Television Assignments by State

The following table of assignments contains the channels designated for the listed communities in the United States, its territories, and possessions. Channels designated with an asterisk (*) are assigned for use by noncommercial educational broadcast stations only. A station on a channel identified by a plus (+) or minus (-) mark is required to operate with its carrier frequencies offset 10 khz above or below, respectively, the normal carrier frequencies.

Footnotes: 1) Following the decision in docket No. 18261, channels so indicated will not be available for television use until further action by the Commission. 2) Operation on this channel is subject to the conditions, terms and requirements set out in the report and order in Docket No. 19075, RM-1645, adopted Jan. 5, 1972, released Jan. 7, 1972, FCC 72-19 (Added 72-19, 1/7772). 3) This channel is not available for use as Elgin unless and until it is determined by the Commission that it is not needed for use at Joliet, Ill. 4) Stations using these allotments shall limit radiation toward stations on the same channel in Puerto Rico, to no more than the effective radiated power which should be radiated by an omnidirectional radio station using maximum permissible effective radiated power for antenna height above average terrain, at the minimum distances from such stations specified in 73.610 (b). The FCC shall consider the status of the negotiations with the appropriate British authorities concerning these allotments when the application for construction permits come before the FCC.

Nielsen DMA Market Atlas

The Designated Market Area (DMA) is a geographic market design that defines each television market exclusive of others, based on measured viewing patterns. Each market's DMA consists of all the counties in which the home market stations receive a preponderance of viewing, and every county is allocated exclusively to one DMA-there is no overlap. The total of all DMA's represents the total television households in the U.S.

The DMA is a standard market definition. As a television buying tool, it is a geographical and demographic means for maximum efficiency. As a station tool, it has applications for sales, programming and promotion planning.

Following, in alphabetical order, are Nielsen's 210 markets for 2000 with coverage maps (1999) for each, with county by county breakouts of TV households. Other data includes the markets' stations, their cities of license, channel numbers and network affiliations.

Coverage maps show total survey areas in light shading, the DMAs themselves in dark shading and white, with Nielsen Metro ratings in white. The survey areas consist of all counties in which the home market stations are viewed to a significant extent including via cable. The Metro Areas usually conform to U.S. Census Standard Metropolitan statistical areas.

Non-DMA markets do not meet Nielsen's criteria for having a DMA of their own. They are listed with the DMA of which they are a part.

A cross-reference list of cities in multi-city DMAs appears on B-242.

TV Markets by Nielsen Marketing Research Territory

Nielsen Marketing Research territory groups are another standard way of reporting sales data. The following table ranks TV markets, known as Designated Market Areas (DMAs), within each Nielsen territory. This provides a yardstick for determining the number of spot markets needed to achieve a given coverage of territory. For example, if the national media are not delivering sufficient advertising weight in New England, the planner will find that three TV markets (Boston, Hartford and Providence) contain over 75% of New England territory household. The planner can also use the table to get a better idea of what TV markets are needed to cover all of New England. Data is from the Nielsen Station Index with tabulations based on a January 2001 estimate. Copyright 2001 Nielsen Media Research.

Co-owned AM and FM stations are often listed together, even when they have dissimilar call letters. In some instances FM may be listed first.

(2) Date station first went on air (regardless of subsequent ownership changes).

(3) Frequency in kilohertz; power and hours of operation. WOF operates with one kilowatt in daytime hours, 250 watts at night, and uses a directional antenna in daytime. (9) Frequency for WOF-FM is 101.1 megahertz, with 3 kilowatts of effective radiated power and an antenna height of 300 feet above average terrain. WOF-FM broadcasts in stereo (see **(3a)**).
