LABORATORY TESTS: TWELVE STEREO PHONO CARTRIDGES
COMPOSERS AND THE ZODIAC
*BASIC REPERTOIRE UPDATED
Fisher 500-TX is the satellite receiver.

Tune it manually.
Traditionalists can tune AM and FM stations in the normal way, with Fisher's ultrasmooth flywheel drive.

Or by push button.
Preset your four favorite FM stations on the miniature dials. After that, tune to any one instantly, at the touch of a button. The station will be locked in electrically, so there'll be no drift.

Or by AutoScan.
Touch one of these two buttons and the next FM station up or down the dial is automatically tuned in, dead center. Hold down either button and all FM stations up or down the dial come in, one by one.

Or by remote control.
With this optional accessory (the Fisher RK-30, $9.95), you can operate the AutoScan from your easy chair or bed.

It having to switch the stereo mode, stereo-channel speaker remote speaker any-
> If you connect a, you’ll be able to k, or both tracks, reo speakers with a monitor switch. Fisher 500-TX has a tremendous sensitivity. (Usable sensitivity 1.7 microvolts.) And it has a highly selective crystal filter that lets you pull in weak, distant stations located right next to stronger, local stations. In our tests the 500-TX was able to receive more clear stations than any other receiver or tuner, regardless of price.

And speaking of price, that's the best feature of all.
It costs less than other, less powerful, less versatile, less sensitive receivers. It's $449.95. (Walnut cabinet, $22.95. Prices slightly higher in the Far West.)

* 190 watts +1dB at 8 ohms. Other receivers that claim big power are nearly always rated at 4 ohms. Their power into normal 8-ohm speaker systems is actually less.
The 190-watt Fislar world's most vers

You'll be able to do more things with the new Fisher 500-TX than with any other receiver in history.

In addition to being able to choose your favorite FM station manually, or three ways automatically, the 500-TX lets you control speakers throughout your home.

You can set up, and control, a center-channel speaker in your main stereo setup. Plus, you can set up remote stereo speakers in another room and listen to just the remote speakers. Or just the main stereo system. Or all at the same time.

Plus, since the 500-TX delivers an enormous 190 watts into an 8-ohm load, you'll have enough power to feed still another pair of stereo remote speakers.

Plus, you can feed a single, remote mono speaker without the receiver out of line. Simply use the center connection to feed a remote speaker wherever in your home!

And there's a stereo tape recorder monitor either track through both your stereo system's special mode, tape or its own.

And more. The special facilities for the simple accessory that will add a reverberation effect to the sound. (Ask your Fisher dealer.

Other features of the 500-TX you should know about...

In addition to its easy access, and versatility, the...

State of the art in automatic turntables.
Be critical. Motors: 3 types—2 good—1 better

The Induction Motor...most popular, least accurate. Most automatic turntables are built around induction motors. Some are given special names (usually describing their pole structure or starting torque). When well designed and manufactured, they have high starting torque...get the platter up to full speed quickly...and are relatively free from rumble. But, the rotor of the induction motor “slips” in relation to the magnetic field and varies the motor’s speed with changes in power line voltage, turntable load and temperature. Under less than ideal conditions, as in your home, these speed changes can raise or lower not just the tempo, but the pitch of your recorded music.

The Synchronous Motor...correct speed, incorrect choice. At first glance the ideal turntable motor would seem to be the conventional synchronous type. This rotor never “slips” to affect turning accuracy because it is locked to the precise 60-cycle frequency of the power supply. Turning speed cannot vary when voltage fluctuates...when room and/or motor temperatures change...or when record loads increase. However, the conventional synchronous motor also has its drawbacks. Starting torque and running power are often too low. And, to increase the torque and power means to increase noise and rumble levels...and involves disproportionately high expense.

The Synchro-Lab Motor...perfect speed, perfect choice. A motor that combines high starting torque and synchronous speed accuracy has obviously been needed. The Garrard Laboratories designed the Synchro-Lab Motor to meet these needs, by combining the advantages of both types of motors. This new synchronous motor reaches the correct speed instantly and locks in to the 60-cycle current...no matter how the power line voltage varies...or the temperature changes...or how many records you play at one time. For the many people whose musical senses are easily distressed by variations in pitch, the Synchro-Lab Motor will be a constant assurance of listening pleasure.

There are, of course, other benefits which stem from the Synchro-Lab Motor, notably the elimination of the need for variable controls to obtain proper speed, and of heavy turntables which tend to cause rumble through accelerated wear on the important center bearing over a period of use in your home. The Synchro-Lab Motor powers five Garrards, priced from $59.50 to $129.50 for the SL 95 Automatic Transcription Turntable shown above. These units incorporate other Garrard-engineered innovations such as anti-skating compensation, cueing and pause controls; highly advanced, low-mass tonearm systems. Feature-by-feature descriptions of all models are to be found in a complimentary Comparator Guide. Let us send you one. Write Garrard, Dept. AG59, Westbury, N.Y. 11590.
LIKE a good part of the staff of this magazine (the first five names in the column at left, for example), I am what is known as a Moon-child, born under the constellation Cancer, a sign whose denizens are reputed to be home-loving, fond of good food and drink, reverent toward the past, sentimental, essentially rather conservative, and, as a result, somewhat resistant to rapid change. Well, all right . . . guilty as charged, and it comforts me that I keep good company—Proust, Rembrandt, and Franz Schubert, among others. I must say, though, that the last part of it—"resistant to rapid change"—does tend to make life in the fast-moving field of audio rather difficult. But we Cancerians also have a firm sense of duty, and it was for that reason that I undertook last month a quick tour of European equipment manufacturers and record companies to check on the progress of the latest industry phenomenon—the tape cassette. I had heard from a number of domestic sources the rather alarming (to me) prediction that the cassette would be the primary format for new releases of recorded material within ten years (how’s that for "rapid change"?), and this round of polite industrial spying was intended to unearth any corroborating evidence from abroad—where, of course, the concept got its start.

First stop was Hildesheim, Germany, where I was the guest of Blaupunkt, known in this country principally for its car radios, but also manufacturers of TV receivers, home and portable radios, and stereo playback equipment. And last, a number of hurried interviews and innocent questions later, was Swindon, England, home of Garrard turntables. The whole trip made a neater package than I had originally thought it would—what, for example, have a German manufacturer of car radios and an English producer of record turntables to do with one another?

The answer is the cassette. Blaupunkt had recently brought out, just in time for the 1969 Hanover Industrial Fair, its first car-cassette unit (mono record, stereo playback). And Garrard, when tweaked with the suggestion that they may soon have reason to make common cause with buggy-whip manufacturers, replied by showing me their new cassette-player facility, one which at that moment was busily turning out the mechanical and pre-amplifier sections for—you guessed it—Blaupunkt’s new car unit. Garrard already has several contracts for its cassette equipment in this country, and further has on the drawing boards a number of improvements, for both mechanical and electronic efficiency, that appear at the moment to be just this side of science fiction.

Though Philips, who started it all, has recently had to double the production capacity of all its European prerecorded cassette factories (in Holland, France, England, Spain, and Germany), I gathered from the many record-industry people I talked with that there is still a good deal of cautious pessimism coupled with a measure of wait-and-see. This is understandable on two counts: all these companies have enormous investments in disc-pressing facilities, and, since recorded material comes into being in tape form originally anyway, a switch-over to cassette production is, though complicated and expensive, less a tooling-up problem than that faced by equipment manufacturers. Or perhaps it’s just that they have their own Cancerians to deal with.

By WILLIAM ANDERSON

THE CASSETTE—GETTING READY
Now—Discount Store Prices on any Record...any Label...any Artist!

No Obligation to buy any Records—Ever.... Just the opportunity to SAVE UP to 55%!

More than 35,000 records to choose from!

THE Longines Symphonette’s new service, THE CITADEL RECORD CLUB gives you any record, any artist, any label at savings up to 55% off manufacturer’s suggested price. No obligation to buy any records • Free Record Bonus Certificates • Jet Speed Service • See details below for your special $1.00 Trial Membership!

The new Citadel Record Club acts like a “record buyers’ cooperative”... giving you FREE choice of any record available today at discounts up to 55%, with 35% guaranteed! There are no compulsory purchases... and, any member of your family may share your privileges as a Lifetime Member! Read on to learn why the Citadel Record Club is the fairest of them all!

1. ANY RECORD, ANY ARTIST, ANY LABEL, ANY KIND OF MUSIC YOU PREFER.... you name it, and if it’s in print, you have it at a guaranteed 35% off manufacturer’s list price (often as high as 55%). This even includes imported labels and hard-to-find specialties.

2. YOU ARE NOT REQUIRED TO BUY ANY RECORDS AT ALL! Buy as many or as few records as you need—records of your choice!

3. MAKE YOUR SELECTIONS FROM THE SCHWANN CATALOG... 300 pages, more than 35,000 records listed. Same book used by the biggest stores. You also get 2 FREE Bonus Catalogs listing special bargains and current top sellers.

4. IRON CLAD GUARANTEE! FACTORY-FRESH RECORDS! Any record that is imperfect replaced without additional cost to you.

5. 24 HOUR SERVICE... FASTEST ANYWHERE! Your orders mailed promptly... mostly within 24 hours of receipt of order.

6. DID YOU EVER WANT TO VOTE FOR YOUR FAVORITE ARTIST... HELP GET AN AWARD FOR A BELOVED RECORDING? The Citadel Record Club, in cooperation with The Longines Symphonette Society, has been selected to help nominate and select the recordings and artist to receive the GOLD MEDAL AWARDS of merit. This is the only group of awards granted as the direct result of record-buying consumers’ own preference. To make certain that you are completely familiar with the nominations, you will be sent the particular record to play and to evaluate without obligation to buy. And, since once a record is played Citadel will not resell it, you can own the record (if you wish) for a tiny fraction of the list price! Now your voice can be heard—your wants recognized—your favorite recording artists rewarded!

SEND NO MONEY NOW... JUST TRY US! Remember: any member of your family can order from Citadel for three full months if you just take the time to mail us the coupon below! We will bill you later for just $1.00 for your 3-Month Trial Membership in the greatest record club ever! As a Citadel Member, all the above benefits, and a lifetime of musical satisfaction is yours!

LETTERS TO THE EDITOR

Shocker

• Your May cover is a shocking and unforgivable offense to decency and good taste. Any violinist with so wild a bow arm and so incredible a left-hand wrist position ought not to be permitted on the front of a serious musical journal—think of all the young violinists reading your magazine whose minds might be corrupted by such a display. But I was highly pleased by William Anderson's editorial, in which, as usual, style, intelligence, and savvy gratifyingly prevailed.

HARRY WEISS MCCRAW
Hattiesburg, Miss.

Harmonica's Hard Times

• I was most pleased and enlightened to read Fritz Kuttner's article "The Long Life and Hard Times of the Harmonica" (May). The harmonica has been a large part of my life since I made my first public appearance on radio at the age of three, winning a contest for harmonica amateurs. Unfortunately, public rejection of this instrument has forced me to base my livelihood as a music teacher and entertainer on other instruments. Occasionally, at the club where I work, I will play a few light classics on the harmonica, but always with the result Mr. Kuttner mentions—the general attitude seems to be, "Why waste time and effort on a toy?" This attitude, I believe, stems largely from the way the public is exposed to the harmonica. Sales displays usually set it alongside such items as the kazoo and the kazoo-harp, and the harmonica has also become associated with comedy and slapstick humor.

But the battle for acceptance is slowly being won. Here in Canada, a few years ago, the Toronto Conservatory of Music finally accepted the accordion as an instrument worthy of serious music. It won't be long now.

PAUL PALACE
Winnipeg, Can.

FM Transmission

• Of what value are the magnificent FM tuners and receivers available to the public, with their high sensitivity, low signal-to-noise ratio, low distortion values, and other fine specifications when so many FM stations transmit their music in such a haphazard fashion? To have it playing over superb equipment only accentuates the defects of the transmission.

SARAH MINEEY
Baltimore, Md.

Cage

• In the article on John Cage in the May issue, Richard Kostelanetz says, "pursuing the logic of his previous intellectual development, Cage took the aesthetic leap that made his music even more indeterminate in both conception and execution, so that each performance of a piece would be hugely different from all the others." This follows a mention of a fixed, "permanent form" work of 1952. The next mention is of a "free, free, free" piece of 1957.

Mr. Cage himself states, in his own chronology of his works and methods, that his first "indeterminate" works were done in 1958. Given that it might have been 1957, as Mr. Kostelanetz says, there is an interesting historical-musicalological leap somewhere between 1952 and 1957.

Could this leap be connected with the fact that in 1952 Earle Brown wrote seven works, the most pertinent to the point being December 1952 and a prototype sketch of 23 Pages entitled 1953? Both of these, as far as I and others can determine, are the first examples of "indeterminate" and "open form" music, by Cage's own definition of the word in his book Silence (composition which is indeterminate with respect to its performance), allowing improvisation and free realization on the basis of the graphic implications with any sound materials. Would not these seem to be the works which took the aesthetic leap? As Heinz Klaus Nefenger has said, "There is no reason to remind the public of Brown's early experimental pioneer achievements since their glory has been dimmed by Cage's experiments which followed right afterward."

Mr. Kostelanetz replies: "Miss Minee's quotation of Cage's authority notwithstanding (as no source is given), '23°' (1953) is a (Continued on page 8)
unique: revolutionary
Sound Effect Amplifier.

In introducing the striking all solid state 60 watt 5001 and 140 watt 5003 AM/FM Multiplex Stereo Tuner Amplifiers, JVC brings the stereo fan a new dimension in stereo enjoyment—the complete control of sound effects.

This exciting innovation is made possible through the incorporation of a built-in Sound Effect Amplifier (S.E.A.), a versatile component that divides the audio range into five different frequencies. It enables the 5001 and 5003 to be tailored to the acoustical characteristics of any room, or to match the sound characteristics of any cartridge or speaker system, functions that were once reserved for expensive studio equipment. But even without the S.E.A. system, the 5001 and 5003 would be outstanding values. They offer improved standards in FM sensitivity and selectivity by utilizing the latest FET circuitry with four IF limiters in the frontend of the 5001 and five in the 5003. They both deliver a wide 20 to 20,000Hz power bandwidth while holding distortion down to less than 1%. They feature completely automatic stereo switching with a separation figure of better than 35dB. They allow two speaker systems to be used either independently or simultaneously. Indicative of their unchallenged performance is their refined styling. All controls are arranged for convenient operation. The attractive black window remains black when the power is off, but reveals both dial scales and tuning meter when the power is on. For the creative stereo fan, the JVC 5001 and 5003 are unquestionably the finest medium and high powered receivers available today.

How the SEA System Works

Glance at the two charts appearing on this page. In looking at the ordinary amplifier frequency characteristics where only bass and treble tone controls are provided, you can see how response in all frequency ranges at the low and high levels is clipped off. Compare this chart with the one showing the SEA frequency response characteristics, and the difference is obvious. No clipping occurs in the SEA system. It offers full control of sound in 60, 250, 1,000, 5,000 and 15,000Hz frequency ranges from -10 to +10dB. For the first time ever, you have the power to determine the kind of sound you want to hear.

Manufactured by Victor Company of Japan, Ltd.

CIRCLE NO. 32 ON READER SERVICE CARD
thoroughly indeterminate work; so is Music for Piano, 4-19 (1953), among other pre-1958 pieces. There is indeed a case to be made for the work of Earle Brown, but Miss Meneely could do more for her cause by concentrating on him, rather than sniping at Mr. Cage and his adherents.

- In Richard Kostelanetz's article on John Cage, he says that Time Records' recording of Cage's _Aria_ and _Fontana Mix_ (S 8003) has been deleted from our catalog. Please be advised that this recording, and several others which contain the works of John Cage in our Contemporary Sound Series, are still available.

**CHET WOODS**

New York, N.Y.

**To Amplify or Not to Amplify?**

- In your April issue, in the article "Electro-Acoustics in the Concert Hall," you printed excerpts from two _New York Times_ pieces, by Henry Pleasants and Harold Schonberg, on whether or not to amplify singing voices. Over the years I have become an enthusiastic partisan of the great majority of Henry Pleasants' ideas on music, especially the controversial ones. This question of amplification is, to the best of my recollection, the one time I have ever seriously disagreed with him.

Do you recall Nino Martini in the movies? He sounded like a serious competitor of Gigli. As it turned out, he had a good top, but was just a charming tenor whose voice, through amplification, took on enormously impressive dimensions. The same was true of a chap who sang in a film with Grace Moore—Michael Barlett. They did the _Bolero_ duet, as I recall, and he sounded like a cross between Caruso and Fleta. Of course he was nothing of the kind. It isn't merely the volume of the voice which is affected by amplification. Certain voices, if they are cleanly produced and forward, are helped by the building up electronically of the natural timbre. In other words, it's not just the size of the voice that is affected.

A truly fine singer never sings at the top of his voice. There is always something to spare. It is a matter of technique. But in high and/or dramatic passages there is always an inevitable tension—not to be confused with forcing—and no amount of amplification can obviate the need to really give at such moments. If one gives less voice in the belief that the difference can be made up by the mike, then there is an inevitable drop in artistic intensity, in "thrill." As far as phrasing is concerned, a fine artist always pays attention to this critical aspect of the vocal art. I question whether a singer with a small voice will phrase any better when he is helped by amplification if he is not artistically motivated to do so.

Being able to give less voice can, in certain cases, help good articulation of the words. But then, many great singers got their words out in spite of pouring out big sound—Caruso, Flagstad, Tibbett, Thomas, Pears, Gedda, Farrell. And often what do you do during a stage performance when you have several singers with voices of different sizes? Must you cast either all large unamplified voices or all small beefed-up voices?

"and new speaker systems, new power amplifiers, and multi-channel dividers"
No, here I subscribe to all that Harold Schoenberg says. Except the business about Barbara Streisand. It is through the drive and intensity of her singing that you can judge whether your voice carries well—and it does. An electronically beefed-up Dinah Shore or Doris Day can become as loud as Streisand, but the basic compass is missing.

GEORGE LONDON
Artistic Administrator
J. F. Kennedy Center
for the Performing Arts
Washington, D. C.

Mr. Pleasants replies: "I'm happy to assure my old friend George London that we don't disagree at all. We are talking about different things. He is talking about opera singing, and I am talking about what you order. In my letter to the New York Times, I was talking about popular singers, prompted by Harold Schoenberg's suggestion that what makes Barbara Streisand a star is the fact that she is a girl with healthy pipes and a microphone, which makes her a Barbara Streisand. It may well be that it is the miche that makes a Barbara Streisand possible—or a Crosby, a Sinatra, an Andy Williams, or a Billie Holiday. But it doesn't make a Barbara Streisand. That's all God, Watson's and artistic sensibility, a communicative instinct, and a lot of hard work. Come to think of it, was Barbara amplified when she was singing in I Can Get It for You Wholesale?"

"But there is an element that Mr. London, I think, overlooks. The fact of the microphone, and its potentiality both as auxiliary and critic, has prompted singers (excepting opera singers) to sing differently, certainly to produce their voices differently. It's a lighter production and, in the good over, more forward, which probably accounts for their superior enunciation and may well serve good plugging. And being loud to the microphone, they use it better than opera singers do, exploiting it rather than offering their voices for exploitation. Frank Sinatra, in an article "The Secrets of My Success" for Life magazine, wrote: "Many singers never understood, and when one does, it is their instrument..." Instead of playing a microphone, they're playing a microphone!"

"My own guess, if I may revert to my normal controversial self, is that the operatic style of vocal production will die with opera. But even granting amplification, as we want it in moving pictures, TV, and records, does Mr. London really remember Nino Martini sounding like a competition to Gigli, or Michael Bartlett suggesting a cross between Caruso and Elsta? I don't!"

---

**English Music and American Conductors**

I was delighted that William Finkman found Leonard Bernstein's recording of the Vaughan Williams Fourth Symphony an "electrifying" performance (February). It comes very near to achieving the hectic, exhilarating vitality of the composer's own "rpm version," which dates from 1937, and gives the lie to the unfortunate belief, held only too widely in England, that foreign conductors cannot do justice to English music. Mr. Bernstein's compatriot Andre Previn has been doing sterling work (with the London Symphony Orchestra) on the Vaughan Williams symphonies, and it will be interesting to compare his version of the Fourth, which he recorded recently in London, with Mr. Bernstein's.

I can only hope that these issues will be successful enough for the American companies to consider recording some more English works. Above all, there still remains unrecorded the stupendous "Gothic" Symphony of Havergal Brian, whose catalog includes five symphonies, a major orchestral work (with the London Symphony Orchestra) on the Vaughan Williams symphonies, and it will be interesting to compare his version of the Fourth, which he recorded recently in London, with Mr. Bernstein's.

Mr. Bernstein, I can only hope that these issues will be successful enough for the American companies to consider recording some more English works. Above all, there still remains unre-corded the stupendous "Gothic" Symphony of Havergal Brian, whose catalog includes five symphonies, a major orchestral work (with the London Symphony Orchestra) on the Vaughan Williams symphonies, and it will be interesting to compare his version of the Fourth, which he recorded recently in London, with Mr. Bernstein's.

**Record Clubs**

William Anderson's editorial in the April issue must have been read with interest by many. Hardly a month goes by, it seems, without a letter to the editor complaining about high prices for discs of poor quality. And yet Mr. Anderson's remarks hit directly at a second of our—the recording-buying public's —problems: where can we get what we want when we want it? His praise of King Carol is certainly justified, but even they cannot put a friendly local within reach of every potential record buyer. The only solution, (Continued on page 16)
There's a lot more enjoyment coming your way from the brand new Pioneer OUTPERFORMERS. We are introducing an exciting array of all new products: compacts, fasscecks, stereo receivers, tuners, amplifiers, speaker systems, turntables and headphones that will delight even the most discriminating listener.

Illustrated here is the brand new SX-440 Stereo Receiver. Pleasing in every detail, a smartly styled, striking black front panel with 3-dimension subdued illumination graces the esthetic handcrafted cabinet. Its FET front-end provides excellent selectivity and delivers clear, interference-free reception. Frequency response is 20 - 70 kHz, inputs; magnetic phone, tape monitor and auxiliary. Outstanding sensitivity, Music power is a solid 40 watts (L-H) with stereo channel separation at better than 60 db (phone).

Priced at only $189.95, the Pioneer SX-440 is an ideal component for the budget minded or the audiophile. You'll discover qualities of sound you never knew existed with the full line of OUTPERFORMERS which only Pioneer can bring you.

See and hear the PIONEER OUTPERFORMERS at your franchise Pioneer dealer. Write for details.

...though fault it has, is for us to buy our records by mail, which, as Mr. Anderson pointed out, is becoming more prevalent.

May I suggest that Stereo Review plan an article discussing the relative merits of the various mail order record dealers, such as the All-label clubs (Unicorn, Record Club of America, etc.), the big-name clubs (RCA, Columbia), and the non-label dealers such as King Karol? Many of us would appreciate such an article, since it could inform us where we could get the most reliable and economical service.

Gary L. Root

We have tried to "plan" such an article many times, but have been repeatedly foiled by the impossibility of making a selection that really will satisfy everyone. If we were, for example, to set up a dummy name and address, join every club, and order a mess of records, of what would the experience then have to offer us? We might be very lucky and receive too few or too many. Group buying is also a factor, and together with the other important variables makes even assessment difficult, let alone prediction.

Group Listening

William Anderson's editorial on group listening in the February issue was particularly interesting to me, because I have been playing records for small groups in my home for twenty years. My recipe is simple: choose people who are genuinely interested in classical music and turn the lights off. I have had as many as twelve guests in my living room, though usually we are eight. I play not more than four compositions, with a chat about the music, or the arts in general, between numbers. And when the music is on, my guests are as quiet as mice, obviously absorbed. I hold a musical evening once a month during the winter, and it is only the lack of comfortable seating space that prevents me from inviting all those who at one time or another have been my guests and who, I am sure, would be glad to come more often. A typical program: Beethoven's Quartet, Op. 132; Kaddish, Sonata for Cello and Piano, Op. 4; and Dutilh's Symphony No. 2. I'd be delighted to have Mr. Anderson join us.

W. B. Holiday
Kamloops, B. C., Canada

Sorry, Wrong Number!

David Hall's endorsement of the Karajan recording of Bruckner's Ninth Symphony (February) led me to send away immediately for this recording. The record I received, however, was a fine rendition of Schubert's Eighth and the overtures Leonore III and Coriolan by Beethoven. This was Deutsche Grammophon SLM 130601, the number David Hall used to identify the Bruckner Ninth.

Robert P. Hogan
New Bedford, Pa.

We apologize for the error, and are pleased that Mr. Hogan liked what he got.

Flanagan Fancier

I want to thank William Flanagan for his many fine and helpful record reviews, which often lead to my best buys. I have just gotten the Desto recording of his songs and cycles, as well as the same label's Rotem release, which Flanagan reviewed (March), and both are delightful.

Duncan Fraser
Johnstown, N. Y.

Reissues

In regard to the World Series recording of the Kodaly First String Quartet performed by the Roth Quartet, I believe this recording was first announced in 1954 as Mercury 101-46. It is unfortunate that Mercury is not more scrupulous about identifying the provenance of its World Series releases. Reissuing at these prices is a fine idea, but other companies are more straightforward about what they are offering.

Rev. Jerome F. Weber
Syracuse, N. Y.

According to a Mercury Record representative, Mr. Weber is absolutely right about the Kodaly recording—it is a version, and is electronic stereo. Although it is Mercury's policy, as it is that of most record companies, to comply with the FTC ruling that electronically reproessed discs be clearly labeled as such—site the recent releases on the World Series label of Mozart's Zaide, Glinka's Orphee and other—Brelsys recording managed to get past all the checkpoints without being identified as a stereo "import."

Chagrin

I do not wish to be impolite, but nevertheless I definitely want to voice a complaint. On George Jellinek's recommendation, I purchased the London recording of Don Giovanni and found to my chagrin that a libretto was not enclosed with the record.

Gentlemen, I trusted Mr. Jellinek's judgment, and that of the editors of Stereo Review. If it is not possible to trust the quality of your personnel, please do not continue to publish.

Winfred K. Ostmann
Providence, R. I.

We're impressed with the strength of Mr. Ostmann's criticism—other readers ask with that when we accept subscriptions. But we are certain that the error in a libretto was the result of a lapse in London's quality control, and that the company will gladly send Mr. Ostmann a copy if he writes to them and asks for one.

STEREO REVIEW
"The tracking was excellent and distinctly better in this respect than any other cartridge we have tested....The frequency response of the Stanton 681EE was the flattest of the cartridges tested, within ±1 dB over most of the audio range."

From the laboratory tests of eleven cartridges, conducted by Julian D. Hirsch and Gladden B. Houck, as reported in HiFi/Stereo Review, July, 1968.

To anyone not familiar with the Stanton 681, this might seem to be an extraordinary statement. But to anyone else, such as professional engineers, these results simply confirm what they already know.

Your own 681 will perform exactly the same as the one tested by Hirsch-Houck. That is a guarantee. Every 681 is tested and measured against the laboratory standard for frequency response, channel separation, output, etc. The results are written by hand on the specifications enclosed with every 681.

You don't have to be a professional to hear the difference a Stanton 681 will make in your system, especially with the "Longhair" brush that provides the clean grooves so essential for flawless tracking and clear reproduction.

The 681EE, with elliptical stylus, is $60.00. The 681T, at $75.00, includes both an elliptical stylus (for your records) and an interchangeable conical stylus (for anyone else's records). For free literature, write to Stanton Magnetics, Inc., Plainview, L.I., N.Y.
NEW PRODUCTS
A ROUNDUP OF THE LATEST HIGH-FIDELITY EQUIPMENT

**Electro-Voice** has introduced two new "Musicaster" portable speaker systems. Both units, the Model IA (shown) and the Model IIA use glass-filled polyester enclosures housing a 12-inch wide-range speaker. The speaker is silicone treated and a 3/4-inch "Acoustifoam" barrier between the speaker and the grille provides additional weather proofing. Both units have an 8-ohm impedance and a power-handling capacity of 30 watts. Frequency response of the IA is 80 to 10,000 Hz, and the IIA has a response of 80 to 16,000 Hz. Weight is about 30 pounds. Prices: Model IA, $69.90; Model IIA, $88.50. Circle 145 on reader service card

**Kenwood** has introduced the Model KR-100 AM/stereo FM receiver, rated at 110 watts total music power (IHF) into 8 ohms. The continuous-power output, both channels driven, is 60 watts into 8 ohms. Other amplifier-section specifications include less than 0.5 per cent harmonic distortion and less than 0.5 per cent intermodulation distortion at rated power output. Power bandwidth (IHF) is 18 to 30,000 Hz. Signal-to-noise ratios are -60 dB at the magnetic-phono inputs, and -70 dB at the auxiliary inputs; FM sensitivity is 1.8 microvolts (IHF). The capture ratio is 2.5 dB, FM signal-to-noise ratio is 60 dB, FM harmonic distortion is less than 0.5 per cent, and stereo separation is 35 dB.

The controls include five pushbuttons for high- and low-frequency filters, interstation-noise muting, tape monitor, and loudness compensation. There is a six-position input-selector switch, a five-position mode selector, volume, balance, a combined power/speaker-selector switch, and separate bass and treble controls for each channel. There are front-panel jacks for a pair of stereo headphones and for connecting a second tape recorder. There are separate preamplifier-output and power-amplifier input jacks on the rear panel. Overall dimensions of the receiver are 16 1/2 x 12 1/4 x 5 1/2 inches. Price, including a walnut-grained metal cabinet: $299.95. Circle 146 on reader service card

**Elpa Marketing** has added the Model PE-2018 to its imported line of Perpetuum-Ehner automatic turntables. The three-speed unit (33 1/3, 45, and 78 rpm) has a single lever to control both the turntable operation and tone-arm cueing. Specifications include flutter and wow of 0.01 per cent and rumble of less than -13 dB (both by the DIN standard). A pitch control permits varying the speed by ±3 per cent. Anti-skating compensation is set automatically when the tracking force is established. Tone arm set-down is determined automatically, and the arm will not lower onto the turntable unless a record is in place. The cartridge shell has a manual adjustment for vertical-tracking angle to compensate for the number of records on the turntable. Price: $99.50. An optional wood base (shown) is $7. A dust cover is also available for $7, and an automatic 45-rpm spindle is $1.95. Circle 147 on reader service card

**Craig** is offering a free illustrated folder covering its line of audio products. Included are portable and component reel-to-reel tape recorders, mono and stereo cassette recorders, home and automobile tape cartridge players, and tape recording accessories. Pictures, descriptions, and prices of all the items are included. Circle 148 on reader service card

**Pioneer** has announced the CS-41 two-way speaker system. The drivers are an 8-inch air-suspension woofer and a 2 1/2-inch cone tweeter; the crossover frequency is 2,500 Hz. Overall frequency response of the system is 35 to 20,000 Hz. Maximum power-handling capacity is 25 watts; amplifiers rated at 10 watts per channel can be used. The oiled-walnut enclosure measures 19 x 11 x 9 1/2 inches and has a wood-lattice grille over a dark brown grille cloth. Price: $67.50. Circle 149 on reader service card

**Epicure Products** has brought out its first product, the EP Model 100 bookshelf speaker system. The drivers are an 8-inch acoustic-suspension woofer crossing over at 1,800 Hz to a 1-inch tweeter. Overall frequency response of the system is 40 to 18,000 Hz ±3 dB. Minimum recommended amplifier power is 18 watts; maximum power-handling capacity is 60 watts. Dimensions of the oiled walnut enclosure are 9 x 11 x 21 inches. Each speaker comes with a graph of its frequency response and a ten-year warranty. Price: $149. Circle 150 on reader service card

**RCA** has augmented its "Starmaker" line of dynamic microphones with six new models, three with cardioid pick-up responses and three omnidirectional. All six microphones come with cables and holders, and are packed in attaché-type carrying cases. Five of them are of dual-impedance design, which permits switching from high (15,000 ohms) to low (200 ohms) impedance by rotating the five-pin connector. The exception is the HK-105, which has a fixed impedance of 200 ohms. The HK-105 has a frequency response of 70 to 12,000 Hz. It is made of die-cast metal, weighs 5 ounces including the 10-foot cable, and measures 4 inches in diameter by 7 1/4 inches long. Prices: $8 each; six for $45. Circle 151 on reader service card

Circle 150 on reader service card
The new Sony savings plan: $119.50

A Really Spectacular Buy. The new solid-state stereophonic Sony model 252-D is loaded with exciting quality features including sound-with-sound! Handsomely mounted in a low profile walnut wood cabinet. Here is the most tape deck recorder for the money. And it's a Sony!

Scrape Flutter Filter. Special precision idler mechanism located between erase and record/playback heads eliminates tape modulation distortion. This feature formerly found only on professional studio equipment.

Sound-with-Sound. A versatile feature that enables you to record on one channel while listening to the other. Ideal for learning or teaching foreign languages as well as perfecting diction, singing and instrumental music.

Vibration-Free Motor. An important new Sony development utilizing "floating" shock absorber action to isolate completely any motor vibration from the tape mechanism.

Non-Magnetizing Record Head. Head magnetization build-up—the most common cause of tape hiss—has been eliminated by an exclusive Sony circuit which prevents any transient surge of bias current to the record head.

Instant Tape Threading. Exclusive Sony Retractomatic pinch roller permits simple one-hand tape threading. An automatic tape lifter protects heads from wear during fast forward and rewind.

Scny Mode 252-D. Just $119.50! For your free copy of our latest tape recorder catalog, please write to Mr. Phillips, Sony/Superscope, Inc., 8146 Vineland Avenue, Sun Valley, California 91352.

SONY  SUPERSCOPE  The Name in Quality

You never heard it so good.
approximately 41/2 inches long by 1 inch in diameter. List price: $20. The other two omnidirectional loudspeakers, the HK-111 and HK-112, each cost $78. The HK-111 has a frequency response of 50 to 20,000 Hz. It comes with a removable windscreen and 20 feet of cable. Its dimensions are 101/2 inches by 11/2 inches. List price: $78. The HK-112 has a frequency response of 100 to 15,000 Hz. It comes with a metal desk stand and 20 feet of cable. Its dimensions are 5 inches by 11/2 inches. List price: $50.

The three cardioid units are the models HK-103, 106, and 110. The HK-103 (left) has a frequency response of 100 to 15,000 Hz and is meant for vocal and orchestral recording. It is 7 inches long by 1 inch in diameter. List price: $93. The HK-106 (right) has a low-frequency roll-off and is intended for voice applications outdoors or in other locations with high ambient noise. Its frequency response is 150 to 10,000 Hz. List price: $64. The HK-110 has a built-in windscreen and on/off switch and is suitable for close-talking applications. It has a frequency response of 100 to 12,000 Hz. List price: $78.

**NEW PRODUCTS**

**A ROUNDUP OF THE LATEST HIGH-FIDELITY EQUIPMENT**

- **Telex** is offering free a new eight-page brochure covering its line of communications and dictation headphones, pillow loudspeakers, and accessories. The brochure contains photographs, specifications, prices, and information on applications for all of the products included. It is available by requesting catalog BI-2166 from the Telex Communications Division, 9600 Aldrich Avenue South, Minneapolis, Minn. 55420.

- **Fisher's newest stereo amplifier, the Model TX-50, has a continuous-power output of 20 watts per channel at 1,000 Hz into an 8-ohm load. Other specifications include harmonic distortion of 0.5 per cent at 1,000 Hz, intermodulation distortion of 1 per cent, and a power bandwidth (IHF) of 25 to 25,000 Hz into 8 ohms. Hum and noise figures are -55 dB at the magnetic phono inputs, and -65 dB at the high-level auxiliary inputs. The controls include power on/off, volume, mono or stereo mode, balance, bass, treble, and a three-position input-selector switch. Four rocker switches control main and remote speakers on/off, high-frequency filter, and loudness compensation. There is a pilot light and a front-panel headphone jack. The amplifier's dimensions are 151/2 x 9 x 41/2 inches. Price: $199.95. An optional walnut enclosure (shown) is available for an additional $22.95.

**Circle 153 on reader service card**

- **Garrard** has introduced the X-10 "Module," a three-speed (33 1/3, 45, and 78 rpm) automatic turntable that is premounted on a base with dust cover and comes with a factory-installed stereo cartridge. The turntable has interchangeable automatic- and manual-play spindles. Storage space for the unused spindle is built into the base. One lever sets both the turntable speed and indexes the arm set-down. A cueing lever is provided. The cartridge is a ceramic type with a turnover diamond stylus. The relatively high output of the cartridge makes the unit suitable for use as a replacement turntable in consoles or with inexpensive amplifiers that do not have magnetic-cartridge inputs. The dust cover is designed so that it can either be lifted off, tilted back and locked into place, or slid off if the unit is placed under a shelf limiting overhead space.

Price: $32.50.

**Circle 154 on reader service card**

- **Harman-Kardon** has introduced the Nocturne Three Thirty AM/stereo FM receiver rated at 70 watts (both channels combined) music power into 4 ohms. Total music power into 8 ohms is 65 watts. Both intermodulation and harmonic distortion are less than 0.8 per cent at rated output. The signal-to-noise ratios are 80 dB at the high-level inputs, and 60 dB at the low-level inputs. The FM-tuner section has a sensitivity of 2.7 microvolts (IHF) and a capture ratio of 3 dB. Spurious-response rejection is 75 dB and stereo separation is 30 dB. The controls include volume, balance, bass, treble, and a five-position input selector. An indicator light shows which input the receiver is set to. Six rocker switches control power on/off, main and remote speaker systems, mono or stereo mode, tape monitor, and loudness compensation. There is a front-panel headphone jack and a signal-strength tuning meter. The receiver measures 13 x 131/2 x 41/2 inches. Price: $199.95. An optional walnut enclosure (shown) is $24.95.

**Circle 155 on reader service card**

- **Revox** is importing the Bib tape-head maintenance kit. Included in the kit are a bottle of special tape-recorder cleaning fluid, two plastic tape-head cleaning swabs, two tape-head polishers, ten cotton swabs, a double-ended brush, and a packet of cleaning tissues. The various items, along with an instruction leaflet, are packed in a foldable plastic "wallet." Price: $2.95.

**Circle 156 on reader service card**
Most receivers that cost about $200 are severely compromised. If they have reasonable power, they lack features. If they have features, their power is usually marginal. And most $200 receivers are less than elegant looking. The kindest thing you can say about them is that they are adequate. For $200, we don’t think adequate is good enough. So we’ve introduced our Nocturne Three Thirty.

It's beautiful. It has big power. (90 watts, 1 HF, -1 dB.) Ultra-wide-band sound. A truly sophisticated AM/FM tuner. And every important feature you could possibly want in a receiver. Like function indicator lights. Defeatable contour. Headphone receptacle Tape monitor switch. And front panel switching for stereo in two rooms, separately or at once. (The Three Thirty has enough reserve power to drive 4 speaker systems without stress or distortion.)

The Three Thirty is at your Harman-Kardon dealer now. See and hear it soon. We think you'll agree that it delivers a degree of excellence never before available at such a modest price. For complete technical information write: Harman-Kardon, Inc., Dept. SR7, 55 Ames Court, Plainview, N.Y. 11803.
This is the world's finest cartridge. Ask anyone.

AUDIO QUESTIONS & ANSWERS

Magnetic-Phono Sensitivity

Q. The magnetic-phonograph input sensitivity on my amplifier is rated at 1.4 millivolts. My phono cartridge, according to its manufacturer, has an output of 3.4 millivolts. What, if any, bad effects could result from this mismatch?

A. What the sensitivity rating of your amplifier means is that a signal of 1.4 millivolts in each channel will drive the amplifier to its full rated power output if the amplifier's volume control is fully turned up. Since no one runs an amplifier wide open in that way, a cartridge that puts out 1.4 millivolts would probably not have enough output to achieve a good signal-to-noise ratio with your amplifier.

You should be aware that although the input sensitivity rating of amplifiers is pretty well standardized, all manufacturers are not using the same output-rating method for cartridges. But in any case, a phonograph cartridge output of 3.4 millivolts sounds about right for your amplifier's sensitivity.

In general, the more expensive the amplifier, the higher its input sensitivity; and the more expensive the cartridge, the lower its output voltage. In respect to the cartridge, this comes about because in order to reduce the moving mass and thereby increase the cartridge's performance capability, the manufacturer has had to physically minimize the voltage-generating elements in the cartridge. However, since a high-quality cartridge is usually used with a high-quality amplifier, the signal levels end up well matched.

There's one possible difficulty. Some amplifiers that have high enough sensitivity to operate well with low-output cartridges are not able to take the output of a medium- or high-output cartridge without going into overload clipping on loud high-frequency (high-velocity) recorded passages. In the latest amplifier designs this is being taken care of either by circuits that are designed to handle a wide range of signal levels or by the use of a phono-sensitivity switch.

Same Products, Different Results

Q. Within the past year I have noticed that Stereo Review and Electronics World had checked the same model receiver, but with different results. I find that odd, since the Hirsch-Houck Laboratories are conducting tests for both magazines.

A. No two samples of any product in this world are going to check out identically in all areas, and I would find it odd if they did.

Phono-Cartridge Frequency Response

Q. It has been stated numerous times in your publication that frequency-response figures without a qualifying tolerance (plus or minus so many dB) are essentially meaningless. However, I notice that several of the top-name manufacturers of phonograph cartridges give their frequency response of their cartridges without such qualifications. Why is this?

