Unlimited field expansion of inputs and outputs is available, using building blocks of various configurations. Knowledge of, or an estimate of, ultimate system size at the point of initial installation is not required. Terminating inputs and internally bused-together card frames are not used.

Very wide bandwidth and high slew rate in the video matrix prepare the D-2400 to handle HDTV, MAC, Digital Video, etc. signals. Similarly, the high quality, high level and wide bandwidth of the audio matrix provide for a wide range of audio signals, including time code.

D-2400 systems are based on the use of 20 x 10 matrixed crosspoint boards and 10-bus output amplifier boards, arranged in various configurations and accommodated in 14" (8 rack units) card frames.

D-2400

Standard building block configurations are used. They range from 160 x 20 by 1 level to 40 x 20 by 4 levels. Modules and rear assemblies may be deleted for systems of smaller or intermediate size—or for an initial less-than-capacity installation that may later be brought up to full capacity by adding the deleted items. Other configurations within a card frame are available for special applications.

Regardless of system size and configuration, modules are not slot conscious. A module of a particular type will operate correctly in any slot where that type is used. PROM changes or switch changes, etc., are not required.

Datatek does not internally bus card frames together to initially provide an assembly of some specified ultimate system size. This practice, although convenient to a manufacturer, penalizes the customer with the necessity to specify an "ultimate" size, the necessity of occupying rack space with unused or partially unused card frames, and the necessity of higher initial cost.

All Datatek systems are expanded by external cabling, and the addition of system hardware as it becomes necessary. This, to a very large extent, relieves the customer from initial commitment to system size and configuration, to rack space and location, to hardware type and to higher initial cost.

DATATEK CORP.

Routing Switchers

VIDEO-AUDIO SWITCHING UNITS

D-4300 Series Video and Audio Switching Units

• Video and Audio switcher "building blocks" of 6 x 1, 16 x 1 and 20 x 1
 • Each building block equipped with self contained power supply
 • Choice of video-only switching, audio-only switching, audio-follow-video and split audio operation
 • Video and Audio inputs are high impedance bridging, permitting stacking units for multiple output bus applications
 • Vertical Interval video switching
 • Video switching units equipped with 4-section cable equalizer on output
 • Differential Phase/Differential Gain performance of 0.15°/0.15%
 • Video crosstalk 60 dB or better to 6.0 MHz

• Audio maximum output level +30 dBm, balanced
 • Audio distortion 0.15% maximum, 20 Hz to 20 kHz
 • Audio dynamic range in excess of 100 dB
 • Audio inputs and outputs on connectors
 • Balanced audio crosspoint, audio common mode gain -60 dB, 10 Hz -20 kHz
 • Remote control panels using momentary switches with choice of LED or incandescent lamps for feedback tally
 • Remote control cable is RG-59/U coax with BNC connectors
 • Local control panels available
 • Switching units are plug-in modules
 • Optional tally relays available for source tallies, intercom, etc.

SWITCHING UNITS

D-4301A	6 x 1 Video Switching Module, bridging inputs, occupies 2 module widths in 10-module DF-603 Rack Frame. Less rack frame and remote control panel.	\$395.00
D-4310A	6 x 1 Video Switching Module, terminating inputs occupies 1 module width in DF-603 Rack Frame or DF-603H Rack Frame. Less rack frame and remote control panel.	\$385.00
D-4302A	6 x 1 Audio Switching Module, bridging inputs, occupies 1 module width in 10-module DF-603 Rack Frame or in 3-module width DF-603H Rack Frame. Less rack frame and remote control panel.	\$405.00
D-4304A	20 x 1 Video Switching Unit, bridging inputs, including 1-3/4" rack frame, less remote control panel.	\$895.00
D-4305A	20 x 1 Audio Switching Unit, bridging inputs, including 1-3/4" rack frame, less remote control panel.	\$895.00
D-4317A	20 x 2 Audio Switching Unit, bridging inputs, including 1-3/4" rack frame, less remote control panel.	\$1800.00
D-4307A	16 x 1 Video-Audio Switching Unit, audio-follow-video switching, bridging inputs. Includes 1-3/4" rack frame, less remote control panel.	\$1250.00
DF-603	Rack Frame, 5-1/4"	\$185.00
DF-603H	Rack Frame, 1-3/4"	\$155.00

REMOTE CONTROL PANELS

D-4320A-6	Pushbutton Remote Control Panel, 6 inputs, for video only, audio-only or audio-follow-video switching. 1-3/4" rack mounting, less control cable (coax). Uses switches with LED tallies.	\$375.00
D-4322A-6	Pushbutton Remote Control Panel, 6 inputs, for video-only, audio-only or audio-follow-video switching. 1-3/4" rack mounting, less control cable (coax). Uses switches with lamps for tally, and clear plastic lenses for inserting legends.	\$385.00
D-4320A-6S	Pushbutton Remote Control Panel, 6 inputs, audio-follow-video or split-audio switching. 1-3/4" rack mounting. Uses switches with LED tallies.	\$395.00
D-4322A-6x2	Pushbutton Remote Control Panel, 6 inputs, 2 output buses, for controlling two of 6 x 1 type switching units. 1-3/4" rack mounting, less control cable (coax). Uses lamps for tally and clear plastic lenses for inserting legends.	\$475.00
D-4320A-16	Pushbutton Remote Control Panel, 16 inputs, for audio-follow-video switching. For use with D-4307A Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with LED tallies.	\$435.00
D-4322A-16	Pushbutton Remote Control Panel, 16 inputs, for video-only, audio-only or audio-follow-video switching. For use with D-4307A Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with lamp for tally, and clear plastic lenses for inserting legends.	\$460.00
D-4320A-20	Pushbutton Remote Control Panel, 20 inputs, for video-only, audio-only or audio-follow-video switching. For use with 20 x 1 Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with LED tallies.	\$455.00
D-4322A-20	Pushbutton Remote Control Panel, 20 inputs, for video-only, audio-only or audio-follow-video switching. For use with 20 x 1 Switching Units. 1-3/4" rack mounting, less control cable (coax). Uses switches with lamps for tally, and clear plastic lenses for inserting legends.	\$490.00
D-4320A-20S	Pushbutton Remote Control Panel, 20 inputs, for audio-follow-video or split-audio switching. For use with 20 x 1 Switching Units. 1-3/4" rack mounting. Requires 2 control cables (coax). Uses switches with LED tallies.	\$465.00

DATATEK CORP.*Routing Switcher***D-4325 Routing Switcher**

- 25 x 1 routing configuration in 2 rack unit frame:
 - Video and Stereo Audio
 - Video and single Audio Channel
 - Video Only
 - Stereo Audio
 - Single Channel Audio
- Control arrangements:
 - Local Control Panel
 - Remote Control Panel over coax line
 - RS-232/422 serial interface (standard)
 - "Wire per crosspoint" parallel
 - Binary parallel port (5 bit)
- All control arrangements operable in parallel with full tally
- Control system fully compatible with D-2000 series routing switchers
- Crosspoint status retained in event of power loss. Memory maintained for years
- AC coupled video inputs with DC restoration
- Vertical Interval video switching referenced to present output signal
- Precision video cable equalizing for outputs
- Differential Phase/Differential Gain of 0.08°/0.08%
- Audio inputs are balanced high impedance bridging, with high common mode rejection
- High audio output level capability, .03% total harmonic distortion at +32dBV
- Wide bandwidth audio for time code usage
- Provisions included to expand from 25 x 1 to 50 x 1

The D-4325 25 x 1 routing switcher provides "on-air" performance switching of video and audio signals. It is contained in a 2 rack unit mounting frame providing up to one 25 x 1 video and two 25 x 1 (stereo) audio channels, and redundant power supply modules. Modules can be deleted where less than maximum capacity is desired.

Twenty-five looping video inputs using BNC connectors are at the rear of the frame and allow expansion to more outputs by adding frames. Audio inputs are by way of 15-pin "D" connectors and, as in the case of the video inputs, looping audio input connectors are provided. A set of mating audio connectors is included with the system.

The rear of the frame also includes a 9-pin "D" connector for RS-232/422 control, which is included in the D-4325 package as standard. Loopthrough BNC connectors are included for use with D-2000 type control panels.

The front of the D-4325 frame can be equipped either with a blank front panel with power supply status LEDs, or a local control panel with audio/video breakaway capability. The front panel is hinged to provide access to the plug-in modules for adjustment or maintenance purposes. There are no active components in the rear of the frame; all active components are on the plug-in modules.

D-4325

Control System

Control electronics for the D-4325 system is included on each of the video or audio switching/output modules. For audio-only switching, a separate control module is not needed.

The microprocessor based control system is D-2000 switcher compatible, allowing use of any of the D-2000 series control panels, as well as the control panels designed specifically for the D-4325 system. Pushbutton remote control is over a single coax cable using BNC connectors, and maximum control cable length is over 1,000'.

A local control panel, D-4325LC, mounts on the front of the rack frame in lieu of a front cover and provides audio/video breakaway switching. The D-4325LC local control panel also includes connectors for remote "wire per crosspoint" and binary parallel controls. This is useful when it is desired to operate the D-4325 system from existing control panels.

The D-2184-25 is a 1 rack unit remote control panel providing breakaway switching and also a "chop" facility to toggle automatically between two selected inputs. This is particularly useful in adjusting and comparing video levels, color levels and timing in amplifiers and program sources.

The D-2033A-25S Remote Control Panel, with relegendable button caps, is available as an alternative to the D-2184-25 Remote Panel.

An RS-232/422 control port is included in the D-4325 as standard, with baud rates up to 38.4K baud plug selectable on the switching/output modules. This allows control from computers, editors, terminals and modems.

A significant feature of the D-4325 control system is that all control methods may be operable in parallel, with normal tallies. For example, a switch made via the RS-232/422 port will be displayed as a tally on both the D-4325LC local control and D-2184-25 remote control panels.

The control system on each switching/output module includes a EEPROM to store crosspoint status in the event of a power loss. Data retention is specified as a number of years.

DATATEK CORP.**Audio Amplifiers****D-507G Audio Distribution Amplifier**

• Bridging • Balanced or unbalanced inputs • 30dBm maximum output capability on each of six 600 ohm source terminated outputs • 20dB gain adjustable \pm 6dB from front panel • Individual power supply • Requires D-507GRA \$195.00

D-507GRA Power Supply and Connector Assembly \$100.00

D-507GRA-1 Power Supply and Connector Assembly for VCR duplicating, to provide 12 unbalanced high impedance outputs \$110.00

D-512D Audio Preliminary/Program Amp

• Microphone of line bridging inputs • Output levels up to +30dB/150 ohm • Transformers on input and output • DC remote gain control • Individual power supply • Requires D-512RA \$340.00

D-512RA Power Supply and Connector Assembly \$145.00

D-513 Audio Distribution Amplifier

• Line bridging • Balanced or unbalanced floating transformer coupled input • Six 150 ohm transformer coupled balanced or unbalanced floating and isolated outputs of up to +30dBm/150 ohm • Individual power supply • Occupies 2 slots in DF-609 frame • Requires D-513RA \$590.00

D-513RA Power Supply and Connector Assembly \$145.00

D-513-600 Audio Distribution Amplifier, same as D-513, wired for 600 ohm output. Requires D-513RA \$590.00

Signal Processing Equipment

900 Series Modular Signal Processing System

902 De-esser Module

- Variable frequency de-essing
 - Full band ducking
 - Auto threshold sensing
 - User may choose conventional crossband attenuation or attenuate only the necessary portion of HR range
 - 10-LED display shows gain reduction 0-20dB
 - Maximum output level: +24dBv into 600 ohms or more
- 902**\$359.00

903 Compressor/Limiter Module

- Stereo strappable
 - OverEasy® characteristic
 - Infinity plus compression
 - Independent detector input permits compression pre-emphasis, anticipatory compression or other effects
 - 10-LED display allows monitoring over a 40dB range
 - +24dBv into 600 ohms or more maximum output level
 - 20Hz-20kHz ± 1dB frequency response
- 903**\$359.00

904 Noise Gate Module

- Key input
 - Downward expansion capability
 - Programmed latch mode
 - OverEasy threshold
 - Adjustable attack and release rates
 - Flexible parameter settings
 - Attenuation limit control
 - Programmed latch mode (PLM) circuit
 - 10-LED display monitors gain, reduction over a 60dB range
 - +24dBv into 600 ohms or more maximum output level
- 904**\$359.00

905 3-Band Parametric Equalization

- Three simultaneous bands of equalization
 - Infinite notch on each band
 - Shelving or contour on hi and low
 - Each EQ band has controls that vary the boost or cut by 15dB
 - HF and LF bands have a switch for contouring (shelving)
 - Clip light shows overdriving (distortion) anywhere within the circuit
- 905**\$379.00

929 Single-Ended Noise Reduction Module

- Sharply reduces constant hiss in a variety of applications. Constant audio- and videotape and optical-sound-track hiss is the main target
 - Adjustable for maximum effectiveness and flexibility
 - No encoding required
 - Balanced inputs and outputs
 - Two channels; stereo-strappable
 - Fast sliding-filter design
 - Multi-function quieting knob
 - 20Hz-20kHz ± 1dB frequency response

Noise-Reduction Systems

180A

140A

150X

**Type I (180A, 150X, 911)
Noise Reduction Systems**

The 180A is a 2-channel record/play (encode/decode) noise-reduction unit for linear transmission media (± 1 dB 20Hz-20kHz response up to high input levels), principally tape decks operating at 15 ips or greater. The 180A is a 600 ohm, balanced unit with terminal-strip connections and a transformer-balancing option, and is designed for nominal +4 levels.

The 150X is similar to the 180A except that it is designed for high-impedance, nominal -10, unbalanced (RCA jack) operation.

The 911 (single-channel simultaneous encode/decode) module, which is designed for use in the 9-bay F900A powered mainframe, gives the same performance as the 180A.

In the 180A and 150X, each channel's encoder and decoder can be used independently at the same time, so full (decoded) monitoring is possible, as is separate use of the encode half for mastering with a second machine. The full encode/decode cycle results in a doubling of media dynamic range, with or without signal present, to a maximum of 115dB, which exceeds all 16-bit PCM systems. Depending on the individual channel noise of the medium, this translates into at least 40dB of noise reduction using the Type I format. Such a feat is achieved by compressing the signal by a 2:1 ratio and applying a carefully tailored frequency-response pre-emphasis during record, and expanding the signal 1:2 with a precisely complementary de-emphasis during playback. The companding is linear over a 100dB range and requires no pilot tones or special calibration.

Applications

Type I units are designed to provide two-step, encode/decode noise reduction around tape recorders with flat frequency response (± 1 dB Hz-20kHz) and headroom maintained at high frequencies. Usually this means a 15 ips machine. (Some recordists may wish to investigate using dbx® noise reduction with a 14- or 16-bit PCM digital recorder to increase its dynamic range significantly). For multi-channel configurations, units may be easily combined and/or stacked.

The 180A is designed for 600 ohms, +4dB levels, and fully balanced operation; balancing transformers are an option. The 150X is a high-impedance, unbalanced -10dB (RCA jack) unit. Both are rackmountable and standard height. The 911 is single-channel encoder/decoder, also a 600 ohm, +4, balanced unit, is a 5 1/4" high module for use in the F900A and FS900 frames.

180A	\$569.00
150X	269.00
911	239.00

**Type II (140A, 224XDS, 941A/942A)
Noise Reduction Systems**

The 140A is a 2-channel record/play (encode/decode) noise reduction unit for use with tape and cassette decks, cartridge machines, VTRs/VCRs, microwave links or land lines, and other less-than-optimum broadcast/transmission/recording media or consumer-grade equipment of non-linear frequency response. The 140A is a 600 ohm, balanced unit with terminal strip connections and a transformer balancing option, and is designed for nominal +4dB levels.

The 224XDS is similar to the 140A except that it is designed for high impedance, nominal -10dB, unbalanced (RCA jack) operation.

The 941A (2-channel encode) and 942A (2-channel decode) modules, which are designed for use in the 9-bay F900A powered mainframe, give the same performance as the 140A. The advantage to having separate units for record and play is that the broadcaster or duplicating house may purchase them according to need, e.g., having only one 941A for production or STL but multiple 942As for individual decoding.

With the 224XDS and 140A, each channel's encoder and decoder can be used independently at the same time, so full (decoded) monitoring is possible, as is separate use of the encode half for mastering with a second machine. The full encode/decode cycle results in a doubling of media dynamic range, with or without signal present, to a maximum of 115dB (105dB for the 224XDS). These figures exceed all 16-bit PCM systems. Depending on the individual channel noise of the medium, this translates into at least 40dB of noise reduction using the Type II format. Such a feat is achieved by compressing the signal by a 2:1 ratio and applying a carefully tailored frequency response pre-emphasis during playback. The companding is linear over a 100dB range and requires no pilot tones or special calibration.

Applications

Type II units will provide two-step, encode/decode noise reduction around 2-channel, non-linear transmission media of greater than 45dB dynamic range. Tape and cassette decks, cartridge machines, VTRs/VCRs, and microwave links or land lines are typical uses. (Type II works fine with linear media too, of course. Some recordists may wish to investigate using dbx noise reduction of either type with a 14- or 16-bit PCM digital recorder to increase its dynamic range significantly.) For multi-channel configurations, units may be easily combined and/or stacked.

The 140A is designed for 600 ohm, +4-level, fully balanced operation; balancing transformers are an option. The 224XDS is a high impedance, unbalanced -10 (RCA jack) unit. Both are rackmountable and standard height. The 941A 2-channel encoder and 942A 2-channel decoder, also 600 ohm, +4, balanced units, are 5 1/4" high modules for use in the F900A and FS900 frames.

140A	\$569.00
224XDS	299.00
941A	259.00
942A	269.00

DBX, INC.

De-Esser/Expander/Equalizer

263X

263X De-esser

- Single-slider action
- Selectable bandwidth
- Knot-adjustable sensitivity
- 1/4" front panel high impedance mike input
- 600 ohm output to +18dBV
- Designed for the working vocalist, sound contractor, band-leader and announcer or DJ
- Single-ended input and output
- 20Hz-20kHz ± 1dB frequency response
- Automatic de-essing operating range: +18 to -35dBV

263X \$149.00

463X

463X Noise Gate Expander

- Single-slider action enables quick setting of the amount and severity of gating
- Adjustable threshold knob
- Single-ended input and output
- 1/4" front-panel high impedance input
- Stereo strappable
- 600 ohm output to +18dBV
- Key input for special applications
- Designed for the recordist/mixer, instrumentalist, ENG technician, sound contractor—indeed, for anyone who needs a friendly processor that gets rid of unwanted noise between notes or sounds
- In an instant change the gating characteristics—and the noisiness and overall sound of the program—by ear
- 20Hz-20kHz ± 1dB frequency response

Two 463Xs become a master/slave stereo pair of noise gates at the push of a button and a single connection cable. However, if you pair a 463X with a 163X OverEasy® compressor/limiter, you have a choice of configurations. If the 163X is the slave and the 463X the master, you'll have a stereo pair of 463Xs—the 163X turns into a 463X. And if it's the other way around (the 163X the master and the 463X the slave), then the 463X turns into a 163X and you have a stereo pair of 163X Compressor/Limiters.

463X \$149.00

1531P

1531P Switchable Stereo/Mono Graphic Equalizer

- 1/3-octave 1-channel or 2/3-octave 2-channel
- Constant-Q filters, selectable range (7.5/15dB)
- Balanced ins and outs, +24dBV
- XLR and phone connections
- Switchable highpass bass filters

The 1531P is a precision equalizer of unusual power, accuracy, and versatility. It is configurable into single-channel 1/3 octave or dual-channel 2/3 octave use. In either mode its filters are of constant-Q topology and its boost/cut ranges are switchable. It works in balanced and unbalanced operation. Its design is low-noise for quiet professional operation. For specialized applications it has a range of highpass (lowcut) filters. And it has precise overall attenuators for each channel level.

Specifications

Filter Type:	ISO centers ± 6%, 1/3-octave or 2/3-octave bandwidths, constant-Q, symmetrical peak/dip
Control Range:	± 15 or ± 7.5dB nominal
Switchable Highpass Filter Sliders	
Centered:	-3dB at 20, 60, or 120Hz, 18dB/octave
Frequency Response:	20Hz-20kHz ± 0.5dB
Equivalent Input Noise:	-90dBVA
Total Harmonic Distortion (THD):	0.01% (0dBV input)
Intermodulation Distortion (IMD) SMPTE:	0.05%
Maximum Input:	+24dBV
Maximum Output:	+20dBV into 600 ohms single-ended, +21dBV into 600 ohms balanced
Input Impedances:	30K ohms balanced, 18.8K ohms single-ended
Output Impedance:	22 ohms
1531P	\$395.00

DBX, INC.

Compressor/Limiters

160 SERIES COMPRESSOR/LIMITERS

The 160 series is a complete line of OverEasy® compressor/limiters. Through sophisticated circuit design, the disturbing side effects often associated with compressor/limiters have been eliminated. All models incorporate the patented dbx® OverEasy circuit, which provides inaudible transition into compression even at high ratios.

The rms detector—a unique circuit for detecting true rms levels—simulates the reaction of the human ear to audio signals, providing compression that sounds natural and appropriate to the music. And because the response of this unique detector accurately correlates to the thermal limits of loudspeakers, dbx compressor/limiters can provide optimum driver protection in high-power applications.

The 160 series also features the patented dbx VCA (voltage—controlled amplifier), which gives precise, low-distortion control of audio levels over a very wide dynamic range. Feed-forward gain control allows beyond infinity: 1 compression ratios without gain instability. DC control of all functions eliminates “noisy pot” problems because no audio signals pass through front-panel controls.

160X Compressor/Limiter

- OverEasy or classic hard-knee compression
- Dual rms display system: Monitors input or output with a 19 LED display. Simultaneously monitors gain reduction over a 40dB range with 12 LED display
- Hardwire bypass
- Stereo-strappable (two units required)
- Infinity + compression provides “dynamic reversal” effects
- Compression ratio continuously variable from 1:1 through infinity: 1 to -1:1
- Threshold variable from -40 to +20dBv
- Output gain variable from -20 to +20dB
- +24dBv input and output levels
- Input and output connectors via a barrier strip or 1/4” tip/ring/sleeve phone
- Active balanced input provides hum and RF rejection
- Provision for optional active-balanced output

160X \$399.00

163X Compressor/Limiter/Preamp

- OverEasy compression controlled by a single slider
- Three-step set-up with front panel level set
- Front panel Hi-Z input with rear panel gain trim
- Rear panel line input/output
- +18dBv maximum output level
- Accessory kit for rackmounting 1 or 2 163Xs (or other dbx _63X products)

163X \$149.00

165A Compressor/Limiter

- Compression ratio continuously variable from 1:1 to infinity: 1
- In automatic mode, compressor attack and release times are determined by program material dynamics. In manual mode, variable attack and release rates allow the 165A to be used as an ultra-fast or slower rms-detecting limiter
- PeakStop® circuit prevents unwanted peaks from getting through
- Separate detector input allows compression preemphasis and other effects

160X

165A

- Each 165A is equipped with matched rms detectors for stereo-strapping operation without the signal-summing errors of conventional strapped compressors
- Analog rms meter is switchable to read input or output levels or the amount of gain reduction over a 30dB range
- Active balanced input for hum and RF rejection
- 24dBv input/output capability

165A \$799.00

166 Compressor/Limiter/Noise Gate

- Noise gate with switchable release rate
- LED shows gate operation
- Variable OverEasy compressor with infinity :1 effects
- PeakStop for good-sounding clipping
- Side-chain monitoring for easy set-up of frequency-dependent or anticipatory processing
- Output level control, +21dBv maximum output
- Hardwire bypass
- 1U-high rackmount
- Gate threshold control allows an 80dB input range. The attack of the gate is very fast and the release is switchable (fast or slow)
- Dual-mono or stereo operation is possible

166 \$575.00

Accessories

- AB-1** Active-balanced-output card for use with the 160X \$30.00
- CA-165** Coupling cable to connect two 165As for stereo operation. \$30.00

“dbx”, “OverEasy” and “PeakStop”, are registered trademarks of dbx a Division of BRS North America, Ltd.

DBX, INC.**Program-Route Selectors/
Synthesizer/Expander****400XG/200XG Program-Route Selectors**

- Connects 3 decks, 3 processors, 1 NR unit
- Hardwired; no signal degradation
- Pre/Post tape processing
- 400X permits processing and NR during dubbing, 200X during playback only
- 400X LED complement shows signal path through processors
- Rackmountable, low-profile
- RCA phono jacks

You can connect all these components in the signal path and switch each one in and out at the push of a button. Moreover, signal processors can be placed in front of the tape decks ("Pre" of pre/post) for processing during recording.

The 400X differs in appearance from the 200X in that a full-function color coded LED display tells you at a glance what's in and out of the signal route. More important, with the 400X you can signal-process during all dubbing operations or use either side (encoder or decoder) of the NR unit. For example, you can make a Dolby cassette of a dbx*-encoded tape as well as the dbx backup copy and an unencoded copy, and you can process the copy with the equalizer, compressor/limiter, expander, etc. (except for encoded-to-encoded dubbing).

In the 200X all the dubbing is direct from deck to deck, with no processing possible.

Both units are rackmountable and are designed for line-level, -10 (RCA jack) unbalanced operation. Best of all, they're hardwired, which means no loss, no gain, no distortion, no signal degradation.

400XG \$279.00
200XG 149.00

**120X-DS Subharmonic Synthesizer
with Subwoofer Crossover**

- Synthesizes 27-54Hz subharmonic fundamentals from 54-110Hz program input
- Precision, phase-coherent crossover for subwoofer applications
- Rackmountable, low-profile
- RCA phono jacks
- 2 channel
- Frequency response (no synthesis, full-range mode): ± 1 dB 25Hz-20kHz
- Dynamic range: 102dB

Included in the 120X is a precision zero-sum (12dB/octave high pass [-3dB at 120Hz], 6dB/octave derived lowpass) crossover for subwoofer and sound-reinforcement applications.

Sliders control the amount of newly restored bass and the overall low-frequency and subwoofer-output levels. An LED display shows where and when the subharmonic synthesis is taking place. The 120X is designed for line-level, -10 (RCA jack) unbalanced operation.

120X-DS \$299.00

3BX-DS Series III Dynamic-Range Expander

- Expansion variable up to 50% (1.5:1)
- Impact restoration variable up to a potential +12dB, signal-dependent
- 3 separate bands of processing
- True stereo RMS expansion (channels ganged) preserves imaging and L/R balance
- Full 4-band LED display

**400XG****120X-DS****3BX-DS**

- Controls and switches for all functions including level match/expansion midpoint (the point between upward and downward expansion) and pre/post tape processing
- Rackmountable, low profile
- Hardwire bypass
- RCA phono jacks
- Expansion: To 50% increase, maximum 12dB upward and 20dB downward
- Frequency Response: ± 0.5 dB 20Hz-20kHz, any setting
- Dynamic range: 107dB

The opposite of a compressor, a dynamic-range expander makes loud sounds louder and quiet ones quieter, thereby increasing dynamic range. An expander is useful, then, in a variety of sound reinforcement applications for improving the excitement and drama of both music and effects. The 2 channel 3BX-DS has sophisticated sounding expansion circuitry, including a fast-acting impact restoration circuit that works only on the initial attack of a transient. The result is a significant increase in "punch" in the music. Old, tired analog sources may be said to take on some of the presence of digital recordings.

Dividing the audio band into three parts—low, mid-, and high—means the dynamic-range expansion is audibly seamless, with no adverse interactions among instruments having different frequency ranges. Expanding the bass guitar will not modulate the ride cymbal.

The 3BX-DS will prove useful in any sound-reinforcement or similar situation calling for an increase in the power and impact of the louder passages along with a reduction in noise. An example would be a system mixing LPs and CDs: dynamic-range expansion with impact restoration permits LPs to take on some of the life and power of compact discs.

3BX-DS Series III \$499.00

Real Time Analysis System

RTA-1 Real Time Analysis System

- Frequency-response analysis using music, the unit's own stereo (uncorrelated) pink noise, or tones
- Precision 1/3rd-octave topology using triple-tuned (IEC class 3) filters, ISO-centered 31 bands (20Hz-20kHz); 0.3dB resolution, 100+dB dynamic range; true rms-level detection
- Analyses performed in real time; battery-backup memories have averaging, subtracting, inverting, or normalizing capabilities; A, C, or CCIR-ARM weighting, or flat; selectable display range
- Accumulation with variable time constants including exclusive "forever" averaging
- Help screens at the touch of a button; easy-to-use menu-driven operating system with flexible (8088) microprocessor-based architecture
- High-resolution, high-visibility amber CRT display; output for color monitor (IBM EGA standard)
- RS-232 and Epson FX80 (or equivalent printer) parts for PC compatibility
- Mike preamps built-in with 48V phantom power supply
- Automatic calibration

The RTA-1 professional realtime analysis system computes, displays, stores, and manipulates response curves using external signal generators, its own pink noise, or the actual music program. It offers unprecedented flexibility in measuring audio frequencies.

The self-contained, PC-compatible RTA-1 includes an 8088-based microcomputer, an amber CRT monitor, two uncorrelated pink-noise generators, soft keys, and cursor joystick, and all processing including self-calibration.

Menu-driven, the RTA-1 offer an infinite accumulation mode, several averaging and peak-hold modes, battery-backup multi-memory storage and manipulations, and has a color-monitor output and a printer port. Curves may be saved, averaged, subtracted, normalized or inverted, copied or erased; memory is handled with graphic menus that display 16 subscreens.

Inputs are all balanced and include two at microphone level with 48V phantom powering and four at line level. All inputs may be monitored on the screen, by themselves or in combination. Version 1.0 operating modes, all keypad-chosen, comprise RTA functions, RRC (room-response curve derived using music), and memory analysis. The cursor permits scrutiny of levels or responses in each band.

The front controls of the RTA-1 include the cursor joystick, brightness, on/off, six soft-key screen-labeled buttons for RTA operation, a "back" (previous menu) button, access to help, pink-noise mute, printout, and XLR inputs for self- or phantom-powered microphones. Sturdy handles make lifting and rackmounting easy.

The rear of the RTA-1 comprises two pairs of inputs and parallel outputs, pink-noise outputs, D-type connectors for various digital and computer equipment, AC power, and battery backup. Protective feet let the unit be set on its back.

Specifications

Filters:	31 ANSI class III bandpass-type, monolithic switched-capacitor; 18dB/octave asymptotic slope, triple-tuned, flat-passband (maximum ripple 0.5dB)
Center Frequencies:	20-20kHz, $\pm 6\%$ (ISO)
Detectors:	32, rms

Mike Inputs:	
Impedances:	2.5 k-ohms/100 pF differential 100 k-ohms/200 pF single-ended, phantom off 5 k-ohms/200 pF single-ended, phantom on 48VDC $\pm 10\%$ through 4.99 k-ohms to both signal lines; 20 mA maximum current with 2 mV ripple
Phantom power:	
Common-Mode Rejection Ratio:	> 50dB at 10 kHz (80dB at 1 kHz)
Crosstalk, Any Two Inputs:	< -60dB
Dimensions:	7"H x 19"W x 19.25"D

RTA-1.....\$6950.00

* The RTA-1 is intended for analyzing broadband signals and therefore its self-calibration uses pink noise for highest accuracy in such measurements. The triple-tuned filters used to achieve ANSI class III response have three bumps (ripple) across the flat portion of their response, so a sinewave swept across the passband of any one filter will appear to vary in amplitude approximately up to $\pm 0.3\text{dB}$. For broadband sources the noise-based calibration averages out these errors.

DELTA ELECTRONICS, INC.

Exciter/Monitor

C-QUAM® AM STEREO SYSTEM*ASE-1 AM Stereo Exciter****ASM-1 AM Stereo Modulation Monitor**

C-QUAM Stereo Exciter and Stereo Modulation Monitor produce an AM stereo quadrature modulated signal having superior separation and low distortion throughout the audio spectrum. The ASE-1 Exciter and ASM-1 Monitor C-QUAM System is completely compatible with existing monaural receivers and multimode decoder receivers.

C-QUAM Stereo transmission system is a full spectrum system providing separation from 50 Hz to over 10 kHz. Its signal can be demodulated by simple envelope detectors to produce a low distortion monophonic audio signal while stereo receivers demodulate the same signal to full stereo.

The ASE-1 C-QUAM Exciter produces the signals needed for stereo operation of an AM broadcast transmitter. From stereo audio input, the Exciter generates an audio drive signal for the transmitter's modulator and an RF signal to replace the transmitter's crystal oscillator output.

ASE-1 Exciter circuitry includes all required processing features. Limiters are provided to prevent excessive positive and negative modulation. A blend processor makes high single channel modulation possible, by blending a little of each channel with the other. Additional processing is not necessary. Unlike FM stereo, C-QUAM AM modulation does not require pre-emphasis.

Meters and convenient controls simplify use of the ASE-1. Large lighted meters display either left and right audio levels or L + R and L-R audio levels, in dB and percentage modulation. The mode switch selects stereo or mono operation. The pilot switch controls the 25 Hz tone, allowing the tone to be turned off as required in testing. The switch labeled Day/Night selects one of two audio equalization circuits, adjusted to match separate, alternate transmitters. The equalization circuits also can be remotely selected through contacts on the rear panel.

The ASM-1 Stereo Modulation Monitor houses a high performance C-QUAM decoder which demodulates the RF sample. The ASM-1 provides all the demodulated signals necessary for annual proof of performance when used with standard AM proof equipment.

The demodulated signals available on the rear panel of the Monitor include L + R, L-R, Envelope Detector Output, and Left and Right audio, both balanced and unbalanced. The 25 Hz pilot tone used in the C-QUAM system also is available on a rear panel connector.

Front panel meters display the pushbutton selected parameters: positive and negative L + R, L-R, L and R modulation levels. Peak flashers indicate -100%, +125%, L-R Limit, and negative limit modulation conditions. Two additional thumbwheel controlled peak flashers can be set to flash at any desired level of modulation. The modulation meters and the thumbwheel controlled peak flashers are accessible through rear panel connectors for remote indication.

SPECIFICATIONS

The following is typical closed loop performance of the Exciter operating into the Monitor.

Stereo Separation:

35 dB minimum

Frequency Response:L,R 40 Hz to 15kHz \pm 1.0 dB**EXCITER****Audio Input:**

Receiver/Generators

RG-4

RG-3A Receiver/Generator

- Frequency counter on generator
- Correlation detector circuit
- Heavy gauge weatherproof aluminum case
- Operates on line current or gel cell batteries (optional)
- Double shielded coaxial cables
- Front panel meter indicates generator output voltage, battery voltage, and receiver IF

The RG-3A is designed to be used in conjunction with any conventional impedance bridge for antenna measurements in the AM broadcast band. However, a dramatic improvement in signal-to-noise ratio will be realized when the RG-3A is used with the Delta model OIB-1 or OIB-3. The unique patented circuit of the Delta impedance bridges places the high-level output (two watts) directly in parallel with the interfering signals on the antenna. The generator is attenuated by the measuring network in other bridges before competing with the interfering signals.

A solid state linear power amplifier provides two watts (10V across 50 ohms) of RF output. Modulation (90% AM) is selectable with a front panel switch. The generator output may also be pulsed with a 50Hz square wave for use with the correlation detector in the receiver. Digital readouts display the generator frequency (10Hz resolution) for accurate setting of the desired frequency. The generator and the receiver track together utilizing a single tuning control.

The receiver uses a correlation detector circuit. The correlation detector switches the generator on and off at a 50Hz rate. The detector output during generator off periods is subtracted from its output during generator on periods. Interfering signals are thus removed from the indicated receiver output, permitting excellent null indication on the front panel meter.

A voltage sensing circuit automatically disconnects the battery supply to prevent excessive discharge of the gel cell battery. An LED indicator indicates charging. The power supply permits operation of the RG-3A while charging batteries or even with the batteries removed.

Specifications

- Frequency:** 0.5 to 1.65MHz in 2 bands
- Accuracy:** Digital display with 10Hz resolution
- Tuning Control:** Single knob tunes generator and receiver, ± 5 kHz vernier on receiver
- Output Level:** Adjustable: 10V RMS (2W) into 50 ohms, 20V RMS Open circuit
- Modulation:** 400Hz 90% AM, 50Hz square wave
- Connector:** BNC female
- Receiver**
 - Sensitivity:** 5 μ V nominal
 - Selectivity:** -3dB bandwidth 3.2kHz (± 1 kHz)
-45dB bandwidth 34.0kHz (± 4 kHz)
- Receiver BFO:** Variable
- Weight and Dimensions:** 28 lbs., 16" wide, 10" deep, 11.5" high

- RG-3A with batteries \$4245.00
- RG-3A without batteries 3995.00

RG-4 Receiver/Generator

- Up to 2W output
- 10 microvolt receiver sensitivity
- Receiver/generator isolation > 120dB
- 100kHz to 30MHz operating range
- Digital frequency synthesizer design
- Keypad entry operations
- 9 frequency test storage registers
- Coincidence detector
- LCD readout
- Gel-cell battery pack

The RG-4 Receiver/Generator is designed as the ideal companion instrument for Delta's OIB-1, OIB-2, and OIB-3 impedance bridges. These bridges and the RG-4 thus form a complete, portable impedance measuring system. Its lightweight construction, combined with a rugged weatherproof aluminum case, make this instrument equally at home on the service bench or in the field.

The generator output level is 2W, 100kHz to 20MHz, and 1W, 20MHz to 30MHz. Receiver sensitivity is 10 microvolts, with separate front panel gain controls for RF and audio. Generator/receiver isolation is > 120dB.

Frequency selection is accomplished by a front panel keypad assembly, controlling a precision phase locked loop digital frequency synthesizer. Selected frequencies are displayed on a large LCD readout panel. To help speed test processes, nine storage provide store and recall of your frequently used test frequencies.

Frequency increment and decrement keys provide manual sweeps of a chosen frequency in 1, 10, 100, or 1000kHz steps. Separate 5kHz step keys simplify FCC required antenna resistance measurements.

Modern gel-cell batteries power the unit for field measurements, for up to four hours from a full charge condition. The AC supply/charger operates from either 120VAC or 240VAC. The power supply will both power the unit and charge the batteries at the same time. Automatic switching in the power supply to a "trickle" charge condition prevents battery damage.

Specifications

- Generator**
 - Modulation:** 400Hz 90% AM, 50Hz squarewave

AMP-1 AM Stereo Tri-Band Audio Processor

- Digital control
- Tri-band processing in matrix mode
- Active, balanced input/output circuits
- VCA gain display for each band
- L + R and L-R processor modulation display
- User adjustable density for each band
- User adjustable L + R positive peak limiter
- User adjustable gated bands
- Input high and input low indicators
- Single channel limiter indicator (audio loss indicator)
- Auxiliary mono output
- Block diagram and setup information on top cover
- Front panel stereo headphone jack and level control

The AMP-1 AM stereo tri-band audio processor is a high performance processor which combines state-of-the-art technology with ease of operation. The processor design complements ASE-1 AM stereo exciter and C-Quam® stereo systems. The AMP-1 delivers a loud, clean, and bright sound. Stations contemplating a move to AM stereo may initially use the AMP-1 in a monaural mode to provide an improvement over older processor technology and then convert the AMP-1 to AM stereo processing through simple jumpers.

The AMP-1 AM stereo tri-band audio processor provides state-of-the-art processing techniques. The input audio signal amplifiers are digitally controlled for precise level adjustment. The input gain control circuit uses a broadband AGC with slow attack and release times.

All processing occurs in the L + R and L-R matrix mode for optimum stereo performance. For both the L + R and L-R signals, three frequency filters divide each signal into low, mid and high bands. Each frequency band is independently processed for a more consistent and pleasing sound regardless of the program material. The three bands are then summed and applied to an integrated clipping circuit which can be adjusted according to the station's programming. Individual L + R output level and L-R output level controls provide independent adjustment of modulation levels. The left channel and right channel signals are then derived from the L + R and L-R signals. All input and output circuits are balanced, active circuits. A high quality, front panel accessed headphone driver permits easy setup and adjustment in typically noisy transmitter environments. The AMP-1 design maintains the Delta tradition for rugged mechanical construction.

Ease of adjustment and operation was a primary goal in the design of the AMP-1. This goal was realized with a straightforward front panel design and easily adjusted controls. The input circuit is jumper selectable for a -15 to +15dBm input level and for balanced or unbalanced operation. The gain of each low, mid and high band voltage controlled amplifier (VCA) is displayed for each band from 2 to 20dB in 2dB increments by three ten-segment LED displays. Two additional ten-segment LED displays show processor modula-

tion for both the L + R and L-R signals. The processor operation can be monitored using the front panel headphone jack and volume control.

The eight processor controls are accessed by removing a front panel security cover. Three controls determine the density of the low, mid and high VCA outputs. The gate threshold control adjusts the aggressiveness of the processor. A stereo enhancement control widens the stereo image. Individual L + R output level and L-R output level controls permit individual adjustment of the modulation levels. Output gain is adjustable from 0 to +20dBm. A positive peak control permits full adjustment of the L + R positive peaks of from 100% to 150%.

Specifications

Audio Input:	20K ohms, balanced, -15dB to +15dB 20K ohms, unbalanced, -5dB to +5dB
Audio Output:	600 ohms, balanced, 0dB to +20dB < 10 ohms, unbalanced, +6dB to +26dB
Input CMRR:	> 40dB
Gain Control Range:	10dB, differential input amplifiers 25dB, tri-band VCA's 8dB, peak limiter
L-R Gain Adjustment Range	
(Stereo Enhance):	0dB to 4dB (Mid band) 0dB to +6dB (High band)
Crossover Frequency:	Low band Fc (-3dB) = 20Hz to 200Hz Mid band Fc (-3dB) = 200Hz to 2000Hz High band Fc (-3dB) = 2000Hz to 20kHz
Metering:	VCA Tri-band Gain: 2dB to 20dB 2dB increments
	L + R Processor Modulation: 40% to 130%, 10% increments
	L-R Processor Modulation: 10% to 100%, 10% increments
Input Connections:	6-terminal barrier strip, left (+, GND, -) right (+, GND, -)

DELTA ELECTRONICS, INC.**Splatter Monitor****SM-1 AM Splatter Monitor**

- Means of verifying FCC and NRSC compliance
- Easy to operate and to interpret measured results
- Measurement of I, Q, I+Q (chopped) and external audio signals
- 450kHz to 1700kHz phase-locked operation with 10kHz or optional 9kHz channel spacing
- Portable operation from external 12VDC supply and optional active antenna
- Meter detector circuit ballistics matched to splatter levels as perceived by a listener
- Front panel speaker and headphone jack permit audible monitoring of interference
- Adjustable alarm output permits remote control monitoring
- Rear panel I and Q outputs and buffered meter output

The model SM-1 AM Splatter Monitor provides AM broadcast engineers with a means of accurately and easily measuring off-channel emissions to ensure compliance with the FCC regulations or the more stringent recommendations of the NRSC. Manufactured in response to the recommendations of the National Radio Systems Committee (NRSC) for AM improvement, the instrument provides many of the features of an expensive spectrum analyzer at a significantly reduced price. The AM Splatter Monitor measures the level of splatter or any other spurious emissions which fall between 11kHz and 100kHz away from both sides of the carrier.

Designed to be installed in an equipment rack and fed with an RF sample from the transmitter or common point, the AM Splatter Monitor is also portable and can operate from a twelve volt DC source, such as the cigarette lighter in an automobile. An RF sample is provided via an optional active antenna. This portability feature makes the Splatter Monitor attractive for investigating interference complaints.

Because splatter level normally decreases with frequency away from the carrier, the AM Splatter Monitor measures the most important segment of spectrum associated with splatter. This same segment of spectrum is where the changes in splatter level occur. These changes are due to factors such as shifts in modulation level, changes in program material, audio processor adjustments, and tube aging. The AM Splatter Monitor has an alarm that may be set to detect such changes. The station can use this alarm through a remote control system to signal the occurrence of a splatter problem.

The AM Splatter Monitor is normally installed in a rack at the transmitter site to continuously monitor the transmitter's output spectrum. Although the regulations regarding emission limitations require field measurement to assure compliance, the intervening elements between the transmitter's output and the far field are usually quite

linear, so continuous monitoring of a transmitter's output is a reasonable indication of operational compliance. The AM Splatter Monitor is portable, and may be removed from the rack for field monitoring to assess compliance of the close-in spectrum (within 100kHz) to emission limitations rules. The unit may also be used for field monitoring in the strong signal areas of other AM stations to investigate interference complaints. For these purposes, the AM Splatter Monitor derives power from an automobile's cigarette lighter jack (+12V) and receives its RF input signal from an optional, active antenna.

A 3 $\frac{1}{2}$ digit thumbwheel switch labeled Carrier kHz adjusts the operating frequency of the AM Splatter Monitor from 450kHz to 1700kHz. Simple crystal and jumper changes allow operation at either 9kHz or 10kHz channel spacing. When tuned to 450kHz, the AM Splatter Monitor can be connected to the 450kHz IF output of a synthesized receiver, taking advantage of the AM Splatter Monitor's synchronous detectors to evaluate the I and Q modulation of received stations.

Specifications

SM-1	Splatter Monitor, 10kHz channel
SM-1A	Splatter Monitor, 9kHz channel
RF Input:	50 ohm unbalanced, 1 to 20VRMS
Measurement Range:	0 to -85dBc
Measurement Accuracy:	± 2 dB
Detector Modes:	I, Q, I and Q (chopped) and external audio
Measurement Functions:	RF Cal 0-100kHz Spectrum 11-100kHz Spectrum Variable (offset) Spectrum 0 to -45dBc -40 to -85dBc
Offset Range:	11-99kHz
Offset Bandwidths (Receiver Models):	Spectrum analyzer mode (± 0.5 kHz) Narrow Band Receiver (± 3.0 kHz) NRSC Wide Band Receiver

DELTA ELECTRONICS, INC.**Remote Control System****RCS-1V****Remote Control System**

The RCS-1V Remote Control System provides radio and TV broadcast studio personnel with constant monitoring and control of unattended transmitter facilities.

- Continuous video display of digital readings and equipment status indicators
- Automatic update of channel readings and status
- Highlighted out-of-tolerance and alarm flags
- User-designated screen format
- A number of system options including autologging, telephone access with voice synthesizer, and modulation bargraph displays

The RCS-1V is designed to eliminate the need for operator intervention in monitoring, and to simplify that intervention when control action is required. The operator interface is provided by a video display screen and keypad. The machine interface is provided by specialized input and output modules. System memory and logic are provided by integral microprocessors.

Measurement and status information from station equipment is read by the Remote Control System. The system interprets this information and makes it constantly available to the operator. No operator action is required for normal monitoring. Station log entries are simply copied from the screen, or the system can be equipped to print the log automatically.

Video flags and alarm messages alert the operator when a control action is required. Simple keypad pushbutton manipulations allow the operator to adjust equipment in response to instantaneous readings, and to change equipment status and operating modes as necessary. All control actions are confirmed by corresponding changes in screen display data.

SPECIFICATIONS**RCS-1V Transmitter and Studio Unit:**

Height: 10.5" (26.7cm)

Width: 19" (48.3cm) standard EIA rack mount

Depth: 20" (50.8cm) including mating connectors

Color: Light gray front panel, green phosphor display (optional white)

Weight: 36 lbs. (16.3kg)

Power: 115VAC +/-10%, 50/60Hz approximately 100 watts depending on options (optional 230VAC)

Fuse: 3AG-1A SLO BLO (0.5A for 230VAC)

Battery Backup: Video refresh memory, channel definition memory, and digital clock circuit are backed up by three C size alkaline cells. Estimated life: 2 years

Modem Port: RS-232C, 1200 baud full duplex, 25-pin miniature "D" receptacle

Printer Port: RC-232C, 50-19, 200 baud internally selected (nominally 4800 baud) 25-pin miniature "D" receptacle 20mA loop — TB1-4 and TB1-5

External Video: BNC female, 2.25V p-p non-interlaced composite video

I/O (Input/Output) Unit:

Height: 10.5" (26.7cm)

Width: 19" (48.3cm) standard EIA rack mount

Depth: 12" (30.5cm) including mating connectors

Color: Light gray front panel

Weight: 14 lbs. (6.4kg) plus optional cards

Power: Derived from RCS-1V transmitter unit

Mounting: Must be immediately above or below the RCS-1V transmitter unit or another I/O unit

Number I/O Units per System: Maximum 3 for up to 88 channels

**RCS-1V****RCS-1V Remote Control System Control Units**

RCS-1V Transmitter Site Unit w/integral video display and bus buffer assembly	\$6200.00

DELTA ELECTRONICS, INC.**Power Controller****APC-1 Automatic Power Controller**

- Automatically controls the antenna current of AM stations to insure that the power is kept within FCC limits
- Requires DC signal from linear rectifier or from Delta's TCA/TCT line of current transformers and ammeters. Provision for controlling up to three power levels for day, night, and pre-sunrise operating modes
- Long time constant circuit minimizes effects of modulation and carrier shift
- Meter shows deviation from correct power level. LED indicators show status of power controller
- Relay chatter and "hunting" is prevented by using special digital logic circuits to provide selectable increments for on-off timing of raise and lower motors, depending on the characteristics of the raise/lower controls. Different timing available for main and alternate transmitters (or for day and night transmitters).

The APC-1 Automatic Power Controller measures the operating power of an AM station, and by interconnection to the transmitter's Raise/Lower controls causes the power to remain well within FCC limits. The unit monitors a DC voltage from an external linear rectifier driven by an RF sample of the common point or base antenna current. A special long time constant circuit removes modulation components and averages carrier shift variations. The DC voltage is then compared to several fixed voltages and the comparator outputs enable appropriate operation of the Raise/Lower controls and front panel indicators. A relative power meter provides continuous display of the power level and facilitates setup adjustments.

The input circuits provide for adjusting the gain of up to three instrument amplifiers and selecting the appropriate signal depending on mode of operation. (Day, night or pre-sunrise authority.) Front panel adjustments are provided to set the power meter to 100% when the correct power is indicated by the official RF ammeter.

Comparator circuits provide for operation of the Raise and Lower relays and LED indicators and provide rear panel alarm outputs and LED indicators when the power exceeds the FCC high limit of 105% or the FCC low limit of 90%. A front panel pushbutton permits testing the FCC high alarm at 100% power level instead of 105% power level. An additional comparator determines when the power is below a selectable value of 70 or 80% so as to prevent operation of the Raise relay, should the power be well below the normal level.

Special digital timing circuits permit separate adjustments (by changing circuit board jumpers) for two transmitters so that the power controller will return the power to near 100% on each correction. This prevents relay chatter and hunting which would otherwise occur as the power level remains near the Raise or Lower limit.

The Raise and Lower limits may be set to select from three incremental thresholds at which power correction occurs (by changing circuit board jumpers). Front panel controls are available for manual transmitter control when needed.

The ATS option includes additional circuits and indicators to determine if the FCC power levels are exceeded for three minutes.

The APC-1 circuits utilize CMOS digital circuitry and conservatively rated IC operational and instrument amplifiers. A single printed circuit board accommodates the input and control logic circuits and two additional boards are used for the regulated power supply and the ATS option circuits. Adequate RF shielding and filtering are provided to insure reliable operation in high RF fields as experienced by some transmitting stations.

**Specifications****Main/Alternate**

Indicators: Two LEDs to indicate transmitter in use

Power Level**Indicators:**

Disable (70% or 80%), FCC Low (90%), Raise (90%, 93.3% or 96.7%), Lower (101.5%, 103.3% or 105%), FCC High (105%)

CPB-1/CPB-1A

Common Point Impedance Bridges

The CPB-1 and CPB-1A Common Point Impedance Bridges* are operating impedance bridges similar to the OIB-1, but designed for permanent installation in your phasing equipment at the antenna common point. The CPB-1 will handle common point powers up to 5kW with 100% amplitude modulation on a continuous basis. The CPB-1A is designed for transmitter powers up to 50kW. Both instruments have two 4" dials calibrated directly in resistance and reactance. A panel meter is provided for use as a null detector. The R and X dials are manipulated as a normal bridge to give a null indication on the panel meter while the transmitter is operating at full or reduced power. The value of the common point resistance and reactance can then be read directly from the two dials.

- CPB-1 Common Point Impedance Bridge, 5kW **\$2205.00**
- CPB-1A Common Point Impedance Bridge, 50kW **.2625.00**

Note: CPB-1 and CPB-1A available with or without front panel.

OIB-3

OIB-1

Operating Impedance Bridge

The OIB-1 Operating Impedance Bridge* measures the operating impedance of the individual radiators, networks, transmission line sections, and common point of directional antenna systems while they are functioning under normal power. This "operating impedance" cannot be measured by usual impedance bridge methods because the systems' characteristics are disrupted when the bridge is inserted in the circuit. The OIB-1 thus satisfies a critical requirement long felt by consulting and broadcast station engineers. In addition it has many applications in other fields that cannot be duplicated by any other instrument.

- OIB-1 Operating Impedance Bridge (Specify lead length 12" or 18") **\$2095.00**
- Extended R and X Ranges **.2890.00**
- Permits reading resistance to 1000 ohms.
- Reactance to 900 ohms. Includes calibration.

*U.S. Patent No. 3,249,863.

OIB-3

Operating Impedance Bridge

The OIB-3 is an advanced version of the industry standard OIB-1 operating impedance bridge. It has all of the OIB-1 features plus an extended resistance and reactance range and an improved meter amplifier. It is built in a heavy drawn aluminum case and no additional carrying case is required.

- OIB-3 Operating Impedance Bridge (Specify 12" or 18" Leads) **\$2890.00**
- Bridge Leads 12" Replacement Leads for OIB-1 or OIB-3 (2 each) **105.00**
- Bridge Leads 18" Replacement Leads for OIB-1 or OIB-3 (2 each) (Changing lead length requires recalibration) . . **105.00**
- Recalibration Cleaning and recalibration of OIB-1, OIB-3 and CPB-1/1A **.280.00**
- Repair labor and parts additional.
- Return authorization not required.

FMC-1

Frequency Modulation Controller

• Automatically controls the modulation level of an FM or Aural television transmitter to prevent excessive or undesirably low modulation • Uses an input sample from the audio or composite output of modulation monitor • Interfaces monaural or stereo composite signal with 600 ohm balanced input and output circuits • Provides A +/-8dB window of adjustment of stereo, audio or composite • Front panel meter indicates audio operation gain of system, and test modulation percentage • Two one-digit counters with overflow indicators separately display over modulation peaks for present and previous one minute count period • Recessed front panel controls provide adjustment of four modulation control levels and the audio level adjustment rates

FMC-1

- Test mode checks operation of controller and facilitates parameter adjustment
- Proof of performance tests may be conducted with unit in circuit
- Reverts to hardwire through mode on power or circuit failure

The FMC-1 frequency modulation controller provides automatic control of the modulation levels of an FM broadcast transmitter or audio channel of a TV transmitter. The FMC-1 provides a closed loop system around the transmitter which allows the broadcast engineer to maintain modulation at the desired level despite variations in the audio level from different program sources and other system variances. Through fail in is controlled by a digital attenuator maintaining true transparency at all gain settings. No clipping or compression is used.

By using a closed loop approach, the FMC-1 allows modulation levels to be maintained independent of audio program levels, output level variations of the stereo generator or other exciter/transmitter variations which may affect the audio baseband level.

- FMC-1S Single Channel **\$4130.00**
- FMC-1S With ATS **.4675.00**
- FMC-1D Dual Channel **.4550.00**
- FMC-1D With ATC **.5125.00**

TCT-1/TCT-2 and TCT-3

Toroidal Current Transformers

The TCT-1, TCT-2 and TCT-3 are precision toroidal current transformers designed primarily for obtaining sampling voltages for phase and magnitude measurements on broadcast arrays. The units are housed in rectangular aluminum shield enclosures with a 1 1/4" teflon lined pass hole through which the current carrying conductor is passed.

The TCT-1 and TCT-2 may both be used in the same system since they have identical tracking characteristics. The TCT-3 has somewhat different characteristics and preferably should not be mixed with the other two types.

- TCT-1 Toroidal current transformer 0.5V/A **\$300.00**
- High voltage (HV) model **500.00**
- TCT-2 Toroidal current transformer 0.25V/A **.300.00**
- High voltage (HV) model **.500.00**
- TCT-3 Toroidal current transformer 1.00V/A **.300.00**
- High voltage (HV) model **.500.00**

DELTA ELECTRONICS, INC.

Broadcast Products

MJ-50 In-Line High Power Meter Jack

The MJ-50 Meter Jack is a make-before-break in-line jack assembly especially designed for permanent installation in broadcast antennas, transmission lines, and networks to permit the "hot" insertion of the OIB-1 operating impedance bridge or ammeter without interruption to normal program operation. The Meter Jack is rated for continuous operation at currents of up to 50 amperes and is insulated for 10kV RMS. Accessory plug panels are available for use with the OIB-1 and for all of the most commonly used ammeters. The BP-50 bridge panel is a plug panel designed for insertion in the meter jack and has terminals suitable for connection to the OIB-1 bridge leads and is also rated for 50 ampere operation. The MP-308 as depicted above is a plug-panel for use with a Weston model 308 ammeter for "hot" ammeter insertion. Plug panels for use with other meters are also available on request.

MJ-50	Meter Jack	\$205.00
BP-50	Bridge Plug	105.00
MP-308	Meter Plug	105.00

AMC-1 Amplitude Modulation Controller

The automatic modulation controller is the only modulation controlling system that provides a completely closed loop around the transmitter. The sampling of actual modulation levels after the PA output network assures precise adjustment for optimum modulation levels. The AMC-1 also keeps a digital count of positive and negative over-modulation bursts for both present and previous one minute periods.

AMC-1	Amplitude Modulation Controller . . .	\$4515.00
	(With ATS option)	5040.00

Transmission Line Switches

The manually or remotely operated coaxial transfer switches are designed to change coaxial connections with a minimum of change-over or off-air time. They can switch pairs of transmission lines in less than two seconds.

The 6730E and 6732E coaxial transfer switches are manufactured for use with 1 5/8" 50 ohm transmission line. The 6740B and 6742B coaxial transfer switches are designed for use with 3 1/8" 50 ohm transmission line. The 6730E and 6740B operate on 120V, 50/60Hz. The 6732E and 6742B operate on 220/240V, 50/60Hz.

Transfer switches are used to switch transmitters, transmission lines, antennas, dummy loads and auxiliary equipment quickly and efficiently when failures occur, when operating

procedure is changed, or during scheduled maintenance periods. They also simplify equipment tuning, testing, and emergency repairs by facilitating quick checks under actual operating conditions.

DELTA ELECTRONICS, INC.

Variable Inductor/Reflectometer

RVI 30135U0/35125V7 High Current, Long Life Rotary Variable Inductor

The RVI is especially suited for commercial and military applications, where long life and high reliability are prime requirements.

All metal components of the RVI are heavily silver plated, and the winding is black passivated. Insulating materials have been selected for high voltage and high temperature operation: Teflon over glass reinforced epoxy for the coil winding support; steatite for bearing and roller mounts; glass reinforced epoxy for the base plate.

End contacts to the coil are made through silver plated wipers on the end bearings. The moving contact is a massive contoured roller riding on a roller rod which is in turn supported at each end by heavy silver plated brass end mounts. Steel springs housed in wells in the end mounts maintain constant roller pressure at any position along the coil but are out of the current path.

Coil shaft bearings are sized to provide extremely long life, even under continuous rotation. The inductor is therefore well suited for motor-tuning applications. A wide range of inductance values is available from the standard RVI series. Special sizes, shaft dimensions, and other features are available on special order.

Specifications

RVI 30135U0

Maximum Inductance: 12 μ H
Minimum Inductance: 0.06 μ H
Distributed Capacity: 9.1pF
Halfwave Resonance (Coil Shorted): 37.5MHz
Current Rating (Free Air): 40A (4MHz), 20A (30MHz)
Number of Turns: 13
Turn Pitch: 9/16"
Base Plate and Coil Frame Material: Glass-reinforced epoxy (G10)

RVI 35125V7

Maximum Inductance: 10 μ H
Minimum Inductance: 0.10 μ H
Distributed Capacity: 13.5pF
Halfwave Resonance (Coil Shorted): 42MHz
Current Rating (Free Air): 40A (4MHz), 25A (30MHz)
Number of Turns: 12
Turn Pitch: Variable — 9/16" to 7/8"
Base Plate and Coil Frame Material: Glass-reinforced epoxy (G7)

RVI 30135U0/35125V7 \$995.00

PRH-1 High Power Pulse Reflectometer

The PRH-1 is a high power pulse reflectometer intended for measurements on rf transmission line systems. It is useful for determining the location and nature of faults and for the periodic routine surveillance of these systems.

PRH-1

RVI

It is especially designed to operate in the high field environments found at HF transmitting installations. As an example, useful data has been obtained on a line terminated in a rhombic antenna immediately adjacent to a second rhombic antenna operating with 500kW power applied.

The Reflectometer drives the transmission line with a high voltage, short duration, gaussian shaped pulse. A time versus amplitude display of the echoes is examined on an oscilloscope. These echoes originate from line discontinuities and faults, and from the antenna or load terminating the line. The nature of the line faults or other echo sources can be determined from the shape of the echo displays. The distance to the echo sources can be measured using the time calibration of the oscilloscope display.

Specifications

Characteristic Impedance: 50 ohms (unbalanced)
Pulse Voltage: Adjustable to 5kV maximum
Peak Pulse Power: Adjustable to 500kW maximum
Pulse Duration: 30 ns nominal
Pulse Repetition Rate: Internally adjustable to 10kHz maximum
Range Resolution: 5 - 10 feet (dependent on internal adjustment and oscilloscope bandwidth)
Range Accuracy: 2% typical (dependent on oscilloscope sweep accuracy)
Maximum Induced Power Level: 500W continuous; 1000W intermittent
Power Requirement: 115V; 50/60Hz; 40W
Size (rackmounting): 7" H, 19" W, 10" D
Size (portable): 7" H, 12" W, 10" D
Weight: 20 lbs.
Accessories Supplied: 10' terminated scope cable
Pulse Output Connector: Type N

PRH-1 \$3100.00

TCA Series Ammeters

The TCA (Transformer Coupled Ammeter) series uses a toroidal current transformer (TCT) to obtain a sample voltage proportional to the RF current flowing in a conductor. This sample is connected by a 50 ohm coaxial cable to a special rectifier circuit where it is converted to a DC current to drive the indicating instrument. A DC voltage output for driving a remote indicating instrument which may be calibrated to agree with the primary meter and used for remote indication is also provided.

The primary winding of the transformer is the current carrying conductor passed through the hole in the transformer box. This is usually a tubular lead feeding a tower base, a network lead, or the conductor connecting the transmitter output to the "common point" of the antenna phasing networks.

The meter circuit has a 50 ohm load resistor for proper termination of the cable. Thus, the cable is both source and load terminal for a match. A patented three-diode rectifier circuit converts this sample to a DC voltage for display.

A switch is provided on all meters to remove and ground the rectifier portion of the circuit when not required. This greatly enhances its immunity from lightning damage.

Every TCA system is calibrated at an RF frequency of 1MHz. Since the frequency response is extremely flat, accuracy is assured over the entire range of broadcast frequencies. The accuracy specification of $\pm 2\%$ of full scale is guaranteed without corrections.

The TCA-EX and TCA-XM series of RF ammeters include a wide variety of scales, scale combinations, and optional features, all of which are uniquely defined in the model numbering system.

TCA-N-EX. This model is a single-scale meter with external output. The system consists of a current transformer; a six-foot coaxial cable; and a meter box housing the meter movement, rectifier circuitry, and external output connector.

TCA-N-EXR, TCA-N/N-EXR. Meters with the "-EXR" suffix provide an auxiliary output connector along with an internal relay to ground the rectifier circuit (turn the meter off). The dual-scale models include a second relay for changing scales remotely.

TCA-N-XM3R. The addition of the "XM" after the range number specifies a metering system in which the rectifier circuit is housed in a metal box, and the indicating instrument is unmounted and provided with a six foot shielded-pair cable for separate panel mounting. Both 3" and 4" meter movements are available.

TCA-N-EXHV. The suffix "HV" appended to any of the TCA series model numbers specifies that the current transformer supplied with the meter is the high voltage type.

TCA-Jr. RF-Ammeter

- Accurate and reliable means of measuring low power common point and antenna base currents
- To reduce susceptibility to lightning, the meter is designed for temporary installation
- When the engineer needs to verify operating power or adjust power levels, the meter is simply inserted into either a standard J-plug or Delta MJ-50 meter jack and the current readings made
- Assembly is mounted on a 10" x 4" XXXP plate with contacts that permit the plug to be inserted in either a standard J-plug or Delta meter jack
- Linear, mirrored-scale meter permits measurement of currents from either 0.2 to 1.0 amperes RF for the TCA-Jr. 1 or from 0.4 to 2.0 amperes RF for the TCA-Jr. 2
- TCA-Jr. is designed for temporary insertion; no remote output is necessary
- Meter accuracy exceeds the 2% specified by the FCC and is limited essentially by the linearity error of the meter

TCA Accessories

Remote Meter Sets

Meter movements and calibration potentiometers are available in separate sets in both single and dual scale models with 3" or 4" movements. All are available for EX and EXR TCA series meters and are complete with mirror scales identical to the TCA meters. Single

TCA Jr.

scale sets can be mounted on the customer's panel with the potentiometer in series with the meter movement and connected to the TCA-N-EX by a shielded pair cable. Dual scale models are available for use with the TCA-N/N-EXR series meters. A set consists of an appropriate dual meter, two calibration potentiometers and a three position switch for operation of the relays and selection of separate potentiometers for the two scales.

Standard Meter Panels

Standard 19" wide panels are available to accommodate Delta's remote meters. The panels are equipped with mounting holes for the remote meter selected as well as holes for the calibration potentiometer and the On/Off or scale select toggle switch. Please note that remote meters and meter panels are sold as separate items but will be supplied assembled if requested.

Enclosed Meter Panels

The enclosed meter panel has all the features of the standard meter panel plus a rear panel enclosure with connections for each meter circuit and a power supply, and has provision for an integrating buffer amplifier board. The rear panel also provides a hole pattern for an output connector used for connecting automatic logging, remote control or ATS equipment to the meter circuits.

Integrating Buffer Amplifier Board

This printed circuit board contains up to four integrating instrumentation amplifiers to be used when metering outputs for automatic logging, remote control or ATS applications. Each amplifier accepts the output of one TCA-EX or TCA-EXR meter, removes the modulation components and raises the level to 10VDC full scale. The outputs are low impedance so that the panel meters and auxiliary equipment can operate simultaneously. The board requires a ± 15 VDC supply at 10mA for the four amplifiers. This board is intended for use in the enclosed meter panel but may be incorporated in customer designed circuits.

TCA Power Supply

This modular power supply is for use in the enclosed meter panel and is available for incorporation in customer designed circuits. The TCA-PS2 operates from 115/230VAC, 50/60Hz and provides two outputs: a regulated ± 15 VDC at 100mA for the integrating buffer amplifier; and 24VDC at 0.5A for operating the relays in the EXR series ammeters.

Mounting Brackets

There are three special mounting brackets available for mounting TCA meters on network panels. The TCA-MB1 is used for mounting one TCA current transformer on a panel. The TCA-MB2 mounts two TCA current transformers on a panel (the second transformer is typically used for a phase monitor sample). The TCA-MB3 mounts a TCA meter box to TCA-N-XM rectifier box.

Conductor Bushings

A conductor bushing can be used to increase the voltage rating of a TCA or TCT to approximately 15kV (RMS crest). The TCA/LS-8 has a 5" teflon bushing and an 8" conductor for use with a single TCA or TCT current transformer. The TCA/LS-11 has an 8" bushing and an 11" conductor for use with two TCA or TCT current transformers.

CE1700^{nm} CompuEffectron®

- Studio quality performance
- 20-20kHz bandwidth
- 90dB dynamic range
- Less than 0.2% distortion
- Built-in library of 128 effects permanently stored in memory
- Road-worthy design
- All steel chassis
- Single rack space
- Touch control front panel
- Remote accessibility
- Non-volatile user memory with 219 locations
- Sample mode with full edit capabilities
- Setup mode—create a whole new effect while using another
- Glitch-free operation when instantly changing from one effect to the next
- Real time processing
- 100:1 flange ratio
- Delay gliding
- Sample editing

The CE1700^{nm} is a fast, smart computer that lets you control both the digital delay system and the way that delayed signals are used in generating effects. All of the signal processing is done in real time.

The "micro" is programmed to manage the delay memory by instantly performing whatever calculations are necessary for each effect. The CE1700^{nm} can glide through the delay memory without changing the tap-off point...absolutely no clicks, pops or glitches. By controlling the glide rate, the CompuEffectron is able to approach "zero" delay and sweep to any predetermined delay to create ultra wide "flange" ratios.

Another benefit of real time processing is the Record, Play and Repeat functions. This feature allows you to sample sound for up to 1.5 seconds. If you want to edit the end of the sample you can stretch or reduce it. You can edit the beginning of the sample and even add up to 224ms of previous information.

The CE1700^{nm} comes completely programmed with a permanent library of preset effects. These include "patches" for Flanging, Doubling, Chorus and Echoes. Each program in the library can be simply and independently called up. Once activated, the preset can be altered, if desired, and stored in the non-volatile user memory.

When you do wish to create a "new" effect, the "preset" that is closest can be used as a starting point. Your "new" effect can also be stored in the non-volatile user memory.

The user memory allows you to build sequences, mixing both user and preset effects, to perfectly tailor your performance. Remote access, via a foot switch, gives you complete on stage control.

CE1700^{nm}

In addition to its tremendous processing capability, the CompuEffectron is also a high performance, easy to use, basic signal processor. All of its parameters can be directly accessed via the front panel touch key pad.

Specifications

Input:	Max. level: +14dBV (5.0VRMS)
Sensitivity:	Line level: -8 to +8dBV (0.4 to 2.5VRMS) Instrument level: -34 to -8dBV (20 to 400VRMS)
Output:	Max. level: +8dBV (2.5VRMS)
Dynamic Range:	90dB
Frequency Response:	20 to 20kHz (all delay settings)
Distortion:	0.2% max. at 1kHz
Modulation:	Width (max.): > 100:1 Speed: 0.05 to 10Hz
Feedback:	0 to 100%
Mix:	0 to 100% Delay vs Source
Memory:	Library: 128 preset programs Setup: 1 location User (non-volatile): 219 locations
Sample:	Record: Stores up to 1723ms Play: Plays recorded sample Repeat: Stores and repeats sample
Bypass:	Source output only
Power:	< 10W
Dimensions:	1.75" x 19" x 10"
Weight:	12 lbs.
CE1700^{nm} CompuEffectron\$999.00

CompuController Footswitch

The capabilities of the CompuEffectron can be greatly expanded with the addition of the CompuController.

This accessory accepts MIDI signals to control one or two CE1700^{nm} from any MIDI source. The CompuController is an intelligent device that can be programmed to accept any MIDI source signal to control any of its outputs. With the CompuController you will have direct access to the Bypass, Repeat and Program functions of the CE1700^{nm} with the flexibility of the MIDI medium.

CompuController.....\$25.00

DESISTI LIGHTING

Discharge Fresnel Lens Spotlights

Rembrandt 575W/1200W/2500W/4000W/6000W Discharge Daylight Fresnel Lens Spotlights

- Double-ended, medium length arc discharge lamp with a color temperature of 5600°K and color rendering index in excess of 90
- High voltage igniter mounted in an external protective enclosure at side of lamphouse base. This allows improved cooling and enhances electrical insulation of critical component
- Ballasts and accessories are interchangeable with other luminaires in DeSisti range
- Can be used as key or fill light on location
- Rugged octagonal shape of light sheet steel, allowing strong air flow to pass the lamp, lens and reflector, particularly when the unit is tilted down
- Quick acting spot to flood is accomplished with smooth non-slip focusing mechanism
- On/off momentary pushbuttons mounted on enclosure at side of lamphouse base
- Elapsed time indicator, non-resettable
- Power cut-off microswitch acts if Fresnel lens is broken or removed or the lens door is not properly closed
- Anodized aluminum reflector
- High temperature heat resistant matte black paint

Accessories

- Wire guard
- 4-leaf rotating barndoor
- 8-way rotating barndoor
- Color frame
- Cone with set of discs
- Complete set of scrims

2450	Rembrandt 12,000W HMI 20" Fresnel with #2455 wire guard, #2451.100 25' cable, and yoke with 1 1/8" pin	14,000.00

DESISTI LIGHTING

Fresnel Lens Spotlights

**LEONARDO 1000W, 2000W, 5000W
FRESNEL LENS SPOTLIGHTS**

Common Features

- Front and rear spot-flood focusing • Highly efficient optical system
- Manual or pole operation • Innovative lens door accessory clips which can be positioned to suit various applications • Engineered ventilation system ensuring extended lamp life • Rugged octagonal shape of light sheet steel, allowing strong air flow to pass the lamp, lens and reflector, particularly when the unit is tilted down • Quick acting spot to flood action is accomplished with a smooth no-slip focusing mechanism • Anodized aluminum reflector • High temperature heat resistant matte black paint • All purposes spot used for basic set lighting either in studio or on location • Available either with 23' (7m) cable and switch or with 3'-3" cable, no switch

Accessories

- Wire guard • Four leaf rotating barndoor • 8-way rotating barndoor
- Color frame • Complete set of scrims

LEONARDO 1000W Fresnel Lens Spotlight

- G 22 bi-post, heavy-duty socket • Recessed 10A toggle switch mounted on the unit, rated for AC and DC • 6" diameter convex Fresnel lens mounted on the hinged front door • 23' (7m) cable, 3 core x 1.5 sq.mm

Accessory

- Cone with two discs (front aperture: 55 x 80 x 105mm)

310.100 Manual (M.O.)

Focus: Directly controlled by front and rear T-handles
Stirrup: Flat bar or cast aluminum with various mounting options
 (Please specify with order)

310. LEONARDO 1000-750-500W, 6" Fresnel, manual operated, 25'-0" cable, switch, connector and 5/8" adaptor on yoke \$465.00

310/ST LEONARDO 1000-750-500W, 6" Fresnel, manual operated for hanging, with 3'-0" cable, connector, flat yoke and c-clamp 91.100 450.00

311.100 Pole Operated (P.O.)

Focus: Front mounted angle cast aluminum cup coded yellow and rear T-handle
Stirrup: Constructed from precision diecast parts and steel tubing allowing control of the following functions through colored diecast aluminum cup:
 Vertical movement: (Tilt) – White
 Horizontal movement: (Pan) – Blue

311. LEONARDO 1000-750-500W, 6" Fresnel, pole operated, 3'-0" cable, c-clamp and connector . . \$635.00

LEONARDO 2000W Fresnel Lens Spotlight

- G 38 bi-post, heavy-duty socket • Recessed 20A toggle switch mounted on the unit, rated for AC and DC • 10" (250mm) diameter convex Fresnel lens mounted on the hinged front door • 23' (7m) cable, 3 core x 2.5 sq. mm

Accessory

- Cone with two discs (front aperture: 110 x 150 x 190mm)

320.100 Manual (M.O.)

Focus: Same as 310.100
Stirrup: Aluminum flat bar with various mounting options
 (Please specify with order)

320. LEONARDO 2000-1500-1000W, 10" Fresnel, manual operated, 25'-0" cable, switch, connector and 1 1/8" adaptor on yoke \$750.00

310.100 (M.O.)

350.100 (M.O.)

351.100 (P.O.)

320/ST LEONARDO 2000-1500-1000W, 10" Fresnel, manual operated for hanging, with 3'-0" cable, connector, flat yoke and c-clamp 91.100 \$695.00

321.100 Pole Operated (P.O.)

Focus: Same as 311.100
Stirrup: Same as 311.100
Switch: Rotary 20A switch with angled diecast aluminum cup coded red

321. LEONARDO 2000-1500-1000W, 10" Fresnel, pole operated, 3'-0" cable, c-clamp and connector . \$855.00

LEONARDO 5000W Fresnel Lens Spotlight

- G 38 bi-post, heavy-duty socket • Recessed 45A lever switch mounted on the unit, rated for AC and DC • 12" (300mm) diameter convex Fresnel lens mounted on the hinged front door • 23' cable (7m), 3 core x 4 sq. mm

Accessory

- Cone with two discs (front aperture: 155 x 215 x 275mm)

350.100 Manual (M.O.)

Focus: Same as 310.100
Stirrup: Same as 320.100
350. LEONARDO 5000W, 12" Fresnel, manual operated, 25'-0" cable, switch, connector and 1 1/8" adaptor on yoke \$1100.00

350/ST LEONARDO 5000W, 12" Fresnel, manual operated for hanging, with 3'-0" cable, connector, flat yoke and c-clamp 91.100 1100.00

351.100 Pole Operated (P.O.)

Focus: Same as 311.100
Stirrup: Same as 311.100
Switch: Rotary 40A switch with angled diecast aluminum cup coded red

351. LEONARDO 5000W, 12" Fresnel, pole operated, 3'-0" cable, c-clamp and connector \$1250.00

DESISTI LIGHTING

HMI/Portable Lighting

Desisti HMI Softlights

The Desisti Softlight is developed to extend the usage of the HMI, DMI, Brite-Arc or QMI High Intensity Discharge Lamps into fill light applications. Suited for Film, Video or Photographic media, the low current draw of the lamps coupled with the soft, virtually shadowless light output of the unit offer many possibilities for the lighting professional. Housed in heavy sheet metal, the unit has the appearance of a traditional softlight with the lamp and starting circuitry mounted in a removable bottom panel for easy maintenance. A protective glass is mounted above the optical system to limit the ultraviolet emission of the lamp. The glass protection is seated on a safety cut-out switch to ensure the unit can only be turned on if the glass filter is in place.

The top hood contains the secondary reflector which can be easily changed from a white painted reflector to an anodized aluminum reflector for different effects. Robust and compact, the Desisti Softlight is available in 575W, 1200W and 2500W sizes. Units have a full complement of accessories and are available with 120V or 220/240V ballasts.

Desisti Softlight 575W

Raffaello 2000/System	\$3900.00
#2004.200	575W, 120V, 60Hz ballast	1930.00

HMI Softlights

RC80/F 650-120V 800W-220/240V

RC100/F 1000W 120V or 220/240V

The Varibeam 650W and 100W units are variable focus softlights with a full range of interchangeable accessories. The unit is suited for key or fill light applications. Features include a rugged stainless steel strap for support to the lamp sockets, even field of light with focus from spot to flood by means of an external plastic knob. The attachment of the barndoor is simplified without the need of an accessory holder unless additional accessories are required. The RC80/F650W can also be used for mounting 800W 220V lamps, 650 or 1000W unit . . . \$190.00

Accessories

RC101	Accessory holder	45.00
RC103	4-leaf barndoor	40.00
RC104	Dichroic filter	184.00
MX63	6 5/8" scrim set	40.00
240.100	Lightweight alum. kit stand (replaces RC240)	70.00
RC413	Gaffer grip with 5/8" spigot	33.00

RC200 2000W-120V or 220/240V

The Varibeam 2000W variable focus spotlight is a smartly priced unit with variable focus control providing a smooth even field of light in the spot or flood position. The rugged metal housing ensures protection of the reflector and sockets and will withstand the treatment of location handling. Ideal for key, fill or special effect applications in studio or on location. The RC200 can operate at 120 or 220/240V by simply changing the lamp. The power cable comes complete with 15' of cable and in-line switch. A full range of accessories are available and the barndoors can be mounted to the unit without the traditional need for accessory holder. . . . \$370.00

RC110

RC200 Head

Accessories

RC201	Accessory holder	79.00
RC202	4-leaf barndoor	111.00
RC204	Dichroic filter	393.00
MX10	10" scrim set	56.00
RC220	Light alloy folding stand	161.00
G227	Heavy metal grip	98.00
RC205	Protective glass	65.00

RC110 "Minilite" 1000W-120V, 800W-240V

The 1000W Minilite-RC110 is a floodlight with a fixed lamp position suitable for illumination of small backgrounds or for fill light applications. The even field of light is extremely smooth from side to side and can be neatly cut with the integral barndoor leaves. The unit is also provided with 12' of cable, an on/off switch, and a fiberglass back. The rugged construction of the unit will withstand the rough handling of location lighting. A range of mounting equipment is available for use with the RC110. . . . \$225.00

Lighting Systems

TIZIANO 200W Portable Discharge

Daylight Lamp Open-Face Luminaire

• Focusable open-face luminaire for single-ended discharge lamp • Pistol handle is provided for handheld operation and for stand mounting • Stirrup for hanging is available as accessory • Easily focusable from spot to flood position by thumbwheel • On/off pushbutton can be activated by the same hand that holds the unit • Color temperature is balanced for daylight (5600°K) • Powered with AC normal ballast or with DC special electronic ballast • DC power supply can be any 24V or 30V battery • Unit is "flicker-free" and can be 30% dimmed • Lightweight "TIZIANO" is optimum for remote television, ENG and location filming • Solid and slotted sheet steel, octagonal shape with flat corners, safety glass front frame and diecast accessory clips • GY 9.5 socket—Model GL 1221 • High voltage igniter mounted inside the housing in a thermally insulated compartment. Hot restrike permitted, but 20 seconds lag suggested between two strikes • Sandblasted anodized aluminum reflector • Cables 5' (1.5m), 2 x 1 sq. mm + 6 x 0, 30 sq. mm (head to ballast), 6' (1.8m), 3 core x 1 sq. mm delivered with AC ballasts, 7' (2.0m), 2 core x 1.5 sq. mm (ballast to DC source), delivered with DC ballast

- 2200/Kit** "TIZIANO" 200W kit for 30/24VDC operation with:
 #2200 200W "TIZIANO", #2201 yoke, #2202 case, #2205 ballast, #2206 barndoor, #2207 color frame, #2208.100 ext. cable, #2209/set scrims \$5,700.00
- 2200.** "TIZIANO" 200W, CID open face focusing spotlight with 5'-0" cable and connector 1,700.00

2200.100

TIZIANO 2500W

Discharge Daylight Lamp Open-Face Luminaire

• Focusable open-face luminaire designed for the single ended discharge lamp • Combination of an accurately constructed ellipsoidal aluminum reflector with the high output compact source lamp produces high performance fitting suitable for the most stringent conditions • Focus range of 8.5:1, spot to flood extends the use of this versatile luminaire • Unsurpassed in long throw applications • 5600°K color temperature and rugged lightweight construction make the "TIZIANO" a particularly useful keylight or daylight fill on film or video locations • Rugged octagonal shape of light sheet steel with rear handle and diecast accessory clips. Spot to flood action is accomplished with a smooth no-slip mechanism • G 38 bi-post socket • High voltage discharge lamp igniter housed in a thermally insulated compartment at the rear of lamphouse. Hot restrike permitted, but 20 seconds lag is suggested between two strikes • Ellipsoidal sandblasted anodized aluminum reflector • Flat bar aluminum manual stirrup with 1 1/8" (28.57mm) spigot (B.S.) • 10" (0.5m), 3 x 4 sq. mm + 4 x 1 sq. mm with mating connector

- 2230/System** "TIZIANO" 2500W system with:
 #2230 2500W "TIZIANO", #2024 ballast 120V, #2236 barndoor, #2237 color frame, and #2021.100 extension cable \$6,100.00

2230.100

RAFFAELLO 575W and 2500W

Discharge Lamp Softlights

• Extends the use of the high intensity discharge lamps • Offers users a soft, virtually shadowless light output • Efficiency of the lamp is very high with daylight quality light beam (5600°K) (3200°K lamps also available) • Low power requirement and cold source • Protective glass is mounted above the source optical system to limit the ultraviolet emission • Power cut-off microswitch is provided if the glass is broken or removed • Nickel plated brass socket with expansion allowance • On/off pushbutton mounted on control panel. Hot restrike permitted, but 20 seconds lag suggested between two strikes • Solid and slotted sheet metal, without spill light and appropriate ventilation • Sandblasted anodized aluminum reflector • Aperture: 12 5/8" x 15" (320 x 380mm) (575W) 17" x 24 3/4" (430 x 630mm) (2500W) • Yoke: flat bar with 1 1/8" (28.57mm) spigot (to B.S.) (575W) • Double reinforced tubes with 1 1/8" (28.57mm) spigot (to B.S.) (2500W) • Built-in elapsed time indicator • Heat resistant matte black paint • 25" (7.5m) cable, 7 core, 1.5 sq. mm with mating ballast connector

- 2000/System** "RAFFAELLO" 575W HMI system with:

DESISTI LIGHTING

Lighting Kits

DLK 200

"Punch" light kit for lighting through windows and other transparent materials. 2000W units for long throw applications 120 or 220V. Stands extend to 8'-3", folds to 35". Accessory holder not required for barndoor.

- 2 RC200 2000W varibeams
 - 2 RC201 2K accessory holders
 - 2 RC202 4-leaf barndoors—2K
 - 2 RC220 2K stands
 - 2 MX10 Set of full single and full double scrims (10" dia.)
 - 1 DC121638 Large 2K case (12" x 36" x 38")
- Total kit weight: 54 lbs.

DLK 200 \$1747.00
 DLK 200/L with 2-FEY 2000W lamps 1948.00

DLK 380

Draws under 20A for ENG or ETV applications. Accessory holder not required for barndoor.

- 3 RC80/F 650W varibeams
 - 3 RC103 4-leaf barndoors
 - 3 240.100 Nano stands
 - 1 DC81632 Compact 3 light case (8³/₄" x 16" x 32")
- Total kit weight: 30 lbs.

DLK 380 \$1133.00
 DLK 380/L with lamp(s) 1197.00

DLK 3100

3—1K's in compact rugged case. Barndoors attach without accessory holder

- 3 RC100/F 1000W varibeams, plus same accessories as DLK 380
- Total kit weight: 30 lbs.

DLK 3100 \$1133.00
 DLK 3100/L with 3-DXW 1000W lamps 1244.00

DLK 480

Can be used in 220V applications. Ideal for EFP applications or documentaries.

- 4 RC80/F 650W varibeams
 - 4 RC101 Accessory holders
 - 4 RC103 4-leaf barndoors
 - 4 RC240 Nano stands
 - 4 MX63 Set of full single and full double scrims (6⁵/₈" dia.)
 - 1 DC 111638 Extended 4 light case (11" x 16" x 38")
- Total kit weight: 44 lbs.

DLK 480 \$1794.00
 DLK 480/L with 4-FAD 650W lamps 1879.00

DLK 4100

Full accessories including scrims, barndoors, and accessory holders. Lightweight compact case carries all items.

- 4 RC100/F 1000W varibeams
- Plus same accessories as DLK 480
 Total kit weight: 44 lbs.

DLK 4100 \$1794.00
 DLK 4100/L with 4-DXW 1000W lamps 1943.00

DLK 3801

Variety of ENG and ETV applications, draws under 20A. Accessory holders and scrims included. Additional accessories available including dichroic filters and black flags. 120V or 220V use.

- 3 RC80/F 650W varibeams
 - 2 RC101 Accessory holders
 - 2 RC103 4-leaf barndoors
 - 3 240.100 Nano stands
 - 1 MX63 Set of full single and full double scrims (6⁵/₈" dia.)
 - 1 DC111632 Extended 3 light case (11" x 16" x 32")
- Total kit weight: 34 lbs.

DLK 3801 \$1228.00
 DLK 3801/L with lamp(s) 1292.00

DLK 200

DLK Mix 5

DLK Mix 4

Industrial or documentary lighting applications, 120 or 220V. Extremely flexible Mix kit with two 650's and two 1K fill lights. Four lightweight rugged stands. Case allows for storage of varibeams with accessory holders attached to units.

- 2 RC80/F 650W varibeams
 - 2 RC110 Minilites—fixed focus fill lights
 - 2 RC101 Accessory holders
 - 2 RC103 4-leaf barndoors
 - 4 RC240 Nano stands
 - 2 MX63 Set of full single and full double scrims (6⁵/₈" dia.)
 - 1 DC111632 Extended 3 light case (11" x 16" x 32")
- Total kit weight: 43 lbs.

DLK Mix 4 \$1599.00
 DLK Mix 4/L with 2-FAD 650W and 2-FLM 1000W lamps . . . 1702.00

DLK Mix 5

"Portable Studio" for indoor or location. 5 lights in one case, 5000W. Good for CCTV or CATV. Minilites used for fill, set or cyc lights. Includes 4 Nano stands and fiber grips.

- 2 RC100/F 1000W varibeams
 - 3 RC110 Minilites, fixed focus fill lights
 - 2 RC101 Accessory holders
 - 2 RC103 4-leaf barndoors
 - 1 RC413 Gaffer grip with 5/8" spigot
 - 4 240.100 Nano stands
 - 2 MX63 Set of full single and full double scrims (6⁵/₈" dia.)
 - 1 DC111638 Extended 4 light case (11" x 16" x 38")
- Total kit weight: 50 lbs.

DLK Mix 5 \$1862.00
 DLK Mix 5/L with 2-DXW 1000W and 3-FCM 1000W lamps . . 2027.00

DLK Pinza 2 "Hollywood Special" 2-RC50 kit with:
 2-RC50 and 1-DC81632. 573.00

DLK Pinza 3 3-RC50 kit with: 3-RC50 and
 1 DC81632. 720.00

DLK Pinza 4 4-RC50 kit with: 4-RC50 and
 1 DC111632 872.00

DIELECTRIC COMMUNICATIONS

FM Antennas

DCR-C Series**FM Broadcast Antennas**

- Circularly polarized
- Radomes or de-icers optional
- Arrays to sixteen sections
- Tower-side or pole-mount
- Input power up to 40kW
- VSWR field adjustable

The DCR-C is circularly polarized with a power rating of 4kW per section (10kW with radomes), and is available in stacked arrays of up to 16 sections with an input rating to 40kW. For situations where ice formation is common, the arrays can be equipped with electrical de-icers or radomes. Both are options at extra cost.

Radomes Optional

For operating situations where icing conditions are frequent and/or severe, radomes are made available for DCR-C arrays. Using radomes instead of de-icers saves about 50 pounds of dead weight per section and increases windload by about 134 pounds per section at 50/30 lbs./ft.² wind pressure. Using radomes increases the maximum power per section from 4 to 10kW in arrays of four sections and fewer. DCR-C antennas supplied in radomes are slightly modified to accommodate the radome.

Beam Tilt and Null Fill, Directional Arrays

Beam tilt and/or null fill is an optional extra on the DCR-C series. These options are ordinarily specified for the larger arrays (eight sections and more). However, arrays of seven sections and fewer may include one or both options. When such is the case, the array is supplied as a center-fed system (rather than end-fed) at additional expense.

The DCR-C antenna is available in directional arrays which are custom-built to the needs of the directivity situation.

**General Specifications**

DCR-G Series**Tri-Pole FM Broadcast Antennas**

- Circularly polarized
- Adjustable polarization ratio
- Integral de-icers optional
- Arrays to 16 sections
- Pole or tower-leg mount
- VSWR field adjustable under pressure

The DCR-G Series of antennas consists of circularly polarized elements with a power rating of 6kW per section. They are available in stacked arrays up to 16 sections with an input rating to 40kW. The DCR-G antenna is a three-pole system with factory-adjustable elements that allow control of the ratio between vertical and horizontal polarization. The elements of the antenna section may be adjusted to provide maximum ERP in the horizontal plane and less in the vertical plane. This is most useful where available transmitter power is less than necessary for maximum ERP in both planes.

Pattern Circularity ± 1 dB

The arrays described here offer radiation circularity within 1dB in free space. In side-mount situations, tower metal and guy wires affect the circularity to varying degrees. We recommend that side-mounted arrays be above the highest guy wire. When this is impractical, the guy wires can be insulated from the tower and at 3.5-foot intervals for a distance of 14' from the point where the guy wire touches the tower.

DIELECTRIC COMMUNICATIONS

FM Antennas

DCR-H Series

Economical FM Broadcast Antennas

- Circularly polarized
- Radomes or integral de-icers optional
- Arrays to eight sections
- For Class A stations
- VSWR field adjustable

The DCR-H antenna series is intended for the Class A FM stations seeking superior performance. The DCR-H antenna is a low-power version of the DCR-C and is available in one through eight sections with a power-input rating to 12kW. The DCR-H antenna provides DCR-C antenna performance to the Class A FM station at purchase prices significantly lower than those of the high-power antenna.

End-Fed or Center-Fed Arrays

Two power distribution methods are used with the DCR-H antenna. The array is usually end-fed unless it includes beam tilt and/or null fill. In this case, the sections are fed from a center point. The input connection in either case is a 1⁵/₈" diameter, 50 ohm, EIA flanged copper transmission line.

Radomes Optional

For operating situations where icing conditions are frequent and/or severe, radomes are made available for DCR-H arrays. Using radomes instead of de-icers saves about 60 pounds of dead weight per section and increases windload by about 60 pounds per section at 50/30 lbs./ft.² wind pressure. DCR-H antennas supplied in radomes are slightly modified to accommodate the environment of the radome.

Power Gain Proportional to Sections in Array

Each section of a multi-section array provides slightly less than 0.5 power gain in each polarization. This factor improves slightly as the number of sections in the array increases. To illustrate, an 8-section array provides a power gain of 4.3 in each polarization while a one-section array provides 0.46 power gain.

Beam Tilt and Null Fill, Directional Arrays

Beam tilt and/or null fill are optional extras on the DCR-H series. These options are ordinarily specified for the larger arrays (eight sections). However, arrays of seven sections and fewer may include one or both options. When such is the case, the array is supplied as a center-fed system (rather than end-fed) at additional expense.

FM Antennas

DCR-M Series**Quadrapole FM Broadcast Antennas**

- Wideband. Suitable for multi-station operation
- Circularly polarized
- Integral de-icers optional
- Arrays to 16 sections
- Pole or tower-leg mount
- Low ice sensitivity
- VSWR field adjustable

The DCR-M Series of antennas are circularly polarized elements with a power rating of 18kW per section and available in stacked arrays of up to 16 sections with an input rating to 40kW. Special arrays suitable for multi-station operation and/or having higher power input ratings are available.

Beam Tilt and Null Fill, Directional Arrays

Beam tilt and/or null fill are optional extras on the DCR-M series. These options are ordinarily specified for the larger arrays (eight sections and more). However, even numbered arrays of six sections and fewer may include one or both options. When such is the case, the array is supplied as a center-fed system (rather than end-fed) at additional expense.

The DCR-M antenna is available in directional arrays which are custom-built to the needs of the directivity situation.

High Power Input Capability

The DCR-M antenna is available at extra cost with 4¹/₁₆ feed system having a power input rating (for five or more bays) of 80kW.

Multi-Station Operation

The wide bandwidth and high power input capability of the DCR-M antenna permits multi-station operation at extra cost. Dual station antennas having a frequency separation of less than 3.0MHz employ a standard shunt feed system.

Multi-station antennas for more than two stations or for two stations within a 5.0MHz bandwidth employ a branch feed system.

Branch feed systems are also employed for multi-station antennas requiring null fill and/or beam tilt.

Terminating RF Load Resistors

6000 Series Water Cooled Loads

Several versions of water cooled loads provide power dissipation for systems of 10,000W to 50,000W CW power ratings. The basic Series 6000 water cooled load requires a water supply, and accepts a 1/2" pipe thread or 3/4" garden hose water connection. A family of control thermostats are available for use with these loads.

6600 Series Dolly Loads

(Water Cooled)

For transmitter buildings, Dielectric offers a Dolly Load in three models, with pressure and flow interlocks if desired. These loads can be wheeled easily from one location to another. Dolly Loads require a water supply and accept a 1/2" pipe thread or 3/4" garden hose water connection. Overall dimensions are: Height 31.5"; Base—width 24", depth 20"; Dry Weight 64 lb.

6600 Series
Dolly Load
Either EIA flanged or
unflanged available—
specify when ordering

Model	CW Power Rating	Minimum Flow Rate (Water)	RF Input	Price
6610	10kW	4 GPM	3 1/8"	\$3,620.00
6625	25kW	6 GPM	3 1/8"	3,660.00
6650	50kW	10 GPM	3 1/8"	3,750.00

DIGITAL PROCESSING SYSTEMS, INC.

Time Base Correctors/Synchronizers

DPS-165

DPS-175

DPS-165 Frame Synchronizer

- 525-line buffered memory • Monochrome or direct color input • Synchronous or non-synchronous switching • Auto diagnostic memory • Internal test signal generator • Two true RS-170A outputs • Optional remote control • Freeze frame/field (field 1/2 selectable) • Horizontal phase control

DPS-165	Frame Synchronizer	\$4,990.00
DPS-165A	Frame Synchronizer with adaptive comb filter5,990.00
RC-165	Remote Control for DPS-165 and DPS-165A	1,340.00

DPS-175 TBC/Framestore

- High performance, low cost • Freeze frame/field (field 1/2 selectable) • Synchronous and non-synchronous switching to tape • Wide dynamic tracking range of -1 to +3 and clear viewing up to $\pm 30X$ play speed • Heterodyne capability • Direct color capability with 3.58MHz feedback • 525-line buffered correction window and TTL/RF selectable drop out compensator • Two true RS-170A video outputs • Horizontal phase control • Editing and assembly • Match frame editing

DPS-175	T.B.C./Framestore	\$6,450.00
DPS-175A	T.B.C./Framestore with adaptive comb filter6,990.00

DPS-170

DPS-185

DPS-170 Time Base Corrector

- High performance/low cost • Heterodyne capability • Direct color capability with 3.58MHz feedback • Wide dynamic tracking range of -1 to +3 with clear viewing at up to $\pm 30X$ normal tape speed • Tape source flexibility, with a 16-line buffered correction window and RF/TTL selectable drop out compensator output • Two true RS-170A video outputs • Editing and assembly • Horizontal phase control • Match frame editing

DPS-170	Time Base Corrector	\$4,990.00
----------------	-------------------------------	-------------------

DPS-185 Test Signal Generator

- 32 test signals • 2 independent outputs per channel • 7 auxiliary outputs—sync drives • Genlockable • RS-170A specs • Dedicated color black outputs

DPS-185	Sync/Test Generator	\$4,250.00

DIGITAL SERVICES CORP.

Digital Effects System

Illusion Digital Effects System

- Multi-channel system
- Perspective with variable vanishing point (option)
- Shape manipulation (optional)
- Still store option: Can store field (256) and frames (128) separately and perform slide changes
- Bubble memory. Non volatile and with 2000 event storage
- Performs as dual channel system when in the A/B video switching mode
- Variable expansion control to infinity
- Freeze
- Preprogrammed effects
- User programmable
- Three dimensional joystick control, horizontal, vertical and circular
- Rotation
- Unlimited expansion and compression
- Vertical and horizontal aspect control
- User control of: effect duration and speed, picture size, screen placement, perspective orientation, rotation
- Manual or automatic execution
- Smoothly executed effects
- 100% digital processing
- Can be used as an additional channel to other digital effects systems
- Switcher and editor compatible
- Small rack equipment, can be installed in remote vans
- Integral keyer with mask key capability
- Frequency response: $\pm .5$ dB to 5MHz
- Sample rate/signal processing: 4xSC/8 Bit
- Signal inputs: A Video, B video, key (terminating), keyer fill video (terminating), keyer background video. Reference: color black
- Signal outputs: 2 PGM, 1 key, 2 illusion keyer and 1 shadow key
- System timing: per RS-170A; color phase adjusted over 360°, H phase adjustable over approx. 100nS
- Interconnect: mainframe to control panel, serial RS-422, 1000 feet max/50 feet standard
- Control Panel: drop-in or table-top configuration. Rack electronics: 11 RUs; 19 1/4" high by 17 3/4" deep, 90 lbs.

Effects

Slide	Double image	Posterization
Flip	Split image	Mosaics
Skew	Mirror	Freeze
Squeeze	Invert	Strobe
Spin	Combinations	Variable border
Rotate	Barrel roll	Shape manipulation
Spiral	Aspect control	Drop shadow
Expand	Alternate line	
Compress	Image	

Feedback effects:

A bordered picture spun with "feedback" to give multi-image geometrical effect. Unique to Illusion, the effect is internally generated and does not tie up a switcher M/E. The image geometry is manipulated and controlled through Illusion's panel.

Mosaic:

Captured from live video or freeze frame, the resolution (tile size) may be varied with Illusion's fader permitting easy on-air execution.

Posterization:

As with mosaic, any signal source may be posterized. Variations are available to compensate for highly illuminated and dark subjects.

Alternate line split image with perspective

Split image is formed by separating the image into alternate lines. The solid video (seen in the monitor picture) is the unsplit portion of the signal. The perspective vanishing point is variable.

Double image with axis offset:

A double image over a background can be manipulated into any number of creative effects with Illusion. The double image could be posterized independent of the background...or put into perspective (cut-in monitor picture) are just two examples.

* All these pictured effects can be performed on dynamic live video or frozen images.

The system consists of a CRT terminal, disk drive and rack electronics that are added to an existing Illusion mainframe. The CRT is menu driven. Up to two additional disk drives may be added which would provide storage space for up to 10,000 "slides". A removable cartridge drive is also available.

ILN7000 Composite Illusion
Designed for composite inputs and outputs

.....\$23,900.00

ILN9000 Component Illusion
Designed for component inputs and outputs. Configured RGB. Can be configured Beta on request when ordered.25,900.00

Options

RTN100 Rotation
Includes rotation and spiral effects\$1,000.00

PSP100 Perspective
Adds keystoning to video image for 3-dimensional perspective. Can be on either X or Y axis. Adds particular dimension to flips, spins and barrel rolls5,000.00

ICP100 Additional Control Panel
Loop-through additional panels can be placed at other editing locations for added convenience. The active panel closest to the frame electronics is the one that functions at a given time3,200.00

Eclipse 3-Dimensional Optical Digital Effects System

- 68020, 32-bit processor
- Curved effects option
- Programmable effects
- Picture placement
- Picture cropping
- Automatic cube builder
- Rotation
- Picture twist
- Perspective
- Perspective with Rotation
- Trajectory: smooth on all continuous parameters
- Drop shadow
- A/B switch simulates dual channel effects
- User programmable
- Removable micro floppy disk storage integral with control panel
- Shape manipulation option
- Software based. System is expandable with continuing developments.
- Optical Perspective: Perspective controlled by 3 dimension joystick
- Compression and expansion ratio: H and V, infinite
- Integral keyer with mask key capability

Additional Effects

- Slide
- Flip
- Skew
- Squeeze
- Spin
- Spiral
- Expand
- Compress
- Mirror
- Axes offsets
- Push-on/Pull-off
- Invert
- Combinations
- Barrel Roll
- Aspect Control
- Posterization
- Mosaics...multiple levels
- Freeze
- Strobe
- Variable Border
- Feedback
- Shadow effect color background

Menu driven, the system includes a high resolution CRT terminal and an easy access control panel. Its many discrete function controls permit creative and operating staffs to quickly become comfortable with Eclipse.

Specifications Preliminary

	NTSC Component	NTSC Composite
Frequency Response	± .5dB to 5MHz	± .5dB to 5MHz

- ECL4000 Composite only \$42,900.00
- ECL5500 Composite/Component 42,900.00
- ECL6000 Component only 44,900.00

Options

CVE200 Curved Effects

Includes curved effects, picture twists and automatic cube builder. Concave and convex curves can be programmed into effects sequences. The twist capability of the CVE 200 package is fully programmable. A twist can be from left to right, right to left, top to bottom, bottom to top, or curved. The automatic cube builder assists in building up complex three sided cube effects. The programming mode places all three sides alternately on the screen to aid in visualizing the cube effect while defining the individual key frames.

- CVE200 \$5,900.00

PGT100 Page Turn

Includes page turn, page scroll

The Page Turn Option will enhance the already powerful effects features of Eclipse with CVE 200 Curved Effects. Authentic two dimensional page turns and page scrolls can be added to effects sequences.

Page Turn (Effects 1 and 2)

The effect, when run in real time, will show the mirror image of the front side video on the rear (effect 1). If a different image is desired on the rear, a second pass mode has been included to provide this feature (effect 2). Both modes can be bordered (effect 1).

Page Scroll (Effect 3)

The amount of scroll or turn is definable in seven discrete steps. The scroll or turn can be adjusted to start or finish from any corner, side or point in between.

- PGT100 \$6,900.00

KYM200 Key Manipulation

This option adds the ability to do an internal, linear key and manipulate it. The key manipulation can be combined with Eclipse's digital effects. If Page Turn PGT 100 and Curved Effects CVE 200 options are installed, then the key manipulation can be combined with these extremely powerful and varied effects. The system generates a self key from a composite video signal supplied by a variety of equipment including title cameras, character generators and graphic systems. Complex shapes or characters are keyed with 8 bit edge resolution. Even a soft edge on the input video is maintained. Key Clip and Key Gain are adjustable from the control panel.

- KYM200 \$2,500.00

DOLBY LABORATORIES, INC.**Noise Reduction Units**

361

365

361 Single Channel Noise Reduction Unit With Automatic Changeover

• Overall Frequency Response: ± 1 dB from 30Hz to 20kHz (encode/decode) • Total Harmonic Distortion: At +4dB, less than 0.1% at 1kHz; less than 0.2% from 40Hz to 20kHz • Bridging transformer, input 10K ohms balanced and floating • Transformer, 20 ohms output impedance, balanced and floating. Will drive any load impedance from 200 ohms upwards • Input and output levels adjusted by multi-turn potentiometers accessible from front of unit. Minimum input of 350mV for Dolby level on both calibrated and uncalibrated inputs. Maximum output level of +22dB into bridging load; +21dB into 600 ohms; +20dB into 200 ohms (0dB=0.775VRMS) • Dolby A-type noise reduction characteristic providing 10dB of noise reduction from 30Hz to 5kHz, rising to 15dB at 15kHz • Overall Noise Level: Record-playback (NR out), better than 80dB below Dolby level, unweighted 30Hz to 20kHz bandwidth, or weighted CCIR/ARM • Matching Between Units: ± 1 dB at any level and any frequency, 30Hz to 20kHz • Signal Delay: Constant with frequency, 24 μ s. Overall encode-decode process, 48 μ s. • Phase Error: Less than 5°, 20Hz to 20kHz overall encode-decode • Steel case, zinc passivated finish; front panel clear anodized with black characters • 1 $\frac{3}{4}$ " x 19" rackmounting • 12 lbs. • 3-pin XLR input and output connectors for line-in, to recorder, from recorder, and line-out • Pushbutton switches for selection of: Record/Play, NR in/out/remote operation, Dolby tone on/off, Normal Signal (monitor line-in during record, decoded signal during playback), Check Tape (monitor encoded signal directly from tape) • Mono jack socket for linking and/or remoting Dolby tone (plugs are provided with unit). 5-pin XLR connector for remote control of record/play mode and Dolby NR in/out.

The 361 is a single-channel Dolby A-type noise reduction unit with built-in record/playback changeover facilities. This unit is suited for tape recorder applications where changeover between record and playback is necessary. The changeover function may be accomplished by either using front panel pushbutton switches or, remotely, by command from the tape machine. Signal reconnection is not required for changeover. The noise reduction in/out function may be controlled by a pushbutton switch on the front panel or remotely.

During recording, the incoming signal may be monitored at the line input or the encoded signal may be monitored in the "tape check" mode.

361	Single-channel noise reduction unit, record or playback (automatic changeover)	\$1350.00
361SR	Equipped with Cat. No. 280	1725.00
Manual	Extra copy of manual 361 (one provided with each unit)	25.00

365 Two-Channel Noise Reduction Unit

• Overall frequency response: ± 1 dB, 30Hz-20kHz, encode/decode • Total harmonic distortion: at +4dB, less than 0.1% at 1 kHz; less than 0.2% from 40Hz-20kHz • Noise Reduction: Dolby A-type characteristic providing 10dB of noise reduction from 30Hz to 5kHz, rising to 15dB at 15kHz • Overall Noise Level: record/playback (NR out), bet-

ter than 80dB below Dolby level, unweighted 30Hz to 20kHz bandwidth, or weighted CCIR/ARM • Matching Between Units: ± 1 dB at any level and any frequency, 30Hz-20kHz • Signal Delay: constant with frequency, 19 μ sec per channel, 38 μ sec overall encode/decode, including delay of Model 360 series interfaces • Set-up: Dolby tone oscillator for establishing correct levels via built-in meter amplifier and interface meter • Two independent processors per unit • XLR inputs and outputs • Bridging transformer input, 10k ohms balanced and floating • Transformer, 20 ohms output impedance, balanced and floating. Will drive any load impedance from 200 ohms upwards • Input levels adjusted either by single-turn "uncal" or multi-turn "cal" potentiometers accessible from front of unit • Minimum input of 350mV for Dolby level on both calibrated and uncalibrated inputs • Maximum output level of +22dB into bridging load; +21dB into 600 ohms; +20dB into 200 ohms. (0dB=0.775V) • Jack sockets for linking and/or remoting Dolby level set-up operation • Stereo jack socket for independent In/Out remote operation, achieved by grounding the terminals for In/Out and Dolby level set-up. Maximum grounding resistance 25 ohms • LED status indicators are also remotable • The system is highly stable with either Cat. No. 280 or Cat. No. 22 modules, and does not need routine alignment • Crosstalk: better than 70dB over 20Hz-20kHz • Plug-in processing module (Cat. No. 280 or Cat. No. 22) • Fiberglass printed circuit board and solid-state devices throughout • Steel case, zinc passivated finish; front panel clear anodized aluminum with black characters • 3.5" x 19" rackmounting • 18 lbs.

The 365 is ideal for simultaneous encode/decode of a single channel, or for applications requiring two channels of dedicated recording or playback. Front panel switches operate encode/decode functions for each channel.

The 365's processing circuitry is contained in a pair of modules which are easily accessible from the front panel. Push-buttons on the front panel control the process in/out function. Dual meters and built-in reference generators simplify Dolby level set-up. The process in/out and Dolby level set-up functions may be operated remotely.

Each channel of the 365 has a play uncal control which permits temporary recalibration to match a tape recorded at a different level while retaining the unit's preset Dolby level.

365	Two channel noise reduction unit, independent record or playback.	\$2100.00
365SR	Two channel Dolby SR unit, (Cat. No. 280) independent record or playback.	2700.00

Accessories

280	Single-channel Dolby spectral recording module for use with 361 and 365 and in M-series frames	\$900.00
22	Dolby A-type noise reduction module, single-channel	600.00
35	NRM tester and test extender for Cat. No. 22.	650.00
225	Compact Dolby A-type noise reduction module, single-channel, low power.	600.00
100	Dolby 'A' labels per 1000	10.00

DOLBY LABORATORIES, INC.

Noise Reduction Units/Module

372 Portable Two-Channel Noise Reduction Unit

- Overall Frequency Response: ± 1 dB from 30Hz to 20kHz (encode-decode)
- Dolby A-type characteristic providing 10dB of noise reduction from 30Hz to 5kHz, rising to 15dB at 15kHz
- Matching Between Units: ± 1 dB at any level and any frequency, 30Hz to 20kHz
- Compact size with self-contained power source
- 3-pin XLR inputs and outputs. 7-pin Tuchel/Binder from recorder and to monitor are provided
- Differential input, 6K ohm minimum impedance
- Output Circuit will drive any load impedance from 600 ohms upwards (to recorder, 1K ohms upwards)
- Minimum input level -10dB for Dolby level, all inputs. Maximum line output level +21dB into 600 ohms or above. Maximum to recorder output level +16dB into 600 ohms or above. (0dB=0.775VRMS)
- Slide switches for selection of: Cal/Uncal level controls, Dolby tone on/off, Record/Play, each channel, NR on/off, each channel, Monitor norm/check, each channel, Power on/off
- Two separate, or ganged Uncal level controls, internally selectable for record level setting or playback Dolby level calibration
- Headphone 1/4" stereo jack socket and rotary level control, independent of line output
- Total Harmonic Distortion: At +4dB, maximum 0.1%, 1kHz to 20kHz
- Overall Noise Level: Record/playback (NR off), 75dB below Dolby level over a 20Hz to 20kHz bandwidth unweighted
- Signal Delay: Constant with frequency, 15 μ s overall encode-decode process
- Phase Error: Less than 5 $^\circ$, 20Hz to 20kHz overall encode-decode
- Black cast aluminum with steel covers • 1 $3/4$ " x 7 $1/4$ " x 8 $1/2$ " • 3.3 lbs. without batteries • Battery (4 "C" cells or Nicad, rechargeable via rear panel) or 5-30VDC input

372 Portable two-channel noise reduction unit \$2500.00

372

234

380 Two-Channel Noise Reduction Unit

- Dolby A-type characteristic providing 10dB of noise reduction from 30Hz to 5kHz, rising to 15dB at 15kHz
- Frequency Response—Record Input to Play Output (NR off, Record Output Connected to Play Input): ± 1 dB, 35Hz to 20kHz ± 3 dB, 27Hz to 32kHz
- Frequency Response of Noise Reduction Processors: ± 1 dB, 20Hz to 20kHz, at any level, back-to-back for simultaneous encode-decode
- Matching Between Channels: ± 1 dB, 20Hz to 20kHz, any level
- Input/Output Level (Intended for VPR-3 and VPR-80): Capable of adjustment between 160mVRMS to 1.0VRMS
- Total Harmonic Distortion: Less than .1%, 35Hz to 20kHz
- S/N Ratio (NR off): Record output, reference to Dolby level: Better than -87dB, CCIR/ARM weighted. Better than -87dB, 20Hz to 20kHz. Play output, reference to 100nWb/m: Better than -83dB, CCIR/ARM weighted. Better than -84dB, 20Hz to 20kHz
- Single, rackmounted unit with all-steel chassis, incorporates two Cat. No. 55 noise reduction modules mounted on a circuit board, and is interfaced with the VTR via two 10' interface cables
- Incorporates a Dolby calibration tone oscillator and switching logic
- Cat. No. 199 Remote Control unit is provided as standard equipment with a 15' connecting cable • 1 $3/4$ " x 19" rackmounting

The 380 provides two independent channels of Dolby A-type noise reduction for the Ampex VPR-3 and RCA TH-900, Ampex VPR-80 and RCA TH-400, and Ampex VPR-6 videotape recorders.

With the VPR-3 and TH-900, the 380 is fully operational upon plug-in and calibration. Two 380s may be used to provide four channels of noise reduction when the four-channel option is used. With the VPR-80, TH-400 and VPR-6, a single 380 provides noise reduction on channels 1 and 2 via connectors on the back.

For use with the VPR-80 and the TH-400, a Cat. No. 235 interface must be installed on the audio board of the VTR which will provide connectors to the back of the machine.

An LED meter for each channel is located on the front panel for ease of calibration. A playback "Uncal" feature is also included which permits temporary recalibration for non-standard-level tapes without changing the standard level of the unit.

380 Two-channel noise reduction unit \$2250.00
Cat.

No. 235 Interface board for interfacing 380 noise reduction system with Ampex VPR-80. Installs on audio board in place of 6 ICs. Cables to back of VTR provided. \$250.00

Cat.
No. 217 'Dolby A' labels for 1" video tape per 100. \$10.00

234 Two-Channel Noise Reduction Module

- Dolby A-type characteristic providing 10dB of noise reduction from 30Hz to 5kHz, rising to 15dB at 15kHz
- Playback Frequency Response (NR out): ± 1 dB, 50Hz-15kHz (limits of test tape)
- Frequency Response of Noise Reduction Processors: ± 1 dB, 20Hz-20kHz, at any level, back-to-back for simultaneous encode-decode
- Matching Between Channels: ± 1 dB, 20Hz-20kHz, any level
- Record/Playback Frequency Response (NR out): ± 1 dB, 45Hz-15kHz (typically +1,-3dB from 35Hz to 20kHz)
- Record/Playback S/N Ratio (Scotch 479): Referred to standard peak level (8dB above 100nWb/m)

	CCIR/ARM	Unweighted
NR out:	60dB	57dB
NR in:	70dB	57dB

- Playback Crosstalk: At 1kHz NR out: better than -60dB. NR in: better than -70dB
- Record Crosstalk: Record on one channel, simultaneous playback from other channel: 200Hz-10kHz NR out: better than -40dB NR in: better than -50dB
- A 6-pin connector is provided for remote control of NR functions, Dolby tone, and indication of their status.

The 234 has been designed to incorporate two independent channels of Dolby A-type noise reduction in the Sony BVH 2000 Series including the Sony High Definition videotape recorder. It plugs directly into the VTR in place of its AU-27 audio board, duplicating the record/play functions while adding the noise reduction feature. No modification of the VTR is required.

In addition, an LED meter for each channel is built in to simplify Dolby level calibration. The 234 also features playback "uncal" controls which permit temporary recalibration for nonstandard level tapes without changing the standard studio calibration level.

234 Two-channel Dolby A-type noise reduction module for Sony BVH 2000 (includes 2 X Cat. No. 225 and record/play audio circuitry) \$2350.00

225 Compact low power consumption Dolby A-type noise reduction module, single channel (for use with Cat. No. 221B, Cat. No. 226, Cat. No. 234, and models 372 and 380) \$600.00

DOLBY LABORATORIES, INC.

