• 4 stage level control selectable on front panel • Defeatable "silence gate" prevents noise rush-up, holes, pumping, and breathing once the signal level falls below a preset threshold (during pauses or low-level program material) • Six switchable HF limiter curves (25 to 150µs) match the HF limiting to the medium or device being protected and optimize control of excessive sibilance • Defeatable clipper follows the HF limiter, so the unit can be used for absolute peak protection • Switch-selectable gain compression recovery rate. Hard knee recovery (at a constant rate) is best for single tracks and live-voice. The Soft knee recovery rate provides more subtle gain-riding for mixed program material • Faster "compression" function can be switched-in • Switchable for stereo-tracking or independent 2-channel operation • Least-used controls are concealed behind a security panel • Two LED bargraphs per channel simultaneously display gain reduction and peak output level • Output level meter can be calibrated to match the overload point of the device being driven • Balanced, floating inputs and outputs are EMI-suppressed • 25dB gain reduction range is achieved with a low-distortion, Class-A VCA • Two channels in a 1 3/4" rackmount package • Hard-wired bypass switch included

464A\$1195.00

ORBAN ASSOCIATES, INC.

Audio Processing

536A Dynamic Sibilance Controller (2-channel)

2-Channel De-esser. Replaces 516EC 3-channel unit. This model contains two independent channels with active-balanced input and output, with output transformer option. Inaudible de-essing over a 15dB input range. Simple set-up and operation. Improved noise and distortion performance

536A \$539.00

Accessories

RET-22 XLR type connectors for inputs and outputs \$24.00

RET-23 Balanced output transformers (2) for both outputs. \$32.00

642B Parametric Equalizer/Notch Filter

• 4-band, dual-channel parametric equalizer. Each section offers overlapping tuning with a 25:1 frequency range; + 16dB boost/-40dB cut in each band • "Q" variable from 0.29 to 5.0 • "Constant-Q" design enables use of equalizer as a true infinite-depth notch filter; ± 10% vernier frequency control on each band facilitates precise tuning of notches • Tunable 18dB/octave high-pass filter and 12dB/octave "Automatic Sliding Besselworth" low-pass filter provide maximum flexibility while preserving musicality • Front-panel Cascade switch permits use as either a two-channel 4-band, or one-channel 8-band equalizer • In/out switches on each band and on each channel simplify comparison of EQ settings with flat • 12dB make-up gain is available • Overload indicator warns of overload anywhere in equalizer • Noise and distortion specs > 16-bit digital • Active balanced inputs and outputs with optional output transformer • Main signal path is free of coupling capacitors

642B \$ 995.00

642B/SP Parametric equalizer/notch filter (2 ch) (16 lb.) (LMF/LMF/HMF/HMF x 2) 1.045.00

642B/SPX Parametric equalizer/notch filter (2 ch) (16 lb.) (LF/LMF/HMF/HF;LMF/LMF/HMF/HMF) 1.045.00

RET-049 XLR connectors for all inputs and outputs. (2 lb.) \$24.00

RET-051 Balanced output transformer for both outputs. (2 lb.) \$32.00

672A/674A Graphic Parametric Equalizers

The 672A/674A are quasi-parametric equalizers with continuous control over center frequency, bandwidth, and amount of peak or dip. Convenient graphic-style EQ controls provide reciprocal EQ in eight bands. Additional 12dB/octave highpass and lowpass filters tune continuously over 100:1 frequency range. Additional lowpass output permits use as equalizer cascaded with electronic crossover. Gain control; overload lamp; in/out switches for equalizer and each filter. Line level balanced input; unbalanced outputs can be balanced with optional transformer(s)

672A \$689.00

RET-006 Balanced output transformer. Order one per output. (2 lb.) \$16.00

RET-021 XLR connectors for input and both outputs. (2 lb.) \$18.00

674A 2-channel version of the 672A with HP/LP filters, barrier strip terminals \$1299.00

ACC-003 Plexiglas security cover for filter section controls. (2 lb.) \$9.00

RET-007 Balanced output transformers (2) for main outputs. (2 lb.) \$32.00

RET-008 Balanced output transformers (4) for both outputs. (2 lb.) \$64.00

RET-010 TRS phone jacks for inputs and all outputs. (2 lb.) \$13.00

RET-012 XLR connectors for inputs and all outputs. (2 lb.) \$30.00

764B Programmable Parametric Equalizer

• 4-band, dual-channel parametric equalizer. Each section offers overlapping tuning having a 25:1 frequency range; + 16dB boost/-40dB cut in each band • Bandwidth variable from 5 to 0.1 octaves ("Q": 0.3 to 15) • Proven Orban "Constant-Q" design enables use of equalizer as a true notch filter • Tunable 18dB/octave high-pass filter and 12dB/octave "Automatic Sliding Besselworth" low-pass filter provide maximum flexibility while preserving musicality • 99 non-volatile memory registers for instantaneous storage and accurate recall of complete control setups, including input gain • Digital displays show current settings of control parameters • High-quality, no-compromise audio path having no VCA's • Up to 14 two-channel slave units can be addressed by the master unit. Each pair of channels can be ganged to track in stereo or can be programmed independently • MIDI-and RS-232 controllable. Port for remote control.

764B \$POR

536A

642B

764B

787A

787A Programmable Mike Processor

• Standard Line-level input with optional Jensen transformer mike preamp and 48V phantom power • 3-band parametric equalizer with variable frequency, bandwidth, and boost/cut for precision control • Smooth compressor delivers maximum presence and "punch" while maintaining consistent levels • Full-function de-esser helps control excessive sibilance • Noise gate attenuates noise by up to 25dB; compressor gate prevents rush-ups during pauses (front-panel control selects noise or compressor gate) • Effects send-and-return with programmable return level simplifies integration of external reverb or "psychoacoustic exciter" • Store, Recall, and Compare buttons provide instantaneous access to 99 user-programmed control setups • Digital display shows current settings of control parameters • Easy-to-read bargraph displays show output and gain reduction levels • Memory protected by internal back-up battery • Security code locks programming controls to prevent tampering • Built-in control connectors for remote control and MIDI and RS-232 interfaces • Provision for second-channel slave unit for dual-mono or stereo operation (787A/SL)

Three-band parametric equalizer, compressor, de-esser, noise gate, and compressor gate integrated in a compact, powerful system. Stores up to 99 different control setups in memory for instant recall. Designed for mike processing and voice recording, but versatile enough for many other production uses.

787A \$1995.00

787A/SL Second Channel slave for 787A \$995.00

RET-045 Midi Interface Options \$95.00

RET-046 Jensen transformer/Mic preamp (order one for each 787A and 787A/SL channel) \$195.00

RET-050 RS-232 Interface Option \$95.00

ACC-024 Basic remote control accessory TBA

Security Covers

This acrylic security cover attaches easily to any Orban product. Fits most other EIA-standard rackmount panels. Available in four sizes and in three colors. Acrylic may be painted to achieve other effects. Three sets of screws are supplied for three levels of security. Any other 10-32 x 1/2" screw may be used.

MX-5050B-II

Compact Professional Recorder

The MX-5050B-II features: Switchable +4 or -10dB levels, DC Servo Capstan Motor, Hr., Min., Sec., Tape Counter, Front panel alignments for optimum performance, overdubbing and many more useful production features. Additional benefits of the MX-5050B-II are three speeds, selectable 1/2 or 1/4 track reproduce, full edit capability including splicing block, noise free inserts, XLR connectors, NAB/IEC EQ switching and the unique 3-position re-record level switch. Frequency response is 25Hz-22kHz ± 2dB, with an S/N ratio of 72dB, (15 ips) mike inputs, mike/line switching, remote.

MX-5050B-II Two-channel half-track recorder/reproducer with quarter-track reproducer capability. DC-servo capstan. Three speeds in speed pairs of 15/7.5 or 7.5/3.75 ips, field selectable. Transformerless balanced output. Vinyl covered wood cabinet.

MX-5050B-II \$2995.00

MX-5050B-IIIF One-channel full-track recorder/reproducer with two-channel half-track reproduce capability. Otherwise identical to MX-5050B-II

MX-5050B-IIIF \$3395.00

MX-5050BQ-II

MX-5050BQ-II

Four Channel Compact Professional Recorder

The 1/4", four channel version of the MX-5050B-II is for those applications where utmost reliability, flexible interface (+4 or -10 levels), and premium performance is required. Whether your four channel recording requirement is fixed or portable, the MX-5050BQ-II is an ideal machine for small studios, broadcast stations, educational or A/V facilities and serious home recordists. Supports CB-116 auto locator.

MX-5050-BQ-II Four channel, quarter-track, quarter-inch tape recorder/reproducer. 15/7.5 ips. DC-servo capstan system. +4 or -10 levels, microprocessor control, and dynamic braking.

MX-5050-BQ-II \$4095.00

MX-5050

Mark III/2 1/4" Two Channel Professional Recorder

The Mark III/2 has BII features plus separate transport and electronics for convenient tabletop console or floor console, and microprocessor controlled transport functions. It has completely accessible front and rear electronics adjustments, and record punch-in and punch-out without clicks or pops.

MX-5050 Mark III/2 Two channel, quarter-inch tape recorder/reproducer. 15/7.5 ips. DC-servo capstan system. Transformerless balanced output. Tabletop console.

MX-5050 Mark III/2 \$3695.00

MX-5050

Mark III/4 1/2" Four Channel Recorder

The Otari MX-5050 Mark III/4 is a compact, tabletop console recorder in the 1/2" four channel format. A Proprietary Microprocessor governs tape handling including dynamic braking, motion sensing and transport logic. Additionally, a separate microprocessor controls a real-time electronic counter that features an LED real-time display and zero-return. The capstan is under servo control and speeds are switchable between 15 and 7 1/2 ips. The true, three head design machine also has a ± 7% variable speed control, selective reproduce for overdubbing, a built-in dual frequency test oscillator and a full complement of electronics adjustments for rapid test and setup. The MX-5050 Mark III/4 is capable of interface to tape controllers and time code synchronizers. A transport remote control (Model CB-102) is available +4/-10 switchable I/O.

MX-5050 Mark III/4 Four channel, half-inch tape recorder/reproducer 15/7.5 ips. DC-servo capstan system. +4 or -10 levels, micro processor control and dynamic braking. Tabletop console.

MX-5050 Mark III/4 \$5595.00

MX-5050

Mark III/8 1/2" Eight Channel Recorder

The Otari MX-5050 Mark III/8 is a compact, tabletop console recorder in the 1/2" eight channel format. A Proprietary Microprocessor governs tape handling including dynamic braking, motion sensing and transport logic. Additionally, a separate microprocessor controls a real-time electronic counter that features an LED real-time display and zero-return. The capstan is under servo control and speeds are switchable between 15 and 7 1/2 ips. The true, three head design machine also has a ± 7% variable speed control, selective reproduce for overdubbing, a built-in dual frequency test oscillator and easy-access rear panel calibration adjustments for rapid test and setup. The MX-5050 Mark III/8 is capable of interface to tape controllers and video synchronizers and is compatible with all dbx* noise reduction products. Two optional remote controls are available: Model CB-114 which handles transport functions or Model CB-110 Session Controller which has transport controls, channel switching, and remote electronic time display. +4/-10 switchable I/O.

MX-5050 Mark III/8 Eight channel, half-inch tape recorder/reproducer. 15/7.5 ips +4 or -10 levels, microprocessor control, dynamic braking, full function remote (optional)

MX-5050 Mark III/8 \$4995.00

OTARI CORP.

1/4" Recorder

MX-55-N

Preliminary**MX-55-N 1/4" Compact Recorder**

- DC capstan, servo-controlled
- Variable speed, $\pm 20\%$
- Speed select in pairs: 15/7.5 or 7.5/3.75 ips
- Reel size compensation control
- Plug-in four head design for easy access
- Reel size capability: 11.8" (maximum)
- Integral tape splicing block
- Microprocessor controlled real time counter with search-zero, search-cue, 3-point cue memory, and repeat
- Dump edit mode
- Standard recording level selectable (185/250/370 or 250/320/514 nWb/M)
- Front panel record setup adjustable
- XLR input/output and microphone connectors
- Lighted VU meter with peak reading indicators
- Rugged diecast deckplate and side panels
- Available 19" rackmount
- Noise-free punch in/out
- Built-in test oscillator (100Hz, 1kHz and 10kHz)
- Active-balanced in/output
- Equalization IEC/NAB switchable
- Rotary encoder enabling 0.01% steps for pitch
- Cue control with monitor loudspeaker
- Selective reproduce (SYNC) for overdubbing
- Optional transformer available
- Optional fader control function

The MX-55 series is designed for use in recording studios and audio post-production like the preceding MX-5050 models. This series uses 1/4" tape at user-selectable speed pairs of 15/7.5 ips or 7.5/3.75 ips, and is available in six versions. These are: full track, twin track NAB or DIN stereo, twin track with center-track time code, 4 track, and twin-track in a desktop "overbridge" design. The extra reproduce head provides flexible performance of 1/4 track reproduce. The transport features a DC quartz PLL capstan motor and a 7-digit tape timer featuring a 4-memory "mini-locator". Transport controls are arranged for easy, efficient editing and mastering. Front panel access is provided for record alignment, and a built-in oscillator provides 100Hz, 1kHz and 10kHz test tones.

Specifications

Transport	
Transport Control:	Variable within $\pm 20\%$
Wow and Flutter:	15 ips: $< \pm 0.06\%$ (peak weighted, DIN 45507)
	7.5 ips: $< \pm 0.08\%$ (IEC Pnb,386)
	3.75 ips: $< \pm 0.12\%$

Rewind Time:	< 100 seconds for 2500' (762m)			
Transport Controls:	F.Fwd, Rwd, Stop, Play, Rec., Edit, Cue, Speed, Reel Size			
Electronics Input:	Line: Transformerless, active balanced, > 10K ohms (20Hz to 20kHz) Level: +4dBm, -16dBm switchable/adjustable Max. Input: +30dBm Mike: Active balanced; input impedance: 10K ohms; minimum level: -70dBm			
Output:	Line: Transformerless, active balanced, > 200 ohms source impedance Level: Switchable level +4dBm or -16dBm Max. Level: +26dBm (balanced load) +2dBm (unbalanced load)			
Equalization:	NAB or IEC switchable. Recording equalization is adjustable on the front panel

Cartridge/Reel Recorder/Reproducers

CTM-10

**CTM-10 Series
Cartridge Recorder/Reproducers**

• Sum/difference matrix encoder • Front panel azimuth adjustment with phase comparator • Front panel indicators for: capstan servo lock, vari-speed, cart insertion error, jammed tape, primary, secondary and tertiary cue tone sense, matrix mode and azimuth alignment • LED tape timer display • Cue track record/erase • Headphone jack • Splice finder on record/play decks • 9600Hz external capstan control • ± 6% vari-speed control • Input level "SRL" presets • VU Meters with peak reading LEDs on record electronics, peak reading LED arrays on playback decks • Stop and FFW audio output mutes, user-defeatable • Tone generators for cues and tests: 150Hz sine for secondary cue, LF EQ; 1kHz sine for primary cue, ref. level; 1kHz square for phase compensation alignment; 8kHz sine for tertiary cue, bias or EQ alignment; 16kHz sine for azimuth or EQ alignment • Adjustable low frequency EQ • Test input jack • Record mode vari-speed lockout • Tape speed may be user-converted to 15, 7.5 or 3.75 ips (internal jumpers)

The series consists of three models: the CTM-10S stereo record/play deck, the CTM-10M mono record/play deck, and the CTM-10 mono + stereo playback deck, to which recording capability is a simple retrofit. Three CTM-10 series decks may be rackmounted side-by-side (5 1/4" H). The record electronics unit, housed in a separate chassis, is the same size.

The CTM-10 record electronics unit incorporates Dolby HX-Pro* bias optimization circuitry which increases the high frequency dynamic headroom, flattening out the maximum output level (MOL) curve to yield performance at 7.5 ips which is equivalent to non-HX performance at 15 ips; (likewise 7.5 ips performance at 3.75 ips). HX-Pro is not noise reduction, and needs no decoding.

*HX-Pro is a trademark of the Dolby Licensing Corp.

CTM-10	Mono/stereo play.	\$2,195.00
CTM-10-M	Mono rec./play*	2,445.00
CTM-10-S	Stereo rec./play*	2,695.00
CTM-10-R	Record electronics	1,350.00

* Requires CTM-10-R for record function

OTARI CORP.

Master Recorders

MX-70 Series 1" Multi-Channel Recorder

The MX-70 is a multi-channel mastering recorder for audio post production and recording studios. The MX-70 features a microprocessor-controlled constant-tension transport, noiseless and gapless insert recording capability at any speed, a full function remote control, exceptional audio electronics, and is designed for easy interfacing to any SMPTE/EBU time code-based synchronizer, editor or machine controller. The series includes 1" 8-channel, 1" 8 prewired for 16-channel, and 1" 16-channel models. All versions may be converted to 1/2" 8-channel format with an optional conversion kit.

Proprietary microprocessors govern tape transport, dynamic braking and motion sensing, real time counter, return-to-zero, and return-to-cue functions. Tape speed is user-convertible between 30/15 and 15/7.5 ips speed pairs with $\pm 20\%$ variable speed control.

Editing features include record punch-in/punch-out bias ramp and timing for noiseless, gapless insert recording, a spot erase mode, a dump edit mode, and a splice block.

MX-70-16 1" 16-track recorder; includes remote transport/session controller CB-117. 30/15 ips or 15/7.5 ips field convertible. Electronically balanced I/O +4 or -10dB operating level \$21,650.00

MX-70-8/16 As above with 1" 8-track head assembly; prewired for 16-track. Expandable with upgrade kit. 16 VU meters, 16 connectors, 16-track wiring harness and motherboard \$18,650.00

MX-70-8 As above with 1" 8-track head assembly. 8 VU meters, 8 connectors, dedicated 8-track wiring harness and motherboard \$17,200.00

All machines include: 1) full function remote (CB-117-16-track, CB-117-8/16-track, CB-118-8-track); 2) splicing block; 3) seamless noise-free punch in/out; 4) spot erase; 5) adjustable record phase compensation; 6) maintenance/operation manual

MX-70

Accessories

- CB-119** 8-memory locator with one button store and locate capability, repeat shuttle, auto rewind, and transport controls \$1,495.00
- CB-120** 99-memory locator with auto-punch in/out, rehearsal mode, head and tail guard points, pre-roll, repeat shuttle, search zero, search start, search event time, and transport control 2,595.00
- CB-120B** Same as CB-120 with time code reader and generator and parallel transport interface 2,595.00
- ZA-70** Remote autolocator stand with casters 293.00
- PB-7BLA** Service extender board 195.00

MX-80 Series 2" Multi-Channel Recorder

The MX-80 is a 2" multi-channel mastering tape recorder for use in audio post production and recording studios. Like the MTR-90 and the MX-70, the MX-80 features a microprocessor controlled constant-tension transport, noiseless and gapless record punch-in/punch-out capability at any speed, a full function remote session controller, and external control connectors to interface easily to any SMPTE/EBU time code based synchronizer, editor or machine controller.

Three configurations of the MX-80 are available: 2" 32-track, a cost-effective dedicated 2" 24-track, and a 2" 24-track prewired for 32 tracks.

Each MX-80 features tape speeds which are user convertible between 30/15 and 15/7.5 ips speed pairs. Audio post-production users will appreciate that at 7.5 ips, an entire hour of continuous recording can be put on a single 10.5" reel.

The MX-80 record circuitry incorporates Dolby HX-Pro bias optimization circuitry. HX-Pro increases the MX-80's high frequency dynamic headroom, flattening out the maximum output level (MOL) curve to yield performance at 15 ips which is equivalent to non-HX performance at 30 ips; and likewise 15 ips performance at 7.5 ips. Please note that HX-Pro is not noise reduction, and needs no decoding.

MX-80-32 2" 32-track recorder. \$39,150.00

MX-80-24/32 2" 24-track prewired to expand to 32 channels 34,500.00

MX-80-24 2" 24-track recorder dedicated. 33,850.00

Accessories

- CB-119** 8 memory locator with one button store and locate capability, repeat shuttle, auto rewind, and transport controls \$1,495.00
- CB-120** 99 memory locator with auto-punch in/out, rehearsal mode, head and tail guard points, pre-roll, repeat shuttle, search zero, search start, search event time, and transport control 2,595.00

MTR-90/100 Series 16, 24 Channel Master Multi-track Recorder

- Optimal Tape Guidance System — a pinchroller — less PLL capstan, two 1/2 HP D.C. reel motors, and integral tape guidance headblock assembly
- Adjustable record phase compensation
- Transformerless I/O with high current, direct-coupled outputs (isolation transformers optional)
- Spot erase, bidirectional cue, and elapsed time indicators
- Integral splicing block and flip-up flush mounted transportation handles
- Easy access tilting deckplate accommodates up to 14" reels with automatic reel size sensing
- ± 20% vari-speed control with ips and percentage readout
- 5 digit real time indicator
- Serial I/O interface (RS-232)
- Designed for easy interface to any SMPTE based video editor, tape machine controller or synchronizer
- Spare channel of audio electronics
- Electronic inserts and transport ballistics have been optimized for post production applications

MTR-90-24/24 2" 24 Track Recorder Includes remote transport/session controller (CB-113), 30/15 ips tape speeds, electronically balanced I/O with high current direct coupled outputs . . . \$52,950.00

MTR-90-16/24 As above with 16 Track Assembly, 16 channels of electronics, 24 track wiring harness and motherboard, 24 VU meters, 24 channels of connectors . . . \$49,975.00

Accessories

- CB-115 Ten-memory locator . . . \$2995.00
- ZA-52J Stand for locator and remote . . . 235.00
- EC-101 Chase synchronizer module option . . . 3295.00
- CB-121 Remote control for offsets and display of synchronizer . . . 495.00

MTR-100A Analog Multi-Track Tape Recorder

- Available three speeds: 30/15/7.5 ips
- Audio automatic alignment functions in less than 240 seconds
- Pre-settable winding speed from 2 to 472 ips
- Tape end detect system
- Reliable tape transport mechanism. Easy for maintenance by installing mechanical parts of the upper side of the top panel
- Built-in mini-autolocator includes these functions: selectable indications of timer/time code frame/tape speeds ips/cm/sec., search zero, search cue points, search last play start point, shuttle function, drop frame display function, reverse play/erase and record, library wind mode
- ± 50% vari speed control
- Improved frequency response by mounting head-amplifier and SEL/REP head amplifier under the head assembly
- Transport control switch order (available in three variations)
- Wide range of optional accessories including parallel and serial interface
- Easily interfaced with broadcast and recording studio equipment

MTR-100A . . . \$59,950.00

DTR-900 Digital Audio Tape Recorder

- Pinch rollerless transport
- Electrical and tape compatibility with other PD format tape machines
- CRC (cyclical redundancy check) and RSC (Reed-Solomon code) error detection and correction circuits
- Two auxiliary data channels for storing console automation data, subcode data, or additional audio
- Two analog audio tracks for audible reference when cut/splice editing, or for storage of other clock or synchronization data
- A dedicated track for SMPTE/EBU time code data
- Gapless, seamless punch-in and punch-out circuitry which is quick, silent, and switchable between 5 and 10ms

MTR-100A

DTR-900

- Data output clocking in the PD format may be derived from any digital channel, eliminating the need for a dedicated control track
- Sampling rate switchable between 48kHz and 44.1kHz
- ± 10% vari-speed control
- Easy interface to SMPTE/EBU time code based synchronizer and editing systems through parallel or serial (RS-232 or RS-422) control ports
- EC-100 series chase synchronizer available
- Resolves to any common time base reference for easy interface to video and film systems
- Built-in SMPTE/EBU time code generator/reader
- Standard 18 element-per channel peak-reading meters
- Active balanced line inputs and outputs
- Standard pre-emphasis control system
- Digital overdubbing and "ping-pong" recording capabilities
- 100 cue-memory autolocator/session controller, featuring automated punch-in/punch-out and time code autolocation
- User-assignable transport control switches

DTR-900-16/32 Digital 16/32 . . . \$151,950.00
DTR-900-24/32 Digital 24/32 . . . 167,900.00
DTR-900-32 Digital 32 . . . 189,000.00

Video Duplicator

T-700 High Speed Video Duplicator

- 250W Nd-YAG single crystal laser uses a Krypton gas pump lamp which is simple and inexpensive to replace
- Simple, one operator control requires little technical training
- Eliminates wasted tape caused by inappropriate length, preloaded cassettes
- Higher productivity per square foot of production space means reduced overhead
- Automated loading and splicing of master tape eases the burden on the operator and facilitates faster master tape changeovers
- Automatic system shutoff when the amount of blank tape that is remaining is not enough to complete a whole program
- Integral tape cleaning system collects loose oxide particles from the tape
- Comprehensive error diagnostics displayed on the CRT screen to allow easy recovery from error conditions
- All electronics assemblies, circuit boards, and cabinet panels are easily removed for repair or replacement, greatly reducing downtime
- Mirror-master recorder available for VHS (NTSC or PAL)

The T-700 combines advanced tape transport technology and the Thermal Magnetic Duplication (TMD™) process for a laser-based pancake-type duplicator utilizing a high-speed tape handling bin loop.

During the laser heating process and subsequent cooling period, excellent short wavelength transfer is effected by the intimate contact accomplished by the print wheel and capstan drive system.

The TMD technology was developed for video duplication by E. I. DuPont de Nemours and Company. The process relies on the low Curie temperature (the temperature at which a magnetic particle loses its magnetic properties) of chromium dioxide (CrO₂). The tape is heated by an infrared laser while the copy tape is in contact with a

specially made mirror master of the video program material. As the two tapes emerge from the heating zone and the CrO₂ particles cool, they orient themselves into an exact mirror image of the master tape.

The T-700's pancake-type, continuous-loop design will produce tapes several times faster than other high speed designs that utilize "master tape shuttle systems" that require the duplication process to stop for master tape rewind after each copy. This continuous-loop approach also allows statistical quality control techniques to be used, compared to the time-consuming batch techniques necessary with real-time duplication.

To provide full operator control, an informative display shows all pertinent system performance parameters such as speed and tension levels, in addition to displaying all production data such as program length, piece counts, copy and master tape serial number.

Specifications

- Dimensions:** 77" H x 66.1" W x 34.9" D
- Weight:** 2000 lbs.
- AC Power:** 480V, 3 phase, 50/60Hz at 20A per phase
- Air:** 100 psig of clean, dry air at 13cfm maximum flow

OTARI CORP.

Universal Resolver/Time Code Reader

EC-401

EC-401 Universal Resolver

Common Features

- **Widelok™:** A proprietary wide frequency range, constant phase circuit which maintains accurate phase lock (resolve) over $\pm 30\%$ frequency range
- **Internal timebase generator:** A crystal controlled oscillator providing a stable 50.000, 59.940, or 60.000Hz output, selectable from the front panel. This output is also available to control other equipment
- **Editor interface:** Provides comprehensive control over resolver operation, includes BUMP and SLIP control inputs, time base outputs, and serial time code data output
- **SLIP controls:** Allow inaudible retard and advance slewing by fields, and 0 to 3% front panel SLIP speed adjustment. Includes indicator
- **BUMP adjustment:** Allows tape retard or advance while the resolver is being bypassed; 0 to 30%
- **PHASE adjustment:** Allows the phase relationship between the control and reference signals to be continuously varied over one pilot cycle
- **NORMAL ballistics mode:** High correction gain mode for use with most field tapes. Widelok provides phase lock over $\pm 30\%$ speed range and follows any variations or discontinuities in pilot signal
- **AUTO ballistics mode:** Automatic gain switching for minimizing audible wow and flutter on certain "problem" tapes, provides "loose-lock" to smooth over most discontinuities
- **GAIN trim** optimizes performance for capstan motor characteristics
- **Memory reference logic** (used in both ballistics modes): Maintains reference to last known valid speed, when valid tape signal is lost
- **Variable Speed Oscillator:** For special effects, accommodation of off-speed tapes, and for rough correction of sync point
- **VALID pilot window detector:** Provides LED confirmation that a valid pilot signal of -20dB or higher, and between 40 and 80Hz, is present
- **Speed indicators:** Green and amber LEDs confirm "locked" or "above/below speed" conditions
- **Sonic alarm:** Signals a non-standard record condition, or loss of lock in AUTO mode
- **Input select:** Front panel switchable tape input levels of LINE (0dBm), or HEAD (75dBm)

- **Video loop-through:** Allows "daisy chaining" of video signal; with switchable 75 ohm termination
- **Time code reader** reads and displays SMPTE/EBU time code from 0.1 to 15 times play speed (at 15 ips). The reader includes 59.94Hz output, HOLD button, and drop frame indicator
- **Universal output** controls virtually all capstan servo configurations: 9600Hz referenced; up to ± 10 VDC potential, and 50/60Hz synchronous (through an external MDA for older machines)

The EC-401 Universal Resolver is a multi-purpose speed controller for audio tape machines used in film and video interface applications. The EC-401 utilizes Widelok to lock a tape machine's speed control track to an external or internal timebase reference.

The tape machine control track may be a Mono (biphase) or FM Pilot signal, SMPTE/EBU time code, or any signal in the 40 to 80Hz range. External reference inputs to the system may be SMPTE/EBU time code, a composite video signal, AC mains, or any 40 to 80Hz TTL level signal. An internal reference of 50.000, 59.940, or 60.000Hz, generated from a crystal-controlled oscillator, may also be selected as a reference signal.

Interchangeable plug-in modules are available for the tape input section of the EC-401 offering a choice of Mono Pilot record/playback, FM Pilot record/playback, or combination Mono/FM playback-only. Corresponding head assemblies are available for Otari MTR 10/12 Series tape machines. The Otari FM Pilot Head assembly will also play back SMPTE/EBU center channel time code (offset compensation may be required for your application).

EC-401 **\$3495.00**

- *Patent pending
- **Mono Pilot is compatible with NeoPilot; FM Pilot is compatible with NagraSync. NeoPilot and NagraSync are trademarks of Nagra/Kudelski Magnetic Recorders, Inc.

EC-201 Portable Time Code Reader

- **Wide reading range:** 1/20 to 60x play speed (input code quality dependent)
- **Active balanced, XLR, +4dBm** inputs and outputs
- **Reshaped time code output:** to help clean up "problem" time code
- **Auto-Off circuit** to save battery current while the input is inactive. The display time before blanking is adjustable between 1 and 15 seconds. The auto-off feature may also be switched out for continuous display
- **CMOS construction** allows up to 60 hour continuous use on one set of four "AA" batteries; over 120 hours on standby
- **User bits display** with full hexadecimal capability
- **Hold button** to "freeze" the display for edit logging
- **Input range:** -10 to +10dBm nominal
- **Equalization adjustment** on front panel optimizes the EC-201's phase response for widest reading range, relative to the tape machine's reproduce circuits
- **9VAC adaptor** included

The EC-201 is a compact, high performance SMPTE/EBU Time code reader designed as an accessory to any audio or video tape recorder. Its small size, light weight and battery/AC operation allow it to be used in both studio and field production, as well as for trouble shooting time code based equipment.

EC-201 **\$495.00**

Battery Chargers/Packs

KD-11 Portable Quick Battery Charger

• Charge 4 batteries consecutively • Charge 2 DP-1240 batteries consecutively by using the selector switch • Any available channel outlet may be used for charging • Initiates a trickle charge after the quick charge is completed • Operation without switching to 100VAC ~ 240VAC, 50-60Hz

Specifications**Quick Charging**

Current: 1.6A

Trickle Charging

Current: 50mA

Automatic Switching:

To 50mA trickle charge after completion of quick charge. Detection automatic after voltage drops

Input Voltage:

100V ~ 240V \pm 10% 65VA (worldwide input without voltage switching operation)

Charging Times:

DP-11: 1 hr.; DP-1240:3 hrs.

Quick Charging**Display:**

The red LED illuminates during quick charge and the green LED illuminates during trickle charge. (The same LED changes from red to green)

Overall Dimensions:

65H x 140W x 250Dmm (without rubber pads and handle)

Weight:

Approx. 1.9kg (without AC cord)

KD-11 \$750.00

KD-220 Portable Quick Battery Charger

• Simultaneous quick charging of two battery packs • Compact and lightweight by adoption of switching regulator • Operation without switching to 100 ~ 240VAC 50/60Hz • Applicable to three types of batteries (NP-1, DP-1240 and DP-2460) • Functions for quick and normal charging as well as matching for overdischarged batteries • Protection from abnormal overcharge of batteries by action of total timer (protective timer) when detection of completion of quick charging fails due to malfunction of batteries • Complete charging is assured by automatic switching to trickle charge after completion of quick or normal charge • Independent emergency operation owing to two built-in independent power supplies

Specifications**Operating Condition**

Temperature: 0 to 35°C (32 to 95°F)

Humidity: Up to 90% RH

Input Power:

100 ~ 240VAC \pm 10% 50/60Hz (worldwide input without voltage switching operation)

Power Consumption:

130VA (100VAC), 165VA (240VAC)

Overall Dimensions:

2 1/2" H x 5 1/2" W x 9 4/5" D (without rubber pad and handle)

Weight:

Approx. 4.6 lbs. (with AC cord)

KD-220 \$750.00

KD-240 Portable Quick Battery Charger

• Charger for DP-1240 can charge 4 batteries consecutively • Compact and lightweight by adoption of switching regulator • Any available channel outlet may be used for charging • Initiates a trickle charge after the quick charge is completed • Operation without switching to 100VAC ~ 240V 50/60Hz

Specifications**Quick Charging Current:**

1.7A

Trickle Charging

Current: 70mA

Automatic Switching:

To 70mA trickle charge after completion of quick charge. Detection is automatic after the voltage drops

Input Voltage:

100V ~ 240V \pm 10% 65VA (worldwide input without voltage switching operation)

DP-11

KD-240

Charging Time:

DP-1240: 2.5 hrs.

Quick Charging Display:

The red LED illuminates during quick charge and the green LED illuminates during trickle charge. (The same LED changes from red to green.)

Overall Dimensions:

65H x 140W x 250Dmm (without rubber pads and handle)

Weight:

Approx. 1.8kg (without AC cord)

KD-240 \$650.00

DP-11 Professional NiCad Battery Pack

• 13.2V pack adopted to minimize the common memory problems of the NiCad battery packs • A built-in thermal protector guards the battery. When a short-circuit occurs, the thermal protector engages and the malfunction is isolated. It is not necessary to replace the fuse. Because of the automatic return system • The high power cells enable 1.7AH (0.2C discharge rate) • Full/EMP indicator for usage log (manual operation) • This is the direct replacement for Sony NP-1

Specifications**Voltage:**

13.2V

Capacity:

1.7AH (0.2 C discharge rate)

Protection Network:

Thermal protector engages at 75°C (167°F) \pm 5°C (9°F)

External Dimensions:

2.8" H x 7.2" W x .98" D (71 x 184 x 25mm)

Weight:

1.3 lbs. (580g)

DP-11 \$150.00

DP-1240 NiCad Battery Pack

• High capacity of 4.4AH (C/5-rate) is attained by adopting the high output type cell • Each cell is carefully selected for best performance • A built-in thermal protector guards the battery. When a short-circuit occurs, the thermal protector engages and the malfunction is isolated. It is not necessary to replace the fuse because of the automatic return system • The exterior is composed of a durable fiber-reinforced plastic • This is the direct replacement for Sony BP-90 and is 200g (0.44 lb.) lighter

Specifications**Voltage:**

12V

Capacity:

4.4AH (C/5-rate)

Protection Network:

Thermal protector is built-in. Off at 75°C (167°F) \pm 5°C (41°F)

External Dimensions:

6 11/16" H x 4 13/16" W x 1 1/2" D (170 x 123 x 37mm)

Weight:

3.3 lbs. (1.50kg)

DP-1240 \$230.00

Editing Systems/System Interfaces

EDDi™ Non-Linear Editor

- Filmstyle off-line • Real-time preview • Master scene log • Working scene log • Clip and mark bins • 4000 cuts per project • 150 project store • Dynamic scene control

EDDi is a laser disc or VHS video tape based non-linear editor that uses a filmstyle approach to 'off-line' editing. Frame numbers or time code are never displayed on the screen, all references to source material are visual or by user defined 'named' labels. With a minimum configuration of four laser discs or eight VHS players it is possible to perform previews of most scenes in real-time. To support real-time viewing of material, EDDi allows the mounting of multiple copies of the same material.

EDDi **.POR**

Abner A/B Roll Editor

- Individual control of VTR transports • SMPTE/EBU time code readers (optional) • A/B roll and sync roll modes • Insert and assembly editing modes • Split video and audio edits • Frame accurate VTR servoing (time code mode) • Animation editing • One button extend edit • Auto/manual take control for GPI trigger • Multi-event memory storage • On-the-fly, still frame or numeric entry mark with trim capability • Printer/PC output (RS232C) • System Diagnostics • Advanced microcomputer technology

The Abner is a low cost A/B roll micro-processor based video editing system using either SMPTE/EBU time code or control track and is available in a 19" rack/deskmount or slim line tabletop configuration.

Operating Configuration with Servo Routine

- JVC-8200, 8250, 7700, 8600, 8800, 600, 850, 900, S-710
- Panasonic-AG6500, AG-7500 • Sony-Type 5 series, BVU 800, 820, 850, 870, BVW10, BVW15, BVW40

Without Servo Routine

- JVC-6400 • Panasonic-8500, 9600, 9240, AU700 • Sony-SLO-383

- Abner/TC **\$6600.00**
- Interface Cables **300.00**
- Sony Type 5 Cable **600.00**

AR-2000 Auto Ramp Generator

The AR-2000 is a single rack unit device that provides the JVC KM-2000U Video Switcher with an auto-transition capability for dissolves and wipes taking up to 299 frames.

This will allow a video tape editor, the Paltex Abner for example, to trigger the KM-2000U with a General Purpose Interface (GPI) command during an A/B roll edit sequence.

The AR-2000 interfaces with the KM-2000U through the switcher control panel and can be field retrofitted to any existing unit without any major modifications.

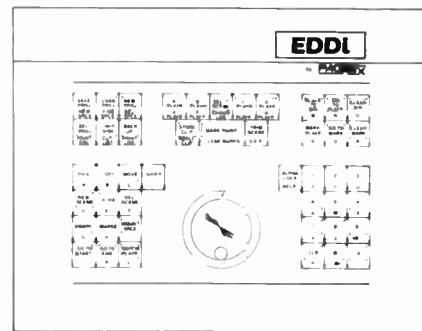

AR-2000 **\$1200.00**

SID Parallel VTR to RS422 Serial Interface

The SID unit provides various parallel remote VTRs the capability to be integrated with editing systems using RS422 serial interfaces, the E-Series from Paltex for example.

SID establishes communication with the editor interface and converts the serial data stream into the discrete parallel commands required by the VTR. SID reverses the process and passes back to the serial interface, all VTR acknowledgements.

SID will also add Time Code to the RS422 serial line via its built-in time code reader.

Abner Tablettop

Abner Main Display

Abner Executive Menu

Using the latest micro-processor technology, SID provides rotary switch selection of multiple parallel VTRs including: KR-M800U, BR-S810U, BR-8600, PR-8800, VO-5850, VPR-2B, AG-6500, and AG-7500.

SID together with a suitable parallel cable will convert any of these to RS422 without any software changes. There is also a version that will work with the HR-200 and TT-7000.

The unit comes complete with a 9-pin serial cable and customer specified VTR cable.

- SID **\$1300.00**
- SID for 1" VTRs **1600.00**

R-SID Serial VTR to Parallel Control System

The R-SID unit allows various RS422 serial VTRs to interface with the Abner Editing System.

R-SID communicates with the serial VTR and converts the data into the parallel structure needed by Abner. At the same time R-SID reverses the process and provides the VTR with serial data from Abner commands.

Using the latest micro-processor technology, R-SID identifies all machine types with one set of software, thereby allowing it to be plugged into numerous styles of VTR without modification.

R-SID will communicate with the following: BVU-950, BVU-800 Series, BVH-Series, BVW/SP-Series, AU-650, KRM-860, CR-850, PR-900.

The unit comes complete with a 9-pin serial cable, multi-pin Abner cable and external low voltage power supply.

R-SID **\$800.00**

PALTEX CORP.

Editing Systems

E-Series Videotape Editing Systems

The Paltex concept allows you to expand and enhance the system as your needs grow, from the Elite to the Esprit Plus while maintaining system compatibility. This in turn allows staff to freely move between edit rooms of varying power without problem.

With different versions to choose from, you now have the proven benefits of Paltex Editing at a price that fits any budget.

Elite

- Up to 6 VTR interfaces, any mix 1", 3/4", 1/2"
- 3 machine edit, keyboard assignable
- 3 SFC's per event in EDL
- 3 user definable keys
- 250 event non-volatile EDL memory
- Assignable record/play capability
- Switcher register recall
- Delayed effects with A1/A2 splits
- EDL text edit, clean, block and sort routines
- Full page EDL display
- Sequential auto assemble
- Time code phase auto adjust
- Event match of EDL
- Rotary Varascan™ shuttle control
- Jog keys, ± one field
- A/V sync frame bump
- Effects rehearse facility
- Auto source selection
- Scratch pad memory
- Help and switcher set-up help

Elan

Includes Elite features, plus:

- Up to 12 VTR interfaces, any mix 1", 3/4", 1/2"
- 4 machine edit, keyboard assignable
- 5 SFCs per event in EDL
- 5 user definable keys
- 326 event non-volatile EDL memory
- Insert A1, A2, A3, A4
- Lookahead cue mode
- Speedscan™ programmable speed
- Freezescan™ programmable freeze
- Animation assembly
- Checkerboard and sync roll auto assembly
- Active ListTrac™ of EDL
- Auto list match of EDL
- Recall of sync roll effects from EDL
- Split screen EDL display
- Comments only event search
- Slow play with speed set
- Delayed start of source VTRs
- User key text with edit capability

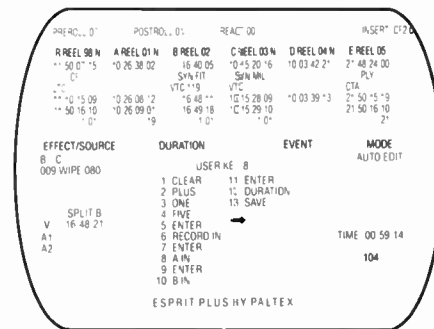

ES/P

Includes Elite features, plus:

- Up to 12 VTR interfaces, any mix 1", 3/4", 1/2"
- 4 machine edit, keyboard assignable
- 5 SFCs per event in EDL
- 3 user definable keys
- 998 event non-volatile EDL memory
- Backtrac™ "off-line" software
- Checkerboard auto assembly
- Active ListTrac™ of EDL
- Auto list match of EDL
- Recall of sync roll effects from EDL
- Programmable split screen EDL display
- Comments only event search
- User key store

Esprit Plus

ESPRIT PLUS DISPLAY WITH USER KEY SET-UP TEXT

ES/D

Includes Elite and Elan features, plus:

- Up to 12 VTR interfaces, any mix 1", 3/4", 1/2"
- 6 machine edit, keyboard assignable
- 10 SFCs per event in EDL
- 10 user definable keys
- 500 event non-volatile EDL memory
- Multi-record up to 6 machines
- Slave play and slave record facility
- Slave off-sets automatically listed in EDL
- Switcher memory data stored with EDL
- Auto data store and manual store capability
- M/E map data re-assignment
- Total learn-mode speed control in EDL
- Mid-interval learn and freeze
- FIT™ expansion and compression
- Programmable split screen EDL display
- All extra sources in EDL with recall
- FFWD and RWD speed set

Esprit Plus

Includes Elite, Elan and ES/D features, plus:

- Up to 16 VTR interfaces, any mix 1", 3/4", 1/2"
- 8 machine edit, keyboard assignable
- 10 SFCs per event in EDL
- 10 user definable keys
- 700 event non-volatile EDL memory
- Audio Console 'ESAM' interface

Elite	\$ 13,600.00

PANASONIC BROADCAST SYSTEMS CO.

CCD Camera/Recorder/Adaptor

AK-400 3-CCD Color Video Camera

- Frame interline transfer CCD image sensor (RGB) 574H x 499V pick-up element
- f/1.4 prism with quartz filter
- Dual concentric filter wheels
- Variable speed electronic shutter (1/125, 1/250, 1/500, 1/1000 sec.)
- 2000 lux (at f/5.6) high sensitivity
- High signal-to-noise ratio of 60dB
- 650 TV lines resolution
- 0.05% all zones registration
- Dynamic highlight compression
- 6dB black stretch (0-25%)
- Iris override $\pm 1/2$ f-stop
- Gain select: 0, +9, +18dB
- Automatic modes: auto black, auto white (A, B preset), pulse cancel
- 3 channel RGB linear color matrix
- RGB shading correction: white H/V, black H/V, extender
- Lens extender red/blue gain, master pedestal
- 2H vertical aperture correction
- Zebra level indicator

AK-400
(Docked to AU-400)

- Viewfinder character display: audio level, f-stop, filter-position, gain, auto, matrix, on/off, DC supply, shutter, lens extender, black stretch
- Viewfinder LED indicator: rec tally, VTR warning, auto, shutter, high gain, lens extender, black stretch, battery warning, tape remain

AK-400 Standard Configuration:

AK-400H camera head, AK-VF410 1.5" viewfinder, AK-Q470 tripod mounting adaptor, AKY-1044 shoulder strap

AU-400 Camera Recorder

- High picture quality, with 1" VTR performance, due to component analog CTCM recording and metal particle tape
- Compact, lightweight, rugged construction
- Dust and moisture resistant design and construction
- 20-minute recording with small 1/2" cassette. No adaptor is required to use the small cassette directly in other M-II VTRs
- Because of the dual video and audio heads, confidence video and audio can be checked on the built-in camera viewfinder and speaker during recording
- Playback can be monitored with the camera viewfinder or a B/W monitor via the video output connector
- Auto backspace editing is accurate within 3 ± 2 frames
- Built-in SMPTE time code generator (VITC/LTC) with separately addressable user bits
- Comes with external time code input
- Four audio channels: FM audio (CH3/CH4) and linear audio (CH1/CH2)
- Dolby C noise reduction circuitry for linear audio channels

AU-400

- Convenient in-the-camera viewfinder displays status, and provides an audible warning from the speaker should a problem occur
- Audio can be monitored on the side-mounted speaker
- Incorrect operation is prevented by the Inhibit switch

AU-S400 VTR Adaptor

- Selectable NTSC, Y/C, PR/PB input
- 26-pin camera connector input
- NTSC video BNC input
- Microphone level control for adjustment of input level from the camera microphone
- Tape indicator displays remaining time in 5-minute steps
- Battery compartment accepts two AU-BP220 Battery Packs

This VTR adaptor increases the range of applications of the AU-400, making it a stand-alone M-II portable recorder. It can be connected to a component or composite type ENG camera system.

AU-S400 (Docked to AU-400)

Accessories:

- AU-BP220** Rechargeable 2.2 AH 12VDC NiCad battery pack for the AU-400, AU-S400 and AU-500
- AU-BP402** Rechargeable 4 AH 12VDC NiCad battery pack for the AU-500
- AU-M400** AU-M400 camera-base mounted battery holder for the AU-BP220

- AU-B420** Battery charger for the AU-BP220 (1 hr. charge time) and AU-BP402 (2 hr. charge time)
- AU-B110** AC adaptor, supplies 12VDC at 10A for the AU-400, AU-S400, AU-500 and AU-505 via 4-pin XLR connector
- AU-B50** AC adaptor, supplies DC power for the AU-505
- AU-H400** Soft case for the AU-400/SU-400 combination

PANASONIC BROADCAST SYSTEMS CO.**Portable VTR/Player/
Time Base Corrector****MII****AU-500 Portable Recorder/Player**

- High picture quality provides 1" VTR performance due to component analog CTCM recording and metal particle tape
- 90-minute recording/playback using standard 1/2" cassettes. A small cassette provides 20-minute recording/playback without requiring an adaptor
- Confidence playback of color video and audio is possible. Video can be monitored in the camera viewfinder and at the video output; audio can be monitored at the audio monitor output
- SMPTE time code generator (VITC/LTC) and reader (LTC)
- Time code data can be superimposed on the video output
- Four audio channels: 2 FM audio (CH3/CH4) and 2 linear audio (CH1/CH2)
- Built-in Dolby C noise reduction circuitry for linear audio
- Built-in RS-422 9-pin serial interface
- Field color playback, including a simplified DOC circuit, allows field viewing
- SC In and Sync In terminals for TBC connection
- Five times normal speed search, reverse and forward
- Audio dubbing on longitudinal tracks CH1/CH2
- Warning indicators (Dew, Servo, Tape End, Clog, Battery, Slack) inform the operator of VTR status
- Built-in RF modulator (CH3/CH4) for TV set monitoring
- Camera input (26-pin) can be switched among component, Y/C, and composite

**AU-500**

- One AU-BP402 or two AU-BP220 Battery Packs can be used

Accessories

- AU-BP220** Rechargeable battery pack, NiCad, 12VDC, 2.2AH, 1.5 lbs.
- AU-BP402** Rechargeable battery pack, NiCad, 12VDC, 4AH, 3.08 lbs.
- AU-B420** Battery charger for the AU-BP220 and AU-B420
- AU-B110** AC adaptor, supplies DC power
- AU-H500** Soft case for AU-500

AU-505 Field Player

- High quality picture based on M-II component analog format
- Compact, lightweight, and easy-to-carry player
- 90-minute playback on standard 1/2" cassette, or 20-minute playback using the small cassette, without the need for an adaptor
- Four audio channels: 2 FM audio (CH3/CH4) and 2 linear audio (CH3/CH4)
- Dolby C noise reduction for linear audio (CH1/CH2)
- Built-in RF modulator (CH3/CH4) for playback
- 8-pin EIA-J connector for easy connection to a video monitor
- Wireless remote control with on-board storage space
- Built-in time code reader (LTC/UB)
- 8-digit LCD tape counter
- 2-way power supply (battery: one AU-BP402 or two AU-BP220. AC requires AU-B50 adaptor)

**AU-505****AU-TB50 Time Base Corrector**

- Special component time base corrector is an optional companion for the AU-500 and AU-550 VTRs
- Correction window of 32H for three component baseband signals
- With the AU-550, broadcast quality reproduction with no guard band noise, is possible from (1x) normal speed in reverse to twice normal speed forward (+2x)
- S/N deterioration due to bandwidth and noise from digital conversion is minimized by 8-bit, 13.5MHz sampling
- Color framing editing
- Playback is synchronized with the reference signal up to ± 5 times normal speed; up to ± 16 times in monochrome
- Built-in digital 1H line component (Y, PR, PB) dropout compensation circuit
- Vertical blanking may be any line between 10H and 21H
- Internal sync generator may be synchronized externally
- Front panel video level, chroma level, set up, hue, sub-carrier phase, and sync phase controls
- Remote level and phase control is possible with the optional AU-ER65 Encoder Remote Control accessory

**AU-TB50****Typical Connections****• Connections for AU-500****• Connections for AU-550**

Refer to Green Section for Addresses and Telephone Numbers.

B-929

PANASONIC BROADCAST SYSTEMS CO.**Edit Recorder/Controller/
Audio Mixer****MII****AU-550 Field Edit Recorder with Auto Tracking**

- High-quality picture, with 1" VTR performance, is made possible by component analog CTCM recording and the use of metal tape
- Standard-sized 1/2" metal tape cassettes permit more than 90 minutes of recording and playback, and small, 20-minute cassettes can be used without an adaptor
- Auto-Tracking allows noiseless playback at from -1 to +2 times normal speed, plus instant start from still frame (when used with the optional AU-TB50 Time Base Corrector)
- Confidence playback of video and audio (CH1/CH2) can be monitored during recording
- Built-in SMPTE time code generator and reader (VITC/LTC)
- Stable playback with viewable color at 5x normal speed, forward or reverse, is possible with the optional companion TBC (AU-TB50)
- Field color playback is possible through monitor or TV
- High FF and REW speed permits full rewinding of a 90-minute cassette in less than 6 minutes
- Two FM audio tracks (CH3/CH4) and two longitudinal tracks (CH1/CH2) provide a total of 4 audio channels, or two stereo pairs
- Built-in Dolby-C noise reduction on the longitudinal tracks
- Individual/combo editing is possible in video, FM, audio CH1/CH2, and time code modes

AU-550

- Picture search at ± 16 times normal speed, for quick program access and review
- Fine adjustment of capstan speed, up to $\pm 7\%$, is possible with Tape Speed Override (TSO) via the Trim button
- Preroll is presettable to 3, 5, 7, to 10 seconds
- Built-in RS-422 9-pin serial control interface
- AC or DC powered
- Built-in sync generator
- Tape speed override (TSO) allows a manual $\pm 20\%$ adjustment of playback phase differences between the two VTRs in 0.5% to 1.0% steps
- 19" rackmountable

AU-A50 Field Edit Controller

- Compact, lightweight, and designed for speed and mobility
- Rugged construction, sturdy enough for field work
- One-event memory for two-machine control and editing
- 8-digit LCD display shows present tape position, as well as Edit In/Out points (TC or CTL)
- Built-in RS-422 9-pin serial interface
- One-knob search operation. Once selected, the Jog, Variable, or Shuttle modes can be controlled by turning the Jog knob on either the player or the recorder
- Preview, Review, Go To, Auto-Edit, and Trim functions are all provided
- Built-in color bar and black burst generator with composite output
- Audio split editing

AU-A50

AU-MX50 Field Audio Mixer

- Compact and lightweight for easy mobility
- Rugged construction for tough field work
- 6x4 matrix audio mixer with linear faders
- Input levels of -60dB, -20dB, 0dB, +4dB, and +8dB, selectable
- Built-in audio equalizer for each output channel
- Four VU meters monitor output levels
- Built-in 400Hz or 1kHz tone generator
- Audio monitor output on the front panel
- Headphone terminal

AU-MX50

M-II 1/2" Metal Particle Tape Cassettes

- The use of pure iron particles boosts the magnetic characteristics far above conventional cobalt ferric oxide tape
- This high-density formulation of ultra-fine metal particles also boasts a -10dB improvement over conventional tape in the carrier-to-noise ratio

Standard Cassettes

AU-MPL 90; 95 minutes
 60; 65 minutes
 30; 35 minutes
 20; 23 minutes
 10; 12 minutes

Small Cassettes

AU-MPS 20; 23 minutes
 10; 12 minutes

**MII**

PANASONIC BROADCAST SYSTEMS CO.**Component Players/Recorder/
Players****Preliminary****AU-640 Editing Studio Recorder/Player**

- High picture quality, due to component analog Chrominance Time-Compressed Multiplexing (CTCM), provides 1" VTR performance
- 90-minute recording and playback with standard-sized 1/2" cassette. A small, 20-minute cassette may also be used, without an adaptor
- Confidence playback of video and audio (CH1/CH2) is possible during recording. For real-time monitoring
- Built-in digital component TBC with 32-line correction
- Built-in SMPTE time code generator/reader (VITC/LTC)
- Four audio channels: 2 FM audio (CH3/CH4) and 2 linear audio (CH1/CH2)
- Built-in Dolby-C noise reduction for linear audio channels
- Large, 32 character, two line alphanumeric display on detachable panel
- Maximum of 32X normal speed forward and reverse search and jog are possible
- Full range of assemble and insert editing for video/FM audio (CH3/4), linear audio (CH1/2) and time code. Convenient functions like Preview, Review, Go-To, Trim and Auto Tag provide maximum versatility for studio editing tasks
- Audio edit points can be set separately from video edit points (split editing)
- Color framing in a 4-field sequence prevents H-shift that occurs at editing points. This function assures optimum picture quality in editing and is especially effective for production work such as animation

**AU-620**

- Vertical interval subcarrier control to prevent phase differences and preserve resolution during conversion from composite to component or vice versa
- Tape speed override (TSO) permits manual adjustment of playback speed differences between the AU-620 and a second VTR in ranges of $\pm 6.25\%$ or $\pm 12.25\%$
- Waveform, encoder, and TBC remote controls
- Audio mix output
- Built-in RS-422A 9-pin serial interface and 50-pin parallel interface
- 19" rackmount

MII**Preliminary****AU-630 Studio Player with Auto Tracking**

- Auto Tracking (AT) allows noiseless playback from -1X to +2X normal speed plus instant starts from still frames making the AU-630 ideal for broadcast use
- Slow-motion speed can be preset to 1/2, 1/8, 1/16 or 1/32 second for smooth transfer from normal speed playback with no disruption
- High picture quality provides 1" VTR performance due to component analog CTCM recording and metal particle tape
- 90-minute playback time with standard 1/2" cassette
- A small 20 minute videocassette can also be used without an adaptor
- When playing back tapes containing a color frame pulse, the AU-630 will control color framing in a 4-field sequence to prevent H-shift at edit points
- Adaptive Edge Comb Filter delivers outstanding vertical resolution in slow/still AT modes
- With the Variable Memory Playback, changes in tape speed and direction can be recorded in memory for freely selectable tape intervals when playing tapes recorded in the variable (AT) mode at -1X to +2X normal speed
- Tape Speed Override (TSO) permits manual adjustment of playback speed differences between the AU-630 and a second VTR in ranges of $\pm 6.25\%$ and $\pm 12.25\%$
- Program playback speed can be adjusted from 80-120% of normal in 0.1% steps, allowing time compression or expansion
- Up to 4 cue points can be registered with the Multi-Cue Button
- Waveform, encoder, and TBC remote controls

**AU-630**

- Audio mix output
- Built-in TBC with a 32H p-p correction capability
- Four audio channels: FM audio (CH3/CH4) and linear audio (CH1/CH2) with VU meter for each channel
- Built-in Dolby-C noise reduction circuitry for linear audio channels
- Built-in SMPTE time code reader (VITC/LTC)
- 8-digit display shows time code data, drop/non-drop frame mode of VITC/LTC and warning indications
- Maximum 32X shuttle search in forward and reverse with monochrome picture
- Built-in RS-422A 9-pin serial interface and 50-pin parallel interface
- 19" rackmountable

MII**AU-620 Studio Player**

- High picture quality provides 1" VTR performance due to component analog CTCM recording and metal particle tape
- 90-minute playback time with standard 1/2" cassette
- Built-in TBC with a 32H p-p correction capability
- Remote control of an externally connected TBC is possible
- Four audio channels: FM audio (CH3/CH4) and linear audio (CH1/CH2)
- Built-in Dolby-C noise reduction circuitry for linear audio
- Built-in SMPTE time code reader (VITC/LTC)
- 8-digit display shows time code data, drop/non-drop frame mode of VITC/LTC and warning indications
- Maximum 32X shuttle search in forward and reverse with monochrome picture. Viewable color video can be monitored up to 4X normal speed, forward and reverse, with frame by frame jog control
- Time code can be superimposed on the monitor

**AU-640**

- Built-in RS-422A 9-pin serial interface and 50-pin parallel interface
- Component/composite output is possible
- TSO allows adjustment of playback speed within $\pm 7\%$ for synchronization with other sources
- 19" rackmountable

MII

PANASONIC BROADCAST SYSTEMS CO.

Component Recorder/Players

AU-660PE Editing Studio Recorder/Player with Automatic Tracking

- 23-key editing control panel on detachable panel
- Auto tracking (AT) allows noiseless playback from -1X to +2X normal speed plus still frames
- In the variable (AT) mode, the operating conditions (tape direction and speed change) within the range extending from normal speed in reverse (-1X) to twice normal speed (+2X) can be memorized and played back (Variable Memory Playback)
- 2 built-in demodulators make possible "on-the-fly-editing" with instantaneous switching from auto tracking heads to the record/playback heads without picture distortion at the change-over
- Machine-to-machine synchronization and sync roll via simple connections
- When editing with a second VTR, the field select function allows you to select odd or even fields to match the fields of both VTRs
- Individual record inhibit for video, linear audio channels and time code
- Automatic standard/non-standard selection function automatically detects whether the input signal or the signal from the tape is standard (conforming to RS-170A) or non-standard and automatically selects the same signal type for recording or playback
- Independent black burst output for correct color framing, editing and genlock purposes
- High picture quality, due to component analog Chrominance Time-Compressed Multiplexing (CTCM), provides 1" VTR performance
- 90-minute recording and playback with standard-sized 1/2" cassette. A small, 20-minute cassette may also be used, without an adaptor
- Confidence playback of video and audio (CH1/CH2) is possible during recording for real-time monitoring

AU-660PE

- Built-in digital component TBC with 32-line correction
- Built-in SMPTE time code generator/reader (VITC/LTC)
- Four audio channels: 2 FM audio (CH3/CH4) and 2 linear audio (CH1/CH2)
- Built-in Dolby-C noise reduction for linear audio channels
- Large, 32 character, two line alphanumeric display
- Maximum of 32x normal speed forward and reverse search and jog are possible
- Full range of assemble and insert editing for video/FM audio (CH3/4), linear audio (CH1/2) and time code. Convenient functions like preview, review, Go-To, trim and auto tag provide maximum versatility for studio editing tasks
- Tape speed override (TSO) permits manual adjustment of playback speed differences between the AU-460 and a second VTR up to 15% of normal speed
- Program playback speed can be adjusted from 80-120% of normal in 0.1% steps, allowing time compression or expansion
- Built-in RS-422A 9-pin serial interface and 50-pin parallel interface
- 19" rackmountable

MII

AU-650 Studio Recorder/Player

- High picture quality, due to component analog Chrominance Time-Compressed Multiplexing (CTCM), provides 1" VTR performance
- 90-minute recording and playback with standard-sized 1/2" cassette. A small, 20-minute cassette may also be used, without an adaptor
- Auto-tracking provides broadcasting pictures in still and slow motion, from normal speed reverse to twice normal speed forward, in 56 steps
- Confidence playback of video and audio (CH1/CH2) is possible during recording. Automatic editing of video, audio (CH1/CH2, CH3/CH4) and time code is possible
- Built-in digital component TBC with 32-line correction
- Built-in SMPTE time code generator/reader (VITC/LTC)
- Four audio channels: FM audio (CH3/CH4) and linear audio (CH1/CH2)
- Built-in Dolby-C noise reduction circuitry for linear audio (CH1/CH2)
- Large, 32 character, two line alphanumeric display
- Maximum of 32x normal speed forward and reverse search and jog are possible
- Presettable smooth-action slow motion
- TSO (tape speed override) allows adjustment of playback speed within $\pm 7\%$

AU-650

- Time code data can be superimposed on one video output
- Built-in RS-422 9-pin serial interface and 50-pin parallel interface
- Waveform remote and encoder remote for system integration
- S.C. H-phase adjustment for proper NTSC signal output
- 19" rackmount, requiring only 6 rack units
- Tilttable operation panel may be removed and remoted

MII

Preliminary AU-X80 Editing Studio Recorder/Player

- High picture quality, due to component analog CTCM, provides 1" VTR performance
- 90-minute recording and playback with standard-sized 1/2" cassette. A small, 20-minute cassette may also be used, without an adaptor
- The AU-X80 is equipped with a 12-pin multi-connector for CTCM/component input-output switching to give it both MII-to-MII and component editing capabilities
- A 7-pin connector outputs the luminance (Y) and chrominance (C) signals separately for editing/dubbing onto S-VHS system VTRs with minimal degradation
- For both insert and assemble editing, the video, audio 1 and audio 2 tracks can be selected independently and in any combination. The use of an external edit controller makes possible automatic editing, including single event editing by setting the in and out points, as well as Preview
- Quick and precise edit point setting with 17-step Jog and Shuttle dial
- 2 linear audio tracks with Dolby-C noise reduction
- Independent level meters for audio 1, audio 2 and video/tracking
- Digital time counter
- Auto head cleaning system
- Tilttable operation panel in 7 steps up to 90°
- 19" rackmountable

AU-X80

MII

PANASONIC BROADCAST SYSTEMS CO.**Edit Controllers/Accessories****AU-A65 Editing Controller**

- Optional AU-SW65 connects up to 4 VTRs via RS-422A
- Connection to optional CRT monitor • Editing using time code is frame-accurate • Maximum 250-event memory • Interface adaptor provides multi-format (3/4", 1", S-VHS) VTR compatibility
- Selectable CTL, LTC, VITC • Variable memory editing (VME)
- Audio split editing • First edit recording allows reference signal to be recorded onto blank tape prior to assemble editing • Color framing
- Shuttle from still up to 32 times normal playback in both forward and reverse. Jog and Slow Motion are possible from -1X to +2X normal speed • A/B roll transitions enable cut and dissolve (0 to 999 frames) • Errors are indicated by an audible alarm and error message display • V-V-V (preview), V-B-V, and B-V-B review editing are possible • Internal back-up battery protects data in EDL memory • 15-pin GPI port • Interface adaptor permits storage/retrieval of editing data onto/from 5" floppy disks • 36-pin parallel port allows printer connection • Editing points can be set with the Mark In/Out button • Preroll is presettable to 3, 5, 7, or 10 seconds

**AU-A64B Production Edit Panel**

- Programmable time code with 23 key control on the VTR front panel along with RS-422 source control • Variable speed memory playback allows memory storage of a variable playback sequence and recall on cue • 10 cue point memory for multiple cue recall
- Edit duration time displayed independently for video and audio edits • Audio split editing • Audio spot erase of audio CH1 or CH2 with preset in- and out-points • Search at up to 32X normal playback in both forward and reverse. Variable speed is possible from -1 to +2 times normal speed in 56 steps. Jog is also possible for frame-by-frame tape movement • Preview, Review, Go-To, Cue, and selectable preroll assist editing process • Manual tape speed override allows adjustment of capstan speed by $\pm 6.25\%$ and $\pm 1.25\%$ • 32 character 2 line display shows time code, operation mode, tape speed, edit-in and -out data, key pad entry and error messages • Rec inhibit for video, audio (CH1/CH2), or time code
- Multifunction LED display indicates color framing, SCH, etc.

MII**M-II System Options, Accessories****AU-WR65 Waveform Remote Control Unit**

- Controller for connecting four units, including AU-660PE, AU-650 and AU-620, and sending the signal from the selected VTR to the waveform monitor • Waveform remote function for up to four VTRs: Input, RF, Y/PR/PB, Encoder Out

AU-ER65 Encoder Remote Control Unit

- Controller for remote control of the encoder blocks of AU-660PE, AU-650, AU-620 and AU-TB50B • Encoder remote function: Video Level, Setup, C Level, Hue, System Subcarrier Phase (Fine/Coarse), Video Phase • On-air indication

AU-SW65 Audio Video Switcher

For switching and transmitting the 3-system component, composite, and audio L&R input signal.

- 3-input selection for component, composite, audio L&R signal
- Built-in fade (dissolve) function • A/B roll selection function
- Transition set, up to 999 frames • Interface with AU-A65

AU-IA35 Transcoder

- This unit converts M format signals to the MII format • Transcodes from Y, I, Q to Y, PR, PB

AU-A620 Remote Control Panel Case

- Case will mount on the front panel of the AU-660PE, AU-650 and AU-620 for use as a remote controller • Connection to the VTR via 20-pin cable

AU-A630 Remote Control Panel Case

- Case will mount on the front panel of the AU-660PE, AU-650 and AU-620 for use as a remote controller • Connection to the VTR via 20-pin cable

AU-A640 Remote Control Panel Case

- Case will mount on the front panel of the AU-660PE, AU-650 and AU-620 for use as a remote controller • Connection to the VTR via 15-pin cable • With 15-pin cable connection, extension of up to 33' (10m) is possible

AU-A650 Remote Control Panel Case

- Case will mount on the front panel of the AU-660PE, AU-650 and AU-620 for use as a remote controller • Designed for serial control (with 9-pin cable) using the RS-422A connector • With 9-pin serial cable connection, extension is possible for up to 3,300' (1,000m)

PANASONIC BROADCAST SYSTEMS CO. Broadcast Cart Systems/Color Monitors

M.A.R.C. II 100/400/800/1200 Automated Cart Systems

The M.A.R.C. II playback/recording systems automatically select the proper MII cassette from an expandable library for news, spots, I.D.s, or programs; in fact, for any program element. Randomly intermixed large and small cassettes may be used. The basic system handles 123 cassettes and expands to a total system capacity of almost 1,200 cassettes. This flexibility enables complete broadcast automation.

Mechanical System

- M.A.R.C. II can consist of 5 VTRs, two robots with three manipulators, and an expandable modular storage system. This storage system can be expanded from 472 to 1,176 cassettes
- With the full complement of five VTRs, minimum event time with continuous playback can be as short as 10 seconds. Even with the full complement of 1,176 cassettes, this event time is only 10 to 15 seconds, while still allowing up to 90 minutes per cassette
- The expanded systems have redundant protection with dual robots and three manipulators
- The cassette input/output (I/O) station can be used while the system is operating
- The M.A.R.C. II sequential output switcher has video and audio outputs for Program (A), Preview (B), Test, and Monitor
- SMPTE type RS-422 VTR control is used throughout the system
- Advanced automation technology makes the robot manipulator outstandingly reliable
- Self-diagnostic functions inform the operator of system status, errors or malfunctions
- System VTR maintenance may be performed from the rear while the robot is in operation

M.A.R.C. II/800

Operational System

- The M.A.R.C. II systems can accept one-event per cassette or multi-events per cassettes
- Bar codes are used to identify the cassettes. The bar code reader, built into the manipulator, checks each cassette as it is loaded
- 100,000 elements can be held in the database. In addition, the system can be coupled to the database of an external host computer
- The playlist is updated in real time, and can be edited. A list of required cassettes is printed out in advance
- Auto protect function lends on-air playback added security by running a synchronized back-up copy of the programs. The back-up VTR records program sequence as a single continuous event, then runs it in sync with the programs as they are broadcast
- Automatic recording of network feed for time-shifted broadcasting
- Component/composite inputs allow multi-source editing by connection with external VTRs, and a variety of combinations between the system's 5 VTRs
- Cassettes are purged in accordance with user selectable criteria

BT-M1310Y 13" S-Video/Component Analog Color Monitor

- > 560 lines of horizontal resolution
- 0.39mm dot pitch and in-line gun CRT
- A/B split, pulse cross, and underscan
- Preset selector for contrast, brightness, chroma, phase and aperture
- Blue only display
- Switch selectable: AFC fast/slow, comb/trap filter, RGB cutoff, color/ auto/mono mode internal/external sync
- BNC connector with automatic termination
- Manual degaussing
- Front access white-balance adjustment
- Tally light
- A, B, or RGB selectors with loopthrough; VTR selector
- S-Video input with loopthrough
- Optional component input (R-Y, B-Y, Y)
- 19" EIA rackmountable, metal cabinet
- Commercial U.L. listing

Standard Accessories

- AC power cord
- Rackmount handles
- Service and operations manual

BT-M1310Y \$1895.00

Batteries/Battery Belts

212/213/214 NiCad Camera Battery Packs

- Complete flexibility with a choice of battery mounts
- Hand selected premium quality NiCad cells
- Impact resistant all metal case
- "14, "13" and "12" are available at no extra cost with built-in charger. Order as "C" Series (as 214C, etc.)

Specifications

	Available Watts	Volts	Amp Hours	Hours*
212	48.0	12.0	4.0	2.0
213	52.8	13.2	4.0	2.5
214	57.6	14.4	4.0	2.3

Weight: 4.75 lbs. (14.4V); 4.50 lbs. (13.2V); 4.25 lbs. (12.0V)

Size: 5" x 3" x 4" (14.4V, 13.2V, 12.0V)

Connectors: Mates with a choice of standard battery mounts

Minicharger®: Use PE-8200, PE-8204 ("C" series has our built-in charger)

212	\$490.00
213	500.00
214	.510.00

*Camera run time is estimated using 23W.

PE-90 NiCad VTR Battery

- Direct replacement for Sony BP-90 VTR battery
- Can even run your camera*
- Top quality fast-charge NiCad cells
- High impact molded case—completely sealed
- Moderate price
- 100% quality control inspected, electronically and manually

Specifications

Volts (nominal): 12.0

Capacity & Typical Running Time:

Available Watts	Amp Hours	Hours**
48	4.0	4.0

Weight: 3.5 lbs.

Size: 4 3/4" x 6 1/2" x 1 7/16"

Connectors: Authentic Sony pigtail connectors

Minicharger: Use PE-38, PE-8200 or PE-8204

PE-90	\$220.00
-------	----------

*When used with the convenient Perrott 9037 battery carrier, will power camera and camera/recorder combinations

**Running time is estimated using Sony BVU-50 VTR

PE-52-4 NiCad Dual Output Belt

- Four hour charger built right in
- Runs 30V light with 4AH of power—or runs camera with 8AH of power
- Powers your Perrott Lite® 90 minutes
- Top quality fast-charge NiCad cells
- Full grain cowhide leather pouches and strap
- Half-inch spacing between pouches for flexibility and comfort
- 100% quality control inspected, both electronically and manually
- Powers Betacam camera/recorder combination

Specifications

Available Watts	Amp Hours	Hours
(14.4V Camera) 115.2	8.0	5.0
(14.4V 75W light) 115.2	8.0	1.5
(30V 250W light) 115.2	4.0	.4

Weight: 11.0 lbs.

Size: Pouches: 28 1/2" x 2" x 4 1/4"

Belt: Adjustable

Connectors: 5-pin XLR for 14.4V, 8AH

PE-52-4*	\$815.00
----------	----------

PE-54-4* Shoulder Model	755.00
-------------------------	--------

*With built-in 4 hour charger

NP-1/NP-1A NiCad Batteries

- Authentic original equipment
- Can be charged in about one hour
- Circuit breaker and thermostat protected
- Off-the-shelf delivery
- Top quality fast charge NiCad cells

Specifications

Volts (nominal): 12.0

Capacity & Typical Running Time:

Available Watts	Amp Hours	Hours

Programmer 3A "Live Assist Controller"

The Programmer 3A allows stations to take advantage of music formats which have been recorded on reel to reel tape for automation systems. Up to four reel to reel tape decks can be controlled by the Programmer 3A.

- **Audio:** Conductive plastic stereo level controls resistively sum audio from each source. Opto-isolators silently gate audio on and off for each source as it is used. Outputs can be wired mono or stereo directly to program and cue buses of a studio console, eliminating the need for additional console inputs
- **Memory:** A memory circuit allows the operator to select the music deck he will play next by touching the "next play" button for that deck. That button and the "common next play" button will light. The system then stands ready. When the operator has finished running his commercials, weather, etc., he pushes the common play button and the selected deck starts. He does not have to remember which deck is next, the Programmer 3A does it for him
- **Auto:** The auto "One-step" switch allows the Programmer 3A to segue to the next preset deck automatically
- **Timer:** The minutes/seconds timer resets to zero and starts counting up each time a deck is started. This allows the announcer to talk over an instrumental intro on a song right up to the vocal portion
- **Logic:** White lights tell the operator which deck is playing and amber lights tell the operator when a 25Hz cue tone is coming across during the last second of a song. The operator can start speaking with confidence when he sees the amber light knowing, for certain, that the song is ending
- **Dimensions:** 57/8" H x 11 1/4" W x 9 1/4" D with rear connectors
- **Power:** 24VDC at 200MA maximum is required to run the Programmer 3A Controller. This power is available from the tape decks it is controlling. An optional power supply is available for systems with tape decks that do not have 24VDC available

Programmer 3A

- **Compatibility:** The Programmer 3A is directly compatible with Otari ARS-1000DC and Revox PR99 playback only decks. It is also compatible with ITC 750 and 770 playback decks using the ITC 25Hz tone detector and a 25Hz filter. Any reel to reel tape deck can be interfaced using a 25Hz tone detector and notch filter from M.W. Persons and Associates

Programmer 3A Controller	\$990.00

PESA AMERICA, INC.**Character Generators/Color Monitors****CG-4722 Character Generator**

- Up to 8 resident fonts held in RAM (optionally 2 of these can be in EPROM)
- Internal memory holds 15 pages for instant access
- User friendly edit channel
- Color palette with 121 different "true" colors
- Each disc has capacity of 128 pages or 8 fonts
- Camera input for font and log composition
- Integral encoder and DSK
- Dual channel version
- Integral real time clock/up-down event timer
- Optional time code reader for automatic subtitling
- System consists of: keyboard, data management unit including two 3 1/2" double density disc drives, and rackmount mainframe, 2RU high

The CG-4722 is a character generator based on the CG-4721 series of equipment. It incorporates features and capabilities normally found only on expensive character generators.

The system contains a built-in genlocking SPG which requires only a reference video signal for system timing purposes; for training applications no external signals are required. A built-in NTSC or PAL encoder with DSK is included as standard. Various versions of keyboard layouts are available for international users. The system can be fully controlled with one monitor from the edit channel which displays the output of the character generator, or DSK preview, together with superimposed information concerning the character generator operating state. This equipment is ideal as a professional titling system for use in broadcast television, video production, graphics, cable television, business and education.

Optionally, a time code reader for automatic subtitling and a second channel address keyboard are available.

Preliminary**CG-4711 Character Generator**

The CG-4711 is a low cost character generator, based on the best selling CG-4722, designed specifically for broadcasters, production/facility houses and other users working to full broadcast standards.

The CG-4711 offers the same easy to use operating system as the CG-4722 and discs can be freely exchanged between the two models of character generators.

The standard unit comes complete with: down stream keyer, NTSC or PAL encoder, genlockable SPG, 4 font RAM, 15 page "Scratch Pad" memory, and clock/up-down timer

Options

- Second 3.5" disc drive
- Non-volatile font memory
- RGB/YUV outputs

Differences Between CG-4711 and CG-4722

- No font/logo composer on CG-4711
- No second channel capability on CG-4711
- No remote address keyboard on CG-4711
- No RS232 interface for external computer/printer
- No time code reader for automatic subtitling

**CG-4722****BM-4309****BM-4300 Series Color Monitors**

- High resolution CRT
- PAL and NTSC versions
- Two encoded signal inputs
- Selectable internal/external sync
- Delay: H, V, H + V (pulse cross)
- Normal/underscan
- Preset controls for hue (NTSC only), chroma, brightness and contrast
- Individual gun cuts for R, G, B
- Selectable horizontal time constant (VTR)
- Automatic and manual degaussing
- Notch/comb filters — NTSC, notch filter — PAL
- Remote control (optional)
- Front panel tally light

The BM-4300 series of color monitors have been designed to meet the demanding requirements of broadcast, production and industrial users. They combine high reliability, ease of maintenance and superior picture quality with energy efficient circuits for low power consumption.

The modular design and ruggedized construction of these monitors make them particularly suitable for OB and other mobile applications. PIL (Precision in line) CRTs are employed with a dot matrix shadow mask. These tubes have computer matched yokes which simplify convergence and eliminate troublesome registration adjustments while retaining broadcast quality resolution. CRT phosphors are available to meet EBU and USA standards.

The monitors are available in 9", 14" and 20" sizes in cabinet form with 19" rackmount kits available as options. The rackmount kit for the 9" version accepts 2 monitors side-by-side or one monitor together with a waveform monitor or vectorscope using an adaptor panel. Optional remote control panels are available for each of the sizes.

SWAT Plus ASC-4652-C

SWAT ASC-4652-C**Sync Watcher Analyzer and Timer**

- Two different modes of operation: Watcher or Timer
- Complete analysis of the sync and blanking parameters of a video signal
- EIA and CCIR versions — choice of PROMS for different TV standards
- Displays results on B/W monitor or its own 40 character LCD panel
- Alarm indications on out of tolerance parameters
- Either of two video inputs may be selected for analysis
- Manual or automatic selection of parameters for test
- RS232 port interfaces to wide selection of printers to provide hard copies of measurement results
- Self-calibrating

The SWAT ASC-4652-C is a microprocessor controlled instrument developed with state-of-the-art technology and designed to monitor a number of sync and blanking parameters of a video signal and check them against a pre-set list of limits. Each parameter is displayed on an integral 40 character LCD panel or the complete set of results may be viewed on a monitor for evaluation and study. Parameters that previously could not be examined accurately on conventional test equipment such as vectorscopes, waveform and picture monitors can be analyzed precisely with the SWAT, thus avoiding the many errors common during editing and quality control of video signals.

The SWAT ASC-4652-C operates in two ways to monitor and record activity within a video environment in its Watcher mode and in a Timer function.

Watcher Mode Parameters measured are:

- Sync amplitude
- Horizontal sync width
- Number of vertical sync pulses
- Equalizer width
- Vertical pulse width
- Front porch width
- Horizontal blanking width
- Vertical blanking width
- Burst amplitude
- Number of cycles in burst
- Burst position (PAL)/Breezeway (NTSC)
- SC/H phase to within 2°
- Sc frequency error to within 0.2Hz
- Line detection of vertical interval information

Additional Information displayed on Monitor:

- Video fail
- No interlace
- No burst
- Burst blanking
- SC/H unlock
- Unbalanced burst
- INV R-Y phase (PAL only)
- Vertical blanking
- No V sync

The SWAT continuously monitors video signals, makes selected standard measurements, compares them against defined limits and provides an alarm message whenever these are exceeded.

Alarm Indications:

- LED on the front panel
- Indication on integral LCD panel
- Inverse video on monitor screen to indicate parameters outside tolerance. The word Alarm is also printed at the top of the monitor screen
- Closing contacts on internal relay to trigger external alarms

The ASC-4652-C is RS232C compatible and may be interfaced with various printers for a complete printout of the measurement results.

Timer Mode

In its Timer mode of operation, the instrument can be used to measure the precise difference in horizontal delay and subcarrier phase between input signals A and B.

The presentation in this case would consist of:

- Reference video (A or B)
- H lock or unlock
- V lock or unlock
- 4 field lock or unlock (PAL only)
- PAL lock or unlock (PAL only)
- SC lock or unlock
- H delay in nS
- SC phase in degrees
- Provide an alarm whenever any parameter is outside tolerance

Preliminary**SWAT Plus SW-2000**

Greater flexibility in the use of the SWAT Plus is now available with the introduction of the user programmable version. This version allows the user, on an individual parameter basis, to:

- Switch the measurement on or off-line
- Turn the parameter alarm on or off
- Alter the "standard" value of the parameter
- Alter the tolerance of the parameter

In addition, the NTSC user can select amplitude measurement results to be displayed in mV or IRE units.

Programming of the unit is carried out immediately after switching the equipment on when the user is given the option, by use of the front panel keys, of reprogramming the parameters or commencing measurements using the last set of parameters entered into memory. If, after a short while, no key is pressed the unit automatically enters the measurement mode. Reprogramming is carried out using the front panel keys which assume different functions in this mode and are used in conjunction with an interactive line on the monitor display. Whenever a change to a parameter has been entered, this change is held in memory until a further modification is made by the user — this information is held in memory even with the power switched off. At any time, the user may revert to the "standard" set of parameters (CCIR/PAL-B or RS-170A/NTSC) appropriate to his system simply by pressing the reset button while in the programming mode.

SIM-4000 Intercom System

- Microprocessor controlled system
- Front panel programmability
- System expandability
- Momentary latching front panel switch operation
- Transformer-balanced audio external lines
- Full 4 wire operation
- Convenient interface to external equipment
- Non volatile user memory
- External headset connection
- Each station is self-contained
- Two auxiliary external audio lines
- Full range high quality audio with AGC
- Headset or speaker/mike (hands free) operation
- RS-232 access to microprocessor to map crosspoints
- LEDs indicate switch status
- Custom software available
- Broad range of options/accessories available

The SIM-4000 has been designed to provide high quality, flexible and reliable communication systems for TV studios, TV stations and O.B. Vans.

Two standard package configurations are available: the SIM-4016, 16 x 16 matrix, and the SIM-4032, 32 x 32 matrix. Several comprehensive systems can be interconnected to build a communications network.

An array of standard and optionally available accessories supply a comprehensive system for any custom need. These features may be combined at the time the intercom is ordered or field installed at a later date.

Preliminary**SIM-8000 Series Talkback System**

- Flexible microprocessor controlled system
- Easy system expandability by adding further systems in new areas
- Momentary latching front panel switch operation
- Transformer balanced external audio lines
- Full four wire operation
- Convenient interface to external equipment
- External headset connection
- Each terminal self-contained
- High performance audio specification
- Headset or speaker/mike (hands free) operation
- 2 color LEDs indicate switch status

The SIM-8000 Series of talkback units have been designed specifically to implement, simply, high quality and reliable communications between members of a production team in a broadcast station.

Quite frequently the talkback requirements within a television studio complex can present a difficult and intricate problem for system designers, and complications of differing operational practices between various broadcasters usually results in an expensive solution. Total flexibility is the hallmark of the PESA SIM-8000 series, enabling the precise requirements of broadcasters and other users to be met economically using two standard matrix configurations that can be programmed, under software control, to exact needs, be it a small system or a large station complex.

While the product range is designed, using state-of-the-art components and microprocessor technology, to meet the demanding requirements of broadcast television and production facilities, the SIM-8000 is equally suitable for many other applications including stage, broadcast radio, recording studios and outside broadcast vehicles.

SIM-4000

SIM 8016

RIS-8032 Terminal

Preliminary**TB8000 Talkback System**

The TB8000 Talkback System is a second generation product derived from the very successful SIM4000 range. The TB8000 series now includes switching matrices of 16 x 16, 32 x 32 and 64 x 64. By the use of component surface mounting techniques these matrices are half the size of their SIM4000 equivalents given an increase in packing density by a factor of four. In addition to the obvious benefits this provides to the customer in reduced rack space required, it also brings an economic advantage in the "cost per cross point" of the system.

Experience gained in customer discussions and SIM4000 installations suggested that the concept of distributed hardware and software control should be retained in the product in order to retain the economic flexibility of a customer configurable matrix mapping. However, the need was suggested to extend the number and size of the talkback panels available. In the TB8000 half rack width, TB panels are now available with a number of "add on" key panels enabling a customer to have enhanced flexibility in positioning the panels in desks and again have a more cost effective solution than the previously available integrated panels.

PINNACLE SYSTEMS, INC.

Digital Video Effects/Graphics

3000E Graphic Design WorkStation—Includes Video WorkStation chassis; the Pinnacle Painter full-color 32-bit paint system; the Pinnacle Sculptor 3D modeling system; vector based anti-aliased multiple font package; digitizing tablet; pen with cancel button; keyboard; paint memory; 3D memory; 95M byte hard disk drive; AGP-3 accelerated central processor with accelerated floating point processor; Video WorkStation integration software. . . . \$39,950.00

3000E Series Options

3000-40 Animation Option—Animation and machine control package including motion scripting; lighting choreography; real-time wireframe preview; in-betweening; trajectory calculations; serial VTR control; 3000E Series software integration package for animation, 3D, and paint. . . . \$9,995.00

3000-20 FreezeFile™ Option—Adds FreezeFile capability to 3000 Series WorkStation. Standard system stores more than 150 frames or 300 fields. . . . \$5,450.00

3000-10 Digital Effects Option—Adds real-time digital effects and montage capability to 3000 WorkStation (requires 2000 Series control panel). . . . \$12,950.00

2000 Series Control Panel with 25' cable . . . \$4,500.00

ETB-4 Extended Texture Buffer Memory—Adds four additional texture buffer memory locations for use in texture mapping 3D models. For series 2030, 2033, 2040 and 3000E only. . . . \$2,995.00

2010 Video WorkStation with Software-Based Digital Effects—Includes Video WorkStation chassis; control panel; effects system software; montage frame buffer; key processing channel; and 25' control cable. . . . \$23,500.00

2020 WorkStation with FreezeFile—2010 plus a single channel still store. Standard system stores more than 150 frames or 300 fields. Stills can be stored and recalled randomly and can be arranged in a stack or sequence play list. Digital effects and transitions between stills or between stills and live video are possible using 2020 software. . . . \$32,800.00

2020-2 WorkStation with Preview Channel—2020 with the preview channel output frame buffer and integration software. Output is full bandwidth RGB or monochrome, frame or field. . . . \$39,900.00

2030 WorkStation with Paint—2020-2 plus Pinnacle Painter full-color 32-bit paint software; digitizing tablet; pen with cancel button; keyboard; extended paint memory package; vector based anti-aliased multiple font package; 2030 software and component digital video integration package for paint, FreezeFile and effects. . . . \$49,200.00

2033 WorkStation with 3D Modeling—2030 plus Pinnacle 32-bit Sculptor 3D modeling; lighting; texture mapping software package; 8 additional bitstream fonts; floating point processor; extended 3D memory package, 2033 software and component digital video integration package for 3D, paint, FreezeFile and effects. . . . \$57,950.00

2040 WorkStation with 3D Animation—2033 plus frame-by-frame animation and VTR control including motion scripting; lighting choreography; real time wire-frame preview; in-betweening; trajectory calculations; serial VTR control; and 2040 series software and component digital video integration package for animation, 3D modeling, paint, FreezeFile, and effects. . . . \$67,850.00

AGP-3 Accelerated Graphics Processor—Acceleration option decreases 3D modeling and rendering time by more than 200%. For 2000 Series and 3000. Included with 3000E. . . . \$4,995.00

SV-1000 Super V-1000 Desktop Video WorkStation—Includes system unit; control panel with joystick; 25' control cable. Standard features include variable smooth placement; cropping; borders; pushes and pulls; wipes; cuts; posterize; tint; negative; horizontal and vertical invert; and GPI in and out. . . . \$13,900.00

SV-1000E Super V-1000 Desktop Video WorkStation with Enhanced Digital Effects—SV-1000 plus enhanced effects package with variable smooth compression; field strobe; variable mosaics; limited sequencing and picture path acceleration. . . . \$15,995.00

"S" Option Super V-1000 Still Store*—Still Store option adds the ability to randomly store, recall, and manipulate up to 100 stills with extremely fast access time. Stills are stored on internal Winchester disk drive. Option may be ordered as SV-1000S or SV-1000ES models. . . . \$3,995.00

"AT" Option Super V-1000 WorkStation AT*—IBM-AT hardware and software compatible video workstation. Includes 20M byte hard disk and controller, AT-style keyboard; color graphics display adaptor with color and monochrome output; and IBM DOS 3.3. Not needed for "S" option. . . . \$1,000.00

K1000-S WorkStation Still Store Upgrade Kit—Upgrade kit to field convert SV-1000 or SV-1000E to the "S" version. . . . \$4,995.00

K1000-AT WorkStation AT Upgrade Kit—Field convert SV-1000 or SV-1000E into IBM-AT compatible computer, including 20M byte hard disk and controller; AT-style keyboard; color graphics display adaptor with color and monochrome output; IBM DOS 3.3.4. . . . \$1,395.00

K1000-E Enhanced Digital Effects Kit—Upgrade SV-1000 to SV-1000-E. . . . \$2,990.00

2040 Video WorkStation™

PRIZM Option for the Video WorkStation—Adds complete Z-axis manipulations including rotation, perspective and the ability to integrate all other 2000 or 3000 series WorkStation functions. . . . \$29,400.00

CEO PRIZM Option—Curved effects option adds the ability to bend and warp real time images. Adds such effects as page turns and fish eye. . . . \$4,995.00

Linear Key Channel PRIZM Option—8-bit, full bandwidth . . . \$12,500.00

CAO Component Analog I/O Option*—For Betacam and MII compatibility. For 2000 or 3000 Series Video WorkStation. . . . \$950.00

Y/C Composite Switchable I/O Option*—For 2000/3000 series. . . . \$495.00

DSK21 Component Analog Background Keyer—Downstream keyer to be used with Video WorkStations equipped with CAO or Y/C option. Gives component systems live video background capability. . . . \$795.00

SX21 A/B Composite/Component Routing Switcher—Video WorkStation controlled or manual routing switcher for composite, component analog video (Betacam, Betacam SP, MII, S-VHS). . . . \$895.00

DC-2000/DC-200C/DC-2000Y/C Dual Channel Digital Effects Combiner and Software—Two channel system requires two 2000/3000 Series Video WorkStations. Unique dual channel system when used in conjunction with montage memories and built-in background keyer, gives 5 active layers of video. . . . \$ 995.00

DC-2000 Dual channel digital effects combiner and software . . . \$ 995.00

DC-200C Component version . . . 1,695.00

DC-2000Y/C S-VHS version . . . 1,695.00

TD-60 Digital Cartridge Tape Backup System—Backs up to 120 NTSC (72 PAL) still frames; 240 NTSC (144 PAL) still fields on a single removable cartridge. Will also back up Painter and Sculptor images, animation files and sequences. . . . \$2,950.00

Additional TC-50 Tape Cartridges. . . . 50.00

OD-800 Digital Optical Disk Drive—800M byte write-once (WORM) optical disk drive. Archives up to 1600 NTSC (967 PAL) still frames; 3200 NTSC (1934 PAL) still fields on a single removable optical cartridge. Can record and play Freeze-Files directly from the OD-800. Will also back-up Painter and Sculptor images, animation files and sequences. . . . \$8,900.00

Additional OC-800 Optical Cartridges . . . 290.00

HD-200 200M Byte Hard Disk Option*—Doubles storage capacity of standard disk drive. Recommended for the 3000, 2030, 2033 and 2040. . . . \$2,900.00

BE-150 Buffered Extension Cable for WorkStation AT Option—Used to place keyboard and RGB color monitor up to 150' away from system unit. . . . \$500.00

HCO Hard Copy Input/Output Interface—Supports a host of hard copy devices for graphics output including film recorders, laser printers, thermal printers and ink jet printers. Supports high resolution scanners. Can print out pixel or vector based images. Sculptor images can be output in high resolution up to 4000 x 4000 pixels. . . . \$2,900.00

CMM-9 9" Color RGB Menu Monitor (includes 6' cable) . . . \$695.00

KCA Component Analog Input/Output Kit—For existing composite system. . . . \$5,100.00

KYC Switchable Y/C-Composite Upgrade Kit. . . . \$3,800.00

KHD200 200M Byte Disk Drive Upgrade Kit . . . \$5,500.00

K2020 Upgrade Kit for 2010—To a 2020. . . . \$9,800.00

K2020-2 Preview Channel Upgrade Kit for 2020—To a 2020-2. . . . \$7,700.00

K2030 Paint Upgrade Kit for 2020-2—To a 2030. . . . \$10,400.00

K2033 3D Modeling Upgrade Kit for 2030—To a 2033. . . . \$9,500.00

K2040 Animation Upgrade Kit for 2033—To a 2040. . . . \$10,750.00

KAGP3 Accelerated Graphics Processor Kit. . . . \$7,500.00

*Option must be specified at time of order.

PRC/PLASTIC REEL CORP. OF AMERICA

Video Reels/Cases

Video Tape Reels/Cases

Plio-Magic's quality of endurance gives you precision reels that last and last for long-term dollar savings. There's a reel for all types of tape systems: 1" and 2" video tape reels with NAB centers. For shipping, transporting or storage, Plio-Magic® custom designed cases are available for video tape reels and cassettes. All offer the unparalleled protection of PRC's super tough material assuring dust resistant, safe protection for your valuable programs. We maintain large inventories in four centralized locations, assuring you of products when your requirements dictate.

BRABURY/PORTA-PATTERN, INC.

Test Charts

Test Chart System

The PORTA-PATTERN Test Chart System is a convenient, portable 9" x 12" chart package for studio or field use. The system has been designed to offer maximum versatility and protection for the test charts, thus providing faster, easier camera set-up and alignment.

The lightweight, self-standing aluminum Chart Holder provides three-point positional alignment. A spirit level is an integral part of the unit's design for horizontal alignment accuracy. Optional Microphone and Light Stand Mounting Adaptors allow the system to be stand mounted with the same alignment capabilities.

The system contains one each Resolution, Linearity, Registration and Logarithmic Reflectance Charts. The charts are mounted in recessed, high-impact plastic frames for chart surface protection. Each chart frame is color coded for ease of location in the holder. Charts are placed in order of usage. After use the front chart can be reversed so all chart surfaces are protected.

001-10*	Four Chart System with no adaptors	\$330.00
001-11*	Four Chart System with microphone stand adaptor	345.00
001-12*	Four Chart System with light stand adaptor	355.00
001-13*	Four Chart System with mike and light stand adaptors	375.00
001-15	Microphone stand adaptor	35.00
001-16	Light stand adaptor	40.00
001-17	Aluminum frame assembly, complete w/o adaptors	205.00
001-50	Dual system carrying case	85.00
001-51	Single Chart carrying case	60.00
001-24*	Resolution Chart	80.00
001-25*	Linearity (Ball) Chart	80.00
001-26*	Registration Chart	80.00
001-27*	Nine-Step Log Chip Chart	100.00
001-28	Production Slate	60.00
001-29	Blank plastic chart frame	50.00
001-30	BBC Zone Plate Chart, 525 line	155.00
001-31	BBC Zone Plate Chart, 625 line	155.00
001-32	Multi-Burst Chart	80.00
001-33	Window Chart	80.00
001-34	Chess Board Chart	80.00
001-35	Reverse Registration Chart	80.00
001-36	BBC #61P Flesh Tone Reference Chart	155.00
001-37	Pulse Bar Chart	160.00
001-38	CCIR Linearity (Ball) Chart	80.00
001-39	Auto-Registration Chart	80.00
001-40	Lens Focus Chart	80.00
001-42	Line Resolution Chart	80.00
001-43	Full-Field Color Bar Chart	145.00
001-44	Eleven-Step Log Chip Chart	110.00
001-45	Depth of Modulation Chart (Rev. 1984)	75.00
001-46	RCA P-200 Resolution Chart	85.00
001-47	RCA P-300 Resolution Chart	85.00
001-48	BBC #62 High Saturation Color Bar Chart	180.00
001-49	Lens Back Focus Chart	80.00

(*Includes Charts indicated)

014-10	EFP Three Chart System with three Black and White Geometric Test Patterns, including case	\$240.00
014-11	EFP Three Chart System with two Black and White Geometric and one Nine-Step Log Chip Chart, including case	270.00
014-12	EFP Three Chart System with one Black and White Geometric, one Log Chip and one of either Color Bar, BBC #61P Flesh Tone or Pulse Bar Chart, including case	300.00

DUOCHART™ Systems

The PORTA-PATTERN DUOCHART System is a lightweight, durable portable video test chart package in the convenient PORTA-PATTERN 9" x 12" image size. Each chart is recess-mounted on lightweight, heavy-duty expanded PVC Foamex™ and hinged to fold face-to-face when not in use. Black Velcro™ provides a light and dirt seal when the system is closed. Each system includes a black vinyl case for carrying and storage. There are three DUOCHART systems to provide the right information for the required set-up and evaluation.

(A) Resolution/Linearity. This system contains the standard Resolution and Linearity Charts. The Resolution Image is designed as a standard reference for measuring and evaluating overall camera resolution as well as testing for camera streaking, ringing, interlace and aspect ratio. The Linearity image is designed for measuring and adjusting scan linearity. The image is a matrix of circles that provide reference when combined with the proper electronically generated grafting signal.

(B) Registration/Log Grey Scale. This system contains the standard Registration and Log Grey Scale Charts. The Registration Image is designed for adjustment of scan timing (registration) in multiple tube color cameras. The Log Grey Scale contains two rows of nine paint chips each, providing the range of reflectance from TV white (60%) to TV black (3%), scaled in increments to approximate the transfer characteristics of the color picture tube.

(C) Multi-Burst/Flesh Tone Reference. This system contains the Multi-Burst Chart and the BBC #61P Color Flesh Tone Chart. The Multi-Burst Image is a dual range grouping of bursts. The full scan range is from 1MHz to 8MHz in 1MHz steps. The half scan range is from 0.5MHz to 4MHz in 0.5MHz steps. The bursts are spaced by a solid black bar for separation of burst information on a waveform monitor. The BBC #61P Color Flesh Tone Image has been developed to provide a standard color reference for matching and evaluating cameras after normal color balance is achieved. The image is manufactured in close cooperation with the Research Department of the BBC with advanced electronic color separation to assure spectral characteristics and long lasting chromaticity.

020-10	Resolution/Linearity	\$135.00
020-11	Registration/Nine-Step Log Grey Scale	165.00
020-12	Multi-Burst/BBC #61P Flesh Tone Reference	195.00

Electronic Field Production (EFP) Three Chart System

In order to provide a greater range of available test patterns in a package better adapted to the portability of EFP camera systems, PORTA-PATTERN has developed a Three Chart System which will accept any combination of three charts presently available in the PORTA-PATTERN catalog.

The system consists of three protective plastic frames, similar to those used for all individual PORTA-PATTERN Test Charts, uniquely hinged end-to-end which allows the frames to be folded upon themselves, thus providing complete surface protection for all three charts and, when closed, takes up no more space than a single PORTA-PATTERN Test Chart.

The entire system is held closed by a Velcro™ closure system and a vinyl coated nylon case is included to provide a complete Three Chart System in a package 15"H x 18"W x 1 1/2" thick.

BRABURY/PORTA-PATTERN, INC.

Test Charts

ENG Two Chart System

The PORTA-PATTERN ENG Chart System has been designed to provide basic alignment, registration, color balance and Auto-White balance information for fast electronic news gathering or field camera set-up.

The system consists of a Registration Chart and a specially designed Color Balance Chart, mounted on durable white acrylic. The two acrylic frames are hinged together, and the charts are folded face-to-face when not in use. Black Velcro™ provides a light and dirt seal when the system is closed, and the white acrylic has a non-reflective surface for Auto-White balance use.

- 008-10 ENG Portable Two-Chart System, Registration and Color Balance, including Carrying Case **\$190.00**

Test Slides and Test Slide Systems

The PORTA-PATTERN Test Slides and Slide System provide the same accuracy and convenience for Color and Black and White Telecine set-up and alignment as the industry standard PORTA-PATTERN Test Charts. These slides are available in either a 2" x 2" glass protected format, for use with slide projectors, or a 3 1/4" x 4" field lens format for use with large image Telecine systems.

- 002-10P* Test Slide System, Positive, 8 Slides with Hardwood Case **\$180.00**
- 002-10N* Test Slide System, Negative, 8 Slides with Hardwood Case **180.00**
- 002-20 Hardwood Slide Case, 10 Slide Capacity **65.00**
- 002-24P* Resolution Slide, Positive **15.00**
- 002-24N Resolution Slide, Negative **15.00**
- 002-25P* Linearity (Ball) Slide, Positive **15.00**
- 002-25N Linearity (Ball) Slide, Negative **15.00**
- 002-26P* Registration Slide, Positive **15.00**
- 002-26N Registration Slide, Negative **15.00**
- 002-27 Nine-Step Log Grey Scale Slide **135.00**
- 002-32P* Multi-Burst Slide, Positive **15.00**
- 002-32N Multi-Burst Slide, Negative **15.00**
- 002-33* Window Slide **15.00**
- 002-34P* Chess Board Slide, Positive **15.00**
- 002-34N Chess Board Slide, Negative **15.00**
- 002-36* BBC #61P Type Flesh Tone Reference Slide **70.00**
- 002-38P CCIR Linearity (Ball) Slide, Positive **15.00**
- 002-38N CCIR Linearity (Ball) Slide, Negative **15.00**
- 002-41P Depth of Modulation Slide, Positive **15.00**
- 002-41N Depth of Modulation Slide, Negative **15.00**
- 002-43* Full-Field Color Bar Slide **70.00**

(*Includes Slides as Shown)

16mm and 35mm Alignment Films

- 005-10 16mm Black and White Chess Board Alignment Film, 50' **\$130.00**
- 005-12 16mm BBC #61P Type Flesh Tone Reference Film Loop, 10' **100.00**
- 005-20 35mm B & W Chess Board Aspect Ratio Transfer Alignment Film, 100' **395.00**

Spherical Transparency Illuminators

The PORTA-PATTERN Spherical Transparency Illuminator provides a laboratory-type test standard in a practical, video-oriented test package. It is a unique approach to 8" x 10" format transparency illumination for testing, set-up and evaluation of color television camera systems.

A wide range of ultra-stable color temperatures and illumination levels are easily achieved by the use of two front panel controls. The modified 20" integrating sphere produces a flat illumination field throughout a cone angle of greater than 20 degrees without any additional adjustments.

The light source is a low-voltage, regulated DC controlled quartz iodine lamp that assures a constant color temperature independent of AC line variations. This light source illuminates the interior of the sphere which is coated with high efficiency Eastman BaSO₄ sphere coating.

The illumination level is varied by adjusting the light source position inside the sphere, employing the principle of the inverse square law. A precision lamp position assembly, controlled by a numerically calibrated vernier knob, enables the selection of established illumination levels without the use of a light meter.

The PORTA-PATTERN Spherical Transparency Illuminator mounts on any light stand that will accept a 1 1/8" stud. The unit includes a yoke, hood, spare lamp, transparency holder and 10' power cord.

- 010-10 Spherical Transparency Illuminator, spare lamp, 117V, 60Hz **\$2960.00**
- 010-11 Same as above, 230V, 50Hz **2960.00**
- 010-60 Vinyl coated nylon fitted dust cover **145.00**
- 010-75 Test bench mount **65.00**
- 010-99 12V, 50W replacement lamp for 010-10, 010-11 **17.50**

8" x 10" Illuminator Transparencies

The PORTA-PATTERN 8" x 10" Transparencies represent advanced state-of-the-art technology using emulsioned high-impact acrylic. The geometric images are direct reading to the camera. There is no glass between the camera lens and the image to cause distortion or light loss. The elimination of the normal "sandwich" type of construction prevents buckling of the image surface and moisture collection.

This all acrylic construction eliminates the danger and high cost of breakage under normal operating conditions. Neither image emulsion nor acrylic base is subject to heat distortion or damage under usual operating conditions.

Highest quality photographic reproduction insures accurate resolution and maximum and minimum density stability. Dimensional stability and resolving power are in excess of 0.010 percent. All geometric image transparencies include tube scan information to aid in camera set-up. Geometric images are available in standard positive image transparencies or negative image transparencies for lower average picture level.

- 006-20 Hardwood Transparency Case, 10 Transparency Capacity **\$150.00**
- 006-24P Resolution Transparency, Positive **170.00**

12	6,390.00	6,800.00	9,745.00

*Prices shown are for single (DA-1) or dual (DA-2) patterns. For three patterns (DA-3) monitors add \$100.00.

**For PM-19 Precision Monitor System: Add cost of PMA-19 to either AM-19 (204) or AM-19D (210).

When ordering specify: Number of towers in the antenna array, number of patterns employed, reference tower number for each pattern, sampling line impedance and 117 or 230VAC operation.

AM-19 (204)

AM-19D (210)

PMA-19 Precision Monitor Adaptor

• Current deviation mode • Ultimate precision • Up to 12 towers, DA-3

The PMA-19 Precision Monitor Adaptor is used in conjunction with either AM-19 (204) or AM-19D (210) monitors. This unit is required, for the most part, in very critical arrays. The current deviation mode provides a third measured parameter which displays directly the deviation of the current ratio from the licensed ratio. P.O.R.

RMP-19 (204) Analog Remote Metering Panel

This panel contains meters which duplicate those of the AM-19 (204) for direct display of phase angle and current ratio. A switching relay is provided to conserve the required number of remote control channels. \$725.00

Ancillary Equipment (Antenna Monitors)

RSA-19 Remote Switching Adaptor for Interface to Remote Control System. \$725.00

ECP-19 Extension Control Panel. May be used with RMP-19 (204) or RMP-19D (210) 525.00

RC 16 + Automatic Remote Control System

Includes SU-16 Studio Unit (16 channels). This unit contains the master controller and time clock. It sends commands to the transmitter unit and receives data from it. It is pre-programmed for each station according to user specifications. It provides manual or automatic surveillance and control at the option of the operator. Front panel indicators provide channel number, telemetry data, time, and status indications.

Includes TU-16 Transmitter Unit (16 channels). This unit accepts analog telemetry and status inputs and provides relay closure control outputs. It receives its instructions from the studio unit and operates the relays to control each function. Individual telemetry adjustments are provided for one person calibration under local control.

RC 16 + \$5,300.00

Options

- XTU/XSU Channel Expansion Units set/\$2,075.00
- ALU Automatic Logging Unit. 1,995.00
- VDU Video Display Unit 1,025.00
- Telephone Interface Option 600.00
- Subcarrier Modem Option 500.00

RC 16 +

POTOMAC INSTRUMENTS, INC.

Transmission Equipment

SMR-11 Synthesizer Monitor Receiver

- Ultra low distortion AM monitor receiver • Covers 530kHz to 1.700MHz frequency range • Crystal controlled frequency synthesized local oscillator • 12kHz to 28kHz IF bandwidth (switch selectable) • Adjacent channel notch filter • Internal speakers • External balanced and unbalanced audio outputs • Loss of modulation alarm • Loss of carrier alarm • Signal strength/peak modulation metering • Adaptable to AM stereo reception • 230VAC option

Sensitivity and selectivity in the SMR-11 are consistent with the current state of the art and are dictated by the design constraints of the primary objective.

Receiver pre-selection and bandwidth are key design parameters. Because of the constant bandwidth, tuned L/C pre-selector and four pole ceramic IF filter, the SMR-11 exceeds most out-of-band rejection characteristics in other AM receivers.

The SMR-11 also contains switch selectable 10kHz (9kHz in Europe and Australia) notch filters. These filters are provided to eliminate the "beat note" that exists between the desired station and any first adjacent channel signal. The notch filter may be switched in or out at the user's option.

ANT-11 Antenna

The ANT-11 is a tunable, constant bandwidth, ferrite rod antenna housed in a Faraday shielded enclosure containing an internal pre-amplifier. The primary advantages afforded by this antenna are: directivity, immunity to man-made electric fields (fluorescent lights, electric motors, etc.), and the ability to be placed at a remote point while connected by a single coaxial cable.

The CQUAM® stereo version is essentially the same instrument exhibiting the following stereo specifications.

Specifications

Bandwidth and Selectivity (typical):	12kHz BW: -3dB at ± 6.5kHz; -60dB at ± 11kHz
Detector:	L + R: active envelope detector L-R: Motorola CQUAM IC decoder
Audio Output:	5W into 4 ohms, each channel, continuous sine wave at 0.4% THD Left and right channel 600Ω balanced outputs, -2dBm into 600Ω load for 50% left-only or right-only modulation
Notch Filter:	Located in left and right outputs, switchable, 40dB depth at 10kHz or 9kHz
Audio Frequency Response:	12kHz BW: 0.5dB maximum variation 60Hz to 3.5kHz; -3dB at 35Hz and 12kHz 24kHz BW: 0.5dB maximum variation 60Hz to 7.5kHz; -3dB at 35Hz and 12kHz
Total Harmonic Distortion (Typical 24kHz BW at 600 ohms Output):	0.2% at 1kHz, 1% at 55Hz and 4.5kHz; for 50% left-only or right-only modulation
Intermodulation Distortion (200Hz and 2500Hz; 4:1 ratio):	1.0% typical at 50% left-only or right-only modulation
Separation (24kHz BW):	> 30dB, 60Hz to 5kHz
S/N Ratio (24kHz BW):	50dB typical maximum for 50% Left-only or right-only modulation

SMR-11R	Rackmount version (requires 3 1/2" of vertical space in a standard 19" equipment rack) includes two internal speakers—less antenna. . . \$1900.00
SMR-11R (S)	Above rackmount version includes CQUAM AM stereo demodulator2400.00
SMR-11D	Desk model mounted in natural finish maple cabinet (4 1/2" H x 20" W x 12 1/2" D) less antenna1975.00
SMR-11D (S)	Above desk model version includes CQUAM AM stereo demodulator2475.00

MPC-11

PA-11 External RF pre-amplifier for whip antenna or long wire antenna applications \$250.00

Options

- ANT-11** Remote, tuneable ferrite rod antenna with internal, low noise pre-amplifier—recommended for most SMR-11 applications \$700.00
- WP-11** Fiberglass weatherproof housing for ANT-1175.00

MPC-11 Modulation and Power Controller

- Modulation and power control • Front panel metering and outputs for auto logging • Accommodates up to 3 separate power levels and/or antenna patterns for both main and ALT/AUX transmitters • Carrier shift compensation • Self diagnostics and fail safe operation • Open collector status alarm outputs • Remote control and ATS compatible interface • Simple installation

The MPC-11 Modulation and Power Controller continuously monitors transmitter modulation and power levels and, if either parameter varies beyond user set tolerances, it automatically adjusts these levels as necessary to maintain operation within the desired limits. Various safeguards are provided to prevent over control or unnecessary transmitter adjustments.

An RF sample is derived from a toroidal sampling transformer at the transmitter side of the antenna common point meter, level detected and demodulated by internal detectors, and processed by separate circuits for modulation control and power control. The MPC-11 is designed to accommodate up to three different antenna patterns and/or power levels, each separately for a main and/or alternate/auxiliary transmitter.

Specifications

Alarm Outputs:	Over power: over modulation Under power: under modulation Power out: modulation out Power control alert: modulation control alert All are transistor switches to ground, normally closed (100mA maximum from 50V maximum positive supply), open for alarm
Power Requirements:	105-130VAC, 50-60Hz, 20VA
Operating Temperature Range:	32°F (0°C) to 113°F (45°C)
Storage Temperature Range:	-20°F (-29°C) to 140°F (60°C) with battery installed
Dimensions:	19" rack panel, 5 1/4" H x 15" D

MPC-11 P.O.R.

POTOMAC INSTRUMENTS, INC.

Audio Instrumentation

AA-51

AA-51 Audio Analyzer

The AA-51 Audio Analyzer is an automatic multi-purpose test instrument designed to accurately measure total harmonic distortion, intermodulation distortion, wow and flutter, frequency response, signal-to-noise ratio, RMS voltage level, stereo phasing, and a differential gain (ratio) of signals in the audio frequency spectrum. There are no "Set Level" or "Balance" controls. Input signals between 0.1VRMS and 50VRMS are automatically leveled to the proper reference for distortion measurements. Out-of-range lights are provided for indicating that input levels are within the usable 40dB range.

For total harmonic distortion (THD) measurements, automatic nulling is accomplished via internal feedback circuitry. The operator merely coarse-tunes the input frequency, switches the function switch to THD and reads the meter. Accurate harmonic distortion measurements at various discrete frequencies and different power levels can be made much faster than with conventional distortion analyzers.

Intermodulation distortion measurements are performed with equal simplicity. Utilizing the SMPTE standard modulation signal provided by the AG-51 generator, the AA-51 displays percent IM for input levels between 0.1VRMS and 50VRMS. Again, measurements are automatic—no level or balance adjustments are required. With the function switch in the IM position, variations in intermodulation distortion may be observed over a wide dynamic range—automatically. This feature makes the AA-51 a very useful test instrument for troubleshooting audio systems.

Signal + Noise/Noise ratio measurements are made with the function switch in the "Noise" position. In this mode, the voltmeter bandwidth is restricted to 20kHz. S + N/N measurements are accomplished by reading the difference in audio output level between reference signal corresponding to 100% modulation and the residual noise of an unmodulated signal. Accurate frequency response measurements are facilitated by a wideband voltmeter which exhibits a flat response (± 0.1 dB) from 20Hz to 200kHz. Input level range is from 1mV to 100V full scale. The average responding meter is calibrated to the RMS value of a sine wave.

Incidental frequency modulation termed "Wow and Flutter" is usually associated with record and playback equipment such as tape decks, cart machines and turntables. The AA-51 measures weighted peak flutter as specified by IEEE standard 193. Wow and flutter measurements are automatic. Test signals may be derived from a prerecorded standard test tape or record or from the 3.15kHz signal provided by the AG-51.

Stereo signals and mono signals derived from a stereo source are often degraded by phase errors and differential gain variation between Left and Right channels of a given audio system. The AA-51 contains both Phase and Ratio measuring circuitry which enables the operator to evaluate these characteristics quickly and accurately throughout the complete audio spectrum and over a wide dynamic range. Phase angle is displayed with a zero center scale indication and full scale sensitivity of either $\pm 54^\circ$ or $\pm 180^\circ$ as determined by a front panel switch. The ratio meter is also a zero center scale device with ± 6 dB full scale deflection.

The Phase and Ratio measurement features of the AA-51 are particularly useful for line equalization measurements, azimuth alignment of stereo tape heads, and troubleshooting of audio consoles, amplifiers and networks.

AA-51 Audio Instrumentation

RFI shielded, stereo inputs, 117VAC (230VAC optional) \$2550.00

THD Meter: 0.1% to 100%, 20Hz to 20kHz, automatic set level and balance Included

Intermodulation Distortion Meter: 0.1% to 100% 60Hz and 7kHz composite (other frequencies optional), automatic set level Included

AC Voltmeter: 5Hz to 500kHz, 1mV to 100V Included

S + N/N Meter: 20Hz to 20kHz Included

Phase Meter: $\pm 180^\circ$, 20Hz, to 20kHz Included

Wow and Flutter Meter: 0.01% to 1% peak weighted, automatic set level Included

Ratio Meter: ± 6 dB, 20Hz to 20kHz Included

AG-51

AG-51 Audio Generator

The AG-51 Audio Generator contains a low distortion 20Hz to 200kHz sine wave generator, an SMPTE standard intermodulation signal generator and a fixed frequency sine wave generator at 3.15kHz for wow and flutter tests. Signal outputs are simultaneously available at levels of up to +18dBm (equivalent sine wave power for complex signals) at separate Left and Right output connectors. Outputs may be switch-selected for Left only, Right only, Left and Right in phase (L + R), and Left and Right in phase opposition (L-R). Front panel switches enable the operator to select fully balanced or unbalanced outputs at impedance levels of 150 ohms or 600 ohms. A dynamic range of 99.9dB in 0.1dB steps utilizing a combination of 10dB, 1.0dB and 0.1dB precision attenuators is provided. Attenuator dials display output level directly in dBm in the 150 ohm source impedance configuration. Automatic output leveling circuitry with a built-in self-test feature provides a constant output level thereby eliminating the need for output metering.

AG-51 Audio Instrumentation

Audio Generator: RFI shielded, transformerless stereo outputs, balanced and unbalanced, 600 ohms and 150 ohms, automatic signal leveling with self test feature. 117VAC (230VAC option) \$2025.00

Stereo Matrix Switch: L, R, L + R, L - R Included

Precision Attenuators: 10dB, 1.0dB, 0.1dB steps Included

Low Distortion Sine Wave Generator: 20Hz to 200kHz Included

Composite Intermodulation Test Generator: 60Hz and 7kHz at 4:1 (other frequencies optional) Included

3.15kHz SMPTE Wow and Flutter Frequency Standard Included

AT-51

Audio Test System: Includes AA-51 Analyzer and AG-51 Generator at single purchase price \$3975.00

Audio Test Accessories

TC-51 Fiberglass reinforced Transport Case, houses both AA-51 and AG-51, dimensions 21" x 19" x 14" \$375.00

DX-51 Low Distortion AM Detector \$235.00

IX-51 Balanced to Unbalanced Audio Transformer with switch selectable line termination of 600 ohms, 150 ohms or open circuit \$230.00

RK-51 19" Rackmounting Kit for AA-51 or AG-51 (2 kits required for complete AT-51 system) \$75.00

QA-100

QA-100 QuantAural Audio Program Analyzer

- Measures audio processing
- Evaluates station sound
- Analyzes competitive stations

Your own ears will always be the best judge of sound. But now there is an instrument designed especially for professional broadcast programmers and engineers to assist in program sound analysis. Here's what you can do with the QuantAural QA-100 Audio Program Analyzer:

Take audio from any source: receiver, tape recorder, modulation monitor, production studio output, audio processing equipment; and measure: Maximum peak level (FCC limits this value), Overall audio processing effectiveness (average level), Tightness of sound, processing control (peak density), Tonal balance and consistency (4 band real time analyzer), Stereo image width (L - R to L + R ratio), Preemphasis (4 band real time analyzer), "Punch" (special "aural intensity" measurement)

This device is a must for any highly competitive radio station. It provides important technical information about any audio signal which can suggest adjustments in equipment, operations and audio processing for that special sound you want to achieve.

QA-100 \$3500.00

POTOMAC INSTRUMENTS, INC.

RF Generator/Detector

SD-31

SD-31 Synthesizer/Detector

• Designed for antenna impedance measurements with RF bridges in the presence of strong interference • High-level oscillator compatible with general radio 1606 series, 916 series, and Delta OIB-1 impedance bridges • Frequency crystal controlled, variable in 500Hz steps from 100.0kHz to 1999.5kHz • Versatile—can be used as an RF signal generator for troubleshooting antenna systems; as a variable frequency oscillator for antenna site survey; or other applications requiring a precise frequency source • Special coherent detector circuit rejects interfering signals experienced during antenna measurements • Receiver for detector can be external or optional built-in RX-31 receiver • Powered by rechargeable batteries • Self-contained portable package

The SD-31 Synthesizer-Detector is a high-output signal generator of precisely known frequency combined with a sensitive, selective detector for RF bridge measurements of AM antenna impedance. Packaged in a single lightweight battery-powered unit, the SD-31 complements bridges such as the General Radio 1606, 916, and the Delta OIB-1.

A frequency synthesizer determines the generator frequency, which can be adjusted in 0.5kHz steps by means of a front-panel switch from 100.0kHz to 199.5kHz. Frequency accuracy is the same as that of the internal crystal reference oscillator. A front panel fine-frequency control varies the frequency up to $\pm .01\%$. The generator can drive a wide range of load impedance at levels up to 20VRMS. It also has a variable low-level output suitable for driving a counter or for receiver frequency calibration.

SD-31 \$2425.00

RX-31

RX-31 Receiver Option

The RX-31 is designed specifically as an RF interface between an impedance bridge and the SD-31 Coherent Detector. Conveniently mounted in the protective cover of the SD-31, the RX-31 is a

single conversion super heterodyne receiver which derives its local oscillator signal and power supply voltage from the SD-31. Receiver circuitry is packaged in an aperture-free, drawn aluminum enclosure which provides excellent RF shielding. IF selectivity is provided by active bandpass filter which can limit receiver bandwidth to 100Hz.

RF Filter

Manually tuned in 3 bands: 0.1-0.3MHz
0.3-0.8MHz
0.8-2.0MHz
RX-31 \$675.00

Accessories

HS-11 Headset \$ 25.00
GR

Adaptor Adapts general radio type 874 connector to BNC jack \$40.00

UHF

Adaptor Adapts large UHF jack to BNC jack (for Delta OIB1) \$38.00

FL-31

Two Pole Tuneable Band Pass Filter 0.5MHz to 1.7MHz (provides attenuation for strong adjacent channel signals resulting from RF Bridge feed through) \$600.00

Test

Cable RG223 Double Shielded Coaxial Cable cut to 5' length with UG88 (BNC male) connectors on both ends \$17.00

MCC-31 Deluxe wood carrying case \$125.00

FIM-21

Field Strength Meters

FIM-21, FIM-22, FIM-41

• 6 position (20dB per step) attenuator • High Q double-tuned RF input for maximum image rejection • Multi-pole hybrid IF filter with shape factor (6dB to 60dB) of 2.2:1 • Fully temperature compensated circuitry plus voltage regulation for long term stability • Four-inch, mirrored scale, taut-band meter with internal lighting • Front panel speaker with weather-treated cone or headphone output • RF coaxial input for measuring terminal voltage between 10 μ V and 10V • Mechanical "vernier" is integral part of receiver tuning control • Differential comparison circuit for balancing oscillator and receiver output for precise calibration • Capable of signal ratio measurements (including harmonics) to -80dB

FIM-21, FIM-22 and FIM-41 represent a new generation of precision instruments for direct measurement of electromagnetic fields in the 200kHz to 5.0MHz frequency spectrum. These units are intended for portable field use and include a laboratory quality receiver, integral shielded loop antenna, precision attenuator, in-

ternal calibration source, and voltage regulated battery power supply.

FIM-21 Covers AM broadcast spectrum only (535, to 1605kHz). Utilizes 6 "D" batteries (not included) . . . \$2450.00

FIM-22 Covers 200 to 550kHz frequency spectrum. Utilizes 6 "D" batteries (not included) . . . \$2850.00

FIM-41 Covers 540kHz to 5MHz frequency spectrum in two bands. Utilizes 6 "D" batteries (not included) . . . \$2800.00

FIM-71

• Accurate—direct reading—volts or dB • 45MHz to 225MHz—continuous tuning • Peak or averaging detector (switch selectable) • Wide or narrow IF bandwidth (switch selectable) • 20dB or 60dB meter range (switch selectable) • AM or FM demodulator (switch selectable) • Calibrated dipole antenna, mounted on case for near-ground measurements or removable for TASO measurements • 140dB measurement range (1 μ V to 10V) • 4 $\frac{1}{2}$ " , mirrored scale, taut-band meter • Front panel speaker • Recorder output • Rugged, portable package • Calibrated signal generator, 45MHz to 225MHz • Battery or external power • Use as signal source/selective voltmeter for insertion loss measurements of filters, etc. • Measures FM harmonics to -80dB.