A. Oddly enough, the cartridge manufacturers do have some justification for their omission. A phonograph cartridge is designed to play a recording and deliver, ideally, an exact electrical analog of the physical motion imposed upon it by the record groove. Unfortunately, however, there exists no industry-wide standard that defines the test record, measuring equipment, or procedure to be used in checking a cartridge's frequency response. In addition, the cartridge's response will vary depending on the mechanical characteristics of the tone arm, the electrical characteristics (shield-to-inner-conductor capacitance) of the tone-arm cable, and the electrical characteristics of the amplifier's input circuit. As a matter of fact, a cartridge's frequency response will even be influenced by the relative hardness of the vinyl in the test disc.

It would follow, therefore, that for a company legitimately to specify a fre-

CIRCLE NO. 4 ON READER SERVICE CARD
The portable Concord F-400
a superb stereo tape deck

Combines cassette handling convenience
with record and playback performance comparable
to some of the finest reel-to-reel units. How?
A newly engineered transport mechanism
and an electronically-controlled capstan
motor that all but eliminate the wow and
flutter bugs. Plus narrow gap, flux-field heads
for wide range frequency response. Has inputs
for recording live, off-the-air, from records
or from reel-to-reel tapes, or other program
source. And outputs
for playback thru external speakers, or
thru your own home system power amplifier
and speakers.

Operates on batteries as well as AC. So you
can also enjoy it away from home. Make live
recordings on field trips get-togethers—indoors,
cutdoors—anywhere.
(Has VU meters, or you
can use the automatic record-level control.) Or
you can entertain with pre-recorded cassettes,
or your own. Has built-in stereo power amplifiers
and matched stereo speakers.

The portable Concord F-400
a superb tape recorder
frequency response for a cartridge, they would have to state all the conditions and test equipment used to derive the response—which would not be particularly helpful to the user who had different equipment.

From a practical point of view, however, the situation is not as bad as the above might make it appear. Bumps and dips of 3 or 4 dB, whose placement and amplitude would be dependent upon the test conditions, would either not be particularly audible in normal playback, or could have their effect neutralized by the speaker systems’ mid-range and tweeter level controls or by a slight offsetting of the amplifier’s treble control.

Turn-Off Wear and Tear

Q. I have a solid state receiver that I use about four hours a day. I have heard that turning an amplifier on and off ages the components as much as several hours of play. What is your opinion on this?

A. Let’s first look at what happens with tube equipment. Stress occurs in several areas of the circuit at the moment it is turned on. Tube filaments, which have a low resistance when cold, experience a very large rush of current (this is the reason that light bulbs tend to burn out at the moment they are switched on), and the input filter capacitor, particularly if the unit has a silicon rectifier, is hit with an abnormally high voltage (perhaps 500 to 600 volts). An additional factor, the initial charging current through this same input filter capacitor, may cause an abnormally high level of current to be drawn from the power supply. The rectifier diodes are also stressed at the moment of turn-on for several other reasons.

Obviously, transistors have eliminated the tube filament warm-up problem. And the voltage levels in transistor circuitry are so much lower—say, 35 to 70 volts—that the other parts are not stressed particularly during warm-up. Probably the only components in a transistor amplifier that might suffer from repeated on-off switching would be the pilot lamps and (possibly) the power-supply rectifier diodes that have to supply the capacitor-charging current surges at the moment the amplifier is switched on. However, it is not expensive for the manufacturer to provide oversized large-current rectifiers and thereby to eliminate that potential breakdown area.

Now the finest costs less than $200.

We’re talking about Kodak’s finest—the Instamatic M9 movie camera. Now you can own one for less than $200.

And what a camera it is. Just drop in the film cartridge and you’re ready to shoot. The 5-to-1 zoom lens lets you capture the long shots by telephoto, and gives you the broad view by wide angle. You’ve got your choice of fingertip power zoom or manual zoom.

Four filming speeds from slow motion to fast action let you set the pace. Through-the-lens CdS electric eye gives you the correct exposure automatically. And the sports-type finder lets you see action outside the area you’re filming. There’s even provision for remote control and for single-frame exposure for animation.

The Kodak Instamatic M9 movie camera with ultra-fast f/1.8 power zoom lens is waiting for you for less than $200. See your Kodak dealer. Price subject to change without notice.

AUDIO BASICS

HOW MANY SPEAKERS?

When a "Supersound Deluxe Console" or any of its pre-packaged cohorts are touted in banner headlines as having "a total of six"—or ten, or twelve—speakers, the manufacturer implies that there is some virtue in the numbers, that more speakers automatically mean better sound. This is pure myth-making. In practice, the number of speakers employed in a speaker system is irrelevant—except to the design engineer. What counts is the system's ability to cover the entire musical frequency range evenly and with a minimum of distortion. The listener should therefore be primarily concerned with the final result, and not get hung up on the question of how it is achieved.

A speaker designer has a number of options. He may choose a simple woofer and tweeter combination with a sufficiently wide range. Or he may decide to add a separate mid-range unit, thereby narrowing the frequency band handled by each speaker. Decisions of this sort are not arbitrary. The engineer must weigh the relative merits of his alternatives. Adding the mid-range unit, for example, frees the woofer and tweeter from the need of extending into that part of the audio spectrum. This, in turn, may permit the use of a large-cone woofer (large woofers have difficulty handling mid-range and higher frequencies) with greater power-handling capacity in the bottom reaches.

If three driver units are used in the system, problems of overall balance may arise that must be overcome through elaboration of the crossover network. If the designer is constrained by cost, he may have to cut corners to produce a three-way system (which may be requested by the sales department) within a budget that would have permitted him to create a possibly better-sounding two-way system. The advertisements would probably stress the fact of the extra speaker as if that in itself were assurance of merit.

Advertised ambiguities of this kind also abound in regard to speaker enclosures. A friend of mine who lives in a converted barn with a room of baronial dimensions prides himself on two enormous corner-horn speakers for which he claims inherent superiority in all areas. He got into quite a debate with an audiophile neighbor who was convinced that the acoustic performance of these speakers was inferior. In the end, the latter got hung up on the question of how it is achieved.

The point I'm rather obviously pounding in is this: as far as the listener is concerned, engineering choices should be left to the engineers. Advertisements making much of specific design principles should be taken with a grain of salt until the listener is satisfied by the final result, and not to accept a claim to inherent superiority in all areas. He got into quite a debate with an audiophile neighbor who was convinced that the acoustic performance of these speakers was inferior. In the end, the latter got hung up on the question of how it is achieved.

A friend of mine who lives in a converted barn with a room of baronial dimensions prides himself on two enormous corner-horn speakers for which he claims inherent superiority in all areas. He got into quite a debate with an audiophile neighbor who was convinced that the acoustic performance of these speakers was inferior. In the end, the latter got hung up on the question of how it is achieved.

The point I'm rather obviously pounding in is this: as far as the listener is concerned, engineering choices should be left to the engineers. Advertisements making much of specific design principles should be taken with a grain of salt until the speaker—or whatever—proves out in practice.
Scott introduces
AM high fidelity

POWERFUL NEW SCOTT 382C
AM/FM STEREO RECEIVER
MAKES BOTH FM AND AM
LISTENING A PLEASURE

Ready for an incredible listening experience? Then try
the AM section of the new Scott 382C. It pulls in stations
so strongly... eliminates interference and drift so thor-
oughly... delivers sound of such clarity... that you'll
think you're listening to the FM section. The only differ-
ence is the programming!

Until now, the high fidelity fan has either had to miss
out on programming available only on AM or he has had
to forego good sound. Now, using all the latest FET and
Integrated Circuit techniques, Scott engineers have de-
signed a brilliant new AM section. The result... the new
Scott 382C AM/FM Stereo Receiver, the first high fidelity
AM ever available! In AM or FM stereo, the 382C re-
ceives both strong and weak stations perfectly. Weak
stations burst forth loud and clear. Strong stations never
distort.

Scott introduces 4 AM circuit innovations
- New Scott 4-pole LC filter improves selectivity. - Use
of IC's and FET's in the AM IF amplifier gives better
signal/noise ratio, lower distortion, and better signal-
handling capacity. - New FET mixer gives improved cross
modulation rejection and adjacent-station interference.
- New Scott transistor oscillator dramatically reduces drift
and pulling.

Listen to the AM section of the new 382C at your dealer.
You'll hear an incredible improvement in AM sound. Then
switch to FM or records... the 382C is identical in de-
sign to the 342C FM stereo receiver introduced so suc-
cessfully a few months back. In addition to the totally new
AM section the 382C has all these advanced 342C features:
(1) Perfectune... a light that snaps on automatically when you're
perfectly tuned to an FM station. (2) Quartz crystal lattice filter IF
section... your 382C will never need realignment. (3)"Wire-Wrap"
... a permanent connection technique that eliminates solder joints.
(4) New IC multiplex section... for better stereo performance and
reliability. (5) Printed circuit modules... which snap into the
main chassis.

382C SPECIFICATIONS:
Power (±1 dB), 110 Watts; IHF Dynamic Power @ 4 Ohms, 45 Watts
per channel; IHF Continuous Power @ 4 Ohms, 33 Watts per channel;
IHF Continuous Power @ 8 Ohms, 25 Watts per channel; Selectivity,
40 dB; Frequency response ±1 dB, 20-20,000 Hz; Hum and noise,
phono, -55 dB; Cross modulation rejection, 80 dB; Usable sensitivity,
1.9 mV; Tuner stereo separation, 30 dB; FM IF limiting stages, 9;
Capture ratio, 2.5 dB; Signal to noise, 65 dB; Phono sensitivity, 3 mV;
Dimensions: 15½" L x 5" H x 11½" D.
382C 110-Watt AM/FM Stereo Receiver... ONLY $299.95.
342C 110-Watt FM Stereo Receiver... $269.95.
Walnut finish case optional extra.

casionally even a little harmonic daring. But it is all directed toward the accomplishment of a very small thing—what really keeps up the interest is the social picture: the gardens of Vauxhall, the great democratic meeting place where urbane royalty mixed with country bumpkins, the demi-monde, and the intellectuals, all in search of entertainment; the outdoor orchestral pavilion, the fireworks, the pageants, the homo- 

Certainly, there is no one who will deny that at least half the appeal of something like a Neapolitan boat song, Viennese Schrammelwirt, or Parisian bal minuet is extra-musical; that it lies in the pictures of a different life they evoke. And we cannot insist that the value of the music of such national-minded composers as Smetana, Dvořák, Sibelius, Rimsky-Korsakov, Elgar, and Villa-Lobos (to give a mere half-dozen instances) lies completely in the music and not in the nationalism. The music— even intentionally—is not just about itself; it has a subject, and that subject is part of the music's appeal. The music tells us something—perhaps something quite important—about a place and a time. What it tells us is nonverbal, of course, but verbalized knowledge is not the only knowledge there is.

I have a small group of records at home that I keep separate from the rest of my collection. I call it my sociology shelf, and it contains records whose musical value is dubious but whose social efflorescence is so pungent that it sustains interest by itself. A few titles: "Average Girl and Average Boy" by a duo called Paul and Paula; "The Brewer's Big Horses Can't Run Over Ale" (a temperance song) sung by Homer Rodeheaver with Mrs. Rodeheaver at the piano; the black preacher T.N.T. Jones giving a sermon (with singing) called "Let God Fight Your Battles"; "Primrose Hill" by the Daniels-Deason Sacred Harp Singers (a Fa-Sol-La group). Someone in the future will be quite interested in such records: aesthetic pleasure aside, they will give him a more immediate and penetrating insight into social circumstances in the United States during the first sixty years of the twentieth century than a dozen books will.
NEW FINCO

HOME ENTERTAINMENT DISTRIBUTION WIRING SYSTEM FOR DO-IT-YOURSELFERS

Everything needed to wire your home for multiple set reception — in easy-to-handle kit form.

- For Color TV – UHF/VHF
- Black & White TV
- FM/FM Stereo

Turn your whole house into a home entertainment center. Operate up to four sets, or be able to move your entertainment equipment from room to room. Kit includes all necessary parts, fittings and instructions.

THE FINNEY COMPANY
34 W. Interstate Street, Dept. SR 7

CIRCLE NO. 25 ON READER SERVICE CARD
Henry Pleasants’
Serious Music—and All That Jazz!
A Book Review by Don Heckman

HENRY PLEASANTS, an Establishment
needler from ‘way back (The Agony of Modern Music, 1955), has lost
not one wit of his remarkable ability to get to the heart of musical matters in his
latest book, Serious Music—and All That Jazz! It is, in fact, essentially two
perceptive books running concurrently. One is a brilliantly catholic survey of
contemporary music that describes every-thing from chance music, serialism,
and neoclassicism to rhythm-and-blues, jazz, country-and-western, and pop. The
other is an elaboration of the premise, first advanced by Pleasants in the mid-
Fifties, that twentieth-century Serious (the capitalization is Pleasants’) music
fails to fulfill the first criterion of a truly viable contemporary music—that
of communication.

Remarkably, before Serious Music—and All That Jazz!, no single book had
managed to explore the many intersect- ing streams of contemporary American
music. But, as Pleasants so exhaustively points out, most of the available litera-
ture has been supplied by authors who have a vested interest in supporting the
aims of the musical Establishment. Pleasants, on the other hand, far from
avoiding a confrontation with the Estab-
ishment, seems to take delight in twitting it. In his description of the
decline and fall of Serious music as a sig-
nificant twentieth-century force, he
provides an editorial commentary that
will surely raise hackles everywhere in
virtually symphonic proportions—from Academies to Cultural Foundations to
Centers for Performing Arts.

Consider, for example, his suggestion
that ‘European music grew steadily
more intellectual during the nineteenth
century . . . Wagner especially having
been a kind of intellectual monster—but
this may well be considered a symptom
of its decline.” And again, writing of the
dependence of the Serious music per-
former upon precise interpretation of
written notes: “It must seem inevitable,
however, that any musician constantly
subject to such inhibitions and restraints
will be—or become—emotionally and
imaginatively handicapped and stunted.”

And, in a final indictment: “. . . a som-
nolent Establishment, obese and obs-
olscent, but still greedy . . . has spawned
and continues to sponsor . . . a degra-
dation and debasement of the arts, a ru-
tification of the senses, a mockery
of intelligence, a repudiation of the spirit
and a celebration of impotence. . . .

And so on—words that are not precisely
calculated to win him friends in the
musical groves of academe.

But I assume they are intended to in-
fluence people. And the real question
the book raises is whether Pleasants has
provided an argument effective enough
to break through the deepening slumber of
that ‘sommolent Establishment.’ The
kernel of his proposal offers viability—
or, if you will, the potential for wide
popularity—as the true test of music. He
is willing, perhaps eager, to throw out
the traditional attitude that a work of
art possesses implicit value. To Pleas-
ants, it is a work’s effect, rather than its
content, that is its significant measure,
and toward this end he writes extensive-
ly—and knowledgeably—of the impor-
tance of style in all forms of music. But
the full thrust of his argument comes
through in a paragraph which tells us
that ‘Art is no more a profession than
excellence is a profession, or mediocrity.
It is a distinction, the name we give to a
superior craft of communication—mu-
sic, painting, theater, literature, etc.; and
the artist is, or should be, the master
craftsman.”

Inevitably, this leads him to the forms
of music described by Serious musicians
(usually pejoratively) as Popular. In
The Agony of Modern Music, Pleasants
advanced jazz as the true contemporary
music. Now he broadens his definition,
suggesting that recent jazz has wound
up in the same cul-de-sac as contempo-
rary Serious music—that is, it has be-
come ingrown, infantile, and aimed
solely toward the sterile objective of sat-
sifying its own needs, rather than at-
temting to reach a wide audience.

Pleasants is aware (though he gives it
fairly short shrift) of the obvious retort
that music—or, indeed, any art—intend-
ted to please a great number of people
can, like Lyndon Johnson’s politics of
consensus, lead to numbing mediocrity.

A better solution might be to deter-
mine the definition of excellence that the
popular-music forms—jazz, rhythm-and-
bones, motion picture scores, and the rest
—provide for themselves. For example,
although Pleasants is willing to group
these forms under a geographic/chrono-
logical category which he refers to as
the “Afro-American Epoch,” he seems
to me too little willing to accept the im-
plex aesthetic standards of excellence
that such a grouping implies. When he
writes that jazz owes the explicit beat
(and the propulsive characteristics
that are derived from it) and “. . . cer-
tain related melodic characteristics of
attack, contour and cadence . . . to the black
musician,” he is not only minimizing
other significant influences stemming
from African music, but fails to specify
the aesthetic importance of the influ-
ences he has listed.

And more seriously, he accepts, with
little comment, the pattern of black in-
ovation and white exploitation that has
recurred again and again in popular mus-
ic. The effects of this exploitation upon
black performers—especially the hop-
pers of the Forties—may be more appro-
riately be a topic for the social anthro-
pologist, but they surely might have
played some role in a book that empha-
sizes so strongly the importance of a
music which has received most of its
creative energies from black culture.

FINALLY, I am not as convinced as
Pleasants seems to be that both contem-
porary Serious music and contemporary
jazz are lacking in communicative value.
The levels at which art—and the art of
music in particular—communicates are
diverse indeed. I suspect that a Mc-
Luhanized society, in which perceptual
images of all sorts are fragmented, over-
lapped, multiplied and divided, may be
more responsive to the non-melodic,
organized sound of young contemporary
musicians than Pleasants realizes.

Obviously, Serious Music—and All
That Jazz! is a book that merits reading,
discussion, and argument, and that’s
about all any author can expect. For
anyone—repeat, anyone—who cares
about the condition of music today, it is
necessary reading, even if you have to
hide it under a copy of the Journal of
Music Theory.

Stereo Review
Fisher introduces
the world's first faultless
headphones.

Audiophiles have always been aware that, at least theoretically, headphones are the ideal way to listen to reproduced music, particularly stereo.

"Direct coupling" to the original.

With headphones, the information received by the microphones is channeled directly to the ears, completely bypassing the unpredictable acoustics of the living room. The microphones become, in effect, the listener's ears and only the original concert acoustics are heard. This "direct coupling" to the concert hall is, of course, impossible with conventional loudspeakers, as is the 100% stereo separation inherent in headphone listening.

We said theoretically. Because, in actual use, headphones have thus far been hampered by a number of practical disadvantages.

Fisher engineers have never believed that these disadvantages are insurmountable. But it took them until now to solve all the problems to their satisfaction.

The result is a pair of headphones called the Fisher HP-100 which can truly be considered the first commercially available model with all plusses and no minuses. Listening to them, or rather with them, is a new and different experience. The theoretical potential of headphones has finally been realized.

The comfort factor.

One of the main objections to conventional headphones is that they are uncomfortable. After wearing them for half an hour, the listener wants to go back to loudspeakers.

Excessive weight and unpleasant clamping of the head are only the lesser reason, although most headphones are certainly much too heavy and confining. More important is the uncanny isolation of the listener from the audible world around him, as though his head were encapsulated. This, of course, is due to the more or less airtight "cup" that fits over the entire ear, to provide close coupling of the acoustic cavity of the phone to the eardrum. Otherwise, with conventional headphones, there would be a serious loss of bass.

The Fisher HP-100 solves this problem in a highly imaginative way. The phones are not only extremely light but are also allowed to rest lightly against the ear on large, flat foam-rubber cushions, leaving the perimeter of the ear unconfined. The diaphragm of the driver is completely covered by the foam rubber and acoustically "sees" the thousands of tiny air bubbles in it, instead of a single cavity. This, combined with special acoustic delay slots in the back of the driver, maintains proper bass loading without the conventional airtight seal and its attendant discomforts.

As a result, wearing the HP-100 is as pleasant physically as listening to loudspeakers. In fact, to some people the sound does not appear to originate in the phones but seems to come from a certain distance, as in loudspeaker listening, but with a much more pronounced stereo effect.

No more boominess.

Eliminating the single air cavity of conventional headphones also gets rid of another common fault: boomy bass. The low-frequency response of the Fisher HP-100 is amazingly smooth and is essentially flat down to 19 cycles, which is just about the low-end cutoff of the human ear.

Audiophiles have always been aware that, as a matter of fact, the overall frequency response of the HP-100 is essentially uniform from 19 to 22,000 Hz, an unprecedented achievement due, in part, to the sophisticated driver design, which borrows from advanced microphone technology. It is, in effect, a reversed dynamic microphone with the coil driving the lightweight diaphragm, instead of vice versa. Which brings us to another unique advantage of the HP-100.

Smooth treble response.

Nearly all headphones exhibit a certain roughness in their high-frequency response curve. Not the HP-100. The light microphone-type diaphragm provides completely smooth treble and superb transient response, so that the sound has the airy immediacy known only to owners of exceptionally fine tweeters.

Needless to say, distortion is nonexistent at normal listening levels. The impedance of the HP-100 is compatible with all types of amplifiers and receivers. Power input for average listening levels is 2 milliwatts. The phones are supplied with a fully adjustable vinyl-covered headband, velvet-soft, non-stick foam pads that are removable (and therefore washable!), and 8 feet of cable.

After reading all this, you will be prepared for an important listening experience when you first try the Fisher HP-100.

But you are not yet prepared for the price. Only $34.95. Which may be for the makers of the world's first faultless headphones, the greatest achievement of all.

(For more information, plus a free copy of The Fisher Handbook, 1969 edition, an authoritative reference guide to hi-fi and stereo, use coupon on front cover flap.)

JULY 1969
Praise-Winning Stereo Components

HEATHKIT AR-15 Deluxe Stereo Receiver

The World’s Finest Stereo Receiver…. the Heathkit AR-15 has received high praise from every leading audio & electronics magazine and every major consumer testing organization. Here are some of the many reasons why. The AR-15 delivers 150 watts music power from its 69 transistor, 43 diode, 2 IC’s circuit—75 watts per channel. Harmonic and IM distortion are both less than 0.5%, at full output for clean, natural sound throughout the entire audio range at any listening level. The FM tuner has a cascade 2-stage FET RF amplifier and an FET mixer to provide high overload capability and excellent image rejection. The use of crystal filters in the IF section is a Heath first in the industry and provides an ideally shaped bandwidth and adjacent channel selectivity impossible with conventional methods. Two Integrated Circuits in the IF amplifier provide hard limiting, excellent temperature stability and increased reliability. Each IC is no larger than a tiny transistor, yet each contains 28 actual parts. The FM tuner boasts sensitivity of 1.8 uV, selectivity of 70 dB and harmonic & IM distortion both less than 0.5%. You’ll hear stations you didn’t even know existed, and the elaborate noise-operated squelch, adjustable phase control, stereo threshold control and FM stereo noise filter will let you hear them in the clearest, most natural way possible. Other features include two front panel stereo headphone jacks, positive circuit protection, transformerless outputs, loudness switch, stereo only switch, front panel input level controls, recessed outputs, two external FM antenna connectors and one for AM. Tone Flat control, a massive electronically filtered power supply and “Black Magic” panel lighting. Seven circuit boards & three wiring harness make assembly easier and you can mount your completed AR-15 in a wall, your own custom cabinet or the rich walnut Heath cabinet. For the finest stereo receiver anywhere, order your AR-15 now. 34 lbs. *Optional walnut cabinet AE-16, $24.95.

HEATHKIT AJ-15 Deluxe Stereo Tuner

For the man who already owns a fine stereo amplifier, Heath now offers the superb FM stereo tuner section of the AR-15 receiver as a separate unit. The new AJ-15 FM Stereo Tuner has the exclusive FET FM tuner for remarkable sensitivity, exclusive Crystal Filters in the IF strip for perfect response curve and no alignment. Integrated Circuits in the IF for high gain, best limiting; Noise-Operated Squelch; Stereo-Threshold Switch; Stereo-Only Switch; Adjustable Multiplex Phase, two Tuning Meters; two Stereo Phone jacks; “Black Magic” panel lighting. Seven circuit boards & three wiring harness make assembly easier and you can mount your completed AJ-15 in a wall, your own custom cabinet or the rich walnut Heath cabinet. For the finest stereo tuner anywhere, order your AJ-15 now. 19 lbs. *Optional walnut cabinet AE-18, $19.95.

HEATHKIT AA-15 Deluxe Stereo Amplifier

For the man who already owns a fine stereo tuner, Heath now offers the new AA-15 Deluxe Stereo Amplifier. The new AA-15 Stereo Amplifier has the same superb features: 150 watts Music Power; Ultra-Low Harmonic & IM Distortion (less than 0.5%), at full output; Ultra-Wide Frequency Response (+1 dB, 8 to 40,000 Hz, at 1 watt); Front Panel Input Level Controls; Transformerless Amplifier; Capacitor Coupled Outputs; All-Silicon Transistor Circuit; Positive Circuit Protection. 26 lbs. *Walnut cabinet AE-18, $19.95.

HEATHKIT AS-48 High Efficiency System

Our finest Heathkit System… the new AS-48 uses famous JBL” speakers custom-designed for Heath. The specially constructed 14” woofer employs a 4” voice coil, a massive 1 1/2 pound magnet assembly and an inert, self-damping material to suspend the cone to deliver clear, full bodied bass down to 40 Hz. Crisp, open highs, up to 20 kHz come from the 2” direct radiator. A three position high frequency control conveniently mounted on the rear panel lets you adjust the balance to your taste. Easy, one-evening assembly. Just wire the high frequency control, and the 2500 Hz LC-type crossover, then install the speakers. All components mount from the front of the one-piece cabinet for easier assembly and a more solid sound. And the handsome pecan finish will blend graciously with any decor. For very high performance stereo, order two of these remarkable bookshelf systems today. 43 lbs.

HEATHKIT AS-38 Bookshelf System

The new Heathkit AS-38 is a medium priced system that’s small enough to be used in apartments, yet delivers sound that readily qualifies it for use with the very best of components. The 12” woofer and 2” tweeter, custom-designed for Heath by JBL” produce clean, lifelike response from 45 Hz to 20 kHz and the variable high frequency level control lets you adjust the sound to your liking. For easier assembly and more realistic reproduction, all components mount from the front of the one-piece walnut cabinet. Build the new AS-38 in an evening, enjoy rich, complete sound for years. Order two for stereo. 38 lbs.
HEATHKIT AJ-14 Transistor Stereo Tuner

You've read about this low cost, high quality Heathkit Stereo Tuner with performance that far exceeds that of assembled units in its price range ... and owners, experts, leading testing organizations agree! Advanced circuitry is the key to the AJ-14's superlative performance. 14 transistors; 5 diodes in all 3 transistors in the "front-end" tuning section; 4 transistors in the 4-stage IF section insure high sensitivity and selectivity. A solid-state transformer-operated power supply furnishes outputs for fast, easy, assembly too. 29 lbs. Walnut cabinet AE-25 $9.95; metal cabinet AE-35 $3.50.

HEATHKIT AA-14 Solid-State 30-Watt Stereo Amplifier

In the traditional Heath concept of fine performance at low cost, the AA-14 amplifier out-performs, by far, comparable factory built units . . . a fact confirmed by the experts. Delivers a cool 30 watts IHIF music power (20 watts RMS) at ±1 dB from 15 to 50,000 Hz, thanks to a generous power supply design. The transformerless complementary output circuit insures minimum phase shift and low distortion. A 6-position source switch handles your record, tape, radio, turntable, stereo or mono. For independent adjustment of each channel there's a cluched volume control . . . full-range tandem controls for bass and treble boost and cut. Edge-lighted dial; and a front panel mounted stereo headphone jack, plus a speaker-off switch for private listening. Easy to build too, with fast circuit board construction . . . choice of 3-way installation. 11 lbs. Walnut cabinet AE-25 $9.95; metal cabinet AE-35 $3.50.

HEATHKIT AR-14 30-Watt FM Stereo Receiver

The superb AR-14 is today's best value in the transistor stereo marketplace. It's a marriage of the AJ-14 tuner and AA-14 amplifier above. Two preamplifiers and two power amplifiers deliver the coolest 30 watts of music power you've ever heard . . . at ± 1 dB from 15 to 50,000 Hz. And its sensitive FM tuner pulls in stations far and near. Other features include: advanced transformerless output circuit for lower phase shift, lower distortion, and wide response; 6-position source switch handles your record, tape, radio, turntable, stereo or mono. For independent adjustment of each channel there's a cluched volume control . . . full-range tandem controls for bass and treble boost and cut. Edge-lighted dial; and a front panel mounted stereo headphone jack, plus a speaker-off switch for private listening. Easy to build too, with fast circuit board construction . . . choice of 3-way installation. 11 lbs. Walnut cabinet AE-25 $9.95; metal cabinet AE-35 $3.50.

HEATHKIT AD-27 FM Stereo Component-Compact

We call the AD-27 a "Component-Compact" because it is masterfully engineered from the proven high quality Heathkit stereo components shown above . . . assembled only physically into a handsome walnut cabinet with sliding tambour door, and a top performing BSR 500A Turntable added. The amplifier delivers an honest 15 watts of music power per channel and has output impedance from 4 to 16 ohms. Frequency response is virtually flat from 12 Hz to 60 kHz. The FM stereo tuner portion boasts 5 uV sensitivity and 27 dB channel separation. Harmonic & IM distortion throughout the system are both less than 1%, order yours today. 29 lbs.

HEATHKIT AD-17 Stereo Compact

Using the same proven Heathkit stereo component approach of the AD-27, Heath engineers took the solid-state stereo amplifier section of the AD-27, matched it with a high quality BSR-400 Turntable and put both of these fine components in a handsomely styled walnut finish cabinet. The result is the "17" — featuring 30 watts music power, 12 Hz to 60 kHz response, auxiliary and tuner inputs, less than 1% Harmonic & IM distortion, adjustable pressure and anti-skate control and much more. Circuit board construction and wiring harness make assembly fast and easy. 29 lbs.

HEATHKIT AS-18 Miniature Acoustic Suspension Speaker System

The AS-18 Speaker is perfect for all the Heathkit stereo components shown on this page. Features famous high quality Electro-Voice® speakers — 6" woofers, 2½" tweeter and assembled walnut cabinet. Handles 25 watt program material, 50 watts peak. And you can save an extra 5%, by ordering a complete system. Here's all you do: (1) pick a separate amplifier and tuner, match them with speakers and you have a system; (2) choose a receiver, add a turntable and speakers, and you have a system. Then just add up the cost and subtract 5%, from the total price (the complete system must be ordered at the same time). That's all there is to it!
THE BASIC REPERTOIRE
Updatings and Second Thoughts for 1969
By MARTIN BOOKSPAN

This magazine was just a few months old in the summer of 1958 when David Hall, music editor at that time and now senior record critic, phoned to ask me to prepare a series of monthly articles, each installment focusing on a different work from the standard repertoire and assessing the available recordings of that work. The point of departure was Virgil Thomson's remark, made when he was music critic of the New York Herald Tribune, that the backbone of the orchestral literature consisted of "fifty pieces," and the initial plan called for a five-year "Basic Repertoire" series, by which time the fifty backbone items would have been exhausted. But in the years since Thomson made his statement, the literature of the concert hall has expanded greatly, making the figure of fifty no longer valid. So before long we decided to broaden the coverage and let the series run indefinitely. Thus the Basic Repertoire has continued uninterrupted in these pages since November 1958.

In any twelve-month period, new versions of many of the Basic Repertoire pieces are bound to be added to the recordings catalog, and others are withdrawn. I am therefore constantly called upon to do more listening and re-evaluation; the result is my annual "updatings and second thoughts," of which the following is the eleventh.

Four months ago I organized a new series, "Repertoire Review," which is published on a bimonthly basis in Stereo Review magazine. The purpose of this new series is to provide a forum for the discussion of the entire performance spectrum as it relates to a specific aspect of the performing arts. The first installment, "The New录音 Tape World," was published in the June issue of Stereo Review; the second, "The Recording Studio," will appear in the August issue. The series is designed to be comprehensive, covering all aspects of the recording process, from the recording studio to the concert hall.

In the coming months, we will be publishing a series of articles on the recording industry, which will be published in Stereo Review magazine. These articles will cover a wide range of topics, from the history of recording to the latest technology in the industry. We hope that these articles will be of interest to anyone who is interested in the recording industry, whether they are professionals or amateurs.

Finally, I want to thank all of the musicians, record producers, and technicians who have contributed to the success of the Basic Repertoire series. It is because of their dedication and hard work that this series has been able to continue for so many years. I also want to thank all of the readers who have written to me over the years, asking for reprints of the original essay versions of the Basic Repertoire articles. The reprints of this 1969 review of the "Basic Repertoire" are available without charge. Circle number 160 on reader service card.

| Brandenburg Concertos | Lucerne Festival Strings/Baumgartner (Deutsche Grammophon ARC 198142/3)  
Vienne Concertus Musicus/Harmonia Nova (Telefunken S 9549/L, 9549/L)  
Tape: Saar Chamber Orchestra/Ristenpart (Nonesuch A 3013) | Despite the release of several worthy new integral recordings during the past year, my first choice remains the consistently satisfying, if unspectacular, performances conducted by Rudolf Baumgartner. My tape preference is now Ristenpart’s Nonesuch reel, more stylish and imaginative than Klempeter’s, my former choice. |
| **BACH:**        |                                    |                    |
| Chaconne, in D Minor, from Violin Partita No. 2 | Szeryng, violin (included in Deutsche Grammophon 139270/1/2)  
Szegedi, violin (included in Vanguard BS 6278/89)  
Segovia, guitar (Decca DL 79751)  
Tape: none available | Both Szeryng and Szegedi bring to this music a sense of fiery and passionate conviction; Szeryng’s, a much more recent recording, has far better sound. Segovia’s performance on the guitar gives evidence of similarly high artistic commitment. |
| **BARTÓK:**      |                                    |                    |
| Concerto for Orchestra | Soloists, Chorus, New York Philharmonic/Bernstein (Columbia MS 6753, ML 5775)  
Soloists, Munich Bach Choir and Orchestra/Richter (Deutsche Grammophon ARC 198197)  
Tape: Soloists, Saar Chamber Orchestra and Chorus/Ristenpart (Nonesuch E 1011) | Bernstein’s continues to be my preferred disc version because of its spontaneity and uninhibited exhilaration. Tape fanciers are directed to Ristenpart’s imaginative performance. |
| **BEETHOVEN:**   |                                    |                    |
| Piano Concerto No. 3, in C Minor | Gilless, with Cleveland Orchestra/Szell (included in Angel S 3734)  
Fleisher, with Cleveland Orchestra/Szell (Epic BC 1138; tape EC 828)  
Rubinstein, with Boston Symphony/Leinsdorf (RCA LSC 2917; tape RCA TR 3-5038) | The recent Gilless-Szell collaboration, in their integral set of the Beethoven piano concertos, is an unusually light-textured and intimate performance. The Fleisher-Szell version is more heroic; Rubinstein and Leinsdorf lean toward breadth and elegance. |
| Piano Concerto No. 4, in G | Rubinstein, with Boston Symphony/Leinsdorf (RCA LSC 2848; tape TR 3-5019)  
Schmieder, with Philharmonia Orchestra/Bouvier (included in Angel GRE 4006)  
Istomin, with Philadelphia Orchestra/Ormandy (Columbia MS 7199) | Rubinstein’s performance has an impressive stately dignity, Schnabel’s a warm feeling of intimacy, and Istomin’s a gentle introspection and poetry. All three are highly recommended. |
| Piano Concerto No. 5, in E-flat, “Emperor” | Serkin, with New York Philharmonic/Bernstein (Columbia MS 6366, ML 5766; tape MQ 489) | Serkin’s remains outstanding among available versions for brilliance, intensity, and spontaneity, with Bernstein matching him all the way. |
| Violin Concerto, in D | Francescatti, with Symphony Orchestra/Walter (Columbia MS 6263; tape MQ 409)  
Stern, with New York Philharmonic/Bernstein (Columbia MS 6093, ML 5415) | Francescatti’s is a tender, loving performance; Stern’s is more impassioned but no less loving. |
| Piano Sonata No. 14, “Moonlight” | Rubinstein (RCA LSC 2654)  
Mozarac (Connoisseur Society S 1566, 1566)  
Tape: Serkin (Columbia MQ 582) | All three of these pianists bring remarkable powers of evocation to their performances. Rubinstein’s, for me, is the most consistently beguiling of all. |
| Symphony No. 1, in C | NBC Symphony Orchestra/Toscanini (included in RCA Victor RCA 8000)  
Cleveland Orchestra/Szell (Epic BC 1292; tape EC 843) | This genial, unhurried performance is one of the finest of all Toscanini’s Beethoven recordings. Szell’s benefits from much more recent and far more clearly defined sonic reproduction. |
| Symphony No. 2, in D | Royal Philharmonic/Beecham (Angel S 35509)  
New York Philharmonic/Bernstein (Columbia MS 7084)  
Tape: Cleveland Orchestra/Szell (Epic EC 843) | All three of these are invigorating accounts of this rollicking score; Beecham’s is particularly treasurable. |
| Symphony No. 3, in E-flat, “Eroica” | BBC Symphony/Barbirolli (Angel S 36467; tape YTS 36467, 3 3/4 ips)  
New York Philharmonic/Bernstein (Columbia MS 6774; tape MQ 775) | The confidence and power of Barbirolli’s performance gain their impact on me with the passage of time. Bernstein, too, delivers a most satisfying account which improves after a rather breathless first movement. |
| Symphony No. 4, in B-flat | BBC Symphony/Toscanini (included in Seralphonic 1C 6019)  
London Symphony/Monteuex (RCA Victor VICS/VIC 102)  
Tape: Suisse Romande Orchestra/Ansermet (London K 80057) | This early Toscanini-BBC Symphony recording is far more spontaneous and genial than his later NBC Symphony reading. Those who must have up-to-date sound are directed to Monteux, Schmidt-Isserstedt, or Ansermet. |

<tr>
<td><strong>BEETHOVEN:</strong> Symphony No. 5, in C Minor</td>
<td>Amsterdam Concertgebouw Orchestra/Szell (Philips PH 900169) &lt;br&gt;Chicago Symphony/Reiner (RCA LSC 2343; tape FTC 2032)</td>
<td>London has apparently again withdrawn the mighty recording by Erich Kleiber and the Amsterdam Concertgebouw. In its absence, the Szell-Concertgebouw version is my recommendation, with Reiner’s headlong and inspired performance a good second choice, despite badly overloaded sonic reproduction.</td>
</tr>
<tr>
<td><strong>BEETHOVEN:</strong> Symphony No. 6, in F, “Pastoral”</td>
<td>Columbia Symphony/Walter (Columbia MS 6012; tape MQ 3701)</td>
<td>Walter’s decade-old recording remains unrivaled for gentle and relaxed lyricism.</td>
</tr>
<tr>
<td><strong>BEETHOVEN:</strong> Symphony No. 7, in A</td>
<td>Columbia Symphony/Walter (Columbia MS 6082) &lt;br&gt;Tape: Suisse Romande Orchestra/Ansermet (London K 80052)</td>
<td>Here Walter’s blend of athletic vigor and dynamism produces a performance of compelling vitality.</td>
</tr>
<tr>
<td><strong>BEETHOVEN:</strong> Symphony No. 8, in F</td>
<td>Marlboro Festival Orchestra/Casals (Columbia MS 6051, ML 6531) &lt;br&gt;Tape: Cleveland Orchestra/Szell (Epic EC 851)</td>
<td>The description of Walter’s way with the Seventh above applies with equal validity to Casals’ version of the Eighth.</td>
</tr>
<tr>
<td><strong>BEETHOVEN:</strong> Trio No. 6, in B-flat, “Archduke”</td>
<td>Istomin/Stern/Rose Trio (Columbia MS 6819) &lt;br&gt;Tape: still none available!</td>
<td>Still unrivaled for poetry and personal involvement is the performance by Eugene Istomin, Isaac Stern, and Leonard Rose.</td>
</tr>
<tr>
<td><strong>BERLIOZ:</strong> Symphonie fantastique</td>
<td>Suisse Romande Orchestra/Ansermet (London CS 2101) &lt;br&gt;London Symphony/Davis (Philips PH 900101) &lt;br&gt;Tape: Boston Symphony/Munch (RCA FCT 2113)</td>
<td>It takes Ansermet a while to warm to the task, but from the third movement onward, his is a completely convincing account that emphasizes the diablerie of the music with bone-chilling effect. Davis and Munch represent traditional polarities in their attitudes toward this score: Davis is the more formal, Munch the more flamboyant.</td>
</tr>
<tr>
<td><strong>BERLIOZ:</strong> Harold in Italy, for Viola and Orchestra</td>
<td>Primrose and Boston Symphony/Munch (RCA LSC 2228) &lt;br&gt;Linzer and New York Philharmonic/Bernstein (Columbia MS 6558) &lt;br&gt;Tape: Menuhin and Philharmonia Orchestra/Davis (Angel ZS 36123)</td>
<td>The new Trampler-Pretre account scores in recorded sound, but I continue to prefer the elegance of Primrose-Munch or the unbridled emotionalism of Linzer-Bernstein. On tape, the rather soporific account by Menuhin and Davis is preferable to the unidiomatic version by Barshai and Oistrakh.</td>
</tr>
<tr>
<td><strong>BIZET:</strong> Symphony No. 1, in C</td>
<td>New York Philharmonic/Bernstein (Columbia MS 7159) &lt;br&gt;French National Radio Orchestra/Beecham (Capitol SG/G 7237) &lt;br&gt;Tape: Suisse Romande Orchestra/Ansermet (London L 80900)</td>
<td>The recent Bernstein recording is a fleet and fluent performance of this minor masterpiece, a reading easily the equal of the best previously available.</td>
</tr>
<tr>
<td><strong>BRAHMS:</strong> Piano Concerto No. 1, in D Minor</td>
<td>Fleisher, with Cleveland Orchestra/Szell (Epic BC 1003; tape FC 802) &lt;br&gt;Curzon, with London Symphony/Szell (London CS 6329; tape L 80126)</td>
<td>I find the recent Serkin-Szell performance disappointingly heavy-handed. Both Fleisher and Curzon (with the indefatigable Szell conducting for them both) deliver much more satisfying performances.</td>
</tr>
<tr>
<td><strong>BRAHMS:</strong> Piano Concerto No. 2, in B-flat</td>
<td>Barenboim, with New Philharmonia Orchestra/Barbierioli (Angel S 36526) &lt;br&gt;Serkin, with New Philharmonic/Szell (Columbia MS 6967, ML 6367; tape MQ 891) &lt;br&gt;Watts, with New York Philharmonic/Bernstein (Columbia MS 7134; tape MQ 999) &lt;br&gt;Horowitz, with NBC Symphony Orchestra/Toscanini (RCA LCT 1025; tape TR 3-5027)</td>
<td>Each of these four performances has its special virtues. I lean toward the pure Romanticism of the Barenboim-Barbierioli approach, but an equally persuasive argument could be made on behalf of any of the others.</td>
</tr>

match your auto-turntable to the quality of a Sherwood 6000

The No-Compromise "Sound Center" for Limited Space. Now get maximum performance in a mini-space! Sherwood’s new E000 is the full-feature, 120-watt music power AM/FM "STEREO SOUND CENTER" that provides unlimited choice of matching components. Choose any automatic turntable”—any magnetic cartridge. Mount perfectly on the pre-cut oiled walnut cabinet. Choose any speaker. Big or little, low or high efficiency. Your Sherwood 6000 has the power to spare for clean, pure, wall-to-wall sound. Compare features: FET FM tuner for ultra-sensitivity. Front-panel tape dubbing and headphone jacks. Stereo and mono extension speakers. As the high-performance heart of the finest component system, the Sherwood 6000 takes no more space than "compromise compacts." It’s the modern solution to big sound in small space. Features: 120 watts music power, 1.8 µV IHF sensitivity, -95 dB crossmodulation rejection, automatic FM stereo switching, zero-center tuning meter, front and rear panel tape inputs/outputs, mono speaker output. Perfect match for your 6000—Sherwood’s new Berkshire II speaker system: slim 9" deep cabinet with 12" woofer, 5" mid range, 160° "omni-polar" tweeter, 28-22,000 Hz response.