Noise Reduction Units

XP Series Multi-Track Noise Reduction Unit

The XP Series contains up to 24 channels of Dolby A-type noise reduction in 12 1/4" of rack space, including power supply. The XP Series utilizes an on-board, integrated noise reduction circuit instead of the interchangeable No. 22 modules.

Each XP noise reduction channel consists of a plug-in. No. 331 module which contains the integrated Dolby A-type noise reduction circuitry, precision input and output amplifiers with low distortion, controls, and an accurate LED calibration display. The separate, regulated PS3 power supply, designed for rackmounting directly above the noise reduction unit chassis, contains fan cooling and electronically-controlled output protection.

The XP Series includes "uncal" controls, permitting convenient resetting of Dolby level for playback of and punch-in on tapes from studios with different Dolby level standards. The user can select the option of "hardwired" or electronically-buffered bypass of individual channels or all channels simultaneously. The XP offers discrete FET switching for reliable, noise-free routing of audio signals.

Overall Frequency Response: 20Hz to 20kHz ± 1dB, encode-decode, at any level.

Total Harmonic Distortion: Less than 0.1%, 20Hz-20kHz, Less than 0.04% at 1kHz

Signal Connections: Custom input/output connectors on backplane, with provisions for locking to main chassis.

Individual Track Controls: NR In/Standby: electronically switches noise reduction characteristic in and out.

Bypass: provides relay-controlled "hard" bypass of all circuitry.

Uncal: permits temporary recalibration of Dolby system (± 6dB) for playback of and punch-in on non-standard-level tapes without disturbing the preset studio Dolby Level (pull to activate recalibration, push to restore preset level). In the Uncal mode, record calibration automatically matches the modified playback calibration.

LED mode indicators for NR In, Uncal, and Record.

Common Facilities Controls (on PS3 Power Supply): NR Off: User-selectable choice of electronic (soft) bypass or hard-wired (hard) bypass of all tracks simultaneously by means of switch on backplane of main XP series mainframe.

Dolby Tone/Cal: Activates internal master Dolby Tone oscillator.

Monitor: Selects the output to be monitored by Normal (automatic switching between line-in during recording and decoded tape during playback), Check Tape (in recording mode monitors encoded signal directly from tape without decoding), or Line In switches.

Reset ± 12V: Restores power after overload has occurred

LED mode indicators for power On, NR In, the selected monitor output mode, and Dolby Tone; LEDs for status of power supply (High Temp and High/Low Power Line) and for each of the five power supply rails.

Remote Control: Remote control of common facilities can be selected by positioning a link on the rear of the PS3; a front panel LED indicates Remote mode when selected.

Calibration Display: Eight-LED display for each track permits accurate calibration of Dolby Level (within ± 0.1dB if desired) by matching intensity of LED pairs, indicates the presence of signals and clipping, and assists in alignment with high-level reference tapes.

Signal Levels: Multi-turn potentiometers for each track adjust levels to and from the console and to and from the recorder. The minimum input is -5dB for Dolby Level, all inputs. The maximum output is 12VRMS (+ 24dBr) into 600 ohms and above (0dBr = 0.775V).

Switching Circuits: Noise-free discrete FET switching for all internal functions; relay switching for "hard" bypass.

Remote Mode Changeover: Record/play changeover designed for remote control by recorder. Opto-isolator on logic input requires +4 to +25VDC voltage differential to activate changeover logic (the current requirement is approximately 5mA, any voltage).

Record-Play Changeover Time: 3ms maximum.

Input Circuitry: Switch-selectable for floating balanced differential or unbalanced bridging impedance (approximately 10K ohms).

Input Common-Mode Rejection: 45dB at 100Hz (balanced condition).

PS3

XP Series

Output Circuitry: Hum-cancelling, single-ended outputs drive any load impedance from a minimum of 200 ohms. Each output is switch-selectable for operation with balanced or unbalanced loads.

Output Ground-Noise Rejection: 40dB (driving single-ended load, output adjusted for + 4dBr at Dolby Level, 100Hz).

Overall Noise Level Record-Playback: > 80dB below Dolby Level (A weighted, unweighted 20Hz to 2kHz, or CCIR/ARM); > 70dB below Dolby Level (CCIR 468.2 weighting).

Noise Reduction: Standard Dolby A-type characteristic, providing 10dB of noise reduction from 30Hz to 5kHz, rising to 15dB at 15kHz.

Matching Between Units: ± 1dB at any level and frequency, 30Hz to 20kHz, between any Dolby A-type units.

Signal Delay: 13.5µs per channel; overall encode-decode process, 27µs

Phase Error: + 26° at 20Hz; -7.5° at 20kHz; less than ± 5° from 50Hz to 15kHz (overall, NR in).

Dimensions: Mainframe: (8 1/4" x 19"), rackmounting

PS3: (3 1/2" x 19") rackmounting

Weight: Mainframe (number in model designation indicates number of tracks supplied):

XP8 21 lbs. (9.4kg)

XP16 29 lbs. (12.8kg)

XP24 36 lbs. (16.3kg)

PS3 30 lbs. (13.6kg)

Power Requirements: Mainframe operates from PS3 Power Supply; power and interconnecting cables are provided. User-selectable voltage ranges (50-60Hz, single-phase): 85-115V; 102-132V; 187-242V; 204-264V. Consumption with Cat. No. 331 card: XP8, 90VA; XP16, 150VA; XP24, 200VA. Note: All specifications apply with input and output controls set for Dolby Level equal to + 4dBr (1.23VRMS). (0dBr + 0.775V)

DOLBY LABORATORIES, INC.

Tape Duplication/Surround Decoder Units

330

SDU4

330 Tape Duplication Unit

- Overall Frequency Response: 30Hz-15kHz, ± 1 dB (encode-decode)
- Total Harmonic Distortion: At +4dB, less than 0.1% at 1kHz; less than 0.2% from 40Hz to 20kHz • Dolby B-type characteristics: (40dB below Dolby level) +3dB at 500Hz; +6dB at 1000Hz; +10dB from 4kHz upwards • Dolby C-type characteristics: (60dB below Dolby level) +8dB at 200Hz; +16dB at 500Hz; +20dB from 2kHz to 7kHz
- With noise reduction switched out, system becomes line amplifier
- Built-in 16kHz low-pass filter giving 45dB attenuation at 80kHz. Filter response below 15kHz, ± 0.5 dB • Overall Noise Level: Better than 80dB (unweighted or according to CCIR/ARM) below Dolby level
- Crosstalk: Better than 50dB between channels, 20Hz to 20kHz • Signal Delay: 20 μ sec. • Phase Difference Between Channels: Less than 5°, 20Hz to 12kHz, overall encode-decode • Matching Between Units: Better than 1dB at any level and any frequency • Two independent signal processors per unit • 3-pin XLR input and output connectors for each processor • Balanced floating transformer. Input impedance; 10K ohm or 600 ohm, selected by rear-mounted switch • Transformer, 20 ohms output impedance, balanced floating; will drive any load impedance from 200 ohms upwards • Input and output levels adjusted by multi-turn potentiometers accessible from front of unit. Minimum input 350mV for Dolby level. Maximum output level +22dB into bridging load; +21dB into 600 ohms; +20dB into 200 ohms (0dB=0.775RMS) • Pushbuttons for selection of: NR in/out, Dolby tone, Remote/local operation • Toggle switch mode selector behind access plate for selecting encode or decode (quality monitoring) mode • 5-pin XLR connector for remote control of NR in/out and Dolby tone oscillator is provided • Fiberglass printed circuits, solid-state devices throughout • Steel case, gray stoved plastic textured finish; front panel clear anodized with black characters • 1 $\frac{3}{4}$ " x 19" rackmounting • 12 lbs.

The 330 is designed for use in the preparation of master tapes for high speed duplication onto cassettes, cartridges, and open-reel tapes to be played back on home equipment incorporating Dolby B-type and/or C-type noise reduction circuitry.

The 330 can accommodate either the Cat. No. 66 B-type module or the Cat. No. 219B C-type module. The Cat. No. 66 comes standard with the 330 and the Cat. No. 219B is available as an option. User may specify the inclusion of either module upon ordering the unit.

For monitoring of the master or the final product, the 330 can be operated in the playback mode by activating a switch under the removable access plate on the front panel.

330	Duplication processor includes Cat. No. 66 B-type noise reduction module	\$1900.00
330C	Duplication processor includes Cat. No. 219 C-type noise reduction module	2050.00
66	Dolby B-type noise reduction module, two-channel	900.00
219B	Two channel Dolby C-type noise reduction module (retrofit for Model 330)	1050.00
101	'Dolby B' labels per 1000	10.00
99	'Dolby C' labels per 1000	10.00

SDU4 Surround Decoder Unit

- Rackmount unit incorporating a professional surround decoder module, interface circuitry, and power supply • (On rear panel) Lt (left total) and Rt (right total) XLR inputs for two-channel encoded signal; left, center, right, and surround XLR outputs. Additionally, Lt and Rt internal monitor points and left, center, right, and surround external processor loops are provided at a 25 pin female D connector • One toggle switch and three push-button switches control system operating modes and internal test signals. A single rotary knob controls four-channel master level. Screwdriver adjustable controls recessed behind panel for adjustment of input and output levels. Signal present LEDs indicate left, center, right, and surround decoder outputs • Two balanced floating transformerless inputs. Input gain adjustment will accommodate a range of 250mV (-9.8dBr) -2V rms(+8.2dBr). Input impedance is greater than 10K ohms. Common mode rejection greater than 60dB up to 1kHz, greater than 50dB at 10kHz. Maximum common mode voltage 4V rms, 5.8V peak. • Four balanced floating transformerless outputs. Output gain adjustment will accommodate a range of 250mV (-9.8dBr) -2.5V(+10.2dBr) at the normal master level control setting. Output impedance 25 ohms. Maximum output voltage +26dBr into balanced 600 ohm load, less into lower impedances. Maximum output +20dBr into unbalanced 600 ohm load • Dolby surround, conventional stereo, and mono modes, selected by front panel pushbutton or remote control • A two-channel single-ended monitor output is provided, located after the input amplifier and gain control. Dolby level is 500mV (-3.8dBr) at these outputs. Output impedance is 100 ohms and these outputs can drive loads greater than 10K ohms • Overall frequency response: 20Hz-20kHz ± 1 dB (L, C, and R) 100Hz-7kHz ± 3 dB (surround output) • S/N Ratio: (referenced to Dolby level) greater than 80dB (left, center, right), CCIR/ARM weighted. Greater than 70dB (surround), CCIR/ARM weighted. (master level control at normal setting) • Total harmonic distortion (THD) at the main balanced outputs will not exceed 0.25% into balanced loads 600 ohms or greater at any output level up to 12.5V rms at any master level control setting. THD at Dolby level at 1kHz with input and output adjusted for +4dBr, 0.1% typical • Two plug-in modules: one Dolby surround decoder and one facilities module. Fiberglass printed circuit cards, gold-plated connectors, solid-state devices throughout • Bottom tray gold alodine, extrusion black anodized. Front panel black anodized with white and yellow lettering, cover black textured paint. • 1 rack unit (1.75") high, (10.25") deep behind mounting surface • 11 lbs.

The SDU4 is designed for reference monitoring of Dolby stereo or Dolby surround program material in broadcast, audio-for-video, music recording and some film applications. The unit contains a reference 2:4 matrix decoder, identical to that used in the Dolby stereo monitoring equipment found in film production centers. The 2:4 decoder takes a two-track matrix encoded signal as its input and generates four output signals (left, center, right and surround).

An internal calibrate mode, using channel-sequenced pink noise, allows easy verification of monitor levels and equalization. Internal logic allows the correct reproduction of program material either with or without a center loudspeaker.

DORROUGH ELECTRONICS

Audio Processor/Loudness Monitors/Console

610

610 Discriminate Audio Processor

- LED metering provided for each channel plus an LED output meter designed for precise setting of the modulation to the relative loudness level desired
- Peak clipping circuit
- Entry portals available for interfacing with any of the AM stereo systems
- Available for AM, FM and television

The 610 is a digitally designed tri-band audio processor with attack and release times a function of a programmable EPROM. Units track with digital perfection.

610-AM\$3400.00
 610-FM with stereo generator6200.00

700

700 Monophonic Audio Console

- Seven mixing positions
- Two microphone positions with switchable third
- Five line level positions with 3 inputs per position
- Two program buses (Audition—Program)
- Two VU meters—loudness meters optional
- Three selectable external monitor inputs
- 10W monitor amplifier
- Self-contained cue amplifier and loudspeaker
- Muting optional on all mixing positions
- Shallco stepped attenuators in each mixing position
- Telephone type key switches for program/audition switching
- Plug-in IC circuit boards
- Aluminum cabinet construction

Specifications

Mike Input: Active balanced -50dBm at 150 ohms
Line Input: Buffered unbalanced -10dBV nominal adjustable per mixing position 10K ohms or 600 ohms, switchable
System Gain: Mike 70dB, line 30dB for +4dBm output
Max. Output: +26dBm at 600 ohms
 700\$2825.00

Loudness Monitors

- Integrates on the same scale, two ballistics, showing the relationship between the average and the peak
- Simultaneously displays peak and average, and the relative difference, in dB, between these two ballistics is derived from the integration time of the persistence scale

40-A

- Right and Left inputs for use in stereo mixing applications. With one instrument, the operator can easily see the stereo mix and avoid the classic in-phase/out-of-phase problem. "Center channel build-up," the addition of in-phase or monophonic material, which causes the mix to be perceived as louder, will appear as a sudden increase in level.

Research has established the relationship between integration time, RMS metering and the display of peak levels. It displays, in an easy to read format, the actual energy content of the program material regardless of frequency, while still indicating the peak amplitude of the complex audio signal. The Loudness Monitor allows the operator to ride levels in a manner such that all program material can be adjusted for equal perceived loudness while protecting the peak of the waveform. One meter gives you more complete and more usable information than any combination of peak hold, VU and PPM indicators.

With the Loudness Monitor's long scale, even clicks and pops that should be difficult to locate in the mix, appear on the meter scale.

Observation of the complex audio signal on an oscilloscope will indicate the average and the peak excursions of the program material. The use of an oscilloscope with a variable or long persistence CRT will show additional information relative to recurrent amplitudes which are displayed by the persistence of the screen as a concentrated band of energy about the center of the CRT. It is these two pieces of information which compose the acoustically related visual indication of the complex audio signal, and is the basis for the Loudness Monitor. Those sources which are more sinusoidal in their energy content, such as female voices and bass, are indicated in the persistence scale, and program material with more transient information, male voices or drum tracks, are indicated in the peak scale.

10-A Single meter, console or panel, 3/16" LEDs in arc configuration. Dimensions: 4.25" x 2.0"\$475.00

12-A Dual meter (two side by side), console or panel mount, 3/16" LEDs in arc configuration. Dimensions: 8.562" x 2.0" ..\$950.00

DUBNER COMPUTER SYSTEMS, INC.

Character Generators

10-K/20-K Character Generators

• Full function real-time character generators • 30 standard fonts with border and drop shadow edges are included. Additional packages of styles and sizes available on disk. Foreign language fonts and keyboards available • Optional packages of 16 high-resolution typefaces are used to build fonts in any size from 4 to 150 (upper case height) scan lines high • Kerning, spacing, positioning, coloring, and edging—by letter, row or page, with user controllable complete overlap and tuck • Separate background plane for “weaving,” with unlimited weave capability • 256 simultaneous colors, from a total 16.7 million for characters, edges and backgrounds—selectable by palette, RGB, or HSV • Sophisticated digital filtering produces graphics with 16 intermediate shading levels of any color. Both character and edges are generated this way • Complete directories with user comments, selectable by message type • Full sequence control of message time, speed, type, and duration • Alphanumeric message storage, up to 31 digits in any order • Full-color edit output with cursor and adjustable safe-title marks • Integrated sync generator, encoder, and linear downstream keyer • Menu-driven • Separate menu screen output for prompts, error messages, system information and “preview text” • Help key, along with a “help screen display” for every operational key on the keyboard • Recordable tabs and justified tabs (right, left, and center) • Centering and positioning—top, middle, bottom in both horizontal and vertical • Instant italicizing of any font—right or left, in multiple positions • Automatic message retype, with different font, color, or edge • Multiple playback choices—fade, wipe, and reveal, for any message in any sequence • Linear key signal output for anti-aliased fonts • As many as 4 plug-in keyboards • GPI trigger controls sequences • User-formattable disks • 4M bytes of internal memory, allowing approximately 24 fonts and 1,000 text pages on line, depending on size • Anti-aliased and standard fonts • Flash • 40ns start or stop, 80ns minimum width, no maximum (up to full screen). The “apparent resolution” of anti-aliased font is < 10ns • Characters or background colors from 1 to 485° scan lines (full screen) • Horizontal linear adjustment range of $-17/+1\mu s$. Phase adjustment continually variable through 360° • Compatibility: Dubner CBG and Texta: Animations and graphics can be transferred to a 20-K cartridge on a 20-K; and to a 10-K diskette on a 10-K equipped with optional lomega drive. Full Color Graphics: CBG Third Plane, Textra 500 and DPS-1 full color images can be converted on a 20-K to a 20-K background with reduced color resolution

Dubner 20-K and 10-K Character Generators are identical systems, except for the disk drive.

The 20-K system includes a 10M byte lomega cartridge disk drive.

Cartridge contains system software and standard fonts. Approximately 10,000 text pages fit on a disk. Background graphics, fonts and animations reduce text storage capacity.

A connector for additional external disk drives is standard. An lomega disk drive connected to a 10-K functions as a 20-K.

The 10-K features a 1M byte 5 1/4” floppy disk drive.

Diskette capacity is 800K. Four diskettes included contain system software, standard fonts and messages. Approximately 1,000 text pages fit on a diskette. Background graphics and animations reduce text storage capacity.

* PAL Specifications available upon request.

Specifications

Video Inputs

Genlocking: 1.0V p-p NTSC black burst or composite video. 4.0V p-p sync and blanking may be used alternatively

Background: 1.0V p-p NTSC composite video for internal keying

Video/Key Outputs

R, G, B: 0.7V p-p non-composite video for use with external encoder or RGB monitor

10-K/20-K

- Air:** 1.0V p-p character generator NTSC composite video
 - Edit:** 1.0V p-p NTSC composite video with cursor
 - Mixed:** 1.0V p-p composite video with character generator keyed into background. (Linear key with anti-aliased fonts)
 - Status/Preview:** 1.0V p-p monochrome video showing status messages or preview of next display
 - Key:** 1.0V p-p keying signal for use with external keyer; composite or non-composite; output is linear (256 steps) for external linear keyers when anti-aliased fonts are used
- 10-K \$15,000.00
 20-K \$18,500.00

Options

Presentation Graphics Software

Combines versatile text composition and high resolution fonts with multi-faceted graphical displays. 16.7 million colors to choose from with 256 displayable simultaneously \$2,500.00

K-Dig Digitizer

Hardware/software product for anti-aliased camera capture. 16 level gray scale. Includes font compose software \$4,000.00

K-PNT Painting

Combines the ease of K Series text operation with the artistry of K-Paint design. With an artist’s tablet and stylus and K-paint software, this hardware/software option offers a separate interface for using font compose software. Choose 256 colors from a palette of 16 million or match screen color directly for fills and brushes \$5,000.00

5-K Character Generator

• Full resolution font character generator • Included as standard are: floppy disk storage of images and text pages, 256 colors on-screen from the full 16,700,000 possible, and eight regular fonts or four anti-aliased fonts with four sizes each on line for instant access • Gives the operator selection of different colors for the character itself and for its edge and shadow • Sequencing of moves and pages has nine selectable speeds • Animation playback of up to 40 frames from the Dubner Texta or DBG-2 is possible, plus displaying all backgrounds from Texta and CBG-2 • All the pre-packaged Backgrounder programs will run on the Dubner 5-K

5-K \$9,500.00

DUBNER COMPUTER SYSTEMS, INC.

*Video Painting Systems/
Graphics Generator*

DPS-1 Video Painting System

- 4, 2, or 1-field NTSC frame buffer • Keyboard and status display
- Tablet • 10M byte lomega drive for storage and recall of up to 8 pictures • Color selection: by hue, saturation, and luminance or from the picture; all legitimate NTSC colors allowed • Millions of colors displayable simultaneously • Cut and paste • Targeted color correction: contrast, brightness, hue • Frame averaging • Fill • Motion suppression
- X, Y, Z, tilt, scale and perspective • Pictures in internal memory
- Posterize • Mosaic • Magnify • Compatible with CBG-2 3rd plane
- Brushes: Hard and soft solid, airbrush, transparency (window) soft and hard, square, stamp, luminance, wash, calligraphy, multi-color, soft and hard trim, fuzz, smear; all brushes anti-aliased • Soft stencils, reverse stencil • Emboss • Cropping • Draw lines and curves (anti-aliased) • Color ramps: vertical, horizontal, diagonal, 4-way • Tilt and pressure sensitive stylus • Text generation (anti-aliased)

Options

- VTR control • Animation • Larger disk drives

The DPS-1 is a full-color video painting system that grabs images from any NTSC source for storage and modification. For perfect picture quality, the DPS-1 stores and uses all four fields of the NTSC color sequence.

The DPS-1 is based on software innovation that allows the composite NTSC signal to be digitally sampled and manipulated without decoding and re-encoding.

DPS-1 \$23,000.00

DPS-1

TBS-20 Turbo Paint System

- + 20 Meg cartridge disk • Image manipulation along the X, Y, and Z axis • Rotate with roll • Pitch and yaw • Perspective moves • Both real time and frame by frame effects • Automatic assembly onto disk
- VTR and still store • Digitizing tablet and Grass Valley Group™ • 9505 sync generator

Options

- 300M byte disk
- 2 gig optical laser disk that stores 2000 stills

The Turbo Paint System incorporates leading edge technology to increase process speed and memory making it more powerful than its small brother the DPS-1 Painter.

TBS-20 \$40,000.00

Texta Video Graphics Generator

- Proportional spacing • 9-speed roll • Crawl and slow reveal • Diagonal typing • 3-D shadows • 64-color logo characters • Scanwipe
- Tumble • Timed roll • Animate any sequence of frames in real time
- Unlimited border and shadow combinations • Optional second channel permits read next previewing, dual user operation, merged output for creating complex imagery and curve drawer software • Options include a Video Digitizer, for creating new fonts and logos, a weather service interface, for receiving hourly satellite pictures and forecasts, and a tablet with pen and four-button "mouse" drawing directly into Texta's display memory • Texta disks are fully compatible with the CBG-1 and CBG-2 and can be used for playback on Dubner's 20-K character generators • Texture mapping on dual channel systems permits design of 3-D objects and "mapping" of a flat Texta graphic onto geometric shapes • Can store over 500 fonts and 20,000 pages of text on twin removable disk cartridges • Full-screen image composition, combining text and a variety of graphic tools: Lines, Grids, Ellipses, Scale, Rotate, Area Fill, and more • Anti-aliasing circuitry generates over 16 million intermediate shades • Palette of 4096 colors
- Texta 500 adds full color NTSC paint system

DYNAIR ELECTRONICS, INC.*Distribution Equipment***SERIES 5300 DISTRIBUTION EQUIPMENT**

Series 5300 Distribution Equipment mounts in a 5-1/4" x 19" rackmounting frame (13.34 x 48.26 cm). The frame has a total of twenty mounting spaces. Two power supply modules can be used to provide redundant power supply operation. All amplifier modules include "on-board" power regulators, fuses and blown fuse indicators. AC input power is 115/230 VAC \pm 10%, 50/60 Hz.

FR-5300B Frame

Module Mounting Frame. Provides twenty spaces for Series 5300 modules. All modules can be installed without soldering. (Frame shown with modules installed.)

Size: 5-1/4"H x 14-1/4"D x 19"W Net Weight: 9 pounds

PS-5305B Power Supply Module

Power Supply Module. Mounts in FR-5300B Frame and provides unregulated dc for amplifier modules. Requires four spaces in frame. Two power supplies can be installed for redundant operation.

AD-5370B 5 Output Audio Distribution Amplifier Module

High performance audio distribution amplifier module. Indefinite short circuit protection. Can be used in same frame with other Series 5300 modules.

DA-5310B Dual 1 Input 2 Output Video Distribution Amplifier Module

Video Distribution Amplifier Module for high performance video systems. Two identical amplifier sections on one module, each providing 1 terminating input to 2, 75 ohm outputs. Equalization available for up to 1000 ft. (305 m) of cable.

DA-5310B/10A Video DA, Non Equalized

DA-5310B/11A Video DA, Equal., Belden 8281, Unbal. In.

LA-5353B/41A Line Amplifier, Equalized, WECO 16 PEVL

PD-5360B 5 Output Pulse Distribution Amplifier Module

Pulse Distribution Amplifier Module for high performance video systems. Regenerative input, linear output with controlled, adjustable, rise time. Front panel input pulse presence indicator. Normal output with up to 1000 ft. (305 m) Belden 8281 input cable.

Series 5300 Blank Filler Panels

BP-5390A Blank Filler Panel. Mounts in FR-5300B Frame and fills one unused amplifier space. Net Weight: 4 oz.

BP-5391A Blank Filler Panel. Mounts in FR-5300B Frame and fills two unused amplifier spaces. Net Weight: 5 oz.

BP-5392A Blank Filler Panel. Mounts in FR-5300B Frame and fills four unused amplifier spaces. Net Weight: 6 oz.

CC-5398A Power Supply Service Cable

Power Supply Service Cable. Allows power supply to be extended from frame for maintenance.

CE-5396A Module Extender

Module Extender for all Series 5300 modules (except power supply). Allows modules to be extended from frame for maintenance. Net Weight: 2 lbs.

CN-9860A Cable Mating Connector

Cable Mating Connector. For use with Western Electric type 760 or equivalent 124 ohm balanced cable. Mates with Trompeter BJ-77.

CN-9861A Cable Mating Connector

Cable Mating Connector. For use with Western Electric type 16 PEVL or equivalent 124 ohm balanced cable. Mates with Trompeter BJ-77.

SP-5359A Transient Protection

Dynasty/Dynasty 100 Routing Switchers

Dynasty routing switchers are available in 30, 40 and 60MHz bandwidths, while the Dynasty 100 has a bandwidth of 100MHz. The Dynasty 100 permits clean processing of even the most complicated signals including 1280 x 1024, 60Hz, non-interlaced computer generated graphics as well as NTSC, PAL, HDTV, audio and control signals.

Laser Trimmed Hybrids let the user "Hot Change" modules without any PROMs to change, module adjustments or DIP switches to set. These time saving improvements also aid in increased bandwidths for overall system performance not to mention reduced down-time for maintenance, repair, upgrade and modification.

The use of custom printed circuit baluns provide for minimum input return loss. Further, the utilization of true 75 ohm, high density, BSM connectors allows for rapid system modification and expansion without the previously common system down time and realignment. System expansion is just about as simple as Plug 'n' Play. All the way to 1000 x 1000.

Dynasty may be easily upgraded to 100MHz performance by the addition of Dynasty 100. For those users that require high definition and computer generated graphics, Dynasty 100 offers the maximum in signal processing performance, yet still at only about twice the price of a conventional (competitor's) 10MHz switch. Dynasty 100 offers 250V/ μ s slew rates. The combination of Dynasty and Dynasty 100 switchers allows the system designer to Mix 'n' Match bandwidths in a given switching environment.

Specifications

30MHz Systems

VIDEO 100 x 100 system
Input: 1.0V p-p, 75 ohm, composite video (0.714V, 0.286 S)
Input Return Loss: > 30dB at 5MHz (for 10 loops)
Output Return Loss: > 40dB at 5MHz
Output DC Ref.: Adjustable -0.2 to +0.2V; maintained \pm 0.02V 10-90% APL; composite and non-composite video

Chrominance/Luminance

Gain: Adjustable to unity. Any input to any output \pm 0.05dB
Crosstalk Isolation: > 60dB to 5MHz. Worst case, all inputs and outputs active

Electrical Length: 25ns nominal (frame input to output)
Differential Delay: 1° at 5MHz
Bandwidth: 30MHz (1MHz reference)
Frequency Response: 100kHz-5MHz: \pm 0.15dB; 8MHz \pm 0.3dB; 20MHz \pm 1.0dB (1MHz reference)

Slew Rate: 50V/ μ s
Envelope Delay: < 5ns 100kHz-5MHz

Chrominance/Luminance

Delay, 12.5 T Pulse: < 5ns

Chrominance/Luminance:

Gain: < 0.05dB
Differential Gain: 0.05%, 10-90% APL, 5MHz
Differential Phase: 0.05°, 10-90% APL, 5MHz
Transient Response: 0.5% 2T pulse, 1.0% T pulse
Tilt: < 1% line or field
Hum and Noise: 80dB RMS below 1V p-p, 10MHz bandwidth

40MHz Systems

VIDEO 100 x 50 system
Input: 1.0V p-p, 75 ohm, composite video (0.714V, 0.286 S)
Input Return Loss: > 35dB at 5MHz (for five loops)
Output Return Loss: > 40dB at 5MHz
Output DC Ref.: Adjustable -0.2 to +0.2V; maintained \pm 0.02V 10-90% APL composite or non-composite video

Gain: Adjustable to unity. Any input to any output \pm 0.05dB
Crosstalk Isolation: > 60dB to 5MHz. Worst case, all inputs and outputs active

Electrical Length: 25ns nominal (frame input to output)
Differential Delay: 1° at 5MHz
Bandwidth: 40MHz (1MHz reference)
Frequency Response: 100kHz-5MHz: \pm 0.15dB; 8MHz \pm 0.3dB; 20MHz \pm 1.0dB

Slew Rate: 50V/ μ s (1MHz reference)
Envelope Delay: < 5ns 100kHz-5MHz

Chrominance/Luminance

Delay: < 5ns

Chrominance/Luminance

Gain: < 0.05dB
Differential Gain: 0.05%, 10-90% APL, 5MHz

Dynasty

Differential Phase: 0.05°, 10-90% APL, 5MHz
Transient Response: 0.5% 2T pulse, 1.0% T pulse
Tilt: < 1% line or field
Hum and Noise: 80dB RMS below 1V p-p, 10MHz bandwidth

60MHz Systems

VIDEO 100 x 20 system (100 x 80 with DA-1580A input distribution)
Input: 1.0V p-p composite video (0.714V, 0.286 S)
Frequency Response: 100kHz to 10MHz \pm 0.10dB, to 20MHz \pm 0.25dB, to 30MHz \pm 0.75dB, to 60MHz \pm 1.5dB (1MHz reference)
Slew Rate: 100V/ μ s

Pulse Response (10MHz S.W. 2ns rise and fall times): 8ns, equal rise and fall times with 20% maximum overshoot and ringing

Differential Gain: 0.1% at 5MHz
Differential Phase: 0.1° at 5MHz
Crosstalk Isolation: > 55dB to 5MHz, > 25dB to 60MHz, worst case all inputs and outputs active

Hum and Noise: 55dB RMS noise below 1V p-p signal, 60MHz bandwidth unweighted

100MHz System

VIDEO 50 x 80 system
Input: 1.0V p-p, 75 ohm composite video (0.714V, 0.286 S)
Input Return Loss: 40dB at 5MHz
Output Return Loss: 30dB at 5MHz
Signal Connectors: 8NC
Gain: Unity
Worst Case Crosstalk: 50dB at 5MHz, 25dB at 100MHz

Pulse Response (10MHz S.W. 2ns rise and fall times): 5ns equal rise and fall times with 15% maximum overshoot and ringing

Slew Rate: 250V/ μ s
Bandwidth: 100MHz (1MHz reference)
Frequency Response: 100kHz-5MHz: \pm 0.25dB; 8MHz \pm 1.0dB; 100MHz + 1.0, -3.0dB (1MHz reference)

Envelope Delay: < 10ns 100kHz to 80MHz
Differential Gain: 0.2% 1V p-p, 10-90% APL at 5MHz
Differential Phase: 0.2° 1V p-p, 10-90% APL at 5MHz
Tilt: 1% maximum line or field
Hum and Noise: 65dB RMS noise below 1.0V p-p signal, 10MHz bandwidth unweighted; 50dB, 100MHz

Switching Time:

< 5 μ s

Audio Specifications

Inputs: Balanced high impedance bridging, + 24dBm max. at 600 ohms (+ 30dBm at 150 ohms)

Common Mode

Rejection: > 60dB, 50-120Hz; 50dB, 30Hz-15kHz
Outputs: Balanced low impedance, indefinite short-circuit protection. + 24dBm max. with 600 ohm load. + 30dBm max. with 150 ohm load
Output Level Variation: \pm 0.2dB max. between inputs

Connectors, Input-

Output: 37-pin "D" subminiature
Gain: Adjustable to unity
Crosstalk Isolation: > 80dB below max. out to 15kHz (worst case)
Frequency Response: 30Hz-20kHz \pm 0.2dB (Time Code Output - > 220kHz bandwidth)

Harmonic Distortion: 0.1% to 15kHz + 8dBm in/out; 0.25% to 15kHz max. in/out
Hum and Noise: -75dBm max.

ECHOLAB, INC.

Production/Audio Follow Switchers

SE-3

SE-3 Production Switcher/Special Effects Generator

- 3 mix-effects circuits, 2 border generators
- 1 color background, 2 color matte generators
- Front-panel programmable with up to 5,000 steps
- Quad splits
- Re-entrant effects
- ECHOLab's patented Soft Take
- 1 3/4" front panel depth
- 12 video inputs total, 10 are looping impedance or 75 ohm terminated, inputs 1 and 2 are black and color background. Composite or non-composite, sync or non-sync sources may be used
- 5 keying inputs, comp or non-comp, must be synchronous Genlock source (black or composite video). 75 ohm terminated

The SE-3 makes exceptional performance available for a low price. A powerful built-in Z-80 microcomputer replaces most of the digital logic found in other switchers and also allows user programming.

SE-3 \$ 12,200.00

Options

- SYSCAL** System Calibration program for SE-3 \$ **285.00**
- APL-3** Apple offline storage program for SE-3 **875.00**
- RPS-3** Remote Power Supply for SE-3 front panel **100.00**
- DSG-3** Drop Shadow Generator (15 lines) for SE-3 titler . **2,250.00**
- NTSC-3** NTSC encoded chromakey generator for SE-3. . . **1,650.00**
- RGB-3** RGB chromakey generator for SE-3 **1,650.00**
- SERIAL-3** SMPTE serial interface **2,225.00**

Upgrades

SE-3 to SE-6 upgrade (includes CPU, EFF, FPL, TLY, DSK swap) \$ 12,000.00

AFS

AFS-Audio Follow Switcher

- 9 inputs plus silent and tone, voiceover. Stereo optional
- 600 ohm balanced line, XLR type connectors
- Programmable, computer controlled audio switching and fading
- SMPTE link to ECHOLab's SE-3 or edit controllers
- Parallel link to other video switchers

The AFS is a computer-controlled switcher for audio mixing in a video environment. Intended to complement the SE-3 switcher, the AFS can be a stand alone programmable mixer or it can be controlled by the SE-3 or other video switchers. In this mode, the AFS will automatically switch audio to follow video, that is, selecting direct bus video 5 will cause the AFS to switch to audio source 5. Up to four sources can be designated as audio-only and will not respond to video switching.

Eleven input sources are selectable, including a low distortion 450Hz tone and silent, and voiceover can be added to the output. Pushing a single button will select its input in the normal fashion, and if two or more buttons are pushed simultaneously all buttons will remain lit and all sources will be selected.

- AFS-M** Monaural **\$4,500.00**
- AFS-S** Stereo **5,500.00**
- AFS-D** Audio follow stereo daughter board **1,000.00**
- SPK-A** Spare parts kit for AFS **500.00**
- SVC-A** Service manual for AFS (basic unit includes 1) . . **50.00**

SE-6

SE-6 Production Switcher

- Quad splits, re-entrant effects
- ECHOLab's patented Soft Take
- Computer control of all switching and effects
- Front-panel programmable with up to 200 shots or 500 transitions
- Contact closure editing interface (standard) will initiate any pre-programmed event
- Remote fully digitized control panel with two wires to chassis
- 12 video inputs total, 10 are looping impedance (47K ohm) or 75 ohm terminated. Two inputs are internally generated black and background colors. Composite or non-composite sync or non-sync sources may be used
- 6 linear keyers (Key 1-Key 5 and CGEN), one RGB or composite chromakeyer. Key 1, Key 3, and CGEN may be used with cut and fill signals

The SE-6 adds convenience and flexibility for fast-paced teleproduction. Two independent mix-effects systems and direct bus switching handle up to 12 video inputs, including black and background. Two built-in Z-80A microprocessors handle digitization of front panel controls (no heavy cables) and allow full control by edit controllers as well as user programmability. A front-panel programming system has been developed for enhanced ease of use.

The SE-6 is used in two modes: In production mode, the switcher is a normal 5-bus switcher. In program mode, the programming capability is turned on with a keyswitch, and the programming keypad is used to store control sequences for later playback. Any operation which can be done manually can also be programmed.

SE-6 \$ 19,900.00

- DSG-6** Drop shadow generator (15 lines) for SE-6 titler **2,250.00**
- NTSC-6** NTSC encoded chromakey generator for SE-6. . . **1,650.00**
- RGB-6** RGB chromakey generator for SE-6. **1,650.00**
- SERIAL-6** SMPTE Serial interface **2,225.00**
- SPK-6** Spare parts kit for SE-6 **1,300.00**

DV-5 Production Switcher

• Designed for teleproduction and post-production in small and medium-sized broadcast studios • Automatic calibration • 12 inputs, including black and background • 3 keyers • 3 digital color generators • Front-panel programmable with TimeTracker • Two mix-effects systems for effects and autotake • Switching power supply • Soft Take • Computer control of all switching and effects • Contact-closure editing interface will initiate any pre-programmed event • Remote fully digitized control panel with two wires to chassis • 39 wipe patterns • Command will return 28 parameters to factory calibration

The DV-5 video switcher is a compact and powerful tool for advanced teleproduction. Innovative circuit design allows packaging in a compact two rack-unit chassis and a 12¹/₄" remote front control panel. The electronics chassis uses just two printed circuit cards.

Built-in computers handle advanced features such as front-panel programmability, calibration, and fault diagnosis.

The DV-5 is used in two modes: Production or Programming. In Production Mode, the switcher allows control of wipe patterns and effects. In programming Mode, a keypad is used to store control sequences for later playback. When sequences have been programmed, they may be recalled in Production Mode for fast accurate recreation of effects that are difficult or impossible to perform manually.

Specifications**Effects Pattern**

Generator: 40 patterns available; border, symmetry, normal-reverse, soft controls

Take Pattern

Generator: 4 patterns plus mix, key and effects

Downstream Keyer: Fill with matte or external character generator video; fade-to-black; reverse keys

Color Generators: Three, background/border/DSK; digitally settable

Effects Keyer: Mix/Wipe/Key; keyer is internal, external, DVE, or chroma. Key mask and key reverse

Edit Control Interface: Optional RS-422 or 423 interface to popular edit controllers

Audio Follow: Optional 10-input audio follow switcher is available

Chroma Keyer: Optional RGB or NTSC chroma keyer

Drop Shadow Generator: Optional Drop Shadow Generator with variable 0-15 line drop, black or white pre-shadow, outline

Programmable: Time Tracker follows control movements, or normal mode follows button pushes. 6 full panel setups can be stored or optionally to 99. Up to 999 step sequences of control operations can be stored. Expandable, battery backed-up CMOS memory allows optional multiuser memory areas with password protection

Video Inputs: 10, looping impedance, 1V p-p composite or non-composite, synchronous or non-synchronous video inputs. 1, Character Generator Fill. 1, Digital Video Effects (DVE). 1, Genlock input. 1 DSK fill

Key Inputs: 1, External chroma key; 75 ohm terminated. 1, External Effects key; 75 ohm terminated. 1, Character Generator key; 75 ohms terminated. 3, looping impedance Red/Green/Blue chroma-key inputs. 1 DSK Video Key

Video Outputs: 1, Preview; 1V p-p 75 ohm source terminated. 2, Program, 1V p-p 75 ohm source terminated. 1, DVE feed from insert bus. 3, Black, 1V p-p 75 ohms source terminated

DV-5

Sync Inputs: NTSC: Sync, Blank, CBF; 75-ohm terminated, 2-4V p-p; or use optional genlock sync generator
PAL: PAL ident flag added, external PAL sync generator required

Data: 1, Tally connector, 10 form C relays. 2, BNC, RS-423 link to front panel. 1, RCA phono jack for contact closure editing. 1, 9-pin D connector for RS-232 or RS-422 link to edit controller. 1, 9-pin D connector for RS-232 or RS-422 link to DVE or Audio Follow Switcher

Differential Phase: .5°
Differential Gain: .5%
Bandwidth: .1dB-6MHz
Path Length: ± 1°
Absolute Delay: 170ns

Program Output
Isolation: 45dB
Crosstalk: 52dB at 3.58MHz
Fade Linearity: 1%
Signal-to-Noise Ratio: 65dB signal to RMS noise, unweighted
Power Consumption: .65W, 110 or 220V, 50-60Hz
Mechanical: Control panel: 12¹/₄" x 2" x 19" rackmountable. Chassis: 3¹/₂" x 18" x 19" rackmountable. Shipping weight: 34 lbs.

DV-5 \$9995.00

Options

DSG-5 Drop Shadow Generator (15 lines) for DV-5 titler \$2000.00
GLS-5 Genlock Sync Generator for DV-5 1000.00

EECONOLINE® TIME CODE READER PERIPHERALS

TCR-65 Time Code Reader

- Rackmount package • 1/20 to 20 times play speed reading range • 0.4" red LED • Updates from tach pulses during code dropouts • Front panel controls for time code level and display hold • 117VAC, 60Hz, 4W max.

The TCR-65 can be used to read and decode longitudinally recorded time code from video tapes, audio tapes, and magnetic film.

The TCR-65 receives standard serial (longitudinal) SMPTE time code through a rear-mounted XLR connector and converts the code into eight digits of clock time.

The error-detection system pulse train is obtained from an external tachometer when the rear-mounted toggle switch is in the on position. When the toggle switch is in the off position, pulses are delivered by an internal code bit counter. The TCR-65 automatically switches back to time code reader mode when a good time code frame is again detected. The LED display is then loaded with the current time code data.

TCR-65 \$1350.00

MTG-55 Master Time Code Generator

- Drop frame or non-drop frame operation • Color frame synchronization through a rear-mounted BNC connector. This feature permits using an external 15Hz color framing pulse
- Loophrough video input/output connectors (BNC) to assure that time code transmission starts at the beginning of a frame, per ANSI-V98, 12M • A video input designed to accept composite video or composite sync • An XLR connector that provides for time code output on the rear panel

The MTG-55 outputs serial time code. Time code is formatted in hours, minutes, seconds, and frames. It is a useful instrument for indexing video and audio tapes for subsequent material location and editing.

The front panel includes six thumbwheel switches for setting initial time of day. Frames are automatically preset to zero. Other front-panel controls include an on/off switch, a drop frame/non-drop frame selector, a start button, a stop button, and a load button.

Output of the MTG-55 is 0dBm, 600 ohm, balanced.

The unit is 1 3/4" H and 10" D. It has a standard 19" W rack-mount front panel. Power required is 117VAC, 60Hz, 3W maximum.

MTG-55 \$1350.00

TIME CODE READER/INSERTERS

Each unit can read drop or non-drop time codes and provides controls to adjust character size and screen position.

VCG-75 Video Character Generator

- Compact rackmount package • 1/20 to 20 times play speed reading range • Front panel controls for time code level, size, position, brightness, insert on/off, and display hold • 117VAC, 60Hz, 3W max.

VIG-850

The VCG-75 reads SMPTE time code from video tape or other sources and outputs this data as video characters. The output data can be burned into or superimposed over the source video on a monitor. Time code is read at 1/20 to 20 times normal playback speed, in either forward or reverse mode.

Using the VCG-75, you can correlate specific video frames with time code information without looking away from the video monitor.

Time code is received through a rear-mounted XLR connector. Video is received and transmitted through rear-mounted BNC connectors with two isolated outputs of 75 ohms each, unbalanced.

Video input and output levels are 1V p-p, nominal, NTSC format. SMPTE input sensitivity is 50mV minimum. Input impedance is 2.5K ohms.

VCG-75 \$1350.00

VIG-850 Premium Multi-Format Time Code Generator/Reader

- Compact, rackmount package • Generates longitudinal and VITC time code • Reads and displays longitudinal and VITC time code • Generates slaved time code from 10 commandable generator slave modes • Compatible with NTSC and PAL/SECAM video standards • Built-in broadcast quality VITC video inserter • Drop and non-drop frame • Generates, reads, and displays user bits • 105-125VAC, 47-30Hz, 30W max.

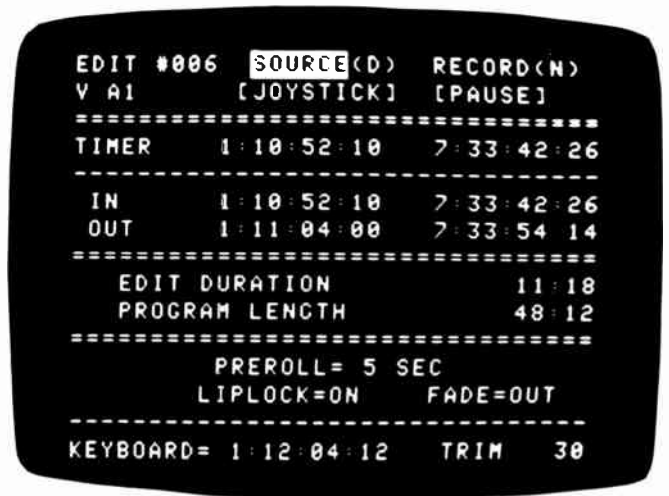

The VIG-850 can generate drop or non-drop time code with or without user bits in all modes. It incorporates techniques using microprocessor multi-level interrupt firmware programming that allows simultaneous operation of generator and reader functions.

Vertical interval time code is an integral part of the video signal. It can be read whenever a usable video picture is being reproduced at tape speeds ranging from high speed shuttle all the way down to freeze-frame. Unlike longitudinal time code, VITC does not require a dedicated track. This frees up both audio tracks for stereo programming. VITC provides tape indexing resolution down to the video field. Redundant recording methods and an integral error detection code give VITC a high immunity to dropout reading errors.

VIG-850 \$5490.00

Super 90

Super 90 Edit Control System

- Plugs into most 3/4" and 1/2" VTRs
- Joystick control of tape speed
- Pulse Scan
- Interchangeable VTR formats
- High speed search
- Cruise
- Full VTR remote control
- Auto-tag
- Recall feature
- Built-in sync generator
- On-board computer
- Dynamic Edits
- Mark, set and trim in/out edit points
- Programmable pre- and post-rolls
- Insert or assemble edits
- Independent control of audio and video channels
- Control track or SMPTE/EBU time code
- Abort capability
- Status display generator
- Fastest edit controller available

The Super 90 is a low cost microprocessor-based editing system designed to bring sophisticated joystick editing within the budget of every videotape producer. It is a plug-in system that provides variable speed tape motion control with most 3/4" and 1/2" editing VTRs.

The multi-format Super 90 is particularly suitable for high speed ENG (electronic news gathering), EJ (electronic journalism), remote production vans, educational and industrial productions, broadcast productions requiring a single source, and as an off-line system for commercial post production.

The Super 90 can be used for single or dual monitor editing, remote VTR rolls, back-timed edits, animation and manual edit listing. The Super 90 operates on control track or industry standard SMPTE/EBU time code, and is available in NTSC or PAL versions.

The Super 90 is human-engineered for ease of operation and is the fastest editor available in the industry. The dedicated twelve-button keyboard permits quick initiation of edit functions and communication with the editor and its options, Liplock® audio pitch control, and Blade™ black/fade module.

Super 90 Single Source, Cuts-Only Edit Controller

Includes two time code readers and one generator, all built-in. RS-232 edit list out capability, two VTR interfaces, one each operator and maintenance manual.

Super 90 \$4950.00

Accessories

CI Character Inserter

Inserts or displays time code digits into video. Provides "window dubs." \$1200.00

BL-90 Blade Black Generator And Fade Module

Fades up from and/or down to black at in or out edit points. Includes internal black burst generator for prerecording color black on video tapes. (Fades NTSC and PAL, Black Burst Generator NTSC only.) \$925.00

CCA-90 Control Cable Assembly

Interfaces VTR to 90 Series Edit Controller. Specify VTR manufacturer and model number \$650.00

RGL-90 Time Code Reader/Generator/Listener Module

Installed in a ECS-90 it will generate and read drop and non drop frame SMPTE or EBU time code. Lists edit decisions via RS-232 serial port to storage devices \$3250.00

Manuals

ECS-90/Super 90 Operators \$25.00
 ECS-90/Super 90 Installation and Maintenance \$50.00

EECO, INC./CONVERGENCE CORP.

Video Edit Controllers

ECS 195 Series Editing Systems

A powerful, low cost A/B roll video edit-controller. Standard features include the ability to mix tape formats, including 1", exclusive tag features simplify backtiming for match frame edits and matching video to narration; scene store for quick storage and retrieval of key scenes, and an internal 50 edit line memory that is expandable to 200 lines.

The basic system may be expanded to include three time code readers and one generator, and a list management package with sequential auto-assembly.

ECS 195, Basic System

ECS 195LM with a list management package and sequential auto-assembly, three time code readers, one generator

The Console

- Joystick • Cruise • SMPTE time code or control track
- High speed search • Manual bump

Edit Entry

- Switcher effects and notation • Split audio/video edits

Auto Edit Cycle

- Preview modes • Allstop • Replay • Status display generator • Dual Serial EDL ports • TwoCom • Color framed time code generator on the 195LM

Tags

- AutoTag • AutoMatch® • Scene store and recall
- Syncroll • Manual bump

List Search

- JoyScrol® on the 195LM • ListScrol®

List Management

- Internal memory 50 edit line memory storage is standard on the 195; 200 edit lines are included in the 195LM
- Add, delete or replace edits with or without ripple in the 195LM • Pending clean • CleanIt® • Format selection
- Reel-numbers • Edit numbers • Recall edits • Renumbering

Auto Assembly

- Auto assembly provides for automatic editing of a sequence or an entire program, following the instructions in the edit list • Manual assembly calls up the next edit automatically, but actual performance of each edit list is initiated by the operator allowing for modifications or adjustments • Auto and manual assembly are available on the 195LM

Other Features

- Audio monitoring • Three channel audio insert selection • Trim function • Auto duration • Automatic dialog replacement

Engineering Notes

- Assemble/Insert • Time code with offset • Switcher/Mixer control • VTR interfaces • Color framing • Multiple or single monitor • Smart start • Programmable personality • Preroll/Postroll time select

ECS-195 A/B Roll, Three VTR Controller with 50 event memory, tag features, edit list in and out, add, delete and CleanIt. Includes three parallel VTR interfaces

..... **\$ 10,505.00**

ECS-195 Plus includes all features of the ECS-195 in addition to: internal time code readers and one generator. Complete list management package including add, delete and replace with or without ripple, JoyScrol (list slaved to VTR motion), 450 event edit memory, sequential auto-assembly and Operation/Maintenance Manual

..... **\$ 15,000.00**

Conversion Kits

LM Option A Upgrades earlier 195TCRG to ECS-195LM. Adds list management package with Ripple, JoyScrol 200 event memory and sequential auto-assembly

..... **\$ 2,200.00**

LM Option B Upgrades basic 195 to ECS-195LM. Adds three time code readers and one generator, list management package with Ripple, JoyScrol and sequential auto-assembly

..... **\$ 6,000.00**

LM Option C Upgrades the ECS-195LM to the ECS-195 Plus if the unit was purchased after January 1, 1987

..... **\$ 2,200.00**

ECCO, INC./CONVERGENCE CORP.**Video Editing Systems****200 Series Video Editing Systems**

- **ActionMatch:** Calculates edit points to match action and sound anywhere within an edit segment. Audio-only or video-only inserts can be precisely matched to corresponding action or sound with joystick control and a single keystroke
- **Amber Status Monitor:** An amber status monitor is included with each 200 System
- **Auto Duration:** Utilizes the trim register to set the edit duration relative to either an in or an out point
- **Auto/Manual Assembly:** Provides for automatic editing of a sequence or an entire program following the instructions in the edit list. Manual Assembly calls up the next edit automatically but actual performance of the edit relies on the operator
- **AutoMatch:** Allows the operator to create matching source and record in edit points at any location within the previous edit. This automatically provides match frame edits for A/B rolls and effect transitions
- **Auto Scene Store:** In this mode a single keystroke snapshots scene location by time code and reel number. Up to 99 locations can be stored or listed
- **Automatic Dialogue Replacement:** ADR provides cue tones and a continuous audio record cycle for "looping" or post-dubbing of sound. It can also be used to replace video material
- **CleanIt:** CleanIt automatically cleans overlapped edits in the EDL one edit at a time during the off-line edit process. This program constantly checks the preceding edit to see if an overlap has occurred
- **Color Framing:** A Color Framing routine allows the edit system to monitor the color frame relationship for 1" VTRs based on time code
- **Control Track or SMPTE/EBU Time Code:** The editing system has the capability to operate in either control track or industry standard SMPTE/EBU drop frame or non-drop frame time code. The system also operates with any combination of control track or SMPTE/EBU time coded tapes
- **High Speed Search:** Allows the operator to program any tape time location (control track or SMPTE/EBU time code), and have the selected VTR search to that tape location
- **List Scroll:** Gives you joystick control to shuttle forward and backward through the edit list, including "cruise" for no-hands scrolling of EDL
- **Manual Bump:** Allows for small adjustments to rolling VTRs from the keyboard to achieve precise synchronization of multiple machines for syncroll
- **Programmable Personality:** Each model of VTR has an individual "personality" with regard to speed and response characteristics. Personality switches tell the system what specific VTRs are connected
- **Smart Start:** Learns the characteristics of the VTRs in the system and makes adjustments in the synchronization routines to accommodate variations in performance
- **Split Audio/Video Edits:** Can be programmed with independent selection of audio and video in edit points

ECS-204X

A four VTR, advanced list management A/B roll edit controller with assignable record, three built-in time code readers, 1000 line edit memory, 409 list cleaning program, CleanIt, block moves, comments, sequential and checkerboard auto-assembly. Includes three VTR interfaces, electronic control unit with rackmount kit, monitor, the PC-300 list storage program, Operation and Maintenance Manuals. Fourth VTR interface and Time Code channel optional \$19,000.00

ECS-205

An eight VTR advanced list management A/B roll edit controller with four built-in time code readers (expandable to eight), with assignable record. Includes list management and assembly features of the 204.

Includes four VTR interfaces, two electronic control units, editing console, status monitor and operations/maintenance manuals. Additional VTR interfaces and time code channels optional, monitor, the PC-300 list storage program and Operation/Maintenance Manuals. . . . \$27,000.00

**Conversion Kits**

- CK-201/204** Upgrades the ECS-201 to the ECS-204. Includes a memory board and keycaps \$10,800.00
- CK-202/204** Upgrades the ECS-202 to the ECS-204. Includes a memory board and keycaps 6,480.00
- CK-203/204** Upgrades the ECS-203 to the ECS-204. Includes a memory board and keycaps 5,400.00
- CK-204/205** Upgrades the ECS-204X to the ECS-205. Includes one VTR interface, an additional electronic control unit with rackmount kit, and time code reader channel 5,200.00

Options and Accessories

- AVS-100** Audio Follow Video Switcher \$1,200.00
- CG-100** Command Generator 1,000.00
- CI** Character Inserter 1,200.00
- ICC-100/5'** Interconnect cable for parallel I/O 175.00
- ICC-100/20'** Interconnect cable for parallel I/O 300.00
- IIFP-100** Interface Package (Specify VTR manufacturer and model number intermixable formats available) 1,000.00
- IIFP-100/VSI** Serial VTR interface package, provides dual range joystick control. Time code is carried through VSI to 204X, 1205 or 1000 Series Edit Controller—no additional time code cables required 1,500.00
- JB-100** Junction Box 200.00
- PIO-100** Parallel input/output 175.00
- SE-100** Switcher Effects Unit 7,000.00
- SWI-100/110** Switcher Interfaces includes JB-100 and appropriate cables; specify model/manufacturer of switcher to be interfaced 2,000.00
- SWI-120** Switcher Interface includes JB-100 and appropriate cables; specify model/manufacturer of switcher to be interfaced 3,000.00
- RMK-200E** Rackmount kit 250.00
- PC-300** Software program for outboard edit list management 1,000.00

ECCO, INC./CONVERGENCE CORP.**Video Edit Controller****ECS 900 Plus Video Edit Controller**

- A six serial VTR controller
- Any serially interfaced VTR may be assigned record functions from the 1000 keyboard
- Combinations of parallel and serial interfaces may be used
- Serial time code generator is standard with optional longitudinal time code reader
- The edit decision list can be transmitted in and out of the controller via dual RS-232 serial data streams to personal computers, independent disc drives, punched tape reader/generators and printers
- An edit list of 1000 lines may be stored internally
- List management includes pending and actual addition and deletion of edit events
- The controller may be fully interfaced to most major manufacturers' production switchers for A/B roll effects
- CleanIt...The dynamic edit list cleaning program that cleans lists as edits are performed
- TenCom...Set of ten general purpose interfaces, can trigger external digital video effects units, graphics generators, audio tape decks and external VTRs
- ActionMatch...Provides single keystroke backtiming that matches audio and video points for in-scene synchronization
- AutoMatch...For single keystroke matchframing
- AutoTag...For automatically extending events from a match frame point
- ListTag...For single keystroke matchframing to any point within previously recorded material
- SyncRoll Tag...Single keystroke re-synchronization among several source and record reels for edit-by-edit synchronized rolls
- Split Audio/Video Edits...A logical keystroke/joystick sequence that quickly establishes separate in-points for audio and for video
- 99-Frame Scene Store...A separate memory that can store 99 different time code locations by reel number, accessible via two-digit addresses. Locations can be entered "on the fly" as music beats, chord changes, scene changes, etc.
- Joystick VTR Control...All interfaced VTRs can be placed in high speed forward or reverse scan, play, jog and still-frame pause from the joystick
- ListScrol...The joystick can be used to scroll and cruise the edit list through a highlighted line in the edit decision list register
- Last and Next Edit Recall...One shifted keystroke pulls any edit in the highlighted line up to the edit register for modification, trimming and/or re-recording
- Five Preview Modes...VVV, VBV, BVB, Preview-In and Preview-Out
- Manual Bump...Up to four rolling VTRs can be manually synchronized—and locked into sync—for SyncRoll
- SyncRoll...Three sources and one record VTR can be rolled "in-sync" while cuts, wipes and dissolves are performed from the keyboard of the 1000. Each transition/event is automatically loaded into the edit list
- List Management Package...Features Add, Delete and Replace, with or without Ripple
- The PC-300 personal computer program...for outboard list storage and manipulation
- JoyScrol...A feature that locks the position of the edit list to the motion of a delegated VTR

**ECS 900 Plus**

- Sequential auto-assembly
- 409...An advanced stepthrough list cleaning program unique to Convergence edit-controllers
- Move...A feature that can literally edit the list by defining blocks of edits and copying—or deleting—them anywhere in the list, with or without Ripple
- Comments...Entry into the list from the keyboard of an MS DOS based personal computer (with the PC-300)
- Checkerboard auto-assembly
- User bits display
- Exchange register...used for alternating active edit events

ECS 900 Plus

A complete high-end six serial VTR list management edit system with assignable record, 1000 line edit memory, list in and out, add, delete and replace with or without ripple, CleanIt and 409 list cleaning programs, block moves, comments, JoyScrol, sequential checkerboard auto-assembly. Includes three VTR VSI serial interfaces, one time code generator and Operations/Maintenance Manual. Three additional VSI serial interfaces and time code channels optional \$16,200.00

TCR-4 Internal time code reader, 3 channels \$3,500.00

TCR-1 Time code reader expansion channel for existing TCR-4 \$300.00

Accessories

Video Switcher Source cuts-only systems. Audio follow \$1,200.00

CI Character Inserter Inserts time code digits into video being recorded, providing "window dubs" 1,200.00

ICC-100/5' Interconnect cable for Parallel I/O 175.00

ICC-100/20' Interconnect cable for Parallel I/O 300.00

IFP-100 Interface Package Specify VTR manufacturer and model number (1", 3/4", 1/2") 1,000.00

JB-100 Junction Box Required for multiple connections to Parallel I/O. 200.00

PC-300 Personal computer software program (MS, DOS, IBM compatible) 200.00

SE-100 Switcher Effects Unit Audio follow video switcher with 23 wipe patterns, dissolves. 7,000.00

SWI-100/110 Switcher Interfaces includes JB-100 and appropriate cables; specify model/manufacturer or switcher to be interfaced 2,000.00

SWI-120 Switcher Interface Includes JB-100 and appropriate cables; specify model of switcher to be interfaced . . 3,000.00

EECO, INC./CONVERGENCE CORP.**Editing Systems****IVES® II Desktop Postproduction Editing System**

In its standard configuration, the IVES II can easily handle all editing and machine control functions for a typical 2-VTR editing bay without additional peripheral equipment. And when expanded through the addition of its A/B option, your IVES II increases its power even more, giving you full A/B roll and separate Special Effects Generator (SEG) control in one package.

- SMPTE/EBU time code or control track editing, so you can edit whichever way you find more comfortable. And to safeguard your efforts, the system will automatically switch to control track pulses should the time code source be interrupted
- An internal routing switcher that automatically routes all your video, audio and time code inputs based on your selections. No recabling is necessary
- Dedicated Mark/Set keys that let you easily mark in and out edit points on-the-fly or set them numerically
- Back-to-back matched edits that are as precise as possible because the system automatically matches last out points with next in points for both video and audio
- Programmable general purpose interface (GPI) relay closure that can trigger auxiliary equipment at any time before or during an edit
- Video and audio fade control that allows you to program video and audio fades directly from the keyboard, for durations of 1 to 9 seconds
- Scene-thru and replay, the IVES II's unique commands that let you replay any sequence of edits or just the last edit performed
- A rapid go-to search that lets you find any scene location, including last in and last out points, within seconds
- A print command that generates an edit decision list (EDL) of your edits in CRT display or industry standard edit list formats
- Preview out, a time-saving command that permits you to preview and fine tune your edit out point without having to preview the entire edit
- Aux video input that allows you to conveniently insert camera or title video into your production
- The ability to insert IVES II color black as a video source
- Copy source or master tapes for workprints or backup copies. IVES II's one-button Copy command automatically rewinds both VTRs to the beginning, then quickly makes a direct copy from the play VTR to the record VTR, or vice versa. While copying, you can add time code to just the copy or to both tapes if you need two tapes that have identical time code. This is especially helpful for A/B editing situations. And because all video, audio and time code signal routing is performed automatically, no cable repatching is required
- Stripe the play and/or record tapes with continuous SMPTE/EBU time code, control track pulses and video color-black. All at the touch of single-button controls. And possible because the IVES II includes its own sync and video color-black generators and dual time code generator/readers. So you won't need additional time code equipment, either in the field or in the postproduction room
- Print out rough cut edit lists in CRT or industry standard EDL formats, so you can review important scenes and possible edit points without actually performing the edit
- Mix audio directly onto your edited master tape. Add background music, sound effects and voice-overs, complete with fades and adjustments of the mix ratio from front panel or auxiliary audio line inputs. A 3W amplifier is included so you can monitor audio from either VTR
- Change from one tape format to another quickly and easily, allowing you to move from 1/2" to 3/4", 3/4" to 1", etc., with remarkable speed

IVES II Single Source, Cuts-Only Edit-Controller. Includes two VTR interfaces, two built-in time code readers and generators, internal sync and black generators, programmable fades to and from black, audio mixer, non-volatile memory, operators manual. System is expandable to include second source VTR for A/B roll effects \$5,350.00

IVES II

IVES Pro

IVES® Pro A/B Roll Editing System

Three VTR Edit Controller with Remote Rackmountable Electronics and Detached Keyboard.

- Ability to intermix 1/2", 3/4", 1" formats
- Self-contained SMPTE/EBU time code generator/readers
- RS-232 serial port
- Parallel output to printer
- Pre-stripe capability with color-black and time code
- Programmable fade to and from color-black
- Audio mixer with programmable fade
- Automatic dubbing of source material and edited master
- Internal sync and color-black generators with outputs
- Split audio/video edits
- Auto assembly from external source
- Learn mode — repeats series of keystrokes
- E-E preview for setting audio/video record levels
- Ability to edit with drop/non-drop time code formats
- Non-volatile memory for edit and function data storage

IVES PRO A/B Roll, Three VTR Edit-Controller with remote rackmountable electronics, auto-assembly from external source, three VTR interfaces, three built-in time code readers and two generators, internal sync and black generators \$7,950.00

EECO, INC./CONVERGENCE CORP.**Computerized Editing Systems****EMME® Computerized Editing Systems**

• A workstation optimized for creative video editing • Fast, comprehensive edit decision list • Time-saving cluster events function • Multiple workstation configurations • Built-in expansion • Integrated time code modules • Fast, smooth, control of up to nine 1", 3/4" or 1/2" VTRs/Multitrack ATRs and a production switcher

Fast, Comprehensive Edit Decision List

A powerful edit decision list program allows you to select functions quickly and efficiently. As you edit, each of your decisions goes directly into the list. You can insert a multisource event such as a dissolve by pressing the DISSOLVE key, then entering the desired number of frames. Follow the same procedure to re-edit a multi-source event.

The EMME list also lets you correct entry errors. If an entry is made into an existing event by mistake, that event is not destroyed. To restore the event to its original form, press the O.S. (Out Sequence) key on the keyboard, and the system reverts to the beginning of the event, thereby automatically deleting the erroneous entry.

Along with these shortcuts, you still get a full selection of time proven features like selective update, block move, sort, change sequence, auto clean, list clean and global search.

Time-saving Cluster Events Function

With the powerful editing tool of cluster events, create complex, multiple-source decisions as elements of the cluster, then treat them as a single event. To dissolve back and forth from a person on camera to a character generator graphic, for example, you no longer have to create an event for each dissolve. Instead, create a cluster that is previewed and recorded as one event. By controlling the character generator through the Relay key, you can dissolve to the person on camera, trigger the relay and change the graphics, dissolve back to the person, and continue through the entire sequence.

And you can use cluster events to great advantage with today's "intelligent" switchers, capable of displaying multiple sources in a wide variety of modes.

Multiple Workstation Configurations

An optional workstation has been customized for the unique needs of today's professional film editors. This Cinemagraphic Editing Workstation is easily interchangeable with the Video Editing Workstation. Each is plug compatible with the EMME computer.

If your specialty is filmstyle editing, you can make all editing decisions using the "Mouse" Contoller, a single-button device that moves a corresponding cursor on a display of all system functions on a data display monitor.

Integrated Time Code Modules

An LTC reader is included in each EMME machine interface, and you can order additional time code accessories to suit your applications. These include the time code inserter, VITC reader, LTC generator and combined LTC/VITC generator, all plugging into the system's smart interface chassis.

VITC capability lets you use all audio tracks available for applications like multiple language programs and stereo audio mixes. And it gives you the added flexibility of editing in slow motion—all the way down to still frame.

Prioritizing time code formats in the absence of a particular code is easily accomplished. If you're reading LTC, for example, and this code drops out, the system automatically reverts to VITC, or to the control track. Similarly, when the VITC reader is in use, the order of priority can be from VITC to LTC, and finally to control track, so that you always have automatic backup capability.

Auto Assemble with Full Look-ahead Search

Auto Assemble lets you automatically assemble all of your edit decisions onto a master tape. With our look-ahead search, you can even auto assemble a half-hour program in a half hour of real time. Once you've completed your edit decision list, you select Auto Assemble on the control panel. The system automatically looks ahead in the list for the next edit, cues a selected VTR, then pre-parks it to wait for the right time to play.

**E-Key Registers for Repetitive Functions**

The Video Editing Workstation gives you 10 E-key registers, each a set of up to 80 keystrokes that the workstation remembers and executes with a single stroke. You can quickly execute special functions like center cut dissolve and automatic offset just by pressing one key. When a weekly show opens with a standard sequence of special effects, for example, the commands used to perform the opening can be stored into one or more E-key registers.

Multitrack ATR Control

You can match video to audio for perfect lip synchronization, time special audio effects to match video action, and expand the total number of synchronous audio channels.

Smooth, Efficient Editing At Your Command

EMME's Video Editing Workstation features a dedicated function editing control panel. Keys are grouped by function into clusters, and the clusters logically arranged on the panel to maximize your efficiency and creative freedom. You'll find the most frequently used keys placed in a triangular pattern where you can easily locate and use them. Also included is a special Help key as part of the control panel to give you instant, on-screen information about specific functions as you need it.

A shuttle knob lets you manipulate the powerful edit decision list to select list management functions and control machine motion.

All functions that require a status display are highlighted with LED indicators on the keytops, so that as you scroll through the list, you are constantly kept informed of in-use status, right up to the current event.

EMME 3000/3100 Includes three VTR interfaces, three longitudinal or vertical interval time code readers, rackmountable electronics chassis and interface chassis (E-Box with E-bus control module), rackmountable single 8" disk drive. Choice of either Video Workstation or Computer station (color coded keyboard), operator and technical/installation manual. \$24,950.00

VMI VTR Interface Package For Parallel Or Serial VTRs. Package includes P.C. and time code reader boards (longitudinal or vertical interval), 10' RS-422 cable (from main frame to interface), 50' control cable (from interface to VTR). VTR make and model number and time code cables must be supplied by customer. \$2,995.00

AMI ATR (Audio) Interface Package For Parallel Or Serial ATRs. Includes two P.C. boards, time code reader (longitudinal only), 10' RS-422 cable (from main frame to interface), 15' cable (from interface to ATR). ATR make and model and time code cables must be supplied by customer. \$4,750.00

RF Coaxial Loads

**CPTN-3000
2500-3000W**
Oil Dielectric
Frequency: DC — 1000MHz
VSWR: 1.15 Max. 1.1 typ.
Power: 2500W continuous; 3000W intermittent
Ambient: -40° to +45°C
Input: LC (f), 1 5/8 EIA opt.
Weight: 35 lbs.
Op. Position: Horizontal only
Finish: White enamel

**CPTC-50K
50kW**
Calorimeter Version CPM-50,000
Water Load with Integral Heat Exchanger
Frequency/VSWR: DC-1 GHz 1.1:1*
Power: 50kW continuous
Ambient: 0° to +35°C
Input: 3 1/8 EIA, 6 1/8 opt.
Weight: 500 lbs.
Air Flow: 4500 CFM
Op. Position: Upright
Finish: White Enamel
AC Power: 220VAC, 15A, 60Hz, 3 (50Hz available optional)
Fully Interlocked: Load Resistor is field replaceable

**DPTC-50KFM
55kW**
Dry, Forced Air Cooled
Frequency: DC-110MHz
VSWR: 1.15:1
Power: 55kW continuous
Ambient: -40° to +45°C
Input: 3 1/8
Weight: 143 lbs.
Op. Position: Upright
Finish: White enamel
Air Flow: 1600 CFM
Interlocked for line power, air flow, and over-temperature
AC Power: 208/230VAC 7A 60Hz (50Hz available option) Reject Load option available

**CPTC-5K
5000W**
Oil Dielectric/Forced Air
Frequency: DC-1000MHz
VSWR: 1.15 Max., 1.1 typ.
Power: 5000W max.
Ambient: -40 to +45°C
Input: LC (f), 1 5/8, 3 1/8 opt.
Weight: 57 lbs.
Op. Position: Horizontal only
Finish: White enamel
AC Power: 115VAC, 60Hz (220/50 optional extra)

ELECTRONICS RESEARCH, INC.

FM Antennas

1100 Series High Power Circularly Polarized FM Antennas

• Rugged, heavy-duty antennas capable of handling powers from 5kW (single bay) to 40kW (eight or more bays) • May be purchased in arrays of up to 16 bays • End fed in combinations from one to eight bays • In off center fed antenna arrays, the center feed "T" is located one half bay spacing below the center of the array. In even numbered arrays, the center feed "T" is located at the center of the array • Input flange is approximately 7' below center feed "T" • Radiating elements are fed using a 3 1/8" coax stem which is supported using a stainless steel support bracket • Interbay 50 ohm coax is 3 1/8" rigid • Standard 1100 Series antennas have coaxial input 3 1/8" 50 ohm EIA female, and input power rating 32kW or less depending on the number of bays in the array. Higher input power ratings up to 64kW can be achieved using optional 6 1/8" center feed sections

1100 Series

Polarization: Circular (clockwise)
Azimuthal Pattern: ± 2dB in free space, both horizontal and vertical
Ellipticity: ± 3dB in free space
VSWR at Input: (Without field matching) 1.25:1 top mounting, 1.5:1 or better side mounting
VSWR at Input: (With field matching) 1.1:1 or better

Specifications

Frequency Range: 88 to 108MHz, factory tuned to one frequency

1105 Series Circularly Polarized FM Antennas

• End-fed antenna having a maximum input power of 7.5kW and power gains ranging from 0.46 for one bay up to 4.48 for the 8-bay model • Single bay for one bay has in input power limitation of 3kW • DC short puts the antenna at ground potential for added protection against lightning damage • Beam tilt and null fill are not available with the 1105 series and no power splits other than 50/50 are offered with these antennas • 6' matching transformer extends below the bottom bay of the antenna and terminates in a 1 5/8" EIA input flange • Brass, copper and stainless steel construction

Specifications

Frequency Range: 88 to 108MHz
Polarization: Circular (clockwise)
Azimuthal Pattern: ± 2dB in free space, both horizontal and vertical
Ellipticity: ± 3dB in free space
VSWR at Input: (without field tuning) 1.1:1 top pole mounting; 1.5:1 or better side mounting
VSWR at Input: (with field tuning) 1.1:1 or better

Note: All antenna brackets are stainless steel. All weights given include brackets, interbay line, and transformer section. Factory-installed deicers are available using either 300W or 500W per bay. Specify 120 or 230V. Heater elements are replaceable in the field. Shielded

interbay heater cable and junction boxes are supplied. Heater weight, including junction boxes and interbay cable, is 6 lb. (2.7kg) additional per bay.

ESPRIT™ SERIES PROJECTION SYSTEMS**Features Common To All Models**

- Greater video bandwidth and smaller spot size for sharp pictures and high contrast ratio
- User friendly remote control to facilitate set-up and operation
- 16 digit alphanumeric display of operational status and diagnostics
- Modular plug-in single function circuit board design with independent regulation for ease of servicing and reliability
- Automatic horizontal and vertical sweep frequency sensing with autolock
- Autosensing or manual selection of NTSC 3.58, NTSC 4.43, PAL and SECAM video formats
- RS-170 capability to accept RGB with auto-sensing for plus or minus sync
- Drift-free convergence that is immune to typical temperature, voltage and frequency variations
- Adjustable blue video enhancement to improve both foreground and background color resolution when used with personal computers
- Front and rear projection capabilities on flat or curved screens
- High efficiency thermally isolated switch mode power supply for cooler operation and longer life
- Dual 120/240V switchable input with built-in surge protection
- Throw distance approximately 1.5 times the image width
- Precision parallax optical system allows an adjustable image from 4' to 12' in width (up to 25' in width with an optional lens)
- Automatic video gain control
- Sweep direction LED indicators
- May be mounted in any position: floor, table, ceiling
- Vertical and horizontal focus modulation for improved corner resolution
- Adjustable four-sided blanking for sharp edges and elimination of VCR head switching noise

Esprit

all major circuit functions • Wide range of RGB source compatibility • Electronic resolution: 1024 lines per picture width; 330 lines per picture width (NTSC) • Scanning rates: horizontal: 14-28kHz; vertical: 40-100Hz

Esprit 500 \$8,995.00

Esprit 300 Color Video/Computer Projection System

- Upgradable to Esprit 535
- Simple installation with independent nine zone registration
- Compatible with most low resolution computers
- High light output—400 lumens (peak white)
- Self diagnostic capability
- Liquid cooled phosphors
- Wide band RGB video amplifiers (13MHz bandwidth)
- $\pm 15^\circ$ keystone correction
- Error diagnostics of all major circuit functions
- Electronic Resolution: 768 lines per picture width (RGB); 330 lines per picture width (NTSC)
- Scanning Rates: Horizontal—14kHz to 17kHz; Vertical—40Hz to 100Hz
- High resolution coated f/1.01 lenses

Esprit 300 \$5,995.00

Esprit 535 Color Video/Computer Projection System**Same features as Esprit 300 plus:**

- Compatible with most low and medium resolution computers
- 9 pin "D" TTL RGB input connector with loopthrough connector (CGA and EGA compatible)
- RS-232 (computer control system compatible)
- Horizontal frequency width tracking
- Remote adjustable horizontal phasing
- Automatic keystone tracking
- Wide band RGB video amplifiers (30MHz bandwidth)
- Electronic Resolution: 1024 lines per picture width
- Scanning Rates: Horizontal: 14kHz to 36kHz

Esprit 535 \$10,995.00

Esprit 700 Color Video/Computer Projection System**Same features as Esprit 535 plus:**

- High light output—350 lumens max.
- 6 element hybrid super-high resolution coated f/1.01 lenses
- Upgradable to Esprit 1000
- Compatible with most low, medium, and high resolution computers
- RS-232 network capability
- Sweep direction LED indicators
- Wide band RGB amplifiers (100MHz bandwidth)
- \pm to 7° keystone correction
- Electronic Resolution: 4096 lines per picture width RGB
- Scanning Rates: Horizontal—14kHz to 48kHz; Vertical: 40Hz to 150Hz

Esprit 700 \$14,995.00

Esprit 1000 Color Video/Computer Projection System**Same features as Esprit 700 except:**

- Internal frequency tracking test pattern generator
- 8 element ultra high resolution glass lenses
- Scanning Rates: Horizontal—14kHz to 75kHz

Esprit 1000 \$24,995.00

Esprit 500 Color Video/Computer Projection System

- Simple installation with independent nine zone registration
- Compatible with most low and medium resolution computers
- High light output—400 lumens (peak white)
- Fully automatic sweep frequency sense and hold
- 9-pin "D" TTL RGB input connector with loop through connector (CGA and EGA compatible)
- Automatic vertical sync polarity select
- Liquid colled phosphors
- Horizontal frequency width tracking
- Adjustable blue video enhancement
- Remote adjustable horizontal phasing
- Automatic keystone tracking
- Large 16 character LCD operational status display
- Integral comb filter for improved resolution (NTSC 3.58 only)
- Wide band RGB video amplifiers (20MHz bandwidth)
- Composite sync, separate H and V or sync on green
- High efficiency thermally isolated switch mode power supply for cooler operation and longer life
- Complies with all HHS and FDA requirements
- Plus or minus 15° keystone correction
- Error diagnostics of

ESP/ELECTRONIC SYSTEMS PRODUCTS, INC.

Video Computer/Audio Switcher

69019 Rackmount

69021 Tabletop

69019/69021 High Definition Video Switchers

- Modular design
- 19" rackmountable
- Stereo audio switching
- Front panel controls
- Wired remote control station
- Bright LED channel indicator
- High impedance loopthrough capability for paralleling switchers
- Up to 8 RGB, video, and stereo audio input channels
- Micro-processor controlled
- Computer terminal control via RS-232 input
- Gain and brightness level adjustment on each RGB input to match output levels between channels
- All remote connectors are 6-conductor telephone modular connectors
- Front panel controls include channel selects, volume control, mute audio, main power/illuminated switch and momentary contact switches

Options

- Modular input assemblies for system expansion
- Remote control extension cables available in 25' increments up to 100'
- Wired remote control
- Infrared wireless remote control
- Decor cabinet
- System interconnect cables available in 25' increments up to 100'
- Computer interface box for IBM-PC and PC compatible computers

This system has been developed to meet the needs of those who require wide bandpass control, and distribution of video, computer (RGB), and audio signals.

The system is housed in a 5 $\frac{1}{4}$ " high, 19" wide rackmountable enclosure. It also can be supplied in an optional attractive decor/tabletop for desk/tabletop installation.

The switcher is expandable to accommodate up to 8 computer (RGB) inputs and/or 8 video inputs with stereo audio. A high impedance feed-through feature allows the capability of paralleling multiple switchers for a multi-output switching matrix. Individual gain and brightness controls match all output levels.

The system is micro-processor controlled, accessed by front panel controls or remotely via an optional wired remote control station or an infrared wireless transmitter.

The switcher may be controlled also by a computer keyboard via RS-232 interconnect.

Pushbutton operation offers automatic switching between input signal channels. The effect is smooth and professional switching with no delays or adjustments. A bright LED digit channel indicator prominently displays which input channel has been selected.

Specifications

Power Requirements:	115VAC, 60Hz 220VAC, 50Hz
Consumption:	28W max.
Input	
Number:	Up to 8 video, 8 RGB (sync) and 8 stereo audio sources
Impedance:	15K ohms unterminated 75 ohms terminated
Level:	Up to 2.0V p-p video Up to 5.0V p-p RGB Up to 7.0V p-p sync
Output	
Adjustable:	Up to 3.0V p-p into 75 ohms
Number:	Two, separate and buffered
Impedance:	75 ohms
DC Component:	< ± 0.1 VDC
Tilt:	< 0.1%
Video	
Frequency Response:	60MHz RGB 15MHz video
Noise:	> 40dB below 1.0V p-p

ELECTRO-VOICE, INC.**Microphones****Professional Microphones****635A Dynamic Omnidirectional Microphone**

The 635A is a rugged, durable microphone. The moderately high output level (-55dB) is appropriate for a broad range of studio and field applications. Its response has been specially shaped for up-close vocals.

Specifications

• Frequency Response: 80-13,000Hz • Impedance: 150 ohms • Output: -55dB • Diaphragm: Acoustalloy® • Case: Steel • Finish: Fawn beige micomatte • Size: 5¹⁵/₁₆" (151mm) long; 1³/₃₂" (36mm) dia. • Weight: 6 oz. (170g) • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 312A clamp

635A\$116.00

649B Miniature Dynamic**Omnidirectional Lavalier Microphone**

Created especially for TV, the 649B is our most popular dynamic lavalier. Frequency response is tailored for balanced performance in the lavalier chest position.

Specifications

• Frequency Response: 80-10,000Hz • Impedance: Lo-Z (150 ohms) • Output Level: -61dB (0dB = 1mW/10 dynes/cm²) • Case: High-tensile, lathe-turned aluminum • Finish: Non-reflecting gray • Cable: 30' (9.1m), 2-conductor, shielded, brown synthetic rubber-jacketed cable • Size: .75" (19mm) diameter; 2.25" (57.2mm) long • Net Weight: 1.1 oz. (31g), less cable and neck cord assembly

649B\$170.00

DL42 Cardiline®**Dynamic Unidirectional Microphone**

The DL42 is state-of-the-art in superdirectional dynamics. "Cardiline" is a patented combination of line and cardioid design. Compared to other "shotguns", the DL42 has more uniform response in the critical mid and high frequencies and much more uniform directivity.

Specifications

• Frequency Response: 50-12,000Hz • Impedance: 150 ohms • Output: -50dB • Diaphragm: Acoustalloy • Case: Aluminum and steel • Finish: Fawn beige micomatte • Size: 16³/₄" (425mm) long; 3³/₄" (95mm) max. dia. • Weight: 1 lb., 11 oz. (800g) complete; 13 oz. (369g) mike only • Cable: Special coil cord to extend from mike connector (Switchcraft A3M) to shock mount bail for mechanical isolation • Included: Screw-on handle, windscreen, shock mount and carrying case

DL42\$692.00

DO54 Dynamic Omnidirectional Microphone

Based on the RE55, the DO54 is a moderately priced microphone with essentially flat response over its rated frequency range of 50-18,000Hz. It is useful in applications where the RE55 would excel but where the 1/3 octave additional response below 50Hz is not required, or where small microphone-to-microphone variation is acceptable.

Specifications

• Frequency Response: 50-18,000Hz • Impedance: 150 ohms • Output: -58dB • Diaphragm: Acoustalloy • Case: Steel • Finish: Fawn beige micomatte • Cable: 15' (4.6m) Switchcraft A3F conn. • Size: 5³/₄" (146mm) long; 1¹/₈" (29mm) max. dia.; 3/4" (19mm) shank dia. • Weight: 6.5 oz. (184g) • Included: 310A clamp, metal carrying case

DO54\$171.00

DO56 Shock-Mounted**Dynamic Omnidirectional Microphone**

The DO56 is a shock-mounted omnidirectional microphone for handheld broadcast and sound reinforcement applications. All handling noises and cord vibration are isolated from the microphone element.

635A

649B

DO54

DO56

Specifications

• Frequency Response: 80-18,000Hz • Impedance: 150 ohms • Output: -61dB • Diaphragm: Acoustalloy • Case: Steel and aluminum • Finish: Silver tone beige • Cable: 15' (4.6m) Switchcraft A3F conn. • Size: 6¹/₄" (159mm) long; 1¹⁵/₃₂" (37mm) max. dia.; 3/4" (19mm) shank dia. • Weight: 6.5 oz. (185g) • Included: 312B stand adaptor, protective vinyl carrying pouch

DD56\$143.00

DO56L (long case)162.00

DS35 Single-D Dynamic Cardioid Microphone

Created especially for the professional entertainer, the DS35 has become a connoisseur's microphone. Its Single-D design emphasizes the low frequencies in up-close, handheld applications.

Specifications

• Frequency Response: 60-17,000Hz • Impedance: 150 ohms • Output: -60dB • Diaphragm: Acoustalloy, polystyrene Volumetric Dome • Case: Steel • Finish: Fawn beige micomatte • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 312A clamp, metal carrying case • Size: 7¹/₄"L (184mm) x 1⁷/₈" max. dia. (48mm) x 3/4" shank dia. (19mm) • Weight: 9.2 oz. (261g)

DS35\$182.00

Professional Microphones**RE10****Variable-D® Dynamic Super-Cardioid Microphone**

A fine, moderate-cost microphone for sound reinforcement, broadcasting, choir pickup and stage work. The RE10 is similar in design to the RE15, but meets requirements where somewhat more unit-to-unit variability is acceptable.

Specifications

• Frequency Response: 90-13,000Hz • Impedance: 150 ohms • Output: -56dB
• Diaphragm: Acoustalloy® • Case: Steel • Finish: Fawn beige micomatte • Size: 6³/₄" (172mm) long; 1³/₈" (35mm) max. dia.; ³/₄" (19mm) shank dia. • Weight: 6 oz. (170g) • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 310A clamp, metal carrying case

RE10\$197.00

RE11**Variable-D Dynamic Super-Cardioid Microphone**

An excellent microphone for broadcast and quality sound reinforcement, the RE11 is a modestly priced unit with many of the features of the RE16 but where the most precise unit-to-unit matching is not necessary.

Specifications

• Frequency Response: 90-13,000Hz • Impedance: 150 ohms • Output: -56dB
• Diaphragm: Acoustalloy • Case: Steel • Finish: Fawn beige micomatte • Size: 7³/₈" (187mm) long; 1²⁵/₃₂" (45mm) max. dia.; ³/₄" (19mm) shank dia. • Weight: 8 oz. (227g) • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 310A clamp, metal carrying case

RE11\$209.00

RE15**Variable-D Dynamic Super-Cardioid Microphone**

Literally born in a Hollywood TV studio, the performance and reliability of the RE15 have made it the workhorse directional microphone for broadcast and high quality sound reinforcement.

Specifications

• Frequency Response: 80-15,000Hz • Impedance: 150 ohms • Output: -56dB
• Diaphragm: Acoustalloy • Case: Steel • Finish: Fawn beige micomatte • Size: 6⁹/₁₆" (167mm) long; 1³/₈" (35mm) dia.; ³/₄" (19mm) shank dia. • Weight: 6 oz. (170g) • Cable 15' (4.6m) Switchcraft A3F conn. • Included: 310A clamp, metal carrying case

RE15\$298.00

RE16**Variable-D Dynamic Super-Cardioid Microphone**

Another professional favorite, the RE16 is like the RE15 except it has a different blast filter. An integral part of the RE16, the blast filter makes possible the closest handheld use without any "P-pops". In all other respects, the RE16 is like the RE15. Its rugged, mechanically "nested" design is highly resistant to damage.

Specifications

• Frequency Response: 80-15,000Hz • Impedance: 150 ohms • Output: -56dB
• Hum Pickup Level: -57dBm (re: .001 gauss field) • Diaphragm: Acoustalloy
• Case: Steel • Finish: Fawn beige micomatte • Size: 7³/₈" (187mm) long; 1²⁵/₃₂" (45mm) max. dia.; ³/₄" (19mm) shank dia. • Weight: 8 oz. (227g) • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 310A clamp, metal carrying case

RE16\$308.00

RE18**Shock-Mounted Variable-D Dynamic Cardioid Microphone**

The RE18 is a direct descendant of the popular RE15 and RE16 microphones. While maintaining the accurate frequency response characteristics and super-cardioid polar pattern of the RE15, the RE18 has added an integral shock mount for even better performance.

Specifications

• Frequency Response: 80-15,000Hz • Impedance: 150 ohms • Output: -57dB
• Diaphragm: Acoustalloy • Case: Steel • Finish: Silver tone beige • Size: 7" (178mm) long; 1²⁵/₃₂" (41mm) max. dia.; ³/₄" (19mm) shank dia. • Weight: 8 oz. (230g) • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 312B stand adaptor, protective vinyl carrying pouch

RE10

RE11

RE15

RE16

RE18

RE20**Variable-D Dynamic Cardioid Microphone**

The RE20 was created especially for critical recording, broadcast, and sound reinforcement applications which require response that extends to the frequency extremes. Combined with a subtle elevation of response in the 5000 to 15,000Hz range, the RE20 provides performance heretofore available only from the most expensive condenser microphones.

Specifications

• Frequency Response: 45-18,000Hz • Impedance: 150 ohms (changeable to 50 or 250 ohms) • Output: -57dB • Diaphragm: Acoustalloy • Case: Steel • Finish: Fawn beige micomatte • Size: 8¹⁷/₃₂" (216.7mm) long; 2⁹/₆₄" (54.4mm) max. dia.; 1¹⁵/₁₆" (49.2mm) body dia. • Weight: 1 lb., 10 oz. (737g) • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: Stand adaptor, metal carrying case

RE20\$545.00

ELECTRO-VOICE, INC.**Microphones****RE50****Shockproof Dynamic Omnidirectional Microphone**

The RE50 was designed expressly for handheld news gathering work. It has the same tailored frequency response and high output level as the 635A.

Specifications

• Frequency Response: 80-13,000Hz • Impedance: 150 ohms • Output: 55dB • Diaphragm: Acoustalloy® • Case: Aluminum • Finish: Fawn beige micomatte • Size: 7³/₄" (197mm) long; 1⁵/₁₆" (49mm) max. dia.; 1" (25mm) shank dia. • Weight: 9¹/₂ oz. (269g) • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 301A clamp, metal carrying case

RE50 \$172.00

**RE50****RE55 Dynamic Omnidirectional Microphone**

The RE55 is a dynamic omnidirectional microphone designed for the most demanding professional applications. Ideal for boom or stand mounting in recording and broadcast use, it is excellent also for close-up handheld use in stage and interview situations.

Specifications

• Frequency Response: 40-20,000Hz • Impedance: Lo-Z (150 ohms) • Output: -57 (0dB = 1mW/10 dynes/cm²) • Diaphragm: Acoustalloy • Case: Steel • Finish: Fawn beige micomatte • Size: 10.5"L (266.7mm) x 1.22" major dia. (30.9mm) x .75" shank dia. (19mm) • Weight: 8.5 oz. (241g) without cable • Cable: 15' (4.6m), 2-conductor, shielded, rubber-jacketed, broadcast type with Switchcraft A3F connector • Included: 310A clamp and vinyl pouch

RE55 \$285.00

**RE55****RE85 Shock-Mounted Miniature Dynamic Omnidirectional Microphone**

Here's a lavalier microphone that offers professionals in the TV industry great protection from cord and case-conducted mechanical noise. The RE85 has an internally shock-mounted microphone capsule which is "floating" in high-compliance rubber inside the durable steel case. "Slippery" cable and case finishes reduce transmission of mechanical disturbances to the shock mount. Response is tailored for the lavalier chest position.

Specifications

• Frequency Response: 90-10,000Hz • Impedance: 150 ohms • Output: -61dB • Diaphragm: Acoustalloy • Case: Steel • Finish: Champagne • Size: 2⁵/₈" (67mm) long; 5⁹/₆₄" (23mm) max. dia. • Weight: 8 oz. (229g) • Cable: 30' (9.14m) • Included: Neck cord, tie clasp, cable belt clip, protective pouch

RE85 \$172.00

**RE85****RE98 Electret Condenser Microphone**

The RE98 is an omnidirectional lavalier microphone. It has phantom power, a 9V battery, 20dB greater input before overload, and a high tensile-strength cable. The finish is a non-reflecting black.

Specifications

• Frequency Response: 80-15,000Hz • Output: -45dB • Impedance: 150 ohms

RE98 \$227.00

**RE98**

Professional Condenser Microphone Systems**CO 15P Phantom Powered Condenser (Electret) Omnidirectional Microphone**

The CO 15P is the finest omnidirectional microphone we manufacture. Its element is used in precision real time acoustic analyzers. Response extends from below 20 to 20,000Hz. Unlike typical "omnidirectional" microphones, the CO 15P maintains true omnidirectional performance at the highest frequencies.

Specifications

• Frequency Response: 20-20,000Hz • Impedance: 150 ohms • Output: -45dB • Case: Steel • Finish: Fawn gray micomatte • Cable: 15' (4.6m) Switchcraft A3F conn. • Included: 315A windscreen, 310A clamp, metal carrying case • Size: 6¹³/₁₆" L (173mm) x 1¹/₁₆" max. dia. (27mm) x 3/4" shank dia. (19mm) • Weight: 7.5 oz. (213g)

CO15P \$328.00

CO 15P

CS 15P Cardioid Electret Condenser Microphone

The CS15P is a professional remotely powerable electret condenser cardioid microphone designed especially for recording, broadcast and sound reinforcement applications where the smooth, wide range response of a studio microphone is desired. The machined steel case and rugged internal design enable the CS 15P to withstand abuse.

Specifications

• Frequency Response: 40Hz-18kHz • Impedance: 150 ohm nominal (balanced) • Output: -45dB ref. • Case: Steel • Finish: Fawn beige micomatte • Cable: 15' (4.6m) 2-conductor, shielded, brown rubber-jacketed cable with Switchcraft A3F connector • Included: 315A windscreen and 312A stand clamp • Size: 6.94" L (176mm) x 1.06" max. dia. (27mm) x .75" shank dia. (19mm) • Weight: 8 oz. (227g)

CS15P \$304.00

CO90

CO90 Miniature Condenser**(Electret) Omnidirectional Microphone**

Perfect for today's broadcasting and wide range sound reinforcement systems. They are more reliable and more versatile than many condenser lavaliers. The 2-conductor cable incorporates 2 nylon stay cords for high breaking strength. The cable-to-case interface is built to last. The cable assembly is field replaceable.

Specifications

• Frequency Response: 40-15,000Hz • Impedance: 150 ohms • Output: -57dB • Operating Voltage: 1.1-1.8V battery • Battery Life: Over 1000 hours • Case: Mike, brass; electronics, aluminum; battery/transformer housing, steel • Finish: Fawn beige micomatte • Mike Size: .851" L (21.6mm) x .415" max. dia. (10.5mm) • Cable: Mike to battery housing, 6' (1.83m) • Weight: 4 oz. (114g) complete, less battery; 8 oz. (23g) less battery/transformer housing and belt clip • Included: Tie clasp, 385 windscreen, protective pouch, belt clip

CO90 \$165.00

CO94

CO94 High Performance Miniature**Condenser (Electret) Omnidirectional Microphone**

The CO94 does not have the limited dynamic range typical of miniature microphones powered by low voltage batteries. A CO94 is typically 10dB greater in sensitivity than conventional designs and will accept 20dB greater input SPL before overload (141dB). Thus, the CO94 may be used where other miniature microphones are simply unacceptable. A high-pass filter cuts off unwanted noise below 80Hz. The CO94 may be phantom or battery powered, including a dual-power mode where a battery ensures against loss of signal should the phantom power fail.

Specifications

• Frequency Response: 70-16,000Hz • Impedance: 150 ohms • Output: -56dB • Operating Voltage: 1.1-1.8V battery • Battery Life: Over 1000 hours • Case: Steel and high impact plastic • Finish: Fawn beige micomatte • Size: Mike, 1³/₃₂" dia. (10.3mm); 1/4" deep (6.4mm); electronics, 1¹/₂" L (38.1mm) x 1⁷/₃₂" W (13.5mm) x 3/8" D (9.5mm) • Weight: Mike, 1 oz. (2.8g); Electronics, 1/4 oz. (7.1g) • Included: 385 windscreen, belt clip, tie clip adaptor, metal carrying case

Mixer/Loudspeaker Systems

ELX-1™ Audio Mixer

The ELX-1 rackmounts in 1 rack unit (1.75") with optional RM-1 brackets. It is powered from AC line, internal batteries, or external source, with automatic switchover. An Electro-Pulse® indicator shows power status and battery condition. Includes detachable line cord and shoulder strap. It has an all metal case construction with 4 balanced transformerless inputs, switchable to mike or line level, extensive RF shielding and protection circuitry. Input controls set actual gain of preamps for optimum noise performance with any input signal. Phantom power is available at microphone inputs. Low-cut filters switchable at each input. Pushbuttons are used throughout so there are no intermittent slide switches. An LED clip indicator at each input and 3-color bargraph meter shows peak output level. Switchable output limiter prevents clipping; Yellow LED lights when limiting occurs. 1kHz tone oscillator and transformer-isolated output; split windings present signal to 5-way binding posts and XLR-type jack. One output switchable to mike or line level. Headphone output, with separate power amp and level control can drive any headphones or a cue speaker. Two 1/4" stacking jacks allow interconnecting other mixers; modifiable for insert patching. 1/4" auxiliary input jack for fifth input or for stacking additional mixers. Input control color-coding markers supplied; may be coordinated with EV 379-series colored windscreens.

ELX-1 \$567.00

Sentry® 500/505 Professional Monitor Systems

These systems have been designed for the broadcast/recording studio engineer. The design meets the needs of professionals by combining high efficiency with extended low frequency response, high power capacity across the entire frequency range, uniform frequency response and constant directivity. Each system employs a Super-Dome™ tweeter capable of handling 25W of input power, while reproducing program material with response out to 18kHz.

Specifications

Frequency Response: 40-18,000Hz
Impedance: 8.0 ohms
Long-Term Average Power Handling Capacity (at 8 ohms): (40-40,000Hz) 100W

Sentry® 500

The Sentry 500 was designed for 1/4- to 1/2-space use. The speaker system should be mounted as close as possible to floor/ceiling and/or wall surfaces. When coupled with the WB23 wall mount kit, the Sentry 500 can be integrated into virtually any environment.

Specifications

Dimensions: 23 3/4" H x 27" W x 13" D
Weight: 70 lbs.

Sentry 500 \$520.00
WB23 Wall Mount Kit 28.00

Sentry 505

The Sentry 505 must be used in quarter-space to achieve specified low frequency performance. Installation of the system on a wall can be accomplished with the mounting brackets included with the system. It is possible to mount the Sentry 505 so that the drivers are angled at 60° or 30° from vertical.

Specifications

Dimensions, 30° from Vertical: 19.50" H x 25.63" W
Top: 18.75" D
Bottom: 7.50" D
60° from Vertical: 18.75" H x 25.63" W
Top: 19.50" D
Net Weight: 60 lbs.

Sentry 505 \$520.00

Sentry 100A

Sentry 505

Sentry 100EL Professional Powered Monitor System

The Sentry 100EL powered monitor speaker system combines the advantages of the Sentry 100A monitor with a self-contained, high performance power amplifier. It is designed with the broadcast/recording studio engineer in mind, although it is well suited for a wide variety of professional applications. It offers uniform frequency response and dispersion across a wide range, extended low frequency response.

A Super-Dome tweeter is used to reproduce program material at high levels, with response out to 18kHz and uniform dispersion (120° at 5kHz). The low frequency section is an 8" direct radiator woofer installed in an optimally vented enclosure. The Sentry 100EL is housed in a utility cabinet wrapped in a special scratch-resistant, matte black vinyl. The cabinet size is intentionally designed for rackmounting. When coupled with the SRB-7 rackmount/wall mount kit, the Sentry 100EL can be integrated into virtually any environment that demands conservation of space such as mobile recording studio facilities. The steel reinforced grille is covered with a custom gray cloth.

Specifications

Frequency Response: 40-20,000Hz

Sentry 100EL \$545.00

Sentry 100A Monitor Speaker System

The Sentry 100A monitor speaker system meets the needs of professionals with high efficiency and extended low frequency response, high power capacity across the entire frequency range, uniform frequency response and dispersion, all in a compact package. The Sentry 100A is housed in a utility cabinet wrapped in a special, scratch-resistant, matte black vinyl. The cabinet size is intentionally designed for rackmounting. With the SRB-7 rackmount/wall mount kit, the Sentry 100A can be integrated into virtually any environment that demands conservation of space such as mobile recording studio facilities. The steel reinforced grille is covered with a custom gray cloth.

Specifications

Frequency Response: 45-18,000Hz
Impedance: 6 ohms

Long-Term Average Power-Handling Capacity

(above 40Hz): 30W
Dimensions: 17.25" H x 12.00" W x 11.125" D

ELECTRO-VOICE, INC.**Speaker Systems****SOUND REINFORCEMENT SPEAKERS****S-1803**

The S-1803 Keyboard Reinforcement System offers low distortion and wide frequency response (useable response 35Hz to 18kHz) making it ideal for synthesizers and other keyboards. Capable of handling 200W continuous power.

Specifications

Frequency Response: 50Hz-16kHz
Nominal Impedance: 8 ohms
Sensitivity: 99.5dB
Dimensions: 35.5"H x 28.0"W x 19.4"D
Net Weight: 134 lbs.

S-1803 \$1242.00

S-1503

The S-1503 Three-Way High-Level Music Playback/Sound Reinforcement System features a higher power EV-exclusive VMR® vented midrange speaker. Capable of handling 200W continuous power.

Specifications

Frequency Response: 65Hz-16kHz
Nominal Impedance: 8 ohms
Sensitivity: 100dB
Dimensions: 28.7"H x 24.4"W x 13.8"D
Net Weight: 105 lbs.

S-1503 \$992.00

S-1202

The S-1202 Full Range Compact Sound Reinforcement System is a time coherent, constant-directivity, high efficiency design, capable of handling 300W continuous power. The high frequency section of this two-way system utilizes a flat-mouth 90° x 40° diecast horn coupled to the pro-music titanium driver.

Specifications

Frequency Response: 75Hz-20kHz
Nominal Impedance: 8 ohms
Sensitivity: 101.5dB
Dimensions: 24.7"H x 19.1"W x 11.7"D
Net Weight: 66 lbs.

S-1202 \$667.00

FM-1202

The FM-1202 Compact High-Level Floor Monitor, like the S-1202, is a time coherent constant-directivity, high efficiency system. Capable of handling 300W continuous power.

Specifications

Frequency Response: 75Hz-20kHz
Nominal Impedance: 8 ohms
Sensitivity: 101.5dB
Dimensions: 19.4"H x 19.4"W x 24.4"D

Coupled through a specially designed crossover/equalizer network to the proprietary, extended coil, 15" low-frequency speaker in an optimally-vented enclosure the FM-1502 has a useable frequency response from 47Hz to 23kHz. It offers the ultimate in high-level, high-clarity, floor monitoring. Capable of handling 300W continuous power.

Specifications

Frequency Response: 65Hz-20kHz
Nominal Impedance: 8 ohms
Sensitivity: 102dB
Dimensions: 22.0"H x 22.5"W x 27.9"D
Net Weight: 75 lbs.

FM-1502 \$786.00

STAGE SYSTEM SPEAKERS**SH-1502ER**

The SH-1502ER is a 200W, 2-way, high-efficiency, constant-directivity stage system featuring a vented, horn-loaded woofer section. It combines professional quality components arranged in a vertical array with an unusually durable enclosure. The result is wide-range, accurate sound reproduction with transparent highs and "punchy" bass response.

The bass section of the SH-1502ER is designed as a vented-horn format of system for

a projected midrange sound quality combined with low-frequency performance extending to below 60Hz.

Specifications

Frequency Response: 10' on axis, swept 1/3-Octave, Half-Space An-echoic Environment: 62-20,000Hz

Nominal

Impedance: 8 ohms
Dimensions: 31.9"H x 24.7"W x 16.0"D
Net Weight: 81 lbs.

SH-1502ER \$580.00

SH-1512ER

The SH-1512ER is a 200W, 2-way, high-efficiency, constant-directivity stage system featuring a vented, direct-radiating woofer section. It combines professional quality components arranged in a vertical array with an unusually durable enclosure. The result is wide-range, accurate sound reproduction with transparent highs and "full" bass response.

The bass section of the SH-1512ER is designed using Thiele-Small parameters for efficient performance to below 55Hz.

Specifications

Frequency Response: 10' on axis, swept 1/3-Octave, Half-Space An-echoic Environment: 50-20,000Hz

Nominal

Impedance: 8 ohms
Dimensions: 31.9"H x 24.7"W x 16.0"D

UHF TV Translators

1 Watt/10 Watt UHF Solid-State Television Translators

- Quality color performance • Completely solid-state • Includes low noise pre-amplifier (which incorporates a channel preselector) to optimize signal-to-noise ratio • 50dB dynamic range adaptive AGC • FCC type accepted • Dual auto on sensing (carrier and sync sense) • Front panel monitoring of power output, AGC, and power supply voltages • Front panel local oscillator sample ports • Single plug-in channel selection • Modular design • Optional remote interrogator • Built-in test voltmeter • Color transmission compatible with PAL, NTSC, SECAM Systems • Output frequency FCC-470-890MHz—CCIR-Band IV, V • Output impedance 50 ohms • Output connector type N

These "All Solid-State" translators and amplifiers are designed for automatic unattended operation in remote areas where reliability and performance are prime considerations. All versions incorporate VSWR protected emitter ballasted silicon power amplifier transistors and low noise high dynamic range "front end" transistors. All power supplies are electronically regulated to allow for line voltage variations.

Types TU1A/V and TU1A/U

The TU100 Series is a solid-state, modular translator line with all the features necessary for automatic, unattended NTSC or PAL color operation. Models are completely solid-state with the exception of the final amplifier tube. All models utilize a ceramic triode capable of 750W plate dissipation to assure linearity and long life at 100W output.

Each 100W UHF translator is contained in a single cabinet. UHF and VHF input versions operate on the dual conversion principle to convert the input signal to a 45MHz IF frequency.

Low noise, remote mounting preamplifiers, when appropriate, assure the ultimate reception of distant signals and minimize antenna lead loss.

MC2127 2.15-2.7GHz MMDS/ITFS Broadband Down Converter

- Dual input capability enables simultaneous reception of both MDS channels 1 and 2, at 2150 to 2162MHz, and MMDS/ITFS channels at 2500 to 2680MHz • Output bandwidth, from 100 to 400MHz, is complementary to modern decoding systems and CATV compatible television receivers • Surface mount topology • PLL crystal controlled • Compact • Weatherproof

The MC2127 is a sixth generation downconverter designed expressly for application in large scale Multichannel Multipoint Distribution Systems.

Specifications

- Input Frequency: 2.5-2.7GHz w/2.15-2.162GHz option
- Conversion Gain: 25dB min.
- Frequency Response: ± 1dB/50MHz segment
- Maximum Input: 35 channels at -47dBm ea.

Refer to Green Section for Addresses and Telephone Numbers.

EMT 246 Digital Reverberator

• Reverberation algorithm, free of coloration through optimized eigentone distribution • Individually adjustable reverberation times at low and high frequencies • Separate amplitude control of the group of early reflections (cluster) • Wide reverberation time range (0.2-20s), selectable in three overlapping programs with individually matched densities • Initial delay of up to 999ms • As a special program: the original sound of the EMT 250 • Additional programs: Delay, Echo, Non-Lin • Supplementary low-pass filter with linked control of cluster and reverberation • Remote control of all functions — may be implemented via a two-conductor audio line

The EMT 246 Digital Reverberator employs a tandem circuit consisting of two TMS 320 signal processors. A high clock frequency of 19.2MHz and a suitable hardware complement enable a large number of instructions per program to be executed for the intricate computations involved.

The input signal is converted into 16-bit information using the well-known method of successive approximation. The conversion is uniform; a floating point technique is not employed.

Internally, certain computations are performed in the processor with 32-bit information to prevent errors in rounding off data. A 16-bit word length is used for storing intermediate results.

This technique insures the highest possible signal-to-noise ratio obtainable with a 16-bit architecture.

To insure optimum operating efficiency of the main processors, a third processor (Z80) is employed for control functions. All commands are converted into control information by this system, in order to be utilized directly by the signal processors.

The following command modes are provided:

- On the front panel of the unit: The individual commands are entered via pushbuttons and EMT slideway controls
- Additionally or alternatively through a remote control unit that incorporates the same arrangement of buttons and controls. For distances up to 10m, remote control of the main unit is accomplished through a five-conductor cable, which likewise implements the power supply feed. For control over greater distances, a separate power supply must be employed; but in this case the connection to the main unit may be made through a two-conductor audio line
- Remote control via MIDI, whereby only certain parameters may be altered. (Preprogrammed settings may be called up by addressing memory locations)

The main unit is designed for 19" rackmounting.

Six programs are provided for use.

Programs A, B, and C are reverberation programs that include a unique algorithm for optimizing the eigentone distribution. The programs provide different ranges of reverberation time and thus correspond to a small, medium-size, or large reverberation chamber with idealized properties.

In addition to the reverberation time, adjustments may be made with respect to the decay time at low and high frequencies (as a factor of the basic reverberation time), the amplitude of a group of early reflections (cluster), and the initial delay time.

Program D produces delay and echo. The delay time and the feedback amplification are individually adjustable in the left and right channels for echo generation.

Program E is exactly equivalent to the program of the EMT 250 Electronic Reverberation Unit. However, additional adjustment capabilities and an extended initial delay range are provided.

Program N is a non-linear reverberation program in which the early and late reverberation phases may be adjusted independently of one another. In addition, the time span of the early phase may be set.

A selected setting of program parameters may be stored in a memory with 99 user-accessible locations. An additional 90 settings have been factory implemented. All stored settings may be called up simply by

EMT 246

keying in the appropriate memory address; the parameters may then be modified, if desired, and the results stored as required in the user-accessible memory.

This user memory is designed as a plug-in module, enabling each operator to employ an individually programmed memory. The identity of such a user memory module is displayed whenever power is applied to the unit.

The fixed programs F91 through F99 fulfill special requirements, for example, the execution of test routines for simplifying unit servicing. The special program F91 enables alphanumeric displays to be entered via the keyboard, thus permitting the name of an artist, etc., to be indicated along with a memory location.

Specifications

Input:	Electronically balanced
Impedance:	Min. 10K ohms
Nominal Level	
(Factory Set):	+ 6dB
Adjustable:	-10dB to + 15dB
Output:	Electronically balanced
Impedance:	Max. 50 ohms
Nominal Level	
(Factory Set):	+ 6dB
Adjustable:	-10dB to + 15dB
Frequency Response of Delay Program:	30Hz to 12kHz (+ 1/-3dB)
Overdriving Margin Referred to Nominal Level:	6dB
Signal-To-Noise Ratio of Delay Program Referred to Nominal Level:	RMS, unweighted — 88dB; Peak, unweighted (CCIR 468-2) — 82dB; Peak, weighted (CCIR 468-2) — 76dB

EMT 445 Digital Audio Delay Unit

- Audio-frequency delay unit with 16 bit resolution and 48kHz sampling frequency
- Variable delay time between 1ms and 10.9s in two channels (stereo)
- Twice the delay time in mono operation
- Full audio bandwidth of 20kHz even for long delay times
- Delay-time switching without clicking
- 99 memory units for preset delays
- Remote control via two leads (serial)

In the standard version of the EMT 445 Digital Audio Delay Unit, a sampling frequency of 48kHz is used to achieve a flat frequency response between 30Hz and 20kHz.

A special version for telecommunication authorities employs a sampling frequency of 32kHz.

Different memory capacities may be selected, resulting in a variety of configurations with the individual maximum delay times indicated in the table below.

Maximum Delay Times

MEMORY		32 kHz		48 kHz		
No. of boards	Banks employed	64 k	256 k	64 k	256 k	
1	1	2 s	8.1 s	1.3 s	5.4 s	M
1	2	4 s	16.3 s	2.7 s	10.9 s	O
2	3	6.1 s	24.5 s	4 s	16.3 s	N
2	4	8.1 s	32.7 s	5.4 s	21.8 s	O
1	1	1 s	4 s	0.6 s	2.7 s	S
1	2	2 s	8.1 s	1.3 s	5.4 s	T
2	3	3 s	12.2 s	2 s	8.1 s	R
2	4	4 s	16.3 s	2.7 s	10.9 s	E
						O

The EMT 445 Digital Audio Delay Unit employs a digital word length of 16 bits in all versions and with all memory configurations supplied. A signal-to-noise ratio of minimally 88dB is thereby achieved.

The digital audio-signal delay unit may be alternatively equipped with a mono or stereo input. The number of audio signal outputs is also selectable: two, four or six.

An additional CPU is assigned to the front panel for manual control. Remote control capabilities are thus provided through a serial interface, similar to the case of the EMT 252 Digital Reverberation System and the EMT 245 Digital Reverberator. In addition, as many as 100 preset delays may be stored for specific applications (parameter memory).

Specifications**Operating Modes**

Mono: Input 1 to Outputs 1–6
Stereo: Input 1 to Outputs 1, 3, 5
 Input 2 to Outputs 2, 4, 6
Test: Various test programs for calibration and service. Complete memory test with front-panel indication of defective chip and board 48kHz

Sampling Frequency:**Amplitude**

Quantization: 16 bit, uniform
Storage Time (with 48kHz sampling frequency): Minimum configuration (Memory) 500µs to 600ms, stereo (500µs to 1.3ms, mono)
 Maximum configuration 500µs to 10.9s, stereo (500µs to 21.8s, mono)

EMT 266X

**EMT 266X
Transient Limiter**

Limiting amplifier with pre-delay of the signal to be controlled and adaptive pre-emphasis.

The EMT 266X Transient Limiter enables absolute limiting of even rapidly rising wavefronts (transients) and the shortest signal peaks. The unit can be employed to advantage with radio transmitters, for record cutting, and in cassette dubbing. For FM and T.V. broadcasts, an adaptive pre-emphasis option is available to prevent overdriving beyond the permissible deviation limit, as would otherwise occur due to the pre-emphasis stage ahead of the transmitter.

The EMT 266X Transient Limiter delays the program to be limited by about 0.3 msec. The input for the control process is extracted from the program signal before the delay is initiated. The control information can thus be fully formulated before the signal to be limited reaches the control stage.

A specially derived transient-response function prevents the appearance of perceptible "holes" in the modulation. Similarly, the release characteristics have been optimized with reference to human auditory perception for fixed or programmable release times.

Technical Data

Inputs	balanced, floating
Input impedance	min. 5kohms
Nominal input level	-20 to +15dB, continuously adjustable in two plug-in ranges
Maximum input level	+24dB (Δ 12,28V)
Outputs	balanced, floating
Output impedance	max. 40 ohms
Nominal output level	-20 to +15dB, continuously adjustable in two plug-in ranges
Maximum output level	+22dB on min. 200 ohms (Δ 9.76V)
Frequency response	
without adaptive pre-emphasis	30Hz to 15kHz, \pm 0.3dB, -0.5dB at the band limits
Signal-to-noise ratio, rms, unweighted, referred to nominal level without adaptive pre-emphasis	92dB
with adaptive pre-emphasis, measured after de-emphasis	87dB

- EMT 966 023 Transient limiter, mono \$3870.00
- EMT 266 022 Transient limiter, mono with adaptive pre-emphasis 4360.00
- EMT 266 020 Transient limiter, stereo, with adaptive pre-emphasis 5945.00
- EMT 266 021 Transient limiter, stereo 4695.00

**EMT 277 DX
Limiter**

Control amplifier with pre-delay for use in the modulation of AM transmitters.

EMT 277 DX-LIMITER

With the EMT 277DX-Limiter, overdriving of AM transmitters may be effectively prevented. Absolute protection against control voltage peaks is achieved by employing the transient-limiter principle. (Note the description of the EMT 266X Transient Limiter).

In addition, a compressor/expander is employed with a controlled program-dependent release time, to permit the highest possible increase of the average modulation. Two separate adjustments for compressor gain and ratio may be set and activated through an external contact. In this manner, separate adjustments may be made for day and night operation to compensate for differing propagation conditions, or separate settings may be provided for speech and music, when an appropriate detector precedes the input of the EMT 277 DX-Limiter.