FIM-71 Utilizes 10 "D" batteries (not included) . . . \$4500.00

FIM-72

FIM-72 Same as 71 but 470MHz to 960MHz continuous tuning • Calibrated generator 470MHz to 960MHz

FIM-72 Utilizes 10 "D" batteries . . . \$6250.00

Accessories

HS-11 Headset for all models . . . \$ 25.00
MCC-21 Deluxe wood carrying case for FIM-21, FIM-22, FIM-41 . . . \$125.00

MCC-71 Deluxe wood carrying case for FIM-71 . . . \$125.00

Unipod Telescoping stand for FIM-21, FIM-22, FIM-41 . . . \$60.00

ANT-71 Antenna elements and balun (spare) for FIM-71 . . . \$475.00

ANT-72 Antenna elements and balun (spare) for FIM-72 . . . \$475.00

AC72 117VAC adaptor for FIM-71, FIM-72 . . . \$75.00

RO-71 Phone plug with internal potentiometer for adjustable record output . . . \$30.00

8P-71 Rechargeable battery pack for FIM-71, FIM-72 . . . \$95.00

8C-71 Battery charger for FIM-71, FIM-72 . . . \$215.00

8K-71 Rechargeable battery kit includes BP-71 and BC-71 for FIM-71, FIM-72 . . . \$535.00

PRIME IMAGE, INC.

*Time Base Correctors/
Frame Synchronizers*

TBC + /TBC•Sync + Time Base Correctors

- True color lock — full reverse, 5X forward, stop scan and slow motion
- Full 16 line, 8 bit system
- Compatible with dynamic tracking VTRs
- Front panel set up adjustments
- RF and TTL dropout correction
- Advanced vertical steering
- Genlock — stand alone operation
- Corrected output meets full RS-170A specs
- Super efficient construction; constructed of steel
- Incorporate a unique air intake and cooling system
- Occupies only 1 3/4" vertical rack space
- Weighs only 16 lbs. (TBC +) and 18 lbs. (TBC•Sync +)
- Requires only 50-55W

Plus — Digital Effects

Standard operator selectable, in channel digital effects for variable mosaic, posterization, and sepia tone enhancement of the video image. These effects may be used individually or in any combination and are adjustable over the full picture level range.

TBC•Sync +

Incorporates all of the features of the TBC +, plus provides for full frame or field synchronization between synchronous and asynchronous sources. TBC•Sync + also provides for non-V locked recorders to be edited or mixed with camera or recorder inputs.

DUB•TBC + Dub Mode Time Base Corrector

The DUB•TBC + provides up to twelve generations of clearer, crisper video tape copies for all commonly used dub mode video tape recorders having Y/C688 or R-Y/B-Y type capabilities. The DUB•TBC + removes time base error and avoids degradation due to excessive signal processing — avoids up to four major encoding-decoding degrading processing steps for each generation of copying.

- Option/06** Terminal control package — provides password protected control of transmitter through a computer terminal. Includes auto-answer/auto-dial modem (Requires /01 or /02 option) **\$ 595.00**
- FMQSPS** Single phase power supply option **4,995.00**

695 FM Exciter

• Low distortion, < .025% independent of temperature • "Automod" automatic modulation control • Modulation metering and peak counter built in • Broadband design eliminates adjustments and tuning • Micro-physics virtually eliminated • 5 to 20W output • Synthesized phase-locked loop design, 100kHz steps • Convection cooled, no fan or blower • Extensive metering, annunciator panel and bargraph modulation display • Spectrum display output permits Bessel-Null calibration of modulation monitoring • Very low noise

695	FM Exciter	\$5,295.00
------------	----------------------	-------------------

691 Tunable Stereo Modulation and FM Test Set

• Complete proof-of-performance instrument for mono, stereo, and SCA measurements • Converts a standard X-Y oscilloscope into a spectrum analyzer • Off-the-air or direct transmitter connection • Will accept up to 50W of RF input with a suitable termination • Peak flashers adjustable from 1% to 199% with 100% peak counting digitally displayed

691	FM Modulation monitor/test set	\$5,295.00
691/01	FM modulation monitor/test set with SCA	6,295.00
691/02	FM modulation monitor/test set with dual SCA	6,695.00

772F Stereo Generator

• 100% solid-state • Remote mono-stereo switching • Optional phase equalized input filters available • 3 1/2" of rack space

772F	Stereo generator with filters	\$1,695.00
-------------	-----------------------------------------	-------------------

QSI SYSTEMS, INC.

Colorbar Generator/Video Source Identifiers

CB-2440 SMPTE Colorbar Generator/Video Source Identifier

• SMPTE colorbar pattern • Genlockable • Automatic switchover to internal synchronization upon loss of genlock signal • 24 character ID • 40 separate IDs in memory with minimum 72 hours battery back-up • ID inserted in VBI of input program video • Switchable 1kHz stereo test tone, locked out in live mode • 2 blackburst outputs and 1 isolated colorbar output • LED status indicators for genlock, ID programming and tone generators • 1 rack unit high

Specifications

Colorbar Output: 1V p-p, blanking at 0VDC, 75 ohm source terminated
Pattern: SMPTE
Pulse Widths: Within RS-170 specifications
Subcarrier Frequency: 3.579545MHz ± 10Hz from 10° to 50°C ambient, front panel adjustable
Vector Accuracy: Within 1.5°
Blackburst Outputs: 2, 75 ohm source terminated, blanking at 0VDC
Pulse Widths: Within RS-170 specifications
Subcarrier Phase: Adjustable ± 30° to match colorbars
Genlock Input: Front panel switchable
H Phase: 75 ohm terminated, composite video
Subcarrier Phase: Front panel adjustable ± 1µs minimum
Indicator: Front panel adjustable over 360° range
Audio Tones: Red LED
Indicators: Left and right 1000Hz tones 600ohm balanced, transformer isolated, individually switchable from front panel
Tone Levels: Red LEDs
Inputs: Internal jumper selection of 0, 4, or BdB attenuation on each tone, adjustable to +10dB, factory set at +BdB
Identifier Input: L and R balanced, relay switched to outputs with BARS/LIVE switch in LIVE mode
Display Length: 24 characters maximum
IDs in Memory: 40 maximum
Display Modes: Two, active area over internal colorbars, and vertical interval over external video, selected with BARS/LIVE switch

CB-2440

Character Display – Active area: ASCII 64 character, 7 x 9 matrix, full surround black background
Display Size: Vertically and horizontally adjustable within the active area
Character Matte: Internally adjustable from 60 to 110 IRE. Factory set at 78 IRE
Character Display – Vertical Interval: ASCII 64 character, 5 x 7 matrix insert horizontally adjustable, vertically fixed at 7 lines with adjustable start selection
Character Matte: Internally adjustable from 30 to 70 IRE. Factory set at 45 IRE
Output: Selection between colorbars or external video with the BARS/LIVE switch 75 ohm source terminated, 1V p-p nominal
Differential Gain: < 0.5%
Differential Phase: < 0.5°
Frequency Response: ± 0.5dB, to BMHz
Tilt and Overshoot: < 1%
Hum and Noise: -60dB below 1V p-p
Mechanical Video Connectors: BNC
Audio Connectors: Output—3 pin male XLR, input—3 pin female XLR
Size: 3/4" H x 19" W x 16" D
Weight: 9.5 lbs.
Power: 117VAC ± 15%, 50/60Hz, 22VA
CB-2440 \$3495.00

2400 Satellite Video Identifier

• No decoder required • Convenient, quick change numerics • Locking toggle switch for mode selection • Front panel numeric readouts • Excellent video transparency • Only one rack unit high

Specifications

Display Size and Position: In Active Area
 7 x 9 matrix, 18 lines per field, positionable within the active area
Video Input: 1V p-p nominal, 75 ohm internal termination
Video Output: Unity gain, 75 ohm source terminated
Differential Phase: < 0.5°
Differential Gain: < 0.5%
Frequency Response: ± 0.5dB to BMHz
Tilt and Overshoot: < 1%
Hum and Noise: -60dB below 1V p-p
In All Modes
 24 characters in a 10 numeric, 12 alphanumeric and 2 numeric format
Character Programming: Numeric: 3 front panel touch buttons. Alphanumeric: one internal switch bank per character.
Automatic Bypassing: Direct relay bypassing from video input to video output on power loss
Front Panel Controls: Locking toggle switch for Active Area/Vertical Interval. Touch buttons for Cursor, Count and Access.
Front Panel Displays: 10 digit numeric LEDs for Telephone Number, 2 digit numeric LEDs for Code
Internal User Controls: 2 16-position rotary switches (Fine and Coarse) for vertical positioning. 12 6 bit Dip switches for alphanumeric character programming.
Power: 117VAC, 50/60Hz, 13VA. Rear panel mounted power switch and fuseholder
Mechanical: Size 1 3/4" H x 19" W x 12" D, rack mountable
2400 Satellite Video Identifier \$1995.00

QSI SYSTEMS, INC.

Switcher/Identifier/Color Bar Generator

SW-402 Mini-Production Switcher

- One rack-unit high • Four video inputs • Two switchable buses • Dissolve between buses • Two program and two preview outputs • Tally contacts (dry closure)

The SW-402 is a four input, two output mini-production switcher with a simple dissolve feature between the two selected signals. Designed originally to augment the QSI AF-1000 autophasing blackburst generator, the SW-402 can easily be integrated into other systems. The SW-402 is a compact, easy to operate, mini-production switcher—ideal where space and dollars are limited.

Specifications

- Inputs:** 1V p-p composite, internal termination, BNC
- Outputs:** 1V p-p, adjustable, two preview, two program, BNC
- Dissolve:** Between buses
- Power:** 115VAC ± 10%, 230VAC optional
- Size:** 1 3/4" H x 19" W x 12" D
- Tally:** Dry contacts on program bus, 9-pin connector, supplied

- Frequency Response:** ± 0.5dB to 8MHz
- Differential Gain:** < 0.5%
- Differential Phase:** < 0.5°
- Switching:** Vertical interval
- Sync Source:** Video or black on input #1
- Weight:** Net weight: 6 lbs.

SW-402 \$1895.00

SW-402

PSF-777

PSF-777 Color Bar Generator

- 1kHz audio test tone output • Can be powered by most common camera/VTR—11VDC to 15VDC batteries • Internally selectable for either flashing ID or constant display

PSF-777 is a battery operated split-field colorbar generator with 8 character user programmable video identification in the black block of the split-field bar pattern.

The PSF-777 is perfect for the remote engineer when testing temporary microwave links or long cable runs.

Specifications

- Video Output (with 8 character ID):** 1V p-p, 75 ohm source terminated
- Pattern:** Split-field NTSC bars
- Pulses:** Within RS170 specifications
- Subcarrier:** 3.579545MHz ± 10Hz, 0-50°C
- Vector Accuracy:** Within 1.5°
- Audio Output:** Video bypass with power switch off
Front panel switchable (transformer isolated)
-56dB, 150 ohm balanced; 0dB, +4dB +8dB at 600 ohm balanced
- Tone:** 1kHz Sinewave; distortion < 3%
- Power:** 11VDC to 15VDC, 120mA
- External Controls:** Power switch; LED indicates power on and low battery (flashing); and 4 position audio level switch

Mechanical:

- Video Connector:** 2 BNC for video in/out
- Audio Connector:** XLR
- Power Connector:** 2.1mm coaxial power jack
- Size:** 3" H x 4.6" W x 8.6" L
- Weight:** 3.5 lbs. (less battery)

Optional transistor battery pack (2) with 115VAC power adaptor.

PSF-777 \$1295.00

PSF-BAT Battery board option for PSF-777 \$89.95

Vertical Interval ID

PCID-864

PCID-864 Portable (ENG) Camera Identifier

- 8 characters • Reduces the risk of airing your competitors' signal
- Labels the unit instantly (in the field if desirable) to identify every EJ camera and VTR you have in use—a real time-saver in identifying signal sources
- Identifies live news feeds from each helicopter or van when you have more than one crew sending to a steerable antenna
- Battery (not included) • Provides at least 32 hours of continuous operation
- ID is internally selectable for active picture area or VBI display
- Weighs 12 oz. with battery • Also has external DC input connector
- Clips on camera operator's belt or pocket • 8" H x 4" W x 1 1/2" D
- 9VDC

PCID-864 \$595.00

Q-TV

Prompters

Mini-Q II Prompter

- Hi-efficiency optical reading surface for easy-to-read copy
- Copy reading surface: 9 1/2" x 9 5/8"
- 7 lines of text in reading area for "complete thought" preview
- Shadow-free lighting illuminated by two 50W hi-intensity lamps
- Script capacity: 30'
- No special paper required. Uses standard 8 1/2" wide bond paper
- The compact miniaturized motor is "sound-take" silent
- Miniature variable speed hand control measures 4 1/2" x 1" with 25' cable
- Universal camera mount
- Solid-state circuitry
- Power: 12V battery-pack belt, 5A; or AC to DC power converter
- Weight: 9 lbs. less mount

Mini-Q II Prompter System includes:

- 1 Mini-Q II Prompter
- 1 Hand Control with 25' Ext. Cable
- 1 Camera Mount
- 1 Power Cable (unterminated)
- 1 Equipment Case
- 1 Instruction Manual

Mini-Q II Prompter \$2985.00

Optional Accessories

DC Power Supply \$150.00
 Prompter Paper, lined, 300' Roll 26.50

Mini-Q II

MVP-9 Mini Video Prompter

- Meets the requirements of the small professional studio
- Simple to operate
- Compact and realistically priced
- Variable speed forward/reverse script drive
- Vidicon pick-up camera
- Can be located in the control room or studio floor
- Houses a lightweight 9" prompter monitor and over-the-lens beam-splitter
- Readable from distances up to 8-10'
- Mounts with adjustable bracket onto the camera pan and tilt head

MVP-9 System includes:

- 1 VPS-100 Console Transport
- 1 Vidicon Camera with lens
- 1 9" Prompter Monitor with eye-line
- 1 Remote Hand Control
- 1 Prompter Camera Mount
- 1 Instruction Manual

MVP-9 \$3950.00

Prompter Systems

**VPS-100 Console Transport/
VPS-300 Convey or Transport
Prompter Systems**

The VPS-100 and VPS-300 prompting systems offer the broadcast industry and its allied fields a versatile, efficient and rapid method for providing prompter copy through a video signal.

Prompter copy is prepared on standard 8 1/2" x 11" single sheets of paper using any manual or electric typewriter. The prompter script is conveniently fed through the aperture of the VPS-100 by means of taping the individual sheets into a continuous roll; or by placing the individual sheets of copy on the conveyor belt of the VPS-300.

Prompter copy is scanned by the Vidicon camera and transmitted to one or more prompter/monitor readouts mounted on or off camera. The prompter script appears as clearly defined copy. Both units are equipped with a remote hand control for easy operator control.

When used with the VPS Eye-Line, prompter copy is superimposed directly over the taking lens of the television camera for direct "eye-to-eye" contact with the viewing audience. The high brilliance image is clearly visible to the speaker but in no way detectable by the camera lens.

One VPS-100 Prompter System

- 1 VPS-100 Console Transport
- 1 Vidicon Camera w/lens
- 1 15" Prompter/Monitor
- 1 Remote Hand Control
- 1 25' Coaxial Cable
- 1 Prompter Camera Mount
- 1 Camera Balancing Assembly
- 1 VPS Eye-Line
- 1 Instructional Manual **\$4750.00**

Two VPS-100 Prompter System

- 1 VPS-100 Console Transport
- 1 Vidicon Camera w/lens
- 2 15" Prompter/Monitor
- 1 Remote Hand Control
- 2 25' Coaxial Cable
- 2 Prompter Camera Mount
- 2 Camera Balancing Assembly
- 2 VPS Eye-Line
- 1 Instruction Manual **\$6500.00**

Three VPS-100 Prompter System

- 1 VPS-100 Console Transport
- 1 Vidicon Camera w/lens
- 3 15" Prompter/Monitor
- 1 Remote Hand Control
- 3 25' Coaxial Cable
- 3 Prompter Camera Mount
- 3 Camera Balancing Assembly
- 3 VPS Eye-Line
- 1 Instruction Manual **\$8250.00**

One VPS-300 Prompter System

- 1 VPS-300 Conveyor Transport
- 1 Vidicon Camera w/lens
- 1 15" Prompter/Monitor
- 1 Remote Hand Control
- 1 25' Coaxial Cable
- 1 Prompter Camera Mount
- 1 Camera Balancing Assembly
- 1 VPS Eye-Line
- 1 Instruction Manual **\$5350.00**

Two VPS-300 Prompter System

- 1 VPS-300 Conveyor Transport
- 1 Vidicon Camera w/lens
- 2 15" Prompter/Monitor
- 1 Remote Hand Control
- 2 25' Coaxial Cable
- 2 Prompter Camera Mount
- 2 Camera Balancing Assembly
- 2 VPS Eye-Line
- 1 Instruction Manual **\$7100.00**

Three VPS-300 Prompter System

- 1 VPS-300 Conveyor Transport
- 1 Vidicon Camera w/lens
- 3 15" Prompter/Monitor
- 1 Remote Hand Control
- 3 25' Coaxial Cable
- 3 Prompter Camera Mount
- 3 Camera Balancing Assembly
- 3 VPS Eye-Line
- 1 Instruction Manual **\$8850.00**

Videoprompter Equipment w/Monitor for On-Camera Prompting

- 1 15" Prompter Monitor
- 1 Prompter Camera Mount
- 1 Camera Balancing Assembly
- 1 VPS Eye-Line **\$1910.00**

VPS Equipment w/o Monitor for On-Camera Prompting

- 1 Prompter Camera Mount
- 1 Camera Balancing Assembly
- 1 VPS Eye-Line **\$1135.00**

Roll-Away Stand Unit

- 1 Heavy-duty Elevated Tripod Stand w/ Casters
- 1 Stand Monitor Mount
- 1 VPS Eye-Line **\$1860.00**

Display Monitor

- 1 15" Hi-Resolution Prompter Monitor (B & W) **\$775.00**
- 1 13" Hi-Resolution Prompter Monitor (Color*)
- *Color applicable to computer prompting only **\$850.00**

QCP Mark I Computerprompter Program

• IBM PC, XT, and AT compatibility • True variable-speed, bi-directional, smooth scrolling • Four fonts: two full upper- and lower-case fonts as well as two all uppercase fonts • Proportional spacing—for the most easy-to-read prompter copy • Comprehensive Word Processor for text creation and last-minute changes. Highlights: Automatic Wrap, dynamic Insert and Delete Modes, Transfer Text, Search-for Text, and more • Compatibility with any PC-DOS ASCII file. Use your own word processor and QCP Mark I will prompt the text by employing its unique "Convert" mode. Additionally, Convert enables you to prompt any ASCII file sent via telephone lines and other transmission schemes • Easy-to-understand menu of special functions, displaying such choices as: Character Size, All Upper-Or-Lower-Case, Eight Character and Background Colors, Position of Speaker Arrow, and more • Unlimited use of Special Markers to pinpoint specific areas of text to jump to • Text Underlining and Coloration to highlight any section of script • Large selection of international characters. The QCP Mark I is multilingual, allowing you to prompt such languages as Spanish, French, German, Italian and Portuguese • Printing in three convenient formats. Also, with a single keystroke, the program will automatically paginate your text so that pages end only between sentences • Compatibility with both Floppy and Hard Disk Drive systems. Once "booted up," the entire QCP Mark I is loaded in and you may remove the program disk • Thorough PC-DOS Disk Functions, available without having to leave the program. They include: Format and Copy Disk, Copy, Erase and Rename File

QCP Mark I is an innovative computerprompter program offering multipurpose applications. It fully answers today's prompting requirements, be it in news, public speaking, commercials, or corporate television.

The QCP Mark I Computerprompter program allows you to compose a prompter text on an IBM compatible computer. Crisp, clean letters are displayed on a monochrome or color prompter monitor giving a speaker exceptional legibility of prompter text.

**QCP Mark I includes:**

- 1 QCP Mark I Computerprompter Program
- 1 Limited Backup Program
- 1 Composite Video Board
- 1 Variable Speed Script Control
- 1 Instruction Manual \$4975.00

VPS-500 II Computerprompter™

• Word processing • Clear, crisp copy • Quick access to all copy • Memory up to 1 hour, 45 minutes • Optional printer for hard copy • Smooth scrolling • Variable speed control • Various colors, underlining • Positive or negative display

The VPS-500 II is a fully self-contained program, written entirely in super fast machine code. It sets up, automatically, in 25 seconds flat. Everything you'll need to do your work is stored right inside the computer.

You don't even have to know what a computer looks like to operate the VPS-500 II.

It takes a minimum amount of instruction to learn. So even the first time you use it, you can be prompting quickly and confidently.

The VPS-500 II creates, edits, saves, erases, and prompts to an astounding 1 hour and 45 minutes.

What's more, it can assemble as much as 32 separate text files for prompting. Plus keep you informed of where they are with an easy-to-read run order list.

You can also highlight points and separate speakers with 10 color combinations and a handy underlining feature.

The VPS-500 II can provide you with immediate hard copy printouts of your prompter text, complete with emphasis and underlining indications. And, in 3 convenient styles: Prompt, Script, Draft.

**VPS-500 II includes:**

- 1 Computerprompter Keyboard
- 1 Disk Drive
- 1 VPS-500 II Computer Software
- 1 Variable Speed Script Control
- 1 Interconnecting Cable
- 1 Manual
- 1 Equipment Case \$4200.00

QCG-304 Teleproduction Titling Generator

- Instant sizing — 8 to 64 scan line heights plus incremental extend/condense for face styles — keyboard accessed
- 512 colors — easy RGB palette selection of background and character colors
- True proportional spacing — upper and lower case, four styles
- 48 sizes per face
- 55ns horizontal resolution
- Edge selection — full surround border, 8 colors row selectable per page
- Easy edit — real time composition and editing capability — Quanta's exclusive text editing package
- Roll — 260 rows, 9 speeds plus pause, edit in roll compose, roll to fixed title
- Crawl — 260 rows, 9 speeds plus pause, edit in crawl compose
- Automatic page sequencing — random or sequential, date/time generator for real time sequences — dwell time selectable 1/4 to 99 seconds per page
- Manual page sequencing — random or sequential, forward or reverse, 0 second dwell time
- Built-in 3¹/₂" Disk Drive — 400 pages — second drive optional
- Built-in full terminal complement — sync/genlock RS170, NTSC or PAL Encoder full studio timing
- Graphic blocks/graphic separators — variable size and color
- Real time clock and date generator
- Full battery back-up
- RS-232 Data I/O Port — optional

Fully self-contained, the QCG-304 provides for either stand alone operation or may be integrated into a full television production studio. The proportionally spaced type face styles provide over 40 resident fonts per face style instantly on-line with Quanta's exclusive instant sizing.

NOTE: The QCG-304 Series is available with French, French QWERTY, German-Nordic or Spanish-Portuguese keyboards. Contact your dealer for pricing and delivery.

QUANTA CORP.

Teleproduction Titlers

QCG-38 Teleproduction Titling Generator

- Resolution of 25ns at 32 scan lines
- Instant sizing—8 to 64 scan line heights plus incremental extend/condense for both resident face styles—keyboard accessed
- 512 colors—easy RGB palette selection of background and character colors
- True proportional spacing—upper and lower case, two faces
- Edge selection—full surround border, 8 colors row selectable per page
- Easy edit—real time composition and editing capability—Quanta's exclusive text editing package
- Roll—260 rows, 9 speeds plus pause, edit in roll compose, roll to fixed title
- Crawl—260 rows, 9 speeds plus pause, edit in crawl compose
- Automatic page sequencing—random or sequential, date/time generator for real time sequences—dwell time selectable 1/4 to 99 seconds per page
- Manual page sequencing—random or sequential, forward or reverse, 0 second dwell time
- Built-in 3 1/2" Disk Drive—400 pages—second drive optional
- Built-in full terminal complement—sync/genlock RS170, NTSC or PAL Encoder full studio timing
- Graphic blocks/graphic separators—variable size and color
- Real time clock and date generator
- Full battery back-up
- RS-232 Data I/O Port—optional

QCG-38

The QCG-38 is a real time professional teleproduction titling system for use in broadcast or non-broadcast applications.

Fully self-contained, the QCG-38 provides for either stand alone operation or may be integrated into a full television production studio. The proportionally spaced type face styles provide over 40 resident fonts per face style instantly on-line with Quanta's exclusive instant sizing. Ease of operation, real time functions and dependability make the QCG-38 a versatile, multi-feature low-cost character generator.

Specifications**PERFORMANCE****Horizontal**

Resolution: 18ns at 16 scan lines

Resident Type**Faces:**

Eight face styles, upper and lower case
 Helvetica medium with border
 Serifa with border
 Cooper Black with border
 Bolt Bold with shadow
 Optima Bold with border
 Rockwell Bold with shadow
 Bookman Bold with border
 Helvetica Bold with border (caps only)
 Graphic symbols

Faces proportionally spaced with upper and lower case. 48 sizes per face with 8 to 64 scan line heights plus widths of normal, condensed and extended

Color:

512 colors for colorizing characters by row or page and backgrounds by row or page. Maximum 34 colors per page (13 each characters and backgrounds, 8 each edges—available simultaneously)

Character**Edge:**

Full surround border, 8 colors per page selected by row. See-through characters through edge selection/background selection

Editing**Functions:**

Cursor up, down, right, left, home; line feed; return; key repeat; erase row, page; center row, page; justify row or page—right or left; move up, down; insert/delete character, word, row; variable size graphic separators; variable size graphic blocks; scan line pair adjustment of top or bottom leading, or both (row tuck); caps lock; 4 columnar tab settings per page; color palette selection of RGB colors

Memory: Single 3 1/2" disk; 400 pages (max. 40 characters per row, 13 rows per page). Second disk available (optional)

Display**Functions:**

Flash by character; recall page by number; recall next page, prior page; matte characters in/out of Program output; sequential or random page sequencing; real time clock and date generator displayable any size, color or location on page

Dynamic**Functions:**

Automatic or real time sequencing of any combination of pages; dwell time, 1/4-99 sec., selectable by page. Roll 260 rows max.; crawl 260 rows max.; position on any row, any size/color and mix with static text as required. Roll/crawl at 9 speeds plus stop with programmed speed changes imbedded in message or manual keyboard adjustment. All dynamic displays may be one time or continuous

ELECTRICAL**Battery****Back-Up:**

System has NiCad battery for RAM and real time clock. Automatic program restoration including dynamic displays after power failure

Video**Standards:**

Built-in RS170 Sync Generator with Genlock. Built-in NTSC or PAL encoder. Subcarrier phase and horizontal phase adjustment accessible from rear panel. Upstream or downstream operation. Chromalock plus regeneration of sync for proper genlock to non-time base corrected signals

Inputs:**Outputs:**

1 composite video in, looping
 2 program, 1V p-p composite at 75 ohms
 1 edit, 1V p-p composite at 75 ohms
 1 key, 1V p-p composite monochrome at 75 ohms

Data I/O**Ports:**

RS-232 (optional)

ELECTRICAL**Power****Requirements:**

105-110/210-270VAC, 4B/70Hz

MECHANICAL**Dimensions:**

4 5/8" H x 17 1/2" W x 17 1/2" D

Color:

Almond and Black

Teleproduction Graphics and Titling Generator

- 7 resident type faces — 56 fonts on-line
- Upper and lower case
- Fine or bold border
- 30 topical graphics display symbols
- Instant sizing — true proportional spacing
- 128 colors — each page is palette assignable
- Built-in 3 1/2" high density disk drive (400 pages) — second drive optional
- Built-in full terminal complement — sync/genlock and NTSC or PAL-I encoder — full studio timing adjustments standard
- 224-row RAM with battery back-up — dynamic displays and automatic sequencing
- Patented NANOLOG™ character smooth and fill refinement — high resolution average rise time
- Four-quadrant positionable drop shadow
- LED front-panel operator prompting
- RS-232 data I/O port option

The QCG-400 Teleproduction Graphics and Titling Generator is designed for real time, easy operation in a wide variety of titling applications.

Incorporating the Easy Edit and quick, versatile composition features which have made Quanta the preferred standard of mid-range character generators world-wide, the QCG-400 is a modern, low-profile, ultra-portable self-contained unit.

Specifications

Performance

Resident Faces:	7 faces at 6 vertical sizes each (from 8 to 64 lines high) Face #1 Helvetica Medium proportional upper and lower case Face #2 Bolt Bold, caps non-proportional, lower case proportional Face #3 Serifa, proportional upper and lower case Face #4 Cooper Black, proportional upper and lower case Face #5 Helvetica Medium Italic, proportional upper and lower case Face #6 Grotesque 9, proportional upper and lower case Face #7 Upper Case: Helvetica Bold (all caps) proportional Lower Case: 30 selected symbols
Graphic Symbols:	Weather, sports, transportation, medical, communications, miscellaneous
Face Selection:	By character, maximum of two faces can be mixed on a row. All 7 faces may be used on a page
Character Color:	Select any of 16 pre-defined palettes of 8 colors each. Palette is stored with page. Character color by word
Background Selection:	Select either of 2 pre-defined palettes of 8 colors each or external video. Palette is stored with page. Background color by row
Edge Styles:	Selectable by row: fine border, bold border, 4-quadrant drop shadow positionable
Edge Luminance:	Eight levels black to white, stored with page
Page Size:	16 rows (max.) 32 characters on a row available with Grotesque 9
System Parameters:	Stored within a block: tabs, memory protect, roll/crawl pointers and speeds, shadow quadrants, status line size, user-defined center of screen, last selected face description, flash speed
Roll Message Length:	224 rows
Crawl Message Length:	6,110 characters
Roll Speed:	9 plus pause (start and re-start). Programmable roll to stop function provided
Crawl Speed:	4 plus pause (start and re-start)
Roll/Crawl Display Areas:	Blanking to blanking. Crawl displays can include static text area
Character Flash:	By word. Flash speeds: 2
Special Display Elements:	Graphic separators, graphic blocks, underline accents, special symbols (optional on international language versions)

Clock Displays:	Real time clock (hours, minutes) or event timer (minutes, seconds)
Tab Positions:	8 columnar tabs with vertical tabbing
Editing Functions:	Insert row or character; delete row or character; center row or page; justify row or page left or right; row move left or right; reduce top leading; reduce intercharacter spacing (selected characters); erase row or page; capture character attributes: Get, save or exchange row or page. Applicable editing functions operate right of the cursor on a row or from the cursor to end of page
Resident Memory	224 rows (RAM) with battery back-up for non-volatile retention. Battery will last in excess of 24 hours
Automatic Sequencing:	Full 14-page resident memory
Disk Memory:	400 pages plus 2 blocks per disk
Page Access:	Random or sequential
Disk Access Time:	Page: average .4 sec: max. 1.2 sec. Block: average .6 sec: max. 1.5 sec.
Electrical Television Standards:	Built-in RS-170 sync generator with genlock. Built-in NTSC or PAL encoder. Genlock/Color lock; built-in 360° subcarrier; horizontal drive phase adjustable ± 1.5 usec. on back panel
Stand-Alone Operation:	Yes
Input:	One, external video in, looping
Edit Output:	One, 1.0V p-p composite at 75 ohms
Program Output:	Two, 1.0V p-p composite at 75 ohms
Key Output:	One, character plus edge, 1.0V p-p composite at 75 ohms
Power: (PC Card Selectable):	117VAC, 60Hz, 150W max. 220VAC, 50Hz, 150W max.
Data I/O Port:	One, RS-232 Optional
Mechanical Dimensions:	Self-contained chassis: 5" H x 18" W x 17 1/2" D
Ventilation:	Filtered, forced-air cooled
Color:	Dark brown and almond
QCG-400/SD	Single disk drive \$6595.00
QCG-400/DD	Dual disk drives 7090.00
QCG-400/RM/SD	Rackmount chassis with single disk drive built-in and remote keyboard 8995.00
QCG-400/RM/DD	As above but with dual disk drives 9490.00
Options	
DD-400	Second 3 1/2" disk drive for QCG-400 units customer installed \$ 495.00
RS-232/400	RS-232 Data I/O port for QCG 400 units factory installed 500.00
KBD-400	Remote keyboard for "daisy-chain" operation with QCG-400 rackmount chassis 1995.00
	Operating manual 50.00
OM-400	Service and maintenance manual 150.00
SMM-400	10-pack of 3 1/2" diskettes 150.00
FD-3.5	Language conversion kit 1000.00
LCK-400	
	Note: QCG-400/SD or QCG-400/DD also available with French, French QWERTY, German-Nordic or Spanish-Portuguese keyboards.

**QCG-500 Professional
Teleproduction Graphics and Titling System**

- Rackmount electronics chassis
- Single scanline FONT-FLEX™ instant sizing in single scan line increments
- 16.7 million color palette
- Styles at 64 and 32 scanlines
- Color menu allows positive color matching and key-in of RGB values
- Rackmount kit and slides
- Easy edit
- Built-in sync/genlock and encoder
- Full studio timing for simple system integration
- Base resolution of 29ns
- Single 3 1/2" disk drive
- Optional second disk drive
- 28 face library disk
- Remote keyboard
- NTSC or PAL

The QCG-500 is a fully disk loadable, broadcast quality character generator and graphics system designed for cost effective teleproduction titling and text efficiency.

A powerful software intensive system, the QCG-500 offers real time speed and convenience. No slow, time consuming menu selections are required — all functions are immediately accessible from the keyboard and happen as the operator commands them.

A low profile remote keyboard accesses the rackmounted electronics with built-in 3 1/2" disk. The entire electronics chassis requires only 7" of vertical rack space. Big system features provide a degree of professional flexibility never before attainable in the QCG-500 price range. Disk compatibility with the Q8 Teleproduction Graphics System also makes the QCG-500 an ideal remote unit or addition to an existing Q8 graphics production facility.

Graphics enhancement accessories provide for a full paint system and digital effects, all conveniently controlled from the QCG-500 tri-level keyboard permitting interaction between text, paint or effects operations.

Specifications

Disk Loadable:	Program, faces, pages
Rackmount:	Chassis includes electronics, single drive, power supply
Number of Keyboards:	One standard
Disk:	Single 3 1/2" double density, double sided; second drive optional
Pages per Disk:	600 maximum
Power Requirements:	150W power supply; 110/120VAC switchable
Stand-Alone Operation:	Yes
Encoder:	Built-in, NTSC RS-170 or PAL
Genlock/Colorlock:	Built-in, horizontal and subcarrier phase adjustments
Phasing:	External, 360° subcarrier, horizontal drive ± 1.5µs
System Integration:	Keyboard selectable upstream/downstream, or jumper selectable
Edit Output:	One, 1.0V p-p composite at 75 ohms
Program Output:	Two, 1.0V p-p composite at 75 ohms
Key Output:	One, character + edge or full page, 1.0V p-p composite at 75 ohms
Sync Output:	4.0V p-p composite
External Video Input:	One, looping

QCG-500

Options	2nd 3 1/2" disk drive
Electronic Video Paint:	Yes, addressed by QCG-500 keyboard
Digital Video Effects:	Yes, addressed by QCG-500 keyboard
Camera Capture Digitizer:	Yes, addressed by QCG-500 keyboard
QCG-500/SD	Single disk drive \$11,995.00
QCG-500/DD	Dual disk drives 12,490.00
QCG-500/SD/PVW/ENC-RGB	Single drive with preview and encoder 16,995.00
QCG-500/DD/PVW/ENC-RGB	Dual drives with preview and encoder 17,490.00
QCG-500/SD/RGB	Single drive with RGB/NTSC encoder 13,995.00
QCG-500/DD/RGB	Dual drives with RGB/NTSC encoder 14,490.00
DD-20/500IN	Optional 20M byte hard disk 2,495.00

Options

DD-20/500	20M byte Hard Disk, includes: 3 1/2" Rackmount Chassis, Power Supply, Host Adaptor, Controller Board (not available with RS232-500 or clock option) \$3,995.00
QCC-1/500	Camera Capture Font/Logo Compose (Card mounts in chassis) 495.00
DD-500	3 1/2" Disk Drive Expansion Kit (Customer Installed) 495.00
RS232-500	RS232 Data I/O and Protocol, includes: 2 Port: Serial I/O Boards (unavailable with DD-20) 795.00
KB-500	Keyboard, English (Multiple keyboards require external switch, customer supplied) 1,995.00
FD-3.5	10-Pack of 3 1/2" Diskettes 150.00
PVW-500	Preview update kit, includes: Rackmount chassis with Frame Grab Board, NTSC Encoder, Interface Board, Power Supply, Ribbon Cable, Software, Rackmount Kit with Slides (No simultaneous preview and program of dynamic displays such as roll and crawl) \$5,495.00
RGB-500	RGB Encoder Update Kit, includes: Power Supply, Word/Word Board (exchange) Palette RAM Board (exchange), Rear Panel RGB/NTSC Encoder, One 3/4" Rackmount Chassis Rackmount Kit with Slides \$2,995.00
QST-500	Automated Subtitling System via Time-code Input. Includes: Plug-in Time Code Reader Board, Audio Connector, Software and Manual. Indicate language and standard. Dual Disks are required. (Not available with RS232 or clock options.) \$1,495.00
OM-500	Operating Manual 50.00
SMM-500	Service and Maintenance Manual 300.00

QUANTA CORP.*Teleproduction Titlers***Q8 Teleproduction Titler**

• Rackmount electronic chassis • **FONT-FLEX™**: Exclusive Instant Sizing, Instant Extend/Condense, Instant Italics—Left or Right • 16 Million Colors: Interactive Menu Selection, Positive Color Matching, Characters/Backgrounds/Edges • Automatic Page Sequencing: Program up to 800 pages for automatic display • Automatic Keystroke Sequencing: Build animated or special editing sequences assigned to single keystrokes • Pop-On Animation: Sophisticated keystroke sequencing—reveal characters, words or rows at selected frame rates programmable • Easy Edit: Expanded text manipulation—real • Selectable Edge Styles & Colors • "Unlimited" Roll: Total disk (400 time in any composition mode • Character "Tuck" • Vertical Row "Tuck" • Type Faces Disk Loadable • Fade/Matte/Key • Built-In Sync/Genlock with Full Studio Timing • Built-In Color Encoder plus RGB Outputs • 26ns Base Resolution • Floppy disk chassis with dual 8" Disk Drives—Standard: 800 pages combined capacity • RS-232 Data I/O Port • Multiple Keyboard Operation: Up to 5 • Dual Channel Version: 2 independent or interactive channels—Program/Preview; A/B Mix • Expanded Dual 5-Megabyte Memory Option: Removable media memory—greatly increases system access speed and page storage capacity • NTSC/RGB (PAL available)

Q8 is a broadcast teleproduction graphics and titling system, microprocessor driven, incorporating high technology circuitry and the simplicity of real time operation. Employing quality components and user-oriented design considerations, Q8 provides a complete complement of video typography, graphics display, character generator effects and animation, text handling and composition functions.

Q-8S Single Channel System, NTSC, Includes:

Single-channel chassis, 117VAC/60Hz \pm 10% with sync/color lock, NTSC color encoder, RGB output, RS-232 data I/O port
System software (license required)

- 1 floppy disk chassis—dual 8" disk drives
- 1 keyboard—English, 117VAC power supply, 25' cable
- QCC-1 camera capture font/logo compose—PC card
- 2 Rackmount kits with slides
- 28 Face library diskette—all styles at 64 and 32 scanlines
- 2 Maintenance extender boards
- 1 5-Pack 8" floppy diskettes
- 1 Operating manual
- 1 Operator training diskette
- 1 Service and maintenance manual

Single-Channel System \$23,995.00

Q-8D Dual-Channel System, NTSC, includes:

2 Single-channel chassis, 117VAC/60Hz \pm 10% with sync/color lock, NTSC color encoder, RGB output, RS-232 data I/O port
System software (license required)

- 1 Floppy disk chassis—dual 8" disk drives
- 2 Keyboards—English, 117VAC power supply, 25' cable
- QCC-1 Camera capture font/logo compose—PC card
- 3 Rackmount kits with slides
- 28 Face library diskette—All styles at 64 and 32 scanlines
- 4 Maintenance extender boards
- 1 5-Pack 8" floppy diskettes
- 1 Operating manual
- 2 Operator training diskettes
- 1 Service and maintenance manual

Dual-Channel System \$34,995.00

Options**DD-20/8 20M byte Fixed Disk Add-on, Includes:**

3 1/2" Rackmount Chassis, 20M byte Fixed Disk, Power Supply, Host Adaptor, Controller Board \$ 3,995.00

QST-Q8 Automated Subtitling System via Time-code Input. Includes: Plug-in Time Code Reader Board, Audio Connector, Software, and Manual. Indicate Language and Standard. (Dual channel units require subtitle display via time-code in one channel only.) \$1,495.00

EN-10 Keyboard, English, 117VAC Power Supply, 25' Cable. \$4,995.00

**Q8 Quantafont**

- RKB-8 Recall Keyboard with Editor Interface. \$2,495.00**
- SCA-8 Second Channel Upgrade (Q-8S to Q-8D), NTSC, RGB, 117VAC/60Hz \pm 10%, Includes:**
 - 1 Single-Channel Chassis, 1 Rackmount Kit with Slides, 1 117VAC Power Supply, 2 Maintenance Extender Boards, Connecting Cables, 1 Operating Manual, Supply, 25' Cable \$19,995.00
- QCC-1/8 Camera Capture Font/Logo Compose (PC Card Mount in Q-8 Electronics Chassis). \$2,995.00**
- KC-8 Keyboard Cable Extension Kit**
 - 50' Cable with Connectors \$45.00
 - 75' Cable with Connectors \$55.00
 - 100' Cable with Connectors \$65.00

Accessories

- FD-10 10-Pack 8" Floppy Diskettes. \$ 225.00**
- FLD-8 Face Library Diskette (All face styles at 64 and 32 scanlines) \$1,000.00**
- FS-8 Single Face Style \$100.00**
- INT-8 International Language Conversion Kit, Includes:** System Software, International Face Library at 64 scanlines (Face Styles as Above), Operations Manual Addendum with International Keyboard Layouts \$995.00

SPECIFY: French AZERTY, French QWERTY, German-Nordic, or Spanish-Portuguese

Note: Q-8S or Q-8D also available with French, French QWERTY, German-Nordic or Spanish-Portuguese keyboards. Contact Quanta for pricing and delivery.

FONT-FLEX is a trademark of Quanta.

QUANTA CORP.

Character Generators

Delta 1 Text Generator

- Anti-aliased characters for an apparent resolution of 4.6ns
- Fast character rendering during text entry
- Real-time operation with rendered fonts
- Text entry at any angle
- Subscan rolls (smooth motion)
- Texture mapping of characters, borders, shadows, and backgrounds
- Font and attribute selection, character by character as you type
- Rotation character by character for "rainbow" effects
- Rotatable grids for multiple typing surfaces
- Dozens of online fonts
- Unlimited colors for character, borders, shadows and backgrounds
- Variable blurs for softening characters, borders and shadows
- Shear (italicize) any type face from the keyboard
- Size any type face by height or width
- Hundreds of variable shadow positions and border widths
- International character sets with accents
- Easy composition
- Automatic character kerning
- Page and keystroke sequencing
- Dynamic functions roll and crawl in any speed, slow reveal, and flash
- Dynamic wrap of frame buffers
- On-air functions geared especially for live broadcasting
- Adjustable "intercharacter" spacing
- 40 selection keys for storing user-defined attributes
- 32-bit microprocessor
- Hard disk, standard
- Disk loadable fonts, menu text, and setups
- Custom engraved keyboard
- 5M byte of video RAM on-board
- 4M bytes of program memory
- RGB or Y, R-Y, B-Y outputs
- Pages stored to floppy or hard disk
- NTSC, PAL and PAL-M compatible
- High-capacity hard disk drive
- Standalone hardware
- Unlimited characters per row
- Unlimited rows per page

Delta 1

- Image files (texture, background) compatible with Quantapaint 32
- Software controlled horizontal and subcarrier phase adjustment
- Real-time clock
- Dual frame buffers for preview/air and multi-level effects
- Dynamic digital compositing (mixing)
- High-speed proprietary accelerating processor (Bit Blitter)
- Math co-processor for fast rendering
- Downstream video linear keyer
- Rackmount electronics chassis
- 4 bit status buffer, dual: 32 bit frame buffers
- Digital/analog video compositor
- Single 3 1/2" floppy disk drive
- Linear Downstream keyer/fader
- 20M byte hard disk
- System software, 5 master typeface styles
- Sync/genlock/encoder, provides RGB and encoded outputs
- NTSC (PAL available)

Delta 1 \$35,995.00

Orion Character Generator

- 16 levels of anti-aliasing, 256 levels of transparency
- Effective resolution of 5nsec
- Typographic-quality characters
- 5 standard anti-aliased face styles in 8 sizes each
- Up to 32 resident fonts, all anti-aliased
- Real-time operation
- Next-page buffering
- On-screen status information for fast and easy composition
- Font cache (automatic font load)
- Automatic kerning between fonts
- 16 million colors
- Color spreads for background, character, or edge
- International character sets with accents
- Selectable edge types
- Automatic page sequences
- Reveal by character, word, or row
- Keyboard character animation
- Vertical wipe
- Fade
- Visible, adjustable safe-title and tab indicators
- Display clock with up/down timer
- Character overlap (overstrike)
- 700 pages of storage per diskette
- ROM-based operating system, 2 1/2M byte internal memory
- Broadcast quality sync generator/encoder/keyer
- Provides RGB and encoded outputs
- Linear downstream keying for anti-aliased text

Orion

- 68000 microprocessor
- Proprietary hardware, including customized ASICs
- Single 3 1/2" floppy disk drive in electronics chassis
- NTSC (PAL available)

ORI-SD Single disk drive \$14,995.00
ORI-DD Dual disk drive 15,595.00
ORI-HD ORI-SD with 20M byte hard disk and SCSI inter-
 face 18,750.00

QUANTA CORP.

Electronic Video Paint Systems

QVP-100/QVP-200 Series

Quantapaint™ Electronic Paint Systems

• 640 x 486 NTSC (768 x 576 PAL-I) pixel resolution • Pixel-keying • 16.7 million available colors • RGB camera capture, a unique "undo" function allowing the artist to erase his/her last operation • Text mode with five font selection • Seven levels of zoom for picture magnification • Offers NTSC, composite downstream keying, simultaneous RGB out, graphics chassis, bit pad and stylus • Optional business graphics and animation software • Pop-up menu • Sixteen predefined brushes or patterns • Windows and slide shows • Drawing tools • Painting and display effects • Quantapaint QVP-200 is exactly like the QVP-100 but includes an IBM XT-compatible computer • Complete stand-alone system • Computer comes with a floppy disk controller, realtime clock chip, IBM-PC XT-compatible BIOS, video display card, 640K, and 1M byte of above board RAM

- QVP-100** Computer Required*
Rackmount chassis with encoder, composite keying, and graphics card, sync/genlock/NTSC/RGB (PAL available), bit pad and stylus, rackmount kit with slides, Quantapaint software with RGB camera capture \$ 9,995.00
- QVP-115** QVP-100 with business graphics software 11,495.00
- QVP-120** QVP-100 with animation software and animation machine controller. Specify VTR: BVH 2000 Betacam™ Series, BVU-800, BVW-15/40, VPR3, VPR6, and VPR-80. (Requires VTR with time code reader) 13,495.00
- QVP-125** QVP-100 with business graphics and animation software with animation machine controller. Specify VTR: same as QVP-120 above. (Requires VTR with time code reader) . . 14,995.00

QVP-200 Series

- QVP-200** QVP-100 with 100% IBM™ XT-compatible computer with: One 5 1/4" floppy drive (360K per diskette), monochrome green screen with swivel base, two RS-232 serial ports and one parallel port, 640K RAM and Intel above board RAM, 8088-2 microprocessor and keyboard . \$13,995.00
- QVP-210** QVP-200 with 30M byte hard disk 15,995.00
- QVP-215** QVP-210 with business graphics 17,495.00
- QVP-220** QVP-210 with animation software and animation machine controller. Specify VTR: BVH 2000 Betacam series, BVU-800, BVW-15/40, VPR3, VPR6, and VPR-80. (Requires VTR with time code reader) 19,495.00
- QVP-225** QVP-210 with business graphics and animation software with animation machine controller. Specify VTR: BVH-2000, BVW-15/40, Betacam series, BVU-800, VPR3, VPR6, VPR-80 20,995.00

*Minimum requirements for your computer to work with Quantapaint QVP-100

8MHz processor, 100% IBM compatible, 640K bytes of RAM, Intel above board with 1M byte of RAM, one 5 1/4" floppy disk drive, One 20M byte hard disk and controller, keyboard, CRT display screen (monochrome) and controller, available slot for Quantapaint interface board, Com1 serial port available for bit pad, Com2 serial port available for animation control or character generator interface options, LPT1 parallel port available for ink jet printer option, DOS version 3.1 or later

QVP-2502

Quantapaint Electronic Paint System

• Basic automatic drawing functions with individual enhancements • Dynamic painting functions • Illustration aids • Palette of 16.7 million colors may be called upon to create individual page palettes of 256 colors each

- QVP-2502** Rackmount chassis with microcomputer, graphics card, above board RAM, sync/genlock/encoder/NTSC (PAL available), RGB 256 color digitizer (camera capture), Quantapaint II software, computer monitor, business graphics software, 2-D animation software, rackmount kit with slides, 3 1/2" floppy disk drive, 30M byte hard disk, bit pad and stylus, operator manual, keyboard \$24,995.00

Quantapaint 32

Quantapaint 32 Electronic Paint Systems QVP-3000

• Complete stand-alone system • Powered by Texas Instruments' 34010 dedicated 32-bit graphics processor that runs at a clock rate of 49MHz • System includes 4M bytes of onboard CMOS video RAM, a single floppy disk drive, and a graphics tablet with stylus, control keyboard and status monitor • 720 x 486 NTSC (720 x 576 PAL) broadcast-quality resolution and a total of 16.7 million colors • Outputs include RGB and, with the optional encoder, NTSC or PAL • 32-bits per pixel allows every pixel on the screen to be a different color, each with a transparency level from invisible to opaque—256 increments in all • All painting, drawing, and special effects can be selected from the graphics tablet and executed with the tip of the stylus from the on-screen, pop-up menu • Fourteen natural drawing tools • Variety of electronic brushes ranging from 1 pixel in diameter up to 50 pixels • Numerous "tricks" effects • Screen clear command • Quick save function • Paint mixing palette • Penstroke animation

- QVP-3000** Rackmount Electronics Chassis with: 32-bit graphics board with flash digitizer, Quantapaint 32 software with full-color camera capture and text rendering, 80286 microprocessor, 1M byte RAM, RGB video in/out, single 3 1/2" floppy disk drive, 720K, single 30M byte hard disk, 2 RS-232 serial ports, 1 parallel port, 5 typeface styles with accents, software enable module, DOS version 3.3, computer monitor, monochrome, bit pad and stylus, keyboard \$24,995.00
- QVP-3002** QVP-3000 with 160M byte high-speed hard disk 27,995.00
(Replacing the 30M byte disk in chassis)
- QVP-32-ENCI** Optional plug-in sync/genlock encoder 1,195.00
- QVP-3300 3D** Rackmount electronics chassis with: 32-bit graphics board with flash digitizer, 80386 microprocessor, math co-processor, above board RAM, Quantapaint 32 software with full-color camera capture and text rendering, Topas-32 three dimensional modeling and animation software, RGB video in/out, 3 1/2" floppy disk drive, 720K, single 30M byte hard disk, 2 RS-232 serial ports, 1 parallel port, 5 typeface styles with accents, DOS version 3.3, software enable module, computer monitor, monochrome, keyboard, bit pad and stylus (requires QVP32-AMC for single frame recording to tape). \$48,500.00
- QVP-3302** QVP-3300 with 160M byte high speed hard disk 51,500.00
(Replacing 30M byte disk in chassis)
- QVP-32-ENCI** Optional plug-in sync/genlock encoder 1,195.00

Refer to Green Section for Addresses and Telephone Numbers.

QUANTA CORP.**Graphics System****Artista™ Graphics System**

• Full color graphics system providing full-color paint, typographic quality, anti-aliased fonts, 3D modeling, and animation capabilities in a single system • Extraordinary effects with extraordinary painting tools—airbrush, full-color flash camera capture, stencil, wash, cut and paste, etc. • Flash digitizer for instant full-color camera capture • Five multi-colored and anti-aliased fonts are standard with 3D edges or drop shadows • Business graphics—easy generation of colorful, dramatic charts and graphs • Color selection—16.7 million available, pop-up color palette with on-screen color mixing or select, and user-defined spectra • User-definable brushes and brush effects; brush types are anti-aliased, transparent, neon, chrome, movie, dither, and pastel • Tools—pixel precise positioning; magnification; user-defined boxes, rectangles, circles, and ellipses; rubber-band connect; and image archiving on storage media • Full-shaded backgrounds; horizontal, vertical, up/down slope, and automatic tile backgrounds • Stencil cutting by drawing or text, reverse stenciling, color-selectable and opacity controllable stencils • Cut and paste—X and Y perspective, proportional enlargement and reduction, simple stamp, rotations, ellipsoid/elliptical paste, and filtering • Area fills—boundary fill of an area defined by interior or boundary color, transparent fill • Cut and paste with transparency—move, rotate, resize any section of the screen • Powerful 2D animation tool allows the artist to cut out up to 20 sections of a picture, rotate them separately in 2¹/₂D space, and describe a separate path for each to follow. Completed animations are single-frame recorded to a video tape recorder via an optional Quanta machine controller • Powerful 3D modeling and animation • All of three dimensional space is available to position objects, cameras, or lights • 13-inch high rack-mountable chassis • Two 5¹/₄" floppy disk drives • 190M byte hard disk, 32M byte cartridge tape streamer for hard disk backup and archiving • 24-bits-per-pixel with eight additional bits for transparency and stencils • Resolution of 756 pixels by 486 lines in NTSC (740 x 577 PAL) • Two separate frame buffers (genlocked RGB, NTSC, or PAL) • High-performance 16.7MHz 68020 CPU with a 68881 fast math coprocessor provides increased processing speed • Display terminal, bit pad, stylus, and keyboard combine strong ergonomic features with high-performance functions • Terminal features a 14-inch nonglare screen, a fast screen refresh rate, and tilt-and-swivel capability • All paint, text, 3D, and animation functions are displayed on the terminal menu and easily accessed by the stylus on the bit pad or from the keyboard • Eight "hot" buttons reside on the bit pad for instant access to frequently-used functions

Artista Specifications

Processor:	68020
RAM:	4M bytes
Serial Interface:	RS-232
Floppy Disk Storage:	2-390K bytes
Hard Disk Storage:	190M bytes
Tape Streamer:	32M bytes, unformatted
Power:	Operated from 110/220V, 50/60 cycle
Power Consumption:	500W
Dimensions:	12 ¹ / ₄ " H x 19" W x 20 ³ / ₄ " D
Weight:	65 lbs.
Mounting:	For rackmounting

Video Inputs:

- Green—7V (no sync) • Blue—7V (no sync) • Red—7V (no sync)
- Sync—4V • Video one—1V p-p • Video two—1V p-p

Artista

Keyboard and Display Specifications

Power Requirements: 115VAC (+ 10%,-15%), 0.5A, 60Hz, 230VAC (+ 10%,-15%), 0.25A, 50Hz, 55W nominal

Dimensions:	
Display:	14.5" H x 13.5" W x 13.5" D
Keyboard:	1.5" H x 19" W x 7.5" D
Weight:	
Display:	19.4 lbs.
Keyboard:	2 lbs.

ART-5000 Includes:**Rackmount Electronics Chassis with:**

- Microcomputer • 4M bytes RAM • Graphics board • Flash digitizer
- Composite NTSC (PAL available) • Decoder NTSC (PAL available) for rolling video capture

Artista Software includes:

- Complete 32 bit paint tools and functions • Instant full-color camera capture • Five anti-aliased typeface styles • Texture mapping • 2D cut-out animation • 3D modeling • 3D animation with Hierarchical motion • Two 5¹/₄" floppy disks • One 190M byte hard drive • One 32M byte tape streamer • Sync/Genlock encoder, NTSC (PAL available), RGB • Green screen • Black box RS-422 to RS-232 interface • Keyboard • Bit pad with stylus

ART-5000\$77,500.00

Options**ART-AMC**

Animation machine control interface for single frame recording to tape, specify VTR: BVH-2000, Betacam™ Series, BVU-800, VPR-3, VPR-6, VPR-80 (requires VTR with Time Code Reader)

ART-AMC\$1,995.00

QUANTEL

Video Effects Systems

Mirage™ — Three-Dimensional TV Images In Motion

The Mirage system brings to reality that which has never been done before in realtime: the concept of forming live television pictures into three-dimensional shapes and moving them in three-dimensional space. Effects are accomplished with live video or during post-production in the edit suite. Mirage will process any shape that can be conceived including globes, cylinders and cones. Using Mirage's Floating Viewpoint Control, the user can take the viewer's eye not only around the image but through it as well. The Morph shape generator allows creative people without computer programming experience to form their own custom shapes.

Encore™ — Multi-Dimensional Images

Second only to Mirage in its video manipulation capabilities, Encore also provides three-dimensional perspective with Floating Viewpoint Control, plus compression, expansion, flips, rotation, mosaic, posterization and more. Its integral combiner lets the user connect 14 units for multi-channel operation. And using Mirage as an Encore channel, the system will produce free-form manipulation of flat pictures including such effects as an Encore picture flying down a Mirage cylinder.

Paintbox® — The Ultimate TV Graphics System

Quantel's Paintbox is a complete electronic graphics and design system that has become the world standard. Paintbox provides the user with all the facilities that are available in a conventional graphics studio—electronically. Working with a simple touch tablet and pressure-sensitive stylus, pictures are displayed in front of the artist on a TV screen. Live video may be captured and designers have complete freedom to create or change images in real-time in whatever art medium they select, ranging from oils, water color, chalk, pencil and crayon to air brush. Paintbox animates, produces TV's finest typography, and perspective may be added as an option. Instant access to thousands of pictures is available through Quantel's Central Lending Library in addition to its own library storage capabilities.

Cypher Graphics Generator

Much more than just a perfect caption generator with print-quality type faces and logos, Cypher also has the manipulative power of Encore available for each and every character. Cypher can generate any character from an enormous resource of type faces. With Floating Viewpoint Control, Cypher users can orchestrate the movement of the caption or its individual characters with the utmost ease. Each visible character can be modified separately or together in size position, rotation or perspective. Each color in a caption can be different, multi-colored, and even animated to produce unusual color changes and effects. Traditional typographic capabilities such as kerning, letter spacing, word spacing, text justification and line spacing are designed into the Cypher system, as well as rolls and crawls.

Harry-Digital CEL Recorder

Harry, is a digital cel recorder for use with Paintbox digital art/graphics system.

Harry allows cel animation, video retouching, matte work, and video rotoscoping to be performed directly from a Paintbox touch tablet.

This capability eliminates the need for complicated frame-by-frame editing sessions with video tape recorders. Harry can do it easier, faster, and in digital form.

Harry is a real time random access record/replay system fully integrated with the Paintbox. Cels can be prepared one at a time on the Paintbox and then automatically stored in Harry. Capacity is 2,700 cels.

During rehearsal or sequence build-up, Harry can replay at any speed. Any cel can be edited or repeated for twinning purposes. Cels can be replayed at normal video frame rates for program output.

Harry can also record approximately 90 seconds of live video which can then be retouched one frame or field at a time. The modified video can be edited and replayed in real time.

Complex matte preparation and rotoscoping can likewise be performed frame-by-frame from a live source returning to a live replay.

All these functions can be done easily using the Paintbox menu. No additional control panels are required. Like the Paintbox, Harry has been designed to be used by artists and graphics designers.

Mirage

Viewpoint Control Panel

Paintbox System

Options for Harry

Rainbow bringing several important enhancements together in a single package. Included are: Color Grading, Color Changing, Track and Trail, Differencing and Averaging.

Dynamic Rounding This feature allows the combining of digitally generated pictures without the intrusion of annoying interference artifacts.

Paradoxically, the totally pure, noise-free nature of digital pictures generates noise when two such pictures are added together—an inherent problem with the digital standard. The option package eliminates this problem, taking the Harry one step beyond the digital standard.

Audio Scratch Track This feature gives Harry a 60 second random access internal audio scratch track facility (optionally 120 seconds), allowing operators to make perfectly timed cuts against audio—frequently the controlling factor in an editing job.

Operating System Refinements Are:

- Non-additive Mixing—neatly complementing Harry's existing additive mixing capabilities
- Enhanced clip library management system for easier and faster access to stored clips; these are now organized alphabetically and a keyword search facility has been added
- Library for storing keyer set-ups—invaluable in complex multi-generation edits

QUANTEL*Video Effects Systems***DLS 6030 Digital Library System**

- Small size, compact electronics
- Up to 6400 stills storage capacity
- Standard SMD interface built in
- Powerful, user-friendly control
- Digitally-linkable capability
- Store digitally on standard video tape
- Digital production effects possible

With unprecedented capabilities for recording, accessing and presenting pictures, sophisticated disk storage, digital production effects, and limitless off-line digital storage on standard videotape, the DLS-6030 can meet your most demanding requirements. Now and far into the future.

Storage can be either field or frame to give you the flexibility you need for pictures and captions.

The DLS 6030 accepts asynchronous input so you can capture pictures from incoming remotes.

Picture grab lets you capture stills from live video in rapid succession, then later edit them to select those you want to store permanently.

**DLS 6030**

You can also erase individual pictures from the disk at any time without affecting pictures stored on adjacent tracks. Special "write protect" features are included to prevent accidental erasure.

Since all picture information remains in digital form, complete fidelity is maintained without generation loss—even if you use small ENG-type recorders. An elegant digital innovation from the digital video people.

DSC 4800 Satin TV Standards Converter

- Freeze
- Noise reduction
- Component input and output
- 4:2:2 component digital input/output
- Auto input standard select
- Overscan
- Internal test signals
- Remote control
- Engineering set-up
- Laser frame
- Image enhancement
- Revert
- Single wire reference

Satin is an advanced bidirectional broadcast quality TV standards converter. Besides handling PAL and NTSC signals, other color standards can be processed via the component RGB input and output. Picture quality is excellent. This is achieved because Satin is completely digital—with the digital decoder and coder contained in the Codec and the line and field conversion taking place in the standards converter unit. The result is a superb technical performance which is maintained year in and year out. Satin is ready now for the digital studio. Video processing is SMPTE 4:2:2 component digital format in accordance with the CCIR.601 international standard. Satin also features a digital interface conforming to the international standard—a further building block in the realization of the all-digital studio.

**DSC 4800 (Satin)**

QUANTUM AUDIO LABS, INC.**Broadcast/Production Consoles****Series 22 Broadcast/Production Modular Consoles****General**

- Mainframes accommodating 8, 14, 20 or 28 inputs
- Modular construction, right down to the connector panels
- Four output program buses (2 stereo pairs)
- Bus outputs transformer balanced and floating
- Stereo program/audition masters
- Rackmounted power supply
- Built-in talk-back/slating system (Provisions for external talk-back)
- Control room and studio monitor switching
- Control room headphone and cue speaker amps included
- Connector for external talk-back mike
- Built-in oscillator 30Hz, 100Hz, 1kHz, 10kHz
- (2) bus-assignable echo returns
- "On-Air" light logic from any channel "on" button

Input Modules

- Mike inputs transformer balanced and floating
- Line inputs differentially balanced (Not 2201)
- Peak overload indicators on mike preamps
- Remote start logic for cart and tape machines
- Individual Mike/Line A/B switching
- Pan-pot and balance controls
- Prefader audio cue circuit
- Phase inverting switch
- Penny and Giles, 4" (long throw), conductive plastic linear attenuators
- Input level trim vernier controls (20dB range)
- (2) Auxiliary feeds: Echo and Foldback
- 3-band equalizer with In/Out switch
- 100Hz high-pass filter

Specifications**GENERAL**

Frequency Response:	20Hz to 20,000Hz \pm 1dB (re 1kHz)
Equiv. Input Noise:	\leq -127dBm (20Hz to 20,000Hz)
Output S/N Ratio:	\geq 80dB
Output Distortion:	\leq 0.1% THD up to +24dBm; (30Hz to 20kHz)
Slew Rate:	\geq 10V/ μ s
Power Requirement:	100-120/200-240VAC (switchable); 50/60Hz
Power Consumption:	22/8 1VA; 22/14 1.3VA; 22/20 2VA
Channel Separation:	Main outputs: 80dB at 1kHz; Input to Input: below noise level
Overall Gain:	103dB typical

INPUTS

Mike Inputs:	Transformer balanced and floating; Full 200 ohm nominal impedance sources; (actual input impedance 1200 ohms broadband). -60dB nominal input level; 20dB gain vernier
Line Inputs:	Differentially balanced; Actual input impedance \geq 15K ohms; Nominal input level: +4dB, Acceptable level range: -20dB to +30dB
Echo Return Inputs:	Differentially balanced; Nominal level: +4dB; Input impedance: \geq 15K ohms

EQUALIZERS

2201 Mono Modules:	Low: 50Hz shelving or 200Hz peaking; \pm 12dB Presence: 1500Hz or 3000Hz; \pm 12dB High: 6kHz peaking or 12kHz shelving; \pm 12dB
2202 Stereo Modules:	Low: 100Hz shelving; \pm 12dB Presence: 1kHz; \pm 12dB High: 10kHz shelving; \pm 12dB
High Pass Filter:	12dB/octave slope (-3dB point at 100Hz)

OUTPUTS

Main end	Transformer balanced and floating; +8dBm
Aux. Outputs:	Nominal level (strappable for other nominal levels) +24dBm max.
Monitor Outputs:	Control room and studio: unbalanced; 0dB nominal; 15 ohm source impedance; +22dBm max.
HS end Cue Speaker:	5W, 8 ohm self-contained amplifier
Optional Outputs:	Direct mono/stereo output from each input; Differentially balanced; +24dBm max.

**CONNECTORS**

All inputs: Female Q-G (XL) type; ("B" inputs of 2202 stereo modules: ribbon connector). All bus outputs, foldback, echo send: male Q-G (XL) type; Monitor, HS, cue facilities: Barrier strip on power supply. Direct mono/stereo outputs (optional: ribbon connectors. Auxiliary inputs 2210 (option): ribbons connectors. Start contacts and "On Air" light logic: ribbon connectors.

Main Frames: (4-output Series 22)

22/08	8-input main-frame-no input modules	\$3900.00
22/14	12-input main frame-no input modules	4700.00
22/22	22-input main frame-no input modules (8 + 14)	6600.00

Module Prices

2201-A	As above but without EQ	\$375.00
2202	Stereo line input module with 3-freq. EQ.	475.00
2202-A	As above but without EQ	425.00

Available Accessories

01	Blank panel for unused position	\$ 15.00
02	Transformer balancing installed (e.g. inputs)	75.00
03	Mono output option-metered	350.00
04A	Digital clock/timer with edge panel controls	200.00
05	Spare parts kit	500.00
06	Service extender card	100.00
07	Instruction and service manual (spare)	35.00
08	Phantom Powering:	
	08-1 22/08 input mainframe	300.00
	08-2 22/14 input mainframe	350.00
	08-3 22/22 input mainframe	420.00
09	Direct output preparation-Per console:	
	09-1 22/08 console	125.00
	09-2 22/14 console	150.00
	09-3 22/22 console	180.00
10	Direct output per channel of input mode	60.00
11	2210 4-line auxiliary input switch assembly	200.00
12	Additional 2210 assemblies	155.00
13	5.4m (18') interconnecting cable set (two) (replacing standard 2.7m (9') set)	25.00
14	Audition VU meters follow	100.00
	Control Room monitor selector switch	
15	Audition stereo P and G linear fader (with 2205-B Monitor Module)	350.00
16	4 P and G program/audition submaster faders (two each on two panels)	500.00

QUICKSET INTERNATIONAL, INC.

Light Weight Tripods/Trolley/Heads/Dolly

**QuickSet Husky
(Wt. Capacity 17 lbs.)**

Tripods, Counterbalance Spring Heads
 Load Capacity17 lbs. (7.7kg)
 Maximum Height . . .57"-72" (144.8-182.9cm)
 Minimum Height . . .23"-31" (58.4-78.7cm)
 (dependent on model)
 Column Height16" (40.6cm)
 Tilt Angle60° up, 90° down
 Pan Rotation360°
 Weight7 lbs. (3.2kg)

QKTH-1
 Lightweight all aluminum tripod. Spring loaded counterbalance head, safety elevator column, all black finish. 2-section tubular legs.

QKTH-3
 Same as QKTH-1 with 3-section tubular legs.

QKTH-7
 Same as QKTH-1 but with strut supports.

QKTH-9
 Trolley, Same as QKTH-1 but with single length leg with struts and detachable wheels.

Photographic Tripods
 Load Capacity17 lbs. (7.7kg)
 Maximum Height . . .72"-90" (182.9-228.6cm)
 Minimum Height . . .30"-31" (76.2-78.7cm)
 (dependent on model)
 Column Height16" (40.6cm)
 Tilt Angle60° up, 90° down
 Pan Rotation360°
 Side Tilt40° up, 105° down
 Weight7.5-8.25 lbs. (3.4-3.75kg)

QKTH-17
 Lightweight aluminum tripod. 3-section elevator column and 3-dimensional pan, tilt and side tilt head.

QKTH-21
 Same as QKTH-17 but with 4 section tubular legs.

QKTH-30 Fluid Head Tripod System Head
 Capacity3-12 lbs. (1.3-5.5kg)
 Pan Rotation360°
 Tilt Angle60° up, 90° down
 BasePermanently Affixed to Column
 Handle14" with Custom Grip Mounting . . .Quick-On/Off Plate with Safety Lock, 3^{3/4}" x 2^{1/2}" with 1/4"-20 screw. 3 Balancing Locations

QUICKSET INTERNATIONAL, INC.

*Medium Weight Tripods/Pedestals/
Columns/Heads/Dollies*

**QuickSet Samson
(Wt. Capacity 70 lbs.)**

QST-1 ENG/EFP Tripod

Load Capacity 70 lbs. (31.8kg)
Maximum Height 58" (147.3cm)
Minimum Height 32" (81.3cm)
Weight 9 lbs. (4.1kg)

QST-1

Strong, lightweight tripod, struts, extendable legs. Without elevator column.

QST-3 Tripod With Elevator

Load Capacity 40 lbs. (18.2kg)
Maximum Height 76" (193cm)
Minimum Height 34" (86.4cm)
Weight 10 lbs. (4.5kg)

QST-3

Strong, easily portable tripod with geared elevator center column.

QST-5

³/₄ size version of QST-3
Maximum Height 55" (139.7cm)
Minimum Height 21" (53.3cm)

QST-9 Trolley

Load Capacity 40 lbs. (18.2kg)
Maximum Height 54" (137.2cm)
Minimum Height 36" (91.4cm)
Column Height 18" (45.7cm)
Wheel Circle 34" (86.4cm)
Weight 13 lbs. (5.9kg)

QST-9

Trolley, tubular, single section legs with wheels permanently attached. Geared elevator column.

QSP-1 Mobile Pedestal

Load Capacity 40 lbs. (18.2kg)
Maximum Height 55" (139.7cm)
Minimum Height 37" (94cm)
Wheel Circle 28" (71.1cm)
Weight 23 lbs. (10.5kg)

QSP-1

Mobile pedestal has geared elevator column housed within 4" diameter vertical tube. Three radiating arms, at the base, house 4" wheels.

QSC-1 Stationary Column

(includes Side Arm and Head)
Load Capacity 15 lbs. (6.8kg)
Maximum Height 30" (76.2cm)
Minimum Height 37" (94cm)
Horizontal Reach 10" (25.4cm)
Weight 8 lbs. (3.6kg)

QSC-3 Safety Elevator Column Unit

Load Capacity 25 lbs. (11.4kg)
Maximum Height 24" (60.9cm)
Minimum Height 6" (15.2cm)
Weight 6 lbs. (2.7kg)

QSC-3

Geared elevator column with mounting flange.

QSD-1 Dolly

Load Capacity 50 lbs. (22.7kg)
Wheel Size 4" x ³/₄" (10.2 x 1.9cm)
Wheel Circle 42" (106.7cm)
Folds to 6 1/2" x 7 1/2" x 21 1/2"
(16.5 x 19.0 x 54.6cm)
Weight 9 lbs. (4.1kg)

Video Friction Head

Load Capacity 25-35 lbs. (11.4-15.9kg)
Tilt Angle 45° up, 90° down
Pan Rotation 360°
Dimensions 5 1/2" x 6 1/2" x 6 1/2"
(14.1 x 16.6 x 16.6cm)
Weight 2 1/2 lbs. (1kg)
Mountings 1/4 x 20 camera screw

QSH-4

Standard Counterbalance Spring (25 lb. cap.)

QSH-3

Heavy-Duty Counterbalance Spring (35 lb. cap.)

³/₈ x 16 mounting screw available on special order.

QSH-6 CAM Head

Load Capacity 40 lbs. (18.1kg)
Tilt Angle 30° up, 40° down
Pan Rotation 360°
Dimensions 8 1/2" x 6 1/2" x 4 1/2"
(21.6 x 16.6 x 11.5cm)
Mountings 1/4 x 20 camera screw

³/₈ x 16 mounting screw available on special order.

QSH-9 Photographic Geared Still Head

Load Capacity 25 lbs. (11.4kg)
Tilt Angle 45° up, 90° down, ± 15° side
Pan Rotation 360°
Dimensions 8 1/2" x 6 1/2" x 6"
(21.6 x 16.5 x 15.2cm)
Weight 2 1/2 lbs. (1.1kg)

QSH-11 Geared Movie Head

Load Capacity 25 lbs. (11.4kg)
Tilt Angle 45° up, 90° down
Pan Rotation 360°
Dimensions 6" x 6 1/2" x 7 1/2"
(15.2 x 16.5 x 19cm)
Weight 2 lbs. (1kg)

Tripods, Pedestals, Trolley and Columns

QSH-19	"Junior" (Wt. Cap. 30 lbs.) For QST-1 Tripod	853.00
QSH-25	"Super-Hydro" (Wt. Cap. 50 lbs.) For tripods with Samson columns	1102.00
QSH-27	"Super-Hydro" (Wt. Cap. 50 lbs.) For QST-1 Tripod	1081.00

Dolly and Accessories

QSD-1	Dolly for QST-1 and QST-3 tripods	\$175.00
QSM-1	Second Control Arm for Video, Cam and Fluid Heads	51.00

QSH-6

QSH-15 Mini Fluid Head

Load Capacity 10 lbs. (4.5kg)
Tilt Angle ± 90°
Pan Rotation 360°
Dimensions 4" x 5" x 6"
(10.2 x 12.7 x 15.2cm)
Base For Samson Column
Weight 4.5 lbs. (2.0kg)

Junior Fluid Heads

Load Capacity 30 lbs. (13.6kg)
Tilt Angle ± 85°
Pan Rotation 360°
Dimensions 4" x 6" x 6"
(10.2 x 15.2 x 15.2cm)
Weight 7.0 lbs. (3.2kg)

QSH-17

For Tripods w/Samson Columns

QSH-19

For QST-1 Tripod

Super-Hydro Fluid Head

Load Capacity 50 lbs. (22.6kg)
Tilt Angle ± 80°
Pan Rotation 360°
Dimensions 6 3/4" x 6" x 7"
(17.1 x 15.2 x 17.8cm)
Weight 10 3/4 lbs. (4.9kg)

QSH-25

For Tripods w/Samson Columns

QSH-27

For QST-1 Tripod

QUICKSET INTERNATIONAL, INC.

Headsets/Headphones

Single Earphone Astrolite

Double Earphone Astrolite with ventilated cushions accommodate eyeglass frames

Astrolite MK II Series Headsets/Headphones

The Astrolite MK II Series is a comprehensive range of communication and high fidelity headsets and headphones combining comfort and performance.

Astrolite features deep, soft earpads that are available in two versions: The standard noise-reducing cushion, and the ventilated (notched) cushion (provides air circulation and allows the user to hear ambient sound). In addition, all headsets are supplied with a soft padded headband. Astrolite headsets may be provided with a single earphone or with double earphones, and the double earphones can be independently wired. The choice of microphone types are: Carbon, noise-canceling carbon, electret, noise-canceling electret, dynamic, and noise-canceling dynamic. Mike level to carbon level amplifiers are available, and are located inside the earshell. The boom arm rotates either for left or right side use and has tension adjustment. Astrolite headsets are robust, reliable, and ideally suited for commercial applications which require comfort and the ability to withstand rough usage.

Applications: Astrolites are used around the world in many public and commercial areas of industry, but are especially suitable in the broadcasting and aviation fields. The single phone Astrolite is popular with users who need one ear free for telephone or intercom applications.

For Intercom Systems

Microphone Type	Carbon Systems	
	Single Earphone	Double Earphone
Carbon	2655-CS4 \$179.00	2635-CS6 \$229.00
Noise-Canceling Carbon	2654-CS4 \$199.00	2634-CS6 \$249.00

Astrolite Accessories

Part No. 19405

Pair of ventilated ear cushions which eliminate ear perspiration, accommodate eyeglass frames, and permit user to hear ambient sound without removing the headset...especially good for use in broadcast booth to communicate with spotters, engineers, and other commentatorspr./\$14.00

Part No. 19408

Pair anti-perspiration covers for use with standard cushions to absorb perspirationpr./10.00

Part No. 104382

Strain relief cable clamp to attach headset cable to shirt or coat which will eliminate weight of cable from headset.29.00

Part No. 2701/28

Cough switch (spring-loaded, clickless switch to kill microphone for Sportscaster application) installed on main cable and supplied with clothing clip.55.00

Part No. 2678/80

Windscreen cover for moving coil type microphone .3.00

Part No. 8601/1

Windscreen cover for electret type microphones (supplied standard) extra as spare3.00

RACAL/TELEVISION EQUIPMENT ASSOCIATES, INC.

Headsets/Headphones

Minilite Lightweight Headset/Headphone

- Sturdy nylon headband or substitute your eyeglass frame
- Quality dynamic microphone
- Earphone pivot
- Adjustable acoustic microphone tube
- Soft funnel-like earpiece—removable
- Double sided available
- Sound collector

The Minilite is a super lightweight headset with minimum head contact and no physical ear contact. The receiver earpiece is mounted on a swivel joint and is fully adjustable in all directions so that nothing must touch the inner ear as the soft, funnel-like molding directs sound into the ear.

The microphone is acoustically coupled by means of a slim, flexible plastic tube which adjusts for optimum performances.

Overall, the Minilite is an excellent headset for use over extended periods of time. It is durable and parts are easily replaced.

- Minilite 6751** For dynamic intercom
Magnetic type \$229.00
- Minilite 6751-CS4** For carbon intercom
Amplified magnetic type. 349.00

Freedom-1 Lightweight Headset/Headphone

- Unobtrusive
- Excellent stability
- Ultra lightweight
- Noise canceling
- Hygienic
- Attractive design

The Freedom-1 has a cushioned, flat surface receiver with a fully adjustable headband. It combines comfort with technical excellence and is geometrically designed to achieve maximum stability without the user experiencing any noticeable pressure on the head.

The noise-canceling electret microphone (which reduces background noise and eliminates outside interference) has a carbon level equivalent amplifier inside the earphone. The rugged miniature microphone is easily adjustable for the user's convenience. With an approximate weight of only 2 ozs. and maximum stability maintained at all angles, the user will hardly notice the presence of Freedom-1 when it is worn.

- Freedom-1 4000-CS4** \$299.00
- Freedom-1 4000-310** Without switch and coiled cord—Terminated plug PJ051B 229.00
- Freedom-1 4000 TEL**—Terminated modular telephone plug 229.00

Secrette Secure Headset/Headphone

- Comfortable canvas headband
- Straps secure with hook and loop fastener—quick and easy to fit
- One-piece rubber molding encloses quality earphone
- Noise canceling magnetic or carbon microphones

Secrette meets the needs of those requiring a headset which is lightweight, comfortable, single-sided, and very secure.

Originally designed for combat infantrymen, this headset will not dislodge in use—a plus for working with handheld cameras, etc. A webbing headband is attached to a light cradle around the earpiece and secured around the user's head.

Secrette is sufficiently compact to be rolled up and carried in a pocket, and the low profile of the earpiece allows the user to wear a hardhat, parka, or skicap.

- Secrette 5352** For dynamic intercom
Noise-canceling magnetic type \$179.00
- Secrette 5354-CS4** For carbon intercom
Noise-canceling carbon type 219.00

Slimgard Noise Exclusion Headset/Headphone

- Comfortable, adjustable headstrap
- Thin earshell fits under hardhat
- Comfortable foam filled earpads
- Sturdy adjustable boom arm available on either earshell
- Choice of noise-canceling microphones
- Adjustable neckband secures headset for maximum attenuation and minimum pressure

Slimgard is a lightweight, comfortable headset with ambient noise exclusion to provide communication in noisy conditions. This exclusion protects the user against hearing damage as well.

The headset is designed to fit under most safety helmets, hats and caps, and its slim profile makes it less obtrusive and unsightly than other high-noise type headsets. It is ideal for use with handheld cameras. Its ruggedness surpasses the competition.

The benefits offered by Slimgard—lightweight, noise exclusion, minimal maintenance, flexible design—make it a versatile headset for use in applications such as air traffic reporter, pilot, television camera operators covering sports and music, and other high-noise industries.

- Slimgard 3631-G2** Noise-canceling dynamic type . . . \$369.00
- Slimgard 3637-CS6** Noise-canceling amplified carbon level. 479.00
- Slimgard 3637-G1** Traffic reporter's headset 419.00

FREEDOM-1	123dB Re 2x10 ⁻⁵ Pa/IV	300-3400Hz	150 ohms

AMPLIFIERS:
<p>FOR MINILITE: Carbon Level Amplifier "R" Current Drain 7 mA Minimum terminal voltage 8V Polarity Reversing Diodes Maximum excitation 24V behind 470 ohms gain adjustable up to 44dB Design output 160mV into 150 ohms Signal to noise 60dB Response 250 to 4000Hz</p>
<p>FOR ELECTRET: Integral Amplifier PT No. 16551 for direct carbon replacement with electret microphone Output 250mV (100 load) for supply voltages greater than 12V, amplitude is reduced at lower supply voltages) A pre-set gain control gives an adjustment range of 30dB Supply Voltage 3 to 28V DC (either polarity) Current consumption 10mA (approximately) Frequency response 300 to 5000Hz Noise better than 60dB into 100 (300-4000Hz)</p>
<p>FOR FREEDOM -1: Output 250mV for 100 ohm load Terminal voltage 5V at 10mA to 10V at 100mA for 100 ohm load (equivalent to 6V-20V) Line current consumption 10mA maximum Frequency response 300 to 4kHz (effective approximate) Noise better than -60dB into 100 ohms (300-4000Hz)</p>

Cables:	
BROADCAST TYPE:	Coil cord, 10' extended, shielded microphone wires. A 3' tangent end, a bifurcation (splitter) at plug end to provide separate cable end for microphone plug and phone plug; plugs not included. (Also available with optional 6' straight cable with bifurcation.)
DYNAMIC SYSTEMS:	Astrolite and Slimgard Series: Coil cord, 10' extended, has shielded microphone wires, optional microphone switch (add \$30.00), no plug included. Minilite and Secrette Series: 6' straight cable, shielded microphone wires, optional microphone switch (add \$30.00), no plug included.
CARBON SYSTEMS:	Coil cord, 10' extended (or optional 20' extended, add \$10.00), has a 3-position microphone switch (with belf clip) and plug PJ051B for single phone (or monaural double phone). The double phone -- independently wired -- has plug 414.

2.0 Meter Antenna System

- True parabolic reflector surface
- Matched high performance Laux/Seavey feedhorn
- Galvanized reflector surface and mount
- Powder coated finish
- Infinite declination adjustments
- Bronze bearings
- Certified for 120 mph wind load
- Range tested and certified at 37.6dB gain

The 2.0 antenna system is small, only 6.5' in diameter, yet it outperforms many 8' antennas. The combination of military tolerances, additional surface area and the Laux/Seavey feedhorn provides nearly 2dB more gain than a standard 6' antenna.

2.8 Meter Antenna System

- True parabolic reflector surface
- Matched high performance Laux/Seavey feedhorn
- Galvanized reflector surface and mount
- Powder coated finish
- Infinite declination adjustments
- Bronze bearings
- Certified for 120 mph wind load
- Range tested and certified at 40.1dB gain

2.8 Meter PERF Antenna System

- True parabolic reflector surface
- Matched high performance Laux/Seavey feedhorn
- Galvanized reflector surface and mount
- Powder coated finish
- Infinite declination adjustments
- Bronze bearings
- Certified for 120 mph wind load
- Range tested and certified at 40.1dB gain
- C and Ku-compatible .125 perforation pattern

The 2.8 PERF antenna system provides the same high performance as the 2.8 solid antenna with the added benefit of see-through petal design that blends into any surrounding.

9.0 Meter Antenna System

- True parabolic reflector surface
- Matched high performance Laux/Seavey feedhorn
- Galvanized reflector surface and mount
- Powder coated finish
- Infinite declination adjustments
- Bronze bearings
- Certified for 120 mph wind load
- Range tested and certified at 40.1dB gain

9.0 Meter PERF Antenna System

- True parabolic reflector surface
- Matched high performance Laux/Seavey feedhorn
- Galvanized reflector surface and mount
- Powder coated finish
- Infinite declination adjustments
- Bronze bearings
- Certified for 120 mph wind load
- Fixed declination adjustments
- Range tested and certified at 40.1dB gain
- C and Ku-compatible .125' perforation pattern

The 9.0 PERF antenna system provides the same high performance as the 9.0 solid antenna with the added benefit of see-through petal design that blends into any surrounding.

RADIATION SYSTEMS, INC.

Satellite Antennas

240KV 2.4 Meter Satellite News Vehicle (SNV) Antenna

The 240KV 2.4 meter antenna is a high performance Ku-Band antenna designed specifically for SNV applications. Besides meeting the FCC 2° spacing requirements, its aero-dynamic design with cycloidal drives makes it the ideal SNV antenna. The complete package mounts above the roof line resulting in cost effective installation and efficient use of vehicle space. The state-of-the-art design results in excellent beam pointing along with easy, safe stowing and deployment.

Superior RF performance and extreme ruggedness is achieved through the monocoque construction consisting of 16 front and rear skins reinforced with radial ribs. The panel skins are formed from high strength 6061-T6 aluminum sheets using the exclusive AccuShape* process, assuring extremely accurate contouring and long-life durable structure. The reflector assembly is attached to a structural spine that also acts as a weatherproof electronics enclosure for the LNA, waveguide switch and HPA.

The corrugated feed horn provides excellent illumination characteristics at the 14.0-14.5GHz transmit frequency band. The secondary patterns meet the FCC transmit pattern envelope required for 2° satellite spacing. The feed horn also provides excellent on-axis and off-axis cross-polarization specifications yielding 35dB and 30dB respectively.

The feed is connected to a broad band orthomode transducer providing rectangular WR-75 waveguide ports which operate across the 11.7-12.2GHz receive and 14.0-14.5GHz transmit bands. Each orthogonal port can be used in either a transmit or receive mode which allows easy verification of cross-polarization discrimination via waveguide switch actuation. By adding a diplexer and filter to either or both ports, the feed system can be easily configured initially or upgraded later to 3-port or 4-port operation.

The feed horn, OMT, and polarization drive components are located at the antenna focal point. The assembly is held in position by two hinged rigid legs which support cables and waveguide, and dual gas cylinder struts which extend into position as the reflector is deployed.

Gain(Midband) R/T ¹	Receive	Transmit
4-Port ²	47.4dBi	48.8dBi

¹Referenced at rear of reflector and includes waveguide loss.

²Referenced at rear of reflector and includes waveguide and diplexer losses.

500CS(C-Band) and 500KS(Ku-Band) 5.0 Meter Satellite Earth Station Antennas

The 500CS and 500KS are designed for use with video, message and data networks. They meet FCC radiation pattern requirements for operation at 2° satellite spacing. They also meet current Intelsat and Eutelsat radiation pattern specifications.

Superior RF performance is achieved through the use of twenty-four precision AccuShape* reflector panels and a prime focus feed. The high-strength aluminum reflector panels are supported by an identical number of lightweight trusses. All panels are completely interchangeable. A mounting plate interfaces the trusses to the mount. No alignment or testing of the reflector during installation is necessary.

The feed is a corrugated ground plane aperture which yields very circular symmetric illumination characteristics. Additionally, the design provides excellent cross polarization isolation performance. The standard Ku-Band feed is capable of dual receive or receive/transmit output configurations. Optional diplexer assemblies can convert this feed to a 3-port (2-Rx, 1-Tx) or 4-port (2-Rx, 2-Tx) configuration. The feed is supported by a quadrapod spar configuration for optimum secondary pattern control.

The galvanized steel mount employs a straightforward elevation-over-azimuth geometry to allow easy pointing to any visible satellite within the orbital arc. A margin of safety has been built into the design to ensure antenna support under adverse environmental conditions. The mount's stiff, rugged construction provides the pointing accuracy needed for either C-Band or Ku-Band operation.

The tripod mount design allows for easy installation on three concrete piers. Each pier is typically 18" diameter and 8' deep. Only about two cubic yards of concrete are needed. The antenna is sensitive to foundation heading due to its ability to be pointed 360° in azimuth.

Frequency	C-Band Models 500CS (with Linear Receive/ Transmit Feed)		Ku-Band Models 500KS (With Linear Receive/ Transmit Feed)		
	Receive	Transmit	Receive ¹	Receive ¹	Transmit
	3.7-4.2GHz	5.925-6.425GHz	10.95-11.2GHz	11.7-12.2GHz	14.0-14.5GHz
Gain (Midband)	44.2dBi	48.0dBi	52.9dBi	53.6dBi	55.0dBi

¹Choose one receive band. Other bands and special wideband feeds are available.

RADIATION SYSTEMS, INC.**Satellite Antennas****C-Band Satellite Earth Station Antennas**

- 551CF 5.5 Meter
- 700CH 7.0 Meter
- 920CS 9.2 Meter

These antennas are designed for economical, high performance video, message and data communications. They meet the Intelsat Standard F-1 performance specification.

The antennas employ precision AccuShape* reflector panels and dual shaped Cassegrain optics. The feeds have corrugated horns for high cross-polarization isolation levels.

Twenty-four high-strength aluminum panels provide the durability needed to withstand rough handling and a wide range of environmental conditions. The panels are mounted to radial members which attach to a central hub. No alignment or testing of panels during installation is necessary. The hub also provides a weather resistant enclosure for protection of low noise amplifiers and other electronic components.

The elevation-over-azimuth mount consists of an upper elevation trunion rotating on a heavy-duty ball bearing and supported by a tubular steel kingpost. The mount is available in both manual and motorized versions. Manual elevation and azimuth positioning is accomplished with threaded rod assemblies. Pointing angles are read from dial indicators on the mount.

Interface to a foundation or rooftop platform is via a circular symmetrical eight-hole flange on the bottom of the kingpost. Foundation heading is not a critical factor due to the unique kingpost design which allows unrestricted 360° azimuth positioning during installation. Once the desired azimuth operational sector is determined, the azimuth drive unit is secured and the position is calibrated. The azimuth operational sector is 45° for the manual drive and 120° for the motorized version. This sector can be shifted at any time without special tools.

Optional motorized jackscrew actuators are used for the elevation and azimuth axes and a polarization drive unit rotates the feed. These drive options can be easily added to a manual antenna in the field.

The optional Series 4000 microprocessor-based programmable control system is capable of positioning the antenna to within .02° accuracy. In the manual mode, it allows an operator to run or jog each axis while monitoring the position on a panel display. In the automatic mode, it can store up to 40 satellite positions and automatically direct the antenna to any position according to a preprogrammed schedule. Options are available for program track and for controlling other earth station components.

An economical 3-axis jog controller, the 4050, is also available.

	Receive Frequency (Midband)	Receive Gain	Transmit Frequency	Transmit Gain

RADIATION SYSTEMS, INC.**Antennas****1100CS/1100KS****11.3 Meter Satellite Earth Station Antenna**

- Qualified for 2° satellite spacing
- Outstanding sidelobe performance
- High gain
- 180° azimuth capability ensures coverage of future 55°-143° orbital arc
- Large, weather resistant hub for mounting electronics

The Model 1100CS (C-Band) and 1100KS (Ku-Band) earth station antennas are engineered for high gain and low sidelobes to meet the demanding requirements of high capacity satellite communications. Their high performance radiation patterns allow easier frequency clearance in areas congested with terrestrial microwave routes and enable them to operate with satellites spaced 2° apart. They are recommended in applications for quality domestic transmission and reception of video, voice, message and data. The Model 1100CS is also suitable for international Intelsat B stations.

Options

- Motorized drives with manual or programmable controllers
- Work platform and ladder
- 180° azimuth travel in two 90° sectors
- 145° azimuth travel in overlapping 110° and 90° sectors
- Deicing systems. Manual and automatic versions for feed and subreflector, half reflector and full reflector
- Feeds with the following polarizations:

Receive Only	Receive/Transmit
Single linear	Orthogonal linear
Dual linear	Circular
Dual circular	Coplanar linear
	3-port linear frequency reuse
	4-port frequency reuse (linear or circular)

- Lightning arrestors
- Hub fans, light and duplex AC outlet

700CS/700KS**7 Meter Satellite Earth Station Antenna**

- High performance RF patterns
- Qualified for 2° satellite spacing
- Programmable control system
- Protection and maintenance of LNA's afforded by extra large hub
- Stiff, rugged mount for accurate pointing

The 700CS (C-Band) and 700KS (Ku-Band) 7-meter antennas are designed for high performance video, message and data applications. These antennas meet the new FCC requirements for 2° satellite spacing.

Options

- Motorized drives with programmable 3-axis (elevation, azimuth, polarization) controller
- 180° azimuth travel in two 90° sectors
- 145° azimuth travel in overlapping 110° and 90° sectors
- Deicing systems
- Feeds with the following polarizations:

Receive Only	Receive/Transmit
Single linear	Orthogonal linear
Dual linear	Circular
Dual circular	Coplanar linear
	3-port linear frequency reuse
	4-port frequency reuse (linear or circular)

- Work platform and ladder
- Lightning arrestors
- Hub fans, light and duplex AC outlet

**1100CS/1100KS****551CF/551KS****5.5 Meter Satellite Earth Station Antenna**

- Ku-Band model qualified for 2° satellite spacing
- Rugged kingpost mount has 360° azimuth travel
- Easy to install on rooftop or ground foundation
- Large hub for protection and maintenance of electronics
- Optional motorized drives

The 551CF (C-Band) and 551KS (Ku-Band) antennas are designed for economical, high performance video, message and data communications. The 551CF meets the Intelsat Standard F-1 performance specification. The Model 551KS meets the FCC requirements for 2° satellite spacing and the Intelsat Standard E-2 performance specification.

Options

- Feed blower for Ku-Band feed
- Motorized drives with 3-axis (elevation, azimuth, polarization) programmable or jog controls
- Deicing systems
- Feeds with the following polarizations:

Receive Only	Receive/Transmit
Single linear	Orthogonal linear
Dual linear	Circular
Dual circular	3-port linear frequency reuse
	4-port frequency reuse (linear or circular)

- Lightning arrestors
- Hub fans, light and duplex AC outlet
- Low temperature protection for motorized drives

RADIATION SYSTEMS, INC.**Antenna Control Systems****4050 Antenna Control System**

- Economical, reliable antenna positioning control system
- Independent control of azimuth, elevation, and polarization axes
- Up to 1000' of remote capability
- Easy to operate

The 4050 Antenna Control System is designed to be a low-cost, 3-axis control system used in applications requiring antennas ranging in diameter from 5.0 meters up to 11.3 meters. The system includes the 4050 Antenna Control Unit, the 4051 Contactor Unit, position sensing potentiometers, motor drive limit switches, and associated cables.

The 4050 allows the operator control of the azimuth, elevation, and polarization axes individually, or simultaneously, via front panel toggle switches. The angular position is displayed by a panel meter located on the front of the control unit. Selection of the axis readout is controlled by rotating a selector switch located on the front panel to display the position data for azimuth, elevation or polarization. A range of 0°-350° is provided for azimuth, 0°-90° for elevation and $\pm 120^\circ$ for polarization. A calibration circuit for each axis is located inside the 19" wide rackmounted chassis.

4051 Contactor Unit

The 4051 interfaces with three drive motors, the motor drive limit switch outputs and data potentiometers by means of a multiple pair cable that connects to the contactor box. AC reversing relays located inside the contactor box are used to control the voltage applied to each drive motor.

Series 4000 Antenna Control System

- Stores and accesses up to 40 satellite positions
- Modern microprocessor-based design
- Simple to operate with prompt/response command and data entry
- Allows automatic repositioning per a preprogrammed schedule
- Remote control capability through RS-232C interface port

The Series 4000 microprocessor-based antenna control system is designed for use with SatCom Technologies' 5.0 meter through 11.3 meter diameter satellite earth station antennas. The system consists of the 4010A Antenna Control Unit; the 4020A Local Control and Contactor Unit; 4030 Optical Position Encoders; video terminal and control cable. By precisely controlling azimuth, elevation and polarization drives, the system can position the antenna within .02° accuracy.

4010A Antenna Control Unit

The 4010A is a microprocessor-based programmable controller which allows manual and automatic positioning of the antenna. It is housed in a standard 19" wide rackmounted chassis and is connected to the 4020A Local Control and Contactor Unit via up to 2000' of control cable. Precision optical encoders on each antenna axis ensure accurate and reliable position monitoring.

Operator interface to the 4010A is via the video terminal which provides full alphanumeric capability. Antenna commands are selected with simple abbreviations. A menu page is available listing all commands for review, or alternatively, they may be displayed and grouped into functional categories. All commands (motive or data entry) are presented in prompt/response format, guiding the operator to the desired result.

**4050****4010A**

In the manual mode, the 4010A allows run or jog of each axis. In the automatic mode, several types of operation are available. The operator can enter satellite longitude and the 4010A will automatically compute the proper azimuth, elevation and polarization angles. It will then activate all axes of the antenna until the position is attained, and store the position data in memory. To access any satellite position previously stored, the operator can review a list which identifies each satellite by name and number. Alternately, he can bypass the list and directly access a specific satellite by its number. Finally, the operator may enter a schedule of up to 100 entries consisting of satellite, date and time, and the controller will automatically reposition the antenna per the schedule. Battery back-up is included to retain data and clock during power outages.

The 4010A includes an RS-232C serial data interface port which allows remote monitor and control of the antenna. Options are available to include remote selection of receiver channels, indication of signal strength and control of other system functions.

4020A Local Control and Contactor Unit

The 4020A includes motor starters, reversing contactors and overload protection for each drive motor. The components are mounted in a NEMA 4 enclosure suitable for mounting on the antenna kingpost. All wiring and components are per the National Electric Code.

Local control of each axis is provided by switches mounted on an interlocking door inside the enclosure. A power switch on this door must be deactivated manually before gaining access to the high voltage components.

Options

- Remote monitor and control of receivers and other system equipment
- Program track
- Protection against transients and lightning induced surges

RADIATION SYSTEMS, INC.**Antennas****Microwave Grid Parabolic Antennas**

- Meet or exceed all existing F.C.C. requirements
- Lightweight, yet extremely strong. Electrical characteristics equal to comparable diameter solid parabolic reflectors
- Cross polarization discrimination response exceeds 40dB
- Wind loading characteristics only 25 to 40% of comparable size solid parabolas
- De-icing available on all models
- Nesting design for shipping ease and economy
- Survival: 125 mph with 1" of ice

Mark Antennas Division offers a variety of sizes of heliarc welded aluminum multi-element grid parabolas for point-to-point relay operation in the 335 to 2700MHz frequency range. The patented (U.S. No. 2,850,735; Canada No. 545,296) grid of construction is lightweight, yet extremely strong. One of the outstanding advantages of the grid antenna is that it has wind loading characteristics of only 25 to 40% of comparable size solid parabolas.

Heated grid parabolas come with completely installed de-icing equipment. The lead jacketed heater cable is securely mounted to the back side of each grid element and terminated in a weather-proof cast aluminum enclosure. The thermostat is preset to activate when the temperature drops to the ice forming range. De-icing power is applied only between 25 and 35°F.

Standard termination of all parabolas in the 335 to 2700MHz range is 7/8" EIA swivel flange or "N" female. (Please specify).

The grid parabola is made of heavy walled, aluminum pipe heliarc welded for superior strength and rigidity. Feeds are constructed of heavy brass components protected against oxidation. The radiator's active element is protected by a durable Teflon (335-960MHz) or Plexiglass (1400-2700MHz) feed housing which assures long life with trouble free operation, with up to 10 psi pressurization.

VSWR is 1.3:1 or better on all antennas listed. Low VSWR to 1.06:1 is also available. When ordering, please specify size, exact operating band, pressurized or non-pressurized, heated or non-heated. 7/8" EIA swivel flange supplied on non-pressurized feeds, with "N" female termination as an option.

RADIATION SYSTEMS, INC.

Antennas

Mini Grid and Short Haul Cylindrical Antennas

- Point-to-point communication
- TV translator/transmitter
- Telemetry
- Off the air UHF pickup

The Mini Grid and Short Haul antennas provide low cost installations for satellite telemetry, TV translator and point-to-point communications.

These antennas offer a new Heliarc-welded aluminum multi-element grid parabolic section antenna for point-to-point communication in the 335-960MHz frequency range.

The unique grid construction is patterned after the patented grid design used on all Mark full-sized grid parabolas.

Feed components are constructed of heavily plated solid brass, and the active element of the radiator is protected by a durable Teflon feed housing to assure long life with trouble-free non-pressurized operation.

Standard input termination is a type "N" female (UG-58) coaxial connector.

Simplified mounting utilizes universal clamps for quick, easy installation to round members up to 3 1/2" diameter.

Please specify exact operating frequency (maximum bandwidth is 20MHz).

RADIO SYSTEMS, INC.

Broadcast Console/Audio Equipment

ESA-10

ESA-10 Broadcast Console

Standard Features

- Thirty Inputs into Ten Linear Faders
- Two Stereo Outputs, Each with Mono Mixdown
- Time of Day Clock
- Digital Timer
- Three Stereo LED Meters

Performance Features

- Ten Remote Start Circuits
- Three Monitor Sends
- Three Muting Circuits
- Three Way Programmable Cue Circuitry
- Internal Cue Amp and Speaker
- Simultaneous Program and Audition Sends
- Two, Four Position Auxiliary Switchers

The ESA-10 offers every standard console operating function. Total flexibility is obtained by allowing user programming of all operator functions and, by providing the widest range of interface with other control room equipment. Special control abilities, make this console the most flexible board in its class. The audio quality and dependable performance combine to make the Radio System ESA-10 the choice in broadcast consoles.

ESA-10 \$9,950.00

DA-8/16

DA-8/16 Distribution Amplifiers

Total isolation: The DA-16 provides 8 stereo or 16 mono, independent audio outputs from one input. The DA-8 provides 8 mono outputs. Each output is completely isolated and has an individual level control. A single feed can be routed to multiple locations of varying level requirements and impedance, protecting the integrity of the signal quality through every output.

Studio agile: Bridging inputs allow these DA's to be connected to a program feed with no line loading. A typical studio application is to connect the DA in parallel with the console air output for distribution of the program signal to other feeds.

Transparent audio: Ultra-low noise levels, fast transient response and low distortion insure that the signals at the output of the DA are an exact image of the input. Only one type, high quality op-amp integrated circuit is utilized for all input and output amplification.

Intelligent packaging: Level controls are accessible, yet tamper resistant, through front panel access holes. All connections are made on convenient, full sized, rear panel barrier strips.

The entire DA occupies only one unit (1³/₄") of rack space.

DA-8— 1 x 8 \$345.00
DA-16— 2 x 16 425.00

TM-2

TM-2 Studio Timer

This easy to operate studio timer counts time up in one second intervals. Six bright, 5/8" high, seven-segment, LED digits display times up to 24:59:59.

Front panel pushbuttons allow operator control of timer functions. "Reset" returns the display to 00.00.00 when in either the run or stop modes. "Start" initiates or continues the count and "Stop" holds the display reading constant. These functions are all remotable through rear panel connections.

Last-event timing can be accomplished by connecting the studio timer to external source equipment through rear panel remote reset terminals. Each terminal is isolated and capacitively coupled so that machines will not interact and the timer will reset (and, if in the run mode, begin to count again) from either a pulsed or holding connection. This reset function can be activated by ground or positive voltage connections.

TM-2 \$175.00
TM-2R w/Remote starts 195.00

PA-1

PA-1 Phono Pre-Amplifier

Real RFI immunity: Input and output RF suppression and ground-plane circuit technology block RF interference, eliminating the need to resort to distortion-prone audio transformers.

Quiet performance: It is hard to tell that the PA-1 is on until you place the stylus on the record. A combination of discrete and integrated circuit components in the input stage yield low noise specifications. Crosstalk between channels is also so low that the PA-1 makes the perfect dual pre-amp for two channel, mono use.

Responsive design: Uniformly high-speed circuitry, with response up to the MHz range, insures the unit's capability to reproduce even the fastest music peaks. Second stage equalization buffers the cartridge for loading changes and provides broadband high input overload protection. Slew induced distortion, transient intermodulation, and input clipping are virtually non-existent.

PA-1 \$295.00

RADIO SYSTEMS, INC.

Audio Consoles/LED Meter and Microphone Preamp System

RS-6/12/18 Consoles

• Differentially balanced input instrumentation amplifiers • Input gain set jumpers and selectable input attenuators, nominal input levels from -60dBm to +10dBm. Max. input level +22dBm • Active balanced line outputs, adjustable 0dBm to +10dBm, max. output +22dBm • Headphone output 1VRMS, 10VRMS max. 600 ohm headphone .05% typical, .1% max. distortion • Monitor sends: 1VRMS nominal, 10VRMS max. 330 ohm unbalanced • Cue input: 2WRMS

Specifications

Impedance: +20K ohm or jumper selected
Headroom: 22dBm at any level
Line Outputs
Impedance: 100 ohm balanced
Distortion: .02% nominal, .05% max., 20Hz to 20kHz, PGM, Aud., and Mono outputs
S/N Ratio: Line: 88dB (or better)
 Mike: 74dB (or better)
Dimensions: 6-Channel—20³/₄" H x 27" W x 9" L
 12-Channel—32³/₄" H x 27" W x 9" L

Microphone Preamp and DCX Circuit Boards/Power Supplies and Cabinets

"DCX" stands for "DC eXternal." It's a unique system of circuit boards, power supplies, and cabinets which are all supplied separately. Combine them to make custom products—each ideally suited to your requirements.

All circuit boards are the same size for easy installation in any DCX cabinet. These boards can be "buddied up" for dual usage — Dissimilar DCX circuit boards can be combined in the same cabinet. Match any DCX circuit card with the internal power supply board. The independent ±18V, regulated 36W power supply will power multiple units — With this much flexibility, you are free to design your own products which fit your application exactly.

Circuit cards	\$69.00
DC-PS181 Internal power supply	\$ 89.00
DC-PS36X External power supply	99.00
DC-CBU Universal box cabinet	39.00
DC-RK7 Single rackmount cabinet	39.00
DC-RK2 Dual rackmount cabinet	49.00
DC-5MA 5 mic pre-amp	325.00

DCX Circuitboard	Model Number	Input Imp (in ohms)	Max. Output Level	THD (Note 1)	Signal/Noise (Note 2)	Channel Separation	Power Consumption (Note 3)	Configuration
5 Mic Pre-amp	DC-5MA	150	+26 dbm	D2%	-97 db	>97 db	7 watts	5 ch.
Phono Pre-amp	DC-PA	47K	+22 dbm	D5%	-70 db	>70 db	2.5 watts	dual/stereo
Line Amp	DC-LA/F DC-LA/S	47K	+25 dbm	D2%	-80 db	>80 db	2.5 watts	dual/stereo
Mic Pre-amp	DC-MA	150	+25 dbm	D3%	-80 db	>80 db	2.5 watts	dual
Headphone	DC-HP	20K	1/2 watt (10 v RMS high Z)	D1%	-90 db	>90 db	6.5 watts	2 ch., stereo
Power Amp	DC-PW	20K	12 watts	D2%	-80 db	—	18 watts	mono
Oscillator	DC-O5	—	+24 dbm	D5%	—	—	1.5 watts	one channel
Synchronizers	DC-TTS DC-TAS	—	—	—	—	—	self powered 1 watt	single

NOTE 1: THD is measured at maximum output before clipping into 600 ohms (8 ohms for the power and headphone amps).
 NOTE 2: Signal to noise measured A weighted, input terminated (where applicable), relative to maximum output. Noise is degraded by approximately 6 db with use of internal power supply.
 NOTE 3: Add power consumption of boards to determine the total number which can be utilized with a common power supply. Internal supply provides 18 watts. External supply provides 36 watts.

xLSCM2 Preamplifier

- Turntable preamp
- Precision performance
- Stereo and mono outputs
- Balanced stereo and balanced combined stereo (mono) outputs
- 0.008% distortion
- ± 0.25dB response
- -90dB S/N
- + 24dBm max. out
- Tabletop or single (R1) and dual (R2) 1³/₄" rackmount

xLSCM2 \$154.00

P-SSM2

P-SSM1/P-SSM2 Mono Solid-State Meters with Power Supply Switchable Peak/VU

The Primus P-SSM1 and P-SSM2 solid-state meters provide you with both of your favorite ballistics, peak and VU. Front-panel selectable and calibrated to ANSI C165 "VU" and the German DIN 45406 Peak Reading specifications.

- Self-contained power supply
- Single or dual meter versions
- Individual level calibrated
- May be used with balanced or unbalanced sources
- Very compact 2" H x 3" W x 7¹/₂" D tabletop case
- Up to 5 units may be rackmounted on a standard 19" x 1³/₄" panel

P-SSM1 Primus Mono Play only \$115.00

P-SSM2 Stereo or Dual Mono 175.00

P-42/MX

P-21/P-42/P-42MX Mono/Stereo Mike/Line Amplifiers and Mixers

The Primus P-21, P-42, and P-42MX are three different versions of mike and line amplifiers that will fulfill any requirements for amplifying, line matching, buffering, and mixing. The P-21 is a straightforward 2-in 1-out mike/line amp. The P-42 is a dual 2-in 1-out mike/line amp. And the P-42MX features the added benefit of being able to mix all four channels into the #1 output. All inputs are mike through line-level gain selectable.

- XLR-type mike input connector
- Quick-disconnect line input and output connectors
- Switch-selectable mixing feature
- Highest quality conductive plastic pots
- May be used with the Primus P-M1 or P-M2 meters for a mini-mixing setup
- All inputs gain selectable from mike-level through high-level

Specifications

Output: Balanced 600 ohm, + 26dBm max.
Inputs: Balanced bridging to + 25dBm in
Distortion: .008% at 1kHz and + 3dBm out
Response: + 0, -1dB; 10Hz-20kHz
S/N Ratio: Mike level; -67dB at + 8dBm out. Line level; -85dB at + 8dBm
Dimensions: Tabletop/bracket mount 2" H x 7" W x 7¹/₂" D. Single or dual rackmounts available 1³/₄" H x 19" W x 7¹/₂" D
Mains: 117VAC, 230VAC, 50/60Hz
 P-21 Mike/line amp (2-in 1-out) \$189.00
 P-42 Mike/line amp (4-in 2-out) 249.00
 P-42MX Mike/line amp (4-in 2-out) with mixing 295.00

P-VG1

P-VG1 Single Channel Compressor

Mike Amplifier, Compressor, and Noise Gate with Compression Ratio Adjust and Metering, and Completely Adjustable Thresholds, the Primus Voice-Guard features balanced inputs/outputs and, as shown, assures complete control over compression depth, background noise base, and decay times. Available in either single or dual mixing versions.

- Adjustable compression ratio
- Adjustable, instantaneous attack, noise threshold
- Compression depth metering
- Adjustable compression threshold
- Highest quality conductive plastic pots
- XLR-type input/output connectors

P-VG1 \$289.00

RAMKO RESEARCH, INC.

Audio Mixers/Distribution and Power Amplifiers

P-4M

P-5MX

P-4M/P-4S

Four Channel Mixer with 6 Inputs

- All inputs are mic/line selectable
- Highest quality conductive plastic pots
- Cueing on all channels
- 4 Channels and 6 inputs
- Switch-selectable VU or peak reading meter ballistics
- XLR-type input/output connectors
- Switch-selectable muting
- Balanced inputs/outputs
- Hi-Lo equalization, selectable for channel 1, 2, or all
- Phones and monitor outputs
- Mono and stereo versions available
- Tabletop/bracket mount or 19" rack panels available

The Primus P-4M Audio Mixer has all of the features you would expect to find in a much larger studio console, but comes in a compact 13/4" H x 11 1/2" W package. Ideal for news rooms, small production facilities, churches, remotes, etc. No other mixer will give you as much performance in this size package. And by adding the P-5MX (Extender), a full eleven inputs may be realized.

P-4M 4 Channel, 6 Input Mixer \$634.00
P-4S Same as P-4M but stereo, 4 input 889.00

P-8S/16M

Audio Distribution Amplifier; 1 x 8 Stereo

- 2" H x 17" W tabletop/bracket or 13/4" H x 19" W rackmount
- Independent, dual-regulated power supplies
- Optional pushbutton selected output metering and phones monitor
- Meter selectable for VU or peak ballistics
- Individual recessed front-panel level controls
- Pot/knob option
- Response flat to 100kHz

The Primus P-8S/16M is a dual one-by-eight Distribution Amplifier with the same high performance featured in the P-3S/6M DA. In addition, these units have dual-regulated power supplies and may be ordered with individual pushbutton selectable output metering and phones monitor. This versatile unit can be used either as an eight-channel stereo DA or as a 16-out mono DA.

P-8S/16M Tabletop \$360.00

P-5MX

Mic/Line Mixer and P-4M Extender

- Highest quality conductive plastic pots
- 5 Channels mic thru line level
- Each channel has switch-selectable send/receive
- Send signal amplified and buffered
- XLR-type input/output connectors
- Balanced inputs/outputs

The Primus P-5MX is a 5-channel mic/line mixer with pushbutton selectable send/receive. In addition, this unit may be plugged into the P-4M to provide 5 additional channels.

P-5MX 5 Channel Mic Mixer \$514.00

xL2

P-3S/6M

P-8S/16M

P-3S/6M

Audio Distribution Amplifier; 1 x 3 Stereo

- Response through 100kHz
- Practically unmeasurable distortion
- Tabletop/bracket; single- or dual-rackmounting
- Input gain select
- XLR-type input and quick-disconnect output connectors
- Individual recessed front-panel level controls
- Pot/knob options

The Primus P-3S/6M is a dual one-by-three audio DA with enough punch to drive any load that might be encountered. Even 8 ohm headphones. In addition, you'll find the specs surpass even the most demanding requirements including SMPTE time code. Gain select allows inputs to operate anywhere from mic through high levels.

P-3S/6M Tabletop \$245.00

xL2 Power Amplifier

2W of professional power

- Dual outputs/music-on-hold, speaker, headphones amp

In the studio or the field. Drives 8/4 ohm loads, balanced 500/600 ohm lines, and up to 25 headsets. Tabletop/bracket mount or 1 to 5 unit rack mount.

xL2 2W, music-on-hold, and power amplifier \$99.00

xL20/xL40 Power Amplifiers

Four basic studio quality amplifiers cover the range of 20W to 100W while the inexpensive plug-in modules take care of the rest of your requirements. And, upgrades and modifications couldn't be easier...in the field or in your facilities. Simply remove two screws, remove the cover, and plug in the desired module.

xL20 Basic 20W power amp with 4/18 ohms output . . . \$149.00
xL20P Above amplifier with addition of 70V line out 169.00
xL40 Basic 40W power amp with 4/8 ohms output 225.00
xL40P Above amplifier with addition of 70V line out 310.00

Options

M1 Mike and Telco line input plug-in amplifiers with level controls and adjustable line level "ducking" \$24.00
EQ1 System bass and treble controls with output indicators 16.00
SM1 System module containing M1 and EQ1 35.00
R1 Single rackmount for all xL series amplifiers 15.00
R2 Dual rackmount for all xL series amplifiers 15.00
R3 Triple rackmount for xL2, xL/mm and xL/mm2 series only 15.00
R4 Four rackmount for xL2 and xL/mm 1 only 15.00
R5 Five rackmount for xL2 only 15.00

Optional built-in digital clock-timer (6-digit) for DC-38 series consoles. Clock runs continuously, display switched between clock and timer functions. Line frequency accuracy \$249.00

PM-42 "Sidekick"

Field Portable Mixer with Intercom

With the PRIMUS "SideKick" you'll pack all the mixing power necessary for even the toughest situations and your own two way intercom system built-in.

Four channels (2 with switchable AB or phantom power); cue on all channels; runs on standard 9V alkalines or the optional NiCad/charger pack (internal); slate and line tones; gain select on all inputs via external switches and internal plug-in resistors. All of this in a lightweight, compact 2 1/2 lb. package.

- SideKick** \$520.00
- NiCads and Charger (optional)** \$52.00
- Padded Carrying Case (optional)** \$49.00

xL6M1

- 6 input (mike/line) with phones monitor, master level control and expansion capabilities • Dual XLR and phone jack connectors on each input (mike/line) and barrier strip outputs • High impedance balanced in and low impedance balanced out • 10Hz-30kHz, ± 1dB response; 0.008% distortion; + 24dB max. out; -90dB S/N, line/-67dB S/N, mike • Tabletop or single (R1) 1 3/4" rackmount
- xL6M1** \$190.00

PM-42

xL6M1A

- Same as xL6M1 but with output metering and phantom power at all mike inputs
- xL6M1A** \$225.00

xL6M1B

- Includes all the features of the xL6M1 and xL6M1A above and has the added benefits of voice gating (adjustable sensitivity) on all inputs and programmable input precedence gating
- xL6M1B** \$295.00

RS-1616 Routing/Amplifying/Distribution System

The PRIMUS RS-1616 is an audio through data routing/amplifying system with user friendly controls (local front panel, remote 4-bit binary, common 3-wire serial, or standard RS-232 personal computer control).

The system can be configured from as little as 8 mono/4 stereo in by 2 out, to as large as 128 mono/64 stereo in by 64 out, with each main frame capable of handling up to 16 mono/8 stereo (or combinations thereof) and 16 out. Up to 32 main frames may be looped together and controlled with a single control system. Additionally, all individual functions such as: stereo or mono operation, gain, output levels, and bandwidth are field changeable in minutes.

Amplify/Route/Distribute

The RS-1616 can match all of your various signal sources to your required line level without extra amplifiers or attenuators. With a combination of individual input gain selection and trim adjustment, the RS-1616 can accept balanced or unbalanced inputs from mic thru line level, with a maximum in of + 27dBm (18V peak). The gain range available is -14dB to + 60dB with a dynamic range of 117dB at unity gain.

RS-1616

- The RS-1616 can handle audio, SMPTE, Time Code, DC, Ultrasonics, modems, or any other signals through 100kHz. With the inputs strapped for DC, RS-232 computer signals, to 9600 baud, may be routed or simultaneously distributed to as many places as desired without loading or degradation of the original signal. P.O.R.
- 16 x 16 mono with front panel control, single mainframe . . . \$3244.00
 - Configurable 8-in, 2-out; 128 x 64 P.O.R

RAMSA/PANASONIC INDUSTRIAL COMPANY**Audio Mixing Consoles****WR-8428 Post Production/Recording Console**

• 28 x 4 x 2 x 2 x 4 x 1 • Video and broadcast post production • Multi-core input plugs (RS-232) • Capable of connecting a second 24-track recorder • 28 input channels • Modular design • Furnishes total of ten mixing bus lines; four group, two master, and two echo buses • Group and master lines can be monitored in stereo • User can set up separate program and audition stereo monitoring modes • Each module contains 100mm stroke input fader and three-band equalizer • Variety of modules to choose from

WR-8428 Base Mainframe includes these standard modules: WU-8113 x 2 (Master Output); WU-8114 (Monitor Output); WU-8115 (Talk-Back/Oscillator) and WU-8085 (Power Supply)

WR-8428 \$8,180.00

WU-Z300

Mixer stand side bars for WR-8428 (requires WU-Z316) \$369.00

WU-Z316

Mixer stand cross bar for WR-8428 (requires WU-Z300) 148.00

WR-8616 Post Production/Recording Console

• 16 x 4 x 2 x 1 • Left and right stereo outputs, XFMR balanced • Phantom mike power, at each input 48V • Meets broadcast configuration standards • Remote start-stop control for cart machines, turntables, etc. • Extensive metering facilities, 8 Gan-Graph 6 VU meters • Modular construction • Variety of modules to choose from

WR-8616 Base mainframe includes 4 standard modules: WV-8103 x 2 (Master Output); WV-8104 (Monitor Output); WV-8105 (Talkback/Oscillator) and WV-8083 (Power Supply)

WR-8616 \$5,530.00

WU-Z300

Mixer stand side bars for WR-8616 (requires WU-Z316) \$369.00

WU-Z316

Mixer stand cross bar for WR-8616 (requires WU-Z300) 148.00

WR-T820B Recording Console

• Extensive metering capabilities • 20 inputs and is capable of 8- and 16-track recording • Ability to simultaneously mix incoming signals w/tape playback signals during overdubbing • Pushbutton selection of electronically balanced mike, line or unbalanced tape signals • 48V Phantom power switchable for each channel • Mono-solo monitoring on output signals • Built-in talkback oscillator

WR-T820 \$8,500.00

WU-Z200

Mixer stand side bars for WR-T820B (requires WU-Z220) \$233.00

WU-Z220

Mixer stand cross bar for WR-T820B (requires WU-Z200) 83.00

WR-8210A Recording Console

• 10 inputs, 4 group outputs designed for versatile multitrack recording applications • 48V Phantom power • Left and right stereo outputs and 10 tape recorder sub-mix inputs • 4 LED peak reading meters • Direct outputs and access points on inputs are included • Stereo effects returns, group outputs and monitor controls are simple to operate • Sub-in section can be used for tape or echo monitoring during recording and overdubbing

WR-8210A \$2,500.00

WR-8112/WR-8118**Sound Reinforcement/Recording Consoles**

• PA mixer use with up to 18 microphone and line signal inputs • 48V Phantom power • Pushbutton tape input accommodation easily handles multi-channel recording, overdubbing and mixdown • 3 band equalization section on each input for high, mid-range and low frequencies • Diverse metering capabilities with 12-point LED bargraph meters • Sweepable peak-dip mid-range controls • Lightweight, compact design • 4 group, 2 master and 1 mono master outputs

WR-8112 12 x 4 x 2 x 1 \$2,900.00

WR-8118 18 x 4 x 2 x 1 3,900.00

WR-8428

WR-S208/WR-S212/WR-S216**Stereo Mixing Consoles**

• 2 channels on each console have stereo inputs on both line and phono/recorder inputs • With the exception of the two inputs, all inputs are mono, electronically balanced mike/line inputs • Each model offers three send circuits; a pre-fader monitor foldback circuit; a post-fader effect send and a switchable pre/post-fader send for foldback monitoring of effects • 48V phantom power • Peak indicators • Solo buttons allow monitoring each channel individually • 60mm faders standard on input channels

WR-S208 (2 stereo, 6 mono mike/line inputs) \$1,600.00

WR-S212 (2 stereo, 10 mono mike/line inputs) 2,200.00

WR-S216 (2 stereo, 14 mono mike/line inputs) 2,700.00

WR-Q208 Rackmount adaptor for WR-S208 85.00

WR-S840 House/Stage Mixing Console

• Extensive RF protection • Matsushita Resistive Plastic (MRP) faders and input attenuators • Module design allows for variety of configurations • Each input features 4-band EQ, variable HP filter, phantom power, PFL, channel-on switch, more • Standard 40 input, 8 bus configuration includes five standard modules: WU-S84 group output module (X8), WU-S85 Master Output Module (X2), WU-S86 Effect Return Module (X2), WU-S87 Monitor Module (X1), WU-S88 Talk-Back/Oscillator Module (X1) and the WU-PS80 Power Supply • Other modules to choose from

WR-S840 (Standard configuration) \$13,900.00

WR-133 Portable 8 Input/2 Output Audio Mixer

• High quality performance characteristics—extended frequency response, wide dynamic range and noise-free performance • Switchable remote broadcasts, recording or sound reinforcement modes • Can be connected to cue to echo effect unit through pre-mix outputs, and to echo effect unit through from echo and to echo • Peak-level LED indicators • Two VU meters • Frequency response: 20Hz to 20,000Hz • Rugged construction designed to withstand rough handling

WR-133 \$1,200.00

WR-Q51 Rackmount adaptor 85.00

WR-M10 Compact Audio Mixer

• 4 mono input circuits • 6 stereo input circuits • 2 stereo phono input circuits • I/O connector panel can be moved to the rear, top, or bottom surface • Rackmount angle fittings allow installation flexibility • Can be mounted on a standard 19" EIA rack or a wall surface • Can also be flush-mounted in the wall or on a tabletop • Main output frequency response (with output transformer): 30Hz to 20kHz, +0.5dB, -2dB • THD: 0.3% max. (+18dB output, 50Hz to 15kHz, main output)

WR-M10 \$900.00

RAMSA/PANASONIC INDUSTRIAL COMPANY Amplifiers/Speakers/Microphones

WP-9220

WP-9055/WP-9110/WP-9220/WP-9440

Power Amplifiers

• Balanced inputs • Precision input attenuators • Built-in and remote status monitoring • Multiple amplifier protection systems • Stereo/mono/bridge • Frequency Response: 20Hz-2kHz (± 0.5 dB) • High slew rate • Controlled rise time • No transient intermodulation distortion • Dual voltage design

WP-9055	2 x 50W (8 ohms) 1.75" rack space	\$ 590.00
WP-9110	2 x 100W (8 ohms) 3.5" rack space	840.00
WP-9220	2 x 200W (8 ohms) 5.25" rack space	1090.00
WP-9440	2 x 400W (8 ohms) 5.25" rack space	2090.00

WS-A 10 Compact Speaker

• Heat resistant voice coil • Built-in magnetic shield • Built-in thermal protection circuit • Heavy-duty construction • Multiple mounting possibilities • Input terminals • Power capacity: 80W • Sensitivity: 88dB (1W/1m) • Amplitude response: 80Hz to 16kHz (-10dB) • White or black finish

Applications for the WS-A10 include small-speaker monitoring in recording studios, on-stage keyboard and personal monitoring, distributed music systems, audio for video monitoring and many others.

