

## IMPORTANT: READ THIS FIRST

The information in this book is not to be used to exceed F.C.C. specifications, in any case, as applied to power, modulation, frequency spectrum, etc. It is illegal to do this to any CLASS D RADIO

This book is a factual report of gathered information, and as such is intended for use on radios for EXPORT ONLY.

If you are not familiar with electronics, it is better to check for advice with your local electronics or CB center, as to restrictions, etc., concerning your radio.

More information, on other units will be forthcoming in future issues, to be published on a quarterly basis.

This book will not be found at a book store, but can be obtained through your local CB Dealer or Distributor, or by completing the order form in the book and sending to:

# SECRET CB WISHES TO GRATEFULLY ACKNOWLEDGE THE FOLLOWING PEOPLE FOR THEIR HELP AND CONTRIBUTIONS TOWARD GETTING VOLUME 11 IN PRINT, THEIR ENCOURAGEMENT AND CONTRIBUTION OF MATERIAL HAS BEEN INVALUABLE, 

> VIC says "THANKS" and a free book to the above people

## I: PRODUCTION

Thanks for the warm comments received on "Secret cB" Volume 10. We know you are going to be just as pleased with "Secret cB" Volume ll. We have under gone somewhat of a "new beginning" and have some exciting new things coming up.

You will notice a picture of "The Trouble Shooter" on the front cover. We are now in full production and the response has been terrific. Thanks for all the orders. Currently, we are developing a live receive/transmit frequency display and a few other goodies. We will keep you informed as these developments are available in the form of refined products. We are also in the process of evaluating some new products and will have a full report in upcoming issues.

In answer to the question - Do we have a mail-in service department? - the answer is NO. One of our goals here at Secret CB is to simplify things as much as possible so the average technician can successfully do his own work and thereby make more money.

Due to the popularity of $F M C B A b r o a d$, we have included a special section on how a regular $A M C B$ can be modified to work on FM. We also have available a high quality FM Receiver Converter Board and an FM Deviation Board specially designed for this purpose. You could set up your own repeater.....................

Thanks to all the readers, experimenters, hobbyists, and contributors who have again helped us put out another book. Keep the information coming and see your name in print and receive a free "Secret CB" book.

## ExTRA! EXTRA! READ ALL ABOUT II!!!

HOW TO GET ON 28 \& 29 MHZ WITH THE UPD858 PLL CHIP

1. Isolate pin 22.
2. Install a 4.7 K Ohm resistor from 22 to ground.
3. Wire up a DPDT switch as shown above. This gives channels up to 28.405.

If you really want to GET HIGH, take both pins 2l, and 22 high for channel 28.965-29.405.

Taking pin 19 high also will net 29.455 , on channel 8 , up to 29.805 on channel 40 .

Have fun with this one!

See also the following pages for more 858 goodies.

| 055 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 * |

*The scale of frequencies will have the same pin status as the frequencies at 26.---, after the point shown here. 27.055 has the same pin states as 26.055, except that pin 21 is now active. This progression will repeat itselí as frequency increases.

If you take pin 22 high (with 21 low), you will get channels 27.965-28.405. With 19 high, you will get 28.455-28.805.

With 21 and 22 high you will get 28.965-29.405. With 19 high, you will get 29.455-29.805.

Steps to re-program 858

1. Isolate pin 19 and add 4700 Ohm $\frac{1}{4} W$ carhnn film resistor to ground. 2. Isolate pin 22 and add 4700 Ohm $\frac{1}{4} W$ carbon film resistor to ground.
2. Cut pin 21 trace as shown above. $X$

# HOW TO INCREASE ANL EFFICIENCY 70\% <br> President Washington, Grant <br> Cobra 138XLR, 139XLR <br> Robyn SB510D, SB520D <br> Other 858 Uniden chassis 

1. Remove R43, and install a 2.2 M Ohm $\frac{1}{4}$ Watt resistor in its place.
2. Remove C39, and install a . 47 uf l6Volt in its place.

TR

# CPI ALC MODIFICATION 

FOR INCREASED
SSB POWER

Rec-Xmt Board

1. Change R2l6, to a 4.7K Ohm $\frac{1}{4}$ Watt
2. Change R2I7, to a 15 K 立Wat $T^{T}$

## CRAIG L232/WARDS GEN-719A

## with UPD2824C chip

The only way to convert these sets without replacing the PLL chip, is to change the $X 4$ mixer Xtal frequency. Use the ruad bilateral switch circuit shown on page 71 of this volume.

The following Xtal frequency will give you the channels indicated.
11.2858 Stock channels
11.135
26.515-26.955
27.415-27.855
11.435
27.865-28.305

Adjust Ll8 with the scope at TPlo.
Connect TVM to TP9, adjust Ll3 for 6.5 V on channel 40 (VCO).
Peak Ll4 with scope at TPl on channel 19.
Adjust CT3 for 34.9875 MHz on channel 19 USB.
Adjust L20 for 34.9850 MHz on channel 10 AM .
Adjust Ll9 for 34.9825 MHz on LSB, channel 19.
At TP3 on channel 19 on mode indicated;
LSB Adjust CT2 for 7.7975 MHz .
USB Adjust CTl for 7.8025 MHz .
AM, TX
Adjust Ll7 for 7.800 MHz .

## Transmitter Alignment-

Put DCma meter in series with TP8. Adjust VR8 for 30 ma on channel 19, USB, TX. Put DCma meter in series with TP7, and adjust VR9 for 60 ma on channel 19, USB, TX.

Inject a 1 KHz tone on USB and peak L26, L27, L28, L29, L36 for Max. VR5; Carrier Null, VR6; AM Power, VR7; SSB ALC, VRl0; RF pwr meter.

## Clarifier-

2. Clip R142.

3. Jump R418 in Craig and Rl64 in Wards.
4. Cut wire at top of Clarifier control and run a new wirc. from clarifier to pin $l$ of IC5.
5. Lift anode of D54 and install 5.6 uH choke. For more slidu, use our Super Clarifier Diode.

## Slider-

1. Clip D5.
2. Clip R24.
3. Change cl7, to approximately a 34 pf .
4. Solder a wire onto the unused terminal of the clarifier pot and run it to the emmitter of 244 for an 8 V source.
5. Change D3 to a Super Clarifier Diode for more slide.

## Channels-

For channel expansion see Volume 3, pages 8-13.

HOW TO ADD AN RF GAI!: CONTROL TO YOUR CPI 3C0-400

Parts required:
1

1

1

1

Pick up 10 volts from pin 2 of J50l. Wire up as per drawing above and solder to TP5.
Mount the potentiometer inhere convenient.