OPTIONS

AM Band-Pass

A band-pass filter with a bandwidth of 60Hz to 4.5kHz may be inserted. Without this filter, the unit exhibits a wideband frequency response.

Adaptive Presence

Boosting the frequency band immediately below the steep rolloff point of 4.5kHz (mentioned above) produces the impression of a wider frequency response. In the EMT 277 DX-Limiter, this boost is produced not with a fixed filter but instead by means of a program-dependent adaptive presence network.

Polarity Reverse

This feature insures that the input signal always arrives at the transmitter with the proper polarity when different limiting thresholds are in use for the two half-waves. The polarity of the input signal is corrected inaudibly.

TECHNICAL DATA

Input	balanced
Input impedance	min. 5kohms
Nominal input level, continuously adjustable	-20 to +15dBm
Max. input level	+24dBm
Output	balanced
Output impedance	max. 40ohms

EMT 938

EMT 938 Broadcast Disk Reproducer

Turntable in tabletop cabinet with direct drive and quick starting of the platter. The Cabinet serves as the installation base for stationary operation.

The EMT 938 Broadcast Disk Reproducer fulfills user requirements for highest reliability at the lowest possible cost.

The platter of the 938 Broadcast Disk Reproducer is driven directly, i.e., the platter shaft is rigidly connected to the rotor of the motor, mounted concentrically underneath. The fact that no elastic coupling is employed in the drive system makes possible an extremely rapid platter acceleration, and thus the "quick starts" so necessary for broadcast programming, without the use of an auxiliary platter.

Operation is controlled with the "Start/Stop" and "Tone Arm Lift" buttons. The rotary switch to the right enables the speeds 33 1/3, 45 and 78 rpm to be selected. The rotary knob to the left of the buttons is the main power switch.

The motor drive circuitry and the equalizer amplifiers are located on printed circuit boards, which may be swiveled out for servicing. The amplifiers produce a nominal level of 1.55V (+6dB) on 200 ohms (max. +21dB), and they are equipped with a circuit for muting during run-up. The monitor outputs, mono and stereo, continuously deliver the necessary level for cueing.

The chassis of the 938 Broadcast Disk Reproducer is spring mounted in its supporting frame to achieve the necessary mechanical absorption characteristics without employing additional external damping measures.

- EMT 938 110 Direct drive for Lo-Z pickup cartridge \$3700.00
- EMT 938 120 Direct drive for 47K cartridge3720.00
- EMT 938 900 Acrylic dust covers for above75.00
- EMT 938 901 Flush mounting brackets40.00
- EMT 938 903 Cue amp and speaker310.00

EMT 948

EMT 948 Broadcast Turntable

Direct drive turntable, ready to install, with fast start and back cueing of platter, remote control capability.

The EMT 948 Broadcast Turntable has been conceived for ease of operation and highest reliability.

The platter is directly driven on the shaft of a special Hall commutated motor. A high-precision magnetic tacho-generator delivers a reference frequency which is proportional to the rotational speed for precise phase control of the drive system. The direct drive system provides exceptionally stable speed characteristics; because of the rigid coupling of the rotor to the platter and the high torque, individual syllables may be spot cued.

Pickup cartridges with built-in magnifying lens are preferred for use with the turntable. The proven 929 Tone Arm is statically and dynamically balanced in all directions and is insensitive to chassis vibrations and mechanical shocks.

Operation is controlled with three buttons: "Start/Stop," "Reverse Rotation," and "Tone Arm Lift Motor." Speed selection is accomplished with rotary switch. These and other functions, such as variable speed and Mono/Stereo switching, can be directed by remote control through a 36-pole connector.

The chassis of the 948 is spring-mounted in its supporting frame to achieve the required mechanical absorption characteristics without additional damping. The use of constructional element, a stiff ring, inhibits all rotational oscillations.

- EMT 948 110 Turntable for Lo-Z pickup cartridge \$5320.00
- EMT 948 120 Turntable for 47K cartridge5280.00
- EMT 948 970 Console for above1245.00
- EMT 948 971 Console with cue amp and speaker1835.00
- EMT 948 030 Acrylic dust cover for above145.00

Pick-Up Cartridges and Tone Arms

Refer to Green Section for Addresses and Telephone Numbers.

EMT 950 Direct Drive Studio Turntable

The EMT 950 employs a highly advanced inverted-mass configuration with lightweight turntable platter, heavy chassis plate, and a ribbed motor housing of gray cast iron.

The specially designed cylindrical motor with Hall effect commutation is driven by a power amplifier. It incorporates a slender rotor exhibiting especially low momentum to drive the thin, ribbed main platter attached to the rotor shaft. A high precision tachometer disk with a photoelectric transducer enables exact control of the motor speed. Exceptionally low wow and flutter figures are attained with this drive system. Since rotating masses have been reduced to a minimum, the rumble-free main bearing is relieved of substantial thrust, and fast, exact starts are assured. An electrical disk brake enables the platter to be stopped quickly and affords controlled drag for manual cueing. Rapid lowering of the tone arm is effected by the motorized arm rest. The stylus contact point is illuminated by a flood-light beam.

ES 391

ES 992E/994E

70 Series Console Mount Clocks and Timers

ES 172 Six Digit—12 Hour Clock. Three setting controls: Fast Advance, Slow Advance, and Hold.

ES 172 \$183.00

ES 174 Six Digit—24 Hour Clock. Otherwise identical to the ES 172.

ES 174 \$183.00

ES 370 Four Digit, One Hundred Minute Up/Down Timer. Six controls: Count Up, Count Down, Stop, Minutes Advance, Seconds Advance, Reset.

ES 370 \$233.00

ES 371 Up/Down Timer. Similar to the ES 370 except with Leverwheel Preset capability for faster setting of the desired time.

ES 371 \$370.00

ES 570 Four Digit, Sixty or 100 Minute Timer. Select 60 or 100 minute mode on rear connector. Start, Stop and Reset controls. Runs continuously unless stopped. Reset will return all displays to zero. Unit will run if reset while running or will stay at zero if reset when stopped.

ES 570 \$174.00

ES 572 Six Digit—12 Hour Clock or Timer. Five controls: Start, Stop, Reset, Fast Advance, Slow Advance. Will run continuously to 12:59:59. Advances to 1:00:00 and continues as clock unless stopped or advanced.

ES 572 \$223.00

ES 574 A 24 hour version of ES 572 \$223.00

ES 575 Exactly like ES 570, with the addition of a "freeze" button. When the button is released, the display "catches up" with the correct elapsed time. Dimensions: 2.16" H x 4.5" W x 4.13" D.

ES 575 \$223.00

ES 562E/564E Six Digit Clock/Timers with Memory

ES 562E/564E is a combination six digit clock and 24 hour timer with memory, allowing the user to set the clock to the correct time of day, switch to timer mode, then switch back to time of day by pushing one button; time of day will be correctly displayed, in hours, minutes and seconds. Six pushbutton controls are mounted on the top of the unit, near the front of the desktop case. When panel mounting is specified, they will be mounted on the front panel, below the display. The controls may also be remoted, through two rear-mounted five pin connectors (Option R or Option D). These controls are Reset, Timer, Fast/Start, Slow/Stop, Hold and Clock. Display: Six digits of .55" Planar Gas Discharge Display.

562E/564E \$362.00

ES 112E/124E Digital Clocks

ES 112E (12 hr.) and **ES 124E** (24 hr.) are solid-state, six digit clocks. Can drive 80 Series and 90 Series slaves. Displays are gas discharge, .55" high. Dimensions: 2 1/2" H x 8" W x 6" D.

ES 112E/124E \$191.00

80 Series Jumbo Clocks and Timers

Large, bright 1" gas discharge displays provide effortless long distance viewing from 40 feet.

ES 182E Six Digit—12 Hour Clock. Three rear-mounted setting controls: Fast Advance, Slow Advance, and Hold.

ES 182E \$315.00

ES 184E Six Digit—24 Hour Clock. Otherwise identical to the ES 182E.

ES 184E \$315.00

ES 380AE Four Digit, 100 Minute Up/Down Timer Displays minutes and seconds, with rear-mounted connector to allow remote wiring of six momentary SPST Controls: Count Up, Count Down, Stop, Minutes Advance, Seconds Advance and Reset. Other features similar to ES 301AE.

ES 380AE \$366.00

ES 381AE Up/Down Timer. Similar to ES 380AE, except that leverwheel preset is used.

ES 381AE \$482.00

ES 580E Four Digit, 60 Minute Timer Displays minutes and seconds. Rear connector allows remote wiring of three momentary SPST controls: Start, Stop and Reset. Reset returns all displays to zero, and timer will continue to run from zero if reset while running.

80 Series slaves are also compatible with other ESE clocks and timers: ES 112E/124E, 301AE, 302AE and 510E. Dimensions: 4.45" H x 10.38" W x 6.58" D.

ES 580E \$264.00

ES 510E Four Digit 60 Minute Timer

ES 510E is a four digit, sixty minute timer (59:59) with Start, Stop and Reset controls. If stopped, display will hold time reading and when restarted will continue with next count from last displayed figure. If reset while running, timer will continue to run. ES 510E can drive 80 Series and 90 Series Slaves. Dimensions: 2 1/2" H x 6" W x 6" D.

ES 510E \$174.00

ES 232 Time Calculator

ES 232 is an eight digit, 24 hour, Up/Down Timer/Time Calculator displaying Hours, Minutes, Seconds, and Frames (30 frames per second) on bright red .4" LED's. In the Calculator mode, data may be added or subtracted, or stored in memory, or recalled from memory. There are 10 memory locations available. Data may be added or subtracted from the timer value, while the timer is counting either up or down, but not while the timer is stopped. When stopped, data moved from calculator to time serves to preset the timer. In the timer mode, ES 232 counts up or down, and can be reset while running or stopped. It can be preset to any number in the 24 hour range. While timer is running or stopped, it is possible to enter the value into memory without disturbing the operation. It is also possible to recall a value from memory and add or subtract while timer is counting up or down. ES 232 uses 24 keys, mounted on a desktop case, measuring 2" H x 5" W x 6" D.

ES 232 \$250.00

90 Series 2-Inch Displays Viewable at 60 Feet

ES 391AE Presettable Up/Down Timer. 100 Minute Range, Displays Minutes and Seconds, uses Leverwheel Preset. Controls are Count Up, Count Down, Stop, Reset and Preset. Dimensions 4.45" H x 10.38" W x 6.58" D.

ES 391AE \$564.00

ES 590AE Sixty Minute Timer Displays Minutes and Seconds. Rear-mounted connector provides for wiring to user's single pole, momentary, push-button controls—Start, Stop and Reset. Reset returns all displays to zero, and timer will continue to run from zero if reset while counting. Dimensions: 4.45" H x 10.38" W x 6.58" D.

ES 590AE \$395.00

ES 992AE/994AE—6 Digit Clocks. ES 992AE (12 hr.) and ES 994AE (24 hr.) Hours and Minutes on Two Inch Gas Discharge Displays, Seconds on One Inch Gas Discharge Displays. Three to mounted setting controls—Fast Advance, Slow Advance, and Hold. Dimensions: 5" H x 12" W x 3 1/2" D.

ES 992AE/994AE \$495.00

ES 301AE/302AE 100 Minute Up/Down Timers

ES 301AE is a four digit, one hundred minute timer (99:59) with six controls: Count Up, Count Down, Stop, Minutes Advance, Seconds Advance, Reset. Counting can be activated up or down or set back to zero. When "Stop" control is pressed, the four digit display is held. Counting direction (up or down) can be changed or time can be reset to zero without stopping the count. The ES 301AE can drive 80 Series and 90 Series Slaves. Displays are gas discharge .55" high.

With the ES 302AE, the user can preset time much faster than with the ES 301AE, because lever-wheel type switches are used for the preset feature. The ES 302AE can drive 80 Series and 90 Series Slaves. Dimensions: ES 301AE—2 1/2" H x 8" W x 6" D, ES 302AE—2 1/2" H x 10" W x 6" D.

ES 301AE \$271.00

ES 302AE \$350.00

Master Clocks

ESE Masters provide a means of keeping all time displays in the system in agreement, through the use of a Serial Time Code. Only one pair of wires is needed to distribute the time code to all remote serial input displays. An ESE Master Clock System can operate digital displays, clocks with sweep second hands, printers, and in addition, tell your computer what time it is. Twelve hours of standby battery operation is standard in ES 160 and 160/1.

ES 160. Mounted in a 5 $\frac{1}{4}$ " relay rack panel and chassis, displays six digits of time information on .4" LED displays, in 12 hour format. The ES 160 has 3 sec. per month accuracy. Its standard output is serial BCD, CMOS compatible, and drives ES 161E, 166E, 171, 991, or 993 Remote Displays without buffering. All inputs and outputs are through rear-mounted connectors. Dimensions: 5 $\frac{1}{4}$ " H x 19" W x 15" D \$1250.00*
ES 160/1. One second per month version of ES 160 \$1450.00*

ES 180. NBS Master Clock receives and decodes the radio time broadcasts transmitted by the U.S. National Bureau of Standards (NBS). The unit provides an extremely accurate time reference that is available in several forms. These include:

- 1 $\frac{3}{4}$ " front panel, with LED display of hours, minutes and seconds
- Serial time code output of the displayed time data • 1 PPS output (1 Pulse Per Second) • RS-232C output (1200 baud, switchable to other rates) • Audio output (speaker)

Optional outputs available:

- Parallel BCD output • Relay contact closure on the hour and half hour

The unit is supplied with a built-in battery backup supply to maintain clock timekeeping for up to 10 hours in the event of a power outage. Time Accuracy \pm 10ms of UTC \$1987.00

ES 199. Our most accurate Master, providing better than .5 seconds per month. It contains a 10MHz receiver, with audio output, to synchronize with WWV at the push of a button. WWV transmits a 1000Hz tone at the start of each minute, except for the first minute of each hour, when a 1500Hz tone occurs. If the button is pushed and held during this time, the seconds' counters of the clock will be reset to zero. The ES 199 is supplied with an antenna, battery and charger. An external sync input connector is provided, to allow introduction of a periodic logic 'O' or contact closure at a once per second or slower rate. In order to simplify maintenance, test points are provided on the 1000Hz decoder board, to allow recalibration of the oscillator using only an oscilloscope. The serial output will drive 100 ES 161E, 166E, 171, 991 or ES 993E Remote Displays. Dimensions: 5 $\frac{1}{4}$ " H x 19" W x 15" D. Electrical: 117VAC, 50/60Hz. Options: B (CMOS, 5V) J, 1 PPS Output, Relay Closure on Hour and 1/2 Hour, Impulse Driver (ES 162) \$1687.00*

ES 192E/ES 194E. The most economical Masters, ES 192E (12 Hr.) and ES 194E (24 Hr.) are constructed using ES 112 or ES 124 digital clocks and adding the ES 167B Serial Time Code Generator to provide the output needed to drive Remote Serial Displays ES 161E, 166E, 171, 991 and 993E. Displays are 6" incandescent type. Dimensions: 2 $\frac{1}{2}$ " H x 8" W x 6" D \$376.00

Accessories

ES 161E Remote Digital Display decodes serial time data and displays six digits of time on .55" Gas Discharge Displays, in either 12 or 24 hour format. Dimensions: 2 $\frac{1}{2}$ " H x 8" W x 6" D \$191.00

ES 161TZ Remote Slave Displays with Time Zone Offset. Displays six digits of clocktime. Available in 12 or 24 hour format. Unit will be in 12 hour unless otherwise specified. To display 24 hour format master must also be 24 hour format. \$266.00

ES 162 Impulse Driver plugs into the ES 160 chassis, and can drive 20 Impulse Clocks. Designed so that if power fails, impulse always comes on with the same polarity when power is restored \$232.00

ES 199

ES 160

ES 165 Impulse Driver was designed to provide synchronized power to the ES 168 Impulse Clocks. It is capable of driving 50 ES 168 clocks, and will keep them running accurately through 12 hours of power failure. The ES 165 derives its synchronizing pulse from any one pulse per second source, such as the ESE Master Clock, and can also accept the once per second, alternating 12 or 24V impulses from an existing impulse clock system \$220.00

ES 166E Jumbo 1" Clock Display features six digits of 1" Gas Discharge Displays in 12 or 24 hour format. Receives serial time code input from any ESE Master Clock or ES 167B. Dimensions 4 $\frac{1}{2}$ " H x 10 $\frac{1}{2}$ " W x 6 $\frac{1}{2}$ " D. \$294.00

166ETZ Remote Slave Displays with Time Zone Offset. Six digit display. 12 or 24 hour format. Unit will be 12 hour unless otherwise specified. To display 24 hour format master must also be 24 hour format. . . . \$369.00

ES 167B Serial Time Code Generator is an integral part of ES 160, 190, 192E/194E and 196 Master Clocks, this unit can be added to many other ESE products, including ES 112, 124, 182, 184, 992, 994, 750, 751, 753, 754 and all 780 Series Time Programmers. Drives ES 161E, 166E, 171, 991, or 993 Remote Displays \$169.00

ES 168 Impulse Clock operates from the 8 PPS output of the ES 165 Impulse Driver. As many as 50 ES 168s can be connected to a single driver, and they will continue to run during a power outage of at least 12 hours \$149.00

ES 171 Console Mount Remote Display receives the serial time code generated by any ESE Master Clock, or any ESE product containing the ES 167B serial time code generator, and displays it on bright red .3" LEDs. Dimensions: 2 $\frac{1}{4}$ " H x 4 $\frac{1}{2}$ " W x 4" D \$183.00

Impulse Clock. When a sweep second hand is desired specify the 3201 .003" "Extra Flat" Impulse Clock. It has a 12" dial protected by a glass cover and metal bezel and is approximately 1" thick. As many as twenty impulse clocks can be driven by a Master Clock which has ES 162 as an accessory \$236.00

ES 991AE 4-Digit Serial Input Slave decodes serial time data and displays four digits of time on large 2" Gas Discharge Displays. Dimensions: 4 $\frac{1}{2}$ " H x 10 $\frac{1}{2}$ " W x 6 $\frac{1}{2}$ " D, Desktop Case \$376.00

991TZ Remote Slave Displays with Time Zone Offset. Four digit display. 12 or 24 hour format. Unit will be 12 hour unless otherwise specified. To display 24 hour format master must also be 24 hour format \$451.00

ES 993AE 6-Digit Serial Input Slave features four digits of 2" high Gas Discharge Displays, and two digits (Seconds) of 1" Gas Discharge Displays. Receives serial time code input from any ESE Master Clock or ES 167B. Dimensions: 5" H x 12" W x 3" D (Wall Mount) . . . \$520.00

993TZ Remote Slave Displays with Time Zone Offset. Six digit display. 12 or 24 hour format. Unit will be 12 hour unless otherwise specified. To display 24 hour format master must also be 24 hour format. . . \$595.00

* Battery and charger are included in the ES 160, ES 160/1 and ES 199.

Time Code Readers

ES 453 SMPTE Time Code Reader is an eight-digit SMPTE Time Code Reader displaying Hours, Minutes, Seconds and Frames \$395.00

ES 452 Play Speed SMPTE Time Code Reader/Window Dubber is a microprocessor-based eight digit SMPTE time code video character inserter which displays either the time data or the eight user bit characters \$550.00

ES 455 is a bi-directional, multi-speed, eight-digit SMPTE Code Reader, that can add the information to a video stream for recording time code on the video portion of a tape, or for displaying it on a monitor. Reading speed is 1/30 to 20 times playback speed \$795.00

ES 456 "Smart" SMPTE Time Code Reader. The ES 456 is a bi-directional multi-speed, eight digit SMPTE Time Code Reader which displays Hours, Minutes, Seconds and Frames on .4" red LED's. The ES 456 incorporates a digital error detection system: When a bad frame of time code is detected, the unit will switch to a frame-counting mode \$750.00

ES 257 SMPTE Time Code Reader/Comparator is capable of making two comparisons, as established by the two sets of thumbwheels located on the front panel. By specifying option "B" (four-line parallel BCD, 5V CMOS compatible), additional comparisons may be made by connecting one or more ES 258 "expander" units \$875.00

ES 258 SMPTE Time Code Comparator has been designed as an "expander" for the ES 257. Two sets of eight-digit thumbwheels are on the front panel, to allow comparison of two SMPTE code locations . . \$395.00

ES 270 IRIG 8 Time Code Reader Nine digits of time are shown on bright red LED's .4" character height. An RS232C interface (Hrs., Min., Sec. only) can be supplied as an option. ES 270 comes in a rackmounting enclosure 1 3/4" H x 19" W x 10" D \$405.00

ES 280 Audio Time Code Generator/Reader is a 10 Digit Audio Time and Code Generator/Reader, capable of laying down a serial 8CD time code on audio tape in the Generator Mode, and recovering and displaying it in digital form in the Reader Mode. The code has been designed by ESE. It is not a standard code, such as SMPTE or IRIG. The frequencies used to produce the code have been selected to be compatible with cartridge machines as well as other tape recording and playback equipment. Amplitude adjustment assures the right amount of signal for the particular machine being used \$578.00

720 Series Programmable Clocks, Timers and Time Code Readers

10 events occur on 10 isolated output channels, in the form of momentary reed relay contact closures. Latched outputs may be specified at the time of order. When latched, the next event to occur serves to "unlatch" the previous event.

Programming is done through the front panel keyboard, or "on the fly" in the "Run" mode. As the keys are actuated, the data is displayed on bright red .4" LED's. Re-programming is accomplished by "writing" the new data over the old data.

A battery, battery charger and crystal timebase are provided, to prevent malfunction caused by a power interruption.

The 720 Series units have a 3 1/2" H front panel, 19" W, with chassis extending 8" behind the etched and clear anodized panel.

ES 720 Contains its own 24 hour clock for comparison. \$845.00

ES 722 Contains its own 24 Hour Presettable Up/Down timer for comparison \$845.00

ES 727 Contains a SMPTE Time Code Reader. Code is received through a rear-mounted female XLR connector \$1150.00

Programmings

780 Series Ram Time Programmings are the most cost-effective way of programming more than eight events. They are flexible, easy to use, and

ES 790

ES 280

ES 727

provide 32 events (expandable to 96). The size of the unit is 5 1/4" H x 19" W x 10" D—Relay Rack construction, totally enclosed, with a screen top. 780 Series units operate from the power line with a backup crystal time base and 72 hour battery/charger as an integral part of the equipment.

Eight Digits of Programming Capability

ES 780 10 Days, 10 Outputs, Hours, Minutes, Seconds. \$1575.00

ES 781 100 Days, Hours, Minutes, Seconds. \$1433.00

ES 782 16 Outputs, Hours, Minutes, Seconds \$1654.00

Six Digits of Programming Capability

ES 783 Hours, Minutes, Seconds \$1365.00

ES 784 100 Days, Hours, Minutes. \$1365.00

ES 786 16 Outputs, Hours, Minutes \$1600.00

ES 787 16 Outputs, Minutes, Seconds \$1600.00

Four Digits of Programming Capability

ES 788 Hours, Minutes \$1313.00

ES 789 Minutes, Seconds. \$1313.00

ES 790 Microprocessor-Based Programmable Timer is a 1,000 event, 32 channel, microprocessor-based programmable clock. Events occur as reed relay contact closures (single pole, normally open). These closures may be all momentary, all latching, or 16 of each, at the user's option. A simple modification allows the use of 16 double pole relays, instead of 32 single pole relays.

1,000 time events can be programmed into the memory and they can be entered randomly, as opposed to chronologically.

An internal crystal with battery and battery charger is provided for uninterrupted operation.

The size of the unit is 5 1/4" H x 19" W x 10" D.

ES 790 Totally enclosed in rackmounting chassis w/screen top. . \$2300.00

ES 790/1 790 w/1 Sec/Mo accuracy, Master Clock Option \$2888.00

ES 790/3 790 w/3 Sec/Mo accuracy, Master Clock Option \$2730.00

750E Series Thumbwheel Programmer Comparators are recommended when programming up to eight time events. Thumbwheel switches are set to compare the time information from an ESE Clock or Timer.

One set of thumbwheels is required for each event. The standard 750 Series units are enclosed in 3 1/2" high relay rack panel and chassis.

ES 750E ES 112 and one 6 Digit Program \$364.00

ES 751E ES 124 and one 6 Digit Program. \$364.00

ES 753E ES 112 and two 4 Digit Programs (Hrs. & Min.) \$435.00

ES 754E ES 124 and two 4 Digit Programs (Hrs. & Min.) \$435.00

ES 756E ES 510 and one 4 Digit Program (Min. & Sec.) \$358.00

ES 758E ES 510 and two 4 Digit Programs (Min. & Sec.) \$452.00

ES 760E ATS Clock is a six digit, 24 hour, programmable clock designed specifically for Automatic Transmission Systems.

On the front panel are a six digit display of time, in hours, minutes and seconds, and two sets of four thumbwheels. These thumbwheels are used to program mode switching times in hours and minutes. 3 1/2" H x 19" W x 8" D.

Under normal operating conditions, the ES 760E will operate from the 60Hz power line. If, for any reason, normal power is interrupted, ES 760E will automatically switch to its internal battery and crystal time base. A built-in battery charger keeps the battery ready for such emergencies. Battery operation can continue for up to eight hours.

ES 760E \$717.00

ESE**Generators/Distribution Amplifiers/
Interfaces/Audio Level Indicators****ES 206A Video Time and Date Generator**

Designed to allow the addition of Time and Date information to a video signal. Two rear-mounted video jacks permit "looping" the video information through the 206A to add the data.

ES 206A \$550.00

ES 207/ES 208 Video Distribution Amplifiers

Controls are available through the top plate with a miniature screwdriver for video gain, DC level, and HF equalization. The amplifiers are clamped, providing a very stable output signal to the output terminals. A single pair of BNC connectors are wired for a loop-through input, although provision is made on the circuit board for a terminating resistor if desired. If operated with internal input termination, the terminal used as a loop-through input can be internally wired as a fifth output, in the case of ES-207.

These amplifiers can be used for distribution and for signal conditioning, equalizing up to 1000' of coaxial cable. A very wide range of chroma level control can be obtained with the DA. Output video is expected to be set for OVDC on the blanking or porch level, with video extending positive and sync negative. Nominal input and output signal level is 1V p-p. Typical gain control range is from 1/2V to 1 1/2V p-p.

ES 207 \$175.00
ES 208 300.00

ES 209 Video/Stereo Distribution Amplifier

A 1 x 12 video distribution amplifier combined with a dual audio distribution amplifier. It was designed primarily to meet the needs of tape duplicating systems, especially the VHS and Beta Hi-Fi formats. It is housed in a rackmounted cabinet 1 3/4" H. Two BNC input connectors provide a loop-through video input signal. RCA jacks provide looped inputs for audio. Twelve outputs are provided per channel. An option is available on the circuit board to internally terminate the video input at 75 ohms, if desired. All twelve outputs will deliver identical signals, and unused outputs need not be terminated.

It may be used for signal distribution and for signal conditioning. It will equalize and compensate gain for up to 1000' of RG-59 cable (and up to 3000' of the higher grade video cables).

The audio portion of the DA package is designed to create twelve exact copies of the stereo input drive signals.

The audio DA is transformerless, and unbalanced. The input is hi-impedance, while the outputs are medium, and will drive either 600 ohm or hi-impedance inputs.

ES 209 \$495.00

ES 461 SMPTE Time Code Generator

A pre-settable, eight-digit SMPTE/Time Code Generator, capable of Drop Frame or Non-Drop Frame operation, user bits and jam sync.

ES 261 \$795.00

ES 86U Edit Control Interface "The Enhancer"

The ES 86U Edit Control Interface has been designed for "insertion" into existing VHS and 3/4" video tape editing systems. The additional features provided by ES 86U are: • Black Generator • Automatic or Manual Video Fade • External Source Editing • Stereo Mixing

ES 86U \$1250.00

**ES 206A****ES 209****ES 212 Hybrid Telephone Interface "Phone Patch"**

ES 212 uses a "heavy iron" transformer hybrid network, 600 ohm balanced line level inputs and outputs, switched metering, with full level and dynamics control.

ES 212 \$995.00

ES 214 Dynamic Audio Level Indicator

A highly accurate audio level indicator, which is designed to simulate the action of a conventional VU meter but with superior dynamic characteristics. The LED meter is five to one hundred times faster in responding to complex waveforms than mechanical meters without sacrificing the familiar meter "movement."

The ES 212 has 14 LED Lamps in 3 colors. Scale +4, +3, +2, +1dB-Red. 0dB-yellow. -1, -2, -3, -5, -7, -10, -15, -20, -25dB-Green, with an input impedance of 2200 ohms at maximum sensitivity. 6800 ohms at +8dBm "House Level," 10,000 ohms at minimum sensitivity. The input circuit is transformer isolated, balanced bridging.

ES 214 \$131.00

ES 216 Dynamic Audio Level Indicator

The unit displays audio levels in ten discrete steps using ten LED indicators. Levels of -20, -10, -7, -5, -3, -1, 0, +1, +2 and +3dB are displayed. Levels below 0dB are displayed using green LED's, 0dB is yellow and levels above 0dB are red. The ES 216 can be ordered in either the peak reading mode or in the VU response mode.

The ES 216 is designed to be console or panel mounted and can fit in the same space as many commonly used mechanical VU meters. It consists of a printed circuit board assembly mounted to a black plastic front bezel.

The audio input is balanced and presents an impedance of approximately 6000 ohms.

The input sensitivity is adjustable via a potentiometer located at the rear of the printed circuit board. Maximum sensitivity provides a 0dB reading with an input of -14dB ("Peak" mode) or -10dB ("VU" mode)

ES 216 \$63.00

EVENTIDE, INC.

Audio Processing Equipment

BD980

BD980 Broadcast Delay Line

• Stereo operation with two independent audio channels and ten seconds of delay are standard • Advanced de-glitched catch-up system for cleaner, faster delay rebuild • Superb audio quality with 16-bit linear PCM design and 50kHz sampling rate • Frequency response extends to 20kHz • Ramp to zero and wait and exit modes eliminate switching and monitoring hassles when entering and exiting delay • BD980 is also capable of stereo time compression without a variable speed tape deck • Manual delay mode for production effects • Large, easy-to-read alphanumeric front panel readout displays modes, timings and delay "safe" information • Remote control compatible with the BD955 delay • On-board self-test diagnostics

BD980 \$5495.00

BD955

BD955 Broadcast Digital Delay Line

• Designed specifically for the broadcast industry • This RAM based digital delay line offers delay up to 6.4 sec • DUMP button cancels the objectionable program and, if desired, cuts off the caller • Auxiliary relay contacts may be used to control the telephone and/or a cartridge machine • "Catch up" feature allows the program to continue in real time, without the necessity for filling the delay period with a jingle or announcement • This feature does not introduce wow, and is virtually undetectable in operation • When not used as an editing delay, the delay line may be used as a production tool • Front panel switches allow setting of delay from 6.5ms to the unit's maximum delay • 15kHz 6.4 sec

BD955 Including variable delay dump and catch up features, 115V or 230V:

- 7.5Hz, 6.4 sec delay \$3350.00
- 15kHz, 3.2 sec delay 3350.00
- 15kHz, 6.4 sec delay 4300.00
- Stereo interconnect—plus cost of two units 150.00

931

932

BD931/932 Broadcast Digital Delay Lines

• Features full 16kHz bandwidth and greater than 90dB dynamic range • Employs advanced circuitry and 64K RAM chips to deliver full bandwidth • Stereo stations stay in stereo during delay operation with BD932

- BD931** 16kHz, mono, 115 or 230V, 3.2 sec fixed delay \$1795.00
- BD931** 6.4 sec fixed delay 2295.00
- BD932** 16kHz, stereo, 115 or 230V, 3.2 sec fixed delay 2595.00
- BD932** 6.4 sec fixed delay 4495.00

SP2016

SP2016 Effects Processor/Reverb

• Most versatile digital reverberator and audio effects processor • Modular design and software updates accommodate advances in the art of digital signal processing • 24 standard effects programs include stereo room, plate, inverse and special effect reverbs, flanging, chorus, loop edit sampling, comb filter effects, and many more • Optional additional software includes mono to stereo synthesizer, digital vocoder, autopanner • Still more software programs are available from third-party suppliers • Up to 65 different sets of program and parameter presets can be stored and recalled by the user • Full stereo operation • Frequency response is 20kHz to 16kHz for most programs • Extensive self-test capability • Balanced XLR stereo inputs and outputs • Optional MIDI interface and handheld remote controls are available • Optional signal processor user development (SPUD) system allows users to create their own programs for custom and specific applications, and to create all-new effects (SPUD system requires IBM PC or Hewlett-Packard desktop computer and user knowledge of audio signal processing techniques)

- SP2016** \$6895.00
- MIDI Interface** 495.00
- Mini remote** 195.00
- Automatic Panner program ROM** 195.00
- Vocoder program ROM** 495.00
- Stereo synthesis program ROM** 275.00
- PC 25 ROM expander kit (retrofit—standard on current units)** 495.00

EVENTIDE, INC.

Audio Processing Equipment

2830

2830 Omnipressor® Dynamic Modifier

- Combines the characteristics of a compressor, expander, noise gate and a limiter • Dynamic reversal feature makes high level input signals lower than corresponding low level inputs • Provides wide range of controls • Useful in all program-controlled gain changes • Continuously variable expansion/compression control goes from an expansion range of 10 to 1 to a compression range of -10: 1 • Attenuation and gain limit controls adjust the gain control range from 60dB to as little as ± 1 dB • Bass cut switch • Limits low frequency response in the level detector • Metering system employs a logarithmic amplifier to generate information on input, output and gain

2830 Omnipressor \$700.00

2830 Balanced in/out transformer coupling (must be ordered with unit)..... 40.00

H949

H949 Harmonizer® Digital Special Effects

- Combination digital delay line, pitch changer, and all-around special effects unit • When used with a tape recorder, is capable of shortening or lengthening a piece of program material to fit a given time slot while maintaining normal pitch • Pitch change feature offers one octave up and two octaves down continuously variable with a four-digit readout for precise ratio • In the delay mode, there are two outputs, each with up to 400ms • Long delay permits simulated reverb • Time reversal and other distinctive effects are available on this versatile unit • The frequency response at any delay (unity pitch ratio) is 20Hz to 15kHz ± 1 dB

H949 Includes LU618 De-Glitch Card \$3500.00

H969

H969 Pro Pitch Harmonizer®

- Delivers unprecedented pitch change quality • Incorporated 16 bit linear PCM circuitry • Bank of twelve "instant" pitch change presets • Two independent four digit readouts display selected pitch ratio and delay times simultaneously • Dual concentric coarse and fine adjust control pots make it a snap to set exactly the pitch ratio or delay time you want • Flanging offers many creative options • Live performance is made easy with the inclusion of front panel preamplified input and effect output phone jacks • Standard rear panel XLR-type studio level jacks

H969 \$4500.00

H3000

H3000 Ultra-Harmonizer

- Program key for loading, saving, removing, up loading and downloading presets • Function key for MIDI sequencing and parameter control, also adjusts LCD display contrast • Parameter key for control of user-adjustable parameters for each program • Control and data entry group to perform data entry functions in three ways: "knob", keypad and up/down buttons • 2 line x 40 character LCD readout display • Four control "softkeys" serve a variety of functions determined by the software programming • Level indicators show input levels of each channel on a pair of tri-color 10 segment LED bars • Level key is used to change input or output levels for either or both channels • Complete, receive/transmit MIDI control of all parameters in real time • Sequence front panel controls with virtually any sequencer (not just with system exclusives) • Sync delays to MIDI clock (they stay right in time) • Mix effects levels and input/output levels via MIDI—gives you an automated mix • Control effects through MIDI modulation functions—change parameters with pitch wheel, mod wheel, note ranges, etc.

H910 Harmonizer®

- Pitch ratio readout • Second output for delay only • 230V • 50/60Hz

H910 \$1500.00

H910 Balanced in/out transformer coupling 100.00

“They Work Alone Or Together”**610 System Controller**

All communications within the EV-BLOC system are supervised by a system controller. The function of the system controller is to establish the location and type of each module installed in the system, and to schedule the use of the EV-COM bus by other modules. The 610 System Controller module is specifically designed to perform this task and provide a gateway to the EV-BLOC system. The standard RS-232C serial port allows an external computer or computer based editor to control and monitor the status of any of the 610 Series modules installed in the system. Fitting the 422 option changes the serial port to a SMPTE/EBU compatible RS-422 configuration.

611 Time Code Reader/Translator

- VITC/LTC Reader. Reads longitudinal time code from 1/30th play speed to 70 times providing time and user bits out as multiplexed parallel BCD (with BCD option fitted) or as serial ASCII (with 232 option fitted). Custom interfaces are available for other OEM applications
- LTC Jam-Sync Generator. Regenerates and re-synchronizes LTC code to eliminate edit aborts due to mis-phased or unreadable time code
- VITC/LTC to LTC Translator. Permits LTC only editing equipment to read both codes providing frame accuracy at all tape speeds

612 Time Code Generator

- VITC/LTC Generator. 4/8 field color framed, free running or jam-synced to data from a 611 Reader module. When jam-synced to the record VTR reader in VITC only editing, continually ascending code is inserted on the edit master as edits are assembled. VITC coded workprints can be prepared for frame accurate edit decisions without a character burn-in
- Multi-Source VITC Keyer. Any number of isolated video sources may be encoded with identical VITC using multiple 612 Generator modules

613 Video Character Generator

- Off-Line Editing. Inserts time/user bit character data from another 610 series module into program video for burning time code into workprints. Frame accurate edit decisions can also be made directly from VITC without the need of a window dub
- Video Typewriter. Used in conjunction with a computer or keyboard, the 613 module is a low cost alphanumeric character generator for preparing tape indexes, slate boards, etc.

610

611

612

613

614 Transport Control Module

- Issues commands, receives tallies and provides capstan control for the slave transport
- Handles wide variations in machine characteristics
- Programmable interface contains novel hardware and advanced software algorithms that are optimized to take advantage of each transport's unique functions
- Ability to learn individual transport characteristics, which can vary with different reel sizes and the relative amount of tape on each reel
- Continually measures and interpolates with previous data to build trajectory templates in memory. Thus, locating and synchronizing response times are optimized, resulting in significant savings in time and gentle transport handling
- Contains a high speed LTC reader which recovers time code from the slave transport, and makes it available to the 610 system controller via the EV-COM bus

Each module requires a companion I/O module as outlined below:

- For 610 — 605 Serial I/O Module
- For 611 — 604 Parallel I/O Module
- 605 Serial I/O Module when 232 option fitted
- For 612 — 603 Parallel I/O Module
- & 613 — 605 Serial I/O Module when 232 option fitted
- For 614 — 6141 Serial I/O Module

EVERTZ MICROSYSTEMS LTD.*Terminal Equipment***Teach Your Editor VITC****620 VITC/VITS Deleter****621 VITC Generator/Translator****622 VITC Reader/Translator**

Powerful VITC/LTC translator modules. Source identification and remote control via video signals.

The 620 series modules are basically stand-alone units, i.e., no provisions are made for direct data transfer between modules, except via external code or video connections. For more complex systems 610 series modules should be used. Their "EV-COM" communications bus permits direct command/data interchange with other modules within a frame.

620 VITC/VITS Deleter

This is a general purpose vertical interval signal deleter. A high quality programmable video keyer substitutes black level for any type of code or test signal present on lines 10 to 21 (6 to 22 for PAL) of the vertical blanking interval. A group of DIP switches is used to select any line or group of lines. Color burst is not affected.

EV-BLOC Rack Frame Components**Backplane Assembly #601**

The Backplane circuit board has been developed specifically to meet our design goal of maximum flexibility on the system level with reliability and performance on the module level. Circuit conductors for data, video and audio signal transfers, from each circuit block to its associated I/O module, have been carefully laid out to eliminate any chance of cross-talk between program video and high frequency microprocessor signals.

The assembly comes complete with 21 64-pin euro-card connectors (DIN 41612), one for the power supply regulator module, and 10 pairs for the EV-BLOC modules and their companion I/O modules.

621 VITC Generator

- VITC generator: 4/8 field color framed, resettable to 00:00:00:00 or jam-synced to longitudinal time code (LTC option) with error by-pass (a terrific LTC to VITC translator; teach your editor VITC)
- Multi-source VITC keyer: any number of 621's can be synchronized to a common time code generator to accommodate isolated video sources. User bits may be transferred from the common generator or preset locally, using easily accessible DIP switches. This provides an added benefit.
- Source identification: the user bits in each module can be encoded to uniquely identify its video source. The time code bits can be set to zero, for camera, etc., or jam-synced to time-coded sources such as VTR's.
- Remote machine control: six control inputs can be utilized to control VTR's, etc. via the program video path

622 VITC Reader

- VITC reader. Reads vertical interval time code from about 20 times play speed down to still frame, providing time and user data out as LTC and multiplexed parallel BCD. An optional video inserter (VCG) keys the data into the picture
- VITC to LTC translator for use with LTC only editing equipment or readers
- Source ID decoder. User bits encoded with a special code from an EV-BLOC 621 module or Model 4000 are displayed as unique source identification, e.g., CAM 3, TC 1, VTR 5, etc., using the optional VCG

- Remote machine control. Six grounding output switches respond to specific user bit codes from a 621 encoder to remotely control a variety of devices via the program video path or off tape. Just think of the application potential

623 Time Code Reader

- Microcontroller (MCU) based module contains a full speed (1/30 to 70 times play) longitudinal time code (LTC) reader and LTC translator/phase restorer • VITC sub-module can read at speeds from still frame to in excess of 40 times play speed, and contains a full wind speed (still to over 45 times play speed) VITC reader, designed for use with non-time base corrected video signals • Front panel mode switch allows the LTC/VITC reader pair to operate in either an LTC or VITC only mode or in an automatic switchover mode • MCU firmware automatically selects valid code from either source and provides accurate time code reading from still frame to 70 times play speed

Power Supply Regulator #602**Power Transformer #6025**

The power supply consists of two separate assemblies.

The plug-in regulator module provides regulated +5V for microprocessor and logic circuits, and $\pm 8V$ for signal processing elements.

The power transformer module contains all line/mains voltage circuits enclosed in a heavy duty stainless steel shielding case. Appropriate RFI protection is provided by LC filters.

The power supply provides enough DC current to handle a full complement of 10 EV-BLOC modules. Except for special custom applications, the two units are generally supplied together.

Each EV-BLOC module in this series requires an I/O module as outlined below:

For 621 & 622—I/O module 603

For 623—I/O module 605

EVERTZ MICROSYSTEMS LTD.

*Character Generator/
Clocks/Timers*

VCG-1260 Character Generator

The VCG-1260, designed primarily to display time information in video, has limited text and logo capabilities too. It decodes DQS-B6 or SMPTE/EBU time code from your master clock system and displays the time or user bit information. In addition, a built-in elapsed time counter with 0.01 sec resolution and a remote START/STOP control may be used for timing sporting events, etc.

The VCG-1260 may be used as a low cost alphanumeric generator using the optional serial ASCII port. Limited custom logo capabilities are optionally available.

Eight front panel keys allow user selection of 4 character sizes; horizontal and vertical positioning, inverse video, input code, and display formats to suit individual applications. The configuration parameters are stored in non-volatile memory, eliminating the need to reprogram the setup after a power failure.

A broadcast quality keyer and high resolution characters combine to give a high quality presentation for on-air use. A separate preview output is provided for setup to preserve the integrity of the program output on air.

VCG-1260 Video character generator including video keyer to convert master clock and SMPTE inputs to video output. Sports timer function with remote control stop/start facility — internal clock system, H-V positioning, inverse, video-preview output. Optional serial ASCII input for alphanumeric display information and tape leader generator function.

VCG-1260 \$2480.00

PT-26 Production Timer

The PT-26 Production Timer is a very versatile and easy to use production tool. Two independent timers with separate displays allow up-counting, down counting with automated count reverse at 00:00, totalizing program segments, real time use in 24 hour format, etc. Timer A may be used as a 24 hour real time clock and gives a DQS-B6 serial code output to drive many Evertz accessories such as remote displays, video character generators, serial-to-parallel decoders, etc. A programmable transistor switch output is available on each timer and will operate in either the up or down mode. A front panel slide switch permits the two timers to operate with seconds in sync.

Data entry follows calculator format for ease of operation. Separate function keys for each timer control Up/Down, Set/Reset and Start/Stop. Each timer is provided with an external input for remote control using a single pushbutton for stop, start or reset.

A quartz crystal timebase provides an accuracy of approximately 1 sec per week. Power is supplied from a separate 9-14V, 300mA DC line adaptor. The unit is packaged in an attractive, lightweight enclosure.

PT-26 Deluxe production timer features two event count up, count down, real time and two displays, time calculator function **\$595.00**

Remote Time Displays

A variety of remote time displays is available, all operating off our well established DQS-B6 serial time code. The code can be distributed over large areas using a twisted or shielded pair cable. In addition, a simulated analog display, 1275A, also reads SMPTE/EBU edit code.

120/125 General Purpose Data Display

The 120 can be used for display of time code, real time, programmable user messages, machine status, and source identification. The wide viewing angle and large characters make the display legible to over 100'. Four brightness levels and up to three fonts (dependent on display format) can be selected to best suit your individual application and ambient lighting.

VCG-1260

PT-26

1275A

120

The 120 reads SMPTE or EBU time code at play speed, forward and reverse (full speed range is available on Model 125). Display "freeze" and user bit data are enabled via the front panel push buttons or remote control inputs.

120 \$595.00

120e Enhanced version with RS-232/422 serial I/O and column/row dot addressing **.695.00**

125 Full speed range (1/30th to 70 x play) time code reader only **.995.00**

1275A Time Display

1275A has 60 LEDs mounted in a circular arrangement, simulating an analog second hand. In addition, the hours, minutes and seconds are displayed in digital format. The unit reads DQS-B6 or SMPTE/EBU time code or may be used as a totally self contained 12 or 24 hour clock. A dip switch allows user selection of 8 different operating and display modes. Beautifully finished with wood trim, ideally suited for studio, lobby, board room, etc.

1275A \$595.00

EVERTZ MICROSYSTEMS LTD.*Chaser/Emulator***Chaser™ 7000 Series Chase Synchronizer**

- Time code based chase synchronizer
- Continually reads edit code from two tape machines, a master and a slave
- Maintains a pre-determined time relationship between the two by directly controlling the slave's transport functions and capstan motor
- Full speed time code readers allow the slave to chase the master in wind speeds, reducing cueing and lock up times
- Capable of a high degree of synchronization accuracy, so that overall system stability is only limited by the slave transport mechanics

Three different synchronization modes give Chaser tremendous flexibility. In "frame-lock" mode, Chaser maintains absolute alignment of the time code numbers, including offset, and subframe phasing. The "phase-lock" mode maintains only the relative phase between two tapes without regard for absolute time code numbers. A third mode, "auto-lock" is a combination of both. After initial synchronization using time code numbers, "phase-lock" continues using only the frequency component of the code.

Two different, though functionally similar, control panels are available: the integral front panel with display/keypad or a remote control unit with expanded capabilities. The integral control panel contains an alphanumeric LED display and a number of clearly labelled pushbuttons logically arranged in a display group, a data entry group and a function group.

The remote control unit is connected to Chaser's SMPTE/EBU RS-422 serial remote control port, allowing it to be conveniently located at the edit console, while the Chaser electronics are located near to the audio transport. In addition to the functions on the integral front panel, the remote control unit constantly displays the slave transport's status. This optional remote control unit replaces the integral front panel display/keypad.

7000 DSP Integral Front Panel/Local Control \$3950.00
7000 RCT Remote Control Version 4950.00

7100 Emulator Audio Transport Interface

- Audio transport interface that integrates audio into the video edit suite
- Performs audio insert edits without tying up a VTR to synchronize the audio tape machine
- Simplify the list management process by integrating the ATR edit points into the edit decision list
- Uses the same transport interface and control electronics as Chaser
- Receives commands from the edit controller, in the specified RS-422 serial VTR protocol format
- Controls all the cueing, pre-roll synchronization, record in/out, and other functions necessary in an integrated editing environment

To make use of Emulator, all you require is an edit controller that uses the SMPTE/EBU serial remote control protocol for controlling video tape machines. Emulator interfaces are available for several VTR protocols (BVU, BVH, VPR, etc.). The edit controller must be capable of sync rolling the source VTRs. An extra channel of control is required to communicate with Emulator.

If multiple record machine capability is available on the edit controller, an additional Emulator may be added to control a master record ATR sync rolled with the record VTR. All the ATR functions, edit points, etc. are controlled from the main edit controller keyboard. Separate synchronizer control panels are not required.

7100 \$3950.00

**7000 DSP****7100****e²****e² Emulator Transport Interface**

- Provides an intelligent serial interface between VHS machines and video tape editors or machine control computers
- Basic unit uses control track
- Optional LTC reader (reads down to 1/10th play)
- Optional VITC reader accurately decodes multi-generation time code even off low cost VHS machines, leaving full audio track availability (reads down to still frame)
- It will cue-up, pre-roll, synchronize, shuttle, jog frame by frame, with 100% position accuracy
- Controls most professional/industrial VHS and S-VHS machines
- Compatible with your existing edit controller (CMX, GVG, Sony, Ampex, Convergence, Calaway, Paltex, etc.)
- Compact size, fits in the palm of your hand
- Built-in diagnostics
- Uses 1/2" VCRs for off-line editing or go on-line with S-VHS
- Capable of "fast" frame accurate editing of ENG footage shot on S-VHS
- Precise picture accurate edit decisions with the ability to "mark" edit points

The e² is an intelligent transport interface that graduates your VHS or S-VHS machine to the professional editing environment. e² communicates directly with your edit controller or computer and provides complete transport control at all speeds. The VITC or LTC reader options permit frame accurate editing, auto-location, and more.

e² control track version \$1395.00
e² with LTC 1795.00
e² with VITZ (no LTC) 1795.00

Synchronizer/Time Code Equipment

7600/7600-MST

EV-BLOC Multi-machine Synchronizer

- Aligns or synchronizes a tape on a transport under control of the 7600 (the slave) with a reference signal from another machine (the master) • Slaves an ATR to a VTR for the integration of audio editing into the video editing suite • Synchronizes multi-track ATR's to video during mixdowns of audio for video • Synchronizes an ATR to a VTR for audio lay-backs • Synchronizes multiple ATR's to increase the number of available audio tracks • Controlling standard slave transport functions such as fast forward, rewind, and auto cueing of the transport • Standard 19" x 3 rack units high rackframe c/w power supply, transformer, and backplane, houses up to 10 modules • 610 system controller/time code generator module • 611 LTC reader for the master transport (reads from 1/30th to 70X play speed) • 614 transport control module for the slave (includes the cable to slave) • Remote control unit

7600 Multi-machine chaser with remote and one slave **Starting at \$5495.00**

ECM-4010 Edit Code Master

- Designed to take full advantage of the multitude of application possibilities for vertical interval time code • Combination generator and high speed reader for both, LTC and VITC • High resolution character inserter can be used to burn in a window from either the generator or reader data • Powerful microprocessor software and proprietary reader and generator circuitry combine to offer a time code system that will outperform any other • Modular construction using euro-card style EV-BLOC modules in a one rack unit high frame • High resolution character generator/keyer • Time and user bits presettable from front panel • Parallel and serial remote control • RS-232/422 serial port to interface to external computers • Alphanumeric user bit capability • Wide speed range in both LTC and VITC readers • Reads last valid code from either VITC or LTC in auto mode or manual priority selection • Several Jam-Sync modes with and without user bit transfer • Adjustable LTC output level to + 12dBm • Keypad lock-out prevents unauthorized tampering

ECM-4010 **\$4995.00**

3700D Edit Code Master

- Longitudinal time code generator and full speed reader (over 2000:1 speed ratio) • Video character generator with high resolution characters and alphanumeric user bit decoding is standard • Separate generator and reader displays are particularly useful in Jam-Sync modes and when operating reader and generator independently • High flexible Jam-Sync modes allow transfer of reader time and user bits into the generator in a variety of configurations • Full alphanumeric user bit functions can be used to record tape index, captions, source identification or other data along with the time code • RS-232C serial port permits interfacing to remote control panels, computers, editors, etc. • Multiplexed parallel BCD output of reader time and user bits • An aural alarm signals genlock problems. This can be disabled if, for example, the generator is locked to a VTR rather than house Sync or PGM video

3700D **\$3650.00**

ECM-4010

3700D

4900

3600D Edit Code Generator/Reader

- SMPTE/EBU edit code generator, a full speed reader and a video character inserter in a slim one rack unit package • True dual standard, NTSC and PAL. Generates time code in accordance with SMPTE RS-170 or RS-170A, or EBU 4 or 8 field standards (4 switch selectable modes), locked to the PGM video source • Front panel format switches, no need to disassemble whenever certain system parameters need to be changed, e.g., field 1 or 2 update of VCG, color framing, drop frame, etc. • Reads time code from 1/30X to 70X play speed • High resolution character generator in two character sizes, full screen positionable, keys time and user bits into the picture • Momentary and continuous Jam-Sync modes. In Cont Jam, good code is automatically substituted when synchronizing to poorly recorded or disrupted code

3600D **\$3150.00**

4900 Edit Code Reader/VCG/Translator

- Capable of hesitation-free time code display from 70X down to 1/30X play speed • VITC option all the way down to still frame • Full speed range LTC reader • Optional VITC decoder module • Easily accessible formatting DIP switches • High resolution character inserter; 2 sizes • VITC source ID decoder • Byte-wide parallel data output for easy editor interface • Play speed LTC translator output incorporating a soft-lock feature provides continuous time code at all reading speeds from still frame to maximum wind • LTC code phase corrector/regenerator for dubbing

4900 **\$1995.00**

49V VITC Reader Module for 4900 **300.00**

FAIRLIGHT INSTRUMENTS, INC.

Digital Effects Processors

CVI Plus

Computer Video Instrument CVI Plus

• 2MHz 6809 processor • Icon based menus • Memory module as standard with 7 fonts, 108 brush shapes and 108 textures, up to 100 titles stored in its "library" and large sequence memory • Full screen frame store • Alphanumeric keyboard as standard • Digital and analog circuit boards • 2 fields or 1 frame of memory • Diagonal wipes, live picture inversions and reverses • Stencil facility • Push-on-off fields

The CVI Plus is ideally suited to the economics and capabilities of $\frac{3}{4}$ " and $\frac{1}{2}$ " production facilities. It's also a unique tool for music video, storyboarding, video artistry, live performance, and educational and commercial applications—even some forms of video animation.

The CVI Plus can take any video image from a live camera, tape, film, still or slide and enhance or manipulate the image in real time through effects as well as by on-screen painting and drawing.

Still images, presets and sequences can be stored digitally onto video tape and recalled for later use.

The CVI Plus is a computer based "real time" digital effects processor with paint, A/B wipes, keyer, sequencer and titling facilities, available in both NTSC and PAL. The CVI Plus has a palette of 4096 colors, 108 brush shapes, and 108 textures. Since the CVI Plus is menu driven and the control panel has "slider" controls of such functions as: Zoom, Stretch, Horizontal and Vertical Pan, Hue, Saturation, Value and Color Depth control, it allows the user a "user friendly" atmosphere in which to create. Use any of the 100 factory presets or modify to your liking and store them for future use. There is an RS232 port for communications with other computers. Supplied with a 2 meter control panel cable.

CVI Plus 42291 \$9,950.00

Graphics Pad

A large drawing tablet with a 12 x 12 active area. Gives the user greater control in drawing and pixel placement. The menu area allows for complete control of menus. Comes standard with 4 button cursor, stylus and holder and cables.

Graphics Pad #32402 \$650.00

Stylus and Holder #32403 (for use with Graphics pad) 190.00

Keyboard Piggyback Cable #32277 (allows Alphanumeric Keyboard to be used in line with Graphics Pad) 60.00

CVI Link-Amiga

• Save and load presets • Save and load sequences • Save and load images • Save and load fonts • Upload presets from CVI • Mouse control • CVI menus resident in software • Active control panel on Amiga screen • All ROM presets accessible by name and number • 7,920 user (RAM) defined presets per diskette • Entire parameters of presets are printable • Create presets within Amiga • ASCII commands from Amiga alphanumeric keyboard

Software and interface cable package to allow the CVI and CVI Plus to communicate with the Amiga Computer. Software package allows controlling of the CVI/CVI Plus from the Amiga, by using the Amiga to display the Fairlight menus. Future software updates will include SMPTE lock, IFF to/from CVI format.

CVI Link—Amiga #32602 \$795.00

CVI Link—IBM #32603 795.00

Memory Module REV 7

For use with the CVI. Adds additional onboard memory to allow for storage of: 36 user defined brushes and textures, adds 72 new brushes/textures, 100 pages of title memory, and 8 fonts (1 user definable). The sequencer memory has been increased to allow for 10 sequences totaling 9000 lines of data.

Memory Module REV 7 #32101 \$595.00

Note: Memory module is required for use on the CVI.

Video Producer

• Real-time video digitizing • Real-time pixelation • Real-time drawing over video • Real-time colorization to music • Strob- ing, audio strobing • 18 brushes and 18 textures • 7 font/5 size/12 variation titling feature • GPI input • Luminance or chroma keying • Available in NTSC or PAL • Optional alphanumeric keyboard • Real-time continuous pan and zoom control • Real-time aspect ratio control • Real-time colorization of video images • Real-time reversals and inversions • 4096 colors • 10 factory or user definable sequencer • 100 page title library (4000 characters) • 100 preset effects • Built-in digitizing pad • RGB outputs • Workstation design • 64K ROM memory, 24K system RAM, 454 Video RAM • 2MHz 6809 processor • Resolution: Analog: > 300 lines (composite in- composite out); Digital: 235 pixels per line (field store)

The Video Producer is not just a video effects processor and not just a paint box. It combines both with unique control capabilities. It is ideally suited to the economics and capabilities of three-quarter inch and half inch production and post production facilities. The Video Producer can take any video image from a live camera, tape, laser disc, or tuner and enhance or manipulate the image in real time through effects as well as by on-screen painting and drawing.

Video Producer #52292 \$4,990.00

Alphanumeric Keyboard #32300 (for use with CVI and Video Producer) 595.00

FAROUDJA LABORATORIES, INC.

Decoder/Transcoder/Flesh Tone Corrector

CFD-N NTSC Decoder with Chroma Enhancer

The CFD-N is a high quality NTSC to RGB comb filter decoder for use in critical applications where high resolution and absence of artifacts are required. Among these applications are large screen projection, precision color monitoring, tape-to-film transfer, computer generated information display, color keying and standard conversion.

The CFD-N uses an active comb filtering method which leads to a much more effective suppression of color subcarrier dot crawl problem present with standard comb filter designs. In addition, the resultant image has no visible loss of resolution. The luminance bandwidth extends to 10MHz, making the CFD-N the closest thing to true RGB possible. This comb filter approach results also into an inherent improvement in signal-to-noise ratio.

Features of the CFD-N include also, a luminance enhancer to improve narrow band input signals, and chroma enhancement circuitry which eliminates ringing, chroma/luminance delay errors, and apparent loss of chroma bandwidth often associated with NTSC signals.

With a standard NTSC input signal, the CFD-N decoder provides on the back panel: Separate RGB signals, combed chroma and luminance, R-Y, B-Y, G-Y, and sync outputs. All sources drivers are capable of handling three outputs.

The CFD-N is a moderately priced professional unit, housed in a rugged mount case only one module high.

Specifications

Inputs (75 ohms)

- Video: 1V p-p NTSC
- Subcarrier: 4V p-p 3.58MHz

Outputs (75 ohms)

- R, G, B: 1V p-p
- R-Y, B-Y, G-Y: 1V p-p
- Luminance: 1V p-p
- Chroma: 3.58MHz, 1V p-p
- Sync: 4V p-p

Performances, Luminance Channel

- Bandwidth: ± 1dB to 5MHz, -3dB at 8MHz
- 2T Sine-Square Pulse K Factor: < 1.5%
- Vertical Tilt: < 2%
- Signal-To-Noise Ratio: 60dB
- Subcarrier Rejection: 32dB

Performances, Chrominance Channel

- Demodulated Chroma Bandwidth: 1.5MHz
- Demodulation Quadrature: 90° ± 1°
- DP: < 1.5°
- DG: < 1.5%
- Chroma-Luminance Delay Error: < 25ns

- CFD-N\$6250.00
- CFD-1H 1H Delay Option375.00

CTC-N Transcoder

The CTC-N is a high quality bidirectional (RGB to components or components to RGB) transcoder. It contains a genlock sync generator with blanking processor and sync reinsertion.

A certain amount of color correction is provided through two black balance front panel controls.

The proc-amp controls provide for a ± 15 IRE set-up control, which allows for removal of set-up from the luminance signal if required. BNC and Betacam style 12-pin connectors are provided.

An internal color bar generator is available as an option.

Specifications

- Inputs:** Y/R-Y/B-Y, or R/G/B Looping BNC or 12-pin terminated
 - Y .7143V p-p non-composite or 1V p-p composite (100% white)
 - R-Y .7V p-p (75% saturation)
 - B-Y .7V p-p (75% saturation)
 - or
 - R .7V p-p non-composite or 1V p-p composite (100% white)
 - G .7V p-p non-composite or 1V p-p composite (100% white)
 - B .7V p-p non-composite or 1V p-p composite (100% white)
- Sync: 4V p-p or Blackburst: .3V p-p
- Outputs:** R/G/B or Y/R-Y/B-Y 2 BNC and 1 12-pin of each
 - R .7V p-p non-composite or 1V p-p composite (100% white)

CFD-N

- G .7V p-p non-composite or 1V p-p composite (100% white)
- B .7V p-p non-composite or 1V p-p composite (100% white)
- or
- Y .7143V p-p non-composite or 1V p-p composite (100% white)
- R-Y .7V p-p (75% saturation)
- B-Y .7V p-p (75% saturation)

Video Performance

- Bandwidth: ± .3dB to 8MHz
- T Pulse K Factor: < 1%
- Tilt: < 1%
- Signal-To-Noise Ratio: 60dB
- Matrix Accuracy: ± .1%
- Input to Output Accuracy: ± .2%
- Relative Delay: < 5ns
- Return Loss (Power On): > 50dB

Processing

- Functions: Blanking; Sync insertion; set-up adjustment; Y level adjustment; Output clamping

- CTC-N\$1800.00
- CTC-N With Color Bar Generator2200.00

FTC-N Flesh Tone Corrector

The FTC-N addresses itself to the problem of sensitivity of the NTSC system to phase errors, and to the resulting hue shifts which are particularly visible on skin colors. This device automatically reestablishes proper skin tone in a +/15° or +/30° window without affecting other colors, and therefore eliminates the major effects of chroma path distortion without introducing errors in other areas.

Front panel color balance adjustments as well as screwdriver adjustment of video level, chroma level and hue are provided.

Specifications

- 2T Sine Square Pulse K Factor: 1%
- Frequency Response: ± 0.5dB (0 to 4.2MHz)

FAROUDJA LABORATORIES, INC.

Encoder/Detail Processor

CTE-N NTSC Encoder

The CTE-N pre-filters luminance and chrominance informations prior to mixing, in order to avoid spectral overlap and artifacts. It is the only NTSC encoder which generates an NTSC signal free of cross-color and cross-luminance components. If the signal generated by the CTE-N is decoded through a CFD-N decoder, the result is virtually indistinguishable from R,G,B.

Even if the CTE-N signal is observed on a home receiver, the picture quality will be noticeably improved, as cross-color and cross-luminance artifacts are much lower.

In fact, the quality of Faroudja encoding and decoding processes is such that now NTSC Video Matting is possible, under a form which defies detection and which is indistinguishable from R,G,B matting. As a result, high quality matting from 1" tape sources is now practical. Furthermore, computer graphics can be manipulated or stored under NTSC form and displayed or transmitted without loss of quality.

CTE-N

Specifications

Inputs—Loopthrough (High Impedance) Level

R:	0.7V p-p non-composite
G:	0.7V p-p non-composite
B:	0.7V p-p non-composite

Vertical and Horizontal Detail Processor

The Vertical and Horizontal Detail Processor (VHP), which uses the patented boost principle, improves the visibility of small details whether they are present in the horizontal or vertical direction without enhancing large outlines. This approach presents numerous advantages over the use of a conventional enhancer: the picture is more natural and acquires a certain film-look, and does not show the plastic or "cartoon" effect typical of conventional enhancers or low-cost, limited bandwidth cameras and VTRs.

Available in the PAL/SECAM or NTSC standards, VHP is equipped with detail and video level threshold controls which make its operation virtually noise-free in noisy and dark picture areas. Horizontal and vertical boost levels are separately controllable.

Specifications

Cartridge Machines/Eraser/Splice Detector

**THE DYNAMAX CTR100 SERIES
CARTRIDGE MACHINES**

OPERATIONAL

- CARTSCAN System—automatic activation of Elevated Level, Aux, Mono* and Matrax* modes • All front panel switches illuminated • Fast forward • Vary Speed—motor speed continuously variable from 1.875 to 30 ips from external reference • Cue tone tracking within $\pm 30\%$ of preselected speed • Front panel diagnostics • On-board test oscillator

MECHANICAL

- Playback units—1/3 rack width • Record/Play units—1/2 rack width • 1/2" anodized tool plate deck • Brushless variable speed 3 phase DC servo motor with electrolyzed nonmagnetic stainless steel shaft and permanently lubricated ball bearings, strappable for 3.75, 7.5 and 15 ips • Micro-adjustable tape guides

ELECTRICAL

- Crystal controlled reference for all internal functions • 144kHz bias oscillator • Audio transformerless circuitry • All power supplies regulated • 110/220V 50-60Hz operation

*Stereo machines only

Cartridges/Labels and Tapes

Program Delay Cartridges

Program Delay Cartridges are a sure way to protect your listeners and your station from the airing of undesirable talk show information while retaining a "live" sound. Four long life program delay cartridges are available for use with cartridge tape machines equipped with delay head configurations. These delay cartridges, available in 8 and 10 second versions (at 7 1/2 ips) have precision tape lengths, curved pressure pads and specially lubricated reel hub. The 600 Delay Cartridge contains 3 pressure pads while the 300 contains 2 pressure pads.

Delay Cartridges

- 140-5DL** Model 300, 8 sec., curved pressure pads and special reel lubrication **\$7.35**
- 140-6DL** Model 300, 10 sec., as described above **7.35**
- 149-5DL** Model 600, 8 sec., curved pressure pads and special reel lubrication **.8.75**
- 149-6DL** Model 600, 10 sec., as described above **.8.75**

Cartridge Labels

Available in 6 distinctive colors, these cartridge labels provide an attractive method for identifying prerecorded cartridge tape information. These self-adhesive labels hold securely to the cartridge but remove easily without liquids or chemicals even after a year of use. No unsightly adhesive remains. A typewriter, pen or pencil can be used as the marking instrument. Net weight: 2.6 lbs. per 250 sheets.

*Must be ordered in multiples of 6 (standard package).

WALL-MOUNT OR MOBILE RACKS

Unique versatility has been built into the WR-25 Wall-Mount Cartridge Rack. The modular design of the basic WR-25 is a single 25 cartridge rack that mounts either on a wall (using the mounting bracket included) or as one of eight racks that form the MR-200 Mobile Cartridge Rack. Fully loaded, the WR-25 rack removes easily from the wall bracket and transfers to an MRB-1 carousel rack base. The sturdy MRB-1 supports up to eight wall racks.

TABLE-TOP CARTRIDGE RACKS

Table-Top Cartridge Racks are available in two sizes. Each offers the same versatile features as the mobile rack, MR-200. Each 12-cartridge bank is an integral unit that mounts on a revolving center support.

TR-48

Storage for 48 cartridges. Four separate removable racks store 12 cartridges each. Outside diameter when fully loaded is 15", height is 20". Racks are chrome plated welded steel. Base is black panned steel.

TR-96

Storage for 96 cartridges. Eight separate removable racks store 12 cartridges each. Outside diameter when fully loaded is 20", height is 20". Racks are chrome plated welded steel. Base is black panned steel.

WR-25 Wall Rack — Holds 25	\$32.00
90-3 Extra mounting bracket for WR-2575

FXM-500 Extrol Effects Memory 2,950.00

CVM-1000 Component Video Mixer

• RGB, Y/R-Y/B-Y, YIQ inputs and outputs • Full transcoding at all inputs and outputs • 16 or 24 (optional configuration) inputs plus color background and black level • 2 or 3 M/E configurations available; 3 crosspoint rows per M/E, mix or wipe of background, video key or title key via lever arm or autotransition • Wipe transitions with hard or soft edges; hard or soft border edges; variable softness and width controls; pattern limit wipe; pattern modulation; expanded wipe patterns • Joystick positioner with rate control and centering button • 1 of 3 external title keyer inputs plus key bus inputs; insert video from key bus or title key matte; border, shadow or outline; edge colorizers; independent autotransition • 1 of 2 external video keyer inputs, plus key bus or chroma keyer inputs; insert video from key bus, video key matte, M/E preset bus or external source; key invert function; edge; independent colorizers; independent autotransition • Chroma keyer with component inputs; upto 4 optional units • All controls addressable by optional serial interface • GPI and tally interfaces • Look-ahead preview system

CVM-1000 **POR**

PVM-500 Production Video Mixer

• 4 bus, 6 input plus black and color background • Independent transition rates for Effects, Program, Downstream Keyer and Fade to Black • 3 independent colorizers for Background, Effects Keyer and Downstream Keyer • 22 wipe patterns • Program mix row with auto transition between program and preset buses • Downstream keyer for titling • 6 independently adjustable camera and video source Black Burst reference outputs • 2 Program Line outputs and Preview Monitor output • Edge generator in the DSK • Compact size, easy operation and easy interface with other equipment • Optional CCK-500 Exkey Chroma Keyer, FXM-500 Extrol Effects Memory and Editor Interface

PVM-500 \$8,950.00

CVM-600

CVM-1000

PVM-600

CCK-500

Exkey Component Chroma Keyer 1,000.00

FXM-500

Extrol Effects Memory 2,950.00

PVM-600 Production Video Mixer

• 4 buses—Program, Preset, A and B • 12 inputs for effective editing capability • Internal backcolor and black signal generator for easy title composition • 24 wipes plus hard and soft border with modulation function • 2 program outputs, 2 preview outputs, 2 Mix/Eff outputs for system connection expansion • Auto transitions for effects, program, downstream keyer and fade to black; can be preset from 0 to 999 frames • Colorizing functions for background, border and downstream keyer • 2 key inputs can be colorized • 3 reference black burst outputs • Tally outputs • GPI and serial interface ports for editor interface

PVM-600 \$14,950.00

VRS-2000

VRS-2000/ARS-2000

Video/Audio Routing Switchers

- 8 x 8 crosspoint matrix, expandable to 32 x 32
- Serial and parallel control standard
- Balanced audio inputs and outputs; XLR-3
- Audio-follow-video switching capability—either 2 channel mono or stereo channel audio switching with breakaway
- Vertical interval switching
- 8MHz bandpass + 3dB
- External remote control via RS-232C or parallel interfaces
- Optional RS-2110 control unit

VRS-2000	\$4,650.00
ARS-2000	6,690.00
RS-2110 Control Unit	2,700.00

CCS-4360

CCS-4360 Color Corrector

- Improves inferior sync and burst by consistently inserting new signals at the output when input signal disturbances occur
- Black stretch function enhances detail in low light level scenes
- Vertical blanking can be in 1 H steps within a range of 11 H to 21 H
- Independent R, G and B controls for white, black and gamma
- All operation modes (bypass, operate, off) have equal delay between input and output to eliminate system timing differences
- Differential and balance operation modes
- Rackmountable main frame and remote operation panel; can be used with up to 1,000' of multi-cable

CS-4360	\$6,950.00
-------------------	------------

MF-2000DC

MF-2000 Multiflex Digital Effects System

- Composite and component inputs and outputs
- Accepts asynchronous video input
- Built-in mixing circuit for composite background video output
- Proportional "joystick" motion control
- Variable borders with selectable tracking
- Internal keyer
- Effects/event memory
- Full serial control operation of mainframe
- Compression, wipe, push, freeze, multi-freeze
- Posterization, mosaic
- Frame/field freeze with variable strobe
- Variable internal and external windows
- Adjustable H and V ratios
- A/B input selection
- Removable memory medium
- 5.5MHz bandwidth (approx. 440 line resolution)
- Optional MF-2000DC Dual Unit Controller allows simultaneous effects on 2 channels without video switcher

MF-2000	\$19,500.00
MF-2000DC Dual Unit Controller	4,000.00
MF-2000MU Main Unit (2 required for dual channel operation)	14,625.00

CCS-4400

CCS-4400 Component Color Corrector

- Y/R-Y/B-Y input and output interface with several internal level scaling capabilities
- RGB black and white level control
- Individual gamma correction for RGB
- Overall gamma correction
- NTSC (encoded) monitoring output
- Serial interface control unit; operates with up to 1000' of remote cable
- Color correction function can be inhibited for VITS
- Video and chroma gain and set up controls

CCS-4400	\$7,750.00
--------------------	------------

FOR-A CORP. OF AMERICA

Time Base Correctors/Frame Synchronizer

FA-430

FA-430

Digital Time Base Corrector/Image Processor

- Full feature processing for 3/4" and 1/2" VTR formats
- Includes Time Base Correction, Image Enhancement, Digital Color Correction and Noise Reduction
- System consists of the basic 19" rackmount main control unit and a compact remote controller containing controls for all correction functions
- Incorporates the major design and performance features of the Model FA-410
- Combines both H detail enhancement and selective noise reduction to provide pleasing pictures with appearance of greater bandwidth
- Color correction allows RGB correction to compensate for poorly aligned camera white and black levels as well as for camera-to-camera differences in shooting the same scene
- Special Black Stretch circuit that provides improved contrast in low light level scenes
- Allows directors to "paint" scenes to create special moods by changing overall picture hue
- Time Base Correction capabilities provide professional broadcast level performance
- Composite or non-composite video outputs, built-in sync pulse generator, and composite sync and VTR subcarrier outputs
- Dub-In, Dub-Out mode for editing and duplicating

FA-430 **\$9,950.00**

FA-450

FA-450 Component Time Base Corrector

- Advanced 8-bit digital design providing full-frame TBC performance of the highest quality for PAL or NTSC systems
- Full color frame memory with field/frame picture freeze
- Highly versatile, with input capability for both component (RGB, YUV, Y, C685 (Y, C924) for PAL; RGB, Y, R-Y, B-Y, YIQ and Y, C688 for NTSC) and composite signals
- M-dub and Y/C dub input and output
- DOC
- Compatible with a wide range of existing and future video technology including component VTR, CVM-500 Component Video Mixer, U-matic VTR with dynamic tracking
- Compatible with both low and high band VTR (PAL only)
- M-dub connector for both YIQ and Y, R-Y and B-Y (NTSC only)

FA-450 **\$9,950.00**

FA-440

VEC-440

FA-440 Digital Time Base Corrector with VEC-440 Video Effects Controller

- Adjustable automatic freeze to exclude inferior signals
- Process amp controls (video level, chroma level, chroma phase, black level) easily accessible behind front panel
- Compact, lightweight unit
- Optional freeze remote control
- Multiple digital effects
- Programmable effects routines
- Built-in effects keyer with output key signal
- Full frame time base correction
- Frame memory provides field or frame freeze with adjustable strobe freeze
- Component processing
- Dropout compensator
- Compatible with a wide variety of 1/2" and 3/4" VTRs
- DOC

VEC-440 Video Effects Controller offers a selection of eye-catching special effects to make your video productions really stand out.

- Effects include negative; variable paint effect; variable mosaic; multiple images combining frozen and moving pictures; compression; invert; color background and a memory function that allows you to program up to 9 pages of 127 effects per page.

FA-440/VEC-440 **\$9,450.00**

FA-800 AUTOCOR™ Time Base Corrector/Frame Synchronizer

- Frame memory with automatic level control function which sets input video to the most suitable level
- V blanking line control to designate VITC time code, test, ID and teletext signals
- Automatic freeze function which freezes the last good video frame when the video input is interrupted
- Selectable video freeze or black signal output in automatic freeze mode
- Freeze is automatically released when video signal input starts again
- Selectable frame/field freeze in manual mode
- Top and bottom 4-bit data swap
- Automatic selection of color/black and white mode
- Built-in RS-170A standard sync signal generator with genlock capability
- Adjustable SCH of video output in the internal mode
- Full processing amp facility and optional remote control unit

FA-800 **\$7,450.00**

Note: All For-A products are available in PAL standard. Call for pricing.

FORTEL, INC.

*Time Base/Color Correctors/
Multi-Format Processor*

Y-688³² Total Error Corrector

- 32-line super-wide instantaneous window Phase Comp™ One and two line digital look ahead velocity compensator and phase error corrector
- Complete image processing including horizontal and vertical enhancement and horizontal detail improvement
- Luminance noise reduction through advanced compression and combing techniques to 10dB
- Chroma noise reduction to 10dB
- Chroma crispening
- Gyro-Trac™ automatic window re-centering for extraordinary errors without hue shift or horizontal movement
- Record 1™ pilot tone compatible for automatic setting of image processing controls
- Chroma Amplitude Correction through two line look ahead providing 4.2dB short term and 6dB long term correction
- Accepts shuttle speeds up to ten times normal
- Unitec™ construction features easy access to all components without board or unit removal from operating system
- Front panel image process bypasses control with internal programmable jumpers allowing anything from super transparent time base correction through extensive image reprocessing
- High efficiency, low power, low heat
- Accepts composite or component (Y-688³²) signals and outputs both types
- Adjustable H and V blanking
- Automatic chroma/luminance delay compensation
- Adjustable video position
- Drop-out compensation based upon previous line information
- Single cable genlock sync generator
- Programmable jumpers and mode switches allow tailoring to specific system objectives
- Automatic color or monochrome operation
- Full proc amp
- Chroma combing

Y-688³²

- Use Y-688³² for time base and image correction of U-Matic masters when dubbing to other U-Matics, VHS or Beta formats
- Edit, special effects, or A/B rolls through Y-688³² for third generation tapes that look like master tapes
- Use accessory adaptors or RGB switcher to do complete production in component format for final product approaching full bandwidth format
- Reprocess any color-under signal to reduce luminance noise by 10dB and chroma noise by up to 10dB
- Use in conjunction with Record 1 for completely automatic processing of clean, sharp pictures
- Remove transmission noise and distortions from satellite feeds
- Use with latest scan track U-Matics for broadcast stable pictures in slow motion
- Do field production in U-Matic format and all post production through broadcast or distribution copies for lower program costs
- Use with microprocessor controllers and U-Matics for high quality, economical, automatic program delay or remote broadcast

Total Error Corrector for 3/4" professional series VTRs, featuring: Y-688 (dub) component input and output, NTSC composite input and output, 32-line TBC with DYNA-TRAC™ dynamic tracking and high speed shuttle, image processing with noise reduction, and full proc amp controls.

Y-688³² \$12,695.00

CC-2 Color Corrector

- Provides broadcast quality control of video color in all common component formats
- Component operation is provided for RGB or Y, R-Y, B-Y and M-II formats
- Plug-in PC boards permit easy reconfiguration for either 525 or 625 standards
- Black, white and gray color balance adjustment
- Black and white gamma control
- Standard proc amp controls
- Independent hue, saturation and luma adjustments for each of the six color derivative vectors
- Trackball adjustment for color balance, gamma, and proc amp functions
- Store and recall functions allow the correction feature to be switched in and out for comparison with uncorrected material
- Shaft encoders and trackball can be automatically rezeroed by pushbutton, eliminating manual reset
- Frequency Response: 8MHz ± 0.2dB
- K Factor: 1%

CC-2 Multi Format \$12,490.00

CC-2

SuperPro 200 Multi-Format Video Processor

- For professional video post-production
- Compatible with most 3/4" and 1/2" recording systems
- A transcoder for inter-format editing between NTSC, U-Matic, VHS, S-VHS, and Betacam/MII formats
- Picture enhancement
- Infinite window time base correction
- Frame-store with frame and interpolated-field freeze
- Accepts inputs from U-Matic, VHS, and S-VHS dub sources as well as NTSC composite video
- Dual-channel architecture provides either true 8-bit dub (58dB S/N ratio, 5.5MHz bandwidth) or Heterodyne processing
- Output formats are independent of inputs and include Y/629 dub (VHS/S-VHS), Y/3.58 dub (S-VHS), Y/R-Y/B-Y (Betacam/MII) and NTSC composite video
- Dynamic tracking/shuttle processing
- Proc Amp

Super Pro 200

- Chroma Plus color processing for significant improvement in chroma noise and sharpness
- Bypass
- Adjustable Y/C delay
- Optional remote control
- Free running/genlock synchronization

Super Pro 200 \$8995.00

Refer to Green Section for Addresses and Telephone Numbers.

FORTEL, INC.**Time Base Correctors****DHP 525S Digital Time Base Corrector**

• Infinite window correction range • S-VHS compatible • Frame freeze • Field freeze (interpolated) • Drop-out compensation • High speed shuttle • Horizontal enhancement • Luma noise reduction • NTSC composite in/out • Remote control option • CCIR-601 sampling • Provides digital high performance processing of 1/2" and 3/4" NTSC composite video signals • Compatible with most of the 1/2" and 3/4" VCRs around • 1 3/4" chassis • Front panel accessible PC boards ease troubleshooting and minimize downtime • Power consumption of < 100W

Specifications**Signal Processing**

Sampling: Per CCIR-601, 13.5MHz sampling, 4:1:1
Bandwidth: 2.2MHz (-3dB) composite, 5.5MHz (-3dB) Y/C
Differential Gain: < 1%
Differential Phase: < 1°
K Factor: 5% or less
Horizontal Tilt: 1% or less
Vertical Tilt: 1% or less
S/N Ratio: 57dB
Residual Time Base Error: ± 15nsec luminance
 ± 2° chrominance

Inputs

Y/C: 3.58
Composite Video: 1.0V p-p, ± 3dB, 75 ohms
Composite Genlock Signal: 1.0V p-p, ± 3dB, externally terminated
VTR RF: BNC connector, 75 ohms

**DHP 625****Outputs**

Y/C: 3.58
Video Out 1: 1.0V p-p, 75 ohms, BNC connector
Video Out 2: 1.0V p-p, 75 ohms, BNC connector
Advanced Sync: 1V or 4V p-p, BNC connector, 75 ohms, ± 1.0dB

Dimensions: 1.75" H x 17.125" W x 20.75" D

Operating Voltage: 105 to 125VAC, 60Hz

DHP 525S\$6495.00

DHP 625 Digital Time Base Corrector

Same as DHP 525 except:

- Available in PAL
- EBU sampling rates
- For processing 1/2" and 3/4" PAL composite video signals

Specifications

Same as DHP 525 except:

Sampling: Y 13.5MHz, U 3.375MHz, V 3.375MHz
Bandwidth: 3.25MHz (-3dB)
K Factor: 4% or less
Advanced Sync: 1V or 2.2V p-p, BNC connector, 75 ohms, .3Y p-p

Operating Voltage: 200-260VAC, 50/60Hz

DHP-625\$5995.00

Turbo 2 Time Base Corrector

• Infinite window correction range • Automatic detection of SP, Hi or Lo band dub inputs • Field or frame freeze with interpolation • VTR interface for slow motion operation • Horizontal enhancement • Noise reduction • 5MHz resolution from dub inputs • 1 rack unit high (1 3/4") • Available in NTSC or PAL • EBU sampling rates • Component outputs • Remote control option • Full-featured TBC intended for high-quality processing of video signals in a 3/4" recording environment • Picture quality associated with Y-688 "Dub" processing • Compatible with all 3/4" videocassette recorders • Power consumption of < 100W • Front-panel removeable boards and built-in circuit diagnostic testing speed troubleshooting and minimize downtime

Specifications

Sampling: Y 13.5MHz, U 3.375MHz, V 3.375MHz
Bandwidth: 5.0MHz (-3dB) Dub mode
 3.25MHz (-3dB) Encoded mode

Differential Gain: < 1%
Differential Phase: < 1°
K Factor: 1% or less (Dub mode)
 4% or less (Encoded mode)

Horizontal Tilt: 1% or less

S/N Ratio: 57dB

Residual Time

Base Error: ± 15nsec luminance
 ± 2° chrominance

Inputs

Composite Video: 1.0V p-p ± 3dB, 75 ohms
Composite Genlock Signal: 1.0V p-p ± 3dB, externally terminated
Dub Input: 7-pin connector, automatic SP, Hi or Lo band sensing and switching

**Turbo 2**

VTR RF: BNC connector, 75 ohms
VTR Interface: Sony 18-pin VTR interface connector

Outputs

Video Out 1: 1.0V p-p, 75 ohms, BNC connector
Video Out 2: 1.0V p-p, 75 ohms, BNC connector
Advanced Sync: 1V or 2.2V p-p, BNC connector, 75 ohms, ± 1.0dB

Y Out: 1.0V p-p, 75 ohms, BNC connector, (Betacam compatible)

U Out: 0.7V p-p, 75 ohms, BNC connector

V Out: 0.7V p-p, 75 ohms, BNC connector

Dub Out: 7-pin connector, SP, Hi or Lo band switchable

Operating Voltage: 200-260VAC, 47-63Hz

Turbo 2 NTSC\$7495.00

TBC Control*750.00

Turbo 2 PAL

• Offers broadcast quality processing of 1/2" and 3/4" PAL format signals

Turbo 2 PAL\$8995.00

*The TBC Control can be used to remote front panel functions of the Turbo 2 or DHP 525 TBC.

FOSTEX CORP. OF AMERICA

*Multi-Track Master Recorders/
Accessories*

E-SERIES MULTI-TRACK/MASTER RECORDERS

E-16/E-8 Multitrack Recorders

- E-16 — 16-track/16-channel, E-8 — 8-track/8-channel
- Transports plus record/play logic are totally microprocessor controlled, so these machines can run computer-derived edit decision lists
- Gapless punch-out prevents a blank space from occurring immediately after the punch-out point
- A synchronizer part will interface with all SMPTE based systems
- When an E-Series recorder is used with the Fostex autolocator and MIDI to SMPTE synchronizer, Model 4050, you have automatic programmable punch-in/out, in addition to 100-point auto-locate, 10 programmable edits, SMPTE time code generator/reader (all four formats) — plus the ability to locate in the measure, bar, and beat
- For ease of use with 8 bus mixing consoles, the E-16 has the first 8 inputs normalled to inputs 9-16
- The first 4 inputs of the E-8 are normalled for ease of use with 4 bus output mixers. Unlike other 8-track recorders, you don't have to re-patch to record on tracks 5-8 when using a 4 bus board
- Dolby C™ noise reduction. If you stripe an edge track with SMPTE time code, you have all remaining seven tracks to work with — no need for a guard track. The E-8 uses the same transport as the E-16 and the same R/P cards
- 10 1/2" reel NAB hub

E-16	16-track with Dolby C, direct drive (Avail. 15 or 30 ips speed)	\$7,995.00
E-16M	E-16 with dedicated monitor package, playback amps and headphone mixer	9,995.00
E-8	8-track 1/4" recorder with Dolby C	4,495.00

E-22/E-2 Master Recorders

- Each has a third, center channel for SMPTE control
- E-22 1/2" 2-track has center track SMPTE with SMPTE control, you'll be able to run computer-derived edit decision lists, punch in/out automatically and auto-locate to the bar and beat
- E-2 uses 1/4" tape
- Compatible with professional formats
- Built-in 2-position autolocator can be used to set up a loop or repeat
- Real time counter with search-to-zero even from the negative domain
- Auto stop and auto play from rewind, as well as from fast forward
- Servo control of the reels in the Edit mode lets you find cues and spot erase with pin-point precision
- When the Pitch Control is engaged a flashing warning light is displayed along with the exact percentage of speed deviation
- Time readout changes to read percentage of tape speed when pitch control is touched

E-2	1/4" stereo recorder, 10 1/2" reel with center track SMPTE, 7.5 and 15 ips standard (15/30 ips extra cost).	\$3,750.00
E-22	1/2" stereo recorder, 10 1/2" reel with center track SMPTE, 15/30 ips	3,995.00
E-22/4	E-22 with 1/2" 4-track head. Stereo on TK 1 and 2, time code on TK-4. TK-3 is guard band	4,495.00

NOTE: All E-Series recorders have gapless/seamless punch in and out.

L-8	E-8 logging recorder — 24 hours	\$ 6,850.00
L-16	E-16 logging recorder — 24 hours	11,400.00
	Logging recorders have 3 heads, headphone monitor, tag outputs, end-of-tape warning signal, malfunction warning signal	
5030	-10 to +4 line adaptor (8-channel) XLR and phono595.00

160 Multitracker

• Multiple input/output 4 x 2 x 2 mixer with a 4-track/stereo cassette recorder • 3³/₄ ips tape speed and Dolby C noise reduction • Two mike inputs and four line inputs can be used for simultaneous 4-track recordings • Stereo bus may be used to record four (or more) input signals mixed to mono or stereo • Overdubs and punch-in recordings are easily accomplished, with the monitoring logic • Auxiliary bus has a source/tape button for each track • Dedicated Sync input to track 4 is designed specifically for MIDI applications • Channel insert points allow you to connect signal processors such as limiters and reverbs across the input channels, bypassing the auxiliary summing amplifiers • Dedicated stereo bus with metering • Pitch control • Zero stop • Optional foot switch for remote punch-in/-out • Frequency response: Mixer section 20Hz ~ 20kHz; Recorder section 40Hz ~ 14kHz • S/N: Mixer section mike 75dB weighted, line 82dB Weighted; Recorder section 70dB weighted referenced to 3% THD level

160 Multitracker \$840.00

260 Multitracker

6-Input Mixer with 4-Track Recorder

• Bounce tracks freely with the independent stereo bus • Two additional line inputs • Group multiple inputs on the Stereo Master Bus, or assign a single input channel to a track directly, by-passing the summing amplifiers • Automatic monitor switching • Switchable LED bargraph meters for MONMIX, AUX SEND 1, AUX SEND 2, or the Stereo Master Bus • 3³/₄ ips — twice the normal cassette speed — and Dolby C noise reduction • 4-digit liquid crystal display with 2 position memory • Frequency response: Mixer section 20Hz ~ 20kHz; Recorder section 40Hz ~ 14kHz • S/N: Mixer section mike 65dB weighted, line 80dB weighted; Recorder section 70dB weighted referenced to 3% THD level

260 Multitracker \$1195.00

460 Recorder/Mixer

• 3-band input EQ • SMPTE/EBU sync capability • 8 input channels each with parametric EQ, phantom powering and solo • True 2-speed recorder with independent EQ circuitry for each speed • Dedicated stereo mixer for the 4-channel bus — individual gain and pan plus overall master level • Flexible and convenient interface/patching design • 2 position autolocator • Search to zero • Auto repeat • Monitor select for Aux 1, Aux 2, 2 CH In, stereo master of Tape/Bus 1 ~ 4 • Independent level controls for Monitor/Phones/Solo • Switchable LED bargraph meters with selector switch (Stereo/Tape/Bus) • 4-digit LED display counter with 2-position memory • Easy rolling punch-in recording • Frequency response: Mixer section 20Hz ~ 20kHz; Recorder section 40Hz ~ 18kHz • S/N: Mixer section mike 66dB weighted, line 82dB weighted; Recorder section 70dB weighted referenced to 3.0% THD level

460 Recorder/Mixer \$2495.00

250 AV Mixer

• Standard cassette tape speed (1⁷/₈ ips) • 1V monitor output to drive any programmer • Compatible with both commercial (half-track) and consumer (quarter-track) formats • Functions for both production and presentation modes.

250 AV \$1300.00

460

20 Recorder/Reproducer

• 2-Track/2 channel with center track/recorder/reproducer • 15 and 7¹/₂ ips ± 0.5% tape speed • Standard 7 inch reel—¹/₄" tape width • Transport microprocessor controlled • Center channel control track can be programmed with SMPTE or any sync pulse • Can be used as a master sync controller on stage • Utility recorder/controller

20 \$1550.00

80 Recorder/Reproducer

• 8-Track, 8 channel recorder/reproducer • 15 ips, 0.5% — tape speed • Standard 7 inch reel—¹/₄" tape width • Transport microprocessor controlled • Optional Auto-Locator and Synchronizer available • Records SMPTE time code, drum and other sync pulses • Records live performances on all eight tracks simultaneously • Layer a tape one track at a time, submix and overdub

80 \$2595.00

FOSTEX CORP. OF AMERICA

SMPTE Time Code Equipment

4000 Series SMPTE Time Code Equipment

- Truly contemporary hardware is software based. All 4000 series products are designed for easy upgrades with socketed EPROMs
- Serial data ports for computer interface

The 4000 Series of products allow you to control and synchronize tape recorders with each other, video with audio, synthesizers to tape recorders, video tape to synthesizers, SMPTE to MIDI or any combination of all the above.

4010 Time Code Generator/Reader

- Multi-format: Generates, reads and regenerates all formats of SMPTE/EBU code: 30fps, drop-frame, 29.97 non-drop, 25fps, and 24fps
- Synchronous code
- External Pulse In: accepts virtually any kind of pulse information to generate time code—pilotone, neopilot, synchrotone, 50Hz, 59.94Hz, blackburst (RS-170A), etc.
- Supplies video control track pulses for a video machine when used as a slave to an audio recorder
- Independent generator/reader
- High speed reader accurately reads code from 1/10 to 100 times play speed
- Frame + 1: displays either one frame ahead or the actual current frame
- Electronic event memories
- Generates user bits and hex
- Reads user bits and hex
- True regeneration
- Jam sync/force jam
- Synchronized to color frame
- Includes high speed reader adaptor cable for 4030 synchronizer
- Includes two DIN connectors so you can make up event control cables
- Software upgradable
- Serial data port

4010 \$1295.00

4011 Window Inserter/VITC Interface

- Three input modes for reader: VITC—the reader only reads vertical interval time code, LTC—the reader will only read longitudinal time code, Auto—the reader will automatically search for either code
- Format indicator
- Adjustable window—positions code display on screen for both horizontal and vertical display
- Full display
- Capable of displaying both time code and user bits simultaneously
- Rear panel flexibility

4011 \$1295.00

4030 Synchronizer

- Synchronizes up to 4 machines (one master and three slaves)
- Fast lock-up
- Interfaces to most brands of video and audio tape recorders
- Synchronizes to within 1/100 of a frame
- Easy to update using socketed EPROMs
- Works with 24, 25, 30fps and drop frame
- Immune to static electricity damage
- Serial interface port allows communication with personal computers to help you run edit decision lists (EDLs), or write your own software
- Slave as many transports as you wish, just by adding a 4030 for each slave

4010

4030/4035

- SMPTE programmable record in/out
 - Master waiting in chase mode
 - Slave waiting in chase mode
 - Calculation of offsets from the keypad
 - Store auto record with offset
- 4030 Does not include cables or interfaces \$1500.00

4035 Controller

- Sophisticated remote controller for the 4030
- 10-position autolocate
- Selectable pre-roll up to 99 sec.
- Zone limits, or end-of-tape tags so that you can't run off the reel
- Programmable, automatic punch in/out with rehearse function
- Individual transport control of up to one master and three slaves
- Drives video as master or slave with the appropriate interface
- Locks to film editors using bi-phase sync pulses with the addition of the 8720 interface
- 8710 interface contains software to designate each 4030 as slave 1, 2, or 3

4035 \$500.00

8710 Synchronizer interface unit (used when adding two or more slaves (4030) controlled by 4035). \$500.00

4050 MIDI Synchronizer/Autolocator

- Sync MIDI to SMPTE, the universal timing standard, with built-in SMPTE generator (all formats)
- Automatic punch-in/out with Rehearsal and Take modes
- Complete autolocate for Fostex models 20, 80 and E-Series
- Autolocate to a SMPTE number or to the Bar/Beat
- Up to ten cue points and tie sequences can be stored in the internal memory, which is backed up by battery
- Built-in tempo generator
- Optional serial communication bus allows interface with a personal computer

4050 Does not include cable (8440 for E-Series) \$1300.00

M77RP

M80RP/S

M85RP

M88RP/S

PRINTED RIBBON MICROPHONES

M11RP/S

- Professional unidirectional type designed for announcing and speech
- Wide range of application in broadcasting, recording studios and auditoriums
- The soft and delicate sound quality is a characteristic of the printed ribbon-microphone
- The double suspension method prevents pickup of mechanical noise
- Sound quality switchable in 3 steps (0,1,2)
- Also suitable for percussion and oriental musical instruments

Specifications

Impedance: 600 ohms; Sensitivity: -51dB, 2.8mV/Pa (0dB=1V/Pa); Frequency Response: 40-18,000Hz; Dimensions: 7.1"H x 2.7"W x 2.5"D; Weight: 25.3 oz.

M11RP/S \$595.00

M22RP/S

- Dynamic type M-S system stereo microphone
- Most suitable for outdoor stereo sound pickup for television and radio as it needs no power supply
- Provided with a hand holding grip for outdoor sound pickup. Also has a wind screen
- The double suspension method prevents pickup of mechanical noise
- Most suitable for sports broadcasting, pickup of outdoor natural sounds and auditorium on-the-air monitoring

Specifications

Impedance: 600 ohms; Sensitivity: -51dB, 2.8mV/Pa (0dB=1V/Pa); Frequency Response: 40-13,000Hz; Dimensions: Ø2.8" x 9.8"; Weight: 24.5 oz. (Developed by assistance from NHK Technical Laboratory)

M22RP/S \$1095.00

M55RP

- Professional unidirectional type developed solely for vocal use
- Possesses both the sound quality resembling the ribbon type and the durability of a moving coil type
- Reliability is high and adaptable to announcing use
- Can be mounted on a goose neck

Specifications

Impedance: 250 ohms; Sensitivity: -57dB, 1.4mV/Pa (0dB=1V/Pa); Frequency Response: 70-18,000Hz; Dimensions: Ø2" x 6.7"; Weight: 8.7 oz.

M55RP \$449.00

M77RP

- Professional unidirectional type for pickup of bass and bass drums
- A straightforward sound attained by lowering resonance of the diaphragm and thus response extended to the lower region
- The proper equalizer matching the musical instrument can be selected by a 3 step switch
- Also suitable for strings such as a guitar

Specifications

Impedance: 250 ohms; Sensitivity: -56dB, 1.6mV/Pa (0dB=1V/Pa); Frequency Response: 40-18,000Hz; Switch: 3 step sound selecting; Dimensions: Ø45 x 172mm; Weight: 360g

M77RP \$460.00

M80RP/S

- Bidirectional professional broadcasting specification type for announcing and speech

- Soft and delicate sound having a characteristic of almost identical sound quality between 0° and 180°
- Can be mounted on a goose neck
- Suitable for announcing in school broadcasting and studios

Specifications

Impedance: 60 ohms; Sensitivity: -52dB, 2.5mV/Pa (0dB=1V/Pa); Frequency Response: 50-18,000Hz; Dimensions: 5.4"H x 2"W x 1.9"D; Weight: 9.5 oz.

M80RP/S \$495.00

M85RP

- A professional near field type designed for sound pickup in a strong noise environment and for decreasing cross polarization interference
- Most suitable distance from the sound source is 2-5cm
- Its application is wide such as announcing in a loud noise environment, pickup of back chorus in a large orchestra or very close to a musical instrument, etc.
- Must be careful not to move the sound source as it will change the sound quality
- Can be mounted on a goose neck

Specifications

Impedance: 600 ohms; Sensitivity: -56dB, 1.6mV/Pa (0dB=1V/Pa); Frequency Response: 50-12,000Hz; Dimensions: Ø2" x 6.5"; Weight: 9.8 oz.

M85RP \$395.00

M88RP/S

- A professional bidirectional type for announcing and speech
- A high degree of reliability proven through its widespread use in television and radio broadcasting
- A superior directional pattern with almost identical sound quality between 0° and 180° and very low pickup at 90°
- The delicate and soft sound is most suitable for announcing
- Sound can be selected by a 3 step switch to adjust for distance and voice quality of the announcer
- Also high performance pickup of percussion and oriental music

Specifications

Impedance: 600 ohms; Sensitivity: -52dB, 2.5mV/Pa (0dB=1V/Pa); Frequency Response: 40-18,000Hz; Switch: 3 step sound selecting; Dimensions: 5.4"H x 2"W x 1.9"D; Weight: 11.5 oz. (Developed by assistance from NHK Technical Laboratory)

M88RP/S \$650.00

M51RP

- Studio-quality cardioid vocal microphone rugged enough to take the rigors of the road
- Absolute clarity and lack of distortion
- Smoothness of the response, particularly in the important midrange frequencies, is startling in its transparency

Specifications

Frequency Range: 80-20,000Hz; Output Impedance: 250 ohms; Sensitivity: Open circuit voltage (0dB=1V/Pa) -58dB output level, (0dBm=1mW/Pa) -58dBm; EIA Microphone Rating GM: -149dB; Dimensions: 2" Dia. x 8¾"L; Net Weight: 10.2 oz. (290g)

M51RP \$250.00

- P303 ISO-Mount \$159.00
- P400 Matrix Transformer for M22RP \$299.00

Frezzi On-Board™ Battery Packs
"Superior To Camera-Manufacturer Supplied"
FEATURES: EXTENDED LIFE WITH NO MEMORY

- Battery mounts direct to camera-manufacturer-supplied Anton/Bauer bracket or optional Frezzolini® camera battery mounting bracket.
- No cables or modification required.
- Full 4AH capacity—only premium selected nickel-cadmium cells used.
- Custom-designed mounting brackets available.
- Rugged welded aluminum case.
- Lightweight 2AH models available.
- Internal fuse & thermal protection—internal spare fuse included for field replacement.
- Complete charge compatibility with camera-factory-supplied charge systems, or Frezzolini® fast, overnight or multiple battery chargers available.

Frezzi On-Board™ BP-12 4AH, 12 volt	\$455.00
Frezzi On-Board™ BP-13 4AH, 13.2 volt	475.00
Frezzi On-Board™ BP-14 4AH, 14.4 volt	495.00
Frezzi On-Board™ BP-122 2AH, 12 volt	275.00
Frezzi On-Board™ BP-132 2AH, 13.2 volt	285.00
Frezzi On-Board™ BP-142 2AH, 14.4 volt	295.00

All battery packs have fast charge (1 Hr.) capability.

Frezzi™ Premium-Grade Direct Replacement
for Sony BP-90 Battery Packs
Models: FBP-90 and Fast Charger Model FBP-90 FC

- Full 4AH capacity using premium-grade selected nickel-cadmium cells.
- Rugged & serviceable plastic case.
- Fuse & thermal protection
- Internal spare fuse for field replacement.
- High discharge capability to power 100W lightheads.
- Weight 3.5 lbs.
- Complete charge compatibility with:
 Sony BC-210 charger.
 Frezzi BC-124S overnight charger.
 Frezzi MBC-5 8-battery overnight charger
 Frezzi BC-77UB 1 hr. fast charger w/HV fast-charge adaptor cable.
 Plus other Frezzi fast/slow multi-battery charging stations.

**FREZZI™ SINGLE-BATTERY
UNIVERSAL FAST CHARGERS**

**Model BC-77U/Model BC-77UB
Single-Battery Universal Fast Chargers**

General:

The line of Frezzolini® Universal fast chargers was specifically designed to fast-charge (1 hr.) all models of Frezzolini 12V and 14.4V 2-6AH battery packs. The Frezzi chargers also have the capability to safely fast-charge Anton/Bauer 12V and 14.4V nickel-cadmium on-board battery packs. All chargers are transformer-type line-isolated and designed per European IEC-65 safety code specifications. The chargers are constructed of heavy-gauge aluminum in a compact size to withstand abuse in the field. The universal feature of this charger enables operation anywhere in the world.

Model BC-77U/BC-77UB \$395.00
Model BC-30D (for use with 30V batteries with fast charge capability) 395.00

**FREZZI MULTIPLE BATTERY CHARGING STATIONS
"We custom-design per your specific charging requirements"**

MBC-2 (All Feature Model)

Fast-charges five (5) Frezzolini or Anton/Bauer 12-14.4V nickel-cadmium battery packs in less than one (1) hour while simultaneously charging eight (8) additional Frezzolini, Sony, JVC or Panasonic VTR battery packs overnight. Universal AC inputs. Deluxe shipping case available. Weight: 45 lbs.

MBC-2 \$2400.00

MBC-4

Fast charges (1 hr.) five (5) Frezzolini or Anton/Bauer 12-14.4V nickel-cadmium battery packs while simultaneously charging eight additional Sony BP-90 type battery packs in 14 hours. Universal AC inputs. Deluxe shipping case available. Weight: 45 lbs.

MBC-4 \$2090.00

MBC-4A

Fast charges (5) Frezzolini or Anton/Bauer 12-14.4V battery packs. Weight: 43 lbs.

MBC-4A \$1595.00

**MBC-5, Charges Eight (8)
BP-90 Type Batteries Simultaneously**

- Universal AC inputs
- Compact size
- Line-isolated
- Current-sensing LEDs
- Other models available for all VTR or camera battery packs

Charge eight (8) BP-90-type battery packs simultaneously in 14 hours with MBC-5 Charging Station. Universal AC inputs. Weight: 8 lbs.

MBC-5 \$495.00

OVERNIGHT TRICKLE CHARGERS

- Fully charges battery packs in 14 hours
- Switchable 115-230VAC 50/60Hz input
- Miniature size
- Transformer-type line-isolated
- Current-sensing LED

RPS-2

RPS-3

RPS-40

Frezzi™ Dual Channel AC Adaptor and Fast Charger

The RPS-2 Dual-Channel combination power supply/fast charger consists of two (2) totally independent power sources. Each power source has the capability of either functioning as a precise regulated power supply for ENG Camera/VTR Power or switching over to a nickel-cadmium battery fast charger. Either one or two battery packs are simultaneously fast charged with automatic high-charge termination when the battery packs reach full charge.

Specifications

AC Input: 115/230VAC ± 10% 50/60Hz
Regulated DC Output: 13.25VDC (3.0A max. each channel)
Line Regulation: ± .05% for 10% line charge
Load Regulation: ± .05% for 50% load change
Output Ripple: 5.0mV p-p maximum
Overload Protection: Automatic current limit/foldback
Fast Charge Time: 12.0V battery-75 minutes
 14.4V battery-180 minutes
Size: 8 1/2" x 5" x 5 1/2"
Weight: 8.5 lbs.

Model RPS-2\$895.00

**Frezzi On-Board™ AC Power Supplies
 Models RPS-3 and RPS-40**

Ultra light weight, compact size, mounts directly to ENG/EPF professional TV cameras with on-board battery mounts. Replacing battery with either unit allows for "continuous" operation when 120 or 240VAC 50 to 60Hz is available. Easy voltage selection slide switch on unit. On-off lighted switch. Advanced switching design with full RFI/EMI suppression. Supplied as OEM and replacement equipment to major manufacturers.

PAG-loc BATTERY SYSTEM

The PAG-loc mount is an improved mechanical and electrical camera-to-battery interface system. Once a PAG-loc camera bracket is installed onto a camera, a variety of PAG-loc batteries and battery holders can be attached. PAG MICRO-MASTER charger is outfitted with PAG-loc connector.

- | | | |
|-------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| #9522 | CAMERA BRACKET | PAG-loc Camera Brackets are offered with an assortment of direct camera fittings. Specify camera manufacture and model. Accepts all PAG-loc batteries and clips. Has BP-90 socket to power light |
| #9515 | PAGCLIP 90 | PAG-loc PAGCLIP 90 holds any BP-90 type battery including PAG PP-90 or Master 90 batteries |
| #9516 | PAGCLIP NP-1 | PAG-loc PAGCLIP/NP-1 holds NP-1 battery |
| #9530 | BETA BRACKET | PAG-loc Camera Bracket with special mounting plate for BetaCam VTR/tube camera combination |
| #9531 | BETA/CCD BRACKET | PAG-loc Camera Bracket with special mounting plate for BetaCam/VTR/CCD camera combination |
| #9523 | CARRY BELT | Leather belt with 2 PAG-loc brackets for carrying spare PAG-loc batteries |
| #9320 | PP20 | BATTERIES (with exterior fuses)
13V, 2AH lightweight NiCad battery with PAG-loc mount
<i>Specify black or white</i> |
| #9395 | PP95 | 13V, 4AH NiCad battery with PAG-loc mount |
| #9396 | PP96 | 14V, 4AH NiCad battery with PAG-loc mount |
| #9398 | PP98 | 13V, 4AH SUPER CELL NiCad battery with PAG-loc mount |
| #9399 | PP99 | 14V, 4AH SUPER CELL NiCad battery with PAG-loc mount |

Parts available to convert Anton Bauer batteries and camera brackets to PAG-loc.

PAGPAC BATTERIES

PAGPAC and PAG-loc batteries of high quality NiCad are approved for use in virtually all video equipment. All PAG batteries may be fast charged with any PAG microprocessor charger. Slow charge with appropriate PAG SOLOCHARGER. Use MULTICHARGER with 4AH batteries.

- | | | |
|-------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| #9390 | PP90 | 12V, 4AH approved NiCad replacement for Sony BP-90 battery. Powers VTRs and portable devices. Attach to ENG cameras with PAGCLIP 90 battery holders. Case comes apart for service. Exterior fuse and spare fuse |
| #9391 | MASTER 90 | All new 12V, 4AH BP-90 type NiCad battery. Same as PP90 above but has new high performance cells to extend running time |
| #9360 | PP60 | 12V, 2.5AH NiCad replacement for Sony BP-60 Lead Acid battery. (Can also be charged on Sony charger.) |
| #9387 | PP86A | 13V, 4AH NiCad battery for use on ENG cameras with Anton Bauer/Frezzolini mount |
| #9386 | PP86 | 14V, 4AH NiCad battery similar to PP86A described above. Can be used on same cameras for a longer running time |

MICROPROCESSOR CHARGERS

SPEEDCHARGE 6000

Model #9407

- MICROPROCESSOR CONTROLLED
- FAST AND SLOW CHARGES VARIETY OF NICAD BATTERIES/BELTS (10-15V; 2-12Ah)
- REVITALIZES POOR BATTERIES
- ACTS AS AC POWER SUPPLY
- CONNECTS TO SEQUENCER 6000

"The only battery charging system you need."

Built-in microprocessor selects correct charge for any NiCad battery or belt ranging from 10-15 Volts and 2-12Ah of **any manufacture**. Fast charges 4Ah in 1 hour. Slow charges and revitalizes. Balances batteries. Automatic 110/220V switching. Also is AC power supply (12-14V at 4 amps). Detects faulty batteries. Self diagnostics. XLR-4 pin cable. BP-90 adaptor supplied. Attach SEQUENCER 6000 to accommodate 8 batteries/belts. Variety of SPEEDCHARGES in other ranges available.

#9437 SPEEDCHARGE 6000 for batteries or belts of **12-30 volts** (2-12Ah). Fast charges 4Ah battery in 2 hours.

SEQUENCER 6000

Model #9418

Connect to SPEEDCHARGE 6000 to sequentially fast/slow charge or revitalize any assortment of 8 NiCad batteries or belts (2-12Ah) of **any manufacture**. Status indicators for all eight channels. Eight BP-90 sockets.

MASTERCHARGER

Model #9420

- MICROPROCESSOR CONTROLLED
- ACCEPTS ASSORTMENT OF 4 NICAD BATTERIES/BELTS (12-14V; 1.5-12Ah)
- FAST CHARGES 4 SEQUENTIALLY
- SLOW CHARGES 4 SIMULTANEOUSLY
- ACTS AS AC POWER SUPPLY

Microprocessor controlled 4 channel universal charger. Sequentially fast or simultaneously slow charges any **ENG NiCad** 12-14V/1.5-12Ah, then balances and trickle charges. Also is AC power supply (12-14V at 4 amps). Automatic 110/220V switching with auto circuit breaker. Detects faulty batteries. Self diagnostics. Four BP-90 and four Anton Bauer/Frezzolini type sockets on board.

MICROMASTER

Microprocessor controlled single channel fast charger and balancer. Accepts NiCad ENG batteries of **any manufacture** in 12 to 14 volt range. Automatic 110/220V switching. PAG-Iok connector and BP-90 socket. Charging, ready, and faulty battery indicators. Under 2 lbs.

9526 **MICROMASTER** for 1.5-12Ah batteries (fast charge 4Ah in 1 hour).

9529 **MICROMASTER MOBILE DC** for 1.5-12Ah batteries. Same as #9526 but 12VDC.

10/90 MULTICHARGER

Model #9408

Overnight charges and balances ten PAG PP90, Master 90 or Sony BP-90 equivalent NiCad batteries simultaneously. Ten BP-90 sockets.

Suitable for all 4Ah NiCad batteries or belts in 12-14 volt range.

SOLOCHARGER

Model #9429

Lightweight low cost overnight battery charger **suitable for all 4Ah NiCad 12-14V batteries or belts of any manufacture**. Has BP-90 socket.

(4Ah, 7Ah, and 10Ah versions available in 12-14V or 24-30V models.)

Refer to Green Section for Addresses and Telephone Numbers.

PAGCLIPS

PAGCLIP battery holders easily attach to ENG cameras to hold BP-90 type battery such as PAG PP90 or Master 90. Each clip model outfitted with appropriate electrical camera mating.

- | | |
|---------------------------------------|-------------------------------|
| #9515 Fits Cameras with PAG-lok mount | #9505 Fits Sony M3A/DXC3000 |
| #9464 Fits Hitachi Z-31 or FP-15 | #9547 Fits Sony 330 |
| #9463 Fits Hitachi SK-97 or FP-22 | #9546 Fits Sony Betacam |
| #9459 Fits Sony M3 | #9456 Fits cameras with |
| #9467 Fits JVC cameras | Anton Bauer/Frezzolini mounts |

CAMERA BATTERY PACKAGES

Packages contain: 1 PAGCLIP. Holds BP-90 type battery like PAG PP90.
 2 PAG PP90 (12volt/4Ah) batteries.
 1 PAG SOLOCHARGER for 12-14V/4Ah batteries.

- | | |
|--------------------------------------|-------------------------------|
| #9510 Cameras with PAG-lok mounts | #9506 Sony M3A/DXC3000 camera |
| #9486 Hitachi Z-31 or FP-15 cameras | #9507 Sony 330 camera |
| #9497 Hitachi SK-97 or FP-22 cameras | #9509 Sony Betacam |
| #9498 Sony M3 camera | #9496 Cameras with Anton |
| #9508 JVC cameras | Bauer/Frezzolini mounts |

CHARGER ADAPTORS

- #9458 BP-90 plug to Anton Bauer/Frezzolini type connector (cable)
- #9455 BP-90 plug to XLR-4 male pin (cable)
- #9447 XLR-4 socket to BP-90 socket (box)
- #9468 XLR-4 socket to BP-60 socket (box)
- #9488 BP-90 plug to BP-60 socket (cable)
- #9577 BP-90 to JVC NB-P2U shoe (cable)
- #9576 BP-90 to NP-1 (shoe) cable adaptor

PAG-lok CHARGER ACCESSORIES

- #9514 PAG-lok to BP-90 plug (cable)
- #9518 PAG-lok to Anton Bauer convertor

ACCESSORIES

- #9469 Stacking bracket (stacks SPEEDCHARGE and SEQUENCER)
- #9472 Battery stand (holds four BP-90 type batteries for charging)
- #9500 Shipping case holds SPEEDCHARGE 6000 and SEQUENCER 6000
- #9501 Shipping case holds MASTERCHARGER
- #9502 Soft carrying case for MASTERCHARGER or SPEEDCHARGE or SEQUENCER

LIGHTING ACCESSORIES

For PAGLIGHTS

- #9801 Bulb for PAGLIGHT 100 (100 watts/12 volts)
- #9821 Bulb for PAGLIGHT 250 (250 watts/24 volts)
- #9841 Bulb for PAGLIGHT 250 (250 watts/30volts)
- #9804 Dichroic Filter (for PAGLIGHT 100 or 250)
- #9809 PAGLIGHT 100 or 250 Accessory Kit (4 leaf rotating barndoors, and clear safety glass)

For PAGLIGHT MINI

- #9831 Bulb for PAGLIGHT MINI (75 watts/12 volts)
- #9833 Bulb for PAGLIGHT MINI (100 watts/12 volts)
- #9837 Bulb for PAGLIGHT MINI (100 watts/14 volts)
Use with 13V or 14V batteries.
- #9834 Dichroic Reflector for PAGLIGHT MINI
- #9835 Narrow Beam Reflector for PAGLIGHT MINI

PAGBELTS

World's only ALL LEATHER deep molded belts encasing top quality NiCad cells. With or without 14-hour internal charger (IC). Has XLR-4 socket. Fast charge all 12, 13, and 14 volt PAGBELTS with any PAG microprocessor charger. Slow charge with appropriate PAG SOLOCHARGER.

Indicate 1) Waist Size: Standard 32"-42" or Large 38"-48".
2) Buckle Type: Conventional Buckle or Quick Release.