WS-A10	\$120.00
--------	----------

WS-A70-K Compact Monitor Speaker

• Easy to set up • Maximum input power: 160W • Momentary peak input: 400W • Auto gain control built-in • Constant-directional Twin Bessel Horn (120° x 120°) • Anti-magnetic design • 8" Woofer • Heat resistant voice coil

WS-A70-K	\$240.00
----------	----------

WS-A80 Compact Speaker

• Two-way loudspeaker • 8" Low frequency driver for extended low frequency response, high efficiency and low distortion • Consistent and reliable under conditions of very high input power • Constant directivity Twin Bessel Horn • Thermal protection circuit • Heavy-duty construction • Multiple mounting possibilities • Input terminals • Power capacity: 80W • Crossover frequency: 2.5kHz

The WS-A80 features extended amplitude response, uniform coverage and high output capability. Housed in a virtually indestructible molded cabinet for portable service that incorporates multiple mounting provisions, the WS-A80 is an ideal system for the working musician. Applications for the WS-A80 include on-stage monitoring, vocal PA reinforcement, distributed music systems, high-quality playback.

WS-A80	\$280.00
--------	----------

WS-A200/WS-240 Compact Speaker System

• Maximum input power: 250W • Constant-directional Twin Bessel Horn (60° x 40°) • Frequency range: 70 to 20,000Hz • One-piece molded plastic enclosures • Unique stacking structure

The Twin Bessel Horn features accurate control of horizontal and vertical directivity. The improved design of the open end horn reduces reflection and adds greater uniformity in regard to sound direction. This horn offers flexibility adaptability to the use of the speaker in either the horizontal or vertical direction.

The WS-A240/WS-SP2 Subwoofer System extends the low frequency response to create greater impact in the bass frequencies.

WS-A200	\$560.00
WS-A240 Compact subwoofer system (12" driver)	450.00
WS-SP2 Subwoofer processor (required for WS-A240)	210.00

WS-A200

WS-A10

WM-S2

WM-S1

WM-S1/WM-S2/WM-S5/WM-S10 Miniature Condenser Microphones

• Four miniature condenser microphones specifically designed to replace the bulky microphones that have become the industry standard • Application for application, these tiny powerhouses easily match the performance of larger microphones, and in blind listening tests have been chosen by some of the world's leading professionals as superior to presently available microphones

WM-S1	High SPL mini-condenser (Phantom power only)	\$ 199.00
WM-S2	Mini-condenser mike (Batteries or phantom power operation)	160.00
WM-S5	High SPL mini-condenser mike (Phantom power only)	270.00
WM-S10	Headset mini-condenser mike (Batteries or phantom power operation)	210.00
WM-Q01	Telescoping mini-boom (for WM-S1, WM-S2 and WM-S5)	55.00

RANGERTONE RESEARCH, INC.

*Film-To-Video Multiplexers/
Telecine Projectors*

2000 Series Film-To-Video Multiplexers

Rangertone manufactures a complete line of film-to-video optical multiplexer systems. The unique optical system allows multiformat film overlays as well as 35mm direct program dissolves.

2000 SeriesPOR

TC-240 35mm Telecine Projector

- Designed for use as a 35mm motion picture projector capable of projecting into a video system
- Available in either NTSC or PAL format. The NTSC model incorporates a special design 3-2 Geneva movement
- By utilizing different options, the projector can be used as a studio, broadcast or film chain projector

TC-240 \$29,950.00

SC10S 16mm Telecine Projector

- Synchronous motor
- 5 bladed shutter
- Line output
- Audio, remote socket and light diffuser for television use
- Automatic threading known as "circloading" allows the operator to thread the projector automatically while allowing removal of the film, simply and quickly without rewinding
- 250W quartz halogen lamp
- Built-in loudspeaker
- 20W audio amplifier
- Automatic loop restorer
- 16 tooth sprocket drive

SC10S \$2,985.00

SC211S 16mm Telecine Slot-Load Projector

- Synchronous motor
- 5 bladed shutter
- Audio line output
- Light diffuser for TV transfer

SC211S \$2,325.00

SC212S 16mm Telecine Slot-Load Projector

- For silent film speed

SC212S \$2,790.00

TV-518 Super/Regular 8mm Silent Telecine Projector

- Variable speed motor with interchangeable shutter modules

TV-518 \$1,875.00

4116 TV conversion lens with adaptors 695.00

6150 8mm telecine projector stand with video camera mounting bracket 515.00

4119 Interchangeable shutter module for TV-518 (specify desired film speed when ordering) 395.00

TV-518

Broadcast Quality Headphones and Mikes with Extended Range Performance

"Broadcast Quality" headphones provide acoustic performance desirable in (but not limited to) broadcast, recording, industry, and special music education. The basic headphone main frame is identical to the C/C3 Series. Broadcast quality headphones have a transducer and ear cushion design which together form a small anechoic type chamber into which the user's ear fits. The result is that the entire clamping pressure of the headphone is distributed across the large area of the ear cushions, that rest against the head, nothing rests against the ear, so fatigue over long listening periods is reduced. Specifications of the type BQ Series Headphone include a frequency response from 20Hz to 20kHz; Sensitivity: 100dB re .0002 μ bar for 1mW input at 1kHz; Harmonic Distortion: Less than 0.3% at 90dB SPL; Color: Two tone brown. Any mike boom or condenser mike boom can be attached to the BQ Series Headphone. Use only condenser mikes for "on the air" sportscasting, etc. Add the cost of the desired mike to the cost of the model headset selected.

- BQ3-Monaural Headphone 8 ohms impedance \$64.95
- BQ3H Same as BQ3, but in impedances of 150, 600, and 2K ohms 72.55
- BQ-Stereo Headphone 8 ohms per channel 79.95
- BQH Same as stereo Type BQ, except in impedances of 150, 600, or 2K ohms per channel . . 89.50

BQ2—Single Ear Headphone—Used extensively in broadcasting, this single ear headset is super comfortable. Headband construction distributes the entire weight of the headphones across the top of the user's head. Any of the mike booms or the condenser mike can be attached. (Use only the condenser for "on the air" broadcasting). Available in 8, 150, 600, or 2K ohms . . . \$61.95

Condenser Microphone Boom Attachments—For sports broadcasting, studio, and recording applications. A condenser type product for professional use shows remarkable damping characteristics by use of a feather weight diaphragm of only a few microns thickness. A condenser mike is of special interest in broadcasting, but it is also an excellent choice anywhere superior performance is essential, i.e., recording, special education, industry, etc. Electret condenser mike booms can be ordered attached to any BQ Series headphone. Price includes the condenser mike, FET mike amplifier, externally replaceable battery supply, and a power on/off switch which also doubles as a "cough-off" switch. Specifications include a frequency response, virtually flat, from 20Hz to 20kHz; Impedance: 600 ohms; Sensitivity: -63dB (0dB-1V/ μ bar at 1kHz), signal-to-noise ratio: Over 40dB (A curve at 1kHz). Headsets supplied with condenser mikes come equipped with a 4 or 6 conductor shielded tinsel cord 5 1/2' long unterminated. (6-wire for stereo).

- ET-1—Electret Condenser Microphone Boom Attachment—Omni-directional design. Usually used in studio and/or recording applications. Excellent low frequency response. \$74.95
- ET-2—Same as above, but cardioid noise cancelling design. Substantially reduces crowd noise 89.50

Sports/Studio Broadcasting Headphone/Mike

SB/2—Single Ear "On-The-Air" Headphone/Mike—Noise cancelling electret condenser mike, ET-2, is mounted on a rotating boom having a flexible gooseneck designed for optimum talk adjustment. Boom can be rotated away from in front of the user's face and the mike will mute at the top of its rotation. The mike is powered by 1.5V battery which has a life in excess of 1 year even if the on/off switch is never used. The on/off switch will also act as a "cough-off" switch. Output impedance of the electret mike is 1K ohms. Specify headphone impedance, i.e., 8, 600, 2K or 10K ohms. Supplied with 6' shielded cord terminated in a 4-pin XLR connector. (Add \$15.00 for 6' retractile cord). \$210.00

SB—Double Ear Broadcaster's Headphone/Mike—Same as above, but a double ear model useable in high noise areas. 6' long five conductor cord is terminated in a 5-pin XLR. Headphone can be operated monaural, stereo, or binaural. Specify impedance desired. (Add \$24.00 or 6' retractile cord). \$265.00

SB-700/2—Ultra Lightweight Single Ear Broadcaster's Headphone/Mike—Weighing only slightly more than an ounce, this product is manufactured with "open air" type dynamic transducers having a free field sensitivity of 110dB at 1kHz for 10mW input; electret condenser, noise cancelling, mike has a frequency response of 30 to 20kHz; Mike sensitivity: -67dB at 1kHz; Mike windscreen is furnished. A 1.5V battery powers the electret mike and is easily replaced from inside the XLR plug without disassembly. Typically the mike battery has a 6 month life if never turned off. Using the push-to-talk switch, which turns the battery off when not in use, the battery can last a year or longer. PTT switch also has a "lock-on" feature. Specify headphone impedance when ordering 32, 600, 2K ohms. \$199.95

SB-777—Same as above, but a double ear model. Terminated in a 5-pin XLR connector so that the headphone can be operated monaural, binaural, or stereo 249.95

R-COLUMBIA PRODUCTS CO., INC.

Headphones/Mikes

UL-85—Ultra Lightweight Headphone/Microphone—Weighing only 1 ounce, this headphone/mike offers basic comfort and performance for intercom, camera, telephone, and broadcasting work. Designed to hang comfortably and operate from either ear, this headphone/mike features dynamic headphone transducer, and ultra miniature electret condenser microphone. Mike has a frequency response from 20 to 20kHz, and a nominal output impedance of 600 ohms. The UL-85 is terminated in a 3.5mm 3-circuit plug. Specify headphone impedance when ordering . . . \$129.95

ULH-85—Headband version of UL-85 headphone/mike. Unit can be worn on user's left or right side 139.95

UL-85/M—Same as UL-85, except that this model features "controlled magnetic" transducer instead of a dynamic type. Frequency response of the UL-85/M is 100 to 5kHz; Nominal impedance is 1.5K ohms; Nominal DCR is 200 ohms; Sensitivity is 114dB re .0002μbar for 1mW input measured in a NBS 9A coupler. Will operate into almost any telephone or voice communication circuit \$129.95

ULH-85/M—Headband version of UL-85/M 139.95

TV Camera Operator's Headphones

52/T—Single Ear Camera Operator's Headphone—Circumaural foam-filled vinyl ear cushions plus padded headband for comfort. Supplied with "dynamic" transducers that replace HC3 and HC4 magnetic types, and a N-1 type carbon mike element. 6' tinselized cord is wired to a PJ-051 3-ckrt 1/4" phone plug as follows: Ring and sleeve to headset; Tip and sleeve to mike. Wiring can easily be changed if necessary. (Add \$16.00 for 8' retractile cord) \$ 96.50

52/TT—Same as above, but Double ear type. (Add \$16.00 for 8' retractile cord) 145.00

32PO52—Inline Push-To-Talk Switch—An accessory for TV camera intercom systems. Installed on cord 2 1/2' from headphone so that user can hold in hand while operating, or unit can be clipped to user's belt. Double acting—either push-to-talk, or lock-on/lock-off. (Add to price of headphone selected) \$49.95

52/TA—Amplified Camera Operator's Headphone—The 52/TA has 2 integrated circuit amplifiers, a built-in 9V battery supply, and a dynamic mike. One I.C. amplifies the sound from existing headphones, while the 2nd amplifies and matches the dynamic mike to the carbon mike circuit. Up to 5 times the output level of carbon mikes is available. Volume and level controls are provided for both headset and mike. A PJ-051 plug is wired the same as described for 52/T, and is easily changed at the plug. For Sony, Panasonic, Philips, JVC, Hitachi, etc. \$175.00

52/TA/8C—Same as above, but with 8' retractile cord 191.00

52/TAA—Same as 52/TA, except that this double ear model is especially useful where high ambience is present 250.00

52/TAA/8C—Same as above, but with 8' retractile cord 266.00

ET-2—Noise Cancelling Microphone—Can be added to 52/TA or 52/TAA to quiet surrounding ambience. Add to price of model selected \$89.50

Rotating Mike Boom Attachment with Mike Mute Switch—Allows 52/TA and 52/TAA to be used with mike on user's left or right side. Mike mutes when it is rotated overhead. Add to model selected \$29.50

52/700—Amplified Ultra-Lightweight Cameraman's Headphone—Headphone/mike, weighing slightly more than 1 ounce that works directly into the carbon mike circuit of a TV camera. In-line PTT switch clips to user's belt and has a "lock-on" feature. Cord is terminated in a standard PJ-051 plug \$249.50

52/777—Same as above, but double ear model 295.00

52/100—Sony Replacement Camera Operator's Headphone/Mike—4-circuit mini-plug, by Sony. Headphone impedance is 45 ohms; Sensitivity is 108dB/mW; Frequency response: 20 to 10kHz. Dynamic noise cancelling mike has an impedance of 600 ohm; Sensitivity: -86dB (0dB=1V/μbar) In-line PTT switch has lock-on/lock-off feature and can be clipped to the user's belt \$199.95

52/111—Same as above, but double ear model 250.00

R-COLUMBIA PRODUCTS CO., INC.

Headphones

Telephones, Telephone Headphones

6058/T—ENG/IFB/"Hands-Free" Telephone—A complete electronic tone dialing telephone which operates from any modular telephone jack. Dimensions: 4 1/2" x 2 1/2" x 1". Unit can be clipped to user's belt. Requires UL-85/M, ULH-85/M or ULH-700/M "hands-free" telephone operation. Features for ENG/IFB use: Mike mute switch, 3 mike inputs, 3 headphone outputs. Ringer circuit alerts user to incoming calls **\$149.95**

6058/P—Same as above, but tone dialing (10ppm). For use in areas where pulse dialing is not available. **\$139.95**

6058/PT—Same as 6058/T but with switchable tone or pulse operation **199.00**

UL-85/M—1 Ounce Telephone Headphone/Mike—Clips over user's ear. Can be worn on left or right side. Controlled magnetic transducer and electret condenser mike have tailored speech response. For use with 6058 Series telephones **\$129.95**

UL-85/2M—Listen Only Headphone—Only 3/4 oz. for Series 6058 telephones **\$ 49.95**

ULH-85/M—Same as UL-85/M but with headband **139.95**

ULH-700/M—Deluxe Ultra-Lightweight Telephone Headphone/Mike—Single ear style weighing slightly more than 1 oz. Custom tailored in terms of cord length, plug, magnetic transducer, leather ear cushion, etc. for operation with 6058 Series telephones **\$179.95**

ULH-777/M—Same as ULH-700/M, but double ear model **220.00**

52/Taret—Amplified Telephone Headphone/Mike for High Noise Environments—2 ear model with noise cancelling microphone. Headset has integrated circuit amp which boosts the volume level of 6058. Rotating mike boom mutes when it is rotated to the overhead position and allows user to choose left or right side for mike. Control adjusts volume of call being received. Full size circumaural ear cushions attenuate surrounding ambience. **\$266.00**

52/Taret/2—Same as above, but single ear model. **195.00**

20X047—Alligator Clip Cord Assembly—Permits 6058 series telephones to operate from any standard carbon mic type of telephone simply by unscrewing transmitter cap and connecting clips to exposed terminals **\$39.50**

52/TM—"Hands-Free" TeleHeadphone"—Un-plug the cord from the handset of any modular telephone and plug it into 52/TM for "Hands-Free" telephone operation. Transducer and mike are compatible with Western Electric and Bell Telephones. A control is provided to regulate the volume of incoming calls. Single ear model **\$150.00**

52/TMM—Same as above, but double ear type. Gives user isolation from surrounding ambience **195.00**

ET-2—Noise Cancelling Microphone—Can be added to 52/TM or 52/TMM. Add to price of model selected. **\$89.50**

PBX-86—1 Ounce TeleHeadphone Enhancement—Same telephone operation as the 52/TM, but uses UL-85/M. Measures 1 3/4" x 3" x 1" and clips to user's belt. UL-85/M headphone mic. plugs into the top relieving the heavy pull from the telephone cord which is plugged into the bottom. A control is provided to regulate volume. (UL-85/M priced separately) **\$99.75**

375X047—Plantronics Adaptor Cord—Converts PBX-86 or 52/TM for use with telephones that have been jack equipped for use with PJ-325 plug **\$39.95**

TC-700—Telephone/Communication Headset—Ultra-lightweight, heavy-duty headphone/mike, for use with PBX, ACD, or jack equipped telephones when plugged into enhancements like ATAR-700 or ETAR-700. Features include a noise cancelling electret condenser mike, adjustable mike boom, soft leather ear cushions (foam optional), speech tailored magnetic transducers, million flex-life tinsel cordage. The cord is terminated in a modular telephone jack allowing several users to have their own private headset which can be plugged into a common enhancement. (Add \$10.00 for 10' retractile cord). **\$197.00**

TC-777—Same as above, but double ear model **220.00**

Star-700—PBX/ACD Enhancement—Has 2 solid-state amplifiers which derive their power from the PBX or ACD equipment via a PJ-327 type plug. The Star-700 unit will also operate with jack equipped telephones. Modular jack accepts TC-700 headphone/mike. (Add \$10.00 for mike mute switch) **\$135.00**

ETAR-700—Electronic Telephone Enhancement—User installable. Converts newer types of electronic telephones for use with a headphone/mike. A 9V battery is used to operate the integral amplifiers. LED indicator signals when battery is low. A mike mute switch is provided along with a control to adjust the volume of incoming calls. Modular jack accepts TC-700 headphone/mike. **\$149.95**

R-COLUMBIA PRODUCTS CO., INC.

Intercom Headphones

**Self Powered Intercom Headphones
For Theater, TV, Sports, Industry, Etc.**

T4/IC—2-Way Intercom on a Single Wire—Each headphone has a built-in integrated circuit amplifier, volume control, 9V battery supply, and attached dynamic microphone boom. They provide 2-way duplex intercommunication on a single wire such as ordinary lamp cord. Headphones can be separated by distances of up to 1,500', and up to 10 units can be operated together. A separate program source can be mixed with intercom without additional circuitry or attachments. Ideal for football teams (pro, college, and high school), TV/Radio broadcasters, theaters, industry. Double ear model **\$175.00**

T4/IC-2—Same as above, but single ear model. **188.00**

T4/ICE—Same as Model T4/IC, but equipped with a better noise rejecting microphone. The dynamic mike will improve performance in extremely noisy environments, like that found in small aircraft or heavy industry. **250.00**

T4/ICE-2—Same as above, but single ear model. **261.00**

Rotating Mike Boom Attachment with Mike Mute Switch—Indicate this feature by adding an "R" to the model desired, i.e., T4/ICR, T4/ICR-2, TP/ICR, TP/ICR-2, T4/ICER, 52/TAR, etc. This feature cannot be added to carbon mike type headphones such as the 52/T. Add to the cost of model specified. **\$29.50**

T4/IC-HH—Hard Hat Intercom Headphones—Identical headphone as T4/IC, except that custom-made mounting is provided for an ANSI approved hard hat. Special spring loaded yoke posts allow easy and convenient fit to different size heads. Hard hat models can be operated in any proportion with standard T4/IC's. Price includes hard hat **\$275.00**

T4/ICE-HH—Same as T4/IC-HH, but with noise cancelling condenser microphone . . . **357.00**

T4/85—Ultra-Lightweight Headphone Intercom Station—Same as T4/IC with the electronics and battery supply built into a belt pack which allows the use of special purpose headphones like the ultra-lightweight 85/700 **\$149.95**

T4/85X—Same as above, but a 3-position switch has been added which acts as a mike mute PTT switch with lock-on feature **199.95**

85-700—Deluxe Ultra-Lightweight Headphone/Mike—Single ear style weighing slightly more than 1 ounce. Headphone is custom tailored to operate with belt pack T4/85 **\$159.95**

85/777—Same as above but double ear model. **199.95**

85/900—Helmet/Hard Hat Headphone/Mike—Industrial grade headphone/mike manufactured for full compatibility with any style military/safety helmet and/or protective clothing . . **\$199.95**

TP/IC—AC Line Powered Intercom Headphone—The identical headphone as the T4/IC, except that this headphone is part of a system powered by a 120VAC Main Station/Power Supply eliminating the need for batteries. TP/IC headphone does not have a cord. Interconnect cables, terminated in standard "Modular" type telephone plugs, are inserted directly into headphone and power supply for instant hook-up **\$175.00**

TP/IC-2—Same as above, but single ear type **\$188.00**

TP/ICE—Same as TP/IC, but equipped with noise cancelling condenser microphone . . **250.00**

TP/ICE-2—Same as above, but single ear model **261.00**

MS/PW-1—Main Station/Power Supply—Single channel operation for up to 10 TP/IC intercom headphones at distances of up to 1,500'. Simply plug ICC Series cables into TP/IC headphones and MS/PW-1 for instant hook-up (120V operation) **\$250.00**

MS/PW-2—2-Channel Main Station/Power Supply—Same as MS/PW-1 but two separate intercom systems can be operated from the same supply. Switch joins both channels to create a single larger intercom system which can be monitored by one or both "director's" headphone **475.00**

ICC-100—Interconnect Cable—100' length of ultra-lightweight and flexible cable, terminated on both ends with 4-pin modular phone plugs. Includes heavy-duty plastic reel for storage . . **\$54.00**

ICC-50—Same as above, but 50' length **39.00**

BP-2—Belt Pack Kit—Sturdy plastic housing with belt clip and 2 modular jacks. Plug long connecting cable into the bottom and 3' connecting cable (provided) between headphone and BP-2 **24.95**

CS-1—Modular Cable Splicer **9.95**

CS-2—Modular Cable Splitter **19.95**

CS-3—Duplex Adaptor—Converts receptacles at MS/PW from one line to two **19.95**

System 10—Starter System Package—Additional stations can be added by purchasing additional TP/IC headphones and interconnect cables. Consists of 2 each TP/IC headphones, BP-2 belt packs, ICC-100 cables, and quantity one MS/PW-1 Main Station/Power Supply (120V) System **\$650.00**

T4/IC

T4/IC-HH

MS/PW-1

TP/IC

R-COLUMBIA PRODUCTS CO., INC.

Wireless Intercom Headphones

Professional Quality 2-Channel FM Wireless Intercom Headphones

TR-50/PRO/S—Professional 2-Channel FM Wireless Intercom Headphone—Same as TR-50, with the addition of flexible and insulated rubber duckie antennas, switchable 2-channel operation (including crystals), a dual conversation receiver featuring monolithic crystal filters for improved adjacent channel rejection, "Com-Lock" circuitry which prevents 2 transmitters from being operational at the same time. All accessories and attachments available for the TR-50 can be added to the TR-50/PRO Series. TR-50/PRO/S operates simplex, i.e., push-to-talk
\$497.00

TR-50/PRO/S2—2-Channel FM Wireless Intercom Headphone—Same as TR-50/PRO/S except 1 ear configuration. Consists of a Transmitter mounted into a single ear headphone/mike with receiver unit clipped to user's belt\$555.00

TR-50/PRO/V—Voice Actuated FM Wireless Intercom Headphone—"Hands-Free" version of the TR-50/PRO/S. User can select either PTT or VOX operation. In the VOX mode, a level control can be adjusted to compensate for background noise. Com-Lock circuit prevents loss of communication if 2 users try to speak at once. The VOX has a fast switching time.\$597.00

TR-50/PRO/V2—Single Ear 2-Channel Voice Actuated FM Wireless Intercom Headphone—Same as TR-50/PRO/V but in a single ear style. Consists of a transmitter mounted into a single ear headphone/mike with receiver clipped to user's belt\$657.00

TR-50/PRO/V285—Ultra-Lightweight Headphone Voice Actuated 2-Channel Professional FM Wireless Intercom—Same performance as TR-50/PRO/V2, except that this model has been configured to operate with a 1 ounce headphone/mike. Both TX and RX are built into a belt pack which can be worn from the shoulder with the strap provided. (Add \$ 140.00 for 1 ounce UL-85 headphone/mike)\$595.00

TR-50/PRO/D—Full Duplex Wireless Intercom Headphone—Users can speak and listen "hands-free" simultaneously. Only 2 headphones can be involved in "hands-free" full duplex intercom. In the "full duplex" mode, both transmitters transmit continuously resulting in a short TX battery life (3-4 hours)\$550.00

Selectable 5-Channel Profesional Series FM Wireless Intercom Headphone—Any model, except full duplex TR-50/PRO/D, can be ordered with the ability to operate on any one of the 5 available channels simply by switch selection. To order this configuration, change the model number 50, to 55, i.e., TR-55/PRO/S, TR-55/PRO/V, TR-55/PRO/V2, etc. Add to the price of model selected\$100.00

TR-72—High Powered Intercom Headphone—A 400mW version of TR-50/PRO/S with a range up to 1 mile. This model requires an FCC license for operation. Operates in the 72MHz "Manufacturer's Radio Service Band." BP-72 NiCad battery belt pack is required to accommodate higher TX power\$695.00

PRO Series Wireless Intercom Accessories

ET-2—Noise Cancelling Microphone—Broadcast quality electret microphone used for sports broadcasting work by TV and radio stations. Add to price of unit being specified\$89.50

Hard Hat Accessory—All double ear models of Professional Series of wireless headphones can be "hard-hat" configured. (Requires a different headphone suspension system). Order as TR-50/PRO/S/HH, TR-50/PRO/V/HH, etc. Add to price of model selected. (Included is ANSI approved hard hat)\$90.00

49P003/R—PRO Receive Crystals—Specify channels A, B, C, D or E\$18.95

49P003/T—PRO Transmit Crystals—Specify channels A through E\$24.75

BP-72—NiCad Battery Pack—Clips to user's belt. Measures approximately 2" x 4" x 1"\$75.00

CH-72—Battery Charger—For BP-72 battery pack\$30.00

BOP50—Carrying Case—Custom made to transport and protect four TR-50 or TR-50/PRO headphones with accessories. Molded of tough ABS plastic. The inside is filled with foam which has custom pockets that exactly fit the contours of the headphone and accessories\$185.00

RFL Series

Fixed Microwave Transmission System

- Low noise dual down conversion receivers
- High power output. Up to 12W at 2GHz with GaAs FET technology for excellent reliability. (BiPolar below 2.7GHz)
- Receivers have LNAs built in for excellent dynamic range and noise figure performance
- Up to 4 integral audio channels if required
- Comprehensive fault diagnostics with LED alarm panel and metering facility
- AC or DC primary power supplies
- Unique chassis design with hinged front panel for easy access
- Modular construction provides ease of maintenance
- Single channel or duplexed/diplexed multi-channel system configurations available
- Hot-standby changeover option and frequency diversity systems protect against equipment failure and fading
- Full range of installation accessories

The RFL Series of modern, solid-state fixed links offers economical and reliable transmission of color video signals with up to four associated program channels in all TV frequency bands from 1.7 to 13.7GHz. The transmit terminals feature high output power and, when used in conjunction with our low noise figure receivers, long path lengths can be easily achieved.

Although generally intended for STL/TSL applications, the excellent linearity characteristics and high performance of the RFL Series makes it equally suitable as a low cost multi-hop system.

The RFL Series offers an extensive range of options allowing it to be used in two-way, dual and repeater configurations and can supply options to complete the system package including antennas, waveguides, pressurizing equipment and fully automatic changeover shelves.

General Specifications:

Monitoring

- Meter Panel:** Output power/receive level, video level, synthesizer phase volts plus all system voltages
- Diagnostics:** Front panel summary alarm LED plus integral alarms for all system voltages, each audio subcarrier presence, synthesizer phase lock, AGC, etc.

Power Requirements

Voltage Input: Choice of AC from 110 to 240V ± 10% 50 or 60Hz with optional 12 or 24VDC negative earth supply

RFL Series Models:

Transmitters	RFL-205B	RFL-255B	RFL-705B	RFL-1305B
Receivers	RFL-204B	RFL-254B	RFL-704B	RFL-1304B
Frequency Bands	*1.70- 1.99- *2.11- 1.99GHz 2.11GHz 2.3GHz	*2.30- 2.45- *2.50- 2.45GHz 2.50GHz 2.65GHz	*6.50- 6.875- *7.125- 6.875GHz 7.125GHz 7.4GHz	*12.25- 12.7- *13.25- 12.7GHz 13.25GHz 13.7GHz
Nominal O/P	12.0W	10.0W	1.0W	0.25W
Receiver N.F.	3.0dB	3.5dB	4.0dB	5.0dB

Environmental To

- Specification:** + 25 to + 115 deg. F
- Safe Use:** -5 to + 125 deg. F
- Storage:** -25 to + 140 deg. F
- Humidity:** 95% long term
- Altitude:** 10,000 ft.

Mechanical Description

- Transmitter and Receiver:** Direct 19" rackmounting with hinged door for access. Width: 19" Height: 5.25" Depth: 6" Weight: 15 lbs.

Accessories

- Additional Audios:** Up to 4 integral as required
- Automatic Changeover:** Independent 19" rackmounting unit
- Installation Components:** Full range available

ROSS VIDEO LTD.

Production Switchers

RVS210A/RVS216A Video Production Switchers

Features Common to Both Models:

- Three bus Multi-Level Effects (MLE) system permits manipulation of foregrounds, backgrounds and titles without ever locking up the switcher and the Transition Preview system enables you to see every effect or wipe before you take it, even with the switcher on the air
- Program/Preset buses permit simple flip/flop operation using the cut button. Transition controls include cut button, wipe or dissolve using fader handle or auto transition
- Three completely independent auto transition units, programmable from 1 to 999 frames
- Key bus permits source selection for chroma keys, video keys and matte keys
- MLE keyer features video or matte fill, internal, external or split-screen key, optional RGB chroma key, key invert, key mask using pattern generator
- Three independent matte generators for wipe borders, title matte and background
- Key input from key bus, an external source or a character generator; key fill from internal video, character generator or the independent DSK matte generator
- Key invert and key mask using pattern generator
- Downstream keyer transition can be tied to the effects system
- In normal operation, the MLE keyer and Downstream keyer "remember" key and softness levels, fill source, borders etc. for each source
- Independent frame rate auto transition for fade-to-black with preview system that shows next program output after fade-to-black is completed
- Linear keying for compatibility with anti-aliasing character generators
- Standard general purpose interface to each of the three auto transitions or a fourth line which permits selection of any one of the three
- Video Input: 1V p-p, composite, bridging
- Pulse Input: 1-8V p-p, 75 ohms, bridging; 1 sync, 1 blanking, 1 burst flag (PAL only)
- Video Outputs: 1V p-p, 75 ohms, 2 program, 2 preview, 1 blank
- Frequency response: ± 0.1 dB to 5.5MHz; +0.1 to -1.0dB to 8MHz

RVS210A Video Production Switcher

- Twelve wipe patterns with modifiers: hard or soft edges, hard or soft bordered edges, pattern aspect ratio, pattern reverse, rate-controlled pattern positioner
- Independent control of both wipe and split screen border widths and soft edge
- Cut or dissolve titles in or out manually or with independent frame rate auto transition
- Learn Key feature permits computerized editor to initiate wipe or dissolve to multiple keys
- Control panel measures 14.5" x 17.6" x 7" deep. Can be mounted on desk or in rack space using optional adaptors. Rackmounting requires 8 rack units. Rack frame requires 3 rack units 5 1/4" and is 18.25" deep
- Differential phase: $\leq 0.7^\circ$ (10-90% APL)
- Differential gain: $\leq 0.7\%$ (10-90% APL)

210A-10 Video Production Switcher (10 inputs) including your choice of: 2 meter control cable (210A-302) or 10 meter control cable (210A-310) and technical manual. \$10,950.00

Options

- 210A-115** RGB chroma keyer \$ 800.00
- 210A-135** Pulse regenerator 1,000.00
- 210A-140** Linear key border generator 1,500.00
- 210A-230** Twelve event memory system. 1,200.00
- 210A-231** Serial interface adaptor 1,200.00

210A-136 Feature Package Number 1 Includes:

- Function Button—This feature brings a wide range of operational modes, additional production facilities and aids to easier operation and ability to wipe to DSK.
- 210A-136** \$1,200.00

RVS-216A

210A-137 Feature Package Number 2 Includes:

- 12 additional wipes • Two extra DSK border shadow modes
- 210A-137** \$900.00
- 210A-250** Spares kit 450.00
- 210A-330** Control cable, 30 meters 175.00
- 210A-400** Rackmount adaptor for control panel 100.00
- 210A-410** In-desk mounting adaptor for control panel 150.00

Note: Feature package 2 may only be purchased in conjunction with feature package 1, building upon the items offered by package 1.

RVS216A Video Production Switcher

- 24 wipe patterns with modifiers: hard or soft edges, hard or soft bordered edges, pattern aspect ratio, pattern reverse, rate-controlled pattern positioner. One of the patterns is user programmable
- Wipe limit determines maximum size of wipe pattern at full limit of fader movement
- Non-sync inhibit detects non-synchronous sources and inhibits keys, wipes or dissolves and substitutes a cut at the end of the transition. Non-sync LEDs indicate the presence of a non-synchronous source
- Pulse processor provides consistent color framing of synchronous signals by means of sync and burst reinsertion
- Cut, dissolve, or wipe titles in or out manually or with independent frame rate auto transition
- Linear keyer
- Function button allows the user to select many alternate modes of switcher operation, useful operator aids and diagnostic routines
- Control panel measures 14.5" x 22.25" x 7.5" deep
- Rack frame requires 3 rack units (5.25") and is 18.25" deep
- Differential phase: $\leq 0.5^\circ$ (10-90% APL)
- Differential gain: $\leq 0.5\%$ (10-90% APL)

216A-16 Video production switcher (16 inputs) including your choice of: 2 meter control cable (216A-302) or 10 meter control cable (216A-310) and technical manual. \$15,450.00

Options

- 216A-115** RGB chroma keyer \$ 800.00
- 216A-110** Encoded and RGB chroma keyer 3,100.00
- 216A-140** Linear key border generator 1,500.00
- 216A-135** Pulse regenerator 1,000.00
- 216A-230** 12 event memory system. 1,200.00
- 216A-231** Serial interface adaptor 1,200.00
- 216A-250** Spares kit 450.00
- 216A-330** Control cable, 30 meters. 175.00
- 216A-410** In-desk mounting adaptor for control panel 225.00

Note: Switcher price includes one each of operation and installation manual

ROSS VIDEO LTD.**Production Switchers****RVS-504/505 Series Video Production Switchers**

• Clean panel layout only 46" long • Most simple transitions are made between Background bus (B) and Background Preset bus (B PST) • B bus is always the On-Air Bus • When B PST source is transferred to the On-Air B Bus at the end of a transition, the B source is automatically transferred to the B PST bus • Foreground source is selected on the F bus and the processing mode is selected in the Foreground group of MLE controls • Mode selections include RGB and Encoded Chroma Keys, Non-Additive Mix, Split Screen, Spotlight, PST Key and Matte Key • Each MLE Title Keyer is a complete Downstream Keyer with 4 input sources. Three inputs can be wired from primary crosspoints and tally is supplied • The Transition Control Group...Dissolve, Wipe and Take buttons are located adjacent to the Fader • HOLD buttons, conveniently located in the control group for each MLE level, allow directing a transition to any or all levels • Available with 16, 20 and 24 inputs, and in NTSC, PAL and PAL-M standards

504A-16	Video Production Switcher (16 inputs)	\$36,850.00
504A-20	Video Production Switcher (20 inputs)	38,505.00
	Extra control cable for basic switcher	per ft./8.40
505A-16	Video Production Switcher (16 inputs)	40,719.00
505A-20	Video Production Switcher (20 inputs)	42,790.00
505A-24	Video Production Switcher (24 inputs)	45,054.00
	Extra control cable for basic switcher	per ft./8.40

Options**Encore Memory System**

504-220	Encore (freestanding)	\$7,857.00
504-220A	Encore with extension tub to match switcher tub	8,634.00
504-220B	Encore with cassette storage	8,683.00
504-220C	Encore with cassette and extension tub	9,550.00
504-224	Extra control cable for Encore	per ft./1.40
505-220	Encore (free standing)	7,857.00
505-220A	Encore with extension tub to match switcher tub	8,634.00
505-220B	Encore with cassette storage	8,683.00
505-220C	Encore with cassette and extension tub	9,550.00
505-224	Extra control cable for Encore	per ft./1.40

Quad Split

• Quad Split does not tie up any switcher bus, and virtually gives you 4 extra buses free • Each quadrant has access to any 9 predetermined primary inputs • Includes diagonal, offset and conventional quad patterns • Has its own border color generator • Lets you preset the next source for each quadrant...then do a vertical internal take of the entire scene

505-160	Quad Split Screen	\$3,596.00
----------------	-----------------------------	-------------------

RVS 514 Series Video Production Switchers

• Designed for any small studio, edit suite or van • Operational convenience of the PGM PST style of switcher offers added power to a fully integrated MLE system • Complex multilevel effects are immediately accessible via wipe, dissolve or cut transitions • See the next event on the preview monitor as you compose it • Logical controls allow any effect to be achieved easily • Patented Transition Preview System • Most simple transitions are made between the PGM bus and the PST bus • PGM bus is always the On-Air bus • When the PST source is transferred to the On-Air bus at the end of a transition, the PGM source is automatically transferred to the PST bus • Foreground source is selected on the F bus and the processing mode is selected in the Foreground group of MLE controls. Mode selections include RGB and Encoded Chroma Keys, Non-Additive Mix, Split Screen, Spotlight, PST Key and Matte Key • Complete Downstream Keyer with a 4-input source selector...the 5th bus of the switcher • The Transition Control Group...Dissolve, Wipe and Take buttons are located adjacent to the Fader • Conveniently located HOLD buttons allow directing a transition to any or all levels • One rack frame only 7" (4 RU's) also contains all optional accessories and 2 aux buses • Additional frame is required to accommodate 6 more aux buses • Switcher panel width is 28" (12

**RVS-514**

inputs or 34" (20 inputs) and 18" deep • Available with 12 or 20 inputs, and in NTSC, PAL and PAL-M standards

514A-12	Video production switcher (12 inputs)	\$29,652.00
514A-20	Video production switcher (20 inputs)	31,801.00
	Extra control cable for basic switcher (per ft.)	8.40

RVS 524 Series Switchers

• Designed for any small studio, editing suite or mobile van • Manipulate up to four video signals with just one fader handle • Permits changing the background picture either separately or in combination with the foreground and title sources...or dissolving or wiping behind a chroma key...all without locking up the switcher • Most simple transitions are made between the PGM bus and the PST bus, using the familiar flip/flop mode of operation • PGM bus is always the on-air bus. When the PST source is transferred to the on-air bus at the end of a transition, the former PGM source is automatically transferred to the PST bus.

• The foreground source is selected on the F bus and the processing mode is selected in the foreground group of MLE controls. Mode selections include RGB and encoded chroma key, split screen, PST key and matte key • MLE title keyer is a complete Downstream Keyer with a 4 input source selector...the 5th bus of the switcher • A variety of patterns and effects can be created with the 18 basic patterns (Inner Pattern Group), Pattern Modulation, Horizontal and Vertical Multipliers, Joystick positioner and optional Rotary and Spin wipes • Each pattern, chosen with the rotary selector, can have colored and soft edge borders • Push-pull switch on the aspect ratio control knob is used to round corners on the box wipe patterns • Horizontal and vertical multipliers multiply the pattern a number of times horizontally or vertically or both • Joystick can change the number of multiple patterns appearing on the screen, as well as positioning a pattern • Colored and soft edge borders are standard • One rack frame only 7" high (4 RU's) houses all electronics and optional equipment, plus two aux buses. An additional frame is required to accommodate six more aux buses • Switcher panel width is 22" (12 inputs) or 28" (20 inputs) and 16.65" deep

Options**Rotary/Spin Wipe**

• Nine standard rotary wipe patterns are available with colored and soft borders • Spin: A full excursion of the fader handle spins some patterns 360° and simultaneously reduces their size until they vanish • Spin Preset: The angular position of a pattern can be set manually

524B-12	Video production switcher, 12 inputs	\$23,756.00
524B-20	Video production switcher, 20 inputs	25,690.00
	Extra control cable for basic switcher	per ft./8.40

ROSS VIDEO LTD.**Production Switcher****RVS416 Production Switcher**

- Two 4 bus Multi-Level Effects (MLE) systems permit manipulation of eight sources simultaneously in foregrounds, backgrounds and keys without ever locking up the switcher; the Transition Preview system enables the operator to see every effect or wipe before taking it, even with the switcher on the air
- Program/Preset buses permit simple flip/flop operation using the cut button. Transition controls include cut button, wipe or dissolve using the fader handle or auto transition
- Six separate matte generators provide color for wipe borders, title matte and background
- Expanded GPI interface function means that any editor with GPI has access to all auto transition starts as well as several of the switcher memory modes
- The Modify button, unique to Ross Video, allows the user to select many alternate modes of operation and to access useful operator aids and diagnostic routines from the control panel without the need for a separate configuration device
- Video output pulse processor has sync and burst replacement to provide consistent color framing of synchronous signals by means of sync and burst re-insertion
- Preset black permits a two stage transition starting with the present source followed by a fade-to-black, then to the next source selected on the preset bus
- Five independent auto transition units, programmable from 1 to 999 frames
- Master fade-to-black includes independent frame rate auto transition for fade-to-black, with preview system that shows next program output after fade is completed
- Non-sync inhibit detects non-synchronous sources and inhibits keys, wipes or dissolves, and substitutes a cut at the end of the transition. Non-sync LEDs indicate the presence of a non-synchronous source. This feature can be overridden
- Two independent pattern generators controlled by pushbutton selector
- Wipe limit is available to stop the auto transition of any pattern at a pre-determined size
- Keyer 1 features video or matte fill, internal, external or split screen key, optional RGB and encoded chroma key, key invert and key mask
- Keyer 2 features video or matte fill, internal, external or character generator key, optional border controls and independent auto transition and cut buttons for additions without leaving the MLE control group
- Key over enables selection of key 1 over key 2 or key 2 over key 1 within each of the MLE systems
- Key memory permits key 1 and key 2 to "remember" key and softness levels, fill source, borders, mask parameters, etc. for each source on the keyer

Options

- **Editor Serial Interface.** The editor can control MLE 1, MLE 2 or both MLEs at the same time via the dual serial port, using RS 232 or 422 computer interface
- **Event Memory.** Storage and recall of 50 complete switcher setups including key levels, patterns, matte levels, transition rates, etc. Assignment switches permit storage of information from either or both MLE systems
- **Linear Key Border Generators.** Provides an extremely high quality key border, outperforming other border generators; offers good resolution on small letters and virtually eliminates the jaggedness on inclined edges that is common to most border generators
- **RGB/Encoded Chroma Keys.** Single RGB keys available for both MLE systems. Encoded chroma key available for MLE 1 offers flexibility of keying from videotape or from any encoded video signal. Plug-in boards ensure simple field installation without video input timing complications

**RVS 416**

- **Rotary, Star Wipe and Pointer Generators.** Rotary wipe patterns, including the clock wipe, are available with colorized and hard or soft borders. Many of the usual patterns can be made to spin and the rotation can be tied to the rate of fader movement or can be continuous at a fixed rate. The five point star can also spin and the pointer can be rotated and positioned
- **Matrix Wipe Generators.** A variety of matrix wipe patterns causes the wipe to take place from one scene to another with a mosaic effect. The wipe can take place in a random, spiral or zig-zag pattern or in variations of these. Several mosaic tile sizes are used, resulting in patterns having a total of 64, 256 or 1024 tiles
- **Pulse Regenerator.** No external drive pulses are needed. All required pulses are produced by locking to an incoming color black reference

ROSS VIDEO LTD.

Production Switchers

RVS-508 Video Projection Switcher

- 20 or 24 inputs, as selected, includes Color Black and Color Background • 2 Multi-Level Effects (MLE) Systems, each with 3 buses (foreground, background and background preset), foreground keyer, title keyer, 31 pattern wipe generator, and patented transition preview system • Foreground keyer has 9 inputs, including self key, matte key, non-additive mix, external, split screen, spotlight, and preset/key bus, plus optional RGB/ultra key and encoded chroma keyers • Title keyer has 4 input source selector, including preset/key bus for self key, color outline/matte fill generator, and analog border generator. Borders may be white or black • Wipe pattern positioner can preset wipe location and modulate vertical edges with adjustable frequency and amplitude. Modulation can be used in the locked or free-run mode • Wipe aspect ratio is adjustable and box or corner wipes may have their corners rounded. Wipe patterns may be multiplied horizontally, vertically, or both • Program and preset buses • Master fade-to-black handle • Color generator for color background pushbuttons, MLE-1 Wipe/Border, and MLE-1 Matte Fill • Non-synchronous input inhibit automatically performs cut at end of fader travel when dissolves or wipes between non-sync inputs would cause unwanted picture disturbances • Choice of colored or white bus pushbuttons • Wipe limits are adjustable • Masking available on foreground keyer • 2 heavy-duty power supplies • 25' interconnect cables between control panel and electronics mainframe • Oak panels on ends and top • Extender board • Special tool kit • Spare parts kit • Technical manual

508B-20 Video production switcher (20 inputs) . . . \$69,857.00

508B-24 Video production switcher (24 inputs) . . . 73,465.00

Extra control cable for basic switcher (per ft.) . . . 14.00

RVS 517 Series Switchers

- 12 or 20 inputs • Designed for any post-production, van or studio installation • Wide range of optional equipment enables the 517 to meet most production requirements • Operational convenience of the PGM/PST style of switcher offers the added power of two fully integrated MLE systems • Logical controls allow any effect to be achieved easily with a minimum of confusion. For example: preset a title by the push of only a single button, then move the fader handle to put it on-air • Complicated transitions that include up to four sources can be seen on the preview monitor and adjusted without disturbing the on-air output of the effects system • After previewing a wipe or dissolve, switching off TRANS P/V automatically returns the monitor to the next scene preview mode, regardless of which limit the fader is at • Most simple transitions are made between the PGM bus and the PST bus. At the end of a transition, the PST source selection is transferred to the PGM bus and the PGM source is automatically transferred to the PST bus • MLE title keyer is a complete downstream keyer with a four-input source selector • The Transition Control Group—dissolve, wipe and take buttons are located adjacent to the fader handle • Conveniently located HOLD buttons permit directing a transition to any or all levels • The Preview (or next scene) monitor always shows what change will take place in the next transition • Adjusting key levels, effects, borders or colors is simplified and there are no surprises because the next

RVS508

- scene is always in sight on the preview monitor • A wide variety of patterns and effects can be created with the 30 basic patterns, pattern modulation, horizontal and vertical multipliers, joystick positioner and optional rotary/spin wipes and matrix wipes • Equipped with two pattern generators which are independently controlled by an assignable pushbutton pattern selector • Selector has 30 pattern keys, an assign key and a shift key. The most commonly used patterns may be selected directly • When the SHIFT key is turned on, 30 different patterns may be selected, thereby providing a total of 60 patterns from the selector panel • 17 1/2" of rack space required for the 517 electronics package, including all options. Control panel 34" -38" wide and 26" high, depending on number of inputs

517A-12 Video production switcher (12 inputs) . . . \$51,744.00

517A-20 Video production switcher (20 inputs) . . . 55,524.00

Extra control cable for basic switcher (per ft.) . . . 12.72

Option

Ultra Key

- Keying with any color • Superior hue discrimination • Production flexibility • Ease of operation • Continuous remote control of hue adjustment—you can key with any color • Completely integrated into the MLE system, meaning that you use it like an ordinary chroma key unit without the limitations and restrictions imposed by add-on units • Change foreground or background sources separately or in combination with each other or with titles • Permits the use of two or more chroma key cameras with selection right on the switcher control panel, including automatic key follow of the foreground bus video selection • Optional multi-camera selector is available • No distortion of colors in the keyed scene. That means you can make transitions to and from chroma key situations without the distracting hue shifts on the keyed-in subject • Separate "traveling matte" output may be recorded for subsequent post-production to eliminate problems of encoded keying • Two remote controlled adjustments—hue selection and null control. With the use of the null control, you can eliminate blue edging or blue tint

Ultra Key . . . \$3,780.00

RTS SYSTEMS, INC.

Programmable Master Station Intercom

SERIES 800

802 Master Station

The 802 Master Station is a sophisticated microprocessor-assisted intercommunications control station capable of providing 22 independent signal paths operating in up to six separate modes. It offers an array of features including intercom, squawk, IFB/SA, station-isolate and signaling. An intelligent combination of hardware and software programmability allows the user to conveniently structure an individualized operating format. The 802 does not require space consuming central electronics, yet it features a sensible front panel layout, unique momentary/latching action buttons, individual channel listen level controls, and stereo headset source assignment.

Microprocessor-Assisted

The 802 utilizes a powerful Z80 type microprocessor to control the selection and operation of multiple functions and capabilities. For example, front panel switch functions may be user programmed to meet changing needs and requirements, or electronic switching circuitry may be instantly reprogrammed. In fact, almost all circuitry and functions may be programmed for specific conditions. This refined firmware package offers immense capabilities via the standard EPROM. In addition, special firmware can be created for unique applications.

Smart Features

Each 802 can operate independently and may be employed as a single unit or used in multiples, depending on the application. A wide range of functions is incorporated into a single, compact rackmount package. Standard and optional features may be combined to configure each station to user specifications. These features include 2-wire conference-line intercom with separate talk/listen switching, one-way announce/page functions, IFB (program interrupt), squawk address (dedicated-line intercom), station-isolate (video-iso), program monitoring and multi-source audio selection for mono or stereo headset. Six programmable, non-committed relays can be activated by any one or combination of front panel switches.

Programmable signaling circuitry (call lights) may be incorporated as an option for use in conference-line or dedicated-line operations. These call lights may be augmented by a chime signal. A memory circuit holds the flashing call signal for a predetermined time or until answered.

Each individual channel of the 802 can operate in either a 2- or 4-wire balanced line mode making it easy to couple to external equipment such as other intercom systems, radiotelephones, telephone circuits and communications lines. Flexible design allows ample system accessibility through 19 circuit access ports.

The 802 is completely self-contained, requiring no external electronics or other ancillary equipment.

Applications

The 802 is powerful and versatile enough for every intercommunications application. In the entertainment industry, teleproduction, broadcast and theater users appreciate the sensible controls, quick set-up, and programmability. The 802's adaptability, non-volatile user memory, and presets are perfect for industrial applications such as high level security operations, oil production communications, large scale research teams, aerospace command centers and airport control towers.

All front panel switches have dual level illumination and large easy-to-read interchangeable legends. The switches also feature a unique momentary/latching action; the microprocessor continually senses the position of each switch and determines whether to make a temporary or permanent latch. As a result, every switch can operate in either a momentary or latching mode.

Infrequently used controls are placed on a hidden, yet easily accessible front panel pullout adjustment board. These controls include listen assignment switches for the stereo headset and loudspeaker, trim pots for individual channel listen levels, headset and panel microphone gains, and switch illumination intensity. The 802 is compatible with dynamic and carbon microphone headsets as well as "plantronics" type mini headsets. A front panel mounted gooseneck microphone may be used in conjunction with the loudspeaker for headset-free operation.

RTS SYSTEMS, INC.

Intercom System

MATRIX/CONFERENCE-LINE INTERCOMMUNICATIONS

810 MASTER STATION

The 810 Master Station is a multi-purpose intercom station designed for use in professional applications. Featuring four different modes of operation, the 810 is capable of satisfying a wide variety of intercommunication requirements.

The 810 is compatible with other Series 800 products. All intercom lines are balanced line-level, and operate in a full-duplex mode. Interconnection to TW intercom circuits is also possible through ancillary equipment.

A group of 11 pushbuttons serve as the selection switches. The first 10 buttons may be latching or momentary-action and directly access the intercom lines. A momentary-action All Talk pushbutton enables each station to talk simultaneously to all the intercom lines.

All front-panel pushbuttons are illuminated at a low level for easy identification in darkened environments; when engaged or tallied, they become brightly lit.

The 810 can be ordered in 4 versions to accommodate specific operational requirements in a variety of system arrangements. The 10 selection pushbuttons take on different functions in each version of the 810.

Squawk System

The 810 can be used to create a 10 x 10 point-to-point squawk system. Any one of the 10 user stations can talk to any other station or combination of stations. Communication is dedicated to each respective station and the receiving station will automatically hear all incoming messages.

A station can talk to multiple stations simultaneously by depressing any combination of buttons. Depressing the All Talk button will page all stations simultaneously.

In a typical operation, any station can talk directly to any other station by depressing its respective pushbutton. There is one momentary pushbutton for each station.

Matrix Intercom System

The 810-AA can be used as a user station within a 10 x 10 matrix intercom system. Any one of the 10 stations can talk to any other station or combination of stations. All 10 pushbuttons are latching action for maintained and dedicated communications to other stations. The receiving station will automatically hear all incoming messages.

Each latching-action pushbutton will illuminate when engaged, indicating switch status.

10-Channel Conference Line Intercom System

The 810-CL can be used as a user station within a 10-channel conference line intercom system. All pushbuttons are latching action to allow continuous communication on any channel or combination of channels.

5-Channel Conference Line Intercom System

The 810-5CTL can be used within a 5-channel conference line intercom system. All pushbuttons are latching action to allow continuous communication on any channel or combination of channels. Each channel has a separate talk and listen pushbutton; this allows any combination of listening and talking to selected channels.

Interconnection

Interconnection to the 810 is straightforward using standard 50-pin microribbon connectors. A rear panel, multi-pin, molex connector provides access to various circuit ports essential for coupling to other intercom equipment.

810	Master Station/10 Channel Squawk System Station	\$1727.00
810-AA	10 Channel Matrix System Station	1800.00
810-CL	10 Channel Conference Line Station	1827.00
810-5CTL	5 Channel Talk/Listen Conference Line Station	1827.00
-M	20" Gooseneck Panel Microphone	140.00
865	Central Matrix/Required for 810 Squawk System	1047.00
4012	50-pin x 12 (3-pin XLR type connectors) System Interconnect.	549.00

927 Reference Tone Generator

The 927 is designed for use in making master and/or duplicate audio or video tapes. Operating in a stereo mode, it offers a significant improvement in record/playback quality assurance since a broad spectrum of frequencies can be placed at the head end of the tape rather than a single tone. In addition to discrete tones, white noise, pink noise, noise reduction tones, and stereo channel I.D. are available.

The 927 can also be used for test applications such as telephone lines, satellite and microwave links, professional audio studios, and semi and fully automated test benches.

927 \$1195.00

MSA-325 Modular Loudspeaker

A full range loudspeaker that fits conveniently into a standard 19" EIA rack. It is a single rack unit in height by one half rack unit in width allowing it to be used singly or in tandem pairs. Maximum handling power is 10W.

It is designed to be used with 810 Master Station but may be used for any monitoring application.

The MSA-325 is the lowest profile full range loudspeaker and enclosure available today. Considering it is only 1³/₄" high, it puts out an amazing amount of sound.

MSA-325 \$140.00

RTS SYSTEMS, INC.

Intercom System

824 TWENTY-FOUR CHANNEL INTERCOM STATION

The 824 Rackmount Speaker Station is a 24 channel intercom user station designed to work within a Series 800 component intercommunication system. Mounted in a standard EIA equipment rack, it is particularly suited for applications that require a simultaneous "open-listening" mode of operation with a panel microphone and loudspeaker as well as a private mode of operation with a headset or a handset.

In the hands-free open-listening mode (both the loudspeaker and panel microphone turned on), acoustic feedback is suppressed by adjustment of a front panel sidetone (balance) control. This control cancels the originating microphone signal in the local loudspeaker.

In the private operating mode, almost any headset or handset can be used while the loudspeaker is turned off. This mode may be expanded by using the loudspeaker for monitoring and the headset or handset for conversation.

Practical operating features include rotary switch selection of any one of 24 channels; a Page pushbutton switch to allow any one station to address all other stations independently of the selected channel or volume setting; a panel microphone/speaker select switch; microphone on-off latching-action switch, a speaker on-off switch and a full range volume control. A dynamic microphone headset connector, and carbon microphone headset connector accept almost any type

of headset—including Plantronics telephone-type headsets.

User oriented features include a microphone limiter circuit for equalizing levels, a powerful loudspeaker/headphone amplifier and silent channel select switching.

The 824 may be connected in a system of up to 100 user stations. All stations are bridging and do not affect the line. There are no central electronics, switching, or interconnect; all select switching and amplification is done at each station. All lines are balanced and without voltage (dry). They operate in a two-wire, full-duplex mode. A local AC power supply provides power to each 824. Line interconnection is accomplished via standard 50-conductor 25-pair cable. Line interconnection and distribution may be run in parallel or series or a combination of both. (4025A, a 1 x 4 splitter and 4022, a 1 x 2 splitter, can be used for cable routing and distribution.)

The 824 system may be employed in a medium to large facility where multiple station, multi-channel intercom is required. Up to 24 separate conversations may take place simultaneously with any combination of stations; any station may select any channel.

The 824 may be interconnected to other RTS System's intercommunication and pro-audio products. Interfacing can be accomplished via 4024 Connecting Block, 862 System Interconnect, or custom made devices.

824 \$1217.00

RTS SYSTEMS, INC.

Intercom System

848A

848A Programmable Matrix Intercom System

The Model 848A Programmable Matrix Intercom Station is the main component of a "distributed summing bus" matrix intercom system. In a point-to-point system arrangement, each station can talk to any one or combination of other stations.

A quantity of two stations can be used to create a 2x2 minimum size system, while a quantity of 24 stations make up a 24x24 maximum size system. The latter system can support 12 separate and independent conversations. Most typically, however, each station would be in communication with a number of other stations designated by that given station's operational needs.

In addition to 24 regular talk buses each station has an All Talk bus for system paging and two TW intercom conference-line circuits for direct connection to standard RTS systems intercoms.

The 848A is augmented with a powerful computer which provides a series of new functional capabilities and operational enhancements.

Programming features include electronic momentary/latching switch action, latch disable, instant mike-on, calling station tallies, received call stacking, auto-stacking answer-back, forced crosspoints, crosspoint inhibit, auto return talk, crosspoint grouping, and busy line lock out.

A dedicated-line matrix intercom system can be used wherever point-to-point intercommunications are required. Typically, applications employ a number of persons who need to carry on private conversations with specific individuals or groups of individuals. The ability to set up and alter (in real time) each station for a group of specific "talk-to" destinations helps to maintain a continuity in the exchange of information between individuals working in other areas, on other channels, on the same 848A system—without interference from persons not involved.

In addition to the private conversations, party-line conversations can take place simultaneously on the two conference-line circuits. This mixing of communication modes can effectively augment the total intercommunication capability. A group of sub-mix level controls located on a front panel pull-out adjustment board allows each user to adjust the mix of input sources to suit his individual needs.

Applications include television and radio broadcast operations, teleproduction studios and mobile units, theme park operations, schools and training centers, and a variety of industrial and commercial operations.

This system is a 24x24 Matrix Intercommunication System. Operating in a 4-wire, full-duplex mode, all communication paths are distributed to each station, thus the term "distributed summing bus." This concept eliminates the need for central matrix switching electronics—all station select switching is done directly at each station.

Each talk path is dedicated to a send/receive bus. In a typical operating example, the user selects the station he wishes to talk to by pushing that respective pushbutton. The selected receiving station will automatically hear the sending station. The receiving station may respond to the sending station by simply pressing the respective pushbutton. When the communication is completed, each station can switch off that circuit. Another mode would be to leave the circuit switched up and turn off the mike switch. This would be especially useful when a number of circuits are switched on but the user wishes not to be heard for a moment. An All Talk switch allows any station to talk to all other stations simultaneously.

Each station is augmented with two TV intercom conference line circuits. This capability has been included to allow each station to connect to standard TW intercom system lines. In this manner the matrix-based intercom may be directly connected to satellite conference line systems as required. Conference-line channels 1 and 2 are accessible on individual front panel talk and listen switches. These circuits, of course, can be used simultaneously with point-to-point matrix operation.

All stations are self-contained and do not require external electronics, central power supply, or central matrix switching.

The system operates on balanced lines, making it impervious to external interference and interline crosstalk while maintaining excellent frequency response and voice clarity over long distances.

4001

4002

4003

4010

4020

SERIES 4000 IFB SYSTEM

A one-way communications system, created especially to meet critical requirements in the television broadcast industry. This program-interrupt system is used primarily for cueing on-air talent. It is based on a modular building-block concept that allows the user to configure a system sized to meet his requirements. Main system components consist of control stations, user stations, and central electronics. A system may grow to four 4003 Control Stations, three 4010 Central Electronics, and twelve or more 4020 User Stations. A brief operational description of an IFB System: The talent is receiving a program feed through the IFB System components. The director pushes a button on his control station which interrupts the program feed and permits the talent to receive a message from the director's microphone. Two or more talent positions may be interrupted independently or all together.

The Series 4000 IFB System control stations are designed to provide the necessary switching commands and voice signal origination that ultimately becomes the part of the composite IFB signals to the talent user stations. Each station provides a given number of switch functions according to its model number. (All switches are illuminated momentary pushbuttons with two brightness levels.) The 4001 has six switches: IFB-1 thru IFB-4, IFB ALL, and SA (studio announce). The 4002 has eleven switches: IFB-1 thru IFB-8, IFB ALL, SA-1, and SA-2. Model 4003, with sixteen switches, provides IFB-1 thru IFB-12, IFB ALL, SA-1, SA-2 and SA-3.

Each control station model may be ordered with a high-quality gooseneck microphone permanently attached to the top panel. (An "M" suffix is added to the model number: 4001M, 4002M and 4003M). Should an existing microphone be more suitable for operations, the "M" suffix model need not be ordered. A terminal-strip connection on the control station microphone preamplifier circuit board accepts a microphone- or line-level signal from the existing microphone. Any convenient nearby microphone may be used, i.e., an intercom headset microphone, a paging microphone, audio-slate microphone, etc.

The Model 4010 central electronics unit contains all the necessary control functions and electronics to provide the active link between Models 4001, 4002, or 4003 control stations and Model 4020 user stations. It performs the silent electronic switching between program and voice, assigns the program channels to the appropriate outputs, sets the program/voice level mix to the talent, and supplies two channels of composite audio, combined with a DC voltage, to the Model 4020 user stations. In addition, it provides convenient front panel monitoring facilities for set-up and testing.

The Model 4025A Splitter Assembly is designed for applications involving 50-pin microribbon connectors. There are five high-quality connectors wired in a parallel pin-to-pin configuration with flat ribbon cable, one male connector and four female connectors.

The Model 4020 user station, a small "belt pack" package, allows the user to receive audio signals as designated by the central electronics unit and the control stations. It is the electronics package typically used by talent personnel, such as newscasters, sportscasters, musicians, etc.

Each 4020 contains the necessary electronics to provide a stereo audio signal to the user. Two power amplifiers rated at 1/2 watt each are capable of driving almost any set of headphones, earphones, or even small loudspeakers.

Since each 4020 is bridging to the line, up to three stations can be paralleled across a single output of the 4010 central electronics unit.

A flat ribbon cable may be ordered by adding an "F" suffix on the model number, e.g. 4015-5F. A standard vinyl sheath round cable with stranded wire may be ordered by adding an "L" suffix on the model number, e.g. 4015-5L. Cable assemblies may be ordered in the following standard lengths (in feet): 5, 15, 25, 50, 75, 100, 150.

The Model 4025A Splitter Assembly is designed for applications involving 50-pin microribbon connectors. There are five high-quality connectors wired in a parallel pin-to-pin configuration with flat ribbon cable, one male connector and four female connectors.

The 4025A is a completely passive device and may be used as a splitter, with one input and four outputs, or as a combiner, with four inputs and one output.

The Model 4015 Cable Assembly is a pre-wired double ended connector/cable assembly with 50-pin microribbon connectors that are wired pin-to-pin. The assembly is available in two types: ribbon cable for light-duty interior use and round cable for exterior use.

Dual headphone, dynamic mike, 6' cord w/A4M conn. \$87.00

PS8 Power Supply
A single PS8 (two-channels) can power: 12 user stations w/o call lights, 7 speaker stations w/o call lights, 7 user stations with call lights, 5 speaker stations with call lights, or a combination of above. \$437.00

PS31 Power Supply
A single PS31 can power approximately 30 user stations on any combination of 3 powered output channels. A program audio input can be added to any one of the three channels. \$1175.00

TW1222, TW1224, System Interfaces
Designed to provide the best possible coupling between the TW Intercom system and other types of intercom and communications systems.
TW1222 \$558.00
TW1224 488.00

VCP6A, VCP12A, VIE306 Station ISO
Provides the necessary control, switching and interface functions for private communications between any of 3 control stations and 6 user stations.
VCP6A \$ 949.00
VCP12A 1595.00
VIE306 3087.00

SAP1626 Source Assignment
Multiple switch assembly assigns any one of 12 intercom channels and/or 3 program audio channels to 26 separate intercom 2 channel user stations. \$2949.00

TW5W Splitter
A completely passive 1 x 5 connector splitter assembly. \$99.00

CPK62 Circuit Card Kit
Small-size user station plug-in circuit card. External controls and connectors are provided. \$217.00

DT108 Headset
Single headphone (50 ohms), dynamic mike, 6' cord w/A4M conn. . . \$210.00

DT109 Headset
Dual headphone (50 ohms), dynamic mike, 6' cord w/A4M conn. . \$240.00

51103XD Headset
Single headphone, dynamic mike, 6' coil cord w/A4M conn. \$145.00

51303XD Headset
Dual headphone, dynamic mike, 6' coil cord w/A4M conn. \$160.00

RTS SYSTEMS, INC.

Professional Audio Products

Series 400 Professional Audio Products

405 Professional Phono Preamplifier

High performance two-channel preamplifier designed for critical use in disc mastering, broadcast stations and commercial installations. It features adjustable cartridge termination, switchable rumble filter, and two output formats. **\$437.00**

416 Distribution Amplifier

Expanded version of the 424 with six outputs. Both units provide outstanding performance specifications and feature individual output level controls, a master gain control, and 33dB of gain adjustment. . . **\$631.00**

424 Distribution Amplifier

High performance 1 x 4 audio distribution amplifier with balanced input and four individually amplified transformer balanced outputs. **\$453.00**

444 Dual Two-Channel Buffer Amplifier

Designed to couple consumer, semi-pro, and industrial equipment with professional systems, the 444 provides the necessary electronic interface between +4dBm Lo-Z balanced circuits and -10dBV Hi-Z unbalanced circuits. **\$368.00**

465 Microphone Preamplifier

Single-channel, high performance wideband preamplifier with transformer balanced input and output, this unit features a switchable limiter, switchable phantom mic power, and adjustable gain. . . . **\$477.00**

1400 In-Line Microphone Preamplifier

Battery powered high performance microphone preamplifier that features impression specifications, a switchable limiter circuit, and adjustable gain; all packaged in a durable compact housing. **\$264.00**

Series 2500 Amplifier System

Consists of a series of high performance audio amplifiers and other associated circuitry items that are designed to be part of a versatile card frame system. Up to eight plug-in circuit cards and two power supplies can fit into the three rack unit frame.

Specifications common to 2500 Amplifiers are: +28dBm into 600 ohm loads from 30Hz to 20kHz all outputs driven; +32dBV maximum input level; SNR > 100dB; input CMRR typ 75dB at 50Hz; 4µsec rise time; maximum phase shift +22.5° at 20Hz, -22.5° at 20kHz; output source impedances of 80 ohms or less.

2501 Card Frame Assembly

Consists of the basic card cage housing and related components: rear rackmount supports, strain relief bars, front cover, and interconnect housings and crimp terminals. **\$575.00**

2503 Extender Card Assembly

Designed to allow any one of the 2500 amplifier circuit cards to extend out from the card frame for servicing or adjustment **\$180.00**

2505 Power Supply Assembly

A ± 26V at 4A unregulated power supply mounted on a bent metal frame. It is expressly designed to fit into the 2500 card frame. Two 2505 power supplies for each card frame are recommended for backup power **\$383.00**

2510 1 x 6 Audio Distribution Amplifier

Consists of a single differential balanced input and six individually amplified transformer balanced outs. **\$520.00**

2512 Stereo 1 x 6 Audio Distribution Amplifier

Can be used as a single 1 x 12 or a dual 1 x 6 distribution amplifier. Optional remote gain VCA circuitry is available. **\$455.00**

2514 Quad Line Amplifier

Can be used as four discrete amplifiers or two stereo pairs. Optional remote gain VCA circuitry is available. **\$513.00**

2516 Quad Buffer Amplifier

Primarily designed to interface unbalanced -10dBV IHF level equipment + 4/ + 8dBm professional equipment. **\$520.00**

2522 Universal Relay Card

Comprises ten individual DPDT relays with buffered logic inputs. **\$272.00**

2524 Universal Dual Summing Amplifier

Consists of a pair of six input, one output summing amplifiers with balanced input/output circuitry. **TBA**

2528 Dual Microphone Preamplifier

Features phantom power, variable gain, balanced inputs and outputs, and very low noise. **TBA**

2540 Mix-Minus Matrix

A 24 input by 8 output monitoring device used to delete one of 24 inputs from each combined output for 8 different output groups. . **TBA**

2542 Switcher

A single 16 input by 1 output or dual 8 input by 1 output remotely controlled audio switching network. **TBA**

Tape Transport Consoles

RL200 Rack

For tape transports in two sizes, 18" and 24". 18" accepts tape transport up to 15 3/4" high, 24" up to 21" high. Standard includes casters, all rack mount rails and 7" blank front panel. Optional colors.

Part Number
RL200 — 18"
RL200C — 24"

400-A

400-B

Console is shipped knocked down for easy, economical shipping. 10 bolts are used for assembly. Space-saver size is 22 3/4" wide; 33 3/4" high (variable on request); 27 1/2" front to rear. Can be locked in desired position without complicated hardware. Machine is dropped in place using feet to locate position and prevent movement. There is adequate cable accessibility allowed. Equipped with rollaround casters. Lower section has standard 19" opening front and rear, plus a shelf with back as standard equipment.

OPTIONAL: With additional rack rail and modifications, other equipment can be installed in front and rear of lower section. Console can be used for other rack mounted equipment. With fillers in top section removed, opening becomes standard 19". Rack rails can be added to mount other equipment. With rear riser assembly, a Ruslang over-bridge system can be added for additional overhead rack space. Console is laminated with standard Ruslang walnut and black trim; other colors optional.

Part Number
RL400-A
RL400-B

RL300

RL300 Table Top Console

RL300—Accepts tape transport 19" x up to 15 3/4" high-rack space overbridge. Transport lifts up for service. Primarily used as a table top installation.

A rack base called RL350 is available to make a roll-around console with 19 1/4" rack space directly below transport. Takes up 23 1/2" x 24" floor space. Casters included.

RL600 Tape Transport Console

RL600—Accepts tape transport 19" x 21" high standard or 21 1/8" high by request, plus other RL500 features. Optional overbridge can be added to RL600 with special riser.

RL500 Tape Transport Console

RL500—Accepts tape transport 19" x up to 15 3/4" high (17 1/8" high on special order). Transport tilts down in front for ease of operation; lifts up for service. Front directly under transport lifts off after loosening four mounting screws. Casters are included. The overbridge can accommodate any size required from 3 1/2" high to 11" deep to 36" x 19" depth (we have supplied).

RUSSCO ELECTRONICS, INC.

Mixer/Amps/Preamps

505 Studio/Master 5-Channel Audio Mixer

• 5 mixing channels, 4 channels with built-in preamps • Each preamp can be quickly modified to accept microphone, phono or high level signals • 5th mixer channel accepts 5 balanced, high level input lines, each selected with long-life, pushbutton switches • Studio/Master features pushbutton on-air switches with LED indicator lights • Cues on any channel and has a 3 1/2" true VU meter • Built-in 25W monitor amplifier provides power to your external speaker • Built-in headphone amplifier with stereo headphone jack allows you to use a monitor headset of high or low impedance • Built-in amplifier features FET muting • Cue amplifier drives a built-in 3" cue speaker • Allen-Bradley Mod Pots for quiet, trouble-free performance • Available as a rackmount model (505R) fitting in a 5 1/4" x 19" rack space, or as blue-gray, maroon, and black table model (505).

505 Desk type 5 channel unit—includes 25W built-in monitor amp \$1616.00
 505-S Desk top stereo unit—no monitor amp is included 2365.00

Note: Any stereo power amp may be used with the 505 stereo console as a monitor MP, but the 225 was especially designed for this purpose.

MA-225 Audio Power Amplifiers

• All purpose audio amplifier • Dual channel 25WRMS each • Excellent channel separation allows use as two monaural amplifiers • All solid-state • Epoxy glass circuit board • Low distortion—excellent frequency response • Fused output lines • Integrated circuit input stages • Accessory amplifier to the 505-S Console Mixer • Accessibility through the panel to change channel level preset controls
 MA-225 \$325.00

MA-325 Stereo Audio Power Amplifier

• Dual channel 25W RMS into 8 ohms • Distortion: < .3% THD at 25W output • Frequency response: ±.5dB 15Hz-25kHz • Hum and noise: <80dB below 25W • Channel separation > 60dB 20Hz - 20kHz • Input Z: 10K ohm unbalanced • Front panel peak indicators • RCA plug input jacks • Barrier strip output connector • 1 3/4" rackmount enclosure
 MA-325 \$449.00

2418 (Mono)/4428 (Stereo) Multi-Mate Distribution Amplifiers

• Multi-Mate gives you simplified routing of multiple audio signals • Instant flexibility without modifications or options; either stereo or mono with the same unit • Basic 2418 offers you 2 inputs with 4 stereo outputs or 8 monaural channels total • Larger capacity 4428 doubles those channels to 16 maximum • You may use either model balanced or unbalanced with no internal changes • Each individual output is separately screwdriver adjustable • Multi-Mate amps are RF proofed • We supply a spare internal IC • Desk top units are small with an antique silver no-mar finish • Anodized rackmount panel optional
 2418 Mono or Stereo/1 in 8 out or 2 in 8 out \$347.00
 4428 Mono or Stereo/1, 2, or 4 in with 16 out 530.00

2816 Audio Distribution Amplifier

• Total of 16 outputs fed by two balanced line inputs that can be fed by a single audio source or separated and fed by two audio sources • Features two sections of 8 outputs each • Each section is fed by a single balanced line • Amplifier may be used for stereo distribution or two separate mono sources • Level of each distributed audio line can be adjusted independently from the others with no interaction between the lines • Accidental feed on the line will not go back to the source • The 2816 does not use an audio transformer which often imposes limits on the audio signal • Amp delivers +18dBm into a 600 ohm line
 2816 Either 1 or 2 lines in with 16 lines out. Rackmount only \$470.00

MLD-22 Microphone/Line Driver Multi-Purpose Preamp

• Dual channel unit capable of driving a 600 ohm line to a maximum level of +18dBm • Used as a line to line booster amplifier, high impedance output equipment such as a tape recorder can be fed into this unit to feed a telephone line • The MLD/22 can be used as an unattended piece of remote equipment or as a stereo preamp • It can combine both mike or line channels into a single line out • Features gain levels that are adjustable • Use it for balanced or unbalanced operation • Self-powered, solid-state rugged and economical
 MLD-22 \$247.00

Studio/Master 505

2418

2816

Fidelity-Pro and Fidelity-Master Professional Phono Pre-Amps

• Pre-amps include integrated circuits, self-contained power supplies, industrial rated components and a custom-made "easy-access" enclosure • Mono or stereo versions available with balanced or unbalanced output • The Fidelity-Master series offers straight RIAA equalization • The Fidelity-Pro units feature switchable high and low frequency filters • The balanced output models include highest quality transformers for true line isolation • Two integrated circuits per channel give you peaks to +18dBm on 600 ohm line • All models are self-powered

FMMU	Fidelity Master-Mono output unbalanced 600 ohms	\$169.00
FMMB	Fidelity Master-Mono output balanced 600 ohms	202.00
FMSU	Fidelity Master-Stereo output unbalanced 600 ohms	262.00
FMSB	Fidelity Master-Stereo output balanced 600 ohms	324.50
FPMU	Fidelity Pro Mono output unbalanced 600 ohms	189.00
FPMB	Fidelity Pro Mono output balanced 600 ohms	225.00
FPSU	Fidelity Pro Stereo output unbalanced 600 ohms	282.00
FPSB	Fidelity Pro Stereo output balanced 600 ohms	339.00

Phono-Mate Professional Phono Pre-Amps

• Full solid-state circuitry • Lots of headroom at +16dBm • Straight RIAA equalization • RF proofed against outside interference from AM or FM stations • Mono or stereo versions available with balanced or unbalanced output • The balanced output models include highest quality transformers for true line isolation • "Easy-access" aluminum cases for easy servicing • Requires separate power supply—one power supply will serve up to 4 preamps

Phono-Mate Pre-Amps were designed for use with outside power supply. The Phono-Mate is supplied with connector cables for use with any outside source of DC power between 27 and 39V.

1-U	Mono preamp, unbalanced output 600 ohm output impedance.	\$109.00
1-B	Mono preamp, balanced output 600 ohm output impedance.	125.00
2-U	Stereo preamp, unbalanced output 600 ohm impedance.	163.00
2-B	Stereo preamp, balanced output 600 ohm output impedance.	195.00
PMPS	Phono Mate power supply	74.00

RUSSCO ELECTRONICS, INC.

Amplifier/Remote Equipment

CD100 Compact Disc Adaptor-Amplifier

Using state-of-the-art manufacturing techniques, the overall price can be kept down without sacrificing quality. Designed specifically to interface consumer-type CD players, the CD 100 can be used to interface any high impedance output device to a 600 ohm line; balanced or unbalanced.

Specifications

Frequency Response: 15Hz - 30kHz
 H. Distortion: < .1%
 Noise: < 75dB

CD100.....\$69.95

T-212 Telephone Equalizer-Coupler

Built into the T212 is a three band equalizer which drastically changes the sound quality of the average telephone line enabling you to mold and contour frequency response as you need it, to transform a "tin can" phone line into a quality communication line. Other features include a 60Hz notch filter to eliminate hum, a high frequency boost filter for resurrecting lost highs, a 2W headphone amplifier, two 600 ohm high level output amplifiers, and rear panel connections for remoting the line connect switch and a hold switch. Single circuit board construction, no hard wiring and state-of-the-art PC mount components ensure the highest standards of construction and reliability.

When integrated with the Russco T321 remote broadcast mixer, the T212/T321 combination make up one of the simplest and most effective remote systems available today.

Specifications

All Outputs: < .3% THD at rated output level
 Phone Line Input: -15dB from typical phone line
 Hum and Noise Level: < -60dB below 0dB reference
 Frequency Response: 20Hz - 20kHz
 Equalization: + 10dB at 100Hz, 1.5kHz, 7kHz
 High Frequency Boost: + 6dB at 6kHz
 RF Proofed
 Transformer Isolated
 1 3/4" rack mount enclosure

T-212.....\$399.00

T-321 Telemote

The Stellar Series Telemote 321 gives you two low impedance microphone inputs and one medium impedance tape recorder input in a 3 lb. package. It requires no batteries or any other external power source except your phone line.

While you're broadcasting that important event, you can supply audio up to 3 headsets at once and control their level by a front panel pot. The audio level feeding the telephone line is controlled by a built-in limiter with the limiting action displayed by a LED bargraph meter. The 321 also incorporates a signal bell that allows calls originating at your station to be received at your remote location. Also, you may route the audio from a portable radio into the mixer for on-air checking with the program off the phone line. You'll like the convenient tilt-stand that doubles as a handle.

Specifications

- 2 low impedance microphone inputs (250 ohms)
- 1 medium impedance tape recording input, matches anything from 8 ohm tape recorder output to 10K ohms output
- 3"H x 8"W x 6"D
- Weight 3 lbs.
- Case: anodized aluminum cabinet with tilt up stand
- Frequency response of unit, 30Hz to 15kHz, maximum distortion 1 percent

T-321.....\$599.00

SACHTLER CORP. OF AMERICA

Camera Support Equipment

Video 80 Fluid Head

• OB/Studio applications • Leakproof, zero-friction fluid head • Fluid damping modules control very precisely camera/lens combinations weighing up to approx. 80kg • Damping modules guarantee grades of drag which can be reproduced exactly at all temperatures at which cameras can still be operated • Seven settings of drag for the horizontal and vertical position • Locks for the horizontal and vertical direction are working independent of the damping and counterbalancing system. They bring the camera to a stop, wherever desired, without transmitting vibrations • Maximum load: approx; 198 lbs. • Drag can be completely turned off, if one has to make sudden movements with the camera • Grades of drag: horizontally and vertically 7 each and 0 • V-shaped wedge plate is used to mount the camera to the sliding balance plate • Tilt angle: $\pm 60^\circ$

8080 Video 80\$7,935.00

OB 2 Tripod/OB Dolly

• Developed especially for outside broadcasting • Can be extended twice • Crank operated elevation unit • OB Dolly can have pneumatic tires of 8" diameter. As a special feature Sachtler offers an extender for the OB dolly. This extender, on the one side increases the size of the supporting base and on the other side it takes the weight off the wheels

Video 14 II Fluid Head

- 3 step dial-in drag adjustment
- Damping can be set for 3 different drag levels but the drag can also be disengaged. A selected setting can be re-engaged at any time
- Temperature span from -40° to +60°C
- Free-wheeling for pan and tilt
- Sliding, quick-release wedge plate (1/4" and 3/8" screws) for center of gravity compensation
- Touch and go system quickly fastens the camera to the supporting mount
- 2 adjustable pan arms
- In order to counterbalance (white tilting the camera) two adjustable pull-back springs are used
- Built-in counter balance spring tilt ± 60°
- Tripod interface flat base for video 14 pedestal/75mm bowl tripod
- Vertically and horizontally working brakes which when applied do not transmit vibrations to the camera
- For horizontal levelling a precise circular waterlevel is built-in
- Maximum load: approx. 33 lbs.

1400 Video 14 II Fluid Head \$1,295.00

Dolly 14 Rolling Triangle

- For pedestal and 75mm bowl tripod
- Heavy-duty 3.15" diameter casters
- Built-in handle
- 9.7 lbs.
- Dimensions for transporting: 75"H X 7.9"W x 24.2"L
- Maximum load: 88 lbs.

7053 Dolly 14 \$295.00

Tripods 14

- Work with a height of 15cm off the ground up to a height of approx. 1.50 meters
- 75mm bowl leveling
- Black anodized aluminum construction
- Maximum load: 33 lbs.

Tripod 14 Medium

- Height range: Spreader 14: 5.9" - 31.1"; Dolly 14: 16.1" - 33.5"

Tripod 14 Long

- Height range: Spreader 14: 24.8" - 54.3"; Dolly 14: 32.8" - 59.4"

4151 Medium \$295.00

4182 Long \$315.00

Spreader 14

- For 75mm bowl tripod
- Works on slippery or delicate floors
- Light, robust and unbreakable
- For transportation purposes the spreader is simply folded up and remains attached to the tripod
- Maximum load: 88 lbs.

7001 Spreader 14 \$120.00

- Rubber and polyamid parts for slippery or delicate floors
- Light, robust, unbreakable
- Rubber pull loop tripod attachments
- Folds inward for transporting ease

Sachtler Triangle—Lightweight \$290.00

Sachtler Triangle—Heavy-Duty 395.00

SAMSON TECHNOLOGIES CORP.**Wireless Microphone Systems****Broadcast STD Series Frequency Selectable True Diversity Wireless Systems**

A significant evolution of wireless technology, Broadcast STD is the only system with 10 selectable frequencies in the receiver and transmitter, full RF monitoring and dbx noise reduction.

Offering more channels to choose from in different RF environments, Broadcast STD features ten selectable digitally-synthesized channels in both the receiver and the transmitter. The optimum channel can easily be selected using the BR-3 receiver's extensive RF monitoring capability on the front panel.

The visual "window" into the RF environment is actually a two-level, five segment multicolored LED ladder capable of scanning the RF level in any given location. Once the clearest frequency in the BR-3 has been selected, the user need only dial up the matching frequency in the transmitter. This delivers perfectly clear, uninterrupted wireless performance before the transmitter is even turned on. It also eliminates the need for a costly spectrum analyzer to "look at" the RF environment.

BR-3 Receiver

The BR-3 uses wide dynamic range dual-gate mosfet front ends. The dual receivers are arranged in a superheterodyne configuration with a maximum amount of interstage shielding.

A full array of convenient user features has been built into the BR-3. It includes dual A-B channel switching indicators, two separate 5 segment LED R.F. ladders that display R.F. signal strength, an LED 10 channel numerical indicator, separate up/down keyswitches for channel selection, audio level gain control, balanced XLR 600 ohm output jack, a 3-position attenuation switch for the balanced output (-20dB, -30dB, -40dB) and an unbalanced output jack with a nominal output of -20dB.

BH-3 Handheld Transmitter

Designed for maximum comfort with all-brass construction for total structural integrity, the BH-3 is available with a wide variety of today's most popular mike elements including the Electro-Voice N/DYM 757 Neodymium mike, the E-V BK-1 condenser and the Shure SM58, SM85 and SM87 capsules.

For greater ease of operation, all of the BH-3 transmitter's controls are located at the bottom of the mike barrel. These include a power on/off switch, mute on/off switch, a 10 channel selection rotary switch, a 3-function LED light to determine power "on", audio input overload and low battery, and a mike overload sensitivity control.

BT-3 Belt Pack Transmitter

The BT-3 supplies the highest level of sound and performance for a vast range of lavalier, headset mike and instrument applications. Supremely versatile, it accepts electret condenser mike capsules like the Sony ECM 44 and ECM 55, the Sennheiser MKE-2 or the Audio Technica 831-C uni-directional lavalier. The BT-3 comes equipped with a 6 pin Hirose input plug so that most any other type of lavalier may be used as well. The BT-3 is also fully compatible with the AKG C-410 and Audio Technica AT-73 headset microphones.

The BT-3's extensive controls include power on/off switch, a mute on/off switch, an audio level trimpot control, a 10 channel selection rotary switch, an external antenna and a unique "up-down" slide switch that optimizes its use with lavaliers, headset mikes or instruments.

Broadcast STD Series VHF Wireless Systems**Guitar System**

GC-1 instrument cable (1/4" male phone multi-pin plug); BT-3 body pack transmitter; BR-3 true diversity receiver. **\$1695.00**

MC-1 microphone adaptor cable XLR to P-6 plug. For adapting wired handheld mike to BT-3 body pack transmitter **45.00**

SCALA ELECTRONIC CORP.

Antennas

150-174MHz:

GP-150	VHF Groundplane 0dBd gain, omni, 144-174MHz (specify frequency), fully DC grounded, N or UHF connector . . . \$ 165.00
CDV-150	VHF sidemount dipole, 146-174MHz (broadband), N connector. 150.00
OG-4	Omnidirectional, 4.0dBd gain, 144-174MHz (specify frequency), N or UHF connector, (electrical downtilt optional: add \$30.00) 330.00
CA5-150EB	Five-element ruggedized yagi, 9.0dBd gain, rear-mount, H or V polarization, 144-174MHz (specify frequency), N or UHF connector 200.00
CL-150EB	High-performance ruggedized log-periodic, 7.35dBd gain, rear-mount H or V polarization, 147-174MHz (broadband), N connector 350.00

450-470MHz:

UBO-450K	Unity-gain (0dBd) omni, fiberglass, 406-470MHz (broadband), N connector \$ 155.00
UBO-470K	Unity-gain (0dBd) omni, fiberglass, 450-512MHz (broadband), N connector 155.00
OGB-455K	Omni, fiberglass, 5dBd gain, 440-470MHz (broadband), N connector 380.00
OG-6	Omnidirectional, 6dBd gain, 406-512MHz (specify frequency), N connector (electrical downtilt optional: add \$30.00) 330.00
OGB-460K	Omni, fiberglass, 7dBd gain, 450-470MHz (broadband), N connector 760.00
CA5-450	Five-element ruggedized Yagi, 10.0dBd gain, 406-512MHz (specify frequency) rear-mount, H or V polarization, N connector 185.00
CA7-460	Seven-element ruggedized broadband yagi, 10.0dBd gain, 450-470MHz (broadband) rear-mount, H or V polarization, N connector. 185.00
RA5-450	Radome-protected yagi, 10.0dBd gain, 400-512MHz (specify frequency), rear-mount, H or V polarization, N connector . . . 350.00
CL-400	Radome-protected log-periodic, B.0dBd gain, 400-512MHz (broadband), rear-mount, H or V polarization, N connector (35dB F/B ratio) 350.00
CPR-450K	Radome-protected helical, RH-CP, 12.0dBic gain, 400-512MHz (broadband), rear-mount, N connector 1540.00
PR-450U	Paraflector, half-parabolic screen, 15.5dBd gain, 450-470MHz (broadband), V or H polarization, N connector. 550.00
PR-450CU	Paraflector, as above except higher front-to-back ratio (25dB) 580.00
	Replacement feed assembly for PR-450U paraflector (specify 450-470MHz) 120.00
8000/460	Low-noise high-gain preamplifier, > 20dB gain, < 2.0dB noise figure, 450-470MHz (broadband), N connectors, cable-powered (includes 110VAC supply) 400.00

Note: Scala offers other antennas for the 450-470MHz band, including panels and dipoles. Also available are arrays of two or more antennas for increased gain and/or special patterns. Contact Scala for technical information and pricing.

940-960MHz:

OGB3-900K	Omni, fiberglass, 3.0dBd, B90-960MHz (broadband), N connector \$ 400.00
OGB9-900K	Omni, fiberglass, 9.0dBd, B90-960MHz (broadband), N connector 1000.00
PR-450U	Paraflector, half-parabolic screen, 18.0dBd gain, 940-960MHz (broadband), H or V polarization, N connector. 550.00
PR-450CU	Paraflector, as above except higher front-to-back ratio (25dB) 580.00
	Replacement feed assembly for PR-450U paraflector (specify 940-960MHz) 120.00
MF-960	Miniflector, 14.0dBd gain, 940-960MHz (broadband), V-polarization, N connector 300.00
RA5-450	Radome-protected yagi, 10.0dBd gain, 940-960MHz (specify frequency) rear-mount, H or V polarization, N connector . . . 350.00
CL-900	Radome-protected log-periodic, 8.0dBd gain, 800-1000MHz (broadband), rear-mount, H or V polarization, N connector (35dB F/B ratio) 350.00
8000/STL	Low-noise high-gain preamplifier, > 20dB gain, < 2.0dB noise figure, 940-960MHz (broadband), N connectors, cable-powered (includes 110VAC supply) 400.00

FM Monitoring (88-108MHz):

CL-FM	Super-rugged log-periodic, B8-108MHz (broadband), 7.0dBd gain, 25dB F/B ratio, center-mount, H polarization, available in 50 or 75 ohms \$500.00
CL-FMHR	Rear-mount version of CL-FM 550.00
CL-FMRX	High-performance log-periodic, 88-108MHz (broadband), 6.5dBd gain, for precision monitoring applications, center-mount, H polarization, available in 50 or 75 ohms impedance. 280.00
CL-FMRXR	Rear-mount version of CL-FMRX 320.00

B-1016

HDCA-5	Five-element ruggedized yagi, 7.5dBd gain, BB-10BMHz (specify frequency) center-mount, H polarization, 75 ohms, available with N, UHF or F connector \$230.00
HDCA-5EB	Rear-mount version of HDCA-5 270.00
HDCA-10	Ten-element ruggedized yagi, 9.5dBd gain, BB-10BMHz (specify frequency) center-mount, H polarization, 75 ohms, available with N, UHF or F connector 310.00
HDCA-10EB	Rear-mount version of HDCA-10 350.00

VHF-TV Monitoring:

CL-26	Super-rugged log-periodic, B.25dBd gain, channels 2-6 (broadband), center-mount, H polarization, available in 50 or 75 ohms \$600.00
CL-24	Same as CL-26, except covers channels 2-4 500.00
CL-24HR	Rear-mount version of CL-24 550.00
CL-46	Same as CL-26, except covers channels 4-6 500.00
CL-46HR	Rear-mount version of CL-46 550.00
CL-713	Super-rugged log-periodic, 9.0dBd gain, channels 7-13 (broadband) center-mount, H polarization, available in 50 or 75 ohms 500.00
CL-713HR	Rear-mount version of CL-713 550.00
HDCA-5	Five-element ruggedized yagi, center-mount, 75 ohms Channels 2-6 (specify channel), 6.75 to 7.5dBd gain . . . 230.00
	Channels 7-13 (specify channel), B.0dBd gain 210.00
HDCA-5EB	Rear-mount version of HDCA-5 Channels 2-6 (specify channel), 6.75 to 7.5dBd gain . . . 270.00
	Channels 7-13 (specify channel), B.0dBd gain. 220.00
HDCA-10	Ten-element ruggedized yagi, center-mount, 75 ohms Channels 2-6 (specify channel), B.75 to 9.5dBd 310.00
	Channels 7-13 (specify channel), 10.0dBd 240.00
HDCA-10EB	Rear-mount version of HDCA-10 Channels 2-6 N/A
	Channels 7-13 (specify channel), 10.0dBd 250.00

UHF-TV Monitoring:

CL-1483	Radome-protected log-periodic, B.0dBd gain, channels 14-83 (broadband), rear-mount, 50 or 75 ohms, N connector, (35dB F/B ratio) \$350.00
PR-450U	Paraflector, half-parabolic screen, for any single UHF-TV channel, 15.5 to 18.0dBd gain (depending on channel), 50 or 75 ohms, N connector 550.00
PR-450CU	Same as PR-450U, except higher front-to-back ratio (25dB) 580.00
4DR-4S	Radome-protected panel, for any single UHF-TV channel, 9.0dBd, 50 ohms Channels 14-28 (specify channel) 500.00
	Channels 29-44 (specify channel) 450.00
	Channels 45-B3 (specify channel) 400.00

Prices and Specifications Subject to Change Without Notice.

Antennas/Accessories

VHF-TV Antennas:

CL-26	Color log, 8.25dBd gain, channels 2-6 (broadband), center-mount, 50 or 75 ohms	\$600.00
CL-24	Color log, 8.25dBd gain, channels 2-4 (broadband), center-mount, 50 or 75 ohms	500.00
CL-24HR	Color log, 8.25dBd gain, channels 2-4 (broadband), rear-mount, 50 or 75 ohms	550.00
CL-46	Color log, 8.25dBd gain, channels 4-6 (broadband), center-mount, 50 or 75 ohms	500.00
CL46HR	Color log, 8.25dBd gain, channels 4-6 (broadband), rear-mount, 50 or 75 ohms	550.00
CL-713	Color log, 9.0dBd gain, channels 7-13 (broadband), center-mount, 50 or 75 ohms	500.00
CL-713HR	Color log, 9.0dBd gain, channels 7-13 (broadband), rear-mount, 50 or 75 ohms	550.00
CL-713E	Color log, 9.0dBd gain, 174-230MHz (broadband), center-mount, 50 or 75 ohms	500.00
CL-713EHR	Color log, 9.0dBd gain, 174-230MHz (broadband), rear-mount, 50 or 75 ohms	550.00

Note: N-type terminations are standard on all CL-series antennas. VHF-TV logs are available with UHF or F type terminations. Power input rating is 250W (1kW optional at extra cost).

Broadband Stacking Harnesses for CL-Series Antennas:

	Two-bay	\$150.00
	Four-bay	250.00
HDCA-5	Five-element ruggedized yagi, single-channel, center-mount, 75 ohms Channels 2-6 (specify channel when ordering)	\$230.00
	Channels 7-13 (specify channel when ordering)	210.00
HDCA-5EB	Five-element ruggedized yagi, single-channel, rear-mount, 75 ohms Channels 2-6 (specify channel when ordering)	270.00
	Channels 7-13 (specify channel when ordering)	220.00
HDCA-10	Ten-element ruggedized yagi, single-channel, center-mount, 75 ohms Channels 2-6 (specify channel when ordering)	310.00
	Channels 7-13 (specify channel when ordering)	240.00
HDCA-10EB	Ten-element ruggedized yagi, single-channel, rear-mount, 75 ohms Channels 2-6	N/A
	Channels 7-13 (specify channel when ordering)	250.00

Note: HDCA-series yagis are available for export channels in Bands I and III. Standard HDCA-series power rating is 250W. Arrays of two or more HDCA-series yagis available with 1kW rating (50 ohm input). Standard termination is 75-ohm type N (UHF and F types available).

Stacking Harnesses for HDCA-Series Antennas:

	Two-bay	\$100.00
	Four-bay	200.00

Circularly-Polarized Yagi Antennas For VHF-TV

CA-2	Two-element ruggedized dipole/reflector, single-channel, 50 or 75 ohms Channels 2-6 (specify channel when ordering), center-mount	\$250.00
	Channels 7-13 (specify channel when ordering), rear-mount	220.00
CA-4	Two-bay array of CA-2 dipole/reflectors, single-channel, 50 or 75 ohms Channels 2-6 (specify channel when ordering), center-mount	550.00
	Channels 7-13 (specify channel when ordering), rear-mount	480.00
2CA-4	Four-bay array of CA-2 dipole/reflectors, single-channel, 50 or 75 ohms Channels 2-6 (specify channel when ordering), center-mount	1200.00
	Channels 7-13 (specify channel when ordering), rear-mount	1060.00

Note: CA-series power rating is 250W. 1kW rating available at extra cost.

TVO	Crossed-dipole omni, single-channel, 50 or 75 ohms (specify channel)	250.00
TVO-2	Two-bay array of TVO crossed-dipoles, 50 or 75 ohms (specify channel)	600.00
TVO-4	Four-bay array of TVO crossed-dipoles, 50 or 75 ohms (specify channel)	1200.00

Note: TVO-series power rating is 100W. TVO-4 available for 1kW input.

UHF-TV Antennas:

CL-1483	Color log, 8.0dBd, channels 14-83 (broadband), radome protected, 50 or 75 ohms, rear-mount, H or V polarization, 100W power rating, type N termination	\$350.00
PR-450U	Paraflector, 15.5 to 18.0dBd, for any single UHF-TV channel in 470-890MHz band H or V polarization, 100W power rating, 50 or 75 ohms, type N termination	550.00
PR-450CU	Paraflector, same as PR-450U except higher front-to-back ratio (25dB)	580.00

Note: Stacking harnesses are available for CL-1483 and PR-450U series antennas.

SL-8 Paraslot, UHF-TV omni transmit antenna, available for one, two or three channels in bands IV/V (470-890MHz). 300W input power rating and type N termination are standard. 1kW models have 7/8" EIA flange termination. 1.75° of electrical downtilt (beamtilt) is standard. Additional downtilt and null-fill are optional at extra cost. All SL-8 antennas include a guy kit, plus your choice of mounting hardware to attach to a flat vertical surface or an appropriately-sized pipe mast. If antenna will be side-mounted on tower and stabilized with sidearm at top, the guy kit may be omitted by ordering "less guy kit" (deduct \$200.00).

	SL-8 (One Channel)	SL-8-2 (Two Channels)	SL-8-3 (Three Channels)
Channels 14-26 (470-548MHz)	\$4400.00	\$4900.00	\$5400.00
Channels 27-43 (548-650MHz)	4000.00	4500.00	5000.00
Channels 44-65 (650-782MHz)	3600.00	4100.00	4600.00
Channels 66-83 (782-890MHz)	3200.00	3700.00	4200.00

1kW power input rating: add \$500.00; Null-fill: add \$500.00; Guy spreader kit: add \$500.00

4DR-Series Parapanel, radome-protected UHF-TV panels and arrays, for any single specified UHF-TV channel in bands IV/V (470-890MHz). 100W and 1kW power rating available. All arrays include power divider and Andrew Superflex feeders. Supplied complete with hardware to attach to 2 3/8" (60mm) OD pipe mast. 100W panels and arrays have type N termination. Single 1kW panel has type HN termination. 1kW arrays have 7/8" EIA flange termination.

	Channels 14-28		Channels 29-44		Channels 45-83

VHF-TV and UHF-TV Antenna System Accessories

Matching Transformers CX-series for any single VHF-TV or UHF-TV channel, allows low-loss impedance-matched interconnection of 50 and 75 ohm devices such as antennas, transmission line, transmitters, etc. (specify channels) \$40.00

Power Dividers Scala offers a broad range of RF power dividers for use in broadcast and communications systems, with equal and unequal power splits, and designed for operation at three power levels. All Scala dividers are foam-potted and designed for outdoor use with no pressurization required.

100W dividers are available with two, three and four-way equal or unequal splits, 50 or 75 ohms. Also available with 50-ohm input and 75-ohm outputs. Terminations are Type N, either 50 or 75 ohms as appropriate. (Specify channel, power split ratios and input and output impedance when ordering.)

PD-2 (two-way)	\$125.00
PD-3 (three-way)	135.00
PD-4 (four-way)	145.00

500W dividers are available in two, three, four, six and eight-way equal power splits, with 50-ohm N input and 50 or 75-ohm N outputs. (Specify channel and output impedance when ordering.)

PD-2MP	\$500.00
PD-3MP	550.00
PD-4MP	600.00
PD-6MP	700.00
PD-8MP	800.00

1000W dividers are available in two, three, four, six and eight-way equal power splits, with 50-ohm 7/8" EIA flange input and 50 or 75 ohm N outputs. (Specify channel and output impedance when ordering.)

PD-2HP	\$1000.00
PD-3HP	1100.00
PD-4HP	1200.00
PD-6HP	1400.00
PD-8HP	1600.00

SCALA ELECTRONIC CORP.

Antennas/Accessories/Preamplifiers

CL-FM	Ruggedized log-periodic, 7.0dBd gain, 88-108MHz (broadband), center-mount 50 or 75 ohms, N termination, 250W power rating (1kW available)	\$500.00
CL-FMHR	Rear-mount version of CL-FM	550.00
CL-FMRX	Precision monitoring log, receive only, 6.5dBd gain, 88-108MHz (broadband), center-mount, 50 or 75 ohms, N termination	280.00
CL-FMRXR	Rear-mount version of CL-FMRX	320.00

Broadband Stacking Harnesses for CL-Series Antennas:

	Two-bay	\$150.00
	Four-bay	250.00
HDCA-5	Five-element ruggedized yagi, 7.5dBd, single channel (specify frequency), center-mount, 75 ohms, N termination	230.00
HDCA-5EB	Five-element ruggedized yagi, 7.5dBd, single channel (specify frequency), rear-mount, 75 ohms, N termination	270.00
HDCA-10	Ten-element ruggedized yagi, 9.5dBd, single-channel (specify frequency), center-mount, 75 ohms, N termination	310.00
HDCA-10EB	Ten-element ruggedized yagi, 9.5dBd, single channel (specify frequency) rear-mount, 75 ohms, N termination	350.00
CA5-150H	Five-element ruggedized yagi, 9.0dBd, single channel (specify frequency), center-mount, 50 ohms, N termination (UHF type optional)	230.00
CA5-150EB	Five-element ruggedized yagi, 9.0dBd, single channel (specify frequency), rear-mount, 50 ohms, N termination (UHF type optional)	270.00
CA5-150V	Five-element ruggedized yagi, 9.0dBd, single channel (specify frequency), sidemount bracket for V polarization. 50 ohms, N termination (UHF optional)	360.00
2CA5-150HV	Dual yagi array, H polarization, V stack, 11.5dBd, single channel (specify), 50 ohms, N termination, with coax stacking harness	560.00
2CA5-150VH	Dual yagi array, V polarization, H stack, 11.5dBd, single channel (specify), 50 ohms, N termination, with crossarm assembly and stacking harness	820.00

Note: Single CA5-150 series yagis have power input rating of 250W. For 1kW rating (HN termination): add \$150.00. Contact Scala for pricing on arrays with 1kW power ratings.

Stacking Harnesses for HDCA and CA5-Series Antennas:

	Two-bay	\$ 100.00
	Four-bay	200.00
CA-2	Two-element ruggedized dipole/reflector, single channel (specify), 4.0dbd gain, 250W power rating, rear-mount, 50 or 75 ohms, N termination.	200.00
CA-4	Two-bay array of CA-2 dipole/reflectors, with stacking harness	500.00
2CA-4	Four-bay array of CA-2 dipole/reflectors, with stacking harness	1000.00

Note: CA-2-Series available with 1kW rating. Contact Scala for pricing.

FMO	Crossed-dipole Omni, 88-108MHz (broadband), 50 or 75 ohms, 100W, H-pol	\$ 250.00
FMO-2	Two-bay array of FMO crossed dipoles (specify frequency if for transmit use)	600.00
FMO-4	Four-bay array of FMO crossed dipoles (specify frequency if for transmit use)	1200.00
FMV	Sidemount dipole, vertical polarization, 50 ohms, N termination, 100W with sidearm mount (specify frequency when ordering)	200.00
FMV-2	Two-bay array of FMV dipoles, V-pol, V-stack, 100W, with harness 50 ohms, N termination, with sidearm mounts (specify channel when ordering)	500.00
FMV-4	Four-bay array of FMV dipoles, 100W, with harness and sidearm mounts	1000.00

FM Antenna System Accessories:

Matching Transformers CX-series for any specified frequency in the 88-108MHz band allows low-loss interconnection of 50 and 75 ohm devices such as antennas, transmission lines, transmitters, etc. Specify channel and connector configuration when ordering. **\$40.00**

Power Dividers Scala offers a broad range of RF dividers for use in broadcast and communications systems, with equal and unequal power splits, and designed for operation at three power levels. All Scala dividers are foam-potted and designed for outdoor use with no pressurization required.

100W dividers are available with two, three or four equal or unequal power splits, 50 or 75 ohms. Also available with 50-ohm input and 75-ohm output. Termination are type N, either 50 or 75-ohm as appropriate. (Specify frequency, power split ratios, and input and output impedance when ordering.)

PD-2 (two way)	\$125.00
PD-3 (three way)	135.00
PD-4 (four way)	145.00

500W dividers are available with two, three, four, six and eight-way equal power splits, with 50-ohm N input and 50 and 75 ohm N outputs. (Specify frequency and output impedance when ordering.)

PD-2MP	\$500.00
PD-3MP	550.00
PD-4MP	600.00
PD-6MP	700.00
PD-8MP	800.00

1000W dividers are available with two, three, four six and eight-way equal power splits, with 50 ohm 7/8" EIA flange input and 50 or 75 ohm N outputs. (Specify frequency and output impedance when ordering.)

PD-2HP	\$1000.00

PD-4HP	1200.00
PD-6HP	1400.00
PD-8HP	1600.00

Low-Noise FM Preamplifiers:

Scala/Triax low-noise preamps offer high performance and reliability at a very reasonable cost. The high gain and low noise figure make possible the reception of very marginal signals. The preamp is housed in a cast aluminum weatherproof housing (normally installed adjacent to the antenna) and powered by a remote DC power supply through the coax downlead. Each preamp requires a power supply or a DC coupler which can be used to connect an external customer-provided regulated supply of 24VDC at 100ma (negative ground). The 2AT type preamps feature a 10dB trap which can be field tuned through the FM band in cases where it is useful to attenuate an unwanted signal (at least 1MHz removed from the desired signal).

8000/2A/F	Broadband FM preamp (88-108MHz), 20dB gain, < 2.0dB NF, F terminations	\$280.00
8000/2A/N-50	Same as 8000/2A/F except with 50-ohm N termination	290.00
8000/2A/N-75	Same as 8000/2A/F except with 75 ohm N termination	290.00
8000/2AT/F	Same as 8000/2A/F except has tunable 10dB trap	300.00
8000/2AT/N-50	Same as 8000/2A/N-50 except has tunable 10dB trap	310.00
8000/2AT/N-75	Same as 8000/2A/N-75 except has tunable 10dB trap	310.00
8000/SPS/F	Power supply for one preamp, F termination, 110VAC input	80.00
8000/SPS/N-50	Same as 8000/SPS/F except 50 ohm N termination	80.00
8000/SPS/N-75	Same as 8000/SPS/F except 75 ohm N termination	80.00
8000/PSC/F	RF/DC coupler for use with external DC supply, F termination	30.00
8000/PSC/N-50	Same as 8000/PSC/F except 50 ohm N termination	80.00
8000/PSC/N-75	Same as 8000/PSC/F except 75 ohm N termination	80.00

204989-2	Grounding kit for Andrew 7/8" cables	24.00

**Gyrozoom® 60/300 and FP-1
Image Stabilizer Lenses**

- 60 to 300mm zoom of subjects up to 1000'
- Compact and lightweight
- Easy to operate
- Variable speed servo zoom control
- Auto iris with momentary manual mode
- Standard lens flange and detachable power cable
- C-Mount adaptor available
- Low battery indicator
- Computer-designed optics
- Ultra high resolution and contrast

Gyrozoom image stabilizer lenses eliminate virtually all image vibration. They fit most ENG/EFV cameras and free you from bulky, unwieldy mechanical stabilizers and mounts.

Use it from any unstable platform—motor vehicle, helicopter, airplane, boat, or a camera operator's shoulder. Gyrozoom lets you get the shot right the first time.

Gyrozoom is available in two versions, the 60/300 or the fast-pan FP-1.

Specifications

	60/300	FP-1
Image Format	2/3" video (11mm diag., 6.6 x 8.8mm)	2/3" video (11mm diag., 6.6 x 8.8mm)
Focal Length	60µ300mm	60µ300mm
Zoom Ratio	5X	5X
Maximum Aperture Ratio	1:6.2	1:6.2
Focus Range	10' to infinity	10' to infinity
Field Angle	Horiz: 8.38°µ1.68° Vertical: 6.28°µ1.26°	Horiz: 8.38°µ1.68° Vertical: 6.28°µ1.26°
Filter Size	Ø 72mm P=0.75mm	Ø 72mm P=0.75mm
Stabilization (± 1/2° tremor)	.4Hz-85% (-16dB attenuation) 1Hz-94% (-24dB attenuation) > 4Hz-98% (-34dB attenuation)	.4Hz-85% (-16dB attenuation) 1Hz-94% (-24dB attenuation) > 4Hz-98% (-34dB attenuation)
Pan/tilt Rate	6° per second	30° per second

Gyrozoom 60/300

FP-1

Accessories

Wide Angle Attachment

- Reduces the focal length by 5X (12mm to 60mm) (Note: When the wide angle is attached the 12mm to 60mm focal range is not stabilized)
 - Attaches quickly to the front of the Gyrozoom lens with a threaded mount
 - f/6.2 at all focal lengths
 - Minimum operating distance is 3"
 - Computer designed optics ensure ultra high resolution and contrast
 - Anti-reflective multilayer coatings on all air-to-glass surfaces for maximum light transmission
- Wide Angle Attachment (12mm to 60mm) \$1,495.00

Remote Control System*

- Provides remote control of focus, stabilization, iris and zoom functions
 - Operator can be positioned up to 150' from camera. (When powered by 115VAC)
 - Compatible with several pan and tilt mechanisms
 - Power requirements: 115VAC or 28VDC
- Remote Control System \$2,250.00
- *(Requires factory retrofit)

Soft Travel Bag

- Padded, soft travel bag assures convenient, safe transport of your Gyrozoom lens
 - Separate compartments are provided to hold the wide angle attachment and additional lens cables
 - Lightweight yet sturdy
- Soft Travel Bag \$98.00

1282/1882 Audio Mixers

- Wide range of inserts and auxiliary buses
- Metal carrying handle
- Up to 6 auxiliaries
- "In place" or stereo solo
- In-line monitoring
- For studio or live performance
- Auxiliary returns
- Peak hold bargraphs
- Auxiliary masters
- Talk to tape and slate
- Master monitoring
- SNR master outputs
- 18 inputs subgrouped
- At Unity Gain: better than -80dB
- Distortion mike input (set to -30dBu) subgrouped to master outputs: 0.00085% THD at 1kHz
- Equalizer provides versatile controls of highs and lows plus a 20:1 mid sweep

1882

Access to controls is crucial. The 1282 and the 1882 have logical grouping of controls, the high profile knobs, and the immediate view of signal connections. Hands on, there's positive switch action, center detented pan and tone controls and an overall sense of precision, whatever you operate.

1282 12 channel.	\$4140.00
1882 18 channel.	4794.00

62/122/24-2 Audio Mixers

- Frequency Response: 20Hz-20kHz overall, -2dB
- Signal-to-Noise Ratio: All outputs at maximum, -84dB
- THD: Less than 0.03% at 1kHz
- Left/Right Outputs: +4dBm into 600 ohm min. load, max. output +21dBm
- Inputs: Microphones balanced from -65dBu into 1K ohm; line balanced from -30dBu into 50K ohms

Electronics are assembled onto double sided printed circuit boards. There are no wires inside these mixers, all the input and output connectors mount directly to these boards. Once assembled, these printed circuit boards are screwed to the steel front panel and slid inside an extruded aluminum shell. Finally, metal side cheeks are screwed on, which totally enclose to protect and screen the mixer. The result is very low hum and noise susceptibility.

Controls and connectors are laid out for ease of use. You see at a glance the cables running to microphones, amps and particularly effects.

Input channel controls are laid out in logical groupings. First the input section, then equalization auxiliaries and finally routing and panning. Controls are staggered, permitting the tightest knob density combined with ease of operation. Similarly, the output section is laid out in logical groupings. So you get to the controls you need without fumbling.

Access to each channel is directly above the input. Microphones are brought in via a standard wired, XLR connector. Line input is on a 3 pole jack. Both inputs are balanced so you can eliminate grounding problems in any unusual situation. An electronic balancing circuit is used in preference to transformers resulting in transmission of full bandwidth signal.

122

The input stage is the most critical part of any mixer design. Here the incoming signal is matched to the circuitry. The greatest care has been taken to ensure a large gain swing on the input—providing overall signal matching from -55dBm to +10dBm, and a wide 25dB margin of overload above this. Once set, it is unusual to need to readjust during a performance.

62	6 channel.	\$1345.00

SENNHEISER ELECTRONIC CORP.

Microphones

MKH 20 P48U Studio Condenser Microphone

- Frequency range: 20 to 20,000Hz
- Directional characteristic: Omnidirectional
- Ideally suited for the reproduction of acoustic string and wind instruments
- Optimal resistive loading of the diaphragm
- Low noise, transformerless

MKH 20 P48U 48V phantom powering \$925.00

MKH 30 P48U3 Studio Condenser Microphone

- Frequency range: 40 to 20,000Hz
- Directional characteristic: Bilateral (figure eight)
- Ideally suited for use in applications utilizing the "mid side" (M-S) recording technique in which the MKH 40 "piggybacks" the MKH 30 to enable both mono and stereo recording simultaneously
- Transformerless; optimal resistive loading of the diaphragm

MKH 30 P48U3 \$989.00

MKH 40 P48U Directional Studio Microphone

- Frequency range: 40 to 20,000Hz
- Directional characteristic: Cardioid
- Ideal for digital sampling and recording
- Wide, flat frequency response; very low inherent noise
- Capable of high sound pressure levels with low distortion

MKH 40 P48U 48V phantom powering \$925.00

MKH 416 Directional Field or Studio Microphone

- Frequency range: 40 to 20,000Hz
- Directional characteristic: Supercardioid
- Particularly low feedback
- Low proximity effect
- High signal-to-noise ratio
- Rugged and extremely resistant to adverse climatic conditions
- Built-in pop filter

MKH 416 TU 12V AB power \$875.00
MKH 416 P48U 48V phantom power \$875.00

MKH 816 Directional Field or Studio Microphone

- Frequency range: 40 to 20,000Hz
- Directional characteristic: Lobar
- Extremely sensitive to feedback
- High signal-to-noise ratio
- Rugged and extremely resistant to adverse climatic conditions
- For long recording distances

MKH 816 TU 12V AB power \$1179.00
MKH 816 P48U 48V phantom power \$1179.00

MD 409 U-3 Dynamic Cardioid Microphone

- Frequency range: 50-15, 000Hz
- Cardioid characteristic
- Capable of handling high sound pressure levels with excellent shock mounting and feed back protection
- Large transducer element enclosed in a flat black stainless steel basket gold-plated on the front side
- XLR connector

MD 409 U-3 \$269.00

MD 421 U-5 Dynamic Cardioid Microphone

- Frequency range: 30-17, 000Hz
- Directional characteristic: cardioid, low acoustic feedback
- Reduced handling noise and no overload, even at extremely high volume
- Five-step variable bass control
- Hum compensation coil
- Quick-release clip

MD 421 U-5 \$399.00

MKH 20 P48U MKH 40 P48 MKH 30 P48U3

MKH 416 MKH 816

MD 431 U MD 441 U

MD 431 U Supercardioid Musician's Microphone

- Frequency range: 40-16, 000Hz
- Supercardioid directional characteristic allows extremely high volume before feedback occurs
- Optimum damping of handling noise owing to spring-mounted system suspension in all-metal housing
- Hum compensator coil
- Shock-tested
- Built-in impact noise filter
- Built-in pop filter
- Noiseless reed switch
- Quick-release mounting clip
- Suitable for connection to all musical instrument amplifier systems

MD 431 U \$429.00

MD 441 U Dynamic Supercardioid Microphone

- Frequency range: 30-20, 000Hz
- Directional characteristic: supercardioid
- Optimum protection against handling owing to shock-mounted capsule
- Distortion-free transmission even under highest sound pressure
- Ten different, switchable response curves
- Hum-bucking coil
- Built-in pop filter
- Quick-release clamp

MD 441 U \$559.00
MD 441 U-3 All black, no bass equalization \$467.00

PROFESSIONAL MICROPHONE SYSTEM

K3U Powering Module

Equipped with a 5.6V battery—or remote controlled with a recorder or console via a 12 to 48V phantom circuit—the K3U powers any one of the five modular heads. Battery life is approximately 600 hours. An LED indicator flashes when the K3U is switched on, indicating at least 20 hours of remaining battery life.

A 3-position roll-off switch (flat, -7dB and -20dB at 50Hz) permits reduction of wind and handling noise without affecting voice pickup.

The K3U has a balanced, low-impedance output.

K3U \$210.00

ME 20 Omnidirectional Head

The ME 20 preserves the entire acoustic ambience. For interviews and meetings in quiet surroundings, or when pickup of background noise is essential. Internal acoustic isolation to minimize handling noise.

ME 20 \$112.00

ME 40 Super Cardioid Head

The ME 40 has sharp attenuation of sound arriving from behind to eliminate ambient reverberations and feedback from loudspeakers. For interviews in noisy surroundings, film dubbing, PA...wide frequency response in musical applications.

ME 40 \$165.00

ME 80 Super Cardioid Shotgun Head

The ME 80 has pressure gradient interference transducer for accurate, noise-free sound pickup at a distance, even in acoustically poor environments. Can also be used to solve extremely severe PA system feedback problems.

ME 80 \$239.00

ME 88 Spot Head

The ME 88 provides clarity, even at long distances. A long interference tube transducer for an almost beam-like pickup pattern. Extremely lightweight (2 oz.) to permit direct mounting on a handheld camera or attachment to the MZS 802 Telescopic Boom. Fixed windscreen for imperviousness to wind and handling noise.

ME 88 \$315.00

MKE 2-3 Subminiature Omnidirectional Lavalier

Clip-on microphone, black, for electret microphone modular system. Also available in flesh color at same price.

MKE 2-3 \$254.00

MKE 2-3 + K3U Combination Package

Miniature clip-on microphone and grip/power supply, also available in flesh color.

MKE 2-3 + K3U \$409.00

MKE 40-3 Cardioid Lavalier

Clip-on directional microphone for electret microphone modular system.

MKE 40-3 \$289.00

MKE 40-3 + K3U Combination Package

Clip-on directional microphone and grip/power supply.

MKE 40-3 + K3U \$439.00

Phono Preamp**

SB-1 MKII

ADA-2

ADA-1 MKII

SC-3

SB-1 MKII Stereo Buffer

The SB-1 MKII is in a 1 3/4" rackmount case and is supplied with plain and rackmount end panels. The unit has an internal 120VAC power supply.

The SB-1 provides a convenient means to interface a two channel semi-professional tape recorder or VTR with -10dBV levels to a professional mixer with +4dBm levels.

The unit is divided into two sections. The amplifier section will accept the recorder outputs and is 100K ohms unbalanced bridging. The outputs of this section are 600 ohms transformer-balanced, which are used to feed the line level inputs of the mixer. The gain is adjustable from the front panel.

The inputs of the second section are 15K ohms transformer-balanced bridging, which will accept the outputs of a professional mixer. The outputs are 600 ohms unbalanced and will feed the -10dBV inputs of the recorder.

- Input:** 2 RCA phono jacks (amplifier)
2 female XLRs (transformer)
- Input Impedance:** 100K ohms unbalanced (amplifier)
600 ohms balanced (transformer)
- Max. Input Level:** +18dBV (amplifier)
+18dBV (transformer)
- Gain:** 0dB to +30dB (amplifier)
-14dB (transformer)
- Noise:** -101dB below rated output
- Freq. Response:** ±1dB, 20-20kHz
- Distortion:** <.2% at 20Hz max. rated output (amplifier)
- Output:** 2 male XLR (amplifier)
2 RCA phone jacks (transformer)
- Output Load:** >600 ohms balanced (amplifier)
>600 ohms unbalanced (transformer)
- Output Level:** +18dBm max. (amplifier)
+6dBm max. (transformer)
- Power Requirements:** 120VAC or 220VAC, 50/60Hz*
- Dimensions:** 19" x 1.75" x 5"
- SB-1 MKII** \$235.00

ADA-1 MKII Audio DA

The ADA-1 MKII is in a 1 3/4" rackmount case and is supplied with plain and rackmount end panels. The unit has an internal 120VAC power supply.

The ADA-1 MKII may be used as a four channel line level distribution amplifier or as four individual line drivers. The common feed input is line level balanced bridging. A second set of unbalanced inputs are provided by way of four 1/4" phone jacks which, when used, interrupt the corresponding line amplifier and all other higher numbered line amplifiers from the common feed. The gain of each line amplifier is screwdriver-adjustable from the front panel.

The outputs are 600 ohm transformer-balanced and have a maximum output level of +24dBm.

The ADA-1 MKII may be used as a four-channel DA or with semi-professional tape machines or mixers as a line driver to bring these units up to +4dBm.

