## **Editor's** Notebook

Stan Vincent welcomes you to the magazine that likes to say 'feng shui'.

ow that Christmas is well out of the way, everyone can concentrate on the important things inlife-like buying hi-fi. If you've managed to keep your wallet intact over the Festive Season, this issue contains numerous items that are actually worth spending money on. Whether it's a midprice CD player (page 56), an elegant table for your system (page 48) or Harman/Kardon's highend solution for both music and movies (page 38), there's something for all tastes. I hope you enjoyour articles as much as we enjoyed putting them together!

### Jack Russell syndrome

"Tryournewmicrosystem, Stan!" barked the Philips PR man. "You'll love it!" Under this duress I had no option but to tarry a while with the £369 Philips FW17, a small and frankly cheesy-looking device, gadget-laden as you might expect, and whose main claim to fame is a "genuine 45 Watts per channel RMS". The only slight catch is the ten per cent distortion which you can expect if you crank it to the max.

Messrs Sircom, Kennedy and I set it up in the office auditioning suite and had fun with Stairway To The Stars, a recording of Tom Hazelton playing the San Sylmar Wurlitzer Pipe Organ (Klavier KD 77006). And the truth of the matter is that we were quite surprised at how good the sound was - in the middle frequencies at least.

Therewasagenuinesenseofstereoimagery and musical integrity in the midband, and a sweetertop than I've heard from many amicro. As for the low frequencies - well, you have to press the 'Bass Kick' button and pray that the cones don't go into orbit. Could be worth investigating for the downstairs loo.

### The I Ching on the cake

Audio practitioners Shun Mook Audio, Inc, operate in an extreme shoal of the hi-fi ocean, even for a Californian company. Invoking elements of the I Ching and drawing parallels with the finest musical instruments, hithertothe company has been known best for its exotic draughtspiece-shapedMpingoDiscs:stick'em on your gear and — allegedly — listen to the waytheir exotic ligning smooth outyour sound.

Dropping in on mygood friend Branko Bozic (the man behind Audiofreaks, which imports this stuff), I was intrigued to hear a more conventional product from the Shun Mook stable: the Bella Voce 'High A.R.T.S.' loudspeaker. The key with this design (which will sell for around £4,000) is that resonances are controlled by most unorthodox methods. There is no cross-bracing within the speaker; instead, the thickness of the sides, top and bottom isvaried in an asymmetric pattern by gluedon wood panels. As you'd expect, there are Mpingo discs inside, as well as Kable Jackets wrapped around internal wiring.

Fromthesmall, informal audition I was granted, the speaker sounded most impressive. Many authorities would scoff at the mysticism that seems to underpin this design; however, those sceptics would do well to ponder on the miraculous effects being ascribed around the world to feng shui, the art of furniture arrangement, which also looks to the I Ching as a spiritual source. I shall not take a side in this argument, other than to say I'm taking a lot more care where I put my sofa these days.

### Adventures in concert sound

I wentto see two great bands during November - The Beautiful South, at Wembley Arena; and Paul Weller, at the Brixton Academy. In each instance I left the gig bemoaning the fact that because sound engineers can get away with a poor-quality live mix, they mix poorly.

In the case of The Beautiful South, the sound was unspeakably bad: woolly bass, a horn section made to sound like a Bontempi organ, and a horrific tonal balance that put far too much weight on the bass drum. I'm a great fan of their music, but no matter how hard I tried, I couldn't enjoy the show.

Paul Weller fared much better — at least you could hear what he was singing, for some of the time - but sitting upstairs at this theatre-style venue, we missed out on the full assault of the main speaker rig, meaning that once again we were on the end of a ragged tonal balance that made a mush of the bass guitar.

There is only one solution to this problem: compulsory hi-fi education in schools. If the average sound engineer was regularly besieged by teenaged hordes complaining about upper mid-basssuckout, he'd Jan Vincent

soon have to change his tune.

#### **PREE WITH THIS ISSUE**

Don't missyour complimentary copy of the Beginner's Guide to Home Cinema, presented in association with Mordaunt-Short. It contains everything you need to know about setting up superb surround-sound !

### **OUR AIMS AND VISION**

- Hi-Fi Choice has been testing hi-fi since 1975.
- Collectively, our reviewers and columnists notch up over a century of listening to hi-fi.
- Our hi-fi group tests are the most thorough in the business. Our listening tests are conducted under strict blind conditions, using an experienced panel drawn from the hi-fi industry.
- No other hi-fi magazine in the world regularly performs blind listening tests.
- We assess every facet of a product's performance –

sound, build and measurement.

We can predict how individual components will perform in a multitude of systems.

CHAR

- Best Buy products are of significantly greater value than alternatives in the same price band.
- Recommended products offer a superb performance, if one not remarkable enough to earn a Best Buy.
- We look forward to a healthy future for high-quality audio, and the ultimate fusion of images and sound.

### FEBRUARY 1996

**ISSUE 151** 

Just a few of the latest mid price CD players battling it out for Best Buy and Recommended flags in our main test this month.

### THE FRONT END

### 7 Update

Gasp as the hi-fi industry's equivalent of *Tomorrow's World* leaps out of the page.

### 14 Sessions

We caught Jason Kennedy groping lots of different bits of hi-fi, but fortunately it was in private.

### **25** Statements 1

Alan Sircom cuts his heating bill in half with the latest amps from the Scandinavian kings of hollow-state technology, Copland.

### **27** Statements 2

Eight grand's worth of two-box CD player has to be something special — but, to Mark Levinson, it's mere entry-level stuff.

### **38** Statements 3

**30** Help!

Harman/Kardon brings music and movies together in its Citation system. Will it make Alvin Gold listen to Ravel or Robocop?

Malcolm Steward tells you all you ever

needed to ask about hi-fi and Jimmy Hughes goes headlong into the past with mono.

<u>D</u> 0 0 000

*Choice* readers air their views on the exciting world of high fidelity audio reproduction and risk winning a green shirt-esque garment.

### COLUMNS

### Z Editor's Notebook

Stan Vincent raises the roof with a power-mad micro system, Shun Mook's new speakers and the variability of the live event.

### **13** Ear Waxings

Jason goes Hungary in search of hi-fi shows, but ends up getting his head turned by a pair of Avant Garde horns.

### **29**<sup>21st Century Fox</sup>

Barry Fox unearths exclusive information about the future of high-quality audio and the Acoustic Renaissance in Audio.

### **138** Personal Messages

The new Rega *Planar* 9 turntable has now left Paul Messenger — and he misses it.

Don't miss the Budget Speaker shoot-out in Sessions this month — plus some hefty but affordable US amplification and the latest clean-living floorstanders from Epos.

### THE REVIEWS

### **48** Equipment supports

Malcolm Steward gets to grips with eight of the best multi-tier equipment tables around. Can they prove their mettle?

### **56**<sup>CD players</sup>

Paul Miller and the eagle-eared *Choice* blind listening panel get to grips with a stack of the latest midprice CD players.

### FEATURES

### **22** Small is beautiful

David Vivian explains how to optimise a listening room of minimal acreage.

### **READER SERVICES**

### **42** Subscriptions

How to get it without trying, a simple guide to receiving the finest hi-fi magazine in the world via the remarkable services of the Post Office.

### 75 Factsback

Benefit from our instant (well, nearly) access to features and reviews from recent issues, brought to you by return of fax.

### **81** Readers' Classified

Buy or sell your classic, pre-loved, secondhand audio products here.

### 137<sup>Next Month</sup>

Find out the lo-down in hi-fidelity with next month's *Hi-Fi Choice*, packed full of jelly and marrowbone for a healthy coat.

# Update

### IN HI-FI ALL THE NEWS IS GOOD NEWS, SO HERE'S MALCOLM STEWARD WITH THE STORIES THAT COUNT.

The latest in a long line of budget winners: NAD's new 312 integrated amplifier.

### NAD plus ten

The new product train keeps rolling at NAD, with three "attractively priced" additions joining the company's range.

The first and most expensive, at £249.95, is the 512 CD player. This remote-controlled minimalist device has been developed from the 502 and uses a MASH D/A converter with a five-pole filter. The player sports a new calendar-type display and benefits from a buffered digital output for enhanced performance with outboard DACs and digital recorders.

The 412 tuner continues NAD's pure and simple design philosophy. Based on the 402, the new model comes with a redesigned chassis and improved display. Twenty-four stations — twelve FM and twelve AM — can be accommodated in its non-volatile preset memory. The price is £189.95.

Last in the line-up is the 312 amplifier, which offers 25 Watts per channel continuous power but will deliver 75W short-term into a two Ohm load. It has six line inputs, including two tape loops, and a moving magnet phono stage. Also included in this £199.95 integrated are a headphone jack, pre-out sockets, defeatable tone controls and NAD's Soft Clipping circuitry.  $\mathbf{\Omega}$  (0181) 343 3240.

### MS for £17.65/litre

MS25i: a big box for your buck.

Mordaunt-Short's recently revamped *Music Series* range has expanded further with the addition of a new model, the *MS25i*. This seventeenlitre floor-stander incorporates an anodised aluminium gold dome tweeter and a 6.5-inch MCS bass/midrange driver. A braced cabinet, computer-optimised magnet systems and a bi-wirable, hard-wired, minimalist crossover network complete the list of features.

Sensitivity is a healthy 89dB and the nominal impedance is eight Ohms. The *MS25i* sells for £299.99 in either black ash or rosewood veneer finish. Although it is supplied as standard with floor-spikes, a matching plinth is also available for an extra £39.99. ☎ (01705) 407722.

## Neat tweek

Neat Acoustics has revised its small but musically Petite loudspeaker. The most obvious change to the Petite II is the Tonagen EMIT tweeter, which replaces the titanium coated plastic dome unit used in the original design. Naturally, the crossover had to be altered to marry the new tweeter to Neat's paper cone bass/midrange and the company exploited the opportunity to revamp it with high tolerance components. The result, says Neat, is lower colouration and improved all roundcompatibility.

The Petite II comes in regulation black finish at £745 and in a new Cherry wood finish for £795. (01833) 631021.

### In brief

- Bravura has upgraded its Accelerando and Brio corner horn loudspeakers. Changes to the shape and volume of the compression chamber, along with the damping materials used, have elevated both performance and prices. The Accelerandos now sell for £6,600 while the Brios fetch £5,950. ☎ (01732) 851408.
- Henry Azima, leader of the Mission Cyrus design team, has been appointed Managing Director of Mission. His brother Farad becomes the company's Chairman.
- Richer Sounds has opened new stores in London Road, Leicester and Oxford Road, Reading, and relocated its Liverpool branch to Berry Street. All these emporia are bigger than the chain's customary premises. ☎ (0500) 10 11 12.
- Beyerdynamic has moved to Unit 1, Albert Drive, Burgess Hill, RH15 9TN. ☎ (01444) 258258.
- Chord Electronics has added Decca International to the impressive list of recording companies to whom it supplies amplification. 2 (01622) 688480.
- NVA has announced it will build power amplifiers fuelled by rechargeable lead-acid cells. Prices for a 60W mono amplifier — weighing around 80kg — will start at £2,000. 12 (01763) 272707.
- Phoenix Contact's Maintrab plug uses varistors and gas-filled surge resistors to protect sensitive electronics from harmful mains spikes. The price is £11.75 plus £2.50 p&p, with discounts available for bulk buyers. © (01734) 442844.

HI-FI CHOICE

Neat's radical revamp on the Petite tweet.

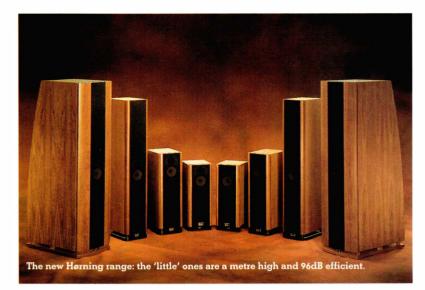

### The **TEAC** VRDS Range The One System You Can't Beat!

Everybody is aware of the huge success of the VRDS range of integrated CD Players and Transports. Now the VRDS players are complimented by a range of components which share the same outstanding build, engineering and sonic gualities

Everyone knows that the VRDS mechanism is the best CD transport in the world -Now there's no need to compromise with the rest of your system!

### 0 **VRDS T-1 CD TRANSPORT** IDD/AC 0 With the acclaimed VRDS mechanism, Highly rigid chassis and remote control - the TEAC ethos of sonic performance, build quality and ease of use are typified in the T-1 0 D-T1 D/A CONVERTER 6 0 The matching DAC for the T-1 TRAC uses Bitstream Conversion\* in dual differential operation, a copper chassis to minimise RF interference and offers 4 digital inputs 6 V-8030S Cassette Deck TEAC The latest example of TEAC's expertise in tape engineering features a 3-Head Dual -Capstan drive transport, Dolby S Noise Reduction and separate Bias and Level controls - proof indeed that the cassette is still a viable source. Also available is the V-6030S A-BX10 INTEGRATED AMPLIFIER An Audiophile amplifier which TEAC gives superb dynamic power and performance. Featuring a These send the information on the TRAC VALUE FRANCE balanced stereo input and a fully balanced circuit configuration, the A-BX10 offers 100 Watts per channel and an optional phono board for MM and MC cartridges 5 Marlin House, The Croxley Centre, Watford, Herts TEAC TEL: 01923 819630 FAX: 01923 236290 WD1 8YA

Bitstream Conversion is a trademark of the Philips Corporation.

### A Statesman in the highlands

Definitive Audio's £27,000 Living Voice *Air Partner Statesman* speakers were used at the launch party for Runrig's tenth CD, *Mara*. The event was organised in conjunction with Edinburgh's Music Mill which has been appointed as Scotland's official agent for Living Voice and is currently demonstrating the £14,700 *Airscout*.

If those models sound a little too rich for your wallet, Definitive has announced the revised Hørning range of hybrid horns. These three-ways have a sensitivity of 96dB and above, use Lowther full range drivers and employ acoustic techniques to avoid using passive crossover components. Clad in high quality Danish cabinets, the range starts at £2,500 for the bronze spec *Aristophane*.  $\mathbf{\Omega}$  (0115) 9813562.

### Making plans for Orelle

Orelle has four new high-end products launched under the XTC brand. The range opens with the *CDT-1LE* CD transport, which uses a Philips swing arm pick-up and a unique Fast Rise Time Buffered clock. This is an XTC development that reduces jitter and decreases the interaction between digital integrated circuits. The transport comes with a remote control, BNC coaxial output and a solid silver digital interconnect cable included in its £1,250 price. The complementary *DAC-1* converter, which sells for £1,000, features an Analog Devices 12-volt, 18-bit DAC and independent power supplies for its analogue and digital sections. There are no capacitors in the signal path and, like the *CDT-1*, it uses a resonance-controlled aluminium chassis with isolating feet and cones. The three-input unit provides auto-switching between different sampling rates.

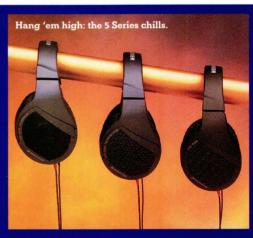

The £800, remote controlled, *PRE-1* preamplifier uses a class A MOSFET circuit that's claimed to give a valve-like sound. The partnering *POW-1* power amplifier comes in at £2,000 and offers a choice of two-, three- or four-channel operation. In two-channel mode it delivers 175 Watts per channel. Like the rest of the XTC range it features a resonance-controlled aluminium chassis and direct-coupled circuitry. **2** (0181) 908 4126.

### Scart trickery

Configuring an AV system can be hard work, even for those with considerable experience in setting up complex but comparatively straightforward hi-fi systems. The B-Tech *BT201* AutoScart control centre aims to simplify the process.

The *BT201* connects and switches any three Scart devices to a television monitor or other AV component's input. Whichever device is in Play mode is automatically routed to the *BT201*'s output. If more than one is working, a userdefined priority system decides which input takes precedence.

The control centre, which is powered by an external supply, incorporates a video amplifier to prevent signal loss. It also has a second phono output to route sound to a hi-fi system. A status switch allows Scart pin 8 to be switched, so overcoming the problem of equipment that won't switch automatically to AV mode. The B T 2 0 1 c o s t s £ 2 9 . 9 5 . ☎ (01689) 848535.

### Comfort and style from Sennheiser

Sennheiser has updated most of its headphones this year and the latest range to enjoy styling and performance tweaks is the well established 5 series. The circumnaural *HD535*, *545* and *565* have all been altered to make them more stylish and comfortable to wear. The 1996 models come in a new black finish and exert less pressure on the wearer's ears. Technical modifications have been introduced to reduce treble distortion and improve the neutrality of the voicing to suit all types of music. The entry-level *HD535* sells for £99.95, the *HD545* Reference for £119.95 and the *HD565* Ovation for £139.95.  $\Im$  (01628) 850811.

### In brief

- Price cuts at JBL bring the cost of an HT-1 THX speaker system down from £2,500 to £2,000. The company's SoundEffects packages both drop by £200: the SFX Music/Movies 1 is now £499.99 while the SFX Music/Movies 2 costs £899.99. ☎ (0181) 207 5050.
- Bush has a new range of retrostyled portable radios including the £99.99 Overdrive, which is fashioned after a Corvette dashboard and includes a cassette player. £29.99 buys the Jitterbug, Hip Hugger and Cruiser models. 20 (01923) 859777.
- Danish loudspeaker manufacturer Eltax has set up a UK office in Milton Keynes to retail its broad range of hi-fi and home theatre systems. 22 (01908) 226464.
- Bib is selling a deluxe version of its SAV-A-DISC CD restorer polish kit. £19.98 buys a glass bottle with applicator and a polishing cloth, all housed in a laserengraved Walnut box. ☎ (01442) 233233.
- Goldstar's new £250 *F-191A* system, which includes a CD player, amplifier, tuner and cassette deck, is unusual in being designed for hanging on the wall. Traditionalists can place it on a shelf or table using a supplied stand. (01753) 500400.
- Turntable manufacturer Wilson Benesch has won the Sheffield Newspapers and Chamber of Commerce award for being the most innovative company in Sheffield. The award includes £5,000 worth of research and development finance, and collaborative support from Sheffield Hallam University. ☎ (0114) 2852656.
- B&O product designer David Whitfield Lewis has been elected to the Faculty of Royal Designers for Industry. Lewis already has work exhibited in the design collection of New York's Museum of Modern Art.
- Dolby Labs has developed a twospeaker surround sound system, Dolby Surround Multimedia, specifically optimised for use with home computers. The system is based on the existing Pro-Logic decoding process. ☎ (01793) 842100.

### MOST SALES LITERATURE ON SPEAKERS GETS RECYCLED. **OURS JUST GETS REREAD.**

As you may have noticed, the "high-end" audio world tends to congregate in small sects around many "gurus" who preach unbelievable creeds about wholly unbelievable technological breakthroughs. True to our tenet, following the teachings of our first official Danish Holyman, chief tester St.Erik "The Ear" Nielsen, we feel compelled to prevent further adoration of Golden Calves, comparable idols, and other profane fallacies.

Hence, "The Book of Truth", a musical bible containing such towering commandments as: Thou shalt not listen to speakers with undersized voice-coils. Thou shalt not listen to speakers plagued with phase response problems. Thou shalt only listen to speakers that employ one-piece MSP (Magnesium Silicate Pothat utilize complete absorption of evil, backwards-

radiated energy, and allow for virtuous, echofree sound reproduction.

To further indulge in these and

other truths from Skander-

The Book of Truth Li.F

borg, Denmark, please call +49-40-858-066 or fax us at +49-40-859-035, to réceive a missionary copy of our small masterpiece of true audiophile literature. In the meantime, you may ponder seeking refuge in the heavenly sounds emanating from our meticulously handcrafted speakers (like the Contour 1.3 our company raccoon, Knudsen, is preaching from), whilst on a pilgrimage to one of our few true dealers. Consequently, you may

lymer) woofer cones. Thou shalt only listen to speakers

even consider recycling your former speakers as well.

#### THE FRONT END

### No honks from Harlech

With the Twin Bass Tuning system incorporated into Castle's new floor-stander, the Harlech, you can kiss goodbye to many of the low frequency difficulties that plague loudspeakers - according to the manufacturer. Twin Bass Tuning aims to improve the speaker's interaction with the room and so alleviate honk and boom problems.

The Harlech uses two 130mm bass/mid units (one firing upwards) and a forward-facing 25mm alloy dome tweeter. Bi-wiring terminals are provided and sensitivity is quoted as 88dB, eight ohms. The 930mm-tall speaker sells for £799 in standard finishes or £949 in deluxe Santos rosewood or yew veneers. (01756) 795333.

### Gemstone cables In brief

AudioQuest distributor. Arcam has two new interconnects from the Californian cable specialists. Audio Truth Opal x3 and Audio Truth Emerald x3 both feature AudioQuest's

Triple Balanced Air-Hyperlitz construction and FPC-6 solid copper conductors. The two designs are differentiated by the dielectrics used as their primary insulation: Opal x3 uses air and polypropylene, while Emerald x3 employs an air and Teflon combination. Both cables have a PVC outer sheath and come terminated with Functionally Perfect Copper -FPC -– plugs

Opal costs £159 for a 0.5m pair and £189 for 1m, while Emerald is £189 for 0.5m and £249 for 1m. Recommended uses are connecting CD players to preamplifiers, and preamplifiers to power amplifiers. (01223) 861550

### Behold the Vitalizer

Beverdynamic has introduced the SPL Vitalizer audio enhancer (formerly found only in professional circles) to the hi-fi marketplace. This  $\pounds$ 499 gadget uses "an ingenious combination of dynamic equalisation, phase shift manipulation and harmonic filtering to unlock the real potential of the audio spectrum." Apparently this device will make old recordings sound the way the engineers would have wanted them to, had modern equipment been available then, and give video soundtracks top and bottom end that you never knew was there. **2** (01273) 479411.

B&W's innovative budget baby.

### **Pyramid power**

As well as putting speakers inside anechoic chambers, B&W is now putting anechoic chambers inside its speakers. The company's new DM302 is the first to employ the newly-developed Prism system, which uses tapered pyramid shapes, like those used in anechoic chambers, to eliminate resonance inside the speaker's cabinet.

Other features designed to help the DM302 provide big-speaker performance from a compact enclosure include a 120mm doped paper cone bass driver, mounted in a rigid steel chassis. A 26mm soft dome tweeter with a low diffraction faceplate takes care of high frequencies. Both drivers are internally clamped to the front baffle and six horizontal braces reinforce the reflex ported cabinet. Sensitivity is high at 91dB and the speaker's crossover uses quality components and high performance B&W cable. The price of this budget baby is £129.99. ☎ (01903) 750750.

- There's been a slight reprieve for vinyl enthusiasts stunned by the announcement that Audio Technica was to cease production of all moving coil cartridges. It will continue producing one model, the ATOC9. However, the ATOC7, ATOC10 and ATOC30 will be no more. There's better news for moving magnet buyers because production of these cartridges will continue indefinitely. And a new range that was previously only available in the USA will be here soon. 🕿 (0113) 2771441.
- Academy Sound is coming to the rescue of Quad 33 owners who love their preamps but not the **DIN connectors with which** they're equipped. For £185 Academy will fit 33s with a new rear panel decked out in goldplated phono sockets, and will supply a set of lxos interconnects. The conversion includes replacing the old power out sockets with a shrouded mains connector and replacing the Radio 2 input with a CD auxiliary input. The final part of the conversion is to enclose the tape and pick-up selector boards, which involves fitting new replacement boards. ☎ (01872) 553317.
- Postponed from November, the £130,000 Dynaudio Arbiter battery powered preamp and 800W monoblocks will be on the road in the last week of January. The Arbiter duo will be appearing in Birmingham and Glasgow. Further details are available from Phil Parker at Music Matters Solihull on 🕿 (0121) 742 0254 or Stuart Bailey at WM Cooper Music Room Glasgow on ☎ (0141) 332 5012.

# Ear Washings

**Jason Kennedy** suffers thermionic overload as he reports from Budapest and investigates a new tube amp.

neach of the last two occasions that l've visited Hungary for the Budapest High End show, l've returned saying "Never again". It's not the show but the 16-hour drive with Peter Qvortrup (the Danish demon behind Audio Note) that takes days to recover from. This time, what lured me East was a plane ticket. Now it was but a few instants before I kissed the tarmac of the overcast, sub-zero, two-stroke-infused conurbation that is Budapest in November.

Eventhough the average salary isonly £200 a month, theremust be some citizens with forints to spare, since the dozen or so distributors and manufacturers first seen at this show three years ago are still around today. And none of them sells budget equipment.

Even relatively real-worldhi-fi is much dearer in Hungary than it is over here. Take a Micromega *Stage 1*, for example —  $\pounds 550$  in the UK but 30 per cent more in Hungary at  $\pounds 725$ . Us Brits don't know how good we've got it! None of the home-grown Hungarian equipment comes any cheaper, mainly because ithas highend pretensions, and indigenous manufacturers have to buy from the same parts suppliers as everyone else. However, this doesn't seem to stem the light but steady flow of amplifiers and louds peakers that are displayed at the show each year.

Tubes have as much appeal to Hungarians as anyone else, so it came as no surprise to chance upon what appeared to be an Audio Note *Ongaku* copy made by Péter Dénes. Could this have something to do with the influence of Audio Note distributor (and show organiser) Merlin Audio? The 'Hungarongaku' was selling for £1,250, which seems quite reasonable for a single-ended ampequipped with 211 tubes let alone one that looked decent and had Audio Note aspirations. Even if you bought a circuit diagram and made one yourself, it could easily cost that much in parts alone.

Since my Hungarian is limited to half a dozen words, I couldn't arrange a comparison between this and the real thing, which was sharing table space with a pair of mighty *Gakuons* in Merlin's room of excess. Also anchored in this quietwater of audiophile overload I sighted a veritable fleet of Japanese-built Audio Note products floating on a sea of Sound Organisation tables, feeding a pair of Audio Note *AN-E* speakers wired with full-on, as-much-silver-as-

you-can-pack-in-there cable. Very nice it sounded too, and the master himself, Kondosan, was on the scene to give his blessings.

#### **More Hungarian Dances**

Back on Planet Earth we stumbled over L'Auditeur Pointe Hot, a£700 integrated amp using 6L6 tubes in a cherry-wood-faced cabinet. (The transistorised Pointe Cool is available in the same classy finish.) More sober but nicely made were the Mellorn range of pre/power transistor amps, comprising the *Crescendo* passive pre, *Anachron* phono stage and *Temptation* monoblocs, heard driving the company's substantial Access mkII speakers to good effect.

The true wild men of the Hungarian scene, however, are the proprietors of Alisca Orange: bearded dudes belting out some dynamic sounds with their 200 Watt *Red Lion* power amp and Focal-drivered *hangdoboz* (loudspeakers). They also had a box of interesting second-hand records to sell, but their prices made yer average UK shop look generous.

Another interesting product, though not at the show, was a pair of the stylish German

#### Feeling horny? — the amazing Avantgarde Acoustic speakers

horn speakers from Avantgarde Acoustic (Alan Sircom saw these also, at the Frank furt High End show last year). Although Peter Qvortrupisnotoriously fickle about horns, it looks as though he may find it within his heartto take themon board and release a tweaked version. Certainly, it'll be interesting to hear what Herb Riechert (of Audio Note New York) can do to tame the rather brash balance of this unusual design.

This is not the first time PQ has tried to source a horn speaker worthy of AN'selectronics. Iremember being bowled over by Tommy Hørning's big four-ways in the late '80s, and more recently there wassupposed to have been a design in the offing from Bruce Edgar (another luminary in tube and horn circles), but it never appeared. When PQ finds a horn he wants to back, it should be a killer. Watch this space!

### **Getting heated**

Ihavecometounderstand why Paul Messenger wrote what he did in his column last month, on the subject of power supplies. In my case it'sthe eightors ot ube power supplies that sometime *Choice* contributor Rob Dowse is using with his new 'integrated' amp — on the end of some speakers that started off as copies of the Living Voice *Air Partner* (this wardrobesized enclosure was pictured on page 14 of the December 1995 edition, furniture fans).

Subsequent to its inception, however, this amp has evolved into something else. It might look rather 'hairshirt', but its brasschassis and matching door-handle volume control lend it an airofesoteric style that quite takes my fancy. More significant are the bass power and dynamicshe's getting outofits 3.75 Watts (developed by 6B4G triode valves).

I'm rather worried that he's breaking the laws of physics — how can this little amp produce more grunt than your average 100W transistor amp? I reckon that the wall of tube-regulated power supplies has a lot to do with it. Here's to fantasy hi-fi in the flesh!

# Choice Sessions

### JASON KENNEDY HAS THE KEY TO THE SECRETS OF THE HI-FI UNIVERSE — BUT DOES HE KNOW WHERE THE LOCK IS?

#### The Powerplant system: Micromega Stage 1, Cyrus III, B&W CDM2 As if to prove that not all good hi-fi

costs an arm and a leg, The Powerplant in Brighton keeps the prices down.

**X**avier Wilcox is the founder of Brighton's Powerplanthi-fistore, and I went to school with him. His tastes in hi-fi have digressed from mine since the days when we sat around listening to LloydCole's Rattlesnakes on a Linn LP12, so I knew the risks I was taking when Iaskedhimtorecommenda£1,500 system for me to review. However, it is nowhere near as hard to select stuffyou think you'll like as it is to get your ears around something that might bite back.SoI bit the bullet and called up a Micromega Stage 1 CD player (£550), Mission Cyrus III integrated amplifier (£500) and a pair of B&W's new CDM1 loudspeakers (£400) - not forgetting to dig out some Cable Talk for hooking up along the way.

Apart from its inherent sonic and ergonomic qualities, this system offers a number of upgrade options for the enthusiast who wants to improve quality as the budget

The Powerplant's CD-based system lives up to the company's name.

maanea

becomes available. Apart from the usual cable, stand and support upgrades, the Cyrus can be augmented by a *PSX-R* power supply and even a Cyrus power amp, while the Micromega can be taken up to *Stage 2* and 3 if you want to get more out of your discs. So this is a flexible package that can be readily upgraded without huge expense.

What's more, there are various ergonomic permutations. The Micromega remote is designed to drive the matching *Stage* amp and tuner (and is thus a sea of buttons), but by grace of remote-control-code standards, it will adjust volume and operate the mute facilitity on the *Cyrus*, which saves another piece of plastic on the coffee table.

Of course, all of this would be as naught if you didn't want to listen to the system, and to begin with I did not. It was brash and edgy — just the sort of thing Xavier seems to like. However, being a persistent kind of chap I persevered, since most of the fundamental hi-fi parameters were present and correct. Musical timing was good, stereo imagery was convincing and there was a reassuring feeling of solidity. Quite honestly, it was just the presentation that I found distasteful, and conveniently a simple change of cables was sufficient to refine the balance into to something that I could enjoy.

For the record, Powerplant had recommended Cable Talk *Studio* 2, but alas this was languishing Chez Malcolm Steward, and I'd used *Monitor* 2 interconnect instead. Swapping this for Trichord *Pulsewire*, and exchanging the *Talk* 3 bi-wire for two runs of Hitachi *SSX-102K* LC-OFC speaker cable, did marvels for the tonal balance even if did raise the price a little.

The end result was a very fine system. It was little more sparse-sounding than the one I'd started out with, but a whole lot cleaner, and its onthe-button sense of timing (combined with an excellent sense of stereo depth and oodles of detail) put the instruments in space and let them groove.

The tape hiss on a recording of William Burroughs and his Advice For Young People (on Material's Hallucination Engine album) was clear and present, as was the backing vamp stolen from Billy Cobham's fusion-tip Spectrum album (also sampled by Massive Attack for

*their June 1991* Safe From Harm *single – Trivia Ed*).

This system has plenty of energy and power. You can belt out The Stone Temple Pilots at truly entertaining levels, yet both amp and speakers remain in control. Alternatively you can get into a mellow groove at mellow levels, without the sound shrinking out of the room. This combination offers not only a taste of the high life, but also an open-ended invitation for future enhancements courtesy of a few waste-free upgrades.