## Clarifier Modification-

1. Remove the Blue-White wire and Gray wires from the relay and solder them together. Unit will now slide.

## Frequency Expansion-

1. Remove the Yellow-White wire from channel selector boards.
2. Remove the Blue-White wire from the channel selector boards.
3. Build a switch kit as follows:

NOTE: this is a DPDT ON/ON/ON switch.
Hook-up as follows:

1. Solder Blue wire to Blue-White wire.
2. Solder Gray wire where the Blue wire was on the switch board.
3. Solder the White wire to where the Yellow-White wire was on the switch board.

Center position is normal, position $1415-475$, pos. 3 485-705.
R212; AM AMC, R728; RF Meter, R726; SSB ALC.
Adjust T701, T702, T703, T704, T705, T706.
C746: TVI
On USB, no mod., adjst T602, C617, R609, for minimum RF output.

Clarifier-

Slider-
For more slide use a choke (Super slide) in series with D205.
For maximum slide, remove C210, C208, C207, C209 capacitors.

1. Lift R24 opposite D4.
2. Install new wire from lifted end of R24 to emitter of Q44.
3. Clip D5.
4. The value of Cl7 can be altered slightly for best slide.

## Slider-

For more slide use a choke (Super Slide) in series with D205.
For maximum slide, remove C210, C208, C207, C209 capacitors.

1. Lift R24 opposite D4.
2. Install new wire from lifted end of R24 to emitter of Q44.
3. Clip D5.
4. The value of Cl7 can be altered slightly for best slide.

Parts Required:
l-SPDT switch.
2-SPST switches.
12 inches of four conductor ribbon wire.

Wire as shown below:

(Isolate Pin 10 if grounded)
SWI $=27.605-28.045$
SW2 $=26.325-26.765$
SW3 $=26.815-26.955$
$S W 1+S W 3=27.455-27.725$

Adjust L19 and L2l for maximum frequency coverage.
Reference: Volume 10, PP 25-31.

If you have trouble getting this mod to work, retune the tripler - VERY CRITICAL - (Ll8 on President Washington)

This can be modified in two ways.

## PLL Conversion-

1. Unground pin 9 for low frequencies 26.510-26.950.

Note: No time to round up a radio and try this but here it is- check it out for yourself. Unground pin 20, and check the results.

## Xtal Change-

1. Remove $\mathrm{X} 2,10.4667 \mathrm{MHz}$ doubler cut xtal.
2. Obtain a lo.6917 doubler cut Xtal for channels 4l-85, and a l0.2417 xtal for channels 26.515-26.955. Above information can be used in conjuction with this. Use a relay or our new electronic Xtal switcher (Kit ll6), to switch the Xtals.

Readjust $T 1, T 2, T 3$ for full coverage.
Transmitter alignment:
Adjust Tll, T4, T5, T6, T7, Tl0, Ll4, Ll6 on LSB, for maximum output and frequency coverage desired.

## Clarifier-

1. Clip D49.
2. Clip Rl48.
3. Run a wire from un-used terminal on clarifier control to emitter of Q36 (positive of C299).
4. Jump D50.
5. Install Super Clarifier Diode in place of D4.
6. Jump C27 with 22pf capacitor.
7. Remove C22 across CT3.
8. Adjust CTl: USB; CT2: AM; CT3: LSB.

VRI; Am power RV9; AM modulation RV8; SSB mod. RV10; SSB ALC.

## PRESIDENT AR144/COBRA 146GTL

(D2824 Chassis)
Here's the modification you've been waiting for!

1. Unsolder and remove IC2, D2824C PLL Chip.
2. Install and solder in new D28l6C Chip.
3. Connect pin 20 to pin 21 (ground).
4. Install switch and wire as follows:

Run a wire from pin 9 to one side of the switch. Run another wire to center of switch and PC board
 ground.
5. Adjust VCO Coil, Ll4. Without slide, you will get frequencies 27.420-27.860. Install slide to get 5's.

Clarifier Modifications-
l. Lift anode of D30, and connect Super Slide in series.

This gives 5Kc of Slide.
For l3Kc slide, change

D30 to our Super Clarifier = Diode.
2. Connect control to 8 V source. Ground other end.
3. Clip D32.

-Reference; Volume 10 pp. 41-42.

Picture below shows how to modify PC board on front panel to make clarifier work on transmit as well.

l. Obtain a SPDT center off switch.
2. Wire as follows:

This unit uses a separate VCO for USB/AM and LSB. Adjust TC3 on USB/AM and TC2 on LSB.
VR4 SSB Modulation
VR5 AMC
VR204 SSB ALC
VR210 AM Power
Adjust T201, T202, T203, T204, T205, T206, L207, L208, for maximum RF output and frequency range.

Clarifier:

Run to 9Volt
source, emitter of (1) Q229

## ROYCE 1-641

## Frequency Modification-

1. Locate the PLL unit and the 6 terminals to input.
2. Cut the trace as shown.
3. Obtain a SPDT switch and wire across cut as shown.

Channels 11-27 will be 405-595

Slider-

1. Locate the clarifier. Cut the pink wire off. Run a new wire from the clarifier over to a 9 V source at emitter of Q20 (Jll).
2. Clip R99.

Tune up-
VR7 Modulation
VR8 SSB Power
VR9 Voltage Regulator
VR4 S Meter
VR2 Squelch Range
Adjust Tl2, Tl3, Tl4, Tl5, L6, Ll, for maximum.

## ROYCE 1-632 UPDATE

## Clarifier-

1. Clip R48.
2. Cut White wire off of clarifier. Replace white wire with a jumper to the positive side of C7l (emitter of Q20).

Channel Expansion-

1. Locate the green wire running from pin 9 of PLL to channel selector.
2. Cut this wire in two and install an SPDT switch so you can make and break this connection.

For nurd channels, cut trace from pin 4 , to the channel selector. Bridge the cut with a 4.7 K Ohm resistor. Connect a SPDT Center off switch as follows:

VR5; SSB Power.
VR7; AM AMC.
VR2; SQ.
VR4; S Meter.
Tune up T5, T4, T9, Tl0, Tll, T12, L6, L4, Ll.
ROYCE 641
Locate the terminals (6) that go to the PLL unit. Install a SPST switch to make and break the cut trace. See figure below.

SEARS 663-381050
VR6; SSB Power.
VR5: AM Modulation.
VRl0; AM Power.
Tune Up L38, L37, L39, L40, L27.

## SEARS 663.3810 with 2824 Chip

## Clarifier-

1. Remove front panel. Follow these steps:
A. Remove Knobs.
B. Remove nuts on Volume and mode switches.
C. Remove top and bottom case covers.
D. Remove the 4 screws, two on each side of panel.
E. Unsolder meter tabs on panel PC board.
F. Lift out panel.
2. Locate VR403. Remove JP412.
3. Remove R405. Install solid wire jumper in its place.
4. Prepare a 6" length of wire. Solder one end to the hole where JP4l2 was next to Fine Tune control.
5. Solder other end to cathode of D50.
6. Clip D32.
7. Lift anode of D30 (varactor), and install a Super Slider in series. For more sliđe, use our Super Clarifier Diode and Super Slider.
8. Reinstall front panel.