WITH (IC) Charger	WITHOUT Charger		Description
#9203	#9103	12V/4Ah	Belt (runs 12V/100W light 26 min/use for microwave)
#9253	#9153	12V/7Ah	Belt (runs 12V/100W light 45 min/use for microwave)
#9283	#9123	12V/10Ah	Belt (runs 12V/100W light 65 min/use for microwave)
#9204	#9104	13V/4Ah	Belt (runs 12V/100W light 32 min/use for microwave)

#9208	#9108	24V/4Ah	Belt (runs 12V/250W light 23 min/use for microwave)

PAGBELTS also available in 14, 24, and 30V models (4, 7 & 10Ah).

PAGCLIP 90 BELT

Model #9457

Belt mounted PAGCLIP 90 holder with adjustable quick release nylon belt. Holds PAG PP90, Master 90, or any BP-90 type battery (12V/4Ah). XLR-4 socket output for powering lights, microwave, etc.

PAGLIGHTS and KITS

Lighting/Lighting kits

Developed to support the requirements for cool running portable efficient ENG lighting.

OPERATING TIME FORMULAS

$$\text{Battery Operating Time in Hours} = \frac{\text{Ah of battery/belt}}{\text{Amps consumed}}$$

If watts not amps are known:

$$\frac{\text{watts consumed}}{\text{volts required}} = \text{amps}$$
 Put into the first formula.

H621E

H521E

H621E/H621EB 1" Video Tape

• C and B formats • An increase of +2dB in video and color S/N over previous 1" product (H621) • Minimal dropouts, even after repeated use • Signal deterioration is extremely limited even after repeated use or extended still playback and stand-by • Excellent tape transport, even during special types of playback, such as slow motion • Reduced incidences of print-through, even after long storage periods • Capable of over 2,000 passes • The density of BERIDOX magnetic particles has been significantly increased for a super high density magnetic layer • Smoother base has been developed • Improved backcoating technology • Binder has been improved and made stronger • Available in an optional tough flame-retardant case which protects it against dust, heat and shock during storage and shipping

H521E and H521EBR 3/4" U-Matic Videocassettes

• H521E has an increase of +1.5dB in video and color S/N, and +2.0dB audio S/N over previous 3/4" product (H521) • H521EBR offers a +2.0dB improvement in video, color and audio S/N • Superior backcoating and low electrical resistance of the H521E/EBR tape surface, ensures minimal dropouts even after repeated use • Low electrical resistance helps prevent static electricity buildup • Ideal for field use, the H521EBR features a special anti-static shell which helps reduce dropouts to a typical value of 4 • H521EBR is a broadcast version of the H521E • Improved "U" binder material significantly aids tape transport stability by maintaining the friction factor of the tape at an ideal level • Each H521E tape is packaged in a specially designed, rugged, shock resistant case equipped with a dust-proof seal

The H521E offers reduced print-through. Designed to withstand still playback of over 3 hours, with minimal decrease in RF signal output.

The Beridox particle size has been reduced from 0.35µm, which increases the *S-BET factor from 22m²/gm to 32m²/gm and creates a magnetic layer of much higher density.

Coercivity of the particles used in H521E tapes has also been raised from 620 to 640 Oersted.

Mini cassettes For ENG/EFP use are available in 10- and 20-minute lengths

*S-BET Factor: The value given to the specific surface area per unit of weight. The higher the value, the finer magnetic particles become.

FUJI PHOTO FILM U.S.A., INC.

Videocassettes

H421M/H321B Professional Super HG Videocassettes

- Special anti-static leader and trailer for reduced dropouts
- The H321B has a special anti-static treated shell in addition to "Duro-back" coating and anti-static leader to minimize dropouts
- Excellent video and color S/N performance
- Superb sound reproduction
- H321B has an impact-resistant cassette shell constructed of AB-resin

In response to the introduction of 1/2" ENG and EFP video systems, Fuji offers professional-use 1/2" videocassettes: Super HG H421M (for the M-format) and H321B (for the Betacam format)

M401 MII Videocassettes

- Professional broadcast-quality 1/2" metal tape.
- Super Fine Metallix metal magnetic particles permit ultra high-density recording for superior image quality. The particles are densely and uniformly distributed on the tape using Fuji's exclusive coating process to achieve an intrinsic coercivity 1500 Oe, with maximum retentivity of 2600 gauss
- Strong and thin base — with an ultra-smooth surface
- Magnetic layer, undercoating layer, and special backcoating layer are all applied to the tape base using ultra-thin coating processes. The resulting four-layer tape is only 13.5 microns thick
- Initial dropouts are absolutely minimized. Even after repeated recording, playback, and dubbing, the anti-static backcoating and tough durable binder keep dropouts extremely low
- Cassette shells designed for maximum durability, are constructed of impact-resistant hard resin to help maintain optimum tape tension and transport stability

H321E Professional 1/2" Videocassette

- Designed for Betacam analog component recording
- Specially designed for a low friction coefficient to ensure stable tape transport even after repeated playback
- High video and color S/N (signal-to-noise) ratio, minimal dropouts and exceptional durability
- Suited to all professional ENG and EFP applications
- Interchangeable with the H321B videocassette
- Combined effect of anti-static leader tape and durable binder material ensures a minimum of dropouts
- Shock-resistant ABS resin shell has been redesigned with identification holes to provide complete compatibility with Betacam SP VTRs
- 4-layer tape construction
- Super Fine Beridox magnetic particles
- Duroback coating helps eliminate dropouts by making the tape more durable and reducing the incidence of dust-attracting static electricity
- Available in 5-, 10-, 20-, and 30-minute lengths

H321ETBA

8mm Metal Videocassettes

- Excellent performance indoors and out
- Super fine Metallix particles provide a full four times the magnetic energy of standard tapes
- Static preventing backcoating and self-cleaning binder keep dropouts at a minimum even after repeated recording and playback

VHS SHG Compact Videocassette

The Fuji Compact Videocassette Super HG is one-quarter the size of a standard VHS videocassette. Super HG is designed for an excellent video signal-to-noise ratio for a rich, clear picture and a color signal-to-noise ratio that gives bright, pure colors. A unique dust-guard VE leader tape is intended to minimize dropouts.

TC-20 0.33 hour	\$9.99
-----------------	-------	--------

Super HG Hi-Fi VHS/Beta Video Tape

Specifically designed for optimum performance with the VHS Hi-Fi VCRs. Super smooth magnetic layer with 20% greater packing density than former Super HG. Super Duroback backcoating offers reduced friction, guaranteeing stable tape transport and color reproduction even under extreme environmental conditions. Antistatic leader works with this backcoating to minimize dropouts for clear, crisp sound reproduction. "Blue Shell" cassette and precision mechanism. Video signal-to-noise + 4.0dB; color signal-to-noise + 4.0dB; audio frequency response 20-20,000Hz ± 1.0dB; audio sensitivity + 2.0dB; video RF sensitivity + 2.0dB; dynamic range + 80dB; chroma output + 2.0dB.

H351 L-250 Beta	12.99

Pro-S, S-VHS Video Tape

Beridox particles have been reduced to an ultra-fine grain size and given a coercivity characteristic optimally suited to S-VHS performance.

Using a binder system that excels in uniform dispersion characteristics, the magnetic layer has been formed and coated with an exceptionally high density. As a result the magnetic energy level is 80% higher than that of Super XG Pro and provides high-range output characteristics.

The magnetic layer surface has been thoroughly smoothed through the use of a super calendaring technique. Modulation noise is substantially reduced as a result, and, combined with the tape's high output characteristics, provides a dramatic improvement in the Carrier/Noise ratio.

Video and Computer Degaussers

Garner serves the video and computer industries with a full line of automated video tape erasers engineered for both the speed and effectiveness professionals demand.

- **Depth of Erasure:** Garner's erasure of a heavily saturated, high coercivity tape is the standard of the industry
- **Speed:** Erases high-energy tape completely in 5 to 15 seconds. Other erasers take many times that long
- **Ease of Operation:** Just touch the "on" switch and place the tape on the conveyor. There are no drawers, no spindles and no height adjustments

2400 Continuous Running Degausser

For large volumes of data cartridges, floppy disks, and other magnetic media with coercivity ratings of up to 800 oersteds. Window opening: 10.5" x 1.4" \$9,880.00

2400Z Continuous Running Degausser

For large volumes of data cartridges, floppy disks, and other magnetic media with coercivity ratings of up to 600 oersteds. Window opening: 10.5" x 2.75" \$10,880.00

Audio/Computer Degaussers

Audio tape degaussers can completely erase audio reels, cartridges and computer tapes. Just touch the power button and place any reel, cartridge, cassette or disk on the endless belt. In four seconds it delivers a clean erasure that will meet the most stringent standards, save valuable time and do a better job of erasing. All models available in 220/240VAC/50Hz.

Erasure Level (all models): -80dB nominal.

Method of Operation: Tapes are passed on continuous belt over high flux coils and deposited at the end of the machine.

Thermal Protection: Overheating is prevented by automatic cut-off switch, which reactivates after cool-down period.

Quartz Lamps

Quartz Lamps

A necessity in television and film studios, these tungsten-halogen lamps offer a brighter, whiter light and extended life for the theatrical user. Call us for information about the use and handling of quartz lamps.

Notes:
 1. Standard projectors are compatible with a single line rate. Other input options are available (including multiple line rates), contact General Electric Projection Display Products Operation or your nearest authorized sales agent
 2. Light output given in terms of open gate minimum lumens. Modulated light output is typically 65% of open gate level
 3. NTSC/PAL/SECAM switchable at line rate specified, available as option at additional cost
 4. Accepts wideband monochrome video at line rate specified

*Available at extra cost.

Talaria Multi-Standard Large Screen Video Projector

- All the features of the Talaria professional video projector plus the ability to switch automatically between three preset scan rates
- Uses both standard video inputs and non-standard line rate inputs
- You can use any two input sources between 15kHz and 34kHz in combination with standard NTSC video
- Projects a picture from 4' to 30' wide
- With its interchangeable lenses, you can vary the throw distance anywhere from 12' to over 280'

Model	Light Output	Max. Power	Voltage	Price
PJ5100MS	1000 lumens	900W	115/220	\$ 64,760.00
PJ5150MS	1700 lumens	1100W	115/220	88,850.00
PJ5155MS	2400 lumens	1750W	220	123,970.00

Talaria® Large Screen Video Projectors

- One lens "no convergence" system
- High brightness picture allows use in high ambient light
- Requires no special screen; use of flat matte screen allows viewing by those off the projection axis
- Optional lenses allow variable throw distances from 4' to 175'
- Accommodates diverse inputs: NTSC, PAL/SECAM, RGB and a wide variety of computer interfaces
- User friendly television style controls
- Glass lenses for a sharper image corner to corner
- Selection of front or rear projection at the flip of a switch
- Creates picture size from 4' wide to 24' wide and larger
- Built-in diagnostic and color bar/gray scale generator
- Continuous tilt adjustment of ± 15° pitch
- Compact, and transportable (it only weighs about 145 lbs.)
- Modular construction and smartly-engineered design
- Single optical path light valve
- Accepts a wide variety of input signals: 1/2", 3/4", or 1" video tape, live camera feed, satellite feed, video laser disc, and closed circuit television (CCTV)
- Accepts on-line computer generated graphics
- Aspect ratio (ratio of width to height) is 4 x 3

All projectors include as standard:

- Standard 3:1 (throw distance to picture width) lens
- Instruction manual
- 2 Day Operator and 4 Day Maintenance Training Courses held monthly in Syracuse, NY. Training will be held at customer location at extra cost
- Detachable operator control unit
- Mechanical tilting mechanism

Accessories

Screens, cases, projection stands, raster masks and dowsers available

Talaria Multiple Valve (MLV) Large Screen Video Projector

- Two light valves and two lamps in this one unique projector results in at least 80% more brightness and 50% more contrast than our single light valve projector
- Full color images up to 30' wide
- Two piece aluminum frame for ease of transportation and setup, or you can choose a one piece frame for fixed simulation or command control applications
- All Talaria Projector lenses may be used with the MLV, allowing front or rear screen throw distances of 1.5, 3.0, 4.2, 4.9 and 7 times the width of the screen
- Optional single output lens
- Accepts a number of different input signals, including videotape, live camera feed, satellite feed, video laser disk, closed circuit television (CCTV), and on-line computer-generated graphics
- 525/625 line standard video as well as computer compatible

Model	Input	Description	Price

SPH-3A

SPH-4

SPH-3A PHONE SYSTEM

- Remotable
- Connects directly to the phone line
- Null doesn't change from line to line
- Important adjustments are screwdriver only
- Built-in monitor amplifier

The SPH-3A provides an easy, inexpensive method of interfacing broadcast equipment with an existing telephone system. Unlike a Speaker-phone, the Gentner system permits continuous send and receive audio. In addition, the caller can be monitored with an in-studio speaker without feedback. This eliminates the need for talent or guests to wear headsets. The SPH-3A is easy to use and install.

Specifications

Frequency Response — (Reference 1,000Hz)

Send In to Mix Out — 20Hz to 30kHz within .1dB

Phone In to Caller Out — 330Hz to 3300Hz within 1dB

Send and Receive amplifiers incorporate band-pass filtering to improve nulling and transient suppression. The send filter can be by-passed.

Noise and Distortion — (Reference 0dBm)

Send In to Mix Out — -75dB typical .1% max. .05% typ.

Send In to Phone Line — -90dB typical .1% max. .05% typ.

Phone Line to Caller Out — -65dB typical .5% max. .10% typ.

Inputs and Outputs

Send In — Balanced -20dBm to +20dBm 600 ohms

Caller Out and Mix Out — Balanced 0dBm

(+18dBm max.) 600 ohms

Speaker — 8 ohms 2 watts

Auxiliary In and Out — 10K ohm -20dBm typical

Hybrid

Wheatstone Bridge Method

This method provides a flat, wide band null response that typically does not change from line to line. Null — 20dB typ.

Dimensions — 1-3/4" x 17" x 8"

Weight — 6 lbs. (10 lbs. shipping)

Power Consumption — 7 watts

SPH-3A \$559.00

SPH-4 BROADCAST TELEPHONE SYSTEM

- One-time, one-control null adjustment
- Monitor speaker amplifier
- Automatic speaker dimming
- Continuously programmable "caller control" extends dynamic hybrid performance
- Setup adjustments are screwdriver, front panel adjustments
- Caller beep tells the caller he's on the air
- Connects directly to the telephone line and sent through standard modular jacks
- Totally remotable
- Built-in test generator for simple null adjustments

The SPH-4 is a self-contained telephone interface device designed to provide clean, clear phone audio for a variety of uses. Computer designed equalization before and after the telephone mix assures best hybrid performance and telephone audio quality.

Audio connections are made through rear panel XLRs, while the phone connections use standard telephone modular jacks. The SPH-4 has a built in speaker amplifier so your operators and guests will not have to wear headsets to hear the caller. The unit is relatively load insensitive. Once initial adjustments are made, no further adjustment will be required. The unique "caller control" feature reduces the caller level in relation to the send audio. This reduction is front panel programmable and continuously adjustable. When the "on" switch is depressed, a tone is heard down line alerting the caller that he is on the air. At the same time, timing curcuits are muting all connection clicks and pops, providing the cleanest possible connection to the phone line. Instant muting of the caller can be accomplished for the desired duration.

Specifications

Send Level — -25dBm to +18dBm 20K bridging

Caller & Mix Outputs — 600 ohms balanced 0dBm (+18dBm max.)

Distortion — .01% typical

Frequency Response — Send and receive channels are uniquely equalized. Send In to Mix Out: +/- .2dB 20-20kHz Noise — -70dBm typical

SPH-4 \$799.00

GENTNER ENGINEERING CO., INC.

Pre-Wired Audio Patch Panels

26SR

48DR

96BA

Pre-Wired Audio Patch Panels

Gentner pre-wired patch panels are manually wired using the finest quality parts available. Each panel undergoes an intensive quality control program to ensure reliability and overall quality. All bays are wired with soldered connections using stranded wire which guarantees the bay will withstand many years of flex and vibration. Each cable is numbered and has a 1" section of clear heat shrink at the termination break. Cables are neatly bundled using cable ties and exit the bay on the left side as viewed from the rear. Other bundle sides are available at no extra cost but may result in a longer delivery time. Bundle lengths come standard at 5'; other bundle lengths up to 8' are available at no extra cost but may result in longer delivery time. Bundles in excess of 8' are also available at extra cost. A wide variety of terminations are available.

Model Numbers Are Broken Down As Follows:

- 48DR** = Panel Description — Two Rows of 24 Jacks
- 52DR** = Panel Description — Two Rows of 26 Jacks

- 24SR** = Panel Description — One Row of 24 Jacks
- 26SR** = Panel Description — One Row of 26 Jacks
- 96BA** = Panel Description — Bantam Panel — Two rows of 48 Miniature Jacks
- T-R-S** = Jack Description — TIP-RING-SLEEVE Type Jack
- T-R** = Jack Description — TIP-RING Type Jack (Sometimes Referred to as TIP-SLEEVE Jack)
- BO** = Wiring of Normals Brought Out To Termination
- AB** = Wiring of Normals — Normals Wired at the Bay Using a Short Jumper
- XT** = Christmas Tree Termination
- PU** = Punch Block Termination
- NT** = No Termination — Numbered Cables
- BB** = 24 Terminal Barrier Blocks
- CT** = Custom — Wired To Anything — Customer Supplies the Termination
- FB** = Terminated with Flexiblocks (Stranded Wire Punch Blocks)

Model No.	Price	No. Of Jacks	Wiring Of Normals	Termination

10A 10 x 2 Stereo 20A 20 x 1 Mono Program Switchers

- Passive switching ensures instantaneous noise-free selection of your sources
- Insensitive to power fluctuations
- Completely remotable
- Easy punch down connection to your equipment
- Illuminated LED within the switch uses positive report-back from the switching relays to indicate which source is currently routed to the output
- Type-on, peel-off designation strips provided with switcher
- "Control Enable" switch prevents accidental switching; it must be depressed with source switch to enable the switching process (May be bypassed if desired)
- Depression of a switch with the "Control Enable" switch deselects the source currently selected and routes the desired source to the output
- When "deselect" switch is depressed with the "Control Enable" switch, all sources will be deselected in the switcher
- Connector provides auxiliary control signals and audio outputs (selectable by internal jumpers)
- Signal connector provides source interconnection to the switcher. A 5' cable with mating connector and punch block (or Flexiblock) is available from Gentner Engineering
- Remote connector provides complete remote control and report back status of the switcher. A 5' cable with mating connector and punch block (or Flexiblock) is available as an accessory

Program switchers give you a simple, reliable way to switch sources such as on-air audio—tape machines—computer printers—telephone lines and more. Because these switchers are passive (using sealed, socket mounted magnetic latching

relays), you get instantaneous, noise-free selection of a source and it will stay selected even in voltage fluctuations or total power failure.

The 10 x 2 stereo switcher selects ten stereo channel sources to a stereo channel output; the 20 x 1 mono selects twenty mono channel sources to a mono channel output. Connection to your equipment is accomplished via a provided punch block cable (Flexiblock also available); remote control connections are made via a punch block cable, available as an accessory.

Specifications

Dimensions:	1 $\frac{3}{4}$ " H x 19" W x 9" D
Weight:	8.5 lbs. (12 lbs. shipping)
Power:	120/240VAC 10/5W nominal
Connection to Equipment:	66B350 or Flexiblock punch blocks with interconnecting cable and connector for signal connections (available as accessories)
Front Panel:	10A: 12 switches (momentary) 20A: 22 switches (momentary)
Rear Panel:	50D connectors (signal, male) (remote, female)
Switching Method:	Passive connection using sealed, magnetic latching DPDT relays (IC socket mounted)
Frequency:	DC to 30kHz (within .01dB), DC to 100kHz (within .5dB)
Noise/Separation:	> 90dB
Levels:	Recommended -20dBm to +20dBm
10A 10 x 2	\$939.00
20A 20 x 1 mono	\$959.00

GENTNER ENGINEERING CO., INC.

Telephone Interface System

Microtel Portable Telephone Interface

- Portable, battery-operated telephone interface
- Replaces the handset of the telephone to provide high quality audio for feeding and receiving information
- Provides a high-quality line level output of the send amplifiers for feeding other audio sources such as a broadcast loop
- Input jack is used for mixing another audio source with the receive telephone audio
- Submini jack for an optional wall transformer
- Two 9V batteries and a jack for optional wall adapter
- Female XLR provides connection for your microphone
- Toggle switch turns the unit on
- Jack is provided for feeding another audio source down the phone line
- Connect to the input of your tape recorder to record information from the phone line
- Plug-in for headphones and speaker

Specifications

Connectors: All minijacks except:
 Microphone — XLR
 Handset — Standard handset modular
 External power — Submini jack

Inputs: Nominal levels + impedances

Microphone: -55dBm 150 ohms

Aux In: -10dBm 47K ohms

Aux RCV: -10dBm 47K ohms

Handset RCV: -25dBm 10K ohms balanced

Outputs: Nominal levels, impedances + frequency response

Microtel

Handset Xmit: -15dBm 600 ohms 300Hz -3kHz

Aux Out: -20dBm 600 ohms 20Hz-10kHz

Aux Send: + 4dBm 600 ohms 20Hz-5kHz

Headset: 300mW 20Hz-70kHz

Distortion: < .5%

Power: (1) 9V battery
 Connection provided for internal back-up battery
 Battery life 12 hours nominal (Alkaline)

AC Power: Wall transformer 12VDC submini jack (optional)

Nominal Current Consumption: 33mA at full output
 13mA at idle current

Microtel \$219.00

TC-100/B

TC-100/B Automatic Telephone Interface

- Auto-answer, auto-disconnect capability
- Latching or momentary tape starts
- Direct connection to telephone line
- A-lead control for 1A2 and digital phone systems
- Bi-color LED flashes red on rings and green on answer
- Easy installation and operation
- Manual or automatic operation
- Full duplex (hybrid) capability
- Table, undertable, wall and optional rackmount configurations
- Send and receive controls are front panel adjustable
- Optional Touch-Tone® decoder board with dial tone and busy detection (TC-100/BTT)
- Internal DC bias jumper provides simulated phone line voltage for private line intercom system

Specifications

Input: Barrier balanced 600 ohm .5% distortion, -20dBm to +10dBm adjustable 55dB SNR

Output: Barrier balanced 600 ohm, .5% distortion, 0dBm nominal (adjustable), 55dB SNR

Telephone: RJ-IIC (modular) with A-lead closure

Null: 18dB average

Power: 120VAC wall transformer (240VAC available)

Indicators: "Send" — Bi-Color LED (red-ring, green-answer)

Controls: "Send" receive level, null

Switches: Start (momentary), auto disconnect, ring count, null, coupler

Remote Control: Coupler (momentary or constant ground) Do not answer (constant ground)

Remote Outputs: (Open collectors 100mA) status ring

Remote Starts: Relay contacts (C, NO, NC) (Constant or momentary)

Answer: 60-105VAC 15-70Hz ring voltage nominal

Disconnect: Line reversal

Option Board: Open collectors (100mA) for all touch tones including A, B, C, D BCD Open Collectors for all TTs. Disconnect on Dial-tone and busy signal

Internal Options: DC Bias jumper for simulating a telephone line

TC-100/B \$399.00

TC-100/BTT \$29.00

VRC-1000

VRC-1000 Voice Remote Control

- **Dial-up telephone interconnection.** The VRC-1000 can be controlled from any location with a telephone—your home, a car, a pay phone, the studio, etc.
- **Absolute security.** Multiple-level security codes (user defined) prevent unauthorized command of the VRC-1000.
- **16 Metering Channels.** Each channel has 4-digit presentation, with four user-defined tolerance limits.
- **16 Status Channels**
- **32 Command Outputs.** Outputs can be momentary or electrically latching.
- **“Smart” operation.** The VRC-1000 has the ability to determine an alarm condition and then automatically correct the condition if possible. It can also initiate a telephone call to any of five different telephone numbers to report an alarm (and it will keep calling until it gets an answer from an authorized human). The VRC-1000 will automatically note the time and date of an alarm and report it to you along with the alarm condition (it will also log the alarm and time, if equipped with the internal modem option).
- **Automatic Transmission System (ATS) Capability.** All 32 command outputs can be set to automatically be activated from any of three sources. The four tolerance levels on each metering channel can be set to cause an automatic output such as power control. Changes in status channels can cause a command to be activated. Twenty time of day functions are also possible. In total there are 116 Automatic Command possibilities.
- **Synthesized voice reporting.** The VRC-1000 literally talks to you to report conditions. With nearly 800 “words” in memory, it can be set up (using a simple set-up procedure) to say what you need it to say in reporting conditions at your transmitter.
- **Audio monitoring of transmitter site.** With the VRC-1000’s built-in condenser microphone, you can listen to your transmitter site via your telephone.
- **Video terminal display/printer option.** When appropriately equipped, all status, metering and command functions are displayed on a video terminal or printer. The display keyboard will permit activation of all command functions.
- Can be used with any video display terminal or personal computer.

With the adoption of FCC Docket 84-110, remote control of broadcast transmitters has been freed from the previous cumbersome requirements. Transmitters may now be remotely controlled from any location, using standard dial-up telephone lines.

The VRC-1000 Voice Remote Control operates on the dial-up telephone system to allow you the freedom of remote control from anywhere. You communicate with the VRC-1000 by listening to its synthesized voice and commanding it with a Touch-Tone® (DTMF) key pad or portable automatic dialer.

Serial data output is available as an option.

Specifications

Status Capability:

16 channels, TTL-compatible (+ 5VDC switched by external contact). Each channel has two states (activated and deactivated). Each condition can be set up to be alarmed.

Command Capability:

32 outputs, configured in 16 channels of two commands each, open collector output, rated to 48VDC at 250mA, can be set up to function as internally latching.

Mute Capability:

Any status channel can be assigned to any metering channel to override (defeat) the limit checking and effect associated automatic command capability. A total of 40 such assignments are possible.

Interconnecting Circuit:

Standard toll-grade telephone circuit or dedicated two or four wire interconnection with toll-grade performance characteristics.

Modes of Operation:

Automatic call initiation upon alarm condition presence (status or metering alarm) of up to five telephone numbers (auto dial) and automatic answer of incoming call (auto answer). Optional-subcarrier, dedicated line, or two-way radio interconnect possible.

Audio Monitor:

Built-in microphone, manually initiated, permits audio monitoring of area near the VRC-1000.

Temperature Range:

0° to + 50°C, operational -20° to + 70°C

Power Requirements:

120/240VAC, 50-60Hz, 15W nominal

Input/Output Connectors:

Series D type, 37 pin, male. Mating, female, solder cup supplied.

Dimensions:

1.75”H x 17”W x 10”D, mounting brackets provided to permit mounting in standard 19” rack configurations.

VRC-1000 \$2,995.00

Options

Internal Modem Option for VRC-1000 includes printed circuit board modem and additional firmware stored in memory device for mounting within VRC-1000 chassis. Firmware provides ASCII data output for video display terminal presentation and recording on printing device \$ 995.00

Fail-Safe Unit Option for VRC1000. This 1.75” rackmounting unit provides absolute carrier control of associated transmitters by sensing the presence of program audio at transmitter input. Time-out to activation of this unit; front panel selectable, up to 99 seconds or 99 minutes. 495.00

Battery Pack Option for VRC-1000. This 3.5” rackmounting unit permits operation of VRC-1000 unit, only, for up to eight hours without AC power. Includes self contained AC power supply and a 4’ interconnecting cable 695.00

Video Display Terminal/Printer Option for VRC-1000. Functions with Internal modem option. Consists of one (1) Hewlett-Packard HP700/41 video display terminal and keyboard, one Epson LX-800 Dot Matrix Printer and one (1) Spring Modem 1200 standalone modem. 1100.00

Video Display Terminal-Only Option for VRC-1000. Functions with Internal modem option. Consists of one (1) Hewlett Packard HP700/41 video display terminal and keyboard and one (1) Spring Modem 1200 standalone modem. 825.00

Optional Accessories

Antenna Monitor Interface Option for VRC-1000. Provides for interface of common antenna monitors to VRC-1000. This 1.75” rackmounting unit includes AC power supply and cabling for connection to selected antenna monitor. Advise Antenna Monitor Manufacturer and Model when ordering \$995.00

DC Amplifier Accessory for VRC-1000. Provides DC isolation for metering input sample voltages. Includes AC power supply 350.00

Command Relay Assembly Accessory for VRC-1000. 3.5” rackmounting unit provides sixteen (16) relay outputs for one group of eight command channels. Relays rated to 9A up to 240VAC (non-inductive) or 100VA. Screw barrier strip output. Includes self contained AC power supply and 4’ interconnecting cable. (Longer lengths available on special order) 405.00

Screw Barrier Strip Panel Accessory For VRC-1000. Provides conversion of D connector to screw barrier strip for 16 metering or 10 status, or 8 command channels of VRC-1000. Interface provided with 4’ interconnecting cable. Panel is 3.5”H x 10”W standard rackmounting configuration. 149.00

Flexiblock Interface Accessory for VRC-1000. Provides conversion of D connector to Flexiblock interface (allowing use of stranded wire) for 16 metering, status, or 8 command channels of VRC-1000. Interface provided with 4’ cable (longer lengths available on special order). Panel is 3.5”H x 19”W standard rackmounting configuration. 149.00

Punch Tool, model D 1714, impact tool for Siemens punch block, above 54.95

Punch Block Interface Accessory for VRC-1000. Provides conversion of D connector to Siemens style punch block interface for 16 metering, 16 status or 8 command channels of VRC-1000. Interface provided with 4’ cable (longer lengths available on special order). Panel is 3.5”H x 19”W standard rackmounting configuration. 149.00

Temperature Sensor Probe/Supply Accessory for VRC-1000. Provides the sensing of air temperature. Includes power supply to support 4’ probes, and one probe. Probes to provide output in Celsius available on special order. 135.00

Additional Temperature Sensor Probe for use with above 35.00

Portable Automatic Dialer Buscom #213 Ponatouch, with interconnecting cable to external speaker 139.00

Automatic Telephone Dialer Panasonic model KX-11236. 159.95

- 599 86 Gitfix Ball 6 attachments 499.95
- 599 8C6 Gitfix Ball 6/Cremaillere gearlift attachment 749.95

Monocolumns with Accessory Tray:

- Diameter 4", for Cameras to 100 Lbs., Charcoal Finish**
- 615 Monocolumn w/Cremaillere gearlift, diameter 1 1/2", 35"-54" \$1499.00
- 615 8F Monocolumn Ball 6F 1839.00
- 615 8F-680 Same w/680 fluid head 4229.00

Attachments for Cameras

- 568 Car and all purpose attachment \$179.95
- 520 Wall support 15", turnable 129.95
- 521 Same, extensible 24"-40", not turnable 229.95
- 522 Same as 520, but stronger 19", not turnable 99.95
- 5228 Same as 522, adjustable 139.95
- 523 PM Simple tilt head, 2 small platforms 39.95
- 523 MM Simple tilt head, 1 small-1 large platform 49.95
- 523 GM Simple tilt head, 2 large platforms 49.95
- F88 Accessory triangle bag, attaches to all tripods 69.95
- 582 Accessory tray, for Super Pro Tele Studex, monocolumn 79.95

Twin Heads, Bracket

- 584 Twin heads, for 2 cameras of up to 5 lbs. \$59.95
- 539A Twin (triple) bracket, for 2 (or 3) heavier cameras of up to 25 lbs. 79.95
- 5398 Same, center mounted 99.95

Dollies, Collapsible with 3/8" Screw-in Center (Specify Tripod)

- 390 W/1 1/2" wheels, adjustable leather shoes, rubber foot \$219.95
- 391 W/3" wheels, adjustable metal shoes 299.95
- 392 W/5" wheels, adjustable metal shoes 399.95
- 491 W/3" wheels, metal shoes, stirrups (specify tripod for adaptors) 399.95
- 492 W/5" wheels, metal shoes, stirrups (specify tripod for adaptors) 499.95
- 590 Same, heavier duty, not collapsible (specify tripod for adaptors) 699.95
- 591 Same, with traveling fixings (specify tripod for adaptors) 899.95
- 593 Same, collapsible (specify tripod for adaptors) 799.95
- 594 Same, with traveling fixings (specify tripod for adaptors) 999.95
- 498 Tripod adaptors for dollies with metal shoes, stirrups (specify tripod) set of 3 29.95

GKC RESEARCH & DEVELOPMENT

Mixers/Amplifiers

UMC-4 Universal Micro Mixer

(Compatible with all ENG recorders)

- All integrated circuits, wide flat frequency response
- 4 low impedance balanced microphone inputs female XLR-3 connectors
- Line input (RCA phone jack)
- Output: Switchable male XLR-3 connector, balanced line level or mike level
- Clipper limiter circuitry (defeatable)
- Built-in tone oscillator
- Monitor headphone 1/4" jack
- Standard 3/4" VU meter
- Derives power from enclosed standard 9V alkaline battery
- External power input jack for battery or well filtered DC supply up to 12V
- All connectors are American standard
- Diecast aluminum body with black-texture finish
- Dimensions: 4 3/4" H x 5 1/4" W x 2 3/8" D
- Weight: 1 3/4 lbs.

UMC-4 \$550.00

UMC-4

M-3 2-Channel Mini Mike Mixer

- Integrated circuit construction
- 2 low impedance female XLR-3 mike inputs
- 1 mike level output
- Powered by enclosed 9V alkaline battery
- Diecast aluminum body with black-texture finish
- Dimensions: 4 1/4" H x 2 1/4" W x 1 1/4" D

A microphone mixer booster designed for the one man operation, compatible with all Mini-Cam recorders.

M-3 \$250.00

M-3

DA-5

DA-5 Distribution Amplifier

- One 2K ohms balanced line input female XLR-3 connector
- Input level control
- Five 600 ohms balanced line outputs male XLR-3 connectors
- Derives power from enclosed standard 9V alkaline battery
- External power input jack for DC supply up to 12V
- Diecast aluminum body with black-texture finish
- Dimensions: 5 1/4" H x 3 1/4" W x 1 1/2" D

All integrated circuit, compact, lightweight, and versatile. It is used for audio distribution or as a headphone monitor amplifier.

DA-5 \$250.00

100 Mike-Line Amplifier

- Low impedance mike input female XLR
- 600 ohms balanced line output male XLR
- Line level output "adjustable" 0dB to +8dB
- Power requirement: 9V battery
- Dimensions: 4 1/4" H x 2 1/4" W x 1 1/4" D

All integrated circuits, low noise, wide flat frequency response. It is widely used in the broadcast industry. An internal helipot is provided to adjust amplifier level output. It comes with belt clip and battery.

100 \$125.00

100

150 Mike-Line Amplifier

- Low impedance mike input female XLR
- 600 ohms balanced line output male XLR
- Line level output adjustable 0dB to +8dB
- 600 ohms headphone monitor output (Tini jack)
- Clipper limiter (defeatable)
- Power requirement: 9V battery
- Dimensions: 4 1/4" H x 2 1/4" W x 1 1/4" D

This amplifier is designed for the broadcast engineer who desires quality, versatility and reliability. Ideal for use with long cables from mike to mixer, from mike to telephone line or from mike to microwave system. It features a built-in clipper limiter circuitry, also a headphone monitor output. Comes with belt clip and battery.

150 \$175.00

150

GKC RESEARCH & DEVELOPMENT

Amplifiers/Speakers

300 Microphone Booster Amplifier

- Low impedance mike input female XLR-3 connector
- 600 ohms balanced line output (binding posts)
- Power requirement: 9V battery
- Dimensions: 4 1/4" H x 1 1/2" W x 1 1/4" D

Extremely compact, integrated circuit construction, primarily designed for telephone program feeding. It also has many other uses in the broadcast industry. It comes with belt clip and battery.

300 \$89.50

400 Dual Impedance Monitor Amplifier

- Balanced input 2K ohms female XLR-3 connector
- Switchable output 8 ohms or 600 ohms, two phone jacks 1/4" and Tini
- Powered by 9V battery
- Dimensions: 4 1/4" H x 2 1/4" W x 1 1/4" D

All integrated circuit amplifier, designed for the broadcast industry, features the dual impedance switchable output. It comes with belt clip and battery.

400 \$125.00

500 Monitor Amplifier

- Input 1K ohms
- Output 8 ohms
- Powered by 9V battery
- Dimensions: 4 1/4" H x 2 1/4" W x 1 1/4" D

A high quality all integrated circuit amplifier, widely used by broadcast engineers on remotes and motion picture sound men on location. It features two output phone jacks and a belt clip for the convenience of the operator. Battery included.

500 \$89.95

600 Monitor Amplifier

- Balanced input 2K ohms female XLR-3 connector
- Output 8 ohms, two phone jacks 1/4" and Tini
- Power output switchable from 250mW to 500mW
- Powered by 9V battery
- Dimensions: 4 1/4" H x 2 1/4" W x 1 1/4" D

High fidelity all integrated circuitry, widely used by broadcast engineers as IFB amplifier and by sound men in the ENG and motion picture fields. It features the switchable dual power output, and comes with belt clip and battery.

600 \$125.00

700 Monitor Amplifier Speaker

- Input 1K ohms
- Output impedance 8 ohms
- Dimensions: 4 1/4" H x 2 1/4" W x 1 1/4" D

All integrated circuit amplifier, primarily designed for ENG applications and it has many other uses in the industry. It can be used as a speaker amplifier, speaker headphone amplifier, as a headphone monitor amplifier. It comes with a belt clip and 9V battery.

700 \$125.00

800 Monitor Amplifier Speaker

- Balanced input 2K ohms female XLR-3 connector
- Power output switchable from 250mW to 1/2W
- Output impedance 8 ohms
- Dimensions: 5 1/2" H x 7 1/2" W x 2 1/4" D

High fidelity all integrated circuit amplifier, designed for the demanding engineer who requires quality, ruggedness and portability. It features a 4" speaker, powered by 9V battery or external power supply up to 12VDC.

800 \$200.00

900 Monitor Amplifier Speaker

- Balanced input 2K ohms female XLR-3 connector
- Power output switchable from 250mW to 1/2W
- Output impedance 8 ohms, two phone jacks 1/4" and Tini
- Dimensions: 5 1/4" H x 3 1/4" W x 1 1/2" D

A quality, compact amplifier features 3" speaker, powered by 9V battery or external power supply up to 12VDC. It can be used as a speaker amplifier, speaker headphone amplifier or as a headphone monitor amplifier.

GKC RESEARCH & DEVELOPMENT

Microphones/Amplifiers

200 Phantom Powered Pre Amp

The entire amplifier is constructed inside the Switchcraft connector. By inserting it into any professional microphone whether of the dynamic or the condenser type having a 200 ohms impedance and a sensitivity of 100µV, and connecting the other side of cable with the alligator clips to the telephone transmitter contacts, it directly replaces the carbon microphone.

200\$89.50

200

250

250 Phantom Powered Pre Amp

• Dimensions: 2 1/4" H x 1 3/8" W x 1 1/8" D

This compact, versatile, all integrated circuit unit is designed for the radio and television news reporter who requires feeding a combination of live reporting and a cassette recording through telephone lines.

250\$89.50

M-15

M-15 Electret Condenser Shotgun Microphone

- Frequency Response: 50Hz-15,000Hz
- Output: Balanced, XLR-3 type connector
- Maximum Sound Pressure Level: 115dB
- Power Supply: 1.5V AA battery
- Sensitivity: -45dB
- Output Impedance: 250 ohms
- Directivity: Super-Directional
- Battery Life: 3000 hours
- Dimensions: 15" L and 3/4" dia.

It comes in a case with battery, mike holder, wind screen and 20' 2 conductor shielded rubber cable with XLR-3 type connector.

M-15\$179.50

AC-60

AC-60 Universal Digital Crystal Sync

• Dimensions: 4 1/2" H x 2 1/4" W x 1 1/4" D. Weighs 8 ozs.

It provides 1V 60 cycle sync signal. Compatible with all Nagras, Stelavox, Tandberg, and Uher recorders, also can be used with Multi Channel recorders. Derives power from enclosed 9V battery, barely consumes 5mA including the LED indicator. Comes with battery.

AC-60\$175.00

F-5

F-5 Mini Mike Fishpole

This fishpole is specially designed for newswork. Constructed for durability and toughness, it is also lightweight and versatile, making it easy to handle and carry. The three heavy-duty aluminum tubes are telescopic and collapsible, 4' in length when extended and 20" when collapsed. It comes with a miniature two conductor shielded flex rubber cable.

F-5\$79.50

2

2 Collapsible Microphone Stand

A unique design for a mike stand, it is lightweight and sturdy, quickly and easily set up. It is a 4" long cylinder 7/8" in diameter. To use simply pull and spread the hinged legs stored inside the cylinder. It accepts standard mike-holders with 5/8" x 27" threads.

2\$19.50

Mike/Light Brackets for the ENG Mini-Cameras

(Fig. T, U, W, X, Y, Z)

Heavy-duty, lightweight aluminum construction. All brackets feature a shock mount microphone stud assembly and 1/2" diameter light post. Accommodates the Mini-Pro and other portable lights. Can be installed in a matter of seconds and easily removed for storing camera in fitted case.

UNV-50 Light Bracket

(Fig. S)

A 1/2" diameter lightpost with 1/4" x 20" threads screw and a pin type ratchet in the center for easy installation.

X-Calibre Digital Video System

• Dual channel, multiple input DVE that, in a complete package, combines two full time base correcting frame store synchronizers with comb line NTSC decoders, full digital signal processing and a sophisticated mixer • Includes a brilliant zoom and trajectory capability, with further zoom variations combining slide, flip, tumble and spin • Other effects include vertical inversion, variable axis compression, segmented reveals and conceals between channels, variable borders and full re-entrant capability • State-of-the-art technology • Designed for compatibility with future hardware developments • Consists of three sections: Digital Effects Controller, Mainframe Unit and Zoom Processor • Digital Effects Controller is designed for desk-mounting and can be used alongside an edit controller or as a complete effects vision-mixer • Digital Effects Controller and Mainframe Unit are connected by a single cable RS-422 interface and can be located up to 1000 meters from each other • Mainframe contains one Frame Store Synchronizer, the interface logic to the Zoom Processor and houses the Digital Control Electronics, the Central Microprocessor and the Sync Pulse Generator • Zoom Processor Unit houses the second frame store, digital adaptive spatial filter and microprocessor control system • 3-axis joystick • A/B transitions may be performed automatically at a pre-programmed rate from 1 to 99 frames. Alternatively, the effect may be controlled manually with the 'T'-bar quadrant fader, which offers the unique feature of user-programmable damping • Full Edit Memory enables any combination of button push effects and joystick T-bar picture movements to be stored

X-Calibre

Proteus Digital Effects Controller

• Dual channel multiple input, digital effects unit incorporating full time base correction, plus two full frame stores • State-of-the-art software and hardware • Designed to work with standard NTSC video inputs or any heterodyne VTR—both studio machines and portables • Comprises two sections: the Digital Effects Controller and the Mainframe Unit • Digital Effects Controller is a 7-unit panel designed to be desk-mounted either alongside an edit controller or as a comprehensive stand-alone effects vision mixer. It is connected to the Mainframe via a single cable RS-422 interface, enabling the units to be separated by a distance of up to 3000' • Full Edit Memory stores any combination of button push effects and joystick/'T'-bar picture movements • Mainframe Unit contains two full Frame Store Synchronizers each with a universal Time Base Corrector front end, and houses the Digital Control Electronics together with the Central Microprocessor and is responsible for actioning all commands received from the Effects Controller • Mainframe Unit also houses the Sync Pulse Generator which conforms to RS-170A and SMPTE four field specification for subcarrier to H phase timing with a field one ident pulse

X-Calibre Mainframe, Zoom Unit, Effects Controller, inter-connection and power cables, instruction manual **\$32,500.00**
 Proteus Mainframe, Effects Controller, inter-connection and power cables, instruction manual **22,900.00**

Options and Accessories

Component output in place of dual output **NC**
 3 1/2" floppy disc storage system for X-Calibre **\$1,125.00**
 Sony BVU® 18-pin connector to 5-pin connector Dynamic Tracking® interface cable **125.00**
 Beta Component input cable: 12-pin connector to 6-pin DIN connector **125.00**
 Beta Component output cable: three BNC connectors to one 12-pin connector **250.00**
 Service Manual, Proteus or X-Calibre **150.00**

System-DVP Digital Video Processor

• TBC and frame store synchronizer system • Expandable, each stage having a progressively larger repertoire • Starts with a single channel TBC which is capable of a number of digital effects including solarize, posterize, fully variable borders, false colors and one channel picture moves. This can be upgraded to a dual channel system providing reveals, conceals, push-offs, fades and a range of wipe transitions, all to frame accuracy • Dual TBC system can later be extended to a dual frame store unit which increases the effects range even further to include vertical transition, mosaics, freeze and strobe • Same mainframe housing is common to all four units and upgrading is easily and speedily effected • Mainframe incorporates a GPI for edit controller interface and is packaged in a 3U rackmountable chassis • Removable filter panel at the front of the system gives access to the processing amps controls • Operated from a compact control panel with illuminated switches and LED display connected to the main signal processing unit via a 6'6" cable

System-DVP

Basic Configurations

Single Channel TBC with controller **\$7,800.00**
 Single Channel TBC/Framestore with controller **8,730.00**
 Dual Channel TBCs with controller **9,600.00**
 Dual Channel TBC/Framestores with controller **11,575.00**

Upgrades

TBC to 2 Channel TBC **\$2,300.00**
 TBC/Framestore to 2 Channel TBC/Framestores **3,450.00**
 TBC to TBC/Framestore—with the return of an undamaged TBC board **1,300.00**

*Director's Viewfinder/
Mic Booms*

Director's Viewfinder

The Mark IV 10:1 Zoom Director's Viewfinder is a precision optical instrument that has been designed specifically for the purpose of aiding filmmakers in the composition of 16mm or 35mm motion pictures. Although not an image recording device, like the prime or zoom lens for a camera, the Mark IV Director's Viewfinder has been constructed with great care to provide the ultimate in quality operation. Computer design, optical quality glass, precision machined parts and SMPTE-format aspect ratios provide the user of the Mark IV with the most advanced viewfinder available to the professional motion picture-maker. It is an indispensable tool for directors, directors of photography, camera operators and anyone involved in the creative composition of a scene for motion picture filmmaking. It can be used when scouting locations, for staging or camera blocking or during actual filming.

Director's Viewfinder \$550.00

Sonic 312 Mic Boom

Lightweight, black anodized aluminum in three sections with durable high-grade locking collars. Silent twist-lock collars allow quick and easy extension or retraction of the boom.

Universal microphone mounting stud: reversible 5/16" or 3/8" with 5/8" adaptor and leather security washer with lockdown nuts. All American and European microphone mounts are easily attached and the non-slip design safeguards your microphone investment.

Reinforced nylon cable grommet at the boom base. The open grommet construction permits ease of microphone cable feeding when extending or retracting the pole.

Foam comfort, noise dampening hand grips and protective rear end cap provide the finishing touch to this fine piece of sound equipment.

Sonic 312 \$185.00

Accessories:

A hard shell shipping tube, manufactured of high impact plastic, is available as an optional accessory . . . **\$75.00**

Gordon Fishpole Microphone Boom Holder

Converts a medium or heavy-duty lightstand into a mic boom stand by securing the supplied knuckle joint to the top of the stand. Works with the Sonic 312 Microphone Boom or any standard mic boom. **\$85.00**

Director's Viewfinder

Mic Boom

Microphone Boom Holder

Sonic 312 Field Repair Kit

- 2 Neutrik audio connectors (1 male, 1 female)
- 2 noise dampening hand grips
- 1 universal mounting stud with accessories
- 1 cable strain relief
- 1 lockdown assembly
- Repair instructions

312 Repair Kit \$30.00

Sonic 307 7' Mic Boom

- Lightweight, black anodized aluminum
- Universal microphone mounting stud and cable strain relief
- Foam wrapped core surrounds Canare "Star Quad" cable
- Neutrik black chrome XLR connectors with gold plated contacts
- Silent twist lock collars

307 \$185.00

ALAN GORDON ENTERPRISES, INC.

Scene Slates

Scene Slates

V0400 Large Velcro Scene Slate: Forget cleaning or constantly writing numbers and letters on tape. Use the handy velcro numbers and letters for marking. Numbers sets store on back. White on black; 12" x 11"; velcro covered masonite; pine clapper. Also has provision for holding color control or gray scale chart. \$90.00

V0402 A.G.E. Economy Slate: More than just economical, this popular slate features a "T" bar holder on the back for ease in handling, 12 1/4" x 9 3/4". Blackboard finish masonite with pine clapper. You use chalk for marking . . . \$35.00

V0403 The Combo Slate: "Black on white" acrylic slate, 12" x 9 1/2" x 3/16" thick white acrylic. Pine clapper for that unmistakable "Wooden Resonance." Mark with a china pencil or water soluble marker \$40.00

V0404 Thrifty Slate: White or yellow on black background, this sturdy masonite 11" x 9 1/4" pine clapper slate can take heavy use. Chalk is preferred for marking.

V0404 W (White on black) \$30.00
V0404 Y (Yellow on black) 30.00

V0405 Hollywood Slate: The perfect small professional slate for those tight shots in tight spots (even the "talent" can handle this one): cars, closets, corners, cribs, anywhere space is at a premium. 8" x 7 1/4" white on black masonite with pine clapper. Use chalk for easy erase \$20.00

V0406 Insert Slate: The baby of the family, this little (5" x 4") white acrylic slate conveniently fits in your back pocket. Without clapper. China pencil wipes away clean in a flash \$7.00

V4013 "Lite-Wate" Slate Kit: Expo dry marker wipes easily from the 11" x 9 1/4" white Marlite surface with black lettering and pine clapper. One black Expo marker included \$35.00

V0412 Oak Clapper Slate: Our designer series, natural finish solid oak clapper and your choice of: white on black epoxy laminate or black on white acrylic. 11" x 8 3/4", and you use chalk on black background, china pencil or water soluble marker on white acrylic. It's a natural.

V0412 W (White on black) \$45.00
V0412 B (Black on white) 45.00

V0400

V0402

V0409

V0410

V0408 Think Big Slate: Especially for the "Big Shot" in your company. Almost twice the regular size, this one is guaranteed to attract attention. 22" x 15" and made tough, just like the Economy Slate (less "T" bar handle). Fully functional pine clapper and white on black washable background. The big fella takes chalk to mark. \$85.00

V0407 Invitation Slate: This mini-slate is only 5" x 4 1/2" but looks like the real thing. Functioning wood clapper with sturdy white on black showcard. Use chalk to write your own get well card, place setting, gift card or invitation \$5.00

V0410 Slate Clock: A novelty professional scene slate. Hour, minute and second hand tells the exact time, a real unusual showpiece for office or home. Battery powered clock is positioned in center of slate. 11 3/4" x 10 1/4" \$40.00

V0411 Mirror Slate Clock: A very unique gift item. A must for every film executive's office or home. The accurate battery powered clock has hour, minute and second hands and runs 6 months or more on one AA battery. White silk screening on mirror surface, 11 3/4" x 10 1/4" with pine clapper. \$45.00

V0409 Mirror Slate: A real novelty. Great as a gift to your friends in the industry. White silk screening on mirror surface; 11 3/4" x 10 1/4"; with pine clapper; use china pencil for marking. Ready for wall mounting \$30.00

GORMAN-REDLICH MFG. CO.

Broadcast Equipment

CM

CM Antenna Monitor

- True Ratio readout. Non-reference and reference amplitudes are separately measured and divided electronically to give a digital readout that will not change with transmitter power and is exceptionally stable under conditions of unsymmetric modulation. Stability of readout makes readings easy to take and accurate
- Exceptionally stable phase indication with automatic display of phase sign
- Either true ratio or relative amplitude may be selected for measurement with a front panel switch
- Designed for reliability and maintainability. MIL spec. PC boards with through hole plating. Gold plated switch and relay contacts. Tower Select switch contacts of coined silver. All ICs and relays socketed. Minimum one week burn-in to expose early IC failure. Relays tested 10⁷ operations without failing
- Dual surge protection. A gas discharge tube across each sample line termination protects against lightning surges. In addition, a disconnect sample lines from the electronics when readings are not required
- Level meter simplifies installation
- Accurate. Typically exceeds FCC Specs by substantial margins

CM \$1590.00

CRW

CRW Weather Radio

- .28μV sensitivity for clear, reliable reception
- Crystal and ceramic IF filters, dual gate MOSFET front end for excellent interference rejection
- Rackmounting, removable. Attractive black anodized panel
- Relay closure by 1050Hz "alert" tone for automated recording of emergency messages
- Relay closure by 1650Hz, tone signal for automated recording of updated forecasts
- 1050Hz "alert" tone demutes receiver, gates audio to rear terminals, and energizes a flashing LED for local and/or remote alarm
- Built-in whip antenna, plus jack for 50 ohm outdoor antenna and terminals for 300 ohm antenna
- False alarms and missed alerts eliminated by high Q, individually tuned active filters, and a circuit that requires at least four seconds of continuous tone signal to trigger
- Mil Spec P.C. Board, socketed ICs, conservative component ratings for long maintenance-free performance

CRW \$475.00

CEB

EBS Equipment

The CE or the encoder portion of the CEB generate the 853 and 960Hz tones that make up the attention signal of the EBS system. A "loop through" relay substitutes the attention signal tones for program audio when the encoder is activated. Activation is for a period of 20 to 25 seconds, and can be initiated either by a front panel switch or remotely.

The CD or the decoder section of the CEB works in conjunction with a radio receiver tuned to the station being monitored. Any stable receiver will work satisfactorily, and connection of the CEB or CD is very simple. When an EBS attention signal is received, the receiver will be demuted and will remain demuted until a reset button is pushed. Auxiliary alarm terminals are provided.

- CEB Encoder-Decoder \$475.00
 - CEB Encoder only \$330.00
 - CE Encoder with Stereo Option. \$360.00
 - CD Decoder (required for LPTV) \$280.00
 - Encoder FCC Type Accepted
 - Decoder FCC Certified
 - Exceeds FCC Specifications
 - Receiver can be supplied to drive Decoder \$100.00
- All interconnections to the EBS equipment are made through a barrier terminal block. No special connectors are necessary.

CMR

CMR Antenna Monitor

- True ratio reading. Non-Reference and Reference amplitudes are separately measured and divided electronically to give an accurate digital reading (and an equally accurate DC voltage for remote readings) that will not vary with carrier level, and is exceptionally stable under conditions of deep, unsymmetric modulation
- Stable, accurate phase reading with automatic phase sign
- Amplitude or true ratio may be selected for measurement with a front panel switch. Optional common point terminal for measuring common point amplitude
- Designed for reliability and maintainability. MIL Spec. PC boards with plated through holes. Gold plated switch and relay contacts. Relays have been tested to 10⁷ operations without failing. All ICs and relays are socketed. Each unit is burned in at least one week to expose early IC failure
- Dual Surge Protection. Gas discharge tubes across the sample line terminations, plus a relay that drops out when the monitor is not being interrogated and disconnects the sample lines from the electronics, protect against lightning induced sample line surges
- Level meter simplifies installation
- Accurate. Typically exceeds FCC specs by substantial margins
- Narrow phase-sign ambiguity (typically, ±0.2°) gives accurate phase readings near zero or 180°

CMR \$2150.00

CMR-1

CMR-1 Remote Indicator

The CMR-1 may be used for hardwire remote control and remote reading of the CMR Antenna Monitor. The two units are connected by a multiconductor cable up to 1500' long. Because the readings of the CMR-1 will exactly duplicate those of the CMR, weekly remote metering calibration is not necessary. A Local-Remote switch on the CMR front panel transfers control to the CMR-1 when it is set to Remote; when it is set to Local, control reverts to the CMR.

CMR-1 \$430.00

THE GRASS VALLEY GROUP, INC.

Production Switchers

Model 100 Production Switcher

Unique Three Bus Multi-Level Mix/Effects System

- Eight looping video inputs, plus black and color background
- DSK Preview, overrides look-ahead preview system
- Cut or mix key transitions with independent frame rate auto transition

Master Fade-to-Black and Pulse Processor

- Independent frame rate auto transition for Fade-to-Black
- Preview system that shows program output when Fade-to-Black is engaged
- Pulse Processor re-inserts blanking from black burst on program output for stable output and recordings
- Standard contact closure editor interface (GPI) to each of the three auto transitions or a fourth "select" line which allows selection of any one
- Program and Preset buses for background transitions
- Video key bus for luminance keying, chroma keying, and pattern inserts, over the background transition
- Look-Ahead Preview System that shows the next effect; Wipe transition preview
- Auto transition, adjustable 0-999 frame, lever arm transition or cut button
- Ten wipe patterns, with modifiers: Hard or soft edges, Hard or soft bordered edges, Pattern reverse, Pattern aspect, Rate controlled positioner, Preset pattern size
- Independent Matte Generator for key fill and pattern borders

Video Keyer

- Video or Matte fill
- External key input
- Optional RGB chroma keyer
- Key invert
- Key mask using pattern generator
- Preset Pattern insert filled from key bus

Standard Downstream Keyer

- Key input from the video key bus or an external key input
- Key fill from an external video source or the independent DSK matte generator
- BORDERLINE® Generator option for black or white title borders, drop shadows, or matte filled outline
- Key invert
- Key mask using pattern generator
- Optional serial interface (RS 232/422) for external computer control
- Optional pulse regenerator for system timing

Mechanical Specifications

- Control panel can sit on desktop (17"W x 14"D), or with rackmount adaptor, can be placed in modular rack enclosures (requires eight rack units)
 - Electronics frame requires three rack units and 20" depth
 - Single 15 conductor control cable
 - Full tally system
 - Selectable power ranges from 100 to 240V, 50 or 60Hz
- 100N NTSC Production Switcher. \$10,495.00

Options

- 100-30S 30M Control Cable \$ 300.00
- 100-33 RGB Chroma Keyer 850.00
- 100-34 Chroma Key By-Pass Board 54.00
- 100-40 NTSC Digital BORDERLINE Generator 1,500.00
- 100-41 NTSC Pulse Regenerator 1,000.00
- 100-50 Serial Interface Adaptor 1,500.00

100CV Component Video Production Switcher

The 100CV is a compact, flexible, economical component switching system with the traditional family characteristics of its older brother; quality, performance, economy and a comfortable drive. Designed for professional component video production, the 100CV has all the qualities expected by the most sophisticated user.

Model 100

The 100CV features non-looping video inputs, 8 in all, and 3 sets of BNC connectors for every input. Utilizing the same control panel as the 100 Production Switchers, the 100CV Component Video Production Switcher has updated electronics that incorporates as standard equipment many of the features offered as options on the 100.

The electronics frame of the 100CV requires 6 rack units and 20" depth.

- 100CV-525B 100CV Basic System for 525 Line System — Beta Format. \$18,950.00
- 100CV-525M 100CV Basic System for 525 Line System — "M" Format 18,950.00
- 100CV-3-525B 525/Beta Format — Frame and Maintenance Manual Only 15,950.00
- 100CV-3-525M 525/"M" Format - Frame and Maintenance Only 15,950.00

Options

- 100CV-40 525 System - Digital BORDERLINE Generator \$1,500.00
- 100-51 Key MEM Effects Memory System 3,195.00
- AMX-100M Audio Mixer System (Mono) 5,495.00
- AMX-100S Audio Mixer System (Stereo) 6,695.00
- 50CV Component Video Dissolver 5,000.00
- CV-21 Y, R-Y, B-Y to RGB Translator (for use in CV-20T Tray) 995.00
- CV-22 RGB to Y, R-Y, B-Y Translator (for use in CV-20T Tray) 995.00
- CV-23 Color Bar Generator (for use in CV-20T Tray) 1,195.00
- CV-24N NTSC Decoder (for use in CV-20T Tray). 1,500.00
- CV-25N NTSC Encoder (for use in CV-20T Tray) 1,500.00
- CV-20T CV-20 Series 2 RU Tray with Power Supply 895.00
- CV-20PS Backup Power Supply for CV-20T 245.00
- CV-20EXT Module Extender. 110.00

THE GRASS VALLEY GROUP, INC.*Production Switcher***Model 200 Production Switcher**

- Linear keying
- Optional Linear Borderline® Key Edger provides a variety of modes including multiple-line drop shadow, border, outline, and transparent shadows
- Pre-set wipe
- Optional multi-format chroma keyer for up to eight sources. You can use an RGB signal from a camera or color difference signal from a Beta or MII component tape source
- Luminance key
- "Over" Function Switch-layer keyer priority in each mix effect
- Auto select mode
- Accumulative latch for fill and key signals
- Six assignable external key source inputs/mix effect
- Four external key fills/mix effect
- Standard Key Masking. You can create realistic key effects with the dedicated shutter (box) mask, external key mask or either ME wipe output in any keyer—including the downstream keyer. To optimize key appearance, the mask system also features invert and forced foreground modes
- Key Memory. Key selection recalls clip, hue and gain
- Horizontal and Vertical Multipliers. Multiply a basic pattern from one to four times on the horizontal or vertical axis
- Border, soft and border symmetry modes
- Rate controlled positioner
- Normal, reverse, and flip-flop wipe direction modes
- Four Learn User Wipe Registers. Saves wipe pattern and all modifiers, so you can recreate the setup at the push of a button

Matrix Wipe Patterns

- 32 Programmed Wipe Patterns. Six patterns are available through dedicated buttons, and 26 through user personality assignment
- 64 x 48 Pattern. You can fill the screen with over 3,000 tiles
- Pattern Mix Mode. Modulates any analog wipe pattern with the selected matrix pattern for an endless variety of effects

With 20 primary inputs and two mix effects, the 200 gives you more keying power than has ever been offered in a mid-sized production switcher.

For starters, the 200 gives you the creative freedom of five powerful keyers, two in each ME and one downstream. You can use either ME as a background for the downstream keyer, which also includes a fade-to-black and an output blanking processor.

The 200 gives you one matte generator for each keyer, one for each wipe system, and two background generators—for a total of nine—in addition to the color-black generator.

And for even more creative versatility, the background generators provide background wash.

The 200 standard effects memory system gives you the freedom to program effects with standard registers and quickly recall them on any switcher level.

**Model 200**

When you need to move fast, you'll appreciate the 200's easy-to-use features, including look-ahead preview, preset black mix and auto delegation. Plus display windows for mounting Horizon multi-destination routing displays.

300-3AN

300 Series Production Switching System

- Unlimited re-entry of effects
- E-MEM® effects memory system on each Mix/Effects (M/E) with Effects Dissolve and sequencing
- Four input buses per M/E
- Independent title mix/cut per M/E
- Lever and title auto transitions
- Multi-source title keys
- Automatic key follow
- Chroma key memory per input
- Quad split from each M/E
- Personality Programming
- Omni-Key™ system—Linear Key Mode/Key Memory/Key Invert/External Key*

The 300 Series Production Switching System has been developed to meet the demanding requirements of both live broadcast production, and complex program and commercial production in the studio or edit suite. It is the first production system designed specifically to integrate Digital Video Effects and E-MEM effects memory control. Careful attention to the human engineering of panel controls and computer assisted operation provide unmatched production power and ease of operation.

The fully integrated E-MEM system, standard in each mix/effects system, can learn up to 20 different M/E configurations (all switches and controls). Each E-MEM effects system is independent allowing for selective recalls during live programming. E-MEM's unique "Effects Dissolve" capability allows any combination of analog controls to be treated as a transitional device for unique transitions and effects previously impossible under manual control. Sequencing allows a series of changes in control set up and effects dissolves to be linked together for animated effects and complex productions. The E-MEM effects systems can be linked with control of the other switcher functions (Flip-Flop mix, DSK, Background, Quad Split) and the KALEIDOSCOPE digital effects system by the Master E-MEM effects memory option. This distributed E-MEM system allows frame accurate control of individual elements of very complex effects frequently used in post-production.

* Available as standard on all 300 series switcher systems beginning May, 1985. Omni-Kit available to upgrade 300 series systems to include Omni-Key™ enhancements.

Four input buses per M/E handle most common effects sequences without re-entry. Transitions from one background to another, the addition of a video key (chroma key, DVE key, self key or matte key), a title key or any combination of the above, can be accomplished with one lever movement on a single M/E. Title hierarchy is selectable over or under the video key for full flexibility. Four input buses also permit a quad split output from each M/E. Thus dissolves or wipes are now possible between quad split from different M/Es.

An automatic preview function displays the exact results of the next lever movement (including all re-entries) in the Preview monitor.

Lever and title auto transitions with independent rate programming, are provided on each M/E. Titles can be added or deleted in combination with background or video key transitions or independently from title mix (auto transition) or title cut buttons.

The preset black function permits a transition to black (mix or wipe) between the on air effect and the previewed effect. The first lever movement is a transition to black (the crosspoint is automatically selected), and the second lever movement is a transition to the previewed effect.

High performance chroma keyers ignore luminance highlights in non-key areas, due to an exclusive Luminance Annihilator circuit. Encoded chroma key with shadow can be added to each M/E. For each primary input the appropriate chroma keyer (RGB or Encoded) and last key set up is memorized for automatic recall if selected.

A program/preset mixer with downstream keyer feeds the Program output of the switcher. It operates just like an M/E, with the exception of wipes, non-additive mixes, and video keys. Downstream keyer functions are accomplished in the same manner as title keys in an M/E with the same sources available.

300-2AN 24 input 2 M/E switcher, NTSC	\$113,540.00
300-2BN 16 input 2 M/E switcher, NTSC	109,840.00
300-3AN 24 input 3 M/E switcher, NTSC	161,235.00
300-3BN 16 input 3 M/E switcher, NTSC	153,215.00
300-530 E-Disk™ II + Effects storage system with dual 3.5" floppy disk drives	5,500.00

THE GRASS VALLEY GROUP, INC.

Production Switchers

1680 SERIES PRODUCTION SWITCHERS

With the 1680 there is another level of possibilities available to operators worldwide. With the same familiar drive of the 1600, there is more power, more control than ever before. Whether live broadcast or post production, the 1680 provides double the production power from each mix/effects system. Plus the 1680 has the ability to interface with peripheral devices integral to modern production. So your potential to create brilliant special effects explodes.

The evolution from the 1600 has brought other standard features to the 1680—expanding your ability to create visual messages. Non-Additive Mix greatly improves how supers look on the screen. Soft Bordered Wipes allow control of border width and degree of softness. And the Downstream Keyer is standard in every 1680. The Standard Title Keyers, Non-Additive Mix, Soft Bordered Wipes, and Downstream Keyer all add up to the production power needed to meet today's heavy demands.

E-MEM® System

Although standard on the 1680-10X, the E-MEM System is an option on all other 1680 switcher models. The system provides effects memory for all switcher functions, plus the sequences created with the Post Production System. The system allows individual elements of complex effects to be adjusted and previewed separately, giving you precise control and effect repeatability.

Serial Interface Adaptor

The serial interface adaptor expands the switcher/editor interface beyond the edit decision list to total switcher control. It is the central hub that allows the switcher to connect all peripheral devices, such as the E-DISK™ Effects Storage System, post production audio, your computer editing system, and many other external production tools.

Post Production Audio

This integrates the control of audio sources with your system by placing your audio sources under computer editor control.

E-DISK Effects Storage System

With the E-Disk floppy disk system, favorite effects can be stored permanently for future use. This allows effects to be created off-line then used in live programs with perfect repetition. The E-Disk System is particularly useful in fast-paced formatted programs, where visually exciting effects are consistently repeated.

Peripheral Interface

The Peripheral Interface expands production capabilities by allowing your computer editor to control other intelligent devices, such as Digital Video Effects or character generators.

Preliminary Specifications

INPUT CHARACTERISTICS

Video Input Level:	1V p-p composite or .714V noncomposite.
Pulse Input Level:	4V p-p ±6dB.
Subcarrier:	2V p-p ±6dB.
Input Hum Attenuation:	≥26dB (reference; 1V p-p hum).
Maximum Input Hum Level:	1.5V p-p.

OUTPUT CHARACTERISTICS

Level:	1V p-p composite (nominal).
Available:	Three; 75Ω ±1%, source terminated.
DC on Output:	±50 mV blanking to ground.

MIX/EFFECTS CHARACTERISTICS (each M/E)

Mix Tracking:	≤1% gain error. ≤10mV p-p DC error.
Chrominance Linearity	
During Mix:	≤1.5% amplitude error. ≤2° p-p phase error.

VIDEO SYSTEM CHARACTERISTICS

Short Time	
Waveform Distortion:	≤1% unweighted.
Line Time	
Waveform Distortion:	≤0.5%.
Field Time	
Waveform Distortion:	≤0.5%.
Frequency Response	
(reference; 1 MHz):	300kHz to 5MHz: ±0.2dB. 5MHz to 8MHz: +0.2dB to -0.7dB. 8MHz to 20MHz: 0dB maximum.
Differential Phase:	≤1.5° (10-90% APL).
Differential Gain	≤1.5% (10-90% APL).
K Factor:	0.5% (2 T Pulse).
Chrominance/Luminance	
Inequalities:	≤ 10ns delay. ≤0.2dB gain.
Crosstalk:	≥52dB at 3.58MHz; 50dB at 4.43MHz.
Signal-to-Noise Ratio:	≥65dB p-p signal/RMS noise to 5MHz.
Path Length Deviation:	≤1.5°.
Gain Stability:	≤1%.
Gain Uniformity:	≥0.1dB.
DC Stability:	≤30mV.

POWER

Input Power:	95-125 or 190-125 VAC, 48-62Hz.
Power Consumption:	450VA approx. (1680-24K/16K). 275VA approx. (1680-10X). 225VA approx. (1680-16F/24F). 200VA approx. (1680-10V).

1680-10VN	1680-10VN Production Switching System	\$26,970.00
1680-10XN	1680-10XN Production Switching System	43,265.00
1680-16FN	1680-16FN Production Switching System	59,385.00
1680-16KN	1680-16KN Production Switching System	85,350.00
1680-24FN	1680-24FN Production Switching System	65,505.00
1680-24KN	1680-24KN Production Switching System	91,770.00

Options

1680-013	Control panel power cable 10V/10X (50m)	\$ 440.00
1680-019	Control panel power cable 16/24F and 16/24K (50m)	910.00
1680-096	Remote panel for E-Disk	225.00
1680-401	RGB Chroma Keyer for 10V/10X	1,700.00
1680-402	RGB chroma keyer for 16F/24F—16K/24K	1,790.00
1680-405	Chroma key switcher for 10V/10X	830.00
1680-407	Encoded chroma keyer for 16F/24F—16K/24K	3,070.00
1680-408	Encoded chroma keyer for 10V/10X	2,650.00
1680-492	E-MEM panel tub for 16K/24K	1,265.00
1680-493	E-MEM panel tub for 16F/24F	1,265.00
1680-494	E-MEM III Serial I/F for 10X	1,440.00
1680-495	E-MEM III Serial I/F for 10V/16F/24F	1,440.00
1680-496	E-MEM III Serial I/F for 16K/24K	1,440.00
1680-497	E-Disk	7,190.00
1680-510	Analog Borderline for M/E 1	4,785.00
1680-511	Analog Borderline for M/E 2	4,785.00
1680-512	Analog Borderline for M/E 3	4,785.00
1680-513	Analog Borderline for DSK	4,785.00
1680-515	Parallel Edit I/F (video and audio) for 10V	7,635.00
1680-516	Parallel Edit I/F (video and audio) for 10X	7,635.00
1680-517	Parallel edit I/F (video and audio) for F and K's	7,635.00
1680-518	Quad split for 16F/24F—16K/24K	1,970.00
1680-520	Dual Power Supply for 10V/10X	2,620.00
1680-527	Aux Bus for 16F	2,455.00
1680-528	Aux Bus for 24F	3,055.00

THE GRASS VALLEY GROUP, INC.

Digital Picture Processor

DPP-1 Kadenza™ Digital Picture Processor

- The first multi-level, real time digital compositing system designed for post production
- Uncompromised picture quality
- Allows simultaneous control of 5 digital effects or switcher channels
- Kaleidoscope™ digital effects system channel utilizes full variety of effects
- Switcher channel features standard external and internal keyers, background "wash," and Borderline® edge generator
- Mask Bus switcher channel architecture enhances production power
- Accepts inputs in digital component, analog component, and analog composite formats
- Modular design concept permits versatile system configurations

The DPP-1 provides multi-level compositing in real time, with superb image quality and powerful technical innovations which give you the freedom to create true virtuosity in post production.

DPP-1 video processing is performed by any combination of Kaleidoscope channels and switcher channels, each representing one "layer" of the final composite. Any combination of five switcher and Kaleidoscope channels may be controlled at any one time. These resources may be shared between Kadenza systems and normal Kaleidoscope control positions in digital or analog edit suites and studios.

The control panel provides full functionality in a compact and easy to use format. The controller provides the intelligence and memory for the system, along with source selection control and editor interface.

Kaleidoscope and switcher channels each feature a full bandwidth key channel which is processed along with the video and provides image outline and transparency information to the combiner system.

The combiner system assembles the composite image using the key, depth, and priority information from each layer.

The combiner system also assembles a composite key signal which can be used to matte the video composite into a background with an external keyer, typically found in a disk system. In addition, both video and key composites can be recorded and used in a subsequent layering pass.

The DPP-1 accepts a variety of inputs from sources including RGB camera outputs, C-format tapes, and 1/2" analog components tapes. Maximum possible image quality can be achieved from digital component, analog component, and analog composite formats. The system provides outputs in all three formats.

The DPP-1 is a specialized post production processor. There is no true "program" bus. And because all available processing power can be used in any composite, there is no look-ahead preview facility.

Each DPP-1 channel is a separate "layer" of the composite picture. Any one layer may obscure images "behind" it or be obscured by images "in front" of it. Any full screen image will therefore cover all lower layers. An image with soft edges or transparency will only partially obscure layers behind it.

Transitions such as mix and wipe are performed on a channel-by-channel basis. A layer is mixed off or on by making it more or less transparent. Similarly, the wipe signal is used to reveal more or less of a given video layer. The menu structure of the control panel permits full access to the capabilities of the Kaleidoscope and switcher channels.

Independent source selection rows with 16 buttons per row are provided for each layer. Each row features a shift key for access to another 16 selections. Flexible crosspoint mapping allows the user to group commonly used inputs at the unshifted control level.

A transition panel provides access to mix and wipe functions for any layer or layers. Independent selections can be made for different layers and transitions can be performed simultaneously.

Specifications**Video Inputs:**

Number of inputs is determined by video source selectors fitted 32

**Maximum No. of Inputs:
Input Formats Supported:**

NTSC or PAL; RGB (requires sync on Green); YUV SMPTE levels; YUV BETACAM® levels; CCIR 601/656 digital

Key Inputs:

Number of inputs is determined by video source selectors fitted 32

**Maximum No. of Inputs:
Input Formats Supported:**

Analog, with or without NTSC setup; CCIR 601/656 digital (UV information ignored)

Reference Input:

NTSC, PAL color black (or composite video), sync

Video Outputs:

NTSC or PAL; analog component RGB or YUV; CCIR 601/656 digital

Key Outputs:

Analog 0.7/0.714V, non-composite CCIR 601/656 digital (No UV information)

Key Output Timing:

Analog $\pm 1 \mu\text{sec.}$ wrt video output (user adjustable); Digital: synchronous with output video

DPP-1N NTSC \$185,000.00
DPP-1P PAL 175,000.00

THE GRASS VALLEY GROUP, INC.**Video Tape Editing Systems****Systems 31/41m/51Em Video Tape Editing Systems****Modular**

Each editing system, while uniquely designed for specific applications, permits "personal tailoring" to satisfy individual editing needs.

Expandable

As your demands increase for additional editing features and equipment, GVG editing systems expand to accommodate your growth by adding hardware or software modules.

Flexible

GVG Editing systems have the industry's most flexible interfacing capabilities. Examples include RS-422 and RS-232 VTR Control as well as the ability to control a wide variety of switchers and other equipment.

Help File

Sometimes an editor needs a quick solution to a complex editing request. Help File with sub-categories insures easy access to definitive help — help you will remember and repeatedly use.

System 31

- DEC 11/23 CPU • 64K bytes of memory • Dual 0.5M byte floppy disk drives • Distributed processing control • 8 control ports for VTRs and switchers • 4 accessory ports • Sync interface • 132 column printer • DEC RT/11 operating system • Exclusive super edit • Assignable VTRs, video, audio • Video, dual audio editing • Edit list display, input-output • Multiple edit list disk files • Auto-track dissolve setup, anywhere in edit list • Match any edit, both sides of dissolves • Unique-timed action modes — XGPI, expanded switcher control, log in edit list • Full preview, edit functions • Sequential, checkerboard, and cue-ahead auto-assembly • Real-time edit mode • Replay any edits, with auto-scroll • Six-character alphanumeric reel ID • Multiple-record, synchronous replay • Help file • Event numbers to 999 • Notes in the edit list, with individual add, delete • User-bit time reference • Powerful edit list management, with/without ripple insert, delete groups, recall, replace, move groups, shift groups

The System 31 is an editing system of unusual functional dimension. With eight I/O ports, and exceptional features such as Super-Slave and Cue Ahead, the System 31 provides exceptional performance at an outstanding performance/cost ratio.

System 41m

- Faster DEC 11/23 CPU • 64K bytes of memory • Dual 0.5M byte floppy disk drives • Distributed processing control • 8 control ports for VTRs and switchers • 4 accessory ports • Color-lock sync interface • 132 column printer • Jogger motion control • DEC RT/11 operating system • Exclusive super edit • Assignable VTRs, video, audio • Video, dual audio editing • Edit list display, input-output • 10 macro functions, with nesting • Multiple edit list disk files • Powerful edit list management, with/without ripple insert, delete groups, recall, replace, move groups, shift groups • Single-Keystroke dissolve • Auto-track dissolve setup, anywhere in edit list • Three freeze modes • Help file • Match any edit, both sides of dissolves • Auto-clean removes overlaps • Full preview, edit functions • Match to freeze, variable-speed • Replay any edits, with auto-scroll • Six-character alphanumeric reel ID • VTR speedometer • Event numbers to 999 • Notes in the edit list, with individual add, delete • Unique timed-action modes — XGPI, expanded switcher control, log in edit list • Fill mode computes VTR speed • User-bit time reference • Real-time edit mode • Multiple-record, synchronous replay • Super-slave — Slave 1 to 6 VTRs, easy slave setup, positive offset lock, easy offset change, slaves in edit list • Precise programmed motion control • Sequential, checkerboard, and cue-ahead auto-assembly

The System 41m has a faster CPU than System 31. It also has features which make variable-speed VTR control and editing precise and easy. System 41m software and hardware features permit full exploration of the professional's creativity.

System 51Em

- V3.0 Super Edit™ Software • 32 contact XGPI • 409™ list clean-up software • Trace™ software for film style rough cuts mode • Comprehensive diagnostics package

**System 51Em****System Capabilities**

- "Effects-Jog" ability to move KALEIDOSCOPE™ Effects through key-frame sequences by utilizing the "Jogger" motion controller • Preview preselect, using the TEN-XL®, true record re-assign (audio and video paths follow the control path) and preview is possible • Start up menu is easy to use, yet provides rapid access to editing programs, EDLs, diagnostic programs, and utility files • Enhanced diagnostics package provides for ease in installation and self-check trouble shooting • Effects Memories are written to EDL Disk and restored to 300 and 100 Switchers • Film mode capability in 24 and 30 film frames/SEC and NTSC and PAL tape frames • Over 200 software improvements including: auto-match, assemble edit, "slaves" stored and recalled • 4 level highlighted display format, improves clarity and operational ease • High speed list display and scroll capability

Interfaces

- KALEIDOSCOPE DPM-1 Digital Effects • AMX-100 • Dubner "Page" control for Texta and CBG • Abekas A-62 • Panasonic AU-600 MII format • Time line "Lynx" Synchronizers • Graham Patten 616 Audio Console • Harrison Pro-7 Audio Console • Improved Lexicon Dynamic Pitch Audio Pitch control

Manuals and Installation Guides

- Super Edit Manual • Installation Guide • Video tape on installation and operations

The System 51Em gives you extraordinary control over the most complex editing tasks. Its performance, ease of operation, and unequalled complement of software functions allow full expression of your creativity. A DEC 11/23 CPU and large memory capacity make your work fast and flexible. System 51EM interfaces with virtually all of the industry's leading equipment, and its 16 ports permit unrestricted control.

Pricing

51Em-8	System 51Em - one 8" Disk Drive/ 10M Byte Fixed Drive	\$46,900.00
41m-8	System 41m - two 8" Disk Drive	\$35,900.00
31-8	System 31 - two 8" Disk Drive	\$29,900.00
3141-8	Conversion Kit for System 31 to 41m (1A)	7,000.00
3151-8	Conversion Kit for System 31 to 51Em (1, 1A)	19,000.00
4151-8	Conversion Kit for System 41 to 51Em (1, 1A)	13,000.00

Note 1. Includes installation on site by field engineering, excludes XGPI. Includes one year software subscription.

Note 1A. GVG systems only, call for quote on ISC manufactured systems. Software subscription must be current to purchase kit.

THE GRASS VALLEY GROUP, INC.

Editing/Production Systems

VPE-141 Editing System

• Computer electronics including drive controllers, memory, processor, I/O ports, and XGPI on a single PC board layout • DEC LSI 11/73 high speed processor • 512K bytes of RAM memory • Ability to boot the operating program from battery backed up CMOS memory • Edit decision list information is automatically saved in the event of power failure • Control of GVG switchers, audio mixers, and the ability to store E-MEM (effects memory) information on the edit decision list disk is also standard with the 141 • Control of up to 7 SMPTE RS-422 VTRs is included in the price of the system. VTR transport control is enabled through a touch sensitive "Jog-Pad"™ which allows the user to invoke VTR transport functions by sliding a finger along the surface area of the pad • The user may select from two types of menu displays, TTL color or RS-170 monochrome

Base Models	
VPE-141*	NTSC \$25,000.00
VPE-141P*	PAL 25,000.00
Machine Control Protocols	
Machine control protocols selection of 16 per machine \$500.00
Keyboard Options (Choose 1)	
141-JOGPAD	Keyboard with "Jog-Pad" motion controller (std.) NC
141-JOGKNOB	Keyboard with rotary style knob (option) \$300.00
Options to Super Edit	
EDL-XT	Includes 409, Trace, XEDL \$5,000.00
EDL-XTP	(PAL) Includes 409, Trace, XEDL 5,000.00
Hardware Options	
141-BDISK	8" Drive Kit \$950.00
141-Rackmnt	Rackmount hardware 200.00
*Includes 5 machine protocols	

VPE-141

GVG Video Switcher Protocols: - order 1	
SS300-VPE	300 Serial Control NC
SS200-VPE	200 Serial Control NC

SW-006D	Graphics factory NC

IPS-100

IPS-100 Integrated Production System

• Full capability post production system • Single chassis design • Will control most RS-422 machines including 3/4", Beta and M-II 1/2" formats, and type "C"

The unit includes a 100 video switcher, Editor and edit keyboard with Jog-Pad, a sophisticated audio mixer called the AMX-170, a powerful edit controller with full list management capabilities, sync and pulse distribution with test signals, and an optional character generator. Also optional are shock mounted transport cases.

The compact unit can handle the post production needs of a small facility or efficiently add an economical suite to a larger production facility. Because of its single chassis construction it is also ideal for mobile applications.

IPS-100*/1IPS-100P* (PAL) \$58,900.00
IPS-100B*/IPS-100BP*	As above - excludes AMX-170 and 100 Control Panel. System is capable of video and audio cuts, transitions, and limited video wipes \$49,900.00
IPS-100VC	IPS-100 Video Control Panel 3,000.00
IPS-170AC	Audio Control Panel 7,000.00
PTR-80	Printer, serial I/F, buffer tractor feed (not available for 220V) 400.00
IPS-CC1	Chassis carrying case 1,900.00
IPS-AC1	Accessory carrying case 1,900.00
IPS-DOC	IPS-100 manual set 200.00
IPS-CG	Character Generator Kit Includes CG card, 3.5" disk drive, interconnect cables and installation guide 8,500.00
IPS-QC8	Quick connect cable set 8 meter Includes fan out panel for 4 VTRs, 4 interconnect cables, 4 "pig-tails" for the VTRs (video, reference, and audio interconnects included) 1,500.00
DM-12	TTL type color display monitor 12" (120V only) 850.00
DM-9	TTL type color display monitor 9" (120V only) 850.00
100-33	RGB Chroma keyer for 100 850.00
100-34	Chroma key by-pass 54.00
100-40	Digital border line 1,500.00
*Includes 5 machine protocols	

THE GRASS VALLEY GROUP, INC.**Audio Mixer****AMX-170S Automated Audio Mixer**

The AMX-170S is a powerful automated audio mixer with features typical of larger, higher priced mixing consoles.

Computerized Editing Integration

The mixer provides unparalleled performance in the video production environment by integrating fully with your computerized editor. Crosspoint selection, including input sources and output routing, as well as transition sequences may be controlled from the edit system. Equalization, trims, and fader level may be assigned to any of the input sources and are recalled when the input is selected from the edit controller.

The ability to recall complex effects from the edit list through E-MEM™ registers speeds up post production by minimizing the need to manually re-set the mixer for each edit pass.

Input Routing

Up to eight VCA (voltage controlled amplifier) inputs may be simultaneously routed to any four program channels, permitting full utilization of new generation tape machines with four-channel audio record and playback.

Equalization and Trim

Features four-band equalization and level trim for each of the eight mixing inputs. Control of equalization, trim and filters may be delegated to any of the mixing inputs.

A trim control adjusts incoming levels within a gain range of -6dB to 30dB. Greater flexibility is available by pre-setting the input amplifiers to accommodate other levels.

Tone Generator

The mixer includes a 1kHz/400Hz tone generator for system alignment or for adding tone to tape leaders.

Audio Effects Memory E-MEM

The mixer's E-MEM register capability makes the AMX-170S a truly automated post production audio mixer, with the ability to store and recall control panel settings. Each E-MEM register stores a particular panel set-up including input levels, equalization and trim values. Any of 20 E-MEM registers may be recalled either manually or through the edit controller during an edit event.

Transition Control

Crossfades between mixer set-ups may be easily accomplished manually, or they can be triggered by an edit computer. Complex effects can be further simplified by setting up automatic transitions between the mixer's E-MEM registers.

Monitoring Capabilities

An amplified headphone output and monitor outputs are available.

Monitoring selections are available for Program or R-VTR, allowing independent selection of sources for headsets or monitors. Level and balance controls are provided, and a 20dB attenuator may be toggled in or out for instant reduction of monitor level. A convenient mono/stereo button is provided to identify phase differences and stereo image.

Specifications

Audio Inputs:	8 primary, 8 alternate
Record Device Inputs:	4
VCA Faders:	8PGM A, 8PGM B
Filters:	High/low cut (10kHz and 75Hz)
Equalization:	4 band \pm 12dB; low shelving (100Hz); low-mid peak dip (500Hz); high-med peak dip (2.5k); high shelving (8k); bargraph display indicators
Outputs:	2 stereo, (A) L/R, (B) L/R
Monitor Controls:	Levels, balance, dim, 5W/ch headphone amplifier
Sources Monitored:	PGM A, PGM B, Record VTR A and B
Video Editor Control:	RS-422/38.4k baud (9-Pin D); GVG serial communications protocol

THE GRASS VALLEY GROUP, INC.

Synchronization Generators

9500 SERIES

NTSC REFERENCE SYNCHRONIZING GENERATORS

The 9500 Series Synchronizing Generators represent moderately priced sync generator systems. The SPG Gate Array IC, designed exclusively for the 9500 Series, has made accuracy, stability and reliability available in an affordable system.

With over 2,100 logic gates in a 44-pin package, the SPG Gate Array contains all critical circuitry for exact SC/H phase, regardless of external conditions.

Hybrid integrated circuits allow improved performance, manufacturability and reliability. Servicing can be kept to a minimum, since troubleshooting is done at the functional block level.

9505 Source Synchronizing Generator

The 9505 is a single module system available for either encoded subcarrier or color black reference. SC/H Phase is always correct. No adjustment is necessary.

Input Power: 100-125VAC or 200-250VAC, 50/60Hz

Power Consumption: 15W maximum

9505-ES	NTSC Source Synchronizing Generator . . .	\$1,800.00
	Encoded Subcarrier Reference	
9505-ESX	9505-ES with TCXO	2,000.00
9505-CB	NTSC Source Synchronizing Generator . . .	2,000.00
	Color Black Reference	
9505-CBX	9505-CB with TCXO	2,200.00
9505-TCXO	Temperature Compensated Crystal Oscillator (TCXO)	350.00
9505-TSG	Test Signal Generator Module	800.00
9505-SID	Source Identification Submodule for TSG . . .	300.00

9510A Reference Synchronizing Generator

The 9510A is designed for use when space requirements allow only a single rack unit, or a deluxe source sync generator is required, providing genlock to video or encoded subcarrier. Two color black and encoded subcarrier reference outputs are standard.

Power Consumption: 20W maximum

9510A	NTSC Reference Synchronizing Generator	\$2,650.00
9510-TSG	Test Signal Generator Module	800.00
9510-SID	Source Identification Submodule for TSG . . .	300.00
9510-PPC	Phase Preset Control Module	350.00
Dual 9510A	Dual 9510A NTSC Sync Generator System	6,950.00

9520A Master Reference Synchronizing Generator

The heart of the 9500A Series, this two rack unit master provides two outputs each of pulse and subcarrier. Two color black and two encoded reference outputs are standard. The 9520A will genlock to video or encoded subcarrier signals.

The input power for the 9510A and 9520A are the same.

Input Power: 105-125VAC or 210-250VAC, 50/60Hz

Power Consumption: 30W maximum

9520A	NTSC Master Reference Synchronizing Generator	\$3,155.00

9550A Sync Pulse Generator Changeover Switch

The 9550 will monitor both the on-line and backup generators with visual and audible alarms in the case of failure, and has an LED status display to assist in identifying the faulty signal. The 9550A is mounted in a one rack unit tray with removable modules for easy servicing. It has automatic and manual switching, ten signal channel capability, and crosstalk suppression greater than 65dB.

Video Processing/Timing Systems

3240-20

3240 Video Processing Amplifier

- SC/H phasing • Full regeneration of sync and burst • Adjustable blanking width • Soft and hard clippers • Cable equalization option • Selectable line deletions: 10-21 • Sin² pulse edges • Color black output option • Optional accessories

The 3240 Video Processing Amplifier is a high performance sync and blanking regenerative amplifier designed for signal processing in studio, master control, remote, and transmitter locations.

The basic 3240-10 system is a fully functional processing amplifier, available in one rack unit (RU = 1.75") height. Controls are available on the card edge or at a remote control point.

The compact and rugged construction, coupled with low power consumption and wide supply voltage range, make it ideal for remote van applications. All active components are accessible from the front of the rack.

Conservative ratings, and a sealed air design that keeps contamination out, will assure years of trouble-free service.

The expandable 3240-20 system in the two-RU frame contains four additional cells for accessories. The accessories are plug-in modules that complement the basic processor. The frame has been prewired to accept the accessories, and power is supplied from the 3200A Power Supply.

3258 SC/H Phase Meter

The 3258 SC/H Phase Meter is a measurement instrument specifically designed to aid in establishing and maintaining an SC/H phased video system. It has two video inputs plus a color frame pulse (VI) input, which are used to measure absolute SC/H phase of either video input, the difference between the two video inputs, and absolute SC/H phase of either video input with respect to an externally applied house reference color frame pulse (VI).

The 3258 SC/H Phase Meter comes with a power supply, module extender and two instruction manuals.

3258 **\$2995.00**

3274A

3274A Borderline Generator

- External matte • Complete downstream keyer • Matted inserts • Three modes of caption enhancement • Insert fade-in and fade-out operation • Optional matte colorizer • Optional non-sync detector

The 3274A Borderline Generator is a caption inserting device normally installed at the output of studio production switching systems.

3274A-10 NTSC Borderline Generator in 1-RU tray, power supply, AC line cord, module extender, two instruction manuals, and a 1.75"H x 19"W (4.45 x 48.3cm) control panel with 8m (26') of control cable. (Rackmounting panel)

3274A-10 **\$3995.00**

3274A-11 NTSC Borderline Generator in 1-RU tray, power supply, AC line cord, module extender, two instruction manuals, and a 2.25"H x 6.95"W (5.72 x 17.6cm) control panel with 8m (26') of control cable. (Console mounting panel)

3274A-001 Extra Cable/Meter for 3274A **.6.00**

STM-85N

STM-85N NTSC Source Timing Module

- Decodes the encoded subcarrier signal output of SPG generators, producing discrete sync, blanking and subcarrier, V1 and color black • Output phase relative to that of the driving SPG is adjustable over the range of +27/-35µs, using front mounted controls • Further adjustment of 2H advance and 1H delay is possible with internal dipswitch settings • When phase is adjusted, subcarrier and H sync move together, ensuring accurate SC/H phase at all settings

STM-85N **\$850.00**

SCB-100N

SCB-100N NTSC Sync/SMPTE Color Bar/Audio Tone Generator

- One rack unit • Fully SC/H phased • Sync generator provides four color black outputs, two outputs each of sync, blanking and subcarrier, and one each of V1 and encoded subcarrier, two outputs of SMPTE color bars and one balanced Lo-Z output for audio tone

SCB-100N **\$1250.00**

DDA-1

DDA-101 Digital Distribution Amplifier

- Fully RP125 and EBU 3246-E compatible digital amplifier
- Available in a 2 rack unit frame
- Modular design allows up to 4 DAs per 2 rack unit frame
- Standard features include 1 input by 4 output, full 10-bit data path, and automatic cable equalization for up to 500' (150m)
- LED indicator for video input signal
- Independent driver per output for maximum reliability and ease of maintenance
- High efficiency power supply for cool operation
- Data reclocking for greater noise immunity

DDA-101 digital distribution amplifier features 1 input by 4 outputs with 8 or 10 bit data paths and automatic cable equalization for up to 500'. The digital DA comes with data reclocking, an independent driver for each output and a high efficiency power supply. The DDA-101 is available in a 2 rack unit frame that can hold up to 4 DAs with an optional back-up power supply.

DDA-101	Digital DA	\$ 725.00
DDAT2-115	2RU tray with 115VAC power supply	1000.00
DDAT2-230	2RU tray with 230VAC power supply	1000.00
DDA-PSM	Backup power supply (115/230VAC)	300.00
DDA-EXT	Digital DA Extender	125.00

DAC-110 Digital to Component Analog Video Translator

- RP-125/EBU 3246-E component digital to CAV translating
- 8/10-bit resolution per channel switch selectable
- Automatic selection of 625/525 50/60 line/field rate
- Digital video presence indicator LED
- Input cable EQ for up to 500' (150m)
- 1RU frame
- 3 sets of CAV outputs, one output is Y, B-Y, R-Y, the other outputs may be either RGB or Y, B-Y, R-Y (switch selectable)
- Sync add/delete on all outputs
- 1 composite sync output in time with CAV outputs
- One terminating digital video input
- Internal 100% full-field color bars generator

DAC-110 digital to CAV translator handles CCIR 601 digital video to component analog video. Selectable 8 or 10 bit conversion, automatic selection of line/field rate (525/625), input cable equalization, adjustable horizontal blanking and internal test signals are some of the significant features available with the DAC-110. The system is available in a 1 rack unit frame with selectable 115/230VAC power supply with one digital input and three component outputs. The outputs can be selected for RGB, Beta or MII by a front panel switch.

DAC-110 Component digital to component analog translator **\$5000.00**

ADC-120 Component Analog to Digital Translator

- Two sets of CAV inputs
- Inputs may independently be either RGB or color-difference
- External reference—Color black/composite sync timing reference adjustment: $\pm 2\mu\text{sec}$
- Local and remote selection and indication of inputs
- Two RP-125/EBU 3246-E digital video outputs
- Color-difference monitor output of selected channel
- Automatic 525/60 or 625/50 line/field rate selection
- Force black mode
- Chroma off mode
- Compact 1RU mode
- 115/230VAC selectable

ADC-120 analog to digital translator accepts two analog component signals of any format and produces CCIR 601 digital output. The input may be selected locally or remotely and LEDs will indicate which input is active. Timing may be taken from sync on the Y or green channel or an external reference may be utilized. Line/field rates of 525/60 or 625/60 will be automatically detected and selected. An output of the component input is available for monitoring purposes. The ADC-120 comes in a one rack-unit frame.

ADC-120 Component analog to component digital translator **\$6500.00**

THE GRASS VALLEY GROUP, INC.**Component Video Terminal Equipment****CV-20 Series Component Video Terminal Equipment**

The CV-20 Series is a growing family of products providing component video system designers with signal generation and format conversion capability.

Whether the need is conversion between various component formats or conversion between the composite and component world, the CV-20 Series is an economical solution.

CV-11/85 Translator

The CV-11/85 Translator is a simplified version of the CV-21. It may be used in any application where "straight through" conversion from Y, R-Y, B-Y to RGB is required, such as displaying the component output of a Betacam* system on an RGB monitor. The CV-11/85 is designed to mount in a standard 8500 Series video DA tray, and may be used in conjunction with 8500 Series amplifiers to provide multiple RGB feeds.

Specifications

Inputs: Y, R-Y, B-Y (75 ohms terminating)
Y = 1V p-p including sync; R-Y, B-Y = $\pm 350\text{mV}$ (75% saturation)

Outputs: RGB (one each)

Frequency Response: $\pm 0.2\text{dB}$ to 6MHz

Gain Adjust: Unity $\pm 1\text{dB}$

CV-11/85 Y, R-Y, B-Y to RGB translator (mounts in 8500 Series DA tray) \$385.00

CV-21 Translator

The CV-21 converts Betacam or SMPTE standard Y, R-Y, B-Y signals to RGB. The CV-21 features full blanking processing which enables the user to delete sync on the RGB outputs, if desired, and to compensate for setup on the Y input signal.

Specifications

Inputs: Y, R-Y, B-Y (75 ohms terminating)
Y = 1V p-p including sync; R-Y, B-Y = $\pm 350\text{mV}$ (75% saturation)

Outputs: RGB (two each); Y

Frequency Response: $\pm 0.2\text{dB}$ to 6MHz

Gain Adjust: Unity $\pm 1\text{dB}$

Setup Adjust: ± 15 IRE

CV-21 Y, R-Y, B-Y to RGB translator (mounts in CV-20T tray) \$995.00

CV-22 Translator

The CV-22 converts RGB signals to Betacam or SMPTE standard Y, R-Y, B-Y. Full blanking processing and sync add/delete capability is provided to accommodate the large degree of variability which exists in RGB environments.

Specifications

Inputs: RGB (75 ohms terminating) 700mV video with or without sync.
Sync/color black (looping) required if input video is non-composite

Outputs: Y (three); R-Y, B-Y (two each); Y = 1V p-p including sync; R-Y, B-Y = $\pm 350\text{mV}$ (75% saturation)

Frequency Response: $\pm 0.2\text{dB}$ to 6MHz

Gain Adjust: Unity $\pm 2.5\text{dB}$

Setup Adjust: 0 to +10 IRE

CV-22 RGB to Y, R-Y, B-Y translator (mounts in CV-201 tray) \$995.00

CV-23 Color Bar Generator

The CV-23 is a component color bar generator which generates full-field color bars in both RGB and Y, R-Y, B-Y formats. It requires comp sync or color black as a timing reference and is capable of operating in either 525/60 or 625/50 systems.

Specifications

Output Signal: Full field color bars switch selectable to 75% or 100% saturation

Outputs: One set each RGB and Y, R-Y, B-Y

Reference Input: Composite sync or color black

Timing Adjust: Output timing may be adjusted to $\pm 2\mu\text{s}$ with respect to the input timing reference

CV-23 Component color bar generator (mounts in CV-20T tray) . . . \$1195.00

CV-20

CV-24N NTSC Decoder

The CV-24N is a variable-Q notch filter design. Front panel controls are provided for input level, setup adjust, chroma phase and chroma gain. The output matrix may be strapped to provide RGB, Betacam, SMPTE, or YIQ outputs.

Specifications

Input: NTSC video (75 ohms terminating), 1V p-p nominal, adjustable $\pm 3\text{dB}$

Outputs: Two sets, strappable to any one of the following: RGB (700mV video/300mV sync); SMPTE-standard Y, R-Y, B-Y; Betacam; or YIQ

Luminance Bandwidth: DC to 6MHz $\pm 0.2\text{dB}$ with 3.58MHz notched out to approximately -30dB

S/N Ratio: $> 60\text{dB}$ (6MHz bandwidth)

Propagation Delay: Approximately 850ns

CV-24N NTSC Decoder (mounts in CV-20T tray) \$1500.00

CV-25N NTSC Encoder

The CV-25N produces high quality NTSC video (2 outputs) from composite or non-composite RGB. The CV-25N has a unique, onboard pulse regenerator which derives blanking from input sync, eliminating the need for separate blanking input, sync timing on the output may also be adjusted. An alignment test generator is also included.

Specifications

Inputs: Number and Type: One each R, G, B video (internally terminated), sync, subcarrier (looping)
Levels: 700mV RGB video with or without sync, with $\pm 1\text{dB}$ gain trim; 4V p-p sync $\pm 6\text{dB}$; 2V p-p SC, $\pm 6\text{dB}$; 2V p-p SC, $\pm 6\text{dB}$
CMRR (RGB inputs): $> 40\text{dB}$ at 60Hz
(75 ohm source terminated) Number and Type: Two each NTSC composite video; Level: 1V p-p nominal (714mV video, 286mV sync and burst)

Outputs: **Frequency Response:** $\pm 0.2\text{dB}$ to 5MHz (luminance)
Black/White Balance: < 0.5 IRE residual subcarrier
I/Q Quadrature: $> 0.5^\circ$ of subcarrier
Electrical Length: 810ns $\pm 40\text{ns}$ (RGB in NTSC out)
Adjustments: (Card Edge) H Phase, Fine Chroma Phase, Test Mode Enable, Green Tie Enable, I Black Balance, Q Black Balance, Setup

Mounting: Fits in CV-20T tray

Power: Provided by CV-20PS power supply

CV-25N NTSC Encoder (mounts in CV-20T tray) \$1500.00

CV-20 Tray

The CV-20T tray is a 2RU tray which will accept up to four CV-20 Series modules in any mix. It comes with one power supply; a second (backup) supply and module extender are available as options.

CV-20T 2RU tray with power supply (holds up to 4 CV-20 series modules) \$895.00

CV-20PS Backup power supply for CV-20 tray \$245.00

CV-20EXT Module extender for CV-20T series modules. \$110.00

*Betacam is a trademark of Sony Corporation.

THE GRASS VALLEY GROUP, INC.

Distribution Amplifiers

8500 Series

8500 Series Audio/Video Distribution Amplifiers

The 8500 Series is a range of video and audio distribution amplifiers. The DA's feature both high performance and low cost as a result of innovative engineering coupled with advanced manufacturing techniques.

All 8500 Series models feature differential inputs with six outputs. Circuit building blocks such as input amplifiers, output amplifiers, and voltage regulators have been reduced to individual hybrid integrated circuits which provide improved performance, better unit-to-unit consistency, and ease of maintenance over conventional discrete designs.

Video DA's include the 8501, a basic non-equalizing DA; the 8502, an equalizing DA with dual range (0-500' and 500'-1000') variable equalizer; the 8503, an equalizing DA with precision stepped equalization (0, 100', 200',...1000') plus vernier trim (0-125'); the 8504, a delay DA capable of up to 300ns delay (up to 1.1µsec. with optional plug-ins); and the 8505, a field DA which combines long cable eq (up to 3000' of 8281) and a two speed clamp. The line also includes the 8520, a pulse DA.

The 8551 is a high performance voltage-mode audio DA. It has an active, balanced Hi-Z input (input Z > 40K ohms) and six active, balanced Lo-Z outputs (output Z > 50 ohms). The 8551 will accommodate signal levels to +24dBu; SNR is > 110dB.

The 8560 Stereo Audio Distribution System is a series of audio distribution amplifiers. Each amplifier handles two channels of audio, manipulated by a single gain control and a balance trim.

A two-rack unit frame of the 8560 Series houses up to four DAs, a meter board and power supplies. The meter board, with PPM and VU ballistics, allows monitoring of all DA inputs and outputs.

8500 Series

DHX-532 Digital Routing System

- Digital parallel routing system with data reclocking, conforms to standards: CCIR 601 (MOD F), RP 125, and EBU 3246-E
- Available in 8 input by 8 output building blocks, expandable up to 32 inputs by 32 outputs per DHX-532 frame, ultimately expandable to 128 inputs by 128 outputs
- 10-bit data path protects signal integrity
- Employs the same control system and can be one level of the HORIZON™ analog routing system family
- Compact design: matrices of up to 32 inputs by 32 outputs in just 15 rack units, including power supplies
- Control via 75 ohm coaxial cable for easy installation
- PC boards removable from the front for fast access, as well as PROTECT™ to guard destinations against unauthorized intervention
- Optional redundant power supply
- Backup interpreter module
- Complete stand alone capability

The DHX-532 is a parallel digital routing system supporting CCIR, SMPTE, and EBU standards. The system features a 10-bit data path and data reclocking.

To simplify the transition from analog to digital video technology, the system may function as one level of a GVG Horizon routing system, allowing digital video, analog video, and audio matrices to share a common control system.

Specifications

Electrical:

32 input by 32 output maximum, expandable from 8 inputs by 8 outputs in 8 x 8 building blocks. 10-bit parallel digital video. Two isolated outputs per destination. Conforms to: SMPTE RP125, EBU 3246-E, CCIR 601 (Mod. F). Switching in the vertical interval (line 10) synchronized to reference video

Power Requirements:

90-120VAC or 180-260VAC 50/60Hz

Power Consumption:

400W for fully equipped 32 x 32 system

Mechanical:

Input/Output Connectors:

25 Pin D

Height:

26.25" / 66.5cm (15 rack units)

Width:

19" / 48cm rackmount

Depth:

18" / 45.6cm

Weight:

150 lbs./65.2kg

Model	Inputs	Outputs
DHX-88	8 x 8	\$22,750.00
DHX-168	16 x 8	25,250.00
DHX-248	24 x 8	30,600.00
DHX-328	32 x 8	33,100.00
DHX-816	8 x 16	28,100.00
DHX-1616	16 x 16	30,600.00
DHX-2416	24 x 16	38,800.00
DHX-3216	32 x 16	41,300.00
DHX-824	8 x 24	33,450.00
DHX-1624	16 x 24	35,950.00
DHX-2424	24 x 24	47,000.00
DHX-3224	32 x 24	49,500.00
DHX-832	8 x 32	38,800.00
DHX-1632	16 x 32	41,300.00
DHX-2432	24 x 32	55,200.00
DHX-3232	32 x 32	57,700.00

Each system is supplied with one technical manual, one signal module extender and one interpreter extender.

Options

DHX-PS	Backup power supply; specify line voltage/frequency at time of order	\$2,500.00
DHX-INT	Backup interpreter module	1,500.00
DHX-EXS	Extender, signal modules only	500.00
DHX-EXI	Extender, interpreter module only	250.00
DHX-MAN	Manual, operations/maintenance.	180.00
DHX-CPM	Crosspoint module	2,850.00
DHX-IBU	Input buffer module.	2,500.00
DHX-OAM	Output amplifier module	2,500.00
DHX-CKC	Cable end kit; crimp (connectors only, does not include cable).	110.00
DHX-CKS	Cable end kit; solder (connectors only, does not include cable).	110.00

Routing Switchers

TEN-XL 10 x 1 Routing Switcher

- Breakaway stereo audio comes with every unit
- Both local and remote control panels are available
- Binary control system
- Differential inputs for both video and audio
- Video inputs are DC restored and switching is done in the vertical interval line (line 10)
- Built-in expansion capability lets the TEN-XL be a 19 x 1, 28 x 1 or more
- 12-hour minimum crosspoint memory in case of power failure

The TEN-XL encompasses video, stereo audio, optional RS422/232 serial interface module, relay module, and dual power supply, all in a one rack unit frame.

TEN-XT Monitoring Station

- Combines the capabilities of the TEN-XL with the Tektronix 1740 or 1750, as well as the 528 and 1420 waveform/vector monitors.

TEN-XTM Routing Switcher

- Designed to reside in a half-rack frame next to waveform and vector displays
- Incorporates all the features of the TEN-XT plus providing audio VU/Peak metering along with a built-in audio monitor/speaker combination
- Stereo audio monitoring is available via a front panel headphone jack
- Audio metering can be set to provide VU, Peak power, or both

All TEN-XL options can be used including serial interface, tally relay matrix, dual power supplies and the widest variety of useful remote control panels.

TEN-XL and TEN-XT Routing Switchers Complete Units

TEN-XL	10 x 1 video/stereo audio switcher with local control panel	\$1495.00
TEN-XLV	10 x 1 video only switcher with local control panel	1195.00
TEN-XLVA1	10 x 1 video/single audio switcher with local control panel	1345.00
TEN-XLRC	10 x 1 video/stereo audio switcher for remote control use (does not include remote control panel)	1460.00
TEN-XLRCV	10 x 1 video only switcher for remote control use (does not include remote control panel).	1160.00
TEN-XLRCVA1	10 x 1 video/single audio switcher for remote control use (does not include remote control panel)	1310.00
TEN-XLA	10 x 1 stereo audio switcher with local control panel	1270.00
TEN-XLA1	10 x 1 single audio switcher with local control panel	1120.00
TEN-XLARC	10 x 1 stereo audio switcher for remote control use (does not include remote control panel)	1235.00
TEN-XLA1RC	10 x 1 single audio switcher for remote control use (does not include remote control panel).	1085.00
TEN-XLVCV	10 x 1 component video/stereo audio switcher with local control panel	3950.00
TEN-XLVCV-V	10 x 1 component video only switcher with local control panel	3650.00
TEN-XLVCVA1	10 x 1 component video/single audio switcher with local control panel	3800.00
TEN-XTM	10 x 1 video/stereo audio switcher for half rackmount with VU/peak meters and audio monitor	2100.00

(For 220/240V operation add -2 to model number)

Routing Switchers

TEN-20™/20-TEN™ Compact Routing Switcher Systems

- TEN-20 switcher ten input-by-twenty output
- 20-TEN switcher twenty input-by-ten output
- 4-level control, with numerous matrices per level
- Control via twisted shielded pair cables, for simple and cost-effective installation
- PC boards remove from the front for easy access
- "PROTECT" and locked panel features, standard on all control panels, guard your destinations against unauthorized intervention
- All systems available in component as well as composite versions
- Battery protected RAM saves your data for as long as 30 days

Choose from these versatile panel configurations:

- 20 input button per source—controls any combination of four levels
- 10 input button per source—controls any combination of four levels
- 4-level X-Y—controls all inputs and destinations

Each switcher is contained in a single rack unit frame, with both video and audio matrices available. Either may be configured video only, audio only or video plus multiple audio. A component video version is also available.

TEN-20 and 20-TEN video and audio routers feature high density, multi-layer boards with excellent bandwidth and signal-to-noise ratio.

These single crosspoint modules give you increased reliability and full functionality.

Options include the flexibility of an RS232/RS422 serial interface and the extra reliability of dual power supplies.

Video Performance Specifications

Differential Gain:	0.1% at 1V p-p output, 10-90% APL
Differential Phase:	0.1° at 1V p-p output, 10-90% APL

THE GRASS VALLEY GROUP, INC.

Routing Switchers/Data Matrices

HORIZON™ Routing Systems

HORIZON is designed as a high-performance audio/video distribution routing switcher suitable for a wide variety of applications including composite and component video, HDTV, stereo or even multiple audio, plus time code.

HORIZON is offered in a variety of frame sizes and configurations from 128 x 128 multi-level systems through 16 x 16 frames and all are intermixable. 64 x 64, 48 x 32, and 32 x 16 sizes provide intermediate steps; each size available with the number of modules to meet your needs. Plug-in modules transfer from frame to frame without causing downtime or system interruption.

HX-16/HX-32

- Most compact routing systems in the HORIZON family.
- Flexibility in control level selection makes them the ideal solution to component routing and stereo audio applications.
- Their frames may be used as part of larger HORIZON systems, so you can configure exactly the system you need.
- Available in video and audio mixtures to suit your needs.

HX-48

- 48 Input by 32 output video and audio capability are available in 18 rack units—including power supplies.
- Space for optional dual power supplies and system controllers is part of this package.
- For multiple audio or component video applications, simple interlevel cable allows the HX-48 to drive one or more smaller systems.
- The same cable also allows you to use the HX-48 as part of a larger system.
- Start with as few as 16 inputs by 16 outputs and build to frame capacity in 8 input/16 output steps.
- Available in video/video, video/audio and audio/audio frame capability.

HX-64

- Each HX-64 matrix may be structured up to 64 inputs by 64 outputs—without unlimited matrices in as many as four control levels.
- Each matrix is self-contained in an 18 rack-unit frame, including power supply, with space for an optional dual power supply and optional back-up controller.
- Size of each matrix is fully independent from the rest of the system.
- Composite video matrices may be full size, for example, while audio and time code or component matrices are smaller.

HX-128

- Largest member of the HORIZON family.
- Building block frames allow one-time system structuring for all your needs so you can grow at your own pace without retiming or rewiring.
- Each matrix frame, video or audio, occupies just 12 rack units.
- Power for up to two matrix frames of the same type is supplied by a single 6 rack unit frame.
- As many as 128 inputs x 32 outputs are housed in 18 rack units.
- Extra-compact, 128 x 64 format is also available in 30 rack units, without adding extra frames for dual controllers or video/audio monitoring.
- Matrix frames may be stacked in 128 x 32, 128 x 64, 128 x 96 or 128 x 128 systems.
- Smaller matrices may be structured within each configuration.
- Expand system and plug-in modules without system interruption.

Options

- 35 standard control panels
- Dual power options
- Dual controller option without adding frames
- On-line programmability and real time system diagnostics
- Unlimited RS-232/422 control capability with HX-GPI
- Interface option, including output exclusion
- E-MEM™ Interface, with full 4-level breakaway capability for GVG production switchers
- Full-time, real time video status display
- Source tally for production/master control
- Status displays for in-panel readout of HORIZON sources selected to GVG production or master control systems
- Integrated machine control
- RS-422 matrix

Specifications

VIDEO

Off. Gain:	< 0.1% at 1V p-p out, 10%-90% APL
Off. Phase:	< 0.1° at 1V p-p out, 10%-90% APL
Frequency Response:	± 0.15dB, 100kHz to 5.0MHz, +0.15, -0.5dB to 8MHz
2T Pulse/Bar Response:	Pulse 0.25%; 8ar 0.25%, Pulse/Bar 0.25%
Tilt:	< 0.5%
X-Talk:	-60dB at 5MHz (all inputs hostile and synchronous)
SNR:	> 75dB
Output OC (DC Rest. System):	Blanking at 0V, ± 50mV
Timing Scatter:	± 1° (NTSC or PAL) max., input to input on any one bus
Electrical Length:	(HX-16, 32, 48, 64), typical: Outputs 0-15: 43.6ns; Outputs 16-31: 44.4ns; Outputs 32-47: 45.0ns; Outputs 48-63: 45.8ns
Electrical Length:	(HX-128), typical: Outputs 0-15 and 64-79: 48.1ns; Outputs 16-31 and 80-95: 49.7ns; Outputs 32-47 and 96-111: 51.4ns; Outputs 48-63 and 112-127: 53.0ns
Input Char.:	All inputs 75 ohms internal term., return loss > 40dB to 5MHz
Output Char.:	Two 75 ohm term. outputs per bus; ret. loss 40dB to 5MHz; output/output isolation 38dB to 5MHz
Signal Level:	1V p-p nom., 2V p-p max.
Gain:	Unity adj. ± 1.0dB

B-606

HX-RS Front Panel

HX-RS Rear Panel

AUDIO

Frequency Response:	± 0.1dB, 20Hz to 20kHz
Harmonic Distortion:	< 0.5% at +24dBu, 20Hz to 20kHz
SNR:	> 100dB, ref. +24dBu, 20Hz to 20kHz
X-Talk:	> -80dB, 20Hz to 20kHz, all inputs hostile
Input Char.:	Bal. Z = > 12.5K ohms; CMRR > 65dB
Output Char.:	One bal. output per bus, Z < 30 ohms
Recommended Load:	600 ohms or greater; 150 ohm available
System Level:	± 24dBu (12.28VRMS) max.
Stereo Phase Acc.:	< 0.72 = L to R diff. at 20kHz
Gain:	Unity, adj. ± 1.0dB

HORIZON Data Matrices

HX-RS Data Matrices eliminate the complexity of data patching encountered when using sophisticated editing systems, graphics devices and VTRs.

Systems may be configured in sizes from 16 inputs x 16 outputs up to 64 x 64 and from 2-wire to 8-wire capability. The 64 x 32 4-wire size takes just 18 rack units of space and has the capacity to double in size with the addition of a simple 12 rack unit frame.

Reliable, low current relays switch bi-directional paths. Additional software allows the system to function traditionally or as an "exclusive" system, which allows any source to be taken to only one destination at a time.

