navy uses the helicopter to rescue air-crash and other victims: the victim is scooped out of the sea in the net and carried like a fish

by high temperatures and/or high altitudes, both of which further reduce the engine efficiency. Of course, these problems also affect military helicopters, and for this reason improved engine designs for operation in hot climates and at high altitudes are likely to be developed under the pressure of military requirements. This might fairly soon alter the picture in favour of the smaller helicopters required in under-developed countries.

The engineering problems of helicopter development do not involve any novel principles but they do present a difficult combination of refined structural and mechanical design. Also, experience shows that no matter how carefully the design is executed the safety and reliability of the helicopter can only be firmly established by lengthy and very rigorous testing. From the experience of the past ten years we have accumulated a great deal of knowledge which has led to increasingly complicated design and manufacturing and test requirements, and this is partly responsible for the high cost of helicopters at the present time, because the expense of these developments has been borne by the relatively small number of helicopters so far produced.

Ensuring Trouble-Free Machines

For each type of modern helicopter it is necessary for us to allocate a number of prototypes—sample helicopters which are subjected to very severe endurance runs, partly in the air and partly tied down on the ground. Also, the critical stresses are measured in every important component in all conditions of flight, and this is an extremely laborious procedure. These measurements are used for comparison with laboratory fatigue-test results in order to establish a safe operating life for each part. Also, extensive rig-tests are necessary to carry out tests on the transmission and on the major mechanical and control assemblies, to establish satisfactory overhaul lives and wear rates, adequate lubrication, and so on.

All this testing increases the purchase price of the helicopter, but in the long run, of course, it reduces the overall costs somewhat by providing operators with increasingly reliable and trouble-free machines. At present the cost of helicopters is unavoidably high, and they are generally used only for very specialised jobs where cost is not the most important factor. Many of these jobs could not be done by any other vehicle. Our own helicopters have been used for crop-spraying in England, and in central Africa for malaria control in the Belgian Congo, where they have done a magnificent job; for carrying oil-drilling equipment over difficult country, as in New Guinea, and also for transporting oil crews to and from the drilling rigs which are seventy miles out in the Persian Gulf, in the water.

For several years our helicopters have also operated very successfully from ships of the Norwegian and British whaling fleets in the Antarctic, and, above all, we are most pleased by the record of our helicopters in rescue and ambulance work.

In Malaya one Royal Air Force squadron alone has evacuated more than a thousand casualties from the jungle; and in other parts of the world many hundreds of sailors and civilians owe their lives to pilots and crew-men flying helicopters built in our factory. This is a great source of satisfaction to us: we feel we have reason to be proud of the progress made in the past ten years.

From what I have said you will see that the problems of future development do not present themselves to me as primarily technical problems but rather as problems of timing and priority. The steady but apparently unspicacious advance of the past few years actually hides a great deal of active thinking about the future. If we had been asked five years ago to design a helicopter suitable for large-scale production

Another method of air-sea rescue: an R.A.F. Coastal Command helicopter bringing out men from the rubber dinghy with a special lifting cable

Helicopters for industry: the first of two Westland Whirlwind models ordered by a Cambridge charter company for oil survey-work and exploration in Nigeria

for the civil market it is fair to say that we would not have known how to go about it. Today we have a reasonably clear picture of the basis for such a design, even though it is not likely to materialise until there is some easing of immediate military requirements, which at present occupy the whole of our resources.

BOLTZ: 'There is one thing that occurred to me while you were talking. When we look at a helicopter we see no wings: it does look as though, if the rotor were to stop—that is, if the engine broke down—the whole thing would fall like a stone. Is that true?'

FITZWILLIAM: 'Not at all. The autogyro before the war flew, of course, quite successfully with no mechanical drive to the main rotor, and when you throttled back the engine of that machine it glided down just like any other aeroplane.'

In the helicopter, when you throttle back the engine, there is a free-wheel, as you probably know, and the main rotor continues to turn. You might ask why it continues to turn. It does so because it is a kind of windmill. As you are coming down with the engine throttled back the rotor blades are gliding round in a circle, just as if you had an aeroplane gliding in a straight line. And when you arrive at the ground you can use the energy stored up in those blades in exactly the same way as an aeroplane uses the kinetic energy which it has in landing to cushion the descent.' (Broadcast in 'London Calling Asia')

JAMES LAVER

OUR WAY OF LIFE: 13

JAMES LAVER, discussing what he calls the 'intractable problem' of housing in Britain—and particularly in London—thinks that so far as the 'typical home' of the middle classes is concerned the majority of houses available to such people no longer correspond to present-day social conditions

The Englishman's Home

THE English like to consider that they have a particular sentiment of 'home,' a quasi-monopoly of the word itself. They love to point out that even people who use the same language employ this term in a different and somehow inadequate manner, as if unconscious

of the deeper meanings which we read into it.

There are, of course, in England, many different kinds of 'home,' ranging from 'the stately homes of England' to the squalid slums which we have been making desperate and not altogether unsuccessful efforts to sweep away during the past quarter of a century. But the typical English home is the house inhabited by the middle classes, and that is what I want to talk about now. For the great problem today is due to the unfortunate fact that the majority of these houses were erected up to a hundred years ago, and they no longer correspond to social conditions.

In the north of England it is not so bad. Houses were built in large numbers in, say, industrial Lancashire. For the most part they are on two storeys, and as their inhabitants never had very much domestic help they are still able to continue, with the addition of a bath and a more up-to-date kitchen, to live more or less rational lives. But in London (and about a fifth of the total population of these islands lives in Greater London) the situation is very different.

Typical London Town House

In the middle of the nineteenth century there was an enormous increase in prosperity and a corresponding increase in population. Not only that, but the shop-keepers and merchants of the City, who had previously lived over their places of business, moved out to what were then the suburbs—Kensington, Notting Hill, Bayswater, and so on—and they built the typical London town house. There are literally thousands of them in London, each with a portico and two pillars. What were other characteristics?

They were, first, very large houses, at least by modern standards, but by all previous standards they were, owing to the high cost of land, very narrow houses. They were houses on end, and it is only because there were so many of them that they came to be accepted as the normal type of dwelling and that nobody noticed how very odd they were.

Externally they had much propriety and even a certain magnificence, for the last relic of an English urban style had not yet been swept away in the flood of Ruskinian neo-Gothic. They were designed to form streets of uniform aspect. Perhaps the uniformity was even a little overdone. The witty Czech author, Carel Capek, once remarked that there was a mysterious unwritten law by which every house in London was compelled to have a portico with two pillars. But we who suffered until very recent times from the opposite defect are not likely to complain of a style of urban architecture which at least regards the street as a unity, instead of pursuing some different private fantasy for every house. When they were first built the houses of the 'fifties, with their generous balconies, their noble pediments, and, of course, their pillars, the whole covered with newly painted stucco, must have presented an appearance attractive enough.

What of the inside? The rooms were arranged on top of one another. This was the vital fact. Great as had been the social divisions in the typical eighteenth-century country house, masters and servants were, at least in the physical sense, on the same level. Now that society was confronted with a perpetual symbol of its hierarchical structure the servants became literally the 'lower classes.'

I wonder how many of my listeners know what an area is? It is the excavation behind an iron railing which gives light and air—but not very much—to the cellar kitchen. In this kitchen, below ground, worked the cook and her helpers, and now works the abandoned housewife with no helpers at all. A hundred years ago the lady of the house hardly ventured into the kitchen. Her dining room was on the ground floor and her drawing room or parlour on the floor above. Above this again was her bedroom, and here the domain of gentility ceased. Above were the children's and the servants' bedrooms. In the whole history of architecture there never was a more class-conscious house than this astounding product of Victorian democracy.

Such houses were built, as we have noted, in enormous numbers, and they were built to last for ever. Even Hitler's bombs made comparatively little impression. But social structures are more fragile than architectural ones, and one of the main problems of modern London is how to live in a persistently hierarchical house in a decreasingly hierarchical world.

Few single families can now afford to live in such houses, so that most of them are now divided into flats or maisonnettes. If they have a

lift, the inhabitants are lucky. At their best they are a makeshift, but with few exceptions they are the houses you have to put up with if you want to live anywhere near the centre of London, and the problem had already become acute some fifty years ago.

The answer seemed to be to go further afield, and the result was that the twentieth century witnessed two mass migrations, the first wave travelling outwards in concentric rings, and the second back again. The first resulted in covering the adjacent countryside with villas, the second in the creation, nearer to the centre, of huge blocks of flats.

The wave outwards was, for a few years, an almost successful attempt to make the best of both worlds. A man could work in the City and sleep amid the laburnum trees. It was the last pathetic attempt of urban man to live the life of his ancestors. But the city worker cannot 'live in the country,' for he takes the town with him wherever he goes, and in London, at any rate, the suburbs spread so fast and so far that a long train journey from home to office and back again became a commonplace of daily life; and many a suburban dweller spent an appreciable portion of his income on his season ticket.

Still, it was possible to rear a family in suburbia, even if the family tended to be a small one, and suburban houses were so much easier to run than the vertical houses which had been left behind that the stock disease of the suburban wife was not over-work but boredom. The counter-wave did not really begin until immediately after the first world war. It was gathering momentum throughout the 'thirties. New blocks' of flats were springing up everywhere. In many of them it was obviously almost impossible to bring up any family at all.

So we in England are coping with an intractable problem. New county-council houses and 'building estates' have done much to mitigate it, but it is by no means solved. For the two main difficulties remain—heating and servants. The cost of heating has in recent years gone up by leaps and bounds, and, owing to 'full employment' and the Welfare State, servants are almost unobtainable. The situation is particularly difficult in London. (*Broadcast in the BBC's General Overseas Service*)

The 1956 Motor Show

THE 1956 Motor Show at Earl's Court, London, comes in a year which has been peculiarly difficult for the motor industry in Britain. This is the year of the credit squeeze: the year when the Government set out deliberately to swing the output of industry away from the people who want to buy the things they make, and over to the export markets. Cut demand at home, not only for the things we make ourselves but the things we buy abroad, and increase our shipments of the things made in our factories, and by so doing we shall cure the creeping sickness of inflation and make a healthy balance of trade: that is the aim.

And because the Government specifically wants Britain to buy fewer of its own cars and sell more of them abroad the car industry has run into serious difficulties. The long honeymoon of plenty of work on the car assembly-lines, in the body-pressing plants, and in the engine workshops has been interrupted. The four-day working week and even the bitterly contested discharging of thousands of workers—this is the background against which the industry has been preparing its annual show.

Does this strike a note of gloom? On the contrary, the industry seems to be full of fight. It recently recorded its best monthly export record for nine months. Indeed, the shipment of 4,200 cars in a month to the United States is the best monthly total ever sent to that difficult and valued market. In the first six months of this year the exports of the whole industry were worth more than £200-million. Reviewing the fact that Britain is still the world's biggest exporter of motor vehicles Mr. Stanley Clark, Chief Executive of the Society of Motor Manufacturers and Traders, said: 'With all its troubles, the industry is not doing so badly.'

So the Motor Show will put on view nearly 300 cars this week. The British industry has never been afraid to show its wares alongside those of other countries; so there will be cars from the United States, Canada, France, Germany (the competitor most successful, it appears, in attacking British world supremacy in the car-export market), Italy, Sweden, and—from behind the Iron Curtain—Czechoslovakia. Half a million visitors are expected in the ten days of the show, after the Prime Minister, Sir Anthony Eden, has given it his blessing at the opening ceremony. It promises to be an exciting show. **BERTRAM MYCOCK**

The City of Carlisle

ALAN DIXON describes an English cathedral city which, though preoccupied nowadays with its thriving, modern industries, is dominated by military monuments bearing testimony to a warlike past

Carlisle cathedral from the south-west. 'The cathedral has seen its share of battle: it has been pillaged and burnt, and even partially demolished'

THIS English cathedral city has held its place on the Scottish border for nearly a thousand years, and for a thousand years before that it had been held in turn by the Romans, the Danes, and the Scots. No wonder, then, that it has a history of warfare, intrigue, and revolt, or that its visitors look first at its castle, its cathedral, and its citadel before thinking twice of its importance as a modern city. Its walls were erected for a warlike purpose. The centuries have left their marks, but the centre of the city is still recognisable from maps indicating the buildings of 700 years ago.

Carlisle has the somewhat doubtful distinction of having been the most warlike town in England. It was a Roman, Agricola, who first recorded the city in A.D. 78, and such was its strategic importance that the Romans garrisoned the site with a regiment of more than 1,000 cavalry. At that time there was no stronger defence link in the whole Roman system except perhaps that which guarded the Rhine at Cologne. From Carlisle stretched the great Roman wall built by the legions against the Picts and Scots. After the 300 years of Roman occupation there was little peace in the regions around the wall, so much so that St. Cuthbert, Bishop of Lindisfarne, who started to build a monastery in the area, was forced to flee from it.

Then came the Danes, a hundred years later in A.D. 875, and Carlisle was once again an armed camp. Another century passed, and the English king, Edmund, showed so little concern for his border fortress that he handed over the city and the whole of Cumberland to Malcolm, King of the Scots. It remained a stronghold for Scottish offensives until William Rufus claimed the town as English in 1092. That is why you will find no reference to Carlisle in the Domesday Book, and why Shakespeare

The Crescent, with statue of Lord Lonsdale, and the eastern part of the Citadel, a massive stone barrier flanked by two towers erected by Henry VIII

The Town Hall, erected early in the eighteenth century on the foundations of a much older structure: for a hundred years there was only one flight of steps

refers to Macbeth as the Prince of Cumberland and successor to the Scottish Throne, just as in the past we have referred to the Prince of Wales as heir to the Crown of England.

Surprisingly enough the constant armed bickering which went on until the city surrendered to Bonnie Prince Charles in the rising of 1745 seems to have moulded rather than marred Carlisle. Only after that were the swords hammered into ploughshares, and within two years of the 'March of the '45' Hamburg merchants had established the woollen industry: after nearly 1,700 years of warfare Carlisle turned to industry and commerce. Enterprising in peace as it had been in war, the city abolished its walls and gates at the beginning of the nineteenth century to make way for industrial expansion.

A Wide Range of Products

Today Carlisle is an active and prosperous county borough. It is another northern city which has not over-specialised, and its prosperity depends on the wide range of products that are manufactured in its mills and factories. It is the home of world-famous biscuit-makers, dyers, woollen and cashmere manufacturers, heavy and light engineers, and many of these concerns were first formed in the years of peace at the beginning of the nineteenth century.

Though industry now holds sway, the town is dominated by its military monuments. The castle, broad based and formidable, dominates the northern heights, and it was here that the unhappy Mary Queen of Scots was held captive. The Citadel, a massive stone barrier flanked by two towers, which was erected by Henry VIII as a last line of defence should the castle walls be breached, still stands. The cathedral, too, has seen its share of battle: it has been pillaged and burnt, and even partially demolished, stone by stone, but there still remains some of the fabric of the original Norman structure. It is one of the smallest cathedrals in the country.

In the shadow of these buildings one forgets that Carlisle is a modern and flourishing city with a population of nearly 68,000. One remembers that it is the only town on English soil which bears a purely British name—Caer Luel—and, furthermore, it is the only town added to England since the time of the Norman Conquest. (Broadcast in the BBC's General Overseas Service)

Carlisle is the home of light industries of world renown, including a firm of biscuit-manufacturers: two of the processes from oven to packing tin

EMITAPE

The WORLD'S FINEST RANGE OF MAGNETIC RECORDING TAPE

Used by the leading broadcasting organisations and for recording the world's greatest artists by "His Master's Voice", Columbia and Parlophone.

Books to Read

Reviewed by
Bruce Miller

THE sub-title of *England and the Middle East*, by Elie Kedourie, is 'The Vital Years 1914-1921,' and this indicates what it is about. It is not a general discussion of British policy in the Middle East: it is concerned with the policy of Britain during the first world war, the rise of Arab nationalism under British encouragement, the circumstances in which a National Home in Palestine for the Jews was proposed, and the way in which British and French power waxed and began to wane in the countries that are now Syria, Iraq, Jordan, and Israel. This is a period of great importance, and it has acquired almost the qualities of a mythical age in much British writing and thinking. I need mention only the figure of T. E. Lawrence to show what I mean. Mr. Kedourie's pen is mordant and disdainful, but this has the advantage of making his writing more detached than that of most of the earlier writers on the period. His method is not to use a closely connected narrative but a series of linked essays. This means that sometimes continuity is lost; one often feels there is much more to be said. But on the things he does deal with—especially the personalities of such men as Lawrence and Sykes—his work is brilliant and revealing, and I think his book will stand as the first cool assessment of the events with which it deals.

* * *

I can recommend the new revised edition of George Kirk's *A Short History of the Middle East*. This takes events from the rise of Islam to almost the present day. Its faults are that it is rather breathless—it covers a vast amount of ground in a small space—and that Mr. Kirk has strong views on the Zionists, whose activities in the past thirty years he disapproves of. Otherwise it is remarkably objective in its account of what has happened to make the Middle East the sort of place it is. In particular, it is valuable for its full and frank account of what was involved in European penetration into the Middle East in the nineteenth and twentieth centuries.

* * *

Communism and Nationalism in the Middle East, by Walter Z. Laqueur, is the first fully documented account of these two movements and the interaction between them. Anyone who reads it will come away with his ideas in a ferment, for Mr. Laqueur shows circumstantially how close the clandestine relations between nationalist movements and Communism have been, how rickety are some of the governments of the Middle East in spite of their formal independence, and how much the imagination of the Middle East intelligentsia has been caught by the achievements of Communism in the Soviet Union. He is not out to scare us but to show, as well as he can, the confused struggle of ideas which is taking place amongst the educated people of the Arab countries, Turkey, and Israel. His book is scholarly, sensible, and thoroughly to be recommended.

* * *

New Babylon, by Desmond Stewart and John Haylock, is a 'portrait of Iraq' by two British school-teachers who spent seven years or so there after the war. It is noteworthy in a number of ways. First, the two men write as representatives of a postwar generation of British intellectuals, who have absolutely no patience with some of the traditional ways in which British people in the Middle East have treated the local people, but who also recognise the economic and social needs of Middle East peoples and have no illusions about the difficulties of meeting those needs. Second, there is the difference in their styles, as reflected in different chapters; I found this an unusual and amusing aspect of a joint book. Third, and most important, is their down-to-earth determination to get at the facts about Iraq, to allow no humbug or hypocrisy in what they say, but also to demonstrate their affection for Iraqis and their hopes for the Iraqi future. At times they are hard on previous writers, and a bit cocky and cheeky in their comments; but they are sincere, sensible, and well meaning, and have a sense of humour.

* * *

Richard Wright is an American Negro novelist, and *The Colour Curtain* is his report of the Bandung Conference, the first international conference of free governments composed of coloured people. Wright is in a remarkable position. He is an American Negro who feels the emotional power of colour and appreciates to the full the backward countries' resentment against the European powers who, they feel, discriminated against them on racial and economic grounds. But as an American who has had a bitter and disillusioning experience of the Communist Party he knows also how hollow the appeal of Communism to coloured people in revolt can be; and he also knows that technological advance does not necessarily mean social peace. His account of the conference is centred on the minds of the people taking part, not on their decisions or debates; and while at times his approach is too deeply emotional to give a clear and accurate picture he is still a valuable guide to a matter in which all of us, willy-nilly, are going to be concerned.

Show-Jumping Comes into its Own

JOHN STOCKBRIDGE tells the story of the remarkable rise in popularity of show-jumping in Britain: in ten short years it has built for itself a great reputation for spectacle and clean competition that make it, as he says, in the best sense of the word a popular sport

SHOW-JUMPING is what we could easily call Britain's newest sport: new, not because it has just been thought of—it is, in fact, some sixty years old in Britain—but because only in the past ten years has it been taken seriously by the general public. And in that short space of time it has caught the public imagination and built up for itself a reputation for spectacle and clean competition that make it, in the best sense of the word, popular. And its popularity increased not only in Britain but also throughout the Commonwealth. The Canadian Horse Show Association, the Equestrian Association of South Africa, the New Zealand Horse Society, and the Equestrian Federation of Australia—all these are post-war developments.

It is true that we in Britain competed before the war, but we thought ourselves lucky in those days to be even placed. Since the 1948 Olympiad, however, and the bronze medal it brought us, we have been on the show-jumping map. Successes in Rome, Nice, Madrid, Brussels, Dublin, White City, Helsinki, Stockholm—we have won at innumerable show-jumping centres and all against strenuous foreign competition.

Now, how? That is the interesting thing. Why since the war, and not before? If it is possible to put it in a word the word would be 'organisation.' Organisation by the British Show-Jumping Association, and in particular by its chairman, Lt.-Col. Mike Ansell, himself a great rider before the war. The B.S.J.A. was formed in 1923 with the one immediate intention of giving some shape, some organised pattern to sport, in particular to lay down rules of jumping, which it never had before.

Out of this upsurge of popularity have come several show-ring personalities—people like Pat Smythe, who is not only one of our best but one of the world's best. At twenty-seven she has collected the international honours of a veteran. I talked to her about the difficulties of training horses for the show-ring. This is what she said:

'It needs time and patience and understanding of the horse's character. For instance, I am breaking now a young horse which I hope will make a jumper, but even after a year I will not know really whether it is going to make international class, top class. Yet one has to start from the beginning, never over-face it, never overtax its confidence, and always let it enjoy the job in hand. And, of course, a lot of work is done on the flat in a field—that is, just riding round,

making it supple and obedient, and muscling it up: in other words, preparing it physically for the great effort that is going to be involved in this jumping; and then, when you actually start to teach it to jump, never asking it to do more than it can at the time.'

I asked Pat Smythe what she thought were the basic qualities needed for a good show-jumping horse, and she said:

'They must enjoy jumping, they must also be confident as they are jumping, brave, not chicken-hearted, not afraid if anything goes wrong. And nowadays—with international jumping and the very big spread fences we have to jump—a horse must have a lot of scope, freedom, and be able to jump a distance as well as a height.

'I think horses get to know you very well. I know that Prince Hal can pick me out in a crowd even if I have not got riding things on. After having ridden them for so long horses have complete confidence in their riders. It is a very important thing to have this partnership: if in going round perhaps something goes wrong and you know the horse very well you know exactly what you can ask it, what great effort you can ask it to make. Whereas the first time you ride a horse you are obviously experimenting with weight and balance and things, and you cannot produce consistent results. You can produce the occasional terrific win the first time you sit on a horse, but you get a much better result after time and partnership.'

And what, I finally asked Pat, were the qualities of a good rider? 'I think one has to be very strong physically, especially if riding a lot of horses. I ride a great many horses all the time, and it is certainly physically tiring, and luckily I can cope with it. The other thing is you must have the right temperament. Even if perhaps underneath you are not very calm you must put on a facade of calmness, otherwise the horse gets upset too. It is all a matter of being able to organise the horse to produce its best form in the ring.'

Since the war, pony clubs and riding clubs have sprung up all over the country, most of which are affiliated to the British Show-Jumping Association, and with this affiliation they get the benefit of its full resources.

International wins are naturally of great importance to us. But it is the emergence of show-jumping as a national sport that makes them possible. We are by nature a horse-loving people. We have possibly the finest bloodstock in the world, and more jumping horses than ever before. We have in the B.S.J.A. an organisation we can depend on to keep our show-ring standards high; and we have the riders, on whom our existence as a show-jumping nation must ultimately depend. (Broadcast in the BBC's Overseas Services)

Kenya — a S

COLIN WILLS gives some impressions of Princess Margaret this week when she completed the last stage of her East African tour. A 'Land and its Development' can be heard c

FLYING into Kenya from the north the traveller finds himself looking down on a vast brown plain, speckled with the sparse black shadows of scrub and thorn trees. It seems complete desert, until you notice two things. The plain is patterned, here and there, by the curving cicatrices of dried-up rivers—rivers that must, in flood-time, be wide and wild, and which have left along their verges a thin thread of green vegetation. And now and then, in the immense waste, you will see a strange group of round, dome-like houses, surrounded by a thorn-bush boma to guard the cattle against marauding lions—and you will realise that men live in this wilderness.

This is the Northern Province, a region of plains and plateaux and volcanic ranges which covers about half of Kenya's 225,000 square miles. Its people are nomadic herdsmen—in one area, as well as cattle, there are huge herds of camels—and they are hunters, for there is much game in this wasteland. These nomads have changed little in the half-century of British rule, which has put an end to raids and tribal wars and brought increasing welfare to the tribes. Travelling in the Northern Province one still sees, again and again, that immemorial figure of Africa—the herdsman with his blanket and his spear, his glistening skin lit up by the flash of metal ornaments, his dark eyes watchful and proud.

'A Memorable Sight from the Air'

On the north-western frontiers where Kenya meets Uganda, the Sudan and Abyssinia lies Lake Rudolf, stretching 185 miles from north to south. It is a memorable sight from the air—a long mirror reflecting the brilliance of the sky—but the land around it is barren volcanic country, fantastic and forbidding. South of Lake Rudolf, however, there opens one of the most marvellous scenic regions in Africa—the great Rift Valley. This is one aspect of Kenya's varied landscape that Princess Margaret will certainly see, and one that Her Royal Highness will surely remember with delight and wonder.

But the Rift Valley must come later in the Princess's visit to Kenya. On her flight from England to Mombasa, though, she may well have caught exciting glimpses of the barren north, the Rift Valley, and the central highlands.

The highlands form a fantastic contrast to the arid lowlands of the north; they are so rich and green, the air so fresh and cool. And the greatest contrast of all is provided by the mountain that gives this land its name. Almost on the equator, above a burning plain and a green massif, rises snowy Mount Kenya.

On the flight to Mombasa Her Royal Highness will have had a magnificent view of that other giant, the greatest mountain in Africa, Kilimanjaro, which lies on the southern borders of Kenya, inside Tanganyika. Yet while passing within view of these snowy mountains the Princess will have flown over stretches of thorny desert, still marked on the map 'Waterless . . . Uninhabited.' They

This lion 'posed' for the Princess in Nairobi National Park: the Princess

are not altogether uninhabited: they are the haunt of lions, which, half a century ago, held up the building of the railway from Mombasa to Uganda by their constant attacks on the labour force.

And after these barrens comes the coast plain—vividly green, lush, perfumed, with the damp warmth of the tropics and the spicy winds of the Indian Ocean. And on an island linked to this coast strip of farms and coconut plantations is Mombasa, second city of Kenya, and one of the great ports of East Africa. Mombasa is modern, though its tropical gardens, the ancient battlements of Fort Jesus, and the costumes of many of the people link it to the past splendours of the Arab adventures of Sindbad's day.

In Mombasa, at the start of her tour, Princess Margaret will have met representatives of the Asian community, who number about 130,000, and who are very active in the commerce of the Colony. The Princess will also meet members of other, smaller, racial groups. And she will have a welcome of extraordinary warmth from the Kenya Europeans, for there are no people anywhere who delight more in making a guest at home. She will see much of the Europeans' achievements in bringing peace to a country where the inhabitants had for ages been ravaged by war, as well as by famine and disease and slave-raids. She will see how the European private citizens are helping in the development of the African, which is very much the concern both of the colonial administration, and of the United Kingdom Government.

And everywhere she goes Her Royal Highness will see how remarkably Kenya has maintained its progress and its development despite the three years of the Mau Mau struggle—a struggle which cost the country millions and diverted much manpower from progressive work.

The African people of Kenya—nearly 6-million of them—will be waiting to greet the Princess with tremendous enthusiasm. In Kikuyuland, of course, there are still some Mau Mau at large, but the great bulk of the Kikuyu (the most numerous tribe in Kenya) have shown their determination to help preserve law and order.

There are so many other tribes—over eighty—that one cannot attempt to list them. Among these others there are the Nilotic Nandi, Lumbwa, Suk, and Turkana, and, on the shores of the great inland sea, Lake Victoria, the Kavirondo, farmers and fishermen. People of all the African tribes, of all the races, will make the Princess welcome.

Sometimes a splendid landscape is like an empty stage, but in Kenya it is the setting for an incomparable spectacle of wild life.

In the game reserves of Kenya the visitors may see at close quarters, and in perfectly natural conditions, great herds of antelope and gazelle, families of giraffe and troops of zebra, lions, and perhaps elephant and rhinoceros. Princess Margaret will not fail to see this exciting aspect of a wonderful country.

in Kenya's National game reserve

In Nairobi the Princess will open the Royal Technical College, a wing of which is shown here: it represents a great development in the joint training of all races

There will be a dinner party in honour of Her Royal Highness at Government House, Nairobi, and a garden party on the following afternoon

One of the places the Princess is to visit is Machakos, in Kenya's Southern Province, where she will see dances by members of the Kamba tribe

Tourism in Britain

ERNEST ATKINSON gives some facts and figures that emerge from the report of the British Travel and Holidays Association. More and more people are coming to Britain, it seems, to join 'the natives' in their holidays—and having come once they often come again

THE figures in the annual report concern last year but they suggest that this year, in the month of July alone, getting on for 200,000 visitors from overseas will have landed in the United Kingdom. Over the year, the figures are formidable. The August Bank Holiday weekend, when there is a general holiday on the Monday, is, of course, the peak of it. But it is reckoned that the holiday industries in Britain, besides looking after 24-million to 25-million of their own people—about half the population—will have entertained well over a million visitors from overseas for the second year in succession. And to make a little more room for them something approaching 1,750,000 have gone abroad to help to swell the tourist industries of other countries, mainly on the continent of Europe.

It is estimated that holiday spending by British people in Britain comes to something like £400-million in the year. And tourists from abroad may well spend this year more than the £156-million they put out last year to the benefit of the travel, hotel, entertainments, and other industries. In fact the tourist industry is one of the biggest things on the export side of the balance of payments: the country gets more from it than from all her iron and steel exports to all parts of the world. There is no bigger single dollar-earner. American and Canadian visitors between them benefited the economy last year by £56,300,000.

'It Is an Expanding Business'

If all these figures seem rather lavish there is, of course, another side of the picture. If your Briton spends an average of £17 on his holiday—and I should have guessed it would be more—and the overseas visitor £150 or so, there must be a great many people working hard to give them value for it. Even the tax-collector or the Revenue man gets his share, to the tune of £5-million or thereabouts, in the taxes that we all have to pay on cigarettes, tobacco, drinks, some entertainments, petrol, and so forth. It is an expanding business, and the Government is always under pressure to help it. Given the right conditions the association thinks that in a few years' time Britain ought to be able to receive 2-million overseas visitors in the year, and that as early as 1960 we should be prepared to receive half a million Americans. Travel looks like becoming so much cheaper, and easier, both by air and by sea, that estimates like that look reasonable enough.

What will have to be faced, of course, is the problem of where all these people are going to sleep when they get here, and the association makes a shrewd point when it says that for the price of one new jet aircraft we could have two large new hotels. Perhaps the air-transport undertakings—like the railways, and shipping companies in the great days of their expansion—may feel moved to take a hand in the business.

Up to now we have managed; and London is to have one or two more new hotels. Likewise there are motels going up. And always more and more people like holiday camps. Since about seven out of every ten of our holiday-makers go by road—more than half of them in their own cars—obviously the tourist industry is on good ground in backing up other industries in calling for great road improvements. What is good, meanwhile, is that more and more people do come to Britain to join her people in their holidays—and that, having come once, they so often come again.—(Broadcast in the BBC's General Overseas Service).

This Week's Listening

CALDER HALL

IN this week's programme on Britain's first atomic-power station Sir George Thomson, the distinguished physicist, explains how the splitting of an atom produces electricity. The Designer and Chief Engineer describe some of the formidable problems that confronted them, and the General Manager talks about the day-to-day running of this new type of plant, and introduces some of the workers who operate it. The much-discussed radiation hazards are assessed by the Principal Medical Officer, who also outlines the various precautions.

In producing electricity the Calder Hall type of reactor also produces a valuable by-product, plutonium, which is itself an atomic fuel. But before it can be used it has to undergo a highly complicated separation process in a very expensive chemical plant. The programme will include a visit to Winscale, the only plutonium factory in Britain.

Summing up at the end of the programme is Sir Christopher Hinton, the Director of the Industrial Group of the British Atomic Energy Authority, who more than any other one man is responsible for Britain's lead in this field.

G.O.S.: Monday 13.15 and 23.45; Tuesday 18.30
'London Calling Asia': Monday 13.15

AFRICA TOMORROW

SINCE 1900 the African continent, where man's technical achievement remained in the Iron Age, has met in head-on collision a Europe transformed by the Industrial Revolution. Some 2,000 years of history have been crowded into two generations. What will come next?

Philip Mason thinks there is a hint to be found in contrasting what is happening in the purely African territories of the West Coast, now well on their way to self-government, with those in the east and south, where there are also Asians and Europeans, and in the north where Africa joins the Mediterranean culture.

In west Africa the first passionate desire for things European is being modified by a new nationalism which seeks to ground itself in African soil. In the east and south, Africans still seek to arm themselves with Western ways and Western knowledge. Throughout the continent any solution of psychological and cultural problems will have to take account of the hampering effects of climate and disease, and the burning need for capital and for Western help in medicine and technology.

'Africa Tomorrow' will be the subject of this week's talk in the G.O.S. series 'The Story of Colonisation.' The speaker will be Philip Mason, who is Director of Studies in Race Relations at the Royal Institute of International Affairs.

G.O.S.: Monday 16.15; Tuesday 00.30 and 05.00

THE VALUE OF GOSSIP

FOR this week's edition of 'From the Third Programme' another tenth-anniversary-week talk has been chosen: 'The Sociology of Gossip,' by Max Gluckman, Professor of Social Anthropology at Manchester University. Exactly what connection such a despised habit as gossiping has with the study of anthropology is difficult to see at first sight. But Professor Gluckman, using illustrations from a study of the Makah Red Indians in the United States, does not leave you in doubt.

The Makah are famous in anthropological literature for the 'potlatch'—the ceremonial feast to which one group invited their social rivals in order to demonstrate their family superiority. Today the 'potlatch' has disappeared, but the 400 or so Makah still on the tribal roll in Washington State have faithfully maintained its traditions, and still look upon gossip and slander as a social art. In the case of the Makah, this game of back-biting has not caused the break-up of the group; rather, thanks to their unceasing battle to show their own social superiority, it has proved a consolidating force.

By using this example of the Makah, Professor Gluckman shows that communal gossip has its uses. It does, for instance, help a community—whether tribe or village—to evaluate people for their qualities of leadership and their moral character without actually confronting them with their failures. In this way clique-animosities are built into a larger social order by means of gossip.

G.O.S.: Monday 15.15; Friday 23.15

October 14 — 20

WEST INDIAN FARMING

REGULAR listeners to the General Overseas Service have probably by now become accustomed to the weekly programme 'Five Minutes for Farmers,' which, if they are not interested in farming, has at least the merit of brevity. People who enjoy this programme may not be aware that the BBC's agricultural magazine, 'Land and Livestock,' may also be heard every week in certain parts of the world.

This fifteen-minute programme has at present two quite separate editions: one for listeners in East Africa and in Central and South Africa, and the other for those in Australia and New Zealand. Beginning this week, a third edition of 'Land and Livestock' is to be broadcast monthly for listeners in the West Indies.

It is intended that the new programme shall act as a medium for the exchange of agricultural news and information between the various Caribbean territories, as well as for the passing on of practical ideas on agriculture from other parts of the tropical world and even from Britain. It will be edited and introduced by the BBC's Overseas Agricultural Producer, Hilary Phillips, who visited the West Indies recently.

Programme for the West Indies: Tuesday 23.15

'THE MOVING FRONTIER'

THE gradual extension of population and commerce westwards to the Pacific coast—the 'moving frontier'—has been one of the major trends of the history of North America. Many observers have noted a similar policy in the Soviet Union, a policy of occupying the empty spaces, which are already owned politically, with agriculture and industry.

In this week's talk on the Soviet Union, Owen Lattimore, the distinguished American scholar, will look at this development. It is one which is associated with Mr. Khrushchev, whose slogan could well be 'Go east, young man!'

Professor Lattimore is a member of John Hopkins University in the United States. He has had extensive personal experience of central and east Asia since his childhood, and has written extensively of these comparatively little-known areas.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

MODERN MUSIC

UNDER the title 'This Modern Stuff' a series of six talks is to be given by the young conductor, Lawrence Leonard. He will discuss the musical revolution that took place at the end of the nineteenth century when composers reacted sharply against the romantic tradition of the time and began to write in a style totally different from anything that had been heard before. He will review the musical development of the first half of this century, with particular reference to the work of such important figures as Stravinsky, whom he calls 'the key figure of our times,' Bartok, and Schönberg. The series will end with some

Lawrence Leonard

notes on British composers of today, and the prospects for music in the next fifty years.

Lawrence Leonard, aged thirty-three, is one of the rising generation of conductors. He joined the London Philharmonic Orchestra as a cellist when he was only sixteen, and is now the conductor of the Goldsbrough Orchestra and of the Morley College Symphony Orchestra. He is particularly interested in modern music, and hopes to illustrate to listeners in these talks that it is only the style in music that has undergone such a drastic change in the last hundred years: the thoughts behind it are still the same.

G.O.S.: Monday 20.15; Tuesday 13.30; Wednesday 02.30

On Sunday at 17.30 a Harvest Festival service will be broadcast from the thirteenth-century parish church of St. Etheldreda's at Hatfield, Hertfordshire

OLYMPIC INTERVIEWS

DESPITE the intervention of the first world war, the Rt. Hon. Philip Noel-Baker, M.P., competed in the final of the Olympic 1,500 metres both at Stockholm in 1912 and at Antwerp in 1920. In each race he helped to pace another British competitor to victory.

In the second of his series of Olympic interviews Roger Bannister will talk to this distinguished 'Olympian' about these meetings. Apart from a life-long interest in athletics—he was Commandant of the British team at the last Olympic Games at Helsinki in 1952—Mr. Noel-Baker has occupied a prominent place in British political life.

G.O.S.: Monday 17.00; Tuesday 02.15 and 09.30

TRANSLATING THE BIBLE

IN the third and last of the series of talks on 'Printing and the Bible,' the Rev. W. J. Bradnock, who is Translation Secretary of the British and Foreign Bible Society, will discuss the current demand for the translation of the Bible into modern languages, and will survey the progress made since the Bible was printed by Gutenberg.

The task of translation is far from finished: there is at this moment an immense programme of translation and revision in more than 300 languages.

G.O.S.: Monday 19.00; Tuesday 23.30

THE WEEK'S PLAYS

AND whereas there hath been, time out of mind, a free grammar school kept within the said town of Darnley, to the end that the children of that place might be brought up in godliness and good learning . . . So runs the charter granted to Darnley Grammar School by Queen Elizabeth I, and it is with the problem of whether the school shall stay free and 'Grammar' that Geoffrey Trease's *Time Out of Mind* is concerned.

For in the mid-1850s, when the play takes place, there is a move by some of the wealthier townspeople of Darnley to turn the school into a public school, which will mean higher fees, fewer local boys in attendance, and the importation of wealthy children from elsewhere.

The resistance to the move is conducted single-handedly by the quiet, scholarly headmaster, Mr. Rawley, who would much prefer to concentrate on his long-meditated study of Greek drama. But the battle to save his school's soul must be fought, and so this mild-seeming champion goes forth to war.

There is quarrelling, too, in Josephina Niggli's *Sunday Costs Five Pesos*; in fact, this is a comedy about little else but a quarrel. It starts as a lovers' quarrel in a little Mexican town; it turns into a quarrel between neighbours, and one way and another the peace of Sunday (when to fight means a fine of five pesos) is thoroughly disturbed before the lovers' knot can be retied. PETER FORSTER

'Time out of Mind': Sunday 01.00 and 18.30; Wednesday 14.15

'Sunday Costs Five Pesos': Thursday 19.00; Friday 01.30 and 10.00

with recorded extracts
13.45-14.00 The World of Science
A weekly survey
of the latest developments

Asian Club. The speaker on Sunday will be Mary Trevelyan, and she will be replying to questions on various problems associated with the life of overseas students in London. Miss Trevelyan is adviser to overseas students at the University of London. Before the war she made two journeys to Asia: in the first she travelled from Ceylon through the length of the sub-continent to Kashmir, and in the second she spent a year in the Far East studying problems concerned with the migration of students to Western countries for study and their subsequent return to their home countries.

Personal Call. For Wednesday's Personal Call Stephen Black will visit Sir Christopher Hinton, F.R.S., the managing director of Industrial Group, United Kingdom Atomic Energy Authority, and the acknowledged main architect of the great atomic project at Calder Hall.

Both Sir Christopher Hinton and Stephen Black will also be heard in the feature programme on Calder Hall, 'The Atomic Power Station,' to be broadcast on Monday.

International Press Conference. Following Monday's programme on 'The Atomic Power Station' at Calder Hall, the speaker in International Press Conference will be Sir Edwin Plowden, K.C.B., Chairman of the Atomic Energy Authority since 1954, who will answer questions on the scope and future of atomic energy.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

From microphone to aerial

through Marconi's experienced hands

In the surge of new television requirements, Marconi's have not forgotten that the majority of countries still look to them first and foremost for the supply, installation, maintenance and, in some cases, operation of sound broadcasting systems. Moreover, television programmes are not silent ; sound broadcasting equipment and techniques must advance in step with vision. The unique experience and advanced technical knowledge of Marconi's are at the disposal of broadcasting authorities all over the world.

*75% of the world's broadcasting authorities rely on Marconi Equipment.
Marconi Television equipment is installed at all B.B.C. and I.T.A. Television Stations.*

THE ELECTROLUX WITH THE BIG

Frozen Storage

COMPARTMENT

Graceful in appearance and generous in capacity, the Model LT.730 includes a large frozen storage compartment. Meat or fish placed in this compartment will freeze and the storage time will, in general, be three times as long as in the main compartment. Five icetrays provide a plentiful supply of ice (80 big cubes) for cold drinks.

- Handy door shelves
- Interior light
- Vitaliser and Utility drawers for salad, vegetables, eggs and fruit
- Interior volume 7 1/2 cu. ft. approx.
- Operation by Kerosene, Electricity or Gas. Dual Control models, adaptable to either Kerosene or Electricity, also available
- Cooling unit guaranteed 5 years

Industrialising India

J. R. D. TATA, a leading Indian industrialist, gave an address of which this is the broadcast version to H.R.H. the Duke of Edinburgh's Study Conference on Human Problems in Industry. The Duke arrives in Ceylon this week in the course of a tour that will take His Royal Highness to Australia for the official opening of the Olympic Games

OF all the tasks confronting the world today perhaps the most formidable one is the industrialisation of the under-developed areas of the world; and none, I think, offers greater potential rewards for humanity as a whole. The first question one might ask in dealing with this subject is whether the problems involved in the industrialisation of a country like India today are likely to be different from those experienced in the West in the nineteenth century and the first half of the twentieth? I think not.

For, after all, the process in both cases will have been one of transforming the environment and the working and living habits of a large proportion of the people from life on the farm and in small artisan and trading communities to life in factories and urban areas. Human nature being fundamentally the same everywhere and at all times, it may be expected to react to such a change in generally the same way.

The main differences, as I see them, are likely to be of degree and form rather than of substance. The fact, for instance, that India's civilisation goes back 5,000 years or so, and that life in much of the Indian countryside is still as it was in the tenth century, may be expected to render the process of modernisation more difficult. On the other hand, our task should be made easier by such factors as the opportunity to benefit from the accumulated experience of the West, the inherent skill and patience of the Indian people, and the inspiration they will be able to draw from a past rich in craftsmanship and productive achievement.

To them industrialisation will to some extent be a revival as well as an extension of something that already exists.

As in other countries, the human aspects of industrialisation in India have been a mixture of good and evil, and for very much the same reasons. The failures have mainly taken place in the older industries established many years ago in or near large cities as well as in poorly organised small industries.

Conditions were from the start much better in large industrial communities, and particularly in those created in virgin areas by enlightened pioneers like Jamsetjee Tata, who, it may be said, laid the foundations of India's industrial development. He sought not only to provide good wages, working conditions, and housing but also to integrate the working and social life of his employees into healthy and well-adjusted communities.

Jamsetjee Tata's vision of a prosperous industrial community lives today in the city of Jamshedpur. Although he died more than fifty years ago he visualised from the start the tree-

lined avenues, the modern quarters, the schools, and the medical and other services which still today make Jamshedpur one of the better industrial towns to live in.

The problems of human relations in industry in countries like India would seem to consist in meeting three main requirements. The first, which is now universally accepted, is to provide for the basic material needs of the workers: good working conditions, adequate wages, job security, retirement benefits, housing, medical care, and educational facilities for the worker and his family. The second is to provide, within and outside the factory, the means of satisfying the

more intangible but equally strong human desire for self-expression and fulfilment, and other urges characteristic of human life in the group: for instance, recognition of individual worth, opportunities for promotion and leadership, the feeling that one 'belongs.'

The third is to cope with the special problems of the worker recently transplanted from a village to a modern industrial and urban community. For him the stresses of transition are obviously likely to be greater than for one already accustomed to and hardened by city life. To the former the family and the small village community in which he previously lived provided all the elements of social life and human intercourse. Too often in the past did he find himself adrift in an impersonal and hostile environment in which he sought in vain to replace the family and social contacts, the personal prestige, the friendliness, the trust and compassion which he had left behind. Bewildered and unhappy, he suffered acutely from the disintegration of his previous background and spiritual values and from the loss of his individuality.

In order to ensure the fulfilment of individual and collective life within the industrial society I feel that an effort must be made to render it possible for industry to be not only a source of employment but also a way of life. Considerable significance attaches, in my view, to the concept of the autonomous plant or factory community developed by Peter Drucker in his book *The New Society*.

What appeals to me about this concept is the distinction drawn within the industrial community between the functions and activities of community life on the one hand, and job functions and activities on the other.

It seems to me there is much to be said for the idea that the members of the plant or factory community, which is made up of all those who work in it, should be given some say and freedom to participate in the management of these matters. This would provide an effective extension of the democratic principle to the industrial community, and also a partial substitute for the sense of belonging and participation which are important elements of life in the village.

I would not, however, like this to be construed as a plea for surrendering any of the functions of management. I am firmly in agreement with the proposition that management's duty is to manage. The important thing, however, to be clear about is—what is management to manage? Where the social organisation of the society within the factory does not impinge directly on the economic performance of the enterprise but is only incidental to it the assumption of

SIRDAR PANIKKAR

K. M. PANIKKAR, the distinguished Indian historian and diplomat, shows in his contribution to 'The Story of Colonisation' how, time and again in the history of Asia, when nomads have over-run more civilised peoples they have ended by settling down, adopting or modifying the way of life of the conquered

Crucibles of Civilisation

NOMADISM is a way of life, a form of culture which has existed from the beginning of history. While men in river valleys and in areas of adequate rainfall developed a settled, sedentary life, cultivated lands, built towns and cities, and organised social forms suitable to themselves, men living in arid zones, in steppes, and in deserts developed a different life based on herds of domesticated animals, moving across areas of pasture-land. The nomad's life was as much a response to the challenge of the steppe, the climate, and the desert as sedentary civilisation was to other conditions. The chief characteristic of nomad life is regular seasonal movement in search of pasture-lands. It follows that nomadism can flourish only where there are vast open spaces enabling the tribe and the herd to move freely in obedience to climatic conditions. Naturally, where settled life has become powerful there is always a tendency to press on the nomad's preserves; equally the nomad, warlike and hardy as a result of his occupation, presses as constantly on the border that separates the desert from the town. These parallel tendencies have been one of the permanent strands of human history.

Central Strand in Human History?

We have but little knowledge of history from the nomad's side, of the aggressions of the settled communities against pastoral peoples, of the occupation of their grasslands by organised states, of the continuous pressure to push them back more and more into the desert. But we know of the occasional violent eruptions of the nomads on civilised communities and the trail of misery that they left behind: towns and cities razed to the ground, empires uprooted, civilisations destroyed. From the time of the Aryans, like whirlwinds from nowhere, they have erupted with suddenness on peaceful civilised societies, sometimes settling down to build up a new civilisation as the Aryans did, but at other times vanishing as in the case of the Mongols into the deserts with the same suddenness with which they emerged. So great has been the impact of these eruptions that some historians have seen in this continuous struggle between nomads and settled societies the central strand in human history.

When we look back on the Sakas, the Huns, and the Mongols—the more recent instances of nomadic eruption—and see how the greatest and most powerful states, the Roman and the Chinese Empires and the Khalifat, fell to their onslaught, and realise that for at least 3,500 years these onslaughts used to be repeated periodically, we cannot be surprised that historians should have tried to see some kind of law, something more than casual occurrences, in these recurring calamities.

What is it that gave the nomadic people at different times this amazing dynamism enabling them to overturn powerful empires? At no time was their population large or even considerable compared to that of the states which fell before them. Jenghiz Khan, when he moved against the Khawarizmian Empire, could have claimed hardly a million men as his subjects; while the Empire of China which he attacked, and which his successor conquered, was even at that time the most populous of nations.

Their strength, it would seem, was derived mainly from their possession of the fastest method of transport then available, the horse and the camel. While settled nations might raise horses and use them for purposes of war, to the nomad the horse was a part of life. It enabled him to move freely over his domains, to withdraw deep into the steppe when attacked by powerful forces, to appear and strike with lightning suddenness.

Though the propensity of the nomad to burst into civilised communities and cause destruction and havoc is writ large in the pages of history, a significant fact to which equal attention has not been paid is the tendency of the nomad, once the first momentum of his attack is over, to settle down peacefully and adopt the culture and life of the conquered, and often even to become the carriers of that culture to other areas. The Yue Chi, for example, became the great carriers of Mahayana Buddhism, and were instrumental in the spread of Indian culture in the steppes of Central Asia.

The great nomads of the sea, the Norsemen, after two generations became the spearhead of French culture, carrying it far into the deserts of Syria. The Huns, after overturning the Roman Empire in the fifth century, became in turn the upholders of the imperial tradition. In fact, the nomad by his character lent himself admirably to this process of transformation. The influence of civilisation, with its higher material comforts, with its arts and enjoyment of luxuries, was at all times too irresistible to the children of the steppe.

Nowhere was this more forcibly demonstrated than in the case of the Mongols, the nomads *par excellence* of modern history. The successors of Jenghiz, who destroyed the Khawarizmian Empire and humbled the pride of the Khalifs of Baghdad, themselves became in the course of a century the great champions of Islam. The Ilkhans of Persia after their

conversion to Islam were the protagonists of Iranian culture. A stranger fate overtook the Mongols in Peking: under Kublai, the grandson of Jenghiz, the Mongol Empire became the inheritor of the traditions of the Hans and Tangs. Kublai was much more than the Great Khan: he was the Son of Heaven, ruling the world under the mandate of Heaven.

The Yuan dynasty—as the Mongols came to be known—did not, it is true, become national as the Mongols did in India at a later time, but they became the upholders of Chinese civilisation and carried Chinese culture to the outer regions which they conquered. In time, except for those who still lived in the steppes and the deserts, they were assimilated wholly into Chinese life.

Timur's career of conquest was the last outburst of nomadism on a continental scale. He led his hordes far and wide, destroyed in the most approved nomadic manner cities and towns, massacred large numbers, and uprooted empires. Though it was but an ephemeral phenomenon, for unlike Jenghiz he was unable to leave a well-knit empire behind him, it is necessary to emphasise that for all his destructive enthusiasm he was a most potent carrier of Iranian culture. Hating the refinement and luxury of the Iranian court, he and his armies unconsciously became the transmitters of Iranian civilisation in the areas of his rule.

The Mogul Empire in India, which his descendant Babur founded in 1525 and which endured for three centuries until the British replaced it, was not a result of nomadism but only an aftermath. Babur could not justly be called a nomad, though the nomadic tradition was strong in him. The empire he founded, especially under his grandson, became a national monarchy, for Akbar realised that the sources of his strength lay inside the country and not in his ancestral territories in Central Asia.

Akbar built up not merely a new state but a new civilisation in India, combining the Iranian culture which he had inherited from his father with the life and civilisation of the Hindus which he consciously encouraged. The nomad had been wholly tamed, and the Mogul Empire with its notable revival of art, literature, architecture, and music, combining the best in India and Persia, was the outcome of this transformation.

A similar process was witnessed in China also. The Manchus were nomads in the process of change. Under Nurhachi they had come a great way from the primitive nomadism of earlier times. When, in the 'Time of Troubles' that followed the breakdown of Ming authority in the middle of the seventeenth century, Nurhachi's successors occupied Peking and established the Ching dynasty they could not have foreseen that they were writing their own doom as an independent people. Not only did the civilisation of China conquer the Manchus but their very homeland became just a province of the Celestial Empire.

The Importance of the 'Rimlands'

The Manchu emperors, in turn, not only became the Sons of Heaven but the very embodiment of Chinese civilisation. K'ang-hsi and Ch'ien-lung not only re-established Chinese authority in areas like Sinkiang and Tibet which had previously been lost to the empire but identified themselves wholly with Chinese civilisation. Ch'ien-lung was in fact a poet and writer of some note in Chinese. As in the case of Akbar the nomadic strain in them was wholly lost: China had tamed them.

Thus it will be seen that the civilised communities in Asia which were subjected to heavy pressure were able to absorb the shocks and in time to civilise and assimilate the nomads. But it should be remembered that both India and China lay outside the main highways of the nomad peoples. The grasslands through which the nomads moved were separated from India by the Hindu Kush mountains, so that while the main stream rushed towards Europe only a trickle reached the Afghan valleys, and from there the plains of Hindustan. Similarly, China was normally off the route of the nomads, and consequently while the Huns, for example, starting from the borders of China, could overturn the Roman Empire, China itself was practically untouched by their power.

This is why the great geographer Mackinder, for example, dismisses India and China as rimland areas which he considers unimportant for the purposes of his doctrine. And yet it is in the rimlands, watered by un-freezing rivers, by sheltered seas, by the monsoon, which are marginal areas for the nomad, that civilisations grew and flourished. They were the crucibles of civilisation, and the nomads, when they entered those areas, were themselves tamed and assimilated. Their pressure, no doubt, brought new incentives and often helped in the forward march of civilisation, as when the Aryan nomads under the influence of the earlier culture produced Indian civilisation, or as the Kushans—as the civilised Yue Chi came to be known—became the carriers of Mahayana culture, or as the Moguls in India laid the foundations of a new synthesis. (Broadcast in the BBC's *General Overseas Service*)

Concluding 'The Story of Colonisation.' A New 'Colonialism'? by Geoffrey Wheeler (see note on page 17)

Practical work done by the students during their two-year course includes the nursing of seedlings, and handling implements like the chain-leveller (right)

Training Women for Agriculture in Ceylon

CORRY HODGSON visits the college at Kundasale, near Kandy, where women are taught the basic skills of farming so that they can play their part in increasing the country's food supply

AS an ex-student of the first agricultural college for women in England I was specially interested to visit the first agricultural college for women in Ceylon. Kundasale is in the mountains about eight miles from Kandy, and the offices of the college are on the top of a hill looking across lovely valleys. I was greeted on my arrival by the acting principal, a slender Ceylonese girl in a sari of pastel shade, and before I was shown round she told me something of the origin and purpose of the college.

It was Mr. D. S. Senanayake, the first Prime Minister of Ceylon after it became a Dominion, who had the idea of training women in agriculture, and it was during his term of office, in 1948, that Kundasale was opened. There are about 100 students and they take a two-year course in agriculture, horticulture, and domestic science.

I went first to the cowshed and there I saw the girls feeding and milking both the Sindi cattle and two European breeds, Ayrshires and Shorthorns, which have acclimatised quite well. Nearby were modern calf-pens, and just down the road a clean, airy pig-barn. Not only are the buildings well kept but the boars and the sows have a concrete pool where they bathe daily.

There is an extensive poultry section in charge of one of four girls from Ceylon who came to England to take a course at one of our colleges. Ducks, hens of several breeds, and a large number of American Mammoth Bronze turkeys are kept.

Difficulties in Animal Husbandry

The horticultural section grows vegetables and fruit of all kinds, and the fruit includes pineapples, bananas, and passion fruit. The horticultural section is a favourite with many of the students, and I found it presented fewer problems than animal husbandry, which has difficulties we Westerners would not think of. The majority of the Ceylonese are Buddhists or Hindus, and both religions forbid the taking of life. One's first thought is that this does not interfere with such occupations as egg production and dairy work, but a moment's consideration makes one realise that cockerels and bull calves have got to be dealt with, and there is a need for culling if you are going to keep up a good standard; also you cannot keep laying hens till they die of old age.

There is a carpentry shop where the girls are making anything from hen-coops to standard lamps, a handicraft section where basket-making and upholstery are among the activities, and in the needlework section they are doing excellent embroidery and learning lace-making as well. Life for the girls at Kundasale is certainly varied.

The college undoubtedly turns out useful and adaptable women, but as yet few continue actual farm work after they leave. However, many have become teachers in country schools, and many more use their knowledge for the guidance and advance of the people in their villages. In this way they fit into the drive the country is making to improve and extend its food-growing capacity.

I saw something of the work being done among the small farmers and the peasants, and I was most impressed—as were the Colombo Plan experts with whom I talked—by the responsiveness of the peasants to new ideas. I went round with an extension officer to several small places and found everyone keen to get his advice about the feeding and breeding

of their animals and the treatment of the soil; many were trying out new crops. And the experimental farms and Government seed-stations just cannot cope with the demand for new and better types of seed.

But perhaps the most exciting agricultural movement in Ceylon are the big new settlements which are being started in the north, for these are based on irrigation schemes, necessary because this is the dry area, with only one short monsoon period during the year. Irrigation is necessary, and these modern schemes are linked with the very early history of the country, for they are utilising water supplies that were first built up 2,000 years ago.

It was about 500 B.C. that the north was settled by people from India, and the great kings of that time built huge artificial lakes called tanks, some of them as much as 5,000 acres in extent; and water was brought to them by canals from the wet districts in the mountains. The water from the tanks made the country a flourishing agricultural area where millions of people could live. A great civilisation grew up, centred on the capital city of Anuradhapura, and this existed for 1,500 years. Then invasion from India and civil war in the country itself caused the breaking of the dams, and the tanks drained away till only malaria-breeding swamps were left. The people died of starvation and disease, and jungle covered the land. Today modern science has conquered the malaria mosquito, and the dams of the great tanks are being repaired. The modern engineers have found that the builders of the past knew exactly what they were doing.

Life is flowing back to the north, and once more, as you drive through the countryside, you can see miles and miles of the brilliant emerald green of paddy-fields. The Government is building pleasing modern houses for the people, and they are flocking back to the land which their ancestors used to inhabit over a thousand years ago.—(Broadcast in the BBC's General Overseas Service).

The girls are particularly keen on growing vegetables and fruit of many kinds

Iskander Mirza President of Pakistan

PHILIP WOODRUFF, whose knowledge of General Iskander Mirza dates back to the years before Pakistan's independence when they were both in government service, here offers some personal impressions of the President of Pakistan, who recently paid official visits to Turkey and Afghanistan

WHEN I first heard the name of Iskander Mirza I was told that he was really a Mogul prince who had missed his century. It was a perceptive saying, and it is still, I think, a revealing way to think of him; but you must imagine a Mogul prince who has been to Sandhurst and lived with British officers in an Army mess, who has been a Deputy Commissioner under a British Governor on the North-West Frontier, who has stayed in their homes—scores of times—with British officers, whom they counted as one of themselves, just as he counted himself, but who kept behind all this his own Mogul and Islamic quality.

What do I mean by his own Mogul quality? It is not easy to say. Iskander Mirza is really descended from the Murshedabad family, the last Mogul rulers of Bengal, who had been officials under the Great Mogul, the Emperor at Delhi, but who had become virtually independent princes long before the time of Clive and Warren Hastings. They were pensioned by the East India Company after they had seized Calcutta from the company and Clive had recaptured it, and Iskander, all through his service under the British, was carrying on—as much for amusement as anything else—a kind of sardonic guerrilla war with some department of the Government of India about his share of this pension.

But I am thinking, when I speak of Mogul quality, not of descent but of what the Moguls admired in their rulers. The first English travellers in India were impressed by the absolute power of the Mogul emperors. And it was true that there were no checks on the king's power as there are in England. They admired a king who was not afraid to use force; who would use this power ruthlessly and decisively; but they also admired an unpredictable mercy; most distinctively, I think, they admired the tactful use of power. Akbar, the greatest of the Moguls, did not attempt to conquer the proud Rajput princes: instead, he married a Rajput princess. They would admire the man who, with power in his hand, would give his adversary the chance of an honourable way out.

The President of Pakistan being received by President Celal Bayar of Turkey, and (right) by H.M. the King of Afghanistan

These were qualities Iskander showed as a Deputy Commissioner. He came to join us in the Defence Department of the Government of India in 1946 because of his knowledge of Islam and the way Muslims were thinking. I see him now—rather more comfortably built now than the subaltern—in a grey-flannel suit with a white line in it, with rather an impish look on his still boyish face. But I think he was still basically a District Officer and a Frontier officer at heart.

There is a story from a Frontier district that we all know. There was a party of Pathans who, mainly from high spirits, were taking every chance they could of opposing the Government. In that kind of situation there always are sitters on the fence—men who put a Deputy Commissioner without a sense of humour into a rage because he cannot rely on them, but people who can be useful to a man who has the Mogul virtue of tact. The Pathans arranged a procession which Iskander knew would become troublesome: that is to say he knew it would start fighting and rioting when it reached a certain area. The tactless use of power would have been to arrest the leaders as a precaution, or to station troops or police at the critical point. Iskander's method was far more effective. He arranged for a certain suggestion to be made to some of the sitters on the fence; they invited the procession to tea and greeted them with garlands and flags and speeches of welcome. The tea was hot and strongly sugared, but someone—no one, of course, ever knew exactly who—had laced it heavily with croton oil, the swiftest and most violent of vegetable purges. The procession reformed and went on its way, only to disperse with unseemly haste before the critical point was reached.

Attitude to Temporal Power

There is a word for which I know no exact English equivalent: the Urdu is *hikmatamali*, which literally means practical judgment, the science of what is possible, and in ordinary use means judicious management, the art of getting something done by persuasion and finesse and bluff with just a hint of force in the background. It was in this that Iskander excelled as a District Officer, and as a statesman I should not expect him to take violent measures when he could get his way by guile or persuasion, nor to stand on a point of prestige when he could get the substance by appearing to surrender. Indeed, it would delight him to feel that he had got the better of the other man without giving up anything that really mattered; and in the old days—but, of course, men change, and particularly in office—it would not have surprised me if he had taken a particular line just because it appealed to his sense of humour and gave him a chance to bring off a coup. Judging still by those old days, I should say that he was a true Muslim in his attitude to temporal power.

It is my impression that every Muslim—or at least every Muslim I have known at all well—thinks of power as coming downward from above, from God to his prophet and the successors of the prophet on earth—the Khalifas—and thus to whoever holds the power of the state as ruler. To the Muslim all men are equal before God, but power does not come up from the people to the ruler; it comes from above, and the good ruler will govern wisely and well in the light of what he believes right. Good government, such a man would say, is better than self-government. I should expect Iskander still to think on those lines.

Have I given you a picture of the man? Only the beginnings of it. Like the first Governor-General of Pakistan, Mohamed Ali Jinnah, and like the first Prime Minister, Liaquat Ali Khan, but more even than either of them, he is Western in externals, beautifully dressed, in manners and speech the nicest kind of well-bred English gentleman; but profoundly Muslim at heart. In his house you will not think that you are in an English house: you will know at once that you are in that world in which the art of Persia adapted itself to something in the air of the Indian sub-continent—a cross-breeding that produced the Taj Mahal and the great mosque at Fatehpur Sikri.

And you will be talking to someone who before long will make you laugh, a man of the world, a gentleman rather than an intellectual, a man who takes the world as he finds it, who likes the pleasures of the world wisely used, courteous above all things, no burrower in files but a man who knows how to delegate power, a realist with not much use for theory. You might, at first, make a superficial mistake and think him something of a cynic, but I think you would be wrong. I think that deep at heart you would find, stronger than anything else in him, that quality in Islam that puts on the lips of the believer many times every day these words, spoken of God: 'The Merciful, The Compassionate.' (Broadcast in the BBC's Overseas Services)

Most of the terraces are placed so as to give wide and open views across the park's green acres

Nash Terraces in Regent's Park

KENNETH ADAM tells of the work which has been done during the past year to restore the great mansions and orderly terraces designed by the Regency architect, John Nash, to enclose on three sides one of London's famous parks

THE other Sunday morning after church in London I was walking round one of John Nash's famous terraces which enclose and dominate three sides of Regent's Park, and I was thinking that in the sunshine it really is the most beautiful park not only in north London but in the whole of London. And, further, how important these great Palladian palaces with their pillars and their roof statues and their friezes and their iron balconies, how important they are to the whole conception of the Regent's Park as a whole! Because the Regent—George IV to be—a flamboyant creature. And there is something braggart about these terraces his man Nash built, looking over the green acres of the park.

In a sense I suppose it was the first 'housing estate' to be built in Britain: it was planned as a kind of private garden city for the aristocracy. Of course, it never became what the Prince Regent and Nash intended it to be, and as we know it today it is only a fragment of the great design.

'High-Sounding Royal Names'

Some years ago, just after the war, it looked as if even this fragment was going to be still further chipped and mutilated, because a great many of the tall houses—there are not quite 400 of them in all—were requisitioned by Government departments during the war, and allowed to get into a shocking state. In fact, less than ten years ago a committee under Lord Gorell spoke of all terraces as 'giving the impression of hopeless dereliction.' Well, it is pleasant to be able to report that it was not 'hopeless.' Not having promenaded in that direction for some time I was astonished at the change in the look and the condition of the houses in Hanover, Clarence, and Gloucester terraces—such high-sounding royal names they all have, it sounds like a Shakespearian cast, doesn't it?

The Crown Commissioners, who own most of them, really seem to have buckled to in the past year with all kinds of repairs, weather-proofing, refacing the brickwork, rebonding the walls, retimbering the floors, and, above all, with hundreds of gallons of cream-coloured paint; the façades positively gleam again, and one might take it, at a glance, that the good old Georgian days were back and the *élite* were in residence once again. They are not, of course. If you go closer you will see neat notices on many of the front doors: 'Ministry of Agriculture and Fisheries,' 'Department of Inland Revenue,' 'Ministry of Works Training Centre,' and so on. The officials are still in possession of at least half the houses. But gradually, as the supply of normal office premises returns, residents are being coaxed back, at rents which do not mean that these magnificent rooms are the privilege of the highest income-group.

Mind you, they have their problems, these private tenants. I went to a party a day or two after my walk with a friend who is one of them. And as we stood there, in his elegant drawing room, with its long windows, sipping drinks, he told me a sorry tale of dry rot and poor brickwork and inadequate damp-proof courses. The melancholy fact seems to be that splendid and rich as the vision of John Nash and his fellows was the actual building did not live up to it. It was, indeed, rank bad building, most of it. And so the question still remains: can the terraces survive; ought they to survive? I suppose it would be more sensible to send them to oblivion after their swaggering creators, more sensible and practical. But do we always have to be sensible and practical? The very improbability of these terraces is their charm, and I for one would hate to see them disappear, and the Regent's Park become just another green and bosky open space. (Broadcast in the BBC's General Overseas Service)

Cumberland Terrace is now largely used by Government offices

Gradually most of the smaller houses are being leased to private tenants

Fresh paint has brought out the symmetry of design and use of classical detail

Journey to

DEREK HOLROYDE, the BBC's representative in Delhi, recently made a tour with his wife that took them 2,000 miles by air and nearly 3,500 miles by road into the states of Madras, Mysore, and Travancore-Cochin: in this, the first of two programmes on their tour, the travellers give an account of South India as it is today

Cape Comorin is the southernmost point of South India, an area where 50-million people live in a harmonious tradition going back for centuries

SOUTH India is almost an island. When you visualise the map of India—that downward-pointing triangle of suspended Asia that thrusts itself like a wedge between the Arabian Sea and the Bay of Bengal—it seems hard to believe. Yet it is so. Rivers and forests and ranges of hills combine to separate the southern peninsula from the central plains and the Gangetic valley of the North, and leave the South almost isolated, an entity on its own attached to the rest of India.

Almost every South Indian we had met in the North had told us that we should find the true home of India's culture and way of life in the South. They said it with a quiet confidence, and it made us ask just what were the conditioning factors that could have made South India so distinctively different from the North. After all it is part of one nation, with the same religion, and the same social traditions that go with it. So why should there seem to be such a strong and rather different atmosphere about the South.

For an answer we went to Mr. K. M. Panikkar the eminent historian of South India: 'From the earliest times in India, the North and the South, Aryavarta and the Deccan, have been recognised as being distinct. Though united by a common culture and by a binding social organisation to his brethren in North India, the Southerner has a different perspective of his country, as it is more natural for him to look at it from the southernmost point upwards. His attitude generally is that genuine India lies to the south of the Vindhya, that the tradition there is purer, and that he is the custodian of the true culture and civilisation of India. Bounded on three sides by the sea, and protected by the Deccan massif from the pressure of the Gangetic valley, the South has had a much more peaceful life during the course of its history.'

Continuity of Life and Traditions

So it is geography, in part, which has given birth to this feeling of independence and regional pride. Then we asked Mr. Panikkar whether it was also the case that the development of South India had been less interrupted by foreign influence: 'Deccan or Southern India has a social and political integration which the North lacks owing to the frequent convulsions to which it has been subjected. The political traditions of the South are a living factor, and not merely historical memories. Society there has never been disrupted, and this continuity of life and traditions gives to the people of the South a greater sense of self-confidence and a wider tolerance.'

We sensed that in South Indians there is a deep instinctive loyalty to their traditions—their past is indeed, as Mr. Panikkar said, a 'living factor' in their present-day outlook, and continuity of language has inevitably provided a binding element. All the four languages of the South—Tamil, Telugu, Malayalam, and Kannada—have their origins in unrecorded history, and even without knowing any of them we could catch something of their rich flavour.

The exuberance of the language is matched by every other aspect of life: they all reflect a facet of the brilliant natural colouring which the abundance of sun, sea, and rain has produced. Man and nature live with each other in perfect harmony: his bright-red-tiled houses match the earth of red ochre; he is a part of his own rich emerald-green rice-fields and the swaying coconut-palms. The synthesis is complete. If he is close to the soil, he has also felt the fresh air blown in from the sea. Almost every seafaring people have come to trade on the coasts of Coromandel and Malabar. The ships of King Solomon came seeking

peacocks, sandalwood, and spices; in the pounding surf beyond Quilon, mentioned by Pliny, the Phoenicians beached their high-prowed boats—we saw them, unchanged in design, fishing in the same waters. Greeks, Romans, Arabs, Jews, and even Chinese came here long before the Europeans, and the quest was always the same: cinnamon and ivory, pepper, ginger, camphor, and coconuts.

It can fairly be said that it was due at least as much to the climatic and other natural attractions of the South as to its commercial advantages that the Britisher came to pioneer so many of South India's chief industries. Though they are still found in large numbers, they have a good record in sharing more and more of the management of these with Indians. We met many an Englishman, and Scotsman too, managing cotton- and silk-mills, processing sugar, making chemicals, growing rubber and coffee, exporting cashew nuts, mining gold, manufacturing coir yarn and coconut matting, and planting tea.

The tea estates are situated in the higher parts of the ranges of hills that run parallel with the Malabar coast. We drove scores of miles on winding roads that led through rolling hills studded with the low, dark-green tea bushes, plantations of hundreds of acres; and then, lower down, through darker areas of coffee until in the foothills of Coorg and Travancore we came across the dense, stately ranks of tall rubber trees, silently dripping their white blood into coconut shells. All these estates are sited so as to take full advantage of the warmth and moisture brought in by the prevailing south-west winds.

The Kolar Goldfields of Mysore

Gold-mining sounds a romantic occupation, but it was not until we visited the Kolar goldfields in Mysore State that I realised all the hazards involved in prising the precious metal from the stubborn rock. Here the skill and instincts born of generations of mining experience are being employed to provide the gold that forms so important a part of the Indian family's wealth and the Indian merchant's currency. We spoke with John Taylor, director of the firm that manages the three mines at Kolar: 'The three mines on the Kolar goldfield now working stretch over a length of about five miles, through which the quartz reef goes from which gold is obtained. This reef goes down into the ground, and the bottom of the deepest (the Champion Mine) is very nearly 10,000 feet, which is the deepest in the world. From a ton of rock you get about a third of an ounce of gold. That is to say, about the amount that goes into an ordinary ring. A ton fills one of those little trucks which you see on the railways. The total amount of gold produced each year is about 220,000 ozs. from the three mines. It is entirely sold in the bullion market in Bombay, which is about the biggest in the East.'

Industries like this employ thousands of people, but there are very

South India

Building in progress at Bangalore, one of the cities which are rapidly expanding

few industries in the South though more are being started. For the average South Indian, who has somehow to coax a living out of an acre or two of earth, life is hard and poor and pitiless. The day we arrived in Madras the newspapers carried reports of a national survey of agricultural labour. The results showed that the average yearly income for an agricultural family in South India was no more than 382 rupees, just under £30 a year. It was the lowest average in the whole country, and barely more than half what a North Indian may earn from his fields.

It is natural that a people who have to exert every tendon to grasp every bowl of rice should seek spiritual solace. In the evenings they throng the narrow streets leading to the temples, and with earnest determination push through the crowds and the traffic to make their supplications for good crops and immunity from hardship and disaster. Hinduism is part and parcel of an Indian's daily life. It may be an automatic ritual touching only the surface, or it may be deeply devotional, but always it is an intensely personal rather than a corporate worship.

Prayers Accompanied by Music and Colour

The surroundings in which the South Indian prays are full of exuberance. The temples are elaborately ornamented and gilded, and whether he goes to make his offerings in the great temples of Trichy or Trivandrum, or even if he makes the long pilgrimage to India's southernmost point, Cape Comorin, to lay coconut and rose-water at the feet of the virgin goddess, Kanyakumari, his prayers are accompanied by music and colour. As the hour appointed for worship begins bells ring, drums beat, and the long *nagaswarams* are blown.

It is a paradox that in the region of India where the Hindu religion flourishes at its most vigorous the Christian religion should also be firmly established. But so it is. St. Thomas brought Christianity to the Malabar coast in the middle of the first century A.D., and in subsequent centuries many different sects established themselves in all parts of the South. The greatest number of Christians today are Catholics, and their whitewashed churches and roadside shrines are a common sight.

The work of generations of missionaries is to be seen everywhere: schools, colleges, and medical institutions, owing their origin to many different denominations. Independence has led, understandably perhaps, to some emotional reaction against the continued presence of foreigners of this type, but such missionary activity as we saw seemed to be fully in harmony with the needs of the new India.

Missionary encouragement alone, however, does not explain the tremendous enthusiasm all over the South for education. In Travancore, where almost eighty per cent. of the children go to school—this figure is more than five times greater than for the rest of the country—a mere statistic becomes a human phenomenon. All day long we were slowed down by the unending streams of

The South Indian goes to pray and make offerings in richly decorated temples

children walking to and from school. Not all India's educational needs can be met in the schoolroom, however, as Mahatma Gandhi so clearly recognised. He believed that education must start in the village—that people must be taught to use their hands more efficiently as a first step towards improving their minds.

This is what is known as Basic Education, and at Gandhigram, in the pink, parched plains of central Madras, is a settlement devoted to teaching this idea. To this little village of neatly constructed bamboo and palm-leaf huts come young men and women from all over South India to be trained as village-level workers and exponents of social education. When we went there the director, Mr. Ramachandran, explained to us that the students themselves have to learn to do all the jobs they must later introduce into the villages: digging latrines, making homespun clothes, and planting crops more scientifically. Only by giving a lead themselves will they be able to overcome the age-old prejudice against the dirtying of hands and the traditional village ways.

This is one method by which a fuller and more useful life is being brought into existence, and it makes a lot of sense, too. But it is a slow method, and the immediate problem is of a different order. Each year thousands of educated South Indians are leaving schools and colleges and looking for work. Many of them have to leave the South and look elsewhere in India for employment, because the South has not the resources nor the market for large-scale industrial development. In order to avoid frustration and waste of valuable manpower a good deal of thought is being given to substituting vocational training for the rather aimless attainment of purely academic qualifications.

Though there is a problem in affording proper opportunities for men, there is a surprising difference in the case of women. We were particularly interested to discover that a far higher proportion of women

enjoyed opportunities of education than in the North, and they seemed to have gained a position of greater emancipation. When we spoke with Mrs. Ammu Swaminadhan, who is a Malayalee, and one of the women Members of Parliament, we asked her why this was so. 'In Malabar women have always enjoyed absolute social and economic equality with men, as we have always been governed by a unique matriarchal system of society. Anyway, in the South generally the impact of purdah has never been felt, and so women have been given more opportunities for social and educational advancement.'

Progress is tempered with tradition, but progress there undoubtedly is, and signs of change are evident enough. We saw new hospitals and new hydro-electric projects; cities like Bangalore and seaports like

OUR WAY OF LIFE: 14

YVONNE MITCHELL

YVONNE MITCHELL, a leading actress of the younger generation, suggests that England does not seem to care about her theatre but adds that, oddly enough, it does flourish: 'The Englishman likes to go to the theatre to be entertained: what he means is that he likes to forget what his life is really like'

Paradox of the English Theatre

THE theatre in England cannot unfortunately be truly said to be part of the life of the people. It is a pastime enjoyed by the few, and considered either unnecessary or immoral by many. Actors are still often regarded as 'rogues and vagabonds,' and going to the

theatre is usually reserved for an occasion such as a birthday treat or entertaining friends from abroad. There is no national theatre, though a few years ago a foundation stone was laid for one (or rather mislaid—it had to be dug up and moved some yards away, and there it still lies).

Over and over again in its long history (the theatre in England sprang from the Church in medieval times, when religious plays were performed on carts in the streets) the Englishman has said, with mock regret: 'The theatre is dying.' Nevertheless, it has strangely enough persisted quite vigorously through all its vicissitudes, in spite of the temporary closing of the theatres by Oliver Cromwell, and the closing of theatres in London during the early days of the last war; in spite of the coming of films, and the coming of television.

The Biggest Box-Office Draw

Although the Englishman does not seem to care, the theatre still, on and off, flourishes. Though there are now signs of a change, until recently there have been only two theatres in England that have had a repertoire of plays: the Old Vic, in London, and the Memorial Theatre at Stratford-upon-Avon. Both these theatres live and flourish on one name only: Shakespeare. Though the majority of English people have never seen a Shakespeare play, because they think it would be highbrow or difficult, he is so immensely enjoyed by the minority and by children that he still remains the biggest box-office draw in the country.

Apart from the Old Vic and Stratford, the English theatre exists in two forms: the London theatre and provincial repertory. In London a play is put on for as long as it will run, and then withdrawn. In the provincial rep. a resident company will give a play for one or two weeks only, and it is never brought back into the repertoire.

In London the only English plays which do consistently well are thrillers. They are, in fact, a popular English pastime. They are commonly known as 'whodunits.' They are invariably murder stories, without much characterisation or good writing, and their aim is to tease the audience into guessing who murdered the corpse. Since the advent of psychiatrists these plays have acquired another facet: 'Why did the murderer murder the corpse?'

There are no plays for children, except at Christmas-time, and then the theatres are full of special entertainments. Some of these are the traditional pantomimes. These are based more or less on fairy stories, *Aladdin*, *Puss in Boots*, *Cinderella*, or *Mother Goose*, but year after year they get further away from being suitable for children. Music-hall or variety comedians usually play the Dame or the Buttons or whatever is the chief part, and the jokes are much more vulgar than is allowable on the stage at any other time of the year. Indeed, the censorship of the spoken word in the English theatre is very odd. Practically anything can be said in a pantomime, but texts of serious plays sent to the censor (and all plays have to be sent to him for permission to perform) are often refused permission if they deal with certain taboo subjects. Sexual perversion, for instance, and anything to do with Royalty come under the ban. With plays on other subjects, only salacious lines will be cut, but it is odd this ban seems to disappear at Christmas-time.

Apart from the tradition of pantomime and thriller, these days London theatre-managers prefer to put on American plays, or translations from the French, which have been already proved popular in those countries.

It has been very difficult for many years for an English playwright to get a play produced in London. The managements say that there are no good English plays being written, and this is largely true, as good writers steer clear of the theatre, and stick to novels or film-scripts, which are more remunerative and have a better chance of being accepted.

But, happily, things change so rapidly in the theatre that in the past few months three or four English plays have not only made an appearance but done very well. And, in fact, it is possible to see already that the English playwrights of today have a bond in common. This is strange because, unlike the French playwrights, who meet and exchange endless ideas in cafés, the English writers have no particular meeting ground. Nor have they any special philosophy such as existentialism, or set form such as the modernising of Greek plays—which help to give the French a common mould. But the fact remains that the English writers of today all seem to have the same approach to life: they all write in a comic or

satiric vein about serious subjects. Dennis Cannan, John Whiting, and Peter Ustinov (the best of the younger playwrights—and all three, by the way, actors) present the modern political world in ironical terms which sometimes border on farce.

Theatre-goers, of course, are not on the whole ready for this new type of play. The public still likes its plays in the pre-war manner, as if the war had changed nothing. Comedies in which the upper classes still employ butlers and maids remain more popular than plays which reflect the modern world.

The Englishman likes to go to the theatre to be entertained: what he means is that he likes to forget what his life is really like. He likes to go with his family or friends, taking with him a box of chocolates for the occasion. He likes coffee in the intervals (or a drink at the theatre bar). He would like the play to start at eight o'clock so that he can have a meal first, but only a few theatres comply. Most of them (from an early habit acquired in the war) start at seven-thirty, so that buses and trains will still be running when he leaves. And he likes the well-established, mature stars.

It is a strange paradox, the English theatre: the Government consider it, like all the arts, unimportant; the average Englishman is apathetic towards it, or likes it in its cruder forms; playwrights find it difficult to get their plays put on; the vast majority of actors are out of work; and yet, when future generations look back to England today in the theatre it may seem like a golden age, the age of the poet—playwrights T. S. Eliot and Christopher Fry; the age of the glorious actors—Sir John Gielgud, Sir Laurence Olivier, Michael Redgrave, Alec Guinness, Dame Edith Evans, Dame Peggy Ashcroft.

No, England does not seem to care about her theatre—but oddly enough it does flourish. (*Broadcast in the BBC's General Overseas Service*)

Industrialising India

Continued from page 3

exclusive responsibility by management appears to be unnecessary and a source of avoidable irritation and resentment.

In considering the human problems involved in the rapid industrialisation of a country like India I feel that there is a valuable lesson to be learned from the Indian armed forces, which seem to have developed social skills well in advance of those of civil organisations, particularly in the fields of selection, training, human management, and welfare. The regiment has proved a satisfying substitute for the family and the village. As a piece of social engineering this has, to my mind, been quite an outstanding achievement. I believe that the leadership, the stress on human relations, and the concern for the men's personal life and well-being which form an integral part of the officer's duty in the Indian Army are worthy of emulation. I do not, of course, suggest that regimentation or a military type of organisation should be applied to industry. This would be quite unthinkable, at least in a democracy.

And here may I be permitted in passing to express the belief that a society in which freedom, individuality, and initiative can flower requires not only the existence of political democracy, as exemplified by freely elected parliaments and governments and a free press, but also a large measure of economic democracy—that is, free enterprise—which alone can ensure freedom of choice and decision to the citizen.

In this context, the divergent developments in India and China will, I am convinced, be of tremendous significance to the world as a whole. For if in the years to come India succeeds in building by democratic means the prosperity of her people, she will have made a decisive contribution to the survival and the continued progress of the democratic way of life. But if she fails while China, employing totalitarian methods, succeeds, then millions of people in the still under-developed areas of the world may judge by the results achieved rather than by the means employed, and the cause of freedom will have suffered a grievous setback.

The challenge that the hovels of Asia and Africa present is in this shrinking world a real and an immediate one to all of us, however far away from them we might be. If the industrialised nations of the world, possessed as they are of the necessary technology and capital, recognise the overwhelming importance of this challenge and help to meet it in India and similarly placed countries, then we shall together have the resources, the knowledge, and the skills to usher in an era of abundance, and happiness for all the peoples of the world. (*Broadcast in the BBC's General Overseas Service*)

The Goons suspect the presence of a mine—an incident during a rehearsal at this year's Radio Show

Goon cameramen Harry Secombe (left) and Peter Sellers get a close-up of Spike Milligan's beard

The Goons Are Here Again!

GALE PEDRICK traces the career of that 'polished, highly professional team of extremely clever lunatics'—the Goons—which can be heard in a new series of adventures opening in the G.O.S. this week on Wednesday at 12.15, Thursday 01.30, and Friday 07.30

IS there a place in British radio Variety for just one utterly crazy and scatter-brained programme? Someone had the wit to ask this question five years ago. As a nation we are reputed to like our fun to be broader than it is long: not for us the nuances of fantasy, the milk-and-venom of satire.

So it was with some misgivings the Variety Department agreed to present a slightly surreal comedy show, 'Crazy People,' with Harry Secombe, Spike Milligan, Peter Sellers, and Michael Bentine.

From it stemmed 'The Goon Show,' the prime example of 'pure' radio. ('Pure' radio being material which is born of sound broadcasting and which could not successfully be projected in any other medium of entertainment).

Since then the founder-Goons (with the exception of Michael Bentine, who sought other outlets for his brilliant fooling) have been concocting their own special fun-potion, with acknowledgement to Rabelais, Edward Lear, Lewis Carroll, and Stephen Leacock.

It is difficult even for the addict to define Goonism: to the Goons themselves, so they tell

me, it means 'bringing any situation to its illogical conclusion.' Fair enough?

In writing of 'The Goon Show' in its infant days I described it as an acquired taste. The remarkable thing is that by 1956 it had been acquired by so many people. This crazy commentary on our life and time has become, in spite of itself, one of the most popular shows on the air today.

Spike Milligan handed me a tray-full of fan letters. He is the good-looking young Irishman who writes the 'Goon' scripts, and is the voice of dim-wit Eccles. 'Believe it or not,' he told me, 'there are letters there from bishops, dons, schoolteachers, elderly retired people—and children from eight or nine years upwards.'

Spike Milligan and his confederates met during the war. Starving in an attic is probably too picturesque a phrase to use, but Secombe says: 'Six of us, all impoverished, shared a friend's flat near Notting Hill Gate—not always observing the formality of asking his permission: and three at least slept on the floor.' It was a long time before the luck turned.

Fantastic as the Goon Show plots are, there

is always, you will find, a reason for everything that happens. Each Goon story is a struggle between the forces of evil and those of good.

'What we do,' says Peter Eton, the producer, 'is to take some story-line which threatens the welfare of Britain and the Commonwealth itself. It must, at the very least, be a story strong enough to endanger the Government—the tale of the Phantom Head Shaver, for instance, in which Brighton became a city of terror and had to be cordoned off by the military. Or, again, there was the story of the Batter Pudding Hurler.'

He summed it up: 'There'll never be another show like it, for the simple reason that everyone concerned is an individualist.'

Nowhere in 'The Goon Show' do the characters themselves play for laughs. The essence of their performance is that they believe it to be real. Nor is this so difficult as it may appear. 'Nothing,' Spike Milligan mused, 'is so crazy as the things that happen in real life. Do you remember when we based a plot on the sinking of Westminster Pier?'

'Three days after it had happened, when the thing was still stuck in the mud, a man was sent down to wait until low water, so that he could climb up the mast and stick up a notice: "Closed to the Public!"'

No wonder the Goons take it as a compliment to be hailed as 'a polished, highly professional team of extremely clever lunatics.'

Journey to South India

Continued from page 9

Cochin which are expanding rapidly, and large modern offices rising in the palm forests. In Bangalore, particularly, the past few years have seen the construction of large factories for the manufacture of aircraft, telephone equipment, and electronic apparatus. Everywhere we noticed new roads being laid and new bridges, and even the mountains and forests are being penetrated by the long, straight lines of electric pylons in what is still the sanctuary of the tiger, the bison, and the wild elephant.

The South lives out of doors, and some of the sights of that living we shall never forget—like Chinnalapatti, a village with a centuries-old tradition of weaving, where no less than 5,000 families earn their livelihood from making brilliant coloured saris, and where from every house comes the tireless sound of the handlooms. Rice is the staple food of the South, and even the onlooker can share something of the farmer's determination and energy as men and bullocks, ankle-deep in water, strain together to turn the soggy mud-furrows in the paddy. From Madras right round the coast to Mangalore the sight of fishermen bringing their frail craft in over the breakers is as exciting a spectacle as you will see anywhere. The craft, sometimes no more than three or four logs lashed together, are steered in with an effortless skill that left us breathless. Along the roadside we saw the families who make their living from the humble but prolific coconut, hammering the coarse fibre from the husks which have soaked in water for half a year, then twisting the shreds by hand into long coir ropes.

For a last word I went to Sri Prakasa, Governor of the State of Madras, who has brought the detached eye of a Northerner to the South Indian scene: 'I can mention many things I have noted which can be regarded as characteristic of the South and which we do not find in the North. Naturally, I have been most in touch with the Tamil people, whom I have found a law-abiding, intelligent, patriotic set of persons, who are very devoted to ancient thought on life, who themselves live reasonable lives; very simple lives, however rich and powerful they may be, and because of which I have noted a great deal of true democracy.'

When we stood on the coloured sands of Cape Comorin, with our backs to the endless expanses of the Indian Ocean, we caught a sense of the immense weight of this one nation stretching like a tree from these warm shores to the frozen Himalayas: 1,500 miles to the North the top-most branches scrape the fringes of central Asia, but here, we felt, are the roots. (*Broadcast in the BBC's General Overseas Service*)

'Black Prince,' one of the Fell ponies recently sold to the Pakistan Government, and (right) a herd grazing near Ambleside, Westmorland

STORIES FROM 'RADIO NEWSREEL'

Here and There

LAKELAND FELL PONIES

IN these days when the horse is being replaced by the tractor and the motor it seems odd that any sort of horseflesh apart from the thoroughbred should be earning Britain currency from abroad. Yet there is quite an overseas demand for Shetland and Welsh ponies and for the Fell ponies which come from north-west England. The annual colt and stallion show, organised by the Fell Pony Society, took place this year at Penrith, in Cumberland, and I went along and talked to some of the owners and breeders of Fell ponies.

Naturally, we talked about the present demand for their ponies, and I learned that in the past few months the Pakistan Government had been a purchaser. There, I understand, it is the intention to use the Fell pony stallion on the Anglo-Arab type of mare, and so produce the kind of animal distinctly suitable for use as a pack-transport pony in the hills.

Over a year ago one of the best stallions in the breed, Guards Hero, which was bred by Mr. Little of High Abbey, in Cumberland, was sent to Pakistan. This year I saw his son, the yearling colt, Guards Hero II, take the championship, an outstanding feat as he was up against some very good, mature stallions. But he showed the type of blood the Pakistan Government is getting. I had a chat with Miss Crossland from Windermere, who is secretary of the Fell Pony Society, and she told me she has more inquiries for broken Fell ponies than she can supply.

One of the objects of the Penrith show was to select stallions to run in the society's two breeding enclosures, at Barrier in Cumberland and near Coniston in north Lancashire, under a scheme which was introduced ten years ago to improve the breed. SYDNEY MOORHOUSE

NEW LIGHT AIRCRAFT

ANEW aircraft has been developed to do such jobs as spraying fertiliser from the air. It is known as the EP9, designed and built by Mr. Edgar Percival. Before the war he and his aeroplanes set up many flying records, and now after twenty years he has built this light agricultural plane. The first production model, which is going into service in New Zealand soon, made its maiden flight piloted by Mr. Edgar Percival himself.

Afterwards I went up in the plane. Flying in it is rather like being in a helicopter: there is the same wide view of the fields, almost directly below, the same feeling of manoeuvrability, and, when it is needed, a very low speed. It takes off in a hundred yards or less. The EP9 is by any standards a small aircraft. It costs less than £9,000, and it is only ten yards

long, but for all that there is plenty of room in it. It can hold five passengers as well as the pilot, or if it is used as a flying ambulance two stretcher-cases, one walking casualty, and a nurse. For spraying from the air its cabin can comfortably take a big container that holds nearly a ton of fertiliser, and there are special doors at the rear of the cabin so that this container can be put in or removed easily.

I asked Mr. Percival why he decided to build this particular type of aeroplane, and he said: 'Because I felt there was a great need for such a thing: people seem to have neglected providing an aircraft for aerial farming as has been carried out in New Zealand and Australia. I made a six-month survey first, visiting most countries in the world, particularly Australia and New Zealand, and actually flew on some of the operations and talked with some of the operators and pilots. We have confidence that we can build and sell about 150 of these planes next year.'

Mr. Lloyd Griffin, the chief pilot of the New Zealand firm which is going to operate this aircraft, told me his company already uses several American aeroplanes for farming from the air, but they are changing to the EP9 because it has a greater future from the economic point of view, with its greater load-carrying capacity, low operating costs, and ability to work from short airstrips.

IVOR JONES

SAILING TO ANTARCTICA

THE 1,000-ton wooden vessel, *Endeavour*, newly commissioned as a ship of the Royal New Zealand Navy, recently sailed from London for New Zealand. She was formerly the Royal Research Ship, *John Biscoe*.

After loading stores and equipment the *Endeavour* will embark Sir Edmund Hillary's scientific party for MacMurdo Sound, in the Antarctic, later this year.

The renaming ceremony took place at Southampton, and afterwards Captain B. E. Turner, of the Royal New Zealand Navy, spoke about the *Endeavour's* mission: 'In August of 1768 a small wooden ship about half this size was commissioned by Captain James Cook and sailed from England, via Tahiti, to New Zealand. From there they sailed on to the Antarctic and to world fame.

'This ship has been named after her illustrious predecessor, and is to follow an almost identical track to New Zealand. Then, having embarked the New Zealand components of the British Trans-Antarctic expedition, she will sail to the Antarctic. Her captain will chart courses that her predecessor charted, and the men that sail in her, the seamen and the men of the expedition, go to tread the paths of their predecessors to high adventure.

'To Doctor Fuchs, and the men that go with him, we can confide our trust that if human endeavour can prevail they will look on this ship in the Ross Sea. I would like to take this opportunity of saying "thank you" to the management and men of Thornycrofts, especially the men at Northam who have laboured to fit this ship for this project. Her condition, I can say, is a tribute to their skill.'

The 'Endeavour' in the Southampton shipyard where she was refitted for her voyage to Antarctica

When the BBC's 'Arenoscope' became a circus ring television cameras caught the critical moment when the acrobat's hands reach for those of his partner in mid-air

Under the Domes of Sound visitors could hear BBC sound effects, and voices in 4

THE 1956

JOHN DAVY, Scientific Correspondent of 'The booming electronics industry with a visit to the important part of the industry which is concerning final impression,' he says, 'was of the integral

THE Radio Show is an opportunity to gain a bird's-eye view of an astonishing industry which must have sold one or more of its products into practically every home in Britain. For television, especially, this has been a significant year, since the Independent Television Authority, the commercially supported alternative to the BBC, is approaching its first birthday, and up in the gallery of the Earl's Court Show the BBC and the ITA stood facing each other from opposite ends of the hall.

Bigger screens and brighter pictures are the most obvious trends to be noted in television sets. For areas where reception is good there are sets with fewer valves and a correspondingly lower price. There is a set with a twenty-one-inch screen for just over eighty guineas—the cheapest set of this size to be had. So-called 'portable' television sets are beginning to appear, although I, for one, would not volunteer to carry them very far. The lightest weighs some thirty-five pounds. These sets will mostly work off a car battery as well as the mains.

Really compact lightweight television sets will probably depend on the application of a gadget which is already making itself felt in radios, namely the transistor. These tiny little components can replace a fraction of the power used by a valve. This year a fully 'transistorised' portable wireless was on show for the first time. Unfortunately transistors are still expensive, and the set in question costs thirty guineas—quite a bit more than some other more conventional battery portables on the market. Transistors are also being used in amplifiers: one firm has a gramophone turntable with a transistor amplifier, powered by dry batteries, and using so little current that it is claimed the batteries last for 1,500 playings.

'Hi-Fi' Comes into its Own

A theme which ran through the whole show was 'Hi-Fi' or 'High Fidelity.' Listeners and viewers are becoming more discriminating about the quality of both sound and picture. This year most of the radio sets displayed incorporated circuits enabling them to receive the BBC's broadcasts on the Very High Frequency band. These V.H.F. transmissions make use of a system called 'frequency modulation,' which means that virtually all interference is eliminated. The ether is becoming so crowded nowadays—especially the medium wavebands—that in some parts of Britain listening to the domestic programmes is no pleasure at all—there always seems to be a ghostly cabaret from foreign parts, or a talk in a foreign language, chattering and whispering away in the background. But the V.H.F./F.M. system is bringing back a beautiful purity of reception, and music-lovers, especially, are hurrying to exchange their sets for ones which can receive the new wavelengths.

The one disadvantage of the system is its short range—like television. a large number of small stations are needed to cover the country. However, over eighty-four per cent. of the population of the United Kingdom can now receive V.H.F. broadcasts from the new stations the BBC has installed—and the manufacturers have not been slow to provide the sets to take full advantage of the new service.

The doors of this cabinet roll back to reveal the 17-in. screen of a television set that also tunes in V.H.F. sound programmes

Brightness and volume can be adjusted by using a remote-control gadget from one's seat

The louder you shout the faster your car goes—an ingenious electronic toy

A demonstration model of 'Ernie,' the electronic robot that will choose at random the winning numbers of the Premium Bonds recently announced by the Treasury

DIO SHOW

... follows up his recent G.O.S. talk on Britain's radio show at Earl's Court, London, of that very making domestic radio and television sets. 'My vision has come to play in British national life'

While the ground floor at the Radio Show was definitely devoted to business, up in the gallery the accent was on pleasure. The Army, the Royal Navy, and the Royal Air Force, the Post Office engineers, the BBC and the ITA were there, with stands showing electronic equipment, working models, and other demonstrations. Human beings were on show as well as machinery. Television is a more potent star-maker even than films, and TV 'personalities' become national figures almost overnight. On the Celebrity Dais there were to be seen the now-familiar faces of people who were quite unknown perhaps only a few months ago. There they were, working hard, being interviewed by a charming young lady, and handing out autographs.

Fun with the Latest Electronics

The research engineers of the Post Office 'let their hair down' on their stand. They built an 'electronic darts-board,' incorporating some of the latest electronic devices which will be used in modern telephone exchanges. This was thronged with schoolboys, pressing buttons and making lights flash. Then there was 'Ernie,' another robot which will choose electronically, and quite at random, the winning numbers of the Premium Bonds which the Treasury is introducing soon.

In another corner, wheezing and grunting, and from time to time remarking 'Ah-h-h' and 'Oh-h-h' in a hoarse voice, was 'Esme,' the electronic Speech Synthesiser. This slightly uncanny individual is designed to produce synthetic speech sounds—and pretty synthetic they are, too. But Esme is quite a new-born infant at the moment, and may grow up to play an important part in tele-communications.

Other attractions for schoolchildren—who were closely pursued in most cases by eager fathers—were a radar scanner on the Earl's Court roof, worked from below, with which visitors could pick up well-known local London landmarks; a model of a rocket which went 'off course' when you pressed a lever, and rocked around in a dramatic manner, just like the science-fiction films; and actual examples of experimental test rockets which have reached over 2,000 miles an hour in a few seconds.

Leaving Earl's Court, rather footsore and thoroughly impressed both by the variety and sheer quantity of the exhibits, my final impression was of the integral part television has come to play in British national life. At every turn, rows of square grey screens were ranged, displaying a thousand identical pictures of the last day of the Test Match (transmitted by the BBC), and, with a nice sense of tact, another thousand pictures of a powerful Western being transmitted by the ITA.

As far as Britain's national industrial and economic life is concerned the radio and television industry is only a part—although a very important part—of the electronics industry. Electronics equipment is penetrating industry and science as fast as television is penetrating British homes. Britain's radio industry exports each year radio and electronic equipment worth more than £36-million, and the rapid expansion which has taken place since the war looks like continuing. But the domestic television and radio sets which dominated the Earl's Court Show represent the backbone of the industry, and are vital contributors to its prosperity.

Books to Read

Reviewed by
Daniel George

AT the age of ninety-four, George Bernard Shaw died in November, 1950. He was born in 1856, so within very few years of his death we have been celebrating the centenary of his birth. There have been revivals of his plays and many articles about him. There have also been two biographies: one by St. John Ervine, called *Bernard Shaw: His Life, Work, and Friends*; the other by Stephen Winsten, called *Jesting Apostle: The Life of Bernard Shaw*. St. John Ervine's is the longer and more important of the two, though Stephen Winsten's, in its unambitious way, is readable and useful. St. John Ervine has the advantage that he is himself a dramatist and dramatic critic; he knew Shaw intimately for over forty years, and Shaw was aware of his intention to be his biographer. He writes with candour as well as admiration, never glossing over Shaw's failings as a man or his mistakes as a dramatist.

His failings as a man were not very serious—anyhow at this distance. The chief one seemed to be that he was a philanderer. Women were attracted by him, and he was evidently flattered by their attentions; but he shrank—mainly because he was poor—from the responsibilities of a serious involvement as much as he shrank from marriage.

How far he was genuinely conceited is a nice question. To begin with he blew his own trumpet to draw attention to himself, and he whistled to keep his courage up. Later no doubt he thought his opinion on, say, world affairs was more important than it actually was. It ended by being almost ignored. But all this is rather trivial. It must not be thought that Shaw's failings are emphasised at the expense of his achievements. They were great achievements—politically through his speeches on behalf of Socialism and his work in the Fabian Society; philosophically through his plays. He was one of the great liberators of human thought, comparable with Voltaire in the stimulus he gave to his own and succeeding generations. Mr. Ervine discusses the plays and the pamphlets, he discusses Shaw's ideas, with many of which he was not in sympathy, and he discusses Shaw's friends, with many of whom he was also not in sympathy.

Compared with St. John Ervine's, Stephen Winsten's book on Shaw is rather slight—less than half its length, for one thing, and it is on a rather lower intellectual level, but it contains much additional information, especially about Shaw's family and childhood, some letters not before printed, and some photographs which changes in fashions of men's and women's clothes have made amusing. The author's summaries of Shaw's opinions and philosophy are not impressive, and as he has already written four books about Shaw it is clear that the strain begins to tell. All the same, there is some valuable material here for the many future biographers whom Shaw's life and work will undoubtedly attract.

Another man great in his day, who lived to almost the same age as Shaw, being ninety-two when he died in 1904, was Samuel Smiles, whose best-known book, among many, was *Self Help*. One of his grand-daughters, Aileen Smiles, has now written a biography of him under the title *Samuel Smiles and his Surroundings*. It is written in a happy-go-lucky style with irritating asides to the reader as though Samuel Smiles needed constantly to be defended from denigrating attack, when the fact is that the average reader of today knows little of Samuel Smiles beyond his name and could easily have been interested by a book more tactfully and intelligently written. On the other hand, by making allowances for the author's family pride and enthusiasm one can soon get used to her shrill comments on modern life and share her admiration for her ancestor who, if he praised the virtues of hard work, was always careful to set a good example. His biographer furnishes in a rough-and-ready kind of way some historical background for her subject, whom she consistently refers to as 'Granpa,' but is rather more concerned with domestic details. A recent historian truly described *Self-Help* as 'for a decade the bible for all working men who aspired to better their conditions.' To us some of its precepts may sound platitudinous, but they were not platitudinous then. On the whole, then, this book would be better if it were not so defensive; but taking it as it is it is full of interest.

Agreeable and slightly scandalous letters on political and personal matters from Lord Clarendon to the Duchess of Manchester have been edited by A. L. Kennedy, and published with the title *My Dear Duchess*. Lord Clarendon, who was twice Foreign Secretary, gossips very frankly, not to say cynically and wittily, about his contemporaries, and the book makes agreeable reading.

An unusual kind of anthology has just appeared: *To the Hustings: Election Scenes from English Fiction*, selected and introduced by H. G. Nicholas. Among the authors drawn upon are Peacock, Dickens, George Eliot, Trollope, Meredith, Wells, Galsworthy, and Belloc. At first sight it does not look a very promising subject, but the book turns out to be highly entertaining.

A Penguin bargain is *The Penguin Story*, published at 1s., beautifully produced, freely illustrated, giving the history of this wonderful enterprise, including a classified catalogue of all the Penguin and Pelican editions.

Bernard Shaw: His Life, Work, and Friends, by St. John Ervine (Constable, 50s.)
Jesting Apostle: The Life of Bernard Shaw, by Stephen Winsten (Hutchinson, 21s.)
Samuel Smiles and his Surroundings, by Aileen Smiles (Robert Hale, 18s.)
My Dear Duchess, edited by A. L. Kennedy (Murray, 21s.)
To the Hustings, edited by H. G. Nicholas (Cassell, 18s.)
The Penguin Story, by Sir William Emrys Williams (Penguin Books, 1s.)

TRANSISTOR
PORTABLE

TRANSISTORS have eliminated the need for valves. TRANSISTORS use practically no current. They do not break, or wear out, are as small as a child's finger-nail and need only torch batteries to keep them going. The result—a portable which will give you years of cheaper, trouble-free listening, with the famous PAM printed circuit for final, 100% reliability. The Transistor Portable Model 710 contains a 6" loudspeaker, the largest ever fitted in a portable of this size, and works entirely off four U.2 batteries (normal torch batteries). The playing life of these batteries on one set gives 1,000 hours performance.

PAM (RADIO & TV) LIMITED, 295 REGENT STREET, LONDON, W.1

This Week's Listening

ROLL OF HONOUR

A SERVICE of dedication, at which Her Majesty Queen Elizabeth the Queen Mother will be present, will be held in the Royal Military Chapel at Sandhurst of a roll of honour containing the names of all commissioned officers of the British Commonwealth and Empire who gave their lives in the second world war. The scene at the service will be described for listeners by Lt.-Gen. Sir Brian Horrocks.

The roll of honour records the names of 19,781 officers, and is arranged in the following sequence: British Army, Armies of India and Burma, Canada, Australia, New Zealand, South Africa, Colonies, and Protectorates. The service of dedication will be conducted by the Chaplain General, the Rev. Canon V. J. Pike. The roll of honour has been designed by Miss Elizabeth Friedlander.

G.O.S.: Tuesday 21.00; Wednesday 05.15 and 10.30

TRAFALGAR DAY

THE story of Trafalgar and of the death of Nelson has an epic quality which has been faithfully maintained in British history books down to the present day. That story will be told again this week in 'Horatio Nelson,' a radio portrait based on Nelson's own letters, conversations, and reports, and on the judgments and accounts of his contemporaries and of later writers.

It is popularly believed that Trafalgar—the last major fleet action between sailing ships—was a battle for the defence of the British Isles. But as E. E. Rich, Professor of Naval History at Cambridge University, has pointed out in a talk broadcast in the BBC's Third Programme Trafalgar was not a 'Battle of Britain,' despite Napoleon's boast that he was about to 'end the destiny of Britain.' It was, in fact, an offensive battle fought to give Britain control of the Straits of Gibraltar and the Mediterranean, and the chance to open a 'second front.'

G.O.S. listeners can hear Professor Rich's description of this famous battle, of which the 151st anniversary falls this week, and his appraisal of Nelson's strategy in 'From the Third Programme.' 'Horatio Nelson': Sunday 01.00 and 18.30 'Trafalgar': Monday 15.15; Friday 23.15

'THE COLONIAL QUESTION-MARK'

DURING the next three weeks 'London Forum' presents a series of related discussion features under the general title of 'The Colonial Question-Mark.' The subjects to be examined are: this week 'The Ethics of "Imperialism"'; next week 'The Economics of "Exploitation"'; and the week after that 'The Pace of "Self-Determination."'

What do people mean when they talk about 'imperialism' and 'colonialism'? Have the policies of metropolitan Powers been guided by a code of ethics? And whether they have or not, how has imperial rule worked out in practice? These questions will be tackled by a team of distinguished speakers in this week's 'London Forum' on 'The Ethics of "Imperialism."'

First, an Indian historian, who has played an active role in the affairs of his own country both at home and abroad, Sardar K. M. Panikkar, and a British historian, Professor Charles E. Carrington, author of *The British Overseas*, will examine the terminology of the subject under the chairmanship of a Canadian, Robert McKenzie, Lecturer in Sociology at the London School of Economics.

They will be followed by an exchange of opinion between Geoffrey Barraclough, who has just succeeded Arnold Toynbee in the Stevenson Research Chair of International History at London University, and Philip Mason, a former member of the Indian Civil Service, now Director of Studies in Race Relations at Chatham House, on the principles which have inspired the activities of imperial powers.

Listeners to 'The Story of Colonisation,' which ends this week in the G.O.S., will remember that Panikkar, Carrington, Barraclough, and Mason have all taken part in that series of talks.

In the final part of this week's programme, Sir Hilary Blood, a former Colonial governor, and Robert Kweku Atta Gardiner, a senior civil servant in the Gold Coast, which is his own country, one fast nearing independence, discuss in particular the British record of colonial rule under the chairmanship of Willy Richardson, a West Indian who

October 21 — 27

has recently visited both East and West Africa. Bruce Miller, himself an Australian, will introduce the speakers, and at the end of the programme will sum up the points that they have made.

G.O.S.: Sunday 16.15; Monday 02.15

A NEW 'COLONIALISM'?

SINCE 1945 two nations only have increased greatly the extent of territories over which they hold sway. The post-war world has witnessed Russian domination of Communist satellite states in central and eastern Europe, extending into the Balkans; and the U.S.S.R. has totally swallowed up the smaller Baltic republics which formerly belonged to the Russian Empire.

More recently the Chinese Communists have established control over North Korea, expanded into Tibet, and increased their sphere of influence in Indo-China. Large and rich Chinese 'colonies' still exist, of course, in many towns of South-East Asia; and there have been reports lately of a Chinese threat to adjust their frontier with Burma to include land previously claimed by their own Imperial dynasty, apart from Communist political infiltration throughout most of this area (as elsewhere in the world).

What degree of autonomy is left to those smaller countries in Central Asia, lying between these two new, huge Powers? Nearly forty years ago at the Baku Conference the delegate for Turkestan urged the Soviet Government: 'Remove your colonisers working behind the mask of Communism!' This week Geoffrey Wheeler, Director of the Central Asian Research Centre, will give the final talk in the G.O.S. series 'The Story of Colonisation.'

G.O.S.: Monday 16.15, Tuesday 00.30 and 05.00

THE OLYMPICS

IN 1924 Harold Abrahams won the 100 metres sprint at Paris: he is the only British athlete to have won this Olympic event. He also competed in the 1920 Games in Antwerp, and was captain of the British athletic team in the Games at Amsterdam in 1928. In the third of his series of Olympic interviews Roger Bannister will talk to Mr. Abrahams about the athletics of this era, which were dominated by Paavo Nurmi.

Apart from being well known to listeners as a broadcaster and writer on athletics, Mr. Abrahams is also secretary of the National Parks Commission in Britain.

G.O.S.: Monday 17.00; Tuesday 02.15 and 09.30

Members of the Langley Prize Band, one of the bands which qualified for the finals of the Brass Band Championships last year: this year's finalists can be heard in a concert on Saturday at 21.30

Nancy Spain, who devised the new panel game 'These Foolish Things,' chatting with René Cutforth, one of those taking part on Thursday at 20.30

BRASS BAND CHAMPIONSHIPS

SOME 270 brass-band players from nine bands will compete in the finals of the *Daily Herald* National Brass Band Championships at the Albert Hall, London, this week. The first of these championships was held at the Crystal Palace in 1860, and they have been held regularly in London ever since. Preliminary contests are held in the provinces, and the finalists travel to London to compete during the day, and play together in the evening under an eminent conductor. The winners will be announced on Saturday at 16.45, and excerpts from the evening concert will be broadcast at 21.30.

The conductor this year will be Karl Rankl, who is conducting at the championships for the first time. Rankl, born in Austria in 1898, held various appointments in European opera-houses until the outbreak of war, when he came to England. He was Musical Director at Covent Garden from 1946-1951, and he is now principal conductor of the Scottish National Orchestra.

THE WEEK'S PLAYS

RADIO is particularly susceptible to the kind of small-cast play in which somebody now old tells a tale of experience long ago. An example is *The Lovely Voice*, which Ann Stephenson has adapted from a story by Cynthia Asquith, the distinguished lady who was for long secretary and friend to Sir James Barrie, an author who knew as much as any about the art of story-telling.

An old lady has been discussing the subject of murder with her grandson, an opinionated young man who holds that the act of murder has nothing to do with character, being simply the product of circumstances. Whereupon the old lady sets to musing and recounting certain events of which she was a spectator when a little girl on holiday in a quiet French provincial hotel. It was a matter of a lovely lady with black hair—or was it a black wig concealing red hair?—and another lady, and an encounter in the forest, and a death, and a sequel.

Another natural story-teller is Paul Gallico, the American journalist and writer who somehow effected the remarkable transition from America's leading sports reporter to the author of best-selling simple-seeming fables about snow geese and snow flakes. *The Small Miracle* demonstrates his skill in the latter vein.

A small orphan named Pepino is devoted to a donkey named Violetta in the Italian town of Assisi where seven centuries ago St. Francis, who also loved animals, was born. But Violetta falls very sick, and Pepino conceives the notion that if she could be admitted to the underground crypt where St. Francis is buried the homage might bring about a miracle. And so the small boy sets about climbing the formidable ladder of the Church's hierarchy, until the Pope himself is brought face to face with the problem of Violetta. PETER FORSTER

Lesson 105
15.15-15.30 NEWS and News Talk

What I Believe. Mr. Stanley Spencer will talk on Sunday of the way in which belief and conviction have affected his work. Much of Mr. Spencer's painting has a deeply religious aspect; he has been frequently criticised by those who hold more orthodox views. Cookham, where he was born, is very often used as the setting for his paintings.

Standards of Living. What is it like to be a writer in 1956? Have opportunities and markets changed from those available to him a quarter of a century ago? Three men associated with the literary world will be discussing these and related questions on Monday. Mr. Richard Goold-Adams will be chairman, and the speakers will be: Mr. L. A. G. Strong, the well-known author who is also associated with a publishing house; Mr. Spencer Curtis Brown, director of one of London's biggest literary agencies; and Mr. Stewart Campbell, a Fleet Street journalist and editor of the Sunday newspaper, *The People*.

Question Time. Current affairs will provide subjects for discussion on Wednesday. With the United States Presidential election entering its final phase, the reassembly of Parliament at Westminster on Tuesday, and next month's opening of the new session of the United Nations in New York, there should be plenty of matter for discussion by the team which will consist of Christopher Mayhew, Labour Member of Parliament, Ian Orr-Ewing, Conservative Member of Parliament, and Graham Hutton, economist and author.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

SOURCES OF POWER

The Sun

Soon, we are told, the Sahara will blossom like the rose. That is as may be: what seems likelier, sooner, is that many better-loved places will bloom anew at the Sahara's expense. The natural heat-traps of the world can be used for transforming solar rays into electrical power. Already a device exists by which one square mile of desert could be made to supply 175 million horse-power-hours a year. To handle and control such amounts of electricity would vastly interest Crompton Parkinson—who, since the dawn of the electrical era, have been associated with the pioneering and production of major electrical developments. When and where the sun is *invited* to scorch up the earth, Crompton Parkinson, hot but happy, will be perfectly capable of putting the resultant power through its paces.

G. RÉVÉSZ

In this work the late Dr. Révész, one of the world's leading psychologists and sensory experts, sets forth his theory on the origins of human language. The translation of this important work is by J. J. Butler. 30s. net

LONGMANS

Putting 'Commentary' on the Air

In the past two years listeners to the BBC's Overseas Services have had the opportunity of hearing no fewer than 700 broadcasts of 'Commentary'—a five-minute highlighting of some aspect of the news. Here you are taken behind the scenes to learn how 'Commentary' is planned and prepared

DAY after day for the past two years—almost without a break, in fact, since November, 1954—listeners to the BBC's Overseas Services throughout the world will have heard the announcer in London introducing 'Commentary.' 'Commentary' has reached thousands more by way of the regular re-broadcasters. They include stations and networks in places as far apart as Hong Kong, the Gold Coast, the West Indies, and Canada.

Listeners will have found that the 700 or so 'Commentaries' which have gone out during that period have covered a very wide range. On the one hand, they have dealt with the debates and atmosphere behind the scenes at all the major conferences: the meeting of the Afro-Asian nations at Bandung, for example, or the 'Summit' Conference of Heads of Governments at Geneva in July last year.

Then there were the disarmament talks in New York, the autumn meeting of Foreign Ministers in Geneva, as well as the talks in London which led up to the creation of the Caribbean Federation, the Round Table Conference on Malta, the London talks on the future of Malaya and Singapore, and, most recent of all, the London Conference on Suez. To the stories on the main international events must be added those on such topics as U.S. trade policy, events in Argentina, new appointments in the Church, the Honours List, the denunciation of Stalin at the 20th Congress, terrorism in Cyprus, the British Government's drive against inflation, the Standard motor strike, and the Trinidad Oil Company controversy.

Indeed to glance down the list of 'Commentaries' is like taking a panoramic view of the events of the past two years: a view which does not entirely neglect such sidelights on life as the progress in Britain of the evangelist Billy Graham, the crowning of 'Miss World,' or the centenary of the London bus.

The range of subjects has been matched by the variety of the contributors, some prominent in the service of the state or the learned professions, many of them well-known broadcasters and newspaper correspondents. Others have been men and women whose views, by virtue of chance, achievement, or relationship, have acquired a temporary significance.

Most of the 'Commentaries' are carefully prepared. Often they have taken the form of unscripted interviews. In some cases the commentators have spoken 'off the cuff' from notes and hastily assembled jottings. This has generally happened on occasions like Budget Day or elections, when the 'Commentaries' have been prepared by regular contributors to the Overseas Services. They include Princess Indira,

known to overseas listeners during many years for her parliamentary reports; Sam Pollock, who has long covered the industrial scene; Andrew Shonfield, Foreign Editor of the *Financial Times*, and Bruce Miller, Australian-born political commentator, and lecturer on politics at University College, Leicester.

Although they are all speakers who are well acquainted with the special requirements of the overseas listener, these special occasions bring their particular difficulties. On Budget Day, for example, the main problem for Princess Indira was to gauge how long she could afford to go on sitting in the Press Gallery of the House of Commons if she were to be back in the studio

with her 'Commentary' in time to go on the air. At the General Election the 'team'—Bruce Miller and Robert Reid—worked on through the night checking over the results as they came in on tape and on the television screen. At the last possible moment they would leave the operations room and start to prepare their 'Commentaries.' But whenever it seemed that a clear trend was emerging a result or two or three would completely change the picture—often enough with only a few minutes to go to transmission time.

On these occasions the speaker only reaches the studio in time as a rule to hear the newsreader winding up 'the News.' Then he sits down and makes last-minute alterations to his script, for he knows that in a second or two 'the News' will end, and the announcer will be handing over to him for another 'Commentary.'

It is true that one cannot say a great deal in so short a time; but the opportunity provided by this five-minute 'spot' may be judged from the fact that a full fifteen minutes of news contains little more than 2,000 words: rather less than two columns in a newspaper.

Moreover it should be borne in mind that 'Commentary' has never set out to be a digest. Its object is to highlight some aspect of a story which appears to merit closer attention. 'Commentary' is rather like the editorial leading article in a responsible newspaper. 'Commentary' is essentially free to range over just as wide a field; and is equally able to resist the pressure of the merely topical. The news must suggest—never dictate—its direction.

To many listeners 'Commentary' has proved a welcome follow-up to the news. Some, however, have said frankly that they would prefer to have more news and to rely on their own newspapers for comment. Others have declared that they welcome the opportunity of comparing what the 'Commentary' speaker says with the view of their local leader-writers, particularly when the English papers they receive are always at least a week old.

Above all, 'Commentary' aims to give the listener an opportunity to go over an event in rather more detail than elsewhere; and—if he will—to reflect. Most times the listener will probably be content to accept the expert view: the opinion of a diplomatic correspondent, say, like Nicholas Carroll of the *Sunday Times*, William Forrest of the *News Chronicle*, or Richard Scott of the *Manchester Guardian*.

'Commentary' seeks to express as widely as possible the range of opinion in Britain; for one of its basic principles is the belief that diversity of opinion is just as much a safeguard of free thought and expression as it is a token. R. F.

The London Library

SIR HAROLD NICOLSON speaks of the immense value of a unique library in London, and suggests to people overseas that it might be an excellent institution to copy

I AM going to talk to you about the London Library, the annual general meeting of which was held a month or two ago, with Mr. T. S. Eliot, its president, in the chair. But before I do so I must, I suppose, 'disclose an interest,' in that I have for several years been chairman of that excellent institution and am thus in some manner boosting my own goods. What I really wish to do is to point out to you the immense value of this unique library, and to suggest to you who are overseas that it might be an excellent thing to copy in your own cities and home towns.

You may be wondering why I used just now that curious expression, 'disclose an interest.' It is a House of Commons expression and is used by a Member when he is supporting or opposing a motion dealing with some company or project with which he is personally concerned. Thus if an electrification project is to be discussed which concerns companies in which a Member holds shares he is expected in supporting the project to begin his speech with the words: 'Before I advocate this project, Mr. Speaker, I must disclose an interest in the sense that I hold one hundred preference shares in a company which may benefit if the scheme is approved.' Such a statement is greeted by murmured approval from the House, indicating that he may now continue to make his speech without fearing that he will be suspected of personal bias.

How It Came into Being

It sometimes happens that a Member forgets to open with this self-protecting sentence, and then if he is subsequently discovered to be financially interested in the project he may suffer blame and disrepute. But once he has uttered the magic words, then he is immune to future criticism. When I disclose an interest in the London Library I am not admitting that I derive any financial profit from the institution or that I receive any salary for my services as its chairman. I am merely warning you that what I say may possibly be biased by my long connection with the library and by the deep affection that I feel for it and its staff.

When I say that the London Library is a unique institution I mean that it is, so far as I am aware, unique of its kind. In no other town, so far as I know, does there exist a library of just the same quality, offering just the same facilities and advantages to its members, or inspired with the same purposes or an equivalent sense of mutual service. There is nothing like it in Paris or Berlin or, I believe, New York, Ottawa, or Sydney. It is about time that such libraries were founded overseas, and here I shall tell you how it came into being and how it works.

It all started with Thomas Carlyle. When he was writing *The French Revolution* and *The Life of Frederick the Great* he found, naturally, that he needed many works of reference, that such works were difficult for private individuals to acquire and keep, and that Mrs. Carlyle had already shown signs of acute displeasure when he started to clutter up her beloved drawing room with what she called, in her sprightly fashion, 'musty tomes.' Carlyle in those days was obliged to go on horseback the whole way across London from Chelsea to Bloomsbury, taking his notebook with him, pen and paper, and, I suppose, a packet of sandwiches provided by his dutiful wife.

He would enter the British Museum reading room, send for the books he wanted, and remain the whole day under the dome of that stuffy repository of learning, taking notes. As others have found before and since, this gave him an acute headache, allowed him little time for reflection, and obliged him to undergo the exhausting process of copying out long extracts from French and German books which, he well foresaw, would be far longer than he would actually need. He thought wistfully how nice it would be if he could study, as distinct from merely read and copy, these books in the calm of his garden at Cheyne Row. How pleasant it would be, when one came across a passage that appeared relevant or important, to pace up and down the garden path, working out exactly how it could be fitted into the texture of the book as a whole.

But as he could consult these books only in the reading room of the British Museum Carlyle was forced to copy, copy, copy, in an atmosphere which in those distant days was thick and oppressive. There was no air-conditioning in the years that Carlyle poured over his books of reference for the French Revolution and the rise of Prussia.

Five Thousand Elected Members

Then one day—it was probably a wet or foggy day when he was plodding across London in his great wide hat upon his big grey mare—he conceived the idea of founding a lending library which would acquire and house all the important books in all the main languages needed by serious students for several different subjects. Students would have to be elected members of this institution by a committee composed of learned and reliable men. Once they had been elected and had paid their subscriptions they would be free to browse along the shelves and to take home with them the books that they needed, as many as ten books at a time.

Carlyle discussed this project with his cronies, John Stuart Mill and Matthew Arnold, and as a result the London Library was born. Since that day, more than a hundred years ago, it has of course expanded enormously. It has acquired specially designed premises in St. James's Square, which, although bombed slightly in the last war, are now restored to full capacity. It has a membership of roughly 5,000 readers, which is the figure regarded by the committee as the largest number which can efficiently be served by the existing staff, premises, and books. Although the subscription rates had, after remaining the same for a quarter of a century, to be raised recently, there has been no falling off of applicants. There are indeed but few scholars, students, or serious readers in Britain who do not find the London Library a useful, nay indeed an indispensable, guide and assistant in their labours.

Now why is it, you may ask, that the London Library differs from the great national and municipal libraries that are spread all over the country? How, again, is it different from the several subscription libraries which minister with such aptitude to the needs of the vast reading public?

In the first place, I should say, it is run not so much as an official or urban institution but as a club to which members owe a certain loyalty, in which they all, I hope, take a large measure of pride, and which aims at providing the serious scholar, student, or reader with the books which he might find it difficult to obtain with equal convenience elsewhere. The staff are specially trained to suggest to members the sort of books which they would find most useful for their purpose, and the authors' catalogue as well as the several subject-indexes (which, incidentally, are published up to date every few years and which are consulted and used by librarians all over the world) provide the members with up-to-date information of the most important works published on their subject.