B&W UK Ltd @ (01903) 750750 Micromega Digital Audio Ltd @ (0181) 502 1416 Mission, Centralforce Ltd @ (01480) 451777 Powerplant @ (01273) 775978

TOOTEGA

#### **THE FRONT END**

Acurus RL11/A150 pre/power amplifier The words 'US muscle amplifier' and 'budget' are rarely seen together —

unless Richer Sounds is involved.

his competitively-priced American This competitively precess pre/powercombo is brought over by punter'sfavouriteand independent-retailer's Nemesis, Richer Sounds. This piece is made by a company called Mondial, which used to produce a distinctivelookingampcalled the Aragon. (You might remember the black box with a 'V'-shaped notch; it has recently returned in updated form). Now Mondial offers this tasteful if lessremarkable-looking combo, sporting remote control and 150 Watts per channel for rather less shekels than one has become accustomed to paying for American hardware.

The Acurus *RL11* preamp is a line-only affair, with six inputs, two tape outputs and two pre outputs. The slimline remote doesn't cater for input or record selection, but covers volume, balance, mute and mains in straightforward fashion. The *A150* power amp is your usual hefty lump, with serious fins (heat sinking) at the back, and a pair of five-way binding posts per side. Nice switch, too.

I christened this combo in place of the *Cyrus III* in this month's system, where it made a pretty dramatic impression. The detail and bandwidth without losing a sense of rhythm.

The toughest test was with my *Sonolith* speakers. It handled this with aplomb, although the forward character became more apparent. So if you've got a pair of big speakers that won't do what they're told with the bass, this couch-friendly combo could be right up your alley. *Richer Sounds* **2** (0171) 403 4710

#### Celestion Impact 10, Mordaunt-Short MS10i, KEF Coda 7

The three big noises in the budget speaker market fight a pitched battle for supremacy in Jason's living room.

£129, £140, £129

The Mordaunt-Short *MS10i* and Celestion's *Impact 10* are two new contenders in the highly-competitive budgetspeakerarena, and their arrival prompted us to stage a Small Speaker Shoot-Out. The defendingchampin this arena is currently KEF's very effective *Coda7*, butit's notthe onlygood speaker at the price. Don't forget JPW's £120 *Sonata*, which won a lot of admirers when we tested it back in issue 71.

The Mordaunt-Short MS10i is second up in the Music Series range, and retails for £140. It stands just over 30 centimetres tall, and is the heaviest and (apparently) the most technologically brash of the three contenders. Reasons for this obser-

vation include

a full-size, gold-

the mid-bass driver.

anodised metal dome

tweeter, and a 90mm plastic cone on

bigger at 31 centimetres tall, and

costs £129. It's quite similar to the

M-S by virtue of its injection-

moulded front baffle, but Celestion

has taken a leaf from KEF's book by

Celestion's Impact 10 is a little

treating the baffle to

a sculptural effect

The £130 KEF Coda 7's enclosure is the smallest of the bunch by a few millimetres, but it sports the largest mid-bass cone (95mm doped paper). Its 25mm fabric dome tweeter sits in the prettiest baffle for my money: sculpted, it integrates the drive units with the reflex port using a degree of finesse rarely seen in any hi-fi, let alone on budget kit.

Drawing comparisons between these three speakers was complicated by each one needing to be sited in a slightly different place. But with the help of some Atacama stands

and a Mission Cyrus *III* amplifier, good music was enjoyed all round.

Every one of these speakers made a very good impression. I was surprised at their imaging abilities, and I was pleased to hear a distinct lack of boxiness,

despite bass which had some weight and

speed. The *MS10i* will be remembered for decent dynamics and openness: give it enough space

(about 18 inches from the wall) and it'll produce pretty clean low frequencies as well. Any closer to the wall and the port can make itself obvious. This rosewood-look sample even managed to hang on when wicked up, although I wouldn't recommend it to the thrash-metal fraternity.

The Celestion makes use of its extra few cubic centimetres to produce well-extended bass, in the con-

text of a relaxed presentation. This adds realism to drums and substance to bass guitar, but may also contribute to a slightly laid-back sense of timing.

Next to the KEF, the Celestion sounds a shade

The classic budget baby — M-S's MS10i.

The challenger — Celestion's Impact 10.

The market dominator — KEF's Coda 7.

#### HI-FI CHOICE

US muscle.

but with a British

price tag from Acurus.

improvement can only be

described as extra 'body',

underpinning the music with

deep, solid grunt and opening

out the soundstage to bring the

acoustic of the recording environ-

ment into play. This trick can be

ascribed largely to the depth and

solidity of bass coming through the

speakers, but of equal significance is

the fact that it sacrificed none of the

Cyrus's musical magic in the

process. Further swapping of ancil-

laries proved the Acurus pairing to

be peculiarly capable of reproducing

SESSIONS

### With Cinema DSP, you'll be amazed at what comes out of the woodwork.

Bats screech overhead. Wolves howl in the distance. And footsteps crunch across your living room floor.

No, it's not your imagination. You're hearing sounds placed around the room, just as the director intended.

All courtesy of Yamaha Cinema DSP. The home theatre technology that gives dialogue more definition. Music, more dimension. And sound effects, more graphic detail.

Only Yamaha Cinema DSP creates phantom speakers that fully replicate the experience you get in multi-speaker movie theatres. It sounds so real, in fact, you'll swear you hear sounds in places that you don't even have speakers.

As you might imagine, a breakthrough like this is no small feat. It's accomplished by multiplying the effects of Digital Sound Field Processing and Dolby Pro Logic.®

Digital Sound Field Processing is Yamaha's unique technology that electronically recreates some of the finest performance venue: in the world. And Dolby Pro Logic is the technology responsible for placing sound around the room, matching the dialogue and sound effects with the action on the screen.

Together, these two technologies allow Yamaha to offer a complete range of home theatre components that outperform other comparatively priced products on the market.

Stop by your local Yamaha dealer for what could be a very eerie demonstration. Maybe we can't talk you into a system, but that doesn't mean we can't scare you into one.

For your local Yamaha Dealer telephone: (01923) 233166.

Yamaha Electronics (UK) Ltd, 200 Rickmansworth Road, Watford, Herts. WD1 7JS. Dolby Pro Logic is a registered trademark of Dolby Laboratories Licensing Corporation.

### CINEMA DSP

Only Yamaha Cinema DSP creates phantom speakers. It sounds so real, you'll swee you hear sounds in places you don't even have speakers

#### THE FRONT END

➡ bland, but in the real world this might mean it is better suited to the sometimes-less-than-pristine output of budget amplifiers and CD players, with which the *Impact 10* is likely to be partnered.

> The Coda 7 has already undergone Hi-Fi Choice's formal review process (awarded a Best Buy in issue 145). It has the sort of qualities that bring out the life and character in music: it keeps time very nicely, the leading edges of notes are well defined without them sounding brash, and above all I heard clear differences between recordings. However, the Coda 7 is still a budget speaker; you can hear it in the curtailed bass extension and the discouraging noises it makes when you turn it up too much.

> For some tastes, the winner might well be the Mordaunt-Short or the Celestion, but for me the Coda 7 still rules the roost. None of these speakers is a bad 'un, and all three serve to remind that the Budget Box is a remarkably good-value item which will often be bettered only through considerably greater expenditure. When selecting one of these small miracles, the most important thing is to stick with the amp and CD player you know, and choose the speaker that lets you forget hi-fi and enables you to hear all kinds of music from Shostakovich to Frank Zappa... Celestion 🕿 (01473) 322222 KEF 🕿 (01622) 672261 Mordaunt-Short 🕿 (01705) 407722

Trichord Research Black Box One Grandmasters of the CD player, Trichord, have even modified the mains to get the best from digital audio.

Mains filters don't have an impressive hi-fi reputation. Most of them compress and restrict dynamics in exchange for a smoother tonal balance. Now Trichord Research — purveyor of the *Clock 2* CD player modification tested last issue — reckons that it has madetheultimate'original current cleaning device', in the shape of a solid cube that's been aptly dubbed *Black Box One*.

Trichord's Tom Evans designed a similar device for ECA (the *Pandora*), and this is a further step in the same direction. Made specifically for CD players, the *BB1* can cope with a maximum load of 50 Watts; try it on an amplifier, wait half an hour to reset its thermal fuse.

For the most part the *BB1* had a subtle but tangible effect, notably in the resolution of ambient and

acoustic detail, which aids the sense of three dimensionality in music, and hence tangibility. It's no surprise that the greatest effect occurred with the Trichord *Digital Turntable* CD transport (a modified Pioneer PD-S703, due for imminent launch), which resolved much more low-level information. Musical intelligibility seemed to improve as a result.

Taking the *BB1* out of the system caused a notable increase in subjective loudness. However, I believe that to be due to greater distortion rather than an absolute increase of volume, which would make the *BB1* perfect for high-resolution systems. *Trichord Research Ltd* **2** (01684) 573524

### Audio Alchemy DAC-MAN 'Dinner, dinner, dinner — DAC-MAN' is a bit of a cliché, but how does the Caped Crusader of CD fare?

C1/0 05

The DAC-MAN is a cute little device from those digitally-oriented Californians at Audio Alchemy. Rememberthe Digital Decoding Engine and DAC-In-The-Box? Both made a good impression on these shores.

One key to AA's popularity is undoutedly their parsimonious price list, which makes some US equipment seem rather overcooked. The DAC-MAN sets an even lower price benchmark than its siblings, at just below £150. When the QED Digit and Cambridge DACmagic 1 turned up at this price they were considered remarkable; to survive an Atlantic crossing at this price is extraordinary.

For your money you get a dinky little extruded metal case with sexy fins: inside there's a Crystal converter chip that can be addressed both optically and electrically at one end, while its analogue output is taken right to your amplifier by a pair of chewy purple interconnects.

These captive cables are made by Tara Labs, no less, and offer the double whammy of saving you bunce that would have gone on decent-quality interconnects, as well as offering one less mechanical joint.

Not only is this little package neat; it is upgradeable, too. The power supply is a basic plastic moulded affair that sits half-way between the mains plug and the DAC, and it can be replaced with one of Audio Alchemy's *Power Stations* (from £59.95), that should bring worthwhile improvements.

Like any DAC it relies on what it is fed by the transport, but it certainly improved on the Sony *CDP*-361's onboard DAC even using the normally-second-rate optical feed. The '361 became more lively and colourful, and responded to various discs with energy and vigour. Even Orelle's fine *CD*-100 player lost some of its dryness, pumping up dynamics and weight.

The result with the Trichord Digital Transport was suitably impressive: DAC-MAN brought out a great deal of its spatial resolution, fine sense of timing and all round naturalness. Trichord's own Pulsar One DAC (a more exalted specimen) put in an appreciably finer performance, but it hardly wiped the floor with this Dark Knight of the audio world. It remains to be seen how well DAC-MAN compares with its peers, but I have a sneaky suspicion that we could have an audiophile bargain on our hands here. Audio Alchemy 🕿 (01494) 441736

Who knows the secret of the black magic (Trichord) box?

SESSIONS

Have a fin time with the DAC-MAN converter.

#### Sony CDP-361

Do Sony CD players get better as they get cheaper? If they do, then the new CDP-361 must be one of the best.

n our last budget CD player test (issue 147) we auditioned — and applauded—theSony*CDP-761E*. Then again, we worked up even more of a sweat over the still cheaper *CDP-561E*. Could it be that Sony CD playersget better as they getless expensive? That might sound bizarre, but it proved to be the case with the company's penultimate range. (Remember the *CDP-915E* and '715E? Paul Miller's still using the latter). To research this theorem more fully, Iresolved to review Sony's budget baby *CDP-361*.

(In case any nomenclature spotters out there are wondering, the missing suffix 'E' is not an auspicious omen. It indicates that this model has not had the audiophile treatment lavished on its more exalted siblings.)

Enough portenting already. The *CDP-361* is a fully-featured bantamweight machine, with novelties such as remote digital output-level control (traditionally not tops for sound quality) and an optical digital output for future DAC upgrades. As far as casework is concerned, the low price accounts for the cheesy feet (only the front ones look chunky) and the generally low mass. However, the lid does not rattle when tapped, unlike another more expensive machine in this feature.

When played in isolation on the front of an expensive system, this Sony puts on a good show. It has no obvious failings, and its sins are of

omission not intrusion — it adds very little to the sound. Musical energy was extracted and reproduced with plenty of vitality. The frequency response droops in neither treble nor bass, so the former has air and sparkle, while the latter has weight. What's more, it can get mellow and groovy when circumstances require. More expensive CD players would provide a more natural tone and a considerably fuller-bodied sound, plus extra detail, but the *CDP-361* covers most of the bases without resorting to the abrasiveness of earlier budget machines.

The aspiring audiophile would be best advised to save another £50 for a *CDP-561* (sorted with that all important 'E'), but those who want to fit and forget could do worse than this little charmer. *Sony* 2 (0181) 784 1144

#### **Orelle CD-100**

Orelle has a reputation for producing a sonic silk purse out of a technological sow's ear. Will the CD-100 follow suit?

There are two ways of looking at the technology used in the Orelle *CD100*. One is to regard it as rather 'old hat' — after all, multi-bitdigital converters and swing-arm transport mechanisms came in with the first CD players back in 1983.

Alternatively, even though swingarm lasers are no longer manufactured, and the budget CD player market has gone over to bitstream DACs, that'snoreason topresume that mature technology is no longer capable of putting in a decent performance.

The *CD-100* is chunky and clunky. Its case is all aluminium, with an eight-millimetre-thick anodised slab of the stuff on the front. Controls are of the basic 'audiophile pretension' variety; the display is old-fashioned but easy to read; the remote is a mundane device off the shelf. It's the innards that count, and under the hood you'll you'll find a Philips S1 crown chipset, a 50VA toroidal transformer and six IC regulators. These parts have been arranged by Chris Bryant, sometime hi-fi reviewer and a bit of a digital whizz.

Designers such as he persevere with multibit because of its ability to reproduce leading edges, which are the key to timing. And the *CD*-100 does have a keen sense of timing, which lends a sense of coherence and belivability to the CD reproduction that often eludes other players. Initially the sound is a little dry, with cymbals seeming more splashy than usual, but once you've become accustomed to the balance, it becomes apparent that the music is more engaging than usual.

It's not just timing, of course. This Orelle plucks plenty of information from the pits in your discs, and it is just as convincing with King Crimson as Paul Bowles. Next to more expensive alternatives it can sound a little 'hair-shirt', and high frequencies could be more natural, but for the money, and in an appropriately-oriented system (ie Orelle's own, Naim, Rega etc) it should prove a most able performer. *Orelle* **2** 0181-810 9388

### Epos ES22

The famous Epos stable sires another loudspeaker. Is it a thoroughbred stallion, or a carthorse?

The new ES22 floorstander has been launchedtobridgetheeconomicchasm between the ES25 range topper and the ES14 (now £675 — it seems like only yesterday that this speaker cost 2/6 etc). The elegant new comer will set you back a not-entirely-unreasonable £1,185.

The *ES22* is currently available in the tasty light-cherry veneer pictured here, but apparently walnut is on the way. The speaker's compact (yet sturdy) frame measures nearly a metre and weighs 17kg, and the base houses high-torque threaded inserts so that you can lock spikes firm (but will they survive Paul

Messenger's cruel spanner?).

**18** FEBRUARY 1996

'Nothing new' is

not an insult to

the Orelle CD-100.

#### THE FRONT END

Viewed from the front, the *ES22* is a picture of simplicity, but the rear aspect reveals two flared ports and a plethora of 4mm sockets. Epos supplies bridging plugs, but it's clear that for sonic purity, tri-wiring is the approach that they encourage. I started off with one run of *Sonolith Monolith 20/20* cable, but found that the addition of Cable Talk *Talk 3 Bi-wire* brought the *ES22s* to life.

The drive units consist of a 25mm alloy dome tweeter on a polyamide suspension, and a pair of injectionmoulded 150mm cones. The lower of the two has a stiff dust cap at its centre, and provides bass; while the upper one handles the all-important midrange frequencies. This driver has a phase plug attached to the chassis to improve dispersion. Both of the large cones feature substantial 32mm voice coils for better power handling, so you can throw a party with them, yet they won't cramp up when you crank up.

Like the Mordaunt-Short *Performance* 860 I reviewed in issue 146, the ES22 has a separate chamber for the midrange drive unit, which should prevent interference from the long-throw bass driver.

That bass driver has a lot to answer for, notably a claimed 38Hz low frequency roll-off point — in plain language, it supplies grunt of significant substance. That claim is borne out on audition after you've found that special spot where bass extension is maximised and port audibility is minimised. Once you find that location you'll cement a musical foundation, and secure the essential musical underpinning necessary for your imagination to truly suspend disbelief. Of course, you must also be able to follow the tune (as certain Scotsmen have been known to utter), and the *ES22s* are adept at this kind of portrayal.

While bass gets your rib cage going, what gets your heart involved is the midrange, which in this instance is alluringly nimble and beguiling. Once the *ES22*s are fully tri-wired with something lively like Cable Talk 3, they have the energy and dynamics to match the requirements of your most spirited records, along with the subtlety and imaging qualities that bring out the atmosphere of more spiritual vibes.

Only one disc gave the *ES22s* any trouble, and that was a *Stereophile* piano recording called *Intermezzo*. I'm used to hearing this record through the mighty *Sonoliths*; through the Eposes it sounded a shade less like the excellent transcription I have become accustomed to.

Most of the listening was done with Michell amps, but I hooked up the Cyrus III as well, which elicited a more open, lively sound that helped the midrange but left the bass less defined and controlled. Not a bad result overall, and consistently very musical. Having heard all of the Epos speakers at one time or another, I'd say that the ES22 is well worthy of a reputation that's the envy of many in the trade. It possesses a fine sense of timing, offers high resolution across the frequency range, and has just enough character to be endearing without obscuring. Epos 🕿 (01705) 407722

### Red Hot on Impulse GRP 11512

The Impulse label was started in 1960 by Creed Taylor, and it was under his direction that the label signed John Coltrane. Yep, we're talking 1960s jazz, when the form

moved out of bebop into free jazz and split into myriad shards. This album was put together by the Red Hot organisation to spotlight the incredible talent present on Impulse, at the same time swelling the war-chest of Red Hot's fight against AIDS. It's a useful sampler for those of you tempted by Impulse's numerous recent reissues of CDs and LPs.

The compilation contains 11 tracks from artists both celebrated and relatively obscure, sporting names like John Coltrane, Charles Mingus and Archie Shepp. While this is elementary material for the jazz aficionado, it is also accessible to the unitiated. We are spared the heavier moments of Pharoah Sanders or Archie Shepp; instead there is gentle induction into a world of spiritual vibes and extraordinary talent.

If the so-called Acid Jazz movement has caught your imagination, get acquainted with where it all began.

### King Crimson - Lark's Tongues in Aspic EGCD 7

On a totally different tip to *Red Hot on Impulse*, here's the Virgin value rerelease of a classic Brit Rock album from 1973. This was Crimson's sixth album, and the first appearance of its classic power trio line-up: Robert Fripp on guitar and Frippertronics, John Wetton on bass, Bill Bruford on drums. That awesome parade of musicians is joined here by Jamie Muir on 'percussion and allsorts', with David Cross on violin and Mellotron.

The title track starts off barely audible with light drum and guitar, but becomes a raging torrent at the flick of a switch. There are subtle melodic tracks, but an ever-present menace lends an edge. The other stand-out track is *Easy Money* (nothing like the Ricki Lee Jones song), which features weighty, textural bass from Wetton as a counterpoint to the rhythmical extravagances of 'human metronome' Bruford. Imagine early '80s Rush and you've not even begun to conceive the majesty of Crimson. *Tom Sawyer* with attitude, anyone?

# Don't always judge

Unique geometrical structure which includes a 3-dimensional dome significantly reduces resonances produced by 'standing waves' within the enclosure. A further reduction of spurious noise provides a strong, solid bass, combined with a crisp mid and high frequency. The musical precision is audibly superior.

The cassettes utilise advanced composite materials as used in aerospace design. A rigidity that achieves optimal azimuth stability. A 'softness' and flexibility that dampens mechanical vibrations transmitted from the motors. And a geometry that reduces resonance from within the enclosure.

A uniquely designed transparent friction sheet placed between the cassette hub and casing allows smoother tape rotation. This embossed sheet reduces rotation torque to one quarter of standard tapes and shows a significant improvement in wow and flutter.

The STUDIO IV metal cassette has a vast headroom for perfect compressionless recording. Making this tape the ideal choice for master recording quality.

Record on the new 353 tape and hear the difference.It's as simple as that.353 tape has been designed to convey the superior dynamics and clarity of digital sound from analogue tape.

Reduced modulation noise, improved definition, higher output, and superb flat frequency response. From the deepest bass to the purest acoustic highs. 353 liberates recorded music.

The Studio IV goes beyond most new metal tape properties. It not only produces excellent high frequency levels but also provides an exquisite balance within the total musical spectrum while reducing noise to a minimum. The ultimate cassette for reproducing any musical source.

After extensive research, the newly developed STUDIO IV pure metal tape utilises perfectly shaped and densely packed super fine magnetic crystals dispersed uniformly over the tape surface.

The advantage

Made possible by the latest advances in resin moulding technology, the tape support surface is totally free from curvature. Together with precision engineered vertical guide pins, the rock steady tape path ensures accurate azimuth which greatly reduces phase differences between left and right signals.

Every cassette may look the same from the outside. But it's the performance inside that counts. Compare 353 with your usual brand of tape and discover the advantage for yourself. 353. Advanced audio and video cassettes.

a tape by its cover.

# Small is beautiful

Space: the final frontier for hi-fi — but **David Vivian** hasn't got much of it. Here he explains why size isn't important for great sound quality.

hare a secret? I'dlike a biggerroom. Something with real depth and width and volume. Big enough to sitatone end and see perspective lines converge at the other. Big enough for clouds to form up near the light fittings. Big enough to party in for weeks at a time. But, most of all, big enough to accommodate a sod-off, gigawatt hi-fi.

I like big. I'd like my hi-fi to be more powerful than my car and my car to be a Ferrari *F40*.1likeshock wave bass, high velocity transients and visceral volume.

Curious, then, that I live in a bijou semidetachedcottagewith but a thin wallseparating my living space from next door's. Stranger still that I listen to hi-fi in the smaller of the two living rooms, a pretty little thing barely 13 foot by ten foot. Butthen I have no choice. Ibought the house because it has a mill pond outside and I like communing with the ducks. I reckon you'd have done the same.

And so the struggle continues — unachievable sonic aspirations versus the real world. I don't want to move house for the sake of the hi-fi. Neither, if you're a sane and well adjusted human being, do you.

Now, at this point, I should hedge my bets. My instinct here is to qualify like crazy. Imean, it's hard enough to be didactic about system building anyway. But the dreaded small room syndrome? You can'twin. People will tell you that it's well nigh impossible to extract a truly satisfying sound from a shoe box. They'll say it doesn't contain enough air for big speakers to generate genuinely deep bass. Or to let the music "breathe". They'll point to the evils of near field listening; the in-yer-face presentation; the unconvincing soundstaging; the skull-drilling treble.

And they'd be right. I've experienced all of this and more over the years. Dragging a decent sound from a confined space isn't easy. But neither is it all that hard. Reviewer Malcolm Steward previously had a living/listening room almost as small as mine, yet his active Linn/Naimset-up sounded disgustingly dynamic and natural. No twee system for a tiny room, this. The Naim SBLs were just a couple of paces from the sofa; each had its own NAP250. They went excitingly loud, but effortlessly.

A couple of years ago I compared the remarkable Nakamichi/Soundstream/KEF combo in Ken Chisholm's VW *GolfGTI* (probably the best in-car sound in the country) with the frighteningly expensive, exotic and gorgeous system in Loughborough dealer Derek Whittington's house. We parked Ken's car in thedriveand shuffled between Derek's spacious lounge — in which the outrageous Shahinian Diapason loudspeakers looked about right and the well packaged but decidedly intimate cabin of the compact German hatchback.

Guess what? Derek's system sounded more impressive. But Ken's was tighter, faster and more musical. And because it focused attention on the music, the fact that we were sitting in a sound booth with the front speakers less than four feet apart ceased to matter.

### **Interface explorations**

If music matters, the size of the room shouldn't. It might be harder to achieve some of hifi's neater tricks in a small room. Invisible speakers, a stereo soundstage with convincing height and depth, subterrane an bass and a realistic rendering of the scale and shape of the recording acoustic require space. But getting the music right—the pace, rhythm, tem po, cohesion and accurate resolution of timbre and harmonics —shouldn't be a problem. In fact, it's easier.

Indeed, the more you explore the small room/system interface, the better it looks. Given that the room probably has a bigger influence on the sound of a system than any single component in it, the effect tends to diminish with the size of the room. Because transmission and reflection paths are shorter, there's less opportunity for the room to "get hold" of the sound and manipulate it. You hear it straight and true, just as the producer intended.

Theoldroomsize/amp powerequation still makes sense. You don't need as many Watts to fill a small room with sound, especially since efficient speakers have become so fashionable at the affordable end of the market. Soyoumightaswellmakethem goodWatts. Thesmoothnessand easy-going musicality of valves have obvious attractions here. Let'sfaceit, with the 25 or so Watts a side of an Audio Innovations Series 500 to play with, you aren't going to rock the Albert Hall. Small is where it's at

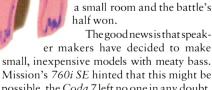

### The boppy Brit sound

I think things are even betterthan that. Okay, acosy, glowinglittlevalve-amped system will probably be as soothing as it issmall-room friendly. And I bet any competent dealercould come round with a selection of ballsy British components from Linn or Naimor Arcamandknock up at aut, punchy, tuneful ensemble that will keep your feet tapping for months.

They'retheeasy options. But what if you don't want mellifluous? What if you find the

boppy Brit sound a little short on finesse and transparency. What if you want it all? A small-room system that doesn't cost the earth butsounds like a million bucks. A system with space and pace, dynamite, dynamics and disarming delicacy. A system that will keep you enthralled not just into the early hours of the morning but for weeks, months, endeven years.

Idon'tknow what it is, either. But I've spent years trying to find out and picked up a few pointers on the way. Until I decided to experiment with small-room possibilities for this article, my system comprised a Meridian 602 transport, Meridian 603 DAC/pre-amp (used purely as a DAC), a Pioneer A400 GTE integrated amp(astweaked by the unfeasibly talented Tom Evans of Trichord and Michell fame) and ---getthis—a pair of KEF Coda 7 loudspeakers. I've had speakers of all shapes and sizes in my room-from large, multi-drive-unit floorstanders to dainty miniatures. They've all worked to an extent. Because all the walls are different lengthsstandingwaveshaveneverbeen a problem — it's possible to pump quite a lot of bass energy without things becoming boomy or

Mission's 760*i* SE hinted that this might be possible, the Coda 7 left no one in any doubt. But they need careful controlling. It's no good plonking the baby KEF on weedy stands and expecting miracles. Mine sit on 24-inch Slate Audio stands that cost three times as much as the Codas and damp down just enough of their tendency to become over exuberant at highish volumes. Thus tamed, they're a wonderful small room design: breezy, open and articulate with surprising low-end wallop and speed and treble quality that belongs to an altogether more expensive speaker.

### X vs GTE

con-

gested. However, on the

whole, the small speak-

ers have given the best bal-

ance. Get the balance right in

Good treble is vital in the near field. A harsh, gritty high end, whether its the responsibility of the electronics or the tweeter, is a non-starter. The Evans GTE tweak adds some flesh and warmth to the original A400's hyper-clean treble, but substituting a current, off-the-shelf A400X ushers in even finer resolution and delicacy. Troubleis, the X doesn'thit as hard as the GTE. Upgradefrom Coda7sto Coda8sandtheshortfall disappears. The 8s have a bigger, more basssolid sound than the 7s with the attendant benefit of being a little less obvious through the midrange. They also sound more relaxed and dynamic. Swapping them for a pair of Castle Severn's - slim, elegant £500 floorstanders to see if I can keep the roll going, doesn't work. The Castles are a tad more cultured but sound a little sluggish and bass-heavy by comparison. Replacing the A400X with harman/kardon'sleanerandmorezesty£200610 integrated injects some life and bounce-a little too much with either pair of Codas - but, overallthePioneer/KEFteamgelstobesteffect. Final question. How much of the overall sound is down to the once redoubtable Meridian 602/603 combo? Adding Pioneer's latest £400 Legato Link S machine, the *PDS*-904S, provides an intriguing answer. The Pioneer isn't quite as rich as the Meridians but even more detailed and atmospheric.

Ą

So, oursound has taken on a real 'larger-thanthe-room' quality but lost none of its vibrancy or coherence in the process. Moreover, the systemvalue has actually fallen by  $\pounds 2,700$ . Put back another  $\pounds 350$  for REL's latest tuneable active subcube, the *Q-Bass*, and you can have still more solidity and depth in the lower registers.

Moresolidity *than* depth, tobehonest. Perhaps that stomach-wobbling 'whoomph' you get with seriously deep bass really is the preserve of large rooms. Little else is, though. I had a good sound and found a better one. So don't assume that throwing time, effort (and, yes, even a little money) at a small-room system isn't productive. On the contrary, it's essential. And the results can be hugely satisfying. I still want a big room, though.

 $\label{eq:cd} \begin{array}{l} \mathsf{CD} \cdot \mathsf{AMP} \cdot \mathsf{TUNER} \cdot \mathsf{LOUDSPEAKER} \\ \mathsf{FULL} \ \mathsf{SYSTEM} \ \mathsf{REMOTE} \ \mathsf{OPERATION} \end{array}$ 

will be launched in December 1995 at prices that you may not believe.

# A fair **cop**

**Alan Sircom** has his senses soothed by some seductive Scandinavian tube amps.

hreeyearsago, Scandinavian amplifierspecialistCopland introduced the criticallyacclaimed *CTA301/504*: a combinationofpreandpower amplifiers deploying valves. Today, Copland has radically upgradedthe *CTA301* preampto become *CTA 301 mkII* (now £1,349), while the redesigned 504 power amp has become the £2,099 *CTA 505*.

The 301 preamplifier still uses four power supplies: one each for the line amplifier stage (four inputs plus tape), phonostage and valve heaters. However, the mkII has a new circuit board, improved circuit layout and two separate earth lines for the signal and power supply paths. These tweaks notwithstanding, I would guess that the most obvious change has been the switch to Russian valves. Copland has swapped from E82CC double triodes in the line stage to Sovtek 6922s, while the E83CC valves in the phono stage have been replaced with military-specification 12AX7 triodes. The good news is that the mkII version - significantly better than the mkI, if memory serves - is retrofittable into the mk I chassis, at an as-yet-unconfirmed price. It is also worth noting that the preamplifier inverts phase at its outputs, so ideally the speaker connections should be inverted at the amplifier.

The CTA 505 power amplifier is likewise modified. The new power amp has ceramic valve holders soldered directly to the circuit board, aswitch-free signal path, custom-made transformers, higher specification filter capacitors and many other improvements. In the tube stakes, a complement of 12AX7 and 12 AU7s make up the low-level section, with a brace of four 6550 tetrodes to do the real work. This allows the CTA 505 to pump out 67 Watts per channel intetrode mode, or 35W in switched triode mode.

A major point in Copland's favour is the superb build quality of its products. There is massive attention to detail,manifestintheshapeofthedeeplysolid panelling; elegant, Cello-like alloy knobs; and circuit boards so thick that you could dig roads with them. The components tacked onto this board are pretty substantial, too, including specialist transformers made by Microtraf — Copland's in-house brand.

COPLAND

COPLAND

### It would win the Eurovision Song Contest

One can't help but describe the sound ofthisamplifiercombination as 'sweet' —especially when the power amp is in triode mode. However, it never gets boggeddownin audiotreacle, even when digging out the most syrupy soul ballads. It just has an admirably consistent polishing effect that brings out the best in every record played.

This sweetness is reinforced by an immense sense of control, especially remarkablefora valve amp drivingrealworld loudspeakers (Ruark Equinox) with below 100dBefficiency. There is little of the soggy bass associated with some tube designs; instead: clean, tight bass with crisp mid-range and treble. If anything, the Copland duo is rather too controlled, and sometimes errs towards the intellectual and mannered presentation. However, if—like me you are more King Crimson than King Kurt, a little extra control and a touch of the cerebrals can be a good thing.