HX-RS matrices may be used as stand-alone systems, or as one level in a larger HORIZON system. More than one HX-RS may also be used to simplify complicated intercom systems.

Specifications

4 pole bi-directional switching	
9-pin "D" connectors for data paths, pin #9s at chassis ground	
Max. End-to-End Resistance:	2 ohms
Max. Voltage Signal to Chassis:	100V
Max. Contact Current:	1A
Operate Time:	< 20µs
Release Time:	< 10µs

HORIZON Production Interfaces

Start with any model 300 with optional serial interface adaptor or with a model 200 with optional dual serial adaptor and the streamline option. Add a HORIZON production interface to your HORIZON Routing System. 300 Series systems may store as many as seven preset source selections per internal E-MEM register. Model 200 systems will direct the HX-GP200 to store source information in its resident memory.

A single HX-GPEM interface serves up to 16 model 300 inputs or up to 8 inputs of each of two 300's. One HX-GP200 interface is fully equipped to work with up to 20 model 200 inputs.

HORIZON production interfaces are simple, C-Bus options. Where several 300's or model 200's are in operation, multiple units may be used to take full advantage of HORIZON routing power.

For instant feedback to camera locations, the programmable HX-ST source tally option module plugs directly into HORIZON production interface frames. An economical 16 relay/16 optoisolator configuration, it performs the tasks of larger source tally systems at a fraction of the cost and space normally required. Source tally growth beyond 16 x 16 capability is simple and economical with expansion frames and additional HX-ST modules.

HX-GP200	\$3000.00
HX-GPEM For use with model 300 only	3000.00

Refer to Green Section for Addresses and Telephone Numbers.

**3291 COMPLETE UNIT WITH
DUAL CHANNEL AUDIO OPTION**

3290/3291 Wavelink®

Fiber Optic Communications System

The 3290 is the broadband transmission component of the Wavelink system. It provides a full wideband 10MHz channel to accommodate any signal requiring such a bandwidth, for instance high-quality video. Incoming coaxial cable can be equalized by the 3290 with the addition of an optional submodule. The 3290 consists of an LED or laser-based transmitter, a receiver employing an APD detector, and compact mounting tray built to accommodate transmit and receive modules with their power supplies. The mounting trays are available in one rack-unit (RU, 1.75 inches) or two rack-unit heights. One RU tray package houses up to three transmitter or receiver modules or one laser transmitting system. Two RU tray packages will house up to six transmitter or receiver modules, or two laser transmitting systems, plus two power supplies for back-up redundancy.

3291

The 3291 is the multichannel transmission component of the Wavelink system. Like the 3290, the 3291 consists of an LED or laser-based transmitter and an APD-based receiver. In addition to a 5.8MHz video channel, the 3291 includes the multiplexing capability for two optional subchannels of audio and/or data. The 3291 also provides adjustable equalization of incoming and outgoing coaxial signal cables as an option. All 3291 receiving systems and LED-based transmitting systems are housed in two rack-unit mounting trays. Each of the two rack-unit trays will accommodate three transmit or receive systems. Laser-based transmitting systems are housed in either one or two rack-unit trays, one laser transmitting system being accommodated by each rack-unit of height.

3291 Audio, Data, and Alarm Options

Each option consists of plug-in modulator and demodulator modules which are fully interchangeable with the other option modules. The modulator module plugs into the frame of the transmitting system, while the demodulator module is housed in the standard two rack-unit frame used in the receiving system. Audio options use a unique

FM-on-FM modulation scheme to enhance the signal-to-noise performance. The baseband audio signals are individually preemphasized and modulated at 100kHz; one channel is then frequency modulated on a 9.8MHz carrier, and the other (dual audio systems) on an 8MHz carrier.

For the data option, serial asynchronous data (up to 20kbits/second) is accepted at the data modulator via an RS232 interface. The data is bandlimited to 500kHz to limit the spectral width of the modulator output, and then FM modulated on a 9.8MHz carrier. The audio/data option combines the features of the single audio and data options. Audio specifications are the same as for the dual audio option, and the data specifications remain unchanged. The GV43 audio option supports transmission of two channels of audio on carriers of 5.8MHz and 6.4MHz for common carrier applications; and 6.2MHz and 6.8MHz for satellite link applications.

Before transmission, each option channel is summed with the video channel on the exciter or LED transmitter module, and the resulting waveform is frequency modulated on a carrier of 24MHz. At the receiver the FM signal is demodulated and separated into its video, audio, and/or data components. The demodulator modules perform further FM demodulation and baseband filtering to restore the original audio or data signals. For the dual audio and the audio/data options, the audio output amplifier may be configured for a 600 ohm (20 dBm) or low impedance (50 ohm) balanced output. For the single audio option a choice of 600 ohm, 150 ohm, or a low impedance (50 ohm) balanced output is provided. The data output is available via an RS232-compatible interface. An optional alarm provides relay closures if a video input at the transmitter becomes disconnected, an optical carrier is absent at the receiver, or a redundant power supply fails.

Repeaters

Laser-based 3290/91 repeaters allow transmission distances to be greatly extended.

THE GRASS VALLEY GROUP, INC.

Fiber Optic Transmission Equipment

Series 87

Video Fiber Optic Transmission Equipment

- Fiber optic transmission
- NTSC or PAL baseband video
- 10MHz frequency response
- 60dB signal-to-noise ratio
- 830nm multimode LED
- Frequency modulation

Series 87 wideband equipment provides long distance analog transmission of high frequency signals on optical fiber. Typical applications include transmission of RGB signals for HDTV (High Definition Television), and transmission of RGB signals to remote computer graphics video terminals.

Analog electrical baseband signals are input to Series 87 transmitter modules, one baseband signal per transmitter module. Analog transmission occurs on a single optical fiber. A frequency modulated square-wave carrier eliminates video distortion that is due to optical system nonlinearities.

A maximum of eight transmitter and/or receiver modules may be housed in a Series 87 tray.

Fiber optic cable type should be 50/125 or 62.5/125 multimode. SMA-906 optical connectors are standard.

Specifications

Video Input

Level: 1V p-p nominal, gain adjustable from +2dB to -5dB

Impedance/

Connectors: One unbalanced 75 ohm BNC

Video Output

Level: 1V p-p nominal, gain adjustable from +3dB to -3dB

Impedance/

Connectors: Two unbalanced 75 ohm BNC

Differential Distortion

Phase: < 5°
Gain: < 5%

Frequency Response:

1Hz to 8MHz ± 1dB
8MHz to 10MHz + 1, -5dB

2T Pulse to Bar: ± 3%

Field Tilt: < 2%

Line Tilt: < 2%

Relative Chrominance to Luminance

Delay Distortion: < 15ns

Typical Signal-to-

Noise Ratio: (Through 3 meter cable attenuated to -25dBm receive power; CCIR weighted, 10kHz to 5MHz) > -60dB

GRAY ENGINEERING LABORATORIES, INC.

SMPTE Edit Code Products

DR-107B SMPTE Data Receiver and Character Generator

The DR-107B offers an unusual number of capabilities in a minimum space at an economy price. All controls are on the front panel. In addition, there are internal selectors for drop frame status on the monitor, choice of monitor up-date change, and free running of time in the absence of code.

Reads and displays SMPTE, EBU or 24 frame time code or user bits on video monitors. Has restored output for dubbing.

Character heights may be varied from 8 to 64 lines in four increments, and the widths may be adjusted to the preferred aspect ratio. The characters may be plain or boxed. Characters may be inserted in the vertical interval, offering greater versatility to recording or transferring of tapes. Lines 12 through 19 are used in the vertical interval mode so no interference will occur. Size: 1 $\frac{3}{4}$ " high; standard 19" relay panel x 9 $\frac{1}{2}$ " deep excluding plugs.

DR-107B \$2795.00

DT-113 SMPTE Time Code Transmitter

SMPTE edit code is generated from a master clock which may be selected for drop frame count by a front panel switch. Transmits code at 30, 25, or 24 frame counts, color frame sync mode. User bits may be inserted from a parallel 32 line input. Time or user bits can be displayed on an 8-digit hexadecimal readout. The master clock may be reset or loaded to a time on an 8-digit thumbwheel switch. The clock can be stopped by a hold button. The clock and transmitted code can be synchronized to the 60Hz line or to video/sync frames. Code start is within the ANSI spec. (1 H-line in the vertical interval). The clock can be synchronized to the color burst phase for odd or even frame count when the sub-carrier is in phase. Size: 1 $\frac{3}{4}$ " high; standard 19" relay panel x 9 $\frac{1}{2}$ " deep excluding plugs.

DT-113 \$2995.00

Code Readers and Video Character Generators

DR-103A Data Receiver and Character Generator. Reads and displays edit code and equivalent film-frames on video monitor and has three switchable code inputs . . . \$4550.00

DR-115 Data Receiver and 4 Channel Character Generator. Provides four separate video character displays from one edit code input for Iso-Camera productions. \$4250.00

DR-120 Data Receiver, Character Generator, Identifier, and Demultiplexer. Reads and displays time code, multiplexed user bits, and video source identification on video monitors. \$3150.00

DR-122 Data Receiver and Dual Character Generator. Allows simultaneous video displays of both time code and user bits with video source identification capability and complete independent adjustment of character positioning \$4450.00

Code Readers and Local Displays

DR-109B Data Receiver, Display and Demultiplexer. Reads and displays time code or multiplexed user bits on an 8-digit hex readout. Has dub output. \$2795.00

DR-109P EBU version of DR-109B \$2795.00

TBC-117 Edit Code Time-Base Corrector. Converts wide-band erratic code input to a truly regenerated "ANSI" spec code output. Used for dubbing and distribution \$3900.00

TCR-119 Time Character Reader. Reads the video characters generated by a Gray DR-107, DR-115, DR-120, or DR-122 from freeze to play speed and converts to longitudinal time code output for automatic computer editing . . . \$3950.00

Special Equipment

ACO-238 Automatic Change-Over. With inputs from two independent SMPTE time code generators, this unit will automatically sense failure of one generator unit and switch to the other to allow resumption of code output . . . \$5750.00

DT-113

DR-107B

Code Comparator

CC-114 Code Comparator. Compares a preset time with an incoming time code to produce an editing signal on coincidence. Must be used with a Gray time code reader. \$2330.00

CC-114A Reader Code Comparator. Same as CC-114 except unit incorporates a wideband reader. \$2750.00

Code Generators

DT-104F Data Transmitter. Transmits code at 30, 25, or 24 frames/sec., has advanced slave decoding, color frame sync, a variable code simulator/generator, NTSC/PAL compatibility, field or frame rate time code selection plus many more functions \$5950.00

DT-213 Data Transmitter and Character Generator. Transmits code at 30, 25, or 24 frames/sec., color frame sync mode in either frame or field rate time code. Sets and displays time code, and user bits in hex format. Slaves to incoming code and has a built-in character generator for both time code and user bits \$3495.00

DTG-236 Dual Time Code Generator. Transmits two separate SMPTE format codes: 24 frames/sec. and 30 frames/sec. The two codes have a synchronous start every five frames on the 30 frame code. \$5750.00

User Bit Equipment

MC-110 User Bit Modifier and Combiner. Combines time codes serially from two independent sources using user bits for the second time code. \$2595.00

MD-111 User Bit Modifier, Display and Demultiplexer. Modifies multiplexed user bits on incoming edit code from a 32 line parallel input \$3295.00

UBE-118A User Bit Encoder. A 10 channel multiplexer that encodes user bits from parallel inputs. Encoder for VID-225, DT-104F, DT-113, DT-113P, or MD-111. A real time clock is provided for insertion into one channel of user bits. \$2550.00

Safe Area Generators

VR-116 Video Reticle Generator. Allows precise positioning of titles and graphics from dead center to the edge of the vertical and horizontal blanking \$2595.00

VR-216P PAL version of VR-116. \$2995.00

VR-121 Video Reticle Generator. Similar to VR-116 with the addition of monitor linearity check, variable reticle size and position with memory and recall and a keying switch to set the reticle areas from white to black \$3950.00

Code Phase Measurement Equipment

CPI-123 Code Phase Indicator. Measures and displays the phase difference between an actual code frame start on VTR versus ANSI spec to determine computer compatibility. \$2100.00

TCA-143 Time Code Analyzer. Measures, displays, and corrects the phase difference between the cue-track frame code and the video to allow computer acceptance. It also displays the code level and indicates phase error, bit count, sync word, and count error faults with memory. \$2595.00

GRAY ENGINEERING LABORATORIES, INC.

SMPTE Edit Code Products

CPC-700 Series Code Phase Corrector

The CPC-700 Series equipment measures the difference between the actual SMPTE code start and the ANSI specification, displays this difference, re-phases and re-transmits the corrected code to specification and computer acceptance. This equipment will also correct drifting or unlocked time code caused when the video is recorded to a different sync source than the longitudinal code.

The basic 700 series rack comes equipped with the power supply module pair 701-1/701-2 and the frame pulse generator module pair 702-1/702-2. Space in the rack is provided for one or more code phase corrector module pairs 703-1/703-2. One of these pairs is required for each playback VTR machine in the edit bay.

- CPC-700** \$1395.00
- 703-1** Code phase corrector module pair/995.00
- 703-2** Code input-output rear module pair/995.00

VID-225 Vertical Interval Decoder

The VID-225 is a microprocessor based instrument which performs a dual function by decoding both an incoming Longitudinal Time Code (LTC) on a cue track and a Vertical Interval Time Code (VITC) present on a composite video signal.

A SMPTE longitudinal code is outputted at a rate proportional to either input. This allows the VITC input to be used from freeze frame to full wind speed and be automatically interfaced to most existing edit controllers, code readers/character generators, and other equipment that requires proportional LTC into their inputs.

The longitudinal decoder incorporates "The McFadin Window"® with wide range digital decoding from 1/100 to 100 times the VTR play speed. (Machine dependent).

Selection of the two codes can be automatic or manual, allowing the maximum advantage of both codes in various editing situations. At tape speeds below 1/4 play speed, the unit outputs longitudinal data at a 1/4 rate when VITC is present, and will squelch if an absence of time code is required by the edit controller when the tape is stopped.

Demultiplexing circuitry is provided to decode the display user bits that have been encoded using a time code generator in conjunction with the UBE-118A, FCM-227A or similar multiplexing devices.

The eleven position thumbwheel is used to instruct the demultiplexing circuitry which one of the ten frames of data to display, or to display all frames. This multiplexing scheme allows 10 times the normal 32 bits to be encoded.

The VITC data is extracted from the incoming video, and made available for use in re-encoding with other video equipment such as the DSI-126, in an editing room environment.

- VID-225** \$3950.00

UBE-118A User Bit Encoder. A 10 channel multiplexer that encodes user bits from parallel inputs. A real time clock is provided for insertion into one channel of user bits . . . \$2550.00

DSI-126A Data Selector and Inserter. Accepts up to eight channels of serial VITC data from VID-225's and selects one of these channels by tally information from a video switcher, to modulate the composite video with VITC information \$2595.00

FCM-227A Film Counter, Multiplexer, and Character Generator. With tach and 3/2 inputs from a telecine system, an ASCII RS-232 terminal that provides scene, take, and reel information and a DT-104F SMPTE edit code generator that provides field rate time code, this unit will output vertical interval time code containing this data for inserting on one or more video lines. It will also output encoded parallel user bits to the SMPTE edit code generator. A character generator is included, which displays time code, user bits, and the multiplexed scene, take, and reel information \$4950.00

CPC-700

VID-225

VIE-224

DET-129 Data Entry Terminal. Provides data entry of edge numbers/starting footage count, scene, take, and reel numbers into the FCM-227A film counter/multiplexer \$5450.00

FC-142 Film Counter and Character Generator. Counts film feet and frames from a film projector or Telecine to precisely identify all film frames in a 3/2 scan transfer by inserting information in a window dub for viewing with complete video field accuracy. The information displayed can be feet and frames or edge numbers and frames for 16mm or 35mm \$2995.00

VIE-224 Vertical Interval Encoder

The VIE-224 modulates a composite video signal with VITC from an external incoming SMPTE LTC. A front panel display presents the time code or user bits by selection from a panel switch.

This unit is particularly useful when a facility that has a SMPTE LTC generator needs to encode video tapes with VITC. It is also useful when converting tapes with LTC to VITC for editing precision or freeing an audio track for stereo.

The incoming time code is updated before modulating the video to maintain real time. The user bits may be updated by a front panel switch whenever a secondary time code is transmitted in the user bits.

The incoming SMPTE longitudinal code is demodulated by a wide band decoder incorporating The McFadin Window and processed through microprocessor-based circuitry to provide time base correction. This assures that the same data is encoded on both fields of each TV frame, regardless of incoming edit code speed or phase.

VITC transmission can be programmed to modulate on any combination of vertical interval lines from 10 through 20 on either or both fields. Any signal that is on a selected line is erased before the VITC is encoded.

- VIE-224** \$3450.00

Stik-up

Stik-up

CamraLite

Stik-up

- Compact single source luminaire
- Small, lightweight
- 100W, 150W, 200W and 12V, 125W
- Mounts in any position

Stik-up is a small, durable incandescent luminaire. It weighs only 9 oz. with its 9' cord. Ultra light wire frame construction allows you to mount it where you need it—in any position by almost any means. Tape it to a stand, camera dolly, scenery, furniture. Hang it by picture wire. Stick it up with gaffer tape, masking tape, an alligator clip, even a clothespin. Convenient snap-on extension arms and clips allow you to use color filters, correction filters or diffusion material. And you can take it anywhere, tucked into your briefcase or utility bag.

Stik-up is ideal for television, film and still photography. Its 100W, 3000 Kelvin light source makes it an ideal miniature fill light. It creates the subtle reflection of dash lights in a car, the glow of a table lamp or candle, the ambience of a distant skyline. When you're in a tight spot, Stik-up can solve your problem. It's the ultimate trick for your bag of tricks, for better lighting made easier.

Stik-up Kit

The ready-to-go Stik-up Kit contains three heads, three sets of extension arms, six clips and three lamps. It is available in either a reusable carton or an Excalibur custom case.

Technical Data

- Dimensions: 3" x 3" x 4" H
- Weight: 9 oz. with power cord
- Housing: Wire frame and steel
- Reflector: Diffused aluminum
- Lamp: Q 100 CL/120VDC
- Power Cord: 9' flat BB/B, molded plastic U-ground plug

Ordering Stik-up

CamraLite

- Unique variable area reflector
- Keeps constant color temperature
- Mounts on any film or video camera

CamraLite is designed to mount on any film or video camera, in close proximity to the lens. It also accepts a 5/8" stud for use on a stand. Soft, yet efficient, it serves to lighten or erase the harsh effect of facial shadows in close-up work. Its reflection adds sparkle and life to the subject's eyes.

CamraLite is lightweight and easy to use. It will not overheat or jam if left on during long rehearsals.

How It Works

The rear wall of the CamraLite contains a unique variable area reflector, allowing the intensity of the light to be modulated without any fluctuation in the color temperature. As the distance between the subject and camera changes, a constant 3200K can be maintained by adjusting the reflector. No variation in exposure is required. The reflector is controlled by a convenient shaft on the side of the fixture.

Technical Data

- Dimensions: 8 1/2" H x 11 1/2" W x 6 1/2" D
- Length including yoke: 10 3/4"
- Weight: 2 1/2 lbs.
- Control shaft: 14" long. May be attached to either side of fixture
- Cable and connector: 6" high temperature lead, U-grounded male plug
- Control: Separate toggle switches for each lamp
- Lamps: 120V/600W BHC/DYS/DYV
120V/420W EKB
30V/250W DYG
220V/650W DYR

THE GREAT AMERICAN MARKET

Patterns

GREAT AMERICAN PATTERN

The Great American Pattern is a custom designed template for use in ellipsoidal spotlights. Made of high quality, durable stainless steel, it is tough enough to stand up under intense heat. Cut it with scissors to fit any pattern holder.

Standard Pattern

The Standard Pattern is photo etched in a 4" x 4 1/2" matte. The pattern area does not exceed 3" in diameter. An Adaptor (catalog #400) is available to secure standard patterns in spotlights with larger pattern holders.

Continental Pattern

The Continental Pattern is etched in a circular format to fit European "B" size pattern holders and some domestic fixtures. The outside diameter is 3 5/16" (85mm) and the design diameter is 2 3/8" (60mm).

Great American Patterns are available in three additional sizes: Mini Pattern, TV Pattern and 4 x 5 Pattern.

Mini Pattern

The Mini Pattern is a stainless steel template designed for use in popular 3 1/2" ellipsoidal spotlights. The pattern area is 2" in diameter and each design is turned upside down in the matte for quick and easy insertion in the pattern holder. Cut the edge with scissors if you wish to tip the pattern to compensate for a keystone.

The Mini Pattern is manufactured to the same exacting specifications as the standard Great American Pattern. The 2" diameter design is photo etched in a 4" x 2 5/16" matte.

The Mini Pattern Collection is tailored for the designer working in a small space. However, a number of standard Great American Patterns can be conveniently cut to fit the 3 1/2" spotlight. In some cases, only a portion of the design will be used.

4 x 5 Pattern

The 4 x 5 Great American Pattern is made to project in any Scene Machine. It may be used alone or combined with a painted glass slide. In the Mini Scene Machine, a 4 x 5 Pattern may be used with a Mini Disc to enhance a moving effect.

The large rectangular format of the 4 x 5 Pattern accommodates many new design concepts and increases the versatility of pattern projection.

The 4 x 5 Pattern is photo etched in a 4" x 5" matte. The pattern area does not exceed 3" x 4".

Modular Projection System/ Stage Equipment

Scene Machine Modular Projection System

- Project all effects with one basic unit • Hang in any position, throw 10' to 200'
- Install permanently or take it anywhere

The Scene Machine is a modular projection system, designed for professional use, but simple enough for a high school stage. With interchangeable parts, you can project all still and moving effects from one basic unit.

Basic Scene Machine Systems

Head + Slide Carrier + Lens: Use this economic system as a conventional pattern projector. Holds two slides for background projections.

Head + Spiral Machine + Lens: Use spirals to create subtle shimmer or bold, gyrating projections. Also, for moving reflections, such as water or firelight. Speed and direction of spirals greatly affect the look, as does lens focus.

Head + Disc Machine + Lens: Use large discs for rain, snow, or fire, removing the heat filter for extra brightness. Use Slide Turret with remote control to project five different background looks.

Head + Film Machine + Lens: Use film loops for cloud crawls, waves, water ripple, fire. Excellent for subtle, realistic movement, atmosphere, dream sequences.

Scene Machine SystemPOA

Blackwrap™ Flexible Matte

Black Aluminum, Coated Two Sides

Blackwrap is form holding, heat resistant and tough. It is a natural for use in theatre, television, motion picture, lab or electric shop. Use Blackwrap to mask light leaks, shape beams, create barndoors, snoot or flag, hide cable and hardware, make rain covers, make a black snowball. Blackwrap is .002" thick. It is available in 12" x 50' rolls. Other sizes may be special ordered.

- 2700 Blackwrap 12" x 50' x .002" \$22.95
- 2710 Blackwrap 24" x 25' x .002" \$22.95
- 2715 Blackwrap 36" x 25' x .002" \$39.00

Star Strobe 2™ Random Flash Curtain Strobe

Use Star Strobe to create depth and excitement for your concert, club or TV special. It can hang from its cord or be permanently affixed to hard scenery.

Star Strobe 2 is a self-contained unit, complete with lamp. It is 7^{5/8}" L and 2^{1/4}" W. It weighs 7 oz. with cord. The lamp is rated at one million flashes. Star Strobe 2 is supplied with an 8' 18/2 black power cord with molded plug. The insulated plastic housing precludes the need for a ground.

- 3102 Star Strobe 2 \$69.00
- 3103 Star Strobe 3 Super Bright \$79.00

Instaset™ Vacuum Formed Scenery

Instaset vacuum formed scenery is quick and easy to assemble, yet looks finished and professional. The three dimensional surfaces can stand the closest scrutiny of a camera.

Instaset is lightweight and tough. You can trim it with shears or a utility knife. Apply it to scenery or framework with tape, glue, or staples. Paint it with scene paint, spray paint, any acrylic or vinyl wall paint.

Instaset is available in a variety of flameproof vinyl and ABS materials. Vinyls include translucent, clear, metalized and white in 4' x 10' sheet size. Thickness ranges from .015" to .030". ABS, either black or white, is available in 44" x 92" sheet size, either .030" or .060" thick. All carry a 94 V-O (self-extinguishing) flammability classification and are approved for public assemblage. Special orders welcome.

InstasetPOA

Modular Projection System

SPE-3

LightWiz™ Remote Control Electric Yoke

- Holds many popular fixtures • Pans 400°, tilts 100° • Uses 0-10VDC control signal from any board—no special controller needed
- Unique mounting cradle allows optimum balance of any light
- Strong, smooth, reliable • Affordable

LightWiz automatically adjusts itself for variations in weight and size of the mounted load. The tilt function will compensate for out-of-balance situations. In addition, when an external obstacle prohibits a move, LightWiz will shut down rather than burn out a motor.

LightWiz is able to pan and tilt in very small increments, at speeds barely perceptible. These slow moves give LightWiz flexibility and grace not usually associated with mechanical moving lights.

You may mount a ColorWiz color changer on the light you place in the LightWiz yoke. A convenient receptacle for the ColorWiz control cable is located on the LightWiz connector panel.

LightWiz \$1895.00

SPE-3 Flicker Generator

- Variable random flash rate • Flicker up to 1800W • Battery operated solid-state control • Full on position for focus • Realistic fire effects

The SPE-3 random variable flicker rate does not repeat for 20 minutes. 1800W capacity allows you to control the fire light as well as the essential key light focused on the performers. The key light flickers with the same timing as the fire light. Two threshold level settings are provided; use 0-100 for large loads and 30-100 for smaller lamps. As well as fire effects, use the SPE-3 to create the light of an old time movie screen, TV tube flicker, candle light, gas light, and many more special effects.

SPE-3 Fire Flicker Generator: 120V or 230V. \$269.00

SPE-3A AC Adaptor. \$18.95

Fog Power Produces dense white fog in most fog/smoke generators. Non-toxic, non-flammable and non-explosive. Water soluble.

Lighting Equipment

COLORMAX® SYSTEM

- Twelve colors—your choice • Quick change, 2.5 seconds maximum
- Random access, remote control with preset • Slave up to 100 to one control channel • Lightweight, compact, durable • Functional, trouble-free design suits ColorMax to the rigorous demands of the opera house, rep company, road show and television studio • Completely enclosed with no exposed moving parts • No tools are required for access to the gel • Fan extends gel life • Ball bearing roller assemblies insure smooth operation • Modular electronics • Reliable microprocessor design

ColorMax is a self-contained rolling color changer which slides easily into the gel frame holder of your fixture.

ColorMax is available in three sizes: 6 x 7 1/2 for fixtures with 6" lens and 7 1/2" gel frame, 8 x 10 for fixtures with 8" lens and 10" gel frame, and Far Cyc, designed to fit the Far Cyc fixture.

ColorMax Far Cyc

- Made to fit one window of a single, two-, three-, or four-light Far Cyc unit • More than one can be mounted on a three- or four-light model • Precision fit with no light blocked from the covered or adjacent windows • May be adapted for use on 5K fresnels and other large fixtures • Enables you to change up to twelve colors of your choice

Controller

- 4 channel memory system • Channel number relates to the setting on the rotary dial on the ColorMax units • Each channel can command up to 100 units. If more than 250 units are to be addressed by one controller, a buffer is needed • Gel positions are designated Frame "A" thru Frame "L". You can preset a frame position on each channel, then address each individually or all together by means of a master "go" button • Can be used in either two- or three-scene preset mode • ColorScan enables you to make a continuous sweep back and forth between any two colors in your colorstring. The function will reverse and repeat until turned off or another signal given

ColorMax Memory System

- Designed to address 96 channels and record two or three hundred cues, depending on the number of channels used • Will also interface with existing lighting control systems • Will execute ColorMax cues when triggered by a signal from one assigned channel of the primary lighting console

ColorMax ColorQ™ Computer Control

- Efficient, flexible computer controller for ColorMax color changers • ColorQ memory will hold 100 simple cues (single moves), plus 100 "string" cues (sequences of moves). Each "string" may have up to 25 steps • Complete manual control • Each color and channel can be accessed individually without disturbing a cue in progress • Digital displays and LEDs show constant status • Extends the use of the ColorMax with a memory/manual combination, and the option to address from an external board

ColorWiz™

- One universal size • Changes eleven colors or more • Runs on any 0-10VDC control voltage—no special controller needed • Mounting plate allows the unit to be placed with the gelstring rolling either horizontally or vertically • Light weight permits mounting without additional fixture support • Particularly suited for use on ellipsoidal spotlights with pattern projections • Black aluminum housing • 11 3/4" H x 11 3/4" W x 2 1/2" D • 5 lbs. with power cord

ColorWiz is a self-contained rolling color changer which slides easily into the gel frame holder of most fixtures. It holds a gelstring (sections of gel taped together) which moves on rollers inside the unit. The prescribed gelstring length can be divided into any desired configuration: eleven color sections is maximum for 6" and 8" fixtures, up to 22 sections for smaller units. The gelstring may also contain irregular sections within it.

MicroBrute LV9

High Performance/Cool Beam Micro 9-Light

- Cool beam with MR-16 12V lamps
- 3150°K temperature
- Rated lamp life of 1225 hours
- High intensity, smooth field with 65W or 75W lamps
- Three swivel stick lamp housings for maximum flexibility and precise focus
- Lamps protected by bora silicate safety glass
- Expanded metal lamp housings for full convection cooling
- Positive locking yoke
- Mounting block accepts any stud from 1/2" -3/4", and fixture mounts vertical or horizontal (on X or Y axis)
- Easy to pack and set up
- Always dependable
- Steel, painted black housing
- Aluminum, painted black barn door set
- 6' 16/3 cable with 15A parallel U-ground plug
- 3150° color temperature 1225 hrs. rated lamp life
- Accessory barndoors and clips to hold gel or diffusion in place

MicroBrute LV9 accepts nine MR-16 lamps, 75W maximum, wired in series. Neon indicators in the rear of the lamp housings identify failed lamps.

MicroBrute LV9 is available in a convenient Double Header Kit. The kit consists of two heads, two sets of barndoors, and gel clips and lamps in a durable, smart looking Excalibur case.

MicroBrute 12V6

Cool Beam Battery Powered Micro 6-Light

- Cool beam with MR-16 12V lamps
- Each lamp separately switched
- 3050°K temperature
- Rated lamp life of 3500 hours
- High intensity, smooth field with 65W or 75W lamps
- Two swivel stick lamp housings for maximum flexibility and precise focus
- Lamps protected by bora silicate safety glass
- Expanded metal lamp housings for full convection cooling
- Positive locking yoke
- Mounting block accepts any stud from 1/2" -3/4", and fixture mounts vertical or horizontal (on X or Y axis)
- Exceptionally small and bright—Can be powered by any 12V source
- Steel, painted black housing
- Aluminum, painted black barn door set
- 10' cable 10 gauge high temp wire with spade lug termination
- 3050° color temperature; 3500 hrs. rated lamp life
- Accessory barndoors and clips to hold gel or diffusion in place

2170	Case: 3 Compartments	275.00

TEL 171 Digital Telemetry

The TEL 171 converts your Moseley TRC-15AW or TRC-15AR to digital metering transmission, a method that eliminates the offset and gain drift in the analog metering. A local display in the transmitter control unit duplicates the readings displayed by the studio control unit. This permits one-man weekly meter calibration.

The system consists of printed circuit boards which substitute directly for the audible metering generator, the audible metering demodulator, and the meter. The local display for the transmitter control unit includes a replacement front panel and a liquid crystal display printed circuit board.

Installation is quick and simple since the same PC mounting hardware is used, and the same wiring harness connects to the new boards.

3-1/2 digit (-1999 to +1999) displays are used. These easily read displays are updated twice a second. Should the metering carrier be lost, or a framing or parity error occur, the display at the studio will blank and a front panel LED will indicate the problem.

Through the use of digital transmission and displays, we eliminate the error inherent in analog transmission, and simplify the task of remote meter calibration and meter reading.

TEL 171 Digital Telemetry Adaptor for Moseley TRC-15A **\$800.00**

TEL 172 Digital Telemetry

The TEL 172 converts your Moseley PBR-30AW or PBR-30AR to digital metering transmission, a method that eliminates the offset and gain drift in the analog metering.

A local display mounted in the transmitter control unit duplicates the readings displayed by the studio control unit. This permits one-man weekly remote meter calibrations. The system consists of five printed circuit boards that substitute directly for the metering oscillator, audible metering processor, SCU metering processor, metering demodulator, and the analog meter.

Installation is quick and simple since the same motherboards connect to the new boards.

3-1/2 digit (-1999 to +1999) displays are used. These easily read displays are updated twice a second. Should the metering carrier be lost, or a framing or parity error occur, the display at the studio will indicate the presence of an error, and the Read lamp on the PBR-30 will extinguish.

Through the use of digital transmission and display, we eliminate the error inherent in analog transmission, and simplify the task of remote meter calibration and meter reading.

TEL 172 Digital Telemetry Adaptor for Moseley PBR-30 **\$920.00**

TEL 171 SPECIFICATIONS

H & F 1211TT Telemetry Transmitter

Substitutes for Moseley 51 A5416 Audible Metering Generator.

A/D Conversion

Resolution: 3-1/2 digits (-1999 to +1999)

Conversion Rate: 2 conversions/second

Accuracy: Limited by temperature stability of reference (LM399 H)

.05% of reading +/- 1 count, 0 degrees C to 50 degrees C

Full Scale Sensitivity: 2 Volts for +1999 indication.

Data Transmission

Bit Rate: 300 Baud

Character Rate: 4 characters per conversion

Word Rate: One word per conversion (2/s), each conversion transmitted once with idle time between conversions.

Character Format: Start bit, six data bits, even parity bit, two stop bits. First four data bits carry digit code in BCD (except on half digit where three bits carry +/-, 0 or 1, and out of range indications). Last two data bits identify digit (00 half digit, 11 is last digit).

Word Format: Digits transmitted in order (0, 1, 2, 3). Data channel idle between conversions.

Encoding: FSK, 1270 Hz Mark, 1070 Hz Space.

Output Level: +1 dBm into 600 ohms, adjustable (line), and 5 V p-p open circuit, Z = 2.2 K (subcarrier).

Display

3-1/2 digit LCD local display.

Power Requirements

Floating +15: 35 mA

Floating -15: 30 mA

+5: 0.2 mA

+15: 30 mA

H & F 1221TR Telemetry Receiver

Substitutes for Moseley 51 A5420 Audible Metering Demodulator.

Minimum Receive Level: -40 dBm (7.7 mV)

Data Output: Character parallel, negative 250 uS strobe, carrier, parity, and framing alarms. All TTL levels.

Power Requirements: 5V, 100 mA

H & F 1231TD Telemetry Display

Substitutes for Moseley meter.

3-1/2 digit LED display with PROM programmed decimal points. All metering and control data presented on front panel connector for logging or ATS.

Power Requirements: +5 V, 400 mA

TEL 172 SPECIFICATIONS

A/D Conversion

Resolution: 3-1/2 digits (-1999 to +1999)

Conversion Rate: 2 conversions/second

Accuracy: Limited by temperature stability of reference and reference voltage divider to +/- 10 ppm/Celcius degree +/- 1 count.

Full Scale Sensitivity: 1.999 volts for indication of 1999.

Data Transmission

Bit Rate: 150 Baud

Character Rate: 4 characters per conversion

Word Rate: One word per conversion (2/s), each conversion transmitted once with idle time between conversions.

Character Format: Start bit, six data bits, even parity bit, two stop bits. First four data bits carry digit code in BCD (except on half digit, where three bits carry polarity, 0 or 1, and out of range indications). Last two bits identify digit (00 is half digit, 11 is least significant digit).

Word Format: Digits transmitted in order (0, 1, 2, 3). Data channel idle between conversions.

Encoding: FSK, 1258 Hz Mark, 1168 Hz Space.

Output Level: 0 dBm, adjustable.

Data Display

Local Display: 3-1/2 digit "calculator type" LED display without decimal points.

Studio Display: 3-1/2 digit LCD display with decimal points (PROM programmed) and error indication.

HALLIKAINEN & FRIENDS, INC.

Remote Control/Television Audio System

DRC 190 Digital Remote Control

- A/D Converter
- Keyboard entered calibration scaling and curve
- Sample $\pm 2VDC$ max., $\pm 100V$ max. common mode
- Analog Multiplexer reed relays
- Control Out Open Collector transistors
- Failsafe output at each site with A/D board
- Control lockout
- Channels 10, expandable to 100 in groups of 10
- 1200 bits/second, half duplex, voice grade link
- Applications program language
- Serial I/O RS232/C at programmable baud rate
- Optional parallel I/O IEEE488 instrumentation bus

The DRC 190 Digital Remote Control can be operated manually, or, with the addition of standard computer peripherals, will monitor, display, and print all relevant readings including phase, relative amplitude, calculated ratios and deviations. Upon finding a parameter out of limits, the DRC 190 can be programmed to print the reading, make appropriate adjustments, then print the corrected reading along with a notation of the adjustment. With the addition of a modulation controller the DRC 190 can be programmed to meet FCC requirements for full ATS and, with distortion analysis equipment, test and log Proof of Performance data, automatically.

The system is based on the Motorola 6802 microprocessor. The use of a microprocessor vastly simplifies the hardware design, thereby reducing system costs. The DRC 190 uses standard peripheral chips and bus architecture so design updates may be easily implemented by merely changing EPROMs. This insures the user that he will not be stuck with an obsolete system as integrated circuit design advances.

Unlike other systems that employ different hardware at the studio and transmitter sites, the DRC 190 studio and transmitter units are interchangeable, further reducing design and manufacturing expenses.

DRC 190 \$3800.00

TVA Series Television Audio Systems

- High quality audio
- Rackmount construction
- Audio-follow-video plus manual control
- Noiseless audio switching
- Mic & line mixing
- Monitor speaker outputs
- Expandable to 36 inputs
- Comprehensive monitoring and metering facilities
- Three output DAs on program and audition channels

The TVA Series combines audio-follow-video and manual control in a flexible audio system consisting of rack-mountable components which can provide for your present and future audio mixing requirements. The sys-

DRC 190

TVA 142

tem is expandable to 36 balanced inputs in groups of six. It offers balanced audition, program, and cue outputs plus two monitor channels.

The TVA 142 is the mixing stage of our television audio system. Each TVA 142 Mixer Module has six balanced mic or line inputs with individual gain controls. Audio routing to the program and audition channels is controlled either manually or with the audio-follow-video feature. In the AFV mode, the video switcher, through ground switching, activates a noiseless control circuit sending audio to either the program or audition channels or both. Front panel LED indicators show how each input has been assigned. Manual operation is easily accomplished with a premium grade lever switch above each input gain control. Audio levels are monitored with peak flashers. The TVA 142 provides three outputs, program and audition to feed a line and a cue output for local use. The TVA 142 will serve as a stand alone mixer for many applications.

The TVA 132 Output Module provides three line level distribution amplifier outputs for multiple program and audition feeds. It offers accurate VU meters on both program and audition channels. One TVA 132 module can, when used with one to six TVA 142 Mixer modules, provide two separate audio mixes with metering. This can be very useful when one program is "on-air" and a second one is to be simultaneously recorded. The TVA 132 meters, feeds, and monitors while the TVA 142 affords individual level control and tally indicators.

Television Audio System

TVA 132	Output Module with Power Amplifiers	\$1495.00
TVA 132-1	Output Module with 600 ohm Monitors	1300.00
TVA 142	Mic-Line Mixer Module	1590.00
TVA 142-1	Mic-Line Mixer (Manual Overrides AFV)	1670.00

Bill Daniels 1988/89 Illustrated Trade References

**The Most
Comprehensive Library of
Equipment Trade References
Ever Published!**

Each Illustrated Trade Reference is in an 8 1/2 x 11 format and provides the following categories:

Product Section

Complete with manufacturers' equipment descriptions, specifications, illustrations and pricing when available.

Telephone Directory

Contains full name, address and phone number of those companies who provide a product or service to their respective industries.

Product Index/Yellow Pages

Lists products and services alphabetically, with cross-reference to manufacturer name and page number where product appears in Product Section.

1988 AUDIO

1860 pages covering the complete product lines of 434 manufacturers who serve the Professional Audio and Commercial & Industrial Sound Industries. Featuring studio and remote audio equipment plus sound reinforcement, background music, paging, intercommunications and telecommunications systems and equipment. ISSN# 0882-5432

\$195.00 (2 Volume Set)

1988 VIDEO

1196 pages covering the complete product lines of 336 manufacturers who serve the Professional and Industrial Video Industry. Contains information on video production and communications equipment. The difference between the Video Book and our Broadcast Trade Reference is the quality level of equipment. For example, Sony, Panasonic and JVC Broadcast products are included in the Broadcast Trade Reference while their Industrial products are included in the Video Trade Reference. ISSN# 0747-6183

\$95.00 (1 Volume)

1988/89 AUDIO-VISUAL

1148 pages covering the entire product lines of 397 manufacturers who serve the Instruction and Presentation Industries. This reference features equipment and devices used in presentations from classrooms to boardrooms, from film cameras to electronic blackboards. If your interest is in expanding and improving communication methods through effective use of audio-visual, multi-image and photographic media, this reference contains the products you need. ISSN# 0747-6167

\$95.00 (1 Volume)

1988/89 BROADCAST

1320 pages covering the entire product lines of 312 manufacturers who serve the Broadcast and Recording Industries. Provides information on television, radio, recording and production equipment for studio, ENG/EFP, location and remote facilities. ISSN# 0882-5688

\$135.00 (Includes Technical Data & Applications Information Manual)

1988/89 TECHNICAL DATA & APPLICATION INFORMATION

Approximately 400 pages of comprehensive reference information including engineering data, equipment interface diagrams, drawings, systems, glossaries, terms, charts/tables, basic how-to information, explanations of new technology and more. Whether you're a seasoned engineer, a systems technician or a creative director, this manual contains all the answers to your questions and the information you need for your day to day operations. An \$80.00 value FREE with the purchase of the 1988/89 Broadcast Trade Reference.

1989 SECURITY & LOSS PREVENTION

Over 2000 pages covering the entire product lines of over 350 manufacturers who serve the Security Industry. Includes information on access control, intrusion detection, perimeter protection, fire protection and detection, monitoring, information security, communications, office security products, safes and locks, and guard and investigation equipment. ISSN# 0747-6205

\$195.00 (2 Volume Set)

1989 CCTV/MATV/CATV

Over 700 pages covering the complete product lines of over 150 manufacturers who serve the Closed Circuit Television/Video, Master Antenna and Community Antenna Systems Industries. Provides the product information necessary to design, specify and purchase video surveillance and signal distribution equipment from single camera/monitor to multi-camera sequential switching systems. ISSN# 0885-5463

\$69.50 (1 Volume)

HARRIS CORP.

Frame Synchronizers

634

HVS 634 Component RGB Frame Synchronizer

- Component RGB mode • Digital noise reduction • 3-cable or 4-cable RGB inputs • Freeze field or frame • Heterodyne time base corrector

The most recent synchronizer to join the Harris family — based on the reliable and proven HVS 632 synchronizer.

The 634 will synchronize and time base correct both Component RGB and Composite NTSC video sources, making it a versatile tool in most broadcast and production environments.

RGB component input capability, combined with DNR (Digital Noise Reducer) design makes the HVS 634 ideal for film to tape transfer applications.

Chrominance and luminance noise reduction is independently variable up to 10dB—without motion artifacts. RGB 3-cable (sync on Green) or 4-cable (separate black burst) operation is switch-selectable.

Full-bandwidth picture freeze increases production versatility by providing front panel selectable field or frame freeze. The 634 locks non-synchronous video sources—satellite, camera, studio feed, or heterodyne VTR—to station sync with precise accuracy. Hysteresis compensation is standard.

The component-coded architecture of the 634 results in a TBC that is inherently immune to color phasing problems and vertical or horizontal picture shift. The four-field NTSC color sequence is always correctly maintained.

HVS 634 \$28,000.00

642

HVS 642 Digital Frame Synchronizer

- High performance time base corrector • Exceptional noise immunity • Automatic noise reduction • High quality freeze field or frame • Audio synchronizer control • Separate, clean-switching TBC/synchronizer inputs • Full plug-in boards and power supply • Built-in diagnostic and troubleshooting aids • Optional full function remote

A proprietary input sync detection circuit maintains signal lock-up to 20dB in both synchronizer and TBC modes (patent pending). This feature enables the 642 to lock on noisy feeds, then reduce noise.

Smart Noise Reduction (SNR) provides true, automatic, frame recursive noise reduction up to 12dB. Depending on the amount of noise in the picture, noise reduction may be automatically switched off or reduced, to avoid the common motion artifacts from 3-dimensional filtering. (Patent pending).

The built-in Time Base Corrector (TBC) operates with any non-segmented, heterodyne 3/4" or 1/2" VTR that employs subcarrier feedback and advanced sync inputs. The TBC features picture-in-shuttle, slow motion for dynamic tracking VTR's, and dropout compensation (DOC) from RF or TTL signal.

The HVS 642 synchronizes a multitude of today's remote feeds, including networks, satellites, microwave and cable systems. The 642 is equally at home timing and synchronizing internal video signals in your production and post-production studios.

HVS 642 Basic \$7,900.00

HVS 642 With Freeze and SNR 9,495.00

VW-3

VW-3 TBC/Frame Synchronizer

- Exceptional degree of transparency in either TBC or synchronizer mode • Multiple source hot switching without video roll or breakup • Full frame "infinite window" TBC for direct or heterodyne signals. Superior time base corrector for 1", 3/4" and 1/2" format video tape machines • Electronic frame or field freeze for production applications • DOC: TTL or RF inputs • Velocity compensation in both direct and heterodyne TBC mode • Selectable freeze on loss of video—last good field or system black • High performance in a small package (only 1 3/4" high) • Remote control of all function switches, plus proc amp controls with presets • Match frame edit option

The VW-3 provides simultaneous time base correction and synchronization, making it possible to take random feeds from tape machines, microwave links, or satellites and "hot" switch them synchronously with program materials.

The VW-3 is a refinement in time base corrector/frame synchronizer technology. It is designed to provide the highest performance for a wide variety of time base correction and synchronization applications.

Basic VW-3 \$11,700.00

VW-3 With Match Frame Edit option 12,700.00

Remote control \$1,500.00

HARRIS CORP.

Time Base Corrector/Digital Still Store

HVS 550VT Digital Time Base Corrector

- Wideband subcarrier feedback mode
- Heterodyne process mode
- 8-bit, 4Xfsc architecture provides virtually transparent signal performance
- 16-line correction window
- Automatic vertical advance
- Built-in proc amp
- RS-170A sync output circuitry
- Complete operator control of video signals and genlock of external equipment
- Dropout compensation, RF or TTL
- Full remote panel option (only 1/2 rack width)

The Variable Tracking (VT) feature allows the 550VT to be used with slow-motion heterodyne VTRs such as the Sony BVU 820 with its Dynamic Tracking mode. The 550VT will dynamically track from 1X reverse play speed to 3X forward play speed, and will hold color lock to $\pm 5X$ shuttle speed. In addition, the 550VT will enable the VTR to present a stable picture in "Pause" as well as present a viewable picture in forward and reverse modes ($\pm 40X$ normal speed).

HVS 550VT **\$5,595.00**
Remote Control Option **.975.00**
Sony BVU Interface Cable **.250.00**

HVS 550VT

ESP II Digital Still Store

- Easy to learn, simple to operate
- Single independent user
- Single channel output, expandable to dual channel
- Digital effects transitions on separate output
- 1/2 second recall of stills
- On-line capacity up to 1700 stills (frames)
- Excellent for mobile and studio environments

The ESP II provides quality and versatility on a budget, combining still store features with digital effects.

With the ESP II, graphic artists can use multilayer art techniques as successive generations of stills. Up to 15 generations may be produced without degradation in picture quality.

Multilayer graphics can be built in a single memory channel. For future use, stills can be stored to disk at random or in a sequence. A five-digit identification/address number identifies both the still and the disk on which the still is stored.

ESP II can function as two independent freeze frame synchronizers, with a separate third channel for digital effects transitions: horizontal and vertical wipes, fades and dissolves, pushes and pulls. Transitions may be selected at four preset rates: 16, 24, 32, or 48 frames.

With a single channel ESP II, you can transfer slides, still photos, artcards, titles and other graphics to digital frames for video production or special display. The freeze frame feature allows you to "grab" stills from live camera or tape productions. The single channel model is easily upgraded for dual channel operation.

The ESP II dual channel still store has sophisticated microprocessor control of sequence and stored image display, and a variety of digital effects transitions for on-air production or graphics generation.

With two independent channels, switching may be made between two still stores, two live pictures, or one of each. Dedicated pushbuttons for all key commands are incorporated for operational simplicity and accuracy.

ESP II

The modular architecture consists of two freeze frame synchronizer boards and a system genlock, control and transition effects board. These are housed in a mainframe that requires only seven inches of rack space.

Proc amp controls and mainframe and system timing adjustments are on the mainframe front panel or on an optional engineering remote panel. The engineering remote panel is only one rack unit high and is powered by the mainframe. Operation control of the system is afforded by a separate control panel measuring only 3 1/2" x 19".

ESP II Single channel with 80M byte RSD **\$26,333.00**
ESP II Single channel with 340M byte FSD **32,666.00**
ESP II Dual channel with 80M byte RSD **30,995.00**
ESP II Dual channel with 340M byte FSD **35,995.00**

Options and Accessories

Single channel remote panel **\$ 3,200.00**
 Dual channel remote panel **3,500.00**
 ACR-20 engineering remote panel **1,200.00**
 80M byte CDC/RSD cartridge drive **8,000.00**
 80M byte data cartridge **575.00**
 340M byte CDC/FSD fixed drive **13,000.00**
 Single rackmount kit for RSD/FSD **500.00**
 Dual rackmount kit for RSD/FSD **775.00**

HARRIS CORP.

Digital Still Store Systems

DIGITAL STILL STORES

IRIS II

- Up to 6 simultaneous users
- Up to 6 input channels
- Up to 12 output channels (6 with transitions)
- Digital graphics composition with up to 6 simultaneous user stations (ICS)
- Aurora interface (up to 5 Aurora systems on one IRIS)
- Over 40,000 picture storage
- 4:1:1 Architecture
- On-line library
- Heterodyne TBC/synchronizer inputs
- NTSC, PAL, RGB
- 654 Framestore Synchronizer: Available as a 2- or 4-output unit (field expandable). The 654's Transitions option provides dissolves and left/right, up/down wipes with programmable transition frame rates between pairs. Transitions can be programmed into sequence lists.
- IRIS Composition System (ICS): With this option an artist can compose complex multilayer graphics quickly and easily, using the familiar joystick control and dedicated pushbuttons. This digital graphics option provides a wide range of effects:

Variable compression	Cut and paste
Variable expansion	Digital key
Variable aspect ratio	Field/frame interpolation
Continuously variable border width/color	Removable on-line memory of effects
Variable border/matte generator with softness	Transparency

Built with component-coded framestores and designed to evolve as the needs of the industry change, IRIS II accommodates up to 6 simultaneous users and can provide on-line access for 260 to 21,440 stills stored on 1 to 8 drives respectively.

Each user has capabilities for preview/program output, library management, production graphics, transition effects, and field-to-frame interpolation.

The modularity of the system gives maximum flexibility and easy expandability.

IRIS II Plus

- Up to 2 simultaneous users
- Up to 2 input channels
- Up to 4 output channels (2 with transitions)
- 4:2:2 Architecture meets CCIR rec. 601
- Model 422 framestore
- Aurora interface
- Over 30,000 picture storage
- On-line library
- 422 framestore is synchronizer only, no TBC
- NTSC, PAL, RGB

The 422 frame buffer/synchronizer provides all-digital video connections to other systems such as paint and digital video effects.

The 422 has 4:2:2 sampling and four frames of memory. Input ports include single RGB and NTSC (PAL) composite plus dual CCIR-601/RP-125 digital. Output ports are dual RGB, NTSC (PAL) and CCIR-601/RP-125.

Existing IRIS II still stores can be easily upgraded to IRIS II PLUS by replacing the frame buffer with the 422. This can be done by the user. Existing libraries of stills can be converted to the new standard.

Common Features

- **User Stations**
Keyboards provide dedicated keys for easy operation. Minicontrollers have an interactive user menu. May be freestanding or slaved to a keyboard or other minicontrollers.
- **Storage Media Flexibility**
IRIS is compatible with media storage drives from Control Data Corporation. Drives currently available are 80M byte RSD, 340M byte FSD, and 800M byte XMD

- **On-Line Library System**
Stills are cataloged by a 6-character numeric or alphanumeric ID and a description (IRIS II only) of up to 20 characters. Up to 66 stills can be linked together in a sequence list, and more than 75 sequence lists may be linked. Sequence lists may be run manually or automatically
- **Interface Capability**
Computer Port: (RS-232) For switcher or computerized station automation; Aurora Videographics Interface: Links the graphics creation capability of the Aurora AU75 or AU220 directly with the Harris IRIS system; Printer Port: For hardcopy capability. Centronix and TI-compatible parallel interface
- **Multiple Drive Access Capability**
IMAC™ (IRIS Multiple Access Controller) allows two or more IRIS still store systems to share DCU's and drives. Up to six IRIS systems (IRIS II and IRIS C in any combination) may be interconnected with an IMAC
- **Troubleshooting and Diagnostics**
Diagnostic Error Log
Diagnostics Option

IRIS II

Basic system with single user, 80M byte RSD, and one 654 (1 input/2 output) \$68,800.00
 Basic system plus ICS 78,800.00

IRIS II Plus

Basic system with single user, 80M byte RSD, and one 422 \$73,800.00

IMAC™ (IRIS Multiple Access Controller)

- Up to six IRIS systems
- Up to a total of thirty-six users
- Up to thirty-two disk drives
- Compatible with IRIS PLUS or IRIS II/IRIS C
- High performance operation, transparent to IRIS users
- Over 60,000 picture storage (80,000 with IRIS II)
- Self-monitoring diagnostics included
- Easy to service with front-loading boards
- Redundant power supplies

IMAC connects up to six IRIS still store systems for sharing Disk Control Units (DCUs) and disk drives. IMAC controls DCU functions and drive access, and pools all stills into a common data base of over 80,000 images on up to 32 disk drives accessible by up to 36 simultaneous users.

This feature doubles the storage capacity of the IRIS system while keeping the IMAC operation transparent to the users. No new commands are needed to access the IMAC data base.

IMAC **POR**

HARRIS CORP.**Video Workstation System****HarrisVws™ 5000 Video Workstation System**

- Flexible workstation configuration
- User friendly
- Powerful Motorola 68020 based controller with math co-processor
- Open architecture, software based product for virtually open-ended growth potential
- Flexible, cost-effective storage, both magnetic and state-of-the-art optical disk drives available
- Convenient and flexible software, dedicated keys, and mouse or trackball control for executing commands, including creating, editing, and managing sequence lists
- Powerful 20 field database structure, catalog in excess of 1,000,000 stills
- EBU/SMPTE 4:2:2 Architecture meets CCIR Rec. 601
- Composite, RGB, and RP-125 digital inputs and outputs
- Heterodyne TBC/synchronizer inputs
- NTSC or PAL
- 2nd simultaneous user
- 32-bit processing power

The basic rackmounted system includes the system controller with embedded Apple Macintosh II microcomputer, an internal 90M byte or 300M byte disk drive, 13/14" frame buffer, a freestanding or rackmounted color monitor, keyboard, mouse or trackball and operating software, including high-capacity library software.

The keyboard has eight dedicated function keys and seven that may be user-programmed. It may be located at a distance of up to 1,000' via an optional keyboard extender.

Any standard NTSC studio monitor may be used for line and preview outputs from the frame buffer.

Additional disk drives, both magnetic and optical, may be added to the system to increase its storage capacity.

The storage capacity, without optional external drives, is 100 or 400 two-field frames of video (double for single fields), depending on which of the two available internal drives is chosen. Magnetic and optical drives may be intermixed up to a maximum of five individual drives. A cluster of four optical drives or an optical disk changer is treated as a single drive up to a maximum of four such clusters.

2,400M byte (3,000 frame) capacity each, may be added to a basic system. An optional disk changer permits having up to 141 optical disks (450,000 frames) available in a semi on-line state for rapid recall.

A 15/16" ultrahigh-resolution color monitor (rack-mounted or freestanding), is available. This option is required for MultiViews, which presents 12 miniatures of frames conveniently on the control screen rather than on the line and preview monitors.

HarrisVws 5000

The frame buffer (Model 656V or 422V) has memory for four frames of video. It is provided with RGB and NTSC composite inputs plus optional digital input (in Model 422V) that meets the CCIR-601/RP-125 (4:2:2) standard; plus outputs for preview and line, each of which meet CCIR-601/RP-125, composite, and RGB standards. A second optional set of outputs permits simultaneous use by a second operator.

A transition option provides dissolves and up/down right/left wipes with programmable transition frame rates between pairs.

The system is provided initially with the Model 656V frame buffer; it may be upgraded to the Model 422V if digital I/O is required.

A HarrisVws 5000 system with one magnetic disk drive shelf and one optical disk drive, but exclusive of the control monitor, occupies 31 1/2" of vertical space in a standard rack.

HarrisVws 5000 90M byte single user system with control monitor \$39,990.00

HARRISON SYSTEMS, INC.*Television Audio Console***TV-3 STEREO TELEVISION CONSOLE**

TV-3 is a television audio console that provides production facilities and signal-performance specifications which match your high standards of video production. It incorporates virtually every function and feature requested by a wide range of surveyed teleproduction clients. Eight stereo groups, a versatile multitrack-interface section, VCA input grouping, and automation-ready features make TV-3 the perfect console for all audio production, post-production, and master control applications.

The versatility of TV-3 is based on console facilities which are adaptable to a wide range of tasks, Mono microphone/line input modules and stereo-line input modules are routed by way of defeatable pan and balance controls to any combination of the eight stereo groups. Each main output can be utilized as a main program, selective mix-minus, or floor feed. Each main output has an overall level control, monitor feed, and metering feed. As the method of employing a multitrack recorder varies with the application and task, the multitrack routing and multitrack monitoring sections are adaptable to any potential TV-3 application.

All TV-3 input modules have presence-of-signal and peak indicators, as well as individual, stepped input-level controls for both microphone- and line-level inputs. All input modules also have 48-V phantom microphone powering and electronic phase reversal of input signals. A three-band equalizer with additional independent, sweepable high-pass and low-pass filters is provided on microphone/line inputs; and the stereo-line inputs have special, switched stereo EQ designed to preserve phase coherence of signals. Microphone/line input modules are also optionally available with fully parametric EQ. Balanced patching is provided for all input and audio-group modules and is switchable to pre- or post-fader positions.

The fader section of each input module has VCA subgrouping and is automation-ready for your choice of several available automation systems. All input and audio-group modules contain pre-fader listen and full stereo after-fader listen, as well as a special automatic pre-fader listen function for greatly simplified cueing. Four mono auxiliary sends are fed from each channel for effects capability and foldback.

Four audio-group master modules provide control of the eight stereo groups. These groups can be sent to any combination of four stereo program feeds and four mono program feeds, whose outputs can be individually controlled via program modules.

Monitoring functions are performed through a highly flexible monitor-module system. Signals for audio monitoring and meter monitoring may be derived from a wide variety of sources. A sweepable oscillator with pink-noise generator is standard on the monitor module.

All inputs and outputs of the Harrison TV-3 are balanced and operate at full line level (+4dB or +8dB). This includes all patch inserts, send points, and return points. The extensive use of LEDs, in deference to incandescent lamps, provides a reliable indication of all critical console operations. The highest quality components are used throughout TV-3. This includes fully socketed ICs, high-reliability front-panel components, and solder-masked, double-sided, plated-through printed circuit boards.

Harrison Systems prides itself on the high quality of construction used throughout all of its products. Proprietary Harrison design techniques and multiple independent ground systems within the TV-3 assure the maximum in signal-to-noise ratio, with minimum crosstalk.

TV-3 can be configured in many different ways. Each configuration is optimized for a specific application, while still accommodating the wide variety of teleproduction tasks for which TV-3 is designed. The standard TV-3 configuration consists of a combination of microphone/line input modules and stereo-line input modules, four audio-group master modules, and a minimum of one program master module and one monitor module. Up to four program master modules and four monitor modules may be accommodated in special configurations.

One special configuration precisely matches the needs of many of Harrison's continuing group of U.K. and European broadcast clients. This configuration utilizes stereo-group master modules, which are derived from stereo-line input modules, as submaster modules for

TV-3's eight stereo audio groups (G1-G8). This enhancement provides for stereo group equalization, direct multitrack routing, and auxiliary sends directly from the groups, without sacrificing any other TV-3 system features. Four additional mainframe module positions and one additional program module are required for this higher-cost option.

For some applications, the VCA input grouping and automation interface, equalization, and separate multitrack-interface sections may not be necessary. These sections may be deleted from the appropriate input modules, with a moderate reduction in cost.

Three distinct mainframe profiles exist for TV-3 console systems. For fixed installations, mainframes are available in sizes which accommodate complements of 32 to 60 modules. An optimized, space-conserving OB mainframe design is available for remote/OB installations in 38- or 48-module sizes. Smaller TV-3 configurations may also be constructed in portable profile mainframes, which have 12, 20, or 28 module positions.

Meter overbridge housings are available for each mainframe profile, or "clean-top" versions may be used with Harrison's DS-1 color-video-graphics metering system.

A wide range of specific options are available for TV-3 in regard to metering, patchbays, and automation systems. These options allow TV-3 to be tailored to the needs and requirements in different world markets.

Metering options include Harrison's DS-1 color-video-graphics metering system, Harrison's 36-segment LED bar-column meters, NTP or RTW plasma-type meters, DIN or BBC moving-coil PPM meters, and standard ASA VU meters.

Patchbay configurations differ greatly, and TV-3 is generally designed to be used with user-supplied patchbay systems. Due to the wide variety of system integration methods, all of TV-3's possible patch-access points are available on 30-pole DIN-standard multipin connectors.

Standard TV-3 automation interface is compatible with the Harrison AUTO-SET, the Melkuist GT800, and the Valley People (Allison) 65K.

TV-4 Series Teleproduction Audio Consoles

TV-4, Harrison's latest teleproduction console offers the best in high-performance audio for television images. Designed to fill the varied needs of the medium-sized video production house, TV-4 is unmatched in versatility by all other consoles. The main application areas of TV-4 are: on-air production, remote production, studio production, sweetening, and postproduction. TV-4 is available in a variety of configurations of up to 52 mono mike/line or stereo line inputs.

Despite its versatility, TV-4's simplicity of operation is inherent by design. Simplified facilities for multitrack production (via the stereo audio submasters) in no way complicate the basic operations that do not require the use of multitrack recorders. Through the latest available technology and manufacturing techniques, Harrison offers a truly "No Compromise" high-performance audio console—at a price well within reach of the medium-to-small video production facility. TV-4 uses thick-film, laser-trimmed resistive network technology throughout, providing exceptional long-term stability with no user adjustments necessary. The latest high-speed, low-noise, low-distortion amplifiers assure the best possible electronic performance. The extensive use of multipin input/output connectors means rapid installation and system troubleshooting.

- 4 main stereo-output assigns the 4 individually derived main mono-output assigns for versatile mix-minus or "clean feed" matrix
- Up to 8 stereo analog audio submasters
- 3-band state-variable EQ with continuously variable frequency select and boost/cut on each mono mike/line input
- Peaking/shelving EQ curves selectable in both high and low bands
- 4 selectable bandwidth (Q) curves available for mid-band EQ
- Continuously variable high-pass filter, at 12dB per octave (range: 26Hz to 2.6kHz), on each input
- 4 mono auxiliary sends and 1 stereo cue send from each input, each with individual pre/post and on/off switching
- 4 mono auxiliary (summed feed) sends from each stereo submaster, each with individual pre/post and on/off switching
- Left/right panning via the stereo submasters (On consoles not fitted with submasters, stereo panning is via the PGM-1 and PGM-2 main stereo output pairs) Each panning control has individual "pan enable" switching
- Module insert patch-point selectable on/off by insertion/removal pushbutton (pre/post-fader, pre/post-EQ, or pre-EQ/post-fader)
- Simplified multitrack send and receive facilities via the stereo submasters (when so equipped)
- Video switcher/editor interface (VSI) available for true audio-follow-video operation. All audio cross-fade operations may now be performed "in console" with no need for console direct outputs or external switcher crossfade modules
- Pre-fader listen (PFL) function, standard
- "Automatic" pre-fader listen (APFL) function allows listening to what has been muted, standard
- Optional non-program-interrupt after-pan listen (APL) function
- Optional direct output from each input channel
- 4 effects returns available (on dual program-master-module motherboards only) as extra-cost option
- Patchbay assembly may be ordered fitted to either right- or left-hand side of console
- Complete ARMS, Harrison VSI, or Mastermix automation fader packages standard on multipin header on each input strip. No fader change necessary when changing or upgrading to automation
- Center detents on all pan and EQ boost/cut controls, internally trimmed for true "zero" at detent
- Phantom power enable/defeat switching on each mike/line input module
- 12-segment LED bargraph VU meters supplied standard
- Moving-coil pointer-type VU meters, 36-segment LED bargraph VU/PPM meters, NTP or RTW plasma-type PPM meters, or Harrison DS-1 computer videographics metering subsystem available at extra cost
- True "minimum signal path" design
- Module insert patch-points are always driven. May be used as extra cue, IFB, direct out, etc.
- Remote control of individual channel on/off may be fitted at moderate extra cost.

TV-4 Series

- Proprietary summing-bus architecture results in the lowest cross-talk and noise floor yet available in any console
- Latest high-speed, low-noise, low-distortion amplifiers; all amplifiers in audio path are 5532, 5534, or LF353 integrated-circuit packages
- All insert patch-points (feeds and returns) are balanced and floating at nominal line level (without sacrifice in module internal headroom)
- VCA fader assemblies, standard
- Penny & Giles 3000 Series conductive-plastic fader assemblies, standard
- All logical switching functions under electronic (solid-state) control; console contains no relays
- Discrete-transistor microphone-preamplifier input stage
- Fully balanced, differential, transformerless solid-state inputs and outputs
- Dual microphone inputs for each mike/line input module
- Dual internal bipolar power rails
- 4 LEDs indicate channel status: On/Off, PFL, VCA, and APL.

- All input/output connectors supplied with console system (except optional microphone XLRs)
- Module-to-frame interconnections are via DIN-standard 64-way hard-gold Eurocard connectors, not printed-circuit-board edge connectors
- All high-level console input/output connections via DIN-standard 30-pole Tuchel-type connectors. (Microphone inputs optionally available on DIN-standard 30-pole or XLR connectors)
- Internal frame wiring via shielded ribbon cable and multipin ribbon-cable headers; hand-wiring is virtually eliminated
- Complete frame and patchbay assembly constructed entirely of heavy-gauge aluminum. Legs are welded carbon steel
- Entire console is designed for rapid and effective field service with minimal use of soldering iron. Active components are mounted in sockets, and all potentiometers are fitted with 3-pin AMP "quick connect" connectors.

SeriesTen

SeriesTen Audio Control Console

The SeriesTen is the first totally automated audio control console system ever produced. The SeriesTen is a virtual console, embodying sophisticated internal signal routing circuitry on each console module. Under the control of the SeriesTen's central facilities, the form and function of any desired console system can be dynamically created in the SeriesTen. All of the wide range of Harrison Systems' console architectures can be created in SeriesTen, used for a specific purpose, and saved by the automation system for later use. It can be reset to any configuration in less than one video frame, including all signal flow parameters as well as all values and settings for all system facilities. Specifically, it can be instantly configured to any of the following console architectures:

1. Dual path inline multitrack recording and production. Similar to the MR-2, MR-3, and MR-4.
2. Stereo television and broadcast production and post-production with independent multitrack facilities. Similar to the TV-3 and TV-4 systems.
3. Complex film post-production re-recording (dubbing) in mono, 2 channel stereo, left-center-right 3 channel stereo and 4, 6, and 8 channel Dolby cinema formats. Similar to the PP-1 system.
4. Fixed or touring live performance and venue systems for house sound reinforcement and stage monitoring use. Similar to the HM-5 and SM-5 systems.

In all architectures, the system configuration, status, features, and facilities are totally dynamically automated with hard disk, multi-processor, multi-tasking automation computer system. All automation functions are frame accurate.

Module

In the design of the SeriesTen system, the signal flow architecture of all of the required console module configurations were rationalized into a single module design. This module may be programmed dynamically to fulfill the signal flow functions required at any level of any SeriesTen console configuration.

The module can be programmed to any of the four following functions (other programming possibilities exist):

1. Dual signal path mono input module. Dual path, inline (input/output/monitor) module for multitrack recording, mixing, and production use. All facilities are provided for a mono microphone or line input, a multitrack feed, a multitrack return, and a multitrack monitoring position. Each module has two complete, totally independent and automated signal paths, yielding double inputs on each module for complex remix and post production operations.
2. Stereo line input module. Stereo input module for stereo sources including, but not limited to: stereo tape recorders, stereo tape cartridges, turntables, CD players. Also serves as a full features stereo return module for signal processing and effects returns.
3. Stereo audio group module. Stereo audio group module which provides an intermediate control level in traditional (broadcast/venue) console architectures. Also serves as a dialogue, effects, and music submasters in film architecture. Up to 8 SeriesTen modules may be designated to function as stereo audio group modules in a multitrack system. Up to 16 may be designated in a purely post-production system.
4. Stereo program master. Stereo or mono program master output module. Up to 8 SeriesTen modules may be fitted for this function, for motion picture or other complex post-production applications.

AIR-790™/PRO-790™ Audio Consoles**Common Features**

- Modular construction
- Program assign switches allow the module signal to be freely assigned to two stereo programs and two mono programs
- Program feeds may be used for any purpose
- Main fader used on the input modules is a high quality conductive-plastic unit made by Penny and Giles of England
- Fader does not directly carry audio, but instead carries a DC voltage which is used to control VCAs (voltage controlled amplifiers)
- Use of VCAs gives a great degree of protection against dirty faders and their attendant noises
- Use of VCAs also guarantees more precise tracking between the two sides of a stereo signal being controlled by a single fader, and silent, click-free muting

AIR-790 Broadcast Console

The AIR-790 is an on-the-air radio broadcast console. There are three types of input modules for the three types of inputs normally utilized in radio broadcasting:

- **Stereo Line Input.** For line level stereo sources that require logic interface (CD players, cart machines, turntables, etc.).
- **Mono Microphone Input.** For microphone level mono sources that require logic interface for the talent (cough buttons, talk buttons, On and Off tallies, etc.).
- **Remote Line Input.** For line level stereo sources that do not require logic interfaces (satellite links, phone hybrids, remote lines, etc.).

All of the input modules share certain features. The three-switch (Off-On-Audition) electrically-interlocked logic control system is the heart of the operation of all the AIR-790 input modules. This logic control system makes it impossible for the console operator to accidentally have an input on the air and at the same time on audition. It also allows for the direct transfer of an input from the on-air buses to the audition bus, or vice-versa. There are only three possible states of the logic control system:

- **Off.** The module signal is not routed to either the audition bus or the program assign switches.
- **On.** The module signal is routed to the program assign switches, but not the audition bus.
- **Audition.** The module signal is routed to the audition bus but not the program assign switches.

All of the input modules have an identical array of four program assign switches. The assign switches themselves do not carry audio. Instead, they carry a logic signal which controls solid-state assignment switching.

When the fader is pressed below the bottom off position, the module input signal is sent to an "in-console" cue speaker and optionally to the control-room headphone and/or loudspeaker monitors.

Each of the input modules has an internal jumper array which allows the module to control the muting in the control room or either of the studios. Additionally, any of the input modules may be set to control the timer. The Mono Microphone Module has two sets of jumpers, one for each of the two inputs, only one of which is active at a time.

AIR-790

PRO-790

PRO-790 Production Console

The PRO-790 is a general purpose production console. There are two types of input modules, one for monophonic microphone and line level inputs, and the other for stereo line level inputs:

- **Mono Microphone/Line Input.** For microphone and line level mono sources that require fader start logic (CD players, cart machines, turntables, etc.) with equalization and other processing.
- **Stereo Line Input.** For line level stereo sources that require fader start logic (CD players, cart machines, turntables, etc.) with phase coherent stereo equalization and other processing.

In addition, any of the three types of input modules from the AIR-790 may be fitted in PRO-790 systems when equalization is not required.

The input modules share certain features. The fader/logic control system is the heart of the operation of the PRO-790 input modules. This logic/control system makes it possible for the console levels and mutes to be controlled by the fader and associated switches, by VCA fader grouping, or by Harrison's proprietary video switcher/editor interface (VSI).

The VSI allows for direct control of levels and mutes from video editors or switchers. Both parallel and serial control ports are provided. Crossfades become part of the Edit Decision List. Audio can follow video in production, without a separate external control device.

Monophonic input (PFL) and stereo after pan listen (APL) solos are fitted as standard. Harrison's unique Automatic Pre-fader Listen (APFL) logic provides hands free cueing while editing.

Both types of input modules have an identical array of four program assign switches. The assign switches themselves do not carry audio. Instead, they carry a logic signal which controls solid-state assignment switching.

Each of the input modules has an internal jumper array which allows the module to control the muting in the control room and/or either of two studios. Additionally, any of the input modules may be set to trigger the timer.

HARRISON SYSTEMS, INC.*Recording Consoles***MR-4 Series Music Recording Consoles**

The MR-4 music recording console is designed for the most demanding original-multitrack music recording user. The versatility of the MR-4 is unmatched by other consoles, and its ease of operation is equally unprecedented. System signal-flow switching allows the mixing engineer to precisely define, on a module-by-module basis, the exact console configuration for each session's needs.

- Full and complete 24-track output assignment matrix
- Direct output from each input/output channel
- Odd/even multitrack panning capability
- Complete 24-track multitrack monitor with individual panning and level controls
- Unique monitor-to-multitrack bus assign for ease of "ping-ponging" (multitrack combine)
- Dual independent stereo-mix output buses for easy mix-minus operation
- Pushbutton insertion/removal of module insert patch-point
- Pre/post source select for module insert patch-point
- Movable jumper selection of module insert patch-point (pre/post-fader, pre/post-EQ, or pre-EQ/post-fader)
- 3-band state-variable equalizer with continuously variable frequency select and boost/cut on each input
- Continuously variable high-pass filter, at 12dB per octave (range: 26Hz to 2.6kHz), on each input
- Peaking or shelving EQ curves selectable in both high and low EQ bands
- 4 selectable bandwidth (Q) curves available for midband EQ
- Each EQ band has individual in/out switching
- Each EQ band may be routed to either the main or monitor channel
- High-pass filter may be routed to either the main or monitor channel
- 4 mono auxiliary sends and 1 stereo cue send from each input, each with individual pre/post switching
- Feeds for stereo cue and all auxiliary sends may be individually derived from main or monitor outputs
- Four effects returns and ARMS/Mastermix automation master controls, standard
- Pre-fader listen (PFL) function, standard
- "Automatic" pre-fader listen (APFL) function allows listening to what has previously been muted, standard
- Optional after-pan listen (APL) function, non-program-interrupting
- 4 LEDs indicate channel status: On/Off, PFL, VCA, and APL
- Complete Harrison, ARMS, or Mastermix automation fader package provided on multipin header on each input/output strip. No fader change necessary when adding automation

Technical Highlights

- Proprietary summing-bus architecture results in the lowest crosstalk and noise floor yet available in any console; assures constant low noise, regardless of number of inputs present
- Latest high-speed, low-noise, low-distortion amplifiers: all amplifiers in audio path are 5532, 5534, or LF353 integrated-circuit packages
- All insert patch-points (feeds and returns) are balanced and floating at full line level (without sacrifice in module internal headroom)
- Extensive use of laser-trimmed, thick-film resistor networks assures long-term circuit stability with no user adjustments necessary
- VCA fader assem-

MR-4

- Penny & Giles 3000 Series conductive-plastic fader assemblies, standard
- All logical switching functions under electronic (solid-state) control; console contains no relays
- Discrete-transistor microphone-preamplifier input stage
- Fully balanced, differential, transformerless solid-state inputs and outputs

Installation and Service Highlights

- Module-to-frame interconnections are via DIN-standard 64-way hard-gold Eurocard connectors, not-printed-circuit-board edge connectors
- All high-level console input/output connections via DIN-standard 30-pole Tuchel-type connectors. (Microphone inputs optionally available on DIN-standard 30-pole or XLR connectors)
- All input/output connectors supplied with console system (except optional microphone XLRs)
- Internal frame wiring via shielded ribbon cable and multipin ribbon-cable headers; hand-wiring is kept to a minimum
- Complete frame and patchbay assembly constructed entirely of heavy-gauge aluminum. Legs are welded carbon steel
- Entire console is designed for rapid and effective field service with minimal use of soldering iron. Active components are mounted in sockets, and all potentiometers are fitted with 3-pin AMP "quick connect" connectors

Moving-coil pointer-type VU meters, 40-segment LED bargraph VU/PPM meters, NTP or RTW plasma-type PPM meters.

PP-1 Post-Production Consoles

A major development is the concept of "Distributed Control Intelligence" (DCI). This involves placing an individual microcomputer in each input module of the console. This "DCI" concept offers the end-user many advantages over the older "hardware logic controlled" analog consoles. Included in these advantages are tremendously expanded automation opportunities, improved ergonomics (human engineering), better reliability, easier maintenance, and many side benefits such as noiseless switching.

PP-1 Post-Production Consoles

**Input Module — Automated Features**

- Input pad (-20, -10, 0, or +10dB)
- "B" line input select
- Phase reversal
- 2 A/B insert patch points
- In/Out switching for each of the 4 parametric EQ sections
- In/Out switching for the parametric hi & low pass filters
- Channel mute
- Fader level
- VCA group select with 7 segment LED readout display

Other Input Module Features

- State-Variable 4 band parametric equalizer. Each band is fitted with continuously variable boost/cut, frequency select, and bandwidth controls
- Selectable 2 or 3 channel panning with true divergence control
- 4 echo sends
- Solo-in-Place, with echo
- Unique "cuing" feature: electronic "prefader listen" function under software control. This feature allows monitoring of an input when the fader is either pulled all the way down, or when the channel is muted. The input signal is then superimposed over the mix on the monitors, but is not sent to the main buses, therefore not destroying the mix. This yields a very powerful function for tight punch-ins and punch-outs
- Built-in self-diagnostic routines. Each input's 7 segment VCA group select LED readout doubles as an indicator for diagnostics, troubleshooting and calibration.
- Automation control switching which enables any input to function in any automation state
- Separate solo and mute functions

Output Capabilities

- Individual left, center, and right, each operating position
- Individual 8 bus re-assign, each operating position
- Individual 4 echo sends, each operating position
- Composite left, center, and right, combining all positions
- Unique recorder input composite matrix
- 8 wide external meter select and pad

Other Console Features

- Two separate intercom systems
- Individual and master recorder controls
- Instrument quality test oscillator with pink noise generator
- Isolated oscillator of fixed frequency and level to facilitate recorder alignment
- Oscillator may be remotely activated

Frame Configurations:

- Primary and Secondary frames are available to accommodate from 9 to 27 inputs in multiples of 3
- A Secondary Section, in effect, is a pre-mix section. Each secondary section is supplied with 8 main output buses, left, center, and right panning buses, and 8 re-assign buses
- A Primary Section takes the main output feeds and the left, center, and right panning feeds from all sections, including itself, and sums these signals for composite matrix output assignments.

Prices By Factory Quote Only

HEDCO**Routing Switchers****SRB 8/1 Video Switcher**

- 8 Video Inputs
- Broadcast Quality
- LED Indicators
- Single RU Frame
- Remote Option
- Meets AVR-1 Specs

SRB-8/1 Video Only Routing Switcher is our plain vanilla unit. Frame houses one VSM-9 and one VPS-153 module with front panel access for maintenance. Local front panel displays video status on LEDs. Compact rackmounting with excellent performance.

Rear Panel shows loopthrough BNC video inputs which exhibit $> 50\text{dB}$ return loss. Dual video outputs have $> 0.1^\circ$ diff. ϕ . 0.1% diff G and 0.1dB response. Equipped with captive AC cord and remote plug for parallel control.

RCP-100 Remote Panel has 8 LED switches mounted in 19" single RU panel. Single wire per crosspoint control.

**Ordering Information**

SRB 8/1 8 input, video only

Options

RCP-100 Remote 8/1 Panel

CAB-1 Cable for RCP-100

SRX-162 Extender Module

LCP-100 Local Control Panel

SRB-182 AFV Switcher

- 8 Video Inputs
- 8 Audio Inputs
- AFV Operation Only
- One RU Frame
- Remote Option
- Meets AVR-1 Specs

The **SRB-182 AFV Switcher** frame construction is identical to the SRB 8/1 above except for the rear panel. Audio Follow Video operation is standard and controlled locally by LED switches mounted on the front panel. Audio response of 0.1dB from two outputs with $< 0.1\%$ THD at levels up to $+24\text{dBm}$ over the range of 20Hz to 20kHz .

Rear Panel of the SRB-182 AFV Switcher shows loopthrough BNC video inputs and dual video outputs. Audio inputs and outputs are through an RDI terminal block for ease of wiring. Equipped with captive AC cord and remote plug for parallel AFV control.

Options

RCP-100 Remote 8/1 Panel

CAB-1 Cable for RCP-100

SRX-162 Extender Module

LCP-100 Local Control Panel

SRB-481 Dual Video Switcher

- Dual Video
- 8 Input Groups
- Separate Control
- Vertical Interval
- Two Remote Panels
- Meets AVR-1 Specs

SRB-481 Dual Video Switcher provides two independent 8 input, dual output video switchers in a single RU frame. Frame houses one VPS-151 power supply and two VSM-9 video modules with fold down front panel access. Independent vertical interval switching on last video.

Rear Panel of the SRB-481 show an independent set of BNC looping inputs and dual outputs for each video group. Contact closure to ground on a single wire per crosspoint through the individual rear mounted connectors provides parallel remote control. Equipped with a captive AC cord and fuse protection.

HEDCO

Routing Switchers

SRU-YRGB Video Switcher

- YRGB or RGB Switching
- Single Control Panel
- Dual Outputs per Bus
- Two RU Frame
- Complements UltiMatte®
- Meets AVR-1 Specs

SRU-YRGB Video Switcher consists of four individual 8 input, one bus VSM-900 switchers in a two RU frame. Outputs are simultaneously controlled by one RCP-100 panel to provide Y, R, G, B switching. Dual outputs on each bus allow monitoring and direct feeds. Unit may be used for 3 channel RGB switching by removal of one VSM-900 module.

Back Panel Shows four groups of 8 loopthrough BNC inputs for Luminance (Y), Red (R), Green (G), and Blue (B). Each channel has dual outputs. Equipped with a standard AC connector and a 1A Circuit Breaker/Switch.

RCP-100 Control Panel provides 8 LED switches for singular control of all channels. Panel is single RU high and mounts in a standard 19" rack.

Ordering Information

- SRU-YRGB 4 Channel YRGB Video Switcher
- SRU-RGB 3 Channel RGB Video Switcher
- RCP-100 Control Panel for 8 Inputs
- CAB-1 Cable for RCP-100

Option
SRX-162 Extender Module

MRA/MRB-8/8 Audio and Video Switchers

- 8 Inputs • Up to 8 Output Buses • Up to 4 Channels • Audio, Video, AFV • Dual Power Supplies • Vertical Interval Switch • Differential Audio In/Out • Meets AVR-1 Specs

MRA/MRB 8/8 Audio and Video Routing Switchers provide 8 buses which can select from 8 buffered inputs. Each bus including control logic, transparent switches and output amplifier is contained on one module. A separate buffer module feeds signals through a motherboard to each crosspoint module. Frame has space for redundant power supply and all modules are removable from the front.

MRA Rear Panel shows the eight looping inputs and dual outputs on each bus. Frame space for two redundant VPS-154 power supplies, one VBM8 buffer module and eight VCM8 crosspoint modules. Individual connectors for looping and bus control. Separate AC inputs.

RCP-104 Control Panel controls up to eight buses using individual rotary pushbuttons plus take pushbuttons for selections. Panel is standard 19" width and requires only one RU of space. LED indicators.

Ordering Information

Size	Video	Audio
8 Inputs/1 Out	MRA 8/1	MRB 8/1
8 Inputs/2 Out	MRA 8/2	MRB 8/2
8 Inputs/3 Out	MRA 8/3	MRB 8/3
8 Inputs/4 Out	MRA 8/4	MRB 8/4
8 Inputs/5 Out	MRA 8/5	MRB 8/5
8 Inputs/6 Out	MRA 8/6	MRB 8/6
8 Inputs/7 Out	MRA 8/7	MRB 8/7
8 Inputs/8 Out	MRA 8/8	MRB 8/8

MRB Rear Panel shows the RDI terminal blocks for audio differential inputs and outputs. Frame contains space for two APS-155 power supplies, one ABM8 buffer and eight ACM8 crosspoint modules. Individual connectors for bus control plus looping connectors. Separate AC inputs.

RCP-100 Control Panel is equipped with LED switches for control of 8 inputs on one bus. Up to eight panels may be used at separate locations for video, audio or AFV operations. Single wire per crosspoint.

Control Panels

- RCP-100 Panel, 8 Inputs, 1 Bus
- RCP-102 Panel, Dual 8 In for 2 Buses
- RCP-104 Panel, TW/Take for 8 Buses
- CAB-1 Cable for RCP-100, RCP-102
- CAB-3 Cable for RCP-104 (2 RQD)

Options

- REX-161 Extender Module
- VPS-154 Redundant Video P.S.
- APS-155 Redundant Audio P.S.

**IRS 48 x 48 AUDIO/VIDEO
INTERMEDIATE SIZE ROUTING SWITCHER**
**IRS 24 x 24 VIDEO AND 3 CHANNEL AUDIO
INTERMEDIATE ROUTING SWITCHER**

- No fans or blowers are required. Thermal design provides for efficient heat removal. All integrated circuits are state-of-the-art, require very little power and are mounted in high quality I.C. sockets. All components are off-shelf and most dual sourced, available from an electronic parts house near your location.
- All modules are identified by matrix card slot for the computer software, not by individual module. Permits total type interchange.
- Back-plane inputs and outputs (signal I/O) modules are direct plug-in, with no intervening cables or wires to cause signal degradation or timing changes which complicate future maintenance problems.
- Each module has close tolerance on-board voltage regulators for maximum isolation characteristics. The input to each regulator is fused and its output is protected by automatic thermal shutdown and current limit.
- The video buffer has Differential Inputs to assure a high degree of common mode or hum rejection.
- The video channels use vertical interval switching featuring back porch clamping to assure bounce-free switching between signals with widely different APLs. No SC traps are used. The circuit is designed to clamp only when there is a difference in DC levels, thus helping to maintain excellent system transparency.
- Audio input is balanced differential for either balanced or unbalanced sources, has input impedance greater than 50K ohms and operates at levels up to +24dBm.
- Dunker circuit gives "pop free" on-line audio switching.

IRS 48 x 48

System can start as small as 12 x 12, single channel, and expand to 48 inputs by 96 outputs with up to four channels of Audio, Video and Time Code in any combination.

The IRS is available as individual Video, Audio 1, Audio 2, and/or Time Code Matrices with a maximum capacity of 48 inputs by 48 outputs in just 17 rack units, (29.75").

IRS 24 x 24

Can start as small as 12 x 12, single channel, and expand to 24 inputs by 24 outputs with up to three channels of Audio.

IRS CONTROL PANELS

This series of control panels can be used on all HEDCO microprocessor based routing switchers. Control is via shielded twisted pair (balanced) using RS 422 protocol, MPU 6803 based.

RCP-301: Basic single bus control panel. Keypad entry, Audio follow Video.

RCP-302: Single bus control panel. Keypad entry, separate Audio and Video selection.

RCP-303: X-Y control panel. Keypad entry for control of all buses. Audio follow Video.

RCP-304: Single bus control panel. Keypad entry, separate Video and two channel Audio selection.

RCP-311: 1 R.U., 16 pushbutton "shot box" panel. Buttons can be easily programmed to access any 16 inputs of 24, all levels.

RCP-306: X-Y control panel. Keypad entry for control of all buses. Separate Video and two channel Audio selection.

RCP-307: Single bus control panel. Keypad entry, separate Video and three channels of Audio.

RCP-310: 2 R.U. 48 pushbuttons. (IRS 48 x 48 only)

RCP-305: 1 R.U. 24 pushbuttons. (IRS 24 x 24 only)

IRS 24 x 24

IRS FRAMES

Both Models' Switchers are contained in 17 rack units 29.75".

IRS MODULES

IVI-611 Video Input Buffer

- Back porch clamp
- Differential inputs
- Equalization for 200' of 8281 or equivalent cable
- On board power supply regulation
- 6 buffers per module

IXP-144 Audio or Video Crosspoint

- 12 x 12 array
- Crosspoints are transistor arrays in IC sockets
- Vertical interval switching (refer to house sync)
- On board power supply regulation

IYO-612 Video Output Amplifier

- On board power regulation
- 6 output amplifiers per module
- Two separate full level outputs per amplifier
- Output gain unity, ± 3 dB adjustable

IAI-601 Audio Input Buffer

- Accepts balanced or unbalanced audio lines
- Differential inputs
- S/N ratio > 90dB
- On board power regulation
- 6 buffers per module

IAO-602 Audio Output Amplifier

- 600 ohms or 150 ohms outputs
- 6 output amplifiers per module
- Two separate full level outputs per amplifier
- +24dBm max. at 600 ohms; +27dBm max. at 150 ohms

ICL-412 Computer

- One required for each 12 buses
- On board diagnostics
- Non-volatile E² RAM for unlimited memory retention
- MPU 6803 based at 76.8 Kbaud

ICI-401 Bus Interface

- One required for each 12 buses
- Uses RS-422 bi-directional controls
- Change module for RS-232-C

HEDCO

Routing Switchers/Distribution Amplifiers

HD-12 Routing System

- 12 X 12 Audio and video in one 2RU frame
- 12 x 12 Stereo audio in one 2RU frame
- Serial control card included in each frame, RS232 and RS422 ports
- High definition performance
- Multi level control-breakaway or AFV

The HD-12, 12-input, 12-output audio and video switcher series is designed to fill the requirements for routing switchers between the HEDCO's SR and MR series small switchers and the IRS, intermediate size switchers.

The HD-12V Video Switcher is housed in a two rack-unit frame, complete with power supply and RS232/RS422/RS485 serial control card. The HD-12A audio frame will house either single 12 X 12 audio or stereo 12 X 12 audio. A 12 X 12 video with stereo audio switcher is available in four rack units including power supplies and serial control. Also, a 12 X 12 Video and 12 x 12 Audio Switcher is available in one 2 rack unit frame. Since each switcher frame, either audio or video, has its own serial control card, the frames may be remotely controlled, together or separately, on the same common party line. Front panel local control is available as an option.

HD Series Distribution Amplifiers

Any mixture up to twelve HDA modules or power supplies can be included in the HD series frame.

AUDIO

- HDA-201** Audio line amplifier, 8 outputs, gain adjustment per output. (Available in configurations of 1 X 4 stereo, 1 X 8 stereo unbalanced, 1 X 16 unbalanced) \$350.00
- HDA-202** Audio DA, 8 output balanced. 250.00
- Option:**
- HDR-200** Remote gain cell (two cells maximum per HDA-201) 135.00

VIDEO

- HDA-101** Video distribution amplifier, 8 output \$295.00
- HDA-102** Equalizing DA, 8 outputs (equalizes 1000 ft. of 8281 type cable. 355.00
- HDA-103** Equalizing DA, 8 outputs (equalizes 2000 ft. of 8281 type cable. 355.00
- HDX-100** Extender 125.00

Frames and Power Supplies

- HDF-100** Distribution frame complete with single power supply, 3RU \$615.00
- HPS-100** Redundant power supply (120V or 240V). 335.00

600 Series Distribution Amplifiers

VIDEO

- VDA-601** Video distribution amplifier, 6 outputs \$175.00
- VDA-602** Equalizing DA, 6 outputs 215.00
- VDA-605** NTSC subcarrier DA, 6 outputs 205.00
- VDA-606** PAL subcarrier DA, 6 outputs. 205.00
- VDA-608** Video linear DA, 6 outputs. 125.00
- VDA-608WB** 60MHz wide band DA, 6 outputs 190.00
- VDA-609** Regenerative pulse DA, 6 outputs 185.00

AUDIO

- ADA-600** Audio line distribution amplifier, 6 outputs \$185.00
- ADA-601** Ultra low noise line amplifier, 12 unbalanced outputs 130.00
- RAD-600** Remote gain line DA, 6 outputs 245.00

Frames and Power Supplies

Frames are complete with a single power supply; redundant power supplies can be added to any of the 6000 series frames.

- ADF-6000** 10-DA Audio frame with one power supply, 2RU \$675.00
- ADF-6400** 4-DA Audio frame with one power supply, 2RU 540.00
- VDF-6000** 10-DA Video frame with one power supply, 2RU 675.00
- VDF-6400** 4-DA Video frame with one power supply, 1RU 540.00
- AVF-6000** Combined 5 audio, 5 video DA frame with one power supply, 2RU 675.00
- AVF-6400** Combined 2 audio, 2 video DA frame with one power supply, 1RU 540.00
- VPS-180** Redundant power supply (120V or 240V). 265.00
- DEX-160** Extender 80.00

HEDCO

Distribution Amplifiers/ Routing Switchers

SAA-320 Hedline 8-Output Audio Distribution Amplifier
SAA-330 Hedline 8-Output Audio Remote Gain Amplifier

- Balanced, differential inputs providing exceptional common mode rejection
- Outputs are balanced
- Mini-phono monitoring jack is located on the front panel
- Wide dynamic range
- Low THD
- Flat frequency response
- Self-contained including on-board power supply
- SAA-330 can be controlled via a 2-wire single potentiometer
- Standard gain range of either ± 9 dB or $+8$ to -60 dB is factory set. Other ranges are available to special order
- Available as stand-alone units or rackmounted with 3 or 10 to a frame with any of the Hedline products

Specifications

Input Impedance: > 10K, differential, balanced or unbalanced
Level: + 18dBm max.
Common Mode Rejection: > 60dB at 60 Hz
Output Impedance: 600 ohm or 150 ohm, source terminated
Output Level: + 21dBm at 600 ohms
 + 24dBm at 150 ohms
 + 27dBm voltage mode
Response: ± 0.1 dB 20Hz to 20kHz
Distortion: < 0.1% 20Hz to 20kHz at + 18dBm
Signal-To-Noise Ratio: > 95dB
Power: 115 or 230VAC
 50/60Hz
 10W max.
Weight: 2.4 lbs.
Size: 1.66" H x 5.23" W x 11" D

SAA-320 Audio DA, 8 Outputs \$375.00
SAA-330 Audio Remote Gain DA, 8 Outputs \$435.00

BPE-301 Battery Powered, 8 Output Equalizing Distribution Amplifier

- Cable equalization
- 8 output distribution for applications where AC power is not available
- Self-contained with a rechargeable 1.9AH gel cell battery
- Battery will drive all 8 outputs for more than 8 hours maintaining broadcast quality operation
- Can be charged by any 12V automotive charging system
- Equalize 1000' of 8281 type cable to 30MHz with common mode hum and noise rejection
- 4-pole cable equalizer allows four individual peaking circuits to compensate for various lengths of cable
- Equalization controls are located on the front panel along with gain and response controls
- Differential input is via looping BNC connectors

Specifications

Input Impedance: High impedance, 75 ohm bridging
Input Return Loss: > 45dB to 5MHz
Gain: ± 5 dB at 1V p-p nominal
Output Impedance: 75 ohm ± 0.1 %, source terminated
Output Return Loss: > 40dB to 5MHz
Differential Gain: < 0.25%, 10 to 90 APL at 3.58MHz
Differential Phase: < 0.25°, 10 to 90 APL at 3.58MHz
H or V Tilt: < 1%
Equalization: Up to 1000' of 8281 type cable
Weight: 4 lbs.
Size: 1.66" H x 5.23" W x 11" D

BPE-301 \$435.00

BPE-301

SVS-345

SAS-345

SVS-345/SAS-345 Hedline 4 x 1 Switchers

- Self-contained including on-board power supply
- SVS-345 is a vertical interval switcher with full broadcast specifications, 30MHz bandwidth, two balanced outputs plus a monitoring phone jack on the front panel
- Available as stand-alone units or can be rackmounted with 3 or 10 to a frame
- Both feature looping inputs for output expansion up to 4 x 4
- Local and remote control panels have illuminated, relegendable momentary pushbuttons
- Front panel features a gain adjustment control, LED indication ± 12 V and the fuse

Specifications (SVS-345)

Impedance: High impedance, 75 ohm bridging
Input Return Loss: > 45dB to 5MHz
Output Impedance: 75 ohm ± 0.1 %, source terminated
Output Return Loss: > 35dB to 5MHz
Differential Gain: < 0.1% 10 to 90 APL at 3.58MHz
Differential Phase: < 0.1° 10 to 90 APL at 3.58MHz
H or V Tilt: < 0.5%
Crosstalk: > 60dB to 5MHz
Input/Output Connector: BNC

Specifications (SAS-345)

Impedance: > 10K differential, balanced or unbalanced
Level: + 18dBm max.
Common Mode Rejection: > 60dBm at 60Hz
Output Impedance: 600 ohm source terminated
Output Level: + 18dBm at 600 ohms
 + 24dBm voltage mode
Distortion: < 0.1% at 20Hz to 20kHz at + 18dBm
Crosstalk: > 80dB at 20kHz
Signal-To-Noise Ratio: > 100dB
Input/Output Connector: Barrier strips

SVS-345 4 x 1 Video Routing Switcher with Local Panel . . . \$540.00
SAS-345 4 x 1 Audio Routing Switcher with Local Panel . . . \$540.00

AVM 16 x 1 Video and Stereo Audio AFV Distribution Amplifier

- Provide stereo or audio line switching and stereo audio monitoring as well as video switching in the same self-powered unit
- Solid-state switching
- Switching is referenced to the vertical interval of the last video present
- Dual outputs are provided to isolate monitoring and line switching
- Video section has buffered inputs, "T" style isolation crosspoints and an output amplifier with gain and response adjustments accessible through the front panel
- Video outputs are on standard BNC connectors
- Inputs may be selected by either the local control panel or by the optional remote panel
- Both panels are illuminated and relegendable
- Audio section consists of stereo switching with line outputs and stereo monitoring
- Audio line outputs, left and right, are on a standard barrier strip
- Provide differential balanced around ground signals with maximum + 19dBm levels
- Audio input stages are differential, balanced and bridging, providing high DC and common mode rejections
- Audio line gain controls are also accessible through the front panel holes
- Allows ± 3dB adjustment
- Gain and balance for the audio monitor are front panel mounted

AVM 16 x 1 Video Only or Stereo Audio Only Distribution Amplifier

- Crosspoint control system is designed to turn the selected input cross points on and concurrently turn the previously selected cross-points off
- Initial power-up circuit selects input one
- Power supply is self-contained within the frame
- Each monitor amplifier is built around a single-ended, integrated circuit power amplifier
- Both AC coupled monitor amps have gain and balance controls on the front panel
- Provide 2W into an 8 ohm load
- Output of the complementary line amplifiers feeds an operational amplifier in a differential mode which in turn drives the gain and balance portions of the power amplifier's circuitry
- Output of each power amplifier is wired through the front-panel mounted stereo jack to the rear-panel speaker jacks, allowing the use of either headphones or speakers
- Remote connector may also be used as a tally connector
- Control lines go to ground for the selected input
- Can sink up to 250mA
- Expanding inputs and outputs
- Up to 4 AVM switchers can be connected in series with their outputs terminated in a 4 x 1 switcher
- Separate pushbutton panel controls all switchers
- Can also be combined to expand outputs by using any of the AVM-200 looping input switchers

Video Specifications

Input Level:	1V p-p nominal ± 6dB
Input Impedance:	AVM-100, AVM-101: 75 ohm, 0.1% terminating AVM-200, -201, -202, -203: high impedance bridging
Input Return Loss:	> 40dB to 4MHz
Outputs:	Two 75 ohm 0.1% source terminated
Output Gain:	Unity, ± 3dB adj.
Output Isolation:	> 40dB to 5MHz
Output Return Loss:	> 40dB to 5MHz
Output DC:	> 50mVDC

HSG-100 NTSC Source Synchronizing Pulse Generator

- TCXO temperature compensated crystal oscillator
- Low power consumption (20VA)
- No warm up required
- Genlock/free run, consistent SC/H
- RS-170A specifications
- Master operation
- Master oscillator is a temperature compensated crystal oscillator with negligible warm-up time
- Generator is stable and usable immediately after switching
- When genlocked, it is phase locked to the processed burst derived from the incoming video signal
- Correct sync/subcarrier phase relationship (SCH) in its internal mode
- Front panel SCH indication in the genlock mode of operation
- H phase resolution is within 10ns
- Low power consumption at 20VA
- Low heat generation

TWS Series

HSG-100

Specifications

Pulse Outputs

Number of Outputs: 2 each of sync and blanking, 1 each of H drive, V drive and burst flag

Output Isolation: > 40dB
Level: 4V p-p, adjustable
Impedance: 75 ohms
Spurious Signals: > 34dB down
Output DC: Baseline < ± 200mV

Subcarrier Output

Number of Outputs: 2
Level: 2V p-p, adjustable
Impedance: 75 ohms
Spurious Signals: > 40dB down
Output DC: NIL
Distortion: < 1%

Color Black Output

Number of Outputs: 2
Level: 40 IRE units sync/burst
Impedance: 75 ohms
Output Isolation: > 40dB to 4MHz
Spurious Signals: > 34dB down
Output DC: < ± 100mV

Sync Lock

H Phase Advance: > 12µs
H Phase Delay: > 4µs
Fine Phasing: 4.4ns increments typical
V Phasing: 1 line advance
Lock Jitter
Color Lock: < 5ns
Mono Lock: < 25ns

Performance

HENRY ENGINEERING

Interfaces/Turntable Controller

The Matchbox Interface Amplifier

- Gain is adjustable to +20dB
- +26dBm maximum output level
- .008% distortion, 90dB S/N
- All active direct coupled circuitry
- Does not load or ground studio lines
- Self contained regulated power supply
- Provides extra AC outlet for convenience

The Matchbox is the ideal way to correctly interconnect "Hi-Fi" or Semi-Pro (IHF standard) equipment with professional studio gear. The Matchbox is a bidirectional unit, with four independent amplifiers providing full stereo input and output interface. Two amplifiers convert a stereo IHF Hi-Z unbalanced source to Lo-Z balanced outputs at studio level. A second pair of amplifiers converts a stereo balanced studio line source to unbalanced IHF outputs to feed the inputs of an IHF device. All circuitry is active and direct-coupled for absolute sonic transparency. The Matchbox is compact and lightweight, allowing it to be permanently mounted to most cassette recorders, tuners, portable mixers, etc.

Matchbox

Specifications

- Power Input:** 115VAC, 4W
Fuse: .1A, internal
Dimensions: 6.25" x 3.75" x 2.25"
Weight: 2 lbs.
Adjustments: Studio output level adjustable via front panel access holes

	IHF Input to Studio Output	Studio Input to IHF Output
Electrical Input Level:	-10dBV to 0dBV, nominal	0dBm to +8dBm, nominal
Input Impedance:	25K ohms, unbalanced	10K ohms, balanced
Gain/Loss:	+6dB to +20dB, adjustable	-14dB, fixed
Output Level:	0 to +8dBm nominal, +26dBm max.	-10dBV nominal, +20dBV max.
Output Load:	600 ohms or greater, balanced	2K ohms or greater, unbalanced
Freq. Response:	DC-20kHz, ±0.25dB	DC-20kHz, ±0.25dB
Distortion:	.008% at any level	.008% at any level
Noise Level:	85dB below +4dBm output	75dB below -10dBV output
Number of Channels:	2, "Left" and "Right"	2, "Left" and "Right"
The Matchbox	\$195.00	

Superrelay Utility Control Interface

- Six double-pole relays for low voltage and audio switching
- Solid-state synchronous relay controls 300W of on-the-air lights without buzz, pops, or arcing. (1000W version available)
- Built-in flasher, can be defeated for constant-on mode
- Can be controlled by switch, relay, CMOS and TTL compatible
- Can be connected to telco line for ring control switching
- Built-in power supply, 24VDC available for utility use

Superrelay

Superrelay is a multipurpose control interface for use in broadcast station control rooms, A/V systems, or any installation requiring multiple circuit control. Superrelay is ideal for controlling the various equipment functions that need to be switched when, for example, a control room mike is turned on, e.g., EBS receiver mute, intercom speaker defeat, telephone bell disconnect, skimmer recorder start, "On The Air" warning lights on, etc. Superrelay can be controlled by virtually any console's muting output, or by any external switch, either momentary or maintained. It provides two types of outputs: relay and switched AC. Six relays can be used for low voltage and audio switching; a switched AC output will directly power up to 300W of "warning lights" and make them flash. Superrelay can also be connected to any dial-up telephone line for control of equipment when the line rings.

Superrelay **\$195.00**

Universal Turntable Controller

- Works with most console remote control facilities, or use "outboard" switches
- Tally lamp outputs accommodate illuminated pushbuttons
- No contact bounce or false operation
- CMOS circuitry is RF immune...no relays
- Self contained regulated power supply
- One UTC controls two turntables

The Universal Turntable Controller is a control interface unit for use in conjunction with Technics (SP10, SP15, SP25, SL1200 MKII) and Russco direct drive professional turntables.

The "UTC" adds remote control facilities to these turntables. It converts the turntable's "single button" control logic so that separate start/stop switches can be used to operate the turntable. The UTC also provides outputs to drive 24VDC tally lamps for run and stop mode indication. The turntable's start/stop switch can still be used for cueing records, and the Universal Turntable Controller will always remain "in sync". It easily connects to the turntable with just three wires, and may be controlled by either momentary switches or CMOS circuitry. One UTC will control two turntables.

Universal Turntable Controller **\$195.00**

HENRY ENGINEERING

Radio Control Room Equipment

SynchroStart Turntable-Recorder Synchronizer

- Start-muting for two turntables, individual delay adjustments
- Compatible with any cartridge or reel-to-reel recorder
- Either or both turntables can auto-start recorder
- Recorder will auto-start only if in record mode
- Audio inputs/outputs are electronically balanced, direct coupled
- Timer output will start external timer when recorder starts

SynchroStart is a turntable-recorder synchronizer with automatic turntable start-muting. It has two primary functions when used with a turntable and cartridge recorder: (A) It eliminates "cue burn," record surface noise, and accidental turntable "wow-in" and (B) takes the guesswork out of dubbing records to tape cartridge. SynchroStart mutes turntable audio during disc start-up, so that all noise preceding the start of audio is squelched. The audio is "ramped up" smoothly; a disc may be cued within audio permitting efficient "real time editing" of musical content. SynchroStart also provides a synchronized output to start a cartridge recorder at the exact moment the beginning of disc audio is beneath the playback stylus. Carts are consistently "tight" with one-button ease. The unit is fully automatic, needing no user adjustment once installed.

SynchroStart\$395.00

Telecart Audio Message Telecontroller

- All cart machine connections are opto and relay isolated
- Audio circuit is transformer-coupled for line isolation
- Digital call counter registers up to 999 calls received
- Failsafe design permits unattended automatic operation
- Can be used with phone systems requiring A-lead control
- Built-in power supply; does not draw power from phone line

Telecart is an automatic answering unit that permits a standard NAB-type cartridge machine to answer a telephone line and play a recorded message to the caller. Telecart will work with virtually any cart machine; no auxiliary control tones or relays are needed. The unit is fully automatic for unattended operation. Its "failsafe" design prevents the line from being answered unless the message cart is cued and ready to play. If a caller hangs up before the message has finished playing, Telecart will hold the line "busy" until the cart has re-cued. The line is then released and a new call may be received. A digital call counter registers the number of calls answered up to 999.

Telecart\$195.00

LogiConverter Studio Equipment Control Interface

- All inputs are opto-isolated
- All outputs are relay-isolated
- User-programmable logic translation
- Compatible with TTL/CMOS/Open-collector logic
- Inputs/outputs can be momentary or maintained
- Start-only or start-stop from single input signal

LogiConverter is an interface unit that facilitates remote control of broadcast studio equipment. It eliminates the incompatibility often encountered when a broadcast console is used to provide remote start-stop control of peripheral equipment. LogiConverter converts TTL/CMOS or "open-collector" console outputs to relay closures for remote interface that is compatible, reliable and isolated. It (A) isolates the control circuitry and (B) translates the logic to best suit the device being controlled. All LogiConverter inputs are opto-isolated; outputs are SPDT (Form C) relay contacts. The unit can be user programmed via internal "dip switches" to generate either momentary or maintained outputs from various inputs, with 24 input/output combinations possible. LogiConverter will control up to 4 circuits, and can provide start-only or start-stop outputs from a single input signal.

LogiConverter\$195.00

SynchroStart

MixMinus Plus

MixMinus Plus Differential Summing Amplifier

- Null adjustment provides 40dB of hybrid signal rejection
- Program input accepts nominal +4 to +8dBm level
- Receive input accepts -28 to -10dBm level from fader
- Output will drive up to +26dBm into 600 ohm load
- Inputs and outputs can be balanced or unbalanced
- Internal regulated bipolar power supply

MixMinus Plus is a differential summing amplifier designed to add a "Mix-Minus" output to a broadcast audio console. This output is typically used to feed the Send input of a telephone hybrid device. MixMinus Plus has two inputs and one output. One input is fed with the Program output of the console. The second input is fed with the hybrid Receive audio, tapped just after the "phone" channel fader on the console. MixMinus Plus subtracts the hybrid Receive signal from the Program output, thus creating a Program mix minus the Receive audio. The null adjustment will provide 40dB rejection of the Receive audio signal (30Hz-3kHz). MixMinus Plus is easily connected to most consoles and needs no adjustment once installed. The overall gain is unity.

MixMinus Plus\$195.00

HITACHI DENSHI, LTD.

Video Tape Recorder/Player

HR-230

High Performance 1" Production VTR

- High quality recording/reproduction
- Interchangeability with all Type C tapes
- 2-hour/3-hour reel operation selectable
- -1 to +3 times variable play speed (option)
- Built-in 4H p-p TBC (option)
- Auto set-up of optimum record current
- Video confidence (simultaneous playback)
- DG/DP compensation circuit
- Deviation marker for modulation setting
- Auto chroma function
- Built-in cable compensator
- Auto set-up of optimum bias current
- Audio confidence (simultaneous playback)
- Linked left-right volume control possible
- Peak level display by LED
- Audio spot erase function
- Built-in monitor speaker
- Digital servo system
- Quick start of tape travel
- Hand advance of tape under servo control
- Automatic color framing
- Any size of reel usable without servo switching
- Protective Reverse Oxide (PRO) tape path
- Non-contact head drum in standby and FWD/REW modes
- Retracting entrance and exit guides
- Escape tension mechanism
- Retracting master erase head
- Automatic audio head cover opening and closing
- Built-in monitor select buttons
- Controls with unity setting and center click
- Various displays for ease of operation
- Assemble/insert editing with 1-frame accuracy
- Split edit and forced edit possible
- Cue shift and variable preroll
- Preview and review operation
- Change and display of edit data
- Edit point setting by 10-key entry

The HR-230 is a 1" helical-scan VTR in accordance with the SMPTE Type C standard.

The HR-230 inherits the same features as the former HR-200 Series models such as the tape transport designed by CAD to assure stable tape travel, the PRO tape path to protect oxide surface of a tape, the air support system to reduce resistance to tape travel, and the retracting entrance guide for ease of tape loading. In addition to these features, air tension arm posts are adopted to further reduce resistance to tape travel and an escape tension mechanism and retracting exit guide, to make tape loading more simple and accurate in combination with the retracting entrance guide.

Only by changing the mounting position of reel motors, both of the 3-hour and 2-hour reel operations are possible; the former for desktop and console configurations, and the latter for rack-mount configuration. Other performances improved, and functions added, are two microprocessors which independently control the operation system and servo system, -1 to +3 times

HR-230

variable play speed and its memory function (option), auto set-up function of the optimum video record and audio bias currents, variable play time function which can increase or decrease program time, master/slave control function, reduction of tape accelerating time and lock-in time, incorporation of 4H p-p TBC (option), various alarms and error messages for ease of fault diagnosis and maintenance, etc.

The HR-230 can be used in any configuration of desktop, console and rackmounting and is most suitable for broadcast station, production house and other high end industrial and educational applications.

HR-230-1

Package Includes:

- HR-230—Recorder/player • TC-030—Plug-in digital TBC
 - Take up reel • Set of extender boards • Service manual

- HR-230—Recorder/player • TC-230—Digital TBC • SL-30—Slow motion (head scan tracking) • Take up reel • Set of extender boards • Service manual
- HR-230-2**\$69,087.00

HITACHI DENSHI, LTD.

Color Camera

SK-97 FULL AUTO SET-UP CAMERA

- High performance pickup tubes—2/3", 3-tube • High resolution over entire screen—600 TV lines at center • High signal-to-noise ratio—58dB (NTSC) 55dB (PAL) • Improved prism optics • ABO (Automatic beam optimizer) • Encoder with dynamic contrast (Variable gamma) • High-precision static and dynamic registration
- Linear matrix masking • Auto iris • Two filter disks • High-brightness, high-resolution viewfinder • Viewfinder character display
- Power supply options • Preheat/operate switch • +9/ +18dB high-gain switch • Centralized control panel • Chroma keying outputs • Selectable YIQ/RGB outputs • SMPTE/EBU color bar output • Hi-fi microphone amplifier • Two-wire/four-wire intercom system

Versatile Auto Set-Up System

- Zero method control • Auto set-up mode selection • Data files
- Fault diagnosis • RCU (Remote control unit) • Auto/manual set-up by camera itself

The SK-97 is an epoch-making, 2/3", 3-tube, portable color camera with full auto set-up functions. The camera satisfies all the requirements necessary for a portable camera in EFP and studio applications; i.e., excellent picture quality, great ease of operation and extremely high reliability.

The SK-97 employs the same auto set-up system as that of the sister camera SK-970 for studio portable use, and can be used in combination with the SK-970. The SK-97 can also be controlled by the SK-110 full auto set-up studio camera system.

The SK-97 weighs approximately 13.2 lbs. (6kg) excluding a lens even with the improvement in performance and addition of the auto set-up functions.

Digital Command System Available

When an optional digital command system consisting of the MU-97A multi adaptor and the DU-97A DCU is used, all the camera operations can be remotely controlled from the RCU or the SK-110's SCU through a single coaxial cable. The MU-97A is attached to the camera side cover and the DU-97A of half-rack size is located near the BSU.

In addition, when a TX-97 triaxial adaptor is used together with the above units, power transmission up to 1.4 miles (2.3km) as well as camera control is possible through a single triaxial cable if using a Fetten 2.5 LS/11.5 cable.

Superior Serviceability

The pickup tubes are rear-loaded for ease of replacement. In particular, the R and B channel tubes can be simply replaced by removing the top and the bottom cover of the camera respectively.

All of the electronic circuitries are divided by functions into printed circuit boards with silk printing on both sides, and major circuit boards are inserted into a PCB harness with mother board connection.

DIMENSIONS AND WEIGHT

	Width		Height		Depth		Weight approx

SK-97D Full Auto Setup Camera

- $\frac{2}{3}$ " MS tubes offer a high quality picture with superb center and corner resolution
- Improved prism optics—high speed (f/1.4) prism optics with a quartz filter guarantee high sensitivity and excellent color rendition
- Built-in ABO circuit eliminates comet tails, extends the dynamic range of the camera and thereby makes highlight shooting very easy
- Dynamic white suppression/knee aperture correction
- High signal-to-noise ratio of 59dB (NTSC) (56dB with PAL-B) is obtained at 2,000 lux (200 fc), f/4.5 with a newly developed low-noise preamplifier and a new low-noise FET
- High-precision registration by the World First Real-time Lens Error Correction (RLC)
- 3DTL system is employed for horizontal contour correction. It performs the optimum corrections for RGB channels and ensures the most effective edge correction for any kind of color tone. (The out-of-green system is employed for vertical contour correction)
- Remote control of DTL
- Built-in linear matrix masking amplifier ensures high-fidelity color rendition and easy tone-matching among the cameras. Remote control from the setup control unit is also available and the control data can be stored in a selected file
- Auto iris
- Two filter disks
- High-brightness, high-resolution viewfinder
- Viewfinder character display
- Power supply options: Can be powered by a battery belt, a battery pack, a car battery, an AC power adaptor or from the battery in the VTR connected to the camera
- +9/+18dB high-gain switch
- Control panel
- Chroma keying outputs
- Component signal output
- SMPTE/EBU color bar output
- Built-in high-fidelity microphone amplifier accepts a mike with an output level of -45 to -60dBm
- Two-wire/four-wire intercom system
- Automatic cable compensation
- Zero method of control is capable of setting up the R,G and B channels automatically, thus eliminating manual adjustment of the G channel required for the G-reference method. In addition, several SK-97D's (maximum 42 cameras) can be set up simultaneously in only 2 minutes by using a setup control unit, the SU-97D
- Auto setup mode selection
- Check function of auto setup conditions with an external chart
- Data files
- Full fault diagnosis
- Remote Control Unit (RCU)
- Base Station Unit (BSU)
- Auto/manual setup by the camera head itself

The SK-97D employs $\frac{2}{3}$ " MS pickup tubes, ideal for portable use. However, with adaptors and accessories, the performance capability is equal to those of a studio camera. Additionally the SK-97D can be used in a camera-recorder combination.