Frequency Expansion-

1. Unsolder and remove IC2. Replace with a UPD2816C. Be carefull--CMOS!
2. Ground pin 20 to pin 21.
3. Install switch as follows:

Adjust VCO Ll4.
Tune Up-
Peak L40, L39, L38, L37, L27 on USB.

2Pole 6Position

With DPDT switch in off position, radio operates on normal 40 channels. Refer to Volume 6, Page 27 for frequency chart.

Position: l. 26.325-26.545
4. 26.875-26.960
2. 26.555-26.640
5. 27.425-27.595
3. $26.645-26.865$
6. 27.605-28.045

## SHARP CB-5470 HD42851B3 Chip

## Clarifier-

1. Lift wire as shown at "RIT".
2. Solder in a new wire where the other was removed.
3. Solder the other end of the new wire to the center tab of clarifier control.

## Channels-

1. Remove the PLL synthesizer cover.
2. Locate and isolate pin 8 of IC201.
3. Wire up a SPDT switch as shown:

| $\square$ | Ground |
| ---: | :--- |
| $\longrightarrow$ Pin 8 |  |
|  | $\longrightarrow$ to 6 V @ COM point |

This will give channels 27.605-28.045.

| LSB |
| :---: |
| 1 |
| 2 |
| 3 |
| 4 |
| 5 |
| 6 |
| COM |

For channels inbetween 405 and 505, wire up a SPDT switch as shown:

VCO coil - adjust T203 for full coverage. Stagger tune T204-T205 over full coverage with scope at TP204.

Transmitter Adjustments-
Adjust T305, T304, T303, T302, T301, L309, L306, L303, L302, L301 for maximum on USB, with a 1 KHz tone. Do this 3 times. Adjust T205 for even power on all channels.
R339, SSB carrier null; C3l, AM power; R54l, AM modulation;
R542, SSB ALC; R301, RF power meter.

New GRANT and MADISON with MB8719 Chip
Disregard hookup instructions on page 15 of Volume 10 .
COMPRESSOR: Install in place of C99. Remove TR24. Solder Black wire towards + side and White wire towards TR2l.

EXPANDOR: Install at Volume Control as illustrated below:

If the modulation and receive audio feed in at the same place or close together, it may be necessary to use a relay in order to prevent feedback. If this is necessary, we recommend the following procedural hook-up.

Same hook-in point

Different hook-in points

[^0]PRESIDENT ARI44, COBRA 146GTL, \& SEARS 663.3810 COMPRESSOR: Modify as shown:

Solder BLACK wire to point A above.
Solder WHITE wire to point $B$ above.
CUT collector (middle lead) of TR27.

EXPANDER: Remove Cl39. Solder BLACK wire towards collector of TR36 and WHITE wire towards Rl81/Cl38.

France and England have adopted 27 MHz CB with one difference. Instead of the conventional amplitude-modulated carrier, they are using frequency modulation due to less RF interference problems. A standard PLL CB AM radio can be converted to FM easily.

We have designed an IC mike amp. with active filter which connects to the VCO varactor. The voice signal changes the VCO frequency at an audio rate, hence FM. The AM modulator is disabled as shown below:

1. Cut board at points $A$ and $B$ shown above.
2. Run a wire from $C$ over to the power switch ( +13.8 V ). Add an additional $2200 \mathrm{f} / 25 \mathrm{~V}$ Electrolytic capacitor at C as shown.

l. Connect RED wire to 9Volt Xmit source.
3. Connect BLACK wire to a good ground.
4. Unsolder the ground and audio hot wires on the chassis mike con.
5. Install the input wires from new board in their place.
6. Soldershield of output coax to the VCO CAN. Solder the center wire to the VCO varactor as shown below.

We also have available a high quality $F M$ IF strip for the receiver, which uses the 455 KHz IF signal as the input. Also has outputs for noise activated squelch. The heart of the system is the LM3065 FM IF system.

Complete general hook-up instructions are included with the "FM EXPERIMENTER KIT" (\#ll8), which includes the "MIKE AMP/FILTER DEVIATION" board (\#ll8A) and"FM RECEIVER CONVFRTER" board (\#ll8R).

One point that should be made is that $F M C B$ will not be found to be the ultimate panacea for all of the problems associated with regular CB transmission, and reception. FM is FM, and as such, will operate on a line of sight basis. One thing that can be said is that when used with a repeater, it can be a very useful way to go.

NOTE: The "MIKE AMP/FILTER" (\#ll8A), board can also be used as a mike amp on $A M$, and works super in conjuction with the VSB-1!

BLOCK DIAGRAM OF FM RECEIVER BOARD USED IN AM CB CONVERSION

BLOCK DIAGRAM OF MIKE-AMP-FILTER-BOARD (MAFB) USED TO MODULATE THE VCO RESULTING IN FREQUENCY MODULATION. ALSO CAN BE USED AS A PREAMP FOR THE VSB 1 Where Required.

## DIGI-SCAN DS-400

As most of you know REDCO bit the dust a while back and their products soon disappeared from the market. Now what do you do when you need a UFO? Don't give up, DIGALOG TECHNOLOGY, INC. has built a unit called the DIGI-SCAN DS-400 which is the same as the UFO. Hook up and performance are identical, except for the elimination of fast scan and home channel buttons on the front panel.

The D.T.I. DS-400 system is designed to expand the receiver frequency range of many SSB Pll 40-channel transceiver systems now in use. The $D S-400$ is field programmable, which allows operation on different types of radios with one unit. The DS-400 automatically displays the receiver frequency with a 5-digit frequency monitor system. The operating frequency range of the receiver is now increased to a maximum of 28.000 MHz in 5 KHz steps. This gives the AM-SSB operator a total of 1200 channels. This system should be installed by a licensed technician only.

The DIGI-SCAN DS-400 will adapt to many SSB Pll 40-channel 1 ddios. These include the following PLL chips: D2824, MB8719/8734, 02A, UPD858, l45106, LC7120, SM5104, 40013, SBE Descrete, and others. The DS -400 can be installed to almost any PLL synthesizer provided the following conditions exist:
l. If a l0-meter conversion is intended, the VCO must not shift between transmit and receive.
2. As the VCO control voltage is increased, the radio operating frequency must also increase.
3. The VCO should have at least a 1.5 MHz range. ( $0-5 \mathrm{~V}$ change on control voltage input to VCO).
4. The down mixer frequency output must not exceed 4 MHz .
5. The down mixer signal must have enough output signal to drive the DS-400.
6. The VCO output must NOT be doubled or tripled as this will cause 10 or 15 KHz steps.

If these conditions above are met, the DS-400 system should work on the receiver. The frequency range will be determined by the various circuits; i.e. bandwidth, sensitivity, etc.

Different types of radios have different frequency ranges. D.T.I. has developed a system whereby the user can tell if his radio is operating on the frequency displayed by the DS-400. The system is called an "out of lock" indicator. If, for any reason, the radio should go out of lock the first digit on the DS-400 will become an "L" instead of a "2".