In the second place, the London Library is not a lending library in the same way as the admirable subscription libraries are lending libraries. It is not the policy, for instance, of the London Library to be up to date with current fiction. We do not purchase the latest novel, unless it be by an author of established reputation, and many biographies and memoirs have to wait a bit to prove their value before the library considers them worthy of finding their place upon our shelves. The large sums that we spend annually on the acquisition of new books is in the main devoted to books of importance, whether they be published in England or overseas. Successive Librarians, such as Sir Hagberg Wright, Dr. Purnell, or Mr. Simon Nowell Smith, have been men of letters and professional scholars, intent on maintaining the high standard of the library without overburdening its shelves.

In the third place, there exists no lending library in the world—and by lending library I mean one that allows its members to take books home with them or have them sent to them in the country—which possesses so valuable a collection of foreign works of reference or standard books. The sections in French, German, Italian, Spanish, Portuguese, Dutch, and Russian are specially complete, and if you intend to write the life of Potemkin or Pombal or Lamennais you will find in St. James's Square practically all the material that you will need.

Some of you, whether you are old or young, may perhaps be coming to London for purposes of research work or in order to complete some book on which you have been engaged. I suggest that you should bring with you a letter from your own university authority stating that you are a serious scholar or student and worthy of trust. It might then be possible for you to become a temporary member of the London Library, with access to all its resources, and with the privilege of enjoying many of the facilities that it offers. (*Broadcast in the BBC's General Overseas Service*)

Sir Thomas Beecham, Richard Arnell, and Denis Vaughan discussing the first performance of Arnell's 'Landscape and Figures'

The greatest success of all—the Hamburg State Opera's production of 'The Magic Flute'

THE TENTH EDINBURGH FESTIVAL

ROBIN COCKBURN gives his impressions of an annual event which attracts more than a quarter of a million visitors to the Scottish capital to enjoy music and drama, films and paintings, pageantry and folklore, brought together from all parts of the world

TEN years ago many a good citizen of Edinburgh was saying, of the first festival: 'It's just a passing post-war pipe-dream . . . It'll never stand the test of time . . .' and so on. Yet this year the city has almost burst at the seams. And still the Scottish Tourist Board proudly claims: 'We haven't turned a visitor away yet.' And neither they have. If hotels were full—nearly every hotel bed is booked more than a year in advance—and the boarding houses crammed, there were still hundreds of private homes with a spare bed to let. Festival visitors increase Edinburgh's 500,000 population by more than half as much again, and during their stay it is estimated that they spend between £2,000,000 and £3,000,000 in the city.

The year 1956 may become known not just as the year in which the festival attained double figures but as 'the sunglasses-and-mackintosh festival.' Festivals are not exempt from the fickleness of the weather. During the three festive weeks in August and September, Edinburgh saw brilliant sunshine alternate with torrential rain and thunderstorms.

A brilliantly sunny morning, glinting on the polished drums of the kilted Edinburgh City Police Pipe Band as it made its daily march along Princes Street, would give way to a dour afternoon and a downpour by night, a downpour that would send hundreds of spectators hustling home during the performance of the open-air Tattoo—that enormously popular and thoroughly Scottish feature—on the Castle Esplanade. Yet the Tattoo went on, night after night, with Highland dancers performing their delicate, intricate steps on the hard, wet parade-ground.

More 'Sell-Outs' than Ever Before

But such was the amazing appeal of the Edinburgh Festival that floods and storms made not the slightest difference to its success. According to the Scottish Tourist Board ticket sales by the second week were £8,000 to £10,000 up on last year. There were more 'sell-outs' than in any previous year, and the most overwhelming success of all was the Hamburg State Opera Company's performance of Mozart's *Magic Flute*.

Not unexpectedly, some of the finest festival decorations—in a city beflagged and decked with flowers—were seen in the shop windows. In a Princes Street baker's window, for instance, I saw two loaves of bread fashioned in the shapes of a violin and bow; another was moulded in the shape of a harp. Everywhere the motif was tartan: it predominated. Many shops had replicas of the massed pipes and drums in the Tattoo. Some of the taxicabs flew little Lion Rampant flags.

Visitors from abroad seemed to acknowledge this 'Scottishness' by wearing Scottish themselves. Tartan jeans, tartan waistcoats, tartan tammies, and head-squares were to be seen everywhere. Overseas visitors can buy Scottish goods free of purchase tax, and post them home or to their ship—tartan skirts, or Border tweed, even hermetically tinned, specially packed haggis!—(Expanded from a broadcast in the BBC's *General Overseas Service*.)

The festival organisers range far afield with their invitations: last year they brought over some Japanese dancers, this year Ram Gopal's Indian ballet

Jacqueline Mackenzie, a BBC television personality, took the title-role in 'Fanny's First Play,' by Shaw

Characters in the stage adaptation of Dylan Thomas's 'Under Milk Wood,' originally written for the BBC

GEOFFREY BARRACLOUGH, Stevenson Professor of International History in the University of London, outlines in his contribution to 'The Story of Colonisation' the various phases of the great movement which in the course of eight centuries took Europeans overseas into Asia, Africa, and the Americas

The Reaction of Europe

IN the first centuries of its history Europe stood on the defensive. Invaders from south and east, and Vikings from the north, were striving to gain a foothold, seeking a share in the inherited riches which Rome had built up on European soil. Eventually, after the year 1000, the reaction came; and it is that reaction I shall be talking about. I shall try to see what its different phases were, and to distinguish the different motives which took Europeans into Asia, Africa, and the New World.

The first phase was the movement we call the Crusades—an attempt to establish European settlements in Asia Minor. It failed in the end because it came up against the revived power of Islam under the leadership of the Seljuk Turks. But it is significant because it shows clearly the mixture of motives which affected European colonisation later. First, there was the religious motive; it was real, but it was soon overlaid by other considerations. The Italian cities were interested in trading: they wanted to tap the wealth of the Orient. The feudal knights were land-hungry: they wanted estates—and peasants to work their estates for them. The pressure of population, the impossibility of making a livelihood at home, had already led to colonisation within Europe. It took peasants from the Netherlands into Prussia and Poland, and peasants from France into Spain. It took the English into Ireland and Wales.

First Settlements in the Mediterranean

This land-hunger might be mixed with a buccaneering spirit. It was often whipped up by religious fanaticism: Prussians and Lithuanians were heathen; and that was sufficient reason to rob them of their lands. But the Crusades in the East tempered this spirit: they taught the rudiments of toleration. Christian knights recognised in the great Saladin their equal in civilisation and their superior in military genius. At first they abused the Mohammedan faith; before long its high ethical and religious qualities were better understood. If Christianity really were superior, as Europeans thought, it must prove its superiority by its power of attraction, not by the bloody weapon of the sword. This change of spirit has occurred in all phases of European colonisation, but it has usually come too late and too half-heartedly to affect the course of events.

I have mentioned the Italian cities and their interest in Oriental trade. It was a powerful incentive to colonisation, for trade led to trading stations and trading stations led to colonial settlements. Already in the thirteenth century Venice and Genoa had colonies in the Crimean ports on the Black Sea. Similar colonies were founded by the Catalan Company in the eastern Mediterranean: thus began the Spanish maritime expansion. But that was not all. The competition of the Italian cities between themselves led to the search for new markets. And so you get the remarkable medieval intercourse between Europe and the Far East, between Cathay, as it was then called, and Europe—an intercourse which had no parallel again right down until the nineteenth century. The hero of this story, of course, is Marco Polo, but he was not unique, as so many people often assume. For example, Genoese merchants were found at Peking in 1326, and, needless to say, trading interests were stronger than racial and religious animosities.

The Discovery of the Americas

The next, and decisive, phase in European colonisation came, as everybody knows, as a result of the stranglehold which the Turks and the Mamelukes of Egypt had established over the trade-routes of the eastern Mediterranean. It was to discover alternative routes to the Orient that Columbus, Vasco da Gama, and others set sail. The result was the discovery of the Americas. But it is important to remember that colonisation in the true sense of the word was neither the object nor the immediate result. To trade, not to conquer and settle the land, was the intention. And although the Age of Discoveries led to the creation of the Spanish and Portuguese empires in South America, these were less colonial settlements than great systems of exploitation for amassing the fabulous riches of the New World, just as the English enterprises of the sixteenth century were really expeditions to despoil the Spaniards of their new-found wealth. European colonisation overseas hardly got under way before the seventeenth century.

When it did so, conditions were very different. The European wars of religion had produced a new atmosphere. Many of the colonies now established in the New World were the work of persecuted minorities seeking freedom of religious belief. They attracted also those whose economic status had suffered from incessant war and famine and poverty: the uprooted and the hungry as well as the persecuted fled overseas.

But the great European wars added another motive as well for colonisation—one that was destined, in the end, to be the most important. The rising nation-states had discovered that the resources of the New World were of decisive importance in their rivalries and conflicts at home. And so the struggle for predominance in Europe served as an

impetus to colonisation and empire-building. The rivalries of Spain and Holland, of Holland and England, of England and France, were fought out across the oceans. In India as in North America eighteenth-century England was out to defeat France, to prevent France from drawing ahead, quite as much as it was seeking to found colonies for their own sake. The old colonial system, as it is called, was an offshoot of the rivalries of the European Powers.

The new colonial system of the nineteenth century was the result of the Industrial Revolution. It is sometimes said that the driving force was the vast increase in the population of Europe. But that is only partly true. Surplus population certainly went to America and Australia, but the French colonies in north Africa were not founded as an outlet for surplus population; and India, also, was unsuitable as a permanent residence for Europeans, and was not conquered by England for that reason.

Again, there was no pressure of population driving Russia to seek new colonial lands in central and eastern Asia. Russian colonisation, it is true, stands in some ways apart from that of other European Powers: they had gone overseas; Russia colonised overland. Its pioneers had entered Siberia at the close of the sixteenth century; but Siberia was forbidding territory, and it was only in the nineteenth century that Russian colonisation in central Asia got under way, until in the end the whole of Turkestan was conquered.

Russian motives were no different from those of the other European Powers: that is to say, they were strategic. There was also a search for markets, particularly for entry into the Chinese market; and, above all else, conquests were undertaken for reasons of prestige and power. These were the motives that impelled all the European states alike as the nineteenth century advanced. The competition of highly industrialised nations, the driving force behind the movement, reached its peak in the last quarter of the century, and their rate of encroachment was quite without parallel. In only one generation no less than one-fifth of the land area of the globe and one-tenth of its inhabitants were gathered into the expanding domains of the European conquerors.

Colonisation in Asia and Africa

In all this process we must distinguish between colonisation in the so-called empty lands and colonisation in the old crucibles of civilisation with their teeming populations. In reality, of course, there were no empty lands. The colonisation of North America involved the elimination for all practical purposes of the North American Indians.

But in India and China, and in parts of Africa also, where they came up against existing civilisations and effective governments, the Europeans acted differently. First they established trading-stations; then they intervened on the grounds that the safety of the settlement required stability; then they demanded concessions to establish a sphere in which other European Powers could not interfere.

This was the course of events in China from 1834, when the British were recommended to occupy Hong Kong as a means of applying pressure on the Chinese Government, down to the acquisition of the New Territories in 1898, as a reaction against the drive of other European Powers, Germany in particular, for a foothold in China. Two different situations resulted. In some territories the European settlers had an absolute majority: Australia and New Zealand are a case in point. In others they remained a minority whose position could only be upheld by the active support of the government at home.

Neither position was tenable in the long run. The European settlers, unless hard pressed by a native population, demanded at least autonomy, or (as in the case of the United States) threw off colonial bonds altogether. In the other territories, in India, for example, or in China, it was only a question of time until the acquisition of European techniques placed the native population in a position of technical equality both in the industrial and in the military fields. Here Japan showed the way to Asia and to Africa also.

The reaction was the more certain, and was all the stronger, because none of the European Powers had evolved a consistent or convincing colonial ethic. Here the fundamental issues had already been raised, back in the sixteenth century, by the Spanish Jesuits. Morally, they said, colonial rule could only be justified by the benefits conferred on the native inhabitants: they were God's creatures, and must be accorded equal human rights. The answer they received was categorical: 'We came here,' their opponents told them, 'to get rich and relieve the Indians of their gold. It is a law of nature that the inferior shall be subject to the superior, heathen to Christian, savage to civilised.'

In the ensuing conflict of policy the Jesuits were defeated. It is true that the voice of European conscience, which they first raised, has never been stilled; but it has also never been unambiguously dominant. (*Broadcast in the BBC's General Overseas Service*)

King's Cove is a typical Newfoundland outport, getting its living mainly by fishing: the opening of the Cabot Highway has brought it closer to St. John's

A Canadian Looks at Newfoundland

RONALD HAMBLETON describes the large and rugged island jutting out into the north-west Atlantic which became Canada's tenth province in 1949 after having been a British colony—in fact the oldest—since the days of the great Elizabethan sailor-explorers

NEWFOUNDLAND is Canada's tenth province now, but that is not the main point of this tale. The point is that when I came to write a biography of E. J. Pratt, the Canadian narrative poet whose world is the sea, I found that I could not write about him at all without first learning something about Newfoundland. I could not really understand him without understanding at least to some extent his people. And this was a difficult job, because in Canada Newfoundland and its people are still pretty strange to the rest of us.

Most people know that Canada is officially bilingual and that about a third of the population is French in language, thought, and culture. You would think that this was a strange element to English-speaking Canadians. It is strange, of course, but it is a strangeness we have lived with for centuries. Newfoundland, however, although it is the oldest British colony, was indeed a new-found land to us, less than ten years ago.

To find the spot where E. J. Pratt first saw the light of day you have to look to the far right of the map of Canada. At that point we are nearer to England than we are to Vancouver, B.C., at the western part of the Dominion. At one point this island of Newfoundland is only eleven miles from the mainland, but it is incredibly far away in spirit and mood.

The Mood of the Place

The mood of the place seems to remain unchanged to me since the first man landed there. Sir Humphrey Gilbert, nearly 400 years ago, discovered this island for his Queen when he and his ships went exploring along the shore. The *Delight* sank with its passengers—blacksmiths, carpenters, and musicians and one poet. The *Swallow* foundered off Cape Race because its crew was sick with plague and could not man her. The *Squirrel* was swamped by the Atlantic waves carrying Sir Humphrey to the bottom with her. Only the *Golden Hind* brought back the news to Falmouth.

It is not a very big island, and the weather is grim. The temperature never rises above sixty degrees except in the most unusual days of summer, and it often drops to sixty below in winter. There is almost no farm-land on the island—it is so rocky and craggy, so there is only one main road. But then almost all the inhabitants live in a tiny peninsula at the south-east tip, called the Avallon Peninsula. No one lives inland. They all live in settlements, large or small along the wrinkled coastline.

Bonavista is a typical Newfoundland settlement—it is called an outport—not very far from Gander airport. It is a collection of about a thousand buildings, square and white, two or three storeys high, set not in straight rows, but angled, each on its own little plot of land. They come closer together as we draw nearer to the sea until they turn into boathouses and piers. And then there are the ships. The whole island depends on the sea for most of its livelihood.

Since confederation there has been more heavy industry building up, and this has drawn the people southward to the region of the Avallon

Fishing boats along the waterfront at Grand Bank on the Burin Peninsula

Peninsula. Since the whole island is bound by ice part of the time, and in the north for six months of the year, travelling has to be done by boat or dog team. That means, too, that for most of the time the Newfoundlanders have to live in isolated communities, self-sufficient in every way. They are knit together, as they always have been, and this is still the only place in Canada where dialects are not dying out. There are communities that speak Gaelic, others that speak a kind of Norman French, others that have an Irish brogue, all mixed up and corrupted by Eskimo and Indian words. In religion they are hardly ever mixed.

In the central region, rocky and glacial and marshy by turns, great new mining works are now developing, but these mechanical devices have not yet affected the Newfoundlanders themselves. Their territory extends fifty to 100 miles out into the Atlantic and their world is marine.

Just think of the place-names, every one evoking the memory of some sea tragedy, or some victory over the sea: English Harbour, French Bay, Spanish Room, Portugal Cove, and Ireland's Eye—these tell us about the sailors and fishermen of many nations who have crowded in. There are places like Happy Feeling, Sweet Bay, and Heart's Delight; others called Unfortunate Cove and Misery Point and Empty Net; and in lonely regions places called Seldom Come By and Come By Chance. So the Newfoundlanders have written a bit of their story into the map.

They do not laugh easily, not the fisher-folk. There are too many capsized trawlers, too many shrouded bodies washed in, too many widows on the island for that. But they do have their moments of exuberance. This is the only place in Canada where folk-poetry is a natural if not a very frequent mode of expression. There are folk-songs still being created, one of which cropped up not many years ago, which runs: 'I's de boy that builds de boat and I's de boy that sails her.'

Amongst the rest of the Canadians it is still unusual to know someone who has been to Newfoundland. It has no graces, no elegant resorts, no leisure, and very little luxury. All it has got is three centuries of battle with the sea. One thing could be said for the pioneer who 'homesteaded' at Ontario, say—sooner or later he tamed the land and put lawn where once was forest. Newfoundlanders will never tame the Atlantic, no matter how often their ships plough in it. (*Broadcast in the BBC's General Overseas Service*)

SIR SIDNEY ABRAHAMS spoke in the 'I Remember Africa' series of his years as Attorney-General in the Gold Coast: 'I feel a legitimate pride,' he says, 'in my association with a Colony whose advancement to the verge of independence within the Commonwealth reads like a romance'

SIR SIDNEY ABRAHAMS

The Gold Coast as I Knew it

I SPENT twenty-four years of my life overseas in the Colonial Legal Service and in that time served in six territories and became acquainted with a number more. I think I can fairly say that my time spent on the Gold Coast provided and still provides me with an interest not excelled by any of these other territories. I can feel a legitimate pride in my association

of a little over four years with a Colony whose advancement from Crown Colony status to the verge of independence within the Commonwealth, in less than twenty years since I left, reads like a romance. I feel sure that the example of the Gold Coast stimulates other Colonial dependencies to emulation.

In the time allotted to me in this talk I am going to engage in some reminiscences of the time I spent in the Colony from early in November, 1928, to the end of January, 1933, holding the important appointment of Attorney-General. Shakespeare's Henry V before Agincourt says: 'Old men forget.' They do forget, but they also remember, and remember vividly—why, I cannot say, for memory is capricious. What I am going to select for my talk is somewhat of a variegated nature, and begins with my landing at the port of Sekondi. Here my wife and I made our acquaintance with the mammy-chair and the surf-boat. The famous deep-water harbour of Takoradi near Sekondi had been opened a short time earlier by the Secretary of State for the Colonies, the breezy J. H. Thomas, but it was not then in full working order, and passengers embarking and disembarking at coastal ports had to undergo the ordeal of being slung overside in a sort of box into a boat which was tossed up and down according to the intensity of the waves on that iron-bound shore. My wife never became reconciled to the mammy-chair, and I never became reconciled to the surf-boats, which despite the skill of the boat boys were occasionally overturned when nearing the shore, and on rough days there used to come into my mind the unfortunate experience of one of my predecessors in office who was drowned when his boat was upset in the surf.

Today I believe all passengers disembark or embark at Takoradi, proceeding to or from there by a good and interesting coastal road. The most remarkable features on this road, as I recollect, are the famous castles built by the Portuguese in the fourteenth and fifteenth centuries, the most impressive of which are Elmina and Cape Coast, fairly close to each other. I once saw the great pile of Elmina one night in the light of a full moon, and I marvelled at the daring and enterprise of these pioneers in navigation and adventure, who were said to have constructed this fortress of stone brought out from Portugal and landed in the boiling surf. Building began in 1482, and took eighty years to complete.

The New Supreme Court Building

As Attorney-General my departmental chambers were located in the Supreme Court, a not very dignified building to house the courts, and it had the reputation of not being actually sunproof. I felt a little uneasy when rays of the tropic sun penetrated my room, though I cannot claim that I suffered any ill effects. The present Court, a fine massive building worthy of the purpose for which it was built, was begun but not completed before I left the Colony in 1933. I saw it on my visit in 1949, and felt gratified to realise that the great government function of the administration of justice (I may be forgiven if as a lawyer I claim it is the primary function of government) has been adequately honoured.

In my day the Supreme Court consisted of the Chief Justice and five puisne judges, all Europeans. Today the Chief Justice and three of the puisne judges belong to the Gold Coast. Such has been the progress of the Colony and the recognition by the British Government of the competence of its inhabitants.

The Chief Justice in my time was a famous personality, Sir Philip Crampton Smyly, who at sixty-two retired in 1929 after eighteen years of office preceded by fifteen years in the neighbouring Colony of Sierra Leone. I have the most affectionate recollections of Sir Crampton and his charming wife, who were our next-door neighbours.

The Attorney-General of a Colony is the titular head of the Bar, and as such should be attentive to the interests of the legal practitioners of the Colony, and if necessary should be their spokesman where these interests require representation. I trust I was not lacking in my duties in that respect. I made many friendships in the profession, the members of which were almost entirely African, and I remember gratefully and proudly the complimentary luncheon given me by the Bar on my departure as well as the kindly speeches made in my honour when I took farewell leave of the Bench and Bar on the same occasion.

I must mention a few legal personalities. The doyen of the Bar was

Peter Awoonor Renner, who must at that time have been over seventy but maintained a youthful vigour in his tall, powerful frame. He was an eloquent speaker and an able lawyer, and had wit and humour which I found most attractive. Another veteran, Franz Dove, a native of Sierra Leone, was also very much of a personality. He was a lawn-tennis fan and frequently went to England to enjoy Wimbledon. Even in his sixties he was no mean player himself. He had his own private court, and I enjoyed many an afternoon there. Franz lived to be over eighty, maintaining his interest in sport to the last. He died in England some four years ago, and a memorial service was held for him in St. Martin-in-the-Fields. Of the younger members of the Bar, I would make special mention of J. B. Danquah, LL.D., lawyer and literary man, and those two men of destiny, Sir James Henley Coussey, President of the West African Court of Appeal, and Sir Kobina Korsah, recently appointed Chief Justice of the Supreme Court.

Changes in the Constitution

I should feel ungrateful if I did not record my appreciation of the loyal assistance given to me by my senior Crown Counsel, L. E. V. McCarthy, the son of an African father, who had been Solicitor of the Colony, and an English mother. McCarthy was a tower of strength to me, with his unequalled knowledge of local law and custom.

The Gold Coast constitution today provides for the government of the Colony, Ashanti, and the Northern Territories by a legislature and executive closely approaching self-government. The legislature is elected, and the executive exercised by an all-African cabinet with an African Prime Minister. In my day the Executive Council was purely official, and the Legislative Council consisted of sixteen official and fifteen unofficial members. This legislature was responsible for the Colony only. Ashanti and the Northern Territories were governed separately by the Governor of the Gold Coast, who worked mainly through a Chief Commissioner. The Ashanti Kingdom, as every schoolboy knows, was brought to an end by a British Expedition in 1896, and the young king Premph was exiled to the Colony of the Seychelles in the Indian Ocean. There he remained until 1924, when he was brought back to his former capital Kumasi, and two years later his gratified people, with the approval of the British Government, elected him as Kumasihene, that is to say Paramount Chief of Kumasi.

My reminiscences would not be complete without mention of two very distinguished personalities among the head chiefs who were members of the Legislative Council. They were Sir Ofori Atta, K.B.E., Omanhene, that is Paramount Chief, of the State of Akim Abuckwa, and Sir Emmanuel Mate Kole, Konor or Head Chief of the State of Many Krobo. Atta would have looked impressive in any company. A big, handsome, dignified man in his chieftain's robes, he spoke perfect English in staccato sentences, fired in debate like a machine gun. Mate Kole, though not as forceful a character, was no less dignified, and his gentle engaging manner made him generally popular. I parted from them both with mutual regret.

And now a final word about sport. The people of the Gold Coast, both European and African, had a variety of sporting activities, though not so well organised as they afterwards became. Cricket, football, tennis, golf, and polo had their enthusiasts. The Turf Club ran a number of race-meetings which were well attended. As the possessor of a high-class stop-watch, and having had some experience in timing athletes, I was selected as time-keeper, and found timing horses easier than timing men. Track athletics, the form of sport nearest my heart, was restricted to the half-dozen or so schools and colleges, and I was complimented by being elected president of the association for promoting the annual championships of these establishments. The competition was keen and the sportsmanship good, but I cannot truthfully say the standard was very high. I took on the training of the athletes for the Accra Technical School, and felt rewarded when one of my pupils named Isaac Narquah long-jumped twenty-one feet six inches—a distance not to be compared with the performance of West African athletes today, but a good effort at that date on very hard ground and with bare feet.

In 1949 I was invited by the Gold Coast Government to visit the Colony to conduct a campaign for the encouragement and improvement of sport. As a result, I am glad to say, a team of athletes visited England in 1950 and achieved considerable success. The Government, on their return, voted a large sum of money for the construction of a stadium, since completed. A team took part in the Olympic Games at Helsinki in 1952, and in the British Empire and Commonwealth Games at Vancouver in 1954. The Gold Coast is on the athletic map, and just as I hope that one day a Gold Coast scientist or writer will be awarded a Nobel Prize, so I hope that one day a Gold Coast athlete will win an Olympic Gold Medal. And why not? (*Broadcast in 'Calling West Africa'*)

The bureau recently helped a firm of ironsmiths in a Buckinghamshire village to execute a pair of gates for Christ Church, Oxford: the gates (right) were donated by an American, and they bear the arms of England and the U.S.A.

The Village Craftsman

MUNGO MACCALLUM talks about the work of the Government-sponsored Rural Industries Bureau in helping to keep men like the village blacksmith, the boat-builder, and the saddler in business

YOU hear a lot of talk nowadays about how standards of workmanship are deteriorating and mass production is displacing craftsmanship. I used to agree with this, but now I am not so sure. I recently paid a visit to the Rural Industries Bureau, south of London. And in this organisation, with its rather uninteresting title, it seems to me that craftsmanship and progress are being combined in a big way.

The Rural Industries Bureau was founded to keep rural industries alive in an era of mass production and new techniques: to keep men like the village blacksmith, the boat-builder, the saddler in business in a useful, not merely an arty-crafty way. British Governments, Conservative and Labour, regard this as supremely important in peace and war.

Now, the difficult of keeping, say, a boat-builder busy in a village on the east coast is that techniques change; and he, working on next to no capital, has not the equipment to compete with the cheaper boats put out by a big firm. So, if he is unlucky, he goes out of business; the village loses another fragment of its identity; and his son migrates to the city. But the bureau can stop this from happening.

A Miniature Boat-Building Yard

The bureau stands in the middle of the considerable expanse of Wimbledon Common. An old farm has been converted into workshops, and in the first of these, as we enter, we find a miniature boat-building yard. The wonderful smell of wood and shavings fills the air, and from the floor rears the half-built hull of an eighteen-foot boat. The builder, a middle-aged craftsman, explains that this boat has scarcely a single screw in it: it is a glued job. Glued boats are in demand, and he is building this one with the minimum equipment to show small builders how they can do it and still make a profit.

Further on we meet a chunky man with shoulders like an Australian axeman's. He is a master blacksmith, an authority on wrought-iron work, and he tells us a story. A beautiful old iron gate at the entrance to a historic castle was falling to bits, but the local smith could not restore it because he did not know how to reproduce some of the ornamentation. He sent an S.O.S. to the bureau, and our friend the master-craftsman went down and showed him how. Now the gate is as good as ever, and an ancient skill has been revitalised to the good of all concerned.

And so it goes on. We meet many craftsmen on the bureau's staff, speaking in the accents of all England, from Cornish to Cockney, Berkshire to Birmingham, with many stories of how old skills are being kept alive and new skills adapted so that handcraft can compete with mass production. Finally, we go into a big room, and here, ranged round the walls, are examples of the work we have heard about. Beautiful furniture, pottery, basket-work, brick-making, wrought-iron work and designs, fishing nets, toys—all hand-made, and all an economic proposition. (Broadcast in the BBC's Pacific Service)

A craftsman in a small boat-building yard: by doing research into new techniques the bureau enables such firms to meet the competition of larger ones

Small brickyards can send samples of clay to the bureau's testing station near Reading, where they are moulded into bricks, which are then baked and tested

OUR WAY OF LIFE: 15

J. B. PRIESTLEY

J. B. PRIESTLEY, speaking as one who describes himself as almost a classless man, suggests that class-consciousness exists on all levels of English society, and he asks you to believe that in some respects it is stronger towards the bottom of the social ladder than at the top

The English Class System

IN a series like this any speaker obviously has a very wide choice of topics. I have gone and landed myself with what is probably the most difficult subject of all: the English class system. It is my own doing; I have only myself to blame. But at least I have two good reasons for attempting this theme. In the first place, it has rarely been quietly and reasonably discussed—simply because most people cannot help starting to discuss it with a good deal of prejudice one way or the other, and therefore in a rather emotional fashion.

Now I have no such strong feelings. I am in fact almost a classless man, a rare figure among Englishmen. This is not due to any personal superiority but chiefly to a series of accidents. My grandparents on both sides belonged to the working class. My father, a schoolmaster, ended as a member of the professional middle class, but in the lower rather than the upper half. I suppose if I am to be put anywhere, then I am in the upper half of the middle class, but with all the lower classes just round the corner. But actually, as I am sure most people in Britain would agree, rather a classless type. I certainly have no strong feelings about class, so I am the man to talk about it.

The other reason why I chose this complicated prickly subject is that I know from personal experience that a great many people overseas completely misinterpret and misjudge the English class system. They assume that it is something imposed upon the lower classes by the members of the upper classes. They think it starts at the top, backed by tremendous authority, and then has to be accepted, with much grumbling, all the way down the social pyramid. Now I assure you that this idea of the English class system is quite wrong. This is how a dictatorship works, when a new hierarchy has to be imposed chiefly by force, but it is not how things happen in a very old society like ours. For you must remember—it is very important—that we have been on this island a long, long time.

The system is not imposed from the top or from anywhere else. Class consciousness exists on all levels of English society. Believe it or not, in some respects class consciousness is stronger towards the bottom of the social ladder than it is at the top. Nearly all English people instinctively grade themselves socially, being intensely aware at all levels of the most delicate fine shades of social inferiority and superiority.

During the war I was chairman of a small organisation that ran hostels for bombed-out working-class mothers and children, chiefly from the East End of London. I saw a good deal of these women, some hundreds of them, and I assure you that being English they began grading themselves in terms of social inferiorities and superiorities far too subtle for my understanding. You can call it pathetic or absurd just as you please; but there it is: it is an essential part of the normal English character. Incidentally, it is one reason why the English have produced so many good novels, for a society of this sort, with nearly everybody on a series of gigantic social ladders, offers a novelist wonderful material.

Not Imposed from the Top

Mistake number one, then, is to assume that the class system is imposed from the top. Mistake number two—and I do not blame anybody from a different type of society for making this mistake—is to imagine that this division into classes is galling and wounding and generally humiliating for everybody except those at the top. Not a bit of it! This is to misunderstand the whole situation. One class may be thought to be better than another—and in my youth the very term 'better class' was frequently used—but this does not mean that the actual persons in that class are held to be better as persons.

I may consider myself socially inferior to a duke—as indeed I am—but that does not imply that I think myself personally, as a man, inferior to a duke. Nobody in the eighteenth century supported more wholeheartedly the class system than Dr. Johnson, and nobody then or now was more sturdily independent than Dr. Johnson. (Several of his remarks, quoted by Boswell, are valuable keys to the English class system.)

Recently, reading an American book about the talk—you might call it table talk—of Alfred Whitehead, the philosopher, I noticed that in spite of his highly favourable view of American society he thought the English system more comfortable and companionable than the American, in which men and women were more likely to be despised because they did odd menial jobs, on the ground that in a classless society they ought to have done better for themselves.

Not that the English have ever been fixed in their classes: this is a class, not a caste, system. Ever since the Middle Ages if an Englishman did not like the class he found himself in he could by making the necessary effort leave it for another and perhaps much higher class. English

history is crowded with men of humble origin who became great leaders and died glittering with titles and orders. This idea of promotion by exceptional merit is an essential part of the system. I agree it has its drawbacks. It tends to encourage conservatism, because men hastily climbing the social ladder take care not to attack and defy the established order. Again, I have always thought that the prevailing idea of class was a hindrance and not a help to England as a highly industrialised country. For this reason, that the English employer tended to pay very low wages just because most of the men and women working for him belonged to what he called the working classes and therefore ought to be content with low wages. In this way his class prejudice often operated against his best long-term interests, for his competitors overseas, notably in America, succeeded by raising both wages and the rate of production.

I must add, however, that here I am referring to the immediate past and not to the present time. Indeed, there can be no doubt that the class divisions of the past are now losing all their sharp edges and are beginning to fade away. But there are signs that their place will be taken by divisions more suited to the economic and social structure of our time. In short, our fundamental class-consciousness remains, together with the whole absurd elaboration of minute social inferiorities and superiorities. But the English in general enjoy this game as they do so many others, and after all they might be easily enjoying far worse things. (*Broadcast in the BBC's General Overseas Service*)

The T.U.C.

BEN ROBERTS, Lecturer in Trade Union Studies at the London School of Economics, gave this talk in the Overseas 'Commentary'

REGENCY Brighton, with its charming squares, rows of beautiful Georgian houses, and miles of delightful promenade, was the town chosen for this year's annual British Trades Union Congress. About 1,000 delegates, representing more than 8-million members, discussed a wide range of social, economic, and political issues.

From the point of view of the public attention the Congress now secures, the original hopes of its founders have been amply fulfilled. At the time when the first Congress was called, eighty-eight years ago, the unions were on trial before a Royal Commission, set up in 1867 to investigate the manner in which the unions conducted their affairs. Since they feared a hostile verdict the unions were anxious to explain their point of view to the public, and they thought they might achieve this by holding an open discussion of their problems.

The first gathering, held in Manchester, was rather like an academic conference. There were, however, too many pressing issues of practical concern to the delegates for them to dwell for long in the genteel atmosphere of an academic gathering. They wanted action, action that would better the lot of work-people, and a resolution was enthusiastically carried that henceforth 'the trades of the United Kingdom should hold an annual congress for the purpose of bringing them into closer alliance, and to take action on all parliamentary matters pertaining to the general interest of the working classes.'

A Parliamentary Committee was later elected, and it soon became closely allied to the then powerful Liberal Party. But a good many workers, especially in Lancashire, at this time voted Conservative, and the Parliamentary Committee was not always successful in persuading trade unionists to vote for the Liberals.

In the last twenty years of the nineteenth century there was a growing dissatisfaction with the failure of both the Liberals and the Conservatives to tackle the social problems of unemployment and poverty. The Parliamentary Committee was not keen on an independent Labour Party and resisted demands that one should be established; but eventually it reluctantly decided to enter into an association with a number of Socialist organisations to form, in 1900, the Labour Representation Committee. Six years later, with twenty-nine Members of Parliament, the Labour Representation Committee changed its name to the Labour Party.

The trade unions gradually affiliated to the new party, and by the end of the first world war they had finally severed all their previous ties with the Liberals. Since that time the unions have been wedded ideologically as well as constitutionally to the Labour Party. But, and it is important to remember this, the T.U.C. is an independent body. Indeed, when Labour Governments have been in office the T.U.C. has been a powerful though friendly critic. (*Broadcast in the BBC's Overseas Service*)

A Visit to Broughton Castle

PATRICIA WINGFIELD takes you into Oxfordshire to a moated castle owned by the twentieth Lord Saye and Sele, whose family have lived there continuously for 504 years: it is one of the few such castles still in use as a private residence

In the topmost room of the wing nearest the camera the Parliamentarians met to plot the rebellion against Charles I

TODAY you do not find many moated castles in England which are lived in as homes. But there still are a few, and one of them is Broughton Castle, near Banbury in Oxfordshire. Broughton is perhaps rather deceptive at first glance: you see, it is a typically fourteenth-century castle with an Elizabethan manor-house superimposed. When Richard Fiennes 'modernised' it in 1554 he did not pull it down, as so often happened in those days: he left the fortified part as the core of the building and built above and around it, with the result that today the owners, Lord and Lady Saye and Sele, are able to sleep in a fourteenth-century bedroom, sit in a dining room that has a fourteenth-century vaulted roof, and use a fourteenth-century chapel.

Broughton was first acquired in 1306 by a Crusader, John de Broughton, who gave the house his name. From him Broughton passed to the famous William of Wykeham, whose picture hangs in the Great Hall. It was William of Wykeham's great-great-niece, Margaret Wykeham, who brought the castle into the Fiennes family when she married Sir William Fiennes, the second Lord Saye and Sele. And today the Fiennes family still lives there—the present owner is the twentieth Lord Saye and Sele—a record of 504 years of continuous residence.

'Tremendous Feeling of Continuity'

That, I think, is what impressed me most at Broughton: this tremendous feeling of continuity about the house. Wherever you look you see the actual possessions left here by generations of the Fiennes family; especially in the Great Hall, where there are medieval suits of armour (I am told there are many more put away that would take a lifetime to clean); and on the walls are swords and pistols of every period, as well as Cromwellian breastplates, and even tin helmets from the first world war.

This Great Hall is, in medieval fashion, in the centre of the house. Once the smoke rose through a hole pierced in the roof. But Richard Fiennes, with his ideas for modernising Broughton, in 1554 put a plaster ceiling on this Great Hall, and two floors above it. It is an elaborate ceiling, typically Tudor: the white plaster pendants pointing down like so many stalactites—an incredible contrast with the bare, stone Gothic walls. In fact, some visitor was heard to say once: 'I never thought I should see a Tudor ceiling that would be too modern for the walls!'

The most famous Lord Saye and Sele was the one who, like Hampden, objected to paying Ship Money to Charles I. He thought the country had suffered just about enough from Charles, and he actually planned the Civil War at Broughton with Pym and Hampden and Harry Vane and others (but not Cromwell, who was not yet prominent). The Council Chamber is the room where the plotters sat; and I must say it is the perfect room for the job, isolated at the top of the house and overlooking every approach to the castle.

At the beginning of the Civil War this Lord Saye and Sele with his two sons fought for the Parliament in the Midlands, and there are rooms at Broughton still called the Barracks, where his regiment of Bluecoats slept the night before Edge Hill. He was, according to the Cavaliers, 'a curious subtil Piece,' and came to be nicknamed 'Old Subtlety.' Later he showed his disapproval of the Commonwealth by retiring, and at the Restoration of Charles II he painted the panelling in the drawing room for joy. (Broadcast in the BBC's General Overseas Service)

The Great Hall is in the centre of the building: its stonework is medieval, but the plaster ceiling was put up by Richard Fiennes in Tudor times

The same Lord Saye and Sele who fought Charles I later welcomed the Restoration, and to show his joy painted the panelling in the drawing room

Books from Britain

The Tribe That Lost Its Head

NICHOLAS MONSARRAT. The most startling novel of the year. A massive and important theme—that of race relations and self-determination—and forceful writing make this great new Monsarrat a book that will create controversy everywhere. 18s. CASSELL

Atomic Weapons and East-West Relations

Professor P. M. S. BLACKETT gives an informed and controversial account of the present situation in the development of atomic weapons, with a disturbing critique of the policies of the great powers. About 8s. 6d. CAMBRIDGE UNIVERSITY PRESS

John Graham, Convict

ROBERT GIBBINGS. 'There are few works that give so perfect a picture of the Australia of the Botany Bay days... Embellished with magnificent wood engravings', by the famous author-artist. New edition after being out of print for some years. 15s. DENT

Saints of Sind

PETER MAYNE. Sind, in West Pakistan, is a land where esoteric mysteries are taken for granted, and where 'saints' abound. This unusual book combines a personal quest, a personal adventure, and an account of travel. *Frontispiece and map.* 18s. JOHN MURRAY

An Historian's Approach to Religion

ARNOLD TOYNBEE. As a complement to *A Study of History*, Dr Toynbee considers the attitude of the 20th century Western world towards Christianity. 21s. OXFORD UNIVERSITY PRESS

Pan Books

Alan Villiers' *Cruise of the Conrad*, story of his global voyage in the last frigate under sail (illus., 2s. 6d.); F. A. Mitchell-Hedges' *Danger My Ally*, exciting account of his life of adventure (illus., 2s. 6d.); Michael Sadleir's London novel *Fanny by Gaslight* (3s. 6d.); Ernest Hemingway's *Fiesta* (2s.).

Theatre in the East

FAUBION BOWERS. A comprehensive work on the dance and drama of the East, in which the author describes the Four Schools of Indian Dance, the plays of U Nu of Cambodia, Chinese opera and Japanese Kabuki, and dance forms of Eastern Countries. 42s. NELSON

The Saturday Book 16

Edited by JOHN HADFIELD. 'The most richly caparisoned, a dandy of the annuals given us by British Publishers'. *Books of the Month.* Over 100 pages of illustrations in colour and monochrome. September 17. 30s. HUTCHINSON

Homecomings

C. P. SNOW. In this sixth novel of C. P. Snow's famous 'Lewis Eliot' sequence we see the narrator in full maturity. We follow Eliot from the bitter end of his first marriage, through the war to a second marriage, and the beginning of a new and hopeful life. 15s. MACMILLAN

Obtainable at all good booksellers. In case of difficulty write to the publisher, c/o The Publishers Association, 19 Bedford Square, London, W.C.1. (Prices are net)

Books to Read

Reviewed by
M. R. Ridley

I AM going to begin with two really considerable books, separated from one another in period by well over 2,000 years, and quite different in technique, but alike in first-rate craftsmanship, and also in a certain amplitude of general effect, a quality not very easy to define except by negatives.

The Last of the Wine, by Mary Renault, is set in the last years of the Peloponnesian War. Miss Renault is not concerned to analyse the motives of historical characters, or to try to make clear the shifts and intricacies of the cross-currents of politics. She shows us ordinary Athenian life, and we watch the great figures and the cross-currents through the eyes of ordinary Athenians, themselves a good deal bewildered by the political complications in those years when Athens was drawing step by step nearer to her final downfall. The life of the city of the violet crown is drawn with the quiet and precise clarity of a Dutch painter. I know very few historical novels which so vividly recreate a period but in which none the less it is so clear that it is the men and women, not the period, that matter.

In the Time of Greenbloom, by Gabriel Fielding, is wholly modern. It is, I think, a very remarkable and very rich book. The story is that of the growth to young manhood of a highly strung and sensitive boy. His egotistical mother and charming but ineffective father are no help to him; nor is the school to which he is sent in the pursuit of 'normalcy.' In his quite young days his intimate and understanding companion is a girl of his own age, and his feelings for her are shown with a delicacy of perceptive insight which makes most other 'specialists in children' look like ham-handed fumbling. About half way through the book she is found strangled, and the rest of the book follows his struggles to make some sort of adjustment to life after the shock. The chief influence upon him is a somewhat mysterious figure described in the blurb as a 'millionaire prophet,' the Greenbloom of the title.

A Single Pebble, by John Hersey, is the story of a few weeks in the life of a young American engineer, sent to survey for a possible site for a great dam on the Yangtze as he makes an up-river trip in a Chinese junk. The book shows all Mr. Hersey's best qualities. The pictures of the untamable great river are superb, sometimes terrifying. The style is spare and taut, never a word wasted, every word putting its weight on the rope, and, more, applying it in the direction for maximum effect. This is a most satisfying piece of finished technique which is doing much more than merely displaying itself.

All lovers of Francis Brett Young's work will welcome with gratitude his legacy to us, a book called *Winstanlow*. It is described as an unfinished autobiographical novel, but it is much nearer autobiography than fiction. He was working on it in the last years of his life, till he knew that the strain and excitement of creative writing were more than his already weakened heart would stand and sadly laid it aside. But I cannot detect in it the smallest trace of any weakening of his powers, or blunting of his zest for experience. Indeed his love of the English countryside, and his almost unrivalled power of painting it, had perhaps been ripened to a mellower richness by his exile in South Africa.

I am going to take the chance offered by the publication of the latest Penguin block of ten to say something about John Buchan. I do not think that the selection is a wholly happy one. It seems to have been in part guided, or misguided, by a desire for continuity. For example *The Island of Sheep* is there presumably because it is the fifth of the Richard Hannay stories; but it is the least satisfactory of them. But of the other two of this trio, *Castle Gay* and *The House of the Four Winds*, the one is in spirit largely and the other both in spirit and scene almost wholly Ruritanian, and of the many countries that he takes us to Ruritania is the only one where Buchan is hopelessly not at home. None the less, there is here some of the best Buchan. There is *Prester John*, *The Thirty-Nine Steps*, *Greenmantle*, *Mr. Standfast*, *The Three Hostages*, and *John MacNab*.

I have lately been reading two or three criticisms of Buchan which seem to me almost grotesquely beside the point. He is accused of being a snob. It is true that he thought he found in a particular stratum of English society not so much certain qualities which he admired—he finds those also elsewhere—but a particular combination of those qualities. But to label 'snob' a man who created for one of his great figures the old, humble, unlettered South African hunter, Peter Pienaar, is merely fatuous. Buchan was a first-rate teller of stories and of very diverse kinds of stories. He had a strong dramatic sense. He had a command of English clear, euphonious, and highly effective, and he could describe with rare felicity two types of country which he knew and loved, the Scottish lowlands and the English country round Oxford and in the Cotswolds. And it is there, and with the people who live there, that he is always at his best, which is why I should put *Witchwood* far above—and *Midwinter* a good deal above—any of the books in this selection.

The Last of the Wine, by Mary Renault (Longmans, 16s.)
In the Time of Greenbloom, by Gabriel Fielding (Hutchinson, 16s.)
A Single Pebble, by John Hersey (Hamish Hamilton, 11s. 6d.)
Winstanlow, by Francis Brett Young (Heinemann, 12s. 6d.)
10 novels by John Buchan, Penguin series (all 2s. 6d., except *Mr. Standfast*, which is 3s. 6d.)

'Books to Read'—G.O.S. on Wednesday 16.15, Thursday 00.30 and 05.00

Members of the Youth Hostels Association launching their canoes after spending a night by the Thames, and (right) checking their route to the next hostel

Making an Adventure of 'the Holidays'

RUTH DREW tells how, thanks to various youth organisations, more and more children are being given the chance to enjoy holidays away from their families, often leading to exciting trips abroad and to the making of useful friendships with children from other countries

THE fact is that nowadays independent holidays for children have become possible and attractive; and that applies to families with modest incomes as well as to the more well-to-do. So we are now seeing a change in the social pattern, thanks to ever-increasing numbers of schemes designed to give boys and girls a few weeks' adventurous activity during the summer apart from their parents. Many of the people I know have taken advantage of such schemes, and I have yet to find a boy or girl—or a parent—who has not been enthusiastic.

From the viewpoint of international friendship this change is clearly going to be fruitful, because many schemes are run to provide holidays for children in countries overseas. For example, our Boy Scout movement organises many international visits. This year one group from south-western England went off to Copenhagen as the guests of Danish Boy Scouts. A group of twenty-eight boys went off to north Norway for what was described as an Everest-style expedition. The Mount Everest Foundation gave a money grant towards this project, and the boys themselves had been making preparations and raising money for the trip since 1954.

Of course, only limited numbers of boys are lucky enough to be included in these overseas expeditions. But all of them, including the small Wolf Cubs aged eight to eleven, have the opportunity of a short summer-camp in Britain, and the thrill of sleeping in tents and getting gloriously dirty, building camp-fires under the stars. The same applies to Girl Guides in Britain. And for those outside these big national movements there are

A group of pupils from the Colne Valley High School who spent part of their summer holiday youth-hostelling in Germany together with some of their teachers

schemes such as the Concordia camps for older children, some of them abroad, some in Britain. Here boys and girls of many nations work in teams, harvesting grain-crops, picking fruit, and lending a hand with forestry work.

I was talking about all this the other day with a friend of mine whose eight-year-old twins—a boy and a girl—went last year to a forest school-camp. It returned them in unbounded health and spirits. They had been taught just how to camp like old hands in company with a host of children between the ages of seven and eighteen: competently taught, mind you, and unobtrusively cared for by experienced leaders. And the twins were starry-eyed about trekking expeditions through woodlands, and river-journeys by canoe—all of which had opened their minds to the fascinating secrets of woodcraft and wild life in the countryside.

Other children I know have been to riding camps, to explore new territory from the exciting viewpoint of a pony's back. The children themselves are responsible for grooming and feeding these ponies. And some nautically minded characters of my acquaintance have had the time of their young lives at a sailing club which provides safe sailing for small boats in a sheltered inlet. Here they learned how to handle dinghies; and then had the thrill of going to sea with competent instructors aboard one of the larger craft which the club provides, among them a schooner and a six-metre racing yacht.

For children who find their thrills in the mountains short courses are held in various climbing centres. And for those who like walking and cycling there is the tremendously popular Youth Hostels Association. This organisation has a chain of hostels all over Britain where walkers and climbers and cyclists can spend the night and get simple food and accommodation for a very modest charge. It is obvious how popular these hostels are when I tell you that membership now numbers 186,000. By the way, many overseas youth-hostel clubs are affiliated to the British organisation, so that boys and girls go abroad in their thousands every year to explore new lands and meet people of different nationalities. (Broadcast in 'London Calling Asia')

British Scouts acted as hosts to many overseas groups during the summer: Belgian and Swedish Scouts were among those attending a jamboree in Essex

The Farnborough

IVOR JONES, the BBC Air Correspondent, revealing that the British aircraft industry is in a state of recovery, he says, Britain is exploiting more fully than ever

THE weeks before and after Farnborough are always a time of stock-taking for British aviation. Beforehand, this year, there had been a certain pessimism—largely because of the prospective lack of new prototypes. And, in the past, it is brand-new aircraft that have added most to the excitement of the show. The question was asked, and will certainly be asked again, whether foreign visitors would go on turning up at great expense to see aircraft with which, in many cases, they were already familiar. And Farnborough, although it has now become almost a British institution, is intended mainly for overseas guests.

I think the two Russian delegations that spent Farnborough week in Britain gave the answer to this doubt. In terms of rank at least they were the two most powerful delegations from abroad. One, representing the Soviet air forces, was led by their Commander-in-Chief, Chief Marshal of Aviation Pavel Zhigarev. The other was drawn from the Russian aircraft industry, and was led by the Government Minister for the industry, Mr. P. V. Dementiev. The official programmes for both allotted a good deal of time to Farnborough, and the Russians went out of their way to say that they had been impressed by much of what they saw there. But, more than this, members of both teams asked if their timetable could be altered to allow further unscheduled visits there. This was done.

If the Russians found this year's Farnborough display overwhelmingly interesting, even though they are not customers of the British aircraft industry, it seems fair to assume that the other overseas guests—who are, at least potentially—found it equally worth while. As to what they saw: there was only one aircraft that could be called a new prototype. This was the Vickers-Supermarine N.113, an immensely powerful twin-jet naval fighter. It is built to carry an atomic bomb from the deck of an aircraft-carrier. But there were several developments of already famous aeroplanes. There was a new and faster version of the Vickers Viscount, already the most successful airliner Britain has ever built. Bristol's showed their new Britannia—again larger and faster than the one which is going into service initially with B.O.A.C. These two aircraft are evidence that British manufacturers are now getting down to the business of fully exploiting established airliners, as the Americans have been doing for years.

There were other, smaller airliners intended specially to meet overseas needs—the Handley-Page Herald, designed for what you might call branch-line traffic in sparsely peopled places, and the Scottish Aviation

Four transonic Hunters from 43 Squadron in formation over a huge crowd. These fighters have

Developed, the Bristol Britannia 301 will fly non-stop from London to New York

A Canberra bomber demonstrated a Napier Scorpion rocket-motor using liquid propellants, to be used to give fighters more speed and manoeuvrability at great heights

h Air Show

... this year's Farnborough Air Show as re- consolidation and transition. Meanwhile, advantages in building turbo-prop airliners

win-Pioneer which can operate from the world's smallest and roughest fields. British constructors are now increasing their attention to world markets to a point where it is possible for a foreign customer to look at several of the aircraft at Farnborough and say: 'They were designed with my country in mind.'

The flying was, as usual, superb—in spite of the worst weather the tow has ever had. This was particularly hard on the two Fairey Delta 2s, one of which holds the world's air-speed record at 1,132 miles an hour. Originally, it had been planned that they should fly towards each other over Farnborough, each at more than a thousand miles an hour. They could have passed at a closing speed of more than 2,000 m.p.h. at 10,000 feet or above. But it was decided that at this speed—even six miles up—their sonic bangs would be intolerable. The closing speed was cut to 1,600 miles an hour—and only on one day was the weather good enough to make the demonstration possible even on these terms. However, the sight of the two aircraft on the ground was good for the prestige of British aviation.

In spite of the F.D. 2s, though, the emphasis this year has been on aircraft for sale; and, perhaps even more, on aero-engines, which are usually in the market. Exports of British aero-engines are now running more than £500,000 a week. Three major new engines were seen in flight. There was the Rolls-Royce Tyne turbo-prop, fitted in an old Lincoln bomber. It was almost eerie to see this huge 'flying test-bed' making a low-level pass, as it did at one point, supported by only a single engine and propeller.

There was also the Bristol Orion, another big turbo-prop, mounted in a Britannia: and—perhaps most spectacular of all—the Napier Scorpion rocket-motor. This was carried by a Canberra bomber, and poured out a long jet of golden flame.

Two firms demonstrated what might be called new engine techniques. De Havilland's had two of their Super-Sprite rockets attached to a Valiant bomber to help it on take-off. The speed with which the heavy aircraft got off the ground, and the steepness of its climb, were quite extraordinary. So was the noise it made.

Rolls-Royce showed a device for reversing the thrust of a jet engine to shorten an aircraft's run on landing. It was fitted to a Hawker Hunter fighter, with open panels near the tail through which the jet can be forced forward and sideways instead of backwards in the ordinary

(Continued overleaf)

De Havilland Super-Sprite rockets fitted to a Vickers Valiant give the aircraft a shorter take-off, and can then be jettisoned; they are ready for squadron service

... gave a display of aerobatics before 1 American Sabres in the R.A.F.

The Fairey Fireflash, an air-to-air guided missile, was put on show to the public for the first time when mounted under the wing of a Hawker Hunter F.4 fighter

It is more than two hundred years since Drambuie was first brought to Scotland by Bonnie Prince Charlie. The pleasant custom of drinking a liqueur becomes, with Drambuie, part of a tradition that has its origin in the colourful days of the eighteenth century.

Offices of Profit

BRUCE MILLER comments on the recent report of a Select Committee recommending changes in a Bill now before Parliament

A SELECT Committee of the House of Commons has published a report recommending changes in a Bill now before the House on the holding by Members of Parliament of what are called offices of profit under the Crown. This has been a vexed subject for many years.

I think it is a good example of the flexibility of procedure of the British Parliament that there should be a published report of this kind before the Bill is finally passed with amendments by the House. It shows not only the flexible procedure of Parliament, but also the care with which the House of Commons approaches any question of the qualifications and integrity of its own members.

One of the traditions on which Parliament is founded is that it is there to keep an eye on the Crown, the executive government. In earlier days this meant precisely what it said—it meant keeping an eye on the King and his household. All the people we should now call civil servants, or (in our angrier moments) bureaucrats, were then personal servants of the King. They held offices of profit under the Crown. Now if the King wished to ensure that Parliament did not keep too strict an eye on himself and his expenditure, an obvious way was to make Members of Parliament dependent upon himself by giving them positions in the royal household, the executive government of the country.

In the seventeenth century, and the eighteenth, this was the recognised method by which the King got support: he bought it. He made sure that enough Members of Parliament were in office—either real office or office in sinecures of one kind or another—to constitute a loyal majority. There was always an element in the House of Commons that resented this; and in 1700 it went so far as to pass an Act saying that nobody who held an office of profit under the Crown should be eligible to sit in the House. The Act was repealed immediately. Most students would say that was a good thing. If the Act had remained in effect, it would have been impossible for the modern British system of responsible government to develop. That system has as its most essential feature the presence in the House of Commons of Ministers who are responsible to that House, who can be questioned there about their administration, and can be defeated by an adverse vote of the House.

If the Act of 1700 had been proceeded with, no Ministers could have sat in the House of Commons, since Ministers are the most obvious examples of offices of profit under the Crown: they receive an extra ministerial salary in addition to their parliamentary allowance. But a whole series of complicated enactments since 1700 have made it a general rule that if a man holds any other government office than that of a Minister he cannot be an M.P.

It is a commonplace to say that in this century all sorts of new activities have been undertaken by governments; and it is this that has caused the present examination of what an office of profit is.

What is wanted now, it is widely felt, is an enactment which, in the first place, makes perfectly plain to people seeking entry to the House of Commons which posts will disqualify them and which will not, and in the second place a system which makes the field of entry into Parliament as wide as possible without bringing the higher civil service into Parliament and without giving anyone an opportunity to use his position as an M.P. in order to make money by corruption. It looks as if the new recommendations will do that. (*Broadcast in 'London Calling Asia'*)

The Farnborough Air Show

Continued from page 15

way. The Hunter landed in 600 yards—less than half the usual distance. This device will be important in helping future Comets and American jet airliners to land on short and icy runways.

Two final points: Britain's first operational guided weapon—the Fairey Fireflash—was seen for the first time, carried in flight by two fighter types, the Hunter and the Vickers Supermarine Swift. And apart from the flying there was the exhibition of aircraft components and accessories, which this year was bigger and attracted more attention than ever. It was this that seemed to interest the Russians most, with its great variety of equipment—ranging from huge propellers to what seemed to be space suits for air crew and new radar devices. It gave them perhaps an even better chance than the aircraft themselves to sum up the quality of the British industry's products and the progress it is making.

This, I believe, is probably the most important aspect of Farnborough from the foreign visitor's point of view. It gives a fuller opportunity than any other air show of fixing the point that one of the great air powers has reached. Because of this it can almost serve as an international yardstick. Looked at in this way, this year's show indicates that the British aircraft industry is now in a phase of consolidation and, at the same time, of transition: of consolidation, because Britain is now exploiting more fully than ever before her advantage in building turbo-prop airliners, and is now applying the earlier lessons of the Comet; of transition, because the British pattern of future supersonic flight is not yet clear. As to engines, they are not only maintaining but probably increasing their lead.

This Week's Listening

October 28—November 3

'LONDON FORUM'

THE second programme in the series 'The Colonial Question-Mark' is sub-titled 'The Economics of "Exploitation"'. It will deal with the issues raised by the need—which few would deny—for the under-developed countries to exploit to the full their local resources.

Many serious questions will be raised. How far, for example, is external aid really necessary and on what terms? What form of aid best satisfies their economic requirements while not unduly qualifying their independent status? These considerations will be dealt with in the setting of the dependent territories. The programme will open with a discussion of the political aspects, and continue with an exchange of views on the means and minimum social cost of such a venture.

Those taking part will include the Rt. Hon. Aneurin Bevan, M.P., the member of the Labour Party's 'Shadow Cabinet' entrusted with Colonial Affairs, and the Rt. Hon. Lord Salter, a former Conservative M.P. and Minister of State for Economic Affairs. Lord Salter is the author of Iraq's present development plan. The contributors will be introduced by Andrew Shonfield.

G.O.S.: Sunday 16.15; Monday 02.15

THE MAN WHO WAITS

IN many countries today the leisured ease of the café and the restaurant is gradually being replaced by the hustle and bustle of the snack bar and the 'quick lunch' place. This is particularly true of France, where the bistro is fighting a losing battle against the inroads of 'self-service.'

In a recent talk broadcast in the BBC Third Programme, which will be repeated in the G.O.S. this week, Pierre Schneider examined this change in French living and showed how it is affecting the *garçon de café*, that traditional figure of French living whom one economist described as 'the symbol of wasted energy and working hours.'

Schneider himself laments the passing of the *garçon*, the high priest of the temple of conversation, as a victory of 'technology over civilisation.'

G.O.S.: Monday 15.15; Friday 23.15

Richard Todd talks about his career as a film actor on Tuesday and Wednesday in 'The Stars Look Back'

ATOMIC ENERGY TALKS

INDIVIDUAL listeners who were interested in the four talks on atomic energy broadcast in 'London Calling Asia' and reproduced in LONDON CALLING may obtain free of charge the text of the talks in reprint form from BBC Publications, Marylebone High Street, London, England.

WORLD TIME CHART

The following corrections are necessary to bring up to date the LONDON CALLING World Time Chart:

AZORES: amend to: deduct 2

MADEIRA: amend to: deduct 1

UNITED STATES OF AMERICA: all regions: add one hour to the printed times

BERMUDA: amend to: deduct 4

Ted Ray and Kitty Bluett return to the air on Sunday, Tuesday, and Saturday in 'Ray's a Laugh'

THE SOVIET UNION

UNTIL his arrest in 1950 Bernhard Roeder, a Berlin lawyer, was a non-Communist official of the East German Government. For opposing the Sovietisation of East Germany he was sentenced to twenty-five years' forced labour and deported to the Arctic camp of Vorkuta in the Soviet Union early in 1951.

After being transported from Vorkuta to the Urals in 1955 Herr Roeder was amnestied and repatriated later the same year. Since his return he has written a book, *The Katorshan* (the Russian word for political prisoner).

Both by profession and personal experiences Herr Roeder is well qualified to talk on 'The Penal Code and Legal System' in the G.O.S. series on the Soviet Union. In his talk Herr Roeder will examine the principles underlying the Soviet legal system, and what is meant by 'Socialist justice.'

He will also discuss the changes in the law and punishment wrought by the death of Stalin, and, in particular, the extent to which slave labour now plays a part in the Soviet system.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

THE WEEK'S FLAYS

IN his novels Francis Brett Young was always prepared to tackle the large theme, the broad canvas; and so it is with his *White Ladies*, which Anthony McDonald has adapted for broadcasting. The title is the name of a large house in the country which Bella Tinsley finds by accident before the first world war, and falls in love with.

As luck has it, Bella happens to be a very wealthy young woman at the moment 'White Ladies' comes into her life, and so is in a position to try to acquire it, though this in itself proves very difficult. But the house becomes an obsession with her.

Indeed, the strands of her whole emotional life become entangled with the house: her love affair with Henry Fladburn in the days when she was a lowly governess before her uncle left her his money; the relationship with Wilburn, her lawyer, who advised her well but eventually embezzled part of her fortune; her marriage, and the son to whom she plans to leave this incomparable home. The house is the be-all of her life, and we are shown how it is also very nearly the end-all.

Obsession of a very different sort colours Dan Totheroh's *The Great Dark*, for here is drama whose origin is in the miner's determination in the face of dangers underground. There has been a pit disaster; five men have been trapped down the mine. Above, their wives are waiting, and from their talk together we learn about them and about the men below.

PETER FORSTER

'White Ladies': Sunday 01.00, 18.30; Wednesday 14.15

'The Great Dark': Monday 11.30; Thursday 19.00; Friday 01.30

THE OLYMPICS

THE excellent track and climatic conditions of the 1932 Games at Los Angeles helped the setting up of new records in most of the athletic events which were held. Amongst them was Tommy Hampson's victory in the 800 metres in what was then a world record time.

This week Mr. Hampson will tell Roger Bannister about the tactics which carried him to success, and will also recollect other outstanding impressions of what he has called 'The Sunshine Games.' Mr. Hampson is now the Social Relations Officer of Stevenage, one of Britain's new towns.

G.O.S.: Monday 17.00; Tuesday 02.15 and 09.30

VICAR OF ST. MARTIN'S

FOR many years the Rev. Austin Williams worked as a chaplain for Toc H, and it was when he was with a Toc H unit in Lille just before the fall of Dunkirk that he was taken a prisoner-of-war. At the end of the war he became curate at St. Martin-in-the-Fields, where he stayed until 1951, when he moved to Bristol as Vicar of St. Alban's. Mr. Williams has now returned to St. Martin-in-the-Fields to become 'Vicar of the Parish Church of the Commonwealth,' and he will conduct the Service to be broadcast from St. Martin's on Sunday.

G.O.S.: Sunday 10.30; Monday 01.00

16.15 MAX BEERBOHM
'A Personal Tribute'
by Siegfried Sassoon

On May 20 of this year Sir Max Beerbohm
died in Kapallo at the age of eighty-three.
He is remembered for the exquisite
urbanity of his stories and essays, for his
devastatingly witty caricatures, and for his
enchanting broadcasts of his later years.
But to his friends these varied achieve-
ments, however perfect, seemed only a
reflection of something they valued still
more—the unique quality of his personality.

3 Brilliant new COSSOR models for WORLD-WIDE RECEPTION

MODEL 527/X for all-dry battery operation. A fine all-wave receiver giving world wide reception on three wavebands. Single dry battery operation with latest low consumption valves, very economical. Fully tropicalised.

MODEL 534/AX Another Cossor triumph—a fine Radiogram with a fully tropicalised chassis and electrical band-spreading on short waves. Latest type automatic 3-speed record unit. 5 valves plus 'Magic Eye' tuning.

MODEL 517/AX Four-waveband A.C. mains receiver in a highly polished wooden cabinet with ivory plastic front. Its full, rich tone is achieved by an up-to-the-minute circuit, including five Cossor valves, 8" moving coil speaker and many other fine features.

Every Cossor set has 60 Years' experience behind it

(English by Radio)
'Listen and Speak'
Lesson 106
15.15-15.30 NEWS and News Talk

Personal Call. When talking with Stephen Black on Tuesday Mrs. Clare Sheridan will draw on her memories of a busy life of travel, writing, and sculpture, which include visiting Russia immediately after the revolution in 1920 when she sculpted the heads of both Lenin and Trotsky while they were working in the Kremlin.

Standards of Living. The subject for investigation on Monday is the change of holiday-making habits over the last quarter of a century. Holidays are an immediate link with a raised standard of living. Three 'holiday experts' will take part in the discussion under the chairmanship of Richard Goold-Adams: J. S. Bowen, who is in charge of the Workers' Travel Association; B. A. Andrews, who will talk of the changes that have been brought about through the large-scale introduction of coaches both for long tours and day trips; and D. S. M. Barry of the British Railways.

Lily Lee Sings. Lily Lee was born in Shanghai in 1923. She studied in Chungking and later at the Central University's College of Music. In 1947 she sang regularly for the Central Broadcasting Station of China. She later made an extensive tour of south-west China, and became well known for her interpretation of Chinese folk songs. Miss Lee now lives in Sarawak, and her programmes, which are broadcast every Monday, were specially recorded for the BBC by Radio Sarawak.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

**DIESEL
POWER
AT WORK**

Vehicles of all sorts, commercial and private, are powered by Perkins Diesel engines. Available as first equipment or as complete conversion unit for a wide range of vehicles. This 25 cwt. Trojan Tipper is powered by a Perkins P3 (V) engine.

86G

This Massey-Harris tractor is fitted with a Perkins P6 (TA) engine. All over the world Perkins agricultural diesel engines are helping farmers to produce bigger and better crops, and to harvest them more quickly and economically.

ON LAND AND SEA, in industry and on the farm Perkins Diesel engines are at work on a bewildering variety of jobs. For diesel power saves money. Local Authorities find diesel engines reduce fuel consumption by approximately 50%, a considerable saving over an annual period. Farmers save money using Perkins Diesel engines in tractors and combines. At sea, Royal Navy submarines, fishing boats and private yachts use Perkins Diesel engines for economy and safety. The Thames River Police have standardized on Perkins engines. On the road, you'll see the Perkins sign on many well-known commercial vehicles. Whatever the job, diesel engines give you greater reliability, longer life, easier starting and reduced running and maintenance costs. Perkins Diesel engines offer you far more — for far less. May we send you details?

Perkins industrial diesel engines have endless applications. This Arpic Compressor, fitted with a Perkins S6 (1) diesel engine, generates power for pneumatic drills.

'The Transport of Ideas'

SIR STEPHEN TALLENTS gives reasons to support his conviction that one of the most urgent world-wide needs of our time is the development of a system of communications more scrupulously devoted to the conveyance of truth than anything we at present possess

ONE outstanding impression which the experience of a fairly long and varied working life has hardened into a conviction is that one of the most urgent world-wide needs of our time is the development of a system of communications more sensitive, more penetrating, more skilfully managed, and more scrupulously devoted to the conveyance of truth than at present we possess. During my lifetime, so it seems to me, ideas have seized power. Ideas have become, surely, the most powerful of modern missiles.

I always have in mind the words of a UNESCO report: 'Since wars begin in the minds of men, it is in the minds of men that the defences of peace must be constructed.' Are we not today watching—sometimes it is called a cold war—a world-wide struggle between armies of ideas for the seat of power which ideas have won for themselves?

I am not talking only of the need for a more efficient system of communications at high international or specialised scientific levels. I believe this need to permeate every level of every civilised community in the world. It is found in the relationship between government and people; between employers and their staffs; between trade-union leaders and their members; within every town and every village community; even between many dispersed families.

Now at this point you may fairly ask what credentials I have for presenting this conviction of mine to you. The greater part of the life behind me was spent in government service; but I fancy that I must in my time have had experience, generally in England but sometimes beyond the seas, of a greater variety of occupations than most of my generation. It included two great wars—a winter of the first spent in the trenches, and much of the second in Broadcasting House. It has ranged from some of the great government offices in Whitehall to one of the poorest districts in London; to the Liverpool docks and the coalmining valleys of Wales. I spent eighteen troubled months in the Baltic countries—Estonia, Latvia, and Lithuania—that are now within the borders of Soviet Russia, and after that five years in Ireland.

Then suddenly, about halfway through my life, I was called upon to concentrate upon the distribution of ideas. I had to prepare a campaign that involved questions of scientific research, of agricultural production and marketing, of domestic buying and selling. It was primarily to be addressed to every home in Britain; but it had also to secure a reflection of itself in other countries, some of them, like Australia and New Zealand, on the other side of the world.

I realised quickly enough that anyone working for the improvement of our communications system—we will call it publicity work for convenience—was engaged in a dangerous trade: you would laugh if I told you about some of my early mistakes and mishaps. But I also realised that it had to be taken seriously; that it was not just the casual business of giving drinks at the right moment to the right people, which it was often represented to be. Comparing publicity work with the organising and administrative jobs on which I had been previously engaged, I saw that properly conducted it demanded just as exacting work as any of them.

Then, as I came to recognise the importance of the job, I was shocked—and still am shocked—at the lack of recognition which it meets with both among the public and in high places. I see today, in one of my present occupations, the immense care and detail—calculations, blue-prints, consultations, timetables—with which great civil-engineering projects for physical transport—a new road or a railway or an airfield—are worked out in advance: I have rarely seen comparable pains taken to work out a scheme for the transport of ideas.

I came, in my own attempts to master the job, to divide its territory into two parts. There was the field in which everyone of us, whether we would or not, could not help being engaged. Everyone you see, by his talk, his letters, the way he handles a telephone call or guides a stranger in the street, makes an impression—cannot help making an impression—good or bad—on those around him. This is specially true of any contacts, however casual or fleeting, he may make with people of other countries.

There was another field which demanded expert knowledge: the production of Press material, for example, of posters, of films, of exhibition displays. I always maintain that the only workshops in which, year in and year out, the arts of modern communication are being studied and tested are places which seldom get the credit for the full value of their work. I am thinking of the daily work of such places as newspaper offices and advertising agencies, film and broadcasting studios.

I believe that an efficient system of communications must touch the imagination as well as appeal to the intelligence, and it is there that the artist has a vital part to play. The best expression of this belief that I know is a sentence I once chanced upon in a letter from John Stuart Mill, the economist, to Thomas Carlyle, the historian. 'It is the artist,' he wrote, 'in whose hands alone truth becomes impressive and a living principle of action.' I am not thinking only of the art of the expert writer or painter or typographer. There is an art of good manners, good speech, and good letter-writing.

So there is just a brief account of the background behind the conviction of which I set out to tell you. I close it with a threefold invitation to all, wherever you may be: to take an active interest in a subject of which the importance is still too little regarded; to take a hand yourselves, as every one of you can, in the improvement of the world's communications; and in so doing to show yourselves, however limited your opportunities, artists. Pray accept the invitation. (From a talk in 'London Calling Asia')

Lord Radcliffe as a broadcaster: he gave the BBC series of Reith Lectures for 1951 on the subject of 'The Problem of Power in Organised Society'

Lord Radcliffe

A. P. RYAN presents a radio portrait of the Rt. Hon. the Lord Radcliffe of Werneth, Lord of Appeal in Ordinary, who has been appointed to make recommendations for a new constitution for Cyprus

IF Lord Radcliffe has ever had a setback in life I do not know what it was. From his schooldays he has been scooping in all the prizes and effortlessly beating all rivals. No man has more excuse than Lord Radcliffe for being conceited and pompous. I will tell you why in a minute, but before doing so I want to add what is not the least important and not the least attractive thing about this astonishing V.I.P.: he is so natural, so unaffected and modest that you feel when you talk with him that you are talking on equal terms. It is only when you remember what he has done that you realise that his brain is in a different class from the brains of ordinary people.

Now why would he be entitled to look back with complacent pride on his life's record? As a schoolboy at Haileybury he showed he was faster mentally than others of his age; so much so that for his last year he had to be left to work by himself, as he had long passed the level of the highest form in the school. Such a boy would not be likely to be popular. But I have been told by some who were at Haileybury with Cyril Radcliffe—as all his contemporaries affectionately call him—that he was well liked by everyone. Haileybury is a famous school for rugby football and other games, and there were some great players there in Radcliffe's day. He was not an outstanding player; but neither was he just a bookworm, and the star footballers took him as one of themselves.

From school he went up to Oxford, and there he stood out among his fellow New College men in years when that ancient college was well provided with brilliant scholars. He took first-class honours in Greats, the most difficult of the Oxford examinations for a degree, and he won a fellowship at All Souls, which is the most coveted honour of its kind in the university. With this at his back, he proceeded to the Inns of Court. Soon he was earning a handsome living as a barrister. He did not practise in the courts which are most familiar to the public because they lead to reports of crime cases: he chose the Chancery Bar, where he would be faced with all sorts of intricate and highly technical matters.

Outstanding in the Chancery Courts

Lawyers make a competitive society, and although they work loyally to the traditions and conventions of their profession they allow themselves much freedom in commenting on one another. (At least that is my experience—and it is based on having many lawyer-friends.) But I have never heard any lawyer say anything critical if Lord Radcliffe's name came up in conversation: they all say he was outstanding in the Chancery courts and in arguing cases before the House of Lords and the Judicial Committee of the Privy Council.

It is on those heights of the law that the heavyweights among judges and learned council dispute; and there Lord Radcliffe was very much at his ease and at home. He took silk—that is, he became a King's Counsel—when he was in his middle thirties, and he might have looked forward to many years of drawing tens of thousands of pounds in fees. But I do not think he would have done that, even if there had not been a war, because he is a man with wide interests, and it would have bored him to spend the rest of his life adding to his fortune at the Chancery Bar.

During the war he served in the Ministry of Information and in charge of censorship. There he was a tower of strength; and everyone who listened to and read the news from Britain in those days owed much to Lord Radcliffe's cool head, profound commonsense, and ability for impressing people who were temperamentally at the opposite pole from him. He insisted, in the face of fierce opposition from bureaucrats in the Armed and Civil Services, that all the news should be told, unless it could be shown that by releasing it to the public the enemy would be helped. No other excuse for suppression was accepted by Lord Radcliffe. But for his firmness there would undoubtedly have been an orgy of stopping the legitimate flow of news which would have made people suspicious and lacking in confidence.

At this stage Lord Radcliffe showed that he still had that remarkable capacity I have referred to earlier of winning other men's affection even when he was defeating and disagreeing with them. His conduct of the censorship went clean contrary to the ideas of some well meaning patriotic V.I.P.s—but they all liked Cyril.

Seeing Everyone's Point of View

After the war he went back for a short while to the Bar, and then he was called upon to go out to the East to deal with the frontiers that had to be drawn to divide India from Pakistan. He worked quickly, and although here he did not escape criticism, nobody (so far as I am aware) on either side of the border doubted his good faith in being fair between Hindus and Moslems, or his thoroughness in studying the lie of the land. That was ten years ago. Since then Lord Radcliffe has done some memorable work: he acted as chairman of a film industries committee; he would have been chairman of the committee that enquired into the future of the BBC, but just at that time he became a Lord of Appeal.

His going straight from the Bar to be a Lord of Appeal was most unusual. It had not happened in the way it did to him in the case of any predecessor in the present century. But he has not settled down as a member of the senior court in Britain. He has spent three years of hard labour presiding over a Royal Commission on Taxation. Lately, he was expected to give up his legal position and to take on the administration of the vast Gulbenkian fortune. His interest in cultural and educational matters is very keen, and he would have been an ideal disposer of an international estate of the sort that Mr. Gulbenkian left. But this was not to be, because the conditions under which the estate must be administered would not have allowed Lord Radcliffe his full scope.

There is one point about his mission in Cyprus of which I am absolutely confident: no matter how heated the atmosphere, how many accusations may be levelled against him, he will remain quite calm; he will study the facts set before him dispassionately; he will not be satisfied until he has got to the bottom of them. He will see everyone's point of view—Greek, Turkish, and the rest. He will ask in his quiet, gentle, friendly voice the most searching and very awkward questions. No one will ruffle him, no one will deceive him; and at the end he will put forward a sensible, fair-minded solution. Whether it will be accepted is another matter. Whether it is or not, he will not lose his temper or nurse a sense of grievance: he will turn his hand to the next job ahead.

What is his secret? I would say it can be solved in three parts: first, that super-brain; then, a happy disposition in which inflexible moral principle combines with a keen sense of humour; next, complete inability ever to have a chip on his shoulder. It is a rare combination in one man, and it explains why he has been so invariably liked and trusted. (*Broadcast in the BBC's General Overseas Service*)

'DO IT YOURSELF'

CYRIL RAY takes the International Handicrafts, Homecrafts, and Hobbies Exhibition—where the pictures on this page were taken—to illustrate a remarkable development in the social life of Britain

AN exhibition was recently held at Olympia, in London: its full title was the Handicrafts, Homecrafts, and Hobbies Exhibition, but everybody called it the Do-It-Yourself Show—and that was not simply to get out of the terrible responsibility for Englishmen—as distinct from Scotsmen and Irishmen and Welshmen—of having to pronounce three initial aitches, one after another. It was because 'do it yourself' is the sort of catch-phrase that sums up a remarkable recent development in social life.

There is nothing new about hobbies, of course—collecting stamps, making model ships, or building radio-sets; the lamentable results of the fretwork and pokerwork crazes of fifty years ago are still to be seen in many an English front parlour. But more and more people these last few years have taken to making their own furniture, hanging their own wallpaper, laying their own carpets or parquet floors, and so on. A great new industry has grown up of making and selling special rollers for painting walls with; special paints; assembly kits of table-tops and table-legs; books about 'how to do it'; articles in newspapers and magazines.

No danger of burning clumsy fingers with a soldering iron here: to mend the kettle all you want is a blow-lamp and a patent soldering paste

The causes behind this great development are rather interesting illustrations of some of the economic facts of life in Britain today. Why do people do so much of their own home repairs and decorations? The first and most obvious answer is that they do it to save money—and it is true that this kind of job is very expensive these days, because the cost of materials has gone up, and so have the wages of paper-hangers and painters and carpenters and plumbers.

But so have the wages of the people who are doing it themselves. A lot of them could afford to get the jobs done by other people, but they cannot get the people to do them. They take up the paint-brush or the paste-pot not so much, or not only, to save money but to save time.

In other words, it is one aspect of full employment that is behind the spread of 'do it yourself.' And in the same way lots of firms that manufacture small pieces of furniture find it is a very good idea not to assemble their little stools and tables but to make the parts and sell them separately, because the cost of labour is so high in a country with full employment.

Then there is the fact that with more and more people working on rather dull, repetitive jobs in factories there is a great satisfaction in doing some job at home that gives you something to show for it—a finished article; especially, of course, one that you can make use of. And then there are the new materials—chiefly in the field of plastics—that are easier to handle for amateurs than the old traditional materials.

Some of the products, of course, are still a bit amateurish, and some are pretty whimsical. But in the making of pottery—though this is a hobby rather than a practical do-it-yourself job—there is often as much self-expression as there can be in painting or in writing, and that is probably the most interesting side of this whole social development: the jobs about the house can lead to highly satisfying creative work.

And the importance of that these days brings me to one last factor. People in Britain have more and more leisure, and there are more and more mechanised ways of filling in that leisure time. Here is something to do in the steadily increasing leisure time that almost everybody enjoys—something to do, rather than something to watch other people doing. (Broadcast in the BBC's General Overseas Service)

Why not insulate your attic with fibreglass lagging before the winter sets in?

S. DE MADARIAGA

DON SALVADOR DE MADARIAGA, the distinguished historian and diplomat, in this contribution to 'The Story of Colonisation' contrasts the methods and achievements of the Spanish settlers in the southern parts of the American continent with those of the English in the North

The American Adventure

WHEN Columbus discovered America his mind was to a considerable extent influenced by his own name. Born Colombo, he wished to be known as Colon. And Bishop Las Casas, the famous advocate of Indian rights, who knew his family and had access to his papers, explains his motive in the following significant words: 'Christopher,

which means bringer or bearer of Christ, for in truth . . . he brought our Saviour Jesus Christ to these remote lands and realms until then unknown . . . His surname was Colon, meaning *repopulator*, inasmuch as he was the first to bring over people from Spain . . . to found colonies or new populations which, settling among the original inhabitants, should constitute a new Christian and happy republic.'

Thus from the very outset, from the very name of the discoverer of the New World, the two ideas flow which are to rule the evolution of the Spanish Empire: the Spaniards in the New World will be Christophers, *i.e.*, Christ-bearers, and Colon-isers, *i.e.*, *pobladores*, populators, in those 'remote lands and realms.' Note the word, for it is essential: realms. It means that the 'Christian and happy republics' which the Spaniard will found, though the direct outcome of their colonies (in the old sense of the word, *i.e.*, groups detached from the mother country) are not colonies in the modern sense of the word (*i.e.*, dependencies). They are realms—nations united by the common link of the Crown.

Religious Considerations in Spanish Policy

The authority above all those realms of the Old as of the New World was the king. The king of Spain was no despot: he was head of the state in every one of his many realms, but in a living sense, a sense in which rights and privileges were defined, justified, and therefore limited and conditioned by functions and duties. The king was God's minister on earth. He could not swerve from the path of God without losing the very basis of his authority. His government had therefore to be carried out in close touch with the men whose profession it was to carry religious principles to their political and social conclusions. Hence the strong influence of religious considerations in the policy of the Spanish.

The first onslaught of the discovery and conquest had been terrific. The men who had been fighting the Moors for centuries suddenly found a new continent open to their predatory and fighting instincts. But the reaction was immediate and it found devoted and eloquent advocates such as Las Casas, a *conquistador* turned priest, and later friar and bishop. These men raised the moral issue: what right had the Spaniards to be in the New World at all? The struggle between the two tendencies is at work from the first: on the one hand the *pobladores*, as they called themselves, who want lands to grow crops, and mines to exploit, and Indians to work; on the other the friars, who want justice for the Indians.

There was no precedent: the Crown had to create a philosophy of colonisation. The struggle to set up such a foundation of thought went on throughout the first half of the sixteenth century. It began with the firm stand taken by Queen Isabel to declare all Indians free, to deny Columbus the right to sell them as slaves, and to make all fighting in the Indies dependent on the definite refusal of the Indians to accept the Christian faith or on their attacking their would-be converters.

'A Charter of Indian Freedom'

At Isabel's death, Ferdinand, colder and positive, turned a deaf ear to Christian arguments; but Las Casas obtained from the great Cardinal Ximenes Cisneros, then regent, a kind of charter of Indian freedom which ultimately was incorporated in the Laws of the Indies. The Laws of the Indies are without dispute the most honourable monument erected by a dominant monarchy for the protection of its subject peoples. But what became of them in actual fact?

The answer is not simple, for it covers a whole continent and three centuries. A number of conclusions may however be attempted. The two old tendencies in the struggle remained alive throughout the three centuries in an ever-threatened balance: that of the *pobladores*, in the local Whites or Creoles and in the new Spanish settlers; that of the friars in the Crown and in those of its overseas agents that were not corrupted. This general rule knew frequent exceptions, the hard-hearted friar and the pro-Indian White landowner or civil servant being by no means exceptional figures. The feeling of colour was weak. Mixed bloods were frequent, and some of the highest Spanish-American nobility were descendants of Indians on their maternal side. Negroes were brought in to relieve the strain on the Indians. In the course of time a curious situation arose: though officially the Indians were free and the Negroes were slaves, in actual fact the lot of the Negro seems to have been the more favourable.

Distance in the days of the mule and the sail considerably reduced

the actual effect of the authority of the Crown and gradually set up local ways of living, which eventually led to a pre-national consciousness. Universities set up everywhere from the first fostered this spirit, and the new nations grew strong under the convergence of four factors: Christianisation of the Indians; grafting of the Spanish stock on the Indian peoples; local autonomy gradually developed through distance; and intellectual consciousness and leadership provided by the universities.

The English colonisation of the northern part of the continent was in many ways the very opposite of its southern counterpart. The Spanish conquest had been individualistic enough, but every one of the conquerors had brought in him a strong centralising principle, twice Roman: Catholic and imperial. Based, moreover, on Papal title-deeds it proceeded, as it were, from what for the Spaniards was the centre and fount of all authority. The English and the Scots and the Welsh who followed them, on the other hand, disregarded the Pope's decree.

The English did not go out from the centre of authority towards the periphery of their king's dominions: they went from the outside inwards, impinging on the territories theoretically held by the king of Spain in the hope of snatching some for their own ends. Content at first to prey on the gold-laden galleons, they later made sundry attacks on Spanish settlements already established and colonised, but finally veered northwards in order to colonise the vast territories which the Spaniards had left unoccupied.

The men who came over were of a different type from that which had conquered and explored the southern lands. Their aims were more akin to ours, more 'modern,' less feudal, less lordly, more political and economic, less religious. True there was all that puritanism. But puritanism was itself a social-ethical version of religion, with the stress on duty rather than on worship, a religion less like a spire rising towards heaven than like a bridge leading to another land. It was strongly communal, and as such dependent on a well-defined group, and therefore carrying with it the seeds of that racial discrimination from which Spaniards were nearly free.

Political Growth of the English Colonies

These English settlers lacked the twofold Roman tradition which made the Spaniards both legally imperial and religiously universal; and so they were naturally led by instinct to consider the native Indian as a breed outside the pale. The colonies which these emigrants founded were conceived as purely White; and the native was for them a nuisance to get rid of. This was done by ruse and by war, by treaties, purchases, battles—whatever method was suitable in a process uninhabited by friar, lawyer, or king's conscience. The native receded everywhere before the White, and the White was able to organise his community practically unhindered by any consideration of what share was to be reserved for the Indian.

This policy was made possible by the absence in the north of any well-organised Indian community such as the Spaniards had found in Peru, Mexico, Yucatan, and Bogota; for though the Spaniards succeeded in subjugating these native empires, they were content to graft their own culture on the cultures already rooted in the land; while the English had to deal with Indians who were either nomadic or not deeply rooted in their lands. On the other hand, the practical elimination of the native in the north enabled the immigrant to come into closer touch with the land.

The political growth of the English colonies came relatively earlier because of these different circumstances. Their stock was much simpler: none of the picturesque palette of half-castes, whose social connections added so many complications to Spanish-American life; none of the prepossessions about who could or should do or not do this or that according to family pedigree or hue of skin; none of the *conquistador* tradition to this day alive in many a *caudillo* or ambitious general. A trend towards equality set in which was to favour a republican evolution and a pragmatical turn of mind. This in its turn favoured a policy of expansion: in population, by a liberal acceptance of other stock than the English, provided they were European; in territory, by a frankly acquisitive policy, which began in the colonial days and was vigorously pursued after independence had been conquered from Britain.

One more contrast is worth noting. Led by some goat-like instinct as well as by the belief that the source of gold was to be found in broken territory, the Spaniards occupied the mountainous parts of the continent: Mexico, Peru, the Andean fortresses from Chile to Colombia; not till the eighteenth century did they begin to colonise the pampas of Argentina; while the English colonised the vast plains of the north. This choice, the outcome of many historical causes, not excluding a certain amount of hazard, was in perfect harmony with the deeper national trends—upward, spire-like individualism in the Spaniard, forward, bridge-like community spirit in the Englishman. This in its turn led to the United States in the north, and to the dis-united states in the south. (*Broadcast in the BBC's General Overseas Service*)

Cdr. Noble, Under-Secretary for Commonwealth Relations, was among the admirers of New Zealand meat, while thousands flocked to Australia's wine bar

A Visit to the British Food Fair

JOHN TIDMARSH takes you to an exhibition at Olympia, in London, where you could see—and taste—the products of manufacturers in Britain alongside those of Commonwealth and foreign countries: a tempting variety of good fare, ranging from Cornish pasties to caviare and pineapple juice to vodka

THIS was one of those delightful exhibitions where you can have a first-class buffet lunch with wine for absolutely nothing—except, of course, the price of admission. It involved a fair bit of walking between courses, but nearly every stand seemed to be offering free samples. In fact, the organisers invited you to 'Eat and drink your way round.'

Now this, I found, was a very formidable challenge, particularly when you got to the stands of some of the overseas and Commonwealth countries. Australia, for instance, was showing that she produces eggs, honey, jam, butter, raisins, peaches, pears, pineapples—and beautiful girls. But the emphasis was on Australian wines. During the show they were expecting 25,000 people to find out for themselves how good they are by accepting a free glass.

Then there were the Iron Curtain countries—Poland, Czechoslovakia, Hungary, and Rumania. They all seemed particularly anxious to let you know what they have to offer in the way of drink. Poland, for instance, had a very large display of dry vodka, and I was told that we already drink more than 20,000 bottles of it a year in Britain. Of course, Poland also gives great prominence to her tinned ham, which she claims is the finest in the world. At the moment most of it goes to America.

At the Rumanian stand I was invited to try their caviare: 'Much better than Russian caviare,' they told me. I was also pressed to a glass of *tzuica*—plum brandy. This is downed in one gulp and is very warming indeed. The Rumanians told me that caviare, *tzuica*, and wines are the

In the large American section the latest types of kitchen equipment were put on show together with traditional foods: the doughnut stand proved a great draw

sort of things they would like to send us when we have a trade agreement.

The Americans were appearing at the fair for the first time. They had taken up quite a lot of space, and the idea was to give a broad picture of what America produces, what she imports and exports, how foods are processed and packed, and, of course, what Americans like to eat. It included what the manager of the American stand, Mr. Charles Witt, called 'some typical pieces of Americana'—doughnuts and hot-dogs, both given away free.

But what intrigued me was the frozen food. It was quite a feature of the fair, by the way. The Americans were showing examples of their complete frozen meals. There was a pot roast all laid out on an aluminium tray: beef, roast potatoes, green peas, and sweet corn. You buy it in a packet, pop it—aluminium tray as well, if you like—into an oven, and it is ready in fifteen minutes. Nothing to prepare, and only the knife and fork to wash up. It is called, of course, the TV Dinner.

The Americans were also showing the very latest thing they have in kitchen installations: an electric cooker fitted with smoke and fume filter; a food-waste disposal unit, which grinds everything to a pulp and then washes it away; a dish-washer, a combination refrigerator and food freezer (with special ice-cube ejector), and an automatic washer and drier. I asked Mr. Witt about the standard of cooking in America. Did he agree that France led the world? Where did he place America? 'I would say that America is tops,' Mr. Witt declared.

Amongst all this overseas competition the banner of British cooking was bravely carried by the Gas Council with a very interesting feature called 'Mr. Therm Goes County.' Each of the twelve area Gas Boards had its own kitchen where they were cooking typical and, in some cases, little-known regional dishes. And what wonderful names some of them had: Shropshire fidget pie (basically ham and potatoes), star-gazy pie (fish, including herring and mackerel, a Cornish dish), Cumberland clipping-time pudding (a rich rice pudding, by custom part of a bountiful spread provided when sheep-shearing begins). (Based on broadcasts in the BBC's 'Radio Newsreel')

Little-known British dishes were given a boost by the Gas Council, which arranged a series of twelve regional kitchens: the West Midland cooks at work

An old bronze statue of Shiva, Lord of the Dance.

Practising the Bharata Natyam, a classical South Indian dance of religious origin

Journey to South India

DEREK HOLROYDE, the BBC's representative in Delhi, continues the account which he and his wife broadcast in two programmes after a tour of South India covering 5,500 miles through the states of Madras, Mysore, and Travancore-Cochin

WHEN gods still walked the earth, and men still had the vision to see them, music and dance were born in India. The drums quivered, the great god Shiva lifted his foot above the demon of evil, and matter became motion: creation had begun. To this day no dance performance is begun without an invocation to Shiva, the Supreme Being, the Lord of the Dance, of whom it is said: 'His body movements set the universe in motion; his speech is the source of sounds; his adornments are the moon and stars.'

The true home of the dance is in South India. In the north dancing could not flourish under Mogul rule. It became a vehicle of entertainment divorced from the religious inspiration of Hinduism. But the South, undisturbed by foreign incursions, was able to continue the teaching through the close and disciplined relationship between the *guru*, or teacher, well versed in Sanskrit and music, and the pupil. Even today the most authentic dance schools are in the South, and a knowledge of the Tamil language is an indispensable part of the dancer's equipment.

For us in the West, dance, music, art, sculpture, and drama are, today at least, almost secular entertainments; but not so in India, where they are still a part of the religious life. In fact, these arts were entirely a religious rite, and even to this day the great Sanskrit treatise, the *Natya Shastra*, is still studied by those who wish to learn the rules for dancing, music, grammar, and drama. Nearly 2,000 years before Christ, Brahma, the Supreme Creator, was asked by Indra, King of the Gods, to write a book for ordinary people unlike other Vedic books which had become the exclusive property of the priestly Brahmin class. Brahma retired into solitary contemplation to create this epic work, but it turned out to be too complicated even for King Indra, and so Brahma decided to choose a mere mortal, the sage Bharata, and explained to him the intricacies of the whole complex process.

The classical dance of South India, *Bharata Natyam*, takes its name from this great *guru*, who had the honour to teach this new art-form to a company of celestial dancers and musicians, and winged musicians called *gandharvas*. We saw these beautiful creatures, frozen in stone, in many a temple carving in South India. Lord Shiva witnessed the first presentation by the sage Bharata, and was so inspired that he danced his famous Dance of Creation, and so the art of dancing passed from the gods to man.

Man still reverences the gods. Any day in the life of a South Indian would teach one that. We discovered it at dawn one day in Malabar. At 4.30 in the morning we visited Cheruthuruthy, where the great Malayalee poet, Vallathel, now seventy-four years old, started a dance school for the teaching of *kathakali*. This is different from *Bharata Natyam*, which is older, and is quite unique to this part of the South known as Kerala. It is more of a dance drama, and in it are performed the stories of the great Hindu epics, the *Ramayana* and the *Mahabharat*. The sickle

moon was riding high as we drove through the pale morning mist lying thick on the paddy-fields.

The dancers had already been practising for two hours, and now they lay on the ground receiving their daily massage. It takes at least six years to train a dancer, and every single muscle of the body has to be brought and kept to a pitch of suppleness. The massage was being done by foot. Men were actually walking over the well-oiled bodies of the dancers—even the youngest of only eight—supported by poles. Gently and slowly they used their feet to knead and massage every part of the dancers' bodies. All this strenuous training and physical discipline is accompanied by an equal religious devotion. On the forehead of these young gods—for gods they looked—were the yellow sandalwood stripes of their morning worship, and before the day was done they would bow low, with hands in supplication, to touch the floor of their dancing room.

The architecture and sculpture in the temples and palaces of the South provided a majestic setting, and a reverent one, for the performances of music and dance. In south Travancore we saw the palace of Padmanabhapuram, built for the rajahs of Travancore in a beautiful blending of carved wood and grey stone. The black dancing floor, polished like marble, was made from coconut-shell charcoal mixed with plaster. The granite pillars around it had been polished by the wind-blown sand to a shade of gold. A little further south is the temple of Suchindram, one of several famous for its musical pillars. A man playing a wooden hammer on the slender columns of solid stone can produce the highly complicated rhythms of South Indian, or Carnatic, music.

Another form of South Indian dancing is the *kathakali* in which Hindu epics are told in dramatic form: a character in the 'Prahlada Charita'; and (right) dancers practising

Religious festivals are occasions for enthusiasm, with plenty of noise and colour: part of the Dasera procession in Mysore, which takes place in October

The close connection between religion, temple, and dance produced a class of dancers attached to the temples. They were called *devadasis* and kept the tradition of classical dance alive. They were servants of the temple god, but later their position became corrupted, and a social stigma was attached to dancing as a result of the Mogul influence in the North, and people kept away. The twentieth century, with its stirrings of political nationalism, however, also brought the desire to rediscover the cultural heritage of India, and girls from good families defied society and pioneered the revival of classical dancing by undergoing the strenuous training themselves. One of these was Rukmini Devi Arundale, who in 1936 started at Kalakshetra, in Madras, a school for the teaching not only of the dance but of all the arts.

It was again early in the morning that we drove out of Madras to visit Kalakshetra. An atmosphere of true religious devotion pervades the school. We listened to the students beginning their day with prayers that demonstrated the universality of religion. The old Sanskrit prayers are followed by Buddhist and Christian prayers. The students quietly disperse to their classes, and soon from the different buildings comes the noise of strings: the *veenas*—the long instruments of South India to which two large, hollowed gourds are fixed to act as sounding chambers—then flutes and drums, and the *gurus'* voices as peremptorily they call the beat. With their *saris* tightly wound round them, the small groups of dancers bend and gesture in unison.

Learning is an intimate, dedicated task, drawing its strength from the almost subconscious knowledge inherited by each generation from its predecessor. None of the music, for instance, is anywhere written down. Notation is still relatively unknown. It survives today because father has

passed it to son in a long cavalcade of devoted artists. In a simple, unobtrusive house in Tanjore one of these families still lives. Four brothers—Ponniah, Chinniah, Vadivelu, and Sivanandam—all masters of the dance and composers of music in the early years of the last century, established a tradition of music here. The day we visited their house, we were greeted by the sound of a violin: a little off tune, perhaps, but this was no ordinary violin, for it was made entirely of ivory and was now being played by one of Ponniah's great-nephews. The violin was presented more than a hundred years ago by the Maharajah of Travancore in appreciation of Ponniah's contribution to music. As we heard it now, other members of this typical Indian family moved about the house—grand-daughters and their husbands, and sons with their wives all shared this roomy building. We watched the newest generation: little, wide-eyed children, naked save for the gold amulet below their fat tummies, who stared back in rapt amazement. In a corner two babies swung contentedly from the ceiling in hammocks made from deftly twisted saris.

Dance of the Hobby Horses

But it is not in the secluded silence of these old houses alone that the ancient but still living culture of the South is to be found. It resides, too, in the countryside, among the villagers and in the jostling market places, where the people are always ready to stop and watch the folk-dancers in their brightly coloured costumes whirling and prancing in a riotous display of exuberance and movement. We saw two dancers fitted into golden, *papier-mâché* hobby-horses decorated with hundreds of tiny mirrors and mosaic pieces of coloured paper. The dance is performed on six-inch stilts, and the horsemen circle each other, turning and bowing as they pass, the plumes on their heads nodding gaily as they dance.

All the gaiety and flashing colours that we saw in the villages and in the festivals are matched by the equal radiance and vividness of the natural surroundings. We drove back that evening into a gathering storm over Tiruchirapalli. Driven clouds, white as sea-spray, tumbled up the heavens and turned mauve and purple and russet red as the sun set in a horizon of green and turquoise. The buildings were bathed in golden light, and then the rain fell as it can only fall in South India. Rain—and the beat of drums. Sometimes, watching the fingers of one of the best players, it reminds one of the hard-hitting quality of hail beating on flagstones. The South is famous for its percussion instruments, and there must be at least a hundred different types of drum. One of these is not really a drum at all: it is a round, clay pot, some two feet in diameter, called a *ghatam*, on which the player beats the rhythm with his bare fingers.

Instruments like this are indispensable to South Indian music. They act as foils to the singer or instrumentalist, continually introducing new beats; and between two or more of them a good-humoured conversation develops, as each takes up the other's theme and answers it. The players' hands and fingers move over the hard surfaces of their percussion instruments at tremendous speed as they strive to outdo each other, passing the theme backwards and forwards. We heard also many of the drums used by folk-singers and dancers. In one group we heard a drum that roars rather like a lion, and the dance it accompanies is appropriately called the *Urumi* or Lion Dance. The drummer rubs a bent cane over

(Continued on page 16)

'In the countryside people are always ready to watch the folk-dancers in their brightly coloured costumes whirling and prancing in riotous display'

G. J. RENIER

OUR WAY OF LIFE: 16

G. J. RENIER, Professor of Dutch History in the University of London, once wrote a much-discussed book called 'The English—Are They Human?' Here, in his latest observations, he says: 'I think the Britain in which I am living now is infinitely superior to that where I arrived so many years ago'

A New Insularity

I HAVE looked at the English for well over forty years, and I have lived with them. That is not quite the same thing: you do not look much at what you live with—granted. But then, when you look again, you see much better. And perhaps you understand better, because you feel sympathy. That should help towards making a portrait: you cannot make a good portrait if you do not like your sitter, believe me. Need I tell you that what I have noticed most of all is that almost everything around me has changed as I looked at it all these years? That is natural. Change is the great law of life: all things change. But the pace of change is not always the same. And surely no one would deny that during these forty-odd years that are behind us change has ceased to be a dignified, slow procession: it has now become a rush and a whirl.

The world into which I landed in 1913, when I first arrived in Britain, was seemingly static and amazingly insular. The British in those days were the proud owners of an Empire. Of that Empire they knew little, and of the rest of the world hardly anything at all. How well this other-worldly insularity revealed itself when they engaged in the first world war with all the lack of realism that characterised those days!

It was going to be another South African War, with volunteer professional soldiers winning an easy and rapid victory, while at home the motto would be 'business as usual.' When after a while, and for good reasons, they ceased to despise the enemy, the British began to hate him; and they distrusted the foreigners whom they did not hate, suspected plots and spying, and grew hot under the collar each time a foreign language was talked in their midst.

How different, how sober, were the British who fought the second world war! They entered the fight with no illusions: they knew that it would be a grim affair; they knew that it would last a long while, and that they would win only if they put every ounce of their strength into the struggle.

There was no intolerance of things foreign this time. They knew what issues were involved right from the beginning: they were fighting a wicked regime, not a nation. Therefore those Germans who opposed Hitler were regarded as allies. The Germans were free to speak their own language in the heart of London, for London was this time the capital of a mighty and international movement of liberation.

The End of British Isolationism

Do I mean, now, that the British have ceased to be insular? Certainly not! But their insularity has had the sting taken out of it: it has ceased to be arrogant or ignorant. There is no ignorance, wilful or otherwise, of European and world conditions; there is no notion that Britain can solve her problems regardless of what happens in the big world outside; there is no isolationism now. But there is a marked tendency among the inhabitants of the British Isles to singularise themselves, and to deal with their own internal problems in their very own way.

At the basis of it all is still the conviction of the British that they are different from the rest of mankind. Now let us be quite clear about it: there is little left of the belief held universally forty years ago that the British are superior to the common run of mankind. There is no trace of that old fallacy.

Indeed, it is from foreign observers like myself that one hears the message of the superiority of the British from the point of view of relations between individual and community, citizen and state and of the running of public affairs in general.

What has happened is a curious reaction to the nationalism that is now affecting such a large proportion of the Eastern world. I grant you, there was a time when most Britons were jingos. But that is dead history. The notion: 'My own country is perfect; it is the best community in the world; all things foreign are a blemish on the fair face of my nation'—that notion has travelled away for good, and, I regret to say, antiquated though it must be in the eye of truly emancipated men, it still exists in many parts of the world. Or rather, it has arisen there.

And the British often react to all this by saying: 'Oh well, good or bad, our own ways are the best for us.' They discuss railway nationalisation as though it had never occurred in any country but theirs, or the death penalty and its abolition as if the problem had not been coped with long since by most civilised nations. They tend to ignore the outside world even though they are no longer ignorant of it.

This new insularity, this British answer to the new forms of nationalism, also manifests itself in practice. Certain international organisations like the European Coal and Steel Pool are approved of; the British are willing to help them, but not to submit to their authority. There is a growing tendency in Britain to insist upon the sovereign status of the United Kingdom. The proof that there is behind this no arrogant unwillingness is provided by the way in which the change of the British Empire into a genuinely free Commonwealth has been accepted by the nation. The British are as proud of the fact that they founded this free association of equal nations as they are of their own free parliamentary institutions.

Power Is not Everything

I think that the Britain in which I am living now is infinitely superior to that where I arrived so many years ago. It is a country that has lost its position as a first-class power, and that has lost this position mainly as a result of the immense sacrifices it made for the cause of freedom and human dignity during two world wars. But the British have discovered that power is not everything. They know now that it may be easier for the population of a second-class power to be happy than for that of a first-class one.

It is in this spirit that they have set about the task of putting their own house in order. The Welfare State that has been created in Britain is not the work of one party: the two main parties see the details differently but they are agreed upon the main issue. Security from want, and security from fear are pursued by Tories and Labour alike, and as a result the condition of the masses is indescribably better than it was forty years ago. The South Downs not far from Eastbourne, where they come to an abrupt end

Winchelsea is now a sleepy inland village but it was once a busy seaport

'SECRET' SUSSEX

KAY BATCHELOR writes of a county which was, as she says, for so long a 'secret kingdom,' stretching undisturbed along the South Coast, cut off by marshes east and west, and inland by forests

I ALWAYS feel that almost anything could happen in Sussex: for so long it was the 'secret kingdom,' stretching undisturbed along the South Coast, cut off by marshes east and west, inland by forests, and from the sea by chalk-hills, that something old is in the air. It certainly is in Winchelsea, which seems to hold within its thirteenth-century streets and quiet squares a more completely ancient atmosphere than anywhere else in England. Unlike its sister Cinque Port of Rye, standing within sight across the marshes like an island of old buildings, Winchelsea has not let in the centuries, and is contentedly withdrawn from the present.

Henry James, who chose to live his latter days in the livelier air of Rye, caught the Winchelsea atmosphere precisely: 'The wide ambiguous flat,' he called it, 'that stretches eastward from Winchelsea hill . . . little villages that seem made only for long shadows and summer afternoons.'

This low marshland is, however, only a small part of Sussex; and to the west of it rise the Downs, those great bare chalk-hills that shoulder along the remaining two-thirds of the Sussex coast and hold, for all their seeming smoothness and innocence, some very long memories in their folds. It was on the Downs, too, in what is still a real silence and solitude, that Stone and Bronze Age men buried their dead in chambered mounds; and the gentle outlines of several hundred of these 'barrows' remain.

Because the Downs are such an intrinsic part of Sussex, it is fitting that the county town of Lewes should be set in their eastern slopes. From its narrow hill Lewes overlooks both the curving uncultivated Downs and the farms and fields, deep-hedged lanes and dark woods of the Weald. And Lewes itself is a town of contrasts: it is a mixture of eighteenth-century restraint and twentieth-century trade, overhung by a Norman fortress and threaded with little winding passage-ways. In the middle of bustling traffic an opened door reveals an enchanting garden, and in the busy High Street modern plate-glass is wedged between graceful, small-paned bow-windows and handsome old doorways.

St. Dunstan and the Devil

Lewes is awake and industrious in spite of its antiquity, but north of it in the completely rural Weald lies the unruffled little village of Mayfield. Here, in a convent, are the tongs that an early Archbishop of Canterbury—St. Dunstan—clapped red-hot on the nose of the Devil when he came to tempt him in his forge.

As he was obviously something of a craftsman, St. Dunstan might well have been interested in the mechanics of the 'new' game of cricket, which made what Sussex likes to claim was one of its first appearances in the village of Slindon. Slindon is near the western borders of the county, and there Nyren—later to become most famous of the Hambledon Men—started it all: he was taught the game by Dr. Richard Newland.

And what enormous men those early cricketers seem to have been. If contemporary writers are to be believed, the eighteenth-century pitch was peopled by an altogether larger race of men: great muscular creatures with thick black beards, who whacked and shouted and stumped with a sort of gigantic abandon; and whose shadows still swing a mighty bat across the summer haze at every village cricket-match. (Broadcast in the BBC's General Overseas Service)

The High Street of Lewes, the county town, looks out over the uncultivated Downs, while a timeless atmosphere is preserved in its winding passage-ways

Sussex men claim that they were the first to play cricket and to teach the game to others: a match on the village green at Stanmer, near Brighton

E. F. G. HAIG, in this contribution to the 'I Remember Africa' series, speaks about his first years in West Africa in the early nineteen-twenties as a young Assistant District Officer on a bush station

An 'A.D.O.' in Nigeria

I THINK it is one's earliest experiences of a country that stand out most vividly and enjoyably in the memory, so I am going to talk about my first years in West Africa as a young Assistant District Officer in a bush station. When I arrived in Nigeria in the early 'twenties I was sent straight off to Ogoja. In those days in the south there were no Eastern and Western Regions, only Southern Nigeria, the capital and headquarters of which was Lagos. Ogoja was a long way from Lagos—far enough away to be fairly safe from the visits of such dubiously welcome folk as very senior officials or auditors; anyway, we were bound to get quite long notice of their prospective arrival.

When I reached Ogoja I was given a house in Mango Avenue. It consisted of two small circular mud-huts connected by a narrow passage: each hut had a roof of poles and grass, and there were no ceilings. There was no glass, either, and the wooden doors and window shutters had been crudely put together by bush carpenters. The furniture consisted of one table and one chair. All the other necessities of life came from my camp kit, which also included about fifty cases of tinned food.

For about three months I spent most of the time learning my job in the station, which also housed the Resident, the District Officer, and the Medical Officer. In those days police and forestry officials were luxuries that did not come our way, while the agricultural and education departments were hardly more than myths. My jobs included looking after the local treasury, which gave me plenty of headaches, and the prison, which held a great deal of human interest. The inmates comprised a very few criminal types, a large number of careless borrowers, some too-affectionate young men who had confused *meum* and *tuum* in the matter of wives, and a handful of *habitués* who on discharge always managed on some pretext or other to regain their prison paradise.

The principal members of the African staff were the district clerk, the dispenser, the postmaster, and the police corporal. Their houses, though small, always seemed to me to be rather more civilised in shape and style than the ones we lived in; and they had their wives and children with them, which was more than we could say. It was an entirely bachelor European station, but by no means unsociable: when we were all four of us in the station together we always gathered every evening at one of our houses, taking the privilege more or less in rotation.

Travelling from Village to Village

But for most of the month we travelled the division from village to village, and it was this travelling that I found so diverting. There were no motor-roads and not many roads on which you could use a motor-bike. When we went travelling all our household goods went on the heads of carriers, who were provided by different towns and villages in turn. They were paid ninepence per day: it does not sound much, but there and then it meant quite a lot to a villager. In the dawn twilight about five a.m. fifteen to twenty of these carriers would file up to the front of the house. There, the steward boy and small boy and cook would be laying out the loads for our tour: camp bed, camp table and chair, tin bath, office box, crockery box, tin trunk for clothes, kitchen box, oddments box, holding carbide lamp and carbide, hurricane lamps, perhaps a gun, water filter, and two or three chop boxes containing mainly tinned food.

Along with the carriers there came a police constable or a court messenger: on seeing the loads he would make a rather hopeless attempt to align the strongest men opposite the largest loads. Hopeless, because as soon as the signal was given the strongest men usually made a bull-rush for the lightest loads. Anyway, unless the policeman was very timid or the big men very big, fair adjustments were made, and the carrier train went serpentine away to the bush, frequently yodelling at the top of their voices.

Behind them came the constable, two personal servants—always known as boys, of course, even though they might be septuagenarians—and the interpreter. There were more than a dozen languages spoken in the province: although I learnt two of them well enough to pass my exams, I never spoke them really fluently. This was partly from lack of opportunity, as we were often transferred from one division to another, and partly because my ear was not musical enough to become really familiar with a tonal language.

Last of all I would set off myself, clad as always in khaki shorts, shirt, and stockings, and dangling the *topee* which in those days was

almost compulsory. These morning walks, of anything from five to twenty miles, were exhilarating—at any rate for the first two or three hours. Sometimes the carriers would disappear quickly into a tunnel of forest, from the dark depths of which there drifted strange scents and the sounds of unknown birds and insects. Sometimes, again, we would take the high road and watch the sun rise as we walked for miles along a track of yellow laterite: but when that happened I was usually on a bicycle and started later.

Our destination was generally a village, where we would be welcomed by the local village head, or a chief with a few followers. The carriers would lay down their loads by the rest house, which was a house of mud with a roof of grass or palm-leaf thatch. There were no doors: I have slept hundreds of nights in doorless houses in Nigeria and never yet been burgled.

Sometimes on reaching the end of the journey I would go almost at once to the session of the local Native Court, and sit with them and hear appeals; on other occasions there would be no work till four o'clock in the afternoon, when complaints would be heard, and we would discuss local affairs such as judicial arrangements, maintenance of roads and buildings, or staff appointments.

A Very Peaceful Kind of Life

This would go on till twilight or later; then the party used to break up, and the local notables would go back to their village. For me, at least, there usually followed a delightful evening. First I would have a rather scanty bath in the small, tin receptacle provided for the purpose. Then came dinner, which generally consisted of groundnut soup—a wonderful concoction of which I never got tired—chicken, yam cakes, boiled pawpaw or local pumpkin.

After dinner, if we were lucky, I would find that the carriers had made a camp fire in the rest house compound and were sitting or lying around it. I would join them, and with the help of the interpreter we would tell each other stories and learn something of the local folklore and the local point of view. But everyone was tired and we went to bed early: by ten or half-past, as a rule, there was nothing to be seen except wood embers reddened by a stray gust of wind, and nothing to be heard except the night-long chatter and tinkle of insects, or the occasional hysterics of the forest hyrax.

This was a very peaceful kind of life. All the people of town and village were friendly: they knew by experience that the government was there to stop inter-tribal fighting and to secure justice and safety for everybody. In those days there was no direct taxation, so the difficulties and worries of the tax collector had not yet overtaken us. For nine months of the year almost complete harmony reigned over government and people. When the dry season arrived—otherwise known as the campaigning season—a certain watchfulness supervened: in some parts there were usually a few villages who wanted to have a go at some ancient enemy with the help of matchets and flint-lock guns. But in Ogoja Division this was exceptional: for the most part our simple and healthy life was not disturbed even by the sound of the internal-combustion engine.

Travelling of this type occupied two or three weeks each month for all of us; but while the D.O. and A.D.O. would only travel inside the one division, the Resident went on tour in succession to the headquarters of the five divisions of the province. Towards the end of the month we would all come back to the station, where a good deal of work awaited us. In my case there were arrears of work in the prison and local treasury to be made up, Native Court returns to be scrutinised and checked, minor appeals and complaints to be dealt with—all the important ones, of course, going to the D.O.; and sometimes I had to take minor civil or criminal cases in the Provincial Court.

In the evenings there were pleasant reunions, lubricated by the liquid produce of Scotland, and usually one or two amusing travel adventures to be heard.

Thus life provided an alternation of office work and travel which never allowed boredom to creep in. It was, of course, an entirely masculine life: during my first eighteen months there was never a European woman in the station. As to whether this was an advantage or not, I would not dare to express an opinion here. (*Broadcast in 'Calling West Africa'*)

Flashback to 1926: the author in front of the District Officer's house at Abakaliki, Nigeria

The end of the 30,000-mile Oxford and Cambridge expedition to Singapore and back: the six members and their Land Rovers outside the R.A.C. in London

UNIVERSITY EXPEDITION

SIX young university men arrived again in London after driving more than 30,000 miles overland to Singapore and back in two specially equipped field-cars, one painted light blue, and the other dark blue. It took one week less than twelve months. They were members of a joint Oxford and Cambridge Far Eastern Expedition, a combined motor-endurance rally and study trip—the second of its kind. Two years ago Oxford won a 25,000-mile rally across Africa; this time Cambridge won on points, so the score is now one all, and already there is talk of another expedition to South America. When I interviewed members of the Far Eastern expedition I spoke first to Nigel Newbery of Oxford, and then to Henry Nott of Cambridge.

'Nigel, you were in the Oxford half of the expedition. What has been happening to you since I saw you start off twelve months ago?'

'That is a rather complicated question. Broadly speaking, we have driven from London to Singapore; we have done quite a lot of study in minerals and irrigation in India and Burma, and finally we have taken a very good film. We have driven up to Khatmandu, and we have driven from Calcutta to Bangkok, which was considered impossible before we did it, because nobody had ever done it.'

'What were your worst moments?'

'I think we had a very depressing night in Thailand, when we had four accidents in a row, two of which could have been quite serious. We also had one very nasty night driving through southern Thailand; this was just before we reached the end of our difficulties. It was a long and extremely difficult bit of jungle.'

'Now, Henry: yours would be the Cambridge vehicle, and you split up a bit some of the time, I think? What were the highlights?'

'The highlight for me really was arriving in Singapore. We spent so much time planning and we had spent a great deal of energy in getting everything ready for the difficult parts of the journey, and they went quite successfully. Our arrival in Singapore was quite an occasion, and the champagne corks were popping—there was quite a crowd there.'

'What about technical difficulties: did you find you could cope with the road conditions, the weather—all that sort of thing?'

'We found, in fact, that we were almost over-equipped. We had taken a tent that was specially tropicalised against monsoonal rain, but in fact the amount of rain we had was very small, and the tent did extremely well. We had taken spades; we had winches and crowbars; we had everything you can think of for getting out of difficult situations.'

BARBARA HOOPER

Here and There

LAKER PRESENTATION

DURING the tea interval of the last day of the fifth Test match at the Oval a silver salver was presented to Jim Laker, the Surrey and England bowler, to mark his achievement in taking nine Australian wickets for thirty-seven, and ten for fifty-three in the fourth Test match at Manchester.

The presentation was made on the pitch by the M.C.C. President, Lord Alexander, who was accompanied out to the wicket by Lord Tedder, President of Surrey County Cricket Club. The sun was shining, the grass was green—a very pleasant little memory.

Earl Alexander presenting Laker with the salver recording the 19 wickets he took at Manchester

At the end of the match I had a few words with Jim Laker about the presentation. First I asked what was on the salver that was handed to him. He said: 'It is a very large and beautiful silver salver, and inscribed on the front of it is the entire scoreboard of the Manchester Test match in all detail, with a little inscription to the effect that it was presented by Field-Marshal Lord Alexander to commemorate the fourth Test match at Manchester, England versus Australia. The scoreboard is really beautifully done, beautifully engraved. It really is a wonderful memento of a great day.'

REX ALSTON

THE BRITISH ASSOCIATION

ONE of the difficulties of reporting a meeting like that of the British Association for the Advancement of Science is not only to understand the scientific terms that are bandied about, but also to convey to the listener the meaning of what is said about the use of scientific terms. I had this in mind when I asked this year's President of the Association, Sir Raymond Priestley, whether he thought any headway is likely to be made in making science more intelligible to the public:

'I hope so. There will always be technical terms—you can't get away from them. I brought with me to the meeting a manuscript which is being written by the Institute of Education at Birmingham. It is an attempt to make a vocabulary which has the least possible number of words beyond the normal 5,000 words which people use; and the idea is that scientists should be asked as far as possible to keep their communications inside this vocabulary. Whether it is possible I do not know, but it is a very praiseworthy attempt.'

News of a new method of producing steel was given in one of the many papers read at the meeting by Sir Charles Goodeve, the director of the British Iron and Steel Research Association. Sir Charles was both cautious and optimistic about the results. He did not think the new process when it was ready would produce cheaper steel, but nevertheless it was extremely attractive. It did away with the need for coke ovens and blast furnaces; but, again, he did not think that these would be outdated; blast furnaces were most efficient.

This new method of producing steel, which was only a plan on paper just over a year ago, was not a replacement of the present methods but would be an additional one with its own particular advantages. The new steel was called cyclo-steel—'cyclo' because at one stage there was a circular process in production. It was made by blowing powdered ore and coal into a special furnace. He said they were now operating one of the key stages of experimental production at a pilot plant near Middlesbrough—'except,' he said with a sudden grin, 'except when we don't blow it up, which we have done.' I asked him how many years it would be before the steel was in production:

'We hope in the year 1957 to know how to design a proper plant. We are still learning the fundamentals of it, and we do not intend to try and put all the bits together until we have learned the fundamentals. It will then be some years in a second stage—perhaps five years, perhaps ten—depending on difficulties which are very much there.'

CONRAD VOSS-BARK

'All Clear'—Puncher (John Mills) and the Professor (Bryan Forbes) smuggling the baby into a cabin: a scene from 'The Baby and the Battleship'

Bob Hope and Katharine Hepburn co-star in a comedy called 'The Iron Petticoat'

GORDON GOW, in this contribution to the *General Overseas Service's* monthly review of releases in the United Kingdom, deals with four 'feature films,' and interviews Ralph Thomas, who directed one of them

MANY learned and contradictory words have been written on the subject of infant care, but it is unlikely that the volumes containing them would fall into the hands of bachelor sailors. This very probable supposition is the basis of a thoroughly improbable comedy, *The Baby and the Battleship*, involving, among others, John Mills and Richard Attenborough, and directed by Jay Lewis.

The baby is smuggled aboard the battleship for suitably absurd reasons, by a sailor called Puncher (because he used to be a boxer), and what an affable oaf John Mills makes of him! Presently, the battleship proceeds through Mediterranean waters to take part in an exercise, and below decks Puncher and his shipmates grapple with two problems: how to look after the baby correctly (he is only six months old); and how to keep his presence aboard a secret from the officers.

One of the shipmates is a married man and a father of some experience. He takes it upon himself to act as a kind of foreman, disdaining any direct participation in the enterprise but giving instructions with a know-it-all air that drives his companions frantic. All the same, his advice is welcome, and the sailors put it into practice with splendid ingenuity. Once they have acquired second-hand knowledge of things like nappy-changing and bottle-feeding, they soon find the means to carry them out: table linen vanishes from the officers' mess; and when the ship's doctor dons his rubber gloves he discovers that all the finger-tips are missing.

Antics like this, coming thick and fast, keep *The Baby and the Battleship* bouncing with mirth. The mirth comes within a whisper of vulgarity at times, but it never takes an outright liberty. Its tone is set in a laughable yet touching scene where John Mills croons the baby to sleep, ever so softly, with an almost Rabelaisian ditty entitled *The Tattooed Lady*.

And just as you begin to wonder how they will keep the buffoonery up to scratch for the length of the film a Ruritanian marshal comes aboard with cohorts, and makes a minute inspection of every part of the ship, which allows for a fresh bout of hilarity as the sailors find it necessary to shift their charge from point to point at breakneck speed to dodge the attention of these inquisitive guests.

There is more broad comedy in *The Iron Petticoat*, a British film with American stars and a distinctly American manner. Bob Hope appears as a lieutenant assigned to the task of converting a Soviet airwoman to the Western way of life. Since the airwoman is a fighter-pilot of considerable renown, and played by Katharine Hepburn at that, Hope's job is uphill work in more ways than one. *The Iron Petticoat* was scripted by the American writer, Ben Hecht, in the style of a typical Bob Hope comedy. The jokes are strictly in the gag-man category, and there is little attempt to derive any satire from the clash of Eastern and Western ideals.

Bob Hope is provided with the brash quips his fans will expect and undoubtedly appreciate. Squirring the airwoman at a night-club party, he calls the waiter and says: 'Bring us a pitcher. Half champagne, half

vodka. And water-wings for everybody.' So it bubbles along in settings that recall the gloss and glitter of a Hollywood musical, though, to be sure, we get a colourful glimpse of Piccadilly Circus or the Horse Guards clip-clopping past Buckingham Palace now and then to remind us that the action is taking place in England.

The interest of the film is centred on the star combination, Hope and Hepburn, a combination that turns out to be as incongruous as it sounds. Bob Hope's uphill work, as I have indicated, is not confined to the plot. His humour has thrived in company with glamorous actresses like Dorothy Lamour and Jane Russell, to name but two. Now, confronted by Katharine Hepburn, he seems rather at a disadvantage. Although the script is geared to conform with the Hope tradition, Miss Hepburn whips through the film like a carefree tornado: her personality overwhelms it.

It is not a question of brute force, I am sure—no necessity for that. Miss Hepburn has triumphed over some difficult parts in her time. This one is a walkover: the ramrod woman steeped in Soviet regulations, yet weakening at the sight of a flimsy negligee in a shop window and at the contemplation of what it might do for her. This makes no great demands on her sensitivity. And when she counters Hope's boost for Western democracy with tirades of Communist doctrine her personality is so potent, her wit so sharp, that the horseplay looks like child's play. Hope is no actor-comedian. He is a gag-man, one of the best in his own highly competitive field. But I doubt if he has even played against competition like this. Anyway, the conflict is intriguing to watch. *The Iron Petticoat* is an uncommon film, and I had a talk with its director, Ralph Thomas, about it.

'This is certainly a change from the typical British film you usually do, Mr. Thomas, isn't it?'

'Yes. Normally, Betty Box has produced the last twelve pictures that I have directed. We work as a team: we start with an idea or a script; we get it into the shape that we want, and we put it on the screen with a cast we believe is right for it. This film, of course, started with a script written in America, and we have two great international stars in the cast, so we set out making a picture that was already half-way there. It was an odd thing but the two protagonists, Katharine Hepburn and Bob Hope, had never met although they had lived within 2,000 yards of each other for more years than either of them would admit. I do not think they had ever spoken to each other before they met at Pinewood.'

'Two Completely Different Temperaments'

'How was your job as a director trying to control what must be two completely different temperaments?'