- Input:** 1 female XLR (common)
4 1/4" phone jacks (individual)
- Input Impedance:** 15K ohms balanced (common)
150K ohms unbalanced (individual)
- Max. Input Level:** +18dBV (common)
+18dBV (individual)
- Gain:** +30dB to 0dB
- Noise:** 101dB below rated output
- Frequency Response:** ±1dB, 20-20kHz
- Distortion:** <.2% at 20Hz max. rated output
- Output:** 4 male XLRs
- Output Load:** >600 ohms balanced
- Output Level:** +18dBm max.
- Power Requirements:** 120VAC or 220VAC, 50/60Hz*
- Dimensions:** 19" x 1.75" x 5"
- ADA-1 MKII** \$290.00

ADA-2 Audio DA

The ADA-2 is a two input and eight output audio distribution amplifier in a 1 3/4" rackmount case which is supplied with rackmount end panels.

Eight front panel pushbutton type switches select either input A or B for each of the eight line amplifiers. This unique feature allows the ADA-2 to be used as a second DA when one input is not feeding all eight outputs. The inputs are transformer-balanced bridging, and front panel access is provided to the internal gain adjustments which have a range from 0dB to +30dB.

Each of the line amplifiers uses a pair of complementary output transistors with an output impedance of less than 100 ohms which is coupled to the output transformer. The transformer has a turns ratio of 1:2 and, therefore, a gain of 6dB. This configuration allows the ADA-2 to provide a +30dBm maximum output level. The unit is powered by an internal 120VAC power supply.

- Input:** 2 female XLRs (A & B)
- Input Impedance:** 15K ohms balanced (A & B)
- Max. Input Level:** +18dBV (A & B)
- Com.-Mode Rejection Ratio:** -87dB at 1kHz
-76dB at 10kHz
+30dB
- Gain:** +30dB
- Noise:** -101dB below rated output
- Frequency Response:** ±1dB, 20-20kHz
- Distortion:** <.2% at 20Hz max. rated output
- Output:** 8 male XLRs
- Output Load:** >600 ohms balanced
- Output Level:** +30dBm max.
- Power Requirements:** 120VAC or 220VAC, 50/60Hz*
- Dimensions:** 19" x 1.75" x 5"
- ADA-2** \$600.00

SC-3 Stereo Combiner

The SC-3 is a stereo RIAA phono preamp with super low noise, line amplifier and a stereo combiner. The unit features a 1 3/4" rackmount case which is supplied with plain and rackmount end panels and a 120VAC internal power supply.

The front panel switches permit selection of either RIAA phono inputs or line level inputs. A unity gain buffer is provided as the first stage to provide low input capacitance for the phono input.

The SC-3 inputs are RIAA phono, line level unbalanced 1/4" phono and transformer-balanced female XLR. The SC-3 has three 600 ohm transformer-balanced outputs; two for the left and right stereo outputs, and the third is a mono output. The SC-3 inputs are RIAA phono, line level unbalanced 1/4" phono and transformer-balanced female XLR.

- Input:** 2 RCA phono jacks (phono)
2 XLR female (line)
- Input Impedance:** 2 1/4" phone jacks (line)
47K ohms unbalanced (phono)
15K ohms balanced (line)
47K ohms unbalanced (line)
- Max. Input Level:** +18dBV (line)
- Gain:** +54dB (phono)
0dB (line)
- Noise:** -90dB below rated output
- Frequency Response:** ±1dB, 20-20kHz
RIAA nominal (phono)
- Distortion:** <.2% at 20Hz max. rated output
- Output:** 2 male XLRs (A & B output)
1 male XLR (mono output)
- Output Load:** >600 ohms balanced
>600 ohms (mono output)
- Output Level:** +18dBm max. (A & B output)
+18dBm max. (mono output)
- Power Requirements:** 120VAC or 220VAC, 50/60Hz*
- Dimensions:** 19" x 1.75" x 5"
- SC-3** \$295.00

*Internal Selectable

SESCOM, INC.

*Mike Line Driver/Audio Leveler/
Audio Generator*

MLD-6 Dual Mike-Line Driver

The MLD-6 is a rackmounted dual mike-line driver for low impedance microphones to bring them to line level. The unit features transformer-balanced inputs and outputs with XLR type connectors. The gain of the amplifiers is front panel adjustable. The MLD-6 is one rack unit high and is AC powered.

Specifications

Input: 2 Female XLR's, transformer balanced
Input Impedance: 150 ohms balanced
Maximum Input Level: -25dBV
Gain: +75 to +41dB (adjustable)
Noise: -85dB below maximum output
Frequency Response: ± 1dB 20-20,000Hz
Distortion: < .20% at 20Hz maximum output
 < .10% at 30Hz maximum output
 < .05% at 50Hz maximum output
 < .01% at 1kHz maximum output
Output: Transformer balanced, male XLR's
Output Load: > 600 ohms balanced
Output Level: +21dBm maximum
Power Requirements: 120VAC or 220VAC, 50/60Hz, Internally selectable
Dimensions: 19.00" x 1.75" x 5.00"

MLD-6\$315.00

SAT-2 Stereo Audio Leveler

The SAT-2 is a rackmounted stereo audio leveler for satellite audio. The unit will accept signals from -35dBm to +12dBm and provide an adjustable steady output within the range of -10dBm to +8dBm. All inputs and outputs are transformer-balanced and have XLR connectors. The unit features low distortion, typically below 0.2% across the bandwidth. The unit has adjustable attack and release times which are internal. The SAT-2 is one rack unit high and is AC powered.

Specifications

Input: 2 Female XLR's
Input Impedance: 115K ohms balanced
Maximum Input Level: +12dBV
Noise: -85dB below maximum output
Frequency Response: ± 1dB 20-20,000Hz
Bandwidth: 45kHz at -3dB
Distortion: < .2% at 20Hz maximum output
 < .2% at 30Hz maximum output
 < .2% at 50Hz maximum output
 < .2% at 1kHz maximum output
Output: 2 Male XLR's
Output Load: > 600 ohms balanced
Output Level: +21dBm maximum
Power Requirements: 120VAC or 220VAC, 50/60Hz, Internally selectable
Dimensions: 19.00" x 1.75" x 5.00"

SAT-2\$275.00

AG-1 Audio Generator

The AG-1 is a rackmounted low-distortion audio generator. The unit features pushbutton frequency selection and decade control. The range of selectable frequencies is from 100Hz to 15kHz which is very usable in studio applications. The output levels are +20, +8, +4, 0 and -10dBm transformer balanced. The unit also has a VU meter which tracks the output level. The AG-1 is one rack unit high and is AC powered.

MLD-6

SAT-2

AG-1

Specifications

Frequency Response: ± 1dB 100-15,000Hz
Distortion: < .05% at 20Hz maximum output
 < .05% at 30Hz maximum output
 < .05% at 50Hz maximum output
 < .01% at 1kHz maximum output
Output: 1 Male XLR
Output Load: > 600 ohms balanced
Output Level: +20dBm maximum
Power Requirements: 120VAC or 220VAC, 50/60Hz, Internally selectable
Dimensions: 19.00" x 1.75" x 5.00"

AG-1\$230.00

SESCOM, INC.

**Power Amplifier/Audio Test
Equipment Audio Accessories**

SH-1 MKII

SH-1 MKII Power Amplifier

The SH-1 MKII has been completely redesigned. It is in a 1 3/4" rackmount case and is supplied with plain and rackmount end panels. Also, the unit now has a 120VAC power supply.

The SH-1 is a 10W per channel stereo power amplifier designed for use in the studio, AV facilities and broadcasting. Used in conjunction with the SHB-1 MKII (headphone junction box), the SH-1 can drive multiple sets of headphones. Also, it may be used to drive small control room monitors or talk-back speakers.

Front panel level controls and headphone jack are provided. The input connectors are RCA phono jacks, and the output connectors are binding posts for each output, and one male 3-pin XLR for direct connection to the SHB-1. The power supply features a low flux field Toroidal power transformer.

SH-1 MKII \$240.00

LS-2

LS-2 Passive Distribution Box

The LS-2 is designed to provide up to four isolated transformer-balanced outputs from one input. It may be used in the same way as an audio distribution amplifier when active electronics are not needed. It is most useful when an output feed must be run a long distance and then split to runs in several different directions.

The input is selectable 150 or 600 ohms transformer-balanced, and the transformer has four 600 ohm balanced secondaries. Building-out resistors are placed between the transformer secondary and the XLR outputs for further isolation. The LS-2 has a maximum output level of +30dBm. (Rackmountable).

LS-2 \$220.00

**ASG-2
Audio Sinewave Generator**

The ASG-2 is a handheld, battery operated sinewave audio generator designed for field use. It is housed in a rugged aluminum case. The battery is a slide lock compartment that requires no tools for change.

The sinewave generator is a typical wien-bridge oscillator circuit with a thermistor for thermal stabilization. The unit is low distortion, typically under 25% across the band, and will generate high quality sinewave from 20-20kHz. The ASG-2 has three decade switching plus eight switches to determine the exact operating frequency. There is a pushbutton switch for turning the unit on and off.

The output level is a maximum +10dBm to 60dBm and has both balanced and unbalanced outputs. The balanced output is electronically done. The output levels are determined by two rotary switches. One switch is for the decades in 10dB increments and the other rotary switch is 1dB increments. The unit will drive 600 ohm loads.

The size of the unit is 3.6" x 5.5" x 1.8". The unit draws under 20mA. However, we recommend to use at least alkaline batteries if available, Kodak Lithium for the longest life.

ASG-2 \$185.00

OB-2

OB-2 Output Balancer

The OB-2 is designed to provide a means to convert line level, 600 ohm unbalanced outputs to 600 ohm balanced outputs. The unit features two channels, each with a maximum input level of +30dBm. Both female XLR's and 1/4" phone jacks are provided for the inputs while the male XLR's are used for the outputs.

The use of balanced lines is helpful in reducing noise as the shield is not a signal-carrying connector. When used properly, balanced lines are of great benefit when ground loops are encountered. The OB-1 is ideally suited for use with semi-professional tape recorders, VTR's and semi-professional mixers. Frequency response: ±1dB; 20-20kHz. (Rack-mountable).

OB-2 \$220.00

SHB-1 MKII

**SHB-1 MKII - Headphone
Junction Box**

The SHB-1 MKII is designed for use with the SH-1 MKII power amplifier as a stereo headphone junction box. It also may be used with any 10 to 75W stereo amplifier.

Looping inputs and outputs are provided using a female XLR type connector and RTS phone jack for the looping input. The looping output uses a male XLR type connector and RTS phone jack. The six headphone outputs have building-out resistors for isolation. Any headphones between 8 ohms and 2000 ohms may be used.

Standard two-connector shielded microphone type cable with 3-pin XLR type connectors can be used to connect the SHB-1 to a SH-1 or to additional SHB-1's by use of the looping inputs and outputs.

SHB-1 MKII \$95.00

PB-1 Patch Bay

The PB-1 is primarily designed for use in four and eight-track studios. It features ease of installation with no soldering and balanced line operation. Standard molded type cables may be used for connecting the studio equipment to the PB-1.

Designation strips and 16 pairs of patch points using RTS 1/4" phone jacks in a normaled configuration are provided on the front panel. An additional 16 RTS 1/4" phone jacks are located on the rear panel for connecting the patch points to the studio equipment. RTS 1/4" phone jacks of the insulated sleeve type are used so as to help prevent ground loops from occurring.

Also available is a non-normaled configuration: the PB-2.

PB-1 \$225.00

PB-2 \$225.00

SESCOM, INC.

Audio Transformers/Accessories

TR-Series Transformers

The "TR-Series" transformers are designed to match various sources such as microphones and line levels to inputs.

The entire series features low distortion and broad frequency response. There are seventeen different types of transformers in the series.

Model	Type	Prim. Imped. (ohms)	Sec. Imped. (ohms)	Case Style	Power Level	Price
TR-124	Mike-Matching	150	150	C	-30dBV	\$40.75

TR-135	Line-Matching and Pad	600	10K	D	+ 4dBm	50.85

MLD-1 MKII and MLD-3

Mike-Line Drivers

The MLD-1 and MLD-3 feature two stages of amplification with maximum output of + 16dBm and screwdriver adjustable gain from the front panel. The units are designed to be used for news, sports, or live commercials from remote locations.

The transformer-balanced input will accept a low impedance dynamic or condenser microphone, and the unit can supply phantom power to the microphone.

The output is 600 ohms transformer-balanced. The MLDs are most useful when using extremely long or noisy mike-type cables or Telco pairs.

The MLD-3 is also provided with switches to activate the limiter circuit and to turn on the phantom power to the input connector.

- MLD-1 MKII \$175.00
- MLD-3 210.00

IL Series In-Line Transformers

The IL-Series in-line transformers and accessories are widely used to solve interconnection problems in the field. These units are designed to be placed in the line between any two units.

SHARP ELECTRONICS CORP.

Broadcast Color Cameras

XC-B10/XC-B20P Broadcast
ENG/EFP Color Cameras

Broadcast-caliber picture quality starts with three $\frac{2}{3}$ " Diode Gun LOC/MS Saticon* (XC-B10) or Plumbicon* (XC-B20P) tubes coupled with a high-transparency glass f/1.4 prism beam splitter.

The Standard Automatics:

- **Auto-White**—The high performance Auto-White circuit is supplemented by a preset 3200°K setting
- **Auto-Black**—Black balance is continuously maintained by high-gain DC clamp circuitry and precisely calibrated by the microcomputer Digital Auto-Black Balance. This combination totally eliminates black balance adjustment when switching from 0 to 18dB gain
- **Auto-Centering**—The Automatic Centering circuit allows centering to be automatically adjusted using computer control. A preset switch position is also available
- **Automatic Beam Optimization Adjustment (A.B.O.)** Built-in automatic beam optimization circuitry can handle incident light intensity up to 8 times higher than normal. This feature eliminates "comet tailing" and "blooming" phenomena caused by bright pin-point light sources.

The Exceptional Automatics:

- **Auto Iris**—With NAM (non-additive mix) of R, G and B plus center screen weighting, achieves performance that rarely needs manual intervention
- **Auto Contrast**—The Auto-Contrast circuit automatically adjusts the camera when shooting in low contrast conditions. Manual Master Black adjustment is also available for shots where special effects are desired.
- **Auto-Knee**—The Auto-Knee circuit widens the dynamic range of the camera. Soft compression of the whites is automatically adjusted to capture the maximum information in high contrast outdoor or back-lighted scenes
- **The Standard Displays:**
Zebra with Level Adj and ON/OFF, Video Low, A/W, A/B, A/C Status, Genlock, Gain Position, Lo-Battery, Tally
- **The Exceptional Displays:**
Audio VU meter to get that perfect recording, Tape Remaining, Camera Number, Iris f-Stop, Filter Wheel Position, Lens Zoom Position, Auto Contrast...and more
The camera display is placed off-center so as not to disturb shooting. Display erases automatically, leaving only critical information on permanent display

Component VCR Compatibility

The XC-B10 and XC-B20P are compatible with Betacam and MII format component recorders. It is also compatible with the 26-pin SMPTE camera-to-VCR standard.

Choice of Viewfinders

- 1.5" Viewfinder with underscan can swivel 180° and can slide right or left. Additional features include a built-in peaking circuit, oversize optics for non-critical eye position and adjustable diopter.
- 5" High Resolution Viewfinder (over 500 TV lines) with underscan and precision low-profile pan/tilt mechanism.

Specifications

Optical System:	Prism beam splitter (f/1.4) with bias light injection
Lens Mount:	Bayonet
Pick-Up Tubes:	Three $\frac{2}{3}$ " Diode Gun LOC MS Saticons (XC-B10) or Plumbicons (XC-B20P)
Scanning System:	525 lines; 2:1 interlace 30 frames/second
Synchronization	
a. Internal Synchronization:	Built-in sync generator (meets SC-H Phase requirements of RS-170A)
b. External Synchronization:	Locks to composite video or black burst
Synchronization:	H-sync adjustable from 2 μ s delay to 4 μ s advance with respect to genlock input signal.
Timing for External Synchronization:	Subcarrier phase adjustable 360° with respect to gen-lock input signal
c. Blanking Width:	H-Blanking adjustable from 10.0 μ s to 11.5 μ s V-Blanking selectable—18, 19 or 20 lines

XC-B20P

	Plumbicon is a trademark of N. V. Philips

SHARP ELECTRONICS CORP.**Broadcast Color Camera****XC-A1 Broadcast ENG/EFP Color Video Camera****2/3" Diode Gun Saticon* Tubes with Prism Optics**

Broadcast-caliber picture quality starts with the three 2/3" Diode Gun LOC/MS Saticon tubes coupled with a high-transparency glass f/1.4 prism beam splitter. The result is high sensitivity, enhanced resolution (750 lines), excellent S/N ratio (57dB), truer colorimetry, plus reduced image retention and comet tailing. Bias lighting further reduces lag, especially for those critical low-light scenes.

Automatic Functions Offer Increased Ease-of-Use

- **Auto White**—The Auto-White circuit is supplemented by a preset 3200°K setting. This allows shooting to begin immediately if the action requires a quick change of scene
- **Auto-Black**—Black balance is continuously maintained by high-gain DC clamp circuitry and precisely calibrated by the microcomputer Digital auto-black balance. This combination totally eliminates black balance adjustment when switching from 0 to 18dB gain, and reduces routine maintenance requirements
- **Auto-Centering**—The Automatic Centering circuit allows centering to be automatically adjusted using computer control. A preset switch position is also available

+9/+18dB High Gain Switch

Sensitivity can be increased 3X or 8X for low-light level scenes using the +9dB and +18dB settings. Minimum required illumination is an amazingly low 30 lux (2.8fc) at f/1.4.

Compact, Lightweight Diecast Body

Sharp has precision-machined the diecast camera body to create a durable, solid unit that assures optical alignment under the roughest ENG applications.

Automatic Beam Optimization Adjustment (ABO)

Built-in automatic beam optimization circuitry can handle incident light intensity up to 8 times higher than normal. This feature eliminates "comet tailing" and "blooming" phenomena caused by bright pin-point light sources.

Color Temperature Filter System

A 4-position rotating filter system allows selecting the optimum color temperature filter for indoors, normal outdoor light, bright sunlit outdoors, and cloudy/dim outdoor light levels.

Power Conserving Standby Switch

Switching to standby mode further extends running time with battery operation by reducing power consumption to a minimum while the operator is waiting for the action to begin.

Information-Packed 1.5" Viewfinder

The 1.5" underscanned electronic viewfinder can swivel a complete 180° and can slide right and left. Additional features include a built-in peaking circuit and a zebra pattern video level indicator with adjustable threshold.

Multi-Standard Intercom System

The intercom provides communication with virtually all major 2-wire intercoms presently in use.

SHINTRON CO., INC.

Signal Processing Equipment

690 ET (Everything Time Code) Reader/Generator

- Independent readers and generators handle time code and user bits in either Vertical Interval Time Code (VITC) or Longitudinal Time Code tracks
- Translate between VITC and Longitudinal Time Code
- Character generator for data display and user interface/menu purposes
- Interface based on the RS-422 Orange Bus protocol
- Microprocessor controlled
- Adjustable hysteresis levels from -15 to -25dB
- Ten internal memories
- All setups are stored in non-volatile memory
- In the longitudinal mode, reads at speeds from 1/60 to 80 times normal play speed in either forward or reverse
- One frame is automatically added when reading in the forward direction or is subtracted when reading in the reverse direction
- Jam-sync to other Time Code Generators in either Longitudinal or VITC mode

690 ET \$4500.00
 690-TD 690 with time/date option and built-in time/date calendar generator 4800.00
 650 Combination SMPTE/EBU TC/Userbits Generator/Reader identical to 690 except it does not include VITC capability 3000.00
 Time Clock/Date Calendar Option 300.00

647 SMPTE/EBU Edit Code Generator

- Capable of generating SMPTE/EBU code either independently or in synchronism with incoming video
- 6 digit, 1/2" LCD with back light
- Dropframe or non-dropframe
- Freely resettable time data
- Userbits are set by thumbwheels on the front panel

647 \$1500.00

646 Edit Code Reader/Raster Display

- Reads either SMPTE or EBU code
- Front panel 8 digit LED numerics of 1/2" height
- Readable tape speed range from 1/8" to 40X
- Capable of keying in the data on video raster in either black letter on white background or the reverse

646 \$1500.00

640/641 Portable SMPTE Time Code Generators

- Places time code on tapes to identify segments, takes and frames for later editing
- Battery-operated 3 "AA" cells
- Can be attached to portable VTRs such as Sony BVU series and JVC
- Displays both time code and userbits on liquid crystal digits and is able to generate userbits as well

640 SMPTE for ENG/EPF, dropframe \$ 990.00
 641 SMPTE or EBU, dropframe or nondropframe 1500.00

12X Routing Switcher Series

- 12 inputs of either composite video (V), three channel component video (C), or three channel audio (A)
- Control three separate video channels for RGB, YIQ, Y, R-Y, B-Y formats
- Can receive commands from any 12X remote control unit
- Engineered for the highest possible electrical performance and system transparency

12X-C4
 "12X" high-isolation routing Switcher for component video 12 inputs and 4 outputs with 3 channels per output. 30MHz bandwidth. RS422 (SMPTE) remote controller with status indicators \$6990.00

12X-V4
 "12X" high-isolation video routing switcher, 12 inputs, 4 output buses. Remote controllable \$3300.00

12X-S1
 12 x 1 stereo audio switcher \$1000.00

690 ET

647

646

12X

260

MC-1

260 AFV Routing Switcher

- Provides passive switching of both video and up to 2 associated audio signals from 12 inputs to one output
- Can be used for stereo or a combination of audio and time code channel
- Audio circuits consist of two identical balanced pairs
- Equipped with a mechanical indicator switch
- Audio override capability built-in

260 \$510.00

MC-1 Component Intermatrix Converter

- Three BNC connectors for either YIQ, RGB, Y, Y-B and B-Y external genlock input
- Stand alone unit, one rackunit high
- Used as an integral part of editing and post production set-ups
- Genlocks to studio colorback
- Outputs are six BNC connectors for two sets of the selected format
- Bandwidth is better than 20MHz
- Equipped with one conversion matrix
- Basic proc amp is built-in

MC-1 \$2000.00

SHINTRON CO., INC.

Signal Processing Equipment

CB100-VA Dual Video Distribution Amplifier

- 2 (1 loopthrough/5 out) or 2 (1 terminated in/6 out) or 1 (1 in/2 out)
- 15MHz bandwidth
- Self contained power supply
- Adjustable cable compensation of 500' is built in
- Gain adjustable + 6dB to -10dB

CB100-VA \$330.00

CB100-CA CandyBox Dual Cable Compensation Amplifier

- Contains a pair of 1 in/5 out precision cable compensation DAs capable of compensating up to 1,000' of Belden 8281 coaxial cable
- The two amplifiers can be connected in cascade to compensate up to 2,000' of the same cable
- Gain and cable length are individually adjustable from front

CB100-CA \$600.00

CB100-LC IBM-PC To Video Level Converter

- Detects CGA or EGA card automatically
- Converts IBM-PC's RGBI to video RGB
- Produces proper waveform acceptable to video equipment
- Converts impedance to 75 ohm for long lines
- TTL inputs and buffered outputs
- Jumper selection of color/monochrome and sync level
- Adjustable horizontal blanking interval

CB100-LC \$300.00

CB100-EN NTSC/PAL Encoder

- Encodes RGB to NTSC or PAL
- Produces correct ScH relationship
- Genlocks to colorback
- 1 set of RGB input and 2 NTSC outputs
- Subcarrier phase adjustable

CB100-EN \$1500.00

CB100-SY NTSC Sync Generator

- Genlocks to helical video
- Correct ScH relationship
- Produces color ID pulse
- Colorblack, sync, blank and subcarrier outputs
- H and Sc phases are adjustable
- 2 independent selectable inputs
- Genlocks to incoming video or internal crystal

CB100-SY \$1100.00

CB100-PT Protocol Translator

- Translates Grass Valley Switcher protocol and Shintron Orange Bus Language
- No external adjustment
- Automatic operations

CB100-PT \$2000.00

CB100-EN

CB100-ADA

CB100-LC

CB100-DD4 CandyBox Super-VHS Dub Distribution Amplifier

- S-VHS dub distribution amplifier specifically designed for duplication
- Equipped with dub 4-pin connectors
- One loop-through input with automatic terminating feature and 6 outputs
- Individual luminance and chrominance gain adjust from front

CB100-DD4 \$450.00

CB100-ADA CandyBox Dual Audio Distribution Amplifier

- Contains a pair of precision audio 1 in/6 out DAs for duplication facilities
- Connectors are all RCA phono-plug for convenience

CB100-ADA \$350.00

CB100-OC Octopus Intelligent Peripheral Multiplexer

- A CandyBox Series product
- Resource multiplexer which can perform as a Local Area Network, a print spooler with 250K byte memory and a multiported communication device
- Through an Octopus two computers can be connected to a printer, a communication link can be established between computers and many such convenient subsystems can be configured

CB100-OC \$700.00

251 Cable Compensation Video Amplifier Module

- An accurate cable compensation amplifier for up to 1,000' of Belden #8281 coaxial cable
- Trims are front accessible
- Equivalent of Grass Valley 3402 VDA

251 \$280.00

SHINTRON CO., INC.

Distribution Amplifiers

332 Duplication Video-Stereo Audio Distribution Amplifier

- Output capacity is 12
- Unit contains its own power supply
- One rack unit high enclosure
- Video, via BNC, audio via RCA
- Wideband low-noise
- For use in electromagnetically noisy environments
- Designed for duplication facilities

332\$600.00

332

336 Video Distribution Amplifier

- One input with loopthrough and termination switch
- Video gain screwdriver adjustment on front panel
- Six outputs
- All-silicon solid-state for multiple fan-out, high grade distribution systems

336\$300.00

336

211 Video Tray

- Accomodates 4 video modules and one power supply module
- Power supply module included
- Loopthrough input
- One rack unit high

211\$627.00

211

212 Video Tray

- Accomodates 8 video modules and two power supply modules for redundancy
- 1 power supply module included
- Loopthrough inputs
- Two rack units high

212\$825.00

212

213 Audio DA Tray

- Accomodates 4 audio modules and one power supply
- Power supply included
- Rear panel connection via terminal strips

213\$693.00

213

220 Super-Wideband Audio DA Module

- Designed for signal distribution in broadcast installations
- Exceeds broadcast specs in all crucial areas

220\$275.00

220

250 Video Distribution Amplifier Module

- Built-in 500' adjustable cable comp
- Broadcast specs
- 1 loopthrough, 6 out
- Trims are front accessible

250\$176.00

250

252 Video Distribution Amplifier Module

- 250 VDA with 12dB boost at 4MHz
- Cable compatible (non-broadcast)
- Crisp character display
- Designed for flight information display systems at airports

252\$220.00

6810 High Power Circularly Polarized

The 6810 has a 10kW power rating per bay and is an excellent choice for most class C stations. Maximum input for an array of four or more bays is 40kW due to feedline limitations. The broad bandwidth of the 6810 assures excellent stereo and SCA performance. It also allows two stations, with a frequency separation of up to 2.4MHz, to diplex into a common antenna.

The 6810 is also unusually capable of being accurately directionalized and so is used for FCC directional antenna requirements. The 6810 provides the high power FM broadcaster with a well-proven, reliable antenna.

VSWR—1.08:1 \pm 100kHz for single station operation

6812 Low Power Circularly Polarized

The 6812 was designed originally with the educational broadcaster in mind, but its design features and sturdy construction have led many commercial broadcasters to specify it for a low cost installation, translator, or as a standby antenna.

Like the 6813NP, the 6812 is a truly non-pressurized design. Constructed of stainless steel, the weight and windload of this antenna are extremely low.

VSWR—1.1:1 \pm 100kHz with optional matching transformer

6813 Medium Power Circularly Polarized

The 6813 has a 3kW per bay power rating and is competitively priced to offer an exceptional value to the medium power FM broadcaster. This antenna has proven to be the primary choice of the Class A broadcaster. The 6813 has extremely low windloading; its windload with radomes compares favorably to that of other similar antennas without radome protection.

This model also has a broad bandwidth, assuring excellent stereo and SCA performance. In fact, in certain close-spaced situations, the bandwidth has allowed two stations to be diplexed into this model without degradation of stereo or SCA performance on either station. If the high power ($3\frac{1}{8}$ ") input is used, a maximum power input of 20kW is possible.

VSWR—1.08:1 \pm 100kHz

6813NP Medium Power Circularly Polarized—Non-Pressurized

The 6813NP is the only antenna at this power level specifically designed to operate without pressurization. It is not a de-rated version of an otherwise pressurized antenna. Originally developed for remote subarctic and tropical installations, it is an excellent solution to the problems remote areas pose to the broadcaster. The non-pressurized design and construction of this antenna include the matching transformer and eliminate the need for nitrogen or dry air, making it the perfect antenna for locations where nitrogen or pressurization equipment may not be easily available or practical. While retaining many of the features of the pressurized 6813, the 6813NP is feedline limited to a maximum 4kW input to an array.

VSWR—1.1:1 \pm 100kHz

6810

6812

6813

6813NP

SHIVELY LABS, INC.**FM Antennas****6814 Super Power Circularly Polarized**

The wide bandwidth and high power rating of the 6814 antenna make it ideal for multiple station operation or when very high transmitter power is used into a low gain configuration. Stations can be easily combined over a frequency spread of up to 6.0MHz. Each bay is rated conservatively at 25kW with an upper limit for the entire antenna array of 160kW because of feedline restrictions. During dry power testing, a single 6814 bay took 1.4mW of power before failing, 56 times its power rating.

VSWR—1.05:1 \pm 200kHz for single station operation

6814

6015P High Power Circularly Polarized

The 6015P panel antenna provides the best pattern omnidirectionality of any antenna on the market, boasting \pm 0.7dB in the horizontal polarization. It can also readily be modified to furnish directional patterns. By simply adding a broadbanding unit, the 6015PB is capable of accepting the output of two or more stations over a 3MHz bandwidth, while maintaining a VSWR of 1.1:1 or better over each channel.

The panels are approximately 8' square and are constructed entirely of stainless steel to assure durability, no maintenance and high strength.

VSWR—1.1:1 \pm 500kHz

6015P

6014PB Broadband High Power Circularly Polarized

Stations from over the entire FM band can be combined into the 6014PB. Frequency changes or station additions involve no changes to the antenna.

The natural characteristics of a panel style antenna can yield excellent circularity for wide area metropolitan coverage, or a wide variety of directional patterns.

The power handling of the 6014PB is conservatively rated at 15kW average, 100kW peak, per panel.

The 6014PB has an excellent strength-to-windload ratio. The panels are approximately 8' square. Panels and radiators are constructed entirely of stainless steel for durability, no maintenance and high strength.

VSWR—1.1:1 or better across entire FM band

6014PB

6600 Medium Power Horizontally Polarized

The 6600 antenna is horizontally polarized only. This allows broadcasters with no desire for circular polarization to take advantage of the higher gain with no sacrifice in quality. Thus, maximum ERP is achieved at minimum cost. The power rating is 5kW per bay, with a maximum array input of 40kW for eight or more bays.

VSWR—1.08:1 \pm 100kHz

6600

6601/6602 Low Power Horizontally Polarized

Both the 6601 and 6602 low power horizontally polarized antennas are primarily designed for educational stations. However, their excellent design and construction also make them ideal low cost, low power options for the commercial FM broadcaster who has no desire for circular polarization.

The 6602 is a non-pressurized design utilizing Type N connectors and RG-213 cable, while the 6601 is a pressurized system complete with our fine matching transformer and rigid interbay feedline.

The very low weight and windload of these models further add to their versatility.

VSWR—1.1:1 \pm 100kHz with matching transformer

6601

SHURE BROTHERS, INC.*Professional Microphones***SM10A/SM12A Headset Dynamic Microphones**

• Head-worn microphones for remote broadcasting, intercommunications systems and vocal performance for drummers and keyboard players • Noise-cancelling, unidirectional and close-talking • Lightweight, padded headbands eliminate user fatigue and an adjustable boom maintains proper mouth-to-microphone distance

SM10A-CN Boom microphone only \$140.00

SM12A-CN Microphone and single monitor earphone 190.00

SM17 Miniature Dynamic Microphone

• Designed especially for use with acoustic stringed and other acoustic musical instruments • Omnidirectional pickup pattern • Frequency response: 50-15,000Hz • Attached 10" small-diameter cable

SM17 \$103.00

SM15-CN Head-worn Condenser Microphone

• Close-talk, electret condenser design • High sound pressure level capacity (141dB) • Fully adjustable boom pivot • Comes with 4' microphone and 10' amplifier cable, a windscreen and a carrying/storage case • Frequency response of 50-15,000Hz

SM15-CN \$275.00

SM77EB/SM78EB Starmaker™ Series

• Fixed low frequency rolloff plus a slight mid-frequency presence rise in frequency response • SM77 has slim styling and is effective for instrumental applications • SM78 has superior wind and pop protection, making it well suited for vocal applications

SM77EB-LC Without cable \$111.00

SM78EB-LC Without cable 136.25

SM85-LC Unidirectional Condenser Microphone

• Lightweight microphone designed for handheld live vocal applications as well as broadcasting and studio recording requirements • Controlled low frequency rolloff minimizes handling noise and boominess • Lightweight, extremely tough aluminum case and a Teflon-coated all steel grille • Elastomer "spaceframe" isolates the condenser element from virtually all mechanical vibration

SM85-LC Without cable \$275.00

SM87-LC Supercardioid Condenser Microphone

• Similar in appearance and construction to the SM85, the SM87 features a supercardioid, rather than cardioid, pickup pattern • Flat response means less equalization is needed • Especially useful in multiple-miking situations, or single-miking in a noisy or reverberant environment • Frequency response is 50-18,000Hz

SM87-LC Without cable \$329.00

SM48 Unidirectional Dynamic Microphone

• Low-impedance, unidirectional dynamic vocal microphone • Equipped with its own specially designed cartridge • Utilizes a highly efficient cartridge shock mount, which reduces handling and stand noise dramatically (over 10dB quieter than many competitive models) • Extremely smooth peak-free frequency response with a slight mid-range presence rise for enhanced vocal intelligibility • Built-in spherical windscreen • Uniform cardioid pickup pattern greatly reduces off-axis coloration and rejects background noise to permit higher sound system gain before feedback • Non-glare gray handle finish and satin chrome grille provide for a professional on-stage appearance

SM48-LC Supplied without cable only \$126.00

SM94 Unidirectional Condenser Microphone

• Wide-range, smooth, flat frequency response has no presence boost or low-end rolloff, making it an ideal choice for live instrument miking or recording • Cardioid polar pattern is exceptionally smooth and uniform at all frequencies • Elastomer "space frame" shock mount • Can be

used at sound pressure levels up to 141dB (800-ohm load) • May be powered by standard phantom power supplies or by an internal 1.5V AA battery • Swivel adaptor and vinyl storage bag are included

SM94-LC Supplied without cable only \$250.00

SM96 Unidirectional Condenser Microphone

• Ideal for live performance and recording, as well as general sound reinforcement systems • Smooth, even frequency response has a slight presence rise and electronically generated low-frequency rolloff for maximum vocal sound clarity • Built-in multi-stage wind and pop filter and uniform cardioid polar pattern • Polar pattern that doesn't "collapse" at higher frequencies—off-axis response stays uniform throughout the sound spectrum • Elastomer "space frame" system isolates the transducer element from the roughest handling • Very low RF and hum susceptibility • Low distortion output • Wide dynamic range gives it the ability to take extremely high sound pressure levels without "breaking up" • Can be powered by virtually any phantom (simplex) power source, or by an internal 1.5V AA battery • Swivel adaptor and a zippered vinyl storage bag are included.

SM96-LC Supplied without cable only \$250.00

SM98 Miniature Musical Instrument Microphone

• Utilizes a high performance, low-noise, low-distortion preamp • Wide, extremely smooth frequency response for accurate, faithful reproduction of acoustic instruments • Nearly perfect cardioid polar pattern at all frequencies for superior source isolation • Incorporates a detachable cable for ease of set-up and tear-down • Preamp is powered by two standard 9V batteries or an 11 to 52VDC (phantom) simplex supply • Battery on/off switch and a 12dB/octave low-end cut-off switch • Included is a unique swivel adaptor which allows the miniature microphone to be used with all standard mike stands, booms and goosenecks

SM98 \$250.00

SHURE BROTHERS, INC.

Wireless Microphone Systems

W20R Receiver

• RF carrier frequency: 150 to 216MHz • Distortion: less than 0.5% THD • Dynamic range: 98dB A-weighted • Audio frequency response: 50 to 15,000Hz, ± 1 dB • Antenna type: $1/4$ wavelength omnidirectional vertical • $11\frac{1}{16}$ "H x $7\frac{1}{2}$ "W x $6\frac{13}{16}$ "D

If you have a clear path between mike/transmitter and receiving antenna, the W20R is a logical choice. It includes advanced companding circuitry, linear-phase filters and crystal-controlled frequency generation for a stable RF link with excellent signal-to-noise ratio.

W10BT Body-Pack Transmitter

• RF power output: 50mW max • Modulation: $54F3 \pm 12$ kHz deviation • Attached 12" omnidirectional flexible wire antenna • 4 "H x $2\frac{3}{4}$ "W x 1 "D

A sensitivity selection switch and concealed audio gain potentiometer let you fine-tune this compact transmitter for perfect compatibility with whatever microphone or musical instrument you're using. The input of the W10BT accommodates various input sources from low level, low impedance mikes to high level, high impedance electric guitars.

Separate power and audio on-off switches allow the sound to be muted without annoying "pop". All controls (except the recessed audio gain potentiometer) are conveniently located on top of the unit.

A fresh 9V alkaline battery provides power for approximately eight hours.

WL83 Microphone

This electret condenser mike is the wireless system version of Shure's SM83. It has just been refined for even greater performance and versatility.

Wear it as a lavalier. Clip it to acoustic, wind, or string instruments. No matter how you use it, you'll get the quality sound you expect.

Wireless Microphone System

The Wireless Microphone System combines top-performance RF circuitry with unparalleled audio design to produce a wireless sound equal to that of a microphone with a cable. To perform this accurately, this system is totally integrated acoustically and electrically — guaranteeing that microphone, transmitter and receiver will work flawlessly together.

A great wireless system starts with a great microphone. Now you can use a wireless system that works beautifully with most Shure dynamic and battery-operated condenser mikes.

Thanks to the availability of many computer-selected frequencies, plus a well-controlled RF output concentrated at the given transmission frequency of each system, you can operate twelve — or more — W25DR Wireless Systems at the same location without interference, or up to seven or more with the W20R.

W25DR Diversiphase™ Receiver

• RF carrier frequency: 150 to 216 MHz • Distortion: less than 0.5% THD • Audio frequency response: 50-15,000Hz ± 1 dB • Antenna type: $5/8$ wavelength omnidirectional vertical • $3\frac{1}{2}$ "H x $8\frac{1}{4}$ "W x $8\frac{5}{16}$ "D

The Diversiphase receiver does much more than just minimize dropout from reflected signals or a blocked path between transmitter and receiver. Diversiphase also maximizes antenna gain by constantly monitoring the signals from both antennas, locking them into phase so they don't cancel each other, and adding them together.

Precision-tuned linear-phase filters and advanced RF circuits reject harmonic energy from TV, two-way radio and other stray signal sources. This increased selectivity means you hear only the signal from the wireless transmitter.

Signal-to-noise ratio is excellent, with a typical 98dB dynamic range (A-weighted).

Prices and Specifications Subject to Change Without Notice.

Stands

- BB-77 Baby Boom:** 31" (787mm) adjustable boom arm. Fits MS-10C Floor Stand. Standard 5/8"-27 thread accepts any threaded Shure microphone, mount or swivel adaptor. \$25.85
- CO-1 Stand Adaptor:** Screw-type clamp with 5/8"-27 male thread for mounting second microphone on microphone stand, table or desktop. Adjustable 360° swivel aids horizontal positioning. \$15.85
- MS-10C Floor Stand:** Quickly and easily adjusts from 35" to 64" high. Positive ring lock maintains desired height. Standard 5/8"-27 thread accepts any threaded Shure microphone, mount or swivel adaptor. Also accepts Model 88-77 Baby Boom. Chrome plated. Weighted 10" base for stability. \$33.35
- S15:** Tall mike stand that extends to 14'. Standard 5/8"-27 thread for direct mounting. Includes cable clamp for vertical application of wire. \$165.00
- S37A Modern Desk Stand:** Nonreflective, textured gray finish. For use with all microphones with swivel connector assemblies, or microphones with swivel adaptors \$21.65
- S39A Vibration-Isolation Stand:** For all applications where vibration is a problem. Fits all Shure microphones \$60.00

Adaptors

- A25B:** (Black) To be used with Models 515, 545, 565, SM57 and SM58 tapered handle microphones—for use with standard desk or floor stand \$4.00
- A25C:** For SM94, SM96 Mikes 4.00
- A57D:** (Champagne) Snap-in Locking Swivel Adaptor for Models SM80 and SM81. 3/4" (19mm) diameter microphones—for use with standard desk or floor stand. \$12.20
- A57E:** (Ebony) Adaptor for SM85 and SM87 12.20

Plug-In Modifiers

- A15AS Microphone Attenuator:** Prevents input overload in applications where very strong signals are applied to a microphone input. Selectable 15, 20 or 25dB loss. \$39.45
- A158T Bridging Transformer:** Matches balanced or unbalanced devices of different impedances. (33K ohm primary and 600 or 7500 ohm secondary) . . . \$42.50
- A15HP High Pass Filter:** Provides a low frequency cutoff to reduce unwanted low frequency noises \$36.00
- A15LA Line Input Adaptor:** Converts balanced low impedance microphone input to bridging line level input \$36.00
- A15LP Low Pass Filter:** Provides a high frequency cutoff to reduce objectionable high frequency noises. \$36.00
- A15PA Presence Adaptor:** Adds "presence" to vocals or instruments in recording, broadcasting, and PA applications \$36.00
- A15PRS Phase Reverser:** Reverses the phase of a balanced line without modification of equipment \$36.00
- A15RS Response Shaper:** Provides sibilance filtering in recording, broadcasting, and PA applications \$36.00
- A15TG Tone Generator:** Produces a continuous 700Hz signal capable of driving low-impedance balanced lines, and is extremely useful in setting up. . . . \$68.35
- A85F Low-Impedance To High-Impedance Line Matching Transformer . . . 17.50**
- A95U Series Low-Impedance to High-Impedance Line Matching Transformers (Plug-In Types):** Low-impedance connector is a 3-pin professional audio type designed to mate with Canon XL Series, Switchcraft A3 (Q.G.) Series or equivalent. High-impedance connector is a 1/4" phone plug or jack.
- A95U:** Male 3-pin \$29.60
- A95UF:** Female 3-pin. 31.70
- A97A Low-Impedance to Medium-Impedance Line Matching Transformer:** High quality transformer designed to properly match low-impedance (150 ohm to 600 ohm) microphone outputs to medium-impedance (1K ohm to 10K ohm) inputs, such as those frequently used in cassette recorders. Low-impedance connector—3-pin male professional audio connector. Medium-impedance connector—Amphenol MC 1M type connector \$29.50

Goosenecks

- A12:** Mounting flange \$3.70
- G6A:** 6" (152mm) flexible gooseneck (side vent). 8.35
- G12:** 12" (304mm) flexible gooseneck \$10.55

- G12-CN:** 12" (304mm) flexible gooseneck with professional female 3-pin audio connector \$20.00
- G18:** 18" (457mm) flexible gooseneck 12.00
- G18A:** 18" (457mm) flexible gooseneck (side vent) 12.50
- G18-CN:** 18" (457mm) flexible gooseneck with professional female 3-pin audio connector \$21.45
- A98-G18:** 18" (457mm) flexible gooseneck for SM98 microphones 42.00

Mounts

- A25M:** Designed to hold two tapered handle microphones such as Shure Models 545D, 545SD and 545L \$26.00
- A26M:** Designed to hold two microphones listed above when using A2WS Windscreens, "ball-type" Models 565D, 565SD, 588 and other Shure microphones with tapered handles. \$26.00
- A27M:** A highly versatile stereo microphone-adaptor designed to place two microphones in a variety of selectable positions. Allows for independent positioning flexibility. Consists of two stacking sections that rotate on their centers for complete angular adjustment. \$55.00
- A55M:** A breakthrough in noise isolation. Reduces mechanical and vibration noises by more than 20dB. Standard 5/8"-27 female thread fits all Shure desk and floor stands. Fits most Unidyne® and Unisphere® microphones, except those models with built-in swivel mounts. Size: 3 3/4" H x 1 1/2" D x 2" Dia. (95 x 38 x 51mm) \$35.55
- A55HM:** Half-mount version of A55M. 31.50
- A45Z Speaker Miking Bracket:** Z-shaped bracket permits positioning a microphone (in a swivel adaptor) in front of a musical instrument amp/speaker or sound reinforcement speaker for recording or other uses \$12.95
- A98HA:** Hanging adaptor for SM98 microphone 13.30
- A98MK:** Drum mount kit for SM98 microphone. 42.00
- A89SM:** Shock mount for SM89 shotgun microphone 90.00

Windscreens

- A1WS:** Windscreen for 515 Series \$5.00
- A2WS:** Designed to effectively minimize wind noise in outdoor locations and control explosive breath sounds in any location. For Models 545D, 545SD, 545SH, 545L, and 571 \$10.85
- A2WS-BK:** Black Windscreen. 10.85
- A3WS:** Windscreen for SM94 5.00
- A58WS:** Controls wind noise and "pop". For use on all Shure "ball-type" microphones, such as the Unisphere models. \$ 5.00
- A58WS-BK:** Black Windscreen. 5.00
- A58WS-8L:** 8Lue Windscreen. 5.00
- A58WS-8R:** Brown Windscreen 5.00
- A58WS-GN:** Green Windscreen 5.00
- A58WS-OR:** Orange Windscreen 5.00
- A58WS-RD:** Red Windscreen. 5.00
- A58WS-WH:** White Windscreen. 5.00
- A58WS-YL:** Yellow Windscreen 5.00
- A98PF:** Pop filter for SM98 Microphone 13.30

Cables

- C15A:** 15', 1-conductor, with 3-socket mic and 1/4" phone plug connector \$8.50
- C20B:** 20', 1-conductor with 3-socket mic and 1/4" phone plug (equipment) connector \$11.00
- C20D:** 20', 2-conductor, heavy-duty with 3-socket (microphone) connector (only) \$23.95
- C20H:** 20', 2-conductor, heavy-duty with 3-pin and 3-socket connectors. \$29.40
- C25F:** 25', 2-conductor, Triple-Flex®, with 3-pin and 3-socket connectors. \$24.25
- C50J:** 50', 2-conductor, Hi-Flex®, with 3-pin and 3-socket connectors . . . 25.00
- C100J:** 100', 2-conductor, Hi-Flex, with 3-pin and 3-socket connectors . . . \$33.35
- C25E:** 25', 2-conductor, Triple-Flex, with 3-pin and black 3-socket connectors. \$26.00
- C258:** 25', 2-conductor, heavy-duty, with 3-pin and black 3-socket connectors. \$24.25
- C25J:** 25', 2-conductor, Hi-Flex, with 3-pin plus 3-socket connectors . . . 13.35

SHURE BROTHERS, INC.

Amplifiers/Mixers

M64A

M64A Universal Stereo Preamp

• Permits turntables to be used with PA mixers and amplifiers without phono inputs • Also useful as a microphone preamplifier or low-gain buffer amplifier • Includes a 3-position slide switch for selecting Phono, Tape, or Flat frequency compensation

M64A \$102.00

M68A Microphone Mixer

• 5-channel models with 4 microphone inputs (each switchable for high or low impedance) and a high-level auxiliary input • Both include high- or low-impedance auxiliary output • Units can be easily connected to provide additional inputs

M68A 3-pin male XLR input connectors \$211.00

M68FCA 3-socket female XLR input connectors \$211.00

M267

M267 Professional Mixer with Limiter

• For recording or broadcast use • Four low-impedance balanced inputs switchable to mike or line level • Simplex (phantom) power on each input • Fast-acting limiter; built-in battery supply • Headphone level control • Illuminated VU meter with LED peak level indicator • Low-cut filters and tone oscillator • Battery check switch • Mix bus jack • Mike and line level outputs • Master volume control • 120/240 VAC, 50/60Hz, 9.5W; battery power • 2³/₄" H x 11³/₈" W x 7¹/₂" D

M267 \$520.00

M268 Microphone Mixer with Phantom Power

• 5 Channels • Ideal for public address and recording applications • Mix bus, simplex (phantom) power • Automatic muting circuit • Active gain controls and electronic power supply regulation • 120VAC, 50/60Hz, 5W • 2³/₄" H x 11³/₈" W x 7¹/₂" D

M268 \$290.00

FP11 Mike-to-Line Level Amplifier

• Portable, 1-input, 1-output • Provides up to 84dB of gain so that microphone and auxiliary level devices can be boosted to line level • Balanced, locking XLR input and output provide a switchable peak limiter, a peak/limiter LED indicator, aux level mini-phone jack input, powered by one standard 9V battery

FP11 \$260.00

FP12 Headphone Bridging Amplifier

• 1-input, 2-output • Designed to provide headphone feeds from any type of audio input • Two XLR in/out connectors and two 1/4" in/out jacks • Mike/Line input switch • Hi-Z/Lo-Z headphones switch • Headphone level control, powered by one standard 9V battery

FP12 \$245.00

FP16 Distribution Amplifier

• 1-input, 6-output, compact, self-contained audio distribution amplifier for routing multiple audio feeds without sacrificing signal clarity • Specially designed for field production use

FP16 120VAC \$570.00

FP31

FP31 Microphone Mixer

• Designed for electronic news gathering (ENG) and electronic field production (EFP) use, including film, video, and remote broadcast applications • Measures just 6⁵/₁₆" x 5⁵/₁₆" x 1⁷/₈" • Incorporates the features most requested by audio engineers, electronic news professionals, sportscasters, and film and video sound engineers • Provides a wide, flat frequency response, low distortion, and up to +18dBm output • Built-in slate microphone for voice announcement and emergency field use

FP31 Battery power \$990.00

FP32 Stereo Microphone Mixer

• Two transformer-coupled outputs (one for each stereo channel) and three inputs, each switchable for low impedance microphone or line level operation • Stereo capability is enhanced by a concentric clutched stereo master gain control • Built-in slate microphone and slate tone • Built-in tone oscillator for level checks or line tests • Built-in phantom (simplex) and A-B(T) power for condenser microphones • "Phantom" jack permitting use of an external microphone power supply (up to 48 VDC)

FP32 Battery power \$1350.00

FP42

FP42 Stereo Microphone Mixer

• Handles remote mixing jobs with its two outputs (one for each stereo channel) and four balanced inputs, each switchable for line or mike level operation • Each input channel also has a low-frequency rolloff switch and a center-detented stereo pan pot for convenient stereo mixing • Concentric clutched stereo master level control • Pull-pot cueing permits cueing or checking each input via headphones • Can be battery or AC-operated • Mini and 1/4" stereo headphone jacks with level control are included.

FP42 120/240VAC/battery power \$990.00

FP51

FP51 Compressor/Mixer for Mike or Line Input

• 4 mike/line inputs • Cue on each input • Separate headphone amplifier • 1/4" and mini headphone jacks • Compressor and memory switch on front panel • AC/DC powered with battery check • Phantom power for mikes • Rackmountable • Peak light on U meter • Outputs at line mike and mix bus levels

FP51 \$940.00

SHURE BROTHERS, INC.

Broadcast Phonograph Cartridges

BC70/BC80/BC90

Professional Broadcast Phonograph Cartridges

The BC Series is designed specifically for radio station use. This is the first line of phonograph cartridges to offer professional broadcasters both high-fidelity sound reproduction and the ruggedness to withstand the rigors of constant backcuing, all at a very affordable price.

The three-model BC Series (BC70, BC80, BC90) has quickly set a standard for ruggedness in professional phonograph cartridges. Shure employs a uniquely engineered internal cue guard design which stabilizes the stylus shank and helps to prevent the shank from bending backward or snapping when backcuing. To extend the reliability of this design even further, a high-stiffness stylus shank is employed to ensure stability and longevity in heavy-duty use. Lateral stylus movement is limited by another Shure exclusive, a wraparound stylus grip. This device prevents accidental damage to the stylus if the tone arm is dropped on or slid across a record.

But Shure didn't sacrifice sound quality for durability. Shure borrowed from the most respected cartridges in the history of stereo reproduction—its very own V15 Series. For example, Mäsar® stylus polishing (a trademark exclusive from the Shure V15 Type-V-MR) is utilized for less surface noise from the very first play. And a ruler-flat frequency response (much like that of the V15 Type V-MR) ensures pure, uncolored sound reproduction. The Shure BC Series delivers sound of unmatched clarity and depth with detail rarely heard from broadcast music.

The BC Series incorporates important design features for making the DJ's job easier. Brightly colored stylus grips (BC70, red; BC80, blue; BC90, green) in a cutaway design make the stylus completely visible.

A bright orange dot on the top of the stylus tip itself makes for even greater visibility and ease in cuing up a record. For further convenience, Shure has packaged each BC Series Model with two replacement styli in addition to the one stylus mounted on the cartridge. Additional replacement styli are packaged four-to-a-box.

The BC Series also offers users a choice of tracking forces, stylus geometries, and mounting styles. The BC80 and BC90 both track in a range from 1-1.5g and have elliptical stylus tips; the BC80 is a P-mount and the BC90 is a 1/2" mount. The BC70 tracks from 2.5-3.5g, has a spherical stylus tip, and is a 1/2" mount.

- BC70** \$ 90.00
- BC80** 126.00
- BC90** 126.00

Model	Stylus Grip Color	Stylus Configuration	Mounting Style	Tracking Force Range (grams)	Frequency Response	Output Voltage (typical) (1kHz at 5cm/sec peak recorded velocity)	Channel Separation	Replacement Stylus Model Number (4 per box)
BC70	Red	Spherical	1/2"	2.5-3.5	20-15,000Hz	5.0mV	20dB at 1kHz	SS70
BC80	Blue	Elliptical	P-mount	1.0-1.5	20-20,000Hz	5.0mV	20dB at 1kHz	SS80
BC90	Green	Elliptical	1/2"	1.0-1.5	20-20,000Hz	5.0mV	20dB at 1kHz	SS90

CIK-1 Component Video Keyer/Mixer

The CIK-1 is a stand-alone keyer/mixer. It is the perfect solution for the existing component video facility that needs an extra level of effects or the "A/B" suite that wishes to have effects capabilities.

Linear Circuitry The CIK-1 uses wideband linear closed-loop multipliers (HDTV opt.) for noise-free key edges and precise multi-channel tracking.

Superior Chroma Keys Installing a CIK-1 upstream of a camera NTSC encoder stops a background from causing fringing in the encoder.

Key Source Selector The key source can be any combination of the insert sources Red, Green, Blue, Luminance value, Matrixed color (chroma key), or the Luminance of an external input. Also has key invert.

Variable Key Gain Wide range available. High gain for separating a computer-painted image from a darker background. Medium gain for fine tuning perfect chroma keys, low gain for quiet edges.

Transitions The CIK-1 can mix or cut to and from a key. There is a GPI interface (closure to ground) to initiate transitions.

Matte Generator Internal color generator for matte fill keys.

Remote Control Panel Rack or console mount up to 300' away.

RGB or Y/R-Y/B-Y Available in either format. Specify when ordering.

CIK-1 \$2990.00

CIK-1

Delta Series

All Delta modules have looping inputs, 3 outputs per channel, and output gain adjustments for each channel. Prices do not include mounting frame.

Delta CB Converts RGB to Y/R-Y/B-Y. Includes blanking processor for the addition of adjustable levels of sync and set-up to the Y channel. . \$495.00

Delta BC Converts Y/R-Y/B-Y to RGB. Standard version passes Y channel sync and set-up to RGB outputs. Sync stripper to remove sync and set-up from Y channel input, keeping it off RGB. . \$495.00

Delta 33 Component video DA, no conversion. \$395.00

Delta CBG-1 Color Bar Generator The Delta CBG-1 is a split field SMPTE (RS-189) component video color bar generator that plugs into a Delta series frame. It is available in either the RGB or Y/R-Y/B-Y format. Also includes on-board sync generator for stand-alone operation.

Delta CBG-1 \$695.00

Rackmount Frame \$495.00

Delta

BetaMate CTDM/CTCM Dub Switchers

The BetaMate is designed to increase the productivity and quality of any Betacam™ or MII suite. A Betacam tape-to-tape dub is done in one of three ways:

1. NTSC—least desirable
2. Component—more desirable
3. Compressed Time Division Multiplexed (CTDM/CTCM)—most desirable

CTDM is the internal format of Betacam. A dub in this mode eliminates two stages of color difference channel expansion and compression. The BetaMate connects to the recorder and up to 4 source machines using the 12-pin dub cables. It also breaks out the component video signals to BNC's for connection to other equipment. A pushbutton selection then determines which source machine (or dub off) is connected directly to the record machine for a CTDM dub.

BetaMate (Specify Betacam or MII) \$1095.00

Break-Out Boxes (BOBs)

These passive Break-Out Boxes allow easy connection with BNC cables to the component video 12-pin connectors (Y/R-Y/B-Y format) found on Betacam or MII™ machines (specify). BOBs are rugged, diecast aluminum boxes that are easily rackmounted and are available in either record or playback configurations (specify).

BOBs (Betacam) \$89.00

BOBs (MII) \$99.00

BetaMate

BOBs

SIERRA VIDEO SYSTEMS, INC.

Routers/Distribution Amplifiers

SVS Series Wideband Routers

The SVS Series 8/16 wideband routers are a cost-effective solution to any facility's small to mid-size signal routing requirements.

Matrix

Our Series 16 routers are based on a 16x4 (16 in by 4 out) video crosspoint card and a 16 x 8 audio crosspoint card. There are two frame sizes: a 1 R.U. high frame (1 rack unit is 1 3/4" H) and a 3 R.U. frame. The 1 R.U. frame holds one video crosspoint card or two audio crosspoint cards. The 3 R.U. frame can hold up to six crosspoint cards. There is no hand wiring; a rear motherboard sandwich construction technique is used. This means that by simply using a different rear motherboard, we can build frames that use identical parts but are completely different size configurations. For example, a 3 R.U. frame that has six 16 x 4 video crosspoint cards can be a one level 16 x 24, or, with a different rear motherboard, it can be a component video 16 x 8. Component video being 3 levels: 1 for Red, 1 for Green, and 1 for Blue (or Y/R-Y/B-Y). Or, that same 3 R.U. frame may have 2 video cards and 4 audio cards for a 5 level 16 x 8 router with video, stereo audio, time code and data levels, all with breakaway capabilities. In addition, multiple frames may be added to the system design for more levels, larger routers, more audio, more time code, or data levels, etc. By doing this we obtain reliable, consistent performance in an easy-to-assemble and easy to expand router series that keeps efficiency up and cost down.

Performance

With a 20MHz video bandwidth, these routers can easily expand into new areas. All audio is switch balanced with common mode rejection to keep switching noise and crosstalk to a minimum. Dual power supplies (with alarm) are available and all modules have on-board voltage regulators. Many system sizes have both looping inputs and dual outputs. However, this varies from size to size as some systems contain more electronics in a frame than the connectors at the rear can accommodate.

Control

Control can be with either pushbutton control panels or, in the 3 R.U. frame, a microprocessor option is available (with back-up processor if desired). With the processor, serial control (RS-232 or RS-422) becomes available allowing the router to be controlled from a terminal or a host computer. The pushbutton panels (in 8, 16, 24, or 32 pushbutton sizes) are either X-Y or individual bus control with a wide variety of breakaway and level control configurations possible. Also available is a keypad type panel. All control panels have 2 control connectors (25-pin D) so they may be daisy chained or connected in parallel in any configuration to suit your particular installation requirements.

Series B

Same as above except based on an 8 x 8 video crosspoint or 8 x 8 stereo audio module. For example: six 8 x 8 crosspoint cards in a 3 R.U. frame may be configured as a single level 8 x 48.

Routing (Modules only)

16 x 4 Video	\$1445.00
16 x 8 Audio	1445.00
8 x 8 Video	1445.00
CPU (Processor)	675.00
Typical X-Y Control Panel (16 x 8)	665.00
15 Meter Control Cable	75.00
1 R.U. mounting frame and power supply	495.00
3 R.U. mounting frame and power supply	995.00

Example Systems (Modules and Frames, Less Control)

16 x 24 Video	\$9665.00
16 x 8 Video with Stereo Audio	6775.00
16 x 4 Component Video	5330.00
16 x 4 Video	1940.00

16 x 4 Video Crosspoint Card

Series 8/16 Routers

Series 32

Series 32 32 Output Distribution Amplifiers

These DAs are perfect for duplication facilities, pool feeds, studio outputs, etc. Wherever a large number of outputs with identical output-to-output performance is needed. Redundant power supplies are optional. All modules have differential inputs and excellent output-to-output isolation. Prices include mounting frame and power supply.

S32V	The video module is wideband output (-3dB at 30MHz)	\$1195.00
S32S	Audio with stereo outputs to +10dBm	1195.00
S32A	Audio with balanced outputs to +24dBm	1195.00
S32T	Audio with transformer coupled inputs	1295.00

SIGMA ELECTRONICS, INC.

Sync and Distribution Equipment

Color System Timing and Testing Products

TSG-375A Test Signal and Sync Generator
 Stable and accurate test signal generator, with 24 different patterns, a complete sync generator with 3 blackburst outputs, several production-aid outputs including source ID and countdown generator **\$2995.00**
TSG-370A A non-genlock version of above **.2695.00**

SCH-385 Subcarrier/Horizontal Phase Meter
 A display indicates relative sync and subcarrier of two different inputs, absolute SC/H phase of either input, and the associated "Color-Incidence" light provides a green light for proper color-framed edits or special effects **1650.00**

CSG-450 Color Sync Generator
 Master RS-170A Sync Generator with all standard sync outputs, C.F.I.D., and 3 blackburst signals. **1200.00**

CSG-455 Color Sync Generator
 Same as CSG-450 with additional outputs of selectable test signals of SMPTE Bars, Crosshatch, Red Field, and Safe Areas, plus Audio Tone. **1600.00**

CSG-460 Color Sync Generator
 Master or genlockable RS-170A sync generator, with all standard sync outputs, C.F.I.D., and 3 blackburst signals **1500.00**

CSG-465 Color Sync Generator
 Same as CSG-460 with the addition of selectable test signals of SMPTE Bars, Crosshatch, Red Field, and Safe Areas, plus Audio Tone . . . **1900.00**

BTS-414 Blackburst Timing System
 Genlocks to either composite video or blackburst, and provides 4 independently adjustable blackbursts out. Providing advance or delay of horizontal sync and 360° of continuous burst phase adjustment. **1750.00**

VPA-380 Video Processing Amplifier
 Built-in genlocking sync generator, adjustable blanking width controls to allow saving the various vertical test and identification signals; and a dual mode genlock circuit to allow acceptance of either stable or VTR signals **1750.00**

Video and Stereo-Audio Products

VSS-120 Switcher
 12 x 1 video with stereo-audio-follow passive switcher. Useful in stereo TV or 2nd language channel operations. Green legend indicates selected input, all others remain terminated in their characteristic impedance . . . **\$275.00**

VAS-120 Switcher
 12 x 1 video with single audio channel. **.250.00**

SVX-210 Video Only Switcher
 Provides vertical interval switching of 10 inputs to a dual output line. Output clamping is standard, with DC restoration optional **695.00**

SAV-210 Audio/Video Switcher
 Provides vertical interval switching of Audio-Follow-Video, Audio only, and Video only. A "dwell-timed" control function allows one handed selection of either audio or video breakaway. After dwell time has elapsed, the control function reverts to audio-follow-video operation. An audio input/output interface option provides for easy audio wiring **875.00**

SSV-210 Stereo-Audio/Video Switcher
 Functions in the same manner as the SAV-210, with an additional audio channel. Either channel is suitable for use with SMPTE time code. .995.00

VSD-200 Video/Stereo Audio Distribution Amplifier
 1 x 6 video with stereo-audio distribution amplifier. Optimum pricing and packaging for stereo television and duplication facilities **900.00**

VAD-200 Video/Audio Distribution Amplifier
 1 x 6 video with single channel audio DA **.650.00**

ADA-110 Audio Distribution Amplifier
 High performance Audio DA. One input and ten outputs; low noise, flat response, adjustable gain -8 to +23.5dB. Can be used for SMPTE Code **405.00**

ADA-210 Audio Distribution Amplifier
 Same high performance DA as the 110 except dual configuration. Can be either dual 1 x 10 or a single 1 x 20. Ideal for SMPTE Code **\$610.00**

TSG-375A

CSG-450

CSG-465

Self-Contained Sync and Distribution Equipment

VDA-115 Video Equalizing Amplifier
 The VDA-115 is an extremely versatile unit. In its most simple configuration, it is a 1 x 6 Video DA. More importantly, it is a cable equalizing amplifier that can serve as a "line-driver" or "line-receiver" to compensate for up to 1100' of coaxial cable. It features a differential input that can eliminate as much as 10VAC of hum **\$360.00**

VDA-100A Video Distribution Amplifier
 6 output DA frequency response 0.2dB to 10MHz, looping input, DC coupled, ±6dB gain adjustable, 110/220VAC. Desk or rackmount **310.00**

ADA-106 Audio Distribution Amplifier
 1 x 6, high performance amplifier, with a frequency response of ±0.1dB to 30kHz, can be used for SMPTE Code. Screw capturing terminals. 110/220VAC. Desk or rackmount **310.00**

PDA-100A Pulse Distribution Amplifier
 1 x 6 pulse regenerative DA with looping input. 110/220VAC. Desk or rackmount **310.00**

SDA-110 Subcarrier Distribution Amplifier
 Regenerative subcarrier amplifier, 2 independently adjustable outputs. 110/220VAC. Desk or rackmount **390.00**

PDA-110 Pulse Delay Amplifier
 Ideal aid in system timing. Four independently delayable outputs, range of 0.2 to 2µsec. 110/220VAC. Desk or rackmount **415.00**

CSG-160 Color Sync Generator
 Provides all the standard synchronizing outputs including blackburst. RS-170 standard. Desk or rackmount **800.00**

AFV-100 Passive Audio Follow Video Switcher
 6 inputs to one output RCA jacks for audio **185.00**

VS6-100 Passive Video Switcher
 For switching six video inputs to one input. Desk or rackmount **115.00**

MODULAR DISTRIBUTION EQUIPMENT

System 500

System 500 Modular Distribution System

- Flexible
- Hinged front door
- 10 modules and 1 power supply capacity
- Space efficient
- EX-505 is required to service any of the distribution modules in the frame
- Frame is supplied with rear mounting blank panels
- Accepts a second PS-501A for redundant power supply operation

For any signal distribution equipment, the FR-500 Module Mounting Frame provides maximum flexibility in a very efficient package. Intended for use in broadcast, cable, industrial, duplication and similar installations.

Flexibility and versatility. An internal motherboard allows both modules and rear frame adaptors to be conveniently installed or reorganized, to meet any system requirement. Up to ten modules plus a power supply can reside in the frame, and any combination of existing or future System 500 modules can simultaneously be installed in the frame.

FR-500 Module Mounting Frame

Holds up to ten of any combination of modules plus a power supply. Internal "motherboard" allows for easy additional modules . . . **\$400.00**

EX-505 Module Extender **30.00**

PS-501A Power Supply Module

Provides necessary power for a fully loaded frame of modules. 110/220VAC operation. **150.00**

VDA-510 Video Distribution Amplifier

1 input/6 outputs, DC coupled, frequency response ± 0.2 dB to 10MHz, diff. phase 0.2°, diff. gain 0.2%, ± 3 dB gain adjustment **240.00**

VDA-515 Video Equalizing Amplifier

Capable of compensating up to 1100 ft. of coaxial cable **280.00**

ADA-526 Audio Distribution Amplifier

1 input/6 outputs, an extremely flat frequency response (0.1dB to 30kHz). Can operate bal. or unbal. **280.00**

PDA-530 Pulse Distribution Amplifier

Regenerative Pulse Amplifier 1 input/6 outputs. Input level 2-6V p-p, output level 4V p-p **240.00**

PDA-535 Pulse Delay Amplifier

Two sections of two independently adjustable stages **360.00**

SDA-540 Subcarrier Distribution Amplifier

1 input/3 outputs. Each output is independently adjustable. . . **320.00**

BTM-551 Blackburst Timing Module

Provides horizontal and burst phase adjustment of its blackburst output. Requires a BSG-100A for reference timing signals **375.00**

CBG-565 Color Bar Module

Provides dual outputs of selectable outputs of SMPTE Bars, Cross-hatch, Red Field and Safe Areas. This unit requires timing signals from BSG-550 **600.00**

BSG-550 Black Signal Generator

Provides two RS-170A blackburst outputs, plus synchronizing signals for other System 500 modules **400.00**

CGM-560 Color Genlock Module

Used to genlock other System 500 modules, such as CBG-565 or BTM-551 to an external reference. **500.00**

SMALL STUDIO AND EDIT SUITE EQUIPMENT

BSG-100A

CBG-100A

BTM-100A

BSG-100A Black Signal Generator

Provides two RS-170A blackburst outputs, plus control driving signals for other Series 100 modules **\$495.00**

CBG-100A Color Bar Generator

Provides dual outputs of selectable SMPTE Bars, Crosshatch, Red Field, and Safe Areas. This unit requires a BSG-100A for timing reference **495.00**

BTM-100A Blackburst Timing Module

Provides horizontal and burst phase adjustment of its blackburst output. Requires a BSG-100A for timing reference **\$495.00**

CGM-100A Color Genlock Module

Used to genlock CBG-100A and BTM-100A to an external reference **495.00**

FR3-100 Rackmount Frame

For any 3 small box modules. **70.00**

SONY CORP. OF AMERICA

1" Video Tape Recorders

**BVH-3000 (Sync)/BVH-3100 (Non-Sync)
1" SMPTE Type C Format Video Tape Recorders**

- Air threading technology limits tape handling to a minimum for ease of operation and tape protection
- Easy manual tape threading with wide movable guide system
- Time base corrector function supplied as a standard
- Two types of time base corrector processors available—Standard TBC Processor or High Quality TBC Processor
- High Quality TBC Processor provides a steady DT playback picture
- Self-aligning DT system for Dynamic Tracking playback within a DT range of -1 to +3 times normal playback speed
- Separate SC-H phase meters for tape SC-H phase and reference signals provided
- Serviceability improved with the sophisticated one-circuitboard/one-function design
- Full scale built-in editing facility
- Video/audio confidence playback
- Versatile system interface available for system expandability
- Two hour recording and playback
- Computer controlled servo system including sophisticated self-diagnostics
- 147 lbs., 7 oz.

Supplied Accessories

- Extension board (EX-136)
- Empty reel (R1-11 VA)
- 37-pin D-sub connector
- 50-pin D-sub connector
- Phone plug adaptor
- Key ID label
- Overlay sheet (printed)
- Overlay sheet (blank)

BVH-3000 \$48,000.00
BVH-3100 40,125.00

BVH-3000

BVH-2500 1" Video Tape Recorder

- Various Δt recording modes:
 - Still—Records or replaces a selected field or frame
 - Step—Steps forward one time increment and records or replaces a selected field or frame
 - Slow—Records at speeds from $1/60$ to $8/60$ (NTSC), $1/50$ to $3/50$ (PAL), $1/90$ to $5/60$ (PAL-M) normal, set by the variable speed control

- No preroll for Δt recording
- Compatible with SMPTE/EBU type C format
- Standard real time recording
- Instantaneous and repeatable re-write capability using a DT Record, Play and Erase Head
- Approx. 400,000 fields or 200,000 frames recording capability with 2-hour reel
- Built-in time code generator/reader

Supplied Accessories

- 50-pin connector for Remote Out-3
- 37-pin connector for Monitor Select
- Empty reel
- Extension board
- Phone plug adaptor
- Operation and maintenance manual

BVH-2500 \$70,000.00

BVH-2500

SONY CORP. OF AMERICA**1" Video Tape Recorders****BVH-2800/2830 1" Digital VTRs with PCM Sound**

- BVH-2800 for 2 hour operation; BVH-2830 for 3 hour operation
- Playback compatible with BVH series VTRs
- A total of 5 audio channels—2 PCM audio channels and 3 analog audio channels
- PCM audio editing capability
- Video and audio (analog and digital) simultaneous playback during recording/editing
- Versatile system interface with a simple connection
- Integral time base corrector with a wide 15H p-p correction window (optional)
- High speed dynamic tracking system with DT ranges from -1 to +3 times normal speed
- Easy tape threading with movable head gate system
- Computer controlled servo system including sophisticated self-diagnostics
- Life of the lower drum improved and extended
- Mechanical squeeze plate to minimize impact error

Supplied Accessories

- 50-pin connector for remote out-3
- 37-pin connector for monitor select
- Extension board EX-113
- Phone plug adaptor
- PC board indication label
- Screw B5 x 16
- Operation and maintenance manual

BVH-2800	\$42,500.00
BVH-2830	60,000.00

**BVH-2800****BKH-2801 PCM Audio Processor**

- When interfaced with BVH-2800 VTRs, enables high quality 2-channel digital recording and playback
- Three sampling rates, 48kHz or 44.1kHz/44.056kHz can be selected
- All of the audio function controls and indicators are located on the front panel for ease of operation
- Optional circuit boards for digital I/O interface (BKH-2804) and audio D/A converter (BKH-2805) are available
- 19" rackmountable or, with the BKH-2803 Processor Mount Adaptor, VTR mountable for desktop use

BKH-2801	\$15,000.00
-----------------------	-------------

**BKH-2801****BKH-2802 Control Panel**

- Designed exclusively for BVH-2800 VTRs and houses all of the function keys needed for 2 machine editing including the numeric keypad
- In addition to the conventional editing capabilities of 1" machines, this control panel provides independent CH1 and 2 digital audio editing

BKH-2802	\$7,000.00

BVH-2180 1" Video Tape Recorder

- Tape transport with three-hour recording and playback capability
- High speed Dynamic Tracking System; Wide DT range from -1 to +3 times normal speed; Programmed play; DT variable memory function
- Easy threading head gate system with precise cross roller guide
- Three types of control panel (option)
- Plug-in time code board (option)
- Full scale editing facility
- Versatile system interface
- Front operation and improved serviceability
- Self-diagnostic system
- 170 lbs.
- 28.2"H x 24.5"W x 22.5"D

Supplied Accessories

- 50-pin connector for remote out-3
- 37-pin connector for monitor select
- Empty reel
- Extension board
- Phone plug adaptor

BVH-2180\$53,600.00

BVH-500A Portable 1" Video Tape Recorder

- Back space assemble edit with on/off switch
- Digital servo system
- Electric tension servo system
- Advanced gyro rolling characteristics
- Color framing facility
- Warning indicators
- Reel size selector
- 60 minutes recording/playback
- Dust and weather-proof housing
- 35 lbs.
- 7"H x 15"W x 16.5"D

Supplied Accessories

- Empty reel
- CCQ-2AR
- Operation and maintenance manual

BVH-500A\$33,700.00

Optional Accessories

- HT-500A Color stabilizer (NTSC)\$3,585.00
- BVR-500 Function remote control\$410.00
- CLP-550 Color playback for adaptor for (using with a TBC)
NTSC\$5,565.00

BVT-2000 Digital Time Base Corrector

- For BVH-2180/2500/2800/2830 1" VTRs
- Correction range of 12H p-p
- Dynamic tracking playback with BVH-1100/1100A/1180/2180/2500/2800/2830 series
- 9-bits, 4X fsc sampling
- 1H prior drop-out compensation with digital Y/C separation
- Built-in velocity error compensation
- Built-in sync generator
- Built-in video processor
- Built-in automatic advanced sync generator
- Synchronized to external reference signal with high and low tape speed
- Simultaneous playback monitoring
- Remote control facility

BVT-2000\$14,300.00

BKH-2100 Digital Time Base Corrector

- Plug-in TBC for BVH-2180/2800/2830
- Consists of 4 circuit boards (plug-in type)
- PAL/SECAM switch selectable (BKH-2300)
- 1H p-p window correction
- 8-bits, 4X fsc (NTSC)
- Recognizable B/W picture, up to ± 50 times normal speed
- Second order velocity error compensation
- Selectable vertical blanking 10H to 21H
- Full remote control capability

BKH-2100\$8,425.00

**BKH-2150 Digital Time Base Corrector
With Dynamic Tracking**

- Plug-in TBC for BVH-2180/2800/2830
- Consists of 4 circuit boards (plug-in type)
- PAL/SECAM switch selectable (BKH-2350)
- 15H p-p correction window
- 9-bits 4X fsc (NTSC), 8-bits 4X fsc (PAL/PAL-M) 8-bits 1135
- fH (SECAM) sampling frequency
- Recognizable monochrome picture up to ± 50 times normal speed
- Recognizable color picture up to ± 8 times normal speed
- Broadcast quality picture from -1 to +3 times normal speed
- Digital dropout compensation
- Second order velocity error compensation
- Selectable vertical blanking 10H to 21H

BKH-2150\$12,300.00

SONY CORP. OF AMERICA**Digital Video Tape Recorders****DVR-1000 4:2:2 Component Digital VTR**

- SMPTE D-1/EBU standard
- Meets the CCIR rec. 601 4:2:2 Component Digital Standard
- 525/60, 625/50 switchable
- Two levels power supply voltage (100-120V and 220-240V)
- Both L (Large) and M (Medium) size SMPTE D-1 cassettes usable
- Complete frame edit operations are assured with no picture shift
- Editing with direct digital data streams drastically reduces the signal degradation from multiple dubbing in editing, thus overcoming the inevitable limitations of analog recordings
- Both digital and analog I/O ports are provided for various video and audio inputs/outputs
- The analog ports can be used with any conventional studio equipment (RGB, Betacam)
- The digital port, which conforms to the SMPTE RP-125 and the EBU Tech 3246-E parallel digital interface standards, will allow interfacing with other digital studio equipment
- Each audio channel has a storage capacity of 20 bits per sample at a sampling rate of 48kHz
- The recording mode can be selected from eight modes available. The selected mode specifies the number of audio bits per sample and defines the type and quantity of associated ancillary data, thus ensuring transparency to AES digital audio signals
- The four digital audio channels provide high quality sound and flexible production capability
- System flexibility due to three RS-422 ports
- Wide Electroluminescence (EL) display system
- Broadcast level playback and freeze pictures at up to $\pm 1/4$ times normal speed
- Color pictures in shuttle up to ± 40 times
- Separate unit system, tape transport unit and processor unit

DVR-1000 \$140,000.00

**DVR-1000****DVR-10 D-2 Digital Cassette with Dynamic Tracking™ VTR**

- Conforms to SMPTE D-2 composite digital format
- With digital interfaces, more than 20 generations with no signal degradation in audio and video can be obtained
- Dynamic tracking facility permits noiseless still, slow motion and variable speed playback within -1 to 3X normal playback speed. (Audio channels muted during DT use)
- Wide bandwidth of 6MHz and high signal-to-noise ratio of 54dB
- Error correction/concealment feature for dropout-free performance
- Four digital audio channels
- Compact (6 rack units high) and lightweight (103 lbs., 10 oz.)
- Accepts both M-size (94 minute operation) and S-Size (32 minute operation) cassettes
- Large electroluminescent display (640 x 200 dots) with 12 menus for operation control and audio metering
- Two machine editing control (built-in) via RS-422 port
- Up to 99 cue points can be stored and selected for random accessing and pre-roll
- Control panel can be angled or removed and connected to the rear panel for maintenance
- DFX-1200 (D-1 to D-2) and DFX-2100 (D-2 to D-1) digital rate converters available for digital conversion

Supplied Accessories

- Control panel BKDV-101
- Extension board (EX-138)
- Extension board (EX-185)
- Rackmount kit
- Connector plug (50-pin)
- AC power cord
- Plug holder
- Operation and maintenance manual

DVR-10 \$72,500.00

Video/Audio Tape

V1-K Series

V1-K Series 1" Video Tape

- Offers smooth transport in all modes and on all C-format VTRs

Cartons—V1-K-18B, V1-K-34B, V1-K-66B, V1-K-96B

Shipper Case—V1-K-18SP, V1-K-34SP, V1-K-66SP, V1-K-96SP, V1-K-126SP, V1-K-156SP, V1-K-188SP

V-16 Series 1" Video Tape

- High sensitivity for mastering durability to withstand stress of editing and repeated play • Minimal dropouts 3 per minute.

Cartons—V-16-18B, V-16-34B, V-16-66B, V-16-96B, V-16-126, V-16-188

Shipper Case—V-16-18SP, V-16-66SP, V-16-34SP, V-16-96SP

HD-1 Series High Definition 1" Video Tape

- High density Vivax™ magnetic particle rendering high quality picture and sound reproduction required for HDVS.

Shipper Case—HD-1-33SP, HD-1-48SP, HD-1-63SP

XBR Series

XBR Series U-Matic® Videocassettes

- The ultimate broadcast master • Offers improved video and audio characteristics, greater durability, reliability and low dropout rate

KCA XBR Videocassettes (for standard size U-Matic machines)

KCA-10XBR, KCA-20XBR, KCA-30XBR, KCA-60XBR

KCS XBR Mini Videocassettes (for portable, in-field use)

KCS-10XBR, KCS-20XBR

BRS Series U-Matic Videocassettes

- Broadcast standard videocassette • Carbon Mirror™ backcoating and anti-static shell

KCA BRS Videocassettes (for standard size U-Matic machines)

KCA-10BRS, KCA-20BRS, KCA-30BRS, KCA-30BRS-SC, KCA-60BRS, KCA-60BRS-SC

KCS BRS Mini Videocassettes (for portable, in-field use)

KCS-10BRS, KCS-20BRS, KCS-20BRS-SC

KSP Series U-Matic Videocassettes

- Designed especially for use with Sony Pro Plus VCRs • Super Vivax magnetic particles allows tape to handle higher FM carrier frequency of the U-matic SP system

KSP 10, 20, 30, 60, KSPS Mini S10, S20

BCT Series Betacam Videocassettes

- Reliable, durable, broadcast quality cassettes
- BCT-5K, BCT-10K, BCT-20K, BCT-30K, BCT-60L, BCT-90L (to be used only with Betacam SP VTRs capable of loading large cassettes)

BCT Series

BCT Metal Series Betacam SP Videocassettes

- Ultra-fine metal particle for enhanced video/audio characteristics
- BCT-5M, BCT-10M, BCT-20M, BCT-30M (small metal cassettes)
 BCT-5ML, BCT-10ML, BCT-20ML, BCT-30ML, BCT-60ML, BCT-90ML (large metal cassettes)
 BCT-5MNP, BCT-10MNP, BCT-20MNP, BCT-30MNP, BCT-20K-SC

4:2:2 Component Digital Video Master Cassettes

- Super Vivax magnetic particles • High Polymer binder system ensures uniform, high density particle distribution
- DCM-200, DCM-400, DCM-600, DCM-1600, DCM-75CL

D-2 Composite Digital Video Master Cassettes

- Metal particle formulation for outstanding picture quality • Small cassettes—DCS-60M, DCS-100M, DCS-180M, DCS-250M; Medium cassettes—DCM-60M, DCM-100M, DCM-180M, DCM-250M, DCM-300M, DCM-750M

1/2" PRO X Series Videocassettes

- Ultra fine super precision Vivax • Beta S/N improved by 1dB, color S/N by .5dB • VHS S/N by 1.5dB compared to ESX Hi-Fi • For recording video master tapes, editing and dubbing, PCM digital audio recording

BETA	VHS
L-250, L-500	T-120

Professional Grade VHS

30, 60, 90 and 120 minute lengths

1/2" Dynamicron-Series Videocassettes

- Economical, high value performance for general purpose recording

BETA	VHS	1/2" Reel-to-Reel
L-125, L-250, L-500,	T-60, T-90,	V-30H, V-32, V-35
L-750, L-830	T-120, T-160	

MP Series Metal Particle 8mm Videocassette

- Cosmilit Ultra-fine magnetic particle ensuring high output and low noise • Unique UST (Ultra Surface Treatment) eliminates dropouts

Packaged—P6-30MP, P6-60MP, P6-90MP, P6-120MP

Bulk—P6-30PH, P6-60PH, P6-90PH, P6-120PH

Bulk 8mm cassettes—P6-30PHB, P6-60PHB, P6-90PHB, P6-120PHB

EVPCASE—P-case for bulk cassettes must be ordered separately

D-1/4, D-1/2 Series Open Reel Digital Audio Tape

- High coercivity magnetic particles and precise surface technology provide excellent resolution and high output, especially in the high frequencies

1/4" — D-1/4-730, D-1/4-1460, D-1/4-2190

1/2" — D-1/2-1460, D-1/2-2920

3/4" Digital Audio Master Cassette

- Extremely low dropout rate • High precision cassette shell for reliable tape transport

KCA-60BRK-PCM, D-3/475U, DAU-30, DAU-60, DAU-75

Professional DAT

DT-60R, DT-90R, DT-120R, DT-10CL

Tape Accessories

CL-25—U-Matic tape case; **CL-1-SPS**—1" Tape shipper case (9" dia.); **CL-1-SPM**—1" Tape shipper case (10.5" dia.); **CL-16SPL**—1" Tape shipper case (14" dia.); **KCS-1CL**—U-Matic cleaning cassette; **BCT-5CL**—Betacam cleaning cassette; **L-25CL**—Betamax cleaning cassette; **V-25CL**—VHS cleaning cassette; **RI-9V**—1" Empty reel (9"); **RI-10V**—1" Empty reel (10.5"); **RI-11V**—1" Empty reel (11.75"); **RI-14V**—1" Empty reel (14")

Betacam Camcorders

BVW-550 Betacam® SP Camcorder

- The BVP-50 Color Camera is combined with the BVV-5 Betacam Recorder to configure a camcorder for ENG use
- Simultaneous playback of video and audio
- 4-channel audio
- Built-in LTC, VITC, user bit generator with genlock capability
- Audio/video confidence playback
- Phantom power supply
- Built-in loudspeaker
- 8-digit LCD display
- Backspace edit
- CCD eliminates problems of lag, image burn-in and registration adjustments
- Electronic shutter speeds of $\frac{1}{100}$, $\frac{1}{125}$, $\frac{1}{175}$, $\frac{1}{250}$, $\frac{1}{500}$, $\frac{1}{1000}$, and $\frac{1}{2000}$ second
- Dynamic contrast control (auto knee control), switchable, extends dynamic range to 600%
- Automatic iris control, white/black balance with dual white balance memories for each filter position (4)

Supplied Accessories

- | | |
|---------------------------|------------------------------------|
| • Shoulder belt | • 50-pin connector cap |
| • Tripod adaptor (VCT-14) | • Rain cover |
| • Extension board | • Cap for handle hole |
| • Extractor | • Carrying handle |
| • Chest pad | • Operation and maintenance manual |
- BVW-550** \$36,500.00

BVW-530 Betacam SP Camcorder

- Can be separated into two parts: the three $\frac{2}{3}$ " diode gun Plumbicon tube camera (BVP-30) and the recorder part (BVV-5)
- 4-channel audio
- Built-in LTC, VITC, user bit generator with genlock capability
- Audio/video confidence playback
- Phantom power supply
- Built-in loudspeaker
- Back space edit
- Auto centering
- Auto white balance with 3-position digital memory
- Automatic beam optimizer
- Wide dynamic range to accept excessive light
- Two line image enhancer
- Color framing out from multi connector
- Video level indicator

Supplied Accessories

- | | |
|---------------------------|--------------------------------------------|
| • VTR bracket | • Extension board |
| • 50-pin connector caps | • Extractor |
| • 4-pin connectors | • Chart for automatic centering adjustment |
| • Shoulder belt | • Operation and maintenance manual |
| • Screws M4 | • Microphone adaptor |
| • Tripod adaptor, bracket | |
- BVW-530** \$45,500.00

BVW-507 Betacam SP Camcorder

- Can be separated into two parts: the BVP-7 3-CCD Portable Color Camera and the BVV-5 Betacam Recorder
- 4-channel audio
- Built-in LTC, VITC, user bit generator with genlock capability
- Audio/video confidence playback
- Phantom power supply
- Built-in loudspeaker
- Backspace edit
- Eliminates problems of lag, burn-in, vibration and electric interference
- Variable electronic shutter ($\frac{1}{100}$, $\frac{1}{125}$, $\frac{1}{250}$, $\frac{1}{500}$, $\frac{1}{1000}$, $\frac{1}{2000}$ second shutter speeds)
- Dynamic contrast control (auto knee control) extends high light dynamic range by 600% enabling a clear picture in high contrast environments
- Automatic white/black balance system includes two white balance memories for each optical filter (4 positions)
- 2H image enhancer
- Shading compensator for lens extender automatically selected

**BVW-505****Supplied Accessories**

- | | |
|------------------------------|------------------------------------|
| • Shoulder belt | • Rain cover |
| • VCT-14 tripod adaptor | • Handle-hole cap |
| • Extension board, extractor | • Carrying handle |
| • Chest pad | • Operation and maintenance manual |
| • 50-pin connector cap | |
- BVW-507** \$34,000.00

BVW-505 Betacam SP Camcorder

- Can be separated into two parts: the BVP-5 3-CCD Portable Color Camera and the BVV-5 Betacam Recorder
- 550 lines horizontal resolution, 58dB S/N ratio
- f/5.6 at 2000 lux
- 4-channel audio (2 longitudinal, 2 AFM)
- Capable of simultaneous monochrome video playback in the viewfinder
- Genlock capability
- Dynamic contrast control allows 600% highlights
- Phantom power supply
- Built-in time code generator/reader
- Built-in loudspeaker and microphone
- Automatic iris control
- Automatic white/black balance (4 positions)
- 2H image enhancement
- Linear matrix
- Shading compensation for lens extender
- 1.5" viewfinder with horizontal slide
- Weighs 14.3 lbs.

BVW-503 Betacam SP Camcorder

- Can be separated into two parts: the BVP-3A $\frac{2}{3}$ " MF Saticon™ Color Camera and BVV-5 Betacam Recorder
- Accepts lenses with 6 and 12-pin connectors
- Auto centering
- Auto white balance with 3-position digital memory
- Automatic beam optimizer
- Wide dynamic range to accept excessive light
- Two line image enhancer
- Shading compensation with lens extender
- 4-channel audio
- Built-in LTC, VITC, user bit generator with genlock capability
- Audio/video confidence playback
- Phantom power supply
- Built-in loudspeaker
- Backspace edit

SONY CORP. OF AMERICA

Betacam Camcorder/Recorder

BVW-200 Betacam® SP Camcorder

- 3-chip 2/3" interline CCD pickup device
- Built-in Filters: 1: 3200°K, 2: 5600°K + 1/4ND; 3: 5600°K, 4: 5600°K + 1/16ND
- 58dB video S/N ratio
- 550 TV lines horizontal resolution
- Compact, lightweight (15 lbs., 3 oz.), and efficient (20W) with miniaturized tape transport and high density circuits in a one-piece VTR/camera system
- Automatic iris control with improved response speed
- Automatic white/black balance with dual white balance memory for each filter (4 positions)
- Dynamic contrast control (auto knee control) compresses highlight signals in high contrast environments
- Can use metal particle tape for the Superior Performance (SP) recording format or oxide tape for conventional Betacam format recording
- Monochrome viewfinder is selectable between viewing luminance or chrominance (CTDM) signal playback
- Recording review function rewinds tape 2-10 seconds, plays back last scene and stops at previous pause location
- Full function control (eject, play, rewind, FF, stop) are covered by safety lid and inhibited during recording mode
- Built-in time code generator/reader
- Time code slave lock function can slave or provide TC for other devices
- 8-digit LCD multiple display
- Detachable microphone is phantom powered and can be used for ambient audio or detached for interviews
- Two channels audio input with phantom powered microphone or line inputs, Dolby NR (noise reduction) on linear channels and two AFM audio channels simultaneous recording

BVW-200

- Built-in loudspeaker for monitoring individual or mixed audio channels and alarm tone
- Diagnostic system
- Record status, battery, 5-segment audio level, W/B balance and tape remaining indicators in viewfinder

Supplied Accessories

- Tripod adaptor
- Extension board
- Operation/maintenance manual
- Shoulder belt
- Rain cover

BVW-200 \$25,000.00

BVV-5 Betacam SP Recorder Unit

- Simultaneous playback of video and audio
- Can be operated as a combo camcorder when connected to BVP-3A/30/5 cameras, or as a portable recorder VTR when connected to an optional VA-5 VTR adaptor
- 4-channel audio
- Built-in LTC, VITC, user bit generator with genlock capability
- Audio/video confidence playback
- Phantom power supply
- Built-in loudspeaker
- 8-digit LCD display
- Back space edit
- 7 lbs., 3 oz.

Supplied Accessories

- VTR bracket
- 50-pin connector cap
- 4-pin connector
- Operation and maintenance manual
- Shoulder belt
- Screw M4

BVV-5 \$11,000.00

Optional Accessories

VA-5 VTR Adaptor

When attached to the BVV-5, the BVV-5 can be operated as a stand-alone recorder. Accepts composite or component signals via the 26-pin connector from the camera head \$2,200.00

VA-500 Playback Adaptor

When connected to the BVV-5 via a 20-pin connector, the BVV-5 can provide color playback, and it outputs either composite or VHF RF signals \$2,700.00

BVV-5
Shown with
optional VA-5

VA-500

SONY CORP. OF AMERICA*Betacam Recorder/Players***BVW-75 Betacam® SP Studio Editing Recorder/Player**

- Can be directly connected to other Betacam studio VTRs, BVE Series editors and BVH Series 1" VTRs via the RS-422 communication cable
- 36-pin parallel interface
- Dynamic tracking capability -1 +2
- Variable memory for DT editing
- 4-channel audio
- Capstan override $\pm 16\%$
- Time code reader/generator for LTC, VITC, U-bits
- Video/audio confidence
- Character display
- High speed picture search
- Two independent SC-H phase indicators
- Built-in TBC with remote control
- Color framing
- Simple audio mixing
- 66 lbs.

**BVW-75****Supplied Accessories**

- AC power cord
- Remote control cable RCC-5G (9-pin)
- 12-pin dubbing cable
- Extension board
- Operation and maintenance manual

BVW-75 \$35,900.00

BVW-70 Betacam SP Studio Recorder/Player

- Maximum playback time of over 90 minutes
- In addition to the two conventional longitudinal audio channels, two AFM audio channels are added, making a total of four channels available
- High speed picture search
- Built-in time code reader and time base corrector
- Built-in character generator and characters can be superimposed via Video Output 3
- Free from color framing as long as the recording component signals are fed directly from the component signal source
- RS-422 serial interface and 36-pin parallel interface
- Recording capability
- Built-in editing facility
- 225W power consumption
- Two independent SC-H phase indicators for composite input and output
- 66 lbs., 2 oz.; 5 rack units high

**BVW-70****Supplied Accessories**

- AC power cord
- RCC-5G remote control cable (9-pin)
- 12-pin dubbing cable
- Extension board
- Operation and maintenance manual

BVW-70 \$32,000.00

**BVW-65 Betacam SP Studio Player
With Dynamic Tracking (DT)**

- Maximum playback time of over 90 minutes
- In addition to the two conventional longitudinal audio channels, two AFM audio channels are added, making a total of four channels available
- High speed picture search
- Built-in time code reader and time base corrector
- Built-in character generator and characters can be superimposed via Video Output 3
- Free from color framing as long as the recording component signals are fed directly from the component signal source
- RS-422 serial interface and 36-pin parallel interface
- Dynamic motion control (DMC) playback which, when activated, will allow the BVW-65 to memorize the tape speed trajectory for noiseless playback picture within the Dynamic Tracking range of -1 to +2 times normal speed
- 175W power consumption
- 61 lbs., 11 oz.; 5 rack units high

**BVW-65****Supplied Accessories**

- AC power cord
- Remote control cable RCC-5G (9-pin)
- Extension board
- Operation and maintenance manual

BVW-65 \$26,500.00

SONY CORP. OF AMERICA**Betacam Recorder/Players****BVW-60 Betacam® SP Studio Player**

- Maximum playback time of over 90 minutes
- In addition to the two conventional longitudinal audio channels, two AFM audio channels are added, making a total of four channels available
- 160W power consumption
- High speed picture search
- Built-in time code reader and time base corrector
- Built-in character generator and characters can be superimposed via Video Output 3
- Free from color framing as long as the recording component signals are fed directly from the component signal source
- RS-422 serial interface and 36-pin parallel interface
- 59 lbs., 8 oz.; 5 rack units high

**BVW-60****Supplied Accessories**

- AC power cord
- Remote control cable RCC-5G (9-pin)
- Extension board
- Operation and maintenance manual

BVW-60 \$22,500.00**BVW-35 Betacam SP Portable Recorder/Player**

- Portable VTR with RS-422 interface based feeder capability
- 4-channel audio
- Built-in LTC, VITC, user bit generator and reader
- Frame accurate back space edit
- Feeder capability with RS-422 for field editing
- Audio/video confidence playback
- Phantom power supply
- Component and composite input/output
- Provision for TBC connection
- Built-in RF modulator
- Search mode
- 8-digit LCD display
- Weighs only 15 lbs.

**BVW-35****Supplied Accessories**

- Antenna selector switch
- Coaxial cable with F-type connector (NTSC)
- Coaxial cable with standard aerial connector (PAL)
- Extension board
- Soft carrying case
- Operation and maintenance manual

BVW-35 \$14,000.00**BVW-22 Betacam SP Player**

- Simply designed control panel, user-friendly
- Plays back Betacam SP (metal particle) and conventional Betacam (oxide) videotapes
- Plays back S-size 5/10/20/30 and L-size 60/90 minute videotapes
- Front-loading function convenient for limited spaces
- Four audio channels feature two linear channels with Dolby Type-C NR (Noise Reduction) and two AFM channels
- Dolby NR is automatically switched on when a metal tape is played and switchable when an oxide tape is played
- RM-770 wired/wireless remote control, supplied, features playback, FF, rewind, 3.5X search (forward/reverse), superimpose, functions and can be used in a wireless configuration or wired with a 5m cable, supplied
- Recognizable monochrome pictures at 3.5X speed in search mode with instant lockup
- Built-in RF modulator allows monitoring audio/video on ordinary TV receiver tuned to CH3 or CH4
- Superimpose function superimposes time code, CTL and user bit data on the monitor through the video, RF or monitor outputs, selectable on/off
- LED display shows TC, CTL, user bit, error messages or adjustment modes
- Compact and rackmountable (4 units high)

**BVW-22****Supplied Accessories**

- Remote control unit including remote control cable and battery (RM-770)
- Antenna selector
- Coaxial cable with F-type connector
- Operation and maintenance manual

BVW-22 \$4,950.00

SONY CORP. OF AMERICA

*Studio/Field Color Camera/
Accessories*

BVP-360 Studio/Field Camera

- For high quality field production and studio systems
- f/1.2 optical system gives superior sensitivity and depth of field
- Comprehensive auto alignment system ensures the highest quality picture
- 2/3" MS Plumbicon or MS Saticon™ tubes give high performance surpassing conventional larger tubes
- High resolution — 700 TV lines at center, 600 TV lines in corners
- Digital registration compensation ensures precise registration
- Superior S/N ratio of 60dB
- Streamlined mechanical design with compact and lightweight camera head for great maneuverability
- State-of-the-art triax transmission system
- RGB full band transmission for multicore system
- BVF-7000Q/7000QM 7" color viewfinder
- BVF-70/70CE 7" B/W viewfinder
- Convenient filing facility — setup files, scene files and lens files

Specifications

Camera Head

Pickup Tube System: 2/3" MS Plumbicon or MS Saticon 3-tube system
Optical System: f/1.2 prism
Filter Wheels: Color filters: A—Cross; B—3200°K; C—4300°K; D—6300°K; ND Filters: 0—cap; 1—clear; 2—1/4; 3—1/16

Sensitivity (at 90% Reflectance): 2000 lux with f/4.5 typical (MF "PbO"), 2000 lux with f/4 typical (MF "Saticon")

Minimum Subject Illumination: Approx. 10 lux f/1.2 + 24dB gain (MS "PbO"), Approx. 12 lux f/1.2 + 24dB gain (MS "Saticon")

S/N Ratio: 60dB (NTSC), typical
Resolution: 700 TV lines at center
Registration Error: Zone 1: 0.05%; Zone 2: 0.1%; Zone 3: 0.15%
Geometric Distortion: 1% (all zones)
Tracker: Intercom use

Incom/PGM Audio (2-ch): Double headset jack
Weight: Approx. 64 lbs.

BVP-360/TP\$62,300.00
 BVP-360/MP56,000.00

MSU-360 Master Set-up Unit

- A maximum of 8 BVP-360 cameras can be set up with one MSU-360. Together with the expansion unit, 36 cameras can be controlled
 - RS-232C external computer interface port
 - Two types of control panels, the OCU-3610 (drawer type) and OCU-3620 (console type) are available
 - Manual digital registration control
 - Self-diagnosis facility
 - Cable compensation facility
- MSU-360\$9,000.00

CCU-360 Camera Control Unit

- Self contained power supply block makes utility AC power available for the camera head
 - RGB chroma key outputs with triax/multicore cable
 - SMPTE/EIA color bars
 - 2-wire, 4-wire, or RTS intercom system is provided
 - Detachable CCU control panel can be used as a remote control panel
 - Fully system-designed inputs/outputs facility is provided
 - Control panel, optional
- CCU-360T\$19,000.00
 CCU-360M1B,000.00

SONY CORP. OF AMERICA

*Portable Color Video Camera/
Accessories*

BVP-350 3-Tube Portable Color Video Camera

- Ergonomically designed for operator ease and comfort and versatile shooting applications • f/1.2 optical prism block system matches the sensitivity and depth of field or larger format cameras • MS Plumbicon™ pickup tubes, high field operation and dynamic beam focusing techniques result in high resolution of 700 TV lines • Minimum illumination as low as 10 lux (at maximum gain) • Internal switch adds an additional 6dB when the camera is switched locally to 18dB for a total of 24dB gain • Employment of MS Plumbicon tubes, FET, pre-amplifier technology, an S/N ratio of 60dB (luminance) • High dynamic range allows acceptance of up to 600% of normal video level • Automatic digital registration compensation provides extremely precise and quick registration adjustment • Two optical filter wheels allow independent neutral density (ND) and color temperature adjustment • Viewfinder can be rotated 360° as well as adjusted horizontally, vertically, and laterally to enable the camera to be comfortably employed in complex handheld shooting sequences • Viewfinder has multiple status messages and alarms

Supplied Accessories

- Carrying case • Rain cover • VCT-13 tripod adaptor • Board extractor • EX-38, EX-90 extension boards • 6-pin connector • Shoulder belt • CAC-11A microphone adaptor • Operation and maintenance manual

Specifications

Pickup Tube: 2/3" MS Plumbicon
System: RGB 3-tube system
Color Filters: A: cross, B: 3200°K, C: 4300°K, D: 6300°K
ND Filters: 0: cap, 1: clear, 2: 1/4, 3: 1/16
Lens Mount: Bayonet mount
Sensitivity: 2000 lux with f/4.5 at 90% reflectance, typical (MS "PbO")
Illumination: Approx. 10 lux (f/1.2 lens, + 24dB gain)
Geometric Distortion: 1% (all zones)
Power Requirements: 12VDC (10.5V to 17V), 24W
Operating Temperature: -4°F to 122°F
Weight: 13 lbs., 6 oz.
Viewfinder: 1.5" monochrome picture tube; Tally; peaking switches: 500 TV lines

BVP-350\$51,400.00

CCU-355 Camera Control Unit

- Designed for use with the BVP-350 Color Camera via triax cables
- Remote operation of up to 1800 meters with 14.5mmØ triax cables
- Will accept Y/R-Y/B-Y signals. RGB or Y/R-Y/B-Y output is selectable with the built-in encoder
- Directly interfaces with the MSU-360 and the OCU-3610/3620 to allow the BVP-350 to be integrated into a multiple BVF-360 camera system
- Any of the RCF-3600 series of remote control panels can be directly interfaced with the CCU-355 via serial digital control
- Full communication facility including talkback and program audio feeds to the camera, and camera reverse talkback to the CCU
- Camera, CCU call, red and green tally circuits are also included
- Compact, half a 19" rack size

Supplied Accessories

- Power cable • Tally number label • 4-pin connector for waveform monitor • Operation and maintenance manual

CCU-355\$14,000.00

CCU-350 Camera Control Unit

- Combines a high performance system interface and flexible remote video control with portability and low power consumption to provide dual purpose operation with either the BVP-350 or BVP-50 cameras
- The encoder is incorporated into the CCU to provide RGB or

CCU-350

CCU-355

- Y/R-Y/B-Y output selectable with an internal switch, along with composite output
- Directly interfaces with the MSU-360 and OCU-3610/3620 to allow the integration of the BVP-350 or BVP-50 portable cameras into a multiple BVP-360 camera system
- Any of the RCF-3600 series of video panels directly interface via serial digital control with the CCU-350, thus allowing a flexible choice of operational control
- Interfacing capability with BVP-50 series cameras with the CA-50 camera adaptor, thus offering precise adjustment of CCD cameras for field production applications
- Remote operation up to 300 meters
- 19" rackmountable with the optional RMM-301 rackmount unit (half rack size wide)
- Built-in genlock
- Full communication facility including talkback and program audio feeds to the camera, plus camera reverse talkback to the CCU
- Camera/CCU call, red and green tally circuits

Supplied Accessories

- Power cable • PCB extension board • Tally number label • Operation and maintenance manual

CCU-350\$10,500.00

SONY CORP. OF AMERICA

Portable Color Video Cameras

BVP-50 3-CCD Portable Color Video Camera

- 550 TV lines horizontal resolution • f/5.6 sensitivity at 2000 lux
- No lag or image burn-in • No vertical smear due to Frame Interline Transfer (FIT) CCD • Rejects interference from strong electric or magnetic fields • High precision CCD image geometry eliminates registration adjustments and results in 0.05% registration error in all zones
- Electronic shutter speeds of 1/100, 1/125, 1/175, 1/250, 1/500, 1/1000 and 1/2000 second enables capture of clear images of high speed objects
- Compact, lightweight (7 lbs., 7 oz.) and efficient (11.5W) • Dynamic contrast control (auto knee control), switchable, extends dynamic range to 600% resulting in crisp pictures even in high contrast environments • Automatic iris control • Automatic white/black balance with dual white balance memories for each filter position (4) • Multiple indicators in viewfinder including filter indicator, zebra pattern (video level), audio level and low battery • Can be interfaced with 1", U-Matic® and Betacam™ portable VTRs and can be docked to Betacam VTRs to configure a camcorder for ENG/EFP use

Supplied Accessories

- VCT-14 Tripod adaptor • Extension board • Extractor • Chest pad
- 50-pin connector cap • Rain cover • Cap for handle hole • Carrying handle • Operation and maintenance manual

BVP-50 \$25,500.00

BVP-50

BVP-7

BVP-7 3-CCD Portable Color Camera

- High resolution CCD for 700 TV lines resolution • No lag or burn-in, impervious to vibration and shock and not affected by magnetic or electric interference • Free from registration adjustments (0.05% registration in all zones) • Variable electronic shutter (1/100, 1/125, 1/250, 1/500, 1/1000, 1/2000 second shutter speeds) captures clear images of high speed objects • Dynamic contrast control (auto knee control) extends high light dynamic range by 600% enabling a clear picture in high contrast environments (switchable) • CCD structure results in reduced vertical smear when handling severe highlights • Automatic W/B balance system includes two white balance memories for each optical filter (4 positions) • Viewfinder features high resolution CRT (550 lines) with quick start-up (1.5 sec.). Other features include video level, audio level (CH1), gain, filter position in addition to other indicators, vibration-resistance, sharp-directional microphone and two direction position adjustment • 2H image enhancer produces crisp pictures • Linear matrix features highly faithful color reproduction shading compensator for lens extender automatically selected • Can be coupled with a Betacam™ VTR for a one-piece camcorder or connected to various 1", Betacam or U-Matic® VTRs for standard ENG or production applications • CA-3A or CA-50 camera adaptors allow connection to a variety of VTRs, video systems (optional)

Supplied Accessories

- VCT-14 tripod adaptor • Extension board • Extractor • Chest pad
- 5-pin connector cap • Rain cover • Handle-hole cap • Carrying handle • Operation and maintenance manual

BVP-7 \$23,000.00

BVP-5

BVP-3A/30

BVP-5 3-Chip CCD Portable Color Camera

- 550 lines horizontal resolution • High quality CCD pickup device
- High sensitivity: f/5.6 (NTSC) • Minimal lag and high resistance to image burn-in • Impervious to vibration and shock • Minimum effects from electric/magnetic fields • Free from registration adjustment
- Compact and lightweight: super maneuverability (only 7 lbs., 1 oz. with VF) • Dynamic contrast control ensures wide dynamic range
- Automatic iris control • Automatic white/black balance • 2H image enhancement • Viewfinder indications for warning/confirmation
- 1.5" viewfinder with horizontal slide mechanism • Color framing out from multi-connector • Video level indicator

Supplied Accessories

- Tripod adaptor • Extension board • Extractor • 50-pin cap • Rain cover • Cap for handle hole • Carrying handle

BVP-5 \$18,000.00

BVP-3A/30 3-Tube Portable Color Video Cameras

- BVP-3A: Three 2/3" MS Saticon™ tubes • BVP-30: Three 2/3" Diode Gun Plumbicon™ tubes • 650-line resolution at center, improved corner resolution • S/N: 59dB • Auto white balance with 3-position digital memory • Auto centering • Automatic beam optimizer • Wide dynamic range to accept excessive light • Shading compensation with lens extender • Two line image enhancer • Genlock facility with CA-3 or CA-30 camera adaptors, optional • CCU-300 interface with CA-30 camera adaptor, optional • Accepts lenses with 6 and 12 pin connectors, optional • Color framing out from multi connector • Video level indicator

Supplied Accessories

- Tripod adaptor • Extractor • Tripod bracket • Chart for automatic centering adjustment • Extension board • Operation and maintenance manual • Microphone adaptor

BVP-3A \$25,650.00

BVP-30 \$34,500.00

BVM-1912

BVM-1912 Automatic Set-up Color Monitor

- Auto convergence and geometry adjustment • Auto setup capability (with the optional BKM-2053 probe) • Optional plug-in type decoder boards are available for viewing other TV standard systems • Component (Y, R-Y, B-Y) and RGB inputs available • Optional component (Y, R-Y, B-Y) and R, G, and B outputs are available with the BKM-1440 • Stabilized color temperature is obtained by employing a newly developed beam current feedback • A picture setup switch for accurate incoming video level alignment • Up to 6dB of aperture correction at 4.5MHz and 6.5MHz, selectable • Built-in cross hatch and white signal generator (100 IRE) for easy monitor alignment • Split screen (upper half: color mode; lower half: monochrome mode) • VITC display (with optional BKM-1460) • Safe area display (with optional BKM-1470) • With the optional BKM-1480, the black level signal generator is available for easy and precise adjustment of black level settings of the monitors • Blue only mode with monochrome display for noise component evaluation • A lockable pull-out drawer gives control access • Comb filter • Fast/Normal/Slow AFC mode switch • Over drive protection protects against picture tube damage • Provided with D-sub 9-pin RS-422 interface for future available remote control unit • 19" rackmountable with optional BKM-2000

Supplied Accessories

- BKM-1410 NTSC decoder • BKM-1411 NTSC comb filter • BKM-2056 auto setup adaptor

BVM-1912 \$10,000.00

BVM-1910

BVM-1910 19" Auto-Setup Color Monitor

- Auto setup capability (optional BKM-2056) • By using optional decoder boards (plug-in type), a maximum of 3 TV standard systems can be selected in the drawer • Component (Y, R-Y, B-Y) and RGB input facilities are available • Stabilized color temperature • Optional component (Y, R-Y, B-Y) and R, G, and B output facilities are available with the BKM-1440 • Split screen (upper half: color; lower half: monochrome) for precise picture confirmation • VITC display facility (with optional BKM-1460) • Safe Area Display facility (with optional BKM-1470) • Pulse cross facility is provided to check the horizontal and vertical syncs simultaneously • Built-in cross hatch and white signal generator (100 IRE) • With the optional BKM-1480, the black level signal generator is available for precise adjustment of black level settings • Blue only mode with monochrome display to evaluate noise components precisely • A lockable pull-out drawer gives access to convergence, color balance, level adjustment and other controls • Over Drive Protection circuit protects against picture tube damage • Super Fine pitch CRT assures a center resolution of 900 TV lines at 30fL • 19" rackmountable with the optional BKM-2000 • Precise convergence; convergence errors are less than 0.4mm at the center and 0.7mm at the edges

Supplied Accessories

- BKM-1410 NTSC decoder board • BKM-1411 NTSC comb filter adaptor • AC power cord • Extension board • 10-pin connector • Tally number plates • Operation and maintenance manual

BVM-1910 \$7,400.00

BVM-1310

BVM-1310 13" Color Monitor

- 700 TV lines center resolution at 40fL • Auto setup capability (option) • 3 TV standard systems out of the 4 TV standard NTSC, PAL, SECAM, or PAL-M can be selected using the optional decoder boards (plug-in type) • Stabilized color temperature obtained by a beam control circuit • Picture setup switch for accurate alignment • Up to 6dB aperture correction at 4.5MHz and 6.5MHz selectable • Built-in cross hatch and white signal generator (100 IRE) • Built-in component (Y, R-Y, B-Y) and RGB input facility with optional output facility • Pulse cross function for simultaneous checking of horizontal and vertical sync • Provides US standard phosphors • Over drive protection circuit protects picture tube from damage • Raster size stability within 1% from 0 to 40fL • Comb filter • 19" rackmountable with optional kit • Split screen (vertical only) for precise picture confirmation • VITC display facility (option) • Blue only mode with B/W display to evaluate noise component precisely • Two lockable pull-out drawers give access to convergence, color balance, level adjustment and other controls • AFC switch provides 3 modes [Fast/Normal/Slow] • Auto/manual degaussing

Supplied Accessories

- AC power cord • 10-pin connector • Screwdriver • Fuses and tally number labels • Operation and maintenance manual

BVM-1310 \$4,650.00

BVM-8021

BVM-8021 8" Portable Color Monitor

- Suitable for ENG/EFP applications • High resolution of 400 TV lines at center (composite input) • Operates with one or two NP-1A battery packs, a 12V car battery, or an AC outlet • BP-90 capability with optional bracket VLC-100 • Easy connection to TV tuner unit TU-1110 series using the tuner connector • Spring loaded control knob prevents control damage • Normal scan/under scan select switch • Blue only mode switch • H/V delay function displays horizontal and vertical sync signals • Input A or input B (BNC or tuner) selectable • Built-in charger for battery pack NP-1A

Supplied Accessories

- AC power cord • Hood • Operation and maintenance manual

BVM-8021 \$1,100.00

SONY CORP. OF AMERICA

Editing Control System

BVE-9000 Editing Control System

- Can be configured in its basic form to control 4 VTRs, a video switcher, and an audio mixer, and then be expanded to suit customer requirements
- Operator communicates with the system through dialogues with the CRT which keeps the operator informed of the current editing status
- Sony VTRs, such as the BVH Series 1", Betacam, BVU Series U-Matic and Component Digital VTRs, can be simultaneously controlled
- A maximum of 27 Sony VTRs, equipped with RS-422 interfaces, a video switcher and an audio mixer can be interfaced with the BVE-9000 system
- Standard RS-232 port dedicated for printer use
- Two 3.5" floppy disk drives provided as standard
- Machine control ranges from manual control (fast forward, rewind, shuttle and jog) to automatic control (preroll synchronization and audio recording)
- Dynamic Motion Control (DMC) is standard
- Provides full control of the main functions of the switcher in use
- Editing can be executed on selectable time references — VITC, LTC or CTL can be used individually or in any combination
- Synchronization is selectable from seven grades in order to execute editing under various circumstances
- Up to six player VTRs, two auxiliary inputs and black signals can be utilized as sources to perform assemble editing or insert editing by using Video, Audio 1, 2, 3, 4 in any combination
- Memory capacity provides a total of 512 events as standard and is optionally expandable to 999 events. Additional comments can be added to the EDL data and stored in the memory
- Time code, VTR operation status and the editing process can be superimposed on the sub-picture monitor or the main picture monitor to enable operators to remain informed of the BVE-9000 operations
- Provides powerful self-diagnostics on a block basis, and board basis
- Editing data display is available in either color or monochrome

Specifications

CPU:	16-bit microprocessor, common bus control, operational program in 3.5" floppy disk
Operation:	Data and source control by keyboard with VDU of edit data and source status
Keyboard:	58 keys in typewriter order, color coded; 24 keys for basic functions; 12 keys for system defined and user programmable function keys; 17 self lighted keys for source and monitor select and search dial mode keys; 18 keys for extra functions; Bidirex search control, shuttle, jog, DMC audible alarm
CRT Display:	B/W: 6 x 7 dot matrix x 80 characters x 29 lines, 640 x 261 graphics; Color: 6 x 7 dot matrix x 80 characters x 29 lines, 16 colors, 640 x 261 graphics, 16 colors
Edit Reference:	CTL, LTC (SMPTE/EBU), VITC (SMPTE/EBU)
Edit Accuracy:	±0 frame with time code operation (Normal play mode)
EDL I/O:	Standard 3.5" micro floppy disk, optional 8" floppy disk, printer, TTY, microcomputer, PTP/R
VTR Interface:	Model: BVH, BVW, BVU, DVR-1000/DVPC-1000, and HDV series VTRs. Maximum of 27 VTRs connectable. Maximum of 14 VTRs (6 players and 8 recorders) controllable
Video Switcher Interface:	Grass Valley Group 100/300/1680 series
Audio Mixer Interface:	MXP-29/MXP-2000 series
GPI:	3 standard ports + 32 optional output ports + 8 optional input ports. Programmable pulse output
RS-232C Port:	One standard port (printer) + 4 optional ports. Programmable baud rate and bit
BVE-9000	\$ 15,500.00

SONY CORP. OF AMERICA

Viewfinders/Accessories

BVF-7000Q 7" Color Viewfinder

- Specially designed for use with BVP-360
- Various camera indications provided in viewfinder
- Wide range of mechanical positioning
- Dimensions and camera interface compatible with BVF-70 7" viewfinder
- High resolution from Super Fine Pitch Trinitron (0.2mm center, 0.25mm side)
- Underscan display
- RGB inputs from camera give high quality color monitoring
- Composite video input for return video display

BVF-7000Q \$8,500.00

BVF-70 7" B/W Viewfinder

- Specially designed for use with the BVP-360—for direct camera installation
- High resolution, 800 TV lines at center
- Various camera indications provided in viewfinder
- Wide range of mechanical positioning

BVF-70 \$4,950.00

BVF-50 5" B/W Viewfinder

- 600 TV lines resolution at center
- Adjustable center position marker with on/off switch
- Panning and tilting facility
- For all BVP series portable cameras

BVF-50 \$2,250.00

CCU-300L Camera Control Unit

- AC/DC 2-way power operation
- 600m max. power operation
- Genlock function
- Multi and mixing monitor
- Double jacks for headset

CCU-300L \$9,000.00

AC-500/500CE AC Adaptor

Supplies DC power to Sony BV-series equipment; genlock functions by means of a VBS signal; AC power cord and DC cord 2m (1-551-258-00) with XLR-4P supplied; Power Requirements: 100/120/220/240VAC adjustable, 50/60Hz; Power Consumption: 120W max.; Input/Output Terminals: Camera connector (14-pin); Video out connector (BNC type) NTSC 1V p-p, 75 ohms; Mike out connector (equivalent to XLR-3-31), Reference Output: -60dBm 600 ohms, balanced; DC out connector (equivalent to XLR-4-31), + 12.3V, 7A; Ext. VBS input connector (BNC type), VBS (1V p-p) or BS, 75 ohms; 9 lbs., 8 oz.; 3.6"H x 8.5"W x 12.9"D \$590.00

BC-210/210CE Battery Charger For BP-90

Battery charger for BP-90 battery packs; up to four BP-90 batteries; AC power cord supplied; Power Requirements: 100/120/220/240VAC adjustable, 50/60Hz; Power Consumption: 70W; Output Terminals: Battery jacks (for charging x 4) 2.0A (typical); Charging Time: Approx. 2 hrs. per BP-90; 11 lbs., 7 oz.; 3.6"H x 8.5"W x 12.4"D . . . \$890.00

BC-1WA Battery Charger For NP-1A

The BC-1WA is a battery charger for the NP-1A battery pack used in the Betacam; Up to four NP-1A batteries can be charged sequentially; Power Requirements: 120VAC ± 10%, 50/60Hz (for USA and Canada), 220 to 240VAC ± 10%, 50/60Hz (for Europe and UK); Power Consumption: 58W; Charging Time: Approx. 1 hr. (max. 2 hrs.); Rechargeable Battery: NP-1A only (per NP-1A); 5 lbs., 5 oz.; 3.1"H x 4.2"W x 10.3"D \$460.00

DC-100 Battery Case For NP-1A

Battery case for one NP-1A battery; specially designed for the BVV-1A Betacam recorder; Metal fitting x 2, Screw (B 3 x 6) x 2, Screw (B 4 x 6) x 2 and Lace supplied; 10 oz.; 8"H x 3.3"W x 2"D \$265.00

BVF-7000Q

BVF-70

BVF-50

CCU-300L

AC-500/500CE

BC-210/210CE

DC-100

RMM-100

BP-90

DC-300 Battery Case For BP-90

BP-90 battery case (one BP-90) for BVP-350 camera and CA-50/CA-3A/CA-30/CA-300 equipped cameras; 1 lb., 3 oz.; 7.3"H x 6.4"W x 1.9"D \$595.00

DC-310 Battery Case For NP-1A

Battery case for BVP series 3-tube cameras and CA-3/CA-30/CA-300 equipped cameras; Up to two NP-1 batteries can be carried; Holder x 1 and Screws x 1 set supplied; 1 lb., 6 oz.; 8"H x 3.5"W x 3.1"D \$550.00

RMM-100 Rackmount Kit

Can be rackmounted on a standard 19" rack or system console. For all Studio Betacam VTRs \$325.00

RMM-301 Rackmount Kit

The DCU-300 CCU adaptor and the CCU-300 can be rackmounted side by side in a standard EIA rack; 10 lbs., 6 oz.; 5.2"H x 19"W x 13"D \$175.00

BP-90 Rechargeable Battery Pack

Type of Battery: NiCad rechargeable; Voltage: 12V; Current Capacity: 3.5AH; 3 lbs., 12 oz.; 6.9"H x 4.8"W x 15.1"D \$365.00

NP-1A Rechargeable Battery Pack

Type of Battery: NiCad rechargeable; Voltage: 12V; Current Capacity: 1.5AH; 1 lb., 8 oz.; 1"H x 2.8"W x 7.3"D \$85.00

SONY CORP. OF AMERICA

Audio Recorder/Reproducers

**APR-5000 Series
Analog Audio Recorder/Reproducers**

Common Features

- Transport built on a rigid cast chassis
- 16-bit microprocessor control
- Precision tape counter with both location and go-to displays
- Forward reverse tape shuttling and wind speed control through Manual Velocity Control (MVC)
- ± 50% vari-speed range
- Automatic reel size sensing
- Ceramic capstan shaft
- 400kHz bias frequency for low modulation noise, low distortion and reduced "edit squeal"
- Spot erase function sensing
- Microprocessor-managed audio alignments with non-volatile parameter memory
- Instant recall of "personality" presets upon plug-in of alternative head block units
- Standard monitor amplifier and speaker
- Standard headphone output
- Integral editing block
- Quick-change, alignment stable head block units
- Optional stand (SU-14) allows for 15° angle positioning
- 102 lbs., 110 lbs. with SU-14 stand
- 16 1/4" H x 19" W x 19 7/8" D, with SU-14 stand 43" H x 22 1/8" W x 20 1/2" D

APR-5002 Audio Recorder

Specifications

Frequency

Response: Record/Reproduce — 30ips, AES: 50Hz-28kHz +0.75/-3dB; 15ips, NAB: 30Hz-24kHz +0.75/-2dB; 7.5ips, NAB: 30Hz-20kHz +0.75/-1.5dB; **Record/Sync** — 30ips, AES: 50Hz-20kHz +0.75/-3dB; 15ips, NAB: 30Hz-16kHz +0.75/-2dB; 7.5ips, NAB: 30Hz-8kHz +0.75/-1dB

Total Harmonic

Distortion: 30ips, AES < 0.025%, 15ips, NAB < 0.035%, 7.5ips, NAB < 0.055%

Bias and Erase

Frequency: Bias — (400kHz), Erase — (100kHz)

APR-5002 TBA

APR-5002H Audio Recorder

All Common Features Plus

- 1/2" tape width
- 2 channels
- Master recorder

Specifications

Frequency

Response: Record/Reproduce — 30ips, AES: 40Hz-25kHz +0.75/-3dB; 15ips, NAB: 25Hz-24kHz +0.75/-2dB; 7.5ips, NAB: 25Hz-22kHz +0.75/-2dB; **Record/Sync** — 30ips, AES: 40Hz-25kHz +0.75/-3dB; 15ips, NAB: 20Hz-20kHz +0.75/-2dB; 7.5ips, NAB: 20Hz-10kHz +0.75/-2dB

Frequency: Bias — (400kHz), Erase — (100kHz)

APR-5002H TBA

APR-5002W "Wide Profile" Audio Recorder

All Common Features Plus

- Wide profile headstack (amorphous material heads)
- Extended low frequency response with uniformity and extended head life

APR-5002W TBA

APR-5003 "Center Track" Audio Recorder

All Common Features Plus

- IEC center track for time code
- Time code generator/reader
- Chase-lock synchronizer
- Dynamic sync offset adjustment

APR-5003 TBA

SONY CORP. OF AMERICA

Digital Audio Recorder

**PCM-3402 2-Channel DASH
(Digital Audio Stationary Head) Recorder**

- Electronic editing facility with 16-bit memory
- Digital fader and digital balance trim
- Programmable time code functions
- Synchronization with a video sync signal
- Versatile inputs/outputs, multiple digital formats
- Time code generator/reader
- Extended synchronization facilities
- Time code auto-conversion capability
- Two types of remote interfaces
- Sync recording (punch in/punch out) capability
- Flexible digital level meter
- 16M bit digital memory
- Shuttle (manual velocity control) facility
- Variable speed $\pm 12.5\%$
- Reduced power consumption
- With supplied stand, 169 lbs., 13 oz.