</table>
| **BRAHMS:**  
Violin Concerto, in D  
Heifetz, with Chicago Symphony/Reiner  
(RCA LSC 1903; tape FTC 2151) |  
The measured and somewhat monolithic account by Oistrakh and Klemperer is my own choice; those in search of a less Teutonic approach are directed to the brilliant Heifetz-Reiner performance. |
| **BRAHMS:**  
Concerto in A Minor, for Violin and Cello  
Francescatti and Fournier, with Columbia Symphony/Walter  
(Deutsche Grammophon C 8755) |  
The rich, warm lyricism of the Francescatti-Fournier-Walter performance is still deeply satisfying to me. |
| **BRAHMS:**  
Symphony No. 1, in C Minor  
Philharmonia Orchestra/Klemperer  
(Deutsche Grammophon 136452; tape P 6452) |  
Despite rather harsh and unfocused sound, Klemperer's account is still my preference: it is a noble and majestic reading. The now deleted Steinberg tape is my recommendation, if you can find it; Walter's (Columbia MQ 337) is a reasonable alternative. |
| **BRAHMS:**  
Symphony No. 2, in D  
Vienna Philharmonic/Monteux  
(RCA Victor/CS 6440; tape L 80173) |  
Both Monteux and Kertész have the benefit of the lustrous sound of the Vienna Philharmonic in their generally mellow accounts of this mellower of the Brahms symphonies. There is no satisfying tape version to be had at the moment. |
| **BRAHMS:**  
Symphony No. 3, in F  
Cleveland Orchestra/Szell  
(Deutsche Grammophon 139137/8; tape K 9138) |  
Klemperer continues to be the conductor who, in my view, responds most intuitively to this score's possibilities, but again his sound is dated. Both Szell and Walter provide good alternatives in modern sound. |
| **BRAHMS:**  
Symphony No. 4, in E Minor  
Bavarian Radio Symphony/Jochum  
(Deutsche Grammophon 136452; tape P 6452) |  
Though several new performances have been released in the past year, my preferences remain unchanged: Toscanini's is in a class by itself for surging drama and architectural splendor, and both Szell and Walter provide good alternatives in modern sound. |
| **BRAHMS:**  
Symphony No. 5, in E Minor  
Philharmonia Orchestra/Walter  
(Deutsche Grammophon 136452; tape P 6452) |  
Despite several new releases in the past year, Furtwängler's hypnotic account is still my number one choice, with Jochum's suggested for those who want up-to-date sound. |
| **BRUCKNER:**  
Symphony No. 7, in E  
Berlin Philharmonic/Furtwängler  
(Deutsche Grammophon 139137/8; tape K 9138) |  
As before: Furtwängler if you seek a mystical experience, with Haitink and Mehta as persuasive spokesmen for the younger generation's view of this marvelous score. This DGG "Furtwängler in Memoriam" album has been deleted, but I am told the Bruckner Ninth will reappear on Heliodor in the fall. |
| **BRUCKNER:**  
Symphony No. 9, in D Minor  
Amsterdam Concertgebouw Orchestra/Haitink  
(Vienna Philharmonic/Mehta  
(Deutsche Grammophon 136452; tape L 80170) |  
Rubinstein's most recent recording lacks something in conviction; I continue to prefer the totally committed performances by Ashkenazy or Vásáry, Ashkenazy having the better of it sonically. |
| **CHOPIN:**  
Piano Concerto No. 2, in F Minor  
Ashkenazy, with London Symphony/Zinman  
(London CS 6440; tape L 80173) |  
I doubt that the absolutely brilliant Bernstein performances will ever be surpassed. |
| **COPLAND:**  
Ballet Suites—Billy the Kid and Rodeo  
New York Philharmonic/Bernstein  
(Columbia MS 6175, ML 5575; tape MQ 397) |  
The Boulez-Cleveland Orchestra disc of the complete Images, on the way from Columbia, may alter things; for now, either Argenta or Ansermet gives most pleasure. Argenta's reading is just a mite more zestful, but Ansermet has more modern sound reproduction. |
| **DEBUSSY:**  
Preludes  
Suisse Romande Orchestra/Argenta  
(London STS 15020; tape: Suisse Romande Orchestra/Ansermet  
(London L 80089) |  
Despite the enthusiasm for Boulez's account (CBS 32 11 0056) in other quarters, I find considerably more passion and personality in any of these three versions. |
Because accuracy of reproduction is essential to him, Virgil Thomson listens to music using AR-3a speaker systems.

After many years of composing, listening and writing about music, Virgil Thomson requires music reproduction which is accurate, reliable and convenient to use. Some years ago, he became the owner of a pair of AR-3s. He has recently changed these to AR-3a systems, and replaced his older amplifier with the new AR amplifier.

Mr. Thomson’s system consists of: a Dual changer, KLH tuner, Ampex tape recorder, AR amplifier, and AR-3a speaker systems.

Acoustic Research makes AR speaker systems, amplifiers and turntables. All are described in our catalog, obtainable for the asking.

*Virgil Thomson, Mr. Thomson’s autobiography, is an interesting and informative chronicle of music history during recent decades by a man who has helped make that history. It is published by Alfred A. Knopf.

<td></td>
<td>Wild, with Boston Pops/Fiedler (RCA LSC 2746; tape TR 3-5006)</td>
<td></td>
</tr>
<tr>
<td><strong>Fur Elk Concerto</strong></td>
<td>Lipatti, with Philharmonia Orchestra/Galicia (Odyssey 32 16 014)</td>
<td>Of the several new versions that have been released since last year, the one by the twenty-four-year-old Brazilian pianist Nelson Freire moves close to the top of the list: it is a stunningly brilliant and musically alert performance. Lipatti's is strongly impassioned, Lipatti's more delicate and studied.</td>
</tr>
<tr>
<td></td>
<td>Rubinstein, with Symphony Orchestra/Wallenstein (RCA LSC 2566; tape FTC 2100)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Freire, with Munich Philharmonic/Kempe (included in Columbia M2X 798)</td>
<td></td>
</tr>
<tr>
<td><strong>Messiah</strong></td>
<td>Soloists, Chorus, and English Chamber Orchestra/Mackerras (Angel S 3705)</td>
<td>Both performances are extraordinarily sensitive and keenly attuned to Baroque performing practices—especially Mackerras'.</td>
</tr>
<tr>
<td><strong>Water Music</strong></td>
<td>Complete: Bath Festival Orchestra/Menuhin (Angel S 36173; tape Y2S 36279, 3½ ips)</td>
<td>Menuhin's continues to impress me as a highly imaginative treatment of the complete score; Szell's, of the versions of The Suite arranged by Sir Hamilton Harty, is the most vigorous.</td>
</tr>
<tr>
<td></td>
<td>Handel Suite: London Symphony/Szell (London CS 6236; tape L 80089)</td>
<td></td>
</tr>
</tbody>
</table>
Introducing Scott's new
Q100 Quadrant
The first successful
360° full range
speaker system.

There have been many attempts to develop a speaker system that would reproduce the full-frequency sound and 3-dimensional audio effect of an actual live performance. Until now, all of these attempts have failed. Either the frequency range was limited, or speaker placement was critical, or the listener had to sit in a limited area, or the expense involved was beyond the average audiophile. Now, Scott engineers have succeeded!

The Quadrant speaker has four sides. An 8" woofer is mounted on side One. Another 8" woofer is mounted on side Three. Four 3" mid-range/tweeters are mounted on all four sides, one to a side. Woofers radiate sound in a 180° arc. Mid-range/tweeters, in an arc of 90°. As a result, the Scott Quadrant covers a full circle with a full range of sound.

Stereo follows you everywhere
Place the Quadrant speakers virtually anywhere in the room (even with one corner against the wall!). No matter where you go, you hear full-range, 3-dimensional stereo. Even the elusive high notes follow you everywhere. Even in a funny-shaped room. Even in a room with so-called "dead spots."

A live performance is a 3-dimensional sound source. You hear sounds, not only directly, but also reflected from the walls. Similarly, the Quadrant uses the reflective qualities of the walls to heighten the "live" stereo effect. Scott's new Quadrant speaker system, an incredible state-of-the-art advance... in stereo realism... is priced at only $149.95, actually much less than many speakers which can't measure up to the Quadrant sound.

COMPARE SCOTT'S NEW QUADRANT WITH ANY OTHER SPEAKER SYSTEM!

Conventional speakers tend to be directional. They have good wide-range response only within a relatively narrow triangular listening area.

Omnidirectional speakers are omnidirectional only in the bass range. The vital high frequencies are perceptible only in a limited area.

Reflective speakers can give an illusion of presence and depth. However, they require an equalizer for flat response, and the use of separate (and expensive) pre-amps and ultra-high-wattage power amps.

Scott's Quadrant speakers represent a no-compromise design. Quadrant speakers can be placed virtually anywhere, give extraordinarily good wide-range response and 3-dimensional stereo realism and presence throughout the room. In addition, no equalizers or special amplifiers are required.

</tr>
</thead>
<tbody>
<tr>
<td><strong>HAYDN:</strong> Symphony No. 94, in G, &quot;Surprise&quot;</td>
<td>Royal Philharmonic/Beecham (Angel S 36242; tape, included in Angel Y3S 3698, 3/4 ips) Cleveland Orchestra/Szell (Columbia MS 7006)</td>
<td>To the bubblingly vital Beecham reading I would now add the more sedate but superbly balanced Szell account, which also boasts exceptionally clear orchestral reproduction.</td>
</tr>
<tr>
<td><strong>HAYDN:</strong> Symphony No. 101, in D, &quot;Clock&quot;</td>
<td>Royal Philharmonic/Beecham (Angel S 36255; tape, included in Angel Y3S 3699, 3/4 ips) Vienna State Opera Orchestra/Wöldike (Vanguard Everyman S 187; tape, included in Vanguard F 1916)</td>
<td>Beecham's &quot;Clock&quot; exhibits the same qualities that distinguish his version of the &quot;Surprise&quot; above. Wöldike is less airborne but solidly convincing nonetheless.</td>
</tr>
<tr>
<td><strong>HAYDN:</strong> Symphony No. 104, in D, &quot;London&quot;</td>
<td>Royal Philharmonic/Beecham (Angel S 36255; tape, included in Y3S 3699, 3/4 ips) Vienna State Opera Orchestra/Wöldike (Vanguard Everyman 1665D; tape, included in Vanguard F 1916)</td>
<td>As in the versions of the two Haydn symphonies above, Beecham's sparkling vitality makes irrelevant his use of corrupt orchestral scores. But in this particular work, Wöldike outdoes him even in performance—and employs authentical orchestral parts as well.</td>
</tr>
<tr>
<td><strong>LAZO:</strong> Symphonie espagnole</td>
<td>Perlman, with London Symphony/Previn (RCA LSC 3073) Stern, with Philadelphia Orchestra/Ormandy (Columbia MS 7003) Tape: Ricci, with Suisse Romande Orchestra/Ansermet (London K 80046)</td>
<td>The recent Perlman-Previn performance is a unique blend of intimacy and virility. Along with the Stern-Ormandy recording, it is now at the top of my list. Only Ricci's somewhat less elegant version is available to tape collectors.</td>
</tr>
<tr>
<td><strong>LISZT:</strong> Piano Concerto No. 1, in E-flat</td>
<td>Richter, with London Symphony/Kondrashin (Philips PBS 300006; tape, C 900006) Argerich, with London Symphony/Ambrosio (Deutsche Grammophon 139383)</td>
<td>Richter's is still a masterly performance; of those released since last year, Martha Argerich's is superbly played, brilliantly recorded, and viscerally exciting.</td>
</tr>
<tr>
<td><strong>MAHLER:</strong> Das Lied von der Erde</td>
<td>Vienna Philharmonic/Bernstein (London CS 26005; tape N 90127) Vienna Philharmonic/Walter (London 4212)</td>
<td>Bernstein most movingly communicates to me the poetry, passion, and longing of this score. And the mono-only Ferrier-Patrzak-Walter set is still magical.</td>
</tr>
<tr>
<td><strong>MAHLER:</strong> Symphony No. 1, in D</td>
<td>Vienna Pro Musica Orchestra/Horenstein (included in Vox VBX 116) London Symphony/Solti (London CS 6401; tape L 80150)</td>
<td>Horenstein's aging mono-only recording is still the finest ever of this symphony, with Solti's my continuing choice among the modern versions. Kubelik's recent version (DGG 139331), too, is an attractive, rather easygoing performance.</td>
</tr>
<tr>
<td><strong>MAHLER:</strong> Symphony No. 4, in G</td>
<td>New York Philharmonic/Bernstein (Columbia MS 6152, ML 5485) New York Philharmonic/Walter (Odessey 32 16 0026) Cleveland Orchestra/Szell (Columbia MS 6833, ML 6233; tape MQ 783)</td>
<td>At least four new versions of this symphony have been released in the past twelve months, those conducted by Haitink, Abravanel, Kubelik, and Oistrakh. None of them alters my previous preferences: Bernstein's is an individual but highly persuasive account; Walter's, now available in fake &quot;stereo,&quot; has moments of powerful poetic insight; and Szell's, among the more literal performances, seems to me the most impressive.</td>
</tr>
<tr>
<td><strong>MAHLER:</strong> Symphony No. 9, in D</td>
<td>New York Philharmonic/Bernstein (included in Columbia M3S 776; tape MQ 993) London Symphony/Solti (London 2220)</td>
<td>Bernstein's reading packs a tremendous emotional wallop, and it is very well recorded. Solti's is only slightly less moving.</td>
</tr>
<tr>
<td><strong>MENDELSSOHN:</strong> Violin Concerto, in E Minor</td>
<td>Francescatti, with Cleveland Orchestra/Szell (Columbia MS 6758, ML 6158; tape MQ 742) Stern, with Israel Philharmonic/Bernstein (Columbia MS 7053, ML 6453)</td>
<td>Both Francescatti and Stern bring an irresistible quality of soaring abandon to their performances. Stern's derives from the &quot;live&quot; concert given atop Jerusalem's Mount Scopus only a few weeks after the six-day war of June 1967.</td>
</tr>
<tr>
<td><strong>MENDELSSOHN:</strong> Symphony No. 3, in A Minor, &quot;Scottish&quot;</td>
<td>New York Philharmonic/Bernstein (Columbia MS 6976, ML 6376) Tape: London Symphony/Maag (London L 80083)</td>
<td>For some unfathomable reason, London has seen fit to withdraw the disc version of Maag's absolutely electrifying performance, though the tape is still listed. Until Maag's disc again becomes available (on the Stereo Treasury label?), my recommendation is Bernstein.</td>
</tr>
<tr>
<td><strong>MENDELSSOHN:</strong> Symphony No. 4, in A, &quot;Italian&quot;</td>
<td>Marlboro Festival Orchestra/Casals (Columbia MS 6931, ML 6331) Tape: Cleveland Orchestra/Szell (Columbia MQ 904)</td>
<td>Casals' version continues to dominate the field by virtue of its thrumming vitality.</td>
</tr>

"The finest loudspeakers I've ever listened to, regardless of size, type or price."

That's how Ronald M. Benrey, electronics editor of Popular Science, described a pair of Rectilinear III speaker systems in the May 1968 issue of his magazine, in an article on "The Stereo System I Wish I Owned."

Mr. Benrey went on to justify his ranking of the Rectilinear III's: "They produce beautiful bass tones without boom, accurate midrange tones without a trace of coloration, and crystal-clear treble tones without a hint of harshness. And they do it at any volume, including 'window-rattling' sound levels."

Of course, one expert's opinion may differ considerably from another's. But here's what Julian D. Hirsch wrote in the "Equipment Test Reports" of Stereo Review, December 1967:

"The Rectilinear III ranks as one of the most natural-sounding speaker systems I have ever used in my home. Over a period of several months, we have had the opportunity to compare it with a number of other speakers. We have found speakers that can outpoint the Rectilinear III on any individual characteristics-frequency range, smoothness, distortion, efficiency, dispersion, or transient response. However ... none of the speakers combine all of these properties in such desirable proportions as the Rectilinear III."

Summing up his test report, Mr. Hirsch concluded: "In our opinion, we have never heard better sound reproduction in our home, from any speaker of any size or price."

Of course, both Mr. Benrey and Mr. Hirsch write for the readers of popular, large-circulation magazines. But here's what Larry Zide wrote for the more specialized audience of The American Record Guide ("Sound Ideas" column, October 1968):

"The transient response of the speaker is superb... the overall quality is extreme in its fidelity to 'live' music. The bass is solid and firm, the midrange is clear and neutral, and highs are bell-like in their cleanliness.

"It all comes down to this: there are only a handful of speakers that I find completely satisfactory... I have had these Rectilinear III units for a month now. Lately I have found myself listening to them just for the pleasure of it. They are among the very best speakers on the market today."

Of course, all of the opinions above appeared in publications that accept advertising. But here's what Buyer's Guides magazine wrote in their August 1968 issue, just in case you're more inclined to trust a consumer review without ads:

"Rectilinear III has had tremendous impact on the hi-fi industry... This speaker's virtue is the fact that it is the first and only full-range dynamic speaker system that possesses sound quality which is directly comparable to electrostatic speakers... Flute and violin concertos as well as string quartet were reproduced with honest clarity... Piano and organ music were effortlessly reproduced in a manner that suggested the instruments were being performed live. Jazz and rock music were unpretentious and true sounding..."

To such unanimity from such varied sources we need only add the dimensions and price of the Rectilinear III: 35" x 17" by 12" deep, $279.00 in oiled walnut.

(For further information, see your audio dealer or write directly to Rectilinear Research Corporation, 30 Main Street, Brooklyn, N.Y. 11201.)

<tr>
<td><strong>MOZART: Piano Concerto No. 20, in D Minor</strong></td>
<td>Barenboim, with English Chamber Orchestra/Ansermet (Angel S 36430); Rubinstein, with Symphony Orchestra/Wallenstein (RCA LSC 2635; tape FTC 2182)</td>
<td>Some less than perfect ensemble notwithstanding, Barenboim's recording conveys to me more of the intensity and drama of this concerto than any other version available. If the Rubinstein tape should prove to be elusive—it is no longer listed in the Harrison catalog—my alternative recommendation would be the Haskil-Markevitch version (Epic EC 820).</td>
</tr>
<tr>
<td><strong>MOZART: Piano Concerto No. 21, in C</strong></td>
<td>Rubinstein, Symphony Orchestra/Wallenstein (RCA LSC 2634; tape FTC 2125); Lipatti, Lucerne Festival Orchestra/Karajan (Angel 35931); Schnabel, London Symphony/Sargent (Angel COLH 67)</td>
<td>Despite the fact that it was Geza Anda's recording of the slow movement, used in the soundtrack of the film <em>Elvira Madigan</em>, that made this concerto a best-seller, I prefer Rubinstein's more intense performance. The older versions by Lipatti and Schnabel are both very special.</td>
</tr>
<tr>
<td><strong>MOZART: Clarinet Quintet, in A</strong></td>
<td>Boskovsky, with Vienna Octet members (London CS 6379; tape L 80145)</td>
<td>The calm, genial Boskovsky-Vienna Octet performance still leads the pack for me.</td>
</tr>
<tr>
<td><strong>MOZART: Sinfonia concertante, in E-flat, for Violin and Viola</strong></td>
<td>Druian, Skemrick, and Cleveland Orchestra/Szell (Columbia MS 6625); Tape: Stern, Trampler, and London Symphony/Stern (Columbia MQ 961)</td>
<td>Szell conducts an elegant performance, and his soloists—first-chair men of their respective sections in the Cleveland Orchestra—play with a good deal of spirit.</td>
</tr>
<tr>
<td><strong>MOZART: Symphony No. 35, in D, &quot;Haffner&quot;</strong></td>
<td>English Chamber Orchestra/Barenboim (Angel S 36512); Tape: Columbia Symphony/Walter (Columbia MQ 436)</td>
<td>Barenboim's absolutely poised and polished performance now carries the day, with Bruno Walter's the most satisfying among the tape versions.</td>
</tr>
<tr>
<td><strong>MOZART: Symphony No. 39, in E-flat</strong></td>
<td>Cleveland Orchestra/Szell (Epic BC 1106); Tape: New York Philharmonic/Bernstein (Columbia MQ 942)</td>
<td>The Szell/Cleveland performance has a robust vigor and penetration that are quite appropriate to the music; in the absence of a Szell tape, Bernstein's is my first choice.</td>
</tr>
<tr>
<td><strong>MOZART: Symphony No. 40, in G Minor</strong></td>
<td>English Chamber Orchestra/Britten (London CS 6598); Tape: Columbia Symphony/Walter (Columbia MQ 611)</td>
<td>Britten's highly personal approach may not be to everyone's liking; it is to mine. Of the versions on tape, Walter's is my first choice. Both these conductors, incidentally, adopt a rather free Romantic attitude toward this score.</td>
</tr>
<tr>
<td><strong>MOZART: Symphony No. 41, in C, &quot;Jupiter&quot;</strong></td>
<td>NBC Symphony/Toscanini (RCA LM 1040); Columbia Symphony/Walter (Columbia MS 6255, ML 6555; tape MQ 436)</td>
<td>Toscanini's heroic performance is still unparalleled; Walter's is gentler, and perhaps more human.</td>
</tr>
<tr>
<td><strong>PROKOFIEV: Peter and the Wolf</strong></td>
<td>Flanders, with Philharmonia Orchestra/Kurtz (Capitol SG/G 7211); Lillie, with London Symphony/Henderson (London CS 6187; tape L 80061)</td>
<td>Last year's recommendations still stand: Michael Flanders takes a no-nonsense (and highly musical) approach; Beatrice Lillie's gimmicky version nevertheless contains some characteristically inspired clowning.</td>
</tr>
<tr>
<td><strong>PROKOFIEV: Symphony No. 5</strong></td>
<td>Suisse Romande Orchestra/Ansermet (London CS 6406); New York Philharmonic/Bernstein (Columbia MS 7005, ML 6405); Tape: Boston Symphony/Leinsdorf (RCA FTC 3007)</td>
<td>Ansermet is the more straightforward, Bernstein the more highly personal (with a very measured first-movement tempo); the powerful drama and tragedy of the score are devastatingly communicated to me by Bernstein. In the absence of the now deleted Ansermet tape, my recommendation goes by default to Leinsdorf.</td>
</tr>
<tr>
<td><strong>RACHMANINOFF: Piano Concerto No. 2, in C Minor</strong></td>
<td>Rachmaninoff, with Philadelphia Orchestra/Stokowski (included in RCA LM 6123); Graffman, with New York Philharmonic/Bernstein (Columbia MS 6634, ML 6934; tape MQ 657)</td>
<td>The past year has wrought no change: the composer's own version is a classic; Graffman and Bernstein seem to me to be the most heroic team among present-day collaborators.</td>
</tr>

IF YOU REALLY VALUE YOUR RECORDS

DON'T UNDERRATE THE GRAM!

(...a commentary on the critical role of tracking forces in evaluating trackability and trackability claims)

TRACKABILITY:
The "secret" of High Trackability is to enable the stylus tip to follow the hyper-complex record groove up to and beyond the theoretical cutting limits of modern recordings—not only at select and discrete frequencies, but across the entire audible spectrum—and at light tracking forces that are below both the threshold of audible record wear and excessive stylus tip wear.

The key parameter is "AT LIGHT TRACKING FORCES!"

A general rule covering trackability is: the higher the tracking force, the greater the ability of the stylus to stay in the groove. Unfortunately, at higher forces you are trading trackability for trouble. At a glance, the difference between ¾ gram and 1, 1½, or 2 grams may not appear significant. You could not possibly detect the difference by touch. But your record can! And so can the stylus!

TRACKING FORCES:
Perhaps it will help your visualization of the forces involved to translate "grams" to actual pounds per square inch of pressure on the record groove. For example, using ¼ gram of force as a reference (with a .2 mil x .7 mil radius elliptical stylus) means that 60,000 lbs. (30 tons) per square inch is the resultant pressure on the groove walls. At one gram, this increases to 66,000 lbs. per square inch, an increase of three tons per square inch—and at ½ gram, the force rises to 75,000 lbs. per square inch, an increase of 7½ tons per square inch. At two grams, or 83,000 lbs. per square inch, a whopping 14 tons per square inch have been added!

The table below indicates the tracking force in grams and pounds, ranging from ¾ gram to 2½ grams—plus their respective resultant pressures in pounds per square inch.

SPECIAL NOTE:
The Shure V-15 Type II "Super-Track" Cartridge is capable of tracking the majority of records at ¾ gram; however state-of-the-art advances in the recording industry have brought about a growing number of records which require 1 gram tracking force in order to fully capture the expanded dynamic range of the recorded material. ¼ gram tracking requires not only a cartridge capable of effectively tracking at ¼ gram, but also a high quality manual arm (such as the Shure-SME) or a high quality automatic turntable arm capable of tracking at ¾ gram.

TESTS:
Our tests, and the tests of many independent authorities (see Note No. 2), have indicated two main points:

A. At tracking forces over 2 or 2½ grams, vinylite record wear is dramatically increased. Much of the "high fidelity" is shaved off of the record groove walls at both high and low ends after a relatively few playings.

B. At tracking forces over 1½ grams, stylus wear is increased to a marked degree. When the stylus is worn, the chisel-like edges not only damage the record grooves—but tracing distortion over 3000 Hz by a worn stylus on a brand new record is so gross that many instrumental sounds become a burlesque of themselves. Also, stylus replacements are required much more frequently. The chart below indicates how stylus tip life increased exponentially between ½ and ¾ grams—and this substantial increase in stylus life significantly extends the life of your records.

RELATIVE AVERAGE TIP LIFE VS. TRACKING FORCE

No cartridge that we have tested (and we have repeatedly tested random off-the-dealer-shelf samples of all makes and many models of cartridges) can equal the Shure V-15 Type II in fulfilling all of the requirements of a High Trackability cartridge—both initially and after prolonged testing, especially at record and stylus saving low tracking forces. In fact, our next-to-best cartridges—the lower cost M91 Series—are comparable to, or superior to, any other cartridge tested in meeting all these trackability requirements, regardless of price.

NOTES:
1. From calculations for an elliptical stylus with .2 mil x .7 mil radius contact points, using the Hertzian equation for indentors.
2. See HiFi/Stereo Review, October 1968; High Fidelity, November 1968; Shure has conducted over 10,000 hours of wear tests.

<tbody>
<tr>
<td><strong>RACHMANINOFF:</strong> Piano Concerto No. 3, in D Minor</td>
<td>Cliburn, with Symphony of the Air/Kondrashin (RCA LSC 2355; tape FTC 2001)</td>
<td>Cliburn virtually owns this work for our time. The 1958 sonics of his disc are now showing their age—is there a Cliburn-Ormandy-Philadelphia collaboration in RCA's future?</td>
</tr>
<tr>
<td><strong>RAVEL:</strong> Boléro</td>
<td>New York Philharmonic/Bernstein (Columbia MS 6011, ML 5293; tape MQ 522)</td>
<td>Bernstein's is still the version that makes the most musical sense to me.</td>
</tr>
<tr>
<td><strong>RAVEL:</strong> Daphnis and Chloé</td>
<td>Complete: Suisse Romande Orchestra/Ansermet (London CS 6546) Boston Symphony/Munch (RCA LSC 2568) Tape: London Symphony/Monteuex (London L 80054) Second Suite only: Chicago Symphony/Martinson (RCA LSC 2806; tape FTC 2196)</td>
<td>Munch has atmosphere and splendid virtuosity in the orchestral playing; Ansermet gets clearer recorded sound.</td>
</tr>
<tr>
<td><strong>RESPIGHI:</strong> The Pines of Rome and The Fountains of Rome</td>
<td>New Philharmonia Orchestra/Munch (London 21024; tape L 75024) NBC Symphony Orchestra/Toscanini (RCA Victrola VIC 1244)</td>
<td>As in the Daphnis and Chloé above, Munch creates a vivid atmosphere, and he secures brilliant playing from the orchestra; here he is also the beneficiary of luminously clear and vivid sonic reproduction.</td>
</tr>
<tr>
<td><strong>RIMSKY-KORSAKOV:</strong> Capriccio espagnol</td>
<td>Hamburg Radio Symphony Orchestra/Monteuex (Vanguard Everyman S 257) RCA Symphony Orchestra/Kondrashin (RCA LSC 2323; tape FTC 2099)</td>
<td>Both Monteuex and Kondrashin—and for that matter Agreta, too (London 6006)—translate the essential spontaneity of this score into an exciting experience. Kondrashin's is the best recorded, and he is dealing with brilliantly virtuosic players.</td>
</tr>
<tr>
<td><strong>RIMSKY-KORSAKOV:</strong> Scheherazade</td>
<td>Royal Philharmonic/Beecham (Angel S 55055; tape ZS 35505) London Symphony/Previn (RCA LSC 3042)</td>
<td>Beecham's recording is still marvelously sophisticated and imaginative; Previn's is a worthy new addition to the lists.</td>
</tr>
<tr>
<td><strong>ROSSINI:</strong> Overtures</td>
<td>NBC Symphony/Toscanini (RCA Victrola VIC 1271) Tape: London Symphony/Gamba (London L 80096)</td>
<td>For sheer vitality, Toscanini's performances are still in a class by themselves.</td>
</tr>
<tr>
<td><strong>SAINT-SAÉNS:</strong> Carnival of the Animals</td>
<td>With verses: Coward, with Kostelanetz Orchestra (Columbia CL 720) Music only: Menuhin and Simon, with Philharmonia Orchestra/Kurtz (Capitol SG/G 7211) Tape: no satisfactory reel available</td>
<td>The straightforward and musically direct performance conducted by Kurtz is very satisfying; if you like Ogden Nash with your Carnival, the verses are delivered with absolutely perfect slyness by Noel Coward.</td>
</tr>
<tr>
<td><strong>SAINT-SAÉNS:</strong> Symphony No. 3, in C Minor</td>
<td>Boston Symphony/Munch (RCA LSC 2341; tape FTC 2029)</td>
<td>The Munch-Boston Symphony performance is still a model of cumulative tension, brilliantly played and excitingly recorded.</td>
</tr>
<tr>
<td><strong>SCHUBERT:</strong> String Quintet, in C</td>
<td>Vienna Philharmonic Quintet (London CS 6441; tape L 80185)</td>
<td>The seraphic elegance of the playing by the Vienna Philharmonic Quintet is still supreme.</td>
</tr>
<tr>
<td><strong>SCHUBERT:</strong> Piano Quintet, in A, &quot;Trout&quot;</td>
<td>Peter Serkin and friends (Vanguard VSD 2055; tape C 1715)</td>
<td>Peter Serkin and his colleagues bring great ebullience and vitality to their performance.</td>
</tr>
<tr>
<td><strong>SCHUBERT:</strong> Symphony No. 5, in B-flat</td>
<td>Royal Philharmonic/Beecham (Capitol SG/G 7212) Tape: Columbia Symphony/Walter (Columbia MQ 391)</td>
<td>Mauzle's reading (Deutsche Grammophon 138085) is perhaps the most imaginative, but this disc has been deleted and may be hard to find. Both Beecham and Walter offer affectionate accounts of the music.</td>
</tr>
<tr>
<td><strong>SCHUBERT:</strong> Symphony No. 8, in B Minor, &quot;Unfinished&quot;</td>
<td>New York Philharmonic/Walter (Columbia MS 6218, ML 5618; tape MQ 391)</td>
<td>I may always prefer Bruno Walter's unique mellowness and tender warmth in this score.</td>
</tr>
<tr>
<td><strong>SCHUBERT:</strong> Symphony No. 9, in C</td>
<td>Berlin Philharmonic/Furtwängler (Heliodor S 25071) London Symphony/Krips (London CS 6061; tape L 80015)</td>
<td>The extraordinary vibrance and fluidity of Furtwängler's reading are truly enhanced by Heliodor's splendid artificial stereo sound.</td>
</tr>
<tr>
<td><strong>SCHUMANN:</strong> Cello Concerto, in A Minor</td>
<td>Rostropovich, with Leningrad Philharmonic/Rozhdestvensky (Deutsche Grammophon 186674; tape C 8674)</td>
<td>Continuing to lead the field is the sensitive and penetrating performance by Rostropovich. (Continued on page 52)</td>
</tr>

</table>
Four years ago, the Dual 1019 was years ahead of its time.

And it still is.

Of course, the Dual 1019 did start out in life with all the advantages an automatic turntable could have.

For example, a tonearm that could track well below the minimum tracking force recommended for any cartridge made (and still can). Plus, the ability to spin records at selected variable speeds for special purposes (as well as dead-accurate speed for ordinary purposes). And a unique cueing system that not only allows you to lower the tonearm slowly and smoothly on any portion of the record, but can also be used with automatic start.

After we gave the 1019 everything we could, we let the professionals put it to the test.

Results? The 1019 (and every other Dual since) has lived up to or surpassed every single claim we’ve ever made.

Not only that, but every Dual model also exceeds NAB standards for broadcast turntables in rumble, wow, flutter and speed accuracy. (We'll be glad to send you reprints of the test results, exactly as published.)

It’s no wonder that most professionals who earn their living in the hi-fi business have Dual turntables in their own component systems.

Today, there are four Duals available. Ranging from the 1212 at $79.50 (introduced a few months ago) all the way to our four-year old 1019 at $139.50. They’re all included in our full-color brochure which is also yours for the asking.

Whichever one you choose, you’ll be getting a 1969 automatic turntable with the exclusive Dual features and precision performance that keep it years ahead of its time.

<tr>
<td>SCHUMANN: Piano Concerto, in A Minor</td>
<td>Lipatti, with Philharmonia Orchestra/Karajan (Odeyssey 32 16 01141) Rubinstein, with Chicago Symphony/Giulini (RCA LSC 2997) Freire, with Munich Philharmonic/Kempe (included in Columbia MX 798) Tape: Fleisher, with Cleveland Orchestra/Szell (Epic EC 812)</td>
<td>That his performance can be listed along with Lipatti's fleet-fingered and deeply perceptive version and Rubinstein's noble conception is a measure of the success achieved by Freire, a new artist on the international scene.</td>
</tr>
<tr>
<td>SCHUMANN: Symphony No. 1, in B-flat, &quot;Spring&quot;</td>
<td>Berlin Philharmonic/Kubelik (Deutsche Grammophon 1588660; tape C 88660)</td>
<td>Despite some patches of less than perfect orchestral ensemble, Kubelik's recording seems to me more spontaneous and joyful than any other.</td>
</tr>
<tr>
<td>SCHUMANN: Symphony No. 4, in D Minor</td>
<td>Symphony of the Air/Stokowski (United Artists UAS 8000; tape JATC 2209)</td>
<td>The Stokowski recording is now no longer listed in either the Schwann or the Harrison catalogs. But no other conductor currently in the lists has so intuitively captured the brash and boisterous vitality of this score. This one is worth an arduous search.</td>
</tr>
<tr>
<td>SHOSTAKOVICH: Symphony No. 1, in F</td>
<td>New York Philharmonic/Bernstein (Columbia MS 6115; ML 5415; tape MQ 375)</td>
<td>The cumulative drama of the Bernstein performance makes it the standout version for me, though the Previn-London Symphony reading for RCA is a strong alternative.</td>
</tr>
<tr>
<td>SIBELIUS: Symphony No. 1, in E Minor</td>
<td>Vienna Philharmonic/Maazel (London CS 6375; tape K 80162)</td>
<td>Despite the release of several new performances since last year, the passion and drama of Maazel's version still carry the day for me.</td>
</tr>
<tr>
<td>SIBELIUS: Symphony No. 2, in D</td>
<td>Concertgebouw Orchestra/Szell (Philips 800092) London Sinfonia/Hannikainen (Crossroads 22 16 0226) Tape: Vienna Philharmonic/Maazel (London K 80162)</td>
<td>The Crossroads release of the 1959 recording by the late Tauno Hannikainen adds another first-rate performance to the lists. Szell's is on a higher level of emotional intensity, however.</td>
</tr>
<tr>
<td>SIBELIUS: Symphony No. 5, in E-flat</td>
<td>New York Philharmonic/Bernstein (Columbia MS 6749; tape MQ 765)</td>
<td>Bernstein still best molds this score's diverse elements—its strength, nobility, sensitivity, poetry—into a totality.</td>
</tr>
<tr>
<td>SMETANA: The Moldau, from My Fatherland</td>
<td>RCA Victor Symphony/Stokowski (RCA LSC 2471; tape FTC 2058)</td>
<td>Stokowski's sorcery imbues this much-played work with a new freshness and dynamism.</td>
</tr>
<tr>
<td>STRAUSS: Don Juan</td>
<td>NBC Symphony/Toscanini (RCA Victrola VIC 1267) New York Philharmonic/Bernstein (Columbia MS 6822; tape MQ 779)</td>
<td>Toscanini's rendering has a quite unique imaginative impetuosity; among modern performances, Bernstein's is my preference.</td>
</tr>
<tr>
<td>STRAUSS: Ein Heldenleben</td>
<td>Los Angeles Philharmonic/Mehta (London CS 6608) Royal Philharmonic/Beecham (Seraphim S 60011) Tape: Boston Symphony/Leinsdorf (RCA FTC 3006)</td>
<td>Mehta's recent recording stamps him as a superb interpreter of this score; it also proves conclusively that the Los Angeles Philharmonic now belongs in the front rank of the world's orchestras. Beecham's budget-price disc is also fine.</td>
</tr>
<tr>
<td>STRAUSS: Till Eulenspiegel's Merry Pranks</td>
<td>NBC Symphony/Toscanini (RCA Victrola VIC 1267) New York Philharmonic/Bernstein (Columbia MS 6822; tape MQ 779)</td>
<td>Toscanini's performance is the one for unbridled excitement, Bernstein's for snap and spirit.</td>
</tr>
<tr>
<td>STRAVINSKY: The Firebird—Suite</td>
<td>London Symphony/Stokowski (London 21026; tape L 75026) BBC Symphony/Boulez (Columbia MS 7206)</td>
<td>Stokowski's performance of the more familiar sequence of movements from the complete ballet is hair-raising in its orchestral brilliance and sonic splendor; Boulez uses the original 1910 Suite (it omits the Lecace and Finale), and he, too, scores a triumph.</td>

(Continued on page 54)
Now you can sit anywhere... hear everything. Perfectly.

Two Grenadiers can make any room sound like Carnegie Hall... no matter where you put them. Because they're the only speaker systems totally engineered for full-dispersion, full-fidelity stereo.

- You hear lifelike, perfectly-balanced bass everywhere, because Grenadier woofers face downward. No other placement gives you such instant, full-circle sound dispersion. No other design eliminates standing waves for uniform sound throughout the room, full-bodied sound that doesn't need walls or corners to reinforce it.

- You hear all the highs wherever you are, because Grenadier's wide-angle acoustic lens spreads the music across a 160° arc... more than double the dispersion of ordinary speakers, with no need to aim or angle.

- What you hear is spectacular sound: music as only Grenadier's massive drivers can reproduce it. Bass all the way down to 20 cycles from a 15-inch woofer built around an 18-pound ceramic magnet structure. Living presence from a mesh- less midrange direct radiator. Crystal-clear highs through an ultrasonic domed tweeter with a low-mass aluminum voice coil.