It can rock with the lads down the pub, if needed, but this Copland duo is far more relaxed with a refined night of jazz at the wine bar. However, it got behind thegutsy, crunchingguitars from the Foo Fighters' eponymous first albumwith as much aplomb when digging deep into Rachmaninov's Second Symphony. The latter highlighted another commendable trait: an impressivedynamicrange. This equipment won't reproduce the sort of wild-stallion dynamics that you might hear from a no-feedback, single-ended triode design from Audio Note, for example. Instead, youget a more reserved version of events, with a strong sense of control.

Imagery is clearly focused, with a superbsense of space around instruments in the soundstage. More than this, though, I commend the solidity of the Copland's sound which, like other products from this company, only adds to an innate sense of rightness in the sound. That's rightness in a bolted-down and natural sense, not rightness in the airyfairy manner of some of its valve peers.

### Conclusion

As ever with Copland, this is a grownup amplifier that makes music with a refined, yet never over-civilised, air. I can'twaitforthenewCoplandHDCD CD player!

## Levin on a **player**

The prestigious Mark Levinson brand has released its first 'budget' CD player – a snip at £8,000. **Alan Sircom** dreams of the day when he'll be able to afford one.

nly Madrigal could comeup with an 'entry level' eight grand CD player. The £3,995 Mark Levinson No37 transport and identically priced No38D/Aconverterwould beflagships in any other company's range —but with its top transport and matchingDAC weighing in at a cool £21,000, eight grand is a mere bagatelle.

The No37 and No38 arrive in huge boxes, but are average-sized components — a minor diappointment, for about a nanosecond. Then you feel the sheer heft of the casing, the quality of the black ano dised finish, and the way that nothing flexes, even when you lean on it.

Curiously, the AC plug socket for the *No 38* is in the middle of its (soft white) underbelly. This shortens the path between the inflowing mains current and the DAC's powersupplycircuitry. (Mostuse lengths of wire, regardless of the digitaldamagethatcanensuefrom consequent stray fields).

### What's in the box?

Ratherthan adopting a conventional, off-the-shelf CD transport, Levinson has taken an 'ard-as-nails industrial CD-ROM drive and totally rebuilt it tomake it even tougher. This takes an age to run in, but the results are worth it.

The DAC has also been given the overkill treatment, with six digital inputs, and both XLR (balanced)and gold-platedphono (single-ended) outputs. Within this 20-bit device, there's a Pacific Microsonics HDCD processor, allied to Levinson's own 'intelligent FIFO' buffer. This buffersthedigital signal from the transport, in what is claimed to be a far less jitter-infested manner.

The user-friendly buttons and big red LED display seem too large — but have you ever tried to read a regularsized CD display across a large room? This value-added package includes comms ports for Levinson *Thirtysomethings* to talk to one another and the facility to program functions or store information (down to minutiae like absolute phase) for thousands of discs.

#### T'would make a statue weep

Despite its overt sophistication, this Levinson pairisjudged finally on sound quality. Just how good does eight grand's worth of American kitsound?

Well, from the start it was clear that this was no normal CD player. In fact, it operates so far beyond the average performance envelope as to have little in common with less expensive siblings.

This impression is founded primarily on bass: the impact, depth and sheer resolution of it. No other player I have tested has the ability to grab so much bass detail from the silver disc. It seems to reach down to the very bow-

\_ \_ \_ \_ \_ ± \_ \_ \_

els of the loudspeakers to wring out a few more Hertz.

WithHDCD, yougetDickensianlevels of detail, and scale Tolkien would beproud of. Put a way the HDCD discs and you get a similar overall sound, only with slightly less detail and subsequently less sheen to the performance. Neil Young's *Mirrorball* aside, you also managet o by-pass the turgid amusicality of current HDCD discs.

CDafterCD sounded fresh and new, resolving information that remained hidden until now. Even poor recordings displayed subtle nuances more easily than ever before. This mannered performance won't endear itself toward the most frantic music, but even at its worst, it will delve deep into the disc.

#### The big conclusion

If I had to sum up the No 36/No 37 in one word, I'd pick 'majestic'. Majestic in bass performance; majestic in producing a rock-solid soundstage. Most of all it is majestic in its control of music.

Think of this transport/DAC duonot as an expensive CD player, but instead a cheap alternative to a McLaren F1 in the status ratings. Now, if only I could pick thosesix winning lottery numbers...

Path Premier, Desborough ParkInd. Est., Desborough Park Road, High Wycombe, Bucks HP12 3BG 20 (01494) 441736

Good CD sound don't come cheap — it costs about £8,000, in fact.

### 0171 229 2077

### **21st Century**

A new 'Super CD' draws tantalisingly close, but will it founder on the rocks of sensational journalism? **Barry Fox** reports the latest news.

### n the mid 80s, when serious listeners were unhappy about the sound quality of CD, the price of discs and playerswastoohigh forthemassmarket. The Japaneseelectronicsindustrydeveloped DAT, offeringlonger playing time and the bonus of home recording. Most people in the hi-fibusinesssaw DAT asnomore than an adjunct to CD, but the Japanese could not resist hyping their new format. The popular press dressed up DAT as a predator for CD, with the result that people who had just bought CD players felttricked. Those ready to buy CD put the purchase on hold.

More recently, a similar fate has befallen Video CD, the system that puts 74 minutes of VHS-quality video onto a standard CD. Publicity for DVD (the high-density disc that will hold a full movie of broadcast quality) has seen to that. Even though the promise of a £500 DVD player is already looking sick, and likewise the projected launch date of autumn 1996, people 'know' something better is coming.

For all the right reasons, the UK's ARA (Acoustic Renaissance for Audio) has been trying to raise awareness of the high-density disc's potential for amazing hi-fi applications. However, that idea could run out of control. The ARA proposed a High Quality Audio Disc (HQAD) with high ersampling rates and more bits per word than standard CD. The ARA suggested 96 kHz, twice the 48 kHz DAT standard. Philips would prefer 88.2 kHz, which is twice the CD standard, and thus better suited to remasters of existing discs.

Pioneer has been planning a high-density, high-quality, three-inchstereo CD. Sonyisway out on a limb, with a completely new idea for HD audio. Sony wants a 'bitstream' system, quite different from PCM. Instead of fixed word lengths of 16 bits or more, a single bit would switch very rapidly to steer signals up or down. This would make it easy to build a very cheap Discman portable, with the disadvantage of negating any digital signal processing, for instance filtering or shaping.

Professor Malcolm Hawksford (of the Centre for Audio Research and Engineering at the University of Essex) has already written a technical paper which compares PCM with a bitstream. In his opinion, "We believe the inherent advantages of a linear PCM system to be overwhelming" he writes.

"Actually, there is nothing very much wrong with the existing CD system," says the

### ARA's Tony Griffiths, until recently the boss ofDecca's recording centre, and one of the forces behind DCC's push to 18-bit resolution. "If there was anything wrong, studio engineers and producers would be jumping up and down at what the CD system does to their recordings. I think people really want more louds peakers and more channels, to make the sound more realistic. Around 15 million people are using Dolby surround decoders, with up to five speakers round the room."

High density discscreate the space for more channels, and higher quality for each channel if people want it. So the ARA has made up a one-hour demonstration programme on fivechannel digital tape. It pulls together examples of stereo, Ambisonics and old quadraphonic recordings. One example has a singer on stage being heckled by the audience. Play it in surround and the hecklers are at the rear of the room; play it in stereo and they are on stage alongside the singer.

The Japan Audio Association saw what the ARA was doing, and in July formed its own Advanced Digital Audio (ADA) conference. Most Japanese audio manufacturers belong to ADA, and the group holds regular meetings to discuss future music recording and playback. The ADA will make a formal proposal on hifihigh density CD by March 1996. Behind the scenes there is Japanese Government support, and like itor not, the ADA's decision will shape the future of hi-fi in the next century.

Representing the ARA, Meridian Audio's BobStuartgave two demonstrations to the ADA

Do we want higher resolution, or music all around the room? The debate begins here.

in Japanon 20 October. At least half the ADA's hundred members turned up: it was the first time they had seen a presentation by a voluntary group, on a mission for the good of the industry, rather than a manufacturer trying to sell a new standard.

Stuart told the audience: "I am not here to explain the benefits of high sampling rates and high bit numbers. I am here to show what fivechannel discrete 16-bit linear PCM sounds like, and ask you to imagine what it would sound like with five channels of 20-bit code".

The IFPI, world trade body for the record companies, is now having private talks with the RIAA and RIAJ, the record industry trade bodies in North America and Japan. The IFPI's Director General, Nicholas Garnett, says: "We did not want to be faced with a *fait accompli* assembled by the hardware industry. So we are getting everyone to agree a laundry list of what we want from the new system. Top of the list is copyright control."

No-one in music or hi-fi seriously expects the new hi-fi format, whatever form it takes, to be ready for several years. But as the debate widens, there is a real risk that a national newspaper will take these shards of information and inflate them into a shock horror story. Heaven help the hi-fi market if we have a new DATstyle scare which advises consumers to wait for the 'revolutionary' new Super Audio CD which is 'just around the corner'.

# Help!

### IF YOU DON'T KNOW WHY THERE'S NO SUN UP IN THE HI-FI SKY, YOU NEED HELP FROM MALCOLM STEWARD

#### **Sparkling neutrality**

I have a Philips CD473 CD player, NAD 3225 amplifier and Leak Sandwich 600 speakers. The sound is very neutral, just as I prefer it, but I'd like to replace the CD473 with a player that has more sparkle in its treble and more oomph in the bass without compromising midrange neutrality. What do you recommend? Richard Clews, West Midlands

The Rotel RCD-970BX recently impressed me as a player that mixed punch and panache in equal portions. It delivers a well-balanced sound that's enthusiastic but also open and articulate in the frequency extremes. Try this

### Query of the month

After 14 years listening to a Sharp Optonica system, I now have a 'real' hi-fi which I bought second-hand. My Linn LP12 turntable, *Ittok LVIII* arm and K9 cartridge sit on a Mana *Reference* table, while my Micromega Stage 3 CD player, Naim NAC72 pre-amplifier and NAP140 power amplifier with *FlatCap* power supply sit on an Apollo equipment table. Interconnect is Chord Solid, and my Linn Keilidh speakers are connected with Naim NAC-A5 cable.

However, from what I've read and heard, my turntable is 'coloured', the cartridge is 'bright', the amps are 'warm', the cable is a 'dinosaur' and the speakers can sound 'shut-in'. Does this mean that my system works, or is it back to the drawing board? Also, listening to some albums on both CD and vinyl it's hard to tell the difference between the formats. Jeff Wilding, Manchester

Welcome to the wonderful world of hi-fi paranoia. Don't worry about the remarks concerning your components: the vital element in system building is attaining a workable balance and yours is reasonably well sorted. My own system uses the same 'coloured' turntable, 'warm' amps and 'dinosaur' cable, but I'm not fretting: a reviewer's opinion of a product reflects not only his preferences but also the characteristics of the system in which he did the auditioning.

What your system definitely needs, though, is being set up properly. The performance of the LP12, in particular, is entirely dependent upon the skill of the person who twiddles its springs. Get it tuned by a franchised dealer and you should have little trouble hearing the difference between CD and LP.

Linn LP12 needs professional set-up for tip-top results.

### Fancy equal portions of punch and panache? Try a Rotel RCD-970BX. The Audiolab 8000A is thor-

updated version of our old favourite, the RCD965BX.

Compare it with other similarly priced players such as the Kenwood DP-7060, the Onkyo DX750, and the Sony CD-P561E. Don't forget to audition the Arcam Alpha One and, for a few dollars more, the stalwart Alpha 5 Plus.

### **Power partnering**

Could you advise me on which sub-£500 amplifier best suits the Mission 752 speakers? I've been thinking about the Cyrus III and the Audiolab 8000A, both of which are available here in South Africa. Justin Mueller, via the Internet oughly dependable, although you may find its sound errs towards caution and restraint. This probably won't suit you if you're looking for large doses of excitement. The Cyrus III, naturally, will work happily with the Mission 752s, but I find it more convincing when it's partnered with the PSX-R power supply (upping its price to around £800).

nPED

Options I'd recommend you audition are the Arcam Delta 290, Naim NAIT3 and the more expensive Exposure XV.

### **Standing a chance**

I was lucky to buy a secondhand pair of Spendor SP100 loudspeakers. My problem is discovering which stands would fit them best.

Dirk Kallweit, Bremen, Germany

Spendor advises against using generic stands with the SP100 because its dimensions and cabinet construction demand a dedicated support. The company supplies four stands, the first of which is an MDF 'furniture' type. However, you'll achieve far better results with one of the three metal models, either one of the domestic designs — one is 350mm tall, the other 500mm — or the 450mm tall, box-section, openframe stand aimed primarily at professional users. As Spendor rightly points out, there's no

### THE FRONT END

single ideal stand: what works in one situation won't necessarily work as well in another. Call the company on +44 (0) 1323 843474 for specific advice.

### The upgrade connection

I have a Rega Planar 3 turntable fitted with Rega Elys cartridge, an Arcam Alpha 5 CD player, Creek 4140 amplifier and Heybrook HB1 speakers on HBS1 stands. I'm happy with these and don't want to change them. However, I want to improve the sound in subtle ways by upgrading my £20 interconnect and QED 79-Strand. The Creek has DIN sockets: is this a problem? I'm also considering changing my Target TT2 equipment table to a three-shelf unit or upgrading the Alpha 5 to Alpha 6. I have about £250 to spend in total. Colin Cheeseman, Oxon

215

The DINs on your Creek aren't a problem: Cable Talk, the Chord Company and SonicLink all manufacture suitable interconnects fitted with high quality DIN connectors.

Switching to better speaker cables alone will bring a dramatic improvement. Cable Talk's Talk 3 or Ixos Superstrand 603 make excellent and inexpensive upgrades

to the 79-Strand.

With regard to stands, I'd suggest that if you have the floor space you retain the twotier table for your CD player and amplifier, and instead treat your Rega to its own separate support.

#### **Connection consistency**

What do you think would be the best speaker cable and interconnect for a Mission DAD7, Cyrus III and Mission 753 combination? Jaume Moreno Roca, Spain

There's much to be said for using speaker cable and interconnects from the same manufacturer: it's a fair bet that one was developed using the other, which should provide consistent performance. I would look at Cable Talk's range and also consider using Chord Company interconnects with Naim NAC AS speaker cable.

#### Listen to your heart

I'm having trouble here in Singapore choosing a new CD player to partner my Cyrus III, PSX-R and Neat *Petite* speakers on MAF stands. I've tried the Quad CD67, Cyrus DAD7, Meridian 506 and Naim CD3. My mind goes for the Quad but my heart goes out to the Naim. I'm worried about system matching. Chin Yee Hock, via the Internet

If the Naim gives you a buzz then that's the

player to buy. I'm more concerned about the combination of amplifier and speakers you're using.

I've found that the Neat Petite only delivers its full potential being driven by muscular, tight-sounding power amplifiers such as the Naim NAP250 and Exposure IV. While the Cyrus III is a very capable amplifier it's probably better partnered with a less demanding speaker, such as the Neat Mystique or Mission 752.

### Catch 78

My system consists of a Pioneer PD-5010 CD player, a Dual CS5000 turntable with an Ortofon OM20 cartridge for LPs and Shure M75ED for 78s, Pioneer A-400X amplifier, JVC TDW253 cassette deck, B&W DM220i speakers and a Technics SHGE70 equaliser.

I have two problems. The first concerns the equaliser I bought because I listen to, research and re-record 78s. The instructions for connecting it seem to assume that the amplifier has a tape monitor facility, and as the A-400X doesn't, I can't get full facility from the equaliser.

The bigger problem is a lack of sound quality. There's practically no bass — on any input — and the system sounds boxy and restricted in all but the high frequencies. Do I need new speakers or a subwoofer? Stephen Sutton,

Northumberland

I am sorry to say that you shouldn't have bought an A-400X. The man from Pioneer says you can't get off-tape monitoring from that model's phono input because the phono stage isn't connected to the Cyrus III: a natural and convincing partner for Mission 752s.

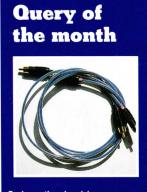

HELP!

record selector: that facility was discarded to optimise phono sound quality. You're in an uncommon situation and the answer is either to buy an amplifier with a more conventional tape loop configuration or to kludge an arrangement that will work. You could, for example, use a cheap secondhand preamp — or a separate phono amplifier — and take the line-level signal from this to, say, the tuner input on your A-400X. You could then connect your equaliser to the A-400X and your cassette deck to the equaliser's tape loop.

If you retain the Pioneer, you should investigate loudspeakers with a generous bass register rather than complicating already complicated matters with a subwoofer. Try models such as the TDL RTL2 or the Rega EL8.

#### No crutches needed

I have the following gear: Marantz CD-65II CD player,

Each month we're giving away a one metre pair of Precious Metals interconnect cables to the writer of the most interesting letter. If you've any system queries send them to: *Hi-Fi Choice* (Help!) Dennis Publishing Ltd, 19 Bolsover Street, London W1P 7HJ.

#### THE FRONT END

Arcam Alpha 6 amplifier, Mission 761*i* speakers, Thorens *TD150II* with Rega *RB250* arm and Linn K9 cartridge. The problem is the CD, which sounds 'thin', lacking bass and life compared to the turntable.

I could spend up to £500 improving it, which puts players such as the Arcam Alpha 5 and Micromega Stage 1 on the list. However, I could instead buy an external DAC such as the Arcam Black Box 50 or the cheaper QED Digit+. What's the best course of action? Peter Westwood, via the Internet

It's nice to hear that the venerable TD150 can still hack it in the digital nineties. To partner this rocker from the locker I would choose either the Arcam or Micromega rather than trying to tart up an old budget player. No disrespect to the CD-65II, but there's more to a decent sounding CD player than just the DAC. The Micromega Stage 1 also conveniently offers a particularly worthwhile and cost-effective upgrade path if you decide to progress further with CD.

#### I'm so excited — not!

My system consists of a NAD 304 amplifier, NAD 501 CD player, Aiwa AD-F450 cassette

deck and Mission 760SE speakers bi-wired with Cable Talk Talk 3 on Atacama SE24 stands. The speakers are sited 29 inches away from the rear wall.

I am happy with the cassette deck, but the CD doesn't always sound clear or tight enough. With £200 to spend, should I replace the CD or amp to get a more exciting sound? *Maran Benadict, Essex* 

Before doing anything else, move your speakers much closer to the wall: the 760SEs require boundary reinforcement to deliver their intended response.

The NAD 501 is probably what's not delivering the excitement you crave, so a new CD player would be your best upgrade. Listen to the Sony CDP-561E, Denon's DCD-825, Kenwood's DP-3060 and the Marantz CD-53, all of which have a suitably spunky demeanour.

### **Permission to experiment**

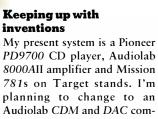

My system consists of a Rotel *RB/RC970BX2* amplifier, Sony *CDP-761E* CD player, NAD 402 tuner, and TDL *RTL2* speakers. I'd like to add a second Rotel power amp but wonder whether bi-amping or bridging the power amps would provide the most

improvement. Also, would putting spikes under my CD player improve the sound a lot? Jerome Chung, via the Internet

I'd always opt for bi-amping over bridging unless the speakers are inefficient and starved of horsepower, which is not the case with your RTL2s. Bi-amping will control the drivers better, improving detail resolution, musical coherence, dynamics and imagery.

I'm less convinced about spiking your CD player. Putting it on an equipment table or isolation platform will definitely be worthwhile. After that you're in suck-it-and-see territory. Some players respond to the oddest tweaks — Blu-Tack balls beneath their feet, telephone directories on top of their cases to damp them... There's plenty of scope for harmless experimentation.

planning to change to an Audiolab CDM and DAC combination. I'd also like to add an Audiolab 8000P power amplifier and change the speakers for 733 floorstanders. Having discussed this with a number of dealers in Hong Kong, they all say I should wait for the new High Definition CD format before upgrading. Do you agree? Ben Gilbey, via the Internet

For the current state-of-play regarding HDCD I'll refer you to Barry Fox's report in this issue (21st Century Fox, page 29). My opinion is that whatever happens, it wouldn't be sensible for record companies to adopt a format that wasn't in some way compatible with the installed base of CD players. Imagine having to buy a new CD player just so that you could hear the latest disc by your favourite artist. That doesn't sound like a businesslike proposition to me. While hi-fi's techno-crazies might enjoy spending money on the week's latest invention, that doesn't apply to most ordinary record buyers.

#### **Upgrade:** step II

Having recently upgraded from a Rotel *RCD965BX* to a Naim *CD3* I'm impressed by the energy and soundstage the Naim has given my system. I now want to upgrade my Arcam *Alpha* 3 amplifier and Mission 760iSE speakers, and I'm considering the Arcam *Delta* 290 and Audiolab 8000A. I want to add more body to the sound without sacrificing detail. Are there any other amps I should listen to?

rock if you bi-amp them.

I've heard the Naim NAIT 3 but I found it sounds a bit too forward and it doesn't have a headphone jack.

G M Gridley, London

Both the amps you mention are eminently suitable contenders. Other models with which you could compare them include, obviously, the Cyrus III and the Musical Fidelity E100, which impressed our panel with its 'almost dramatic' presentation.

On the subject of headphones: many can actually be driven directly from the speaker outlets of an amplifier that doesn't provide a headphone socket (check with a dealer about your particular model). You just need to buy a simple adapter — try Tech-Link on (0181) 771 8388.

#### **End-of-tonearm**

I have a Roksan *Xerxes* turntable, Moth arm and Audio Technica *AT95E* car-

tridge, and my problem is endof-side distortion. It's mainly noticeable as a sort of sibilance, and a hardening and slight edginess, particularly in the higher frequencies. I have had the cartridge realigned and the stylus replaced. Tracking weight and anti-skate settings are also fine.

It has been suggested that the cartridge is being overwhelmed by the turntable and that I should upgrade it. Would you agree? I have up to £150 available. I've also considered a much better tone-arm.

Nicholas Schofield, Lancashire

The AT95E is a fine, inexpensive cartridge but it's not the most sophisticated design in the world and it won't track as securely as more refined models. As a cost-effective upgrade I'd suggest a Roksan Tabriz tonearm fitted with a Denon DL110 high output MC.

If you want to go all-esoteric you'll find that uni-pivots from Naim and Wilson Benesch provide astounding tracking, although I have to admit that I've used neither on a Xerxes. I'm hopelessly biased towards uni-pivots because I prefer the less mechanical sound they offer. These uni-pivots have also turned me on to cartridges that I didn't appreciate one jot with 'rigid' tone-arms.

#### Hoax or holy?

I've tried bi-wiring, which some magazines reckon is an absolute must in high-end systems, but without any success. At first it surprised me with a greater insight into the music, but then it got unnerving with too much treble and poorer bass. The imagery suffered as well. I've tried many different cables bi-wiring Magnapan 1.5SEs, Tannoy D700s and D500s, with Audio Research SP-11/D-200 and Yamaha CX-1/MX-1 amplifiers, but it never seemed to work properly. So, I'm now happily using singlewired speakers, worried that bi-wiring might be a big hoax. Michael Heine, London

Bi-wiring can and does work for some loudspeakers and systems, but there are no guarantees. If your system happens to sound better with just a single run of cable, there's no need for concern.

#### Legal on the outside

I have a Teac P-700 CD transport and a Sony DTC-59ES DAT coupled through an Audio Alchemy DT1 to an EAD DSP-1000 outboard DAC. I'm very pleased with the CD copies I produce as it's almost impossible to notice any difference between the copy and the original. As I don't need the DAT's converters, I've started wondering about the possible benefits of a DAT transport. Is there such a thing? José F Valgôde, Spain

Copying CDs isn't exactly legal here in the UK. I'd also suggest that it's rather pointless. Even DAT masters sound inferior through a revealing system. Double speed DAT, however, is another matter. If you're serious about performance I'd say do nothing until you've heard the 96kHz Pioneer D-07 or D-05. The only pure DAT transport I've come across is Nakamichi's 1000DAT.

### **DEALER DECISIONS**

Three well-known hi-fi dealers dole out expert advice.

### The Query

I am currently using a system comprising a Marantz CD50SE CD player, Cambridge Audio DACmagic 1 D/A converter, P70 amp and Castle Durham speakers. Also included is an Aiwa ADF400 cassette player. Interconnects are home-made from expensive microphone cable, speaker cable is QED 79 Strand.

The problem is that I've recently moved home and the sound of the system has become flat and undynamic as well as bass-light. I know that the front end is okay, because of tapes I have recorded on this system. When played back through my personal stereo, they sound better than the original source via the system! I suspect the speakers, which are ten years old. I have a budget of around £400. W Riley, Merseyside

#### **Paul Green Hi-Fi**

From your letter, I presume the system was all right before you moved, so the change of room seems to be the problem. Throughout my 30 years in hi-fi, I've come across rooms that just never sound right — but these are rare.

I do agree that ten-year-old loudspeakers could give way to a new pair, and I would suggest trying the TDL *RTL2*, Mission 733, Tannoy 633, as well as the Systym *1*65 floorstanders.

My advice to you would always be to find a good, friendly dealer near you, who will allow you to take things home and try them in your system. Only this way will you achieve the sound you want. *Paul Green, Paul Green Hi-Fi, Bath* 

#### **University Audio**

Rooms can have a significant effect on the quality of the sound due to changes in volume, reflective surfaces, type and placement of furnishings, and placement of speakers. Since you were happy with the the system in your previous room, we don't think your equipment has anything to do with apparent change in the sound quality. My first suggestion is therefore to experiment heavily with the position of your speakers.

If, at the end of the day, this has no real effect, it could be that your current speakers are not interacting with the room successfully and need to be changed. In that case, my advice would be to look at speakers which have slightly more midband presence than your current units.

My suggestion would be to look at what Mission, Ruark or Monitor Audio have to offer. When choosing your new speaker, short list one or two and then ask for a home demonstration, as this is the only real way of seeing whether or not they are what you want. **Colin Parr, University Audio, Cambridge** 

### Zeus Audio

I agree with you in thinking that your loudspeakers are past their best. However, it is impossible to talk in absolutes without a proper demonstration. Additionally, in your case, I feel that a home demonstration would be almost mandatory. As an example that sticks closely to your budget, the new B&W *DM610* speakers, with a pair of Kudos stands and some good cable from Cable Talk or The Chord Company, might well do the trick.

Eventually, when you are happy with a particular pair of speakers, it would be worth looking at an amp and CD player that would move your system further forward. Once again, without demonstration, most recommendations are specious, but the upgradable Micromega *Stage* range of CD players and amps might be worth a look. Good hunting! *Dennis Cope, Zeus Audio, Belfast* 

Note: In last issue's Dealer Decisions, the query submitted to the dealers was slightly different to the version printed. Apologies to Grahams Hi-Fi Ltd of London N1, whose answer — despite being in accord with the tone of the original letter — appeared rather overenthusiastic in recommending modifications to the Rega turntable.

### HELP!

# The Jimmy Hughes **Experience**

Hi-fi deviant **Jimmy Hughes** comes clean about the real path to sonic Nirvana, with one ear tied behind his back.

ealism is the aim of highfidelity sound reproduction. The sound might be 'realistic' in hi-fi terms, but the experience of real people making music together is rarely conveyed by even the besthi-fi, despite all the right ingredients seeming to be present. Reluctantly, you conclude that even the best equipment is flawed — but then hear a relatively modest system that by happy chance seems to excite and stimulate the emotions despite sonic limitations.

As I make changes and improvements to my own system, frustratingly I find that sonic excellence/realism and musical involvement don'talwaysgo hand in hand. Indeed, I sometimes feel that as a system gets better in hi-fi terms, it actually punctures the illusion of 'reality' it tries to create, so you can't overlook it and just listen to the music.

The great actor plays a part so totally yet unobtrusively, you're convinced he is who he purports to be. It's art that conceals art. Likewise hi-fi needs this quality if it is to convince. In other words, we should hear the message rather than the medium.

To convincingly recreate the scale and range of a large or chestra calls for a system that can handle wide contrasts and extremes, and present information to the ear in a coherent, cohesive manner. Yet the more effectively you meet the challenge of reproducing these extremes, the greater the risk of the whole sound falling apart. That's why a good but not too ambitious system, which does not try to exceed its limits, is often musically more satisfying than something 'better' that aims higher but misses the target.

Thetrendin audiodesignistowardssimplicity, eliminating unnecessary components to maintain a short, clean signal path. There's merit in this Less Is More approach, but in my opinion it's sometimes necessary to lose a battle or two to win the war. Rather like Alice in *Alice Through the Looking Glass*, it's almost as if the goal we seek gets further away the more we go straight for it. Mikhail Gorbachevtried to save Communism byreforms, yetended up destroying it. Had he actually set out to destroy communism, I doubt he'd have succeeded quite so quickly. Indeed, he might even have saved it!

Hi-fi never seems to improve in a linear, cumulativefashion; progressis invariably erraticand eccentric. Early, pre-stereo music reproduction systems often had remarkable musical integrity, despite soniclimitations. Today, despite making massive strides over the past thirty or forty years, many of the 'gains' have been in areas like the elimination of noise and distortion, allied to greater user convenience.

It's easy to assume that better sound is simply about eliminating certain readily identified problems — noise and distortion being obvious flaws with early sound reproduction. Yetwhile advances have unquestionably been made in these technical areas, it has often been

### With a speaker like this who needs stereo? Get back to the life and soul of music with mono.

at the cost of musical integrity. It's akin to the way intensive farming createscheaper and more readily available foods of good appearance and excellent consistency, but at the expense of flavour and nutritional value.

Of course, older methods of recording and reproduction were flawed; yet often the lossesseemed hardly to touch the music. You need only compare the best recordings made today to those produced thirty or forty years ago to hear how warmth, naturalness, and a certain ease have been replaced by a cold clinical 'perfection' thaterodes human individuality from the performance.

In my darker moments leven think stereo, which ushered in a whole new era of sonic realism, often distracts from what is essential. Listening in mono concentrates the mind superbly! It's satisfying because you simply have to listen to the music; there's no stereo to tickle the ear. And while the loss of spread can initially disappoint, the improvement in coherence and timing is ample reward.

It's not dissimilar to the way black and white photography compels you to focus on essentials that colour dilutes. Monosounds less glamorous than stereo, but once you tune in, everything is much more cohesive and integrated, and clarity is hardly impaired at all. You are not chained to one spot to hear all the music; just like real life, you can move around.

I deviate from the purist straight and narrow by having my speakers back to front and usinga linematchingtransformerbetween CD player and amplifier. More recently I began experimenting with an output transformer between amp and speakers. Since the amp I listen to (an Orelle SA-100 integrated) is transistorised, there's no need for a transformer. Yet to my ears music sounds so much better with it in place I can't take it out.

Youcould arguethatthisapproachis wrong, and that it only serves to hide faults bettertackled head on. You could well be right. Yet I find it virtually impossible to get the kind of sound I wantwithout such deviation. Even with unlimited cash I doubt that I could get the colour, vibrancy and subtlety I enjoy now, without breaking a few rules...

### **HINTS & TIPS: MAKING THE MOST OF MAINS**

The quality of mains cabling and the mains supply itself are overlooked when one is faced with the myriad details one can attend to when setting up a hi-fi system. Yet the mains supply is the 'petrol' on which the hi-fi 'engine' runs; no power supply, no music! The quality and consistency of mains electricity is certainly capable of affecting sound quality, and many enthusiasts report that their systems often sound best at weekends and after midnight, when demands on the National Guild are less taxing.

Those serious about music will probably run their system from its own dedicated mains spur, thereby avoiding some of the distortion and noise dumped on the supply by devices like TV sets and computers. If you find certain hi-fi components suffer with audible buzzing from the power transformer, it's possible a cleaner mains supply may reduce or eliminate this noise. A dedicated spur will also reduce mains borne clicks produced by fridge-freezers, for example, though often this disturbance is only cured by suppression of the offending item itself.