SCAN SWITCH: A momentary toggle switch which controls the scan function. Push the scan switch down or up and hold for rapid changes in frequency. (l0 steps/second)

STEP SWITCH: A momentary toggle switch which controls the frequency selection one step ( 5 KHz ) at a time. Push the step switch up or down and release for each frequency change desired.

## SPECIFICATIONS:

```
Frequency Range.........25.995MHz to 28.000MHz in 5KHz steps
Readout...................l/2" high, 5 digit, 7 segment LED
Resolution.....................Least significant digit = l KHz
Power Consumption.................450 Ma at l3.8VDC (27.155)
Size......................................................" x 5" x 5\frac{1}{2}"
```

D.T.I. DIGI-SCAN DS-400 systems are manufactured as receiving systems only, and to use them for transmission in the United States of America is in direct violation of the Federal Communication Commission's rules and regulations.
! ORDER YOURS TODAY AND YOU WILL BE GLAD TOMORROW THAT YOU DID!

## COMING ATTRACTIONS

## SERIAL DATA/PLL FREQUENCY SYNTHESIZERS

These are already in use in programmable scanners and will probably be seen in $C B$ transceivers in the not too distant future. Probably on the drawing boards right now, as the manufacturers are hassled by you know who about you know what. Anyway, the serial data designs could prove to be very interesting indeed. It is something new, but don't worry - we will guide you through them just as we have through conventional PLL's. Now to the technical stuff.

An example of a currently available serial data chip is the MM55122 manufactured by National semiconductor. It is CMOS, operates from a single power supply, and features an on-chip oscillator, a $2^{10}$ divider chain, phase detectors and binary input programmable divide. So far, not much difference. However, channel selection is accomplished by a 9-bit serial code included in a 26-bit data string inputed to the data $I / O$ pin. The $26-b i t$ data consists of the following.

Logical 1 sync bit
Three 4-bit data to generate analog outputs for such things as squelch, AVC, Volume, etc.
4 control bits that are latched and externally available at pins A-D. $9-$ bit binary input channel select code.

Hore on these devices as they appear on the market!

## Alignment:

Peak T2, T3, T4, L6. Adjust RV3 for best modulation.

Note: The $9106 / 9109$ series AM units are terrific 40 channel units, but forget trying to get 26.545 for the truckers (or any other out of band frequency for that matter!). You cannot change the 10.240 reference Xtal or you will get a split on REC/XMIT. Remember, $10.240+1024=10 \mathrm{KC}$ reference. You can't jump the chip- it has a Read Only Memory. You can't use pin 8 because only your Xmit would go low, RX would stay on l-40 channels. This chip does not use a 15.360 MHz down mixer input to the programmable divider input. The programmable divider input is tae VCO output with out any additional down-mixing. I'm not saying that the PLL could'nt be modified by changing the chip and adding a down-mixer and new channel selector. It just would'nt be cost efficient.

There are still quite a number of HYGAIN 02A Cybernet boards available for around \$10. It would be smarter to buy a board and add the rest of the goodies, than try to convert the above chip.

## COLT 210 LC7130 PLL

ADD CHANNEL 9 AND 19 AT
THE FLIP OF A SWITCH

## ZAPPER 9000 INSTALLATION UPDATE

## CRAIG L150 (JPD2814C)

1. Remove C72.
2. Solder the center lead towards the coil.
3. Solder the shield wire towards pin 10 ICl.
4. Adjust $L 8$ for best overall performance.
5. Adjust Llo VCO.

## Alignment-

Peak Ll2, Ll3, Ll4, Ll5, Ll7 for frequency coverage desired. Adjust VR2 for maximum modulation or clip D4.

## REALISTIC TRC420A

1. Remove C63.
2. Solder center lead towards R67 and shield towards T7.
3. Adjust $\mathrm{T} 8, \mathrm{VCO}$ coil.

Alignment-
Adjust T10, Tll, L5, L4, L3.
Modulation-
Cut collector of Ql4.
PLL hint- Clip Dll and play with input code on pins $1-6$ of $1 C l$.

Somehow the AM frequency modification for the uPD 858 PLL Chip never did get into print, so here it is.

3 SPST SWITCHES
l. Isolate pin 20 from ground by cutting the pc trace.
2. Solder a $4.7 k$ resistor from pin 20 to ground.
3. Cut trace on pin $2 l$ and add a $4.7 k$ resistor to ground. 4. Wire up switches and connect to pins 12, 19, 20 and 21 as diagramed above.

Taking pin 21 low will drop frequencies by 1 MC . With pins 19, 20, \& 21 High, channel l will be 27.365 and channel 26 will be 27.665. 27-40 remain normal. With pin 20 and 21 high, 19 low, channel 27 becomes 27. 675 and channel 40 is 27.805 .
If you take pin 20 high, channel 1 will be 27.765, channel 8 will be 27.855 and channel 25 will be 27.845. 27-40 will remain normal. In order to get the extra channels, the VCO and transmitter will have to be readjusted. Check the schematic for the coil numbers on your particular set.

Modulation adjustment: RV2
Tune the following coils for maximum with a 1000 Hz tone injected through the microphone and using a peak reading wattmeter on channel l3: L7, L8, (L9 is TVI filter - tune for minimum interference on TV).

New channels can be obtained by either switching Xll and Xl2 or by substituting other crystals for them.

$$
\begin{aligned}
& \text { Xll }=11.730 \text { receive oscillator } \\
& \text { Xl2 - } \frac{11.275}{.455} \text { transmit oscillator }
\end{aligned}
$$

As you can see, Xll is 455 KC higher than Xl2. This is how you get your receive IF frequency of 455 KC . If you swap Xll and Xl2 around, you will get low channels. This can be done easily by using a switch. (Be sure to use solid hookup wire between the switch and board. Keep the leads as short as possible.) The wiring configuration should look like this:

$S_{1}=$ DPDT toggle switch
NOTE: If you use other crystals, they must be 455 KC apart so receive and transmit will work togetiner correctly.

Locate the plug from channel selector over to the MSM5807 PLL chip. Find the \#6 (BLUE) and \#8 (WHITE) wires. Connect a SPDT switch between the two so you can make and break the connection. This will yield channels up to 27.595. See Drawing below:
Frequency Chart as follows-

1. 28
2. 29
3. 30
4. 32
5. 33

22. 54
23. 57
24. 55
25. 56
26. 58
27. 59
28. NORMAL - 40

The model 40 has the $\mathrm{am}, \mathrm{fm}, \mathrm{cb}$ all in one package. This model will be described in detail here. If you have the model 20 or 20A, you will find a separate cb module with an 02A chip and looks very much like a Kraco 4020. Now let's get down to business.