All together, a three-way system with enough magnetic power to lift a ton of steel. A speaker system that can turn 100 watts of amplifier power into enough music to fill a concert hall.

Or to make your living room sound like one.

Anyone who wants the best, and is worried about spending an extra $20, ought to have his ears examined.

Look at what you're getting for the extra $20.00.

The Papst hysteresis motor for reduced noise and rumble, unvarying speed accuracy. An exclusive feature of the Miracord 50H.

The cartridge insert with slotted lead screw for precise stylus overhang adjustment. Without this Miracord exclusive, your whole investment in a record-playing instrument could go down the drain. Because if the stylus overhang is incorrect, the finest cartridge will not track accurately.

The exclusive Miracord pushbuttons—the gentlest touch is all that's needed to put the 50H into automatic play (stacks of 10 or single records). Or you can start the turntable and play single records manually by simply lifting the arm and placing it on the record.

In addition to these exclusive features, the Miracord 50H offers a metal cam (not plastic) for greater reliability; piston-damped cueing; effective anti-skate; a dynamically balanced arm that tracks to ½ gram.

Finally, consider what the leading experts are saying about the Miracord 50H. That $20 bill looks pretty tiny now, doesn't it? Miracord 50H less cartridge arm and base, $159.50. The Miracord 620 ($99.50) and the Miracord 630 ($119.50) follow in the great tradition of the 50H. See what we mean at your hi-fi dealer. Benjamin Electronic Sound Corp., Farmingdale, N.Y. 11735. Available in Canada.

MIRACORD 50H

Stanton 681SE

By JULIAN D. HIRSCH and GLADDEN B. HOUCK

Phono cartridges, like most audio components, seem to get better and better each year. As we tested a number of cartridges for the annual July cartridge report, we were struck by the great sonic similarity between most of the units, and by the clear superiority of a few of them.

In testing cartridges, we are faced with measurement problems not unlike those of speaker testing. Armed with an imposing array of special test records, we measured most of the obvious characteristics of a cartridge, including the required tracking force, output-signal level, frequency response and crosstalk, square-wave and tone-burst distortion, and intermodulation distortion. When you examine our test data, presented in somewhat abbreviated form with the individual cartridge reports, you may be more impressed by their similarities than by their differences. So were we. Even where a difference appeared, it was not always obvious what its audible subjective effect, if any, would be. One must conclude, as we did, that these tests, valuable as they may be as an indication of various factors, are not in all cases measuring what we hear, since there are some differences in the sounds of the various cartridges that do not seem to be related to the measured data.

Inevitably, as with loudspeaker testing, we rely on our ears for the final judgment. By playing a standardized series of difficult-to-track musical excerpts, we were able to determine, in a rough fashion, how well each cartridge could play heavily cut recordings without "shattering" (break-up) distortion. Also, by playing a number of commercial pressings, and switching in an A-B fashion between two cartridges, we were often able to detect and evaluate the very subtle differences that distinguish the outstanding product from the merely good one.

For testing, we installed each cartridge in a Shure-SME 3012 arm. Using Cook and Fairchild test records (no longer available) that have very high recorded velocities at low and medium frequencies, we determined the minimum tracking force required to play them. This force, which in every case was lower than the manufacturer's recommended maximum, was used for the subsequent tests.

We measured intermodulation distortion (IM) with the RCA 12-5-39 record at velocities from 4.3 centimeters per second (cm/sec), an average recording level, to 27.1 cm/sec, which is probably far greater than would normally be encountered on all but a few commercial stereo discs. This test is a measure of mid-range tracking ability, and does not correlate particularly well with the way the cartridge handles high-velocity, high-frequency material.

Many of the cartridges tested showed a rapid distortion rise above 15 to 20 cm/sec, while some could play the full 27.1 cm/sec without serious distortion. At low levels, a distortion of about 1 per cent is typical, although some measure as low as 0.5 per cent. Actually, it appears that the ability to play the high velocities of this record has little to do with the more subtle differences that one hears between cartridges when they are playing normal musical material.

Much more important, we believe, is the ability to...
play actual records of music without "shattering" distortion. The Shure "Audio Obstacle Course" record is our test medium, and by assigning arbitrary numerical demerits every time a cartridge mistracked, we arrived at a crude quantitative rating. To show how much things have improved recently, only two years ago many cartridges scored over 100 demerits (not very good), and scores less than 20 were rare; this year the average was in the low 20's, none exceeded 50, and the best were in the 8-to-12 region. We do not publish the actual scores, which are easily misinterpreted, but we gave them great weight in our own evaluation.

We measured output voltage, frequency response, and channel separation with the CBS STR-100 record, using an automatic chart recorder to plot the response curves. The curves shown in each cartridge report are exactly as measured (averaging the two channels) except that we have applied a correction factor to the response below 500 Hz for an ideal RIAA-reproducing characteristic. In any case, departures from a flat response below 500 Hz result from record and preamplifier characteristics, since cartridge design has almost no effect on low-frequency response (above 40 Hz, at least). Our test record had been used for many other cartridge tests, which had affected its high-frequency response and introduced a slight peak around 15 kHz (1 kHz = 1,000 Hz), and some loss at 20 kHz. Since we depended on this measurement mostly for a comparison between cartridges rather than an absolute, objective response curve, this peak was not eliminated from the frequency-response curves, but we made allowances for these effects in our evaluations and descriptions.

The sensitivity of a cartridge to induced hum from external magnetic fields, such as those surrounding a power transformer, was measured with our own test jig, which provides us with purely relative information. All the cartridges tested were adequately shielded for normal use, but there was a 20-dB difference among them; therefore, anyone whose audio installation has a tendency to pick up electromagnetic hum should choose one of the cartridges that we have listed as better than average in this respect.

The transient response of each cartridge was measured with the square-wave bands of the CBS STR-110 record, and with the sweeping tone bursts of the new STEREO REVIEW SR-12 test record. Oscilloscope photos of the square-wave response give a clue to the frequency and amplitude of the high-frequency stylus resonance. Unfortunately, the SR-12's sweeping tone-burst test does not lend itself to photography or to the exact determination of the frequency at which a response irregularity occurs. Almost every cartridge showed some amount of distortion of the tone-burst output at the highest frequencies (about 20 kHz), and we have commented on this in

---

**How to Interpret the Curves**

The upper curve in the frequency response and separation graph represents the averaged frequency response of the cartridge's right and left channels. The lower curve, which starts at 500 Hz, represents the averaged separation between channels. The amount of separation at any frequency is indicated by the vertical distance between the upper and lower curves, and is expressed in decibels.

Inset at the lower left of the frequency-response graph is an oscilloscope photograph of the cartridge's response to a 1,000-Hz square wave on a test record. The shape of the reproduced wave is an indication of a cartridge's high- and low-frequency response and resonances.

Note that the distortion figures shown in the distortion-vs.-recorded-velocity graph are not directly comparable, in terms of audible effect, with distortion figures obtained on other components. The vast majority of the program material on discs has velocities well below 15 cm/sec and rarely hits as high as 25 to 30 cm/sec. The curve is therefore useful as a means of comparing cartridges, but not as an indicator of absolute distortion. With most cartridges, the distortion at the higher recorded levels decreases as the tracking force is increased. However, with average program material, the distortion remains about the same over the range of rated tracking forces.

---

the individual cartridge reports. Some were quite poor in the highest octave, while one was near-perfect. The analogy to our use of tone bursts in speaker tests suggests that these responses should correlate with sound quality, and they seem to in most cases.

For listening tests, we mounted two arms on the same turntable, switching between cartridges in pairs, and listening for differences when playing the same passages. This, in the final analysis, is the best and perhaps the only way to detect the real differences between closely comparable cartridges. As in our previous tests, we found that most cartridges sounded pretty much alike, and even where differences were audible it was not easy to decide which was better. However, we did determine, to our satisfaction, that three cartridges of the group were audibly superior to the others. Please understand that the differences were quite subtle, and could be detected only by a direct A-B comparison. While not everyone might agree with our choices, we will offer them for what they are worth.

In view of the impressive $100 price tag on the ADC-25, we expected it to be good, and we were not disappointed. In the A-B tests, this cartridge had a silkiness, definition, and an indefinable "open" quality which set it apart from most others. Frankly, we cannot account for this open quality, but it was always apparent when switching from any other cartridge to the ADC-25. It was a totally easy cartridge to listen to, with any record.
Incidentally, its compliance is very great, and it should be used in only the best of arms, with low friction and low mass.

We were not as fortunate in detecting differences between its three interchangeable styli. Perhaps with an unlimited budget of time and choice of records we could have heard differences, but as it was, we must report no difference, measurable or audible, between the styli. We would like to see the ADC-25 sold with only one stylus, at a lower price—a step that ADC is considering.

The Elac STS-444-12 aroused our special interest because of its outstanding tracking ability (the best of the group and unsurpassed by any other cartridge we have tested) and because of its practically perfect tone-burst response, which was not approached by any of the other cartridges. Intuitively, we knew it had to sound good, and it did. We would have a hard time deciding between it and the ADC-25. It sounded different—perhaps not quite as open or warm—but very, very good.

The ultimate surprise came from the $9.95 Grado FTR. Past experience with Grado cartridges has taught us that they often sound much better than their price or measured performance would indicate. Even so, we were not prepared for the FTR. Objectively, it checked out well, with good, but not outstanding, tracking and IM distortion, and excellent frequency response and separation. Tone bursts and square waves were also good, though not the best of the group.

It was in listening quality that the Grado FTR excelled. Its clarity and definition, particularly at the high frequencies, were equal to any cartridge we have heard. Though not as warm and relaxed sounding as the ADC-25, it brought a freshness to some of our records that we had not realized was in them. If its 2-gram tracking force does not present a problem, it certainly is an exceptional buy.

To summarize, the top three this year include one selling for $100 and one for less than $10, and we would not have an easy time choosing between them on the basis of hearing alone. The Elac, without any special sound of its own, was so smooth and sweet sounding that it clearly deserved its place with the others.

We compared these cartridges with the top units of the past two years (Empire 999VE, Shure V-15 Type II, and Stanton 681EE). Good as they were and are, they have been equaled by the newcomers. This is the nature of progress, and we have no doubt that next year some new cartridges may equal or outperform the three we have chosen this year.

If we seem to have ignored the other nine cartridges tested, it was merely because no one of them seemed to be clearly superior to the others. There were differences in sound, to be sure, but mostly of such a nature that individual taste would be the deciding factor. All had one or more failings in their measured performance which kept them from the top category, although we should mention the exceptional channel separation of the Goldring G800 Super E, which was not equaled by any of the others. Another problem was that we could not critically compare each cartridge against all of the others in listening tests, for reasons of time. We had to content ourselves with comparing each with the ADC-25, as representative of the best available, and it emerged the better choice from each such comparison.

Please understand that all the cartridges are good ones—good enough so that we could be perfectly happy living with any of them. But, even though they are nearly equal, some are a "bit more equal" than others.

---

**AUDIO DYNAMICS ADC-25**

* The ADC-25 enjoys the distinction of being the most expensive cartridge on the market. It is called a "cartridge system" by its maker, since the cartridge is supplied with three easily interchangeable styli of different dimensions, to suit various types of record grooves.

The two elliptical styli have radii of 0.3 x 0.7 mil and 0.3 x 0.9 mil, respectively. According to ADC, the degree of record wear and the groove depth will determine which of the two ellipticals will sound better. The spherical stylus has a radius of 0.6 mil and is designed for optimum performance with RCA Dynagroove and other records that incorporate "pre-distortion" to reduce tracing distortion in playback. All the styli have similar compliance and tracking-force requirements, and all are intended to be used from 0.5 to 1.25 grams force.

We made our measurements with the 0.3 x 0.7-mil stylus, and spot checked the other two to assure ourselves...
that they would give the same results (they did). A 1-gram force was used throughout. The output of 2.5 millivolts was among the lowest we have measured, but ADC informs us that future production versions will have somewhat more output. The ADC-25 was slightly more sensitive to induced hum than most of the others tested, but not significantly so. In any case, with components that match the quality of this cartridge, no difficulty from either cause will be experienced.

In its tracking ability, the ADC-25 was one of the top-ranking cartridges we have tested. Its frequency response was exceptionally smooth, with no significant resonance or response peak. Separation exceeded 20 dB up to about 8 kHz, and became approximately 5 dB at 15 kHz and higher. The ADC-25 tracked 19.8 cm/sec at 2 per cent IM distortion. Its square-wave response was nearly perfect, and the tone-burst response showed only a slight irregularity at 20 kHz. Price: $100.

ELAC STS-444-12

In last year’s tests, the Elac STS-444E proved to be one of the better cartridges in our test group. In this year’s survey, we checked the STS-444-12, which is the same cartridge with a 0.5-mil spherical stylus instead of the elliptical stylus used in the 444E. Whether because of normal production tolerances, product improvement, or the different stylus dimensions, the STS-444-12 emerged as distinctly superior to the cartridge previously tested, and it is in fact one of this year’s top three.

The STS-444-12 is rated for tracking forces of 0.75 to 1.5 grams, and we were able to operate it at 1 gram. Its output was 3.3 millivolts, with average hum-shielding effectiveness. Its tracking ability was outstanding and equal to the best cartridges we have tested. The STS-444-12 had a smooth frequency response, with a slight rise at 14 kHz. Its separation was 25 to 30 dB up to 8 kHz, reducing to 5 to 10 dB above 10 kHz.

In our IM tests, the Elac STS-444-12 tracked 17.5 cm/sec at 2 per cent distortion. Its square-wave response was excellent, with no detectable ringing and only one slight overshoot. The tone-burst response of this cartridge was nearly perfect, and it was easily the best of this group of cartridges in this respect. Price: $59.50.

GOLDRING G800E MK II AND G800 SUPER E

Last year we reviewed the newly introduced Goldring G800E cartridge, imported from England by IMF Products of Philadelphia, Pa. For the current report, we tested a more refined version, the G800 Super E, as well as a recent production model of the G800E, the Mk II.

Both cartridges use a 0.3 x 0.8-mil elliptical diamond stylus. The G800E is rated for tracking forces from 0.75 to 1.5 grams, while the Super E operates from 0.5 to 1.25 grams. By our tracking criteria, the G800E required 1.5 grams, and the Super E could track at 1 gram. Its vertical compliance was so great, in fact, that forces exceeding 1 gram caused the cartridge body to contact the record surface.

The output of the G800E was 3.6 millivolts, while the G800 Super E had the lowest output of any of the cartridges tested—2.2 millivolts. Its susceptibility to induced hum was somewhat greater than that of the other cartridges tested, but not sufficient to cause any problem in actual use.

The tracking ability of the Super E was just below
the top-performing cartridges tested, while the G800E was noticeably behind the Super E in this respect. Both cartridges had very smooth frequency response up to 20 kHz, with the G800E slightly flatter than the Super E above 10 kHz. The channel separation of both units was excellent. In fact, the Super E had the best separation of any of the cartridges tested in this group. It exceeded 30 dB up to 6 kHz, and was more than 10 dB all the way to 20 kHz.

The G800E had 2 per cent IM distortion at 19.4 cm/sec, and the Super E reached this distortion level at 16.3 cm/sec, using the 1-gram force. Their square-wave responses were quite similar, nearly ideal with very slight ringing (the Super E square wave is shown). Both cartridges had exceptionally good tone-burst response, with only a slight irregularity at 20 kHz. Price: G800E, $49.95; G800 Super E, $69.50.

**EMPIRE 808E**

*The Empire 808E cartridge, designed to operate over the relatively wide range of stylus forces from 1 to 4 grams, has a 0.4 x 0.9-mil elliptical diamond stylus. The relatively moderate ellipticity of this stylus makes it practical to use the higher tracking forces without damage to record grooves. In our test, the 808E required 2 grams for optimum tracking.*

Its output was 5 millivolts, and its hum shielding was somewhat better than average. In tracking ability, the 808E had a low ranking among this group of cartridges, but nonetheless tracked in a perfectly satisfactory manner. In the rankings of a year or two ago, it would have stood higher, but many of the newer cartridges reflect the continuing improvement in cartridge performance, and the 808E, while a good unit, is a slightly older design.

The Empire 808E had a pronounced peak in its response at 14 kHz, but separation was very good over the full frequency range. It exceeded 30 dB at mid-frequencies and is better than 8 dB all the way to 20 kHz.

The 808E tracked 20.2 cm/sec at 2 per cent IM distortion. Its square-wave response showed one cycle of ringing at 15 kHz, followed by several rapidly damped low-level ringing cycles. The tone-burst response was good to 10 kHz, but was quite irregular in the highest octave. Price: $29.95.

**EMPIRE 888VE**

*The Empire 888VE is a lower-cost version of the 999VE, which was one of the best cartridges tested last year. Its physical appearance is similar to that of the 808E, and it is the most refined version of the 888 series, available with a choice of five stylus assemblies. The 888VE has a 0.2 x 0.7-mil diamond, rated for operating forces between 0.5 and 2 grams. We used a tracking force of 1.5 grams in our tests. The output was 4.2 millivolts, with average hum-shielding effectiveness. Tracking ability was very good, though slightly below the 999VE and the top cartridges in the current tests. The frequency response was smooth to 20 kHz, and the separation was very good, varying from 30 dB at mid-frequencies to better than 10 dB between 15 kHz and 20 kHz. The 888VE had 2 per cent IM distortion at 13 cm/sec when operating at 1.5 grams. Increasing the tracking force to 2 grams enabled it to track 22.3 cm/sec at 2 per cent distortion. The square-wave response showed only one cycle of ringing with excellent damping. The tone-burst response showed some ir-
regularity in the uppermost octave, from 10 kHz to 20 kHz. Price: $59.95.

GRADO FTR

- The FT Series is a new cartridge design by Grado Laboratories that is available with several interchangeable styli. The unit we tested was fitted with a 0.6-mil spherical stylus, designed for a tracking force of between 1.5 and 3.5 grams. We used a 2-gram force.

The FTR had an output of 5.1 millivolts, with hum shielding slightly less effective than average. Its tracking ability was very good, ranking just below the top cartridges. The frequency response was smooth all the way to the 20-kHz limit of the test record, with only a slight rise in the 15-kHz region. Channel separation was exceptionally uniform with frequency and was closely matched between channels. It was 20 dB or better up to 10 kHz, reached a minimum of about 10 dB at 15 kHz, and exceeded 20 dB at 20 kHz.

The FTR tracked 19.3 cm/sec at 2 per cent IM distortion. Its square-wave response had only a single overshoot, with negligible ringing. The tone-burst response showed some irregularity just above 10 kHz, but was otherwise excellent all the way to 20 kHz. Price: $9.95.

PICKERING XV-15/750E

- The XV-15/750E is Pickering's top-of-the-line cartridge. The same cartridge body is available with a choice of nine styli, making it perhaps the most universally applicable cartridge on the market. The built-in brush rides on the record ahead of the stylus, and does a fairly good job of record cleaning and a fine job of keeping the stylus from getting clogged with dust.

The 750E stylus, used in the tested cartridge, is a 0.2 x 0.9-mil elliptical diamond, designed to track between 0.5 and 1 gram. We used 1 gram in our tests. The output was 3.3 millivolts, with hum shielding slightly less effective than average. The tracking ability of the XV-15/750E was very good, only slightly behind the highest ranking cartridges. Its frequency response was exceptionally flat, with little evidence of any high-frequency resonance below 20 kHz. Channel separation was better than 20 dB below 2 kHz, but it reduced smoothly at higher frequencies and was only a couple of decibels above 13 kHz.

The IM distortion reached 2 per cent at 20.2 cm/sec. Square-wave response was very good, with slight ringing at the stylus resonance that appeared to be somewhat above 20 kHz. The tone-burst response was also good except at the very highest frequencies just below 20 kHz. Price: $60.

SHURE M91E, 92E, 93E

- Shortly after Shure introduced their "Hi-Track" series of cartridges, we reported on the M91E (February, 1969 issue), noting at the time that it came very close to matching the performance of their widely acclaimed V-15 Type II at a much lower price.

The M92E and M93E use the cartridge body of the M91E, which snaps into an "Easy-Mount" bracket for simplified installation. Like the M91E, the M92E uses a 0.2 x 0.7-mil elliptical stylus, rated for tracking forces from 0.75 to 1.5 grams. It has a slightly higher output voltage than the M91E, and is rated to track velocities 2 to 3 dB lower than the M91E. The M93E is similar, but has a 0.4 x 0.7-mil stylus designed to operate from 1.5 to
3 grams, and with 1 to 2 dB less "trackability" than the M92E.

Both the M91E and the M92E required 1.5 grams in our tracking tests, while the M93E operated at 2 grams. The M91E had an output of 5.7 millivolts, while the M92E and M93E had 6.5-millivolt outputs, the highest of this year's group of cartridges. Hum shielding was slightly better than average. The M93E tracked slightly better at 2 grams than the M92E did at 1.5 grams, but both ranked just behind the best cartridges in this group and not far from the M91E, which tracked as well as any cartridge we have tested to this date. The M91E IM distortion at the highest velocities was about the same as the M93E, but with a tracking force of 1.5 grams instead of 2 grams. In essence, however, the cartridges had similar distortion characteristics.

All three cartridges had similar frequency-response characteristics. The cartridges had excellent response up to 20 kHz, with a slight peak in the 13- to 15-kHz region. Their channel separation was excellent up to 10 kHz. The M92E lost separation above 11 kHz, while the separation of the M93E remained at 5 to 10 dB all the way to 20 kHz. The M91E showed better separation than either of the others between 10 and 20 kHz.

The M92E and M93E were able to track velocities of 20 to 21 cm/sec at 2 per cent IM distortion. Their square-wave responses were essentially identical, with several cycles of ringing at about 15 kHz (the M91E square wave is shown). The tone-burst response showed considerable degradation between 15 and 20 kHz. The Stereophonic Review SR-12 test record was not yet available at the time the M91E was tested, so we do not have tone-burst response data on it. Prices: M91E, $19.95; M92E, $19.95; M93E, $39.95.

STANTON 681SE

When we tested the Stanton 681EE cartridge last year, it proved to be one of the top-ranking units in respect to smoothness and tracking ability. This year we tested the 681SE, which is the same cartridge body with a less-compliant 0.4 x 0.9-mil stylus. The rated tracking force of 2 to 5 grams suggests that this cartridge may be intended for the rigors of commercial and broadcast service rather than in a pampered home music system.

We found 2 grams to be a suitable tracking force. The output was 4.5 millivolts, and hum shielding was average. Although its tracking ability was good, it did not match that of the 681EE or of several other top-quality cartridges in this respect. The 681SE had a very flat frequency response to 20 kHz, marred only by a sharp (but inaudible) dip at 11.5 kHz. Channel separation was better than 20 dB up to 2 kHz, reducing to 6 dB or less at frequencies above 10 kHz.

The Stanton 681SE tracked 23.8 cm/sec at 2 per cent IM distortion. Its square-wave response was the best of this group of cartridges, with negligible ringing. The tone-burst response was also excellent except at 20 kHz, where it became slightly irregular. Price: $55.

PAST CARTRIDGE REPORTS

The following cartridges reported on in July, 1967, are still available: ADC 10/E Mk II and 220, Empire 808 and 888SE, Shure V-15 Type II and M75-6.

The following cartridges were reported on in the July, 1968 survey: ADC 550-E, Elac STS 241-17, 311-17, and 411E, Empire 999VE, Goldring 800E, Ortofon ML-15, Pickering XV-15/AME/-100, Shure M75-E, Stanton 500-E and 681EE.
Dr. Murray Baylor of the Knox College music faculty presents the Sang Award plaque to Eric Salzman. The accompanying citation read (in part): "He ventures into fields where opinions have not yet been fully formed and is able to seize on and illuminate... whatever he discusses."

Dr. Murray Baylor of the Knox College music faculty presents the Sang Award plaque to Michael Steinberg. The accompanying citation read (in part): "His approach to criticism is that of a thoroughly trained musician with a keen ear for the highest musical standards."

MICHAEL STEINBERG
"Criticism: Why Go On?"

Music criticism in America is in bad repute, and deservedly so. Most of the writing about music in daily papers appalls with its ignorance, caprice, triviality, its intellectual and even journalistic slovenliness, its tone of condescension, its bad prose. The record magazines publish some good criticism, but also much bad; the general magazines, weekly, monthly, and quarterly, do rather poorly on the whole, and most of them ignore music anyway.

Understandably, almost everyone is discouraged about the situation, and many are ready to doubt that music criticism can be a valuable activity at all. As a reader of criticism in fields other than my own, I am convinced of the value of criticism as guidance (to start from something immediate and practical) and as stimulation. When I read such criticism, I notice that most of it is written by persons who are themselves professionally active in the field. The work of historians is criticized by other historians—but criticism of the work that musicians do is not, for the most part, written by musicians. The difference by no means guarantees good criticism of history books, but it does seem to ensure a rather dependable level of incompetence in music criticism.

We do not lack perceptive, informed, and literate persons capable of writing good music criticism. It is true, though, that being a music critic to many people implies a relationship to music that they find unattractive. I am often asked how, after five years and a bit, I like my job on a daily paper. I like it very much indeed and find it humanly and professionally rewarding and stimulating in ways I would not have anticipated; I am, however, also apt to answer that, while I love music more and more, I like concerts less and less. With their limited repertoire and their rigid and uncomfortable packaging generally, concerts give too narrow a view of music. There is, besides, something anomalous about being a consumer by profession. I am convinced that I am a better critic for being in touch with all sorts of musical activities, and a

The Sang Prize for MUSIC CRITICISM

The Elsie O. and Philip D. Sang Prize for Critics of the Fine Arts, sponsored by Knox College, Galesburg, Illinois, is intended to give public recognition to those performing a cultural service in the field of criticism, a profession in which acclaim is seldom given but which has a tremendous effect on success in the arts. The prize, which consists of a $5,000 cash award and a commemorative plaque, was awarded this year in the field of music criticism by a jury that included composer-conductor Aaron Copland, composer Vladimir Ussachevsky, conductor Stanislaw Skrowaczewski, and Prof. Murray Baylor of the Knox College music faculty.

Basing their decision on critical articles and reviews submitted for the prize competition, the jury members selected Michael Steinberg, music critic of the Boston Globe, and Eric Salzman, contributing editor of Stereo Review, as co-winners. Mr. Steinberg, who writes regularly for a number of professional music journals in Europe and the U.S., has been with the Globe since January 1964. He has taught in the music faculties of Princeton, Hunter College, Manhattan School of Music, the University of Saskatchewan, Smith, and Brandeis, and is now on the faculty of the New England Conservatory of Music and a member of the visiting faculty in the Critics’ Training Program at the University of Southern California. Mr. Salzman has been a monthly contributor to Stereo Review since January 1967 and is the subject of this month’s staff biography (see page 104). On the following pages are reproduced the substance of the co-winners’ remarks at the award ceremonies at Knox College on April 27.

—Editor
The critic must stand outside as well as inside. The visible surface of the music world is the result, to a considerable degree, of the interaction between an industrious public-relations effort and a docile public. What gets written about is apt to be whatever makes the best copy, but it is the critic's job to do what the public relations people are not concerned with doing, and it may even be his job to try to undo their work. There is plenty to do. Amid the dreary academicism on one side and the claptrap and gimmickry of the know-nothings on the other, there is even some interesting new music being written. Some of the most fundamental and cherished assumptions about the relation of the audience to music and indeed about the limits of music itself are being questioned. It is a delightful moment to take the risk of standing up, thinking whatever you think, saying it clearly, reporting what you hear and see, not as a missionary or tastemaker or publicist, but as a teacher who hopes to make you truly possess your ideas by stirring you into thinking them up for yourself. It is more than delightful, it is necessary. The failures of criticism are failures of performance, but they do not indicate that criticism is not worthwhile. I see every reason to go on.

—Michael Steinberg

ERIC SALZMAN
"Criticizing Criticism"

The occasion of receiving an award for criticism is, I suppose, as good as any to bring up the painful subject of music criticism—or rather the lack of it—in this country. In simplest terms, one can say that the state of American music criticism is a national disgrace. I say this not with the arrogance of someone who has just won a prize for being a good critic, but as an objective statement of a well-recognized (although not often publicly discussed) fact. I say it as someone who has been active in the field for a decade but now considers himself largely out of the fray—at least as far as day-to-day "professional" reviewing is concerned.

My major activity is composition; my major writing is, with the exception of an article now and then in other publications, confined to Stereo Review. It is only in magazines devoted to records and recording that a meaningful standard of music criticism—intelligent, relevant, informed writing, for a general audience—is maintained. There are deep-seated social and cultural reasons for this, and if we want to understand the present low estate of music criticism in this country, we must take a larger view of the role and history of music and criticism in American life.

"Serious" music—the Western tradition of art music—was imported to this country from Europe, largely as an amusement and fashionable decor for the well-to-do and upper middle class. The role of the critic was, at this stage, that of educator, explicator, and proselytizer. A group of highly literate and very literary music critics developed a kind of elegant music-appreciation approach typified by the writing of such men as James Gibbons Huneker, William Henderson, and Lawrence Gilman; Olin Downes and even Paul Rosenfeld were also of this tradition.

Subsequently, however, when proselytizing for the classics no longer seemed necessary and the general level of performance went past the point at which most critics could tell the difference, their role became that of keepers of the sacred flame. Critics ceased to be interested in the living art of music (they had never been interested in its popular manifestations, but now they abandoned even its contemporary serious forms) and limited themselves to comments (usually clichés) on the interpretation of established classics. The intellectual as well as the larger public promptly lost interest in music criticism entirely.

One of the sources of the problem is the basic lack of interest on the part of our so-called intelligentsia—our intellectual and literary establishment—in music at all. Music is still taken seriously in European intellectual life, and it once was here too. No more. One gets an idea of just how deep the general magazine editor's mistrust of music and writing about music really is when one tries to do freelance articles on music. I was taken to lunch with one prominent and influential gentleman recently who would talk about nothing but international politics (he was sure we were going to war with China any day now), and the implication was clear: next to these issues, music is trivial. Another editor told me even more explicitly: "Well, you know, we have so many more important things." Still another said, "That was a marvelous article you wrote, but it's not really for us. Do you write on anything else besides music?"

It is indeed a wretched situation. Music criticism is hardly even a profession. There are a few vestigial full-time positions, but, with very rare exceptions, these jobs are filled by luck or happenstance—often someone is simply pulled out of the newsroom or off the woman's page. The basic attitude of 99 per cent of the newspapers in this country, starting with the New York Times, is that the critic owes his allegiance not to the art he criticizes, but to the newspaper and its median readership. The critic—or, more accurately, reviewer—is to provide an entertainment guide to help newspaper readers decide whether or not they should see (or should have seen) the show. Critics who actually know something about and are active in the art they write about are definitely not wanted.

These attitudes are prevalent in all the arts, but they hit music the hardest. The result is that serious criticism, knowledgeable criticism, personal criticism, criticism with a broad view, is virtually nonexistent in the daily press or in periodicals of a general nature. Even the bit of reviewing that passes muster for criticism cannot mean anything without a larger context. A critic must have a point of view, he must know something about his art and become part of its history. He is a participant in a dialogue, and must see not only the close-up view—the scrape of the bow on the string—but must also have some larger vision of the relationship of this art to the rest of life. This is perhaps the area in which criticism has really failed most dramatically. Not only have our critics failed to comprehend the revolution that has taken and is taking place in music, not only have they failed to see the relationship of music to contemporary life, but they have walled music off from the rest of experience, creating their own imaginary room which they call "art." Alas, even some of the well-intentioned journals and newsletters dealing with contemporary mu-
sic have, in their reactions to the mani-
tics and misconceptions of so-called
popular journalism, only emphasized
one of its grossest misrepresentations—
that music is an insiders' mystique, un-
connected with the rest of life. The
critic who bumbles about "passionate
sweep" or "impeccable octaves" and
the analyst who straightens us out on
"contiguous diads" and "intersecting para-
ters" are equally irrelevant.

The problem of criticism is actually
part of a wider issue, the crisis of the
traditional institutions of music. Why,
after all, should it matter whether mu-

sic criticism is any good or not? Why,
after all, should performers cringe and
quake at what the New York Times
will or will not say? What is this non-

sense that is still perpetuated about
the "power of the critics" or the "pow-
er of the New York press"? It is, I as-

sumed you, purely and totally a myth,
and, like most myths, it is operative
only so long as people continue to be-

lieve in it.

Well, the myth has long since ceased
to have any reality, and the time has
come to explode it. I mean the myth of
the Carnegie Hall debut and the cheer-
ing audience and the grumpy critic on
the aisle and the rapturous reviews in
the next morning's paper and the calls
from Sol Hurok and the glamorous
career springing therefrom. It is all
pure poppycock; it hasn't happened
that way, outside the movies, in de-
cades. Even Van Cliburn had to get his
start in Russia. And yet, every year,
literally hundreds of aspiring young
singers, pianists, and fiddlers spend
thousands of dollars they cannot afford
to give meaningless recitals, before
papered houses, or, sadder still, a hand-
ful of friends, all in a totally vain and
absurd hope. Still others, already on
their way up (with reputations built
on European tours or recordings), will
hire a hall and paper it

thousands of dollars they cannot afford

for the New York reviews will

influence the New York reviews. Why?
Because they hope that

you have your own opera company?
Kaiserslautern (population 90,000) in
Germany has one. This country is full
of fantastic talent without an outlet—
a fabulous, unused, wasted natural re-
source. Believe me, you are better off
making your own decisions and judg-
ments than trusting those of the critics
—whomever they are.

So who needs criticism? In truth, a

bad deal of it has become simply ir-
relevant. The older print-visual gen-
cration, which reads (or might read)
music criticism, is not interested in the
object of that criticism—the music it-
self. A younger generation grooves on
music, but couldn't he less interested in
criticism. Well, perhaps they are right.
Perhaps real music criticism takes place
in other ways, other places.

There are tremendous changes taking
place in our culture generally and in
music particularly and, as we grope to
understand these changes, we find most
criticism is no help at all; so we look
for other ways, other techniques. Per-
haps a new work, a new composition,
might be a more significant act of criti-
cism than a dozen written critiques!

One of the changes that has had an
overwhelming impact on musical life
is the growth of the recording medium,
and this has a great deal to do with my
being here in the first place. In
fact, although I have been a concert
reviewer, the bulk of my writing has
been about records and my share of
the Sang Award is being given specifi-
cally for a series of articles and re-
views published in Stereo Review in
1968. Concerts retain a residual pres-
tige, but recordings have long since be-
come the principal means of musical
communication, and in fact are now
the major influence on every area of
musical life. Similarly, although jour-
nalistic criticism also retains a residual
prestige, it is only in the record maga-
zine that one can find any amount of
serious, high-quality writing about mu-

sic for the general reader. In fact, the
record magazines are now the only
general music magazines published in
this country.

Of all the publications I have writ-
ten for, Stereo Review is easily the
most far-sighted editorially, and the
most involved and responsive in terms
of what I have to say (this is true of both
editorial management and reader-
ship). The record audience is the real
music audience in this country, and its
involvement and commitment are lit-
erally changing the nature of musical
culture. If music criticism can survive
and make a meaningful contribution
if new talent and new ideas can find a
place to develop and get across, it will
be through the record magazines. In
this sense, Knox College's award to a
record-magazine critic has an impor-
tance that might not be immediately
obvious. I am personally grateful to
the magazine, not only for giving me a
forum, not only for allowing me my
sometimes unconventional and gaudy
views, not only for letting me sound
off on unpopular subjects or dive into
even the most freakish contemporary
music and find a listener, but for a deeper
sympathy for and understanding of what
it is all about. Records and rec-
cord magazines represent the vital
part of living musical culture, not yet en-
tirely anesthetized, sliced up, and pre-
served in so many labeled pickle jars.
They have helped to bring into being a
new audience, and opened this audi-
ence up to kinds of music and musical
experiences that were previously only
esoteric byways in the province of a
few scholars and experimenters. They
have helped make music a relevant
part of contemporary life and opened a
dialogue between the musician and the
listener. In making the whole of hu-
mans musical expression and aural ex-
perience a relevant part of contem-
porary life, they have given music a
past, multiple presents, and, perhaps,
even a future. If criticism survives and
continues to make its own contribution
to music, it will be thanks to them.

—Eric Salzman
INSTALLATION OF THE MONTH

“INSPIRED” STEREO

SINCE the raison d’être for Stereo Review’s Installation of the Month feature is providing our readers with ideas for their own audio installations, we were very much pleased when Paul Muchlinski, of North Platte, Nebraska, wrote to tell us that the ideas for his stereo control panel came from the readers of Stereo Review. And we were even more pleased to see that the inspiration had produced such an attractive installation.

Mr. Muchlinski designed the cabinet with the help of a friend, but had it built by professionals. It is made of book-matched walnut with solid walnut stiles, and it stands 4 feet wide by 6½ feet high. The cabinet is mounted on casters for easier access to the rear. The back of the cabinet is covered with four separately removable sections of peg-board, and a small fan provides additional ventilation for the equipment. The speaker enclosures on either side of the cabinet were manufactured by Barzilay. Each houses a Jensen 15-inch G-600 Triax full-range speaker.

Mounted on the sloping panel of the cabinet are, from left to right, a Concord AM/stereo FM receiver used to drive speakers in the basement recreation room, a McIntosh MX-110 combination preamplifier/stereo FM tuner, and a Monarch four-band communications receiver. The power amplifier, a McIntosh MC-240, is concealed in the large drawer on the right. The drawer on the left is used for storing records and tapes. The two tape decks are a Concord 776D and a Crown SS-822-P.4. The turntable, flush-mounted like the other units, is an Empire 398 with an Empire tone arm and 880P stereo cartridge. In addition to housing the amplifier, the right-hand drawer also provides space for a Fisher K-10 reverberation unit and a home-built switching panel that feeds signals from the various components to the tape decks.

Mr. Muchlinski listens mostly to semi-classical music and writes that “after a busy day, I enjoy the music of Mantovani, the Ray Charles Singers, and the Melachrino Strings, who rate high on my list.”

—HP, HP.
In an imaginary interview, a longtime tourist of the zodiac reports some ancient liaisons between music and astrology

By ROBERT OFFERGELD

The world's Musick is an Harmonie, caused by the motion of the stars, and violence of the Spheres, . . . Now the cause we cannot perceive this Sound according to Pliny is, because the greatness of the sound doth exceed the sense of our ears.

—Andreas Vogelmaier, Musici actae micrologus, Leipzig, 1517
(translated by John Dowland, London, 1609)

Mr. Offergeld: As I understand it, we're supposed to discuss music and . . . Really, I can scarcely bring myself to say it—do you mean to tell me that you believe in astrology?
**Mr. Agonistes:** How can I believe in it? It is not susceptible of clinical demonstration.

**Mr. O.:** Thank heaven—using that expression loosely. For a moment you had me worried. I take it then that actually you disbelieve in astrology.

**Mr. A.:** How can I disbelieve in it? It too often works.

**Mr. O.:** You can’t be serious. How can anybody believe in the occult wasn’t all that superstitious. For example, his humorous deathbed remark—"I think I am about to become a god"—expresses the sardonic view he took of such religious nonsense as the public deification of dead Roman emperors. Yet when police forced him to banish all the Chaldean astrologers from Rome, Vespasian quietly made an exception of his personal stargazer, as being rather too useful an administrative aide to dispense with.

**Mr. O.:** I daresay you expect me to feel that it was perfectly rational of Vespasian to have a staff astrologer, in the first place.

**Mr. A.:** I’ve noticed that many intelligent people do not share the common superstition about being rational. Did you ever see the great Spanish dancer Escudero? His mother was a gypsy, a notoriously strong-minded one. After her son became famous, she systematically threw out everybody who tried to sell him insurance on his feet. In the gypsy view, insurance simply invites disaster, on the theory that when it becomes all that profitable to have bad luck, bad luck is sure to come. Rational, no. Intelligent, yes.

**Mr. O.:** First Chaldean stargazers! Now gypsies! What century is this, may I ask?

**Mr. A.:** Happily, it’s not the nineteenth, which was the first civilized century scared to death of finding these dark perceptions relevant to daily experience. The same century, of course, thought nothing of spending five hours listening to a Wagner opera, and I’d like your opinion on the rationality of that.

**Mr. O.:** Now you’re simply being perverse.

**Mr. A.:** Not at all. Doesn’t it strike you as odd that the nineteenth-century rationalists who were so queasy about astrology were happy to drown themselves in music? From Beethoven’s Fifth to Wagner’s Tristan, the most popular nineteenth-century music is still generally felt to be about death, the dark night of the soul, eroticism—and, above all, fate. Opera, for example, offers the greatest assortment of ill-starred enterprises known to literate man, and it is never more characteristically operatic than when its heroine goes to a fortune-teller, as in Ballo in Maschera, or when she is one herself, like Carmen. Or when the fortune-teller is disguised as a goddess, like that sepulchral old bat Erda in Das Rheingold. The fact is that even quite brainy people love to inspect the dark workings of fate when they are presented in musical form. The music itself provides all the logic needed, and the metaphysics can be conveniently left unstated.

But if it will reassure you, the alliance between music and astrology is not my idea. It was established so long before written history that it must be called aboriginal, and we find it already full-fledged in the oldest myths. In the Philadelphia University Museum you will find some shell plaques that decorated the harp of a King of Ur in Chaldea. They are engraved with zodiacal animals making music on primitive instruments, and they represent episodes in the Babylonian epic about Gilgamesh, twelve incidents of which story gave the zodiac its original twelve signs—"zodiac," as you know, meaning "circle of animals." Likewise, the number of strings on prehistoric instruments always had an astrological significance by way of the lunar calendar. The three-stringed tortoise-shell lyre of the pre-patriarchal Goddess of Heaven referred to her three-season sacred year—spring (the goddess as maiden), summer (as nubile woman), and winter (as tyrannical crone). The seven strings on the classic Chinese zither (the ch’iu) were identified with the five planets then known plus the sun and the moon.