'I was largely a referee. They are both great individualists and absolute masters in their own field. He is essentially a vaudevillian—the best of his kind. He has got a wonderfully timed delivery; he knows exactly how to sell a smart wisecrack, how to get a wonderful visual reaction with his very mobile funny face. She is a highly trained and very expert light comedian with enormous talent. It is very difficult to mix these two together, because farce and dramatic comedy are quite incompatible.'

'You had the world première of this film, I think, in Berlin—at the Berlin Festival—didn't you?'

'Yes. It was rather fun because it was shown to a lot of different

Robert Helpmann, David Kossoff, and James Robertson Justice in 'The Iron Petticoat'

Sylvia Sims and Kenneth Haig play leading roles in 'My Teenage Daughter,' a study of juvenile delinquency produced by Herbert Wilcox and Anna Neagle

'Films to See'

audiences in a very short time. It was shown to the sort of festival audience—a rather stuffy audience—who seemed to enjoy it; it was shown to a paying audience in a 3,000-seat cinema, and they laughed a lot and obviously loved the movie. But the biggest reaction was in a cinema which actually backed on to the Russian zone. There were about 2,600 people in the cinema, a lot of them standing. Very many of them lived in East Berlin under Russian rule, and there were, I think, quite a lot of Russian soldiers in that audience as well. And they laughed at it. It had an identical reaction when it was shown to an American camp, full of American soldiers of all ranks and their wives and families. It is very odd that the Russians and the Americans laughed at the same thing: there must be something international about humour, I think.

Sequel to 'Doctor in the House'

'Yes, and despite the clash of East and West in the film, East and West find it equally funny. Now, I gather the next thing you are going to do is something in more familiar vein for you, because your most famous film, I suppose, was *Doctor in the House*: I believe you are going to make another of Richard Gordon's 'Doctor' books into a film?'

'Yes, we are sticking our chins out. Betty and I actually bought the three stories together—*Doctor in the House*, *Doctor at Sea*, which was not strictly a 'Doctor' story but a nautical comedy which had a doctor in it, and *Doctor at Large*, which is quite definitely and unashamedly a sequel to *Doctor in the House*. It tells the story of the same people, no longer students but doctors starting off in private practice, and I think it has got a lot of humanity, a lot of reality. This is very documentary-comedy in style: it is not a slapstick comedy; it is not particularly broad comedy. I think it is terribly funny, and I am looking forward to making it enormously. It has got Dirk Bogarde in it again, and James Robertson Justice, Muriel Pavlow—a lot of the old people—and I hope people will like it.'

* * * * *

Adolescent delinquency is a topic that has been engaging American and Continental film-makers a good deal lately, but it has not been explored much in British films. So it comes as something of a shock to find Herbert Wilcox and Anna Neagle grappling with it in a production, *My Teenage Daughter*, that is very much off their beaten path. Miss Neagle herself is cast as a mother, widowed and reasonably well-to-do. Her two daughters have a happy home, and Miss Neagle provides for them by working in a magazine office. Her work is so efficient that she gets a promotion to the post of fiction editor of a magazine called *Teenage*. Imagine her embarrassment, then, when the elder of her two daughters, who is seventeen, takes up with a rather sleazy young man.

Sylvia Sims, a newcomer, acts well as the daughter, and Margaret Lockwood's little girl, Julia, does splendidly as her younger sister, who observes the seventeen-year-old in tight, tartan jeans and sloppy sweater, and remarks wisely: 'She's just a crazy mixed-up kid.' There is not all that much indication, really, that the kid is mixed-up, beyond the fact that she spends a lot of time in a crowded, dingy cellar where pseudo-bohemians perform choreographic contortions while the band plays a tune called *Get With It*. No matter when she and her boy-friend visit this dive (and they drop in frequently), the band is always playing *Get With It*, showing that adolescent delinquency can be darned monotonous.

Eventually something really happens: there is a murder, or something very like one, and for a few minutes things get quite dramatic. The boy-friend's wealthy old aunt, beautifully played by Helen Hayes, refuses to give him some money, and when he snatches her purse she drops dead. So Miss Neagle's teenage daughter, who is waiting outside in a car, is automatically involved, and a crisis develops.

There is no compromise whatever about *Child in the House*. This film is unabashed sentimentality, and little Mandy Miller, as the child in question, turns out to be as accomplished a heart-string-plucker at the ripe age of eleven as she was some years ago in *Mandy*. (As a result of her success in that picture she is called just Mandy now.) Her achievement is interesting, I think, because young children can often appear to act naturally under the guidance of a patient and clever director, but when they get to be as old as Mandy is now they are very much aware of what acting means. As a result, they tend to be coy and self-conscious about it. But in *Child in the House* this talented little girl manages to look natural most of the time, and towards the end of the story her distress is bound to strike a sympathetic chord from all but the toughest.

Her father, who is played by Stanley Baker, is what you might call a likeable bounder. He is a thief and a gambler and continually on the run. His little daughter does not see him much, but whenever they do meet there is a warm affection between them. The mother is ill in hospital, the father in hiding, so Mandy goes to live with her aunt and uncle, a prosperous but childless couple who have grown a bit sour: Phyllis Calvert and Eric Portman make them convincing enough.

The whole thing is nowhere near as soggy as you might expect. It is a bit slow to get going, but once into its stride *Child in the House* is thoroughly acceptable on its own sentimental terms. (Broadcast in the BBC's *General Overseas Service*)

Mandy Miller gives an accomplished performance in 'Child in the House' as the daughter of a criminal on the run (played by Stanley Baker)

Journey to South India

Continued from page 9

a goatskin, which is covered with a mixture of burnt hay and castor oil. Ingenuity, coupled with a natural instinct for music in the South, have led to the invention of many unusual musical instruments. One of them features in *Villupattu*—the Song of the Bow—which comes from Tinneveli in Madras State. The bow is about ten feet long, a leather thong stretched between the two extremities of a curved bamboo pole. Behind it sit two men: one plucks the bowstring, to which is attached a row of bells, while the other beats the open end of a large earthenware pot that is tied to the bow. The singer, sitting cross-legged in front of them, sings of the Lord Shiva and his consort, Parvati. Shiva and Parvati! Religion is never far away: ritual and custom, music and dance are all one. It was in the magnificent temple at Madurai that we stood in the pillared cloisters and watched the images of Shiva and Parvati being carried on bamboo palanquins to their morning bath. Afterwards they would be bathed in coconut milk, and rice would be offered to them: not far away was the haunting sound of the flute.

Throughout Tamilnad, which is the home of the Tamil language in Madras State, one is never far away from the sights and sounds of worship. Sometimes our car was stopped as a highly decorated cow—a sacred animal to all Hindus—its horns topped with brass, and yellow spots painted on its body, accompanied its owner to the temple; or we would see the almost life-size horses and other animals of baked clay standing guard over a shrine; or, again, catch a glimpse of villagers carrying gleaming brass pots of new rice to the temple as a harvest offering.

Where the Wild Elephant Roam

There are still vast areas of South India where the wild animal population is greater than the human, where the wild elephant roam at will and sometimes stalk through the tea estates, uprooting hundreds of tea bushes and causing great damage. There is tiger and bison, too, and game reserves have been created to prevent their extinction. Once in twelve years an elephant round-up is held, to capture elephants for work, since only they can go into the teak forests in the hills and haul the huge tree-trunks to places where they can be used. And deep in the hills there are still tribal settlements where the people have not had any contact with the modern India that is being created in the plains.

It is not only in the thickly wooded hills, however, that isolated communities are to be found. There are some who exist in the Malabar coastal area and have managed to preserve their distinctive identity. Such a group are the White Jews of Cochin. They came to India probably in the first century A.D., and although there are now only about a hundred of them left in the seaport of Cochin they have kept their way of life intact. We walked through the narrow street leading to their synagogue, where a patriarchal old man showed us round, and it was with a supremely proud smile that he said: 'We have been here 900 years.' Another group are the Muslims of Arab descent known as Moplahs. Their songs are characteristic of their history—a mixture of Arab, Malayalam, and Tamil words.

The most conservative of Brahmin Hindus live in Malabar: they are called Nambudhris, and are of pure Aryan stock. Even today they live in a twilight world of ancient custom which has been handed down for 2,000 years, speaking a very Sanskritised language. They live mainly indoors and devote their lives to learning and administering the land. I visited one of these Nambudhri households, but being a foreigner I was only allowed into an outer room. There is a matriarchal society, and the elderly woman who came to meet me was friendly enough. Her ear-lobes were pulled down with heavy gold earrings, and her whole appearance must have been identical with that of her own forbears hundreds of years before.

A Clamour of Festivals

South India has not needed to resist the modern influences of change. The old way of life is too secure and deep-rooted for it to be undermined by the temporal trends of today. Whereas our festivals in the West are preserved for their historical interest, in South India they are alive in the minds of the people and need no artificial stimulus. The South is indeed a clamour of festivals: they love noise and colour, and they excel in producing both. For one of the year's big religious festivals—*Dassera*—held at Trichur on the Malabar coast, eighty drummers and thirty-six elephants from two temples turn out, and in a spirit of good-hearted rivalry compete with each other in the splendour of their performance until the spectator is almost buried in the sound.

It should be needless to say that we left South India with deep and sincere regret. But its music will ring in our ears for a very long time to come and will conjure up pictures of that incredible countryside: from the hills—said to be older than the Himalayas—that rise from the plains like lunar peaks, to the quiet backwaters of Travancore, which weave through the palm trees, and the vivid green squares of rice that grow wherever there is space and water to irrigate them. A lovely land that is a hard taskmaster to its people, but from which they seem to draw endless inspiration and enthusiasm. (*Broadcast in the BBC's General Overseas Service*)

This Week's Listening

ANDREW BONAR LAW

FROM October, 1922, until May, 1923, Andrew Bonar Law was the British Prime Minister. His 209 days in office were cut tragically short by illness, and he died only five months after resignation. He was the first man of Commonwealth origin to become Premier of Great Britain.

Bonar Law had been born in the Canadian province of New Brunswick in 1858. At the age of twelve he had left Canada to spend his boyhood in

Glasgow, where he attended the High School and later became a merchant. He had been first elected to the House of Commons in 1900, and eleven years later had become Conservative leader.

How did this quick-witted but rather silent Canadian Scot become Prime Minister? He was not a statesman with great imagination: he fought his last election on the slogan 'Tranquillity and Stability.' 'There are times,' he said, 'when it is good to sit still and go slowly.' How then could he have been the perfect second-in-command in Lloyd George's Coalition Government which won the first world war? These and other questions will be answered in a programme about Bonar Law this week.

Speakers will include Lord Coleraine, his younger son, a former Conservative Home Secretary, Lord Templewood, and a former Labour Minister of Defence, Mr. Shinwell. It will end with an appreciation by the Oxford historian, Dr. Robert Blake, whose long biography of Bonar Law was published last year under the title *The Unknown Prime Minister*.

G.O.S.: Monday 17.30; Tuesday 02.30; Friday 10.00

COLONIAL QUESTION-MARK

THE speed with which colonial territories have advanced to political independence has been one of the major features of post-war colonial policy. What determines the rate at which it is carried out, and why does the pace vary from colony to colony? Is there a danger of going too fast or too slow? And are some colonies too small to ever achieve a state of real political independence?

These are some of the points which will be considered in the third and final 'London Forum' devoted to the 'Colonial Question-Mark.'

G.O.S.: Sunday 16.15; Monday 02.15

THE SOVIET UNION

'SCIENCE and the State' is the title of Lord Adrian's talk in the G.O.S. series on the Soviet Union. Lord Adrian, formerly known as Professor E. D. Adrian, has been the Master of Trinity

November 4 — 10

College, Cambridge, since 1951. His distinguished scientific career has included the award of the Nobel Prize for medicine in 1932, and the Presidency of the Royal Society in 1950.

Earlier this year, at the invitation of the Academy of Sciences of the U.S.S.R., he led a party of members of the Royal Society on a visit to scientific institutions in the Soviet Union. In his talk Lord Adrian will describe the level of scientific achievement in the Soviet Union and the position enjoyed by the scientist in Soviet society.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

THE OLYMPICS

THE last Games before the war were held at Berlin in 1936. The lavish presentation, including the building of a superb new stadium, was intended by the Nazi Government to act as an advertisement for the regime. The atmosphere of these Games will be recalled by Godfrey Brown, in conversation with Roger Bannister, in the series of programmes on 'The Olympics.'

Mr. Brown, who is now the headmaster of the Royal Grammar School at Worcester, was one of Britain's finest quarter-milers between the wars, and was an unlucky second at Berlin in the 400 metres. In the programme he will speak about his races, which also included being a member of the British team that won the 4 x 400 metres relay event, and about two of the outstanding performers at the Games—Jesse Owens and Jack Lovelock.

G.O.S.: Monday 17.00; Tuesday 02.15 and 09.30

THE BUDDHIST REVIVAL

THIS month in Delhi—as part of India's recognition of this year's 2,500th Buddhist anniversary—an international exhibition of Buddhist art is being held to coincide with the UNESCO Annual Assembly. Later in the month a symposium on Buddhism will be attended by delegates from Western as well as Asian countries, who will afterwards visit some of the more important Buddhist shrines in India.

For Francis Watson this year's commemorations and pilgrimages call to mind the contributions made by Western scholars to the knowledge of Buddhist tradition and culture. Under the title of 'East and West in the Buddhist Revival,' he will recall in a talk the tribute of the late Mrs. Sarojini Naidu, of India, to 'the scholars of Europe who restored to us our pride in our ancient culture . . .' In giving some insight into their discoveries, he also considers the influence of their work on present-day Asian thought and attitudes.

G.O.S.: Friday 16.15; Saturday 00.30 and 05.00

Paul Rogers can be heard in 'Hunter's Moon,' a play by Eden Phillpotts, on Sunday and Wednesday

RUSSIAN-BORN PIANIST

THE soloist, Nina Milkina, who will play the Schumann *Piano Concerto in A Minor* on Tuesday at 14.45 with the BBC Symphony Orchestra, conducted by Rudolf Schwarz, was born in Moscow in 1919 and began playing the piano at the age of three. When she was eleven she had her first compositions published and performed. She studied with various eminent professors, including Rachmaninoff, who heard her play when she was a child and persuaded her parents not to let her become a child prodigy.

Miss Milkina made her debut in London when she was in her teens, and is now one of Britain's leading pianists, winning particular praise for her interpretation of the Mozart piano concertos. She is married to an Englishman.

FOR CHILDREN

ALL young children and their parents know the Agay little 'Railway Engine' books by the Rev. W. Awdry, illustrated by C. Reginald Dalby. Was there ever a happier combination? But Mr. Dalby is much more than a tender to Mr. Awdry's enchanting locomotives. All have much the same faces registering delight, triumph, defeat, exhaustion or determination, but very different bodies. Colour matters most, next line.

In a doss-house for tired engines, for instance, is Gordon, the Blue Express, sleek, snug, wind-resistant, and stream-lined, but James the Red Engine will undoubtedly get the better of him.

'The Three Railway Engines' is the title of the first of three 'Railway Tales' in the programme for children.

G.O.S.: Sunday 13.15; Monday 21.30; Saturday 09.45

'HUNTER'S MOON'

THE scene, as almost always with an Eden Phillpotts play, is in east Devonshire. This play he might possibly have called *A Village Romeo and Juliet*, had not Delius used the title before him, for the theme is that of young lovers and attentive parents, though the idiom here is of comedy.

Not that Peter Chadd and Nancy Owlett are frustrated and forbidden in their wooing by the attitudes of their respective widowed parents, old Matthew Owlett and Dinah Chadd. Indeed, if the younger pair can soon tie a satisfactory knot, it seems likely that their elders will follow suit.

The trouble is that Matthew is an opinionated old man, even crankish, and one of the opinions troubling him at the moment is that Peter Chadd is rather too meek and mild. True, Peter (played by Paul Rogers) is a hefty young man and a member of the local constabulary.

But in Matthew's opinion 'He's a thought too given to mercy—too tender.' And in this opinion he persists until one fine moonlit evening when Peter happens to catch the poacher who has been troubling the local gamekeeper, and who turns out to be none other than his own prospective father-in-law.

PETER FORSTER

G.O.S.: Sunday 01.00 and 18.30; Wednesday 14.15

A wartime picture of Sir Winston Churchill and the late Field-Marshal Smuts: on Wednesday Sir Winston is to unveil the Smuts memorial in London, in a ceremony broadcast at 10.55, 18.30, and 22.15

Lesson 107
15.15-15.30 NEWS and News Talk

What I Believe. Professor Raymond Firth, Professor of Anthropology at the University of London since 1944, has conducted social research surveys in West Africa, Malaya, New Guinea, and the Solomon Islands. On Sunday he will discuss the ways in which people of different cultures use symbols to represent their relations to one another and to the natural world around them. He will include some observations on his belief in the nature of religion as a human concept.

Question Time. Wednesday's programme will take the form of an impromptu discussion between Dr. Raymond Greene, F.R.C.P., and Colin Wilson. Dr. Greene was Senior Medical Officer on the Mount Everest Expedition in 1933, and is the author of many scientific and medical papers on the effects of great altitude and exposure to cold. Colin Wilson is a young writer whose first novel, *The Outsider*, was a best seller.

Standards of Living. The changes in the field of adult education over the last quarter of a century have been so great that it is impossible to consider all of them in Monday's half-hour programme. One kind of adult education will be dealt with on this occasion; all the speakers will be from Morley College, one of the first schools for part-time students to have been established in England. Those taking part in the programme under the chairmanship of Norman Fisher, will be Dennis Richards, the principal; J. O. Greenwood, who teaches English; and A. F. Wallden, a taxi-driver who has been attending Morley College as a student for nearly twenty-five years.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

In the field of television transmission 'Standard' coaxial cable and SHF radio links are the backbone of the G.P.O.'s permanent television transmission network in Great Britain. Illustrated is the tower and antennas system at Blackcastle Hill, Scotland, one of seven repeater stations along the route of the Manchester — Kirk o' Shotts television link.

C Communications

by

Standard

One of the largest telecommunication engineering organisations in the British Commonwealth Standard Telephones and Cables Limited is engaged in research and the development, manufacture and installation of all types of communication and control systems. Concerned with every aspect of telecommunications engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated planning of complete communication projects involving inter-dependent systems of various types.

'Standard' products include:—

Telecommunication Line Transmission Equipment
Radio Broadcasting Equipment
Radio Communication Equipment
Air Radio Navigational Aids
Supervisory and Remote Control Systems
Railway Communication Apparatus
Railway Control Equipments
Telephone Cable
Sound-Reinforcement Systems
Public and Private Telephone Systems

EMITAPE

FOR RECORDING
AT HOME
... OR IN THE STUDIO

WHEREVER it is, with EMITAPE
you can be sure of
obtaining the finest possible results ...

for the professional ... for
the amateur ... at home and
abroad—in fact the world over

EMITAPE is the finest magnetic
recording tape.

THE EMITAPE RANGE—

There are three types of EMITAPE—
Emitape '77' is a special "Pen Tested" tape for
professional application—'88' is a
General Purpose tape and '99' is a special thin base
tape for Long Play purposes.
Emitape is wound on a variety of spool sizes which
fit all standard, professional and

domestic tape recorders and provide for all possible magnetic
recording requirements.

A RECOMMENDATION—

Emitape is used by people who know the recording business
—"His Master's Voice", Columbia and
Parlophone for recording world-famous artists
and by broadcasting organisations
throughout the world.

use EMITAPE for YOUR recordings

GEAR AND "DYNHUB" HUB LIGHTING EQUIPMENT

RE.228

HIGH TEMPERATURE LIGHTWEIGHT RECTIFIERS

- For operation in ambients of up to 85°C
- Elimination of cooling fins for compactness
- Light alloy construction for light weight
- High stability

These are some of the salient features of this new range of rectifiers, primarily
developed for Service requirements, but now available in production
quantities for all applications. Units can be supplied with various finishes
to comply with RCS.1000 categories H.1 and H.2.

'All People that on Earth Do Dwell'

PHILIP MASON introduces a week of broadcasting in the General Overseas Service which is 'basically an attempt to promote understanding—of the East by the West, of Christians by non-Christians, of those on both sides of barriers of race who peer at each other mistrustfully.' (Details of these broadcasts will be found on page 17)

SOME six years ago these words were used in a talk to a group of people thoughtful about the future of the world: 'There are two problems in world politics today which transcend all others. They are the struggle between Communism and liberal democracy, and the problem of race relations. Of the two, I am prepared to argue that the problem of race relations is the more important . . .' In 1950 those words must have come to most people as a surprise. Today, many would argue that they have been justified. It is fifteen months since peoples of Asia and Africa met at Bandung to hold a conference in which an American commentator read the implication that 'the link of colour'—or, as I should prefer to say, the link of not being European by racial origin—overrode all other links.

I felt at the time that that view was overstated, but there is a truth in his words. When the Suez Canal dispute arose, India's first reaction was not to think of the effect an interruption to traffic might have on her own trade or on her plans for development but to express sympathy for a non-European power anxious to control every activity taking place within her borders. It was the same over Abadan, and will be the same over the next dispute of the kind: neither law nor international convenience nor the needs of commerce count against this fellow-feeling.

But it is not enough to define this reaction as impatience of 'colonialism': it is much more. 'Colonialism'—in the sense of the invasion of one part of the earth's surface by people from another—has a long and respectable history and has been responsible for the spread and growth of many ideas for much of mankind's progress. Nor does India feel it to be wrong that people of a distinguishable stock and culture (such as the Nagas) should play their part—inevitably a subordinate part—in a wider whole. It is not 'colonialism' that has roused resentment but a particular form of 'colonialism,' the dominion of Western European powers, in the nineteenth century particularly, over Asian peoples.

There were two unusual features about this form of 'colonialism.' It did not fall into the simple patterns of the past: it was not the conquest of a less 'civilised' people by a more 'civilised,' like the conquest of Britain by Rome; it was not the conquest of a more 'civilised' people by a less, as of Rome by the Goths; it is more useful to look at it as the conquest of old civilisations by younger—and there is something very gallant about that.

At the time of the Crusades there was not much to choose between East and West in tech-

nical achievement, still less in progress along that road of social development which Sir Henry Maine described as leading 'from status to contract,' from a society in which a man's position is largely determined for him, and one in which he has largely to make it for himself. But at the end of the Middle Ages Europe suddenly started to march along that road very much faster than before, and at the same time to make startling discoveries in technology.

For various reasons this double advance—in mastery of the external world, and towards competitive and yet disciplined individualism—did not occur at the same time in Asia. And the im-

pect of peoples who had made it on those who had not was devastating in a double sense, because both forms of advance were highly infectious, and military and diplomatic defeat was followed by a turmoil of new ideas.

That was the first big difference between this nineteenth-century 'colonialism' and others that had gone before, such as India's to the south-east and Islam's to the west. The second was one I can only deplore: the stand-offishness and sense of superiority that went with it. This arose from a misleading idea. Europeans in Asia in the nineteenth century saw differences between themselves and those around them, and supposed they were due not to history and upbringing but to an inborn hereditary difference.

Britain in the nineteenth century pictured herself as the angelic bearer of blessings—peace, justice, roads, railways, irrigation; to India she came to seem conceited, aggressive, insensitive, and aloof. The impact of the Western nations on Africa produced a still sharper contrast, a still more disturbing turmoil of ideas, a still more pronounced sense of racial superiority; that is why the Bandung meeting of the underdeveloped countries of Asia and Africa has come to be invested with an appearance of racial solidarity.

Meanwhile the cause of social progress in Europe came to be associated with nationalism. The two do not really go together but historically they grew up side by side, and together fell into line against the Russian Imperial State and the Austro-Hungarian Empire. The liberals of the nineteenth century believed that the freedom of the individual to develop in his own way was something to be fought for and died for; they found themselves naturally at enmity with the great empires, and supposed that their nationalist allies shared their ideals. But alas! When the tyrants were done away with the right of the individual to be himself disappeared in the new nationalist states before waves of emotion, followed by waves of storm-troopers.

And this unnatural alliance between those who believe in liberty and those who believe in the nation, right or wrong, is repeating itself before our eyes in Asia and Africa. Both have lined up against 'colonialism,' both have lined up against false ideas of racial superiority. And so they think of each other as allies, yet could not be further apart in intention.

This week of spoken-word broadcasting in the General Overseas Service is basically an attempt to promote understanding—of the East by the West, of Christians by non-Christians, of those on both sides of barriers of race who peer at each other mistrustfully.

LORD STRANG

LORD STRANG, former Permanent Under-Secretary of State at the Foreign Office, made this first contribution to the series of talks currently being broadcast in the G.O.S. by experts on the Soviet Union

The U.S.S.R. and its Peoples

THE Union of Soviet Socialist Republics is a land as large in area as the whole of the North American continent, and with a population of nearly 200-million people. How best can I give a general introduction to this vast country? Let us look first at the name itself. You will see there the word Socialist: Socialist, you will note, not Communist. According to the orthodox conception of the

new revolutionary dispensation, there are three kinds of organised societies: People's Democracies, Socialist societies, and Communist societies. People's Democracies are those which have taken the first steps along the correct Marxist road: the eastern European satellite states and the Chinese People's Republic are in this class. Next come the various republics which make up the Soviet Union: these are in the second, the Socialist class; but they are held to be well on the way towards the third and final Communist class, which still lies in the future.

Then there is the word 'Soviet.' This is the ordinary Russian word meaning council or committee. It indicates the basic constitutional structure of the Soviet Union: a great pyramid of councils or Soviets, central and local, with the Supreme Soviet at the summit, and with elections organised in such a way as to ensure strict control by the one legal party, the Communist Party of the Soviet Union.

Theoretical Rights Reduced to Zero

Then, this great new state of the modern world is a 'union' of republics. It is not, in form at any rate, a unitary state like France or Italy. It is a federation of fifteen constituent Soviet Socialist republics, each organised on a basis of nationality. In theory these various republics all have a wide measure of autonomy: they may enter into relations with foreign states; they even have the right of secession from the Union. But in practice the rigid control of the Communist Party of the Soviet Union reduces these rights to zero.

We commonly refer to the Soviet Union as Russia, and there is good reason for this, because the Russian Soviet Federal Socialist Republic is by far the largest of the republics of the Union. It has more than three-quarters of the area and nearly two-thirds of the population. It stretches eastwards from Leningrad right across the north of Asia to the Bering Strait; and south from the Arctic Ocean, over successive areas of tundra, forest, steppe, and desert, to the confines of Central Asia.

A good part of it had already been added to the Muscovite Empire during the century of vigorous northward, eastward, and south-eastward expansion between 1550 and 1650. The Muscovites moved their frontier steadily to the east (as the Americans moved theirs to the west), and could plant posts thousands of miles away on the northern Pacific when the way to the Baltic and the Black Sea was still firmly barred by Swedes, Poles, Tartars, and Turks. The penetration and colonisation of Siberia, its exploitation first by fur-trappers, then by agriculturalists and—more recently, and in gigantic measure—by industry based on the iron ore of the Urals and the coal of the Kuznetsk basin, is one of the great achievements of the dynamic energy of the Russian people.

Contrasting Treatment of Minorities

Three-quarters of the population of the Russian Republic are Russian. The remainder are national minorities, mostly of Finnish, Tartar, or Mongol origin, scattered about, and forming a kind of mosaic. In the Soviet Union as a whole there are peoples speaking eighty different languages. Where these nationalities are in compact and substantial groups they have their own autonomous republics or regions within the Russian Republic. Unlike the Tsars, the Soviet rulers have encouraged the languages, arts, and national traditions of their minority peoples. But, on the other hand, some of these peoples have been brutally deported *en masse* to other parts of the Union.

The various national republics of the Soviet Union, other than the Russian Republic, are all on the fringes, and they fall into three groups: the western group, the trans-Caucasian group, and the Central Asian group. Two members of the western group—the White Russian and Ukrainian Republics—have a predominantly Slav population, racially and linguistically akin to the Russians. Both are separate members of the United Nations.

The Ukraine (the name means borderland) is the second in importance of all the Soviet republics, a rich agricultural and industrial area with great coal deposits in the Donets basin. The Ukraine was in times gone by the battle ground of Muscovite, Pole, Tartar, and Turk. It now includes within its borders areas of Ukrainian (or, as they are sometimes called, Little Russian) population that once formed part of Poland, Czecho-

slovakia, and Rumania. The Ukrainians have a touch of the Tartar in them, as the Russians have a touch of the Finn.

The non-Russian republics of the western group are, from north to south, the Estonian, Latvian, Lithuanian, and Moldavian republics. The Moldavian Republic, with a population akin to the Rumanian, includes part of the former Rumanian territory of Bessarabia. The possession of Estonia and Latvia restores to Russia the outlet to the Baltic which Peter the Great first achieved in the eighteenth century. Between the two wars they were independent, democratic states. They have now once again, with Lithuania, fallen under the bitter yoke of the Muscovite.

The three republics of the trans-Caucasian group are Georgia, Armenia, and Azerbaijan. This is the area where in past times Russia long contended for mastery with Turkey and Persia. Most of the area fell to the Russians in the first quarter of the nineteenth century. These are turbulent peoples who, much as they have suffered from the heavy hand of the conqueror, have developed politically, culturally, and economically under both Tsarist and Soviet rule. Stalin himself was a Georgian, and Mikoyan comes from Armenia. The Azerbaijanis are akin in race and language to the inhabitants across the frontier in north-west Persia; they have within their borders the oil of Baku.

The third group is in Soviet Central Asia, which would be called a colony if it were situated overseas instead of having a common land frontier with Russia. It was conquered by Russia in the 1860s and 1870s. Formerly composed of the states of Khiva, Bokhara, and Turkestan, it was redistributed on a national basis among the five Soviet republics of Kazakstan, Turkmenistan, Uzbekistan, Tajikistan, and Kirghizia. The most northerly of these—Kazakstan—is second only in area to the Russian Republic. In this formerly primitive land, industry, mining, and agriculture have been developed on a great scale. The other Central Asian republics border on Persia, Afghanistan, and China. Their populations are akin to the inhabitants on the other side of the Persian and Afghan frontiers. Uzbekistan produces most of the cotton grown in the Soviet Union; and here also we find the cities of Bokhara and Samarkand.

Here, then, is the Soviet Union. The question suggests itself: how far is it a continuation of the historic Russian Empire and how far is it a unique Communist society? The short answer is that the Soviet Union is both these things. The difficulty is to evaluate the relative strength and compulsive force of these two, sometimes conflicting, trends: to discern how far the Soviet rulers use conventional methods of *realpolitik*, and how far they are governed by the revolutionary objective.

Much in Common with Tsarist Empire

The Soviet Union has much in common with the Tsarist Russian Empire. The Soviet rulers have always admired some of the great tempestuous figures in Russian history like Ivan the Terrible and Peter the Great. There is a similar intense concentration of power at the centre, autocratically exercised. There is a wide range of state action, operated through a vast bureaucracy backed up by an all-pervading secret police. There is also a similar extreme and drastic way of doing things which seems to be characteristically Russian. The despotic character of the Soviet system may be regarded as a reversion to an earlier Tsarist autocratic absolutism which had begun to be mitigated in the latter part of the nineteenth century by the dissemination of more liberal ideas. Whether the Soviet despotism will itself in its turn be similarly mitigated is one of the great questions of our time.

Where the Soviet Union differs chiefly from Tsarist Russia is in its revolutionary inspiration. The inevitability of world conversion to Marxism-Leninism is fundamental to the Soviet outlook, and so is the conviction that Marxism provides an infallible guide to action. The revolutionary tactic is to exploit antagonisms among capitalist powers, to foment agitation and revolt among colonial and semi-colonial peoples, and to promote internal class-conflicts in other countries.

In times of emergency the safety of the Soviet state will take priority over the revolutionary purpose. Even in normal day-to-day affairs the Soviet Government, being confident that history is on their side, can afford to make short-term deviations without losing sight of the long-term aim.

If there had been no revolution Russia would no doubt today still have been a pretty powerful state, but her Communist masters have effectively harnessed the dynamic energies of the Russian people for their own purposes. In the Soviet Union we see repeated on a vaster scale, and with more dangerous possibilities, that marriage of the will-to-power and a proselytising creed which once threatened to dominate Europe in the first flush of Islam and, again, in the age of the Counter-Reformation. This is the challenge which faces us in our own generation. (Broadcast in the BBC's General Overseas Service)

The Soviet Union: The Intelligentsia, by Hugh Seton-Watson (see note on page 17)

New models of bicycles for children have been prepared by manufacturers for the Christmas trade: they are as efficient as larger machines but gayer

Cycles and Motor Cycles on Show in London

HAROLD BRIERCLIFFE, Editor of the 'Motor Cycle and Cycle Trader,' offers a preview of the thirty-first Cycle and Motor Cycle Show which is being held in London this week. A report on the show will be broadcast in the G.O.S. on Tuesday at 00.15, 07.45, and 19.45

THE thirty-first London Cycle and Motor Cycle Show assumes greater importance this year in view of the decision to stage the event every other year in future: the next exhibition will not take place until 1958. British manufacturers are, therefore, making an extra effort to capture the attention of the home public and overseas customers.

The twin industries, mainly based in the Midlands of England, continue to play an increasingly important part in the nation's economy. Last year more than 2-million bicycles and 60,000 motor-cycles were exported, bringing in £28-million, a considerable proportion of this amount being in dollars.

There are an estimated 9-million adult cyclists in Great Britain, together with some 3-million child riders of juvenile tricycles and junior bicycles. Sales of cycles to children have expanded greatly in recent years, largely because of the increased birth-rate of the immediate post-war years, and this trend is expected to continue.

Despite current domestic propaganda urging restrictions on child cyclists British cycle manufacturers will have at Earls Court many new bicycles for schoolchildren. For this year's Christmas trade these machines are more than ever exact copies of adult machines, with standard steel-tubing, two roller-lever or caliper brakes that are as efficient as those on larger machines, gay colours, and chain-guards.

Adult bicycles, too, follow the tendencies towards more brilliant colour finishes, in which overseas markets (especially those in the Far East) are now taking keen interest. An innovation at Earls Court is the fitting by cycle-makers of a three-speed hub-gear that is smaller, lighter, smoother, and quite silent—a major triumph of precision engineering.

Racing bicycles and lightweight cycle fittings made in Britain are used throughout the world, and as with children's and standard machines they have finishes which for durability are unsurpassed. A leading Birmingham factory, for example, is finding a steady demand for its road-racing bicycle, using British-made equipment, with a specification based on models used by its riders in the 1955 Tour de France.

The enhanced appearance of 1957 cycle finishes is matched by new fittings and components: white-walled tyres, polished-alloy caliper brakes, more comfortable saddles, increased lighting power from dynamo sets, stronger and more attractive mud-guarding, and a new idea in crank-cotters which obviates the need for hammering.

There are now nearly 1,250,000 motor cycles registered in Britain, compared with 462,287 in 1937. Reliability is equally the watchword of the

Leslie Archer, on his Norton, winning the Moto-Cross Grand Prix of Great Britain last July: he also won the European Moto-Cross Championship

British motor-cycle industry, and the latest designs have generally been evolved after much experiment on the race-track, or in scrambles and trials events. Of particular interest is the fact that enthusiasts overseas can purchase British production racing machines similar to those ridden by works teams. A British rider on a British machine has again won the European moto-cross (rough riding) title, and the world's speed record has also been regained recently for Britain.

Thus models on view combine performance with the ability to stand up to the toughest conditions likely to be experienced in overseas countries. Improved performance in most cases has been achieved without stepping up petrol consumption (the demand for economic travelling being predominant the world over). The popularity of lightweight machines (125 c.c. to 250 c.c.) is reflected in the number of these models on view, and British manufacturers are also featuring scooters and autocycles

Before long a great expansion in sales of British ultra-lightweight machines can be expected. Leading makers are producing two-stroke engines and suitable frames that will have even wider appeal.

This Earls Court exhibition has a reputation as one of the most attractive of the London shows, primarily because it is so largely a young people's gathering. This year several of the smaller stands are to be found in the gallery, leaving part of the main floor for specialised exhibits, such as vintage and racing motor cycles.

Sheep stations in Australia are replacing horses with specially adapted lightweight motor cycles

British bicycles are famous for their reliability under all conditions: a milkman in Zanzibar

FRANCIS WATSON recalls some of the contributions made by Western scholars to the knowledge of the Buddhist tradition and culture, and considers the influence of their work on present-day Asian thought and attitudes

East and West in the Buddhist Revival

THIS year the 2,500th anniversary of the Buddha is being commemorated. In Delhi in September there was an international symposium on Buddhism, after which delegates visited the memorable Buddhist shrines in northern India. Delhi was also the host-city for this year's meeting of UNESCO, and to coincide with the UNESCO conference an international exhibition of Buddhist art was arranged. It might at first seem strange that these events should be taking place in Delhi, since India is not a Buddhist country. Buddhism as an institution has been virtually extinct in the land of its birth for nearly a thousand years. But India is the land of its birth, the first source of the culture that moved with it as it spread over Asia. And today, though India is a secular state with no established religion, her prestige as a cradle of religion is part of the picture which she has formed of herself and which the world recognises. (Her national symbol of the three lions is taken from a pillar of the great Buddhist king, Asoka.)

The special character of this year's celebrations—even the Asian idea of Buddhism's significance today—is the product of not much more than a century of discovery by Western scholars and popularisation by Western writers. In the process of discovery a change has taken place in the ideas of Asian peoples about their own culture, and those ideas have played their part in developing even the political pattern that we see today.

Asia's Cultural Heritage

A key factor in the post-war history of Asia was, of course, the relinquishing of British control in India, Pakistan, Burma, and Ceylon. And one of the Indian tributes paid in August, 1947—that of the late Mrs. Sarojini Naidu—included a gesture of gratitude to (in her own words) 'the scholars of Europe who restored to us our pride in our ancient culture, to the antiquarians, to the archaeologists who have discovered for us our own hidden cities.'

The whole pattern of East-West relationships of the past few generations is shot through with the growing realisation of the grandeur of Asia's cultural heritage, a realisation which within Asia itself has helped to nourish the spirit of nationalism to a degree which, if it is difficult to measure, it is also difficult to exaggerate. It is a strange story, and perhaps the strangest part of it is that which deals with the recovery, or revival, or whatever word you like to use, of Buddhism.

And so to me, among the images that all these pilgrimages and commemorations and eloquent speeches call up just now, there are pictures of men almost forgotten. I think of James Prinsep, for instance, one of four remarkable scholars who were all attached to the Calcutta Mint in the service of the East India Company in the early part of last century. James Prinsep found the key that unlocked centuries of unknown antiquity; three years later he had worked himself to death at the age of forty-one. Or, again, I think of Sir Alexander Cunningham of the Bengal Engineers, who helped Prinsep in his early days and went on to become the first Archaeological Surveyor to the Government of India.

Men like Prinsep and Cunningham and so many more were probing the darkness for historical truth. But they were also the servants of a ruling power; and in the end, however long it might take, what they helped to find was bound to influence relationships between East and West. That founder of empire, Warren Hastings, under whose inspiration Bengal in the late eighteenth century witnessed such remarkable labours of enthusiastic scholarship by Englishmen, wrote candidly that he was concerned to produce a more generous feeling for the character of the inhabitants of India, their civilised traditions and their writings; and these, he added, 'will survive when the British dominion in India shall have long ceased to exist, and when the forces which it once wielded of wealth and power are lost to remembrance.'

Warren Hastings and his colleagues as yet knew nothing of Buddhism; but the pioneer work of recovering the ancient languages, collecting manuscripts, and copying inscriptions, made possible a sort of second renaissance in which a later generation of Western scholars demonstrated that the East, if it is our pupil in some matters, is our parent in others—in language, for instance. That was startling enough. But in what the language conveyed? In philosophy, in religion? These concepts made slower headway, but it is not difficult to imagine how they could work upon Western views of Asia, and Asia's view of itself; how they could affect attitudes, and so to some extent affect events.

Of course, the missionaries must come into the picture. Into my picture—as I think about these celebrations, this revived attention to Buddhism—comes the sturdy, the devastatingly honest figure of the Rev. Spence Hardy, a Christian missionary in Ceylon. He published two books, forgotten now, perhaps, but in their day very influential: a book called *Eastern Monachism*, and ten years later *A Manual of Buddhism in its Modern Development*. His sensible intention in investigating Buddhism in Ceylon was to help his fellow-missionaries by giving them some understanding of (in his own words) 'the system they are endeavouring to supersede by the establishment of the Truth.'

And it was he, by talking to the Buddhist monks and studying their scriptures—not in the ancient Pali language, which he did not know, but in later Sinhalese and Tamil versions—it was Spence Hardy who really first presented the serious Victorian reading public in England with some exposition of the chief Buddhist doctrines and with a consecutive narrative of the life of the Buddha himself as he appears in the traditions.

How intriguing these threads are when we pick them from the pattern! It was Spence Hardy's unpretentious books which stimulated a great Danish scholar, Fausböll, to work on the then almost unknown Pali language which has since yielded so much of our knowledge of Buddhist thought and of the early Buddhist church. Moreover, it was Spence Hardy's version of the Buddha story which Sir Edwin Arnold chiefly used for his long poem *The Light of Asia*, which first appeared in 1879. It was *The Light of Asia* which fired a young Englishman to become a Buddhist monk and, in 1908, to lead the first Buddhist mission to England. And the very fact of a Buddhist mission to Europe, and one that made converts, helped to convince the eminent psychologist, Jung, that in our own day a profound penetration of the West by the East was going on—something, he said in 1930, that exactly corresponds with what happened 1,900 years ago when the spirit of the East entered Rome.

Jung's theories and arguments do not appeal to everybody, not even to all psychologists. But he does succeed in drawing attention to a missing element in European thought which he believes can be supplied by the new interest in Eastern metaphysics, and more particularly by the study of Buddhism and Taoism.

In the eighteenth-century Age of Enlightenment, as Europe was pleased to call it, the writers who made so much of the triumph of reason quite often looked to Asia, or what they knew of Asia, for support. The urban Chinese, or the critical Brahmin, became stock figures for showing the West how to think and behave rationally.

There was then no reliable knowledge of Buddhism to stimulate Western philosophers. Had it been available, one cannot help thinking that it would have been seized upon, for it combines a rationalistic approach with a fundamental idealism. Dare I go further and suggest that had that knowledge been available the Western addiction to reason might have been modified in important respects? That it might not have taken that materialistic turn which, in the philosophical sense, at length produced the Western heresy of Marxism, which now we see—to turn the wheel full circle—expounded in the lecture-halls of Peking?

However far that line of thought may be carried, or even if it is rejected as fanciful, it is clear that it is the impact of the West which has confronted Asia with her present ideological conflicts. For the West has not only dangled before Asian eyes the materialistic fruits of science and industry and organisation, with a choice between Communism and some form of social democracy as the ladder for picking the fruits; the West has also, as I have tried to show, played a very significant part in restoring Asia's own defences against the invasion of ideas. Western antiquarians and archaeologists, and those who have spread their discoveries among so wide a public, have restored, as Mrs. Naidu said, the pride of Asian peoples in their past.

Broad Opportunity of Self Assertion

A Buddhist revival is partly the result of that renewed feeling. In countries like Ceylon and Burma and Thailand, where there is a long-established continuity of Buddhist institutions, a Buddhist revival may mean, among other things, increased ecclesiastical influence in politics, a certain amount of reaction against land-reform, and against the removal of what are now thought of as social evils. But I think there are other and stronger possibilities, and they are most significantly seen in the case of India, where there is no entrenched Buddhist church or system to support by all this appeal to the glories of the past and the supremacy of moral values. What this year's celebrations seem to me to reveal is that in the conscious effort to be Asian in face of the future, Buddhism—I mean, of course, in the non-Islamic areas of Asia—offers at least something of a common language. To India, as the cradle of Buddhism, it offers—though her spokesmen may be careful not to say so—a certain prestige of leadership. But to all the peoples who are half attracted and half repelled by the imposed revolution in thought proceeding in the Communist north of the continent it provides this broad opportunity of self-assertion.

In the West also the small number of actual adherents of Buddhism—even if it is increasing, as it is said to be—is a secondary matter. To anyone who has really penetrated Buddhist teaching, distinctions between East and West in any case disappear. Much more significant are the broad steps towards a recognition that humanity in Asia and in the West faces the same predicament in a world of fast communications, and must draw upon a joint heritage to deal with it, a heritage of thought that is concerned with man and not with masses. (*Broadcast in the BBC's General Overseas Service*)

The motor-vessel 'Magga Dan,' in which the main party will sail to the Antarctic

Off to Antarctica

This week's sailing from London of the main party of the Trans-Antarctic Expedition will be the subject of a G.O.S. programme on Thursday at 21.30 and Friday at 10.45. The plans of the expedition—due at Vahsel Bay next January—are here outlined by its leader, DR. VIVIAN FUCHS

THIS week I leave London with the main party of the Trans-Antarctic Expedition in the 2,100-ton Danish motor-vessel *Magga Dan*, which has been specially built for navigating ice-covered seas. Her special features include an apparatus giving control of engines and steering from the crow's nest on top of the foremast. The ship will also carry the relief party and stores for the Royal Society's Antarctic Expedition. The decks will be crammed with 600 barrels of fuel, three Sno-Cat tractors, and two aeroplanes.

The main party expects to arrive at Shackleton, its base near Vahsel Bay in the Weddell Sea, during mid-January, 1957, having landed the Royal Society party 200 miles to the north. At Shackleton it will find the eight men of the advance party, led by Kenneth Blaiklock, who were left behind last February to prepare the base for the main expedition. Despite the severity of the Antarctic winter, during which temperatures dropped as low as minus 63 degrees Fahrenheit, they have been pressing on with the building of the main hut. Between May and August, of course, they never saw the sun. They have also been carrying out a meteorological programme, maintaining radio communications, and tending the dogs, which were housed for the winter in snow tunnels.

An early air reconnaissance carried out last February revealed some of the first obstacles which bar the expedition's route to the south: there is a wide belt of crevasses forty miles from Shackleton, and about sixty miles beyond that are the first mountains. When travelling begins the advance party's first object will be to find safe routes through or round these obstacles. For these reconnaissance journeys it is almost certain that dogs will be used. Journeys on the ground are essential to prove the first stages of the southern route before sending out depot-building parties or the crossing party itself: air observation can be most deceptive, and sometimes an area which seems impassable can be found negotiable on the ground.

In January further air reconnaissance will be carried out before the main depot is set up about 300 miles inland. It will be known as Depot 300, and three or four men will spend the winter there in order to do meteorological and glaciological work at an altitude of between 6,000 and 8,000 feet. They will also ensure that this last and most important depot is not buried beneath winter snow. A lightweight aluminium and plywood hut, together with twenty-five tons of stores, will be flown to Depot 300.

No final decision as to who will man the depot will be made until we arrive at Shackleton, but it is likely that two of those who will winter there will be Dr. Hal Lister, the glaciologist, and Jon Stephenson, our Australian geologist. Of those now at Shackleton at least four will remain for yet a further year—Ken Blaiklock as surveyor, Ralph Lenton as builder, vehicle-engineer, and radio operator, Roy Homard as engineer, and 'Taffy' Williams as radio operator and mechanic. The South African meteorologist, Johannes La Grange, will

The dump set up by the advance party on the ice at Shackleton: valuable stores were lost when ice broken up by storms drifted away

also probably stay for a second year. Dr. Rainer Goldsmith, the medical officer, and the two meteorologists, Tony Stewart and Peter Jeffries, will be returning in the *Magga Dan* after a truly rough introduction to Antarctic conditions.

It is expected that the coming season's reconnaissance and depot-laying journeys will be completed by the end of March, 1957, and then, apart from the men at Depot 300, the remainder of the expedition will winter at Shackleton. The dark months will be a busy time: an enormous amount of work will have to be done in preparing schedules, working out weights, and sorting and packing equipment for the crossing journey. The sun returns in mid-August, 1957, but it will be early November before a start can be made.

The trans-continental journey by way of the South Pole will be nearly 2,000 miles long, and it is expected to last four months. A considerable amount of scientific work will be done *en route*. The depots laid the previous season will support the crossing party for the first 300 miles, and a reception party of New Zealanders, led by Sir Edmund Hillary, will ensure that supplies of food and fuel are available for the last 300 miles of the journey. But between these two points the shortest distance is 1,100

miles, and for that period the crossing party will have to be self-sufficient. It is hoped that it will meet Sir Edmund's party somewhere in the region of Mount Albert Markham, and once the parties have joined up they will travel to Scott Base, set up by the New Zealanders at McMurdo Sound on the Ross Sea, arriving there during the third week in February, 1958.

Almost immediately afterwards the whole Trans-Antarctic Expedition will sail for New Zealand which has in the past seen the departure and return of so many Antarctic travellers.

One of the Sno-Cat tractors, and the Auster aircraft used for reconnaissance

In Praise of the Western Isles of Scotland

Skye is one of the more mountainous of the islands—and the most famous—in the Inner Hebrides group: cliffs north of Portree

ONE of the most magical lines of poetry in our language runs: 'We shall in dreams behold the Hebrides.' No one knows who wrote the stanzas in which it occurs, but they are intended to represent the feelings of exiled Hebrideans or men from the Western Isles of Scotland who had been turned out of their homes and sent across the seas a century or more ago.

What would an exile of this kind have beheld in his dreams as, sick for home, he recollected what are referred to in the same poem as 'the lone sheiling and the misty island'? He would have seen, in outer aspect at least, something not very much different from what anyone returning to the Western Isles would see today.

He would in misty or stormy weather see what would appear to be long, low lumps of peat and rock lying nearly dangerously submerged in a grey or white wave-lashed sea. At intervals, when the clouds broke beneath the wind, he would catch glimpses of even darker mountains with the antlers of them tossing away the spume of the mist and the rain out into the farther Atlantic. In really fine weather, at midsummer or even better in late autumn, he would see something very different: he would see island scenery unsurpassed for beauty of colour and form in all Europe. But on that I would like to dwell a little later on.

But the returning traveller from 100 to 150 years ago would, of course, see a few man-made differences today in this immemorial scene. Little steamers rather than sailing boats ply between the islands; and the aeroplane is a regular, if not over-frequent, visitor to the more important outer islands. The most subtle, the most insinuating and saddest difference would, however, be one of humanity—that is, depopulation.

Remote and Enisled People

The fact is that with a few notable exceptions people have by enforced evictions or voluntarily been leaving these ancient islands for the past century and a half in a steady stream—islands in which their forebears lived for more than a thousand years.

There are 787 islands off the coasts of Scotland and under Scottish law (a pretty staggering number, I think you will admit). Of these well over half are on the west coast, in other words the Hebrides. These Hebrides are divided into two large groups, the outer and the inner. The Inner Hebrides are a scattered group of which the most famous and most beautiful is Skye. The Outer Hebrides form a long ridge well out into the Atlantic. They may not be able to provide anything quite so spectacularly lovely as Skye in the way of scenery, but if you are a real lover of the Western Isles it is to the outer group that your heart turns.

Here in the outer isles, for much of the year cut off from the sight of the mainland and even of the inner isles, there is preserved nearly all that remains of the old Gaelic civilisation of Scotland. Does that sound 'high-falutin' nonsense to you? I hope not, for it is true. Let me put it thus. Imagine if lying far off the coasts of our neighbours, the English, there was a large group of islands in which the traditions of the old pre-industrial, even pre-Reformation England still lived. Imagine, in short, that somewhere enisled and half-forgotten there lingered the 'Merrie England'

MORAY McLAREN writes in praise of the unsurpassed scenic beauty of the Hebrides, and of the charm of their people: 'In the outer isles,' he says, 'there is preserved nearly all that remains of the old Gaelic civilisation of Scotland'

of which the writers of centuries ago used to speak. That is roughly a comparison of what the Western Isles means to Scotland.

I do not want to mislead you by using the word 'Merrie.' The Western Isles of Scotland are not given over to song and dance, though there is a good deal of singing and dancing and piping there. But it would be a mistake to take this as typical of the islands as a whole. Indeed, in some of the more strictly Protestant isles such activities are frowned upon. On the Catholic isles which have remained untouched by the Reformation there is an uninhibited gaiety of this kind, and there is also music and eloquence on many of the Protestant islands. At this point let me make a large claim for our islanders: I doubt if anywhere else in the world will you find amongst remote and enisled people such lack of friction between Catholic and Protestant. Religious strife amongst (I emphasise that word) the islanders themselves scarcely exists.

Ancient and Expressive Tongue

To return to my use of the word 'Merrie,' when I was thinking of the comparison between these islands and old England this is what I meant. In the Gaelic civilisation that lingers in these islands, whether Catholic or Protestant, you still get a taste of that old eloquence of speech, that dash, that imaginative and poetic outlook which once animated all Scotland when the country was an entire Celtic land.

Most people in the Western Isles are fluent in Gaelic, one of the most ancient and expressive tongues in the world. It is said to be possible to go on telling a girl that you love her for nearly half an hour without using the same words or phrases twice. Everyone, of course, also speaks English, but their English has a spring and a lightness and a melody about it which is of a bygone age. Above all, it is imaginative English. To hear a man describing a bus journey is almost like listening to a humorous epic. And, by the way, the islanders can make up a song about anything—even about missing or catching a bus. Their conversation, either trivial or important, has a peculiar blend of poetry and fun which I have found nowhere else in the world—not even in Ireland.

I do not wish to give the impression that I am sentimentalising over the inhabitants of these islands which I love so well. They have their failings. On the one hand, or at one extreme, some of them can be lazy, feckless, and undependable. At the other extreme, they have acquired a hard-shell obduracy of opinion from which nothing can move them. The truth is that for 200 years they have had a very hard time of it, what with the detestable evictions of last century, famine, the deprivation of their fishing rights, and so on. The Celt of the islands is a magnificent fighter in attack, but when the attack is over he is inclined to sink back into lethargy and accept the worst. It is this quality in him, after a long period of ill-treatment, which has led to the abandonment of his ancient homes—even when he was not forcibly turned out of them.

The Isle of Mull: the pyramid is a memorial to King Edward VII

Barra is one of the southernmost isles in the Outer Hebrides: Castlebay, with the ruins of Kisimul Castle which was for centuries a stronghold of the MacNeils

But that, again, is not the whole story. There are places in the islands where more women and even children have been making a stand, where they have been striving to support life in the traditional manner and not just depending on tourists or Government grants. One of these places is the fairly large and, to my mind, lovely island of South Uist.

South Uist is famous in Scottish history as the home of Flora Macdonald, who rescued Prince Charles Edward Stuart (usually known as Bonnie Prince Charlie). And it was from South Uist that Flora took Charles to Skye disguised as one of her serving maids. South Uist has a more modern claim to distinction. Since the war (and it is pathetic to have to make this claim with pride) its population has not only not sunk but has ever so slightly risen.

The islanders have achieved this by themselves. They have found work for themselves in their tartan-weaving industry, in their improved crofting (that is, small farming), and in the seaweed industry. I am bound to admit that this state of affairs is very unusual in the Western Isles. It is this, therefore, that makes some of us think it so unfortunate that the new and only rocket or guided-missile range in Great Britain should have to be established on South Uist. It seems to us that there are so many other and now utterly barren islands on which this base could have been established without disturbing (to put it at its mildest) a comparatively flourishing small and ancient Gaelic civilisation—one of the last left in the world.

And now to turn to something as yet indestructible by the hand of man: the beauty of these islands. I have travelled much and I have seen notable scenery in many parts of the world, but I have not seen anything to approach the varied and subtle beauty of the Western Isles in fine weather. The Alps are larger and grander than are any of the mountains in the Hebrides; the colours of the Mediterranean and the East are brighter; the climate in most other places is certainly more amenable and settled, and so on: but for soft luminous colouring combined with an indefinable hint of splendour I think the Western Isles have the Alps, the Mediterranean, and even the Himalayas beat.

On a fine, tranquil summer or autumn day these apparently countless islands lie in a sea that is neither blue nor green nor gold but is at times a mixture of all three, turning at sunset to crimson and then to dark purple and black. The beaches that lie to the western side, that is towards the vast Atlantic, are composed of sand that is sometimes silver, sometimes yellow, with here and there the strangest and most elusive hint of pale rose. The long, tired Atlantic rollers that come in to break upon these beaches after their huge journeys produce the most magical effect just before their end. Each long roller seems to stand motionless and erect for a second before it bursts in silver and white foam. In that second it catches the light and the colour from the sand below it and becomes a wall of all the colours that you can think of in the world—a standing rainbow of thick water; then it collapses, and all is over until the next roller comes in.

Some of the islands are mountainous, as is Skye, with superb rock pinnacles that make them look much grander than their height warrants. Other islands are flat and peat- or green-coloured. In those flatter islands there are innumerable little fresh-water lochs, full (I may add, as a keen

angler) of sporting brown trout and, in the autumn, sea-trout and salmon. At the right season of the summer some of these little lochans are bright with water lilies. I could go on for a long time giving you a list of the peculiar beauties of sea, loch, mountain, rock, and plain landscape in the Western Isles, but in the end (even if I had the time) I should merely exhaust myself in words without passing on to you a tenth part of the enchantment of this part of my native Scotland.

There is, however, one element which I must mention to end with: that is the light. Our light in the northern parts does not come directly down from the sun but seems to stream over the horizon. It is this that gives the extraordinary subtlety to the colouring of everything that you see around you on a fine day. It does more: it seems, somehow, to make all material objects luminous themselves, so that they appear not to reflect light but actually to give it out. Luminous, light-giving—that is the word for these islands in the far north-west. Small wonder that those who have lived for so many generations in the Western Isles of Scotland have a kind of luminous charm in their personalities. One remembers the fine days in the Hebrides and forgets the bad ones. And so, also, one recalls the unique appeal of the Hebrideans themselves, and forgets and forgives their failings. (*Broadcast in the BBC's General Overseas Service*)

BOSWORTH MONCK

OUR WAY OF LIFE: 17

BOSWORTH MONCK suggests that for a man to become a leading industrialist in Britain he needs something more than efficiency and luck: he must be outwardly indistinguishable from his fellow-countrymen

The British Businessman

JUST recently much has been said and written about British businessmen and the way they behave. Most of it started from a sensational row between some of the directors of one of our big engineering companies. As a result of this row we were told that expensive mink coats were necessary to sell motorcars, and that the head of the firm himself needed five motorcars—mostly gold-plated—to do his job, and that these had to be taken about by aeroplane to meet him anywhere in Europe because no taxi or hired car was grand enough.

Because there is always something engaging about a fight—just think how quickly a crowd gathers around a couple of snarling dogs—and particularly a fight involving beautiful women, jewellery, fast cars, and so on, a lot of notice has been taken of this squabble, and I have no doubt that versions of it are being retailed from Patagonia to Tibet. Of course, the whole thing is really trivial, but there would be something serious in it if the idea was to get about—as it easily might—that British industrialists and businessmen were all like these tales. Nothing would be further from the truth. There are a few who consume conspicuously by sipping champagne from chorus girls' slippers, but I should say most of them are as sober and staid a lot of men as you would find anywhere in the world in ten days' march.

Now why is this? What is the point of earning more than your fellows if you do not spend it? The first reason, I think, is that the British do not really much like the showy or flamboyant except perhaps in their Prime Ministers, Test batsmen, and jockeys. To succeed in Britain in commerce or industry you have outwardly to be indistinguishable from your fellows. Success—and it is a very important kind of success to be a leading industrialist—comes from diligence, loyalty, and quiet efficiency in a man, and these obviously are not qualities you would notice about people you merely passed in the street. Besides, of course, a man needs a large slice of luck, but that has nothing to do with his intrinsic qualities.

Diligence, loyalty, quiet efficiency: these are the bourgeois, or middle-class virtues, if you like. It is fashionable nowadays to sneer at anything that can be labelled bourgeois—even virtues. But it was the middle class who translated the technical advance of the eighteenth and nineteenth centuries into commercial success and, historically, the first industrial revolution, and so gave Britain her dominating part in world trade until fifty years ago. So it is not surprising that the tradition has endured and that it is those solid nineteenth-century qualities that still get rewarded.

Favourable Attitude to the Amateur

Then, another reason why our industrialists and businessmen tend not to be different from the rest of us is the way in which they are found, particularly the senior officials of any company, perhaps, rather than its directors. Long service is almost certainly thought necessary for seniority, and in many cases long service in a department of the business. Great weight is attached to sheer experience, and exuberance is thought vulgar. Then there is still the deep respect in Britain for the amateur: the professional tends to be looked down on. The professional who succeeds—and I am glad to say an increasing number are doing so—generally does so by keeping his professionalism in the background, and even laughing at all professionalism in a depreciating sort of way.

This attitude of favour towards the amateur shows most strikingly in the composition of boards of directors. A chief designer, a works manager, a sales manager must be well based professionally, even if it does not show outside the factory. But for the directors, who are legally and practically responsible for the policy and its execution in all our commercial and industrial enterprises, all seems to be different: a survey I did for the British Association in 1954 showed that five out of six directors of engineering concerns were without technical qualifications of any sort.

Commercial and industrial managers and traders fall into two groups: those who stay at home, and those who do not. Much of what I have said applies to both lots, but all of it to those who stay at home: most of the directors, and particularly works managers, chief designers, and so forth. But for a nation like ours, which must be among the world's principal exporters to survive at all, very great importance attaches to those who go or stay abroad for their employment. In past centuries the British who left their home country did so for adventure, to seek their own fortunes, and in the belief that by living in undeveloped countries they could rule them to advantage or convert them from heathenism.

Those who leave Britain now do so primarily because they are paid to do so: it is a job like any other. And for this reason the British commercial man or industrialist you meet in Bangkok or Bogota is much more

representative of our way of life than the Englishman you would have met in the same place a hundred years ago. Besides, communications being so much faster and easier, there just are more British businessmen about in Bangkok than there used to be. Many of our leading industrial men think it right to spend part of each year among their customers rather than in their factories, and reckon to roll into one, like their Victorian forbears, the job of chief salesman as well as manager, albeit at different times and places. In addition, most big British companies send other high-level executives, particularly sales directors or managers, to different parts of the world each year.

Finally, there are Britons resident in other countries, representing British factories or helping local firms to exploit a British agency. The best of these high-g geared travellers and Britons living abroad speak other languages as well as British; they do their best to sell British goods by their knowledge of the countries in which they live; and, most important of all, they try to explain to the factories in Britain precisely what it is citizens of Rio want different from those of Ruislip.

They would fail in this—to get across what was wanted—unless they were very much like their fellow-managers back in Britain. Napoleon said derisively of us that we were a nation of shopkeepers. The aftermath of the Industrial Revolution and two world wars has been to make us a nation of commercial travellers—with the nation very much like the travellers. (*Broadcast in the BBC's General Overseas Services*)

Sir Francis Younghusband

GEORGE SEAVER introduces 'The Twain Shall Meet,' a radio portrait of the famous explorer and mystic, which can be heard in the G.O.S. this week (Monday 17.30, Tuesday 02.30, and Friday 10.00)

TWO exploits of Sir Francis Younghusband captured the imagination of his countrymen in his lifetime: one, his crossing of the Gobi Desert by an untried route in his early twenties—immediately followed by his crossing of the Himalayas by an unknown pass; the other, his successful leadership of an expedition to the mysterious capital of Tibet. But these were only the highlights in a life that was an almost perpetual adventure.

Gazetted from Sandhurst to the Royal Dragoon Guards in India, he gave proof of soldierly qualities, and being granted a long leave, with a roving commission in Manchuria and Korea to report on Russian designs in the Far East, he returned half across Asia from Peking to Yarkand and over the Himalayas to rejoin his regiment on the day that his leave was up—this at the age of twenty-three.

Thereafter he was employed to explore and examine the Pamirs, against Russian threats to the North-West Frontier. This led to his appointment as Political Officer of Hunza. The outbreak of the Chitral Campaign occurring while he was on leave in England, he joined the staff of *The Times* as a war correspondent, hastened to the scene of action, and published the authoritative history of the campaign. He followed this up by a first-hand account of the Jameson Raid in South Africa. Returning home he married, and then had an interlude of comparative leisure as Governor of two central Indian states, at a time when Lord Curzon was Viceroy. It was Curzon who invited him to lead the historic mission to Lhasa in 1904. He ended his career in India with the post of Resident in Kashmir. Soon after retirement, as the result of a motor-car accident, he lay between life and death. On recovery he devoted his whole attention to the subject which was his life-long interest: the comparative study and philosophy of religion. This resulted in his founding the World Congress of Faiths.

As President of the Royal Geographical Society and Chairman of the Everest Expedition he was the inspiration of such mountaineers as Norton, Mallory, Somervell, Smythe, and Shipton.

In this programme you will hear people who knew him intimately at one time or another in his long life. For instance, there will be his daughter, Miss Eileen Younghusband, C.B.E.; Dr. Longstaff, also of Himalayan fame; Lord Samuel, his staunch supporter and successor as Chairman of the World Congress of Faiths; and Lady Ravensdale, his friend Lord Curzon's daughter, who now fills the same office.

The W.V.S. runs clothing exchanges where mothers with growing children can exchange still usable clothes: fitting boots at the Camberwell centre

The Dowager Marchioness of Reading, Chairman of the W.V.S., accepting from Lord Luke of Pavenham a van for the 'Meals on Wheels' service

The W.V.S.

NORMAN MACKENZIE talks about the Women's Voluntary Service, whose thousands of members all over Britain are helping people meet the emergencies and problems of everyday life

MOST of us in Britain first got to know the Women's Voluntary Service during the war years: we could see its members, dressed in their smart green uniforms, everywhere that people needed help—staffing canteens in bombed areas, looking after evacuees from the cities, or people who had lost their homes. More than a million women belonged to this voluntary organisation during the war.

The W.V.S., as it is usually called, was started in 1938 at the request of the Government, and its main purpose was to help in all forms of civil defence. Today civil-defence preparations are still a great part of its responsibility, but that is a wide definition that covers very many activities, for in the years since 1945 members of the W.V.S. have taken on a great deal of welfare and social work.

The W.V.S. can be all-important in an emergency. It may have to provide emergency feeding arrangements in a flood or fire disaster, or find clothing and shelter for people who have lost their homes. Its overhead expenses are met by a Government grant, but, apart from the trained staff at headquarters, and full-time organisers up and down the country, all W.V.S. work is voluntary. It is yet another example of the partnership between official and voluntary agencies that has grown up in Britain.

These days you will find members of the W.V.S. doing work on behalf of a local authority, or perhaps providing volunteers to co-operate in schemes organised by other bodies. For instance, it helps find blood donors for the blood-transfusion service, or helpers for old people's clubs, or its members may assist campaigns for national savings or paper salvage. In fact, it is hard to think of an aspect of welfare or social help in which you will not find members of the W.V.S.

From Hot Meals to Baby-Sitters

Every week the W.V.S. takes hot meals to old people who are not able to go out or to cook for themselves, and it serves about 20,000 meals a week under this 'Meals on Wheels' scheme. It runs clothing exchanges where mothers with growing children can save money by exchanging still usable clothes. It helps look after discharged prisoners, or finds baby-sitters for couples who cannot otherwise get out for an evening together. It gives help, too, to problem families, to hospital patients and their visitors, by running 'trolley shops' in the hospital wards, and its members distribute the orange juice and free cod-liver oil which the Government provides for young children.

And, of course, there is its work with the Armed Services: W.V.S. members run clubs for soldiers, and even send members abroad to provide entertainment and welfare services for troops serving overseas.

It is amazing how many people co-operate in all these schemes, some of them for a few hours a week, some for two or three days. But the W.V.S. is proud of the fact that it can always find work for a willing volunteer. And much of that work would not otherwise get done. I have often heard local councillors say: 'Well, our council can't do this or that. Why don't we ask the W.V.S. to help?' And it usually can. That is why it is hard to describe exactly what the W.V.S. does: many thousands of its members all over Britain are working without publicity or reward to help other people. (Broadcast in 'London Calling Asia')

The W.V.S. is ready for any emergency: during the disastrous East Coast floods of 1953 it supplied hot meals to the men repairing the sea defences

C. E. CARRINGTON

C. E. CARRINGTON, Professor of British Commonwealth Relations at the Royal Institute of International Affairs, in his contribution to the G.O.S. series 'The Story of Colonisation' tells how largely empty lands such as Australia, New Zealand, Canada, and southernmost Africa came to be peopled by migrants from Britain and other West European countries

Empty Spaces

THE first commandment given to Man in the Garden of Eden was: 'Be fruitful and multiply and replenish the earth.' And this command has been obeyed. We seem now to be in sight of an age when the earth will be replenished and when fruitfulness—in that sense—will be a blessing no longer. But although the chief purpose of mankind for so many thousand years

has been to multiply and to spread, it is only in the last hundred that much attention has been given to the technique of it. Until then there was always plenty of elbow-room in the Great Wide Spaces: 'Better land farther out' was always the slogan in the old British colonies.

Statistical study is one of the great innovations of the nineteenth century, and only towards the end of it was it possible to know the laws which govern the vital growth of peoples. Colonisation used to be a matter of trial-and-error, and every colonising adventure more or less a tale of woe. When the valiant Captain John Smith at last succeeded in founding Virginia—about 350 years ago—he made a comment that we can take as typical: 'The fault of our going was our own. What could be thought fitting or necessary we had, but what we should find or want we were all ignorant. Everything of worth is full of difficulties but nothing so difficult as to establish a commonwealth so far remote from men and means.'

The British Overseas

In his day the people of the British Isles (with which I shall have to include the Irish, because you cannot separate them statistically) numbered something less than 7-million persons: their descendants today number not less than 140-million, of whom nearly two-thirds live outside the British Isles. I can find no parallel in history to this multiplication: no other race has grown so fast or spread so wide. But this phase of history has come to an end: the population of Britain is now increasing very slowly—if at all—and the population of what we used to call the Dominions shows only a moderate 'natural' increase—that is, by the excess of births over deaths. The great increases in recent years in Canada and Australia are largely due to the revival of migration on a large scale, and from other European countries as well as from the British Isles.

Before I deal with my main subject—the peopling of the empty spaces in Australia, New Zealand, and South Africa—I must say something about North America. The first emigration from the British islands was English only, and by the time of the American Revolution a quarter of the English already lived on the other side of the Atlantic. The Highland clearances set the Scots moving in the eighteenth century, at first to the United States, but British Canada owes its origin to loyalists who preferred to live under the British flag. Since the days of the loyalist migrations there has always been an ebb and flow across the American frontier according to the degree of prosperity on either side; and this has made statistics hard to check. There were many Scots among them, and many more have followed them to Canada. French settlers had already occupied much of eastern Canada more than a century earlier. The Irish, as everyone knows, moved to America or Australia as a flood of refugees to escape from agricultural distress, especially in the famine years of the 1840s.

All through the nineteenth century more British migrants were going to the United States than to all the British colonies put together: mainly because, when a man decided to emigrate, America was the nearest, the cheapest, and in those days the easiest land to get to. Gradually the British colonies asserted themselves, and in the two great periods of migration in this century—just before the first world war and just after the second—Canada, Australia, and New Zealand got the most British settlers.

The test case is really Australia, because it was an empty land when the settlers first went there, and because complete statistics have been kept since the beginning, so in Australia we know how migration really works. There are some dark spots on the record, as on all historical records, and we had better clear them away first. Australia was once a convict settlement, but that was a passing episode and better forgotten. Another dark spot was the treatment of the aboriginals—a few scattered bands of nomadic hunters living in the Stone Age. If the early settlers behaved badly, it is fair to recall that the aboriginals behaved just as badly towards the settlers, and seemed quite untamable.

All through history one of the phenomena we can observe again and again is the expansion of a numerous people at a higher economic level into land which is ranged over but not put to the best use by scattered tribes at a lower economic level. The Russian expansion into Central Asia at the present time is a very good example of it. But if the aboriginals are as primitive as the Australians they have no notion of property in land: they merely resent intrusion on their hunting grounds. The first Australian settlers were pastoral peoples who wanted wide grazing

grounds; they simply brushed the aboriginals aside. This, too, is what happened to the Indians in the American Wild West. Later come agricultural settlers, and with them the full system of legal property in land.

Australia's taking-off point came when the world discovered that Australian wool was unrivalled. From that time on, as they say in Australia, the country could live on the sheep's back. Then, in 1851, the whole character of Australia was changed by the discovery of gold. Emigrants of a new type flocked to the goldfields, and in ten years the population of Australia was more than doubled. The 'diggers' were men of a different stamp from the land-hungry farmers' boys who had emigrated in the earlier days. They were adventurous, unsettled, radical in politics, ready to work for wages if they had no luck at the goldfields, and they were more likely to be townsmen than countrymen.

The 'diggers' gave Australia its national character, and Australians still like to call one another 'Digger.' It was not surprising, since there was gold and there was labour, that urban development came early. As long ago as the 1880s all the notions of our modern planned economies were cropping up in Melbourne. It was realised that uncontrolled mass-immigration would not do; that the number of immigrants must be related to the amount of capital available; that secondary industries must be built up with tariff protection; and that Australia could not live on the sheep's back for ever. So modern Australia appeared—a highly industrialised community based upon radical democracy, and hardly less upon trade-unionism. It is not surprising that the great immigration since the last war—a million new immigrants, half of them from Britain—has been managed with great skill, a very different matter from the headlong gold-rush a hundred years ago.

There is one question we have not yet considered. Why do they go? What is the motive? Are they escaping from intolerable conditions at home, or are they attracted towards some land of promise overseas? Is it push or pull? Obviously both, but in different proportions at different times. Colonisation by attraction, pull rather than push, accounts for the fortunate condition of New Zealand, so far away that no one went there unless they really wanted to. Those who care to study the art of colonisation will find that New Zealand is the model colonial settlement, because from the beginning it was planted with selected emigrants in organised groups. It has been a lucky country, but luck is another name for snatching your opportunities.

Problems of Race Relations

One of the things we respect in the story of the New Zealanders is their success in dealing with the Maoris who inhabited some parts of the islands before the white men came. There was friction at first and even a short period of racial war, but it died out in a few years, leaving little bitterness behind. The secret was that the Maoris (only seven per cent. of the population now) were left, substantially, in possession of their tribal lands, while there was plenty of unoccupied land for the new settlers.

No such happy state of affairs exists in South Africa, where the Bantu are four-fifths of the population but occupy only a small fraction of the land. The early history of South Africa is a frontier problem. The original settlers at the Cape—the Dutch, of course—found a land that was as empty as Australia. They discovered it, they colonised it. They were a pastoral people, and as they increased they spread inland, occupying wider and wider grazing grounds. Four generations after they landed at the Cape the *trek-boers*, that is the boldest settlers who led the advance, began to encounter another pastoral race, the Bantu, who were also expanding but in the opposite direction, southwards from central Africa. And then the clash of colour began in South Africa.

However, I am not going to discuss South African politics here, but to point out that the phases of the migration problem are much the same in all countries: it makes little difference what colour are the skins of the migrants. First come the adventurous pioneers in search of empty land—'better country farther out'—and then the agricultural settlers moving in tribes or organised parties; last comes the mass-movement of wage-labourers, and with them come the stresses of industrial society.

In the past two centuries the British were the most numerous and the most enterprising of the migrants. They found out and they occupied almost every piece of empty land in the world which had a climate resembling that of north-western Europe. There is no more land like that waiting to be taken up, and no more surplus of land-hungry Britons, so we may regard that chapter as positively closed. But what next? *The resources of the earth have hardly yet been scratched.* All that has happened so far has been a mere reconnaissance. Intensive cultivation is the next step, while the new nations advance into the lands of colder and warmer climates. The adventure of mankind is hardly yet begun. (*Broadcast in the BBC's General Overseas Service*)

World première at the Royal Court: 'Look Back in Anger,' by John Osborne, with Kenneth Haig and Mary Ure

Royal Court Theatre

AUDREY RUSSELL visits a little repertory theatre in London where the English Stage Company has been producing controversial plays by present-day dramatists. In an interview with George Devine, its artistic director, she discusses the aims and hopes of the company, and the reactions of London audiences to their work

THE Royal Court Theatre is not, strictly speaking, in the West End of London: it is not in what was known as Theatreland—that is, in Shaftesbury Avenue or Piccadilly or the Haymarket; but it is in a neighbourhood that has always been associated with the arts—Chelsea. So it is a little theatre that holds some 470 people in a neighbourhood all on its own: that is not a very easy thing for any theatre. But it has had a tremendous past and a great tradition. It was here that Shaw's plays were first seen; it was here, too, that a very different kind of play—*The Farmer's Wife*, by Eden Phillpotts—had such a very long run; and it also has a romantic association, because it was here that Ellen Terry met her future husband, James Carew.

Now the theatre has had for some months a new and important venture in the English Stage Company, and I called on Mr. George Devine, its artistic director, and asked about the aims of the company. He told me:

'The main aim of the company is to try to promote the modern dramatist, particularly the English dramatist. We felt that a theatre with a policy which concentrated on trying to get plays written which would have a real application to modern life, and not the sort of plays which belong to the Edwardian period—which is what

George Devine, the artistic director of the English Stage Company

I think so many plays that are written and presented belong to—would have a public in London. Out of nine-million people, I feel, there are enough who want to go to the theatre to get a bit of excitement and have the blood running in their veins, not just sit back and be flattered, which is what so many plays do.'

'Your theatre has been described as the novelists' theatre: is that because so many novelists have written plays for you?'

'That is true, although in fact one of our most successful plays—*Look Back in Anger*, by John Osborne—is by a young dramatist who is himself an actor and is a member of the company. But it is called the novelists'

theatre because I have tried to introduce writers to the theatre who have not written for it before. I feel that we want some fresh blood and fresh ideas, and people who have a mature point of view writing for the theatre, people who are in touch with modern life. To me so many people of the theatre have a little world of their own about which they write, think, and act but which does not really have anything to do with modern life as it is. That is why I turn to other writers, principally novelists, who know how to tell a story, for my new plays.'

'I suppose the problem for every manager—for every man of the theatre—is to find new plays. Is that your problem too?'

'It certainly is. Many people will tell you that there are dozens of wonderful plays hanging about ready to be produced if only somebody would open a theatre and put them on. We have read here—myself and my assistants—some 400 plays since we opened this venture: out of those I should not think there were more than four at the very most that we felt were worth encouraging. It is a very interesting thing: everybody says nobody puts on plays. In fact, it seems to me that one person in ten must at some time or other write a play and send it to us.'

'Would you say that there is a theatre of your kind in, say, Paris or New York?'

'Of course, Paris is a very different cup of tea. In France nearly every writer of any calibre has a go at the theatre at one time or other, and there are many theatres in Paris where plays of ideas, experimental plays, modern plays, are put on. New York is not quite the same: there are what they call 'off-Broadway' theatres where they do experimental work, but they do not, I think, confine themselves to purely contemporary theatre as we do here. They do Chekhov; they do classical plays as well as modern ones. But we are after the contemporary dramatist, trying to bring the theatre to some sort of point where it may be compared to the most modern movements in painting, music, and the other arts.'

'Now, you have a true repertory. I think you started with five plays, and the same actors and actresses were playing in them during this season. That is something that the London theatre-goer is not used to: most London theatre-goers are used to a play running on until it is on its very last legs and then stops. How are London theatre-goers reacting to this repertory theatre in the centre of London?'

'Whereas it is accepted as practice in the opera-houses and in the classical theatres like the Old Vic, the average straight-play theatre-goer has not yet really got round to the little extra bit of bother that it needs to look up the paper and to see "what's on at the Court tonight," and we are, without any question, having a bit of a struggle to get people to do that. Until we do, of course, we shall not have the public that we hope to build up in time.' (Broadcast in the BBC's General Overseas Service)

One serious problem in the Territories is to even up development between the Europeanised and the primitive native: meanwhile the two cultures are living side by side

Parade at Kokoda, a typical 'outstation': the district officer detailing duties to Administration employees and men of the Royal Papuan Constabulary

The Territories of P

H.R.H. the Duke of Edinburgh will this northern approaches. Some of the sights he will be told about are describe

The demand for higher education for girls is increasing: the first batch of girls ever to be trained as teachers attending a course at Popondetta Education Centre

There are few roads, and no railways: oil-survey teams working in the jungles and swamps of Papua have to rely on helicopters to bring in supplies of food and equipment

A SPINY-BACKED dragon athwart Australia's northern approaches, New Guinea conveniently swallowed during the second world war thousands of Australia's enemies: those it could not digest it immobilised. Its terrain—ask any Serviceman who battled along the Kokoda Trail—is a mighty armament. Hence its importance to underpopulated Australia, the British Commonwealth, the democratic world.

Strategic importance apart, Papua and New Guinea (Papua is roughly the lower half of the mainland east of longitude 141°, and Australian territory; while New Guinea comprises the jointly administered Trust Territory to the north, and includes various adjacent islands) are so packed with fascination, adventure, and challenge that they will repay the visit. Here are 184,000 square miles of administrative headache, entailed in the care and advancement of 1,750,000 natives, a medley of tribal groups and sub-groups speaking about 300 languages: a village may not understand another ten miles distant.

The people vary as widely in racial characteristics as in tongues, and present an amazing mixture of humanity ranging from outright primitives, still decking themselves in the fantastic plumes of birds of paradise, to relative sophisticates, three generations under European influence, who run their own businesses, have cash incomes, and motorcars. Savages or not, all those who have come under European influence are keen to acquire the white man's know-how.

Superimposed is a non-indigenous population of about 3,000 Chinese in Trust Territory, practically all traders, and 12,000 Europeans, mostly Administration officials, though many are in private enterprise.

If ever the derogatory tag 'colonialism' was inappropriate to the handling of a territory it has been here. From the early days of Australian administration (Papua, 1906; New Guinea, 1921) principles were determined and enforced—notably by administrators such as Sir William McGregor and Sir Hubert Murray—which, adapted slightly to our changing concepts, may be summarised today: not to alienate the land from the indigenous inhabitants; to place native interests first in the handling of social, economic, and political affairs; to preserve, so far as is consistent with humane principles and practicable advancement towards self-determination, the pattern of village life and customs.

One serious problem is to even up development as between advanced and backward groups: unless this unbalance is redressed serious difficulties could arise later from conflict of interests between dominant and relatively primitive groups. What is the Administration doing, and what will the Duke of Edinburgh see of its work? Port Moresby, on a fine harbour where the *Britannia* will drop anchor, conveys every impression—as the administrative centre should—of a successful blending of European and primitive cultures. The town,

The people are a Orokaiva man in

 by Australian-born EDGAR BEE

set around by terraces of wide-porched, louvered bungalows on the steep, garden-clad hillsides, is pleasantly tropical, with an air of solidity and spaciousness about the stone pre-war buildings, an air of efficiency and purpose about the post-war administrative and business quarters, an air of friendliness along the tree-shaded streets where natives mingle self-assuredly with Europeans.

Here, and at outposts in the nearby hills, the Administration has training facilities for the most promising members of the population, covering child education, teacher training, technical training, health and welfare, agricultural methods, business management, including the running of co-operative enterprises, and so on. These facilities extend, of course, throughout the controlled and semi-controlled areas, and include experimental farms, native-staffed hospitals, and the like.

The eagerness of the people to take advantage of these facilities is sometimes embarrassingly illustrated. At the teachers' training school and the nearby headquarters of the Royal Papuan Constabulary raw recruits have often turned up without invitation after trekking right across the island. As one official said to me wryly, 'How can you turn them down if it is at all possible to find a place for them?' These recruits have all too often braved death, having to traverse what is to them hostile territory, to reach their goals; they have come armed with bows and arrows to defend themselves. Children, too, have turned up at newly opened schools on outpost stations, similarly armed against their fellow-pupils. Perhaps a generation ago these people were cannibals.

From Moresby the Duke will fly to Lae. It is the only way to go in this country where roads, though being pushed into the mountains as fast as possible, are all too few: there are no railways. Papua-New Guinea's rapid development owes almost everything to the aeroplane; and this despite the fact that it is the world's worst flying country.

Lae, on the Huon Gulf, north coast of the mainland, is the aerial crossroads and clearing house, with routes radiating into the highlands, east and west along the coast, and north and north-east to the adjacent islands, as well as south to Moresby and Australia.

Heading north-east to the island of New Britain, the Duke will make Rabaul as his third port of call: the old administrative centre of New Guinea, established by the Germans before the first world war and occupied by the Japanese during the second world war.

In so few words it has been impossible to convey more than the merest outline of problems and achievements in so large and variegated a region. The briefest of references, now, to the development of general resources: exports, covering mainly copra and coconut products, rubber, gold, timber, cocoa, coffee, and shells, have risen from a total value of £A4,692,000 in 1949 to an estimated £A13,258,000 for 1955-56.

Some of the world's finest plywood is now being milled in the forests of New Guinea: grading sheets of cut veneer before they are dried at a mill in the Bulolo valley

Books to Read

Reviewed by
Geoffrey Boumphrey

I SHALL begin by describing what seems to me the best of the travel books: *Interval in Indo-China*, by Andrew Graham. Colonel Graham spent two years in Indo-China as Assistant Attaché at the British Legation in Saigon. This was from September 1952 to 1954, so it covered Dien Bien Phu and the Geneva agreements which ended the war. However, this is in no sense a war book, nor does it deal with political problems: its aim is simply to give you its author's impressions of a country about which most of us know singularly little. Clearly he enjoyed his two years enormously, and he succeeds in making the reader enjoy it all with him. He writes with deceptive ease and simplicity, and he has the gift of describing the little things in a way which brings the whole scene to life. In fact this is a travel book that I can recommend to you unreservedly.

I would not say quite as much about my next, *Land of Swift-Running Horses*, by Mabel Waln Smith. The main attraction of this seems to me that it describes vividly and in detail a way of life and a part of the world about which very little has been written before. Miss Smith is a Quaker from Philadelphia. Staying with a married sister in China, she learned to speak Chinese. This book describes a summer she spent on the edge of the Gobi desert with a herd of wild horses, their breeder, a picturesque, loud-mouthed Swede, and his Mongolian herdsmen and their families. Although you may find the writing a bit highly coloured, I am pretty sure that you will enjoy this book if you like reading about strange, wild ways of life, and especially if you are fond of horses.

Geoffrey Keyes, v.c., of the Rommel Raid, by Elizabeth Keyes, is a Book Society choice, I see, and so it deserves to be. In a way its title does it less than justice, because although Geoffrey Keyes is, of course, the central character, the book fills a much larger canvas than just his life and death. In particular, we learn much about his father, Admiral of the Fleet, Lord Keyes, and the part he played in the founding of the Commandos. Various military operations are admirably described. This is an inspiring book to read; and the photographs and maps are of the same high standard.

Cockleshell Heroes, by C. E. Lucas Phillips, is the story of the daring raid on German shipping at Bordeaux in 1942. Five tiny canoes were set afloat by submarine at the mouth of the estuary, and of these two succeeded in penetrating sixty miles upstream to their target and putting six enemy cargo ships out of action.

Commander Crabb, by Marshall Pugh, has as its hero the man whose name was on everyone's lips as recently as last April, when he was officially reported 'presumed dead after failing to return from a test dive in the Portsmouth area.' This was just at the time when two Russian cruisers were in Portsmouth harbour, and you will no doubt remember the speculation that was aroused. Only the last chapter of the book is given to this incident, and in fact it takes us little further than we were before. The bulk of the book was written or at least prepared before Crabb's death, and the author tells us in his foreword what extreme difficulty he had in extracting any personal details from his reluctant hero. His character, almost as much as his deeds, make this a rare book to read.

For a complete and utter contrast let me refer you now to *Buffalo Bill and the Wild West*, by Victor Weybright and Henry Blackman Sell. This lavishly illustrated book came as a surprise to me. I had no idea that its subject still occupied so important a place in the American Pantheon. It gives you his whole story, down to the sad ending that was surely implicit in the man's character. But I must say to me the most interesting parts of it are those that describe the Wild West when it was wild, the Indians and the buffaloes. What a raw deal they both had!

Now for something very different: *The New Outline of Modern Knowledge*. Over a quarter of a million words by twenty-six eminent authorities—and only 18s.; broadly divided into philosophy and metaphysics, science, the arts, politics and economics, and law. The editor, Alan Pryce-Jones, tells us that the work is designed for an intelligent public without any detailed acquaintance with much of the matter in hand.

The select but not small body that likes reading about sail will be glad to know that Alan Villiers's *Cruise of the Conrad* has gone into a Pan edition.

'Books to Read'—G.O.S. on Wednesday at 16.15; Thursday 00.30 and 05.00

what
is
HI·FI
?

Hi-Fi has been adopted as a term to denote high quality sound reproduction. With the aid of a Hi-Fi system you can bring records, particularly Orchestral works, to "life" wherever you are. A good Hi-Fi system transports you from your home into the concert hall.

A Hi-Fi system is in reality a gramophone or radio that has been refined and improved beyond all recognition. Hi-Fi equipment is not particularly expensive. We send systems and components of various kinds to listeners all over the world. If you are interested we'll send you our special catalogue. Write today to:

'London Calling' Olympics Number

Next Week's 'London Calling' will be a greatly enlarged number devoted to the Olympic Games which H.R.H. the Duke of Edinburgh is opening in Melbourne, Australia, on Thursday, November 22

There will be a specially drawn cover by Ralph Lavers, the Australian-born artist, architect, and designer of the torch for the last Olympiad which will be seen again in the Melbourne stadium this year

Special features in this issue will include:

BBC PLANS AND TEAM COVERING THE GAMES

MELBOURNE: PORTRAIT OF A CITY

THE OLYMPIC VILLAGE

INTERVIEWS WITH PAST OLYMPIC CHAMPIONS

By ROGER BANNISTER

REX ALSTON ON BRITAIN'S CHANCES

NORRIS McWHIRTER ON THE OPPOSITION

AUSTRALIA: THE DUKE OF EDINBURGH'S TOUR

By GODFREY TALBOT

Usual Price: 6d.

This Week's Listening

'CHRISTIANITY AND RACE'

THE character of a number of this week's spoken-word programmes in the General Overseas Service is indicated in an article on page 3 by Philip Mason, Director of Studies in Race Relations at the Royal Institute of International Affairs. Mr. Mason will himself be broadcasting the first of six talks under the title of 'Christianity and Race,' which are based on a series of lectures he gave earlier in the year at Leeds University.

He begins by accepting that 'there is a sense in which Christianity, in this matter of race, is challenged,' and in his first talk he takes up 'The Challenge from Without'—as he calls it—that comes from people of other faiths and, more particularly, from Western agnostics.

'Race Against Time' is the title of the 'London Forum' in which Philip Mason will also take part. He will be joined by speakers from Asia and Africa. They will include Colonel Laurens van der Post, author and traveller, Kamila Tyabji, an Indian barrister, and Miss Peter Ady, an economist.

The speakers will look at the problem of race relations in various parts of the world, the causes of prejudice and the way in which it manifests itself, and the possibilities of reducing the tensions associated with racial divisions.

Colonel van der Post will be this week's speaker in 'Our Way of Life.'

'Christianity and Race': Monday 16.15; Tuesday 00.30 and 05.00

'London Forum': Sunday 16.15; Monday 02.15

THE LEGACY OF ASIA

MANY listeners will remember the recent series of talks in which John Blofeld described his scholar's pilgrimage to the Buddhist shrines of northern India. But the Buddhist religion is only part of the legacy which ancient Buddhism has left to the peoples of Asia.

One of the most enduring and impressive monuments to the faiths of Asia (for they also include temples dedicated to Hindu and Jain deities) are the great rock temples of Ajanta and Ellora in North Hyderabad.

In his talk 'The Buddhist Legacy in Rock,' John Blofeld will describe the deep impression they made on him, and compare them with the caves of Yun Kang in north China, which he has also visited.

Sir Francis Younghusband, the almost legendary traveller in Central Asia, soldier and founder of the World Congress of Faiths, will be the subject of a radio portrait entitled 'The Twain Shall Meet,' introduced by George Seaver on page 10; and Sir Harold Nicolson will also deal with an Asian topic—the cultural and religious influence of Persia—in his fortnightly talk in 'This Day and Age.'

John Blofeld: Friday 16.15; Saturday 00.30 and 05.00
Harold Nicolson: Thursday 16.15; Friday 00.30 and 05.00

AL READ

PAUL FENOULHET

This week's programmes will include the Al Read Show, and 'Variety Calls the Tune,' the first of a series by the BBC Variety Orchestra under its conductor, Paul Fenoulhet

November 11 — 17

THE RUSSIAN INTELLIGENTSIA

WHAT are the attitudes of the second generation of a revolution? The answer to this perennial question may be the key to much that has been happening inside the Soviet Union during recent years. This will be one of the topics to be considered by Hugh Seton-Watson in his talk 'The Intelligentsia' in the series on the Soviet Union in 'This Day and Age.'

In this talk Professor Seton-Watson will describe the status of the intellectual and professional classes in modern Russia, and will also seek to determine whether the term 'a managerial society' can be applied to the Soviet Union. Professor Seton-Watson holds the chair of Russian History at the School of Slavonic and East European Studies in the University of London.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

'THESE RADIO TIMES'

ARTISTS and broadcasters with a Commonwealth background have always been among the most welcome and provocative subjects to have appeared in Gale Pedrick's popular series, 'These Radio Times.' It seemed the most natural thing in the world, therefore, to suggest that these performers should present their own overseas version of this light-hearted history of entertainment on the air.

So, for six weeks, listeners can hear behind-the-scenes stories of radio told for us by artists who have made their mark in broadcasting.

G.O.S.: Wednesday 10.30; Friday 01.00 and 17.30

THE WEEK'S PLAYS

CELEBRATED plays like *Rope* and *To the Public Danger* have abundantly established Patrick Hamilton's ability to chill and thrill an audience. This week suspense-addicts can hear his *Money with Menaces*, a small *tour de force* in sustained mystery and menace.

Cleverly the weather is made to play an important contributory part in the atmosphere. For it is on a sweltering summer's day that the newspaper proprietor, Andrew Carruthers, receives the telephone call from Mr. Poland. The name is unknown to Carruthers; as a busy man, and one used to having his way, he would not accept the call but for the intimation, through his secretary, that it has to do with his eleven-year-old daughter, Jennifer.

To say that Jennifer has been kidnapped by Mr. Poland, who now proposes to extort cash from Carruthers, is not to spoil anybody's enjoyment of the plot. Kidnapping is merely the basis of Mr. Poland's plan for coping with Carruthers.

There are detailed arrangements to be made, which, if observed, can carry the whole business to a conclusion within a few hours. And so at the bidding of this unknown voice, Carruthers is sent out into the heat of the afternoon to obey strange orders that may save his child.

In complete contrast is *Musical Evening*, set in Scotland nearly 120 years ago at the time of the visit of the great pianist-composer, Frederic Chopin, to Miss Jane Stirling, formerly a pupil of his in Paris.

Legend has always had it that Jane Stirling was in love with Chopin; and he did actually pay her a visit. Gordon Glennon's short play imagines an encounter one evening between the ailing genius and one of Jane's own protégées, a girl who wants to become an opera singer.

PETER FORSTER

'Money With Menaces': Sunday 01.00 and 18.30; Wednesday 14.15
'Musical Evening': Monday 11.30; Thursday 19.00; Friday 01.30

H.M. the Queen laying a wreath on the Cenotaph on Remembrance Day last year; this year's Service of Remembrance will be broadcast on Sunday at 10.30

THE OLYMPICS

THE city of Melbourne becomes host next week to the athletes and visitors attending the 1956 Olympic Games. In the space of 121 years Melbourne has developed from a tiny settlement into a dignified city of more than 1,500,000 people.

Some of its citizens have joined forces with John Thompson of the Australian Broadcasting Commission to present, in 'Olympic City—1956,' a portrait of Melbourne, or rather a series of verbal snapshots of their city.

One of the athletes will be Mrs. Dorothy Tyler, who will be interviewed in the last of Roger Banister's series, 'The Olympics.' Though jumping the same height as the winner on each occasion, Mrs. Tyler was placed second in the ladies' High Jump at Berlin in 1936, and again in London in 1948. A former world-record holder for this event, Mrs. Tyler also competed in 1952 at Helsinki. This year she completes a remarkable record of four Olympics, spread over twenty years, when she makes a final attempt to win a Gold Medal.

'Olympic City—1956': Tuesday 10.30; Thursday 23.45; Friday 18.30

'The Olympics': Monday 17.00, Tuesday 02.15 and 09.30

RUGBY LEAGUE TEST

THE first Rugby League Test match between Great Britain and Australia of the present tour will provide keen interest to all followers of the code. Great Britain at home won the last series in the 1952-3 season by two games to one, but Australia—who won the last of the three Tests in that season—have this time travelled with an experienced team, and many of their players know their way around the Club grounds of the League.

Wigan, in the Lancashire coal-mining area, stages the first Test, so the Australians are assured of a great welcome from supporters who have travelled many miles just to see their own team play, and who look forward to enjoying a first-class Test series with the visitors. A commentary on the second half of the match will go out on Saturday at 15.10, and an eye-witness report at 21.00.

THIRD PROGRAMME ANTHOLOGY

TEN years ago the BBC inaugurated its Third Programme to show, in the words of the then Director-General, that 'we are not afraid to express our own culture or to give our people access to the culture of others.'

The anniversary has been appropriately celebrated by a series of special broadcasts, and by the publication of an anthology offering at least one example of every type of programme broadcast—excluding, of course, music.

The selection includes notable contributions by T. S. Eliot, William Plomer, André Gide, Max Beerbohm, Thomas Mann, and Maxim Gorki.

From the *Third Programme*. Published by the Nonesuch Press by arrangement with the BBC (21s.)

Your Wavelengths

London Calling is published several weeks in advance and we regret that, for reasons beyond our control, it is sometimes necessary to alter wavelengths after we have gone to press. The latest information is always given in Programme Parade

A preview of the week's programmes
with recorded extracts
13.45-14.00 The World of Science
A weekly survey
of the latest developments

What I Believe. Sunday's speaker, Michael Tippett, says that his approach to the subject of 'belief' must tend to be based on his direct experience as a creative artist, which for him is so positive a matter that its demands and purposes seem to point to super-personal if not actually transcendent sources. Michael Tippett's best known work, *A Child of Our Time*, was first performed in 1944; his first opera, *A Midsummer Marriage*, was performed last year at Covent Garden.

Standards of Living. The subject for discussion on Monday, will be the changes in unemployment conditions during the last twenty-five years. The speakers will be C. E. Birdsall, who works at one of London's largest Labour Exchanges; Tom Fallon, for many years a policeman in the East End of London and later at Scotland Yard; and K. Dulake, who for nearly thirty years was in charge of the Rowton House organisation in London.

English Writing. Oliver Goldsmith (1728-1774) will be given an up-to-date assessment in Saturday's programme. Goldsmith was one of the literary circle that surrounded Dr. Johnson. His fame rests securely on one immortal comedy, *She Stoops to Conquer*, and on one immortal novel, *The Vicar of Wakefield*. But he was also an essayist of charm and simplicity, and a poet. The speaker will be S. C. Roberts, Master of Pembroke College, an expert on the writers of the eighteenth century. His talk will be illustrated by readings from Goldsmith.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes, and provides a valuable supplement to the BBC's direct transmissions from London

OVERSEAS JOURNAL OF THE BBC · PRICE SIXPENCE

MELBOURNE 1956

Special applications:
**Monitoring,
 Field Tests,
 Laboratory
 purposes —**

The **EDDYSTONE 770** **V.H.F**
 &
U.H.F

**Communications
 Receivers**

Superbly engineered and of advanced design, the two models offered possess excellent electrical characteristics and are robustly constructed for service in any climate. The "770 R" has continuous AM/FM coverage from 19 Mc/s to 165 Mc/s; the "770 U" from 150 Mc/s to 500 Mc/s. Both incorporate six-position turret tuning assemblies of unique design and giving high reliability. Fully illustrated literature with performance curves on request.

The 1956 Olympic Games

This week H.R.H. the Duke of Edinburgh opens the Olympic Games in Melbourne, and in special features in this number we set the scene of the greatest of all international sporting occasions. The BBC arrangements in Melbourne to give listeners a full coverage are explained by the Head of Outside Broadcasts (Sound), CHARLES MAX-MULLER

THE variety of programmes which the BBC team will have to look after during the 1956 Olympic Games includes a thirty-minute live contribution direct from Melbourne between 7.30 and 8.00 a.m. GMT in the BBC Light Programme, which will also be heard by listeners to the General Overseas Service, and two five-minute pieces in Bulgarian and Urdu.

To meet its different commitments the team will be made up of three main commentators responsible for contributions in the English language. These 'voices' are already well known to listeners. First, there will be Rex Alston, who has broadcast on athletics during the past two Olympic Games, and was sent by the BBC to the last Empire Games in Vancouver and the 1954 European Games at Berne. He has covered for the BBC most of the athletic meetings in England since the war, and this season he has also been to Budapest for the Hungary v. Great Britain match.

In Australia, Rex Alston will have with him as the athletics expert Harold Abrahams, who was himself an Olympic performer and Gold Medallist in 1924. Raymond Glendenning, who was also a BBC commentator in the past two

Olympic Games, will be the third member of the commentator team. His responsibilities will be to cover the many sports other than athletics which form part of the Olympic Games. We shall, of course, also rely considerably on contributions from our colleagues in the Australian Broadcasting Commission.

The BBC News Division is sending Leonard Parkin to look after their specialised interests. This will entail cabling daily despatches for news broadcasts, and sending 'in voice' brief reports for inclusion in the many daily editions of 'Radio Newsreel.' Leonard Parkin will also be keeping in close touch with the activities of H.R.H. the Duke of Edinburgh, who apart from opening the Games in Melbourne will be paying visits to various other parts of Australia.

During the Games the BBC team expect to send to London some 200 different items. Most programmes will be sent over Post Office circuits between Australia and the United Kingdom, but for the most important occasions we shall also be using Radio Australia transmitters, which will be relayed by the BBC station at Tebrau in Malaya.

All these arrangements entail a great deal of

Broadcasting the Games

ALEC WEEKS gives details of the Overseas coverage of the Olympic Games in the daily BBC reports and summaries picked up direct from Melbourne

JUST after seven o'clock every morning between Thursday, November 22, and Saturday, December 8, a small team of BBC staff will make their way through a foggy autumn dawn, to BBC studios, recording rooms, and control points in London. There amidst microphones, technical equipment, and, of course, central heating, they will talk to BBC commentators in Melbourne, 10,000 miles away and ten hours ahead in clock time, for news of the progress of the 5,000 competitors who, in mid-summer conditions, will be taking part in the Olympic Games.

What a difference to 1896, when 260 competitors attended the first modern Olympic Games held in Athens! But in those days—when cigarettes were only threepence a packet—there was no BBC transmitting boosting station, and it was only possible to telegraph a signal between two points eight miles apart. Though great progress has been made in that lifetime span of sixty years, the turning of a switch or the pressing of a button is not sufficient to organise an Olympic Games.

When planning the Overseas coverage many points had to be taken into consideration: which countries should receive an Olympic report, at what time, for what duration; how it should be presented, which sports and events should be covered; would reception be good, would the necessary staff be available, was the whole thing technically possible?

Recorded Commentaries

It was debated whether listeners should be taken over to Melbourne for 'live' commentaries on some of the major events; there is always something to be said for the event that is 'happening now,' but reception may not be satisfactory at that particular time, and events may be running behind schedule through bad weather—just to mention two of the unforeseen things that may ruin a 'live' broadcast—so it was decided to record commentaries on the major events, and include them in the various reports from Melbourne.

For our first Olympic report of the day we shall be joining listeners in Britain at 07.30 GMT (17.30 hours Melbourne time) for a thirty-minute report which will be illustrated by recorded commentaries and interviews made earlier in the day. On a few occasions this will include commentaries on events taking place at the time. On the first day (Thursday, November 22) these recordings will include descriptions of

the impressive Opening Ceremony: the parade of the 5,000 competitors, the entry of the Olympic Torch and the kindling of the Olympic Flame, the Olympic Hymn, the release of the 5,000 racing pigeons, the taking of the Olympic Oath—all culminating in the official opening by H.R.H. the Duke of Edinburgh.

At 10.45 and 17.30 (repeated at 23.45) GMT daily (excepting Sunday) listeners can hear their own special fifteen-minute Olympic Games report. Once again this will include recorded highlights of the day's events as well as detailed results. Both reports will be brought up to date with the latest results and further commentaries and interviews received from Melbourne.

If Reception is Poor

Naturally, 10,000 miles is quite a way for a report to travel, and if reception is poor it may be impossible to re-broadcast the reports received from Melbourne. If that is so listeners will be given a summary of events and results collected from the reports that will be pouring into the BBC: these will be read—and, indeed, all Olympic reports will be introduced from the studio in London—by David Rowe, who handled a similar assignment during the 1952 Games.

The BBC Team in Melbourne (Continued from page 3)

behind-the-scenes work, such as booking of microphone points, recording channels and circuits, and seeing that the various contributors are at their positions when required.

To look after this and the many other administrative worries Robert Stead, who for three years has been the BBC's Representative in Australia, and who hands over his responsibilities at the end of October, is to be the BBC's manager. His wide knowledge of Australia and our various contacts out there will be invaluable to the team.

To assist him, particularly on the language contributions for the BBC's External Services, he will have Brian Rhys Jones, the 'number two' in the BBC Sydney office.

The sending of a team to Melbourne entails considerable expense, and on this occasion, unfortunately, none of our colleagues in the BBC's European Service will be present with us on the spot. None the less they require a great number of varied contributions: in point of fact some twenty-one reports will be broadcast in fourteen

BBC OLYMPIC REPORTS

NOVEMBER 22 to DECEMBER 8

Daily, excluding Sundays at

07.30-08.00 GMT 10.45-11.00 GMT

17.30-17.45 GMT 23.45-00.00 GMT

Finals of the sixteen Olympic sports will be taking place during the following dates and will be included in the daily Olympic reports

November 22—November 24

ATHLETICS, FENCING, WEIGHT-LIFTING

November 26—December 1

ATHLETICS, SWIMMING, BOXING, CANOEING
ROWING, FENCING, BASKET BALL, MODERN
PENTATHLON, WRESTLING

December 3—December 8

SWIMMING, CYCLING, HOCKEY, FOOTBALL
SHOOTING, YACHTING, FENCING, GYMNASTICS

'London Calling Asia' will be transmitting two short reports on the first and last day of the Olympic Games: besides including recordings of the opening and closing ceremonies, focus will be on the Asian competitors and their performances. The BBC Colonial Service will broadcast two reports from Melbourne given by the first four-minute miler, Roger Bannister. He will concentrate on the Colonial competitors. Detailed results will also be given in the daily 'Sports Round-up.'

Pre-Olympic Games reports from Melbourne can be heard on Sunday, November 18, at 15.45 GMT, when under the title of 'Melbourne at Home' listeners can hear a little of the four years of preparation that have gone into the organisation of the 1956 Games. This programme will be repeated on Tuesday, November 20, at 07.45 and 21.00 GMT, and on the eve of the opening of the Games—Wednesday at 16.30 (repeated Thursday 02.30)—the chances of competitors from Great Britain will be discussed in a thirty-minute programme entitled 'Olympic Preview.' And then we in London will sit back and wait until we hear the voice of Rex Alston 10,000 miles away giving us the first instalment of the sixteenth Olympic Games.

different languages. For the language contributions we shall be using foreign journalists already in Australia or members of visiting teams.

For the technical facilities we are lucky enough to be looked after by the Australian Broadcasting Commission and the Australian General Post Office, who will be providing the necessary microphones, recording gear, sound-proof boxes, and editing channels—in fact all that goes to make up complicated operations of this nature. We shall be taking with us from England only some midget tape-recorders.

All broadcasting correspondents are to be housed in what I understand is a very modern building: a girls' college in Melbourne. Most of the broadcasts will go out from a series of studios which have been constructed at the main stadium where the athletics will take place.

We are all looking forward to what is likely to be a most interesting and exciting, if tiring, fortnight, and hope that we shall be able to meet the requirements of our very varied world audience.

The Olympic Park: in the foreground is the swimming pool; behind it are the football field and (left background) the cycling track. The heart of Melbourne, with (centre background) the Olympic Park by the Yarra

MELBOURNE—the Olympic City

JOHN THOMPSON, of the Australian Broadcasting Commission, presents a portrait of the city of Melbourne in the voices of some of its citizens. Mr. Menzies, Prime Minister of Australia, is himself a Melburnian, and in introducing the broadcast by his fellow-citizens he assured competitors and spectators of 'a hearty Australian welcome'

MELBOURNE is a young city, not much more than a hundred years in age, but the people of Melbourne already number more than a million and a half. It began with a man whose name was John Batman. In 1835, standing at the mouth of the river Yarra, John Batman looked at virgin bush reaching away to an unexplored inland, and said: 'This is the place for a village.' Today that village covers a metropolitan area of nearly 700 square miles. The city proper is closely built, and buildings average about the same height as the buildings of London; suburban houses are nearly all surrounded by their own gardens. Melbourne is a university city, a cathedral city, a great seaport, airport, and a manufacturing centre. It was for many years the capital of Australia—until the foundation of Canberra.

In order to make this programme I went round among the citizens. I recorded what they told me about their own city, and I questioned particularly those who were able to make a comparison with other great cities in other parts of the world. One of them was my friend Joe Bradshaw, one of the 500 American Servicemen who married Australian girls and settled in Melbourne after the second world war. He said: 'I think Melbourne is much like San Francisco. The streets are about the same, although in San Francisco you have hills. You don't have so many hills.'

Easy Place To Move Around In

Everybody is struck by the orderliness of Melbourne. The streets are broad and well planned, and public transport (the electric trains and trams) is so well run that Melbourne is an easy place to move around in. It is a very respectable city, very quiet on a Sunday: so quiet, in fact, that people often make fun of it, but the Melburnians do not mind. They have good reason to be proud of their city: the gardens, the noble streets, the peaceful suburbs, the fine buildings, the graces of civilisation.

I asked Sir Bernard Heinze, the Ormonde Professor of Music, what he thought of Melbourne: 'How can I describe it? Some people say it is a little like Manchester, others say it is a little like Hollywood. The only resemblance I can find is in some sense the feeling of Manchester, that is, of the people of Manchester—nothing to do with the city of Manchester. Of course, I am one of those people who think that Australia, following the example of Europe, is setting out a number of types of people. For instance, you could never mistake a Queenslander; the people from Western Australia have got a character entirely their own; and you surely know the difference there is between talking to people in Sydney and talking to people in Melbourne. We are developing entirely different types

of people, people stemming from something different in their idealism and what they want out of life. But as far as Melbourne itself is concerned I find a sturdy individualism, and I think the people are inclined to be a little more home-loving than the Sydney-siders.'

It is a very lovely city. To me the greatest difference from some other Australian cities is the solidity of the buildings. It is a very solid form of architecture you see about the place, and I am not sure that does not stamp the Melbourne character. I always feel when I have been to other cities that some of them are more fragile: always when I come back to Melbourne I feel that I am coming back to the settled things of life. To quote a Melbourne poet, Michael Thwaites, who was a Rhodes scholar a number of years ago: 'I would think that Melbourne, above everything, is a city of homes and gardens.'

The old suggestion that Melbourne was somewhat more like English cities than Sydney is something of the past. It is a city that is beginning to develop its own character. It is too often forgotten that it is a bit larger than Birmingham or Glasgow or Kiev, for example. The much-abused climate is on the whole very good. It seems to be quite reasonable

(Continued overleaf)

Racing on the spacious waters of Port Phillip Bay where the yachting events of the Games are to take place: Melbourne is built on its north-eastern shore

to settle for a city where you get five or six hours of sunshine on an average all the year round.

Now, it is a feature of Melbourne these days—indeed, of the whole of Australia—that you meet newcomers from other countries at every turn. We welcome people from abroad, wherever they come from, and we have an enormous immigration programme. There is beginning to be much less racial prejudice here than in most other countries. Most of our new citizens, of course, are still coming from England, Ireland, Scotland, or Wales. That is only natural: this now independent Dominion was formerly a British colony, and the whole wilderness of Australia was opened up and civilised by people of British stock. One of my broadcasting colleagues, Eldridge by name, was an Englishman not long ago: he is an Australian now—in fact, a Melburnian:

Parties in Your Own Home

'I have been here two years now, and I like it very much. I find it a quiet city in the sense that it is relatively slow moving. The people are polite; they are very friendly. There is much more home life than there appeared to be in Sydney. If somebody asks you to dinner here, normally that means "Come to my place for dinner." It does not mean: "Oh, come to dinner at such and such a hotel." There are many more parties of the English type, where you have a fairly quiet party with not too many people in your own home. You may listen to some gramophone records that somebody has brought along, or somebody will come along and do something—almost like going back to the Victorian "I've-brought-my-music-shall-I-play-now" type of thing.

'I was living until a short time ago out at Mt. Dandenong, up in the Dandenong Ranges, and that is a very lovely part of the world. I only hope some of the visitors at Olympic time will have the opportunity to go up there, because there are some very beautiful sights in the Dandenongs itself. You have Sherbrooke Forest which is one of the places where you can with luck see lyre-birds, and you can certainly hear them.'

Meanwhile, of course, there are many Asians visiting Melbourne for trade or for study. Many of them stay for several years: they attend our universities, and their children go to our schools. How do the Asians like it? I asked Miss Sarikananda, a student from Thailand, how do they get on with the people they meet in Melbourne? 'More or less I think they are nice people. I do not think there is much prejudice. Since I have been here I have stayed with a family during the week-end, and on long vacations, and I have found they like you as one of the family. I have never had any trouble. Once you get into the family they pay attention to you and are real good friends, very sincere.'

Intellectual and Artistic Activity

Melbourne is a great city for sport, but it is a city, too, where there is much intellectual and artistic activity. It has a fine orchestra, splendid libraries, important research institutes. There are many good painters and writers in Melbourne, and the first of our famous singers—she was the world's most brilliant soprano fifty or sixty years ago—took her stage-name from this city: that was Nellie Melba.

I asked Frank Eyre, among others, what he thought of the cultural life of Melbourne: 'I remember when I first arrived in Melbourne Sir John Medley met me in a tram. He was then Vice-Chancellor of Melbourne University, and he said: "Oh hullo, Eyre, you're another of these young Oxford chaps coming out. Well, I don't know whether you think you're going to like it or not, but it depends what sort of chap you are. If you're the kind of chap who wants to see Chekov twice a night, you're not going to." I don't think you can see Chekov quite twice a night here, but there is no need to. The theatre has been wonderful here

The Dandenong Ranges—where the lyre-bird can be seen and heard in Sherbrooke Forest—are within fifty miles of Melbourne

the past few months; music is very good; I personally wish we had more ballet. It is my only real lack. There is a wonderful art gallery. It is probably the best outside London in the British Commonwealth, I should imagine.'

And now Professor Burke, Professor of Fine Arts at the University, on the Botanical Gardens: 'They were designed by an Australian of very great genius, William Gilfoyle, who composed on the great principles of perspective and light and shade, using foliage and trees. He liked to plant the eucalyptus behind European foliage, and he has palm trees and Scotch firs in English lawns. It is a wonderful setting, with two lakes and streams sloping down to the Yarra. It is also a place for the bird-lover. Of course, you get black swans and those small blue wrens which I think one of the most lovely birds in the world—they remind me of Maeterlinck's Blue Bird—and occasionally you get a glimpse of the crimson parrot. I think for visitors to the Olympic Games the Botanical Gardens will be one of the memories they will carry back.'

Especially if they go to concerts in the Gardens. Sir Bernard Heinze was telling me: 'As a matter of fact, I am the chairman of the Mozart Festival Committee. We will have opera from the Elizabethan Theatre Trust, and part of the year's festival will be given during the Games. At the same time we are to have concerts in the Gardens, and up the hill, rising away from the lake against which the orchestra is placed, the people will sit in their multitudes, upwards of 75,000, sometimes 100,000 people.'

A Serious Interest in Food

I think visitors are going to get some surprises. They will be surprised by the solid, settled wealth and the high standard of living in Melbourne. Among other things, I think they will enjoy many of our Australian wines. We produce sound wines of every type—reds and whites and good sherries and so on. They will find good restaurants, too, if they take the trouble to look. You can always eat well in Melbourne: 'Food in Melbourne is better than it is in any other Australian city; it is improving all the time. There has been a vast improvement since the war. I attribute this to the influx of Europeans who have taken a serious interest in food.

'There is quite a variety of restaurants. It might be worth mentioning that there are several places in Melbourne where they are taking a pride in purely local dishes such as kangaroo-tail soup, notable Australian fishes such as the barramundi, and, of course, that excellent fish the Murray cod. Delightful venison dishes and soups are served, too, which gives a very nice local flavour to the menu.'

So says Mr. W. G. Cook. He was kind enough one evening to motor me round for what might be called, I suppose, a perambulatory dinner. In a French restaurant, first, we had an attractive *hors d'œuvres*. For our fish course we motored some miles to an excellent Chinese restaurant, where the orders to the kitchen were given by microphone from the front desk. Later in an Italian restaurant—one of the best of many Italian restaurants—we sat at leisure, with a bottle of good red wine, over an *ossi buchi*. We went off orce more, this time to a Russian restaurant where the proprietor himself, as we sipped our sweet black coffee, walked among the tables, singing.

Melbourne, considering its youth, is more colourful than you would expect. It was a naughty place before it became respectable. It used to be a gold-rush town, and it keeps some flavour of the times when Lola Montez danced and sang and smoked her cigars in public here. The old coaching houses have a Dickensian feeling—roast beef and apple pie, and comfortable intimate bars.

Reminders of Burlington Arcade

You must realise, I think, that this city was created by settlers who had either the courage or the intelligence (or both) to take a chance 'in the days when the world was wide.' They were often homesick, of course. They liked having things to remind them of home, and the roofed-over arcades that they built in Melbourne, with little shining shops of all kinds, are reminders of the Burlington Arcade, for example, in London.

Melbourne, of course, is a very sport-loving city. Large areas are devoted to cricket and football grounds, tennis courts, and racecourses; and good sporting facilities are taken for granted by everyone. The Melbourne golf-courses are easily the best in Australia—indeed, they are in world class. It is the headquarters of Australian football, a very fast open game played on a large oval with eighteen players a side.

The most famous horse-race in Australia, the Melbourne Cup, is run here on the first Tuesday of each November. Throughout Australia, in every town and village, traffic stops and work ceases when the Cup is on. School-teachers bring portable radio sets to work so that they and their classes can listen to a description of the Melbourne Cup. Trams come to a halt, and drivers and conductors and all their passengers pile out and crowd into the radio shops whenever the Cup is broadcast.

The Games themselves, of course, will dominate every other activity in Melbourne. The main Games area, quite close to the city proper, has been transformed by the erection of new structures: new grandstands at the Melbourne Cricket Ground, and a new running track, cycling track, and soccer field, all dominated by the great futuristic Olympic Pool, which is now one of the landmarks of the city, waiting in readiness for champion swimmers from every part of the world. (Broadcast in the BBC's General Overseas Service)

Up to thirty-two athletes can be housed in blocks of flats

This brick-built little house will be 'home' to ten athletes

A general view of the village, which covers 117 acres and consists of more than 750 buildings

OLYMPIC VILLAGE

The state of Victoria has created a self-contained community on the outskirts of Melbourne to house the 7,500 athletes and officials. After the Games the specially built houses and flats will provide permanent homes for Australian families

FOLLOWING Olympic tradition the city of Melbourne has arranged to house the athletes attending the sixteenth Olympiad in a self-contained Olympic Village. The choice for the site finally rested on Heidelberg, on the north-eastern outskirts of the city, and the responsibility of building it was vested in the Victorian Housing Commission, the housing authority of the State of Victoria.

The site was one of the remaining undeveloped portions of the Commission's large estate of 4,500 houses in Heidelberg, and it had the essential qualification that all services—sewers, water, gas, electricity, and so on—were available when required. It was also large enough to accommodate the 750 dwellings needed not only to house the Olympic athletes but to provide them with all the amenities of living. It was, in fact, the only site in Melbourne which could fulfil all the requirements of so gigantic an undertaking.

The village, which is the major constructional work associated with the Games, has been planned so that most of the buildings put up are of a permanent nature and can be used after the Games for the housing of families by the State of Victoria. The outlay upon it thus becomes a permanent asset to Australia.

A New Departure for Victoria

The very nature of the village has called for a new departure in housing planning in Victoria. Accommodation had to be provided for 7,500 people. Catering, shopping, transport, and other facilities which the visitors will require, together with open spaces for training, had to be placed conveniently near their quarters. All these factors involve a housing density greater than is usual in the suburban areas of Melbourne, where single houses on individual sites predominate. Thus the majority of the houses in the village will be in groups, some of which, although used extensively abroad, have not been adopted previously in Victoria.

Each dwelling has been finished and fitted as far as possible as a complete house, except that the cooking stove and clothes-boiler have been left out and fences have not been built. The dwellings range in size from single-bedroom houses to small blocks of flats accommodating up to thirty-two athletes. This will allow for the utmost flexibility in meeting the needs of national teams and their accompanying officials.

Three training ovals have been built near the village. Post-offices, medical and dental centres, and other services, including a branch of a bank, will be among the facilities available. Each national group will have its own kitchen and chefs, and special national foods will be served. Proposed menus were forwarded beforehand to the Olympic organisation in each country, and any reasonable suggestions for changes were accepted.

A bedroom in one of the houses: all beds are fitted with inner-spring mattresses

Olympic Honour for Britain...

**We are proud to announce that LEAK TL/12 Amplifiers
have been chosen for use at the 1956 Olympic Games.**

It was in 1945 that H. J. Leak revolutionised the performance standards for audio amplifiers by designing the original "Point One" series, and we became the first firm in the world to market amplifiers having a total distortion content as low as 0.1 per cent. This claim was received with incredulity, but it was subsequently confirmed by the National Physical Laboratory and since then hundreds of TL/12 amplifiers have been used by the B.B.C. and Commonwealth and foreign broadcasting authorities, and thousands have been used by recording studios, leading musicians and music-lovers throughout the world.

Further development work resulted in our producing, at a much lower price but with the same high performance standards, the TL/10 amplifier. The output of the TL/10 is ample for high-fidelity home music systems, and the quality of reproduction obtained is equal in every respect to that of the TL/12. We always use the TL/10 amplifier and "Point One" pre-amplifier for our public demonstrations of high-fidelity reproduction of gramophone records and radio. The TL/10 amplifier, when used with the best available complementary equipment, gives to the music-lover a quality of reproduction unsurpassed by any equipment at any price. Even when the complementary equipment falls below that of the best obtainable, the use of these amplifiers will enable one to obtain very marked improvements in reproduction.

LEAK Dynamic (moving-coil) Pickup

This new pickup results from five years continuous development of our first moving-coil design. Reports from users have justified our earlier belief that the pickup might earn recognition as the best in the world.

FREL is the trade name of the Leak Full-range Electrostatic Loud-speaker which will be available to the public in 1957. The design is original and has great theoretical and practical advantages over previously described electrostatic loudspeaker systems. It is the result of intensive research and development work carried out by H. J. Leak, M.Brit.I.R.E., and A. B. Sarkar, M.Sc., who are the authors of a paper, describing the basic design principles of this loudspeaker, which was published in the *Wireless World*, October 1956. A reprint of this paper will be supplied on request.

Recalling Olympic Triumphs of the Past

ROGER BANNISTER, first middle-distance runner to cover the mile in under four minutes, talks with famous British athletes about the great personalities and performances of past Olympic Games, after an interview with Professor Gilbert Murray in which the distinguished scholar evokes the spirit of the Games in the ancient world

BANNISTER: Professor Gilbert Murray, Britain's—and possibly the world's—most distinguished classical scholar, is in his ninety-first year. I want to ask him some questions about the ancient Olympic Games. He is, very interestingly, an Australian. The ancient Olympic Games were held from 776 B.C. to A.D. 393, a span of more than a thousand years. Could you tell us how these Games arose?

MURRAY: The date 776 B.C. is a sort of guess. It is the first time of which there is any record, but the Games must have been going on much earlier.

BANNISTER: Were the Games originally a festival in connection with harvest and the crops?

MURRAY: More or less. It was one of the Eniotos festivals. 'Eniotos' means a year or definite period. And as the early Greeks were, of course, an agricultural people, there was one constant anxiety: you have the spring and the summer and the harvest, and then that is cut, and the earth is quite bare and there is nothing to eat—will it ever come to life again? So the great excitement was whether there would be a new king or a new Zeus, or a New Year god, as it were. And then come innumerable myths, all of the same form—that there is a person who is born of the Zeus, of the sky god, and a human virgin, and you recognise him as the son of god.

BANNISTER: Why, if the festival was annual, were the Games held every four years?

MURRAY: That must have been a much later correction. The Greeks wanted to get a cycle, you see, which was complete, namely a sun cycle and a moon cycle. And they worked away at it with very primitive algebra, and they thought that they got a proper cycle in a set of four years. They got it roughly within some minutes.

BANNISTER: Was the prize for an Olympic victor in the sixth century still a crown of wild olives?

MURRAY: It was still a crown of wild olives, but authorities differ slightly as to the meaning of the crown. One says that it is to show that

Roger Bannister was a finalist at Helsinki in 1952, and will go to Melbourne as a commentator

the victor represents vegetation, that he is the new life of the year. The others say that it represents the great distinction of the victory—that it is of no value: it is glory, simply.

BANNISTER: Were the honours shared fairly equally among the city-states of Greece?

MURRAY: I think so. People came from all over Greece, and there was that very interesting thing—a truce everywhere. Even if two states were at war, competitors from any of those states could come through quite peacefully.

BANNISTER: What would you pick out as the most important ideal of the Games at their best? Was it the magic of victory?

MURRAY: I think it was this curious idea of goodness, quality. The idea was to find out who was the best man, or how you could be your best. The love of excellence was the great thing.