Power conditioners are available to clean up a dirty mains supply, but whether or not the results are fully beneficial is controversial. Such devices often lead to a smoother cleaner sound, but can sometimes sap dynamics and punch from the sound, leading to a slight loss of focus and immediacy. However, if your system sounds rough and edgy it is likely such treatment will prove beneficial. It may have limited power handling, so don't plug in a big power amp until you've read the small print!

You can also use 'twin and earth' solid-core cable (obtainable in different thicknesses, quite cheaply, from any electrical hardware shop) to replace the cable fitted to mains distribution boards and gain a beneficial improvement in clarity and definition. Replacing captive mains cables is not recommended for the average enthusiast, and will void your warranty. But detachable mains cables using the popular IEC plug are fair game and can easily be fitted with a solid core replacement lead. Indeed, several companies market a range of ready-made solid-core replacement mains cables and distribution boards. The improvement wrought by special mains cables seems to vary, but at its best you can expect a big improvement in treble cleanness; a tighter, more powerful bass; and greater dynamics.

Some hi-fi components are supplied with a detachable, reversible, figure-of-eight plug-in mains lead — many Marantz and Philips CD players for example. Because mains polarity can influence sound quality, it's worth trying these cables both ways rather than just trusting to luck — sometimes the difference can be quite large.

Quite a lot of today's hi-fi equipment is supplied with a two-core mains lead, and it's not unusual to find systems without an earth wire. With equipment built to double-insulated standard, this isn't necessarily a safety hazard, but the lack of an earth can lead to variations in sound quality. CD players (especially older ones) tend to produce quite a lot of RF noise that is lessened considerably if the player (or the amp it's connected to) is earthed.

If your CD player is not earthed to the mains, try this simple test. Switch on the CD player and bring a small portable FM radio, tuned to an FM station, close by. You may find the signal is obliterated by the 'noise' being radiated by the CD player. Earth the unit (often it's best to earth the amp as the central component, and this should in turn earth all items connected to it), and usually the radiated noise will dramatically fall, sometimes to the point where the radio can sit on the CD player without interference. While writing this, I checked the grounding of the Trichordmodified Marantz *CD-12* I use, and found the interference quite bad — the noise itself was pretty vicious. The transport itself was grounded, but Trichord's digital output board is not connected to the chassis. So I tried grounding the body of the digital output plug and found a slight lessening of RF noise as picked up by the radio. More important, the sound seemed cleaner and more precisely focused, with less 'hash' around voices and instruments.

HELP

Because of RF noise from CD, it's a good idea to turn off unused CD players and DACs when listening to sources like turntables and (obviously) tuners. However, this must be offset by the length of time it takes to warm up the CD player. In the case of a machine like the Naim CDS, for example, which takes upwards of eight days to warm up, switching off the CD player is a bitter pill to swallow. It's also useful to consider where each component is placed in relation to its partners: you should avoid close proximity between 'noisy' items like CD players, and noise-susceptible components like amplifiers.

If you do decide to ground various components in your system, take care not to create an earth loop. This occurs when the system is grounded to the mains at two points, and may cause an audible hum through the speakers (especially when switched to turntable) that increases with volume. Some increase in residual hum may also occur. Usually just one item in the system (the amplifier preferably) needs to be earthed to ground the whole system. Some amps are designed to earth only the casework and keep the signal negative free from ground. In such cases the components connected to the amp will not be earthed.

I don't know anyone else who does this, but I ground the metal equipment support stands I use with a series of wires connected to croc clips. Whether this helps damp any tendency to pick up RF I don't know, but it does make a difference and leads to a cleaner, firmer sound. If you don't mind the bother of making up the cables, try it; it's a simple but effect tuning tip and it costs very little.

Finally no article on mains wiring is complete without a warning; don't delve into equipment or mains wiring (even component earthing) unless you know precisely what you're doing. Always switch off your equipment before attempting any work, and make sure you unplug any items to be modified. *Jimmy Hughes* 

Not to be purchased by the pound and chewed in the cinema: XLO's mains lead.

WHAT HI FI?

1994

# Mentioned in displatches

hen a great industrial power focuses its resources on a well definedgoal, mountainscan be moved. And the relaunch of harman/kardon's Citation brand is an exemplary lesson of this principle in action. The Citation 7000 is a highend AV-and-music reproduction system that synthesises the talents of three key companies within the US-based Harman Audio umbrella. To wit, these are harman/kardon, Fosgate Audionics and Audioaccess. Many readers will knowalreadythatharman/kardon makesamplifiers and other high-fidelity electronics. Audioaccess, meanwhile, was acquired by Harman about two years ago, and is one of themost prestigious names in multi-room audio and AV systems. In this instance its contribution was to add a multi-room interface into the Citation processor, that can be fully exploited with appropriate add-ons.

# The difference is Fosgate

However, the most distinctive contribution is probably in the area of

soundquality, and here the honour falls to Fosgate. This brand's main claim to fame is in the area of multichannel directional enhancement(seeboxout, 'A Short History ofFosgate&Citation', page 41), notably through the use of proprietary 'discrete' circuits, rather than the usual integrated circuits. Fosgate claims better sound and spatial performance from their circuits made up of individual transistors

and resistors, not because ICsare inferior *perse*, but because Fosgate has been able to pursue its own agenda, rather than that of IC designers. **Alvin Gold** finds that Harman's new flagship system provides music and movie soundtracks beyond the call of duty! Characteristically,Fosgatecircuitshaveshort, simple signal paths, and passive components chosen for sound quality. Home grown circuit parameters are engineered to stay within the limits dictated by Dolby Laboratories for official Pro-Logic surround sound performance, yet they are sufficiently quick and accurate to keep up with the demands of the latest digital film soundtrack systems such as Dolby's AC-3 six-channel system. From one point of view, the '6-Axis' process (main technical claim to fame within the Citation system) is a logical extension of Fosgate's basic ideas (see boxout, 'Directional Enhancement and the 6-Axis Mode').

# It's THX Jim, but not as we know it

Taken at face value, the Citation 7000 is simplyanother THX system, but its beauty is much more than skin-deep. The speaker system is the most familiar part, being based upon the original Fosgate home cinema system, albeit with extensive revamping. The main speakers for front left, centre and right (LCR for short) have the usual pair of tweeters flanked by bass/mid units, which are configured vertically (technically, a 'semi-linearray') to give the required wide lateral and narrow vertical dispersion. The carcass of the speaker is much more solid and less resonant than the Fosgate original, however; the baffle, meanwhile, is felt-lined to kill secondary reflections, and stepped for time alignment purposes.

To partner the LCR speakers, the system comes with two passive subwoofers sporting 14-inch, pulp-coned drive units. The latter are mounted in simple butsolid vented enclosures, yielding a claimed bassresponse extending down to 21Hz (at -3dB). The surround speaker is a large, dipolar design, each side of which containstwo speakers fitted at an angle. Unusually, the two halves are wired independently. They are driven together in anti-phase (opposition) during Dolby Surround and THX surround soundmodes, butthey can be operated in phase when using the 6-Axis mode, for example.

Allofthespeakersare driven by threemas-

The basic building blocks of a Citation 7000: the white speaker handles surround duties.

# HARMAN/KARDON CITATION 7000 SYSTEM

Surround

CITATION

sive Citation power amplifiers, each capable of supplying four lots of 150 Watts into an eight-Ohm load. (Peak current is quoted as a whopping 130 Amps.) Alternatively each amplifiercan have its outputs bridged to give two lots of 450 Watts and even more Amps. In total, the system requires nine channels of

amplification, which means that you can dedicate two biamplified channels to the subwoofers, and have a single channelleft unused. I suggest you plug your doorbell into that one, because there's no way you're going to hear it otherwise.

#### **Processed ease**

Most of the clever stuff is incorporated into the processor. The Citation 7.0 is a large component, loosely based on harman/kardon's Fosgate-designed AVP1 processor, but with greatly improved spatial processing, increased flexibility and that elusive property that has become known as 'intelligence'. The basics include eight inputs (including two tape circuits) and a range of sound-processing algorithms, including Dolby Pro-Logic, 70mm mode, THX, various generic acoustic modes (rock, jazz, classical, four that are user-programmable), mono enhance and — of course — 6-Axis.

The unit is controlled by a precisionstepped attenuator (volume control) with 1dB increments. With the multi-channel circuits switched off, the 7.0 will function as a minimalist audiophile-grade preamplifier, butwith the additional (switchable) ability to handle composite video or S-Video signals from video recorders or Laser Disc players.

Given the complexity of this system, its ease of use rates highly. The processor's video output carries a comprehensive set of on-screen displays with nested menus. These are also displayed on the unit's front panel in a display that can turn itself off automatically. Ultradiscreet 'Power On' indicators on the power ampsmeanthere are no distractions when using the system in a darkened room, and the amps have a control wire to the processor so that they will switch on and off automatically.

Only very basic facilities are provided on the processor's front panel, but the remote control makes up for these omissions, and has illuminated key but tons like those on many mobile phones. System setup is basically similar to that of other AV systems: for best results a sound pressure level meter would be recommended, but alternatively there is an automatic routine using a microphone included with the system (we didn't have time to test it, alas.)

# The Numbers of the Beast

It's an Herculean task to assess a system with somany variables—all the more sogiven that different people will ascribed ifferent levels of importance to the multiple facilities provided. For example, anyone who cares nothing for AV material or multi-channel reproduction will have little interest in this system. On the other hand, the Citation 7000 is a much less specialised AV-only product than any previous THX system, with the arguable exception of the Meridian *Digital Theatre* (the two are compared head to head in the box-out, 'Citation 7000 vs. Meridian Digital

Theatre', page 41).

Nevertheless, the Citation 7000isfirstand foremost an AV system, and in this form it was tested with a Sony LaserDisc (LD) player and JVC S-VHS VCR — as one might predict, the LD playergave cleaner, bet-

ter focussed sound, with

much smoother midband and treble. I compared three replay modes: Dolby Surround Pro-Logic, 70mm (a proprietary Dolby derivative that pulls information from the left and right front channels to their respective surround speakers, giving a wider, potentially more involving sound) and 6-Axis.

### **Swanky modes**

Each of the latter-mentioned configurations is capable of superb results. In any comparison, the Citation always goes higher, louder, smoother and better. The bass energy from many of the more dramatic soundtracks comes in tidal waves that threaten to engulf anyone who stands in the way, which is stirring stuff even by THX standards. However, the most impressive feature of the Citation, with Dolby Surround material, is its subtlety. THX systems can sound a little soft and defocused, in part because their re-equalisation and timbre matching (psychoacoustic processes to make the surround sound effect less noticeable) sit uneasily with ancillary electronics and speakers that lack the necessary resolving power.

In this case, the 6-Axis circuit (operative in all multi-channel modes, not just 6-Axis) 'steers' the soundtrack image from speaker to speaker with much greateraccuracythan I have heard before. Sounds 'panning' across the soundstage did so in a smoother, more progressive, better focussed way, yet at the same time the larger ambient soundfield was presented in a much more coherent and distinctive form. Even tonal colours seemed more vital than usual.

# Directional Enhancement and the 6-Axis Mode

Dolby Surround Pro-Logic works by interpreting combinations of in-phase and outof-phase signals to 'steer' particular sounds to one of four speakers: front left, front centre, front right, or the rear. The 6-Axis process is different in two key areas. First, as the name suggests, it detects six directions rather than four. Pro-Logic's single surround signal is replaced by side and rear sensing point on each side of the system: the rear signals combine to form a phantom rear channel at the centre-back position. Of course, this means that the playback system requires separate side and rear speakers, which explains why the Citation 7.3 surround speaker has been designed as two systems in a single box. In 6-Axis mode these two systems are driven in phase but from separate amplifiers.

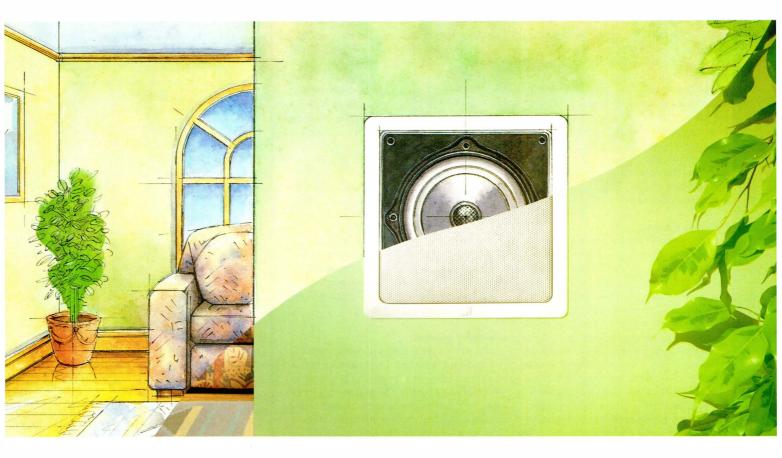

Some of you may be wondering how the system manages to derive 'stereo' rear channel information, given that a conventional surround soundtrack, on VHS or LaserDisc, only carries mono information for the rear. However, due to the way that the surround signal is actually encoded on your video software, you will find that some side channel information is present in the playback signal, which 6-Axis makes use of.

The other difference between 6-Axis and Dolby Surround Pro-Logic is the nature of the detection process itself. In standard Dolby-type detectors, the incoming signal is only averaged to determine whether it will be steered towards front speakers or rear. In the 6-Axis process, a circuit called the Dominant Peak Detector performs much faster arithmetic on the incoming waveforms, tracking the changing signal dynamics much more closely. The result is much greater steering accuracy and response speed. Note that the Dominant Peak Detector is not limited to the 6-Axis process; it is used for all the remaining sound processing, including Dolby and THX.

# What's in Harman/Kardon's Citation 7000 system?

ITEM	COST AS TESTED
Citation 7.0 Processor/preamplifier	£3,500
Three Citation 7.1 Power Amplifiers	£7,500
Three Citation 7.2 Left, Centre, Right Speakers	£3,300
Two Citation 7.3 Surround Speakers	£1,700
Two Citation 7.4 Subwoofers	£2,000
Total price of units when purchased separately	£18,000
Total price when purchased as a complete system	£16,500

# How KEF's interior design can help yours.

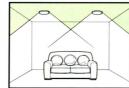

**KEF**<sup>®</sup> Ci Series

KEF's new Ci Series speakers are stylish and space-saving - but that's not all.

They also have KEF's patented Uni-Q® technology, to give you astonishingly accurate tonal balance throughout the room.

Most loudspeakers, even ones with pivoting tweeters, only sound their best in one small area of the room. That's because they have a separately mounted woofer and tweeter. But with KEF Uni-Q® loudspeakers the tweeter is mounted at the exact acoustic centre of the woofer cone.

So they sound great wherever you are (or wherever they need to be installed!).

And great sound is only part of KEF's Ci Series design. They're easy to install in new or

existing homes and you can paint them to match your decor. They come in round and square shapes to complement ceilings or walls and because all of them have stainless steel grilles and weather resistant components, you can put them where you want - even in bathrooms, or under the eaves outdoors.

So if installed speakers are part of your interior design, choose the ones

designed with your interior in mind.

The experience of sound

# HARMAN/KARDON CITATION 7000 SYSTEM

#### 6-Axis of the best

The 6-Axis process has much to recommend it with Dolby Surround material. Therearimage was weak, but there was a clear impression of a stereo effect at the sides of the listening area, albeit with much less spatial definition than that existing between the front speakers. Perhapsmoretothe point, switching from THX to6-Axis made *a* massive change, from a stereo image rooted in the plane of the screen, with occasional excursions in the depth plane, to a fully-fledged three-dimensional sound field, with nopreferred axis. The effect was very like that of Dolby AC-3—which is only to be expected given the declared aims for the system.

Still, my preference remains with the 6-Axisenhanced THX mode, for two reasons. First, the 6-Axis mode alone negates one of the key

# A Short History of Fosgate & Citation

Jim Fosgate set up Fosgate Research and Fosgate Audionics to develop high-grade surround decoders. These had been his passion since the days of SQ, QS and CD-4 quadraphonic systems in the '70s. He was not alone in recognising these systems' deficiencies, but unlike most pundits he also recognised that directional enhancement would become important in the future. Fosgate firsts have included active steering logic and logic-derived centre channels, which Dolby Labs incorporated (nine years later) into their ubiquitous Pro-Logic system. Fosgate was acquired by Harman three years ago.

### **A Short History of Citation**

The prestigious Citation brand was established around 1960 by Dr Sidney Harman, to produce the very best of Harman audio. Key Citation models of yesteryear have included the Citation 2 (a 60-Watt, wide-bandwidth valve amp) in 1963, and in 1972 the Citation 14 FM tuner, which was the first in the world to include a Phase-Locked Loop (PLL) multiplex decoder. In 1977 the Citation 19 pioneered low levels of negative feedback in a solid state amplifier, and in a joint venture in 1981, with legendary Finish designer Matti Otala, the celebrated Citation XX power amplifier was the first to accommodate Otala's model of how a loudspeaker's impedance changes when it is stressed with transient waveforms.

Subsequently the brand lost impetus, eventually becoming no more than a badge applied to Japanese-built electronics of no special distinction. Citation eventually ceased production in 1986. The current relaunch represents a return to the original ideals, and all products are designed and built by Harman in the USA. The Citation 7000 will be followed by more affordable models, systems and processors in the future, but no details are currently available. advantages of THX, which is that it detaches the sound from the side speakers. With 6-Axis, they could often be identified clearly. Second, the 6-Axis system has the effect of unstitching the stereo image from the TV screen. In both cases, I suspect the problem is associated with the nature of Dol by Surround, and that it will disappear with discrete multi-channel recordings. On the other hand, the 6-Axis process, though more intrusive, is also keener and sharper than THX, and with dramatic special effects it can be more involving. Manywill prefer it for this reason; 6-Axis is very easy to like.

# How does it perform with music?

I felt more sympathetic to the aims of the 6-Axis process with conventional two-channel stereo material, where it was often very convincing indeed. A stereo recording of the Eagles's *HotelCalifornia* was altogether more involving, rounded and three-dimensional with 6-Axis than with twin speaker stereo, and it was curiously lacking in image-placement anomalies. The same observation applied to an offair recording of Mahler's 2nd from the Birmingham Symphony Hall, with a gloriouslylarge-scale, listener-immersing sound. In real life, however, the hall acoustic is said to be much more distant and less for thcoming.

With each of the stereo recordings I tried, which ranged from Ella Fitzgerald tok d lang, from Britten to the Beatles, 6-Axis processing produced a wider stereo image, superior stereoseparation and—amazingly—very few

# STATEMENTS SPECIAL

imaging nasties. When 6-Axis was used with Dolby Surround material there was an almost subliminal feeling that the sound was being mechanically manipulated behind the scenes, but this impression was largely absent when listening to plain ol' stereo. Now just imagine if there were recordings that had been mixed using a complementary 6-Axis matrix, purposefully for replay through this system. Noone has even hinted that such recordings will ever be made, but their ability to suspend disbelief would be devastating.

# Conclusion

At the end of a fortnight's intensive listening, I still had a lot left to learn about the Citation 7000. However, I have no doubt that this is a landmark product which, like the Meridian *Digital Theatre* before it, marks a kind of reconciliation between the multi-channel reproduction of music. It points the way towards a future of audiophile-quality multi-speaker systems, and in the light of its performance, superb construction quality and future-proof design, the £16,500 price tag is more than justified.

# The Absolute Beginner's Guide to Home Cinema

You'll find a complete glossary of Home Cinema terminology in the FREE booklet supplied with this issue.

# CITATION 7000 VS. <u>MERIDIAN DIGITAL THEATRE</u>

The obvious foil for the Citation 7000 is Meridian's Digital Theatre system (reviewed in issue 140). Both systems have the uniquely high-falutin' aim of treating stereo source material with the same thoroughness that is brought to bear on film-based (Dolby Surround) material. However, beyond this basic common principle, there is surprisingly little similarity between the two. The Citation is a THX system through and through. The Meridian is not because the speakers are not THX compliant. The Meridian system is designed to reproduce a number of potentially important (though not widely used) matrix recording processes, such as Ambisonics and Trifield. The Citation system limits itself mainly to vanilla stereo and Dolby Surround sources.

■ The Meridian is an all-digital system, making extensive use of DSP, and using high-bit-rate internal arithmetic to produce the required audio resolution. The Citation system takes a quite different approach, using purist analogue circuits at the front of the soundstage, with discrete (non-IC

A different approach to multi-channel from Meridian's Digital Theatre system. based) spatial circuits handling the surround feeds.

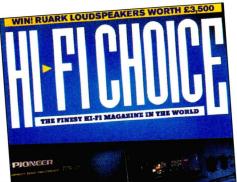

The Citation's 6-Axis technology is an audacious attempt to redesign spatial enhancement systems such as Dolby Pro-Logic. Meridian has left this area alone.

In practice, the Meridian system has the edge with non Dolby sources, thanks largely to a speaker system which sounds more balanced with stereo recordings. The Citation, which can sound unwieldy with stereo material, has the edge with Dolby Surround sources. In the Citation's favour, however, the 6-Axis system offers advantages over its Meridian counterpart through more accurate, smoother, more progressive steering, and superior image focus — which works in all multi-channel replay modes.

# COMPETITION

# We have 26 pairs of Wharfedale Valdus speakers, worth over £3,000, for you to win. Ideal for Hendrix!

ne of the legendary names in hi-fi, Yorkshire's Wharfedale is one of the bestknown speaker builders around, with a reputation that dates back longer than anyone dare remember. Not only that, Wharfedale boss Stan Curtis is the kind of guy that lives for detail. Who else would know that Jimi Hendrix used a Mallory PP9 battery in his Cry-Baby wah-wah pedal during the second Isle of Wight Festival? That festival was 26 years ago, so it's fitting that there are 26 prizes up for grabs in this most excellent Wharfedale competition.

This plethora of competition prizes is drawn from Wharfedale's new Valdus range. Like all Wharfedale products, the Valdus speakers combine high-tech materials and fine sound quality with superb value for money - not to mention ass-kick bass. First lucky winner out of the hat will receive a pair of £300 Valdus 500 floorstanding loudspeakers. Joint Second Prize is one of two pairs of superb Valdus 400 speakers, worth £200 per pair. The joint Third Prize is one of three pairs of the £150 Valdus 300s, while the four joint Fourth Prize winners will each receive a pair of £110 Valdus 200s. Finally, the 16 runners-up will each win a pair of the cute little £90 Valdus 100s.

# THE QUESTION

What make of PP9 battery did Jimi Hendrix use in his wah-wah pedal during the second Isle of Wight Festival?

- a) Duracell
- b) Mickey
- c) Mallory
- d) Ever-Ready

# TO ENTER, PHONE NOW ON 0891 333315

■ You will be asked to state the answer to the question above. Please speak clearly, and don't forget to leave your name, address and daytime phone number. Winners will be picked at random from all correct entries. You will be asked to inform us if you do not wish to receive details of further offers or promotions.

Calls cost 39p per minute cheap rate, 49p per minute at all other times. Calls should take no longer than two minutes.

Lines open at midnight on Friday January 5, 1996, and remain open until midnight on Friday February 9, 1996.

Alternatively, write the answer on the back of a postcard or sealed-down envelope, together with your name, address and daytime telephone number. Please state whether you are over 18 years of age. Address this entry to:

Hi-Fi Choice Competition (CHFC602A)

Bradley Pavilions,

Bradley Stoke North,

Bristol BS12 OBQ.

All postal entries must arrive by first post, Friday February 9, 1996.

# **COMPETITION RULES**

- The Closing Date for this competition is February 9, 1996.
- Winners of the Wharfedale competition will be judged from all correct entries submitted by telephone and post, and drawn at random on the Closing Date.
- All winners will be notified by post.
- The Editor's decision is final and no correspondence will be entered into.
- The Wharfedale competition is not open to employees of Dennis Publishing Ltd., Wharfedale (UK) Ltd., nor their suppliers, agents or associates.
- We regret that this competition is open to UK residents only.
- No cash alternative will be offered.
- The act of entering the competitions will be taken as acceptance of the rules.
- You must notify us if you do not wish to be informed of any special offers or promotions. On postal entries, please indicate clearly on your entry if you do not wish to receive details of further special offers.
- We will assume you are over 18 years of age unless you state otherwise.
- For a list of winners of the Wharfedale competition, write enclosing a stamped, addressed envelope, to: *Hi-Fi Choice* Winners, Dept 151/1, 19 Bolsover Street, LONDON W1P 7HJ.

You walk in to the Hi-Fi shop. Across a crowded showroom, a Hi-Fi system catches your eye, then seduces your ear.

Infatuated, you pay your money. Unfortunately, you also take your chances.

On the other hand, once the ear is wooed by the sumptuous sound quality unique to Arcam, a life-long love affair usually ensues.

Year after year, our dedication to sonic excellence is rewarded with top industry awards and, believe us, luck has nothing to do with it.

All of our Hi-Fi is produced at our Cambridge HQ, where it must pass the most rigorous set of tests, checks and double checks. Then, just when another quality Arcam product thinks it's safe to go into the loving arms of a new customer, we check it again.

We work hard to produce Hi-Fi separates of the highest quality, keeping construction simple and building in long service and reliability at every stage of production. So, if you're about to invest in Hi-Fi, invest in an Arcam. After all, we don't leave anything to chance.

Should you?

# LETTER OF THE MONTH

#### **Standing waves**

After living with the same system for 20 years or so, I have recently returned to the world of hi-fi buying, and I have noticed three new ideas — bi-wiring, hugely expensive kit and spikes for loudspeakers.

It's the spikes that provoked this letter. There always seem to be four per speaker. If it is really important that a speaker sits on the floor in a solid and stable way, why fit four spikes? Why not three? With four (or more) points of support, it is very difficult to get all of them in equal contact with the floor, even if the floor is not uneven.

This is known to anyone who has studied elementary geometry, and also to anyone who has wrestled with a wobbly table in a pub. There must be people in the hi-fi industry who fall into at least one of these categories.

Am I missing the point? (This was not just an opportunity for a pun: I really would like to know). Allan Beattie Dhahran, Saudi Arabia

You're quite right that three feet are in many respects better than four from a loadspreading point of view, and there are quite a few tri-pointed stands on the market. However, loudspeaker stands are often designed to act as a drain for energy coming from the speaker cabinet, so more points of contact mean better energy sinking. Also most speakers are rectilinear and tend to respond better to four point support from spikes or Blu-tack. — Ed

# Music vs Hi-Fi

I bought issue 149 of *HFC* for its review of the Sony *QBric* which I have just bought.

I nearly fell out of my chair when I read the letter from your open-minded Australian correspondent (on p53). I buy music to hear through my hi-fi and had stupidly presumed most people do likewise. Terry Pullen obviously listens to the hi-fi not to the music. Either his taste in music has been questionable and is now maturing nicely (as seems likely) or that his mind has been kept open for so long that his brains have fallen out.

Your job as professional reviewers is to hear the barely perceptible and justify to those who change their system, or their partners, that they have done the Right Thing. We poor amateurs should try to find what, admittedly, you recommend overall; a transparent system which allows us to listen to the music we choose. I would suggest that Mr Pullen and others like him place a voluntary embargo on buying hi-fi magazines (except Hi-Fi Choice of course — Ed) and listen to their music instead. David O'Keeffe Galway, Ireland

### **Dare to be different**

I recently bought the December issue of *Hi-Fi Choice* because I need a cassette recorder. I also have the November issue of *What Hi-Fi?* 

What struck me was that there seemed to be little agreement between the two magazines. In low-priced tuners, the nearest agreement seemed to be for the Denon TU-260L; for cassette recorders, you seem to agree about Aiwa but nothing else. When it comes to loudspeakers, the same applies.

I accept that assessment is subjective, but I find this difference of opinions rather

disquieting whether the reviews are subjective or objective, there should be more agreement than this. Brian Lister SW London

On the evidence of your own eyes, you must decide which magazine has the greatest integrity and authority. Our reviewers have over 100 manyears of experience in auditioning and selecting hi-fi. Can What Hi-Fi match this?

#### **Net gains**

Your December 1995 article about the Internet didn't have the usual hype and errors, but you should know that Hi-FiOn WWW is not US-based. The last part of the domain name indicates that the server is situated in Norway.

Meridian Audio and Grahams Hi-Fi are the only British companies that are making information available over the Net so far. There are others like Moorgate Acoustics who have pages where they just ask people to use more traditional means to contact them.

I would also like to comment on the digital amplifier under development bv Harman, even if no such product has vet reached the market. I believe that there is an in-car amplifier using the same principle, and I also saw a prototype from Wadia back in '92. If I'm not too mistaken they were using several Class D amplifiers in order to get a 'multibit power-DAC' instead of a bitstream scheme. Robert Lundemo Aas

*via the Internet* 

Mmmm!

is our stylish new Hi-Fi Choice garment, which will be awarded to the writer of the most interesting letter of the month. Available only in capacious, figure-hugging XL size!

This

#### **OUR ADDRESS**

The Editor-in-Chief, *Hi-Fi Choice*, 19 Bolsover Street, LONDON W1P 7HJ • Fax: 0171-323 3547 • e-mail: 100433.1130@compuserve.com. *"We reserve the right to edit all letters that we publish."* 

**Malcolm Steward** tests eight equipment tables, and quickly discovers that there's more to solid sound than a few bits of mild steel...

veryexperienced audiophile acknowledges the importance of equipment supports. Indeed, it is a sadly misinformed person who doubts that stands are vital to exploiting the potential of a good hi-fi system. However, if you truly believe that your turntable or CD player sounds wonderfulsitting on the carpet then please write and tell me.I want then ame of the genius who has managed to produce equipment that's wholly impervious to the effects of air and structureborne vibration!

Over the past few years I've realised that it is not just turntables and CD players whose performance can be profoundly influenced by parking them on a suitable support. In an ideal world, those of us who seek ultimate performance would possess rooms large enough for every hi-fi component to have its own, dedicated platform. Sadly that's rarely possible, so let's all give thanks for the multi-tier tables being tested here.

A few words on the practicalities and setup of such supports are in order. First, I suggest strongly that you use a separate support for your favourite source component, rather than simply siting it atop a multi-tier stack. I realise that this isn't always possible, but it is worthwhile if you demand the best results.

Second, when you're contemplating buy-

# **EQUIPMENT TABLES**

ing a multi-tier stand, I'd recommend that you look beyond your immediate needs. In other words, if your system currently requires four tiers, go for a five- or six-tier table, or a modular design. The reason is simple: as and when youexpandyoursystem, the new addition will work better on its own shelf than it will piggybacked on top of another component.

Finally, spend as much time as is takes to set up your multi-tier table just so. Levelling problems tend to be magnified in stands that are three or four feet tall, so if you don't set up the table accurately it'll be the top-most component-most likely your CD player or turn table if the stand's supporting a complete systemthat comes off the worst.

It'snear impossible to deliver concrete judgements upon stands simply because there are too many variables involved. Not only do you have to consider the interaction between individual components and the stand, but also how the stand interacts with the floor. And there is the small question of your floor's soliditynot tomention its construction, where the stand is sited relative to the loudspeakers, and how loud you play your music. All these factors influence the performance of any given support.

Forthistestthe standswere used on a woodenfloor and placed some twenty-five feet away from the speakers, which we replaying at "realistic" volumelevels. They were tested supporting various components, but the mainstay was my Naim CDS CD player, which has proved, over theyears, to be very revealing about what keeps its feet off the floor. This test procedure can't give results that a reguaranteed to be accurate for all possible domestic circumstances, but it does provide a reliable guide to comparative performance. A specimen that is criticised for sounding bright in this test won't necessarily peel wallpaper in your room, but will probably sound brighter than its peers.