Specifications

Recording Format:	DASH-S/TWIN-DASH selectable
Number of Channels:	Digital audio x2, time code and cue x2
Tape Speed:	Low: 19.05cm/sec. (7.5 ips, at fs=48kHz) or 17.50cm/sec. (6.89 ips, at fs=44.1kHz); High: 38.1cm/sec. (15 ips, at fs=48kHz) or 35.00cm/sec. (13.78 ips, at fs=44.1kHz)
Recording Time:	Low: 3 hours max.; High: 1.5 hours max.
Rise Time:	0.7 sec.
FF/Rew. Time:	Approx. 3.5 minutes (10.5" reel)
Synchronization Accuracy:	Within 0.4msec.
Editing Accuracy:	Within 1msec (electronic editing)
Sampling Frequency:	48kHz/44.1kHz/44.056kHz (selectable)
Quantization:	16-bit linear
Dynamic Range:	>90dB (emphasis on)
Frequency Response:	20 ~ 20,000Hz
Total Harmonic Distortion:	<0.05% at 1kHz
Inter-Channel Crosstalk:	>80dB at 8kHz (max. input level)
Digital Level Control:	+12dB ~ - ∞
Cross-fade:	0 ~ 10.7msec. (16 steps, punch in/out edit); 0 ~ ∞ 21.3msec. (16 steps, splice edit)
Emphasis:	50 μ sec./15 μ sec.
Inputs/Outputs	
Line In:	(x2) — +4dBs (+24dBs max.), adjustable range: -2dB ~ +10dB, 10K ohms, transformerless, balanced, XLR-3-31
Line Out:	(x2) — +4dBs (+24dBs max.) 600 ohm load, adjustable range: -10dB ~ +2dB, <50 ohms, transformerless, balanced, XLR-3-32
Aux. Track In:	(x2) — +4dBs (+14dBs max.), 10K ohms, transformerless, balanced, XLR-3-31
Aux. Track Out:	(x2) — +4dBs (+14dBs max.) 600 ohm load, <50 ohms, transformerless, balanced XLR-3-32
Digital Interface In:	(x2) — AES/EBU and SDIF-2 (Sony Digital Interface Format) selectable, AES/EBU: RS422, XLR-3-31, SDIF-2: TTL compatible, BNC

**Digital Interface Out:**

(x2) — AES/EBU and SDIF-2 (Sony Digital Interface Format) selectable, AES/EBU, RS422, XLR-3-32, SDIF-2: TTL compatible, BNC

Composite Sync In:

(x1) — NTSC/PAL/SECAM, >0.3V p-p, 75 ohms, BNC

**Time Code In:
Time Code Out:**

(x1)
(x1) — SMPTE/EBU format, 200 ohms, balanced, XLR-3-32

Serial Remote Control In/Out:

(x1) — Sony 9-pin remote, RS-422, D-sub-9s

Supplied Accessories

- Stand
- 10.5" empty reel
- Power cord
- Extension board
- 9-pin cable
- Reel crampers

PCM-3402TBA

SONY CORP. OF AMERICA

Digital Audio Recorders

PCM-3324 Digital Audio Multi-Channel Recorder

• 24 channel digital audio recorder complying with "Digital Audio Stationary Head" (DASH) format • One full hour of high fidelity recording with 1/2" wide, 14" reel tape • Switchable 48kHz and 44.1kHz sampling frequencies • Bi-directional manual search to any desired point on the tape using shuttle dial • Auto locate of any cue point • Electronic punch in/out with crossfade variable in 16 steps: Splice editing also possible • Four memories each for cue points, channel setups, and channel groups • Precision-engineered heads for exceptional durability, recording density and accuracy • Tension servo controlled heavy-duty tape transport with BSL capstan motor • Variable pitch control ($\pm 12.5\%$) and half-tone adjustment • External synchronization and external servo control possible • 16 segment LED peak level meter for each channel • 485 lbs., 1.6 oz. • 39 1/2" H x 32 3/4" W x 29 1/4" D

Specifications

Number of Tracks: 28 tracks, 24 PCM tracks, CTL (control) track, EXT data track, and 2 tracks for analog audio signals

Tape Speed: 66.5cm/s (sampling rate at 44.1kHz); 72.38cm/s (sampling rate at 48kHz)

Tape: Digital audio master tape, D-1/2-2920 (65 minutes at 44.1kHz), D-1/2-1460 (33 minutes at 44.1kHz)

Sampling Rate: 44.1kHz and 48kHz (switchable)

Quantization: 16 bit linear/channel

S/Noise Ratio: > 90dB (Emphasis On at 1kHz)

Frequency Response: 20Hz to 20kHz, +0.5dB to -1.0dB

Power Supply: 100-120VAC model; 220-240VAC model, 50/60Hz approx. 2kVA

Total Harmonic Distortion: < 0.05%

Emphasis: On/Off switchable

PCM-3324

Wow and Flutter: Undetectable

Rec and Play Time: 65 minutes (14" reels at 44.1kHz); 60 minutes (14" reels at 48kHz)

Rewind and Fast Forward Time: 4 3/4 minutes (14" reels); 2 3/4 minutes (10.5" reels)

Channel Coding: HDM-1 (High Density Modulation)

Error Correcting: CRCC and Cross Interleave Code

Editing: Sync recording, punch in/out and splice free. (Cross fading at every editing point)

PCM-3324TBA

PCM-2500 Digital Audio Recorder

• Sampling frequencies of 44.1kHz or 48.0kHz are selectable for analog input, depending on which best suits your requirements • The 32kHz, 44.1kHz*, and 48.0kHz are ready for the digital input • Records the "start ID" in the sub-code area during both recording and playback and its timing is available • Digital I/O's correspond to AES/EBU, SDIF-2, and S/P DIF, to allow easy interfacing with other digital equipment • Two box construction consisting of the recorder and the interface unit which has the professional analog audio digital I/O's • Built-in error indicator, indicates the error conditions by 2 types of LEDs • Emphasis on/off • Wireless/wired remote control capability • The cue/review function makes finding specific points fast and easy • Master safe function, which helps prevent mis-erasure, is available. With this function, the recording is inhibited

*The 44.1kHz sampling frequency cannot be used through the S/P DIF

Specifications

Error Correction: Double-encoded RSC

Tape Speed: 8.15mm/sec. at $f_s = 48, 44.1, 32$ kHz; 12.23mm/sec. at $f_s = 44.1$ kHz (only playback for wide track mode)

Recording Time: Max. 120 min. (13.0 μ m tape, Sony DT-120)

Rewind and Fast Forward Time: Approx. 1 min. (with Sony DT-120)

Start ID Timing Accuracy: 0.3 sec.

Tape: Metal particle

Sampling Frequency: 32kHz (digital input only); 44.1kHz, 48kHz

Quantization: 16-bit linear

Dynamic Range: > 90dB (emphasis on at 1kHz)

Frequency Response: 2-22,000Hz at $f_s = 48$ kHz; 2-20,000Hz at $f_s = 44.1$ kHz

Total Harmonic Distortion: < 0.005% at +4dBs

PCM-2500

Wow and Flutter: Limited only by crystal oscillation accuracy

Crosstalk: > 85dB at 1kHz

Emphasis: On/off switchable 15 μ sec./50 μ sec.

Input/Output: Line In: Ref. level +4dBs +8/-10dB, max. 24dBs, 44K ohms, balanced, transformerless, XLR-3-31 x 2; Line Out: Ref. level +4dBs +8/-10dB, max. 24dBs, 100 ohms, balanced, transformerless, 600 ohm load permissible, XLR-3-32 x 2; Digital Interface I/O — AES/EBU: RS-422, XLR-3-31 (in), XLR-3-32 (out); SDIF-2: TTL compatible, BNC; S/P DIF: 0.5V p-p, phono; Word Sync Out: TTL compatible, 75 ohms, load permissible, BNC; Remote: Wireless and wired, stereo phone

Power Requirements: 100/120/220/240VAC, 50/60Hz

Power Consumption: Recorder: Approx. 37W; Interface Unit: Approx. 12W

Weight: Recorder: 26 lbs., 8 oz.; Interface Unit: 11 lbs., 1 oz.

Dimensions: Recorder: Approx. 4" H x 17" W x 16 5/8" D; Interface Unit: Approx. 4" H x 17" W x 15 3/8" D

PCM-1630 Digital Audio Processor

- 2-channel digital audio processor with 16-bit linear quantization
- Fully compatible with PCM-1610
- Switchable 44.1kHz and 44.056Hz sampling frequencies
- RAR for improved reproduction reliability, using optional DABK-1630 board and DMR-4000 recorder
- 16-bit linear quantization dynamic range
- Analog filter and oversampling digital filter
- Wide 20-20,000Hz + 0.5-1.0dB frequency response
- 57 lbs., 5 oz.
- 7⁷/₈" H x 16³/₄" W x 20⁷/₈" D

PCM-1630TBA

PCM-1630

DMR-4000 Digital Master Recorder

- Additional confidence heads for simultaneous monitoring of the signal being recorded (RAW)
- Two composite digital outputs (main/sub) to be supplied to the PCM-1630 with the DABK-1630, for reliable RAR operation that minimizes the effect of code errors on the reproduced sound
- Built-in time code generator/reader for recording the SMPTE time code on Aux channel 2
- A front panel switch allows selection of the free run, rec run, or re-generate mode
- Built-in head cleaner
- 8-pin connector for single cable connection to the DAE-3000 or PCM-1630 (with DABK-1630)
- Built-in 9-pin remote interface
- Simple editing without the need for an editor
- 9.53cm/sec tape speed
- Reliable mechanism for long-term high performance
- Power consumption: 170W
- Power requirements: 100/120/220/240VAC selectable

DMR-4000TBA

DMR-4000

DMR-2000 Digital Master Recorder

- Built-in time code generator/reader for recording the SMPTE time code in 3 different modes: auto stop, free run, and re-generate
- Built-in head cleaner
- Optional IF-5850DA for connection to the DAE-3000
- 9.53cm/sec tape speed
- Built-in 9-pin remote interface
- Power consumption: 85W
- Power requirements: 100/120/220/240VAC

DMR-2000TBA

DMR-2000

DTA-2000 Digital Tape Analyzer

- Allows testing of the error status of digital audio recording
- Connects to any printer with Centronics compatible interface for printing out a sequential list of CRC, Average, Hold, Mute and Parity errors as well as the sampling frequency, time code mode (drop frame/non-drop frame), time code jump and emphasis On/Off
- Power requirements: 100-120/220-240VAC, 50/60Hz
- 9 lbs., 15 oz.
- 13¹/₄" H x 16³/₄" W x 13" D

DTA-2000TBA

DTA-2000

DAQ-1000 Cue Editor

- Cue editor used in compact disc mastering
- Capable of producing subcode data in the form of Table of Contents (TOC) and recording them onto audio track of master tape recorded on PCM-1630/VTR combination
- Memory function to store subcode information, with selectable Direct, Editor Transfer and Edit input modes
- 99 auto locate points
- Built-in printer for making hard copies of data
- With optional DABK-1000 PQ generator added, subcode data can be recorded on P and Q channels of compact discs
- Compatible with DMR-4000, BVU-8000DB or DMR-2000 with IF-5850DA interface box
- Power requirements: 85-276VAC, 50/60Hz
- Processor—32 lbs., 1 oz.; Keyboard—18 lbs., 12 oz.
- Processor—5⁵/₈" H x 16³/₄" W x 19³/₈" D; Keyboard—4" H x 16³/₄" W x 15" D

- System expandability
- User-friendly keyboard
- Flexible EL display
- Recorder control
- Edit point search with memory rehearsal
- Automatic editing
- Unmatched precision
- Improved crossfading
- Built-in time code generator/reader
- Self-diagnostics
- Low power consumption
- Player select keys
- Function keys
- Balance/fader controls
- Search dial
- Edit mode keys

Specifications

Inputs/Outputs: Digital I/O—SDIF-2 (BNC), AES/EBU (XLR type); Composite Digital—(BNC, B-pin); Remote I/O—(RS-422, P2 protocol)
Max. 4 units

Player Connection: Max. 4 units

Search Mode

Memory Capacity: Approx. 6 seconds (16-bit, stereo)

Fader Level Control: +6dB to $-\infty$ or +12dB to $-\infty$ (switchable)

Balance Control: 0dB to -3dB (0.2dB steps) or 0dB to -6dB (0.4dB steps) switchable

Crossfade Time: 0 to 999msec.

Auto Locate Accuracy: ± 1 frame (with DMR-4000/2000)

Preroll Time: 0 to 59 sec.

DAE-3000

Editing Resolution: 23 μ sec. equivalent to one sample with PCM-1630

Power Requirements: 100-240VAC, 50/60Hz

Power Consumption: 60W

Weight: Processor—55 lbs., 2 oz.; Keyboard—15 lbs., 6 oz.

Dimensions: Processor—9 $\frac{5}{8}$ " H x 16 $\frac{3}{4}$ " W x 20 $\frac{1}{8}$ " D; Keyboard—13" H x 16 $\frac{3}{4}$ " W x 13 $\frac{5}{8}$ " D

Supplied Accessories

- DABK-3001 interface kits (x 2)
- Extension board (x 1)
- Keyboard cables (15-pin x 1, 10m)
- Composite digital cables (B-pin x 2)
- Remote cables (9-pin x 2)
- AC power cord (x 1)

DAE-3000TBA

DAL-1000 Digital Audio Limiter

- Can achieve the "0 word" attack time
- Compact circuits replace conventional ICs and reduce the size and power consumption
- Interface: Complete digital coupling equipped with SDIF-2 (Sony Digital Interface Format) and AES/EBU format
- Allows the setting of 2 kinds of limiter curves
- 5 programmable preset memories for parameter setup
- Supplied with a wired remote control system for direct and quick access from the console, with 5m cable

DAL-1000

- Sampling Frequency: 44.056kHz, 44.1kHz, 48kHz (auto select)
- Main Unit: 9 lbs., 5 oz.; Remote Control Unit: 1 lb., 13 oz.
- Main Unit: 1 $\frac{3}{4}$ " H x 19" W x 12 $\frac{5}{8}$ " D; Remote Control Unit: 7 $\frac{1}{8}$ " H x 4 $\frac{3}{4}$ " W x 13 $\frac{1}{16}$ " D

DAL-1000TBA

DMU-30 Digital Remote Meter

- 32 segment LED type metering section (with overload indicator)
- Reference Marker: Reference signal level from -10 to -20dB
- Meter Fine Mode: 0.2dB steps
- Peak Hold: 1.5 or 4 seconds
- 2 types of data input with through output (same as PCM-1630/1610) status in/out, AES/EBU digital audio in/out
- Remote control facility for "peak hold reset" and "fine mode select"
- Indicators for CRC/Parity/Average/Hold
- Approx. 5 lbs., 8 oz.
- 5 $\frac{1}{4}$ " H x 4 $\frac{1}{4}$ " W x 7 $\frac{1}{2}$ " D

DMU-30TBA

DMU-30

CD Players/Loader

CDP-3000/CDS-3000**Professional Compact Disc Player System**

- Separate player and control unit
- 10-key direct access and bi-directional search
- Programmed play
- Flexible monitoring
- Digital time display
- Remote start/stop
- T-type, optical pick-up

Specifications (CDP-3000)

Readout System:	Non-contact optical system using semiconductor laser pick-up
Distortion:	*0.015% (20-16,000Hz)
Dynamic Range:	> 92dB
Crosstalk:	88dB (at 1kHz), 70dB (at 20kHz)
Access Time:	Within 2 seconds
Frequency Response:	20-20,000Hz, +0.5, -1.0dB
Outputs:	Line out (Cannon XLR-3-32 type, 2 pcs.) + 4dBs (+ 6 to -20dBs variable) 600 ohms, balanced
Error Correction:	Sony Super Strategy Cross Interleave Reed Solomon Code (CIRC)
D/A Conversion:	16-bit linear
Dimensions:	37/8" H x 8 1/2" W x 18 3/4" D
Weight:	Approximately 17 lbs., 10 oz.
Supplied Accessory:	Data interface cable
CDP-3000	TBA

CDP-3000

Specifications (CDS-3000)

System:	Control unit for CDP-3000 compact disc player unit (Two units can be connected and controlled at a time)
Output:	Headphones (stereo phone jack, 20mW + 20mW at 8 ohm load)
Memory:	8 memory addresses for programmed play of up to 8 music selections randomly selected from 2 discs
Weight:	7 lbs., 4 oz.
Dimensions:	4" H x 13 1/4" W x 9 1/4" D
CDS-3000	TBA

CDS-3000

CDP-5000 Compact Disc Player

- Reference compact disc playback machine designed specially for use in broadcasting stations
- Sony's original T-type laser optical pick-up system
- Constant Linear Velocity (CLV) servo-controlled mobile disc table
- 10-key direct access and 2-speed manual search — access time of less than 2 seconds with a precision of 1 frame (13.3 milliseconds)
- Balanced line outputs, XLR-3-32 type connectors
- Power requirements: 120VAC, 60Hz or 220/240VAC, 50/60Hz
- 115 lbs.
- 19 3/4" H x 34 1/8" x 22 1/4"

CDP-5000

TBA

CDP-5000

CDK-006 Automatic Compact Disc Loader

- Can house up to 60 CDs
- Controlled by an external 8-bit microprocessor controller
- Detachable CD storage trays provide fast and easy tray exchange
- Self diagnostic capability
- Dual phono outputs
- 9 lbs., 7 oz.
- 19 3/4" H x 12 1/2" W x 16 5/8" D

CDK-006

TBA

CDK-006

MXP-3000 Series**Automated Audio Recording/Remixing Consoles**

- Frame accurate automation, fader and mutes, in all modes, read, write and update, menu driven system
- 20M byte hard disk drive storage system with 1M byte floppy disk for up/down loading of automation data
- Infrared remote keyboard for automation control from console
- 8 automated sub groups
- Electronically latched mutes
- Perpetual update mode
- Snapshot displays of faders and mutes
- 122 minutes of on-line storage
- Oxygen free copper cables and gold plated connectors (internal)
- Low noise hybrid amplifiers throughout
- Available in two frame sizes, 20 and 36 inputs, automated or non-automated versions
- 24 track dedicated bus assigns
- External microphone power supply (DC48V Phantom Power)
- Six sends: 1-4 mono, 5-6 stereo pair with pan control, all pre or post fader, with selectable channel or monitor location with level control
- 4 echo returns with PFL
- Switchable control room outputs to feed up to 4 sets of monitors
- 2-stage peak indicators at either mic preamp or EQ output
- Variable bus control from -14 to +5dBm
- Patchless audio sub grouping mode, allows any of the first 24 I/O modules to be assigned as an audio group master
- Metering, choice of mechanical VU or PPM meters, VF light meters
- Modular patch bay

Specifications**Inputs**

- Mic:** Up to 72 channels with dual mic inputs
Gain: Variable/switchable gain 15 to 35, 30 to 65dB
Max. Level: +7dBs, 1.2K ohms, balanced, transformer/transformerless (opt.)
Line: Up to 72 channels with dual line inputs
Ref. Level: +4dBs (± 10 dB)
Max. level: +28dBs, 10K ohms, balanced, transformerless/transformer (opt.)

Outputs

- Line:** Line 24 channels assignable up to 20 additional direct outputs
Ref. Level: +4dBs at 10K ohm load
Max. Level: +28dBs at 10K ohm load
Impedance: 120 ohms, balanced, transformerless/transformer (opt.)
Aux Send: (1-6), 2 MIX (L, R), Mono
Ref. Level: +4dBs at 10K ohm load
Max. level: +28dBs at 10K ohm load
Impedance: 120 ohms, balanced, transformerless/transformer (opt.)

Control Room

- Monitor:** (L, R), studio monitor (L, R)
Ref. Level: +4dBs at 10K ohm load
Max. Level: +28dBs at 10K ohm load
Impedance: 120 ohms, balanced, transformerless

MXP-3000 Series

- Frequency Response:** 20 ~ 20,000Hz ± 0.5 dB
Harmonic Distortion: < 0.003% (line in line out, +20dBs in), < 0.02% (Line in 2 mix out, +4dBs in)
- Equivalent**
Input Noise Mic: < -128dBs (20 ~ 20kHz, -0.5dB)
Line: < -110dBs (20 ~ 20kHz)
Noise Level: < -93dBs (line input tracks), < -85dBs (line input to 2-mix)
Crosstalk: < -80dB adjacent channel line inputs, at 15kHz, < -60dB (between channel and 2 mix ACN buses, at 15kHz)
- Equalizer**
Wien Fixed: MXBK-EQ31 Q adjustment: fixed at 1.5
 High: 8kHz ~ 20kHz ± 15 dB, shelving/peaking; Mid: 800Hz ~ 8kHz ± 15 dB; Mid: 150Hz ~ 2.5kHz ± 15 dB; Low: 40Hz ~ 250Hz ± 15 dB, shelving/peaking
Q Type: MXBK-EQ34 Q adjustment: fixed at 1.7; HIGH: Selectable 2kHz, 4kHz, 8kHz, 16kHz ± 15 dB, shelving/peaking; MID: selectable 480Hz, 1kHz, 2kHz, 4kHz ± 15 dB; MID: selectable 120Hz, 240Hz, 480Hz, 1kHz ± 15 dB; LOW: selectable 30Hz, 60Hz, 120Hz, 240Hz ± 15 dB, shelving/peaking
LC Type: MXBK-EQ32 Q adjustment: switchable 0.5/1.5
Wien: MXBK-EQ32 Q adjustment: switchable 0.5/1.5
Switchable: HIGH: 8kHz ~ 20kHz ± 15 dB shelving/peaking
Q Type: Mid: 800Hz ~ 8kHz ± 15 dB; Mid: 150Hz ~ 2.5kHz ± 15 dB; Low: 40Hz ~ 250Hz ± 15 dB
Low Cut Filters: Variable 20 μ 320Hz (-3dB), 12dB/octave
High Cut Filters: 16kHz (-3dB), 12dB/octave
Oscillator: Variable 20 ~ 20,000Hz with less than 0.1% distortion
Output Level: Max. +18dBs at 10K ohm load
- Supplied Accessories**
- I/O extender board
 - Fader removal tool
 - Knob tools (1 set)
 - "T" handles (2)
 - Cable chimney (1 set)
 - Meter lamps (4)
- MXP-3000**.....TBA

MXP-2000 Series Broadcast/Post Production Mixing Consoles

- Plug-in input cards
- Mono input module
- Stereo line input module
- Group module
- Master module
- Monitor module
- Communication module
- Dynamics processor module
- Phase reverse, low cut filter and EQ in/out
- Module faders control VCAs
- Modules can be assigned to any of four audio/VCA groups
- Separate direct output
- Solo and PFL
- MXP-2016S 1: Approx. 110 lbs.
- MXP-2026 with modules: Approx. 160 lbs.
- MXP-2036 with modules: Approx. 200 lbs.

Specifications

Inputs:	Mic—Reference Level: -70dBu, variable to +10dBu, Max. Level: 30dBu above nominal input, 1.2K ohms, transformer/transformerless (opt.); Line—Reference Level: 0dBu or +4dBu, Max. Level: +27dBu, 10K ohms, transformer/transformerless (opt.); Return—Reference Level: 0dBu or +4dBu, Max. Level: +27dBu, 10K ohms, transformerless
Outputs:	Line—Reference Level: 0dBm (600 ohm load), Max. Level: +25dBu at 1K ohm load, 50 ohms, transformer balanced; Group—Reference Level: 0dB (600 ohm load), Max. Level: +25dBu, 50 ohms, transformer balanced; Stereo—Reference Level: 0dB (600 ohm load), Max. Level: +25dBu, 50 ohms, transformer balanced; Send—Reference Level: 0dB (600 ohm load), Max. Level: +25dBu, 50 ohms, transformer balanced
Frequency Response:	30 ~ 20,000Hz \pm 0.5dB
Total Harmonic Distortion:	0.05% (+20dB at 1kHz)
Equivalent Input Noise:	-126dBu (150 ohms terminated)
Noise Level:	-95dBu (Master fader off), -75dBu (Channel fader off)
Crosstalk:	80dB (channel to channel, at 16kHz), 60dB (bus to bus at 16kHz)
Equalizer High Frequency:	Frequency Range—10kHz; Mid Frequency: Frequency Range—150Hz-5kHz; Low Frequency: Frequency Range—80Hz; High Pass Filter: Cutoff frequency (-3dB): 80Hz Slope: 12dB/oct.
Compressor:	Threshold: -20dB + 10dB; Attack Time: 1 to 5msec; Recovery Time: 25-1,000msec; Ratio: 1.5:1 to 5:1
Limiters:	Threshold: \pm 12dB; Attack Time: 100msec; Recovery Time: 500msec; Ratio: 20:1

MXP-2000 Series

Oscillator:	Variable 150-15kHz; Output Level: Max. +12dBu
THD:	<0.05% at 1kHz
Power Requirement:	100/120/220/240VAC, 50/60Hz
Power Consumption:	MXP-2016: 225W, MXP-2036: 440W

Supplied Accessories

- Extender card
- AC power cord
- "T" handles
- Knob tools
- Fuse
- Allen hex driver
- Connectors

Mixing Console Frames

MXP-2016 Holds up to 20 modules. Supplied modules same as 2026.TBA

MXP-2026 Mixing console frame includes a main frame, VU meters and the following modules. This frame holds up to 30 modulesTBA

MXP-2036 Mixing console frame includes a main frame, VU meters and the following modules. This frame holds up to 40 modulesTBA

Supplied Modules

MXBK-2005 Master module x 1. MXBK-2006 Monitor module x 1. MXBK-2007 Communication module x 1.

SONY CORP. OF AMERICA**Mixers****MXP-29 8-Channel Audio Mixer**

- Equipped with 8 mike/line inputs and 2 line outputs
- Incorporates Voltage-Controlled Amplifier (VCA) in front of each channel fader for editor control of channel levels
- Can be controlled from BVE-900 Sony edit controller
- Various optional inputs/outputs—2 sub inputs for extra source connection or echo/effects return, 2 external monitor inputs, 2 aux outputs for echo/effects send, 2 monitor outputs, and a TB output for studio communication
- Trim control for each balanced mike/line input—variable range 30dB
- Built-in 3-band equalizer and low cut filter
- VU meters with 15 segments of LEDs reading from -20dB to +3dB
- Operates on AC (100/120/220/240V) or external 12VDC
- Easy mounting into a 19" standard rack or a Sony U-matic rack
- Dimensions: 6¹/₈" H x 19" W x 17³/₄" D
- Weight: 28 lb. 11 oz.

MXP-29 \$3,849.00

MXP-29

MX-P21 8-Channel Audio Mixer

- Compact audio mixer with 8 channel inputs and 2 channel outputs, especially suitable for audio/video production
- Various optional inputs/outputs—2 sub input jacks and 2 Aux output jacks for connection to and from echo machine or reverberator; monitor output jacks for driving external monitor speaker; TB output jack for intercommunication; external monitor input jacks for return audio monitoring
- Built-in 3-band graphic equalizer and low cut filter
- 2-way operation: 100-120/220-240VAC or external 12VDC
- 19" EIA standard rackmountable
- Dimensions: 5¹/₈" H x 19" W x 17³/₄" D
- Weight: 27 lb. 13 oz.

MX-P21 \$1,899.00

MX-P21

MX-P61VU 12-Channel Audio Mixer

- Equipped with 12 mike/line inputs and 4 line outputs
- Switchable microphone power supply— +48V (phantom power) and +12V (A/B feed)
- Built-in 1kHz test tone for precise level setting
- Hi-cut and low-cut filters for convenient bandwidth limiting
- Monitoring either through headphones or external monitor speaker system
- TB output and communicate input connectors
- Cascade connectors for increasing the number of inputs
- Needle-type VU meters
- Compact and lightweight
- AC/DC operation
- Dimensions: 5¹/₈" H x 17" W x 22¹/₈" D
- Weight: 40 lbs. 13 oz.

MX-P61VU \$10,675.00

MX-P61VU

SONY CORP. OF AMERICA

Condenser/Lavalier Microphones

Professional Audio

ECM-23F Cardioid Back Electret Condenser Microphone
 • Operates for more than 6,000 hours with one size "AA" battery
 • Suited to professional and creative use in recording and broadcast studios as well as sound reinforcement systems
 ECM-23F \$155.00

ECM-23F

ECM-33F Uni-Directional Back Electret Condenser Microphone
 • Powered by an external phantom power DC source • Will operate for approximately 1,000 hours on a single battery (Eveready 126 or equivalent) • Low-cut switch • Pad switch • Wind screen
 ECM-33F \$241.00

ECM-33F

ECM-44S/44B Omni-Directional Lavalier Electret Condenser Microphone
 • Miniature $\phi 1\frac{1}{32} \times 1\frac{19}{32}$ ", ($\phi 8.5 \times 14.5$ mm) 0.07 oz. (2g) microphone head • Satin-nickel plating (ECM-44S) or black finish (ECM-44B) • Operation on AA-size battery • Supplied holder clip and urethane wind screen
 ECM-44S/44B (XLR Output) \$179.00
 ECM-44BPT-44SPT (Pigtail) 89.00
 ECM-44BC/44SC (SMC9-4P Connector) 131.00

ECM-55

ECM-66

ECM-77

ECM-44

ECM-55S/55B Omni-Directional Lavalier Electret Condenser Microphone
 • Omni-directional electret condenser design • Designed for miking musical instruments and voice pickup • Frequency response range of 30 to 18,000Hz
 ECM-55S/55B (XLR Output) \$281.00
 ECM-55BPT/55SPT (Pigtail) 179.00
 ECM-55BC/55SC (SMC9-4P Connector) 219.00

ECM-672

C-76

ECM-66S/66B Uni-Directional Lavalier Electret Microphone
 • Wide-range, uni-directional back electret capsule • Clean, natural reproduction of musical instruments • Excellent isolation from the acoustic environment • Power supply includes a battery on-off switch • LED battery condition indicator • Frequency range of 70 to 14,000Hz
 ECM-66S/66B (XLR Output) \$325.00
 ECM-66BPT/66SPT (Pigtail) 240.00
 ECM-66BC/66SC (SMC9-4P Connector) 280.00

C-535P/C-536P

ECM-77S/77B Omni-Directional Lavalier Microphone
 • Fingernail-size—5.6mm • Frequency response range of 40 to 20,000Hz • Enables unobtrusive miking but reduces glare • Permits intelligible voice reproduction even if the microphone is hidden inside a costume
 ECM-77S/77B (XLR Output) \$320.00
 ECM-77BPT/77SPT (Pigtail) 245.00
 ECM-77BC/77SC (SMC9-4P Connector) 280.00

ECM-672 Unidirectional Back Electret Condenser Microphone
 • Frequency range of 50-16,000Hz • Operates on one AA size battery for 3000 hours • LED battery condition indicator • Built-in low cut filter operated by on/off switch • Supplied urethane wind screen has a stopper to prevent it from falling off the microphone
 ECM-672 \$475.00

C-48 Dual Diaphragm Condenser Microphone
 • Omni-directional, cardioid, and bi-directional • Selector switch • PAD switch and low-cut switch add to the operational features • 2-way power capability • Smooth, clear, natural sound • Low-noise, high-gain FET preamplifier • Frequency response over a range of 30 to 16,000Hz • Handles a minimum of 128dB SPL without audible distortion or coloration
 C-48 \$995.00

C-76/C-74 Super Uni-Directional Gun-Type Condenser Microphones

• For use in theaters, on sound stages, in large halls, in television studios and even outdoors • The microphone is simply aimed at the sound source • Suited to the performing arts • High sensitivity • Broad frequency response • Excellent transient capability • The microphones discriminate against background noise and unwanted sounds

The C-74 is shorter than the C-76 and therefore slightly more maneuverable.

C-74 \$860.00
 C-76 995.00

C-535P/C-536P Uni-Directional Condenser Microphones

• Inconspicuous on stage. Users can select the model that best suits their microphone positioning needs • C-535P is designed for on-axis sound pickup • C-536P is designed for applications requiring minimum clearance and right angle pickup • The microphones have a frequency response of 30 to 16,000Hz • Dynamic range of 116dB • Output impedance is 200 ohms • Maximum sound input pressure level is 138dB • 48VDC phantom powered, equipped with a 10dB switchable pad and offer a Canon XLR-3-12C type connector • Each unit measures 21 by 154mm • Weighs 148g

C-535P/C-536P \$487.00

UHF Multi-Channel Wireless Microphone System

This wireless microphone system is the answer to professional demands for a wireless microphone system featuring each of the three essentials of quality, reliability and versatility. The system offers extended dynamic range and the unique "Space Diversity Reception" assures failsafe operation as well as expands the possible service area. All units in the system are not only compact but also of the convenient plug-in type. The system can thus be adapted to many different applications with utmost precision.

Series 200B/VE Console

• 8 input version of the Series 200B mixing console, specially adapted to work closely with a video editor • Audio crossfades can be made totally under editor control, though the console is also capable of operating in a standalone mode as a Series 200B • The edit decision list is created on the editor in the usual way which allows audio control to match video with simplicity and flexibility • The Series 200B retains all its facilities, including low noise microphone inputs with high common mode rejection and superlative transient performance • A parallel interface version for direct connection to a Sony BVE 900 or other similar system is available • Serial interfaces are optional • All auxiliary sends normally follow the fading action of the VCA, Aux. 1 and Aux. 2, however, may be switched pre-EQ and pre-VCA by moving internal push-on jumpers • Can respond to both control modes of the Sony BVE 900 with the BKE 916 card DIP switches up, 8 inputs are controlled as 4 stereo pairs, with accurately ganged fader control • With the DIP switches down, 6 inputs are controlled separately in a mono format, and 2 inputs are left under complete manual control • A compact additional 45mm fader controls the extent to which the BVE 900 can attenuate the signal and sets the maximum fade depth, significantly enhancing the control capabilities of this type of system • Either standard or sweep EQ input modules may be specified • Incorporates sophisticated solid-state switching between listening to the stereo master output, and the relay signal from the two-rack mastering machine • Monitor output is automatically dimmed by 20dB during VTR spooling to prevent high level signals from causing annoyance and possible loudspeaker damage • A large LED indicator on the output panel illuminates to show clearly when the console is under BVE control

16 channel console with SEQ	7645.00

Series 500

Series 500 Mixing Consoles

Available in 4 mainframe sizes, the Series 500 will accommodate 16, 24, 32 or 40 input modules with eight subgroup modules. These incorporate the console's eight effects returns channels, ideal for live work—and they can also be used as monitor channels when the console is used for 8-track recording.

The console may be further extended by four input modules, available as an option to the right of the output section.

Signal-to-noise ratio is a whisper at $> -80\text{dB}$ (unity gain). The adjacent-channel crosstalk is an inaudible -70dB at 1kHz. And the distortion is just 0.005% at 1kHz.

The 500 is fully modular. You could opt for a complete 16, 24, 32 or 40 channel console—or buy a part-filled frame that gives you the opportunity for expansion.

The external power supply unit provides both the $\pm 17\text{V}$ audio rails and the $+48\text{V}$ phantom power.

Each input is electronically balanced, giving the benefits of low noise, excellent transient response and better high frequency common mode rejection.

Every input module offers 4-band variable frequency equalization, six auxiliary sends, a pan pot and soloing facility.

Each input module has its own individual post-fader line out jack socket to enhance its versatility and insert send and return jacks to accommodate external signal processing.

The 500 is a full 8-bus console, selected in pairs from each input module and grouped in pairs for convenience at the output modules. The signal can be routed either to the stereo master mix or to any or all of the eight sub-groups.

It's essential to have plenty of auxiliary sends. The 500 provides six, normally post-fader, though buses 1 and 2 can be switched to pre-fader for cue sends. It's also possible to place the auxiliary sends pre-EQ, using push-on links on the circuit board.

If more sends are needed, you can use the group buses as effects sends, too. There are eight effects returns for outboard signal processing units (reconfigurable as 8-track monitor returns for the smaller recording facility).

The input modules feature the same high performance 4-band equalization section as our more expensive consoles. Each band gives up to 15dB of boost or cut.

In addition, a switchable high pass filter is incorporated at 100Hz to curb residual stage rumble.

Series 600

Series 600 Mixing Consoles

- Signal-to-noise ratio is better than -80dB (unity gain)
- Adjacent-channel crosstalk is -100dB at 1kHz
- Distortion is 0.005% at 1kHz
- Completely separate, comprehensive 16-track monitor section
- Can monitor three external stereo sources
- Wide 60dB input attenuation range (including the 20dB switchable pad) handles high level signals from condenser mikes or line inputs
- For mixdown, the tape returns are normalled to the first 16 input channels—leaving the monitor channels available for use as effects returns
- Can work with a 16-track recorder without ever repatching
- Each input module has its own individual post-fader line out jack socket
- Adjustable line level matching on each module (either -10dB or +4dB)
- Full 8-bus console, selected in pairs from each input module and grouped in pairs at the output modules
- Signal can be routed either to the stereo master mix or to any or all of the eight sub-groups
- Provides six-normally post-fader (buses 1 and 2 can be switched to pre-fader for cue sends, with the extra option of using a push-on link to bypass the channel EQ)
- Group buses can also be used as effects sends
- High and low shelving controls and two variable frequency mid EQ controls
- Each band gives up to 15dB of boost or cut

Specifications

Distortion:	Measured at unity gain with +20dBu at output

Mixing Consoles

Series 2400 Mixing Consoles

The Series 2400 combines up-to-the-minute technology and advanced features with a price that today's commercial recording studio demands. This high performance-to-cost ratio makes the Series 2400 an attractive proposition for the studio owner—while his clients will appreciate the sonic quality of the desk and the flexibility of its split console design. The Series 2400 is easy to use, because the logical format of the split design makes it simpler to memorize the layout and complex signal paths used in the recording session. Because the split console needs fewer functions on each module, the controls are easier to reach without stretching. With inputs and output/monitor modules at either end of the desk, the producer can use the monitor section without hindering the engineer while laying down tracks.

In mixdown, the Series 2400 gives you the option of using all the monitor channels as effects returns, so the 24 input console gives you 40 equalized inputs, while the 28 input version allows up to 52 inputs—all at a considerably more economical price than most other console designs. The choice of mainframe sizes makes the Series 2400 ideal for the large, successful studio as well as the personal recording facility or smaller studio. The 24 input mainframe provides 16 track equalized monitoring as standard, but also accommodates the 24 track monitor module to access tracks 17-24.

Both versions of the Series 24 are designed to cater for the Soundcraft automation system. The automation option memorizes fader and mute facilities, and provides VCA grouping—making more complex recording systems that much simpler. We use electronically balanced mike inputs, which give exceptional transient performance compared with conventional transformer balancing.

Series 2400

SPECIFICATIONS

Distortion	Mic pre-amp, -30dBv in, +4dBv out	40Hz: 0.008, 1kHz: 0.008, 18kHz: 0.01, IMD: 0.015
	Channel line in to mix out, +4dBv in, +4dBv out	40Hz: 0.005, 1kHz: 0.005, 18kHz: 0.01, IMD: 0.009
Crosstalk	Line in through pan control to stereo mix buss	40Hz: -64dB, 1kHz: -63dB, 18kHz: -55dB
	Adjacent channel	40Hz: -100dB, 1kHz: -95dB, 18kHz: -85dB
Noise	Equivalent input ref 200	-128.5dBv
	Mik noise: 28 inputs and 24 monitors routed to mik or unity gain	-74dBv (DIN Audio)
Input impedance	Mic input	2kΩ (5kΩ with pad)
	Line input	10kΩ
Output impedance	Any output	<40Ω
Output capability	Any group or mix into 600	+21dBv
Gain	Max mic	75dB
	Max line	40dB
Frequency response	Mic input at 50dB gain to mix	20Hz: -1.6dB, 1kHz: 0dB, 20kHz: -0.2dB
	Line input at unity gain to mix	20Hz: -0.8dB, 1kHz: 0dB, 20kHz: -0.2dB
Phase response	Line input to mix output	20Hz: +20°, 1kHz: 0°, 20kHz: -20°
	NB: 0dBv = 0.775vrms	

Every input module features the 4 band semi-parametric equalizer with sweepable mids, and a high pass filter that has a continuously variable turnover frequency between 50Hz and 800Hz. The monitor modules each contain a 3 band equalizer with sweepable mid frequency, which gives you EQ control over effects returns.

TS-24/TV-24 Mixing Consoles

We have established a set of master conditions which can configure the whole console at the press of just one button for each particular stage in recording, mixing, broadcasting, and video post production, without sacrificing any flexibility. The signal path designated Channel always goes to the multitrack routing, and the Mix path is always connected to the mix bus. Thus your monitor automatically becomes your mix, and you can mix as you go.

Only one set of multitrack returns is necessary since their connection to the mix path on each module is used for both monitoring and mixing, thus simplifying installation and patchbay arrangements. To help clarify visual indication, separate scribble strips are provided (instead of a confusing double one) and the Mix and Channel controls are in clearly defined areas. The equalizer, (with high pass filter and patch point) and each pair of auxiliary sends can be used in either signal path, as desired, but usually the position of the EQ, filter and patch point block is set by the master status and a LED indicates whether it is in Channel or Mix. To change this locally you may press Flip, but its position is always reset by a change in master status.

The dedicated "Instrument" input which, while still being capable of accepting normal line level signals, is able to accept an input directly from an instrument, thus eliminating the need for a D/I box in most cases. All the inputs and outputs including "oscillator out" are electronically balanced apart from the insert send, which is ground-compensated to allow for easy interchange of effects units which may have differing earthing arrangements.

Frame sizes are available to accommodate from 32 to 48 I/O modules or up to 40 and 8 optional stereo modules. Customized modules with tape remotes etc., may be ordered through the custom department. Blank modules for customizing are available in 1, 2 and 4 module-wide formats. The console is designed so that the modules (other than the command module) can be placed to suit individual requirements. Usually, from the left hand side, there are 24 I/O modules and then the command module. The section to the right may be fitted with I/O, stereo or custom/blank modules as desired. The 19" patchbay is situated on the right hand end of the console.

The TV-24 version of the TS-24 is designed to meet the specific needs of television and radio post-production and broadcasting. With the addition of an extra 16-way routing matrix, and extra 24 track monitoring facilities, independent multitrack back-up may be achieved. This is especially useful in live broadcast situations where a multitrack recording is needed for later remixing as well as the broadcast mix, which may be composed from any or all of 8 stereo solo groups. One button (marked TV) will initialize broadcast mode, otherwise the console functions in exactly the same way as the standard TS-24.

Optional Stereo Input/Sub Group and Effects Return Module

The top half of this module is a dedicated effects return, and the lower half may be a stereo sub group or separate stereo input. Separate scribble strips are provided to differentiate.

Effects Return Auxiliary Sends

Auxiliaries 1-4 may be accessed via individual level controls.

Equalizer

A four band equalizer with fixed frequency ranges is provided.

Level Control and Panning

Overall level control is via a rotary fader, and the stereo position is achieved via the pan pot above. PFL and Cut facilities are provided with associated LEDs. Sub cuts the feed to the mix bus and sends the signal into the stereo input/sub group below via the effects return level and pan control. This feeds adds to the stereo input.

Stereo Input/Sub Group

The lower half of the module may be used as a separate stereo input, or stereo sub group. The input to this section appears on the patchbay and is normalised to groups 1-16, i.e., if you do not plug anything into the patchbay, the 8 stereo sub groups will correspond to normal output groups 1-16, (1 and 2, 3 and 4, etc.) These feeds are paralleled from the group output which also appear separately on the patchbay. For use as a separate stereo input, you simply plug into the patchbay and override the usual group connection.

**TS-24 Series****Auxiliary Sends**

The six auxiliary sends available on the TS-24 can be accessed in the same way as the Input/Output module, i.e., with on/off and pre/post switching in pairs. However, since there is only one signal path present, the channel button CH is omitted. In its place is a button marked ST. When this button is down, the odd numbers (1, 3, 5) are fed from the left signal, and the even numbers (2, 4, 6) are fed from the right signal.

Equalizer

A four band fixed frequency stereo equalizer is provided which may be switched in and out via the EQ button and associated LED.

Main Fader

Main level control is via a stereo long throw fader with illuminated cut and solo buttons as on the input/output module.

Mixing Consoles

Series 8000 Mixing Consoles

The Series 8000's "Active Feedback Network" input amps create lower distortion figures and improve noise floors throughout the console. The mike input has a control range of 20-70dB (augmented by a switchable -20dB pad) while an adjacent button switches to the line level input, with a gain range of ±10dB. Switchable 48V phantom power is provided.

The switchable equalizer consists of a parametric four-band EQ, each band having dual concentric frequency/gain controls and a 3-position 'Q' selector, giving excellent overall control. The EQ section is completed by the switchable 80Hz high-pass filter.

Each pair of the eight auxiliary sends may be selected as pre or post the channel fader—or switched out of circuit.

Individual group selection, to any of the 8 groups or to Mix, is provided by a fast, flexible switching matrix—with LED indicators to show where the signals are routed. The pan pot is always in the mix path, but may also be switched in to the group path.

Other features include a channel on button and PFL facility, an 'Active' LED to show that a signal is present at the input, and a smooth, high quality 100mm channel fader.

The stage monitor console provides eight main sends, routed to the group outputs. In addition, there are two auxiliary sends which can be used either for effects, or as two extra monitor sends. The channel master VOL control is followed by a 4-band equalizer with two sweepable midrange bands.

To enhance the module's versatility the main and aux sends may be switched to Pre fader. In this mode the channel master control can be used independently for side fills, an emergency front-of-house mix or a stereo broadcast feed.

Series 6000 Mixing Consoles

The 6000 delivers the ultimate in efficient multi-track recording in a simple and flexible package.

Structurally, the 6000 features the ultimate split bus architecture based on the popular Soundcraft 500 and 600 consoles, a design which allows simple access to the console's unique features.

A preamplifier for each input module accepts 68dB of continuously variable gain and a low noise floor, regardless of setting (without the need for a switchable pad). The closest competition in this price range offers only 50dB of continuously variable gain.

Series 8000

Series 6000

The 6000 is capable of up to 24 buses and can be expanded up to 32 track monitoring. It also features a four-band semi-parametric EQ and a phase reverse switch to reverse polarity on individual input modules. Each of the six discrete auxiliaries sends selectable pre or post fader with additional pre or post EQ settings.

Additionally, optional add-on packages and hardware are available for the 6000. A separate MIDI-based automation package provides the home studio enthusiast with the flexibility and "extra-hand" that is always needed. An optional internal patchbay with 64 tie lines for external effects allows for complete access to console connections. An optional floor stand is also available to keep the console securely mounted in place.

All-In-One Instrument for Audio and Tape Machine Testing in the Service Department or on the Sales Floor

With the introduction of the 1500A Tape Recorder System, the service technician or audio salesman has the capability of performing all of the necessary tests for maintenance, troubleshooting or comparative analysis of any audio device, whether it be cassette or open-reel tape machine, preamplifier, equalizer, turntable/phono cartridge, or any other peripheral audio device. With the 1500A's exclusive 2-channel inputs and outputs, the instrument lends itself to rapid stereo (2-channel) check-out and comparative measurements.

With its built-in CRT, the 1500A gives you unparalleled information: both alphanumeric data on the screen plus graphic information for those applicable tests. Thus, we have combined the qualities of having an instrument with digital readout only, analog meter only, or an instrument having graphics plotting capability into one unit—the 1500A. This is all possible because of the built-in Z80 microprocessor and display processor circuitry.

The 1500A has been engineered with the operator in mind. The push of a button brings up a test from the on-board Read Only Memory (ROM). Push Start Inputs to activate the analyzer section or Start Outputs to activate the generator section. That's all there is to running a test on the 1500A. Also, for those facilities with automation in mind, the IEEE-488 general purpose computer interface bus is available.

SPECIFICATIONS

OUTPUT

Single Ended, Dual Channel
Impedance: 50 Ω \pm 1%
Response: 20 Hz to 40 kHz $<$ \pm 0.2 dB

INPUT

Single Ended, Dual Channel
Impedance: 100 K Ω \pm 1%
Maximum Level: \pm 22 dBm (10V rms)
Response: 20 Hz to 40 kHz $<$ \pm 0.2 dB
3 dB Bandwidth: $>$ 100 kHz

AC VOLTS

Measure Left Channel Only, Right Channel Only, or Both Channels
Accuracy: True rms. \pm 2.5% or reading with a crest factor no greater than 6
Autoranging: 1 mV to 40 V rms full scale 10 dB steps
Residual Noise: $<$ 100 μ V
Display: Vertical bar graph
Readout: Volts/dBm: 3 digits/0.1 dB

AZIMUTH/PHASE METER

Measurement Frequencies: 2.8 \times 1.57 \times 1.118 \times 1/4, 15.8 \times 1 kHz
Cycle Time: 0.1 seconds through noted frequencies
Measurement Range: \pm 180° electrical phase
Accuracy: \pm 2° electrical phase (Eqv. to 1/26 minute of arc in cassette format)
Display: Dynamic, shows instantaneous phase error between L and R channels, plus digital readout of error at measured frequencies

DISTORTION

Measure & Display: 2nd or 3rd Harmonic vs Level
Fundamental Frequencies: User selectable 315, 333, 400 or 1000 Hz
Accuracy: \pm 5% of reading
Residual Distortion: Output $<$ 0.1%, Input $<$ 0.3%
Input Level from Recorder: Display shows distortion vs level in 1 dB steps
Output Level to Recorder: \pm 10 to -20 dB in 1/2 dB steps referred to preset output
Sweep time: $<$ 40 secs. Can be terminated earlier with STOP button or at Low Sweep Limit or controlled manually
Display: Trace shows plot of distortion vs input level
Digital readout of distortion in % and dB

FREQUENCY RESPONSE

Frequency Range: Continuous sweep from 40 kHz to 20 Hz. Can be terminated earlier with STOP button or Low Sweep Limit or controlled manually
Accuracy/Resolution: \pm 5% of reading/ \pm 3%
Amplitude Accuracy/Flatness: \pm 0.2 dB / 0.2 dB
Minimum Input S/N Ratio: 20 dB
Max Input Signal Slope: 60 dB per octave in normal mode
Sweep Time: 34 secs. from 40 kHz to 20 Hz
Output Level Offsets: User selectable -10, 0, -10 or -20 \pm 0.1 dB
Display: Trace shows level at 123 discrete frequencies. Digital frequency readout. Level readout referred to input or display

CHANNEL SEPARATION

Frequency Range: Continuous sweep from 20 kHz to 20 Hz with 1/3 octave resolution
Residual Noise: $<$ 200 μ V
Amplitude Accuracy: \pm 1 dB
Output Level Offsets: User selectable -10, 0, -10 or -20 dB \pm 0.1 dB

Δ SPEED/DRIFT

Measurement Time/Range: 0 to 610 secs / \pm 4%
Output Frequency: 3.0 kHz (NAB, JIS) or 3.15 kHz (DIN, ANSI) \pm 0.05%
Display: Trace shows 10 second average speed error vs time. Digital readouts of both instantaneous and 10 sec. avg. error

FLUTTER

Output Frequency: Same as speed and drift
Autoranging: 0.3 to 10% full scale
Accuracy/Residual Flutter: \pm 5% of reading/ $<$ 0.005%
Detection, Weighting and Display Dynamics: Per NAB, JIS, or DIN/ANSI standards
Display: Vertical bar graph. Digital readout shows 2-Sigma signal (smoothed, 95% of peak)

NOISE

Residual Noise (1V reference): Flat -90 dB, Weighted -96 dB
Flat Response: -3 dB points at 20 Hz and 20 kHz
Detection, Weighting and Display Dynamics: Per NAB, ANSI, CCI-R/ARM OR CCIR standards
Output: Floating 50 Ω termination
Accuracy: \pm 5%
Display: Autoranged vertical bar graph with digital readout referred input ref. level

GENERAL

Rear Panel Outputs: Composite video signal, 1V p-p \pm 6 dB, 75 Ω , 1K Ω
negative sync. Demodulated flutter signal, autoranged, $<$ 15V p-p, 1K Ω
Power: 100, 120, 220, 240 V 48-66 Hz, 100 W
Dimensions - HWD: 7.0 X 17.0 X 16.4" (18 X 43 X 42 cm)
Weight - Net/Ship: 34 lbs (15.5 kg) / 43 lbs (19.5 kg)
Environmental: 90% RH, \pm 50 to \pm 104° F (\pm 10 to \pm 40°C)

OPTIONS

1/3 OCTAVE SPECTRUM ANALYZER

Accuracy: 1.0 dB
Rejection Ratio: $>$ 60 dB
Maximum Peak to Peak Pass Band Ripple: $<$ 1 dB
Center Frequency Accuracy: $<$ 3%
Typical Filter Slope: $>$ 50 dB per octave
Dynamic Range: $>$ 90 dB
Filter: ANSI S1 11-1966 (R1975) Third octave, class II, type 0
Noise Frequency Range: 20 Hz to 20 kHz
Flutter Frequency Range: 0.5 Hz to 200 Hz

IEEE-488 GENERAL PURPOSE INTERFACE BUS

Compatible with the IEEE-488, ANSI MC1 1 and IEC 625-1 bus configurations. All front panel buttons and functions, except for output level, are accessible from GPIB.

CCIR 468-2 FILTER

Replaces CCIR/ARM filter

MOL/MAXIMUM OPERATING LEVEL

Measurement & Display: Output level vs Amplitude Compression at test frequency
Measurement Frequencies: 31 user selectable frequencies between 40 Hz to 40 kHz
Accuracy: 5%
Output Level: \pm 10 to -20 dB
Sweep Time: 33 sec

1500A	Tape Recorder Test System	\$5650.00
Option 002	Rackmount Kit	130.00
Option 007	1/3 Octave Spectrum Analyzer	1595.00
Option 009	IEE-488 GPIB Computer Interface	695.00
Option 010	CCIR-468-2 replaces CCIR/ARM	250.00
Option 011	MOL Module	450.00

1510A TAPE RECORDER/ AUDIO TEST SYSTEM

With the introduction of the 1510A Tape Recorder/Audio Test Instrument, the audio engineer has the capability of performing all of the necessary tests for maintenance, troubleshooting and general check-out of any professional audio device, whether it be tape recorder, film machine, mixing board, reference turntable, parametric equalizer, or any other outboard device. With the 1510A's exclusive asynchronous inputs and outputs, the instrument lends itself to system check-outs and remote location testing such as satellite, transmitter or studio testing, using either the 1510A's microprocessor-controlled generator or an external generator (the 1510A's inputs are totally auto-ranging and auto-tuning).

With its built-in CRT, the 1510A gives you unparalleled information: both alphanumeric data on the screen plus graphic information for those applicable tests. Thus, we have combined the qualities of having an instrument with digital readout only, analog meter only, or an instrument having graphics plotting capability into one unit—the 1510A. This is all possible because of the built-in Z-80 microprocessor and display processor circuitry.

The 1510A has been engineered with the audio professional in mind. The 2-channel outputs are electronically balanced and floating, the inputs are differential, and the output levels are from +30dBm to -70dBm into 600 ohms with a pushbutton resolution of 0.1dB. For those facilities with automation in mind, the IEEE-488 general purpose computer interface bus is available.

SPECIFICATIONS

OUTPUT

Balanced and Floating Dual Channel

Impedance: 50 Ω \pm 1%
Response: 20 Hz to 40 kHz \pm 0.1 dB
Maximum Level: +30 dBm for distortion and MOL test +20 dBm for frequency response and channel separation test. +10 dBm for AC volts, Δ Speed, Flutter and Dropout tests
Level Control: 0.1 dB vernier with a 20 dB range
Level Attenuation: Selectable 20, 40 or 60 dB
Differential Residual Noise: $<$ 50 μ V

INPUT

Differential Dual Channel

Impedance: 100 K Ω \pm 1%
Maximum Level: +34 dBm (42V rms)
Minimum Level: -70 dBm (245 μ V rms)
Common Mode Rejection: $>$ 60 dB at 60 Hz
Response: 20 Hz to 40 kHz \pm 0.1 dB
3 dB Bandwidth: $>$ 100 kHz

AC VOLTS

Measure Left Channel Only, Right Channel Only, or Both Channels

Accuracy: True rms, \pm 2% or reading with a crest factor no greater than 6
Autoranging: 300 μ V to 40 V rms full scale 10 dB steps
Residual Noise: $<$ 100 μ V
Display: Vertical bar graph
Digital readout of ACV: 3 digit, dBm 0.1 dB

AZIMUTH/PHASE METER

Measurement Frequencies: 2 E \cdot 1.5 7 \cdot 1.11 8 \cdot 1/4, 15 B \cdot 1 kHz
Cycle Time: 0.1 seconds through noted frequencies
Measurement Range: \pm 180 $^\circ$ electrical phase
Accuracy: \pm 2 electrical phase (Eqv. to 1/26 minute of arc in cassette format)
Display: Dynamic, shows instantaneous phase error between L and R channels, plus digital readout of error at measured frequencies

DISTORTION

Measure & Display: 2nd or 3rd Harmonic vs Level
Fundamental Frequencies: User selectable 315, 333, 400 or 1000 Hz
Accuracy: \pm 5% of reading
Residual Distortion: Output $<$ 01%, Input $<$ 025%
Input Level from Recorder: Display shows distortion vs level in 1 dB steps
Output Level to Recorder: \pm 2C to -10 cB in 1/2 dB steps referred to preset output
Sweep time: $<$ 40 secs, \pm 20 to -10 dB. Can be terminated earlier with STOP button or at Low Sweep Limit or controlled manually
Display: Trace shows plot of distortion vs input level
Digital readout of distortion in % and dB

FREQUENCY RESPONSE

Frequency Range: Continuous sweep from 40 kHz to 20 Hz. Can be terminated earlier with STOP button or Low Sweep Limit or controlled manually
Accuracy/Resolution: \pm 5% of reading/ \pm 3%
Amplitude Accuracy/Flatness: \pm 0.1 dB / 0.1 dB
Minimum Input S/N Ratio: 20 dB
Max Input Signal Slope: 60 dB per octave in normal mode
Sweep Time: 34 secs. from 40 kHz to 20 Hz
Output Level Offsets: User selectable +10, 0, -10 or -20 \pm 0.1 dB
Display: Trace shows level at 123 discrete frequencies. Digital frequency readout. Level readout referenced to input or display

SPOT FREQUENCY RESPONSE

Frequency Spots: 20, 50, 100, 200, 500, 1K, 2K, 5K, from 10K to 20K and 40 kHz
Sweep Time: 12 secs. in fast mode, 17 secs. in normal mode
Other Specifications: Same as Frequency Response

CHANNEL SEPARATION

Frequency Range: Continuous sweep from 20 kHz to 20 Hz with 1/3 octave resolution
Residual Noise: $<$ 100 μ V
Amplitude Accuracy: \pm 1 dB
Output Level Offsets: User selectable +10, 0, -10 or -20 dB \pm 0.1 dB

Δ SPEED/DRIFT

Measurement Time/Range: C to 610 secs./ \pm 4%
Output Frequency: 3.0 kHz (NAB, JIS) or 3.15 kHz (DIN, ANSI) \pm 0.05%
Display: Trace shows 10 second average speed error vs time. Digital readouts of both instantaneous and 10 sec. avg. error

FLUTTER

Output Frequency: Same as speed and drift
Autoranging: 0.03 to 10% full scale
Accuracy/Residual Flutter: \pm 5% of reading/ \pm 0.05%
Detection, Weighting and Display Dynamics: Per NAB, JIS, or DIN/ANSI standards
Display: Vertical bar graph. Digital readout shows 2-Sigma signal (smoothed, 95% of peak)

NOISE

Residual Noise (1V reference): Flat -92 dB, Weighted -97 dB
Flat Response: -3 dB points at 20 Hz and 20 kHz
Detection, Weighting and Display Dynamics: Per NAB, ANSI, CCIR/ARM OR CCIR standards
Output: Floating 50 Ω termination
Accuracy: \pm 5%
Display: Autoranged vertical bar graph with digital readout referred to input ref. level

GENERAL

Rear Panel Outputs: Composite video signal, 1V p-p \pm 6 dB, 75 Ω , negative sync. Demodulated flutter signal, autoranged, $<$ 15V p-p, 1K Ω
Power: 100, 120, 220, 240 V, 48-66 Hz, 120 W
Dimensions - HWD: 7.0 X 17.0 X 16.4" (18 X 43 X 42 cm)
Weight - Net/Ship: 34 lbs (15.5 kg) / 43 lbs (19.5 kg)
Environmental: 90% RH, \pm 50 to \pm 104 $^\circ$ F (\pm 10 to \pm 40 $^\circ$ C)

SOUND TECHNOLOGY, INC.

Test Equipment

1530A MTS Stereo Analyzer/Monitor

General Features:

• Test results displayed on integral CRT • "Video eye" — microwave test results back to master control • 7" H x 17" W x 16.4" D • 34 lbs.

Measurement Capabilities:

• 2 channel AC voltage • 2 channel swept frequency response • 2 channel swept channel separation • Phase error at 2.8, 5.7, 11.8, 15kHz • 2 channel composite and spectral noise • Wave analysis • IMD analysis (optional) • Differential inputs • Asynchronous inputs and outputs

Optional Oscillator Capability:

• Automatic frequency sweeps • Automatic level sweeps • Balanced 2 channel outputs standard • Low distortion sideband generator for Bessel null alignment (10,396Hz)

The 1530 MTS/Stereo Analyzer can be used in Master Control or permanently stationed with a reference decoder at the transmitter. The 1530 is designed to analyze signals from any existing audio oscillator, or can be used with the 3100 2 channel programmable generator for optimal set-ups. The 1530 measures phase-error, voltage/power, frequency response, channel separation, noise and harmonic distortion. All test results are graphed on the built-in CRT.

Specifications

Input	
Response:	20Hz-40kHz ± 0.1dB
Differential Residual Noise:	< 50µV
Common Mode Rejection:	> 60dB at 60Hz
3dB Bandwidth:	> 100kHz
Input Impedance:	100K ohms ± 1%
Maximum Input Level:	42VRMS (+ 34dBm)
AC Volts	
Response:	True RMS with -3dB bandwidth from 5Hz-115kHz
Accuracy:	± 2% of reading
Autoranging:	Full scale readings of 100V, 30V, 10V, 3V, 1V, 300mV, 100mV, 30mV, 10mV, 3mV, 1mV, 300µV and 100µV
Residual Noise:	< 100µV
Display:	Vertical bar graph Digital readout of AC Volts (3 digits) Digital readout of AC Volts in dBm (± .1dB)
Phase Error (Phase Meter)	
Measurement	
Frequencies:	2.8, 5.7, 15.0kHz, ± 1kHz min. and 11.8kHz, + 1/-4kHz min.
Measurement Range:	± 180° of electrical phase
Accuracy:	± 2° electrical phase at 15.0kHz
Display:	Dynamic: Bars show instantaneous phase error between A and B channels for each frequency. Digital readout of error at measured frequencies
Wave Analysis	
Display:	2 nd or 3 rd harmonic distortion versus the input level
Fundamental Frequencies:	100, 400, 1000 or 5000Hz
Accuracy:	± 5% of reading
Maximum Residual Distortion:	Output: < 0.01%. Input: < 0.01% (3 rd harmonic); < 0.02% (2 nd harmonic)
Input Level:	Input from DUT: Display shows distortion versus input level in 1dB steps
Sweep Time:	< 40 sec. from + 20 to -10dB. Can be terminated with Low Sweep Limit or Stop button
Display:	Trace shows plot of distortion versus input level. Digital readout of distortion in both percent and dB
Minimum Input S/N Ratio:	The noise at the harmonic of the frequency tested must be at least 10dB lower than the distortion level to meet the 5% accuracy specification
Frequency Response	
Frequency Range:	Stepped sweep from 40kHz-20Hz. Low Sweep Limit can be used to reduce frequency sweep.

1530A

Wideband intelligent mode for use with external discrete freq. oscillator available using Manual Mode
± 3%

Frequency Resolution:
Minimum Input S/N Ratio: 20dB
Maximum Input Signal Slope: 60dB per octave in Norm mode, 30dB per octave in Fast mode
Output Level Offsets: + 10, 0, -10, -20dB ± 0.1dB
Display: Level of 123 discrete frequencies. Digital frequency readout

Channel Separation Frequency Range: Sweep from 20kHz to 20Hz with 1/3 octave resolution
Residual Noise: < 100µV
Amplitude Accuracy: ± 1dB
Output Level Offsets: + 10, 0, -10 and -20dB (± 0.1dB)

Noise Residual Noise (referred to 1V): Flat: < -92dB. NAB weighted: < -97dB
Response (Flat Mode): -3dB frequencies are 20Hz and 20kHz
Detection, Weighting, and Display Dynamics: Per NAB, ANSI, or MTS standards (MTS = 15kHz lo-pass, notch at 15,734Hz plus switchable 75µs de-emphasis curve)

Accuracy: ± 5%
Display: Autoranging vertical bar graph with digital readout, referred to input reference level (1/3 octave spectral display available as option)

1530A	MTS - Stereo Analyzer/Monitor	\$5850.00
	Add Option 001 Oscillator (includes 10,396Hz Sideband Generator frequency)	1250.00
	Add Option 002 Rackmount Kit	130.00
	Add Option 004 Intermodulation Distortion Analyzer	475.00
	Add Option 007 1/3 Octave Spectrum Analyzer	1595.00
	Add Option 008 Rugged Flight Case	240.00
VP150	Video Printer for 1530A	1695.00
76 10-0000	Printer Paper (per roll)950

MSAT Multi Channel Switching System

• A minimum system consists of one Master Controller plus one Slave Mainframe plus one Audio Switcher Card • Each Slave Mainframe holds up to 13 Audio Switching Cards • One Master Controller can control up to 16 Slave Mainframes • A "split backplane" allows you to perform 2 channel switching within the same mainframe

With the Programmable Multi Channel Switching System you will be able to test up to 1,536.00 channels of audio. You can test multi channel consoles, tape machines, routing switchers, patch bays and multiple satellite transponders — all automatically.

MSAT-100G	Master Controller with GPIB	\$ 1350.00
MSAT-100R	Master Controller with RS-232	1350.00
MSAT-200	Slave Mainframe having continuous backplane	1690.00
MSAT-202	Audio Switcher Card (8 x 1 channel)	360.00
MSAT-203	Audio Switcher Card (4 x 2 channel)	360.00
MSAT-204	Switch Closure Module	160.00

SOUND TECHNOLOGY, INC.**Transmission/Audio Test Systems****3000 Series****Transmission/Audio Test Systems**

- 2-channel inputs and outputs
- The ability to run automated tests without using a computer
- Separate generator and analyzer for remote testing capability
- Front panel programmability
- FSK (Frequency-Shift-Keying) communication between generator and analyzer is standard, as well as GPIB and RS-232 interfaces
- The 3000 Series is fast. THD measurements typically made in 500ms, level measurements as fast as 30ms

The 3100A output configuration is 2-channel, electronically balanced, and completely floating. This transformerless design allows you to drive virtually any kind of circuit—balanced, unbalanced, off-ground or whatever, with no loss of level and no groundloops. This unique design insures that you get very clean low level signals, even below microphone line levels and down to 24.5 μ V (-90dBm). Also, RF shielding built into and around the 3100A insures RF rejection. RF rejection is accomplished by complete isolation of the oscillator module from the microprocessor control section using optical-isolation techniques.

One of the primary design considerations for the 3000 Series was speed and the 3100A generator was no exception. Using the latest state-variable oscillator technologies, oscillator stabilization times were reduced to permit a sweep from 20Hz to 20kHz with 10 points/decade (30 measurements) in less than 6 sec. for level measurement and 15 sec. for THD measurement using the companion 3200 Analyzer.

Another feature of the 3100A Generator is the concept of front panel programmability. Not only can comprehensive frequency and level sweeps be generated and stored, but entire testing procedures or proofs can be built and stored into memory locations in the 3100A. There are 50 locations used for panel set-ups and 10 locations for chaining panel set-ups for automated test sequences. A single panel set-up can run an automatic sweep. When using the stored programs within the 3100A Generator, in conjunction with the analyzer programs stored in the 3200A Programmable Audio/Transmission Analyzer, you have the ability to design whatever automated testing sequences you want right on the front panels.

For the first time your field engineering people can duplicate the exact testing procedures used back at the main facility without having to cart along a computer and its peripherals. You have a complete, comprehensive test system at your disposal for normal, nonautomated troubleshooting. The 3000 Series is a versatile piece of stand-alone test equipment in the field or on the bench.

The 3200A Audio Analyzer can handle any demanding testing situation thrown at it: stereo measurements? No problem, it's 2-channel. Need to perform rapid phasing and channel separation tests? The 3200A has it covered; measure phase to 40kHz, channel separation at any frequency up to 100kHz in fractions of a second. Remote measurement requirements from time-to-time? The 3200A has you covered; when used with the FSK capability contained in the ST 3100A Audio Generator, it will make remote measurements unmanned. And, because of the ability to store panel set-ups in its memory (like the ST 3100A Generator), you can perform complete proofs with the 3200A Analyzer remotely located and unmanned—all without the use of a computer or external communication lines. The generator/analyzer communication is done through the audio line being tested.

With the 3100A Analyzer, you have unmatched measurement capability: Flat and filtered level ratio and Notch Lock; THD vs level or frequency; SMPTE IMD analysis; phase error; channel separation.

All measurements can be made 2-channel and can be displayed on both of the LED readouts, as well as the tracking analog meter.

In addition to the ability to receive FSK data from the 3100A Generator, the 3200A Analyzer can be controlled via GPIB or RS-232C. More importantly though, front panel test set-ups can be stored into the 3200A memory. As a result, automatic receipt and analysis of data from the 3100A Generator can all be accomplished through the line you are testing.

The analyzer was also designed with speed in mind: it takes the 3200A Analyzer only 30ms (above 1kHz) to make a level reading and 500ms (above 50Hz) to make a THD measurement.

Notch Lock allows you to make signal-to-noise measurements in the presence of a low level signal as in the case of measuring quantization noise in digital audio systems. Without Notch Lock, the auto-nulling notch filter on an analyzer such as the 3200A could become a hindrance when attempting to measure the most bothersome aspect of digital audio: increased noise floor due to the quantizing error occurring in low passages.

Measurements can be made to virtually any audio specification due to the inclusion of the following standard filters: Hi Pass—20Hz, 200Hz, 400Hz; Low Pass—15kHz, 20kHz, 30kHz and 80kHz. The 200Hz and 15kHz filters conform to the IEEE RCVR spec. There is also provision for the use of external filters.

The following peripherals can be driven directly from the 3200A rear panel: X-Y plotter, Epson® or Okidata® type printer. Data can also be recalled and viewed on the two LED displays. Test results can also be left in protected memory for later retrieval by a printer, a computer or through a modem if the analyzer is remotely located.

System Ordered in One Mainframe:

3000A	Programmable Transmission/Audio Test System	\$9395.00
Option 002	Rackmount mainframe	130.00
Option 004	Intermodulation Distortion Analysis (IMD)	850.00
Option 005	Generator Special Functions Group (Toneburst, Sine/Step)	895.00
Option 006	Generator De-emphasis Group (10, 25, 50, 75 μ s)	495.00
Option 009	GPIB Computer Interface	590.00
Option 010	Analyzer Notch Lock	350.00

System Ordered in Separate Mainframes:

3100A	Programmable Audio Generator	\$4250.00
Option 002	Rackmount Mainframe	100.00
Option 004	IMD Generator	275.00
Option 005	Special Functions Group (Toneburst, Sine/Step)	895.00
Option 006	De-emphasis Group (10, 25, 50, 75 μ s)	495.00
Option 009	GPIB Computer Interface	295.00

3200A	Programmable Transmission/Audio Analyzer	\$5495.00
Option 002	Rackmount Mainframe	100.00
Option 004	IMD Analyzer	575.00
Option 009	GPIB Computer Interface	295.00
Option 010	Notch Lock	350.00
Option 011	Remote Self Check	350.00

Packaging Option Available for Each of the Above Instruments:

Option 003	Amber-Color Acrylic Tilt-Up Cover with Lock	\$110.00
Option 008	Rugged Flight Case	240.00

SOUND TECHNOLOGY, INC.

Distortion Measurement Systems

1701A

1710A

1700B

1700 Series

Distortion Measurement Systems

- Pushbutton frequency selection is fast and repeatable
- Fully automatic nulling circuits measure distortion as low as 0.0009% in five sec.
- RMS, peak, and average responding meter circuits let you measure to accepted standards
- Measure floating sources from 30μV to 300V; break ground loops with the built-in balanced voltmeter; measure power in dBm or in watts across 8 ohms
- Internal 10Hz to 110kHz balanced and floating oscillator is adjustable from -90 to +26dBm in 0.1dB steps
- Measure signal-to-noise ratios with 100dB dynamic range
- Automatic Set Level and IM distortion measurements optional

1700B Distortion Measurement System. **\$3200.00**

Option 002 Rackmount Kit **130.00**

Option 005 dBm Meter Scale and Front Panel **390.00**

1701A Precision Distortion Measurement System. **\$3250.00**

Option 002 Rackmount Kit **130.00**

Option 004 Intermodulation Distortion Analyzer. **750.00**

1710A Professional Distortion Measurement System. **\$3990.00**

Base unit includes Automatic Set Level and Selectable Average, RMS, Peak Responding Meter Circuits

Option 002 Rackmount Kit **130.00**

Option 004 Intermodulation Distortion Analyzer. **975.00**

Option 005 Output Attenuators and Meter Calibrated for both 150 and 600 ohms. **350.00**

Option 008 Rugged Flight Case (Available for above instruments) **240.00**

Accessories

1200-6000 8 ohm, 1% tolerance, 250W, non-inductive load resistor. **\$ 40.00**

31001 Factory retrofit of Auto Set Level (option 003) into 1700A/B, 1701A and 1710A **450.00**

SPECIFICATIONS

GENERATOR	1700B	1701A*	1710A

M Series

M Series Modular Mixing Consoles

Usability, and simplicity with flexibility was the key instruction in the design brief. "A 'live audio' mixer with the basic essentials for Concert Sound Reinforcement, Theatre, Television Production and Multi-track Recording, incorporating the suggestions of many experienced users, incorporated in an affordable package."

For television production, the matrix can create mix feeds to production assistants and camera operators as well as actors/participants not required to hear certain parts of the production (i.e. mix-minus) and can feed various VTR's with separate mixes and provide primary and secondary transmission feeds.

The extruded aluminum mainframe is available in two sizes, 34mu (up to 24-8-2) and 42mu (up to 32-8-2), housing a variable number of inputs (1mu) modules and the eight groups and master (10mu) module. Cosmetically designed to enhance any production control room, the "M Series" is built to withstand the rigors of mobile and location work, and the modular construction facilitates efficient "on the spot" servicing.

Full visual monitoring is provided by eleven high intensity LED bargraphs reading the VU scale of stereo masters, 8 sub groups, solo, six auxiliary and the four matrix outputs.

- 16-8 16 channel console. 16 input modules and 8 blank modules in a 24-8 frame. Includes 8 subgroups with 16 track monitoring facilities, external power supply **\$10,335.00**
- 24-8 24 channel console. 24 input modules and 8 subgroups with 16 track monitoring facilities, master selection and external power supply **11,595.00**
- 32-8 32 channel console. 32 input modules and 8 subgroups with 16 track monitoring facilities, master section and external power supply. **13,995.00**

CM-4400 Digital Routing and Muting Synchronized to SMPTE

CM-4400 Series Modular Mixing Consoles

The CM-4400 with its Digital Routing System provides a superior alternative to conventional consoles. Some of the advantages of this system are rapid assignment setups and changes, immediate visual assignment indication, pre-programmed muting, and with the optional external computer interface it is possible to have all muting and assignment control synchronized to SMPTE Time Code.

The CM-4400 is of fully modular construction. Each unit is 35mm or 1.377" wide. The frame prices include the master module, computer module, meter bridge and external power supply.

- 32 WPB **\$39,655.00**
- 32 Series **30,655.00**
- 28 WPB **32,595.00**
- 28 Series **28,995.00**
- 24 WPB **29,475.00**
- 24 Series **24,275.00**
- 16 WPB **24,455.00**
- 16 Series **19,255.00**

WPB after model number indicates unit comes with patchbay.

SOUND WORKSHOP

Mixing Consoles/Storage/Editing System

Series 34C

Series 34C Modular 24-Bus Audio Recording/Mixing Consoles

- Clear, uncluttered layout for quick understanding of control locations and purpose
- All circuitry is high slew, yielding unexcelled transient response
- Dynamic LEDs are all driven from constant current sources, eliminating clicks and induced power supply ripple
- Line and mike inputs are fully balanced designs using IC and discrete devices
- 4-band equalizer with sweepable frequency selection
- Auxiliary send system consists of 6 send buses configured as four mono sends and one stereo send
- Stereo mix bus serves as the monitor mix bus during tracking sessions
- Solo systems are provided on both the monitor and channel signal paths
- Consoles equipped with the ARMS console computer offer an independent solo/mute system that further enhances the function of the Series 34's standard systems
- High resolution metering modules provide 40 segment, 3-color LED displays that feature both peak and average modes
- Patch bay is an expandable modular

design providing 7 jacks per I/O channel plus complete facilities for Master Module functions and an array of external signal processing gear • Mainframe is a unitized, welded, steel structure, not a series of bolted-on sections

Video Editor Interface	POR	—

ARMS Computer pricing includes mono VCA grouping package.

DISKMIX™ Console Automation Storage/Editing System

- Only one track of the multi-track tape recorder is needed for time code. This track may be shared for video lock-up, etc.
- You can start and end anywhere within a mix
- No cumulative delays are built up during the mix process regardless of the number of update passes
- An unlimited number of mixes may be stored. Up to 99 mixes can be saved under any one mix name (Songcode)
- All mixes are stored in complete form. New sections are automatically merged after each pass. There is no need to construct or "join" mixes
- DISKMIX is a "slave" type device which may be "driven" by any audio or video production system which uses SMPTE Time Code
- Complete offline facilities allow sections of mixes to be "spliced" and "merged" on disk without having to run the tape. There is no arbitrary limit to the number of mixes that may be spliced or merged using the offline functions. The merge function allows specific faders and/or mutes to be selected for each mix merge
- Fast, transparent operation does not get in the way of the creative process. Logical on-screen menus allow selection of all functions without the need for cumbersome typing or memorization of command syntax rules
- Optional custom keypad provides convenient full system operation (except for entering Songcodes, Titles, and Notes), eliminating the need for the computer keyboard at the console
- All important system information is clearly displayed in color on-screen windows
- System is hosted by a PC or PC Clone computer. All Data files are in standard MS/PC-DOS format

DISKMIX System \$7,950.00

Included:
DISKMIX Computer, DISKMIX System Software, DISKMIX Interface Cable

Required:
PC/XT Compatible Host Computer, Display Monitor, PC-DOS 3.1, ARMS Compatible Audio Console
DISKMIX Keypad (optional) \$950.00

STRAND LIGHTING

Portable Lighting Kits

KIT V

KIT VII

Pulsar 600W

A light, compact, open faced floodlight, it is ideally suited for remote and location work. Stand camera-mounted or handheld, the Pulsar's fiberglass "cool touch" housing is a great asset. It gives a soft edged beam with variable spread, has a rapid-turn fast focus knob and an integral heat dissipator—and slips into compact storage. Operates both 120V and 240V lamps.

lanebeam 650W

lanebeam floodlights have basic features in all sizes: They are open faced, lightweight, compact, durable and ideally suited for work in film, television and still photography. They provide a soft edged beam with variable spread and fast focus. The 650W model accepts a variety of tungsten-halogen lamps for both 120V and 240V operation.

lanebeam 1000W

The 650W and 1000W lanebeam floodlights feature molded fiberglass housing for "cool touch" operation permitting faster pack-up after shooting as well as comfortable handling. The 1000W accepts a

variety of tungsten-halogen lamps and like all lanebeams has available a wide variety of accessories and both yokes for stand mounting as well as gaffer grips.

lanebeam 2000W

The largest lanebeam offered as a kit component is the 2000W which features a lightweight aluminum housing, will operate on 120V and provides a soft edged beam with variable output. It has rapid-turn fast focus knob, is equipped with yoke and stand mounting bracket and a complete range of mounting and grip equipment and accessories. Will also operate on 240V.

ladi 1000W

This unit provides high output fill light for portable and remote applications in television, film and still photography and features a one piece reflector for a wide field and smooth light distribution. The compact housing with folding, springloaded integral 4-way barndoors is ventilated for cooling and efficient operation on a wide range of tungsten-halogen lamps for both 120V and 240V operation.

Retrofit Kits

(For old diecast Lekolites)

2000 1000W kit for 6" x 9" (152 x 229mm) and 6"
x 12" (152 x 305mm), includes complete rear-end
assembly and front barrel, 11 lbs. (5kg) \$190.00
2016 1000W kit for 6" x 16" (152 x 406mm),
includes complete rear-end and front barrel,
11 lbs. (5kg) 190.00
2750 500/750W kit for all 6" (152mm) units, includes
complete rear-end assembly, 6 lbs. (2.7kg) 150.00

Notes

- Fixtures are provided with 3' (.9m) leads, connectors and C-clamp for hanging unless otherwise specified
- To specify grounded connector type, add suffix to catalog number
GP—Three Pin
GTL—Twistlock
GR—Parallel Blade U-Ground
HGP—Harj-lock Pin Connector
- Lamps and color frames not included unless otherwise noted
- Lamps listed are 3200°K unless otherwise noted. Lamps and fixtures are 120V unless otherwise noted
- For international applications, designate 100, 120, 220 or 240V operation

STRAND LIGHTING

Lighting Control

Mantrix™ 2S Control Console

• A complete two scene preset console with up to 56 manual overlapping submasters • Operates as a standard four scene preset Mantrix 2 at the flip of a switch • Electronic matrix patch (optional) with displays allows assignment of dimmers to control channels at proportional levels • Controls up to 288 dimmers on 12 to 48 channels • Split crossfader with tracking LED display • Fade rate control for times from 1 second to 4 minutes with manual takeover • Grand Master • Blackout switch • Multiplexed control signal for control of up to 96 2.4kW dimmers on 4 wires, or 97 to 288 dimmers on 8 wires • Controls any combination of 2.4kW, 6kW and 12kW CD80 dimmers • Ideal for use as manual back-up or stage manager's panel with Light Palette® or MiniLight Palette®

Single Tier Consoles

8110	12 channels, without patch	\$2,070.00
8111	12 channels with patch	3,150.00
8112	24 channels, without patch	2,700.00
8113	24 channels with patch	3,780.00
8108	36 channels, without patch	3,420.00
8114	36 channels with patch	4,500.00
8109	48 channels, without patch	4,050.00
8115	48 channels with patch	5,130.00

Double Tier Consoles

8116	36 channels with patch	\$4,950.00
8117	48 channels with patch	5,580.00
8118	60 channels with patch	6,300.00
8119	72 channels with patch	6,930.00
8120	84 channels with patch	7,560.00

Mantrix 2S With Memory

(All prices include 25' control cable)

Single Tier Consoles

8181	12 channels	\$8,186.00
8182	24 channels	8,822.00
8183	24 channels with video module	9,550.00
8184	36 channels	9,458.00

Double Tier Consoles (all with video modules)

8186	36 channels	\$10,641.00
8187	48 channels	11,278.00
8188	60 channels	11,914.00
8189	72 channels	12,550.00

Light Palette Control Console

• Programs and executes six-part fades • Six timed or manual faders, two of which are split • Electronic proportional patching • Programmable fade profiles • Integral memory backup system • Multiplexed output • Special effects package

Light PalettePOR

Mini Light Palette Control Console

• Two 9" high resolution CRT displays with all operational information • Proportional patch for assigning dimmers and levels to channels • 7 overlapping pile-on submasters, 3 inhibitive submasters • Executes up to 3-part cues • 3 crossfaders, 1 of which is split • 200 control channels for up to 384 dimmers • Special effects package • Electronic back-up • Disk for library storage • Interfaces to any dimmer • Diagnostics program

Options

• Designer's remote console • Remote control unit • Printer • Remote monitor • Full system back-up • Mantrix manual console • Non-dim and auxiliary controls

Mini Light PalettePOR

Mantrix 2S

Mini Light Palette

Light Palette

Lightboard M

MLP/2 Mini Light Palette Two Control Console

• Two full-color, high resolution CRT displays are integral • Ability to respond to ambient lighting conditions: dark control booth or bright work lights, MLP/2 adjusts the CRT intensity automatically • Up to 100 unique lighting groups can be loaded onto 10 fully overlapping submasters for ease of operation • Lighting information on all 10 submasters may be assigned and replaced quickly and easily providing random access to 10 banks of manual presets—it's like having a 10-scene preset and memory console in one • Bump buttons are included for even greater effect

MLP/2POR

Lightboard M Control Console

• Multiplex control signal to drive 384 dimmers, with optional expansion to 768 • Up to 96 channels can be addressed digitally or manually • Up to 48 overlapping submasters • 200 memories • 2 internal special effects generators • 8 remote field-programmable function keys for automated systems • 3 1/4" disk drive standard • Video output standard • Optional remote focus module and printer • Bump buttons on channels and submasters with level control • Recorded or manual rate control

Lightboard MPOR

CD80 Dimmer Packs With Toroidal Chokes

• Compact design: Twelve 2.4kW, six 6kW or six 12kW dimmers in a 8 1/2" H x 23 1/2" W x 20 1/2" D (21.6 x 59.7 x 53.2cm) package • Toroidal chokes • Terminal block phase changer in 2.4 and 6kW packs • All electronics on a single, easily accessible card • Failure indicators for power, overtemp and over voltage • Multiplexed control wiring and "daisy-chained" connections for expandability

- 8124** 120V with 12 2.4kW dimmers, two 20A GTL receptacles per dimmer, 65 lb. (29.5kg) \$4035.00

CD80 Pack

CD80 Dimmer Bank

CD80 Dimmer Module

CD80 Dimmer Banks and Modules

• Compact, high density dimmer banks • Dual 2.4kW, single 6kW or 12kW dimmer modules • Designed for all theatrical and television applications

Dimmer Banks

• Extremely shallow—only 17 3/4" (.45m) deep • Up to 96 plug-in 2.4kW dimmers in 24 1/2" (6.2m) width • Ideal for dimmer per circuit applications • Equipped with quiet fans to maintain proper operating temperatures • Designed to reduce installation costs • Full length guides and self aligning dimmer connectors for positive dimmer module alignment

Dimmer Modules

• Heavy gauge aluminum chassis • Heavy-duty, self aligning power and control plug • Toroidal chokes • Plug-in non dim modules available

CD80/8 Dimmer Banks

• High performance, increased filtering chokes that address the requirements of rise time and harmonic distortion in applications where electrical noise and lamp sing is a concern • Racks allow control from more than one console and have the provision of "status quo memory" operation • Compatible with all control consoles in the Strand family • Available with 2.4kW and single 6.0kW modules • No loss in density—48 modules per rack • Compact size—only 17 3/4" (0.45m) deep x 24 1/2" wide • Easy to install; simple to maintain • Quiet fans to maintain operating temperatures • Optional split rack control • Optional "status quo" memory

CD80/8 Dimmer Bank

1571	1 1/2" (38mm) Tormentor pipe, 12' (3.7m) long, wall mounted, 44 lbs. (20kg)	160.00
1572	Three-rung ladder with four 18" (457mm) 20A pigtails and two 12" (3.7m) 20A feed cables. 60 lbs. (27.2kg)	696.00
1573	Three-rung ladder, same as 1572, unwired. 50 lbs. (22.7kg)	370.00

Stands

1513	4'-7" (1.2m-2.1m) stand with 14" (356mm) diameter. 20 lbs. (9.1kg) base	\$113.00
1514	5'-8" (1.5m-2.4m) stand with 18" (457mm) diameter. 25 lbs. (11.3kg) base	165.00
1519	"Trojan" folding stand for lanebeam 2000	134.00
1520	3'-5" (0.9m-1.5m) stand, castered 30 lbs. (13.6kg) legs	196.00

1521	5'-8" (1.5m-2.4m) stand, castered 40 lbs. (18.1kg) legs	\$ 200.00
1522	Stand, heavy-duty aluminum castered, extends from 4' (1.22m) to 8'6" (2.6m) 18.5 lbs. (8.4kg)	353.00
1529	Stand for 4500MP Pulsar	68.00
1530	Small kit stand, aluminum, folds to 21" (533mm) extends to 8'6" (2.6m), 5/8" (16mm) stud. 2.3 lbs. (1.04kg)	75.00
1531	Wind-up stand, extends to 8'6" (2.6m)	495.00
1535	Regular kit stand, aluminum, folds to 30" (762mm), extends to 8'6" (2.6m), 5/8" (16mm) stud. 2.9 lbs. (1.3kg)	88.00
1631	Gladiator stand for 12,000 HMI	5725.00

Operating Poles

1941	Operating pole, 6' (1.8m) 2.1 lbs. (0.95kg)	\$107.00
1942	Operating pole, 9'3" (2.8m) 2.8 lbs. (1.3kg)	112.00
1943	Operating pole, 12'7" (3.8m) 3.5 lbs. (1.6kg)	118.00
1944	Operating pole, 15'10" (4.8m) 4.2 lbs. (1.9kg)	124.00

Lite Lifts and Hangers

1980	Pantograph lite lift, supports 12 lbs. (5.4kg), extends 10' (3m) 13.5 lbs. (6.1kg)	\$428.00
1981	Pantograph lite lift, supports 25 lbs. (11.3kg), extends 10' (3m) 13.5 lbs. (6.1kg)	450.00
1983	Pantograph lite lift, supports 35 lbs. (15.9kg), extends 10' (3m) 15.5 lbs. (7kg)	571.00
1984	Telescopic hanger, 10-20 lbs. (4.5-9.1kg), extends 12'3" (3.7m) 16.5 lbs. (7.5kg)	320.00
1985	Telescopic hanger, 10-20 lbs. (4.5-9.1kg), extends 7'4" (2.2m) 12.5 lbs. (5.7kg)	279.00
1986	Telescopic hanger, 20-40 lbs. (9.1-18.1kg), extends 12'3" (3.7m) 14.5 lbs. (6.6kg)	376.00
1987	Telescopic hanger, 20-40 lbs. (9.1-18.1kg), extends 7'4" (2.2m) 15 lbs. (6.8kg)	320.00

Extension Cables

6410	10' (3m) 3-wire grounded pin connectors 20A, 2.6 lbs. (1.2kg)	\$52.00
6411	10' (3m) 3-wire grounded twistlock connectors 20A, 2.6 lbs. (1.2kg)	57.00

Cases

1977	Carrying case for Century Kit I (1051)	\$271.00
1978	Carrying case for Century Kits II (1052), III (1053), IV (1054), V (1055), VI (1056), VII (1057), VIII (1058) and IX (1059)	311.00
1979	Carrying case for Century Kit XI (1061)	311.00
3363	Fixture case for 575W HMI head, 25 lbs. (11.3kg)	504.00
3366	Ballast case for 575W HMI ballast, 34 lbs. (15.4kg)	790.00
3573	Fixture case for 1200W HMI ballast, 39 lbs. (17.7kg)	728.00
3576	Ballast case for 1200W HMI ballast, 39 lbs. (17.7kg)	896.00
3683	Fixture case for 2500W HMI head, 43 lbs. (19.5kg)	830.00
3686	Ballast case, castered for 2500W HMI ballast, 45 lbs. (20.4kg)	952.00
3786	Ballast case, castered for 4000W HMI ballast, 52 lbs. (23.6kg)	986.00
3793	Fixture case for 4000W HMI head, 49 lbs. (22.2kg)	964.00

Recorder/Reproducer

A807

A807-2/2VUK

A807 Recorder/Reproducer

- Rugged transport with aluminum diecast chassis
- Servo controlled spooling motors and brushless DC capstan motor
- 3 tape speeds
- User friendly operating concept
- Shuttle controller and "one hand cueing"
- Microprocessor controlled tape deck and audio electronics
- Phase compensated digitally controlled audio electronics, no alignment potentiometers
- Microphone inputs with 48V or 12V phantom powering
- NAB/CCIR equalization switchable
- Built-in monitor speaker for input and "off tape" monitoring
- RS-232 serial port and parallel remote port
- Scissors, tape marker, cut and splice blocks optionally available

With the A807 series recorder/reproducer, Studer introduces a compact low cost professional recorder for a multitude of applications. Its compact size (19" rackmount compatible) makes the machine ideally suitable for all kinds of broadcast applications, on location as well as for general use in the recording field.

Recorder/Reproducer

A810 Professional Broadcast Recorder/Reproducer

- Four tape speeds front panel selectable
- Servo control of capstan and spooling motors
- Precision milled, diecast transport chassis
- Selectable "softkey" functions, including up to 4 autolocate points, start locate, tape lifter defeat, vari-speed mode, tape dump, remote control enable, and fader start
- Zero locate
- Real-time counter automatically translates time with speed change
- Self diagnostic system
- Advanced phase compensation in audio circuits
- Digital storage of audio parameters
- Instant realignment for alternate tape formulation
- Optional center track time code channel with separate time code heads and microprocessor delay for time coincidence of code and audio
- Optional serial communications bus for RS-232 and SMPTE bus

With internal function re-programming as well as a variety of options and configurations, the A810 can be tailored to virtually any professional recording need.

Applications

- Broadcast production
- Video post-production
- Broadcast on-air
- Recording studio mastering
- Critical quality tape copying
- TV stereo simulcast
- High quality industrial A/V

Order Numbers

- VU = Portable/rackmount
- VUP = Separate VU panel for rack or console mount
- VUK = Includes rolling console
- 1 = mono
- 0.75 = 2 track 0.75mm separation
- 2/2 = 2 track 2mm separation
- TC = Center track time code channel

Reel-to-Reel Recorders

B77 MKII Professional Audio Recorder/Reproducer

- Massive diecast aluminum alloy chassis for transport stability
- Three heads for off tape monitoring • Three motors • Servo controlled direct drive capstan motor for low wow and flutter • 3³/₄ and 7¹/₂ ips tape speed (standard version) • Solid-state, full logic transport control with motion sensing for safe tape handling • 10¹/₂" reel capacity
- Built-in variable speed control • Input switching for track bounce and tape echo effects • Front panel microphone inputs (Hi- or Lo-Z)
- VU meters with adjustable peak indicators • Edit switch for monitoring tape in all transport modes • Splicing block with tape cutter
- Infrared end-of-tape sensor • Modular electronics for fast servicing
- Carry handle on cabinet versions

PR99 MKII Professional Broadcast Recorder/Reproducer

- Balanced and floating inputs and outputs • Calibrated input and output levels • Input and output mode switching • Full logic transport control
- Repeat function • Microprocessor controlled real time counter • Autolocate and zero locate functions programmed to stop precisely on cue
- Variable speed control with 7 halftone range • Splicing block with built-in tape cutter • Modular electronics for easy servicing • 2-way self-sync for monitoring off record head • Front panel microphone inputs • Ready/Safe switches for recording modes • Adjustable headphone output with ample amplification • Rackmount flange and metal cage standard • Tape speed options: 3³/₄-7¹/₂ ips (STD) or 7¹/₂-15 ips (HS) • Tape dump button • Edit switch for monitoring audio in all transport modes • Connections for fader start, remote control (serial or parallel), external vari-speed and motor panel • Massive diecast aluminum alloy transport chassis

The PR99 MKII offers professional production features and superb audio performance in a compact, economical package. In addition to balanced and floating "+4" inputs and outputs, the PR99 MKII includes a microprocessor-controlled real time counter with autolocate functions for faster production and easier editing.

TELEPHONE HYBRID AND TELEPHONE SYSTEM

Hybrid

- Effective attenuation of sidetone signals
- Separate transmit and receive paths
- Electronic feedback loop for matching to prevailing line conditions
- Built-in limiter
- Bandpass filters for voice clarity and system protection

Telephone System

- Palm-sized remote module
- Microphone input
- Headphone output
- VU meter for line level
- Level controls for mic, telephone receive, and headphone
- Integrated mic/line amplifier

Telephone Hybrid System

Specifications

TRANSMIT CIRCUIT

Input sensitivity, adjustable	+ 6 dBu ... + 15 dBu
Input impedance	>5 kOhms
Input symmetry	>60 dB
Input balanced and floating	
Bandpass in transit circuit producing frequency response of a telephone capsule	300 Hz ... 3400 Hz (-3 dB), 12 dB/oct.
Transmit level	-13 VU at 600 Ohms
Total harmonic distortion	<1%

RECEIVE CIRCUIT

Input level, nominal	-13 VU at 600 Ohms
Max. input level	+3 VU
Output sensitivity, adjustable	+6 dBu ... +15 dBu
Output balanced and floating	
Output impedance	≤50 Ohms
Load	≥200 Ohms
Frequency response: bandpass	300 Hz ... 3400 Hz (-3 dB), 30 dB/oct.
Built-in noise generator, level adjustable	
Total harmonic distortion	<1%
Threshold fixed	at approx. +16 dBu
Attack time	approx. 0.5 msec
Release time (IEC 268-8)	approx. 0.5 sec

HYBRID CIRCUIT

Input/output balanced and floating	
Test voltage	1kV
DC input/output impedance	1500 Ohms
Balancing range R	200 Ohms ... 2000 Ohms
Balancing range C	0 ... 0.1 μF
Sidetone attenuation-sine wave (dummy load)	>40 dB
Sidetone attenuation-white noise (dummy load)	>30 dB
Sidetone attenuation on an exchange line, depending on quality of line (measured with voice)	approx. 20 dB
Symmetry	>60 dB
Matching is controlled by the voice signal in the transmitted circuit.	
Threshold adjustable, rang	0 ... -25 dB

MICROPHONE/LINE AMPLIFIER

HYBRID INPUT

Nominal level	+6 dBu
Max. input level	+24 dBu
Input impedance	≥10 kOhms
HYBRID OUTPUT	
Nominal level	+6 dBu
Max. level	+22 dBu
Load impedance	≥200 Ohms

Single Telephone Hybrid System

19" card frame with built-in power supply, wired for two electronic telephone hybrids (cradles) and one relay unit, equipped with one electronic telephone hybrid (cradle) consisting of: 1 x 19" card frame 1.918.102.00; 1 x telephone hybrid (cradle) with noise gate 1.915.764.00; 1 x relay unit 1.915.762.00.
#75.700.89114 \$2100.00

Dual Telephone Hybrid System

19" card frame with built-in power supply, wired for two electronic telephone hybrids (cradles) and one relay unit, equipped with two electronic telephone hybrids (cradles) consisting of: 1 x 19" card frame 1.918.102.00; 2 x telephone hybrid (cradles) with noise gate 1.915.764.00; 1 x relay unit 1.915.762.00.
#75.700.89224 \$3100.00

Telephone Audio System

19" card frame with built-in power supply, equipped with one electronic telephone hybrid and one relay unit, one microphone and line amplifier, one remote control unit with 10M cable consisting of: 1 x 19" card frame 1.918.102.00; 1 x telephone hybrid (cradle) with noise gate 1.915.764.00; 1 x relay unit 1.915.762.00; 1 x mike and line amplifier 1.915.906.01; 1 x remote control unit with 10M cable 1.918.106.01.
#75.700.89113 \$2725.00

STUDIO TECHNOLOGIES, INC.

Recognition/Control Unit/
Stereo Simulator**RCU-1 Recognition/Control Unit**

- Recognizes if input signal is stereo or monaural. Circuitry compensates for phase errors and level differences
- High performance cross-fade circuit automatically switches stereo simulator in-circuit on detection of mono. Compatible with the AN-2 Stereo Simulator or other manufacturers' products
- Manual override functions using front panel controls or logic level signals from remote control equipment
- Two auxiliary relay contacts provide contact closures on recognition of mono and simulator in-circuit conditions

Applications

As television broadcasters begin MTS broadcasting, most programming material available is still monaural. Stereo simulators can greatly improve the listener's appreciation of "stereo" TV. However, when a stereo simulator is used in the television broadcasting on-air audio chain, it must be switched into the chain for mono programming and out of the chain for programming that is already stereo.

The RCU-1 Recognition/Control Unit is designed to solve the problem of controlling the stereo simulator by determining whether the input is mono or stereo and automatically switching a stereo simulator in-circuit when mono is detected.

The RCU-1 is a reliable, real-time device designed expressly for on-air MTS.

The RCU-1 can also be employed as a dedicated mono/stereo recognition device when connected to a broadcast video tape recorder. Prior to broadcast, a video tape can be previewed to determine if the audio channels are mono or stereo. Broadcast audio routing and processing standards can more readily be maintained.

How the Recognition/Control Unit Works

The RCU-1 incorporates circuitry which continuously compares the L-R signal level with the L+R signal. If mono is recognized (i.e. the L+R signal is predominant) the circuitry switches the stereo simulator in line; if stereo is recognized (i.e. the L-R signal is predominant) the stereo simulator is switched out, allowing the stereo program to be broadcast. During silent passages the RCU-1 "remembers" the preceding mono/stereo condition and remains in that state.

When program material is mono, under ideal conditions the two inputs to the RCU-1 will be identical and have no L-R component. In reality, this is seldom the case due to conditions such as tape head misalignment. Extensive circuitry is used to allow $\pm 45^\circ$ of phase error (at 1kHz), and 10dB of level difference to still be recognized correctly.

The line outputs of the RCU-1 employ VCA based crossfading circuitry, connecting the inputs to the outputs when the input is recognized as stereo, and connecting the output of the stereo simulator to the RCU-1 outputs when the input is recognized as mono.

Specifications**Input and**

Output Levels: +8dBm (will operate correctly at +4dBm)
Input Impedance: 20K ohms, electronically balanced
Output Impedance: 100 ohms, electronically balanced
Output to Simulator: Sum of left and right (L+R) line input signals
Mono Input Signals: Mono input signal must be present on both left and right line inputs for correct recognition

Frequency Response: 10Hz to 20kHz, ± 1 dB
Distortion: .04% THD at max output (+22dBm)
Signal-to-Noise Ratio: 80dB
Output Signal Switching: VCA based cross-fade circuit
Recognition Section: Will recognize phase error of $\pm 45^\circ$ at 1kHz, and channel level difference of 10dB

Remote Control Inputs: Current limited logic level
Auxiliary Relay Contacts: Isolated, sealed, bifurcated type
Connections: 26-position screw terminal strip
Power: 115/230V, 50-60Hz, 10W
Dimensions: 1 $\frac{3}{4}$ "H x 19"W x 7"D (one standard rack space)

RCU-1\$1200.00

RCU-1

AN-2

Mod-1 Optional Recognition Circuitry

The Mod-1 adds to the RCU-1 the ability to recognize a signal on the left channel only as mono. Signals on the right or both channels will be recognized as stereo. The Mod-1 is an optional feature.

Physically, the Mod-1 consists of a printed circuit board that is installed inside the RCU-1's cabinet, and electrically connected to five points on the RCU-1 motherboard circuitry. The Mod-1 can be installed at the factory or in the field.

Mod-1\$100.00

AN-2 Stereo Simulator

- Restores natural timbre of acoustic instruments—adds warmth and reality to synthesized ones
- Simulates the sound of a spaced pair of microphones without loss of mono compatibility
- Adds "air" and "definition" to mix, reducing the need for equalization
- Completely mono-compatible—no fade-outs or phase problems
- Simulates space without reverberation by using random, non-recursive filter techniques
- Variable width control allows "spread" and "size" of image to match sound.

Applications**Recording Studios:**

Many times, multi-track recording of voices, an instrument or group of instruments must be assigned to a single track. This results in the loss of the complex overtones and relationships in their true sound.

The Stereo Simulator recreates that stereo space and depth. This makes it especially useful with purely electronic instruments such as synthesizers and guitars—instruments usually assigned to a pan pot during mixdown (a mono device). The Stereo Simulator creates a much more pleasing "spread" to the sound, allowing the instrument to be heard even in the most complex mixes.

Also, by using the Stereo Simulator's modulation feature, many effects are possible such as stereo chorusing and stereo pitch blends.

The Stereo Simulator has a place in both small and large studios as a track saver and versatile enhancer.

Broadcast & Film

Unlike most outboard devices such as time delays, harmonizers and equalizers, the Stereo Simulator is fully mono compatible.

This means recordings produced with the Stereo Simulator suffer no balance distortion when heard on AM radio.

The Stereo Simulator is also a valuable resource for television broadcasters that offer stereo transmission since much of the material they must broadcast is, in fact, monaural.

And, it's ideal for converting mono film tracks to a fuller, more contemporary "stereo" sound for either broadcast or theater use.

Specifications**Input and**

Output Levels: Selectable—10 or +40dBm, electronically balanced
Frequency Response: 20Hz to 15kHz ± 2 dB
Distortion: 0.2% THD
Dynamic Range: 90dB
Signal-to-Noise Ratio: 70dB
Power: 115/230V, 50-60Hz, 10W
Dimensions: 1 $\frac{3}{4}$ "H x 19"W x 7"D (one standard rack space)

AN-2\$650.00

STUDIO TECHNOLOGIES, INC.

Audio Simulator/Microphone Preamp

ISS

Mic-PreEminence

ISS Integrated Audio Simulator System

Through its full remote capabilities, the ISS is completely equipped to interface with a station's automation system or operator controls. Or, the ISS recognition card can be added, enabling the ISS to precisely determine the mono/stereo status of the audio input signals and automatically switch the simulator into the on-air audio chain upon recognition of mono. The recognition circuitry detects mono in three ways. A signal on either the left or the right channel only is recognized as mono. If there are signals on both the left and right channels, the recognition circuit accurately compares them to identify stereo or mono. One channel phase reversals are a constant concern for MTS broadcasters. To prevent loss or degradation of audio to mono listeners, the ISS Polarity Correction card can be added. It continuously monitors the input signals and upon recognition of a phase reversal, automatically restores signal integrity. Sometimes you don't need simulated stereo, so the ISS electronically crossfades between the audio input signals and the simulated stereo. The ISS circuitry selects one of three crossfade speeds for smooth, unobtrusive transitions.

Specifications

Input and Output

Format:	Dicrete left and right
Input Level:	0, +4, or +8dB, switch selectable
Input Impedance:	20k ohms, electronically balanced
Output Level:	0, +4, or +8dB, switch selectable
Output Impedance:	100 ohms, electronically balanced
Maximum Output Level:	+26dBu into 600 ohms
Frequency Response (Simulator By-passed):	20Hz to 20kHz, ±0.1dB
Signal to Noise Ratio (Simulator in Circuit):	76dB
Distortion (THD): (20Hz to 20kHz):	Simulator by-passed: < 0.06%, Simulator in circuit: < 0.40%
Remote Control Inputs:	Optically coupled, current limited logic level, switch selectable for continuous or pulse type
Output Signal Switching:	VCA based crossfade circuit
Auxiliary Relay Contacts:	Isolated, sealed, bifurcated type
Connections:	Screw terminal strip
Power:	115/230V, 50-60Hz, 100W
Dimensions:	5.25" H x 19.00" W x 13.00" D three standard rack spaces
Weight:	19.0 lbs.
ISS	\$4995.00

Accessories

Recognition Module

Precisely determines the mono/stereo status of the input audio programming and automatically switches the simulator into the on-air audio chain upon recognition of mono **\$995.00**

Polarity Correction

Monitors input signals and upon recognition of a phase reversal, automatically restores signal integrity **\$995.00**

Extender

Allows testing of any module easily **250.00**

Mic-PreEminence Microphone Preamp

- Two independent channels each with a gain control
- Transformerless electronically balanced input and output
- Phantom power, switchable on/off
- Minimal number of capacitors in audio path
- Two stage LED metering
- Output phase reverse switch
- Output unbalance switch
- Noise within 1dB of theoretical limit (-129.5dB EIN)

Studios: The Mic-PreEminence can be used to minimize the signal flow through a console during original recording and over-dubbing. Put critical instruments through the Mic-PreEminence and then directly into the multi-track.

Sampling: Use the Mic-PreEminence with digital sampling. Store the best sound you can.

Location Recording: Plug a stereo mike pair into the Mic-PreEminence, then connect the output directly into a two track digital recorder.

Specifications

Power Requirements:	115 or 230VAC (Japan 100 or 200VAC), switch selectable 50/60Hz, 10W
Connectors:	XLR type, pin 2 high
Input/Output:	Electronically balanced, capacitor coupled
Noise:	-69.5dB at 60dB Gain (i.e., -129.5dB EIN, which is 1dB above theoretical minimum). (20Hz to 20kHz bandwidth, 150 ohm resistor on input)
Frequency Response:	+0/-1.5dB, 20Hz to 60kHz, 40dB Gain +0/-0.5dB, 10Hz to 90kHz, 68dB gain +12 to +68dB, adjustable
Gain Range:	20V/μs
Slew Rate:	0.0020% at 1kHz and 30dB gain 0.0025% at 20kHz and 30dB gain
Distortion:	
Input to Output Phase Shift:	9° maximum, 20Hz to 20kHz
CMRR:	70dB, 20Hz to 20kHz, 30dB gain
Output Level at Clipping:	+30dBu into 10K ohms balanced, +29dBu into 600 ohms balanced, +24dBu into 10K ohms unbalanced, +23dBu into 600 ohms unbalanced
Dimensions:	1.75" H x 19" W x 7" D (one standard rack space)
Mic-PreEminence	\$795.00

When you have to tame heavy duty power problems.

NEW **WHR Series** **STABILINE®** **Automatic Voltage** **Regulators**

- High accuracy $\pm .5\%$ to $\pm 1\%$
- Efficiency 99%
- Low harmonic distortion and internal impedance
- 350 single and three phase models
- Single and individual phase control
- Input circuit breaker standard on many models
- Customization available
- Narrow range (+7.5%, -15%) typical input correction models
- Wide range (+12.5%, -25%) typical input correction models
- Ratings from 2 to 1680kVA

WHR Series STABILINE® Automatic Voltage Regulators are high power regulators that correct the wide fluctuations in input voltage that can cause irreparable computer memory loss or damage to components in sensitive electronic equipment. They are ideally suited to protect applications such as process control, computer centers, X-ray equipment, broadcast transmitters, laboratories, precision machinery, lighting circuits, and electric heating.

Advantages include high efficiency (99% typical) and extremely low harmonic distortion (less than 0.25%). WHR Series units are insensitive to the magnitude and power factor of the load, so they can be used even with loads having high inrush currents.

A WHR Series regulator is comprised of three basic modules: an input circuit breaker; a control module or modules; and a power module. The input circuit breaker eliminates the need for additional circuit protection since it protects against both sustained overloads and short circuits. The solid-state control module monitors output voltage and actuates the power module if voltage fluctuates beyond the selected limits. Single and three phase models may have one control for all phases or individual controls for each phase, depending on model.

MODELS

Single Phase – Wide & Narrow Range
120V Input & Output
208/240V Input & Output
380/480V Input & Output
480/600V Input & Output
Ratings from 2.5 to 425kVA

Single Phase – 3-Wire, Wide & Narrow Range
Single & Individual Phase Control
208 & 240/120V Input & Output
Ratings from 5 to 500kVA

Three Phase – Wide & Narrow Range
Single & Individual Phase Control
208/240V Input & Output
380/480V Input & Output
480/600V Input & Output
Ratings from 7.5 to 1680kVA

Wireless Microphone Systems

Handheld Wireless Microphone Transmitters

MARK SM58/PL80	Handheld VHF transmitter: supplied with Shure SM58 or Electro-Voice PL-80 element. Features Swintek dBS audio scaling expander, 100dB dynamic range minimum. Black body standard (gold and chrome optional): supplied with 2 ea. THR-B NiCad batteries, THR-BC charger and BUB 9V battery adaptor	\$1295.00
MARK SM55	Omni handheld VHF transmitter: supplied with Sony ECM-55 electret mike element for broadcast interviewing applications. Same specifications and accessories as SM58/dBS	\$1295.00
MARK SM78, SM87, M500	Rock handheld VHF transmitters: featuring the Shure SM78, SM87, or the Beyer M500 mike elements. Same specifications and accessories as the MARK SM58/dBS.	1395.00

Mark 50A/ENG

Body Pac Wireless Transmitters

MARK 50A	Body Pac VHF transmitter: features the complementary Swintek audio scaling expander/compander dBS to achieve a S/N ratio >90dB, which helps eliminate buzz zones and other forms of low level interference. Incorporates military step attenuator with external adjust; switching Pos/Neg bias for all condenser mikes; LED indicator for compressor adjust and battery level; transmitter is equipped to accept 100K ohm music input via 4-pin TA4F jack; steel 9V battery clip. Supplied with flex antenna and battery	\$580.00
MARK 50A/S	MARK 50A/dBS with mike mute switch.	580.00
MARK 50A/2	Dual frequency MARK 50A/dBS, PL-2 input deleted	680.00
MARK 50A/ENG	Body Pac ENG dBS VHF transmitter: features the Swintek dBS audio scaling expander/compander with high gain mode for whisper sound or high impedance boom mike. In addition to dynamic mike operation, switchable Pos/Neg bias is supplied for condenser mike use. Headset monitor output for fish pole microphone. Microphone input attenuator is a military step attenuator supplied with coax antenna and batteries	\$780.00
MARK 50A/ENG/2	High powered dual frequency ENG dBS VHF transmitter: same specs as MARK 50A/ENG.	980.00
MARK 50A/UHF/ENG	UHF Body Pac dBS transmitter: same specs as MARK 50A/ENG, supplied with coax antenna and batteries.	780.00

Mark QDC

Switching Diversity AC Receivers

MARK 1L/RFSD	Pro Stage AC switchable diversity VHF receiver: features LED indicators for peak audio, analog field strength, AC, external squelch switch. Outputs: balance mike level on XLR; high level with volume control. Supplied with whip antenna, AC cord, and NiCad handheld recharger (check for receiver options).	\$1260.00
---------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------

Portable DC Receivers

MARK 3	Cinematography DC portable VHF receiver: powered by AA batteries or external ± 10-16VDC, LED indicators for analog field strength, audio and battery on. MARK 3 receiver equipped with 3-pin audio (XL) connector, internal high level switch and external LEMO power input plug. Supplied with ANT-3 antenna, batteries, and LEMO plug for external power input	\$1175.00
MARK QDC	Mini Pro Video DC Body Pac VHF receiver: supplied with dBS compander, 12dB Sinad at .5µV, unbalanced low level out at -30dBV, powered by two transistor batteries or external 12-18VDC, external LED indicator for battery power and audio level; adjustable line output at + 10dBV; pocket size; (5.6"L, 2.75"W, 90" thick) excluding knobs and connectors; weight 10 oz.	\$780.00
MARK QDC/2	Dual frequency QDC receiver: same specs as MARK QDC	\$880.00
MARK QAC	Weather resilient AC Q receiver: features 12dB Sinad at .5µV balanced low level out at -40dBV powered by external 12-18VDC source, LED modulation indicator balanced at + 10dBV.	580.00
MARK QAC/2	Dual frequency QAC receiver: same specs as MARC QAC.	680.00

Mark QAC

Complete Wireless Microphone System Packages

Handheld Switching Diversity Systems

MARK 1L/SM58	Complete Pro Vocal system featuring the Shure SM58 mike element, high-band diversity receiver, NiCad batteries with charger and carrying case	\$2588.00
MARK 1L/SM78	Same as above featuring the Shure SM78 mike element	2588.00
MARK 1L/PL80	Same as above featuring the EV PL80 mike element	2688.00
MARK 1L/SM87	Same as above featuring the Shure SM87 mike element	2688.00
MARK 1L/M500	Same as above featuring the Beyer M500 mike element	2688.00

Body Pac Switching Diversity Systems with Mike

MARK 1L/50A	Complete Pro Stage lavalier system, including pocket transmitter, Sony 55 lavalier mike, hi-band diversity receiver, transmitter battery and carrying case.	\$1988.00
MARK 1L-50A/ENG	Same as above but supplied with the hi-power ENG transmitter on specified broadcast frequencies.	2188.00
MARK 1L-50A/UHF	Same as above but supplied on UHF broadcast frequencies	2488.00

Portable Wireless Systems with Mike

MARK 3-50A	Complete Pro Cinematography hi-band system which includes receiver, lavalier transmitter, Tram lavalier mike, batteries and carrying case	\$1888.00
MARK QDC-50A	Complete Pro Video mini hi-band wireless system which includes Beta Cam	1488.00
MARK QDC/SM55	Same as above but supplied with Omni handheld transmitter.	2088.00
MARK QDC/ENG	Same as above but supplied with hi-power ENG transmitter on specified broadcast frequencies and with Sony 55 Lavalier mike.	1888.00
MARK QDC-50A/2	Dual frequency MARK QDC-50A system	1688.00
MARK QDC/ENG/2	Dual frequency MARK QDC-ENG system	2088.00
MARK QAC-50A	Complete audio/visual hi-band system featuring durable weather resilient receiver, lavalier transmitter with lavalier mike and batteries.	1288.00
MARK QAC/SM58	Same as above but supplied with SM58 handheld transmitter	1888.00
MARK QAC/50A/2	Dual frequency MARK QAC-50A system	1488.00

Full Duplex Transceiver Systems

- Mark 200DS** Two heavy duty all metal Mark 200D communicators including 2ea. NB200D nicad batteries, charger, carrying case and antenna. (headsets not included) **\$ 2,190.00**
- Mark 200DP/S** Two ABS lightweight Mark 200DP communicators with integrated antenna, 2ea NB200D nicad batteries, charger and carrying case. (headsets not included) **1,990.00**
- Mark 200DP-200D/C** Mark 200D/C RTS/Clear-Com/Telex transceiver interconnect with Mark 200DP, nicad battery, charger, HS200D/BP headsets, ANT-2MM antenna and carrying case. **2,190.00**
- Mark 200DP-200D/AC** Mark 200D/AC duplex base transceiver with headset input, Mark 200DP, nicad battery, charger, 2ea HS200D/TP headsets, ANT-2MM antenna and carrying case **2,290.00**
- Mark 200DP-200D/V** Mark 200D/V duplex base transceiver with line level in/out, Mark 200DP, nicad battery, charger, HS200D/TP headset, ANT-2MM antenna and carrying case **2,190.00**
- Mark 200-2CH/200DP** Portable two channel full duplex 1/2W system for use by broadcaster under group K frequency, with 2ea Mark 200DP, nicad batteries, chargers, 3ea HS200D/BP headsets, antenna system and carrying case **9,990.00**
- Mark 200-RPL/6-CH-200PD** Complete six channel full duplex wireless intercom system utilizing seven frequencies in a common 19" x 7.25" rack with cabinet, six Mark 200DP remote transceivers, 12ea nicad batteries, antenna system, charger and carrying case. (headsets not included). **11,990.00**

* When supplied with Mark 200D all metal industrial grade transceiver add \$ 100.00 per 200D transceiver.

Transceivers

- Mark 200D** Industrial grade full-duplex all metal transceiver with nicad battery, charger and antenna system. **\$1,095.00**
- Mark 200DP** Lightweight (24 oz. with nicad battery) ABS plastic full duplex transceiver with internal antenna, nicad battery, and charger **995.00**
- Mark 200D/V** Full duplex base transceiver with line level in/out and whip antenna **995.00**
- Mark 200D/C** Full duplex base transceiver interconnect for use with single channel Clear-Com or RTS dual channel architecture, utilizing three pin XLR and whip antenna **995.00**
- Mark 200D/C2** Mark 200D/C transceiver with channel 1 or 2 select from remote transceiver (note: remote unit must have tone option). **1,295.00**
- Mark 200D/AC** Full duplex base transceiver with headset input and whip antenna **995.00**
- Mark 200-RPL/D** One rack mounted RPL console with cabinet, which will accept six Mark 200D/R receivers, includes antenna system and one Mark 200D/T transmitter **2,250.00**
- Mark 200D/R** Mark 200D/R receiver for use with Mark 200-RPL/D console **580.00**
- Mark 200D/T** Mark 200D/T transmitter for use with Mark 200-RPL/D console **580.00**
- Mark QDC** Pocket receiver for monitoring transmissions between full duplex systems. **780.00**

Headsets For Mark 200DP Lightweight Transceiver

- HS200D/BDP** Beyer DT 109 (dual muff) with preh plug **\$ 250.00**
- HS200D/BP** Beyer DT 108 (single muff) with preh plug **210.00**
- HS200D/SP** Hard-hat (single muff) preh plug **250.00**
- HS200D/TP** Wire-band (single muff) preh plug **150.00**
- HS200D/HNP** Hi-noise cancelling (dual muff) with preh plug **325.00**
- HS200P** Rugged (single muff) with preh plug **150.00**
- HQDC** Earpiece with mini plug for QDC **50.00**

Headsets For Mark 200D All Metal Industrial Transceiver

- HS200D/BD** Beyer DT 109 (dual muff) with four pin female XLR with built in antenna **\$275.00**
- HS200D/B** Beyer DT 108 (single muff) with four pin female XLR and built in antenna **235.00**
- HS200D/S** Hard-hat (single muff) with four pin female XLR and antenna **275.00**
- HS200D/T** Wire-band (single muff) with four pin female XLR, ANT-4BNC required **150.00**

Batteries and Chargers

- AL200D** Alkaline battery for Mark 200D transceivers **\$ 35.00**
- NB200D** Nicad battery for Mark 200D transceivers **75.00**
- NB200D/9V** Nine volt transistor battery pack for Mark 200D transceivers **75.00**
- AC200D** NB200D battery charger. **40.00**
- NB200D/1-CH** NB200D fast charger for one NB200D battery outside of communicator **150.00**
- NB200D/2-CH** Four hour NB200D battery charger outside of communicator **150.00**
- NB200D/6CH** NB200D fast charger for six NB200D batteries **595.00**
- NB-D** Belt pack nicad battery for Mark 200 systems supplied with nicad and charger **350.00**

Hard Wire Interface Cables and Controls

- TA4F-V** TA4F plug to (phone plug audio out 0dB, mini plug audio in at 0dB) **\$70.00**
- TA4F-VR** TA4F plug to (mini plug audio in 0dB, mini plug audio out -40dB) **70.00**
- TA4F-PT** Remote push to talk button for Mark 200 series of remote transceivers **70.00**

Tone Encoders

- 200D/TONE** Tone encoder/decoder for use with all 200 series of transceivers **\$ 150.00**

200D/Scrambler

- 200D/Scrambler** Scrambler for use with all 200 series of transceivers **895.00**

Miscellaneous Items

- BP200D** Belt-holster for Mark 200D **\$75.00**
- BP200DP** Belt-holster for Mark 200DP **75.00**
- 200RC** Rack cabinet for Mark 200D/RPL; black or gray **250.00**
- 200CC** Mark 200 series carrying case with insert. **150.00**
- A4F** Four pin XLR plug for Mark 200D **15.00**
- 17HR595** Five pin preh plug for Mark 200DP **15.00**
- TA4F** Four pin Switchcraft mini XLR plug. **15.00**

SWITCHCRAFT, INC.