1. Remove the unit from the dash.
2. Remove the top of the radio. You are now looking at the underside of the pc board. The board is labeled so you will be able to find and adjust everything directly from underneath.
3. Locate the IC labeled IC SYNC. Find pin 9. Cut this pin loose from its 5 v source and you have dropped 640kc. Your range is now 26.325 thru 26. 765.
4. By applying 5 v to pin 10 you will go as high as 27. 595.
5. Pin 14 will shift frequency 10 kc for extra inner frequencies.

Adjust VCO for full coverage. Remove plate on rear of radio and two screws holding pc board and you can remove it. Figure l, on next page, shows board removed and turned over. Figure 2 shows chip location and information.

## DELCO CBD-40

Fig. 1

FRONT

Fig. 2

FRONT

Fig. 3

Wire up the DPDT Center-off switch as diagramed in Fig. 2. Install switch in front panel as in Fig. 3. Now locate the AM/FM/CB antenna splitter. (Mine was located under top of dash which was removed with only 8 screws:) The splitter has a tuneable coil for $C B$. I ended up getting maximum results with the core turned counterclockwise, almost all the way out. NOTE: Be careful- the coil core will screw all the way out. Works Great:

## SANKYO SCS-555 MSMF807

For more frequencies, change the value of X 2 and switch with a switch.

Replace D2l with a Super Clarifier Diode for more VCO range.
Tl7 is VCO coil.
Modulation-
Adjust k62 or remove Qll.
Peak out Tll, Tl2, Tl3, Tl.
For wider frequency coverage retune Tl8, T19, T20, Tl4, T15, Tl6.

1. Cut board circuit traces at pins $9 \& 10$.
2. Add $3 k \frac{1}{4} \mathrm{~W}$ resistors across cuts.
3. Obtain a DPDT Center Off switch and wire up as in diagram below. Position 1 will give channels 26.435 (Ch.10) to 26.745 (Ch. 38).

Position 2 (Center) will be Normal channels.
Position 3 will render channels 26.755 (Ch. 10) to 27.065 (Ch. 38). Use Frequency Counter to verify

The following can be done if you would like to be able to switch over to even channels, such as 26.750. Add a 10micro-henry choke and adjust trimmer to adjust for on-frequency operation. Switch to O's or 5's with a SPST switch.

## SPECIFIC RADIO TUNE-UPS

## AUDIOVOX MCB-5000:

Change final to 2SCl306. You can push the original to +7 watts, but it won't take it for long.

RX: R247; SQ Range
R213; S Meter
TX: T201, L202, L204; peak
R268;AMC (defeat C273, 3.3mfd Electrolytic).
R212; RF Meter
Note: R24l may be pulled for improved NB (220K Ohm).

## CRAIG Llol:

RX: Rll7; SQ Range
R128; S Meter
TX: Peak T301, L302, L303, T302, L305, L308, L309. R226; AMC (defeat R224, 680 Ohm).
R3l9; RF Meter R5l0; Dim range on LED readout.
G.E. 3-5819A:

RX: RV1; SQ Range RV3; S. Meter

TX: Peak L5, T3, T4, L4, L7, Lll, Ll2. RV2; ALC (defeat C96). RV4; RF Meter.
RV501; SWR Meter (calibrate against an external meter). RV502; AWI (see Vol. 9, Page 31 "GE3-5821A" for alignment).
J.I.L. 615CB:

RX: VR202; SQ Range
TX: Peak IFTl07, IFT202, IFT201, L206, L204, L203, L202, L201. VR201; Power output adjust VRl01; AMC, DO NOT ATTEMPT TO DEFEAT.

JOHNSON MESSENGER 4170/4175 (Update):

```
RX: Rl7 - IF Gain
    R42 - S Meter Adjust
```

TX: Peak - Tl5, Tl6, Tl7, Tl8, L5, L6, L7
Mod. Defeat - Pull Q19
Model 4175 - Pull R47; put 5 K variable resistor in place; use to
adjust lights on TX.
Model 4170 - Pull R47; put 15 K variable resistor in its place;
use as RF Meter adjust.
For extra frequencies: Pin 13 of PLL to 10.31 VDC, @ (Pin 6 of
PLL).
Correct Factory P/N for Pll: 300l-201 is: 544-300l-201
JOHNSON VIKING 4330 \& 4360:
Change final to 2SCl306
RX: R2 - IF Gain
TX: Peak - Tl02, T5, T6, T7, T8, L3, L4, L6
NOTE: Do not touch: L7 - 2nd harmonic
L5 - 3rd harmonic
R227 - AMC
KRACO KCB4000:
RX: VRl - AGC
VR7 - Squelch range
VR6 - S meter adjust
TX: Peak - L2, L3, L6, L9
VR4 - AMC (Do not defeat!)
VR5 - RF Meter adjust
NOTE: If you have trouble getting modulation up, tune L3
\& L6 for maximum modulation.
KRACO KCB4005:
RX: VRl03 - squelch range
VRl02 - S meter adjust
TX: Important! Peak FLl (filter) at Channel 21
Peak - T401, T402, L402, L403, L404
VR402 - RF output power
VR403 - RF meter adjust.
VR201 - AMC (defeat D20l)

## LAFAYETTE DYNACOM 40 (WALKIE-TALKIE):

Unit has a PLL 02A chip - for extra channels (Pin 9 \& l0)
Small switch will mount on top of case.
RX: Adjust for maximum audio - Tl0, T8, T7, Ll4, T6, Ll6, T5, go back and re-adjust Tl0, T8.
RVl - Squelch range
RV3 - S Meter
TX: Heat sink Q4
Change insulator on Q5 to thin mica TO-220
Change stock antenna on unit to Radio Shack P/N A-0292, catalog no. 2l-184, TRC-200
After changing the above:
NOTE: RF meter to ext. ant. jack. Max. out - T3, T4, L7A, Lll, Ll2 AMC - RV2 (defeat C96, 3.3uf P-RF meter - RV4 (Adjust till just comes in the blue. Disconnect meter to ext. ant. jack. Extend antenna fully, using field strength meter max. Ll7.
DO NOT TOUCH Tl3 - TVI!

## LAFAYETTE SSB 140:

Change final to 2 SCl307, original only 2 watt.
In AC power supply, change $C l(2,200 u f / 25 v o l t)$, to a $3,300 u f / 35 \mathrm{~V}$.
RX: RV8, AGC
RV9; AM SQ Range
RVIO; SSB SQ Range
RV6; AM S Meter
RV7; SSB S Meter
TX: Peak (USB) T4, T5, T6, Lll, L7, Ll3.
RV4, RV5; Carrier balance
RVIA; Final Bias
RVIl; SSB Mic Gain
RV2; SSB RF ALC
RV12: AM AMC. Do not defeat.
VR4; AM Power
RV3; RF Meter
RV501; SWR Meter Calibrate
RV52l; Modulation Meter Calibrate
RV5ll; AWI adjust. See Vol. 9, Page 31 for correct procedure.

