

RADIO INDEX

Showing where to set your dials for each
Broadcasting Station in America
Tells you the station you are receiving
without waiting for announcement.

RAD DEX

A Complete Radio Index

*Please Read the Following
Instructions Carefully*

January 1926
Price 25 Cents

*W*HEN any station is received mark the dial numbers in the proper place in the "Index by Call Letters" (pages 10 to 25). Enter the dial readings for each new wave length in its place in the "Index by Wave Lengths" (pages 2 to 15). This automatically calibrates your set and shows you exactly where to set your dials even for those stations you have never heard.

The power in watts for each station is shown in a separate column in the "Index by Wave Lengths." With this information you can tell what station you are receiving without waiting for the announcement.

The wave length of each station is shown in the "Index by Locations" (pages 26 to 32). This enables you to identify the station when only the name of city is heard.

The wave length is also shown in the "Index by Call Letters" thus providing an immediate cross index to the full data regarding the station in the "Index by Wave Lengths."