**Mr. O.:** I draw no very clear conclusions from all this.

**Mr. A.:** It might help if we pinpointed the real reason astrology provoked such hostility among the rationalists. I imagine you’ll agree that astrology is the oldest form of metaphysics known—a speculative system based on the empirical observation of planets and people. But the really radical thing about astrology is its intention, an ancient idea but one so bold in the context of modern life that neither theology nor science will touch it with fire-tongs. The real intention of astrology is nothing less than this: to discover a direct and meaningful relation between individuals and the rest of the universe. By a coincidence, it is some sense of precisely this relation that we obtain from great music.

**Mr. O.:** Now hold on. Astrology as a primitive metaphysical system may be everything you say it is. But you are glossing over the nature of its assumptions, which are intellectually disreputable. How can the positions of the planets at the hour of your birth possibly affect your destiny? The notion is utterly arbitrary.

**Mr. A.:** No more arbitrary than some of Plato’s most useful ones—not to mention Arnold Schoenberg’s. You and I may not like some of the uses to which astrology is put—
its vulgarized exploitation in the tabloids, let's say—but its utility is a matter of historical fact.

Astrology proposed a serviceable logic of the irrational, for example, long before psychiatry got around to it. Certain kinds of music are an essay in the same direction, and I sometimes think that astrology's profoundest insight is also its most musical one: namely, its recognition that reality cannot be halted for inspection. Today any bright college freshman can tell you that the real world (as distinguished from a number of simplistic theoretical ones) is always composed of mutating forms. Correspondingly, the human situation—political, biological, historical, what have you—is to be sensed only as a perpetual flux. It is graspable only as music is grasped, being in no case a stasis but always a process. As such, it is only feebly represented by frozen statistical fact—a perception familiar not only to Plato but to the Chinese astrologers who wrote music about it fifteen hundred years before him.

Mr. O.: I grant you that astrology seems to introduce a sort of principle of evolving forms into human biography. But I still fail to understand how this principle validates the underlying occult assumptions.

Mr. A.: I'm coming to that. As it turned out, the historical weakness of astrology was not its occult assumptions but its methodology—which, as I noted a moment ago, is empirical. Through the centuries, astrology amassed an encyclopedic store of astro-behavioral data, but these data were imprecise, being based on trial and error. They therefore became "unscientific" the moment theoretical science replaced the real universe as an object of study with a mechanically plausible laboratory model of it.

Please note that this development, which followed Newton and Leibniz by about a century, described the association of man and the rest of the universe as a purely fortuitous one. Each was discovered to be merely an ingenious contraption, and you'll recall that both were thought to be engaged mainly in running down. No meaningful relation between these two contraptions was discoverable or even desirable, since that might indicate some kind of shaping purpose in nature (and you'll also recall that "teleology" has been the dirtiest word in higher thought for well over a century).

Astrology therefore had to go, and it was not rejected, as you might have thought, after exhaustive inspection of its data. It was rejected a priori as being inexplicable in terms of the closed system of universal truth that science—somewhat prematurely, as it happened—had adopted. Today our college freshman can also tell you that this closed system—particularly its notion of the universe as a Newtonian static Absolute—proved a catastrophic bust all of fifty years ago. Meanwhile the ambitious young scientists who have their hands on the nucleus of the atom (and the genetic codes in our chromosomes—talk about fortune-telling!) have inherited some grave communicational difficulties from their simplistic grandfathers. If we are to judge from certain public statements, not even a Nobel prize guarantees its winner's ability to utter ten coherent words on such subjects as "the meaningful relation of the individual and the rest of the universe."

Perhaps the moment has arrived to give these gentlemen the address of a good astrologer. It might even be helpful if they listened to some of the music that I would like, in a moment, to discuss.

Mr. O.: Do I at this point, and of course with the proper respect, note the birth of a new intellectual discipline—one we might call astromusicology?

Mr. A.: That's fine with me, so long as you also note something else. Unlike some musicologists, I shall attempt to prove nothing. You can no more "prove" a horoscope than you can a fugue. You can only say of either of these forms that it works or it doesn't. If it is successful, its subject is startlingly illuminated and its value is self-evident. The only inference I derive from either project is a practical one: for the best results, you have to consult a pro.

Now it is a curious fact that until the age of Darwin, Marx, and Freud, you could often get the best music and the best horoscope by consulting the same man, who in many cases could also have helped you with your logarithms, conic sections, and celestial navigation. Such men were of course by definition polymaths—the exact opposite of the specialists fashionable today. Pythagoras and Ptolemy were only the best remembered ones in Classical times. Boethius was quoted as the common authority on music and mathematics throughout the Middle Ages (which also carved zodiacal figures on its Gothic cathedrals). In the Renaissance, of course, you were polymath or nothing much, and a notable proficiency in either music, mathematics, or astrology could almost always be taken as prima facie evidence of a serious involvement with the other two.

Mr. O.: But did any of these people ever really write music?

Mr. A.: Some wrote it. Others, and not the least interesting of them, just thought it—like the great seventeenth-century astronomer and mathematician Johann Kepler, a friend of Galileo and Tycho Brahe's pupil.

Galileo was of course the son of the composer-mathematician-lutenist Vincenzo Galilei, who was associated with Jacopo Peri and other Medicean composers in the production of the first lyric drama in the monodic style, a form later called opera. Kepler's teacher Tycho Brahe was the Danish astronomer who approached the astrological aspects of his science as "something divine." After a minute study of the comet of 1577, Tycho made perhaps the most famous prediction recorded outside of Holy Writ. He affirmed that a prince would be born in the north, in Finland, who would lay waste to Germany and vanish in the year 1632. Seventeen years later, Sweden's king Gustavus Adolphus obligingly got born in Finland, subse-
fluently laid waste to Germany in the Thirty Years War, and died in the year 1632. You’ll pardon me for thinking that the U. S. State Department and Pentagon could cultivate a better informed class of scientist than they now do.

Mr. O.: Are you perhaps suggesting that Jean Dixon should get a Cabinet post?

Mr. A.: I’d have to know first how she rates at the infinitesimal calculus and triple counterpoint!

Meanwhile, you’ll admit that Tycho was a hard act to follow, but Kepler managed it nicely. In the early 1600’s, he drew horoscopes for both the Emperor Rudolph II and Wallenstein, who happened to have the job of waging war against the invader predicted by Tycho. Simultaneously, and by his own account, Kepler was led to some of his greatest scientific discoveries by musical analogies. As a mathematician, he explained among other things the eccentric orbit of Mars, the laws of optics, the solar rotation, and the lunar tides—also anticipating, in the view of some later scientists, Descartes’ theory of vortices. In De Harmonice Mundi, summarizing the incredible diversity of his thought in a single world-view, he elaborated a music of truly cosmic origin, analyzing the planetary movements specifically in terms of musical intervals (he assigns a strange little melodic fragment on mi and fa, for example, to the planet Earth).

Among the more noted writers in this genre were the Frenchman Mersennus (Père Mersenne) and the Englishman Robert Fludd (or Flud). In 1626, just seven years after Kepler published his Harmonices Mundi, Mersenne issued Des Paralleles de la musique, in which he enlarges Kepler’s theories of planetary musical intervals. Mersenne expounds a highly detailed relation between these intervals and “colors, tastes, figures, geometrical forms, virtues, vices, sciences, the elements, the heavens, the planets, and many other things.” He proposes a “concert of the planets” in which Saturn and Jupiter take the bass, Mars the tenor, Venus and Earth the alto, and Mercury the soprano. He even finds that the numerical ratios of the intervals correspond to the hierarchies of Being as expounded by the Scholastics, and this leads him to a consideration of inaudible pitches, which he compares to the nine orders of invisible angels surrounding the Holy Trinity.

On the other hand, Robert Fludd’s Monochordum mundi symphonium, published in 1622, takes issue with both Kepler and Mersenne. Fludd was a distinguished and prosperous physician, a Cabalist, and a Rosicrucian, and the precise points of his dissent are a little hard to make out, since he observes that the whole universe, including God’s heaven, is in fact a great musical instrument, its keyboard being the intervals between the angelic hosts, the fixed stars, the planets, and the elements. God figures in this scheme as the tuner of the instrument, and Fludd’s book contains an engraving in which the structure of the universe is derived from the intervals on the Pythagorean monochord.

Mr. O.: Did any of this occult theorizing ever have discernible issue in composed music?

Mr. A.: That depends somewhat on who does the discerning. In my opinion there are definite traces of it as early as the fourteenth century, when occult influences reportedly invaded the church in music by Philippe de Vitry, Guillaume de Machaut, and others. Also, the dark and brooding quality of much medieval Christmas music derives from a mystery much older than the Christian one—namely, the prehistoric ritual of the winter solstice.

But it happens that we also have, as a reference in this matter, some music of great importance composed by a...
practicing astrologer. I was a student, fourteen or fifteen, when I first ran across the name of John Dunstable, plus one of his motets, in a venerable edition of Grove. More interesting to me then than the sound of his motet—at least as played by me on the piano—were the scanty facts of his life. It is certain that this elusive Englishman, in addition to being the chief composer of his age (roughly the interval between the death of Chaucer and the birth of John Skelton) was a widely respected mathematician and astrologer.

AN EXPERIMENT IN ASTROMUSICOLOGY

By Eleanor Bach
and
Robert Offergeld

The beautiful solar chart of Igor Stravinsky.

(3) October 20, 1874, Danbury, Connecticut
(4) June 17, 1882, St. Petersburg, Russia

Each of the persons represented in this list occupies a singular position in the musical history of his time, but one with which only a student of music would be apt to possess an offhand familiarity.

Miss Bach's impressions are given first, after which the subjects are identified in subsequent paragraphs.

(1) May 8, 1829, New Orleans, Louisiana: A very unusual and interesting chart. There are four planets operating with great power in their own signs—the Moon in Cancer, Saturn in Capricorn, Venus in Taurus, and Uranus in Aquarius. This was certainly a conspicuous and superior personality. The Sun, Mercury, and Venus are conjunct in Taurus, giving great aesthetic perception and liveliness of sensation. A rather traditional or conventional sense of structure in his work, but also much emotion and a sense of fantasy. There is great control here but also great moodiness. Something unexpectedly and almost explosively big happens in connection with this person. Also the public is affected by something very sensual and earthy about him. There is an aggressive sexuality and also much concern with death. I would also guess at a public self-control as proverbial. His unflappable public self-control was as proverbial as his private moody. His famous for “monster concerts” with hundreds of performers, including enormous orchestras and in some cases dozens of pianos. His anatory legend was international and perennial, and he was forced to leave the United States and nationally reported scandal. He was profoundly attached to his mother, and although he had innumerable affairs, he never married.

(2) September 13, 1874, Vienna, Austria: This subject is a great revolutionary. Saturn in opposition to Uranus indicates something profoundly revolutionary in relation to the structure of his art, changing or challenging its aesthetic values and theory. Equally clear is a very difficult life: there is a grand cross here, four planets (Uranus-Saturn and Venus-Neptune) in stress aspect to each other. There is a remarkable division or split in these influences. There is sensuality, also a great sense of drama, probably a pioneering one. But the Sun in Virgo gives also a quality of purity and a kind of structural precision. The Moon and Jupiter are in Libra, so that there is a strong melodic trait—but of a peculiar kind, with something involved and intensely moody about it. And yet all these divisive elements are reconciled by thought, a highly pronounced intellectual.

The subject is Arnold Schoenberg, widely felt to be the most revolutionary figure in modern music, perhaps in all music. His promulgation of the serial or twelve-tone method of composition gave modern music an entirely new structural concept, changing both its theory and its aesthetic values. The extraordinary trials of his career are well documented. His early music particularly may be called intensely moody, particularly in his harmonic texture, and his concept of the tone-row may justly be called a molecular peculiarity. He composed numerous works of great dramatic power for the theater as well as dramatic episodes conceived for recitation with orchestra. Even those who disagree with his principles concede his single-minded purity of intention, and no other composer or teacher has ever insisted so relentlessly that all the elements of music shall be subjected to a single intellectual system.

(3) October 20, 1874, Danbury, Connecticut: At first this chart seems similar in a way to the last one, but actually it is very different. This is...
In his day, Dunstable's reputation as a seer must have been great, for John of Whethamstede, Abbot of St. Albans, wrote some Latin verses about him under this English heading: "Upon John Dunstable, an astrologian, a mathematician, a musician, and what not." That "what not" nicely expresses the Abbot's dismay at his subject's versatility, but the verses roundly affirm that Dunstable was: (1) "another Michael" (referring to the chief of the archangels, the only one who knew the secret "word" of the Creation); (2) "a new Ptolemy" (meaning the

a more complicated, much less single-minded person. This subject is very energetic, very busy, much involved in big affairs. He is apparently quite versatile, for the affairs are diversified. There is also, in the preceding chart, a pronounced originality (Uranus opposite Saturn), but here it is less clearly defined. However, theory is just as important for this subject as for the last one, and there is also a strong pioneering force. With Neptune in Aries, this is all stated in a lively, energetic way with great movement. His Moon is situated very close to that of the United States, which speaks of American traditions and feelings. Yet there is also here some difficulty with the public, a difficulty not apparent in the preceding chart. The sextile of Jupiter and Venus indicates an involvement with money, administration in relation to it, affections, and a generally expansive temperament. The relation of Mercury and Pluto indicates a native shrewdness, even something detective-like, in this subject.

The subject is Charles Ives, who after two generations of public neglect is now considered by many to be America's most original composer. Ives' music is much concerned with American history, American philosophical values, and American musical sources. But this composer's originality, which involved polytonal writing, considerable dissonance, and a high degree of ideologial saturation (all of them far in advance of their time), kept the public and the establishment at a distance during his lifetime. As the head of a large insurance company, Ives was much involved in large affairs unrelated to music. In particular, he never committed all his energies to the kind of savagely single-minded fight for his musical principles that Schoenberg did. Both as a businessman and a composer, Ives was involved with large concepts: large groups of clients, large orchestral forces, large social ideas concerned with the common welfare. His shrewdness of mind and verbal pertinacity, both very much in the astringent New England tradition, are a matter of record.

(4) June 17, 1882, St. Petersburg, Russia: What a beautiful chart for a musician! It has Neptune leading or ruling music at one end of the train of planets and Uranus bringing up the other. The Moon is in good aspect for both, harmonizing their influence—and meanwhile the planets are all in one third of the chart, giving this career a beautifully self-contained quality and clarity of aim. This subject is another revolutionary, but in a very different sense than the two preceding. Neptune is conjunct Saturn, which refers to established patterns and respect for tradition, while Uranus brings in a new order—really the avant-garde. Yet Neptune, Uranus, and Saturn are trine, so that the new forms and ideas have a profound relation to the past. Uranus in Virgo gives great originality, also remarkable precision as to detail. The Moon, Venus, and Mercury are in Cancer, a very emotional sign, and in this case also prophetic of new forms and new techniques. Mars is in Leo, indicating a strong sense of theater, and the Sun and Jupiter in Gemini indicate also a deep preoccupation with words. This subject has great sensitivity, great pride, great stubbornness. There is also a strange anger here, perhaps at confusion, deception, or negligence.

The subject is Igor Stravinsky, who is still enjoying what is demonstrably the most lucidly ordered and clearly defined career in modern music. In the early years of the century he led the musical avant-garde into the theater with a succession of revolutionary and epoch-making bullets. Later he led it into a highly formalized neoclassicism, and in still later works, as well as in his extensive polychromatic writings, he proposed a kind of systematic renewal of tradition and of historical materials and disciplines as a basic condition of real progress. His insistence on clarity of statement, his merciless attention to detail, and his general abhorrence of inaccuracy are legendary. His preoccupation with words, with legend and myth, has produced a series of musical settings for important literary texts, including the Psalms, certain Greek classics, and contemporary works by such writers as André Gide and W. H. Auden.

(5) May 10, 1916, Philadelphia, Pennsylvania: This subject is definitely a spokesman for new trends, and such would have a peculiarly disturbing effect. Uranus is in the same degree as the United States' Moon, indicating a certain kind of public response—but it is perhaps a response of consternation, or even disaffection. In certain directions there is a distinct rapport, but there is even more conflict. Unorthodox procedures are indicated, and Mars in Leo gives an emphatic impulse of drama, with a curious regality and great passion in connection with this dramatic situation. Uranus in Aquarius indicates a primary concern with inventions and mechanical matters; in fact, the main configuration of this chart is a T-square, Uranus opposite Mars and both of them square the Sun, which relates some kind of mechanical contrivance to sensation. The challenge of this subject is to do something completely novel, particularly as regards technique. There are many planets in Cancer, and they indicate particularly a concern with structural matters, the human voice, an analytical approach to sound, and also a peculiar obsessiveness. Also indicated are tremendous skill and cleverness. This chart exhibits the same Leo-Aquarius axis as does the second one [Arnold Schoenberg's], but the emphasis is very different. The second subject was a real fighter against tradition, and his revolt against the old forms was the specific issue. But for this subject tradition simply does not exist, and the only issue seems to be the effective dramatization of something completely new.

The subject is Milton Babbitt, the leader and spokesman of a movement devoted to "total serialization" as an organizational device in music and the exploitation of electronically produced and manipulated sound in place of that derived from traditional sources, instrumental or vocal. Babbitt reportedly has no interest whatever in the expressive potential of music, considering its chief value to be the mathematical integrity of its organization. Pieces produced by this composer on an electronic synthesizer are considered by the initiate to be the chief showpieces and also the intellectual justification of his aesthetic theory. These works have won wide academic attention and considerable public resistance. Babbitt unquestionably occupies a dominant if not "regal" position in his academic province, and a recent biographer mentions his "passionate" nature, particularly in relation to his didacticism. Although a great deal of the tradition against which Schoenberg revolted can be deduced from the nature of his revolt, Babbitt's music seems to acknowledge no history but its own and no experience but that of its composer.
second-century Alexandrian astronomer whose Almagest was still the definitive work on planetary and prognostical affairs); and (3) "a youthful Atlas unshakably upholding the heavens."

My early brush with Dunstable presently inspired me with a nagging curiosity: What kind of music would an astrologer be likely to compose, anyway? Nobody I knew of at the time was singing Dunstable's motets and masses, so I had to invent the genus "astrologer's music" in my own fancy.

Now suppose that somebody gave you that problem as an assignment. Have you any idea of what sort of sound you might come up with? Mozartean? Bachian? Ravelian? Gregorian?

Mr. O.: Well, let's see. Maybe something like Webern. What did you produce?

Mr. A.: Webern is not bad, not bad at all. What came in my case was of course much more provincial. But greatly to my surprise, the principal elements of such a music prefigured themselves for me unbidden, and they were quite strange. I understood instinctively that the melody of this music would not be the usual full sentences at all, but something in the nature of disjoint oracular fragments. And its harmony would consist for the most part of mysterious clusters of starry sounds, growing and dissolving in a great stillness that was not exactly a silence. Like the night sky in winter, this aural void would be lit dimly by a kind of sonorous galactic dust, an almost-sound that trembled on the threshold of audibility.

In the absence of subtle composing techniques (or of handy do-it-yourself devices—say, electronic synthesizers), such imaginings of course produce no viable music. Today I recall only that my experiments took shape in the region of Capricorn and the key of F₂ Minor—or rather, near that key, for the operative tone-cluster was a polytonal chord (G, C, F₁, A, C, located left to right on the piano) that I was later to encounter in the white magic of a great modern masterwork, which I'll identify in a moment.

So my zodiacal fantasy was a halting affair. But ever since this curious exercise, and no doubt as a result of it, I have been able to spot true astrologer's music instantly. There is more of it around than you might suspect, and I mention the following examples mainly because they came in as a result of it, and not because they had to be available on recordings.

Dunstable's great motet Veni sancte Spiritus—Veni creator Spiritus (it was possibly composed for the Notre Dame coronation of Henry VI) is of course astrologer's music by professional coincidence. But, in contrast to Dunstable's shadowy existence as a historic figure, this music leaves in the memory a quite remarkable effect of a somewhat cryptic but very strong personality. So do two ancient Chinese pieces, Sound of the Temple and The Elegant Orchid (available on Lyrichord LL-142). These works are performed on the astrologically tuned cb'min that I mentioned earlier, and the latter piece is attributed to Confucius, a well known polymath circa 550 B.C. Then there is that well known non-polymath J. S. Bach—and if you think he didn't know about astrologer's music, listen to The Art of Fugue. If I were a practicing stargazer, I'd use nothing else as background music in my waiting room.

Mr. O.: Can you recommend anything more recent?

Mr. A.: In addition to Gustav Holst's orchestral suite The Planets, there's Constant Lambert's ballet suite Horoscope—plus, from 1966, Jacques Bondon's Concerto de Mars for guitar and orchestra (RCA VICS 1367). Bondon was a disciple of Darius Milhaud, and his concerto makes sometimes boisterous, sometimes somber play with Mars as a planet, as the Roman god of war, and as the month of the vernal equinox. And of course Hindemith's "symphony" Harmonie der Welt, with its "Musica Humana" and "Musica Mundana" movements, does try, like astrology, to relate the universe to the individual—and musically. Meanwhile, the last word for (and from) the revolutionary young is "The Age of Aquarius" (Soul City Records SCSI-92005), the 5th Dimension's version of the big hit from Hair.

If there is a contemporary dean of musical astrologers, his name is of course Igor Stravinsky, a senior Magus whose arcane touch is perpetually self-renewing. Long before I had run across Jean Cocteau's witty drawing of Stravinsky in the robe and peaked hat of a stargazer, I had received something of the same illumination myself during a performance of Apollon Musagète. I say "something of the same" because Cocteau's medieval costume more properly belongs to, let us say, Olivier Messiaen. Stravinsky represents a far older Orphic branch of the guild, and despite its neo-classical references and its unearthly serenity, Apollon is surely as oracular as anything in music. If I needed any proof, I received it with the plangent, prophetic, polytonal chord that announces the nativity of Apollo. The chord is C, F₂, B₂, D, F₂ (located from left to right on the piano), and you will see that it is simply my old post-Dunstable tone-cluster transposed up a fourth. Perhaps nothing could reveal more clearly the contrary influence of the planets in different horoscopes than the accompanying change in the function of the chord. To me it had meant an occult darkness. To Stravinsky it obviously meant the even more mysterious effulgence of Mount Parnassus, and the eternal equipoise of the healing shrine at Delphi. The gods know another order of the heavens than mortals do, and the lyre of Apollo makes a different music than the harp of the King of Ur.

Robert Offergeld, formerly music editor of this magazine and a regular contributor, was born under the sign of Cancer, thought by astrologers to be one particularly sensitive to the occult.
MASCAGNI'S "OTHER" OPERA: L'AMICO FRITZ

Angel’s recording under Gianandrea Gavazzeni is a laudable release of a lovable work

In his excellent introduction to Angel’s new recording—the first in stereo—of L’Amico Fritz, Mosco Carner offers this quote from an older, wiser Pietro Mascagni reflecting on his early years: “It was a pity that I wrote Cavalleria first. I was crowned before I was king.” It is true that the tremendous success of Mascagni’s first opera aroused expectations of future grandeur—expectations that he was never able to fulfill. On the other hand, it is also true that, amid all the lamentation about the composer’s fall from greatness, insufficient recognition has been given to his “other”—and, in its own way, equally excellent—opera, L’Amico Fritz.

Despite certain melodic similarities, the two works are miles apart. Whereas Cavalleria is passionate L’Amico Fritz is gentle. The characters in the former seem to be governed by impulses (Sicilian impulses, at that); those of the idyllic L’Amico Fritz are calm, practical Alsatians, with the likable figure of David thrown in to provide a measure of rabbinical wisdom. They do have one element in common: the virtue of brevity. In both operas, Mascagni was working with concise, clear-cut stories, and, to his everlasting credit, he did not believe in writing vast stretches of music to conceal a lack of profundity. The story of L’Amico Fritz is very simple: a young and allegedly confirmed bachelor is brought to the safe harbor of matrimony through the gentle manipulations of his friend, who feels that, though love may often triumph unaided, a little nudging will hurt no one. There isn’t an unsympathetic character in the entire opera, and in his music Mascagni presents apt portrayals of the whole attractive lot of them. This is a subtle yet consistently inventive and rewarding score, worthy of immediate resurrection in our opera houses.

The opera has fared well on records. Mascagni himself conducted its first recording during World War II, with the youthful Ferruccio Tagliavini and Pia Tassinari happily cast as Fritz and Suzel. This authoritative and altogether felicitous performance is still available (Everest 429-2), but sonically it quite naturally shows advanced age. I am happy to report that it may now be affectionately laid aside (not discarded) in favor of Angel’s new set. Here we have Mirella Freni in her accustomed excellent form as a disarming, irresistible Suzel, full of girlish charm and unaffected lyricism, and Luciano Pavarotti as an ardent, temperamental Fritz, with his brand of passionate Italianate singing combined with artistic control and clearly pointed diction. In the grateful role of Rabbi David, the friend who brings these not-quite-immovable objects together, the young Spanish baritone Vincenzo Sardinero reveals vocal and interpretive qualities that will undoubtedly make him a major figure on the international operatic scene in short order. These three characters are the opera. The role of the wandering minstrel Beppe could be made into something more important, but the interpreter here is not fully up to the challenge.
Conductor Gavazzeni's approach to this opera understates its lyricism to some extent. Perhaps Mascagni, in the older recording, went to the other extreme, not being able to resist lingering over his own expansive melodies. Still, the high points of the opera—the lovely Cherry Duet, Fritz's "Ed anche Beppe ami"—and even the orchestral Intermezzo could use more poetry and expressiveness. Nonetheless, Gavazzeni's leadership has its impressive aspects—it is obvious that he too loves the score in his own cooler, twentieth-century fashion.

Sonically, of course, a comparison between the two recordings is pointless. Only the Angel set brings out the colors and flavors of Mascagni's clever orchestration. For me, this is a lovable opera and a laudable release.

MOZART (AND HAYDN) ON THE HARPSICHORD

Igor Kipnis' latest disc for Columbia couples two delightful keyboard works

This new Columbia release marks the first time that the Mozart Concerto No. 9, in E-flat (K. 271), has ever been recorded on the harpsichord. That fact would normally be of minor interest to record collectors, while arousing a few snorts (both pro and con) and some small debate among musicologists. But when the performance has the kind of wings this one has—Igor Kipnis with Neville Marriner directing the pseudonymous London Strings—then the musicological event becomes secondary to the musical one.

This is a stunning performance of Mozart's first great keyboard concerto, a work, by the way, that has not fared at all badly in previous piano performances. But Mr. Kipnis has the style of the music in his fingers and in his heart, and the harpsichord, rather than diminishing the expressivity of the music, enhances it. The paradox is easily explained. Most pianists (at least those with any historical acumen) recognize the piece as an early work—it was, after all, composed in 1777, a mere quarter century after Bach—and tend to bend over backwards not to overplay it. They often produce "pretty" performances. But the harpsichord, almost by nature, cannot overplay the music, especially in matters of dynamics, and the performer is free to show what he can do in the way of eighteenth-century expressivity. Mr. Kipnis can do a lot; I don't think there is a harpsichordist around today with more imagination and taste.

The Haydn concerto, of course is known as a harpsichord work and has been recorded in that form several times in the past, though most currently available recordings are with piano. It is a thoroughly delightful piece of music, and Mr. Kipnis gives it a performance that is full of inventiveness and good spirits.

The orchestra, under the direction of Neville Marriner, plays with spirit and finesse (there is even a second harpsichord for the continuo), but those who are acquainted with the group under its real name on another label may find that the Columbia recording does not provide the same sheen on the strings those other recordings do. The balance between harpsichord and orchestra is totally unreal compared to concert performance, but then —how many times must one say it?—records are not concert performances, and rice vera. I find the balance, musically, a trifle too favorable to the solo instrument, but quite listenable nonetheless.

In all, the record is an only slightly flawed joy. I might mention that the notes, by Mrs. Igor Kipnis, are informative and explicit without being at all proselytizing.

James Goodfield

ENTERTAINMENT

INSTANT "LAUGH-IN" FOR SUMMER'S DOLDRUMS

Reprise's second album from the popular TV camp has everything—except Rowan and Martin

Students of the mad, mod Monday night TV circus known as "Rowan and Martin's Laugh-In" will applaud Reprise's bringing them a second album of the show direct from beautiful downtown Burbank. As an avowed member of the fan club, I can assure the entire constituency that all the proper ingredients are present in the latest excursion—all, that is, except one. Somewhere in the course of the move from Epic to Reprise the troupe seems to have misplaced Dan Rowan and Dick Martin. Their names do not even appear on the cover. The show does survive the unexplained loss of its two bland, batty protagonists bravely on the new disc, although I confess I missed the presence of both ding-
a-ling( as I believe they refer to one another) if only for sentimental reasons.

But the rest of the ritual is preserved intact for ready reference: Arte Johnson, his long black overcoat all but visible as he creaks into position on a park bench to ask sourpuss Ruth Buzzi if she'd "care for a Walnetto"; the frantically informative segment devoted to the news of the past, present, and future, introduced alluringly by the "Ladies of the Ensemble" and climaxed by the sports report—Alain Sues ringing his little chime and reducing the whole tribe of sportscasters to the absurdity they already border on; the gags-galore cocktail party ("People in backward countries are too forward," was one of the remarks I managed to catch on the wing); Henry Gibson reciting his poem; professional dumbbell Goldie Hawn suggesting that Christmas be moved to July when the stores aren't so crowded; and all the key phrases that send all us "Laugh-In" addicts up by sheer dint of repetition: "YOU BET YOUR SWEET BIPPIF," "SOCK IT TO ME," and "LOOK THAT UP IN YOUR FUNK AND WAGNALS."

The fun, of course, is in the pace, and jotting down samples proved too much for a mere pencil, but I could almost swear I understood Miss Buzzi to say at one point that she had taken up a collection for a man in her office but failed to raise enough to buy one. Jibes at "the establishment" also abound, as well as such useful suggestions as "Let's get sex out of the movies and back in the motels where it belongs."

If "Laugh-In" harbors a secret, beyond the skill of its writers in pressing incredible numbers of old gags into new and useful service, it is the refusal of the show ever to take refuge in the "but seriously, folks" ploy of its comedic rivals. Over-inflated balloons in all categories are punctured exclusively by the needles of comedy, never by preachment. The new album should prove especially comforting to the faithful on those Monday evenings when NBC sees fit to pre-empt the "Laugh-In" hour for some "special" or other, as has happened far too often of late. And then there are those summer TV doldrums—better get your copy quick.

Paul Kresh

MILES DAVIS' "FILLES DE KILIMANJARO"

His new Columbia disc is a brilliant synthesis of current pop and jazz trends

The promise of Miles Davis' previous recording, "Miles in the Sky," has been brilliantly fulfilled in his new collection of contemporary jazz, "Filless de Kilimanjaro," on the Columbia label. Pulling together the many disparate musical influences flowing through pop music and jazz, Davis has managed to effect the synthesis that everyone else has only been talking about—and he does it without sacrificing a whit of his jazz powers.

He is aided in this program—and in no small way—by an absolutely overwhelming rhythm section, one of the best jazz has ever seen. The solo-ensemble interchanges are on such an exalted level of achievement that they must be heard to be believed. I can think of few major players who would allow the independence of action that Davis permits behind his solos here; it is a measure of his musical strength that he can give his rhythm players a free hand and not worry about its effect on his own playing.

This is classic modern jazz, and the sound of everything is stunning, from the quasi-rock rhythms of Frelon Brun to the Gil Evans-styled ensemble textures of Tont de Suite. On two tracks the rhythm section changes, and these pieces (Petits Machins and Mademoiselle Mabry) are accordingly the weakest. But granting that slight diminution in quality, this disc preserves one of the most brilliant outings in Davis' recording career. Don't miss it.

Don Heckman

MILES DAVIS: Filles de Kilimanjaro. Miles Davis (trumpet); Wayne Shorter (tenor sax); Herbie Hancock (piano, electric piano); Ron Carter (bass); Tony Williams (drums). Also Chick Corea (piano); Dave Holland (bass) on two tracks, Frelon Brun; Tont de Suite; Petits Machins; Mademoiselle Mabry; Filles de Kilimanjaro. COLUMBIA CS 9750 $4.79.

RECORDING OF SPECIAL MERIT  
**BACH: Brandenburg Concertos (complete)**, Hans-Martin Linde (flute and recorder); Günter Höller (recorder); Helmut Hücke (oboe); Ferenc Fricsay (violin and violino piccolo); Edward H. Tarr (clarino trumpet); Gustav Leonhardt (harpichord); Collegium Aureum. RCA Victor VICS 6052; two discs; $5.00.

**Performance:** Emphasis on authenticity  
**Recording:** Excellent  
**Stereo Quality:** Good

It seems to be the Brandenburg season again: at least three new versions are imminent in addition to this one. The Collegium Aureum, a recording group of some of the best European freelancers, emphasizes historical authenticity in the present performances, not only through the use of the original instruments (violino piccolo, clarino trumpet, gambas, etc.) but also by approximating the size of the forces believed to have been used by Bach and others—often no more than one person per part. In the case of the Fifth Brandenburg, for instance, they use a string quintet plus flute and harpsichord. Curiously enough, these quite reduced forces don’t sound emaciated, thanks mainly to fairly resonant acoustics, and their clarity is quite exceptional. The level of instrumental playing is first-rate (listen particularly to Tarr’s sensational account of No. 2 on the snail-shaped valveless, razor-clean clarino trumpet), and these fine players make their instruments sound anything but antiquated. I am dubious about their tendency to remain for long periods of time at a fairly loud dynamic level, and one might wish for a bit more “soul” to add to the group’s fine sense of ensemble, efficiency, and stylistic understanding. From that standpoint the Concentus Musicus of Vienna (Telefunken S 9) [59/60], who also employ reduced forces and old instruments, are perhaps a little warmer in outlook—but overall, the Collegium Aureum interpretations must be considered among the very best of the many recorded versions now available. The recording is most satisfactory, and steps is not overly pronounced but quite good; but the liner notes miss an important point in not including comment on the disposition of the forces, much less a description of the instruments, with illustrations, as Telefunken has done.

**RECORDING OF SPECIAL MERIT  
BACH: Cantata No. 1, “Wie schön leuchtet der Morgenstern”; Cantata No. 4, “Christ lag in Todesbanden.”**

**Performance:** Emphasis on authenticity  
**Recording:** Excellent  
**Stereo Quality:** Good

One has only to hear the thrilling trumpets of the opening to feel that this promises to be one of the best recordings of the music currently available. There are a few shortcomings, mainly minor stylistic details, but overall (and not least in quality of sonic reproduction) this performance can be recommended with pleasure.

**BARTOK: Sonatinas (Folk Times of Transylvania, transcribed by Geretly); Roman Tancok (Romanian Folk Dances, trans. Székely); Este Szekelyekna; Magyar Népdalok (Hungarian Folk Tunes, trans. Szigeti); DOHANANYI; Ruralia Hungarica, Op. 32c, KODALY: Adagio; Intermezzo from Háry Júlia (trans. Szigeti).**

**Performance:** Spirited  
**Recording:** Excellent  
**Stereo Quality:** Good

Both of these cantatas are superb pieces, even though No. 1, with its impressive opening chorus and Christmas motif, is not as well known as it should be. The performances, too, are generally excellent, in spite of the fact that Richter in some sections of No. 4 has a tendency to be idiosyncratic. This is a large-scale, flamboyantly dramatic reading; if it is somewhat Romanticized, sounding in places like Bach writing Beethoven’s Ninth Symphony, it is also, by virtue of its intensity and canny avoidance of stodginess, the best currently available performance of this cantata, in my opinion. The soloists are first-rate, the instrumentalists are exceptional, and the large (rather too large-sounding in No. 4) chorus is wonderfully stirring. The sonic reproduction is equally impressive, and texts and translations are included.

**RECORDING OF SPECIAL MERIT  
BACH: Easter Oratorio (BWV 244), Elly Ameling (soprano); Helen Watts (contralto); Werner Krenn (tenor); Tom Krause (baritone); Vienna Akademiechor; Karl Münchinger cond. LONDON: BS 26100; $5.98.**

**Performance:** Warm and devoted  
**Recording:** Excellent  
**Stereo Quality:** Fine

This is a particularly humane-sounding Easter Oratorio, warmer than the fairly recent and also excellently performed Maazel interpretation. Münchinger’s vocal soloists are first-class; the chorus is most satisfactory and so also are the fine instrumentalists. One has only to hear the thrilling trumpets of the opening to feel that this promises to be one of the best recordings of the music currently available. There are a few shortcomings, mainly minor stylistic details, but overall (and not least in quality of sonic reproduction) this performance can be recommended with pleasure.

**BARTOK: Sonatinas (Folk Times of Transylvania, transcribed by Geretly); Roman Tancok (Romanian Folk Dances, trans. Székely); Este Szekelyekna; Magyar Népdalok (Hungarian Folk Tunes, trans. Szigeti); DOHANANYI; Ruralia Hungarica, Op. 32c, KODALY: Adagio; Intermezzo from Háry Júlia (trans. Szigeti). Robert Gerle (vocals); Rezs Benoit (piano).**

**Performance:** Spirited  
**Recording:** Excellent  
**Stereo Quality:** Fine

In at least one respect, record reviewers are damned if they do and damned if they don’t. Should one of our number make an unfavorable comment, or an error in fact that he wouldn’t have if he had read the liner notes of a given release carefully (or read them at all), all hell breaks loose in the letters column. On the other hand, I, for example, always read annotative material—but just as often with horrified fascination as with interest and satisfaction. And since jacket notes are written with the inevitably specific intention of influencing the listener’s opinion of what he is to hear, I cannot avoid regarding them as quite as much subject to criticism as the music itself. Often I find that my reaction to what I hear may indeed be in some way—either nega-

### Stereo Review Record and Tape Service

Have you been having a little difficulty obtaining some of the records and tapes reviewed in this issue? Stereo Review Record and Tape Service to the rescue! Not a record club—no discounts, no special deals. We’re here simply as a service to those of our faithful music-loving readers who are about to give up the search for “hard-to-get” records and tapes. If you want help in your musical dilemma, all you need do is complete the coupon below and mail it in with your remittance. We’ll see to it that your records and tapes are mailed to you promptly, well packed and fully guaranteed against damage or defects.

And if you’ve been having a hard time finding some favorite recording not reviewed in this issue, we’ll do our level best to find it for you also. Simply fill in as much information as you have available (title, manufacturer, record number) on the coupon below and we’ll do the rest. If you’re not sure of the price, we will be happy to mail it for you. We may well offer food for thought to those who would look with disdain on the word ‘transcription.’ It is the artistry with which it is accomplished which determines the value. But earlier in his essay, Mr. Gerle beats the drums for the transcription of folk music as if it were a matter of comparable controversy.

Well, if Mr. Gerle’s continuing commentary on each work involved is accurate and if my ears do not deceive me, he has recorded a recital about forty-five minutes in length to demonstrate that (so long as they’ve got artistry) transcriptions of folk music or just about anything else should be a matter of something close to missionary concern with all of us. Since I would scarcely advocate dragging the inhabitants of, say, the Kentucky hills onto the stage of Town Hall to enlighten us as to the nature of their musical folklore, I am one hundred percent in favor of transcriptions (so long as they’re done with artistry) in an area such as this. But why should one listen spellbound to a transcription for violin and piano of the Intermezzo from Kodály’s opera Hársi Játos is somewhat less than ineluctable to me. And when, finally—if I read Mr. Gerle correctly—we are to ask to find unique merit in transcriptions of pieces by Béla Bartók, which, originally composed for other instruments, were either Bartók’s own folk transcriptions or pieces developed from his own folk transcriptions, then I willingly concede that Mr. Gerle has just about lost me altogether.

As I very much feared when I began this notice, I have written little about the music or its performance. The playing is beyond reproach; it is entirely possible that I would have found the program itself somewhat less monotonous had I been unaware of Mr. Gerle’s virtually unique premise. Maybe I should stop reading liner notes!

The Great Philadelphia Orchestra Sweepstakes goes on, as Columbia continues to pull items like this out of cold storage to compete with RCA's brand-new Philharmonic releases. Well, score one for Columbia. This recording is billed as "in commemoration of the twentieth-anniversary of his debut," and that isn't Ormandy's debut; they're talking: that isn't Ormandy's debut, either! The maestro, after all, has been playing in public for a quarter of a century, and his association with the Philadelphia dates back just that far. Isomon's Beethoven has the estimable virtues of simplicity—strong, unmannered, rather grand, never fussy, never still, flowing across an impressive emotional landscape. The two Eugenees work well together, and the recorded sound is also happy.

E. S.

BRAHMS: Piano Quintet, in E Minor, Op. 34, Christoph Eschenbach (piano); Amadeus Quartet. Deutsche Grammophon 139397 $3.98.