RX: RVI; SQ Range
RV3; S Meter
TX: Peak T3, T4, L7, Lll, Ll2
RV2; AMC (disable C96;
RV4; RF Meter

MIDLAND 63-445:
RX: VRI; AGC
VR3; SQ Range
VR4; S Meter
TX: Peak Lll4, Lll3, Lll2, Ll09
VR5; AMC (disable R274)
VR2; RF Meter

MIDLAND 77-856:
Change '90 day wonder'
RX: VRI; AGC
VR2; S Meter adjust
VR3; Squelch range
TX: Peak - Ll6, Ll5, Ll2
VR5; AMC - if you can't get up, pull D21 (as a last resort pull ClOl)
VR4; RF Meter adjust

MIDLAND 77-861B:
RX: C33; IF gain
R50; Squelch range
Rl8; S meter adjust
TX: Peak - Tl, T2, T3, L4
R57; AMC (defeat C53)
Rl3; Low power output adjust (set for l.5W)
Rl7; RF meter (adjust to high power setting)

MIDLAND 7001 (79-007):
RX: RV4; AGC
RV5; SQ Range
RV3; S Meter

TX: Peak (on USB) Tl, T2, T3, Tll, T4, T5, T6, T7, Ll0, Ll4, Ll6 RV6/RV7; Carrier Balance
RVI; Final Bias. Suggest changing final to 2SCl307
RV8; SSB Modulation
RV10; SSB ALC
VRI; AM Power
RV9; AM Modulation
RV2; RF Power Meter
RV501; AWI

## MOTOROLA CF925AX:

Change final to 2 SCl 306 and put heatsink on driver if ther is room.
RX: VRIO1; AGC
VRl03; Squelch ranye
VR102; S Meter adjust
TX: Peak; Ll0, L7, L6, L4, L3, Ll
VR2; AMC - Really mic output lever, AMC is non-adjustable. Pull R27, lK resistor and R33, 100 Ohm resistor.

MOTOROLA MOCAT 40:
For all T4000 series, use SAMS 186
NOTE: Extender adjust is on 4005,4020 only! Highly sensitive noise blanker, adjust is R502

RX: R229; Squelch range
Pull Rl20 (27 ohm) ; put 50 ohm variable resistor in place and use as $S$ meter adjust.

TX: You either got it or you don't! AMC Defeat: Pull VR305 (ll.8V zener)

Pull CR206 - diode
Pull R306 (56K), put in l00K variable, use as RF meter adjust.
NOTE: This unit has plated through PC board - good luck!

## NDI PC-102:

RX: VR201; SQ Range
VRl02; $S$ meter
TX: Peak T401, T402, T403, T501, T502, T503
VR203; AMC (defeat CR305, and C316 if necessary) VR502; RF Meter

## PACE 8003:

RX: VRl09; IF AGC
VRI01; RF AGC
VRl02; SQ Range
VR103: S Meter

TX: Peak T503, T504, T302, L303, CT301, L304 VR201; AMC (disable C219)
VR301; RF Meter

PACE 8016:
RX: Rll4; Squelch range
Rl07; Meter zero
Rl08; $S$ meter adjust
TX: Peak; Lll5, Lll4, Lll2, Ll09, Ll06
R168; AMC (defeat Cl78)
Pour it to this one - it has a 25 Watt Final!

## PACE 8117:

RX R135; SQ Range
Rl37; S Meter
TX: Peak L301, T301, L302, T302, L304, L307, L308 R220; AMC (defeat CR201)
R325: RF Meter

PANASONIC RJ-3250:
Change '90 day wonder' on final.
Audio Board - remove R70 (variable l00k resistor) AMC control defeat.
RX: R24; Squelch range
R22; $S$ meter adjust
R105; VU/Mod meter adjust
TX: Tune; L8 \& Ll6 for maximum modulation Peak; Tll, Tl2, Tl3, Tl4, Tl5, FLl, Ll8 R73; RF meter adjust
NOTE: Do not exceed 6 watts dead key!

RX: R46; SQ Range
Rl43; S Meter
R163; VU/Mod Meter. Do not adjust until after TX adj.
TX: Change final to a 2 SCl 306 , as original is only 1.5 Watt. Peak T5, T6, T7, T9, Tl0, L7, Ll0, FLl, Lll
R94; AMC (adjust to $90 \%$ if it won't go, $L 7$ for maximum modulation
Rl46; RF Meter

RAY JEFFERSON CB-845:
RX: RVI; SQ Range
RV3; S Meter
TX: Peak L5, T3, T4, L7, L11, L12 RV2; AMC (defeat C96, 3.3uf Electrolytic)
RV501; SWR Cal. (150 Ohm 5Watt non-inductive resistor will equal a 3 SWR cal..
RV4; RF meter

RCA 14 T 303 (02A PLL chip):
RX: RVIb; SQ Range RV3; $S$ Meter

TX: Peak L5, T3, T4, L7, Lll, Ll2* RV2; AMC (C96, 3.3uf Electrolytic)
RV541; Modulation meter (cal with external meter)
RV502; RF Meter
RV501; 150 Ohm 5 watt non-inductive resistor, equals 3 on SWR cal.
*Repeak clockwise L7
*Repeak counter-clockwise Ll2

REALISTIC TRC-428:
RX: VR3; IF Gain
VR6; SQ Range
VR8; S Meter
VR401; SWR Meter Calibrate
TX: Peak Tl0, Tl2, Tl3, L5, L8
(There is no AMC adjustment. If it won't come up by tuning L5 and L8, pull both R90 and Rl04)
(There is no RF Meter adjustment. Pull R3, put in a 100 ohm variable in place and adjust.)

REALISTIC TRC-432:
RX: VR30l; Power supply voltage adjustment, 13.8 V max.
VR302; SQ Range
VR4; IF Gain
VR5; S Meter

TX: Peak Tl2, L5, L4, L3
AMC adjustment; Cut collector of Qlo

REALISTIC TRC-441:
Change final to 2SCl306. Change all thin plastic insulators on heat sinks to Mica insulators.

RX: VR3; S Meter
VR5; SQ Range
VR2; IF Gain

TX: Peak Tll3, Tll4, Ll07, Ll04
(There is no AMC adjustment). Remove Dllo, DO NOT remove Cl46.
VRI; RF Meter Adjustment

REALISTIC TRC-490 (21-1583):
NOTE: Unit has an MB8734 Pll chip - for frequency \& slider Modification, see Volume 7, pages 18-22 (Courier Galaxy) Change '90 day wonders' on final \& driver; also under chassis check TR25 and TR26. In P/S TR303, some are sinked wrong.
Change final to 2 SCl 307 if you are going to push unit.
RX: VRl; S Meter adjust
VRl2; Squelch range
TX: Peak L26, L27, L28, L29, L36- Do not touch L39 (TVI)
VR3; TX frequency adjust
VR8; Driver bias
VR9; Final Bias
VR5; Carrier balance
VR7; RF ALC (Don't exceed 15 W in $S S B$, and $7 W$ in $A M$ unless final has been changed.
VR6; AM Power
VRl0; Rf Meter adjust
For modulation increase - cut Rl02 (l5K) located to right of Ll7.