# WILL I REALLY HEAR A **DIFFERENCE BETWEEN TABLES?**

You might regard the performance of an equipment stand as a fairly esoteric consideration; you might believe that specialist tables ought to remain the sole preserve of tweakers and anorak-wearers. However, we're not talking about subtle differences or nuances here - at least not all the time. Some of the differences between these tables were dramatic and totally 'real world'. This point was ably illustrated while I was playing discs to a friend who is a music fan but not especially interested in hi-fi equipment. I moved the CD player from one table to another between tracks and he immediately asked what on earth I'd done to make the disc sound so much better. He found it impossible to believe that a change from one platform to another both "virtually the same" in his estimation could change the music's pace, dynamics and the venue's perceived acoustic.

# **AUDIOPHILE FURNITURE BASE** £480 as tested (modular)

nd the prize for ease of set-up goes to ... Audiophile Furniture's Base system. If you hate inhaling carpet fibres, this is the stand for you. The three-legged design is a cinch to level up, and the process is further simplified by hand-adjustable support cones.

This design is modular and therefore easy to expand as your system grows. The table I tested consisted of a £70 SP01 starter pack, which includes a shelf, three adjustable floor-cones and screw caps. To bring it up to four-tiers I added three £50 S120 shelf packs, each comprising a shelf and three support legs. (Different legs are available if you need more than 120mm between shelves.) Each shelf supported a £65 Base 01 isolation platform. The final touch is the cable management system which enables you to route mains, line-level and speaker cables neatly and separately.

# **Sound Quality**

The system managed to make music sound lively yet easy going at the same time. Its presentation hovered closer to restraint and neutrality than a 'heads-down, no-nonsense-boogie' approach; it was polite without being dull. I reckon that makes it appealing for rock fans who like their music loud, but don't appreciate it when high notes are portrayed too vividly. Sibilant vocals and splashy cymbals certainly weren't a problem here. Middle and lower frequencies seemed clear and open, while lower notes made themselves felt without being excessive.

If the tonal balance of this table was essentially ordered, so too was its portrayal of musical imperatives such as rhythm and pace, which were precise. Musical dynamics were a little muted compared with livelier tables, however. The Base is nonetheless a clear front-runner, with only a slightly restrained sound to detract from its undeniable utility and flexibility.

Audiophile Furniture Ltd. The Square, Forest Row. East Sussex RH18 5ES 🕿 01342 826262

FI-RAX R4

■i-Rax manufactures a range of tables, and builds supports to order. Glass side panels and doors are an option on several of the company's designs. The R4 reviewed here, however, is a standard "open" model. Mind you, calling it standard hardly seems appropriate given its dazzling appearance, but fear not: more subdued finishes are also available.

The R4 is constructed from quadrantshaped aluminium tubing, joined with contoured "knuckles" (the base joints have adjustable spikes). The six shelves sit on lockable studs, that can be moved within the uprights to provide appropriate spacing. Rubber 'O' rings isolate the tinted 6mm glass shelves.

#### **Sound Quality**

Despite not having the absolute rigidity of welded, braced structures, the R4 sounded quite respectable. There was a lively, exuberant quality about its presentation but not to the extent that you'd call it bright or forward. Christy Moore's voice on Live at The Point, for instance, projected vigorously but stayed well short of being in-yer-face. Shane MacGowan's effusive The Snake, which readily provokes misbehaviour in a poor support, came across in a ship-shape manner although the R4 didn't extract quite as much of the music's low frequency content as more uncompromising designs. This lent the presentation a tonal liveliness that might not complement bright or forwardsounding components.

The R4 proved itself a likeable performer. Its balance wasn't completely neutral, but it didn't rob recordings of their vitality or expression, which is a far worse sin. Moreover, it conveyed timing and dynamics with the kind of energy that keeps you involved. JEM Distribution, Springfield Mills, Spa Street, Osset, Wakefield WF5 0HW 🕿 01924 277626

**ON TEST** 

£600

While this table is often referred to as the *Amplifier Stand*, it can also be used to support a whole system, including source components. Like all Mana supports it is upgradable, for example by replacing its top glass shelf with a laminated board and adding a glass-shelved *Flat Top*. You can also put one or more *Sound Stage* platforms beneath the whole caboodle, which improves the performance of every item on the stand.

Setting up this all-welded stand is a timeconsuming process. On a basic five-tier stand there are twenty-four spikes that need twiddling and locking, and each of them requires precise adjustment to get the full nine yards' worth of performance. That effort, however, pays dividends. Other *Hi-Fi Choice* scribes and I have raved about the Mana effect before, but quite honestly even our loftiest superlatives don't do full justice to the transformation these stands can produce in a system with any vestige of potential.

# **Sound Quality**

The Mana table enhanced all the hi-fi aspects of the system's performance. Bass went deeper, treble became cleaner, dynamics and detail seemed more pronounced, and tonal colour was more vividly rendered. That much you'd expect for the price. Harder to describe - yet infinitely more valuable — was the dramatically increased reality and presence of the sound. The broader harmonic compass, expanded dynamic contrast, sharper delineation of instruments, extended sound-stage and duck's-bottom tightness of the music's timing combined to make the sonic presentation more persuasive and thrilling. Mana tables are not cheap but they're essential if you want to unlock your system's full potential. Best Buy!

Mana Acoustics, 59 Jubilee Close, Pinner, Middlesex, HA5 3TB 🕿 0181 429 0118

### QUADRASPIRE Q4 £200 as tested (modular)

applaud manufacturers who take a modular approach to hi-fi. Why should the consumer have to junk perfectly serviceable components that could have been designed to allow simple additions or modifications? That situation is unlikely to occur with the Quadraspire table. The basic Q4 (four-tier) stand costs £200, and may be expanded easily when extra shelves are required (£50 each). Alternatively, it can be altered to accommodate equipment of different heights. This elegantly simple unit consists of four cherry-veneered MDF shelves supported by solid aluminium rods, which thread together to clamp the shelves. The standard shelf height is 140mm, with 100mm and 180mm being 'standard' alternatives

# **Sound Quality**

The Q4 provided a very neutral sound supporting the finicky Naim *CDS*. Unlike many supports, the Q4 seemed to emphasise no part of the frequency spectrum unduly. Bass was full-blooded and articulate, the midrange clear and balanced, while treble

information was projected cleanly in an orderly fashion.

In spite of its neutral character, though, the table never made music appear restrained or over-damped. Briskly-struck acoustic guitar had its characteristic dynamic bite, while percussive bass lines started and stopped precisely. Perhaps most noticeable, however, was the absence of 'edge' or intrusive colouration on singers' voices. As a result, the table's sound, or lack thereof, provided a detailed, informative and easy-going insight into recordings.

While the Mana table, for example, is ultimately more revealing, the Q4 is still a decided cut above average. Less tricky to set up and more forgiving, it won't expose shortcomings in your system quite so ruthlessly. This combination of attributes means that the Q4 definitely merits a Best Buy tag. Quadraspire Ltd, 62 Riverside, Sir Thomas Longley Road, Rochester, Kent ME2 4BH **2** 01634 296615

# **EQUIPMENT TABLES**

### SOUND ORGANISATION ZO38 £129.95

ike the original Sound Organisation turntable stand that started the whole equipment table ball rolling, the ZO38 five-tier is a back-to-basics, no nonsense design. It comes fully welded and ready to use once you've fitted its floor-spikes, inserted the four join-hiding plastic caps, and dropped the shelves into position on the fixed hangers. Level it up and you're in business.

Finished in a crackle black paint, it looks smarter than early Sound Organisation stands. It isn't exactly an oil-painting to behold, but its sober, form-following-function styling isn't without appeal. It's also amenable to mild tuning. Serious audiophiles might want to change the supplied lightweight shelves for 9mm MDF boards: this beer-money operation can make an appreciable difference to the performance of some sensitive components.

# **Sound Quality**

The sound of this stand seemed to err on the lively side of neutral, imparting an animated, briskly-paced quality to music. I didn't spot any of the excessive high-frequency raggedness or poor bass definition that often goes hand in hand. It has to be said, however, that the Naim CDS didn't appear to resolve information at the frequency extremes as precisely on the ZO38 as it did on more neutralsounding platforms. Substituting a Medite board for the supplied shelf noticeably tightened the low and high ends, and brought an improved sense of order and instrumental separation to energetic music. Forceful vocals and strident sax became more dynamic, yet easier to listen into.

In its defence, though, the Sound Organisation table isn't what you'd call expensive, and it's hardly likely to be used by someone who has spent big bucks on sensitive components. As supplied it's a fundamentally solid design, well suited to middle market systems or supporting less critical components. At its budget price it deserves to retain its Recommended status. *Sound Organisation, 8 Greyfriars Road, Bury St Edmunds, Sutfolk IP32 7DX Co 01284 701101* 

EQUIPMENT TABLES

# SOUND STYLE SELECT X6105

SoundStyle reckons the X6105, part of its new Select range, is a cut above average. While beauty certainly resides in the eye of the beholder, it's hard to argue that this support is anything but a striking piece of audio furniture. It follows the usual SoundStyle pattern of using tubular legs — four rather than the three employed in its basic range — with rectangular-section cross members providing the support for its glass shelves. All the metalwork is finished with a lustrous paint job (you can choose from a selection of colours).

The toughened glass shelves sit on thermoplastic pads in the cross members. There's no ringing when you rap the shelves, although the stand's legs sound a little lively. Setting up the stand is easy and it's a weighty, stable structure once assembled.

# **Sound Quality**

To complement its physical characteristics, the X6105 turns in an impressively weighty and colourful performance. The CDS's low end lost only a little of its slam and body compared to the Mana, while the treble extreme seemed satisfactorily sorted. The SoundStyle didn't have the precise resolution of the more costly reference, and there was a hint of added brightness evident but it would be churlish to complain unduly.

The X6105's performance proved generally well balanced and easy to enjoy. An instrumental factor here was the stand's healthy respect for timing: even with music that provoked a little added tonal liveliness in the presentation, rhythm sections stayed tightly locked to the rest of the musicians. I didn't detect the smearing or imprecision that often accompanies a vigorous presentation.

Given its highly respectable sonic showing, fine structural integrity and smart appearance, the X6105 thoroughly warrants a Recommended rating. SoundStyle, 8 Greyfriars Road, Bury St Edmunds, Suffolk IP32 7DX • (01284) 701101

#### STANDS UNIQUE SOUND TOWER £249

he Sound Tower is a self-assembly five-tier stand that uses glass shelving and wooden uprights. The top and bottom shelves are fixed, while the middle three sit on movable lugs that enable the stand to accommodate components of different heights. The review sample came with an additional isolation shelf (£44.64): a sheet of glass with adjustable spikes that locate into the top of the stand's uprights.

Over the past decade or so I have assembled a number of equipment supports, and alas the *Sound Tower* isn't among the easiest to build or adjust for perfect levelling and stability. Final set-up is complicated by the floor-spikes being structural components: as well as supporting the table they also clamp the lower shelf between the uprights and decorative feet.

#### **Sound Quality**

Under the support-critical Naim *CDS*, the *Sound Tower* seemed to disjoint music's timing, impair detail resolution and com-

press dynamics. Strangely, the isolation platform worsened its performance. On the table alone a rapid-fire flurry of guitar chords sounded merely imprecise, but with the platform it sounded as though the player was wire-brushing the strings.

The stand seemed to favour simpler, slower-paced music; busy recordings sounded far less of-a-piece. It also seemed to introduce a degree of coloration into some singers' voices. In general, vocals and instruments lacked substance and depth. Acoustic guitars, which emerged rich and full-bodied on the Mana, sounded harmonically diluted and less gutsy here. Audience noise and applause on some live recordings sounded off-puttingly effusive: the table seemed to be adding undue energy here.

Though not a hit from an audiophile perspective, as a piece of furniture the *Sound Tower* proved more successful.

Stands Unique, 18 Spencer Parade, Stanwick, Northants NN9 6QJ 🕿 (01933) 461058

# TARGET B5

arget's *B5* uses welded tubular-section steel uprights and braces, with generously-spaced fixed shelves. As you'd expect it comes in the ubiquitous black finish for £175 with wood shelves, or £210 with glass. However, if you're after something more jazzy you can opt for the slightly dearer *B5* deluxe. This comes in a range of finishes including the metallic black of the glass-shelved £224 review sample.

Setting up the *B5* is plain sailing. It's sturdily built, and once I'd adjusted its floor spikes it rooted itself solidly to the floor. The glass shelves sit on rubber domes attached to the corners of the table's frame. The whole assembly is commendably rigid: also there's no chance of the shelves slipping because they sit within rather than upon the metal framework.

# **Sound Quality**

I'd be loath to use my Naim *CDS* on a "regular" support like the *B5*, but I have to say that the table acquitted itself admirably supporting this sensitive source component. And it did so with the sort of ambitiouslyrecorded CDs that usually seek out a support's weak points. The *B5* demonstrated excellent grip at the frequency extremes. Bass<sup>•</sup>lines had commendable weight and were surprisingly well articulated: both their timing and intonation sounded spot on.

High frequencies were as clean as a whistle, full of vitality yet free of smear and exaggerated sheen. Simpler acoustic recordings showed the *B5* to be free from any overt colorations or musically disruptive artefacts. It also sounded realistically dynamic, discriminating clearly between small changes and providing the slam and speed required to cope with larger ones.

All round, I was sufficiently impressed by this design to reach into the drawer for a Recommended tag. *Target Audio Products plc, Suite 6A, Britannia House,* 

Britannia Estate, Leagrave Road, Luton LU6 1RJ 19 (01582) 401244

# PRICE PROMISE

We always try to ensure that our prices are competitive. However, in the unlikely event an authorised competitor within 30 miles advertises an identical product as available from stock at a lower price, even in a sale, we will match that price!

Added value offers not available on price match.

# SEVENOAKS HI FI SALE

**Our Sale continues** into February. **Throughout our** branches you will find significant reductions on top name makes and models. All our seasonal specials are brand new in factory sealed boxes with full manufacturers quarantee. The quantities of some of these offers are limited, so please call your local branch before travelling.

# **TRUE MUSICAL**

# quality hi fi products with style and value

# ALPHA 6 CD

Arcam's reputation has long been established for class leading performance with their remarkable ALPHA 1 and 5+ CD Players. The new ALPHA 6 carries on from these. The secret is Arcam's new 20 bit digital audio board, which delivers a musical presentation with more detail, clarity and depth than ever before. The ALPHA 6 offers slimline styling and a minimalist layout, ensuring ease of operation as well as making it an ideal aesthetic match for Arcam's own Alpha series of amplifiers. especially the new ALPHA 6+. These two models combine to provide the convenience of full remote control operation and outstanding sound quality. However, the astounding sonic performance of the ALPHA 6 means that it will also complement more expensive ancillary products like the superb Delta series from Arcam. At every Sevenoaks Hi Fi branch you will discover the Arcam Alpha and Delta series of products.

# meridian

All Meridian components, from the simplest to the most complex, are designed to be operated by the touch of a single button. The 508 integrated CD Player is no exception.

Utilising a high mass drawer mechanism and a steel chassis means that CD transportation is remarkable. With an upgraded 20 bit Delta Sigma conversion stage ensuring realistic reproduction of all music, the 508 is a very fine CD Player. However, the real benefits of

the **508** are only realised when it is used with other Meridian components, creating a flexible remote control system.

# monitor audio

The breathtaking Studio series of loudspeaker's from Monitor Audio, offer a no compromise approach to design and construction. This is obvious the first moment that you see them. Whether they are finished in a standard satin veneer or a luscious grand piano lacquer, the STUDIO 20SE are stunning. All the models within the Studio series offer a combination of a gold anodised tweeter and an aluminium alloy bass/mid range driver. When they are partnered with suitable amplification the STUDIO 20SE's will offer remarkable transparency and the necessary focus to reproduce complex passages of music with glorious accuracy. To experience the Monitor Audio Studio series contact your local Sevenoaks Hi Fi branch.

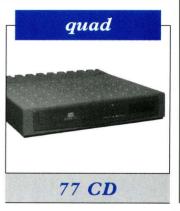

With the introduction of the 8000Q pre amplifier, Audiolab are able to offer an audiophile product, capable of working within any quality ancillary combination.

New Zq technology ensures ultra low noise and distortion, while a printed circuit layout realises the optimum signal path

The 8000Q is best described as a purist design. Six line and three tape inputs mean it is an ideal partner for Audiolabs own 8000P or 8000M power amplifiers. Yet, the convenience of remote control operation does not detract from the 8000Q's outstanding performance

Every Audiolab product offers a logical upgrape path, ensuring every model purchased today will perform for many years. For more information on the complete Audiolab range. including the 8000A, 8000C, 8000T, 8000CDM, 8000DAC, 8000PPA and the new 8000S, then contact your local Sevenoaks Hi Fi branch.

# authorised dealers for quality brands of hi fi separates

Sevenoaks Hi Fi have been at the forefront of Hi Fi retail in the UK for over 23 years. We sell quality products to discerning customers and we firmly believe in a meaningful demonstration and helpful unbiased advice.

All the products we sell are brand new, fully guaranteed and maintained by our own service department. We also offer Peace of Mind with our own 'No Quibble' extended warranty. We are able to install the products you purchase, ensuring their optimum performance.

WATFORD-Open Sunday

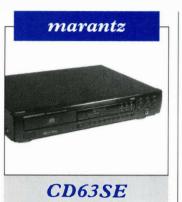

# EXPRESSION

# for hi fi connoisseurs and music lovers

The introduction of the new 77 CD Player enables Quad to offer a system with almost limitless expansion capabilities. Available in two guises, either as a conventional mains powered CD Player, which offers all the hallmarks of performance and style you associate with Quad or a bus powered CD Player which must be connected to the revolutionary new 77 integrated amplifier and operated by the new intelligent remote control. With the addition of a 77 digital tuner this exciting family of products will soon be complete. Thus, ensuring Quad continue to master the art of combining innovation and tradition.

Each model in the superb Castle range is engineered to look good and sound great. The new **SEVERN** are Castle Acoustic's two-way, reflex floorstanding loudspeakers. Their hand crafted enclosures incorporate newly developed drive units. A long throw bass/mid range driver and a soft dome ferro fluid tweeter, with off-set configuration, ensures outstanding stereo imagery, making them adept at handling all types of music, like the bigger Castle HOWARD II. Although the SEVERN has a slim profile and a very small 'footprint' it generates a surprising level of controlled bass. A matching veneered spiked plinth in one of Castle's extensive finishes provides extra stability and style.

The CD63SE offers the kind of sparkling performance normally associated with audiophile CD Plavers.

Marantz are one of the few dedicated manufacturers that aim to make recorded sound as realistic and enjoyable as is possible. This development of hifidelity has led the Hi Fi press to bestow numerous Best Buys and Recommendations upon models within their range. The most recent being the award of Best Buy status upon the **CD63SE** from What Hi Fi? At the heart of the CD63SE a high mass drawer mechanism provides precise transportation with accurate tracking and retrieval of the information stored upon the CD. The **CD63SE** also offers a logical upgrade path with its optical or coaxial digital outputs. With

this pedigree the **CD63SE** represents exceptional value for money

For a demonstration on the Marantz SE series, including the new CD63II Ken Ishiwata Signature, visit your local store.

Designed and developed in the UK, like all of their models, the **RA970BX** integrated amplifier offers the same solid build quality and delivers the type of performance you expect from this discerning manufacturer. Four line inputs, a tone defeat switch and a split volume knob provides finite adjustment. When partnered with suitable loudspeaker's the **RA970BX** delivers music with a close attention to detail. For further details on the Rotel range, including the superb RCD970BX CD Player and the RC/RB970BXMKII pre and power amplifiers, then visit your local Sevenoaks Hi Fi.

# mission

Mission have been at the forefront of quality loudspeaker production for many years. However, until they launched the **753**'s the market for slim floorstanding loudspeaker's was very small indeed. The 753's changed that almost overnight. From the day of their launch they received critical acclaim from the Hi Fi press. The four identical bass/mid driver and tweeter array offers a fine balance and a lively open performance, which ensures that all music is delivered with stunning realism, especially when combined with quality amplification like the Cyrus range of electronics. At Sevenoaks Hi Fi you can audition the Mission 753's,

752's and 751's in all of our branches.

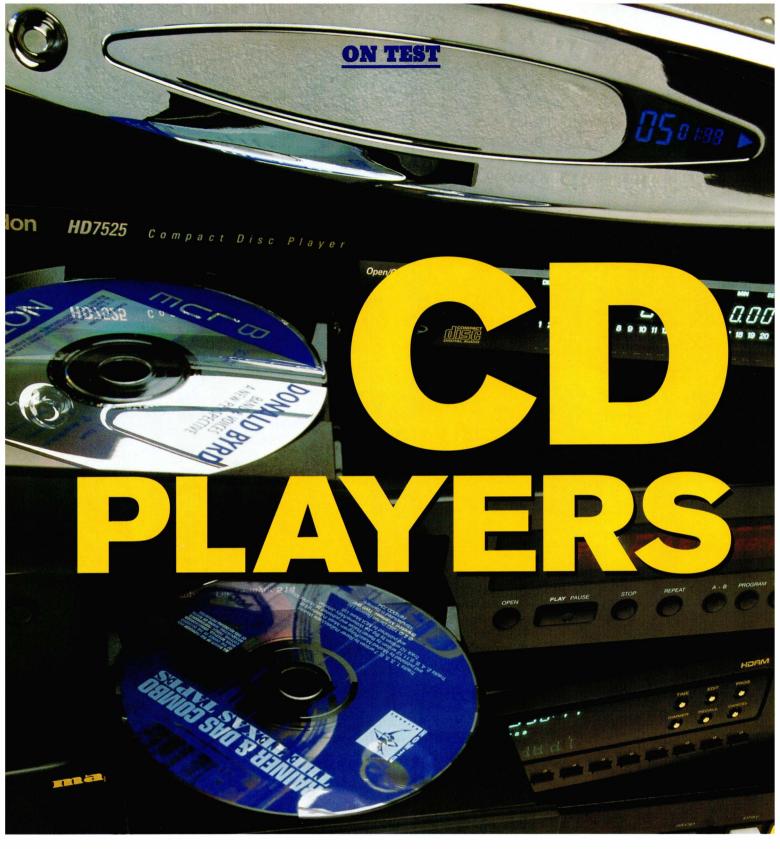

# ring any one of our branches for a competitive quote

# Simply ask your local branch for details.

If you thought this level of service might be expensive - then you would be wrong. We always try to ensure that our prices are competitive.

However, in the unlikely event an authorised competitor within 30 miles advertises an identical product as available from stock at a lower price, even in a sale, we will match that price! Added value offers not available on price match sales.

This month **Paul Miller** tests ten CD players in the all important £250-£500 price band. Which offer the best blend of facilities and sound? ore than in any other area of the hi-fi market, when it comes to CD players, the number sold is inversely proportional to the cost of the units. Some companies (Philips, in particular) have shifted their entire range below the £200 watershed. Others, including JVC and Denon, will not cross the £300 barrier, in this country at least.

Meanwhile, players that would once have been described as 'flagships' from the likes of Yamaha, Kenwood, Pioneer, Technics and Sony are now pitched below £500.

With attention polarised by classic  $\pounds 200 \cdot \pounds 250$  players from Marantz, Pioneer and Sony (in particular), it's hardly surprising that life is becoming increasingly tough for all those  $\pounds 300 +$  players sitting on the top

shelf. Competition, however, is bringing innovation to the fore.

So what should you expect for

HI-FI CHOICE

your £300-£400? Features are usually provided by the truckload, enhancing the player's operation without compromising its sound quality. Full remote control, direct track access and various programming/ repeat modes are typically joined by index search, intro scan, peak search,

CD/tape editing options, fader, autocueing and random play operations.

The most comprehensivelyequipped players will even offer a non-volatile

custom program facility, enabling favourite selections of tracks to be stored and recognised the moment the CD is loaded. Digital outputs will facilitate future upgrades while the option of both fixed and variable analogue outputs allow the player to be connected directly to a power amplifier

instead of an intermediate preamp or all-inone integrated amplifier.

This cuts down on superfluous boxes and unnecessary circuitry that, in many

instances, simply get in the way of the music. If a player is equipped with a digital volume control, however, do check it has not defaulted to maximum output before loading a CD! Enhanced build and component guality are further rewards for spending that little bit extra on your new player.

Plastic moulded chassis and facias are replaced by chunky alloy casework, just as the mechanical

integrity of the transport mechanism should see a welcome boost.

In terms of internal technology, there is still a broad range of ideas being pursued by different manufacturers. This is especially true in the realm of Digital Signal Processing, where data manipu-

lation, rather than straightforward oversampling and conversion, is fast becoming the order of the day. Naturally, some

players still use conventional multi-bit converters to translate the CD's digital data into recognisable music. This relies on converting entire 16-bit 'words' of information at once, yielding a wide dynamic range at the

expense of slightly increased distortion. Other players rely on

a new generation of bitstream converters that reduce these unwieldy 16-bit digital words into smaller packets of four bits or less. Smaller chunks of data are processed at an appropriately higher speed, avoiding the uneven steps and distortions of multi-bit con-

verters at the expense of extra noise, generated both

in and out of the audio band. In an effort to gain the best of both worlds, some CD

players employ part multi-bit and part bitstream (socalled hybrid) converters. although inevitably these suffer from their own, unique distortions.

There is, however, no need to worry about the rela-

tive compatibility of different CD

players. Regardless of the technology, they must all conform to certain agreed standards. Every CD player

TEAC

will handle both 12cm and 5cm silver discs, offer the same basic

track-skip, pause and stop facilities, and require a line input on your amplifier.

Unless you have a death wish, never connect a CD player to an input marked 'phono' or 'disc' on your amp,

but use any line-level connection such as aux, tuner, tape or one marked specifically for CD. So CD compatibility is assured. But sound quality? Well, that's another matter...

#### **Tricks of the Trade**

I've broached this topic during all recent CD player tests, but the subject of output levels bears repeating. Only when all CD

> players adhere to a standard 2V output will direct A/B comparisons be conducted on a fair and level playing field. In this test, only JVC hit the 2V nail squarely on the head, while NAD, Marantz, Onkyo

and H/K all managed to score within +1dB or so of the target.

Unfortunately, it only takes one manufacturer to squeeze 2.3V or 2.4V from its player in order to confer some advantage on audi-

> tion and, quite naturally, the competition gets wise and ups the ante to 2.5V or more. Even within this digital dozen, our tests revealed a massive +3.5dB gulf

hetween the quietest (JVC XL-Z674) and loudest (Audio Innovations Alto) CD players. All other things being equal, this advan-

tage in level will often be perceived as a bigger and bolder sound in-store.

Hi-Fi Choice is the only magazine to conduct blind listening tests where the outputs of all players are normalised to a fixed level. As a result, we can compare genuine rather than artificial differences between players -

> which ensures our tests are authoritative.

### **The Listening** Davs

Each CD player was auditioned over a period of two

days under strict, blind conditions at a precisely matched listening level. This way, the 3V output of Audio Innovations' Alto could not secure it any advantage over the lower 2V of JVC's XL-Z674. Crucial though they are, level-matched listening tests remain unique to Choice.

Each player was left spinning on 'all repeat' for at least 48 hours

to ensure every contender was well .... and truly 'cooked' prior to the listening tests. A broad repertoire of vocal, folk.

pop and classical CDs were auditioned before the collective impression of the two panels was entered directly into a computer. Sound, value and swing tag ratings were all awarded before the identity of each CD player was revealed.

The system used for the test included DPA-100S pre and power amplifiers plus

Audio Note AN-E (main) and REL Stentor (sub) loudspeak-

ers. Sony's CDP-715E (issue 137) was used throughout as a reference CD

player. My thanks to Roger (Denon), Mark Hockey (Trio/Kenwood), Mike Martindell (Arcam), Guy Sargeant (Audio Innovations) and Alan Sircom (Hi-Fi Choice) — this month's blind but golden-eared panel.

# THE CAST LIST

# AUDIOVECTOR

You may be forgiven for thinking that the best solution for a speaker design is the commonly found, easy to manufacture, rectangular box. Not so.

The asymmetric cabinet used with all AUDIOVECTOR speakers is an example of the finest engineering and visual design.

- non parallel sides reduce standing waves
- ultra-rigid front panels
- quality crossover and high sensitivity
- exceptional design

- = more clarity, articulate bass
- = better transient response, greater dynamics
- = easy load for amplifier
- = unrivalled depth of sound stage and imaging

In technical terms, the absence of parallel surfaces means there are no standing waves. This results in less distortion, higher <u>sensitivity and a cleaner sound</u>. In layman's terms this means an involving and enjoyable sound...

...but if you have heard the AUDIOVECTOR speakers you would know this.

AUDIOVECTOR 2X	Black Ash	.£850
AUDIOVECTOR 3X	Cuba	£1500
AUDIOVECTOR 3X	Black Ash	£1500

AUDIOVECTOR 5 Cuba	£2500
AUDIOVECTOR 5 Black Ash	£2500
AUDIOVECTOR 6 Black Piano	£4600

ARCAM

# **ON TEST**

# Arcam Alpha 5 Plus

Ithough we never formally tested Arcam's *Alpha* 5 CD player, this model incorporated the 16-bit innards of the original *Alpha*, within the slimline casework of Arcam's *Alpha One*. (Those two models were thoroughly reviewed in issues 112 and 137 respectively.) I mention this because the latest *Alpha* 5 *Plus* looks all but identical to the *Alpha* 5, which, in turn, looked just like the *Alpha One*.

Still with me? Good, because the 16bit heart of this 'brand new' player is traditional to the core, despite being gilded with a few internal refinements and featuring a slightly more up-to-date CDM9 transport mechanism. And there is nothing wrong with a little traditionalism. At least you're assured of a player whose construction and reliability has already passed the test of time.

Features include a dimmer for the attractive yellow display, shuffle (random) and program play, plus a ten-second intro scan, repeat play, direct track access and standby operation — all courtesy of Arcam's remote control. Remote volume and display adjustment are inoperative, I might add. Incidentally, existing owners may have the audio board of their *Alpha* 5 upgraded to the '5 *Plus*' specification for £100. Just see your local Arcam dealer.

# **Sound Quality**

Judging by the furrowed brows and puzzled expressions of our blind panelists, I was prepared for something of a struggle in our description of this CD player's performance. The crux of our panel's criticism concerned the sheer unevenness of the way this player highlighted differing aspects of sound. At one point, there was an emphatic sense of drive that exaggerated the club-like atmosphere of Leftfield's *Original*. "It is almost," it was suggested, "as if the player was designed for this sort of aggressive, synth-based music."

OPER

The Alpha 5 Plus still sounded decidedly big and butch with John McLaughlin, although the Hammond organ dominated the proceedings with a huge swell of midbass, creating a one-note effect that undermined the subtlety of the track as a whole. In similar fashion, the natural vibrancy of the raw and breathy character in Dusty Springfield's voice, throughout *Casino Royale*, had been replaced by an altogether flatter sound.

Here, and with the jazz selection, our panel likened the *Alpha*'s performance to "a mainspring slowly winding down," its music sounding uneventful despite enjoying a superficial sense of dynamics.

# Conclusion

SOUND

VALUE

PRICE

\*\*\*\*\*

\*\*\*\*\*

Although the technical heritage of Arcam's latest *Alpha 5 Plus* can clearly be traced back to the original 16-bit *Alpha* and *Alpha Plus* CD players, this particular sample demonstrated a sag in both the technical and musical performance of a respected lineage. Sure enough, the obvious first impressions are of a fairly up-beat and dynamic sound, but this disguises a genuine lack of transparency, of contrast and shading that impairs the natural colour and individuality of the different

pieces of music. Our blind listening tests involve a very wide selection of musical styles. Yet whether we were listening to pop, jazz, classical or 'urban rave', there was a 'sameness' about the tunes that rolled across the carpet. Nothing nasty, but so many years after the original *Alpha* was launched, neither is it terribly inspiring.