Jack Panels/Patch Cord Sets/Jacks

Jack Panels

Rugged, heavy-duty jack panels for switching, distribution and control of audio signals in broadcasting stations, theaters, P.A. installations, etc. Series 1200 has black phenolic panels reinforced with steel for rigidity. Slotted mounting brackets fit standard 19" relay racks. Panel includes plastic covered designation strips.

Part No.	Rows	Number of Jacks	Size, In. (mm) Width x Depth x Height	Price
1200	Single	24 ¹	19 x 1.25 x 1.75 (482.6) (31.75) (44.45)	\$ 44.95

	Double		19 x .265 x 1.75 (482.6) (15.88) (44.45)	

Series 2400

NOTE: ¹ Jacks not supplied, except on special order.
² Recommended plugs are Switchcraft Nos. 420 or 425.
³ Supplied with "Kwik-Change" designation strips.

Patch Cord Sets

Constructed of bronze tinsel conductors, insulated and shielded with black nylon braid overall.
Series 18Q—3-cond. shielded (TRS) patch cords use Military Plug PJ-051R (Part No. 482) at each end with grounded shields (both ends).
Series 19Q—2-cond. (TS) patch cords use Military plug PJ-047B. (No. 420) connected to each end with shield grounded (both ends).

Part No.	Length, Ft. (m)	Plugs Used	Price

"MT-Jax" Military Telephone Jacks

Long frame 2- and 3-cond. jacks, commonly referred to as telephone switchboard jacks, designed for communication and military equipment. Springs are nickel silver alloy with welded cross bar palladium contacts. Available in "A" and "C" frame designs. Part numbers cover "A" frame design. For frame design "C" add prefix letter "C" for part numbers.

SYMETRIX, INC.

Signal Processing Equipment

A-220

A-220 Stereo Amplifier

Stereo Power Output: 20W/ch. at 8 ohms, 40W/ch. at 4 ohms • Mono: (bridged) Power Output: 40W/ch. at 8 ohms • THD + N: .05%, 20Hz-20kHz • S/N Ratio: 93dB 20Hz-20kHz • Controls: Channel 1 Level, Channel 2 Level • Switches: Power, Stereo/Mono Bridged (rear panel)

The A-220 is equipped with both 1/4" TRS and XLR connectors, in parallel. Balanced or unbalanced signals may be input to either connector, and the unused connector may be used for "loopthrough".

The configuration of the input level controls may be switched to reflect the way the amplifier is used. When it's operated as a stereo amplifier, channel-to-channel level matching is a must. The dual tracking level control configuration routes the left and right input signals to a close tolerance dual potentiometer (Level 1), so the level for both channels is accurately set by a single knob.

For 2-channel use, the independent position routes signals separately to the Level 1 and Level 2 input controls, allowing each channel's level to be set separately.

The A-220 is intended for use in medium power applications that require exceptional quality and reliability, such as audio monitoring in video production, near field studio monitors, small speakers used for "radio reference," and for headphone monitoring.

A-220 \$315.00

528

528 Voice Processor

• Mike Preamp: Gain: 0-50dB EIN: -127dBm phantom power: +48VDC THD: <.035% • Parametric/Notch Filter: Boost/Cut: +12/-30 Bandwidth: .05-3.3 octave • De-esser: Range: 20dB f_c: 1kHz-8kHz • Comp/Limit/Expander: THD: <.035% Max gain reduction/attenuation: 40dB • Output: Gain: 0-25dB Metering: de-esser, comp/limit/exp, output • Controls: Preamp Gain, De-ess Frequency, De-ess Range, Compress Threshold, Compress Ratio, Gate Threshold, Cut/Boost (x3), Bandwidth (x3), Frequency (x3), Output Level • Switches: Bypass (x3), Meter Select, Power

The 528 is a complete microphone input signal processor: mike pre-amp, compressor/limiter, downward expander, parametric equalizer/notch filter, de-esser, all in single rack space package. Phantom powering for condenser mikes, balanced line input for high level signals. LED metering indicates output level, gain reduction, de-esser activity. Used for broadcast announce mikes, public address, and specialized processing in recording and high level sound reinforcement.

528 \$649.00

571

571 SPL Computer™

• Output Control Range: 40dB • Noise to Gain Ratio: 1:1 to 3:1 • Averaging Time: 5 sec. to 5 min. • Output Gain Trim: -15dB, +5dB (remote control optional) • AGC: selectable fast, slow • S/N Ratio: >86dB • THD: <.035% • Max. Output: +24dBm, balanced, into 600 ohms • Operating Controls: Averaging Time, Page-Over-Music, Ratio, Output Gain Trim • Set-Up Controls: Page Mike Gain, Sense Mike 1 Gain, Sense Mike 2 Gain, Page/Music Mode (rear panel) • Calibration Controls: Max level, Min level, Cal (on/off)

The 571 senses ambient noise and automatically adjusts level. Stand-alone paging controller with separate music input, adjustable page-over setting, two sensing mike inputs. Digital signal processing under proprietary software control assures freedom from runaway gain and feedback problems. Fast one-time calibration, non-volatile memory. Used for automatic level control in environmental/life safety systems in public gathering places, paging/music systems in airports, subway, bus and train stations, factories, restaurants, night clubs.

571 \$B49.00

Patchbay

32 Jack Patchbays

The Patch-32 family of patchbays is the perfect solution to the problem of interconnecting your equipment in any audio system. The Patch-32's "normalized" connectors let you set up commonly used signal paths without using any patchcords. Then, if you change your mind about a connection, all you have to do is insert a patchcord to reroute the signal. You do all the patching with standard, reliable, 1/4" to 1/4" patchcords, no RCA cords, miniphone plugs, etc. The Patch-32 allows you to make all the connections from the back of the patchbay to your equipment without resorting to custom wired cables or expensive adaptors. By using standard off-the-shelf phone to phone or RCA to RCA cables the connections from the back of the Patch-32 to and from your equipment are made simple and quick. All Patch-32s have two rows of sixteen 1/4" jacks on the front panel.

Patch-32A A 1 3/4" high, rackmount patchbay for interconnecting unbalanced equipment. 1/4" phone to 1/4" phone \$189.00

Patch-32B Identical to 32A except for rear panel RCA jacks. 179.00

Patch-32AB Rear panel is a combination of 1/4" and RCA jacks. 189.00

Patch-32Access Gives separate send and return from consoles with single jack access points 189.00

Patch-32TRS Tip-ring-sleeve, front and rear. 209.00

SYMETRIX, INC.

Signal Processing Equipment

CL-150B

CL-150B Fast RMS™ Compressor/Limiter

- Fast RMS circuitry with "soft knee" transition characteristic yields smooth overall compression, excellent control of dangerous peaks
- Selectable automatic or manual operation • Integral sidechain de-esser controls sibilance and high frequency sensitivity • Used for music recording, sound reinforcement, radio/television spot production, and audio for video

CL-150B **\$279.00**

501

501 Peak-RMS Compressor/Limiter

- Two processor device with variable ratio compressor and an infinity-to-1 peak limiter for the ultimate in compression/limiting • "Soft knee" transition characteristic assures sonic integrity • Selectable automatic mode significantly reduces overshoot and distortion • Balanced and unbalanced inputs and outputs • Used in broadcasting, recording, sound reinforcement and tape duplication

501 **\$339.00**

501 Option 01—Transformer balanced output **389.00**

525

525 Dual Gated Compressor/Limiter

- Combines the best attributes of compressor/limiters and expander/gates • Program-controlled system analyzes incoming signals, adjusts attack and release times accordingly • Controls very wide dynamic range signals with no "pumping" or "breathing" • Stereo or two-channel mono operation • Used for live sound reinforcement, high level stage monitors, recording, video post production, audio duplication and video transfer

525 **\$495.00**

511A

511A Noise Reduction System

- Two channel single-ended noise reduction system configured for use in professional and commercial audio systems • Dynamic high frequency filter and downward expander • Up to 30dB overall reduction of both high frequency and broadband noise • Dynamic filter reduces high frequency sounds like hiss, RF artifacts, and dimmer noise, while broadband and low frequency phenomena like hum, turntable rumble and air conditioning noise are reduced by the expander • 18dB/octave rumble filter is included for optimal treatment of low frequencies • Works on any signal without pre-processing • Independent two channel or true stereo operation is front panel selectable

511A **\$629.00**

544

544 Quad Expander/Gate

- Four channel, dual-mode processor for problem solving and special effects • Full control complement, sidechain processing, external key (trigger) inputs • Sonic excellence, ease of operation, total control • Used to eliminate mike leakage and room noise from vocal and drum recordings, to "clean up" live stage sound, and for effects like gated reverb and keyed bass

544 **\$629.00**

SX201

SX201 Parametric EQ Preamp

- Designed to handle both low level and line level inputs • Three fully parametric bands of equalization are provided, with +15dB boost and -30dB cut capability • Overlapping frequency controls cover the entire audio range, from 16Hz to 20kHz • Bandwidth is continuously variable from .05 octave (for deep notch filtering), to 3.3 octaves (for smooth tone shaping) • Separate line and preamp inputs • Line level input provides both balanced or unbalanced terminations, for levels ranging from a nominal -10 to +8 • The preamp input is unbalanced, and is intended for use with low level signals, such as those from synthesizers, guitars, and electronic drums • The overall input level control allows the operator to set internal signal levels to match boost cut conditions • High headroom, high slew rate active devices are employed • Separate balanced and unbalanced output line drivers, capable of +18dBm and +24dBm respectively

SX201 **\$239.00**

SX202 Dual Microphone Preamplifier

- Two ultra clean microphone preamplifiers • Variable gain • 15dB pad • Polarity switch (one channel only) • Selectable +48V phantom powering for professional condenser microphones • Balanced or unbalanced individual and summed outputs • Microphone inputs on 3-pin XLR connectors, outputs on 3-conductor 1/4" connectors • Independent power supply included

SX202 **\$219.00**

SX204 Headphone Amplifier

- 1-in 4-out stereo headphone amplifier • High voltage converter technology provides ample headroom for even the loudest headphone requirements • Stereo/mono switch • An overall input level control • Individual level controls for each output • Balanced or unbalanced inputs on 3-conductor 1/4" connectors • Headphone outputs on 3-conductor 1/4" conductors • Independent power supply included

SX204 **\$269.00**

SYMETRIX, INC.

Telecommunication Equipment

104 Multi-Line Telephone Interface

- Consists of two modules: a rackmount controller unit and a remote desk module
- Interconnection between the desk module and controller unit is via a standard 25 pair telephone cable (up to 300 feet of additional extension cable may be implemented)
- All system control is performed by the desk module
- May be used in conjunction with a user provided 2500 telephone (standard desk set) or in a "hands free" fashion
- Control functions include seize, release, transfer to hold, transfer to cue, and transfer to air
- Up to four callers may be conferenced "on air" at once
- An output jack and gain control on the desk module provide caller monitoring via headphones or 25 ohm speaker
- Audible ring indicator in the desk module may be muted

The 104 is a telephone interface system designed specifically for broadcast and teleconferencing applications. The 104 is essentially a stand-alone electronic telephone system which connects to up to four incoming telephone lines via standard RJ-11 ("modular") connectors. No additional telephone line equipment is necessary. The 104 is FCC approved (parts 68 and 15) and may be installed by non-technical personnel.

- 104**\$1695.00
- 104 CTRL** Extra console for two-station operation of the 104. Includes 50-pin bridged-T adaptor and two 25/25 cables.**400.00**

108 Broadcast Telephone Interface

- 108 system consists of two modules: a rackmount controller unit and remote desk module
- Supports a second (optional) desk module
- All system control is performed by the desk module
- May be used in conjunction with a user provided 2500 telephone (standard desk set) or in a "hands free" fashion
- All lines may be seized, routed, and released by buttons on the 108 desk module
- Control functions include seize release, transfer to hold, transfer to cue bus, and transfer to air
- "Profanity button" momentarily mutes all callers

The 108 Broadcast Telephone System is a microprocessor based telephone interface designed specifically for broadcast use. The 108 allows the broadcaster to interface his on-air mixing console to up to eight incoming telephone lines for talk shows, news broadcasts, or any other telephone-air applications.

The 108 is essentially a stand alone electronic telephone system which interfaces directly to incoming telephone lines via standard RJ-11 ("modular") connectors. No additional telephone line interface equipment is necessary. The 108 is FCC approved (parts 68 and 15) and may be installed by non-technical personnel.

- 108**\$2995.00

104

108

Accessories

- 108 CTRL** Optional control console for two-station operation of the 108. Ready to plug in. Includes 25' cable with connectors**\$400.00**
- 108RB** An accessory for the 108 System that provides an external relay for each of eight telephone lines. Relays close whenever a line is seized on the 108. Use the 108RB for A-lead control, or with user-supplied high current relays to transfer lines and/or light indicator lamps**\$250.00**
- 25/25** 25' long 25-pair cable used to connect 104 and 108 control consoles with rackmount electronics package. May be used to extend existing cables. Female 50-pin "D" connector one end, male on the other end**\$70.00**
- Bridged-T** Y-adaptor for using two control consoles with a 104, or more than two consoles with a 108. Has three 50-pin "D" connectors, two male, one female**\$60.00**

TI-101

TI-101 Single Line Telephone Interface

- Level compatibility. Back-panel gain switches permit the TI-101 to operate with virtually any professional mixer or console
- Bandpass filtering
- Caller mute: A user provided remote contact closure mutes the caller instantly without clicks or pops
- LED clip indicators are provided
- Conference linking
- Caller equalization
- Two band equalizer with 8dB of boost and cut at 400Hz and 2.5kHz brightens up the caller and enhances intelligibility
- Send limiter
- Receive compressor/expander

The TI-101 Telephone Interface is designed specifically for the connection of professional audio equipment to telephone lines in broadcast and production operations. The TI-101 employs an electronic hybrid circuit which creates a maximum trans-hybrid loss, yielding effective isolation between your studio's send to the telephone line, and your caller return signal.

- TI-101****\$495.00**

TAPECASTER

Cartridge Machines/Loader

X-701 Series Tape Cartridge Machines

- Steel case for optimum electrostatic and electromagnetic shielding
- Electronic tone cueing
- Remote control of all functions
- 100% solid-state
- Premium core, laminated metal faced heads
- Precision machined 2 lb. flywheel assembly hysteresis synchronous motor
- Heavy-duty air damped solenoid
- Extremely rugged construction
- Suitable for high vibration environment
- Auxiliary cue tone option for automation of exhibits, lights, other A/V equipment
- Precision adjustable head bracket

Specifications

- Equalization:** NAB standard
- Freq. Response:** ± 2dB 50-12,000Hz at 7.5 IPS
± 3dB 40-15,000Hz at 7.5 IPS
(Exclusive of head contour effects)
- Distortion:** 2.0% or less
- Signal-to-Noise Ratio:** 58dB or better
- Wow and Flutter:** Less than 0.1% RMS weighted
- Tape Speed:** 7.5 IPS
- Input:** (Line) 0.1V (bridging)
(Mike, 150 ohms) 1.5mV
(Available on record-playback units only)
- Output:** 0dBm at 600 ohms
- Cue Tones:** (Primary) — 1kHz (stop)
(Secondary) — 150Hz (optional extra)
- Cueing Accuracy:** 0.1 second
- Starting Time:** 0.05 second
- Playing Time:** 1 second to 31 minutes at 7.5 IPS
- Power Requirement:** 105-125VAC, 60Hz, 50W standard
220V optional; 50Hz optional
- Power Supply:** Regulated, solid-state
- Motor:** Hysteresis synchronous

TASCAM/TEAC CORP. OF AMERICA

Loggers/Recorders/Reproducers

48L 8-Channel Logger

- Operates at 15 ips tape speed • Recommended 3M #8206 and Am-
pex #705 • Tape counter will display a maximum reading of 23 hours
and 59 minutes • Counter operates in either direction additive or sub-
tractive • 8-track, 8-channel • Head configuration: 3-heads; erase, re-
cord and reproduce • Remote control optional with RC-71 • 17" x
19⁷/₈" x 12⁷/₁₆" • 81⁹/₁₆ lbs.

The 48L is slow speed, logger version of the 48 multi-channel recorder/
reproducer. It is designed for long term, multi-channel recording in an
industrial, broadcast, or governmental setting. The 48L may be exter-
nally controlled for continuous operation by means of a computer, or
intermittent operation by means of a voice actuated circuit (VOX) or
computer control.

48L 8-channel\$4995.00
44L 4-channel3495.00

48 OB Recorder/Reproducer

- Operates at 15 ips with industry standard equalization • Nominal
+ 4dBm balanced inputs and outputs are standard • -10dBV RCA jacks
are provided • Headroom: 24dB at the XLRs; 28dB headroom at the
RCAs • All three motors are under servo control • Rapid spooling
mode • Normal play/record speed can be fixed via an internal crystal,
externally controlled or adjusted over a full ± 12% • Capstan motor:
Phaselock loop DC, direct drive • 19" H x 17" W x 12⁷/₁₆" D • 89.6 lbs.

48 OB

The 48 OB is a high quality 8-track 1/2" recorder/reproducer designed
for audio and video production work where flexibility, reliability and
synchronized operation are primary requirements. We have improved
the audio electronics, added a total servo system under microprocessor
control, and provided single plug compatibility with popular SMPTE
controller/synchronizer systems.

48 OB\$4999.00

44 OB 4-Track Compact Recorder/Reproducer

- All 3 motors are under servo control • Rapid spooling mode permits
forward or reverse winding 8 times normal play/record speed • Normal
play/record can be fixed via an internal crystal, externally controlled or
adjusted over a full ± 12% range • Tape motion is fast and accurate
• Search-to-zero and Search-to-cue functions • Tape counter displays
positive or negative "real time" • Microprocessor control of all trans-
port functions • Each track has its own function selector and pre-load
selector • Sync response is equal to repro response • Precision splicing
block • Simple installation and signal operator controllability

The 44 OB is a high quality 4-track 1/4" recorder/reproducer designed
for audio and video production work where flexibility, reliability and
synchronized operation are primary requirements. The 44 OB operates
at 15 ips and 7 1/2 ips with industry standard NAB equalization, and can
be set for flux reference levels of 250 or 320 nanoWebers per meter.
Nominal + 4 standard, and -10dBV RCA jacks are also provided for the
broadest possible compatibility.

44 OB\$3999.00

44 OB

42B 2-Track Recorder/Reproducer

- Full servo system including capstan and reel motors • Electronically-
balanced + 4dBm inputs/outputs • Custom microprocessor ensures
rapid yet gentle tape handling in all modes • PLL Direct drive capstan
motor and non-magnetic ceramic capstan shaft • Long-life hard perma-
lloy heads mounted on a solid base plate • Manual edit, dump edit and
stop edit • Front-access to all adjustment for transport and amplifier
• Precision real time tape counter

The 42B is an exceptionally versatile high-performance 2-track, 2-
channel tape recorder/reproducer that uses 1/4" wide tape and oper-
ates at tape speeds of 15 ips (38cm/s) and 7 1/2 ips (19cm/s).

Designed especially for demanding production applications, including
lockup to SMPTE/EBU controller/synchronizers, the 42B transport is
built on an extra heavy-duty chassis that ensures stable tape motion
and stable alignment despite the long hours of high speed, start-stop
shuttling that are typically part of editing.

42B\$2999.00

42B

32

34B

38

Series 30 Recorder/Reproducers

- 38—8-Track, 8-Channel
- 34B—4-Track, 4-Channel
- 32—2-Track, 2-Channel

The Series 30 sync and repro heads offer identical response so you don't lose sound quality during track bouncing operations. Further, contour effect has been minimized and head life has been extended by 20%. Even the erase heads are improved with a material that allows more complete erasure.

Special DC reel motors achieve extremely high torque to minimize wow and flutter and provide higher fast-wind speed. A belt-driven, FG servo controlled DC capstan motor ensures exceptionally precise tape speed. A microprocessor transport control guarantees smooth, positive switching with no appreciable stop between fast wind and play/record modes. Lower noise levels are realized with the use of selected integrated circuits and amplifiers.

On each deck, each track has a Function Select button that places it in the Safe or Record Ready mode. There are three Output Select buttons that determine the source of the line output: Input, Sync or Repro.

Remote punch-in recording is also possible using the remote transport control unit (RC-71) or a remote footswitch (RC-30P). Each deck offers a Cue lever, Zero Return function, Pitch control, expanded VU meters, and full dual process dbx noise reduction compatibility (DX-2D/4D optional). The 32 and 34B also offer 19 cm/sec tape speed along with the studio standard 38cm/sec. Other features that are extra on the 32 and 34B are microphone inputs, Mike/Line switches and 0/20dB attenuators, input and output level controls and a monaural headphone monitor output with track assignment switches.

32 1/4" Half Track Master Recorder/Reproducer

- 10 1/2" reel capacity • 15 and 7 1/2 ips • Independent record mode L & R • Simul-sync • Full frequency response in sync mode • Function select and output select • Punch in/out recording • Pitch control ± 12% • Dump edit • Mike inputs • Independent input/output level control • Headphone jack and volume control • Cue control • FL tape counter • Zero return

®dbx is a registered trademark of dbx, Inc.

TASCAM/TEAC CORP. OF AMERICA**Recorder/Reproducer****MS-16 16-Track Recorder/Reproducer**

The MS-16 is a top-line professional multitrack recorder, designed to provide outstanding overall performance in even the most demanding professional applications. The transport chassis has been re-designed to extra heavy-duty standards so that tape motion and alignment will remain stable even through hours and hours of the most rugged use. The MS-16 is also ready for immediate interfacing with SMPTE standard controllers/synchronizers for precision automated location and video/film sync.

The MS-16 employs the economical 1" 16-track tape format, running at 38cm per second. It also offers both balanced +4dBm inputs and outputs as well as unbalanced -10dBV RCA pin jack inputs and outputs for full compatibility with all types of professional and semi-professional equipment. Sync and repro frequency response are identical so there's absolutely no loss of sound quality during track bouncing operations.

Monitor selection facilities have been carefully designed for maximum speed and ease of use in all recording situations. You have a choice of Input, Sync, or Repro output selection, and Insertion (pre-load) switches make it possible to select either input or sync repro monitoring on record-ready tracks. An Input Enable switch permits input monitoring while in the fast wind or stop modes, regardless of the rec function mode, to establish communication between the control room and studio.

A comprehensive range of editing functions are also offered. In the Dump Edit mode the takeup reel is defeated, making it easy to "dump" large edits. In the Manual Edit modes either reel can be easily rotated by hand and the other will follow precisely, maintaining tape tension. And in the Stop Edit mode the reels can be independently rotated by hand. A splicing block is conveniently located right in front of the head assembly—where you need it most.

The MS-16 is fully compatible with SMPTE interlock systems. It features full, precision servo control on the capstan motor, reel motors, and even on the tape tension system. The direct-drive PLL servo capstan motor further offers a choice of three selectable sync modes: Fixed, Variable and External. A channel 16 Sync Lock monitor mode permits continuous time code output to a synchronizer/controller regardless of the deck's Output Select mode. And channels 1 through 15 have a special Lifter Defeat Mute function which automatically engages the muting circuitry when a specified cue point is reached and the tape lifter is activated.

The MS-16 transport and electronics are separate, and both can be mounted in any standard EIA equipment rack. The TASCAM CS-65 console rack neatly mounts both transport and electronics sections in one easy-access unit. For convenient meter location, the meter section is removable from the electronics using the T-0865 amp panel/meter cable kit. The electronics and amplifiers for record, play and bias functions are modularly constructed on one circuit card per channel. Access is fast and easy, minimizing down time for maintenance. For remote control convenience, the record function select and output control unit is removable from the transport block using the CS-63 function remote kit.

Other features offered by the MS-16 include $\pm 15\%$ pitch control, a spooling mode for neater tape packs, VU meters with peak-reading LEDs for each channel, low-frequency compensation control on each channel, and a precision non-magnetic ceramic capstan shaft. Options available for the MS-16 include the AQ-65 10 point remote auto-locator; RC-65 remote transport control unit; CS-64 remote control stand; TZ-65 metal reel clampers; and the DX-8DS dbx units.

TASCAM/TEAC CORP. OF AMERICA**Recorder/Reproducers****ATR-60 Series
Recorder/Reproducers****ATR-60-2T Center Track
Time Code Reader**

The ATR-60-2T is a 2-track with an additional IEC standard center track to record and reproduce SMPTE/EBU time code. The additional time code track occupies the normally blank space between tracks of the traditional NAB 2-track format. As a result, previously mastered 2-track tapes from your library (even DIN) can be time code striped and reedited.

The coincident-head configuration makes time code virtually invisible on the ATR-60-2T. You don't have to change a single operating or editing technique. Use your razor blade to edit if you wish because the code is where it belongs, directly coincident with the audio. Don't worry about striping enough code before your audio, or worry about code overrun at the end of the audio.

Advantages of coincidence carry over to machine maintenance and service. Head Wrap adjustments, which many techs perform as regular maintenance, are very difficult with offset head designs. Special equipment is needed to perform these procedures so that factory service may prove necessary for a routine adjustment. Tape wrap is crucial in an offset design because it affects the distance between gaps on the audio and time code heads, adding yet another variable to a system burdened with delay lines and offset calculations.

In order to record and reproduce time code in the center track, crosstalk performance must be superior or the time code head must be offset. It's easier to offset the head, but to do so means losing editing flexibility and devising "compensating" schemes to deal with the offset.

**ATR-60-2N
Mastering Recorder**

The NAB Standard ATR-60-2N is a quarter-inch mastering machine, designed with an easy going but hard working personality that makes it a joy in the mastering suite. Unsurpassed frequency response, signal-to-noise ratio, crosstalk, distortion, and wow and flutter performance are byproducts of

TASCAM's 30 years of innovative head and transport design.

Designed to prosper in even the most brutal environment, the ATR-60-2N is steel toughened in a two piece configuration that will fit in tiny remote trucks or where audio was an afterthought in planning the video suite. Its Omega Drive transport will thrive on thousands of passes a day, all the while gently protecting your tape from the cumulative tension of the day's shuttling.

**ATR-60-2HS and ATR-60-4HS
High Speed Mastering Recorders**

These machines bear the "HS" designation, meaning high speed. Operating at 30 ips and using half-inch tape, they are perfect for maximum quality music mastering. The 2HS model is a 2-track machine. The 4HS is a half-inch 4-track, a format favored by those mastering audio for video and film.

The 2HS and 4HS have heads that maximize the inherent advantages of high speed operation and wider tape including vivid audio characterized by impressive high frequency response, linearity, and signal-to-noise performance. Able to print at 320nWb/m in addition to the standard 250nWb/m, the ATR-60-2HS and ATR-60-4HS wring every last dB of signal-to-noise performance from your tracks. The Omega Drive transport delivers and retrieves the half-inch tape with absolute precision and speed. The machined head block and hardy deck plate/chassis combination don't give tape skewing or wow and flutter problems a chance to start. And a scrape flutter filter takes dead aim at even miniscule friction induced noise.

**ATR-60-8
High Performance 8 Track**

A half-inch machine, the ATR-60-8 offers a transport designed for extensive shuttling and frame accurate, computer controlled parking. Despite being parked and started in exactly the same spot hundreds of times while editing a single scene, the ATR-60-8 will not pass along cumulative tension spikes to your tape as will many straight-line tape path machines.

You won't be wasting a track as a guard band using your ATR. The ATR-60-8 head offers crosstalk performance so good you can confidently print audio on the track adjacent to code. Time Code

ATR-60

Lock and Sync Lock give your synchronizer/controller optimum access to code without affecting audio, and a single multipin connector is your door to the most responsive SMPTE/EBU control in the business.

M-216

M-200 SERIES MULTI-PURPOSE MIXERS

- 5 complete submix systems (Main Mix, Stereo Mix, Foldback, Effects, Solo) instantly organize and simplify complex sound reinforcement or recording setups without patching
- 8 Tape input jacks combined with top-panel switching matrix provide one-button access to tape or other Line-level sources
- 4 Program buses, each with a Master fader and Pan control plus your choice of XLR and RCA outputs. Single fader grouping for maximum mixing convenience
- Trim and Pad controls enable each channel input to accommodate signals from -70 to +28dBV
- 3-Band EQ combines shelving and sweep-type parametric EQ to provide 12dB and 15dB of cut or boost at each frequency band
- LED Overload indicators on each channel avoid accidental clipping, distortion, or tape saturation
- Switchable VU meters with built-in peak level indicators allow easy comparison of output bus levels
- Convenient front-panel headphone jack can be used to monitor any submix system
- Individual circuit cards mounted on a steel subchassis for maximum strength and road-worthiness

The 200 Series Mixers have what it takes to meet today's growing demand for high-quality audio in the broadcast and cable TV markets. Mono or stereo audio signals from multiple source machines can be mixed simultaneously. These signals can be readily combined with various other audio sources such as voice-over mixes, turntables and cart machines. The mixed program is sent to the edit master VTR via the Program outputs or Stereo Master outputs. Because there are four Program outputs, it's easy to hook up a second VTR to record a "mix minus" (i.e., a "no dialog" mix of music and effects tracks to be dubbed in different languages).

The 200 Series has all the features and functions you need for 4 or 8 track recording — from basic tracks to overdubs and mixdown. Their Program Outputs can be connected to up to 8 individual tracks of a multitrack recorder. They make it easy to record complex combinations of instruments and effects on individual tracks without repatching.

The master control section is where the signals from the input channels are combined and routed to the appropriate output buses. Think of it as the nerve center of the 200 Series. It provides extremely flexible signal routing without the need for cumbersome patch cables. Every signal path is placed right at your fingertips.

There are four Program Master faders which feed the 200 Series' Program outputs. These work in conjunction with a set of Master Pan controls. They accept signals from the Program Master faders and determine the amount of signal that will be sent to the left and right sides of the Stereo Output bus (which has its own set of left and right Master faders). Not only does this give you the convenience of combining related groups of inputs on a single Program fader, it also lets you collectively pan the group of inputs as well.

200 Series channel controls allow each input signal to be carefully shaped and then passed on to the console's submix systems. Precise tonal shaping of input signals is provided by a three-section EQ. The high and low-frequency controls are shelving-type equalizers, offering 12dB of cut or boost. The high-frequency control's center frequency is 10kHz and the low-frequency centers at 100Hz. The mid-frequency control is a sweep-type parametric EQ that allows you to select any frequency from 250Hz to 5kHz and apply up to 15dB of cut or boost. An Overload indicator provides a warning when a signal leaving the equalizer is too hot.

The Stereo Output bus can provide a house mix to the main power amp and speakers, while the Foldback output provides a monitor mix for the talent onstage. 200 Series mixers furnish generous options for hooking up effects and signal processing devices. Effects for a single instrument or voice are best applied using the Insert jacks on individual channels. Effects that are intended for use on several instruments, or applied to the mix as a whole, can be brought in via the Effects sub-mix system and assigned as needed.

The 200 Series' back panel covers all the input and output options for a wide variety of applications. Each channel module offers a complete choice of Mic and Line level inputs, balanced XLR, and unbalanced quarter-inch connectors. Altogether, each channel module can handle input impedances from 50-600 ohms balanced or 150-10 kohms unbalanced.

Mixing Consoles

**M-500 SERIES
MIXING CONSOLES**

The M-500 Series are sophisticated audio mixing consoles designed for professional production applications. The M-520 (20-in/8-bus) is intended primarily for 16-track studios, while the M-512 (12-in/8-bus) is ideal for 8-track installations.

- 20-input channels on the M-520, 12-input channels on the M-512, each with selectable inputs, provide:
 - 20 (M-520), 12 (M-512) balanced XLR microphone inputs with individually switchable phantom power.
 - 2 pair of instrument inputs (1/4" phone and RCA pin).
 - 2 RIAA phono inputs (RCA pin).
 - 16 (M-520), 8 (M-512) line inputs (RCA pin).
 - 16 (M-520), 8 (M-512) multi-track tape returns (RCA pin).
 - 2 pair of stereo tape returns (RCA pin).
- 8 main program busses with bus master controls
- 4 independent auxiliary busses
- 16 (M-520), 8 (M-512) groups of stereo monitor mix controls
- 8 balanced amplifiers (input; RCA pin/22K ohms, output; XLR/600 ohms)
- Access Send/Receive on each input channel and program bus
- 3-band parametric EQ on each input channel
- Mute switch on each input channel
- Direct Out on each input channel
- Built-in talkback mic plus slate tone/test oscillator
- Stereo SOLO
- PFL (Pre Fader Listen)
- 12 (M-520), 8 (M-512) VU meters with LED peak indicators
- 100mm input and bus master faders (compatible with PG-3000)
- Bipolar 15 volt power supply
- Optional pedestal (CS-520 for M-520, CS-512 for M-512)
- Optional top/side board (CS-521 for M-520, CS-513 for M-512)

CD-501 Compact Disc Player

- Pair of electronically balanced XLR type line output connectors. A Mono (L + R) switch permits summing the left and right channel signals to provide monaural output if required. For broad system versatility a separate pair of RCA-jack monitor outputs are provided — one Fixed and one Variable
- AQ-501 wired remote control unit permits remote control of all playback and programming operations
- Remote control system can be used to control two CD-501's linked via a simple phone plug cable. Switching between "CD1" and "CD2" control is accomplished directly from the remote control unit
- Accessible via the remote control unit is 20-selection random programming
- Original LSI incorporating the TEAC ZD Digital Circuit (ZD stands for "Zero Distortion") effectively minimizes digitally-generated distortion products
- Oversampling Digital Filter is used to double the sampling frequency of the digital signal
- Dual Monaural 16-bit D/A converters used for the left and right channels eliminate the need to de-multiplex a combined left/right signal from single-converter systems, thereby eliminating de-multiplexing (switching) noise

CD-501

- 3-beam Laser Pickup is directly driven by a precision Linear Pickup Drive Motor instead of the conventional rotary motor/gear system
- Three repeat modes — Automatic repeat playback of the entire disc or a programmed sequence, or a specified A — B segment
- Next Function

TECHNICS

Turntables

SP-10MK2A Broadcast Turntable with Quartz Phase-Locked Direct Drive Motor

• Quartz control provides virtually perfect speed accuracy (no more than $\pm 0.002\%$ deviation) • Direct drive system uses no belts, idlers or other speed reduction mechanisms, resulting in very low rumble, very low wow and flutter • Elaborate servo system provides enormous torque: start-up time is 0.25 second (25° rotation) from standstill to $33\frac{1}{3}$ rpm • Electromechanical braking system brings platter to dead stop in 0.3 second from $33\frac{1}{3}$ rpm • Heavy (6.4 lb.) platter, rubber-damped both on top and underside to resist vibration • High moment of inertia (130 lb.-in.²) plus enormous torque result in high immunity to load-caused fluctuation — 0% speed change with up to 4.3 lb.-in. load drag • Separately-housed power supply • Quartz-controlled stroboscope for 3 speeds: $33\frac{1}{3}$, 45 and 78.26 rpm • Includes remote control for start/stop

SP-10MK2A \$1550.00
SH-10B3 Base for SP-10MK2A 750.00

SP-10MK2A

SP-10MK3 Quartz Synthesizer Controlled Direct Drive Turntable

• Starting torque is 16 kg-cm, and only one quarter of a second is required to reach rated speed • Moment of inertia is 1.1 ton-cm • Wow and flutter is 0.015% WRMS • Rumble is -92dB (Din-B) • Quartz locked pitch is adjustable in 0.1% step increments or decrements up to $\pm 9.9\%$ • Ultra low speed brushless DC motor based on the Technics SP-02 cutting lathe drive system

SP-10MK3 \$2665.00
SH-10B5 Base for the SP-10MK3 1200.00

SP-10MK3

SL-1200MK2 Quartz Synthesizer Direct Drive Turntable

• Quartz direct-drive disco type manual turntable with tone arm • $33\frac{1}{3}$ + 45 rpm • All quartz-locked variable slide type pitch control ($\pm 8\%$) • Quick start-up and quick braking • Wow and flutter 0.025% WRMS • Pop-up stylus illuminator • Strobe illuminator • Gimbal-suspension tone arm with variable height adjustment • Brushless DC motor • Aluminum diecast cabinet • Anti-resonant visco-elastic main base

SL-1200MK2 \$525.00

SL-1200MK2

SP-15 Quartz-Synthesizer Controlled Direct Drive Turntable

• Quartz control provides virtually perfect speed accuracy, with $\pm 0.002\%$ of perfect speed • Quartz synthesizer pitch adjustment permits up to $\pm 9.9\%$ deviation from standard $33\frac{1}{3}$, 45 and 78.26 rpm speeds, completely under quartz control • Speeds indicated by digital read-out, in 0.1% increments • High torque provides fast start up — 0.4 second from standstill to $33\frac{1}{3}$ rpm, 5.9 lb. platter sustains high 130 lb.-in² moment of inertia for superb immunity to transient load changes • Will withstand up to 2.2 lb.-in. load drag without slow-down • Electro-mechanical braking system stops platter in 0.4 second • Diecast aluminum base with "TNRC" (Technics Non-Resonant Compound) on underside to resist vibration • Platter is rubber-damped on top, underside, and under rim for insulation against vibrations • Pulsed power supply avoids hum induction • Pitch-lock mechanism • Wow and flutter 0.025% WRMS • Rumble -78dB Din B

SP-15 \$980.00

SP-15

SP-25 Quartz Synthesizer Controlled Direct Drive Turntable

• Quartz synthesizer control governs platter speed in $33\frac{1}{3}$ and 45 rpm, and in pitch-altered modes within $\pm 6\%$ of standard speeds • High torque, tolerates up to 1.3 lb.-in. load drag without slow-down • Electronic braking system stops platter quickly • Platter is rubber-damped on both top and underside to resist vibration • Wow and flutter 0.025% WRMS • Rumble -78dB Din B

SP-25 \$600.00

SP-25

Bases for SP-15/SP-25 Turntables

• Heavy, acoustically-inert rubber material for outstanding insulation against vibration • Four individual spring-loaded feet, tonearm base and acrylic dust cover are coupled to heavy rubber material to further suppress transmission of vibrations

SL-P1200

909 Prompter System

- Uses a variety of material for on-camera prompts
- State-of-the-art controls
- Compact, rugged design
- Aluminum casting
- Uses script paper in any format
- Lets your talent see what the camera sees
- Pans and tilts as smoothly as a studio camera
- Provides individually-buffered NTSC video outputs
- Switches between normal and reverse video text displays
- Adjustable video enhancer
- Suited to EFP and ENG

The 909 is a prompter designed specifically to work with your portable video camera. Other prompting systems, designed for heavy studio cameras, have front-mounted imaging monitors that must be counterweighted. The result is a clumsy system that doesn't lend itself to smooth camera work and is time-consuming to set up. The 909 eliminates these problems with a totally different design.

Full-function display control

The 909T provides for two NTSC inputs: One for the text camera and one for your portable camera, with instant switching between cameras. Script feed stops when the talent or operator switches to the auxiliary video feed. When the script is recalled, it continues where it left off, at the exact speed it was moving before the switch.

State-of-the-art microcircuitry controls

The 909T uses a pulse frequency modulation circuit to give you precise one-touch control of script speed forward and backward. A bar-graph display indicates scroll-ready status, direction of movement, and speed. Once your script assistant has established the best speed for the talent, that precise speed can be used every time. Scrolling speed and video-input switching can also be controlled by means of a plug-in remote controller.

Pan and tilt your portable as smoothly as a studio camera

The 909V Camera Viewing Unit mounts on any standard-mount field or studio tripod and accepts any portable camera. It holds the prompting monitor below the camera, so that both are balanced over the tripod head. Tekskil uses folded optics — a surface-reflectance mirror and a 70/30 beamsplitter — to bring the prompts up in front of the lens.

Specifications

Power	120VAC, .2 amp, 60Hz; or (optional) 240VAC, .1 amp, 50Hz
909V Viewing Unit	
Weight	(without monitor) 11.0 lbs. (5.0kg)
Imaging Monitor	9" industrial monitor, Panasonic TR-930 or equivalent
Dimensions	18" H x 12 1/2" W x 19 7/8" D (45.8 x 31.7 x 50.5cm)
909T Script Transport	
Weight	(without camera) 17.0 lbs. (7.7kg)
Inputs	Two, 1V p-p, negative sync video, BNC connector standard
Outputs	Three individually buffered NTSC outputs
Text Camera	Panasonic WV 1410, c/w 16mm lens
Dimensions	15 3/8" H x 17 1/8" W x 17 1/16" D (39.0 x 43.5 x 44.9cm)

909 Prompter System - Includes 909T (script transport), 909V (Camera viewing unit), Remote control and cables

.....	\$4250.00
909V* Camera viewing unit	1340.00
909T* Script transport includes remote control and cables	2910.00

909C Computer Prompter

The 909C lets you compose, edit and play back scripts anywhere in a case small enough to fit under an airplane seat. It has a 128K memory, a display, a keyboard and its own micro-processing system built in. The 909C comes with its own 12V power source, and takes a live feed from the camera or any output from the switcher and lets you see it on the prompt monitor. The talent can also use it via remote control.

***909C Computer Prompter** Includes carrying case, text file cartridge, 2 handheld remote control units **\$5995.00**

TEKTRONIX, INC.

Waveform Monitors

1710B

1710B SERIES WAVEFORM MONITORS

- Burst Phase Indicator
- Dual Filter Display
- Half Rack Width
- Bright CRT Display
- Internal Graticule
- DC Operation
- Available in NTSC and PAL Standards

The 1710B Series Waveform Monitors provide all of the commonly used display modes. In addition, the 1710B Series adds relative burst phase indication and dual filter display. All of this in a cost effective package for the user who wants high quality at a low price. These new monitors are mechanically compatible and retrofit into an existing system that uses half rack width, 5 $\frac{1}{4}$ " waveform monitors.

Because of its extreme light weight, low power consumption, and DC operation (field installable kit) the 1710B Series is ideal for field production, mobile operations, and any other application where space, power consumption and/or portability are prime considerations.

Easy Operation. This monitor was also designed with the user in mind. Controls have clear nomenclature and are laid out in a logical order. This makes the operation of this powerful tool easier than one might expect.

Burst Phase Indication. The relative burst phase between inputs is displayed on the LED bar graph. The center green LEDs indicate the two signals are phase matched. The yellow ones warn the phase is slipping out of an acceptable range. Finally, the red LEDs flag an unacceptable amount of phasing error. This feature allows one instrument to do the complete job of timing and phasing in a basic television system.

Dual Filter Display. The dual filter display allows the user to view both the complete video signal and the luminance information at the same time using just one instrument. This eliminates the need for switching back and forth between filters and makes the instrument easier to operate. Ideal for camera setup.

Bright CRT Display. The bright CRT display permits use of the 1710B Series in high ambient light conditions. Brightness remains high in the magnified sweep modes enhancing the 1710B's use in system timing applications. The internal graticule is parallax-free to reduce errors and improve its monitoring and measuring capabilities.

ELECTRICAL SPECIFICATIONS

VERTICAL DEFLECTION SYSTEM

Frequency Response:

FLAT: Within 5% of the response at 50kHz from 50kHz to 6MHz. The response at Fsc is within 2% of the response at 50kHz.

L PASS: At least 97% attenuation at Fsc.

Transient Response:

Rise to Bar Ratio: 0.99:1.00 to 1.01:1.00

Ringing: 2% or Less

Overshoot: 2% or Less

Tilt (Field Rate Square Wave, Vertical Window, or 25 μ S Bar): 1% or Less

Gain Range:

Input signals between 0.25V and 2.0V can be adjusted to 140 IRE (NTSC) or 1V (PAL) display.

Maximum Absolute Input Level:

+2V (dc + peak ac)

Deflection Accuracy:

1710B: 1V input for 140 IRE display within 2%.

1711B: 1V input displays 1V within 2%.

DC Restoration:

DC Restorer Clamp Time Back Porch

Low Frequency Response at 50Hz Attenuation of 50Hz on Input Signal 20% or less.

Blanking Level Shift with 10% to 90% APL Change: 1710B: APL changes from 50% to either 10% or 90% will cause blanking level shift of 1 IRE unit (7 mV) or less.

1711B: APL changes from 50% to either 10% or 90% will cause blanking level shift of 7.2 mV or less.

Blanking Level Shift Due to Presence or Absence of Burst: 1% or less of 100% video.

HORIZONTAL DEFLECTION SYSTEM

Sweep:

Sweep will occur in all Horizontal mode settings with or without synchronization.

Synchronization:

Sweep will synchronize to composite video 0.5V p-p to 2.0V p-p or to composite sync 143mV p-p to 8V p-p.

2FLD Sweep Repetition Rate:

Equal to frame rate of applied video or external sync.

2H Sweep Repetition Rate:

Equal to half line rate of applied video or external sync.

Timing Accuracy:

1 μ S/div Sweep within 2%.

Linearity (1 μ S/div):

Within 2%

Differential Linearity (1 μ S/div):

Within 3% 0.1 div (0.5 minor div) or less compression or expansion of a center screen 4 div signal, when positioned anywhere horizontally.

POWER SOURCE

Mains Voltage Ranges:

115V (90-132V)

230V (200-250V)

Mains Frequency Range:

48Hz to 66Hz.

Power Consumption:

25 Watts (85.25 BTU./hour) maximum.

CALIBRATION SIGNAL

Frequency:

100kHz + 1kHz.

Amplitude:

1V within 1%.

PHYSICAL CHARACTERISTICS

Dimensions:

5.25"H x 8.424"W x 16.875"L

(13.3 x 21.4 x 42.9cm)

Vectorscopes/Waveform Monitors

1720

1730

**1720 SERIES VECTORSCOPES
1730 SERIES WAVEFORM MONITORS**

- Performance and economy
- Complete line select
- Simultaneous Channel A & B display
- Dual filter display
- One-button front panel recall
- Differential phase and gain measurement
- Stereo audio phase measurement
- RGB/YRGB display capability
- Vector center dot clamping
- Parallax-free internal graticules
- Portable DC power and battery available
- Remote control capability
- Available in NTSC and PAL standards

The Tektronix 1730 Series Waveform Monitors and 1720 Series Vectorscopes provide a new dimension in television signal monitoring for both NTSC and PAL applications. These versatile instruments are lightweight, half-rack width, and have bright CRTs for comprehensive video signal monitoring. Both instruments exceed normal monitoring capabilities. Their unique features make them even more powerful when operated in tandem. Each monitor has its own advanced feature set and the proven 1700 Series family performance to provide more monitor for the money.

Portable DC power

In addition to being ideal for camera control units and video tape recorders, these instruments can be equipped with cabinet and field upgrades allowing them to operate from a 12VDC source for portable operation. They can be used with the Tektronix BP1 or other 12V supply. Coupling this DC operation with their lightweight (about 9 lbs., including cabinet), low power consumption, and compact size make these instruments well suited for use on a portable production cart.

Remote control

Internal front panel presets, RGB/YRGB enable, along with front panel recall/setup can be accessed through the Waveform Monitor Remote Connector.

Available in NTSC and PAL

Both the 1730 Series and the 1720 Series are available in either NTSC or PAL versions.

1720/1730 SPECIFICATIONS

- CRT Viewing Area:** 80 x 100mm

Waveform/Vector Monitors

1740 SERIES

1740 SERIES

- Two Instruments in One
- Optional Dc Power Capability
- Bright CRT Display
- R-Y (V-Axis) Mode
- VITS Monitoring
- RGB/YRGB Display Capability
- Remote Control Capability
- Available in NTSC, PAL, and PAL-M

Similar to the 528A and 142C Series products, the 1740 Series provides all the basic waveform monitoring and vectorscope functions, but in a single, compact package. In addition, the 1740 Series adds dc power operation (optionally), single line vertical interval display which is internally preset, an R-Y/sweep mode for differential phase measurements, and remote control of waveform/vector mode and most of the front panel sweep and vertical amplifier response functions.

The 1740's half-rack width package allows easy installation where space and power requirements are important considerations. The 1740 is mechanically compatible with the 528A, 602, 1420 and 1750 Series instruments.

Typical applications include video signal monitoring in VTR bridges, camera control units, production switcher consoles, and in mobile vans and field productions.

EXTERNAL REFERENCES INPUT

Dc Input Impedance— $>15\text{ k}\Omega$.

Return Loss—At least 40 dB from 50 kHz to 6 MHz.

RGB/YRGB MODE

Will display either a 3-step or 4-step RGB/YRGB display.

Staircase Amplitude—A 10 V input will result in a horizontal display of 9 divisions ± 1.4 major divisions.

Maximum Operating Staircase Signal Voltage—12 V p-p ac component. Signal voltage not to exceed $\pm 12\text{ V}$ dc + peak ac.

VECTOR MODE

Chrominance Bandwidth

Upper: -3 dB point Fsc +500 kHz $\pm 100\text{ kHz}$.

Lower: -3 dB point Fsc -500 kHz $\pm 100\text{ kHz}$.

Vector Phase Accuracy—Within 1.25 degrees.

Vector Gain Accuracy—1740: Within 1.25 IRE. 1741/1742: Within 1.25%.

Quadrature Phasing—Within 0.5 degrees.

SUBCARRIER REGENERATOR

Pull-In Range—1740: Within 50 Hz of Fsc. 1741/1742: Within 10 Hz of Fsc.

Phase Shift with Subcarrier Frequency Change—1740: Within 0.5 degrees from Fsc to (Fsc +50 Hz), or Fsc to (Fsc -50 Hz). 1741/1742: Within 0.5 degrees from Fsc to (Fsc +10 Hz), of Fsc to (Fsc -10 Hz).

Phase Shift with Burst Amplitude Change—Within 2 degrees from nominal burst amplitude to $\pm 6\text{ dB}$.

Phase Shift with Reference Switched Between Internal and External References—Within 0.5 degrees.

Phase Shift with Input Channel Change—Within 0.5 degrees.

Phase Shift with X5 Gain—Within 2 degrees.

Phase Shift with Variable Gain—Within 1 degree as gain is varied from +3 dB to -6 dB.

Phase Control Range—360 degrees continuous rotation.

DISPLAY CHARACTERISTICS

Differential Phase—Within 1 degree.

Differential Gain—Within 1%.

Variable Gain Range—1740: Input subcarrier signals between 28 IRE and 140 IRE can be adjusted to normal burst vector length.

1741/1742: Input carrier signals between 210 mV and 1.0 V can be adjusted to normal burst vector length.

CRT DISPLAY

CRT Viewing Area—80 mm x 100 mm.

Accelerating Potential—Nominally 15 kV.

GRATICULE

Waveform—Internal, variable illumination.

Vector—External, variable illumination. Illuminated with VECTOR or R-Y mode selected.

POWER SOURCE

Mains Voltage Ranges—100 V (90 V to 100 V); 120 V (108 V to 132 V); 220 V (200 V to 242 V); 240 V (218 V to 250 V).

Mains Frequency Range—48 Hz to 66 Hz.

Power Consumption—50 W maximum in ac. 30 W nominal in dc.

DC BATTERY OPERATION (OPTION 07)

Voltage Input Range—11 V to 16 V.

Over Voltage and Polarity Reversal Protection—Fuse blows if $>20\text{ V}$ dc or opposite polarity is applied to the dc INPUT.

Under Voltage Protection—Instrument shuts down when battery voltage (under load) is below 9 V.

Battery Current—3.5 A or less at 12 V.

ENVIRONMENTAL CHARACTERISTICS

Temperature—Operating: 0°C to $+50^\circ\text{C}$. Nonoperating: -55°C to $+75^\circ\text{C}$.

Altitude—Operating: 4500 m (15,000 ft). Nonoperating: 15,000 m (50,000 ft).

CERTIFICATION

Safety/EMC—UL 1244.

Waveform/Vector Monitors

**1750 SERIES****1750 SERIES
WAVEFORM/VECTOR MONITORS**

- Two Instruments in One
- SCH Phase and Color Framing
- R-Y (V-Axis) Mode
- RGB/YR GB Mode
- Remote Control Capability

The 1750 Series offers comprehensive monitoring and measurement of television signals, including SCH phase and color framing, in one compact unit. While similar in appearance to the 1740 instruments, the 1750 has enhanced performance in each of its operating modes.

The unique SCH phase display presents horizontal sync timing relative to reference subcarrier (burst) for verification of signal format and color framing. This mode enables easy analysis and monitoring of these important characteristics of the television signal, a task which previously required complex techniques, highly skilled operators and/or additional instrumentation. The 1750's SCH phase and color frame displays are derived from the standard composite signals. No extra pulses or added signal details are required.

The 1750's SCH capability makes it particularly valuable in production and editing environments where maintenance of SCH phase and color frame are critical considerations. Applications include VTR bridges, camera control units, switcher consoles, master control, mobile and field production units, and in maintenance operations supporting any of these areas.

The 1750's half-rack package allows easy installation in environments where space and power requirements are important considerations. The 1750 is mechanically compatible with 528A, 602, 1420, and 1740 Series instruments.

Waveform Mode

The waveform mode vertical response is controlled by selectable flat, chroma, and luminance (IRE) filters. A backporch slow clamp is controllable from the front panel. An internal jumper reprograms the clamp timing for sync tip operation.

The 1750 has pushbutton selection of H, 2H, V, and 2 V horizontal sweeps. A magnifier provides calibrated sweep speeds of 1 $\mu\text{s}/\text{div}$, 0.5 $\mu\text{s}/\text{div}$, and 0.2 $\mu\text{s}/\text{div}$ at the line display rates, and about 20X magnification of the vertical rate display. The faster sweep speeds are useful for determination of horizontal blanking, pulse widths, risetimes, and other timing details of the signal, while the magnified vertical sweep allows viewing of the vertical blanking interval.

The internal calibrator signal in the 1750 is useful for verification of both video amplitude and sweep timing calibration. Crystal control of the calibrator waveform provides an accurate 1V p-p squarewave and 10 μs timing interval.

The sweeps may be locked to the selected signal (A or B input), or to a separate external reference input. The horizontal rate sweeps may be triggered by the selected source (which presents a stable display in the presence of sync jitter) or may be AFC controlled (which displays sync jitter for analysis). Use of the AFC sweep control can also reposition the H sweep for more convenient timing measurements.

The 1750 Series has front panel line and field selection, and LED readout of the selected line number, and a video output with a strobe pulse on the displayed line. The 1750 (NTSC) will display line 8 thru 23 of either monochrome field (color fields 1, 3 or fields 2, 4). The 1751 (PAL) will display lines 6 thru 21 or 319 thru 334. The line selection range may be extended to any line of the frame by the use of rear panel remote control input in conjunction with the front panel controls.

The line selection function is operational in waveform, R-Y, and vector modes. These features provide convenient in-service monitoring or measurement of field blanking interval test or data signals.

R-Y (V-Axis) Mode

In this mode the display is similar to a waveform display with the demodulated chrominance signal on the vertical axis and the selected sweep on the horizontal axis. Any demodulation axis may be set with the phase control; properly setting the display of burst in the vector mode will ensure R-Y axis decoding when the R-Y mode is selected.

There are differential phase markings on the graticule for use in this mode. Resolution of differential phase error is about twice that of

vector measurement techniques, and the displayed errors may be correlated with time and luminance amplitude by using modulated staircase or modulated ramp test signals.

SCH Phase Mode

This display is a combination of the burst vectors of the vector display and a bright dot on the outer degree circle of the vector graticule. The position of this "sync dot" around the circle represents the timing (phase) of the horizontal sync edges relative to the reference subcarrier. An individual signal may be analyzed for proper format (for proper SCH phase) without any additional reference.

Since it is possible for two signals to be properly formatted but not properly timed to each other (i.e., a color framing error exists), the 1750 has provision for using an external reference input for its subcarrier phase reference. When the external reference mode is used, the display shows the burst phase and sync timing of the selected signal relative to the burst of the reference signal, simultaneously indicating the SCH phase of the selected input signal and its color frame relative to the external reference signal.

INCLUDED ACCESSORIES

Power cord assembly (161-0066-00); clear filter (378-0219-00); contrasting filter (378-0221-00); female remote connector, 25 pin (131-0569-00); 9 pin (131-1006-00); remote connector housing, 25 pin (200-1667-00); 9 pin (200-1170-00); strain relief, 25 pin (358-0314-00); 1.0 A fuse (159-0022-00); 0.5 A fuse (159-0032-00); instruction manual (070-4472-00).

1750 Waveform/Vector Monitor (for NTSC Applications) \$6050.00
1751 Waveform/Vector Monitor (for PAL Applications) 6050.00

Waveform Monitors

1485R Option 01 PAL/NTSC
Dual Standard Waveform Monitor
(Rackmount)1480 SERIES
WAVEFORM MONITORS

- Bright CRT Especially Suitable for Vertical Interval Testing
- Advanced Measurement Modes
- Amplitude Measurement Accuracy Approaching 0.2%
- Digital Selection of Line and Field
- Probe Input Option
- 15-Line Display for VTR Applications

The 1480 Series waveform monitors have excellent amplitude measuring accuracy and many unique operating modes that enable you to work more precisely and accurately. The monitoring needs of CCU, VTR, control room, transmission facilities, transmitter, and special systems are met by the use of 1480 Series waveform monitors. The 1485C and 1485R PAL/NTSC dual standard monitors (see photos) represent the essentials of all seven monitors in the 1480 Series. The differences between the monitors in the series are essentially confined to what lines in the vertical interval are selectable, what filters are selectable in the response mode, and in the field selection modes. Dual-Standard Monitors recognize the signal standard in use automatically and indicate that standard with front panel indicators.

CHARACTERISTICS

VERTICAL DEFLECTION

Inputs—Input A and B are 75 Ω high impedance loop-through. Return loss is ≥ 40 dB from dc to 5 MHz in a 75 Ω system. Aux Video Input is internally terminated in 75 Ω . Return loss is ≥ 34 dB from dc to 5 MHz.

Scale Factor—A and B input calibrated 1.0 V ± 7 mV, 0.5 V ± 15 mV, 0.2 V ± 7 mV. (0.05 V ± 2.5 mV Option 06) volts full scale. Variable: Range for each scale factor at least +40% to -50%. Aux Video Input 1.5 dB gain.

Maximum Input Voltage—2 V p-p (ac coupled), ± 1.5 V dc + peak ac (dc coupled).

Frequency Response

FLAT: 50 kHz to 5 MHz $\pm 1\%$ (1.0 V F.S., VAR in detent). 5 MHz to 8 MHz +2, -3%, 8 MHz to 10 MHz +2, -6%. Typically within +2, -15% to 18 MHz and typically -3 dB at 20 MHz.

Low Pass: Attenuation ≥ 14 dB, 500 kHz and above. 3.58 MHz Bandpass: Amplitude within $\pm 1\%$ of amplitude in Flat response position. Bandpass ≈ 600 kHz. 4.43 MHz Bandpass: Amplitude within $\pm 1\%$ of amplitude in flat response position. Bandpass ≈ 800 kHz. IRE: Conforms to IEEE Standard 205, 1972.

Linear Waveform Distortion

Pulse/Bar Ratio: $\pm 1\%$. For NTSC or PAL 2T Pulse or NTSC T Pulse.

Short Time: Preshoot, overshoot, ringing $\leq 1\%$ of NTSC or PAL T Pulse and Bar.

Line Time: Tilt or rounding $\leq 1.0\%$. Field Time: (Ac coupled) $\leq 1\%$.

Nonlinear Distortion—Differential Gain: $\leq 0.5\%$.

Dc Restorer—Keyed type, may be turned off. Clamping point: Back Porch/Sync Tip. Time Constant: FAST reduces mains hum ≥ 26 dB, SLOW reduces mains hum < 0.9 dB.

Calibrator—Amplitude selected by dc Restorer switch. Sync Tip: 1 V $\pm 0.2\%$. Back Porch: 714 mV or 700 mV $\pm 0.5\%$.

1480 SERIES

HORIZONTAL DEFLECTION

Time Base—5 μ s and 10 μ s timing accuracy $\pm 2\%$ (center 10 divisions). 5 μ s and 10 μ s linearity $\pm 1\%$ (center 10 division).

External Sync Input—Two loop-through high impedance, with ≥ 46 dB return loss in a 75 Ω system. Inputs are slaved to A and B input or to A external sync input only.

External Sync Input Requirements—400 mV to 2 V composite video or 200 mV to 8 V composite sync.

Field Selector—Positive selection of Field 1 or Field 2 in the NTSC system. Positive selection of 1, 2, 3, 4, or 1 & 3, 2 & 4 in the PAL systems.

Line Selector—Dig: Selects lines 9 to 22 NTSC, line 9/322 to line 22/335 PAL, line 9/272 to line 22/285 PAL-M. Var: Approx line 20 of the selected field to line 4 of the next related field. 15 lines. Identical to Var, except 15 successive lines are displayed.

Sync—AFC horizontal frequency range is 15.75 kHz ± 200 Hz. Maximum Jitter with Respect to Input Sync: 10 ns with 4 V RMS hum (30 ns with the addition of -36 dB white noise). Direct horizontal frequency up to ≤ 20 kHz. Maximum Jitter with Respect to Input Sync: 12 ns with 4 V RMS hum (90 ns with the addition of -36 dB white noise).

OUTPUTS

Line Strobe—TTL amplitude pulse. Pulse coincident with line or lines selected by VAR, 15 LINE or DIG modes of DISPLAY switch.

Picture Monitor—Output of incoming video with Line Strobe added. Output impedance is 75 Ω . Output gain adjustable to unity with respect to A and B video input.

Aux Video—Output of incoming video. 75 Ω output impedance. Gain adjustable to unity with respect to A and B video input.

OTHER CHARACTERISTICS

RGB/YRGB Staircase Input— ≈ 12 V for 12.7 divisions deflection. RGB sweep length internally selected for 1/3 normal sweep. YRGB sweep length internally selected for 1/4 normal sweep length.

Mains Voltage—Ranges 100 V ac, 110 V ac, 120 V ac, 200 V ac, 220 V ac, 240 V ac $\pm 10\%$. Frequency 48 Hz to 62 Hz, maximum power consumption 75 W. At factory, 1480, 1482 preset for 110 V ac. 1481, 1485 preset for 220 V ac.

CHARACTERISTICS (OPTION 01)

10X Probe Channel—Scale Factor: 1 V, 0.5 V, 0.2 V full screen with 10X attenuator probe. Gain Range: $\pm 10\%$. Tilt: $\leq 5\%$ on 50 Hz. Squarewave High Frequency Response: $\pm 3\%$, 25 Hz to 5 MHz. Referenced to 50 kHz. Input Resistance 1 M Ω , $\pm 2\%$, not including probe. Input RC Product: 20 μ s, $\pm 1\%$, not including probe. BNC connector accepts most Tektronix probes.

10X Probe Calibrator—Output voltage 1,000 V ± 0.005 V or 0.995 V to 1.005 V.

SLOW SWEEP CHARACTERISTICS (OPTION 07)

Duration—4 to 12 s, variable with front panel control. Linearity— $\pm 5\%$ of full-screen over the length of the sweep.

Indicator—Front panel indicator on when slow sweep is operating but sweep is not running.

Triggering Signal—APL change $\leq 10\%$ to 90% (Bump or Bounce), front panel selectable for either + or - level change.

Sensitivity—400 mV to 2 V p-p composite video with APL change.

Rate— ≥ 0.2 Hz, free-runs at rates < 0.2 Hz or with no triggering signal.

Input—Internal or External

50Hz/60Hz Squarewave Triggering—Sensitivity: 400 mV p-p minimum to 3 V p-p maximum. Input Impedance: ≈ 10 k Ω ac coupled (Rear Panel loop-through connectors not return loss compensated.)

INCLUDED ACCESSORIES

Two BNC right angle adaptors (103-0031-00); One pair rackmount ext DWR Slides (351-0195-01); various external graticules (see matrix below); manual.

R520A NTSC VECTORSCOPE

R520A/R521A/R522A Vectorscopes

- Luminance Amplitude
- Chrominance Amplitude and Phase
- Precision Differential Phase and Gain

The Tektronix R520A Series vectorscopes include three basic instruments. These are the R520A for NTSC, the R521A for PAL, and the R522A for PAL-M.

DISPLAYS

The vector display shows the relative phase and amplitude of the chrominance signal on polar coordinates. To help identify these coordinates, the graticule has points corresponding to the proper phase and amplitude of the primary and complementary colors: R (Red), B (Blue), G (Green), CY (Cyan), YL (Yellow), and MG (Magenta).

Any errors in the color encoding, video-tape recording, or transmission processes that change these phase and/or amplitude relationships cause color errors in the television picture. Polar coordinate displays, such as those obtained on the R520A, R521A, and R522A CRT, have proven to be the best method for displaying these errors.

The polar display permits measurement of hue in terms of relative phase of the chrominance signal with respect to the color burst. Amplitude is expressed in terms of the displacement from center (radial length) toward the color point which corresponds to 75% (or 100%) amplitude of the particular color being measured.

The outer boxes around the color points correspond to phase and amplitude error limits ($\pm 10^\circ$, $\pm 20\%$). For the R520A (NTSC) the inner boxes indicate $\pm 2.5^\circ$ and 2.5 IRE units, and correspond to phase and amplitude error limits per EIA specification RS-189, amended for 7.5% setup. For the R521A (PAL), and R522A (PAL-M), the inner boxes indicate $\pm 3^\circ$ phase angle and $\pm 5\%$ amplitude.

An internally generated test circle, used with the vector graticule, verifies quadrature accuracy, horizontal to vertical gain balance, and gain calibration for chrominance signal

amplitude measurements. Two methods of measuring phase shifts are provided. You can accurately read large phase shifts from the parallax-free vector graticule. A precision calibrated phase shifter with a range of 30° , spread over 30 inches of dial length, is provided for measuring small phase shifts.

CHARACTERISTICS

Graticule—Two separate graticules provide reference for vector and line sweep displays. The parallax-free vector graticule, or the luminance graticule, is automatically selected and edge-lighted concurrent with operating mode selection.

Z-Axis Input—The Z-Axis Input connector accepts external trace-brightening pulses for intensifying a portion of the display during the time of interest.

Video Inputs—Dual BNC input connectors for each channel permit 75 Ω loop-through operation with a return loss >46 dB to 5 MHz (exceeds CCIR recommendation 567, Part D and D2). Amplitude range is 0.7 V to 1.4 V Video (sync tip to peak white).

AC POWER

Mains Voltage Range—90 V ac to 136 V ac or 180 V ac to 272 V ac.

Mains Frequency—47 Hz to 63 Hz.

Power Consumption—95 W maximum at 115 V ac/60 Hz. (Rear panel selector provides rapid accommodation to six line-voltage ranges. Factory set at 115 V ac for the R520A and R522A and 230 V ac for the R521A).

ENVIRONMENTAL CHARACTERISTICS

Operating Temperature Range— 0°C to $+50^\circ\text{C}$ ambient.

OPTIONAL ACCESSORIES

75 Ω Voltage Step-Up Termination—When used with a Tektronix vectorscope, the 75 Ω Voltage Step-Up Termination provides an X5 increase in chrominance amplitude and lets you make more accurate Differential Gain and Differential Phase measurements. Input impedance to the termination is a constant 75 Ω . Use of the termination requires a source of external sync to the vectorscope.

Voltage Step-Up Termination—For use with R520A (NTSC), R522A, (PAL-M) Vectorscopes. Order 011-0100-00 **POR**

Voltage Step-Up Termination—For use with R521A Vectorscope. Order 011-0109-00 **POR**

Single Sideband Chroma Amplitude Corrector—Designed for use with a Tektronix vectorscope in transmitter applications where a vestigial sideband signal is being demodulated with a detecting diode. The corrector provides an X2 increase in chrominance amplitude and passes luminance components with little or no attenuation. Input impedance is 75 Ω .

Chroma Amplitude Corrector—For use with R520A (NTSC), R522A (PAL-M) Vectorscopes. Order 011-0107-01 **POR**

Chroma Amplitude Corrector—For use with R521A Vectorscope. Order 011-0108-01 **POR**

Recommended Camera—For Display Photographs: C-59AP with mounting adaptor 016-0295-01. . . \$90.00

R520A Cradle Assembly—For mounting the R520A in a WECO backless rack. Order 426-0667-00 **POR**

Rackmount to Cabinet Conversion Kit—Order 040-1153-00 **POR**

WFM-300 Component Television Waveform Monitor

- Electronic graticule
- Lightning display
- Waveform display parade and overlay
- Vector display
- Bowtie timing display
- Color gamut limit indication
- Linearity measurements
- Input selectable between Y, B-Y, R-Y, R, G, B, Y, Q, I
- 625/50 and 525/60 configurations
- RGB picture monitor output

The versatile WFM-300 Component Television Waveform Monitor provides a comprehensive set of signal monitoring capabilities designed specifically for the component television environment.

The component based television equipment produces signals quite different from the composite television signals, and the WFM-300 provides new monitoring capabilities to meet this challenge. An innovative Lightning display provides amplitude and timing information for all three channels simultaneously, allowing the operator to set up equipment accurately and efficiently.

The traditional parade display of three signals provides side-by-side comparison of all signals. In addition, any combination of the three signals can be overlaid for accurate comparisons. Both horizontal and vertical magnification can be applied for detailed inspection of the signal being observed.

A vector display of the color difference signals provides the traditional color bar vector display. The new bowtie display uses the special bowtie timing test signal from the TSG-300 component television test signal generator, allowing precise timing of three wire component television systems.

The 3-channel input signals can be Y, B-Y, R-Y or R, G, B, or Y, Q, I with internal accommodation for each signal type. All of these signal types are converted to R, G, B for a dedicated picture monitor output. The valid RGB gamut limit is monitored to ensure the operator is warned if a combination of signals is not valid. The WFM-300 can be configured for both 525/60 and 625/50 signal standards.

Specifications

Vertical Deflection System — Frequency Response: 1 V Full Scale; 50 kHz to 6 MHz within 2% of response at 50 kHz. X5 Gain; 50 kHz to 5 MHz within 2% of response at 50 kHz. Dif'd Step; Equal to greater than -20 dB at 14 kHz and 2 MHz. Transient Response: 1 V Full Scale; Pulse-to-bar 0.99:1.00 to 1.01:1.00. Ringing and Overshoot; 2% or less. Tilt: 1% or less; Variable Gain Range: 1 V Full Scale; Input signals between 0.7 V and 2 V can be adjusted to 1 V display. Deflection Accuracy: Within 2%.

DC Restoration — Attenuation of 50 Hz on Input Signal: Less than or equal to 20%. Blanking Level Shift with 10% to 90% APL Change: Less than or equal to 1%.

Inputs — CH 1, CH 2, CH 3, & External Reference: Return Loss (75 ohms) at least 40 dB from 50 kHz to 6 MHz. Cross Talk Between Channels: Greater than 46 dB isolation between channels. Loop-Through Isolation: Greater than 60 dB isolation between channels. Maximum Input Level for Normal Operation (CH 1, CH 2, CH 3) ±2 V (dc + peak ac). External Reference: +2 to -4 V peak ac (compatible with comp sync).

Horizontal Deflection System — (Waveform and Parade Mode) Sweep will occur in all sweep rate settings with or without a reference signal. Synchronization: Sweep will synchronize to sync amplitude of 0.3 V p-p ±6 dB. 2 FLD Sweep Repetition Rate: Equal to frame rate of selected reference. 2 FLD MAG (Magnification): Approximately X20. 1 LINE Sweep Repetition Rate: Equal to line rate of selected reference. 2 LINE Sweep Repetition Rate: Equal to half line rate of selected reference. Timing Accuracies: 1 μs/Div; within 2%. 0.2 μs/Div; within 2%. Linearity (1 μs/Div and 0.2 μs/Div): within 2%.

Parade Mode — Sweep Repetition Rate: Field or line rate of selected reference.

Vector Mode — Vertical Bandwidth: 900 kHz ±100 kHz. Horizontal to Vertical Bandwidth Matching: No eye opening at 500 kHz or 2 MHz. Vertical Gain Accuracy: ±1%. Horizontal Gain Accuracy: ±1%. Electronic Graticule Accuracy: ±1%.

Bowtie Mode — Common Mode Rejection Ratio: Greater than 40 dB.

Calibration — Calibrator accuracy within 1%.

Transcoder — Accuracy: Within 1%. GBR Outputs: Impedance 75 ohms nominal. Back porch clamped to 0 V. Gamut Limit: Preset threshold settings are nominally +735 mV and -35 mV within ±5 mV.

CRT Display — CRT Viewing Area: 80 × 100 mm. Horizontal = 12.5 div. Accelerating Potential: Nominally 13.75 kV. Trace Rotation Range: Greater than ±1 degree from horizontal.

Power Source — Mains Voltage Ranges: 110 V (88-132 V); 220 V (198-242 V). Mains Frequency Range: 48 Hz to 66 Hz. Power Consumption: 35 Watts maximum.

WFM-300

Physical Characteristics

Dimensions: 5.25" H x 8.424" W x 16.875" L

Weight: Approximately 9 lbs.

Included Accessories

Instruction manual; spare fuse; remote control mating connector; power cable assembly

WFM-300 Component Television Waveform

- Monitor \$4900.00
- Option 01
For 625/50 operation NC
- Option 10
For Betacam® transcoder. 5020.00
- Option 12
For YQI transcoder 5020.00
- Option 14
For MII transcoder 5020.00

Only one color difference transcoder (SMPTE, Option 10, Option 12 or Option 14) can be installed in a single WFM-300. RGB operation is selectable from the front panel on all instrument/option combinations. Option 01 can be combined with all other options.

TSG-170A NTSC Television Generator

- Simple, Effective Test Signal Complement
- RS-170A Sync Pulse Generator with Digital Genlock
- Separate Timing Controls for Sync and Test Signals
- Separate SMPTE Bars Output with Programmable ID (option 01)
- Audio Tone Output (option 01)
- Tape Leader Countdown

The Tektronix TSG-170A NTSC Television Generator offers you the test signals you need plus the advantages of master and genlock sync capability. It provides true 10 bit digital signal accuracy with a full complement of test signals and a stable RS-170A sync generator.

The rugged, compact TSG-170A is designed to support both operational and maintenance requirements. The TSG-170A Option 01 provides even more versatility by adding a separate SMPTE bar generator, programmable identification, and audio tone output.

RS-170A Sync Generator with Digital Genlock

The TSG-170A sync generator's stable color standard and unique digital genlock make it ideal for either master generator or slave operation. All outputs are correctly SC-H phased, even if the TSG-170A is locked to an improperly SC-H phased reference input. The digital genlock calculates sync timing and subcarrier phase to properly identify color framing of the input reference signal. The TSG-170A automatically senses composite video or 3.58 MHz subcarrier reference inputs. It switches to an internal oscillator in the absence of a reference input signal. This high stability crystal oscillator, with its constant temperature oven, ensures long term frequency stability.

Flexible Timing Controls

Horizontal and subcarrier phasing control settings are stored in nonvolatile RAM for digital control of genlock timing. In addition, a separate set of timing controls is provided for sync outputs to simplify system timing. A front panel lockout feature prevents inadvertent changes to the front panel system timing controls.

SMPTE Bars with Programmable ID and Audio Tone (Option 01)

Option 01 adds a separate SMPTE bar output for routine studio needs, such as tape leaders, freeing the front panel selected test signals for engineering and maintenance.

An ID of up to 12 alphanumeric characters may be inserted in the SMPTE bar output. This front panel programmable ID is ideal for identifying satellite feeds, and videotapes.

Option 01 also provides a 400 Hz audio tone output, useful for checking program line continuity and adjusting audio levels. The tone can be adjusted over a 0 dBm to +8 dBm range into 150 Ω or 600 Ω.

Remote Control

Remote operation of test signal selection and timing functions is available by simple ground closure control through a rear panel connector.

TEST SIGNAL GENERATOR

Luminance Amplitude Accuracy	± 1%
Chrominance-to-Luminance Gain	± 1%
Output Impedance	75 ohm
Return Loss	36 dB to 4.2 MHz
TEST SIGNALS COLOR BARS	SMPTE Bars with 10.6 μs blanking
CONVERGENCE	14 lines per field 17 lines per horizontal
PULSE & BAR WITH WINDOW	
2T Pulse HAD	250 ns ± 25 ns
White Bar Amplitude	100 IRE
Field Tilt	0.5%
Line Tilt	0.5%
MULTIBURST	
White Reference Bar Amplitude	428.6 mV (60 IRE)
Packet Amplitude	428.6 mV (60 IRE) p.p
Burst Frequencies	0.5 1.0 2.0 3.0 3.58 and 4.2 MHz
5-STEP STAIRCASE	714.3 mV (100 IRE)
LUMINANCE RAMP	0 to 714.3 mV (100 IRE)
MODULATED RAMP	
Chrominance Amplitude	285.7 mV (40 IRE)
Diff Gain	0.6%
Diff Phase	0.3°
APL	10% and 90%
AC BOUNCE	
Bounce Rate	1 second high 1 second low
FLAT FIELDS	10 IRE, 100 IRE
RED FIELD

MULTIBARS	Color bars and multiburst
NTC7 COMPOSITE	80 IRE 5-step modulated staircase and pulse & bar
LINE SWEEP	714.3 mV p.p Linear sweep from 500 kHz to 5 MHz
MULTIPULSE	
Amplitude	714.3 mV
Frequencies	0.5, 1.0, 2.0 3.0 3.58 and 4.2 MHz

SYSTEM TEST MATRIX	Multibars and NTC7
MONITOR SETUP MATRIX	Convergence IWOB convergence color bars reverse bars and convergence
DAC TEST	500 kHz and 3.58 MHz
OPTION 01 COLOR BARS	SMPTE bars
IDENTIFICATION	12 characters 7x9 matrix
AUDIO TONE	450 Hz (locked to vertical) distortion less than 0.01% 0 to +8 dBu into 150Ω 600Ω or high impedance Click ID adjustable 0.2 to 4 Hz

SYNC GENERATOR

SUBCARRIER STABILITY	3.579545 MHz ± 1Hz over temperature typically less than 1 Hz drift over a year after initial aging
BLACK BURST OUTPUT	
Setup	7.5 IRE
Blanking	Less than 10.6 μs
PULSE OUTPUTS (GENERAL CHARACTERISTICS)	
Amplitude	40 ± 0.1V
Impedance	75 ohm
Return Loss	30 dB to 4.2 MHz
Rise Time	140 ns ± 20 ns
PULSE OUTPUTS (SIGNALS) COMPOSITE SYNC	
BLANKING	
Horizontal Blanking Duration	10.7 μs ± 0.1 μs jumper selectable for 10.2 μs or 10.9 μs
Vertical Blanking Duration	20 lines jumper selectable for 19 or 20 lines
BURST FLAG	
HORIZONTAL DRIVE	
VERTICAL DRIVE	
COLOR FRAME PULSE	Field 1 Line 11
SUBCARRIER OUTPUT	
Amplitude	2 V p.p ± 0.2V
PULSE AND SUB-CARRIER OUTPUTS	
Timing Range	4 μs advance 4 μs delay relative to the test signal and black burst outputs

GENLOCK

GENLOCK SOURCE (COMP VIDEO)	
Input Configuration	75 ohm loop through
Return Loss	At least 40 dB to 4.2 MHz
Burst Amplitude	286 mV +1 dB to -6 dB
Sync Amplitude	286 mV +3 dB to -6 dB
GENLOCK PERFORMANCE	
Horizontal Timing Range	8 μs advance 8 μs delay
Vertical Timing Range	0 1 or 2 lines advance or 1 line delay jumper selectable
Burst Lock Range	3.579545 MHz ± 20 Hz
Jitter	0.5°

PHYSICAL CHARACTERISTICS

TSG-170A NTSC Television Generator \$4995.00
 TSG-170A Option 1 Adds separate SMPTE Bars output with 12 character ID, audio tone output and tape leader countdown 1000.00

SPG-170A

SPG-170A Sync Generator

- Digitally generated RS-170A black burst
- Digital genlock
- High stability subcarrier
- Flexible pulse outputs
- Pulse timing independent of black
- Remote control timing presets
- Remote control ID presets
- Optional SMPTE bars, ID, and audio tone

The SPG-170A sync generator offers all the features expected in a sync generator, plus the advantages of digital accuracy and system flexibility. Ideal for either master or slave generator operation, the SPG-170A features stable RS-170A performance and a rugged 1 3/4" package. The SPG-170A Option 1 provides even more versatility by adding SMPTE bars with programmable identification and audio tone.

Digital Accuracy

All SPG-170A signals are digitally generated to provide excellent SCH and timing accuracy. The SPG-170A also has a digital genlock to ensure consistent color framing and to eliminate timing drift inherent in other genlock systems. This microprocessor-based system calculates genlock input burst phase and sync timing to control output timing and color framing. All outputs are correctly SCH phased, even if the SPG-170A is locked to an improperly SCH phased input. When no input signal is present, it switches to an internal oscillator. This high stability crystal oscillator, enclosed in a constant temperature oven, ensures long term frequency accuracy.

System Flexibility

The flexibility of the SPG-170A's pulse outputs allows you to configure it to your specific system needs. The SPG-170A has eight sync generator outputs: Sync, Subcarrier, Blanking, Black Burst, and four selectable outputs. The selectable outputs can be used for Burst Flag, H Drive, V Drive, and Color Frame Pulse, or they can be used to provide an additional set of outputs for the pulses most commonly used in modern television facilities. Horizontal blanking can be set to 10.5, 10.7, or 10.9 μs and vertical blanking can be set to either 19 or 20 lines.

The SPG-170A sync timing controls allow you to advance or delay subcarrier and pulse outputs relative to the black burst output, eliminating the need for separate delay lines. Microprocessor control enables both genlock and sync timing settings to be stored in nonvolatile memory in case of power failure. To prevent inadvertent changes to critical timing settings, the front panel timing controls can be locked out by an internal jumper. Up to eight timing presets are selectable through the remote control to simplify timing of shared equipment.

SMPTE Bars with ID and Audio Tone (Option 1)

By specifying Option 1, basic video and audio test capabilities are added to the SPG-170A. Option 1 includes SMPTE bars and audio tone generators for setting program levels. Also, a preset ID of up to 12 characters can be added over the SMPTE bar output. This ID is stored in nonvolatile memory from the front panel, and up to four preset IDs can be recalled through the remote control. Additionally, the remote control allows the ID to be replaced by a countdown, providing a tape leader function. The vertically locked 450Hz audio tone provides a unique method for checking audio edit quality. The audio tone can be combined with a variable rate click to distinguish various audio sources.

Total System Solution

The SPG-170A NTSC sync generator is ideal in a master sync system with the ECO-170A synchronous changeover and TSG-170A NTSC television generator.

- SPG-170A NTSC sync generator \$3300.00
- SPG-170A Option 1 SMPTE bars with ID and audio tone \$4300.00

TEKTRONIX, INC.

Synchronous Changeover

ECO-170A

ECO-170A

Synchronous Changeover

- Automatic sync changeover
- Clean electronic switching
- Unique fault detection system
- 8 channels
- Manual override
- Remote control with fault indicators

The ECO-170A Synchronous Changeover provides transparent, automatic selection of sync sources. Front panel controls allow simple access to changeover functions. A two level front panel lockout protects these controls in critical master sync systems.

Transparent Switching

The ECO-170A employs electronic sync transfer to ensure uninterrupted sync for critical production and on-air operations. Unlike other sync changeovers, the ECO-170A uses relay switching only for bypass in case of power failure. This gives optimum sync system performance while ensuring maximum system reliability. Manual sync source selection provides a means for periodic verification of changeover and backup sync generator operation.

Fault Detection

By testing both pulse amplitude and pulse timing, the ECO-170A provides two methods of error checking for your sync system. Conventional amplitude detection finds missing pulses quickly, while the ECO-170A's additional timing detection identifies errors that would otherwise be undetected. When the ECO-170A detects a fault, it automatically switches to the backup generator, unless the backup generator also has a fault. Separate indi-

cators on both the front panel and remote control display faults for each generator. These indicators remain on until cleared by an operator.

System Configuration

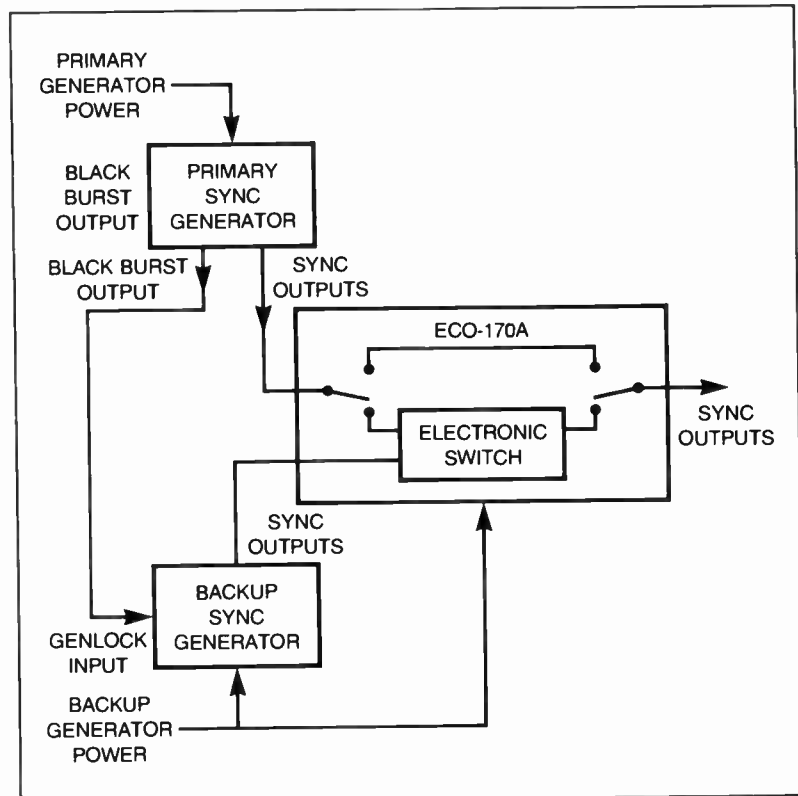

The flexibility of the ECO-170A lets you configure it to your specific system needs. The ECO-170A has eight inputs for each sync generator: Sync, Subcarrier, Blanking, Composite Video, and four selectable outputs. The selectable outputs can be used for Burst Flag, H Drive, V Drive and Color Frame Pulse, or they

can be used to provide an additional set of outputs for the pulses most commonly used in modern television facilities. The composite video channels may be black burst or color bars.

Reliable Sync

With its clean switching and two level fault detection, the ECO-170A teams with your sync generators to provide a reliable master sync system.

ECO-170A \$2000.00

A Master Sync System using the ECO-170A

Television Generator

TSG-300

Component Television Generator

- Multiple Formats and Standards
- Y,B-Y,R-Y (Y,Pb,Pr; SMPTE/EBU)
- GBR
- Betacam®
- MII
- 525/60 and 625/50
- 10 Bit Digital Signal Generation
- New Test Signals for Component Video
- Bowtie
- Coring
- Valid Ramp
- Shallow Ramp
- User Configurable Controls
- Digital Genlock

Digital Genlock

From news gathering to post-production, component television is providing new levels of image quality and operational flexibility. While component television solves many problems inherent in composite NTSC and PAL, it brings with it a new set of concerns. The TSG-300 Component Television Generator provides innovative solutions to the measurement problems encountered in component television systems.

Multiple Formats and Standards

While the EBU and SMPTE are setting standards for component video, there is already a large base of installed component equipment using many different operating levels. The TSG-300 bridges this gap between formal and de-facto standards, providing signals in SMPTE/EBU standard formats as well as previously existing component formats. Signal formats supported by the TSG-300, using color bars as an example (Figure 1), are Y, B-Y, R-Y (Y,Pb,Pr; SMPTE/EBU), GBR, Betacam, and MII. The TSG-300 also supports both 525/60 and 625/50 systems by either internal jumper selection or remote control.

Digital Signal Generation

Precision digital signal generation insures the accuracy and stability of the TSG-300 test signals. 10 bit digital to analog conversion at 13.5 MS/s, even in the color difference channels, allows full bandwidth testing of GBR systems. Digital generation of each individual format eliminates transcoding artifacts.

New Test Signals for Component Video

The TSG-300 provides unique solutions to component measurement problems with signals such as Bowtie, Coring, Valid Ramp, and Shallow Ramp, as well as a wide range of more conventional signals

User Configurable Controls

Operation of the TSG-300 is simplified by its user configurable controls. Many of the test signal controls access a variety of similar signals. These signals are accessed by pressing the switch repeatedly. By simply specifying which signal you want to appear first, the problem of searching for a commonly used signal is eliminated.

Digital Genlock

The TSG-300's unique digital genlock and stable internal oscillator make it suitable for either slave or stand-alone operation. After the incoming signal is digitized, a processor analyzes timing to control the TSG-300's system clock. The digital genlock works with component video or composite NTSC, PAL, or SECAM sources operating in either 525/60 or 625/50 systems. The TSG-300 automatically switches to its internal oscillator in the absence of a reference input signal. This high stability crystal oscillator, with its constant temperature oven, ensures long term frequency stability.

Remote Control

Remote operation of test signal selection, system timing, and line and field rate selection is available by simple ground closure control through a rear panel connector.

Sync/Test Generators

1410R

1410R/1411R/1412R SYNC/TEST GENERATORS

- Five Test Signal Generators and One Switcher
- Conforms to EIA Standard RS-170A (1410R)
- Sync to Subcarrier Phasing Maintained or Corrected
- Color Frame Reference Output
- Genlock to Composite Video
- Lock to External References
- Adjustable Blanking Widths
- Adjustable Sync Delays (H and V)
- Parallel Test Signal Outputs

The 1410R Series Sync and Test Signal Generators are precision generators for use in studios, remote vans, maintenance facilities and anywhere high quality sync or test signals are required.

1410R Series Products

Description	Color Standard		
	NTSC	PAL	PAL-M
Mainframe	1410R	1411R	1412R
Sync Pulse Generator	SPG2A	SPG12	SPG22
Color Bars Generator	TSG7	TSG11	TSG21
Convergence Generator	TSG2	TSG12	
Linearity Generator	TSG3	TSG13	TSG23
Pulse/Bar Generator	TSG5	TSG15	TSG25
Multiburst Generator	TSG6	TSG16	TSG26
Signal Switcher	TSP1	TSP11	TSP21

SPG2A/SPG12/SPG22 SYNC PULSE GENERATORS

The SPG2A, SPG12 and SPG22 are high quality sync generators designed for use in systems where accuracy, stable SCH (Sync-to-Subcarrier) phasing capability, and lockup mode versatility are of prime importance.

Two external synchronization modes, external reference and genlock, are available. In the genlock mode, line field, subcarrier and PAL pulse (SPG12, SPG22) timing are derived from the incoming composite video signal.

In the external reference mode, line, field, subcarrier, and PAL pulse timing is derived from individual reference signals applied to the generator.

The SCH phasing of the generator outputs can be set for zero error or offset to match the SCH phase of the incoming genlock signal.

A slow genlock mode is provided for those applications where fast-lock may upset the system. The slow-lock selector is located on the generator card sets.

Internal adjustments permit some variation of burst and blanking widths on the burst flag, comp blanking, and black burst outputs.

CHARACTERISTICS

Sync Pulse Generators

1410R Subcarrier—Frequency (F_{sc}): 3.579545MHz \pm 1Hz. Pull-in Range: $F_{sc} \pm$ 20Hz.

1411R Subcarrier—Frequency F_{sc} : 4.43361875MHz \pm 1Hz. Drift \leq 1 part in 10^7 per week. Pull-in Range: $F_{sc} \pm$ 20Hz

1412R Subcarrier—Frequency F_{sc} : 3.57561149MHz \pm 1Hz. Drift \leq 1 part in 10^7 per week. Pull-in Range: $F_{sc} \pm$ 20Hz.

PULSE OUTPUTS

Output Level (Into 75 ohms)—4V (1410R), 1V, 2V, or 4V (selectable, 1411R and 1412R) \pm 2V.

Return Loss \geq 30dB to 5MHz

Risetime and Falltime—10% to 90% (Linear Ramp). 140ns, (1410R, 1412R). 250ns (1411R—Other values internally selectable).

Jitter—Linlock: \leq 10ns. Subcarrier Lock: \leq 4ns.

Outputs—Comp sync, comp blanking, burst flag, H drive, V drive, Field reference, 1411R/1412R only: PAL pulse, V/2, V/4, and 64H.

SUBCARRIER OUTPUT

Amplitude—2V p-p into 75 ohm. Return Loss: \geq 30dB to 5MHz.

BLACK BURST OUTPUT

Amplitudes—Sync: 286mV \pm 3.57mV (1410R); 300mV \pm 3mV (1411R, 1412R) from blanking. Burst: 286mV \pm 2.86mV (1410R). Absolute: 300mV \pm 9mV. Setup: 53.57mV \pm 3.57mV (1410R), 0% (1411R), 50mV \pm 2.5mV (1412R).

VIR Signal—(1410R Only) Chrominance Amplitude (40 IRE); phase within 0.5° of burst; envelope risetime Sin^2 shaped $1\mu\text{s} \pm 150\text{ns}$. Luminance: Setup level (7.5 IRE \pm 0.5 IRE); gray level (50 IRE \pm 0.5 IRE); chroma pedestal (70 IRE \pm 0.7 IRE); risetime and falltime Sin^2 shaped. 250 ns. \pm 39 ns.

GENLOCK

Input Configuration—75 ohm Loopthrough with Return Loss: \geq -46dB to 5MHz (1410R); \geq 40dB to 7MHz (1411R); \geq 40dB to 5MHz (1412R).

Input Requirements—1V nominal composite video or black burst, sync negative. Sync Amplitude: Nominal \pm 6dB. Burst Amplitude: Nominal \pm 12dB. Burst Sync Ratio: Within 6dB.

Subcarrier Phase Range—360° via front panel goniometer.

Line Sync Delay Range—Adjustable to advance output sync $\geq 10\mu\text{s}$ or delay $\geq 4\mu\text{s}$ (internal adjustment). A front panel screwdriver adjustment provides a delay/advance range of $\pm 0.5\mu\text{s}$.

Stability (Over Ambient Temperature Range 0°C to $\pm 50^\circ\text{C}$)—Line Lock: Within 70ns. Subcarrier Lock: Within 35ns.

Field/Frame Sync—Fast Lock: Direct-acting in one field. Slow Lock: One line/field slow.

Loss of Lock—Indicated by front panel LEDs (automatic switching to full or partial internal).

1410R NTSC Mainframe and SPG2A . . . \$4200.00
Includes: Extender board (670-4441-02); 1.5 A fuse (159-0016-00); 0.75 A fuse (159-0042-00); rack-mount hardware; instruction manual.

OPTIONAL ACCESSORIES

(For All Configurations)
Single-Width Blank Panel—Order 333-2171-00

Conversion Kit for SMPTE Bars—For TSG1 Module. Order 040-1010-00

Rackmount to Cabinet Conversion Kit—Order 040-1152-00

1410 R Series (Cont'd)

TSP1/TSP11/TSP21 Switchers and Convergence Generators

- Single Switchable Output for Two to Six Generated Signals
- Blanking, Sync and Burst Insertion for External Sync
- Matrixing—Eight Programmed Display Formats to up to Six Sequential Signals
- Convergence Border
- Convergence Key
- Crosshatch or Dots
- Combined Crosshatch and Dots

The TSP1, TSP11, and TSP21 combine the capabilities of a test signal switcher and convergence signal generator in a single unit. They simplify and expand the uses of the 1410R Series signal generators.

From a single, electronically switched output, you have access to all the test signals generated by the card sets in the mainframe. Meanwhile, you may continue to use the individual generator card sets' parallel outputs, so no restrictions are imposed on an established system. As an added feature, one of the input signals can be external (composite or non-composite). All of the switcher inputs are provided with clamp circuitry.

Eight different matrixes are stored in the PROM. This signal matrixing capability, combined with the full-field mode of the TSP1 presents several combinations of signals sharing the full field display.

Most of TSP1 switching functions can be remotely controlled through the mainframe's Remote connector.

TSP1 (NTSC)	\$ 1725.00
TSP11 (PAL)	1610.00
TSP21 (PAL-M)POR

TSG6/TSG16/TSG26

- Multiburst Signal Generators
- Multiburst Signal
- Controlled Risettime Burst Packets
- Last Burst Frequency Variable
- Manual and Field Swept Frequency Signals to 20MHz
- Markers for Both Frequency and Amplitude Reference
- Full and Reduced Amplitude on all Signals

The TSG6, TSG16 and TSG26 are television multiburst and video sweep test signal generators designed for the 1410R Series signal generators.

Performance advances include reduction in harmonic content of sinewave signals and skirt energy associated with gating burst packets. Phase modulation of the burst packets aids ease of measurement by filling in shape of packets. Two ranges of multiburst frequencies are available: the 500 kHz to 4.1 MHz (TSG6) range aids in testing television transmitters and common carrier links, while the 1.25 MHz to 12 MHz range is used in testing television studio equipment and cabling.

Use these generators where nonlinearities make reduced amplitude test signals desirable. The reduced amplitude multiburst signal allows accurate testing of video tape record/playback systems, since it is not subject to the false distortion of the full amplitude multiburst that often occurs in such applications.

High and low frequency bands are provided for both the multiburst and sweep signals. Amplitude and frequency markers may be added to the sweep signal.

Color burst and the horizontal and field sync signals may be removed when non-composite signals are required.

Specifications:

SYNC PULSE GENERATORS

1410R Subcarrier — Frequency (F_{SC}): 3.579545 MHz \pm 1 Hz. Pull-in Range: $F_{SC} \pm 20$ Hz.

1411R Subcarrier — Frequency F_{SC} : 4.43361875 MHz \pm 1 Hz. Drift \leq 1 part in 10^7 per week. Pull-in Range: $F_{SC} \pm 20$ Hz.

1412R Subcarrier — Frequency F_{SC} : 3.57561149 MHz \pm 1 Hz. Drift \leq 1 part in 10^7 per week. Pull-in Range: $F_{SC} \pm 20$ Hz.

PULSE OUTPUTS

Output Level (Into 75 Ω) — 4 V (1410R), 1 V, 2 V, or 4 V (selectable, 1411R and 1412R) ± 2 V.

Return Loss — ≥ 30 dB to 5 MHz.

Risettime and Faltime — 10% to 90% (Linear Ramp). 140 ns, (1410R, 1412R). 250 ns (1411R — Other values internally selectable).

Jitter — Linelock: ≤ 10 ns. Subcarrier Lock: ≤ 4 ns.

Outputs — Comp sync, comp blanking, burst flag, H drive, V drive, Field reference, 1411R/1412R only: PAL pulse, $1/2$, $1/4$, and 64H.

SUBCARRIER OUTPUT

Amplitude — 2 V p-p into 75 Ω . Return Loss: ≥ 30 dB to 5 MHz.

BLACK BURST OUTPUT

Amplitudes — Sync: 286 mV ± 3.57 mV (1410R); -300 mV ± 3 mV (1411R, 1412R) from blanking. Burst: 286 mV ± 2.86 mV (1410R). Absolute: 300 mV ± 9 mV. Setup: 53.57 mV ± 3.57 mV (1410R), 0% (1411R), 50 mV ± 2.5 mV (1412R).

VIR Signal — (1410R Only) Chrominance Amplitude (40 IRE); phase within 0.5° of burst; envelope risetime Sin^2 shaped $1 \mu\text{s} \pm 150$ ns. Luminance: Setup level (7.5 IRE ± 0.5 IRE); gray level (50 IRE ± 0.5 IRE); chroma pedestal (70 IRE ± 0.7 IRE); risetime and faltime Sin^2 shaped, 250 ns ± 39 ns.

GENLOCK

Input Configuration — 75 Ω Loop-Through With Return Loss: ≥ -46 dB to 5 MHz (1410R); ≥ 40 dB to 7 MHz (1411R); ≥ 40 dB to 5 MHz (1412R).

Input Requirements — 1 V nominal composite video or black burst, sync negative. Sync Amplitude: Nominal ± 6 dB. Burst Amplitude: Nominal ± 12 dB. Burst Sync Ratio: Within 6 dB.

Subcarrier Phase Range — 360° via front panel goniometer.

Line Sync Delay Range — Adjustable to advance output sync $\geq 10 \mu\text{s}$ or delay $\geq 4 \mu\text{s}$ (internal adjustment). A front panel screwdriver adjustment provides a delay/advance range of $\pm 0.5 \mu\text{s}$.

Stability (Over Ambient Temperature Range 0°C to $\pm 50^\circ\text{C}$) — Line Lock: Within 70 ns. Subcarrier Lock: Within 35 ns.

Field/Frame Sync — Fast Lock: Direct-acting in one field. Slow Lock: One line/field slew.

Loss of Lock — Indicated by front panel LED's (automatic switching to full or partial internal).

1410 R Series (Cont'd)

**TSG7/TSG11/TSG21
Color Bars Generators**

- Color Bars Signals
- SMPTE Color Bars (TSG7)
- EIA (TSG7)
- Fixed Full Field (TSG11/TSG21)
- Full Field with Switchable Components
- 75% or 100% Amplitude
- Split Field/Y Reference
- Split Field/Red
- Split Field Bars/Bars Reversed

The TSG7, TSG11 and TSG21 provide high-quality full field and split field color bars for the 1410R series signal generators. Fixed configuration signals are available for operational environments such as post production. For lab and maintenance facilities, front panel control of luminance and chrominance signal components provides the flexibility to meet most engineering and testing requirements. The split field bars/Y reference signal provides a convenient means for simultaneous checking of picture monitor color performance and gray scale tracking.

The split field bars/red field signal is useful in detection of VTR noise and moire.

The SMPTE Bars signal provides an easy way to adjust picture monitor chroma, hue, and brightness.

TSG7 (NTSC)	\$ 1965.00
TSG11 (PAL)	1575.00
TSG21 (PAL-M)POR

**TSG2/TSG12
Convergence Test
Signal Generators**

- Dots and Crosshatch
- Dots Only
- Vertical Lines Only
- Horizontal Lines Only
- Vertical and Horizontal Lines
- Position Controls

The TSG2 and TSG12 provide high-quality convergence test signals for the 1410R Series signal generators. You can use them to determine picture monitor or camera scanning linearity, aspect ratio, and geometric distortion. Signals for the TSG2 conform to IEEE Standard 202.

Provision is made for on/off switching of the dots, vertical lines, and/or horizontal lines and for positioning vertical and horizontal lines.

TSG2 (NTSC)	\$560.00
TSG12 (PAL)520.00

**TSG5/TSG15/TSG25
Pulse and Bar Generators**

- Pulse and Bar Overlay
- Full and Half Amplitude Pulse and Bar
- Field Squarewave and Window
- Modulated Pulse and Modulated Bar
- Front Panel Selection of 2T, T, and T/2 Pulse Width and Bar Risetime

The TSG5, TSG15, and TSG25 are sin² pulse and bar television test signal generators designed for use with the 1410R Series signal generators.

The pulse and bar test signal consists of a sin² modulated pulse, a sin² pulse, and luminance bar. The pulse and bar overlay mode lets you conveniently compare pulse to bar ratio without manipulating waveform monitor controls.

TSG5 (NTSC)	\$ 1800.00
TSG15 (PAL)	1680.00
TSG25 (PAL-M)POR

**TSG3/TSG13/TSG23
Linearity and Modulated
Pedestal Test Generators**

- 5 Step and 10 Step Staircase Signal
- Ramp Signal
- 2 Modulation Amplitudes
- One or Three Level Modulated Pedestal
- Flat Field with 11 Fixed Levels
- AC and DC Bounce
- Variable APL

The TSG3, TSG13 and TSG23 provide high-quality linearity and modulated pedestal test signals for the 1410R Series signal generators.

You can select the 5 step and 10 step staircase signals and the ramp signal with or without 180° subcarrier modulation for PAL, or U subcarrier modulation for PAL and PAL-M. Applications include measuring differential phase and gain, dynamic gain, luminance linearity, and burst phase errors.

On the ac Bounce signal, the active portion of each line (excluding sync) changes APL levels at a rate determined by the rate control (1 second to 30 second intervals). Blanking level remains fixed at 0 V. To check ac coupled circuitry use ac bounce.

On the dc bounce signal, ac bounce occurs as described above. In addition, the entire signal changes dc level in the opposite direction at the same rate resulting in no change in average dc level. Clamp circuits may be checked using dc bounce.

TEKTRONIX, INC.

Color Monitors

650HR Color Monitor

- High Resolution Display Plus Capability for Critical Signal Analysis
- 0.25mm Triad Pitch High Resolution Trinitron® CRT
- Variable Aperture Correction
- Precise Color Tracking Over Full Signal Range
- Two Video Inputs with Differential (A-B) Capability
- Video Inputs Isolated from Ground for Hum Rejection
- Optional Parallel Component Inputs—Internally Selected Format
- NTSC, PAL and Multistandard Decoders Available
- Precise Decoders with Outputs to Provide Vector Display on External X-Y Monitor
- Unique Monochrome (White) Display of Decoded Blue Signal for Critical Analysis of Color Noise

The Tektronix 650HR Series color picture monitors are designed for exacting applications where picture quality and signal quality analysis are particularly important. The 650HR uses a Trinitron CRT with resolution capabilities which exceed the performance of encoded television signals. The decoders have sufficient chroma channel bandwidth to pass all of the information in standard signals.

The unique blue only mode feeds the decoded blue video signal to the red, green, and blue channels simultaneously. This produces a monochrome display with a high subjective sensitivity to chroma noise, allowing better analysis of video quality.

The chrominance channel may be manually switched to either the monochrome or color modes, or activated automatically by the presence of burst.

Circuits in the Tektronix 650HR Series are designed for color stability and consistency. Outputs are provided from the precision decoders and may be used to drive an X-Y monitor for a vector display. The regulated EHT supply is not affected by extreme changes in APL even when calibrated brightness, at peak white, is set at 30 fL. Raster size is held within 1%, while excellent clamping maintains a stable black level with a 0% to 100% range of APL.

CHARACTERISTICS

Input Signal Level—0.5 V p-p minimum composite video 2 V p-p maximum. (Exceeds CCIR recommendations 567, Part D and D.2)

Impedance—Terminated: High Z bridging inputs loop-through compensated for 75 Ω (not internally terminated). Return Loss: ≥ 46 dB to 5 MHz, power on or off, input in use or not.

Maximum Safe Input—Exceeds CCIR Recommendation 451-2 (± 5 V peak).

Hum Rejection—Hum is ≥ 50 dB down when 4 V maximum RMS common mode mains hum signal is applied to the monitor in floating ground mode.

NTSC Luminance Channel—Bandwidth (notch filter removed) ≈ 6 MHz. Subcarrier notch filter automatically removed when burst is not present and Mode switch is

in Auto position. Subcarrier notch filter removed when Mode switch is in Monochrome position. Dc Restoration back porch type; not affected by burst. Mains hum reduction due to dc restorer is < 6 dB. Amplitude Linearity: Within 2%.

NTSC Chrominance Channel—Demodulation Axis: R-Y, B-Y. Bandpass: 1.3 MHz equiband. Gain Range: Preset at 0 dB; adjustable from -6 dB to +10 dB.

PAL Luminance Channel—Bandwidth (notch filter removed) ≈ 6 MHz. Subcarrier notch filter can be removed by changing internal jumper. Subcarrier notch filter normally left in circuit.

PAL Chrominance Channel—Demodulation Axis: U, V. Bandpass: ≈ 1.2 MHz. Gain Range: Preset at 0 dB; adjustable from -6 dB to +10 dB.

Residual Subcarrier Detection (On Applied Signal)—Color of displayed picture will shift due to any residual subcarrier. This feature can be inhibited by a jumper on the decoder board.

Chrominance/Luminance—Timer Error: < 30 ns. Gain Error: < 3%.

Delay—Red to green to blue < 50 ns.

Subcarrier Regeneration—Phase Error: Within 1° with input burst variation of ± 10 Hz from subcarrier nominal burst frequency. With Temperature Variation: Within 5° with ambient temperature variation from 0° C to +50° C; with 1° for any +10° C increment within the range 0° C to +50° C. With Input Signal Variation: Within 1° with input signal variations of ± 3 dB from 1.0 V, within 3° with variation of burst/sync ratio of -6 dB to +10 dB. Breezeway Stability: ≤ .02° for burst timing errors including burst width variance (8 to 11 cycles), and breezeway variance ± 0.28 μs. Phase Error Due to Noise: Within 1° with RMS white noise at -24 dB (0 dB = 700 mV RMS).

PICTURE

Height—184 mm (7.2 in).

Width—244 mm (9.6 in).

Underscan—≈ 20% reduction in both height and width.

Aspect Ratio—4:3.

Deflection Linearity—Vertical and Horizontal: 1% of picture height within a central area bounded by a circle whose diameter equals picture height, ± 2% of picture height outside of central area.

Convergence Error—< 1 mm within the central area. Outside of the central area, color separation (misconvergence) is < 2 mm.

Unblanking—All active picture elements are displayed. (Horizontal retrace is accomplished within 10 μs.)

Color Temperature—6500° K. Easily adjustable to other standards.

Calibrated Contrast—30 fL at peak white of standard 1 V signal.

Calibrated Brightness—Displayed black may be preset to a level appropriate for ambient conditions.

EHT (Extremely High Tension)—19 kV nominal, regulated. Load variations cause < 1% picture size variation. Monitor complies, as of date of manufacture, with applicable DHHS standards under Radiation Control for Health and Safety Act of 1968.

Kinescope Protection—Failure of horizontal or vertical scanning shuts off the EHT. Failure of HV Regulator circuit does not cause EHT to soar excessively. EHT supply is current limited.

Heater Voltage—Regulated dc.

SYNC and TIMING

Signal Range—Composite sync 0.5 V p-p to 8 V p-p or composite video 0.5 V p-p to 2 V p-p.

Impedance—Terminated: High Z bridging inputs loop-through compensated for 75 Ω (not internally terminated). Terminated: 75 Ω. Return Loss: ≥ 46 dB to 5 MHz with respect to 75 Ω.

**650HR**

Synchronization—Stable subcarrier regeneration, limited by line sync performance. Line sync white noise immunity is 20 dB. Field sync white noise immunity is 20 dB. Field sync stable with tilt equal to 100% of sync amplitude in vertical blanking. Stable with 20 IRE mains hum.

AFC (Two Loop AFC Type)—Phase Corrector: Corrects for phase errors due to side pincushion correction and other effects within the monitor. Slow AFC: Displays timing errors of incoming sync, particularly, 60 Hz or 240 Hz timing errors. Bandwidth is ≈ 25 Hz. Fast AFC: Largely corrects for incoming sync errors, ≈ 2 kHz bandwidth.

Scan Delay—Horizontal Delay: ≈ 1/4 line; displays burst. Vertical Delay: Displays the vertical blanking interval of the input signal expanded ≈ 2.5 times unless underscan is activated. If the underscan button is depressed, vertical expand is inhibited.

AC POWER

Mains Voltage Range—115V: Within 10% (104VAC to 126VAC). 230V: Within 10% (207VAC to 250VAC maximum). 650HR, 650HR-C are factory set for 115V. 651HR, 651HR-1, 655HR-C and 652HR-C are factory set for 230V.

Crest Factor—≥ 1.3.

Mains Current—1.5A RMS maximum at 115V, 60Hz, 0.75A maximum at 230V, 50Hz. Current is substantially higher during degaussing.

Degaussing Surge Current—5A RMS.

Power Consumption—150W maximum, 110W typical.

Mains Frequency—48Hz to 66Hz.

REMOTE CONTROL UNIT

REMOTE MONITOR UNIT

1440 Automatic Video Corrector

- Reduces Operating Costs
- Extends Transmitter Tube Life and Reduces Maintenance Costs
- Maintains Consistent High Quality Color Pictures
- Automates Transmitter Modulation Level Control
- Maintains Correct Sync-To-Video Ratios During Line Voltage Fluctuations
- Automatic VIRS Referenced Correction of:
 - Overall Video Signal Amplitude
 - Chrominance to Luminance Gain Ratio
 - Black Level
 - Chrominance Phase
 - Burst Gain
 - Sync Gain
- Optional Closed Loop Capabilities for Greater Efficiency and Economy in Transmitter and VTR Operations

The 1440 VIRS Automatic Video Corrector gives fully automatic correction of video gain, chrominance to luminance gain ratio, black level (set up), chroma phase, burst amplitude, and sync amplitude errors. With this corrector in your facility, the quality of the program signal is rigidly maintained. Ordinary changes and even many severe distortions are automatically corrected.

Video gain correction is referenced to the 50 IRE level of the VIRS. Chrominance to luminance gain ratio and burst phase corrections are referenced to the amplitude and phase of the VIRS chrominance respectively. Set up level correction is referenced to the 7.5 IRE level of the VIRS. Sync and burst gain corrections are controlled respective to their standard amplitudes.

Auxiliary Units

In most applications, the usefulness of automatic correction is enhanced by a Tektronix Remote Control Unit. You can conveniently select corrector modes and manually correct six signal parameters with this unit. The remote unit allows easy adjustment of the parameter's preset values for operation in the absence of a reference signal. Automatic correction value adjustments are also provided.

The Tektronix Remote Monitoring Unit provides meter indications of the amount of correction applied to the signal.

CHARACTERISTICS

- Input Impedance—75 Ω nominal.
- Video Display—145 ns.
- Output Impedance—75 Ω.
- Linear Waveform Distortions (Maximum)—Field Time: 0.5%. Line Time: 0.5%. Short Time: T Pulse/Bar: 2%. 2T Pulse/Bar: 1%.
- Nonlinear Waveform Distortions—Differential Gain (10% to 90% APL): 0.5% Differential Phase (10% to 90% APL): 0.5%. Dynamic Gain (10% to 90% APL): Picture 0.5%, sync 0.5%. Chrominance/Luminance Intermodulation: 0.5%. Line Time Nonlinearity: 0.5%.
- Unweighted Video Signal to Random Noise Ratio—≥60 dB to 5 MHz.
- Spurious Subcarrier—-60 dB.
- Field Time Tilt Correction—25% Tilt on Input Signal: Will be reduced to ≤1%.
- Clamping Characteristics—10% to 90% APL or 90% to 10% APL. Recovery within one line to within five IRE without overshoot. Slow clamp option provided to reduce keyboarding when used with noisy signals. Hum Reduction: 1 V hum on input signal can be reduced to ≤25 mV.
- Maximum Correction Ranges—Video Level at Input: ±6 dB. Sync Level at Input: ±3 dB. Chrominance/Luminance Gain: ±3 dB. Burst Level: ±6 dB. Burst/Chrominance Phase: ±25°. Black Level Set Up: ±10 IRE.
- Reduced Correction Ranges—Video Level: ±2 dB. Sync Level: ±3 dB. Chrominance/Luminance Gain: ±3 dB. Burst/Chrominance Phase: ±25°. Black Level Set Up: ±5 IRE.

Dc Error-Signal Output—Source Impedance: 10 kΩ. Open Circuit Voltage: 10 V for remote metering and telemetry. Six Outputs: Video gain, sync gain, burst gain, relative chroma gain, burst phase, and set up.

Chroma/Luminance Gain Correction (±3 dB to -3 dB)—2T Pulse/Bar Ratio—110% maximum and 92% minimum. T Pulse/Bar Ratio: 125% maximum and 85% minimum. 2T Pulse Preshoot: 5% maximum. T Step Overshoot: 5% maximum. T Step Risettime: 95 ns minimum and 155 ns maximum. Chrominance/Luminance Delay: 10 ns minimum and 10 ns maximum. VIR Signal Correction Rate: 0.35 s (90% correction without overshoot).

POWER SUPPLY

- Line Voltage Range—115 V ac ±10% and 230 V ac ±10%.
- Maximum Power Consumption—35 W.
- Line Frequency Range—48 Hz to 66 Hz

1440 NTSC Automatic Video Corrector
 \$6,325.00

OPTIONAL ACCESSORIES

- Remote Control Unit for 1440—(Includes two connectors). Order 015-0240-00 \$1,020.00
- Remote Monitor Unit for 1440—(Includes one connector). Order 015-0239-00 \$1,080.00
- Six Foot Extender Cable—With connectors for use between the 1440 and Remote Control Unit or Remote Monitor Unit. Order 012-0131-00 \$405.00
- Three Foot Extender Cable—With connectors, for use between the 1440 chassis and the rear rackmounting section. Order 012-0637-00 \$410.00

760 Stereo Audio Monitor

- Graphic CRT display of stereo audio signal
- AGC for continuously viewable pattern
- Bar graph for quick setups and accurate peak indication
- Third bar indicates mono compatibility when set to SUM
- Suitable for phase and amplitude measurements

With the 760 Stereo Audio Monitor, the audio engineer can analyze a pattern display of the stereo audio signal. This display, along with a high resolution bar graph, provides accurate monitoring and measurement capabilities. Used in both operation and setup, the instrument provides immediate feedback of the audio signal for creative or technical correction. With the appropriate test signals, the unit can also be used for accurate phase and amplitude measurements.

On the CRT and adjacent bar graph, you can observe amplitude information, stereo separation, and phase correlation between the left and right channels. Also of great importance, you can see monaural amplitudes resulting from the stereo channels.

Your choice of automatic or manual gain control provides flexible control of the pattern size. With no input signal, the display will dim to prolong CRT life.

Two calibrated bars are dedicated to the left and right channels. The input to a third bar is selectable from Sum, Difference (both internally derived), and an Auxiliary input on the rear panel. These bars give the operator even greater resolution for setting levels when the Scale/10 pushbutton is depressed. This increases resolution by a factor of 10 around the 0dB point of the bars. A selectable three second Peak Hold control makes level monitoring easier than ever.

The 760 is ideally suited for use in editing suites, master control, transmission, and any other locations where monitoring the stereo audio signal is a must.

Specifications

Audio Inputs

Balanced Bridging: > 10K ohm/side
Termination: Selectable from > 20K ohm, 600 ohm, 150 ohm (internal jumper)

Protection: Will withstand 50V peak common mode input, DC to 20kHz, without damage

Sensitivity: Gain selectable for 0dB bar indication for sine waves of 0, +4, +8, +12 and +16dBu (internal jumper)

CRT Display

Graticule: L, R, L=R and L=-R lines. Major and minor ticks for phase measurements at 10° and 5° respectively, on L axis

Automatic Gain Control (AGC)

Control Range: +8dB to -20dB (referenced to 0dB on bar graph)

Gain Match and Tracking (over AGC range):

± 0.3dB

Phase Match: ± 1° at 0dB

Frequency Response: ± 0.5dB, 20Hz to 20kHz from +8 to -20dB

Z-Axis Dimming: With absence of signal

Bar Graph

100 Segment LED: Green to 0dB, red above 0dB

Display Range: +8dB to -45dB

760

- Scale:** dB linear from +8 to -20dB
- Resolution:** 0.4dB/segment
0.04dB/segment with Scale/10 depressed (from +8 to -20dB)
- Accuracy:** ± 0.3dB at 0dB and 1kHz
- Peak Hold:** Approximately 3 seconds
Switchable on/off
- Attack/Decay Dynamics:** PPM (Peak Program Meter) per DIN 45406
- Frequency Response:** ± 0.5dB, 20Hz to 20kHz from +8 to -20dB
- Gain Match:** ± 0.3dB
- Crosstalk:** A +8dB signal on any channel causes no indication on remaining bars

Front Panel Controls

Power On/Off

For CRT Display

- Intensity
- Gain Auto/Man/Cal.
- Horizontal/Vertical Position
- Focus
- Trace Rotation

For Bar Graph

- Third Bar Selector SUM, DIFF, AUX.
- Peak Hold On/Off
- Scale/10 (expander)

Rear Panel Connectors

XLR Inputs

- Left, Right, Auxiliary
- Power
- Fuse

Physical Characteristics

Dimensions: Height: 5.25" (13.3cm)
Width: 8.424" (21.4cm)
Length: 16.875" (42.9cm)

Weight: Approximately 10 lbs. (4.5kg)

760 Stereo Audio Monitor \$ 1990.00

Optional Accessories

- Cabinets:**
- Plain (1700F00) \$ 60.00
- Portable (1700F02) 85.00
- Rack Adaptor (1700F05) 180.00
- Blank Panel (1700F06) 60.00
- DC Operation Kit (12VDC) (1700F10) 200.00
- Battery Pack (BP1) 600.00

AVC-20 Audio Vector Converter

- Use with any NTSC vectorscope
- Balanced line level inputs
- User selectable display formats
 - Lissajous pattern with calibrated amplitude
 - Lissajous pattern and sweep displays of both channels
- Time code or third channel input
 - Field locked for time code phase
- Time versus amplitude sweep display
 - Selectable between all 3 inputs
 - Left plus right sweep
- Low power consumption
- No front panel space required
- Simple remote control

The AVC-20 provides stereo audio monitoring capability when installed with an NTSC vectorscope. Complete audio monitoring can be added to VTR bridges, master control consoles and other locations requiring stereo audio monitoring without modifying the vectorscope and without using front panel space.

Stereo phase, individual signal amplitudes and audio distortions can be observed by simply using the B input to an existing vectorscope. A third audio input channel and a field locked sweep are available for monitoring time code or a second language program.

The AVC-20 is easy to operate, install and afford. It's an excellent choice for stereo television facilities.

Audio Monitoring

In an operational television facility, easy to use, reliable instrumentation is a necessity and the AVC-20 provides a multitude of selectable displays that fulfill many audio monitoring requirements. The most versatile display includes a left and right audio sweep displayed simultaneously with a Lissajous display for stereo phase at a glance. A Lissajous only display is available for simple applications. A time versus amplitude sweep display of the left channel, the right channel, or the left plus right channel are available for detailed inspection of each audio signal.

A third input channel provides time code monitoring. It allows an operator to make sure the time code signal is locked to video, is adequately free of noise and of the correct amplitude. It also lets the operator see if the time code sync word is in phase with reference video. Any of the eight display modes can be internally or remotely selected with a simple ground closure.

AVC-20 employs an innovative concept allowing easy and inexpensive monitoring of a stereo audio signal without the need to use front panel space. Operators can set the audio level against the calibrated electronic graticule, while simultaneously checking for audio clipping, audio phase reversal, or measuring phase error. These observations can be made with this single display on an existing vectorscope.

Specifications

Audio Inputs

Balanced Bridging: > 10K per side with > 40dB common mode rejection

AVC-20

Full Scale Input:	Calibrated for 0, 4, 8, or 12dBm jumper selectable with range adjustable for levels from -6 to 12dBm (0dBm = 1mW into 600 ohms)
Maximum Input:	18dBm
Left or Right Phase Error:	< 1° from 100Hz to 10kHz and < 5° from 20Hz to 20kHz
Frequency Response:	From 20Hz to 20kHz within 0.2dB of response at 1kHz
Time Code Input:	Balanced bridging > 10K ohms with a bandwidth > 100kHz
Input Level:	Adjustable for inputs from 0 to 12dBm while maintaining a 4cm deflection
External Reference Loopthrough	
Hi-Z Input:	> 40dB return loss from 50kHz to 5MHz
Input Level:	From 0.75 to 1.5V composite video signal (black burst)
Subcarrier Genlock	
Capture Range:	Within 50Hz of Fsc
Quad Phase Error:	≤ 1°
Adjustable Delay Compensation:	> 360°

7932 12 x 3 AV Routing Switcher

The 7932 is a modular system that uses 4 in 1 out video cards, and 4 in 1 out audio cards. The audio and video output amplifiers are also separate plug-in cards; therefore, a system can be expanded from 4 x 1 to 4 x 2, 8 x 1, 8 x 3 etc., to a maximum of 12 x 3 in one chassis. For economy, two other chassis are available wired 12 x 1 and 12 x 2 which can be used when it is known that expansion will not be needed.

7932-B1 (Remote control version)

12 x 1	\$2,535.00
12 x 2	4,080.00
12 x 3	5,565.00

Note: Above prices include Switchcraft pushbutton panels with 50' cables.

7932-B2 (self contained version)

12 x 1	\$2,465.00
12 x 2	3,935.00
12 x 3	5,325.00

Note: Above prices include Switchcraft pushbuttons on front panel.