ROBYN WV-ll0 (Update):
NOTE: TX circuits on separate PC board. Change final to 2SCl306. Try to use a heat sink on the driver.

RX: VR2; Squelch range VR5; S Meter adjust

TX: Peak Ll8, Ll7, Ll6, Ll5, Ll3, Ll2, Lll, Llo DO NOT touch L9 (TVI)
VR6; AMC
Defeat; C86 \& TRl8, both on main board (TR18 is heatsinked) VR4; RF meter adjust
For additional frequencies - Pin lo \& ll of PLL to Pin 10 PLL.

ROYCE 1-655:
NOTE: This unit has vertical circuit board - Good Luck!
TX: Peak; T401, T402, L403, L404
Modulation Defeat - C30l, lmfd electrolytic.

SEARS 934.38061700 ( $\left.\mathrm{CN}_{\mathrm{i}}-2378 \mathrm{SA}\right):$
NOTE: Unit is identical to 934.38062700. Only difference is no PA/CB capability. Use SAMS 236, see Secret CB Volume 8, pages 68 \& 69 for frequency modification.

RX: RTl; IF gain RT2; $S$ meter adjust

TX: Peak; Tll, Tl2, Tl3, Tl4, Tl5 RT3; RF meter adjust D7; AMC defeat, if needed.

Radio Modulation Adjustments for Various Brands/Models

## BANDIT BELIEVER

the Performance of the bandit antenna is terrific says a Hawail Dealer. The "BANDIT" out performes any antenna that I have used. The name brand I won't mention showed only 3db rating on my base station, when I switched to the "BANDIT" antenna there was a big difference and it gained a 6db rating. It had doubled! For every "BANDIT" antenna we have installed the audio and signal strenght had a tremendous increase. Hats off to Lamtech for a very good antenna and keep it up. Also because of the tuning rings it was always possible to get it tuned to a 1 flat. Our customers are HAPPY.

## HINTS on SERVICING

When servicing a "wireless-modular" radio such as the Royce 655, you will find troubleshooting of a particular module alot easier if you unsolder the terminal pins, remove the module and solder the pins on the other side of the "mother board" in the same direction. Now you have lots of room to work.

## Frequency meter hook-up

Use this for high impedance counter

## SERVICE NOTES

Golden Eagle Mark IV Transmitter

SYMPTOM:
Excessive arcing of the high voltage contacts of the relay.
Solution:
Remove CD601 (lN4005 diode), presently connected with its cathode to the junction of R317, and R3l9 and its anode to ground.

Reconnect the cathode to the junction of R316 (1.5K labeled R327 on the board), and the orange and pink wires that go to the mode switch and relay. Connect the anode to ground. This will shunt to ground a negative pulse that can exceed the voltage rating of the contact.

For factory parts contact:

Nichols Electronics
School Street
Tilton, NH 03276
603 286-4421

To increase modulation and voice quality, clip the $250 p f$ capacitor located on the back of the crystal cartridge.

Noises from an automobile ignition system can be catagorized as:
A. Pulse Noise.

Sources: spark plugs, coil, high voltage wiring.
Erratic sources: voltage regulators (mechanical type), switch noise, blinkers.
B. Continuous Noise.

Sources: generator (alternator), fan, wipers.
To avoid long hours of fruitless labor, be sure the ignition system is in good working order and properly tuned before going any further.

Spark plug cables should be checked or replace every 15,000 miles. A good cable will read between 10 K Ohm and 12 K Ohm on an Ohmmeter.

A good place to start with noise troubleshooting is to first unscrew the antenna coax from the $C B$ unit and then see if the noise goes away. If it does, the noise is not comming in on the DC power lead, but from radiated $R F$ interference. Check for these:

1) Is the coax shield wire connected to the chassis at the antenna end?
2) Is the shield wire connection broken or corroded?
3) Is anntenna mounted on a poor ground, such as a mirror, luggage rack, or bumper? Always install braided shielding between a suspected poor ground and a known good ground such as the main chassis.
4) Noise often comes from poorly grounded metal on the car body. Install ground straps on hood hinges, trunk hinges, doors, exhaust system (front and rear), and the motor mounts.

An easy way to locate noise caused by radiation is to use a walkietalkie as a noise receiver. Pull out the antenna about $6^{\prime \prime}$ and walk around the body, holding the antenna around various suspected areas while listening to changes in the speaker. Check any bad areas and install ground straps as necessary.

## DC NOISE

Remember this important advice- noise suppression, ostensibly, is more effective when applied to the device producing the noise, than to the device receiving the noise.

An alternator produces both "hash", and "whine". The whine is actually a ripple voltage superimposed on the DC line. Coaxial high-current feedthrough capacitors are the best way to go.

## HOW TO SOLVE NOISE PROBLEMS (cont)

Most noise can be elimated by using a separate heavy guage power wire from the $C B$ to the battery to eliminate voltage drops.

One more method to reduce noise can be done if you use your radio on negative ground systems only. That is to go through and short across all the bypass capacitors so the chassis is grounded.

NOW AVAILABLE FULLY ASSEMBLED:

UNIT FEATURES A 5 MILE SIMULATOR FOR TRANSMITTER/RECEIVER TESTS ( 20 MILE SIMULATOR HAS BEEN ELIMINATED FROM PRODUCTION MODEL DUE TO UNAVAILABILITY OF SPECIAL PARTS); DUAL TEST TONES FOR TUNE-UPS; HEADPHONE OUTPUT JACK FOR MODULATION AUDIO CHECKS; DUAL 25 WATT DUMMY LOADS; WORKS ON I I!TERNAL $9 V$ BATTERY AND HAS A JACK FOR OPTIONAL AC ADAPTOR.

## NOISE IN DIESEL TRUCKS

Diesel engines do not have noise-producing high-energy ignition systems and therefore have less of a radiated noise problem. However, there are still noise sources to be found.

1) Alternator- polish and smooth Slip-rings, replace brushes. Most of the noise comes from the rectifier diodes. It will appear as a whine, which changes pitch with RPM (RF radiation is modulated by diode switching frequency). The cure is to install a coaxial 100 amp capacitor at the DC output terminal. This capacitor can be a value of .l-. 5 u f.

If your rig has a generator instead, periodic dressing of the commutator, along with replacing the brushes as required for proper mantainence. Add a . 005uf capacitor across the DC output line and ground.