BANNISTER: There is another question: the original race run by Pheidippides to Athens took place in the fourth or fifth century, so presumably the marathon race was never a feature of the ancient Olympic Games?

MURRAY: Oh no, that was a special event, a very remarkable event.

BANNISTER: It is odd that the event which most people associate in their minds most with the ancient Olympic Games should never have taken place at the ancient Olympic Games. When was the chariot race introduced?

MURRAY: Probably in the sixth century. And then, of course, it was much more splendid, and you could spend more money upon it, and you could have four horses instead of two, and so on.

BANNISTER: The ancient Olympic Games gradually became discredited. Why was that?

MURRAY: They became bigger and bigger, and consequently money mattered more and more. Expense mattered. And when expense comes in vulgarity comes in.

BANNISTER: Did the victors win prizes of money from the Games?

MURRAY: Not from the Games. But I think it would lead to other things. They achieved a good deal of fame, and there are two or three passages in which people complain of the undue attention that is given to athletes.

BANNISTER: Why do you think Theodosius, the Christian emperor, abolished the Games eventually?

MURRAY: I suppose it was because they were associated too much with all the old paganism. They were just a great pagan festival.

BANNISTER: The Bishop of Pennsylvania, when
(Continued overleaf)

The original Olympic Games were held between Greek city-states. The earliest record of them dates from 776 B.C., and works of classical art show that the main sports—such as discus, wrestling, running—were established early on

'The first great distance-runner of the Games'—Kolehmainen of Finland won the Marathon in 1920

he spoke in 1908 before the Olympic Games in London, said the important thing was not so much to have been victorious as to have taken part. That is quite a modification of the Greek ideal. What do you feel of that change?

MURRAY: I do not know that there is anything in that. Of course, to have competed in the Olympic Games you must have been pretty good.

BANNISTER: So you think it was victory which was important?

MURRAY: I think originally it was victory that was important. You wanted to find the victor, to find the man who was really to be the king of the new year.

BANNISTER: Well, you have said victory was important, and I am sure it still is. The ancient Olympic Games had an enormous influence and modelled everything which has followed since.

PHILIP NOEL-BAKER

BANNISTER: The Rt. Hon. Philip Noel-Baker is one of Britain's most distinguished Olympians. He has every qualification: he was second in the 1,500 Metres in the 1920 Olympic Games in Antwerp. Eight years before that he had run in the final of the same event in the Stockholm Olympic Games of 1912. Since then Mr. Noel-Baker, who is a Member of the House of Commons, has gone on to enjoy a distinguished career in British political life, and in 1952 he was the Commandant of the British team at Helsinki. I would like him to tell us something of the Games of 1912 and 1920. First of all, what sort of people competed?

NOEL-BAKER: They were mostly club members from the different athletic clubs round the country, with a sprinkling of university people.

BANNISTER: What effect would you say the war had on the competitors of the Games?

NOEL-BAKER: A good many people began to take athletics quite seriously in the Forces during the war. Certainly after the war the university people played a much bigger part, and with their great facilities at Oxford and Cambridge and their good trainers they played a leading part in British participation in the Games.

BANNISTER: What are the personalities you remember most from the Games: would you rank Kolehmainen as one of the greatest?

NOEL-BAKER: I think Kolehmainen was the first great distance-runner in the Games, and the first great Finn.

BANNISTER: Who else do you remember particularly—do you remember Hans Braun?

NOEL-BAKER: I remember Hans Braun very

well because a year or two afterwards he was my club-mate in Germany when I was studying at Munich University. We ran a lot of relays together. But I think he was the greatest middle-distance runner before the war—the true forerunner of Harbig. Hans Braun was a very fine fellow in every way. He was a wonderful sculptor, whose work ought to live. He himself was killed in October, 1918.

BANNISTER: Most interesting, perhaps, to us is your part in your own races. When did you decide that you were going to help Strode Jackson—Britain's representative in the 1,500 Metres in 1912?

NOEL-BAKER: About four or five days before the race he and I had a work-out together—a final trial over three-quarters of a mile—and he was running so well that I made up my mind that he was a probable winner, whereas with a foot that was not wholly sound, and without very long training, I did not think I had much chance myself. So I thought I had better help him, though I did not tell him till we had lined up for the start.

BANNISTER: I am sure his feeling for your generosity must have known no bounds.

NOEL-BAKER: Well, Jackson had never run in a big race with a lot of starters before, and particularly in a race of that class, so as we walked up to the start I said to him: 'Jacko—you stick close to me and I'll see that we both get to the right place at the right time.'

BANNISTER: And what was the right place?

NOEL-BAKER: The right place was just before the bell for the last lap.

BANNISTER: And now tell us about Albert Hill in 1920.

NOEL-BAKER: Albert Hill was in wonderful condition. It was his fifth day of consecutive racing, and I expected him to be run out by the fifth day because he had been through three very hot heats of the 800 Metres, but actually he had a fairly easy do in the heat of the 1,500 Metres, and he came like a lion at the bell in the 1,500 Metres.

BANNISTER: Now, as a politician, you must have had an unrivalled opportunity for assessing the effect of the international incidents which have occurred at various Olympic Games. In your opinion, is their importance vastly exaggerated?

NOEL-BAKER: Their importance for evil in my view has always been a journalist's legend. I remember shortly after 1908 meeting A. J. Balfour, later Lord Balfour, who had been Prime

Minister, and he said to me: 'I am against your Olympic Games: they only create trouble and ill feeling between the nations, and always will.' I do not think that ever was true, whereas the positive effect on the minds of thousands of young athletes going back to their own country—immensely proud of having taken part in the Games, immensely proud of having run with the great athletes of the world, and of the friendships which they formed, and of the spirit with which all the contests were imbued—I think that has been a magnificent thing.

BANNISTER: I am very glad to hear you vindicate the Games in this way. No one could have done more than you to uphold them.

HAROLD ABRAHAMS

BANNISTER: Harold Abrahams ran for Britain in the Olympic Games at Antwerp in 1920 and at Paris in 1924 when he won the 100 Metres title, incidentally being the only Englishman ever to win this particular title. He equalled then the Olympic record on three occasions. He was also captain of the British athletic team at the Games in Amsterdam in 1928. The first question I would like to ask him is his outstanding memory of Paavo Nurmi. What was it?

ABRAHAMS: There are so many memories of Paavo Nurmi in 1928 because he won four titles and probably could have won eight. The most astonishing performance was when, in one afternoon, Nurmi won the 1,500 Metres in Olympic record time and an hour and a half later the 5,000 Metres—also in Olympic record time.

BANNISTER: I know comparisons between athletes of the present day and the past are always difficult, but would you say that he was a better athlete than, say, Emil Zatopek?

ABRAHAMS: It is always difficult to compare, because one likes to think one's own generation is better than the next. I do think that Nurmi is the greatest distance-runner I have ever seen—and I have seen a good many others—because he was so much better than his generation, which you cannot really say of any of the modern competitors.

BANNISTER: What is your own memory of the 100 Metres?

ABRAHAMS: I think I can remember every inch of that final, but I can remember every millimetre of the semi-final. I went to Paris knowing that I was facing four expert American sprinters and really not regarding myself as having much chance of winning. In the semi-final I was left at the start, and I still managed to win. Many people think that that was the best effort I

In 1928 Paavo Nurmi won four titles—two in one afternoon. This was the year when women made their first appearance at the Games, and Frau Radke won the 800 Metres on the only occasion it was ever held

ever made, and they all tend to ask what would have happened if I had not been left at the start: wouldn't I have done a better time? My answer is no, because I produced something that I never would have produced if I had not been left behind.

BANNISTER: Were you furious with yourself for being left behind?

ABRAHAMS: I was furious for three seconds, and then the whole of my training came to my assistance, and I realised the only way I could win was by not throwing to the winds all I had learnt in training myself.

BANNISTER: You say your training came to your assistance: do you regard yourself as being one of the better-trained athletes in 1920 and 1924? Do you think the general standard of training among the competitors was low?

ABRAHAMS: In 1920 I hardly trained at all. By 1924 I had learnt that to be any good at sprinting I had to study it as a science, and I did study it very closely, and I would say that I probably trained as hard as any athlete in the world in those days. Compared with modern training it would probably be laughed at.

BANNISTER: The Greeks used to talk about a certain magic of victory. What do you think is the importance of winning an Olympic title?

ABRAHAMS: I think my own good luck in winning has made an enormous difference to my whole life.

TOMMY HAMPSON

BANNISTER: Tommy Hampson won a most heartening victory for Britain in the 800 Metres in the Olympic Games which were held in Los Angeles in 1932. He then broke a world record and set up a new Olympic record, and was the first man to break the barrier of 1 minute, 50 seconds for the 800 Metres. He was a member of the team which ran second in the 1,600 Metres Relay, and also beat in that event the previous world record. Mr. Hampson is now Social Relations Officer in one of our new towns, Stevenage. How did you travel to the Games?

HAMPSON: In those days by boat and by train. I think that the slower journey by boat probably gave a chance to do some training *en route*, and certainly whenever the trans-continental train stopped at the various wayside halts on the journey we had an opportunity of getting out and taking at least ten minutes or a quarter of an hour's exercise, sometimes a little longer.

BANNISTER: Did you notice that the climate affected your running?

Tommy Hampson winning the third heat of the 800 Metres from Sera Martin of France at Los Angeles in 1932

Lord Burghley winning a heat in the 400 Metres Hurdles at Los Angeles

HAMPSON: Undoubtedly the climate of the western coast of America was responsible for the large number of new records which were set in the 1932 Games. It is very warm there but not oppressively so; the air tends to be a little more rarified and light than in western Europe, and certainly the competing conditions in the stadium owed a great deal to good climatic conditions. The track itself was the most wonderful surface I had ever encountered up to that time: I can only liken it in texture to a piece of satin, and in resilience to a piece of rubber.

BANNISTER: In the photographs which I have seen of your race you do appear almost to be gliding over the surface of the track. Of course, these Games were the greatest that had ever been held. In the course of twenty-six Olympic events there were twenty-three new Olympic records. And I would like to ask you whether you can pick out some of the particular personalities and events of those Games?

HAMPSON: One of the outstanding memories I think is of the duels between what the Americans called The Two Midnight Expresses—Eddie Tolan and Ralph Metcalfe—their two very strong, very powerfully built Negro runners. Tolan won the 100 Metres with Metcalfe second, and Tolan again won the 200 Metres in which Metcalfe was third.

BANNISTER: Did they use a photo-finish to time the race for the first time then?

HAMPSON: There was a form of photo-finish used which was synchronised with the starting gun, but it was not the sort of mechanism which is in use nowadays. No results, of course, were taken from the mechanical timing. They still preferred to rely on human error and judgment, whatever that might be.

BANNISTER: It would be very interesting to hear something about your own very great race, the 800 Metres.

HAMPSON: There were nine of us who went to the starting line, and the most feared opponents were Phil Edwards, the Canadian Negro, Alex Wilson, also representing Canada, and Eddie Genung of the United

States. Edwards went off at a tremendous rate and covered his first 200 metres in just outside 24 seconds. I knew that he was running too fast, but nevertheless I was in a little bit of doubt as to whether I ought to let him go so far ahead. He covered the first 400 metres in about 52½ seconds and I was about 12 to 15 yards behind, following him with quite a bunch of four or five others. We gradually closed the gap as we went round the third bend and into the back straight, and it was at the top of the back straight that I decided to make my effort to get up to Edwards's shoulder. No sooner had I started that than Alex Wilson came dashing by me, got in close behind Edwards, and simply sailed past him. I had to make a split-second decision whether I would take the risk of running an extra 4 or 5 yards by trying to go round the outside of Edwards round that bend, or whether I would stay behind Edwards and hope to save that extra little bit of energy for a final onslaught on Wilson in the finishing straight. I happened to choose the second course, but Wilson had 7 or 8 yards lead when we came to that 80-yards stretch, and I shall always remember the terrific effort of getting up to him, overhauling him, and passing him just in time to feel the worsted break across my chest.

BANNISTER: That was a thrilling description of a very great race. I know that to me your race in Los Angeles was always held up as an example of perfect middle-distance running.

GODFREY BROWN

BANNISTER: Godfrey Brown was one of Britain's representatives at the 1936 Olympic Games in Berlin. At that meeting he was a very close second in the 400 Metres, and a member of the British team that won Britain a Gold Medal in the 1,600 Metres Relay. He is now the headmaster of the Royal Grammar School at Worcester. These Games at Berlin were, I think, probably the most organised Games that had hitherto been held. Could you tell us something about the organisation behind the Games?

BROWN: Certainly no expense was spared in the provision of the stadium, a swimming stadium, the Olympic Village, and a vast programme of advertisement, which had gone out before the Games took place to all the competing nations. A deliberate attempt was made—for the first time, I should say—to make them a piece of national advertisement—advertisement, of course, for the Nazi Government.

BANNISTER: Could you tell us something about

An appeal from Chris Chataway

"TRAINING, of the right kind, is the key to most worthwhile things," says Britain's Chris Chataway, "whether it's for a race, a career, or life itself. That's why the job being done by the National Association of Boys' Clubs is so important to Britain's future.

"In 2,320 clubs throughout Britain, boys of fourteen and upwards are quietly being shown the way to become decent, self-reliant men. In their leisure hours, 169,000 of these young Britons are taught fitness for work, fitness for leisure.

"All this takes money, of course. That's why anything you can contribute will be not only a worthy gift, but a very real investment in Britain's future manhood."

Donations to: The Secretary, The National Association of Boys' Clubs (Incorporated by Royal Charter), 17 Bedford Square, London, W.C.1.

OLYMPICS . . . *The Official Report*

Next year, *WORLD SPORTS* will again publish the British Olympic Association Official Report of the Olympic Games. Price 10s. 6d. This complete and authoritative record will cover the Melbourne Olympics, the Winter Olympics in Cortina d'Ampezzo and the Equestrian Olympics in Stockholm. Every result of every heat of every event of every sport will be here, together with first-class accounts and striking photographs. Lord Burghley will contribute the Foreword, Harold Abrahams and Jack Crump will cover the Athletics events, Lt.-Col. H. M. Llewellyn the Equestrian Olympics and Dr. Willy Meisl the Winter Olympics and the soccer tournament in Melbourne.

You may order your copy now—12s., including special packing and postage, or 1.75 dollars inclusive.

Please send a copy of the British Olympic Assn. Official Report of the 1956 Olympic Games, when ready, to:

Continued from page 11

the competitors whom you remember in the games? First of all, Jesse Owens.

BROWN: Nobody who has seen Jesse Owens can forget him, I should say. He was the most magnificent athlete I have ever seen, taken all round: he had a superb physique and glorious muscles, and in movement he was the epitome of ease and power. And furthermore, of course, he was a very modest and charming person, and a quite remarkable competitor. I was fortunate enough to be standing just close to the take-off board during the final of the Long Jump. And Luz Long, the German, with his twelfth and last jump, took the lead. He cleared something in the region of 25 feet 10 inches, and Owens, who had been leading up till then, had to jump. Long got an enormous ovation from the crowd—Nazi salutes in all directions—and I noticed Owens taking his place on the run-up while this was going on. And then there was a hush while Owens ran up for his last jump—and he cleared 26 feet 5 inches—that was within 3 inches of his own world record.

BANNISTER: Could you tell us about Jack Lovelock's great race in the 1,500 Metres?

BROWN: I will never forget the devastating effect of Jack Lovelock's early finish. He finished from 300 metres, and this had never been done before; and I clearly got the impression, as soon as Jack started his finish, that the race was over. And so did most of the other competitors. I have never seen anything to equal it.

BANNISTER: Do you remember our only Gold Medal of the 1936 Games, and, incidentally, the only Gold Medal that we have won since then in the track events of the Games?

BROWN: Yes: Harold Whitlock in the Road Walk. I saw that victory, and it was, of course, expected, but at the same time very impressive in its ease and confidence, and very uplifting.

BANNISTER: Most interesting of all—could you tell us something about your own race? You were extremely unlucky: it is a case almost unparalleled, I am sure, in the history of the Olympic Games, that you should have drawn either the next to outside lane or the outside lane in all four rounds of the 400 Metres, the position from which it is most difficult to win. What was your reaction when you discovered in the final that you had got the outside lane?

BROWN: Very devastating, because one has not very long to react to that and put it right, and I remember feeling that it had removed a large part of my chance, and trying to screw up my courage, and not let it affect me. But I think,

JEESSE OWENS (U.S.A.)

HAROLD WHITLOCK (U.K.)

JACK LOVELOCK (U.K.)

Three Gold Medallists at the 1936 Olympic Games—Jesse Owens won no less than three Gold Medals

looking back at that race, the essential mistake that we made was to think it was going to be run in 47 seconds, whereas it was won in 46.5 seconds—slow time nowadays, but rather unexpected in Europe at the time.

BANNISTER: Still, the result of the 400 Metres was certainly made up for in the 4 x 400 Metres Relay, which Britain won.

DOROTHY TYLER

BANNISTER: Dorothy Tyler is a famous high-jumper, and when she competes at Melbourne it will be her fourth Olympic Games. As far as I know no other athlete has competed in the Olympics over a period of twenty years, certainly in the track or field events. Mrs. Tyler was only sixteen in the Ladies High Jump at Berlin in 1936 when she came second, and then she was second in London in 1948. She also competed at Helsinki in 1952.

The first question I would like to ask you, Dorothy, is about the 1936 Olympic Games and in particular why you were unfortunate then not to win a Gold Medal instead of a Silver Medal.

TYLER: In 1936 the rules were that in case of a tie you went on jumping until one of you either failed or got over it, so that although I

was tied for first place I was beaten in the jump-off.

BANNISTER: And is it true that if the rule had remained as it was in 1936 you would have won your Gold Medal in 1948?

TYLER: After the 1936 Games they were a little tired of us having to jump off. It took so long that they altered the rules. These rules applied in 1948, and I tied again for first place, as you know, and the old rules would have given me a Gold Medal.

BANNISTER: You were then one of the married women competing in the Games, and could you tell us something of the effect this had? Do you think that your standard of competition was as good in 1948 as it had been before the war?

TYLER: It was better. I jumped higher as a married woman with two children than I had done as a young girl, but of course the war years would have been my best years. The fact that both Fanny Blankers-Koen and myself competed in the 1948 Games, both of us having two children, has encouraged women to come back who would have married and settled down.

BANNISTER: Did you watch Fanny Blankers-Koen's victories in the 1948 Olympic Games?

TYLER: Yes, I was very interested in the 80 Metres Hurdles and the 100 Metres, because we had girls who came second in both events, but I was a little disappointed that she did not compete in the High Jump, because she had taken my world record during the war in 1943, and I was hoping to be able to beat her.

BANNISTER: Did you watch Zatopek's races in 1948, and do you remember the 5,000 Metres?

TYLER: Yes, the one where Gaston Rieff beat him. I was watching, I am afraid, on a television set, as it was pouring with rain outside, but it was extremely exciting, and I think he left his effort just a little late.

BANNISTER: I think that stands as one of the great acts of gamesmanship of Zatopek but one of the few which did not come off.

TYLER: Yes, he usually manages to do the trick, and is a great favourite of the crowd.

BANNISTER: So then after 1948 you turned still to high jumping, but you changed your style. And now you are coming back again with a history of three very great Olympic Games behind you, and I wish you every success.

High-jumper Dorothy Tyler, who will be competing in her fourth Games at Melbourne, and (right) Fanny Blankers-Koen winning the 100 Metres final in 1948

Rex Alston Sums Up Britain's Olympic Hopes

DEREK IBBOTSON

CHRIS CHATAWAY

GORDON PIRIE

The formidable trio of runners who will contribute to making the 5,000 Metres 'the race of the Games'

THE announcement of Britain's athletic team for the Olympic Games is a four-yearly event which always excites lively interest. The team selected for Melbourne numbers fifty-one—forty men and eleven women—and has aroused little controversy. It is a larger party than had been expected: first, because the sum subscribed by the public is agreeably larger than the authorities expected, and secondly because our athletes have shown such improved form. The British Amateur Athletic Board last year set a minimum standard for each event, and athletes have had this qualifying standard as a target.

Each country may enter three competitors per individual event and, of course, one team per relay event. In only three events will there be no British representative—the Pole Vault, the Decathlon, and the Women's Javelin. The Pole Vault standard both in Europe and in America is fantastically high, and our only possible candidate, Elliott, who was third in the European Championship in 1954, has had a poor season, dogged by injury and loss of form.

Britain has entered the full complement for all the men's track events from 100 to 10,000 Metres, except the 800, and also the Steeplechase, the Fifty-kilometre Walk, and the Marathon. We have two each in the 800 Metres, both hurdle races, Twenty-kilometre Walk, Long Jump, and Hammer, and one each in High Jump, Hop, Step, and Jump, Weight, Discus, and Javelin. In women's events we have three each in 100 Metres and High Jump, two each in 200 Metres, 80 Metres Hurdles, and Long Jump, and one each in Weight and Discus. Those who have been chosen for more than one event are Ruddy and Sandstrom (100 and 200 Metres), Pirie (5,000 and 10,000 Metres), Wilmshurst (Long Jump and Hop, Step, and Jump), June Paul (100 and 200 Metres), Thelma Hopkins (High and Long Jump), and Suzanne Allday (Weight and Discus).

British hopes of winning a medal are obviously highest in the middle- and long-distance events—1,500 Metres, 5,000 Metres, 10,000 Metres, and Steeplechase. Our competitors in these events are all of world class, and would carry high hopes of success in an international fixture against any individual country. But the luck of the draw in the heats, and the strains and stresses of Olympic competition, all play their part in reducing chances of individual success. We cannot presume, for instance, that because Pirie has been breaking world records at various distances he will automatically win a Gold Medal in Melbourne.

The 5,000 Metres should be the race of the Games, and, on form, Britain could take first three places. Chataway is the enigma. Since taking up television news-reading and reporting as a career he has had little competition, but if he judges his preparatory training well that may not be such a bad thing. He has great experience, tremendous courage, and will-power, and what Roger Bannister has so well called 'the greatest index of unbeatability' of all the great long-distance runners, and he

The well-known BBC commentator—one of the team of experts that listeners will hear in the daily reports on the Games—is confident that Britain's team—comprising forty men and eleven women who have all trained as hard as it is possible for part-time athletes to train—is 'the best we have ever turned out'

may well come fresher to the starting line than men like Kuts of Russia, the famous Hungarians—Iharos, Tabori, and Rozsavölgyi—or the Australian, Landy, who have been racing hard throughout the season. Neither should Ibbotson's chances be underrated. He is perhaps Britain's most improved distance runner, who has now acquired the necessary finishing speed, as shown by his recent mile in under four minutes.

The picture is neither so clear nor so promising in the 800 and 1,500 Metres. Last year Hewson was being acclaimed as the potential winner of the 1,500 Metres, but until his outstanding successes recently in Glasgow and later in Manchester, where he was only 9/10 of a second outside the 1,000 Metres world record, he has not had a good season. We must, therefore, put a question-mark against his qualifying for the final. More encouraging has been the form of Wood, who has run some splendid races and has shown great strength and resilience against powerful European opposition. He is one who likes to run his races from behind, and has not yet failed to produce a devastating finish. Either he or Hewson has a fair chance of being placed in the first three.

The case of Johnson, our first choice in the 800 Metres, is in some respects similar to that of Hewson. Johnson was placed fourth in the 800 Metres in the European Championship, but has not reproduced similar form since. He has been flirting with the 1,500 Metres, and has thus lost some of his pace, whilst acquiring extra stamina which will help him in the shorter race, and as anchor man in our 4 x 400 Metres Relay team. His chance of reaching the final at Melbourne must depend on a recapture of his former speed. His companion Rawson, the A.A.A. half-mile champion, is a powerful runner, but scarcely as yet in world class.

Possibly our best chance of a Gold Medal on the track is in the Steeplechase, where Shirley and Disley could both be in the first three. Disley beat the champions of five European countries last season, only to lose his British record to Shirley, who defeated him in the last race of the year. Both have delayed their preparation, but I have seen enough of them to be confident that they will make a tremendous challenge.

In the 1,500 Metres both Brian Hewson and Ken Wood (right) may qualify for the final if they maintain their present form

Suzanne Allday will represent Britain in the Weight and Discus, and Sheila Hoskin (right) in the Long Jump and 4 x 100 Metres Relay

Thelma Hopkins may win Britain's first athletics Gold Medal for twenty years

The world standard in the sprints, the 400 Metres, and the 110 Metres Hurdles is so high that I shall be surprised if any of our competitors reaches a final. Ruddy and Sandstrom in the 100 and 200 Metres, and Higgins and Wheeler in the 400 Metres, have run better than ever before, but their times do not compare with those of the Americans, the Russians, and the Australians. Our hurdlers, Hildreth and Parker, maintain a consistent standard well below that of the best Americans, who lead the world in this event, whilst Shaw and Farrell, our 400 Metres hurdlers, cannot come within yards of the best Russians—to name only one country. Our strength in depth might give us a place in the final of the 4 x 400 Metres Relay, where Britain has a fine tradition.

Our Marathon runners, Clark, Hicks, and Fred Norris, are comparatively untried performers, and, with courses and conditions varying in different parts of the world assessment of form is virtually impossible. Clark and Hicks are new to world competition and, with youth on their side, might spring a surprise in this most unpredictable of all races.

In the field events the outlook is sombre. The British Captain, Wilms-hurst, has done over fifty-one feet in the Hop, Step, and Jump—three feet less than the world record! He and Cruttenden have both long-jumped twenty-four feet, eight inches—two feet less than the world record! Wells has jumped six feet, seven inches—but at least one American has already cleared seven feet! Our throwers—Discus, Hammer, and Javelin—are all at least twenty feet behind the world's best. The only man who might win a place in the first six is Palmer in the Weight, where he has reached fifty-six feet.

In the women's events, where in overall quality we are probably second only to the Russians, we have good hopes of success in the sprints, the High Jump, and possibly the 80 Metres Hurdles. It is unfortunate that in the Olympic Games there are no long-distance events, where we have great strength. The return to the track of June Paul (née Foulds) has given us a potential Olympic sprint champion.

Anne Pashley and Jean Scrivens are two others who should do well, and our Relay team must have a chance of a place in the final. Sheila Hoskin is in the Olympic class. I have left till last the girl whom I believe will be first in the High Jump—Thelma Hopkins.

Our team have trained as hard as is possible for part-time athletes, but none can say how they will fare against the representatives of the host country, Australia, against the might of America, or against the state-sponsored experts from Central and Eastern Europe. One prediction I can safely make: in quality the 1956 Games will be the best ever.

Britain's best chance in track events for men is in the 3,000 Metres Steeplechase: Disley (centre) and Shirley (left) could both be in the first three

Three hopes in the women's sprints and 4 x 100 Relay: June Paul (No. 3) winning the 100 Yards Women's A.A.A. Championship this year, with Anne Pashley (No. 5) second; and (right) Jean Scrivens

The World's Athletes

NORRIS McWHIRTER singles out some of the world champions who will be ranged against Britain's Olympic entrants: after writing off fourteen titles to the Americans and eight to the Russians, he says, British athletes will have to fight it out with the rest of the world for the remaining eleven

IT may as well be said straight away that of the seventy-three countries entering teams for the Olympics track and field events at least sixty-two enter without the vestige of a chance of securing a single one of those illusive pieces of silver-gilt.

If pure weight of numbers were the yardstick it could fairly be said that with a world population of 2,650-million, Britain's population of 51-million was 37-million short of what was required to have the right to expect even a single Gold Medal. In practice, of course, vast populations such as the 600-million in China are only in their Olympic infancy, while the 167-million in the U.S.A. will probably claim twelve titles and both men's relays, as opposed to the two to which they are 'entitled' on a population basis.

A fairer way to appraise what does or does not constitute success or failure for Britain is to write off fourteen titles to the Americans, who have held world supremacy since the Games were re-inaugurated in Athens in 1896, and eight titles to the world number-two power, Russia. This leaves eleven titles for the rest of the world. The strength of Great Britain's combined men's and women's team indubitably makes her the number-three power in the world. Thus, I would say that for the United Kingdom no winner would be poor, one would be fair, two winners would be very fair, three would be right, and four would be success indeed.

Memories of Helsinki

Let it be remembered that before our team flew to Helsinki in July, 1952, we had high hopes of supreme success for McDonald Bailey, the then co-holder of the world 100 Metres record, for Roger Bannister in the 1,500 Metres, for Jim Peters, the fastest Marathon runner in history, and for Sheila Lerwill, the then world-record holder in the women's High Jump. In cold fact none of these hopes materialised, though Mrs. Lerwill got a Silver Medal, and Bailey and Bannister were in the first six.

When our team assembles in Melbourne we shall be able to claim the finest trio of 5,000-Metre men, headed by the world-record holder, Gordon Pirie; the finest trio of steeplechasers in the world; and two Marathon runners in Ron Clark and Fred Norris who bettered Zatopek's Olympic record time on their debut over the twenty-six miles, 385 yards distance in June. In addition we shall field in Thelma Hopkins a girl high-jumper who has surpassed the Olympic height of 5 feet 6½ inches more often than anyone else in the world, and a quartet of sprinters who, having consolidated their baton technique, will be hard to beat.

We thus start with a live chance of supreme success in perhaps eight of the thirty-three events. In the white heat of Olympic competition it takes great good fortune to turn even one of eight possibilities into actuality. Looking in closer detail at those events in which Britain is strongly represented one soon sees the mighty array of talent which stands between our representatives and the top step of the victory rostrum.

Opposition in the 800 Metres

In view of his great performance at Glasgow on September 15, it is possible that the British Team management may switch the sub-four-minute-miler Brian Hewson to the 800 Metres. Nonetheless, his 1 minute, 47.5 seconds, which is the fastest time ever recorded in the British Isles, rates him only number five on the season's ranking list. Ahead of him are the two formidable Americans, Tom Courtney (1 minute, 46.4 seconds) and the coloured Arnie Sowell (1 minute, 46.7 seconds). Also lurking is the world-record holder, Roger Moens, the Belgian policeman, who, largely owing to a recalcitrant Achilles-tendon injury, has been unable to get closer than 1½ seconds of his astounding 1 minute, 45.7 seconds achieved in Oslo last year. Britain's other leading contender, Derek Johnson, has a best performance dating from 1954, when he recorded 1 minute, 47.4 seconds in the European Championships at Bern. This year he came within three-tenths of a second of that time running at Oslo, but he, like Moens, has been suffering from muscle trouble.

In the 1,500 Metres Ken Wood has many supporters, particularly in his native Yorkshire. In the 1956 world rankings he shares an equal ninth behind two Hungarians, including the world-record holder, Istvan Rozsavölgyi (3 minutes, 40.6 seconds), two Germans, a Finn, a Swede, a Czech, and two Australians, including John Landy, the holder of the world mile record at 3 minutes, 58 seconds. This season Wood has been undefeated in all but one minor half-mile race. If, as is quite possible, the Olympic final in this event, which is 119 yards short of an English mile, there is a high wind, Wood must stand a great chance against less ruggedly built Continentals. Our other two entrants are Brian Hewson, who ran

The Marathon is the most unpredictable of all races: possibly the fastest in history was run in Boston this year by Autti Viskari of Finland

Iolanda Balas of Rumania holds the world record for the High Jump

Vladimir Kuts (left) of Russia is the favourite for the 10,000 Metres

Tom Courtney (U.S.A.) has run the 800 Metres in 1 min., 46.4 sec.

Compete at Melbourne

3 minutes, 59.8 seconds for the mile last year, and the Oxford nuclear physicist, Ian Boyd.

In the 5,000 Metres, Britain has a very strong suit, and if only the event were a team race, as in the 1908 Olympics, Britain would be unbeatable, for we field the world-record holder, Gordon Pirie (13 minutes, 36.8 seconds), the former world-record holder, Chris Chataway, and Derek Ibbotson, who ranks sixth in the world at 13 minutes, 57.2 seconds. Personally I share the view that the 5,000 Metres is unlikely to be won by any of those such as Pirie or the Russian, Vladimir Kuts, who will have already battled out twenty-five gruelling laps in the 10,000 Metres on the opening day of the competition. The mighty Hungarian trio—Tabori, Rozsavölgyi, and Iharos—all looked 'over the hump' when I saw Pirie crack them one by one in his 3,000 Metres world-record run on a soft Scandinavian evening last September in Malmö.

The undoubted favourite for the 10,000 Metres is the iron marine from Russia—Vladimir Kuts. His world record of 28 minutes, 30.4 seconds in Moscow on September 11 is well over half a lap faster than Zatopek's Olympic record of 29 minutes, 17 seconds set at Helsinki in 1952.

Pirie's Best Distance

This distance, which is 376 yards further than six miles, is regarded by many as Pirie's best distance. Pirie at present lies fifth in the world rankings behind Kuts, the previous world-record holder, Iharos of Hungary, Chromik of Poland, and the little Algerian, Mimoun-o-Kacha, who has won the international cross-country title on four occasions, and who got the Silver Medal behind Zatopek both at Wembley and Helsinki. Not to be forgotten in this event is the brilliant Australian distance-runner, Dave Stephens, who set a world six-mile record of 27 minutes, 54 seconds in Melbourne in January. Both Stephens and John Landy will be Australia's chief hopes in the track events. They will have the great advantage of a vociferous home crowd, and will be competing without any need for acclimatisation in the highly erratic southern hemisphere spring.

The vista of Britain's great trio of steeplechasers mounting a great offensive in the final of this 3,000-metre event over thirty-two obstacles has recently receded with the impressive advance of the two Hungarians, Sandor Rozsnyoi, the world-record holder at 8 minutes, 35.6 seconds, and Laszlo Jeszenszky (8 minutes, 40.8 seconds), and the twenty-three-year-old Red Army man, Semyon Rzhishchin (8 minutes, 39.8 seconds). These times compare with the British best of 8 minutes, 44.2 seconds by John Disley, and the 8 minutes, 47.2 seconds by Chris Brasher this year, and 8 minutes, 47.6 seconds by Eric Shirley last year. Continental experts favour the chances of Shirley, while those in Britain tend rather to regard John Disley as the senior partner in view of his great experience.

Promise of a Photo Finish

Switching to the distaff side, Britain's team of eleven girls have a great chance to raise us from the silver standard to the gold standard. No country has won more Olympic Silver Medals than Great Britain, and yet in the four celebrations in which we have competed, a Gold Medal has always eluded us. Of the nine feminine events we stand some chance of victory in three—the 100 or 200 Metres, the High Jump, and the 4 x 100 Metres Relay. Our sprint hopes rest with Mrs. June Paul.

Ranged against her are an array of Australians, Germans, and Russians, which will surely cause the judges to call for a photo finish. The Australians, Marlene Mathews and Betty Cuthbert, holder of the 200 Metres world record at 23.2 seconds, have a powerful opportunity to live up to the reputation of the now-retired Marjorie Jackson, who won a 'sprint double' with such impressive ease in Finland four years ago.

The twenty-year-old Belfast dental student, Thelma Hopkins, champion of Europe and champion of the British Empire, arrives in Melbourne as the ex-world-record holder for the High Jump, since Iolanda Balas of Rumania has added a quarter of an inch to her record of last May, with a clearance of 5 feet, 8 $\frac{3}{4}$ inches in Bucharest. This girl, who is of Hungarian parentage, starts with the immense advantage of being six feet tall, and possessed of an inside-leg measurement of 39 inches. On sheer experience and competitive flair Miss Hopkins might, however, manage to put an end to the British tradition for being second in this event.

Hopes are high that our team of Ann Pashley, Heather Armitage, June Paul, and Sheila Hoskin will pull off the 4 x 100 Metres Relay. They have been drilled in the not-very-gentle art of slick baton-passing by the chief national coach, Geoffrey Dyson, to a degree never before attained by any of our Olympic teams. If they are defeated by the Russians or the dangerous East-West German combination it will be for the lack not of skill but purely of m.p.h.

All in all, had our present team been the one which flew to Helsinki four years ago it would have won no less than seven Gold Medals. The standards of the last Olympiad are, however, hopelessly out of date, and it is with some trepidation that we shall be able to measure whether the upsurge in our national standards have in fact kept pace with those in the rest of the world.

John Landy, fastest miler in the world, leading fellow-Australian Mervyn Lincoln at Melbourne: at the Games he will run the 1,500 and 5,000 Metres

Two of Australia's sprint hopes: Betty Cuthbert of Sydney, the twenty-two-year-old holder of the 200 Metres record at 23.2 seconds, and (right) Marlene Mathews

Three long-distance runners who rank among the world's best: Dave Stephens (left) of Australia leading the Hungarians Sandor Iharos and Laszlo Tabori

Very **HOT**

**CLIMATIC
CONDITIONS...**

Prospecting in Antarctic or Equatorial territories has done nothing to impair the efficient working of standard AvoMeters. They have rendered distinguished service under arduous conditions with most of the important post-war expeditions. They have, in fact, proved their unfailing dependability in every kind of climate for more than thirty years.

However, in pursuance of our policy of continually striving for something better than our previous best, we are now producing AvoMeters with special panelimatic protection against extremely difficult conditions of temperature and humidity and resistant to fungus growth. The "potting" of components and the use of recently developed special mouldings admittedly cost a little extra, but this special protection is invaluable in conditions of high relative humidity or tropical cycling of temperature.

Effect of Gravity on Olympic Records

DR. J. C. EVANS, of the National Physical Laboratory, explains how gravity acts as an 'unseen competitor' of athletes in field events, but the nearer they are to the Equator the weaker this force becomes: given the same effort it should be easier to set up new world records at Melbourne than it was at Helsinki. (The interviewer is C. L. Boltz)

MOST people are fascinated by competitions and contests. In ancient Greece, where the Olympiads began, the winner was god-like in his importance for the time being: he was a symbol of victory over great hazards. We do not admire quite so much today, perhaps, but we shall watch eagerly for the performance of our own country's representatives at Melbourne. This sort of interest is emotional, but there is also a considerable scientific interest in the Olympic Games. Physiologists, in particular, are interested in how athletes succeed in doing what ordinary people can never do, and this year there is a considerable interest among physicists as well. But let a scientist talk to you about it: Dr. J. C. Evans, of the National Physical Laboratory.

'As you know, the 1952 Games were held in Helsinki; the 1956 Games will be held on the other side of the world, at Melbourne. Scientifically it can be shown that the same effort by an athlete in certain events would produce a better result at Melbourne than it would at Helsinki. This involves no new scientific idea, because it was known to Sir Isaac Newton 300 years ago: I mean, of course, the force of gravity. You all know the story of how Newton watched an apple fall, and how he developed his theory of gravity, and explained the motion of the planets for the first time.

Brought Back to Earth

'Gravity is the force which tries to pull everything to the centre of the earth—from the moon in the sky to the athlete's javelin. We have experienced it all our lives: when we were children it made us fall down and cut our knees: when we were older we learnt, probably without realising it, that we could throw a stone farthest if we aimed it about half-way between the sky and the horizon.

'The athletes in the field events at Melbourne who putt the shot or throw the discus or javelin will not get away from its influence. The jumpers, the hurdlers, and to some extent even the runners, will be fighting against it all the time. Gravity is, indeed, an unseen competitor that the athlete always has to reckon with. He learns by instinct, by trial and error, or by training, how to deal with it, but he can never get away from it. Everything we hurl into the air is pulled back by gravity: what goes up must come down. Theoretically, of course, it is possible to throw so hard that the missile goes off into space and escapes completely from the earth's gravity, but this is still only a space-traveller's dream.

'Let us take the javelin thrower. He has thrown his javelin upwards and forwards with the greatest effort he can make. It goes up and up, but all the time gravity is working, and its path is flattening out. Soon it no longer rises but begins to fall in an arc, or, to be exact, in a parabola. Now, the stronger the influence of gravity, the sooner it comes back down again, and the shorter the throw. If, on the other hand, gravity were weaker the path would flatten out more slowly, and the javelin would fly farther.

'And what about the high jumper? He is only interested in how far he can jump into the air. The same sort of thing holds: once his feet are off the ground, gravity is forcing him back to earth. The lower the force of gravity, the higher he goes. The runner in the 100 Metres lifts himself with each step—but so slightly that the effect of gravity on his performance is very small indeed. In fact the effects of climate and temperature would be so much more important in this case that we can neglect gravity.

'Now this mysterious force—this unseen competitor—is not quite the same everywhere. The farther we get from the centre of the earth the weaker it becomes. On the top of Everest it is quite a lot less than at the bottom of the Red Sea. Because the earth is rather like an old man with a bulge round his middle, gravity is a little less at the Equator than at the Poles. So it is not quite the same at Helsinki as it is in Melbourne: Melbourne is nearer the Equator, so gravity is a little weaker. Here the unseen competitor is not quite so powerful, and cannot pull men and missiles back to the earth quite so soon.

'So, as I said, if the athlete puts in exactly the same effort at Melbourne as he did at Helsinki, he

Gravity has little effect on sprinters—Bobby Morrow (U.S.A.), 100 Metres world champion, in action

The pull of gravity is very important to throwers—Parry O'Brien, the world-record holder for the Shot

will do just a little better. The difference will be very small—only about one part in 500. So the high jumper would gain about 1/10th inch, which is not worth worrying about. But for the events in which things are thrown, one part in 500 can matter quite a lot. The javelin thrower—if his form is the same—can expect to improve on his Helsinki distance by six inches. The shot putter will add an inch to his distance, and the hammer thrower five. Five inches can improve an Olympic record.

'So, you see, this one-part-in-500 change in gravity can be significant. Of course, it will not have the slightest effect on who wins the event as all the competitors obviously have the same advantage. What it will do, though, is to make it easier to set up new records, which these days are broken by only small margins, and I think there will be some new records set up in the field events due to this difference of gravity.

Possible Records on the Moon

'Of course, I have assumed that the weights of the things thrown are correct: if they were a little too light the effect would be the same as reducing gravity: they could be thrown farther—but the judges would not be satisfied. As a matter of fact, I first became interested in all this a couple of years ago when a well-known British athlete putted a shot fifty-five feet, which was the farthest yet by a Briton. Unfortunately, the record could not be ratified because the shot was half an ounce underweight—an error of one part in 500, which, oddly enough, is the same as the change of gravity from Helsinki to Melbourne. Harold Abrahams, who himself won the 100 Metres in the 1924 Olympic Games, wondered just what this meant in terms of distance. It was at his request that I did some sums, and found that this half-an-ounce error was equivalent to about a 2½-inch bonus.

'These sums were just the sort of sums that a ballistic expert makes when he wants to work out the trajectory—the path the projectile follows—of cannon balls or rifle bullets. They can be applied just as well to putting the shot as to firing it from a gun, and they tell you what happens if you use a shot which is a bit too light or too heavy. At the same time they tell you the effect on the length of the putt of a change of gravity. This gravity effect intrigued me because I knew that gravity is less intense at Melbourne than it is at Helsinki, and I realised that this might well affect the athlete's performance.

'The Olympic Games, of course, are held in a different country every four years. Each Olympic stadium will have a slightly different value of gravity, depending on its latitude and altitude. I have spoken of Helsinki and Melbourne because they are likely to be extremes. But if one day we inhabit the moon, and the moon gets an Olympiad, then I can confidently predict some startling results. You see, gravity is only one-sixth as strong on the moon as here on earth, so a high jump of twenty-seven feet or so and a javelin throw of 1,400 feet or more would be commonplace.'

'Thank you very much, Dr. Evans. Now in the

The Polish Javelin champion, Janusz Sidlo, will be among those to benefit from weaker gravity at Melbourne

AT THE 1956 OLYMPIC GAMES

OMEGA have been chosen to time the Olympic Games ever since 1932, including the Games at Melbourne this year. Omega introduced scientific precision timing into the world of sport and have perfected devices capable of timing events to within one hundredth of a second. Their consistent leadership in the field of high precision timing extends beyond the finishing line into everyday life, and here too Omega have again been officially recognised. In the 1955 precision wristwatch contests at both Geneva and Neuchatel Observatories Omega gained first place. This feat is unprecedented in wristwatch history.

When time decides the issue Omega decides the time.

OMEGA

THE WATCH THE WORLD HAS LEARNED TO TRUST
Some day you will own one.

Omega is the only watch to be awarded the distinguished Olympic Cross for leadership in the field of high precision timing.

Illustrated above is the famous Omega Seamaster, self-winding, waterproof and shock-protected. 18ct. gold with 18ct. gold bracelet.

Gramophone Record Division

A FIRST CLASS SERVICE TO RECORD ENTHUSIASTS

WE offer a first-class service to record enthusiasts throughout this country and abroad. Our premises in Trafalgar Square have been completely redesigned and are now one of the most up-to-date in the country. Here you will find every type of record, both standard and L.P., with all types of accessories and fully experienced staff ready to help with your record requirements.

POLYFOTO RECORD DIVISION, 1 Grand Buildings, Trafalgar Square, London, W.C.1, England.

MAIL ORDER SERVICE

If you are unable to visit us, our Mail Order Service will execute your orders with the minimum delay and the maximum care. All orders over £2.0.0 for L.P. records are sent post free in special poly-sealed outer covers. Records are minutely examined for flaws before despatch and are packed with the utmost care.

EXPORT DEPARTMENT

We operate an export service to all parts of the world, free of Purchase Tax. Export orders of £10.0.0 or over sent post, packing and insurance free.

Dressing Britain's Olympic Team

SAM POLLOCK explains how British manufacturers of nearly everything the well-dressed athlete requires have taken the opportunity presented by the Olympic Games to show their products in the gigantic 'shop window' of the Melbourne stadium

IN these days when international athletics have become such a potent factor in national prestige, and when many nations have gone in for state subsidies and state-aided training for their athletes, there are people in Britain who believe that we ought to follow suit and give our competitors the best equipment and facilities that the taxpayer's money could buy. Rightly or wrongly, those responsible for our Olympic team reject this idea: they believe that the equipping of our athletes, their training, and their other expenses in connection with the Olympics should be left, as so many things in Britain still are, to the voluntary spirit. And I must say that in so far as our team's wardrobe is concerned that spirit has not let us down.

British manufacturers of everything that the well-dressed athlete requires have seized on the wonderful opportunity presented by the Olympic Games to show their products in the gigantic 'shop window' of the Melbourne stadium, before the world-wide audience that will be assembled there in November. Practically every item of clothing the British competitors will wear for the opening parade, and several items of their equipment for the actual contests, have been provided either free or at almost nominal prices by their makers or distributors.

The job of fitting out the team with their parade dress has been undertaken by a Piccadilly firm whose name is a household word in well-dressed circles throughout the world. The firm itself has donated several of the items, has made up others from materials given by their manufacturers, and has taken on the quite complicated task—since the competitors are scattered all over Britain—of seeing that each individual is fitted with his or her outfit in a manner worthy of the high repute of London's West End as an emporium for good clothes.

Head-Dress on Parade

For head-dress on parade the men will wear a white panama hat with band, incorporating a feature which reflects the Briton's eternal pessimism about weather conditions, and the knowledge, gained from previous Olympics, that it does sometimes rain in other countries, even in the panama-hat zone: the hat will be water-proofed. The ladies' hat, of course, required more care. To persuade any group of women to appear in public all identically hatted the hat has to be something special. So our lady competitors' official Olympic hat was designed for the occasion by one of the trade's top designers. The line—I am told by those who know—is classically simple, with scarlet grosgrain band, and with just sufficient lift and variety in the split brim 'to be becoming to most features.'

The blue blazers with Olympic badges for both men and women have been made up from materials given by a Derby firm of weavers and dyers. The navy-blue blazer with brass or gilt buttons—and, if possible, with regimental or club or college badge on the pocket—is as British as the British weekend: it is, in fact, for the men at least, almost the British weekend uniform—the uniform of leisure for which millions of us shed our bowlers and business-suits on Saturdays and Sundays. It puzzles some

World-famous Scottish mills have supplied the men with sweaters in heavy white Botany wool, and the women with cardigans, while a Piccadilly firm contributed the ladies' red sling-bags

Some of the garments which the British team will be 'modelling' in Melbourne: a plastic raincoat, a white 'Terylene' dress, and a blue blazer and white hat

people how this quite sober article of clothing came to have the name blazer. Actually, the first blazers, worn by a famous Cambridge rowing club in the late nineteenth century, were of blazing scarlet, and were probably given the name by amazed Cockney observers when members of the club displayed their garments in London, perhaps at Boat Race time.

Also for parade wear the men are being provided with two nylon shirts apiece—made from the new bulked nylon yarn, 'Taslan'—and the women with a nylon and a cotton-poplin blouse. And both will be equipped with suitcases worthy of their contents—in the new nylon-and-leather combination which gives unique strength plus lightness for carrying. A well-known rubber firm, who are also the donors of gym and training shoes, are providing an item which is almost the Englishman's only answer to the Scottish kilt in the national costume line, namely, a plastic mack for each competitor—a canny provision which, like that water-proofed panama, cocks a distrustful eye even at Australia's sunny skies.

Something Special in Nylons

Then, something really special has been presented to the ladies in the way of nylon stockings. These, I am told, are of a new-style 'twin-thread' construction, which for the first time makes it possible for stockings of twelve, fifteen, and thirty denier to be 'stretch guaranteed.' How revolutionary this is, lady readers will know: the girl who described the idea to me seemed to think it was quite something to get excited about.

To set off their nylons the lady members of the team have been presented by one of Britain's leading footwear-makers with white court-shoes, and the men have been presented by the same firm with a pair of brown shoes each, to set off, I suppose, their white-and-grey nylon socks. I am not sure if nylons also go with the beige casual shoes—of 'camel-sofy' material, was the description given me—which are another gift to the ladies.

A British-invented fabric gets a showing—and a boost—in the girls' white 'Terylene' dresses, with badge, and the men's 'Terylene' grey slacks, whilst a Bradford firm speaks up for the traditional fabric which is Yorkshire's pride with a pair of grey flannels.

Another of Britain's old crafts, and old unbecatable fabrics, is represented in sweaters from the Border mills of Hawick issued to the men, and in the cardigans, also from Scotland, issued to the girls. It is more than a hundred years since the Earl of Cardigan who commanded the Light Brigade at Balaclava gave his name to the woollen garment which now, as we say, 'comes' in much daintier shapes and textures for wear by ladies than when His Lordship found it useful against Crimean winters.

An old fabric, with a practical modern twist to suit this much-travelled generation, is represented in the lady competitors' non-ironing cotton slips; while a tribute from London's premier highway of fashion appears in the caps, with badge and cover, given by a Bond Street firm to the yachting crews, who will certainly need something distinctive in the way of 'lids' to go with those splendid products of another traditional British craft: the five lovely yachts which they will sail in the Olympics.

I have no space to mention all the other items—from track-suits to underwear—which our competitors will, in effect, be 'modelling' at Melbourne. They make an impressive tribute from—and to—an industry which is Britain's oldest, and whose products, however their wearers may 'make out' on this occasion, remain consistent 'winners.'

The Island Territories of the South Pacific

The independent Kingdom of Tonga was represented at the South Pacific Conference: it was in Tongan waters that the mutiny on the 'Bounty' occurred

SCATTERED over the 13-million square miles of the south Pacific Ocean lie uncounted islands. Of the people who live there, some are jet black, some are brown, some are the colour of pale bronze; there is much diversity of language and of culture, but a very large number have one thing in common: they are the great-grandchildren, perhaps even the grandchildren, of cannibals. A hundred years ago a missionary, a trader, or a shipwrecked sailor landing, say, in Fiji, in Papua, or in New Caledonia would have stood quite a good chance of being cooked and eaten.

But that was a hundred years ago or more. And in April of this year the descendants of those people sent their chosen delegates for the third time many hundreds of miles by air and sea to a meeting, a sort of South Pacific Parliament. From Samoa they came, from the Solomons, from Papua and New Guinea, from Tahiti and the Cook Islands, from Guam, Nanru, Rarotonga, and other islands that you may never have heard of: they came to Fiji to take part in a conference of South Pacific peoples. This was organised by an international body of which very little is heard—the South Pacific Commission.

There were representatives of eighteen different administrative units of the islands within the territorial range of the commission, and also of the Kingdom of Tonga, which, as it is independent, does not come under the commission's umbrella. But, so that you may know a little about the work of the commission and the conference, first of all here is Sir Ronald Garvey, who succeeded me some years ago as Governor of Fiji, and took the chair throughout this third conference.

Organ of International Co-operation

SIR RONALD GARVEY: The South Pacific Commission was created some nine years ago by agreement with the six metropolitan governments in Australia, France, the Netherlands, New Zealand, the United Kingdom, and the United States of America as an organ of international co-operation for the purpose of promoting the economic and social welfare and advancement of the peoples of the island territories within their care. At the same time the governments decided to establish two auxiliary bodies to assist the commission in its allotted task; those bodies are the Research Council and the South Pacific Conference. The purpose of the South Pacific Conference is to associate with the work of the commission representatives of the actual people of the island territories, with advisory powers and with functions which include the discussion of such matters of common interest as fall within the competence of the commission, and the submission of recommendations on such matters.

FREESTON: Now I said a minute or two ago that there was great diversity of language and culture among the peoples of the Pacific: what subjects of common interest did they find to discuss? Dr. Ralph Bedell, Secretary-General of the South Pacific Commission, tells us that.

DR. BEDELL: The conference considered a total of twenty-four major papers, covering about a hundred different items, all of which pertain

SIR BRIAN FREESTON, formerly Secretary-General of the South Pacific Commission which earlier this year organised the third South Pacific Conference, introduces a programme in which delegates to that conference discuss their problems

Two types of Gilbertese house: the one on the right has plaited coconut blinds against the weather; in the foreground coconuts are being dried for copra

to the improvement of the well-being of those who live in the islands. Papers were prepared on such topics as economic education, industrial and commercial progress and development, farming systems, including the place of livestock in the Pacific, co-operative societies and maternal welfare.

FREESTON: Dr. Bedell has just mentioned co-operative societies. Now, co-operation in the technical sense is one of the most valuable means for helping on the transition from the native economy, based on communal effort and communal ownership of land and property, to the very different economy of the Western world in which individual effort seeks to accumulate individual wealth. In many islands the basis of co-operation already exists within the village system of life: for instance, in the Gilbert and Ellice Islands. In this group of little coral atolls, many of which support one or perhaps two or three villages each, the foundation for co-operative societies has already been laid. Here is Taulipi Lauti, a Gilbertese delegate, to talk about it.

TAUALIPI LAUTI: People are accustomed to combine in the villages for certain activities, and thus the idea of a co-operative store is not difficult for them to understand. In the Ellice Islands and on some islands in the Gilberts fishing is done communally by the men of the villages, and the catch benefits everyone. If fishing torches are needed, then the women of the villages prepare them. Where such communities still exist it is not difficult to introduce co-operative enterprises. In the Ellice Islands,

Producing copra is a main industry in most of the islands: members of an official committee to improve production inspecting sun-drying racks in Fiji

In Fiji and other islands work is done communally: for fishing, the people of one or more villages join in a large circle to force the fish into a net

Enjoying a chat in a Samoan village: many delegates to the South Pacific Conference dwelt on the need to preserve the village and family way of life

where there is usually only one village, this island communal spirit is very strong, and little difficulty is experienced. But in some of the Gilbert Islands village rivalries are of long standing, and co-operation between villages is often very difficult to obtain.

FREESTON: Let us move south now to the Kingdom of Tonga. Here co-operative societies are already well established: the son and heir of Queen Salote Tubou, Prince Tungi, talks about them.

PRINCE TUNGI: We have co-operative societies of various types: mostly they are producers' co-operative societies; we have no credit unions, but in our special circumstances we have not got a commercial bank there, so we are more interested in getting a commercial bank set up of such a nature that it would be an independent bank and yet be affiliated in a friendly manner with a bigger banking system.

DR. BEDELL: At the conference village industries were considered to be especially important, and the commission was asked to assist territorial administrations with surveys of the local possibilities and problems, and to help with plans for the development of such industries.

FREESTON: This development, of course, raises enormous problems, problems which affect the whole structure of island life. Chief Petero Solia from American Samoa mentions some of them.

A Different Attitude towards Wealth

PETERO SOLIA: The most fundamental problem in advancing the local people and in developing indigenous industries and commercial enterprises is that most of these operations require large amounts of money to start with. They are organised according to principles which have been established by Western people, and they require much larger amounts of capital than people living in a farming economy can easily acquire. It seems that Western people in Europe and America want to save money and material wealth, whereas many of us in the Pacific look at money and wealth as something to be spent today, or to be used for the good of all of us in our society rather than for just ourselves personally. When a European kills a pig he eats a little and puts the rest in his ice-box. When we kill a pig we eat a little and give the rest away to everyone in our family and village. Maybe this is because in olden times we had no way to save or preserve food, but then maybe it is because we know that someone will kill a pig tomorrow.

The same thing is true nowadays to a large extent in regard to money and material possessions. For this reason it is difficult, if not impossible, for village people to meet all of their social obligations and at the same time to set aside any savings for the purpose of developing new industries or buying shares in business or in co-operatives. Some say that this will hold the Pacific people back, and that all customs which prevent our people from saving should be changed or abandoned. Our delegation does not entirely agree with this view. We feel that there is much value in the stability and security of this village and family way of life.

We believe that in Africa and in Asia where people have left their traditional systems to work in factories or mines, where they have shifted to an industrial or commercial economy without maintaining their village organisation, there has been great unhappiness. We do not want this to happen in the Pacific if there is some way to avoid it. Therefore we say that we welcome new industries and new commercial developments so

long as they are adapted to our social system and so long as they can exist alongside our village system of life.

FREESTON: From Fiji we had Ratu Mara, a young chief who after a brilliant career at Oxford went back to help his own people.

RATU MARA: There was a common fear throughout the territories participating of the consequences of a change if we had to accept *in toto* the modern economy—like having factories established in our countries. It was this fear of change that appeared to me to be quite common, and this conservatism seems to arise from the fact that there is in village life a real social security.

TAUALIPI LAUTI: A Gilbertese man who is the possessor of any specialised knowledge or skill will not teach any other Gilbertese. Some toddy-cutters can get far more toddy from a tree than others; some men can grow far better papaya as they have a good fertiliser; some men know how to right overturned canoes; some are clever at European cooking: but they will not teach others. This is understandable where a skill is of definite commercial advantage, but by keeping secret such skills as toddy-cutting, growing papaya, righting capsized canoes, and so on, the owner of the skill gains no commercial advantage, and the custom just stops increased production by others of the subsistence foods. The subsistence economy itself retards development, because the people are very independent and like to be self-sufficient. Thus a man has to cut his own toddy, cultivate his own papaya, look after his own lands, catch his own fish, whereas if there were some division of labour people could specialise, and production would certainly increase.

FREESTON: You will realise that the islanders are alive to their own problems. Whatever we may think of the wisdom or necessity of trying
(Continued overleaf)

The South Pacific Territories

Continued from page 23

to industrialise the islanders, we must at any rate remember the very serious handicaps which beset them in the race for industrial prosperity. Here is Laufatasaga Kalapu from Western Samoa.

LAUFATASAGA KALAPU: In Western Samoa there is not enough power generated for domestic purposes for even one-quarter of the population, and while considerable improvement is possible it is very doubtful whether the territory can ever generate sufficient power economically to support industry on any major scale. Water and fuel power is insufficient to act as a compelling factor to push industry that would be likely to be dependent upon them. We know that there are no minerals in Samoa. Raw materials are confined to the main crops, with perhaps the potential development of timber which is sufficiently in abundance.

Because of the obvious limiting factors for large-scale industries, Samoa should encourage development of small industries. These industries would supplement the copra, cocoa, and banana industries which are the only ones at present forming the national income.

FREESTON: The improvement of the staple crops themselves is also necessary. Here much has been done to help the islanders: for instance, in the Cook Islands, under the guidance of the New Zealand Government, citrus and tomato growing has increased enormously. There has been an export surplus of 50,000 cases of citrus and 40,000 of tomatoes. But surplus can provide an embarrassment: the islands are scattered, the area under the South Pacific Commission covers 6,000 miles from east to west and 3,000 from north to south.

Importance of Land and Sea Transport

DR. BEDELL: The conference drew the attention of the commission to the importance of air and sea transport, and expressed concern that in some territories industrial and commercial development were being hampered by the lack of it. The conference recommended that the commission undertake a review of the inter-island and inter-territorial shipping and air services, with a view to preparing advice on the improvement of these services. In particular, the conference felt that attention should be given to the design of inter-island ships.

FREESTON: We were hearing about the need for the development of small industries—most of these based on the coconut, which is the common factor of the islands. In fact, I cannot remember a single inhabited island throughout the whole area where the coconut does not flourish; in many of the smaller islands it is mainstay of life, providing food, drink, and shelter, and its dried product—copra—is the most important export product of the area.

TAUALIPI LAUTI: Copra production is the universal industry of the group and is practised by everybody. The only processing, however, is the extraction of the meat from the nut, which is done by a knife after splitting the nut with an axe and spreading it out in the sun to dry. At present all copra is sun-dried because in most parts rainy periods never last long. However, in the Ellice Islands, where there is much more rain than in the Gilberts, smoke drying may be introduced. Even though sun drying is likely to remain in the Gilberts, there is room for great improvement, and the co-operative department is encouraging the construction of proper shelters, with trays for the copra which can be run out into the sun, or pushed back under shelter should it rain.

Threat to the Copra Industry

FREESTON: There is, however, a considerable threat to the copra industry—the rhinoceros beetle. This was one of the by-products of the war in the Pacific. Before that it had existed in limited areas there, but it was transported along with troops and supplies to the islands where it had not been known. The beetle is a nasty great insect about two inches long: he gets into the crown of a palm and makes short work of it, and then the palm is gone. In some islands it has already reduced the output of coconuts by half, and it is still spreading. One of the observers at the third South Pacific Conference was Dean Ryerson, of the College of Agriculture of the University of California.

DEAN RYERSON: We are still hoping to find the parasite that will control it completely. We have had success in this field elsewhere. The field of chemical control, of course, is not ruled out, but it is much slower and much longer and much more expensive to find and apply chemical control over such wide areas, whereas if you can find a parasite that likes the rhinoceros beetle, then he hunts him up for you and takes care of him.

FREESTON: I have concentrated on what to me, and to the delegates to the third South Pacific Conference, seem the main problems in the transition from a subsistence economy. Until the South Pacific Commission was set up there was no common meeting place. Many islands had similar problems but there was no way of discussing a solution: now every three years these men and women from far distant homes meet to get to know each other's way of life and thought, to exchange their ideas and compare their difficulties, and finally to take home with them new hopes and aspirations, and a wider conception of the world in which they live. (Broadcast in the BBC's General Overseas Service)

SIR DOUGLAS COPLAND recorded this interview with Andrew Shonfield, Foreign Editor of the 'Financial Times,' before leaving for Melbourne to take up an appointment as Principal of the newly established Administrative Staff College there: he compares certain aspects of the economic life of his own country with that of Canada, where he was until recently Australian High Commissioner

Australian and Canadian Economies

SHONFIELD: Mr. Walter Harris, the Canadian Finance Minister, has been warning us that the Canadian economy is straining itself—they are trying to expand faster than they really can. This seems to me to strike a very Australian kind of note. Does it surprise you, Sir Douglas, having just come from Canada after three years of studying conditions there?

COPLAND: No. It is a good fault. A young country should expand rapidly; and it should take the opportunity of doing so at all costs; and what Mr. Harris had to say about Canada's investment programme in the coming year could have been said, and should have been said, about the Australian programme in any one of the past five years, because our problem in Australia has been largely one of expansion at a greater rate than our own resources could support.

SHONFIELD: But, all the same, you do get the impression—looking at it from a distance—that here are the Canadians expanding rather faster than you, if anything, and running into no trouble at all, so far as their balance of payments is concerned; and Australia always in recent years on the edge of a crisis.

COPLAND: The answer to that is that in the past five years Australia has been expanding at a greater rate than Canada. And we ran into difficulties because our resources are different from Canada. We had a bigger immigration programme relative to our population, and we have faced the problem of export prices for wool and meat and wheat: our terms of trade were adverse, much more than those of the Canadians, who were fortunate that their new developments of resources are in commodities for which there is a world demand—metals, iron, paper, and so on.

SHONFIELD: There is no doubt they are lucky, but is that the whole story?

COPLAND: It is pretty nearly the whole story.

SHONFIELD: They are on to things for which the demand is dynamic, whereas the Australian commodities tend to be rather static—the wool and the wheat.

COPLAND: No, they are not static. You get wide fluctuations in all of these primary commodities. It would not matter whether you were dealing with cocoa or coffee or rubber: they are in the same position. But in the long run I have no doubt that the wool and metals and meat that we produce are going to be a winner, and we must not allow ourselves to be frightened because we run into a short-term difficult position. The Australians are accustomed to that.

SHONFIELD: But there is the view, is there not, that things like wool, coming up against synthetics, things like wheat, coming up against the development of fairly economic, protected agriculture in Europe—that these things are not winners in the sense that newsprint, wood products, aluminum, and iron ore (these are the Canadian products) are going to be? I mean, that Australia just has not got what Canada has got, anyhow.

COPLAND: No, I would not say that. Wool is a winner. You only have to raise the standard of living of a few hundred millions of people in Siberia and China or anywhere in the cool areas of the world, and wool will go forward. There is no substitute for wool.

SHONFIELD: And what about the other point, the thing that one does observe: that is, that the Canadians have right the way through been very careful not to raise tariffs in order to protect their secondary industries, whereas one does notice that in Australia the tendency is rather strongly the other way.

COPLAND: I think the Canadians have done extremely well on their tariff policy, and they are, of all the young countries in the world, by far the most liberal. We have suffered from seeking security after the war—bulk purchases from the United Kingdom which made nonsense of all the Imperial Preference arrangements. We have no one to blame but ourselves for that. But in the long run I think that the tariff measures—not all of them, but over the whole field—will result in very effective industrial development, which is already taking place in Australia.

SHONFIELD: Now, what about the development on the other side, on the agricultural side. Do you have the physical resources to go ahead in Australia, and expand its efficiency?

COPLAND: Yes. Two things have happened in Australia in the past ten years. One is the conquest of the rabbit. I will not go into that story, but it has meant that pastures are now vastly superior compared with what they were seven years ago. The other is that we have done original

—quite original—work in soil investigation, the trace elements in soils. We have converted what used to be regarded as deserts into mixed farming areas. So now we carry more sheep, more cattle than we ever carried before, and our economy is not determined by wheat, as those of almost three provinces in Canada, in the Prairies, are determined. We can

take an adversity in wheat, and shift over to animal husbandry. The climate, the soil, and our new discoveries in pasture development will give us a long pull in that matter.

SHONFIELD: Taking another look at the Canadian side, do you find a tendency in Canada to reconsider this liberal trade policy which we both noticed and approved of? The point of my question is this: that in the Royal Commission on the future of the Canadian economy you have noticed the pressure from the new manufacturing industries, who regard themselves as the providers of more employment for the Canadians but who have an unemployment problem. And the pressure from them is to get more protection, particularly against the United States. Now is this a change which is occurring in the Canadian economy? Is

it going to be a more protected economy in the future? Is it going to follow Australia or not?

COPLAND: No, I do not think so. I think that there are certain pockets, such as textile and agricultural implements, which are suffering at the present time. But taking the picture as a whole the future of the Canadian economy rests upon the export of these new resources that they are developing. In any event the Canadians are in a position where—to use a phrase which I came across in Canada—they are building a nation in the shadow of a giant. The pervasive influence of the United States, not only in economic affairs but in cultural and in all other affairs, is overwhelming. (Broadcast in the BBC's General Overseas Service)

ANDREW SHONFIELD

SIR DOUGLAS COPLAND

Gravity and Olympic Results

Continued from page 19

course of your talk you did say, or you implied, that the earth was not a perfect sphere. If it were a perfect sphere, gravity would be the same everywhere on its surface, wouldn't it? Could you give us some figures, then, to show how much bigger the radius of the earth is at the equator?'

'As you know, the approximate radius of the earth is 4,000 miles, but Polar radius actually differs from the Equatorial radius by as much as thirteen miles, so that taking the whole of the surface of the earth into account one can expect a change of one part in 200 in gravity.'

'You are in charge of the engineering side of the metrology division of the National Physical Laboratory. Now, how does this work of yours relate to what you have been discussing?'

'Metrology, of course, is really measurement—in our case it usually means very precise measurement. Now, it is our job to maintain the standards which are used both in science and in industry: we have to maintain the standard of mass, of length, of pressure, and several others, and then, using these standards, we must provide industry with their standards, for their purposes of measurement. Gravity does come in in several of the measurements we make. If we take a simple example, the measurement of atmospheric pressure. This measurement is made by means of a mercury column—the barometer—and the pressure is measured by the length of the column; but the length of the column does depend on the value of gravity, so it does differ from place to place on the earth. And it means that we must know the value of gravity very accurately at the National Physical Laboratory in order to make the necessary allowance.'

'Coming back to the Olympic Games: is there an ideal place for them—somewhere where the gravity is least?'

'Theoretically, of course, any point on the Equator would be suitable, but the Equator is not very good because of the swamps, sea, forests, and so on: it is not a very practicable idea. But it does happen that Johannesburg, which is a possible venue, is nearer the Equator even than Melbourne, so that we have between Johannesburg and Helsinki a difference of one part in 300, as against the one part in 500 between Melbourne and Helsinki.' (Broadcast in 'London Calling Asia')

The Duke holds the rank of Admiral in the Australian Navy: he was wearing its uniform when he visited H.M.A.S. 'Melbourne' at Portsmouth earlier this year

Sydney, with a population of nearly 2-million, is the chief city in New S.

H.R.H. the Duke of

After the Duke of Edinburgh has performed Games this week His Royal Highness leaves GODFREY TALBOT, who has reported in of the places and people the Duke will see

Besides the sheep and cattle stations the Duke will see the mines where Australia's latest wealth—uranium—is being tapped: storage tanks at the Rum Jungle plant

At the very centre of the continent: Alice Springs, looking south towards the Macdonnell Ranges. The Duke will pay his first visit to this town on November 14

THERE has never been any doubt about Australia's welcome for the Duke: they like him; they approve of his brisk friendliness. The warmth of the people of the Commonwealth towards him, of course, has in it a loyal affection towards the husband of the Queen of Australia. But it is not only as the consort of the British Sovereign that he is liked. His Royal Highness has a place in Australian hearts in his own right, too: he is a 'cobber' already. There are agreeable memories of his visits to the country when he was a serving officer in the Royal Navy. And the good impressions he made then were deepened, and his friendships widened, during the two-month official tour he made with Her Majesty the Queen in 1954 during the royal journey round the world.

The Duke took to the country and its citizens at once. Their clean hardness, open and down-to-earth nature, their straightforwardness and impatience with outward show, their quick generosity, love of sport—all these qualities were seen and appreciated. The Duke, I am sure, has a natural affinity with this land and its vigorous people. Incidentally, he chose a Melbourne man to be his private secretary: Lieutenant-Commander Michael Parker, whom the Duke first met at sea when he and Parker were both lieutenants in the Royal Navy.

The Duke's programme for this 1956 visit is informal and far-ranging, not overburdened with official functions but rich with opportunities to meet the working folk who are the backbone of the country 'on the job': sheep- and cattle-station hands, technicians of all kinds, and, in the north and the limitless outback, the miners and the engineers of the uranium fields. The character of this royal tour will surely be, if the immensely energetic and always inquisitive Duke has his way, not of civic speeches and repetitive red carpets but of the normal, everyday activity of a huge and thriving land: Australia with its sleeves rolled up, busy with beef and wool, and now with drills and geiger counters, too.

Hundreds of Thousands of 'New Australians'

And the Duke is likely to see and to meet, besides the people of British stock (the majority and the mainstay of the land), some of the hundreds of thousands of 'New Australians,' men and women from Holland, Hungary, Czechoslovakia, Italy, and other European countries who have been carried to beckoning, booming 'Aussie' on the broad tide of emigration in these post-war years.

When the Duke flies down the Northern Territory from Darwin, the tropical capital, to Alice Springs (it is planned that he will be there from November 14 to 18) he will be visiting the very centre of the continent, an oasis of green and ordered civilisation after the vast uninhabited spaces of sunburned plains and barren hills simmering in ageless silence. From those pleasantly gardenized villas of Alice, we can be sure, almost every soul will turn out to cheer the visitor and to show him their township at its best. Alice Springs was not in the itinerary of the Queen and the Duke when they spent their two months in Australia. All the more reason to expect a tremendous welcome from townfolk and settlers from remote homesteads for miles around who will gather on that

Wales: it claims the finest harbour in the world, spanned by the famous bridge

In his wide-ranging and informal tour the Duke will be reminded again and again that the foundations of Australia's prosperity are in farming

Parliament House in Canberra, the federal capital of Australia. The city was planned and built in open country far from established towns, and its spaciousness will endure

Edinburgh in Australia

The official opening ceremony of the Olympic Melbourne for further visits in Australia. Here the royal tours for the BBC, tells something and meet in this 'huge and thriving land'

plateau 2,000 feet above sea-level on the day the Duke's aircraft touches down, and the traveller gets that sight of the glowing red masses of the surrounding Macdonnell Ranges.

Next on the royal programme comes the long flight to the far south-east of the country, over the brown and green and opal outback, over mountains and stretches of bushland and gum trees and wattle, to Canberra, seat of Australia's Federal administration. Canberra is set down, within New South Wales, in Australian Capital Territory. Its one industry is government: it is the place of the national Parliament and the government departments. It is also a remarkable model city, a federal capital still in the making, begun from scratch in green open country far from established towns.

A Strenuous Four Days in Canberra

Thus, Canberra is in places only an outline of a capital city: its districts and even its big, new government buildings are separated by many acres of green parkland. Residential suburbs are more 'built up' than the centre of the city, but much of the spaciousness is deliberate, and will endure. For Canberra will always have, in the planners' phrase, an open heart.

In this capital the Duke will have a strenuous four days. He will be met on arrival by the Governor-General, Field-Marshal Sir William Slim, and the Prime Minister, Mr. Menzies; he will attend a Federal Parliamentary dinner; and he will visit military and scientific establishments. Then, on November 22, comes the great day in Melbourne: the Duke will fly to the city from Canberra—over the Murray river, the border between the states of New South Wales and Victoria—and, after being ceremonially received, he will perform the opening ceremony of the Olympic Games in the arena of Melbourne Cricket Ground.

His Royal Highness will not at first stay with the Games. He is to go back to them (and to the waiting Royal Yacht *Britannia*, which will have sailed round from Darwin) at the end of the month; but meanwhile, on the day after the opening, he is to leave for visits to other parts of Australia—to vast, sophisticated Sydney, among other places, and to the gigantic Snowy Mountains hydro-electric project.

Before he leaves Australia the Duke will have met personally thousands of the hard-working people who are taking part in the exciting expansion of the country—both the people of the open spaces and the urban folk (for the fact is that the vast majority of Australians live in the cities of the south-eastern fringe, and many have never seen a cattle-station or a shearing shed in their lives).

The Duke will again know the sparkle, the sincerity, and the promise of the country whose story today abundantly bears out the salute of the Queen herself, who, in Canberra less than three years ago, spoke these words: 'To those in the United Kingdom who seek wider scope for their talents and resources Australia may well seem the Promised Land. For it is a spacious country with a healthy, vigorous people and vast natural resources. Only a pessimist would set bounds to its future.'

what is a Stacatruc?

No doubt you know that a fork lift truck is a machine designed to do many of the backbreaking tasks of heaving, humping, hoisting, and hauling heavy loads which are so inefficiently performed by men trying to emulate horses.

Perhaps you also know that these trucks will not only aid your labour but will save money, improve production, eliminate bottlenecks in the flow of goods, cut down delivery times, use practically the whole of the space in a storehouse — right up to the roof, make stocktaking a pleasure, cut down breakages and accidents due to manhandling, and generally rank as the most versatile tool that modern industry can possibly employ in its drive for greater productivity. In this age of atoms and automation it is the machine which will take up the burden of man's productive tasks, and in this field there is no better machine made than the famous Stacatruc fork lift — part of Britain's best mobile materials handling system.

To play the English version of the game of bowls a perfect lawn is needed, and the players recognise this by the reverence with which they tread on the green

The Abiding Beauty of the English Lawn

FRED STREETER, Head Gardener at Petworth House in Sussex, rightly enthuses over the 'lovely green growing carpet' epitomised in the English lawn, and he goes on to show how science has come to the aid of the owner of the small backyard patch to enable him to compete with the impeccable acres of England's stately homes

ONE of the greatest attractions to visitors from overseas, especially those from the tropics, are our English lawns. After they return home one of the things they remember best are those lovely green, growing carpets of grass. Everybody with a house tries to have a garden as well—and however small it is they manage to make a little piece of lawn somehow, and keep it clear of weeds.

But, of course, to see the really beautiful lawns the poets rave about you should visit some of the gardens round the stately homes of England, where the lawns are a feature, acres of them: some level, others rolling, with specimen trees standing out like sentinels. They really do form the frame to the garden picture. Some of the finest examples are at the various colleges at Oxford and Cambridge—where, the story goes, a visitor asked a gardener how long it took to make a lawn like that, and how did they keep it in that condition? He replied: 'We mow and we roll for a hundred years or so—then we start all over again.'

How to Start One

Thanks to much research during the past few years, lawns are quite easy to keep, with the aid of motor and electric mowing machines, special varieties of grass seeds for different positions and soils, and the many fertilisers, and preparations for killing weeds and moss. There is no need to spend hours on your knees grubbing the weeds out by hand. You simply dust a powder over the weeds, and that is the end of them.

Mind you, the English climate has a lot to do with our success with lawns. They are really quite easy for us to produce and manage, except of course in waterlogged positions, and the remedy there is easily overcome by draining. A few years ago turves from a good pasture, prepared the previous year, were used for making lawns, but owing to expense seeding is now the usual method. The ground is well prepared at the start, then in showery weather in April or September the seed is sown four ounces to the square yard and raked in, a sharp watch being kept to scare off the birds—they can be troublesome if they find the seed. In a very few days germination has taken place, and you begin to notice the greyish green appearing. A slight rolling when the surface is dry—and the lawn is on the way.

Many of the public parks in the British Isles have great stretches of grass which they call lawns for the public to stroll about on and enjoy themselves. These are kept more or less in condition by triplex mowers—taking off the bents and long grass two or three times in the season. The many playing fields also have fine stretches of lawns for recreation. And, you know, often times the very meadows in the country with the cattle feeding are for all the world like a fine big well-kept lawn. (Broadcast in the BBC's Overseas Service)

Part of Bushy Park, Middlesex. The avenue of horse-chestnut trees was planted by William III along an approach to Hampton Court Palace

All the English are capable of fashioning a lawn to their requirements, whether in a Surrey garden or on a world-famous cricket ground like the Oval

The art of landscape gardening grew up in England to provide a worthy setting for the great country houses: lawns are essential to it, as at Wilton House

Ransomes FOR PERFECT CUTTING

By Appointment to
Her Majesty The Queen,
Manufacturers of
Agricultural and
Horticultural Machinery.

Large or small, rough or smooth, any area of grass can be kept in good condition with one machine or other in the wide range of Ransomes Lawn Mowers. Types and sizes include side-wheel and roller hand machines, petrol and electric motor mowers and gang mowers up to 20 ft. wide.

Books to Read

Reviewed by
John Connell

THE book on my list which I have liked the most is *An Edwardian Youth*, by L. E. Jones. My choice is entirely subjective, or at any rate in its first promptings. Sir Laurence Jones describes a world and a society which I, who was born in 1909, am a little too young to have known but whose influence across the great gulf of the first world war profoundly affected the ideas and aspirations of my own generation. Sir Laurence entered Balliol College, Oxford, as a freshman in 1904; his book opens with the preliminaries to this highly rewarding experience. Sir Laurence then draws a limpid, detailed, and warmly affectionate picture of the delightful and bracing society which Balliol was in those years. Sir Laurence moves urbanely on from this society, where I must confess I should like to linger, to a description of early years at the Bar in London, and of the existence at once strenuous and carefree which seemed natural to any young man of upper-middle-class background and education half a century ago.

The sadness of the book, which suffuses all its gaiety and its quiet, demure enchantment, is that Sir Laurence's recollections, like those of any man of his generation, are those of a survivor, most of whose friends and associates died on the field of battle forty years ago.

I cannot say that I was in any way as deeply stirred by *Edward VII and his Circle*, by Virginia Cowles, but I confess cheerfully to a sort of scapegrace, unabashed enjoyment of its bold, brassy vulgarity. Miss Cowles has concentrated her attention—and her not inconsiderable talents as a writer—on the materialistic and social aspects of the King's life. There is throughout the book a brooding sense of silver and plush-framed photographs, a flavour of cigar-smoke and the odour of the billiard room, all of which to anyone with a frank if nostalgic sense of period, such as I possess, are well-nigh irresistible. But I think Miss Cowles omits many of the complexities and much of the subtle strength of the King's character.

King Edward VII's eldest sister, Queen Victoria's first-born, known in her girlhood as the Princess Royal, became in later life a figure of pity and tragedy. In *The Empress Frederick* Dr. Richard Barkeley has written a painstaking and passionately partisan biography of this good, ill-starred woman. I think there will be some German historians who will be angered by the whole-hearted way in which he dismisses many of the propagandist lies which, in her lifetime and afterwards, were buttressed into the mythology of the German Empire's greatness.

Vicky was married very young to the eldest son of King William of Prussia; she had an intelligence as swift and ranging as her father's, and emotions as vigorous and as volatile as her mother's. From her father she had imbibed all his stubbornly progressive and liberal ideas. These she passed on in full to her large, placid, worthy husband, who had adored her since she was fourteen. In Prussia, in the world of courtiers and politicians into which she was projected, in which the forces of nationalist and imperialist ambitions were beginning to burn, she and her ideology earned lasting unpopularity.

Dr. Barkeley tells her story with lively and sympathetic affection. It is easy to see why she was the Prince Consort's favourite child, and why Queen Victoria, who was not without her own streak of indiscretion, seems a model of canny wisdom and prudence compared with her forthright daughter. It is therefore easy to see why the Prussian power-clique hated her and feared her; but it is not easy to forgive the way in which they gave rein to these emotions.

On that note I will turn to a personal and critical assessment of a modern author who, at his best, wrote some of the strongest and most virile English prose of this century—the late George Orwell. Before he died six and a half years ago Orwell gave explicit instructions that no official biography of him was to be written. Since then there has been more than one appreciation and memoir of a writer to whom popularity and influence came only at the very end of a brief life which had its full share of tribulation and disappointment. At first sight Mr. Christopher Hollis seems an unlikely man to attempt a study of Orwell. Mr. Hollis fits smoothly into the pattern of British life and society: Eton and Balliol, a convert to Roman Catholicism, a schoolmaster turned publisher, a Conservative M.P. for a decade; what has he in common with an edgy, angry, rebellious satirist like Orwell? To anyone inside our complex society it is enough to say: they were at school together.

Mr. Hollis's book is penetrative, friendly, but far from adulatory, and it gains both in authority and in interest by being founded on a firm view of the sort of man Orwell was, and an objective understanding of many of the impulses which moved him. Mr. Hollis has, I think, reached down to the core of Orwell's significance as a writer: in an age of no faith he was a man in need of a faith. In a time and a society in which the tide was running heavily against truth and freedom, against what Orwell himself summed up in almost a schoolboy phrase as 'decency,' his rage, which after all was a rage for righteousness, every now and again turned sour within him. He was preserved from final bitterness and frustration by two clear graces—compassion and humour. It is his unswerving comprehension of these factors in Orwell which makes Mr. Hollis's book important and satisfactory.

An Edwardian Youth, by L. E. Jones (Macmillan, 18s.)
Edward VII and his Circle, by Virginia Cowles (Hamish Hamilton, 25s.)
The Empress Frederick, by Dr. Richard Barkeley (Macmillan, 30s.)
A Study of George Orwell, by Christopher Hollis (Hollis and Carter, 18s.)

STORIES FROM 'RADIO NEWSREEL'

Here and There

THE BRITISH SOLDIER

THE Chief of the Imperial General Staff, General Sir Gerald Templar, opened an exhibition at the headquarters of the National Book League in London called 'The British Soldier.' It covered 250 years of the history of the British Army, from the Battle of Blenheim to the Korean War. It was mostly made up of books, manuscripts, and paintings, but there were other things as well.

The man who collected all the exhibits together was Lt.-Col. G. A. Shepherd. He himself served in the Manchester Regiment, and he is now Librarian of the Royal Military Academy at Sandhurst. And it is the man in this exhibition rather than the machine that he concentrated on. He chose Marlborough's day as the starting point, he told me, because he feels that is when the nucleus of the modern Army took shape.

And he was at pains to trace the link between the development of the British Army and the development of the British Commonwealth. That is why one of the main features was a series of six paintings especially commissioned for this exhibition. They were the work of a Regular Army officer, Major Peter Hutchins, of the Signals, and each one showed a map of battle areas and a map of the Commonwealth during a specific period of military history. They were superimposed against a landscape showing the sort of country that some of the major wars were fought in.

It was the older exhibits, though, that probably caught the eye most: the pair of pistols Sir John Moore carried at Corunna, a small worn prayer-book given by Florence Nightingale to a sergeant in the Land Transport Corps just before Sebastopol, original manuscripts of war poems by Byron, Edmund Blunden, and Rupert Brooke, a letter and a cheque in the Duke of Wellington's handwriting, a wonderfully detailed eye-witness sketch-map showing battle positions on the eve of Waterloo. And it was the ordinary soldier in action as well as military history that was illustrated here, so it seems specially right for Sir Gerald Templar to have opened the exhibition as he did with these words:

'Here in these rooms are recorded the magnificence, the colour, the gallantry, the sorrows, quite often the follies of the British soldier, and the pride, sometimes the mockery, and very often the ignorance of the nation. We have today a modern Army, looking with confidence into the future, but happily it is an Army which neither forgets nor for one moment wishes to forget its great past. The tradition of the service today is firm in the hearts and minds of the officers and men who make up our modern units—which are, in fact, very old regiments. Much, of course, of that continuing and long tradition is passed on by word of mouth, and by example, but above all it is in books that the tradition is set down for the guidance of the generations. And I, as the head of the Army today, am most grateful to the National Book League, and to all who helped in gathering together—I think for the first time—a collection which illustrates and represents so fully the story of the British soldier.

It is a great satisfaction to me that among the many libraries that have helped are two in which I take a great personal interest—those of Sandhurst and the War Office.

'Now I know that the League today is doing very much good work with the Army, particularly in its collaboration with the Royal Army Education Corps, in the task of helping the young soldier to become as good a citizen as we can make him in the Army; but I am glad, very glad, that on this occasion the League has turned for a moment from its main task of looking into the future to the task which I believe no less important, of looking at the past, and thus ensuring that the riches of our Army story can be of service to the present and to the future.'

BARBARA HOOPER

STANLEY MATTHEWS

IN the past twenty-five years the name of Stanley Matthews has become famous wherever Soccer is played. The Wizard of the Dribble, as he has come to be called, has played for England seventy-seven times, and to celebrate his Silver Jubilee he was the guest of honour at a National Sporting Club dinner in London.

One of the distinguished guests was Lord Mancroft, Under-Secretary of State for Home Affairs, and he had this to say:

'One of Britain's most experienced and respected statisticians has calculated that for

Three of the model soldiers at the British Soldier Exhibition in London: (left to right) N.C.O. the Royal Waggon Train, Field Officer the Royal Waggon Train, both of 1803-1811, and Driver the Military Train, 1856-1869

every one person playing games in the open air on Saturday afternoon there are between 450 and 500 watching him. I suppose the moralists would disapprove of this. They would say it is one further proof of the decadence of our country, one further example of our following the precedent of Rome with its bread and circuses.

'To my mind there is no better occupation than watching other people taking exercise. I wish to pay my tribute to Mr. Matthews on behalf of 500 watchers who like other people—preferably Mr. Matthews—to take exercise for their pleasure and entertainment.'

ELECTRICITY ECONOMICS

IN its last full year of working Britain's Central Electricity Authority and its twelve Area Boards made a profit of more than £12-million. That is a drop of £6-million on the previous year's profit, but it means that the authority has already netted a total surplus of £70-million since it came into existence eight years ago. These facts and figures are contained in the annual report, and the chairman of the authority, Lord Citrine, foreshadowed some of his plans for the future in answer to

questions put to him at a London news conference. Afterwards he developed several of the points he made in an interview with one of the BBC's industrial correspondents, Reginald Turnill:

'Lord Citrine, you said that in the view of the authority its future activities should be self-supporting—that is to say, power stations should be built out of earnings. Does that mean that when the present standstill in prices comes to an end next March prices of electricity will go up?'

'No, it does not mean anything of the kind. Our self-financing policy is a long-range thing. It may mean at some stage an increase, but it does not necessarily mean an increase next March.'

'There has been some criticism lately of the way the authority chooses its routes for overhead cables. Have you any comment to make on that?'

'Well, you would think we were an autocratic body with all power to disturb anybody in the country and go where we like. It is not true. My own experience is entirely against that—I would not be associated with such a thing.'

'We have to obtain first of all consultations with the planning authorities, an authorisation by the Minister concerned, and if there are any objections they are properly heard and properly weighed even if it means a public inquiry.'

Stanley Matthews, with his son, turns through the pages of a scrapbook depicting twenty-five years in his life

OUR WAY OF LIFE: 18

PHYLLIS BENTLEY writes in praise of the part of England where she was born and where she still has her home. 'There is a freedom, a vigour, and a heartiness in the northern way of life,' she says, 'which infuses a splendid energy into the character of our nation'

'The Mighty North'

I BELONG to the north of England: the industrial north, the north which has sent its manufactures to every corner of the world and won wealth for England; the mighty north, as we who live there like to think of it. Although we share the laws, the government, the system of education, and the religions of the rest of England, in almost every other respect we differ strongly from the south. Our landscape bristles with the tall slender chimneys of woollen and cotton mills, the head-stocks of mines, the truncated cones of pottery ovens, the cranes of shipping docks; when darkness falls the glow of steel furnaces is reflected in the sky, and great chains and loops and clusters of lights show the outlines of the great conurbations of the north, the towns which barely cease before the next town starts again.

When you remember that most of the vigorous, teeming life is imposed upon hills, sprawled over lower slopes of the Pennine Chain, you can imagine what fantastique pictures compose themselves upon the varying ground levels. Not for us the gentle green undulations, the tall leafy trees, large ploughed fields, the mild slow streams, of the south: our Pennine summits are wild moorland, covered with heather or bracken.

Our dialect is rougher and harsher, our manners blunter—though as we think, much more sincere—than those of our southern brothers. Our work, our play, our meal-times are different; our character is different.

If you enquire the cause of all these differences the answer must be, of course, the geography and the history of the region. Our two sea-coasts, with their fine harbours and estuaries, giving us easy access to the ports of the world; our thick seams of coal; our rich pockets of iron ore and once-rich bed of china clay; not least our hills with their rough sheep-pasture and tumbling streams—all these made us shipbuilders and miners and makers of steel and cloth. These basic industries have caused other industries to grow to feed them.

As for history, our eastern coast exposed us to the raids of Vikings long ago, and we were harried and occupied by Danes for a couple of hundred years. Our dialect still shows many Danish words and expressions, and perhaps our character, too, has gained an extra touch of independence from this source.

The great mass of people in the industrial north go to work at seven in the morning and leave at five in the afternoon: we can set our watches by the mill buzzers which shrill through the air at these times of day. Each town has one holiday week each year—in some places this week has become two—when every mill and shop closes, and almost the whole population pours away in special trains to the seaside.

Passionate Lovers of Sport

The leisure occupations of a people are, I suppose, a shrewd indication of their character. The men of the industrial north are passionate lovers of football and cricket: scores of thousands attend each match of their town's club, and pour up to London to watch the Football Cup finals; a Test cricket team playing the Australians without several determined northerners would be a poor team indeed.

The favourite art of the industrial north has long been music. Each town has its own choral society, where huge, mixed choirs render oratorios with considerable talent and precision, especially Handel's *Messiah* at Christmas-time. The brass band, usually organised by a factory, has also long been a popular form of the art. But of recent years there has arisen in the north a very strong movement for amateur drama of a serious kind. Thousands of dramatic societies flourish.

These drama groups form one aspect of a most important and significant feature of life in the industrial north; and that is the vast number of societies of various kinds most democratically and decorously organised. Take the roofs off the buildings in any northern town, any night of the week, and you will find some society or other holding a well-attended, well-run meeting.

For we of the north are intensely independent and democratic. We like to manage our own affairs. We dislike being bossed from London, and are sometimes apt to suspect this when it is not intended. We are not very poetical or mystical in our attitude to life, but realistic and sensible, with a decided tenacity and toughness, and a broad, robust humour. Northern comedians are famous on the English stage and television: they love to puncture neatly the pretentious and pompous person. For the northerner regards any kind of effusiveness or wordiness as affected and insincere. Sometimes his short, plain mode of speech makes him seem rather rude and blunt, but once you can penetrate his crust of reserve you will find an extremely warm and generous heart.

In a word, there is a freedom, a vigour, a heartiness in the northern way of life which infuses a splendid energy into the character of our nation. (Broadcast in the BBC's General Overseas Service)

C. H. PHILIPS, Director of the School of Oriental and African Studies in London, points out in his contribution to the G.O.S. 'Story of Colonisation' that colonisation is not a peculiarly modern phenomenon created by the Western powers in their expansion overseas but an enduring expression of human society on the move

Asia Today

AT the great Delhi durbar in 1903 the Indo-British empire had reached its zenith. In less than a century, by a judicious balance of war and treaty, Britain had given India for the first time political and administrative unity. While the quiet work of the administrators went on—collecting taxes, keeping order, applying the law—the dynamic influence of *laissez-faire* economics and education was let loose. The rule of law became a rule of economic and educational law.

Britain, at the height of the Industrial Revolution, had found in India a safe field of investment. India became a market for Lancashire's cotton goods and Birmingham's steel. Great plantation industries were started, coal and iron were mined; and at the same time 50-million acres of land were brought under irrigation on loans raised at no more than three and a half per cent.; 36,000 miles of railway were built, universities were planted, the peasants were given protection against the moneylenders. In other words exploitation included development.

India's commerce and agrarian economies were organised, and industrialism injected. North and south the cities grew. All was a form of colonisation founded in military power, pursued through economic and cultural means and not through the mass movement of peoples. The directors of the English East India Company had decreed early in the nineteenth century that India was not to be a British colony of settlement, and a parliamentary commission later endorsed this policy, which lasted down to independence in 1947.

Indian Emigration Overseas

More Indians and Pakistanis in fact moved than British. They moved into the newly irrigated lands, into the great canal colonies of the Punjab. They moved, too, into the overseas territories of the Empire. South Indian labourers to the tea plantations of Ceylon, to the sugar farms of Mauritius, to Fiji and Trinidad. Indian chettiar bought up lower Burma; Indian settlers began to colonise eastern Africa. This was colonisation on a grand scale, with something like five millions of Indians and Pakistanis settling overseas, fifty times as many English as were to be found in India.

In the expanding Indian cities there grew under British influence a revolutionary economy and culture. About the middle of the century Karl Marx wrote eight little-known articles on the British in India. He took the view that India was a typical Oriental society, static, stagnating, and that the conquest was to be welcomed because until India was industrialised no dynamic change could take place. This point ought to be stated because Marxist Socialists later made the British conquest a principal target in their attack on colonialism and capitalism, and incidentally spread the belief that because modern capitalism was a relatively new feature of human activity so also imperialism itself was a new aspect of European expansion overseas.

Society in India before British rule had been separated into watertight communities and castes, divided into Hindus and Moslems, into priestly, warrior, labouring, and other groups, each with its own functions; all touching briefly only in the market place. No broad, country-wide section of society existed which was capable of either assisting or challenging government. At the one extreme there was autocratic power based on force, at the other the disinterested masses, and nothing in between. British rule created not only the concept of India but also an Indian middle class, spread throughout the country, which understood this and was interested in its own potential place in government.

Whilst acknowledging the undoubted interest and progress of this class, Curzon at the start of the twentieth century doubted its capacity at that time to exercise power. His view was that India needed more economics, not more politics; that the British Government through the Indian Civil Service best represented the interests of the masses and could protect them against exploitation by British or Indian big business.

Curzon accepted India as an empire in its own right, quite apart from that of Britain. He wished to push its bulwark defences further afield into Central Asia, Arabia, and East Africa. He saw with satisfaction the growth of Singapore, Malaya, and Hong Kong; and he did not doubt that the French adventure in Indo-China and the continuing Dutch empire in the Spice Islands, not to mention the attempt to open up China itself, rested on the fact of British power in India.

Britain, in effect, had created maritime Asia, and in this way, through Western economic and cultural colonisation, the term 'Asia' for the first time was given historical validity. With it a sense of Asianism among the subject peoples began to come to life, perhaps first being made manifest when in 1905 the Japanese defeat of Russia warmed the hearts of nationalists from Peking to Calcutta.

The rate of growth of nationalism varied, partly because the European powers did not view their colonies in the same light. The French, Dutch, and Portuguese, unlike the British, saw their colonies as an organic part of themselves, not so much colonies as a part of the metropolis. The

Dutch emphasised economic development, the French their civilising mission, the Portuguese their spiritual obligation. They did not share Britain's willingness to spread higher as distinct from primary education; and it was not surprising that nationalism grew more rapidly in India under the British than elsewhere.

The British conquest had been made easy by Indian political and social disunity. A deep cleavage on religious and cultural grounds had existed for centuries between the Hindus, who formed about three-quarters of the population, and the Moslem minority. The Moslem ruling groups, who were dispossessed by the British, held back with the rest of their community from the new opportunities opened up by the conquest, and gradually, compared with the Hindus, became educationally and economically backward in a Western sense.

This did not show up while the British imperial system flourished and the British maintained the responsibility of government, but in the twentieth century, under the spread of liberal ideas and the effects of two world wars, and on India's side of the growing assertiveness of the new middle class, British views began to change. The practical possibility of handing over power which had been long envisaged was discussed, and at once the relative weakness of the Moslem position became plain.

When Britain committed herself in 1919 to a policy of transferring power by easy stages, the Moslems hopefully looked for security to the growth of a magnanimous attitude on the part of the Hindus, but by the time of the second world war it was quite clear that the most powerful political party, the National Congress, which was mainly Hindu, was not prepared to give the Moslems a privileged position. Seeing no future for itself in democratic terms, except in a separate Moslem state, the small Moslem middle class committed itself to a struggle for power.

When at the close of the war in 1946 Britain indicated that she would leave India, the struggle became violent, and rather than see the whole country dissolve in chaos the National Congress agreed to the partition of India by the creation of the Moslem state of Pakistan in the north-western and north-eastern areas. The new India and Pakistan were duly declared independent by Britain in 1947.

Within a decade most of the states of maritime Asia followed India and Pakistan into independence; Ceylon, Burma, Indonesia, Korea (North and South), Indo-China (North and South); with Malaya on the brink. The peoples of free Asia were above all conscious and assertive of their newly won independence; and with this went a warm, vague sentiment that what they had really done was to inflict a defeat on Western colonisation, as if colonisation was a peculiarly modern phenomenon created by the Western powers in their expansion overseas, and not an enduring expression of human society on the move.

Growth of an Asian Consciousness

If anything, this sentiment has grown in the past decade. In 1947, for example, at the first Asian conference called at New Delhi by Jawaharlal Nehru, the new Indian Prime Minister, it was the differences, jealousies, and fears shown by the delegates that caught the attention. But in the years that followed the Government of India, largely by playing on the feeling of anti-colonialism, has been able to foster an alliance of Asian states within the United Nations, and in April, 1955, at the second Asian (and African) Conference at Bandung, it was no longer the differences but the state of unanimity among Asians that was remarkable. The existence of an Asian consciousness, with roots deeper than the mere antagonism to European dominance out of which it had grown, was clear.

But the policy of anti-colonialism is obviously too vague and historically unjustifiable to carry the strain of the undoubted differences that exist between the Asian peoples. This Asian picture of colonisation is too naive to last. It appears to be forgotten that the most active colonisers overseas today are Asians: the Indians and Pakistanis, the Chinese in South-East Asia, the Japanese and Lebanese. No, some new, valid basis for Asian co-operation needs to be worked out.

Jawaharlal Nehru stands on his performance at Bandung as the embodiment of Asia as a political entity. Borrowing from British practice he seeks to create a loose society of Asian states which may function as a kind of Commonwealth of Asia. In this, as in much else, India reveals the full significance of the European colonisation of maritime Asia. 'English,' Nehru has said, 'is an Indian language.' Asians and Europeans would do well to follow this line of thought, to abandon the meaningless totting up of balance-sheets of the past, the merits and demerits of European expansion in Asia, and to regard it rather in its historical sense as part of the growth of a world culture. (*Broadcast in the BBC's General Overseas Service*)

C. H. PHILIPS

LEONARD SCHAPIRO, contributing to the current G.O.S. series on the Soviet Union, speaks of the development of the constitutional system since the 1917 revolution, and of the part played by such bodies as the Supreme Soviet, the Council of Ministers, and the Communist Party in running the country

The Soviet Constitution

DURING the thirty-nine years of its existence Soviet Russia has had three constitutions. The first, that of 1918, need not detain us long. Its interest lies mainly in the fact that although the rule of the Bolsheviks in 1918 extended only to the heart of Russia the constitution as adopted was federal in form. This was in anticipation of the day when the several national dependencies of the former Russian Empire, which had profited by the revolution to break away from Russian rule, would once again be reincorporated.

By 1924 the time was ripe for a new constitution. The Ukrainian, the Belorussian, and three trans-Caucasian republics had declared their agreement to join in one union, and the constitution of January 31, 1924, was the result. Since that date the number of republics which have thus voluntarily united in the Union of Soviet Socialist Republics has grown to a total of fifteen.

The rather chequered history of Soviet union suggests that the voluntary adherence must be read rather in the Communist sense of the word 'voluntary.' In some cases—in Georgia, for example, or in the three Baltic republics—naked force had to be used to bring about adherence. A long record of national deviations, severe purges in the Communist Parties of the republics, even risings in some, shows that the process of reincorporation has not gone entirely smoothly. How far is federalism, which is the pattern upon which both the constitution of 1924 and the present constitution of 1936 are based, a reality?

Lenin's Attitude to Self-Determination

Article 17 of the present constitution guarantees to each republic the right freely to secede from the union. The right of national self-determination has been an article of Communist faith since Lenin first asserted it in 1903. However, after the revolution of 1917 it became apparent that this right was in practice only going to be recognised by the Bolsheviks where it was a question of a nation seceding from the rule of a capitalist or bourgeois power. To demand secession from a Socialist union, when once the revolution had taken place, was, as Stalin pointed out already in 1920, profoundly counter-revolutionary.

Today, after years of repressive central action against real or suspected manifestations of nationalism, even the open discussion of the question of secession in a Soviet Union republic is inconceivable. I do not think anyone could pretend that Article 17 is much more than window-dressing, though it is also true that in every federation economic considerations tend to make the question of secession somewhat impracticable.

The real answer to the question 'Is the Soviet Union a federation?' must be sought in Article 14 of the 1936 constitution, which lists the powers of the Union government. It is a formidable list.

It includes, of course, subjects such as defence, which one expects to find reserved to the union government in every federation. Then there is a list of subjects which are less commonly found in the union list in other federations: the basic principles of education and public health, transport and communications, banking and credit, state insurance, agriculture or forestry, for example.

But the decisive point, to my mind, is the absolute control over the budget which the constitution confers on the Union government: it is for the Union government to determine the single national budget and to allocate the taxes and revenues which go to the republics. The republics can suggest their requirements, but the centre determines whether they are to get them or not.

It must also be remembered that the Soviet constitution does not provide any method for judicial determination of the respective legislative powers of the Union and of the republics. The republics are thus deprived of this powerful weapon for asserting their independence which is to be found in many federal constitutions. If the centre in Soviet Russia chooses to interpret widely in its own favour the already very wide provisions of Article 14 there is nothing the republics can do about it.

Let me turn to some other aspects of the two constitutions of 1924 and 1936. In form the 1936 constitution is much more democratic than the 1924 constitution in two respects. In place of a franchise which not only excluded certain classes of voters but heavily weighted the vote in favour of the townsmen and against the peasants, the later constitution lays down universal franchise; in place of indirect election there is now direct election, and in place of open voting there is now secret voting. Secondly, the 1936 constitution contains an impressive array of guarantees of the fundamental rights and freedoms of citizens, which was not contained at all in the 1924 constitution.

These two new features—universal, secret, and direct election of all the organs of government, and guarantees of individual rights—were much paraded before the outside world by the Soviet leaders in order to claim that the new constitution was the most democratic in the world, or indeed, to quote the words of Stalin, who was the main inspirer of the con-

stitution, 'the only thoroughly democratic constitution in the world.' Unhappily, events scarcely justified this high claim, and outside observers could be pardoned some scepticism about it.

Even while the constitution was being debated, and for the years following it, hundreds of thousands, if not millions, of Soviet citizens were arrested and either shot or transported to concentration camps for forced labour by the political police without any trial. In the rare cases where public trials took place abject confessions were made by those charged with treason of all the crimes with which they were charged. We now know that these confessions were obtained by means of torture, because the First Secretary of the Communist Party, Mr. Khrushchev, read to the recent Party Congress a decree of the Central Committee of the Communist Party, dated 1937, and confirmed on January 20, 1939, authorising the use of torture to obtain confessions by the political police.

And what was the position in practice so far as elections were concerned? Let me take the case of the Supreme Soviet, which is under the terms of the 1936 constitution the sole legislative organ in the land. The much more influential, though less frequent, Party Congress, is not mentioned in the constitution. In every single election for the Supreme Soviet which has been held since 1937 one single list of candidates, consisting of Communists and Communist supporters, has been offered.

After the election of these candidates as delegates, invariably by majorities of ninety-eight or ninety-nine per cent. of the electorate, these delegates have time and again voted unanimously for every single measure proposed by the government leaders. On no single occasion since 1937 to date has any vote in the Supreme Soviet been other than unanimous, nor has any delegate ever disagreed with any government measure. Again, this does not suggest to anyone familiar with the working of a freely elected legislature either that elections in the Soviet Union are free, or that the Supreme Soviet really legislates.

I have mentioned the government or, as it is called in the Soviet Union, the Council of Ministers. This body is under the terms of the constitution appointed by, and responsible to, the Supreme Soviet. In practice, so long as the Supreme Soviet remains under the control of the Communist Party, the Council of Ministers will likewise remain under the control of the party. Indeed, for many years past the small Praesidium, or inner cabinet, as we should say, composed of the Prime Minister and a number of Deputy Prime Ministers, has invariably consisted of the top party leaders. Stalin for many years combined the duties of Prime Minister and General Secretary of the party.

Below the Praesidium are the technical ministers, who head their respective departments, but are not expected to take part in the formulation of policy: this is the province of the inner cabinet composed of party leaders. The pattern of Soviet government can really be summed up as follows: the leaders of the Communist Party decide; the rank and file of the party approve and execute. There is some criticism of the execution of policy: there is none of the policy itself.

'Real Changes in the Past Few Years'

It might be thought that all this belongs to the bad old days, which the present party leaders have to some extent repudiated—without, however, showing the courage to admit their own complicity in the bad features of the dead Stalin's reign. Still, this is a step in the right direction, and no one can deny that real changes have been taking place inside the Soviet Union in the past few years. How have these changes affected the working out in practice of the provisions of the constitution? Let me deal first with elections. Here, it must be admitted, very little change is observable as yet. Although both the constitution and the electoral regulations provide for the possibility of the elector being offered a real choice of candidates to vote for, in practice he is still faced with the single list and no choice. The list is still prepared with the approval of the Communist Party, and every delegate returned is either a Communist or a known supporter of the party.

Turning to the rights of the individual, there is no doubt that the arbitrary powers of the political police have in recent years been restricted. It shows that if the party wishes to allow greater legality, as it appears to wish to do at the moment, it can do so. But what is there to prevent the party from changing its mind? The rights of the individual cease to be rights if they are conferred and withdrawn as a favour.

At present, there is little sign that free speech, free press, and freedom of association are going to be permitted in the Soviet Union, though it is much to be hoped that this will come. But it can, of course, only come about if the Communist Party is willing to recognise some freedom for others than itself. So long as it insists, as it has insisted hitherto, in monopolising all power, the constitution will remain what Stalin intended it to be—a façade. (*Broadcast in the BBC's General Overseas Service*)

The Fastest Man on Water

TOM HEANEY describes how Donald Campbell set up a new world water speed record at an average of 225 m.p.h.

DONALD CAMPBELL became the first man to travel on water at more than 250 miles an hour as the haze of an autumn evening began to settle on Coniston, surely among the loveliest of all the English lakes, and as the knowing ones grouped along the shore announced 'Nothing doing tonight.' Already the peaks of the great fells that stand guardian over Coniston had disappeared for the night; in the past hour, too, the surface of the lake had been scarred deeper and deeper by an unpromising 'lop.' The prospects were not good. Yet on this quiet evening when voices from the far side of the lake carried clearly across the water there was tension and drama.

The official timekeepers had gone to their posts and were checking over their instruments. The great yellow buoys marking the kilometre bobbed gently. Launches with members of Campbell's team aboard had moved up the lake to strategic positions. Then we saw that Coniston Water had suddenly become still and smooth. Down through the trees came the word that Campbell had climbed into the cockpit of *Bluebird*, and from the south of the lake Leo Villa, the chief mechanic, reported by radio: 'We're all set, skipper.'

We heard *Bluebird* before we saw her. From the north came the sound of her jet-engine, deceptively restrained in the distance, but within

seconds growing to a fierce, mighty, pulsating roar as *Bluebird* hurtled down the lake with a violence that threatened to scatter the fell mist and awaken the sleeping heights. In a flash she was at the marker buoy and searing, scorching, surging forward down the kilometre stretch. It was breath-taking. And then she was gone.

From a nearby radio link with *Bluebird* we heard how Campbell had been telling in terse, crackling messages of his progress down the lake as the fastest boat in the world travelled faster than ever before—snaking, bucking, plunging, and virtually out of control. 'What's happening? I don't know what's happening. The boat's going mad!' It was sometime before Campbell made his return run to strike an average speed, and when he did he was perceptibly slower. When he climbed out at the jetty to call for a glass of water he was clearly shaken.

On that fantastic first run his speed had rocketed to 286.786 m.p.h., and Donald Campbell was as amazed as anyone else. The return was over 100 m.p.h. slower—164.480, giving an average of 225.63 m.p.h. (From a broadcast in 'Radio Newsreel')

DONALD CAMPBELL

Your Guide to Sport

Nearly all major sporting events in Britain and a good many from Overseas are broadcast by the BBC's General Overseas Service. Details of these broadcasts are published regularly in the programme pages of LONDON CALLING, which also includes articles about the history and organisation of the events to be broadcast.

Below are some of the events on which the G.O.S. will broadcast commentaries or reports during the next six months (up to May 31).

Association Football

Scotland and England Cup ties, semi-final and final, Amateur Cup Final, International matches

Athletics

International Meetings, and Varsity Championships

Badminton

All-England Championships

Boxing

Title matches whenever possible

Cricket

M.C.C. Tour of South Africa. West Indies Tour of Great Britain, County matches

Horse Racing

King George VI Steeplechase; Cheltenham Gold Cup; the Lincolnshire Handicap; the Grand National; 1,000 and 2,000 Guineas

Lawn Tennis

National Covered Court Championship, International Tournaments

Motor Racing

The Monte Carlo Rally
Events at Silverstone and Goodwood

Rowing

The University Boat Race

Rugby League

Australian Tour of Great Britain; Rugby League Cup Final

Rugby Union

The Varsity Match and International Games

Squash Rackets

The Open Championships of Great Britain

Sporting Highlights of 1956 will be broadcast at the end of the year. LONDON CALLING will inform you nearer the time of the exact date of this programme and of all the above-mentioned sports. Results and reports on all day-to-day sporting events will be included in 'Sports Round-up.'

A COPY FOR YOUR FRIEND

We shall be pleased to send a free specimen copy of LONDON CALLING to a friend or relative on receipt of their address. Please write to BBC Publications (11), London, W.1, England.

LONDON CALLING surface mail edition is posted weekly to any address for 25s. a year sterling or pro rata. Remittances should be sent to BBC Publications or any of the following addresses:

AUSTRALIA:	Gordon and Gotch, Ltd., 111-115 Little Collins Street, Melbourne, and branches: BBC, National Building, 250 Pitt Street, Sydney
CANADA:	Messrs Wm Dawson Ltd., 587 Mount Pleasant Road, Toronto. W. H. Smith & Son (Canada) Ltd., 224 Yonge Street, Toronto; Gordon and Gotch, 43 Victoria Street, Toronto
INDIA:	Central Newsagency, 12-90 Connaught Circus, New Delhi; Higginbotham's Ltd., Mount Road, Madras; Oxford Book and Stationery Co., 17 Park Street, Calcutta, 16
ISRAEL:	The Collective Subscription Agency, 3 Ben-Yehuda Street, Jerusalem
NEW ZEALAND:	Gordon and Gotch, Ltd., Waring-Taylor Street, Wellington
PAKISTAN:	Paradise Book Stall, Shambhu Nath Road, Karachi, 3
SINGAPORE:	BEC Far Eastern Station, P.O. Box 434
Ceylon:	Lakehouse Bookshop, McCallum Road, Colombo
SOUTH AFRICA:	Central Newsagency in Johannesburg, Capetown, or Durban, and George Winderley & Co., Parker's Buildings, 1 Burg Street, Capetown
S. RHODESIA:	Kingstons Ltd., Head Office, P.O. Box 1498, Bulawayo; P.O. Box 2374, Salisbury
U.S.A.:	British Publications Inc., 30 East 60th Street, New York, 22, N.Y.
WEST INDIES:	BBC, P.O. Box 408, Kingston, Jamaica
LATIN AMERICA:	Branches of the Bank of London & South America

LONDON CALLING World Air Mail Edition is available by subscription for £1 sterling a year plus newspaper air mail rates. Specimen rates including cost of copies: India, Hong Kong, £3-12-0, Australia and New Zealand £4-5-0 sterling. Special rate to U.M. Forces (outside Europe) £2-6-0 post free. Full details and specimen copy from BBC Publications, London, W.1, England.

Marconi's hand in...

AUSTRALIAN TELEVISION

In August 1955 an order was placed with Marconi's by their Australian associates, Amalgamated Wireless (Australasia) Ltd., for equipment for the two Australian Government-controlled television stations. This has been followed this year by orders from the same source for the Herald-Sun and Amalgamated Television Services commercial stations. The combined value of these orders is over £900,000. Australia is now added to the long list of countries, including Canada, U.S.A., Venezuela, Brazil, Sweden, Denmark, Italy, Switzerland, Yugoslavia and Thailand, which rely on Marconi television equipment.

FOR THE GOVERNMENT STATIONS

the Marconi equipment includes four main transmitters (two 18 kW vision and two 4 kW sound) and their aerials, and four smaller standby transmitters, with two complete camera channels and ancillary equipment for training purposes. The main vision transmitters are designed to handle colour as well as black and white. Marconi's are also supplying the technical equipment for all the Government studios.

FOR THE INDEPENDENT STATIONS

the Marconi equipment includes two 10 kW vision transmitters, two 2½ kW sound transmitters, Aerial and Feeder Systems, Programme Input Equipment, Combining Units, Phasing and Monitoring Equipment, Telecine Equipment, two 3-camera Outside Broadcasting Vehicles and complete technical equipment for four studios.

MARCONI

Complete Television and Sound Broadcasting Systems

MARCONI'S WIRELESS TELEGRAPH COMPANY LIMITED, CHELMSFORD, ESSEX
LG 10r

This Week's Listening

November 18 — 24

THE XVI OLYMPIAD

A DESCRIPTION of the climax of the weeks and months of preparations in Melbourne will be heard in a programme called 'Melbourne at Home,' and a final review of the chances of the British athletes now assembled there will be heard in 'Olympic Preview.'

The Games will be formally opened by H.R.H. the Duke of Edinburgh on Thursday, and G.O.S. listeners will hear a recorded report on the ceremony.

Starting on Friday there will be daily reports from Melbourne, which will include commentaries on some of the highlights of the day's events, at 07.30, 10.45, and 17.30. The 17.30 report will be repeated at 23.45.

'Melbourne at Home': Sunday 15.45; Tuesday 07.45 and 21.00

'Olympic Preview': Wednesday 16.30; Thursday 02.30

The Opening Ceremony: Thursday 07.30, 10.45, 17.30, and 23.45

RACIAL INTEGRATION

DURING the past few months the BBC Third Programme has been broadcasting an important series of talks under the general title 'Aspects of Africa.' With very few exceptions all the speakers were born in Africa and have lived there.

For the next three weeks G.O.S. listeners will hear a selection from this series in 'From the Third Programme,' beginning with a talk by N. J. J. Olivier, Professor of Native Law and Administration in the University of Stellenbosch.

Professor Olivier outlines his reasons for believing that racial integration in South Africa is impossible, and *apartheid* just and practicable.

Philip Mason, Director of Studies in Race Relations at the Royal Institute of International Affairs, presents a contrasting view on this question of *apartheid* in his series 'Christianity and Race.' In making a carefully balanced analysis of the attitude of the Dutch Reformed churches in South Africa, he acknowledges that the Afrikaners' fear 'is not merely for a standard of living but for their very existence as a people.' But while stressing understanding of it, he finds this attitude one 'with which most Christians would disagree.'

'Aspects of Africa': Monday 15.15; Friday 23.15

'Christianity and Race': Monday 16.15; Tuesday 00.30 and 05.00

'ACROSS THE FRONTIER'

THIS week 'London Forum' is about a less ominous aspect of the frictions and misunderstandings that can arise between people of different nationalities. Each nation has its own foibles and idiosyncrasies; each nation is secretly but complacently convinced of the perfection of its own ways. Today, of course, few Englishmen would echo the jingoism of Dickens' Mrs. Gamp: 'Some . . . may be Rooshans, and' others may be Prooshans; they are born so and will please themselves. Them which is of other natures thinks different.' Yet many have a lingering conviction that their own national foibles are superior.

In an urbane conversation on this topic, Bertrand Russell, the philosopher, and Malcolm Muggeridge,

Editor of *Punch*, journey 'Across the Frontier' with Peter Ustinov, the young dramatist, actor, and stage director, who is himself of Russian ancestry and takes a keen interest in European affairs. The chairman will be Edgar Lustgarten.

G.O.S.: Sunday 16.15; Monday 02.15

THE COLOMBO PLAN

IN May, 1950, the governments of the Commonwealth countries in south and south-east Asia agreed to draw up a six-year plan for economic development to run from the middle of 1951—the scheme which is called the Colombo Plan.

At last year's meeting of the Consultative Committee in Singapore it was agreed that the Colombo Plan should be extended until June 30, 1961. This year the Consultative Committee meets in Wellington, New Zealand, between November 19 and December 8; and in 'This Day and Age' Andrew Shonfield, Foreign Editor of the *Financial Times*, examines the aims and progress of the scheme.

Mr. Shonfield also introduces a contribution by the Australian economist, Sir Douglas Copland, a former President of the United Nations Economic and Social Council, and a founder of the plan. Sir Douglas attended the 1954 conference in Ottawa while acting as the Australian High Commissioner in Canada.

G.O.S.: Thursday 16.15; Friday 00.30 and 05.00

THE WEEK'S PLAYS

THE charming little play, *To Live in Peace*, which Victor Rietti has made from the Italian of G. Forzano (and which, incidentally, has no connection with the celebrated Italian film of the same name) is set in Certaldo, a small hill-village in Italy, in the year 1804.

Head of the village, both by virtue of his status as priest and his commanding personality, is Don Geronimo, a humble, human charmer, dedicated to the well-being of his flock. But Don Geronimo does not come from this region: by birth and lineage he is Corsican. Moreover, his family name is none other than Buonaparte; yet such is the isolation of Certaldo that the Napoleon of that line means nothing more to him than a small nephew who was always very fond of playing at soldiers.

Now, however, that small nephew has become Emperor of France, and when he hears that his uncle is still in so lowly a place he sends emissaries to offer Don Geronimo a cardinal's hat, and in the play that follows we see how the worthy priest and his village try to continue to live in peace.

From the genial to the macabre, and a somewhat uncharacteristic anecdote by Jerome K. Jerome—*The Dancing Partner*, adapted for radio by Rex Tucker. This has an old toy-maker, Herr Geibel, so adept in making lifelike toys

Billie Love

Bert Murray

Two of the artists who will be introduced by Rob Currie (left) in 'Palace of Varieties' this week

that he finally makes a life-size and all-too-lifelike toy as a partner for his dancing-mad daughter, Annette. But what starts as a harmless experiment in automation ends in tragedy when the toy takes charge of the human being. PETER FORSTER

'To Live in Peace': Sunday 01.00, 18.30; Wednesday 14.15
'The Dancing Partner': Monday 11.30; Thursday 19.00; Friday 01.30

LIFE WITH WELLINGTON

'THE Happy Warrior' is the title given to a series of three programmes based on letters written during the Napoleonic wars by Private Wheeler, of the 51st of Foot, now the First Battalion, King's Own Yorkshire Light Infantry.

Wheeler, who came from Bath, served twenty-one years with the regiment: he took part in the Walcheren campaign, fought throughout the Peninsular War, and was present at Waterloo. The programmes cover the hectic years from 1809 to 1815, and consist of dramatised scenes linked by some of his vivid passages describing the fighting and life with Wellington's armies.

G.O.S.: Tuesday 06.30 and 18.30; Wednesday 10.00

SIKKIM HOLIDAY

THE tiny state of Sikkim lies along the main chain of the Himalayas, and includes the famous peak of Kangchenjunga. Lesser ranges projecting southwards divide the country into a series of mountain ridges and deep valleys. Sikkim has almost every possible climate.

Its people, too, make Sikkim a meeting place of many cultures, for they include Nepalese, Bhutias, who are of Tibetan stock, and Lepchas, who call themselves the 'people of the ravines.'

John Blofeld has just spent a holiday there, and in a talk entitled 'Sikkim Holiday' will describe his visit to the capital, Gangtok, where the Maharaja has his court, and to the remote Buddhist monastery of Tashiding, set high among the mountains.

G.O.S.: Friday 16.15; Saturday 00.30 and 05.00

INTIMATE MUSIC

THIS week's edition of 'An Intimate Kind of Music' will be introduced by Jeremy Noble, and will include Michael Tippett's *Sonata for Four Horns*, played by Dennis Brain, Neill Sanders, Edmund Chapman, and Alfred Cursue.

This work was first performed in December last year at the Wigmore Hall, shortly after it was written. Its four movements include a fascinating slow movement, 'In the still of the tranquil night.'

Michael Tippett, who was born in London in 1905, has established a shining reputation as an independent-minded creative musician, with such notable works as the oratorio, *A Child of our Time*, and his opera, *The Midsummer Marriage*.

G.O.S.: Tuesday 21.30 Thursday 13.15

RELIGION IN RUSSIA

THE series on the Soviet Union in 'This Day and Age' continues with a talk by John Lawrence on 'Religion and the Churches.'

Mr. Lawrence is the editor of *Christian Newsletter* and was Press Attaché to the British Embassy in Moscow during the war. He revisited the Soviet Union last year with a party of British churchmen.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

Joyce Blackham

Gwen Catley

These singers can be heard in 'Divertissement' on Monday and Friday

Your Wavelengths

London Calling is published several weeks in advance and we regret that, for reasons beyond our control, it is sometimes necessary to alter wavelengths after we have gone to press. The latest information is always given in Programme Parade

The greatest Names in British Electronics use

Mullard
TUBES

Mullard

Electronic Tubes — used throughout the world

MULLARD OVERSEAS LTD., CENTURY HOUSE, SHAFTESBURY AVENUE, LONDON, ENGLAND.

Mullard is the trade mark of Mullard Ltd. and is registered in most of the principal countries of the world

British equipment manufacturers are making a vital contribution to the development of electronics in all fields of application.

Their products are being exported to every corner of the world, earning a universal reputation for advanced techniques and excellent performance.

The majority of these electronic equipment manufacturers consistently use Mullard tubes. This choice is decided upon because they prefer the greater assurance of efficiency and dependability, and because the vast manufacturing resources of the Mullard organisation guarantee ready availability of Mullard tubes wherever they are needed.

85°C High temperature lightweight rectifiers

of light alloy construction—of reduced bulk by elimination of cooling fins—of highly stable characteristics in ambient temperatures of up to 85°C—are now available in production quantities for all industrial and electronic applications. Units can be supplied with various finishes to comply with RCS.1000 categories H.1 and H.2. Full details are available on request.

metal rectifiers

Dept. LC 11.

WESTINGHOUSE BRAKE & SIGNAL CO. LTD., 82 York Way, King's Cross, London, N.1. TERminus 6432

Built for Heavy Duty

Substantially constructed for heavy duty, Harvey Steel Filing Cabinets have an inner framework of vertical steel channels welded together to give maximum strength and durability. This framework also ensures efficient support for the drawers, which glide smoothly and quietly to their fullest extent, despite heavy loading.

Stove enamelled Olive Green or Scarborough Grey (alternative colours to order), with chromium-plated card holders and handles.

*Available with
SUSPENDED FILING CHASSIS
if desired*

UNITS OF 1 TO 5 DRAWERS
QUARTO & FOOLSCAP SIZES

Please ask for Catalogue

Asian Club. Maurice Kendall, Professor of Statistics at London University, will answer questions at Sunday's meeting on forecasting methods. Although polls are conducted regularly to survey how people are reacting or are likely to react to questions in politics or to a new product, they are usually most discussed at elections. As a statistician Professor Kendall is, however, more interested in using these methods to explore social questions generally, and to discover patterns in social behaviour.