Performance: Lean and dramatic
Recording: Bright and clear
Stereo Quality: Good

What with Rudolf Serkin and the Budapest Quartet and Arthur Rubinstein and the Quartette, this latest entry with young Christoph Eschenbach and the Amadeus Quartet makes three absolutely first-rate stereo recordings of the darkly dramatic Brahms F Minor Piano Quintet. (I am not familiar with the Fleisher-Julliard Quartet performance on the Epic label, which might make four). Outstanding in the Rubinstein-Quartette recording was the exquisite playing of the slow movement, but my overall preference has continued to be the more dramatic and somewhat weightier Serkin-Budapest reading. Eschenbach and the Amadeus, too, prefer a leaner treatment of both tempo and texture than the Serkin group, but they also pack plenty of dramatic contrast into the score. Even so, the earlier recording still has the edge when it comes to getting the most out of the contrast between the mysterious staccato-issurato opening of the scherzo and the triumphant outburst that follows. And the absolutely vecco quality of the string playing is beautifully conveyed in that recording. Decidedly different, too, is the treatment of the slow movement as between Serkin-Budapest and Eschenbach-Amadeus. In the one instance, we are made aware of the music's sultry nocturnal aspect, in the other of its almost barcarole-serenade quality.

The DGG recording is very clear and clean, and decidedly on the bright side—to the point of sometimes making that instrumental sound a bit clattery in mid-register as climactic points.

D. H.

CAVALI: L'Ormeño. John Wakefield (tenor), Ormindo; Peter Christoph Ronge (baritone), Amida; Isabel Garciaiz (soprano), Nerillo; Hanncke van Bork (soprano), Sid; Jean Allister (contralto), Meldé; Hugues Cuendet (tenor), Elice; Ann Howell (mezze-soprano), Friebe; Jane Berbé (mezze-soprano), Mirinda; Federico Davia (bass), Ariadne; Richard van Allin (bass), Ormindo; London Philharmonic Orchestra; Raymond Leppard cond. ARGO (Z) 295 $5.95.

Performance: Average
Recording: Good
Stereo Quality: Good

If an art dealer offered you a painting that purported to be a Titian or a Veronese but was in fact almost entirely repainted a couple of years ago by a "restorer" you would be right to feel dubious. And if a museum bought such a work and put it up for public display, the institution would no doubt be said to have "fallen for a fake." I'm afraid this is exactly the case with the modern history of Cavalli's L'Ormeño. Franco Cavalli was, like Titian or Veronese, one of the great creative spirits of the Venetian Republic. He was the pupil and successor of a great master—Claudio Monteverdi—and the first major and prolific opera composer of international reputation. Within a quarter of a century—1639 to 1666—he composed some forty operatic works and was, more than any other single figure, responsible for the development of the genre of opera in the modern sense. But operatic and theater fashions change quickly, and Cavalli was obsolete in his own lifetime; at the time of his death in 1676 he was a distinctly unfashionable figure, and his works, his music, his style vanished completely. Unfortunately, the scores that have survived are mere outlines; lead sheets, to use the modern term, Cavalli, like most seventeenth-century composers (and many pop musicians today), jotted down no more than the tune and a short-hand for the harmony. With the composer dead and the tradition lost, it became virtually impossible to resurrect this music as it must have sounded when it astonished and seduced the whole of Europe.

The problem of reviving, say, Dixieland or the Broadway style of the Twenties would be just as great if we had only lead-sheets or printed sheet music to go by; fortunately we have recordings to keep alive the tradition of "how it goes." But, alas, the lost tradition of seventeenth-century opera remains lost. Raymond Leppard, the "editor," the "realizer," and the director (and, one is tempted to add, the composer) of L'Ormeño, has not succeeded in reviving it. What Mr. Leppard has done is to compose a new work based on some of the Cavalli material. It is charming, no doubt, but it has only a very little to do with Cavalli.

If you can believe the advertising, unequaled values in stereo receivers abound everywhere. Almost every receiver ad claims to offer more of everything for the money—more power, more features, more sophisticated circuitry, better performance... and so on. Not that we don’t do the same ourselves. But with all these claims, it’s becoming harder than ever to decide on a receiver. Who can you believe then? Well, we took our receivers to the experts to find out what they had to say. Their unbiased findings are summed up in the comments above.

Now who do you think offers the finest value in stereo receivers?

*1db (in accordance with the high fidelity industry’s latest test procedures for rating power outputs.)
L'Orinuto, on a text of Giovanni Fas- tini, was produced in 1614 at the San Gas- stiano theater, the first public opera house in the world. It was revived a year or two ago under Mr. Leppard's curatorialship at the Glyndebourne Festival Opera House in Eng- land, and it has been performed more recently at Juilliard and elsewhere. These performance were enthusiastically received, and the work was recorded by the Glyndebourne forces.

Mr. Leppard's notes, in his Glyndebourne program, quotes a description of the story. The critic says: "...we can, with due humility...using all the historical and stylistic evidence...must leave an honest attempt to bring the warm-hearted theatrical vitality which is so strong [in these works] back into circulation again. No half- hearted attempt dampened by academic re- straint will do; performing these works again is like a love-affair; you either give and risk all or better leave it alone."

The argument is an impressive one, and Mr. Leppard has certainly given his all. What he has not convincingly demonstrated is why this should be considered an honest attempt to revive Cavalli and not a new work equally based on some old motives. In such a context, one wonders about the use of words like "humility" and "honesty," not to mention "historical and stylistic evi- dences." If this is a reconstruction based on historical and stylistic evidence, it brings us to the question of what, when, and why. Why do so much of it sound like middle-high Italian Baroque opera of half or even three-quarters of a century after Cavalli? Mr. Leppard has composed lush orchestral music throughout—not just "orchestrated," mind you, but ac- tually composed pieces after page of luxuriant instrumental counterparts. He has developed rich harmonies, instrumental and choral elaborations, highly inflected rhythms, ac- cents and dynamics, etc., etc. He has sliced out generous chunks of the work but, at the same time, has taken pieces of other Cavalli operas (or versions of pieces from other operas) and inserted them in this one. He has rather awkwardly ornamented the vocal lines in many places but totally omitted some of the most essential and obvious cadential ornaments. He has added and elaborated all manner of orches- tral interludes and ritornelli. Finally, he has altered the entire ending of the opera, totally omitting the essential scenes in which Ormindo, who is in love with the wife of the King of Morocco and Fes, is revealed to be the King's son. Without the characteris- tic and typical recognition scene, the king's sudden decision to reprieve the erring pair and permit them to marry and inherit the kingdom is totally absurd. By the way, none of this is mentioned or even implied in Mr. Leppard's notes.

Mr. Leppard's principles are not unsound. Of course one must study and understand the period and its practice and, with hu- manity and honesty, reconstruct a living theater work, not just an academic exercise. I do not quarrel with Mr. Leppard's theory, only with his practice. He has produced a work of theatrical viability and charm, but he has not followed any of his other precepts at all. He is, in effect, hiding behind an austere and impressive name from a great past. It's a throw of an old favorite story. The "experts" (i.e., the critics) have been fooled, and somewhere there's a moral lesson in it all for us somewhere (if we can only find it). The piece is fun, and the very capable cast and orchestra under Mr. Leppard play it for everything it's worth, and if one would say. Its connections with the seventeenth century are tenuous indeed, but anyway it's all very hot-blooded in a campy sort of way. It ain't Cavalli, but then, these days, what is? E.S.

COOPER: Sonata for Flutes and Piano (see PROKOFIEV)

DOHNANYI: Ruralka Hungariana (see BARTOK)

DONIZETTI: La Favorita, Giulietta Simi- onuto (mezzo-soprano), Leonora di Gas- man; Gianni Poggi (tenor), Fernando; Ettore Bastianini (bass), Alfonso; Je- rone Hines (bass), Baldassare; Pico di Palmia (tenor), Don Gasman; Ricci Magnani (soprano). London, Chapel and Orchestra of the Maggio Musicale Fiorentino, Alberto Erede cond. RICORDIM SR 65510 three discs $7.47.

Performance: Tenor troubles Recording: Good Stereo Quality: Good

La Favorita is top-grade Donizetti: a hope- lessly passé story redeemed by some of the composer's best lyric inspirations in a suc- cession of arias, duets, and ensembles. Lon- don's 1935 recording, which is now restored to us in this attractive and appealing release, offers an almost thoroughly distinguished rep- resentation of the opera, a laudable effort marred by one bit of unfortunate casting. That is tenor Gianni Poggi, a singer of in- artistic style and unattractive vocal manners, whose overall performance ranges from the passable to the downright painful.

The tenor part in La Favorita is central, and therefore Mr. Poggi's effect on the over- all enterprise is nearly lethal. Still, there are extended passages when he is totally ab- sent, and in such moments the performance comes to life. Giulietta Simionato sings the part of Leonora in the grand tradition, in splendid voice, and with a strong dramatic presence. Her big scene ("Fia dunque vero...O mio Fernando") is something to trea- sure, and she does her very best to make something memorable of her final scene de- spite Poggi's intrusions. In the part of King Alfonso, the late Ettore Bastianini offers lit- tle characterization, but his tonal quality is luscious and his style securely bel canto.

Jeremy Hines, too, is a strong asset, even if he fails to make a powerful impact in the big confrontation scene, and Piero di Palmia turns in one of his usual expert char- acterizations. The orchestral performance has occasional rough edges, but Erede's way with the music has many virtues, and the early stereo sound is entirely satisfactory.

Technically, the Richmond set holds an edge over its rival (Erato 4053), but otherwise the choice is not easy. Simionato and Bastianini are mighty factors in Rich- mond's favor, but Erede's tenor, Gianni Raimondi, is superior, and its bass, Giulio Neri, also scores over Jeremy Hines. A new recording of La Favorita with Alfredo Kraus, Fiorenza Cossotto, and Sherrill Milnes as Alfonso would settle matters.

G. J.

(Continued on page 86)
How to build a better tape recorder.

ESP Automatic Tape Reverse. A special sensing circuit indicates the absence of any recorded signal at the end of a tape and automatically reverses the tape direction within ten seconds.

ServoControl Motor. Automatically corrects for speed variations and maintains precise timing accuracy. Vari-speed feature of motor can be adjusted up or down to match musical pitch of tape playback to any piano.

Noise-Suppressor Switch. Special filter eliminates undesirable hiss that may exist on older prerecorded tapes.

Scrape Flutter Filter. Special precision idler mechanism located between erase and record/playback heads eliminates tape modulation distortion. This feature formerly found only on professional studio equipment.

Non-Magnetizing Record Head. Head magnetization build-up—the most common cause of tape hiss—has been eliminated by an exclusive Sony circuit, preventing any transient surge of bias current to the record head.

Sony Model 550D. Priced under $349.50. Also available: The Sony Model 560 Tape System with stereo control center, stereo pre-amplifier, and stereo amplifier, microphones, and lid-integrated full-range stereo extension speakers for less than $449.50. For your free copy of our latest tape recorder catalog, please write to Mr. Phillips, Sony/SuperScope, Inc., 8146 Vineland Avenue, Sun Valley, California 91352.

You never heard it so good.
DURST: Sonatina (see PROKOFIEV)

RECORDING OF SPECIAL MERIT

DVOŘÁK: Trio, in E Minor, Op. 90 ("Dumky"). SPÔHR: Double String Quartet, in D Minor, Op. 65. Jacob Lateiner (piano); Jascha Heifetz (violin); Gregor Piatigorsky (cello); Israel Baker (violin); Pierre Amoyal (violin); Paul Rosenthal (violin); Milton Thomas (viola); Allan Harshman (viola); Laurence Lesser (cello). RCA LSC 1068 $5.98.

Performance: Fine, especially the Dvořák
Recording: Good
Stereo Quality: Good

Aside from a rather hard-driven opening, this latest disc to come to us from "the Heifetz-Piatigorsky concerts" offers a performance of the Dvořák "Dumky" Trio (its six movements are inspired by a sort of Slavic lament called a Dumka) that is singular in its tonal beauty, expressive poignancy, and rhythmic vitality. Jacob Lateiner's pianism, with its exquisitely sensitive communication of dynamic nuance and finely shaded phrasing, haunts the imagination long after the record is removed from the turntable.

The Double String Quartet by Weber's slightly older contemporary Louis Spohr is a first recording. It's a perfectly amiable, entertaining, even brilliantly scored piece, whose first movement keeps reminding me of Mozart's "Haffner" Symphony in a minor key. But I'll take the Berwald Sextet any day. The performance by Heifetz and his friends is altogether vital and brilliant. The recording throughout is of the close-knit intimate type, but excellent of its kind. This is one of the finest recordings I have yet encountered in this series.

D. H.

FELDMAN: Piece for Four Pianos (1957); Intersection 3 for Piano (1953); Extensions 4 for Three Pianos (1952-3); Two Pieces for Two Pianos (1954); Projection 4 for Violin and Piano (1951); Structures for String Quartet (1951); Extensions 1 for Violin and Piano (1951); Three Pieces for String Quartet (1954-56). David Tudor, Russell Sherman, Edwin Hymovitz, and Morton Feldman (pianos); Matthew Raimundi and Joseph Rabushka (viols); Walter Trampler (viola); Seymour Karab (cellos). ODYSSEY 32 16 0302 $2.98.

Performance: Still good
Recording: Historic
Stereo Quality: Early American

Let me take this opportunity to . . . well, right a wrong (sort of). I have never been temperamentally very much in tune with Morton Feldman's music. Feldman's style was and is a minimal art, and my own work has always struck me as something mini ("mini" would be the term, I suppose). When this record first came out I wrote a review (for another publication, and, it would seem, in some other lifetime) putting it down. This review and a couple of similar ones were the cause of a letter which will have to be relegated to some (very) small footnote in the history of contemporary music.

Let's start all over again. Around 1949 or 1950, Feldman came into contact with John Cage and some of the advanced painting circles of the period. Feldman quickly evolved a personal musical speech consisting of very soft, isolated sounds, often notated in a graphic form with certain elements specified and other elements (usually pitch or duration) left up to the performers. The fame (or notoriety) of these pieces is a result of their introduction of "chance" or performer choice. But this at-one-time sensational aspect of this music no longer seems so extraordinary and has been somewhat overemphasized. Many of the pieces are in fact fully written out; others give all the pitches, leaving rhythm and ensemble co-ordination as an open element. But these techniques are really a means rather than an end—a means to achieve the dissolution of the notions of development, of process, of linearity which have dominated Western music until recently. Feldman, like the abstract expressionist painters with whom he is associated, has tried to create a kind of pure experience, an experience that represents nothing, that is not in the process of going somewhere from somewhere else, that just is. The paint on an abstract expressionist canvas is the experience itself and so is the isolated, abstracted sounds of a Feldman work.

Feldman began to write music in the early Fifties. For a while he returned to written-out works—presumably because most performers often could not help introducing subconsciously the very elements of relationship and process that Feldman has sought to avoid. More recently he has returned to various open or graphic notations. Some of the earlier music, in fact, has a considerable variation in dynamic and energy level. However the characteristic Feldman gesture—soft, sparse sounds set in an empty, limitless, purposeless silence—is already present in most of these works. Again, like the painters, Feldman establishes a gesture that is recognizably his own, as recognizable as the gesture of a Kline or a Rothko.

Feldman's music has assumed additional importance in recent years as the forerunner of a Kline or a Rothko. Feldman, like the abstract expressionist painters with whom he is associated, has tried to create a kind of pure experience, an experience that represents nothing, that is not in the process of going somewhere from somewhere else, that just is. The paint on an abstract expressionist canvas is the experience itself and so is the isolated, abstracted sounds of a Feldman work.

Feldman began to write music in the early Fifties. For a while he returned to written-out works—presumably because most performers often could not help introducing subconsciously the very elements of relationship and process that Feldman has sought to avoid. More recently he has returned to various open or graphic notations. Some of the earlier music, in fact, has a considerable variation in dynamic and energy level. However the characteristic Feldman gesture—soft, sparse sounds set in an empty, limitless, purposeless silence—is already present in most of these works. Again, like the painters, Feldman establishes a gesture that is recognizably his own, as recognizable as the gesture of a Kline or a Rothko.

Feldman's music has assumed additional importance in recent years as the forerunner of a great deal of art which deals in single, cool, sustained, repeated, or slowly changing experiences; it is, in short, the prototype of minimal art.

This record was originally issued as part of Columbia's pioneering "New Directions in Music" series with an excellent essay by the late Frank O'Hara. It has been reissued on Odyssey under a pretentious (put-on?) title of "Morton Feldman: The Early Years." The new version has an amusing photo by the painter-photographer Howard Kanovitz of Feldman on what looks like the Staten Island Ferry (replacing the less amusing but more precise listings for the excellent performers than the original release did. But alas, it omits the O'Hara essay, which certainly deserved to be reprinted. The sound—which was some kind of stereo from the start—is okay, although, given the fact that much of the music is at the outer edge of audibility, background noise and hiss are something of a problem. But it would be ungrateful not to thank Columbia for putting out a record that is virtually a historical document. Now how about "Morton Feldman: The Later Years," and with a Dolby, please.

RECORDING OF SPECIAL MERIT

Performance: Delightful
Recording: Splendid
Stereo Quality: Fine

Karl Goldmark (1830-1915), friend of Brahms, teacher of Sibelius, and one of the most popular figures in Viennese musical life just before the turn of the century, has been all but forgotten as a composer these days. An occasional violinist, he made a change from Bruch, Mendelssohn, and Tchaikovsky, will program Goldmark's highly effective Violin Concerto every so often, and a pop-concert program may now and then offer the "Rustic Wedding" overture or a ballet music from The Queen of Sheba. But very rare indeed is the conductor who will program the "Rustic Wedding" Symphony. Leonard Bernstein has both programmed the symphony for New York Philharmonic subscribers and—now—recorded it superbly well. One of the hallmarks of a first-rate conductor is his ability to take in hand works long since dropped from the repertoire and to breathe new life into them, often to the point of rehabilitating them as working programs. Thus, Leonard Bernstein and Morton Feldman—both are among the very few who can program and then offer the Sal untula Overture or the Tchaikovsky, Mendelssohn, and Bruch violin concertos. And there is no doubt that, when he puts his heart and mind to the work at hand, Leonard Bernstein has this gift, too. "Welding March (Variations)," "Bridal Song," "Serenade in the Garden," "Orphée: Dance." Please do so. It goes the titles of the five main movements of Goldmark's Symphony. Under a less gifted baton, the variations can sound ponderous, the "Bridal Song" and "In the Garden" sweetly sentimental, the "Serenade" merely cute, and the concluding "Dance" tiresomely brash. But Bernstein makes us appreciate the humor and ingenuity of the first movement, the charm of the third, the rapt tenderness of the fourth, and the high spirits of the last.

86 STEREO REVIEW
New Scott 2560 Compact Cassette...  

The new Scott 2560 cassette receiver not only plays pre-recorded cassettes... it will record AM, FM, or FM stereo, right from its own AM/FM stereo tuner, or from microphones and/or guitar (mikes plug right into the control panel). If you still treasure your records, plug a professional turntable with magnetic cartridge into the 2560 for excellent listening... or, better still, transfer your favorites and rarities to compact, virtually indestructible cassettes.

Best of all, the electronics are those of a Scott component... including FET front end for perfect AM and FM stereo reception... Integrated Circuits, in both IF and preamplifier, to cut interference and distortion to nearly unmeasurable levels... and a cassette section with constant-speed synchronous AC motor, so that what gets played back is virtually identical to what you've recorded.

The speakers? A pair of Scott air-suspension Controlled Impedance bookshelf systems (you can fit them where the records used to be). They deliver sound rivalling that of many speakers twice their size. And the price? Only $339.95, including speakers!

Could this be the end of records?  

No more scratched, warped, or broken records, no more "hold it by the edges only, please," no more shelf-buckling accumulations of albums. Scott's new 2560 cassette receiver not only plays pre-recorded cassettes... it will record AM, FM, or FM stereo, right from its own AM/FM stereo tuner, or from microphones and/or guitar (mikes plug right into the control panel). If you still treasure your records, plug a professional turntable with magnetic cartridge into the 2560 for excellent listening... or, better still, transfer your favorites and rarities to compact, virtually indestructible cassettes.

The Columbia engineers have done their part in helping to achieve a wholly convincing and engrossing result, for the sound is solid, warm, and brilliant.

HAYDN: Harpsichord Concerto, in D Major (see Best of the Month, page 76)

HONEGGER: Sonatine for Violin and Cello (see RAVEL)

KODALY: Adagio; Intermezzo from Hary Janos (see BARTOK)

MAHLER: Symphony No. 9, in D Major. Moscow Philharmonic Symphony Orchestra, Kirill Kondrashin cond. MELODIYA/SERIA-101 6029 two discs $5.98.

Performance: A in Russie
Recording: Good
Stereo Quality: Good

In view of the great influence of Mahler on the later large-scale symphonies of Shostakovich, it was with more than mild interest that I flanked forward to hearing the Viennese master’s last complete and most complex work performed under the baton of a seasoned Soviet conductor. But this ninth stereo recording of Mahler’s poigniant score is not going to make me shun the Solti, Bernstein, and Bruno Walter versions, even though it comes at a bargain price, for the music demands for full realization the virtuoso orchestras that the aforementioned conductors have at their command, and the Moscow Philharmonic simply isn’t in that class, especially in the brass and woodwind departments. However, the strings really do come into their own in the valedictory final movement. In general, Kondrashin pays little heed to the middle-European style of Mahler performance, which tends to emphasize every element of contrast between dramatic and lyrical episodes. This applies especially to matters of tempo. I get the impression that Kondrashin is trying to imbue the music with a Tchaikovskyian flow and in general to soft-pedal its episodic aspects. He keeps the music’s many-stranded textures very clear throughout, no mean feat even with the best of orchestras. However, it must be said again that this is a Mahler performance far removed from the Mittel europa tradition, and becoming disconcertingly so when the saxophone-like Russian horns are in the open, as they are many times in the course of this music.

For this Kondrashin recording, the sound is full and spacious, and the balances are generally good except for a few overprominent solo trumpet spots, which may have been as much the fault of the player as of the engineer.

D. H.

MASCAGNI: L’Amico Fritz (see Best of the Month, page 75)

RECORDING OF SPECIAL MERIT

MOZART: Concertos for Piano and Orchestra: No. 14, in E-flat Major (K. 449); No. 15, in B-flat Major (K. 450), Daniel Barenboim (piano); English Chamber Orchestra, Daniel Barenboim cond. ANGEL 36516 $5.98.

MOZART: Concertos for Piano and Orchestra: No. 11, in F Major (K. 413); No. 13, in B-flat Major. (K. 450), Geza Anda (piano); Camera Akademica of the Szeged Mozartianum, Geza Anda cond. DEUTSCHE GRAMMOPHON DGG 13932 $5.98.

Performance: Listed in descending order
Recording: Good to excellent
Stereo Quality: Good

Barenboim is a phenomenon, no doubt. But if he is impressive in a wide variety of music, this is really home territory for him: playing a Mozart concerto and conducting it from the keyboard. Because a whole pride of Mozart specialists decided to record their own versions of K. 450, Barenboim gets measured against some apparently stiff competition. Music isn’t a competition, and I generally hate these beauty Queen contests. But I must award Barenboim points for clarity, phrase work, dash, expres siva, sense of form, and style. Above all, his tempos seem just right. Whereas both Anda and Selli rip right through the fast movements, Barenboim holds back just a shade... and the music breathes. He is working from a better edition, or perhaps has just a better grasp of style and practice. He has an excellent group of players and good, clear, attractive sound. And he has the marvelous and curtly neglected K. 449 on the underside. I personally think that K. 449 is one of Mozart’s two or three greatest works in the genre, and one of his masterpieces in any idiom or form. An A-plus record from any point of view.

Barenboim is, of course, not the only one to have an excellent supporting case in this distinguished Mozart concerto line-up. By using a smaller group out of the larger Cleveland orchestra, Szell gains similar advantages of wind-string balance, general clarity, and chamber-music ensemble. I enjoyed these performances and, if we were not comparison shopping, I would have no hesitation about recommending them. Still, I must say that Szell does sometimes chug through in a way that Barenboim never does. And there are lots of missled stylistic points: dynamic levels, certain trills, and so forth. I will bet a dolly hemidesmequaver that Szell still uses the highly inaccurate nineteenth-century parts so long in circulation; and Casadesus, of course, learned the music—probably long ago—from some similar edition. In one sense, this is a highly modern performance; direct, strong, no fluff. But it does not benefit from modern knowledge about the piece and about contemporary performance practice.

This is even more true of Anda and the orchestra of the Budapest State Orchestra, conducted by Szell in his own home town. In the rare and quite fascinating K. 413, Anda does not even play Mozart’s own cadenzas, although they exist and were published with the work almost fifteen years ago. Otherwise there’s nothing terribly wrong; it’s just that these performances lack character—eighteenth-century or otherwise. Everything is distant and routine-sounding. Whereas every sound that Barenboim makes has vitality and tension, all of that is lacking here.

Footnotes on the program notes: Columbia’s notes for Szell/Casadesus are an obvious case of compilation from secondary sources. K. 453 cannot represent Mozart’s first use of a flute in a concerto-finale since the flip side. K. 450, has a lovely flute all over its last movement. The Angel sleeve features the following statement: “Daniel Barenboim is an S. Hurok Attraction”—surely the musical graffiti of the year.

RECORDINGS OF SPECIAL MERIT

MOZART: Die Zauberflöte: Der Vogelfänger bin ich ja; Ein Mädechen oder Weibchen; Papageno, Papagena! Così fan tutte: Riololge a lui lo gliardo; Donne mie, la fate a tanti; Don Giovanni: Fin'ch' han dal vino; Die zweiunken die mühen: Metà di voi qua vadano; Ho capita. Le Nozze di Figaro: Se vuol ballare; Non più andrai; Aprite un po' quegli occhi; Vedro, menir' io sospiro; Hr. Prey, Sopran. Dresden State Orchestra, Otmar Suitner cond. ANGEL S 36481 $5.98.

Performance: Both first-rate, with minor reservations
Recording: Both excellent
Stereo Quality: Both excellent

These two records—made for different companies but with the same orchestra and conductor—place before us Mozart singing on the highest current level. Both artists are German, are in their vocal prime (Schreier is thirty-four, Prey forty), and are distinguished members of the operatic jet set—and deservedly so. (Continued on page 90)

DANIEL BARENBOIM
A phenomenon in home territory: Mozart
The sound system at Disney Studios is Altec.

So there must be something in it. There is. Great sound. In every Altec system. Take our Corona speakers. Finer sound in the price range you can't buy. They're only $85.50 each. But still, you get rich, full, clear sound. Better sound, in fact, than you can get in speakers costing as much as thirty dollars more.

Now along with the Corona is a companion FM Stereo Receiver. The 711B. 100 watts. We should mention, of course, that it has IC's, a FET front end, great sensitivity. All the things everybody else talks about. But what makes the 711B really different is the amplifier. (It's designed by the engineers that build sound systems for many of the motion picture, radio, TV and recording studios, and most Broadway theatres.)

At any rate, it's the amplifier that gives you clean, distortion-free sound from the tuner, tape deck or record player. And that, after all, is what high fidelity's all about. Then when you hear that sound through Altec speakers, you'll find you can't beat the system. And these systems start for as little as $549.00. Complete.

You can hear our story at the better high fidelity component dealers.

Write for our catalog, too. Altec Lansing, 1515 So. Manchester Ave., Anaheim, Calif. 92803.

So is this.
The first side of the Schreier recital, devoted to the German Mozart of Die Entfahrung und Die Zauberflote, is an unqualified success. The voice quality is pure, lyrical but masculine, and malleable enough to execute long-sung phrases and extended runs without effort. The difficult "Ich habe ganz und keine Stirne" is brought off with impressive virtuosity. The same artistic equipoise shines through his "arias," but Schreier's Italian pronunciation, though improved since his earlier efforts, is still in need of further polish. He does not break any endurance records in "Il mio tesoro," but the singing is consistently graceful, and always on pitch. The seldom-heard aria from La finta giardiniera is heard in a detailed, vivid context. When you get to hear a fine orchestra and its outstanding conductor, it pays to record in Dresden—and we really get to hear a fine orchestra and its outstanding conductor. For better or for worse, and from Charles Ives to Grandma Moses, it seems that Americans have a distinct fascination for making art out of "originals." And, by "original" I do not mean an innovator in the European sense: Leopold Stokowski, or painter who, through some device or set of devices, suddenly amplifies a continuing tradition with a shocking giant step into the future. The American "original" is, instead, imbued with something of the American pioneer tradition of rugged individualism. And, like Harry Partch, whose music has been recorded at length here, he might sit stoically in the Arizona and New Mexico deserts doing, as the hippies would put it, "his own thing," while the rest of the world slogs about in the mainstream, whether it be left, center, or right. If someone cares to pay heed, to "discover" the "originals" and found a cult on him, then the "original" is only slightly more euphoric than he was in isolation. It is my perhaps unfortunate fate to be glacially suspicious of"originals." (The precise meaning or correct application of this word to composers, painters, or writers has been a highly debatable matter of semantics for some time now.) I admire the tenacity of a Harry Partch, his ability to have stuck out the "doing of his own thing" inventing instruments and a forty-three-tone-to-the-octave theory, including a distinct predilection for Far-Eastern musical Evasion, and evolving the rather unearthly philosophically concepts that lie behind the music. Furthermore, although the music has to be self-resembling by its very nature, I am not by any means unattracted to the lovely sound of the man's work or opposed to his belated recognition. Instead, as I am again reminded by this new Columbia recording, I am merely curious about an "originality" that seems to me more apparent than real; that, for whatever pleasure or diversion it may offer us as listeners, is of precious little pertinence to the art in the long run.

There are three works recorded here—the longest of which is Daphne of the Dunes (1938). It is not in the least surprising to read that the music was originally the sound track for a film called Wind Song. It has Partch's characteristic instrumental and harmonic texture, and its share of curiously haunting melodic fragments; it is also so excessive in length that, for me, these too tangible qualities are soon vitiated and sound monotonous before the piece is over. Barstow (1956) is subtitled, and, I guess, described as "Eight Hichihiker Inscriptions from a Highway Railing at Barstow, California." Its text, delivered by Partch and John Stannard against one of Partch's typically eccentric instrumental backgrounds, is either unappetizing, or maybe it's a bussing as an idea and in treatment. For me, it was the latter. Finally, Carson and Pollyx (1952), "A Dance for the Twin Rhythms of Gemini from Electra and Percussion Dances," is simply more Harry Partch. You could provide you with descriptions of its technical makeup as described by the jacket notes, but I don't think it would help either you or me very much.

(Continued on page 92)
If there can be such a thing as high fidelity in a camera, the Beseler Topcon Auto 100 has it! The meter is on the mirror, immediately behind the lens. It faithfully records every drop of light the lens receives. It transmits this light to the metering system and automatically adjusts the aperture to where it belongs. However, if you want to be creative, you can take this camera off automatic and decide on your own exposures. And for even more photographic excitement you can select from lenses that range from wide angle panoramic to super telephoto. You'll find it only at good camera stores.

BESELER TOPCON AUTO 100
In short, Partch's music must be listened to by anyone interested in it, and it can be responded to in purely aesthetic terms (much to its credit, I believe). It turns on many, but others, like myself, can take it or leave it. Columbia has done a fine job of recording the music, and its performance—Danke Mitchell's conducting of it was supervised by the composer—is presumably ideal. If you don't know Partch's work, I suggest you have a try at it with this disc; because if it isn't exactly mine, that doesn't mean that it might not just be your dish of tea.

Performance: Tidy
Recording: Good
Stereo Quality: Okay

Not so many years ago, comprehensive re-critics of songs by the late Francis Poulenc were so rare among American commercial recordings that, as a reviewer who admires this repertoire, I found myself treading very lightly indeed—very reluctant to put down any performer who undertook such a project. Now, with the availability of several such discs and with the inevitable prospect of more to come, I find myself casting a more scrupulous eye—I mean ear—on style and execution.

Miss Makas, an American soprano and (judging by the photograph on the jacket) a young one, has a light, well-schooled voice which she uses with almost excessively ob-vious care, and is by no means to be put down—no matter if not her own reason than her trim musicianship. Yet, all told, I am left thor-oughly cold by her performances here. The music is of a limited time span of several years, from 1927 to 1943. But, although stylistic range was not precisely one of Poulenc's strong points, Miss Makas does a remark-ably proficient job of making every song sound alike. She rarely gets into the text; one listens without boredom; the solo vocal sound is tasteful and effective, although there is some surface racket during the first few minutes of side one on my review copy. The recorded sound and stereo effects are expressive of more to come, I will stubbornly keep a position on a record involving top-notch instrumental support. (It might be of interest for me to recall that Poulenc's friend, the American composer Ned Rorem, once surprised me by revealing that Poulenc never worried of describing at length the manner of that miraculous modulation or progression in his own work.)

...that as it may, the Mass in G is one of those works so unstudied and sure-footed that I would find it all but impossible to make an honest, preferential choice of one of its movements over the other. The lyrical flow is almost obsessively unifying, but one listens without boredom; the solo vocal writing and choral writing are impeccably clear, idiomatic, and ravishing. In sum, the piece—for me at least—hasn't a dead spot. And the motets which accompany it are scarcely less winning.

Although I suppose Canadian composers Harry Somers, Welford Russell, and John Beckworth might well consider their occupying a position on a record involving top-notch instrumental support, I am not sure that the artistic merits of the arrangement are somewhat open to question. Their pieces are all composed in a somewhat similar stylistic vein, but the clear, exquisite technical and expressive focus of the Poulenc pieces make them seem ever so slightly gauche by compari-son, when, in another context, they might have given considerable pleasure.

But even considering this, the record is an extremely attractive one. The performances seem to me both sensitive and musically satisfying. The recorded sound's effects are tasteful and effective, although there is some surface racket during the first few minutes of side one on my review copy.

RECORDING OF SPECIAL MERIT

POULENC: Mass in G Major (1937); Two Motets; SOMER: God the Master of This Scene. RUSSELL: Who is At My Window? WHO? BECKWORTH: Sharan

Fragments. Festival Singers of Ontario, El-mer Iseler cond. SERAPHIM S 60085 S2.39.

Performance: Eloquent
Poulencc Recording: Commendable
Stereo Quality: Well-realized

Since Seraphim's sleeve annotator, Giles Bryant, writes that "Poulencc, according to several acquaintances who wrote about him, was the blending of seeming opposites that enabled him to hold the interest of any religious fervor with a Hedonistic and flippant attitude to life," I can dispense with any ret-eraction of the same observation I have made so frequently in these columns. Poulencc's Mass in G is certainly no novelty to aficionados, and, after its fashion, strikes me once more as a virtually flawless work. Its technique, its intentions, its continuity are so miraculously clear and perfectly realized that one feels that consultation of the printed score for amplified insight into the work would be virtually a waste of time. In the best sense of the word, the Mass is an almost unbelievably "pretty" piece; yet this aspect of the work seems remarkably natural and unaffected. (It might be of interest for me to recall that Poulencc's friend, the American composer Ned Rorem, once surprised me by revealing that Poulencc never worried of describing at length the manner of that miraculous modulation or progression in his own work.)

...that it may, the Mass in G is one of those works so unstudied and sure-footed that I would find it all but impossible to make an honest, preferential choice of one of its movements over the other. CIRCLE NO. 44 ON READER SERVICE CARD
When you're number one in tape recorders you don't make the number-two tape.

It costs a few pennies more. But Sony professional-quality recording tape makes a world of difference in how much better your recorder sounds—and keeps on sounding. That's because Sony tape is permanently lubricated by an exclusive Lubrication process. Plus, its extra-heavy Oxi-Coating won't shed or sliver. Sony tape is available in all sizes of reels and cassettes. And remember, Sony professional-quality recording tape is made by the world's most respected manufacturer of recording equipment.

Its own way a little dour and heavy-handed. The Prokofiev Sonata—the original version of the perhaps better known Second Violin Sonata, and by far the longest and most ambitious work on the recital—struck me as "manufactured," somehow almost consistently falling short of the grace and idiomatic charm that was its apparent expressive intent. Admittedly, I am but casually familiar with the work and may very well be missing the point warranting the obviously careful attention its composer gave it.

Paul Cooper, an American composer-in-residence at the College-Conservatory of Music in Cincinnati, is a composer whose name and work were both new to me. His short, cryptic Sonata for Flutes and Piano evidently does not require (as its title suggested to me) the presence of two flutists, but instead the alternation of C flute, alto flute, piccolo, etc. As I always do when I draw a virtual blank on a new piece by a composer I've never (to my recollection, at least) heard, I played it more than once or twice, and at different times, to try to get the hang of it—but I'm afraid I lost the ball game. This may very well be because the piece, although not especially recondite or difficult, is not especially recondite in musical technique, states me as a bit quickish and exhibitionistic in its attempt to exploit both flute and piano in "original" ways. In any case, although it's part of my job to have one, a reaction or general opinion of the piece simply does not shape itself in my perception.

For the most part, the Dutilleux Sonatine struck me as the most original and expressively meaningful work on the program, although I thought it rather too brief to have given full realization to the possibilities of its materials or, for that matter, real justification for its seriousness of tone.

Keith Bryan and Karen Keys, flutist and pianist respectively, played with fluency and musicality, but I am familiar enough with at least the Prokofiev idiom to sense that in this work, and very probably the others, their work here is a little wanting in flair, a little wary of taking the chances that make for first-class playing. Recorded sound and stereo are both fine.

Puccini: II Trittico: Suor Angelica, Rosanna Carteri (soprano), Sister Angelica; Miti Truccato Pace (mezzo-soprano), Princess; Maria Solano (mezzo-soprano), Abbes; Amelia Minetti (mezzo-soprano), Sister Monitor; Lia Ceri (mezzo-soprano), Mistress of Novices; others. Chorus and Orchestra of Radio Italiano, Fernando Previtali cond. Il Tabarro. Antenore Reali (bass), Michele; Gianluca Scarlino (tenor), Luigi; Clara Petrella (soprano), Giorgetta; Ebe Ticozzi (mezzo-soprano), Frugola; Giuseppe Nesi (tenor), Tintia; Dario Caselli (bass), Tatja, Orchestra of Radio Italiano, Giuseppe Baroni cond. Gianni Schicchi, Giuseppe Taddei (bass), Gianni Schicchi; Grete Rapaport (soprano), Laurentia; Giuseppe Savio (tenor), Rinuccio; Fernando Corena (bass), Simone; Agnese Dabini (contralto), Zita; others. Orchestra of Radio Italiano, Alfredo Simonetti cond. Everest S-464/3 three discs $8.94.

Performance: Possible to good
Recording: Dated
Stereo Quality: Artificial

These were the first complete recordings of the Puccini one-acters (originally issued on the Cetra label), and as such they are greatly, fully recommended. But they all date back to 1949, and the weight of the past twenty years lies heavy on their sonic. The most severely affected is Gianni Schicchi, an ensemble, oper, with concerted vocal passages which suffer here from distortion and/or insufficient clarification. Suor Angelica shows the strongest signs of survival in this performance. It offers the best balanced singing in the group, and its subdual orchestra is tolerably reproduced.

Actually, apart from the technical deficiencies which constantly intrude, each performance offers something worthwhile. All are idiatically conducted and well-paced, with a reasonable amount of theatrical feeling. In Suor Angelica, Rosanna Carteri makes something memorable of the tragic figure of Angelica, and she handles the considerable vocal challenges remarkably well. Miti Truccato Pace offers a well-chewed pur-
RECORDING OF SPECIAL MERIT

PURCELL: Te Deum, in D Major; Jubilate Deo, in D Major; In guilty night (Saul and the Witch of Endor); Man that is born of Woman (Funeral Sentences). Honor Sheppard and Christina Clarke (soprano); Alfred Deller (countertenor); Neil Jenkins (tenor); Maurice Bevan (baritone); Philip Jones and Edgar Howard (trumpets); Robert Elliott (organ); Anna Honor Sheppard and Christina Clarke (sopranos); Alfred Deller cond. RCA VICTROLA VICS 1407 $2.50.

Performance: Splendid Recording: Excellent Stereo Quality: Good

Whether in the festive Te Deum and Jubilate, the choral pieces intended for St. Cecilia's day, or the gloomier scene between Saul and the Witch of Endor and the affecting verse anthem Man that is born of Woman, this disc presents Purcell at the very peak of his creativity. All these are immensely expressive, exciting, and moving works, and it would be difficult to imagine more devoted performances than the ones to be heard here. Deller is in exceptionally good voice in his many solos, and he directs the four items with great sensitivity. The recording, furthermore, is first-rate, making this a Purcell collection of the highest distinction. Texts are included, along with fine notes by Stoddard Lincoln.

D. H.

Performance: Sensitive Recording: Excellent Stereo Quality: Unusually good

While it is both unlikely and, as the facts have it, untrue that none of these pieces has ever been recorded before, Everest's inclusive title for its new release (in billing impressively bold enough to keep an Elizabeth Taylor happy)—THE WORLD PREMIERE RECORDER—somewhat manages to convince me that the company has a point to make even though its facts are wrong. For the record, the Ravel was once available on the Concert Hall label, the Honegger as a French import (Boite à Musique), and the Villa-Lobos on several different discs. Still, the medium and some readings of Ormandy or Zanderling, since the music itself contains sufficient inherent dramatic contrast without the kind of over-emphasis it gets here at Yevgeny Svetlanov's hands.

Let it be said, however, that the recorded sound is brilliant and spacious, and the stereo localization is used to telling effect in the brass and string interchanges in which the Symphony abounds. As I have said in previous reviews of this music, Rachmaninoff's Op. 13, which he disavowed following its unfortunate first performance in 1897, still remains my favorite among the Russian composer-pianist's symphonies. D. H.

RECORDING OF SPECIAL MERIT

RACHMANNINOFF: Piano Concerto No. 2, in C Minor, Op. 18; Rhapsody on a Theme of Paganini, Op. 34; Agustín Aniceto (piano); New Philharmonia Orchestra, Moshe Atzmon cond. SERAPHIM S 60091 $2.49.