If you have a noisy regulator, remove the wire from the regulator to the FIELD terminal on the alternator. DO NOT put a capacitor in this line! The cure for this is to replace the wire with coax, grounding the shield at both ends.
2) Fans, Blowers, Solenoids- use a 20 amp coaxial capacitor in the hot lead.
3) Electrical Fuel Pump- install a . $005 \mathrm{u} f$ across the motor.
4) Oil Pressure Sender, Water Temperature Sensors, etc.- Install .005 uf across unit.
5) Windshield wipers- install a . 005uf disc cap. on all hot wires to ground. For stubborn cases, use a . $l_{u} f$ coaxial cap. in series with the offending lead.

Below is a listing of capacitor numbers with the corresponding value. Now you can use those junk-box caps, and have the value.

Never again will you have to go through the agony of hooking your rig up backward. Do this simple modification, and relax.

One more simple way to protect your "rig".

If connected up backwards, nothing will happen due to reverse bias which causes blocking action of diode. When connected properly, diode conducts, and radio will be ON.

THE NEIGHBORS HAPPY!

Use SO239 on input and output, Install in aluminum mini-box,

## 20 dB Attenuation Pad

All resistors are carbon, $\frac{1}{2}$ watt rating.

CB
Receiver

Build in a small aluminum mini project box, or wrap brass sheeting around the circuitry, and solder all edges. Keep everything as short and tight as possible.

Now, l00uVolt range becomes louVolt, with $20 d B$ pad inserted. The most important thing is to get it completely shielded.

## HOW TO BUILD A BALUN COIL

A balun coil is a very useful device when hooking up frequency counters, VFO's, injecting frequencies with a signal generator in place of crystals, and many other numerous uses. Below is a diagram of one very easy to build with easily obtainable parts. This balun is built on a 7-30 Mhz. torroid core with an inside diameter of .2 inches and an outside diameter of .4 inches. The core thickness is .125 inches. Following is a complete list of materials that you will need to build your own.

```
#28 and # 31 enamelled magnet wire
torroid core, as above (Miller #F-37-1)
470pf ceramic disc capacitor
#22 Red and Yellow wire
```

This design has a step-up ratio of 2:1. After you are finished winding the coil, cover with heatshrink for a professional looking, highly useful accessory.

HOW TO HOOK UP CORRECTLY

To Generator, VFO, etc.

TO RADIO or Crystal Socket, etc.

## EASY-TO-BUILD CIRCUIT

```
E-Z l000Hz. Tone
```

Parts List:

IF you want to have some fun? - replace the 68 K fixed resistor with a l00K variable resistor to have a wide range of tones. Also, the capacitor off of pin 6 to ground can be changed for different tones.

Accessory
D1 and D2 act as one way switches. The action of these two is that of isolating the independent batteries from both discharging. Select high current common ANODE type stud rectifiers- such as those available from Poly-Paks(l50 amps, 25PIV).

The diodes should be mounted on a piece of aluminum heatsink and wired with 10 gauge copperwire as shown above. Install them in a box of some sort, to prevent shorting out to ground.

If you use common CATHODE diodes, you will have to isolate the two diodes from each other and connect the anodes together. Use a separate heat sink for each diode in this case.

In this series we will show you how to save a lot of hard earned bucks and come out with an outstanding 20 amp regulated power supply. All the parts are easy to find and are common in discount flyers from such suppliers as POLY PAKS (P.O. Box 942, South Lynnfield, MA. 01940) or SOLID STATE SALES (P.O. Box 74D, Somerville, Mass. 02143). The best way to locate parts is to pick up a copy of RADIO ELECTRONICS magazine and page through the ads in the back. You will find a great many good deals there. Now, back to building. Below is a parts list with specifications and a schematic and diagram to help.

## PARTS LIST

2N3055 Transistors, TO3 case
T03 Sockets
T03 Heatsinks
1011184 Rectifiers, common Anode
10,000ufd. @ 35Vdc Electrolytic capacitors

Here is a cute idea on how to eliminate Red LED washout on bright days. A green 2 digit LED is available from Midland (used in 7001 SSB), that can replace your red ones. The only catch is that the red readouts that are commonly used are common anode and the green one from Midland is common cathode.

But do not dispair! There is still a way to use it simply by inverting the input level. Build this circuit 13 times:

Build this circuit once:

To R403

13 V
To segments $A+D$
of l0's ( $6+10$ )

## CHART

What would be really neat is a green common anode dual digit display for direct replacement. Anyone know of a source?

| R401...ll | R407... 8 |
| :---: | :---: |
| R402... 12 | R408...7 |

## SET POWERED CB MIC

This chip has been around a good while and finds a very practical application in the area of Xtal switching. Etch a PC board and you can have a very compact little circuit. Pin-out is as follows:

| Switch | in/out | in/out | control |
| :---: | :---: | :---: | :---: |
| A |  |  |  |
| B | 1 | 2 | 13 |
| C | 8 | 4 | 5 |
| D | 10 | 9 | 6 |

This chip functions like a solid-state switch.
Note: In/Out can be reversed.

18. Ground.

TC9109P

Same as above except it has on chip loop filter input and output, pins 5, and 6 .

1. V+
2. $\operatorname{Qin}(10.240)$
3. LDl Kills output if channel select is improperly positioned between channels.
4. LD3 Loop Lock detector output
5. LD2 Inverter
6. Do $\emptyset$ detector output
7. TIR
8. Fin Prog. div. input $\leqslant 7 \mathrm{MHz}$
9. P6
10. P5
11. P4
12. P3
13. P 2
14. Pl
15. PO
16. Ground

## Extra Channels-

Replace 03A with 02A
(rewiring necessary) for extra channels.

$$
\begin{array}{rr}
1-9 & 26.905-26.805 \\
10-22 & 27.435-27.585
\end{array}
$$

## PLL PINOUT DIAGRAMS (cont)

```

\section*{"OOPS, WE GOOFED"}

Vol. 8, Page 52;
Under switch 2, D should read: "Gray wire that was at B.S. J."

Vol. 7, Page 53; Realistic TRC-425. Do not cut collector of Q509. AMC; VR8. SQ Range; VR5. RF Gain Range; VRl. S Meter; VR3. RF Meter; VRll.

Vol. 7, Page 43; 200 channel conversion. Switch designations should be: Gr--Yw--Rd, not Yw--Gr--Rd.

Vol 3. Page 25; CPI 2000 ( 80 channel conversion). IC marked in drawing for 5 KC drop is really IC-G, not IC-C. Pinout is correct.

Vol 6, Page 32, and Vol 7, Page 63; Thumbwheel 200 Channel Update. Thumbwheel switches are BCD type. Also, the switch marked "Thousands", should be connected

Also, the method of channel entry is in a code from 000-199 as shown on page 34 of Vol 6. You can't dial in "785" for 27.785. Rather, you must dial in "l73" as per chart. The Tens, Hundreds, Thousands should really be Ones, Tens, Hundreds. Note: The thousands switch could be a simple SPST switch instead of the more expensive thumbwell type.

Vol. lo, Page 2; 20 mile simulator has been eliminated from The Trouble Shooter because of unavailablity of special parts.