* * *
Standards of Living. W. O. Carter, a solicitor who all his life has lived and worked in the country, and Dudley Perkins, a solicitor in one of the largest government offices in London, will be in the studio on Monday to discuss some of the major changes in the law which have affected the ordinary citizen. Subjects such as land tenure, town and country planning, military training, rent restrictions, and family inheritance will come under review.

* * *
Drama Studio. Tuesday's play will be *Musical Evening* by Donald Carswell. Its setting is Edinburgh in the year 1848, and it is based on an actual visit paid to the city by Chopin shortly before his death. A young Scotswoman called Jane Stirling was a pupil of his in Paris years earlier and is said to have fallen in love with him. He is known to have visited her home in Edinburgh. On these facts the author has built a charming and amusing romance. Robert Harris plays Chopin and Sheila Raynor, Miss Stirling.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes and provides a valuable supplement to the BBC's direct transmissions from London

THE OLYMPIC FLAME

SYMBOL OF WARM FRIENDSHIP

COMMEMORATING
MELBOURNE 1956

THE ELECTROLUX FLAME

SYMBOL OF COLD RELIABILITY

At the heart of the world-famous Electrolux refrigerator is a tiny kerosine flame. No machinery to make a noise, no moving parts to wear out. Permanently silent, coldly efficient, Electrolux refrigerators have made warm friends throughout the world. Electric models are also available.

Model LT.500—a medium size refrigerator with generous capacity. As well as nearly 10 square feet of shelf space there are a frozen food compartment, a vitaliser drawer and two large door shelves.

DIESEL POWER AT WORK

Police launch or fishing boat, Royal Navy submarine or private yacht—they all use Perkins diesel engines. Powerful

and economical, diesel engines help to eliminate fire risk at sea. Perkins marine diesels range from 25 b.h.p. to 100 b.h.p.

Farmers find Perkins diesel engines offer greater power, easier starting in all weathers and greatly reduced fuel and maintenance costs.

Long distance transport work calls for diesel power, reliability and economy. Perkins diesel engines are available as first equipment or as conversion packs for commercial vehicles of all types.

ON LAND OR SEA, wherever reliable economical power is vital, you'll find Perkins diesel engines at work. With a fuel consumption approximately half that of petrol driven engines, low maintenance costs and longer life, diesel reliability is a by-word. Statistics prove that diesel engines outlast other types. And they completely elimin-

ate fire risk, particularly important in marine applications. At work in 143 different countries, Perkins diesels are fitted as standard equipment by 170 different manufacturers and are in use for 423 varied applications. Whatever your power problem, there's a Perkins diesel engine to suit your particular requirements.

LONDON CALLING

THE OVERSEAS JOURNAL OF THE BRITISH BROADCASTING CORPORATION

No. 890. PUBLISHED WEEKLY

PRICE SIXPENCE

SUBSCRIPTION 25s. A YEAR

H.M. THE QUEEN AT THE ARMY DINNER

Listeners to the General Overseas Service will hear speeches by H.M. the Queen and General Sir Gerald Templer at the Army Dinner in honour of Her Majesty which is being held at the Royal Hospital, Chelsea, London, on Tuesday. The scene will be described by Brian Johnston

'ONCE UPON A TIME'

Traditional Scottish songs and ballads in a special programme for St. Andrew's night

ENGLAND v. YUGOSLAVIA

Commentary by Alan Clarke from Wembley, London, on the Association football international

'RIGHT-HO, JEEVES'

Naunton Wayne in a radio frolic by Dan Ferguson from the novel by P. G. Wodehouse

'LIFE WITH THE LYONS'

Bebe Daniels and Ben Lyon continue the new series of their popular radio Variety show

No strangers to the New World...

History will be repeated in 1957 when "Mayflower II", a replica of the original Pilgrim Fathers' ship, sails from Britain to be presented to the people of America as a goodwill gift.

History repeats itself, too, for The Gourock Ropework Co., Ltd., of Port Glasgow, Scotland. They have been chosen to manufacture every rope on board "Mayflower II". More than two hundred years ago they were acknowledged experts in the rigging of sailing ships and were exporting ropes to the young colonies on the Atlantic seaboard of America. Now, for "Mayflower II", techniques and methods unused for nearly one hundred and fifty years have been revived from old hand-written Gourock records to duplicate exactly the standing and running rigging which will be vital to the safety of this little vessel on her hazardous voyage.

GOUROCK

Rope and steel wire rope for every purpose.

POWER

GENERATION • TRANSMISSION
DISTRIBUTION • APPLICATION

New sources of electrical power are bringing warmth and light to home and hospital—power for farm and industry—power for plenty. Throughout the world, wherever are demanded outstanding skill and craftsmanship in things electrical, will be found the products of Metropolitan-Vickers.

LONDON CALLING

OVERSEAS JOURNAL OF THE BBC

Celia Irving Asks: 'Can I Help You?'

—and invites listeners to write to her about any questions or practical problems concerning life in Britain: they will be answered in a programme broadcast in the G.O.S. every Saturday at 12.15

UNLIKE many programmes, 'Can I Help You?' owes its inception not to the planners in London but to listeners overseas. So many people living abroad feel out of touch with the rapidly changing conditions of life in Britain that they have asked for a programme which will both answer their specific questions and discuss generally the many problems that confront them when they think of returning to this country to live.

The programme has been running for more than a month now, and already it is easy to see that a great many of the questions classify themselves under the big headings of free education, the Health Service, the National Pensions Scheme, housing, etc. I try to deal with these subjects in a broad way, so as to give as much basic information to as great a number of listeners as possible.

Already in the few weeks in which 'Can I Help You?' has been on the air we have spoken of anti-polio vaccination, and how increasing numbers of children are being inoculated; holidays in Britain—what they may cost, and some of the places you can go to; the National Pensions Scheme, and how you can become a contributor.

But do not think that because your particular query is one of detail you will not have it included in the programme. I will do my best, whatever the question, to give you an answer by radio as soon as possible.

It may be that you have a child coming to Britain to school, and details such as how much

pocket-money is normal at that school or how much the train fare costs may be worrying you. Write to me, and let me help: the point being that I am on the spot and can find out much more easily than you who may be several thousand miles away.

If you want to order seeds from Britain and are doubtful whether they will grow in your locality let me know, and I will do my best to find out for you. We do not intend to set any bounds on the type of question answered. The only thing I cannot do is to answer by letter.

While most of the 'big' subjects will naturally be of equal interest to both men and women, we shall certainly be including news of especial interest to women, and from time to time I shall be speaking of the new fashion trends, what is new in fabrics, some of the latest gadgets for saving labour in the home, the new curtain materials, and the latest plastics. In short, all the things which interest the normal woman living in Britain.

Another feature of this programme is that in the first week of every month you will be able to hear 'What's On In London' during the following month, so that if you are about to come to Britain you can plan in advance a visit to a particular exhibition which may be of interest to you. On Saturday, December 1, for instance, I shall be giving information about January, 1957. But it may well be that your destination lies not in London but in some other centre. You may not be interested in what is on in London but in what is on, let us say, in Oxford or Manchester. If this is so, you have only to write, and I shall be glad to find out and tell you by radio.

If there is any subject about which you would like to have regular information let me know, and I will see if it is possible to include it in the programme from time to time. As I said at the beginning of this article you, the listeners, are responsible for starting this programme, and having got it started we want it to develop into a form which will suit and serve you best. So let us know if you have any bright ideas.

It would be of tremendous help in planning these broadcasts if questions could be kept as direct and factual as possible; it would also help me to cover more points in our limited time on the air.

Much as we should like to, we cannot deal with every question the moment it is received, so if you do not hear for a week or two do not give up hope. We shall get around to your particular problem or specific question just as fast as we can.

Although by its nature 'Can I Help You?' must necessarily be directed primarily towards those listeners who are either British expatriates or intending visitors to Britain, we hope that we shall gather a following, too, amongst other listeners, so that through listening to the programmes they will be able to build up in their own minds a picture of what life is like in Britain today, and how we cope with the many problems which naturally arise when one is living in a highly organised and complex society.

So, whether you are a regular or a potential listener, if you have a problem send it to me, Celia Irving, care of Head of General Overseas Service, BBC, London, England.

DR. GEORGE BOLSOVER, Director of the School of Slavonic and East European Studies in the University of London, describes in his contribution to the current G.O.S. series on the Soviet Union the development of the party under the leadership of Lenin and Stalin

DR. G. BOLSOVER

The Communist Party

FOR nearly forty years now Russia has been ruled as a one-party state with the Communists established as the only and ruling party. In March, 1917, the Russian people had begun to have their first experience of real political freedom when the Tsarist autocracy collapsed under the pressure of war and popular discontent. But it ended after the Communists staged a successful armed rising

and seized control of the government in November, 1917. The Communists were a small, revolutionary Marxist party led mostly by intellectuals, with Lenin at their head.

As revolutionary Marxists they believed in the inevitable downfall of capitalism and the creation of a classless society, and regarded the proletariat as the class historically destined to achieve these changes. But they were determined to accelerate the historical process as much as possible, and insisted that it was only Communist leadership which could make the proletariat conscious of its destiny and able to fulfil it. This led them to seize power in the proletariat's name, and to establish a one-party state with themselves as the ruling party. It also led them to treat the proletariat as horse to the Communist rider.

The party's ostensible aim in taking power was to build first a classless Socialist society and, eventually, a classless Communist society based on public instead of private ownership of the means of production and distribution. But what it has created in reality is a society in which public ownership has meant state ownership, and in which social stratification has grown very marked: in fact, a rapidly expanding industrialised society with heavy industry as the golden calf.

State ownership of nearly all the means of production and distribution, and state control of the rest, have increasingly helped to make the Soviet Union a totalitarian state in the fullest sense of the word. They have also bred a considerable army of bureaucrats, and made every citizen, in a sense, a cog in a great state-machine functioning under the Communist Party's direction and control. The result is that the party can reach into and influence the life of everybody in a very real and effective way.

When the party first seized power it had only about a quarter of a million members out of a total population of about 170-million. Now they number more than 7-million out of a total population of about 200-million. The organisation of the party, which was taken seriously in hand after the end of the civil war in 1920, has followed the principle of so-called 'democratic centralism.' This prescribes the election of party bodies by party members, strict party discipline, with the submission of minorities to majorities, and the complete subordination of lower bodies to the decisions of higher bodies. In practice, it produced not a democratic but an authoritarian party, controlled from the centre.

The Structure of the Party

The structure of the party corresponds broadly to the administrative structure of the Soviet state. The lowest party bodies are the primary party organisations which now number several hundred-thousands. These exist in factories, collective farms, government offices, units of the armed forces, or whatever else the party considers necessary, and the number of Communists in them varies considerably from a handful to a few score. Above them, in ascending hierarchical order, come district and town, provincial, and republican party organisations, each with its organs and officials, culminating in the all-union organisation at the centre. An exception is the Russian Republic—by far the largest—which differs from the other Soviet republics in not having a republican party organisation.

The existence of republican party organisations in no way means that the Soviet Communist party is a federal party. On the contrary, it rightly insists that it is a unitary party, and every republican party organisation is strictly bound by decisions of the party as a whole. As party membership and the number of party organisations grew the number of full-time paid officials, or *apparatchiki*, as they are called, grew with them, and it is these *apparatchiki* who really run the party machine at each level under the overall direction and control of the top party leaders. They constitute the party bureaucracy which parallels the state bureaucracy and tries to see that it is efficiently implementing party decisions on state affairs.

In theory the supreme party organ is the congress consisting of elected party delegates. For some years after the revolution it used to meet every year. But after Lenin's death, when Stalin began to gain control in the party, it met less often and at increasingly long intervals, though the party statutes prescribed more regular meetings. In fact, from 1926 to 1952 only five party congresses were called—in 1927, 1930, 1934, 1939, and 1952. Under the present statutes congresses are due to meet at least every four years, and the Twentieth Congress early this year was the first since the mid-1920s to be held within the prescribed period.

The main functions of the congress were supposed to be to debate and decide all important questions of party policy and to elect the party Central Committee and Control Commission, at any rate until 1939, when the congress authorised the Central Committee to choose the Control Commission. But in practice, especially after Stalin secured control, the congress became a mere rubber-stamp for whatever policies and decisions the party leaders laid before it. Between congresses the party was supposed to be run by the Central Committee which had a secretariat, a political bureau, an organisation bureau, and a number of departments covering mainly ideological and economic affairs.

At first the Central Committee was a small body of twenty to thirty members meeting fairly frequently. But even by Lenin's death its members had grown to nearly sixty, and they later became well over a hundred, and are now over 250. The bigger the Central Committee grew, the less frequently it was expected to meet; and it is now scheduled to assemble at least every six months. All this inevitably threw increasing power into the hands of the secretariat and, particularly, the Politburo, both of which after Lenin's death came to be dominated by Stalin in his role of General Secretary. Stalin himself deliberately worked for and furthered this concentration of party authority in his own hands, and he ended by making himself dictator in both party and state with much wider powers than even the most autocratic of the tsars.

It took a few years after Lenin's death before Stalin could establish his ascendancy in the party against such rivals as Trotsky, Zinoviev, Kamenev, Bukharin, and Rykov, who disagreed with him on important issues of Marxist ideology and policy. But he steadily outmanoeuvred them and made them politically impotent by manipulating the *apparatchiki* and the party votes. Eventually he destroyed them physically in the great purges of 1936-38, when he used the secret police on a grand scale at the least suspicion of opposition, and terrorised the party into complete submission to his will.

A Chain of Little Local Dictators

In practice the party had always been authoritarian and hierarchical, with power and influence running from the top downwards, not from the bottom upwards, and with effective authority at each level centring round party secretaries elected on higher recommendation rather than round the local organisation as a whole. But Stalin pushed all these characteristics to the limit, and in 1937 he talked of the party in terms of an army with 3,000 to 4,000 generals, 40,000 officers, and 150,000 N.C.O.s.

In his later years, according to Khrushchev, he rarely assembled the Central Committee and even ceased to use the Politburo as a regular working body, preferring instead to operate through its individual members. In short, the big dictator at the centre increasingly ruled the party through a chain of little local dictators who modelled their treatment of local party organisations on Stalin's own manipulation and treatment of the central party organisation.

Death ended Stalin's personal leadership in March, 1953, and his former Politburo colleagues have replaced it by their own collective leadership. As before, the party remains the only political party in the country with full control over the Soviet state. The arrest and execution of Beria have clipped the authority of the secret police, and this dreaded instrument of Stalin is at present controlled by the party leaders collectively, not by any one of them. The Twentieth Party Congress has met on time, the Central Committee has been called more often, and its Praesidium, which has replaced the Politburo, now works as a body.

Similar changes in methods of party work are also visible at the lower levels of the party organisation. The party leaders describe these changes as a return to Leninist methods, and denounce Stalin's methods as the outcome of his megalomania. But in trying to assess their present and potential significance we should never forget that even Lenin's concept of the party was centralist and authoritarian, and that as early as 1904 Trotsky had attacked his self-centredness.

So far the present party leaders have only replaced the dictatorship of an individual by the dictatorship of a small group, and unless they rid the party of dictatorship in whatever form the danger of another personal dictator will surely remain. But to eliminate dictatorship completely they would have to jettison even some Leninist concepts, which they show no signs of doing. It is also open to question whether all the members of the present ruling group enjoy equal authority. The 'old guard' among them clearly stand out from the rest, and among the 'old guard' themselves Khrushchev has been making most of the running ever since his appointment as First Secretary of the party in the autumn of 1953.

All this suggests that even collective leadership is not proving particularly easy to run, and that Khrushchev seems to be trying to make himself—in Orwell's phrase—more equal than the others. (*Broadcast in the BBC's General Overseas Service*)

Preparing a war-time radar transmitter for carrying out investigations into world-wide, short-wave propagation

A plan position indicator, and (right) rotating beam aerial used for studying back-scatter

The Radio Research Station, Slough

ROBERT REID visits the establishment near London run by the Department of Scientific and Industrial Research, where for forty years scientists have been gathering a wealth of specialised knowledge which is continuously helping to improve radio-communications of all types—in particular, between broadcasters in the G.O.S. and their listeners

WHEREVER you may be listening, I hope my voice is coming through to you loud and clear. And I wonder if you know how it is getting through to you—the sort of journey it is making, and the tricks which are being played with it before it arrives at your end as a voice coming out of your radio-set? I am sitting in London in front of a microphone, just talking. Every word I utter is being converted into a stream of electro-magnetic impulses which is then shot into the air from a B.B.C. transmitter mast.

That stream—or beam, as the engineers call it—goes out at an oblique angle for anything from 500 to 1,000 miles before anything happens to it. It then hits a belt of electrified gas in the upper atmosphere, and this deflects the beam earthwards again. Then it bounces skywards until it hits another of those layers up in the ionosphere; and so in hops of this sort the beam travels across the world until it reaches your radio-set, which then converts those electro-magnetic impulses back again into the voice you are now listening to.

Mysteries of the Upper Atmosphere

I wanted to give that semi-technical explanation of what happens every time we broadcast to you because the whole fascinating process—to me it is still pure magic—is being studied and worked on day and night at the Radio Research Station at Slough, near London. In many ways this is one of the most important lines of research work now being carried out in Britain because the world has come to depend more and more on instantaneous communications. The ether is more crowded than ever it has been with this sort of traffic. Hence the vital importance of knowing what actually happens when radio signals are sent out—for any purpose—and the best ways and means of getting those signals through to the receiving end.

This is a task to which the Radio Research Station has been devoting itself for nearly forty years, probing the mysteries of the upper atmosphere, juggling with wavelengths and frequencies, and accumulating a wealth of highly specialised knowledge which is helping all the time to improve world radio-communications of all types, including nowadays, of course, the important question of air communications for civil aviation purposes.

At Slough, they do two things: they carry out fundamental research work, wrestling with cosmic mysteries which are just beyond the frontiers of human knowledge; but they also give a practical service to broadcasting organisations in Britain and to communications authorities in all parts of the world, providing them with forecasts of conditions for as long as six months ahead. This enables communications people to make whatever operational and technical adjustments are necessary, so that transmission and reception is as near perfect as possible.

Behind this service there is a vast network composed of hundreds of observation stations scattered up and down the world. Some of them, here and there, are operated by this British research organisation—they have even had men stationed in Antarctica. Others are controlled by the governments of different countries. But all the basic material is pooled together and analysed at Slough, and regular guidance bulletins are then issued for world consumption.

The Slough station is a fascinating place to visit. It has a back-log of history to begin with, because it was here—in an old Army hut—that

radar was invented: the device which enabled the Royal Air Force to detect incoming German bombers long before they were over Britain. And the principle of radar has been added to the stock of knowledge which is now helping the scientists and the physicists and the engineers to wrest new secrets from the upper atmosphere.

One line of study which is being developed is connected with what is known as back-scatter. When that beam which is now bringing my voice to you hits one of those upper layers and bounces back to the earth's surface some of the electro-magnetic impulses break away. They go into reverse, as it were, doubling back on their own tracks and returning to the point from which they originated.

In a darkened room in one of the huts at Slough I stood in front of an instrument with a circular, glass screen. A thin line of green light wriggled its way across the screen from one side to the other. Every now and then the line would throw up a jagged peak, recording an out-going transmission from one of the forest of tall masts in the meadows outside the hut. A fraction of a second later there would be an eruption of minor peaks further along the green line as the break-away impulses returned—the back-scatter—like homing pigeons, having made a round-trip of more than a couple of thousand miles in less time than it takes you to blink your eyelids. From the observations and the fine mathematical calculations it is possible to make from studying these antics the scientists are provided with information which helps to increase the degree of operational accuracy in all communications work.

In this same room there is also a dimly lighted screen which shows in map form a sizeable slab of the world. A thin pencil of light was rotating all the time from the centre of the screen. As it swung round on its course it would occasionally leave a dark-grey patch, like a smear, trailing behind it over the north Atlantic, say, or at some point in the Middle East. These dark patches were the actual, hard upper layers which would be hit by any out-going beam—but made visible to the naked eye. This device—the plan position indicator—makes an invaluable contribution to the research work at Slough.

Plotting Sun-Spot Activity

In yet another department in the station I had been shown a huge chart on which is plotted every aspect of solar activity during the past twenty-four years—sun-spot activity, as you would probably call it. A study of this chart, together with other observations, shows that there is every likelihood that next winter the world will see one of the most active periods of solar activity for many years.

Conditions will be extremely favourable for advanced radio research-work, both theoretical and practical, and next winter will mark the beginning of an intensive period of work which will last for a number of years. And a mobile radar transmitter I saw being tuned up will play a star part. It is going to be sent all over the world to transmit signals back to England. At Slough a companion set will be tuned in to pick up those signals. At the end of that period the people at Slough should have amassed new knowledge which will advance the whole science of communications. (*Broadcast in the BBC's General Overseas Service*)

PHILIP MASON, Director of Studies in Race Relations at the Royal Institute of International Affairs, in this contribution to the G.O.S. series 'The Story of Colonisation,' speaks of the peoples of Africa who are on the threshold of independence

PHILIP MASON

Africa Tomorrow

YOU have heard, in earlier talks in this series, of the spread of ideas and technical knowledge by military conquest, by the missionary spirit, by the desire for gain. All these were present in the colonisation of Africa by Europeans. The Cape began as a trading station on the way to the Indies; Europeans spread inland, first of all into empty spaces, as in Australia, later by frontier wars, or by requests for protection. The missionaries went in ones and twos ahead of the farmers, the miners, and soldiers; these followed in larger numbers. In Nyasaland, on the other hand, it was the missionary spirit that led: Livingstone's horror of the slave trade stirred the conscience of his fellow-countrymen, and even the first traders came as part of a missionary enterprise. On the west coast trade was the first and main influence. Everywhere, in varying proportions, the three elements were there—soldier, trader, preacher.

The result for the African of this complex invasion has been an experience of the most shattering nature: it has affected his religion, his economy, his politics, his family, his whole way of life.

No Comparison with the Past

It is not to be compared with the conquest of, say, the Greeks by the Romans—both Mediterranean peoples, though at different stages of development—nor with earlier colonisations in Africa—the moves of Hamitic and Nilotic people southward, the spread of the Bantu southward, the backwash of the Nguni peoples after Chaka's wars. These were colonisations of like by like—comparable with the Normans and Saxons in England—one people a little ahead of the other in organisation or weapons, but leading a similar life.

Even the Arab colonisation on the east coast seems an affair of like by like compared with the revolution in technical achievement brought by the Europeans. Peoples in the early iron age, of whom none had used the plough or the wheel, or hardly any had put one stone on top of another, found themselves within two generations pitchforked into the complex competitive life of big modern cities, dealing with aeroplanes, motor-cars, and automatic lifts, not to mention a whole set of ideas which the invaders took for granted but which to them were quite new: the idea that land could be sold or mortgaged; money, wages, written contracts—all that kind of thing.

I repeat: it has been a profound and shattering experience. It has shattered much that was socially satisfying. Many restraints in marriage and courtship, many rigidly observed laws of property, many 'good old ways' have gone for ever with the old life. And much that was psychologically satisfying has gone too. Here and there the Bantu—far the most numerous group of people affected—had coalesced into nations such as the Baganda, the Barotse, the Zulus, but the basic unit of Bantu society was a much smaller group, most often a man with his wives and their children, perhaps married children and grandchildren, one big family, self-sufficient in food, though expecting some help from neighbouring groups who came together for ritual ceremonies, dances, hunting, war.

Westerners have stressed the external insecurity of this life: the danger of raids by other tribes, of slavery, of witchcraft, apart from drought, famine, and disasters while hunting. But with this external insecurity one may detect a certain internal security, a certain confidence in the hierarchy of ancestral spirits and in the adequacy of known social institutions to deal with known evils. That has gone for ever, and a desperate instability remains.

You must think of the African peoples as both attracted and repelled by the new way of life. The first missionaries found the tribes interested in the nature of divine being or of an after-life, receptive of many Christian ideas, but reluctant to change their habits or to accept new disciplines. They were attracted by much they heard and by more that they saw—by tables, chairs, curtains, pictures, books—but when a second wife was both the sign of economic success already achieved and the means to achieve more it was hard to adopt a religion which insisted on one wife only. Chiefs pressed missionaries to stay permanently with them, often hoping for technical advice, less often from a genuine interest in religion, always influenced by curiosity and a desire for prestige.

That first attraction has often become restricted to the externals of Western life. There is a passion for Western furniture, clothes, radios, an impatience of the kind of leadership that dictates from a fixed platform of its own values. There is a contrast between respect, even affection, for certain individual Europeans and mistrust for Europeans in general. And especially, as a class, for those in authority—native commissioners, missionaries—the very people who have done most for Africans, the people who fifty or even thirty years ago were looked on by the African

as his best friends. As a class Europeans in authority today stand condemned by African opinion because they still think of doing things *for* Africans instead of *with* them.

Everywhere, though in varying degrees, I think you will find Africans attracted by the externals of a Western way of life, yet in a ferment to find new ways of expressing themselves, ready to put on a Western suit but not the beliefs that go with it. You see it in religion: hundreds of new organisations calling themselves separate churches are constantly forming; in all of them you find an attempt by Africans to say something of their own, away from Europeans, unhampered by rigid doctrines, by discipline, by the need to wait before reaching the top of the hierarchy.

On the west coast you have something else: a new insistence on the value of the civilisations which flourished in the Middle Ages to the south-west of the Sahara, civilisations strongly influenced by Islam but distinctively African. There you find a swing back from the old readiness to take everything from the West: it is the fashionable thing to wear not Western clothes but 'national dress,' which not long ago might well have been looked down on as rather backward by those most educated in Western ways. In the north, which is at least as much Mediterranean as African, the peoples of Algeria and Morocco seem unwilling—to put it mildly—to accept with gratitude the French ideal of conferring on them what to a Frenchman is the greatest of all benefits—making them Frenchmen in every sense. Rightly or wrongly, they too want a way of expression of their own.

In east and central Africa the impact of the new world has been sharper and more sudden than elsewhere, and the situation is complicated by the presence of European settlers, who have been used to a world in which power and wealth have been concentrated in their hands. And an already complex situation is made more complex by the presence of Asian colonists, competing with the Europeans for the privilege of teaching, or exploiting, for evil or good, Africans who begin to regard both rivals alike with a certain cynical sourness.

For the Europeans there is an acute dilemma: they have to face not only the prospect of sharing power and privilege with a majority—that has been done in England without too many tears—but of seeing the country in which they have cast their lot and made their homes turned into something quite different. Because one must, I think, face the fact that it will be profoundly different when the majority are in power.

The African is intuitive, emotional, suspicious of what other people and the forces of nature may do to him; his ready laughter, his gaiety, are forms of defence in a dangerous world, but they are there, always ready to take charge of a situation in which we Europeans would be solemnly arguing. An African world, make no mistake about it, will be very different from one controlled by us.

Avoidance of Nationalism

What shape then will be taken by Africa tomorrow, Africa on the threshold of independence? An Africa that is like a pot boiling with uncertainty, insecurity, and anxiety, wants the techniques of the West: it wants schools, roads, universities, hospitals, dams, irrigation systems, and it must have capital and technicians. How can she get them without beliefs she does not want? She may get capital and beliefs either from Western Europe and America, or from Russia. She may turn from the devil she knows to the devil she does not. She may then find that Marxism too needs re-tailoring for an African climate. But some fusion of ways of life has to be found. The tailor's dummy of Western techniques has to be fitted with a new soul.

We have seen in east Africa that an advancing tribe, ahead of its neighbours, one foot on the ladder, may find the ascent too difficult in the face of a European ruling minority and may turn to bloodthirsty and obscene retrogression—frustration taking the course it took with the Nazis in Germany. There are signs on the Copper Belt of Northern Rhodesia of fruitless, unconstructive resistance to authority. Nationalism in Europe we begin to think of as out of date, but the creed of keeping out everyone who does not look like *me* has a wide appeal and is highly infectious. Morally that creed is surely no more respectable when it is held by an African than by a German or an Afrikaner; moreover, it will scare away free capital.

The task for Africa tomorrow is to avoid the kind of nationalism that shuts other people out, that glorifies hatred, that snatches international assets, that frightens away much-needed capital and technical help; to avoid, on the other hand, selling her soul for tanks and radio-sets; to find instead a way of integrating what is best in the African temperament with what the West can offer, of reconciling the attraction and repulsion Africa feels for the West, and in a new mood of self-confidence accepting the help the West can give, and using it for her own immortal purpose. (Broadcast in the BBC General Overseas Service)

Reis Leming, an American who was awarded the George Medal for life-saving in the 1953 floods, launched the ship; his wife and Dr. W. A. Baker, the designer, from Plymouth, Massachusetts, are on his left

Launching 'Mayflower II'

IAN CURTIS describes the launching at a Devon shipyard of a replica of the famous ship in which the Pilgrim Fathers went to America in 1620. 'Mayflower II' is to be sailed across the Atlantic in April next year and presented to the people of the United States

AT the port of Brixham about two months ago *Mayflower II*—a replica of the original *Mayflower*—was launched to the cheers of about 500 people and the background noise of a thunderstorm. The new *Mayflower* will be sailing to America in April next year. Nearly 500 people in the dockyard took an early breakfast, or no breakfast at all, to view the launching and by 8.15 the first half of the *Mayflower* story had reached a successful conclusion.

It was 336 years ago that the first *Mayflower* sailed to the New World, and about one year ago that in both Britain and America it was decided to build an exact replica and to sail her across the Atlantic. The ship was to be built in Britain, and after her crossing to be presented as a gift to the people of the United States. In the shipyard at Brixham the job was welcomed as a chance to build again in English oak, and part of the keel is one gigantic timber forty feet long and one foot thick.

The ship herself is about the size of a small ocean-tug, but that gives you no real idea at all, since she is deep and wide and curved. She is a most graceful vessel, and everyone who has seen her is just waiting to view the finished effect, with the three masts, the two square sails on the main and the fore-mast, the square sprit-sail instead of a jib, and the Arabian-looking lutine sail aft on the mizzen.

In length she cannot be more than ninety feet, so that the twenty-one crew and the twenty or so passengers, will at no stage feel that they are sailing in an Atlantic liner. In the deep hold will be concrete ballast to keep her steady, and water and stores for the voyage.

The cordage and the canvas, the ropes and the sails, are all being specially made in Scotland as exactly as possible as they were on the first *Mayflower*, and for this charts and plans in museums have been meticulously examined. Great credit should be given both to the organisers and to the architect and designer, Dr. W. A. Baker, who has done so much of the research, and also to Mr. Upham in whose yard the ship was built.

Message from Massachusetts

The ceremony began at 7.30 with a prayer and a hymn. The president of the *Mayflower* project, Mr. Felix Stimpson, spoke for Britain: 'We are here this morning to launch the *Mayflower*. Before doing so I would like to read a message we have received from the Governor of the State of Massachusetts, where the Pilgrims originally settled. It says: "To the sponsors of the *Mayflower* project and the people of Great Britain. I salute your magnificent effort to recreate a moment in history in which your nation and mine share a special pride. In bringing back the *Mayflower* as it was in 1620 you are reliving an immortal story of heroism in the face of adversity, which cannot help but make its imprint in the world. God speed your voyage to our shores."'

Mr. Stimpson was followed by Major-General Roscoe Wilson, the Commander of the Third American Air Force, who accepted the idea of the *Mayflower* on behalf of America. Then Mr. Reis Leming launched the ship—you may remember that Mr. Leming was awarded the George Medal as a corporal for rescuing nearly thirty people in Norfolk in the floods of 1953. In accordance with the old tradition a gold cup was presented to Mr. Leming and hurled by him into the sea, whence it was retrieved by a volunteer diver and presented to the shipbuilders. (*Broadcast in the BBC's General Overseas Service*)

'Mayflower II' in dry dock at Brixham: she is made of English oak, and is about ninety feet long; when completed she will have three masts

The end of the first stage of the project—the hull sliding down the slipway

The Anglican Church on the Niger River

The first Archbishop of West Africa, the Most Rev. L. G. Vinuug, at a service in Onitsha Cathedral: he was elected to the office in 1951

PEOPLE say: 'What a lovely picturesque title! Bishop on the Niger'; and then they add, 'But why *on* the Niger?' I usually try to explain that there is some prosaic political reason for it. Two-thirds of the long river Niger are in French West Africa, and it might well be considered a trifle arrogant for us Anglicans to adopt the title 'Bishop of the Niger.' Yet I hope it was really that someone with a sense of poetry gave us this name, someone perhaps who knew something of the powerful and mysterious attraction of that mighty river, who loved the heroic story of the great explorers who sought to discover its ancient secrets; someone who remembered the passionate words of Mungo Park when in his last letter he spoke of his unconquerable hope 'to discover the termination of the Niger or perish in the attempt. Though all the Europeans who are with me should die,' he wrote, 'and though I were half-dead I would still persevere; and if I could not succeed in the object of my journey I would at least die *on* the Niger.'

Mungo Park could, of course, speak of the Niger with a certain sense of possessiveness. For here was a river of whose existence Herodotus had written in the fifth century B.C. but which had remained undiscovered in modern times until late in the seventeenth century A.D. It was Park alone who discovered it. The supreme moment is superbly told by himself in the often quoted words of his diary: 'July 20, 1796. We rode forward through some marshy ground where, as I was anxiously looking round for the river, someone called out "See the water!" and looking forward I saw with infinite pleasure the great object of my mission, the long-sought-for majestic Niger, glittering in the morning sun as broad as the Thames at Westminster flowing slowly to the eastward.'

Much Wider than the Thames

And that was far away at Segou in French West Africa, far above the Niger's confluence with the Benue, and hundreds of miles from that territory called today the Diocese on the Niger. The Thames at Westminster is a narrow stream compared with the mighty Niger in the flood season as it flows between Asaba and Onitsha.

It is of the Church's life and work on this river that we shall be thinking now, and I hope that people will be thinking quite a lot about it in the coming months; for next year the Church on the Niger, or more strictly speaking, the Niger Mission holds its centenary. A century, whether reckoned in runs on a cricket field or in years in the life of a society, is an achievement, especially in West Africa, where centenaries have not yet been very thick on the ground. So the prospect is exciting. As we celebrate it we shall be thanking God for all that has been accomplished through the agency of the Church Missionary Society and of

THE RT. REV. C. J. PATTERSON, Bishop on the Niger, talks about the life and work of the Church along the great river which runs through Nigeria: the original mission set up in 1857 has now grown into three flourishing dioceses staffed by an almost entirely African clergy

Bishop Patterson (second from the right) consecrating the chapel at St. Mark's College, a teacher-training centre in Eastern Nigeria run by the Church

the Anglican Church, but we shall certainly not eschew the cult of personality, for it was with certain Christian people and especially with Crowther, an African from Nigeria, that it all began.

We must properly start then with Samuel Adjai Crowther. He is known to Church history as the first black bishop of modern times, and to biographical romance as the slave-boy who became bishop. The story is the ecclesiastical counterpart of *From Log-cabin to White House*. Sold as a slave in 1821, rescued and deposited with other freed slaves at Freetown, in Sierra Leone, he was there cared for and trained and educated through the C.M.S. Service for some years as a teacher prepared him for the great work he was to undertake on the Niger. For when expeditions were planned to explore the river, and an African missionary teacher was needed, it was Crowther who was chosen—in 1841, 1853, and 1857. With a fine sense of occasion he writes in his diary for July, 1841: 'Today at eleven o'clock the vessel *Soudan* got under way for the Niger, the highway into the heart of Africa.'

Journeyings of Bishop Crowther

Thus began the connection between himself and the river with which his name will always be associated. In 1857 he landed at Onitsha on the Niger and founded the Niger Mission. In 1864 he was consecrated in Canterbury Cathedral as Bishop of the Niger Territory, and from then until his death in 1891 he continued his journeyings, a familiar figure on the Niger. I remember hearing only a few years ago from an old African lady who lived in the riverside town of Asaba how she remembered as a girl the visits of Bishop Crowther in the 1880s, and the crowds which welcomed him on the banks of the Niger.

He was a remarkable man by whatever standards you judge him. It is hardly surprising that all parts of the Church in West Africa regard him as particularly their own spiritual ancestor. But like all the saints he belongs to us all. There was nothing parochial or tribal about his outlook. There was no limit to his zeal for evangelisation. Though a Yoruba from Western Nigeria by birth he was trained as a young man in Sierra Leone and worked as bishop among the Ibos and other peoples in Eastern Nigeria, and he preached and taught with wisdom and persuasiveness in Northern Nigeria. Regionalisation was certainly not in his vocabulary, and he would have noted with approval that the mission which he founded on the Niger today continues to work in all three regions of the Nigerian Federation.

What would he find if he came to review today the work he began in 1857, and what would he think of it? Well, he would certainly find a great outward growth and expansion. After his death in 1891 the territory where he had worked became part of the Anglican Diocese of Western Equatorial Africa, with its bishop living in Lagos. In 1919 this was divided into the two dioceses: Lagos, covering the west and north of Nigeria, and the Niger Diocese, occupying roughly the territory east of the Niger and stretching from the river Benue to the Bight of Benin, and eastward to the French Cameroons. By 1952 the Niger

Bishop Crowther, who founded the Niger Mission in 1857; and (right) a ferry over the Niger at Onitsha

Diocese was again subdivided: the area covered by Crowther's Niger Mission is now the two dioceses of the Niger and the Niger Delta.

In that area today he would find more than 1,500 churches, some of them finely built in stone and brick in such large modern towns as Enugu and Port Harcourt, and others in the numerous towns and villages on the banks of the Niger and its tributaries or in the forest and open grasslands, many of them simple and unpretentious buildings, but all of them centres of Christian fellowship and the worship of God. Nearly a quarter of a million adherents, of whom about a third are communicants, make up the membership of these churches, and just over 100 clergy look after them.

Of the clergy, as Crowther would be glad to find, all but about a dozen are Africans. Indeed, the policy of Africanisation which is a predominant feature of all organisations, political and commercial, in Nigeria today has been mission policy since the C.M.S. began its work on the Niger. The conviction then held that missionaries could best serve Africa by training Africans to evangelise their own people has been steadily practised through these hundred years. We now have an African, Bishop Dimicari, as diocesan bishop of the Niger Delta Diocese, and the five archdeacons are all Africans.

And what a work these clergy have to do! I think of one who looks after sixty-eight congregations and some forty schools. Each church has its own catechist, church teacher, or voluntary lay-reader. The parish is divided into four groups of churches, and the clergyman goes each week to one of the four groups and administers the sacraments. He also preaches, holds communicants' and confirmation classes, is manager of his school and attends meetings of the local education committee, supervises the work of his catechists and teachers, seeks to smooth out difficulties, and does all the other pastoral work which a busy pastor somehow finds time to do. This particular man happens also to be archdeacon of an area with 203 churches, many of which are situated on almost inaccessible corners reached only by canoe or bicycle. Fortunately he is a strong man, in body as well as in spirit.

It is obvious, therefore, that the selection and training in increasing numbers of suitable men for the ministry is a task of the utmost importance in Nigeria today; and it is in the provision of the staff for training in the theological colleges that the assistance of the older established Churches in Europe and America is most urgently needed. Again, Crowther would find that education proceeds apace from the primary to the university level. Here also the work is carried on mostly by Africans.

Members of the preliminary training school of Iyi Enu Mission Hospital, near Onitsha, which also supplies staff for a diocesan maternity service

A Church elder summoning the people by drum to service at a village church

In the mission medical field, too, there have been great advances. The Mission Hospital at Iyi Enu, near Onitsha, now nearly fifty years old, supplies the staff for a diocesan maternity service with centres in many villages. In co-operation with the Nigerian Leprosy Service, the leper settlement begun by the mission at Oji River continues its work, and even became a topic of world news recently when Her Majesty the Queen visited it and encouraged the patients with her sympathy and understanding. Thanks to Her Majesty our new training hospital at Umuahia changed its clumsy title of Union Mission Joint Training Hospital to Queen Elizabeth Hospital. This is one of the several enterprises which we Anglicans share with the Methodist and Presbyterian churches.

The Two Dimensions of Christianity

But Crowther would not be content to judge only by the seen and temporal, the outward forms and institutions. He knew, as a recent writer has reminded us, that 'the expansion of Christianity in any region must always be measured in two dimensions: in the area of population that becomes attached to the Faith, but also in the depth to which the religion penetrates in reshaping faith and life.' Here he might well meet with disappointments, though there would also be encouragements. For a church is always in danger of concentrating on the easier and more superficial things, of loving its own life and losing its soul.

Since Crowther had both wisdom and a sense of humour he would have known what to make of a comment of one of our clergymen in his annual parish report: 'The spirit of evangelistic zeal in this parish is now dead,' he wrote, 'and we are settling down to normal Church life again.' No! Normal Church life as Crowther knew it on the Niger was a continuous bold adventure, not settled and stagnant but ever moving forward and flowing onward like the great river that carried him on his journeys, that brought and still brings life and sweetness to the land.

As we approach this centenary year we shall pray that the Church on the Niger may still be adventuring under the guidance of the Holy Spirit in new and original ways: perhaps in a greater use of African art in our buildings, our music, our forms of worship; perhaps in more imaginative methods of evangelism; perhaps in a new approach among an agricultural people to better rural living.

Above all, I hope we shall remember that the only kind of live church is a missionary church, thinking more of giving than of receiving and possessing. For only thus can the Church on the Niger make its truly African contribution to the Universal Church of God, and give its own special meaning to the Psalmist's words: 'There is a river the streams whereof shall make glad the City of God.' (Broadcast in the BBC's General Overseas Service)

The Meaning of 'Prestige'

HAROLD NICOLSON, in another of his fortnightly commentaries on men and affairs, discusses the various shades of meaning which people of differing nationalities give to the word 'prestige,' and attempts to define the peculiar British conception of it: 'For us it ought to mean,' he suggests, 'power based on reputation rather than reputation based on power'

WHAT they generally mean by this is a situation in which a powerful country, in defence of its rights and interests, is able and willing to bring such overwhelming and inevitable force to bear that the very threat of it renders the use of force unnecessary. Thus a single young policeman is able to control the traffic in Piccadilly Circus merely by making gestures with his hands. It is not that these gestures have in themselves anything compulsive or mesmeric about them. It is merely that the assembled motorists, bus-drivers, and pedestrians are well aware that if they were to ignore or disobey his gestures they would be taken off to the police-station, be summoned to appear before the magistrates, and in the end be punished.

If any doubt existed whether the individual policeman were in fact representing the law of the land, or if there were any uncertainty in the minds of the public that any disobedience on their part would in fact be immediately punished, then the signals would be ignored and much confusion, accompanied probably by several accidents, would be liable to ensue.

Thus what most of us mean when we use the word 'prestige' is the power of recognised authority to enforce its demands. Once the authority ceases to be recognised, once those who defy it are uncertain whether in fact retribution will follow, then prestige in this sense ceases to operate.

Changes in the Doctrine of State Rights

It is inevitable that those who have been brought up with the idea that a state is justified in using or threatening force for the purpose of defending its own rights and interests should be puzzled by a situation in which it is prevented from so doing by the intervention of other states, whose interests may be non-existent and whose rights have not been primarily assailed. It seems intolerable to such people that a small country should be able with apparent impunity flagrantly to assail the rights of a large country on the grounds that it is acting in accordance with the principles of international law.

Those who fail to recognise that the whole doctrine of state rights has been profoundly modified in the last half-century will contend that the term 'international law' is no more than an ideological fallacy. A body of law, if it is to be generally recognised and observed, must be uniform and enforceable: one must know what it is, and be sure that any violation of it will be immediately punished. Even the Charter of United Nations, such people argue, is in no sense either a law or a treaty, since it is not dispassionate, can be negated by the veto of a great Power, and is but rarely enforceable. In so far as any international law exists today it exists only to encourage and protect small countries who are resolved to violate established rights and interests. In the chaotic conditions that have thereby been created, in conditions in which the theory of sovereignty bears no relation to the actually existing proportions of power, authority has disappeared, and with it the beneficent and covert discipline exercised under the old theory of prestige.

I do not agree with this argument. In the first place, I question whether the doctrine of prestige was always exercised with such consideration and beneficence. In the second place, I believe that the Charter of United Nations, although not always clear or always compulsive, does represent the most reasonable principles of international conduct which in our present world we are likely to achieve.

Greater Protection for the Under Dog

For the moment, it is true, it may furnish greater opportunities and protection to the under, rather than to the upper, dog. But I remain one of those misguided doctrinaires who believe that on the whole this new balance of power is a good rather than a dreadful thing. Nor do I interpret the word 'prestige' as relating solely to the potential exercise of force.

Some twenty years ago, that is before Hitler had started to become overtly dangerous, I delivered at Cambridge a lecture to which I gave the title 'The Meaning of Prestige.' I have recently been reading this lecture again and I was pleased to observe that most of what I said then I could repeat without irrelevance today, and that the principles and definitions that I then suggested do certainly apply to a transitional situation in which, as now, the exercise of force on the part of a single state is subordinated to a regard for certain principles if not of international jurisprudence, then at least of international conduct. Let me repeat here some of the definitions and conclusions which I advanced in 1937.

I began by dismissing as wholly out of date the early associations of the word 'prestige' with diplomatic jugglery or deception. I also contended that if we were to interpret the word correctly we must realise that it contains implications other than the employment or threat of force. I took as my theme the definition provided by the *Oxford English Dictionary*, that venerable compendium which so often when consulted helps to clarify our thoughts. That definition runs as follows: 'Influence and reputation

derived from previous character, achievements or associations; or especially from past success.'

I proceeded to consider whether this definition would be accepted in every language and country, or whether different peoples gave to the word 'prestige' particular meanings, conditioned by their own national tradition and temperament. I contended that to the French the word had associations with such concepts as glamour or glory; that for the Italians it had retained something of its original suggestion of the dazzling or the marvellous; and that for the Germans it was related to the idea of 'not losing face,' or, as they might say, the concept of national honour.

What then was the particular shade of meaning that the British gave to the word? I made the following suggestion, that for us it meant, or ought to mean, 'Power based on reputation rather than reputation based on power.' I admitted that in a narrower sense the word 'prestige' was employed to suggest the extent to which foreigners were prepared to believe in our power without that power having to be either demonstrated or exercised. But I argued that it also possessed implications unconnected entirely with the use of force.

The British conception of policy, I contended, was not, as was the German, a warrior conception but a mercantile conception. We were not out for glistening diplomatic victories or dramatic trials of strength. What we were after was a profitable deal. We had learnt from our long business experience that no deal is in the end profitable which imposes conditions that are incapable of fulfilment, or leaves our customers either in a mood of indignant humiliation or devoid of all capacity to trade with us in the future. Our conception of prestige, therefore, was closely akin to credit in the commercial sense. It was based, or ought to be based, on the word 'reliability.'

It is indeed curious that our prestige should have survived for so long, even when we have been shown to possess little political forethought, even when we have demonstrated that we are inclined to act by instinct rather than by method, and when our successive improvisations have met with ill-success. How are we to explain that, whereas our policy is so often unpredictable and therefore variable, we retain and are able to recover our prestige abroad? Obviously it must imply something more than actual physical power and the will to use it; obviously it must depend on something other than constant success; it must be based upon the impression given by national character.

'Justice, Efficiency, Idealism'

Had I in 1937, when I gave the lecture, been able to foresee the future I should have been furnished with an admirable example to prove my case. Thus in 1938 our policy had proved hesitant, uncertain, insincere, and unreliable. The reason for this was that it was determined not by the durable principles of the national character but by the transitory needs of diplomatic expediency. Yet in 1940, when we were faced with the exacting crisis, it was the national character that dominated the situation. That was in very truth our finest hour, and our prestige in the world was vastly enhanced.

But how, you will say, can one hope to define the national character upon which the prestige of any country must in the end be based? Most Englishmen, if pressed to give such a definition, would probably reply: 'Justice, efficiency, and idealism.'

Very few foreigners would accept this definition. They would reply that our sense of justice is not necessarily more advanced than that of other countries, that our efficiency is questionable, and that our idealism all too often derives from the pleasure we take in agreeable rather than in disagreeable sentiments.

A foreigner would probably use the word 'honesty,' by which he would mean not merely a certain standard in the conduct of affairs, but a constant endeavour to relate the principles of public morality to those of private morality. He would also mention such virtues as gentleness, objectivity, or the gift of seeing the other person's point of view, and unity, namely the curious fact that in most vital issues most of us tend to feel and even think alike.

I am not suggesting that these foundations of the British character are due to any special ethical superiority. They derive above all from the security which for centuries our insular position gave us. Being the most invulnerable of the European Powers we could afford the luxuries of righteousness.

But if, now that we have become vulnerable, now that our old effortless security has been taken from us, we were to acquire a small-Power character, then indeed our prestige would wane. Thus I contend that whenever a British government adopts policies which are in contradiction to the national character, and therefore to the people's will, it is debasing our prestige. Am I being self-righteous about all this? I do not think so. (Broadcast in the BBC's General Overseas Service)

Suffolk has long been famous for the richness of its farmlands: a typical farm at Holbrook in the south-western corner of the county

Memories of Bury St. Edmunds

JOHN SPENCER, in a 'Report from South-East England,' talks about the town in Suffolk where he lived as a boy

WHEN I was a boy in Suffolk we lived in a town—in Bury St. Edmunds to be precise—but we seemed to be living half in the country. Suffolk is a county tucked away from the bustle of life, and Bury St. Edmunds is set in the heart of rich farming country. Life was slow, localised, and peaceful. Over the roof-tops of the town you could always see the rolling Suffolk farmland stretching away in gentle, wooded curves from the edges of the town.

Since the war I have been back many times, but only for very brief visits; and life is still peaceful there, though perhaps not quite as untouched as I remember it. But perhaps it is I who have changed, not the town. And, in any case, Bury St. Edmunds is still as full of the power to evoke the past as it ever was. And for a small country town it has a rich past.

I remember as a boy every year on Boxing Day my father used to take me and my brothers to the Angel Hill—a square in the centre of the town—to watch the annual Christmas meet of the local hunt. The scarlet coats of the huntsmen, the beautifully groomed, lively horses, the pack of hounds, restive and ready to be after the fox, and the bustle of preparation on a crisp winter morning—it all stands out in my memory.

Indeed, the Angel Hill is like something out of a painting. It is named after the Angel Hotel, an eighteenth-century inn, which is still renowned among travellers; and it has a secure place in English literature: Charles Dickens, who once stayed there, made the Angel Hotel the scene of one of Mr. Pickwick's embarrassing adventures with the wretched Mr. Jingle. In the novel you will find that Bury St. Edmunds is referred to by its old name—one which I prefer—St. Edmundsbury.

Where Magna Carta Was Drawn Up

The abbey gate, which stands on the Angel Hill opposite the hotel, was once the entrance to one of the largest monasteries in Britain. Its great abbey church was one of the glories of medieval Christendom. Almost all of the monastery buildings were destroyed at the Reformation, but the abbey gate, the Norman tower, and two very beautiful churches were spared and remain today to give the town a rare distinction.

In the gardens which now mark the site of the old monastery you may sit and recapture the past. Here in 1215 the barons of England met to draw up the Magna Carta, which they forced King John to sign at Runnymede. A service to commemorate this great historic occasion used to be held every summer near the ruins of the high altar of the abbey church.

Earlier still, before the Norman conquest, King Edmund was martyred nearby by the invading Vikings. His body was brought to the town and buried in the monastery church. Because of his martyrdom he was canonised after his death, and the little town where he was buried became known as St. Edmundsbury—the burial place of the Saint.

I have said that Suffolk is a quiet, out-of-the-way county, not greatly haunted by tourists. But it has a loveliness of its own which should, I think, be better known. If you want to see rich, wooded farmland enfolding peaceful and often exquisite villages, each with its own ancient and beautiful church, or if you wish to meet slow-speaking, hospitable people, who live peaceably within the rhythm of the country year, you could not do better than pay a visit to Suffolk. At least so it seems to me. (*Broadcast in the BBC's General Overseas Service*)

Angel Hill, Bury St. Edmunds. The gatehouse on the right once gave access to one of the largest abbeys in England to be destroyed at the Reformation

Two aspects of Bury's past: the Angel Hotel has associations with Charles Dickens, and the Norman tower (right) survived the destruction of the abbey

OUR WAY OF LIFE: 19

C. J. HAMSON, Professor of Comparative Law at Cambridge University, speaks of the system of law which has grown up in the British Isles, and has also spread to a considerable part of the world

C. J. HAMSON

The Common Law

THE law is surely the most distinctive, or at least one of the most distinctive, features of the way of life in England. We have developed a system of law—the Common Law—which is peculiarly our own. It is an original invention of great human and social merit.

It now has spread over a considerable part of the world's surface, including the United States of America; but it was created in these islands, and remains a product highly characteristic of our kind of society.

Technically the Common Law of which I speak is the law of England as such, which was extended to Wales and Ireland but not to Scotland; in Scotland the law in force was and is Scots Law; but for our present purposes the technical differences between the Common Law and Scots Law are irrelevant.

More striking even than the actual substantive rules of the Common Law—though these are also important and characteristic—is the Common Law method of administering justice, especially criminal justice. The way in which we try the person accused of crime—of an offence, that is, against society and not merely of a private wrong—is, it seems to me, a quite basic element of our way of life.

It is not by accident that the administration of criminal justice in England is linked, as much for the foreign visitor as for the native inhabitant, with two figures who have captured the public imagination: the policeman in blue, and the scarlet-clad judge. These persons are entitled to the prominence which they have because they embody something—the administration of justice in these islands—which we prize.

Support Given by the Community

Nevertheless, it is wrong to think of even these very important persons as in isolation. No doubt if these persons as a class declined from the high standard of integrity which they have long maintained the administration of justice would be imperilled and might fail. Still, it is certainly not their integrity alone which secures to us our great prize. The continuance of our system depends in the main, and ultimately, upon the support given to it consciously and unconsciously by the community.

What is characteristic of our law, and especially of our administration of justice, is precisely this co-operation of the public. Our law is a law which is founded upon a remarkable quality: the fundamental law-abiding disposition of the people. It is this disposition which makes possible our way of behaving and which endows our system with those features which so much merit respect and admiration.

The quite peculiar co-operation in the law of the public is strikingly manifested by our process of jury trial, the singular invention of the Common Law. And even more revealing than the presence of the jury at the trial is the actual interaction of judge and jury in court. A jury to function properly must be willing to accept, up to a point which it is very difficult abstractly to specify, direction from the presiding judge. I think the jury system, in our sense of the word, broke down in France, for example, because of the unwillingness of the jury there to accept this legitimate direction, though admittedly in some American states which use juries such direction is prohibited. Yet the jury must not be subservient merely: it is its business independently to find a verdict upon the facts, and it should strongly resist any attempt by the judge to encroach upon the jury's province.

An Indefinable Sense of Fairness

To be willing to take legitimate direction and yet to remain when need be firmly independent—that requires a very nice balance of instinctive good sense. And it requires an equal sense on the part of the judge to know how to sum up in such a fashion as both to give the necessary guidance and yet to respect that independence. It is a remarkable thing in court to see a jury reaching the conviction that the judge has overstepped the mark, and turning against him. A prisoner who no doubt is guilty may well be acquitted if the jury should feel that the judge has been unfair to him: they correct that supposed unfairness by leaning far too heavily in the prisoner's favour.

I believe that this really indefinable sense of fairness and unfairness, consecrated in the traditional formulas of the court, is the entire substance of the English process of trial. It sounds simple enough, perhaps; but it is in fact a very remarkable social achievement, and it constitutes in my opinion the greatest triumph of the Common Law. The proper conduct of a Common Law jury trial makes high demands upon the judge, and it is, indeed, the judges who over a long period of time hammered out the process which we now admire.

But the trial is not possible unless there is also a jury having a special quality. Reflect for a moment how odd it is that twelve members of the public should be able to reach a unanimous verdict: a unanimous verdict remains necessary in England for a criminal conviction. It is because such a jury can be impanelled in England, and because there exists a judge with whom that jury can and does collaborate, that we have in England the kind of criminal process which we do have. (Broadcast in the BBC's General Overseas Service)

Nasser's Aims in Africa

STANLEY PARKER discusses an article in an official Egyptian review which may well foreshadow President Nasser's future African policy

EGYPT belongs to three worlds. Physically, she is part of the African continent. In language, and predominantly in race and religion, Egyptians are Arabs. Egypt is also part of a larger entity, the Moslem world, in which the Arabs are geographically the most compact, and culturally the most homogeneous, group.

In his book, *The Philosophy of the Revolution*, Colonel Nasser claimed for Egypt leadership of the Arabs and of the peoples of Africa. In doing this he broke with Egyptian tradition, for the sophisticated citizens of Cairo and Alexandria have not been accustomed to thinking of themselves as Africans. Indeed, when the Khedive Ismail spoke at the inauguration of the Suez Canal he declared: 'My country is no longer in Africa; we are a part of Europe.' He was expressing an idea which Egyptians continued to cherish for more than half a century.

Colonel Nasser seems to be looking in an opposite direction; and his claim that Egypt is destined to lead Africa against Europe was recently developed in a journal. It was in the August issue of the *Egyptian Economic and Political Review*. The article, called 'An African Policy for Egypt,' is anonymous, but as the review is an official publication its opinions may be assumed to be approved by Colonel Nasser.

The writer asserts that Egypt is called upon to liberate African peoples from what he terms 'the deep abyss into which they have been driven by the power of foreign colonialism.' He envisages the creation in Egypt of an institute for African studies. This is to examine African lands and peoples from almost every angle—geographical, racial, historical,

religious, linguistic, economic, social, political, and so on. In particular, it is to study what he calls 'the imperialistic methods which have enabled some European states to maintain their hold on Africa.'

To promote the plan outside Egypt a vast propaganda organisation is proposed: at first it would be in the guise of a consular service. Backed by an extension of Egyptian broadcasting into all African languages, this organisation would extol Egyptian cultural achievements, spread the preaching of Islam, and promote the sale of Egyptian products.

The author of this ambitious project does not give an estimate of the expenditure involved. Nor does it seem to occur to him that some African peoples, notably the southern Sudanese and Ethiopians, have experienced Egyptian rule in the last century. They may not be so enthusiastic about Egyptian leadership. Nor does he seem to consider the extent to which such power and prosperity as Egypt has enjoyed have derived from her position on the Mediterranean, across which the greater part of her trade is still carried today.

The article in question suggests that Egypt should turn her back on the Mediterranean, and expend money and effort in countries with which Egypt has little in common and no prospect of important economic relations. Now, had this plan been published in a Cairo vernacular newspaper it might be dismissed as an Egyptian journalist's dream of empire. But it has appeared in an official review.

Colonel Nasser's action in nationalising the Suez Canal Company has been described as a 'transient impulse,' the instinctive reaction to what he considered a serious slight. But it is reported that on October 1 Colonel Nasser himself told South American journalists in Cairo that he had planned nationalisation for 1956, whether he obtained aid in building the Aswan High Dam or not. This could suggest that he is working to a time-table; and the publication of this article in this Egyptian review may well foreshadow his plans for Africa. (Broadcast in Overseas 'Commentary')

C. B. Fry with boys from the training ship 'Mercury,' which he saved from closing down after the death of its founder

The cricketer—he played for Sussex, Hampshire, Surrey, and England

Until the end of his life Fry continued to follow cricket with zest: watching a match at the age of eighty-three

C. B. FRY: England's Greatest All-Rounder

PETER WEST pays a tribute to the memory of a man who combined a brilliant career in cricket, football, and athletics with forty years' work preparing boys from humble homes for a life at sea

I SUPPOSE no other man in living memory had such a record of zealous, super-efficient versatility. At Oxford his all-round brilliance—academic and athletic—was quite astonishing: cricket, soccer, running, rugby football. He set up a world record for the long jump which was to stand for many years. He collected a double first in the classics, and more than held his own with brilliant contemporaries such as F. E. Smith, later Lord Birkenhead, and John Simon. Cricket for England, soccer for England, and, later, his own magazine in Fleet Street.

I remember him holding court in his box at Lord's, declaiming Greek iambs and translating them for the benefit of his more ignorant guests, then at the next moment going off at a complete tangent by picking up an umbrella and demonstrating the correct method of playing the forward defensive stroke. I remember him, when he was seventy-six, leaping up the stairs of his club four steps at a time: a phenomenal man, still astonishingly young and fit in body then as well as in spirit.

After the first world war C. B. Fry went to Geneva with Ranjitsinhji as substitute-delegate on the Indian delegation to the League of Nations. When he was there he very nearly became king of Albania when that country was looking for an English country-gentleman with £10,000 a year! C. B. Fry had not got £10,000 a year, and nothing came of it. 'Ranji' took him home to India as his personal secretarial and political assistant, and Fry spent several happy years there.

The first time I met him was at a cricket match in the West Country in 1946. He was writing cricket reports then in his racy and quite inimitable style. I was a young reporter, he was a living legend. I sat at the feet of the master, enthralled to hear his tales of W. G. Grace and 'Ranji' and the 'Golden Age.' C. B. Fry liked a good audience: he was never at a loss for a word; and I was one of the best listeners he ever had. His telephonist did not arrive that day, and I volunteered to 'phone through his copy for him.

Honorary Captain in the Royal Navy

After he had heard me do it he said: 'I liked the sound of that. Your voice is right. You seem to know something about cricket. The BBC are looking for new commentators. I'll write to the head man.' Frankly, I did not believe him: I thought he was playing the great man.

I did not realise then that he had dedicated most of his life to giving young chaps a push up the ladder; and that is just what he did for me. I did not know then that at the height of his fame, before the first world war, with the cricket world and much else at his feet, he had given most of his life to running the training ship *Mercury*—to training young boys from humble homes and preparing them for the Navy. The founder died in 1908, and the establishment was in danger of closing down. 'I thought it worthwhile,' he wrote, 'to put other things in life aside and offer to try to carry it on. The real reason why I did it was simply annoyance at the sheer stupidity of allowing such a work to die.'

While a classical scholar at Wadham College, Oxford, Fry astonished his contemporaries—and himself—by setting up a world record for the long jump

He ran that ship for more than forty years, and the Navy gave him the honorary rank of a captain. This really was Fry's life-work, a dedication in an obscure backwater when, if he had wished, the spotlight might have shone upon him in some far more glamorous field. Lord Birkenhead came to see him once at the *Mercury*. 'A lovely place, C.B.,' he said, 'and a fine show. But for you it has been a backwater.' 'The question remains,' Fry replied, 'whether it is better to be successful or happy. It is a good thing for a boy in his first fortnight here to discover that it is worthwhile to make a fine art of cleaning a bucket.'

I suppose C. B. Fry was successful at a greater variety of things than anyone else in this modern world. I doubt if there was anything to which he could not, had he wished, have turned a skilful, efficient hand and a zealous, enquiring spirit. His testament, written in 1939, he called *Life Worth Living*. And if ever a man lived a life worth living and was happy, if ever a man enriched the lives of many others, then it was C. B. Fry. (Broadcast in 'London Calling Asia')

The Value o

ROGER MANVELL, who is a regular contributor in Britain, assesses the value to the critic of the gro ranging from lavish, state-sponsored affairs to sma

I HAVE attended in one or other professional capacity many European film festivals—in Berlin, Venice, Cannes, and, of course, in Edinburgh at our own British festival. I have served for several years on an advisory committee connected with them, and twice served as British representative on the jury at Venice. But I am not in the least hardened to these festivals.

Many people are cynical about them: they go there, as it were, with their hands in their pockets and expect masterpieces by the dozen to be served up for them on the screen. They suspect vague forms of corruption in the way the awards are given, whereas most of the corruption I have seen is created by themselves in trying to get invitations to parties. Some of the festivals are giving themselves a bad name by turning down films on various political and religious counts; but this kind of thing is a dilemma at any international event, the dilemma of plain-speaking versus international face-saving or even simple courtesy, which the hard-headed critic will always tend to disregard. Most of these turned-down films get shown under the counter at the festivals in some small cinema.

An Army of Pressmen

But I do know this: you have to have the constitution of an ox to survive a film festival and take full advantage of it. At Cannes this year it became possible to see six films or programmes of films in a single day and night. Screenings started at ten-thirty in the morning, and the latest one I attended—one of the unofficial ones—began at one-thirty in the small hours of the morning.

That is what festivals are really for: to see films from many countries assembled at one place for a limited period of time. Most of those shown form part of the official festival, but many others are shown on the side. The festivals attract an army of pressmen—the army is about 500 at Venice or Cannes—and delegations of producers, executives, publicists, and distributors. Photographers buzz round stars and other famous personalities, and send pictures of them in various standard attitudes of happiness to the picture-papers of the world.

Only a few people—film wives or delegates with no particular film worries to attend to—grace the beach alongside the tirelessly posing stars, who pause to sign autographs between camera-shots. Most of us spend far too many of the sunshine hours in the familiar dark of the cinema or in the babble of the innumerable international conferences which take advantage of the festival congregations to hold their annual rallies. After all this the parties form a genuine chance to relax and gossip with friends from other countries whom one relies on meeting regularly at the festivals.

Now, any country which enters for all the annual events officially recognised by the International Film Producers' Association cannot hope to produce masterpieces for each one: normally each main film-producing country has to enter two or three films for each festival. In some countries there are certain commercial advantages attached to entering films, and producers have sometimes taken advantage of this situation and sent in their commercial best-sellers rather than the best films at their disposal from the artistic point of view.

Anna Magnani arriving at a cinema for the Venice premiere of 'Sister Letizia'

Film Festivals

Films to See,' the G.O.S. monthly review of releases number of festivals held in various European cities, nes organised by enthusiasts out of local resources

Platinum-haired Elena Giusti signing autographs for young fans on the beach at Venice

This year Venice tightened up its regulations regarding the entry of feature films: they only invited particular films for the competition that they wanted to show, and were no longer prepared to accept whatever the producers chose to send in. The result of this was that Britain, along with certain other countries, only competed in the field of short films.

A strong entry of nearly twenty short films from Britain included what has now become a famous cartoon, made by Joan and Peter Foldes, and called *A Short Vision*. It is the film of the silent, sinister arrival of a flying bomb over a sleeping city—the film that became celebrated overnight in America, when the commentator, Ed Sullivan, included it in his television programme. The music for the sound-track was composed by Matyas Seiber. The film won an award.

The film festivals are mainly of two different kinds: those that are lavish affairs—state-sponsored, with hotels full of guests, including the journalists—and the festivals organised by the enthusiasts out of limited local resources. Cannes (which is held in the spring), Berlin (early summer), and Venice (late summer) are festivals of the state-sponsored kind. They are considered good for national prestige, and attract world-wide interest through the personalities present.

In eastern Europe the big state-sponsored film festival takes place every other year at Karlovy Vary in Czechoslovakia. Britain has been fairly consistently represented there; our feature film called *A Town Like Alice* was entered—the film telling the story of the effect of the Japanese invasion of Malaya during the war on a group of British women prisoners.

The annual film festival in West Berlin has also become an established event, not unconnected with West Berlin's unique position in the political world. The chief awards given are Golden and Silver Bears, just as Venice gives Golden and Silver Lions. The struggle in Berlin, which like Venice and Cannes appoints an international jury of film personalities to decide on the awards, lay this year between Gene Kelly's Anglo-American production *Invitation to the Dance* and Sir Laurence Olivier's film production of Shakespeare's *Richard III*. Gene Kelly's film won in the end, placing Olivier's film second.

Private Enterprise at Edinburgh

The second kind of festival is not state-sponsored: it is, perhaps, peculiar to Britain that it has been left to private enterprise to launch what has become in ten years one of the most successful international festivals of its kind in the world, showing in three weeks each year some 150 films from more than thirty countries. The Edinburgh film festival was started entirely independently by a film society—the Edinburgh Film Guild, which is one of the oldest established cine-clubs in Britain: it was founded over a quarter of a century ago.

Starting tentatively with screenings of international documentaries, realist films, and other specialised and *avant-garde* types of movie, it has developed rapidly into a wholly representative festival recognised by all branches of the film industry and showing virtually every kind of film.

This year Edinburgh has had a flourishing rival in these islands: Eire launched her own festival in Cork, again organised by the local film

Festivals are showplaces for starlets—A shot from the Danish documentary, Caryll Gumm and Marisa Atlasio at Venice 'The Last Cannibals,' shown at Edinburgh

society. It lasted a week, was visited by many film people, and was a rousing success. I did not make it myself, but I intend to go next year.

I have almost forgotten to add that there are in addition to these general film festivals a considerable number of specialised ones which range from film weeks, organised mostly by the Italian and French industries to present their latest productions in various parts of the world, to festivals dedicated to particular branches of film-making, like advertising films, scientific films, films about art, cartoon-animation films, and so on. For example, we are organising a festival of international cartoon and animation in London next Christmas.

Film, you see, is the most vital and productive art apart from writing itself now operating in the world, and the most internationally minded. It does not address its main expression to cliques or to closed groups of people with specialised tastes. It begins by serving the general public in the field of entertainment and information, and then places its considerable technical resources at the disposal of every activity of mankind—industrial, scientific, agricultural, as well as artistic.

There seems to be no limit to its growth and to its use, until entertainment becomes only one branch in the main stream of production, much of which will never be seen by the general public. And it is at the various festivals that we can at least attempt to gather the strings together and see where the screen has got to in the broad and active world of the movie. (Broadcast in the BBC's *General Overseas Service*)

Norman Buckley and 'Miss Windermere III' at rest, and (right) during the run in which he set up a world record by covering 79.66 miles in an hour

Here and There

SPEED-BOAT RECORD

THREE days before Donald Campbell made his record run on Coniston Water, in the Lake District, Mr. Norman Buckley, a Manchester solicitor, set up a new world record for boats of unlimited class by covering 79.66 miles in an hour on Windermere—15 miles an hour more than the previous record held by Herr Von Mayenberg, of Germany.

The setting for Buckley's record-breaking run was Lakeland in all its autumn splendour. The placid waters of Windermere reflected the warm September sunshine and the green and russet leafiness of the wooded shores.

In the distance the peaks of Skiddaw and the Langdales struggled to push their rugged outline through the receding morning mist—mist that delayed the record attempt for almost three hours.

Mr. Buckley had timed his bid for 7.30 a.m. The ends of a five-mile course between Lakeside and Bowness had been pin-pointed by marker buoys. Time-keepers were standing by; spectators were gathering outside the headquarters of the Windermere Motor Boat Club overlooking the lake; excitement was mounting. And still the mist hung tantalisingly in an impenetrable grey blanket over the surface of the lake.

It was approaching ten o'clock before Buckley could bring his bright-green *Miss Windermere III* across from his Ambleside boat-house to the pier below the club-house. Soon the last lingering wisps of mist disappeared. Mechanics gave the boat a final check, and Buckley nosed her with a roar out onto the lake to begin his run. His target, he told me, was eighty miles in an hour.

It was quickly apparent a new record was on the way. *Miss Windermere* roared repeatedly up and down the five-mile course, throwing a great plume of white spray up behind her. This was the dogged endurance of the marathon runner, compared with the breath-taking sprinter's burst of Campbell's *Bluebird*.

Then, with success in sight, came eleventh-hour drama. Suddenly into view sailed a small pleasure-boat, setting up a disconcerting 'lop.' 'Slow down,' shouted the watchers on the shore, among them Mr. Donald Campbell. 'You'll wreck everything.' The man at the

wheel complied immediately. But *Miss Windermere III*, approaching away over on the other side of the lake, met the sudden disturbance and was forced to slow down. It cost about two miles an hour said the experts when it was all over, and Buckley had shaken a forest of congratulatory hands.

Success for the Manchester solicitor atoned for the bitter disappointment of an earlier attempt on the record in May. Then, on the very first lap, the boat hit a piece of driftwood which shattered the propeller and put a premature end to the bid.

TOM GERMAN

ELECTRONICS IN HOSPITAL

ST. THOMAS'S HOSPITAL, opposite the Houses of Parliament, has 600 in-patients and a staff of more than 1,000. They are spread over a dozen blocks, and it is often necessary to locate a doctor or a nurse at a moment's notice. Now this problem of locating an individual doctor in a large busy hospital without disturbing the patients and the rest of the staff with bell systems and loud-speaker announcements has been worrying the authorities for years.

A new system of staff location was recently demonstrated at St. Thomas's, and it is claimed

that it has all the advantages of the other systems and none of the drawbacks. After spending five years on research work, in conjunction with the Multitone Electric Company, they have put the new system into operation.

The doctors clip into their pockets a radio receiver, which weighs five ounces and is like a very fat fountain-pen. When an individual doctor is wanted, a signal is sent out from a small transmitter in the porter's lodge, and a buzzing note sounds only in the receiver of the wanted doctor.

It is loud enough to let him know he is wanted, but not loud enough to disturb the patients if he is in a ward. He goes to the nearest telephone, and—we are told—sometimes is found within five seconds. In any case, it never takes longer than two minutes.

Speech can also be transmitted, but St. Thomas's is not using this part of the system because the doctor cannot reply, and there is no way of telling whether he has received a message. Anyway, a continuous buzz from the fountain-pen receiver tells the doctor they wish to speak to him from the porter's lodge. So he presses the tip at the top of the fountain-pen, holds it to his ear, and he can then hear the message.

REGINALD TURNILL

The porter at St. Thomas's Hospital calling a doctor in the wards who is equipped with a pocket-size wireless receiver (right)

This Week's Listening

Nov. 25 — Dec. 1

'CHRISTIANITY AND RACE'

IN his earlier talks in this series Philip Mason has suggested that, far from its being obvious that estrangements over race would be cured by people all being better Christians, the whole Christian attitude is challenged, first by those who say that a rational system of ethics does not need the basic doctrine of a creative and loving God and, second, by those who believe that separation between races is compatible with a Christian faith.

Having agreed to attempt an answer to these challenges, he feels he must make clear how he himself relates the *New Testament* to the world about him.

He agrees that 'there can be no proof in matters of this kind—only ways of looking at things'—but in presenting 'A Personal View' this week he invites listeners to consider the process of reasoning by which he arrives at an ethical concept of the universe which he believes to be Christian.

G.O.S.: Monday 16.15; Tuesday 00.30 and 05.00

THE CAPE COLOURED PEOPLE

LAST week in 'From the Third Programme' G.O.S. listeners were able to hear the first of three talks chosen from the BBC Third Programme series on 'Aspects of Africa.'

One section of this series concentrated on reflective and personal talks on race relations in South Africa, and it is from this section that the talk for this week has been selected. The speaker is Dr. R. E. van der Ross, Principal of Battswood Teachers' Training College, Cape Town, and his subject is 'The Cape Coloured People.'

In this talk on his own people Dr. van der Ross discusses their general outlook on African affairs, outlines their social and political groupings, and describes their attitude to the *apartheid* legislation. He shows that the status to which they aspire is not just of Cape Coloured people but of full South Africans.

G.O.S.: Monday 15.15; Friday 23.15

Max Jaffa plays with the Orchestre Elegant in 'Melody Hour' on Sunday at 12.00, and Vanessa Lee sings 'Tunes to Delight' on Wednesday and Friday

RUSSIANS OFF DUTY

WHAT the Soviet citizen does in his 'off duty' hours will be the theme of George Gretton's talk on the Soviet Union in 'This Day and Age.' The scope of his talk is indicated by the fact that it will include an account of such world famous institutions as the Bolshoi Ballet Company and the Moscow Dynamo Sports Club, as well as an examination of social life in Russia.

George Gretton is the head of the BBC's East European Service which broadcasts daily to the Soviet Union and to all Communist countries in South-East Europe.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

JOHN ADDISON

IN the BBC Northern Orchestra's concert, conducted by John Hopkins on Friday at 19.00, there will be a performance of John Addison's ballet suite *Carte Blanche*.

John Addison, who was born in 1920, studied at the Royal College of Music, and in 1948 gained the Sullivan Prize. He did six years' war service, and was wounded at Caen. His compositions, which have already won high critical regard, include *Three Terpsichorean Studies*, *Concerto for trumpet*,

The English fleet under Admiral Darby coming to the relief of Gibraltar on April 12, 1781—an episode of 'The Great Siege,' which will be retold in a programme on Thursday at 19.00

strings, and percussion, and chamber music, as well as the attractive ballet *Carte Blanche*, from which the orchestral suite derives.

He has written music for such successful films as *Seven Days to Noon* and *Reach for the Sky*.

'ONCE upon a time' is the ancient, time-honoured English phrase which begins a great tale. In Lowland Scotland it was, however, 'Once upon ane tyme.' Whether it is one or the other, or whether it be in the language which claims to be more ancient than either Scottish or English—Gaelic—the phrase takes us back a long way.

It takes us back to the bard singing in the castle, to the young maiden humming to the child on her knee, to the fisherman telling the tale while waiting for the nets to tell theirs. Such is the material in George Bruce's compilation of songs and ballads which make up the programme for St. Andrew's Night, 'Once Upon a Time.'

In this programme will be heard songs from Lowland Scotland, and from the west in Gaelic (with the meaning given in English), the spoken ballad, and the tale simply told. And along with these will be heard the traditional instruments, such as the fiddle, associated with them.

The whole will give an idea of the great, rich heritage of story-telling that is to be found throughout Scotland.

G.O.S.: Friday 20.15; Saturday 01.00

THE WEEK'S PLAYS

'THE inimitable Jeeves,' as he is often referred to by his scarcely-less-inimitable master, Bertie Wooster, is naturally at the heart of the social and amorous complications which go to make up the plot of *Right-ho, Jeeves*, Dan Ferguson's radio adaptation of the novel by P. G. Wodehouse. Naughton Wayne plays the part of Bertie Wooster.

Naughton Wayne

This is vintage Wodehouse and the sort of humour for which he is best known to the widest audience. We are in that world of cheerful duffers and eccentric peers, disconcerting young ladies and imperturbable servants which he has so often and so happily created for us. Here, too, is that Woosterish slang which seems so slap-

Nov. 25 — Dec. 1

'ALL KINDS OF MUSICK'

A SERIES of four programmes entitled 'All Kinds of Musick' begins this week in which Cynthia Glover (soprano), Richard Walthew (clarinet), and Kathleen Frazier (piano) take part. Songs by Purcell, Arne, and Carey; Schubert's *The Shepherd on the Rock* for soprano and clarinet; *Andantino* by Florent Schmitt, and *Two Pieces* by Gabriel Grovlez (all for clarinet) will be included in the broadcast.

The aim of the concerts is to blend old and new, with music from Europe's past as well as present. British composers are represented, and no item demands more than a few performers.

G.O.S.: Monday 20.15; Tuesday 13.30; Wednesday 02.30

THE GREAT SIEGE

A DRAMATISED account of Gibraltar's last and longest siege, which began in June, 1779, will be broadcast on Thursday at 19.00. The attacking army of French and Spanish numbered some 61,000 men, yet 7,000 defenders successfully resisted it for more than three and a half years.

The help that came to them was slight, for during those years Britain was being defeated in the American War of Independence. The French were taking most of the West Indies, and one of their fleets was off Madras. In India the ruler of Mysore was cutting a British army to pieces. The British forces were stretched to their limit.

But on June 21, 1779, Spain was not at war, although Gibraltar buzzed with rumours. It is at this point that the story, as told in Philip McCutchan's 'The Great Siege,' begins. His script is based on contemporary narratives.

dash but is in fact so carefully and beautifully calculated for its comic effect. The present adventure is sparked off by Bertie's flight from the formidably romantic girl, Madeline Bassett, who none the less manages to hook Bertie's chum, Gussie Fink-Whistle, who in the course of his courtship ends up spending the night in jail dressed as a medieval jester.

This is all the more distracting for Bertie because he had promised to give away prizes at Aunt Dahlia's local show, though he was already worried about the tiff between his cousin Cynthia and her fiancé, Tippy Glossop. Does this sound complicated? Then listen to how Jeeves the butler sorts it all out.

With *The Case of the Eccentric Book Collector*, first of the cases of Francis Quarles (adapted by Lance Sieveking from Julian Symon's stories), we are back to the Sherlock Holmesian idiom of pure detection, with Quarles using a red shirt in Hampstead to trap a murderer in Kent. PETER FORSTER 'Right-ho, Jeeves': Sunday 01.00 and 18.30; Wednesday 14.15

'The Case of the Eccentric Book Collector': Monday 18.30; Friday 01.30 and 10.00

Directed by Sidney Sax

00.15 COLONIAL COMMENTARY

00.30 'I REMEMBER'
by Lady Violet Bonham Carter, D.B.E.
Daughter of Lord Oxford and Asquith, Lady Violet gives some impressions of the pre-1914 era when 'politics were the great national drama and Parliament the great stage on which all eyes were fixed.' She recalls some of the personalities of those days and the atmosphere of the time.
(repeated at 05.00)

A preview of the week's programmes
with recorded extracts
13.45-14.00 The World of Science
A weekly survey
of the latest developments

What I Believe. Professor A. J. Arberry has been Professor of Arabic at Cambridge University since 1947. On Sunday he will pay tribute to Reynold Alleyne Nicholson, the eminent authority on Islamic mysticism. Professor Arberry regards his encounter with Dr. Nicholson as the turning point in his life. One of Dr. Nicholson's poems will be read as well as extracts from Professor Arberry's translation of the Koran which was published recently.

Standards of Living. Changes in housing methods and in housing policy in London during the last twenty-five years will be discussed on Monday by H. W. Wells, a house-agent and chairman of Hemel Hempstead Development Corporation, W. G. Fiske, chairman of the London County Council Housing Committee, and Mrs. E. H. Andrade, a tenant of a L.C.C. flat. The team, under the chairmanship of Stephen Black, will talk of the housing shortage in London mainly due to the war and the subsequent shortage of materials, as well as to the fact that there has been a steady influx of business firms into London.

Personal Call. Yehudi Menuhin, one of the greatest violinists in the world today, was recently in London to make new commercial recordings and also to give a few concerts. It was at the end of a long day's work in the recording studio that he was interviewed by Stephen Black. That interview, which was recorded, will be broadcast on Tuesday.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes and provides a valuable supplement to the BBC's direct transmissions from London

Walsall leads the way...

New 70-seater, 30-ft., 2-axle, Trolleybus with

ELECTRICAL EQUIPMENT

The latest trolleybus. This one of advanced design, overall length, 30 ft., with seating capacity of 70. It weighs about 12 tons, with a total axle weight of approximately 24 tons, — a maximum of 95 h.p. driving motor.

Fifteen trolleybuses — which include the 1,000th Sunbeam chassis with BTH equipment — have recently been put into service by Walsall Corporation Transport. This undertaking ordered their first Sunbeam/BTH trolleybuses in 1933 and in the intervening years have placed a series of orders totalling sixty-six vehicles — convincing evidence of their confidence in BTH electric traction equipment.

Sunbeam/BTH trolleybus delivered to Walsall Corporation in 1933

LONDON CALLING

OVERSEAS JOURNAL OF THE BBC

'Settlers from Overseas'

This week listeners to the General Overseas Service will hear a programme about the problems of coloured people whose work has brought them to Britain. How the programme came to be written is explained in this introductory article by one of its producers, MAURICE BROWN

WHAT was on the minds of the ordinary people of our island and how could it be conveyed frankly to the listener? This was the idea behind 'On the Spot,' a series of broadcasts which was devised for the BBC's Light Programme. The second programme in this series was called 'Settlers from Overseas,' which will also be heard by listeners to the G.O.S. this week.

For the first broadcast in the Light Programme series, the four 'On the Spot' reporters—Wynford Vaughan Thomas, Cyril Ray, Robert Reid, and Edward Ward—visited between them many places in England, Wales, and Scotland to investigate what was on the public mind. They talked to people of all incomes, of various trades and occupations, of markedly different religious and political beliefs, and they came back to the studio with the recorded voices of some of those they had interviewed. There, Gilbert Harding delved into their findings and expressed his own opinions.

It was largely upon this evidence that Joe Burroughs and myself, the producers of this series, chose the subjects to be investigated. What was on the minds of this cross-section of the people of Britain?

The most important worries were the cost of living, housing, and the prospect of unemployment. The future of industry and the implications of automation, naturally, were subjects discussed in Manchester, Sheffield, the north-east, Birmingham, and Coventry; this year's harvest and the future of farming, in the rural areas.

The Housing Shortage

Towards the end of that first programme Cyril Ray, who was talking at the time about housing, mentioned some London property owned by Indians. 'And talking about Indians,' he said, 'reminds me of one subject that's got to be mentioned—race relations. The way we treat and talk about foreigners generally.'

'There's a resentment, we all know it, against West Indians, Cypriots, Jews, in varying degrees all over London, and a lot of it's due to the housing shortage. "Why should a black man have a council house when my Gladys can't get married because her and her Bert haven't got anywhere to live." That's the way the argument goes, and it's a nasty tone of voice and a nasty frame of mind that it leads to.'

'Oh, Cyril,' broke in Wynford Vaughan Thomas, 'when you're talking about race relationship and colour problems you've got to go to Birmingham for that.' So it was that for the 'Settlers from Overseas' programme the two

reporters engaged were Cyril Ray and Wynford Vaughan Thomas, one working in the Home Counties and the other in the west of England and in Birmingham.

Our two reporters were briefed. They were told, to examine all sides of the overseas settler problem. What was the reaction of American servicemen to Britain; were they accepted in British homes; did they buy their way into the hearts of our young women; did we treat them as pleasure-giving guests or as a necessity?

We asked them to solicit Welsh opinions on Italian coal-miners; north-country views on the

Poles, Ukrainians, and other Displaced Persons who are living and working there; East Anglian judgments on Yugoslav agricultural labourers.

We gave the reporters the addresses of Australian actors and writers who have recently come over to find fame; we suggested that German ex-prisoners-of-war who have settled down here and married were good people from which to get the pros and cons of living in Britain. 'And, get a lot about colour,' we said. 'The West Indians, the West Africans, South Africans—if you can find them—Indians and Pakistanis.'

At the end of the week our reporters came back with their records and their stories: they were all about colour.

Are We Hypocrites?

Cyril Ray started his quest at Manston, the large U.S. air-base in Kent, where he was told by a U.S. colonel from a southern state that we, the British, were hypocrites. 'We southern Americans admit a colour bar, and at home we apply it. You say there isn't one here in England, and yet you apply it. Go and ask one of my coloured airmen. He'll tell you.'

That colonel at Manston dines with his coloured officers in the mess, yet one of his coloured sergeants told Ray that his people were not allowed to go into a local dance-hall, where a famous Negro band was appearing. It was not the Americans who stopped them: it was the English proprietor.

It is with this sergeant's statement that we start our broadcast, 'Settlers from Overseas,' which despite our original ideas of broad coverage in the end concentrates on the colour problem in the British Isles and, with the exception of that one American—who I think changed our minds—on the success and troubles of the British West Indian.

We deal with the trade unions' attitude and that of white workers, with housing both good and bad, with white landlords and black, with crime, and with the coloured labourer, the student, and the university graduate.

You may well ask if we come to any conclusions? That, I think, is no part of our task in an 'On the Spot' programme. We all—Gilbert Harding, the reporters, and the producers—only attempt to air the facts we find and hear. Not being experts, we do not give judgment, but there is no question that as far as 'Settlers from Overseas' is concerned we all agreed with Gilbert Harding when he said during discussion: 'You can't have a Commonwealth and hate it.'

The Revolutionary Creed of Colonel Nasser

Colonel Nasser (centre) at a news conference in Cairo in 1953 on the anniversary of the coup against King Farouk; General Neguib is on his left

IN the days when General Neguib was the figurehead of Egypt a photograph was taken of that genial person surrounded by the young officers of the ruling junta. The General was puffing benevolently at his pipe, looking cheerful and rather rotund; but just behind his right shoulder there was a tall, heavily built colonel whose face, with its deep-set, dark-rimmed eyes, was perfectly blank and expressionless, giving no hint at all of the workings of the mind behind it.

Since then Gamal Abdel Nasser, now President of Egypt, has himself learnt something of the art of pleasing crowds and newspaper readers; but he remains in some ways an enigmatical figure still, aloof and conspiratorial, confiding his plans and ambitions only to a small circle of intimates. Even in Egypt, where his eyes fix you from almost every hoarding, his private personality remains little known. His friends are few and are nearly all revolutionaries, trained to secrecy like himself.

His life has been spent in the army, the last decade of it in fostering the revolutionary movement, and he has few links with the intelligentsia, the business and agricultural communities, or the old land-owning class. His home life is modest and blameless; no word of personal scandal has tainted his reputation; visiting foreigners nearly always come away with an impression of well-reasoned goodwill, tempered by righteous complaint.

However, we can learn something of the way his mind works from his one publication, a pamphlet called *The Philosophy of the Revolution*, which originally appeared as a pair of newspaper articles in Cairo. The precise authorship of this is perhaps a little dubious, and it may have been ghost-written by one of the two or three Egyptian journalists who are close to Nasser; but there seems no doubt that the ideas it expressed are Nasser's own, and it is certainly the nearest thing to a political declaration that has yet been given his authority.

Egypt's Role in the World

I think anyone who reads it would agree that its prime characteristic, and in many ways its most frightening one, is its extreme vagueness. The first part of the pamphlet is devoted to a rather hazy account of the origins of the Egyptian revolution of 1952—a political convulsion which was greeted with high hopes and enthusiasm all over the world. The second part is an analysis of some aspects of the Egyptian character and of the purposes of the revolution. The third and most interesting part is a discussion of the place Egypt should occupy in the modern world, and the role she is destined to play in the development of affairs. Nasser describes the Egyptian revolution as a double revolution—against imperialism and against social injustice—and similarly his book is roughly divided into those parts that deal with the internal condition of Egypt and those that deal with her external relations.

Nobody could call this book great literature or precise political thinking. Neguib once said it should be called the psychology, not the philosophy, of the revolution. It is the expression, I think, of a most talented visionary, a man whose ideas are not firmly crystallised by education or experience but whose horizons, as he says himself, are boundless. The Egyptian revolution and its aftermath has not been cast to any existing pattern. No single previous body of political thought has guided the actions of the ruling junta.

If Fascism has had its influence on some aspects of Egyptian policy, the language of Marxism is often apparent too. Egypt's rulers, with

JAMES MORRIS, who until recently was the Middle East correspondent of *The Times*, discusses the implications of a pamphlet entitled *The Philosophy of the Revolution* which was originally published in Cairo in the spring of 1954. 'There seems no doubt,' he says, 'that the ideas it expressed are Nasser's own, and it is certainly the nearest thing to a political declaration that has yet been given his authority'

their limited and provincial experience, have ransacked the political philosophies of the earth for ideas and techniques that might help them in their task of reforming Egypt and giving her what they rather ominously call 'a place in the sun.'

As Nasser says in his pamphlet, all this activity is coloured by the circumstances of the Egyptian past. Through many centuries the Egyptians have been an oppressed or subject race engaged in constant struggles against alien rulers and invaders. Anyone who has lived in Egypt knows how this has tempered the thought of its people. The cynicism and wry, caustic humour of the cities are as characteristically Egyptian as the full-blooded, easy-going bonhomie of the countryside. Social dissatisfaction has marched side by side with suppressed nationalism, and this has produced a bitter strain in the national character.

Nasser well describes in the pamphlet how early and how constantly his mind dwelt upon such embittering topics. As a child, he says, he used to watch aircraft flying overhead and shout aloud: 'Oh God Almighty! May disaster overtake the English!'

In this respect, then, the progress of his thought has mirrored the general development of political activity in Egypt. He was a child of the nationalist era, brought up in those fermenting decades between the wars in which Egyptian dissatisfaction approached its boiling point. But he has reached his maturity, and his power, at a time when nationalism—that is, the drive for national independence—is becoming inextricably confused with greater issues—with racialism, the rise to eminence of the under-developed peoples, the new conflicts between Asia and the West—with all that heaving movement, in fact, which is associated with the name of Bandung.

Vendetta against the West

I think, reading between the lines of *The Philosophy of the Revolution*, you can easily see how much more interested Nasser is in the revolution against imperialism than he is in the revolution against social misery; and I think the pamphlet foreshadows clearly enough how his remarkable energies would become channelled into foreign adventures. In the event, this other revolution has become a campaign of vendetta against the West, and with the nationalisation of the Suez Canal has reached the point where it can split the entire world asunder.

Thus *The Philosophy of the Revolution* has implications far beyond those you might expect of an account of an internal political episode in a minor Mediterranean power. A year or two ago the world thought, and most Egyptians did too, that Egypt was on the threshold of a period of sensible, hard-working self-improvement. Nasser, with his colleagues, had brought to fruition the dreams genuinely shared by the vast majority of thinking Egyptians. The British were leaving the Canal Zone; the Sudan Condominium was ended; Egypt's long-vaunted national aspirations were fulfilled. Nasser seemed to have rationalised and satisfied all the emotional yearnings of his unhappy people.

But the revolution has not quite worked out that way. Nasser's visionary ambitions now far transcend the mere reform of Egyptian life. At his back are the slums and crowded provinces of poor Egypt; but in front of him there stretch prospects of endless opportunity.

What, then, are Nasser's aims, at least as they are expressed in this short work? I think, in order to gauge the calibre of the man, one must first emphasise that there is no real evidence of overriding personal ambition. Whatever you may think of Nasser's aspirations they are never simply cheap or shoddy. He himself draws a parallel between Pirandello's *Six Characters in Search of an Author* and the Middle East of today, which offers a role only looking for an actor to play it; but I do not think he sees himself personally as that actor. It is the place that Egypt must occupy in the world that first concerns him; and this leads him through rather hazy channels to a preoccupation with the future of the Arabs as a whole, of Islam, and of all the under-developed peoples.

One of his theses is that Egypt is uniquely qualified by geography to be the centre of three overlapping circles of activity. First, there is the Arab circle. Egypt and the Arabs are one, he says (though not all Arabs would agree with him); its history is their history; its interests are their interests; and its future, he implies, must increasingly be their future. 'These are actual facts,' he says, 'and not mere words.' Then there is the Islamic world in general, with which Egypt is linked both by religion

(Continued on page 6)

Free navigation through the Suez Canal was guaranteed by treaty in 1888

The Panama Canal, linking the Atlantic and the Pacific, belongs to the U.S.A.

Control of the World's Waterways

DR. F. S. NORTLEDGE, Lecturer in International Relations at the London School of Economics, describes the ways in which freedom of navigation has been secured for the ships of all nations through some of the great canals, rivers, and straits of international importance

IN the Suez Canal crisis we have an example of how national sovereignty may conflict with claims of the international community. Countries depending for their livelihood on a waterway such as the Suez Canal naturally want guarantees that it will remain open under efficient management. And yet the state in whose territory the waterway lies will want to be master in its own house. How can these interests be reconciled? What does 'internationalisation' mean in relation to these arteries of commerce? Some light may be thrown on this by looking at the other great waterways to see what has been done there.

We should begin by distinguishing between canals, rivers, and straits. The general rules for all of these are much the same, but different regimes for each have been evolved. As for canals, no international interest arises with purely internal canals, such as the Erie Canal in America. But where a canal links the high seas freedom of navigation has generally been secured either by custom or convention.

The position of the Panama Canal is unique in many ways. Strictly speaking, the territory in which it lies is under the sovereignty of the Republic of Panama, which seceded from Colombia in 1903. By an arrangement in that year, however, Panama surrendered to the United States in perpetuity exclusive authority in a strip of territory ten miles wide in which to build the canal, receiving compensation in return and an annual rental now amounting to 2-million dollars. Today the canal is run by a company and the zone by a government, both created by United States law. Since 1940 the Canal Zone has been fortified like an integral part of American territory.

It may seem that the Panama Canal is a United States monopoly. But the same principle of freedom of navigation applying to the Suez Canal was extended to the Panama Canal by the so-called Hay-Pauncefote Treaty of 1901. This provision is strictly valid only as between the signatories—the United States and Britain, together with Panama and Colombia—whereas any one of nine Powers may invoke the Suez convention. But, as a matter of history, freedom of transit has been scrupulously maintained by the Panama Canal authorities. We should remember that the American canal is not the vital commercial artery that the Suez Canal is: last year only a third of the weight of cargo passing through the Suez Canal was carried through the Panama Canal. But the importance of the Panama Canal is growing.

Now for rivers. A river is described as international when it is navigable from the open sea and flows through more than one country. Since 1815 there has been a tendency to have all these rivers open to the flags of every nation. A hundred years ago the internationalisation of the Danube was proclaimed in Paris, and for some years after 1921 an international commission regulated the river as far as Ulm, in Germany, with a European commission for the lower reaches. By the peace treaties with Hungary, Rumania, and Bulgaria in 1946 the freedom of the Danube was reasserted, but when a conference to implement this met in Belgrade two years later Russia insisted that this was no concern of the West. So that the Danube is still legally an international highway, although control lies with the states it passes through, of whom Russia has been one since she acquired Bessarabia in 1940.

Many other European rivers were declared international by the peace settlements after 1918—parts of the Elbe, the Ulava, the Oder, Niemen, and so on. Two conventions issuing from a conference in Barcelona in 1921 established general freedom of navigation and equality of treatment, and had been ratified by many European countries by 1939. This

does not mean that freedom of navigation is yet part of the public law of Europe. But it does mean that the international community has established many far-reaching rights in regard to navigable rivers.

Lastly come straits—natural channels between two seas. If a strait is not wider than six miles it is usually deemed to belong to the country or countries on either side. But obligations have grown up to allow merchant ships and naval vessels on peaceful missions to pass through any strait if it is part of a recognised international highway.

There is a long story of Anglo-Russian rivalry behind the status of the Dardanelles and the Bosphorus, the straits which give access into the Black Sea. No doubt has ever existed that these are Turkish, but in 1923 Turkey, as a defeated Power, was compelled to demilitarise them. With the threat of war in Europe Turkey asked for authority to militarise the straits again. This was granted at Montreux in 1936, when conditions were agreed which govern the straits today. Turkey may not materially interfere with the passage of merchant ships.

As for naval ships, Black Sea Powers may send any number through, provided capital ships travel singly, while other Powers may have only limited tonnage in the straits at any one time. That is the position in peace. In war, if Turkey is neutral, she must close the straits to belligerent ships unless they are returning to bases or assisting victims of aggression under a pact binding Turkey. If Turkey is at war she has substantial discretion in regard to foreign warships.

What we have to look for, I suggest, is not uniformity as between one regime and another, but satisfaction with the particular formula arrived at on the part of the countries using the waterway and the sovereign Power. That is the crux of the problem. And satisfaction has to be mutual. In the long run the users must show that it is in the interests of the occupying Power, as well as their own, to have reliable guarantees. Generally they should be able to do this. After all, are they not the customers? (*Broadcast in the BBC's General Overseas Service*)

Both shores of the Dardanelles straits are in Turkish hands and fortified

Crossing the river Danube south of Bucharest between Rumania and Bulgaria

Nasser's Creed (Continued from page 4)

and by history. Finally, there is Africa. 'We cannot stand aside,' says Nasser, 'from the sanguinary and dreadful struggle now raging in the heart of Africa between 5-million whites and 200-million Africans.' Egypt guards the northern gateway of Africa, he says; the people of the continent look up to Cairo as their connecting link with the world outside; and besides, the Nile, the life-artery of Egypt, is an African river.

These three connecting circles, then, form Egypt's environment; and in Nasser's mind, I am sure, the renaissance of Egypt is not an end in itself but merely a step towards filling the special role in this environment that destiny has provided for her. Nasser's political thinking is heavily infused with concepts of destiny. 'Fate plays no tricks,' he tells us. 'The revolution was the will of fate.' And destiny has waiting for Egypt, for the Arabs, for the Africans and the Muslims, the prize of ultimate power.

It is not contentment or prosperity that Nasser is searching for: it is power. The three circles are circles of potential power, and to attain power unity and discipline are required. 'We make a mistake in our definition of power,' he says. 'Power is not merely shouting aloud. Power is acting positively with all the components of power.'

A Vision of Limitless Power

Egypt's fate, and his own duty, Nasser appears to think, is to unite these spheres of potential power into one great force, drawing upon three particular sources of strength—first, the spiritual and material bonds which link the peoples concerned; second, the crucial place occupied by Egypt on the map of the world; and third, oil. Even before the Bandung conference, which brought home to the world the immense latent strength of the under-developed peoples, Nasser seems to have grasped the possibilities of their united future. 'My mind travels,' he says in *The Philosophy of the Revolution*, 'to the 80-million Muslims in Indonesia, the 50-million in China, the millions in Malaya, Siam, and Burma, the 100-million in Pakistan, the 100-million in the Middle East, the 40-million in Russia; and I visualise a co-operation among them all that can guarantee for them and their brethren a limitless power.'

Then, explaining his conception of the Arab circle, he describes how greatly it is strengthened by the presence of oil. Half the world's reserves of petroleum, he points out, are still underground in the Arab regions, and the Arabs therefore control 'the vital nerve of civilisation.'

If this is so, then he must always have known that his aspirations would bring him into inevitable conflict with the West, and his hints of eventual alliance with the Western Powers must have been insincere from the start. His views on Africa, his plans for Arab control of the oil resources, even his militant views on the nature of Arab unity—all must inevitably throw him into direct conflict with Western interests. He is equally opposed, I am sure, to undue Russian influence in the Bandung area: his is Titoism carried to extremes, for he hopes to carry entire continents with him in walking the tight-rope between ideologies. But he is not, perhaps, a neutralist in the sense that Mr. Nehru is, 'from deep-rooted moral principle.'

In foreign affairs as in home affairs Nasser is essentially ruthless. If he is willing to antagonise everyone at home, he will not hesitate to make use of anybody abroad. He accepts Point Four aid from Washington, yet gets his arms from Czechoslovakia. America gives him railway engines, Russia sends him Canal pilots. He outlaws Communism in Egypt, yet willingly accepts the friendship of Moscow. His is an eclectic system of

Colonel Nasser parading through Cairo on his return from Alexandria where he had made the speech revealing his decision to nationalise the Suez Canal

diplomacy. He takes what comes, and only his basic, underlying purposes seem to be inflexible.

It is often argued, of course, that President Nasser needs foreign controversies to fortify the Egyptian ranks behind him. Certainly the Egyptians do not take kindly to authoritarian rule, and I concede that an occasional stimulus is required to reinforce their sense of unity. But I think everyone must agree that as the president of a power faced with nightmarish social and economic problems Nasser has allowed his interest in foreign affairs to get a little out of hand.

Consider the extent to which he has already set in progress those trains of activity outlined in *The Philosophy of the Revolution*. In the Arab world he has managed to capture the loyalties of people in every Arab country who see themselves as progressives. He has also managed by the example of his own success to make reform synonymous with nationalism, stealing the ball from more feudal rulers of the Middle East who have hitherto managed to retain some of the emotional appeal of anti-imperialism for their own objects.

In Iraq he is the hero of those, Communists excepted, who oppose the government of Nuri es Said, with its Western sympathies. In Jordan the army is clearly modelling its political activities upon his. From Saudi Arabia come reports of a Free Officers' movement based on the one which overthrew Farouk. In Aden Nasser's pictures hang in the bazaars. In Bahrain the progressive leaders gratefully receive encouragement from Cairo. A host of leaders from North Africa moves through the coffee-shops of Egypt. Cairo is the capital of the Arab world as never before.

But to a large extent this extraordinary success is an emotional one, though none the less potent for that; and it presupposes a permanent domination of the Arab world by Egypt, whether or not that is what Colonel Nasser actually envisages. Any thinking person can see that the resources which he hopes to tap are, in fact, not in his possession. Economically Egypt is a dead-weight in the Arab world: practically without oil, over-populated, plagued by disease and poverty, she is (materially speaking) grossly unqualified to lead the Arab world.

If she is to lead, then others must provide her with the wherewithal and allow her to bask in the glory. For years there has been meeting in Cairo an oil committee of the Arab League convened under Egyptian inspiration. Its purpose is to prepare for the time when the Arabs will take over control of the oilfields. The idea is foreshadowed in *The Philosophy of the Revolution*; but only the idea, and some of the technicians, can come from Cairo: the money-bags of the Middle East, like the oil, are elsewhere.

Anti-Westernism and Russia

And so though Nasser's emotional appeal is enormous, there must be many thoughtful Arabs who would hesitate to follow his lead too blindly. For example, Nasser's cavalier treatment of the West, though obviously beguiling to former subject peoples, carries with it dangers as well as heady inspirations.

The more Nasser antagonises the West, the more he appears to depend for his strength upon the support of the Soviet Union. His seizure of the Suez Canal may have confirmed his far-sighted ideas about the potentialities of the Bandung block, but it has proved that for the moment such countries as Egypt cannot dismiss the West without accepting the support of Russia, with all its dangers.

Nasser used to say that he had seized the initiative of nationalism from the Communists, but it is a moot point now just who is doing the seizing. Do the well-meaning progressives of the Middle East, enthusiastically climbing aboard Nasser's band-wagon, really mean to burn their fingers in this way? Do the African nationalists want to find themselves enmeshed in Russian ambitions? Obviously the kings and pashas of the Middle East can only view such developments with foreboding, but I suspect the honest intellectuals and army officers must one day pause to ask themselves if emotion is not leading them into perilous alley-ways.

Moreover the Egyptian revolution itself, which aroused such hopes among liberals and men of good will everywhere, has inevitably become distorted under Nasser's leadership. Political life is dead in Egypt; party politics are banned; the new constitution is meaningless, and the referendum held to approve it was farcical. The army still controls everything, and Nasser is at least as supreme an autocrat as any pasha or antique monarch.

All this may be necessary in the present condition of Egypt, but nobody could call it liberalism. Indeed, I think Nasser still fails to express all the characteristics of the Egyptian people. He is cold, conspiratorial, visionary; they are warm-blooded, amusing, friendly. He reflects admirably that strain of restless dissatisfaction and cynicism induced in the Egyptians by generations of foreign rule; he has brilliantly exploited their patriotism; but he seems quite alien to the geniality and bonhomie that refreshes so much of Egyptian life. For Nasser is a man of turmoil. Nobody can deny him his qualities of dynamic determination: he undoubtedly reflects a great instinctive urge for power that is welling up in the hitherto powerless nations. As such, he is at once an inspiration and a symbol. But there must be many an Arab, many an African, many an Asian who prefers a life of peaceful progress and endeavour; and perhaps in the long run their philosophies may prove more potent than President Nasser's. Athena Seyler as Maria in 'Twelfth Night,' with Roger Livesey as Sir Toby

'My favourite of all': Athena Seyler (second from right) as the Old Lady in 'Henry VIII,' with Charles Laughton as the King

'The best short part ever written for comedy'—Caroline, in 'Who Is Sylvia?'

The Pleasure of Playing Small Parts

ATHENE SEYLER looks back over a long and successful career on the London stage, and picks out some of the supporting roles which though they do not carry a high place on the play-bill yet give great satisfaction to the player

THE supporting role, or less pretentiously the small part, is a subject I take great interest in. I have played many leading parts in a long career, and I have played many short ones, and there really is a lot to be said for the small part. Many actresses fight shy of them; they consider them a come-down from the starring role; and there are some obvious disadvantages attached, I am bound to admit. Of course there is the billing, which looms large in the average actor's mind—and in his contract. If your part is not the leading one you come below the title on the advertisements.

I hope I am not giving away many professional secrets, but it really seems to matter to some of us whether our names are displayed above or below the name of the play, however big the type. You will know, if you remember advertisements of theatres, that there is a list of the names of the players, a few of them picked out in large type, some of them above the title of the play and some below; and occasionally you will notice at the bottom one name which has 'with' so-and-so; or 'and' so-and-so: there is a little theatrical joke which always suggests that perhaps some players ought to have 'but' so-and-so at the bottom!

But the point about this is that those players' names which are below the title, particularly the ones who are in big type, however grand they may look, are not quite on the same standing as the ones which head the bill. I often wonder whether the public bothers much about this themselves; in fact, whether they know that it matters at all. However, this point is a very important one in the minds of many actors, and it is one that prevents their playing the smaller parts.

Precedence in the Dressing Room

Now, there is also concerned with this question of precedence in names the question of precedence in your dressing room in the theatre. There is always a star dressing room—in fact, there are two star dressing rooms, one for the lady and one for the gentleman who heads the cast; and then there are the other dressing rooms which go upwards this time—up the stairs—until if you are only a very small player you find yourself practically under the roof.

So that if you are not playing the leading part your dressing room will not be in the most convenient place, or the largest or the best ventilated, or indeed the best decorated; and that is again something which actors rather fight shy of when they are accepting an engagement.

More important still is the question of the calls at the end of the play. Perhaps, again, the public do not notice very much, but it is the lesser players who take their calls first, and that too is graded upwards until the final curtain is taken by the leading people, who then call on their lesser players.

I think it is a pity that actors should take all these things into consideration in refusing a small part, in which they could perhaps easily make a great success and enhance their reputation. I think they are wrong, because so often a short fat part is more rewarding than a long thin one. And then again the failure of a play is so often identified with the name of the leading player: quite an unjustified judgment in many cases, but very common. To be associated with one or two failures running is very damaging for anyone playing the leading parts in them,

whereas the small parts, if they have been good small parts, will be remembered possibly as the bright spots in a disappointing evening.

The experienced player is not likely to be asked to play such a very small part that there might be a repetition of a very sad story connected with a young lady's first appearance at a West End theatre. She had a very short scene, and she was, as a very small player, dressing in a room right at the top of the theatre. Her family had engaged the two front rows of the dress circle in order to applaud her first appearance, but, alas, the call girl forgot to call her; she did not come down to the stage at all the whole evening, and the play proceeded without one sign of her.

Two things are necessary to make a small part really worth playing. First, the position of the part in the play; secondly, that the part should really affect the action of the story. It is little use to have a bright, effective few minutes in the first act if the character never appears again, and by the end of the piece is quite forgotten. And, again, it is not very valuable to have a kind of revue-sketch scene, however amusing in itself, if it is not bound up with the plot, for it is obviously only padding.

When I Brought Down the Curtain

The best smaller roles should appear in all the acts, of course, but, failing that, certainly in the last one. In connection with this I played the best short part ever written for comedy, I should think, in *Who Is Sylvia?* by Terence Rattigan. I had the last eleven minutes of the play, and brought down the curtain, and in that eleven minutes there were twenty-two laughs, not, of course, on my lines exclusively but on the situation and the playing of the two men who were with me in the scene. Well, that is what might be called a plum of a small part.

There is the added advantage in playing a small part of having an easy job; I hate to sound lazy—as a matter of fact I love hard work—but for a change in *Who Is Sylvia?* it was rather fun to dine at home like a lady and only set out to work when the others in the company had been hard at it for two hours. I am afraid this is an unworthy view of one's work, for which I apologise; but our job is not valued by the hours we put in but by the concentration and nervous energy that we put into it.

I have played so many supporting parts that I dearly love: Shakespeare's Nerissa, a darling; and the Nurse in *Romeo and Juliet*; and Maria; but not, oh, not one of those beastly witches in *Macbeth*! Oscar Wilde's Lady Bracknell, of course, and the Duchess of Berwick in *Lady Windermere's Fan*, though she is placed a little too early in the play to count among the first rank of lesser ladies. I saw Ellen Terry play the Nurse in *Romeo and Juliet*, and Edith Evans do Lady Wishfort in *The Way of the World*, when she became the whole centre of the play by a miracle of playing.

Emotional and tragic small roles I must leave to others, as I have no experience of them; but to end my list I would like to quote a scene from perhaps my favourite of all: the Old Lady in *Henry VIII*. I played her at the Old Vic; and it was like jumping over a blue puddle on a bright windy day, so exhilarated did one feel. It was as if one had accomplished something arduous and difficult instead of something very easy and delightful. (*Broadcast in the BBC's General Overseas Service*)

The Daily Pageant of Wimpole Street

Wimpole Street, looking north towards Regent's Park—'a long canyon, with rows of four- and five-storey houses presenting an air of solid respectability'

IT must have been very helpful in the past when the street names of London indicated the merchandise or the trades that were to be found in them. How simple to go straight to Bread Street, Butcher Road, Poultry, Orchard Street, or Carpenters Road for one's wants! That the names matched the character of the street is proved over and over again. Fish Street is still in the middle of Billingsgate fish-market, and Lavender Grove is at Mitcham where lavender is still grown in large quantities. I expect many exceptions can be found: I doubt if a saint ever lived in Apostle Road, E.C.2, or that a fabulous bird spread its wings in Phoenix Street, but nevertheless in London, as in many other old cities, most street names are associated with the trade that flourished in it, the owner of the land, or the time at which it was built.

For this reason I am fortunate in the name of the street in which I live. I live in Wimpole Street, which is called after the county estates of the earls of Oxfordshire who owned the land in London. It might well have been named Medicine Street or Anaesthetic Avenue, as there are more doctors to the square yard practising in Wimpole Street than almost anywhere else in the world. Yet it is not as a medical centre that Wimpole Street is most widely known. A number of books, a play, and later a film have highlighted the street as the scene of a romantic elopement that came about—ironically, in spite of the doctors—when the chronic invalid, Miss Elizabeth Barrett, walked out of No. 50 Wimpole Street to marry Mr. Robert Browning in September, 1846.

Peculiar and Very Special Atmosphere

But first I must tell you about the street as it is today. The postal address is W.1. Geographically, it runs at right angles to one of the largest and busiest shopping streets in London—Oxford Street—then it runs up north towards the quiet of Regent's Park. The streets that surround us are minor characters in the daily pageant of Wimpole Street. It is bounded to the west by a number of smaller streets associated with auxiliaries of the medical profession—physiotherapists, masseurs, nursing homes, and instrument-makers. On the east there is Harley Street, which is equally famous as a centre for specialists and consultants. But my main interest eastwards is that the BBC's Broadcasting House is just a four-minute walk away.

Each day as I walk to work I enjoy the peculiar and very special atmosphere of Wimpole Street. It is a long canyon of a street, with rows of four- and five-storey houses, tightly packed together, presenting an air of solid respectability. Tennyson was rather rude about Wimpole Street: he called it a long, unlovely street, but we are more accustomed to built-up areas in the twentieth century. The Georgian and Victorian façades have weathered, and, in spite of severe losses by bombing it has a dignified unity in its architecture.

AUDREY RUSSELL talks about the street in the heart of London which shares with neighbouring Harley Street the distinction of housing some of England's leading medical specialists, but is perhaps more widely known as the setting for the meeting and romantic elopement of the nineteenth-century poets, Elizabeth Barrett and Robert Browning

Wimpole Street has many features that must be nearly unique. You can tell the time of day and the seasons there without a watch or calendar. I always know when the school holidays have started, by the numbers of schoolchildren being hurried along for dentists' and oculists' appointments. Then the appearance of a large proportion of young people with arms and legs in plaster indicates the end of the winter-sports season in Switzerland. If the street is full of taxis, then you may be sure that the clock points to the hour or the half-hour, for that is the time of most medical appointments, when the taxi-drivers set down their fares. It is at these times, too, that a few itinerant flower-sellers appear, impudently capitalising on superstition by offering sprigs of white heather at the very doors of some of London's best-known consultants.

In the evening it is apparent when six o'clock comes, for a vast and otherwise unobtrusive population emerges from the basements. These are the caretakers who come into their own as doctors and patients leave. Doors are opened wide, brass plates are polished, steps are scoured, and the noise of vacuum cleaners *en masse* resembles a jet machine. When the last mat is shaken out a silence descends on Wimpole Street. Only a handful of cars, left out all night, indicates a few hard-pressed doctors who expect an emergency call.

Comparatively Few Resident Doctors

One of the odd features of Wimpole Street is that comparatively few doctors live there. The days are nearly over when each house was occupied by one practitioner and his family. Rooms are let out singly as consulting rooms, and the prestige of Wimpole Street is carefully guarded by the estate owning the property. Only fully qualified doctors who hold an appointment at a hospital may practise there, and only a limited number may occupy one house and put up a plate on the door. Rents are high for doctors, and only the very successful can afford the splendid isolation of a single brass plate beneath the letter-box.

In America and some other parts of the world doctors call the rooms in which they work their 'offices.' This does not apply to Wimpole Street, for there is still a conscious effort to preserve the atmosphere of the private house. This is most manifest in the room shared by all the consultants in the house: the waiting room. As this is usually on the front of the ground floor, the waiting rooms of Wimpole Street present a series of more or less similar vistas as one walks along the street. Traditionally, they are furnished as dining rooms, but no one has eaten there for years. Generally, a massive mahogany table fills the centre of the room, and you can see the patients sitting round it, trying to allay anxiety or boredom by skimming through the back numbers of magazines. In recent years there has been a move to modernise some of these rooms, but I believe many doctors (in their heart of hearts) regard it as hazardous. There is nothing like a suite of antique dining room furniture to give the air of a well-established practice.

The first doctor to practise in Wimpole Street is famous nowadays only for the reason that he was the first. His name was Sir Lucas Pepys, who came to the street sometime after 1770. In his lifetime honours were showered upon him. He was physician to the King, and was elected President of the Royal College of Physicians in 1804. A few well-known personalities unconnected with medicine have also lived there. Wilkie Collins the novelist ended his days in No. 82. Henry Hallam, historian and friend of Tennyson, lived at 67. Lady Wellington, wife of the Iron Duke, had lodgings there during the Peninsular War.

It is hard to believe that less than 200 years ago the pavements and roads did not exist and that grass grew over the Marylebone Fields, which were then in the news as a proposed new residential area ready for development. It was advertised as having the advantage of being nearer Westminster than the already popular district of Bloomsbury; other attractions offered were a well-established market, a small village, and a pretty church. The church—now known as St. Peter's, Vere Street—still forms the southern boundary of Wimpole Street. It was already built by the end of 1724. It is a plain rectangular building of red and grey brick—just the sort of church suitable for a small country district. Today its congregation has a nucleus of caretakers and office-workers. It is very popular for weddings, and on windy Saturdays the confetti sweeps prettily along our pavements in starry drifts.

St. Peter's is now being surrounded by office and shop buildings more than twice its height, but it holds its own architecturally and fits in with contemporary design without any sense of incongruity. The market by the church has disappeared, but we still have the original winding village

A scene from the 1948 London production of 'The Barretts of Wimpole Street'; and (right) No. 50 Wimpole Street, the house which replaces the one where Elizabeth Barrett and Robert Browning met

street in Marylebone Lane. This is about two minutes away from Wimpole Street, and the one-storey shops sell the same kind of things as over 100 years ago: a dairy, two provision shops, a sweet shop, and two cobblers.

Building progressed through the eighteenth century, from 1724 onwards. Land was sold in strips, and houses built to fit in to the street plan. It was not until some sixty years later that the final blocks of Wimpole Street were completed. It was to a house already about fifty years old at the northern end of Wimpole Street that the family of Mr. Edward Moulton Barrett moved in 1838. I am often asked by strangers to point out the house in which Elizabeth Barrett lived. Unfortunately, it was demolished by a doctor who owned it early in this century, and who rebuilt a neat, grey-looking house to his own tastes sometime between the two wars. A short inscription cut into the Portland stone commemorates the fact that the poet lived in a house on the site, 1838-1846.

It is worth looking at the house next door to get an idea of what the Barretts' home was like. It is a replica of the style, and it is thought it was built by a builder who did a lot of work in Wimpole Street—Samuel Adam. It is a four-storey house with brick-and-stone façades. The front door is to one side, balanced by the very large dining room window. The reception rooms are high ceilinged and dignified, the bedrooms are on the top floors. Elizabeth Barrett's room was probably very large—more than twenty-four feet by twelve—on the second floor at the back.

It was, perhaps, one of the first attempts at a bed-sitting-room in the Victorian age, for the bed was made to look like a sofa, the washstand was covered in, and shelves of books gave the appearance of a study. It was the room that she hardly left for five years. 'We live,' she wrote, 'on the verge of the town rather than in it, and our noises are cousins to silence.' The breathings of her spaniel, Flush, were, she said, the loudest sounds, then the watch's tickings, and then her heart when it beat too turbulently. Although we are now in the centre of London,

Wimpole Street noises are still cousins to silence, at least at night-time.

The exact nature of Elizabeth Barrett's chronic illness has never been diagnosed. Several authorities mention an injury to the spine due to a fall from a horse; others refer to a serious affection of the nerves causing severe bouts of pain—it would probably be diagnosed in Wimpole Street today as a slipped disc.

It was to this recluse, this confirmed invalid, that the vigorous, vital Mr. Robert Browning paid his first visit on May 20, 1845. The poets had corresponded for some months about each other's work, and as one excellent biographer, Miss Dorothy Hewlett, aptly puts it: 'From the warmth of his correspondence we cannot but doubt that Robert Browning came to Wimpole Street on that spring day ready to fall in love.' Gradually Miss Barrett's health improved. His presence and affection gave her courage, and she took a few faltering steps about her room. At the end of a few months she went out visiting and went for short drives around Regent's Park.

But, as everyone who has read the story knows, it was that enigmatic man, her father, who drove the lovers to a secret wedding and elopement. He disapproved of marriage for any of his children. And so it was that, accompanied by her faithful maid, Wilson, Elizabeth Barrett walked up Wimpole Street to the big church in Marylebone Road by Regent's Park: there she married Robert Browning. At half-past eleven husband and wife parted: Elizabeth took off her wedding ring and, after calling on one of her dearest friends to break the news, returned to Wimpole Street for a week. Her health was still delicate, and they prudently decided against the marriage ceremony and flight all in the one day. But on the afternoon of September 19, 1846, she left the street for ever. Once again she walked to the corner: Browning was waiting in a hansom cab, and together they travelled to the railway station on the first stage of their journey to Italy and freedom. (Broadcast in the BBC's Pacific Service)

St. Peter's Church, built before 1724, is at the southern end of Wimpole Street

GEOFFREY WHEELER

GEOFFREY WHEELER, Director of the Central Asian Research Centre, points out in the final talk in the G.O.S. series 'The Story of Colonisation' that 'the Russian and Chinese dependencies are now the only areas from which foreign conquerors and colonisers have neither receded nor shown any signs of receding'

A New 'Colonialism'?

WITH a few exceptions what has been called 'colonialism,' as practised by the traditional imperialists, is everywhere declining. Apart from the satellite countries of central and eastern Europe, the Baltic and the Balkans, where Soviet domination still continues, the two main exceptions are the Russian and the Chinese dependencies in Asia. These are now the only areas in Asia from which foreign conquerors and colonisers have neither receded nor shown any signs of receding.

It is more than a coincidence that the Asiatic frontiers of the Soviet Union are precisely the same as those of Imperial Russia, and that the claims of the People's Republic of China extend to the confines of the Chinese Empire of the Manchus.

The Asian empire of the Tsars stretched from the Urals to the Pacific, and from the Arctic to the frontiers of China, Afghanistan, and Persia. Precisely the same area now forms part of the Soviet Union, but Soviet leaders say that it is no longer an empire and that no colonialism or colonialism exists there. This claim forms the basis of the charges of 'colonialism' which they constantly level against the Western Powers. Has Soviet Russia in fact found a new solution, which is both ethically and economically sound, for the problem of administering territories and peoples annexed or conquered in what Communists call the imperialist period? Has she sufficient experience of all aspects of the problem to condemn out of hand its treatment by other nations?

Empire of No Ordinary Kind

The Asian empire to which the Soviet regime succeeded differed from most other empires in several ways. First and foremost, it was not an overseas empire but geographically continuous. Secondly, to the Russians the Turkic peoples who made up the bulk of the population of their new lands were Tartars, the descendants of those same Tartars or Mongols under whose domination they had themselves been for 250 years. This meant that feelings of superiority and inferiority were never so prevalent as in other empires.

Finally, the native population which came under Russian domination was far smaller, less heterogeneous, and less exposed to cosmopolitan influences than in the empires of Western countries. In all, the native population of the Caucasus and the whole of Asiatic Russia has never amounted to more than 30-million, or rather less than the present population of Nigeria. Apart from the Christian Georgians and Armenians it is predominantly Muslim and Turkic.

It was thus an empire of no ordinary kind which the Soviet regime inherited from its Tsarist predecessors. The first tendency was to favour the grant of some degree of real national independence to the larger communities in Turkestan and Trans-Caucasia provided they accepted the tenets of Bolshevism. Their unwillingness to do this, as well as certain practical objections, such as the conservative attitude of the Russian settlers, made the Soviet authorities give up any notion of relinquishing the empire which they may have entertained; but the theory that the conquest of Asia, and particularly Central Asia, was ethically wrong persisted until 1937. Since then the idea that the conquest was not only inevitable but all for the best has been sedulously developed.

The Policy of Nationalities

Once the architects of the new state of the Soviet Union had made up their minds to continue administering the Tsarist empire they had to decide on a system which would not only satisfy political, economic, and military requirements but conform, at least ostensibly, with Communist dogma. The policy of nationalities, which resulted in the creation of political divisions described as 'national in form and socialist in content,' was the outcome of their deliberations. From the point of view of the economic and military requirements of the Union this policy has worked well. The methods by which the policy has been applied may be harsh and unpalatable, but no more so than in European republics.

A full and impartial examination of Soviet Asian economy and living conditions is still not possible. But on the basis of available information there are good grounds for believing that considerable progress has been made in agriculture, industry, communications, and the like. In addition, the Russians claim, and there is much evidence of, great changes in cultural matters.

Apart from a notable increase in literacy, there has been development in the arts. The quantity of literature produced in native languages as well as in Russian is formidable, although its quality is less impressive. A strong tendency towards Russianisation is everywhere observable.

By what methods have these changes and developments been achieved,

and how have the people reacted to them? The main instrument of Soviet policy is the centralised political control exercised by the Communist Party. Then there is a long list of administrative functions which are exercised in Moscow, and are outside the purview of republican governments. These include such things as the use of natural resources, the guidance of the monetary and credit systems, and the basic principles to be followed in education and legislation. From the reservation of these last two subjects to Moscow stems the whole policy of cultural regimentation, which aims at remodelling the way of life of the Asian peoples.