SK-97D

The camera head weighs only 11.4 lbs. (5.2kg) (with cable adaptor) and the SK-97D weighs 15 lbs. (6.8kg) in a triax operation mode. Though the SK-97D is a compact and lightweight camera, it employs the zero method of control (RGB control) and it is a full auto setup camera. It can control 37 auto functions and 103 control items. These microprocessor-controlled functions are incorporated in the camera head and available in the self-contained operation mode.

Real-time lens error correction (RLC) compensates for changes in prism temperature and the library functions (SCU operation) using a 3.5" floppy disk are provided. The maximum triax cable length is 2400m (Belden 9232). The SK-97D can be used in a system with the SK-110D (1 $\frac{1}{4}$ " tube) studio camera in addition to the SK-970D studio/field camera systems.

SK-97D Full Auto Setup ENG/EFP Camera Less Lens**Package Includes:**

- SK-97D camera head with built-in auto setup • XQ-3457RGB MS LOC DG plumbicons • VF-155 1.5" high resolution viewfinder • TA-97D tripod adaptor • CL-97D carrying case • SVM-97D Service manual • Standard accessories \$61,220.00 (Requires CA-97D and AP-40R2 or battery).

SK-970D Full Auto Setup Studio/Field Camera

- $2/3$ " LOC DG Plumbicons offer superb picture quality
- Improved prism optics high speed (f/1.2) prism optics, brightest for $2/3$ " pickup tube guarantee high sensitivity and excellent color rendition
- Built-in ABO circuit eliminates comet tails, extends the dynamic range of the camera and thereby makes highlight shooting very easy
- High signal-to-noise ratio of 60dB (NTSC) (57dB with PAL-B) is obtained at 2,000 lux (200 fc), f/4.5 owing to a low-noise preamplifier and low-noise FET
- High voltage operation of the pickup tube, together with a wideband preamplifier, fully utilizes the tube resolution. In addition, a dynamic focus circuit greatly improves the resolution at 4 corners
- High-precision registration by world-first real-time lens error correction (RLC)
- Fifteen kinds of exclusive lenses (13X to 45X) incorporating a chart for auto setup are available
- Built-in dynamic contrast circuit controls highlight compression and black stretch of the luminance and chrominance signals to provide pictures having a wide contrast range
- 3DTL system is employed for the horizontal correction. It performs the optimum corrections for RGB channels and ensures the most effective edge correction for any kind of color tone
- Remote control of DTL and dynamic contrast
- Built-in linear matrix masking amplifier ensures high-fidelity color rendition and easy tone-matching among the cameras. Two modes of operation; 2 stages of FIX (Hitachi standard) and manual; and on/off control are provided
- High speed rotary shutter is available as an optional accessory
- Compact and lightweight system
- Microprocessor-controlled auto iris
- Two filter disks
- 7" viewfinder with various functions
- Viewfinder character display
- High-gain switch of up to +18dB provides a broadcastable picture even under low lighting conditions, in combination with the low noise preamplifier
- All the controls necessary for camera operation are on the rear control panel of the camera
- SMPTE/EBU color bar output
- Built-in chroma keying circuit provides a chroma keying signal output plus R, G and B video signal outputs at the BSU
- Hi-Fi microphone amplifier
- Two-wire/four-wire intercom system
- Automatic cable compensation
- Auto setup system utilizing a built-in microcomputer greatly reduces routine setup time and provides the highest picture quality at all times
- Zero method of control is capable of setting up the R, G and B channels automatically, thus eliminating troublesome manual adjustment of the G channel required for the G-reference method
- Auto setup mode selection
- Check function of auto-setup conditions with an external chart
- Data files
- Fault diagnosis

**SK-970D**

- Remote control unit
- Base station unit
- Auto/manual setup by camera itself
- Setup control unit, SU-97D

The SK-970D is the up-graded version of the SK-970 which are widely used in television stations throughout the world.

It is a camera featuring unique functions, ease of operation and maintainability as a studio/field camera, permitting versatile system applications.

Hitachi's computer technology, full auto-setup functions using the zero method of control (RGB control), library functions using a 3.5" floppy disk, real-time lens error correction (RLC), prism temperature correction, microprocessor-controlled auto iris, etc. are attained.

With an optional high speed rotary shutter, a picture of superb dynamic registration is ensured and super slow freeze picture having no blur is obtained without need of a special VTR.

In the triaxial cable operation, the maximum cable length is 2400m.

All the control including the commands for auto-setups are made from the remote control unit and the setup control unit via the base station unit.

The self-contained functions permit the auto-setups of the camera unit.

The SK-970D is a breakthrough camera which can be used with the SK-120 (1" tube) and the SK-110D (1 1/4") as well as the SK-97D Handy camera.

SK-970D Auto-Setup Studio/Field Camera, Less Lens**Package Includes:**

- SK-970D camera head with built-in auto-setup • XO-3427RGB LOC diode gun Pbo tubes • VF-710 7" high resolution viewfinder • SVM-970D service manual

Standard Accessories \$63,330.00

BU-97D	Base station unit for remote control. (Requires RU-97 remote control unit)	\$9,350.00
RM-97D	Rackmount adaptor for BU-97-D	1,180.00
RU-97B	Remote control unit (Requires BU-97D).	4,080.00
RU-97D	Full function remote control unit with digital display. (Requires BU-97D and SU-97D for full operation)	6,110.00
AP-10B	AC adaptor for self-contained operation	680.00

HITACHI DENSHI, LTD.

Color Camera

SK-110D FULL AUTO-SETUP COLOR TV CAMERA

SCU (Setup Control Unit)

This unit provides centralized camera control functions for multiple cameras.

A power supply on/off, auto-setup, quick check, fault diagnosis, manual control, timeout, picture monitor character display, digital display of lens f-number, monitor picture selection, floppy-disk memory for manual adjustment data, and RCU function are provided for each camera. The picture monitor character display includes controlled parameters and percentage of controlled quantities. The DSU function for six cameras is built into the SCU to simplify the system. However, when controlling more than six cameras, use external DSUs.

DSU (Delegation Switch Unit)

This unit serves as a switching unit for data lines and video signals when several cameras are controlled by an SCU. It is possible to assign up to 6 CCUs to one DSU which can be located anywhere between the SCU and the CCU.

TSU (Transfer Switch Unit)

This unit provides switching for data lines and video signals when several camera groups are controlled by two SCUs. The group is selected in a block of a DSU and each camera is controlled through the DSU.

CAMERA HEAD

Pickup Tubes

1-1/4" LOC-DG Plumbicon*¹ pickup tube; 750 TV lines; signal-to-noise ratio of 56dB or more.

Highly Efficient Prism Optics

f/1.8 prism optics.

High-Accuracy Static Registration

Auto setup control for camera registration including that for bow and skew distortions in both the horizontal and vertical directions guarantees high accuracy static registration of 0.05% over the entire screen, in combination with Digital Registration Compensation (DRC) and corner registration compensation which controls four corners independently.

High Precision Dynamic Registration

By using RLC (Real-time Lens Correction), the auto setup system controls on-line, real-time compensation for registration errors caused by variations of lens zooming and focusing.

Scrambling Use of Multiple Cameras

Computerized Tube Hour Meter

Controlled by the built-in microcomputer instead of a conventional electromechanical hour meter, providing a character display of operating hours on the viewfinder screen.

Dynamic Focusing Circuit

ABO (Automatic Beam Optimizer)

High Performance 7" VF with Numerous Functions

Built-in Microphone Amplifier/Limiter

Test Signals for Amplifier Calibration

A 100% and a 200% level sawtooth test signal are provided to facilitate calibration and setup of each video amplifier. By applying these signals in sequence to the input of the process amplifier-2, process amplifier-1 and preamplifier first stage, it is possible to calibrate the level of each amplifier as well as to verify the gamma, knee point, slope, clipping point, etc.

Easy Servicing

The PC boards in the camera head and CCU are simple to remove and are marked on both sides, making parts easy-to-find for quick servicing or inspection. Another serviceability feature is a coil assembly that can be removed while the camera is mounted on the dolly.

*1 © N.V. Philips

CCU

Compact Design

The CCU is designed as a dedicated camera control unit for a computer controlled camera. Both the video processing section and the computer section have been housed in one compact package. The width of the power supply unit is reduced to just a half of 19" rack for compact system configuration.

Linear Matrix Masking

High-Performance Contour Corrector

Compensation signals derived from the R and G channels provide clear, crisp images even for red subjects. The contour correction signals are automatically processed to match the type of subject, maintain optimum compensation and ensure natural images.

Standby Mode Operation

Three operating modes are provided to save power consumption and extend the life of the pickup tubes and CRT.

1. **CCU Power:** Main power supply is switched on; the CCU is operating.
2. **Power:** The camera head is on and the heaters of the pickup tubes and CRT are supplied with 50% of the normal voltage.
3. **Beam:** Beam current of the pickup tube is turned on and the camera operates.

Genlock

The SK-110D is genlocked to a black burst signal or a composite video signal. Horizontal and subcarrier phases can be adjusted manually.

High Reliability LSI Process Amplifier

Output picture quality is greatly affected by the stability of process amplifiers. LSI process amplifiers used in this camera provide stable operation against temperature variations and provide no deviation between channels.

Special Effects

1. The horizontal and vertical deflection currents can be independently reversed, a feature useful in picking up mirror images.
2. The video polarity of the R, G, and B signals can be independently inverted.
3. Swinging of horizontal deflection is provided by means of an externally applied audio frequency signal.

Encoder with Variable Gamma (Contrast)

Gamma control of luminance and chrominance signals is linked and can be adjusted by remote control, making adjustment of the picture contrast very easy, even under such difficult conditions as those encountered outdoors.

Built-In SMPTE/VIT Color Bar Generator

A color bar generator conforming to the latest SMPTE standards has been built in for convenient adjustment of monitors. Also built in is a VIT color bar generator, allowing monitoring of the characteristics of the encoder and the transmission line while on the air.

Computer-Controlled Auto Iris

Lens iris is automatically controlled by detecting the average and peak value of the object illumination and calculating the control output data for optimizing lens servo response by a built-in microprocessor.

AUTOMATIC SETUP

Zero Method Control

The zero method of control is capable of controlling the R, G, and B channels, thus eliminating the troublesome manual adjustment of the G channel required in the G channel reference method.

Expandable System Hierarchy

A microprocessor is built in each unit from the SCU to the camera head, so that the system can flexibly be configured from 1-camera chain to a large scale system. By using a DSU for every group of six cameras, up to 24 cameras can be controlled with just one SCU. By adding a TSU control capabilities can be expanded to up to 42 cameras using two SCUs, providing all the flexibility you will ever need.

Automatic Setup Modes

Eleven automatic setup modes are provided: AUTO SETUP (full), COLOR BALANCE, REGISTRATION, DRC AUTO, G REFERENCE, EXTERNAL chart full AUTO, EXTERNAL chart regi AUTO, EXTERNAL chart color balance AUTO, CHECK, AUTO WHITE, and AUTO BLACK.

Fault Diagnosis

Fault diagnosis of the video system, pulse system and power supply in the camera head and the CCU of the selected camera is performed by depressing the DIAG switch. Diagnosed results are displayed on the picture monitor and the viewfinder, and can be printed out on an optional teletypewriter, too.

Auto Setup of 38 Parameters

Total of 38 parameters of auto setup for color balance and registration including digital registration compensation are available for system setup.

Remote Control

The SCU, TSU, DSU, and CCU may be connected with just three twisted-pair cables and be separated from one another by up to 1,000m (3,000 ft.) The CCU and RCU may be connected using three twisted-pair cables and separated up to 100m (300 ft.)

SK-110D (excluding lens and tubes) . . . \$98,000.00

HITACHI DENSHI, LTD.

Portable Color Cameras

Z-31A 3-Tube Portable Color Camera

The Z-31A can be used in full studio configuration with remote operation panel, in mobile units with triax, and ENG configuration for field shooting of all types including news and commercial production.

In addition to a wide choice of lenses, the Z-31A is offered with composite output and with modules for component output for use with any type small format VTR. The Z-31A features twist field type LOC MS Saticon tubes. These tubes offer 800 lines resolution and 60dB signal-to-noise.

This high resolution, auto setup camera features updated circuitry for improved registration, accuracy, and superior performance.

Even slight registration errors due to prism temperature changes are now corrected by a real-time correction circuit using a microcomputer to provide a stable picture at all times.

The 2H contour corrector with comb filter assures picture sharpness with minimal noise.

The horizontal contour signal is composed of both green and red signals.

With the built-in pre-set masking circuit even subtle color tones can be adjusted without affecting white balance.

The built-in automatic beam optimizer suppresses the comet-tails and expands the dynamic range to facilitate the highlight shooting.

The built-in shading correction circuit ensures a complete flat picture regardless of the pickup tubes and bias light shading.

The frame shading at the corners of the screen is corrected to offer a flat picture.

Other functions include:

- Character display function
- Built-in color bars
- Microphone circuit
- Test pulse

The basic camera can be purchased and accessory kits such as studio panel, triax/coax digital adaptors, 4.5" viewfinder, and component module, can be added at any time.

Specifications

Color System: NTSC, PAL-B
Camera Tubes: Three 2/3" Twist Field type M-S Saticon tubes
Optical System: f/1.4 prism (with bias light)
Encoding System: IQ (NTSC), UV (PAL-B)
Sync System: Internal sync or genlock (operation with composite video signal or black burst signal)

Horizontal Resolution: 800 lines (G-ch at center)
Sensitivity: 2,000 lux (200fc), f/4 (89.9% reflection factor)
Min. Illumination: 40 lux (f/1.6 + 18dB)
Signal-to-Noise Ratio: 60dB (NTSC), 57dB (PAL-B) (typical)
Gamma Correction: 0.35 to 1.0
Optical Filter: 3200°K, 5600°K + 1/8ND, 5600°K, cap
Lens Mount: Bayonet
Auto Functions: Auto white balance, Auto black balance, Auto iris, Automatic beam optimizer (ABO), Auto centering, Auto setup, Auto black set, Auto registration correction, Automatic fault diagnosis, Auto black level

Z-31A

Standard Configuration: Z31A — Camera
 J15X9.5B4KRS (by Canon) — 15X power zoom lens
 GM-6 — 1.5" viewfinder
 AP-40 — AC adaptor
 TA-Z31 — One touch tripod adaptor
 CL-Z31 — Carrying case

Z-31AUE With ASU and lens \$10,210.00
 Z-31AUB Without lens 8,930.00
 Z-31AUF With Fujinon 16:1 lens 10,880.00

Z-31P ENG/EFP Camera

This camera offers all the outstanding features of the basic Z-31A, but incorporates three 2/3" MS type low capacitance Diode Gun Plumbicon tubes.

Specifications

Horizontal Resolution: 660 lines at center (G. ch)
Signal-to-Noise Ratio: 57dB (NTSC)
Pickup Tube: 2/3" LOC DG PbO tube
Optical System: f/1.4 prism (with bias light)
Scan Standards: NTSC 525/60 field/s or IQ (NTSC)
Encoding System: IQ (NTSC)
Minimum Illumination: 30 lux, f/1.6 + 18dB on
Sync System: Internal sync or genlock
Gamma Correction: Variable 0.35 to 1.0
Optical Filters: 3200°K, 5600°K, + 1/8ND, 5600°K, cap
Lens Mount: Bayonet
Auto Functions: Auto white balance, Auto black balance, Auto iris, Automatic beam optimizer (ABO), Auto centering, Auto setup, Auto black set, Auto registration correction, Automatic fault diagnosis, Auto black level

Standard Configuration: Z-31P Camera body, 15X power zoom lens, 1.5" viewfinder, tripod adaptor, AC adaptor, carrying case

Z-31PC With lens \$15,950.00
 Z-31PE Without lens 13,680.00

HITACHI DENSHI, LTD.**3-Chip CCD Color Cameras****FP-C1/FP-C2
3-Chip CCD Color Cameras****Features Common To Both Models**

- Since the high sensitivity and low lag $2/3$ " CCD 3-chip is used, the sensitivity is one stop higher than that of a 3-plumbicon camera, making the FP-C1/FP-C2 ideally suited to use in low light conditions
- Auto knee and flare correction functions
- Subtle color differences among cameras can be controlled by the preset masking circuit
- Computer-controlled auto functions and self-diagnostics improve operational flexibility
- High resistance to shock and vibration
- Immune to magnetic field interference
- Adoption of the image sensor and highly stable design provides high reliability
- Bayonet mount
- Auto white balance
- Auto black balance
- Auto iris
- Auto knee
- Auto black set
- Auto black level
- Self-diagnosis display

FP-C1

- Over 280,000 picture elements offers a superb picture quality of 580 lines horizontal resolution
- Sensitivity: 2000 lux, f/6.7 (89.9% reflection factor)
- Auto white balance (2 memories) — Two kinds of memories for two different white balance data are available for the first time in a camera of this class
- Computer-controlled auto iris — The computer-controlled auto iris function offers a clear and natural picture. The auto iris operating point is adjustable for about $\pm 1f$ /stop
- Masking (with preset on/off switch)
- Test pulses
- Warning indicator
- Status display
- Character display function
- Min. Illumination: 20 lux, f/1.7 (+ 18dB)
- Signal-to-Noise Ratio: 56dB (NTSC), 53dB (PAL)
- Sync System: Internal (conforming to RS-170A) or genlock

The FP-C1 is a 3-chip CCD color camera employing the high density and high sensitivity image sensor with over 280,000 picture elements packed onto a chip.

The adoption of the latest image sensor leads to a superb picture quality of high resolution, a high sensitivity and a high signal-to-noise ratio. The operational flexibilities are greatly improved by the various automatic functions and the self-diagnostic functions controlled by the microprocessors.

Since various accessories are available, the FP-C1 is usable as an EFP/studio camera in conjunction with a remote operation panel.

FP-C1UC with 12 to 1 lens \$7316.00
FP-C1UD with 15 to 1 lens 7685.00

FP-C1

FP-C2

FP-C2 (Preliminary)

- Professional ENG camera is dockable to a Betacam VTR
- 620 line horizontal resolution
- High sensitivity 2000 lux with f/5.6
- Since there is no need for registration adjustment, the FP-C2 is ideal for ENG camera use
- Besides the ENG combo application, the FP-C2 can be used as a self-contained EFP studio camera with an optional camera adaptor
- Minimum illumination 16 lux with f/1.4 (+ 18dB)
- Signal-to-Noise Ratio: NTSC—57dB typ.; PAL 54dB typ.
- Sync system: Internal (conforming to RS-170A) or genlock (operation with composite video signal or black burst signal)

The FP-C2 is a 3-sensor CCD ENG dockable camera using a high density and high sensitivity image sensor for which precision special offset technology is utilized. Operational flexibility is greatly enhanced by superb picture quality with high resolution, high sensitivity and high signal-to-noise ratio, coupled with computer-controlled auto functions and self-diagnostic. Various accessories are available, making the FP-C2 usable as an EFP/studio camera in conjunction with an operational panel.

FPC2UD With 15:1 lens \$10,950.00
FPC2UC With 12:1 lens 10,600.00

HITACHI DENSHI, LTD.

Test Equipment

V-069 Vectorscope (NTSC System)

- Guaranteed vector phase accuracy of $\pm 1^\circ$. This high measurement accuracy is unsurpassed in its class
- Two loop-thru inputs and a loop-thru external sync input are provided. The chrominance signal and sync signal may be independently selected and vector measurement of the input. A sub-carrier signal is also possible
- Input sensitivity can be calibrated to the 1V full scale, 75% saturation or 100% saturation and may be variable controlled over the range 0.5 to 5 times. The UNCAL lamp lights when variable controlled has been made
- The chrominance signal applied to an input may be used to display a non-synced circle to enable a self-check of gain balance and quadrature phase
- Differential gain and differential phase can be measured
- Differential gain is a change in color subcarrier amplitude as a function of luminance level. Differential phase is a phase modulation of the chrominance signal caused by change in the luminance level

V-069 \$1950.00

V-079 Waveform Monitor (NTSC System)

- A line selector function is provided to enable selection of any displayed line of lines 9 thru 22 or either field 1 or 2. This enables observation of VIR and VITS signals, as well as Teletext signals
- Guaranteed flat response ($\pm 1\%$ over the range 25Hz to 3.6MHz and $+1\% -2\%$ over the range 3.6MHz to 6MHz). This wide bandwidth ensures high-accuracy waveform observation and measurement
- Frequency response may be selected as FLAT, IRE, CHROMA, DIFF GAIN. The horizontal-axis sweep may also be selected as 2V, 2V MAG (X20 magnified), 2H or $1\mu\text{s}/\text{div}$, enabling measurements on a wide variety of video signals
- By applying signals to a 9-pin connector on the rear panel, it is possible to display RGB. Optionally, YRGB display is also possible
- DC restore ensures a stable display even in the presence in the amplitude, APL and burst variations
- Two loop-thru inputs are provided
- Horizontal-axis position may be fine adjusted using a 10-turn potentiometer
- Two units may be mounted side-by-side in a 19-inch rack (the V-069 Vector Scope is the same size)

V-079 \$1750.00

RM-079 Rackmount for Dual V-069/079 225.00

Wireless Microphone/Intercom Systems

System 50 Body-Pac Wireless Microphone System

- VHF Hi-band RF link with switching diversity receiver • NRX-II™ Noise Reduction System designed for wireless mikes, > 115dB dynamic range
- Dual frequency selection • < 5 oz.

The TX550 body-pac transmitter operates on two switch-selectable frequencies in either the 160-174MHz (TX550) or 174-216MHz (TX550TV) frequency band. The input is compatible with dynamic or condenser microphones, via a 4-pin locking mini "Q-G" type connector. There is 6VDC power available at the connector for electret elements. There's a mute switch and a low battery indicator.

The TX550 delivers the maximum allowable 50mW RF output power with a maximum deviation of 15kHz. Its frequency multiplication and additional RF filtering minimize spurious and harmonic transmissions, enhancing its use in multiple system operations.

System 55 Handheld Wireless Microphone System

- VHF-Hi band RF link with switching diversity receiver • NRX-II noise reduction system, > 115dB dynamic range • Choice of 4 mike elements: HME HM58, Shure SM58, SM85, or SM87 • Ideal for multiple system operation — up to six in simultaneous operation

The TX555 handheld transmitter is available with a choice of four microphone heads: the standard HME HM58 dynamic, optional Shure SM58 dynamic, or Shure SM85/87 condenser cartridges. An auto lock on the power switch makes certain that power won't accidentally be turned off. There's a mute switch and a low battery indicator.

The TX555 delivers the maximum allowable 50mW RF output power with a maximum deviation of 15kHz. Its frequency multiplication and additional RF filtering minimize spurious and harmonic transmission, enhancing its use in multiple system operations.

- C10220** System 50 Wireless Body Pac System (Includes TX550, RX520, TA4F connector, AC adaptor, belt clip and antennas) \$1095.00
- C10215** System 55 Wireless Handheld System includes TX555 with HME HM58 mike element, RX520, AC adaptor, MC15 mike clamp and antennas 1110.00

- C10225** With Shure SM58 mike element 550.00
- C10226** With Shure SM85 mike element 750.00
- C10227** With Shure SM87 mike element 750.00

RX522 Wireless Microphone Receiver

This low cost rackmountable receiver was designed for either portable or fixed installations where size and weight are major concerns. It is ideal for live entertainment, churches and conferences where cost and high quality sound reproduction are essential. This receiver can be used with both the TX550 Body Pac Transmitter and the TX555 Handheld Transmitter.

- C10289** RX522 Wireless Microphone Receiver includes whip antenna, AC wall adaptor with locking clip \$290.00
- C10314** System 515 Body Pac Wireless Microphone includes RX522 receiver, TX550 body pac transmitter, reversible belt clip, antennas, mike connector (TA4F) 770.00
- C10316** System 525 Handheld Wireless Microphone includes RX522 receiver, TX555 handheld transmitter with HM58 capsule, AC adaptor with locking clip, antennas, mike clamp, vinyl bag 785.00

IC-150 Series Wireless Intercom System

- Full-Duplex Operation — Provides continuous hands-free intercommunication between the base station and as many as four remotes • Push-to-talk operation • Hard-wired system interface • Full inter-system level control
- Ultra compact remote transceivers—single unit, metal enclosed, belt transceivers are only 5 1/2" x 3 1/4" x 1 1/8" and 10 oz. • Only 1 VHF high band channel required • HME dynamic expansion — assures clean, noise-free operation with a dynamic range of at least 80dB • Loop-around side-tone

The IC-150 base station transmits to each MT-1000 remote unit on a single VHF Hi-band frequency. It also receives the VHF mid-band transmission from the remote units. The received signal(s) is simultaneously fed to the base operator's headset, to the wired system interface and to the transmitter section for rebroadcast to each remote unit.

The MT-1000 remote transceivers receive the base operator's message on the VHF Hi-band channel, and transmit messages to base (and subsequently to any other MT-1000) on a VHF Mid-band frequency. In full duplex operation, each MT-1000 uses its own transmit frequency (the IC-150 will receive up to 4 different frequencies). In push-to-talk operation, all MT-1000s may use the same transmit frequency. Operator side-tone is provided through rebroadcast of the receive signal by the IC-150, automatically confirming receipt of communication.

IC-150 Series Wireless Intercom

Ordering Information VHF Hi-Band Systems

Systems and models operating in the 150-174MHz band are type accepted under Part 90 of the FCC Rules.

Systems and models operating in the 174-216MHz band (TV Channel 7-13) are identified by the suffix "-TV", and are type accepted under Part 74 of the FCC Rules.

DN100 Antenna Distribution System

The DN100 Antenna Distribution System allows you to operate up to four NRX II™ RX520 Switching Diversity Receivers in a rackmount configuration with only two antennas. The antennas are provided with the RX520 Receiver. This system speeds up setup time of multicompatible systems dramatically.

The DN100 has the same rugged design and stylish front panel cosmetics as the RX520 Switching Diversity Receiver. By using the RP520 rackmounting kit, the DN100 can be conveniently mounted side by side with the RX520 receiver and takes only one 19" rack space. In applications where the antennas must be mounted outside of the rack, the MB1 antenna mounting kit is available. The kit comes with two mounting brackets and cables. If you are not using four receivers, the DN100's unused ports do not need termination.

A specially designed circuit guarantees there will be no signal loss due to antenna splitting.

- C10297** DN100 antenna distribution system Includes antenna distribution unit, AC adaptor with locking clip, 8 each BNC to BNC cables (4' long) **\$550.00**

TX 425

HM58 Unidirectional Dynamic Handheld Microphone With Mike Mute Switch

Designed expressly for high quality professional applications, the HM58 comes standard with 3-pin XLR cable, mike clamp, vinyl bag, and a gift box. It has a non-glare finish, a mike-mute switch, and is perfectly balanced for use.

Specifications

Type: Dynamic; **Frequency Response:** 80-14,000Hz; **Polar Pattern:** Cardioid; **Impedance:** Low; **Sensitivity:** -75dB ± 3dB; **Connector:** Male, 3-pin XLR; **Cable:** 6mm x 5m with 3-pin XLR connectors; **Dimensions:** 52 x 167mm; **Switch:** Mike mute

- C10018** HM58 **\$164.00**

RM77 Unidirectional Reverb Electret Microphone

The first affordably priced professional microphone offering built-in reverb. An adjustable control permits you to vary the amount of reverb, and a conveniently located 3-position switch provides the ability to "mute" the mike or add the "echo". Now you can get those "special effects" that previously could only be obtained with costly external units or tape delay machines that jam, and need frequent cleaning. The RM77 also comes standard with a 3-pin XLR cable, mike clamp, vinyl bag and a gift box. A built-in "pop" filter minimizes external interference commonly heard in condenser microphones.

Specifications

Type: Electret condenser reverberation; **Frequency Response:** 150-15,000Hz; **Polar Pattern:** Cardioid; **Impedance:** Low; **Sensitivity:** -72dB ± 3dB; **Connector:** Male, 3-pin XLR; **Cable:** 6mm x 5m with 3-pin connector; **Dimensions:** 53 x 190mm; **Battery Type:** "AA" cell 1.5V; **Battery Life:** Approx. 25 hrs. in Echo mode; Approx. 1000 hrs. in Mike mode; **Reverb Time:** 0-.2 sec. (variable); **Switches:** Off-Mike-Echo; **Controls:** Echo rate

- C10017** RM77 **\$144.00**

HM-58

RM-77

EM43-4 Omnidirectional Lavalier Microphone

The EM43 omnidirectional, electret lavalier microphone is small in size, but big in sound. With sensitivity and frequency response only obtainable in far more costly "name brands," the EM43 is easily one of the best lavalier values available today. Mike clip, windscreens and case are included. The EM43 is designed to work in Radio Frequency (RF) environments.

Specifications

Type: Electret; **Frequency Response:** 20-20,000Hz; **Polar Pattern:** Omnidirectional; **Impedance:** 2.2K ohms; **Sensitivity:** -63dB ± 4dB; **Connector:** 4-pin Tiny QG; **Cable:** 2mm x 3m; **Dimensions:** 7.5 x 20mm

- C10111** EM43-4 **\$70.00**

HM ELECTRONICS, INC.

Professional Cabled Intercom Equipment

Series 700 Cabled and Wireless Intercom Systems

- Compatible with popular existing systems • Battery or AC operation
- Internal foldback protection • Rugged construction

A communications system that lives up to the HME reputation of high technology manufacturing and design. The HME 700 Series provides features professionals require: battery operation, compatibility with current systems, high power, mike cable connections, rugged construction, and good value.

BH720

The BH720 is a single channel intercom belt pac, compatible with the 700 series and other similar 3-wire intercom systems. Advanced electronics provide superior audio quality in a compact, lightweight package. The BH720 supercedes the BH710, weighs less and offers more features.

C10058 BH720\$160.00

BH721

The BH721 provides all the functions of the BH720 while also offering 2 channel capability (using 4 conductor cable). A top panel toggle switch allows the user to communicate in full-duplex on either channel. Two 4-pin XLR connectors provide loopthrough capability for adding additional belt pacs.

C10064 BH721\$180.00

PS730 Power Supply

The PS730 is a single circuit power supply offering 30 station capability, DC status lights (green for normal and red for shorted), four output connectors, high or low level signal control, current foldback, and a very small package size.

C10065 PS730\$235.00

WL742 Two-Way Loudspeaker Station

The WL742 is a 2 channel (over a three wire shielded cable), wall-mounted, loudspeaker intercom station. The WL742 is designed to fulfill the majority of the requirements for wall-mounted intercom stations. The WL742 is capable of 2-way communication in three ways:

1. Simultaneous talk/listen via external headset or handset.
2. Simultaneous talk/listen via internal loudspeaker and gooseneck-mounted microphone.
3. Talk/listen via internal loudspeaker and external push-to-talk mike.

The WL742 is compatible with existing HME 700 series products, as well as other popular 3-wire intercoms. The WL742 has a switch which selects either Channel A or Channel B.

Additionally, a mike on/off switch, an illuminated call-light switch, and a user adjustable volume control are provided. The WL742 features an automatic loudspeaker mute capability, which automatically mutes the loudspeaker when headphones are connected.

The WL742 will fit a standard 4 gang (with plaster ring) electrical outlet box. This feature allows ease of installation and maintenance.

Speaker Station. Flush mounts in standard 4 gang electrical box with plaster ring. Allows 2-way communication through use of loudspeaker and external mike, or via standard headset. 2-channel.

C10122 WL742\$255.00

WH710

Flushmount Headset Station. 2-channel. Same electronics as WL742, without speaker. Mounts in standard electrical box.

C10015 WH710\$165.00

RP733 2-Channel Power Station

The RP733 is a rackmountable master station control center providing power for up to 32 belt pac headset stations. It is compatible with all existing HME 700 Series products, as well as other 3-wire intercom systems. The styling is consistent with that of the BH720 and is designed to be rugged and easy to use.

The RP733 has two independent channels with two headset stations having communications access to one or both channels. Two auxiliary inputs allow microphone and line levels to be fed to one or both channels. Headsets may use electret or dynamic mikes.

RP733 can power up to 32 belt pacs with call light functions in any combination between Channel A and Channel B, as long as the total number of belt

Series 700

pacs does not exceed 32. Up to 100 belt pacs can be powered if the call light feature is not needed.

C10299 RP733 2-channel power station configured for rackmounting\$690.00

RH710 Rackmount Headset Station

Same features as WH710 in a standard 19" rack configuration.

C10124 RH710\$180.00

Accessories

- C10088 HS410-2 Beyer DT-109 dual muff headset 374.00

RL742

RL742 Rackmount Loudspeaker Intercom Station

- Switchable for use with dynamic or electret headsets
- Two channels
- Automatic speaker mute

The RL742 is a two channel (over three wire shielded cable), rackmounted, loudspeaker intercom station. It is designed to provide a variety of communications functions in a rackmount configuration.

The RL742 is capable of two-way communication in three ways: 1. Simultaneous talk/listen via an external headset or handset. 2. Simultaneous talk/listen via internal loudspeaker or gooseneck microphone. 3. Talk/listen via internal loudspeaker and external push-to-talk mike.

The RL742 is compatible with all 700 Series products, as well as other popular 3-wire intercom systems.

The RL742 features an automatic loudspeaker mute function, which automatically mutes the speaker when headphones are connected. This mute function is also used to eliminate potential feedback when the button is depressed on a push-to-talk microphone.

The RL742, in addition to standard loudspeaker station applications, can be rackmounted with an RP732 to provide loudspeaker capability with a full-function main station. The RL742 takes up 2 rack spaces in a standard 19" rack.

Specifications

ELECTRICAL

Audio Line Level:	-30dBV at 1kHz nominal
Audio Line Bridging Impedance:	40K ohms, 20Hz to 10kHz
Audio Frequency Response:	100Hz to 12kHz (± 3dB) with a presence peak at 5kHz for improved intelligibility (Speaker: 200Hz to 5kHz ± 3dB)
Limiter:	Soft compression, to eliminate distortion for mike levels above -40dBV
Distortion:	Less than 1%
Mike Impedance:	30 -1K ohms, 200 ohms optimum
Headphone Impedance:	25 -1K ohms, 200 ohms optimum
Headphone Output Level:	80mW nominal, adj. with volume control 110dB SPL with 200 ohm headset

Speaker Output Level:	> 98dB SPL (A wtd.) at 1m
Side Tone Null Range:	> 40dB
Power:	12-32VDC (20-32VDC for optimum performance)
DC Current Draw:	25 to 200mA, typical
Operating Temp.:	0°C-50°C
Front Panel Controls	
Mike On/Off:	Toggle Switch
A/B Channel Selector:	Toggle switch
Call Light Switch:	Momentary, push on, with lamp
Volume Level:	Controls headset and speaker level
Side Tone Adjust.:	Adjusts operator's voice level in headset and loudspeaker
Internal Controls	
Mike Bias:	On/off, provides 12VDC bias for electret mikes to pins 2 (+) and 1 (-) of headset connector
DC Supply Input:	Regulated and unregulated positions
Connectors	
Input/Output:	One each, terminal block Pin 1 - GND 2 - VDC 3 - Audio Channel A 4 - Audio Channel B
Headset:	One each, 4-pin male XLR Pin 1 - Mike low 2 - Mike high and bias 3 - Headphone low 4 - Headphone high
Mechanical	
Dimensions:	3 1/2" H x 19" W
Loudspeaker	
Size:	3" square
Impedance:	8 ohms
Rated Power:	5W
Frequency Response:	± 3dB, 200Hz to 5kHz

Note: All measurements, unless specified, taken with -60dBV at 1kHz to mike input.

C10125 RL742 \$260.00

FR200 Field Pac Receiver Case

- Holds up to four RX752 receivers
- Full diversity reception capability
- Battery or AC operation
- Minimal set up time

The FR200A is a rugged, field pac receiver case for use with HME wireless microphones with flatpac receivers. Up to four RX752 receivers can be installed in the case, providing a compact, convenient package for field production.

The FR200A has a built-in, broad-band antenna diversity system which couples up to four receivers into one or two antennas.

An internal battery compartment allows continuous operation for in excess of 12 hours. An AC-10B AC adaptor is also provided to allow operation from 115VAC.

Internal space and compartments are provided for storage of transmitters, antennas and accessories.

Specifications

Frequency of Operation:	150MHz to 240MHz
Power:	Internal battery compartment takes 12 alkaline "D" cells. External 115VAC
Operating Voltage:	12 to 20VDC
Current Drain:	35mA max. (minus receivers)
System Gain	
Antenna to Receiver:	≥ 0dB
Controls:	Power On/Off Switch
Connectors:	2 UHF Antenna Ports, 50 ohms impedance, four 3-pin XLR audio connectors, 1 external DC connector
Dimensions:	12 ³ / ₄ " H x 13 ¹ / ₄ " W x 9 ³ / ₄ " D (including feet and handle)
Weight:	11 lbs. (minus receivers)
Accessories:	AC-10B AC adaptor 2 each velcro pouches attached to the lid 1 each whip antenna 2 each AN10 dipole antennas with 50' cables

C10294 FR200 Field Pac Receiver Case

With battery compartment, external DC input, and selectable monitor output. (Antennas and cables not incl.) \$1077.00

HNAT HINDES, INC.**Audio Processors****Tri-Maze Audio Processor****Input Section:**

- Selectable pre-emphasis
- 35dB gain reduction capability
- Integrated release time; completely transparent
- Broadband output control for precise density control
- 30dB expansion control range
- Triggered Absolute Level Expansion (TALE) automatically determines mode of expansion for voice and music
- 10 segment input meter display
- Expansion status indicators

Triband Section

- Time domain contoured integrated release, specifically treats time intervals associated with frequencies in the three bands of processing
- 20dB gain reduction range, 35dB capability
- Expansion control on all three bands of processing
- Front panel compression and mix controls
- Separate mix down peak metering, permits active on line set up with program
- Crossover frequencies: 275Hz and 4100Hz, 12dB/oct

Output Section

- Separate pre-clipper output
- 10kHz or 15kHz low pass filters, meets all NRSC 75 μ s requirements for AM
- Low pass filtering dip switch selectable
- Designed to feed ORBAN 8000 and 8100 "Test" input affording complete control over "On Air" sound.

The Tri-Maze is a complete stand alone processor designed to interface directly to the multiplex input of all stereo generators.

The Tri-Maze employs the same release time concept as the A-Maze and the Mic-Maze, as well as post filter zero hysteresis clipping, which results in an overall 2dB increase in loudness. This makes active composite clipping unnecessary.

Tri-Maze Single Channel \$1825.00
Tri-Maze Stereo Package \$3400.00

A-Maze Audio Processor

- Extreme high end clarity
- Absolute transparency
- Triggered expansion separation enhancement
- Integrated release time

The A-Maze employs a self neutralizing integrated release time which automatically provides an infinite number of release time combinations that totally track program density and peak-to-average ratio. The A-Maze literally integrates the program peaks into the average level.

In the absence of audio (pauses) the A-Maze provides a partial instantaneous release depending upon program consistency, which results in preservation of instantaneous dynamic range so your audio always sounds "open" and "unrestricted."

The A-Maze features an expansion and gating concept called Triggered Absolute Level Expansion (TALE). This circuitry allows gating to occur (anywhere) along the expansion slope so there is no "wash-up" in gain associated with other expanders.

Specifications

Frequency Response: \pm 3dB, 2Hz to 90kHz
 \pm 0.25dB, 30 to 20kHz

Distortion (THD) at 6dB GR, + 10dBm: < 0.5%, 50Hz to 20kHz
< 0.3%, 100Hz to 20kHz

THD at 20dB GR, + 18dBm: < 0.2%, 1kHz

Intermodulation Distortion (IM): < 0.5%, 80Hz/4kHz, 4:1 6dB GR
< 0.1% AGC off, + 18dBm out

Signal-to-Noise: -76dB ref to 12dB GR/12dB NR, at + 10dBm

System Slew Rate: 8V/ μ s AGC "off"
5V/ μ s AGC "on"

Stereo Tracking: \pm 0.5dB (worst case)

**Tri-Maze****A-Maze****Mic-Maze****Stereo Spread**

(inverse control): \pm 4dB/Channel at 6dB GR

Attack Time: Fixed, < 2ms

Release Time: Parabolic, derived from release time integration process. Release time varies with duration of input

Minimum Input Level: -10dBm

Maximum Input Level: + 20dBm

Output Clip Level: + 24dBv

Expansion Attack: > 3dB/ms

Expansion Release

Time: Parabolic (mirror of gain reduction release)

TALE Slew Rate: > 10dB/ms

Trigger Sensitivity: 10dB above expansion (min)

16dB above expansion (max)

19" x 1 $\frac{3}{4}$ " x 7"

Weight: Approx. 6 lbs.

A-Maze \$1595.00

Mic-Maze Audio Processor

- Comprehensive support processor
- Highly transparent
- Multiple outputs; 2 lines (diff. and transformer) 1 mike (-55dBm)
- Triggered expansion
- Pause delay
- Adjustable expansion platform
- Muting
- Sync capability for ducker operation or stereo
- Line in
- Dipswitch selectable pre-emphasis
- De-emphasis clippers
- Assymetry control
- Ideal for STL, SCA, AM, FM, TV

Mic-Maze \$730.00

HNAT HINDES, INC.

Audio DA/Telephone Hybrid/Loudness Control

DA2-12 Audio Distribution Amplifier

- Programmable output attenuation permits easy standardization of audio levels even down to -60dBm while preserving signal-to-noise integrity and meter calibration • 3 position input gain selection 0dB, +10dB, +20dB • Input overload indicators to monitor overdrive conditions (on at +18dBm bus level) • 12 discrete balanced differential outputs may be used as 24 unbalanced outputs • Constant voltage output • Internal resistive isolation to facilitate easy output level attenuation while maintaining signal-to-noise ratio and meter calibration • Balanced bridging differential inputs • Single turn log taper controls • Discrete peak LED metering on all channels programmed to come on at +8dBm (open circuit) • Color coded front panel controls eliminate confusion • Full RFI protection on all inputs and outputs • Cool running regulated power supplies • Low profile construction (1³/₄" rack space)

Circuit Specifications

Frequency Response: DC to 75kHz
Maximum Output Level: +24dB (+18dBm loaded, 600 ohms)
Maximum Gain: 40dB
Signal-to-Noise: -75dBm reference to 0dBm out
THD at +18dBm: <.05% DC to 20kHz
Output Impedance: 600 ohm (300 ohm resistive each leg for easy attenuation)
Input Impedance: 22K ohm differential bridging
Slew Rate: 13V/μs
Crosstalk: -90dBm minimum
Output Channel Isolation: Infinite
Noise Floor: 250μV typical
Maximum Output Attenuation: -60dBm typical
Power Consumption: 6W approximate
Peak Meter Calibration: +8dB unterminated
 +6dBm terminated (nominal)
Input Overload Calibration: +18dBm (allows 6dB headroom)
Dimensions: 1³/₄" x 19" x 7¹/₄"

DA2-12 \$525.00

DA2-12

ZH-1

SX-87

ZH-1 Precise Loudness Control

- Unique second harmonic cancelling circuitry • Stereo circuitry • 2dB loudness improvement • Precise metering • No overshoot • SCA protection • Precision controls • High slew rate, wide band width • Zero hysteresis clipper represents the latest in AM and FM peak control • Intended to follow the low pass filters in all stereo generators, thereby providing precise left and right discrete clipping of an absolute magnitude • May be used to provide precise AM peak control with full asymmetry adjustment capability on both mono and stereo facilities • When installed ahead of discrete STL transmitters, overhead problems become nonexistent • Circuit operation is based on amplifying the normal slippage (hysteresis) which occurs with conventional clipping and using this amplified error to control the magnitude of clipping • Direct coupled outputs with low pass filtering for harmonic suppression and maximum baseline control • High slew rate circuitry and precision components provide extended reliability

Specifications

Maximum Input: +24dBu
Maximum Output, Unclipped: +20dBu
Frequency Response (Low-Z source, 1K): ±3dB DC to 80kHz
Frequency Response: -3dB at 19kHz
LPF Output: -22dB at 67kHz
Separation: >85dB
% THD, 3dB
 Below Clipping: <0.1%
% IMD, SMPTE, 10:1 Mix: <0.1%
Second Harmonic Distortion: <0.1%
 At 6dB Clipping: 0.5% typ.
S/N at +10dBu Out: <-74dB
Slew Rate: 13V/μs
Power Requirements: 110VAC, 60Hz, 3.5W
Dimensions: 1 rack space, 5.125" D
Weight, Shipping: 4 lbs.
ZH-1 \$460.00

SX-87 Telephone Hybrid

- Balanced bi-directional trans-hybrid amplification effectively reduces hybrid return loss to zero. This results in a device which is approximately 25dB more tolerant to null upset as a result of line variations • Full band pass filtering on both the transmit and receive sections • Multiple outputs • Zero loss conferencing • Switch hook detection with both continuous and momentary drive capability for control functions such as tape machines, warning lights, etc. • Caller tone signalling • ID tone signalling selectable, 17 or 34 sec. • Receive path muting during answer function • On board test oscillator • Logic functions dip-switch selectable • "On chassis" mix down amp specifically for "off air" contests

The SX-87 Phone Hybrid is specifically designed as an inexpensive, highly sophisticated interconnect device for elaborate ENG applications where multiple interfacing is the norm.

The SX-87 provides the best rejection of feed audio as compared to phone return audio with consistent null floors between -12dB and -19dB. All others are typically 7dB.

Specifications

Transmit Section: Part 68, FCC rules compatible third order band pass with notch filter at 2400Hz to prevent interference with automatic switching equipment
Peak Indicator: Illuminates prior to maximum allowance feed level of -9dBm. (This indicator is to provide the user with a visual illegal condition indication and under normal usage is never on.)
Input Level: -10dB to 0dB balanced
 -10 to +20dBm unbalanced
Trans Hybrid Loss: -55dB at -15dBm feed level, 1kHz, 600 ohms (worst case) -65dB typical
 Six pole band pass filter
Receive Section: Usable Input Range at Telco: -35dBm to 0dB
Nominal Output Level: +6dBm, 600 ohms for -25dB input at Telco
SX-87 \$465.00

HOTRONIC, INC.

Time Base Correctors/Frame Synchronizers

AE61 and AE61B

Time Base Correctors

- Time base correction for heterodyne VTRs
- Constant H phase for matched frame edit
- 4 times subcarrier sampling, 8 bit resolution
- VTR 3.58MHz subcarrier feedback
- Adjustable horizontal and vertical blanking
- Handle high speed search
- Full processing amplifier control

The AE61 and AE61B are broadcast quality digital Time Base Correctors. They operate with 525 line/60Hz monochrome, and accepts heterodyne VTR video signals.

The AE61 and AE61B are small size TBCs with complete features, light weight, low power consumption, and high performance at low cost.

Specifications

AF71 TBC/Frame Synchronizer

- Time base correction for heterodyne VTRs
- Frame synchronization with more than two frame memories
- Constant H phase for matched frame edit
- 4 times subcarrier sampling, 8 bit resolution
- VTR 3.58MHz subcarrier feedback
- Adjustable horizontal and vertical blanking
- Handle high speed search
- No interruption presettable/variable processing amplifier
- Highly stable pause mode capability
- Adaptive comb filter
- 3dB chroma noise reduction
- Full bandwidth freeze field/freeze frame (Field 1 or Field 2 selectable)
- Accept noise satellite feed
- 1 3/4" height; less than 15 lbs.
- Precise automatic microprocessor control freeze frame (optional)
- 16 bit automatic matched digital audio delay (optional for frame synchronization mode)

The AF71 TBC/Frame Synchronizer is the resultant climax of 5 years of ceaseless engineering innovation and refinement.

The powerful features of the AF71 earn their way to the production.

Audio Console

**7512A Audio Console**

- Sheer operating pleasure
- Unmatched sound quality
- Digital logic control
- Top of the line specifications
- Exceptional ease of installation
- Professional-grade linear slide faders
- LED status lights

The 7512A console has a simple design, coupled with high quality slide faders and totally digital remote start and stop controls. The console is designed using VCA technology, a simple, virtually RFI immune audio section, and easy-to-use Molex connectors. The 7512A console has 12 stereo channels, 22 total inputs, one mono and 2 stereo outputs.

The 7512A console includes all the materials needed to install and understand the unit. Modular electronics make service simple and quick. The instruction manual has been praised by users as being the most detailed, simple-to-understand documentation they have seen. Molex connectors are used to make installation quick and easy and a complete kit is included. The 7512A console also comes with a spare parts kit, and the components can be easily plugged in should repairs be necessary.

Broadcasters have come to know the quality of our consoles, and the 7512A is no exception. The professional linear slide faders are built to last for years, and are offset in the console, reducing the chance of spillage into the fader. The full digital logic control of the on-off-cue functions means easy operation, and the LED status lights on each button assist operator control.

The 7512A console is a streamlined package, using durable Lexan® over metal with solid oak top and side panels. This type of construction assures you years of service with minimum upkeep.

The 7512A is packed with the most advanced features, yet is designed to be simple to operate and maintain. The interior of the console is readily accessible. There are no catches or latches; it just unfolds. Once inside, you'll find high technology circuitry, plug-in modules with interchangeability, and a logical, straightforward layout.

Specifications**Intermodulation**

Distortion: All outputs: >0.04% using standard 60 and 7000Hz tones in 4-to-1 amplitude ratio

Overall Signal-to-Noise Ratio:

All secondary circuits: Noise <-80dB below normal maximum output. A-WTD, RMS (ASA)

PROG/AUD Output Noise In a 20-20,000Hz Unweighted Passband (Output Terminated in 600 ohms):

-90dBm or better with one channel on, fader at normal operating position, input terminated. -124dBm equivalent input noise (microphone channels) -68dBm or better with all channels on, and all faders maximum

Attenuator Tracking:

± .25dB, left-vs-right, audition or program, any channel. ± .25dB audition-vs-program, left or right, any channel. Fader at mid-position to full on.

Channel Separation:

> 66dB, 20Hz to 20,000Hz

Power:

117/230VAC, 50/60Hz, 75W, single-phase with safety ground

Finish:

Earth-tone Lexan finish. Solid hardwood trim with oil- and urethane-sealed finish

Size:

10 1/2" H x 33" W x 23" D

Weight:

80 lbs.

Operating Mode:

Stereophonic

Mixing Channels:

12 total

Primary**Input Circuits:**

22 total: 10 inputs accept -60dBm to +20dBm nominal levels, each input adjustable, active balanced; 12 pushbutton inputs (routed to 2 mixing channels) accept -20dBm to +20dBm nominal levels, each input adjustable, active-balanced. All line inputs are 10,000 ohms or greater, bridging

Secondary**Input Circuits:**

One on-air input, two auxiliary inputs, 0dBm nominal level, adjustable, unbalanced

Primary**Output Circuits:**

Program outputs (L & R) active-balanced, factory set at +4dBm, peak at +24dBm. Output adjustable from 0dBm to +10dBm for 0-level meter deflection. Audition outputs (L & R) active-balanced, factory set at +4dBm peak at +24dBm. Output adjustable from 0dBm to +10dBm for 0-level meter deflection

Secondary**Output Circuits:**

Monitor outputs (L & R) at 0dBV nominal, unbalanced (30W/channel into 8 ohm speakers with optional power amplifier module). Head-phone outputs (L & R). 1/4" stereo front panel jack. 5WRMS nominal into 8 ohms. Cue speaker outputs (L & R) 10W nominal into internal 8 ohm speakers

Frequency**Response:**

All outputs: ± 0.1dB, 20Hz to 20,000Hz at normal maximum output

Total Harmonic Distortion:

All outputs 0.03% nominal or lower, 20Hz to 20,000Hz at normal output, fader at normal operation position

Audio Consoles

8000/9000 Series Modular Audio Consoles

8000 Series:

- Precision rotary faders
- Dry contact function switches for remote start and stop (optional)
- Key-type microphone switches
- Digital clock and timer available

9000 Series:

- Laser trimmed conductive plastic linear faders
- Environmentally sealed ultra long life switches with LED indicators
- Digital clocks and timers
- Solid-state control logic circuitry
- Adjustable delayed audio following channel start to prevent "wow"
- Cue select is independent of fader position

Specifications

Operating Mode: Stereophonic; two independent stereo program outputs; separate mix-minus output; monaural (L + R) program output
22 maximum

Mixing Channels: Primary

Input Circuits: Three per channel; all inputs accept -60dBm to +20dBm nominal levels, each channel input adjustable, active balanced. All line inputs are 10,000 ohms or greater, bridging

Secondary

Input Circuits: One on-air, two auxiliary inputs, 0dBm nominal level, adjustable, active balanced

Primary

Output Circuits: Program 1 outputs (L & R) active balanced, factory set at +4dBm, peak at +26dBm. Output adjustable from 0dBm to +10dBm for 0-level meter deflection.
Program 2 outputs (L & R) active balanced, factory set at +4dBm, peak at +26dBm, peak at +26dBm. Output adjustable from 0dBm to +10dBm for 0-level meter deflection.

Secondary

Output Circuits: Monitor outputs (L & R) at 0dBV nominal, unbalanced (30W/channel into 8 ohm speakers with optional power amplifier module).
Headphone outputs (L & R), 1/4" stereo front panel jack, 5WRMS nominal into 8 ohms.
Cue speaker outputs, 10W nominal into internal 8 ohm speakers

Frequency Response: All outputs: ±0.1dB, 20Hz to 20,000Hz at normal maximum output

Total Harmonic

Distortion: All outputs: 0.03% nominal or lower, 20Hz to 20,000Hz at normal output, fader at normal operating position

Intermodulation

Distortion: All outputs: >0.04% using standard 60 and 7000Hz tones in a 4-to-1 amplitude ratio +26dBm

Clip Point:

Overall Signal-to-Noise Ratio:

All circuits: Noise lower than -85dB below normal maximum output, A-WTD, RMS (ASA) ≥ -90dBm with one channel on, fader at normal operating position, input terminated -124dBm equivalent input noise (microphone channels) ≥ -76dBm on and all faders nominally set

PROG1/PROG 2

Output Noise in a 20-2000Hz Unweighted Passband (Output Terminated in 600 Ohms):

Attenuator

Tracking: ± 0.25dB, left-vs-right program 1 or program 2, any channel. ± 0.25dB program 1-vs-program 2, left or right, any channel. Fader at mid-position to full on

Channel Separation: > 70dB

8000-10 Channel

9000-22, 14 and 8 Channels

Power: 117/230VAC, 50/60Hz, single-phase with safety ground, power requirement depends on number of channels

14 Channel	Includes clock, timer, stereo cue, 42 inputs. 14,950.00
16 Channel	Includes clock, timer, auxiliary meter for mix-minus and mono outputs, dedicated meters for Program 1 and Program 2, 48 inputs 15,780.00
18 Channel	Includes clock, timer, auxiliary meter, stereo cue speakers, dedicated meters for Program 1 and Program 2, 54 inputs 17,355.00
20 Channel	Includes full metering, 3 clock or timer positions, 60 inputs 20,119.00
22 Channel	Includes full metering, 3 clock or timer positions, stereo cue, 66 inputs 21,825.00

* Clocks and timers are standard in the 9000 Series and are a \$295.00 option on the 8000 Series console.

10,000 Series Audio Console

The 10,000 Series Audio Console breaks ground in modular audio console design. Numerous novel design innovations have been incorporated which provide the optimum combination of technological sophistication and user convenience.

The 10,000 is a low profile audio console designed for both on-air and production use. The three-tier modular design allows for expansion of size and features at any time in the field. Mainframes start at 14 channels and can be expanded up to 32 input channels; full Program output sub-mix capability, including mix-minus, is provided. Various accessory features and interchangeable modules are available, including pan, solo, 10 position remote input selects, tape remote control units, reference tone oscillators, multiband equalization, etc.

The first tier contains the faders, mute and solo function switches; the second tier contains all the analog modules (E.Q., etc.) and routing switches. The third (optional) tier, oriented at an intermediate angle between the second tier and the meter bridge, is available for additional switching and display functions. The meter bridge is customized for each 10,000 Series Console, allowing the user to determine the best configuration of displays for the facility. Meter bridge accessories include standard VU or Vacuum Fluorescent metering, clocks, timer, temperature indicators, remote control status indicator, etc.

Input Channel:

Each channel is provided with active balanced stereo inputs, with standard Molex input connectors. The input gain can be adjusted to accommodate mike or line level signals. Dual tracking voltage controlled amplifiers (VCA) provide accurate gain matching for each stereo signal pair. Three status controls are standard on each fader module: Channel On, Channel Off and Cue. Internal programming jumpers allow the user to determine the precise configuration of the CMOS control logic routing, which provides flexible console control, external device control and channel sequencing.

Bus Configuration:

Five monaural buses are provided. The first four are normally used as two stereo pairs, that is Program 1 left and right, and Program 2 left and right. Depressing a Program Bus Select switch routes the left and right signals from a channel to the corresponding left and right Program Buses. The fifth bus is used for the mix-minus function and has the following characteristics. When either Program Select switch is activated, the mono sum of the left and right signals of that channel are routed to the mono mix-minus bus; that is, when no mix-minus

switches are depressed, the mix-minus bus will contain the mono sum of all signals present on both of the program buses. When a channel mix-minus switch is activated, the signals originating from that channel are deleted from the mix-minus bus.

Monitor Control:

Full monitor control is located in the first tier. The Monitor Control Module provides independent level controls for control room monitor speakers, front panel cue speakers, and headphones. In addition, two programmable muting functions are available. If a channel is to be used for a studio microphone, feedback between the live mike and the nearby speakers could occur. To avoid this problem, both the monitor speakers and the front panel cue speakers can be programmed to dim (or mute) as the mike channel fader level is increased. If the fader is up, switching the channel to the "Off" mode will instantly restore program material to the speaker systems.

Output Section:

Each of the four monaural program buses have an independent VCA level control; this allows the console to be used as a four sub-mix out production console. The mix-minus signal is a monaural output. Two additional mono outputs are provided; these are the mono sums of the Program 1, left and right, and Program 2, left and right, respectively. Balanced output amplifiers are standard throughout (maximum level +24dBm).

The 10,000 Series Consoles are designed to be ergonomically correct. The console is built in such a way to allow for comfort of operation without operator fatigue. Adequate leg room, engineering access, and wiring ports have been designed in. All welded chassis construction and solid oak trim guarantee durability. The 10,000 Series also comes with an installation kit and a spare parts kit.

The photo shows a typical broadcast configuration; the first contains thirteen input modules, grouped by input type (i.e., tape carts, remote lines, etc.), a tape transport remote control and a monitor control (right-most module). The second tier contains primarily input select and output bus routing switches. A console designed for recording and post-production would typically include more complex processing and routing modules. In this unit, the optional third tier has been omitted.

Since each console configuration is custom designed for the user, it is impossible to show all possible variations. Call for more detailed applications and design information on the 10,000 Series Audio Consoles.

10,000 \$12,000.00-25,000.00

HOWE TECHNOLOGIES CORP.

Audio Timebase Corrector

2300A

2300A Phase Chaser

- Channel fill-in enable switch
- System bypass/online switch
- Polarity reversal enable switch
- Remote control jack (for remote bypass and/or reset)
- "Fill" on/off LED indicator
- "On-Line" indicator
- "Flip" on/off LED
- 21-segment analog time delay error indicator
- Remote status jack (remote sensing of flip, fill, on/off line, clip)
- Total harmonic distortion: 0.02% maximum, any level up to +28dBm
- Intermodulation distortion: 0.02%, any level up to +28dBm
- Overall signal-to-noise: -90dBm
- Dimensions: 19" x 1³/₄" x 13" standard EIA rack
- Balanced inputs and outputs (XLR connectors)
- Inputs accept levels from -40dBm to +20dBm (nominal)
- Outputs (left, right, and L+R) are nominal 20dBm, peaking at +28dBm
- Frequency response is essentially flat: DC to 20kHz, ± 1 dB
- Time delay error correction is available out to $\pm 150\mu\text{sec.}$, and is functional over the entire dynamic range of >90dB

Applications

Anywhere discrete stereo audio information exists which is subject to inter-channel time delay and polarity errors:

- Television broadcasting (especially MTS systems)
- Radio and television pre-production
- Film/video production/post-production
- Film-to-tape and tape-to-tape video transfer/duplication
- Audio duplication

- Theater sound (especially Dolby™ Surround systems: the 2300A corrects phase errors in Surround encoded material, eliminating spitting and assuring accurate decoding and spatial image reproduction)

The Model 2300A provides automatic detection and correction of all interchannel time delays in stereo audio program material delays that normally result in loss of mono compatibility (characterized by noticeable attenuation of high frequencies) and poor stereo imaging. A unique feature of this device is its ability to discriminate between systematic time delay (e.g., tape head misalignment) and intentional phase fluctuations in the program material. Installation of the Phase Chaser in the audio chain downstream of all source machines assures dynamic, real-time phase error elimination, missing channel fill-in, and polarity reversal correction.

Time-delay related high frequency degradation is eliminated; mono compatibility and the intended stereo image are restored.

Single missing channels are "filled-in" (with cross-fade switching) after a user-programmable decision time; polarity reversals are detected and "flipped" with a psychoacoustically optimum crossfade.

The Phase Chaser's proprietary "window of zero correction" circuit accurately discriminates between normal phase fluctuations and constant systematic time delays: the stereo information is left intact. This ability to ignore regular program material phase changes allows the correction of time delay errors in phase-encoded matrix audio, such as Dolby™ Surround Sound. The Model 2300A guarantees accurate multichannel decoding in the theater, as well as mono compatibility and proper stereo imaging in the duplication or transmission of Surround Sound programming.

2300A \$3495.00

IKEGAMI ELECTRONICS (U.S.A.), INC.

Microwave Links

PP-70-7 (7GHz)/PP-70-13 (13GHz)

Portable Mini Microwave Links

- Compact and lightweight transmitter. Miniaturization technology provides a very compact and lightweight design which is superior for portable microwave link applications
- Low power consumption. 3 to 4 hours of operation are possible with a conventional 4AH battery
- An AC power supply unit is also provided for operation with an AC power source
- Versatile applications. The transmitter and receiver can be used as separate components or they may be joined as one single operating unit. This design concept provides a wide range of applications
- Audio input level can be switched to 0dBm/600 ohm or -50dBs/High impedance by a selector switch. When it is set at -50dBs input, an additional AGC function permits direct connection of a microphone
- Surface acoustic wave (SAW) filter is used for IF band to minimize interference by disturbing waves from adjacent channels
- Built-in "LED Bar" and sonalert accurately adjusts for the best receiving direction. The LED indication and pitch change of the sonalert "Beep" provides indication of the receiver input level for accurate positioning even in darkness
- Double superheterodyne system minimizes adjacent-channel interference
- Built-in video and audio test signal generators are provided to simplify field operations

The PP-70 is a high performance, portable microwave link system. It was developed to complement Ikegami's compact microwave link series. This compact and lightweight microwave link is designed for convenient cable-free transmission of television and audio signals, especially as a window link for Electronic News Gathering and Electronic Field Production.

Applications

One-Piece

The one-piece application is most suitable for use in ENG, for a window link, etc.

Two-Piece

The two-piece application is most suitable for use by mounting on an OB van. The RF unit and control unit are connected by a coaxial cable which can be extended to the maximum length of 100 meters (5D-2W). Multicore option will provide complete remote control of all functions at the control unit.

Long Distance Transmission

Long distance transmission is possible by the use of a large diameter (0.6mφ or 0.9mφ) parabolic antenna. The parabolic antenna and tripod of Ikegami's PF701 portable microwave link can be used without modification for this purpose.

IF Through-Relay System

The PP-70 system can be used as a link for "IF through-relay" by connecting the receiver RF unit and transmitter RF unit with a coaxial cable.

The IF frequency of 70MHz enables combined use with the PF701 system and various other microwave links.

Cable Multiplex Transmission

Cable multiplex transmission with one video circuit and two sound circuits is possible by connecting the transmitter control unit and the receiver control unit with a coaxial cable. The connecting cable can be extended to the maximum length of 300 meters (5D-2W coaxial cable).

Two-Way Transmission

The PP-70 system can be used for two-way transmission when it is necessary to send a return video signal, command signal, intercom signal, etc. to the field pick-up site. The antenna system can be used in common in the same frequency band when a branching filter and a two-way adaptor are provided. (A wide band antenna or independent transmission and receiving antennas will be required when different frequency bands are to be used for the two-way transmission.)

PP-70-7/PP-70-13

HL-379A

**HL-379A
CCD Color Television Camera System**

- 1.5" viewfinder
- Test extender card
- Dynamic detail incorporated for correction of lens corner resolution
- White shading correction circuitry in lens extender use incorporated
- Auto highlight compression
- Knee aperture correction
- SMPTE color bars incorporated
- Genlock circuitry incorporated
- High grade picture quality obtained by horizontal three DTL
- Auto iris permits easy shooting of backlighted scenes
- External remote control using digital commands. The following functions can be remotely controlled:
R/B Gain, R/B/M Ped, Iris, DTL Level, Iris Auto/Manual, VTR Start/Stop, Call, Auto White
- A built-in sound monitor speaker
- Compact, lightweight, 3.1kg with VF
- Low power consumption, 13W
- Adjustment tool
- Parts case
- Spare fuse
- Extractor tool
- Tripod mounting plate
- Shoulder pad
- Instruction manual
- Carrying case

The HL-379A is a broadcasting quality CCD camera which has high-performance and high-stability despite its compactness and light weight. Besides its usefulness with various types of VCRs, it can be used as a multi-purpose camera with the host of various accessories.

CCD-770**Compact 3-Chip ENG Color Camera****Preliminary**

- Vertical smear problem is greatly reduced
- Free of panning distortion
- Moire, ringing and return distortion are greatly reduced
- Electronic shutter captures bodies in motion in a fraction of a second
- Highlight compression circuit and wide dynamic range CCD accommodate scenes with wide contrast range (600%)
- Free of sticking
- Free of microphone noise
- Not influenced by earth magnetics
- After image is greatly reduced
- Registration accuracy of within 0.05% (whole picture area)
- Small size, lightweight, well balanced on the shoulder for ease of operation
- Low power consumption; operates at least 2 hours using a 2.5AH battery
- CCD has long life span, regular CCD replacement is not required
- Registration adjustment not required

The CCD-770 is a high performance, lightweight, compact 3-chip CCD camera incorporating the latest advances in charge-coupled device (CCD) technology.

While turning to best advantage the salient features of CCD, such as freedom from sticking, light weight, miniature size, and long life, the CCD-770 incorporates significant improvements over conventional CCD cameras relative to vertical smear, panning distortion, moire, and other problems.

Also featuring incredibly enhanced operation, the CCD-770 lends itself especially to ENG applications.

Specifications

Optical System:	f/1.4, RGB prism beamsplitter
Lens Mount:	Bayonet type (same as ITC-730A)
Color Temperature Filter:	3200°K/5600°K/5600°K + ND (12.5%)/BLIND
Transducer:	TSL system MID
Effective Picture Elements:	649(H) x 491(V)
Scanning System:	2:1 interlace, 525 lines, 60 field/sec., 30 frame/sec.
Sync System:	Internal sync: sync signal generator built in External sync: Genlock system (Automatically switched to internal sync mode when external sync signal is not supplied.)
Encoder System:	I/Q
Aspect Ratio:	4:3
Horizontal Resolution (G ch):	480 TVL or better (whole picture area)
Signal-to-Noise Ratio:	≥ 53dB (p-p/rms, Isig 0.2μA, encoder output, with gamma and detail off)
Illumination:	a) Minimum 40 lux, f/1.6/3200°K (89.9% reflectance, + 18dB gain) b) Standard 2000 lux, f/4.0/3200°K (89.9% reflectance)

Gain Switch Position:	0dB/ + 9dB/ + 18dB
Shading Correction:	Black and white shading correction for both H and V
Video Matrix:	Built-in (with on/off switch)
Flare Compensation:	Built-in
Highlight Compression:	600%
Detail Correction:	H: balance (with comb filtering) V: balance (2H system)
Color Bars:	Split Field type (RS-189A)
Registration:	Within 0.05% (whole picture area)
Automatic Function:	Auto white balance Auto white balance memory Auto black balance and level Auto iris Auto knee (highlight compression)
Shutter Function:	1/100, 1/125, 1/250, 1/500 sec.
Microphone Input:	-60dBm, 600 ohms
Audio Output:	Balanced (-60dBm, 600 ohms) or Balanced (-20dBm, 600 ohms, with AGC) switchable
Intercom:	Mike on/off switch provided switchable between Carbon/Dynamic
Video Output:	VBS 1.0V p-p/75 ohms
Monitor Output:	VBS 1.0V p-p/75 ohms or VS 1.0V p-p/75 ohms R/G/B/R-G/B-G/ENC switchable)
Power Requirement:	DC + 12V nominal
Stability:	Stable when the DC input voltage fluctuates 11V ~ 32V
Power Consumption:	9W approx.
Ambient Temperature:	+ 14°F ~ + 104°F (-10°C ~ + 40°C)
Dimensions:	10.59" H x 3.74" W x 12.32" D (269 x 95 x 313mm)
Weight:	8.6 lbs. (3.9kg) approx.
CCD-770-1	Camera head only. Includes mike amp, DBS unit, genlock unit, 2H DTL, shoulder pad, operation manual, battery bracket w/protection plate. \$ 6,328.00
CCD-770-2	Sames as CCD-770-1 plus 1.5" viewfinder, carrying case for head and tripod mounting plate 7,138.00
CCD-770-3	Same as CCD-770-2 plus A13X Fujinon zoom lens. 8,483.00
CCD-770-4	Same as CCD-770-3 except: Studio-4, EFP version, CCU, 5" viewfinder, 15 meter camera cable, remote module. 12,992.00

Color Camera

HL-95B

HL-95B Unicam™

- High sensitivity: Max. 24dB
- Small size: 250H x 95W x 165D mm
- Weight: 3.0kg (Camera + 1.5" VF)
- Full shading correction: Black and white
- Dynamic focus correction
- Flare correction
- Geometry correction
- Color video matrix
- Knee aperture correction
- 1.5" high resolution electronic viewfinder:
 - White balance indication
 - Battery warning indication
 - Tally (Red) indication
 - Gain up indication
 - Stand-by indication
 - Audio level indication (CH1, CH2)
 - Tape remaining time indication
 - Filter position indication
- Color bars: Split field, in accordance with RS-189
- Sync generator: RS-170A, adjustable H. V Blanking
- Automatics:
 - Auto iris
 - Auto iris close
 - Auto iris waiting
 - Auto white balance—A/B/Off (preset)
 - Auto beam, control
 - Auto highlight compression
- Module extender card 1 and 2
- Tool kit
- Shoulder pad
- Quick release tripod adaptor plate
- User's manual
- Carrying case

The HL-95B Unicam provides handheld color camera flexibility, versatility, as well as higher performance, lower weight and power consumption than obtained with previous cameras based on three 2/3" Plumbicon® pick-up tube configurations.

Utilizing a unique building-block concept, the HL-95B is available as a standalone camera, as well as in many other configurations, accommodating on-board professional 1/2" and 1/4" cassette format VCRs, as well as separate 3/4" and 1" VTRs, and remote triax or multicore cable control units.

A 2/3" SM diode gun Plumbicon (electrostatic focus/magnetic deflection) is incorporated into the HL-95B. This tube's photoconductor size, combined with a diode gun electron tube, results in a high sensitivity and high resolution for the camera.

By taking advantage of the low input capacity of the tube, circuit components and advanced circuit technology, a S/N ratio of -60dB is obtained. This allows video gain of up to +24dB for a maximum sensitivity of under 15 lux (using an f/1.6 lens).

Specifications

Color Camera

HL-79EAL

HL-79EAL Self-Contained Color Television Camera

Although it is smaller and lighter than its HL-79 Series predecessors, the HL-79EAL uses the same proven 2/3" low capacity Plum-bicon pick-up tubes, while achieving important performance improvements in the areas of sensitivity, signal-to-noise ratio, registration accuracy, resolution and RFI immunity. Picture quality is further enhanced by employing chroma aperture correction, dynamic detail correction, automatic highlight compression, which improves picture quality in highlight areas (particularly effective in exterior operations involving high dynamic light areas), and knee aperture correction.

The HL-79EAL is designed for ease of maintenance with a micro computer to carry out self diagnostic functions. The micro computer assesses the camera's operating condition and makes any necessary corrections in a short time.

The ADC-79E incorporated in the system prints out a statement of the camera's condition via an RS232C port, thus control of the camera can easily be made for the long term.

Performance Parameters

- Standard sensitivity is 2000 lux at f/5.0. Maximum sensitivity at +18dB video gain is 20 lux at f/1.4 (using 89.9% reflectance chart).
- Signal-to-noise ratio of -59dB is achieved with low input capacitance tubes using conventional measuring techniques (0dB video gain).
- Registration deviation of Red and Blue with respect to Green is within 0.05% in Zone 1, 0.1% in Zone 2, and 0.3% outside of Zone 2 as a result of the Quadrant Geometry Correction Circuit used.
- By operating the pick-up tube in a high voltage mode, center resolution of 650TVL limiting and corner resolution of 500TVL limiting is achieved (using Diode Gun pick-up tubes, measured at 2000 lux illumination on a standard RETMA resolution chart).
- 1.5" high resolution electronic viewfinder, crisp, high contrast pictures are assured by the use of an improved cathode-ray tube.
- Output signal characteristics in accordance with EIA Standard RS-170A, blanking pulse widths and SC-H phase relationship adjustable.

Performance Features

- RFI Immunity up to 10V per meter (140dB) from 100kHz to 600MHz for the entire camera surface (not including lens port).
- Horizontal aperture correction

B-664

- Generates chroma aperture correction signal when Green information is absent from the signal, results in improved sharpness of picture in Red and Blue content areas.
- Dynamic focus: parabolic modulation of electrostatic focus voltage improves corner resolution.
- Dynamic 2H vertical and balanced horizontal detail correction: parabolic modulation of detail correction signal improves corner picture sharpness.
- Knee aperture correction: expands horizontal video frequency response in highlight areas of picture to compensate for aperture correction fall-off due to gamma compression of correction signal.

Operational Conveniences

- Selectable white balance corrections
- Dual concentric filter wheels
- Selectable video gain
- SC/H phase adjustment
- Adjustable blanking widths
- Viewfinder indicators
- Numerous readouts available to assist the camera operator: white balance mode (A, B, Preset), tally, battery warning, auto white balance, auto black balance, video level (Zebra), gain mode, standby mode, lens extender on
- RGB outputs
- Color bar signals
- Genlock input
- Camera head with EIA RS-170A genlock sync generator
- RGB dynamic beam stabilization
- Bias light
- Full white and black shading correction
- Quadrant geometric corrector
- Quick release tripod adaptor plate
- Module extender cords (2 pcs.)
- Module extractor tool
- Rain cover
- Tool kit with spare fuse and lamp
- Detachable shoulder pad
- Battery bracket with protection plate
- VTR cable (10')
- User's manual
- Carrying case

Automatic Features

- Auto iris control
 - Auto white balance (2 modes)
 - Auto black balance
 - Auto iris closure
 - Auto iris waiting
 - Auto highlight compression
 - Auto beam control

HL-791

HL-791

High Performance EFP Camera

- Auto set-up function including self-diagnostics
- Gain positions: -3dB, 0dB, +6dB, +12dB (or +24dB)
- Self-contained operation with VTR and remote control connectors
- SMPTE color bar generator
- Genlock circuit
- High S/N ratio of -61dB
- System flexibility. The camera head accepts an on-board professional VCR, without a VCR adaptor or can be used as a standalone camera. Multicore remote control system, triax remote control system and a remote control panel are available
- Time code lock is available
- Viewfinders can be selected for various operational purposes: 1.5" black and white, 3" black and white, 4.5" black and white, 6" black and white, 7" color
- Box marker or cross marker is indicated on the viewfinder, position of these markers can be adjusted
- Viewfinder indications include: filter position, audio level, AWB/ABB/ auto setup, VTR warning, battery warning, tape remaining time, gain up, extender
- Aperture distortion compensation circuit provided for R, G and B channels
- Soft DTL
- DTL signal is specially mixed with selected VF video signal to increase viewfinder resolution
- Filter disk specially designed for effects can be attached to camera. Cross, Sunny Cross, Soft, and Through-filter disks are available as options
- Chroma aperture correction
- Dynamic DTL improves corner resolution
- Full white shading
- Three-mode AWB. Two auto white memories, A and B, are provided along with the pre-set white balance at color temperature of 3000°K
- Highlight compression and knee aperture correction
- Iris waiting/lens closing. When power is on, iris is closed until the beam flows. When power is off, iris is automatically closed to protect the camera tube against burn

The HL-791 is a high-performance professional EFP color camera, offering superb capability for both studio and field production. It is suited for on-board VCR operation, standalone camera operation, and multiple camera operation. The HL-791 is a self-contained camera, incorporating self-diagnostic functions with a host of adaptors for various applications. The HL-791 is compatible with all HL-79E accessories.

IKEGAMI ELECTRONICS (U.S.A.), INC.**Color Camera****ITC-735 ENG/EFP Color Camera**

- High-speed f/1.4 prism optical system produces quality color reproduction, high sensitivity, excellent resolution and low shading
- Three Saticon® IV tubes with high voltage operation, and low-noise preamplifiers offer excellent picture quality with 750 TV lines resolution and 58dB S/N ratio
- 2:1 interlaced 525 lines, 60 fields/30 frames/sec. (NTSC)
2:1 interlaced 625 lines, 50 fields/25 frames/sec. (PAL)
- Dramatically sharp pictures are achieved with a 2H detail corrector (standard) and a built-in comb filter, with crisp and level dependent circuits which maintain optimum setting for best picture quality
- A built-in switchable highlight compression circuit automatically enables reproduction of scenes, and contains up to 600% video level
- Operates under lighting conditions as low as 40 lux, using the high gain position (+ 18dB)
- Black shading circuit corrects for frame shading as well as sawtooth and parabola effects, so that the black level will be optimal throughout, even with + 18dB gain
- Sawtooth and parabola white shading correction is provided for each channel
- Employs a video matrix circuit for accurate color reproduction
- Dynamic focus compensates for R, G, and B tubes independently for sharper pictures in the corners
- Individual flair correction circuits correct flare generated in lens optical system, pick-up tubes, etc., thereby ensures satisfactory black levels
- Saticon IV tubes further improves LAG and high-light sticking characteristics
- Compact and lightweight camera head (4.7kg) is balanced to reduce operator fatigue during extended operation
- Furnished with advanced micro-computerized automatic functions required in an ENG camera
- Full range of character display functions, visible on the VF screen, contain overall condition of the camera, to minimize the risk of operational errors. Character displays can be switched off
- In the Auto Iris mode, a unique system allows shooting scenes with high luminance, such as the sky background, where peaked average values can be selected
- Automatic iris close protects tubes from damage wherever the power is off
- Tubes are also protected by a delay circuit, which opens the iris after the beam has stabilized
- Filter settings are:
Indoors—3200°K, outdoors (cloudy weather), 5600°K, outdoors (sunny weather) 5600°K + 1/8ND, CAP (when not in use) BLIND
- For optimum matching of video levels, an easy-to-read zebra pattern indicator is displayed in the VF
- Power consumption can be reduced by using Standby mode (during Standby: approx. 2W)
- Memory of auto white, auto black and auto centering is retained with a 10-year lithium battery
- External switches and controls are functionally positioned to minimize operational errors
- Built-in stable genlock circuit makes external sync operation possible. Switching between external and internal sync operation is automatic
- Horizontal and vertical blanking widths are adjustable. For vertical blanking width, a 3-position switch is provided (18H/19H/20H)

**ITC-735**

- VTRs supplied with component signals can be connected by adding an optional module in the camera for the appropriate format
- The CCU can be operated from the camera head to a distance of up to 100 meters
- Optional remote unit connects directly to camera using a single coaxial cable for control
- The TCU-735 (option) is especially designed for teleconferencing applications. Four cameras can be controlled and powered simultaneously via coaxial and DC power cables
- Plug in modules
- Electronic rotation adjustment makes back focus much easier
- A monitoring switch is provided on the outside of the camera for convenience
- Bayonet mount
- Minimum 40 lux illumination at f/1.6/3200°K (+ 18dB gain)
Standard 2000 lux at f/4.0/3200°K, 89.9% reflectance
- Automatic camera tube protection is provided in case of sweep failure of either horizontal or vertical scanning

Accessories

- CCU-735 Camera Control Unit
- TCU-735 Tele-Conference Unit
- VFM-152 1.5" Viewfinder
- VFM-572 5" Viewfinder
- ACP-735 AC Power Pack
- RCU-735 Remote Control Unit

CCU-735 Camera Control Unit

- Add the CCU-735 and a variety of remote control functions are possible
- Cable length: 300m maximum
- 2-wire/4-wire/RTS intercom system available, common/private selectable

- ITC-735** ENG version (less lens). Includes: Camera head, 2/3" Saticon tubes H4299, mic amp, DBS unit, genlock, 2H DTL, shoulder pad, battery bracket, 1.5" viewfinder, rain cover, module extender, cord for head, tripod mounting adaptor, carrying case for head, AC power pack with AC/DC cord, operation manual. . . . \$ **8,973.00**
- ITC-735** EFP studio version (less lens). Same as ITC-735 ENG except with remote/component unit, 5" viewfinder with bracket, CCU-735 camera control unit (300m), 15m camera cable and without rain cover **12,381.00**

HK-322 Broadcast Color Camera

- Horizontal resolution—60% performance response at 400 TV lines, center
- S/N ratio of 56dB
- Precise geometry of <math><0.1\%</math> distortion
- Superior registration accomplished digitally resulting in minimal errors, maintained with 0.05% throughout the entire picture area
- Independently adjustable bias lights for R, G and B channels
- 8 pre-programmable zoom lens and diascope error correction modes
- ND and color correction filter wheels quickly removable "cassette fashion" for easy maintenance or special effects filter insertion
- Zoom lens heater power is available when the head power is turned off
- Video and power is provided for a video prompter system
- Dual tally system
- 2-channel return video
- Dual mike amplifiers

The HK-322 is a fully automatic television camera system. The Master Control Panel contains a computer to perform all of the setup functions automatically.

One Master Control Panel can control up to 24 cameras directly by using a Camera Switching Unit (CSU). By the addition of a Studio Selector Unit and other CSUs, up to 10 camera groups or a total of 100 cameras may be controlled by a single MCP. For backup purposes, a second MCP may be connected in parallel.

Several other TV cameras have computerized automatic setup controls—but it takes a lot more than just a computer to produce top quality color.

Ikegami has that extra something: color technology. So, when you get an HK-322, you're not just getting a fully automatic camera—you're getting excellent picture quality, superior craftsmanship, and many non-computerized, automatic correction functions.

Camera Head

- 7" high resolution viewfinder with tilt, elevate and rotate capabilities
- Reversal file (H/V, H and V deflection)
- Dream effect
- Mic amp
- Lens files (8)

Camera setup functions are performed by the digital control system contained within the MCP. This information is stored in a camera memory system. The camera becomes a "black box", requiring essentially no internal adjustments.

Camera Control Unit

- BBS/VBS/SYNC-SC genlock
- Totally automatic cable compensation for up to 600m of small diameter multicore cable

- Plug in FM Triax system with an operational range of 1500m
- Digitally controlled automatic shading correction
- R/G/B Detail corrector employs a novel design. Picture detail is no longer lost in red or blue picture content as is common with the "contour out of green" principle
- Chromakey (option)
- Negative video (option)
- Color corrector (option)
- Jumpers for negative and H aperture modules
- 6 blank panels for CCU option unit
- Color matrix
- SMPTE color bar
- Scene file
- Operation control panel (less cable)

Similarly to the camera head, the CCU's memory system retains the setup control data from the MCP. The "black box" concept permits the mounting of the CCUs out of the control area.

Automatics

Basic automatics, other than CPU setup, include:

- Auto white balance/black balance
- Auto iris control
- Auto cable compensation
- Auto pedestal control
- Auto detail level control/selection control
- Auto optical cap
- Auto highlight compression

Special Effects

- H and V deflection reversal, with stored linearity correction
- Negative video permits RGB video polarity reversal
- Horizontal deflection modulation for "dream scenes"
- Scene compression and expansion for improving high contrast and/or hazy scenes
- Various effects may be stored in a data file. Up to 8 presets may be retrieved on command

The Operation Control Panel controls the camera during normal "on air" operation.

After initial setup, each camera may be operated by its individual OCP, independently of the MCP.

In addition, to provide up to 10 studio parallel Automatic Setup capability, additional CPUs may be added for each of the studios.

Standard Accessories

AC and DC power cables, VF extension cable, CCU WFM remote cable, camera head dust cover, VF hood (studio type) head and CCU test extender card, spare fuses and lamps, user's manual

HK-322 Camera Head (less lens and tubes) \$87,000.00

IKEGAMI ELECTRONICS (U.S.A.), INC.

Color Camera

HK-323 Fully Automatic Color Camera

Suitable for outdoor and indoor applications, the HK-323 is a small, light-weight, high quality and flexible color camera. The camera head itself can be used for self-contained applications. For systems flexibility, the base station is provided.

HK-323 Control System

- Maintenance Control Panel (MCP) and Operation Control Panel (OCP) can be included in the HK-323 system
- Up to 40 cameras can be controlled by one MCP using Camera Selection Units (CSU)
- The camera head and the base station can be connected via triax cable, multicore cable, or fiber cable
- The HK-323P portable camera is available, which may be connected to the HK-323 base station
- Using RS-232C interface the camera conditions can be printed out so that records can be maintained
- Various correction files available for ease of operation

HK-323 Color Camera

- 1" Diode Gun Plumbicons® are utilized. Upon request 2/3" Diode Gun Plumbicon tubes are also available
- Full auto-setup function for easy operation
- By changing modules, triax cable, multi-core cable, and fiber cable can be used

Type of camera and extension:

Triax cable Belden 9267 (9.14mm dia.)	750m
Belden 9232 (13.2mm dia.)	1500m
Fujikura (8.5mm dia.)	900m
Fujikura (14.5mm dia.)	1800m
Fiberglass cable Fujikura G2 80/125	3000m
Multicable TV24/TV39/TV36	600m

- Size and weight are minimized for operability. The camera head is 410H x 230W x 390Dmm. 1" type camera head weighs 26kg. 2/3" type weighs 25kg
- High performance prism optics are used. Quartz filter is employed to improve polarization characteristics
- Broad contrast range provided by Highlight Compression circuitry
- Video Matrix is built-in for color correction and matching
- Comet tail is eliminated by Auto Beam Control (ABC)
- Chroma Aperture Function provides sharp pictures of the object regardless of scene color content or special color lighting
- The camera person's name can be indicated on the monitor at the base station
- Viewfinder indications include: Box Cursor, Crossover Cursor, Safe Title Area, Center Cross (HK-323 only), Auto-Setup, Filter Position, R and G Tally, Lens Extender, Gain Up, Video Level (Zebra)
- In the event of camera head or base station trouble the self-diagnosis system alerts the operator, prompting him to take corrective action
- Head test extender
- Blind plate for head lens mount
- Tool kit
- AC power cable
- Spare fuse and lamp
- Manual

HK-323P Handheld Camera

- 2/3" low capacitance diode gun Plumbicon tubes
- Motorized filter wheel
- Full automatics including geometry and shading

Standard Accessories

1.5" viewfinder, test extender 1, 2 and 3, shoulder pad, tripod mounting adaptor, tool kit, rain cover, spare lamp and fuse, manual, carrying case.

Specifications

Studio Color Camera

**SC-500/SC-500P Studio Camera**

- Three $\frac{2}{3}$ " Saticon II or Plumbicon pickup tubes available
- 7" viewfinder with studio hood, tilt and remote type
- Dynamic focus to ensure superior corner resolution
- Deflection distortion corrector for extremely low registration error
- Camera control unit
- Lens hood for ENG type lens
- 2H detail corrector for crisp, sharp images
- Black and white full shading correction
- Video matrix to provide accurate color matching between cameras
- Servo-controlled filter disc
- +6/+12dB video gain switch
- Dynamic beam stretch
- Return video
- Level suppression to accommodate high-contrast scenes
- Horizontal resolution (at G channel)—700TVL at center, 600TVL at corners
- S/N ratio—57dB/NTSC, with Gamma, DTL off
- Automatic centering control
- Automatic iris with weighting system
- Auto cap for tube protection
- Auto white and black balance
- Auto black level

- A non-volatile memory retains all the automatic correction data for several years, even when power is removed
- Character generator
- Genlock

The SC-500 is an economical professional studio color TV.

The SC-500/SC-500P viewfinder camera employs three $\frac{2}{3}$ " pickup tubes and a prism-optics system to produce pictures of superb clarity and color fidelity. The sturdily built, easy-to-service camera can be relied on to keep performing under the most demanding studio conditions. A zebra-pattern video signal indicator in the 7" viewfinder ensures optimum matching of video signals, and a built-in split-field color-bar generator is provided. A character display in the viewfinder permits easy monitoring of camera status while the camera is being used.

Fully modular construction is employed to simplify service and maintenance. Plug-in printed-circuit boards, divided according to circuit function, are utilized. All major controls are located in front of each unit to facilitate adjustments.

SC-500 Saticon II Tubes (less lens and cable)	\$30,766.00
SC-500P Plumbicon Tubes (less lens and cable)	36,921.00

IKEGAMI ELECTRONICS (U.S.A.), INC.

Color Telecine Camera

TKC-990

TKC-990 The High-Performance Telecine Camera With Computer Control

The TKC-990 is a multipurpose broadcast telecine camera suitable for "on-line" applications such as local viewing or direct on-air broadcast and "off-line" applications, such as teleproduction and video tape recording. For on-line applications, film characteristics can be uncorrected, manually corrected or automatically corrected.

For off-line applications, detailed operator scene-by-scene corrections can be established and stored for retrieval during subsequent playback of the film and transfer to video tape.

Outstanding performance and stability characteristics have been incorporated into the TKC-990. Set-up, operation and maintenance controls for the camera, as well as color corrections for film types and corrections to normalize projector characteristics, are microcomputer controlled and stored.

A 6-vector adjustable color matrix permits colorimetry setting to user preferences and match between cameras. The camera's built-in test pattern projector assures standardized setting of geometry and level parameters; simple centralized control of multiple cameras is made feasible by digitally addressing the memories built into each camera's body.

A sequential manual set-up mode, fully automatic set-up mode, as well as a rapid preoperational auto check of user selected set-up parameters is available.

Optical System

- A built-in pattern projector permits computer control
- Large image field lens built into camera body assures long-term stability of optical alignment
- Built-in neutral density wheel with fast attack rate for automatic light control (ALC)
- Color separation is accomplished by a prism beam-splitter with high transmission efficiency, minimum color shading, minimum ghosting and color errors
- Bias lighting to reduce pickup tube lag at low light levels is introduced via the prism. RGB bias lights, individually adjusted, automatically or manually, are utilized
- Yoke is mounted directly on the optical block to minimize registration errors
- An IR filter is provided to assure correct colorimetry

Pickup Tubes

- Vidicon or Saticon® tubes, operated in the high voltage mode, are usable to provide high resolution (700 TVL at center)
- An improved coil assembly, together with dynamic beam focus (DBF) to reduce beam landing errors, results in improved corner focus and resolution (typically 600 TVL in corners)
- Digital deflection and shading circuitry optimizes overall registration geometric distortion and shading performance and also assures ease of tube replacement. The registration is within 0.05% and is stored in digital memory
- Low noise FET preamplifier to establish a video signal with a minimum of -58dB signal-to-noise ratio

The TKC-990 is capable of automatically correcting the video signal generated to reduce or correct problems due to various film errors. Without prior programming, electronic analysis and adjustment of the R/G/B video signals developed by the camera accomplish auto color balance by correcting white, gamma and black. The Automatic White Balance (AWB), Automatic Gamma Balance (AGB) and Automatic Black Balance (ABB) functions coordinated with auto level compensation functions which are Auto Light Control (ALC), Auto White Level (AWL) and Auto Black Level (ABL).

To simplify manual camera checkout, the TKC-990 is provided with the following:

- For monitoring purposes, the camera provides 2 sets of picture monitor (PXM) signals, 2 sets of waveform monitor (WFM) signals and the necessary keying signals for type 528 (or equivalent) waveform monitor
- For precision pickup tube adjustment, a synchronized focus wobble circuit is employed for the beam alignment procedure
- For accurate raster positioning, deflection overscan is available
- A SMPTE color bar is built-in

Specifications

Camera Tube:	1" Vidicon tube or 1" Saticon tube
Optical System:	Dichroic prism system (Bias light for RGB built in) (Pattern projector built in) Image size: 86 x 115mm
Input Signal	
BBS:	0.45V p-p, 75 ohm or high impedance
Sync:	4V p-p (negative), 75 ohm or high impedance
SC:	2V p-p (sinewave), 75 ohm or high impedance
Output Signal	
Line Output:	4 channels (VB or VBS), 75 ohm
Video Monitor:	2 channels, 75 ohm
Waveform Monitor:	2 channels, 75 ohm
Power Requirements:	100, 117, 200, 220, 240VAC; 50/60Hz
Power Consumption:	600VA approx. (including picture monitor and waveform monitor)
Tally Input:	24VDC or contact closure
Ambient Temperature:	-0°C to +40°C
Weight:	220kg approx. (including picture monitor and waveform monitor)
Dimensions:	1500mmH x 550mmW x 430mmD

TKC-990 Package

Consisting of camera head with: • 3VFK8 Optical System • Vidicon Tubes 8507 • Camera Set Panel (OSP) Control Unit includes: • Yoke and assembly • Preamp • Video unit • H-DEF and V-DEF • Geometry unit • Multiboard • PROC-1 and PROC-2 • DTL 1 and 2 • ENG 1 and 2 • Monitor SW • DAC • T-pulse • Sync B • Level unit • ACB • T-CONT • T-I/O • T-Refresh • ALC assembly • Power supply • CSP I/F • Operation Control Panel (OCP-A) • Monitor turntable • Module extender card • Test slide • Adjusting tools • Fuses and lamps • Manual • Monitor housing for picture monitor and WFM • On-air tally • ADC • Interface unit

TKC-990 \$91,000.00

TKC-970

TKC-970 Color Telecine Camera

- Top-quality picture, faithful color reproduction
- By adopting a pre-preamplifier system employing high S/N FETs, the S/N ratio has been greatly upgraded to 56dB
- Registration has also been further enhanced by employing yoke assemblies and a registration corrector
- Thanks to adopting dynamic focus, resolution at the corners has been improved. (700 lines at center; 600 lines at corners)
- The TKC-970 is provided with a black shading correction circuit
- White shading correction is available in three modes
- A bias light incorporated in the TKC-970 reduces lag in dark picture areas
- A crisp, high-quality picture is attained by employing an optical black and a flare compensation circuit
- A horizontal/vertical detail corrector with an auto-edge circuit constantly provides appropriate corrected pictures

Various Automatic Systems

Added to the conventional automatic systems (ALC, AWL, ABL, optical black, etc.) are these additional automatic systems.

- The edge circuit in the detail corrector circuit is provided with auto level control for assuring constant, most rational correction
- Auto Light Control (ALC) is incorporated in the TKC-970's optical system
- Auto Color Balance functions—Auto White Balance (AWB), Auto Gamma Balance (AGB), and Auto Black Balance (ABB)—are provided. These balance controls maintain the best color-balance pictures during On-Air

Highly Reliable Control System

- Since all controls from the exterior are stored in the camera, an abrupt power failure does not require readjustment
- A digital semiconductor in the control system, including a monitor circuit, greatly enhances reliability
- Multiplexer control is possible from the camera thanks to the multiplexer select switch on the control panel

Easy-To-Operate Monitor System

Selection is made from the following items through piano-key-touch operation.

- PM Select: R, G, B, R-G, B-G, -G and ENC
- WFM Select: Pre Sup, Pre Seq, Proce Sup, Proce Seq, Proce RG, Proce BG, ENC
- When the camera power supply is turned Off and then turned On again, PM Select is automatically set to 'ENC', while 'Proce Seq' is automatically selected on the WFM Select
- The SEQ indication employs a horizontal system
- Preamp as well as proc amp waveforms can be monitored

Combinable With Other Equipment

Two types of field lenses are available, and the projection direction (right and left) for the TKC-970 can be selected, enabling a combination with various projectors. For 16mm film projectors, an aplanatic TV film lens (67mm, f/2.5) is available.

Easy Operation and Maintenance

- A test chart, test pulse, and color bar are incorporated respectively in the optical system, amplifier system, and encoder
- Preamp and process-amp are composed of separate R, G, B amplifiers of the same structure, greatly facilitating replacement and maintenance
- Since all dual-in-line IC's are socket types, replacement and maintenance of semiconductors are facilitated
- The target voltmeter employs digital display
- The ND filter position is indicated by LED
- Various check meters for power supply voltage are provided
- Two timers (camera operation time display and tube operation time display) are provided
- The registration corrector circuit is incorporated for easy registration control
- Beam discharge at 150% can be easily set with the Beam Set switch

Various Protective Circuits

- Camera Tube Protection: Automatic camera tube protection is provided in case of sweep failure either horizontal and vertical scanning
- Camera tube heater voltage is lowered during Beam-Off
- Should short-circuiting occur, the power supply is restricted by internal protection, preventing hazards

The TKC-970 employs a prism splitting system with 86 x 115mm image size. Thanks to the adoption of space focusing on an object, any dust adhering to the lens seldom appears as such on the picture. When a telecine camera with the same image size is replaced by the TKC-970, related equipment previously used can be employed without modification. By selecting a field lens, the TKC-970 can be freely combined with various projectors. Further, equipment layout planning can be effected with due regard to operability.

TKC-970 Package

Consisting of—Camera head with: • 3VFK-7 optical system • Vidicon tubes 8507

Camera control includes: • Yoke and assembly • Pre amp unit • Shading unit • Proc. unit • Masking unit • V. detail unit • H. detail unit • Auto black level on auto B unit • Auto white on auto B unit • Pulse unit • Sync. generator with SC/Sync genlock • Monitor unit • Deflection unit (hand V) • Geometric distortion corrector • Multi board • Encoder 1 • Encoder 2 • ALC assembly • Power supply • Interface • Control Panel • Monitor select panel • Set up panel • Turntable for picture monitor • Blank panel for nega. video unit • Optical level control • Acute color balancer

TKC-970 \$73,400.00

Accessories

- Module extender card • Test slide • Lamps • Tool kit • Service manual
- Red tally lamp

**FPH-16 Self-Threading 16mm
Telecine Film Projector**

The FPH-16 is a 16mm telecine projector for use with either the TKC-970, TKC-990 or similar professional telecine cameras. It is designed to meet the requirements of direct on-air broadcast and off-line teleproduction. Provided are quick start and quick stop of picture and sound, still projection, fast forward run and fast reverse run, as well as the functions that a regular telecine projector provides. Film loading is accomplished quickly and accurately through use of the FPH-16's self-threading system. A common mechanism driven by a single motor operates both the shutter and the pull down claw, resulting in a simple, reliable mechanical system with a minimum number of parts.

Options

- Analyzing projection at the speed of 3 frames/sec
- Frame counter
- Frame pulse generator
- Frame search
- Air jet to remove dust on the film
- Automatic film rewinder
- On air tally
- Take-up reel positioning
- Inching knob

FPH-16 \$84,488.00

FPH-16

SPR-35

MPK-3V (R/L)

**SPR-35 35mm Slide Projector
For Professional Applications**

- Dual drum operation — 32 slides per load, 16 slides per drum
- All slides illuminated for easy re-check
A complete check on every slide in the drum can be accomplished quickly by pushing the Skip switch
- Easy maintainability
Two covers at the top are easily removed for easy access to all the optical components. Two doors at both left and right sides may be opened providing easy access to all electrical components
- Remote control
The lamp on/off, slide skip, slide change functions may be controlled remotely
- Built-in spare projection lamp with automatic replacement system
- Shade free illumination
- Slide cooling system
Temperature rise at the slide surface is limited to 10° C above ambient

The SPR-35 35mm Slide Projector is for use in combination with the TKC-970 or TKC-990 and similar professional telecine cameras. The SPR-35 is a dual drum type accommodating a total of 32 slides. Optical lap dissolve between slides is accomplished within 0.6 second.

SPR-35 \$26,144.00

MPK-3V (R/L) Multiplexer

The MPK-3V (R/L) is a sturdily constructed professional quality 3 input 1 output optical multiplexer for photoconductive telecine camera systems. The front-surface mirrors have negligible light loss and are motor driven in a vertical plane; a switching cycle is accomplished in approximately 0.1 sec. Mirror motion is timed to avoid spurious light input to the camera from the center projector during mirror motion.

Contactless controls for motors and brakes eliminate glitch interference in the video signal.

Switching identification is provided from the multiplexer to the telecine cameras so that camera adjustments appropriate to the projector "on air" are facilitated. The multiplexer can be controlled remotely or locally from illuminated switches on the top of the unit.

Standard mirror orientation is for 16mm projectors that load from the left side (R Type) looking in the direction of projectors; an alternate version for projectors that load from the right side can be obtained as an option (L Type).

MPK-3V \$23,318.00

EC-1125

EC-1125**High Definition Television Camera**

- Three times the sensitivity of current HDTV cameras. Ikegami has developed an optical system and lenses as well as a 1 1/4" MS Plumbicon® tube
- Output capacity of the pickup tube has been minimized and, at the same time, a pre-amplifier FET has been developed. As a result, the S/N ratio of the camera system has been improved significantly
- High resolution that is basic to the HDTV camera has been achieved with a pickup tube, optical system, various fixed focal and zoom lenses developed for specific purposes, and correction circuit
- Compact, lightweight, and excellent maneuverability. Its head and CCU have been reduced in size and weight to the greatest extent possible. They are sturdily built and offer enhanced operation
- Electrocinematographic Camera Technology. Operations typical of a cinecamera for movie production that are based on the superposition of cuts has been incorporated in the design of the camera head and its accessories.

This uniquely designed camera head is characterized by: follow focus mechanism, electronic viewfinder offering varied functions, image formation position marking, major hook, and mat box, all reflecting consideration of the cameraman's requirements

- Plumbicon tube has reduced image lag
- Gamma correction is performed by: conventional master gamma variation and dark-area gamma variation. Through combined use of these functions and highlight compression, special gradation effects including high- and low-keyed tones are obtained. A picture with refined artistic effects is thus reproduced
- The 3" electronic viewfinder offers enhanced operation, high maneuverability and has the following characteristics: Deflection expansion that facilitates focusing of details, peaking function for reproducing a clear picture, deflection reversing function for camera work, diopter correction ring for diopter adjustment. The viewfinder also has various focus and tally indications. 7" high-intensity high-resolution viewfinder is available as an option
- Labor Saving. Full advantage is taken of computer control, thus reducing the adjustment time through Auto Setup and momentary retrieval of data stored in memory
- Real-Time Automatic Functions: Auto Beam, Auto Knee, Real-time lens correction, Auto Iris, Auto Cable Compensation
- Automatic Functions through One-touch Operation: Auto White, Auto Black, Auto Centering
- Auto Setup Functions: Level Correction, Registration Correction, Black and White Shading Correction
- Registration is an important factor for picture quality. To achieve such quality, the basic performance of lenses, optical system, and deflection systems has been improved. In addition, the camera is designed to eliminate automatically the following remaining unregistered components: Correction by sawtooth wave, parabolic wave, and their multiples; Point correction by a geometric corrector; Correction of components affected by ambient temperature fluctuations; Correction of components affected by terrestrial magnetism fluctuations; Correction of components affected by lens replacement; Correction of components affected by lens focusing, iris, zooming and other operations
- Auto Beam and Auto Knee circuits are employed to ensure a wide dynamic range compatible with film latitude. As a result, the problem caused by an insufficient beam current has been overcome and the "film image" look can be reproduced

One of the basic components of the HDTV camera is a 1 1/4" MS pickup tube, the heart of the system. Besides featuring high sensitivity, resolution, and S/N ratio, this camera is compact and lightweight. It offers enhanced operation and versatility as well as improved function and performance.

Specifications**Frequency**

Response: (referred to 100kHz throughout the entire cable length) 60Hz ~ 27MHz: ± 0.5 dB, Under 60Hz and over 27MHz: Drooping characteristic

Signal-to-Noise

Ratio: Irregular noise (Y signal): 47dB p-p/rms or more, Synchronous noise (in the picture): 60dB p-p/p-p or more

The measurement is made with the signal band width of 27MHz, aperture correction amount of 0, matrix correction Off, and gamma 1 against standard G-channel signal current value of 350nA. This image pickup state is considered standard for all information that follows.

Resolution:

(as measured by the ITE high-definition AR chart) Luminance signal amplitude modulation relative to 800 TV lines.

Beam setting: Twice as high as normal level; Screen central area: 40% typical (M-S tube)

Registration and Geometric Distortion:**Sensitivity:**

(as measured by the ITE gray scale chart II) The sensitivity is that obtained with $f/5.6$ or more that produces the standard image pickup state when an object with a reflectance of 89.9% is shot at an illumination level of 2000 lux.

Gamma Correction

Characteristic: Correction range: $Y = 1$, $Y = 0.45 \pm 0.05$ or more, $Y = 0.35 \pm 0.05\%$ or more

The gamma correction for less than 20% of the input signal is little short of ideal and can be made independently of total gamma correction.

Input Signal Scanning System**Scanning**

Lines: 1,125
Interlacing: 2:1 (aspect ratio, 9:16)

Horizontal

Scanning Frequency (fH): 33.750kHz

Vertical

Scanning Frequency (fV): 60Hz

Y, Cn and Cw

Signals: $Y = 0.30R + 0.59G + 0.11B$
 $Cn = -0.03R - 0.38G + 0.41B$
 $Cw = 0.63R - 0.47G - 0.16B$

EC-1125 \$324,200.00

*Plumbicon® Registered trademark of N. V. Philips

HDK-1125P High Definition TV Camera

- Top priority is given to picture quality; 1" high resolution tubes are used and a S/N ratio of 44dB (Y signal) is achieved
- Compact and lightweight. Size and weight are minimized without sacrificing a variety of functions typical of the new generation cameras; the size is smaller than that of the 1 1/4" color camera and the weight is about 43kg
- Due consideration is given to operational ease; a host of automatics are incorporated and the F-7 28-core camera cable with a maximum length of 200m is employed to increase camera mobility
- Automatic setup functions are provided to greatly reduce the setup time required for daily operation. To achieve labor saving purposes and enhance ease of operation, the camera has various computer control functions, such as filing functions, using preset memories for instant data retrieval
- High-resolution pick up tubes of 1" MS type are used providing 35% response with 800+ TVL at center
- An automatic geometric corrector circuit is incorporated to improve registration which constitutes a very important factor in camera performance. Further, zoom lens aberration correction (real-time dynamic lens distortion correction) and registration adjustment through zoom lens replacement are made to upgrade performance in the area of registration
- The viewfinder employs a 7", high brightness, high-resolution CRT. The image in the viewfinder may be over-scanned enlarging the entire picture so the lens can be focused sharply. Further, this viewfinder allows complete black level clamping by the feedback method
- CCU consists of the following components:
 - 1) CCU rack
 - 2) 19" B/W picture monitor (DM-516H)
 - 3) Waveform monitor (1480HD)
 - 4) Control panel
 - 5) BAY-1
(Main video and pulse system modules are accommodated.)
 - 6) ENC (option)
 - 7) Optical fiber cable adaptor (option)
 - 8) Power supply

- Automatic functions
 - 1) Automatic setup
 - a. Level
 - b. Registration
 - c. B/W shading
 - 2) Auto beam control
 - 3) Auto white balance
 - 4) Auto black balance
 - 5) Auto iris
 - 6) Auto centering
 - 7) Real time dynamic lens distortion correction
 - 8) Auto geometric correction

HDK-1125P Camera Head (less lens) \$738,500.00

TM-751H 30" Color Monitor

- Designed to monitor the HDTV video program
- 30" high-resolution delta gun, black matrix type CRT produces sharp color image. An aspect ratio of 5:3 is most ideal for High Definition TV
- The majority of control circuits are of the DC control type
- The luminance is adjusted through the addition of the blanking gate luminance pulse. For this reason, the linearity of the circuit is not adversely affected
- The DC component in the video output is restored by the feedback gate clamping circuit. The black level is thus clamped, leading to a high-fidelity reproduction of the input signal
- The pulse cross operation consists of 3 functions, i.e., V Delay, H Delay, and V.H. Delay. Observation of the sync signal is thus facilitated
- Pincushion distortion is inconspicuous even on a laterally long screen with an aspect ratio of 5:3 because the pincushion distortion corrector is of the quadrant geometric type
- The 9-point geometric system convergence control circuit is incorporated. Unlike the conventional models, the TM-751H permits the adjustment of the left and right halves of the screen independently of each other
- An RGB signal and the encoded signal input may be applied to the TM-751H when a decoder unit is incorporated
- Two sets of the RGB signals may be applied to the TM-751H in the absence of the decoder unit

TM-751H Monitor \$80,500.00

IKEGAMI ELECTRONICS (U.S.A.), INC.**HDTV Telecine Camera System****TKC-1125****High Definition TV Telecine Camera**

- Automatic functions performed by the built-in microprocessor reduce the number of routine operating steps. For instance, instant data retrieval of previously stored memory information serves to optimize the picture when switching between different multiplexer inputs
- Many automatic adjustment functions are provided to make real-time corrections to films under various conditions. These functions are the Auto Light Level (ALC), Auto White Level (AWL), Auto Black Level (ABL), Auto White Balance (AWB), Auto Gamma Balance (AGB), and Auto Black Balance (ABB)
- An automatic geometric circuit is incorporated to refine the registration capability which is an important factor in high definition camera performance. Fully automatic setup functions are provided for level, registration, black and white shading, and other parameters

The TKC-1125 is an unprecedented HDTV telecine camera system.

It is a highly versatile and low-cost system which converts motion-picture film to HDTV signals without sacrificing the original image produced by the film. Therefore, this system promises to cover a variety of applications including HDTV broadcasting and video theaters.

The system is divided into two separate sections, the camera and film projector units. The camera has complete automatic setup, utilizing built-in diascope chart. The camera employs 1" high resolution MS Saticon* pickup tubes and a specially designed high-definition optical system.

The film projector employs an intermittent transport system which assures picture stability because it momentarily fixes each film frame referenced to the registration pins.

FPS-35 35mm Film Projector

- During film projection each film frame is momentarily fixed with reference to registration pins to prevent film frame movement and improve stability
- Pull-down system is based on a high-speed intermittent electronic drive. Adequate light intensity is provided
- Projection speed is continuously variable from still-frame to 40 frames per second

Specifications**Film Transport****Method:**

Intermittent, eccentric cam, fast pull-down claw method with registration pins, varistroke type (KS-perforation), pull-down time 10ms

Film**Speed:**

TV Synchronized Drive: 2-3 pull-down (24 FPS and 30 FPS)
Non-Synchronized Drive: Forward: 0 to 40 FPS
Reverse: 0 to 24 FPS

Power**Source:**

100/117/220/240VAC $\pm 10\%$, 50/60Hz, single phase, 2 kVA

TPP-1000

TPP-1000 HDTV Video Projector

The TPP-1000 video projector projects a high definition HDTV video on the big screen, offering realism with a feeling of presence.

In spite of its high brightness, the projector offers natural and distortion-free pictures.

Specifications

Configurations:	Front/rear/scan reversal
CRTs:	9" liquid cooled
Inputs:	RGB
Resolution	
Horizontal:	1000 TV lines
Vertical:	850 TV lines
Corner:	950 TV lines
Contrast Ratio:	50:1
Sync Capability:	29kHz-65kHz H 40Hz-100Hz V
Convergence:	Digital point zone/ analog 4 quadrants
Source Selector:	Available
NTSC-RGB	
Decoder:	External (scan converter)
Electrical:	105-130VAC 50/60Hz
Color	
Convergence:	< 0.1%
RGB Compatibility:	Analog
Aspect Ratio:	Adjustable
Deflection	
Linearity:	< 1% of screen height
Bandwidth:	≤ 100MHz
Test Patterns:	Color bar, cross hatch, gray scale
Power Consumption:	1100VA or less
Screen Size:	70"/100"/120" diagonal
Light Output	
(White Peak):	≤ 530 lumens
Remote Control:	Available (as option)
Projector Weight:	287 lbs.
Controller Weight:	33 lbs.
TPP-1000 \$128,500.00

DSC-1050

Options

DSC-1050 Digital Scan Converter

Incorporating the latest digital technology, the DSC-1050 performs digital processing and scanning line conversion for NTSC standard video signals to produce fine and beautiful visual images.

This converter doubles the number of NTSC color video signal scanning lines to provide RGB signals of 1050 TV-line, 30Hz frame frequency, interlace or 525 TV-line, 60Hz frame frequency, non-interlace.

This converter produces high-brightness, fine pictures with little line flickering. When used in conjunction with the TPP-1000 and the TSW-502 this converter enables such images as TV camera and VTR pictures to be reproduced on a wide screen.

Two types of Y/C separation are employed to prevent picture fineness from degrading due to dot crawling or cross colors frequent in conventional Y/C separation. For motionless input signal, frame-to-frame Y/C separation is made that makes use of the frame correlation. For motion input, the Y/C separation is made by a 2H comb filter that takes advantage of line correlation. Besides the two NTSC encoded inputs, RGB input is optionally available.

Input Signal:	NTSC VBS 1.0V p-p, positive, 75 ohm, 2 inputs bridge connection possible
Output Signal:	RGB 0.7V p-p, positive, 75 ohm, 1 output (G-ch, sync on/off switchable) Switchable between 525 TVL, 60Hz frame frequency, non-interlace or 1050 TVL, 30Hz frame frequency, interlace
Sync Output Signal:	H: 4V p-p negative 75 ohm V: 4V p-p negative 75 ohm Composite: 4V p-p negative 75 ohm Chroma level 0 ~ +12dB (3 step) H, V 0 ~ ± 6dB (3 step)
Adjustable Range:	
Detail Enhancer:	
Power Requirements:	117VAC, ± 10%, 50/60Hz
Power Consumption:	450VA approx.
Dimensions:	249H x 420W x 382Dmm
Weight:	27kg approx.
DSC-1050 \$46,500.00

TSW-702 Source Selector

The TSW-702 Source Selector switches the TPP-1000 projector input signals among 2 analog signals and 2 TTL signals.

Input Signal:	TTL 2 inputs, 1K ohm or more, Hi 2.4-5V, Lo 0-0.4V Analog 2 inputs, 75 ohm terminated, 0-1V p-p
Output Impedance:	75 ohm
Power:	Supplied from TPP-1000 control unit
TSW-702 \$7,300.00

9-Series Color Monitors — In Line Gun CRT Type

- In Line Electron Gun: The CRT has an in-line electron gun; thus eliminating the need for convergence adjustments
- High-Resolution CRT: The display produces crisp, precise images because the monitors use a fine-pitch, dot-mask CRT. A black matrix effect is provided on the CRT screen, enabling pictures to be displayed with a high contrast ratio even under bright lights — more than 600 TV lines at center
- Pulse Cross Circuit: For observing sync signals, a pulse cross circuit with three functions has been included V. Delay, H. Delay, and V.H. Delay
- Protective Circuits: The power supply and high voltage circuits are equipped with excess-current and excess-load protection, to prevent the CRT from being damaged. Sweep failure detection circuits are also utilized for CRT protection
- Signal Generator: Internal cross-hatch signal generator facilitates a convenient means of checking deflection linearity
- Video Input System: A 3 video input system is used with a selector switch located on the front panel
- Signal Demodulation: The IQ standard is used for color signal demodulation; remarkably faithful color signals are reproduced
- Automatic Frequency Phase Control: Extremely accurate color locking is possible with AFPC system
- Keyed Back-Porch Clamp System: A keyed back-porch clamp system is used, to prevent black level fluctuation
- Comb Filter: The monitors have a comb filter for maintaining high-resolution in color images. Color trap/comb filter selection is possible
- Degauss Circuit: Internal degaussing circuit is provided. In addition, the CRT is equipped with a magnetic shield to prevent interference from external magnetic fields
- Residual Subcarrier Test: A switch is provided for checking if residual subcarrier is present on the incoming signal
- Matrix Switching: A matrix switching circuit is provided to reproduce color similar to a TV receiver or NTSC standard
- Selectable Time Constants: Three types of horizontal-AFC time constants are selectable
- Optional Functions: RGB operation, Switching between RGB and NTSC operation

Now, broadcasters have a second line of high-resolution color monitors to choose from; Ikegami's 9-Series Color Monitors. Like the RH-Series, these monitors were built to serve the professional. The 9-Series offer you in-line gun CRT's that do away with the bother of always having to adjust the convergence. You'll find the 9-Series easier to maintain with convenient pull-out panels on the front of the monitors. And to put you in step with the 80's, the 9-Series have a streamlined look coupled with the merit of low power consumption. The 9-Series monitors include AC cable, remote connector and service manual.