Performance: Excellent Recording: Very good Stereo Quality: Good

Although there are several excellent stereo couplings of the ever-popular Rachmaninoff Second Piano Concerto and Paganini Rhapsody, Seraphim has here given us one with a bargain-basement price tag, and it's a first-rate buy. Save for some bottom-heavy bass in the opening chords of the Concerto, Analyses, the 1961 Mitropoulos International Music Competition winner, gives performances that have power, glitter, and warmth in ample and well-proportioned measure. Conductor Moshe Atzmon is a new name to me, but his orchestral support goes far beyond that of mere accompaniment. He and Aniceto's work wonderfully hand-in-glove, and are recorded gratefully warm and spacious sonics in the bargain.

D. H.

RACHMANNINOFF: Symphony No. 3, in D Minor, Op. 44; Tchaikovsky Symphony Orchestra, Yevgeny Svetlanov cond. METROPOLY/ANGEL SR 40084 $5.98.

Performance: Wild and woolly Recording: Good Stereo Quality: Highly effective

If you like your Rachmaninoff with all stops out, with the utmost contrast in tempo and dynamics, this recording is for you. The wildly hysterical treatment of the final pages will illustrate my point sufficiently. Personally, I prefer the more justly proportioned two channels, to reduce acoustic peaks either in the loudspeakers or room acoustics by a factor of 15 decibels maximum. Flattens the response curve for new balance in sound reproduction never before available.

of the music involved are off the beaten path, and though the disc, by its very nature, will scarcely precipitate a stampede in retail shops, it achieves something of a coup in bringing together difficult-to-obtain works by means of such long-standing international stature.

Usually when pieces are ignored, there is ample reason for it. But, as luck would have it, such is not the case here. The Ravel piece was begun in 1920 and completed in 1922. Ravel, like Stravinsky, is a composer whose pieces almost invariably seem exactly right as to duration—unless, in as certain cases I could cite, the pieces give so much pleasure that one wishes they might go on a bit longer. But the Sonata for Violin and Cello, while the Rollo Myers study of the composer suggests gave Ravel a bit of a hard time, is almost twenty minutes long and perhaps too long. It is certainly a comparatively ungainly and even inconsistent work for this particular composer. It nonetheless has its fascination, inasmuch as it appears to be one of those brain-stretching works that composers with highly personal and cultivated styles often undertake in hope of a therapeutic broadening of musical vocabulary and technique. The "modernism" initiated by Stravinsky's Sacre—specifically its polyrhythm and its rhythmic dynamics—are clearly echoed in Ravel's Sonata, quite as if the composer felt that he must come to terms with their implications in his own way.

The Honegger piece is perhaps the most successful and certainly the most charming piece of the three. It is Honegger at his most "French"—which is to say, in his most modest lyrical vein. The Villa-Lobos Çobos is brief and completely forgettable, but pleasantly lyrical and effective while it goes about its glib business.

The Schoenfeld Duo (Alice on the violin and Eleanor on the cello), it seems to me, is uniformly successful and certainly the most charming piece of the three. Work of the same quality is no longer available Columbia disc.

I am disturbed by aspects of the sonics of the recording, which evidently was done in the Philadelphia Academy of Music with the Philadelphia Orchestra, Eugene Ormandy cond. RCA LSC 3058 $5.98, ® TR3 5040 (341) $10.95, ® RSS 1112 $6.98. Performance: Slowish. Recording: Film-studio ambiance. Stereo Quality: Excellent in its way. These two releases bring to twenty-six the number of recorded versions of the Rachmaninoff Sixth Symphony listed in the Swann catalog. The composer himself finished in 1917, the work being first performed in Moscow the following year. It is perhaps too much to say that the Rachmaninoff represents the apotheosis of Russian symphonic music, but for many it is a work that has come to be regarded as the summit of the symphonic art. The recording is a significant one, for it is the first major work recorded for RCA Victor with the Philadelphia Orchestra, Eugene Ormandy cond. RCA LSC 3058 $5.98, ® TR3 5040 (341) $10.95, ® RSS 1112 $6.98. Performance: Slowish. Recording: Film-studio ambiance. Stereo Quality: Excellent in its way.

SCHUBERT: Wanderer Fantasie (D. 760). Moments Musicaux, Op. 94 (D. 780). Wilhelm Kempff (piano). Deutsche Grammophon SPM 159572 $5.98. Performance: Both solid and stolid. Recording: Good. Stereo Quality: Excellent. Pianist Wilhelm Kempff has accomplished precisely what one might have expected of him in this all-Schubert release. Judging by what is commonly considered to be the "right" stylistic attitude toward the music, Kempff just about hits the bull's-eye. But even so, his playing of Moments Musicaux, for all its deadly accuracy and blinding technical clarity, is somehow excessively idiomatique: as if the music loses its charm; its rather oversimple lyricism has, as a matter of fact, an almost military precision about it.

The Wanderer Fantasie, by the very nature of its more flexible and improvisatory musical design, resists such treatment. Still, much as I admire Kempff's mastery of the notes and unmistakable success in getting results that seem almost uncomfortably close to his intention, I would prefer to hear the work played more freely—with less of an eye to the stylistic manner preceding Schu-

ber's early Romanticism and more to the more flexible stylistic manner of the later Romanticism that followed him and that the Wanderer Fantasie so clearly foreshadows. Your interest in this release, then, will depend in large part on your attitude toward Schubert's music, your constancy fixed opinions as to how it should be played. DGG's engineers have done a masterly job of reproducing the sound of Kempff's piano.
If you think all watts are alike, you may get apples the next time you buy oranges.

Which is our way of saying that all amplifiers and receivers aren’t rated the same way.

The several different methods of rating an amplifier’s power capacity are so far apart that an amplifier rated at 250 watts by one system actually puts out only 50 watts by another.

It’s not a Question of “Right” and “Wrong”

We don’t mean that some power rating systems are “wrong” and others are “right.” What we are saying is that one component may appear to be more “powerful” (i.e. deliver more watts) than another, when the real difference may be in the methods used to measure their respective outputs.

Let’s end the confusion by defining the three main rating methods:

“RMS” Rating—The standard laboratory method. The output of an amplifier is measured at a single given frequency. Not especially useful in measuring a component’s capacity to reproduce a complicated signal like music.

EIA Rating—Derived by measuring output at a single frequency. But permits a higher distortion factor (5%), and thus results in a much higher wattage number than the comparable IHF rating (at 1%).

IHF Rating—Arrived at in accordance with the published Institute of High Fidelity Standard, which sets forth two methods of power measurement: “continuous power” method (same as RMS method above) and “dynamic or music power” method. Additionally, it specifies that measurements are to be made with all amplifier channels driven. These two methods, as set forth in the publication IHF-A-201, are accepted as the industry standard by quality manufacturers.

The IHF Method is More Musically Inclined

Clearly, the IHF rating of an amplifier or receiver is more meaningful to anyone buying high fidelity equipment. Because it uses conditions that the listener encounters, while still maintaining strict limits where distortion is concerned.

So it makes sense to check the IHF power rating when you’re looking for an amplifier or receiver. The specification sheets of our member manufacturers carry this rating. As the common yardstick of the industry, it best reflects the concerns of those who developed the concept and craft of high fidelity.

The organization of the quality sound equipment makers and dealers. Specifications stated in terms such as “100 watt IHF ± 1 db” are not true ratings.
The London Phase 4 recording of the "Pathétique" leaves me with mixed feelings of sadness and chagrin. Young Henry Lewis, conductor of the New Jersey Symphony Orchestra and first of the black race to head an American symphonic organization, led the Royal Philharmonic Orchestra in a London concert shortly after his appointment; the Tchaikovsky symphony was the mainstay of the program, and the reviews were friendly, if not wholly ecstatic. At any rate, the London Phase 4 artist-and-repertoire people have seen fit to have Mr. Lewis record this work when the catalog is crowded with other versions, most of them by considerably more seasoned conductors.

Mr. Lewis's reading of the work is a bit on the slow and careful side, lacking somewhat in dramatic urgency, and downright heavy-handed in the always tricky 5/4 second movement. The recorded sound is comparable to that of film sound studios twenty years ago: a sense of warm and spacious room tone has been sacrificed in order to achieve greater detail of instrumental texture. I find this no help to the music or to Lewis, who could have been given an opportunity to display his very ample conductorial prowess in music represented by far fewer "big-name" competitive recordings, and I see no point whatever in going back to the dear "dead" studio recording days of the late Thirties and early Forties.

D. H.

RECORDING OF SPECIAL MERIT

VERDI: Aida: "Ritorna vincitor"; O patria mia. Don Carlo: "Tu che le vanità". Macbeth: "Nel di della vittoria...Vieni!" Fuggiu felice! (with George Macpherson, bass). Otello: Willow Song and Ave Maria (with Maureen Lehane, mezzo-soprano). Gwyneth Jones (soprano); Orchestra of the Royal Opera House, Covent Garden, Edward Downes cond. LONDON OS 26081 $5.98, ® 26081 (7½) $7.95.

Performance: Very good
Recording: Excellent
Stereo Quality: Excellent

Gwyneth Jones sounds like a natural Verdian here: the voice is strong and impressively colored; she can rise to powerful climaxes and can float lovely pianissimos. There is strong determination in her Lady Macbeth (though her reading of the letter is rather tentative), a sense of convincing despair in her Elisabetta, and true poignancy in her Desdemona. The Aida scenes are also well thought out, but here the intonation is not always very secure, nor is the ascent to that formidable high C in "O patria mia" the last word on the subject. But these are small quibbles in an otherwise first-rate achievement. Edward Downes favors leisurely tempos, particularly in Aida, but the orchestra plays extremely well, and the engineering is splendid.

VILLA-LOBOS: Choros No. 2 (see RAVEL)

WAGNER: Die Walküre: Act 1, Scene 3; Act III (complete). Helen Traubel (soprano); Emery Darcy (tenor); Herbert Janssen (baritone); others. New York Philharmonic, Artur Rodzinski cond. ODYSSEY 52 26 0018 two discs $4.98.

Performance: Traubel and Rodzinski excel
Recording: Good for its age
Stereo Quality: Artificial

Recorded in 1945, these generous excerpts from Die Walküre provided valued service to Wagnerians through the years when a complete recording of this opera (to say nothing of a complete Ring) was only a dream. They are not new to LP (Columbia

Try the Sony station countdown test
SL-105 was their previous incarnation), but as budget reissues they are welcome. Technically, of course, they are outranked alongside the current luxurious representations of Wagnerian sound, but they possess enduring artistic values. Helen Traubel's opulent voice is captured in its remembered strength and security; Brünnhilde's part (Act III) was better suited to her commanding tone and manner, but she excels in both acts. Needless to say, the ecstatic close of Act I would have been different had Lauritz Melchior, who was under contract to Columbia at the time, taken the part of Siegmund. Emery Darcy's effort was laudable, but he simply could not measure up to the part's requirements. Herbert Janssen also found the music of Act III strenuous, yet he offers the clear authority and meaningful phrasing of a major artist. The uncredited Sieglinde in Act III was Irene Jesser.

The ceaseless momentum and energy of Arthur Rodzinski's conducting is a major strength here; it often makes one forget the faded sonics. The set is not a "best" of anything, but it is an interesting and valuable souvenir.

G. J.

RECORDING OF SPECIAL MERIT

WOLF: The Italian Song Book. Elisabeth Schwarzkopf (soprano); Dietrich FischerDieskau (baritone); Gerald Moore (piano). ANGEL SB 3703 two discs $11.96.

Performance: Outstanding
Recording: Excellent
Stereo Quality: Proper

The Italian Song Book (Italienisches Liederbuch) is a product of Hugo Wolf's full maturity as a composer. He began working on this collection late in 1890, five months after the completion of the Spanisches Liederbuch. Here again he turned to folk lyrics translated by Paul Heyse, one of the two poets of the Spanisches Song Book. The Italian collection is superior to the other because of the variety of its moods and because of its attractive combination of Mediterranean sentiment and disciplined Germanic expression. It is important to remember that this is not a cycle: the songs may be assembled in varying sequences, and several of them could be sung by either male or female interpreters. As it happens, the present set follows the sequence of the published edition, and the even allotment of the forty-six songs to the two singers is just from every viewpoint.

Both artists are masterly Wolf interpreters. Schwarzkopf, in particular, is in an inspired form throughout. As Ernest Newman pointed out in his remarkable essay on these songs, "Wolf has deliberately passed over the more passionate type of female mentality in order to concentrate on the latter, the sentimental, or the ironic type." Schwarzkopf has judged the emotional content of each song unerringly, and turns each into a compact little drama. A good example is "Wer rief dich denn?", a brilliant sketch of female malice, in which the artist leaves no doubt that the jealous rage is a manufactured one: or "Ich esse von mein Brot," in which the mock-serious emotions of a childish mind are caught with uncanny art. And of course, one cannot pass over the priceless miniature of "Wie lange schon war immer mein Verlangen," a masterpiece in six lines, encapsulating the plight of a woman who has always longed for a musician lover, and has had her prayers answered—but in his sentimental moods the gentleman prefers to fondle his violin. In this song, Wolf gave the piano a hilarious postlude and, needless to say, Gerald Moore rises fully to the occasion. Vocally, Schwarzkopf is fine. She simply does not allow the music to tax her fading but still considerable resources. Her sense of proportion remains unsurpassed; no singer is her match when it comes to conveying coyness and feminine wiles, and, in her angry moments, she can seethe with venom, but the musical line is never compromised through excessive passion.

In this respect, Dietrich Fischer-Dieskau is in a more difficult predicament. Some of his songs do call for honest-to-goodness passion and a wider range of emotional expression. For the most part, his singing is superb, displaying his fine control over phrasing and nuance, exemplary clarity of diction, a curiously lyric line, and an uncompromising respect for the composer's intentions. There are, however, a few miscalculations. The scorn in "Hoffentlich sieh' ich, schönes Kind" takes on exaggerated proportions, so that the climax becomes explosive and tonally strained. Similarly, the beautiful "Wenn du mich mit den Augen streifst" is built to an over-vehement climax that cancels out the carefully achieved effects in the song's opening lines. Fortunately, these instances are few, and the baritone starts the first disc with a performance of "Auch kleine Dinge" the ANGEL 6060 STEREO RECEIVER
CIRCLE NO. 50 ON READER SERVICE CARD

Start at 88 MHz on the nine-inch long dial of the Sony 6060 and tune your way slowly to 108 MHz. Stations you were never able to enjoy before will pop out all along the dial. And when you tune to 96.3, you'll hear the station that is broadcasting on 96.3. That's how precisely the dial is calibrated.

But there's more to the 6060 than just logging stations. It's how they sound once you get them. If it's a stereo station, the music is rich and full. Strong stations won't overpower weak ones. Adjacent stations don't overlap. And the same magnificent FM reception you hear today, you'll hear years and years from now. Sony solid-state i.f. filters make sure of this. They never need to be realigned.

The Sony 6060 is a superb performer. FM stereo, FM and AM broadcasts, records and tapes. Here's why: 110 watts IHF power into 8 ohms; distortion, less than 0.2% at rated output; sensitivity, 1.8 uV; selectivity, 80 dB; capture ratio, 1.5 dB and spurious signal rejection, 90 dB. A host of conveniences enhance your pleasure: automatic stereo reception; zero-center tuning meter; front panel headphone jack; switches for tape monitoring, muting, speaker selection, tape or aux input, loudness that works.

Next time you visit your Hi-Fi dealer, take a trip from 88 MHz to 108 MHz. You'll make some delightful discoveries along the way. Sony 6060, $399.50 suggested list. Other Sony receivers from $279.50 to $699.50. Sony Corporation of America, 47-47 Van Dam St., Long Island City, N.Y. 11101.
moving elocution of which is characteristic of his superior art throughout.

This is a desirable release, and deserves a longer life in the catalog than that usually allotted to Hugo Wolf collections. The songs in The Italian Song Book have exquisite piano accompaniments, and are often rounded out with postulists of extreme subtlety and sophistication. More than any other pianist, Gerald Moore is capable of making the piano parts essential components of the song. Balances between voices and piano are ideal, and excellent translations by Walter Legge are provided. G. J.

WOLF: String Quartet in D Major. La Salle Quartet. Deutsche Grammophon SLPN 139376 $5.98.

Performance: Effective
Recording: Excellent
Stereo Quality: Very good

Along with the symphonic poem Penthesilea and the Italian Scenande for string orchestra, the String Quartet in D is pretty much the complete story of Hugo Wolf's purely instrumental output. The Quartet is relatively early work, built along superfluous conventionally lines. Yet for a man who felt most comfortable and made his major contribution to the art in the small vocal forms, the quartet is imposturing. In terms of length, workmanship, and scope, it is an impressive, frequently eloquent, and moving work. Furthermore, the discreetly innovative lyrical impulse, and, even more strikingly, the subtlety and understated boldness of harmonic language that were to make Wolf's achievement in the lied virtually in a class by itself are in more than occasional evidence in the quartet. The work has power and originality, even if it doesn't quite sustain its length.

Since I must confess that the piece is news to me, and that I am reviewing it without a score, I can only guess about the performance quality. The La Salle Quartet, I would vouch, knows what it is doing and has given a performance of skill and rugged power. The recorded sound and stereo quality are excellent.

COLLECTIONS

Performance: Spumtuous voice, varied interpretation
Recording: Very good
Stereo Quality: Very good

Let me begin by saying that the sheer sound of Marilyn Horne's voice is a joy to the ear. Her smooth technique in executing ornamented music is matched by few singers in any vocal register. She is clearly one singer in a million, and the reservations voiced hereafter must be weighed against these incontrovertible facts.

I have no reservation at all about the Rodolinda arias, which are sung with boldness, accuracy, and fine expressive shading. The music, incidentally, is marvellous—if any Handel opera deserves to be staged, this is it, the absurdity of its plot notwithstanding. The alto aria from Messiah is also beautifully sung, though somewhat wanting in breadth of phrasing, but Miss Horne's decision to undertake 'I know that my redemption', a soprano aria, was, I think, misguided. The orchestra is too high for her to manage the notes without strain, and as a result, her phrasing loses its usual freedom and her intonation falls.

The Bach side of the disc is less consistently impressive, because with the customary sumptuous tone we do not get enough expressiveness and emotional variety. For my taste, it all sounds a shade too cool, even mechanical. The neat but matter-of-fact conducting of Henry Lewis may be partly to blame for this, and I also miss a firm bass line in

The most impressive pieces are on the second side: a splendidly-styled Fantasia by Joseph Carey, the great Augustin composer. Sweeney, and close behind, two grandioso works of the later seventeenth century—Ash- 

than von Noord's Psalm 6, an inventive chorale setting, and Abraham van den Kerck- 

hoven's Fantasia for an instrument with two manual sts.

The collection has excellent variety and (like the earlier volumes in this worthwhile series) should be of great interest to connoisseurs of organ literature. The perfor- 

mances, on the fine Marcussen tracker organ in Jaegersborg, Denmark, are on the whole more commendable. Hansen reveals his usual skill in registration, bringing to the line phrases together and inclines toward severity in his rhythmic expression. The recording is first-rate, and the jacket includes informative notes by Joshua Rifkin.

I. K.

Performance: Homespun
Recording: Good
Stereo Quality: Good

Here are a dozen concert favorites for light entertainment, somewhat sentimentalized and refurbished in modernized settings that are sometimes appropriate (Still wie die Nacht), but more often not. The whole program seems like a German equivalent of the kind of radio concert John Charles Thomas presented more than twenty years ago. Harmless but certainly not serious. The orchestrations are by Franz Josef Hauer, whose name I have encountered before on similar ventures. I hope Herr Breuer is the happy recipient of sizable royalty checks, because aesthetically he is mired in a losing proposition (a syrupy treatment of Mozart's beautiful Arias von corum cupam, harpsichord peggios std plucked bass in Auf Flügeln des Gesangs—that sort of thing).

The enterprise is partly redeemed by Prey, who sings with commendable restraint and with a judicious application of intimacy, sentiment and fervor whenever needed. Despite occasional intonation flaws, the singing is still the best part of what is, all things considered, a disc that one can live without.

This record is the result of two years of intensive research in the sound libraries of Deutsche Grammophon Gesellschaft, Connoisseur Society, Westminster Recording Company and Cambridge Records Incorporated. The Editors of Stereo Review have selected and edited these excerpts that best demonstrate each of the many aspects of the stereo reproduction of music. The record offers you a greater variety of sound than has ever before been included on a single disc. It is a series of independent demonstrations, each designed to show one or more aspects of musical sound and its reproduction.

Entirely music, the Record has been edited to provide self-sufficient capsules of an enormous variety of music arranged in a contrasting and pleasing order. It includes all the basic musical and acoustical sounds that you hear when you listen to records, isolated and pointed up to give you a basis for future critical listening.

Stereo Review
SOMEBODY FINALLY DESIGNED A SPEAKER THAT'S COMPATIBLE WITH THE HUMAN EAR.

Speakers are shaped like cones, right?

The existing cone type speaker was invented by A. S. Sykes in 1919. Then it was refined by C. W. Rice and S. W. Kellogg. The enclosure and bass reflex enclosure happened between 1920 and 1930. The exponential horn was developed about 1919. By 1930, the fundamentals were perfected. And today, these fundamentals are still the same.

Recently, manufacturers have tried to reproduce sound which they believe is comfortable to the human ear — thus, the advent of unreal booming bass and strident highs. And, a great many people like it that way because they think it's high fidelity (in a way it is), but it usually isn't NATURAL sound the way it was originally produced.

With full consideration of the human ear and with the desire to produce a speaker which faithfully reproduces sounds as they were originally created, Yamaha successfully developed the NATURAL SOUND SPEAKER. It's not based on the piston motion concept of conventional cone type speakers. It's based on the principles of acoustic musical instruments such as the piano, guitar or violin. The quality of sounds produced are directly correlated to the acoustical design of their sounding boards. The sounds are called BENDING MOTIONS of sound, and they are natural sounds.

Following the concept of acoustical bending motions of sound, Yamaha developed the Natural Sound Speaker. Its construction is entirely different from that of a conical type speaker. It has a rigid diaphragm constructed of a specially formulated polystyrene.

Eliminated entirely:

The specifications:

**NS-15**: 8 ohms
- Power capacity: 30 watts
- Tone control: Continuously Variable
- Cabinet: Removable grille
- American Walnut
- Open pore, oil finish
- Dimensions: Height: 23½" Width: 14½", Depth: 7½"
- Weight: 22 lb

**NS-10**: 8 ohms
- Power capacity: 20 watts
- Tone control: Continuously Variable
- Cabinet: Removable grille
- Natural Sound: 11 x 15½" American Walnut
- Open pore, oil finish
- Dimensions: Height: 26" Width: 13½", Depth: 7½"
- Weight: 15½ lb

ERIC SALZMAN
By JAMES GOODFRIEND

Eric Salzman is the fastest walker I know. "Actually," he says, "I don't always walk fast. It depends on the tempo of the particular day." Maybe. My own experience leads me to believe that most of his days are allegro molto, with a tendency to accelerate into presto. Andante I consider rare, and I have yet to see him in the throes of an adagio (espressivo or otherwise). Measuring the scope and extent of his accomplishments against the fact that he was born no more than thirty-six years ago tends to support such observations on his life tempo. Any man who does as much as he does has to walk fast.

Eric is professionally a composer, a critic, a writer, a lecturer, a radio music director, and a concert director and producer. He has something to say about all of them. "But," he says, "I tend to regard all my musical activities as aspects of one. I believe that music is a social art and that all manifestations of it are relevant to contemporary life and not an escape. Therefore, I have an interest in technology and the new media as well as the old."

That gets us into composition. Eric studied composition with Otto Luening and Vladimir Ussachevsky at Columbia University (B.A. 1954; Phi Beta Kappa), and with Roger Sessions and Milton Babbitt at Princeton (M.F.A. 1956). He also held a Fulbright Fellowship for two years at the Conservatorio di Sta. Cecilia in Rome, taking time out to visit the modern-music center at Darmstadt, Germany. He has been composing since he was eleven, and his works have been performed in New York, Boston, Minneapolis, Buffalo, Paris, Vienna, Belgrade, Budapest, and a lot of other places. Some of his recent works are Versus and Cantos, a music theater for voices, instruments, and electronics, written with the avant-garde poet John Ashbery; The Peloponnesian War, a tape score for a full-evening (that's what he said!) dance work by Daniel Nagrin; The Nude Paper Sermon, for actor, Renaissance consort, chorus, and electronics, the first multimedia music-theater work commissioned by a record company (Nonesuch); and Can Alan Survive?, tape and electronic "environments" for a walk-through, mixed-media exhibition about pollution, conservation, and ecology now at New York's American Museum of Natural History.

Relating what the music sounds like is a bit difficult, but the aesthetic basis is clear. "My own path is outside the modern-music establishment, and I have a rather independent position. I don't believe in the old dogmas of modern music, which really come out of Romanticism—such as that a certain style of composition is current or contemporary and therefore that everything else is passé. We're entering a post-modern-music, or, actually, a post-modern-art age, in which these questions are secondary. Technology makes C Major, the Aeolian mode, chromatic harmony, the twelve-tone method, aleatory music, and practically everything else simultaneously available. In the last decade, and through records, all of these have become integral parts of contemporary life, and this is the deeper meaning of the word "multi-media"—a conflict or dialogue of music of every kind. Speaking as a composer, my own music, for better or worse, is tied up with all these things."

Eric was born in New York City in 1933 and attended Forest Hills High School. His college background we've already been through, and that brings us to music criticism. He is, of course, one of the two recipients of the 1969 Sang Prize for music criticism, of which more is reported elsewhere in this issue. That alone gives him the right to some strong opinions on the subject. But his experience in the field goes back quite a few years. He was music critic for the New York Times from 1958 to 1962, and for the New York Herald Tribune from 1963 to its demise in 1966. In recent years, with the exception of a few articles, his critical writings have appeared exclusively in Stereo Review. And that brings us to his thoughts about records.

"The experience of records is a very strong one, and it transforms the whole experience of listening to music. This is partially because the sound is coming from speakers, not from a visible group of musicians, and partially because the conditions of listening are so different—and when listening habits change, the way people listen changes too.

A few more of Eric's credits wait patiently to be listed. He is currently Music Director of radio station WBAI, New York's non-commercial, educational, and, recently, controversial FM station. He is also Artistic Director for the concert series called "New Image of Sound," now just finishing its second successful year at Hunter College. And he is artistic advisor to "The Electric Ear," a series of electronic music and mixed media events at the famous New York discotheque the Electric Circus.

Eric's book, Twentieth-Century Music: An Introduction (Prentice-Hall, 1966), is selling extremely well, and he has another now in preparation. He has taught at Princeton, Hunter, and Queens College, and conducted master classes at Bayreuth. He has given talks and lectures all over the world, and since he has combined his lectures with actual mixed-media performances, he could probably make a good living off that alone.

Eric lives, with his charming wife Lorna and two lovely daughters, in an old house, on an old street, in an old section of New York called Brooklyn Heights. The walls of most of the rooms are all covered with old master paintings, drawings, and prints. He likes to eat, to drink wine, and to entertain, and he has several thousand friends, of whom the writer of this piece is one. What does he do on those rare occasions when he finds himself at home and at leisure? He thinks up new projects. "I plan to start a music theater company—musicians, technicians, singers, theater people—to do a great variety of musical-theater and multimedia things," he says, "to create as well as recreate. I want a pool or a group of people who can work in collaboration—the sort of local center I mentioned earlier. I think maybe it can be sponsored by WBAI. Where? I don't know yet. But I'm working on it."
For technical sound recording everything points to Revox

New from the Willi Studer Factory comes the revolutionary Macel 77 incorporating design developments based on experience gained in the broadcast field with the 37 and 62 Series Studer machines. The 77 is a studio quality machine compactly presented and offering features unique in this price class including total indifference to fluctuations in mains supply periodicity. With a wow and flutter level below broadcast standard requirements plus a near response from 20-20,000 Hz at 7½ ips (+2 db) and an ultra low noise level, this new Revox now sets the standard by which the rest will be judged.

Telephone: (516) 484-4650.
Acoustic Research AR-3a speaker systems are important professional tools to composer/arranger Don Ellis.

Don Ellis creates music that ranges from the ancient sitar to a novel four-valve quarter-tone trumpet specially made for him. His work is well exemplified by Electric Bath (Columbia 9585), which was Album of the Year (1968) in Down Beat, placed second in Playboy's annual poll, and third in Melody Maker; the record was also nominated for a Grammy Award.

Mr. Ellis' high-fidelity system in his studio consists of an AR turntable, a Bogen-Lenco B62 turntable, an AR amplifier, a JBL 600 amplifier, a Koss Pro 600A headset, Revox and Crown tape recorders, and a pair of AR-3a speaker systems.

Mr. Ellis advises AR that the turntables, amplifiers, and tape recorders are all capable of highest-quality reproduction, so that making comparisons of different tapes and records can be done dependably with any of them. However, he finds that only AR-3a speaker systems are accurate enough to use in his work.
FANNY BRICE/HELEN MORGAN. Fanny Brice began her career as a torch singer and the late, late show— are only part of the landmarks of their time have vanished or been altered beyond recognition. Helen Morgan (vocals) began her career as a torch singer and could break hearts any time with Frankie and Johnny from the 1934 motion picture of that name; all cleaned up and transformed somehow from a salty ballad into another sad, sappy torch song. I waited in vain—though, for Miss Morgan, who supplies the moodier than her that later and more corrosive satires have simply missed. There are also a couple of fillers: Bubbling Breakfast for the One I Love; an old soundtrack excerpt that should have been left lying in the Hollywood vault, and I'd Rather Be Blue over You, which Miss Brice co-authored with Billy Rose when she was married to him in the late Twenties (her first-hand Rose period, as it were). The recital concludes triumphantly, though, with The Song of the Sewing Machine, a heartbreaker about an immigrant girl finding fast in a garment-industry factory at the turn of the century. No Baby Snooks in this collection, and that's more than all right with me.

Miss Morgan, who supplies the mooder of the two sides here, was a Chicago high school dropout with unrealized ambitions (including the hope of a career in opera) until the night in 1925 when she climbed on top of a piano in a New York nightclub and established her image for what may turn out to be an eternity. Her appeal may not be as sure-fire today as that of the more wholesome Miss Brice, but she once turned on an entire audience or the frame of reference in which she is not a technical one (although RCA's engineers have done a stunning job of that), but the fact that these two performers, one mainly merry and the other melancholy, can still reach us so effectively and shake us up when he eternity. Her appeal might not be as big). If imitation is the sincerest form of flattery, this group also is the combination of every Jewish-mother portrait to which we've since been subjected (are you listening, Portnoy?), except that Fanny Brice's Mrs. Cohen has a gentleness about her that later and more corrosive satires have simply missed. There are also a couple of fillers: Cooking Breakfast for the One I Love; an old soundtrack excerpt that should have been left lying in the Hollywood vault, and I'd Rather Be Blue over You, which Miss Brice co-authored with Billy Rose when she was married to him in the late Twenties (her first-hand Rose period, as it were). The recital concludes triumphantly, though, with The Song of the Sewing Machine, a heartbreaker about an immigrant girl finding fast in a garment-industry factory at the turn of the century. No Baby Snooks in this collection, and that's more than all right with me.

Miss Morgan, who supplies the mooder of the two sides here, was a Chicago high school dropout with unrealized ambitions (including the hope of a career in opera) until the night in 1925 when she climbed on top of a piano in a New York nightclub and established her image for what may turn out to be an eternity. Her appeal may not be as sure-fire today as that of the more wholesome Miss Brice, but she once turned on an entire generation and is still a figure of nostalgic interest in this harsher age, if only as the prototype for impersonations by Carol Burnett. Here, in that quavering, suicidal, alcoholic little voice that always holds this listener just a hair's breadth away from hilarity, she offers her famed renditions of Bill and Ben's Help Lovin' Dat Man for which P. G. Wodehouse supplied the lyrics and which proved to be the biggest hits in Jerome Kern's score for Show Boat.

Other old favorites in Miss Morgan's act are Don't Ever Leave Me and More Than You Know, followed by her plaintive interpretation of Johnny Green's Body and Soul, at the sound of which strong men once were known to break down sobbing over their bathtub gin. There's also an attenuated Frankie and Johnny; from the 1934 motion picture of that name; all cleaned up and transformed somehow from a salty ballad into another sad, sappy torch song. I waited in vain, though, for Miss Brice, that perennial favorite of the disciples of Herr L. Von Sacher-Masoch.

There's also a comprehensible dubbing (at last) of the monologue Mrs. Cohen at the Beach (I remember as a child straining in front of the horn on my Aunt Jenny's wind-up Victor to understanding something like every fifth word and wondering why I was laughing). It must be the progenitor of every Jewish-mother portrait to which we've since been subjected (are you listening, Portnoy?), except that Fanny Brice's Mrs. Cohen has a gentleness about her that later and more corrosive satires have simply missed. There are also a couple of fillers: Bubbling Breakfast for the One I Love; an old soundtrack excerpt that should have been left lying in the Hollywood vault, and I'd Rather Be Blue over You, which Miss Brice co-authored with Billy Rose when she was married to him in the late Twenties (her first-hand Rose period, as it were). The recital concludes triumphantly, though, with The Song of the Sewing Machine, a heartbreaker about an immigrant girl finding fast in a garment-industry factory at the turn of the century. No Baby Snooks in this collection, and that's more than all right with me.

Miss Morgan, who supplies the mooder of the two sides here, was a Chicago high school dropout with unrealized ambitions (including the hope of a career in opera) until the night in 1925 when she climbed on top of a piano in a New York nightclub and established her image for what may turn out to be an eternity. Her appeal may not be as sure-fire today as that of the more wholesome Miss Brice, but she once turned on an entire generation and is still a figure of nostalgic interest in this harsher age, if only as the prototype for impersonations by Carol Burnett. I waited in vain, though, for Miss Brice, that perennial favorite of the disciples of Herr L. Von Sacher-Masoch.

THE FIRST EDITION: The First Edition '69. The First Edition (vocals and instrumental) peaks. But You Know I Love You; I Just Wanna Give My Love To You; It's Gonna Be Better; The Last Few Threads of Love; All the I Know; and five others. REPRISE RS 6328 $4.98, © 6328 S 4.98, © 6328 S 5.95.

Performance: Another good group Recording: Okay Stereo Quality: Good

Alright, already, so Laura Nyro is everyone's idol. Over and over we now hear those thin stringy imitative voices, jumping their tiny octaves (I know an octave is an octave, but unless it's Nyro doing the jumping, an ordinary octave just isn't as big). If imitation is the sincerest form of flattery, this group has a lot of sincerity. They jump in and out of other people's bags like red ants at a picnic. So if you don't care about originality and enjoy listening to ten sets of juvenile lyrics—well, enjoy, enjoy. Oh yes, there's a drummer for the First Edition who seems to be too big for his perambulator (a photo on the jacket shows him turned over on the sidelines). Did the First Edition think of this all by themselves or did they see it on Laugh-In? R. K.

GENTLE SOUL: Gentle Soul, Gentle Soul (vocals); instrumental accompaniment. Occurrence: Bar; Song for Eolia; Young Man Blue; Renaissance; See My Love; and five others. EPIC BN 26574 $4.98.

Performance: Too sweet, too soft Recording: Very good Stereo Quality: Very good

(Continued on page 108)
It's probably a measure of the times that music with the sweet felicity of that produced by Gentle Giant just doesn't sustain one's interest. Yes, it's well done; yes, it's pleasant, sweet, and vaguely reminiscent of a hundred distant folk themes and melodies. But is that enough? I don't think so. If I'm going to listen to folk music these days in its commercialized form, I prefer to hear the modified, but enormously more powerful, transformations provided by the likes of Bob Dylan, Tim Hardin, and Miss Joni Mitchell.

**RECORDING OF SPECIAL MERIT**

JOEL GREY: *Black Sheep Boy*. Joel Grey (vocals); orchestra, Jimmy Wisner, George Tipton, Joe Renzetti arr. and cond. If I Were a Carpenter; Scarborough Fair/Canticle; Both Sides Now; Laura; She's Leaving Home; and five others. COLUMBIA CS 9794 $4.98.

*Performance: Generous and giving. Recording: Tasteful.*
*Stereo Quality: Fine.*

Joel Grey is a very generous, compassionate, and talented young man. His gifts have been obvious in many theatrical efforts, especially in Cabaret and George M!, and certainly in his previous recordings (which I loved). He's made his own big splash. On "Black Sheep Boy," he proves his generosity as an artist by how much he gives to other people's songs. He can hardly hide his enthusiasm for the talents of other contemporary artists. I suspect Joel is busy right now preparing his next album, to be filled with all the selections he didn't have room for on this one. And that will be welcome, too.

"Black Sheep Boy" is a veritable horn of plenty of great modern hits and a few other truly beautiful songs that may never make it to the top, but which musicians cherish. Joel's approach is compassionate—his soft, understated, simple singing is that of a minstrel whose life is in the lyrics as well as the music. "Black Sheep Boy" brings together a few of the real poets of our abundant "now" music: Mr. Tim Hardin, Messrs. Lennon and McCartney, Messrs. Simon and Garfunkel, Miss Joni Mitchell, Mr. Nilsson, and Mr. Donovan Leitch.

Joel Grey has done the world of recorded music an favor by putting under one cover all this beauty, truth, and humor. In the words of Miss Jean Brodie, here is one cover all this beauty, truth, and humor.

**ENGELBERT HUMPERDINCK: Engelbert.** Engelbert Humperdinck (vocals); orchestra, Love Can Fly; Life to Life; Life to Year; Life to Love; Merry Me; To Get to You; True; A Good Thing Going; and six others. PARROT PAS 71026 $4.98, 79026 (33') $5.95, 79426 $5.95, 79026 $6.95, 79626 $5.95.

*Performance: Will the real Tom Jones stand up? Recording: Fair.*
*Stereo Quality: Good.*

Engelbert Humperdinck and Tom Jones have several things in common—recording and music-publishing companies of which they are part-owners, a large audience that is mostly female and mostly over thirty—and, judging by this new release, they must have about the same vocal-cord structure. I have heard singers that sound alike before, but seldom anything like this: after the first few bars of his lead-off number, Love Can Fly, had been substituted by mistake. No, it was Humperdinck all right—or all wrong, depending on how much you like Tom Jones and he shares with Jones a plastic musical car, a supreme indifference to the meaning of lyrics, and songs that make him seem to be singing inside a steel drum. Both also overdramatize even the most benign lyric, so that something like Les Bicyclettes de Belsize, heard here with garbling chorus and oversized orchestra, sounds as if Delilah might be back in town with her four brothers, and all of them bent on revenge. I might add that both Jones and Humperdinck are tremendous commercial successes. Wonders never cease.

**SHAKE KEANE: Dig It!** Shake Keane (flugelhorn); chorus and orchestra. Bend Me, Shape Me; By the Time I Get to Phoenix; Green Onions; Sual Serenade; Sunny; and seven others. LONDON SP 41115 $4.98, 74115 $6.95, 84115 $5.95.

*Performance: Shook, rattled, and winded.*
*Recording: Okay.*
*Stereo Quality: It's there, I guess.*

I see no reason why this record was made. Is there an underground cult of flugelhorn worshipers who want to see this instrument compromise, like Chubby Checker? I guess we were bellowed. I checked the label to see whether or not a Tom Jones recording had been substituted by mistake. No, it wasn't. Humperdinck all right—or all wrong, depending on how much you like Tom Jones and he shares with Jones a plastic musical car, a supreme indifference to the meaning of lyrics, and songs that make him seem to be singing inside a steel drum. Both also overdramatize even the most benign lyric, so that something like Les Bicyclettes de Belsize, heard here with garbling chorus and oversized orchestra, sounds as if Delilah might be back in town with her four brothers, and all of them bent on revenge. I might add that both Jones and Humperdinck are tremendous commercial successes. Wonders never cease.

**JOEL GREY**

A gentle minstrel sings other people's hits.

SHAKE KEANE: Dig It! Shake Keane (flugelhorn); chorus and orchestra. Bend Me, Shape Me; By the Time I Get to Phoenix; Green Onions; Sual Serenade; Sunny; and seven others. LONDON SP 41115 $4.98, 74115 $6.95, 84115 $5.95.
fluoroborn rather than a good vocalist. hind all the tortured blowing is a comy arras ooshing and aching over what's left of nme numbers. When Shake Keane blows, z9 liner notes claim, it envelops your sole being in velvet.“ But it is the tacky epithet “velvet of countless Peppermint Bungies, now peeling off the walls of places nere nobody goes anymore.

R. R.

SONDA: Woman in the Sun, Leonda vocals and guitar) : with various other mu-

nions. Mint is the Mix; Somebody's Gonna Ask Me Who I Am; When I Lived in My

grandmother's House; Blue Diamond in a Saturn Sanding; Mother in Love; and five

hers. EPIC BN 26838 $4.79.

Performance: Pleasant, but unmemorable

Recording: Very good
Stereo Quality: Very good

and a's previous history is a mystery to me. he is a mildly pleasant singer with a mixed
taste of mannerisms that are reminiscent of ve or six other female balladeers who come
mind; her guitar playing, presumably, is

equate. Seven Leonda originals and two adaptations" are included here—a consid-
table number for a first outing. Ironically,

over, the tune not written by Leona-

i, What I Lived . . . . is the most attractive n the album. With the number of new re-

cases that pour out of record-company pop

visions every day, it's pretty difficult to be-

ome excited over anything less than spar-

ing originality. Leonda is competent

ough, and her material has its moments; unfortunately, that's not enough.