Lastly, there is the instrument of what the Russians call settlement, but elsewhere is known as colonisation. This was, of course, started before the revolution, but it has been greatly intensified since. For instance, a comparison of the Soviet census of 1926 and the most recent one taken in 1939 shows that the settler population in Central Asia increased by more than seventy per cent. to about 5-million, whereas the native population increased by less than six per cent. to about 11-million.

It is not easy to decide the effect of these methods on the peoples of Soviet Asia. Materially they are much better off than before the revolution, and better off than the peoples in many neighbouring countries. The demand which exists all over the East for general and technical education has been met more satisfactorily in Soviet Asia than elsewhere. I should even say that, partly owing to the one-sided presentation of information, the peoples of the Asian republics think they are freer and more independent than the peoples of Afghanistan, Persia, and India, and even of the countries of the West.

On the other hand, it must be remembered that these peoples have no standard by which to judge their present state, and have probably stopped thinking about independence. None of them has ever known it except for brief chaotic periods after the revolution. Most of them have never even seen it in operation.

Yet at various times they have shown a desire for a change. The enormous number of Soviet Asians—some put it as high as 200,000—who deserted to the Germans in the last war is an indication of this. The alleged collaboration with the enemy of the Chechens, Balkars, Kalmyks, and many other peoples may be another.

De Facto Claim to Conquests

It is difficult, by the way, to believe that the mass deportations of these peoples, amounting in all to nearly a million, could have been regarded with indifference by their co-religionists and neighbours. Lastly, the constant complaints of the Soviet authorities about feudal and religious survivals suggest that the people are by no means willing to exchange their traditional way of life for the stereotyped existence of Soviet men.

The fact that the Soviet Russian empire is an 'overland' rather than an overseas empire means that even before the revolution Russia established a *de facto*, almost a paternal, claim to the area of her conquests and annexations, a claim which was, and still is to some extent, recognised by the native peoples, however unwillingly. Even if this claim had never been established, or if it had been renounced by the Soviet Government, it is difficult to see how more than two or three of the racial communities could have formed states with any degree of viability. For multi-racial areas the disappearance of firmly established *de facto* control is a serious matter, however arbitrarily that control may have been imposed or however inefficiently exercised.

The grant of complete self-determination to each separate nationality may be impracticable. But for Soviet leaders, with the limited and quite different experience afforded by their overland empire, and with their record of mass deportation and cultural regimentation, to set up as the mentor of the West in the matter of colonial administration and the grant of self-government is strange indeed. The report that Soviet leaders now associate themselves with Western condemnation of the mass deportations, and have decided on the delegation of some administrative responsibility from the centre to the republics is encouraging. But even if the displaced nationalities are rehabilitated, and still more responsibility delegated to the republics, the Soviet claim to moral leadership in righting the wrongs of imperialism and in the grant of freedom to once subject peoples will continue to lack any kind of substance.

I have spoken mainly of the Russian colonising operations in Asia because the superimposition on Asian peoples of the Western civilisation of the Russians conforms more closely with the accepted idea of colonisation. But the Chinese Communists' treatment of Asian nationalities resembles the Soviet system in many respects. For instance, there is now a Sinkiang-Uygur Autonomous Republic in the former Chinese province of Sinkiang. The Chinese People's Republic aims at including in what it

(Continued on page 13)

Some of the finest hills in the Lake District are in Lancashire: the Old Man (centre) above Conistone

Lancashire and its Capital City

ALAN DIXON, in a 'Report from the North of England,' takes you through the more rural parts of Lancashire to the city of Lancaster, its capital: a city which has managed to blend a turbulent history with its prosperity as a seaport and an industrial community

BEYOND Preston, and northwards towards the Scottish border, the traveller moves through the most beautiful part of the county of Lancashire. It is surprising how many people have forgotten that the county is not only the place where fine cotton is woven and spun but, in the north, spans the rich countryside that borders the Lake District. Somehow the men of the Industrial Revolution hesitated before they moved beyond the great centres of Blackburn, Preston, and Accrington. The countryside is comparatively untouched from thereon to the hills of Westmorland.

Twenty miles from Preston lies Lancaster, the capital city of Lancashire. It lies at the head of the crooked estuary of the river Lune that sweeps down into Morecambe Bay. It will come as a surprise to many that the capital of Lancashire, which became a borough in 1193, only achieved the title and dignity of a city in 1937.

Looking back through its colourful and often grim history, which began in Roman times, survived the bitter struggles of the Wars of the Roses, to emerge as a prosperous seaport, it would seem that Lancaster had a greater claim to the title of city than most. It was a seat of kings, and even Shakespeare referred to it as 'time-honoured Lancaster.' Even today in Lancashire we toast Her Majesty as 'The Duke of Lancaster.'

Yet this county town is strangely different from most. It is a mixture of industry and history. Driving into the town, the fine tower of the castle is only part of a skyline that has been invaded by factory chimneys. Its population of a little less than 50,000 no longer tills the rich surrounding countryside but sets off to work each day in the large rayon mills, or the great factory that produces floor and furniture coverings.

History has not been completely swept aside: what is old is treasured, even though it stands shoulder to shoulder with the unattractive products of our industrial age. The sweeping climb to the castle, for instance, is

'A place of grim memories'—the Shire Hall, inside Lancaster Castle, is still used as a court room: the Lancashire witches were tried there in 1612

The river Wyre in the Trough of Bowland—a beauty spot about six miles south-east of Lancaster

Castle Hill, Lancaster: seven counties can be seen from the top of the castle

still a rough pattern of cobblestones. Inside, the castle is magnificent. The Shire Hall, or Court Room, in which the Assizes, Quarter Sessions, and County Courts are held, is still a place of grim memories.

On show is the holdfast and branding iron, which secured the wrists of criminals whilst they were publicly branded on the thumbs in the open court. The Lancashire witches were tried in the Court Room in 1612, and in the old Crown Court more than 240 people were sentenced to death in the years following the battle of Waterloo. Fortunately, against the cruel scenes of the courts and the dungeons can be set the colour of the 650 painted shields of kings, queens, high sheriffs, and constables of the castle from the beginning of its history.

Above, from the turret known as John o' Gaunt's Chair, is the fine view of the open countryside that extends over seven counties. Opposite the castle is the Priory church. It is still in use, and its delicately carved chancel-stalls date from about 1340. Inside the memorial of the King's Own Royal Regiment, one of the earliest regimental chapels to be erected, is to be found what is probably the most complete collection of regimental Colours in the country.

By no means all the modern buildings are subdued by this show of history. The shapely bulk of the Ashton Memorial in Williamson Park looks down from the hillside; lower down is the Royal Grammar School. In the narrow twisting streets of the town the Technical College and the new Town Hall are fine buildings. The Georgian buildings on the north-west border were the homes of the merchant princes when Lancaster was a flourishing port.

The immense vitality of the Industrial Revolution which swept Lancashire left its mark upon the capital city, otherwise it might still be a browsing market town. Instead it is a live industrial community with products that range from sheet metal to rayon. Unfortunately, its streets were never designed for the passage of great lorries, and Lancaster is known as one of the great traffic bottlenecks of the north-west. We can at least say this of it: it has made history, and is busy making history still. (Broadcast in the BBC's General Overseas Service)

J. M. MACKINTOSH, who was a British Liaison Officer with the Russian High Command in Rumania and Bulgaria between 1944 and 1946, gave this talk in the series on the Soviet Union now being broadcast in 'This Day and Age'

The Soviet Armed Forces

OF all the weapons at the disposal of the Soviet Government the Soviet armed forces is one of the most imposing and formidable. Their impressive size, and their victories over the German army during the second world war, is one of the sources of Soviet influence and prestige which helps the Soviet Government to maintain its hold over the countries of eastern Europe. It is no exaggeration to say that in the last resort the Soviet leaders believe in force, and in spite of some relaxation of tension they do not intend to diminish the state of preparedness of their armed forces.

The Soviet armed forces are more than just an exceptionally large and powerful national defence force. They have dual character, which is the key to their strength and weakness. During the second world war the Soviet army won the admiration of the free world in its long struggle against the Germans, but defence of the Soviet Union was only one of the army's roles in the eyes of the Soviet Government. Its victories were also intended to further the political aims of the Soviet Communist Party. For the Soviet army is a political army, which is required to be loyal not only to its homeland but also to the Communist Party which rules it. It is only when we remember that the Soviet leadership—today under Bulganin and Khrushchev just as much as under Stalin—insists on army loyalty to the Communist Party before loyalty to the Russian homeland that we can understand the Soviet army and the many non-military factors which influence it. There are in fact three distinct hierarchies in the Soviet armed forces, only one of which is directly concerned with military, air, or naval operations.

Land Forces of 200 Divisions

Let us look first at the purely operational side of the armed forces. There are believed to be between 3-million and 4-million men in the Soviet forces today, of which the most important part is the land forces, whose strength is about 200 divisions of various types. There are about sixty-five armoured divisions, forty artillery and anti-aircraft divisions, and the remainder are infantry formations. These figures are believed to be accurate after the recent cuts in the strength of the Soviet army have been taken into account. This formidable force is controlled by the Ministry of Defence, which is also responsible for the air force and the navy. The Minister, Marshal Zhukov, was the most successful Soviet commander during the war and, as has now been confirmed by Mr. Khrushchev, was victimised by a jealous Stalin for years after the war.

He is assisted by a number of deputy ministers. These are: the chief of the general staff, Marshal Sokolovski; the commander-in-chief of the land forces and of the joint command of the satellite armies, Marshal Konev; and the commander of the Soviet air force, Marshal Zhigarev. The former Minister of Defence under Stalin, Marshal Vasilevski, is Marshal Zhukov's first deputy for general purposes. The Soviet Union is divided into nineteen military districts, each commanded by a marshal or a senior general. The Government maintains a powerful force of about twenty divisions in East Germany, and three divisions in Poland.

An Elite Corps of Artillery

Soviet army divisions are of the type usually found in the conscript armies of western Europe. An infantry division numbers 11,000 men, and includes an artillery and an armoured regiment. There are tank divisions of 10,500 men, and mechanised divisions of 13,000 men, which include motorised infantry. The artillery is organised in divisions of about 6,000 men each. In an active force these are grouped in rifle or mechanised armies: a rifle army on a war basis would probably contain six infantry divisions, two armoured divisions, and an artillery division. A mechanised army would consist of four armoured divisions, and probably an artillery division also.

Soviet army equipment generally tends to be rough and ready. The infantry is fairly well equipped with light machine-guns and other automatic weapons, and the army authorities have developed the use of the mortar, both as an infantry and an artillery weapon, to a high degree. Much research has gone into the production of new tanks and self-propelled guns, but it is in the artillery that the best weapons and equipment are to be found. Artillery officers in some ways form an élite corps within the commissioned ranks of the army. Artillery tradition among Russian soldiers concentrates on short-range weapons, such as the heavy mortar and the rocket-launcher known as *katyusha*.

The other arms of service—the engineers, the signals, the medical and the supply services suffer from the fact that the Soviets sacrifice their development to the efficiency of the artillery and the air force. Their equipment is primitive and their standard of training poor.

Next to the army, and approaching it in importance, is the Soviet air force. It is not a separate arm like the Royal Air Force, for it has always been an auxiliary of the land forces. The vast majority of air-force units during the war were organised on a close-support basis, and acted as a

kind of air-borne artillery for the advancing armies. Since the war the efforts of the Soviet air force have been directed towards modernisation and the introduction of jet engines, and the present-day first-line strength of the Soviet air force is believed to be in the region of 20,000 planes.

Naturally, the burning question in connection with the air force is to what extent the development of nuclear weapons has caused the Soviet authorities to change their conception of the air force as aerial artillery in support of the army in favour of a strategic air force capable of delivering atomic and hydrogen weapons. This is, of course, one of the most closely guarded secrets in the Soviet Union, and all that can be said about it is that the Soviet air force does possess aircraft in front-line service which are capable of carrying nuclear weapons on inter-continental missions.

The Soviet navy is the least important of the services. It is largely a land-locked navy built for service in the Baltic and Black Seas and for coastal support to advancing land armies. Its main danger in the event of war is its submarine fleet, which contains a number of ocean-going vessels with a range of 10,000 miles. It is unlikely that the Soviet navy will produce an ocean-going fleet capable of challenging the Atlantic or Pacific fleets of the Western Powers.

So much for a brief survey of the fighting services of the Soviet armed forces. The second problem facing the Soviet leaders in defence matters is how to secure maximum military efficiency together with a first-class security system and complete unquestioning political reliability and loyalty to the Communist Party. This is the task of the chief political administration of the Soviet army, whose head is Colonel-General Zheltov, a political commissar of long standing. A political officer, who bears a military rank like his opposite number in the services, is attached to every department or directorate of the high command, and to every headquarters down to battalion level.

The political officer has a staff of lecturers and organisers who bring political indoctrination to every single man in the unit. He organises lectures, collective newspaper-reading, and political discussions to explain party decisions, sweetening his political pill with sports and shows.

Tracking Down Internal Disaffection

Political lecturing and study is, however, insufficient for the degree of control demanded by the party leaders. There must also be an element of fear and compulsion. This is provided by the third hierarchy of the Soviet army—the military branch of the Soviet secret police. This department maintains specially trained secret-police officers at every headquarters from the Ministry of Defence down to regimental level. It is known variously as 'the special section' or 'the counter-espionage department.' This department's responsibility is not only to deal with normal counter-espionage work but is to track down any internal disaffection within the army.

What about the ordinary Russian soldier? Coming from peasant stock he is used to great physical hardships and to a life which seems to him naturally full of hard knocks and unpleasantness from beginning to end. He does not expect 'a good time' out of life, and therefore the tough side of military service in no way dismays him. He is mentally and physically prepared for living and fighting on the minimum of food and drink, and for severe demands on his physical strength. He is ingenious and resourceful in battle when he believes in the cause for which he is fighting, but is sometimes rather unpredictable in morale. There is, however, little comradely feeling between officers and men because of the rigid caste-system in the Soviet army.

Finally, we must turn to one of the most important questions to be asked about the Soviet army today: the attitude of its leaders to modern war, and their relation to the political leadership of the country. Soviet military doctrine has undergone a considerable change since the death of Stalin. Until 1953 it was officially held that in the event of war the Soviet army forces would use their strength to lure the enemy into the interior of the country and destroy him there. This doctrine has now been officially abandoned, and in its place Marshal Zhukov and his colleagues have adopted a theory that any future war—offensive or defensive—may be decided by surprise aggression with nuclear weapons.

There is no doubt that the army has increased its influence in government circles since the death of Stalin. The selection of Marshal Zhukov to be a candidate member of the Praesidium of the Supreme Soviet—the first professional soldier ever to reach this position—and the large number of promotions to the highest military ranks of the past two years is sufficient proof that the army leaders are now consulted on many political issues on which their advice has not hitherto been sought. On the whole it seems likely that in this age of nuclear warfare the army's weight will be thrown on the side of realism, and will be used against any party leaders who may advocate an extreme policy of aggression. Mr. Aneurin Bevan, party Treasurer

Mr. Hugh Gaitskell, party Leader

The conference in session in the great hall of Blackpool's Winter Gardens

The British Labour Party in Conference

PRINCESS INDIRA reports on this year's meeting of the main Opposition party at which 1,300 delegates discussed, among other things, important new statements of policy prepared by its National Executive

DESPITE the many and varied debates on matters of policy and other subjects, there can be little doubt that the main factor overshadowing this year's Labour Party conference was the election of Mr. Aneurin Bevan to the Treasurership of the party. Certainly it was a most dramatic moment when the result of the vote was announced. A thunderous roar of cheers lasting nearly a minute broke out, and as the film cameras whirred and the photographers' bulbs flashed Mr. Bevan, who was sitting unobtrusively in the body of the great hall of Blackpool's Winter Gardens, rose to acknowledge the ovation.

It was third time lucky for Mr. Bevan. He was twice defeated by Mr. Gaitskell in the contest for the Treasurership during the past two years, after he had decided to abandon his safe seat in the Constituency Parties' section of the Labour Executive. Mr. Bevan—who had a clear lead of almost a quarter of a million votes over his nearest rival, Mr. George Brown—gained, in fact, the support of half the entire party, although three other candidates were in the field with him.

The result, of course, became by far the most important talking point for the 1,300 delegates gathered at this famous seaside resort. Opinion seems to be generally divided on whether the election of Mr. Bevan—the hitherto stormy petrel of the Labour Party—will lead to greater unity within the party or, alternatively, will bring matters quickly to a head between the left and right wings of the party.

In general, the remarkable degree of unanimity shown at the conference did seem to indicate that—thanks to Mr. Bevan's election—his more extreme supporters may be willing, at least for the time being, to rally round the party in an attempt to ensure Labour's return to power at the next election, whenever that may be.

But if Mr. Bevan's victory was much in the mind of delegates, this did not stop the conference from carrying on its less dramatic but nevertheless vital business. One of the main items on this year's agenda was the

consideration of the four policy documents—on personal freedom, housing, colonial affairs, and equality—which had been newly prepared by the party's National Executive.

Much of the delegates' time was taken up by discussions on these themes of policy, despite such things as the emergency debate on Suez, when Mr. Gaitskell reiterated Labour's previous stand. Incidentally Mr. Gaitskell, who was appearing for the first time at a party conference as the Labour leader, was given a tremendous reception by the delegates. There seems to be little doubt—as this conference showed—that he has firmly established his leadership in the eyes of the rank-and-file of the party, at least for the time being.

The policy documents certainly produced some fine speeches. But none of the debates was able to match the discussion on foreign policy. Although a number of delegates had been at pains to assert that bi-partisanship in British foreign policy was a thing of the past, and that the conference's duty was to formally bury it, the party Executive appeared to take good care to see that no resolutions or amendments were allowed to creep in which in any way identified Labour policy with that of the Communists.

One of the most outstanding speeches was made by Mr. Alfred Robens, Labour's 'shadow' Foreign Secretary, in which he attacked a blind policy of disarmament as 'unrealistic,' but stressed that the party's policy was based on collective security and the United Nations. But, he said, there had to be full agreement between the great powers if the United Nations was to succeed.

Mr. Shinwell pointed out that the present British rearmament programme, which many speakers had attacked, had not only been started by a Labour Government but had also been endorsed by the party conference at the time. After Mr. Sam Watson had summed up, the conference gave a big vote in favour of the Executive's policy. And this seemed to show that although the party were united in condemning the use of force they nevertheless were determined, in spite of some dissenting voices, not to take the recent change of policy behind the Iron Curtain at its face value alone. A New 'Colonialism'?

Continued from page 10

calls a multi-racial state all the states which were once dependencies of, or in some way associated with, the Manchu Empire. Some of these states, such as Burma and Nepal, have since become and are still independent. Others like Tibet were independent for a time but have been, or are being, absorbed into the People's Republic. In the republic the Han race, as numerically the strongest, takes the lead. Autonomous governments are created for the larger nationalities, but unlike the Soviet Union republics none of them has even the nominal right of secession.

There is no doubt of the trend of Chinese colonial policy towards the borderlands of Communist China. The fact that some of these borderlands such as Mongolia are also borderlands of the U.S.S.R. makes it likely that a conflict of interests between the two great Communist neighbours will sooner or later develop. 'Asia for the Asians' is an important Chinese Communist slogan, and the continued and increasing presence of Russians in Asia can hardly be agreeable to the Chinese, for, however the Russians may regard themselves, the Chinese continue to

think of them as Westerners. There seems less inclination on the part of the Chinese to graft their ancient Asian culture on to their dependent Asian peoples than there is on the part of the Russians to graft their comparatively modern and distinctively Western culture on to theirs. Yet of the two colonial systems the Chinese is perhaps the more pervasive, although the Chinese are less insistent on its achievements. Chinese colonisation extends far outside Chinese territory into Malaya and Indo-China, for instance, and Chinese commercial influence in these areas long ago assumed serious proportions.

Bertrand Russell said in his introductory talk to this series that colonisation played an important part in the three principal agencies in the spread of civilisation—military conquest, commercial intercourse, and missionary zeal. The stage for the new colonialism was prepared by the spread of the Russians over Asia first as traders and then as military conquerors; and the sense of mission which has always informed the Russian character, whether Christian or Communist, has been in operation from the beginning. But the civilisation propagated by Communism—Chinese as well as Russian—is essentially materialist. If this process continues the older and perhaps higher Asian civilisations may be doomed to extinction. (*Broadcast in the BBC's General Overseas Service*)

Commercial T

REGINALD TURNILL, an Industrial Correspondent at the International Commercial Motor Transport Exhibition which was recently staged at Earls Court, London, comments on the achievements of British manufacturers in a field where the value of exports has risen. He points out that nearly 100,000 visitors went to the show.

ALTHOUGH the motor industry has had its setbacks this year so far as cars are concerned, there is a very different story to tell about commercial vehicles. British manufacturers have hit new peaks both in output and exports, and it is expected that by December the value of the year's exports will top the £100-million mark for the first time. Britain has won and retained a decisive lead over her European competitors in this field.

How it has been done—and nearly 100,000 visitors went to see for themselves—was demonstrated at the International Commercial Motor Show at Earls Court. It was the eighteenth biennial show, and the Society of Motor Manufacturers and Traders which staged it claimed that it was the largest exhibition of its kind ever held in Britain. It certainly attracted a record number of overseas visitors and buyers, but it will probably never be known just what the orders were worth that those 2,200 V.I.P.s left behind them.

Big Order for 'Bus of the Future'

A quick survey at the end, however, showed that business worth at least £8-million was done during the eight-day show. That was for both home and overseas markets, and included the £4-million order given by the London Transport Executive to A.E.C. and Park Royal Vehicles for 850 Routemaster buses—'the bus of the future,' as Londoners have been assured by the placards on the experimental prototype which has been in service since February. Leyland Motors secured export orders alone worth £2-million, including sales worth £750,000 to the Argentine. Their home orders totalled another £700,000.

It was the new-style buses and coaches which attracted most attention at the show. At the Press preview these mobile palaces of luxury were besieged by television and newsreel men, and it was difficult to get near them. Leyland's forty-seater long-distance coach combines Italian artistry in the glittering, streamlined coachwork with British craftsmanship on the chassis. Eight feet wide and thirty-six feet long, it is too big for Britain's roads. But earlier models of the Worldmaster, as it is called, are already operating in twenty countries in all five continents. For Alpine work it is equipped with a special exhaust-brake, so that the brake-drums remain cool for emergency stops.

The Atlantean, a new double-decker bus seating seventy-eight, caused some speculation whether the Routemaster, with fourteen fewer seats, was out of date before being brought into service. London Transport tell me, however, that because of London's special traffic problems the Routemaster is the very largest bus suitable for them, and the Atlantean, which is nearly thirty feet long, would be too big. Some provincial towns, however, were very interested in the rear-engine principle, which enables the Atlantean's passengers to enter at the front by a low platform without steps. There are power-operated doors, too, which are worked by the driver. This gives the conductor more time to collect the fares. It costs £6,150, and is likely to make its first appearance soon in Glasgow.

Another new idea of special interest to seaside resorts is the A.E.C. double-decker with a detachable top. Four men can quickly remove the fibre-glass roof so that passengers can get the best out of a sunny day or a sight-seeing trip. There was even a new-style trolley-bus. These

brewer's van

Out comes the sun—and off comes the fibre-glass roof of this double-deck bus designed for use in seaside resorts

Transport on Show

of the BBC, gives some impressions of the Commercial at Earls Court, London. In reviewing the achievements won a decisive lead over their European competitors, eight-day show, and orders worth £8-million were placed

vehicles are falling out of favour at home, but there is still an important export market for them. The new one shown by Sunbeam's of Wolverhampton has a glass-enclosed cabin in which the conductor sits to take the fares: he has a microphone, too, so that he can address the passengers. Colombo wants twenty-six of these. Johannesburg has ordered forty new double-deckers which will be the biggest trolley-buses ever made. Each will accommodate 105 passengers, and this contract is worth £300,000.

There is a demand for smaller buses as well as bigger ones—the sort of thing that a hotel can operate to take its guests to and from the station. A British answer to the Continental vehicles of this type was provided at this year's show by the Morris Minibus. It can seat thirteen, and as it is exempt from purchase tax it can be bought for £625.

For the first time there were light commercial vehicles with two-pedal control, that is to say, with brake and accelerator pedals but no clutch pedal. Standard's—who, incidentally, have recently broken into the Polish car market—exhibited a six-cwt. utility fitted with an automatic clutch for an extra £16.

I drove one of these vans, and came to the conclusion that at last the most difficult thing about learning to drive would soon be eliminated. If you are used to driving it is a strange feeling at first having nothing for the left foot to do. But for learners it means the end of those 'kangaroo' starts and of gear clashing. You just put the car in gear and press the accelerator, the clutch engages automatically, and the car draws smoothly away. I found that you cannot make such a quick getaway from the traffic lights, but you can at last 'creep' in heavy traffic without continual gear changing. You remain in gear the whole time, even when stopped, moving forward at a touch of the accelerator.

Reducing Driver Fatigue

A good deal of attention is now being paid, I found, to making the drivers of long-distance vehicles more comfortable. There is even a special phrase for it: 'reducing driver fatigue.' Some of the big lorries have power-assisted steering, and the cab of one, I noticed, had arm-rests and a two-tone, leather-cloth seat in red, tastefully edged in grey. Add to this chrome fittings and lined floor-mats, and, we were told, drivers are given 'a sense of confidence and enthusiasm.'

As usual, there were some examples of eye-catching vehicles for advertising purposes. An Oldham firm exhibited a van produced for a brewer in the shape of a huge beer-bottle made of fibre-glass. The driver looks through the base of the horizontal 'bottle.'

Because the counter-to-customer form of shopping has proved popular with housewives in country districts, sales of mobile shops are mounting at home as well as abroad. Well stocked, and equipped in some cases with refrigerators, they were quite a feature of the show.

Finally, there were the special-purpose vehicles, monsters which can shift loads of eighty tons or more. These won a special word of praise from Mr. Thorneycroft, the President of the Board of Trade, when he opened the show. One of them, the Scammell Constructor, is intended for use in the oilfields in many parts of the world. But it is no vehicle for a learner: it has a 200-horse-power Rolls-Royce engine, five different gear levers, and a six-wheel drive.

A 150-horse-power British chassis combines with an Italian body in the Worldmaster luxury coach, earlier models of which are already operating in twenty countries

There is a large demand for British-built trolley-buses in overseas countries: twenty-six of this Sunbeam model have been ordered by the city of Colombo in Ceylon

A British answer to the Continental type of small bus—the Morris Minibus, seating thirteen people, costs £625, and its 1½-litre engine develops forty-two horse-power

A NEW biography of the founder of the Suez Canal has been published. It is *Ferdinand de Lesseps*, by Charles Beatty, and is the story of de Lesseps's life from his birth in a French diplomatic family, through his own experiences in the diplomatic service, his dreams of the canal, the difficulties he encountered, the triumph which the completion of the canal brought him, and his final death and disgrace under the shadow of the ill-fated scheme for a Panama canal. Mr. Beatty writes with gusto, plainly regarding his hero as a hero indeed, vindicating him against attack, and pointing out how great was his foresight. I think his account of the Suez Canal venture is fuller and more to be relied on than his account of the Panama one. De Lesseps and his son were hardly blameless over Panama as Mr. Beatty implies. But the story in general is a fascinating one.

The Power Elite, by C. Wright Mills, is an American sociologist's account of the top levels of power in his country. In brief, his view is that present-day America is ruled by a small number of men—small in relation to the population, that is—who are closely linked with one another by money, training, culture, and inclination. Broadly, they form three groups: the corporation executives, the political directorate, and the military leaders. Mr. Mills tries to show not only that these men are very much alike but also that the situation could hardly be otherwise, given the state of American economic and social development. He supports his view with a great deal of evidence.

Such a book is hard to criticise because of its highly generalised character. In present-day terms, Mr. Mills's analysis is tailor-made for the Republican Party and the Eisenhower administration; but it is sadly astray as a picture of the Democratic Party and of the sort of administration Mr. Adlai Stevenson would be likely to create. And even of the Eisenhower administration the study gets quickly out of focus; for instance, it was written when the McCarthy attack on the American foreign service was still at its height, and takes this particular climate of opinion as much longer lasting than it has proved. But it is a sustained and significant essay in prophecy, an intriguing combination of American sociology and traditional American radicalism.

* * *

One reason why I doubt the full validity of Mr. Mills's analysis of *The Power Elite* is that it leaves little or no room for the author of my next book, and yet he has to be fitted in somewhere, since he has obviously been an important part of the power élite, if the United States has one. He is Dean Acheson, whose book is called *An American Vista*. Mr. Acheson's background is such that, if Mr. Mills is right, Mr. Acheson must believe in Republican policies, and could not have stayed five minutes as Secretary of State if he did not. Yet Mr. Acheson's book is devoted to showing how and why he differs from the Republicans, and what he considers the dominant elements in the Democratic Party that make it differ from the Republicans. It is not a very good book, but it is worth reading for those who think that the United States is simply a vista of McCarthyism run mad.

* * *

I must admit that I approached John Strachey's new book, *Contemporary Capitalism*, with much misgiving. I do not like the books Mr. Strachey wrote in the 1930s when he was under Communist influence. Now, twenty years after writing *The Theory and Practice of Socialism*, and after having been a Cabinet minister, Mr. Strachey has set out to write another massive book on the politics of our time. *Contemporary Capitalism* is the first of a series to be written on 'Principles of Democratic Socialism.' I think it is a much better book than any Mr. Strachey has written before, and that it deserves to be very widely read. It is an honest attempt to diagnose the state of development that capitalism has reached, and to suggest different ways of organising society. A large part of this book is a debate with Marx over the question of whether capitalism has brought increasing misery to the workers. On the whole I did not find the argument convincing. In dealing with the past, though, he is at his most brilliant. A unique, and also quite substantial, part of the book is his discussion of various economic theories of the past century or so, especially of Ricardo, the marginal utilitarians, Karl Marx, and J. M. Keynes. This will not be everyone's meat, and Mr. Strachey may have endangered his enterprise by putting in so much of what looks like a course in the history of economic thought. But his powers of exposition and criticism are remarkable.

* * *

Another highly serious book, though more urbane and even simpler in expression, is *Political Theory*, by G. C. Field. The late Professor Field taught political theory for forty years. Just before his death he wrote this book on the fundamentals of the subject as he had worked them out after all those years of lectures and discussions. I can sum it up best by saying it is one of the wisest books I have read for a long time. The book is mainly about what we mean by democracy, what alternative ways of political organisation there are, and what can be said for them. This is essentially a simple book, in the sense that its language is crystal clear and its illustrations are homely and easily understood.

The new Pilgrim Congregational Church, Southwark: it was opened by Mr. Winthrop Aldrich, the United States Ambassador (third from right)

PILGRIM CHURCH

ONE of London's lesser-known historic links with the United States was brought to life at a ceremony in the Thames-side Borough of Southwark. It was the opening of a new Congregational church, and the ceremony was performed by the U.S. Ambassador, Mr. Aldrich.

There was an excellent reason for asking so distinguished a figure to officiate, for this church claims to be the oldest that the Congregationalists have anywhere in the world, having been founded as long ago as 1592, and Mr. Aldrich is himself a member of that denomination.

Not only that: one of the American Ambassador's forefathers sailed to the New World in the *Mayflower*, and many of his companions on that ocean crossing nearly four centuries ago were members of that same Congregational church in Southwark. As Mr. Aldrich said at the ceremony: 'This church has, it seems to me, always been marked by an extraordinary spiritual vitality. In its earliest days it survived persecution and the imprisonment of most of its members. In prison the members continued to conduct services, and later met in secret in the homes of its members. It was not checked in its work by the loss of its building a century ago through the expiration of the lease at that time, but built a new church which was fated to be destroyed by enemy action in 1940.'

'Since then it has been carried on in a succession of houses here in Southwark. Now this church of the Pilgrim Fathers rises once again like the phoenix from the ashes.'

'MIND THAT CHILD'

EVERY day two children under the age of fifteen are killed on the roads of Britain, and every year 10,000 other children become serious casualties. In other words, more than 700 children are killed every year.

In London recently the Minister of Transport and Civil Aviation, Mr. Harold Watkinson, appealed to parents and all road-users to give their maximum support to a three-month campaign which aims at reducing the number of accidents involving children on the roads.

The campaign is called 'Mind that Child,' and it has been organised jointly by the Ministry of Accidents, with the co-operation of about 1,000 of the local road-safety committees. At a news conference I asked Mr. Watkinson what he hoped the campaign would do.

'We want to be quite specific, and we want to make it quite plain that, whatever my Ministry can do, unless we get the help and

Here and There

Stories from 'Radio Newsreel'

assistance of every parent with young children this campaign will not be a success because it really must start in the home. Parents have a great responsibility, and if only they will do just some simple things—like making sure that a bicycle is the right size for their child, making sure that they know how to ride it, seeing that they take a cycling proficiency test—it might make an immeasurable improvement.'

'What about these banning schemes? There are one or two already, aren't there?'

'I think they would be wrong, because children's capacities—and I know from my own children—vary so much that I do not think you can say children of a certain age ought not to ride, or they ought to be banned from certain roads. I am not trying to evade my responsibility, but I do want to highlight the responsibility of parents. JOHN TIDMARSH

Mr. Watkinson, the Minister of Transport, examining a poster for the 'Mind That Child' Campaign

CHESS SCHOOLS

IN an effort to put Britain on top of the world in international chess the British Chess Federation is to open schools for training young people. The first of these will open in London, and one of the founders of the school, Mr. R. G. Wade, a New Zealander who played for England in the last two chess Olympiads, had this to say about it:

'The best international chess players are those who start playing internationally in their late teens or early twenties. The countries of eastern Europe, for example, have known this for years, and for thirty years their masters of chess have been training children of nine upwards.'

'England has been doing increasingly well in international chess these past few years; she has worked her way from sixteenth to eighth in the past four. The only way we can move up is to train young players in international chess.'

'Why this emphasis on young players? The answer is this: it is not only experience that counts in international chess; as important is physical and mental fitness—the ability to concentrate for sessions of five hours, the length of an average international game. International chess is not like a friendly game at home which can go on all night. In the international field you must make forty moves in two and a half hours, or an average of one move every three minutes, forty-five seconds.'

'You begin to feel the strain of finding the best and often only good move each time piling up. It can get so bad you have momentary black-outs just as you are about to move. You may lose your grip on yourself when your opponent makes an unexpected reply. Some players lose their heads, so that they become as terrified as petrified rabbits.'

'In the international field a chess player may really begin to feel the strain around the age of forty. And once he begins to feel the strain he tends to make mistakes, and, of course, mistakes mean the game is lost. Another point: the older player may have the background, the sovereign knowledge of chess playing, but the younger player can acquire this experience by memorising the games of the masters.'

'And yet another point: the older, experienced player has memories of bad moments of strain at the chess board which can lead to loss of confidence and, again, of games. Youth has no such experiences to undermine it.'

'I think that with chess-training schools all over the country there is no reason why England should not come second among the chess-playing countries within ten years, and then go on to beat the present leaders: the Soviet Union.'

Your Wavelengths

London Calling is published several weeks in advance and we regret that, for reasons beyond our control it is sometimes necessary to alter wavelengths after we have gone to press. The latest information is always given in Programme Parade

This Week's Listening

CLOSE OF THE OLYMPIAD

THIS is the last week of the Olympic Games in Melbourne, and the G.O.S. will continue to broadcast reports each week-day at 07.30, 10.45, 17.30, and 23.45. Commentaries may be expected on events, and on some of the finals, in the following sports: cycling, fencing, football, gymnastics, hockey, shooting, swimming, wrestling, and yachting.

On Saturday the last event of the Games will take place in the main stadium in Melbourne—the football final. Fifteen minutes after the Gold and Silver Medals have been awarded the awe-inspiring Closing Ceremony will begin.

Once again the 5,000 competitors will parade in the arena: it is becoming a tradition that the biggest cheer on these occasions is reserved for the most outstanding athlete of the Games—in 1948 it was Fanny Blankers-Koen, in 1952, Emil Zatopek. After the presentations and the speeches the Olympic Hymn will be sung as the Olympic Flag is slowly lowered and the Olympic Flame flickers and dies, to lie dormant until it springs to life again in Rome in 1960.

SOVIET PRESS AND RADIO

LISTENERS to BBC broadcasts may be interested to know how radio and television are organised in the Soviet Union, and something of the purposes they serve in Soviet society. This will be one of the subjects in Anatol Goldberg's talk on the Soviet Union in 'This Day and Age.'

Mr. Goldberg, who is in charge of the BBC's programmes in Russian, revisited his native country earlier this year to meet the Soviet broadcasting authorities as a member of the first-ever BBC delegation to the Soviet Union. In his talk, called 'Information and Propaganda,' Mr. Goldberg will also describe the main characteristics of other channels of communication in Russia, in particular the Soviet press.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

Reproduced by permission of Macmillan and Co., Ltd.

The Walrus and the Carpenter' from Lewis Carroll's 'Through the Looking Glass' will be sung 'For Children' on Sunday, Monday, and Saturday

'A RETURN TO THE NEW TESTAMENT'

UNDER this title in the series 'Christianity and Race' Philip Mason analyses the evidence to be found in the New Testament for and against what he calls 'the idea of separatism—of keeping aloof from people.' He considers that if one reads through the books of the New Testament one is bound to conclude that the early Christian Church faced a racial problem not dissimilar to that of the Dutch Reformed Church in South Africa.

In enlarging on this comparison he says that an orthodox Jew of the first century A.D., with his feeling of being one of a separate people specially chosen by God, 'might well have spoken of the Gentiles . . . in words rather like those an Afrikaner might use of the Bantu.'

Philip Mason then examines the manner in which the early Christian leaders, who had themselves been brought up in the Jewish tradition, sought to overcome the problem, particularly in following Christ's injunction to go out and convert all nations. G.O.S.: Monday 16.15; Tuesday 00.30 and 05.00

AFRICAN MUSIC

IN 'From the Third' listeners can hear the last of a selection of talks chosen from the BBC Third Programme series on 'Aspects of Africa.' This week's speaker is Hugh Tracey, Director of the International Library of African Music, at

December 2 — 8

Roodepoort, who talks about 'The Resilience of African Music.'

African music has, of course, never been written down or perpetuated in any form except by close contact and memory. But Mr. Tracey believes that many influences bearing upon the musical traditions of Africa have not fundamentally altered them. He illustrates the continuance of these traditions by a selection of contemporary examples, ranging from jazz to religious choral singing.

G.O.S.: Monday 15.15; Friday 23.15

MACHINES FOR THE FARM

THE years since the war have seen revolutionary changes in farm mechanisation. Most important of them all has been the widespread adoption of the three-point hydraulic linkage system for tractors, first invented by Harry Ferguson.

New developments, just as important, can be expected in the next few years; some of them are already taking tentative shape. For example, we may soon expect to see tractors without gearboxes or clutches, yet with an infinitely variable speed, more precise than you could get with a dozen gears.

These future trends (and present difficulties) will be discussed by John Cherrington, a farmer, and J. C. Hawkins, of the British National Institute of Agricultural Engineering, in 'This Day and Age' at 17.00 on Monday, opening day of the Smithfield Show and Agricultural Machinery Exhibition in London. The programme will be repeated on Tuesday at 02.15 and 09.30.

TWO BALLAD OPERAS

A COMIC ballad opera by Stephen Storace, *No Song, No Supper*, is to go out in an abridged version on Monday at 05.00 in the second of a series of ballad operas. This rarely heard work was performed for the first time in 1790, and is probably the only English operatic score of that time to come down to us, for most of the late-eighteenth-century operas are never sung because their full scores have disappeared, probably in the fires at Covent Garden.

Stephen Storace was born in London in 1763 and died there in 1796. He wrote several operas, and was a friend of Mozart's. His sister Nancy, the famous soprano, was the first Susanna in *The Marriage of Figaro*, in Vienna in 1786.

The series continues with Sir Julius Benedict's *The Lily of Killarney*, which can be heard in abridged form on Tuesday at 19.00 and on Saturday at 01.00. The plot is based on Dion Boucicault's drama *The Colleen Bawn*, which tells the story of Eily O'Connor, a fictitious character who lived in Killarney. The opera was first produced in 1862.

Sir Julius Benedict was born at Stuttgart in 1804, and died in London in 1885 after working in England for forty years as composer, conductor, and teacher.

SCOTS EVANGELIST

THE first of a series of weekly talks on 'Why Did Jesus Come?' will be given by the Rev. Tom Allan, Minister of St. George's-Tron, Glasgow, who is one of Scotland's ablest evangelists. In 1954

Singers who can be heard this week: Elsie Morison in 'La Boheme' on Thursday at 19.00, and (right) Mel Torme in the first of a series of programmes on Wednesday, Thursday, and Friday

Gilbert Harding (centre) with Wynford Vaughan Thomas (right), one of the two reporters for 'Settlers from Overseas' (see page 3), interviewing Captain William Trott, a Bristol tug supervisor

he became the first full-time organiser of the 'Tell Scotland' movement, which has done so much to bring new life to the Scottish churches.

Tom Allan was serving on General Eisenhower's staff as an R.A.F. officer when he was invited on Good Friday, 1945, to hear some Negro soldiers singing spirituals. He was so moved by their rendering of 'Were You There When They Crucified My Lord' that on demobilisation he studied for the ministry of the Church of Scotland. G.O.S.: Monday 19.00; Tuesday 23.30

A MIXED BAG

A SERIES entitled 'Truth to Tell' begins this week. Each of three weekly programmes will contain four short 'true' stories or anecdotes—call them what you will—by well-known personalities.

This week Alan Villiers, one of the greatest authorities on sailing ships, will be spinning 'A Strange Yarn of the Sea,' and Mabel Constanduros—or Grandma Buggins, as she likes to be known—will recollect the day she found herself 'Asking the Way.' Not many people can speak of the day they stopped the roar of London's traffic: BBC commentator Brian Johnston can, and does, when he recalls a 'Piccadilly Incident.' John Boothroyd, usually with his tongue in his cheek, makes up the quartette with 'Romantic Places.'

G.O.S.: Tuesday 07.15; Friday 15.45; Saturday 22.00

THE WEEK'S PLAYS

THE famous short story by H. G. Wells, *The Man Who Could Work Miracles*, now dramatised for radio by Laurence Gilliam, is a cheerful little parable which demonstrates two of Wells's salient characteristics: his gift for comic characterisation, and his seriousness of purpose, his desire to educate others.

For George McWhirter Fotheringay, 'a clerk in the City, greatly addicted to assertive argument,' is arguing one night in his usual bar and in his usual fashion about the nature of miracles when he discovers that he is himself able to perform them. All he need do is to set his mind on a certain subject, exert his will, and a lamp will burn upside down, or a tobacco jar be turned into a vase of violets, or a piece of laborious work be completed.

All this develops very well: Fotheringay starts to put his miraculous power to beneficial purposes, until he wills something involving the whole earth; and then there obtrudes a disastrous factor which he has not taken into account.

In more realistic vein is a pleasant short piece by Gino Pugnetti, *The Girl and the Soldiers*, about two soldiers stationed near an Italian village, and how in their different ways they woo the girl (played by Claire Bloom) who brings food to their hut each day.

PETER FORSTER

'The Girl and the Soldiers': Sunday 01.00 and 18.30; Wednesday 14.15

'The Man Who Could Work Miracles': Monday 11.30; Wednesday 19.00; Friday 01.30

16.09 COMMENTARY

16.15 'I REMEMBER'
The Third Marquess of Salisbury and Hatfield House
by Viscountess Milner
As the wife of Lord Salisbury's fourth son (whom she married in 1894) the speaker spent nearly six years at Hatfield House. She recalls some impressions of Lord Salisbury and the way of life of those days.
(repeated Saturday, 00.30 and 05.00)

13.45-14.00 The World of Science
A weekly survey of the latest developments

Asian Club. 'Law and the Visitor' is the subject on Sunday. The speaker is Dudley Perkins, Legal Advisor to the Port of London Authority, and frequent broadcaster on legal problems. He will answer questions on the law as it affects Commonwealth and foreign visitors to Britain and as it impresses them. The chairman will be Miss Kamila Tyabji, an Indian barrister now working for a London insurance firm.

Standards of Living. Monday's programme investigates the changes that have been occurring in the countryside of Britain during the past quarter of a century. A farmer and his wife, a country schoolteacher, and an agricultural engineer will talk about the major alterations in their lives and those of their families.

Drama Studio. The powerful middle act of Charles Morgan's play *The River Line* will be presented on Tuesday. The title refers to an underground organisation for helping Allied airmen and escaped prisoners-of-war to get out of Nazi-occupied Europe. This act is set in a French house not far from the Spanish frontier and therefore near the end of the River Line. A group of escapers is gathered waiting for the last stage of their journey. A brave young Frenchwoman, an important link in the organisation, falls in love with one of them known as Heron. But this does not interfere with the tragic decision she and the senior officer have to make when Heron falls under suspicion of being a fake.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes and provides a valuable supplement to the BBC's direct transmissions from London

'Portrait of the General'

JOHN BRIDGES introduces a programme which will be broadcast in the General Overseas Service to mark the retirement of General Alfred Maximilian Gruenther as Supreme Allied Commander, Europe, a post which he has held for the past three years

TWO dozen British staff officers sat in hollow-square formation deep down under a building in Whitehall, gazing with frank curiosity and some puzzlement at an American General in their midst.

The General, newly appointed Chief of Staff of Planning for the Allied invasion of North Africa, stared back and said nothing. He was General Alfred Gruenther, later to succeed Generals Eisenhower and Ridgway as Supreme Allied Commander, Europe.

The British officers were not to know that three days before General Gruenther had been on a post in Texas completely unaware that any operations in North Africa were even contemplated. Nor did they know that only two days before, in Washington, had he heard any mention of it, and then merely its code name, Operation Torch. Yet here he was, on a Monday morning in London, surrounded by members of the British General Staff, expected to hold forth for their benefit on the way such an undertaking should be carried out.

'It was a case,' says General Gruenther, 'of the blind leading the blind. I stalled and kidded along a bit, and I asked them to tell me their ideas. They stalled and kidded along, too, and they said they had not formed any opinions yet and had been waiting to hear ours. And then somebody asked me outright whether I thought the best thing would be to make the landing to the east or the west of Algiers. Well, that was a little difficult for me, because as of that moment I was not too sure if Algiers was to the east or west of Cairo!'

From Nebraska

The circumstances leading up to this moment are graphically described, and with a delightful frankness, by General Gruenther himself in the programme which marks his retirement from the highest military post in Europe. The General tells of his life as a boy in the little village of Platt Centre, Nebraska, where his father ran the local newspaper. The population of Platt Centre then was 375. 'Now,' says General Gruenther, 'there are about a hundred more. Things are pretty steady around there.'

With deep respect and affection he paints lively pictures of the father who inspired and guided his early life; of his four brothers and sisters, and of his mother, whose task it was to run the home, help with the newspaper, and in the absence of her husband on political work at the county seat rule a growing young family—'a dark-complected woman with a good Irish humour, about five feet ten, and with a lot of patience. She was a woman of considerable

energy and intelligence, and we always wondered how she could keep up all this activity. But she never crabbed, and we loved her very dearly.'

The General describes how at the age of thirteen he took advantage of his father's absence to write an editorial in the family newspaper. It concerned the United States budget and contained a strong protest from young Alfred that so much money was being spent on the military. And it is a delight to listen to his tongue-in-cheek remembrance of a time, forty years or so later, when as Director of the Joint Staff in

Washington all his energies were devoted to the task of persuading the Senate Appropriations Committee that a sum of 14-billion dollars was essential to maintain national defence.

'Portrait of the General' gains much from having General Gruenther tell his own story. He has a rich vein of humour, and the sardonic gleam in his eye is matched by the very tangible smile in a voice that at first seems only harsh and rasping. In the telling of any anecdote, the expounding of any situation, General Gruenther is not long in asking you to join him in laughter. And almost always the laugh is on him.

His Wife's Angle

His introduction of his wife into the programme is done in a way completely typical of the man. It might be expected that Mrs. Gruenther, his constant companion and helper for some thirty-five years, would talk of her husband's rise to eminence, of the importance of his role in European affairs, or perhaps give us a little inside knowledge as to the General's diet.

But no, she is brought on as the president of the Anti-Gruenther Association, and we are treated to a description of a traditional American pastime known as kibitzing. 'The main doctrine,' says Mrs. Gruenther, 'is down with all Gruenthers, and don't let 'em get too cocky. Especially General Gruenther.'

It is typical also of the man that one of his main pastimes is the game of bridge, and that in this field as well his reputation is international. How he achieved this is a part of the Gruenther story, well in character, for it is an outstanding example of his quick recognition and complete mastery of a problem.

There is an underlying thread of seriousness throughout the story, however. The programme aims at portraying the man and not his job, but in following his progress through life it is not hard to see how the General came to be chosen to run the forces of the West.

Step by step, driven and encouraged by a father who was wise and kind as well as stern and exacting, he has acquired great powers of concentration, a ruthless determination, and meticulous attention to detail.

Add to these qualities a facility for winning friends that any public-relations man would envy, a brain capable of grasping and analysing the most complex problems, and, above all, a supreme dedication to the cause of the North Atlantic Treaty Organisation. All of these are manifest in the intriguing life story of General Alfred Maximilian Gruenther.

Ten Years of the BBC Third Programme

Below we print extracts from two of the talks which were broadcast in the General Overseas Service to mark the tenth anniversary of the inauguration of the BBC Third Programme in 1946

SIR GEORGE BARNES

The Head of the Third Programme from 1946 to 1948

THE Third Programme started on September 29 ten years ago. That was only a year after the defeat of Japan (and long before viewing was thought of as a serious competitor to listening). The programme owed something of its character to the war which had just come to an end. No civilian had been out of Britain for seven years, and we used this hunger for experience from abroad to satisfy curiosity about life on the continent of Europe, and gradually, as land lines were relaid, to bring music from abroad to re-establish international standards of performance, then only available on gramophone records.

This was the background against which we set to work in 1946. I was given the direction of this experiment, and the terms of my brief were such as to gladden the heart of any programme planner. For instance, we need have no fixed points: you can imagine what this meant at a time when all broadcasting in Britain, and indeed the life of most people, revolved round the nine p.m. news bulletin. We were to present the great repertoire of music, drama, and literature in so far as it was suited to broadcasting in sound; and to give every speaker time 'to fold his legs and have out his talk'—in Johnson's phrase—so long as he could hold his listeners' attention. Productions were to be of the length set by the author or composer. And above all we were to experiment. These plans were heard at a Press conference with incredulity, but when translated into action they were rapturously received.

Something Significant Every Night

The plans were general: this is how we carried them out. We decided to have something of significance every night, to offer one main dish but never to let it be the only one. In the intervals of operas we gave talks or readings for those who dislike music, and in the pauses between the acts in plays recitals of music. We would not allow either the readings or the recitals to be of any old thing that happened to fill the time offered. For we planned everything so that the perceptive listener would be able to detect some purpose behind whatever he might tune into.

I think this exemplified the principle that education comprises not only the acquiring of new knowledge but also learning to see the connection between things already known.

We expected a lot from our listeners: first, they must choose what they wished to hear, for continuous listening to the Third Programme was never intended. Secondly, we expected them to meet the performers half-way by giving them their whole attention. Experiment never stopped. We got a poet, Henry Reed, to adapt Melville's *Moby Dick*; another, Laurie Lee, to dramatise the life of Magellan. We asked Nevill Coghill and Stephen Potter to arrange broadcasts of Chaucer's *Canterbury Tales*, and they were so successful that some were repeated for the far larger audience in the Home Service, and later on were sold as commercial gramophone records. We gave repeat performances of all our own successes, and those that were suitable from other programmes both British and foreign.

Nor did we forget the best of yesterday's broadcasts. We wooed Max Beerbohm with repeats of his pre-war entertainments until he agreed to write new ones for the Third. We brought to the young their first chance to hear Wagner with uncut performances under Sir Thomas Beecham of *Tristan* and *The Valkyrie*.

Of course, we made mistakes. We played pieces by great composers, for completeness sake, which revealed them nodding over their work. On the other hand we made Browning's dramatic poetry live again. We gave much thought to intervals between items. These mattered a lot to us because it is often difficult to calculate the exact length of a new work, and we never allowed a work to be faded before it ended. So we provided buffers, and tried filling them with improvisations on the piano. This failed, but when we invited enthusiasts like Desmond MacCarthy to make extracts from an author's work which the announcer could read we succeeded.

Undoubtedly this programme broke new ground in broadcasting: it chose as its audience those persons hitherto least touched by the Home Service or the new Light Programme, and gave them much that they could not afford to miss. Even more important, the programme was a means of publishing new works in music, drama, and letters: the creative writer was given a new outlet.

At any rate the phrase itself—Third Programme—has now passed into the language with a meaning which, whether they like it or not, millions understand. The repertoire of music enjoyed has been increased, and perhaps the British aversion to the unfamiliar in the arts has been a little bit diminished.

SIR HAROLD NICOLSON

A BBC Governor when the Third Programme started

I WAS one of the governors of the BBC at the time the Third Programme experiment was initiated, and I can well remember the discussions which took place and the different views which at the time were expressed. The idea of a select programme appealing mainly to intellectuals was first mooted by Sir William Haley, at that time Director-General of the BBC, and now editor of *The Times* newspaper. Sir William suggested that now that the war was over and the BBC had re-entered into full possession of its rights and independence it might be well to consider whether it could do anything more to raise its own standards, to express its sense of responsibility for national culture, and to provide the minority of listeners who desired to hear serious talks on serious subjects, or to listen to music which was generally inaccessible, with the sort of exceptional material that they desired.

How far have these original intentions been carried out, and how far has the experiment been justified by its results? To the first question a positive answer can be given. During the past ten years those responsible for the planning and execution of the Third Programme, for its actual day-to-day items, have never for a moment deviated from the original purpose: that of providing the best that can be heard. Has it been justified by the results? Clearly, when one is dealing with qualitative values rather than with quantitative values such a question is difficult to answer. It is estimated that only one listener in a hundred is accustomed to tune in to the Third Programme.

It might, indeed, be objected that it is unfair to spend any of the revenue derived from licence fees on a programme which appeals to so small a minority. But the question is rather whether the Third Programme has succeeded in supplying its sophisticated audience with the sort of listening matter which it wants. Is the quality up to standard? Are they provided with a sufficiently varied programme? And, above all—since this seems to me the essential test of justification—does the Third Programme give the educated listener the sort of material that he would be unable to obtain by any other means?

In answering the last question we need not consider whether the wireless as a means of communication is as subtle or as sensitive as the human ear. I am quite prepared to believe that there are certain gradations of tone or sound which are not conveyed by wireless or by recording with the exact delicacy derived from direct hearing. Yet surely this loss is very amply compensated by the convenience? People who do not possess the health, or the time, or the money, or even the energy to turn out at night and to make an expedition to some opera or concert hall can hear great music or important lectures in the privacy and comfort of their own rooms. Chamber music, by this means, is really rendered for them music in their own chamber.

The BBC as Patron of the Arts

There is an aspect of the Third Programme which I regard as highly important but which is generally ignored by those who attack it. That aspect is the function of the BBC as a patron of the arts. It would generally be agreed that now that the private patron has disappeared it is a valuable thing that the BBC should give to young artists the opportunity of obtaining an audience.

The directors and planners of the Third Programme have from the outset regarded it a primary duty to broadcast the works of modern composers, writers, and dramatists who in this fierce commercial world would have obtained no patron at all. That is a function which is all too often ignored by the critics of the Third Programme. It is not merely that listeners are given material which they could only with great difficulty have obtained through other means: it is that unknown artists are afforded opportunities which if the Third Programme did not exist would not be afforded at all.

A third valuable function of the Third Programme is that it gives to the educated public the opportunity of hearing works which would not by any other means be accessible. Obviously our great orchestras and those who control our operas and theatres are bound to consider the commercial rather than the educative value of what they produce. They simply cannot afford to produce matter which is of interest to a minority only. That is where the BBC can fulfil its function.

A fourth function is to render young or foreign artists familiar to a wider audience, both as performers and composers, both as poets and dramatists. Great care has been given to produce for the listener the best of modern compositions. As patron, as I have said, the Third Programme has amply justified its inception and fulfilled its function; as educator it has also proved itself a valuable guide and companion. Let it continue triumphant and undeterred.

A special dais was put up at Calder Hall for the Queen to deliver an address before throwing the switch that began the feeding of electricity into the national grid

Her Majesty met members of the staff in the Blower House: in the centre is Mr. H. G. Davey, the general works manager

Britain Opens the Atomic Age

Her Majesty the Queen inaugurated at Calder Hall in Cumberland the first full-scale nuclear power station in the world. Here we reproduce the text of a programme outlining the story behind this historic, pioneer achievement as told by the engineers who designed the station and the technicians who are now operating it. The narrator is Stephen Black

WEDNESDAY, October 17, 1956, was a significant date in the history of Britain. On that day Her Majesty the Queen formally opened the first major atomic power station in the world to produce electricity on a commercial scale. This power station has been built by the British Atomic Energy Authority at Calder Hall, in Cumberland, on the north-west coast of England.

Standing with my back to the sea, looking inland, the atomic power station seemed isolated from all the normal lines of communication that one associates with the import of fuel for a power station. There are no docks to bring coal by sea; no lines leading to the power station. The land is rural, with green fields and little cottages. And yet this power station is producing over ninety megawatts of electricity, which is an output equivalent to the yearly consumption of more than a quarter of a million tons of coal. The first representative of the United Kingdom Atomic Energy Authority whom I met was Mr. Richard Moore, who designed Calder Hall. He said:

'What was required was a graphite block enclosed in a steel pressure vessel, surrounded by a concrete shield seven feet thick to prevent the escape of dangerous radiation, and to lead the gas to the heat exchangers in and out of the reactor. The plant is of considerable size: the graphite block itself is about the size of a large living room; the surrounding steel vessel must withstand internal gas pressure of 100 pounds a square inch, and yet provide access to the graphite for the loading and unloading of the uranium, and for the passage of the gas in and out of the plant. The vessel we designed is unique. It weighs some 350 tons and is built of two-inch-thick plate, which at the time was the thickest we considered we could build reliably on site. The electricity output of the plant is handled with some sixty-five miles of cable.'

The atomic power station is on the fringe of what is really a small township, with streets and lights and small buildings which house the clubs and canteens for the work-people. On the right is a conventional electrical sub-station, with the first of the tall pylons, the steel towers, which march off across the Cumbrian fells leading the power away into the national grid. To the west stand two gigantic concrete cooling towers, which are common to any power station. And behind them are the Number One Reactor building, and then the turbine house, long and relatively low, and perhaps 200 yards behind Number One, Number Two Reactor building. Further to the east an array of derricks and cranes and scaffolding and shuttering shows that Calder Hall is already being extended.

Number One Reactor building is clothed—almost casually, I would say—in an outer shell of asbestos and glass, and topped by what looks like a glass conservatory. There are two tall, black factory chimneys with yellow ladders running up the side, and from each corner of this great square building black pipes lead out to the huge black cylinders standing on end. These black cylinders are in fact the heat exchangers, the boilers of the atomic power station, and each one is clothed in a delicate tracery of inspection ladders and pipes, painted in different colours—bright red, yellow, or blue.

I asked Mr. Andrew Young, the engineer who was responsible for building the atomic power station to the plans of Mr. Richard Moore, what he thought when he first saw them. He replied:

'I facetiously said to Mr. Moore: "Why have you spent so much time making it difficult when with a little extra effort you could have made it absolutely impossible?" As a matter of fact, now that it is built, I really cannot think that any major alteration to the design would be justified. The most difficult task was co-ordinating the civil engineering work with the mechanical engineering work, because the whole thing had been timed to a very tight programme which could not be allowed to get out of gear.'

'Take these heat exchangers—how did you get them up?'

'First of all they were transported down in sections from Scotland. These are seventeen feet wide, and it was essential that the whole of the route for these things should be surveyed, bridges examined to see that they could carry the loads, and at one point not very many miles from here, through a village, there was only three and a half inches clearance on each side of the section. We then had to fabricate the heat exchanger horizontally, of course. After it was completed and hydraulically tested it was rolled on to a low loader—thirty-two wheels, and each set of four wheels was steered independently. This enabled us

(Continued overleaf)

Sir Christopher Hinton gave Britain the lead

The construction team: (left to right) R. Moore, designer; A. Young, resident engineer; K. L. Stretch, works manager

Charge and discharge floor above Number One reactor at Calder Hall. The machine on the left is used to insert new elements of uranium into the reactor through the charging tubes in the floor; a more heavily shielded machine extracts the lethally radio-active spent elements

when we transported it up the street, opposite its foundations, to turn it at ninety degrees within its own axis.

'Two steel poles were already in position, supported by guy ropes, and from these ropes were attached to the heat exchanger by a girdle about a third of the way down. They were then hauled into position and landed on their foundations fifteen feet from the ground. The weight of these things is 200 tons, and it takes an hour. Now, that is a long time to have 200 tons hanging on the end of a hook: it is no job for a person with a duodenal ulcer, I can tell you that!'

'Mr. Young, inside the pressure vessel there is the graphite block, the moderator, and inside the graphite block are the rods of uranium. How did you get the graphite block inside the pressure vessel?'

'The graphite block that Mr. Moore referred to as being the size of a living room—that is built up of over 50,000 blocks, and each of those blocks are built one on top of the other over the area of the floor of the reactor vessel to tolerances between 5,000th and 10,000th of an inch. The whole of that had to be planned on a production-line basis as in a machine shop, because 50,000 blocks were laid in something like six weeks. There was also the problem of having to maintain absolutely scrupulously clean conditions. Anyone going into the area had to strip down to the skin and be dressed with clothes provided for them: all rings and wrist watches had to be left outside. Anyone who wore glasses had to sign to say they had glasses, and to show they still had them on when they came out. Any extraneous matter other than graphite and fuel would reduce the efficiency of the pile.

'If you want some of the facts and figures I can tell you the cooling towers, which are the tallest structures, are 300 feet. The main reactor buildings are roughly 120 feet, the heat exchangers 70 to 80 feet, complete with the bend and so on. We had 2,100 men working here at the maximum period, and the maximum number of different contractors at one time, I think, was about fifty. In all it took us three years.'

The General Works Manager of the first commercial atomic power station in the world is Mr. H. G. Davey, and I asked him how he got this job. He said: 'I am basically a chemical engineer, and I spent the war years in explosives. In 1947 Sir Christopher Hinton asked me if I would take charge of this place, and I have said sufficient for you to see that I had no special qualifications. I would claim to be trained in normal industry. As far as Calder Hall is concerned, apart from the nuclear side, you can regard it as an ordinary power station. It will employ about 450 people, but of those only about twelve need be connected directly with the problems of the reactor. All the other people one could find in a conventional power station.

'My work does not differ all that much from that of a manager of an ordinary power station. The problems are surprisingly common. Most of our workers are recruited from west Cumberland. Before the war this was a depressed area: the chief industries were coal and iron mining. We have taken these people and without any great difficulty trained them in this new type of work. They have adapted themselves to the new circumstances in quite a short time. In the control room the type of person one finds began as an electrician, or the equivalent. We have trained him, and gradually he has been promoted from electrician to chargehand, and ultimately to foreman. And we have implicit faith that he will run the reactor to our complete satisfaction.'

The control room of Number One Reactor is a hexagonal room, with the shorter side of the hexagon towards the concrete biological shield which is all that separates it from the atomic pile. The walls are covered with banks of dials and recording instruments in square black frames

behind which are rolls of graph-paper. Needles move automatically, and pens write. In the centre of the room there is the control desk. The dials on the wall give the various temperatures of, for example, the graphite inside the pile, the uranium rods, or the carbon-dioxide gas which is used to convey the heat from the pile to the heat exchangers outside the building. On a panel at the control desk, there is the reactor emergency stop button, ringed in red, which if you pressed it would shut down the whole pile. All this apparatus is controlled quite simply by two men. I asked the foreman, Mr. George Tilby, what sort of education he had had. He told me: 'Quite an ordinary one. I went to a primary school—I think it is called that nowadays—and from there to a central school, served an apprenticeship, and so on. I did not need a university education to become foreman of the entire operation here. It is all laid out for you in a straightforward manner; you take the things as they come along. You learn part at a time, and assimilate it all eventually. It does not take a long time to do that. It just looks a little awe-inspiring to a person who comes in here for the first time, but when they have been in here for a few days they very soon know where they stand, and what each piece of equipment is for.'

I asked Mr. Davey whether the trade unions have negotiated any special agreements with regard to the radiation hazards. Had the trade unions ever demanded any danger money, for example?

'There was talk of that in the early days, but we answered by saying we did not want men to take risks: we would make conditions which rendered the job safe, and we have always maintained that if they carry out the rules and regulations laid down they are quite safe.'

Mr. Harry Crossley is a shop steward of the Amalgamated Engineering Union at Calder Hall, and he had this to say about the health-security measures taken there:

'We are taught a certain amount about the health side of this, but we do not go into it at all deeply. What we do have to have is a complete faith that the people at the top know what they are doing—the Health Physics Department. And we do go into a job on their recommendation with faith. There has been some discussion with the authority on this problem. It has been met with absolute frankness, and any query that the workers had to put to the management has been taken to the highest level as regards brains, and we all finished up quite happy.'

What the Local People Think

I also asked Mr. Davey about the reactions of the local population: 'When the locals first heard that there was going to be an atomic power station here there was some concern. We could describe this as fear of the unknown, which is quite understandable. We went to great lengths to convince them that we would take adequate safety precautions and that they had nothing to worry about. Over a period of time I have talked in pubs, clubs, church halls, women's institutes, and anywhere else you care to mention. I have been asked whether we are responsible for the appalling wet weather. I have said no, and asked if they would give us credit for the fine weather. I've been asked if we were responsible for the absence of salmon in the streams at one season; and I said I do not think so, but could we please have the credit for the excellent fishing season they have had this year.'

'Mr. Davey, does the electricity produced here by the atomic power station bear comparison economically with electricity produced by an ordinary coal-fuelled power station?'

Plutonium, the fuel for the Atomic Age, will not be hacked out by dusty miners but extracted from uranium—as at Windscale—by clinically dressed chemists

Against a background of hills and sea Calder Hall will take an unobtrusive place: there will be no docks, no railway sidings, no ugly heaps of fuel or slag

'Oh, undoubtedly. A short time ago we were talking about generating electricity at about 0.6 of a penny per unit, and you must remember these are early days. The whole thing is extremely interesting because this type of reactor when producing electricity also produces plutonium and fission products. Plutonium itself is an extremely valuable material because it is fissile, and it can be used in reactors in turn for the generation of electricity. To separate plutonium and fission products from the uranium which comes out of the reactor a rather complicated chemical process is required. This exists at our Windscale factory.'

The Windscale plutonium factory occupies 350 acres, and beside it Calder Hall would look pretty small. The buildings are oblong concrete blocks divided by macadam roads. You get inside the process area by going through the changing room, and an elaborate changing procedure. A white coat is given to you, and a piece of film in a special container is pinned to your lapel to measure any radiation to which you may be subjected. You take off your shoes and are given another pair, numbered in the case of the workers, but in my case marked with a 'V' for visitor. Then in your stockinged feet you pass to the barrier and put on the shoes, then swing over for the first time into the 'active area.'

The Works Manager Explains

You are then allowed to walk, as I did, past the constable at the gate along the macadam roads. The white-overalled and white-forage-capped process operators, and the maintenance men in their blue overalls and blue forage caps, looked like automatons, and I thought at once of George Orwell's *1984*, and had to remind myself that these men were in fact just ordinary British workers represented by British trade unions. I found Tom Touhy, the Works Manager, in this office, and he explained exactly what plutonium is:

'Any atomic power plant fuelled by uranium must produce plutonium as a by-product, just as the manufacture of gas produces coke as a by-product. But to separate plutonium a very expensive chemical plant must be used. In fact, the plant would cost as much as an atomic power station. Also, the plant has to be operated by highly trained technicians. The major complication arises from the fact that the material to be handled is intensely radio-active, and therefore must be handled under barriers or behind large thicknesses of concrete. All our chemical plants are effectively encased in large concrete boxes at the early stages of the process. Now, this means that remote control has to be used to a large extent, and to do this we have large numbers of instruments and also a very elaborate chemically controlled laboratory.'

The first part of the chemical extraction process is housed in the biggest building of the entire plant. It is a building some 200 feet high, topped by a factory chimney. I went up in a lift to the tenth floor, and there I asked Mr. Hughes, the manager of the plant, what was the first thing they have to do with the rods of uranium that have come from an atomic power station. He told me:

'The rods are brought from the reactor in a heavily shielded container. They are lifted up to the tenth floor of this building on a hoist, and then immersed under twelve feet of water in this so-called pond. It is a pond of green water, with lights deep down in the water, and there are a number of rods and racks and various things, both in and

above the water, and below it. By the use of remote-control gadgets and hydraulic equipment, these rods are taken from the containers and forced up an inclined plane, through the biological shield, and fall into the dissolver, where in contact with nitric acid they are dissolved to give a solution of uranium, plutonium, and fission-product nitrates.

'On the other side of this pond there is a wall that is the main part of the biological shield. Inside there is a collection of all-welded stainless-steel equipment consisting of vessels and pipe-work, each cell containing something up to five miles of pipe-work. Control is exercised from a control panel. At this panel temperatures, pressures, activity measurements, specific gravities are all recorded, having been measured some distance from the panel and behind the fully shielded wall.'

'Mr. Touhy, how do you control what is happening behind the biological shield apart from the actual chemical processes?'

'We have placed around the biological shield sample troughs where, again by means of remote equipment, we can take samples of the liquors that are behind the shield. These are then passed in lead containers to the chemical control laboratories. In one of these laboratories there is a bench, an ordinary laboratory bench, but it is covered by a large structure—a box with slanting sides made of transparent perspex. There are two holes in the side of each piece of perspex with long rubber gloves hanging out of them.

'This is a typical alpha radio-active glove-box, in which we carry out analyses of alpha-active materials. One of the samples which was taken on the first stages of the chemical process has been brought into the laboratory, and the plutonium content separated. Here we do analysis to determine the plutonium content. Before the war if one had been handling one-thousandth of a pound of radium that would have been considered a great deal. Here we are handling activity equivalent to literally tons of radium. If we did not employ the precautions which you have seen in action the effect on the personnel employed would be simply disastrous. But the Principal Medical Officer, Dr. McLean, is better qualified to tell you what the effects would be.' Dr. McLean said:

Special Problem of Radiation

'Before we talk about the special problem of radiation I think it is just worth mentioning that after all these are factories and they do have all the normal risks of accidents and injury that one meets in any factory. One of the easiest ways of explaining radiation hazards is, I think, in terms of the two quite different types of the problem. On the one hand, an external radiation hazard, which is one where a person may be exposed to radiation by a source which is outside the body; and, on the other hand, an internal radiation hazard where a person may actually absorb into his body a quantity of radio-active material which then remains with him for a period thereafter. This is a very important difference, because the operation of reactors generally, and this could certainly include the new Calder Hall reactors, is essentially an exercise in external radiation-hazard control. And by and large these hazards are relatively easy to manage.

'The first and absolutely essential stage in protection is the design stage, that is the incorporation by good design principles of efficient

(Continued on page 12)

TOM MCKITTERICK

TOM MCKITTERICK, who compiled the recently published Oxford Regional Economic Atlas of the U.S.S.R. and Eastern Europe, discusses in his contribution to the 'This Day and Age' series on the Soviet Union the part played by planning in building up the country's economy to its present strength

Russia's Five-Year Plans

SINCE the 1917 revolution the Soviet Union has progressed from being an economically backward country to the position of second-greatest industrial producer in the world. That much is true, and nowadays requires no proof. But when we try to assess the actual rate and direction of growth in the Soviet economy, and even more when we attempt comparisons with the great industrial countries of the West, we come

up against some serious difficulties.

First of all there is the simple difficulty of measurement. The Soviet Union uses different standards from most other countries and until very recently has not published enough statistical material for people outside to arrive at very accurate estimates of what is happening. The second difficulty is even greater, because the shape of the economy is so very different. Both the Western countries and the Soviet Union like using index numbers as convenient ways of saying how much the economy has grown. But it is very misleading to apply the sort of index number used in one country to the economy of another, since the probability is that the rates of growth have been quite different in different parts of the economy.

Thus in the United States or Britain we know that the consumption of goods by the public has increased at such and such a rate, and that the proportion consumption bears to the whole national income can be fairly easily assessed. In the Soviet Union, however, the rate of investment has been much higher and the consumer has been relatively worse off. So if we try to compare the rate of growth in terms of consumer goods it will be unduly unfavourable to the Soviet Union, and if we measure it in terms of investment it will be unduly favourable.

Development of Basic Industries

I do not propose to give you a long list of figures, but I will quote you a few which appear to me to be particularly significant as illustrations of how things have changed in the past few decades. In 1932, at the end of the first five-year plan, the whole of the Soviet Union produced 64-million tons of coal; in 1955, 390-million tons. In 1932, just under 6-million tons of steel; in 1955, 47-million tons. In the same period output of oil trebled, and production of electric power was increased twelve times. In almost all the basic sectors of the economy there are equally striking figures to be quoted. Each of the five-year plans—the fifth was completed at the end of last year—has concentrated on the development of the great basic industries, so as to lay the foundation for a strong and active economy in the years to come.

This has meant that the rate of investment has been kept far higher than would be possible in a country where the economy is under less close central control. Expenditure on non-essential investment has been effectively prevented, and the consumer has had to make the best he can of what is left over after the needs of the basic industries have been met. From time to time there has been a little relaxation in the consumer's favour, as there was in the period after Stalin's death when Mr. Malenkov was Prime Minister. But these have seldom lasted long, and though the new five-year plan which began this year offers the consumer hope of a rather easier time he is still going to be much less favourably placed than one would expect from the volume of Soviet industrial output.

Two of the five-year plans were completed before the war, the first in 1932 and the second in 1937. The third was due for completion in 1942, but of course the war threw everything out of gear, and a lot that should have been done by then had to be postponed. The fourth plan, from 1946 to 1950, had to concentrate first and foremost on repairing the colossal injuries the war had caused, both by actual damage, in the course of fighting and bombing, and by the 'scorched earth' policy under which mines, oil-wells, and factories were deliberately destroyed to deny their use to the enemy.

The fifth plan, covering the years from 1951 to 1955, was able to take the programme of industrial expansion much further ahead, and the sixth plan, which runs from this year to the end of 1960, is designed to bring about the biggest increases yet in many of the major sectors of the economy. If its principal targets are met it will mean that by 1960 the Soviet Union will be producing as much of many of the main materials and semi-manufactures as the United States produced in the years immediately after the war, and so will be in a position to challenge the rest of the world in the economic field in a way that has never happened yet.

It is not correct to assume, as many people outside the Soviet Union do, that each five-year period is isolated from the rest. In actual fact the process of development is treated as a continuous one, and the beginning of a new five-year plan does not necessarily make a great deal of difference: it is merely a convenient occasion for taking stock of what has already been done, and reviewing the probable course of things in

the future. The targets set at the beginning of a new plan are quite likely to be revised as the work proceeds; usually the revisions are upwards, if progress turns out to be faster than was expected, but there have been several important instances where the figures were revised downwards to bring them more into line with the realities of the economic situation.

The real turning points in Soviet economic development have not had very much to do with the plans as such. They have been occasions like the great famine of 1932, caused by the ruthless imposition of collectivisation which was only one part of the first five-year plan, the political purges of the later 1930s, or the changes made after the death of Stalin in 1953. The sixth plan which has just begun may turn out to be a more decisive stage in history than the others, but that is because its beginning coincided with the great political changes inside the Soviet Union brought about when the new leaders decided to break with the Stalin tradition.

The earlier plans suffered from being too rigid. Effective central planning on the scale attempted in the Soviet Union implies complete control over all sectors of the economy, and also implies that the information coming up from below to the planning authorities is reasonably complete and accurate. In practice the control of the central authorities, though very extensive, is not absolute—it hardly could be unless they were to employ an even bigger army of officials than they do—and the constant obligation on the people who do the work to report progress has led them quite often to falsify their returns so as to make it look as if their targets have been reached when they have not.

Both of these weaknesses in the mechanism are likely to cause errors in calculation. The principal economic ministries have to provide the central planning committees with the information on which the next set of calculations can be based, and must then supervise the carrying out of their sections of the plan. If, as sometimes happens, their information is inadequate or wrong, and their control incomplete, things may be badly thrown out. That is why it was such a mistake under Stalin to try to impose the plans too rigidly. The new plan is more flexible, but even so there is the danger of assuming that central control is more absolute than it really is.

Yet while we know that these internal difficulties exist and are responsible for some of the reassessments of targets that occur from time to time we must not form the impression that the whole Soviet economic system is inefficient. It is not. A terrible price in human hardship and suffering has been paid for the progress of these past thirty-nine years, but the progress is real enough. Even thirty years ago, or even twenty years ago, it would have seemed absurd to talk of Russia challenging the United States in the economic field. Today the challenge is still a distance off, but the fact that it is no longer absurd to talk about it is the measure of the change that has taken place.

Competition in Capital Goods

It is going to be very important for the other industrial countries to appreciate in advance what form the challenge will take when it is made. I do not believe that the Soviet authorities are going to be much interested in direct competition with the Western countries in their own markets, in the sense in which, say, Britain and Germany are.

On the consumer-goods side of the economy it will be years yet before the Soviet Union is producing anything like enough to give her own people any real relaxation of austerity, let alone to have a surplus for export. On the capital-goods side the policy of continuing to expand the productive capacity of the Soviet Union herself is going to make big demands on her heavy industries. So, too, is the economic assistance the Soviet Union is giving to China. There will be very little left over for the export of goods which could easily and profitably be used at home, unless it is decided at some stage to export them for political reasons.

Those words are the crux of the whole matter. I believe that the first point at which the other industrial countries will meet serious competition from the Soviet Union is in the export of capital goods to countries carrying out big development programmes. I do not want to go into the complex question of how either the Western countries or the Soviet Union will help to finance these exports, or how they will provide the receiving countries with technical help to carry out their development.

The point is that since the Soviet economy is so closely controlled a decision to export particular goods can be taken for political as distinct from economic reasons, and it does not matter very much how they are paid for or if they are paid for at all. If it is politically worth while to offer capital goods on favourable terms to particular countries economic considerations need not stand in the way.

Up to now the Western countries have been the chief suppliers of capital goods to the less developed parts of the world. I believe that one of the dominant facts of our times is that the Soviet Union will before very long have the economic strength to challenge this Western supremacy. (Broadcast in the BBC's General Overseas Service)

The company of fifty included a number of women, and most of them seemed very young: they were specially keen to see plays by Shaw and Shakespeare

Chinese Variety in London

BARBARA HOOPER meets members of the Variety Theatre of China who recently appeared for a short season at a London theatre in a remarkable display of traditional juggling and acrobatics

FOR three weeks Londoners were able to see something of China's traditional juggling and acrobatic arts, for fifty members of the Variety Theatre of China appeared for a short season at the Princes Theatre. The first thing that struck me when I met them on their arrival was how small they all were; and the second, how beaming and cheerful they all were: ear-to-ear smiles made up for their total lack of English. Of course, by now they were all hardened travellers: even if this was their first trip outside their own country a flight from Geneva to London could easily be taken in their stride after several weeks spent touring Europe.

Mr. Liu Yi, director of the theatre

The men were all in European clothes, but the women and girls wore their traditional long, straight robes in rich brocades and silks that seemed a great deal more feminine than the tweed coats and suits worn by the other women in the hotel lounge. There were a few grey heads among them, but most of the company seemed very young, especially two delightful, giggling schoolgirls, with pigtailed right down their backs: they were only fifteen, but in China they have no special laws against child actors. The whole company filed round the room shaking hands with everyone else—and there

were a good many of us. Then came bouquets for some of the actresses and a bluff speech of welcome.

Finally, after all the hand-shaking, I managed to have a word with the artistic director of the troupe, Mr. Liu. His secretary was the only one of the whole party who spoke any English, so he interpreted for us. Mr. Liu explained that the variety turns his artists present are really circus acts mimed to music, developed from traditional arts and folk games and sports of the Chinese people, some going back more than a thousand years. But it is only in the past few years that these acts have established themselves as an accepted branch of the legitimate theatre. Now they are so popular—though not perhaps quite as popular as the Peking Opera, and classical straight plays—that the Peking company travels all over China, and appears at all the main provincial theatres.

These theatres are mainly very modern, too: they seat up to 2,000 people, and most have revolving stages. However, that is not so essential to the variety actors, for they use very little scenery: they just bring on the properties for their individual acts.

And what are these acts? Mr. Liu rattled off a string of titles that did not mean very much to me: amongst them 'Jars,' 'Plates,' and what sounded like 'Pagoda of Bowls.' This turned out to be the speciality of one of the youngest and prettiest actresses, Hsia Chu Hua: she balances on one hand, with a pile of nearly a dozen chop-suey bowls on her head.

Hsia Chu Hua doing her 'Pagoda of Bowls' balancing act, and (right) Tu Sha Oyi supporting a pole on which his wife and another girl are doing acrobatics

Familiar objects of pottery figure quite prominently on the programme. Two of the men—Hao Shu Wang and Chou Chin Jung—remind you of football forwards: they bounce large circular vases, weighing up to seventeen pounds, between them from head to head. Then there is a team of acrobats who twirl plates or saucers on long bamboo canes, butterfly-like, while they form a human tower. There is the usual complement of tumblers, balancers, jugglers, impersonators, trick cyclists, gymnasts, conjurers, and trapeze artists, but they all have this in common: complete mastery of the seemingly impossible, and the use of only the homeliest everyday things—hoops, tables, bottles—for all their spectacles.

In between performances the company did some shopping and sight-seeing and went to a few shows. I wondered what (if anything) the Chinese troupe had heard about the British theatre, and what they wanted to see in London. And the answer? They had not heard much, but surprisingly enough they wanted to see plays by Shakespeare and Shaw. (Expanded from a broadcast in 'Radio Newsrel')

One of the teams of acrobats diving simultaneously through a set of hoops

LORD MILVERTON, in a contribution to the 'I Remember Africa' series, offers some vivid personal memories of the West Coast where he served as Governor of the Gambia and later of Nigeria

LORD MILVERTON

'A Land to Love'

MEMORY plays strange tricks in its selection, but in looking back the things that truly last and stand out vividly are largely personal. So much of Africa is a land to love, a land of varying moods, from its wild tropical storms to the peaceful beauty of its night skies. In retrospect the discomforts, the heat, the heavy rains, the arid months, the flies, the pests that prey on man and his crops fall into oblivion. They are the setting of human life. My memories

are of men and women and children, and it is of them that I would like to speak. The Africa that I knew and remember was a land of peace but not of plenty. The peace had been brought by British control, but the plenty had yet to be won from a reluctant soil. In 1933 in the Gambia the first impression was the poverty of the bulk of the population and their ill health and malnutrition.

It is a common mistake to regard the African peasant as lazy. In fact he has had to work hard for a meagre and precarious living, though the one thing he has not been troubled with is a housing problem. Mud huts are so easy to build and so cool to live in. Nowadays urban growth has brought that problem, too, into the towns.

Fringe of a Vast Problem

The overwhelming facts were the need of proper food and medical attention and education of every kind. And all of these needs could be translated into the need for financial aid and capital resources and trained men to apply them. The vast problem was how to help the African to help himself, how to stir the immobility of peasant agriculture into more rewarding methods, and to break through the passive acceptance of a hard fate. It is obvious that a mere handful of Europeans could not touch more than the fringe of the problem, and so increasingly the African has been helped by training to manage his own affairs in every sphere.

The number of qualified officers is still pitifully small for the task in hand, and I remember the impatience of the small groups of educated men, and their natural but unfruitful desire to increase the pace of progress beyond the bounds of possibility. In my later years in Nigeria I remember the long talks I used to have with educated Africans about the need to consolidate the advance of their people and not to court disaster by too great haste. We used to talk about the inseparable relationship between political and economic independence, about the speed with which Western ideas were being absorbed, and about their desire to learn by having the power to make mistakes.

There is, of course, a world of difference between the outlook of what are usually called the intelligentsia and that of the ordinary man and woman. I remember so clearly the struggle to make the ordinary African appreciate that real progress could not be attained without education of women as well as men, that the mothers of the race had a claim to the same equality and the same opportunities of a fuller life as the men.

Today no one disputes that in education of the right kind—especially technical education—lies the key to Africa's future. The craving for education was always keenest in the Eastern Region of Nigeria where the restless enterprise of the Ibo was ever seeking the means of advancement and new outlets. They now share this enthusiasm with the other regions. The West has ever been the most advanced, and the North the most attached to a traditional past.

Just before I went out to Nigeria in 1943 I met Lord Lugard in London, and he told me that he was busy on yet another revision of his book, *The Dual Mandate*. But he added that Africa—and the West Coast in particular—was now moving so rapidly that by the time a revision was complete, and before it could be published, it was already out of date. He warned me that what government might do then was of such major importance that it might affect the whole future of Africa. If Lord Lugard, the greatest of all pro-consuls, could have lived to see the Gold Coast and Nigeria today he would have been pleased but not, I think, surprised. Such was his faith in the African and his ability, once started on the road of progress, to make good.

My own memories of the West Coast are full of the same faith. Simple and laughter-loving, the African I knew was also troubled by a complex of fears: he lived so close to the spirit world, and the faith by which he lived was permeated with superstition. His loyalty was apt to be given to persons rather than to principles, and there were tribal limits to the kindness and charity which were so characteristic of him. I know of no race that responds more readily to courtesy and consideration. In the quite recent past, under the bewildering impact of new ideas and new values, he was literally wandering about in worlds not realized. There was, and I think still is, such a fund of good will towards the British, a good will that was based quite largely on his respect and affection for the District Officer, whom he knew and trusted as a friend.

On the other side there can be few Europeans who have lived and worked in Africa who have not learnt to love the country and its people. On the day of their retirement which of them has not murmured to himself the lines:

And today I leave the galley
Shall I curse her service then?
God be thanked whate'er comes after,
I have lived and worked with men.

I remember on one occasion, when travelling down the Benue and the Niger back from Yola to Lagos in the little paddle-steamer *Valiant*, I had on board as a guest the American Consul-General for West Africa. After a week or two watching the usual work of a Governor on tour—the tribal gatherings, the ventilation of wishes and grievances, the public and private discussions—in some of the most remote districts of the territory he said to me one night at dinner: 'Governor, I reckon that if these people did not like the British you could not administer a vast territory like this with a mere handful of men nor could you remain here against their wishes.' I replied, suitably, that I was glad the truth was so clear to him, and that I hoped he would impart that information to his own government and people.

The handing over of authority has gone far since those days—only nine years ago—and in both the Gold Coast and Nigeria the good will remains, I think, undiminished. The present desire is to work with the British instead of under them, but the willingness to recognise past indebtedness and to accept future collaboration is no longer hampered by the dislike of dependent status. In my memories of Africa, as I hope in the memories of African governments of the future, there will always be a respectful tribute to the Europeans—government servants, missionaries, and traders—who laid the foundations of African advancement.

I have been asked what most lives in my memory of West Africa. It is a difficult question to answer because a flood of memories comes unbidden to my mind. The dignity and discipline of the Moslem North, the bizarre customs of the pagans of the Plateau, the busy trading capacity of the Yoruba West, and the enterprising individualism of the East. I used to dream of a day when all the good qualities to be found in North and East and West might be complementary, and each has a particular part to play in the new-born Nigerian nation. Let us always remember that 100,000 Nigerians served in the last war and made their gallant contribution to the cause of freedom.

I have seen so many strange things in Africa—even a blue moon. One evening coming down the Niger at dusk, when the sky was still aglow with sunset colours, the rising moon shone blue through them—an unmistakable Cambridge blue.

An Instinct for Laughter

I hope the African will never lose his sense of humour. At the beginning of my service in Nigeria I remember a Western chief saying in an address of welcome: 'I do not propose to try and teach a fish how to swim, and so I shall not offer to Your Excellency any advice on the administration of this country.' And at the end of my time, talking over the proposed new constitution, a leading chief of the North said to me: 'You, of course, have the easy job: you have only to convince me; while I have the hard task of convincing my old councillors who view new ideas with suspicion and are reluctant to change old ways.'

Another memory: churning our way in the little paddle-steamer *Valiant* through the twists and bends of the sluggish lagoons and creeks of the Niger Delta, passing clusters of palm-thatched houses abundant with children, the inhabitants would rush out at our approach, the men to steady their half-drawn-up canoes, the rest to laugh and shout their greetings, waving for all they are worth, the children's faces alight with happy excitement. Some of them dive in and with quick, short strokes swim to our boat, grab it for a second or two, and then fall back into the swirling waters, still laughing, shouting, and waving. Such scenes as these dwell in the memory and show in manifold ways the African instinct for laughter and simple happiness.

Such a people, now that the responsibilities of government are being taken over by their own race, deserve a wise and discerning government, and all their friends are confident that they will get it. For anyone who visits an African school and sees the rows of bright-eyed children, so solemn, and yet so full of fun and laughter, there can be little doubt of the future that can be theirs.

I have always been a sailor and have loved the sea. Some of my happiest hours have been spent sailing the waters round Lagos in my small yacht. All kinds of craft from small canoes to ocean-going ships pass busily to and fro, and there is a great fascination about this water-bound capital city whose future destiny already stretches long arms inland. And so I wish God speed to West Africa and to all my friends there. (*Broadcast in 'Calling West Africa'*)

Much Hadham, on the eastern fringe of Hertfordshire, consists of a single village street: a number of the 'black-and-white' cottages are genuine Tudor

Hatfield House has been the seat of the Cecil family since 1607; before then it had been the residence of Henry VIII, Edward VI, and Elizabeth I

Highways and Byways of Hertfordshire

NITA MILLATT, in a 'Report from South-East England,' takes you into a 'Home County' which, despite the busy traffic running through it on the Great North Road, still reflects a quiet country charm

IN the 1930s I lived—indeed, I still do—on the southern fringe of Hertfordshire. I was at school then, and holidays invariably meant expeditions into the country. We went to Cuffley to find tadpoles; we went 'bug-hunting' in the lanes of Bayford; and we camped in Hertfordshire meadows, with the cuckoos calling day and night.

I remember from those days the giant tulip-tree beside Hertford Castle, and in the castle itself a seat which when you sat on it suddenly gripped you with iron bands round legs, arms, and chest. At Hatfield House, when the possibilities of the Great Maze had palled, I might go and look at the gardening hat and silk stockings worn by the princess who became Elizabeth I. She lived at Hatfield while her sister Mary Tudor was on the throne.

Hertfordshire, lying east of the Chiltern hills, is itself quite a hilly county, with long steep rises, or a sudden upward tilt just round a harmless-looking bend. The twisting lanes have absolutely no mercy on an old car like mine. Not only do they bend constantly, the hedges are high, thick set with hawthorn, honeysuckle, and dog-roses. But every now and then there is a break in them, and I am tempted out of the car to gather the reddening berries, and to pick perhaps twenty different wild flowers in as many yards.

A few days ago I set out with the firm intention of finding a place signposted Cold Christmas. So far it has eluded me. But I did find the Hadhams—Much Hadham and Little Hadham. Little Hadham scatters its cottages on either side of a tiny valley. Much Hadham confines itself to a single street: its Tudor houses, some half timbered in black and white, have thatched roofs and overhanging eaves.

An Atmosphere of the Past

But however lovely the villages I still find myself drawn to the great houses. I think of Knebworth House—the home of the Lyttons—originally a Norman fortress, rebuilt in Tudor times, and restored in the nineteenth century until little of the old house remains. But there is still an atmosphere of the past. I sat listening one night to fellow-musicians singing carols from the old minstrels' gallery, the great room lit only by the flames of a roaring wood fire.

Charles Dickens was a frequent visitor to Knebworth, but then Hertfordshire has many associations with literary men. Perhaps it was the gentleness and calm of the countryside that attracted and held them and gave them inspiration. Charles Lamb, in the nineteenth century, called it 'hearty, homely, loving Hertfordshire'; and Thomas Fuller, way back in the seventeenth century, spoke not of Kent but of Hertfordshire when he used the phrase 'the Garden of England for delight.' Izaak Walton, who fished in the river Lea, described its nearby meadows as 'chequered with water lilies and lady smocks.'

Nowadays an incessant stream of fast-moving traffic runs through Hertfordshire, along the Great North Road. But if you turn off into any of the byways you quickly find what E. M. Forster has truly called 'England meditative.' (*Broadcast in the BBC's General Overseas Service*)

Hertfordshire is a county of twisting lanes lined with high, thick hedges

Knebworth House belongs to the Earl of Lytton: most of the present imitation-Gothic building was put up after 1811 to replace the original of 1563

OUR WAY OF LIFE: 20

Urban Lives and Rural Dreams

BRIAN VESEY-FITZGERALD suggests that the more urban and industrialised modern English civilisation becomes the more the townsman aches to get into the country—and he goes on to offer some sidelights on the impact of the 'one-acre squire' on the far-from-simple countryman

IT used to be said of our village—it may still be, for all I know, and of course, it has been said of hundreds of other English villages—that you had to live here for twenty-five years before you were accepted by the natives. It is not true; it never was true: it is a typical townsman's exaggeration. The period was never more than a month or two over twenty years. Anyway, all that is changed now. One of the most extraordinary things about modern English civilisation is that the more urban and industrialised we become the more we ache to get into the country. The more urban our lives, the more rural our dreams: the country cottage with an acre or two is the modern Castle in Spain.

Quite a lot of our cottages have become castles in the past twenty years or so. And there is no doubt about it: the appearance of the village has been improved enormously, and its finances too. I would be the first to admit it. Mind you, it has always been a beautiful village, that is why it has been colonised. It is easy to understand the process, and nobody understands it better than the villager. You motor through, and it looks so peaceful and snug. The church is old and it stands on one side of the trim green—we are very careful about that green: it is worth a lot of money to us—and on the other side there is the vicarage, and that is of mellow Tudor brick. There is a pretty pub, and the landlord is affable, the locals pass the time of day, and the cottages are white and thatched and smiling. And there is a sweet little village shop, run by a charming apple-cheeked old dear, who is so polite and so absent-minded she hardly seems to know the price of anything. Who would not want to settle down in this quiet backwater, among these friendly simple folk, your roots in the soil, growing your own vegetables?

And so we have the retireds: an admiral, a colonel, a couple of majors and a commander, a bank manager, a lawyer. There are one or two business-men who go up to London two or three times a week. There are several spinsters of uncertain age but girlish voices, and one who breeds dogs. We have a name for all these: one-acre squires.

Now do not think, because of that, we do not like them. We do. We could not get on without them, not in the modern world, and we know it. You see, the village has changed since I was a boy. Then the whole place lived on the land. The two farms employed almost all the men, and their women were kept busy looking after them, and the youths went to the farmers as soon as they were old enough. Folk stayed in the village. It was an eight-mile walk if you went to the town, and there was no bus. But now the place is mechanised: the land no longer supports its people. Most of the men, the youths, the girls cycle off to work in the towns. And the women with nothing to do 'do' for the one-acre squires.

Oh yes, it has changed. But there are two things that have not. The men may work in the towns, but they are villagers again the moment they get back. You can almost see the town drop off them as they open their cottage gates. The pavement walk goes, the farm labourer's stride comes back. Fundamentally they are still carters, dowers, hedgers, ploughmen. They are happiest working their gardens or gossiping in the pub of a winter's night. Their roots in this place go back generations. And in

this lies one of the great strengths of England. The other thing that has not altered is the townsman's view of the villager. He persists in thinking us simple. We like it that way.

Now, you will see that as things are all that 'have to live in the place twenty-five years before you are accepted' stuff is nonsense. We would be out of business in that time. If the newcomer is going to be accepted—and, believe me, he is: he is money—then it does not take more than three days. We are friendly people, and, anyway, we have got him summed up by then. The village has an unofficial assessor: the girl that takes the milk round, and it is her valuation that counts. Beryl is a nice, simple, artless girl with wide innocent brown eyes, and the expression of a nit-wit spaniel. What she does not know about a newcomer at the end of three days is not worth knowing—and her mother runs the post office. Newcomers love her: she is such a dear kind soul, and so helpful in breaking the ice. You see, Beryl is always careful to recommend newcomers (if they can be recommended, that is) to other one-acre squires of like social status, character, and temperament. We love her, too: rather more detailed information reaches us. The result is a thoroughly happy smooth-running village.

You might think with all this influx, some of it very monied, that control of the village has passed from the villagers: not a bit of it! We—and I am sure that this is true of every other genuine village in England in a like situation—have developed a technique. We are firm believers in three things: that charity begins at home, in vice-presidents, and in democracy, by which we mean the absolute power of the vote of the majority. Take vice-presidents: after a month or two each newcomer is visited by a deputation and invited to become a vice-president of something or other—makes him feel at home. All the one-acre squires are vice-presidents of something: the cricket club, the football club, the flower show. It brings them into village life; brings in the money too.

As for the other two—charity begins at home and democracy—every year we have a church fete. The money—we generally get about £100—goes to church expenses. So long as it does, so long as nothing is allocated to outside funds, diocesan or otherwise, everything is all right. But a few years ago we had a vicar who was mad keen on foreign missions. He had a top-ranking missionary down to open the fete his first year. There was a meeting after the fete to decide how the money was to be spent. The vicar read out the total: 'Eighty pounds,' he said, 'most satisfactory; fifty for heating, ten for repair of the organ pump, and twenty for missions.'

Up got the treasurer—he was the blacksmith, only the smithy is a petrol pump now: 'No, 'ee doan't, Vicar,' he said, 'tis fifty for 'eating, ten for organ, an' twenty for choir supper and outing.' 'Nonsense,' said the vicar, 'I have decided. That's where the money's going.' 'Thee ain't got money yet, Vicar,' says the treasurer, 'and no more thee won't get none for they missions. I won't sign no cheque for them: not over my dead body. I won't.' There was a roar of approval from the meeting; and then silence. The vicar looked at his flock, and then rapped out: 'Let us pray.' Some of the fete money goes to the choir outing every year now. We have a large choir for a small village. (*Broadcast in the BBC's General Overseas Service*)

Calder Hall (Continued from page 7)

biological shields of steel, concrete, and so on; by the analysis of jobs so as to limit the amount of time spent in any area where there is a likelihood of high exposure, and by the use of remote-control methods. Thereafter the management takes over, the operation of the establishment begins, and in the management of work of this sort the first essential is the accurate measurement of the exposure being received by individuals.

'As far as the internal radiation type of hazard is concerned, the first point that I must make is that the control of these hazards is very much more elaborate, very much more difficult technically, economically, and in every way, and when one has a job such as the chemical processing plant here, then the real problems of health supervision begin. Here we have to measure the amount of radio-activity in the air which could be breathed, on surfaces from which it could be conveyed to the mouth and swallowed, for example. We have to measure the amount of contamination on the clothes and on the skin of individuals, and finally we have to measure any contamination which may actually have got inside the body.'

I have tried to give you a picture of the atomic power station and of the plutonium factory. And it is places like Calder Hall and Windscale which have given Britain her undoubted lead in the realm of industrial energy from atomic power. More than anyone else responsible for this

lead is Sir Christopher Hinton, F.R.S., who from the beginning has been in control of the Industrial Group of the United Kingdom Atomic Energy Authority. Sir Christopher Hinton:

'The picture which you have been given of Calder Hall and Windscale is extremely important because it is on the developments that have taken place there that Britain's programme for the industrial use of atomic energy is based. That programme contemplates the construction of twelve power stations by the electricity authorities before 1965.

'We have designed a reactor which makes use of materials which are well developed and which are readily available; of techniques of manufacture and production which are reliably known and which can be stepped forward with certainty. And we have done that to produce a reactor so designed that it is completely and absolutely stable and safe. One thing which I have constantly been impressing on my engineers during the past ten years is that they are not paid to be clever: they are paid to be successful. They have been successful, and we intend to go on being successful, rather than aim at being clever.

'The Calder Hall reactor will not remain in use indefinitely. As time goes on for certain purposes, at any rate, it will be outdated by other types of reactor, and we are working to develop those other types so that when the time comes Britain will continue to be in the lead.' (*Broadcast in the BBC's General Overseas Service and 'London Calling Asia'*)

Representatives of the Commonwealth and Allied nations were at Cassino War Cemetery to see Field-Marshal Earl Alexander (right) unveil the memorial

CASSINO MEMORIAL

THE Cassino Memorial in Italy, commemorating more than 4,000 officers and men of the Commonwealth Armies who have no known grave, was unveiled by Field-Marshal Earl Alexander of Tunis. After the ceremony Lt.-General Sir Brian Horrocks recorded his impressions:

'This memorial has been erected by the Imperial War Graves Commission to commemorate 4,068 men and women of the Commonwealth land forces who died during the campaigns in Sicily and Italy and who have no known grave. Their names are inscribed on marble pillars standing round a small formal garden, and in the centre is an ornamental pool. Practically every regiment of the British Army is represented on these pillars, as well as Canadians, South Africans, New Zealanders, and no fewer than 1,444 names of men who served in the old Indian Army.

'This is the most inspiring place for a memorial which I have ever seen in my life. You see, it is dominated by the famous Monastery Hill, with its rebuilt Benedictine abbey on the top. This was, of course, a key position in the Gustav Line—the defensive belt constructed by the Germans to protect Rome—and during the winter of 1943-44 it defied in turn the attacks of the United States, Indian, British, and New Zealand troops, and was finally captured months later—though at really a fearful cost—by our gallant Polish allies. In the cemetery which surrounds the memorial lie the men who were killed in this fighting.'

Among the large and distinguished gathering at the ceremony pride of place went to some 260 relatives from all over the Commonwealth.

VIRGINIANS IN LONDON

DELEGATES from Virginia were recently in Britain on a good-will visit as a prelude to the celebrations which will be held next year to mark the 350th anniversary of the first permanent English settlers in north America. The delegates were led by the Governor of Virginia, the Hon. Thomas B. Stanley, and as part of their programme they were entertained to lunch at the Savoy Hotel, in London, by the Pilgrims.

The principal speaker at the lunch was, of course, Governor Stanley, and here is part of what he said: 'Perhaps it appears bold for this small band of Virginians to invade merry England and attempt to indoctrinate you in American history—you whose own history runs back so many centuries longer than our own. We are not attempting that at all. We simply come from the 3½-million people of Virginia

Here and There

with 'Radio Newsreel'

to remind you of an approaching event of some import to you as well as to us, and invite you to enjoy this occasion to the fullest with us.

'In the year 1957 Virginia will sponsor the celebration of an event of great significance: the establishment in 1607 of the English settlement at Jamestown. In connection with this 350th anniversary, those charged with planning the observance came to the conclusion that this commemorative tour should be a vital prelude.

'Many months ago the necessary arrangements were completed, and we are here with these principal objectives. One, to express our appreciation to the British people for their vision and faith in chartering in 1606 the London company which resulted in the first English colony in the New World. Two, to note the appreciation of the commonwealth of Virginia of this era to the people of the Netherlands for their part in sustaining the early colony through trade; and, three, to likewise express appreciation to the people of France for that nation's assistance to young America in its struggle for national independence.'

The mace bearer of Southampton (right) feeling the weight of the mace brought by the Virginian good-will delegation which recently toured Britain

OLDEST LIVING THING

AT a time when the first known settlers were beginning to enter the American continent three trees were growing that are still growing now—they are the oldest known living things in the world today. They have just been discovered by botanists, and they grow to even greater ages than the Californian redwood, also known as sequoia, which had previously been thought to be the oldest living thing. These trees, known as Bristlecone pines, were discovered in California, almost overlooking the notorious desert of Death Valley.

The oldest known sequoia is 3,200 years old, but high up in the White Mountains, at an elevation of more than 10,000 feet, there are three Bristlecone pines which were all 1,000 years old when that ancient sequoia was a seedling. Aged respectively 4,100, 4,050, and 4,000 plus, these venerable trees were flourishing at the time of the Second Dynasty in Egypt, at the dawn of the Bronze Age in Europe, in the era when the first human beings known to have entered the American continent were filtering down from the north-western link with Asia. They might even have given shade to the last of the mammoths and the giant sloths, which overlapped with the arrival of human beings.

The Bristlecone pine, or *Pinus Aristata*, is not a giant in height like the sequoia: it is comparatively short and dumpy in fact, with a maximum thickness of about five feet, and a maximum height of about thirty feet. But it has the broad stubborn, cross-grained look of an organism that has stood up to everything and will continue to stand up to everything.

It grows extremely slowly, and the scientists think that fact may have helped it to reach its great age. This tree is also found in other parts of the south-western states.

I talked in Washington about this discovery to a scientist with the title of dendrochronologist, that is a man who constructs a time scale for remote periods from the climatic fluctuations recorded in the annual growth-rings of these trees. He was naturally enthusiastic about the discovery, which took his science back another 1,000 years.

CHRISTOPHER SERPELL

'RADIO TIMES' ANNUAL

THIS year's *Radio Times Annual*, with its many features and admirable illustrations, should have a wide appeal to all who are interested in the progress of British broadcasting and television and the varied ground it covers. If a copy cannot be obtained from local suppliers, write enclosing an international money order for 2s. 6d. to: BBC Publications, 35, Marylebone High Street, London, W.1, England.

'Johannesburg in 1956 has the international angular anonymity of the modern city'

In this most modern of cities the main university building has an unusual air of restraint

The African gives expression to his irrepressible joy of living even in the darkest and dreariest surroundings: musicians and dancers at a mine near Johannesburg

The city is built right up to the edge of the mining areas which give it its u

Johannesburg—'

NADINE GORDIMER, a South African writer, birth certificate dates back only seventy years to the ridge of the Witwatersrand veld. 'The p Africa towards the idea and the struggle that is p

WHAT is Johannesburg like? It has a population of 884,007. Like New York it has no soul. It is the fastest growing city in the world. It is at an altitude nearly as high as St. Moritz. It is greedy and grim; it is beautiful; it is frenetic. It is the City of Gold. These are some of the facts, and some of the things people merely say about Johannesburg. The facts seem meaningless; the remarks, romantic. A relationship with a city is a personal one, like love, friendship or enmity, and so I can only tell you about my Johannesburg.

It is customary for people talking about Africa to pass over Johannesburg as foreign to the 'real Africa.' Alas, the Africa of vast jungles, proud beasts, and magnificent savages is already a beautiful anachronism. The push of something irresistible as the push of birth is carrying the people of Africa towards the idea and the struggle that is personified in Johannesburg. This city is Africa, all right.

Wealth that Lay Far Below

Until 1835 the high veld of southern Africa where Johannesburg stands was an empty land, not even the settled home of any Bantu tribe. Then the Boers trekked up from the Cape in their thousand-mile migration; and in 1886 gold was found—the immense hidden seam that lay buried all along the ridge of the Witwatersrand veld. In the same year Paul Kruger, President of the Transvaal Boer Republic, signed a proclamation which opened a portion of the gold-bearing land for public digging: this was the birth certificate of Johannesburg.

My grandfather was there, in the beginning. The early prospectors with their primitive methods of mining scratched off only the mere surface of the gold. The wealth lay far below, and most of them were never to share it. They lived a tough, dirty, hopeful life. Legends about such places have a charm which discounts the unlikelihood that they ever happened. My favourite is that as there was scarcely any water the old mining camp crowd who could afford it bathed in soda-water.

Ordinary land in what is now the central city area of Johannesburg—land not then known to be gold-bearing—was bought for as little as half-a-crown for a plot fifty-feet square. The valuation of land in this same central area, exclusive of buildings, was nearly £55-million in 1955. You will find it easy to understand that the chief preoccupation in the minds of Johannesburg's old-timers is the fortune they might have made if they had bought land in their youth. About 1887 the camp was given a name—Johannesburg. So many of the men who had helped create the polyglot community had Johannes as one of their names that no one really knows whom it honoured.

Some young communities centre round church or meeting house. The Stock Exchange was the centre of life in early Johannesburg; balls were even held there at night. It was all part of Johannesburg's avidity, not only for money but for that dazzling concept—everything money can buy. There were crises of one kind and another—the South African War, the Jameson Raid, early labour troubles—but once deep-level mining had begun in the early 1890s the knowledge that the greatest gold output in the world was passing from the earth beneath the Witwatersrand to the earth beneath Fort Knox kept Johannesburg unmoved as Midas himself.

Johannesburg in 1956, on its seventieth birthday, has the international

and its skyline is a contemporary architect's dream, with its infinite variety of styles

the City of Gold'

is a personal view of the fast-growing city whose when an immense seam of gold was found along of something irresistible is carrying the people of ified in Johannesburg. This city is Africa, all right'

angular anonymity of the modern city. The streets square off at right angles; the shops are full of the glittering dross of international mass-production. You might be anywhere: any modern city with few trees and without squares, any city where fountains do not play and there is no inclination, because there is no place, to saunter. It smells of bars, beauty parlours, and petrol.

The climate is dramatic. Often there are splendid electric storms on summer afternoons, but by five the sky is clear, the wet streets shine in the sun where great hooves of thunder have slammed down upon them. In the dry season of winter the dust of the surrounding veld and the great yellow cyanide dumps outside the city make beautiful sunsets.

After working hours the city is drained of most of its life. People stream away to the forest of flats on the first ridge of hills, and to the suburbs. In these suburbs there is the worst Bauhaus, the most blatant Stockbroker's Tudor architecture; there are also pleasing houses of many kinds, from contemporary to the gabled Cape Dutch which is the only form of architecture indigenous to South Africa. But, whatever the houses may be, the whole northern area is beautiful to look upon all summer long, shaded with blossoming trees, jacaranda, and silver oak, hung about with Bougainvillea and wisteria.

Of the 884,000 people in this city less than 400,000 are white. The rest are black, that is, African, coloured, or Asiatic—with the Africans overwhelmingly in the majority. The Africans work in the gold-mines, in industry. Turn down a side-street where the warehouses begin, and this is a black city: here are city workers laughing and shouting and crowding the pavements, eating bread washed down with lemonade, playing draughts with bottle-caps on squares chalked on a paving stone.

Medicine Magic in a White Coat

A few blocks lower still you can walk into the Mai-Mai market, where what remains in the city of the crafts and medicine magic of African tribal life survives. Outside the shopping booths, troughs of strange plants grow. they are there not for decoration but for medicine. Inside the medicine shops there is all the dusty, harmless-looking hocus-pocus of the witch-doctor's bag of tricks—crocodile skins, lions' teeth, hippopotamus fat, cowrie shells. But the African behind the counter will be dressed like a pharmacist, in white coat and spectacles.

When at sunset the city empties, the Africans go home to the vast, smoking townships—towns in themselves—where they live, and which ring the rich city. The best birthday present Johannesburg has received on her seventieth anniversary is the news that the mining houses are to finance a loan of £3-million which will see these slums cleared and rebuilt. No one will be sorry to see them go; but some good things, some contribution to the savour of life in Johannesburg, has come out of them, too.

Only this year the passion of jazz that has given expression to all the African's irrepressible drive toward the joy of living—even while his surroundings are the dreariest and darkest—has burst the bounds of the townships and become part of the city itself. Concerts of 'township jazz,' given by Africans, have astonished white city audiences with the talent, originality, and charm of African musicians—and almost everyone plays something. (Broadcast in the BBC's General Overseas Service)

After working hours people stream away to the forest of flats on the first ridge of hills

Makeshift houses in an African township: for the seventieth anniversary the mining firms are financing a loan of £3-million to build permanent houses like the ones below

Books to Read

Reviewed by
M. R. Ridley

IN *Full Fathom Five*, by H. Sykes Davies, the reader has not got very far into the book before he begins to suspect that a good deal more is meant than at first meets the eye, and the more suspicious he is the more he is rewarded. For this book is, I think, a quite unusual achievement. All allegorical writers are faced by one major difficulty, which only a few succeed in overcoming. Either the writer is so much occupied with his 'message' that it drowns his story, or else, or perhaps more often, the story is so well told that it submerges the message. Mr. Sykes Davies has brought off an unusually balanced fusion. To begin with he tells an admirable story which moves coherently and by a series of well-forged links to a grimly satisfying climax. The story, just as a story, could stand on its own feet as a gripping novel. And it is possible so to read it. But we miss a great deal if we are wilfully deaf to the underlying meanings, since Mr. Sykes Davies has much to say which is worth listening to about the world of experience.

In *The Straight and Narrow Path*, by Honor Tracy, there is also plenty of knowledge of human nature, enough to raise the book far above farce, but it is used in the service of light-hearted and spirited entertainment. There is no thought of a message unless the gay depiction of the chasm between the Irish and the English temperament can be so described. The story is that of an English scholar taking a holiday in an Irish village who gets into conflict with the village priest, and unwisely brings an action for libel. The resulting complications are hilarious.

The Call Home, by James Courage, will not set the Thames on fire. But then it clearly was not intended to. There is indeed about it a most welcome absence of fashionable fireworks, whether of plot or of style. But it is, within its designed limits, a most satisfying book, and I hope I shall not be thought depreciatory, since I mean it exactly the other way, if I add, a very restful one. It is the story of a young doctor, born in New Zealand, practising in England, who is so shattered by the loss of his wife in a motor accident for which he feels partly responsible that he gives up his practice and goes back to his native country and his own family to try to recover his hold on life. All the members of the family are admirably drawn. In particular I fell entirely for the wise old grandmother. Later he meets a young widow, whose marriage had been a disaster, and who, like himself, is needing some renewed courage and balance. In the end, as growing knowledge brings growing understanding and trust, they help each other to 'exorcise their respective bogeys.'

Now for two books of short stories. The first is *Six Feet of the Country*, by Nadine Gordimer. Many qualities in Miss Gordimer's work make it extremely well worth reading. To begin with she can write clean-cut trenchant English with no frills and no fumbling. She has very little to learn about the technique of the particular type of short story which she likes, the type which develops a central theme or idea rather than a plot. Along those lines her execution is quite first rate. Finally, she knows her material intimately, the life and some of the problems of modern South Africa, and is wisely content to observe very keenly and depict very clearly without preaching.

In *Collected Stories*, by V. S. Pritchett, are thirty-seven specimens of the work of one of our recognised masters of the short story. They make an impressive and variegated display, ranging from the comparatively genial, through the ironic to the macabre. Where all are good, some no doubt are better than others, but all of them exhibit Mr. Pritchett's mastery. One thing only I feel to be missing and that is 'warmth.' Too often it seems that Mr. Pritchett is taking such delight in his craft that he forgets that the material on which he exercises it is men and women who can be sympathised with as well as 'handled.'

Levine is Mr. James Hanley at his best, and no more need be said for anyone who knows his work. It is a story of a bit of human wreckage thrown up on an alien shore with no papers, pestered with investigations when he asks nothing but to be left alone and to get back to the sea, and then enveloped in the unwanted devotion of a woman which he feels to be no better than a prison. A grim bit of work superbly executed.

The Red Priest is a slighter piece of work than we are accustomed to from Mr. Wyndham Lewis. Some of it indeed is little removed from farce, but there is more fire to it, and more ironic observation of human nature than farce admits. It is a study of an Anglo-Catholic priest, with Communist leanings, with an appetite for publicity, and a readiness to make a socially desirable and apparently financially profitable marriage, which turns out disappointingly. He has been in younger days a champion boxer, and in the end he is tried for his life after knocking out an exasperating curate. But the story really matters very little. The book is very much worth reading for the mere brilliance of the writing.

The Call Home, by James Courage (Jonathan Cape, 13s. 6d.)
Six Feet of the Country, by Nadine Gordimer (Gollancz, 12s. 6d.)
Collected Stories, by V. S. Pritchett (Chatto and Windus, 20s.)
Levine, by James Hanley (Macdonald, 15s.)
The Red Priest, by Wyndham Lewis (Methuen, 15s.)

* Books to Read *—G.O.S. on Wednesday at 16.15, Thursday 00.30 and 05.00

This Week's Listening

December 9 — 15

CHRISTIANITY IN AFRICA

IN previous talks in the series 'Christianity and Race' Philip Mason has attempted to arrive at some definition of Christian principles. In his fifth talk, 'Problems in Africa,' he considers the application of these principles to specific problems, particularly to race relations in Africa, of which he has been making a personal study in his capacity as Director of Studies in Race Relations at the Royal Institute of International Affairs.

He contrasts the difficulties which arise in the African territories with permanent white inhabitants and those without, and outlines some of the proposals which have been made for developing improved relations. He also reflects the many shades of opinion on this subject to be found in Africa today. But he makes it clear that his basic purpose in this talk is to deal with the specific question: 'What has Christianity to say as to the right course to steer in this complex situation?'

G.O.S.: Monday 16.15; Tuesday 00.30 and 05.00

SOVIET EDUCATION

THE title of S. V. Utechin's talk in the 'This Day and Age' series on the Soviet Union is 'Education for a Communist Society.' Mr. Utechin will tell listeners something of the achievement of the Soviet authorities in transforming a largely illiterate country into one with universal education and a large university population. He will also discuss how far the educational system of the country is affected by ideological considerations, and is used to fashion the thinking of the Soviet citizen.

Mr. Utechin was a student at the University of Moscow in the years before the German invasion of Russia in 1941.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

SHAW AS MUSIC CRITIC

SEVERAL BBC programmes this year have commemorated the many-sided genius of Bernard Shaw. But there is one aspect of his life, according to his devotees, which has never been properly appreciated: his work as a music critic.

Shaw was in his thirties when late-Victorian music circles were startled by a new music critic, with the extraordinary name Corno di Bassetto, who proceeded, in his own words, to 'make musical criticisms readable even by the deaf.'

For two years Shaw wrote every week under this pen-name for *The Star*—and later for another journal—in such an unconventional style that his column was generally considered a joke. However, the English composer, Michael Tippett, in 'From the Third' this week, defends Shavian music criticism, describing Shaw's musical knowledge as extraordinary and his judgment as extremely valuable.

G.O.S.: Monday 15 15; Friday 23.15

Barbara Lyon is the singer in 'Top of the Pops' on Tuesday at 16.30 and Saturday at 02.30

There will be a commentary on the Oxford v. Cambridge rugby match at Twickenham (see note below)

JOHN MAYNARD KEYNES

IT is ten years since the death of J. M. Keynes. In that time his influence on the economic thought of our age has gained ever wider recognition, until even those who contest many of his views can say with Professor Pigou, 'Not all economists have become Keyneses, but all are admirers of Keynes.' In a programme this week Maurice Hill, Keynes's nephew, introduces some recollections of former friends and colleagues of a great man who always had time for the young.

When Keynes wrote his *General Theory*, published in 1936, he had already written to Bernard Shaw to say that he believed himself to be writing a book which would largely revolutionise '... not, I suppose, at once, but in the course of the next ten years—the way the world thinks about economic problems.'

Extravagant as this claim may have seemed, there are few who would dispute that by 1946 when he died the 'Keynesian Revolution' had radically transformed public thinking on such matters as employment and financial control.

Keynes's work in creating the Arts Council and contributing to the development of ballet and to a wider concept of the place of art in everyday life will no doubt be remembered as vividly as the part he played in the direction of the economic conduct of the nation during two world wars.

G.O.S.: Monday 17.30; Tuesday 02.30; Friday 10.00

FESTIVAL OF RECORDS

THIS week the BBC Light Programme is having a special 'festival of gramophone records' in which attention will be focused on the use of commercial records in broadcasting. 'Records Round the World,' the programme on Thursday at 15.00, devoted to the records played from London to different countries can be heard in the G.O.S.

Listeners who have had requests played in 'Concert Choice' or 'Listeners' Choice,' who have enjoyed favourite arias in 'A Box at the Opera,' or heard 'New Records' will realise the extent of the demands made on the 500,000 records in the BBC's Gramophone Library.

And, apart from the G.O.S., regular disc-jockey programmes are broadcast to countries in Europe and to remoter parts of the world such as the Falkland Islands and Antarctica. The people who organise them and the people who listen will be the subject of this forty-five-minute feature.

AUSTRALIAN COMPOSER

AN opera by the Australian composer Arthur Benjamin will be broadcast this week: it is *The Devil Take Her*, an extremely witty comic opera which was introduced by Sir Thomas

Beecham, and then took its place in the repertoire of the Vic-Wells in 1933 and 1934. It is set in London in the fifteenth century, and the scene is laid in a poet's living room, opening on to a street.

G.O.S.: Tuesday 19.00; Saturday 01.00

OXFORD v. CAMBRIDGE RUGBY

THE annual rugby match at Twickenham between Oxford and Cambridge takes place on Tuesday, and at 15.15 listeners can hear a commentary on the second half by Robert Hudson, and a summary of play by Vivian Jenkins.

Results obtained by the two sides in the opening matches of the season are not a clear indication of form at Twickenham, but it may be hoped that they will maintain the standard of last year's game when, mainly through the unorthodox tactics of their half-backs, Oxford won an entertaining victory by 9-5.

This year Oxford's captain is D. O. Brace, the scrum-half and the main instigator of the 'reverse-dummy-scissors' movements which astonished the Twickenham spectators—and Cambridge—last year.

CONCERTO FOR GUITAR

THE guitar is rapidly taking its place as a solo instrument in the serious music field, thanks to the work of Segovia and other famous virtuosi who play not only classical works but music specially written by contemporary composers.

A pupil of Segovia's, Julian Bream, can be heard on Sunday at 14.15 (repeat Tuesday 01.00) in the *Concerto de Aranjuez for guitar and orchestra* by Joaquin Rodrigo, one of the leading figures in Spanish music today. The orchestra will be the BBC Scottish Orchestra, conducted by Ian Whyte.

THE WEEK'S PLAYS

ERIC LINKLATER has never been a writer in a rut. He has written humorous stories and adventure stories and stories for children; histories and biographies and autobiography, as well as a number of distinctive and successful plays.

Sealskin Trousers is the radio version of a book he published in 1947: it taps—as quite a lot of his work has done—the vein of fantasy. Charles Sellin, a biology student, is seriously ill in hospital after a holiday by the Scottish coast when a strange and tragic accident befell his fiancée, Elizabeth, also a science student from Edinburgh University.

Accident is not what Sellin calls it: but then who would seriously believe—even if he were a scientist—in the mutation of a seal with a man, a bizarre survival (or hurrying-up) of an evolutionary process whereby even now there can actually exist a seal-man, eager to lure a girl into the ocean?

Grantham's Outing, by contrast, is strictly down-to-earth, Grantham's being a factory in an industrial area. The play is concerned with the annual outing and the various personal dramas that come to a head when the employees arrive for a festive evening at 'The Red Bull.'

PETER FORSTER

'Sealskin Trousers': Monday 11.30; Thursday 19.00; and Friday 01.30
'Grantham's Outing': Tuesday 06.30 and 18.30; Wednesday 10.00

Your Wavelengths

London Calling is published several weeks in advance and we regret that, for reasons beyond our control, it is sometimes necessary to alter wavelengths after we have gone to press. The latest information is always given in Programme Parade

3 Brilliant new COSSOR models for WORLD-WIDE RECEPTION

MODEL 527/X for all-dry battery operation. A fine all-wave receiver giving world wide reception on three wavebands. Single dry battery operation with latest low consumption valves, very economical. Fully tropicalised.

MODEL 534/AX Another Cossor triumph—a fine Radiogram with a fully tropicalised chassis and electrical band-spreading on short waves. Latest type automatic 3-speed record unit, 5 valves plus 'Magic Eye' tuning.

MODEL 517/AX Four-waveband A.C. mains receiver in a highly polished wood-en cabinet with ivory plastic front. Its full, rich tone is achieved by an up-to-the-minute circuit, including five Cossor valves, 8" moving coil speaker and many other fine features.

Every Cossor set has 60 Years' experience behind it

with recorded extracts
13.45-14.00 The World of Science
A weekly survey
of the latest developments

Asian Club. On Sunday one of Britain's best-known radio comedians, Spike Milligan, will answer questions on the subject of humour, to which he himself has made such a brilliant and individual contribution with his 'Goon Show,' a radio programme whose fame has spread far beyond the BBC's Home Service in which it was first heard. He not only writes the script of this weekly half-hour of inspired lunacy but, with Peter Sellers and Harry Secombe, makes up the three 'Goons' of its title.

Theme and Variations. 'Londonderry Air' is possibly the best-known of all Irish songs, but strangely enough little is known for certain of its origin. Patrick Shuldham-Shaw speaks of this beautiful tune on Monday and illustrates the original theme with the brilliant variation that Percy Grainger wove around it. Sometimes called an Irish love song or an Irish lament, it remains one of the loveliest and most beloved of all tunes at all times.

English Writing. One of the most recent full-length biographical studies of the author of *Robinson Crusoe* is Francis Watson's *Daniel Defoe* published in 1952. On Saturday Mr. Watson will give an assessment of Defoe's position as a writer today, illustrated by readings. For nearly fifty years Defoe was a prodigiously fertile and copious writer of tracts, pamphlets, poems, histories, and political commentaries, besides being in business as a merchant and acting as a roving intelligence officer for different governments.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes and provides a valuable supplement to the BBC's direct transmissions from London

HENLEY—a vision of cool lawns, flashing blades and sunlit water. For over a century Henley Royal Regatta has been a prominent event in the Social Calendar—and the goal of amateur oarsmen the world over. Colourful 'blazers' blend with elegant summer dresses, and venerable gentlemen in faded caps recall the triumphs of bygone days.

Traditional Pleasures

Traditional too, is the pleasant custom of smoking Player's Navy Cut whenever smart people get together. It's the tobacco that counts in these smoothest-smoking, superbly-flavoured cigarettes—England's favourite brand. And now, all over the world, people who appreciate the luxury of the finest tobacco, say 'Player's Please!'