TM14-9RH

TM20-9RH

14" and 20" Series 9RH Monitors — In Line Tube

TM14-9RH/N 14" NTSC Rackmount (less case and chassis tracks)	\$5531.00

TM20-9RH/N/RGB 20" NTSC/RGB Rackmount (less case and chassis tracks)7242.00

10" Series RH Monitors

The TM10-9RH portable professional color monitor complements Ikegami's broad range of 14" (13V), 20" (19V) and 25" (23V) broadcast color monitors. Using a 10" (8.5V) high resolution shadow mask cathode ray tube with a self-converging in-line gun, the TM10-9RH can be operated from AC or DC Power and is available in cabinet or rackmountable versions. The rackmountable versions are 8³/₄" high and are furnished in single, dual, single with adjacent WFM space or single with adjacent Vectorscope space configurations.

American standard matched phosphors are utilized in NTSC versions of the TM10-9RH. Features including pulse cross, keyed back porch clamp, pre-set contrast/hue/saturation/brightness controls, on-demand degaussing, aperture correction, dual video inputs, sync mode selection, color/monochrome selection, individual electron gun cut-off switches, remote control capability, etc. are standard.

TM10-9RH \$4004.00

TM10-9RH

10-Series**High Resolution Delta Gun Color Monitors****Functions include:**

- 3 video inputs each with bridging BNC connectors
- External sync input with a bridging BNC connector
- Pulse cross for examination of horizontal and vertical blanking interval
- Underscan/overscan selection switch
- Switchable AFC time constants for 2msec, 0.5msec, and 7msec
- Pushbutton control for degaussing CRT Shadow Mask
- Blue phase verification—The Blue Gun On/Off switch facilitates chroma level and hue adjustments
- Preset controls for contrast, brightness, chroma level, and hue
- Residual sub-carrier verification, for evaluation of input signal condition
- Color/monochrome selection switch, to facilitate white balance adjustment
- Trap/Comb selection switch
- Corrective Matrix permits rotation of color decoding vectors towards NTSC aim points
- Multi-turn potentiometers are used for RGB Background controls, GB Gain control, Preset controls, and Height/Width controls for easy operation
- A tally lamp is provided

TM14-10RH/TM20-10RH

The 10-Series of high resolution color monitors were developed specifically for higher image quality in TV production and are available in 13V and 19V versions. The high resolution delta-gun CRT has realized high resolution, high brightness, and the convergence circuit greatly facilitates convergence adjustment and operation. The 10-Series monitors include AC cable, remote connector and service manual.

Color Monitors

15-Series Color Monitors

• Fine Dot Pitch Shadow Mask results in high resolution • In-Line Self Converging Electron Gun assures convergence stability • Controlled Phosphors (to American Broadcast Standards) provide consistent colorimetry • Black Matrix surrounding Phosphor Dots assures high contrast under bright ambient lighting • To simplify monitor set-up, the 15-Series uses a Digital Control System (DCS) • Preset level modifications • Two operator memories • To insure long-term black level stability, the 15-Series monitor incorporates Beam Feedback System (BFS) which detects CRT current deviation and eliminates brightness changes due to changes in CRT emission

By providing an optional Auto Set-up Probe, the 15-Series is menu driven, user friendly, with all instructions shown on the screen. An optional Remocon Box provides for remote control operation.

The 15-Series high resolution color monitors are available in 13V and 19V configurations.

TM14-15RH units are available in cabinet or rack configurations, occupying 10 1/2" height. The TM20-15RH configurations are available in cabinet or rack configuration occupying 15 3/4" height.

TM20-16R/TM14-16R (Preliminary)

• 16-Series High Performance In-Line Gun Color Monitors

Cathode Ray Tube:

• 500 Lines resolution • In-line self converging electron gun assures convergence stability • Black matrix surrounding CRT face assures high contrast under bright ambient illumination

Circuitry:

• Comb filter provides wide band luminance, switchable to notch filter at front panel • Varying APL • Pre-set operating controls (hue, chroma, brightness, contrast) • Sweep failure protection circuits prevent phosphor burns

System Conveniences:

• 3 Video inputs (A/B/RGB), with front panel switchable • 13V can be rackmounted in 10.5" height • 19V can be rack-mounted in 15.25" height • Horizontal Time Constant can be selected either 0.5msec or 2msec

Test Facilities provided:

• Underscan Switch to permit observation of picture corners • Pulsecross Switch for sync signal verification

16 Series are high performance, low cost monitors. The units are specifically designed for production or broadcast applications and produce high-fidelity video reproduction with easy operation by utilizing In-Line Gun CRT technology. Comb Filter and A/B/RGB video inputs.

Monochrome Monitors

3HD-Series Monochrome Monitors

- Keyed back porch clamp, switchable to DC restorer
- Dual (A/B) inputs, front panel selectable
- Internal/external sync, front panel selectable
- Notch filter on/off, front panel selectable on 14"
- Tally light
- Remote control (Video Select, Sync Select, Tally On/Off)
- Cross-Pulse

The 3HD-Series range of professional monochrome monitors provide the features and high performance necessary for sophisticated broadcast studio applications. 9" configurations are available as A) Bare chassis, B) Cabinet with handle and C) for 19" rackmounting in an 8³/₄" height for single, single with WFM space, single with Vector-scope space, and dual unit uses. 14" configurations are for cabinet use or for 19" rackmounting in a 10¹/₂" height, slides are optional for the rackmount version.

PM9-3HDP 19" Dual Rackmount

PM9-3HDP Cabinet Type

PM9-3HDP Single with WFM

PM14-3HDP Cabinet Type

An illuminant-D phosphor, as well as pre-set controls for brightness and contrast are also standard on the 14" unit. Pulse delay is optional on the 14" monitors; pulse delay and/or an illuminant-D phosphor are available on special order with the 9" monitors.

Series-3HD monochrome monitors provide high resolution at high brightness, low geometric and differential gain distortion and excellent stability over a wide temperature, input voltage and APL range.

- PM9-3HDP \$1587.00
- PM14-3HDP 2229.00

SPECIFICATIONS

GENERAL

Power: AC 100, 120, 220, 240V
10% 50/60Hz, 55VA approximately

Ambient Temperature: -15°C ~ +50°C (Rack type)
-15°C ~ +40°C (Cabinet type)
90% or less relative humidity (non-condensing)

External Dimension: PM9-3H: 222W x 213H x 308Dmm
PM14-3H: 483W x 265H x 386Dmm

Weight: PM9-3H: approximately 6 kg (without case); approximately 7 kg (with case)
PM14-3H: approximately 13.5 kg (without case); approximately 15 kg (with case)

Connector: Video input: BNC type (2 systems)
Sync input: BNC type (1 system)
Remote input; Tally input
Video A/B; Sync INT/EXT; Size NOR/WIDE; Contrast; Brightness; Power ON/OFF; Notch filter ON/OFF for 14-inch unit

Front Panel Controls: H and V delay switches (single switch for PM9-3H)

Standard Accessories: Remote connector, power cord and manual are provided

Optional Accessories: Rackmounting slide bracket for 14" type

Input Level: 1 Sync input
Video signal: VS 1.0V p-p or V 0.7V p-p positive
Sync signal: 1 4V p-p

Input Impedance: Video input: High impedance, bridge connection [Return loss: 46dB (100Hz ~ 4.2MHz)]
Sync input: High impedance, bridge connection [Return loss: 40dB (5MHz)]

Output Level: 30Vp-p (at CRT drive voltage)

CRT: PM9-3H: M22JEA5WW
PM14-3H: 340CEB4

Phosphor Colorimetry: P4 phosphor, 9300°K (Option: 6500°K)

Brightness: 60 Ft-L (at rated output level)

Operation: Continuous

Video Display Screen: NOR/UNDER switching system, pulse cross circuit provided

PERFORMANCE

Mechanical Vibration: No disturbance picture by shock, i.e. microphonic, etc., when dropped spontaneously from 50mm height

Resolution at Brightness of 30 Ft-L: Center: 800 Lines or more
Corner: 500 Lines or more

Power Voltage Fluctuation: Should the power voltage fluctuate in the range of ± 10% against the rated input voltage, monitor is operated stable and picture quality does not deteriorate

VIDEO CIRCUIT

Maximum Gain: Maximum contrast: 38dB or more

Frequency Response: 100kHz reference, 50Hz

Waveform: 10MHz ±1/3dB (at 30V p-p of output level)
(When square wave of rise time 0.05 sec is supplied at video input connector)
Rise time: 250kHz, 0.1 μsec or less
Over shoot: 250kHz, 8% or less
Sag: 60Hz, 5% or less
Less than 5% DG (at rated output 30V p-p)

Linearity: Coherent noise: -46dB
Hum noise: -55dB
Others: -55dB (except blanking period)
Above measured at output terminal in condition of terminating video input 75 ohm and contrast VR max.

Noise:

DEFLECTION CIRCUIT

Sync Stability: The stability of operation shall be met for the following conditions:
Internal sync: Video input level changed against rated value: -10dB; For video amplitude changes of 0 to 120% and sync levels greater than -6dB (0.15 to 0.3V sync)
External sync: Sync signal input level: 1-4V p-p, negative

Horizontal AFC Time Constant: Approximately 2 msec

Deflection Distortion: Less than 2% of picture height

HIGH VOLTAGE CIRCUIT

High Voltage: 16kV

High Voltage Fluctuation: ± 2% in range of 0 ~ 200μA as 100μA reference

IKEGAMI ELECTRONICS (U.S.A.), INC.

Monochrome Monitors

PM-580

• Triple rackmountable • X-ray protection circuit • Various performance options are available • Horizontal resolution > 600 lines at center • S/N ratio is $\leq -60\text{dB}$ —hum and noise $\leq -40\text{dB}$ —sync noise • Power consumption approximately 18W • 6.59" H x 5.78" W x 8.70" D • 7.72 lbs.

This 5" black and white video monitor provides stable performance despite fluctuations in power or temperature. Solid-state electronics means years of reliable operation.

PM-580\$ 428.00
PM-580/R3 (Triple rackmount version)1451.00

PM-580

PM9-5

PM9-5

• 9" Broadcast Monochrome Monitor • 800 lines • D6500°K phosphor • Keyed back porch clamp, switchable to DC restore • Dual (A/B) inputs, front panel selectable • Internal/external sync, front panel selectable • Normal/wide scan, front panel selectable • Scan delay/normal • Tally light • Remote control (video select, sync select, tally on/off)

The PM9-5 provides the features necessary for professional broadcast studio applications, and combines high reliability, ease of maintenance, and superior picture quality, low power consumption. 9" configurations are available as cabinet and 19" rackmounting in an 8 $\frac{3}{4}$ " height, single with WFM space, single with Vectorscope space, and dual units.

PM9-5\$350.00

PM-930

PM-930

• Horizontal resolution ≥ 600 lines at center • S/N ratio is 55dB (Except sync noise) • Power consumption < 25W • 8.64" H x 8.61" W x 9.45" D • 10.78 lbs.

A surveillance video series 9" black and white monitor built with the latest solid-state electronics. The unit offers front access to main operating controls, implosion-protected picture tube, VTR playback image stability and exceptionally low maintenance requirements.

PM-930\$308.00
PM-930/R2 (Dual rackmount version)757.00

PM-127

PM-127

• Horizontal resolution ≥ 650 lines at center • S/N ratio matches that of the PM-580 • Power consumption is approximately 25W • 11.2" H x 12.6" W x 12.00" D • 16.98 lbs.

A low cost 12" black and white video monitor featuring X-ray protection circuit, VTR playback image stability, rackmountability and solid-state electronics.

PM-127\$439.00
PM-127/R563.00

PM-175A

PM-175A

• Resolution of > 800 lines • Video frequency of 15MHz • Linearity of 2%

The PM-175A is a monochrome monitor of excellent picture quality. Regular-use controls are conveniently arranged and located on the front panel below the escutcheon. The tube employed is a first-quality, integrally implosion protected 17" CRT, and the video chassis is a printed-board module.

PM-175A\$768.00
PM-175A/R (Rackmounted)939.00

PM-205A

PM-205A

• Same as the PM-175A offering higher resolution and a 20" black and white monitor • 1,000 lines resolution • Low noise • Sharp picture quality

PM-205A\$879.00

PM-206

PM-206

• 1,200 lines horizontal resolution • Composite sync, underscan and overscan by switch selection

The PM-206 is a high resolution 20" black and white video monitor. It can be used as a high resolution precision TV monitor or as a high definition character display for computer terminals.

PM-206\$1719.00

4100 MACHINE ASSIGNMENT SYSTEM

- Handles up to 160 Machines
- Up to 24 Control Panels
- Up to 25 Machines per Panel
- Up to 35 levels of switching
- Master start of preset functions
- Tally of Remote/Local control
- Communication via coaxial cable
- Plug-in modules for flexibility and easy maintenance
- Status generator and printer facility

System Controller

The organization is built around the System Controller which is made up of two sections; the Assignment Controller, and the Machine Controller. Each section contains a microprocessor and they communicate with each other via a multi-conductor cable in parallel format.

The Assignment panels all contain a microprocessor and communicate with the Assignment Controller via coaxial cable. The Assignment Controller handles the assignment of control panels and machine interfaces.

The control panels also all have a microprocessor and communicate with the Machine Controller via coaxial cable. The Machine Controller handles communications between the control panels and the machine interfaces.

Machine Assignment Panel

The machine assignment panel permits the assignment of any control panel to control any machine (VTR, Telecine) through the machine interface unit. It effectively interconnects the various control panels and the machine interfaces.

Assignment is made by simply entering the machine number and then the control panel number. Pressing ASSIGN completes the assignment. A machine cannot be assigned to more than one control panel. The communications link between a machine and a control panel is broken by entering the machine number and pressing CANCEL.

The machine and control panel numbers are three characters and do not have to be in any specific order.

Machine Interface

The machine interface is a two rack unit assembly capable of remotely controlling the functions of a machine. It consists of five Relay Tally Boards, a DIP Switch Board, a Line Driver Tally Board, and a Microprocessor Board.

Each Relay Tally Board is capable of seven levels of relays and seven return tallies. Pushbutton functions, e.g. Fastforward, are associated with each relay.

The Microprocessor Board communicates with the outside world and operates the relays etc.

The DIP Switch Board has DIP Switches for machine number assignment, relay close time, and baud rate etc.

The Line Driver Tally Board controls the remote tallies and confirms the presence of the power supplies.

Five 38-pin connectors at the rear of the frame interface between the relay boards and the actual machines being controlled.

VTR interfaces normally consist of 7 levels of control and Telecines normally have 21 levels. However, up to 35 levels may be controlled. The control is buffered via floating (form C type) relay contacts and the tally from the machine with an optical isolator.

Control Panel

Machine Assignment Panel

Control Panel

This desk mount panel provides control of the machines assigned to it. The number of machines to be controlled varies depending on specific customer requirements. The standard configuration is 3 VTRs with 7 levels of control and 2 Telecines with 21 levels of control each. Special control panels with up to 25 machines and 35 functions per machine may be specially ordered.

A three character alphanumeric display shows which machine is assigned to the bus. The machine numbers do not have to follow any specific order and there can be a total of 160 machines in a system. The numbers assigned to the machines should be specified at the time of ordering. A blank machine number indicates that no machine is assigned.

Operations may be preset on all of the busses of the control panel and with one button, the MASTER START, all the selected functions will be taken. Functions are preset by holding down the PRESET button and depressing the desired functions. Preset functions can be cleared by holding down the PRESET button and depressing the function button again. Presets can also be cleared when they are initiated by the MASTER START button.

A coaxial cable is used to interconnect the control panel and the System Controller. Clare Pendar or Shadow type pushbuttons are available.

IMAGE VIDEO, LTD.**Audio/Video Routing Switchers****9520/9521 DUAL AUDIO/VIDEO ROUTING SWITCHERS****Common features:**

- No external power supplies required
- Front panel control with numeric or alphanumeric keypad and displays (optional)
- Can be remotely controlled from up to twenty image video custom or standard control panels
- Serial RS232/RS422 interface
- Parallel BCD interface (optional)
- Crosspoint retention during power failure (optional)
- Self test mode
- Hinged front panel for easy access

9520 Video Routing Switcher**Shares common features plus:**

- A 20 x 10 video routing switcher in 1 rack unit
- A 20 x 10 video and dual audio routing switcher in 2 rack units when used in conjunction with 9521 dual audio switcher
- Vertical interval switching

Using advanced integrated circuitry, 9520 video switcher sets a standard for high density switcher packaging. The 9520 is ideal for mobiles (OB vans), editing suites, post-production and tele-production facilities—any application where space is at a premium.

The wide variety of control capabilities offered by the 9520 allows you to choose the control method most suited to your individual needs. The 9520 can be remotely controlled by up to twenty remote control panels.

An optional front mounted multi-bus control panel is available. By incorporating the keypad and displays onto the front of the unit, the need for any additional rack space is totally eliminated.

Specifications**Inputs**

Number:	20
Type:	BNC—single ended
Impedance:	Internally terminated 75 ohms
Return Loss:	> 35dB
Signal Level:	1V p-p (nominal)

Outputs

Number:	10 (1 per bus)
Impedance:	75 ohms
Return Loss:	> 35dB
Signal Level:	1V p-p (nominal)
Frequency Response:	< .1dB to 5MHz +0dB, -1dB to 20MHz +.05dB, -2.5dB to 30MHz

Level Difference:	< .5%
Hum and Noise:	< 70dB
Line Tilt:	< .25%
Field Tilt:	< .5%
Differential Gain:	< .15%
Differential Phase:	< .15%
Path Length Differential:	< $\pm 1^\circ$

9521 Dual Audio Routing Switcher**Shares common features plus:**

- A 20 x 10 dual audio routing switcher in 1 rack unit
- A 20 x 10 video and dual audio routing switcher in 2 rack units when used in conjunction with 9520 video switcher

9520

9521

The 9521 brings a level of sophistication to high density switching systems. An alternative for radio and television facilities where equipment space consumption is a major concern, the 9521 is simply the most compact 20 x 10 dual audio switcher available.

Choose the control method most suited to your individual needs. The 9521 can be controlled by up to twenty remote control panels. With the standard RS232/RS422 interface, the 9521 can also be controlled by an external computer. The optional front mounted multi-bus control panel incorporates the keypad and displays onto the front of the unit to completely eliminate the need for additional rack space.

Specifications**Inputs**

Number:	20 per channel
Type:	balanced
Impedance:	> 30K ohms internally terminated 600 ohms (jumper selectable)
Signal Level:	+ 24dBm maximum

Common Mode

Rejection (60Hz):	> 75dB
--------------------------	--------

Outputs

Number:	10 per channel, 1 per bus
Type:	balanced
Impedance:	60 ohms externally terminated 600 ohms
Signal Level:	+ 24dBm maximum
Frequency Response:	+0, -.25dB 20Hz to 20kHz +0, -1dB 20Hz to 100kHz

Total Harmonic

Distortion:	< .02% 20Hz to 20kHz (+ 18dBm) < .2% 20Hz to 20kHz (+ 24dBm)
Signal to Noise:	> 96dB
Crosstalk:	< 75dB (20kHz)

IMAGE VIDEO, LTD.**Routing Switchers****9600 High Density Routing Switcher**

- Accurate indication of crosspoint status (true tally)
- Comprehensive diagnostics package
- Infinite number of levels
- Full breakaway capability

The 9600 is compatible with both MAC and high definition television standards. Compact design enables 40 x 40 video and 2 audio channels in just 16 rack units of space, or 80 x 80 video and 2 channels of audio in 48 rack units. The versatility of the system will allow both field expansion up to 320 x 320 and modification without disruption of normal operation.

External distribution amplifiers are not required for matrices. The 9600 is completely compatible with all existing Image Video control panels and operates in conjunction with the Image Video 10K Control System.

9400 RGB (Y) Routing Switcher

The 9400 RGB (Y) is a fully self-contained switcher featuring built-in power supply and all necessary control circuitry.

The 9400 RGB (Y) is a DC-in, DC-out, full transparent unit with 3 x 20 inputs (4 x 20 optional) into 3 x 20 outputs (4 x 20 optional). Inputs are standard loopthrough, with no clamping or DC restore circuitry (all input signals should be on the same DC circuitry).

Specifications**Input**

Level:	1V p-p nom., 2V p-p max.
Impedance:	> 10K ohm loopthrough ext. term.
Ret. Loss (5MHz):	> 46dB loopthrough

Output

IMAGE VIDEO, LTD.

Routing Switchers

6000 Broadcast Routing Switcher

- Solid state vertical interval switching
- Compact expandable modular construction used throughout
- Excellent video and audio specifications for full color broadcast use
- Video only, audio only, audio follow married or unmarried control available
- Crosspoint retention during power interruption optional
- Tally LED on each video crosspoint indicates exact switcher status at all times
- Conservatively rated, overload protected power supplies for trouble free operation
- One pushbutton per crosspoint or thumbwheel control panels available

The 6000 Series Switchers are specifically designed for small and medium audio/video routing systems. These versatile switchers are ideally suited as high quality electronic patch panels, delegate switchers or in any application where remote controlled switching is needed.

Compact 5 x 1 or 10 x 1 crosspoint modules plug directly into the mother board assembly which also accommodates the input and output amplifier modules. This flexible configuration allows up to 24 outputs per 19" rack.

Specifications**Electrical**

Power: 120/240V RMS = 10% 50/60Hz

Video Input

Input Signal Level: 1V p-p
Input Impedance: Bridging 75 ohms
Return Loss: > 46dB to 5MHz
Number of Inputs: As required

Video Output

Level: 1V p-p
Number of Outputs per Bus: 2
Impedance: 75 ohms
Isolation: > 40dB to 5MHz
Level Difference: < 1%
DC on Output: < 0.5V
Frequency Response: ± 0.1dB to 5MHz
 + .1 -.5dB to 10MHz

Audio Input

Input Signal Level: -8dBm nominal
Input Impedance: Bridging 600 ohms balanced

Audio Output

Number of Outputs per Bus: 2
Impedance: 600 ohms balanced
Frequency Response: < 0.5dB
 30Hz-20kHz

Total Harmonic

Distortion: < .5% 30 Hz-20kHz at + 18dBm

6010 10 x 1 Routing Switcher

- Relegendable pushbuttons with gold contacts and LED indicators
- Two outputs per bus, video and audio
- Loophrough video inputs (BNC connectors)
- Bridging audio inputs (D sub-miniature)
- Vertical interval switching
- Hinged front panel for easy access to plug-in modules
- Low power consumption
- Second audio channel may be retrofitted
- All electronic switching
- Crosspoint retention during power failure (optional)
- Basic switcher is 10 x 1, video only, mono or stereo audio only or AFV with mono or stereo audio in one rack unit
- One or both audio channels may be replaced with time code or control bus

B-6B6

Refer to Green Section for Addresses and Telephone Numbers.

6000
Custom Control Panel

6000 Switcher Matrices

6010

- Tally is optionally available (D sub-miniature)
- Parallel BCD control optionally available for automation interface
- Remote (2-3 pin DIN connectors) and local controls may be paralleled

The 6010 self-contained switcher is a high quality 10 x 1 suitable for use throughout the television or radio plant, from production to monitoring applications. The flexible configuration and control system frees the engineer from handbuilt or customized equipment procurement.

INNOVATIVE TELEVISION EQUIPMENT

Tripods

ITE-T1A Wood Tripod with Spreader

Camera/Head
 Load Capacity: 20 lbs. (6kg)
 Max. Height: 59" (147.5cm)
 Leg Angle: Up to 85°
 Folded Length: 35" (87.5cm)
 Folded Width: 5" (12.5cm)
 Weight: 8 lbs. (3.6kg)
 Ball Leveling
 Bowl: 75mm
 Finish: Natural wood and black wrinkle

ITE-T1A **\$270.00**

Optional

Accessories: ITE-CB1 Claw Ball; ITE-RFP rubber foot pads; ITE-SP1A spreader

ITE-T3A ENG Tripod with Spider

Camera/Head
 Load Capacity: 25 lbs. (11.4kg)
 Min. Height: 15" (37.5cm)
 Max. Height: 62" (155cm)
 Min. Folded Length: 28" (70cm)
 Min. Folded Width: 6" (15cm)
 Max. Leg Angle: 80°
 Weight: 7 lbs. (2.25kg)
 Ball leveling
 Bowl: 100mm
 Finish: Black wrinkle
 Includes rubber foot pads; adjustable spreader; spike set

Optional

Accessory: ITE-CB3 Claw Ball

ITE-T3A **\$495.00**

ITE-T4A Wood Tripod with Spreader

Camera/Head
 Load Capacity: 50 lbs. (22.5kg)
 Max. Height: 65" (162.5cm)
 Leg Angle: up to 80°
 Folded Length: 40" (100cm)
 Folded Width: 6 1/2" (16.25cm)
 Weight: 12 lbs. (5.4kg)
 Ball Leveling
 Bowl: 100mm
 Finish: Black wrinkle

Optional

Accessories: ITE-SP4A spreader; ITE-CB3A claw ball; ITE-RFP rubber foot pads

ITE-T4A **\$525.00**

ITE-T6 Elevation Tripod

Camera/Head
 Load Capacity: 50 lbs. (22.5kg)
 Min. Height: 29" (72.5cm)
 Max. Height: 65" (162.5cm)
 Elevation
 Adjustment: 18" (45cm)
 Min. Folded Length: 33" (82.5cm)
 Min. Folded Width: 8 1/2" (21.25cm)
 Max. Leg Angle: 33 1/2°
 Weight: 18 lbs. (8.1kg)
 Finish: Anodized aluminum and black wrinkle

ITE-T6 **\$875.00**

ITE-T3A

ITE-T4A

ITE-T6

ITE-T9 Tripod—Mini with Spider

Camera/Head
 Load Capacity: 50 lbs. (22.5kg)
 Min. Height: 13 1/2" (33.75cm)
 Max. Height: 29" (72.5cm)
 Min. Folded Length: 21" (52.5cm)
 Min. Folded Width: 7" (17.5cm)
 Leg Angle: Up to 80°
 Weight: 10 lbs. (4.5kg)
 Ball Leveling
 Bowl: 100mm
 Finish: Anodized aluminum and black wrinkle

Optional

Accessory: ITE-CB3 Claw Ball

ITE-T9 **\$795.00**

Includes removable adjustable spreader (tyrod) assembly, rubber foot pads and spikes

ITE-T9

ITE-T10

ITE-T10 Elevation Tripod

Camera/Head
 Load Capacity: 140 lbs. (63kg)
 Min. Height: 28" (70cm)
 Max. Height: 59" (147.5cm)
 Elevation
 Adjustment: 18" (45cm)
 Min. Folded Length: 35" (87.5cm)
 Min. Folded Width: 9" (22.5cm)
 Max. Leg Angle: 33 1/2°
 Weight: 26 lbs. (11.7kg)
 Finish: Anodized aluminum and black wrinkle

Optional

Accessories: ITE-H25T Mitchell Adaptor

ITE-T10 **\$1425.00**

ITE-T12 ENG/EP Tripod with Spreader

Camera/Head
 Load Capacity: 50 lbs. (22.5kg)
 Min. Height: 24" (60cm)
 Max. Height: 65" (162.5cm)
 Min. Folded Length: 36" (90cm)
 Min. Folded Width: 7" (17.5cm)
 Leg Angle: Up to 80°
 Weight: 12 lbs. (5.4kg)
 Ball Leveling
 Bowl: 100mm
 Finish: Anodized aluminum and black wrinkle

Optional

Accessories: ITE-CB3 Claw Ball

ITE-T12 **\$795.00**

Includes removable, adjustable spreader (tyrod) assembly, rubber foot pads and spikes.

ITE-T17 Tripod For H-17 with Spider

Load Capacity: 25 lbs. (11.4kg)
 Min. Height: 24" (61cm)
 Max. Height: 58" (147.3cm)
 Min. Folded Length: 29" (73.7cm)
 Min. Folded Width: 7" (17.8cm)
 Leg Angle
 Including Spreader: Up to 80°
 Weight: 5 lbs. (2.3kg)
 Ball Leveling
 Bowl: 75mm
 Finish: Black wrinkle

ITE-T17 **\$550.00**

Includes adjustable spreader, rubber foot pads and spikes

ITE-T20A Elevation Tripod/Head Counterbalanced

Camera/Head
 Load Capacity: 8 lbs. (4kg)
 Min. Height: 31" (78.7cm)
 Max. Height: 68" (170cm)
 Elevation
 Adjustment: 12" (30cm)
 Min. Folded Length: 34" (85cm)
 Min. Folded Width: 5" (12.5cm)
 Max. Leg Angle: 15°
 Tilt Angle: 60°
 Pan Rotation: 360°
 Weight: 6 lbs. (2.7kg)
 Finish: Anodized aluminum and black wrinkle

ITE-T20A **\$145.00**

INNOVATIVE TELEVISION EQUIPMENT

Tripods

ITE-T30 Tripod Elevation Column

Features 3-section legs with radial locks for extension and contraction. An adjustable, lockable spyder provides structural stability. The ITE-T30 is equipped with a spirit level and combination rubber leg tips and metal spikes.

Camera/Head	
Load Capacity:	15 lbs. (6.8kg)
Min. Height:	24" (60cm)
Max. Height at 40°	
Included Angle:	69° (175.5cm)
Leg Angle (adjustable):	40° included (max.)
Elevator Column	
Adjustment:	14" (35cm)
Min. Folded Length:	27" (67.5cm)
Min. Folded Width:	4 1/2" (11.25cm)
Weight:	6.5 lbs. (2.92kg)
Finish:	Anodized aluminum and black wrinkle

ITE-T30 \$225.00

ITE-T40 Tripod "A" Frame

Lightweight, heavy-duty system that features 2-section, positive cam locked legs that are indexed for easy length adjustment.

An adjustable, lockable spyder for structural stability, the elevator column adjusts to 16". Spirit level and rubber-tipped legs are provided.

Camera/Head Load	
Capacity:	40 lbs. (18kg)
Min. Height:	20 1/2" (51.25cm)
Max. Height at 40°	
Included Angle:	66° (165cm)
Leg Angle (adjustable):	100° included (max.)
Min. Folded Length:	32" (80cm)
Min. Folded Width:	7" (17.5cm)
Weight:	10 lbs. (4.5kg)
Finish:	Anodized aluminum/black wrinkle

ITE-T40 \$435.00

ITE-T45 Pneumatic Tripod "A" Frame

Camera/Head	
Load Capacity:	28 lbs. (12.7kg)
Min. Height:	24 1/2" (62.25cm)
Max. Height at 40°	
Included Angle:	78" (198cm)
Leg Angle (adjustable):	90° included (max.)
Elevator Column	
Adjustment:	12" (30.5cm)
Min. Folded Length:	32" (81.3cm)
Min. Folded Width:	7" (5.22cm)
Weight:	11 1/2 lbs. (5.22kg)
Finish:	Black wrinkle

ITE-T45 \$595.00

ITE-T50 Tripod ENG with Spyder

The T50 Tripod is a rugged lightweight all metal unit which provides outstanding rigidity and stability.

Load Capacity:	40 lbs. (18kg)
Min. Height:	
(at max. leg spread):	17" (43cm)
Max. Height:	56" (142cm)
Min. Folded Height:	35" (84cm)
Min. Folded Width:	7 1/4" (19cm)
Weight:	7 1/2" lbs. (3.4kg)
Ball Leveling Bowl:	100mm
Finish:	Black anodize

ITE-T50 \$795.00

Includes: Removable, adjustable spreader assembly

ITE-T553 Tripod

Load Capacity:	45 lbs. (20.5kg)
Min. Height:	6 1/2" (16.5cm)
Max. Height:	64" (162.5cm)
Min. Folded	
Length:	30" (76cm)
Width:	7 1/2" (19cm)
Weight:	8 lbs. (3.6kg)
Leg Sections:	3
Bowl:	110mm
Finish:	Anodized aluminum and black wrinkle

Optional	
Accessories:	Reducer Bushings 110mm to 100mm; 100mm to 75mm

ITE-T553 \$725.00

Includes rubber foot pads and spikes

ITE-T553C Tripod 3-Section Leg with 110mm Bowl

Equipped with combination leg spike/rubber foot pads. Legs are lockable at 3°, 28° and 40° angles. Constructed of lightweight alloy material, with black, hard anodized leg tubes.

ITE-T553C \$695.00

ITE-T554 Tripod

Load Capacity:	60 lbs. (29.5kg)
Min. Height:	6 1/2" (16.5cm)
Max. Height:	61" (155.5cm)
Min. Folded	
Length:	23 1/2" (60cm)

 Weight: 5 lbs. (2.25kg)
 Base: Flat

Optional Accessories: Claw ball leveling; dual handles; quick-release assembly
ITE-H12A \$695.00

ITE-H14A Fluid Head

Camera Load Capacity: 30 lbs. (13.5kg)
 Tilt Angle: ± 80°
 Pan Rotation: 360°
 Height: 5 1/2" (13.75cm)
 Width: 6 1/2" (16.25cm)
 Length: 5 1/2" (13.75cm)
 Weight: 8 lbs. (3.6kg)
 Base: Flat

Quick Release Plate: 1/4-20 and 3/8-16 camera screws
 Optional Accessories: Pro claw ball leveling; dual handles
ITE-H14A \$895.00

ITE-H17 Fluid Head—Adjustable Counterbalance

This system utilizes four step drag adjustable (dial-in-type) with free wheeling in both pan and tilt modes, for smooth, effortless and trouble free control.

The H17 directly interfaces with the T17 ENG/EFP tripod and other ITE claw ball base tripods.

Camera Load Capacity: 15 lbs. (6.8kg)
 Tilt Angle: ± 90°
 Pan Rotation: 360°
 Height: 6" (153mm)
 Width: 4" (100mm)
 Length: 5" (127mm)
 Weight: 5 lbs. (2.3g)
 Base: 75mm claw bowl
 Camera Attachment: 1/4-20 and 3/8-16 camera screws

Finish: Black wrinkle
 Optional Accessories: Includes: control handle, H17CA flat base adaptor; dual handles
ITE-H17 \$1125.00

ITE-H6

ITE-H30 Fluid Head—Counterbalanced

Capacity: 10 lbs. (4.5kg); counterbalanced for 2" Vertical C.G.
 Tilt Angle: + 90°, -75°
 Pan Rotation: 360°
 Pan and Tilt Drag: High viscosity system
 Pan and Tilt Lock: Independent of drag system; positive lock design

Height: 4" (10cm)
 Width: 5" (12.5cm)
 Length: 4" (10cm)
 Weight: 2 lbs. (.90kg)
 Base: Flat
 Camera Mounting Plate/Quick Release: 2" x 2" (5cm x 5cm) with positive lock 1/4-20 screw and anti-rotational pin

Handle: One with adjustable angle
 Level: Spirit
 Finish: Black wrinkle
 Optional Accessory: Extra handle
ITE-H30 \$205.00
ITE-RH30 Right hand zoom handle \$45.00

ITE-H40 Fluid Head—Counterbalanced

Capacity: 30 lbs. (13.5kg)
 Tilt Angle: ± 80°
 Pan Rotation: 360°
 Pan and Tilt Drag: High viscosity system
 Pan and Tilt Lock: Independent drag system; positive lock design

Height: 6 1/2" (16.25cm)
 Width: 7 1/2" (18.75cm)
 Length: 6 1/2" (16.25cm)
 Weight: 7 lbs. (3.15kg) (without handle)
 Base: Flat
 Camera Mounting/Quick Release Platform: 3 3/4" W x 5 3/4" L (9.36cm x 14.37cm) with positive lock and sliding

Handle: One with adjustable angle
 Level: Spirit
 Finish: Black wrinkle
 Optional Accessory: Claw ball leveling, extra control handle
ITE-H40 \$495.00
ITE-RH40 Right hand zoom handle \$50.00

Refer to Green Section for Addresses and Telephone Numbers.

INNOVATIVE TELEVISION EQUIPMENT

Heads

ITE-H50 Fluid Head—**Adjustable Counterbalance**

Camera Load Capacity:	30 lbs. (13.5kg)
Tilt Angle:	Up to $\pm 90^\circ$
Pan Rotation:	360°
Height:	7 1/2" (20cm)
Width:	6 1/4" (16cm)
Length:	5 3/4" (14.5cm)
Weight:	6.5 lbs. (3.0kg)
Level:	Spirit
Handle:	Telescopic
Base:	100mm claw ball
Finish:	Black wrinkle
Optional	
Accessory:	Extra telescopic control handle, as shown, ITE-H50CA flat base adaptor

ITE-H50 \$1050.00

ITE-H50E Fluid Head—**Adjustable Counterbalance**

Camera Load Capacity:	40 lbs. (18kg)
Tilt Angle:	90°
Pan Rotation:	360°
Height:	6 3/4" (17.1cm)
Width:	6 1/4" (15.9cm)
Length:	5 1/4" (13.3cm)
Weight:	6.5 lbs. (3.0kg)
Level:	Spirit
Handle:	Telescopic
Base:	100mm claw ball
Camera	
Mounting Plate	
Quick Release:	2 1/2" x 3 1/2" with 3/8" slot
Finish:	Black wrinkle
Optional	
Accessories:	ITE RH50E, extra telescopic control handle; ITE-H50CA, flat base adaptor

ITE-H50E \$1125.00

ITE-H60 Fluid Head—**Adjustable Counterbalance**

Uses adjustable, toggle lever controlled helical springs and sliding quick release camera plate. Drag control (in both pan and tilt) can be dialed in for eight different levels of personal feel—from freewheeling to maximum drag. The H60 directly interfaces with the T60 ENG/EFP tripod and other ITE claw ball base tripods.

Camera Load Capacity:	30 lbs. (13.6kg)
Tilt Angle:	$\pm 90^\circ$
Pan Rotation:	360°
Height	
(incl. ball base):	8" (20.3cm)
Width	
(incl. handle brackets):	6 1/2" (16.5cm)
Length	
(incl. handle brackets):	6 3/4" (17.2cm)
Weight:	9.2 lbs. (4.2kg)
Base:	110mm claw ball
Camera Attachment:	1/4-20 and 3/8-16 camera screws
Finish:	Black wrinkle
Optional	
Accessories:	Second control handle step ball (100mm/110mm)

ITE-H60 \$3395.00

ITE-RH60T Telescopic handle 155.00

**ITE-H70/H90 Fluid Heads—****Adjustable Counterbalance**

Designed for remote and studio applications. These heads provide unsurpassed smoothness of pan and tilt action for heavy camera loads. Perfect counterbalance is obtained by simply preloading three groups of reactive spring elements and fine tuning by adjusting the sliding camera platform. This complete setup procedure can be accomplished with the camera mounted (on quick release plate) and ready to shoot.

Drag control is simple and precise. By dialing in one of 8 selections in pan and 7 selections in tilt, the camera person can obtain desired level of drag, from freewheeling (pan only) to maximum, with unmatched smoothness and precision.

ITE-H70	
Camera Load Capacity:	65 lbs. (28kg)
Tilt Angle:	$\pm 90^\circ$
Pan Rotation:	360°
Height	
(incl. ball base):	9" (22.9cm)
Width	
(incl. handle brackets):	8 1/2" (21.6cm)
Length	
(incl. handle brackets):	7 3/4" (19.7cm)
Weight:	19 lbs. (8.63kg)
Base:	150mm claw ball
Camera Attachment:	1/4-20 and 3/8-16 camera screws
Finish:	Black wrinkle
Includes Dual control handles	
ITE-H70 \$4995.00
ITE-H70A Mitchell base adaptor 285.00
ITE-RH70T Telescopic handle 155.00

ITE-H90	
Camera Load Capacity:	150 lbs. (68.1kg) at 7" C.B.
Tilt Angle:	$\pm 80^\circ$
Pan Rotation:	360°
Height	
(incl. ball base):	11 1/2" (29.2cm)
Width	
(incl. handle brackets):	10 1/2" (26.7cm)
Length	
(incl. handle brackets):	9 1/2" (24.1cm)
Weight:	41 lbs. (18.6kg)
Base:	Mitchell base
Camera Attachment:	Wedge plate
Finish:	Black wrinkle
Includes Dual control handles	
ITE-H90 \$8500.00

**ITE-H100 Fluid Drag Head**

Camera Load Capacity:	250 lbs. (112.5kg)
Tilt Angle:	$\pm 53^\circ$
Pan Rotation:	360°
Height:	8 1/2" (21.25cm)
Width	
(less handles):	12" (30cm)
Length	
(less handles):	14" (35cm)
Weight:	31 lbs. (13.95kg)
Base:	Mitchell type
Optional	
Accessory:	Right hand telescopic handle
Includes: telescopic control handle; zoom stub handle; quick-release, lever-action wedge adaptor and wedge plate	
ITE-H100 \$3600.00

INNOVATIVE TELEVISION EQUIPMENT

Pedestals/Dollies

ITE-P2 ("Low Boy") Pneumatic Studio Pedestal

Camera/Head
 Load Capacity: 290 lbs. (130.5kg)
 Min. Height: 24 1/2" (62.25cm)
 Max. Height: 45 1/2" (113.75cm)
 Min. Doorway Clearance: 30" (75cm)
 Wheelbase: 28 1/2" (71.25cm)
 Dual Wheel
 Diameter: 8" (20cm) (cast aluminum; polyurethane tires)
 Steering Wheel
 Diameter: 30" (75cm) (vinyl coated)
 Steering Mode: Crab and Tricycle
 Cable Guard: Adjustable from 1/8" (.31cm) to 1" (2.5cm) above floor
 Air Pressure: Pressure relief valve opens at 200 PSI representing equivalent overload condition of 300 lbs. (135kg)
 Construction: Cast aluminum structure with steel tank and outer column to ASME Pressure Vessel Safety Code; aluminum center column
 Pressure Differential
 Trim: Nine 1 lb. (4.5kg) wafers
 Weight: 180 lbs. (81kg)
 Mount: Modified Mitchell type
 Finish: Black wrinkle
 Optional
 Accessory: Air supply charging system

ITE-P2 \$11,800.00

Note: Head not included. Min./Max. heights to cam head mounting surface.

ITE-P3 Elevation Pedestal with Cable Guards

Camera/Head
 Load Capacity: 60 lbs. (27kg)
 Min. Height: 31" (77.5cm)
 Max. Height: 49" (122.5cm)
 Elevation Adjustment: 18" (45cm)
 Caster Radius: 19" (47.5cm)
 Wheel Diameter: 4 1/2" (11.25cm)
 Weight: 36 lbs. (16.2kg)
 Finish: Black wrinkle
 Optional
 Accessories: FHT flat base H25T Mitchell base

ITE-P3 \$2,100.00

ITE-P5 Studio Pedestal—Counterbalance

Camera/Head
 Load Capacity: 265 lbs. (119.25kg) first 174 lbs. (78.3kg) spring counterbalanced
 Min. Height: 34" (85cm)
 Max. Height: 52" (130cm)
 Min. Doorway Clearance: 32" (80cm)
 Dual Wheel
 Diameter: 7" (17.5cm) (polyurethane tires)
 Steering Wheel
 Diameter: 25" (62.5cm)
 Steering Mode: Crab
 Base Construction: Cast aluminum
 Weight (less camera balance weights): 180 lbs. (81kg)
 Mount: Mitchell type
 Finish: Black wrinkle
 Optional
 Accessories: Additional capacity to 310 lbs. (139.5kg)

ITE-P5 \$7,400.00

Note: Head not included.

ITE-D7

ITE-P6 Studio Pedestal—Counterbalance

Camera/Head
 Load Capacity: 145 lbs.
 Min. Height: 32" (81cm)
 Max. Height: 52" (132cm)
 Min. Doorway Clearance: 28" (71cm)
 Dual Wheel
 Diameter: 7" (17.5cm) (polyurethane tires)
 Steering Wheel
 Diameter: 20" (50cm)
 Steering Mode: Crab
 Base Construction: Cast aluminum and fiberglass
 Weight: 125 lbs. (56.25kg)
 Mount: Mitchell type
 Finish: Black wrinkle
 ITE-P6 \$6,100.00
 ITE-P6L Studio pedestal—Counterbalance—"Lowboy" \$6,300.00

ITE-P7 Elevation Pedestal with Cable Guards

Camera/Head
 Load Capacity: 75 lbs. (33.75kg)
 Min. Height: 32" (80cm)
 Max. Height: 49" (122.5cm)
 Elevation Adjustment: 18" (45cm)
 Caster Radius: 19" (47.5cm)
 Wheel Diameter: 8" (20.32cm)
 Weight: 45 lbs. (20.25kg)
 Finish: Black wrinkle
 Optional
 Accessory: Mitchell mount adaptor
 ITE-P7 \$2,750.00

ITE-D3 Dolly

Load Capacity: 90 lbs. (40.5kg)
 Folded Length: 26" (65cm)
 Folded Width: 12" (30cm)
 Height: 7" (17.5cm)
 Diameter: 42" (105cm)
 Wheel Diameter: 5" (12.5cm)
 Weight: 17 lbs. (7.65kg)
 Finish: Black wrinkle
 ITE-D3 for T4A, T6, T10 and T12 \$775.00

ITE-D3G Dolly

Load Capacity: 90 lbs. (40.5kg)
 Folded Length: 26" (65cm)
 Folded Width: 12" (30cm)
 Height: 7" (17.5cm)
 Diameter: 42" (105cm)
 Wheel Diameter: 5" (12.5cm)
 Weight: 17 lbs. (7.65kg)
 Finish: Black wrinkle
 Includes cable guards
 ITE-D3G \$825.00

ITE-D5 Dolly

Load Capacity: 60 lbs. (27kg)
 Folded Length: 23" (57.5cm)
 Folded Width: 6" (15cm)
 Height: 6" (15cm)
 Diameter: 42" (105cm)
 Wheel Diameter: 5" (12.5cm)
 Weight: 7 lbs. (7.65kg)
 Finish: Black wrinkle
 ITE-D5 For T1A, T4A, T9 and T12 \$450.00
 ITE-D5G Dolly with cable guards \$500.00

ITE-SP4A Tripod spreader for T4A (nylon) 60.00

EFP-2 TV Camera Support Cart

Capacity—Cart: 250 lbs. (112.5kg)
 Capacity—Camera: 30 lbs. (13.5kg)
 Height: For transport, with handle and quadpod/leveling bowl removed — 30" (76.2cm)
 Height: In use—Min. 43" (107.5cm); max. 51" (127.5cm)
 Width: 18.75" (47.6cm)
 Length: 22.25" (55.6cm)
 Weight: 38.5 lbs. (17.5kg)
 Construction: Heavy Gauge Aluminum Tubing
 Finish: Blue anodize

ITE-EFP2 Cart with Quadpod and leveling bowl \$1900.00
ITE-EFP1 Cart (less Quadpod and 100mm leveling bowl) 1700.00

Quick Release Assemblies

The ITE quick release assembly provides for rapid attachment and removal of cameras from pan/tilt heads. Positive attachment of plate to adaptor is accomplished by rotating a spring-loaded lever. Inadvertent disengagement is impossible.

Assemblies are used in conjunction with all models of torsion, fluid and hydro heads.

Wedge Adaptor Assemblies

The ITE Wedge plate and adaptor combination provide for rapid attachment and removal of cameras from pan/tilt heads. Positive attachment of wedge plate to adaptor is accomplished by rotation of a locking screw which makes inadvertent disengagement impossible.

Assemblies are used in conjunction with ITE-H2 Cam Head.

Tripod Accessories

Rubber foot pads. Ball feet and leg spikes are available for various ITE tripods.

INOVONICS, INC.

Audio Processing/ Magnetic Recording Equipment

201

201 Average and Peak Responding Limiter

- Variable dynamic range compression
- Exclusive open-loop gain reduction
- Ripple-canceling circuitry
- Visual indication of gain reduction

The 201 is an unusually smooth dual-function audio limiter designed for studio recording, mastering, and broadcast production work. Serving as both a fast peak limiter and independent average-responding limiter, the 201 restricts program peaks to a preset ceiling value while maintaining the average program level within desired limits.

Specifications

- Frequency Response:** ± 0.5dB, 20Hz-20kHz
Signal-to-Noise Ratio: > 75dB, 20Hz-20kHz referred to + 4dBm
Limiter Timing
Peak Limiter Attack: Continuously variable between 1µs/dB limiting and 1ms/dB limiting.
Release: Continuously variable between 5ms/dB limiting and 50ms/dB limiting.
Average Level Limiter
AVG Response: 10ms/dB limiting
“VU” Response: 30ms/dB limiting
Input
Sensitivity: Adjusts to accommodate input levels between -15 and + 5VU with calibrated “unity gain” position.
Impedance: 100K, unbalanced (transformer optional).
Output: Transformer-isolated line output feeds 600 ohm line or bridging inputs at + 4 or + 8dBm. Clipping level + 24dBm.
201-00 Average and Peak Responding Limiter \$680.00
201-01 Line Input Transformer option (balanced input). 60.00

315 Channel Amplifier/925 Bias Generator For High Speed Audio Duplicating

- Equally suited to either cassette or quarter-inch format systems
- Interfaces with virtually any combination of master reproduce and slave record heads
- Equalization is easily tailored for specific formats and tape oxide formulations
- Uses: Upgrade, replacement or new system application in any bus-type high speed audio duplicator

The 315 Channel Amplifiers and 925 Bias Generator comprise a complete electronics package for high speed audio tape duplicating systems. Capable of operating at duplication ratios from 4:1 to 64:1, the 315s and 925 are ideal for upgrading older bus-type systems or for new installations.

These electronics feature wide range, low noise and superior signal headroom. Unusual design flexibility enables their easy integration into a wide variety of installation situations.

315's

925

Specifications

315 Channel Amplifiers

- Duplication Ratio:** 4:1 to 64:1 with appropriate equalizers
Equalization: Two sets of switch-selectable MID and HIGH Equalization and LEVEL CAL adjustments. May be supplied for any combination of format, ratio and oxide formulation. Combined REPRO/RECORD EQ network gives superior overall phase response.
Frequency Response: ± 0.5dB, 200Hz-1MHz with equalizers defeated
Noise: > 75dB below + 17dBmV nominal output bus level
Distortion: 0.5% THD, 200Hz-1MHz at + 17dBmV nominal output bus level
Input Characteristic: Repro preamp operates in current-sensing mode; appears as short-circuit to master playback head. This eliminates primary L/C head resonance factor. Head inductance range: 500µH to 10mH; 750/850µH optimum.
Output: Voltage-source output bus, < 30 ohms source impedance. Nominal “Zero Level” bus level + 17dBmV; clipping level + 37dBmV. Output power sufficient for 10 slave system.
Controls: LEVEL CAL, MID and HIGH EQ presets for each of two, remotely-selected Format positions. LEVEL TRIM control with CALIB. detent affords ± 6dB variation from calibrated value.
Linearizer: Variable non-linear network may be introduced into the Record Amplifier feedback circuit to predistort the output signal in a manner complementary to tape saturation distortion. This reduces tape-generated IMD and THD.

Test/Patch Jack: Closed-circuit jack breaks signal path for testing, calibration or for patching two channels or systems together

925 Bias Generator

- Bias Frequency:** 5MHz standard; 1MHz or 2MHz optionally available
Power Output: 40W; 25VRMS nominal output bus level, A.G.C.-stabilized. Output is short-circuit protected
Additional Outputs: + 180VDC unregulated and + 30VDC regulated for up to four 315 Repro/Record Amplifiers
Controls: BIAS TRIM controls affords ± 3dB variation in output bus level from nominal. METERING switch selects Output Bus Level or percentage of Generator Capacity.
315-00 Repro/Record channel amplifier (one channel) \$ 710.00
925-00 1/2/5MHz, 40W Bias Supply (and power supply for 315's) 1005.00

Refer to Green Section for Addresses and Telephone Numbers.

222

222 AM "NRSC" Audio Processor

- Built-in peak limiter (defeatable) can either enhance or replace existing peak controllers to maintain asymmetrical AM modulation advantage
- Adaptive preemphasis—a separate preemphasis-protection limiter independently controls high frequency program energy for best utilization of the NRSC (or other) curve, consistent with optimum modulation
- Feedforward pulse width modulation (PWM) techniques are used in limiter and adaptive-preemphasis circuits for colorless, quasi-digital control of the program signal
- Active multipole lowpass filtering exceeds requirements for adjacent-channel protection, even under adverse conditions. A proprietary filter overshoot compensator eliminates any need for splatter-generating clippers to assure full modulation

The 222 is an audio processor specifically intended for AM broadcasting. It incorporates an adaptive preemphasis characteristic to enhance signal intelligibility and "presence," and a sharp-cutoff lowpass function to eliminate interference with adjacent channels.

The frequency and phase response of the 222 is rigidly maintained from unit-to-unit to ensure optimum stereo performance from paired processors.

Specifications

Frequency Response

(Preemphasis Defeated):

"Proof" Mode: ± 0.5 dB, 10Hz-15kHz

"NRSC" Version: ± 1 dB, 10Hz-9.7kHz

Distortion:

$< 0.2\%$ THD, 10Hz cutoff with peak limiter off; $*1\%$ THD, 200Hz cutoff with peak limiter on

Noise:

> 75 dB below 100% modulation

Preemphasis Characteristic:

"Truncated" 75 μ s curve

Input:

Active-balanced, 10K bridging; accepts nominal line levels between -15 and +15dBmV

Output:

Active-balanced, 600 ohm resistive source; delivers 0 to +15dBm into 600 ohm loads

222 \$520.00

255

255 Triband/PWM Stereo Broadcast Processor

- Gated AGC has peak-weighted response and variable correction rate
- Gated 3-band compressor/limiter includes a variable "platform" release characteristic and a unique program-adaptive clipping function
- Split-spectrum peak control may be set for 75 μ s or 50 μ s transmission preemphasis protection
- Feedforward PWM gain reduction
- User controls are calibrated for convenient set-up and easy return to previous presets

The 255 is a stereo audio processor with principal utility in the "contemporary music" FM broadcasting format.

The 255 is a multifunction device, incorporating a slow, "gain-riding" AGC with a 3-band compressor/limiter of unusual flexibility. Gain control utilizes a unique implementation of pulse width modulation in a feedforward, "soft-knee" circuit configuration.

Specifications

Frequency Response:

± 0.5 dB, 10Hz-20kHz

Noise:

> 80 dB below 100% modulation, 10Hz-20kHz

Distortion (With Full AGC

Correction and "Subjective"

Adjustments Centered):

$< 0.25\%$ THD, 1kHz-20kHz; $< 0.5\%$ THD, 250Hz-1kHz; $< 1\%$ THD, 20Hz-250Hz

Crosstalk:

> -65 dB, 10Hz-20kHz

Inputs (Left and Right):

Active-balanced, bridging; accept nominal line levels between -20 and +10dBmV

Outputs (Left and Right):

Active-balanced, 600 ohm source impedance; deliver 0 to +15dBm to 600 ohm loads

Gating Threshold:

Fixed at -25dB relative to corrected program level

Threshold Weighting:

-3dB at 150Hz and 5kHz

Correction Range:

± 12 dB

Response to Program

Dynamics:

Quasi-peak; 10ms UK/EBU "PPM" integration

Correction Rate:

Variable between 0.25 and 1.0dB/sec.

Spectrum Division:

Low/Mid turnover, 200Hz (795 μ s); Mid/High turnover is user-selectable, 2120Hz (75 μ s) or 3180Hz (50 μ s)

Program Adaptive Clipping:

A high frequency "activity detector" (HFAD) monitors dynamics at the upper program frequencies to determine an optimum limiting/clipping ratio. A higher incidence of clipped peaks is permitted when sufficient high frequency activity is present to mask other audible effects. Function is internally defeatable

Ceiling Clipper:

Active only on limiter overshoots which would otherwise exceed 100% modulation. Conforms to the selected preemphasis characteristic

255 \$1850.00

260

260 Stereo Broadcast Audio Processor

- Gated, slow, gain-riding AGC
- Split-spectrum average level compressor/peak controller conforms to the 75 μ s curve
- Remote function selection permits use of the 260 as either a gated AGC, a peak limiter, or as a complete processing chain
- Level alarm alerts the operator of a "dead-air" or an "out of limits" situation

The 260 is a stereo processor for FM and TV broadcasting. The 260 and its ease of set-up and operation suggests application in LPTV and educational FM installations.

Specifications

Frequency Response:

± 0.5 dB, 10Hz-15kHz

Distortion:

$< 0.5\%$, 20Hz-15kHz; $< 0.2\%$, 50Hz-10kHz

Noise:

> 75 dB below 100% modulation

Crosstalk:

> 60 dB below 100% modulation

Inputs:

Balanced-bridging, -20 to +10dBm

Outputs:

Balanced, 0 to +15dBm

260-00 \$990.00

250 Programmable Stereo Broadcast Processor

The 250 is a remotely-programmable, stereo audio processor for present and future FM, AM and TV broadcasting applications. Digital programmability of the 250 allows the user to adapt processing parameters to best suit changing station formats and listener profiles over the course of the broadcast day.

The 250 is the only signal conditioner required ahead of the transmitter. It performs the multiple task of a slow, gain-riding AGC, multiband compressor, program equalizer and final peak controller.

Specifications

Frequency Response (Below Compressor and Limiter Thresholds):

Noise*: ± 0.5dB, 10Hz-15kHz
> 70dB below 100% modulation, 10Hz-20kHz

Crosstalk*: > 60dB below 100% modulation, 10Hz-20kHz

Distortion: < 0.5%, 20Hz-15kHz; < 0.2%, 50Hz-10kHz

Inputs: Left and Right; balanced-bridging, -20 to + 10dBmV

Outputs: Left, Right and Mono; balanced, 0 to + 15dBm

Power: 105-130VAC (230V available), 20W; 50/60Hz

Dimensions: 5 1/4" x 19" x 8"

Weight: 11 lbs.

*Data taken with Processor gain adjusted for 10dB Compression and 10dB Limiting of typical program material.

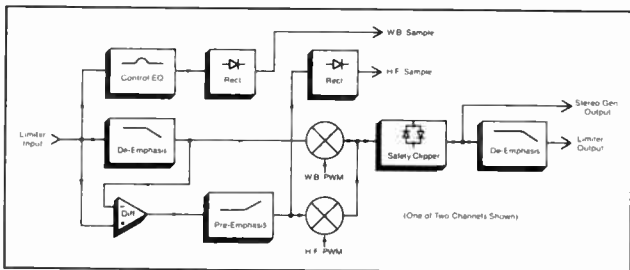

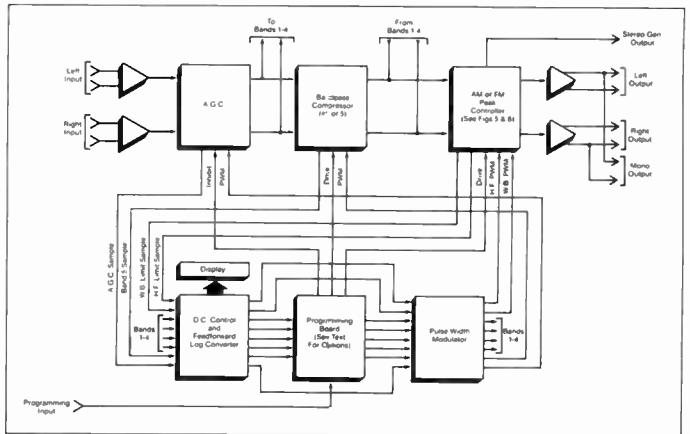

Programming Options

Either of two, interchangeable programming boards may be used with the 250 to furnish either a static or dynamic means of external control.

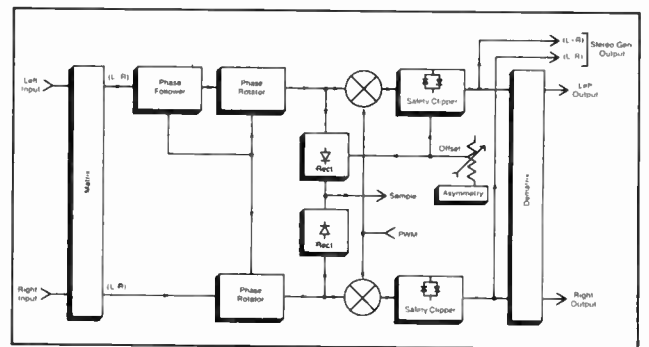

The static programming board, which is supplied as standard with the 250, incorporates a simple series of four on-board manual pre-sets for the adjustable processing parameters, plus a "flat" position and a "proof" mode. These different setups may be accessed remotely to change processing parameters by a series of control line contact closures to ground.

The dynamic programming board places all variable parameters under external computer control. An RS-232C serial interface bus accepts a series of 8-bit digital words to alter processing on an ongoing basis; continuously, if desired. User-designed software options can be used to implement creative control of the 250, and computer programs may be based on such external data as input signal spectral dynamics, station automation equipment command, time of day, etc.

- 250-00 Programmable stereo broadcast processor (for FM stereo) \$2980.00
- 250-01 Programmable stereo broadcast processor (for AM stereo) 2980.00
- 169200 RS-232C computer data interface card (form 250) 410.00

**Figure 5
FM Peak Limiter**

**Figure 6
AM Peak Limiter**

370 Tape Recorder Electronics

- All controls are "up front" for easy set-up; calibration adjustments are stable, multi-turn pots
- Entire electronics assembly unplugs from the front for ease in servicing; all components are standard, "off-the-shelf" available parts
- Two units plug together for stereo operation

The 370 is a replacement electronics package for updating older professional recorders. It is a basic, two-speed, "no frills" unit with excellent performance, high reliability and of rugged construction to meet the demands of continuous use in broadcast, studio and educational applications.

The 370 accommodates virtually any combination of original and replacement heads of either high or low impedance. It is pin-compatible with Ampex 300-, 350- and 440-series machines and easily adapted to most other professional recorders.

Specifications

Overall Frequency

Response (Hz): 15 ips \pm 2dB, 25-25k
 7 1/2 ips \pm 2dB, 20-15k
 3 3/4 ips \pm 2dB, 20-8k

Line Input: "Electronically-balanced," bridging; accepts nominal line levels between -10 and +10dBm.

Line Output: Balanced, transformer-isolated; may be adjusted for nominal line levels between +4 and +10dBm. Clipping Level, +24dBm into 600 ohm load.

Power Requirements: 105-130VAC (230V available), 50/60Hz; 0.3A (plus transport).

370-00 **\$675.00**

370

387

380 Magnetic Recording Electronics

- Equalization, level and bias adjustments for routine, two-speed operation, and a third, "optimized" operating mode with separate adjustments to accommodate a different stock, operating level, track format, EQ characteristic, etc.
- "Pickup" (insert) Record Capability with adjustable delay, and "Sync" Reproduce with automatic monitor transfer.
- Provision for remote selection of monitor function, and defeatable "Auto Mute" to attenuate playback during high speed search.
- Adjustable circuitry to reduce the effects of tape compression and phase distortions.
- Increased erase, bias and signal headroom for high coercivity tapes.
- Switchable "VU" or 10ms, quasi-peak program monitoring.
- Two or more units easily interconnected for stereo or multi-track installations.

The 380 represents Inovonics' fourth generation of self-contained Magnetic Recording electronics for professional audio recording applications. The 380 is suitable either for new OEM installations or for substantially improving the performance of existing magnetic tape and film recording equipment.

Specifications

Signal-to-Noise Ratio: (in dB, referred to a "peak" record level 6dB above 250nW/m; 20Hz-20kHz; 2- or multi-track format):

	Overall		Standby	
	u'wtd.	wtd.	u'wtd.	wtd.
30 ips	-65	-74	-79	-86
15 ips	-63	-72	-75	-84
7 1/2 ips	-64	-72	-75	-84

Line Input: "Electronically-balanced," bridging; accepts nominal line levels between -10 and +10dBm in Calib position of Input Gain control. Control affords additional \pm 12dB gain range.

Line Output: Balanced, transformer-isolated; provision for balanced, transformerless operation. May be adjusted for nominal line levels between +4 and +10dBm. Clipping Level, +28dBm into 600 ohm load; +300dBmV into bridging inputs.

Power Requirements: 105-130VAC (230V available), 50/60Hz; 0.3A (plus transport).

380-00 **\$1020.00**

387 Magnetic Reproduce Electronics

The 387 rackmount chassis may be configured with one, two, three or four channels of plug-in preamplifier modules for magnetic tape or film playback. Each module is complete with metering, a defeatable vernier level trim control and three groups of level set and wide range, three point equalization presets. The 387 accommodates a wide variety of head characteristics in NAB, IEC and SMPTE formats. Electronically-balanced, ultra low noise circuitry yields superior signal headroom and optimum frequency response.

Specifications

Frequency Response: 30 ips \pm 1dB, 45-25k
 15 ips/35mm \pm 1dB, 25-20k
 7 1/2 ips/16mm \pm 2dB, 20-18k

Line Output: Balanced; +26dBm clipping level

Power Requirements: 105-130VAC (230V available), 10W; 50/60Hz
Physical: 3 1/2" x 19" x 5"; 12 lbs. (4 channel)

387-00 Rackmount chassis **\$250.00**

387-10 Single plug-in amplifier module **280.00**

387-20 Blanking panel for unused channel positions **20.00**

INOVONICS, INC.

FM Stereo Generator

705

705 FM Stereo Generator

- FMX™ plug-in option
- Digital synthesis of pilot(s) and subcarrier(s) gives maximum stereo separation and stable operation with no trimming adjustments or other routine maintenance
- Internal phase-compensated lowpass input filtering provides complete pilot and SCA protection. A 25Hz highpass function reduces exciter PLL perturbations
- Built-in peak overmodulation protection and proprietary filter overshoot control circuits assure full modulation without need for additional composite processing
- Adjustable composite equalization can correct for STL or other system non-linearities
- Can interface with a variety of audio processing systems
- Easy set-up and maintenance. All components are readily available; no encapsulated or single-source parts are used

The 705 is a full-featured, stand-alone stereo generator incorporating all necessary lowpass filtering and transmission preemphasis functions. The subcarrier and pilot signals are generated by digital circuitry to assure optimum performance and drift-free operation.

FMS is the tradename for a patented, improved system of FM stereo broadcasting, fully compatible with the customary standards and practices used throughout the world. This means that not only can FMX transmission be received by existing mono and stereo receivers with no performance compromise, but the new generation of FMX equipped receivers can provide the broadcaster with a substantial increase in stereocasting coverage, up to 400% has been claimed by the inventors.

FMX employs a second, "quadrature" subcarrier at the same 38kHz as the regular L-R signal, but with a 90° phase offset. The additional subcarrier is modulated by "compressed" L-R information, and "expanded" in the FMX receiver for a much improved signal-to-noise figure.

Because the new transmission format squeezes yet another subcarrier into the already "interleaved" composite stereo signal, stereo generator design becomes more critical to avoid potential overmodulation and other undesirable effects

Specifications

Frequency Response:	± 0.5dB, 25Hz-16kHz; ≥ -20dB at 10Hz, ≥ -60dB at 19kHz
Stereo Separation:	> 55dB, 25Hz-5kHz; ≥ 45dB, 5kHz-16kHz
Distortion:	< .15% THD in baseband and subcarrier at 95% modulation
Noise (Below 100% Modulation, Pilot Off):	≥ 75dB in baseband and subcarrier; 38kHz residual and "digital" noise above 54kHz, ≥ 60dB
Pilot:	19kHz ± 1Hz; < 2% THD (dist. products > 55dB below 100% mod.); injection level adjustable between 6% and 12% relative to 100% modulation
Inputs (Left and Right):	Active-balanced, bridging, accept line input levels between -10 and +15dBmV for 100% modulation
Input Filtering:	7-pole, phase-corrected, active-elliptic, "FDNR" lowpass with defeatable overshoot control circuitry. Third-order Chebyshev highpass section
Pre-Emphasis:	Selectable for 75μs or 50μs or flat transmission characteristics
Output:	Single-ended; selectable 75 ohm or "zero" (voltage source) impedance. Level adjustable between -5 and +12dBmV (0.5-3VRMS, or 1.2-8V p-p)
Overmodulation Protection:	Integral part of input filter overshoot control circuitry; defeatable with same
Digital Synthesis Sampling Rate:	608kHz (16X subcarrier)
FMX Option:	Auxiliary plug-in circuit board with all parameters preset. Easily user-installed (or exchanged with possible updated versions)
Power Requirements:	105-130 or 205-255VAC, 50/60Hz; 8W
Size:	1 3/4" x 19" x 7" (1U)
Shipping Weight:	8 lbs.
705 Stereo Generator	\$1250.00
FMX Plug-In Option	550.00

• Self-contained unit with fade-to-black • Insert new blanking intervals into program output

924 Blanking Processor with FTB \$1500.00

9026 Autotransition/Event Storage Unit

• Autotransitions on M/E's Mix, FTB and DSK • General Purpose Interface (GPI) • 100 event storage/recall • Chaining of events for longer sequences • Editor interface built-in RS-232 or RS-422 • Stores entire switcher setup • Operated with 9300 or 9400 switchers

The 9026 offers both autotransitions for the 9300 or 9400 Production Switchers and Event Storage and Recall of 100 different panel "snap shots." The autotransitions may be triggered through the GPI with either a momentary closure or TTL active low to ground. Multiple events may be sequenced to perform complex series of events. A Serial Editor interface allows either RS-232 or RS-422 editor control in concurrent operation.

9026-3 9300 Switcher only \$2800.00

9026-4 9400 Switcher only 2800.00

908 Stereo Audio Follow Video

• 10 audio follow inputs • 5 audio breakaway inputs • Auto or manual control • Follows M/E1, M/E2, or mixer • VU meter for program out • Level adjust for program out • Linear fader for manual control • Stereo version available

640

4001

The Audio Follow Video package gives you the ability to mix audio sources concurrent with Fader movement on either the 9400 or 9300 Production Switchers. In addition to audio follow the 908 has 5 separate audio inputs for breakaway.

908-4S Stereo Version 9300/9400 Switchers only \$5600.00

Special Function Options:

5010 Rack Frame \$ 250.00

5050 Power Supply 250.00

924 Blanking Processor with Fade-to-Black 1500.00

4001 Digital Pattern Generator 1650.00

NOTE: Certain options require the use of a 5010 rack frame and 5050 power supply. This frame will accommodate up to seven (7) modules of options or audio/video terminal processing equipment.

5000 Series Distribution Amplifiers

- Reliable operation
- Sturdy frame construction
- Field expandable
- Modular design
- User Configured
- 110-240V AC 50/60Hz

The rack frames which house the electronics are constructed so that different models can be mixed in one frame. A 5010 rack frame will house a power supply like the 5050 and seven card spaces for terminal equipment and/or options. Each option or piece of terminal equipment when ordered will include:

- A rear assembly with connections for inputs and/or outputs wired to one or more card edge connectors
- One or more printed circuit boards
- Front handles or shields (where applicable) attached to each PC board

5010 RACK FRAME

With 5050 (Video) Power Supply

- Rugged steel construction
- Modular design to customize rack
- Seven plug-in modules

The 5010 rack frame is constructed of rolled steel for strength and durability, and designed to accommodate a maximum of eight video, pulse, or subcarrier distribution amplifiers, or seven audio distribution amplifiers. The modular design allows customer configuration of the distribution system. You install only the distribution amplifiers you require.

The 5050 Video Power Supply provides a source for the distribution of pre-regulated + 10V and -10VDC to an entire module frame.

5010	\$250.00
5050250.00

5130 Video Distribution Amplifier

- Specifically designed for NTSC and PAL standard color video systems
- Six isolated outputs
- Flat frequency response
- Minimum chroma-luminance delay (less than 10ns) minimal phase and gain distortion

The 5130 general purpose video distribution amplifier is a quality color and monochrome video distribution amplifier with six isolated outputs. Chroma-luminance delay is less than 10ns with minimal phase and gain distortions to provide the ultimate in video distribution amplifiers.

5130	\$180.00
-------------------	-----------------

5190 Pulse Distribution Amplifier

- Four outputs, each individually driven
- Total regeneration of pulses allow any of the outputs to be operated unterminated
- Circuits or regenerative devices sensitive to hum or other low frequency disturbances are not utilized
- Shaped rise times (less than 100ns)
- Self-regulation of incoming DC voltages

The 5190 pulse distribution amplifier accepts a single pulse on the input, regenerates this pulse and distributes the pulse to four constant impedance outputs.

A high degree of isolation between the outputs is provided by the use of four individually driven outputs. This feature allows for any of the outputs to be operated unterminated.

The 5190 is not susceptible to hum or other low frequency disturbances since circuits or regenerative devices sensitive to these problems are not utilized.

5190	\$190.00
-------------------	-----------------

INTERGROUP TECHNOLOGIES

Production Switchers

9500 Series Production Switchers

• 2 complete mix/effects systems for maximum effects layering • 12 or 24 inputs providing for future expandability with +SIX • 4 linear keyers for crisp clean keys • REFEX Memory System for unlimited store and recall of effects • Internal auxiliary buses for optimum use of external devices • 6 ext. key sources/6 ext. key fills for maximum key flexibility • 7 layers of video for one pass productions • 10 hot keys for fast accurate event/sequence recall

Compact in size, but large in capability, the 12 input version of the 9500 can be rackmounted for reduced space applications. The 9500 was built around REFEX™ (Re-Programmable Effects) and uses extensive memory management for all aspects of the switcher operation. Not only does the 9500 offer more event storage than any other product (over 800 events), but the amount of what is stored in memory is much greater. All key selections store every parameter which effects that particular key. Even patterns have the ability to store pattern modifiers. The operator can select between six different preference registers recalling the unique switcher configuration they desire.

9512 Production Switcher \$28,500.00
9524 Production Switcher 34,500.00

9500

Options

9557	Dual Key Edger	\$3,500.00
9555	Dual Chroma Key/Aux./Prv.	3,500.00
9542	Serial Editor Interface	1,500.00

9508	Stereo Audio Follow	8,500.00
9502	REFEX Level II	2,500.00
9503	REFEX Level III	7,500.00
9506	Redundant Power Supplies	3,650.00
9509	GPI Output Control	250.00

9600

9600 Series Video Production Switchers

• 16 or 24 inputs • 6 matte generators including black/color background • 8 buses • 1 or 2 mix/effects • 42 basic wipe patterns • Program/preview flip/flop mixer • Combination mix • Wipe • Key • 12 input external key bus with 12 input key fill bus • Second keyer with edging in each mix/effects • Panel microprocessor • Frame microprocessor • Serial RS-422 link • 4000' max. separation • 5 input downstream keyer with edging • Mask generator per mix/effects and DSK • Auto transitions • Preference programming, and event save/recall/play (REFEX I) • Dual auxiliary bus • Serial editor interface • Diagnostics • Technical manual • Extender cards • 50' (15m) cable • M⁴-Key—multi-element, multi-plane, multi-level memory key • Extensive standard pattern modifiers • Pattern Attribute Memory System (PAMS) • Title controls • Preview select • Fade-to-black

The heart of the 9600 is the microprocessor-based system known as REFEX. The visible benefits are concerned primarily with system setup, event storage, sequence automation and editing, off-line storage of events and peripheral equipment control; the true benefit of REFEX is much greater than the user-accessible functions.

REFEX Levels I through IV have been defined, Levels V and higher have not. It is this open-ended, fully compatible software/hardware enhancement effort which will insure 9600 owners of future growth options.

To prevent the loss of stored effects, all REFEX memory is battery backed-up in the event of main power failure.

The Series 9600 is one of the few new-generation production switcher systems to maintain the Program/Preset Bus Row architecture so necessary for on-air (or live-on-tape) applications. Yet the extensive effects automation capabilities of REFEX, the keying power of M⁴-Key, and the pattern memory and management of PAMS make it the most powerful post-production switcher available.

The Series 9600 is available in NTSC, PAL and PAL-M versions.

9616-1	Video Production Switcher—illuminated pushbuttons (16 inputs, 1 ME)	\$44,494.00
9616-2	Video Production Switcher—illuminated pushbuttons (16 inputs, 2 ME)	47,494.00
9624-1	Video Production Switcher—illuminated pushbuttons (24 inputs, 1 ME)	46,494.00

JSCP Series B/JSLP FM Broadcast Antennas

Common Features

- Excellent performance for stereo, SCA and quadraphonic broadcasting
- Excellent VSWR bandwidth
- Provides a relatively flat, non-reactive load to the transmitter, keeping crosstalk between the main and subcarrier channels to a minimum. Since the antenna load is flat throughout the significant FM sideband frequencies, this antenna does not significantly contribute to synchronous AM noise
- Conservatively rated at 10kW per bay up to four bays, with a 40kW maximum rating for four bays and above
- True circular polarization
- Rugged mechanical construction and mounting
- Supplied with standard galvanized brackets for round-leg mounting on uniform face towers. Special galvanized brackets can be supplied at additional cost for mounting on tapered towers, on poles, or for tower-face mounting. All hardware is included with mounting brackets. Custom antenna support poles can be supplied
- Tower space requirement and antenna input. Tower space requirement in feet for the JSCP/JSLP antenna array is equal to (984)/frequency in MHz (Number of bays-1). Tower space requirement in meters for the JSCP/JSLP antenna array is equal to (300)/frequency in MHz (Number of bays-1).
- Factory tuned on a "Customer" structure

The Series B JSCP antenna is an improved version of a circularly polarized FM broadcast antenna that has become the industry standard. Each bay consists of a radiating element with associated $1\frac{5}{8}$ " flange, and both element and line are bolted to the mounting bracket for that bay. The interbay feed lines are joined by $3\frac{1}{8}$ " flanges, using silver-plated inner conductor connectors for maximum contact life and minimum power loss.

The patented radiating element consists of four quarter-wave arms attached to a support boom, which also contains the element feed. A tuning cap, incorporating a large-radius tip, is supplied on each arm, which eliminates corona while facilitating field tuning, even to a slightly different operating frequency. The antenna system is fabricated of heavy gauge marine brass and copper throughout. The interbay line and element boom are pressurized up to the feed point by the transmission line pressurization system, with a pressure relief valve at the top of the antenna to allow pressurization system purging without the necessity of access to the top of the antenna.

The input connector location and size for the JSCP is:

- One bay: at the bay itself ($1\frac{5}{8}$ ", EIA male)
- Two through five bays: 3' below the bottom bay ($3\frac{1}{8}$ ", EIA female)
- Six and seven bays: 8' below the lowest bay ($3\frac{1}{8}$ ", EIA female)
- Eight through 14 bays: 13' below array center ($3\frac{1}{8}$ ", EIA female)

The JSLP antenna is the medium power version of the JSCP antenna. Each bay consists of a JSCP style radiating element with a $1\frac{5}{8}$ " shunt feed line supported by a galvanized steel mounting bracket; standard round leg mounting brackets for a uniform face tower are included with each antenna. Silver plated inner conductor connectors are used throughout for maximum contact life and minimum power loss.

The input connector location and size for the JSLP is:

- One bay: at the bay itself ($1\frac{5}{8}$ ", EIA male)
- Two through five bays: 3' below the bottom bay ($1\frac{5}{8}$ ", EIA female)
- Six and seven bays: 8' below the lowest bay ($1\frac{5}{8}$ ", EIA female)
- Eight through 14 bays: 13' below array center ($1\frac{5}{8}$ ", EIA female)

The circularity of the JSCP/JSLP element is ± 1.0 dB in free space. The azimuth pattern will tend to be distorted somewhat by the structure on which the antenna is mounted. Circularity on a steel pole is typically ± 1.2 dB, with circularity on an 18" face tower typically ± 1.9 dB, and on a 42" face tower typically ± 4.8 dB.

Electrical deicing equipment is available in installations where windloading from radomes would exceed the capabilities of the support structure or where icing occurs infrequently. The deicing system consists of a stainless steel sheathed high reliability heater element in each

JSCP

arm, plus the boom, providing a total of 500W of heating with 240V, 50/60Hz applied. The system can be operated at $\frac{1}{4}$ power on 120V under light icing conditions in order to conserve electricity. The deicing system includes heaters, bay junction boxes and flexible interbay cable.

An optional precision thermostat system is available for use with the JSCP deicers. The thermostat turns on the heaters only over the temperature range of 32° to 20°F which is the range over which most icing occurs.

Radomes are recommended in environments where regular icing and sleet conditions prevail, in order to preserve the antenna's excellent VSWR specifications.

Custom directional antenna patterns are available to meet FCC requirements, or for use in countries where such directional antennas are readily useable. Nulls may be produced depending on protection requirements of azimuth heading and null depth.

For reduced low angle radiation near the tower, a low RFR model of this antenna is available.

Options

FCC-directionalization, pattern measurement service, pattern optimization, beam tilt and null fill, special mounting brackets.

JSLP

JLCP Series 2 FM Broadcast Antennas

- Designed for lower power
- Circular polarization
- Factory tuned on a "Customer" structure
- Custom options available
- Rated at 3kW per bay and 7.5kW per antenna system of two to six bays
- VSWR rating is 1.1:1 or better \pm 150kHz after field tuning
- Free space circularity of the radiating element is \pm 1.0dB. The azimuth pattern will tend to be distorted somewhat by the structure on which the antenna is mounted
- Supplied with standard galvanized brackets for round-leg mounting on uniform face towers. Special galvanized brackets can be supplied at additional cost for mounting the JLCP on tapered towers, on poles, or for tower-face mounting. All hardware is included with mounting brackets. Custom antenna support poles can be supplied
- Tower space requirement and antenna input. Tower space requirement in feet for JLCP antenna array is equal to (984)/frequency in MHz (Number of bays -1). Tower space requirement in meters for the JLCP antenna array is equal to (300)/frequency in MHz (Number of bays -1)

The JLCP Series 2 Antenna has proven itself in years of service as a reliable, low cost, low power CP FM system based on completely pressurized feed arrangement. The radiating element and line are fabricated of high strength marine brass and copper and are attached to the support structure by a galvanized steel bracket. Standard round leg mounting brackets for a uniform face tower are included with each antenna.

Custom directional antenna patterns are available to meet FCC requirements, or for use in countries where such directional antennas are readily useable. Nulls may be produced depending on protection requirements of azimuth heading and null depth. Full scale antenna range testing and pattern certification are offered for directional antennas.

Low-windload radomes are offered for the JLCP-2 antenna for environments where icing and sleet conditions prevail, in order to maintain good VSWR. The radomes are constructed of electrically transparent fiberglass reinforced plastic and attached to the element boom on both ends for maximum rigidity. Electrical deicers not available.

For reduced low angle radiation near the tower, a low RFR model of this antenna is available.

Options

Pattern measurement service, pattern optimization, beam tilt and null fill, and special mounting brackets. Larger center fed antennas available on special order.

FM Broadcast Antennas

JLLP FM Broadcast Antennas

- Circular polarization
- Quality and economy
- Rated at 1kW per bay with a maximum of 4kW for four bays. In a multi-element array a power divider is used which has a 7/8" EIA flanged input (female)
- VSWR rating is 1.1:1 or better \pm 150kHz after field tuning the elements
- Free space circularity of the JLLP antenna is \pm 1.0dB. The azimuth pattern will tend to be distorted somewhat by the structure on which the antenna is mounted

The JLLP FM antenna has been designed to meet low budget and educational stations requiring an inexpensive antenna. A high quality antenna was designed and based on the JSCP radiating element. By using an external and non-pressurized feed system, manufacturing costs are kept to a minimum. Each bay consists of a radiating element that is fed with flexible cable with type "N" connectors. Two or more bays are fed through a power divider and cable system which has a 7/8" EIA flange input (female). The element is constructed of high strength marine brass and can be mounted directly to a tower leg or pole. The JLLP antenna is designed to be an "off the shelf" item with the customer assembling a portion of the antenna. This method also reduces shipping and handling costs. A complete set of instructions is included to aid in assembly and tuning of the antenna.

Electrical deicing equipment is available for the JLLP in installations where windloading from radomes would exceed the capabilities of the support structure or where icing occurs infrequently. The deicing system consists of a high reliability heater element in each arm, providing a total of 400W of heating with 240V, 50/60Hz applied. The system can be operated at 1/4 power on 120V under light icing conditions to conserve electricity. The deicing system includes heaters, bay junction boxes and flexible interbay cable. Radomes not available.

For reduced low angle radiation near the tower, a low RFR model of this antenna is available.

JAMPRO ANTENNAS, INC.**FM Broadcast Antennas****JHCP FM Broadcast Antennas**

- Extremely high-power corona-free operation
- Excellent VSWR bandwidth
- Heavy-duty mechanical construction
- True circular polarization
- Conservatively rated at 30kW per bay, with a maximum system rating of 80kW for three bays and above. These ratings are reduced well below both the average and peak power ratings for the power distribution system, with corona and high voltage arcing problems eliminated by the use of very low Q radiating elements. This lowers the surface charge density over the radiating surface areas preventing corona at 30kW levels, even during rain or fog
- VSWR bandwidth of 1.1:1 or better ± 200 kHz of carrier
- Circularity of the JHCP element is ± 1.0 dB in free space. The azimuth pattern will tend to be distorted somewhat by the structure on which the antenna is mounted, with circularity of the antenna typically ± 1.2 dB mounted on a steel pole and typically ± 3.0 dB mounted on a 30" face tower. The pattern measurement service is recommended for this and all antennas to insure that there are no azimuth pattern nulls at the broadcaster's service area
- Supplied with standard galvanized brackets for round-leg mounting on uniform face towers. Special galvanized brackets can be supplied at additional cost for mounting the JHCP on tapered towers, on poles, or for tower-face mounting. All hardware is included with mounting brackets. Custom antenna support poles can be supplied

Tower Space Requirement and Antenna Input

- Tower space requirement in feet for the JHCP antenna array is equal to $(984)/\text{frequency in MHz} (\text{Number of bays}-1)$. Tower space requirements in meters for the JHCP antenna array is equal to $(300)/\text{frequency in MHz} (\text{Number of bays}-1)$

The input connector location and size for the JHCP is:

- One bay: at the bay itself ($3\frac{1}{8}$ " , EIA male)
- Two through four bays: 3' below the bottom bay ($6\frac{1}{8}$ " , EIA female)
- Five and six bays: 8' below bottom bay ($6\frac{1}{8}$ " , EIA female)
- Seven through 12 bays: 13' below array center ($6\frac{1}{8}$ " , EIA female)

The JHCP antenna is a circularly polarized FM antenna for the broadcaster who wants extremely high-input power capability. Each bay consists of a radiating element with its associated $6\frac{1}{8}$ " interbay feed line. The element and line are supported by a heavy brass casting which is attached to the support structure by its mounting bracket. The radiating element consists of four 3" diameter quarter wave arms attached to a $3\frac{1}{4}$ " brass boom by castings.

**JHCP**

The interbay feed lines and boom are pressurized out to the feed point by the transmission line pressurization system. A pressure relief valve is supplied at the top of the antenna for pressurization system purging as well as overpressure relief.

Deicing equipment is recommended for the JHCP in environments where regular icing and sleet conditions prevail, in order to preserve the antenna's excellent VSWR specifications. The deicing system consists of a stainless steel sheathed heater element in each element arm for a total of 1kW of heating with 240V, 50/60Hz applied. The system can be operated at $\frac{1}{4}$ power on 120V under light icing conditions in order to conserve electricity. Bay junction boxes and interbay cable are supplied with the heaters. A precision thermostat system is available as an accessory to control the deicers. The JHCP antenna is optionally available with custom beam tilt and/or null fill.

Custom directional antenna patterns are available. Full-scale antenna range testing and pattern certification are offered for directional antennas. For reduced low angle radiation near the tower, a low RFR model of this antenna is available.

JAMPRO ANTENNAS, INC.**FM Broadcast Antennas****JBCP FM Antennas**

- Inherently broadband, using an internal pressurized feed system with a VSWR of 1.20:1 or better over a 4MHz bandwidth, making it suitable for diplexing. On a single frequency, the VSWR is 1.07:1 \pm 200kHz of carrier with field tuning; deicers are not normally required, as the typical VSWR is 1.4:1 or better with up to 1/2" of radial ice. The individual radiating elements may be field tuned for best VSWR. The VSWR at the antenna input without field tuning will be 1.5:1 or less when side mounted on a tower
- Supplied with standard galvanized brackets for round-leg mounting on uniform face towers. Special galvanized brackets can be supplied at additional cost for mounting the JBCP on tapered towers, on poles, or for tower-face mounting. All hardware is included with mounting brackets. Custom antenna support poles can be supplied

The JBCP antenna is a circularly polarized FM antenna designed for applications requiring relative insensitivity to icing along with high antenna input power. The antenna elements are fabricated of high strength thick wall brass and copper with a 3 1/8" outside diameter. The JBCP antenna will handle up to 40kW per bay and up to 120kW per system, depending upon the number of bays, shunt line size and input connector.

Options

Pattern measurement service, pattern optimization, beam tilt and null fill, and special mounting brackets.

For reduced low angle radiation near the tower, a low RFR model of this antenna is available.

- NOTES:**
1. Weights and windloads shown include mounting brackets.
 2. Windload ratings are 50/33 PSF, 112 miles per hour.
 3. Feed point when end fed, 3' below bottom bay. When center fed 13' below center.
 4. All inputs EIA flange, female.

1650 Series

1680 Series

1690 Series

1650/1680 and 1690 Broadcast Consoles

- Nine on-air boards
- Choice of 5-mixer, 8-mixer or 12-mixer units
- Choice of Penny and Giles, Shallco or rotary conductive plastic attenuators
- + 24dBm output into 600 ohm load
- Better than 90dB signal-to-noise ratio
- Built-in monitor, headphone and cue amplifiers
- Built-in cueing loudspeaker

These consoles offer a choice of five, eight or twelve mixers and a choice of attenuator types as well. There is ample provision for customization to fit individual station requirements, but no accessories are required to put them on the air—each board is ready to operate as supplied from the factory.

High Output, Low Distortion, Low Noise

The Series 1650/1680 and 1690 Consoles have unusually high output capability: + 24dBm into 600 ohm loads, so that today's dynamic program material can be safely handled without clipping. An overload indicator LED is located between the VU meters, and its threshold can be internally adjusted to alert the operator that a downstream device, such as an STL, may be clipping.

These consoles are also unusually quiet: the signal-to-noise ratio of the microphone channel, from input to console output, is > 74dB with -50dBm input and + 8dBm output, or

> 90dB referenced to maximum output. Distortion is extremely low, as well. At the full output level of + 24dBm into 600 ohms, the THD of both Program and Audition channels is < 0.25% over the range of 30Hz to 15kHz; at normal + 4 or + 8dBm operating level, the THD is typically < 0.02%.

533 Octave Graphic Equalizer

• Synthesized LC filter circuitry with smooth combining characteristic • Gain variable from -10 to +20dB, wide dynamic range • Low distortion, low noise, minimum phase shift • 10 adjustable equalizers on ISO 1-octave center frequencies • 12dB boost or 12dB attenuation • S/N better than 106dB at maximum output • Input of +20dB • Output +24dBm

533	Octave graphic equalizer (mono)	\$436.00
DR-1	Double rackmount28.00
SR-1	Single rackmount28.00

5547A Graphic Equalizer/5549A Room Equalizer

• 1/3-octave filters on ISO centers 25Hz to 20kHz • ± 12dB range at center frequency (5547A) 0 to -15dB range at center frequency (5549A) • Fully active-custom hybrid amplifiers in filter circuits • Unique gain structure controls optimize headroom and signal-to-noise ratio for different signal level environments • High and low frequency tunable end cut filters • Active and passive bypass modes • XL, phone jack and barrier strip connectors • Rugged, reliable, roadable

Inputs and Outputs

Both input and output may be wired for balanced or unbalanced operation to match the needs of the system. Input and output connections may be made through 3-pin XL-style, 3-conductor 1/4" phone jacks, or to barrier strip with bare wire or lug connection. All standard. Choose the connector type that suits your needs. The connectors are wired in parallel allowing "loopthrough" connections.

Tunable End Cut Filters

Continuously variable filters at each end of the frequency spectrum control the available bandwidth of the system with a 12dB per octave slope. The high frequency slope is switchable to 6dB per octave to aid in contouring, and a bypass switch removes them from the circuit completely.

JBL PROFESSIONAL

Mixers

1620 Music Mixer

- Eleven inputs
- Stereo outputs for house, booth and headphones
- Two stereo tape outputs
- Processor loop
- Mono light controller output
- Flexible switching matrix
- Reliable performance
- Ideal for disco, small club or broadcast production

The 1620 Music Mixer is an extremely flexible multi-input stereo mixer designed for the most critical and demanding applications. The outstanding features and reliability make it the perfect choice for night-clubs, broadcast production, mobile discos and other installations where high quality is essential.

The 1620 has six independent stereo channels, each with its own level and balance controls. The standard configuration has two stereo phono inputs, one transformer isolated mike input with variable gain, and eight stereo line level inputs. Three of the eight line inputs can accept additional phono or mike preamp cards. These optional cards permit combinations such as five phono inputs, one mike input, and five line inputs; two phono inputs, four mike inputs, and five line inputs, or any other combination you may require. The standard mike input and eight line inputs are selected to any of four level and balance controls through a flexible switching matrix.

The output circuits of the 1620 also have extraordinary flexibility. Separate outputs for house and booth amplifiers are provided, each with its own level control. The house output is transformer-isolated so that remote amplifiers may be fed with minimum likelihood of noise pickup in the interconnecting lines.

A separate headphone circuit has its own selector switch, allowing its source to come from any of the six input controls (pre-fader) or from the program output; its level control feeds an internal headphone amplifier

1620

and front panel stereo 1/4" (6.3mm) phone jack. For convenience in attaching lighting controllers, an isolated mono (L + R) output is provided on a rear panel jack; this output is not affected by any of the output level controls, so that lighting intensity will not be affected by overall level adjustments. Separate bass and treble controls for left and right channels affect the house, booth, headphone and mono outputs. The inflection points of these controls have been carefully selected for minimum midrange coloration and maximum flexibility.

Additionally, two separate tape outputs are provided for making recordings, and a processor loop allows connection of equalizers or other signal modification equipment.

1620 \$996.00

- 1622 Phono Preamp Module for 162096.00

5330 VCA Controlled Mixer (Preliminary)

- All microphone inputs switchable for line level use
- Voltage controlled outputs are standard to facilitate remote control
- Plug-in VCA option available for controlling inputs 1 through 6
- Low cut filters on all microphone inputs
- Preset trims on all controls are accessible through the front panel to limit range of operation and maximum gain
- Built-in output limiter to avoid blasting or overload
- Built-in output level meter
- Electronically balanced inputs for outstanding common mode rejection and RF immunity
- Transformer coupled outputs to break ground loops
- 48V phantom supply built-in
- Effects loop to allow insertion of ancillary equipment

All inputs are voltage controlled through use of an optional card or alternately can be manually controlled in the normal manner.

All units come standard with voltage controlled output amplifiers to facilitate remote control of output levels. Two outputs are provided which may be used for main and monitor or alternately to feed two separate zones. Use of the VCA controls naturally allows ganging of the gain controls of multiple units where desired. Further, priority muting of all channels by channel one is available by remote DC control.

Screwdriver adjustable gain trim controls are available at all mike/line inputs and at both outputs, allowing the presetting of reasonable maximum gains on these controls. The tone controls are also provided with a range trim control which can reduce their effectiveness to zero in applications where their use is not desired.

These trim controls allow the option of limiting control range to levels more suited to unskilled users. (Use of the trim controls allows local or remote gain control to the preset maximum only.)

Fully floating transformer coupled outputs are included to break ground loops and provide power line isolation. These transformers are driven by output stages capable of a full + 24dBm output.

5330

Infrequently used switches are located on the rear panel to preclude inadvertent operation. In addition to the mike/line switches are switches to activate the phantom supply and to defeat the limiter.

Limiting of the output is internally preset to gradually increase above -3 on the output bar graph display and designed to be fully operational at the top of the red part of the display.

Other items are a polycarbonate overlaid front panel with markings on the obverse, which is easily cleanable and virtually indestructible; adjustable rack ears which allow flush mounting the 5330, with or without the optional security cover; and a modular power source, separate from the main chassis, which makes for absolutely no external hum field to interfere with adjacent equipment.

5330 VCA \$897.00

6215 Power Amplifiers

- Space saving single rack space
- Output power 35W per channel into 8 ohms, 45W per channel into 4 ohms, 90W mono bridged into 8 ohms
- Rear panel switch for stereo, dual mono or mono bridge operation
- Fully complementary output
- Low negative feedback — Low T.I.M
- Individual stepped gain controls
- Active balanced input
- Input connectors — XLR, phone jack and barrier strip

The 6215 is a professional power amplifier that has been engineered to meet rigorous demands of musicians, sound reinforcement companies, broadcasters and touring groups. It is equally at home in fixed installations and studios where precise reproduction of complex waveforms must be accomplished.

6215\$597.00

6230, 6260 Power Amplifiers

- Active balanced bridging input circuitry
- Full complementary driver and output circuitry
- Low transient intermodulation distortion (TIM)
- Rugged, road worthy construction
- Individual stepped gain controls
- XL-type, phone jack, and barrier strip input connectors
- Heavy-duty 5 way output binding posts
- Rear panel switch for bridged, dual mono, or stereo operation
- Front panel/heat sinks are made of heavy aluminum; chassis of heavy gauge steel

Designed to meet the most critical professional sound requirements. These power amplifiers are rugged and road worthy, conservatively rated, and can handle highly reactive loads with ease.

The engineering design approach stresses the optimization of each stage, allowing high slew rate and relatively low loop gain. Overall feedback has been held to a minimum and is employed only to stabilize the gain and the operating point. This design approach results in amplifiers with excellent performance under the most demanding dynamic input and load conditions.

Specifications

6290 Dual Monophonic High Power Amplifier

- High output power — 600W per channel into 4 ohms, 1200W into 8 ohms mono bridge mode
- Fully independent audio channels and power supplies
- Fully complementary output
- Low negative feedback, low TIM
- Active balanced inputs with XLR, phone plug, and barrier strip
- Rugged, proven design

The 6290 is a dual monophonic professional power amplifier that has been engineered to meet the rigorous demands of sound reinforcement companies and touring groups. It is equally at home in fixed installations and studios where precise reproduction of complex waveforms must be accomplished at high power levels.

The 6290 features two independent high power amplifiers in one heavy gauge steel chassis. Both channels, with the exception of the mains power cord, are individually powered and protected. There are several benefits to this type of design. Should a channel failure occur in the stereo or dual mono mode, the other channel will not be affected and will continue to operate in the normal manner at full power capability. If the amplifier is being operated in the mono bridge mode, the loss of one channel will not inhibit the other channel, but allows continued operation with a 3dB power reduction.

Other design aspects of the 6290 include low intermodulation distortion (TIM). TIM is one of the more definitive methods for measuring displeasing (audible) distortion mechanisms, and is kept to a minimum by using local feedback in predriver stages. Only a small amount of negative feedback is used to establish the operating point and set the gain. Another factor that contributes to the sonic integrity of the amplifier is the use of fully complementary devices in all predriver, driver, and output stages.

Input terminations can be made to the 6290 by using any standard 1/4" TRS, XL-type connector, or barrier strip. Output terminations are accomplished with five way binding posts, and AC fuses are accessible from the rear of the unit.

6290\$1347.00

JBL PROFESSIONAL

Studio Monitors

4406 Studio Monitor

- Frequency Range: (-6dB): 45Hz-27kHz • Frequency Response (± 2 dB): 55Hz-20kHz • Sensitivity: 87dB SPL, 1W (2.83V), 1m
- Power Rating: 75W, pink noise • Transducer complement: 6.5" (165mm) LF, filled polypropylene cone; 1" (25mm) HF, pure titanium dome

The 4406 is the most compact of JBL's studio monitors and is intended for use where space is restricted. Its close driver spacing produces a coherent sound source, making it ideal as a direct-field monitor for console placement.

Optimum enclosure porting and careful network design ensure smooth response, which extends lower in frequency than is usual for an enclosure of such modest size. Response to 27kHz ensures that the upper musical octave (10kHz to 20kHz) will be reproduced with complete accuracy, making the Professional Series Studio monitors ideal for monitoring critical digital and advanced analog recordings.

4406\$189.00

4406

4408 Studio Monitor

- Frequency Range (-6dB): 40Hz-27kHz • Frequency Response (± 2 dB): 50Hz-20kHz • Sensitivity: 89dB SPL, 1W (2.83V), 1m
- Power Rating: 100W, pink noise • Transducer Complement: 8" (200mm) LF, felted cone; 1" (25mm) HF, pure titanium dome

The 4408 compact monitor is intended for use where space is restricted. Its close driver spacing produces a coherent sound source, making it ideal as a direct-field monitor for close-in broadcast applications.

4408\$237.00

4408

4410 Studio Monitor

- Frequency Range (-6dB): 35Hz-27kHz • Frequency Response (± 2 dB): 45Hz-20kHz • Sensitivity: 91dB SPL, 1W (2.83V), 1m
- Power Rating: 125W, pink noise • Transducer Complement: 10" (250mm) LF, Aquaplas laminate cone; 5" (125mm) midrange cone; 1" (25mm) HF, pure titanium dome

The 4410 studio monitor consists of a three-way vertical array of transducers. The system is provided in mirror imaged pairs in order to ensure absolute accuracy of stereophonic imaging. The 4410 is the logical choice for critical digital recording applications where wide bandwidth, linear response, and accurate imaging are essential.

4410L,R\$375.00

4410

4412 Studio Monitor

- Frequency Range (-6dB): 35Hz-27kHz • Frequency Response (± 2 dB): 45Hz-20kHz • Sensitivity: 90dB SPL, 1W (2.83V), 1m
- Power Rating: 150W, pink noise • Transducer Complement: 12" (300mm) LF, Aquaplas laminate cone; 5" (125mm) midrange felted paper cone; 1" (25mm) HF, pure titanium dome

The 4412 is a three-way monitor system designed for demanding recording and broadcast applications. It is oriented horizontally so that it can be easily integrated into control room architecture, or mounted on the console itself. It is provided in mirror-imaged pairs for accurate stereophonic imaging. The 4412 is capable of remarkably high acoustical output, attaining in many applications those levels normally associated with compression driver monitor systems.

4412L,R\$579.00

JBL PROFESSIONAL

Studio Monitors/Speakers

4425 Bi-Radial™ Studio Monitor

• Smooth, accurate response from 40Hz to 16kHz • Sensitivity: 91dB-SPL, 1W/1m • Flat power response Bi-Radial horn • 200W continuous program power capacity • High-frequency transducer: a pure titanium diaphragm compression driver with edge-wound aluminum ribbon voice coil, copper-plated pole piece, and diamond pattern diaphragm suspension • Low-frequency transducer: 12" (300mm) driver with 3" (76mm) edge-wound copper ribbon voice coil

The 4425 maintains a 100°x100° coverage pattern from its crossover frequency (1200Hz) up to 16kHz. Smooth power response is ensured from the lowest frequencies up to 1200Hz, and flat power response is maintained above that frequency. At the same time, axial response is remarkably smooth, and the combination of controlled power and axial response ensures the reflected sound field in the control room will be free of coloration.

4425 L,R \$849.00

4430/4435 Bi-Radial Studio Monitors

• Frequency Response: 4430—(± 3dB) 35Hz-16kHz; 4435—(± 3dB) 30Hz-16kHz • Power Capacity: 4430—300W; 4435—375W • Sensitivity: 4430—93dB SPL; 4435—96dB SPL

Developed to meet the challenge of digital and advanced analog recording technology, the 4430 and 4435 represent a significant approach to two-way studio monitor design. The incorporation of the Bi-Radial horn in a monitor loudspeaker provides constant vertical and horizontal polar coverage, control of the reverberant field, flat power response, image stability, and coherent sound. The two models also feature improvements in compression driver, low frequency transducer, and dividing network technology. Both systems exhibit wide bandwidth, smooth frequency response, high efficiency, wide dynamic range, and exceptional reliability.

The two models differ chiefly in their frequency capabilities. The two 15" (380mm) low frequency drivers of the 4435 provide greater bass output than is provided by the single 15" bass driver of the 4430.

4430L,R \$1347.00
4435L,R 1899.00

4312A Control Monitor

• 12" (300mm) long excursion low frequency transducer • 5" (130mm) midrange transducer • 1" (25mm) titanium dome high frequency transducer • Suitable for vertical or horizontal placement • Mirror-imaged for accurate stereo imaging

The 4312A extends the high frequency bandwidth of its predecessors through the use of the O35Ti driver. This high frequency transducer uses a 1" (25mm) pure titanium dome, which maintains flat on-axis response to 27kHz.

4312AL,R \$450.00

SLT-I Miniature Loudspeaker System

• Frequency Response: (± 3dB) 100Hz to 18kHz • Power Capacity: 50W • Sensitivity: 87dB SPL, 1W/1m • Nominal Impedance: 8 ohms • Crossover Frequency: 4kHz • 5 1/4" low frequency loudspeaker, 1" high frequency dome radiator • Diecast aluminum enclosure • Integral mounting bracket

Compact and rugged, the SLT-I mounts easily in restaurants, churches, recording studios and mobile audio video installations. It also makes an extremely high quality personal monitor for professional or home use.

- Plug-in printed circuit boards for improved serviceability

Sophisticated Editing Recorder

The KR-M860U incorporates the picture quality and features which make the M-II format the choice of broadcasters, and is the end of the M-II production chain which makes it possible to maintain a single format from the initial field recording right up to broadcasting with quality that rivals that of 1" VTRs. The versatile KR-M860U accepts both 90- and 20-minute M-II cassettes, and its full array of editing functions and built-in Time Base Corrector make it suitable for professional editing and broadcasting applications.

Broadcast-Quality Video and Audio

Through use of the M-II format with Chroma Time-Compressed Multiplexing (CTCM), the pictures recorded and played back maintain full broadcast quality over several generations. Auto-Tracking (AT) heads make stills, slow motion and forward search (up to twice normal speed) completely noiseless. The playback tape speed can be varied by approximately $\pm 7\%$ for perfect timing with other source programs. Accompanied by 2-channel FM audio embedded in the chroma track or 2-channel linear audio with switchable Dolby* C noise reduction, the total quality of programming more than rivals that of 1" VTRs.

Extended Recording Time of 90 Minutes

The higher recording density of the metal particle tape and CTCM recording in the M-II format make possible a continuous recording and playback time of 90 minutes with a single cassette. Approximately the size of VHS cassettes, the M-II cassettes are ideal for tape libraries which are required to hold many hours of broadcast-quality material.

Comprehensive Editing Functions

In addition to a full range of editing functions including automatic insert and assemble edits, preroll, retry, preview, review, and so forth, the KR-M860U incorporates a TBC with a 32H correction capability for synchronization in a multi-component editing configuration. The built-in time code generator/reader allows recording of SMPTE LTC and VITC time codes.

*Dolby noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation. Dolby and the double-D symbol are the trademarks of Dolby Laboratories Licensing Corporation.

Specifications

Recording System:	Rotary 4-head, 2-track helical scanning
Tape Speed:	67.693mm/sec
Tape:	1/2" metal particle tape
Recording Time:	90 min. (with JVC KC-MPL90)
Rewind/Fast Forward Time:	Within 3 min. (with JVC KC-MPL90)

KR-M800U M-II Editing Recorder

- **CTCM for higher picture quality**
The M-II format utilizes Chroma Time-Compressed Multiplexing (CTCM) with the Y and C components recorded on independent tracks. The high picture quality is maintained through use of high-density metal particle tape, even after several generations of duplication
- **Selectable CTCM/Component output and separated Y/C output**
Two outputs are available in the M-II format; CTCM (with Y and time-compressed color difference signals, as used by M-II equipment) and component (Y and independent color difference signals). A Y/C 358 output is also provided for compatibility with S-VHS decks
- **Selectable CTCM/Component/Composite input**
Any of three input signal formats can be selected from the front panel, for ease of operation in multi-format configurations
- **Maximum recording/playback time of 90 minutes**
Using a cassette about the size of VHS cassettes containing 1/2" high-density metal particle tape, recording/playback time has been extended to 90 minutes, a 50% increase over the 60 minutes in the 3/4" U-VCR format. A smaller 20-minute ENG cassette is also available and it can be used with the KR-M800U without an adaptor
- **Dolby* C noise reduction for audio**
Advanced Dolby C noise reduction is provided for 2-channel audio recording and playback to eliminate tape hiss and improve the audio S/N ratio
- **High-speed search at 32 times normal speed**
Any desired scene can be located quickly by searching at 32 times normal speed in either direction. The search speed can be varied continuously between still and 4 times normal speed and switched to a maximum of 32 times normal speed. Search is possible at up to 4 times normal speed while viewing color pictures, without using an external time base corrector. The Y signal follows the timing of the C signal to maintain the relative time difference between them within 20ns.
- **Jog control**
For more accurate retrieval of edit points, a jog control is provided on the front panel, making possible fast access to any required edit point.
- **Comprehensive editing functions**
The KR-M800U has a full range of editing functions for both assemble and insert edits, including Preroll, Auto Edit, Edit In/Out, Trim, Go To and Preview/Review. Whether it is used as a stand alone unit or with an optional editing controller (RM-86U), it ensures excellent operability and professional results
- **Professional-quality edits**
To produce edits that are clean and accurate, the KR-M800U has a frame synchronization capability with capstan speed override and vertical interval switching
- **Capstan servo control**
This servo control has the high-speed response needed to maintain precise tape travel, even during sudden changes in speed
- **Separate audio and video/tracking meters**
The KR-M800U has three illuminated meters for audio channels 1 and 2, and indicating the video carrier level in playback to aid in tracking adjustment, as well as the level of the input video signal in the stop and record modes
- **Adjustable operation panel**
The operation panel can be tilted 90°, in seven increments of 15° each, for optimum utility
- **Digital tape counter/lap timer**
The KR-M800U's fluorescent display shows either the current tape position, the edit-in/out points, or elapsed recording time, in hours, minutes, seconds and frames. This readout is updated from the CTL pulse
- **Front loading mechanism**
To facilitate rackmounting, the KR-M800U has a front loading mechanism; when mounted in a standard 19" rack, it occupies 6 units

KR-M800U

MII

Other Standard Features

- RF output for external DOC
- Hour meter
- Switching regulator
- Balanced XLR audio connectors
- Direct-drive motors
- Digital drum servo
- Tape tension control
- Large, illuminated pushbuttons
- SMPTE time code input/output connectors
- External sync/subcarrier input, reference sync output
- Y/C 358 output connector
- 12-pin Component/CTCM input connector
- 12-pin Component/CTCM output connector
- 45-pin parallel remote control connector
- Front panel connectors for two microphones and a set of headphones (with level control)
- 8-pin monitor connector
- XLR audio monitor output
- 17⁹/₁₆" x 11³/₁₆" x 23¹⁵/₁₆"
- 89 lbs.

Higher picture quality. Longer recording time. Superior systems flexibility. Greater space saving. These features and more make M-II the cost-effective choice of leading broadcasters.

M-II is a video format developed to meet the requirements of the professional video community. Exactly suited for the current state of development in video technology, it uses the CTCM component video recording method, and high-density metal particle tape in a cassette approximately the size of a VHS tape while maintaining broadcast quality.

The KR-M800U is a full-function editing recorder which is designed to serve as the hub of a multi-format editing system. It is designed for easy integration with 3/4" U-VCR and S-VHS as well as M-II equipment and component digital effects units.

The KR-M800U has features that will appeal to video producers and editing staff in TV stations, production houses and anywhere else where professional-quality video communications are required.

Accessories

KR-M460U M-II Portable Recorder

- Backspace editing for high-precision assemble edits
- Off-tape monitoring during recording
- Audio dubbing on linear audio channel 1 or 2
- Backup battery for time code generator/reader
- 8-digit LCD display indicating time codes, control track data and battery condition
- Color playback circuitry with simplified dropout compensator
- LED and audible warnings for servo, condensation, slack tape, tape end, low battery and clogged heads
- High-speed search at up to 5 times normal speed in either direction
- 9-pin serial remote control connector
- Error prevention mechanism which makes control buttons inoperative during recording
- 49dB S/N, video
- Power supply flexibility with external DC input
- 4³/₄" H x 11¹/₈" W x 13³/₁₆" D
- 17.2 lbs.

Compact, Yet Offording 90 Minutes of Recording

Compact size, light weight and low power consumption have been achieved with no compromise in rugged construction. Both standard M-II (90-minute) and compact ENG/EFP (20-minute) tapes can be used without an adaptor.

Systems Flexibility

For wider applications, the SMPTE 26-pin camera connector will accept both component and composite signals. The built-in time code generator/reader allows recording of SMPTE LTC and VITC time codes. Sync In and SC In connectors are provided for the connection of a TBC. Or with a TBC with CTCM input, stable pictures can be transmitted via a microwave link from the site where the news is being gathered.

KR-M460U

MII

The KR-M460U is a portable M-II VCR capable of recording for 90 minutes using an M-II cassette roughly the size of a VHS cassette. With a size and weight comparable to a portable 3/4" U-format VCR yet packed with all the features, performance, and operability that professionals need, newsgathering and field production will have added mobility and versatility while picture quality is improved. And with the M-II format, the KR-M460U's signals will maintain their high quality for several generations; throughout initial recording, editing, and broadcasting.

KR-M460U \$13,500.00

Accessory

SA-M30U Soft Case for KR-M460U \$300.00

KR-M260U M-II Recorder For Camcorder

- Backspace editing for high-precision assemble edits
- Off-tape monitoring during recording (luminance signal only)
- Time code generator/reader for both LTC and VITC time codes
- External time code generator terminal provided
- Backup battery for time code generator/reader
- 8-digit LCD display indicating time codes, control track data and battery condition
- Monochrome playback circuitry included for viewfinder monitoring of playback pictures
- Speaker built-in for audio monitoring and audible warning
- LED and audible warnings for servo, condensation, slack tape, tape end, low battery and clogged heads
- Five tape control buttons
- Operation inhibit switch
- Designed to be directly coupled to any component docking camera
- 49dB S/N, video
- 430 lines resolution
- Power supply flexibility with external DC input
- 4⁹/₁₆" H x 7¹/₂" W x 7⁷/₈" D
- 7.8 lbs.

Compact and Rugged Construction

The KR-M260U is designed for demanding ENG/EFP applications in a camcorder configuration. Using a rugged diecast aluminum chassis, its high-precision mechanism with direct-drive motors is reliable wherever it is used. The cassettes used are specially designed for field applications, allowing continuous recording of 20 minutes. These compact cassettes can be loaded on any full-size M-II VCR without an adaptor.

KR-M260U

MII

The KR-M260U has been developed as a compact and lightweight component input portable M-II VCR with design emphasis on the functions and operability required by a VCR used in a camcorder combination. By combining the KR-M260U with a suitable camera unit, together they can be used as a camcorder featuring excellent mobility and high picture quality with 20 minutes of recording using a compact ENG/EFP M-II tape, which in turn enables maintenance of the same format from recording, through editing, to broadcasting. All this makes the KR-M260U ideal for newsgathering and other on-location applications.

KY-950BU

Cameras shown with optional viewfinder and lenses

KY-320BU/KY-950BU
Three-PbO Tube Color Production Cameras
Common Features

- High horizontal resolution and S/N ratio
- Separate horizontal and vertical pin and trapezoidal distortion correction circuits improve registration accuracy
- SSG circuit conforms to RS-170A
- Color matrix circuit for further improved color reproduction
- Low power consumption

Common Specifications

Optical System:	f/1.4 3-tube R/G/B prism system (with quartz filter)
Focusing/Deflection System:	Electromagnetic focusing, electromagnetic deflection
Encoder:	NTSC (IQ encoder)
Synchronizing System	
Internal:	Built-in SSG (conforming to RS-170A)
External:	VBS or BB
Lens Mount:	Bayonet
Sensitivity (Typical):	f/4.5 at 2000 lux, 89.9% reflectance
Min. Illumination (Typical):	f/1.7, 38 lux (3.6fc) [+ 18dB On, 89.9% reflectance]
S/N (Typical):	59dB (contour correction Off, gamma 1, bandwidth 4.2MHz, matrix Off, I/Q Off)
Contour Correction	
Horizontal:	Dual-edged
Vertical:	2H, with comb filter
Color Bar Generator:	Split bar (100% white)/full field (75% white) switchable
Optical Filters:	Closed, 3200°K, 5600°K, 5600°K + 25% ND
Gain Boost:	0dB, +9dB, +18dB
Variable Blanking:	10.6μs/10.8μs/10.9μs switchable 18H/19H/20H switchable
Input Signals	
Return Video Signal (VBS):	1.0V p-p, 75 ohm
Genlock Signal:	VBS (1.0V p-p, 75 ohm) or BB (0.43V p-p, 75 ohm)
Microphone Signal:	-52dBm, 600 ohm, balanced
Output Signals	
Composite Video Signal (VBS):	1.0V p-p, x2 (BNC/14-pin connector)
Test Signals (VS or VBS):	R, G, B, -G, ENC
Audio Signal:	-52dBm, 600 ohm balanced/-20dB unbalanced or balanced (switchable)
Audio Monitor Signal:	8 ohm, -20dB
VCR Control Signal:	Contact or 4V supply (switchable)

Power Supply: + 12VDC (10.5 to 17V)
Ambient Temp.: -4° to + 122°F (-20° to + 50°C)
Dimensions: 10³/₄" H x 4⁹/₁₆" W x 11¹³/₁₆" D (271.5 x 115 x 299mm)

Standard Accessories: Tripod base, chest rest, mike holder, registration pattern, shoulder strap, extension board, board extractor, dust cover, bias lamp, 2 fuses (3.15A)

KY-320BU

- 2/3" S-M Plumbicon* tubes achieves high stability
- VF-550U, RS-500U, RS-T900U and KA-3U(A) etc. for ENG/EFP, mobile production van and studio applications

KAHN COMMUNICATIONS, INC.