LAB REPORT

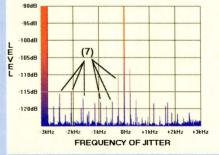

**UN/DITHERED -70dB** 

(1)

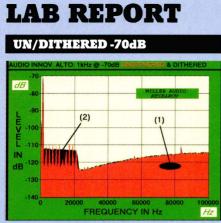

# TOTAL JITTER

ARCAM ALPHA 5 PLUS: JITTER SPECTRUM

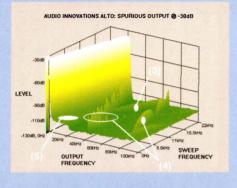

As ever, the characteristic 'fingerprint' of Philips's SAA7220 four-times oversampling filter and long-standing TDA1541A 16-bit DAC dominate this player's performance. Unlike more modern designs, this multi-bit converter is responsible for spikes of distortion (rather than the random noise of a bitstreamer) at all signal levels (1), which are not completely removed by dithering (2) and which, along with spurious sampling tones (3), extend far into the realm of ultrasonics (4).

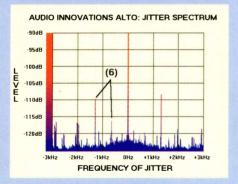

The filter still releases a familiar pattern of stopband images (5), although the extensive range of distortion harmonics (6) and crashing 0.3 per cent THD witnessed at maximum output has been seen in all previous *Alphas*. The pattern of data-induced jitter (7) is also linked to Arcam's implementation, even if the characteristic -6dB 'glitch' in low-level linearity is a little more severe than usual. The change from 26 Ohm to 44 Ohm output impedance also suggests the analogue stage has been altered.

**SPURIOUS OUTPUT AT -30dB** 

# TOTAL JITTER

Because Audio Innovation's *Alto* uses two of Philips's TDA1305 CC/Bit stream converters, it shares a common 'fingerprint' with Cambridge's *DACMagic-1* (issue 136). Similar analogue stages yield a -0.8dB dip in treble output, while the differential operation helps to suppress the levels of ultrasonic re-quantisation noise (1). Distortion is maintained to within 0.001-0.002 per cent (@ 0dB) while the player offers a textbook response to dithered signals (2).

At -30dB, distortion increases to just 0.004-0.03 per cent — revealed in a lone third harmonic (3) — below the level of the stopband images (4) released by its digital filter. The overall 111dB S/N looks pretty impressive (5) but remains tainted by the huge +16dB noise modulation. The 3V output level is also very high, but at least the <1 0hm impedance means it'll drive long interconnects with ease. Jitter, meanwhile, is low and principally limited to data-induced patterns (6).

# Audio Innovations Alto

rom a company that successfully promotes the merits of sub-20-Watt valve amps, here's a product that smacks of modernday realism. Yep, it's Audio Innovations' first CD player and, like its matching *Alto* integrated amplifier,

there's not a glowing tube in sight. The 'flying wing' aesthetics are elegant in the extreme, but make little provision for extraneous buttons and widgets. A simple display graces the right of the drawer, for example, while a solitary 'eject' key lurks inconspicuously beneath. Fortunately, a gaggle of features, including direct track access, intro scan, program, repeat and random play, are available on the matching remote, which happens to look suspiciously similar to that provided with Cambridge's *CD4* player (issue 147).

Then again, both Cambridge and Audio Innovations have their links via the vast Richer Sounds empire, so some crossfertilisation might be expected. Anyway, although the *Alto* uses all-UK-designed DAC and analogue electronics, the transport assembly is an off-the-shelf lineartracking affair sourced from the Far East. And if anything is going to let the side down it's this, especially bearing in mind the sluggish six-to-seven second track access time.

### **Sound Quality**

"Hmm," muttered one panelist. "Not terribly impressed," rejoined another. Why? Well, the *Alto's* music is rather 'sporadic'. Turning our beady ears to Mozart's *Sinfonia Concertante* revealed what was described as "an unusual string tone" — a predisposition to the upper registers of the violin, which sounded snappier and more vibrant than either its lower registers or the richer, more resonant timbre of the violas.

Woodwinds were also brought to the fore as the player emphasised more of the body and 'woodiness' of the clarinets. These encouraged, in turn, a rich, polite, perhaps over-polite balance. One panelist took issue with the word 'balance', because the player seemed, in his view, to lose one or more elements of a recording. The slurred intonation of Dusty Springfield's voice was cited by way of example, while the guitar and organ from McLaughlin's *Afro Blue* would also occasionally "blur into one".

The incisive thrumm of guitars from Shawn Colvin's *One Cool Remove* was picked out clearly but, as was often the case, the piece as a whole was just a little too introspective. So, just as individual elements from each performance were lost, others would be brought to the fore. The end result is far from unpalatable but, for our listeners at least, the distinction between contributing instruments was often too soft and polite.

well

Audio Innovation's refreshing piece of 'audio sculpture' is not just entertaining to the eye. Its easy and unforced sound is also very relaxing to the ear. Nevertheless, we were left with the sense that our

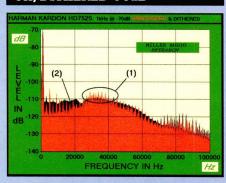

> (admittedly early) sample lacked the dynamic subtlety and discrimination taken for granted with Al's various amplifier designs.

> Perhaps there is more to be teased from the current *Alto* concept but, while this player will not offend your granny and has much to its credit, its inconsistent behaviour must preclude a formal Recommendation. Watch this space for possible future updates.

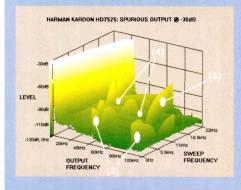

CD PLAY

# LAB REPORT

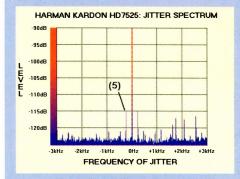

UN/DITHERED -70dB

# **SPURIOUS OUTPUT AT -30dB**

# TOTAL JITTER

At first sight, you'd expect the *HD7525* to sound like a dog's dinner. After all, the player suffers from an array of ghastly high frequency and sampling distortions (1) that are only partially ameliorated by dithering (2). Moreover, the meagre 15dB suppression offered by its 'digital filter' (I use the term loosely) releases vast stopband images (3) into the spectrum. The weird frequency dependency of conventional harmonics (4) also adds to the unique colour of the player.

However, it's this colour that apparently brings subjective success, tailored by mismatches between the 'reference' and 'delayed' RLS DACs. These mismatches cause errors in low-level linearity (-5dB at -80dB and -10dB at -90dB) which, in turn, provide a treble roll-off that progressively 'sweetens' with reducing level. Simply put, where the nastiest distortions occur, RLS (by complete coincidence) helps suppress their subjective impact. This, plus the minute level of data-induced jitter (5), all contributes to the *HD7525*'s clout

# Harman-Kardon HD7525

ealtime Linear Smoothing (RLS) finally comes alive in Harman Kardon's *HD7525*, the third player we've tested using this proprietary technology. There's nothing exciting about the sluggish track access or the basic features on its black plastic facia, but the remote adds direct track access, index skipping and intro search to the standard repeat and program play facilities.

The crucial action all takes place under the sheets, however, where HK uses two 18-bit DACs per channel. One provides a reference for both the direction and rate of change of samples emerging from the second, this being delayed by a period equal to the four-times oversampling rate. After conversion, a comparator circuit interpolates (joins the dots) between successive samples, encouraging a smoother waveform that requires less aggressive analogue filtering. Nice idea in theory, but in practice RLS may simply represent a different set of compromises.

# Sound Quality

"Bloody good," exalted one listener. "Spot on," concluded another. What they were referring to, of course, was the "instantly more open, balanced and instinctively if indefinably 'right' sound" of this refreshing player. Mozart's *Sinfonia Concertante* enjoyed a fresh, dynamic freedom that

œ

allowed the various strings and horns to soar from an inky-black acoustic, rather than the 'dirty greyness' which had formed the musical undercoat of so many other players.

Whatever style of music we chose, its portrayal never came across as intrusive. Leftfield's *Original* was "kicking without bruising," as the potent bass line retained a strong and powa, depicted alongside the unique character of the Hammond organ and the dextrous brushwork of percussion.
"This live studio recording truly comes alive," suggested one panelist. Revealing plenty of busy detail, the *HD7525* delivaered with a remarkable but never restrictive composure. Any criticisms? "Just a tad too enthusiastic at times, but not sufficient to mark the player down," was the overall consensus. **Conclusion**This is a glorious-sounding player that apparently succeeds in capturing ondles of

00 000

apparently succeeds in capturing oodles of information without sacrificing the unique essence of different styles of music. Our panel's immediate instinct was to award the *HD*7525 a Best Buy on the basis of this breathtaking performance.

erful sense of rhythm without sounding

relentless. Similarly, the complex percus-

sion that accompanies McLaughlin's Afro

Blue was now laid bare for our enjoyment.

Rather than the drum and tom-toms

sounding like a 'hollow thud', the reso-

nance of the drum shell was accurately

Nevertheless, with both subjective and comprehensive lab reports to hand, I feel compelled to utter a mild word of caution. It is not unreasonable to suggest that the success of this particular *HD7525* is linked to the precise nature of the mismatching between its twinned RLS con-

verters. There was a gentle but profound alteration in its treble response — a fortuitous anomaly that could not be guaranteed to occur, in precisely the same fashion, with every *HD7525* out there in the shops.

With this in mind, a strong Recommendation seems most appropriate. And the advice of the panel? "Don't pass by a hi-fi shop without buying one!"

**ON TEST** 

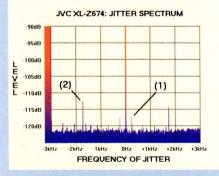

LAB REPORT

# **SPURIOUS OUTPUT AT -30dB**

# **TOTAL JITTER**

JVC may have succumbed to the 'dodgy S/N ratio' ruse, disabling the DAC during a typical S/N measurement, which leads to a fabulous but highly suspect figure like 114dB. This keeps (European) spec-happy reviewers content, even though the similarly unrealistic +13.7dB noise modulation suggests a 'real life' S/N closer to 106-107dB. More than good enough. I would suggest, to stand its ground without digital artifice.

All else is similarly state-of-the-art, with JVC's K2 interface eliminating any power-supply-induced jitter while reducing data (1) and frame-induced (2) jitter to just 173psec. Conventional distortion is also suppressed to remarkably low levels: typically 0.0004-0.0025 per cent at peak output and just 0.0013-0.004 per cent at -30 dB — below the level of background noise (3).

The player's lack of digital 'images' and ultrasonic noise (4) also sets the standard for other players to follow. At lower levels still, all fixed quantisation errors (5) are successfully converted to harmless noise (6). A fabulous result.

**CD PLAYERS** 

WE

eflecting the tumbling costs of advanced digital technology, the majority of JVC's CD player range hovers at or below the £200 mark. So at £300, this XL-Z674 represents the very apex of JVC's digital tree. This position was held until recently by the now discontinued XL-Z1050 costing £500 (issue 119).

The general appearance of the XL-Z674 is clearly based upon cheaper models like the XL-V284 (issue 147), with its centralised mechanism flanked by direct track access, display-off and digital output selection facilities. The matching remote control adds useful extras like index cueing, repeat and program play modes. The player is even fitted with a separate set of variable output sockets linked to an internal motorised volume control.

The approximate output level is displayed over a 48dB range on the display. Despite appearances, this superior (and costlier) technique should not be confused with the more common digital volume control found on competing players.

Moreover, the XL-Z674's internal technology represents a marriage between the 'K2 Interface' of the XL-Z1050 and the latest PEM (Pulse Edge Modulation) bitstream DAC used in the XL-V284. K2 is a proprietary jitter-busting chip developed by JVC for all manner of digital products. It works by using an internal optical inter-

face to 'break' and then reform the chain of digital data before sending the cleaned up digits to the D/A converter. This is really hitech stuff made available to the hi-fi-buying public at a surprisingly modest price.

### **Sound Quality**

Although the XL-Z674 proved difficult to pigeonhole, it was universally

appreciated by the listening panel. In particular, what the player lacks in depth, scale and emotive content it more than redresses with its very even-handed temperament. Track by track, almost every description of this player was prefaced with the adjective 'smooth'. This included Mozart's Sinfonia Concertante, which sounded "brisk and very pretty but still slightly diffuse".

I- I D:00

In similar vein, Shawn Colvin's One Cool Remove was apparently rubbed with 'wet and dry', ensuring a very smooth (there's that word again) and wholesome sound, even if the clubby atmosphere was diluted in the process. So, in an effort to render a very agreeable sound from every disc, some of the uniqueness, delicacy and intimacy of the recording is lost.

When on form, Dusty Springfield should sound as if she were whispering in your ear. On this occasion, and throughout Casino Royale, she sounded a little disinterested - a little impassive. And yet our panel was at pains to point out that despite its slightly restricted palette of tonal colours, the unassuming and pleasantly lively quality of the XL-Z674 should win it many friends.

JVC's XL-Z674 is neither the most insightful nor transparent-sounding CD player. But it paints with a broad brush and succeeds in communicating the essence of the musi-

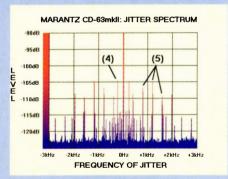

**SPURIOUS OUTPUT AT -30dB** 

As expected, the *CD-63mkll* bears more than a passing technical resemblance to both the *CD-63* (issue 137) and *CD-63SE* (issue 141). All three players use NPC's combined eight-time oversampling filter and DAC; the SM5872, revealed in the characteristic splurge of requantisation noise (1) and rippled but mild stopband images (2). Distortion remains low at 0.0006-0.02 per cent at maximum output, but increases to around 0.25 per cent at low (-70dB) signal levels where, even with digital dithering (black trace), some harmonics (3) poke clear of the background noise.

Talking of noise; the *CD-63mkH*'s 101dB S/N ratio is 1-2dB short of its predecessors even though other specs, including the -1.2dB glitch in linearity at -90dB and astonishing > 130dB channel separation, remain unchanged. This is the first '63 to be treated to my jitter test, however, which reveals relatively high levels of data-induced (4) and spurious (5) jitter components. If the latter can be improved we'll have an even better buy on our hands.

# Marantz CD-63mkII

irst there was the CD-63 (issue 137), followed by the CD-63SE (issue 141). Now, superseding them both, comes the CD-63mkII. The latter seems to be a very slightly

trimmed-down version of the  $\pounds$ 350 *CD*-63*SE*: it features exactly the same casework and facilities as both older models, but its price is now pitched at a highly competitive £270.

As ever, Marantz is offering full remote control with variable output, program and repeat play, peak search, display dimmer and tape edit facilities. Unusually, both coaxial and optical digital outputs are provided to service future upgrades, while a hard-wired BUS connection enables the *CD*-63*mkII* to be fully integrated into a complete Marantz system.

Under the bonnet, the *CD*-63*mkII* adopts the reinforcing brace, perforated rear panel and OFC-wired (Oxygen-Free Copper) mains transformer originally used in the *CD*-63*SE*. Similarly, the combination of Philips linear-tracking transport and NPC's bitstream DAC with Marantz's proprietary HDAM output buffer, is retained from the first *CD*-63. The move away from Philips's own conversion technology (remember that Marantz is part of the Philips empire) also explains why the *CD*-63*mkII* lacks the familiar Philips Bit Stream logo seen on numerous earlier players.

# **Sound Quality**

Given a firm thumbs-up by the panel, Marantz's latest offering was judged to lie "midway between the Pioneer and HK" — players known only as 'numbers two and three' in our blind running order. Moreover, the *CD*-63*mkII* has, it was suggested, "the added advantage of being the sort

of player you'd appreciate in the long rather than short term".

There is certainly a rich and occasionally tranquil quality about the *CD*-63*mkII*, although this does not soften the music's impact in the fashion of the Pioneer, for example. So Dusty Springfield sounded suitably sultry, her voice and accompanying sax oozing the sort of languid mellowness guaranteed to seduce our listening panel.

Dragged out into the winter fog to cool down, our panel continued by applauding the player's ability to retrieve very subtle detail, such as the marimba from *Casino Royale*, even though this finesse was slightly compromised as the track got busier. The same effect was noted with Leftfield's *Original*, where we glimpsed the faint echo of the lead voice before it was quickly submerged beneath a ripple of synthesisers. Not unlike Nessie, really.

The player's warm but lively quality was equally evident from the gutsy sound of Mozart's *Sinfonia Concertante*, without the player really imposing a colour of its own. "Always making sense of the musical chaos," our panel concluded, "this player is partying but not raving."

#### Conclusion

If Harman's *HD*7525 had not made such an impact on both sets of listening panels, Marantz's *CD*-63*mkII* would "undoubtedly have been voted Top Banana".

> Nevertheless, this remains a very smooth-sounding and highly satisfying player that successfully combines the best aspects of both the *CD-63* and *CD-63SE* without financial penalty. Moreover, this product is likely to offer a more consistent performance than the costlier HK. Our verdict? Yet another Marantz player to buy in haste and savour at your leisure.

**CD PLAYERS** 

NAD

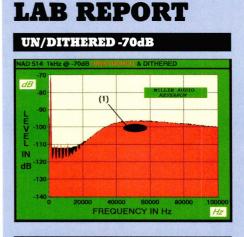

NAD

514

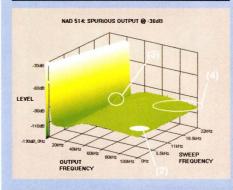

80 8z

9: 01 00 00

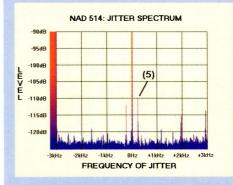

# **ON TEST**

# **SPURIOUS OUTPUT AT -30dB**

# **TOTAL JITTER**

Both the NAD 502 (issue 119) and the 514 are supposedly equipped with 'five-pole active filters' which, in the past, have successfully attenuated any requantisation noise above 35kHz. The continuous splurge of noise (1) emerging from the 514, however, is far closer in appearance to players like Technics's SL-PS620A (issue 112), which have used the same MN6474 DAC with gentler, lower-order analogue filters. This one feature is probably the prime reason for any sonic differences between the 502 and 514.

The requantisation noise, tailored by the DAC's noiseshapers, is just as visible on the 3D plot (2), where it all but conceals a ripple of stopband noise (3 — leaking from the digital filter) and spray of high-order harmonic distortions (4). NAD also matches the standards of earlier Technics players with its excellent low-level linearity and useful 103dB S/N ratio — besting its own 502 in the process. Jitter is also suppressed, with fundamental data-induced distortions (5) accounting for the bulk of its 225psec total.

romoted in NAD's literature as a 'no-compromise CD player', the £370 514 is, to all intents and purposes, a more refined and flexible version of the £220 502 (issue 119). The latter was itself a revision of the acclaimed 5425 (issue 95), and as a result, the 514has an unmistakable lineage stretching back at least four and a half years. Otherwise, the distinctive but rather dated-looking grey facia of the 514 adheres to a theme maintained by NAD for longer than most of us care to remember. At least the faceplate is struck from alloy and not plastic on this occasion!

The standard battery of track access, program and repeat play, music scan and display options are shared between the player and its remote control, along with a NAD-specific widget called CDR. CDR stands for Controlled Dynamic Range, a facility that boosts the level of quiet sounds so that they are not lost during late-night listening or drowned-out when recorded on tape for playback in a car. It's all achieved with mirrors (a digital compressor from Yamaha called the YM3412), and while CDR has its uses, it must never — and I mean never — be selected if you're listening under critical conditions.

# **Sound Quality**

Holding craggy thumbs aloft, our panel

proclaimed their enthusiasm for the open, lively and earnest sound of NAD's 514. This is the sort of player that makes every style of music accessible while still having fun with its content. Another listener suggested that it "teases out the three-dimensional elements of a recording to develop a believable acoustic". The strings from Mozart's Sinfonia

*Concertante* were certainly heard within a recognisable sense of space, while the horns maintained a more distant yet appropriate perspective.

The very deep but not especially wide soundstaging was obvious from the 'geography' of John McLaughlin's *Afro Blue*, where the drummer and guitarist sounded physically closer without appearing cluttered or confused. Similarly, Dusty Springfield's spot in *Casino Royale* was specifically mentioned for the spread of sound achieved by the piano, marimba and guitar — a combination that succeeded in enhancing the sensuality of her voice as well as the atmosphere of the piece as a whole.

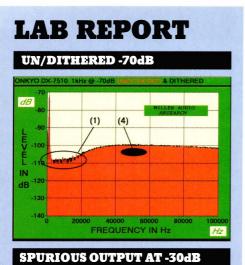

However, the light-hearted ardour of the player can get a little out of hand with busier and more intense pieces of music. The chorus from Shawn Colvin's *One Cool Remove* succeeded in pushing the *514* over the edge, whereupon the voices sounded a little too brusque and relentless. Kept within its limits, however, this player is a spirited and thoroughly entertaining performer.

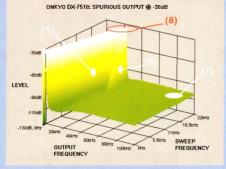

# Conclusion

Despite being the product of several years' continuous development, the NAD 514 is still something of a boisterous and idealistic teenager, lacking the perceived maturity of players employing 'younger technology'. Nevertheless, there's no

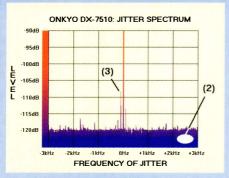

denying the attraction of the 514's spacious and invigorating presentation — recompense for the modest array of widgets and workmanlike rather than hi-tech internal construction. It's one of those cleverly-judged players that deserves to succeed almost in spite of self-imposed odds. Judge the 514 with ears — not eyes — and you could be in for a treat. -

**CD PLAYERS** 

Evidently based upon the *DX-750* (issue 141), the *DX-7510* employs the same combination of NPC's unusual SM5843 eight-times oversampling filter and SM5861 bitstream DAC. Onkyo's implementation still results in a just-about-16 bit S/N of 96dB with a similar penalty in its dynamic range (1). This is also evident from the increase in background noise (2) visible on the jitter spectrum which, otherwise, is populated with mild spikes (3) from power supply ripple.

Otherwise, and judging by the fairly substantial output of requantisation noise (4), the 2.2V output level and 370 Ohm output impedance, there's no appreciable change in Onkyo's analogue filtering. However, the component types could well have been altered.

Eventually, it's the 3D plot that reveals the effect of Onkyo's FPCS technology, simulating an extended fartreble response by gently merging 'real' audio data (5) with its 'reflection' (6). This rises up out of the noise (7) to merge at 22.05kHz (8).

# **Onkyo** DX-7510

ess than a year ago, Onkyo's *DX-750* (issue 141) wowed our blind listening panel with its eccentric but sensational sound. Now comes the *DX-7510*, which looks similar (okay, exactly the same), and even employs the same armoury of highly stylised digital ingredients. Has Onkyo become a little too confident in its cookery?

Superficially, nothing has changed, and so the player still offers a generous spread of widgets including direct track access, a 36-track program, shuffle and various repeat play options, a motorised volume control and Music File facility that automatically recognises your favourite tracks from up to 204 different CDs. The remote control looks slightly different from its predecessor, but the same facilities are on offer — albeit with a new presentation.

Under the bonnet, Onkyo's Fine Pulse Conversion System (FPCS) still takes pride of place, acting rather like a mild version of Pioneer's Legato Link, reducing the ringing associated with impulses and transient detail at the expense of extra stopband noise (see lab report). Just another twist in the digital tale that sets this large, feature-packed machine apart from its conventional competition.

### **Sound Quality**

Returning to our panel's recurring 'metal-

working theme': if the Pioneer *PD-S904* was described as a 'planishing hammer' and the JVC *XL-Z674* as incorporating some 'wet and dry', then the *DX-7510*, by comparison, was likened to a "ruddy great metal press". There is an inevitability and finality about the *DX-7510*'s presentation that tends to regiment its music with a cast iron discipline.

The player seemed most comfortable with our Mozart selection, which was described variously as "vibrant, open and richly detailed," responding slickly to changes in dynamics and tempo.

Moving onto *Casino Royale*, the *DX*-7510 maintained the "big and sexy voice" but applied a generally 'big and sexy' coloration to almost every other element within the performance — including, as our panel noted, the tiny little marimba which now sounded as if someone were running a crowbar across a metal radiator.

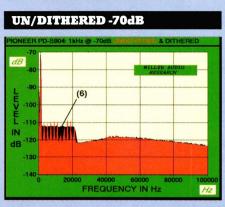

An equally unusual accent was applied to John McLaughlin's guitar, which now sounded "vast and bloomy". The duet between Shawn Colvin and Mary Chapin-Carpenter seemed, once again, too big and blowsy — huge voices, welded together. "Meaty, beaty, big and bouncy," the panel suggested, "more like Meat Loaf colliding with Jennifer Warnes". Similarly, we never really got a chance to appreciate the cleverness of Leftfield's *Leftism* mix, recoiling, instead, from great dollops of music, ladled too generously onto our auditory plate.

# Conclusion

This regimental sergeant-major of a player knows where it's going and woe betide any disc that thinks otherwise. There's certainly more than a hint of the *DX-750*'s unique charm here, but the brew is now somewhat over-cooked. Plenty of fine

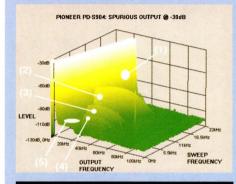

detail, then, rising from an equally quiet, hash-free acoustic, but with an unwelcome 'wham' or machismo that can sound brutish or heavy-handed.

Even though our panel thought a formal recommendation too dicey, we all grew to appreciate its assertive quality. The six million dollar question must be: can you live with a CD player with attitude?

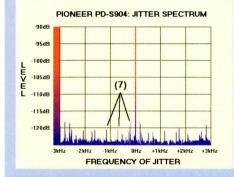

LAB REPORT

# **SPURIOUS OUTPUT AT -30dB**

# **TOTAL JITTER**

The practical limitations of Legato Link Conversion-S are laid bare by the 3D plot which uses an audio frequency sweep (1) running across the entire audioband at the musically important level of -30dB. Here, the bold harmonics produced by Pioneer's internal DSP are clearly visible.

LLC-S is, however, only capable of producing odd (i.e. third [2], fifth [3] and seventh [4]) harmonics rather than both the odd and even harmonics produced in 'real life'. Furthermore, these harmonics suddenly 'appear' immediately outside of the audio range (5), which otherwise enjoys very low levels (0.0014-0.01 per cent) of distortion. Sadly, this approach seems too inflexible to even begin to approach the reality of, er... 'real music'.

LLC-S aside, the PD-S904 is a joy, offering a flat response (unlike the older LLC), excellent low-level resolution and distortion (6), a wide 107dB S/N ratio, very low digital jitter (7) and a freedom from the PSUinduced ripple suffered by earlier players.

Pionee PD-S904

ver the last three years, Pioneer has been blazing a very distinct trail with its Legato Link Conversion (LLC) system: an unusual filter technology that behaves like the expensive DigiMaster kit from US brand, Wadia. Instead of axing the audioband directly above 20kHz, the LLC filter applies a more gentle roll-off. This allows spurious digital reflections (normally removed in other CD players) to provide a sense of the 'musical energy' which might have existed if CD had a wider frequency response.

It's a neat idea, but one that is fatally flawed, because this post-20kHz energy bears absolutely no harmonic relationship with the audio itself. (Or so I pointed out from issue 112 onwards.) Legato Link Conversion-S (LLC-S), however, is a very different proposition because here digital trickery is used to synthesise real harmonics of real musical signals. Does this turn out to be just as daft? Read the Lab Report for a few clues

Back to the PD-S904 itself, the very first model to feature LLC-S in anger. In terms of features, we find little departure from Pioneer's established themes. So the player incorporates a familiar 'Stable Platter Mechanism', requiring you to load all CDs upside down. Peak search, ran-

dom and repeat play modes on the player join direct track access, program play and other useful widgets on the remote control. In every respect, the PD-S904 is an acquired taste.

# Sound Quality

"Mostly harmless," began the panel, "for although this player started out encouragingly, we soon began to lose our concentration." There's no doubt

that this is a firm and articulate-sounding player, yet it's just as easy to notice the lack of 'magic' and musical flair that is ably demonstrated by the likes of Harman-Kardon's HD7525.

0000 00:00

Without being aware of the technology incorporated into the PD-S904, our listeners specifically criticised its inability to correctly resolve transient or percussive detail. Instead of delivering a clear attack, sustain and release, the strongest musical 'pulses' were blunted in impact. The separation between performers was very good, and John McLaughlin's instrumental mix on Afro Blue was a pleasure to follow. Also present, however, was an unusual, almost diaphanous quality that smeared the clarity of tonal colour, if not the focus of the stereo images themselves.

In similar fashion, Dusty Springfield's voice was solidly pin-pointed throughout Casino Royale, despite lacking its familiar colour and intonation. Our panel also pointed out a "flattening of the end of each word — and sibilants in particular."

# Conclusion

Pioneer certainly has some interesting ideas up its corporate sleeve and, by refusing to conform, succeeds in offering a unique product. The power of existing technology, however, remains inadequate when it comes to 'recreating lost musical

detail'. A more flexible technological approach is required for the purpose. As it stands, the archetypal and slightly harder sound of Yazoo or Scritti Politti might fall snugly into the lap of the PD-S904 with its "comfortable and curly sound". But for many other recordings made outside the commercial studios of the early '80s, this player brings a little too much Legato — in the literal sense - to its music.

# **ON TEST**

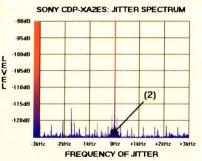

# **SPURIOUS OUTPUT AT -30dB**

# TOTAL JITTER

Because the heart of Sony's CDP-XA2ES beats to the rythm of the older CXD-2562 DAC (used here to generate the bitstream of pulses) instead of the newer CXD-8505, its technical 'fingerprint' bears closer comparison with the CDP-715 (issue 137) and CDP-915 (issue 141) from Sony's previous range. Just compare the action of its noise-shapers (1) captured in the -70dB plot.

In this instance, the wide 106-107dB S/N ratio and modest + 5.6dB noise modulation are both representative of 'real life'. Low-level linearity is great, and the 141psec jitter - although not quite as low as that achieved by the CDP-715 - is still the lowest in this test. Note the 'skirt' of random, low-rate jitter (2).

Distortion is fabulously low at between 0.0016-0.006 per cent at -30dB — well below the level of noise (3) and utterly free of any incoming sampling images from the ultrasonic region (4). Near peak output, however, the new CXA-8042 bit-converter is taxed, pushing distortion up to 0.06 per cent. Whoops!

# Sony CDP-XA2ES

SONY

0

s the sibling of superb CD players like the CDP-715, CDP-915, CDP-561 and CDP-761 (issues 137, 141 and 147 respectively), the new CDP-XA2ES represents an elaboration of existing technology. It sports a blend of old and new chips, wrapped in a crisp newspaper to tease audiophiles with a radical musical aroma.

Features are suitably excessive, and include a motorised volume control, edit/time fader, peak search, program, repeat and shuffle play modes. Conspicuous by their absence, however, are advanced widgets like Sony's Custom File programming and Edit Navigation guide. By way of recompense, Sony has employed the CDP-XA2ES as a vehicle to launch a revised two-part D/A conversion technology.

In similar fashion to Yamaha's I-PDM and Philips' DAC7 Bit-Converters, Sony's latest 'Current Pulse' system reverts to a slightly older Pulse DAC (last seen in the CDP-715) to provide the 'bitstream' for a new and entirely independent analogue conversion IC; the CXA8042. This, plus differential filter stages and top-notch passive components — including Marantz's favourite Silmic capacitors - adds up to plenty of 'hidden engineering' at a relatively modest cost, even if its carcass lacks

the sheer mass of heavyweight CD players like the Teac CD-5.

# **Sound Quality**

The technical presentation of this player is all but faultless: from the tremendous extension of its bass to the highest treble: from its resolution of subtle musical details to its confident handling of the most daunting dynamics. Yet, through all this technical excellence, neutrality and solid imagery, there remains a lack of what our listening panel described as "musical romance".

Sonv's CDP-XA2ES raced through Mozart's Sinfonia Concertante, bringing its mix of "earth and fire" to the fore with a performance that was seemingly played in double quick time - without ever losing its grip.

In similar fashion, the background conversation that opens Shawn Colvin's One Cool Remove proved especially lucid, while her duet with Mary Chapin-Carpenter brimmed with detail. The brew was strengthened by the added meat of its bass, althought the word 'bass' hardly does Sony's CDP-XA2ES justice...