Music Before Christmas

PAULA HARRIS writes about the traditional music—from carols to oratorios—which listeners to the General Overseas Service will be able to hear during this week (for broadcast times see footnote)

EVERYONE knows such traditional Christmas carols as *The First Nowell*, *Good King Wenceslas*, *While Shepherds Watched Their Flocks by Night*, and they will be sung all over the world this Christmas as they have been for centuries. But the famous carols form only a small part of the enormous amount of music written to celebrate the birth of Christ.

Christmas music broadcast in the General Overseas Service in the week before Christmas will range from *Good King Wenceslas* to Bach's *Christmas Oratorio*; from the music of Palestrina, who was born early in the sixteenth century, to a carol by the contemporary English composer Herbert Howells.

It is only fitting that these programmes of Christmas music should be almost entirely choral, for ensemble singing has always flourished in Britain, probably more than anywhere else in the world. The English choral tradition is renowned, and English composers, from Byrd and the Elizabethans onwards, have nearly all written for the voice. They have not confined themselves to songs but have devoted their energies to writing music that several people can sing together.

In Tudor and Stuart times people used to sing madrigals; in the last century duets were a favourite feature of the Victorian musical evening, and the oratorio enjoyed immense popularity. Today there are uncounted thousands of people in Britain who sing in choirs and make their own music, and the number of choral societies of all kinds and all sizes who have been working on their Christmas programmes for weeks must be quite phenomenal. The choirs listeners will hear are a tiny but representative fraction of all the choral societies in the land.

The oratorio most closely associated with Christmas in Britain is Handel's *Messiah*, and it must be performed hundreds of times in the first half of December every year. Bach's *Christmas Oratorio* is not such an integral part of the English Christmas although, unlike *Messiah*, it deals only with events surrounding Christ's birth, and does not go on to His Passion and Resurrection. It is divided into six sections, each of them dealing with one aspect of the Christmas story, and it was originally written to be performed as a cycle on six days between Christmas Day and the Epiphany.

Parts I and II, which are to be broadcast, describe the arrival of Joseph and Mary in Bethlehem, and the angel's announcement of the Divine Birth to the shepherds and the praises of the Heavenly Hosts. The pattern of the music is the same as that of the two mighty

Passions by Bach: the tenor soloist is the narrator, and the contralto and bass and the choir provide arias, chorales, and choruses as a background to the unfolding of the story.

Motets written many years before Bach was born will be sung by the Canterbury Singers, who will contrast them with a group by modern composers. Their programme opens with *Hodie Christus Natus Est* by the sixteenth-century Dutch composer Jan Sweelinck. The sixteenth and seventeenth centuries were rich in composers who wrote wonderful vocal music both sacred and secular, and *Hodie* is one of the best known among the wealth of Christmas works

which have come down to us. It has a cheerful, rhythmical tune given out by the tenors and taken up by the rest of the choir. The Canterbury Singers rehearse in the Cathedral Chapter House and give their concerts there.

A programme in which suitable poetry is interspersed with the music is 'Christmas Verse and Music.' The St. Martin's Singers will sing carols, including *In Dulci Jubilo*; and poems by Henry Vaughan, G. K. Chesterton, Thomas Hardy, Archibald Lampman, Siegfried Sassoon, Walter de la Mare, and Laurie Lee will be heard. There will also be readings from St. Luke's Gospel. The St. Martin's Singers, a group which began singing during the war, have been on concert tours at home and abroad. They will be remembered by listeners in West Africa, to whom they have broadcast regularly.

There will be three programmes of carols. The Orpington Junior Singers, a choir of young girls between the ages of twelve and nineteen, will sing English carols as well as some from the Continent and from Latin-America. This choir has broadcast frequently and given many concerts. Four years ago they sang carols to Sir Winston and Lady Churchill at No. 10 Downing Street, and they have also sung to the Lord Mayor of London at the Mansion House.

Students and choirboys from the Royal School of Church Music, Addington Palace, will sing four famous carols introduced by four Commonwealth students: Ann Hamilton from Brisbane, Michael King from Grahamstown, South Africa, Elizabeth Leigh from Hong Kong, and Philip Cooper from Adelaide.

Finally, carols by the Royal Choral Society, under their conductor, Sir Malcolm Sargent, will be broadcast 'live' from the Royal Albert Hall, London. These famous carol concerts began in 1912 and are so popular that they now fill the hall on four separate occasions each Christmas. Although termed carol concerts they show how wide the range of Christmas music is.

The programmes include a selection of the old favourites, in which the audience joins: but they are blended with Negro spirituals, Tudor motets, carols from many lands, and other less conventional items. The extract to be broadcast will include Sir Malcolm Sargent's own beautiful arrangement of *Silent Night*.

Bach's 'Christmas Oratorio,' Wed. 18.30

Lim Yew Hock

VERNON BARTLETT offers some first-hand impressions of Singapore's Chief Minister, whom he describes as a simple, modest man with a lively sense of fun whose political shrewdness 'has very neatly put the Communists in the wrong'

SOME time ago Singapore's Chief Minister, Mr. Lim Yew Hock, came out to my house for lunch. Singapore is a city in which lots of people go around in large cars with special number plates and flags on their bonnets and so on, and there are generally a few extra policemen around in the neighbourhood of His Excellency the Governor, so I had expected a little fuss about the Chief Minister.

My Chinese cook was deeply disappointed when he arrived driving himself in his ten-horsepower car. More recently he has received so many letters threatening his life that I believe he now has some police protection. The next time he comes to lunch I suppose there will be a policeman hovering behind my gardenia bush and another, perhaps, hiding in my clump of bamboos, but Mr. Lim Yew Hock will have accepted their protection with reluctance.

One of the most typical photos I have seen of him in the newspapers, taken, it is true, when he was only Minister of Labour and Welfare, shows him with dustpan and brush tidying up after a local Labour Front meeting. It was, I repeat, typical—not at all the kind of thing you see in the glossy magazines of film stars pretending to lead the simple life.

Mr. Lim Yew Hock is a simple, modest man, so much so that many people doubted whether he could last more than a few months as Chief Minister in succession to that picturesque and publicity-loving figure, Mr. David Marshall. They did not know their Lim Yew Hock. They knew he had a lively sense of fun, for his eyes nearly always have a glint of amusement in them. They knew that he was quiet and calm—he has that rather deceptive calm you often notice about pipe-smokers—and his pipe is as much a part of him as a cigar is a part of Sir Winston Churchill. When members of an extremist deputation were accusing him of being a Colonial Office stooge he said: 'I sometimes wish I had a temper; unfortunately I have not.' And then he proceeded very calmly to tell them that their suggestion was 'damned ridiculous.'

The man in the street also knew that the Chief Minister had a lot to do with trade unions, but that is about all. What people

did not know was the extent of his courage and his political shrewdness, and what they forgot was that he has a habit of polling a larger majority at election time than any other candidate. There must be some fairly sound reason for that popularity.

His ambition was to be a civil engineer. His parents were very poor, but he won a scholarship at Raffles Institution, Singapore's oldest and most famous school, which has produced an even larger proportion of the members of the Legislative Assembly than the proportion of Old Etonians in a British Conservative Government. But his father died, and he had to find a job—or rather he had to look for a job: the great slump was on, and for three years he had no regular employment. That grim period gave him a sympathetic understanding of the problems of the very poor which explains much of his present strength. Incidentally, his son is now studying civil engineering in England.

Nobody else could stand up successfully against the Communist penetration of the trade unions: he can do so because the workers know how often he has defended their interests in trade-union disputes. Even now, as Chief Minister, he is also Minister of Labour, and some people have thought that he was spending too much time mediating on labour problems. I believe he has been wise to do so, because one of the great problems here is that of teaching the workers to distinguish between genuine trade unions and those unions which create trouble by encouraging unrealistic and exaggerated demands—between unions that help and unions that exploit.

I mentioned just now his political shrewdness. From the moment he became Chief Minister Lim Yew Hock has said that his aim was to win complete self-government; but he has gone on to remind his audience that,

especially after the disastrous conference in London last April, self-government will be won only if the British Parliament has the conviction that it will not immediately become Communist government.

When Mr. Marshall was Chief Minister the Communists or their fellow-travellers (for the Communist Party as such has been illegal ever since the emergency began eight years ago) were able to pretend that strikes, riots, and indiscipline in the Chinese schools were a necessary part of the campaign to win independence. Since Mr. Lim Yew Hock became Chief Minister he has been able to point out that these disturbances, if allowed to continue, would in fact prevent independence. He has very neatly put the Communists in the wrong.

Four-fifths of the population are of Chinese race, and they are naturally impressed by what is happening in China. But most of them were born in Singapore, and they are impressed by what is happening there. The nearer they get to complete self-government the more obvious it becomes that they must make a choice: they must be loyal either to Singapore or to China. The Chief Minister believes their loyalty lies here, and he is determined to put a stop to Communist intimidation.

It is interesting how many of the people who shout loudest about freeing Singapore from British Colonial rule are not themselves citizens of the Singapore they want to free. They are Chinese, and Mr. Lim Yew Hock is anxious to send them back to China; they are so little anxious to go that his defiance of them calls for real courage. I have never lived in a place where so many races mix so freely and in so friendly a way. These disruptive elements are not wanted, and so I for one wish the Chief Minister the most complete success. (*Broadcast in the BBC's General Overseas Service*)

Chinese Schools in Singapore

THE population of Singapore is said to be the youngest of any country in the world—well over half its people are under twenty-one. Four out of five of these are Chinese, and it is quite a sight to see them pouring out of the schools at midday: little Chinese girls in green or blue frocks, and little Chinese boys in white shirts and shorts.

More than a year ago a master in one of the big schools told me that if the head said something that the Communist leaders among the students did not like one of these leaders would bark out an order, and every single boy in the school would turn his back on the headmaster. How has it happened that the Chinese schools have lost their discipline or, rather, changed their discipline in this way?

Looking back, it is fairly easy to see that a great mistake was made just after the war when the British authorities failed to spend all the money they could raise on building schools and still more schools. Chinese boys and girls who could talk English did not do so badly: they went to the English-language schools and have developed a sense of loyalty to Singapore where they were born; but the Chinese-speaking community had to build a lot of the schools themselves, and without much financial help from the Government. The teachers for these schools were brought in from China and had, of course, no loyalty towards Singapore; some of them, indeed, had a loyalty towards Communist China.

The Government has offered grants to these Chinese schools on the same basis as the grants to other schools. They could have Government money if they also had some Government control over what was taught in the schools, but this suited the Communists in the schools so little that they organised student strikes in

one or two schools that had proposed to accept this money and this control. In May last year we discovered how strong the Communist influence had become. You may remember that there was a very bad strike, and one could see schoolboys and girls crowding into buses as soon as lessons were over in order to go down to encourage the pickets with Communist songs, with food, and with money. Quite a lot of these schoolchildren were among the rioters on the night of May 12 when several people lost their lives.

From Bad to Worse

That, of course, was the time for the Government to take strong action. It failed to do so, partly because very influential Chinese citizens on the school-management boards were frightened of what would happen if a lot of the ring-leaders were expelled, and the situation has gone from bad to worse. It has to be realised that some of these so-called schoolboys are actually in their early twenties.

We have no real jungle in Singapore, but a directive from the Malayan Communist Party which was revealed by the Government in its recent White Paper says very truly that in Singapore organising schoolchildren for the struggle is more important than military activities. The organisation has gone on so successfully that there is at least one Communist cell in every class in most of the Chinese schools. The leaders simply tell their teachers to leave the room when they want to indoctrinate their fellows.

To be really effective the Communists needed a union. They first became active in this way in 1954 when they organised a committee to protest against a very mild form of National

(Continued on page 8)

Harwell's Atom School

An industrial correspondent of the BBC describes how students from many different countries are taking courses at Britain's Atomic Energy Research Establishment to acquire the 'know how' of a new and rapidly developing industry

Sir John Cockcroft (centre), Director of the Atomic Energy Research Establishment, chatting with two Australian students attending the course

THE security fence and the guarded entrances still surround the Atomic Energy Research Establishment at Harwell, giving the passing motorist on his way to Reading or Oxford an impression of fearful secrecy. But though the physical barriers remain, the mental ones are being steadily removed. Another step on the way to their complete removal has been reached with the opening by Sir John Cockcroft, the director of the establishment, of the new Reactor School. It stands, significantly perhaps, just outside the security fence, a prefabricated structure of glass and concrete, furnished and decorated in the bright, contrasting colours which are becoming so popular.

I do not know whether it has yet acquired an old school tie, but it is certainly entitled to one, for this is Britain's most exclusive school. Only one other is known to exist outside Britain, and that is in the United States. It seems likely, however, that there is a third in the Soviet Union.

During the early years of development most of the scientific and technical knowledge about atomic energy has been concentrated in the public service—first the Ministry of Supply, and now the Atomic Energy Authority. Now the authority considers that it is imperative to share its knowledge—so that industry will be encouraged to play its full part in exploiting the commercial applications. Two years ago a groundsman's hut, brought to Harwell from the grounds of Blenheim Palace, provided temporary accommodation for the Reactor School so that the work could begin of training the staff of industrial firms in the construction and operation of nuclear reactors, or, as they were formerly known, atomic piles.

Engineers and metallurgists on the staffs of contractors to the Atomic Energy Authority were given priority on those first courses. Much of the information in the lectures was then still on the secret list, and it was even reported that a security officer attended the classes and mingled with the students. Within a year all that was changed. It was announced that students from overseas would be admitted too, and applications were soon coming in from countries all over the world. In September, 1955, Sir John welcomed forty-nine students: six of them came from Australia, and fifteen from ten other countries—Argentina, Belgium, Brazil, Denmark, Germany, India, Pakistan, Spain, Sweden, and Yugoslavia.

This year, in addition to British engineers and physicists, university and technical-college lecturers, and staffs of

Students watching a lecturer demonstrating a reactor simulator, on which the future controllers of atomic reactors are trained

Students from thirteen countries came this year; an instructor explaining to a Portuguese and a Spaniard a graphite stack used for experiments

A member of the Harwell staff giving the first of the course's 150 lectures

firms engaged on nuclear power work, there are thirteen countries represented. Germany has sent five students this time, and Japan and Portugal two each. The others come from Australia, Austria, Eire, Holland, Israel, Italy, Malaya, South Africa, Spain, and Sweden. Among the students I met when I visited the school on the first day of the new term was an Australian scientist from Melbourne. He told me that Australia hopes to be producing atomic electricity on a commercial basis within the next decade. I also met an Italian engineer who had come from the Fiat works at Turin. He is studying the possibilities of using atomic power in ships.

The Harwell courses have been over-subscribed from the beginning, and the improved accommodation has enabled a shorter course of six weeks to be run at the same time as the full three-month course. The shorter course costs £125, and is mainly intended for lecturers and staffs of firms working on ancillary aspects of the nuclear power programme. The full course of fourteen weeks costs £250, and includes 150 lectures, given by Harwell's own atomic experts—professional engineers and scientists whose normal work is inside the security fence. At this school the teachers themselves never cease to be students, for the contents of the course change every few months to keep pace with the newly won knowledge.

The students take part in various experiments, and occasionally have some ideas of their own which prove useful. The current course has a special interest, for the students will visit among other places Calder Hall, Cumberland, and see the world's first nuclear power-station in operation.

The post-war coal shortages speeded up the conversion to oil-burning plant by important sections of British industry as the source of their heat and power. The warning of recent events is that Britain becomes more vulnerable as she becomes more dependent on oil imports. This seems likely in turn to give a new urgency and impetus to the commercial development of atomic power. For that, fresh minds and new ideas are needed all the time. They can be obtained only by the specialist education of the sort that the Harwell Reactor School provides. (Expanded from a broadcast in 'Radio Newsreel')

ALEXANDER NOVE, member of a British agricultural delegation to Russia last year, outlines in his contribution to the G.O.S. 'This Day and Age' series on the Soviet Union the developments in farming policy since the 1917 revolution

Collectivisation in the U.S.S.R.

COLLECTIVISATION carried out by a Communist government in a peasant country generally has three major reasons behind it. I would call the first a mixture of power and ideology. All Marxists regard the peasant as a backward element, the peasant mentality as something to be eliminated. The peasants suffer from a strong private-property instinct; they wish to sell their goods in a free market; they are not predisposed towards Socialism, and therefore their interests run counter to the Communist Party's programme. In the long run a strong peasantry is inconsistent with the political security of the party, and with the achievement of its purposes.

The second point is connected with rapid industrialisation, which is the immediate aim of the Communist Party in every backward country. Where there are no capitalists, and it is impossible or undesirable to borrow abroad, investment must be at the expense of the bulk of the people, who were in Russia the peasants. But these same peasants must feed the growing towns, and they will generally refuse to grow more for less money. In the period of 'war Communism' in Russia, from 1918 to 1921, they were able to resist government pressure, and taught the Communists a lesson about the power of a peasantry which controls land and produce. Therefore that power had to be broken to make rapid industrialisation possible.

Squeezing the Peasants as a Policy

Thirdly, the Marxists have always believed in the superior efficiency of large-scale agriculture, particularly in comparison with the primitive strip-cultivation which was still common in Russia in the 1920s. They therefore thought that modern methods on large collective farms would increase production, while the use of machines would free labour for the new industries.

When in 1928 the Soviet Government tackled the twin problems of collectivisation and the industrial revolution it dealt with the peasant problem by crude compulsion, and this despite the fact that Lenin had advised caution and persuasion, and denounced coercion. Of course, it was not just Stalin's personality which made the difference. Voluntary co-operation would have failed to give the desired results.

Since the entire object of the exercise was to squeeze the peasants, to reduce peasant consumption in order to concentrate on investment, it was quite impossible for Stalin to offer any material inducement to join the collectives. It was, in the circumstances, coercion or nothing. By 1933 the bulk of the peasantry had been herded into the collectives, but the government's victory was dearly bought, and the circumstances of their birth still cast a shadow today over the collectives of Russia. Millions of peasants were deported. All over the country peasants killed their animals rather than lose them to the collective. The new farms had little equipment and no experienced managers: naturally production fell sharply. The state's insistence on heavy compulsory deliveries of produce from the villages left the peasants with too little on which to live, and in 1933 literally millions died of hunger.

How Collective Farms Are Run

A few words are necessary about what these collective farms are. They must, first, be distinguished from state farms, which are state-owned enterprises in which the workers are paid regular wages. Collective farms are not state-owned and are nominally peasant co-operatives, with the villagers cultivating the land in common under a chairman and management committee elected by themselves. Heavy machinery is hired from the state-owned Machine Tractor Stations. Each household is entitled to a private plot of land, averaging perhaps an acre, and is allowed to own a limited number of animals.

Both the collective farm and the private plots of the peasants must supply a quota of produce to the state at fixed, low prices. The remainder of the produce is used for seed or fodder or is consumed by peasants or is sold in the free market. The money income of the collective farm after deductions to a capital fund and meeting various running expenses and taxes is distributed among the peasants. There is no fixed wage, no guaranteed minimum.

In actual fact the chairmen of the collectives have generally been party nominees, and the farms have been told in great detail exactly what and when to sow, what to produce, and how much to deliver; and there have been many instances of absurd disregard for local conditions. The state has taken a large share of the produce at very low prices. This in turn has led to a vicious circle which it is still difficult to break: Farms had not enough money and produce to pay their peasant members adequately; the peasants did not work well; yields were low; the surplus remaining after the government quotas were met were small; there was therefore insufficient money and produce with which to pay the peasants, and so on.

The peasants, in order to survive, concentrated on their little private plots and on the sale of their produce in the free market. But the state

regarded this as an ideological threat, because this is private enterprise, and a practical threat, because the peasants were distracted from work for the collective.

In the three years before Hitler's invasion in 1941 a series of measures were taken to restrict the private plot, and the peasants were compelled to part with some of their livestock. The unpopularity of these measures must have contributed to the disloyal attitude of many peasants to the Soviet regime early in the war.

After the war this policy was continued after some recovery from the wartime losses had been achieved. In 1950 collective farms were greatly increased in size, with their numbers proportionately reduced. The enlarged farms interfered with private pasture-rights. The government subjected private plots to an ever-increasing burden of taxation. At the same time the collective farms were ordered to deliver more and more to the government at prices which remained absurdly low. Under these intolerable pressures many peasants found they could not carry on and abandoned their villages, and in the period 1950-53 production fell.

Stalin's death in 1953 made possible an overdue series of reforms. To start with finance, the prices paid by the state for farm produce have been greatly raised, making possible higher and more regular payments for collective work. Investments in agriculture have been substantially increased. Machine Tractor Stations, which formerly had to rely on peasant part-timers to run and maintain their machines, now have a permanent staff for these purposes. All these measures mean that the government is now spending much more on agriculture, and taking less out of it.

Secondly, disciplinary control by the collective over the peasants has been much strengthened, and so the time available for private enterprise is less than it was. The size of the private plot has been made dependent on doing the required amount of collective work. However, the tax rate on the plot is now much smaller than in the last years of Stalin. A third change is that an effort has been made to eliminate nonsensical bureaucratic controls. Farms now have greater autonomy. Yet, at the same time, the power of party and state organs over the collectives has actually been increased, and reliable party men sent to take charge.

Maize and the Virgin Lands

Perhaps the point is to give greater powers to the men on the spot while ensuring that the men in question can be trusted to carry out the basic policies of the party. And finally there are the major campaigns associated with Khrushchev's name: the maize and the virgin-land campaigns. It is not always realised that they are closely connected. The idea is to grow a great deal more wheat in the steppe-lands of south Siberia and Kazakhstan, thus freeing land in European Russia to grow more feeding stuffs for an expanded livestock population. Maize, in Khrushchev's opinion, would provide the maximum amount of feeding stuffs per acre—no doubt he has been reading about the 'corn belt' in the United States.

Why all these changes? Well, first of all, the Stalin approach had manifestly failed to increase production. Coercion without incentives was not bringing the desired results. At the same time a new and less firmly established government could not completely disregard peasant discontent. Then, in addition, industry was now getting strong enough to be able to a large extent to finance its own further expansion without depending on squeezing the peasants: it was possible to tackle agricultural backwardness without seriously holding back industrial growth. Also, only a much less wasteful use of peasant labour could free the necessary hands for the still growing towns and great construction projects. And so it is that with the end of Stalin-imposed isolation Russian farm experts are now learning all they can of American and British methods, with the accent on productivity and labour-saving.

The Soviet leaders proclaim their extreme optimism about the results of their new policy. By 1960, according to published plans, the output of food is to be almost double that of 1955. This would mean the achievement of an agricultural miracle unknown in world history, and one must say outright that such plans are absurdly high. Granted that the peasants will doubtless work better if paid more, they may well resent the interference with their private interests which is a feature of present policy. In any event, since Malenkov's resignation, the production of industrial consumer-goods which the peasants buy has increased only very slowly, so they have difficulty in finding the goods on which to spend any extra money they earn.

All this by no means excludes a sizeable improvement over the poor performances of recent years: indeed, 1956 looks like providing a record harvest, with possibly a quite large export-surplus of grain. However, one reason for this success is that it has rained heavily in the virgin lands area, where droughts are frequent. One must be careful to distinguish

The Temple of the Tooth, which enshrines a tooth of the Buddha, is one of Buddhism's holy places

The Ceremony of the Perahera

CORRIE HODGSON recalls how two years ago on the night of the full moon in August she witnessed a great religious ceremony as it came to a magnificent climax at Kandy in Ceylon

THE August moon marks the climax to the great religious ceremony in Kandy, Ceylon, of the Perahera. For a fortnight before it there are nightly processions through the streets, getting more and more elaborate as the final night approaches: the number of dancers grows and more and more elephants take part—their trappings becoming more and more splendid and colourful—until on the night of the full moon the Perahera reaches its full magnificence.

I first knew Kandy as a calm and beautiful spot in the mountains of Ceylon: the chief feature was the lake near which stands the Temple of the Tooth, one of the most sacred places in the Buddhist world, for the relic it enshrines is believed to be a tooth of Gautama Buddha himself. But when I came out of the railway station one August day two years ago Kandy was anything but calm and peaceful. The town was a seething mass of people. They were milling round the booths of the street markets which had sprung up everywhere; betel-nut sellers were doing a roaring trade, and so were the men with the balloons.

Masses of people surrounded the tables where gambling games were being played, and awe-stricken people crowded round listening to the eloquence of the patent-medicine vendors. The beating of a drum attracted my attention, and I joined the rush towards the sound—it was a conjurer. Buddhist monks in their saffron robes, clutching black umbrellas, pushed here and there through the crowd.

Early in the afternoon people took up positions on the route where the Perahera was to follow that night. By eight o'clock, thousands were there, and every window and balcony was full. Suddenly there was a sound like pistol shots. It was the cracking of the great whips which signals the start of the procession from the temple. A minute later the lights of the flaming torches of burning copra could be seen approaching: hundreds and hundreds of these are carried on each side of the procession, and light up the whole fantastic scene with a warm, yellow light.

The flag-bearers and the standards of the provinces came into view, and close behind them a huge elephant caparisoned in purple velvet advanced slowly. On his back sat a very, very old man with a long white beard. He was the temple official who carries the royal mandate for the holding of the Perahera. The first of many groups of musicians with their drums and flutes followed, and after them the fifty or so boy dancers.

Followers of an hereditary art—some of the famous Kandian temple dancers

Part of the Kandy Perahera procession

The great tusker which carries the golden casket of relics in the procession

Three elephants followed—baby ones—advancing at the correct, slow pace with their trunks curled up into their mouths. Sometimes they wanted badly to pick up or feel something that they saw on the road, and uncurled them, but a tap on the trunk from their escorts was all that was needed to make them put them back in the right place quickly.

More and more musicians, dancers, and elephants followed, many of the elephants festooned with coloured lights round their ears and down their trunks like Christmas trees. Then there came a group of the famous Kandian dancers—men with whom it is a hereditary art. Their dances were fierce and frantic. They leapt high in the air and whirled about as they advanced. On their heads were halo-like silver head-dresses, and their arms and bodies were covered with silver and jewelled ornaments and armlets. Their lower garments I find hard to describe—perhaps white jodhpurs with ballet skirts on top might give you an idea. In spite of the energy of their movements they were full of grace, and here, too, every finger twisted and moved.

There was a sudden blaze of light: the great tusker elephant with a howdah containing the golden casket of sacred relics came into view. His caparisons were of silver, and richly jewelled; even his tusks had silver sheaths. Men walked at each side holding a canopy over him, while in front of him were men laying a white cloth on the road before him so that he should not tread on the humble earth while carrying his sacred burden. Dancers threw flowers in his path. On each side were escorting elephants, also tuskers, caparisoned in red velvet, and on their backs riders in cloth of gold. Behind came more dancers, and then a group of Kandian chiefs and temple custodians walking in stately procession with their attendants and standard-bearers. This was the end of the Perahera of the Temple of the Tooth; but four other temples take part and on and on came the flaming torches, the dancers, the elephants. More than eighty elephants took part that night, and the procession was more than an hour and a half in passing.

I looked up from the blazing torches and the moving scene below to the full moon shining over Kandy, lighting the waters of the lake, then down again to the vast, silent crowd. No, I would not have missed the Perahera for all the world. (Broadcast in the BBC's General Overseas Service)

OUR WAY OF LIFE

HENRY LONGHURST discusses the large part played by sport in the British way of life, and says we still respect the team spirit, fair play, more than we respect politics and economics. If you want to get something out of us do not threaten us, just say: 'Go on, be a sport!'

Essentially a Sporting Nation

SPORT looms very large in the British way of life, but it does depend on what you mean by sport. In the old days it used to mean huntin', shootin', and fishin'—the sports of the sporting prints which adorn walls all over the world today. But nowadays when people talk about sport they generally mean games—in other words, what goes on the sporting pages of the newspapers. This is the day of spectator sports against participant sports. The more's the pity, you may say, but when you consider that we have got 50-million people stacked in this small island it is obvious they cannot all participate: most of them must be spectators and followers, and there is no discredit on them for that.

Sometimes they are spectators because they are a bit old now—like myself—people that used to play in their younger days, and still follow a game very keenly, and sometimes they are spectators because they never really did play or have the luck to play in representative sides and would like to go and blow off steam. Soccer, of course, is the people's game in Britain.

Soccer is the equivalent of baseball in the United States. It is the game not only of the higher-ups but also of the under-privileged—which most people are bound to be, in the sense that they work most of their lives for a boss; and when you work for a boss or an authority you like to go and blow off steam on Saturdays against somebody, and they particularly like in England to blow off steam against the referee.

The only trouble is that soccer is going down a little, for a reason I will suggest later. The attendances are going down in the great League matches, and clubs are now thinking of covering the spectators with stands to prevent them getting soaked with rain as they pack like sardines on the terraces: that is one good sign. Other people very cynically say that soccer would no longer go on (though I do not agree with them) if it were not for the football pools, which are an essential characteristic, I suppose, of British life at the moment: millions of people every Thursday send in their coupon for the pools.

It may be thought that only, shall I say, the proletariat do that. Not a bit of it! You will find the best-off citizens of Britain filling in their pools on Thursdays; I have in mind particularly a bosom friend of mine who is the managing director of a concern with branches all over Europe. When I said: 'What are you doing filling those things in?' he said, 'Well, my dear fellow, in these days of taxation you can't afford not to, can you? I'd have to work three more lives to get £75,000 free of tax.'

In the summer in England (not so much, of course, in Scotland) the great national game is cricket, and it reaches its peak every two years in England, and every two years in Australia, with the great Test matches between England and Australia, and one cannot wonder at the interest which is shown in England at these times, though foreigners think us mad. I was flying in an aeroplane from Copenhagen during the last Test match against Australia, and the captain passed back not only the log of the voyage—that we were so many thousand feet over such and such—but the latest Test scores: I wondered what all the rest of the passengers who did not come from England thought about that?

Now, I think, there is a more grown-up approach perhaps to the Test matches in England, and less hysteria. People care more about the actual play, the niceties of it, than they do about what I might call the news-

paper stuff (I am a newspaper man myself)—the sort of stuff printed when England lost one Test match in the last series in Australia: a big newspaper came out with the headline, 'I accuse Hutton.' But there is no doubt that county cricket is going down a bit, though village cricket, which we love to think of as a typically English sport, in probably the most beautiful setting for any game at all, lives on as it did.

It is a characteristic of the British attitude to sport that we care less when we are winning than when we are losing. We do not like to rub it in when we have won, and say how bad the others are, but we love to rub it in when we have lost, and say how bad we are and what is wrong with English cricket, what is wrong with English football, and so on. And there is one characteristic which I would like to mention—I do not know whether it is typically British or whether it applies all over the world—namely that all the people in Britain love an amateur. Now Wimbledon is one of the great sporting occasions of the British scene, but I do not know any of my acquaintances of any age anywhere who really looks on the great players of Wimbledon as amateurs. That is not being libellous, because they are amateurs, of course, within the L.T.A. definition, but not within the dictionary definition.

Our Real Amateurs

The sort of people that are looked on as real amateur amateurs are, say, Bannister and Chataway; Bannister being a doctor, and giving up his running to do that; Chataway looking for a career in other spheres. Another was a friend of mine, Anthony Mildmay, who was absolutely no good at any game whatever, and yet was one of the great Grand National riders of all time. You will remember how his horse, just when he was winning, ran out with a rein broken, and failed to finish the course. And then recently there was the Rev. David Sheppard, whom they called on for the Test match against Australia. People did not want to know so much of the Test score, they wanted to know how Sheppard was doing, and when he made a century great was the rejoicing on all sides.

Of course, sport plays a great part in our national life, and I think the team spirit, about which I will not say a lot now—it can become rather pompous—does build a great deal of character. But perhaps the greatest character-builder is a non-team, selfish game like golf, whose frustrations and aggravations and maddening qualities certainly built more character in me than did standing for five years between the goal-posts at football.

But really the greatest single influence in British sport today is television. Television has meant the death of the second-rate—the second-rate in county cricket, in football, and so on; it has taken people to the ringside, to the twenty-guinea seat where they could not go before—twenty-guineas-worth sitting in your own armchair with a whisky and soda beside you, and the fight might not last for more than fifty seconds, so why go out in the rain? In the Boat Race it has taken 8-million people within six feet of the left ear of the cox of the leading boat—and even the umpire has never been so near as that.

Still, we are essentially a sporting nation with our original ideas of what is and is not sporting untouched. We still respect the team spirit, fair play, 'play up and play the game,' more than we respect politics and economics. In other words, if you want to get something out of us, do not threaten us, just say: 'Go on, be a sport!' (*Broadcast in the BBC's General Overseas Service*)

Chinese Schools in Singapore

Continued from page 4

Service. While the emergency lasts every association has to be registered, and a Chinese Secondary Schools' Students Union was finally allowed to come into existence a year ago on the clear understanding that it did not mix in politics. Within a few days of being registered it began to do so. It took part in meetings to protest against a police ban on a concert at which many of the songs were taken straight from Communist Russia or Communist China, with the words slightly altered to suit Malayan conditions. It took part in the rally at Kallang Airport just before Mr. Marshall, then Chief Minister, went to London to negotiate Singapore's self-government—a rally which again ended in bloodshed.

Nobody who has studied Communist methods in other countries could possibly doubt that the whole organisation here is run by Communists. Mr. Lim Yew Hock, the Chief Minister, has realised what his predecessor, Mr. David Marshall, failed to realise, namely, that one cannot leave the government of a country to its teenagers. He has dissolved the Secondary

Schools' Students Union, and he has arrested one or two of its leaders. It is worth noting that some of these leaders who shout a lot about *Merdeka*—the Malay for 'Freedom'—have never troubled to become citizens of the country whose freedom they demand. They are still Chinese, and they will be deported to China.

Other measures may be necessary. One of these schools has as many as 6,000 students, two others each have about 3,000. Very probably the Government will divide these schools up, and it will give no financial help at all except to those that accept the same control over what they teach as is accepted in the English-language and other schools of Singapore. There can be no going back: either the Communists win or the Government wins; and although there is an understandable pride among the Chinese over the successes of Communist China most of the Chinese here are fully aware that Singapore would collapse if it lost its international trade, because it has no raw materials of its own and very few secondary industries.

There may be more risks, there probably will be, and I should say without any hesitation that the Communist danger to Singapore has been very greatly reduced by Mr. Lim Yew Hock's strong action. (*From a talk by Vernon Bartlett in the BBC's General Overseas Service*)

The contest was a great triumph for thirty-three-year-old Mr. Hugh Barr, of Northern Ireland, who became champion ploughman of the world for the third year in succession

The world championship was preceded by the British one, which includes horse ploughing: Mr. A. Revitt, of Norton, Yorks., winning Class Two

The Ploughman's Olympics

LEONARD PARKIN describes the world ploughing contest which took place in England this year on a 600-acre site near Oxford

IN the four years which have passed since the first world ploughing contest was decided in Ontario this friendly struggle for supremacy in the most basic farming operation of all has come to be called the Ploughman's Olympics. But the men who take their ploughs, their tractors, and their skill to the half-acre plots of grassland and stubble of the world-championship arena are not amateurs: ploughing is their craft, learnt during long, solitary hours on the farms on which they work at home. They realise that good ploughing means better production and the world ploughing contest, with its friendly seriousness, does help to spotlight the human side of farming at a time when machines are playing a bigger part.

This year the 600-acre site at Shillingford, near Oxford, on which the championship took place also provided the land for the British national championships. On the first day of what was a three-day festival of ploughing the competitors in the world match took time off from their practice on the sticky Oxfordshire soil, and watched 137 ploughmen from England, Scotland, and Wales taking part in their own four classes for both horse and tractor ploughing.

The British ploughmen were ploughing for the honour of representing their country at next year's world contest, which is to be held at Peebles, Ohio, in the United States. Each year the countries taking part send their two champion ploughmen. The British representatives next year, following their success in the British championships at Shillingford, will be a

The world contest is for tractors only—Arne Braut, of Norway, was runner-up

Somerset man, Mr. R. J. Miller, of Ilminster, and Mr. J. Mason, of Newbould, near Chesterfield, in Derbyshire.

When the British ploughmen—and ploughwomen, too, for there were two competing—began work on their plots a light, early-morning mist was rising thinly over the countryside, and there was that fresh smell of newly turned earth.

As the first day went on one thing was certain: the ploughmen may have been ploughing a straight furrow but they were certainly not ploughing a lonely one. Hundreds of people were pouring through the entrance gates, and more than 130 manufacturers were demonstrating the latest in agricultural machinery. At the ploughing plots groups of country folk stood at the end of each furrow, squinting down them as if they were sighting a rifle, scrutinising, criticising, and sharing comments.

The world contest, on the following two days, was ploughed under even fiercer examination. Thirteen countries took part, including Britain, Finland, Norway, Northern Ireland, Denmark, Sweden, Holland, France, Belgium, Canada, the United States, Western Germany, and New Zealand.

The countries had all helped to build a commemorative cairn at the entrance to the ground which will stand as a permanent reminder of the event. It is built of local Cotswold stone, and each country sent a piece of its own stone engraved with its name.

The contest was a great triumph for Mr. Hugh Barr, a thirty-three-year-old farmer from Northern Ireland. He became the champion ploughman of the world for the third year in succession, adding the Shillingford title to his wins at Killarney, in the second world match, and in Sweden last year. His secret for competition ploughing? It is quite simple, he said: it depends on how well you plough at home.

For the most part the future world ploughing championships have already been arranged. Next year the match will be in the United States, in 1958 in Germany, then in Northern Ireland, and after that in France. The 1961 contest has still to be fixed, but in 1962 Holland will be host to the world's best exponents of one of its oldest crafts. (Expanded from a broadcast in 'Radio Newsreel')

The Duke of Gloucester (left) unveiled a commemorative cairn; the Duchess is talking with Mr. J. D. Thomas, President of the World Ploughing Organisation

DR. THOMAS LONSDALE tells the remarkable story of 'The Colossus of Roads,' the merchant who only began a career as highway engineer at sixty: 'What McAdam did' he says, 'was, first, to be clear in his own mind how good roads were to be built; to build them in Bristol, and thus triumphantly to vindicate his principles; and then to preach and teach these principles up and down the country'

John McAdam—Highway Engineer

AT sixty years of age most people begin to think of retiring: John Loudon McAdam was sixty when he began his career as a highway engineer. For most of his life McAdam had been a merchant. To borrow an old religious phrase, we might almost say that at sixty he became a highway engineer by conviction because he felt the times needed highway engineers.

McAdam was born 200 years ago in the same year as Mozart. This was the age of Louis XVI and Madame Pompadour. McAdam died when he was eighty. By that time steam-trains were running from London to Birmingham, and steam-boats from Chicago to Buffalo. What a sweep of history we have here—the whole outline of the times in which we live was taking shape during McAdam's lifetime.

When McAdam was fourteen his father died, and the boy had to go to New York to work in the counting house of his uncle who was a merchant. The uncle was an auctioneer, a wine and provision merchant, and a dealer in tobacco and timber, and the business must have been prosperous because the uncle helped to found the New York Chamber of Commerce.

When McAdam was not quite twenty the United States declared their independence, and New York was the centre for settlers who were still loyal to the British Crown. During the next seven years McAdam sold on commission fifteen ships which the Navy had taken as prizes from the rebel colonists, so that even in his mid-twenties McAdam must have been trusted by his uncle as a shrewd man of business. When he was twenty-one he married Gloriana Nicholl, a daughter of the leading lawyer in New York, and when peace was declared McAdam and his family went to Scotland. Here, with restless energy, he modernised a coal-mine, and manufactured coke, tar, and varnish from the coal.

Fifteen years later they moved to the south of England, to Falmouth, where McAdam sold another naval prize, this time captured from the French, and then three years later they all moved to Bristol, where McAdam carried on business as a merchant. Whether or not he was prosperous we do not know, but we do know he became prominent because fifteen years later he led the agitation to rebuild Bristol gaol which the great prison reformer, John Howard, had condemned.

In the same year, 1816, when he was sixty, he began his career as a highway engineer by becoming inspector to the Bristol Turnpike Trust. In a few years he was to earn for himself the nickname all over Britain of 'The Colossus of Roads.' Now, the word turnpike is an old word that has come into use again in the name Pennsylvania Turnpike. A turnpike trust was a private company which had obtained an Act of Parliament to take over a length of main road, put a gate at either end, and charge a toll to each road-user. On some roads a toll had to be paid every few miles. Most of the main roads in Britain at that time were turnpikes.

When McAdam took over the affairs of the Bristol Turnpike Trust they were heavily in debt and their roads were very bad. In a few years

the roads became recognised as among the best in the country, the debt was reduced, and the trust became a model of good management. I think McAdam's quality as a man comes out well in this extract from one of his writings. He is writing about the duties of a general surveyor of some 150 miles of roads:

'He must control the contracts and other agreements entered into to save unnecessary expense, he must examine all work performed to see that it is corresponding with contracts and generally keep a vigilant superintendence over the persons employed by him. Accounts of all expenses incurred should be delivered into his office in duplicate, after examination one copy to remain in the office, the other, certified, to be sent to the Treasurer upon which payment may follow.'

As well as managing the affairs of the Bristol Turnpike Trust, and training engineers and workmen, McAdam went up and down the country preaching and teaching his principles in direct and homely speech. The soil under a road must be properly drained, as wet soil will not carry the weight of the carriages. This means that ditches must be dug and kept cleared out. The road bed must be made firm and level, but sloping slightly to shed water off into the side ditches. The stones forming the road must be all the same size, each stone being a rough cube of 1½-inch side, weighing about six ounces.

One may well ask who broke so carefully the immense quantity of stones that this way of making roads demands? I am afraid the answer is a grim one: women, boys, and old men past hard work. These stones were scattered on the road bed until a layer six to eight inches thick of stones had been built up. Then the road was opened to traffic. McAdam

had a skilled workman or lengthsmen on every mile of road. The lengthsmen raked out any ruts left by the carriages in the softer places and added shovelfuls of broken stone.

McAdam's system was not new: many fine roads had been built in France by Trésaguet in which all the stones were broken to be the size of walnuts. There were good roads before McAdam, just as there was geometry before Euclid. What McAdam did was, first, to be clear in his own mind how good roads were to be built; to build them in Bristol, and thus triumphantly vindicate his principles; and then to preach and teach these principles up and down the country.

Strange this queer, Scotch mixture one often finds of a preacher with a vision and a business-man with an intense grasp of practical affairs in one and the same individual! He did most of this preaching for nothing. Between his sixtieth and sixty-seventh years he advised seventy turnpike trusts. 'If I had not sent answers to the enquirers saying I would go gratuitously, I believe I would not have been consulted,' he says. 'If I had made it a money-making speculation my system never would have been introduced into the country at all.' Even today many roads all over the world are laid after his principles—what highway engineers call macadam. (*Broadcast in the BBC's General Overseas Service*)

John McAdam—painted by Turner

Collectivisation in the U.S.S.R.

Continued from page 6

between the luck of the weather, good and bad, and the consequences of changed governmental policies. It is dangerous to jump to conclusions on short-term evidence.

It would be both unfair and unreasonable to put the blame for Russian agricultural difficulties wholly on politics, ideology, and organisation. Any government would have difficulties, which would certainly not be overcome by abolishing the collective-farm system overnight. Despite the apparently boundless spaces of Russia there is now very little unused land where climate and soil conditions are suitable for agriculture. The population is growing by nearly 3½-million per annum, and there is much unsatisfied demand. Nor can war losses be left out of account.

But the Soviet leaders tackle these problems from their own special viewpoint. They propose to achieve higher production while still restricting peasant private enterprise, and strengthening the collective against peasant individualism. While admitting the inefficiencies of the past they consider that these were due to the 'historic necessity' of squeezing the

peasants to finance the industrial revolution. Now Khrushchev imagines he can make the collectives work. But the system was in fact designed primarily to squeeze produce out of the peasants on the cheap, and the press has been reporting many examples of muddle and stupidity arising out of the system. For example, the artificial division between the collectives and the machinery they use is only explicable in political terms, the Machine Tractor Stations being regarded as 'strong-points of the state in the villages.'

There must surely be more changes in the near future, as the government feels its way by trial and error towards something which works better. Perhaps they will plump for the state farms I mentioned earlier, which are ideologically superior, as they turn peasants into 'proletarians.' The only trouble is that they are so much more expensive from the government's point of view: in state farms, but not in collectives, regular wages and social-service benefits have to be paid, and any loss must be covered by the exchequer.

I am not a prophet, and cannot forecast just what the leaders will try next, but despite this year's good harvest we can be sure that the peasant problem will plague the regime for many a decade yet. (*Broadcast in the BBC's General Overseas Service*)

When 22,000 members of the Brigade paraded before the Queen in Hyde Park this year some found need of the care usually bestowed on others on public occasions such as the Lord Mayor's Show (right)

The St. John Ambulance Brigade

NORMAN MACKENZIE describes the work of a voluntary organisation that devotes itself to first aid: it has 127,000 members in Britain, as well as 60,000 overseas—mostly in the Commonwealth

ON any big public occasion in Britain you will see among the crowd men and women wearing a black-and-white uniform marked by a curious eight-pointed cross. You would certainly see them at processions, at a football match, a horse show, even in the cinema or the theatre. The cross is the cross of St. John, and the uniform is that of the St. John Ambulance Brigade, a voluntary organisation which devotes itself to first aid and nursing. These men and women—and young people, too, for the Brigade has a cadet movement with many thousands of members—give up their spare time to learn the techniques of first aid and nursing, and then hold themselves ready to serve wherever they may be called upon. There are about 127,000 of them in Britain, and another 60,000 overseas, mostly in the Commonwealth or in countries which were formerly in the Commonwealth.

Anyone can join the Brigade. There is no distinction of class, race, or creed. The only condition is willingness to help other people. And the Brigade members, for the most part, must even pay for their own uniforms. Once a man or woman joins they are expected to attend training courses and to take examinations, and to serve whenever they are called on. In 1954 alone members of the Brigade treated nearly 200,000 cases on duty, and even more—250,000—when off duty, for a Brigade member will always come forward to help when a street accident or some other incident demands their help.

Boys and girls can join the Brigade—a nursing cadet in training

It is not merely a case of helping when there is an accident, or looking after people who may have been taken ill in a crowd. The Brigade members also do nursing, perhaps visiting sick people at home, or helping out in hospitals which are short of trained staff. And then there is the ambulance service. Many local authorities do not maintain their own full-time ambulance service, or maintain

only a limited service, because the demand is not large enough to justify full-time ambulance crews. But all over Britain St. John's supports a voluntary ambulance organisation which works on contract to local-government authorities: they are called on when needed for accidents, illness, or, perhaps, moving patients from one hospital to another. And the appropriate local authority pays whatever expenses are incurred.

In 1954 St. John's ambulances carried more than 300,000 invalids and took 40,000 accident victims to hospital. In association with the Red Cross and the Women's Voluntary Services, St. John's also helps to operate the Hospital Car Service, taking people to and from hospital for treatment, and taking convalescent patients home again.

Now, this Brigade, which does such invaluable work, was founded in 1887, and it has been growing all the time, especially during the two

Specially trained air attendants of the Brigade accompany sick people, and mobile first-aid patrols (below) go out on busy roads at holiday periods

world wars. Apart from the Brigade there is another body—the St. John's Ambulance Association—which runs training courses and examinations for non-members. Many public bodies and employers ask to have their staffs trained and tested in first aid by the association—the police, for instance, or the National Coal Board, government offices, or big industrial enterprises. For St. John's is recognised as the best of training methods for first aid, and its standards are accepted all over the world.

Both the Brigade and the association are directed by a body that is called the Grand Priory in the British Realm of the Venerable Order of the Hospital of St. John in Jerusalem. This order traces its origins back to the Order of St. John founded in Jerusalem more than 1,300 years ago—back to the Knights of St. John who played such a large part in the medieval crusades. It still maintains its historical link with Jerusalem by operating a special ophthalmic hospital in that city which treats anyone without distinction of race or creed.

The order has a long and complicated history, but today most people know it through the selfless help that members of its Ambulance Brigade give to those who need it. (Broadcast in 'London Calling Asia')

Daniel George

THE best book on John Wilkes, *That Devil Wilkes* by Raymond Postgate, has recently been published in a new edition. The mother of John Wilkes, wife of a distiller living in Clerkenwell, a strict Nonconformist, can never have dreamt that her son, born in 1727, was to be regarded as one of the greatest libertines of all time, almost the anti-Christ, and was almost simultaneously to be honoured in England, Europe, and America as the champion of the individual's right against both King and Parliament. He was not, it must be admitted, a very good or very honourable man. He had to live by his wits—which were considerable.

John Wilkes was let down by his patrons and friends, and almost deserted when he got into trouble. He was employed to write against the Government and against the efforts of George III to secure more power for the Crown. His enemies lay in wait for him, and when he gave provocation by an article in *The North Briton*, a paper he had founded and edited, a warrant was issued for his arrest. But the King and Government had caught a Tartar: from that moment he gave them no peace. They passed a sentence of outlawry upon him, and he spent three years scheming in France. He has been called some hard names, and he deserved them, but to call him, in the words engraved on his coffin, 'a Friend of Liberty' is no idle compliment. Raymond Postgate's book about him makes quite enthralling reading.

Chronologically, George Moore, the Irish novelist who was born in 1852 and died in 1933, comes next in my list of biographies, though actually the book about him is not quite a biography. It is by Nancy Cunard, and it is called *G.M.: Memories of George Moore*. Nancy Cunard wrote a book a short time ago about Norman Douglas. That was, perhaps, a little too intimate in tone: a reader who had never known Norman Douglas felt somewhat out of it. In recording her memories of George Moore she has had us—her ordinary readers—in mind: she does not assume too much on the personal side, though, of course, she assumes we are acquainted with the works of George Moore, with his novels, and generally with his past and present literary reputation. There have been other books about him, and he has written copiously about himself.

From these and other sources one got the impression that he was a vain, very touchy man, inclined to pontificate about art and literature and love, rather muddle-headed, often egregiously wrong in his opinions, and on the whole a slightly ridiculous person. That, anyhow, was how I felt about him until I got a glimpse of him in Lady Cynthia Asquith's recent book, *A Portrait of Barrie*. There he was shown, with not more than his fair share of human failings, as a very amiable man with a nice sense of humour. Nancy Cunard's *George Moore*, so to speak, is also rather a dear. She knew him when she was a child in arms, and throughout his life was on terms of great affection with him. As a poet and writer of distinction herself she sees his shortcomings—at any rate as a critic—but she sees, what is more important, his devotion to his conception of himself as a literary artist. Few authors—Flaubert hardly excepted—have taken themselves and their art more seriously. Immense pains went to the writing of a single paragraph, and he succeeded in writing some of the most beautiful prose of our time.

Gertrude Bell was born in 1868 and died in 1926. The book about her is by Josephine Kamm, and its title is *Daughter of the Desert*. In a comparatively small compass, presumably dictated by the biographical series in which the book appears, she has most cleverly and readably given us the life story of this remarkable woman. She was born at Washington Hall in the county of Durham, and was to be buried with full military honours in Baghdad, after a career more unforeseeable than most.

At Lady Margaret Hall, Oxford, in the 1880s, in spite of what seems now like actual physical discomfort and a repressive spiritual atmosphere, she enjoyed herself, and was the first woman to get a First in Modern History. In 1899 she set out by herself for Jerusalem. Thenceforward there was no holding her. Sir John Glubb, who has written a preface to this book, pays a tribute to her great courage when later she crossed the deserts of Arabia. During the first world war she was attached to the British Intelligence Service in Cairo and associated with T. E. Lawrence; at the Peace Conference she was with him in representing the Arab peoples. In 1922 she became Director of Antiquities at Baghdad, where she died.

We now come to Hilaire Belloc, who was born in 1870 and died in 1953. Poet, novelist, historian, essayist, politician, controversialist—older readers will recall him in all these roles. There was a book about him by J. B. Morton a short time ago, and here is another: *Testimony to Hilaire Belloc*, by Eleanor and Reginald Jebb. I say a 'book about him' because this, like Mr. Morton's book, is not a formal biography so much as a book of reminiscences of the man as he lived by people who were closely associated with him: Mrs. Jebb was his daughter, and Mr. Jebb his son-in-law. Between them—or rather one after the other—they offer sketches of him as a family man.

Mr. Jebb's contribution compresses biographical facts in a narrative which is also an evaluation of Belloc's contributions to literature. Many of us who knew Belloc only through his books will remember him with gratitude.

Addressing a mass meeting at the end of the conference Sir Anthony Eden, the Prime Minister, received great applause when defending his Suez policy

The Conservative Party Conference

RICHARD GOOLD-ADAMS gives his impressions of the Conservative Party's annual meeting which was held in October at the North Wales seaside resort of Llandudno. He suggests that 'the keynote of the conference has been the Conservatives' recovery of confidence in themselves'

THE feature of the Conservative Party conference was the fact that there was no row. Instead the party left the north Wales seaside resort, Llandudno, where the conference had been held, more united and confident than for quite some time. And it is being said by the Conservatives themselves—not, I think, without reason—that their new unity is more genuine than that which the Labour Party had achieved the previous week at Blackpool.

During the period before the conference there had been three elements of doubt and criticism in the party. One centred on the Prime Minister himself, Sir Anthony Eden, who has gained an unfortunate reputation during the past year for being unable to make up his mind. Another criticism sprang from those members of the party who have suffered most from the continuing rise in prices here in England: there had been something of a revolt, that is to say, against the Government's failure to stop inflation.

And, thirdly, there have certainly been plenty of doubts inside the party about the Government's Suez policy: those on the right were dissatisfied with the Prime Minister for not being firm enough, and those on the left of the party were almost as horrified as the Labour opposition at the possibility that Britain might be led into war against Egypt.

Reason for Sir Anthony's Success

All three of these doubts and criticisms seemed to have been swept aside at least for the moment. It is normal for a Prime Minister to receive an enthusiastic reception at a party conference. But when Sir Anthony Eden delivered his big speech at the close of the proceedings the roar of support which he received clearly surprised and delighted him.

It is a little difficult to see quite why he had such a success, but I think the reason lies in this fact. While it had been the right wing of the party which was least keen on Sir Anthony Eden in terms of home politics, there is now general recognition that Mr. Butler has re-established his position as number two in the party.

And Mr. Butler, as Sir Anthony's successor, would be too progressive in his ideas to suit the die-hards. Consequently, the party has accepted the position, and at least for the moment has rallied again round the Prime Minister.

As I see it, the Conservative Party leadership has tried to meet the loss of confidence in its ability to stop prices rising by offering other and new ideas for which sacrifices are worth making. Admittedly considerable time at the conference was devoted to economic affairs. The Prime Minister went out of his way in his own speech to promise that the Government would introduce more relief from taxation for those on fixed incomes (broadly speaking what are called the middle classes), that the Government would introduce this relief as soon as the national interest permitted it to do so.

Both Mr. Butler and Mr. Macmillan, the present Chancellor of the Exchequer, emphasised that in spite of the hard economic realities with which Britain is faced the Conservatives have in fact already reduced taxation very considerably since they were first returned to power in 1951. In spite of these reductions, and in spite of the heavy defence burden, it was also emphasised that more is being spent today on such things as hospitals and education than at any time under the previous Labour Government.

But it was really the several new and partly unexpected ideas which

Mr. Harold Macmillan, Chancellor of the Exchequer, spoke on taxation Mr. Macleod, Minister of Labour, announced a 'workers' charter'

rallied the delegates and made this a successful conference from the party's point of view after all. One idea was the plan to review the Rent Restriction Acts: for years in Britain rents below a certain level have been frozen by law at figures at which they stood before 1939. The result has been that a good deal of property is falling into disrepair, and in spite of the serious housing shortage some people are occupying more accommodation than they need and could afford at an economic rent.

This was a bold move because although it is a genuine attempt to straighten out a serious distortion in the national economy it will certainly lay the Government open to attack by the Labour Party for favouring the rich against the poor.

Another move was made in the field of labour relations. Mr. Macleod, the Minister of Labour, announced the Government's intention to establish a kind of workers' charter. The idea would be to get agreement between employers and the trade unions on such things as compensation for loss of employment, and on other questions affecting the security of the worker.

A third idea was for the Government to take very seriously the proposals for associating Britain with the concept of a common market in Europe: a great area of 250-million people in which goods would move with increasing freedom across national frontiers.

One Vote Against the Government

On the last major point of criticism, about the Government's policy over the Suez Canal dispute, I think Sir Anthony Eden definitely recovered a good deal of the ground that he seemed at one time to have lost. A resolution in favour of the Government's policy was passed with only one vote against.

The truth about the conference in general, I think, is this. Most Conservatives have accepted the idea of the welfare state as something which could not possibly be abandoned now. They are therefore searching (just as the Labour Party is searching) for ways in which to combine their own particular principles, of individual independence and initiative, with the kind of policy that will appeal to members of every class. And I think that compared with the Labour Party the Conservatives have made rather more progress at this year's party conference in reconciling their principles with reality than many outside observers had expected. As a result the keynote of the conference has been the Conservatives' recovery of confidence in themselves. (Broadcast in 'London Calling Asia')

Sir Anthony Eden, the Prime Minister, paid the motor industry a big compliment by opening the show despite international problems which had been engaging his attention

The £9,000 Rolls-Royce Silver Wraith demonstrated by Kenneth Horne (left)—

THE 1956 M

REGINALD TURNILL, a BBC industrial correspondent, says, lay in the better performance offered. Imaginative display, too, played its part

THE motor industry is still the United Kingdom's greatest exporting industry, although this has tended to be forgotten recently. But the motor manufacturers take a tremendous pride in their post-war achievements, and that is probably why they have been rather sensitive about recent criticisms. They point out that the drop in car sales at home and overseas has been entirely due to two factors over which they have no control at all—the credit squeeze at home, and the decision of some countries, such as Australia and New Zealand, to reduce their imports. Whatever the reasons for this year's setbacks, the outstanding success of this year's Motor Show seems to have gone a long way towards restoring the prestige of British cars in world markets.

The Prime Minister himself paid the industry a big compliment by opening the show in spite of the international problems which have deprived him of his holiday. He drove straight to Earls Court from London Airport after a hurried visit to Paris to consult the French Prime Minister, and spent a long time looking at both the cars and the accessories displayed by the 540 exhibitors. 'The British motor industry is not to be maligned and underrated,' he declared. 'There is plenty of evidence here of vitality and inventiveness.'

Record Number of Overseas Visitors

Everybody's spirits seemed to rise at once, and within three days there were a whole series of success stories emerging. The numbers of Commonwealth and foreign visitors were far above the previous records; American orders were placed for cars worth more than £1-million. These included 1,000 of the new Austin-Healey 100-Six and 470 of the new MGA coupes. That was the day after Sir Anthony Eden had declared it could be fairly claimed that British sports cars led the world.

On the same day it was announced that Ford's and the British Motor Corporation had jointly chartered a Dutch cargo-ship to overcome the shortage of shipping space which was holding up their exports to America.

Immediately I entered Earls Court I had the impression that it was the brightest, and certainly the most colourful, show since the war. What made it such a success? Summed up, it lay in the better performance and easier driving which most of the manufacturers offered. Imaginative display, too, played its part in impressing overseas visitors and foreign buyers: transparent plastic bodies, enabling them to make a full inspection without the trouble of lifting the bonnet or opening the boot; the new Hillman Minx engine, incredibly balanced and delicately revolving on the nose of a realistic seal, all helped to keep visitors interested as they toiled through the crowded aisles.

Better performance was expressed in such things as increased engine power, disc brakes, and power-assisted steering; easier driving was available in a score of models, many of them small family cars, on which automatic or semi-automatic transmission at last abolishes that learner's nightmare, the clutch pedal.

What of the individual cars? Well, Ford's offer fully automatic transmission on their new American-style Zephyrs and Zodiacs as an extra costing £187 with tax. They claim it reduces driver fatigue by seventy per cent. The British Motor Corporation has increased the engine-power throughout its range, and introduced some attractive new colours—turquoise was one I noticed—without increasing prices.

A glimpse of the future—a Rover prototype with its gas-turbine engine at the rear

A model that helped to prove Sir Anthony Eden's claim that British sports cars lead the world—the MGA coupé, of which 470 were ordered by American firms

...ent, gives his impressions of the forty-first Inter-
e brightest and most colourful since the war. The
and easier driving which most of the manufacturers
impressing overseas visitors and foreign buyers

The Morris Minor 1000 and the Austin A35 are their answer to the successes of the Volkswagen. They now have top speeds of 75 m.p.h., and it is claimed they will still do about forty miles per gallon when driven at sixty. On top of this, on the home market at any rate, the Morris costs about £50 less than the Volkswagen.

There have been suggestions for some time past that Vauxhall's were going to produce a new small car of revolutionary design, following their £36-million expansion scheme at Dunstable and Luton, but this will not be completed until next year. However, the re-styled Wyvern, Velox, and Cresta models are now more powerful and more economical.

I asked a Vauxhall chief whether he thought the industry was wise, in the face of this year's fall in sales, to push on with expansions which will increase overall car output to about 1,300,000 a year by 1959-60. That is half as many again as in 1955. His reply was that it is a question of modernisation as well as expansion. Vauxhall's plant will soon be as modern as any in Europe, he said, and that would ensure that they remained fully competitive. And so, like Ford's who are in the middle of a five-year £65-million expansion, they are pressing on with it.

One of the few really new models was the Singer Gazelle, which went into production only three weeks before the show opened. At £900 it is advertised as a small luxury car for the family, and has already proved quite a hit on the export side, particularly in New Zealand. Available as a saloon or convertible, it has a top speed of over eighty m.p.h.

The new Berkeley, a small British sports car produced by a caravan manufacturer, also aroused a good deal of interest. Its light, fibre-glass body, claimed to be of great strength and rigidity, enables the comparatively small engine to give a top speed of over eighty m.p.h. with a petrol consumption of fifty-five m.p.g.

More Luxurious than Ever

As usual, the luxury cars succeeded in being more luxurious than ever. The new Jaguar Mark VIII, with its 210 brake horse-power and speed of over 105 m.p.h., costs £1,829. With a refrigeration unit for the tropics, a television set which can be watched during the journey and then carried into the hotel for use there, the well-equipped business man can spend about £9,000 on a Rolls Royce.

The Rover gas-turbine car, looking very practical and roadworthy, with its rear engine cleverly displayed by mirrors, provided an exciting glimpse of the future. But I was told that it was still very much in the prototype stage, with many technical difficulties still to be overcome.

The caravan section drew bigger crowds than ever. Production is running at the rate of 20,000 a year, and many are being exported. It is probably the cheapest form of the modern luxury flat, when you consider that for under £300 you can get a fully furnished, three-berth caravan. One model could be divided into five rooms, sleeping seven people.

Overseas visitors made many complimentary remarks about the show as a whole, and the only complaint I heard was about the car-parking arrangements outside. Perhaps the most satisfying comment came from Mr. W. Kuhne, who is in the motor trade in Amsterdam and Rotterdam. He was impressed with 'the general air of keenness,' and said that not only was the British show superior to the recent Paris show but there was 'vastly more politeness than in Paris.'

The new Mark VIII Jaguar, the most luxurious model ever to be presented by its makers, has 210 b.h.p. and a speed of more than 105 m.p.h.: it costs £1,829

One of the display ideas which brightened this year's Show—a transparent bonnet on the new Morris Minor 1000

An aeroplane-style safety harness designed to prevent drivers and passengers being thrown about in an accident

Built for Heavy Duty

Substantially constructed for heavy duty, Harvey Steel Filing Cabinets have an inner framework of vertical steel channels welded together to give maximum strength and durability. This framework also ensures efficient support for the drawers, which glide smoothly and quietly to their fullest extent, despite heavy loading.

Stove enamelled Olive Green or Scarborough Grey (alternative colours to order), with chromium-plated card holders and handles.

Available with SUSPENDED FILING CHASSIS if desired

The Handley Page Herald airliner, carrying forty-four passengers, is designed to land on short runways

Farewell ceremony for the last Lancaster bomber

NEW PASSENGER AIRCRAFT

ONE of Britain's newest passenger aircraft, the four-engine Handley Page Herald, has been so designed that it can make use of very short runways. In fact, although the Herald is large enough to carry forty-four passengers, has a wing-span of ninety-five feet, and is more than seventy feet long, it can land safely even on grass. The aircraft's capabilities have just been demonstrated during a landing on Alderney, one of the smallest of the Channel Islands.

I was on board the Herald for this flight. We had expected to take off at dawn, but because of the fog it was nearly midday when we started. I had hoped to have a good view of the whole of the small island of Alderney from the air, but there was low cloud all the way, and I did not even see the Channel.

When we broke cloud the first time we could not have been far above the level of the top of the reddish-brown barrier of cliffs. The tiny, grass air-strip—it is only 960 yards long—is about 288 feet above sea-level. It looked as though landing this large aircraft was going to be difficult, to say the least, but I was able to describe the landing at the time, and here is part of the recording I made:

'We are about fifty feet up, coming in; we have bumped; we have touched down; now there are 960 yards ahead of us, and beyond that the cliffs dropping 200 to 300 feet into the sea. But I can see that we are going to pull up well within that distance. I should think we have run about 450 yards, and come to a stop.'

Later the Herald landed at Guernsey where the airport is much larger, but where the surface is still grass. Here is what the managing director of Jersey Airlines, Mr. Malden Thomas, had to say when I interviewed him:

'I think the Herald a most impressive aircraft. I thought before this visit that there was a doubt in all new ventures, but today I am quite a confirmed Herald fan. There is a future for aircraft like this.'

RONALD ROBSON

SIDNEY STREET, STEPNEY

A FAMOUS landmark on the fringe of London's dockland has disappeared. It is the house at 100, Sidney Street, Stepney, the scene of the famous siege of Sidney Street forty-five years ago, when police under the personal direction of the then Home Secretary, Mr. Winston Churchill, caught a party of anarchists who eventually perished in a fire which broke out in the building. The whole block of which this house was part has been knocked down to make way for modern flats.

I went down to Stepney to have a last look round before the demolition, and while I was there I asked the Town Clerk, Mr. William Reeve, what the new Sidney Street is going to look like:

'Upon the site of No. 100 is to be con-

Here and There

—with 'Radio Newsreel'—

structed a block of six-storeyed flats adjoining a smaller block of four-storeyed flats, the two blocks together comprising a total of some forty-four flats.'

'And have you had, by any chance, any complaints either from people living in the borough, or perhaps historians, interested people, saying that No. 100 should be left standing?'

'I have heard no complaints of any kind from anybody, and I am quite sure that the people locally would not for one moment complain of the demolition of a property of this kind and its being replaced with something better constructed.'

I then had a word with one of the oldest inhabitants of Sidney Street, Mr. Marcus Dewbury, who remembers the siege. I asked him what he remembered of it?

'I was on my way to work on the morning that the affair took place. When I got to Sidney Street I saw crowds of people at the Mile End end, and I thought I would wait and see what was taking place. I waited for a bit, and I heard shots from revolvers or rifles—whatever they were—and later on the crowd got thicker, and I could not get out when I eventually wanted to go to work so I thought I had better make a day of it.'

BARBARA HOOPER

One of the workmen engaged in demolishing 100, Sidney Street, Stepney, witnessed the famous siege

THE LAST LANCASTER

SENIOR officers of the Royal Air Force's Bomber and Coastal Command met at St. Mawgan airfield in Cornwall to say goodbye to the last Avro Lancaster in service. This four-engine bomber was described by Sir Arthur Harris, the wartime chief of Bomber Command, as the greatest single factor in the air offensive against Germany. Certainly no service machine has ever been so affectionately regarded by airmen. I took part in many wartime Lancaster raids myself, and I was there to see the last Lanc take off for the last time to the strains of *Auld Lang Syne*.

To many of the young airmen drawn up on parade beneath its wing-tips at St. Mawgan the Lancaster may have appeared as just another rather old-fashioned plane: certainly a plane with a great name in the last war, but to them 1942 and 1943 is a long time ago. But to squadrons converting to Lancasters from Manchester, Stirlings, and Wellingtons in 1942 Lancasters meant a very great deal.

To operate over Germany in one of them meant that the days of grumbling, reluctant take-offs were over, and so was the long, slow haul at medium level over the North Sea.

And over on the other side the Lanc always seemed to have something in hand: it was nimble for its size, and it would climb or turn with great willingness.

Most people, perhaps, remember it best as a conventional night bomber—and indeed most of Bomber Command's forty-two squadrons of them were used mainly on medium- and high-level night bombing—but it was also used extensively in daylight and at low level, and for mine-laying and many special tasks, like the Augsburg raid, the raids on the Möhne and the Eder dams, the assault on the *Tirpitz*, and the many raids that were carried out against the heavily protected U-boat pens.

Lancs were also used with great success by squadrons attached to Coastal Command for patrols against U-boats in the north Atlantic. They were crewed by Canadians, New Zealanders, Australians, South Africans, and men from all over Britain, and no one has ever heard a word said against the Lanc.

The last of this great line seemed out of place on this warm, sunny airfield set in the undulating wooded country of Cornwall: the flat, open, windy acres of the East Coast would perhaps have been more appropriate. But this was where the Lanc did its last job in service, as a navigational trainer with Coastal Command's School of Maritime Reconnaissance.

Although airmen are not normally sentimental people, to close the ceremony officers who had flown hundreds of hours in Lancs came forward to pay the last one—D for Donald—individual tributes in token of the affection of the Royal Air Force for the Lancaster.

This Week's Listening

December 16 — 22

'THE ROAD TO BETHLEHEM'

IT was during Lent in 1955 that David Lloyd James and Harold Rogers joined a party of some forty people led by an Anglican priest, the Rev. L. T. Pearson, who were going to Israel and Jordan to visit places associated with the life of Our Lord. They took a tape machine to record sounds, music, and interviews that would illustrate and bring to life the places they were to visit, and their journey, which lasted two weeks, took them to Haifa, Nazareth, the Sea of Galilee, Jerusalem, Jericho, and Bethlehem.

Out of this rich material the two travellers compiled a programme which can be heard in the General Overseas Service this week. It will be broadcast in three parts: the first, on Jerusalem, will go out on Wednesday at 15.45 and 21.00, and Thursday at 04.45; the second, on Nazareth and Ein Karem, on Thursday at 15.45 and 21.00, and Friday at 04.45; and the third, on Bethlehem, on Friday at 15.45 and 21.00, and Saturday at 04.45.

David Lloyd James and Harold Rogers journeyed not only as reporters but as Christians: this was something more than a job of work. Their aim was to present a picture in sound of the Holy Land that would help to a better understanding of the Bible.

JAMES RAMSAY MACDONALD

IN 1924 James Ramsay MacDonald became the first Labour Prime Minister in British history. Eight years later, in August, 1931, at the height of the great economic depression, MacDonald accepted to lead an all-party National Government.

The storm of bitterness that he aroused in the ranks of the Labour movement by this decision took many years to die down. The Labour Party entered a period of decline, from which it did not emerge again until 1945, and for this decline many people have blamed Ramsay MacDonald.

Yet it is strange to reflect that this handsome Scot had been one of the chief architects of the Labour Party in its early days. He was born in 1866 in the Morayshire fishing village of Lossiemouth and had known grinding poverty and unemployment in his youth. He took an early part in the activities of the Independent Labour Party, became its chairman in 1906, and was returned to Parliament at the General Election of 1906. At Westminster he soon imposed himself as the leading figure in the small Labour group in Parliament.

In a programme to be broadcast in the General Overseas Service Alan Bullock will be introducing the recorded recollections of some of those who knew Ramsay MacDonald either as a friend, a colleague, or a political opponent. The programme will end with an appreciation by the Rt. Hon. Emanuel Shinwell, M.P., the last survivor in the Commons of the first Labour Government of 1924. G.O.S.: Monday 17.30; Tuesday 02.30; Friday 10.00

Brewster Mason and Ursula Howells will be playing in a comedy, 'The Uncivil Servant,' on Sunday and Wednesday; and Jack Train (right) will present an entertainment, 'First Class Journey,' on Saturday

THE WEEK'S PLAYS

KEEPING pace with the vast increase in the number of people employed by the Civil Service in Britain has been the number of jokes about the Civil Service: affectionate disparagement is a characteristically English way of recognising an essential and, on the whole, admirable institution.

The present state of the Civil Service is mirrored in Rodney Quest's genially ironic comedy, *The Uncivil Servant*, which supposes a division of the service called N.A.V.2. Here is the legend of the tea-drinking office-dwellers (somebody is lightly said to have gone down with 'tannic acid poisoning'), the place-jostling, bowler-hatted commuters from the suburbs, the long-winded men with briefcases.

And here at the centre of the story is one John Frensham, in the running for a deputy-directorship, but a notably blunt and caustic man—until one day he comes by an old book on *How to Gain Friendship and Be Prosperous*. Whereupon he tries to subdue his sharp tongue, and sets about wooing neighbours and colleagues in a new silken idiom.

For a mystery play which is simply and solely a mystery, unconnected with crime or detection, there is Aileen Burke and Leone Stewart's *The Projection of Addison*.

PETER FORSTER

'The Uncivil Servant': Sunday 01.00 and 18.30; Wednesday 14.15
'The Projection of Addison': Monday 11.30; Tuesday 18.30; Friday 01.30

THE MISTLETOE CUSTOM

ONCE again this Christmas people will be hanging up mistletoe in thousands of homes in Britain and elsewhere, but few of them will be aware of the origins of this pleasant Yuletide custom. According to Geoffrey Grigson, in a talk that can be heard in 'From the Third' this week, they will in fact be maintaining a custom which although it has lost its point has retained all its symbolic pleasures.

As he points out the hanging of mistletoe is not just the result of romantic concern for Druids which gained new favour about 150 years ago: long before that mistletoe was used as 'a spiritual disinfectant'

to drive away the evil perpetrated by goblins, elves, and fairies. The witch mania which began the custom has long since disappeared, but the use of counter-magic in the form of Christmas decorations unwittingly remains.

G.O.S.: Monday 15.15; Friday 23.15

RACE RELATIONS IN BRITAIN

THROUGHOUT the series of talks on 'Christianity and Race' Philip Mason has been discussing the question of race relations. He has spoken of the attitude of those who follow other world religions; he has given the agnostic's point of view; he has analysed—on the evidence of the New Testament—the problems which confronted the leaders of the early Christian Church, and considered these in relation to the separatist attitude of the Dutch Reformed Church of South Africa.

Philip Mason's purpose throughout has been to define Christian principles, and then to relate them to current problems. Last week he outlined some of the difficulties of race relations in Africa; in his concluding talk, 'Principles into Practice,' he considers race relations in Britain, with particular reference to immigrants from the West Indies.

G.O.S.: Monday 16.15; Tuesday 00.30 and 05.00

A. E. MATTHEWS

THE well-known veteran of the English stage, A. E. Matthews, began his theatrical career in 1887. Since then he has appeared in a great many successful stage and film productions, including *The Importance of Being Earnest, But for the Grace of God, The Chiltern Hundreds, and The Manor of Northstead*, and he has spent a considerable amount of time on tour, visiting South Africa, Australia, and the U.S.A.

Mr. Matthews has acted with many great theatrical figures of the past—Sir Henry Irving, Ellen and Marion Terry, Charles Hawtreay, John Hare, and Charles Wyndham among them—and when Peggy Branford went to see him at his home in Hertfordshire he recalled those early days. He also talked of some of the famous people he has met from outside the theatre, such as Lord Roberts. These recollections by A. E. Matthews will be heard in his talk, 'I Remember.'

G.O.S.: Friday 16.15; Saturday 00.30 and 05.00

SOVIET FOREIGN POLICY

DESPITE the increasing information available to students of the Soviet Union's domestic affairs, it is the country's foreign policy of which the outside world is most continuously aware. In the talk on the Soviet Union in 'This Day and Age' Sir David Kelly will look behind the day-to-day events in the world of Soviet diplomacy, and will seek the answers to some deeper questions.

For instance, how far are the objectives of Soviet foreign policy traditionally Russian or essentially revolutionary? In how few hands is the control of this policy concentrated? What are the diplomatic, military, and economic methods used by the Soviet Union to further its ends, and with what success?

Sir David Kelly completed a lifelong diplomatic career by serving as British Ambassador in Moscow from 1949 to 1951, after holding similar appointments in Argentina and Turkey, and since his retirement has based books and articles on his experience of the Soviet Union.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

The Orpington Junior Singers can be heard in a programme of Christmas carols on Friday at 02.30 and 14.45

15.10 Akhhari Iqtibasat (Press Digest)
15.15-15.30 News and News Talk

Asian Club. On Sunday Dr. A. S. McLean will answer questions on atomic radiation hazards. Dr. McLean is the Principal Medical Officer of the Industrial Group of the United Kingdom Atomic Energy Authority, and is responsible for the health and safety of those employed at the Calder Hall Atomic Power Station and at Britain's only plutonium processing factory at Windscale in Cumberland.

Standards of Living. Britain's National Health Service will be the subject of discussion on Monday. The speakers will be an eminent London physician, a doctor in general practice, and a housewife who has three children. They will examine the advantages and disadvantages of the Service from their own specialised points of view, and will contrast them with the facilities available before the present system was introduced. Some official facts and figures have been prepared and will be read at intervals during the programme.

Question Time. The team on Wednesday will comprise one Member of Parliament and two former Members. Sir Robert Boothby, Conservative Member for East Aberdeenshire since 1924, is well known as an author, journalist, and broadcaster, and is one of the most independent-minded representatives in the House. Anthony Crosland, former Labour M.P., is the author of a widely-discussed book, *The Future of Socialism*. Frank Byers, a former Liberal M.P., has been Chairman of the Liberal Association since 1946.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes and provides a valuable supplement to the BBC's direct transmissions from London

BTH 16 MM. SOUND FILM PROJECTORS

'finest in the world'

IN all quarters of the globe, BTH projectors are the first choice for perfect sound and vision.

Only BTH projectors have all these special features

- * High-speed, high-inertia flywheel which eliminates 'wow' and 'flutter'.
- * Reverse-running—quick re-wind without interchanging spools.
- * Available with magnetic/optical sound system (Model 451) or optical sound system only (Model 450).
- * New design of take-up mechanism—smooth-acting and trouble-free.

A Christmas Message

THE ARCHBISHOP OF CANTERBURY will be broadcasting a Christmas message to people overseas on Monday at 19.00 and Tuesday at 00.30. Here we print excerpts from His Grace's broadcast last year

IT is a great privilege to have this opportunity of speaking a Christmas message to many people overseas, and I value it more than ever because I have seen a good bit more of the world during my visits to the two Rhodesias, Nyasaland, Uganda, and Kenya. It makes the whole difference when I can recall glimpses caught, for however brief a time, of domestic and public life in many countries, and can think of the many friends made.

Travel has two almost contrary excitements. One is to see how greatly countries differ from one another in their scenery, their resources, their manner of life, their communal culture and customs and problems. The other and greater is to find below the differences how alike we all are everywhere. The differences are interesting, instructive, sometimes irritating. The likenesses are the more rewarding, and it is from meeting people and finding in them a common ground of human graces and purposes that we get the deepest satisfaction.

How different Victoria Falls or the Great Rift Valley or the Rockies or the harbours of Sydney or Hobart or Wellington are from anything to be seen in England! But how glorious to discover the kinship of personal friendship, of sympathy and humour, of faith in life and faith in God uniting us all in a living fellowship, irrespective of country or colour or race!

The only altogether fruitful and constructive and redemptive power in the world comes from the discovery of that kind of kinship so that it triumphs over the things that divide. Divisions between men of any kind always diminish the true enjoyments of life and breed discontent, quarrelling, and danger. The discovery of one another in friendship always multiplies the richness of life, spiritual and material.

That is obvious enough. But we men and women care more for the things about which division arises than for the people round us. It takes trouble to care for other people; it means really thinking that they matter as much as we do ourselves; and that means that often enough we should have to give up some freedom of our own, some activity, some profit, some desire in order to help them along the road.

It is better, we may think—and many people do think—because easier and more immediately profitable, to keep others at arm's length, the other side of some dividing barrier of culture or colour or creed or class or country or grade: then we do not owe them anything and can without compunction go our own way. And if we have to use some degree of violence to get our own way, well, they say, what is strength for except to use, and we must always be strong enough to protect what we have and to gain our own ends.

Yes, and in some circumstances the argument seems not only attractive but on quite respectable grounds convincing. And the pressure group, on a small or large scale, goes into action, putting its trust in its power of propaganda or political representation or polemics or physical compulsion. It would matter less if such methods when they must be used for respectable ends were accepted as in themselves regrettable and shameful. But, alas, they are in fact used without shame, boasted of, gloried in.

To love your neighbour is accepted only if by

your neighbour is meant those people you like and can work with anyhow. To bear false witness against your neighbour, by misjudging him, misrepresenting him, by not even examining what there is to be said for him, by exploiting for gain what you can from him—well, one should not do it to a particular person in a mean way, but in public affairs it is all in the game.

This may sound a bit gloomy. But most of the real evils dividing men and parties and peoples grow and flourish simply by this refusal to regard persons and their purposes as having a personal claim upon you and me and everyone for our interest, honest judgement, charity, respect, and championship for the sake of truth.

Where is the cure? None, unless we want to be cured. What will make us want to defeat this end? Look again at the act of God which we commemorate at Christmas. How would you expect God to declare himself to us men? His ways are not our ways, but far more telling. He showed himself to us in a language which every one can understand, simple enough for the least instructed, startling enough to impress the toughest, difficult enough to defeat the self-satisfied and proud.

God came in the person of Jesus Christ, and from birth to death was one of us. He showed God's character and purpose in the fact of his coming at all, in the choice of his humble birth, in the courage of his message to the world, in the authority with which he spoke his message and claimed the allegiance of mankind for it, in the new kind of imperialism which he invented by making his own death on the cross for us his final triumph. Christ brings us the conviction we need—that persons matter most of all. Of course they do: to prove it Christ came from God as a person among persons, and identified himself with every man and woman and child without distinction.

And then he showed us that every person is made or marred by the purpose which he serves, made if it is for God, marred if it is for himself: only one thing can make the best and most of him, and that is to give his loyalty to Christ and to try to break down as Christ did the barriers that divide, so that men may stand in a true brotherhood in the family of Christ, enriching one another in its joys and its sorrows, in its work and its rewards of work, its sacrifices as well as in its rich harvests.

That brotherliness is what in a measure, in a great measure, I find in the Church of Christ wherever I travel—beyond all doubt, far more than can be found outside the churches. But we all need a fresh impetus. God gives it us: nothing else will; and to feel its compelling power we go back to the beginning again at Christmas.

'Voices Out of the Air'

LAURENCE GILLIAM introduces the BBC's world-wide exchange programme for Christmas Day when the vast, scattered community of the Commonwealth—and, this year, the Royal Family itself—will be united by sound radio during the hour before Her Majesty the Queen broadcasts her message to all her peoples from Sandringham

General Overseas Service: Tuesday 14.00 and Wednesday 00.45

The Duke of Edinburgh will conclude the programme in a broadcast from the Royal Yacht 'Britannia,' on which he is touring bases in the Antarctic

THE Christmas Day Commonwealth programme for 1956 takes its cue and its theme from the first royal Christmas message in 1932. King George V ended that first breathtaking link-up by short-wave radio with these words: 'Through one of the marvels of modern science, I am enabled this Christmas Day to speak to all my peoples throughout the Empire. I take it as a good omen that wireless should have reached its present perfection at a time when the Empire has been linked in closer union, for it offers us immense possibilities to make this union closer still . . . I speak now from my home and from my heart to you all; to men and women so cut off by the snows, the desert, or the sea that only voices out of the air can reach them; to those cut off from fuller life by blindness, sickness, or infirmity, and to those who are celebrating this day with their children and their grandchildren—to all, to each, I wish a happy Christmas. God bless you.'

Today, nearly a quarter of a century later, the purpose of the programme remains unchanged. In 1956 it is the Queen who will speak 'from her home and from her heart' to the vast, scattered community of the Commonwealth. In spite of the advance of television it is still a function of sound radio to link this world-wide family of nations.

This year's programme is entitled 'Voices Out of the Air.' After the series of experiments which have given this programme a recorded form in the past three years the producers are reverting to a large measure of 'live' ingredients.

The most ambitious and technically most difficult of these 'live' messages will be the concluding part of the programme, the broadcast by the Duke of Edinburgh from the Royal Yacht *Britannia*.

Prince Philip will be on the second and most distant part of his world tour. After opening the Olympic Games in Melbourne he will travel to New Zealand, and then sail on to visit a number of bases in the Antarctic set up by the scientists and explorers who are concentrating

The Duke of Edinburgh saying goodbye to Prince Charles at London Airport shortly before boarding a plane at the start of his tour round the world

The Canadian Broadcasting Corporation will present the songs and celebrations of Christmas in a programme making full use of the new transatlantic cable

a wealth of manpower, equipment, and scientific fact-finding in the giant, co-ordinated enquiry inspired by the International Geophysical Year.

Before we call *Britannia*, making her way from New Zealand to the Antarctic, we shall be in touch with one party of Commonwealth scientists in Antarctic waters. We shall call the m.s. *Magga Dan*, the Danish ship that is carrying Dr. Vivian Fuchs and his team to their bases on the ice shores of the Weddell Sea. BBC commentator Donald Milner will answer our call from the *Magga Dan*, and introduce various Commonwealth members of the team—including, we hope, George Lowe, of New Zealand, the famous companion of Sir Edmund Hillary in the conquest of Everest, Hal Lister, of Yorkshire, Piet du Toit, of South Africa, and Dr. Fuchs himself, the leader of the expedition.

We hope to link each of these Commonwealth explorers with their homeland, to give them a precious moment of contact with home on Christmas Day.

This theme of contact, of human communication made possible by the unending miracle of technical communication, runs through the whole programme. For example, we have asked the Canadian Broadcasting Corporation to open the programme with a picture of Canada this Christmas that will make full use of the new transatlantic cable, that triumph of British, Canadian, and American skill in the communications field that has already made its mark in the news reporting of the United Nations proceedings and the United States Presidential elections. On Christmas Day this new link will bring the songs and savour of Canada—from Vancouver to Signal Hill, Newfoundland, where only some fifty years ago Marconi's first faint splutterings from Cornwall foreshadowed the torrent of news and greetings that buzzes across the Atlantic hour by hour and day by day.

Australia, too, will have a story to tell of rapid advance in the communications field. Radio and the aeroplane have made a community out

Donald Milner (left), BBC reporter aboard the m.s. 'Magga Dan,' will introduce Dr. Fuchs (right) and other members of the Trans-Antarctic Expedition

of that vast continent, and we shall hear from Broken Hill something of the way inland Australians use the aeroplane as we use buses.

This year's programme will have its share of travellers' tales, too; and, we hope, a plentiful splash of the varied colour and music of the Commonwealth. Three travellers have been on the move since September gathering material.

Denis Mitchell, formerly of South Africa and now with the BBC's North Region at home, has been on his first visit to the Far East. His observant eye and skill with the tape recorder will be revealed in short vivid cameos of people, places, and music from Hong Kong; from Singapore and the Federation of Malaya; from Sarawak; from the Republics of India and Pakistan.

Another traveller, new to the Christmas programme, is Willy Richardson, a Trinidadian working for the BBC's Overseas Services. Richardson will report on the scene in the West Indies on the eve of the historic step of federation, an advance made possible largely by modern communications. He will bring, too, flashes of the voices and music of Jamaica and Trinidad in fascinating counterpoint to the peoples and rhythms across the Atlantic in West Africa, in Nigeria and the Gold Coast, countries moving fast towards a new destiny in the Commonwealth. Here is a fascinating glimpse of old dependence turning towards independence, and retaining always the rights and benefits of inter-dependence, the hallmark of the new Commonwealth.

The third traveller who will be heard is Alan Burgess, the well-known BBC feature writer. His assignment, a new and exciting one, takes him to Rhodesia with a party of Italian immigrants.

Here is a reminder of another recurring motif in the Commonwealth. The constant flow of new blood from old countries, men and women moving away from war, hunger, and ruin to find new homes, new hope, and new life in the Commonwealth countries. And not infrequently bringing something unique and precious from the old lands that will enrich the new.

So when Prince Philip calls across the world from the Antarctic a few minutes before three o'clock on Christmas Day a vast audience will be listening and waiting. The Queen's broadcast will go out this Christmas to a Commonwealth that commands more clearly than ever before in its strange, tumultuous, and unfinished story the means and the power to hear and understand its fellow-members.

Voices from the Gold Coast will speak with new confidence: the Prime Minister has announced the date—March 6, 1957—of the country's independence

From Australia will come a story of rapid advance in communications, particularly in the use of aeroplanes to link scattered communities in the 'outback'

The bells of Sandringham Parish Church will be heard in the programme

Dancers at Port of Spain, Trinidad. In the exchange programme the voices and rhythms of the West Indies will be contrasted with those of West Africa

Laurence Gilliam (right) with Willy Richardson (left) and Denis Mitchell who will introduce, respectively, the West Indian and the Far Eastern items

A view of the lake in St. James's Park, London, on a windy, wintry morning

The Parks and Gardens of Britain

SIR HAROLD NICOLSON shows in this contribution to the G.O.S. 'Our Way of Life' series how two important elements in the British character—a love of privacy and a dislike of noise—find expression in a love of flowers and a talent for arranging landscapes

THERE are two elements in our way of life which foreigners—once they have recovered from the initial shocks dealt to them by our climate and our cooking—regard as specifically British: the first is our love of privacy, the second our dislike of noise. The British do not enjoy confiding their intimate feelings to strangers or eating their meals seated on the pavement, or not drawing the curtains when dusk descends. Other nations such as the Italians and the Chinese actually enjoy noise: they find it agreeable to shout at each other, to allow their motor bicycles to chatter in the streets, and to go clop, clop, clop across the cobbles in wooden clogs. The British love silence and being left to themselves, which often tempts foreigners to regard them as a melancholy people, which assuredly they are not.

It is, I suggest, this love of privacy and silence that renders the normal Britisher averse to town life. We have always been like that. Writing as long ago as the year 1437 the Italian traveller Poggio remarked that 'the nobles of England think themselves above residing in cities. They live in retirement on their country estates among woods and pastures.' Whereas to the French nobleman of the eighteenth century to be ordered to retire to his estates was regarded as a sentence of exile to his English contemporary it was only a sense of duty that forced him to come up to London for the sessions of Parliament and to leave his own beloved fields.

It was for this reason that whereas most of our great cities are ill designed and ugly our country houses, parks, and gardens constitute, as the Duke of Wellington recently observed, 'the most important contribution made by the British to the plastic arts.' Thus a foreigner visiting London, Manchester, or Birmingham for the first time may come to the conclusion that a people who can endure such ugliness without protest or even awareness must be wholly uncultivated. But if he stays long enough in our island to observe the beauty of our country houses and gardens he comes to realise that he has got the whole thing wrong.

We devote to our flower-beds the taste and forethought that we leave out of our city streets: it is in our gardens that the British love of privacy, calm, and peacefulness finds its cultural expression. A foreigner or overseas visitor who has not devoted time to seeing our parks and gardens will return home with a false idea of the most important values in our way of life.

Let him begin by noticing the London parks. In the wide, open spaces

of Hyde Park, assuredly the lung of London, he will observe our love of green fields and our affection for damp, green grass. In St. James's Park and Green Park he will have a perfect example of how much can be done by scientific landscape-gardening in a small space. And if he notices the flower-beds he will observe that the plants are massed for general effect of colour and form and not lined out in horrible stiff patterns of cotton-lavender, artemisia, lobelia, and geranium as they are, let us say, in the Tuileries gardens in Paris, or, I regret to say, in some of the gardens surrounding the town halls of our provincial cities.

The way in which, in London's Green Park, the spring bulbs are planted, the way, a few weeks later, the irises and the tulips are massed by the lakeside, the way, when summer and autumn come, dahlias or asters of every shade and colour are massed in great wide borders in an informal rather than a formal treatment of plants, is less an example of the public way of gardening than an attempt to reproduce in public the private taste for growing plants.

High Standard of Natural Beauty

Then the gardens that surround our country palaces and the great seats of the landed gentry are of a far higher standard of natural beauty than are the *parterres* and water-works of the famous French chateaux.

I know of no more beautiful gardens in the world than the two Savile gardens that are almost lost in the sweeps and curves of Windsor Great Park. Go there in the early summer when the azaleas are out and the lower reaches are covered with wide, long drifts of primula and blue poppy, of rhododendron and coloured primroses. A person who has not visited the Savile gardens at Windsor can have no conception how rich and varied a natural garden can be. They are as much a revelation of what can be done with taste and knowledge to plants and woodlands as the great vistas of Paris are examples of what can be done by intelligent and forceful town-planning.

Then there are the large gardens owned by private people and often planted and nurtured by three or four generations of garden-lovers. There is, for instance, Bodnant, in Wales, which is to my mind the most magnificent example of wild gardening that I know of in Europe. Or go to Nymans or Highdown, in Sussex, where you will see flowering trees and shrubs that have been planted as much as fifty years ago and which have now reached the maturity of their splendour.

Then there are the smaller gardens such as Hidcote, near Broadway, which have been planned with great skill, planted with consummate taste and knowledge, and tended carefully throughout the years. There are clever little gardens scattered throughout the length and the breadth of our island. The Scots are excellent gardeners, and in the north-west of Scotland, where the Gulf Stream swirls to soften the climate, you will find shrubs and trees which you will not find in equal splendour anywhere else in the world.

The advantage is also that many of these gardens are opened to the public on regular dates and on the payment of a small entrance fee. So when next you come to England ask any travel agency to provide you with a list of gardens that will be opened during the season, and take a coach out into the country, where you will find the real Britain, and leave the cities where you will find only a Britain making a poor best of circumstances which the British naturally dislike.

As you motor in coach or car through the countryside you will notice the succession of the smallest gardens of all the cottage gardens. In every English hamlet, in the often tiny space between the house-front and the road, you will see flowers everywhere, daffodils and pinks and roses and the massed Madonna lilies, which although they flourish in cottage gardens are apt to feel unhappy in the grander gardens and to pine and wilt. Compare these gardens with the bleak villages of continental Europe, where scarcely a flower, apart perhaps from a few petunias in cans, is allowed to bloom. It is then that you will recognise that our love of flowers, our love of nature, our love of privacy and silence, is one of the most constant elements in our way of life. (*Broadcast in the BBC's General Overseas Service*)

'Royalty Annual'

THE fifth number of the *Royalty Annual* (Andrew Dakers, Ltd., 12s. 6d.) recalls yet another historic and happy year in the life of the Royal Family. Its authors, Godfrey Talbot, BBC correspondent accredited to Buckingham Palace, and Wynford Vaughan Thomas, who have reported so many royal tours and state occasions, need no introduction to our readers or to listeners to the BBC's General Overseas Service. Many of their broadcasts on these events, as well as specially contributed articles, have been published in 'London Calling.'

Like its predecessors, the annual is necessarily to a large extent pictorial and also includes photographs which may well be unfamiliar even to those who closely follow royal occasions and personalities. In the same way the letterpress strikes an appropriate note of informed authenticity and conveys to the reader that sense of nearness which the authors were in fact privileged to enjoy.

A Child's Christmas in Wales

by
Dylan Thomas

This talk was recorded by the poet in New York shortly before his untimely death on November 9, 1953. Listeners to the General Overseas Service will hear his own incomparable voice reading it on Monday at 14.15 and Tuesday at 21.00

ONE Christmas was so much like the others in those years around the sea-town corner, now out of all sound except the distant speaking of the voices I sometimes hear a moment before sleep. But I can never remember whether it snowed for six days and six nights when I was twelve or whether it snowed for twelve days and twelve nights when I was six. All the Christmases rolled down towards the two-tongued sea like a cold and headlong moon bundling down the sky that was our street. And they stop at the rim of the ice-edged, fish-freezing waves, and I plunge my hands in the snow and bring out whatever I can find. In goes my hand into that wool-white, bell-tongued ball of holidays resting at the rim of the carol-singing sea—and out come Mrs. Protheroe and the firemen.

It was in the afternoon on the day of Christmas Eve, and I was in Mrs. Protheroe's garden, waiting for cats, with her son Jim. It was snowing. It was always snowing at Christmas—December in my memory as white as Lapland, although there were no reindeers. But there were cats. Patient, cold, and callous, our hands wrapped in socks, we waited to snowball the cats. Sleek and long as jaguars and horrible, whiskered, spitting, and snarling they would slide and sidle over the white back-garden walls, and the lynx-eyed hunters, Jim and I, fur-capped and moccasined trappers from Hudson Bay, off Mumbles Road, would hurl our deadly snowballs at the green of their eyes. The wise cats never appeared. We were so still, Eskimo-footed, Arctic marksmen in the muffling silence of the eternal snows—eternal ever since Wednesday—that we never heard Mrs. Protheroe's first cry from her igloo at the bottom of the garden. Or if we heard it at all it was to us like the far-off challenge of our enemy and prey—the neighbour's polar cat. But soon the voice grew louder.

'Fire!' cried Mrs. Protheroe. And she beat the dinner gong. And we ran down the garden, with the snowballs in our arms, towards the house, and smoke indeed was pouring out of the dining room, and the gong was bombulating, and Mrs. Protheroe was announcing ruin like a town crier in Pompeii. This was better than all the cats in Wales standing on the walls in a row. We bounded into the house, laden with snowballs, and stopped at the open door of the smoke-filled room. Something was burning, all right. Perhaps it was Mr. Protheroe, who always slept there after midday dinner with the newspaper over his face. But he was standing in the room smacking at the smoke with a slipper. 'Call the Fire Brigade!', called Mrs. Protheroe, as she beat the gong. 'They won't be here,' said Mr. Protheroe. 'It's Christmas.'

There was no fire to be seen, only clouds of smoke, and Mr. Protheroe, standing in the middle of them waving his slipper as though he were conducting. 'Do something!' he said, and we threw all our snowballs into the smoke—I think we missed Mr. Protheroe—and ran out of the house to the telephone.

'Let's call the police as well,' Jim said, 'and the ambulance. And Ernie Jenkins—he likes fires.' But we called only the Fire Brigade, and

soon the fire engine and three tall men in helmets brought a hose into the house, and Mr. Protheroe got out just in time before they turned it on. Nobody could have had a noisier Christmas Eve. And when the firemen turned off the hose, and were standing in the wet, smoky room, Jim's aunt, Miss Protheroe, came downstairs and peered in at them. Jim and I waited very quietly to hear what she would say to them. She said the right thing—always. She looked at the three tall firemen in their shining helmets, standing among the smoke and cinders and dissolving snowballs, and she said: 'Would you like anything to read?'

Years and years ago when I was a boy—when there were wolves in Wales, and birds the colour of red-flannel petticoats whisked past the heart-shaped hills, when we sang and wallowed all night and day in caves that smelt like Sunday afternoons, in damp front farmhouse parlours, and we chased with the jawbones of deacons the English and the bears, before the motor-car . . . when we rode to the daft and happy hills bare-back—it snowed and it snowed.

But here a small boy says: 'It snowed last year, too. I made a snow man and my brother knocked it down, and I knocked my brother down, and then we had tea.' 'But that was not the same snow,' I say. 'Our snow was not only shaken from white-wash buckets down the sky, it came shoaling out of the ground and swam and drifted out of the arms and hands and bodies of the trees. Snow grew overnight on the roofs of the houses, like a pure and grandfather moss; minutely ivied the walls and settled on the postman opening the gate, like a dumb, numb, thunder-storm of white, torn Christmas cards.'

'Were there postmen then, too?' With sprinkling eyes and wind-cherried noses, on spread, frozen feet, they crunched up to the doors and mittened on them manfully. But all that the children could hear was a ringing of bells. 'You mean that the postman went rat-a-tat-tat and the doors rang?' 'I mean that the bells that the children could hear were inside them.' 'I only hear thunder sometimes, never bells.'

'There were church bells too.' 'Inside them?' 'No, no, no, in the bat-black snow-white belfries tugged by bishops and storks. And they rang their tidings over the bandaged town, over the frozen foam of the powder and ice-cream hills, over the crackling sea. It seemed that all the churches boomed for joy, under my window, and the weathercocks crew for Christmas on our fence.'

'Get back to the postmen.' 'They were just ordinary postmen—fond of walking and dogs and Christmas and the snow. They knocked on the doors with blue knuckles.' 'Ours has got a black knocker.' 'And then they stood on the white "Welcome" mat in the little drifted porches, and huffed and puffed, making ghosts with their breath, and jogged from foot to foot like small boys wanting to go out.'

'And then the presents?' 'And then the presents, after the Christmas box. And the cold postman, with a rose in his button nose, tingled down the tea-tray-slithered run of the chilly, glinting hills. He went in his ice-boned boots,

A portrait of Dylan Thomas by Augustus John, R.A., in the National Museum of Wales, Cardiff

like a man on fishmongers' slabs; he wagged his bag like a frozen camel's hump, dizzily turned the corner on one foot, and—by God—he was gone.'

'Get back to the presents.' 'There were the useful presents, engulfing mufflers of the old coach days, and mittens made for giant sloths, zebra scarves of a substance like silky gum that could be tug-o'-warred down to the goloshes, blinding tam-o'-shanters like patchwork tea-cosies, and bunny-suited busbies and balaclavas for victims of head-shrinking tribes—from aunts who always wore wool next to the skin—and moustached and rasping vests that made you wonder why the aunts had any skin left at all. And once I had a little crocheted nosebag from an aunt—now, alas, no longer whinneying with us.

'And picturesque books in which small boys, though warned with quotations not to, would skate on Farmer Giles's pond, and did, and drowned. And books that told me everything about the wasp—except why.'

'Go on to the useless presents.' 'Bags of moist and many-coloured jelly-babies, and a folded flag and a false nose and a tram-conductor's cap, and a machine that punched tickets and rang a bell—never a catapult. Once, by a mistake that no one could explain, a little hatchet, and a celluloid duck that made when you pressed it a most unduck-like sound—a mewling moo that an ambitious cat might make who wished to be a cow. And a painting book in which I could make the grass, the trees, the sea, and the animals any colour I pleased, and still the dazzling sky-blue sheep were grazing in the red field under the rainbow and pea-green birds.

Breakfast under the Balloons

'Hard boils, toffee, fudge, and all-sorts, crunches, cracknel, humbugs, glaciers, marzipan, and butter Welsh for the Welsh. And troops of bright tin soldiers who, if they could not fight, could always run. And Snakes and Ladders and Happy Families, and easy hobby games for little engineers, complete with instructions—oh, easy for Leonardo! And a whistle to make the dogs bark, to wake up the old man next door, to make him beat on the wall with his stick to shake our picture off the wall. And a packet of cigarettes—you put one in your mouth and you stood at the corner of the street and you waited for hours in vain for an old lady to scold you for smoking a cigarette, and then with a smirk you ate it; and then it was breakfast under the balloons.'

'Were there uncles, like in our house?' 'There are always uncles at Christmas, the same uncles; and on Christmas mornings, with dog-disturbing whistle and sugar fags, I would scour the swathed town for the news of the little world, and find always a dead bird by the post-office or the white, deserted swings—perhaps a robin, all but one of his fires out. Men and women, wading, scooping back from chapel with taproom noses and wind-busked cheeks, all albinos, huddled, their stiff, black, jarring feathers against the irreligious snow. Mistletoe hung from the gas brackets in all the front parlours—there was sherry and walnuts and bottled beer and crackers by the dessert spoons, and cats in their fur-about watched the fires. And the high-heaped fires spat all ready for the chestnuts and the mulling process. Some few large men sat in the front parlour without their collars, uncles almost certainly, trying their new cigars, holding them out judiciously at arm's length, returning them to their mouths, coughing, then holding them out again, as though waiting for the explosion. And some few small aunts, not wanted in the kitchen, or anywhere else for that matter, sat on the very edges of their chair, poised and brittle, afraid to break, like faded cups and saucers.'

'Not Many Trod the Piling Streets'

Not many those mornings trod the piling streets: an old man, always fawn bowlered, yellow gloved, and at this time of year with spats of snow, would take his constitutional to the white bowling green and back, as he would take it wet or fine on Christmas Day, or Domesday. Sometimes two hale young men with big pipes blazing, no overcoats, and wind-blown scarves would trudge unspeaking down to the forlorn sea to work up an appetite, to blow away the fumes, who knows, to walk into the waves until nothing of them was left but the two curling smoke clouds of their inextinguishable briars.

Then I would be slapdashing home, the gravy smell of the dinners of others, the bird smell, the brandy, the pudding and mince coiling up to my nostrils, when out of a snow-clogged side-lane would come a boy, the spit of myself, with a pink-tipped cigarette, and the violet past of a black eye, cocky as a bullfinch, leering all to himself. I hated him on sight and sound, and would be about to put my dog whistle to my lips, and blow him off the face of Christmas when suddenly he, with a violet wink, put *his* whistle to his lips, and blew so stridently, so high, so exquisitely loud, that gobbling faces, their cheek bulging with goose, would press against their tinselled windows, the whole length of the white, echoing street.

For dinner we had turkey and blazing pudding, and after dinner the uncles sat in front of the fire, loosened all buttons, put their large, moist hands over their watch-chains, groaned a little, and slept. Mothers, aunts, and sisters scuttled to and fro bearing tureens. Aunt Bessie, who had already been frightened twice by a clockwork mouse, whimpered at the sideboard, and had some elderberry wine. The dog was sick. Auntie Rosie

had to have three aspirins, but Auntie Hannah, who liked port, stood in the middle of the snow-bound backyard singing like a big-bosomed thrush. I would blow up balloons to see how big they would blow up to, and then when they burst, which they all did, the uncles jumped and rumbled. In the rich and heavy afternoon, the uncles breathing like dolphins and the snow descending, I would sit among festoons and Chinese lanterns, and nibble dates and try to make the model man-o'-war—following the instructions for little engineers, and produce what might be mistaken for a sea-going tramcar. Or I would go out, my bright new boots squeaking, into the white world, on to the seaward hill, to call on Jim and Dan and Jack, and to pad through the still streets, leaving huge, deep footprints on the hidden pavements.

'I bet people will think there have been hippos. What would you do if you saw a hippo coming down our street?' 'I'd go like this—BANG! I'd throw him over the railings and roll him down the hill, and then I'd tickle him under the ear, and he'd wag his tail.'

'What would you do if you saw *two* hippos?' Iron-flanked and bellowing he-hippos clanked and battered through the scudding snow towards us as we passed Mr. Daniel's house. 'Let's post Mr. Daniel a snowball through his letterbox.' 'Let's write things in the snow.' 'Let's write "Mr. Daniel looks like a spaniel" all over his lawn.'

Or we walked on the white shore. Can the fishes see it snowing? The silent, one-clouded heavens drifted on to the sea. Now we were snow-blind travellers lost on the north hills, and vast dewlapped dogs, with flasks round their necks, ambled and shambled up to us baying 'Excelsior.'

We returned home through the poor streets, where only a few children fumbled with bare, red fingers in the wheel-rutted snow and catcalled after us—their voices fading away as we trudged uphill into the cries of the dock birds and the hooting of ships out in the whirling bay. And then the tea—the recovered uncles would be jolly, and the ice cake loomed in the centre of the table like a marble grave, and Auntie Hannah laced her tea with rum, because it was only once a year.

Bring out the tall tales now that we told by the fire as the gaslight bubbled like a diver: ghosts 'who-ed' like owls in the long nights, when I dared not look over my shoulder; animals lurked in the cubby-hole under the stairs where the gas-meter ticked. And I remember that we went singing carols once, when there wasn't a shaving of a moon to light the flying streets. At the end of a long road was a drive that led to a large house, and we stumbled up the darkness of the drive that night, each one of us afraid, each one holding a stone in his hand—in case. And all of us too brave to say a word. The wind through the trees made noises as of old and unpleasant and maybe web-footed men wheezing in caves.

We reached the black bulk of the house. 'What shall we give them? *Hark, the Herald?*' 'No,' Jack said, '*Good King Wenceslas*. I'll count three. One, two, three.' And we began to sing, our voices high and seemingly distant in the snow-felted darkness round the house that was occupied by nobody we knew. We stood close together near the dark door. 'Good King Wenceslas looked out, on the Feast of Stephen.' And then a small dry voice, like the voice of someone who has not spoken for a long time, joined our singing: a small, dry eggshell voice from the other side of the door, a small, dry voice through the keyhole. And when we stopped running we were outside our house.

The front room was lovely, balloons floated under the hot-water bottle gulping gas, everything was good again and shone over the town. 'Perhaps it was a ghost,' Jim said. 'Perhaps it was trolls,' Dan said, who was always reading. 'Let's go in and see if there's any jelly left,' Jack said. And we did that.

BBC Handbook, 1957

THIS current edition of the *BBC Handbook* is a most useful and informative work of reference for those who are interested in any aspect of the BBC's Home (including Television) and External Services, and is, in fact, of interest to anyone who wishes to keep abreast of the latest developments in broadcasting.

It is a basic reference book indicating the range of programmes broadcast in the Corporation's domestic and External Services, and providing facts and statistics which illustrate not only the BBC's importance as a national broadcasting service, but its world-wide significance. The comparative costs of sound and television programmes are included in a detailed analysis of the economics of broadcasting at home and abroad.

In a foreword to the *Handbook* the Director-General of the BBC, Sir Ian Jacob, writes: 'By pursuing its policy of comprehensive service in both sound and television broadcasting the Corporation takes into account the claims of every section of the audience, minorities as well as majorities;' and he concludes by recording 'the happy relations with broadcasting organisations throughout the Commonwealth, and indeed throughout the world, which contribute in no small way to the range and variety of the programmes.'

The *BBC Handbook* can be obtained from BBC Publications, 35 Marylebone High Street, London, W.1, England, price 5s.

The Bowater paper-mill at Corner Brook is one of the largest in the world: in the foreground are hundreds of thousands of logs waiting to be pulped for newsprint

Another View of NEWFOUNDLAND

In a talk published in 'London Calling' in October the author said: 'It is still unusual to know someone who has been to Newfoundland.' GEOFFREY STRODE, General Manager of BBC Publications, visited the island province of Canada during the summer, and in this article he gives his own impressions of a fascinating country

WHEN I boarded the B.O.A.C. Stratocruiser at London Airport to fly to Gander for a two-week visit to the north-west of Newfoundland I had no idea what I would find there. Paper—yes, I knew that there were two large mills, one at Corner Brook in the north-west, and another in Grand Falls, roughly in the centre of the island—but of the people and their country I was quite ignorant.

On arrival at Gander Airport we had to put back our watches by three and a half hours, which meant a seven-hour wait before taking off in a 'local' aircraft for the 200-mile flight to Stephenville, about thirty miles by road from my destination. I spent the period of the wait in the irresistible cosmopolitan atmosphere of the airport. The main reception centre had shops, two large cafeteria-restaurants, and other amenities. Planes of many countries—France, Germany, Scandinavia, Israel, Canada, and the U.S.A.—decanted their passengers for about an hour's stay while both the aircraft and their passengers refuelled. It was fascinating to see the various types, and hear the many languages: the clothes and general appearance of the travellers, even to a large lady who had kept her hair in curlers without bothering to cover them up, made the seven hours' wait pass very rapidly.

It was raining when we reached Stephenville and set off by car for the thirty-mile drive to Corner Brook. The road was the Canadian national highway which runs in an arc from St. John's in the south-east to Port aux Basques in the extreme south-west. It has a dirt surface, and when I commented to the driver on the mud he said he preferred it to the dust of the dry weather. I was to see and inhale plenty of the dust during the next two weeks, for during our stay the weather was hot and sunny.

The terrain is much the same all over the island: forests of spruce, with a few beech trees but hardly any other varieties; beautiful lakes, rivers, gorges, and waterfalls cover a high percentage of the land. There are few birds—apparently birds do not like conifers—and I missed badly the bird song which is so pleasant in Britain.

I hate snakes, and spent quite a time in the rather swampy forests

Logs in a boom being towed along the coast to the mill at Corner Brook

where reptiles would be expected, so it suited me that there are no reptiles of any kind. Bear, moose, caribou, and lynx are in evidence, and in season hunting parties take place to provide moose and caribou for families' winter stocks of meat.

Fishing is a great part of the life of the Newfoundlander. Salmon and trout abound in the rivers and lakes, and fishing for them is strictly controlled. My fishing licence, which covered a period of two weeks, cost twenty dollars (about £6. 10s), and game wardens frequently asked to see it. The main industries of Newfoundland are fishing in the coastal areas for cod and large lobsters, the manufacture of paper and pulp, and mining for gypsum, and I saw a cement works.

For BBC publications we use more than 50,000 tons of paper a year, and consequently my interest was in the paper-mills. The Bowater Paper Corporation mill at Corner Brook has led to a town being built around it. There is a good hotel called Glynn Mill, many beautiful houses with gay gardens, an enormous modern sanatorium, a new hospital, and a grammar school on a beautiful site on a hillside was in course of erection. The other large paper-mill is situated at Grand Falls, where there is a most attractive town, and Grand Falls House, which was built by Lord Northcliffe, commands a beautiful view of the Grand Falls themselves. There is no doubt in my mind that the prosperity of this

(Continued on page 18)

The author samples the fishing in the Adies river—salmon and trout abound in Newfoundland's inland waters

Strawberry Hill House, where the author stayed, is set in typical Newfoundland country, with forests of spruce clothing the hills, and beautiful lakes, rivers, and gorges

Some of the English side practising in Capetown after their arrival in South Africa: (left to right) Insole, Oakman, Lock, Taylor, Wardle, Cowdrey, Parks

England's Team for the South African Tests

If Denis Compton is fit he can transform the England team from a good to a brilliant batting side: the other main batsman, and captain, is Peter May (left)

P. E. Richardson and Colin Cowdrey (right) will provide a well-tryed opening partnership for England: they are particularly good at snatching quick runs

REX ALSTON, in an article written before he left for Melbourne to cover the Olympic Games, assesses the strength of the M.C.C. touring side in South Africa, where the first Test match opens in Johannesburg this week. Full details of G.O.S. coverage of the match can be found on page 18

AS I write we in England have heard that the M.C.C. team has arrived in Capetown, and that Peter May has already struck a rich vein in his first speech as England's captain in South Africa. May this be a happy augury for a tour which promises much good and exciting cricket in golden sunshine.

The English team was given an encouraging send-off by the critics. Only two of those who had helped to retain the Ashes against Australia were not included in the party: Washbrook, who had informed his fellow-selectors that he did not wish to be considered, and Sheppard, who could not spare the time from his work as a curate in a big London parish.

Many would have liked Graveney—the man with the highest batting aggregate in England—to have been given one more chance to establish himself as a consistent Test player. The fates have been unkind to him. If he had not had to withdraw through injury from the fourth Test he might so easily have made his place secure. None can say that either Oakman or Parks, one of whom must have come in for him, is his equal as a class batsman, though both may ultimately prove to have a better temperament. Trueman is another unlucky cricketer, who for the second time has not found favour as a member of a touring party. Trueman in form is a more dangerous bowler than Loader, and a better field, but Loader is more consistent.

Vital Role for Compton

It is not too much to say that the difference between the two sides may well lie in the performance of Compton. Fit and in form, he can transform the English team from a good to a brilliant batting side. If misfortune overtakes him again, the gap he will leave could not adequately be plugged by the introduction of Insole or Parks, who are only likely to figure in one of the first five batting places in the Test team if injury or complete loss of form should lay aside one of May, Compton, Cowdrey, Richardson, or Oakman.

Presumably the policy will be to persevere with Cowdrey as Richardson's opening partner, leaving Oakman as first reserve or at number three. One of the best features of England's first-wicket partnership last summer was the running between wickets, with Richardson as the prime instigator of short runs and Cowdrey a quick-thinking accomplice. South African crowds will enjoy these two, as they will enjoy Oakman's cover drive and his superb fielding in the leg-trap, where his reactions are almost as quick as those of the dynamic Lock.

The core of the batting will be provided by May and Compton, and a partnership between these two, or between one of them and Cowdrey, could be one of the most satisfying sights of the tour. We must expect to see Bailey once more installed as England's number six. The policy of playing six batsmen, three bowlers, and Bailey and Evans, which proved so successful in a wet summer against Australia, could never be entertained on South African batting wickets. England will hope that Tyson

Godfrey Evans, the English wicket-keeper, in one of his spectacular dives

and Statham, who have only appeared twice together in a Test team since their Australian triumphs, will keep free of the injuries which have dogged them, and thus rebuild their successful partnership.

That other famous pair, Laker and Lock, will not find South African wickets so much to their liking, nor South African batsmen such ready victims as the Australians. Laker's flight and accuracy will be his greatest stand-by, and it may be that Wardle will run Lock close as the slow left-hander.

The new young wicket-keeper, Taylor, bats number three for Essex, and made over 1,000 runs last season. His value is increased by being left-handed, and it could be that he might find a place in the team as a batsman in an emergency. The least satisfactory feature of the team is the fielding. The close catching should be good, but May will have one or two of the prospective Test team to hide, and unless Parks is playing there is no obvious cover-point, nor any fleet-footed out-fielder.

By the time these words are read the team will have played against the bulk of the likely South African Test XI, either in the provincial matches against Western Province, Transvaal, and Natal, or against a South African XI at Pretoria. The majority of those who ran England so close in 1955 are still playing—and playing well. Our bowlers will have to dig out the tenacious McGlew, and his left-handed partner Goddard, and our batsmen will have to evolve a method of countering Goddard's accurate leg-stump bowling.

Endean, studious and watchful, Waite, experienced batsman and wicket-keeper, and McLean, adventurous stroke-maker, are sure to play a big part in the series, as are Tayfield, that patient schemer and phenomenally accurate off-spinner, and the tall Heine, who hurls the ball down from a great height to an array of expectant slips and wicket-keeper standing back. His partner with the new ball could be Adcock, almost as tall and as fast, whose tour of England was spoilt by injury. South Africa is certainly not short of fast bowlers as a counter-blast to Tyson and Statham.

These are some who gave pleasure in England, and whom I look forward to seeing again. To them must be added Van Ryneveld, number-three batsman, brilliant field, and occasional leg-break bowler in Dudley Nourse's team in England in 1951. His return to Test cricket will immensely strengthen South Africa, and if, as is rumoured, off-spinner Athol Rowan is playing well enough to invite selection, England's batsmen will have a formidable array of bowling talent to overcome. South Africans have taken especial pride in their fielding since Cheetham's team took Australia by storm a few years ago, and in their own country they are likely to outshine the Englishmen.

Having committed myself to these random comments before leaving England for the Olympic Games, I am wondering how wide of the mark I shall prove to have been when I speak to you from Johannesburg.

Jim Laker and Tony Lock (right) will probably not find the wickets so much to their liking, nor the batsmen such ready victims as the Australians

The England bowlers will have to dig out the tenacious McGlew and his left-handed partner Goddard (right), who is also an accurate leg-stump bowler

This week's Test in Johannesburg will take place in the new stadium at Kent Park which seats 40,000

Compton and May chatting with the Secretary of the South African Cricket Union (right)

Books to Read

Reviewed by
John Connell

ITS author describes my first book under review with commendable candour as a 'romantic biography' of one of the early Labour Party pioneers in Britain—James Keir Hardie. Mr. John Cockburn's *The Hungry Heart* both attracted and exasperated me. Keir Hardie, the centenary of whose birth has been commemorated this year, was a man of integrity, courage, stubborn devotion to what he thought to be his duty, intelligence, and charm. In the fighting pioneer period of the Labour Movement he was a key figure; of recent years his name and his fame have assumed a vague but strong symbolical importance. It is about this symbolical figure that Mr. Cockburn writes, with a gusto, a warm affection, and a sincerity which are all admirable as they are disarming. He has a real understanding of the Scottish industrial background whence Keir Hardie emerged.

Mr. Cockburn tells the story breathlessly, with a wealth of colourful description. His eagerness tumbles over into rather lush sentimentality; he is apt to attribute thoughts and sentiments to his leading character of which there can be no direct or concrete evidence. His picture is painted in strong, simple colours. It deserves to be read by many who take our contemporary Welfare State for granted and know naught of its arduous, heroic, and tumultuous beginnings. But I wish there had been a little more irony, a little less gush.

The second book on my list, which is an autobiography, could not be more different. It is *The Heart Has its Reasons*, the Duchess of Windsor's memoirs. The events in which, just twenty years ago, the Duchess was a central figure, aroused on a different plane as strong passions as any of those that whirled around Keir Hardie's life. The Duchess's account of them—as indeed of her whole life before this climactic episode—is cool, candid, urbane, and in impeccable taste. There is no gush, here, no overflow of sentimentality. The mood throughout is one of discreet sophistication. The Duchess records easily and amiably her memories of her girlhood in Baltimore, her first essays in marriage, her arrival in Britain as Mrs. Ernest Simpson, and as a well-to-do, beautiful and agreeable woman her entry into the small circle of acquaintance and friends of the Prince of Wales. It was as her friendship with the Prince developed that this pleasant, worldly woman was swept into a tangled, intensely dramatic situation to which the rest of her life had given her no guidance at all.

The Duchess's account is extremely important. What it emphasises, in a way which because it is unintentional is all the more valuable, is her own innocence. She did not scheme; she did not adventure; she strove sincerely, to the limit of her power and her understanding, to avert the crisis.

Exactly the same can be said about the two central episodes in the third book on my list, *Home and Abroad*, by Lord Strang. Lord Strang was an extremely eminent member of the Foreign Service during many difficult and critical years; and in 1938 and 1939, though not quite at the top of the tree, he was in a key position, as advisor and official negotiator, in the Czechoslovak crisis which led up to Munich and in the abortive Anglo-Russian discussions in Munich which were the prelude to the Ribbentrop-Molotov Pact of August, 1939, and the second world war. Lord Strang's account of both these episodes is discreetly informative, even-tempered, and impartial. Lord Strang sets out his own part in these events, and a few observations on them, with modesty and pity, and the firm detachment which is to be expected from a public servant of his calibre. Let there be no mistake about it: that calibre was first-rate.

Extremely important and extremely moving is his portrait of his political chief at the Foreign Office in the years immediately after the second world war, Ernest Bevin. This is drawn not merely with official loyalty and prudence but with warm personal affection and admiration; and he says at the end, with quiet, resigned frankness: 'Bevin succumbed to the killing task of being Foreign Secretary.' Ernest Bevin died for his country, and it is right that his closest advisor should make it quite clear.

I have kept my own favourite to the last. It is called *In a Great Tradition*; its authors describe themselves only as 'the Benedictines of Stanbrook.' Before I attempt to give you some account of it and my own ideas about it, I think I ought to make it clear that I am not a Roman Catholic. I have no hesitation, however, in saying that this is a quite unforgettable work. It is a record of an enclosed order of English nuns, across several centuries, and built around a biographical memoir of the brilliant and saintly woman, Margaret MacLachlan, known in the order as Dame Laurentia, who was its Abbess at Stanbrook in Worcestershire from 1931 to 1953. The book moves on two planes of thought and feeling which are deeply interfused. There is the sense of the order's own passage through history, through tribulation, exile, and return to England, and of the timelessness of the faith sustaining individual members of it, and building up, generation by generation a tradition of worship and meditation. And there is a loving meticulously detailed portrait of Dame Laurentia.

Few books that I have read in recent years have affected me more profoundly, or made me ponder more seriously the great abiding issues of human life, of love, of service, and above all of man's relationship to God. By virtue of this book, by its quiet courtesy, its joy, its candour, its simplicity, and its wisdom, I believe the influence for good of this small enclosed community can and will extend far beyond the quiet cloister.

The Hungry Heart, by John Cockburn (Jarrolds, 18s.)

The Heart Has its Reasons, by the Duchess of Windsor (Michael Joseph, 30s.)

Home and Abroad, by Lord Strang (Andre Deutsch, 21s.)

In a Great Tradition, by the Benedictines of Stanbrook (John Murray, 25s.)

'The most affecting images of Christ's birth have come to us from the fifteenth century': Here is the 'Adoration of the Kings,' ascribed to Gerard David

The Christmas Story in Painting

BASIL TAYLOR speaks of some of the ways in which artists have depicted one of the greatest—and most human—of Christian mysteries

THE picture most of us have in our minds of the first Christmas day, whether we realise it or not, has been provided for us by painters and sculptors who have translated the bare, simple words of the Gospel into a more complicated actuality. The Nativity is one of the great Christian mysteries, but it is also the event in Christ's life which is most domestic, most intimate in its humanity, and so it seems to demand from its interpreters not only faith but a certain modesty and quietness.

I think the most affecting images of Christ's birth have come to us from the fifteenth century, when the humanity of God's incarnation was emphasised. Then, in northern Europe, in the Low Countries especially, the devotion of the Middle Ages was infused with a new realism. Then, in paintings by Hugo van der Goes or Gerard David or Roger van der Weyden, the ox and the ass, the shepherds and the Kings, Mary, Joseph, and the Child are innocently reborn in the faces, in the clothes, in the landscape of that place and time; and so the eternity of the event is established rather than denied. In Italy at this same period painting is not so down to earth or humble. Think of the Nativities by Piero della Francesca or Botticelli in the National Gallery: the same stillness prevails, but in spite of the magpie on the roof of the ruined building, or the shepherd's bare feet in one picture, or the watchful tiredness of Joseph in the other, the accidents of life are absent and an ideal beauty prevails.

If we move back in time from the early renaissance, through the ages of medieval Europe to the first centuries of the Church, we also move further from realism, from the historical substance of the event: the rendering of the scene becomes more and more symbolic. For the first painting of the Nativity we should have to look to the murals in those subterranean cemeteries of Rome, where from the third, fourth, and fifth centuries we find the earliest surviving examples of Christian art.