7934 AV Routing Switcher

- Remote controlled
- Crosspoints and latching CMOS integrated circuits provide energy efficient design
- Unlimited control versatility and computer interface with programmable switching
- <0.1µs switching time, 50mV max. instantaneous video change
- V.I. switching
- Stereo audio switching plus auxiliary. (Can be used for tally)
- Breakaway audio available
- Hi level tally available
- 20 x 10 standard, 400 x 400 possible
- Input sync adders optional
- Video DC restorers optional
- Accurate color timing
- Complete accessibility through modular construction
- All boards removable/insertable with power on

NTSC, PAL and SECAMPOR

3713 Stereo/Audio Demodulator

The 3713 is a comprehensive, precision testing instrument for checking the video quality of the television broadcast signal. It has its own built-in tester for self checking calibration.

3713-B1 VHF—5mV sensitivity	\$12,590.00
3713-B2 UHF—5mV sensitivity	13,115.00

4500 Demodulator

The 4500 accepts the broadcast signal and converts it to base band without distorting the original picture quality. It houses a plug-in VHF front end module that is selected and ordered separately for the particular VHF channel required. This VHF module is Telemet type D-xx-A1, where xx denotes the VHF channel number (e.g. D-02-A1 for Channel 2). It contains a crystal-controlled oscillator and FET mixer. Also a 2-stage AGC controlled VHF amplifier, using silicon insulated-gate field effect transistors.

4500-B1 VHF Demodulator (off-air)	\$2,325.00
D-xx-A1 VHF plug-in (channels 2-13)	745.00

4501 Broadcast Demodulator

The 4501 is for use in the measurement of the characteristics of broadcast television signals, including chrominance-luminance relative gain and delay, K rating, burst amplitude and modulation depth, differential phase and gain, intercarrier frequency stability (using an external counter) and other distortions.

4501-B1 VHF—5mV sensitivity	\$6,930.00
4501-B2 UHF—5mV sensitivity	7,245.00

7932

7934

3713

4500-B1

4501

4503 Demodulator Tester

The 4503 provides a fast sure method of determining on-going frequency response of a broadcast TV demodulator.

- 4503-B1 VHF \$ 925.00
- 4503-B2 UHF 1065.00

4503

4504-C1 Synchronous Detector

The 4504-C1 is designed to measure transmitter parameters, especially the incidental phase modulation of the visual carrier. The 4504-C1 can be used with the 4501 broadcast test demodulator and other suitable test modulators.

- 4504-C1 \$2600.00

4504-C1

3705-A1 Envelope Delay Measurement Set

The 3705-A1 measures envelope delay over a wide frequency range. It is expressly designed for measuring the envelope delay incurred in equipment used in the transmission and reception of color television signals.

The 3705-A1 uses the split-frequency method proposed by Nyquist and Brand: a relatively low frequency, 20kHz, called a split-frequency amplitude — modulates a video or RF test frequency and the modulated test signal is applied to the equipment "under test". The split-frequency is demodulated from the output of the equipment "under test" and compared in phase with the split-frequency modulation.

- 3705-A1 \$8835.00

3705-A1

3706-A1 Sideband Analyzer

The 3706-A1 by direct display permits thorough examination of the entire sideband response of television transmitters and sideband filters. It can also be used for the examination, evaluation, and adjustments of video circuits. Spurious emissions, low level sidebands, and frequency deviations are accurately pin pointed with the use of 7 crystal markers whose frequencies are of the most interest in a television transmitter's VSB passband. Discrete frequency marking is augmented by a 1MHz crystal comb frequency marker which provides markers at 1MHz intervals across the swept band on display.

- 3706-A1 Includes VHF channel element (3708-A) \$8660.00

3706-A1

6910-A1 Audio DA System

The 6910-A1 is designed for distribution of audio signals in AM, FM and TV systems. The performance characteristics of the 6910-A1 are in keeping with the high standards of modern audio equipment.

Flexibility as to impedance, and expandability as to the number of single and dual channels available should fill all input and distribution requirements.

- 6910-A1 Audio DA system consisting of:
- 6001-A1 Frame \$ 575.00
- 6101-A1 Power Supply 600.00
- 6201-A2 Audio distribution amplifier with terminal board assembly 525.00
- 4145-A1 Extender 80.00
- 7300-B1 Audio Monitor 1195.00

TELESCRIPT, INC.

Monitor Prompting Systems

Telescriptor

Monitor Prompter

MPS

The Telecue

The compact, portable Telecue transports prompting scripts and graphics with equal facility. To facilitate script prompting continuity and for remote location operation, 8 1/2" x 11" sheets of paper should be taped together.

The Telescriptor

The Telescriptor transports prompting scripts and graphics via a white fiberglass belt with equal facility. Telescriptor prompting only requires that 8 1/2" x 11" sheets of paper be placed singly on the transport's belt. Over and under lapping and immediate editing by exchanging sheets is the norm.

 Video input, specify composite baseband or separate audio and video XL1000MU (LPTV) 49,500.00
 XL1000TU (Part 73) 51,500.00

VHF 1W

Specify 75 ohm "F", "N" or UHF output connector, or 50 ohm "N" output connector; input (2-83) and output (2-13) channel. Special frequencies available on request.

VHF input, AC or +24VDC (specify) TVB-1 \$3,150.00
 UHF input, AC or +24VDC (specify) UTVB-1 3,150.00
 VHF input, Solar Powered* (-24VDC) T-99 2,495.00
 AC Power Supply, T-99 DC-2430 175.00

VHF 10W

117VAC powered. Specify 75 ohm "F", "N" or UHF output connector; output channel (2-13). 50 ohm "N" connector output available at no extra cost. Models MA-TVF-10P2 and -10P3 incorporate extra heavy-duty power supplies for use where wide AC frequency and voltage variations can be expected. For video input models specify composite baseband or separate audio and video.

VHF input, specify channel (2-13) TVB-1/TVF-10 \$5,450.00
 UHF input, specify channel (14-83) UTVB-1/TVF-10 5,450.00
 Video input, 2 piece MA-TVF-10P1 (LPTV) 6,595.00
 Video input with cabinet MA-TVF-10P2 (LPTV) 7,150.00
 Video input w/cabinet and video switching MA-TVF-10P3 (LPTV) 7,650.00

TELEVISION TECHNOLOGY CO.

Recorder/Reproducers

250 Series Recorder/Reproducers

The 250 Series meets your quality, reliability, and operational needs in one professional, compact 10.5" broadcast recorder/reproducer.

For rackmounting in your studio, or case mounting for field recording, the 250 will take on all assignments. You can plug in mike preamps for direct news, sports, and other portable recording requirements. In the studio the 250 will complement your audio system, requiring only 19 1/4" rack height.

The 250 features low-noise, dependable electronics with sync control provided for adding a track to alternate channel, and input/playback monitor/VU selectors. Equalization is switched with speed control. Adjustments and maintenance are made easy by a pull-out drawer providing top access to equalization and bias controls. The transport has all touch-button control TTL logic with protective motion-sensing circuits which prevent tape break or spill when operating from fast mode to play. Automatic tape lifter defeat is actuated by depressing fast mode button or transport or remote control. XLR input and output connectors are standard.

Configurations include full- or half-track mono; two- or quarter-track stereo. All models have two-speed hysteresis synchronous direct drive capstan motors. Unmounted weight is about 45 lbs.

Specifications

Head

Configurations: Full-track, half-track, 2-track, quarter-track, 1/4"

Tape Speeds: 3.75 and 7.5 ips or 7.5 and 15 ips

Frequency

Response: 15 ips ± 2dB, 50Hz-18kHz; 7.5 ips ± 2dB, 50Hz-15kHz; 3.75 ips ± 2dB, 50Hz-10kHz

Signal-to-Noise

Ratio: (Using 3M 206 tape or equivalent) peak record level to NAB weighted noise (NAB equalization 500nWb/m)

	Full Track	Half Track	Stereo 2-Track
15 ips	70dB	66dB	66dB
7.5 ips	70dB	66dB	66dB
3.75 ips	66dB	63dB	63dB

Distortion: 500Hz 3rd harmonic (500nWb/m): < 3%. Standard operating level (250nWb/m): < 0.7%

Flutter and Wow: Weighted peak flutter (ANSI S 4.3-1972; IEC 386-1972) 15 ips .08% or better; 7.5 ips 0.1%; 3.75 ips 0.2% or better

Speed Accuracy: ± 0.2% throughout reel at all speeds using 1.5 mil tape

Brakes: Differential "fail safe" spot brakes

Winding Time: Approximately 90 seconds for 2400' NAB reel

250 Series

- Start Time:** < 0.5 second at 15 ips
- Reel Size:** 5" -7" EIA, and 10.5" NAB
- Equalization:** NAB or IEC
- Bias/Erase**
 - Frequency:** 120kHz
 - Erase Efficiency:** > 70dB at 1kHz
- Inputs:** 10K ohms, min. level 200mV (accessory plug-in balanced bridge transformer or 250-600 ohms mike preamp)
- Outputs:** 600 ohms unbalanced + 17dBm (balanced transformer available) Monitor earphone jack on front panel, 8 ohm min. impedance
- Motors:** Capstan — Direct drive hysteresis synchronous, plus two torque motors
- Control Logic:** TTL with motion-sensing protection
- Transport**
 - Controls:** Power, Hi-Lo tension, fast FWD, fast RWD, stop, start, record
- Power**
 - Requirements:** 105-125V or 220-240V, 50 or 60Hz, 150W

250 Series

Specify NAB or IEC equalization, AC line voltage, AC line frequency, and tape speeds desired when ordering. (Speeds available: 3.75/7.5 or 7.5/15 ips)

Mono Full Track	\$2595.00

50Hz motors and 3.75 ips operation are higher cost options.

TELEVISION TECHNOLOGY CO.

Recorder/Reproducers

255 Series Recorder/Reproducers

The 255 is designed for continuous operation in automation systems and other playback requirements. It is extremely rugged, employs trouble-free TTL control logic, low-noise plug-in electronics and a precision milled heavy cast deck plate.

The 255 features all touch-button control logic with protective motion-sensing circuits to prevent tape break or spill when operating from fast mode to play. Automatic tape lifter defeat is actuated by depressing fast mode button on transport or remote control. Set-up adjustments and easy maintenance are accomplished by a pull-off front dress panel which permits access to equalizers. XLR output connectors are employed to make the 255 compatible to broadcast standards.

Basically developed as a 7.5 ips two-track, two-channel system, the 255 is also available in all standard mono and stereo configurations.

255 Series

Specifications

Head

Configurations: Full-track, half-track, 2-track, quarter-track, 1/4"

Tape Speed: 7.5 ips standard, 3.75 ips available

Frequency

Response: (3M 206 equivalent) 7.5 ips ± 2dB, 50-15kHz; 3.75 ips ± 2dB, 50-10kHz

Amplifier Noise: -74dB, ANSI weighted below 500 nWb/m (half-track)

Distortion: 0.2%, 1000Hz at +4dBm, 3rd harmonic

Equalization: NAB or IEC

Line Output: 600 ohm unbalanced +17dBm (balanced transformer available)

Phones Output: Front panel phone jack, 8 ohm min. impedance

Line Out

Connections: XLR type

Amplifier

Controls: Front panel gain knobs (eq. adjustments accessible from front)

Head

Adjustments: Pull-off head cover and Mumetal shield gives full access to plug-in heads for all adjustments and cleaning

Flutter and Wow: 0.08% weighted peak flutter

Speed Accuracy: ± 0.2% throughout reel at all speeds using 1.5 mil tape

Winding Time: < 90 seconds for 2400' NAB reel

Reel Sizes:

5" -7" EIA and 10.5" NAB reel

Motors:

Single-speed direct drive hysteresis plus two torque motors

Brakes:

Differential "fail safe" spot brakes

Control Logic:

TTL with motion-sensing protection

Transport

Controls:

Power, Hi-Lo tension, fast FWD, fast RWD, stop, start

Remote Control:

(Accessory) contains all mode controls including lifter defeat

Power

Consumption: 120W, 117V or 220V, 50Hz or 60Hz

Rack Space:

15 3/4" H x 19" W x 1.5" D, reel overhang at top using NAB reel

255 Series

Specify NAB or IEC equalization, AC line voltage, AC line frequency, and tape speed desired when ordering (Speeds available: 3.75/7.5 or 7.5/15 ips).

- Mono Full Track \$ 1495.00
- Mono 2 Track 1495.00
- Stereo 2 Track 1595.00
- Stereo Quarter Track 1595.00

Options and Accessories

- Output Transformer Mono \$ 40.00
- Output Transformer Stereo 80.00
- 25Hz Sensor 165.00
- Extender Board 40.00

TELEVISION TECHNOLOGY CO.

Recorder/Reproducers

270 Series Recorder/Reproducers

- Disc brakes
- Fully transistorized, plug-in amplifiers
- Rugged cast frame and solid panel construction
- Direct drive heavy-duty motors
- Removable face plate
- Instant access for maintenance
- Automatic start torque tension control
- Reversing capability with mono half-track and stereo quarter-track units only; accomplished by foil sensing low current transistor switching
- Designed to run for long periods reliably and with trouble-free performance

270 Series

Specifications**Head**

Configurations: Monophonic, half- or full-track; stereo, 2- or quarter-track

Tape Speed: 3³/₄-7¹/₂ or 7¹/₂-15 ips

Tape Width: 1/4"

Reel Size: Up to 14"

Start Time: Play speed in 0.1 seconds

Rewind Time: Approximately 105 seconds 4,800' reel

Timing Accuracy: Better than 99.7% for 30 min. tape Power

Requirements: 117V, 60Hz, 275W (50Hz optional)

Transport

Controls: Play, fast, direction change, stop, speed selector

Control System: All relays and solenoids 24VDC; plug-in relays

Frequency

Response: Mono and 2-track, ± 2 dB, 50-7,500Hz at 3³/₄ ips; $+2$ -3dB, 50-15,000Hz at 7¹/₂ ips; ± 2 dB, 50-15,000Hz at 15 ips. Quarter-track stereo, ± 4 dB, 50-100Hz; above 100Hz response same as mono and 2-track

Signal-to-

Noise Ratio: Mono full-track; 65dB minimum at 7¹/₂ and 15 ips. Stereo 2-track; 60dB minimum at 7¹/₂ and 15 ips. Stereo quarter-track; 58dB minimum at 7¹/₂ and 15 ips, 54dB minimum at 3³/₄ ips

Flutter and Wow: 3³/₄ ips—0.2% RMS or better; 7¹/₂ ips—0.1% RMS or better; 15 ips—.08% RMS or better

Distortion: <.5% total harmonic distortion at +18dBm

Equalization: Front panel switch

Output: +18dBm into 600 ohm balanced line (normally supplied +4dBm = zero VU)

Tape Tension: Continuous adjustable electrical control system

Shipping Weight: 100 lbs.

Size: 19" x 24¹/₂" x 8³/₄"

270 Series

Specify NAB or IEC equalization, AC line input voltage, AC line frequency, and tape speeds desired when ordering (Speeds available: 3.75/7.5 or 7.5/15 ips).

Stereo Quarter Track Auto Rev.	5695.00

TELEVISION TECHNOLOGY CO.

Recorders/Reproducers

280B Series Recorder/Reproducers

Functionally-illuminated transport controls, motion-direction sensing, dynamic braking and a constant tape tension control for improved tape handling are incorporated in the 280B Series Recorder/Reproducers.

An optional DC capstan-servo drive with variable pitch control is available. Two advantages are gained, in addition to servo control: the ability to adjust pitch up or down to a desired level, and the more positive tape drive at all speeds afforded by the larger capstan and pinch roller in the servo system.

All this adds up to a standard in broadcast and studio recording where smooth, positive tape handling, low-noise electronics, and control convenience provide truly professional results. The 280B is available in full- or half-track mono; 2- or quarter-track stereo in 1/4" models, or 4-track (quad stereo) in 1/4" or 1/2" tape width models.

Specifications

Flutter and Wow:

Weighted peak flutter (ANSI S 4.3-1972: I.E.C. 386-1972) using a prerecorded flutter tape.

	DC Servo	AC Motor
Speed		
30 ips	.04%	—
15 ips	.04%	.08%
7.5 ips	.05%	.1%
3.75 ips	.1%	.2%

Speed Accuracy:

± 0.1% with DC servo; ± 0.2% with AC motor throughout reel 7.5 to 30 ips using 1.5 mil tape < 60 seconds for 2400' NAB reel, 1/4" tape To 11.5" (CCR)

Wind Time:

Reel Sizes:

Tape Speed:

Equalization switches automatically with speed. 3.75 ips and 7.5 ips and 15 ips or with DC servo option, 15 ips and 30 ips

Motors:

Capstan: Direct drive hysteresis synchronous or optional DC servo. Reel: induction torque motor (2)

Brakes:

Remote Control:

Dynamic, plus disc

Fast (FWD-RWD), start/stop, record, and ATL defeat (fast FWD or RWD button)

Transport Motion Controls:

Power Requirements:

Fast (FWD-RWD), start, stop, record, edit

105-125V or 220-240V, 50 or 60Hz. Power consumption at 117V, 60Hz: 1 and 2 channel = 223VA; 4 channel = 328VA

Head and Track Configuration:

- Full track mono 1/4"
- Half-track mono 1/4"
- Two-track stereo 1/4"
- Quarter-track stereo 1/4"
- Four-track 1/4"
- Four-track 1/2"

Weights

(approx.):

Shipping weights, standard carton. Un-mounted recorders: Mono—106 lbs. 2-channel—106 lbs. 4-channel—127 lbs. Empty consoles: 1- and 2-channel—103 lbs. 4-channel—120 lbs.

TELEVISION TECHNOLOGY CO.

Recorder/Reproducers

284B-8 Series Recorder/Reproducers

The 284B-8 is available in an eight-channel version using low-noise 280B electronics. These 284B-8's use 1" tape for maximum eight-channel separation and quality; up to 14" tape reels to provide a realistic supply of tape for program-length recording and post-production. The 284B-8 has motion-direction sensing, dynamic braking, and automatic start-torque boost for smooth, positive tape shuttling; uses a constant tension system for added tape handling precision in the Play/Record modes. DC capstan servo drives are standard on all units, as is the variable pitch control. Any two specified adjacent speed-pairs will be present when the machine is ordered. Equalization is automatically switched with speed control. A sturdy console cabinet is included as standard equipment.

Specifications

Flutter and Wow: Weighted peak flutter (ANSI S 4.3-1972: IEC 386-1972) using a pre-recorded flutter tape

Speed	DC Servo
30 ips	.04%
15 ips	.04%
7.5 ips	.05%
3.75 ips	.1%

Speed Accuracy: $\pm 0.1\%$ throughout reel 7.5 to 30 ips using 1.5mil tape To 14"

Reel Sizes: Equalization switches automatically with speed. 3.75 ips and 7.5 ips or 7.5 ips and 15 ips or 15 ips and 30 ips

Tape Speed: Capstan: DC servo
Reel: induction torque motor (2)

Motors: Dynamic, plus disc

Brakes: Fast (FWD-RWD); start/stop; record, and ATL defeat (fast FWD or RWD button)

Remote Control: Fast (FWD-RWD); start; stop; record; edit

Transport Motion Controls: 105-125V, 50 or 60Hz (220/240V optional), 400VA

Power Requirements: 8-track (1.00")

Head and Track Configuration: Shipping weight, standard carton. With console: total—391 lbs.

Specify NAB or IEC equalization, AC line input voltage, AC line frequency, and tape speeds desired when ordering (Speeds available 3.75/7.5, 7.5/15 or 15/30 ips).

50Hz motors and 3.75 ips operation are higher cost options.

285B Series Recorder/Reproducers

The 285B is a professional quality playback or editing system for broadcast or studio applications, as automated tape players, quality control monitors, broadcast control room reproducers, or music library reproducers. The 285B electronics include 600 ohm line output and 8 ohm (3W) speaker output for cueing, editing and monitoring. Speaker gain control is on the front panel.

Transport features in the 280B Series are standard, such as motion-direction sensing logic, functionally-illuminated pushbuttons, edit control, and dynamic braking. Rackmount units occupy only 15.75" of vertical space—electronics are mounted behind the transport deck plate. Electronic set-up adjustments are accessible by removing the head cover. A monitor headset jack is mounted on the transport panel for convenience. Configurations include: full-track mono, two- or quarter-track stereo.

Specifications

Frequency Response: (3M 206 or equivalent) 15 ips ± 2 dB 30Hz to 18kHz, 7.5 ips ± 2 dB 30Hz to 15kHz, 3.75 ips ± 2 dB 30Hz to 10kHz

Signal-to-Noise Ratio: (Using bulk erased 3M 206 tape or equivalent) Peak record level (500nWb/m) to NAB weighted noise.

	Full Track	Two Track	Quarter Track
15 ips	72dB	68dB	65dB
7.5 ips	72dB	68dB	65dB
3.75 ips	68dB	64dB	61dB

Audio Consoles

AC/LC Series Audio Consoles

- Muting programmer board to allow any mike input to control any of the four muted monitor outputs
- Remote start switching for all high-level inputs
- Two studio intercom plus remote line talkback and program cue
- Step-type rotary faders with silver contacts and detented cue on each channel
- Telephone grade lever key switches
- Fully shielded, printed circuit mixing bus
- Four level LED "stretched peak" indicators on each output channel in addition to two standard VU meters
- Balanced transformer pre-amps on all mike and high-level inputs
- Stereo pre-amps for all mike and high-level inputs on all stereo, dual-stereo and simulcast models
- Four interlocked pushbutton switches per input channel allow easy expansion of input sources
- 20W monitor amplifier with four inputs, switch selectable to either program line or two auxiliary inputs
- Dissipation-sensing monitor protects against shorts and overloads
- Headphone amplifier with 4 switchable inputs
- Phase test switch for immediate audible check of signal deterioration from improperly processed stereo source material (standard on all stereo models)
- Plug-in modular PC board electronics

Cartridge Tape Reproducer

Series 8300**Three-Deck Cartridge Tape Reproducer**

The Series 8300 three deck tape cartridge reproducer provides a standard of excellence in a convenient modular configuration.

Standard features include a two bearing crystal-controlled DC brushless servo motor, 150Hz secondary cue tone, audio mixer, audio switcher, and a reload indicator.

Modular construction allows field conversion from Mono to Stereo, as well as fast and easy maintenance.

Specifications

Tape Speed:	7.5 ips
Timing Accuracy (at 7.5 ips):	0.1% second maximum
Wow and Flutter:	0.15% peak weighted
Noise (reproducer):	Monophonic: 60dB or better below reference at 400Hz at 3% THD; 52dB below 160 nWb/m at 1kHz. Stereophonic: 58dB or better below reference of 400Hz at 3% THD; 50dB below 160 nWb/m at 1kHz

Distortion

(Playback Electronics only):	18dB above 160 nWb/m 50-15kHz less than .5%
-------------------------------------	---------------------------------------------

Equalization:

NAB, IEC, CCIR as specified

Frequency

Response:	± 2 dB from 50Hz to 15kHz exclusive of head contour effect
------------------	----------------------------------------------------------------

Cross Talk

(Magnetic Head Limited):

Cue channel to program channel, monophonic. 150Hz - 50dB, 1kHz - 55dB, 8kHz - 50dB

Stereo, cross talk between program channels better than 50dB, 50Hz to 15kHz

Audio Output:

Differentially balanced output* Maximum adjustable level +14dBm into 600 ohm load from 160 nWb/m at 1kHz

*Transformers optionally available for 600/150 ohm balanced floating output. Peak output level: differentially balanced output +22dBm clipping into 600 ohm load

Cue Signals:

1kHz primary—standard feature. 150Hz secondary**—standard feature with remote status available 8kHz tertiary**—optional feature with remote status available

**Relays optionally available for normally open or closed isolated contacts

Audio Mixer:

Standard feature allows two or three decks to be actively combined (summed) to provide one audio output

Audio Switcher:

Standard jumperable feature allows decks combined with audio mixer to only pass audio from the last started deck. 150Hz control is also a jumper-

Series 8300

able selected standard feature to turn off a deck's audio switcher at the beginning or ending of the 150Hz secondary cue tone

Reload Indicator
(indicated "played" status):

Stop/ready lamp flashes when cartridge has been started and then stopped, either by pushing the stop button or by the presence of the cue tone

Motor:

Two bearing non-adjustable closed loop crystal controlled direct drive servo

Tape Capacity:

Type A or B, AA or BB NAB cartridge

Power:

105 to 125V or 210 to 230 50/60Hz, ambient operating temperature: 0°C to 50°C

Remote Control:
External

All front panel switches and indicators

Connections:

Audio: 15 position "D" type, mating connector supplied. Remote: 25 position "D" type, mating connector supplied

Dimensions

(less feet):

10³/₈" H x 8⁵/₈" W x 13¹/₂" D

Weight:

43 lbs.

Wireless Microphone Systems

Diversity Wireless Microphone System. FMR-2 receiver with WT-200 belt-pack transmitter, WLM-200 lapel microphone and WHM-500 handheld microphone/transmitter

FMR-2 Diversity Wireless Microphone Receiver

- Peak reading volume indicator • Power-on LED • Display that indicates RF field strength • Adjustable mike • Auxiliary headphone output capability • Fixed line level output • Two 5/8 wave antennas are supplied • Operates on 120VAC (240VAC available) or 12VDC • Free-standing receiver can be rackmounted

FMR-50 Wireless Microphone Receiver

The FMR-50 provides a clearer, better sounding signal for longer distances from the receiver • Signal remains crisp for distances of 500' or more • Operates on high band frequencies between 150 and 186MHz

WLM-100/WLM-200 Electret Lapel Microphone

- Electret omnidirectional lapel style • Available in both silver and black • Equipped with supple anti-noise cord • Lemo corrector-foam wind screen and three styles of mounting clips available

WT-200 Belt-Pack Transmitter

- Roughly the size of a cigarette package • Easily concealed under clothing • Sensitivity switch • Phantom power • Connectorless battery terminals • Battery test circuit • Separate on/off switches for RF and audio

WHM-410 Dynamic Handheld Transmitter

- Cardioid dynamic • Offers a great deal of economy • No switches are provided which prevents a user from inadvertently turning "off" the microphone

WHM-500 Handheld Condenser Microphone/Transmitter

- Separate on/off switches for audio and RF • Two wind screen styles and two 4.5V batteries are provided • Superb rejection of handling noise • Ideal for the vocalist because of a tailored frequency response

ENG-4

ENG-4 4-Channel Receiver

- Fully transportable VHF FM receiver ideally suited for electronic news gathering, film or sound recording • Simple rotary dial allows quick channel changes in the field • Spring-loaded battery compartment pops up so battery "sled" can be taken out and replaced instantly with a spare—reducing battery change downtime to just seconds • Supplied with a small monitor earphone and a 1/4 wave antenna that mounts vertically or at a right angle.

WT-400 2-Channel Transmitter

The WT-400 transmitter is a belt-worn battery powered VHF FM transmitter for any activity requiring a cordless portable microphone.

TELFAX COMMUNICATIONS

Telephone Remote Units

TFX-31C Telephone Remote Unit

• 2-way electronic telephone circuit with rotary dialing • Electronic "ringer" and LED to indicate incoming calls • 3 microphone inputs and fourth channel for cassette or cart machines • Auxiliary output for recorders or PA systems • Headphone amplifier is powerful enough to drive several headsets • Headphone noise canceler enables broadcaster to hear studio cues with maximum clarity in noisy environments • The built-in rechargeable NiCad battery pack provides 10 hours of service from a 7 hour charge • AC or battery operation with automatic switchover • Battery status LED indicates charge or discharge • Input jack and selector switch for radio monitoring • Modular phone cable and 4 prong adaptor are included • Color coded knobs and input jacks; fold-away handle

Specifications

Mike Inputs: 3 at 150 ohms impedance unbalanced
Aux. Input: 1 at 600 ohms impedance balanced
Aux. Output: .7VRMS into 10,000 ohms unbalanced
Phone Line Feed: -6dBm into standard dial line at 600 ohms balanced, + 4dBm into direct loop (level is switch selectable)
Freq. Response: ± 3 dB, 90 to 15kHz into a resistive load
Distortion: 1% or less at operating levels (+ 14dBm output before clipping)
Headphone Output: 3 at 200 ohms or higher. Switchable input provided for radio monitor

TFX-31C

Headphone Noise

Cancelling: Up to 14dB noise reduction in headphones (switchable)

Power

Requirements: 20VAC at .51A (120VAC/60Hz wall transformer provided for AC operation and battery charging)

Internal Bi-Polar

Battery Pack: 12 long life NiCad batteries (1.2V at 450mAh each), quick charge in 7 hours

Dimensions:

4.5" H x 6.25" W x 6.5" D, 4 lbs.

TFX-31C\$695.00

TFX-131B Telephone Remote Mixer

• Switchable tone or pulse dialing • Built-in rechargeable NiCad battery pack provides 10 hours of service from a 7 hour charge • LCD clock/stopwatch with alarm function • Accessory jack interfaces external audio processors and phone equipment • Channel 4 can be switched to generate 1kHz tone or to become a closed circuit spotter channel • Rugged, lightweight, all-aluminum cabinet • A side-mounted carrying handle rotates out of sight when not in use • Powerful headphone amplifier drives 4 headphone jacks and monitors phone line for reset to dialtone upon disconnect and for studio cues • Radio monitor input jack and selector switch provided • Electronic "ringer" and LED signal incoming calls • Battery status LED indicates charge or discharge • AC or battery operation with automatic switchover. Batteries automatically charge while unit is being AC operated • Switch selectable line level, for either dial or "loop" lines • Quick disconnect mike jacks are standard • Color-coded knobs and input jacks • Modular phone line connectors, cables and service manual are included • An optional carrying case is available

Specifications

Mixing Channels: 4 (channels 1 and 4 can be used as mike or high level inputs...no switching required)
Microphone Inputs: 4 at 150 ohms (unbalanced/accepts A3M plug)
Aux. Inputs: 2 at 600 ohms (balanced/isolated RCA jacks...channels 1 and 4)
Aux. Output: 1 at 10,000 ohms, 0VU = .7V (unbalanced/RCA jack)
Line Output ("Dial"): 1 at 600 ohms, 0VU = -6dBm (balanced/modular jack)*
 or
Line Output ("Loop"): 1 at 600 ohms, 0VU = +4dBm (balanced/modular jack)*
Dialing Pad: Pulse output, 10 pps (switchable to tone dialing, DTMF signaling)

TFX-131B

Headphone Output: 4 at 200 ohms or higher (1/4" mono jacks)

Headphone Noise Cancelling: 14dB (max.), activate to reduce crowd noise

Radio Monitor

Input: 1 (un-amplified/accepts 3.5mm mini-plug)
Accessory Jack: 1 (ext. input to phone line interface, line out and aux. out/6 pin female DIN)

Freq. Response: ± 3 dB, 90 to 15kHz (into a resistive load)
Distortion: 1% or less (+ 14dBm output before clipping)

Power

Requirements: 20VAC/60Hz, .51A (external transformer) or 24VDC

Battery Pack

(Bi-Polar): 12 quick charge NiCads (1.2V at 450mAh ea)

Dimensions: 3 3/4" H x 8 5/8" W x 8 3/4" D (9.5 x 21.9 x 22.2cm)

Weight: 5 lbs. (2.3kg)

TFX-131B\$850.00

*Switchable between -6dBm and +4dBm

TEXAR, INC.

Signal Processing Equipment

Audio Prism

Phoenix

Audio Prism™ Audio Processor

The Audio Prism is a high-performance multi-band audio processor designed for major market broadcast use and other applications where sophisticated program handling is required. It utilizes four intelligent, digitally-controlled processor cards to achieve high apparent loudness while producing few processing artifacts. This absence of undesirable subliminal listener aggravation reduces listener tune-out, producing higher quarter-hour ratings.

For AM broadcast, the Audio Prism is designed to be used with the Texar Eagle™ family of AM Modulation Controllers. For the Orban 8100, 8000*, or other high-quality limiter/stereo generator combination. If transmitter and studio are at separate locations, the preferred placement for the Audio Prism is at the studio, this prevents accidental overdriving of the telephone lines or STL and provides the maximum signal-to-noise ratio over the program circuit.

The unit is completely self-contained in a single 1 3/4" rack-height enclosure and will operate normally in severely hostile electrical environments. Extensive RFI filtering and a three-part lightning protection circuit are standard on all conductors leaving the chassis.

The input impedance is factory-wired for 600 ohms resistive, but can be changed to 10k (nominal) bridging with the removal of a single resistor. The output will drive a 600 ohm balanced load to +12dBm nominal program level.

Audio Prism \$1995.00

AMC-2 Eagle

The AMC-2 Eagle, when added to the Audio Prism, makes a complete monaural AM processing system, from console output to transmitter input. The AMC-2 mounts inside the Audio Prism and has variable asymme-

try and low-frequency tilt correction. A switchable, internal, low-pass filter conforms to the voluntary NAB standard for occupied bandwidth.

AMC-2 Eagle \$695.00

RCF-1 Replacement Card

The RCF-1 is a plug-in upgrade for the Orban Optimod 8100*, which can be used when the Optimod is used in conjunction with a pair of Audio Prisms. No soldering is required. The RCF-1 kit includes a plug-in circuit board and a replacement for the chocolate-brown, metal control cover. Controls include variable bass boost, density and interband coupling. RCF-1 increases loudness by over 1dB and increases bass performance with no sacrifice in signal clarity.

RCF-1 Replacement Card \$425.00

PR-1 Phase Rotator

The PR-1 removes asymmetrical components from program material to eliminate loudness loss caused by unbalanced modulation. Recommended for both AM and FM, the PR-1 mounts inside the Audio Prism and comes installed if ordered at time of purchase. The PR-1 can also be added to Audio Prisms already in the field. Some minor soldering is required for Audio Prisms with serial numbers less than 605.

PR-1 Phase Rotator \$55.00

Phoenix Audio AM Processor

- NRSC compliant • Digital control • Four-band power
- Variable asymmetry • Voice phase rotator • Low-frequency tilt-corrector that can compensate for some weaknesses in plate-modulated transmitters • Requires simple AC voltmeter for easy set-up

Phoenix \$2745.00

Studio Transmitter Links

8300 Series Broadcast Quality Composite 950MHz Aural Studio Transmitter Link and Intercity Relay System

• Improved signal-to-noise ratio • Better stereo separation • Reliable operation in dense RF signal environments • Unique IF repeater capability • Automatic hot-standby switchover (optional) • Tested to customer specified operating frequency

8300 Series Transmitter

• Direct locked RF carrier • IF modulation—between 60 and 80MHz • Fully protected against short and open circuits and high VSWR • Wide baseband bandwidth • RF power output—4W minimum, 14W maximum • ± 50 kHz deviation for 100% modulation • Frequency stability—better than .0001% 0°C to 50°C

8300 Series Receiver

• Surface acoustic wave filter is used to eliminate phase distortion and to provide superior selectivity • Pulse-counting discriminator provides ultra-linear FM demodulation • Selectable IF bandwidth • Selectable hi or low gain RF amplifier

- 8300 5116-8300 Composite transmitter \$4550.00
- 8301B 5116-8301B Narrow/Wide Band (250kHz) composite receiver \$4400.00
- Option 22 IF Repeater 1290.00

7700B Series Broadcast Quality Composite 950MHz Aural Studio Transmitter Link and Intercity Relay

Outstanding performance for the budget conscious, quality conscious user.

7700B Series Transmitter

• IF modulation—between 60MHz and 80MHz • High output power • Power can be adjusted from 3W to maximum power • Fully protected against short circuits and high VSWR • Frequency stability ± 1 p-pm/year • Accommodates two additional subcarriers

7700B Series Receiver

• Crystal controlled triple conversion super heterodyne design • Low noise RF amplifier—3.5dB noise figure • Pulse-counting discriminator • Automatic changeover optional

- 7700B 5116-7700B Transmitter for composite or monaural use \$3850.00
- 7707 5116-7707 Composite receiver 3145.00
- 7705 5116-7705 Monaural receiver 3395.00

8600 950MHz STL System

• For single-channel or dual monaural applications • Optimized for mono applications • Efficient spectrum use (± 25 kHz deviation, 100kHz channel spacings) • Direct output power amplification • Built-in SCA generator/demodulator (39kHz) • Provision for phase matching between two systems for stereo • Compatible with TFT Hot-Standby Auto Changeover Equipment • Tested to customer specified operating frequency • Also available for FCC Part 94 frequencies

- 8600 5116-8600 All solid-state monaural transmitter \$1600.00
- 8601 5116-8601 All solid-state monaural receiver 1595.00

8700 450MHz Transmitter Studio Data Link

• Ideally suited for the telemetry return of a remote control system using FSK data modems • Audio frequency response 300-3000Hz ± 3 dB • ± 1.5 kHz for 100% modulation • Sensitivity— 1μ V for 20dB S/N • 50 ohm RF input • $\pm 0.00025\%$ frequency stability • 6W

8300

7700B

8700

8701

transmitter power • Optional morse code identifier • External battery back-up available • Optional multi-user time division multiplex

- 8700 5116-8700 450MHz Transmitter Studio Voice/Data Link. Specify FCC Group P frequency \$1375.00
- 8701 5116-8701 450MHz Receiver-Studio Voice/Data Link. Specify FCC Group P frequency 1375.00
- Option 01 Automatic ID (Specify ID code) 320.00
- Option 02 Time division multiplex for transmitter 920.00
- Option 03 Time division multiplex for receiver 420.00

TFT, INC.

TV/Aural Modulation Monitors

701 Frequency Monitor

- Covers all UHF and VHF channels
- Off air monitoring of aural modulation
- 250µV sensitivity
- Digitally set peak modulation flashers
- Built-in aural modulation calibrator
- Built-in frequency synthesizer-type modulation calibrator
- Optional over-modulation alarm
- Portable or rackmount
- RF-frequency range-channels 2-83 (54MHz-890MHz)
- 75 ohms impedance input
- ± 0.2dB, 50Hz to 15kHz frequency response
- Off-the-air monitoring of visual and aural carrier frequencies
- Usable as a 6-digit precision frequency counter up to 10MHz
- Optional off-frequency alarm

The 701 is a state-of-the-art TV Monitor designed and optimized for off air monitoring of aural modulation in UHF and VHF TV transmitters without the need of an external RF amplifier.

851 BTSC Aural Modulation Monitor, Rackmount Baseband input only. Specify De-emphasis 8,750.00
Option 01 (7100-4010) Distortion Analyzer2,990.00
Option 02 (7100-4020) Remote Meter & Flasher Panel for 851.595.00

850

- Option 03 (7100-4132) Spare Parts Kit for 851 \$ 824.00**
Option 04 (7100-4110) Modulation Alarm with 2 MUX filters *815.00
855 SAP/PRO Modulation Monitor Rackmount3,950.00
Option 01 (7100-4133) Remote Meter & Flasher for 855590.00
Option 02 (7100-4134) Spare Parts Kit for 855.410.00
Note: When an 850 or 851 is purchased together with an 855, a \$1,000.00 allowance off the 850 or 851 list price is made.

8500/8501 BTSC Stereo Composite Subcarrier Generator/Demodulator

- Transmits BTSC TV stereo composite signal and remote control on one multichannel subcarrier
- 48dB Stereo separation
- Input and output signals fully metered
- 70dB SNR in the stereo channel
- Direct FM modulation
- 75 ohm system input impedance
- Adjustable output levels
- 1.75" H x 19" W x 10" D
- Approx. 10 lbs. each

System comprising an 8500 Generator and 8501 Demodulator. Specify frequency of 6.2, 6.8, or 7.5MHz. Others between 5MHz and 10MHz, are a special order.

8500/8501

- 8500 (5116-8500) Generator only \$2580.00**
8501 (5116-8501) Demodulator only3870.00
Option 01 (7100-4040) Spare Parts Kit for 8500 System595.00

*Not field installable

TFT, INC.

Modulation Monitors/EBS Equipment

**844 FM/Stereo Modulation Monitor/
845 SCA Modulation Monitor**

• 844 combines a tunable RF preselector, a baseband monitor and a stereo monitor in one compact instrument • 845 SCA monitor is a multi-frequency instrument designed for use with the 844 • With an optional receiver module, the 845 can be used as a stand-alone unit, for both off-air and direct transmitter monitoring • Both can be used for remote, off-air monitoring or for direct transmitter measurements • 844 features 50kHz, frequency synthesized channel tuning, to accommodate all U.S. and international standards

- 844** (5116-0844) FM Baseband/Stereo Modulation Monitor (specify frequency for high level monitoring) (75µs de-emphasis supplied standard) **\$4250.00**
- Option 01 (7100-3870) Absence of Modulation/Carrier Fail Alarm **.275.00**
- Option 02 (7100-3890) Spare Parts Kit **.475.00**
- 804** (5116-0804) Remote Meter and Peak Flasher Panel for 844 **.525.00**
- 845** (5116-0845) 3-channel SCA Modulation Monitor, 67kHz supplied standard **.2265.00**
- Option 01 (7100-3880) RF Module-Preselector (specify frequency) **.710.00**
- Option 03 (7100-3910) SCA Channel (92kHz) **.235.00**
- Option 04 (7100-3920) Spare Parts Kit **.230.00**
- Option 05 (7100-4151) Service channel (specify frequency) **.210.00**
- 805** (5116-0805) Remote Meter and Peak Flasher Panel for Model 845 **.495.00**

844

845

753/755A

753 AM Modulation Monitor

• Makes extremely accurate proof-of-performance measurements
• Allows you to monitor your transmitter so precisely that you can modulate it to the maximum legal limits in absolute confidence

- 753** (5116-0753) AM Modulation Monitor **\$1525.00**
- Option 02 (7100-2440) Carrier Power Alarm **.90.00**
- Option 03 (7100-2410) 10kHz Whistle Filter **.340.00**
- Option 04 (7100-2420) 30Hz Telemetry Lowpass Filter **.260.00**
- Option 05 (7100-2430) Absence of Modulation Alarm **.290.00**
- Option 06 (7100-2460) 230VAC ***60.00**
- Option 07 (7100-2560) Spare Parts Kit **.225.00**
- 755A** (5116-0755A) AM RF Preselector (tunable in 1kHz increments) ***1610.00**
- Option 01 (7100-2470) Narrow Band Filter **.485.00**
- Option 04 (7100-2500) Spare Parts Kit **.290.00**
- 704E** (5116-704E) Remote Meter and Peak Flasher Panel for Model 753 **.495.00**

760

8020

760 Emergency Broadcast System

• Designed for broadcasters to meet parts 73.940, 73.941 and 73.942 of the FCC rules and regulations for decoding and encoding the two-tone EBS alert signal • Modular construction of the system provides for maximum versatility and consists of a cabinet assembly, AM or FM receiver, two-tone decoder and a two-tone generator

- 760-1A** (5116-760-1A) Tunable AM Receiver/Encoder/Decoder **\$1420.00**
- 760-1B** (5116-760-1B) Single Channel FM Receiver/Encoder/Decoder (specify one receive frequency) **.1420.00**
- 760-1C** (5116-760-1C) Dual Channel FM Receiver/Encoder/Decoder (specify two receive frequencies) **.1675.00**

8010/8020 E-Alert Receivers

• Continuously monitors local AM or FM radio stations for emergency broadcast system (EBS) attention signals • Audio mute with emergency override provides silent stand-by operation. Flashing LED activated upon alert

- 8010** (5116-8010) FM E-Alert Receiver, specify frequency **\$275.00**
- 8020** (5116-8020) AM E-Alert Receiver, specify frequency **.275.00**

*Not field installable

Remote Control Equipment

8632

8610

8633

8631

8611

8610/8611

10-channel raise/lower plus 10-channel telemetry and status digital remote control system. Expandable by adding models 8631, 8632/33, to a 112-channel system. To provide digital remote control systems for AM, FM and medium size TV stations. Minimum system comprises one (1) 8610 and one (1) 8611.

8610 (5116-8610) Control portion only of 8610/8611 system **\$1650.00**

8611 (5116-8611) Remote portion only of 8610/8611 system. **2150.00**

Option 01 (7100-2610) Subcarrier (SCA) Detector. Frequencies from 26kHz to 185kHz available. Mounts within 8610 or 8611. To provide demodulation of the SCA subcarrier (Specify frequency and whether for uplink or downlink) **\$280.00**

Option 02 (7100-2620) Subcarrier (SCA) Generator. Frequencies from 26kHz to 185kHz available. Mounts within 8610 or 8611. To generate the SCA subcarrier (Specify frequency and whether for uplink or downlink) **\$280.00**

Option 03 (7100-2600) SCA Generator/Detector in one module. Single module combines functions of option 01 and 02 (Specify frequencies and whether for uplink or downlink). **\$610.00**

Option 07 (7100-4136) Spare Parts Kit. To provide spare parts such as relays, IC's and other critical components for emergency repairs **\$475.00**

8631 (5116-8631) Channel Expander (20 channels) To expand the raise/lower and telemetry channels of the Model 8610/8611 by 20 additional channels (to be installed at the remote terminal only) Up to 3 Model 8631's can be added (for 70 channels total). **\$1690.00**

Option 01 (7100-4137) Spare Parts Kit. To provide spare parts such as relays, IC's and other critical components for emergency repair **\$240.00**

8632/8633

32-channel status/alarm expander. Provides an additional 32 channels of status/alarm to 8610/8611 system, for a total of 42 channels.

8632 (5116-8632) Control portion only of 8632/8633 system (One 8633 is also required for full operation) **\$1375.00**

8633 (5116-8633) Remote portion only of 8632/8633 system (One 8632 is also required for full operation) **1455.00**

Option 01 (7100-4138) Spare Parts Kit. To provide spare parts such as relays, IC's, and other critical components for emergency repair **390.00**

7815

(Standalone Unit) Status and control system with 15 on/off control and 15 status indication channels, consisting of a control and remote unit. For on/off control and status indications only. Expandable to 47 channels of status by the addition of 8632 and 8633.

7815-C (5116-7815) Control portion of 7815 system (One 7815-R is also required for full operation) **\$1860.00**

7815-R (5116-7816) Remote portion of 7815 system (One 7815-C is also required for full operation) **2155.00**

Option 02 (7100-3100) Spare Parts Kit. To provide spare parts such as relays, IC's and other critical components for emergency repair **455.00**

Option 03 (7100-3130) Momentary Switch Kit. 8 momentary switches and instructions for replacing front panel toggle switches. Field installation only. **90.00**

REMOTE CONTROL INTERFACE ACCESSORIES

Model Description	Application	Price
FSU-01 Fail-safe unit for TV (5116-0FSU)	Monitors 4 critical parameters, plus aural power and visual power	\$1360.00
ADS-01 Alternate Data Path Selector (5116-0ADS)	Switch from main to alternate data path when invalid data is detected from either the Control or the Remote terminal. Both local and remote units are included	1860.00
CSA-01 Chopper Amplifier (5116-0CSA)	To provide isolation from a floating circuit to a grounded circuit. DC gain is also provided	560.00
PLC-01 Power-to-Linear Converter (5116-0PLC)	To linearize power readings from log scale to linear scale	715.00
TLK-01 Tower Light Monitor (5116-0TLK)	To monitor AC line current.	315.00
LVK-01 Line Voltage Monitor (5116-0LVK)	To monitor AC line voltage	245.00
PVK-01 Plate Voltage Monitor (5116-0PVK)	To monitor plate voltage up to 20kV	240.00
TSK-01 Temperature Sensing Kit (5116-0TSK)	To monitor temperature of air or components	425.00
MBB-01 Isolation Amp (high voltage) (5116-0MBB)	For monitoring voltage and current at 10kV above ground and translate reading in reference to ground voltage to suit the input of the remote control terminals	375.00
SCA1 SCA Generator (5116-SCA1)	Standalone unit converts FSK from modem to SCA frequency. (Specify operating frequency)	840.00
SCA2 SCA Detector (5116-SCA2)	Standalone unit converts SCA frequency to FSK. (Specify operating frequency)	840.00
SCA3 SCA Generator/Detector (5116-SCA3)	Standalone unit combines functions of SCA1 and SCA2 (Specify two operating frequencies)	1110.00

Bill Daniels 1988/89 Illustrated Trade References

**The Most
Comprehensive Library of
Equipment Trade References
Ever Published!**

Each Illustrated Trade Reference is in an 8 1/2 x 11 format and provides the following categories:

Product Section

Complete with manufacturers' equipment descriptions, specifications, illustrations and pricing when available.

Telephone Directory

Contains full name, address and phone number of those companies who provide a product or service to their respective industries.

Product Index/Yellow Pages

Lists products and services alphabetically, with cross-reference to manufacturer name and page number where product appears in Product Section.

1988 AUDIO

1860 pages covering the complete product lines of 434 manufacturers who serve the Professional Audio and Commercial & Industrial Sound Industries. Featuring studio and remote audio equipment plus sound reinforcement, background music, paging, intercommunications and telecommunications systems and equipment. ISSN# 0882-5432

\$195.00 (2 Volume Set)

1988 VIDEO

1196 pages covering the complete product lines of 336 manufacturers who serve the Professional and Industrial Video Industry. Contains information on video production and communications equipment. The difference between the Video Book and our Broadcast Trade Reference is the quality level of equipment. For example, Sony, Panasonic and JVC Broadcast products are included in the Broadcast Trade Reference while their Industrial products are included in the Video Trade Reference. ISSN# 0747-6183

\$95.00 (1 Volume)

1988/89 AUDIO-VISUAL

1148 pages covering the entire product lines of 397 manufacturers who serve the Instruction and Presentation Industries. This reference features equipment and devices used in presentations from classrooms to boardrooms, from film cameras to electronic blackboards. If your interest is in expanding and improving communication methods through effective use of audio-visual, multi-image and photographic media, this reference contains the products you need. ISSN# 0747-6167

\$95.00 (1 Volume)

1988/89 BROADCAST

1320 pages covering the entire product lines of 312 manufacturers who serve the Broadcast and Recording Industries. Provides information on television, radio, recording and production equipment for studio, ENG/EFP, location and remote facilities. ISSN# 0882-5688

\$135.00 (Includes Technical Data & Applications Information Manual)

1988/89 TECHNICAL DATA & APPLICATION INFORMATION

Approximately 400 pages of comprehensive reference information including engineering data, equipment interface diagrams, drawings, systems, glossaries, terms, charts/tables, basic how-to information, explanations of new technology and more. Whether you're a seasoned engineer, a systems technician or a creative director, this manual contains all the answers to your questions and the information you need for your day to day operations. An \$80.00 value FREE with the purchase of the 1988/89 Broadcast Trade Reference.

1989 SECURITY & LOSS PREVENTION

Over 2000 pages covering the entire product lines of over 350 manufacturers who serve the Security Industry. Includes information on access control, intrusion detection, perimeter protection, fire protection and detection, monitoring, information security, communications, office security products, safes and locks, and guard and investigation equipment. ISSN# 0747-6205

\$195.00 (2 Volume Set)

1989 CCTV/MATV/CATV

Over 700 pages covering the complete product lines of over 150 manufacturers who serve the Closed Circuit Television/Video, Master Antenna and Community Antenna Systems Industries. Provides the product information necessary to design, specify and purchase video surveillance and signal distribution equipment from single camera/monitor to multi-camera sequential switching systems. ISSN# 0885-5463

TIME LINE, INC.

Time Code Module

LYNX

LYNX Time Code Module

The LYNX Time Code Module is a high performance modular time code product that is actually four independent functional units in a single enclosure:

- Wide band SMPTE time code reader
- Multi-standard SMPTE time code generator
- Audio/video tape machine synchronizer
- SMPTE 422 communications port for use with external editors

The LYNX module is available in two software versions—the LYNX/SAL (standalone) configuration, and the LYNX/VSI video editor interface.

The modules are half-rack, and only 1³/₄" high, which creates an extremely small rackmounted system. A four machine controller with four independent generators uses just 3¹/₂" of rack space. There are no internal adjustments. Machine interfaces are made by cable change and machine selection from the front panel. Reconfiguration of all operating parameters are automatically controlled by the internal microprocessor. For each controlled machine the independent generator allows convenient local time code striping.

Additional Features

- Nonvolatile battery backup RAM
- No internal adjustments
- Machine selection made from front panel and stored in battery backup RAM
- Employs latest VLSI components for high performance
- CMOS design for low power and heat dissipation
- Opto-isolation between machine audio, video, and communications grounds
- Worldwide transportability:
 - All time code standards
- Internal options cards:
 - RS232/422 machine control board to supplement parallel output
 - Film chain quadrature interface

LYNX/SAL (Standalone)

- Internal crystal or external video reference input
- Selected reference resolves speed of all machines, including current master (wow and flutter are not passed through)
- Expandable up to 32 machines online
- Masterless system—any machine may be freely selected as current master
- Operates in standalone mode only

The LYNX/SAL forms a standalone synchronization system, which employs one LYNX module to each machine in the system and a minimum of two LYNX for master/slave operation. The units are interconnected with 9-pin RS422 data cables supporting up to a 32 machine system.

Front panel access is given to setting sync points, offsets, control of the generator, and basic system functions. Software compatibility is built-in for most standard tape transports.

LYNX/SAL \$2559.00

LYNX/VSI (Video Editor Interface)

- Direct plug-in to machine port of external video editor
- Supports Ampex VPR3 style serial communications
- Enables complete emulation of video transport:
 - Locks audio transport to house video reference
 - Accepts video editor commands
 - Reports transport status to editor
- Accepts all standard LYNX audio interfaces
- Interfaces with video editors only

The LYNX/VSI video editor interface software version makes the LYNX module a compatible audio machine interface to Ampex, CMX, and Grass Valley/ISC editing systems. This LYNX software also enables external computer systems to assert machine control, when transmitting Ampex VPR3 type commands.

Transports listed on the same line use interchangeable cables.

MLW-1

MLW-1 Automatic Stereo Router

- Automatic change to alternate channel on loss of channel
- Automatic change to alternate source on loss of channel or loss of signal
- Three balanced, bridging inputs
- Three modes of operation: automatic, manual, forced
- Full metering of left and right channels as well as left plus right and left minus right channels on front panel
- Microprocessor controlled audio routing and VCA control for precise and inaudible audio corrections
- User programmed time delays and sequence on loss of channel and loss of signal action
- User programmed input and output operating levels
- +29dBV (+27dBm) maximum output level (X-balanced, D.C. isolated outputs)
- Multiple manual audio control functions

The MLW-1 not only detects and corrects problems, its microprocessor based controls make decisions instantly before inaudibly "cross fading" the appropriate MLW-1 functions in or out of the audio chain.

In the automatic mode the MLW-1 will sense the loss of a channel and instantly switch both outputs to the channel with audio, or switch in a second or third audio source. The MLW-1 will also bring up a second or third audio source upon loss of signal. The MLW-1 provides an alarm on these conditions for your operator. User selected programming of the MLW-1 allows changes in the delay on channel loss time and loss of signal reaction time. User defined sequencing of the input channels with loss of signal and channel loss is also user selected. If the polarity of the audio, in either monaural or stereo, is out-of-phase, the MLW-1 will automatically correct the problem and alert your operator. The MLW-1 uses microprocessor audio routing and VCA control for inaudible changes.

In the manual mode the MLW-1 provides the user with six modes of operation on either of the two stereo audio inputs. The MLW-1 will reproduce the stereo input, produce an out-of-phase stereo source, produce the sum of the inputs on both output channels, produce the difference between the two channels on both outputs, direct the left or right channel input to both outputs, all with the push of a button. In either mode the detector circuits and the front panel metering follow the active audio input.

The audio inputs for each channel are balanced bridging, and can be dip switch set for -10dBm, +4dBm, and +8dBm. The audio outputs are X-balanced and D.C. isolated. The operating levels for the outputs can be dip switch set for either +4dBm or +8dBm. Maximum output is +29dBV.

Metering is provided on the front panel for left and right selected input channels on a 23dB range LED VU meter. L + R and L - R metering is also provided on a 43dB range LED VU meter. The remote control connector provides the user with buffered outputs from the current active left and right channels as well as the L + R and L - R audio. Extensive alarm outputs and remote control of the MLW-1 is also provided for remote operation and monitoring.

The MLW-1 can be placed in series with any monaural or stereo audio program path, or can be used as a bridging monitor device to monitor level and channel balance of any audio source. The MLW-1 can be placed pre- or post-audio processing or STL. For Production the MLW-1 can be used to directly switch between multiple sources (at different operating levels) or in series with the program output of a production console for catching and correcting audio problems as well as monitoring all audio production. Audio processing can be precisely balanced using the L - R mode and "nulling" the audio on the processing equipment. Full metering of both channels, sum channel, and difference channel allows for "on-the-fly" audio set-up of audio sources.

Specifications

Frequency

Response: 20-20,000Hz, ± 0.5 dB

Harmonic

Distortion: <0.1%THD + noise (20-20kHz)
<0.1IMD (SMPTE)

Input Level:

-10, +4, +8dBm user selectable. Three stereo inputs, all active, balanced, bridging

Signal-to-Noise:

>70dB below +8dBm operating level

Metering:

LED type 23dB VU left, right
LED type 43dB VU L + R, L - R

Outputs:

Program Left, Program Right +4, +8dBm user selectable
+29dBV, +27dBm max output

Remote I/O:

37 pin connector providing alarms, buffered audio, MLW-1 controls

Power:

110VAC, 50/60Hz

Dimensions:

1.75" H x 19" W x 15" D standard EIA rack

TITUS TECHNOLOGICAL LABORATORIES

Audio Processing Unit/On-Air Light

TLW-1

TLW-1 The Last Word Audio Processing Unit

- Three modes of operation: Automatic, manual, and forced synthesis
- True instrumentation amplifier inputs, balanced, Hi-Z or 600 ohm switchable
- Full metering of left and right channels as well as left plus right and left minus right channels on front panel
- Microprocessor controlled audio routing and VCA control for precise and inaudible audio corrections
- XLR type input and output connectors
- Power loss/audio bypass relay
- Internal or external stereo synthesizer, user selected
- Automatic synthesis on channel loss or mono program detection, user selected
- Automatic mono out with loss of channel with no loss in audio level
- Automatic phase reversal with out of phase source/mono or stereo
- Factory installed optional HOWE phase chaser or automatic audio time base correction
- All outputs: active, x-balanced, DC isolated, unity gain

The Last Word is the single unit that provides broadcasters with automatic detection and correction of a wide variety of problems that can afflict a stereo program. The Last Word not only detects and corrects problems, its microprocessor based controls make "intelligent" decisions instantly before inaudibly by "cross fading" the appropriate Last Word functions in or out of the audio chain.

Because of its exceptional flexibility The Last Word can be installed in many locations. Use The Last Word at the beginning or end of the audio chain. Use it at your STL receiver site to correct instantly for loss of a channel. The Last Word can also be used in the nulling mode to adjust audio processing equipment quickly.

Minor phase errors can also be corrected when The Last Word is equipped with the optional Howe Phase Chaser™. These minor phase errors can be far more disturbing to your mono listeners than to those who are listening to your signal in stereo. Since the majority of the public still listens to broadcasts in mono, The Last Word with the Howe Phase Chaser can be invaluable to you. It will help you protect these people from listener fatigue (and the inevitable loss in ratings) caused by phase errors in the program material or from improper tape head alignment.

The Last Word Eliminates These Problems:

Channel Loss: The Last Word senses a missing channel and instantly switches both outputs to the channel with audio. Or, you can opt for The Last Word's built-in stereo synthesizer to provide a stereo output for broadcast, or bring your station's external stereo synthesizer on line. The Last Word will provide an alarm for your operator.

Audio Out-of-Phase: If the polarity of the audio, in either mono or stereo, is out of phase, The Last Word automatically corrects the problem and alerts your operator.

Mono Program: When The Last Word detects mono programming it can automatically insert either its built-in stereo synthesizer or your external stereo synthesizer into the audio chain for uninterrupted stereo transmission. The Last Word automatically returns to normal "unsynthesized" stereo when a stereo program is detected.

Production: The Last Word is an invaluable production tool. Use it in the manual mode to reproduce the stereo source, produce an out-of-phase stereo source, produce the sum of the inputs on both channels, produce the difference between the two channels on both outputs, direct the left or right channel to both outputs, or place a stereo synthesizer into the audio circuit. This synthesizer can be either its own internal unit, or an external stereo synthesizer. To take advantage of any of these options, simply push a button on the front panel.

OAL-HG

OAL-VS

On Air Lights

- Handsome appearance
- Oak base
- Silver or gold frame
- Horizontal or vertical mounting
- "On air" or "recording"
- "Blackout" face when not in use
- Dimensions: 4³/₄" H x 8¹/₁₆" W x 2¹/₂" D
- Power: 24VDC 680 MA (four #1864 bulbs in parallel)
- Wiring: class 2, #18 to #24 gauge

The On Air light provides the broadcaster and recording studio with a beautiful but practical means of indicating that a studio is in use. The On Air light features a smoked glass window mounted in either a gold or silver frame which is attached to an oak mounting base. The warning "On Air" or "Recording" only appears when illuminated and is blacked out when not in use.

The On Air light uses four 24VDC bulbs which almost completely eliminates the chance of total failure. Bulb replacement is quick and easy. Class 2 wiring, using #18 to #24 gauge wiring directly to your audio console's relays, eliminates the need for special interface boxes.

OAL-HG Horizontal "On Air" gold frame	\$125.00
OAL-HS Horizontal "On Air" silver frame	125.00
OAL-VG Vertical "On Air" gold frame	125.00
OAL-VS Vertical "On Air" silver frame	125.00

For horizontal or vertical "Recording" add suffix "R" (e.g. OAL-HGR)

Standard Coax Patching Systems

Plugs & Cable Assemblies

Jacks: Single/Dual

Introduction:

Trompeter Electronic's standard coax patching systems, shown on this page, provide limitless flexibility to route signals from one place to another. Two basic versions of Standard Coax patching are available. The RCA 50 ohm with a pin size of .070" and the Western Electric (WE) 75 ohm type with a pin size of .090". Signal degradation occurs above 100 mhz. The two series are not interchangeable but can be intermixed on the same panel along with TEI's audio patch jacks and panel lites (not shown).

COAX DATA SWITCHES:

Designed for use up to 15 MHz. Circuits are isolated from ground with shield & center conductor switched. Switched out ports are terminated in a resistive load.

DATA DISTRIBUTION PANELS:

TEI manufactures signal distribution panels that accommodate from 12 to 52 Bulkhead Cable or Feedthru Jacks illustrated above. All panels are 19" standard rack size in insulated and non-insulated versions. Panels accommodating 24, 32, 40 or 52 lines are double row (as illustrated) and 3 1/2" high. Light gray is the standard color though other colors are available on special order.

WALL MOUNT PLATE:

Available with up to 6 BNC or TNC connectors.

ULTIMATTE CORP.

Video Matting Equipment

Newsmatte-2

Ultimatte-300

Ultimatte®/Newsmatte™ Video Matting Equipment

All Ultimattes and Newsmattes can composite transparent objects, fine detail such as hair or smoke, out of focus objects, reflections and shadows. They can all matte on blue, green or red; and all permit the foreground subject to touch the backing without causing fringing or break-up in the composite. They all remove blue spill from the foreground subject while reproducing blue foreground colors. They all have a clean up control to remove unwanted shadows or defects in the backing and a black gloss control to deal with black glossy surfaces in the foreground. All have a positive matte output. Ultimatte Corp. also manufactures the High Definition Ultimatte (not included on comparison chart) which is compatible with High Definition Standards.

- High-Definition Ultimatte 39,850.00

45G Tower

This tower is designed in an 18" equilateral triangular pattern. The three legs of the tower are either heavy, 14 gauge, special quality steel tubing or solid steel bars. The cross bracing is the "zig-zag" design using a continuous, solid steel rod, electric welded to side rails every 15". All sections are 10' in length.

This tower is suitable for mounting communication antennas or other equipment under normal conditions for heights up to a maximum of 300'. Entire tower is accurately constructed, utilizing precision machines and then electric welded throughout.

The tower sections are completely hot dip galvanized after fabrication to give permanent protection against corrosion. Because sections are galvanized as the last operation, all points of welding and other points of construction are fully covered with molten zinc that tends to seal itself should there ever be any breakage on the surface.

Self-Supporting Heights for 45G Tower

Wind Load	Factor of Safety — 1.5		Factor of Safety — 2.3	
	No. Ant.	2 ft. ²	No. Ant.	2 Ft. ²
10.0 PSF (50 MPH)	90.6'	84.0'	72.9'	66.5'
14.4 PSF (60 MPH)	75.9'	69.1'	61.6'	54.5'
20.0 PSF (70.7 MPH)	64.2'	57.8'	51.8'	45.4'

SSV Series Self-Supporting Towers

SSV Towers are designed for a minimum wind load of 30 psf. Towers requiring higher wind or ice loads are no problem due to the tower's amazing versatility.

Standard designs available in heights to 500' depending on loading. Special towers available depending on specific requirements.

The SSV Series make use of primarily knock-down construction for on-site assembly, which reduces shipping costs. Towers for minimal loadings are available in welded construction in heights up to 60', shipped in 20' sections. All components and hardware are hot dip galvanized after fabrication with a zinc coating per EIA standards.

All SSV Series towers are engineered, designed and fabricated to meet or exceed latest EIA specifications.

80 Tower

The 80 tower is constructed in an equilateral triangular pattern with either steel pipe or solid steel legs and tubular or angle steel crossbracing with bolted construction. The triangular size is 41" on leg centers and the diameter of the tower legs vary to meet the requirements of the installation. This feature permits considerable flexibility in supplying a tower tailored to specifically meet and adequately handle the equipment to be installed.

All components of this tower are completely hot dip galvanized after fabrication to protect all areas of the tower. A minimum of 2 oz. of zinc per square foot of surface is applied throughout.

This tower is rated for installation up to 1000' using variable size and weight of tubular or solid steel components. Each tower is individually engineered to handle a particular job.

25G

SSV

80

25G Tower

The 25G is a general purpose communication or heavy-duty TV tower and will satisfy a tremendously wide range of tower needs.

The 25G is built on a 12 1/2" equilateral triangular design with continuous steel "zig-zag" cross-bracing entirely electric welded and fabricated in precision equipment. The 8 "zig-zag" braces per 10' section mean more than usual strength.

Extra heavy-duty 1 1/4" steel tubing is used for side rails, resulting in far greater strength and sturdiness than ordinarily found in this size tower.

The components are hot dip galvanized for a long-life finish, rust-proof and give an always attractive appearance. Every inch, including inside of entire tower, evenly and completely covered with zinc after fabrication.

The 25G uses double-bolted joints. The extra strength of the 25G allows it to be self-supporting provided a house bracket is used and can go 35' above this bracket under normal conditions. Under most guyed conditions the 25G is suitable to heights of 200'. Assembly bolts and nuts are located within 1 leg of each tower section.

Self-Supporting Heights for 25G Tower

Wind Load	Factor of Safety — 1.5		Factor of Safety — 2.3	
	No. Ant.	2 Ft. ²	No. Ant.	2 Ft. ²
10.0 PSF (50 MPH)	72.4'	64.8'	58.4'	50.9'
14.4 PSF (60 MPH)	60.4'	52.9'	48.7'	41.3'
20.0 PSF (70.7 MPH)	51.3'	43.8'	41.4'	34.1'

Refer to Green Section for Addresses and Telephone Numbers.

AVS-1B Routing Systems

- 60MHz Video Bandwidth—no obsolescence with conversion to MAC or HDTV video signals
- Sync-tip clamping of video inputs and outputs
- No control buffer cards used—worst-case failure is single 10 x 10 card
- Multi-sourced, discrete components—no proprietary circuits
- Fully reprogrammable with no downtime
- 10-year memory retention of reprogrammed data and matrix status
- Single or redundant power supplies with failure alarms
- Source/destination lockout capability
- Single-motherboard design for fully operational extender card servicing
- Up to eight individually-addressable levels
- 320 inputs/unlimited outputs maximum size per level
- Secondary combining matrices not required regardless of system size
- Automatic control card switchover with alarm—No undetected failure disasters
- Redundant "Plug-In" cooling fans
- Regenerative time code matrices
- Four user ports, RS-232 and RS-422
- Loophrough coax control panel interconnection via four isolated party lines
- Control panel source names assigned by customer—not by manufacturer
- BNC video and compression-type audio connectors—interface panels not required
- SALVO switching from computer terminal

Master Control Switching

The AVS-1B Routing Switcher is also used as the switching matrix for Utah Scientific Master Control Switchers. In this system, sources are selected by router crosspoints then processed as necessary by the master control mainframe. Some of the advantages of this approach to master control switching are:

- All sources feeding the router are available to the Master Control Switcher
- System timing is greatly simplified since all sources are normally in proper time at the router inputs and the delay of a separate master control matrix needn't be accommodated
- In automated systems additional matrix buses can easily be controlled for multiple output feeds, off-line recording, etc.
- Overall system cost is significantly reduced

Integration with Machine Control

AVS-1B switching systems can be integrated with either of the two machine control systems offered by Utah Scientific. The PLMC-1 party line system can, in many instances, share the matrix party lines. Where the more sophisticated SMC-1 machine control system, with its high speed DYNABUS™ communications network, is used, interconnection with the AVS-1B party line is accomplished at the DYNABUS User Interface/Diagnostic panel. With either system, machine control assignments can either follow or be independent of A/V switches.

User Control Ports

The PL-160 Control and Memory Card furnished with each system incorporates multiple user ports to allow matrices to be controlled and/or monitored by various external devices. Two ports support RS-232 protocol and are brought out to standard RS-232 connectors on the rear panel. Another port supports RS-422 protocol while a fourth port can be internally strapped for either RS-232 or RS-422 operation.

AVS-1B

System Reprogramming

The relationship between source and destination names and their associated matrix inputs and outputs is subject to change as equipment is replaced and systems are expanded.

To alleviate this problem, Utah Scientific has incorporated reprogrammable, non-volatile memories in all its recent panel designs, with the PL-160 Control and Memory Card and the system party lines acting as the reprogramming medium.

The write-cycle time for the RAM memory used in Utah Scientific panels is typically faster, by a factor of 60,000:1, than the EPROMS used by other switcher manufacturers. This permits the reprogramming data to be interspersed with party line control commands and refreshment words. The result is system reprogramming with no downtime.

While RAM memory retention (by Lithium batteries) is typically ten years, with or without AC power applied, it is still backed up by factory-programmed PROMs that down-load into RAM if a check sum error ever occurs on panel start-up or reset.

A customer-furnished "dumb" terminal is used for reprogramming. This same terminal can be used for entering and executing SALVO switch commands and source and destination lockouts.

Power Supply Systems

Two separate power supply systems may be supplied with Utah Scientific switchers. Where space permits, one or two (for optional redundancy) diode-isolated PS-1B supplies are installed in matrix card cages. In other systems the PS-2 redundant power supply system, powering an entire rack of matrix frames, is furnished. The PS-1B system has both audible and external-contact failure alarms, while the PS-2 system offers an optional scanner/alarm panel that continuously scans 36 circuit points creating both audible and external-contact alarms while identifying the trouble source upon failure detection.

UTAH SCIENTIFIC, INC.

Router Control Panels

CSP-30/4

CSP-40/4

CSP-260/4

CSPD/4

Reprogrammable Router Control Panels

- All panels are reprogrammable with no system or panel downtime
- Program-Select switch doubles bus capacity of most panels
- Sixteen group names to satisfy needs of modern TV plants
- Group names assigned by customer—not by manufacturer
- Up to 1600 possible source names provided by most panels
- Touchpad entry of source, destination or panel lockouts
- 10-year retention of user-programmed data, power on or off
- Multi-bus panels provide instantaneous status readout for each level upon selection of new bus
- Single coax party line control connection
- Industry's widest range of reprogrammable, alphanumeric, multi-level panels
- Full matrix/maintenance panel performs various system diagnostics

Reprogrammable Router Control Panels provide individual control and statusing of up to four switching levels (matrices). Designed to operate with either AVS-1 or AVS-1B Routing Switchers, these panels provide a high degree of user-defined flexibility. All panel operations are straightforward, requiring a minimum number of keystrokes to switch or status multiple levels. Other functions, such as source or destination lockouts and panel lock are also entered from the keyboard in a logical manner.

Panels may be reprogrammed as to source and destination names or output bus assignments. This is accomplished over the routing system's party lines in conjunction with the PL-160 Control and memory card. Reprogramming is achieved without interrupting system operation or removing the panel from service.

Panel memory is Lithium battery-supported RAM, typically providing 10-year memory retention with or without AC power applied. Nevertheless, factory-programmed PROMs are also incorporated which download into RAM if a check sum error occurs on panel start-up or reset. The write cycle time for the RAM is 60,000 times faster than that typical of the E²PROMs used by other manufacturers, permitting reprogramming data to be interspersed with party line control commands and refresh words.

Panels are reprogrammed using a customer supplied "dumb" terminal connected to one of the PL-160 Control and Memory card's user ports. This same terminal may also be used for entering and executing SALVO switch commands and source and destination lockouts.

Control panels range from simple, button-per-source, single bus units to a sophisticated full matrix/diagnostic unit that operates in either numeric or alphanumeric modes while performing a variety of switching system diagnostics.

- CSPD-4** Four-level deskmount controller. Full matrix (or multi-bus or single bus as programmed). 3" H x 6 1/2" W x 6" D
- CSP-30/4** Button-per-source four-level controller to select 30 randomly assigned sources. 1 1/3" rackmount
- CX-30/4** 30-button panel to expand CSP-30/4 to 60 sources. 1 3/4" rackmount
- CSP-40/4** Button-per-source four-level controller to select 20 (or 40 by means of Program Select switch) sources. Includes alphanumeric status display. 1 3/4" rackmount
- CSP-260/4** Four-level controller to select from one to sixteen sources within each of sixteen groups. Includes four direct-take buttons plus alphanumeric status display. 1 3/4" rackmount
- CSP-1601/2** Two-level controller to select up to 100 sources within each of sixteen groups. 3 1/2" rackmount
- CSP-1605/2** Two-level 5-bus controller to select up to 100 sources within each of sixteen groups. 3 1/2" rackmount
- CSP-1610/2** Two-level 10-bus (or 20-bus with Program Select switch) controller to select up to 100 sources within each of sixteen groups. 5 1/4" rackmount
- CSP-1600/4** Four-level single-bus (or 2-bus with Program Select switch) controller with separate Preset/Status displays for each level. 3 1/2" rackmount
- CSP-1601/4** Four-level single-bus controller with separate Preset/Status displays for each level. 1 3/4" rackmount
- CSP-1602/4** Single-bus four-level party line control and status panel. Includes 16 keys for input entry with a preset/status display. Four buttons for breakaway and 2 buttons for direct take sources. 1 3/4" rackmount
- CSP-1605/4** Four-level 5-bus (or 10-bus with Program Select switch) controller with separate Preset/Status displays for each level and five output bus select buttons. 3 1/2" rackmount
- CSP-1610/4** Four-level 10-bus (or 20-bus with Program Select switch) controller with separate Preset/Status displays for each level. 5 1/4" rackmount
- CSP-16160/4** Four-level full matrix (or multi-bus as programmed) controller with separate Preset/Status displays for each level plus output bus display. Specially programmed to perform system diagnostics. 3 1/2" rackmount

Numeric Control Panels

- Loophrough coax control connection
- Wide variety of panels and mounting styles
- Continuous status readout
- Single-bus, multiple-bus and full-matrix models
- Optional encoding — permits addressing sources by name
- Audio and video select buttons for separate switching and stusing
- Simultaneous audio and video switching from different inputs (CSP-300R only)
- No custom components or proprietary software
- All keycap and write-in strip graphics provided

CPD/PL Desktop Party Line Control Panel

This panel consists of an attractive enclosure mounting a pair of lever switches for input selection plus a Take button. It connects to one of the AVS-1 or AVS-1B party lines by means of a single rear-mounted connector. The CPD/DL is battery powered thus eliminating the need for an AC power cord. The CMOS and "LS" TTL circuitry consume power only when a new input selection is made. Thus, battery life of several years can be expected in normal operation.

CSP-1 and CSP-2 Lever Switch Control and Status Panels

These panels utilize lever switches for data Preset and Take buttons for switch execution. Two-digit numeric readouts indicate crosspoint status on each assigned bus on data from the matrix refresh memory. Breakaway switching is accomplished by an Audio-Only button.

CSP-10 10 or 20 — Bus Control and Status Panel

This panel provides an inexpensive means of controlling up to 20 buses. Ten two-digit numeric indicators provide continuous status information on ten randomly assigned buses while associated Take buttons permit input selection on each bus. New input data is entered by means of a ten-key touchpad which, with associated two-digit readout, sets up input selection data prior to being switched on one or more buses. As with other numeric panels, the addition of coding PROMs and relegendable keycaps permits addressing and stusing each device by its "familiar" name.

CSP-10C

This panel provides the same features as the CSP-10, but mounts as a front panel on the matrix rack frame and includes a matrix card restraint bar (not pictured). It is most often used in remote van installations

where matrices are typically smaller and rack space is at a premium. Mounting height, including 20 x 20 AV matrix or 30 x 10 AAV matrix, is 10 1/2".

CSP-100 Group/Units Control and Status Panel

This panel, in its non-encoded form, permits addressing up to 100 inputs using two groups of buttons for Tens and Units data entry. With encoding PROMs added each two-button combination addresses a randomly assigned source. This allows the Tens buttons to be assigned group names so that, in combination with the numeric Units buttons, sources can be addressed by their familiar names (VTR-8, TBC-2, etc.). New selections within the same group require only a single keystroke allowing for rapid A/B comparisons such as camera matching. Breakaway buttons provide for separate audio and video switching and stusing. Mounting height is 1 3/4".

CSP-20A/CX-20A Button-Per-Source Panels

The CSP-20A Control and Status Panel with an associated CX-20A Expansion Panel provides button-per-source selection of from 20 to 140 inputs. Each new selection requires only a single keystroke and each button is identified by the source name printed on the label strip.

SC-150 Supervisory Control Panel

The SC-150 Panel provides separate three-digit numeric displays for video and audio stusing. Data entry for up to 160 output buses and 160 sources is by lever switches. Audio and video breakaway switches plus a status-request button are also provided. The keylock switch permits disabling the panel as to switching all buses except one bus (typically a system maintenance or quality control bus) while enabling it to momentarily status any other bus. 3 1/2" rackmount.

CSP-300R Full Matrix Control and Status Panel

This panel provides touchpad data entry and Preset and Active two-digit displays for both audio and video. Input selection data entered from the ten-key touchpad is displayed by either one or both of the preset displays until the Take button is depressed. If different data is entered for audio and video, the two matrices are each switched to their respective selected inputs when the Take button is depressed.

VALLEY INTERNATIONAL, INC.

Signal Processing Equipment

400 Mike Processor

- On-board, 3-band tone control EQ section • "Smart" interactive expander • Expander section doubles as a noise gate • Adjustable Threshold and Range controls • A de-esser is incorporated in the dynamics processing • Microphone connection via a rear panel chassis mount XLR connector

The 400 offers a dramatic improvement in the audio signal chain beginning with its perennial weak link, the microphone preamplifier. Instead of complementing the low noise, low distortion performance of today's super-sophisticated microphones, the 400 provides your microphone with a preamp section superior to that found on your on-air console.

400 \$649.00

415 Dynamic Sibilance Processor

- Two channels of DSP • May be operated independently, or linked for stereo operation • Packaged in a rugged steel rackmount housing • Excellent RF suppression • Withstands rough use in mobile or on-tour applications • Electronically balanced inputs and outputs

Unlike the now outdated de-esser, the DSP can remove objectionable sibilance from vocals even in mixed program, without creating holes in the processed material, and without adversely coloring or affecting the tonal balance of the mix.

415 \$940.00

430 Dynamite™**Compressor/Limiter/Expander/Gate**

- Anticipatory release reduces fast modulation distortion effects • Four continuously variable front panel adjustments • Fully metered, with an 8 LED gain reduction array • Clip warning indicator • Custom aluminum and steel housing case • Excellent RFI rejection and the ability to withstand the punishment of on-road use • 1/4", 3-conductor (stereo) jacks are provided for all inputs and outputs • Front panel patch-through jack option is available

The Dynamite is a self-contained, multi-purpose processing device. It is capable of 18 operating modes, including the basic modes of limiting, expansion, noise gating, keying, de-essing and voice-over ("ducking").

430 \$579.00

440 Limiter/Compressor**Dynamic Sibilance Processor**

- FM pre-emphasis compensated compression and limiting • AGC/compressor operation, and an Auto mode • Complete easy-to-read metering • Symmetrical release coupling circuitry • Extremely fast attack characteristics • Continually variable threshold • Variable release time • Anticipatory Release Computer • Option: Two 440's may be linked in a master/slave configuration

The 440 Limiter/Compressor Dynamic Sibilance Processor offers the convenience of a peak limiter, a high quality compressor/expander package, and a Dynamic Sibilance Processor section, each controlling a common VCA (voltage controlled amplifier).

440 \$940.00

610 Dual Compressor/Expander

- Each of the two channels consists of a compressor and expander section • Compressor section may be configured as a voice-over device • Expander section control features continuously adjustable Threshold and Range controls • Channel VCA release time is variable • VCA mode control • LED bargraph display • Overload warning indicator

The 610 Dual Compressor/Expander offers the convenience of two high quality compressors with the flexibility of multi-function dynamics processing in an attractive, rugged 3 1/2" x 19" rack package.

610 \$1250.00

815 Dynamic Sibilance Processor

- One channel of DSP • Bandpass filter with continuously variable center frequency Q (bandwidth), and continuously variable sensitivity • Tune operational mode allows the DSP to be adjusted by listening and observing the control status indicator LEDs • Two 815 DSP modules may be linked for stereo operation

Unlike the now outdated de-esser, the DSP can remove objectionable sibilance from vocals even in mixed program, without creating holes in the processed material, and without adversely coloring or affecting the tonal balance of the mix.

815 \$420.00

415

430

440

610

Gatex

Gatex 4-Channel Noise Gate/Expander

- Eliminates track leakage when recording drum kits • Enhances dynamic range in keyboard instruments • Controls reverberation decay time • Eliminates effect feeds • Eliminates "breathing" and "lip smacks" in vocals • Eliminates buzz and hum in instrument amplifiers during recording or live performances • Controls unused open microphones during live performances or filming • Easy-to-read 3 LED display • Input impedance: 790K ohm balanced; 745K ohm unbalanced • +24dB maximum input level • +21dB into 600 ohm or greater maximum output level • Program dependent, nominally 100µs, 5ms, 10ms expander attack times

At the heart of Gatex is the TA-101 voltage controlled amplifier. By virtue of its distortion-free operation and wide dynamic range, the TA-101 allows Gatex to process audio signals without coloration.

Gatex \$599.00

810 Kepex II Keyable Program Expander/Gate

- Excellent noise gate • Five continuously variable front panel controls and release and mode switches • Increases dynamic range through active expansion mode • Prevents reproduction of "leakage" or undesirable ambient noise on recordings or in live situations • Generates numerous electronic effects when used in the "keying" mode

While the Kepex II is a logical extension to the original Kepex, it is a totally different design, providing many added features, as well as significant refinements in control functions and audio performance.

810 Kepex II \$420.00

Refer to Green Section for Addresses and Telephone Numbers.

B-1177

811 Gain Brain II Limiter/Compressor/Ducker

- Assures complete transparency, extremely low noise and distortion
- Excellent transient response and wide gain reduction range
- Useful in all applications requiring exacting control over audio levels
- Optimum settings for any type of program material

The Gain Brain II is fundamentally different from any other limiter compressor device, including the original Gain Brain. While other units struggle with peak or RMS detectors that respond to an arbitrary voltage or power level and typically squash or flatten the life out of music, Gain Brain II's response is variable and dependent upon the degree of waveform complexity.

811 Gain Brain II \$420.00

812 Maxi-Q 3-Band Parametric Equalizer

- Employs an all "feedforward" approach
- Continuous control from "infinite cut" to 14dB of boost at center frequency
- Front panel input gain control
- Overload display
- Freedom from distortion and noise in all uses
- Allows for truly meaningful A/B comparisons

The Maxi-Q parametric equalizer employs an array of unique features to deliver, as its name implies, maximum equalization capability.

812 Maxi-Q \$420.00

Comander Compressor/Expander

- Provides highly effective control over the dynamic range of audio signals
- Continuously variable threshold, attack time, ratio, and release time controls
- Interactive expander is integrated with the compressor control circuitry to reduce residual noise which would be "pumped up" or accentuated by the compression process
- Symmetrical Release Coupling circuitry makes the transition from compression to expansion imperceptible, thus eliminating the audible "turn on" noise or noise floor recovery experienced through use of less sophisticated or dedicated-function units
- Expander threshold automatically tracks its compressor threshold
- Variable range control allows the expander section to perform signal attenuation from 0 to 60dB
- Linear Integration Detection allows the unit's detector to emulate the response of the human ear in order to maintain correct musical relationships in the processed material
- Peak Reversion Correction Circuitry compensates for discrimination against low frequencies to eliminate "pumping" and "breathing"
- Anticipatory Release Computer automatically alters release time in response to program

Comander \$420.00

Leveller Audio Level Controllers

Common Features

- Linear Integration Detection enables the unit to understand loudness as perceived by the human ear
- Complex waveforms exit the leveller at slightly higher absolute levels than do simple waveforms
- Output section is differentially balanced to ensure immunity from RF pickup and hum
- Output section automatically compensates for 6dB level loss normally experienced when balanced outputs are wired in an unbalanced configuration
- Once the desired input level is set and the output gain determined, the operator decides whether more or less "levelling" action is required and operates the threshold control
- No attack time or release time controls
- Automated Program Dependency circuitry optimizes the attack and release times as the program content changes
- Continual monitoring and recalibration of the attack and release times by the APD circuitry ensures that no dynamic distortion is added to the signal

Leveller Dual Channel Limiter

- Offers two independent channels that can be coupled for processing stereo information via the front panel link switch
- In operational mode, the individual control voltages of the two channels are averaged to provide superior center image stability for critical stereo processing applications
- Balanced, differential input section of each channel of the Leveller is capable of accepting -10dB, 0dB, or +4dB levels
- Two output sections offer variable gain to accommodate all operating levels found in recording and broadcast equipment
- With variable control, the operator can readily interface the Leveller between two pieces of equipment having different operating level standards
- Two integration times are available to the operator of the Leveller: fast, slow

Dual Channel \$599.00

811

HH2 x 2B

Leveller Horizontal/Vertical Limiter

- Single channel version of the two channel rackmount audio level control device
- Balanced, differential input section accepts line level signals
- Variable output gain control is provided at the front panel

816V/H \$420.00

HH 2 x 2B Balanced Level Matching Interface

- Electronically balanced outputs
- Excellent waveform fidelity and freedom from ringing
- Balanced input sections
- Each level matching interface is a complete stereo system
- Improved transient response
- Excellent RF suppression

While the HH 2 x 2B Level Matching Interface immediately resolves the level and impedance matching problems associated with interfacing -10dB equipment to the studio and broadcast equipment standards of +4dB and +8dB, it also ensures immunity from RF pick-up and hum, thanks to electronic balancing of the +4/+8 inputs and outputs.

HH 2 x 2B \$279.00

HH 2 x 2 Rack panel for one or two HH 2 x 2B \$25.00

PR-2 Series 800 Enclosures

- Two position rack for modular audio signal processors
- Rugged steel construction
- Modules may be linked via front panel link switch
- Barrier strips on rear panel provide easy audio interface

PR-2 \$250.00

PR-10 Series 800 Enclosures

- Install any combination of up to ten 800 series signal processors
- Two section bipolar power supply
- RF filter
- Heat dissipation
- Each section of the power supply powers five 800 series modules
- Rear panel mounted barrier strips

PR-10 \$550.00

Rack Enclosures

EXT/2 Extender for PR-10, PR-2 \$36.00

CDSFS51.0A400H

CDSFS32.1A320L

320' Free Standing "Light Duty" Tower

Furnished in heights ranging from 20' to 320' utilizing standard 20' sections, plus special section lengths as needed. Tower is 3-sided, fabricated from structural steel angles, with bolted field connections. Typical applications include two-way radio, paging, cellular, and light duty microwave.

CDSFS36.3A340M

340' Free Standing "Medium Duty" Tower

Furnished in heights ranging from 20' to 340' utilizing standard 20' sections, plus special section lengths as needed. Tower is 3-sided, fabricated from structural steel angles, with bolted field connections. Typical applications include two-way radio, paging, broadcast, cellular, and microwave.

CDSFS51.0A400H

400' Free Standing "Heavy Duty" Tower

Furnished in heights ranging from 20' to 400' utilizing standard 20' sections, plus special section lengths as needed. Tower is 4-sided, fabricated from structural steel angles, with bolted field connections. Typical applications include two-way radio, paging, broadcast, and heavy duty microwave.

Microwave Antenna Mast

For most applications, tubular steel is an efficient alternative to lattice towers. Valmont's computer analysis generates a precise solution for dish mounting on a tubular structure based on frequency and deflection ranges.

CDSG24A300

300' Guyed 24" Face Width Tower

Furnished in heights ranging from 20' to 300' utilizing 20' sections with 24" face width. Tower is 3-sided, fabricated from structural steel angles, with bolted field connections. Tower is designed for standard 80% guying and a pinned base connection. Typical applications include two-way radio, paging, and AM broadcast.

CDSG36A460

460' Guyed 36" Face Width Tower

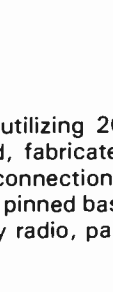

Furnished in heights ranging from 20' to 460' utilizing 20' sections with 36" face width. Tower is 3-sided, fabricated from structural steel angles, with bolted field connections. Tower is designed for standard 80% guying and a pinned base connection. Typical applications include two-way radio, paging, cellular, and light duty microwave.

CDSG48A600

600' Guyed 48" Face Width Tower

Furnished in heights ranging from 20' to 600' utilizing 20' sections with 48" face width. Tower is 3-sided, fabricated from structural steel angles, with bolted field connections. Tower is designed for standard 80% guying and a pinned base connection. Typical applications include two-way radio, paging, broadcast, and microwave.

CDSG60A800

800' Guyed 60" Face Width Tower

Furnished in heights ranging from 20' to 800' utilizing 20' sections with 60" face width. Tower is 3-sided, fabricated from structural steel angles with bolted field connections. Tower is designed for standard 80% guying and a pinned base connection. Typical applications include two-way radio, paging, broadcast, and heavy duty microwave.

CDSG90T1000

1000' Guyed 90" Face Width Tower

Furnished in heights ranging from 20' to 1000' utilizing 20' sections with 90" face width. Tower is 3-sided, fabricated from solid round or tubular steel material for legs, solid round diagonals, and angles for horizontal struts. Tower is designed for standard 80% guying and a pinned base connection. Typical applications include two-way radio, paging, broadcast, and heavy duty microwave.

VARIAN CONTINENTAL TVT

FM Antennas

G5CPS Series — Super Power Circularly Polarized FM Antennas

The G5CPS series was designed for stations needing input powers up to 120kW. These antennas offer the broadband characteristics that are important for optimum main and sub-carrier performance, and above average immunity to the detuning caused by icing. Radomes or deicing heater elements are needed only where the most severe icing conditions are likely to occur. Typical VSWR is 1.5:1 or less with 1/2" of radial ice if the antenna has been field tuned.

¹ Windload based on 50/33 psf.

² End-fed antenna lengths do not include the six ft. matching transformer.

³ Power input capability up to 2,000 feet above mean sea level; derating required above 2,000 feet.

Note: Brackets included in weight and windload calculations.

Refer to Green Section for Addresses and Telephone Numbers.

VARIAN CONTINENTAL TVT

FM Antennas

G5CPM Series—Circularly Polarized Low to Medium Power FM Antennas

The G5CPM series of FM antennas has many of the characteristics of the super power G5CPS series, but is designed for use by low to medium power stations. Input powers of up to 9 or 12kW can be used depending upon the number of bays and whether the antenna is center or end-fed.

All G5CPM antennas have radiating elements made of 1³/₄" diameter heavy duty brass and 1⁵/₈" interbay line.

Like the G5CPM series, the G5CPS has broadband response and machine formed, rather than welded, radiating elements. As a result, the G5CPM is capable of normal operation with up to 1/3" of radial ice. While heaters and radomes are now available for the G5CPM series, they are recommended only for areas where icing conditions are likely to be severe.

The G5CPM uses a six foot transformer section for impedance matching and fine tuning after installation if the very lowest VSWR is required. VSWR without field tuning is normally 1.2:1 or less when pole mounted; 1.5:1 or less when side mounted on a tower.

A quarter-wave grounding stub which places the antenna at ground potential for additional protection against lightning is available as an option at added cost.

Freedom from deterioration caused by weather elements is assured through the use of brass, copper and stainless steel throughout the antenna.

The feed point is completely internal and includes a pressurized environment up to the feed point of each bay.

The broadband characteristics achieved by the design of the G5CPM series make these antennas well suited for optimum performance on both the main and sub-carrier channels.

Specifications

Frequency Range:	88 to 108MHz (factory tuned to one frequency)
Polarization:	Circular (clockwise)
Power Gain:	See chart
Azimuthal Pattern:	± 2dB in free space, both horizontal and vertical
Ellipticity:	± 3dB in free space
VSWR at Input (without field tuning):	1.2:1 or less for pole mounted; 1.5:1 or less, side mounted
VSWR at Input: (with field tuning):	1.07:1 or less

¹Power split is 50/50 vertical and horizontal only. Beam tilt and null fill, are available as extra cost options on center-fed antennas, but will change the gain figures given above and may reduce the power rating.

²End-feeding is done with a six ft. matching transformer section. Center-feeding of an odd number of bays is done at a point one-half bay below the center of the antenna. Six ft. matching transformer is connected to an elbow at the center-feed point and extends downward.

³Windload based on 50/33 psf. Brackets are included in weight and windload calculations.

⁴End-fed antenna lengths do not include transformer.

FM Antennas

G6 Series — Fringe Area FM Antennas

The G6 Series of antennas are designed for stations requiring fringe area coverage. This is achieved due to the internal feed design and element geometry of the G6 series.

These antennas offer an exceptional axial ratio, ± 3 dB or better, and free space horizontal plane circular patterns that are $> \pm 2$ dB in both horizontal and vertical polarizations.

Antenna Type	Power Gain	dB Gain	Type Feed	Power Input Capability (kW)	Calculated Weight (lbs)	Calculated Windload ¹ (lbs)

¹Windload calculated based on 50/33 psf, 112 mph actual wind velocity, no ice. Power input capability up to 2,000 ft. above mean sea level. Derating required above 2,000 ft. Note: All antenna systems have 50 ohm female inputs. Weight and windload calculations include brackets.

G4D Series — Dual Polarized Directional FM Antennas

The G4D antenna, designed to radiate power in a 180° pattern, is built primarily for FM stations located along coasts or in mountainous areas. It can also be used in areas where the licensing authority such as the FCC will allow the use of a directional antenna to meet special requirements.

The elements of the G4D antenna are pole mounted; it is also available without the pole. In that case, exact details of the customer-supplied pole will be required before fabrication begins.

The G4D consists of vertical and horizontal elements that are 3 1/8" in diameter and made of brass to resist the effects of weathering.

Type	Input Power Rating	Input ¹ Flange	Calculated Pole Length (ft)	Calculated Pole Weight (lbs)	Calculated Antenna ⁶ Weight (lbs)	Calculated Pole ² Wind Load (lbs)	Calculated Antenna ³ Wind Load (lbs)	Calculated Outer Diameter of Pole (inches)	Calculated Height ⁴ Electrical Center Above Pole Base (ft)
G4D-1A	12 kW	1-5/8"	25	1088	280	1363	418	8-5/8	22

G4D-8B	40 kW	3-1/8"	95	8896	1673	6633	3481	14 ⁵	53

- All 1-5/8" antennas are male input and all 3-1/8" antennas are female input.
- Based on 50 lbs with 1/2" radial ice on pole
- Based on 50/33 psf. (112 mph wind); the windload with radome is 248 lbs. per level based on 50/33 psf.
- At approximately 89.0 MHz.
- Eight-bay antennas require two ft. section of 16" pole at base of pole structure.
- Additional weight with radome per level is 57 lbs.

VARIAN CONTINENTAL TVT

FM Antennas

G4CPH Series — High Power Circularly Polarized FM Antennas

The G4CPH is a rugged, heavy-duty design capable of handling powers from 5kW (single bay) to 40kW (eight or more bays). The antenna may be purchased in any number of bays from 1 to 16. The antennas are end-fed in combinations from one to eight bays. In center-fed antenna arrays, the center-fed "T" input is located one half bay spacing below the center of the array if the array consists of an odd number of bays. Antennas of one to eight bays are end-fed with a six foot matching section connected to the bottom bay.

G4CPH-16	9.2846	9.6776	40	150	1465	2825	1785	4761

All antenna brackets are stainless steel. All weights given include brackets, interbay line, and transformer section. Factory-installed deicers are available using either 300 watts or 500 watts per bay. Specify 120 or 230 volts. Heater elements are replaceable in the field. Shielded interbay heater cable and junction boxes are supplied. Heater weight, including junction boxes and interbay cable, is six lbs. additional per bay. Windload based on 50/33 psf.

G4CPL Series — Circularly Polarized FM Antennas

The G4CPL series meets the requirements of virtually all Class A licensed stations. They are end-fed antennas which have a maximum input power of 7.5kW and power gains ranging from 0.46 for one bay up to 4.48 for the eight-bay model. A single bay of G4CPL does have an input power limitation of 3kW.

An integral part of the G4CPL design is a DC short which puts the antenna at ground potential for added protection against lightning damage to the transmitter and transmission line. Beam tilt and null fill are not available with the G4CPL series and no power splits other than 50/50 are offered with these antennas.

Type	Power Gain	dB Gain	Input Power Rating (kW)	Approx. Length (ft)	Calculated Weight (lbs)	Calculated Windload (lbs)	Calculated Weight (with Radomes and Brackets) (lbs)	Calculated Windload (with Radomes and Brackets) (lbs)

Broadcast Transmitters

XL-301 1kW Solid State AM Broadcast Transmitter

- Solid state modular design
- RFPWM (PWM at the carrier frequency)
- AM stereo compatible
- Operating from 10 to 1100W with excellent audio response
- Relative insensitivity to load fluctuations
- On-board fault protection
- Easy to maintain
- Dataflex computer control and monitoring (optional)

Specifications

RF Power Output:	1kW, nominal; 1.1kW maximum
Power Consumption:	2.6kW at 1kW, 100% modulation
RF Power Reduction:	Three power levels standard; lowest available level is 10W
RF Frequency Range:	535kHz to 1705kHz
PA Active Device:	MOSFET
Internal PA Protection:	Withstands short circuits at any point in output
Carrier Stability:	± 5Hz
Stereo Interface:	Standard
Output Impedance:	50 ohms unbalanced
VSWR:	1.2:1, maximum, full modulation; 1.5:1 maximum, full power at carrier
Output Connector:	L/C or protected terminal or type "N"
Carrier Shift:	2% maximum, (0.5% typical), at 100% modulation
Harmonics:	Meets CCIR and FCC regulations
Spurious Emissions:	Meets CCIR and FCC regulations
Audio Frequency Response:	± 1dB; 20Hz to 12kHz or better at 95% modulation, 1000Hz reference

315R-1 5kW Broadcast Transmitter

- High efficiency SwitchMod pulse modulation
- Overall efficiency exceeding 57% at 5000W, 95% sinewave modulation
- Harmonic distortion < 2.0% from 20 to 10,000Hz
- Low intermodulation distortion per standard 4:1 SMPTE
- Feedback taken from modulated DC, not from RF envelope, for reduced sensitivity to load conditions
- Bandpass "Q-Taper" output network for flatter response across the audio passband and improved adjacent signal rejection
- Lower peak voltages as a result of operation of the PA anode at DC ground
- Local and remote metering directly at ground reference
- No plate blocking capacitor or DC feed choke required
- Automatic modulation control keeps modulation sensitivity constant at all power levels and with a ± 10% line voltage variation, standard
- Built-in IPL
- + 125% modulation capability
- Built-in forward/reflected power meter
- Low power setting continuously adjustable over entire power range of the transmitter
- Use of triodes eliminates need for screen grid supply
- Overload recycle interrupts pulse train to remove high voltage in microseconds. After third overload, high voltage power supply is shut down
- Improved phase linearity in "Q-Taper" network for AM stereo

317C-3

Specifications

Transmitter:	69" H x 34 ³ / ₄ " W x 33 ³ / ₈ " D; 7.9 sq. ft.
Weight:	1050 lbs.
Tubes:	3CX3000F7 (2)
Air Flow Requirement:	500 CFM
Relative Humidity:	0 to 95%
Ambient Temperature Range:	To 0°C to +50°C (meets FCC requirements to -20°C)
Altitude:	7500' (2280m)

317C-3 50kW AM Broadcast Transmitter

- Superior audio frequency response
- Flat top response
- Extra power for high peaks
- High positive modulation
- Program peak limiter
- AM stereo compatibility
- Solid-state driver
- Long tube life
- High efficiency
- Magniphase® line protection system
- Easy to operate

Specifications

Carrier Power:	Rated 50kW; Capability 60kW; power reduction 25kW or 10kW A3
Emission:	± 5Hz
Frequency Stability:	± 0.5dB, 10Hz to 7500Hz; -1.5dB, 15,000Hz reference to 1000Hz; at 70% modulation
Audio Response:	± 0.5dB, 10Hz to 7500Hz; -1.5dB, 15,000Hz reference to 1000Hz; at 70% modulation
Phase Response:	± 2° from 10 to 1000Hz and phase linear to 30kHz with output lagging 45° at 15kHz
Audio Distortion:	< 2.5%, 20 to 10,000Hz at 95% modulation
Tilt and Overshoot	
Clipped Sinewave:	3% variation in modulation percentage using 6dB symmetrical clipping, 30 to 10,000Hz at 90% modulation
Squarewave:	5% variation in modulation percentage, squarewave frequencies from 30 to 7500Hz to 60% modulation
Noise Unweighted:	-60dB below 100% modulation
Spurious and Harmonic Emission:	-80dB
Output Impedance:	40 to 300 ohms as specified by customer

VARIAN CONTINENTAL TVT

FM Transmitters

814R-1 2.5kW FM Broadcast Transmitter

- Lowest intermodulation distortion • Highest stereo separation • Automatic power output control • Automatic overload recycling • VSWR protection • Superior frequency stability • Automatic filament voltage regulation • Overload indicator lights • Front panel pushbutton control • Superior PA stability • Proven PA design • Built-in remote control facilities • Front panel monitoring • Easy access • Compact size • Outstanding exciter

The 814R-1 is a high-performance, state-of-the-art transmitter that uses the 802A exciter to deliver a crisp, clean signal. The transmitter is solid-state except for the single 5CX1500A tube in the final amplifier. The 814R-1 uses IC logic for all control functions, and incorporates a computer-like memory to restart the transmitter after a power failure. A built-in battery supply and charger enables the logic circuits to remember their state in the event of a power interruption. The transmitter utilizes automatic filament voltage regulation and automatic power control for unattended operation. Standard features include remote control equipment and automatic overload/recycle system. Overload conditions are indicated by an LED display. The 814R-1 is completely contained in one 35" wide cabinet.

814C 3.8kW FM Broadcast Transmitter

- Broadband modular design • Transparent audio performance • No tuning • 100% solid-state • Single-phase power supply • VSWR protection circuit • 100% self-protected solid-state amplifier modules • Designed for low maintenance and long life • Built-in redundancy for reliable performance

The 814C is a compact, high performance transmitter that uses the 802A exciter to deliver a crisp, clean signal.

The transmitter design is based on a 700W broadband amplifier module and utilizes a splitter/combiner technique to achieve the rated output of 3800W.

The RF chain consists of an 802A 50W solid-state exciter driving a solid-state amplifier module which serves as the IPA. The IPA output is split to drive the PA amplifier modules. The outputs of the PA modules are combined and treated as the transmitter's final power amplifier stage.

All modules are self-protected from excessive power supply voltage, VSWR overload, excessive drive power and high temperature.

A single-phase power supply powers all of the power modules. The power supply is fed by a pair of gated SCRs to allow control of the supply output voltage.

All transmitter controls, interface circuits and metering are housed in a self-contained control module which slides out on tracks for easy access. The control module provides access for local or remote operation.

815A 5kW FM Broadcast Transmitter

- Single tube • SCR power control • Automatic power output control • Automatic VSWR protection • Automatic SWR output power fold-back • Remote control interface • Filament voltage regulator • True RMS filament voltage metering • AC power failure recycle • Two/four shot automatic overload recycle • Internal diagnostics • Solid-state IPA

Continental's 815A is a high performance, state-of-the-art transmitter that uses the 802A exciter to deliver a crisp, clean signal.

With an output power of 5000W, it has an adequate power reserve for Class A FM operation using a two-bay antenna system.

The RF chain consists of an 802A 50W exciter and the solid-state IPA driving a 4CX3500A tetrode tube in the final amplifier.

The harmonic filter is internally mounted, providing a 1^{5/8}" EIA flange for direct mounting to the transmission line.

IC logic is used for all control functions. A computer-like memory, powered by battery back-up, restarts the transmitter after a power failure.

814C
Includes the 802A Solid-State Exciter

816R-1A 10kW FM Broadcast Transmitter

- Compact size, simple installation • Solid-state, automatic filament voltage regulation • Meters and controls are set at or near average eye level for easy reading • Exclusive "soft start" circuit and low voltage controls • 23 different circuits or indicators are used to protect the transmitter • Control circuits are conventional low voltage design (28VDC) • Tuning and loading are handled with two motors: there are no chains, gears or couplings to slip or break • 27 LED indicators, 14 indicating fuseholders and 6 front panel circuit breakers help to quickly isolate any transmitter problem • Transmitter power may be adjusted to any level between 0 and 100% without retuning, using front panel controls • If momentary power outages or overloads occur, special circuits protect the transmitter and will automatically restore it to operational status

The 816R offers high fidelity, low power consumption, very little noise or distortion, good stereo separation and excellent frequency stability.

Two independent VSWR protection circuits automatically reduce transmitter power to a safe operating level whenever abnormal antenna mismatches occur. One circuit handles severe mismatches such as lightning strikes by interrupting the RF when reflected power reaches 10%. The other circuit holds reflected power to a preset level during severe icing conditions, allowing power to be maintained at the highest "safe" level.

Specifications Using 802A Solid-State Exciter

Rated Power Output:	814R-1: 2.5kW 814C: 3.8kW 815A: 5kW 816R-1A: 10kW
Power Consumption:	814R-1: 4.9kW 815A: 9.8kW nominal 816R-1A: 18kW nominal
Frequency Control:	Phase-locked loop frequency synthesis from high stability master oscillator
Frequency Stability:	± 250Hz, 0-55°C — 814C, 815A, 816R-1A, ± 275Hz — 814R-1
Output Impedance:	50 ohms
Output Connector:	1 ^{5/8} " EIA flange — 814C, 814R-1, 815A 3 ^{1/8} " EIA flange — 816R-1A
VSWR:	2:1, maximum
Modulation Type:	Direct carrier frequency modulation
Modulation Capability:	± 150kHz deviation
Modulation Indication:	Digital LED display shows true peak level of modulation signal in 5% increments with accuracy > ± 2%
Exciter:	Solid-state unit with variable output of 5 to 50W; self-contained harmonic filter
RF Harmonic Attenuation:	-80dB, minimum
Power Supply Rectifiers:	Silicon

VARIAN CONTINENTAL TVT

FM Transmitters

816R Series FM Broadcast Transmitters—816R-5B, 35kW Broadcast Transmitter

- SCR power control
- Automatic RF power output control
- Automatic SWR circuit protection
- SWR output power foldback
- Remote control interface
- True RMS filament power regulation/metering
- AC power failure recycle
- Two/four shot automatic overload recycle
- Grounded screen amplifier
- Internal diagnostics

The 816R-5B 35kW FM transmitter is a high performance, state-of-the-art transmitter that uses the 802A exciter to deliver a crisp, clean signal.

The transmitter is solid-state except for one 9019/YC130 tetrode power amplifier operating at Class C.

The 9019/YC130 tetrode was specially designed by EIMAC to meet stringent FM service requirements at 35kW.

The 816R-5B is the latest addition to the 816R series of 11, 21.5, 25 and 27.5kW transmitters, but employs a specially designed cavity for the 9019/YC130 tetrode.

The harmonic filter is internally mounted, providing a 3¹/₈" EIA flange for direct mounting to the transmission line.

816R 21.5, 25 and 27.5kW Broadcast Transmitters

The 21.5, 25, and 27.5kW FM transmitters offer high fidelity, low power consumption, low noise or distortion and excellent stereo separation.

816R Series

Common features:

Transmitter power may be adjusted to any level between 0 and 100% with minimal retuning, by using front panel controls.

If momentary power outages or overloads occur, special circuits protect the transmitter and will automatically restore it to operational status.

Two independent VSWR protection circuits automatically reduce transmitter power to a safe operating level whenever abnormal antenna mismatches occur. One circuit handles severe mismatches such as lightning strikes by interrupting the RF when reflected power reaches 10%. The other circuit holds reflected power to a preset level during icing conditions, allowing power to be maintained at the highest safe level.

An exclusive "soft-start" circuit and low voltage controls are easy on the total system and limit current surges through the power supply components; this helps to minimize parts replacement.

Twenty-three different circuits or indicators are used to protect the transmitter and the control circuits are of the conventional 28VDC design.

The meters and controls are strategically placed at or near eye level for easy reading and accurate adjustment. All components are easily accessible.

The wide, flat bandwidth is a result of the wideband quarter-wave cavity design which optimizes performance.

If a problem should occur, 27 LED indicators, 14 indicating fuseholders and six front panel circuit breakers assist in quickly isolating it.

The 816R-5B's control options offer operating flexibility. Its compact size and simple installation will get you air-ready with minimum time and cost.

The harmonic filter is contained within the transmitter cabinet.

FM Transmitters

817 Series FM Broadcast Transmitters

- 817R series 40, 50, and 55kW
- Broadcast transmitters
- Solid-state driver
- FM exciter
- Refined linearity
- Digital frequency selection
- 50W output broadband amplifier
- Automatic power level control
- Modular construction
- Optional automatic exciter control
- Optional automatic combiner control

The 40, 50 and 55kW FM transmitters offer high fidelity, low power consumption, very little noise or distortion, good stereo separation and excellent frequency stability.

The 817R-2B, 817R-1B and 817-4B models each consist of two transmitters whose inputs are combined in a 90° hybrid: two 21.5kW transmitters combine to achieve 40kW output; two 25kW transmitters combine to achieve 50kW output; and two 27.5kW transmitters combine to achieve 55kW output.

Transmitter power may be adjusted to any level between 0 and 100%, without retuning, using front panel controls.

If momentary power outages or overloads occur, special circuits protect the transmitter and will automatically restore it to operational status.

Two independent VSWR protection circuits automatically reduce transmitter power to a safe operating level whenever abnormal antenna mismatches occur. One circuit handles severe mismatches such as lightning strikes by interrupting the RF when reflected power reaches 10%. The other circuit holds reflected power to a preset level during severe icing conditions, allowing power to be maintained at the highest "safe" level.

An exclusive "soft start" circuit and low voltage controls are easy on the total system and limit current surges through the power supply components; this helps to minimize parts replacement.

Twenty-three different circuits or indicators are used to protect the transmitter and the control circuits are of the conventional 28VDC design.

The meters and controls are strategically placed at or near eye level for easy reading and accurate adjustment. All components are easily accessible.

The wide, flat bandwidth is a result of the wideband quarter-wave cavity design which optimizes performance.

If a problem should occur, 27 LED indicators, 14 indicating fuseholders and six front panel circuit breakers assist in quickly isolating it.

Options

The 377C-1A Automatic Exciter Control Unit provides monitoring and control for two 802A or similar exciters. If one exciter fails, the standby exciter is automatically put on line. Indicator lamps show which exciter is operating.

The 377D-1 Combiner Control provides automatic or manual control of two parallel FM transmitters and automatically assures maximum available power to the antenna at all times.

817A 60kW FM Broadcast Transmitter

- Simple installation
- Only one tube
- Completely self-contained including internal harmonic filter
- Solid-state driver
- SCR power control
- Filament voltage regulation
- Automatic SWR power control

817A
Includes the 802A Exciter

- Conventional remote control interface
- Internal diagnostics

The transmitter achieves its high levels of performance with low power consumption.

It has excellent stereo separation and frequency stability; operates with minimal noise and distortion; uses the 802A Exciter to deliver a crisp clean signal.

The transmitter is solid-state up to the power amplifier which uses one tube: a husky EIMAC 4CX40,000G Tetrode operating in Class C.

Operating over the frequency range from 88 to 108MHz, the 817A can be operated at power outputs from 30,000 to 60,000W.

The transmitter control system uses an 8-bit microprocessor for certain internal and external control and status reporting. Additionally, full hands-on local control of the transmitter is provided by front panel controls, meters and indicators, as well as the plasma operational display.

817 Series Specifications Using 802A

Solid-State Exciter

Rated Power Output:

817R-2B: 40kW
817R-1B: 50kW
817R-4B: 55kW
817A: 30, 40, 50, 60kW

Power Consumption:

817R-2B: 62kW nominal
817R-1B: 80kW nominal
817R-4B: 84kW nominal
817A: 53, 65.6, 80.8, 94.4kW nominal

Frequency Range:

88 to 108mHz, in 10kHz steps

Frequency Control:

Phase-locked loop frequency synthesis from high stability master oscillator

Frequency Stability:

± 250Hz

Output Impedance:

50 ohms

Output Connector:

6 1/8" EIA flange

VSWR:

2:1, maximum

Modulation Type:

Direct carrier frequency modulation

Modulation Capability:

± 150kHz deviation

Modulation Indication:

Digital LED display shows true peak level of modulated signal in 5% increments with accuracy > ± 2%

Exciter:

Solid-state unit with variable output of 5 to 50W; self-contained harmonic filter

RF Harmonic Attenuation:

-80dB, minimum

Power Supply Rectifiers:

Silicon

Refer to Green Section for Addresses and Telephone Numbers.

B-1 189

VARIAN CONTINENTAL TVT

Shortwave Broadcast Transmitter

420B—500,000W Shortwave Broadcast Transmitter

Designed for continuous operation, the 420B can be tuned to any frequency within its range of 3.9 to 26.1MHz in less than 30 seconds. Changes to adjacent frequencies can be accomplished in less than one second.

From its centralized master control panel, or from a remote computerized control and monitoring station, the 420B can be set up and either pretuned or automatically tuned to deliver 500,000W of carrier power on any frequency between 3.9 and 26.1MHz. The transmitter can also be manually tuned using controls located on the centralized control panel.

The transmitter uses advanced, but readily available, state-of-the-art components. Multi-phase cooled 4CM400,000 tetrode tubes are used in the power amplifier and modulator sections of the transmitter.

All critical components, including vacuum tubes and capacitors, tuning indicators and the solid-state broadband RF driver amplifier, are water or water-vapor cooled. The backswing diode is cooled and protected with insulation fluid. Other components are cooled by forced air.

The transmitter employs a very simple and reliable three-stage RF amplifier chain which uses only 9 tuning controls, including an optional, tuned balun, to develop 500,000W of carrier power.

The three-stage RF amplifier consists of a broadband solid-state amplifier, grounded-grid 3CW20,000A7 triode, and a 4CM400,000 tetrode final power amplifier.

The modulator is a series hard tube floating deck pulse-width modulator consisting of a single 4CM400,000 tetrode driven by a solid-state MOSFET driver.

Excellent noise immunity is obtained by feeding all low level signals to the floating deck and back to ground via fiberoptic cables.

Modern switching techniques, combined with a highly efficient tetrode tube, give the modulator an efficiency of better than 90%.

Overall transmitter efficiency can range from 65% to 72% depending upon the ambient temperature and operating frequency; typical efficiency is 70%.

The transmitter is relatively small and easy to operate and maintain. Operators can become proficient on the type 420B with a minimum of on-site training. Personnel who have operated the Type 420B consider it to be very "user-friendly."

Optional peripherals allow complete tuning and operation of the transmitter outside of an existing network or system.

Specifications

Carrier Output:	500,000W, min.
Modulation:	Pulse-width modulator
Emission:	A3E, J3E, R3E, on-off keying, A1A or A1B
Frequency Range:	3.9 to 26.1MHz
AF Input Impedance:	600/150 ohms, balanced or unbalanced
AF Input Level for 100% Sinewave Modulation:	-5dBm to +10dBm
AF Response:	± 1dB 50Hz to 7.5kHz
AF Distortion:	< 4% THD 50Hz to 7.5kHz at 95% modulation

Carrier Shift:	< 3% excluding line variations
Modulation Capability:	100% positive and negative peaks 50Hz to 7.5kHz sinewave for 10 minutes per hour; up to 80% modulation continuously
Residual Carrier Noise:	60dB unweighted below 100% modulation at 1kHz or better
RF Harmonic Output and Spurious Response:	Below 75dB
Output Impedance:	50 or 75 ohms unbalanced, 300 ohms balanced (optional)
Maximum VSWR:	1.7:1
Power Source:	4160VAC, 3 phase, 50/60Hz (other on special order)
Power Factor:	0.9 or better
Power Consumption:	Carrier, unmodulated: 770KVA, max. Carrier, modulated: 100% sinewave, 1150KVA, max.
Efficiency:	65% to 72% depending upon the ambient temperature and operating frequency; typical efficiency is 70%
Exciter:	Any suitable exciter with 0.5W output, 3.9 to 26.10MHz
Operating Environment Altitude:	Sea level up to 6000'
Ambient Temperature:	+32°F to +122°F (0°C to +50°C)
Relative Humidity:	Up to 95%
Size and Weight:	Transmitter's main cabinet group and power vault area require approximately 4,300 cubic feet including doorways and walk space, but not including outside heat exchanger. Shipping weight, packed for export, is approximately 47,300 lbs.

VARIAN CONTINENTAL TVT

UHF Transmitters

LDM 1740

Klystron UHF Transmitters: 10-60kW

- Systems from 10-60kW
- Available on all TV systems worldwide
- Low cost of ownership
- Beam modulation/pulsing on LDM 1741/1742 amplifiers
- External or internal drives/excitors
- Compact design with integral high voltage supply
- Simple and efficient cooling systems
- Remote or local operation
- Solid state up to Klystron tube
- Full (IEC215) international safety standards

LDM 1740

- 30kW vision output power
- Up to 18kW sound output power
- 10kW combined output power
- Combined or single carrier amplification
- Single Klystron tube
- Vapor cooled Klystron

LDM 1741/1742

- 10-30kW output power
- Dual Klystron
- Beam modulation
- Separate amplification of vision and sound carriers
- Vapor cooled Klystrons
- Versions with integral or external vision/sound combiner

LDM 1742 System

- 60kW parallel operation or 30kW main/standby

LDM 1741/1742

Television systems	CCIR G, H, I, K, K ¹ , M, N
Modulation	Vision: Negative Amplitude C3F (A5C). Colour: PAL, NTSC or SECAM. Sound: Frequency F3E (F3).
Frequency range	470-860MHz set at factory to specified channel.
Klystron tubes	Compatible klystron tubes: TEV: PT5050 ACE/PT 5080 ACE VALVO: YK1223/YK1233 EEV: K3270BCD/K3271BCD
Power supplies	380/220 or 415/240V ±1.0% 3 phase, 4 wire For operation on other voltages consult Varian TVT.
Supply frequency	47-63Hz.
Power factor	Better than 0.9.

LDM 1742 System

Type number	LDM 1740	LDM 1741	LDM 1742
Dimensions	Width: 102.4 inches (2600mm) Height: 76.0 inches (1930mm) Depth: 44.2 inches (1125mm)	Width: 153.5 inches (3900mm) Height: 76.0 inches (1930mm) Depth: 44.2 inches (1125mm)	Width: 153.5 inches (3900mm) Height: 76.0 inches (1930mm) Depth: 44.2 inches (1125mm)
Output power	Up to 30kW vision only. Up to 18kW sound only. Up to 10kW combined.	10-15kW peak sync.	20-25kW peak sync. (470-860MHz) 30kW peak sync. (470-700MHz)
Typical power consumption	Vision only. 15kW output: 50kW 30kW output: 70kW Combined. 5kW output: 43kW 10kW output: 65kW	10kW peak sync: 28kW 15kW peak sync: 48kW	20kW peak sync: 49kW 25kW peak sync: 60kW 30kW peak sync: 70kW
R.F. output Load impedance	50 ohms unbalanced. 3/8 or 5/8 inch sleeve connectors depending on channel or system used EIA connectors optionally available.		

VARIAN CONTINENTAL TVT

UHF Transmitters

LDM 1790

Klystron UHF Transmitters 30-240kW

- Systems from 30-240kW
- Available on all TV systems worldwide
- Low cost of ownership
- Beam modulation/pulsing on visual amplifiers
- External or internal drives/exciter
- Compact design with integral high voltage supply
- Simple and efficient cooling systems
- Remote or local operation
- Solid state up to Klystron tube
- Full (IEC215) international safety standards

LDM 1790

- 60kW visual output power
- Up to 24kW aural output power
- 30kW combined output power
- Combined or single carrier amplification
- Single Klystron tube
- Vapor cooled Klystron

LDM 1791/1790

- 120kW system. 3 Klystron

LDM 1791/1792

- 30-60kW output power
- Dual Klystron
- Beam modulation
- Separate amplification of visual and aural carriers
- Vapor cooled Klystrons

LDM 1791/1792

Television systems	CCIR G, H, I, K, K', M, N
Modulation	Vision: Negative Amplitude C3F (A5C). Colour: PAL, NTSC or SECAM. Sound: Frequency F3E (F3).
Frequency range	470-860MHz set at factory to specified channel.
Klystron tubes	Compatible klystron tubes: TEV: PT 5090 ACE Valvo: YK 1263/1265 EEV: K 3672 BCD
Power supplies	380/220 or 415/240V - for LDM 1792 operation. 460/266 or 480/277V - for LDM 1790/1791/1792 operation. ±1.0% 3 phase, 4 wire. For operation on other voltages consult Varian TVT.
Supply frequency	47-63Hz.
Power factor	Better than 0.9.

	LDM 1791/1790: Visual 120kW peak sync. Aural 12kW f.m.		
Typical power consumption	For single carrier: 117kW. For combined: 170kW.	For 60kW peak sync. and 6.0kW aural: 135kW.	For 30kW peak sync. and 3.0kW aural: 74.5kW. For 40kW peak sync. and 4.0kW aural: 100.0kW.
	LDM 1791/1790: For 120kW black and peak sync. visual and 12kW aural: 273kW.		
R.F. output Load impedance	50 ohms unbalanced. 6 1/8 inch EIA connectors.		50 ohms unbalanced. 5 1/8 inch Sleeve connectors. EIA connectors optionally available.

VIDEO ACCESSORY CORP.

Switches/Alarms/Distribution Amplifiers

VPS-1P Video Activated Power Switch

When this failsafe unit senses a signal, it provides AC power to any device plugged into it. It is useful in remote applications, inaccessible units, and many other applications. Available as a kit for installations in existing equipment or as a complete self contained unit.

VPS-1P Assembled and tested PC board \$ 108.00
 VPS-1PC With cabinet 170.00

VPS-1P

APS-1P Audio Activated Power Switch

When this failsafe unit senses a signal, it provides AC power to any device plugged into it. It is useful in remote applications, inaccessible units, and many other applications. Available as a kit for installations in existing equipment or as a complete self contained unit.

APS-1P Assembled and tested PC board \$ 108.00
 APS-1PC With cabinet 170.00

AA-1P

AA-1P Audio Alarm

This failsafe unit automatically monitors an audio signal. It will sound a clearly audible alarm upon any loss of audio for more than 12 seconds. Available as a kit for installations in existing equipment or as a complete self contained unit.

AA-1P Assembled and tested PC board \$ 108.00
 AA-1PC With cabinet 170.00

VA-1P Video Alarm

This failsafe unit automatically monitors a video signal. It will sound a clearly audible alarm upon any loss of video for more than one second. Available as a kit for installations in existing equipment or as a complete self contained unit.