This was the one player that successfully retrieved the low bass pedals from John McLaughlin's Hammond organ on Afro Blue, while the bass synths from Leftfield's Original seemed to extend down an extra octave or two, prompting cries of "whoa" from the 'Beavis and Butthead' corner of the listening panel.

TEAC

CD-5

# <section-header>

# **SPURIOUS OUTPUT AT -30dB**

# **TOTAL JITTER**

This player employs the same combination of NPC's SM5840 eight-times oversampling filter and Philips's SAA7350 DAC as Teac's older *CD-P4500* (issue 107). Hence the characteristic suppression of ultrasonic noise (1) with small clusters of stopband images (2) — all indicative of the SAA7350 running with a 16.9MHz clock. Philips would use a lower 11.3MHz clock in players using the same DAC, dramatically changing the 'finger-print' of the machine.

Conventional distortion is low at just 0.009-0.015 per cent (ref. -30dB), although sampling images (3) are still released by the digital filter. More importantly, grittysounding sampling patterns (4) radiate back into the audioband courtesy, once again, of the SAA7350. This is a great pity because other causes of audible displeasure — such as random jitter (5) — are mightily suppressed, leaving a hint of data-induced jitter (6) to bring the total to a low 198psec. And do take account of its high 2.7V output during any A/B dems!

rust Teac to dream up a CD player that's a little out of the ordinary. Such is the *CD-5*; a heavyweight player that takes its basic styling from the cheaper *CD-3*, with the addition of conical supports standing proud from each corner. The inverted cones are terminated in individual, adjustable, goldplated points to support the player on tiptoes. And if you're worried about damaging your furniture, Teac has thoughtfully

precious woodwork. Mounted on a proprietary hi-fi equipment table, however, Teac's pointy feet certainly provide a more secure foundation than the rubberised blobs that lurk beneath almost every other player. And if this wasn't enough, Teac can also supply a gold-coloured version of the *CD*-5.

supplied four protective cups to prevent its

stilettoed feet from drilling holes in your

Whether black or gold, the CD-5 houses the same Philips-based Bit Stream technology applied in earlier players, like the CD-P4500 (issue 107). Teac has also used its centralised mechanism to subdivide the digital and analogue 'halves' of this player. On the outside, the CD-5 is only equipped with basic track skip facilities, leaving its matching remote control to light up the fluorescent display with extra repeat and program play options, direct

track and index searching, fast search (with cue lock) and tape edit facilities.

In common with earlier Teac players, the CD-5 is even equipped with a pitch control, which adjusts the musical tempo over a +/-12 per cent range. Aerobics instructors, please take note.

# **Sound Quality**

After an initial burst of enthusiasm following the

Mozart's *Sinfonia Concertante*, the impression left by the *CD*-5 on our hardbitten panel took a slight downturn. Its performance was likened to a "brilliant façade": a glittering portrayal that was high on style but just a little short on substance. "Full of sound and fury, but signifying nothing," muttered one of our more literary-minded panelists.

healthy pace, vim and vigour displayed by

Specifically, the *CD*-5's balance is not tonally restricted, but there is a tendency for it to sound a little too shrill or unsympathetic. The percussive accompaniment from John McLaughlin's *Afro Blue* and Shawn Colvin's *One Cool Remove* were criticised for "shimmering incessantly", and both gave us the impression that the *CD*-5 would "mince through the music rather than drive purposefully along".

There's no doubt that the generally light, bright and fresh sound of the *CD-5* CD player will prove attractive in some systems. Yet, by lacking the meatiness and musical substance of its more sophisticated peers, it often falls into the trap of sounding too mechanical, as if "going through the motions".

Although this player looks and feels like a million dollars in gold bars, the sound of Teac's *CD*-5 is arguably closer to silver

plate. Nevertheless, it doesn't come across as a cynical attempt to dress digital mutton as lamb for, beyond that Art Deco panelling, the *CD*-5 also incorporates a deal of modern bitstream technology. A gallant attempt then, albeit one that has not significantly evolved from its closest in-house relative, the *CD-P4500*, originally Recommended over three and a half years ago.

ctors, please take n

# **CONCLUSIONS** Best Buys and Recommendations

hile the hot commercial action remains concentrated on players below £250, all the models featured here suggest that variety, rather than consensus, is the

key attraction for those with a little extra to spend. And variety (in appearance, feature content, technology and the actual sound) is cultivated within this month's test group. Rather than there being a communal goal of 'ideal sound quality', it seems instead that

the more you spend, the more outlandish becomes your choice of musical interpretation!

Even the players that slipped through the net of formal Recommendation possess a

certain spark of innovation. Pioneer's *PD*-S904 and Onkyo's *DX*-7510 sport unique digital signal processing, while the Teac *CD*-5 and Audio Innovations *Alto* are examples of stunning aesthetics. As ever, if you are prepared to stump up a little extra cash, there will always be a player to satisfy the demand for flair and individuality.

Nevertheless, neither reputation nor aesthetic genius cuts any ice with the educated ears of our hard-bitten, blind listening panel. As a consequence, Arcam's latest *Alpha* 5 *Plus* was undermined by its superficially dynamic but unsophisticated sound, just as the pyrotechnic antics of Onkyo's *DX*-7510 proved a little too emphatic for our panel's musical constitution.

Pioneer's *PD*-S904 was even likened to a "cheese sandwich in the *haute cuisine* of audio, one that's filling enough (though the edges are curling) but still lacks sufficient colour to tickle the palette".

In similar fashion, the artistic *Alto* from Audio Innovations was heard to a d o pt a piecemeal approach to its music an uneven quality that aggravated what was other-

wise a very polite and graceful performance. A certain smugness was also identified in the lazy tone of vocals from Teac's *CD*-5, a player whose visual 'gravitas' mirrors a cavalier

over-confidence that often leads it to bite off more than it can comfortably chew.

JVC's XL-Z674 gains a swingtag by virtue of its well-upholstered bass, smooth overall sound, generous features and, by the standards of the group, relatively low price. It's an undemanding all-rounder, albeit one that lacks the gut-wrenching dynamics of Sony's *CDP*-

*XA2ES* — a player that walks the tightrope of detail and sophistication while harbouring an astonishing 'kick' to its bass.

If you are looking for a player that errs on the 'romantic' side of neutrality, the spacious and invigorating sound of NAD's *514* is likely to fit the bill. But I'd hesitate to partner it with an amp or loudspeaker that already sparkled with boisterous enthusiasm. Ditto for Harman's *HD7525*, which is equally up-

beat but altogether more enticing with its bold sense of the dramatic, its see-through transparency and ability to reveal the subtlest of con-

trasts from the widest possible selection of musical styles.

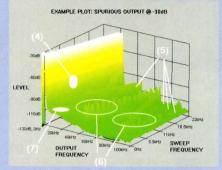

All of which leaves us with Marantz's *CD*-63*mkII* which, because of its £270 price tag, could easily have been overwhelmed by its costlier competition. In the event, the *CD*-63*mkII* put up a courageous struggle with a mature, understated performance that not only belies the player's modest ticket but also promises long-term listening satisfaction. So if Harman's *RLS* player is out of reach at £400, then save yourself a few CDs and opt, instead, for the latest in a long line of bitstream thoroughbreds.

# **HOW TO GET THE MOST** from the new, full-colour plots

### **SPURIOUS OUTPUT AT -30dB**

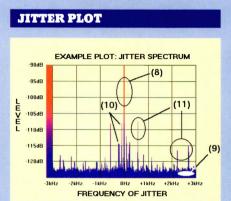

Distortion and sampling images are graphically illustrated on this 3D plot, which opens a new window on our search to explain and confirm the sound of different CD players.

Rather than at just one frequency, an audio frequency sweep from OHz to 22.05kHz (4), at -30dB (in the thick of the music), reveals continuous changes in performance. Distortion harmonics (5) may be seen radiating out to the right of this sweep, and the lower the distortion, the less obvious such harmonics will appear.

In addition, sampling (or stopband) images are represented as whole or partial V-shaped patterns (6) centred on multiples of the 44.1 kHz sample rate. These are especially obvious on our example plot, which also reveals the rippling pattern caused by the player's digital filter. Ideally, such images will be removed altogether, allowing the noise floor to descend, undisturbed, into the darker green region of the graph.

This plot covers a full 100dB dynamic

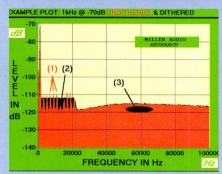

range, running from -30dB to an incredibly low -130dB. So, by looking at the 'colour' of the noise in the audioband (7), we can get a direct indication of the dynamic range of one combination versus another.

This latest test probes fluctuations in the timing of digital signals during D/A conversion — variations caused by interference from the player's own power supply, interference from adjacent clocks and even from the ones and zeros that form the data itself.

Ideally, the plot would show a sharp, central peak (8) rising from as little background noise (9) as possible. In practice, we find jitter (see feature, issue 147) represented as sidebands alongside this central peak. Jitter caused by power supply noise (10), such as ripple and diode switching, is usually seen close to the main peak. This, together with very low-rate jitter, causes the peak to broaden, influencing the stability and focus of stereo images. Jitter caused by interaction with the data itself, or from other repetitive processes within the player, is represented on this plot by the more widely-spaced sidebands (11). This type of jitter is often directly audible and is linked to muddling or harshness, particularly where the music contains sustained treble detail.

# 1 kHz -70 dB PLOT

Dither is a special type of low-level noise used to randomise the predictable quantisation errors that cause unwanted harmonic distortion. Ideally, these harmonics (1) are then traded for a slight increase in inaudible hiss (2), although some DACs are clearly more proficient at this than others.

Look out for a build-up of ultrasonic noise (3) beyond the audioband (>20,000Hz). This is a by-product of some bitstream DACs. Traditional multi-bit DACs produce less of this noise and, as a result, may perform more consistently when partnered with different amplifiers.

#### HI-FI CHOICE

# Aria. A new way to look at hi-fi support.

Introducing the Aria Modular Hi-Fi Support System. It can change the way you look at your components. Build up separate vertical shelves. Or link units side by side. Either way, Aria lets you vary shelf heights to suit your components. Start with a Base Pack and go from there. There's no limit to the number of ways you can build it up. Not only does Aria give you more flexibility than any other hi-fi system, it also provides sound deadening and decoupling benefits. With black tubular steel legs. Grey tinted glass or black MDF shelves. And adjustable carpet-piercing spikes. The Aria Support System. Hi-Fi will never look the same again. I want a good look at the Aria system. Please send me a brochure. Address Name Post Code

Our components improve yours

Zenith Crown Ltd., Tipton Road, Dudley, West Midlands, DY1 4SQ Tel: 0121 520 5070/1432

Many back issues of Hi-Fi Choice are still available. They cost £4.00 each in the UK and £6.95 for overseas orders. This price includes postage and packing.

Oct 1994 - Issue 135 Presenting the European Imaging & Sound Awards94/95. Europe's best hi-fi equipment. Eight new loudspeakers; Pro-Logic AV amplifiers. (Order ref AE35B)

CD player reviews, a look at valve amps & Pro-Logic processors for surround sound effect. Free supplement of Hi-Fi Choice cover photography. (Order ref AE37B)

#### Feb 1995 - Issue 139 CD players-ten tested, speakers, best home recording medium, Ouad 77 amp, Arcam Alpha 5 plus CD

player. FREE ultimate blank tape guide (Order ref AE39B)

#### Mar 1995 - Issue 140 Meridian Digital

Theatre, Amplifiers and Cassette Decks on test, House Pod speaker, FREE pocket guide for mobile (Order ref AE40B)

audiophiles

speakers £1,000 -£2.000: 12 tested. High Definition CD in practice, computerised test procedures

May 1995 - Issue 142

(Order ref AE43B)

July 1995 - Issue 144 Lab test on CD Transports/DACS top-end Turntables, Pear Audio System. Sennheiser Interview The recent Spectrum report discussed. (Order ref AE44B)

#### unravelled, Trichord Investigation-Clock 2 upgrade, Naim Upgrades including the Super Cap. (Order ref AE45B)

#### Sept 1995 - Issue 146

Subwoofer secrets, over 15 loudspeaker supports pro-audio debated on. Sonv's WM-D6C Professional walkman and the LS3/5a

(Order ref AE46B)

E DECKS

uo articles Oct 1995 - Issue 147 The 1995 Ultimate Hi Fi Awards. The EISA specific winners and reviews of the successful Hi-Fi of. products plus a dozen photocopies budget CD players go through their paces.

(Order ref AE48B)

(Order ref AE47B) Nov 1995 - Issue 148 An exclusive test on £1,300 domestic CD-R machine plus reviews on loudspeakers and four integrated valve amps

ver wanted to look back at a *Hi-Fi Choice* review or needed some sound independent advice to make up that 'Best Buy' system? Factsback is a personal service designed to help you navigate the ever-increasing list of available products. Now, all our reprints over the last 12 months are instantly available to you via your fax (or fax/modem) 24 hours a day. You get the review you need, just when you need it.

#### How much will it cost?

The cost of our easy-to-use service is 39p per minute off-peak and 49p per minute at all other times. The pages you will receive have been designed to keep user costs to a minimum. The Factsback system was put together by Starcomm Ltd (01132) 940600

**How Hi-Fi Choice** 

#### Now available on Factsback

- Every Hi-Fi Choice test review from April 1994 to the present. Complete with prices, Best Buys and Recommendations.
- Every Hi-Fi Choice Directory entry. Plus, exclusively through Factsback: the Price Guide; a complete listing of every hi-fi component available.

Quick or in-depth system index. Includes the length of each article.

Call the Factsback system from the handset of your fax

machine. The handset must be switched to 'tone'.

Pollowing voice prompts, select either an index of documents or specific documents by a known document number from the keypad of your fax machine.

Factsback

works

**3** Factsback delivers your choice of documents to your fax machine complete with coversheet.

## THE DIRECTORY

# 

#### **Best Buys & Recommendations**

The most influential symbols in our Directory are the *B'BUY and REC* commendations found at the end of the entries for particularly fine products.

**B'BUY** A product carrying the Best Buy swingtag is of excellent quality and good value for money in its price category.

REC Recommended products are runners up, but they are still definitely worth considering within their price bands.

Please note, however, that an expensive Recommended product will nearly always sound better than an inexpensive Best Buy.

An ideal situation would be to choose suitably priced *B'BUY* or *REC* products from relevant categories and create a Best Buy system. However, due to the varieties in tonal balance that exist in many audio products, and differences in taste, system building is unfortunately not that simple. These ratings make a useful guideline for short-listing components, but only by experiencing the actual combination in a dealer's listening room will you be able to decide whether it works for you.

#### **BUYING HI-FI EQUIPMENT**

The key to putting together a great hi-fi system is finding a dealer with whom you can communicate, and who is sympathetic to your requirements. So the first stage in your quest is to look up your local dealers in our Dealer Directory, at the end of the product Directory, and go to see the people behind the counters. Listen to the sound they make, check out their record collections, sip their coffee and find the store with the right attitude. Then take your records in and listen to them through a variety of components within your budget. Use our Recommendations and Best Buys to narrow options down, but bear in mind that dealers have a lot of experience in putting systems together, so don't worry if parts of the system are not Best Buys. It's the end result that counts. Listen for the system that shows you the greatest differences in your software, (regardless of musical content, records should sound distinctly dissimilar). This is a good way of assessing which system is the most revealing.

If you can borrow equipment to try at home, do this before you buy. Loudspeakers in particular can sound very different according to the room they are in. Don't forget that cables and supports play an important part in the sound of a system: if you take your bits home and plonk them on the sideboard with a bit of mains flex to connect them up, don't expect sonic ecstasy!

# Wall to Wall Magic!

# The Widest Choice of THX in the UK!

Nothing will prepare you for the

sound of THX Kamla style. Experience each soundtrack as the director intended through the JBL Synthesis II system and two other superlative THX Home Audio loudspeaker systems. Amplification by JBL, harman/kardon, Proceed and McIntosh. Processing by harman/kardon and Proceed. Also featured, the UK's first AC-3 demonstration through EAD TheaterMaster.

251 Tottenham Court Road, London W1. Tel: 0171 323 2747. Fax: 0171 637 2690.

JBL, HARMAN/KARDON, JAMO, BOSTON, B&W, KENWOOD, PIONEER, PROCEED, REL, ROTEL, G.E., SHARP, DALITE, RUNCO.

0% finance available subject to status.

## Amplifiers

he amplifier sits at the heart of the system, processing the outputs from the various music sources as

necessary and then driving the loudspeakers. These two (quite separate) functions are integrated into a single box at the low-to-middle price points; but separated pre and power amplifiers, even separate power supplies, become increasingly common as one moves upmarket.

■ Bear in mind that output power and sound quality are not necessarily related. Some of the finest amplifiers around have outputs as low as 12 Watts, but team them with high efficiency loudspeakers and you can achieve loudness aplenty. Only when using loudspeakers of low sensitivity (below 87dB/W) or difficult load do you need lots of power. As general rule, the more widgets an amplifier has (ie tone controls, remote control, DSP) the more money will have to be spent on it to match the sound quality that can be achieved with a minimalist design. The sort of facilities that are useful include tape monitor switching and a source direct button on models with tone controls.

An increasing number of amplifiers are supplied without vinyl disc stages, or with the phono stage as an optional extra. If you use a turntable, make sure that the amp has an MM or MC stage to suit your cartridge.

#### A/V amps

In practice an A/V amplifier provides all the standard CD, tuner, tape, aux and phono inputs offered by a standard stereo amplifier. In addition many also incorporate an AM/FM tuner section, making them A/V receivers.

More importantly an A/V amplifier includes a Dolby Pro Logic decoding chip along with extra circuitry to effect the rear channel delay. Naturally there are at least four channels' worth of amplification under the bonnet to feed the five loudspeaker outputs.

Key	amp, power ampamplifier type
integrated, pre	amp, power ampamplifier type
A/V	includes surround sound capability
50W	power output per channel in Watts RMS
MM,5L,2T	number of inputs of each type (L - line, T - tape,
	1M - moving magnet cartridge, MC - moving coil cartridge
hdph	headphone output available

# made for music

Affordable, quality hi-fi equipment with no compromise on fidelity; that has been the consistent aim in designing the Deva range.

Through innovation, through art and through logic, this is now a reality.

A range of hi-fi amplifiers and digital source equipment, hand-built in England. Developed for the music lover without sacrificing the facilities needed in todays home entertainment music/video system.

Made for music....to hear is to believe.

For further information please contact

 Image: Construction of the state of the

# ELECTROSTATIC LOUDSPEAKERS NOW AVAILABLE IN KITS.

The ESL III electrostatic loudspeaker is a full range, three panel design, which has all of the typical sonic advantages of panel speakers but with the price advantage of doing it yourself.

Assembly is easy and straightforward, with no assembly jigs or stretching frames used at all.

If we have tickled your aural tastebuds and you would like more information, please send SAE for our brochure and info-pack.

E.R. Audio, Magnolia Cottage, West Common, Blackfield, Hants SO45 1XJ.

# **Qudos**°, **The Perfect Balance**

The speaker cable forms a vital interface between your amplifier and loudspeaker system. The properties of the speaker cable you use will determine how well your amplifier can communicate

with your speakers. Use the wrong cable and your speakers could be missing the message. To minimise the signal degrading properties present in all cable, QED's own research programme has established that a Balanced Design Concept is essential for optimal performance.

+QED QUDOS BALANCED DESIGN CONCEPT SPEAKER CABLE MADE IN UK

QED's Qudos speaker cable lowers all the cable's degrading Characteristic Properties in proportion and with the correct balance thereby delivering a superior and more accurate all round performance.

WHAT HI+FI? \* \* \* \*

"Sensational sound... You won't find a better cable at this price."

## Cables

B ables are not accessories, but an integral part of a system. Inevitably some cables are

greater than others. The best cable for your system will only be found through trial and error, but by combining our Recommendations with those of a dealer, you will end up with something suitable. Generally speaking, budget to spend about ten per cent of the total system cost on cables. Analogue interconnects are the leads that connect source components to amplifiers and pre to power amps. The cables in this section are priced for a one metre terminated pair. Symmetrical indicates where a twisted pair of conductors are used. Coaxial means that there is a central 'hot' conductor and a shield that carries the negative signal. Stranded cables have multiple strands and solid core uses individually insulated strand(s).

■ Digital interconnects connect CD transports to DACs, and are traditionally coaxial with a 75 Ohm impedance. They come in optical and electrical varieties, the former being made of plastic or glass. The prices shown are for a terminated linear metre.

■ Speaker cables are used between the amplifier and speaker. Our prices are for a terminated five metre pair unless otherwise indicated.

Key loudspeaker; interconnect; digital, electrical; digital, opticalthese are the different

CABLE				
	1		Loudspeaker cable • stranded • ned • low • copper • PVC outer, figure-of-8	
	2		Luduspeaker Lable - Standed - copper - low infusion budget cable	
	2		spreaker cable - stranded - copper - entry level for AV purposes	
	2		spraner vanie * stranded * copper Joudspraker cable * stranded * copper	
	2		Ludspeaker cable + stranded + med + low + copper + Flat construction, poly outer	
	2	1.45	Loudspeaker cable • stranded • low • low • copper • PVC outer, fig-of-8	DIDUN
	2		Loudspeaker cable • stranded • low • low • OFHC copper • Polyethylene cover	<b>B'BUY</b>
	3		speaker cable • stranded • copper • budget hi-fi cable	
	3		Loudspeaker cable • stranded • OFC • 6 core	
	3		Loudspeaker cable • stranded • med • low • copper • 4-core, round construction	
	4		speaker cable • stranded • copper	
			Loudspeaker cable • solid core • copper • This well-meaning facsimile of earlier ribbon cables ends up sounding lumpy and uneven.	
	5		speaker cable • copper • 4 conductors, 6N	
	5		speaker cable • stranded • copper	
lxos 604	5		Loudspeaker cable • stranded • copper • Bi-wire	
Ixos 602	5		Loudspeaker cable • stranded • OFC • 12 core	
QED Qudos Profile 8	5		Loudspeaker cable • stranded • OFHC • Flat 8-core OFHC poly	
Cable Talk Concert 2	6		speaker cable • stranded • copper • Signal Return Flow System	
Cable Talk Talk 4 Biwire	9		speaker cable • stranded • copper • 4 conductors, 6N	
Chord Flatline Gold	9		Loudspeaker cable • stranded • solid core • low • copper	REC'D
Mission Quartet	9		Loudspeaker cable • solid core • copper • 4-conductor OFC solid core	
	10		Mains cable • strandel • 12A • silver plated copper • PTE insulated	
	12		Loudspeaker cable • stranded • silver • Priced ber meter	
	12		Educational cause and a copper 4 conductor version of Concert	
	16		speaker cable + stranded + solid core + low + copper	
	19	109	Doubleaker Laure - stranded - sond cute - how - copper Digital, electrical - coaxial - stranded - copper - A top performance, low-loss 75 ohm coax with a very open, almost liquid quality.	<b>B'BUY</b>
	20		Digital, electrical • cuaxial • stranded • coppet • A top performance, low-loss 75 only coax with a very open, annost right quarty. Digital, optical • plastic • Very similar to Bandridge AL560; sound is lacklustre	0.001
	20		Digital, optical • prastic • very similar to Banorioge ALSOO; sound is rachidstre Interconnect • coaxial • stranded • OFC • 24 karat plugs	
	20	100	Loudspeaker cable + stranded + copper + Unterminated	<b>B'BUY</b>
	20		Loudspeaker cable • stranded • copper • This Swedish made cable proved a real fit with our listeners - a slick performer and Best Buy upgrade.	DDUI
	20		Mains cable • stranded • 3A • HPMC • PTFE insulated	
	22		Interconnect • Symmetrical • stranded • OFHC copper	
	23		Interconnect • Symmetrical • stranded • OFHC copper	
Cable Talk Improved 2/CD			Interconnect • Symmetrical • coaxial • solid core • copper • Entry level CD etc phono-phono	
	25		Mains cable • solid core • 13A • High purity copper	
	25		Digital, electrical • 75 Ohms • copper • OFC screen	
	25		Digital, optical • plastic fibre	
	25		Interconnect • coaxial • stranded • OFHC copper	
	26		Interconnect • Symmetrical • coaxial • stranded • OFHC copper	
	28		Digital, electrical • coaxial • stranded • 750hms • copper • Can seem slightly impassive but there's no avoiding its exceptionally detailed sound.	<b>B'BUY</b>
	30		Loudspeaker cable • stranded • silver • Priced per meter	
Chord Chrysalis	30		Interconnect • stranded • copper	
Sonic Link Super Mains	30		Mains cable • stranded • 30A • silver plated copper • PTFC insulated	
	30		Digital, electrical • coaxial • 75ohms • PTFE • Deviates from the 75 ohm standard and provides an unbalanced sound.	
vdHMV Videolink 75	30		Digital, electrical • coaxial • 75ohms • copper • An AV-cum-digital cable that nearly beats QED's Digiflex, but emphasises sibilants.	REC'D
Chord Codac	32	108	Digital, electrical • coaxial • stranded • 75ohms • copper • A connection with a stranded inner core and a sound that lacks integration.	
QED Qudos Terminated	33		Loudspeaker cable • stranded • low • low • OFHC copper • Various lengths, terminated	
DNM TCC75	34		Analogue • solid core • medium • low • high purity copper • Non-coaxial	B'BUY
Cable Talk Advanced 2	35		Interconnect • Symmetrical • coaxial • solid core • 6N copper • phono-phono, for CD etc	
	35		Interconnect	
	37		Digital, electrical • copper • An analogue interconnect inappropriately pressed into digital service. A visible deterioration in the digital signal results.	
	39		Interconnect • stranded • copper	
	40		Interconnect • coaxial • stranded • OFC • Double shielded, locking plugs	
	40		Loudspeaker cable + stranded + low + copper	
	40		Loudspeaker cable = stranded = copper = Described as a 'dinosaur of a cable', this stiff wire rod doesn't belong outside Naim systems.	
	45		Loudspeaker cable + standard + cupper + loeal for laying under carbies, int standard to obesit cleaning outsider terminis standard to the stan	REC'D
		100	Digital, optical • plastic • Well constructed stepped-index fibre with polished ends and connectors. Lean, fuzzy, engaging performance.	REC'D
Monster Interlink LS100	45	1 I I X		

Sonic Link Red	45 47		Interconnect • coaxial • stranded • HPMC	
DPA Slink	47		Interconnect • coaxial • stranded • low • silver • phono terminated	DECT
Chord Prodac			Digital, electrical • 75ohms	REC'
Chord Cobra-mono	49		Interconnect • stranded • copper	
Kronos Konnekt 3	49		Interconnect • coaxial • stranded • copper	
Arion LS-2	50	100	Loudspeaker cable • stranded • silver • Biwire, priced per meter	01010
Audioquest Video Z	50	108	bigital, electrical • coaxial • stranded • 75ohms • copper • The very best available, with an expressive sound, but generously priced.	B'BU'
Cable Talk Monitor 2	50		Inteconnect • copper • Signal Return Flow System	
Cable Talk Improved 2/T1			Interconnect • Symmetrical • coaxial • solid core • copper • Entry level phono-phono	
Sonic Link Green	50		Digital, electrical • coaxial • 75ohms • PTFE	
Sonic Link Derwent	50		Interconnect • stranded • silver plated copper	
vdHThe Clearwater	50		Loudspeaker cable • stranded • silver/copper • Despite its evocative title, the Clearwater turns out to be a disappointingly murky sounding cable.	
Kimber Cable KC-1 D'link			Digital, electrical • copper • This cable adopts a woven construction with the addition of a conductive screen. Music lacks detail and spirit.	
Kimber Cable Opti-link	59	108	Digital, optical • plastic • Hardly cheap for what appears to be a bog-standard PMNA fibre, yet it sounds a little brighter and livelier than most.	REC'I
Ixos 102	60		Interconnect • coaxial • stranded • OFC • Double shielded, locking plugs	
Trichord Pulsewire 75/D	64		digital interconnect • Symmetrical • coaxial • solid core • 75 ohms • silver plated copper • mono	
Cable Talk Studio 2	65		Interconnect • Symmetrical • coaxial • solid core • copper • Enhanced version of Monitor 2	
Chord Siren	65		Interconnect • coaxial • stranded • Silver plated copper	
Chord Chameleon	68		Interconnect • stranded • copper	
Arion SA0.5	75		Interconnect • Symmetrical • stranded • silver	
Audioquest Type 4	75	109	Loudspeaker cable • copper • Four 18-gauge OFHC copper conductors wound in a Litz-type fashion increases capacitance but restrains the cable's 'bite'.	
DPA White Slink	75		interconnect • coaxial • stranded • silver plated OFC • polyethylene/PTFE dielectric	
Sonic Link AST150X2	80		Loudspeaker cable • stranded • low • copper • Biwure	
Cable Talk Professional 2	85		interconnect • Symmetrical • coaxial • solid core • copper • MGT Multi Ground construction	
Sonic Link Violet	85		Interconnect • Symmetrical • stranded • HPMC	
Audioquest Digital PRO	90	108	Digital, electrical • coaxial • stranded • 75ohms • silver • A silver cable with all the drive of Video Z but lacking its clear cut transparency.	
Sonic Link Grev	90		Loudspeaker cable • solid core • silver plated copper • A spaghetti-thin silver plated cable lacks bass impact and treble 'air'	
Kimber Cable KC-AG D'lir			Digital, electrical • silver • An asymmetric cable using silver conductors that deviates from the 75ohm standard. Not ideal for digital applications.	
Arion DAC1	99		Digital, electrical • coaxial • stranded • 75ohms • silver	
Kronos Konnekt 2	99		Interconnect • coaxial • solid core • copper	
Audio Note AN-D	100	109	Loudpeaker cable • solid core • copper • Supplied in linear, non-polarised lengths that should be twisted into stereo pairs. Sounds rather grippy and forward	
Audioquest Optilink Z	100		Digital, optical • glass • Good level of midband detail but frequency extremes lack depth and extension.	
Electrocompaniet EC-K3.			Mains cable • stranded • 13A • copper • Terminated, woven conductors	
Ixos 101	100		Interconnect • coaxial • stranded • silver plated OFC • Double shielded, locking plugs	
Sonic Link AST75X2	100		Loudspeaker cable + stranded + copper + Biwire	
Sonic Link Blue	115		Locapean Course Standard Copper Strands	
Arion SA1	125		Interconnect • Symmetrical • stranded • silver	
Chord Solid	130		Interconnect - costal - solid core - copper/silver	REC'I
Cable Talk Reference	140		interconnect · Gazari · Sond cole · Coppersive	NEU I
Moth Leyline Datalink	140	100	Digital, electrical • coaxial • 750 Ohms • copper • A thin, coaxial version of Leyline Black with a rather hard and unforgiving character. Too expensive.	
Sonic Link Care Music	140	100	bigital, electrical « Coasia « Zoo omis « copper « A imit, coasia version of Leynne Black with a rather hard and unorgiving character. Too expensive. Loudspeaker cable « stranded » low « silver plated cooper	
Trichord Pulsewire 75	150		interconnect • Symmetrical • coaxial • solid core • 75 ohms • silver plated copper • stereo	
		100		REC'I
Audio Note AN-B	165	109	Loudspeaker cable • solid core • copper • High capacitance Litz-type cable may act as a taming influence in many systems.	REUL
Sonic Link Black	165	100	Interconnect • stranded • silver plated copper	D'DUN
DNM LBCB500	170	109	Loudspeaker cable • solid core • copper • High impedance can influence the treble response, but this was a winner on sound per pound.	B'BU\
Arion DAC2	199		Digital, electrical • coaxial • stranded • 75 Ohms • silver	
Arion SA2	199		Interconnect • Symmetrical • stranded • silver	
Kronos Konnekt 1	199		Interconnect • coaxial • stranded • copper	
Sonic Link Blue	200		Loudspeaker cable • solid core • high • HPMC • Biwire	
Sonic Link Derwent/spkr	200		Loudspeaker cable • low • silver plated copper • Biwire	
Acdioquest Midnight Hypl			Loudspeaker cable • solid core • copper • Similar to Type 4, but with a delicate smoothness.	
/dHThe Magnum	265		Loudspeaker cable • stranded • copper/silver • Touted as vdH's most prestigious twinlead cable, Magnum sounds soft and old fashioned.	
DPA IS19	275		Loudspeaker cable • solid core • silver/copper • Clear, neutral and transparent sound of the older 8S without the clarity of Gore-Tex Black 16.	
vdHThe Wind	330	109	Loudspeaker cable • stranded • silver/copper • 'The Wind' kicks up a storm with its lush midrange and bone-crunching bass!	REC'I
Kimber Cable D-60	513		Digital electrical • coaxial • 75ohm • Silver • Teflon jacket	
Kimber Illuminati DV50	552		Interconnect • coaxial • stranded • solid core • 110 ohm XLR balanced • Woven shield + drain wire	
Kimber Cable Orchid	1,183		Interconnect • coaxial • 55ohms • silver • AES/EBU, Teflon diselectric	
Audio Note AN-SP	1.270		Loudspeaker cable • silver • Some 15 individually insulated silver strands make up this a civilised and exceptionally detailed sounding cable.	REC'D

**Cassette Decks** 

The compact cassette is still the world's most versatile and ubiquitous music storage medium. Buffs may wrinkle their noses, but they're happy to

(Trial and error is one effective technique, but many decks have manual bias adjustment and some match up to the tape automatically) Lab performance and sound quality often go hand in hand, and are frequently somewhat dependent upon factory alignment. The mechanical integrity of the mechanism is another crucial factor.