But—to look forward again—after the fifteenth century the forms of art seemed to grow too grand for the event. In the Baroque painting of the seventeenth century the stable often swells into a palace, the quiet ritual of a child's birth is changed into a pageant. But if that is what we expect from a painter like Rubens, Rembrandt, at the same moment, combine his own dramatic language of light and shade with the spirit of an earlier period. (Broadcast in 'Radio Newsreel')

Nativities painted in Italy in the fifteenth century are not so down to earth, and an ideal beauty prevails: 'The Mystic Nativity,' by Sandro Botticelli

'After the fifteenth century the quiet ritual of a child's birth is changed into a pageant': 'Adoration of the Magi,' by Paolo Veronese (1528-1588)

The Pleasures of Over-Eating

CYRIL RAY gives his reasons for believing that 'the true delight of Christmas is that it gives middle-aged men the chance to do things they would never dare to do at any other time'

Charlie round the houses with the Germans.

And the thing I remember best about it is the colonel pinning a Military Medal on a Canadian private soldier who was a full-blooded Red Indian. First of all the private grunted—the way Red Indians are always supposed to do—and then he remembered his manners, and brought out the politest word he had learned in a winter's campaigning in Italy. The Canadian colonel pinned the medal on his chest, and the Red Indian said 'Grazie.'

But what on earth am I doing, rambling on about Canadian Red Indians in Italy when what I am supposed to be talking about, I imagine, is the pleasures of the English Christmas. Even if that was the most exciting, or the most extraordinary Christmas dinner I have ever eaten, all the same, every Christmas dinner ought to be the best dinner of the year. And so, of course, it is. And the odd thing about it is that it is not necessarily what you eat and what you drink that makes it so.

Take a typical Christmas dinner: turkey, I suppose, or goose—that is the English custom, anyway. Well, there are birds I prefer to either of them: a roast pheasant, for instance, with all the English trimmings; or a baby spring chicken, fried in the American way; or breasts of chicken done like the Russians do them—Kievsky cutlets—rolled into cylinders and stuffed with butter. Same with the puddings and the pies: there are lighter, subtler sweets that I prefer to a mince pie or a great, solid piece of Christmas pudding. Solid is the word: I sometimes think that Christmas pudding must have been specially invented to keep

you firmly anchored into your chair after dinner, so that the children can get at the clockwork train you have given them.

But there is something about a Christmas dinner of the traditional kind, and I am getting old enough to admit—that the true delight of Christmas is that it gives middle-aged men the chance to do things they would never dare to do at any other time because of what people would say. No, no: do not misunderstand me—I am not talking about kissing pretty girls under the mistletoe. That is another story. I am thinking of figs and dates and crystallised plums, and chocolates and almonds and raisins and marrons glacés, especially marrons glacés—mmm!

It is getting on for a couple of years now since I gave up smoking, and there were a couple of weeks then when I could not stop eating sweets. And straight away I was up against the English convention that whilst a gentleman may walk down Piccadilly smoking a cigarette he may not—in any circumstances—be seen walking down Piccadilly guzzling away at a marzipan bar. Bless my soul! The dodges I had to get up to: nipping into a telephone kiosk for a quick bite at my marzipan, or buying three bars at a time, and retiring behind a copy of *The Times* to have a private orgy.

But Christmas dinner brings release from all conventions of that sort: the fiercest-looking retired major-general is not only expected but encouraged to fill his sweet tooth: 'Won't you have another chocolate cream, Uncle George?'

So if you could see me, and notice that I was furtively licking a finger, it is ten to one I would be after the sugar adhering to it from a hunk of Turkish Delight, or the last, fragrant reminiscence of a plump, sticky, golden date, from one of those long, narrow boxes with palm trees and camels on the lid. How delicious! Just excuse me for a moment, I see there are a couple left. (*Broadcast in the BBC's General Overseas Service*)

IN Britain at Christmas time—indeed, I think the custom holds good throughout northern Europe—we hang up a mistletoe bough as part of the decorations. You know the mistletoe is a magical plant: it was sacred to the Norsemen as the instrument of Baldur's death—you may remember the story. After this unfortunate occurrence Baldur's mother, Frigg, took the mistletoe and hung it high upon a tree, never again to touch the earth; and under it enemies were reconciled and gave each other the kiss of peace. That is why we hang mistletoe high.

When the Norsemen came raiding England they brought faith in the mistletoe (now doubly sacred as the instrument of Baldur's death and as the plant of peace). It was soon taken over by the Druids. In Druidical times mistletoe could be gathered only on certain nights and after due ceremony and sacrifice. It was considered—and still is by many countrymen—extremely unlucky to cut down a tree on which mistletoe grew, or to allow mistletoe to touch the ground. And mistletoe upon the roof of a house was considered a sure protection against lightning. This belief is not wholly dead even yet: you may still occasionally see mistletoe upon the roofs of cottages in isolated parts of Britain.

With the advent of Christianity, mistletoe, a pagan plant, went out of religious favour. People continued to hang it in houses, but it was absolutely forbidden to take it into churches, except in York. There, in the centre of a predominantly Norse district, it was treated with great honour, carried by ceremony into the minster, on Christmas Eve, and laid upon the high altar. Then a universal pardon and liberty was proclaimed for malefactors for as long as the mistletoe bough should lie upon the altar. Normally it was removed on Twelfth Night at midnight, for by then it had shrivelled. The custom died when it was discovered that some of the malefactors had a new bough ready for January 7.

Now all belief in the magical powers of the mistletoe has died, for I doubt if the countryman who has it upon his roof really believes that it

Under the Mistletoe Bough

BRIAN VESEY-FITZGERALD explains the origins of an ancient Christmas custom which is still observed in many British homes

will fend off the lightning. Indeed, mistletoe is now a sadly maligned plant. It is described in encyclopaedias and similar learned works as a parasitic plant, and never a word about the romance that clings about it. And, anyway, it is not a true parasite.

But though the belief in its magical powers has died we still hang up the mistletoe at Christmas, though there is no longer any particular association with Twelfth Night. It was the custom until quite recently not to remove the Christmas decorations before Twelfth Night, which was Christmas until they changed the calendar.

No longer have we faith in the powers of mistletoe. Once it formed the chief ingredient of a love-philtre which was very popular among the young blades of the town, and even more popular among the old ones. I will give you the recipe for this love-philtre: 'Take elecampane, the seed or the flowers, vervain, and twelve berries of mistletoe. Dry well in an oven, and then beat into a powder. Give it to the person you design upon in a glass of wine, and it will work wonderful effect to your advantage.' Richard Burton, who seems to have had some personal experience, says that it is most effective when given in 'red wine of Burgundy.' I pass on the hint. But perhaps I also ought to remind you that Burton wrote the *Anatomy of Melancholy*.

Anyway, we still hang the mistletoe bough up high, but I fear that we no longer do so from the purest of motives. I very much doubt if any modern Englishman hangs up the mistletoe at Christmas in order that he may give his enemy the kiss of peace beneath it. But when he hangs it up he has kissing in mind. Oh yes! Also, today in England you hardly ever see mistletoe hung in the right place or used in the right manner. Today, more often than not, it is suspended from the ceiling, from a light bracket or something of that sort, in parlour or kitchen, just anywhere. It should always be hung, as it was in the olden days, outside and exactly over the centre of the front door. (*Broadcast in the BBC's General Overseas Service*)

A donkey paying a visit to a home for handicapped children which has benefited by the club's donations

Some of the 300 donkeys that have been rescued by the club from a sad fate

The Donkey Club

Jacqueline Dinnage, daughter of the farmer who started it, all, grooming a charge

HUGH DRIVER tells how an act of kindness by a Sussex farmer and his wife to a neglected donkey has led through a chain of circumstances to the setting up of a charity which devotes its profits to welfare of animals, handicapped children, and lonely old people

MOST English villages have a charm and beauty not to be found anywhere else in the world, but among the exceptions must be included the village of Wivelsfield Green, in Sussex. It is rather a drab, uninteresting little place and was completely overshadowed by the nearby prosperous and thriving town of Haywards Heath until a few years ago. Then there occurred an incident which appeared, at the time, to have no special significance. It has, however, put Wivelsfield Green very much on the map. More important, it has led to the foundation of a charitable organisation known as the Donkey Club which, beginning this Christmas, is going to bring a great deal of happiness to handicapped children and lonely old people.

On an October day in 1951—a wet and miserable day—a local farmer, Mr. Jim Dinnage, saw tied to a post in the village a forlorn and obviously neglected little donkey. He felt sorry for it, and on making enquiries found that it belonged to a gypsy. After much haggling Mr. Dinnage bought the donkey and took it to his farm, where it was joyfully received by his wife and young son. That started a family interest in the welfare of these animals, and almost at once friends and neighbouring farmers joined in. So the Donkey Club was formed, and the first effect was to save thirteen of them from death in a London slaughter-yard. Since then well over 300 have been found homes.

Before the end of that October a race was held which has now become an annual occasion—the Donkey Derby, with boy jockeys. More than 1,500 people crowded round the tiny village green for that first Derby, all the proceeds going to local charities. Encouraged by this, the club held another Derby on the following Whit Monday, and catered for a possible attendance of 3,000. More than 20,000 turned up—and still do every Whit Monday.

When the club was first formed it had three main objects: to prevent

Under the starter's orders—one of many races run under Donkey Club rules

the import and shipment of donkeys for slaughter under callous and inhuman conditions; to ensure that all donkeys were in good homes and well cared for; and to devote all profits to the welfare of animals and handicapped children.

As the club developed—there are now more than 5,000 members and the number is increasing rapidly—so the charitable work was extended, and many benevolent societies benefited. Now a new venture is being undertaken as a result of a personal tragedy which befell Mr. and Mrs. Dinnage in February of this year. Their thirteen-year-old son Peter died after suffering for two years from an incurable disease.

Mrs. Dinnage, who was a State Registered Nurse before her marriage, went back to a local hospital which caters largely for children who are crippled or handicapped in some other way. It is the custom to send some of them home for short holidays now and then, and Mrs. Dinnage discovered that some of them had nowhere to go. Some had lost both parents, or one of them, some came from bad homes where they would not be properly looked after. This gave Mrs. Dinnage the idea of establishing—in memory of her son—a home at the seaside where not only these unfortunate children but also lonely old people could enjoy a free holiday.

Through the club she and her husband bought a large and lovely house at Lancing. It belonged formerly to the East Sussex County Council and has been fully equipped as a nursery home. It has direct access to the beach, and so there is no danger from traffic. The house is big enough for the old people to be quite apart from the children if they wish, but Mrs. Dinnage sees no reason why they should.

The new home, which is called St. Peter's, is to be opened specially for a house party for old people only from December 23 to January 2. There will be twenty or more of them, selected from various welfare organisations, and the only qualification is that they must be alone in the world.

On this occasion, and in the future, transport will be provided for any guest unable to get there otherwise. During this Christmas party all the staff will give their services free. Afterwards the home will be closed until Easter so that it can be redecorated and preparations made for the work of providing holidays all the year round.

The Falklands—Britain

SIR MILES CLIFFORD, a former Governor of the Falkland Islands, is to visit the islands lying in the Atlantic Ocean about 300 miles from the tip of South America. In the month of the Duke of Edinburgh will be visiting the islands in the course of the tour which has taken H

WHILE it is the conviction of every British colony that it is quite unlike any other British colony, of none may this be more aptly said than the Falklands. More than 8,000 miles from England, which their people still regard as home, this group of islands—two large and about 200 small—lies some 350 miles to the east, and a little to the north, of Cape Horn. It is thus the remotest of all Britain's colonial communities, and its relatively brief history is peculiar.

It was entirely unpopulated until French and British posts were established there in 1764 and 1765, and for some time neither party was aware of the existence of the other. The French were induced to withdraw in face of an old Papal treaty which had allocated all lands in this zone to Spain, and the British party was expelled by a superior Spanish force in 1770, only to return the following year after news of this incident had nearly brought the two countries to war. In 1774 Britain vacated the islands once more, due largely to Treasury pressure and lack of interest at home, but a plaque recording British claims to sovereignty was left nailed to the blockhouse at Port Egmont, and the Union flag was left flying; in effect, however, the field was left to Spain, who remained in possession until her South American colonies seceded in 1806.

Claiming to inherit the rights of imperial Spain, the government of the United Province of Rio de la Plata took formal possession of the old French settlement of Fort Louis on the East Falkland in 1820 but made no attempt to develop the islands until some six years later, when a Frenchman from Buenos Aires was granted a concession. He very shortly got himself into difficulties with the United States by impounding three American sealing ships, so a corvette, the *Lexington*, sailed down from the river Plate and destroyed the settlement.

Under British Sovereignty Since 1833

In the following year, 1833, Great Britain reasserted her sovereignty which she has maintained ever since. This has provided a bone of contention for Argentina, who insists that Britain has strong-armed her out of her rights, and that the Falklands, or *Las Islas Malvinas*, as she calls them, are hers. The population is nevertheless entirely British and intensely loyal, as those who were present during the Coronation celebrations of 1953 have occasion to remember. They are a hardy, independent, and resourceful folk, able, of necessity, to turn their hands to anything from shearing a sheep or repairing a boat to building their own houses. They number in all about 2,400, dispersed almost equally between the small township of Stanley, the seat of government, and the outlying farms and smaller island farms which are termed collectively 'the camp' (from the Spanish word *campo*, meaning countryside).

The camp, again, is sub-divided into East and West, as the two main islands and their satellites are known, and the West is fiercely jealous of its own individuality. Withal, the islanders are a friendly and hospitable

people—a little conservative, perhaps, as is only natural, having regard to the isolation in which they have dwelt so long, but there is no colony in which a visitor will feel so immediately at home.

The total land area is about 4,600 square miles, and the coastline of the two main islands is deeply indented, providing many excellent harbours and anchorages: which is just as well, for the sea outside can be very violent, and with the strong tides and treacherous currents has accounted for more than 130 wrecks around the coast. The climate is dour, with, as its most trying feature, a persistent wind which blows at an average of fifteen knots throughout the year.

A Precarious Economic Balance

The country is hilly, and can be described as wild moorland with peat-stained streams and tarns, with frequent rocky outcrops and, here and there, the strange phenomena known as stone rivers. There are no trees. The soil is mainly peat, and much of it waterlogged; riding over 'the camp' in winter is no joke and was until recent years the only alternative to traveling by sea, which could be even more discouraging.

The colony is divided up into sheep ranches of varying size situated on the two main islands and on certain of the smaller off-lying islands; with negligible exceptions, they are held in freehold, and for the most part by absentee landlords. The farmers are concerned solely with wool production, and since there are no other natural resources their prosperity, enviable at present, depends on a single and a stable market.

There is no doubt that an export of mutton and beef carcasses could be developed on a modest basis. The sheep are mostly Romney Marsh and Corriedale, and over the years have produced wool of a good standard, but pastures are poor, and the weather is often at its worst at lambing and shearing. Labour is insufficient, and there is no real shepherding. One way and another, it is not surprising that the lambing percentage is low and the mortality high. The economic balance is thus precarious.

Many improvements were effected during the post-war years, and the people now enjoy most of the blessings of a welfare state. There is a modern and well-equipped hospital at Stanley, and efficient medical and dental services. Two-way radio-telephone sets are installed on every farm and inhabited island so that the managers, who are also provided with a standard medicine-chest for emergencies, are in daily touch with the hospital and the camp medical officers; an internal air service brings patients to the hospital, or carries the doctor to the patient, and mothers fly in as a matter of course to have their babies in the maternity wing. A former Royal Naval motor fishing vessel is also available for use in emergency when the weather is unfit for flying.

The radio-telephone sets are equipped with a separate wavelength for inter-farm gossip, which all helps to keep the small and widely dispersed

H.M.S. 'Protector,' a 3,600-ton armed minelayer specially equipped for sailing in icy seas, is stationed in Falkland waters to assist the Governor in maintaining security

Sea-lion bulls basking on the coast of one of the islands, and (below) Gentoo penguins on their nests: they are one of the best known Falkland birds, and their eggs are valued

BROADCASTING THE M.C.C. TOUR

THE majority of cricket enthusiasts will have been following the progress of the M.C.C. tour in South Africa in reports by Rex Alston and E. W. Swanton in 'Sports Review,' and also the detailed news-bulletin reports of 'Sports Round-up.' These will continue until the tour finishes on March 12, with the close of the three-day match at Cape Town against the South African Universities.

For the Test matches coverage in the General Overseas Service will be—to put it quite simply—the broadcasting of the last fifteen minutes of play, followed by a five-minute summary for each day of play. For every Test, with the exception of the third, the commentary will be recorded on the circuit from South Africa, and broadcast at 16.40 to 17.00 GMT.

The third Test match, taking place at Durban, will start and finish earlier than the other four. In this case it is hoped to relay the commentary directly from Durban at 15.15 to 15.35—once again the last fifteen minutes of play and a five-minute summary. If this is not possible the G.O.S. will revert to the other transmission time of 16.40.

All the twenty-minute daily broadcasts of the five Tests will be transmitted to listeners in Australia, who will be receiving them at about 03.00 hours (Australian time) the following day.

On each day of the Tests a five-minute eye-witness account of the day's play will be broadcast between 22.00 and 22.20. This is primarily for listeners in the West Indies who, in view of the tour of Great Britain next summer by their national team, will be closely following the form of the M.C.C.

On the eve of the first Test match, that is on Sunday this week at 18.15 and 22.00, listeners will hear a fifteen-minute discussion programme recorded by the South African Broadcasting Corporation in which well-known cricketing journalists and broadcasters will assess the chances of the two teams; it is also hoped that the two captains, or their team managers, will participate.

G.O.S. Test Match Broadcasts

Commentaries and Summaries	16.40-17.00 GMT, Monday, Wednesday, Thursday, Friday, and Saturday
Eye-witness Accounts	22.00-22.05 GMT, Monday, Wednesday, Thursday, and Saturday 22.15-22.20 GMT, Friday

Newfoundland (Continued from page 9)

island province of Canada is due principally to the development of these paper mills, which bring large revenues to the country.

Most of the houses of the Newfoundlanders, dotted about the countryside, are constructed of wood; and on hillsides they look most attractive with their bright colours. But the people seldom lay out a garden, and few vegetables are grown except in the occasional potato patch. Agriculture seemed sadly lacking, and, unless you are in an area near one of the few farms, tinned milk is accepted as a matter of course. The houses themselves are very well equipped, particularly in the kitchen department. No house would be without its refrigerator and washing machine, and many of them have a deep-freeze.

A visit to Woods Island in the Bay of Islands one Sunday afternoon reminded me of a rather remote English village. On this island 300 people live, with boats as the only means of contact with the outside world. Three little girls going to Sunday School with their puppy, and the lads and lasses out for an afternoon stroll in their Sunday best were reminiscent of a Sunday afternoon in England.

The people are grand folk—independent, self-reliant, and friendly. Many of them know Great Britain, having served in the Newfoundland Regiment. They are intensely patriotic, with every home having a picture of Her Majesty the Queen in the place of honour.

When I asked one man his impressions of a visit to the Mother Country he replied: 'Hardly any of the houses had a picture of the Queen.' At a Rotarian luncheon I attended the proceedings were opened by the assembled company standing to sing the Newfoundland song; and, of course, they toasted the Queen.

In the talk which is referred to in the introduction to this article the author said in referring to Newfoundland: 'It has no graces, no elegance, no leisure, and very little luxury.' I cannot agree with this view. On a hillside near Corner Brook the Blomidon Country Club caters for golf, tennis, the social amenities, and has an excellent indoor curling rink. It is one of the most attractive country clubs I have ever visited. The shop assistants appear to have plenty of leisure because no retail businesses are open on Wednesdays, and on Saturdays they have a half-day off. I was amused when I asked one girl in a self-service store what she was going to do the next day, her day off, and she replied: 'Stay in bed until lunchtime, and then go to the show'—meaning the cinema. I was still more amused when in Corner Brook to see that on the Wednesday morning the place was deserted: I imagined everyone in bed!

The men in the logging camps work hard for the period they are there, but they take plenty of time off and enjoy their leisure with the money they have earned by intensive work. Everyone seems to own an American car, big, brightly coloured, and usually covered in dust. I visited the home of a retired power-house manager on the banks of the Humber river where, aged seventy, he was living with his wife in a cosy, comfortable home in a beautiful spot. In season their hobby is salmon fishing, and in three years out of five they had won the silver tankard of the Rod and Gun Club for the biggest fish caught in that area. They winter in Florida!

There is no doubt whatever that the Newfoundlander knows how to make the best of life in a somewhat backward country, surrounded by modern aids to comfort. I want to see more of this grand young country.

The Falklands (Continued from page 17)

communities in touch with each other. These two measures, alone, have altered the whole way of life and have greatly lessened the former feeling of isolation and the anxiety which this caused in time of illness; a number of lives have already been saved. Mails are delivered promptly by air, and journeys which formerly took days now take an hour and a half.

There are excellent schools in Stanley and—a recent innovation—a boarding school on the East Falkland. For the brightest pupils scholarships are provided each year to secondary schools in Dorset. There is a good broadcasting station and studio which provides entertainment for all and keep the camp and Stanley in constant touch with each other; a cinema, dance hall, and public library in Stanley give a great deal of pleasure, and some of the camp managers have installed sixteen-millimetre cinema-projectors for their workers.

Wages have been substantially increased, and fluctuations in the cost of living catered for; there are non-contributory family allowances on the same scale as in Britain, and a contributory old-age-pension scheme. Where before there was no form of popular representation there are now elected representatives in the Legislature and an unofficial majority. Life, generally, is more comfortable than it was and more rewarding too, perhaps, but it is still tough.

There could be no better stimulation of morale in this lonely outpost than the impending visit of the Duke of Edinburgh in January, 1957.

ESSEX AT CHRISTMAS-TIME

C. GORDON GLOVER, in this broadcast last year, chronicled the approach of the season of rejoicing in the valley where he lives among graceful hills, and fields where the wheat is beginning to turn green

There will be splendid singing at Thaxted when the choir retells 'the midnight winter wonder of the birth of Christ'

IN the northern part of Essex where I live, our graceful hills run as high as the cross of St. Paul's, and of our village which lies among them we say to visiting strangers: 'Welcome to our Alpine valley.' There are Scotch pines about the churchyard, fir-trees round the village hall—where the carol singers have been practising—and along the river soft-berried yew trees where the great grey wings of the wintering fieldfares have been beating from branch to branch these many weeks past.

Some say that if a straight line is drawn roughly eastwards from the top of Hobb's Aerie—our highest hill—the next eminence to be met will be the Ural mountains! Charlie Daw, who lives in his caravan upon that hilltop, does not let this fact trouble him. Not even the fact that the county boundaries of Suffolk, Hertfordshire, and Cambridge lie within ten miles of his abode is of interest to Charlie Daw, for he has never sought to penetrate even these local Iron Curtains.

Charlie is a deeply rooted Essex man. When once in his lifetime he was prevailed upon to visit Southend-on-Sea (and could find nothing to trouble him there) he took good care to travel by Dunmow and Chelmsford in the straightest of possible lines.

We have to climb a couple of hundred feet from our 'Alpine' valley to reach the summit where Charlie dwells with his lurcher dog, looking away and away to the long ridges of cornland that lie towards the Suffolk borders—now folded escarpments of winter brown with the spring-wheat just greening here and there, and the lapwings and gulls still feeding where the last furrows have been drawn.

It is a comely prospect, this, empty of big townships, provident of small villages which live by, and for, the growing of grain. We dwell upon the edge of the wheat-belt of East Anglia, and our farmers, amid the friendly jeers of the community, wax prosperous.

As the festival draws near the regular customers at the Old Bell Inn are beginning to make even the new landlord—a Hampshire man—feel at home

The steeple of St. Mary the Virgin rising above the rooftops of Saffron Walden: on Christmas Eve its twelve bells will ring out over the cold valley

The Old Bell Inn at the bottom of the valley has got the builders in, ripping up the flagstones and putting in plumbing so that the new landlord—a Hampshire man—can have a bath by Christmas. The new landlord in his first Essex autumn has been ill at ease. He finds his Essex customers canny and cautious and unjolly: these are not great rosy men such as grow in the south-west and west. It has been hard to convince the new landlord that because they do not wear their hearts on their sleeves these hearts are not of good gruff gold. He is finding it even now, as the days draw towards Christmas and the Slate Club share-out has been made. He is just beginning to realise it when Charlie Daw, smothered in Farmer Forster's chaff, growls 'You take one along of me, Bert,' to realise that imperceptibly and undemonstrably he is 'in.'

The Christmas fat-stock market in Saffron Walden town has come and gone—Saffron Walden where fields of purple saffron flower grew once to dye half the fabrics in England; where Gabriel Harvey drank with Samuel Pepys in the lordly mansion of Audley End, and Cromwell, riding down from Ely city, stabled his horses in the church of St. Mary the Virgin, almost the largest parish church in England.

Cromwell, Pepys, Harvey, and the autumn crocus have gone, but the twelve great bells that hang in the steeple of St. Mary's will show again that the tradition of campanology runs strong in Saffron Walden. And what ringing will sing out over the cold valley again this Christmas Eve! And splendid ringing—and singing—too, in lovely Thaxted, eight miles to the east, where the Morris Men dance in the streets on Midsummer's Eve, and sing with choir and orchestra the midnight winter wonder of the birth of Christ.

We, for our part, will sing with them, holding our traditional candles, fur-coated and duffle-coated in this oasis of light in the East Anglian darkness. Reborn ourselves, as will be reborn in patient time our late East Anglian aconite. (Broadcast in the BBC's General Overseas Service)

Your Programmes for Christmas

DECEMBER 23—29

A Christmas Service will go out from St. Martin-in-the-Fields on Tuesday at 10.30, 16.15, and 23.15

WORSHIP AND SONG

THIS is a season which we all enjoy. The occasion is the birth in a stable of the Son of God: with that birth there is foreshadowed his death upon the cross; that death contains the secret of our joy, for through Christ's death comes his rising again, which is his victory in this world and the next.

All those who came into contact with the Child of Bethlehem stayed to worship in his presence. The shepherds hurried from the fields to see the Child, and when they saw they worshipped. The Wise Men followed the star, and offered their gifts of gold, frankincense, and myrrh.

On that night of his coming, in the angels' adoration of the Child, there began a worship which has never ceased. He who was born in Bethlehem is the centre to which all men turn and find themselves of one mind in the house of the world. We share with you this Christmas, in the carols we sing and the religious programmes, the happiness and hope, the worship and the joy of this season.

On Christmas Day in the General Overseas Service there will be a broadcast Service from the church of St. Martin-in-the-Fields at 10.30, 16.45 and 23.15, conducted by the Vicar, the Reverend S. Austen Williams. Other religious broadcasts will include Christmas messages by the Archbishop of Canterbury, and Canon V. J. Pike, Chaplain-General to the Forces.

The speaker in 'New Every Morning' will be Father Douglas Carter, of Coventry, and in 'God and his World,' the Rev. C. C. Pratt, Rector of Petertavy, in Devon. **W. D. KENNEDY-BELL**

'CARMEN' FROM COVENT GARDEN

THE first and third acts of one of the best-loved of the grand operas, Bizet's *Carmen*, will be broadcast 'live' from the Covent Garden Opera House on Thursday at 19.10 and 21.15. The cast includes the Australian soprano Elsie Morison, who comes from Ballarat, who will be singing the part of Micaela. Carmen is sung by the coloured American singer, Muriel Smith, and other principal parts are taken by Richard Lewis (Don José), Robert Allman (Escamillo), and Joan Carlyle (Frasquita).

The opera, which was first performed in Paris in 1875, tells of the loves of the beautiful gipsy girl, Carmen, and contains some of the most famous arias in the operatic repertoire.

HOLIDAY SPORT

BBROADCASTS on the first Test match between South Africa and the M.C.C. touring side in Johannesburg will be the main subject of sports coverage in the General Overseas Service this week, and details of this coverage are on page 18.

On Boxing Day at 15.00 football enthusiasts can join listeners at home in hearing a commentary on the second half of one of the English League matches. This will be followed by a commentary by Raymond Glendenning on the King George VI Steeplechase, which is being run at Kempton Park. Again, on Saturday at 15.25 there will be a commentary on the last half-hour of one of the Scottish League football matches.

The New Year follows hard upon Christmas, and with it a mood of reminiscence and summing up. On Saturday at 14.45 the Outside Broadcasts Department will cater for this mood by presenting 'Sporting Highlights of 1956.' In a thirty-minute programme Cliff Michelmoré will turn back the clock and bring some of the memorable sporting events of the past year to life again.

Listeners can hear once again the frustrating finish of the Grand National, when the Queen Mother's horse, Devon Loch, which was in the lead, slipped and fell just a few hundred yards from the winning post. Rugby League fans can hear the exciting moments of this year's Cup Final between St. Helens and Halifax. Archie Moore's skilful boxing, when defending his world title against Yolande Pompey in June, will be recaptured.

The review will also include the highlights of the Test matches between England and Australia in the fight for the Ashes; Britain's triumphs and defeats in the Olympic Games at Cortina, Stockholm, and Melbourne; and the Hoad v. Rosewall final at Wimbledon.

Other events? The Football Association Cup Final, Le Mans, the Boat Race . . . but why not tune in and hear for yourselves? **ALEC WEEKS**

WALTER GIESEKING

MMUSIC by Debussy and Ravel—in which he excelled—played by Walter Gieseking can be heard in a recording which the great pianist made for the BBC shortly before his death in a London hospital in October this year. Last year he was injured, and his wife was killed, in a car crash near Stuttgart.

Gieseking was born at Lyons in 1895, the son of a famous doctor, and began to play the piano when he was four: he made his first public appearance when he was fifteen. He won world recognition as an outstanding interpreter of Debussy, Chopin, and Ravel, but did not exclude the exploration of a large repertoire, including modern music.

G.O.S.: Sunday 23.15; Tuesday 16.15; Friday 06.30

Lizbeth Webb stars in 'Bless the Bride'

Muriel Smith sings in Bizet's 'Carmen'

Ruby Miller speaks in 'I Remember'

'A TALE OF TWO SQUARES'

DDURING much of his life Charles Dickens lived in Tavistock Square, London, in what is now Bloomsbury. Not very far from Tavistock Square—a little south and a little west, on the edge of Soho—is Golden Square: a very different quarter of London. This square must, however, have been well known to Dickens in his earlier years; and it was the haunt of many of his characters.

From Dickens's novels, letters, and diaries, Pamela Bower has compiled a contrasting account of the two squares, as they seemed to him at the time. She has also provided a background of their previous and subsequent history. Miss Monica Dickens, the novelist's great-granddaughter, will add to the programme her own comments upon her ancestor's life and works.

G.O.S.: Monday 12.00; Thursday 18.30; Friday 20.30

From 'The Story of Babar' by Jean de Brunhoff (Methuen) 'The Story of Babar the Little Elephant,' set to Poulenc's music, can be heard on Monday and Friday

TOYTOWN PANTOMIME

IN the immortal saga of Toytown, *The Babes in the Wood* pantomime is the only melodrama. 'Cos why?' as Captain Higgins would ask. 'Cos we shan't tell you,' is the reply. 'Tis enough, 'twill serve to say that all ends happily.

The Babes (played by Dennis the Dachshund and Larry the Lamb) are not done in. And how could they be, with His Worship the Mayor as that contradiction in terms, the Good Hired Assassin? Pompous the Mayor may be, but at least he is no murderer. If he had not been cast as the G.H.A., this story would have been different, and not nearly so good.

G.O.S.: Saturday 09.45

NEWS FROM ANTARCTICA

APROGRAMME this week—'Christmas in Antarctica'—will bring news of the Commonwealth Trans-Antarctic Expedition and of the Royal Society's Expedition which is to make observations in Antarctica during the Geophysical Year.

At present members of both expeditions on board the *Magga Dan* are sailing south from the little island of South Georgia, their last port of call before they reach the Antarctic continent across the Weddell Sea. Donald Milner of the BBC, the only correspondent aboard, will be sending the latest news.

If reception conditions allow, it is hoped to include in the programme a message from the Trans-Antarctic Expedition's advance party at Shackleton Base, and there may be news, too, of Sir Edmund Hillary's party.

DYLAN THOMAS

DYLAN THOMAS once said: 'I like very much people telling me about their childhood, but they'll have to be quick or else I'll be telling them about mine.' He does describe some incidents of his boyhood in the talk, 'A Child's Christmas in Wales,' which is to be broadcast in the G.O.S. This talk—also printed on page 7—was recorded by the poet in New York shortly before his death on November 9, 1953.

Dylan Thomas was born in the Welsh seaport of Swansea on October 27, 1914, and went to Swansea Grammar School, where his father was senior English master. He did not speak Welsh. His first book of eighteen poems was published when he was twenty, and he reached his full stature as a poet with the publication in 1946 of *Deaths and Entrances*. In 1952 he won the Foyle Poetry Prize for his *Collected Poems*.

To listeners Thomas is perhaps best known through his radio play, *Under Milk Wood*, which he described as 'a play for voices.' It was begun in 1947 and completed several years later when he had left London and returned to live in Wales. G.O.S.: Monday 14.15; Tuesday 21.00

FOR THRILLER-ADDICTS

TWO plays this week offer a choice of styles to thriller-addicts. Norman Edwards's *Wrong Number* has basically a straightforward and well-worn theme: the elaborately planned robbery of a mail-van, carrying a large sum of money, by a gang of thugs organised by a non-thuggish master mind.

The author's viewpoint—from which to take a novel slant on all this—is that for most of the action we are in the ordinary suburban house from which the respectable-seeming Doctor (of Music) Pole has conceived the daring robbery.

This is the kind of thriller which is adept in using radio's specially dramatic effects—the unexpected knock on the door, the ringing of the telephone, the sudden piano chord, hoarse whispers.

John Dickson Carr, himself a celebrated writer of thrillers, has adapted one of the best-known adventures of Sherlock Holmes, still the doyen of detectives in fiction. This is *The Adventure of the Speckled Band*, in which Holmes and Watson are disturbed one morning by the arrival of a young lady in distress, a Miss Helen Stonor.

There follows a sensational case involving a trip to deepest Sussex, an encounter with a huge half-mad doctor, plus the menagerie he has brought back with him from India, and a murder—all of which strains Holmes's powers of deduction to their uttermost.

PETER FORSTER

* *Wrong Number*: Sunday 01.00, 18.30; Thursday 14.15
* *The Speckled Band*: Monday 17.30; Friday 10.00, 23.45

A GREAT CELLIST

THE cellist Pau Casals is universally regarded as one of the most profound exponents of music for the instrument. His eightieth birthday falls on December 29, and on Friday at 02.30 a programme in celebration of this event, recorded from the Prades Festival, will be broadcast.

Casals comes from Vendrell, Catalonia, and apart from his fame as a cellist he also won renown as a conductor. He founded the Barcelona Orchestra in 1919, and made it a fine instrumental organisation by devoted work.

Variety For Your Entertainment

KINGS of pantomime and the circus take pride in telling us that the moment the curtain has gone down or the 'big top' has been struck on one Christmas show they start thinking about the next. It might not perhaps be true to say that in broadcasting plans are made quite so far ahead. None the less, it is quite clear that the experience gained in spring, summer, and autumn has had a bearing on the choice of programmes to be heard and

enjoyed by overseas listeners this Christmas.

Frankie Howerd 'opens a box of Christmas Crackers'

There is more than the usual touch of Variety and imagination about this year's Christmas shows. The most intriguing of these, for several reasons, is the 'Christmas Goon Show,' of which two special editions are being prepared. This crazy nonsense first took the air in Britain as an experiment. No one knew quite what to expect. At first some thought it was utterly incomprehensible—the product of a quicksilver mind, maybe, but added quicksilver.

Others saw subtlety where none existed. But the impact was made, and when the Goons went overseas—again as an experiment—the listening public took to this zany, verbal clowning, and, to the astonishment of many, even found it endearing.

The General Overseas Service, in the light of experience, has such faith in the follies and fun of our genially lunatic friends that it is originating one edition solely for overseas listeners.

Jimmy Edwards, accompanied by Dick Bentley, and a party of other performers, have been entertaining Forces stationed in Malta. This was a Combined Services Entertainment operation, but the shows have been recorded to provide some hilarious Christmas listening.

One Christmas star whose light seems to glow more clearly year by year is Vera Lynn. Her overseas public is steadfast: and there will be a friendly welcome for this old friend of song not only in her own 'happy memories' programme, 'Yours Sincerely,' but also as the subject of 'Top of the Pops' (in which, with the aid of Paul Fenoulhet and the Variety Orchestra, one famous singer of popular music has been featured week by week).

From the programme pages it would seem that Britain's leading funny men (some of them special favourites with overseas audiences) have conspired to dispense that most precious quality—

laughter. 'Frankie Howerd,' says the billing, 'Opens a Box of Christmas Crackers, and shares them with his listeners.' Fair enough.

Another Dennis Main Wilson production is a Christmas edition of 'Hancock's Half-Hour.' This pleasantly unassuming character is among the more subtle of our younger comedians—he is still in his early thirties—and has grown in stature since that happy 'break' as one of Archie Andrews' tutors.

The adventures of Ted Ray, master of domestic comedy, will have that seasonable flavour—and 'Ray's a Laugh' is even more acceptable this year by reason of Kitty Bluett's return. This charming and unaffected comedienne from Australia is back again in her favourite role as Ted's 'radio wife.'

Incidentally, Ted Ray has another Christmas date in the popular programme, 'Spice of Life.' A feature is the music of the Revue Orchestra, conducted by the gifted South African musician, Harry Rabinowitz.

There has been a real-life upheaval in the domestic life of the Lyon family since last December. Barbara has been married, a situation her family, the producer, and writers of the famous Lyon programmes are unlikely to ignore. Christmas seems to have provided the Lyons with some of their funniest material, and 1956, we shall find, is no exception.

Another laughter-maker with a special overseas appeal is Jack Train, who started as a cadet in the Royal Navy, and eventually became a star of 'Itma' and 'Twenty Questions.'

If the comics are busy, so are the musicians; and there is an imposing list of first-class musical shows. Among them are Charles Chilton's 'Golden Age of Popular Song' (the period is 1918-1939); 'Tip-Top Christmas Tunes,' played by Gerald and his Concert Orchestra; Ken Mackintosh and Vic Lewis with their respective orchestras in 'BBC Ballroom'; and 'In Show Band Style.'

And to strike their own note of happy and friendly entertainment, two old favourites—programmes each with a record of more than twenty years—'Henry Hall's Guest Night' (in a gala edition), and 'Palace of Varieties.' GALE PEDRICK

The Lyon household will celebrate Christmas in force: (left to right) Richard Bellairs, Molly Weir, and Barbara, Ben, Bebe, and Richard Lyon

Your Wavelengths

London Calling is published several weeks in advance and we regret that, for reasons beyond our control, it is sometimes necessary to alter wavelengths after we have gone to press. The latest information is always given in Programme Parade

13.45-14.00 The World of Science
A weekly survey of the latest developments

'What I Believe.' The speaker on Sunday will be the Rev. Austen Williams, Vicar of St. Martin-in-the-Fields, who will explain the festival of Christmas and its place in Christianity. For many years the Rev. Austin Williams worked as a chaplain for Toc H. At the end of the war he became curate in St. Martin-in-the-Fields, where he stayed until 1951, when he moved to Bristol. Mr. Williams has now returned to St. Martin's to become Vicar of the Parish Church of the Commonwealth.

* * *

Asian Club. A. D. C. Peterson, who will be the guest of the Club on Sunday, has been headmaster of Dover College since 1954. During the war he was sent to the Far East where, from 1944 to 1946, he became Lord Mountbatten's Deputy Director of Psychological Warfare. He has always been fascinated by the East, and particularly by Malaya. Mr. Peterson is the author of *The Far East*, a book which became a standard work very shortly after publication.

* * *

'Personal Call.' Stephen Black is the interviewer in Tuesday's programme which was recorded in the small library of Lt.-Gen. Sir Brian Horrocks's country house in Wiltshire. Sir Brian describes the contrast between his life in the country and that of his work in the House of Lords where he is Black Rod. He also describes his feelings during the war when he was responsible for the lives of thousands of men under his command.

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes and provides a valuable supplement to the BBC's direct transmissions from London

Standard

One of the largest telecommunication engineering organisations in the British Commonwealth **Standard Telephones and Cables Limited** is engaged in research and the development, manufacture and installation of all types of communication and control systems. Concerned with every aspect of telecommunications engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated planning of complete communication projects involving inter-dependent systems of various types.

'Standard' productions include:—

- **Telecommunication Line Transmission Equipment**
- **Radio Broadcasting Equipment**
- **Radio Communication Equipment**
- **Air Radio Navigational Aids**
- **Supervisory and Remote Control Systems**
- **Railway Communication Apparatus**
- **Railway Control Equipments**
- **Telephone Cable**
- **Sound-Reinforcement Systems**
- **Public and Private Telephone Systems**

"Standard" telecommunication systems serve society on land, at sea, and in the air. In the realm of aviation, "Standard" radio equipment flies in many of the world's leading aircraft, including the Vickers Viscount illustrated above

Your New Programmes

STUART HOOD, Head of the BBC's General Overseas Service, outlines the new programmes which listeners will be able to hear during the next three months. (Further details of some of these programmes will be found in the notes on page 17)

THE first quarter of 1957 brings two important events in the history of the Commonwealth: in February we shall be celebrating along with the West Indies their first Federation Day; in March the Gold Coast becomes an independent state under the ancient African name of Ghana. Both of these developments will be marked by special programmes.

The General Overseas Service will carry a programme by Louis MacNeice on the Gold Coast, and Willy Richardson, who has been in West Africa to gather material for the Commonwealth Christmas programme, has brought back recordings for a documentary on the new State.

Being a Trinidadian, he will be the obvious choice as writer and narrator of a portrait of the West Indies—a programme which will have as pendant a special Variety programme by West Indian artists.

Cross-Section of Variety

At this time of year most of the main shows are well under way in both the Home and Light programmes of the BBC's domestic services. As usual we shall try to let our listeners hear a good cross-section of them, including 'Take It From Here,' 'The Goons,' 'Ray's a Laugh,' 'Educating Archie,' 'Hancock's Half-Hour,' 'Life with the Lyons,' and 'A Life of Bliss.'

The G.O.S. will continue to run its own parlour game, 'Two in One,' as well as 'Commonwealth of Song,' which listeners to the Light Programme hear simultaneously on Sunday mornings. Edmundo Ros will be back with his Latin-American Music.

In the field of light-orchestral music I should like to mention 'Song and Dance,' with music mainly from ballet, and 'Masters of Melody,' in which you will hear the best of light music from Lehar and Strauss up to the present day.

On the more serious side there is a series called 'Poet and Composer,' an anthology of verse and song which will include settings of Shakespeare, of Scottish poems, and of poems of the sea and of birds and beasts. 'An Intimate Kind of Music' will continue to present one classical work from the chamber-music repertory and one work by a modern composer. Antony Bernard has devised a series of programmes of English dramatic music from Charles I to George I—a period when much interesting music for the theatre was written by Purcell, Blow, and Locke. Every fortnight there will be a recital with Commonwealth artists such as Lois Marshall from Canada, Joan Sutherland and Linda Phillips from Australia, and Joyce Barker and Lionel Bowman from South Africa.

The BBC Gramophone Department is going to present a new programme: 'Sounds and Sweet Airs.' Lilian Duff is returning with her collection of light music from the Continent, and Mark Lubbock is to provide a series of programmes on dramatic characters and dramatic moments from opera.

The year 1957 is an important one in the Indian sub-continent: it is ten years since India and Pakistan became independent; it is a hundred years since that tragic event—the Indian Mutiny.

In the second week in January you will be

able to hear a symposium by distinguished Indian and English historians who will attempt to evaluate the meaning and nature of the great convulsion of 1857. It is hoped that the result will be as correct an assessment of the revolt as it is possible to achieve in the light of modern historical knowledge. Later in the year Philip Mason, who will shortly be setting out for Pakistan and India, will tell you what changes he found in spots he knew well. Philip Mason, a former member of the Indian Civil Service and now Director of Studies on Race Relations at Chatham House, will make notes of conversation in the villages and fields, and will then try to evoke the mood of the ordinary people he has met.

In a talk on the Indian Revolution Sardar K. M. Panikkar, Indian Ambassador-designate to France, will describe the recent changes in Indian society.

Other features specially written for the General Overseas Service will include a study of Stanley Baldwin in the series on great Prime Ministers. There will also be a feature on London University and one on Bloomsbury, which was once but no longer is the literary heart of London.

The Echoing Air

Bertrand Russell will discuss in a series of six talks books which influenced him in his youth. In 'The Echoing Air' David Lloyd James will bring to light some of the recordings of famous voices from the past which he has found when going through the BBC's archives. The progress of the Trans-Antarctic Expedition will be followed in a series of short reports incorporating actuality from the far south.

Early in the year the Duke of Edinburgh will be in Antarctic waters in the royal yacht *Britannia*, and there will be a special programme on Tristan da Cunha and Deception Island to coincide with his visit to these outposts.

For Burns Night, Scottish Region has promised a special edition of 'Scottish Magazine.' For Australia Day we shall broadcast 'I Live as I Please,' in which Bill Hanney tells of his life at Two Fella Creek, Port Darwin, where he has found the art of living without working. For India Day there will be a recital by the famous Indian musician, Ravi Shankar. On St. David's Day we start a series of recitals by Welsh choirs.

For some time it has been apparent that many listeners—particularly in these troubled days—wish to have a chance to hear British editorial opinion some time in the evening. 'From the Editorials' will therefore have a further placing in the G.O.S. at 17.25 GMT.

SIR COMPTON MACKENZIE, the well-known author, sets down some of the beliefs which have regulated and inspired his long and fruitful life: 'By the time I was fourteen,' he says, 'I had achieved a point of view which in all essentials I retain today on the edge of seventy-four'

What I Believe

AS a Catholic I believe what myriads of other people in this world believe, and therefore I do not presume to suppose that I am expected to give an exposition of my religious creed. So I shall try to dig down into my consciousness and extract some of the beliefs that have regulated my life—perhaps 'inspired' is a better verb. Now, when I look back through a long life I cannot discover any radical change of belief in my attitude to human beings and human affairs. By the time I was fourteen I had achieved a point of view which in all essentials I retain today on the edge of seventy-four.

In the month of August, 1897, I experienced that sudden revelation of a life larger than oneself which so many who have experienced it have tried vainly to convey in words to those who have passed through their own lives without being granted such a revelation. Naturally, such an experience turns the soul to find an outlet for the expression of it in what may be called the conventional practice of religion, but I do not want to discuss this side of conversion.

Inability to Destroy Life Wantonly

The particular shock of change which happened to me was that from that long-ago instant of enlightenment I have never since been able to take wantonly the life of beast or bird. A moment earlier I would have enjoyed killing a sparrow with my air-gun. A moment later the thought that I could have enjoyed doing this was horrible to me. To this day I cannot understand the pleasure of killing anything for the mere pleasure of killing. Oh yes, I have shot many rabbits in a war against them on behalf of my flowers and shrubs and saplings, but for sport I have not killed bird or beast since that August day close upon sixty years ago. Illogically for a time I continued to fish, but I found such sport impossible after my twenty-second year, and even butterfly-hunting about that time became at first distasteful and presently impossible amusement.

As far as I can ascertain, this inability to destroy life wantonly is an aspect of my most profound belief, which is the obligation upon every Christian to love his neighbour as himself. Our present humanitarian ideas are too often inspired by a sense of guilt in those who feel that their predecessors have abused the privileges of wealth and class. I do not want to say a word against that moral recognition of reparation owed as a duty, but I do wish I did not see in it so often a hint of self-gratification in performing that duty rather than a spontaneous and irresistible manifestation of love.

I believe that whenever we perform what is called a charitable act we must first expel from our minds the slightest sense of being the giver, and must always try to feel that we are being graced by that impulse and favoured by our ability to indulge that impulse. What is more painful than to hear some kind person complain that the object of his kindness has shown no gratitude? In a moment the warmth one felt for his generosity freezes in the realisation that when he gave he was expecting to receive an emotional satisfaction in return.

I have tried all my life—and how often, alas, I have failed!—to put myself within the selves of others. I believe that the spiritual, the mental, and the moral happiness of every Christian in this world depends on his or her ability to strive after doing this.

Relations Between the Races

I believe an aspect of this may be seen in the relationship of one race with another. Many British people are perplexed and hurt by the resentment against Britain among nations and races whom they believe that their rule has benefited, and I reflect sadly that almost the only quality our rule lacked was love of those we were ruling. We were only capable of doing what we thought was best for them because we were convinced of our right to decide what was best. We were never able to be the people we were ruling and to look at ourselves with their eyes.

Yet no empire before our own was ever so earnestly and sincerely anxious to benefit the peoples under its rule. Of course, there has been plenty of obstinate stupidity—the American colonies, Ireland, and, at this moment, Cyprus. Yet no Briton who was in India on that August day nine years ago when his country made the greatest renunciation any nation has made in all recorded history, no Briton could keep back a great surge of pride for the example his country had set to the rest of the world. If only that good will of ours could always have been expressed without conveying the slightest hint of patronage.

While I hope for that day in the future when the nations of this little world of ours, spinning round our little sun amid the immensity of the universe, shall have become one federation I do not believe that such a

federation will ever be achieved by the absorption of smaller states. I view with profound misgiving the direction in which big business is now moving, and I would rather the world remained in confusion than that it should attain order by such methods.

We who fought in and survived that first world war for the rights of small nations, a war that cut down the flower of our race, have had to endure disillusionment in full measure. I am exasperated by those who accuse nationalists of being responsible for the present malaise of humanity, for I believe that effective internationalism can be attained only by preserving and encouraging the fullest growth of nationalism. I believe that the individual of today who feels an instinctive dread of the effect on individual life of vast agglomerations like the British Commonwealth or the United States or the Soviet Union and others now emerging in Asia desires instinctively the background of a smaller state to preserve his own individuality.

Therefore I believe that the individual today bears a heavier weight of responsibility than he ever bore, because if he should succumb to the temptation of the easy way out through Socialism or Communism or totalitarianism, with more and more machinery to promote mass emotion, mass thinking, and mass production, the condition of mankind in the future will gradually approximate more and more closely to that of ants or bees. I believe that automation could ultimately benefit humanity by providing leisure which could be wisely used, but the deadening influence that mechanical progress has exercised so far over the minds of the great majority, and the industrial slavery that has accompanied mechanical progress, makes me wonder apprehensively if it may not be too late.

However, I have no sooner said that than I repent of such pessimism, for I remember the struggle of Ireland to achieve independence, and I am reassured by the spectacle of Cyprus fighting a battle for self-determination against immense odds. It is sad that a great country like Britain should compel a small Greek island to fight with terroristic methods in order to prove that its desire to be united with Greece is genuine. Nevertheless such willingness to fight is evidence that liberty still has power to sway the mind of man; a world-wide surrender of liberty would be a terrifying prospect.

What the World Needs Today

Do not let me suggest that I am referring only to Communism. I believe that in the so-called free world liberty is in every bit as much danger of vanishing. The methods of annihilating liberty may differ, but the ultimate result will not be less disastrous. What the world needs today is a tremendous gesture by a great nation, and I believe that Britain is the only one which could summon the moral courage to make it. I believe that if Britain told the world that she proposed to disarm completely and went on to do so no other nation could stand up against the impact of such moral leadership.

I believe that present talk about the impossibility of another world war because of the means of destruction now available to mankind is a dangerous sedative, for all such talk is merely the expression of a hope that war will be averted because neither side can win. If Britain disarmed completely I do not believe that any nation in the world would dare to take advantage of her material weakness, because her moral strength would be overwhelming. Reduction of armaments and agreement to ban the H-bomb are merely devices to make war less unpleasant than it might be; neither of them allows humanity to believe war is impossible.

I may sound like a foolish dreamer, but I cannot forget the effect of that tremendous gesture by which we gave back to India and to Pakistan their liberty. It was to know again that momentary illumination of my boyhood when, on an August day, I was made aware of a life beyond my own, when for the first time I knew for certain that God was my Creator. I was filled with exultation on that other August day in India fifty years later because I was a Briton, a creature who had been transfigured by what on that morning seemed to every Indian a miracle.

I believe that the tremendous gesture of abdication made by Britain nine years ago saved Asia from a state of affairs infinitely worse than any brought about by the present travail of that mighty continent to shape its future, and my conviction that Britain can save the world from plunging into ruin by a much greater gesture than the renunciation of imperial rule in India grows stronger every year I am still alive.

So, in brief, I believe that every man must try to love his neighbour as himself, and that the smallest nation of whatever colour should be allowed freedom to choose its own way of life, and freedom to follow that way of life. The rest is a dream. But we must have dreams in which to believe, and so I declare my conviction that Britain could save the world by completely disarming herself, and thus, by a blazing act of faith, abolish war. (*Broadcast in the BBC's General Overseas Service*)

The main entrance to the research building of the General Motors Technical Centre in Detroit: air-conditioning for the centre was supplied by Britain

Breaking into the Dollar Market

REGINALD TURNILL describes how a go-ahead Scottish firm which specialises in air-conditioning plant recently won important contracts in the United States in the face of strong local competition

EVERYONE has heard over and over again how important it is that British industries should increase their exports if Britain is to maintain her balance-of-payments position. Some industries have been complaining recently that while there are constant exhortations to this effect they are not accompanied by any practical proposals as to how it is to be done. But it seems to be a problem which each industry, and often each individual manufacturer, must tackle individually.

In business as in battle the best method of defence is often to attack, and the Glasgow firm of Thermotank Limited have recently demonstrated how successful this approach can be. For more than half a century this company, founded by three brothers, have been pioneering and installing the air-conditioning systems in many of Britain's big liners, including the famous *Queens*. But four years ago they found that American competition was threatening to break into their traditional markets in Britain. So three young Scotsmen, John Todd of Clydebank, and Douglas Torry and Jack Meek of Glasgow, were sent off to America to see what could be done about it—to see, in fact, if the battle could be carried right into their competitors' country.

Dollars were scarce, and to conserve them they lived in a small hotel outside Detroit, cooking their own meals and using their bedrooms as their drawing offices. At that time the General Motors Corporation, which is the world's largest industrial organisation, were planning their new £70-million technical centre, and were having difficulty with their highly specialised air-conditioning installation. And, said the Americans, they also wanted a system that would still be modern in twenty years' time.

Todd told them verbally that Britain had the 'know-how' to solve their problems, and the three Scotsmen proved it with a lecture supported by drawings and data. They got the contract—worth 5-million dollars.

A United States company was launched with a nominal capital of 5,000 dollars, and a further 40,000 dollars was borrowed from the Bank of England to cover development outlays. Within five days a factory was found. So that almost no down payment should be needed arrangements were made to buy it in five yearly instalments in cash and salary to the owner, who was taken into the employment of the company. In

An aluminium-and-steel dome 188 feet in diameter spanning the width of the styling auditorium at the General Motors Technical Centre seen below

this way the factory was paid for as the money was earned. Back in Glasgow, where the main part of the equipment was made, overtime and night shifts were arranged so that it should be delivered in Detroit several months before it was needed. This was to ensure that progress should not be delayed by the freezing up of the St. Lawrence river.

Within eighteen months the Bank of England loan had been repaid, and the company was established on a sound financial basis. The first contract quickly led to an even bigger one. This was for the mechanical services and air-conditioning in the elaborate new Ford administration building in Detroit. Opened in September, this cost more than £8-million.

Mr. Iain Stewart, the chairman, told me that the company was now in the happy position of having a first-class factory in Detroit, and an impressive list of clients seeking its services. The four largest organisations in the world now appear regularly on its order-book. Apart from that the company has business worth a further million dollars outstanding on its American order-books. Assembling refrigeration units for use on ships at the firm's Glasgow factory

'A Hill in Korea' tells the story of a small patrol of British soldiers, led by a young lieutenant, which is sent to search a village and gets cut off by the enemy

More British 'Films to See'

DILYS POWELL contributed this talk to the G.O.S. monthly review of films newly released in the United Kingdom. (Listeners can hear the latest review on Wednesday at 16.15 and Thursday at 00.30 and 05.00)

THERE is still no sign that people are getting tired of war films; and this month one of the best of the British films—*A Hill in Korea*—is about war. I feel rather handicapped in talking about war films. As a woman I cannot possibly know whether the details of warfare are authentic; and the trouble is there are so many people around who do know, so many people who have the right to expect that a film about war shall be fairly truthful. Since I cannot have the expert knowledge, I have to rely on a feeling that the atmosphere of a film is right or wrong.

With *A Hill in Korea* I fancy that the cinema is giving us something not far off the truth—so far as you can tell the truth about war in a place of entertainment. *A Hill in Korea* is an exciting film. It is also a severe film. I have even heard that the details of reloading the machine-guns are right. But let me get back to what the film is. To begin with, as you might guess, it is about the war in Korea; it is based on a novel by Max Catto.

I suppose it is about time the British made a film about their share in the Korean war. There have been a great many American films on the subject, none of them very good, and most of them too busy with anti-Communist propaganda to bother much with the truth about human nature. The British contribution to the campaign was comparatively small in numbers, but it was marked by a great gallantry: *A Hill in Korea* reminds us of that. And it reminds us of another thing: of the part played by National Servicemen.

It has been the practice for a good many years to make films which pay a tribute to some particular branch of the Services. The Americans are fond of making films about the marines, or the frogmen, or the men of the transport ships; and very well they do them, often enough. In *A Hill in Korea* it is the turn of the raw recruits from Britain who have to go into battle. About twelve years ago Carol Reed made a film—*The Way Ahead*—which was about the training and hardening of an infantry unit drawn from various walks of life. *A Hill in Korea* tells the same kind of story, but from a later stage: when it begins, the men have done their training; they are going into action for the first time. By the end they have become veterans—and all in the space of two or three days.

The film is about a small patrol, with one or two Regular Army men, but all the rest, including the young lieutenant, are National Servicemen. The patrol is sent out to search a village. The village is empty, except for two suspicious-looking peasants who are just leaving with their belongings. Then a member of the patrol is killed by a booby trap; and the whole party find themselves surrounded by Chinese troops. The officer and two men hold the enemy while the rest of the party try to get back to the British lines by another route. But the plan does not work; the patrol reunites, and the whole party take up a position in a deserted temple on a hill-top. The story goes on to describe the stand they make: the waiting, the arrival of an enemy tank, the determination, when escape seems impossible, to give a good account of themselves.

The plot is ordinary enough: we have seen scores of films about the small unit fighting against terrific odds. What distinguishes *A Hill in Korea* from the rest is the austerity with which the story is told. The screen play is by three writers: Ian Dalrymple, Ronald Spencer, and

Anthony Squire, who produces; and the director is Julian Amyes. Mr. Amyes has handled the action with a strong feeling for tension: the silence of the landscape round the British positions, the distant figures of the enemy watched through an officer's field-glasses, the feeling that there are watchers in the innocent-looking woods—all this is extremely well done.

But *A Hill in Korea* is not simply a film of action: it is a film of character. We are asked to look at the patrol and to consider them as men with a background: men who want to be farmers, men who are thinking about dog-racing or a quiet evening in a London pub. The British cinema is often accused of being full of stock types. I do not really know that it is any more full of stock types than, say, the American gangster film. But I see what the criticism means, and it is perfectly true that we have met a good many of the characters in *A Hill in Korea* in other war films, that we have already listened to their talk about beer and girls.

All the same, I do not think the character-drawing is altogether conventional: I think it has a certain truth in it; and the playing is certainly good. As the Regular Army sergeant, Harry Andrews gives a commanding performance; there are lively sketches by Michael Medwin, Harry Landis, and Victor Maddern. Ronald Lewis plays the coward—there always has to be a coward in a war film—and plays him very well; George Baker is sympathetic as the untried young lieutenant; and the inevitable tough who really hates the enemy is given edge by Stanley Baker.

The British have begun making science-fiction films rather late in the day; the Americans have got a good start. But that does not mean American films are necessarily better. A new British one this month, *X The Unknown*, stands up to competition very well. As a matter of fact in some ways I prefer the British type: at its best it is more realistic. I was going to say more down to earth, and I suppose I mean that, too.

A Straightforward Shocker

American science-fiction is always leaving the earth, always taking a trip to Mars or some unknown planet. Unfortunately, outer space always looks much the same, and at the end of the journey the landscape tends to consist of the same plaster hills under the same rather disagreeable ochre light. The excursions have rather monotonous moral objectives, too: always very peace-loving, of course. Personally, I like my science fiction to be in the form of a straightforward shocker, and that is what *X The Unknown* is.

The story is about one of the mysterious visitors to earth who make such frequent appearances in the cinema nowadays. When I say 'visitors to earth' perhaps I am not being quite accurate: the visitor is not a thing from outer space, not a creature which turns up in a flying saucer; it is not one of those popular figures made up of ironmongery. Perhaps it is not fair to tell you exactly what it is, so I will not give the secret away. Let me just say that X turns up when a large crack suddenly appears in the earth in the middle of the Scottish moors.

There are some curious incidents. A little boy is dared by a friend to go at night into a deserted tower on the moors. Half-way there he turns tail and runs in panic; and next day it is discovered that he is badly burned. Two soldiers are left guarding the crack in the earth; and that, I am

At the start of 'X the Unknown' a crack in the earth appears on a Scottish moor: a scientist investigates . . .

Once 'X the Unknown' gets going very mysterious things begin to happen: a small boy is badly burned, and his parents are questioned by a leading scientist (Dean Jagger)—the hunt is on

sorry to say, is the end of them—nothing left except their rifles. A man at a local hospital goes the same way, and he is inside a room. Whatever X is, it has to be nourished, it has to eat. But it does not have to eat people; they are merely incidental. It has to eat radio-activity: in fact, it tries to get into the local atomic-research station and eat the cobalt.

All very absurd, I know; but on the screen the story is told with a certain realism, with attention to commonplace detail; the tension is effectively maintained; and the general effect is enjoyably alarming. The story is by Jimmy Sangster and the director is Leslie Norman. An American, Dean Jagger, plays one of the scientists, but the rest of the cast, including Edward Chapman and Leo McKern, are all British.

The third film I have to talk about is a farce: *The Green Man*, which is based on a stage play by Sidney Gilliat and Frank Launder. The authors have made their own adaptation for the screen, and they are the producers of the piece; the director is Robert Day.

An Artist in Murder

The Green Man is a farce about a professional assassin, an elaborate artist in murder who takes a pride in his work. His quarry is a pompous business-man whose removal needs elaborate planning. First of all the assassin has to scrape up an acquaintance with the man's secretary; he even has to go so far as to get engaged to the girl. The success of the plan depends on careful timing; it also depends on the vanity of the victim. The business-man loves the sound of his own voice; he can be guaranteed to listen to himself broadcasting. So the assassin gets a recording of a speech which is to be broadcast and the recording is incorporated in a fake radio set which contains a bomb. The victim is spending an illicit weekend with a girl in a country pub; the guilty pair are about to withdraw to their bedroom when the assassin, pretending to turn on the radio, sets the duplicate recording in motion; the quarry hesitates, but vanity wins, and the speaker turns back to listen to himself.

The success of all this as farce depends on the playing. It means playing in earnest: the assassin must be completely wrapped up in his absurdly ingenious scheme. Luckily the British cinema has exactly the right actor for the smooth, urbane murderer: Alastair Sim. Mr. Sim makes the whole ridiculous, heartless plan extremely funny; so funny that half the time one's sympathies are with him.

The Green Man, I say, is a farce. Another British film, *The Silken Affair*, wobbles between farce and comedy. It begins promisingly as the story of a law-abiding, rather commonplace professional man, an accountant whose humdrum life is suddenly invaded by adventure. He meets a French girl who urges him to break away from his routine; responding, he falsifies the accounts of two firms—stocking manufacturers—with which he is dealing. As a result the prosperous firm appears to be losing money, and the old-fashioned firm on the point of collapse looks wealthy and go-ahead. This naturally affects the price of the shares on the stock market, and the rest of the story is about the man's struggle to put things right.

Unfortunately the struggle is somehow out of keeping with the rather elegant beginning to the film. The accountant plans to break into his wife's private safe, so he visits a dealer in burglars' tools. The essence of good farce, as I say, is that you in the audience shall believe in it, and that the actors playing it shall appear to believe in it, too. I do not get the sense of conviction in *The Silken Affair*, but there are good moments. David Niven as the accountant does what he can with the part; and the girl is nicely played by a sparkling young person from France called Genevieve Page. (*Broadcast in the BBC's General Overseas Service*)

Jill Adams, Terry-Thomas, and George Cole play supporting roles in 'The Green Man,' a farce written by Gilliat and Launder, and starring Alastair Sim

In 'The Silken Affair' David Niven plays an accountant who is persuaded by a French girl-friend (Genevieve Page) to give up his humdrum way of life

Russia's Moving Frontier

PROFESSOR OWEN LATTIMORE, of Johns Hopkins University in the United States, discusses in a contribution to the 'This Day and Age' series on the Soviet Union the possible effects of that country's drive to open up and colonise its vast territories in Siberia and Central Asia

EXACTLY a hundred years ago in 1856 a young American named Cohens began a long journey through Russia and Siberia to reach the Amur river where he had been appointed commercial agent for the United States. His travels included about 3,400 miles by sled from Moscow to Irkutsk which he covered at the rate of about 100 miles a day. He wrote a report that enthusiastically predicted the development of Siberia, and of Manchuria, too, by the Russians. He described this vast region in his own words as 'lying inert and dormant half the year like one of its own peculiar quadrupeds sucking its paws to sustain animal life. This country, provided by nature with a natural road to the ocean, the Amur river, heretofore closed by barbaric powers, it is hoped will, ere long, awake to the scream of the steam-engine and the lightning flashes of the telegraph and be received in the embrace of commercial states as a worthy, though heretofore rather a 'sleeping, partner.'

There are other accounts of Siberia a century ago that are equally enthusiastic. In those days the United States and Canada also had not yet been crossed by railways, and the traveller who set out by land from the Atlantic coast to reach the Pacific had to count on many days in the saddle. The hardships of the Russian East were not overwhelmingly greater than those of the American West, and it was natural to assume that inland Russia, like inland America, would respond to the 'scream of the steam-engine and the lightning flash of the telegraph' with a burst of the progress and prosperity which the nineteenth century considered desirable everywhere in the world.

There is a reason for bringing up these echoes of a hundred years ago. Every time there is a new dispensation in Russia—after the fall of the Romanovs, after the death of Lenin, after the down-grading of Stalin—there are official declarations that the real future of Russia must be worked out through internal growth and expansion. Thus, when Mr. Krushchev advises the youth of the Soviet Union to seek their destiny by going east or going north he is saying something that catches political attention outside of Russia as well as inside Russia, but he is not saying anything startlingly new. He is re-phrasing, for the collective leadership of the post-Stalin era, a challenge to go out and conquer the wilderness that was an essential theme of Stalin's concept of 'socialism in one land.'

But, more than that, he is invoking a dream of the flowering of the wilderness of which men have been conscious for a century and more. The geography of this dream is the geography of Siberia from the dry but not uncultivable plains of Central Asia to the frozen but not invincible wastes of the Arctic. We all tend to become ideologists, professional or amateur, when we try to speculate on what the Russians intend by what they are doing. It is well, therefore, to keep coming back to the facts of geography, because no matter what the Russians are, and no matter what they want to be, it is the facts of geography that will favour them or hinder them in what they are trying to do.

Increasing Contacts with China

Apart from geographical fact, the most important political fact is that from the Russian revolution to the triumph of the Chinese Communists in 1949 Russia and China were under governments that were suspicious of each other, and limited their contacts with each other; but now they are under governments that want to increase their contacts with each other. They are both engaged in an enormous programme of railway building. First we have the old line of the Trans-Siberian linking up with the Chinese railways in Manchuria. Now we have also a second line of rail which from Siberia crosses Mongolia and enters north China well inland from Peking where it helps to open up, incidentally and significantly, a region of enormous coal-fields and iron deposits.

In addition, we have also to consider a third line much deeper inland on which construction is going ahead rapidly. This line goes from western China into Sinkiang or Chinese Central Asia, and will, perhaps within ten years, link up with the Russian rail net in southern Siberia and the republics of Soviet Central Asia. These triple lines of roughly parallel rail connection obviously have strategic significance. The lines that are deeper in the heart of the continent are more difficult to bomb but much more significant in the long run is the economic and industrial importance of these lines of steel.

A line of rail is a thing that in and of itself causes revolutionary changes. It taps new resources, opens up new markets, and not only brings new populations to new areas but changes the density of the population of old areas and creates new centres of gravity of the population as a whole. I think it is not too much to say that, economically speaking, the United States and Canada ceased to be 'colonial' only after they had built their lines of rail communication from Atlantic to Pacific.

The changes in Russia and also in China will not be less great as a consequence of the railway building that is now going on. It is partly in this context that we must consider the large-scale colonisation of

grain-growing lands that is being carried out in southern Siberia and Soviet Kazakhstan. Regardless of ideology, the Russians have to have more land under the plough because of their growing population and the increasing percentage of their population that lives in cities and works in factories and does not grow its own food.

In the middle of Siberia there is an immensely rich belt of black earth, the kind of soil found also in parts of old Russia, the United States, and Canada, that bears a heavy crop of grain year after year. It extends from Kurgan on the river Tobol eastwards to Barnaul and Vyišk, where begin the highlands that divide Siberia from western Mongolia and Chinese Central Asia. It is about a thousand miles wide from west to east but only about 100 miles deep from north to south. The ancient Siberian town of Omsk stands in the middle of it. Most of this black-earth zone was taken up long ago by Russian peasants with no ideology to guide them but the sure peasant instinct for a good soil to plough.

The margin of new colonisation extends to the south into the grassy plains of Kazakhstan. These plains become drier and more semi-desert the farther south one goes, and this means that the huge new Russian colonisation is not a first wave of settlement driving into the best and most ideal virgin land but a secondary wave spreading into a marginal farming country that may dangerously resemble the dust-bowl areas of the United States and Canada.

The Ancient Gamble with Nature

It is true that the danger can be kept down by good farming practices, such as leaving the stubble in the field over the winter instead of ploughing it under, and planting wind-breaks. But the risk is always there. This is the gamble that the Russians are taking, for no matter how scientifically they may farm it is not likely that they will be able to eliminate entirely the farmers' ancient gamble with nature.

The Russian passion for science is well known. If you are an ardent believer in science and also have an authoritative bureaucracy which carries out the advice of scientists the results can be spectacular. I think there is no doubt that if the Russians had not believed in their scientists and supported them they would not have been able to make the Soviet Union in forty years the second greatest industrial country in the world. On the other hand, the intention to be scientific is not in itself a guarantee that the right scientific decision will always be made, and if a wrong decision is made and backed up by all the authority of a powerful government the results can also be spectacular.

In 1944 I had the good fortune to be a member of an American mission which travelled all the way from the Soviet Arctic down into Soviet Central Asia. That is a long time ago now, but I still have some very vivid memories which involve personal opinions about the difference between the truly scientific and the doubtfully scientific. For example, on the Soviet side of Behring Strait, across from Alaska and very close to the Arctic Circle, they were breeding and fattening pigs. Undoubtedly pig-breeding in the Arctic is a scientific achievement of a sort, and the Russians were immensely proud of it. But when I mentioned this to Vilhjalmur Stefansson, a great authority on life in the Arctic, he was most impatient. 'Why don't they catch seals and fish,' he asked, 'or breed reindeer, or experiment with domesticating the musk dogs?' On this kind of question I must say that I think the Stefansson view is more scientific than the Soviet view.

Goodness knows how much money the Soviets have spent growing tomatoes under glass in the Arctic when they might get their vitamins in some other and more efficient way. These examples are perhaps trivial, but I think they illustrate the reality of what we may expect from the great Russian effort to widen the margins of agriculture in Central Asia, to penetrate the forests of northern Siberia, to make a going concern of the Arctic sea-route from the Atlantic to the Pacific, and to bring civilisation into the Arctic itself.

That reality will be a patchwork of wrong decisions and right decisions, of successful and unsuccessful experiments. When they make mistakes, those mistakes are likely to be persisted in longer than if they had been made by venture capitalists risking their own money because of the momentum that a wrong policy acquires when backed by a strong government. Nevertheless, the balance will certainly be one of successful achievement.

Where railways, mines, factories, laboratories, and experimental stations become going concerns man continues to direct them but is also carried along by them in an irresistible way in transforming the face of the earth and making history. As in the opening of the American and Canadian West, the Russian drive into the east and the north will be accompanied by failures, and even individual tragedies, but, as in America and Canada, the outcome will be something new in the world. (*Broadcast in the BBC's General Overseas Service*)

In this edition of the G.O.S. 'London Forum' three distinguished speakers under the chairmanship of Edgar Lustgarten discuss the question of 'liberty.' They are well qualified to do so—Bertrand Russell, Lord Hailsham, and Don Salvador de Madariaga—and they take as their starting point the famous essay by John Stuart Mill

A Discussion on Liberty

LUSTGARTEN: John Stuart Mill was born 150 years ago, and we are going to take as the starting point of our discussion the famous essay he wrote *On Liberty*. He was concerned, he said, with the nature and limits of the power which can be legitimately exercised by society over the individual: a question, he said, which is likely soon to make itself recognised as the vital question of the future.

It is unlikely that Mill had any inkling of the vast political changes which have swept over the world since he wrote, but there can be no doubt about the accuracy of his forecast. I would like to call on Russell, first of all, to make some assessment of Mill's relevance to our own days since, I think, he has some personal connection with him.

RUSSELL: I have this connection with him, that he was an intimate friend of my parents, and they asked him when I was born to act in the capacity of godfather so far as that was possible in the completely non-religious sense, to which he agreed. And so I have that connection with him; and I grew up in a world which greatly respected Mill. I may say that that respect has survived in me more for Mill as a moralist than for Mill as a logician or an abstract philosopher. His essay *On Liberty* is a very admirable piece of work. I think the particular dangers that he is guarding against are not exactly the same as those that we have to guard against, but I think the general principles that he enunciates, the general values that he sets forth, are still just as true, just as important, as they were when he wrote.

LUSTGARTEN: Madariaga, as a diplomat, as a statesman, and as a writer you have taken a very active part in the life of our times. I wonder how you see Mill's contribution to the subject of liberty, in the light of all you have lived through and written about.

MADARIAGA: I was particularly struck by the way in which Mill, in spite of the fact that he wrote so long before our time, has seen points that have come clear in our time. For instance, I see three points in his essay which are today extremely actual. Perhaps the biggest danger to liberty does not come actually from institutions, from the state, as from the tendency to conformity in society, a thing which I have observed to be dangerous in the United States. Another danger is the number of people who today would agree with the saying: 'People nowadays are more interested in ham and eggs than in their own personal liberty.' I always counter that by saying that the cure for that disease is a year in prison with ham and eggs every morning for breakfast. The third danger is that liberty has no sense without a framework of order. But that carries within itself a danger that in this balance between order and liberty, order may take too much importance, and then liberty may be snuffed out. These three points, I think, Mill has seen very clearly, and that is why I join Russell in my admiration for the essay.

In Favour of Non-Conformity

LUSTGARTEN: So far, Mill has been what in less exalted circles would be called 'pulling in the fans.' Are you going to be another one, Hailsham?

HAILSHAM: Fundamentally, yes. I think it is absolutely astonishing how much of present-day political thought was really started between 1840 and 1855—Marx, Mill. Mill was, I think, the first person who really pointed out the radical change in the argument about liberty which took over when people began to talk in terms of self-determination. He was the first person who saw that self-determination could actually menace liberty, because people, instead of regarding the parent as something alien to themselves, came to identify themselves with a sort of gigantic father-figure in Caesar, or Stalin, or whoever it might be, and to persecute the nonconformist minority. This essay *On Liberty* is really an essay in favour of nonconformity; and as such I am a hundred per cent. behind it.

LUSTGARTEN: There, Hailsham, you lead to a point which was in my mind. Mill limited the enjoyment of liberty to those communities which had achieved a degree of development. Do you think, Russell, that that limitation allowed him to be more exacting in his definition of liberty than he would have been otherwise?

RUSSELL: Oh, yes! If he had been speaking about all mankind he would have had to put limitations that he did not bother with. Because it is perfectly clear that liberty, in the sense in which he valued it, is only possible in an ordered and on the whole law-abiding society. Otherwise you cannot get it. If, for example, there was no law against murder and theft there would be much less liberty in the world than there is where there is such a law. In a society where murder and theft are habitual you could not begin to talk about the sort of liberty that Mill is thinking of. So that he had a certain right to limit it. There are certain things that you must get first.

MADARIAGA: Nevertheless, that points to one of the weaknesses I see in his otherwise admirable essay. I find it perhaps a little too individualistic for our day, a little too much like the counsel of perfection, and that explains why he should limit liberty to certain developed societies. In fact, every time we speak about a communal, collective

life we must not forget that we are speaking about something which is happening. While we are thinking, while we are talking, the river of collective life is flowing, and things are happening under our eyes. Therefore less developed societies must also have some use for their liberty, and they are not going to wait until Mill has defined, or we have defined, the conditions by which the liberty is going to be ruled.

Two Very Great Defects

HAILSHAM: I think to a modern reader Mill has two very great defects. In the first place, like most of the Victorian writers he was so discursive as to be dull, which perhaps is a misfortune rather than a defect but none the less is very marked, and so nobody can read him nowadays very easily. And, in the second place, in his exaltation of personal liberty he under-estimated self-determination. For instance, I think he said that despotism is a reasonable form of government, a legitimate form of government when dealing with barbarians; and he overlooked the fact that barbarians will fight for what they call their liberty with every bit as much determination—and, unfortunately, very often with more fanaticism—as an educated and civilised people will defend theirs.

RUSSELL: I think that is true. But of course liberty is a very vague word, and it used to be used primarily of national liberty, that is to say, not being subject to foreign power, which is a very small part of what Mill is thinking of; but it certainly was the habitual use.

MADARIAGA: I wanted merely to point out that in my opinion what Russell has just said is the crux of the matter: that liberty is used in ever so many senses. I should like to make it clear that in my view liberty is the faculty and the power of taking unhindered such decisions as we consider vital for our own personal destiny. That explains why sometimes it has been interpreted from the national point of view, because what we call national sovereignty could also be defined in the same way. A nation has sovereignty—and I believe very few nations have it, if any—when it can take vital decisions unhindered by any other foreign or internal power.

LUSTGARTEN: Madariaga has pointed out that you can have a different 'we' in this question, the 'we' that has the liberty. It might be the community, it might be the individual; and perhaps it is important for us to arrive at this stage at some idea of what the advantages would be if it were either the one or the other. Now, let us take the individual. Supposing it is the individual who has liberty, what are the advantages to him?

HAILSHAM: Fundamentally I think Mill hit the nail on the head when he talked about liberty as one of the factors—elements, I think he called them—in individual well-being. A man cannot really be a man at all in the full and developed sense of the word unless he has liberty in the sort of way that Mill was talking about. He must be able to think his mind and speak his mind and act his own personality, provided he does so within the reasonable limits imposed by other people's right to do the same thing. I feel myself that that is the ultimate defence of liberty: it is the essential element of individual well-being.

RUSSELL: I should like to take an illustration where there is a

Salvador de Madariaga

Bertrand Russell

Lord Hailsham

Edgar Lustgarten

great deal from history to be learnt, and that is religious liberty. For a long time practically all religions considered that it was proper to persecute, and that a man should not have liberty to hold whatever religion seemed to him right. Gradually the world learnt that it was better to let a man have the religion that he believed in because religion is a very serious thing and a matter in which a man with much moral fibre will not readily give away. Therefore you are liable to punish the best people in the community if you do not allow religious freedom.

MADARIAGA: My feeling is that the question that you have put forward depends on what our idea is of the chief aim of man. I will not quote to you the Scottish catechism about it, as it is highly religious. But in my opinion the Jeffersonian view that the aim of man is happiness seems a bit 'moony.' I do not think that happiness can be realised in this world, and therefore it is no good pursuing it. I think that the real aim of the spirit of man is experience, knowledge through experience or experience through knowledge, and that experience can only be had in freedom.

HAILSHAM: Well, I absolutely accept that because I would be in the minority if I pursued the argument any further, I think a minority against both the view and Mill; because I should have maintained that, although you are absolutely right in putting the fullness of personal existence as the ultimate aim of man, Mill went astray when he defined that solely in terms of self-protection, and that he really ought to have invoked the traditional metaphysics of the Christian world in order to support it.

Happiness and Freedom

RUSSELL: I do not think I should agree that happiness—the general happiness—is not a proper aim for one. I think it is a proper aim: not personal happiness but the general happiness. I do not think that many people can be really happy unless they have a certain degree of freedom, and so it comes back to a very small disagreement in practice.

LUSTGARTEN: If we have established that there are these great advantages in liberty, you have got to take other considerations into account, too, and see whether those might possibly outweigh them or counter-balance them. Now, supposing you have a society which is organising itself to achieve power, to achieve economic advantage at the expense of another power: how would you, Madariaga, balance that against liberty in itself?

MADARIAGA: It seems to me that individual freedom has a very considerable advantage for society as well. To begin with, it is accompanied logically by freedom of thought, and society can only know itself in freedom of thought, in freedom of transmission of thought. Secondly, if you do not have what I call the freedom of vertical movements in society, then that society is going to be ill. That is why it seems to me important that society, while organising itself, should not over-organise itself and so prevent the vertical movements, the fall of the inept and the rise of the apt.

HAILSHAM: I entirely agree with that as a comment. I feel myself that the Marxist would say: 'But none of you have really talked about what we call economic freedom.' That is, I think, a fair criticism of Mill: he was writing before the limitations and defects of the capitalist *laissez-faire* system were fully realised. I feel that the modern Millian—if we may describe ourselves as such—would have to defend Mill against the Communist by pointing out the extent to which individual liberty is itself a safeguard of economic freedom and a prerequisite of it.

RUSSELL: I am not sure that I would put it in that way myself. I should say that economic freedom is scarcely possible in a world of really elaborate industrial technique: that that makes the economic freedom that you had in the days of handcraftsmen and peasants a thing which is no longer possible. We have got to try to secure the goods that went with economic freedom in some other way. We have got to find the way of safeguarding freedom of thought, freedom of opinion, freedom of expression, without that same degree of economic freedom that I think Mill designed.

MADARIAGA: In my opinion the chief thing is spiritual freedom. If the technical era is against it, we must consider it as a temporary attack on our spiritual freedom.

RUSSELL: I did not mean to say that there should be limits on spiritual freedom. What I meant to say was that we should find methods of reconciling spiritual freedom with a somewhat rigid economic framework.

HAILSHAM: You are really talking about different things, in a way, because in a sense I accept the Marxist criticism. I would agree with Madariaga that what he calls spiritual freedom is the fundamental thing. But the Marxist is talking sense when he says that you cannot have spiritual freedom without a certain quantity of ham and eggs.

RUSSELL: I would put it this way. The Marxist goes to the man who has no ham and eggs, and he says: 'Put me in power; give me absolute power, and you'll get the ham and eggs.' He is put in absolute power, and the ham and eggs are not there.

LUSTGARTEN: We are talking about liberty and its advantages to this one and to that one, and what possible counter-balance there might be by other advantages. What are the criteria, Madariaga, by which one judges liberty? How does one establish it, by what tests?

MADARIAGA: My way of looking at liberty is to say: 'Am I in a position to take such decisions . . . as are fundamental for my destiny, for my own fate?' For instance, am I able to choose the place where I am going

to work; am I able to choose the woman I am going to marry; am I able to choose the church where I am going to pray; or to ignore the church where I am not going to pray? Am I going to be able to decide things that are important for my life without somebody interfering?

LUSTGARTEN: Hailsham, do you recognise any close relationship between liberty and the legal system?

HAILSHAM: In practice, and historically, an enormous relationship. When we are dealing, of course, with the abstract conception of liberty I do not find any close relationship at all. But in actual practice in Britain we can claim to have grown up as a country in which liberty has almost become a national religion at times. It has been very closely developed in connection with legal processes such as *Habeas Corpus*. I am not by any means saying that they correspond to anything like an abstract ideal of freedom. But I think they were a very relevant means towards obtaining it.

MADARIAGA: Speaking as an exile from a country where all these things existed and were fairly flourishing when they disappeared in recent years, I can add to what you have said, Hailsham, with all of which I agree. All that you have said is as nothing if there is no freedom of the Press.

LUSTGARTEN: May I hold the freedom of the Press for a moment? I have a feeling, Russell, that while you might not differ violently with Hailsham over the question of the relationship between liberty and the legal system you would at least have some gloss to put on what he says.

RUSSELL: I have this gloss: 'What sort of matters should the law concern itself with?' There is a point about liberty that I do not think we have emphasised enough, and that I want to bring out: the average man in any community, while he dislikes very bad things, also and equally dislikes very good things, and very good things can only exist in a community if there is an extraordinarily strong barrier against interference with the best people.

LUSTGARTEN: I understand, Russell, that what you mean is that the best people are interfered with in many cases by the legal system acting on behalf of what you would call not the best people?

HAILSHAM: I think I would accept that. I think Mill makes the point extraordinarily well in his essay because he takes two startling examples—the trial of Socrates and the Crucifixion, which he classes together, and I think rightly—of the ordinary man being the worst tyrant when he enforces conformity with his rather second-rate morality. It is true that he persecutes the worst and wickedest and most profligate of mankind, but also, unfortunately, he persecutes the prophets. What I had in mind was simply the machinery of law which ought to be brought into force in order to prevent the interference by the state with individual freedom.

MADARIAGA: It seems to me that what lies behind what you both have been saying is that there is something in the community, some kind of hidden spirit, some kind of guide or sense which gives life to its institutions, because any amount of judicial machinery is not going to save liberty if there is not behind that machinery a sense that is going to control it in the direction in which we all desire to go.

Freedom of the Press

LUSTGARTEN: Madariaga, you did raise the point about the freedom of the Press, which you exalted. Russell, would you take as high a view of the freedom of the Press in relation to liberty as Madariaga did?

RUSSELL: I should not put it very high. I think *Habeas Corpus*, for instance, is enormously important. That is a liberty which, on the whole, most countries do not have.

LUSTGARTEN: Now, Hailsham, before we conclude, I think it might be worth my while asking each of you in turn to say—after discussing this question of liberty—how you regard the value of liberty, using 'value' in a different sense from advantage? You know what I mean by that: the value of liberty in its spiritual, in its absolute, and in its abstract sense.

HAILSHAM: I put it very nearly at the top. I think that my whole philosophy of man depends upon his having liberty.

LUSTGARTEN: And supposing he has liberty and nothing else, has he therefore achieved his existence, has he achieved the purpose of his life?

HAILSHAM: Well, there it is for him to use it rightly, which is the purpose of his life.

RUSSELL: I think I should agree with Hailsham. I think that without liberty no great good is possible. But, given liberty, you do not necessarily get a great good because, of course, you may misuse your liberty.

MADARIAGA: I shall only add this thing to the two points of view, with both of which I agree: that just as air, for instance, is composed of myriads of myriads of atoms, we can consider history as composed of myriads of myriads of personal decisions taken by human beings at every second or minute of life. The more personal liberty there is the richer will be these decisions, because the wider will be the scope of these decisions. Liberty is the guarantee of a full and rich history of man. (*Broadcast in the BBC's General Overseas Service*)

In this week's 'London Forum' Bertrand Russell is one of the speakers in a discussion on 'Is an Elite Necessary?' (See note on page 17)

Prize Guernsey and Jersey cattle parading in the judging arena at Olympia

The Supreme Champion of the Show—'Carbrook Aerial 17th,' an Ayrshire cow

THE DAIRY SHOW

JOHN TIDMARSH reports on this year's edition of an annual event in London where 300 cattle as well as goats, rabbits, poultry, and other domestic animals competed for dairy farming's great prizes

I BELIEVE 1956 is likely to be remembered for a long time as the year when summer got left out somehow. The British farmer may also look back on it as a difficult time, with wet weather threatening at one point to ruin the harvest. Yet a visitor to Olympia for the opening of the seventieth annual Dairy Show would not have noticed much to suggest the trouble and worry there had been. Despite a recent outbreak of foot-and-mouth disease in certain counties there was still an entry of nearly 300 dairy cattle, representing the pick of British herds.

I stood watching a herdsman preparing a Jersey cow for the show ring: he worked with great attention to detail, and finally he pulled out a brand-new yellow duster and vigorously polished the horns. That was the sort of thing that was going on everywhere I looked: Ayrshires being brushed, Guernseys having their tails plaited, Shorthorns getting a quick trim with clippers, for they were all in fierce competition for one of dairy farming's great prizes: the Supreme Championship of the Dairy Show—the Cow of the Year, you might call it.

But looks alone are not enough to win the individual championship or the breed championship: there are milking trials for yield and quality, and, incidentally, during the show the animals are expected to produce about 10,000 gallons of milk.

The show includes dairy-farming machinery and classes for bacon, cheese, butter, poultry, rabbits, goats, and pigeons, but the emphasis, of course, is on milk. One of the main talking points among visitors to the

Dairy produce also qualifies for prizes: a judge smelling a sample of cheese

Zoe Newton, seen in 'Drink More Milk' posters, with a competitor

show was undoubtedly the problem of getting people to drink more milk. While production has been going up the amount of milk drunk in Britain has remained more or less the same. I talked about this problem to Mr. Trehane, the Vice-Chairman of the Milk Marketing Board: 'For years we have been saying that we want more milk: we want to have the certainty of supplying the consumer with the milk that he or she wants to take into the household and drink, and we want to make sure that we have got enough milk to make the manufactured products—the butter and cheese—that we would like to supply. We think our butter and cheese are as good as any in the world, if not better, and it is really only now for the first time that we can be sure of supplying those throughout the year in the very best of qualities.' (Broadcast in 'Radio Newsreel')

Judging a Yellow Jacobin pigeon

JOHN WILSON, speaking to listeners in West Africa, drew on his experience as a former Inspector of Schools in the Gold Coast to illustrate the mistakes that arise when people are able to read but cannot understand what they are reading .

Literacy Is Not Enough

I HAVE a confession to make—but wait a moment: before I make my confession, you must share a memory with me. Were you at school before the war? Do you remember those old Standard Six and Standard Seven examinations? It was Standard Six in Nigeria and Sierra Leone, and Standard Seven in the Gold Coast. Do you remember how you used to be examined in reading? You took your school reader, formed a line outside the headmaster's office and took your turn to go into that dreadful place, all alone and friendless.

Inside, sitting behind the desk was a terrible fellow—an Inspector of Schools. He gave you a page number in your reader. You started to turn it up: somehow your fingers had turned into pieces of stick that could not find the right page. This terror behind the desk then asked you to read aloud: your throat felt as if it had swallowed the dust of a whole Harmattan season; your knees had gone weak, your heart was thumping, and the sentence you were trying to read seemed to play hide and seek with you.

Somehow you stumbled on. Then . . . Thank heaven! You had reached the end of the passage. But worse was to come. That terror behind the desk began to ask questions about what you had just read. Not only was he a terrible fellow, he was also a cunning and spiteful fellow, for he had taken down from the office walls all the pictures, charts, maps, and diagrams that might have given you even the slightest clue to an answer.

Trying to Make Things Easy for Pupils

Now here is my confession. If you were at school in the Gold Coast before the war, too often that terrible, cunning, spiteful fellow behind the desk was me. But I am going to confess something further. I was not really spiteful and I was not terrible. I was cunning, but I used my cunning to try to make it easy for you. Now why? Well, I thought the books you had to read could not possibly interest you. Two of them I recall especially: *The Vicar of Wakefield* and *The Mill on the Floss*. There is nothing wrong with these books at the right time and in the right place, but the end of an elementary-school course is not the right time or place for them in the life of any boy. Notice I said any boy, for I am told that the girls liked these books. Apparently all the business of the Vicar's daughters getting themselves paired off and married meant something to these girls.

Now there is an interesting thing: apparently the girls got on better with these books because they meant something to them. I remember a very striking experience about that. In those far-off days in the Gold Coast, twenty-odd years ago, I knew a house steward and a cook. Now the steward was a very ambitious fellow for those far-off days, and he wanted to learn to read. His employer, thinking he was doing a great kindness, gave him a school primer and started him off. Week after week employer and steward ground through words like mat, hat, sat, cat. Laboriously the steward began to read sentences, and after a year of hard trying he could triumphantly read sentences like 'An ant is in a tin.'

Now, while all this was going on the employer found a marked improvement in the food appearing on his dining table. Indeed, from being just passable the food had become really good. Obviously the cook was improving. His employer told him so: he congratulated him and asked him where he was learning to cook all the new dishes? The cook produced a thin battered red book entitled: *Aunt Kate's Cookery Book*. The employer was astonished. He said to the cook: 'But cook, you can't read.' The cook was indignant: he had taught himself to read from *Aunt Kate's Cookery Book*.

And all this began, mark you, by the cook learning to read the names on the tins, jars, and bottles in the stores where he went to do his marketing. It all began at the same time as the steward had begun to learn reading. But all the steward could read was this silly little sentence: 'An ant is in a tin.' The cook could read really useful things such as how to grill steaks and thicken gravy, bake, roast, boil, and broil. The steward was getting nowhere with his reading about the ant in the tin. What ant? What tin? What is it doing there anyhow? Do you care about that ant? I do not think so. I do not care, and the poor steward who was doing the hard work of trying to learn did not care: sentences like these did not mean a thing to him at all.

But the cook! The reading he was doing was full of meaning: it was applied to something in his everyday life. The reading told the cook something that he could understand, he could act sensibly from what he read. Yet, mark you, the words he read were much more difficult than the two- and three-letter words read by the steward. Now I think that is a very interesting thing. When we read, the shortness of the word does not help us much. A word is not simple because it is short or simple to look at or even to say. What really helps us is reading material that means something to us: that has something to do with what we can experience.

A year or two ago I had a very startling reminder of this. It was when there was great talk of the atom bomb and how if scientists were not careful there might be an end to civilisation. Well, at that time I thought it was my duty to learn something about nuclear physics. I got a book about it—a book as simply written as I could find. I started to read it, but I soon got lost. True, I could read the words and sentences, but they did not mean much to me. You see, I had done no regular scientific study for almost thirty years.

The further I went into the book the less I understood, and finally I gave it up altogether. I could not read and understand it. It was just as if I was illiterate. Indeed, in this particular thing I was functionally illiterate: I could say the words and sentences, but I could not understand what they meant.

There was nothing in my daily life to which I could relate my reading about nuclear physics. I am now beginning to be able to read simpler articles about nuclear physics, because in the past two years I have gone to listen to teachers explaining and demonstrating nuclear physics. I have looked at models, pictures, and films about nuclear physics. Until I did that I was quite illiterate in nuclear physics, and although I have tried hard I still am not far along the road of literacy.

Now, of course, if we read about something we do not understand, or only half understand, we can get some very strange, foolish, and even dangerous ideas. Just imagine what could happen if I with my poor literacy attainment in nuclear physics, or half-knowledge, were asked to work in a laboratory.

I remember a very striking case of this kind of semi-literacy and half-knowledge. More than twenty years ago I was learning a certain West African language. Several evenings a week a schoolboy who spoke this language very clearly and very well came to converse with me. One evening he said to me (in his African language) what I took to be a very simple sentence. He asked me if I knew what it meant. I replied that I did, and I translated it thus: 'The river has forced a way into the lagoon.' He laughed very heartily at me and told me that I was wrong and that the sentence meant: 'There is an unwelcome stranger or spy amongst us, be careful what you do and say.'

When we examined this, I found that in the boy's country there was a very large and important lagoon. Flowing near to the lagoon was a river separated from the lagoon by a sandbank. Sometimes, during the great rains, the river forced its way through the sandbank, broke into the lagoon, flooded the surrounding villages, spoilt the fishing, and generally spread disaster. When I learnt this, I then saw how the sentence got its true meaning. You see, I could give a surface meaning to all the words in the boy's sentence, but until I knew something of the geography and tradition of his country I was unable to give the sentence its true meaning. It meant nothing to me: I was functionally illiterate.

The Case of the Cheque-Book

However, my turn came to laugh at the boy. When I was paying him for his help he asked for quite a lot of money. I replied that I could not afford to give him so much. He said that I could get as much money as I wanted if I took my cheque-book and wrote to the bank for it. I found out that he really believed that if you had the right paper—a bank cheque—and knew the right words to write on it, you could get as much money as you wanted. All he knew of cheques was that he had seen me with them and had seen me get money for them. He was looking forward to the day when he had the special trick of literacy that caused such magic to happen. It took me a long time to explain to that boy the full meaning of the few words that appear on a bank cheque. He could read these words all right. He could say them, but to him they meant some sort of magic that produced money. Of course, you see the danger he was in: until he became fully literate about bank cheques he might have tried to get possession of one, fill it up, and try the magic.

I think you can see my drift. All this mass literacy which we all want, I as much as anyone, has got to be thought about. First, have the masses got material to read that means something to them? If not, they are not going to make much progress, no matter how simple and short the words may be in themselves. Second, as people acquire the power of reading, is there any provision for widening their knowledge so that what they read continues to have full meaning for them? We have seen that if reading has no meaning, or even half meaning, it may be very dangerous. Indeed, I think reading with a half meaning is the most dangerous kind of all. If reading has no meaning we soon stop—we are very conscious of our ignorance—but if it has half meaning we often think we know it all. Remember how my half knowledge of an African language caused a boy to laugh at me. Remember, too, how his half knowledge of the words on a bank cheque gave him some very dangerous ideas. (*Broadcast in the 'I Remember Africa' series*)

London Pays Tribute to Smuts

GODFREY TALBOT reports the ceremony which marked the unveiling in London's Parliament Square of Sir Jacob Epstein's strikingly executed statue of the great Commonwealth warrior, statesman and philosopher

MEMBERS of both Houses of Parliament, along with diplomatic representatives and other dignitaries, recently gathered in the big square facing the Palace of Westminster for a special unveiling ceremony. This was performed by the Speaker of the House of Commons, Mr. W. S. Morrison, and now a great new statue of the late warrior, statesman and philosopher, Field-Marshal Jan Smuts, looks out over London. Sir Winston Churchill was to have unveiled the statue, but did not do so on doctor's orders.

Smuts is shown wearing Service uniform, with breeches and leggings, but hatless, hands clenched behind his back, striding forward with the uplifted face wearing a characteristically keen, indomitable air. But the most striking thing about the statue of the Field-Marshal is the colour, for the sculptor, Sir Jacob Epstein, had had it patinated a light lime green, which will, of course, mellow with the years.

It was a crisp and golden autumn morning for the ceremony, with a sky as blue as the sky of the African veldt, and the London plane trees gently showering their leaves down on the people assembled in front of the statue, among them Government Ministers, Service chiefs, and members of the Smuts family, including a daughter and six grandchildren of the statesman who live in Somerset.

The Speaker read a message from Sir Winston Churchill, who said he was grieved that he could not be there to salute the memory of his old friend who served the Commonwealth and Empire so long and so well. And Mr. Morrison paid his own tribute to the great man: 'I never met a man like him for combining harmoniously two qualities which in other men often fight against each other. He was as much at home in the abstract as in the concrete

Now the Field-Marshal looks out over London within sight of the Palace of Westminster in whose councils he so often participated

sphere of mental activity. He revelled in speculative philosophic discussion. His mind flew on strong pinions in that rarefied atmosphere. He was at the same time an intensely practical man of affairs and a formidable soldier.'

Then the Speaker pulled away the flags of the United Kingdom and the South African Union, and the statue of Jan Smuts stood revealed. (Broadcast in the General Overseas Service)

The statue, seen here in close-up, portrays the uplifted face of Jan Smuts wearing a characteristically keen, indomitable air

something about the country in which I was born. And in subsequent years I often walked out to Irene to look at the house in which he was one day to die.

During the war and after I interviewed him on a number of occasions. One cold morning—I think it was in 1944—I waited for him with a good many other reporters at Northolt airport. The aircraft landed and Smuts stepped down. We surged forward in a free-for-all. Goeie môre, Generael, hoe gaan dit?' I called out. 'Goed dankie,' he replied, 'en hoe gaan dit met jou?' And he came towards me. I told him my name and he immediately asked after my father—a man who had died thirty years before.

The interview he gave was superb. He was fascinated, this world statesman, fascinated by the fact that he had been given a boiled egg for breakfast 30,000 feet up in the clouds over Marseilles. To him it was a matter for wonderment, and his blue eyes twinkled as he told me of the incident. As he spoke he looked like a boy. And then he sent a personal message by radio to his wife 'Ouma,' in South Africa. It was the sort of message millions of Servicemen had sent in the war: laconic, brief, and warm. . . . 'I've arrived safely. Everything is under control, and you're not to worry.'

On another occasion he was being presented in London with the freedom of a Scottish city—Aberdeen, I think it was. He refused to have my microphone on the table. 'If I can't make myself heard in this room without this contraption,' he said to me, 'then I don't deserve the freedom of anywhere.' One of his gifts that day was a beautifully carved box of stinkhout-boom. Now it had an inscription on it which the Lord Provost, at the moment of presentation, found difficulty in reading. Smuts's eyes twinkled. 'You're too old for this job,' he said to the Lord Provost with a smile, 'but my eyes are still good. Let me read it.' And he did.

Well, those are just some of the many memories of this remarkable man that one single South African will always keep shining and untarnished for his children and his grandchildren. And they are memories, anyway, that will always come startlingly alive whenever I stand in Parliament Square and look up into the finely sculpted face and piercing eyes of the 'Oubas.'

(Broadcast in 'Across the Line')

'A Legend in his Own Lifetime'

STEPHEN GRENFELL, who was born in South Africa, recalls some of his many personal memories of a remarkable man

IT did not need the statue in Parliament Square to confirm the place that Jan Christiaan Smuts holds in the hearts of the British public. To the British people not only had he become a legend in his own lifetime: to them he had been a legend most of his lifetime . . . for fifty years, in fact. They had first come to hear of him as the young, steely, unorthodox guerrilla who had led a fabulous long-distance commando raid in the South African war, and for the next half-century the pages of the history of the British Commonwealth and Empire are starred with the name of this man who was to become one of its most remarkable sons.

The British forgive easily but they don't forget with equal facility, and Smuts's action and policy after the South African war endeared him to a people who most admire those qualities that were concentrated in his mind and body. If evidence were needed to confirm this it was forthcoming the day he died. The BBC that day commissioned me to take a recording car into the streets of London to find out what the ordinary man and woman felt at the passing of this great Commonwealth figure. Time was short, and on the face of it the assignment looked difficult. Perhaps in those uneasy, hard-up, rationed post-

war years one might have expected a somewhat uninterested: 'General Smuts . . . he's that South African chap, isn't he?' But the legend was alive, strong and living and concrete.

I did not speak to any passer-by that day who did not feel personally affected by the death of the 'Oubas.' A middle-aged Welsh miner who happened to be on holiday in London recalled a moment thirty years before when Smuts had addressed a gathering of Welsh miners who were in ugly mood. Smuts had asked them to sing, because he said he had heard what fine voices the Welsh possessed, and in the lilt of those Welsh voices the moment of trial had passed.

A Yorkshire ex-soldier had heard Smuts address South African troops in the desert during the war, had seen him move among and talk to those troops. It was something, said this ex-infantryman, that he would never forget. The doorman of a London hotel had on more than one occasion opened the door of Smuts's car for him. The crisp 'Thank you,' the brief smile, the straight, appraising look from those clear blue eyes were memories that made the passing of Smuts a personal loss to this man.

You see, I grew up, in a way, under the shadow of General Smuts. I was born in Pretoria in 1913, and spent my boyhood in that city. When I was about six I was taken to General Smuts to be presented, and, the story goes, he lifted me on to his knee to tell me

Rembrandt's group-portrait of the Amsterdam Guild of Marksmen—once deemed a failure—has since become world-famous and is now known as 'The Night Watch'

'Portrait of a Family,' painted about 1668. Rembrandt shocked the people of his time by the vigour and coarse texture of his brushwork, and by his refusal to flatter

'The Anatomy Lesson of Professor Tulp' was Rembrandt's first major commission: leading members of the Amsterdam Guild of Surgeons are shown listening to a lecture

Young and vigorous, about 1629 Five years later, in martial uniform

'There is an autobiography of Rembrandt, not written in words but painted in colors'

The 350th Anniversary

LE ROUX SMITH LE ROUX, a South African artist, gave this talk after going to the works of Rembrandt to celebrate the 350th anniversary of his birth. The show that was designed to

THIS particular Rembrandt anniversary is being celebrated by exhibitions all over the world. In spite of the fact that the Dutch authorities could not borrow from abroad every single Rembrandt they would have liked to include, they were nevertheless able to assemble the most comprehensive collection of Rembrandts seen in our time. The exhibition was jointly organised by the Rijksmuseum, Amsterdam, and the Museum Boymans, Rotterdam. It fell into two completely separate parts which the museums then exchanged with each other after the first three months.

The first part, which originally opened in Amsterdam and then went to Rotterdam, consisted of 100 paintings mainly borrowed from countries as far apart as the United States, Australia, Canada, Spain, and Scandinavian countries, France, Ireland, Great Britain, Germany, and Austria. Even Russia lent six Rembrandt masterpieces from the Hermitage Museum, Leningrad—the first time this institution has contributed to a loan exhibition abroad. The second part of the exhibition—and that was moved from Rotterdam to Amsterdam—consisted entirely of a superb selection of the artist's drawings and engravings, without which no show could reflect his full genius.

As it was part of the purpose of this commemorative show to reveal the man as well as the artist the collection of paintings was accompanied by a score of letters and documents relating to Rembrandt. Who was he, this man whose name is familiar and revered to the ends of the earth? Rembrandt Harmenszoon van Rijn—a name which literally means: Rembrandt, the son of Harmen of the Rhine. The father, Harmen van Rijn, was a miller whose mill indeed stood on the edge of that river just outside the town of Leyden. It was a good mill. It provided the means of giving a first-rate education to the miller's fifth and cleverest son, the young Rembrandt.

He Renounced Learning for Painting

The entry of his name on May 20, 1620, in the register of students of Leyden University was the first document in the exhibition. But the fourteen-year-old boy soon renounced the career of learning his ambitious parents had proposed for him. The creative pressure within him had already grown too strong. He wanted to draw and paint, and could not be deflected from this decision. With an understanding doubtless tinged with disappointment they then apprenticed him to the Leyden painter, Jacob van Swanenburg. After three years Rembrandt decided that he could learn no more from his painstaking but rather mediocre artist, and set off to Amsterdam to work under the distinguished painter Pieter Lastman. Six months later, at the age of nineteen, he returned to Leyden convinced that his powers henceforward needed exercise and not training, and set up a working studio jointly with his painter friend, Jan Lievens.

There is an autobiography of Rembrandt in existence, not written in words but painted—painted with self-revealing insight into the most remarkable series of self-portraits any artist ever left behind him. More

the death of his wife, about 1645 In 1661 he saw himself as the Apostle Paul
to the most remarkable series of self-portraits any artist ever left behind him'

In 1634 Rembrandt married Saskia van Uylenburgh, and in the same year he painted this lyrical picture of her as Flora, the Goddess of Spring; Saskia died all too soon

the man as well as the artist

than sixty of these portraits have come down to us, the earliest painted in 1629, the last in 1669, the year of his death. Eleven of these self-portraits had been borrowed for this exhibition, including one from Her Majesty Queen Elizabeth. It was not vanity that made him return again and again to his own face: it was the convenience of being his own unpaid but intelligent and co-operative model, instantaneously at hand if the artist was in the mood, and ready to assume any expression or costume.

The mixture of concentration and slightly gauche self-confidence in the expressions of the earliest self-portraits reveal how swiftly the young painter's star rose at first. By the time he was twenty-five his reputation as a painter of portraits, and particularly of biblical scenes, was beginning to spread beyond the borders of his own country, and through his more easily portable engravings his fame and influence travelled far and wide. Rembrandt himself did not travel. His financial success at first enabled him instead to bring together an art collection with a strong classical and Italian Renaissance flavour, the inventory of which—drawn up in 1656 preparatory to his possessions being auctioned to meet his debts—was one of the most significant documents in the exhibition.

Picture that Established his Name

Towards the end of 1631 the twenty-five-year-old painter decided to settle in Amsterdam in order to tackle his first major commission. This was the portrait group for the Guild of Surgeons, well known by its title, *The Anatomy Lesson of Professor Tulp*, rightly accorded a place of honour in this exhibition. Instead of the stilted poses of the fashionable group-portraits, Rembrandt brought the sitters together in completely natural attitudes. Their faces are absorbed in concentration as they watch their distinguished colleague the professor, each painted with great perception. The faces are evenly lit throughout, but already there is the telling use of Rembrandt's dark transparent shadow effects. No wonder this picture established his name for good in the competitive atmosphere of Amsterdam, where he had taken lodgings with Hendrick van Uylenburgh, the art dealer through whom he was to meet many of the leading artists and connoisseurs of the day.

Here, too, he met his friend's niece, Saskia van Uylenburgh, fell passionately in love, and married her in 1634. The portraits he completed of Saskia during her short life show his loving preoccupation with her. She seemed to bring a certain dash and gaiety to his outlook, exemplified by a remarkable and famous double portrait in Dresden—not in the exhibition—in which she sits on his knee while he toasts her with a long glass of wine. Most notable of all is his almost lyrical painting of Saskia as the goddess Flora, from the Hermitage in Leningrad, and once in the collection of Catherine II of Russia. The breath-taking delicacy of the floral elements of her head-dress and staff makes one wish that Rembrandt had painted flowers more often.

But along with much marital happiness some heavy shadows now

Bellows' New German Dictionary

"By the inclusion of numerous idioms and phrases the dictionary is also to be commended for what it does in extending the user's facility in comprehension and expression. The main work is usefully supplemented by a brief section outlining the main rules in German grammar with the several declensions, conjugations, auxiliaries, etc. In all there are about 700 pages in a compact crown octavo volume." *Investor's Chronicle.* 15s. net.

Critical Approaches to Literature

DAVID DAICHES 25s. net

Dr. Daiches examines the philosophical foundations of criticism and goes on to consider practical criticism. He then considers the relationship between criticism and various spheres of learning, and an epilogue contains a summary of the aims and value of the art. John Holloway has written that the author "is among our major unexpanded reserves as a critic and scholar."

English People in the Eighteenth Century

DOROTHY MARSHALL 30s. net

The author relates the many aspects of society—political, economic, religious and constitutional—to develop her study of this period. Her many references to individual people help to bring the past to life.

LONGMANS

Programmes for West Africa

LISTENERS in West Africa should look carefully this week at the Special Services columns on pages 19-25 where they will find that considerable changes are being introduced into BBC broadcasts to their area.

To ensure better reception the time of transmission of the West African Service has been changed from 20.15 GMT to 09.00 GMT. Difficulties in reception during the evening hours have been reported from many areas, so it was decided to make a change. The new transmission time will mean that even when conditions are generally not good direct listeners should enjoy far better reception. At the same time, local broadcasting services will be able to take advantage of the improved conditions to record the programmes and rebroadcast them later in the day.

Changes have been made also in the programmes themselves. On Tuesday of each week listeners in the Gold Coast will be able to hear their own magazine programme—'London Calling the Gold Coast,' later, of course, to become 'London Calling Ghana.' Nigerian listeners will be able to enjoy 'London Calling Nigeria' on Thursdays, and listeners in Sierra Leone and The Gambia their programme on Saturdays.

These programmes, which can be heard both through direct short-wave listening and through later rebroadcasts by local stations, will be introduced by their own signature tunes, and will contain news interviews, talks, and music of particular interest to listeners in each territory. Each programme will be followed by 'Listeners' Choice'—of gramophone records based on requests from listeners in the territory concerned.

On Sundays, Mondays, Wednesdays, and Fridays 'Calling West Africa' will continue to provide programmes of interest to West Africa as a whole, covering a wide range of subjects from the set books for the Overseas School Certificate examinations to the popular Sports Diary by John Tully, and a new feature will be a fortnightly programme especially for West African women.

The first two talks in a weekly series on 'Religions of the World' will be given in 'Calling West Africa' on Monday and Friday by Dr. Norman Goodall, Chairman of the Liaison Committee between the International Missionary Council and the World Council of Churches. He will talk first on the history of Christianity and then on the tenets and practices of Christians. Similar talks by speakers of authority on the Muslim, Hindu, Judaic, Buddhist, and Confucian religions will follow in subsequent weeks.

Again with the object of improving reception for both direct listeners and rebroadcasters, the weekly programme 'Calling Rhodesia and Nyasaland' will be transmitted on Fridays at 10.00 GMT instead of 16.15 GMT.

Rembrandt (Continued from preceding page)

began to fall across the path of the painter. Each of their first three children died in infancy. Then in 1641 she gave birth to a fourth, the boy Titus, of whom his father was to paint some exceptionally tender portraits. At this time Rembrandt was immersed in his biggest commission of all, a monumental group-portrait ordered by the Amsterdam Guild of Marksmen of one of its principal companies of civic guards setting forth. Dirt and discoloured varnish darkened it to such an extent that it became known as *The Night Watch*, and by that wrong title it has become one of the most famous works in the history of art.

Protestantism in its most austere form flourished in Holland once the people were released from the oppression of the Roman Catholic Spaniards. So there were no religious murals or great altar-pieces commissioned by the Church in Rembrandt's day. The most sought-after commissions were these large portrait-groups of guilds and corporations. The obvious unpopularity of *The Night Watch* meant that few orders of this kind would come his way in the future. This would have mattered less if Rembrandt were not already in financial difficulties.

When the boy Titus was four, Rembrandt took Hendrickje Stoffels, a young woman-servant, into his household. She brought some new warmth back into his existence. Though he never married her, she filled some of the void left by Saskia's death, and in 1654 she bore him a daughter, Cornelia. He painted Hendrickje Stoffels many times, once even as the goddess Flora, but a humbler, less exuberant Flora. Meanwhile his financial position resulted in the long-drawn-out process of selling up his lovely house and all his belongings. The faithful Hendrickje, with his son Titus, now set up an art-dealer's business to which Rembrandt mortgaged his entire future output to seek some relief from debt. But four years later in 1663 Hendrickje died, followed five years later by Titus. The following year, 1669, Rembrandt himself died.

The troubles and sorrows of Rembrandt's life in no way turned him from his chosen course. He brought a new depth of atmosphere to the art of engraving, and gradually became more and more preoccupied with the subtlety of deep shadow from which the principal figure or figures would emerge with great intensity. In this way he began to simplify his picture compositions more and more by the way he divided them into areas of light and areas of shade. He did not sacrifice colour in the process, but made it a glowing, organic element of both light and shade.

While in Holland it became the age of detailed perfection of delineation and of surface, Rembrandt the rebel concentrated on greater simplification, on suppression of detail, and shocked his contemporaries by the bold vigour and coarse texture of his brushwork which alone gave his painting the intensity he wanted, the urgency of his expression making him leave even the imprints of his painting knife, brush handle, and finger-tips in the thick paint. No one had ever handled paint like that before. No wonder it evoked criticism and opposition. It was 300 years ahead of the time. It is, however, as portrait painter that we think of him first of all, because no one has exceeded him in the depth of understanding, the profound compassionate penetration with which he rendered his fellow-men. The passing of time could only emphasise the greatness of his genius. (*Broadcast in the BBC's General Overseas Service*)

The Self-Portrait of Rembrandt painted in 1645 after the death of his wife is reproduced by gracious permission of Her Majesty the Queen.

ELECTRICAL EQUIPMENT
Behind the Essential Services

Those on whom the public rely for heat, light, water, or transport, themselves rely on BTH electrical equipment, including generators, switchgear, transformers, motors, and control gear. They specify BTH because the name is a guarantee of unfailing service under all conditions—a fact proved by authorities at home and abroad over the past fifty-three years.

This Week's Listening

December 30—January 5

'BASED ON DECEPTION'

THIS week His Royal Highness the Duke of Edinburgh calls in at Deception Island in the South Shetlands. This remote group of islands lies off the top of Grahamland—the 'finger' of the Antarctic continent pointing north-west towards South America.

From Deception Island a British aero-survey expedition is now at work, mapping 50,000 square miles of Grahamland. The first party went down in December, 1955, for five months, and in the programme 'Based on Deception' eight members of the expedition give an account of their work and of the conditions in this isolated and dangerous part of the world.

The programme also includes an explanation of the purpose of this official survey by Sir Miles Clifford, formerly Governor of the Falkland Islands. The second survey party left Britain for Deception Island some weeks ago.

G.O.S.: Monday 00.30; Tuesday 07.45 and 15.45

BERTRAND RUSSELL

ALTHOUGH Bertrand Russell is known to the world as a mathematician and philosopher, it was for literature that he was awarded the Nobel Prize in 1950. He had earned it by his 'versatile and important writings, in which he has shown himself an apostle of humanity and freedom of thought.'

His writings have indeed been versatile; and his remarkable mind has been brought to bear not only upon the more abstract problems of philosophy but also upon social and international questions and upon the human difficulties of ordinary men and women.

It may be wondered what influences, apart from his own intellectual endowment, have shaped his thinking. Part of the answer may be found in his series of talks which start this week under the title 'Books that Influenced Me.' In these he will discuss some of the great writers in fiction, drama, history, and other fields. His first talk is about poets he found most congenial, Shelley above all.

G.O.S.: Monday 16.15; Tuesday 00.45 and 05.00

'LONDON FORUM'

THIS week also listeners can hear another 'London Forum' discussion in which Bertrand Russell will be joined by Malcolm Muggeridge and Sir Eric James to consider the question: 'Is an Elite Necessary?'

The three speakers will discuss the justice and feasibility of the suggestion as well as the problem of reconciling it with contemporary political ideas.

G.O.S.: Sunday 16.15, Monday 02.15

MUSIC FOR THE NEW YEAR

THE old year ends and the new year begins with musical programmes of varied interest. 'Poet and Composer' is the name of a new series of programmes in which literature and music are com-

Eric Barker (right), Deryck Guyler (left), and Kenneth Connor take part in a new series of 'Just Fancy' (Wed. 12.15, Fri. 17.30)

bined. In the first programme Eileen McLoughlin (soprano) and Philip Hattey (baritone) contribute to this anthology of verse and song a feature on 'Shakespeare settings.'

On Monday at 19.00 comes the first of a new series of 'Music to Remember' programmes. Robert Irwin, who is well known to listeners to these programmes, introduces the City of Birmingham Symphony Orchestra, conducted by Rudolf Schwarz. The main item is Schubert's *Symphony No. 9 in C*, the 'Great C major'—the 'symphony of 'heavenly length,' as it has been described. Rudolf Schwarz takes up his post as successor to Sir Malcolm Sargent as principal conductor of the BBC Symphony Orchestra towards the end of 1957.

Enesco's *Symphonic Concertante for cello and orchestra* is played by the BBC Symphony Orchestra and soloist William Pleeth in BBC Concert Hall. Enesco, the great Rumanian composer and scholar, was the teacher to whom Yehudi Menuhin has gratefully and enthusiastically said he owed so much.

The first of a series of programmes, 'Masters of Melody,' is to be heard on Wednesday at 20.15, when Vilem Tausky conducts the BBC Concert

Included in the new gramophone-record programmes are Mark Lubbock's 'A Box at the Opera' (Sun. 00.30, Mon. 17.30) and Lillian Buff's 'The Happy Wanderer' (Sun. 07.15, Mon. 01.30)

Orchestra and the BBC Chorus. The two 'masters' in this concert are Eric Coates and Lehar, a most apt association. Lovely tunes flowed from the composer of *The Merry Widow*, and few English musicians have contributed so much delight in the concert hall and on the air, in his particular *métier*, as the brilliantly successful and ever-youthful Eric Coates, the Nottinghamshire composer, who celebrated his seventieth birthday in August of last year.

'Poet and Composer': Sunday 23.15; Tuesday 13.15; Thursday 20.30
BBC Concert Hall: Tuesday 14.45

'RUSSO-CHINESE RELATIONS'

FOR the final talks on the Soviet Union in 'This Day and Age,' attention turns to Russia's relations with her Communist neighbours. In the first of these, Max Beloff gives the background to the relations between Russia and China, and seeks the answer to various questions. For instance, how far was the Communist revolution in China dependent upon Russian help? What is the present state of the alliance between the two countries: are they friends or foes for the leadership of world Communism? Is there any friction arising out of the common land frontier of the two countries? And how far is Soviet policy in Asia affected by the existence of an independent Communist government in Peking?

Max Beloff is a Fellow of Nuffield College, Oxford. He is the author of a two-volume work on *The Foreign Policy of Soviet Russia*, and also of *Soviet Policy in the Far East 1944-51*.

G.O.S.: Tuesday 16.15; Wednesday 00.30 and 05.00

Members of the British aero-survey team on Deception Island at which H.R.H. the Duke of Edinburgh will be calling this week (see first note)

SOUTH AFRICA v. THE M.C.C.

THE Second Test Match between South Africa and the M.C.C. opens on Tuesday, and is being played at Capetown. With play starting each day at 09.00 GMT and finishing at 16.00 GMT the General Overseas Service will broadcast at 16.40 GMT a recorded commentary on the last fifteen minutes of play followed by a five-minute summary. Once again this will be relayed to listeners in Australia. Each evening at 22.10 (Friday at 22.15) Rex Alston will give an eye-witness account of the day's play.

This will be the first time Rex Alston has visited South Africa, but nevertheless he knows the South African cricketers, having covered their tours of England as the BBC commentator in 1947, 1951, and 1955. Other members of the South African Broadcasting Corporation commentating team will be Charles Fortune, Kyrle Roscoe, Patt Tebbutt, and E. W. Swanton.

ALEC WEEKS

THE WEEK'S PLAYS

THE work of the great Italian dramatist, Luigi Pirandello (1867-1936), is usually tortuous in the extreme, full of contrasts between the outer reality of action and the inner reality of thought, often deceptively simple yet packed with meanings which it requires a mind like a geiger counter to detect. At least, so it is in his great plays.

But the play to be broadcast this week, *The Jar*, shows the master in different, less complex mood, and although one effect of Pirandello's idiom is to set you searching for and finding symbolism in his work which he never put there, this seems straightforward enough.

The Jar is in fact a pleasant trifle, artfully contrived, for, whatever the validity of his thought, Pirandello was a superb theatrical craftsman. Here we are on the farm in Sicily of a short-tempered landlord named Don Lollo, who has just acquired the largest earthenware jar in all Sicily for storing his olive oil. But then the great jar breaks, or at least a piece falls out of its side, and Don Lollo cannot believe that his workers have not done this to spite him. He is even so little amenable to reason that he almost refuses to let Zi Dima, the skilled old local plumber, mend the huge jar, and the situation grows more frantic still when Zi Dima, having got into the jar to mend it, cannot get out of it again.

* * *

The Bell Room gets its chillsome atmosphere mainly by suggesting the idea of something unbearably, inexplicably horrible. This was indeed a favourite device of that master of goseflesh effects, Edgar Allen Poe, from one of whose stories Lester Powell has made this play.

The idea here is 'of a human will that was strong enough to defy the grave,' and it tells how the beautiful but evil Eleonora Brandt set out to ruin her husband, Nicholas, and how even when death claimed her before her plans succeeded—she yet proved able to exert her dreadful will.

PETER FORSTER

'The Jar': Tuesday 06.30; Friday 10.00
'The Bell Room': Wednesday 10.00; Friday 01.30 and 20.30

 (repeated Wed., 01.00; Sat., 18.30)

15.15 **From the Third Programme THE INDIAN REVOLUTION**
 Can Democracy Survive in India?

by Sardar K. M. Panikkar
 Indian Ambassador Designate to France

'Most observers in the West were at first critical of India's intention to establish a democratic system of government.' The speaker surveys the reasons for this attitude—the strength of the caste system, of monarchical and feudal traditions, eighty per cent. illiteracy—and assesses their weight today against many factors which he believes are strongly favourable to the democracy which has been established.
 (repeated on Friday at 23.15)

followed by an interlude

A programme for children
15.15 Radio Se Angrezi (English by Radio) Listen and Speak Lesson 115
15.25-15.30 From the Weeklies

Yearly Round-Up Programme. Tuesday's programme will be made up of items which the producers consider most interesting out of the 1,000 programmes in which more than 2,000 people have taken part during the past year of LONDON CALLING ASIA broadcasts. Each producer will present short extracts from broadcasts for which he or she has been responsible, giving reasons for his choice. So, at 13.30, you are invited to meet the programme staff—Arthur Russell, Terence Cooper, Philip Daly, Margaret Lyons, Rose-Mary Sands, and Hallam Tennyson—who will bring you New Year greetings.

Profiles of Composers. Patrick Shuldham-Shaw starts a series of weekly programmes on Tuesday which will present profiles in words of outstanding British composers. Each programme which include a highly representative work of the particular composer. The first profile will be that of Sir Arthur Bliss, Master of the Queen's Music, a position which dates back to the time when monarchs had their own private bands of musicians.

Discovering London. An Asian living in London has been invited to choose thirteen places he would most like to visit. Every Thursday a well-known traveller, with a mobile recording machine, will accompany him to one of them, and they will explore it together. The Asian will give his reasons for wanting to visit each particular spot—which will surely include a London pub, a famous street market, and other less obvious places

BBC Far Eastern Station

The output of this station, which broadcasts from transmitters in Malaya to South-East Asia, the Far East, India, Pakistan, and Ceylon, consists largely of relays of BBC programmes and provides a valuable supplement to the BBC's direct transmissions from London

The programmes of the BBC's Overseas Services are announced and printed in 'London Calling' in Greenwich Mean Time. This chart shows the hours to be added or subtracted to convert GMT to the clock-time in your part of the world.

The time differences given are those known at the date of going to press—November 15, 1956. A new edition will be published every three months and any intermediate changes will be notified in 'London Calling.'