D.

-HORACIO MALVICINO: The Brazilian

Touch of Malvicino. Orchestra, Horacio

Malvicino arr. and cond. Jazz 'n' Samba,

Quiet Nights of Quiet Stars; Goodbye Sad-

ness; Our Note Samba; Sal y Pimienta; and six

others. DECCA DL 75983 $4.98.

Performance: Too long at the samba

Recording: Okay
Stereo Quality: Good

If watered-down Jobim is to your taste, then
Malvicino is your cup of Tia Maria. Per-

fectly, I'll pass. Antonio Carlos Jobim

doesn't need me or anyone else to tell you
his particular genius as a composer and/or
performing artist. And it follows he doesn't
need Malvicino either.

But Malvicino has presented us with this
album, and Jobim is too prominent among
the composers to be ignored. When I get
a Jobim number, I start humming a lot and

respond at all to this

album. With the number of new re-

cases that pour out of record-company pop

visions every day, it's pretty difficult to be-

ome excited over anything less than spar-

ing originality. Leonda is competent

ough, and her material has its moments; unfortunately, that's not enough.

D.

HELEN MORGAN (see Fanny Brice)

NICK NOBLE: I'm Gonna Make You Love

Me. Nick Noble (vocals); orchestra, Pete

Dino, Chuck Sage, Jimmy Winter arr. and

cond. I'm Gonna Make You Love Me; Lonely

Me; Nick Noble (vocals) ;

Helen Morgan (see Fanny Brice)

Performance: Swell fella
Recording: Poor Nick is swamped
Stereo Quality: Excellent technically

Such a nice fella, Nick—so kind, so ordi-

nary, so good-hearted. I mean you can just

hear how good-hearted Nick is. He must be

left alone and let out loud and clear and

had the orchestra brought down a few deci-
bels. But not our Nick, not our long-suffer-
ing Nick. He just stands there and sweetly

tries to be heard; over, above, and around all

those arrangements. Nick is well-known to
the "incrowds" at Playboy Clubs all over
the country. Maybe he's been romping among
the bunnies so long has forgotten what it
feels like to be a real wolf and bare his
fangs once in a while. But then I have the

feeling. Nick Noble always plays it safe.

Why else would every song he sings be
someone else's big hit?

R. R.

THE SACRED MUSHROOM. The Sacred

Mushroom (vocals and instrumental). I

Don't Like You You Won't Be Sorry; Cata-

tonic Lover; All Good Things Must Have an
End; I'm Not Like Everybody Else; and three

others. PARALLAX P 4001 $4.98.

Performance: Anonymous rock
Recording: Good
Stereo Quality: Good

Two brothers named Larry and Danny Gou-

horn are the whole show here, sitting fine
solos and mellow harmony. Larry offers some
guitar playing, as well. Unfortunately, that's
about as far as it goes, Sacred Mushroom
is certainly competent enough, but one has
to search too far and too long for the phrases
that might distinguish it from the plethora of faceless rock groups.

D. H.

I guess the only thing more alert to sounds
around him than a pop record producer is an
underfed Doberman pinscher. For some time
now, at least some as time is reckoned in the
recording industry, it has been obvious that
country-and-western music is having a big
resurgence, bringing it into the mainstream
of American pop music. Paul Masse, in this
album, has tried an uneasy marriage of c-w

to psychedelic lyrics. Neither comes off very
well. Not the most adventurous of perform-

ers, Mr. Masse often sounds merely cold
when he mixes his guitar and his down-
home voice in such lyrics as "Chocolate men,

silver wings/ marshmallow houses, and
golden things/ kings and queens, magic
songs/ all are waiting, so come along.

Masse has written all the material in the
album, and some of the songs are fairly good
—but most are not. Butterfly Lake, Forever,

and Suzanne struck me as the best of the lot,

probably because in essence they are straight-

un ballads without the psychedelic stalgia-
nites. Suzanne, who inspired Suzanne, has

provided the liner notes. It sounds like love,

all right.

R. R.

LEONARD SCHAEFFER: A Boy and a Dog. Leonard Schaeffer (vocals and instruments). Dreams... Someone in My State Fair; The Artist; The Meeting; Look, spear; and six others. WARNER BROTHERS WS 1756 $4.98.

Performance: Some sort of phenomenon Recording: Good Stereo Quality: Clever

Excuse me, I want you to come over here in a minute and meet the Schaeffers, This is N Schaeffer, the pianist. He told his son Lee and “Music’s a second profession, Len.” "I’m Mrs. Schaeffer, Leonard’s mother, the children’s-story writer, and this is her father..." This is Grandpa Schaeffer, who taught the Oberlin Circuit when he was young. This is David, Leonard’s older brother, it writer—at least, he wrote the liner notes & Leonard’s album. And this is Leonard. He’s eighteen. When he was five he wrote his first song which began "A horse is big, that horse is small..." Because he has his own group— to mention his own record and his name hasn’t changed much. Leonard sings every single perfectly: the pleasures of dream ing, the importance of smiling "on the outside," the vexation of waiting for a phone call that doesn’t come, the excitement of state fair. The words are always a little crazy, and Leonard’s quavery voice sounds like Menasha Shuckinick’s might if he was ever to loose on country music. But the effect is no unpleasant, especially the instrumental back grounds which comment with some wit or the action, such as it is. Never mind. Leonard is destined for big things.

CARL SMITH: Faded Love and Winter Roses. Carl Smith (vocals; orchestra. I Put the Blue in Her Eyes; It’s Been So Long Darling; Your Love; I’m a Lonely Patriot; She’s Looking Good; and six others. COLUMBIA CS 9786 $4.98, 84180632 86.98.

Performance: Assured Recording: Good Stereo Quality: Good

Carl Smith is the Cary Grant of country-and-western music. In personal appearance he is suave and witty, often acting as emcee to introduce the other acts. His performing at- tire is normally tailored and his hair, grown grey, has been allowed to stay that way. This is quite a relief from the many popular country-and-western singers who get themselves up in outfits that look as if they had been assembled by Trigger’s personal tailor (who also owns a sequin factory), and whose hair is often dyed that peculiar metallic-lic mahogany—when they have hair to dye. When they do not, they surmount their skulls with wigs that look either like spaghetti strands sewn to their scalp or widow’s peaks jobs that seem to be painted on. There isn’t a certain something very carefully tailored about Smith’s performances. I suppose they are &-w-oriented—the songs themselves most certainly are—but there is a certain tongue-in-cheek approach in his reading of lyrics that is very alien to this style. For in- stance, when he sings The Party’s Over, one senses that possibly he might be remember- ing not the party’s bitter rue but the glasses of beer. Personally, I rather like his ap- proach, and since he has a passably good voice.
RANDY AND OUR GANG: Anything to Choose. Spanky and Our Gang (vocals and instrumentalists). Yesterday's Rain; Hong Kong Blues; Without Rhyme or Reason; Mecca Flat Blues; Leopard Skin/Photos; and eight others. MERCURY SR 61183 $4.98, ® 1183 (3 4) $5.95.

Performance: Cheerful and competent
Stereo Quality: Excellent

. Highly professional and musical group, Randy and Our Gang are out to cover all the bases on this album. In songs ranging from the old time blues of Mecca Flat Blues to the mild psychedelia of their hit Anything to Choose, there is to know exactly what they are doing, comes as a refreshing change. Our Gang, who seem to know exactly what it is about, the quiet certainty of Spanky and the excitement that comes from a kind of raw vitality, the mild psychedelia of their hit Anything to Choose, and the mild psychedelic of their hit Anything to Choose, there is to know exactly what they are doing, comes as a refreshing change.

Performance: Adventurous and competent
Stereo Quality: Excellent

. Spirit is an excellent group indeed, each of its five members being a strong performer in his own right. The album is beautifully produced, and the orchestrations are first-rate. This is one group whose future, I think, might better lie with the recording of works by other composers, at least for the time being. It seems a shame to waste so much performing skill and musical imagination on material that is still so formless.

THREE DOG NIGHT: Three Dog Night. Three Dog Night (vocals and instrumentalists). One; Hear Me Go; Good Times; and five others. DUNHILL DS 50018 $4.98, ® 5018 (3 4) $5.95, ® 5048 $5.95, ® 85048 $6.95, ® 55048 $5.95.

Performance: Rock standards
Stereo Quality: Very good

. Three Dog Night is another one of the interpretive rock/blues groups—those that specialize in material not composed by members of the ensemble. It features three non-playing singers whose voices are well-matched to the swooping, in-and-out vocal counterpoint they employ. The tunes are familiar, but these renditions rarely approach the excellence of the original versions. Among the better tracks are Neil Young's The Lover (Young is a member of the Buffalo Springfield), Nilsson's One, Tim Hardin's Don't Make Promises, and, surprisingly, an old standard recently adapted as a rhythm-and-blues specialty, Teach Me.

Oh, yes. "Three Dog Night" is a phrase referring to a practice of the Australian aborigines. Since their technology does not yet provide textiles, they depend upon the close companionship of dogs for warmth on cold nights. A one dog night is moderately good, a two dog night is chilly, and a three dog night is absolutely frigid. At least that's what Dunhill says.

THE TYNES: People. The Tymes (vocals and instrumentalists). People; Lovers of Lots; Alleluia Grace in My Life; White Lightning; Make Someone Happy; and six others. COLUMBIA CS 9778 $1.98.

Performance: Old smoothies
Stereo Quality: Fine

. Most of the songs here are written by Jay Ferguson. The ones that are not are by Randy California, both members of Spirit. Though the Spirit seems willing, the material is weak. The songs that Ferguson and California have written seem to rely more on the good orchestrations and performances they receive here than on any intrinsic merit. But aside from the songs themselves—which run what is by now a pretty familiar gamut—this is a superior album in almost every respect. Spirit is an excellent group indeed, each of its five members being a strong performer in his own right. The album is beautifully produced, and the orchestrations are first-rate. This is one group whose future, I think, might better lie with the recording of works by other composers, at least for the time being. It seems a shame to waste so much performing skill and musical imagination on material that is still so formless.

Copyright © 1969 by Paul R. '../../../../../mcdonald-campbell.com/v3'
In retrospect, it seems clear (as it did not the special circumstances that have made Presley such a remarkable phenomenon? — the state of popular music at the time. Consider that some of the more prominent hits were *The Ballad of Dandy Cockett, The Little White Cloud that Cried, Love and Marriage,* and — can you believe it — *Doggie in the Window.* There are those, of course, who would say that a generation that had allowed itself the luxury of silence during the various activities of Joe McCarthy was simply getting the popular music it deserved — music that was melodically banal, rhythmically turgid, and emotionally asexual. And in one sense, it surely was true that such bland, pablum-like music was a perfect reflection of the sentiments that brought Eisenhower to the presidency; it was a music that was a public extension of the private desire for a simple, understandable world. Scouring beneath the surface of our society, however, was a black revolution that was slowly beginning to find its voice. The music of that revolution — although no one yet realized it — was the pulsating, visceral sound of rhythm-and-blues and the soul-reaching cry of gospel songs.

The music of that revolution — although no one yet realized it — was the pulsating, visceral sound of rhythm-and-blues and the soul-reaching cry of gospel songs. It didn't take long for a new generation of youth to discover that its implicit need for a music that was rhythmically active, alive, and expressive of its age was not satisfied by saccharine strings and moody ballads. But unadulterated black music was not quite the answer, either. A mediator was needed, one who could translate the gutsy, sometimes overtly sexual implications of black rhythm-and-blues into a form more tolerable to the young white audience. Presley was the man.

His arrival was hardly viewed by all as a step forward in the salvation of popular music. An older generation, steeped in the rigidity of the Crosby/Como performing style, soon realized — correctly — that Presley's twisting, writhing body was an expression of emotions that it had carefully and deeply buried. And the exposure of those emotions was too much for some; when he appeared on network television, the cameramen were strictly admonished to direct their lenses only at the upper half of Presley's vibrating body. (One wonders how they might have dealt with, say, Chuck Berry.) His songs, dealing openly with emotions generally revealed only in the back seats of cars at drive-in movies, were offensive to this older generation, but they spoke directly and acutely to the young — to those who remembered World War II only as a distant image in childhood and who were ready now to loosen the shackles of the emotionally restrictive cultural environment which surrounded them.

Presley signaled the beginning of the breakdown. Yes, there had been others before him — Bill Haley, for one, had already produced several rock-and-roll hits. But Presley put it all together. He had an electrifying personal presence; his distillation of rhythm-and-blues and country-and-western rarely went too far in one direction or the other; perhaps most important, he had the benefit of management and promotion that was thoroughly cognizant of his unique qualities.

NBC-TV's Presley special of last winter provided a fine opportunity to reexamine this remarkable performer. Unfortunately, the sound track leaves much to be desired, in both quality and presentation. Presley's light-hearted interchanges with his musical associates, his powerful visual image, and, more subtly, his natural machismo have not been adequately translated onto the record. The songs, virtually all of which will be familiar to the hard-core Presley fan, are a careful mixture of best-sellers like *Hound Dog, Heartbreak Hotel, Jailhouse Rock,* and *Love Me Tender,* less familiar songs, and a few new pieces. Side two includes the obligatory "sacred" songs. In the rare moments when the heavy arrangements and the tinny television sound do not intrude, one can experience some sense of Presley's special performing mastery. But more often than not one simply recalls how much better the originals are.

The same is true, in a slightly different sense, of the Camden recording, a mish-mash of old and new. Old Presleyites will be bored by these tracks; the new listener will simply wonder what all the fuss was about.

**THE PERSISTENCE OF ELVIS**

**By DON HECKMAN**

It's hard to believe that nearly fifteen years have passed since the placid surface of popular music was ruffled to a froth by a swivel-hipped, pompadour-topped Memphis singer-guitarist named Elvis Presley. Those fifteen years, undoubtedly, have dimmed our memory of the upheavals attendant upon Presley's arrival, for it wasn't just the music industry that felt the impact. Arguments about the relative degree of immoral behavior that would be generated by each bump of Presley's gyrating pelvis raged across the land— from newspaper editorial to church pulpit.

Most observers expected Presley's appeal to fade rapidly. After all, meteoric careers in the entertainment arts were not exactly unprecedented, and more than one popular singer had arrived with an explosiveness unprecedented, and more than one popular singer had arrived with an explosiveness unassimilated to church pulpit.

Obviously, Presley hasn't faded. In the intervening years he has made more than twenty-five movies, has produced forty-five records that have sold at least a million copies each, and has run up a single-record sales total of more than $3,000,000. No, he was not exactly a flash in the pan. The MGM publicity office, in fact, with a characteristic fondness for cosmic generalizations, informs us that Presley has "... one of the most heard voices in the history of mankind." And the poor Beatles merely aspired to a comparison with Jesus Christ! What was it, then? What were — and are — the special circumstances that have made Presley such a remarkable phenomenon? In retrospect, it seems clear (as it did not in the mid-Fifties) that he was the right man at the right time; in effect, he was the highly physical embodiment of an idea whose time had come.

Consider, for example, the state of popular music at the time. Consider that some of the more prominent hits were *The Ballad of Dandy Cockett, The Little White Cloud that Cried, Love and Marriage,* and — can you believe it — *Doggie in the Window.* There are those, of course, who would say that a generation that had allowed itself the luxury of silence during the various activities of Joe McCarthy was simply getting the popular music it deserved — music that was melodically banal, rhythmically turgid, and emotionally asexual. And in one sense, it surely was true that such bland, pablum-like music was a perfect reflection of the sentiments that brought Eisenhower to the presidency; it was a music that was a public extension of the private desire for a simple, understandable world. Scouring beneath the surface of our society, however, was a black revolution that was slowly beginning to find its voice. The music of that revolution — although no one yet realized it — was the pulsating, visceral sound of rhythm-and-blues and the soul-reaching cry of gospel songs.

It didn't take long for a new generation of youth to discover that its implicit need for a music that was rhythmically active, alive, and expressive of its age was not satisfied by saccharine strings and moody ballads. But unadulterated black music was not quite the answer, either. A mediator was needed, one who could translate the gutsy, sometimes overtly sexual implications of black rhythm-and-blues onto a form more tolerable to the young white audience. Presley was the man.

mostly of other groups, like the Temptations, the Four Tops, and sometimes even vintage Mills Brothers.

If you don't mind your pop music distilled, The Temptations are really a first-rate quartet. The People arrangement is so good to deserve its high rating. Their Tune Was the Day I classify as one of the more possible versions out of the hundreds currently making the scene—there is a charming piano strolling through the song (shades of Carmen Cavallaro). This is followed by an old church-camp picnic version of God Bless the Child, which is a good change of pace. But the choice of such a play-it-safe as Make Someone Happy betrays the Kittel lurking deep down inside this group. Still, if you prefer your hash well-done instead of rare, this is your group. They apply an 18-year Mary Poppins approach to a hard-rock drum beat and then have the chimes/1 should the black falsetto of the lead Ink Spot.

The Look of Love, Alfie, For Once in My Life, and Iris can all be lumped together under the banner 'Tyme Marches On!' Careful fellows, it may pass you right by while you are still chart-ranking. R.R.

WICHITA FALL: Life Is But a Dream.

Wichita Fall (vocals and instrumental), Morning Songs Once in the Morning; Sunny Road; Going to Ohio; Playground; Original Folk Songs; and seven others. IMPERIAL. LP 12417 $4.98, Q TR 8918 $6.95, R TR 8916 $6.95. R C 0918 $5.95.

Performance: Excellent Recording: Fine Stereo Quality: Fine

Wichita Fall is an enigma to me. I like it (them). I don't like it (them). It's (they're) good. It's (they're) mediocre. It's (oh, hell, let's settle for the singular) brilliant. It's just okay; Wichita Fall is a music drum that is to today what Gordon Jenkins was to 1915. The entire album tells a story, the story of a day in the life of . . . but then remember, the Beatles already did that—and better. The day represents the life of a man. God knows how many people have already done this sort of thing before, but with the riddle of the Sphinx. So my conclusion is that the premise of Life Is But a Dream is sophomoric. This is true, but I can't let go of it. The more I listen, the more I like Wichita Fall and its LP. We get lots of those clock-winding sound effects, crescendos, and violin sweeps that are supposed to knock us dead with their theatrical effect. But when Wichita Fall leaves out such sound effects it can make very pretty music.

Physically, it looks as if it is about to embed itself on the Lewis and Clark expedition. But lyrically I discover it is only attempting to get from Ohio to Reno. Its (their) message once again is lost in a kind of muddled Thoreau-Walden-Pond syndrome of mists, rain, and falling leaves which I really can't believe has much to do with any youthful experience these days. When the group can't think of other words, they do 'oo-la-la' a lot.

Sunny Road is a sweet and sadly romantic song. Sometimes Wichita Fall goes totally falsetto and almost barbershop-quartet in style. This must be why it is so mystifying—from barbershop to Beatles, from Thoreau to nursery rhymes. Just where are you, Wichita Fall? I love you, I hate you.
WILD BILL DAVISON: Wild Bill at Bull Run. Wild Bill Davison (trumpet), orchestra. I Found a Nice Baby; Black and Blue; You're Lucky to Me. Low-Low; Georgia on My Mind; Rosie; Blue Tuesday. "Great new release!" Sunday Sweetheart. Jazzology J 30 $5.98.

Performance: A hot trumpet in tepid water.
Recording: Another anachronism.
Stereo Quality: Okay.

This is another prize for the collectors of musical anachronisms. If you like your jazz memories fresh out of the garden and not out of the canned reprocessed versions of originals, this is good pickin.' Wild Bill Davison here gives us an excellent presentation of those good old times when trumpets were hot, trombones strident, clarinets wailed, and the music was black and blue. Glory boy! Those were the days! (Maybe.) R.R.

CHICO HAMILTON: The Best of Chico Hamilton. Chico Hamilton (drums): orchestra. Forl/H Blues—Square: Forte Fingers—Shout! People; Chico Chic; and four others. Impulse! A 9174 $5.98, B 9173 (17.4) $7.95, C 90174 $6.95, D 9171 $5.95.

Performance: Holy drummer.
Recording: Drums and more drums.
Stereo Quality: Drums to the left, drums to the right.

sic, however, does not extend his creative limits. It is an extremely uneven program, ranging from a light, folksish vocal piece (No More) to pianist Chick Corea’s Trio Jet White, Room and Piano. Laws handles it all with ease. Even though very little of what he plays in this collection will be registered in your Cinclay Jazz Memory Book, Hubert Laws is a player who should be heard.

D. H.

EMIL RICHARDS: Journey to Bliss. Emil Richards (percussion); Joe Pontaro (drums); Mike Craden (percussion); Dave Mackay (keyboard); Ray Neapolitan (bass); Tom Tedesko (guitar); Mark Stevens (percussion); Hagan Beggs (narration). Maharim-Tedesco (guitar); Mike Craden (percussion); Dave Mackay (bass).

Hubert Laws heard. (No More) to pianist Chick Corea’s Trio.

A Correction: Promises, Promises

David Merrick, producer of the musical show Promises, Promises, informs us that, contrary to the statement in Rex Reed’s review (May issue) of the original cast album of the show, the voices of the female chorus were not prerecorded and processed electronically to blend with the singing of the cast and the playing of the orchestra. Mr. Merrick says that there are, in fact, four female singers who constitute the live orchestral voices—Kelly Britt, Patti Davis, Betty McCormick, and Ilona Simon—who have been and are performing in the orchestra pit with the musicians at all performances. We are sorry that our review did not understand the technique being used in this aspect of the show, and of course intended no slight to Mr. Merrick or the production.

THEATER•FILMS

RECORDING OF SPECIAL MERIT

Booer T. Jones has done an excellent job here of scoring several standard blues into a cohesive whole to serve as the music for Up Tight. Jules Dassin’s re-make of The Informer. I have not seen the new version, but I am familiar with the plot from the old John Ford film. Jones has caught the right note of inexorable menace to express the doom that closes in on the informing hero, and his frantic, but useless, attempts to escape it. The performances by Jones and his group, the M.G.S., are all excellent. Judy Clay is the vocalist in Childlike. Don’t Get Why, and I think it is the strongest performance on the disc. Jones sings two songs, Johnny, I Love You and Blues in the Garden, in good style, but his real achievement is his orchestrations. They are mercurial and compelling, with top-flight performances by himself at the organ, Steve Cropper on guitar, Donald Dunn on bass, and Al Jackson Jr. on drums. I don’t know if you could call music that is frequently so angry as this ‘entertainment,’ but it certainly makes for interesting listening. The value of the album is greatly enhanced by the fine quality of the recorded sound and the tasteful use of stereo.

—P. R.
More gypsy music? Stiffen for the cimbalom, I told myself, brace for the balalaika. Here they come again, I was fooled! These songs from Macedonian—which in my atlas stretches vaguely across sections of Greece and Yugoslavia—are entirely free of the slobber and sprawl of the Hungarian restaurant music we're accustomed to associate with this genre. Instead, here is music of startling fire and energy. The topics of the songs are characteristic and simple, dealing with such homely matters as a bachelor who doesn't want to get married and enumerates his reasons, a widower mourning for his young wife lost in an earthquake, a bride shouting at her father to wake up because it's her wedding day. The music is something else—wild, swirling, filling the air with the freshness of its instrumentation, a mixture of Greek and Near-Eastern elements and something undeniably and altogether its own. Some of the songs are sung in Macedonian, some in Greek, but what they all have in common is that all are alive with the unmistakable life yielded only by passionate performances. The two women who sing most of the numbers have clear and forthright voices free of tricks and glib manners, and the several ensembles offer them extremely skilled support.

FOLK

RECORDING OF SPECIAL MERIT

PORTRAIT OF ANDALUSIA: Andalucian Flamenco music, produced and recorded on location by Deben Bhattacharya. *Seth:* Solea; *East of the processions,* *Serrana:* Gaetanas de Calles; and five others. Argos ZRG 560 © RG 560 $5.95.

Performance: The real thing
Recording: Superb
Stereo Quality: Adds realism

These enterprising people at Argo, who do not hesitate to send their documentary producers anywhere from the darkest pits of a WCBS mini to the heights of the Himalayas to capture the sounds of this world, have turned their attention here to the real music of Andalusia. To bring Flamenco back alive, Deben Bhattacharya, the producer of this one, decided to concentrate on the little town of Paretene Genil, surrounded by the musical centers of Seville, Cordoba, Granada, and Malaga. In the cafes and squares of the town, his crew set up excellent equipment to capture the flavor of the saeta (a four-lined religious chant said to have emerged from the secret religious rites of candomb/ritual), the *toldo* (a kind of gypsy love song), the *serenata* (a love song from the mountains), the *fandango,* the *zorzital,* and the other categories of Flamenco. Examples of these last are played by local guitarists like Jose Bidmar and sung by singers like Antonio Fernandez and Jose Garcia with inimitable authenticity. But the real excitement comes with contrasts of nerve-tautening tension in field recordings taped at a Good Friday procession in Seville. Here, amid the thrumming of muffled drums, the procession is heard moving before the church of La Macarena, while *saeta* are intoned by men and women whose voices rise above the hubbub of the procession. All the passion of the occasion is captured as a lone voice sobs out to the Virgin, "You are in sorrow and the occasion is captured as a lone voice sobs out to the Virgin, "You are in sorrow and in pain, but do not cry anymorel- And the drums pound on until they fade in the distance, as the awesome pageant passes. A haunting experience, enhanced by an informative booklet of notes and photographs and complete texts.

LILLIAN SMITH, Strange Fruit (selections). Lillian Smith (reader). SPOKEN ARTS 5. SA 961 $5.95.

Performance Compassionate. Recording Admireable.

It is difficult to envisage now the impact the novel Strange Fruit made when it was first published in 1946. It was a novel about the South that cut through a great deal of hypocrisy about black and white relations. On this disc, which she recorded shortly before her death in the fall of 1966, Miss Smith reads some of the most touching and poignant episodes in the book, including the description of Tillie and her children and the harrowing whipping scene. She has also recorded a very moving introduction to the excerpts. At the end of this she notes that she had never considered it "a book about racial problems," and continues: "It is a book not about a lynching but about children in anguish; white and Negro children forbidden to grow openly as human beings; they are the strange fruit on white culture's twisted branches." Strange fruit indeed!

LAUGH-IN '69 (see Best of the Month, page 76)

THE SOUND OF DISSENT, Voices of Eartha Kitt, Dr. Ralph Abernathy, George Wallace, Senator Eugene McCarthy, Martin Luther King, Stokely Carmichael, Al Capp, Hubert Humphrey, James Farmer, Senator Robert Kennedy and others. MERCURY SR 61203 $1.98.

Jack McMillan, the producer of this collection of typical confrontational sounds from the dissenting Sixties, had a good idea: take the voices we've been hearing on the air out of the archives and build a documentaty that says something about the moment though which America is now passing. A cleverly engineered mosaic of sound is the result. Here is Eartha Kitt explaining why she took her show to Lady Bird's luncheon table in the White House; Eugene McCarthy, in the days when he was still audible, promising, if elected, to curb the power of the Pentagon; Dr. Spock and the Rev. William Goffin and Paul Krassner, the editor of the Realist, talking against the war in Vietnam; and James Farmer and Stokely Carmichael expressing their respective views about black power. The soundtrack supplies not only the voices of individuals, but the sounds of mobs, the clashing of the riot squad cars during the Paris student riots, a podium getting smashed up as Peace Marchers in Washington rush a speaker. The most effective moments are when stereo is used imaginatively—so that the listener may hear, for example, Mayor Alito making his nominating speech for Hubert during the 1968 Democratic National Convention in Chicago over one speaker while the confrontation between kids and cops rages out simultaneously from the other. In the final moments, the late Robert Kennedy is heard warning solemnly about the "mindless menace of violence in America." Unfortunately for the effectiveness of the album, the mindless menace of Dan Armstrong's rock music, persists relentlessly throughout.

C. B.
"Scotch" Brand Cassettes prevent tape hangups

Here's the inside story.

"Scotch" Brand builds in trouble-free performance with exclusive features:

**Famous "Dynarange" Magnetic Tape** provides highest possible fidelity at slow recording speed. A slick, tough coating affords smooth tape travel, resists oxide ruboff, assures long tape life.

**Precision-molded case** is high-impact plastic, features permanent ultrasonic sealing, large integral window. Color coded for recording time.

**Anti-friction shields** combat tape hangups. Exclusive, ultra-smooth material reduces drag. Bowed shape guards against uneven tape wind.

**Fixed tape guides** help prevent "wow" and "flutter" often caused by imperfect roller guides. Splined design cuts friction and drag.

**One-piece hub** locks leader tape securely, eliminates "bump" that can distort tape in winding.

**Unitized pressure pad** conforms to recorder head to insure better tape contact.

**Extras**: Cassettes are color coded to identify recording times at a glance. 30, 60, 90-minute cassettes available in album-style or postal-approved plastic containers. Plus C-120 in album only.

Helpful booklet, "Recording Basics" is yours free with any "Scotch" Brand purchase from your nearest participating dealer. Or send 25¢ coin to cover handling to: 3M Company, P.O. Box 3146 St. Paul, Minn. 55101. Also ask your dealer for catalog of special premiums.

Performance: Grand
Recording: Rich
Stereo Quality: Reverberant
Speed and Playing Time: 7 1/2 ips; 82'51''

Out of respect for the memory of Charles Munch, one should not, I suppose, come down too hard on one of his last recorded performances—and one of a work with which he was said to have a deep affinity. Nevertheless, I must say that I am very unimpressed. Munch makes some effective big lines, but the colors of this performance are Old Master—with lots of warm brown varnish on top. The original, in all its glorious and terrifying brilliance, is more impressive. E. S.

RECORDINGS OF SPECIAL MERIT

Performance: Masterly
Recording: Brilliance stressed
Stereo Quality: Good
Speed and Playing Time: 7 1/2 ips; 67'10''

Much as I may be exposed to Dvořák's sixteen Slavonic Dances (Opp. 46 and 72)—and I am considerably so—it seems I never tire of their melodic and rhythmic inspiration, particularly when they are served up with irresistible lift, elegance, and mastery of nuance à la Szell. These are loving interpretations, but free of excess sentimentality: the pieces are galloping, and the virtuosity could hardly be more so. And of course the orchestra is a marvelous instrument, note the precision with which they respond to the mercurial tempo changes in the first Dance of Op. 72...
would have made of this series from RCA! Here on a single tape, in a welcome sequel to Volume I, are more opera highlights that you would store in the entire cabinet space of a couture Virigilia, with some of the most spectacular singers of our own time at the top of their form, stereo to add opera-house realism, and never the scratch of a needle to offend sensitive ears. The present concert, too, is a fine line between the popular and the overfamiliar, still should be a boon to all singing fans, especially to those who respond to opera's high points, but tend to get restless waiting among all the reflective and exposition on full-length recordings. Here are nothing but the big moments—so many and so strong, in fact, that they almost cancel each other out. But what a cast, as they say. Montserrat Caballé ignores all nuances of plot and lyrics as she seizes the opportunity to vocalize spectacularly in an aria from La Traviata, Leoncavallo, and Richard Tucker are overwhelming in the Miserie from II Trovatore; Jon Vickers makes more than it deserves out of "Alfan- 
fort" from Martha; Renata Tebaldi is glor- 
ious in a five-minute tour de force from Caravelli, Kadzi Jopser bowls you over with an excerpt from Verdi's Masked Ball; Anna Moffo tosses off the Jewel Song from Faust with no apparent effort; Rist Stevens warbles to Mario del Monaco about how her heart thobs at the sound of his sweet voice; Jan Peerce is in im- pressive voice as he throws the power of his tenor into the intricacies of an extended aria from the Tomb Scene in Leo. Cesare Valletti delivers a segment from The Barber of Si- role with obvious relish. To vary the pace, the editors have opened the show with the late Fritz Reiner urging the Chicago Sym- 
phony through a power-packed treatment of the Overture to Don Giovanni, thrown into a startlingly alive Leinsdorf-led March from Tannhäuser, and concluded with a thir- 
ten-minute all-star super-scene from Act II of Puccini's last opera, Turandot. Unfortu- 

nately, the last snip is off rather abruptly, startling the listener by a sudden and arbitrary silence at the end of this thrill-packed musical roller-coaster ride.

P. K.

ENTERTAINMENT

PAT BOONE: Look Ahead. Pat Boone (vocals); orchestra, Anita Kerr arr. and con. The Day after Forever; Too Soon to Know; More and More; Kate, Liga; Love of the Common People; Baby, I Feel Like Cynt; and five others. DOT DTX 5676 $7.95.

Performance: Bland
Recording: Good
Stereo Quality: Good
Speed and Playing Time: 3 1/2 ips; 30'53"

Pat Boone has spent the last decade and a half maintaining his spunky-clean image, and although the cover photograph doesn't show his feet, I have a sneaking suspicion that he might be walking around in white buckskin shoes. This tape is another exercise in Boone's particularly bland and unexciting approach to music, an approach that has not changed much since the days of his first hit, Autostop. Appearing a bit lost in the Anita Kerr arrangements, Boone gives a lugubrious once-over to such things as Gonna Find Me a Bluebird and Love of the Common People, which are not exactly great songs in the first place and don't bene- 

fit much from the gee-willikers note in his per- 
formances. Perhaps a nice tape for Mom— 
on second thought, make that Grandma.

P. R.

DIANE HILDEBRAND: Early Morning Blues and Greens. Diane Hildebrand (guitar and vocals); various accompanying musicians, Early Morning Blues and Greens; The Reinforcement of Eulalie Stears; You Wonder Why You're Lonely, Come Looking for Me; Great Time; and six oth- 
ers. Elektra & ESK 1031 $5.95.

Performance: Bland and easily forgotten
Recording: Very good
Stereo Quality: Very good
Speed and Playing Time: 3 1/2 ips; 31'10"

Diane Hildebrand is a young, attractive young lady who has an energetic personality and a voice that has plenty of range. She sings with a great deal of enthusiasm and conviction, and her guitar playing is solid. She is a pleasant surprise, and I would recommend this tape to anyone who enjoys folk music.

JAMES COTTON: Cut You Loose! James Cotton (vocals and harmonica); James Cotton Blues Band. Cut You Loose; Ain't No- 
bodys Business; Set a Date; Slipped and Slid; Nothing Teen Power; and five others. Vanguard VGX 9283 $5.95.

Performance: Subdued Cotton
Recording: Very good
Stereo Quality: Very good
Speed and Playing Time: 3 1/2 ips; 36'38"

James Cotton is a former member of Muddy Waters' Chicago Blues Band, and a disciple of the great harmonica player Sonny Boy Williamson. Although he is an energetic performer strongly rooted in the mainstren of rhythm-and-blues, he is unusually sub- 
ducred here. Much of the time, in fact, is all- 
hotted to his accompanying musicians, most of whom are excellent. Organist-pianist Wayne Talbert and guitarist James Cook get most of the solos; if they do not yet possess first-rate jazz voices, they speak with fire and verve. Their work brings a jazz atmosphere to the proceedings which is unusually in- tense for a blues outing.

Don II

KANGAROO: Kangaroo (vocals and instru- 
ments). Such a Long, Long Time; You're Trying to Be a Woman; Days and Stallions; Make Some Room in Your Life; Frog Gig; You Can't Do This to Me; and six others. MGM MGX 4586 $5.95.

Performance: Ordinary
Recording: Clear
Stereo Quality: Persistent
Speed and Playing Time: 3 1/2 ips; 39'32"

Standard is the word for the group that calls itself Kangaroo, three young men with regu- 

lar-length long hair and a girl who sounds like Judy Collins or Joan Baez but isn't. This is drums, guitar, bass, and some sort of parthenogenesis instrument, all supered up to a hard-rock sound identical with that produced by a dozen other groups. (Are they all reproducing by some sort of parthenogenesis? There must be one combo like this for every teen- 
age in the land by this time.) On this tape they sing surly songs about love, stal- 
ions, frog-hunting, and a restaurant called "Tweed's Chicken Inn" (you can almost taste the grease), mauling the lyrics in incom- 
patible country-style swallows so that it's impos- 
sible to understand anything—which may be a mercy. The parts that go into this kind of product are interchangeable, and the whole is equal to less than the sum of them. To these ears, it simply adds up to a pointless of noise. The tape could complete with the address of the Kangaroo Club or an organization I do not expect will be nominating me for an honorary membership.

P. K.

THE SOUND SYMPOSIUM: Paul Simon Interpreted. The Sound Symposium (instru- 
ments), Dave Alvin, Mike Deasy, Emery, Where I May Find Her; I Am A Rock; Mrs. Robinson; Bookends; The 59th Street Bird Song; and seven others. DOT DTC 5871 $7.95.

Performance: Unobtrusive
Recording: Good
Stereo Quality: Well-balanced
Speed and Playing Time: 7 1/2 ips; 30'53"

Simon is the composer half of Simon and Garfunkel, and what we have here is perhaps a too reverential musical offering of his mel- 
odies by a group with a pleasantly plunky approach and a taste for the Baroque rather than the harmonious, aggressive stance as- 
sumed by so many of their competitors. In this collection are tucked in instrumental comments on such favorites of Simon's as Don't Flow- 

ing down and the Scarborough Fair "can'ticle," with its gentle Elizabethan ambiance. At times, in the number called Clouds, these sym-

TAPE HORIZONS

LIVE VERSUS RECORDED

Microphones are sometimes considered to be the "ears" of a tape recorder. But such a comparison overlooks some important differences between microphones and ears, and if pushed too far, will almost certainly lead to unsatisfactory recordings. For example, if you listen to a person talking from about ten feet away and then move back about fifteen feet, you are not likely to hear a pronounced change in the quality of his voice. If you try the same thing with a microphone, however, the result, when played back, is likely to be shocking. A voice recorded at fifteen feet—as opposed to three feet—will be very thin, and previously unnoticed room echoes and other noises are likely to lend a hollow, non żyw quality to the sound.

This phenomenon raises both technical and philosophical questions about the nature of live vs. recorded sound. In the concert hall we might sit eighty feet more from the stage and enjoy the performance immensely; microphones so set would probably produce an all but unlistenable recording. Traditionally, audiophiles have aimed at making recordings that would put the listener in "the best seat in the house." But who would suppose that the best seat was one situated perhaps eight feet above the stage and six feet back from a solo performer—one typical microphone location.

Is the recordist's art, then, one of sonic conjuring, concerned with creating an illusion of the "real" sound? If it were, then obviously nothing could be more real than the original sound itself. Yet people who have attended a concert and afterwards heard a good tape of it have been known to comment that the recorded version actually sounded more "realistic." And this should not be too surprising, for that complex of sound waves that embody the sound of the music is not the same at any two points within the concert hall itself. The "best seat in the house" is not so much a physical location as an abstraction created by mentally comparing the sound we do hear with the sound our musical appreciation tells us we should hear. In those long-ago days of the 78-rpm discs and the cactus needle, the listener quite unconsciously added the missing musical harmonics and filtered out the extraneous noise and distortion, transforming the obviously low-fidelity sound waves into an experience of the music itself. The same process of mental translation from the immediately perceived to the inferred reality is involved when we say a person's voice sounds the same from across the room as it did close up.

The fact, then, that no rule of thumb can correlate proper microphone placement with the sound perceived at any specific location in the hall does not make the product of the recording art inherently artificial. The recordist is concerned with conveying a reality—the music itself—and not simply with capturing the sound waves that appear at an arbitrary point in space. From the time that sound enters the microphone, the recordist is primarily involved in the attempt to preserve the original faithfully. But learning to place the microphones in such a way that the waves they pick up lessen rather than increase the required mental transformation from perceived sound to musical experience is an art born of patience and a great deal of critical listening.

Words are inherently limited in stimulating the emotions aroused by music. This is especially so in describing how high fidelity components perform. With cartridges, for example, we speak of flat frequency response, high compliance, low mass, stereo separation. Words like these enlighten the technically minded. But they do little or nothing for those who seek only the sheer pleasure of listening.

We kept both aspects in mind when developing the XV-15 series of cartridges. We made the technical measurements. And we listened. We listened especially for the ability of these cartridges to reproduce the entire range of every instrument. With no loss of power. That's what it takes for a cartridge to recreate the most subtle nuances that distinguish one musical instrument from another. An oboe from an English horn. A trumpet from a cornet.

We call this achievement "100% music power."

When you play your records with an XV-15, you won't be concerned with even that simple phrase. Instead, you'll just feel and enjoy the renewed experience of what high fidelity is really all about.

**PICKERING**
These four speaker systems share a surface beauty. But don't be misled. Underneath — where it counts — there are scores of important differences. There have to be.

Because what's right for a small system may be all wrong for a big one. And what works well in a 2-way system may be poison for a 3-way. (Even a little change, like just 1" more cabinet, can upset the design of every component inside.)

Of course not everybody can afford to design every speaker in their line from scratch, the way Electro-Voice does. But then, not everybody has a scientific computer that pre-tests hundreds of ideas on paper to find the few good enough to build.

And not everybody has a huge anechoic chamber (like the one above) to prove the superiority of each design. Nor the staggering array of test equipment that goes with the chamber. Or — most important — the engineering talent and musical sensitivity to take full advantage of these unique laboratory facilities.

When you select an E-V speaker system — regardless of size or price — you can be certain it truly represents the state of the art... and good value to boot.

Anything less would be a cop-out. But don't take our word for it. Listen. Compare. The difference you see and hear is what high fidelity is all about.

ELECTRO-VOICE, INC., Dept. 794F
616 Cecil Street, Buchanan, Michigan 49107