Twin decks offer the option to dub tapes and play two cassettes sequentially. Autoreverse is a useful feature, but

usually with some mechanical compromise.

Key	type of cassette deck noise reduction and other circuitry
single, twin	type of cassette deck
Dolby B, C, HX-Pro	nuise reduction and other circuitry
2 head	number of heads

#### PRODUCT £ ISSUE SPECIFICATIONS & COMMENTS

use cassette decks to make up tapes for the car. There should be no problems in connecting a cassette

deck to any normal amplifier, but some care needs to be

taken in choosing the best tapes for a specific machine.

CASSETTE DECKS			
Sherwood DS1150	80	single • Dolby B, C • 2 head	
Goodmans Delta 700W	100	123 twin • Dolby B • 2 head • 36,13,28cm • Compact and ultra-basic twin deck which is rough and bass shy, with a less than stable tape path.

Marantz SD-635	400	twin • Dolby B, C • HX Pro • 2 head • 43,9,32cm • Drawer loading	
Technics RS-TR979	400	twin • autoreverse • Dolby B, C • HX Pro • 2 head • 43,13,28cm • Both decks record, quick rev	
Onkyo K-611	430	146 Dolby B, C • HX Pro • 3 head • 28,12,32cm • Cute drawer loading mini-size component with 3-heads and dual capstan transport.	REC'D
Marantz DC-1010	450	single • Dolby B, C • HX Pro • 2 head • 42,8,31cm • Inc CD player module	
Nakamichi DR3	450	123 single • Dolby B, C • 2 head • 43,10,32cm • Refined, exquisitely detailed and solid sounding 'budget' Nakamichi 2-header.	REC'D
Teac W-6000R	450	twin • Dolby B, C • HX Pro • 2 head • 44,15,33cm • Pitch control, remote	
Marantz CP-430	500	single • Dolby B • 3 head • Portable, dbx NR, anti-roll	
Pioneer CT-S830S	500	146 single • Dolby B, C, S • HX Pro • 3 head • 42,14,38cm • High class mechanism, if lacking in battleship externals, and superb sound.	REC'D
Yamaha KX-W952	599	twin • Dolby B, C • HX Pro • 2 head • 44,16,37cm • Twin record, opt remote	
Teac V-8030S	650	single • Dolby B, C, S • HX Pro • 3 head • 43,15,35cm • Quartz locked, dual capstan	
Nakamichi DR2	700	127 single • Dolby B, C • 3 head • 43,10,32cm • Accomplished design with simple features (manual tape select!) but superb sound and serviceability.	B'BUY
Nakamichi DR1	850	117 single • Dolby B, C • 3 head • 43,10,32cm • Typically oddball Nakamichi with everything. Good azimuth adjustment and dynamic sound.	REC'D
Arcam Delta 100	899	111 single • Dolby B, C, S • 3 head • 43,12,34cm • Superb transport and a ripe, spacious sound. Dolby S is more successful than some.	REC'D
Pioneer CT-95	1,000	single • Dolby B, C, S • HX Pro • 3 head • 44,15,38cm • Copper plated chassis	
Nakamichi Dragon	2,350	Dolby B, C • 3 head • 45,14,30cm • Auto azimuth correct	

## **CD Players, Transports & DACs**

Now established as the prime audio source, the CD player continues to evolve. Manufacturers have accepted that 'Perfect Sound Forever' (an early Philips slogan) was a trifle optimistic. Now the medium

is being slowly transformed into something worthy of

All CD players offer a basic selection of facilities, and

programme in disc names and track orders. All but the

excessively inexpensive feature remote control. Most CD

some can keep you entertained for hours as you

the audiophile's enthusiasm.

players can be upgraded by adding an outboard DAC (see below). To do this the player needs a digital output of either electrical or optical persuasion; sonically the former is preferable.

A CD player can be split into two basic components: the

audio signal. This is called a digital to analogue convertor,

or DAC. Although most players are contained in a single

disc drive or transport, and a device which turns the

digital bitstream coming off the disc into an analogue

former is preferable. Transports & DACs box, expensive players are usually two-box affairs. The first thing listed for a DAC is the type of convertor chip employed. However, in much the same way that an amp's output is not indicative of its sound quality, the DAC chip is only one factor in a CD player's sound.

## **Digital Recorders**

igital recorders come is a variety of different guises, but have yet to make much of an impact on the

domestic market. At present there are four types to choose from: DAT (digital audio tape), MD (Mini Disc), and DCC (digital compact cassette) and CD-R (CD Recordable). DCC is backwards compatible inasmuch as the machines can play regular audio tapes. MD's claim to fame is its optical disc format, which offers instant track access and can't be worn out like a tape. DAT has been on the market for quite some time now, but has never really 'made it' as a consumer medium. In the last year or so it has began to carve itself a niche at the top end of the market, replacing reel to reel tape recorders as the audiophile's tape-based medium. CD-R is just coming into its own with the release of Pioneer's *PD-Ros*.

## **Stands & Supports**

i-fi furniture is more important than you might imagine; the effect it can have on the sound of

your system is far from subtle. Hi-fi furniture can be split up into two categories — equipment supports and loudspeaker stands.

It is not entirely clear what makes a great equipment support, but some are definitely more equal than others. There's a variety of approaches and materials used include particle board, hardwood, glass and all manner of steel tube and section. The majority are built for sound quality first, aesthetics second, but there are attractive examples. Speakers stands come in a variety of sizes and styles to suit different models. Use dealer or manufacturer recommendations to narrow down the choice of types, but as a general rule the you want the tweeter at ear height.

Over the years he'll take your car, your hard earned cash and years off your life. Do you really think it will be any different with your Arcam?

We can confidently predict that you will enjoy the top quality sound of your Arcam Hi-Fi separates for many years to come.

It's a simple enough prediction, when you consider just how hard we work to produce Hi-Fi of the highest quality.

Like any good parent, we ensure that our little treasures go out into the world with every advantage.

So, before we bid a tearful farewell, the Hi-Fi produced at our Cambridge factory must pass the most rigorous set of tests, checks and double checks. This means that each Arcam separate is blessed with a long, active and productive life.

Then again, sonic excellence and reliability are bound to feature on all Arcam products, since we design them in from the outset.

A very pleasing aspect of all this dedication is that year after year our products make us rather proud with lots of top Hi-Fi industry awards.

So, do keep a close eye on Junior. He also knows quality when he hears it. (Well, you can't really blame the little angel for inheriting your good taste!)

On the other hand, you could invest in a lesser Hi-Fi system than Arcam..

But why deprive yourself, never mind future generations?

Return the coupon below to: Arcam, Pembroke Ave. Waterbeach, Cambridge CB5 9PB, England. Or telephone. (01223) 440964 (24 hours)

## Headphones

here are a variety of different approaches to headphone design. Among the more

expensive models, electrostatic drivers are used in openbacked phones. The more down-to-earth models feature dynamic (moving coil) drivers in circular, open or closedback designs. The advantage of open backs seems to be a correspondingly open sound, but one can also hear external noise, of course. Closed-back designs are useful in situations where it is necessary to block out noise. There are three styles of headphone: circumaural models enclose the ear; supra-aural designs feature a flat pad which presses on the outer ear; and intra-aurals (in-ear) rest inside the ear itself, *à la* personal stereos.

Key	
open back, sealed, in-ear	headphone type
275g	weight in grams
16 Ohm	impedance

#### £ Issue Specifications & Comments

Sony MDR-25	16	open ski	
Sony MDR-W12L	16	in-ear model • 1.2m mini plug	
		sealed • 155g • 8 0hm • In-lead controls are the highlights of this shoddy, sometimes aggressive sounding design.	
	17	open back • 5m, 3.5/6.3mm plug	
	18 18	open back • 38g • 32 Ohm in-ear model • 5g • 1.2m lead, mini plug	
	18	open back • 7m, 3.5/6.3mm plug	
Sony MDR-009TV	19	open back • 5m, 3.5/6.3mm plug	
	19	sealed • Xtra bass feature	
	20	sealed • 230g • 3m lead, dual plug	
Audio Technica ATH-P1/TV Audio Technica ATH-P5	20	open back • 55g • 25 Ohm • 'Omniphones', vol control open back • 70g • 40 Ohm • 'Omniphones'	
	20	open back 7 0g + 16 Ohm • Neodymium magnet	
	20	sealed	
	20	in-ear model • 32 0hm • In-ear	
	20	in-ear model • 32 Ohm • 3.5mm plug, in-ear model	
	20 121 20	open back • 30g • 32 0hm • First step up from a true mini: a near miniature which is cheap, comfortable and inoffensive open back • 140g • 32 0hm • Volume control digital ready

Technics RP-F30	180		sealed • 340g • 32 0hm • 3m lead, XBS double drive	
Sony MDR-610k	190		infra-red cordless • 470g • Seven meter range infra-red	
AKG K340	191	75	open back • 380g • 400 0hm • Heavyweight cans in most respects, the K340 with its electrostatic tweeter is a very revealing headphone.	REC'D
Beyer IRS890	199		open back • 270g • Cordless infra-red	
Beyer DT901	199		sealed • 280g • 250 Ohm • Circum-aural	
Sennheiser HD 580 P	200		open back • 260g • 300 Ohm • Flagship model	
Sony MDR-CD1000	200	111	sealed • 330g • 45 0hm • A fine sounding and comfortable headphone that's likely to work well with most sources.	REC'D
Beyer DT911	219	111	open back • 275g • 250 Ohm • Probably too revealing for many headphone amps, these are very subtle and fine, if expensive cans.	REC'D
Stax SR Gamma	239	55	open back • 300g • One down from the Lambda, the Gamma is an excellent headphone with little to criticise bar the price.	REC'D
JVC HA-D1000	250		sealed • 340g • 32 0hm • 5m, 6.3/3.5mjacks	
Stax SR84	259		open back • 160g • Electrostatic	
Audio Technica ATH9000	273	111	open back • 240g • 32 Ohm • Electrets which connect to the amp's speaker outputs, They sound a little too smooth, but would suit aggressive amps.	
Stax SR Lambda	349		open back • 325g • Electrostatic	
Jecklin Float ELS	399	55	open back • 600g • 8 0hm • These electrostatics have an openness of sound that is rately found in the breed, with good dynamic range to boot.	REC'D
Stax Gamma Pro	399	63	open back • 300g • With SRD-X Pro, the Gamma Pro is like a stethoscope for your hi-fi, revealing subtelties that many loudspeakers fail to resolve.	REC'D
Stax Lambda Pro	449		open back • 325g • Tested with SRD-7B PSU, this is an industry reference, and is frighteningly revealing.	REC'D
Stax Lambda Sig	549		open back • 325g • With SRM-T1, the Signature must be the most transparent headphone available.	REC'D
AKG K1000	646	99	open back • 270g • 120 0hm • 0 me of the best dynamics on the market, hooks directly into speaker outputs.	REC'D
JVC HA-F25	699		in-ear model • 32 (bm • In ear	
Sennheiser IS850	860		30g e Digital audionitie infra-red	
Sennheiser HE60/HEV70	998		Sog - Digital adulphine initia-ted	
Stax Omega	1.695		open back + 400g + Electrostatic	
	9.652			
Sennheiser Orpheus	9,002		open back • 365g • Electrostatic, valve energiser	

## **Loudspeakers**

is capable only of reproducing a signal as good as it is fed. Nevertheless, the distortions (colorations and stereo effects) introduced by loudspeakers (and rooms) tend to be greater than those anywhere else in the hi-fi chain, so careful selection of models is very important.

■ The average loudspeaker consists of an enclosure (much of which may have begun life as part of a tree) plus a couple of drive units hidden behind a removable grille. Inside the box lurks a simple electrical circuit known as a crossover, which divides the incoming (full range) signal into the right bits for the drivers to handle. The designer's primary task is to balance the 'sensitivity' of the loudspeaker (how loud it goes for a given electrical input) against the bass extension (how low it goes), for the given box size. After that, such subtleties as coloration (or lack of it) and dispersion come into the equation.

Careful placement of the loudspeakers within the room is as important as the initial choice of model. For good stereo the enclosures need to be more or less the same distance from nearby walls.

■ There are two subsections within the overall heading of loudspeakers: these are satellites and subwoofers, and active subwoofers. The former is a combination of small mid/treble units and a single subwoofer which provides the bass. They are primarily designed for situations where the sight of loudspeakers would harm domestic harmony. Active subwoofers have built in power amplifiers and offer 'real' bass extension.

#### Key to loudspeakers

horn, po ted, sealed etc

A Lesson in buying Hi-Fi....No.1

Howard didn't expect his new Hi-Fi to be so loud... ... In fact, it wasn't Hi-Fi, it was just loud!

## **Common Sense Prevails**

Our Three Hi-fi Studios and dedicated Large Screen Theatre are here for you to experience the very best in sound and vision technology. Interconnects to installations, whatever your requirements our professional guidance will help you make the right choice.

Established in 1981 in the heart of the country, Sound Academy is accessible by the M6, only five minutes from junctions 10 & 11, and just 15 minutes drive from Birmingham City Centre. Sound Academy have Hi-Fi for the beginner, the enthusiast and the audiophile.

 Specialist impartial advice
 Mail Order available
 Free home surveys available
 Enquiries welcome for Interest Free Credit (APR 0%) Written details available on request

If You've an eye for Quality, You Can't Fail to See Us.

Sharing ASDA Carpark, Off High Street, Bloxwich, Nr. Walsall, West Midlands. Off M6 Junctions 10 & 11.

Open 6 Days a week, 9am -6pm, Friday late night.

CORINTHIAN COMPONENT STAND a product of Kudos Audio Ltd

MANUFACTURED TO FULL PROFESSIONAL SPECIFICATION • COMPLETE ELECTRICAL INTEGRATION, EACH SHELF POWER SOURCED • FUSE RATED FILTERATION ON MAINS INLET • SHUTTERED SOCKETS, ALL ELECTRICAL FITTINGS TO BSI STANDARD • NET WEIGHT 40 KILOS, HEAVY GAUGE SINGLE COLUMN CONSTRUCTION • TOP ADJUSTABLE SPIKED FLOOR CONTACT • DURABLE 50 MICRON STOVE BAKED FINISH • RADIO FREQUENCY SHIELDED POLYMER CONCRETE ISOLATION PLATFORMS WITH EXCELLENT LINEAR SELF DAMPING PROPERTIES TO CHANNEL VIBRATION FROM COMPONENTS THROUGH TO EARTH

The sound it creates with all this is fabulous. It's clear and beautifully detailed, so that you can separate every instrument. Voices are more revealing, but at the same time it sounds easy on the ear. A great stand.

What Hi-Fi? June 1995

KUDOS AUDIO LTD, BEECHES, MOUNT HARRY ROAD, SEVENOAKS, KENT TN13 3JL Tel: 01732 462949

📧 🧕 🖸 🔜

For those of you that think that modern life has been immeasurably improved by the advent of nuclear power, soap operas and the ending of all wars, you should replace all your records with CD's.

## **Tuners & Receivers**

he radio medium operates at a lower profile than TV, but in areas L outside pop music the BBC

service is the envy of the world. Live Prom concerts rival all other sources from a hi-fi perspective. Only the FM (VHF) bands give stereo hi-fi sound, though

AM (MW & LW) are useful for certain transmissions in the UK. Something of a hi-fi afterthought, tuners are often selected merely to match the cosmetics of a chosen amplifier. However, the task they discharge is far from simple, since it requires the skills of RF (reception) and audio (signal processing) engineering. The importance of

the former will depend on local reception conditions, but money invested in a high-quality outside aerial system is well spent.

Tuners come in two basic types. Analogue models tune gradually (and usually manually) across the bands, and can have analogue or digital displays; they are often preferred for sound quality, and are certainly best for AM bands. Digital tuners offer convenient automatic tune facilities and pre-set memories.

■ RDS (radio data system) is a feature t originally designed for in-car applications. Basically RDS tuners can identify and display the name of the radio station being received, but

they offer a variety of other features as well. Receivers are amplifiers with tuners built in. They are often equipped with surround-sound processing.

Key	
FM, M	wavebands received
A/V	surround sound capability
75W,	
30 presets	number of presets offered
MM,3L,3T	number of inputs offered (see Amplifier category)
RDS	has Radio Data System compatibility

## **Turntables & Arms**

Specialist turntables are what high fidelity sound is all about. CD players may offer silent backrounds and flat frequency responses, but they can't match the dynamics and superlative timing that serious turntable users take for granted. Turntables at the

PRODUCT

TURNTABLE

cheaper end of the market tend to be supplied with a matching tonearm, and often include a 'starter' cartridge. Still better quality is found at higher prices among the separate motor units and tonearms. Careful partnering and set-up is essential for these components, but many so-called 'sympathetic' combinations exist.

## Cartridges

artridges fall into two groups: high output MM (moving magnet) models, capable of

working directly into most phono inputs; and generally more expensive low and very low output MC (moving coil) models. MC cartridges usually have better mechanical integrity, tighter tolerances and give better performance. Many amplifiers are no longer equipped with the necessary phono input for a cartridge, and a separate phono stage is necessary. Phono input equipped valve designs need a transformer to cope with MC cartridges.

Cartridge/amplifier interfacing can be very subtle, but even basic high output MM designs benefit in overall balance from optimised amplifier capacitance loading. Cantilever compliance (how springy it is) needs to be considered in the light of the effective mass of the tonearm. High compliance (ie soft suspension) cartridges are best used with low mass tonearms and vice versa.

Product	£	lssu	e Specifications & Comments	
Linn K18/II	197	,	moving magnet • 4.5mV mV • removable stylus • 8g • Metal body	
DNM Reson Aciore	199	)	moving coil • fixed stylus	
London Decca Maroon	199	67	moving magnet • 5.0mV mV • fixed stylus • Now manufactured under the London brand name, this Decca cartridge is as iconclastic as ever.	
Denon DL304	200	)	moving coil • fixed stylus • Elliptical stylus	
Goldring Elite	200	10	3 moving coil • 0.5mV mV • fixed stylus • The basics are right, and it will cheerfully tackle any source material, but its sound has a certain dirtiness.	
Pickering XSV-5000U	200		moving magnet • removable stylus • High output	
Pickering XLZ-7500	200		moving magnet • removable stylus• Hy brid, low impedence	
Pickering TLZ-7500-S	200	1	moving magnet • removable stylus	
Ortofon MC25FL	210	13	9 moving coil • 0.5 mV • fixed stylus • 10.5g • Migh output, Fine Line stylus	
DNM Reson Reca	225	j	moving magnet • removable stylus	
London Decca Gold	239		moving magnet • 5.0mV mV • fixed stylus • Elliptical stylus	
Audio Technica AT-0C9	245	j -	moving coil • 0.38 mV • fixed stylus • 8.8g	
Audioguest MC5	250	)	moving coil • 1.4mV mV • fixed stylus • High output MC, line contact	
Grado Signature 8MZ	250	)	moving magnet • removable stylus • Moving flux	
Ortofon MC10 Supreme	250	)	moving coil • 0.5 mV • fixed stylus • 10.7g • High output MC	
Sumiko BPS	250	)	moving coil • fixed stylus • Nude stylus	
van den Hul MM-1	250		3 moving magnet • 5.5mV mV • removable stylus • If woody midrange could be tamed, imaging and security would pull it through	REC'D
London Decca Maroon Dp			moving magnet • 5.0mV mV • fixed stylus • Deccapod mounting	
Shure V15V-MR	265			
DNM Reson Etile	299		moving only and the stylus and the s	
London Decca Gold Dpd	299		moving magnet • 5.0mV mV • fixed stylus • Elliptical stylus. Deccapod	
Milltek Aurora	299		moving coli + 2.0mV mV + fixed stylus - An overall feeling of relaxed ease characterised this clear and atmospheric Kiseki-built cartridge.	REC'D
van den Hul MM-2	299		moving magnet • 5.5mV mV • removable stylus	NLO D
London Decca S Gold	339			
Notts Analogue Tracer III			moving magnet - 3.0mm mv - med stylus - minetrate and detailed, but coloured, noninear with a questionable effect of records.	
Ortofon MC20 Supreme	350		moving coil • 0.5 mV • fixed stylus • 10.7g • High-output elliptcal MC	
Dynavector 23RS	375		moving coli = 0.15 mV = fixed stylus = 5.3g = Jewel cantilever, exchange	
Grado Signature MCZ	375		moving march + removable stylus + Moving flux	
London Decca S Gold Dp			moving magnet • 5.0mV mV • fixed stylus • Deccapod mounting	
Milltek Olympia	399		moving cities 2.0mV mV = fixed stylus = As Aurora, sapphire cantilever	
Linn Klyde	449		moving coli + 2.000 mV + 6 ked stylus + 8 + 4.100 body	
Dynavector 17D2	443			REC'D
Ortofon MC30 Supreme	450		moving coil • 0.5 mV • fixed stylus • 5.5g • <i>Liear, detaned, neutral and generally mortifative - excenent.</i>	REG D
Kiseki Blue GS	490			
	550		moving coule 0.2 4mV mV • fixed stylus	
Notts Analogue Tracer IV Audioquest 404L	599		moving magnet •	
Benz-Micro The Glider	600		moving coil • 0.5mV mV • fixed stylus • Slight harshness detracted from the performance of this otherwise clear-sounding and detailed cartridge. moving coil • 1mV mV • fixed stylus • Semi-nude design	
Audio Technica AT-0C30	619		moving coll • 0.4 mV • fixed stylus • 7.8g • Nude micro linear stylus	
Grado Signature TLZ	650			
Ortofon MC2000II	650		moving magnet • removable stylus • Moving flux moving coil • 0.12 mV • fixed stylus • 9.6g	
Lyra Lydian	699			
van den Hul DDT-II	699		moving coil • removable stylus	
Benz-Micro H200	700		moving coil • 0.4mV mV • fixed stylus • Silver coils	
			moving coil • 2 MV mV • fixed stylus	
Benz-Micro M090	700		moving coil • 0.9mV mV • fixed stylus	
Benz-Micro L040	700		moving coil • 0.4mV mV • fixed stylus	DEALD
van den Hul MC-10	799		moving coil • 0.4mV mV • fixed stylus • A neutral, balanced performer gives, fine depth and focus and a firm, extended bass	REC'D
Audioquest 404iMH	899		moving coil • 1.4 mV • fixed stylus • Boron cantilever	DEATS
DNM Reson Lexe	899		4 moving coil • fixed stylus	REC'D
Kiseki PHS	899		moving coil • 0.4mV mV • fixed stylus	
Audio Technica ART-1	944		moving coil • 0.4 mV • fixed stylus • 8.8g • This is a delicate and very fluid-sounding MC that tracks well.	REC'D
Ortofon MC300011 Grado Signature XTZ	<b>95</b> ( 975		moving coil • 0.12 mV • fixed stylus • 9.5g • A real eye-opener. Nothing to criticise anywhere, one of the very best. moving magnet • removable stylus • Moving flux	REC'D

Do you want to choose your hifi in a comfortable and relaxing environment . . ?

Do you want friendly and helpful advice (and a cup of tea) . . ?

Do you want to buy your system based on what you hear (and not what somebody tells you) . . ?

Do you live in GUILDFORD . . ?

... or Addlestone, Aldershot, Ashford (Middx), Ashstead, Bagshot, Basingstoke, Bracknell, Camberley, Chertsey, Cranleigh, Dorking, Epsom, Esher, Farnborough, Farnham, Frimley, Godalming, Hartley Wintney, Haslemere, Hook, Horsham, Kingston, Liphook, Leatherhead, New Malden, Odiham, Petersfield, Reading, Reigate, Redhill, Richmond, Shepperton, Virginia Water, Walton-on-Thames, West Byfleet, Weybridge, Windsor, Woking?

**Nobody else** in these areas stocks all the following major brands: Acoustic Energy, Arcam, Audio Innovations, Audiolab, Aura, B&W, Celestion, Creek, Cyrus, Epos, DPA, Harman Kardon, Heybrook, Infinity, JPW, KEF (Reference), Linn Products (including records), Marantz, Meridian, Mission, Musical Fidelity, NAD, Nakamichi, Onix, QED (Systemline), Quad, Rega, Revox, Rogers, Rotel, Sony, Supra, Sound Org, Target, Yamaha (including Home Cinema Systems) & Top Tape.

Visit us first and you won't need to go anywhere else, we have superb demonstration rooms where you can decide in comfort, and we will deliver and install free of charge (and part exchange is possible).

**Complete service** – We are the only outlet in the area to offer the *complete* service. As well as stocking selected items from the above manufacturers we are able to service and/or repair *on the premises* all the above brands (and others also).

## YOU'LL LOVE NEXT MONTH'S

#### **LOUDSPEAKERS**

"Is it serious, Dr Messenger?" Angela asked, her eyes brimming with tears. He drew her close, enclosing her in his manly arms. "Yes, I'm afraid it is," Paul growled in his dark, dusky tones. She could feel his hot breath on her cheek, her hands pressed closely against his heaving chest. "It's 14 mid-price speakers, including new models from Heybrook, Mission and Monitor Audio, all tested in next month's issue."

#### **DAVE BERRIMAN EXPLAINS AMPLIFIERS**

As the lions tore into his side, Capt. 'Daktari' Berriman drove further into the jungle, in search of his long-lost, unrequited love, Sister Mary. She was last seen ten miles from her Mission, explaining the intricacies of hi-fi amplifiers to Pygmy tribes in the surrounding area. "Perhaps they were not ready for Class A circuitry," he pondered, thinking of the young noviciate with a kind of lustful protectiveness...

#### IN SEARCH OF THE ULTIMATE RECORDER

Melissa screamed as the roar of the jet engines grew, ripping her clothes into tatters. She clung for dear life to the man she loved — Horst. "Actually, my real name's Alvin Gold," he whispered, his strong jaw thrust powerfully into the jetstream. "And have you seen any cassette recorders lying about?"

C

All the latest, most ruggedly-handsome products reviewed in Sessions by swarthy Malcolm Steward • Win a romantic evening for two in front of a blossoming hi-fi system • Pouting, heaving breasts in Regency A-line dresses • Sweaty men in jodhpurs • Plus loads, loads more.

MORE ROMANTIC THAN A LIGHTLY-OILED JULIO IGLESIAS ON A BED OF PHEROMONES

The March issue blossoms into pouting, yet still innocent maturity on Friday 2nd, February, 1996. Dare you miss the experience?

## **Personal** Looking for a good reason to re-explore vinyl? **Paul Messenger** believes it's called Rega Planar 9.

ast month's Sessions feature carried an all-too-brief mention of one of the most interesting products to come my way in a long time. The item in question is a brand new and decidedly unusual hi-fi component: a very serious and radical turntable, from one of the best established and most successful practitioners of the art.

When CD first took off in the mid '80s, a Sony spokesperson told me in all seriousness that vinyl would be dead by the end of that decade. Happily, this has proved untrue, and I still make the majority of my purchases on vinyl.

However, while some LP software is still available, the development of vinyl replay equipment has slowed to a trickle. There are between fifty and hundred new verydifferentfrommy normalLinn/Naimhybrid turntable system — even better, in some important respects. But whether one or the other is more 'correct' is far less important than the way each expands musical horizons in its own particular way.

I was relieved that Sessions only required *Planar* 9 to be reviewed as part of a complete end-to-end system. This is an altogether easiertask than trying to define a turntable in isolation. However, curiosity gotthe better ofme, and I quickly discovered that Rega's 'normal' top moving magnet cartridge (the £74 *Elys*) was one limiting factor. A good quality moving coil type sweetened things up a lot.

However, it also brought homehow1hadbecome poorly equipped to isolate variables and do proper turntablecomparisons.

The guys from Rega came down for a fascinatingday,tryingoutvarious

combinations, mixingand matching between the two systems. I still wouldn't say I've got the P9 properly pinned down, but this did start a craving for its unique strengths which will only be satisfied by buying one.

For any reviewer or enthusiast, the archtest for any component is how much you miss it when it's gone. Trial by Deprivation is the only truly valid means of cutting through all that superficial perceptual bullshit and getting down to the heart and essence of the matter. I'mcurrently *P9*-less, and ithurts. It was a deliberate ploy. I asked them to take it away in order to discover the consequences.

In a few weeks I'll get another stab, only this time it'll be fitted with an Naim ARO arm

pillar. I'll also have the right preamp boards installed, so I don't have to worry about tonearmandcartridge factors when getting to grips with what's going on.

One high point of the *Planar* 9 day was a chance to try a pre-production sample of a new cartridge planned by Rega. It's a variation on the *Elys* theme, and still operates according to the moving magnet principle. This has the attendant advantage of high output voltage with no need for additional step-up arrangements. The essential differences between the as yet unnamed newie and *Elys* is thatthe former hashand-wound coils inside, and a classy Vital stylus on the end of the cantilever.

The resultant improvement when mounting the P9/RB300 was little short of staggering. This MM model will be quite capable of mixing it with the top MCs. The pricetag will be pretty firmly up in MC country too, probably around £250, as the extra worksends production costs soaring.

Regardless of cartridge, the *Planar* 9 does astonishing things in the midband, generatingacoherence, focus and seductive, indisputable rightness. Piano music is one of the toughest vinyl tests of all, and *P*9's ability to capture the percussive qualities as well as the tonal and decay character is breathtaking.

> Experience has made me suspicious of stunningmidbands, which often seem to be achieved by sacrificing bandwidth. Added to which, my speakers are better suited to a turntable with a richer and

more laid back character than the resolutely extended but indisputably dry *P*9. It could even turn out to be a case of two rights making a wrong. I chose the Rehdekos mainly for their extraordinary voice band focus—and *Planar* 9 does something similar at the source end.

This could prove to be the rescue of many alaid-backsystem. Forwhateverreason—probably associated with that high inertia/stiffness ceramic platter—*Planar*9 sports the up-front precision one associates with good quality CD players. Yet, it performs that trick within the effortless musicality of the vinyl medium.

It is, in short, an ideal machine to lure CD converts back into re-exploring vinyl. £1,600 isn'tcheap, but it's well below the serious highend, and very good value for the performance and engineering on offer. The solid constructiongives a fuss-free slickness of operation which can match virtually any silver discspinner. Roll back the tide!

CD playerseach year, but just a handful of interesting vinyl components. And since hi-fi magazines are determinedly review-oriented, vinylends up with the lowest of profiles. *Choice* gave its annual six-page allocation last July in anissue which also devoted 14 pages to separate CD transports and outboard DACs!

I'm not denying that important differencesexist between CD players, but substituting vinyl components is an altogether more dramatic experience, as a few hours playing with Rega's *Planar 9* clearly illustrates. *P9* sounds