VA-1P Assembled and tested PC board \$ 108.00
 VA-1PC With cabinet 170.00

VDA-1

VDA-1/VDA-2P Video Distribution Amplifiers

These distribution amplifiers provide a loopthrough input, 6 outputs, adjustable -3 to +3dB gain, and 20MHz bandwidth for reliably distributing video to a number of devices. The VDA-2PC is a 117VAC unit in a cabinet. Input and outputs are rear panel BNC connectors. Test points, power indicator and gain control are located on the front panel. The VDA-2P is the 117VAC unit without a cabinet. The VAD-1 is a 12VDC unit without a cabinet.

VDA-1 Assembled and tested PC board for 12VDC \$ 182.00
 VDA-2P Assembled and tested PC board for 117VAC 206.00
 VDA-2PC With cabinet 300.00

PDA-2P Pulse Distribution Amplifier

A 1 in 6 out pulse distribution amplifier with loopthrough input, and 75 ohm outputs adjustable from -3.5V to -4.5V. These output pulses are regenerated by the amplifier so that dirty input signals are actually cleaned up.

PDA-2P Assembled and tested PC board \$ 206.00
 PDA-2PC With cabinet 300.00

PDA-2P

ADA-2P Audio Stereo Distribution Amplifier

A 1 in 6 out audio distribution amplifier with loopthrough input, 600 ohm isolated balanced or unbalanced outputs, 20Hz to 20kHz bandwidth, and up to +15dB output.

ADA-2P Assembled and tested PC board \$ 206.00
 ADA-2PC With cabinet 300.00

ADA-2P

DA 10-2PC Distribution Amplifier Assembly

Four or five of any combination of our VDA-2P, PDA-2P or ADA-2P distribution amplifiers may be ordered in one full rack width cabinet.

DA 10-2PC With four distribution amplifiers \$ 1030.00
 DA 10-2PC With five distribution amplifiers 1288.00

NOTE: All VAC equipment is rackmountable for \$30.00 per 1 3/4" high rack width.

Refer to Green Section for Addresses and Telephone Numbers.

VIDEO ACCESSORY CORP.

Video Processing/Distribution

VL-1PC Video Line Isolator

The unique "opto-coupled" video line isolator improves the overall performance of your video system by providing 80dB of isolation between input and output grounds.

Common-mode ground loop problems caused by different AC power ground potentials are eliminated. Video input and output are rear panel insulated BNC connectors. A hazard lamp on the front panel indicates dangerous ground potential voltages. Balanced audio isolation with a rear panel barrier strip is optional.

- VL-1PC\$278.00
- VL-1APC With audio option\$345.00

VL-1PC

100-2PC

100 NTSC Color Sync Generator

The 100 Color Sync Generator provides subcarrier, sync, blanking, burst flag, horizontal drive, vertical drive, and black burst outputs. This NTSC unit insures that all genlockable cameras, monitors, VCRs, character generators, editing, and duplicating equipment are locked on exactly the same frequency. For increased capability a built-in VDA-2P distribution amplifier is optional (100DA). The VAC color sync generator is a 117VAC unit in a cabinet. Input and outputs are BNC connectors on the rear panel. A power indicator is located on the front panel.

- 100-2PC Sync generator with black burst\$706.00
- 100DA-2PC As above with 1 in 6 out VDA\$870.00

200-2PC

200-2PC rs-170A Color Sync Generator

The 200 rs-170A genlockable color sync generator provides black burst, sync, subcarrier, blanking, burst flag, horizontal drive, and vertical drive outputs. This NTSC unit insures that all video equipment is perfectly synchronized. Input and outputs are rear panel BNCs. Power and genlock indicators are located on the front panel. Frequency trim, subcarrier phase, and horizontal phase adjustments are accessible through the front panel.

- 200-2PC\$745.00

VDA-3PC

PG-3PC Color Bar/Blackburst Generator

The PG-3PC rs-170A, genlockable, color bar and black burst generator provides SMPTE color bar and black burst outputs. This NTSC unit is useful for both equipment setup and synchronization. Input and outputs are rear panel BNCs. Power and genlock indicators are located on the front panel. Frequency trim, subcarrier phase, and horizontal phase adjustments are accessible through the front panel.

- PG-3PC\$1095.00

PG-2PC Color Pattern Generator

The PG-2PC provides 5 test patterns: Full Field Color Bars, Split Field Color Bars, Full Field Blue Gun, Cross-Hatch, and Black Burst. Up to 64 customer specified alphanumeric characters can be switched on to any test pattern. It is genlockable and will run on 117VAC or 12VDC. It can also provide a 1000Hz audio test tone and a field 1 ID flag. Its subcarrier phase is adjustable. Options include: up to 11 additional customer specified test patterns, an additional customer specified alphanumeric screen, and an additional multi-burst or black burst output.

- PG-2PC\$1130.00

VDA-3PC Clamping Video Distribution Amplifier

The VDA-3PC provides a loopthrough input, six outputs, adjustable gain, wide bandwidth, and clamping for reliably distributing video to a number of devices. The clamping feature improves hum and noise rejection and black level retention. Input and outputs are rear panel BNCs. Test points, power indicator, and gain control are located on the front panel.

- VDA-3PC\$340.00

VS-2PC Video Squelch

The Video Squelch is an automatic two input, one output video switch. If the quality of the main input signal falls below the user predefined setting on the front panel dial, the output is switched from the main input to the alternate input, a power relay trips, and a defeatable audible alarm sounds.

- VS-2PC With mono audio follow video\$1030.00

Any or all of the following may be added to the VS-2PC:

- SA Stereo audio\$206.00
- AT Terminated audio103.00
- XLR XLR audio connectors (3 or 4-pin)\$2.00
- RC Remote control\$206.00

NOTE: All VAC equipment is rackmountable for \$30.00 per 1 3/4" high rack width.

VIDEOMEDIA, INC.

Editing Systems

Eagle

- Eagle I** 2 machine, 250 event, animation, printer output. Unit has built in sync generator with sync, 3.58 and two black burst outputs **\$8,250.00**
- Eagle II** All the features of the Eagle I plus full list management functions including: Insert Event, Delete Event, Move Event, Index, Ripple, Auto-Clean and Slide **\$9,500.00**
- Eagle III** A/B roll system includes all the features of the Eagle II plus a third TCP module, Z6006 multi-level transition switcher control, and Z6007 monitor switcher and GPSI unit. (Specify switcher to be used.) **\$16,500.00**
- Eagle 900** Special edition includes 250 events, A/B roll, Z6006 switcher driver, 3 TCP modules, printer port, basic slow motion control, and list management **\$13,750.00**
- Magnum** A/B roll, rackmount electronics, 250 event, 8" dual disk operating system, software assignable transports, CMX disk translator, expanded list management, printer output, 5 general purpose contact closures, animation, sync roll, diagnostics. Slow motion control is included, if transports specified are capable. Basic system includes serial switcher interface for all popular switchers and 3 transport control processors (serial or parallel, specify transports). System can handle up to six transports by adding additional TCP modules **\$23,500.00**

Eagle I, II and III Editors

Standard Features for all Eagle Editors:

- 250 event memory
- Auto-Edit
- Auto-Tag
- Multi-Split Edits
- Frame Accurate (Micro-Loc or SMPTE)
- Upgradeable
- Control up to 6 transports (optional)
- Printer output
- Status display generator
- On-line "Help" Functions
- Distributed Intelligence
- Animation
- Transitional data entry

Eagle System Specifications

System Configuration: Distributed intelligence using independent transport control processors. Electronics, rack-mount

Central Processor: Z80A 8-bit microprocessor
Transport Control Processor: Z80A 8-bit microprocessor
Software Programs: Contained in EPROMs (non-volatile) or optional disk operating system

Communication Format: RS232C/serial printer; parallel to Transport Control Processor

Edit List Output: Serial printer

Maximum Number of Devices Controllable: 5 source. 1 record

Edit Accuracy: Frame accurate, color framed with SMPTE or Micro-Loc; machine dependent with control track

Time Code Standards: SMPTE drop/non-drop frame, EBU

Television Standards: NTSC/PAL/SECAM/PAL-M

Keyboard: Remote, dedicated

Motion Control: Dual proportional shuttle arms

Chassis: 5 1/4" H x 19" W x 22 1/4" D

Weight: 32 lbs.

Keyboard: 4" H x 21" W x 11 7/8" D

Power: 110/220/240VAC; 48 to 62Hz

Disk Package: (optional) 3 1/2" H x 19" x 13 1/4" D

Weight: 25 lbs.

Eagle/Magnum Editing Options and Accessories

- Micro-Loc II** Intelligent Micro-Loc reader generator. Specify VTR type. **\$825.00**
- TCP-3** Complete set of hardware and software for serial interface of additional transports to the Magnum. (Specify type transports) **\$2,750.00**
- TCP-SM** SMPTE/EBU time code reader option for use with TCP-3 on parallel type VTRs **\$500.00**
- EA100** Single 5 1/4" disk file storage and retrieval system. Includes one 5 1/4" drive, rackmount chassis, disk controller card and software. (not for the 900) **\$1,995.00**
- EDOS-1** Dual 5 1/4" disk operating system. Includes 2 each 5 1/4" drives, rackmount chassis, disk controller board and operating software. System also includes Version 2.00 enhanced list management, assignable VTRs, slow motion control. (Eagle II or III only) . . . **\$5,000.00**
- ZDOS-1** Dual 8" disk operating system. Includes 2 each 8" drives, rackmount chassis, disk controller board and operating software. System also includes Version 2.00 enhanced list management, assignable VTRs, slow motion control and translator to CMX compatible disk. (Eagle II or III only) **\$7,500.00**
- Z6007** Contact closure and general purpose interface. Includes audio and video monitor switcher and software control of 5 separate contact closures for use with external devices. (This unit is standard with Eagle III and 900) **\$1,000.00**

Upgrade or Changeout Charges

- TCP Changeout (VTR Change)** Includes software and cable swap for one VTR. If second half of TCP-3 board is ordered active, add \$900.00. **\$1,000.00**
- EA-DOS to EDOS-1 upgrade** **1,000.00**
- Z6004 to ZDOS-1 upgrade** **1,250.00**
- Eagle 900 to any higher model** Plus price difference in models . . **1,000.00**

VIDEOMEDIA, INC.

Editing Controllers

Mickey

Controller

Mickey 1 and 2 Editing Controllers

- "Mouse" input control • Frame accurate (using SMPTE time code)
- 50 event internal memory • 2 VTR control • Built-in video mixer with 2 channel audio follow mixer • Multiple split edit capability • Automatic external trigger for additional effects devices • Printer output port (RS-232) • Interfaces to most popular VHS, U-Matic, 1/2" and 1" type "C" VTRs • Upgradeable to Mickey 2

Standard Features of Mickey 2

- Mickey 2 includes all of the features mentioned for Mickey 1 plus:
- 3 VTR A/B roll capability • Full auto-drive of internal audio/video mixer

All editing operations on Mickey are achieved by movement of an opto-mechanical "mouse" which will highlight various squares presented on a data display monitor.

The left-hand button of the two button "mouse" activates the function highlighted on the monitor. The right-hand button controls VTR motion (Play, Pause, Variable Speed, Jog, Shuttle, etc.)

Distributed Intelligence

Mickey uses distributed intelligence. That means each VTR has its own dedicated computer (VSIO unit) controlling it. Distributed intelligence is the only method by which consistent frame accuracy of a system can be maintained. Mickey provides protection against obsolescence since expandability is assured by the fact that distributed intelligence is used.

High Speed LAN

The VTRs require no modifications. Mickey's main computer communicates to all VSIO units in the system via a single BNC coax cable. A defective VTR or VSIO unit can be located, isolated and replaced or removed literally within seconds. This high speed Local Area Network (LAN) is a remarkable technological breakthrough.

Mickey's software is just as impeccably designed as its hardware. This mouse driven system is easily the fastest editor to use. Mickey can automatically find a match cut point, extend an edit and clean the edit list with one single stroke, procedures that take any other editing system countless keystrokes.

Specifications

- System Configuration:** Distributed intelligence using independent Transport Control Processors. (VSIO Units)
- Central Processor:** Z80A 8-bit microprocessor
- Transport Control Processor:** Z80A 8-bit microprocessor
- Software Programs:** Contained in EPROMS (non-volatile)
- Communication Format:** RS232C/serial printer; Co-ax LAN Loop to Transport Control Processors
- Edit List Output:** Serial printer

- Inputs:** Mouse, Audio (2 channel, 2 source, 1 record), REF (black burst or composite sync), CF (color frame ID pulse, required only for certain VTRs), Video (2 source, 1 record)
- Maximum Number of Devices Controllable:** 2 source, 1 record
- Edit Accuracy:** Frame accurate, color framed w/SMPTE or Micro-Loc; machine dependent w/control track
- Time Code Standards:** SMPTE drop/non-drop frame, EBU
- Television Standards:** NTSC/PAL/SECAM/PAL-M
- Input Control Device:** Opto-mechanical Mouse
- Motion Control:** Full proportional speed using Mouse
- Video Dissolve:** Selectable rate 5 to 120 frames
- Audio Mix:** 2 channel stereo, same rate as Video
- Outputs:** Printer-DB9, Audio (2 channel) monitor and program, Video (monitor and program), Display 1V p-p composite

Mickey 1 2 machine cuts only editor with GPSI interface for external devices. Includes 50 event memory, mouse control operating system, printer port, 2 channel video dissolve and 2 channel stereo audio follow video dissolve. 2 VSIO-M distributed intelligence interface modules for serial control VTRs are included. (Specify VTR) . . . **\$4,500.00**

Mickey 2 3 machine A/B roll editing system with all features of Mickey 1 plus sync roll and A/B roll software, plus one additional VSIO-M distributed intelligence interface for serial control VTRs. (Specify VTR) . . . **\$5,500.00**

VSIO-PS Option This option must be ordered (one per VTR) for control of parallel VTRs i.e. type 5 U-Matics, JVC CR series. This option includes a SMPTE time code reader. This option may also be used with serial VTRs i.e. JVC 850s, BVUs to provide time code without the necessity of the optional VTRs internal time code boards . . . **\$500.00**

PC-Link Option PC board and software for adding any IBM (PC, XT or AT) computer to the Mickey LAN system. This allows edit list storage and retrieval to floppy disk or hard disk and direct keyboard data entry for the Mickey editing systems. This option is mandatory for use with the Mickey LM list management system . . . **\$1,850.00**

LM Option List management and EDL data basing software package for Mickey editing systems equipped with the PC-Link option. . . . **\$950.00**

VIDEOMEDIA, INC.

Automation/Animation Systems

AUTOMATION SYSTEMS

- Q-STAR II/A** Computer based 900 event, random access and/or sequential automated playback system. Includes 4 VSIO and VTR interfaces. Additional VTRs may be added by ordering additional VSIO units. Up to 20 devices may be controlled. Multiple keyboards may be added. Switcher included with system is a 10 X 1 AFV dual audio channel unit. (Call factory for other switcher possibilities). System also includes real-time clock/date generator, keyboard, electronics, serial printer port and control cables **\$ 9,250.00**
- VMC-2000** Master control system includes IBM-AT compatible computer with EGA color card and color monitor, serial and parallel control ports, 20M hard disk, UPS battery backup, and high speed printer. Accepts logs from the VMC-3000. LAN software to control up to 20 Q-STARs and the VSIO master buffer. System includes 1 Q-STAR 4 machine channel. **29,000.00**
- VMC-2000-2** As above but complete setup for two channel operation. Includes 2 Q-STAR 4 machine channels **37,000.00**
- VMC-2000-4** As above but complete setup for four channel operation. Includes 4 Q-STAR 4 machine channels **49,000.00**
- VMC-2000-8** As above but complete setup for eight channel operation. Includes 8 Q-STAR 4 machine channels **78,000.00**
- VMC-3000** Multi-user station management and traffic control center. Features contract generator, billing software, cuts sheet generator, log generator, sales tracking and report generator, and word processor. Maintains all data for up to 20 channels of operation. LAN System allows for up to 32 additional IBM compatible user stations. Center includes IBM AT compatible computer, EGA color card, color monitor, 20M hard disk, LAN server card and 1 LAN slave card, high speed printer, and UPS battery backup power supply **28,500.00**
- Options**
- VMC-260A** FSK integrated operational software package. Stand-alone FSK encoding and verification station includes terminal, VTR interface, computer and software **\$3,000.00**
- FSK-1** FSK data decoder (requires VSIO-1) . . . **500.00**
- FSK-2** FSK CRT data display generator . . . **1,200.00**
- SM-4** SMPTE time code reader (requires VSIO-1) **500.00**
- MDM-1** Modem and communications software. (VMC-2000, VMC-3000) **1,695.00**
- VSIO-1** Intelligent transport control interface module **750.00**

Q-Star II/A

ANI-MATE

- VMC-101V** Tone encoder for Q-STAR II or VMC-2000 systems. (Not used if FSK or SMPTE are used) **\$900.00**
- LAN-1** Plug in slave card for placing any IBM compatible computer on VMC-3000 LAN network. **750.00**
- Control cable and connector for any U-matic or 1/2" VTR. For use with VSIO units or Q-STAR or VMC-2000 systems **75.00**

ANIMATION SYSTEMS

- VS-5** 3/4" U-matic frame accurate animation system. Can be used stand-alone or controlled from an external computer via RS-232 interface. System includes Sony VO-5850 VTR with modifications, MICRO-LOC reader-generator, special VSIO and operating software **\$10,000.00**
- ANI-MATE** Animation system for frame accurate edits on any Sony BVU, Betacam or BVH 2000 VTRs. Uses the 9-pin remote. VTR must be equipped with SMPTE time code reader **850.00**

VIDEOTEK, INC.**Production Switcher****Prodigy-Production Switcher**

A reliable video switching and effects system follows the multi-level effects with a Look Ahead Preview.

An integral stereo audio-follow-video system provides the critical link between your audio console and editing system and can even be used for master control applications. Three standard RS-422 serial ports link Prodigy to most popular editing controllers and other intelligent devices.

Eight Primary Video Inputs, Black and Color Background • Input 1 is the blackburst reference for genlock plus black • Inputs 2-9 are primary video inputs • Input 10 is the internal color background generator

Multi-level Effects System • Background transitions—cut, mix, wipe • Key transitions—cut, mix, wipe • Combined background and key transitions—provides the power of a two-mix/effect switcher

Look Ahead Preview • Displays the exact result of the next transition

Integrated Stereo Audio-Follow-Video System • Two bus system—preset and program cut or fade between audio sources • Editor control of audio transitions • Audio hold—inhibits AFV operation

Fade-To/Through-Black • Integrated with transition system

Blackburst System Timing Reference • System genlocks to blackburst reference signal on input 1

Blanking Processor • Provides high stability video output and masks minor timing errors between primary inputs

Variable Gain Keying System • Allows the keyer to be adjusted to match the rise time of the key source for high quality keying

Key Memory • Automatically remembers the Key Clip and Key Gain settings for each input in both Self Key and Auto External Key modes

Three External Key Inputs • Can integrate a "wide key" character generator, digital effects system and graphics camera

Auto External Key Follow • Automatically selects External Key when primary input for which it is programmed is selected • Selects Self Key for primary inputs which do not have an External Key programmed to follow

Extensive Wipe Pattern Selection and Modifiers • 24 wipe patterns standard • Hard, soft and hard or soft bordered wipe edges • Rate controlled joystick for positioning and pattern modification • Pattern Memory System—allows editing system to select a pattern with all modifiers through standard editor interface

Programmable Effects Transition System • 100 on-line events with battery backup • Recall pre-programmed effects at the touch of a button • Effects transitions smoothly change analog control settings between the values stored in two ET events • Instant Replay allows Prodigy to learn the operator's actions against a real time clock • Programmed sequences for repeatability without setting the effect up in real time

Serial Editor Interface for Video and Audio • RS-422 port interfaces with most available editing systems

General Purpose Interface (GPI) • Integrates Prodigy with other devices through contact closure interface • Prodigy may be controlled from inexpensive "cuts only" editing systems • Can access memory recall • Allows external device with GPI input to be triggered by Prodigy

Specifications**VIDEO**

Inputs:	8 loopthrough video (inputs 2-9) 1 loopthrough blackburst external reference (input 1) 3 external key; 1V p-p, composite or 0.7V p-p non-composite
Crosstalk:	> -54dB DC to 4.43MHz
Frequency Response:	± 0.10dB at 5.5MHz ± 0.10dB to -1.0dB at 20MHz Smooth roll off at 20MHz

**Prodigy**

Outputs:	Two program outputs Two look ahead preview outputs
Outputs Impedance:	75 ohms, ± 1% source terminated
Tilt:	< 0.5%
K Factor, 2T Pulse:	≤ 1.0%Kp
Differential Phase:	≤ 1.0° at 1V p-p, 10-90% APL
Differential Gain:	≤ 1.0% at 1V p-p, 10-90% APL
Chrominance/Luminance Inequalities:	Delay ≤ 10nS Gain ≤ 0.1dB
S/N Ratio:	> 65dB signal/RMS noise to 5MHz
Path Length Deviation:	(Between any two inputs) ≤ 1.5° (NTSC or PAL)
Mix/Effects Characteristics:	Luminance linearity: ≤ 1.0% gain; ≤ 10mV DC; Chrominance linearity: ≤ 1.0% Amplitude; ≤ 1.0° Phase
Connectors:	BNC connectors
AUDIO Inputs:	Two audio inputs (left and right) per video input (inputs 2-10) + 24dBm maximum 600 ohms balanced
Input Level:	+ 24dBm maximum
Input Impedance:	600 ohms balanced
Outputs:	Two audio outputs (left and right) on program out + 24dBm maximum
Output Level:	+ 24dBm maximum
Output Impedance:	Output source impedance 600 ohms balanced
Crosstalk:	≤ -70dB at 15kHz referenced to + 24dBm
Frequency Response:	30Hz to 15kHz ± 0.2dB (Referenced to 1kHz)
S/N Ratio:	> 70dB (Referenced to + 24dBm)
Harmonic Distortion:	≤ 0.15%, 30Hz to 15kHz (0dBm to + 20dBm out) ≤ 0.5%, 30Hz to 15kHz (+ 20dBm to + 24dBm out)
Common Mode Rejection:	≥ 60dB from 30Hz to 15kHz
Connectors:	Quick disconnect terminal strips
GENERAL RS-422 Serial Ports:	Three 9-pin D connectors are provided on the Electronics Frame for: Control Panel port, Editor port; External CPU port
Control Panel Cable:	10 meter (34.2') cable standard 9-pin D connectors wired straight through to pins 1, 2, 3, 7, 8
MECHANICAL Dimensions:	Control Panel—8.75" H x 19" W x 4.5" D Electronics Frame—5.25" H x 19" W x 17.5" D
Weight:	Control Panel—12.5 lbs. Electronics Frame—30 lbs.
Prodigy	\$9995.00
OPTIONS	
EX-P: Extender cards for servicing Electronics Frame circuit boards	\$200.00
CTC-1: Console for counter top installation of Prodigy. Solid oak construction	100.00

VIDEOTEK, INC.

Professional Rackmount Color Monitors

SYSTEM 8

8" Broadcast Rackmount AC/DC Color Monitor With Comb Filter and Glare Shield. Includes TSM-60 Waveform Monitor and PVS-6 Switcher

Features Include: Raster size regulation, de-gauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, medium resolution 350 lines, comb filter, internal/external sync, anti-glare shield, rackmount accessories, selectable ACC defeat, and Service manual

Options: Pulse Cross, Underscan
Dimensions: 8³/₄" H x 19" W x 18¹/₂" D
Weight: 40 lbs.

Power Consumption: 40W AC, 33W DC
Power Consumption/Entire System: 95W

System 8 with TSM-60 and PVS-6 Switcher \$3595.00

System 8 with VSM-60 and PVS-6 Switcher \$3595.00

System 8 with TVM-620 Combination Waveform Monitor/ Vectorscope \$5525.00

VM-8PRD

Dual 8" Professional Rackmount AC/DC Color Monitor

Features Include: Raster size regulation, de-gauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, selectable ACC defeat, rackmount accessories and service manual

Options: Pulse Cross, Underscan
Dimensions: 8¹/₄" H x 19" W x 15³/₄" D
Weight: 57 lbs.

Power Requirements: 120VAC, 60Hz, 12 or 24VDC

Power Consumption: 40W AC, 33W DC (ea. unit)

VM-8PRD \$2365.00

VM-8PRW

8" Professional Rackmount AC/DC Color Monitor with Space Provided for Videotek TSM-60 with Standard Case or VSM-60 with Standard Case, or TVM-620 with Standard Case

Features Include: Raster size regulation, de-gauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, rackmount accessories, selectable ACC defeat, and service manual

Options: Pulse Cross, Underscan
Dimensions: 8³/₄" H x 19" W x 15³/₄" D
Weight: 32 lbs.

Power Requirements: 120VAC, 60Hz 12 or 24VDC

Power Consumption: 40W AC, 33W DC

VM-8PRW \$1250.00

VM-8PRW-1 Same as VM-8PRW but with space provided for PVS-6 Switcher \$1260.00

VM-8PT

8" Professional Portable AC/DC Color Monitor

Features Include: Raster size regulation, de-gauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, selectable ACC defeat, and service manual

Options: Pulse Cross, Underscan
Dimensions: 9¹/₄" H x 8¹/₂" W x 16¹/₄" D
Weight: 25 lbs.

Power Requirements: 120VAC, 60Hz, 12 or 24VDC

Power Consumption: 40W AC, 33W DC

VM-8PT \$1265.00

VM-8PR

8" Professional Rackmount AC/DC Color Monitor

Features Include: Raster size regulation, de-gauss, keyed back porch clamping, A-B inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, selectable ACC defeat, rackmount accessories and service manual

Options: Pulse Cross, Underscan
Dimensions: 8³/₄" H x 19" W x 15³/₄" D
Weight: 30 lbs.

Power Requirements: 120VAC, 60Hz, 12 or 24VDC

Power Consumption: 40W AC, 33W DC

VM-8PR \$1195.00

VM-8PRA

8" Professional Rackmount AC/DC Color Monitor w/Speaker Cabinet

Features Include: Raster size regulation, de-gauss, keyed back porch clamping, A-B inputs, dual audio inputs, RGB gun switches, RGB background and drive controls, tally light, internal/external sync, rackmount accessories, selectable ACC defeat, and service manual

Options: Pulse Cross, Underscan
Dimensions: 8³/₄" H x 19" W x 15³/₄" D
Weight: 32 lbs.

Power Requirements: 120VAC, 60Hz, 12 or 24VDC

Power Consumption: 40W AC, 33W DC

VM-8PRA \$1450.00

Studio-13 Professional Rackmount Color Monitor

- 13" Trinitron® Plus color picture tube • 380 lines resolution • Selectable comb and notch filters • High voltage regulation • Separate H & V delay front panel adjustable • Split mode A-B display (front panel adjustable) • Automatic sync switchover to internal if external sync is lost, external sync indicator • Automatic degauss • Keyed back porch clamping • A-B-C looping video inputs • RGB video inputs • RGB gun switches • RGB background and drive controls • Tally light • Underscan • Presets — Chroma / Phase / Brightness / Contrast • ACC defeat (switchable) • Selectable time constant (H. AFC) • Monochrome select • Setup select • Aperture control • Rackmount slides • BNC connectors • Service manual • Dimensions: 10 1/2" H x 19" W x 19" D • Weight: 52 lbs. • Power requirements: 120VAC, 60Hz ± 10% • Power consumption: 85W (Avg.), 120W (Max.)

Studio-13 \$2495.00

Studio-13

VM-13PRO 13" Professional Rackmount Color Monitor

- Raster size regulation • 260 lines resolution • Automatic degauss • Keyed back porch clamping • A-B-C inputs • RGB gun switches • RGB background and drive controls • Tally light, internal-external sync • Pulse cross • Underscan • Presets • Selectable automatic chroma control (ACC) defeat for detection of chroma loss • Monochrome-color select • Set-up switch • Selectable horizontal time constant (H. AFC) • Aperture control • BNC connectors • Rackmount slides • Dimensions: 10 1/2" H x 19" W x 19" D • Weight: 48 lbs. • Power requirements: 120VAC, 60Hz ± 10% • Power consumption: 55W (Avg.), 80W (Max.)

VM-13PRO \$1695.00

VM-13PRO

AVM-19s (19") and AVM-13s (13") Color Monitors with Audio

- Slot mask in-line, 90° deflection CRT • Automatic degauss • Keyed back porch clamping • A-B-VTR inputs • Blue gun • Tally light • Internal-external sync selectable • Pulse cross • Underscan • External demodulator input • Internal audio speaker • 8-pin VTR cable (6") • Service manual (Switchable comb-notch filter) • Power isolation transformer • B & W color switch • Sharpness control; AVM-19s only

Connectors: Video, external sync — BNC; Audio — RCA; VTR — 8-pin; External demodulator — 6-pin DIN (Direct interface with Sony TU-1110 tuner)

Dimensions: 12 1/4" H x 14 1/2" W x 15" D (AVM-13s)
17 1/2" H x 19" W x 19" D (AVM-19s)

Weight: 32 lbs. (AVM-13s)
60 lbs. (AVM-19s)

AVM-19s \$825.00

AVM-13s 650.00

RB-013 Rackmount kit for AVM-13s 45.00

RB-019 Rackmount slides for AVM-19s 60.00

Test Equipment

**TSM-60/TSM-50 Waveform Monitors/
VSM-60 Vectorscope**

Common Features

- Mounts in 5 1/4" of vertical rackspace/1/2 standard rack
- Standard NTSC, 525 lines, 30 frame (60Hz field rate) scan
- Standard PAL, 625 lines, 25 frame (50Hz field rate) scan
- Standard PAL-M, 525 lines, 30 frame (60Hz field rate) scan
- Internal illuminated graticule; eliminates parallax errors
- High brightness CRT non-glare contrast filter
- NTSC/PAL/PAL-M standards available

TSM-60 Waveform Monitor

- 10MHz vertical frequency response
- Selectable A/B video looping BNC inputs
- Separately buffered video out 1V p-p into 75 ohms
- Selectable internal/external input sync
- Flat, IRE, chroma or differential gain filters
- Time base: 2 line, 1 line expanded 2 line, expanded 1 line, 2 field or expanded 2 field
- Selects lines 14 thru 21 of field selected
- YRGB/RGB: 9 pin access connector for monitoring color processing amplifier waveforms
- Selectable DC restoration

TSM-60 NTSC \$2065.00

TSM-50 Waveform Monitor

- Vertical frequency response: 6MHz
- Flat, IRE, or chroma filters
- Time base: 2 line, expanded 2 line, 2 field or expanded 2 field

TSM-50 NTSC \$1598.00

VSM-60 Vectorscope

- Selectable A/B video looping BNC inputs, subcarrier A select, external subcarrier looping BNC inputs, external PAL pulse looping BNC inputs (PAL only)
- REF NTSC: selectable A/B and external subcarrier looping inputs
- REF PAL: selectable A or B external subcarrier looping inputs
- Test NTSC: normal/alternate line/test circle pushbutton selectable
- Test PAL: normal/NTSC display/test circle pushbutton selectable

VSM-60 NTSC \$2065.00

TVM-620 Combination Waveform Monitor/Vectorscope

- Tactile membrane panels
- One, two or three video signals may be observed individually or in any combination of 3 inputs
- Four user-defined memories
- R-Y mode displays the demodulated chrominance with horizontal sweep
- Graticule scale to aid in measuring differential phase
- Display sync can be made relative to any of the 3 video inputs or an external reference
- Automatically selects reference, in order of priority External A-B-C
- Vector displays can be overlaid

TVM-620 NTSC \$3995.00

TSM-60

TSM-50

VSM-60

TVM-620

Options

- SSC-1** Single Standard Case \$ 39.00
- PTC-1** Portable Case with Handle and Sunshield . . 135.00
- DRC-1** Double Rackmount Case 200.00
- DAT-3** Half Rack Tray for DRC-1 to mount:
PVS-6, PVS-6A, or Self-Contained Series
Distribution Amplifiers 99.00
- BLK-1** Blank Panel 30.00
- ADC-1** AC/DC Power Supply for TVM-620.
(Must be factory installed during
manufacture.) 200.00
- OPT-A** Remote Change Over for TSM-60. 135.00

VIDEOTEK, INC.

**Test Equipment/Sync Generator
Timing Equipment**

DM-140S 140-Channel Stereo Tuner/Demodulator

- Varacter tuning/frequency synthesized channel selection
- Switchable BTSC (MTS) Stereo/SAP decoder output with LED pilot indicators
- dbx processing of stereo signals
- Built-in stereo amplifier with full range speakers
- Balanced and unbalanced stereo and monaural outputs (Rear panel phono and XLR connectors)
- Internal audio monitoring — 3" speaker
- Random access or up/down channel selection
- Front panel LED channel display
- Unlimited favored channel programming (skips unused channels)
- Tactile feel membrane front panel keyboard with LED feedback
- Front panel antenna/cable select
- Access to gain controls for video, monaural and stereo audio on front panel
- Short-term front panel memory maintained during power loss (1 hour)
- 75 ohm "F" connectors for antenna/cable inputs
- 3 1/2" high, rackmountable

DM-140S \$1995.00

APM-2RS Stereo Rackmount Audio Program Monitor

- Requires only 3 1/2" of vertical rack space
- Stereo inputs — balanced/unbalanced
- Instant verification of stereo phase
- 3-pin male XLR/RCA phono jack input connections
- Internal 3" x 5" speaker
- Two display sensitivity ranges
- Hi/Low input impedance select
- Stereo headphone jack with speaker defeat
- 105VAC—132VAC RMS, 48Hz-66Hz
- Low power consumption makes the APM-2RS ideal for mobile applications

APM-2RS \$493.00

APM-8RS

8 Input Rackmount Audio Program Monitor with 4 Stereo Inputs

- Requires only 3 1/2" of vertical rack space
- 8 inputs — balanced/unbalanced
- Barrier strip input/output connections
- Internal 3" x 5" speaker
- 10W amplifier
- 5m sensitivity ranges
- OdBm, 600 ohm line output
- Calibrated tone output
- Hi/Low input impedance select
- +12VDC battery operation
- Connector removable PC board for serviceability

APM-8RS \$895.00

VSG-201 Color Sync Generator

- RS-170A specifications
- Genlock
- Genlock input subcarrier loss/presence indication on front panel
- Genlock input sync loss/presence indication on front panel
- Six isolated blackburst outputs
- SMPTE color bars—dual outputs
- Color field 1 ID pulse output
- Front panel adjustments for H phase and SC phase
- Selectable vertical blanking width (lines 16-21 internal)
- +4dBm 1kHz tone output, balanced or unbalanced outputs into 600 ohms
- 1 3/4" high, rackmountable

VSG-201 \$1995.00

Times Six/Times Six Plus

Black Burst Generators

- 6 individual composite blackburst outputs
- 6 horizontal and subcarrier phase timing adjustments
- Stand alone or genlock operation. (Automatically switches to internal if external reference signal is lost)
- Genlock input loss/presence indication on front panel
- Compensates for up to 1000' of cable
- Automatically compensates for cable length and equipment drift (Times Six Plus)
- 1 3/4" high, rackmountable

Times Six (Manual) \$1795.00

Times Six Plus (Manual/Automatic) 2660.00

DM-140S

APM-8RS

VSG-201

Times Six

VDP-8000

VDP-8000 Frame Store/Synchronizer

- Synchronizes noisy feeds from satellite, microwave, ENG, remote broadcasts and other non-synchronous sources
- Proc amp controls with presets for video gain, pedestal, chroma gain and chroma phase
- Full proc amp controls in Freeze mode
- Freeze enable/disable allows constant processing of the input regardless of signal quality
- Two video outputs
- Selectable vertical blanking width
- Individual adjustments for H phase, SC phase and SC/H phase
- Horizontal and vertical picture position controls
- Selectable normal/bypass operation
- Remote connector
- Audio steering signal to control an audio synchronizer
- Can insert burst in monochrome signals
- Blackburst output for standalone operation
- Genlock
- 1 3/4", rackmountable

The VDP-8000 Frame Store/Synchronizer provides transparent signal processing in addition to stable, jitter-free lockup of high noise video signals. Unique independent Freeze Field capability permits the storage of two different fields or one field without interruption of live video synchronizing. Stored images remain clear and sharp through the use of a three line digital comb filter.

VDP-8000 \$4695.00

800 Series

MODULAR SERIES

800 Series Distribution Amplifiers

The 800 Series Distribution Amplifiers are engineered to meet critical video distribution needs in all types of applications. The 800 Series is based on the TR-800 eight bay modular tray and PS-800 power supply. Up to eight distribution amplifier modules may be mounted in the TR-800 tray, in addition to a second PS-800 power supply for backup in case of primary supply failure.

The VDA-816S is a standard video DA with one looping single ended input and six outputs. Up to 300' of Belden 8281 may be equalized via a front card equalizer adjustment.

The VDA-816 is a precision video clamping DA with one looping differential or single ended input and six outputs. An optional EQ-800 card may be added to the VDA-816 to allow front panel adjustment of equalization up to 1000' of Belden 8281.

TR-800 Modular DA Tray

- Eight bay modular two rackmount high tray
- Will accept any combination of VDA-816 precision DAs or VDA-816S standard DAs
- Also permits the use of a redundant back-up PS-800 supply
- Comes standard with a single PS-800 supply

TR-800 \$850.00

PS-800 Redundant Power Supply

- Provides unregulated ± 16VDC to the TR-800 rack tray
- An additional PS-800 can be installed as a back-up supply in case of primary supply failure

PS-800 \$199.00

EQ-800 Equalizing Module for VDA-816. Equalizes up to 1000' of Belden 8281 65.00

EX-800 Extender Card for Servicing DA Modules 90.00

VDA-816 Precision Video Clamping DA Module

- Front card output level adjustment
- Front card equalizer adjustment when optional EQ-800 equalizer card is employed
- Can equalize up to 1000' of Belden 8281
- Switchable clamping or DC restoration
- Modular plug-in card
- One looping differential or single ended input and six outputs

VDA-816 \$375.00

VDA-816S Standard Video DA Module

- Front card output level adjustment
- Front card equalizer adjustment can equalize 300' of Belden 8281 cable
- Modular plug-in card
- One looping single ended input and six outputs

VDA-816S \$250.00

SELF-CONTAINED SERIES

VDA-16 Video Distribution Amplifier

- One looping video input
- Six isolated video outputs
- Front panel output level adjustment
- Cable equalizer front panel adjustment (300' Belden 8281)
- Front panel input/output test points
- Front panel LED power indicator
- BNC input/output connectors
- Rackmountable

VDA-16 \$325.00

VDA-16

PDA-16

ADA-16

SDA-14

VDA-16WB Wide Band Video Distribution Amplifier

- 40MHz video bandwidth
- One looping video input
- Six isolated video outputs
- Front panel output level adjustments
- Wide band cable equalization from panel to adjustment
- Front panel LED power indicator
- BNC input/output connectors
- Rackmountable

VDA-16WB \$425.00

ADA-16 Audio Distribution Amplifier

- One balanced/unbalanced audio input
- Six balanced audio outputs
- Front panel output level adjustment
- Front panel input/output test points
- Front panel LED power indicator
- Barrier strip input/output connectors
- Rackmountable

ADA-16 \$325.00

PDA-16 Pulse Distribution Amplifier

- One looping pulse input
- Six pulse outputs
- Front panel input/output test points
- Front panel LED power indicator
- BNC input/output connectors
- Rackmountable

PDA-16 \$325.00

SDA-14 Subcarrier Distribution Amplifier

- One looping subcarrier input
- Four isolated subcarrier outputs
- Regeneration technique removes noise & distortion from input signal
- Available for NTSC, PAL, PAL-M
- Front panel 0°-360° output phase adjust w/0° preset
- Front panel input/output test points
- Front panel LED power indicator
- BNC input/output connectors
- Rackmountable

SDA-14 \$450.00

Options

For all self contained distribution amplifiers

DAT-1 Rackmount frame accommodates (3) DA's. . . . \$ 79.00

DAT-2 Blank panel 25.00

DAT-3 Half rack tray for DRC-1 to mount: PVS-6, PVS-6A or self-contained series distribution amplifier 99.00

DRC-1 Double rackmount case 200.00

PVS-6A 6X1

Audio Follow Video Passive Switcher

• 100% passive—no power requirements • Low insertion loss • Low video/audio crosstalk • Six video/audio (unbalanced) inputs • One video/audio (unbalanced) output • BNC video connectors • Barrier strip audio connection • 1³/₄" rackmount height • Can mount three units side by side using a Videotek DAT-1 rackmount tray

PVS-6A \$190.00

PVS-6A

PVS-6 6X1

Passive Video Switcher

• 100% passive—no power requirements • Low insertion loss • Low video crosstalk • Six video inputs/one video output • 1³/₄" rackmount height • Can mount three units side by side using a Videotek DAT-1 rackmount tray

PVS-6 \$140.00

10X1 Routing Switcher Series with RS-422 Interface

• Wide bandwidth for high resolution applications (1.0dB at 40MHz) • DC restored output amplifier • High speed clamping provides excellent hum rejection • Low return loss > 55dB at 5MHz • +24dBm audio headroom • 3 audio channels per input, balanced or unbalanced • Transformer coupled audio outputs, balanced or unbalanced • Two channel audio breakaway. Auxiliary channel can be programmed to follow video or audio breakaway • Microprocessor control with battery backup • Serial data bus for communication within the system and remote control • Data bus interconnection via RJ11C telephone connectors • System expandable horizontally to 40X1 and vertically to 30X10 • 1³/₄" rackmountable

RS-103A 10 x 1 vertical interval switcher with three audio channels and audio or video breakaway feature. RS-422 computer control interface \$1850.00

RS-103AL Same as RS-103A but without switches. May be controlled by computer or optional RSP-4 remote switching panel 1695.00

RS-103 10 x 1 vertical interval switcher, video only. RS-422 computer control interface 1325.00

RS-103L Same as RS-103 but without switches. May be controlled by computer or optional RSP-4 remote switching panel 1195.00

RS-103A

RSP-4 10 x 1 remote switching panel for RS-103A, RS-103AL, RS-103, RS-103L. RS-422 computer control interface \$789.00

RSP-5 10 x 1 expansion remote switching panel for RSP-4. Permits remote switching from two locations 299.00

ABP-3 Audio breakout panel for RS-103A, RS-103AL. Converts audio I/O 37 pin D connectors to latching terminal blocks. Includes three 18" 37 pin to 37 pin interconnect cables 320.00

RS-10A 10X1 Routing Switcher Series

Audio Follow Video with Breakaway Feature

• Ten video inputs, bridging two video outputs • Two audio inputs for each video channel • Video/audio latching breakaway control • Balanced/unbalanced audio inputs or outputs • Overnight channel memory • Vertical interval switching/momentary contact pushbuttons with changeable legends and "LED" audio/video indicators • 1³/₄" rackmount or free standing with rubber feet

RS-10A 10 x 1 vertical interval switcher with two audio channels and audio (or) video breakaway feature. \$1285.00

RS-10ARC Remote 10 x 1 vertical interval switcher with two audio channels and audio (or) video breakaway feature, includes RCT-1 remote connector kit 1885.00

RS-10ARC-L Local portion of RS-10ARC only, includes RCT-1 remote connector kit 1457.00

RS-10ARC-LS Same as RS-10ARC, but with switching capability at the local and remote locations, includes RCT-1 remote connector kit. 2100.00

RS-10ARC-L-SW Local portion of RS-10ARC-LS only includes RCT-1 remote connector kit 1528.00

RS-10A

Options (RS-10ARC, RS-10ARC-LS)

RSP-1 10 x 1 remote switching panel (may be added to RS-10ARC or RS-10ARC-LS to provide a second remote switching location) \$675.00

RCT-1 Remote connector kit 36.00

CR-1 Cable for remote. ft./99

RSCC-1 Contact closure interface. 250.00

VIDEOTEK, INC.

Routing Switchers

VIS-1201

12x1 Video Only Routing Switcher

- 12 video inputs, bridging/2 isolated video outputs • 24 hour channel memory • Vertical interval switching • Momentary contact illuminated pushbuttons with changeable legends
- 1 3/4" rackmount

VIS-1201 **\$395.00**

VIS-1201

RS-12 12x1 Routing Switcher Series

Video Only Routing Switcher

- Video inputs, bridging/two video outputs • Overnight channel memory • Vertical interval switching/momentary contact pushbuttons with changeable legends and "LED" video indicators • 1 3/4" rackmount or free standing with rubber feet

Remote Control Camera System

MicroSwift

MicroSwift Digital Remote Camera Control Systems

- Proven in use
- Flexible in action
- Allows for custom-designed arrangements
- Machine control interface
- Full back driveability-allows for manual control when necessary
- 2 alternative types of joysticks
- Expandable
- Remote controllable, via modems
- Controls have an exceptionally wide dynamic range
- Choice of controls
- Shot storage with a capacity of up to 1500 individual shots
- Stored parameters include pan, tilt, zoom, focus, pedestal height and CCU functions
- Shot linking
- Shot replay
- No movement on power-up
- User-defined movement limits
- Pedestal profiling
- Soft start and stops

MicroSwift is an advanced and flexible servo control system, designed for remote positioning and control of television cameras. It embodies the very latest techniques of control processing and communications to provide on-air quality movements, and to enable control of virtually any arrangement of cameras over any distance.

Note: All pricing is for use as a **guide only** as system pricing varies according to exact customer specifications.

A. Typical Single-Channel Remote Control System**1. Mark 3 Post Head for ENG Camera without Prompting System (Capacity 77 lbs.)**

Mark 3 Servo Pan and Tilt Head	\$19,100.00
Servo Control Module with Pan, Tilt, Zoom, Focus (supplied in slim-line wall mounting case)	10,025.00
Panel Electronics Module	9,180.00
Operator Panel with up to 99 preset shots per page (max. 15 pages). Fitted with keypad and shot displays	3,390.00
Replacement Lens Drive for customer supplied zoom and focus ENG servo modules	6,230.00
Single-Channel ENG System Package Price	\$45,925.00

2. Mark 2 Spring Balanced Head for Studio Camera with Prompter (Capacity 240 lbs.)

Mark 2 Servo Pan and Tilt Head	\$29,940.00
Servo Control Module (as above)	10,025.00
Panel Electronics Module	7,730.00
Operator Panel (as above)	3,390.00
Replacement Lens Drive	6,230.00
Single-Channel Studio System Package Price	\$56,965.00

3. Mark 2 Spring Balanced Head (as above) with Servo Pedestal

Mark 2 Servo Pan and Tilt Head	\$29,940.00
Servo Pedestal (Modified 3702 Fulmar)	43,450.00
Servo Control Module with Pan, Tilt, Zoom, Focus and Pedestal Height (Supplied in slim-line wall mounting case)	10,025.00
Panel Electronics Module	7,730.00
Operator Panel (as above)	3,390.00
Replacement Lens Drive	6,230.00
Single-Channel Studio System Package Price	\$100,215.00

B. Typical Double-Channel Remote Control Systems**1. Mark 3 Post Heads (see A. 1.)**

(2) Mark 3 Servo Pan and Tilt Heads	\$38,200.00
(2) Servo Control Modules	20,050.00
(1) Panel Electronics Module	7,730.00
(1) Operator Panel	4,075.00
(2) Replacement Lens Drive	12,460.00
Double-Channel ENG System Package Price	\$82,515.00

2. Mark 2 Spring Balanced Heads (see A. 2.)

(2) Mark 2 Servo Pan and Tilt Heads	\$59,880.00
(2) Servo Control Modules	20,050.00
(1) Panel Electronics Module	7,730.00
(1) Operator Panel	4,075.00
(2) Replacement Lens Drive	12,460.00
Double-Channel Studio System Package Price	\$104,195.00

3. Mark 2 Spring Balanced Heads with Servo Pedestals

(2) Mark 2 Servo Pan and Tilt Heads	\$59,880.00
(2) Servo Pedestals	89,900.00
(2) Servo Control Modules	20,050.00
(1) Panel Electronics Module	7,730.00
(1) Operator Panel	4,075.00
(2) Replacement Lens Drives	12,460.00
Double-Channel Studio System Package Price	\$191,095.00

WHEATSTONE CORP.*Audio Consoles***TV-500 MTS Master Control Console**

• Designed to address stereo routing requirements for television • Four stereo subgroup buses • Two separate stereo master buses • Mono bus for SAP as well as mono sum outputs • Four fully stereo auxiliary buses for fold back • Mix minus • Special effects • Each control with a pre/post fader switch and an on/off switch • Mono input modules include source selection between two mike inputs and a third line input • Stereo line inputs can select any one of four stereo sources, as well as full mode and balance control • Input modules include semi-parametric equalization, stereo solo/que functions, and insert point by-pass switch • Console comes with comprehensive control room and multiple studio communication and muting systems • Available with VCA subgroup functions as well as external VCA control ports for editor control • Mainframes are available in 16 through 56 input configurations

**A-20 On-Air Radio Console**

• Designed for smaller radio stations and News/Production Carousels • Available in a 10-input console with module construction • Available modules include mono/mike, stereo line, control room, studio and full function machine modules • Program and audition meters • Digital timer • Remote starts • External input controls

**SP-6 Stereo Production Console**

• Stereo line input channels feature full machine control and remote module status ports • Mike channels include tally and remote on/off ports, as well as full control of multiple studio and control room mutes, interrupts, tally and talkback functions • Automatic and manual timer modes • Clocks • Full function tape remotes • Each input channel employs a comprehensive equalizer circuit, four auxiliary send controls, as well as stereo send capability • Available in either 8 bus multi-track format for radio applications or 4 stereo sub-group format for television installations • Sonic performance • Sophisticated logic functions • Component quality

WHEELIT, INC.

Video Equipment Carts

**EFP-17
Folding All-Terrain Field
Production Cart**

The EFP-17 folding camera cart is the big brother to ENG-1. The EFP-17 is a larger, smoother folding vehicle designed to assemble all of the necessary portable video equipment required for field production. It features a separate shelf to support a monitor for playback or viewing as the action happens. The monitor platform is positioned forward to place the recorder controls at the fingertips of the operator. With optional elevator column and head, taping may be accomplished directly from the cart. Large 12" inflatable pneumatic wheels dampen vibration and allow basic dolly moves over general terrain. The EFP-17 folds to 15 1/2" and only the camera and monitor need be removed for storage. The equipment board is predrilled in 1" increments for quick adjustment.

Specifications

- Equipment Platform:** 17" x 29"
- Monitor Platform:** 41"H x 15" x 21"
- Camera Platform*:** 37"H x 6" x 17"
- Folded Size:** 42" x 28" x 15"
- Load Capacity:** 175 lbs.
- Wheel Base:** 16"
- Wheels (inflatable):** 12" pneumatic
- Casters:** 5" swivel with lock
- Straps:** 1 ea. 8', 2 ea. 5'
- Shipping:** Assm. 57 lbs. truck

*Note: Camera platform is predrilled for elevator column
EFP-17 \$400.00

Accessories:

Receptacle and Cord Reel, Elevator Column, Friction Head, or Fluid Head

**DG/H4/TM
The Challenger Friction Head**

Specifications

- Load Capacity:** 25 lbs.
- Minimum Height:** 34"
- Maximum Height:** 70"
- Elevation Adjustment:** 16"
- Geared Center Post:** 1 3/8" dia.
- Leg Diameters:** 1 1/8" - 1 1/4"
- Head Tilt Angles:** 60° up, 90° down
- Spring Loaded Head:** 2 springs
- Head Pan Rotation:** 360°
- Weight:** 8 lbs.

Material & Finish: Clear and Black anodized aluminum

Self-Locking Gear Mechanism

DG/H4/TM \$170.00

DG/TM/FM-15 Fluid Head

Specifications

- Camera platform 4" x 4 1/4"
- Accommodates cameras up to 25 lbs.
- Dual handle capability
- Positive tilt lock and pan lock
- Leakproof and dustproof sealing
- Easily visible bubble level gauge

**EFP-17
with Column and Head**

- Extremely smooth pan and tilt movements
- Weight: 5 lbs.
- Height: 5"
- Fits ball on flat top tripod
- Low profile design
- Rugged construction
- Reliable operation
- Compatible with European standards
- Unique quick release camera mounting screw with slot to allow camera balancing
- Tilt: +90°

DG/TM/FM-15 (Includes Head and Elevator Assig) \$400.00

**IFP-20
(Non-Folding) Industrial Field
Production Cart**

The IFP-20 is a heavy-duty industrial, non-folding camera cart designed to assemble all of the necessary video equipment required for quality industrial video production. This vehicle will accommodate camera, videocassette recorder with electric editing, monitor, camera control unit, AC adaptors, batteries and/or battery packs. Taping can be accomplished directly from the vehicle with the addition of an optional elevator column and head. The large inflatable pneumatic tires offer smooth transportation over rough terrain.

Video Equipment Carts

ENG-1
With Column

GR-3

CAM-10

ENG-1 Mobile Camera Cart

The ENG-1 mobile camera cart was developed for the video industry as the ideal vehicle for transporting and employing portable video recording equipment. The unit accommodates most VTR and camera CCU's as well as their AC adaptors and battery packs. Addition of the optional elevator column and friction or cam link head converts the ENG-1 into one of the most versatile production tools available. ENG-1 folds to a slim 12" for transportation and storage. The equipment board is pre-drilled in 1" increments for rapid adjustment.

Specifications

- Equipment Platform:** 14" x 29"
- Camera Platform:** 6" x 14" x 35" H
- Wheel Base:** 16"
- Wheels:** 12"
- Casters:** 4" swivel
- Load Capacity:** 150 lbs.
- Straps:** 2 ea. 4'
- Folded Size:** 23" x 42" x 12"
- Shipping:** Assm. 45 lbs. UPS

*Note: Camera platform is pre-drilled for optional column.

ENG-1 \$280.00

Accessories

Receptacle and Cord Reel, Elevator Column, Friction Head, or Cam Head

GR-3 Video Cart

The GR-3 is the smaller offspring of the ENG-1. This folding cart is designed to store, transport, and operate your portable 1/2" VCR equipment. This lightweight, affordable cart is ruggedly built with 8" semi-pneumatic wheels and 4" front swivel casters. The GR-3 is standard with spring head and telescoping column which will accommodate cameras up to 7 lbs. With the GR-3, there is no need to carry or set-up equipment on location; it's all there on your cart when you are ready to shoot. The cart can be folded with your equipment in place.

Specifications

- Equipment Platform:** 13" x 33"
- Wheel Base:** 16"
- Wheels:** 8"
- Casters:** 4" swivel
- Load Capacity:** 100 lbs.
- Straps:** 3 ea. 5'
- Folded Size:** 21" x 41" x 10"

- Shipping:** Assm. 39 lbs. UPS

GR-3 \$370.00

Accessories

Receptacle and Cord Reel

CAM-10 Videocassette Cart

CAM-10 is designed to accept all 1/2" and 1/4" portable VCR equipment as well as their AC adaptors and battery packs. The upper shelf of the CAM-10 is parallel to the ground and is large enough to accept a full size monitor or a small VCR and monitor combination. The lower shelf can be placed in a horizontal position or can be firmly locked into a slanted position to hold a recorder and/or battery pack. The CAM-10 comes complete with elevator column and anti-dumping spring head and will handle TV cameras up to 15 lbs.

Specifications

- Top Platform:** 16" x 24" x 36" H
- Bottom Platform:** 15" x 18" x 6" H
- Wheel Base:** 16"
- Wheels:** 10"
- Casters:** 4"

Telescoping Masts

Non-locking collars or locking collars with spring loaded bolt latches can be specified for rotatable or non-rotatable Masts. Locking collars latch automatically when the sections are extended and are recommended for all field installations.

Modular design means that Masts can be constructed in different heights by shortening or substituting Mast sections. TMD will work with you to design and manufacture the best Mast for your mobile unit or ground installation.

Remote Rotation

An electric driven Mast rotator is also offered as an option. The unit, mounted at the Mast base, provides ± 180° azimuth control from a remote desk-mounted control box. Used with a pan and tilt unit the rotator is an excellent tool for signal relay. 115VAC is required.

Specifications

	Model 7-42	Model 6-27	Model 7-30
Height Extended	42'	27'	30'
Top Load (Max.)	150 lbs.	40 lbs.	150 lbs.

TMD-7-42-367	(Heavy top load) closed vehicle – internal non-rotatable	\$6500.00
TMD-7-42-357	(Heavy top load) closed vehicle – internal rotatable	6500.00
TMD-6-27-157	(Light top load) closed vehicle – internal rotatable	3200.00
TMD-6-27-167	(Light top load) closed vehicle – internal non-rotatable	3200.00
TMD-7-30-357/367	Closed vehicle – internal rotatable 150# top load.	4200.00
Mast Rotator Options	Electric Driven, 115VAC	650.00

Pneumatic Systems – Complete Systems

TMD-C-271	Pneumatic system assembly 12VDC 12 gal. compressor, receiver, regulator controls	\$1200.00
TMD-B-267	Pneumatic system assembly 115VAC 12 gal. compressor, receiver, regulator controls	1200.00

Slight variation in nested and extended heights are due to rotator and locking collar options.

Telescoping Masts

Portable, temporary communication is almost instantaneous with TMD Telescoping Masts wherever you want to take them. The Mast is completely self-contained with a pneumatic system which lifts the Mast and communications assembly from a ground installation or from any mobile unit.

The precision-engineered Masts are constructed of overlapping tubes of extruded aircraft type aluminum. Full length keyways provide azimuth integrity and the Mast can be rotated through 360° in most applications. Masts have been built to reach up to 150' (54m) for trailer or field installation.

SYSTEM/85 MODULAR VIDEO CONSOLES

A generation of modular video furniture for use with Sony's front loading video machines, new 3/4" editing systems and other studio equipment.

These standard 19" EIA modular units are constructed of strong, welded and bolted heavy-gauge steel. All units assemble quickly and easily in any configuration to suit your individual needs. The basic module is expandable to any size system with add-on units. Textured baked on enamel finish in Beige and Gray.

A complete line of console accessories are available to complement the System/85 console — with rackmounting kits for both series of VTRs, panel kits for editors, heavy-duty swivel casters for mobility, multiple outlet electrical assemblies, an oversize shelf for large controllers, and blank panels.

A. Model HB502. For use with Sony's "Type 5" VTRs and RM-440 Controllers. Overall dimensions 41" H x 61" W x 42 1/2" D. System includes:

1 ea. G8502	Basic console — 19"	\$515.00
2 ea. G8500	Add-on console — 19" (\$319.00 ea.)	638.00

20" Full-Suspension Shelf. Wt. 12 lbs.

Model 85083 **\$179.00**

Optional 2 1/2" Casters. Set of 4. Wt. 3 lbs.

Model 85782 **\$28.00**

STATIONARY & MOVABLE DUBBING RACKS FOR 1/2" & 3/4" FORMATS

A Model D4500. Stationary type with five walnut woodgrain pull-out VTR shelves. Shelves are mounted on ball-bearing rollers for easy pull-out. Overall dimensions: 72"H x 20"D x 32"W. Includes:
 1 ea. D4501 Basic rack \$302.00
 1 pr. 45121 Side panels 85.00
 5 ea. 45580 Pull-out shelves (\$98.00 ea.) 490.00
Model D4500 complete. Shpg. wt. 194 lbs. Total \$877.00

Model 4500 (Not shown). Caster base for models D4500 and D4502. Overall dimensions: 4"H x 28"D x 32"W.
 Wt. 32 lbs. \$208.00

B Model D9300. Mobile duplication console with all steel pullout shelves. Overall dimensions: 71"H x 26"D x 30"W. System includes:
 1 ea. C9302 Extended basic frame—30" \$406.00
 4 ea. C9310 Pull-out drawers—30" (\$193.00 ea.) 772.00
 1 ea. 93580 Monitor shelf—30" 95.00
 2 ea. 93786 Heavy-duty 4" caster (\$6.50 ea.) 13.00
 2 ea. 93787 Heavy-duty locking caster (\$7.50 ea.) 15.00
Model D9300 complete. Shpg. wt. 337 lbs. Total \$1301.00

A Model D4500
\$877.00

B Model D9300
\$1301.00

C Model D8911. Single bay duplicating rack with seven shelves. Overall dimensions: 78"H x 26"D x 23 1/8"W. System includes:
 1 ea. D8900 Basic rack \$316.00
 1 pr. 89120 Side panels 119.00
 7 ea. 85088 Stationary shelf (\$35.00 ea.) 245.00
Model D8911 complete. Shpg. wt. 180 lbs. Total \$680.00

D Model D8913. Compact dubbing console with 14 inches of rack mount capacity. Overall dimensions: 78"H x 26"D x 46 1/4"W. System includes:
 2 ea. D8900 Basic racks (\$316.00 ea.) \$ 638.00
 1 pr. 89120 Side panels 119.00
 12 ea. 85091 13" Pull-out shelves (\$119.00) 1428.00
 2 ea. 89061 Anti-tip base (\$63.00 ea.) 126.00
 1 pr. 89243 14" Rack rail 18.00
Model D8913 complete. Shpg. wt. 347 lbs. Total \$2326.00

Model 85300 (Not shown). Rear door for Model D8900.
 Wt. 25 lbs. \$142.00

ADD-A-RACK

Basic rack frames can be bolted together without side panels to form an economical "in line" duplicating center. Side panels are installed at each end. Shelves can be installed at 1" increments to fit exact equipment needs.

Model D4501. Basic rack without side panels.
 Wt. 89 lbs. \$302.00

Model 45121. Side panels (Pr.)
 Wt. 55 lbs. \$85.00

Model 45580. Pull-out shelves.
 Wt. 18 lbs. \$98.00

C Model D8911
\$680.00

D Model D8913
\$2326.00

ADD-A-RACK

Basic rack frames can be bolted together without side panels to form an economical "in line" duplicating center. Side panels and shelves may be added to complete your duplicating center.

Model D8900. Basic rack without sides or shelves.
 Wt. 62 lbs. \$316.00

Model 85088. Stationary shelf.
 Wt. 10 lbs. \$35.00

Model 89120. Side panels (Pair)
 Wt. 49 lbs. \$119.00

Model 85091. 13" Pull-out shelf.
 Wt. 12 lbs. \$119.00

THE WINSTED CORP.

Movable Storage Systems

MOVABLE STORAGE SYSTEMS

In a variety of designs and 5" to 36" depths to serve your special storage needs.

Winsted Shelf Storage System. Offer organization and storage for most any tape or film storage system. Choose from stock or custom shelving at affordable prices. All designs are completely flexible—can be adapted to a variety of configurations and setups to serve your special storage needs. What's more, Winsted shelving grows as your needs grow. Both stock and custom installations can be expanded, or relocated as your needs change.

A "Super Density" Movable Cabinets. Offered in a range of cabinet depths for maximum storage in a limited space. Front row cabinets move side to side on floor tracks for easy access to rear storage. Ideal for "VHS," "BETA," U-matic and broadcast tape storage.

B Space-Saving Pull-Out Cabinets. Ideal for "high access" tape storage. May be installed in room alcoves or set-backs. Save floor space, too, by eliminating unnecessary aisles. Gives you 100% storage space efficiency. Units bolt together for any length system. Cabinets pull-out effortlessly on a low-profile track.

C High Capacity Tape Storage System. Affords compact storage in a limited space. Offered in a full range of cabinet depths to meet every storage need. Cabinets move laterally on low-profile rails for easy access to all records instantly, effortlessly.

OPEN SHELF TAPE CABINETS

For the organization & storage of all tape formats

A Model T7400. Ideal videotape storage system for 3/4" U-Matic videocassettes. Eight inch deep cabinet holds 161 videocassettes. Order molded plastic dividers for videocassettes separately (Model 70983—see Optional Accessories). Seven shelves. Overall: 88"H x 8"D x 36"W. (Inside dimensions: 34 1/2"W x 83"H).
Wt. 120 lbs. **\$439.00**

Add-on Unit. Model T7403. For side-to-side installation.
Wt. 105 lbs. **\$409.00**

Model 74080. Extra Shelf.
Wt. 4 lbs. **\$26.00**

B Model T7700. Video tape storage system holds 102 1" video tapes. Deeper 12" cabinet depth takes 1" broadcast tapes, 7"-10 1/2" quad tapes and 3/4" U-Matic videocassettes. Order molded plastic dividers for videocassettes separately. Six shelves overall: 88"H x 12"D x 36"W. (Inside dimensions: 34 1/2"W x 83"H).
Wt. 125 lbs. **\$464.00**

Add-On Unit. Model T7703. For side-to-side installation.
Wt. 110 lbs. **\$426.00**

Model 77080. Extra Shelf
Wt. 5 lbs. **\$29.00**

C Model T7600. "Super Pak" videocassette tape storage system. Holds 207 3/4" videocassettes. For maximum capacity tapes are stored and labeled on end. Nine shelves. Overall: 88"H x 10"D x 36"W. (Inside dimensions: 34 1/2"W x 83"H).
Wt. 139 lbs. **\$459.00**

Add-on Unit. Model T7603. For side-to-side installation.
Wt. 118 lbs. **\$421.00**

D Model T7800. Quad Tape Storage System. A 16" deep cabinet that is perfect for 2" quad and holds 55 tapes. Five shelves. Overall: 88"H x 16"D x 36"W. (Inside dimensions: 34 1/2"W x 83"H).
Wt. 165 lbs. **\$519.00**

Add-On Unit. Model T7803. For side-to-side installation.
Wt. 150 lbs. **\$479.00**

Model 78080. Extra Shelf.
Wt. 6 lbs. **\$31.00**

E Model 70300. Locking cabinet doors provide security for valuable master tapes. Doors fit all of the Winsted "T" series tape cabinets (except T7200 and T7500 models) and can be added to any existing "T" unit. Full length door hinge and two-point locking system. NOTE: Install cabinet doors only on cabinets that are securely fastened to a wall. Dimensions: 84 1/2"H x 1 1/4"D x 34 1/2"W. Beige baked enamel finish.
Wt. 61 lbs. **\$235.00**

F Model T7104. Beta or VHS Storage. Holds 270 Beta tapes or 240 VHS. Ideal for 1/2" videocassette storage. Order molded plastic dividers for videocassettes separately (Model 70986). Overall: 88"H x 4 1/2"D x 36"W. (Inside dimensions: 34 1/2"W x 83"H).
Wt. 137 lbs. (BETA) **\$419.00**

Model T7100. (Not shown.)
Wt. 135 lbs. (VHS) **\$398.00**

Add-On Unit. Model T7107. For side-to-side installation.
Wt. 127 lbs. (BETA) **\$399.00**

Add-On Unit. Model T7103. For side-to-side installation.
Wt. 120 lbs. (VHS) **\$378.00**

A Model T7400
\$439.00

OPTIONAL ACCESSORIES

1 Model 70983. Molded plastic divider insert (3/4" tapes) for use in T7400, T7600, or T7700.

#70983 Individual Dividers.
Wt. 3 lbs. **\$14.00**

2 Model 70986. Plastic cassette holder (1/2" tapes) for use in T7100 or T7104 cabinets.

#70986 Individual Dividers.
Wt. 2 lbs. **\$13.00**

1 Model 70983
\$14.00 in qty

2 Model 70986
\$13.00 in qty

B Model T7700

MOBILE VIDEO CENTERS

Mobile carts and consoles to organize and store your video equipment

Four new economy A/V carts with the same built-in quality you've learned to expect from all Winsted products. Choose from 34" or 54" heights. Shelves are 28 5/8" W x 18 5/8" D to fit most any electronics. Sturdy, strong, formed and welded steel construction for years of service. Four-inch swivel casters (two locking) for mobility. Textured baked on enamel gray finish with chrome post accents.

A 34" High Video Stand. Features three shelves to fit all of your electronics. Twelve inch clearance between shelves leaves plenty of room for equipment access. Measures 34"H x 22"D x 32"W. Shpg. wt. 43 lbs.

Model R3303 \$147.00

Two Shelf Video Stand. (Not shown.) Top shelf accommodates up to a 25" monitor. Shelf measures 28 5/8" W x 18 5/8" D. Stand is 34"H x 22"D x 32"W. Shpg. wt. 34 lbs.

Model R3302 \$125.00

B Portable Video Stand. Ideal for setup anywhere. Three shelves makes a space for your monitor, VCR and accessories. Measures 54"H x 22"D x 32"W. Shpg. wt. 47 lbs.

Model R3353 \$155.00

54" Video Stand. (Not shown.) Gives you four shelves to hold all of your A/V equipment. Measures 54"H x 22"D x 32"W. Shpg. wt. 54 lbs.

Model R3354 \$177.00

Beautifully styled, decorator consoles in a selection of attractive finishes. Ball bearing casters for total mobility on any surface. Fine furniture for your conference room, office, studio, show-room...and point of purchase displays.

C Low-Profile Video Center. Designed for smaller groups and individual use. Monitor shelf is set back slightly to permit easy access to VTR shelf. Top shelf is 15"D x 32"W. Cabinet is 34"H x 22"D x 32"W. Wt. 68 lbs.

Model R3400 \$327.00

Full Shelf Low-Profile Video Center. (Not shown.) Same as R3400. Top shelf is a full 22"D x 32"W. Lockable base cabinet is 17 1/2"H x 22"D x 32"W. Overall dimensions: 34"H x 22"D x 32"W. Wt. 72 lbs.

Model R3401 \$327.00

D Compact Portable Video Center. Provides complete mobility, ease of operation, and key-lock security. Top section takes most 19" (some 21") monitors and VTR units. Locking swing-away doors. Ventilated locking rear panel for full access to video equipment. Bottom section provides safe storage for your expensive video accessories. 60"H x 22"D x 32"W. Wt. 195 lbs.

Model R3601 \$749.00

Executive Conference Room Consoles

E Hand Rubbed Oak VCR Cabinet. For the VCR center where only the nicest furniture will do. An elegant VCR cabinet sculpted of oak solids with matching oak wood veneers. The look is expensive. The rolled edge design comfortable and clean. Satin smooth hand rubbed finish with uncommon attention to detail.

Offer a pull-out VCR shelf, an adjustable shelf in the lower storage area (30"W x 23 3/4"D) and a spacious compartment (30"W x 23 3/4"D x 25"H) for your TV monitor. Locking doors swing out of the way a full 270°. Cut-outs in rear for cableing. Rolls where you want it on hidden heavy duty casters. Inside dimensions are 57 1/2"H x 30"W x 23 3/4"D. Outside dimensions are 62 1/2"H x 31 1/2"W x 25 5/8"D. Natural oak finish. Shpg. wt. 140 lbs.

Model 37509 \$1475.00

F Executive Video Console. Rich medium oak woodgrain. Holds any 3/4" or 1/2" VTR machine and monitor of up to 25". Convenient shelf stores tapes and other video accessories. VTR shelf pulls out for easy access to controls. Accessory equipment shelf adjusts up or down. Locking cabinet doors for extra security—swing back out of the way. Rear opening provides access to cords, cables and control adjustments. Swivel casters make moving easy. 31 1/2"W x 33"H x 28 1/2"D. Wt. 110 lbs.

Model R3720 \$598.00

Model R3724. (Not shown.) Same features as our Model R3720 with two pull-out shelves. Shpg. wt. 110 lbs.

Model R3724 \$627.00

Model R3722. (Not shown.) Same features as our Model R3720 with storage drawer. Shpg. wt. 110 lbs.

Model R3722 \$648.00

G Large Security Cabinet. With full length locking doors. Provides ample storage space for 25" monitors as well as front loading VTRs. Plate casters for total mobility. Pull-out shelf for accessibility to top, sides and back of your installed equipment. Adjustments and settings may be made without removal. Base compartment offers storage for extra cassettes and video accessories. Measures 63 3/4" x 31 1/2"W x 28 1/2"D. Wt. 198 lbs.

Model R3740 \$981.00

Model R3742. (Not shown.) Same features as our Model R3740 with two pull-out shelves. Shpg. wt. 198 lbs.

Model R3742 \$1010.00

Model R3744. (Not shown.) Same features as our Model R3740 with storage drawer. Shpg. wt. 198 lbs.

Model R3744 \$1031.00

YAMAHA INTERNATIONAL CORP.

Mixing Consoles

PM3000

PM3000 Professional Audio Mixing Console

- 24, 32, or 40 Input channel mainframes (Center Master configuration on 40-channel version)
- 8 Auxiliary mixing bus sends on each input channel, each with its own pre/off/post assign switch
- 8 Group mixing buses, each with its own Master Fader, On/Off switch and Cue switch; assignable to matrix, stereo bus, and rear panel XLR outputs
- 8 VCA (Voltage Controlled Amplifier) groups, with external interface capability
- 8 Master mute groups, with 8 mute assign switches on each input channel, for instant "scene" changes
- Stereo mixing bus, which can be "direct assigned" from input channels, or "Grand Master" assigned from groups
- Mix matrix: like having a separate 11 x 8 mixer within the console
- 4 Aux (effect) returns, each with 2-band EQ and each switchable for use with stereo or mono sources
- Balanced differential XLR inputs; optional input transformers may be internally installed
- Electronically balanced XLR outputs; optional output transformers available
- Optimum input gain structure with 5-position input attenuator switch plus continuous gain trim control
- Multi-point signal monitoring LEDs in each channel guide precise input trim and EQ adjustments without risk of inadvertent clipping
- Extensive input-priority, "in-place" CUE system, plus SOLO mode (which mutes other channels)
- Extensive talkback and communications capability; easily interfaces with most popular intercom systems
- Built-in fixed and variable frequency test oscillator/pink noise source for setup or troubleshooting
- 14 VU meters with peak LEDs, switchable to monitor every bus in the console
- Numerous LEDs indicate status, display clip levels, and illuminate switches with minimal maintenance; only the VU meters have lamps
- Low noise, low distortion, wide bandwidth circuitry delivers "audiophile" quality in a professional mixing console
- Low profile, extruded aluminum chassis affords a clear view of the stage; rugged enough for touring or mobile remote truck applications

Specifications

Total Harmonic Distortion

Less than 0.1%, 20Hz-20kHz, at + 14 dBm output into 600 ohms.

Frequency Response

+1, -3 dB, 20Hz-20kHz, at + 4 dBm output into 600 ohms.

Hum & Noise

(20Hz-20kHz, $R_s = 150$ ohms, Input Gain at maximum, Input Pad at 20 dB)

Input Channel Gain Control

34 dB variation in gain stop-to-stop.

Input Channel Pad Switch

0, 10, 20, 30 or 40 dB of attenuation.

Input Channel Equalization

15 dB maximum boost or cut in each of four bands.

HIGH: 1.6kHz-16kHz (peaking or shelving).

HI-MID: 800Hz-8kHz (peaking, variable Q from 0.5 to 3.0).

LO-MID: 160Hz-1.6kHz (peaking, variable Q from 0.5 to 3.0).

LOW: 40Hz-400Hz (peaking or shelving).

Input Channel High Pass Filter

12 dB/octave roll off below 20Hz to 400Hz (adjustable -3 dB point).

Crosstalk

-60 dB at 1kHz, adjacent input channels.

-60 dB at 1kHz, input to output.

Oscillator/Noise Generator

Switchable sine wave at 100Hz, 1kHz, or 10kHz (less than 0.1%

T.H.D. at +4 dBu output level), or pink noise.

VU Meters (0 VU = +4 dBu, or 1.23 V RMS output level)

STEREO L & R: 2 large, illuminated meters. 12 smaller, illuminated meters, each switchable to monitor multiple circuits.

Peak Indicators

LED (red) built into each VU meter turns on when post-Master fader level reaches 10 dB below clipping.

Signal/Clip Indicators

3 LEDs built into each input module monitor levels in the module: SIGNAL (green) turns on when pre-EQ signal is 10 dB below nominal level. CLIP (red) turns on when pre-EQ signal is 3 dB below clipping. EQ CLIP (red) turns on when post-EQ level is 3 dB below clipping.

Phantom Power

48 DC is applied to electronically balanced inputs or optional transformer-isolated inputs (via 6.8 kohm current limiting/isolation resistors) for powering condenser microphones. May be turned on or off via rear-panel phantom master switch; when on, individual channels may be turned off via +48 V switch on each input module.

Console Dimensions:

24 channel: 12"H x 37.8"D x 53.8"W

32 channel: 12"H x 37.8"D x 64.7"W

40 channel: 12"H x 37.8"D x 75.6"W

PM300040C	(center output)	\$44,500.00
PM300032R	(32 channel)	38,500.00
PM300024R	(24 channel)	33,500.00
PW3000	Spare power supply	1,195.00

Prices and Specifications Subject to Change Without Notice.

B-1223

PM1800-40C

PM1800 Series Audio Mixing Consoles

- 16-, 24-, 32-, or 40-input channel mainframes (Center Master configuration on 40-channel version)
- Stable, wide-range, non-saturating input circuitry
- Master mute function permits instantaneous punch-ins/outs
- Versatile and precise 4-band sweepable equalization and high pass filters on each channel
- Exceptionally low noise, low distortion, wide bandwidth circuitry furnishes truly audiophile quality in a professional mixing console
- Extensive input-priority, cue system, as well as a solo mode that mutes all other input channels
- 8 group mixing buses, each with its own master fader, on/off switch and cue switch; assignable to matrix, stereo bus, and rear panel XLR outputs
- 8 master mute groups, with 8 mute assign switches on each input channel, permitting multiple channels to be silenced or activated all at once
- Mix matrix offers a separate 8 x 4 mixer within the console
- Stereo mixing bus, assigned from groups, plus Group 7/8 stereo assign for an additional stereo mix
- 4 Stereo Aux (effect) returns, each switchable for use with stereo or mono sources
- Extremely flexible input gain structure with 3-position input attenuator switch plus continuous gain trim control
- Multi-point signal monitoring LEDs in each channel aid in making precise input trim and EQ adjustments while protecting against inadvertent clipping
- Balanced differential XLR inputs; optional input transformers may be internally installed
- Electronically balanced XLR outputs; optional (external) output transformers available
- Complete talkback and communications capabilities; easily interfaces with most popular intercom systems
- Built-in multi-frequency test oscillator/pink noise source for setup or troubleshooting
- 13 VU meters (10 meters in 16-channel version) switchable to monitor every bus in the console
- Numerous LEDs indicate status, clip levels, and illuminate switches with minimal maintenance; only the VU meters have lamps
- Low profile chassis affords a clear view of the stage; rugged, yet light aluminum construction suits the console for touring, mobile truck, and other applications

SPECIFICATIONS

Total Harmonic Distortion

Less than 0.1%, 20Hz ~ 20kHz, at +14dBm output into 600Ω

Frequency Response

+1, -3dB, 20Hz ~ 20kHz, at +4dBm output into 600Ω

Hum & Noise

(20Hz ~ 20kHz * R_n = 150Ω, Input Pad = 0dB, Input sensitivity = -60dB, except as noted)

- 12dBm equivalent input noise
- 92dBu residual output noise (balanced outputs)
- 72dBu at GROUP OUT with Master fader at nominal level and all channel assign switches off
- 54dBu (58dB S/N) at GROUP OUT with Master fader and one channel fader at nominal level, and channel assigned to the group bus
- 82dBu at STEREO OUT with Stereo Master Stereo Master fader at nominal level and all channel assign switches off
- 74dBu (78dB S/N) at STEREO OUT with Stereo Master fader and one channel fader at nominal level
- 84dBu at MTRX OUT with MTRX Master and all matrix mix controls at maximum level, all GROUP-TO-MTRX switches off
- 70dBu (74dB S/N) at MTRX OUT with MTRX Master and one Matrix Mix control at maximum level, one channel fader at nominal level, and the corresponding assigned group fader at nominal level
- 64dBu at AUX OUT with Aux Master level control at nominal, all channel AUX mix controls at minimum level (Pre/Off/Post switches Off)
- 54dBu (58dB S/N) at AUX OUT with Aux Master level and one channel AUX mix control at nominal level

Maximum Voltage Gain

- 84dB CH IN to GROUP OUT
- 94dB CH IN to STEREO OUT
- 84dB CH IN to MTRX OUT
- 94dB CH IN to AUX OUT
- 84dB CH IN to CUE OUT
- 20dB AUX RTN to GROUP OUT
- 10dB SUB IN to GROUP OUT
- 10dB SUB IN to AUX OUT

Input Channel Gain Control

34dB variation in gain stop-to-stop

Input Channel Ped Switch

0, 20, 40 dB of attenuation

Input Channel Equalization

15dB maximum boost or cut in the each of 4 bands

- HIGH 1 6kHz - 16kHz (shelving)
- H1-MID 800Hz - 8kHz (peaking)
- LO-MID 160Hz - 1.6kHz (peaking)
- LOW 40Hz - 400Hz (shelving)

Input Channel High Pass Filter

12dB/oct roll off below 20Hz ~ 400Hz (adjustable -3dB point)

Crosstalk

-60dB at 1kHz

Oscillator/Noise Generator

Switchable sine wave at 100Hz, 1kHz, or 10kHz (less than 0.1% THD) at +4dBu output level, or pink noise

VU Meters

STEREO L & R: 2 large, illuminated meters with Peak LEDs. Other meters are smaller size without Peak LEDs. All meters calibrated for 0VU = +4dBu = 1.23Vrms output, Peak LEDs turn on 10dB before clipping.

24, 32 or 40 channel consoles:

- Meters 1 - 4 GROUP/MTRX
- Meter 5 GROUP 5/AUX 1
- Meter 6 GROUP 6/AUX 2
- Meter 7 GROUP 7/AUX 3
- Meter 8 GROUP 8/AUX 4
- Meter 9 CUE 1/AUX 5
- Meter 10 CUE 4/AUX 6
- Meter 11 OSC
- Meter 12 STEREO L
- Meter 13 STEREO R

16 channel console:

- Meters 1 - 4 GROUP/MTRX/AUX
- Meter 5 GROUP 5/CUE 1/AUX 5
- Meter 6 GROUP 6/CUE 4/AUX 6
- Meter 7 GROUP 7/OSC
- Meter 8 GROUP 8
- Meter 9 STEREO L
- Meter 10 STEREO R

Signal/Clip Indicators

2 LEDs built into each input module monitor levels in the module. CLIP (red) turns on when pre-EQ signal is 3dB below clipping. EQ CLIP (red) turns on when post-EQ level is 3dB below clipping.

Phantom Power

48 V DC is applied to electronically balanced inputs or optional transformer-isolated inputs (via 6.8kΩ current limiting/isolation resistors) for powering condenser microphones. May be turned on or off via rear-panel phantom master switch; when on, individual channels may be turned off via +48 V switch on each input module.

Power Requirements

Requires Yamaha PW1800 power supply

Console Dimensions (W x H x D)

- PM1800-40C: 73" x 12 1/8" x 34" (1,854mm x 308mm x 866mm)
- PM1800-32: 62 1/8" x 12 1/8" x 34" (1,578mm x 308mm x 866mm)
- PM1800-24: 50 3/4" x 12 1/8" x 34" (1,290mm x 308mm x 866mm)
- PM1800-16: 39 1/2" x 12 1/8" x 34" (1,003mm x 308mm x 866mm)

Net Weight (excluding power supply)

- PM1800-40C: 220 1/2 lbs. (100kg)

Mixing Consoles

M916/512/508 Compact Professional Audio Mixing Consoles

M916

- 16 input channels, each with two balanced, switch selectable XLR connectors usable with mike or line level sources, and interstage patch points (EQ Out/Fader In jacks)
- 11 mixing buses (including a 5 x 4 matrix), 19 outputs, and 22 patch In/Out points utilizing standard unbalanced phone jacks
- Gain for the overall program, echo and/or foldback outputs can be increased by 10dB with a simple jumper, ideal for distantly placed mikes or low level sources
- Phantom power applies DC voltage to pins 2 and 3 of active channel input jacks via pair of isolated/current-limiting resistors for remote powering of condenser mikes
- Cue/Solo system allows operator to monitor via headphones individual channels, or groups of channels or outputs, without altering or interrupting mix
- Extensive talkback system with microphone and line inputs provides complete communication with performers and crew; permits recorded background music or test program without "using up" an input channel
- 18dB per octave high pass filter at 80Hz is useful for eliminating unwanted low-frequency sounds such as wind, vocal pops, stage rumble and low-frequency leakage from adjacent instruments
- Channel equalizers offer 15dB of boost or cut at any of 9 different frequency ranges; controls calibrated in dB for fast setups; detent ensures flat audio response at "0" setting
- 2 effects input channels can be panned between program buses, and their sensitivity increased from +4dB to -20dB, via internal jumpers, for optimum versatility
- Echo and foldback sends are pre-post selectable on each channel and easily modified to pre-fader/post-EQ or pre-fader and EQ for maximum versatility
- 2 peak LED's on each input channel monitor nominal level and near-clipping level so optimum headroom can be maintained
- 5 illuminated precision VU meters switchable to monitor stereo program, matrix, foldback, echo, or cue levels
- LED's built into each VU meter indicate high level peaks to avoid even momentary distortion
- Modular plug-in circuitry for optimum convenience
- Remote bipolar 25V power supply for minimum hum, maximum reliability and minimum downtime in the event of a difficulty
- 2 identical mike/line inputs per channel, switchable, saving tremendously on re-patching time

M512/508

- 8- or 12-input channels each with balanced XLR connectors
- 4 mixing buses—2 program buses, a foldback bus and an echo bus—and 5 outputs
- 3 effects and 4 sub inputs, each with standard unbalanced phone jacks
- Effect inputs each have a level control and a pan pot for assignment to left and right program buses
- Sub inputs permit signals to be applied directly to program, echo or foldback buses
- Phantom power switch for remote powering of condenser mikes
- 2 illuminated precision VU meters switchable to monitor stereo program, foldback, or echo output
- LED's built into each VU meter indicate high-level peaks
- Peak LED's on each input channel monitor near-clipping level so optimum headroom can be maintained
- Input switchable sensitivity ensures optimum signal-to-noise ratio and headroom with any source
- Integrated, 25V bipolar power supply
- Modular plug-in circuitry for optimum convenience
- Robust construction, handsome rosewood veneer cabinet, and the finest components throughout for consoles as durable and attractive as they are impressive in performance

General Specifications

Frequency Response:

M916	+0, -3dB, 20Hz, +0, -0.5dB, 30Hz to 15kHz
M512/508	+1, -3dB, 20Hz to 20kHz, +0, -0.5dB, 50Hz to 10kHz
THD*:	<0.5% at +10dB, 20Hz to 20kHz, <0.1% at +20dB, 70Hz to 20kHz

Hum and Noise* (20Hz to 20kHz, 150 ohm source) (Input Selector Set at "-60")

-127dBm equivalent input noise (EIN)
-95dB residual output noise with all faders down
-78dB Program Out (82dB S/N): Master fader at nominal level and all input faders down
-72dB Program Out, Master fader at nominal level and all input faders down. (M512/508)
-63dB Program Out (67dB S/N); Master fader and one input fader at nominal level

M916

-73dB Echo, FB (77dB S/N); Master fader and all FB, Echo or at min. level
-63dB Echo, FB or Matrix Out (67dB S/N); Master fader and one FB, Echo or Matrix Mix control at nominal level

Max. Voltage Gain
(Input Selectors
set at "-60" dB
where applicable)

M916 Program, FB, Matrix, and Echo **, 84dB, Channel in to the corresponding output
Effects, 20dB; Effects In to PGM Out. Sub In and Matrix Aux. 10dB, input to output
M512/508 Program 84dB; Channel In to PGM Out, FB 84dB; Channel In to FB Out
Echo ** 94dB; channel in to Echo out. Sub In 10dB; Sub In to respective Out. Effects 20dB

Equalization
(± 15dB Max.)

M916 Low; 100 or 250Hz (shelving); MID, 500, 700, 1k, 1.6k, 2.5k or 3.5kHz (peaking); High: 10kHz (shelving)
M512/508 Low: 100Hz (shelving); Mid; 2kHz (peaking); High; 10kHz (shelving)

High Pass Filter:
Talkback:

18dB/oct, roll-off below 80Hz
Mike or line input XLR, preamp, level control, push-to-talk, and assign buttons for PGM, MTRX, FB and Echo buses

Input to Console:

M508 8 x input channels
M512 12 x input channels
M508/M512 2 x Sub In (Submixer input to PGM buses)
1 x Sub In (Submixer input to FB bus). 1 x Sub In (Submixer input to Echo bus).
3 x Effects In (auxiliary program input and effect return)
M916 32 x input channels (16M1, 16M2), 2 x Sub In (to PGM)

Mixing Buses:

2 x Sub In (to FB), 2 x Sub In (to Echo)
2 x Effects In, 2 x Matrix Aux In, 1 x Talk Back In
16 x Inter-stage Patch (Fader In), 6 x Master In
M512/508 2 x Main Program (L and R), 1 x Foldback, 1 x Echo

Console Outputs:

M916 2 x Main Program (L&R), 4 x Matrix, 2 x FB, 2 x Echo, 1 x Cue (preview)
M512/508 2 x Program, 1 x Foldback, 1 x Echo, 1 x Headphone

Crosstalk:

M916 2 x Program, 2 x Foldback, 2 x Echo, 2 x Headphone (1 2-channel jack), 4 x Matrix, 6 x Master Out, 16 x Inter-stage Patch (EQ out)
-60dB at 1kHz, adjacent inputs, -60dB at 1kHz, input to output

Finish:

Black painted panels, rosewood veneer cabinet, color-coded knobs

Dimensions:

M916 11 1/4" H x 32 3/16" W x 29 3/4" D
M508 7 1/2" H x 20 1/4" W x 19 1/2" D
M512 7 1/2" H x 25 7/8" W x 19 1/2" D

Weight:

M916 94.8 lbs., M508 34 lbs., M512 43.6 lbs.

* Measured with a 6dB/oct. filter at 12.47kHz; equivalent to a 20kHz filter with infinite dB/oct. attenuation

** Maximum voltage gain (Echo, FB) measured with channel fader at nominal level

M916

16 inputs; two main mixing buses; 4 matrices; mixing console \$6595.00

M512

12 inputs with phantom power; 4 outputs; mixing console \$2825.00

M508

8 inputs with phantom power; 4 outputs; mixing console \$2045.00

MZ Series Professional Dynamic Microphones

Common Features:

- Triple laminated pure beryllium diaphragm • 40Hz-18kHz frequency response • Precision photo-silkscreen process acoustic damping system • Three-point floating suspension system • Diecast zinc body with extra-durable wire mesh windscreen • Cardioid pattern • 250 ohms, balanced nominal impedance • Professional XLR connector

MZ 203Be Professional Vocal Microphones

Shares common features except: • 200 ohms balanced, nominal impedance • 500 ohms minimum load impedance • -76dB/μbar at 1kHz output level • 24dB/mOe SPL equivalent at 50Hz • Professional gold-plated 3-pin locking XLR output connector • Metallic dark gray finish • MCH-2 stand adaptor and microphone case included • Superb, smooth response for clear, warm vocal reproduction

MZ 203Be \$315.00

MZ 205Be Professional Percussion Microphone

• Shares common features except: • 650 ohms minimum load impedance • 77dB/μbar at 1 kHz output level • 29dB/mOe SPL equivalent at 50Hz professional gold-plated 3-pin locking XLR output connector • Metallic dark gray finish • MCH 3 microphone holder and case • Specifically designed for pickup of higher-pitched drums, such as snares and tom-toms smaller than 14" • Unique and compact with side-mounted connector design for ease of placement in confined areas and over a wide range of angles

MZ 205Be \$295.00

MZ 103Be Professional Vocal Microphone

Shares common features except: • -76dB/μbar at 1kHz output level • Metallic gray finish • MCH-2 stand adaptor included • Perfectly balanced response for powerful vocal reproduction

MZ 103Be \$235.00

MZ 105Be Professional Musical Microphones

Shares common features except: • -77dB/μbar at 1kHz output level • Metallic gray finish • MCH-2 stand adaptor included • Ultimate accuracy for musical instrument pickup

MZ 105Be \$200.00

MZ 102Be Professional Vocal Microphone

Shares common features except: • -76dB/μbar at 1kHz output level • Metallic brown finish • MCH-1 stand adaptor included • Response is ideally tailored for smooth, clear vocal reproduction

MZ 102Be \$190.00

MC 204 Professional Percussion Microphone

Shares common features except: • Double laminated polyester film diaphragm • 20Hz-18kHz frequency response • 650 ohm minimum load impedance • -77dB/μbar at 1kHz output level • 29dB/mOe SPL equivalent at 50kHz • Metallic dark gray finish • Professional gold plated 3-pin locking XLR output connector • MCH-3 microphone holder and case included • Deep, powerful response tailored especially for floor tom and bass drum pickup • Unique and compact with side mounted connector design for ease of placement in confined areas and over a wide area of angles

MZ 204 \$295.00

MZ 104 Professional Musical Microphone

Shares common features except: • Double laminated polyester film diaphragm • 30Hz-17kHz frequency response • 77dB/μbar at 1kHz output level • Metallic brown finish • MCH-1 stand adaptor included • Broad, flat response for precision musical instrument reproduction

MZ 104 \$145.00

MZ203Be

MZ205Be

MZ103Be

MZ204

MZ105Be

MZ102Be

MZ104

MZ106S

MZ101

MZ 106S Professional Vocal Microphone

Shares common features except: • Double laminated polyester film diaphragm • 800 ohm minimum load impedance • -77dB/μbar at 1kHz output level • On/off switch • Metallic gray finish • Microphone stand adaptor (5/8"), threaded brass adaptor (3/8"), 16 1/2' cable (XLR type, phone type) and case are included • Provides broad, flat response for vocal pickup

MZ 106S \$140.00

MZ 101 Professional Vocal Microphone

Shares common features except: • Double laminated polyester film diaphragm • 40Hz-17kHz frequency response • -76dB/μbar at 1kHz output level • Metallic brown finish • MCH-1 stand adaptor included • Provides rich lows and crisp highs for all types of vocal pickup

MZ 101 \$135.00

YAMAHA INTERNATIONAL CORP.

Audio Digital Effects/Reverberation

SPX90II

SPX90II Digital Multi-Effect Processor

- A wide selection of professional-quality digital effects in a single, compact rackmount unit
- A full two seconds of sampling time available in the freeze programs, two seconds of delay time in the delay programs, and one second of initial delay time in the reverb programs
- 30 preset effects in ROM, 60 user-stored RAM locations for custom-edited programs
- MIDI control of remote preset changes

Reverb: Four distinct reverb programs provide rich, lifelike recreations of the ambience of various acoustic environments.

Early Reflection: The first discrete reflections of a sound before reverb begins. This effect helps bring punch and presence to vocals and instruments.

Delay: Independent delay settings for both right and left channels expand the range of delay effects. Maximum delay time is 2 seconds.

Echo: The gradual decay of discrete reflections. Right and left channels are also independently programmable for complex echo effects.

Modulation: Professional-quality modulation effects (Stereo Flange, Chorus, Stereo Phasing, Tremolo, Vibrato, and Symphonic) enrich the sound.

Auto Panning: An automatic pan (with programmable direction, speed, and depth) of the sound between right and left channels.

Reverb and Gate: A programmable gate controls the envelope of the reverb sound, creating a wide range of unique and unusual sonic possibilities.

Pitch Change: Varies the pitch of an input signal over a two-octave range. Both fine (one cent) and coarse (one semitone) adjustments enable chorus and harmonizer effects. Harmonies can be played by keyboard or sequencer through MIDI control.

Freeze: Records, up to two seconds of sound for complete or partial playback at any pitch. Playback can be triggered from the front panel, a MIDI instrument, a footswitch, or by any input signal.

Compressor: An extremely effective yet subtle way to smooth out the dynamics of a sound.

ADR/Noise Gate: This program uses an envelope or gate to control the volume contour of any input signal, for gating sounds or creating reverse gate effects. The program can be triggered by the incoming signal or by footswitch.

Parametric EQ: Programmable 2-band parametric equalization plus variable Hi-pass/Low-pass filters.

Remote Control Unit (Optional): Permits instant recall of preset effects from any location.

SPX90II \$895.00

REV5

REV5 Digital Reverberator

- A premier professional-quality digital stereo reverberator/effects unit
- Increased sampling frequency, delay time
- Extensive preset program selection; and expanded control over effect parameters
- Improved sound quality with a 20Hz to 20kHz frequency response
- Comprehensive, programmable digital 3-band parametric EQ system in addition to a master 3-band parametric EQ section
- Studio-quality modulation effects, such as stereo flange, stereo phasing, and tremolo
- Independent control of delay, reverb, and diffusion parameters in reverb programs
- Separate 1st reflection right-, left-, and center-delay/level parameters
- Secondary reverb time, delay, and level controls enable production of a second layer of reverberation to augment the primary reverberation

- Space modulation parameter creates periodic variation in reverberation program to recreate actual interference between reflections in a live acoustic environment
- Custom reverberation programs designed by professional sound engineers to enhance the sounds of specific sources
- Reverb and Gate programs, a pan program, and several pitch change programs (with MIDI control) for stunning harmonizer and chorus effects
- 30 main effect programs, and 60 user-programmable memory locations
- 9 unique combination programs, such as chorus/reverb/gate, for professional multi-effect processing

REV5 \$1995.00

YAMAHA INTERNATIONAL CORP.

Compressor Limiter/Graphic Equalizer

GC2020B

GC2020B Dual Channel Compressor Limiter

- Link switch permits operation as two independent channels or in linked mode to prevent loss of stereo perspective
- Independent controls for each channel
- Range of compression ratios are from 1:1 (no compression) to ∞:1
- Attack time from .2 to 20ms
- Release time from 50ms to 2 seconds
- Bypass switch with LED indicator
- Five segment LED display indicates the amount of gain reduction in dB on each channel
- Each channel has a variable expander gate (also called a noise gate) permitting noise during no-signal portions of the program to be eliminated
- Detector in and out jacks that allow the compressor to control or be controlled by external audio signals

The GC2020B is a high-performance two channel compressor limiter noise-gate. With a full 20Hz to 20kHz frequency range, the GC2020B handles a wide range of limiting, compression and noise gate functions.

Extremely compact, the GC2020B fits into one EIA rack space. Total harmonic distortion is less than .03% and the noise level is -87dB. Input and output connections are parallel 1/4" phone and RCA type jacks.

GQ1031

GQ1031 1/3 Octave Graphic Equalizer

The GQ1031 is a moderately priced, single channel, 1/3 octave band graphic equalizer occupying one standard EIA rack space. The GQ1031 features 31 bands of equalization each of which may be cut or boosted by as much as 12dB. An input level control permits level matching with a wide range of audio sources and a peak LED lights at +17dB to indicate that the equalizers +20dB maximum output level is being approached. The front panel EQ In/Out switch by-passes the equalizer circuitry, connecting the input directly to the output.

A standard 1/4" phone jack and an RCA pin jack are provided for both inputs and outputs facilitating connection to a wide range of audio equipment. The unbalanced input presents a load impedance of 22K ohms while the output has a source impedance of 600 ohms.

Possible applications include room equalization, feedback control, stage monitor equalization and use as a creative tool for recording or live performance.

GQ2020 SPECIFICATIONS

CHANNEL	2-channel
MODE	STEREO Mode/DUAL MONO Mode
FREQUENCY RESPONSE	+2dB, -2dB, 20Hz ~ 20kHz
TOTAL HARMONIC DISTORTION	Less than 0.03%
NOISE LEVEL	Less than -87 dB (IHF-A)
INPUT	Unbalanced (RCA pin jack, 1/4" mono phone jack)
INPUT IMPEDANCE	30k ohms
NOMINAL INPUT LEVEL	-10dB
MAXIMUM INPUT LEVEL	+32dB (INPUT Level Control at minimum)
OUTPUT	Unbalanced (RCA pin jack, 1/4" mono phone jack)
OUTPUT IMPEDANCE	600 ohms

Audio Monitors

NS-10M Monitor Speakers

- Sealed enclosure promotes solid bass
- High efficiency and power-handling capacity
- Low distortion, silky-smooth response
- Professional left-right symmetrical design

Specifications

Type: 2-way, bookshelf acoustic suspension
Music Input Power: 100W
Nominal Input Power: 50W
Sound Pressure Level: 90dB/W/m
Frequency Response: 60-20,000Hz
Nominal Impedance: 8 ohms
Woofer: 7" white cone
Tweeter: 1 3/8" soft dome
Crossover Frequency: 2kHz (12dB/oct)
Dimensions: 15" H x 8 1/2" W x 7 7/8" D
Weight: 13 lbs. 3 oz.
Finish: Real wood, black

NS-10Mea./\$212.50

NS-10M

NS-40M Studio Monitor Speakers

The NS-40M Studio is a 3-way acoustic-suspension bookshelf system with a frequency range of 50 to 20kHz, and has a rated power capacity of 100W of program material. Sensitivity is 90dB SPL at 1W, at 1 meter, on axis. The crossover frequencies for the low-loss, low-distortion crossover are 1.2kHz (12dB/octave), 5kHz (mid: 12dB/octave and tweeter: 18dB/octave).

The woofers are each 7" long excursion drivers, the mid-range is a 2.4" soft-dome driver, and the tweeter is a 1.2" soft-dome tweeter. The NS40M Studio is in a compact, black finished, real wood cabinet, and is 23 1/2" x 11.5" x 12" and weighs 7 3/4 lbs. Connection is by heavy-duty binding post cable connectors.

NS-40M Studio\$465.00

S10X/S20X Compact Speaker Systems

- Program input capacity of 75W RMS at 8 ohms and maximum handling capacity of 150W (S10X)
- Program input capacity of 150W RMS at 8 ohms and maximum handling capacity of 300W (S20X)
- Audio visual and video control room monitoring
- Conference room and tele-conferencing installations
- Distributed sound systems
- Low-level foldback systems
- Close-in mike stand mounted monitoring

The S10X and S20X are ultra-compact speaker systems suitable for a variety of uses. Both speakers are of rugged, injection molded construction. The S10X contains one 3 7/8" carbon fiber cone transducer while the slightly larger S20X contains two. Input connections include both push terminals and 1/4" jacks. The two 1/4" jacks on the S20X are mounted to plates that cover holes designed to accommodate one male and one female XLR connector for those applications that require locking speaker connections. The S10X is magnetically shielded, making it especially useful in video applications.

Specifications

Broadcast Large Image Optical Multiplexer

770

770 Optical Multiplexer

- Color or monochrome
- Instant image transfer
- Self-dousing
- Audio with optical switching
- Remote control option
- Precision optical assembly
- Rigid construction

The 770 is designed to meet full broadcast requirements for a large image optical multiplexer. The optical system will accept up to three film inputs, usually one slide projector and two motion picture projectors. Optical switching between film inputs is dynamic at < 100Ms and occurs as a vertical wipe off two DC motor driven first surfaced mirrors. The DC motors provide a positive bi-directional drive which is DC braked for instant stopping without any bounce. The mirror arrangement provides a self-dousing system which permits only the selected input to reach the TV camera, even if the remaining projectors are "on". The 770 is primarily designed to work with broadcast TV cameras which include an integral field lens, but can be equipped with a field lens when applied for use with TV cameras with an objective "taking" lens.

The top cover includes dome lamps which indicate the mode of multiplexer at all times. Local controls are illuminated in colors to match the dome lamps and include power on, select Film 1, Slide or Film 2. Remote control of the multiplexer mode selection is available as an option. Follow lighting is used throughout to indicate the multiplexer mode at all control points. Operation of the multiplexer and remote control is entirely DC derived from an integral DC power supply.

Specifications

- Number of Mirrors:** Two
- Image Size:** Up to 3.38 x 4.50"
- Mirror Action:** Vertical wipe
- Mirror Height:** 3.25"
- Actuation:** Positive bi-directional DC motor drive
- Image Transfer Time:** < 100Ms
- Optical Centerline:** 48" ± 1/2"
- Mirror Surface:** First surfaced aluminum silicon monoxide
- Film Inputs:** Three
- Outputs:** One
- Dimensions:** 53"H x 19"L x 13"W
- Weight:** 150 lbs., uncrated. 200 lbs., crated
- Color:** Two-tone gray
- Finish:** Baked epoxy paint
- Power Requirements:** 115VAC 50/60Hz or 230VAC 50/60Hz
- Power Consumption:** 100W

- 770** Optical multiplexer, large image. 3 inputs and one output. Illuminated dome lamps and local control switches. Select Film 1, Slide or Film 2. Includes level. No field lens **\$3995.00**
- 770-L** Same as above, except left-hand model. Use with left hand film projectors **4295.00**
- RC770** Remote control for 770 series select Film 1, Slide or Film 2. 1.75 x 19" rackmounted panel **250.00**
- C3** Remote control cable for 770 series multiplexer. Add cable length as dash number. (e.g., C3-50) **ft/1.50**
- FL770** Field lens assembly. Mounts to camera end of 770 multiplexer. Includes 6" diameter field lens, mount, mounting brackets, cover and guides for FL770-T and FL770-SM **1295.00**
- FL770-T** Alignment target, used to size and focus images. Fits FL770 assembly **.60.00**
- FL770-SM** Slide mount for Eastman Kodak cross step gray scale slide. Fits FL770 assembly **175.00**
- KTS-1** Eastman Kodak Inconel cross step gray scale slide with instructions. Used to calibrate TV camera **795.00**
- 732A** Pedestal, styled to match 770 multiplexer accommodates slide projectors with max. 10" optical centerline (e.g., RCA TP7 and SS-32 series) **795.00**

THE ZEI-MARK CORP.

Multiplexers

4305

4305 Optical Multiplexer

The 4305 consists of a pedestal mounted optical transfer assembly designed to the industry standard 48" optical centerline. The basic unit includes local control, neutral density filter mounts for each input, three duplex AC outlets (6) for equipment, attached 3-wire AC power cable and complete set-up and operating instructions. All options are at added cost.

TV camera and center input projector supports as well as projector side mounts include all necessary adjustable mounting hardware for item to be used. Where remote control is specified, please indicate cable footage required. Projectors include the necessary projection lenses. Remote control is 24VDC operation.

The Preview option, 2nd TV camera output provides a back-up TV camera in the event of prime output camera failure and to minimize "on-air" errors, e.g., wrong slide, improper start or restart of motion picture film, etc., since Preview enables the operator to verify subsequent inputs while "on-air" from the second TV camera which may be a relatively inexpensive monochrome camera.

Since the 4305 is in itself a fully functional and operational system, the unit may be directly applied for use with floor mounted TV cameras and pedestal mounted film projectors.

Where floor mounted TV cameras have a built-in field lens designed to suit the internal camera optical system, the 4305 field lens can simply be removed to permit direct projection through the 4305 optical transfer and onto the TV camera field lens.

Notes:

1. For the 4307 and 4308, 4th Input source must be reversible format film, e.g., 2 x 2 slides, 35mm filmstrip, and "live" Tel-Op input.
2. For 1" format Vidicon TV cameras, use 50mm "C" mount lens. For 2 2/3" format Vidicon TV cameras, use 35mm lens.
3. At time of order, please specify TV camera and projector models to be used at each input station.
4. For TV cameras, which due to their design require special lenses (other than 35mm or 50mm focal lengths), Zei-Mark can supply special field lenses to work with such TV camera at added cost (usually nominal).

Series 4300 Optical Multiplexer and Accessories

4305	Optical multiplexer, 3 inputs and 1 output. Custom model. Expandable to add Preview and 4 th options. Features custom molded top cover, illuminated dome lamps w/matching colored switches at local control console	\$1995.00
4306	Custom optical multiplexer, 3 inputs and 2 outputs. Expanded model 4305. 2 nd output Preview	2795.00
4307	Custom optical multiplexer, 4 inputs and 1 output. Expanded model 4305. See notes	2995.00
4308	Custom optical multiplexer, 4 inputs and 2 outputs. Expanded model 4305, combination model 4306 and 4307	3495.00

TV Camera and Projector Supports

4310	TV camera support and adjustable mount. Fits all models . . .	\$215.00
4310-SP	Same as 4310, but for TV cameras in excess of 30 lbs.	250.00
4311	Center input projector support	150.00
4312	Custom fully skirted side mount for Left and Right film projectors. Fits all models	295.00
4313	Custom side mount for Left and Right film projectors, less skirts. Fits all models	250.00

Projector Pedestal

KG	Custom pedestal for film projectors. Supplied to accommodate optical centerline heights ranging from 7 to 11 1/2". Equipped with adjustable mounting plate and AC outlets with attached power cable.	\$350.00
----	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------

Multiplexer Remote Controls

RC4305	4305 remote control Select Left, Center or Right input. Console styled 19" rackmount for either flat or vertical mounting. 3 1/2" H. Illuminated to match 4305 dome lamp colors	275.00
RC4306	4306 remote control. Same as RC4305 except includes Preview select switches	275.00
RC4307	4307 remote control. Same as RC4305 except includes 4 th Input mode select switches.	300.00
RC4308	4308 remote control. Same as RC4305 except includes both Preview and 4 th Input switches.	300.00

Projector RC Mounting Panels

PRC-3	3 1/2" x 19" rack panel for mounting up to three RC modules listed below	\$90.00
PRC-4	3 1/2" x 19" rack panel for mounting four projector remote controls listed below. Custom designed to suit system requirements	300.00

Projector Remote Control Modules

RC-2	Slide projector remote control. Works with Ektagraphic or Ekt. Series III models. Provides lamp on/off, forward and reverse.	\$140.00
RC-2LDX	LD-4250 remote control. Includes change, rate, individual E-2 controls for forward and reverse and "hold" to repeat slides. LEDs indicate "on" projector	200.00
RC-8EL	ELMO GS-1200 TC Remote Control. Provides fwd/lamp, rev/lamp and stop	200.00
RC-16E	Eiki NT-0 Series remote control provides forward, forward w/ lamp, reverse, reverse w/lamp and stop	200.00
RC-16EL	ELMO model 16FTC remote control. Projector must be factory supplied to provide for remote control functions, forward, lamp, reverse and stop.	200.00
RC-16S	Remote control for Telex 2230 16mm TV projector. Provides forward, lamp and stop.	200.00
RC-16	Remote control for 16mm projectors not listed above. Can accommodate up to 5 switches (momentary and/or p-p) Specify projector	250.00

Automatic Light Control Remote Modules

RC-ND510	Remote control for ND10 auto light control. AGC and manual control	\$100.00
----------	------------------------------------------------------------------------------	-----------------

Remote Control Cables

C1	Multiplexer remote control cable	ft./\$1.00
C2	Projector remote control cable.	ft./1.00

ND Filters

FK-6	Filter kit. Set of six (6) 3" x 3" Kodak gelatin ND filters w/values 0.1, 0.2, 0.5, 1.0, 2.0 and 3.0. Up to six may be ordered in any combination. Filter mounts and glass supplied as standard on all 4300 and 2000 series multiplexers	\$110.00
------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------

Miscellaneous

A43	Audio-follow control PC board assy. For use with 4300 series multiplexers. Audio switches according to the multiplexer mode. Accepts up to 3 wires from 3 separate sources to a 3 wire output. Operates automatically from mult. control electronics	\$140.00
SL-1	Slot-Lok quick disconnect. One TV camera adaptor and one baseplate	175.00
SL-2	Slot-Lok quick disconnect. One TV camera adaptor and two baseplates. Order when studio camera is used on the film chain	235.00
SLA	Slot-Lok TV camera adaptor only.	125.00
SLB	Slot-Lok baseplate only.	70.00

THE ZEI-MARK CORP.

Slide Projectors/Multiplexer

2000 Optical Multiplexer and Accessories

The 2000 is a mobile, free-standing and self-contained system having a three input and one output capability for either color or monochrome systems. Two inputs are designed for Eastman Kodak Ektagraphic or Carousel 2 x 2 slide projectors and the third input is open for the addition of either 16mm or Super 8mm film projectors.

The optical system consists of beam-splitting mirrors and a large field lens onto which the projected images are focused at the final 3" x 4" image size which the TV camera views, free of screen grain or texture and with high contrast ratios.

- 2000** Optical multiplexer, 3 inputs and 1 output. Uses beam-splitting mirrors. Includes pedestal, optical assembly and provisions for mounting two Kodak slide projectors plus AC outlet and power cable. **\$1050.00**
- 2000-3P** Same as 2000, but includes pellicle beam-splitters in lieu of glass. One film and two slide projectors. **\$1575.00**
- 2000-2E** Same as 2000-3P but with only one pellicle for use with two Kodak slide projectors only. **\$1275.00**
- 2000-2EP** Same as 2000-3P but with only one pellicle for use with one film and one Kodak slide projector. **\$1395.00**
- ZM-20** Bench assembly for film input to 2000 series multiplexer. Includes adjustable projector mounting plate and leveling legs. **\$250.00**
- ZM-20C** Bench assembly for TV camera. Includes adjustable mounting plate and leveling legs. **\$250.00**
- DC-24** Power Supply, 24VDC. Required for RC-16 and RC-2 projector remote controls when used with all 2000 series multiplexers. **\$125.00**
- LD4** Lap-dissolve unit for two Kodak Ektagraphic or Ektagraphic Series III slide projectors. Variable dissolve rate from quick-cut to 10 secs. Includes filament GLO circuits, built-in power supply, tone generator/responder with complete program record and playback capability. Microprocessor. Order RC-2LDX or DSPI-2LDX remote control. Order C2 cable separately. **\$595.00**

LD4250 Dual Drum Slide Projector

The LD4250 includes two Eastman Kodak Ektagraphic Series III Model E slide projectors which feature improved optics and quick lamp change module which pulls out from the rear. Both projectors load identically and slide orientation is the same as for audio visual front projection to facilitate set-up of slide programs to be transferred to video tape or "aired" off the film chain. Projectors face into an optical assembly which includes a first surfaced mirror, pellicle beam-splitter and projection lens.

The mechanical mounting plate assembly includes the LD4 lap-dissolve which utilizes CMoss electronics and includes a microprocessor to provide a programmable dissolve system. The LD4 is a variable dissolve which can be adjusted from a quick-cut up to 10 secs. The unit includes a tone control generator and responder network which permits both the recording and playback of programs using the LD4 lap-dissolve. A unique feature of the LD4 provides playback with varied dissolve rates according to how the program was recorded. When the alternate cycle is started, the position of the rate control is recorded on tape. During playback, whatever dissolve rate was set at that particular alternate cycle will replay exactly as recorded.

Each projector is mounted to an adjustable base-plate to facilitate the set-up and alignment to achieve the desired superimposition at the field lens.

The LD4 is provided with full remote control capabilities.

- LD4250** **\$2995.00**
- E31-20** Ektagraphic III Model E slide projector with horizontal registration. Includes special mounting plate for mounting to 2000 series multiplexer. No lens **\$475.00**
- E31-43** Ektagraphic III Model E slide projector with horizontal slide registration. Modified for Telecine use with 4300 series multiplexers. Includes mounting plate and LK-7A lens support. No lens **\$475.00**
- UN1000** Uniplexer, 1 input and 1 output, for 16mm or Super 8mm projectors. Includes optical assembly main chassis, adjustable TV camera mount, "C" mount lens extender and stand-offs. **\$575.00**

Lens Selection Chart

Projector Mfr.	Model	Multiplexer 4300	Series 2000	Uniplexer UN-1000

BILL DANIELS CO., INC. CORPORATE SERVICES

are for those successful businesses that want to reduce their overhead and increase the effectiveness of their marketing programs.

Corporate Services means having another company perform those marketing tasks that require the valuable time you and your staff can't afford.

- We respond to requests for sales support literature the day we receive them.
- We provide an 800 number for order taking, service inquiries and complaints, answered 24 hours a day.
- We can warehouse, inventory and distribute your products, track loaned equipment and receive trade-ins.
- We specialize in newsletters, catalogs and promotional materials, list management and maintenance.

Our services will enhance your commitment to your sales people, your dealers and your customers. They will also save you time and money.

Call today for a consultation.
Find out how Corporate Services can help you.

SUCCESS BROADCAST MARKETING

1196 Hampshire St. San Francisco, CA 94110 (415) 550-8285

BROADCASTER'S BULLETIN BOARD. The only radio and television postcard response deck program serving the entire industry. Reach over 40,000 key station managers at every station across the country. Reach every Chief Engineer, every General Manager and Program Director. Reach every Group Station Owner and thousands of other equipment purchasers (NAB Convention Attenders) for a fraction of the cost it would take to mail a single letter to 2,000 stations. With this program you reach every station and in many cases every possible buyer for under \$2,000. We include all printing set-up camera work, cutting, inserting, packaging, mailing and postage. Lead generation results from the Broadcaster's Bulletin Board often out perform trade advertising and simulated direct mail campaigns three to one. Another unique service offered only through Success Broadcast Marketing. 1196 Hampshire St., San Francisco, CA 94110. (415) 550-8285.

Say GOODBYE to Compromise... MOVE UP TO DIGITAL CONTROL

CMOS digital design writes new rules for what is possible in audio signal processing. The TEXAR AUDIO PRISM™ delivers the penetrating audio punch of the most powerful analog-based processors but without generating processing artifacts or listener fatigue.

Over one hundred units are now in major radio stations from Los Angeles to New York, from Chicago to Washington DC, from Orlando to Minneapolis. For more information on the digitally controlled miracle that's changing the rules of audio processing, or to arrange a demonstration, call Barry Honel or Glen Clark at (412) 856-4276.

SUCCESS BROADCAST MARKETING

1196 Hampshire St. San Francisco, CA 94110 (415) 550-8285

THE CHIEF ENGINEER'S REPORT Engineers are complaining about the plethora of semi-related broadcast technical publications these days. The CE Report is a unique program service that allows the CE to save time reading one newsletter that condenses all the latest industry news and equipment developments. The CE Report scans dozens of related publications giving vital information in an easy to digest form. The CE Report is only \$79 a year and is available through Success Broadcasting, 1196 Hampshire St., San Francisco, CA 94110.

RADIO DIGEST is a unique program concept. It is the only broadcast trade publication offered to the industry at large on cassette audio tape. Produced as if it were a live radio news talk program, RADIO DIGEST breaks down the latest developments occurring in the industry in an easy to understand and entertaining manner. Listening to RADIO DIGEST saves reading time since it can be listened to at your convenience driving to work, eating, or just relaxing. Designed as an audio magazine, RADIO DIGEST educates and takes a special interest in reporting various industry gatherings on location.

PD HANDBOOK is an annual directory listing all current available programs and formats for syndication. Producers, voice-over talent, production libraries, tape distributors, on-air promotions, gag sheets and other related important programming tools are included. \$30. Send check or money order to the Radio Program Director Report, 1196 Hampshire St., San Francisco, CA 94110. (415) 550-8285.

THE RADIO PROGRAM DIRECTOR REPORT is a strategic report. The only radio industry trade publication exclusively for the Radio Program Director. The focus is effective competitive radio programming.

The unique function of RADIO PROGRAM DIRECTOR centers on making Program Directors better managers, on-air coaches, program schedule planners, audience research experts and competitive winning giants in any market situation.

RADIO PROGRAM DIRECTOR is selectively read by America's top performance P.D.s. The only way to win in competitive radio is by being prepared and knowing how and when to use today's advanced programming techniques. RPD delivers vital information, not gossip. RPD examines events and ideas of consequence to you.

Subscribing to RADIO PROGRAM DIRECTOR is not only a successful marketing strategy but also a smart career move. Geared exclusively to Program Directors, RPD is the only publication of its kind. The secret is out. Subscribe by sending \$115 to the Radio Program Director Report, 1196 Hampshire St., San Francisco, CA 94110. (415) 550-8285.

ENERGY DEGAUSSER FOR PROFESSIONAL METAL TAPE

Erasure of pre-recorded metal oxide tape to a level suitable for reuse is much more difficult due to the very high coercivity of new metal tape.

The new VRS Data V90 provides 5000 gauss, over twice the erasing power of competitive units. Achieves superior 90dB erasure on center tracks of 1" tape, insuring complete erasure of 1/2" oxide and metal tapes.

The equipment is certified by leading metal tape manufacturers. The Model VRS 90 operates on 220-240VAC, 60Hz. Dimensions are 11" x 20" x 24".

VideoStar Means Business— Business Television... and Better Business Communications!

As a leading supplier of **business television**, VideoStar understands the strategic role of television in business communications. By providing sight and sound **connections** to locations around the country...and around the world...via satellite, VideoStar gives business leaders a powerful tool to communicate information and ideas.

VideoStar's **business television** service includes technical and applications consultation, provision of hardware and satellite capacity, network operations and maintenance. Our Tele-Meeting® Network of 200 fine hotels is used for one-time special events or to expand private networks for important meetings. Our transportable stations allow us to serve any site wherever your business meeting takes place.

VideoStar takes pride in providing high-quality service to America's leading organizations, including Eastman Kodak, Hewlett-Packard, MONY Financial Services, Coca-Cola, American Express and many others.

VideoStar is your **connection** to business television. VideoStar means business—business television.

SUCCESS BROADCAST MARKETING

1196 Hampshire St. San Francisco, CA 94110 (415) 550-8285

BROADCASTER MANAGER'S TELEPOLL: Exclusive market research program offers unique opportunity for broadcast suppliers to research market interests, and perception of company's product or competitors. Image study can prove very effective in determining focus of advertising and marketing. Participants receive regular reports through a monthly opinion research study program aimed at asking key broadcast decision makers questions through an impartial second party. Individual studies are kept confidential.

Call (415) 550-8285 extension #70 for free consultation.

SUCCESS BROADCAST MARKETING: SBM is a unique enterprise being that it is the broadcast industry's largest marketing and advertising company whose focus is nothing but broadcast related. SBM takes pride in developing effective marketing campaigns that outperform traditional forms of advertising. Currently SBM offers over 10 different marketing programs, and also tailors competitive campaigns for its clients. Broadcast Manager's Telepoll, Radio Digest, Broadcaster's Bulletin Board, The Radio PD Report, The General Manager's Handbook are among other projects supported by SBM. SBM also brokers NAB Fall exhibit floor space below list cost to qualified exhibitors. SBM also publishes a monthly marketing strategy newsletter of special interest to presidents/owners and sales and marketing. Call (415) 550-8285 for a free no obligation marketing consultation.

Rely On Us For Your Printing Needs

Total

Professional service, outstanding performance and ability are reasons why the **Bill Daniels Company** is **THE** publisher for the electronics industry. For more than a decade we have published dealer and manufacturer catalogs from our in-house library of over 3,000 different manufacturers totaling more than 20,000 current catalog pages. These pages consist of product features, specifications, illustrations, and pricing.

- Customized Catalogs
- Advertising Brochures
- Spec Sheets
- Price Lists
- Mailing

- Service Manuals
- Operator Manuals
- Graphic Design Concepts
- Production Art
- Camera Work

- Typesetting with Today's Most Sophisticated Equipment
- From Concept To Mailing

For your total printing needs we can present it the way you want it at a price you can afford.

Talk To Us First... about a Downstream Keyer

It could save you a bundle!

Model 1231

Model 1235

- Mix or cut a single key source
- Fade to black
- Matte generator for colorizing keys
- Optional Analog key bordering

Model 1238

- Versatile single key system
- Self key or external key
- Remote or local key control & adjustment capability
- Many uses for special effects
- Optional matte generator

- Up to 6 simultaneous key signals over one background
- Internal matte and masking generators
- Rack or console mount control panels
- Timed key dissolves, or key cuts
- Fade or cut to black
- Edit system control capability
- Optional Analog key bordering

587 DIVISION STREET/CAMPBELL, CA 95008
(408) 378-8091 / TELEX 4970334 SWINTEK SUVL
FAX # 408 378 6980

It all started with "Old Blue"...

In 1974 we developed the **Taperaser 309** — the work horse and standard setter that is still going strong in facilities all over the world today.

Then came the **Taperaser 409** that cleaned the tape even better with 40% more flux.

Next our customers and the tape industry requested an automatic tape degausser that was more powerful, able to erase all the different types of tapes and films used, and was more energy efficient with better erasure.

The answer was introduced in 1982 as the **Model 1500**, named for the 1500 oersted tape that was being developed.

And in 1987 we introduced the **Model 1500M** . . . "M" for metal particle tape.

The **Model 1500M** provides:

- **Ease of operation:**
Simply insert reels, cassettes or film stock — no adjustments necessary
- **Precision-controlled erasure:**
Erases tape in an electronically-controlled gradual decay of field reducing 60 Hz component normally associated with tape erasers
- **Selectable flux fields:**
Erases 1500 oersted or 700 oersted by switchable high-flux or low-flux options
- **Multi-format flexibility:**
 - MII
 - Beta-SP
 - D-2
 - 1" reels
 - VHS
 - U-matic
- **Energy efficiency:** nominal 20 Amps at 110 VAC
- **Better erasure:**
 - 85dB on metal particle tape
 - 90dB on 750 oersted tape
- **Longer operation:**
45 minutes continuous

For specifications and more information, please see page 187.