*Frequency Extender/Processors/
Stereo Exciter*

STR-84

STR-84 AM Stereo Exciter

The STR-84 Exciter is based upon a recently patented invention which significantly reduces distortion, especially for heavily separated stereo material. The Exciter also provides extended stereo separation, from 50Hz to approximately 7,000Hz typically providing over 35dB over much of this range. This separation is, unlike phase separation systems, available not only in transmitter monitors, but is available in high quality receivers even beyond the normal mono coverage.

The unit also allows for sum and difference stereo processing and provides transformerless audio circuitry. The sum stereo processing can, if desired, use clipping which can then be maintained through this equipment without tilt.

The spectrum characteristics of the STR-84 Exciter allow broadcasters to fully modulate without fear of causing interference. Thus, there is no sacrifice of mono coverage. Indeed, major all-talk stations have reported mono enhancement. Also, there is no platform motion or noise increase in weak signal locations, and the system can be used with any normal transmitter and with even problem directional antennas.

STR-84 \$14,900.00

APS-01 Power-Side™ Frequency Extender

- Easier tuning, fatter dial, higher fidelity with "Boom-Boxes" and tunable home radios
- "Sideband tuning" allows listeners to tune out both adjacent and co-channel interference
- Dramatic reduction in distortion from directional antennas with all radios including digital car radios
- Reduces power line and building re-radiation distortion and loss of modulation with all radios including digital car radios
- Reduces the depth and severity of selective fading with all radios including digital car radios
- Makes your station a good spectrum neighbor
- Increases coverage for both mono and Kahn/Hazeltine type stereo receivers. Stations gain increased listenership while supporting the AM stereo system that "isn't afraid of the dark"

LPGP-1

Power-side is a patented method for increasing the coverage of AM broadcast stations. One of the two sidebands of the AM signal is enhanced in power and freed of pre-emphasis so as to allow listeners to "sideband tune." The other sideband provided additional pre-emphasis so that resulting signal is fully compatible with center tuned digital radios.

Besides reducing of co- and adjacent channel interference, Power-side improves intelligibility and the quality of signals with continuously tunable radios. Power-side also reduces fading antenna null distortion and re-radiation distortion with all radios including digital car radios.

APS-01 \$15,775.00

LPGP-1 Lines-Plus™ Frequency Extender

- "Gap-Proof" circuit
- Zero frequency translation error
- Portable transmitter fits into many attache cases

The LPGP-1 is a frequency extender system designed to provide gap-proof frequency response over two dial telephone lines. The LPGP-1 prevents the audio frequency gap common to some frequency extenders through the use of pilot tones and PLL circuits. The LPGP-1 also prevents line disconnects from extraneous 2,600Hz noise components by switching a filter in the circuit as needed. With the extender, a full 50Hz to 5,000Hz frequency response is possible over two dial telephone lines.

LPGP-1-T Transmitter \$5,260.00
LPGP-1-R Receiver 6,700.00

GNL-86 "Good 'n Loud" Audio Processor

The GNL-86 is a combination of the Non-Symmetra-Mod with a modern version of the Symmetra-Peak and a "brick wall clipper" for negative going modulation. The GNL-86 comes in both mono and stereo models giving you a loud signal with quality sound. It is compatible with multiband processors as manufactured by Dorrough and Orban.

GNL-86 \$2,660.00
GNL-86 (stereo version) 2,960.00

Kangaroo Video Pack™ Recorder Packs

The Kangaroo Video Pack provides efficient organization and convenient access for all the gear you need to carry. Designed by a news photographer to meet the rugged demands of ENG field use, the original Kangaroo Video Pack was the first recorder bag to provide straps and pockets to hold tapes, batteries, cables, microphones—everything you need to get the job done. Even white-balancing is easy with built-in white balance panels.

Compact enough for one-man operation, versatile enough for two-man crews, with the Kangaroo Video Pack you can pick up and go, knowing that you have everything you need for a simple interview or an all-day SWAT operation.

Semi-Tough

Kangaroo Semi-Tough™ Camera Cases

The original side-loading camera case, the Kangaroo Semi-Tough is ideal for airline travel, or those limited space situations where having your camera with you is a must. The Semi-Tough has a rigid frame of tough aircraft aluminum completely surrounding the camera, while a convenient detachable pocket holds batteries, tapes, and cables. The Semi-Tough comes complete with hand strap and heavy-duty padded shoulder strap for over-the-shoulder carrying.

Kangaroo Nagra Pack

The Kangaroo Nagra Pack, designed for Nagra recorders with 5" or 7" tops, provides the same basic convenience and protection that has gone into all of our video packs. The Nagra Pack has detachable pockets to hold tapes, batteries, wireless microphone and cables, while the front pocket holds four 7-inch tapes or eight 5-inch tapes. A convenient back flap provides quick access to batteries, while the clear rain flap allows use of controls while still providing protection from inclement weather. There's even a front sleeve to hold a clapboard.

The Kangaroo Nagra Pack gives Nagra users the secure, lightweight convenience needed for field recording.

Kangaroo Gripper™ Strap

The Kangaroo Gripper Strap is a heavy-duty shoulder strap that won't slide off nylon parkas, ski jackets, or other slippery material. Padded with our durable Evazote closed-cell foam, the Gripper Strap's three-way action gives you important shock-absorbing capability to carry even the heaviest equipment more safely and comfortably than ordinary shoulder straps.

The Gripper Strap comes with two sliders for easy attachment and adjustable length. It's available in brown, blue, green, rust and gray. It fits all Kangaroo Video Products carrying cases, and many other bags and cases.

KAC-Gripper \$30.00

Rotary Phase Converter for AM/FM Radio and Television Broadcast Transmitters

The Phasemaster® T-Series Rotary Phase Converter is specially engineered and manufactured for use with all types of radio and television transmitters. It converts single-phase power to 3-phase in locations not economically served by 3-phase lines.

Phasemaster® is particularly valuable in situations where the high cost of installing utility-supplied 3-phase power is prohibitive. A Phasemaster® T-Series Rotary Phase Converter can be installed for a fraction of the cost of obtaining 3-phase utility lines.

Utilities often use open delta systems to reduce distribution costs. However, the absence of a third transformer allows the line voltage to fluctuate excessively across the open leg. This condition is unacceptable for broadcast use. When used with open delta systems, the Phasemaster® closes the delta, eliminates undesirable fluctuations and regulates all three lines.

Phasemaster® is low in initial cost, high in performance and has a proven service record of more than 15 years in commercial broadcast installations worldwide. Phasemaster® has been sized and tested for compatibility with most makes and ratings of commercial transmitters.

Performance

The Phasemaster® T-Series Rotary Phase Converter incorporates many superior performance benefits:

- Voltage produced through Phasemaster® is regulated within a range of 2-5% of the single-phase primary electrical supply.
- Output wave forms and phasing are nearly identical to utility-supplied 3-phase.
- The converter has the ability to buffer line transients and voltage spikes.
- Integral lightning protection adds to operating reliability.
- Systems are available to accommodate dual power output ratings, for example in daytime and nighttime transmission. Also available with automatically controlled high-low-power switching.
- The converter is designed to operate indefinitely on a continuous 24-hour-a-day basis, with or without a load, without injury to the converter.
- Units can be remotely controlled.
- Operating cost savings are realized by taking advantage of lower kilowatt-hour rate structures.

Construction

Phasemaster® is built with high-quality materials and components to meticulous manufacturing standards. An extra-large wiring panel is provided for accessibility and ease of making connections. Phasemaster® has no relays, switches, governors or other service-prone components.

Applications

Phasemaster® T-Series Rotary Phase Converters are for use in any application where control of voltage is critical. They are available in a range of sizes for AM/FM and TV transmitters, rated from 1 to 50kW. A list of stations where Phasemaster® has been installed is available.

Phasemaster® is manufactured under U.S. Patents 3349316, 3387202, 3609430, 4410807, Canadian Patent 786933 and Patents Pending.

T-Series Phasemaster®
Rotary Phase Converter

Model	Voltage*	Shipping Weight	Price

* Available in 460V no additional charge.

To select the proper T-Series Phasemaster®, the following information is required:

Type of broadcasting: AM, FM, or television.
 Manufacturer, model number and kW rating of transmitter.
 AM transmitters: power consumption at average modulation and 100% modulation, in kW, KVA or amps.
 FM transmitters: power consumption at 110% current draw.
 Operating voltage.
 Elevation of transmitter installation.
 Any variations in power consumption due to broadcasting at different power levels; for example, daytime vs. night.
 Incoming service single-phase or open delta.

KINOTONE, INC.

16mm Projector

FP-18 TV PROJECTOR

For use in TV, film to tape transfers, and special studio systems.

- Rack Mounting with adjustable Pedestal, 24V Control System, Control Panel, built-on Proximity Sensor (Auto Stop)
- Film Run Mechanism Forward/Reverse
- Crown Groove Intermittent 5 Blade Shutter
- Picture Dowser/Change Over, Still/Step Frame
- Curved Gate
- SMPTE Specs for Jump and Weave
- 5000 foot Film Capability, Remote Control for all Functions
- 24 Frames per second
- Audio: Preamplifier/Line Amplifier Module built-in with +8dBm Output Level into 600 ohm Load B+ Power Supply
- Light Source: Halogen Light Source, 2 Lamp Turret System with Automated Change 250W, 24V
- Drive Motor: 110-250V, 60Hz Synchronous
- Reel Drives: Friction Drive, 5000' capacity
- Optical Playback: Sound Drum Damping Assembly, Sound Drum Accelerator, Solar Cell, Exciter Lamp, Exciter Lamp Power Supply

Precision Projection

The projector's extremely high picture stability, less than .19% jump and weave, is achieved by the unique Philips grooved disk mechanism, curved gate, and ceramic film edge guides. The intermittent mechanism was developed especially for 16mm film systems using a 12 tooth sprocket for film control and protection. This combined with the rotating 5 blade disk shaped shutter, dual halogen lamp with automatic lamp change, provides a highly efficient projection system compatible with 25 or 30 frame TV systems.

Optimal Sound Quality

The sound reproducing system follows the pattern of professional standards used in 35 or 70mm reproducers. A rotating sound drum machined to high standards, fitted with a split damping drum and flywheel accelerator provides for a fast stabilization time and provides for less than .2% wow and flutter. The scanning optics can be adjusted (by lever) to compensate for standard or non-standard recordings. A manual switch will shift the system from optical to magnetic if so equipped.

Audio

The preamplifier module is located within the cabinet. It provides for pre-amplification of selected signals with plug-in equalization boards for optical or magnetic signals. The output provides for a +8dBm signal into a 600 ohm load. Each input is individually controlled for balance, with an overall master and a bass/treble boost circuit.

KINOTONE, INC.

35mm Projector

FP-30 TV

FP-30 TV PROJECTOR

The FP-30 TV Projector utilizes the basic film transport and system as found in the professional 35mm systems widely used for exhibition, and studio applications. The high speed intermittent movement with 5 blade shutter renders the system compatible with 25 or 30 Frame operation. The system meets all SMPTE specifications.

- Equipped with Column and adjustable Pedestal
- 35mm Film Transport
- Fast Pull Down Intermittent 5 Blade Shutter
- Step Frame
- Proximity Sensor (Auto Stop)
- Sound Reproducer, Optical with Solar Cell Pick-up and Exciter Lamp
- DC Exciter Lamp Power Supply
- Sound Drum Accelerator
- Picture Change-Over Relay, Dowser Control
- Electrical Control System 24V DC
- SMPTE Spec on Jump and Weave
- Spool Shafts and Frictions: 6000' capacity
- Drive Motor: Synchronous 115V, 60Hz, 24 p/s
- Lens Support: Vernier Focus, Lensholder, Set of Aperture Plates
- Light Source: Halogen Lamphouse 250W, 36V, 2 Lamp System, Automatic Lamp Change

Precision Projection

The FP-30 TV Projector utilizes a single piece, curved gate of self-lubricating delrin material. The gate, with delrin runner strips and ceramic guides, provides a film path exactly controlled with minimal pressure, providing high picture stability with minimal stress on the film.

Optimal Sound Quality

The optical reproducer follows all of the state-of-the-art designs, resulting in low wow and flutter. The rotating sound drum and the flywheel accelerator provides fast sound stabilization. The high quality slit lens and scanning system provides for high quality sound reproduction.

Audio

The FP-30 TV System is normally provided without Pre Amplification. The solar cell output being easily coupled to Station audio systems. Where a 0 level signal is required, an audio system can be provided as an accessory.

Character Generator/Title

K40 Microfont™ Character Generator

- Self-contained single 58-key keyboard unit with small external power unit
- 16-page internal memory, expandable to 64 pages
- 2 complete upper and lower case fonts: 20 and 32 line Helvetica
- 256 characters
- Complete foreign language set in large size
- Double size font expander key
- NTSC or PAL operation (specify)
- Internal sync generator
- Separate black and white preview output with status line
- Striping on each display line, plus one at top of page
- 32-color palette
- Roll, crawl and title modes
- Italics by line
- Computer interface
- Non-volatile memory

The K40 Microfont offers an array of features in a low cost color character generator: finely resolved fonts, wide choice of colors, broad capture genlocking and mixing, full range rolls and crawls, and automated display sequences.

Easy to use, the K40 is ready to title from the moment you turn it on. Its entire instruction set is printed on the keyboard.

Each line may be individually colored in background and striping, and character colors may be completely intermixed on every line.

The Microfont is housed in a single 58-key unit complete with an internal sync generator. A standard NTSC video input is also provided for synchronizing the K40 to an external video source. An internal mixer adds the K40's output to the incoming video signal, a separate preview output carries the character generator output together with an additional line of characters showing the current system status.

All control functions are generated by the keyboard; an optional parallel interface is provided for operation by computer or remote keyboard.

- K40** \$2495.00
- 64-page memory upgrade 275.00

Character Generators

K200 Chromafont II™ Color Character Generator

- Eight included fonts, each in two sizes
- 128 color groups organized into eight palettes
- 512 color selection
- 10-speed roll and crawl modes
- Underlining and pinstriping
- Italics, superscript, and subscript
- 8000 character memory

The Chromafont II offers the small studio another step forward in quality production capability. Fully resolved, proportionally spaced fonts and rich variation in color and style of display make this character generator a standout in its price range.

Combining very low power digital technology with pipeline architecture, the Chromafont II puts a fine finish on your productions without the usual price-to-performance tradeoff. It genlocks to almost any signal, keys automatically, and can fade to title, fade to picture, and fade to black.

Incredibly easy to use for a machine with such a variety of fonts, colors, and positioning abilities, the Chromafont II has all the important operational essentials printed on the cover of its keyboard. A complete technical manual is included for those wishing to explore the finer points of display making.

The Chromafont II is equally at home as a stand alone unit, downstream in a simple editing suite, or upstream through a sophisticated production switcher. A unique execute mode allows a long sequence of display operations to be programmed ahead of time and then executed hands-off after a single keystroke.

K100 Option C

- K200 \$4550.00
- K200 Complete system with disk upgrade, 500 page storage . . . 6090.00
- K200 Disk upgrade, 500 pages. 1540.00

K100 Chromafont Option B Color Character Generator

- Four fonts: two upper and lower case, two upper case only — all in two sizes (eight 32-character font blocks)
- Full range color control (512 color palette) of background and character, organized as 16 selectable combinations. Color palette includes transparency
- Second 512 color palette for fade/cut/dissolve effects
- Character-by-character color control
- Individual character background color control
- Character-by-character underlining and pinstriping
- Horizontally and vertically adjustable shadow edging
- Flexible non-volatile 8000-character memory. Can be organized as up to 256 lines or up to 64 pages
- Multi-speed roll and crawl
- Fade Control: allows fade to and from black, dissolves from color to color
- Italics: two forward and two backward slants
- Variable line height
- Superscript and subscript
- Serial interface for computer control or extra keyboards
- NTSC or PAL-B compatibility
- Portable, detachable keyboard

Screen Display Composed on a Chromafont Option B, Including One Extra Font

The full color character generator of choice when the budget is limited, the K100 Chromafont represents a unique approach to character generator design.

Advanced high speed pipeline architecture puts sophisticated display capability in your hands at minimal expense.

Compact and versatile, the K100 is equally at home in the EJ van or in the studio. Its superior display adds elegance to routine titling such as schedule changes or weather alerts.

The K100 also offers the small studio or production house a true alternative to costly and inconvenient outside titling services.

- K100 \$3990.00

Chromafont Option C Upgrade

Option C adds to the capabilities of the K100 Chromafont:

- Four new type fonts: one upper and lower case and numerals, two upper case and numerals, one upper case only — all in two sizes
- Unlimited floppy disk storage: frees K100 internal memory space
- Automated timed display sequences
- Pre-cued displays with built-in pauses

- Option C Upgrade \$5880.00
- Upgrade Only 1890.00

ESP-750 U-matic Superior Performance (SP) Series

When used in conjunction with a U-matic SP video cassette recorder, the ESP-750 video cassettes offer superior signal-to-noise ratios in chrominance and luminance, significantly reduced levels of dropouts, and outstanding sound reproduction. A third generation copy of Eastman ESP-750 video tape recorded and played with the U-matic SP VCR is comparable to the resolution and image quality of a first generation original made with a conventional U-matic VCR and tape. The ESP-750 video cassettes are also compatible with existing U-matic video recorders.

ESP-750 U-Matic	.POR

LAIRD TELEMEDIA, INC.**Character Generator****1500 Character Generator****SYSTEM FEATURES:****Resident Memory**

- Internal text memory and font memory are size interactive • Variable page length

Fonts

- 35ns resolution • Multiple resident font capability • 96 characters per font • Multifont library (70 fonts included) • Proportional spacing • Character cell adjustment • 12-56 scan-line character sizes

Display Editor

- Instant italics (forward or backward with choice of multiple angles)
- Auto centering (line and page) • Underline • Insert and delete character • Insert and delete row • Seven edge modes: no edge, outline, full border, and 4 quadrants of drop shadow • 8 edge intensity levels

Color

- 65,536 colors resident, 946 displayable per page

Dual 3 1/2 Disk Memory

- Loadable operating system software • System initialization user defined by auto-sequence • Page, font, and auto-sequence loadable from disk

Operates on NTSC composite format with optional 1032 Color Encoder, or NTSC Y/C format with optional 1032 Y/C Encoder

The 1500 is a high quality television broadcast character generator system with some graphics capability. It is capable of displaying multiple font styles and sizes in a single message. Custom logos and symbols can be included in the font styles. Each character style and size is created from an entirely different high-resolution font file. None of the fonts is stretched, squashed, or otherwise distorted to achieve multiple effects, which assures consistent quality and legibility in each display.

The 1500 is essentially a two channel system. One channel is the Preview/Status Channel and the other is the Program Channel. All message information is entered into the Preview/Status Channel and then transferred to the Program Channel, allowing editing while on-air.

The 3 1/2" dual disk drive system and the logic system are both in one chassis. The single chassis unit can be used as rackmount or an attractive desktop unit.

1500	Character generator—includes 1500 chassis with two 3 1/2" disk drives, keyboard and 70 standard fonts. Requires color encoder.	\$ 7,695.00
1500-PROM	Character generator—includes 1500 and 6 standard fonts. 1530 option required for camera entry and font compose options. Requires color encoder.	4,500.00
1500-EX	Character generator—includes 1500 chassis, 1511 expanded keyboard and 70 standard fonts. Requires color encoder	8,495.00
1500-TURBO	Character generator—includes 1500 chassis with 3 1/2" disk drive, 1511 expanded keyboard, 1534 hard disk and 70 standard fonts. Requires color encoder	9,900.00
1500-LX	Character generator—includes main chassis with 3 1/2" disk drive, 1511 keyboard, 1524 data tablet, 1526 camera entry, 1528 font compose, 1534 hard disk, 1540 expanded graphics and 70 standard fonts. Requires color encoder.	16,500.00
Options		
1401	Optional font set for 1500-PROM.	\$395.00
1402	Optional international font set for 1500-PROM.	395.00
1403	6 font set, custom, select any 6 from library for 1500-PROM	650.00
1422	Computer interface kit for 1450 and 1500 series.	200.00
1505	Memory upgrade, expand from 262 to 512K for older 1500 CGs.	160.00

1510	Keyboard for second location. For remote use—requires 1516 power supply.	\$ 349.00
1511	Direct access keyboard—an expanded keyboard making the most of the commonly used menus, functions, and the entire character set, directly accessible with a single keystroke. Increases user operating speed. For remote use—requires 1516 power supply	995.00
1516	Power supply required for a remote/second keyboard or a 1524 Data Tablet, rackmountable, with 15' cable	695.00
	Longer cable for 1516—add per foot.	1.00
1520	Rackmount kit—for 1500 and 1500-EX	112.00
1520-PROM	Rackmount with slide for 1500-PROM	112.00
1524	Data tablet with 1516 option, requires 1528, for 1500 and 1500-EX	1,495.00
1525	Data tablet—logos, drawings and fonts can be traced into the 1500 with an electronic stylus. Speeds the editing process when used in conjunction with font compose. Requires 1528 font compose for operation for 1500 and 1500-EX	995.00
1526	Camera Entry—Requires separate B & W video camera, copy stand and 1528 font compose for operation	1,995.00
1528	Font Compose—Requires 1524 for 1500 and 1500-EX	495.00
1530	1500-PROM upgrade. Two 3 1/2" disk drives, 70 disk loadable fonts. Required for camera entry and font compose options	3,695.00
1534	Hard disk memory-20M byte	1,495.00
1540	Expanded graphics option for 1500, must have 1524, should have 1526, 1528 and 1534.	3,995.00
ITC-510	Ikegami B/W camera, for 1526 camera entry.	995.00
330-02	Bencher Copymate, copy stand for ITC-510	400.00
1550	Font base, development aid for 1528 font developer, specify type style.	70.00
1032	Color encoder, RGB to NTSC, required for 1500-PROM, 1500 and 1500-EX, (rackmount)	1,325.00
1032-Y/C	Same as above with full Y/C compatibility	1,895.00
BC-200	Tripp Lite uninterruptible power supply, 200W for 1450	400.00
BC-325	Tripp Lite uninterruptible power supply, 325W for 1500, 1500-EX, 1500 PROM	500.00
	Additional fonts for 1450 and 1500-PROM, choose six only, requires factory installation, six additional fonts are maximum.	675.00

LAIRD TELEMEDIA, INC.

Character Generators

1450 Color Character Generator

• 35ns resolution • Capable of producing 65,000 different colors • Six resident fonts • 100 pages of memory and a keyboard • Built-in color encoder • Features enhancements such as italics, edging, outline, four quadrants of drop shadow, and eight intensity levels • Vertical and horizontal flip • Inverted video • Flash and underline • Capable of roll up or down at any of nine speeds • Crawl left or right at any of six speeds • Can be used either downstream or as a stand-alone system • Encoder modulates RGB signals into composite NTSC • Rack-mountable

The standard configuration of the 1450 includes six resident fonts, 100 pages of memory, and a keyboard. Built-in is a color encoder with the same high quality and specifications as the 1032 Color Encoder.

The 1450 features: Italics (at one of seven angles from 12° to 56°), Edging (with full edge, Outline, four quadrants of Drop Shadow, and eight intensity levels), vertical and horizontal flip, inverted video, flash and underline. The 1450 also has the ability to roll up or down at any of nine speeds and crawl left or right at any of six speeds.

The 1450 can be used "upstream", "downstream", or as a "stand-alone" system. The video signal can be "phased" or timed, both vertically or horizontally, with the primary video source.

An optional 1422 Computer Interface Kit allows the 1450 to communicate with IBM® compatible computers. This feature permits unlimited, permanent storage of text on the computer's floppy disc.

1450

- 1450** Includes six fonts and encoder, should have optional BC-200 Power Supply \$3995.00
- BC-200** Tripp Lite uninterruptable power supply, 200W 400.00
- 1401** Optional font set 395.00
- 1402** Optional international font set 395.00
- 1403** 6 font set, custom, select any 6 from library . . . 650.00
- 1420** Rackmount, with slide 112.00
- 1422** Computer Interface Kit 200.00

CG-7000/ES and CG-7000Y/C Color Character Generators

• Vertical scroll in four speeds • Full editing capability • Simplified line and page centering • Optional remote control gives random access to first 15 pages or manual sequencing through all pages • Flashing effect available on any character, word, line or page • Drop shadow, lower right, with 0–100 IRE level control shadow • Characters can be filled in or colored by any external video signal. Allows multicolored or special texturing effects • Key output permits interface to any SEG • Text will only appear within SMPTE safe title area • Special highlight window can surround any line; can be colored • Main unit will auto start and run without keyboard. Permits text to be programmed in advance and run later at trade shows, meetings, point-of-purchase displays, etc. • Internal battery protects memory up to three years • Automatic bypass of video during power loss • Will automatically switch to internal sync if genlock source is lost • Crystal controlled sync generator • 80 pages or 12,160 characters of memory space • Proportional spacing • Character special effects • Optional rackmount with slide for main unit • Optional fonts • Auto page sequence in four speeds • Auto sequence of all lines on all pages at any screen position in four speeds, replaces horizontal crawl • Automatic line centering • Insert and delete a line • Automatic page centering • Copy a line • Copy a page • Move a page • Program pages to display in any desired order prior to scrolling, auto paging or auto lining • Pause or freeze text in place when scrolling, auto paging or auto lining • Go to page number command

The CG-7000Y/C is the same as the CG-7000/ES except that it is fully Y/C compatible. The CG-7000Y/C has a Y-3.58 dual input, built-in Y/C channel keyers, and Y-3.58 dual outputs.

CG-7000/ES

The CG-7000 series is simple and user-friendly. Unlike most other models, the CG-7000 series is made for video people, not computer operators. Many complex operations have been made easy by removing them from the keyboard, and are performed with simple, ordinary controls and switches on the front panel of the main unit.

- CG-7000/ES** \$2195.00
- CG-7000Y/C** 2995.00

Accessories

- RM-5** Rackmount for CG-7000 \$ 80.00
- RC-30** Remote Control, for CG-7000 120.00
- FM-15—Series** Font Module, additional font styles for CG-7000 100.00
- FM-16—Series** Font Module, deluxe font styles for CG-7000 150.00
- MM-1400** Memory Module, for CG-7000 120.00

LAIRD TELEMEDIA, INC.

Multiplexers/Uniplexers

5300 Optical Multiplexer

The 5300 Optical Multiplexer provides as many as three separate film images projected for televising by a single camera. First-surface mirrors and precision optics ensure excellent results in color TV applications. An integral field lens provides an intermediate image plane upon which both camera and projector lenses are focused. The field lens mounting is designed to permit insertion of a special screen for alignment purposes. The mirrors are shifted by individual electric gear motors through a unique torsion-bar/pitman coupling and produce an "instant" vertical wipe image transfer. The optical transfer assembly is supported for a 48" optical center by a bench pedestal.

- * **5300** For three input sources (small image). Includes optical transfer assembly with field lens and cover, bench pedestal and local control **\$2095.00**
- * **5330** For three input sources (large image). Includes optical transfer assembly and cover, bench pedestal and local control . . . **\$3680.00**
- 5040** Large image field lens and mounting assembly for 5330 Multiplexer. (Required for camera without integral field lens.) . . **\$1105.00**

Shelves and Stands

(For 5300, 5330 Multiplexers)

- 5104** Stand for cameras or projectors with optical center height between 8 1/4" and 12 1/4". Includes mounting adaptor. (Specify camera or projector model when ordering) **\$425.00**
- 5107** Shelf for camera or projector. Includes mounting adaptor. (Specify camera or projector model when ordering) **\$310.00**

**5300 Optical Multiplexer**

5108 Stand for camera or projector with height of less than 8 1/4" from mounting base to center of optics. Includes mounting adaptor. (Specify camera or projector model when ordering) **\$425.00**

* Does not include camera or projector mounting shelves or stands.

5100 Series Optical Diplexer/Uniplexer

The 5100 provides two separate film images that may be selectively projected for televising by a single camera. The 2-input projector complement may include either 16mm or Super 8 motion picture film in combination with 35mm 2" x 2" slides.

- 5116** Assembly with first surface mirror and field lens. Includes shelves and adaptors for camera and film projector. (Specify camera and projector when ordering). **\$1200.00**
- 5116 + 35** Diplexer Assembly—for two input sources. Includes first surface mirror, field lens, bench assembly and shelves (desktop mount) for 35mm slide projector and 16mm film projector. (Specify camera or projector, dedicated or dolly-up) **\$1790.00**
- 5135** Uniplexer Assembly same as above for one 35mm slide projector. **\$1075.00**

Lens Accessories

- 5015** Lens Extender—for "C" mount lens: 3/16" for 2/3" format camera. 3/8" for 1" format camera **\$ 21.00**
- 5017** 50mm f/1.4 Lens—for "C" mount camera, includes lens extender: 3/16" for 2/3" format camera. **240.00**
3/8" for 1" format camera. **240.00**
- 5019** 55mm lens with Bayonet mount for prism optic 2/3" tube cameras **1515.00**
- 5023** Variable Focusing Kit—for use on 4320 projectors, with 7" lens, when full projected slide image is preferred, from all slide formats. (Normal projected image is overscanned to SMPTE standards). **395.00**
- 5035** 35mm Lens with Bayonet mount for WV-555 1/2" tube camera **890.00**

**5100 Series Optical Diplexer/Uniplexer****Multiplexer Accessories**

- 5021** Test Slide/Loop Kit—includes Resolution, Registration, and Flesh Tone slides and Resolution 16mm film loop **\$ 225.00**
- 5021A** Test Film, 6' loop, Resolution 16mm film **42.00**
- 5021B** Test Slides, includes Resolution, Registration and Flesh Tone slides **200.00**
- 5036** Neutral Density Filter Kit—assortment of 6 filters, 2 pieces of glass and mounting hardware supplied. (For small image. One kit for each projector recommended) **110.00**
- 5037** Neutral Density Filter Kit—assortment of 6 filters, 2 pieces of glass and mounting hardware supplied. (For large image. One kit for each projector recommended) **235.00**
- 5050** Neutral Density Light Wheel & Automatic Light Control—maintains output from camera at 1V composite video. (Uses 2550 Remote Control) **2150.00**

LAIRD TELEMEDIA, INC.

Film Projectors/Accessories

Film Projectors

ST-180(R)	Elmo Regular 8mm 15fps Projector. Includes 25-50mm zoom lens. silent only. (Requires 5107 shelf, uses 2551 remote control and 3510 remote adaptor.) . . . \$ 800.00
ST-180(S)	Elmo Super 8mm 20fps Film Projector. Includes 25-50mm zoom lens. (Requires 5107 shelf, uses 2551 remote control and 3510 adaptor.) 800.00
HD-1500	Pitch Controller (Super 8 sound) 625.00
GS1200TC	Elmo Super 8 24fps TV Film Projector. Includes 25-50mm zoom lens, optical and magnetic playback, and magnetic record. (Requires 5108 stand, uses 2553 remote control and 3522 adaptor for remote control.) 1875.00
16-CLLTI	Elmo Slotload 16mm TV Film Projector. Includes 75mm lens, optical and magnetic playback. (Requires 5108 stand, uses 2551 remote control and 3518 adaptor for remote control.) 2640.00
ENT-OTLTI	Eiki Autoload 16mm TV Film Projector. Includes 3" lens, optical playback and remote adaptor. (Requires 5108 stand, uses 2554 remote control.) 2373.00
ENT-2LTI	Eiki Autoload 16mm TV Film Projector. Includes 3" lens, optical and magnetic playback, and remote adaptor. (Requires 5108 stand, uses 2554 remote control.) 2924.00
ENT-3LTI	Eiki Autoload 16mm TV Film Projector. Includes 3" lens, optical and magnetic playback, magnetic record and remote adaptor. (Requires 5108 stand, uses 2554 remote control.) 3475.00

Note: It is recommended that one neutral density filter kit, 5036 or 5037, be ordered for each projector in the system.

Slide Projectors

4300	Eastman Single Drum Slide Projector. With Kodak III E Projector, holds 80 35mm slides. Includes modified 7" lens and adjustable mount. (Requires 5107 shelf or 5108 stand, uses 2543 remote control and 3504 adaptor for remote control.) \$ 590.00
4320	Dual Drum Dissolve Slide Projector, with Kodak III E Projectors, holds 160 35mm slides. Provides a large capacity projector with a time controlled dissolve transition. The dissolve time and the dwell time can be programmed to run automatically. The 4320 dual offers the alternate sequencing of up to 160 glass, metal, plastic, or paper-mounted 2" x 2" slides. Image transfer between successive slides is accomplished by a means of a stationary optical beam splitter, thus slides selected from either of the two storage drums share a single, high-quality projection lens. This, together with the use of a quartz halogen light source, makes the projector ideal for color television applications. The single-chip, programmable microcomputer based electronics allow for user computer interface, an unlimited number of remote inputs, and a real time sequencer. Includes modified lens and adjustable mounting hardware. (Requires 5107 shelf or 5108 stand, uses 2545 remote control and 2546 tone generator/decoder.) With 7" lens for small image system 4200.00 With 7 1/2" or 9" lens for large image system . . 4700.00

Remote Controls

(All modules use 1/3 remote control frame width unless otherwise specified.)

2540	Remote Control Frame. Accepts up to three remote control modules. Blank filler panels provided, if necessary. Frame: 1 3/4" H x 19" W x 1 1/4" D \$ 60.00
2541	Remote Control for 5300 or 5330 Multiplexer. Controls input sources 1, 2 and 3. (Not required when LTI projector remote controls are furnished.) 120.00
RC50-2541	50' cable 46.00
RC100-2541	100' cable 75.00

2543	Remote Control for 4300 Single Drum Slide Projector. Controls "Off," "Ready," "Forward," and "Reverse" slide change \$150.00
RC50-2543	50' cable 62.00
RC100-2543	100' cable 105.00
2545	Remote Control for 4320 Dual Drum Dissolve Slide Projector. Includes all local control functions. Full width remote frame furnished 515.00
RC50-2545	50' cable 80.00
RC100-2545	100' cable 125.00
2546	Tone Generator/Decoder for 4320/2545 Dissolve Projector System 350.00
2549	24V Power Supply for Uniplexer Remote Control. . . 190.00
2550	Remote Control for 5050 ND Light Wheel. 80.00
RC50-2550	50' cable 47.00
RC100-2550	100' cable 75.00
2551	Remote Control for film projectors. Controls "Off," "Ready," and "Show" modes. 120.00
RC50-2551	50' cable 49.00
RC100-2551	100' cable 80.00
2553	Remote Control for Elmo GS1200TC Projector. Controls "Off," "Ready," "Show," "Forward," and "Reverse." 150.00
RC50-2553	50' cable 73.00
RC100-2553	100' cable 115.00
2554	Remote Control for Eiki ENT-2LTI and ENT-3LTI Projectors. Controls "Off," "Ready," "Show," "Forward," and "Reverse." 150.00
RC50-2554	50' cable 73.00
RC100-2554	100' cable 115.00
3504	Remote Adaptor for 4300 Slide Projector 115.00
3510	Universal Remote Adaptor with AC power cord for all projectors without remote provisions. Includes local controls, "Off," and "Ready." (Used with 2551 Remote Control.) 155.00
3518	Remote Adaptor for 16-CLLTI Elmo Projector. . . 155.00
3522	Remote Adaptor for GS1200 TC Elmo Projector . . 150.00

Note: One Instruction/Service Manual supplied with each Multiplexer and both Dual Drum Slide Projectors.

Extra Manual	\$25.00
Service Manual for Eiki and Elmo Projectors	45.00

LAIRD TELEMEDIA, INC.

Distribution Amplifiers/Color Encoders

DA-5030 and DA-5040

Audio and Video Distribution Amplifiers

• Each DA has 6 outputs • Broadcast quality video specs • VHS and Beta Hi-Fi quality audio specs • DA-5030 will distribute SMPTE time codes • DA-5040 also functions as video equalizing amp • External power supply • Rackmountable, 4 per space • Front panel level and compensation controls • Front panel test points • Signal-to-noise ratio: DA-5030: 90dB, 0dBm in/out, 600 ohm load; DA-5040: 75dB peak video to RMS noise, weighted • Connectors used: DA-5030: RCA; DA-5040: BNC

DA-5030 Audio DA

This product is equally useful for distributing audio signals or SMPTE time code. The DA-5030 has one looping audio input and six outputs. This DA is mono only, but its input can be looped to additional DA inputs to increase the total number of outputs. The compensation adjustment can be used to offset the poor frequency response of 1/2" and 3/4" VCR audio tracks.

Accessories included: Service info, power loop cable
Options: PS-20 power supply, RM-4 rackmount

DA-5040 Video DA

This product is equally useful as either a distribution amplifier or a video equalizing amplifier. The DA-5040 has one looping input and six outputs. The input can be looped to additional DA inputs to increase the total number of outputs. The compensation adjustment can be used to equalize or compensate for high frequency loss on long cable runs. Up to 1500 feet of RG-59/U can be compensated.

Accessories Included: Service info, power loop cable
Options: PS-20 power supply, RM-4 rackmount

DA-5030/5040 Power Supply

Both DAs are powered from an external power supply. Power can come from the optional PS-20 Power Supply which furnishes 18VDC, 9W. As an alternate, any regulated 12VDC power supply can be used. (Any hum or noise present on a 12VDC power supply may not be fully filtered by the DA. Therefore, use special care in selecting a 12VDC supply.) The DAs have looping DC power connectors which allow multiple DAs to be powered from a single power supply. Each PS-20 Power Supply will operate two DA-5040 or four DA-5030.

DA-5030	\$220.00
DA-5040	220.00
RM-4 Rackmount adaptor	25.00
RM-6 Rackmount for DA-5030, DA-5040, RS-410, and RS-420	60.00
PS-20 Power supply, AC adaptor for DA5030/5040	24.00
PS-40 Power supply, deluxe version for DA-5030/5040	120.00

DA-5020 Video and Audio Distribution Amplifier

• Video and stereo audio DA combined into one unit • Broadcast quality video specs • VHS and Beta Hi-Fi quality audio specs • Rackmountable • More outputs per rack space — 12 video, 12 audio • Front panel level and frequency compensation controls • Front panel test points • NTSC and PAL operation • Signal-to-noise ratio: Video: 75dB peak video to RMS noise, weighted; Audio: 90dB, (0dBm in/out, 600 ohm load)

The DA-5020 is a versatile distribution amplifier that combines video and stereo audio into one cabinet. Twelve matched, isolated video outputs are provided from a single video input. Twelve audio outputs are provided from each of the two audio inputs. The inputs are looping or bridging so that additional DAs can be stacked to provide more outputs, such as 24, 36, 48, etc. The compensation control on the audio DA is designed to help offset the loss of frequency response encountered on 1/2" and 3/4" VCR audio tracks. The video compensation control will compensate for the loss of high frequencies on long cable runs. Up to 1500 feet of RG-59/U can be compensated.

Accessories Included: Rackmount hardware, service info

DA-5020	\$590.00
DA-5020/PAL PAL version, 230VAC	590.00

DA-5020

1032

1032 and 1032Y/C NTSC Color Encoder

• High quality, low cost R-Y, B-Y axis encoding • Ideal for non-broadcast, industrial applications • Allows the RGB source to have H and V phase matching • Contains a complete, RS-170A genlocking sync generator • Internal sync generator has stand-alone crystal mode • Operates in both upstream and downstream configurations

The 1032 changes RGB video, the 3-wire output of many character generators, cameras, etc., into composite NTSC video. The 1032 also allows the RGB signal to be "phased" or timed both vertically and horizontally with primary video. The 1032 encoder is an ideal mate to the 1500 character generator, and can also be used equally well with many other television products and systems.

The 1032 contains a complete genlocking, RS-170A sync generator that will readily lock to stable or unstable sources. It further has the ability to automatically switch over to a temperature-stabilized, internal, crystal-controlled sync generator in the event the program material is lost. Internal jumpers can be programmed to allow the unit to operate in various modes including upstream, such as an input to a switcher, or downstream, such as utilizing the 1500 character generator built-in keyer.

The 1032 will not allow encoding or non-standard, non-NTSC, or computer-generated signals. The RGB source must be 525 line, 60 field, analog, and capable of genlocking.

The 1032Y/C converts RGB signals to two-wire, NTSC, Y-C (3.58MHz) video fully compatible with S-VHS VCR's. The program or genlock input can be either composite or two-wire Y/C. This unit has a key input connector and a built-in, two-channel Y/C keyer, an external key clip level adjustment, and an internal key signal polarity-reversal switch. When mated with a Laird 1500 Series Character Generator, the encoder turns the CG output into NTSC, Y/C video. The CG's key output can also be fed to the encoder key input. This allows CG text to be keyed over external Y/C video by the encoder. The internal keyer will maintain the Y/C signals in two independent channels.

This model also has a composite, single wire, encoded output that can be used regardless of whether the input video is composite or Y/C. This feature permits the 1032Y/C to be used in a total composite system, yet allows full upgrading later to a Y/C system without scrapping either the CG or the encoder.

1032	\$1325.00

LAIRD TELEMEDIA, INC.

Video Processors/Routing Switchers

VC-2000 Professional Video Enhancer/Processor

- Ideally suited to 1/2" and 3/4" videotape correction
- Copy-guard stabilizer
- Fade to black control
- Four audio and video outputs
- Rackmountable
- Automatic regeneration of all sync signals
- Image enhancement and noise reduction
- Signal-to-noise improvement-luminance: Up to 6dB with "Noise Level"
- Useful as a remote camera control unit
- Optional plug-in RF modulator
- Signal-to-noise ratio: 60dB
- Connectors used: BNC (video), RCA (audio), F (RF)

The unit automatically generates sync and blanking signals, both horizontal and vertical, plus color burst signals. The insertion of synchronizing signals plus back porch clamping permit the VC-2000 to solve a variety of stability problems. Jitter, flicker, bending, and rolling are automatically corrected in most cases.

VC-2000

Accessories included: Rackmount hardware

- VC-2000** \$860.00
- VC-2000/PAL** PAL version, 230VAC 860.00
- RFC-34 RF Modulator**, channel 3 or 4 (NTSC) 70.00

VC-2500 Automatic Video Processor

- Automatically maintains correct video levels
- Automatically maintains stable, regenerated sync
- Ideal for driving RF modulators
- Ideal for video tape duplicating
- Clamp circuit removes hum and flicker
- Four video and audio outputs
- Available in NTSC or PAL models

The VC-2500 is ideal for applications where it is necessary or desirable to provide technically correct levels and stable video at all times, automatically and unattended. The VC-2500 is a video processor and as such it completely regenerates all horizontal and vertical sync and blanking signals. The sync regeneration along with an active back porch clamp circuit will

VC-2500

correct most of the stability problems encountered with video. Problems such as jitter, satellite receiver flicker, bending and rolling are corrected automatically in most cases.

- VC-2500** \$560.00
- VC-2500/PAL** PAL version, 230VAC 560.00
- RFC-34 RF Modulator**, channel 3 or 4 (NTSC) 70.00

**RS-400, RS-410, and RS-420
Passive Routing Switchers**

RS-400 Passive Routing Switcher

- 12 video inputs, 1 video output, 12 stereo audio inputs with stereo outputs
- Unbalanced audio
- Audio follow video switching
- Pushbuttons have self-indicator feature
- Suitable for desktop mounting
- Rackmount hardware

RS-410 Passive Routing Switcher

- Six stereo audio inputs with output for each channel
- Unbalanced
- Suitable for desktop mounting
- Four switchers can be rackmounted in optional RM-6 rackmount
- Pushbuttons are non-indicating

RS-420 Passive Routing Switcher

- Six video inputs, one video output
- Pushbuttons are non-indicating
- Suitable for desktop mounting
- Four RS-410/RS-420 switchers can be rackmounted in optional RM-6 rackmount

These three switchers can be used in general purpose audio or video routing applications where selection from multiple sources is required. They should not normally be used when the switching must occur "on line" or during a program in process, because they could introduce a glitch at the switching point.

The switchers contain no active electronics and consume no power. High quality switches with gold contacts are used for high reliability operation. Gold plating is also used on all the audio input and output connectors to improve reliability. All unselected inputs are internally terminated to help minimize crosstalk. All pushbuttons are interlocking.

- RS-400 12x1 video/stereo audio** \$300.00
- RS-410 6x1 stereo audio** 100.00
- RS-420 6x1 video** 100.00
- RM-6 Rackmount for RS-410/420** 60.00

LAKE SYSTEMS CORP.*Broadcast Automation***Highlights of the new generation in fully automatic videotape machine control programming — LaKart II from Lake Systems Corporation.**

- LaKart II controls any format cassette machine: U-matic, Beta, M2 or new digital machines
 - Powerful, multi-tasking computer allows several simultaneous operations: on-air, striping and traffic functions
 - Component processing for enhanced quality available for U-matic
 - Tape uses SMPTE/EBU time coding for accuracy with user bits for program ID
 - Individually programmable VCR pre-roll to get tapes to air fast
 - Tape status for each event on screen so operator can correct problems prior to air
 - Prints "as run" log and tape "pull list"
- LaKart II controls external tape machines in the same manner as it operates cassette machines. Time code and user bits are utilized on spare audio track
 - "User friendly" software with single keystroke execution and custom screen setup by individual user
 - Multiple cuts per cassette to save tape costs
 - 2500 catalog events in RAM, 1000 events in execution, unlimited events and catalog on disk
 - Uninterruptable power source standard for computer protection
 - Software options include:

Traffic interfaces to COLUMBINE, JDS/BIAS, ENTERPRISE, VCI and COMPULINK	
Delay Record	General Purpose Interface
Compile	Master Control
Satellite Recording	Switcher Interfaces

LEADER INSTRUMENTS CORP.

Test Equipment

LCG-396 NTSC Color Bar Pattern Generator

The LCG-396 is a versatile NTSC video generator suitable for testing, servicing and evaluating a broad range of video systems including video tape recorders, CATV and MATV systems, video monitors and television receivers. It provides 11 test patterns including the standard NTSC color bars for measuring and adjusting color purity, white balance, luminance, chrominance, and convergence. Outputs include composite video, H or V scope trigger, subcarrier and RF (CH3 or 4). Other features include variable chroma, luminance and set-up levels, and selectable interlaced or progressive scanning. Also available as an option are RGB outputs on the rear panel for testing color computer display systems and video game color circuitry. The LCG-396 is supplied with a comprehensive user's manual including detailed VTR, TV and monitor application data.

LCG-396

LCG-400 NTSC Video Sync/Test Generators

The LCG-400 provides both genlock and internal synchronization with the full range of video signals needed for testing and adjusting monitors, cameras, VCRs and overall performances of color and B & W TV systems. It is available with either multiburst (LCG-400M) or sweepmarker (LCG-400S) generators. The LCG-400 will sync with all standard composite video and blackburst signals including those from quad head and helical scan VTRs. Patterns include EIA and full field color bars, 5-step modulated staircase, 8 color rasters, crosshatch and dot convergence, circle and corner marker with on/off control of chroma and luminance. Both interlace and progressive scanning are provided. Outputs include composite video, subcarrier, blackburst, selectable vertical or horizontal drive, and CH 3/4 RF. Units are supplied for either bench-top or rackmounting (rails included).

- LCG-400M** \$2295.00
- LCG-400S** 2295.00

LCG-400

LCG-409 Battery Powered NTSC Pattern Generator

A fully portable, battery-operated NTSC pattern generator, the LCG-409 provides video test patterns specified in the service literature for consumer and industrial VCRs, VTRs, video monitors, TV receivers, projection models, and other video components and systems. Patterns available into a 75 ohm video load are crosshatch, dots, full-field NTSC color bars, full raster signals of white (100%), yellow, cyan, green, magenta, red, blue and black (set-up). Chroma may be switched off at the front panel for a luminance gray scale. An RF modulator covering all U.S. broadcast VHF and UHF channels facilitates receiver checks. In addition, an internal 1kHz audio tone frequency modulates a 4.5MHz sound carrier to provide sound and tuning checks of receivers and tuners. A front-panel switch permits the sound carrier to be switched off. The unit is powered by four "C" cells for complete portability, as well as isolation from the power line.

- LCG-409** \$545.00

LCG-409

LEADER INSTRUMENTS CORP.

Test Equipment

LCG-410 Video Sync/Test Signal Generator

Designed in response to the need for a source of specialized test signals for calibration and adjustment of professional video equipment, the LCG-410 Digital Video Test Signal Generator features precision NTSC EIA, SMPTE and full field color bars, staircase, modulated staircase, multiburst (50% and 100%), 2T sin²/12.5T modulated sin² pulse and bar signal, window, dot/crosshatch, full red and white rasters.

All signals are synthesized from a 10-bit digital to analog converter for precision and long term stability. Signals comply fully with the requirements set down in EIA RS-170A.

The unit occupies one vertical unit of rack space (1³/₄") and weighs only 13.2 lbs. Provision is included for remote control and subcarrier frequency accuracy is ± 10Hz.

LCG-410 \$2,695.00

LCG-410

LCG-420 NTSC Sync/Test Signal Generator

The LCG-420 main frame features a precision sync generator, color bar generator, convergence generator and routing switcher. Up to three modules can be accommodated: a multiburst/video-sweep unit, linearity generator and a pulse-bar unit.

The sync generator features full RS-170A compliance using the internal reference. The sync generator will lock to externally-supplied sync/subcarrier, or will genlock to composite video or blackburst.

The color bar generator provides full field, EIA or SMPTE bars as well as split-field color bars with Y reference, solid red or reversed color bars in the lower half. Full raster displays of primary and complementary colors at 75% amplitude are also available.

The convergence section of the main frame provides a combined dot crosshatch pattern set up for use with the Ball chart. The convergence pattern is also available with larger squares (fewer intersections) superimposed over the window and as a border on the color bar pattern.

The 420-U01 Multiburst/Sweep Module offers standard multiburst signals with the frequency of the last burst variable. A three digit readout shows the last burst frequency, as well as the frequency of a variable drop-out marker in the sweep mode, and the frequency of the CW video signal in the manual mode. The sweep signal repeats at the field rate and reaches 10MHz.

The 420-U02 Pulse-Bar Module provides the basic test signals widely used to analyze transient performance including sin² pulse, bar, modulated 12.5T sin² pulse and modulated bar. A selection of T or 2T pulses adapts the signal to 8MHz or 4MHz systems, and both a field square and window signal may be selected for field and line measurements of tilt or sag.

The 420-U03 Linearity Module provides the signals widely used to measure linearity in the form of differential gain and phase. The unit features 5 and 10 step modulated staircase as well as modulated ramp. In addition, full raster signals at levels from zero to 100 IRE in 10 IRE steps can be selected with added chroma at single and triple levels. A bounce signal to check clamps and alternate switching of selection are also featured in this module.

LVG-1604

LVG-1604A 125MHz Programmable Video Generator

Designed to satisfy the signal generation requirements of the most advanced high resolution raster scan CRT displays, the LVG-1604 Programmable Video Generator provides the user with a wide variety of standard as well as fully programmable patterns. Video test patterns can be easily generated with a dot clock rate of up to 131MHz and rasters of up to 4096 pixels by 4096 lines depicting standard or user defined patterns. A wide range of special functions allows the user complete control over the unit's activities making the unit one of the most flexible programmable video generators on the market today.

The LVG-1604 has the capability of storing 100 sets of display conditions in two separate mediums; battery backed RAM and EPROM for a total storage capability of 200. An RS-232-C port enables the user to burn the user's own EPROM or to connect the unit to a computer for unlimited storage capability. Display conditions are programmed and stored in terms of pattern and character selection, RGB, on/off and insert, sync status and raster format. Raster formats can be specified with variable parameters such as clock frequency, character cell size, character cells displayed, number of raster lines, horizontal and vertical blanking, horizontal and vertical sync width, interlace status and other factors which define the electrical characteristics of the pattern(s) displayed. Video outputs are provided in analog, TTL and ECL formats.

The unit is portable and requires no external connections during programming. Furthermore, the unit's ease of operation makes the LVG-1604 extremely valuable since programming may be done in the lab, at the user's desk or even at home with minimal effort.

Test Equipment

LMS-237 TV Stereo Signal Generator

The LMS-237 TV Stereo Signal Generator provides all important stereo TV test signals, such as baseband audio (including SAP), baseband video and modulated carriers on TV channels 3 and 4. Signals comply with the popular Zenith/dbx system.

Complete control of the audio signal is available from the LMS-237. In addition to the internal audio oscillator, jacks for external modulating signals are also provided. Noise reduction may be selected on the L-R and SAP channel, and all components of the stereo signal can be controlled. Four of the most important video patterns are provided—dots, crosshatch, color bars and white raster.

LMS-237 \$5500.00
 GPIB Option for LMS-237 200.00

LMS-238 TV Stereo Signal Generator

The LMS-238 is a TV stereo generator designed to test and align MTS stereo decoders. Test signals are provided for both stereo and SAP operation. Outputs at CH-3/CH-4, VIF, SIF and composite, facilitate rapid troubleshooting to the area of circuit malfunction.

On-screen character displays (L+R, L, R, L-R) indicate the selected mode of generator operation. The four selectable, internal modulation frequencies (300Hz, 1kHz, 3kHz, 8kHz) at 14.1% modulation (-17dB) are supplied. The unit features low distortion, excellent stereo separation and frequency stability.

LMS-238 \$600.00

LFC-944B VHF/UHF Field Strength Meter

The LFC-944B is a portable battery operated field strength meter designed for testing and measuring the performance of CATV and MATV systems. It provides for measuring levels of -40 to +60dBmV on VHF channels and -30 to +40dBmV on UHF channels. The meter scale is also calibrated to make measurements in microvolts. An accurate attenuator provides up to 70dB attenuation in 10dB steps. Accurate detent tuning is provided for VHF channels and UHF tuning for channels 14 to 83 is with a continuous control. The LFC-944B is supplied with a sturdy carrying case.

LFC-944B \$595.00

LFC-945 CATV Level Meter

The LFC-945 CATV Level Meter is a rugged, accurate instrument for measuring signal levels in CATV and MATV Systems. It covers the two frequency ranges 40 to 300MHz and 470 to 890MHz with accuracies of ± 1.5dB and ± 2dB respectively. Tuning of individual channels is facilitated by large dials marked with both frequency and channel, an electronic fine tuning control and a built-in sound amplifier and a loud-speaker which enables separate field strength measurements of the audio and video signals.

Three 20dB switchable attenuators and a 25dB meter scale provide an input signal range of -35 to +60dBm (0dBm = 1mV).

The LFC-945 will also measure AC voltages on the cable system from 0 to 50VAC with an accuracy of ± 5% fs.

Power is supplied by rechargeable NiCad cells and the power switch is automatically set to off when the protective cover is closed.

The LFC-945 weighs just 8.8 lbs. and is supplied with a battery charger, rechargeable batteries, 300:75 ohm balun and nylon web carrying/operation strap.

LFC-945 \$895.00

LSW-333 FM/VHF/UHF

All-Channel Sweep/Marker Generator

The LSW-333 is a complete test and alignment instrument for the RF and IF tuned circuits of VHF and UHF television receivers and FM radios. It is used in production testing and aligning, and in servicing. Front-panel displays of ideal IF and chroma response curves with marker positions permit fast and precise alignment in accordance with manufacturers' recommendations. The LSW-333 has three bias supplies, selectable marker tilt (vertical or horizontal), and vertical and horizontal polarity reversal.

Video Test Equipment

LBO-5860B/H Waveform Monitor

The LBO-5860B is an economical half-rack Waveform Monitor. The unit has an internal graticule and a 7kV (16kV "H" model) accelerating potential for bright, easy-to-read displays. Total RGB and YRGB (optional) capability is available and horizontal sweep speeds of 2H (2 lines), 1μs/div (expanded 2 lines), 2V (2 fields) and 2V Mag (expanded 2 fields) are standard.

The LBO-5860H Waveform Monitor offers all these features in addition to allowing the Vertical Internal Test and Reference signals to be displayed by a front panel line selector. Lines 7 through 21 can be selected from field one or two without interference from the active portion of the video signal. The instrument also has a blanking output to blank the companion Vectorscope during the active portion of the video signal allowing differential gain and phase measurements to be accomplished easily.

The LBO-5860B/H are half-rackmountable and can be mounted side by side with the LVS-5850B Vectorscope. The LBO-5860H is also available in a PAL/SECAM version as the LBO-5861A.

- LBO-5860B NTSC \$ 1740.00
- LBO-5860H NTSC (lines 7-21 line select) 1995.00
- LBO-5861A PAL 2475.00
- LBO-5865 NTSC (full line select). 2695.00

LBO-5860B

LVS-5850B

LVS-5850B Vectorscope

The LVS-5850B Vectorscope provides a convenient method for observing and measuring the relative phase and amplitude of chrominance signal components. It utilizes a unique technique which electronically displays the "inner boxes" which represent error limits of ± 2.5° and ± 2.5 IRE units. This improves the accuracy of phase and amplitude adjustments by eliminating errors due to CRT non-linearities. The LVS-5850B includes three loop-through inputs including a dedicated external subcarrier reference input which is front panel selectable. Either of the two composite video loop-through inputs can also be selected as the reference signal and all three inputs can be displayed individually.

The unit is also equipped with a Z-axis blanking input to provide blanking during the active portion of the video signal and unblanking during the VITS signal for a stable, jitter-free display. A test circle pattern is also selectable for a quick calibration check of the instrument. Another front panel pushbutton provides for either 100% or 75% amplitude levels. A gain control, with a detented calibrated position, provides for continuous amplitude adjustment. A phase control permits rotating the display through 360°. The LVS-5850B is supplied in a protective carrying case or in a 1/2" rack width configuration.

- LVS-5850B NTSC \$ 1995.00
- LVS-5851A PAL Vectorscope 2660.00

LBO-51MA

LBO-51MA Display Monitor

For special low-cost applications — The LBO-51MA is driven by R-Y and B-Y video signals, from a precision chroma decoder or a Tektronix 650 HR series picture monitor equipped with R-Y and B-Y outputs. The LBO-51MA has the added capability of displaying individual VITS and VIRS lines* when used with LBO-5860 waveform monitor.

The unit's CRT display area is 8 x 10cm. Combines 3MHz bandwidth on X and Y axes, with 4MHz on Z axis. Phase shift between X and Y axes is less than 3° at 1MHz (R-Y and B-Y signals are approximately 600kHz).

The absolute accuracy of the LBO-51MA display is dependent upon the accuracy of the precision chroma decoder being used to drive it.

*VITS and VIRS lines may be observed only when the signal delay inherent to the chroma decoder being used is not excessive (10 to 15μs).

- LBO-51MA \$ 1195.00

LVM-5863A

LVM-5863A EFP Color Monitor/Waveform Monitor

The LVM-5863A Monitor has full monitoring capabilities for video cameras, VCRs and audio recorders. Its 2H/2V waveform monitor provides the most useful displays an operator can have. A switchable IRE filter facilitates lens-opening checks. And the 1V/0.25V selector acts as a 4X magnifier to simplify setup level and black-balance checks. Yet, the LVM-5863A is easy to use since controls are kept to a minimum. And, it makes field productions as technically and artistically correct as they can be.

- LVM-5863A \$2150.00
- LBO-5864 EFP Waveform Monitor only 1350.00

LECTROSONICS, INC.

Wireless Microphone System

**VHF Pro Series Systems/
VHF Pro Miniature Systems**

This system is the result of over 10 years of design and manufacturing experience in wireless microphones. It embodies the very latest circuitry available. You are assured of complete freedom of movement and freedom from worry. The system operates on the interference-free "high band" channels which provides operating range up to a quarter-mile. At normal distances, the transmitter signal is so strong that it will completely mask out RF noise from devices such as computers and electronic organs.

The transmitter and receiver are both housed in solid machined aluminum for rugged durability. A host of useful features make the system extremely easy to use with virtually any type of sound or videotaping system. Many components are available today that simply didn't exist a few years ago. These components provide radical improvements in performance, at lower prices than ever before possible.

M119/M140 Microphone

Freedomike wireless systems are supplied with a tiny high quality lavalier microphone. M119 is an omni-directional model. M140 is a cardioid model.

The lavalier microphones include:

- Tie tack mount
- Clip on tie bar mount
- Clip on "goody" mount (excellent for thin fabrics)
- Windscreen

M185 Lavalier Transmitter

Superlative RF and audio performance housed in machined aluminum. 5 pin input connector matches any microphone available. Modulation LED's on control panel allow precise, quick gain adjustments. Self-adjusting battery compartment fits any alkaline 9V battery.

Specifications

Audio Output:	Variable from -40dBm to +3dBm
Antenna Input:	Rear panel BNC connector 50 ohm
Controls:	Front panel On/Off slide switch Front panel output level control knob Red RF LED indicates carrier "On" Red power LED Two red modulation level LED's: -20 & 0dB

Flight Kit Fast, Simple Set-Up

Accessory holders on Multi-6 for simple set-up.

Draws 27.5A at 120V and 15A at 220V.

Kit includes:

- (2) 100-151 Multi-6 • (2) 118-013 8-Leaf Barndoor • (1) 122-147 Scrim Set—Single, Half Single • (2) 176-002 650W, 120V Lamp (150-058 Kit) • (2) 176-007 800W, 220V Lamp (150-059 Kit) • (2) 104-051 Mini-King • (2) 118-003 4-Leaf Barndoor • (1) 148-007 Case • (3) 152-051 Mini-Stand with 5/8" Stud • (1) 156-001 Gaffer Grip • (2) 176-022 1000W, 120V Lamp (150-058 Kit) • (2) 176-027 800W, 220V Lamp (150-059 Kit)

150-058 (120V) \$1800.00

150-059 (220V) 1800.00

LEE COLORTRAN, INC.

Lighting Kits

Color Beam 800 – Fast Set-Up

Uses three cool touch Color Beam 800 units. Total connected load 16.3A at 120V and 11A at 220V.

Kit includes:

- (3) 400-201 Color Beam 800 • (1) 122-147 Scrim Set—Single, Half Single • (1) 148-007 Case • (3) 152-051 Mini-Stand with 5/8" Stud
- (3) 118-013 8-Leaf Barndoor • (3) 126-027 Accessory Holder • (3) 176-002 650W, 120V Lamp (150-060 Kit) • (3) 176-007 800W, 220V Lamp (150-061 Kit)

150-060 (120V) \$1540.00
 150-061 (220V) 1540.00

Color Beam 800

Pro-Kit IV—Foreign Location Work

Designed for use with 120V or 240V lamps for foreign location work. Draws: 20A at 120V and 11A at 220V.

Kit includes:

- (2) 100-091 Mini-Pro • (2) 104-341 Mini-Broad • (3) 118-016 4-Leaf Barndoor • (1) 142-011 25' Extension Cable • (1) 148-030 Metal Case • (3) 152-050 Mini-Stand with 1/2" Stud • (1) 156-012 Gaffer Grip • (2) 176-002 650W, 120V Lamp (150-052 Kit) • (2) 176-092 600W, 120V Lamp (150-052 Kit) • (2) 176-007 800W, 220V Lamp (150-053 Kit) • (2) 176-094 650W, 220V Lamp (150-053 Kit)

150-052 (120V) with metal case \$1280.00
 150-053 (220V) with metal case 1280.00

Pro-Kit IV

Mini-Pro Kit

Designed for use with 30V battery power, 120V, or 220V. Draws 15A at 120V and 8A at 220V.

Kit includes:

- (3) 100-091 Mini-Pro • (2) 118-016 4-Leaf Barndoor • (1) 122-137 Scrim Set—Single, Half Single • (1) 142-011 25' Extension Cable • (1) 148-030 Metal Case • (3) 152-050 Mini-Stand with 1/2" Stud • (3) 176-092 600W, 120V Lamp (150-050 Kit) • (3) 176-094 650W, 220V Lamp (150-051 Kit)

150-050 (120V) with metal case \$1100.00
 150-051 (220V) with metal case 1100.00

Mini-Pro Kit

Camerman's Lighting Kit

All equipment fits in one case. High output lighting equipment for optimum production lighting. Draws 27A at 120V and 14.5A at 220V.

Kit includes:

- (2) 400-201 Color Beam 800 • (2) 126-027 Accessory Holder • (2) 118-013 8-Leaf Barndoor • (1) 104-341 Mini-Broad • (2) 118-016 4-Leaf Barndoor • (1) 122-137 Scrim Set—Single, Half Single • (1) 148-007 Case • (2) 152-050 Mini-Stand with 1/2" Stud • (2) 152-051 Mini-Stand with 5/8" Stud • (4) 176-002 650W, 120V Lamp (150-054 Kit) • (4) 176-007 800W, 220V Lamp (150-055 Kit)

150-054 (120V) \$1595.00
 150-055 (220V) 1595.00

Camerman's Lighting Kit

Battery Belt Kit

Batteries are rechargeable NiCad Cells. Belt comes complete with 14-hour overnight charger and an integrated cable. Charger designed for 120 and 240V input power.

150-063 \$1500.00

Kit includes:

- (1) 100-091 Mini-Pro • (1) 140-003 30VDC Cord • (1) 140-021 Battery Belt w/Charger unit (120/240V) • (1) 148-030 Carry Case (Metal) • (1) 156-005 Mini-Pro Handle • (1) 176-090 250W, 3400°K, 30V Lamp, 25 hours

150-063 \$1550.00

Battery Belt Kit

Mini-Pro With Handle

Optional

140-022 Battery Belt with fast charge capability in place of 140-021 Add \$100.00

140-023 For High Speed Charger Add 820.00

LEE COLORTRAN, INC.

TV Lighting

6" and 8" Fresnels

- Lamp sockets are U.L. recognized, medium bipost 6" units, and mogul bipost 8" unit
- Easy handling, lightweight aluminum construction
- The combination of diecast and extruded aluminum promotes heat exchange and rapid dissipation. Combine this with flow through ventilation and you have a cooler operating unit with longer lamp and gel life
- An improved rack and pinion design with Torlon® insulators for a smooth focusing action
- Lens door is diecast with removable beefed-up gel clips and a spring loaded safety clip for rugged trouping requirements
- All operating controls are thermally insulated for cool handling operations
- The ultimate fresnel performance...high intensity spot with a smooth even flood field

Studio Lighting

A complete line of "Made in America" production equipment, for your television studio requirements. Ellipsoidal effects projectors with field angles from 5° to 40° for throws up to 100'. Lightweight and efficient, Focusing Scoops, Soft Lights, Cyc Strips for fill and cyclorama lighting requirements. Plus variable load suspension units and distribution equipment custom built to your needs.

Theater Fresnel

Mini-Pro

Mini-Pro®

• Utility yoke contains finger operated on/off switch • Recessed power receptacle permits use of detachable 120 or 30V power cord • Completely portable. Designed for stand mounting or handheld operation • Operates at 30V, 120V, or 240V AC/DC • Safety lock prevents accidental loss of accessories from mounting clips • Smooth field. No hot spots • Variable focus produces 3:1 range • Dichroic Filter available for daylight shooting • "Quartz" Lamps for high efficiency • Applications: key, back, kicker, side lighting • Maximum wattage: 650W

- 100-091\$140.00

Ellipsoids

• Designed to frame areas, project patterns and create special effects • For throws of 14' to 140' • Rugged diecast housing assembly • High performance optical train with plano-convex lenses permits greater light transmission, fewer aberrations, improved field control and higher efficiency • Lenses are fabricated of low expansion borosilicate glass • Easily field modified to create 40°, 30°, or 20° field angle in one unit • Lenses are shock mounted • Joy stick design assures fast, precise filament alignment without tools • Lens barrel design permits you to easily focus to a hard or soft field edge • Framing shutter concept enables you to create nearly any three or four sided shape • Solves keystone problem • Each shutter travels in its own plane eliminating interference problems • Equipped with a built-in pattern slot • Available with an optional iris without the loss of other beam shaping capabilities

- 40° and 30° Ellipsoid**
- Incorporates a single 4.5" and 6" diameter plano-convex lens • Outperforms 750W and 1kW 6" x 9" and 6" x 12" existing spotlights • Designed for throws from 14' to 55'
 - 213-055* 40°\$340.00
 - 213-065* 30°340.00
- 20° Ellipsoid**
- Single 6" x 9" plano-convex lens • Outperforms 750W and 1kW 6" x 16" existing spotlights • Designed for throws from 30' to 67'
 - 213-075*\$340.00
- 12° Ellipsoid**
- Single 6" x 12" plano-convex lens • Equivalent in performance to higher priced generic 8" spotlights • Designed for throws from 45' to 80'
 - 213-095*\$340.00
- 10° Ellipsoid**
- Incorporates a single 8" diameter plano-convex lens • 8" unit is equivalent in performance to existing 10" and 12" spotlights • Designed for throws from 55' to 108'
 - 213-105*\$540.00

*Hanging fixtures are listed without terminations but priced with connectors. When ordering, please specify termination required. If you are ordering fixtures with bare wire leads, please deduct \$8.00 from price.

5° Ellipsoid

Ellipsoid Spotlight

- 5° Ellipsoid**
- High transmission from 10" diameter plano-convex lens • With its reflector design, single lens optical system and with optional iris assembly it actually outperforms many followspots • Suited to long-throw applications and is effective from 110' to 140'
 - 213-115\$700.00
- Mini-Ellipse**
- Designed for throws from 6' to 40' • Accepts a range of high output Tungsten-Halogen Lamps from 250W to 500W at 120V and 500W at 240V.
 - 213-155* 30°, 40°, 50°\$215.00
- Zoom Mini 40/65, 25/50, 15/30**
- For any application from a 9' circle at a 7' throw to a 9' circle at a 35' throw • A 600W lamp increases light output by nearly 50% over conventional 500W screw-based systems • Lamp house design allows constant orientation of the filament support bridge for a more compact light source
 - 213-305* 40/65\$235.00
 - 213-315* 25/50235.00
 - 213-325* 15/30235.00

Fill/Flood Toning Lights

**Fill/Flood Toning Lights
Mini Soft-Lite and 1K/4kW Soft-Lite**

• Ultra lightweight • High light output with soft shadows • Combo stud fits 5/8" studs or 1 1/8" females • Ventilation system increases lamp life • Ideal for location interiors for soft-fill lighting • All aluminum construction

104-171 Mini Soft-Lite

• Shares all the standard features listed above plus • 2 switches for intensity control • 14 lbs. \$435.00

- 120-021 Diffusion frame 35.00
- 138-059 Safety cable 9.00
- 152-053 Compact stand castered 145.00

104-181 1k/4kW Soft-Lite

• Shares all the standard features plus • 4 individually switched lamps for intensity control • With single, pin plugs • 25 lbs. \$875.00

- 120-022 Diffusion frame 64.00
- 138-059 Safety cable 9.00
- 142-102 Extension cable #14/3 25' 20A female T.L. NEMA L5-20P male U-Ground (2 required) 60.00
- 142-400 Cable, 25' #8/3 with female single pole pin plugs and 100A stage plug 295.00
- 152-054 Super stand with adaptor 300.00
- 158-003 C-clamp assembly to modify for pipe mounting 18.00

Lamps, ANSI-Code for Mini and 1K/4kW Soft-Lites

- 176-019 500W, 120V, 2900°K, 10,000 hour, EJD \$45.00
- 176-021 1000W, 120V, 3200°K, 500 hour, FCM 41.50
- 176-027 800W, 220V, 3200°K, 150 hour, EME 41.50

Broad

• Designed for wide field, medium throw applications • "Quartz" lamps provide long life and constant light output • Designed for continuous duty applications • Wide variety of lamps • All accessories secured with safety clip • Heavy-duty sockets provide improved cooling and lamp life

- 104-031 Stand Model \$275.00
- 104-032 Hanging Model 275.00

Multi-Broad

• Focus for beam control • Designed for medium to wide field applications • Uses tungsten halogen lamps for high efficiency • All accessories secured with safety clip • Heavy-duty sockets provide improved cooling and lamp life

Mini Soft-Lite

- 104-041 Stand Model \$330.00
- 104-042 Hanging Model 330.00

Accessories for Broad and Multi-Broad

- 118-010 Four Leaf Barndoor \$113.00
- 120-007 Diffusion Frame 29.00
- 138-059 Safety Cable 9.00
- 152-053 Compact Stand Castered 145.00

Set-Light

• For uniform lighting of large surfaces • Barndoors provide sharp cut-off • Heavy-duty sockets provide improved cooling • Wide range of "Quartz" lamps • One piece reflector for increased output • Compact size for tight mounting positions

- 108-002 Hanging Model \$216.00
- 138-059 Safety Cable 9.00

Lamps, ANSI-Code for Broad, Multi-Broad, and Set Light

- 176-019 500W, 120V, 2900°K, 10,000 hour, EJD \$45.00

Far Cycs furnished with mounting assembly, spill masks, and grounding connectors.

LEE COLORTRAN, INC.

Dimming

DIMENSION 192-000 SERIES

Dimmer Module

- The Dimension 192 dimmer module represents an elegant design
- Using conservatively-rated, fully proven components, we have packaged 2–2400W dimmers into minimum space. This is partly achieved by the rack bus design, and partly by the unique control and power connector systems
- Each dimmer is independently cooled with adjacent dimmers being separated by a cooling air flow of 400 ft./min. of ambient air
- State-of-the-art solid-state relays and chokes are used to achieve broadcast-quality filtration

Rack

- 192—1.2 or 2.4kW dimmers per rack. The most in the least amount of space
- Each dimmer is independently cooled with ambient air from the front of the rack. This accounts for a lack of temperature gradient in the rack
- Top and bottom access panels for line and load runs
- Plug-in dimmer and control modules make the Dimension 192 rack fully serviceable
- The Dimension 192 contains auxiliary functions as a standard and built-in feature. The need for an "aux cabinet" is eliminated in most systems
- Dimmers of different ratings (1.2, 2.4, 6.0, and 12.0kW) may be located anywhere in the rack
- Three identical control modules display system status with LEDs
- Plug-in electronic system controls up to 192 dimmers. Each module controls up to 64 dimmers
- Spare module provided per system for emergency backup
- Maintenance—fully front accessible, no side or back access required

166-300	Dual 1.2kW Dimmer Module, 120VACPOR
166-302	Dual 2.4kW Dimmer Module, 120VACPOR
166-304	6.0kW Dimmer Module, 120VACPOR
166-306	12.0kW Dimmer Module, 120VACPOR
166-307	Dual 2.4kW Non-Dim Module, 120VACPOR
166-308	6.0kW Non-Dim Module, 120VACPOR
166-309	Dual 2.0kW Dimmer Module, 240VACPOR
166-310	5.0kW Dimmer Module, 240VACPOR
166-311	10.0kW Dimmer Module, 240VACPOR
166-312	Dual 2.0kW Non-Dim Module, 240VACPOR
166-313	5.0kW Non-Dim Module, 240VACPOR
166-314	12.0kW Non-Dim Module, 120VACPOR
166-315	10.0kW Non-Dim Module, 240VACPOR

Control Module

- Fully plug-in, the module controls all 64 dimmer locations in a vertical column. There are three control modules per rack
- The module controls all functions of dimmer access, timing, and ramping as well as deciding which channels are digital, which are analog, which channels are on panic and does it all with reliability
- Front panel indicators show status of feeder bus bars and power supply, signal status, and rack overtemp

166-341	Analog\$750.00
166-342	Multiplex\$900.00

Wall Pack

- Plug-in Dimmer Modules
- Plug-in Electronic Control Modules
- Single or three phase power
- Ambient cooling with front-to-rear air flow
- All electrical connections, both incoming and outgoing power and control, are made to factory labeled terminal strips
- Multiple packs may be installed in various configurations, each requiring minimum wall space
- The Pack has a lockable door, together with an electrostatic filter system
- Instant change from analog to digital control signal (RS422)
- Lightweight—easy to mount—only 65 lbs.

200-715	12-2.4kW Dimmers with Terminal ConnectionPOR
200-725	6-6.0kW Dimmers with Terminal ConnectionPOR

Both Terminal versions include door.

Lighting Control

Scene Master™ 60 Lighting Control System

- Clarity of operation
- 60 manual controllers are available for setting scenes and recording rapidly up to 60 pile on overlapping submasters
- Console stores up to 120 cues which can be recorded from manual or memory
- In standard format the Scene Master will handle up to 120 dimmers and has options to control up to 512 dimmers
- Optional disk drive
- Printer and handheld remote
- High resolution CRT with clearly defined information areas
- Extensive built-in effects program
- Bump keys and more

The Scene Master 60 represents an ideal marriage of manual and memory systems.

The Control Console is a microprocessor based lighting control system, specifically designed and constructed for the control of theatrical and television dimming systems.

The Control Console does not require the use of any peripheral device such as disk drive or cassette to function. The system operating program is stored in a programmable read-only memory.

The Control Console consists of a portable console, approximately 37" long and 14" deep and one detached 12" amber CRT with integral tilt and swivel bases. Color monitor is optional.

The CRT is a graphics quality amber monitor with a minimum of 1000 dots per line horizontal resolution and 360 lines vertical resolution.

The Console is equipped with non-volatile memory for cue storage with optional 3 1/2", industry standard disk drive used for library storage utilizing environmentally protected, high reliability diskettes with hard plastic cases.

- 168-760** Scene Master 60, 120V, digital output. Amber monitor, controls 200 dimmers with 60 manual channels **\$5775.00**
- 168-764** Scene Master 60XL, 120V, digital output. Amber monitor, controls 500 dimmers with 60 manual channels **6775.00**
- 168-768** Scene Master 60XLC, 120V, digital output. Color monitor, controls 500 dimmers with 60 manual channels **POR**
- 28426** Scene Master 60 operating manual **20.00**

Options available: 240V, analog output

Patchman™ Portable Lighting Control System

- 10 scenes preset — 2 live plus 8 in memory
- Hardwood end caps
- System on/off keyswitch
- Patch control keyswitch
- LED over temp indicator
- LED display; dimmer, channel, intensity
- Memory select switches (Scene X)
- Chase on/off switch
- Chase rate controller
- Memory select switches (Scene Y)
- Channel controllers; Manual section, 2 rows of 12 each—expandable to 96
- Scene Y submasters
- Fade rate controllers
- Crossfader with LED bargraph progress meters
- Scene X submasters
- Softpatch keypad; 0-9, clear, and, thru, channel, dimmer and store to patch up to 512 dimmers

Scene Master 60

Patchman

Patchman offers ten scenes, each with its own submastering assignments. Patch at levels, so every channel can be a groupmaster. There's a split dipless crossfader for timed or manual control variable rate chase, memory back-up and a host of other control functions.

- 168-700** Patchman, 12-channel **\$3985.00**
- 168-701** Patchman, 24-channel **4675.00**
- 168-702** Patchman, 36-channel **5375.00**
- 168-703** Patchman, 48-channel **6050.00**

Accessories

- 157-142** 24-channel plastic cover **\$ 95.00**

Lighting Control

PRESTIGE SERIES LIGHTING CONTROL SYSTEMS

Prestige 1000 and 2000 Features:

- 24 pile-on submasters provide for annual control of complete "stage looks." 12 bump buttons allow instantaneous activation of associated submasters. Submasters 1-12 may be selected as inhibitive faders
- Four timed faders provide for timed or manual execution of cues or cue parts
- Playback controls allow an operator to start an entire cue including cue parts and follow-on cues with a single button. Running cues may be stopped, reversed, speeded up, slowed down, or taken over manually
- Record/Cue functions and "soft" screen keys allow simple, straightforward recording and editing of cues, groups, submasters, effects, patch, and setup with a minimum of console "clutter." The screen keys focus the user's attention on commands which are useful in a particular display and allow for easy software upgrades to the console. Numeric keypad allows rapid construction of unlimited combinations of channels, groups, cues, submasters, and effects for digital level setting or adjustment on the wheel
- Position keys allow the user to move up, down, left, or right in various displays
- Wheel provides a continuous rotation device for setting and adjusting levels
- Power keyswitch and overtemperature indicator
- High resolution color CRT provides the following user selectable displays: Stage, Cue, Group, Submaster, Effect, Cue sheet, Track Sheet, Playback, Patch, and Setup
- 3.5" disk drive provides library storage for shows.

The Prestige 1000 controls up to 200 dimmers, on up to 100 channels, and up to 200 cues and groups may be recorded.

- 168-340 Prestige 1000 Series, 120V, Digital OutputPOR
- 168-341 Prestige 1000 Series, 240V, Digital OutputPOR
- 168-342 Prestige 1000 Series, 120V, Analog OutputPOR
- 168-343 Prestige 1000 Series, 240V, Analog OutputPOR

NOTE: All Prestige 1000 Series consoles come with amber monitor only 168-329 (120V) or 168-330 (240V).

Prestige Series 2000 controls up to 400 dimmers on up to 200 channels, and records up to 300 cues or groups. The operating program is stored in programmable read-only memory. In case of power failure, random access memory shall be retained by an automatic battery backup power supply.

The Prestige 2000 console has all the user functions listed in the Prestige 1000 text with exceptions. A color monitor is standard and the following peripheral options are available: Designer Remote, Handheld Remote, and a hard copy Printer.

- 168-344 Prestige 2000 Series, 120V, Digital OutputPOR
- 168-345 Prestige 2000 Series, 240V, Digital OutputPOR
- 168-346 Prestige 2000 Series, 120V, Analog OutputPOR
- 168-347 Prestige 2000 Series, 240V, Analog OutputPOR

NOTE: All Prestige 2000 Series consoles come with amber monitor 168-329 (120V) or 168-330 (240V).

- 168-348 Prestige 2000C Series, 120V, Digital OutputPOR
 - 168-349 Prestige 2000C Series, 240V, Digital OutputPOR
 - 168-350 Prestige 2000C Series, 120V, Analog OutputPOR
 - 168-351 Prestige 2000C Series, 240V, Analog OutputPOR
- NOTE: All Prestige 2000C Series consoles come with color monitor 168-331 (120V) or 168-332 (240V)

Prestige 3000 Features:

- Key Switch—powers up the system and activates the backup
- Dual Display Screens—provide a choice of ten different displays containing precise information for specific tasks (i.e. Set up, Stage, Playback, Preview, Patch)
- Screen, Record and Cue Keypads with 8 Soft Keys—store cue groups and submasters into the Prestige 3000's electronic memory
- Control Keypad—allows the user to write out and enter commands for the Prestige 3000, revise a channel or dimmer list, and create subsets of channel groups or existing cues
- Position Keypad—makes it effortless to move up, down, right, and left through the system's displays
- Level Wheel—adjusts channel levels or fade rates
- Alphabetic Keyboard—allows the user to label designs and write notes or names onto submasters and groups
- Submaster and Bump Buttons—permit manual adjustment of submaster fades
- Playback Controls—permit the manual altering of the light system to fit the show in progress

The Prestige Series of control consoles, the 1000, 2000, and 3000 are as practical as they are powerful. No matter which you choose, from the remarkable Prestige 1000 all the way up to the feature packed Prestige 3000, you get a microprocessor based lighting control system that gives you speed and flexibility.

The Prestige 1000 is our state-of-the-art base model, the 2000 adds a package of advanced features, and our top of the line 3000 unit, takes you to the farthest advance of technology.

Magic Disk Writer™

The Magic Disk Writer is a self-contained unit which allows an operator, lighting designer, or student to use the Magicsheet option independently of the Prestige lighting console. The Magic Disk Writer may be used to cue a show from scratch or to modify cues in an existing show in a remote location such as a hotel room or drama lab. The unit will also fully simulate playback of a show, except that it will not actually drive dimmers. The capability of driving a printer is also provided.

The system has a standard IBM keyboard port and will fully support all standard IBM PC software provided it is supplied on 3.5" disks. This system serves as a low cost teaching device for lighting design as well as a standard IBM PC. Lighting programs written on the Magic Disk Writer may be transferred via a disk to any Prestige system for operation, for example, by the designer after entering his own pick up notes to the show, or by the student to display and critique his homework in the theater.

The Magic Disk Writer consists of a Summagraphics MM1201 digitizer tablet overlay and stylus, a Taxan KX12 monochrome CRT, and a processor unit. The processor unit contains a Faraday 6413/256 computer card, a Teac FD35B disk drive, and a Power General 3050-1 power supply. All major components are identical to those used in the Prestige 1000 except for the addition of memory to the processor card. A power switch is located on the front of the unit, the disk drive and IBM keyboard connector are located on the right side, and the Magicsheet, printer and AC connectors are located on the rear. During normal operation, the CRT is placed on top of the processor unit and the Magicsheet is placed in front. The Magicsheet software is loaded automatically on powerup from disk. An optional IBM keyboard may be placed to the side of the Magicsheet for operation of standard software.

The Magic Disk Writer operates identically to a Magicsheet on a Prestige 2000 or 3000 console. A special setup option is provided to allow the operator to select whether show disks are created with Prestige 2000 or 3000 format. A special write protected disk is provided with the system which contains both MSDOS and the Magicsheet operating program. The Magicsheet program is automatically loaded and started when AC power is applied to the system. If the IBM keyboard option is installed, the operator may interrupt the Magicsheet program and load other IBM compatible software by inserting the appropriate 3.5" disk. Since the system is not used in live performance situations, no battery backup is provided.

168-750 Magic Disk Writer (Amber CRT Only)
.....\$**6100.00**

**Magicsheet**

The Magicsheet is the lighting designer's easel. With its stylus and your lighting plot attached to the "smart" pad you can enter your plan directly into the Prestige system. Then with the touch of your stylus you'll be able to access a variety of the extensive features of the control board, from the level wheel, to playback, to cueing. Once entered, touching your symbols with the pen can call up cues and fades, trigger effects, and run through lighting sequence as quickly as you can brush the symbols. Linking up the Magicsheet/Designer's Remote with the main console gives you the ultimate features of the Prestige system from a variety of vantage points. You can review your designs as fast as you create them from the perspective of actor or audience. With the monitor attached to the Magicsheet you can call up the same displays you would in the booth.

LEE COLORTRAN, INC.

Studio Lighting Package

20' x 30' Studio (6.1m x 9.1m) Standard Television Package

Designed to meet the requirements for television production lighting, each package presents fixtures, power distribution, dimming and control on the basis of one circuit for approximately every 15 square feet of studio area and one dimmer for every circuit.

The 20' x 30' (6.1m x 9.1m) Studio Package consists of the following major components:

Lighting Fixture Package

• **Fixtures**—Fresnels for key and back lighting. Focusing Scoops for base and fill, and set lights for cyclorama lighting are all part of the basic package and are supplied with all required accessories • **Accessories** • Barndoors • Color frames • Safety cables • C-clamps, and lamps are supplied by Colortran as required by the bill of materials

Dimming and Control System

• Wall mounted dimmer packs with plug-in power modules and plug-in analog control modules • Manual Control Console—Pack Master 36 with 3 scenes, 2 presets and 36 intensity adjustments

Distribution System

• Connector strips are completely prewired at the factory with terminal access by an easily removable cover. Finished matte black enamel with 3" white graphics on front and back for circuit identification • All connector strips are supplied with 18" pigtail receptacles in standard NEMA twistlock termination 20, and 50A capacities. Alternates are available if specified, such as flush mounted receptacles and termination variations (pin connector or U-ground types) • Plugging boxes are available in three basic configurations: surface, recessed, or pipe mounted. Unless otherwise specified boxes are supplied in a surface mounted style with required pigtails

SPG-1300N NTSC Sync Pulse Generator

- Low cost, modular 1RU design
- Adjustable blanking widths and bright burst flag position
- NTSC digital genlock
- RS-170A zero SCH sync/subcarrier, black and test signal outputs
- Independent timing for pulses, black and test signals
- No warm-up, high stability TCXO

The SPG-1300N is an advanced, modular design for master or slave operation. The basic generator has two plug-in modules (genlock, power supply) which are housed in a 1RU mounting frame. Three module options can be included to suit specific requirements. Slots are normalized for the Pulse Generator, Black and Tone and Test Signal modules. However, each slot can accept any option and provide the primary outputs.

The high-stability, no warm-up TCXO has a horizontal phasing range of more than 12µs advance and 4µs delay. Three phasing controls allow fine, medium and coarse adjustments.

The optional 1300PG Pulse Generator module has two outputs of sub-carrier and one output each of sync, blanking, H drive, V drive, burst flag and color frame ident. Level controls for subcarrier and pulse outputs are provided. Vertical can be advanced 1 line. H blanking start and

SPG-102N

ACO-131

finish, as well as burst flag position are adjustable in 16 steps of 70ns. V blanking can be set to 18, 19, 20, or 21 lines. A switch allows color frame ident to start coincident with the vertical block or line 10/field 1.

The optional 1300BT Black and Tone module has two 75 ohm outputs of RS170A zero SCH color black. Fine, medium and coarse phasing of the outputs is independent of Genlock phasing.

The low impedance, balanced stereo tone output can be switch selected as color frame-locked 400Hz or 1kHz. Level is adjustable from 0 to +8dBu. In addition, a left channel ident tone can be selected.

The optional 2600TG Test Signal Generator modules represent the latest technology in 12-bit (4096 steps) digital test signal generator on a single card.

The dual BNC outputs can be level adjusted and conform to RS-170A zero SCH at all times.

In addition, the 2600TG modules are available in various 525-line standards, such as NTSC, RGB, YIQ, B-MAC, M2 etc., so this means two formats can be mixed within the same mounting frame. Custom test signals can optionally be requested and are subject to a one-time programming charge.

SPG-1300N	With 1300PG pulse generator and 1300BT black and tone boards	\$2495.00

SPG-110P/SPG-180M PAL Master Sync Generators

Extremely stable, broadcast quality source of all pulses, subcarrier and a variety of video test signals for PAL systems B, G, H and I. Automatic or manual genlock modes include crash and slow lock. Modular design with several options permits customized configurations.

SPG-110P	Includes 110LD Line Driver, 110SB-3 Color Black Output, 250GD Grating and Dot and 250CB Color Bar Generator	\$4995.00
SPG-180M	PAL Sync Generator for system M (Brazil) Includes 180SB sync and burst module3295.00
110CS	Color standard for SPG-110P735.00
110SI	Subcarrier input for SPG-110P90.00
110LD	Line driver for SPG-110P250.00
110RP	Remote control panel for SPG-110P	1050.00
	Extra instruction manual for SPG-110P65.00
100ME	Module extender65.00
	Extra instruction manual for SPG-180M55.00

LEITCH VIDEO OF AMERICA, INC.

Sync/Test Generators

SPG-141P/SPG-1510P PAL Sync Generators

For PAL systems B, G, H and I. Standard features of this compact, very stable generator include automatic crash and slow lock, black burst output and SC/H corrector module. Frame is wired for optional color bar signals.

- SPG-141P** \$3,295.00
- SPG-1510P** PAL sync generator for systems B, G, H and I 3,295.00
- 250CB** PAL color bar generator for SPG-141P 620.00
- 1510CB** PAL color bar generator for SPG-1510P 595.00
- 1101ME** Module extender for SPG-1510P 150.00
- 100ME** Module extender for SPG-141P 65.00
- Extra instruction manual 55.00

SPG-141P

CTG-240N NTSC Calibration Test Generator

Stand-alone, RS-170A source of most commonly used video test signals, NTSC system pulses, subcarrier and trigger signals. Unit features separate test signal outputs and one switched output.

- CTG-240N** \$7,550.00
- 100ME** Module extender 65.00
- Extra instruction manual 55.00

CTG-240N

DTG-1110N NTSC Digital Test Generator

Single rack unit, one generator version of the DTG-1010N. Ideal for small fixed or mobile installations. Includes outputs of sync blanker, and subcarrier.

- DTG-1110N** \$5,995.00
- 1010RP** Remote control panel 740.00
- 1000ME** Module extender 225.00
- Extra instruction manual 65.00

DTG-1010N NTSC Digital Test Generator

Guaranteed accuracy and stability. Unit contains RS-170A genlock SPG and 5 digital test generators with 40 test signals each. Independent remote control for each generator allows simultaneous test procedures. Includes CCIR 473-3 VITS and outputs of sync, blanking, subcarrier and trigger signals.

- DTG-1010N** With 5 data store modules \$11,500.00
- DTG-1010N-1** With 1 data store module 7,195.00
- 1000DS** Data store module 1,450.00
- 1010RP** Remote control panel 740.00
- 1000ME** Module extender 225.00
- Extra instruction manual 65.00

STG-2500N

ITG-3400N NTSC Insertion Test Generator

The ITG-3400N allows simple and reliable insertion of eight standard, internal vertical interval test signals into program video. These digitally generated, 12-bit precision waveforms conform to CCIR (NTC-7) and FCC specifications. One external, user-supplied signal source can also be selected.

The application of microprocessor control and digital technology in general, together with the latest analog circuit components, results in a unit with previously unavailable features and high quality video specifications.

- ITG-3400N** \$5,895.00
- 1101ME** Module extender 150.00
- 100ME** Module extender 65.00
- Extra instruction manual 65.00

STG-2500N NTSC Studio Test Generator

The STG-2500N provides 22 computer-generated video test signal types specifically designed for baseband video studio equipment and general in-plant applications. Where applicable, the signals are also available at low APL, high APL and luminance only for a total of 56 different test signals. Additional signals include three VITS packages (FCC, CCIR (NTC-7), CCIR with VIRS) and a full range of trigger signals. Test signals are stored in EPROMs and may be adapted to changing industry standards. Conversion to analog form occurs with 10-bit precision. Test signals are directly selectable with front panel push buttons.

- STG-2500N** \$5,995.00

TTG-2500N/XTG-2500N

NTSC Transmission Test Generators

The compact TTG-2500N NTSC Transmission Test Generator provides 22 computer-generated video test signal types specifically designed for FM transmission link measurements. Where applicable, the signals are also available at 10%, 50% and 90% APL for a total of 60 different test signals. Additional signals include three VITS packages (FCC, CCIR (NTC-7), CCIR with VIRS) and a full range of trigger signals. Test signals are stored in EPROMs and may be adapted to changing industry standards. Conversion to analog form occurs with 10-bit precision. Test signals are directly selectable with front panel pushbuttons.

- TTG-2500N** NTSC Transmission Test Generator (FM) . . . \$5,995.00
- XTG-2500N** NTSC Transmitter Test Generator (AM) 5,995.00
- 2500RP-T** Remote control panel for TTG-2500N 870.00
- 1000ME** Module extender 225.00
- Extra instruction manual 65.00

LEITCH VIDEO OF AMERICA, INC.

Video Processing

VIP-1101N NTSC Vertical Interval Processor

- Digitally generated sync, burst and black
- RS-170A SC/H always maintained
- RS-170A or narrow H blanking selectable
- Microprocessor control
- Comprehensive self-diagnostics, including setup and timing modes
- Digital front panel status display
- Automatic failure bypass
- Transient-free switching
- RS-232C remote control interface
- Digital power-down memory
- Digitally temperature compensated, high stability crystal oscillator
- Programmable signal loss handling
- Differential video inputs
- High efficiency switching power supply

VIP-1101N	NTSC Vertical Interval Processor (2 VI source inputs standard) Complete with detachable power cord and instruction manual.	\$4,295.00
1101IP	Input preselect (module)	555.00
1101ME	Module extender	150.00
100ME	Module extender	65.00
	Extra instruction manual	60.00

VIP-1101N

IAD-750

IAD-750N Vertical Interval Adder/Deleter

- Inserts one VI source
 - Controls lines 16 through 19
 - Automatic video continuity
 - Failure bypass
 - The IAD-750N will accept up to two of the 660 Series distribution amplifiers
- | | | |
|----------|------------------------------------|------------|
| IAD-750N | | \$1,820.00 |
| 100ME | Module extender | 65.00 |
| | Extra instruction manual | 30.00 |

SCH-710P/SCH-711P

PAL Sync/Subcarrier Phase Monitor

- PAL version is calibrated to show preferred SCH phase according to EBU Technical Statement D23-1984. SCH-711P has H timing indication.
- | | | |
|----------|-------------------------------------------------------|------------|
| SCH-710P | | \$1,295.00 |
| SCH-711P | | 1,495.00 |
| 710UM | H Timing indication upgrade kit for SCH-710P. | 585.00 |
| | Extra instruction manual | 20.00 |

SCH-730N/SCH-731N

SCH-730N/SCH-731N

NTSC Sync/Subcarrier Phase Monitor

- This stand-alone instrument performs a direct, accurate measurement of the sync/subcarrier phase relationship (SCH per RS-170A) in a composite video signal. SCH-731N includes H timing comparator to show color framing between two signals.
- | | | |
|----------|--------------------------------------------------------|------------|
| SCH-730N | | \$1,300.00 |
| SCH-731N | | 1,600.00 |
| 730UM | H Timing indication upgrade kit for SCH-730N | 300.00 |

VSI-505

VSI-505 PAL/NTSC Video Source Identification

- Mounting frame accepts up to eight 130SI Source Ident modules
 - Each module can be programmed for up to eight alphanumeric characters
 - Character height is 9 or 18 lines
 - Variable positioning
 - Additive mix to video
 - Remote enable/disable
- | | | |
|---------|------------------------------------|------------|
| VSI-505 | | \$1,095.00 |
| 130SI | Source ident | 390.00 |
| 100ME | Module extender | 65.00 |
| | Extra instruction manual | 30.00 |

AVS-481 Audio/Video Switcher

- Wideband, low crosstalk switcher for critical applications
 - Frame accepts one 8 x 1 video and one or two 8 x 1 audio matrices
 - Accurate delay matching, married or separate switching
- | | | |
|--------------------------|--------------------------------------------------------------------------------------------------------------------|----------|
| AVS-481 (Includes 481VS) | | \$895.00 |
| AVS-481-1 | Audio/video switcher mounting frame without front panel control. Requires the 481RP remote control panel | 695.00 |
| 481FR | Mounting frame and power supply. | 495.00 |

LEITCH VIDEO OF AMERICA, INC.

Distribution Amplifiers Video Processing

680 Series Video Mainframe/Modules

Comprehensive range of DAs for signal distribution and processing, such as equalization, clamping and delay. Universal mounting frames accept any type of amplifier in any slot.

FR-681	Video DA mounting frame. 1 RU, flat front panel. Accepts any mix of up to four 680 series modules. Includes one 664PS	\$495.00
FR-681-C	Video DA mounting frame. Same as FR-681 but with fold-down, casting front panel in place of flat front panel	545.00
FR-682	Video DA mounting frame. 2 RU, flat front panel. Accepts any mix of up to ten 680 series modules. Includes one 664PS	750.00
FR-682-C	Video DA mounting frame. Same as FR-682 but with fold-down, casting front panel in place of flat front panel	795.00
VDA-680	Video distribution amplifier	175.00
VEA-680	Video equalizing amplifier without sub-module	250.00
VEA-681	Video equalizing amplifier with clamping	270.00
VEA-682	Video equalizing amplifier with sub-module	300.00
PDA-660	Pulse distribution amplifier	230.00
VCA-660	Video clamping amplifier	275.00
SVD-680	Switchable video delay amplifier (470nS)	475.00
SVD-600/160	160ns passive video delay	240.00
SVD-600/320	320ns passive video delay	410.00
SVD-600/640	640ns passive video delay	650.00
664PS	Power supply	395.00
100ME	Module extender	65.00
	680 Series instruction manual	40.00

680/880 Series

VPA-310P

VPA-330N

880 Series Audio Mainframe/Modules

Very low noise (100dB S/N), virtually transparent, DA. Input over-voltage protection. Two mounting frame sizes available.

FR-881	Audio DA mounting frame. 1 RU, flat front panel, screw terminal back. Accepts any mix of up to four 880 Series modules. Includes one 860PS	\$520.00
FR-881-C	Audio DA mounting frame. Same as FR-881 but with fold-down, casting front panel in place of flat front panel	545.00
FR-882	Audio DA mounting frame. 2 RU, flat front panel, screw terminal back. Accepts any mix of up to twelve 880 Series modules. Includes one 860PS	695.00
FR-882-C	Audio DA Mounting frame. Same as FR-882 but with fold-down, casting front panel in place of flat front panel	775.00
ADA-880	Audio distribution amplifier	245.00
ADA-881	Audio Distribution Amplifier. Eight low impedance outputs. Very low noise (100dB S/N), +30dBu maximum output level, gain range -6 to +33dB, input over-voltage protected and excellent output isolation	\$230.00
ATG-880	Audio Tone Generator. Switch selectable 400 and 1000Hz audio tones. Available on four dual outputs at levels of +8, +4, 0 and -10dBm.	
	The ATG-880 is particularly suited for stereo installations as it provides four sets of stereo outputs, each at a different level. A feature of the tone generator in this application is the Ident switch which causes one of the output channels in each set to pulse off and on	\$225.00
860PS	Power supply	420.00
100ME	Module extender	65.00
	880 Series instruction manual	40.00

VPA-310P PAL Video Processing Amplifier

• Automatic lock mode • Constant sync and burst output • Programmable VITS retention • For systems B, G, H and I

This VPA version, with its high stability SPG, satisfies the most critical user requirements. Pulse outputs and remote control are optional.

VPA-310P		\$5500.00
310RP	Remote control panel	675.00
110LD	Line driver	250.00
100ME	Module extender	65.00
	Extra instruction manual	65.00

VPA-330N NTSC Video Processing Amplifier

• RS-170A front panel SC/H indication • H and V blanking width adjustable • Selectable VIT retention • Video gain control • Fade to black • Soft white clip • Hard white clip • Soft black clip • Hard or soft clamping • Input video lock • External reference lock • Video and/or chroma AGC • Total bypass • Differential input (optional) • Equalizing (optional) • Cue dot (optional)

VPA-330N		\$4850.00
VPA-331N	Same as 330N except has chroma gain control and auxiliary video input	4995.00

Options for VPA-330N and VPA-331N

330CD	Cue dot generator	\$265.00
330PE	Processor equalizer (factory installed)	335.00
330RP-1	Main remote control panel	725.00
330RP-2	Aux. remote control panel	700.00
330RP-3	Cue dot control panel	550.00
100ME	Module extender	65.00
	Extra instruction manual	65.00

LEITCH VIDEO OF AMERICA, INC.

Clock Systems

CSD-5300N Master Clock System Driver

State-of-the-art Master Clock Driver. Serves as master, submaster or slave. Telephone interface for automatic time checks. RS-232 interface for remote programming and computer reference. Outputs include SMPTE time code, impulse, parallel BCD and more.

CSD-5300N		\$3950.00
5300CD	Impulse driver210.00
5300MB	Modem board475.00
5300RI	Reference interface465.00
5300ME	Module extender145.00
100ME	Module extender65.00
	Extra instruction manual60.00

CDD-5400 Clock Distribution Driver

The CDD-5400 not only increases the impulse clock load capacity of your Master Clock System driver, it also provides load isolation and overload protection. The compact, 1RU mounting frame comes with a plug-in power supply and will accept one or two distribution driver modules, depending on your expansion or distribution requirements. LED status indicators and fault alarms keep you informed. Also features power back-up and rear panel connections.

CCD-5400	Includes one 5400ID impulse driver	\$1495.00
5400ID	Second impulse driver790.00
1101ME	Module extender150.00
100ME	Module extender65.00
	Extra instruction manual40.00

CDA-5500 Clock Driver Autochange

• Autochange for two CSD-5300 Master Clock System Drivers • Compatible with CSD-510 Master Clock System Drivers • Switches impulse drive, time code, RS-232 and telephone line • Accepts external 24VDC stand-by power

CDA-5500	Includes 5500CS cable set	\$1995.00
5500TS	Telephone switch280.00
1101ME	Module extender150.00
100ME	Module extender65.00
	Extra instruction manual40.00

DTD-5200 Series Digital Time/Date Displays

The DTD-5200 Series are microprocessor controlled devices and accept standard serial time code in SMPTE or EBU format. No input selection or switching is needed for either type of code. The decoded signal drives a 6-digit, 7-segment real time (time of day) display in hours, minutes and seconds (HH:MM:SS). Either the 24-hour format or the 12-hour format with AM/PM indication can be selected.

The time displays are available in rackmount, console mount or desktop versions. Readout digits are 0.8" H. The brightness of the readout can be set to one of four levels with a rear panel DIP switch.

The time display units are compatible with a user-defined time offset when driven from the CSD-5300N Clock System Driver.

One instruction manual is supplied with each shipment. Optional, genuine hand-rubbed oak wood frames available for most clock models.

DTD-5200	Time/date display	\$ 875.00
DTD-5201	Time/date display with parallel BCD output950.00
DTD-5202	Time/date display with DQC output1250.00
DTD-5203	Dual time/date display1750.00
DTD-5210	Desktop version of the DTD-5200875.00
DTD-5220	2.25" LED read out display1250.00
	Extra instruction manual for the 5200 Series35.00

CSD-5300N

5012

DTD-5203

DAC-5000 Series Analog Clocks

The DAC-5000 Series clocks are designed to combine the advantages of large, easily understood analog time displays and the self-setting capability of digital SMPTE/EBU serial time code readers. This advanced automation is made possible by a unique, digitally controlled drive mechanism. A microprocessor is used to decode the digital time code information and precisely position each hand via three independent motors.

DAC-5005	Digital analog clock 5" desktop	\$695.00
DAC-5006	Digital analog clock 5" rackmount655.00
DAC-5008	Digital analog clock 8" wall mount695.00
DAC-5012	Digital analog clock 12" wall mount695.00
DAC-5016	Digital analog clock 16" wall mount795.00
RM-5008	Rackmount kit for the DAC-500860.00
RM-5012	Rackmount kit for the DAC-501260.00
RM-5016	Rackmount kit for the DAC-501660.00
WM-5012	Dual wall and ceiling mount kit for two DAC 5012's	100.00
	Extra instruction manual30.00
AIC-5108	12VDC analog impulse clock 8" wall mount450.00

VCD-5600 Video Character Display

- Keys SMPTE/EBU time code (HH:MM:SS) into program video
- Simultaneous display of time and text • Three character sizes
- RS-232/422 input
- Time window can contain EEPROM-stored source ident

The VDC-5600 is a 1RU, stand-alone device, designed to key SMPTE/EBU time code derived real time (HH:MM:SS) into program video. No input selection or switching is needed for either type of code. Time can be displayed in 12-hour format with AM/PM indication, or in 24-hour format. Local time-offset can be added in 30 minute increments. The unit is also compatible with a user-defined auxiliary offset when it is driven from the CSD-5300 Clock System Driver. A second line under the time numerals can be used for source identification. The characters appear white on program background or on a black matte. The time/ident window can be positioned anywhere in the picture area.

VCD-5600N		\$1895.00
5600CD	Second Character Display895.00
1101ME	Module extender150.00
	Extra instruction manual40.00

LEITCH VIDEO OF AMERICA, INC.

Still File System/Frame Synchronizer

DSF-3100N NTSC Digital Still File System

- Capacity of 1500 fields/750 frames (upgradable to 10,000)
- Will store the slide as a true color frame (a true color frame requires 4 times the amount of memory as a field)
- Single or dual channel (configurable for preview/on air or A/B operation)
- High quality video specifications
- Compact control panel with back-lit 20" x 2" LCD display and tally LEDs
- Uses standard personal computer with SCSI Interface
- Integrated descriptive library database
- Networking

DSF-3100N \$29,900.00

Includes the following items:

- 3100CU control unit (accepts optional second disk drive)
- 3101DD disk drive (1500 fields storage)
- 3100FB frame buffer
- 3100RP remote control panel
- 3100KB keyboard
- 3100ZX system software
- 3101ZX configuration and diagnostics software
- 3100MAN technical manual
- 3101MAN operations manual
- 3100SD status display (monochrome)

Options

- 3100FB** Second channel (with input) \$15,000.00
- 3100FB-1** Second channel (output only) 10,000.00
- 3100SD** Status display (color) 895.00
- 3100RP** Extra remote control panel 2,495.00
- 3000RA** Remote control assignment 1,195.00
- 3000ME** Module extender 195.00
- 1000ME** Module extender 225.00
- 3100MAN** Extra technical manual 75.00
- 3101MAN** Extra operations manual 75.00

Optional Extra Storage

- 3101DD** Additional 1200 fields \$5,000.00
- 3100EX** Expansion frame 8,000.00
(Includes one 3101DD. Accepts up to two 3101DD)

Optional Backup/Archiving

- 3100TD** Streamer tape drive and one tape \$3,000.00
- 3100TA** DC-600A tape cassette (for 3100TD) 65.00

DSF-3100N

DFS-3000N NTSC Digital Frame Synchronizer

Sophisticated digital circuitry and engineering advancements have produced a frame synchronizer that eliminates "frame grabbing" or picture "freezing" due to noisy video signals. Available in both two-field and four-field versions. With the four-field version the DFS-3000N is able to deal with the four color fields of the NTSC system and eliminate the horizontal shift of the picture that is associated with two-field operation.

The compact frame synchronizer's output is RS-170A zero SC/H at all times. The unit has RS-232C ports for remote control operation and interface with audio delay synchronizers. The remote control panel has the same functions as the front panel of the DFS-3000N. Other features include field or frame freeze, three modes of trouble-free hot switching, VIR corrector, auxiliary video input and four programmable output system phase presets. The programmable presets and the field or frame freeze functions can be activated through the remote control RS-232C port.

The DFS-3000N NTSC Digital Frame Synchronizer is available in an 8-bit or 9-bit version (2-field memory), complete with detachable 3-pin power cord and instruction manual.

DFS-3000N

		8-Bit System 256 Levels	9-Bit System 512 Levels
DFS-3000N	NTSC Digital frame synchronizer with one 3000FM (two-field version)	\$10,995.00	\$12,500.00
3000CF	Comb filter	1,665.00	1,995.00
3000FM	Frame memory	1,665.00	1,995.00
3000RP	Remote control panel	1,195.00	1,195.00
3000RA	Remote control assignment	1,195.00	1,195.00
3000ME	Module extender	225.00	225.00
1000ME	Module extender	225.00	225.00
	Extra instruction manual	65.00	65.00

Refer to Green Section for Addresses and Telephone Numbers.

Starflex Professional Series Modular Television Systems Products

The Starflex modular frame system provide the flexibility which permits you to select the Starflex electronic functions you need and arrange them in the frame in any manner you desire. Starflex modules for signal distribution, timing or processing, either analog or digital, can be used in the Starflex frame simultaneously.

3000	Frame and one 150W power supply	\$495.00
3030	Frame (no power supply).	179.00
1011	Blank panel—single width	15.00
1031	Extender board—single width	100.00

Starflex 3120 Master CRS Generator

This module is one bay wide. The primary purpose is to generate CRS and supply it to the Starflex frame bus. When the front panel switch is on "internal", the unit performs this primary purpose. When "external" is selected, CRS must be provided to the unit through a BNC input. This optional selection permits the 3120 to function as a "CRS Slave" timing module. The 3120 has two BNC CRS outputs available to drive additional Starflex frames.

3120	\$895.00
-------------	-----------	-----------------

Starflex 3125 Black Burst to CRS Translator

This module is one bay wide and provides translation of a black burst signal to a CRS signal. Input is by a loopthrough BNC and the 3125 locks to a black burst signal and maintains color field one throughout the translation to CRS.

The 3125 detects loss of black burst and/or an improper SC/H relationship. CRS is applied to the frame bus under normal output conditions, but can be factory wired to the rear panel BNC output.

3125	\$895.00
-------------	-----------	-----------------

Starflex 3140 External CRS Slave

The 3140 module is one bay wide with two high impedance loopthrough inputs. The unit locks to an external BNC CRS input only and has a ± 5 s timing adjustment. The unit's purpose is to apply CRS to the Starflex frame bus. An example of use would be the transfer of timing from another Starflex frames' CRS source.

3140	\$895.00
-------------	-----------	-----------------

Starflex 3150 External CRS Black Burst Slave

The 3150 is one module bay wide and accepts CRS from an external source (rear panel BNC), supplies it (CRS) to the frame bus and supplies black burst to a BNC output.

It provides user adjustable "H" rate pulse widths, horizontal timing control, and 360° SCH.

3150	\$895.00
-------------	-----------	-----------------

Starflex 3020 150W Power Supply

The power supply is separate from the frame, and may be positioned anywhere in the frame, as desired. May be used in multiples. Use of removable modular rear panels allows totally customized connectors and labeling.

3020	\$326.00
-------------	-----------	-----------------

Starflex 3410 CRS Slave

The 3410 is one module bay wide, employing two high impedance loopthrough inputs. It locks to a CRS input only and CRS is selectable between the motherboard bus (normal) or the rear panel BNC input (optional). The 3410's outputs are timing pulses only.

3410	\$895.00
-------------	-----------	-----------------

Starflex 3420 CRS-Black Burst Slave

The 3420 is one module bay wide, employing two high-impedance loopthrough inputs, accepting 1V p-p CRS. The CRS input is selectable between the motherboard bus (normal), or rear panel BNC (optional). Output of the 3420 is two black burst, 75 ohms, terminated.

3420	\$895.00
-------------	-----------	-----------------

Starflex Series

Starflex 3500 Precision Video Distribution Amplifier

The 3500 is a one input, six output (75 ohm) precision distribution amplifier with full pulse and subcarrier capability. It incorporates a fully differential front end circuit with an extremely high common-mode rejection ratio. It is immune to parasitic high frequency failure and capable of handling the bandwidth of HDTV.

It is available with feedback clamp as well as cable equalizer options.

3500	\$319.00
-------------	-----------	-----------------

Starflex 3520 Universal Distribution Amplifier

The 3520 is a one input (high impedance loopthrough), six output (75 ohm, terminated) video distribution amplifier. It provides an economic alternative for the user who does not require the feedback clamp or cable equalizer options of the Starflex 3500. The 3520 is capable of handling the HDTV bandwidth.

3520	\$214.00
-------------	-----------	-----------------

Starflex 4350 Videoscope

The 4350 is a third generation Videoscope designed to use only one bay in the Starflex frame system. The 4350 Videoscope displays an accurate measurement of the SC/H and timing relationship of any NTSC standard video signals on any NTSC standard monitor, B and W or color.

Innovative use of a video insert display allows determination of reference signal SC/H phase and burst amplitude, and allows comparison with system SC/H phase as well as vertical and horizontal timing. This information is displayed while allowing the input signals to be viewed. To avoid washout of the Videoscope information with high APL, a Shadow mode is available which reduces contrast in the display insert portion. Additionally, the Videoscope display insert can be completely deactivated for crucial monitoring.

4350	\$2350.00
-------------	-----------	------------------

Starflex 4500 Digital Frame Synchronizer/Time Base Corrector

This module is two bays wide with two inputs. The main input is a high-impedance loopthrough black burst for frame synchronization, ± 3 dB from .429V p-p nominal. The second input is a VTR BNC, 75 ohm terminated. It has a 15-pin subminiature "D" remote connector.

The unit has two outputs. One is a time base corrected BNC video output that has auto-bypass operation. If the unit loses reference black burst (module is removed or loss of frame power), or if bypass is selected, the input video will be hard bypassed to this output BNC.

The second BNC output is for monitoring purposes and is time base corrected. A freeze frame can be selected by a front panel control.

4500	\$3995.00
-------------	-----------	------------------

Starflex 6500 Audio Distribution Amplifier

This module is one bay wide with one input and six outputs (150 ohm output capability). The 6500 incorporates balanced (transformerless) differential input and output circuitry.

The signal-path is direct-coupled throughout (no capacitors) and possesses low noise, minimum phase shift and wide power bandwidth (200K). In addition, the 6500 creates a differential (balanced) output from a single-ended input.

Two 6500's may be operated in a stereo configuration by utilizing the two audio-send buses in the Starflex system frame.

6500	\$360.00

 RS170A Digital Sync Generator**

Developed to meet the advanced technology demands of the Broadcast, Industrial and Computer Graphics video markets.

Features: RS170A specification, Digital Design, Multifunction genlock with exclusive PC lock, Panel status lights, Full 360° Sch phasing, Full $\pm 5\mu\text{s}$ H phasing, Fail safe mode for loss of burst, Broadcast spec. TCVCXO (Temperature Controlled, Voltage Controlled, Crystal Oscillator).

PSG-313A \$ 1535.00

PFT-314 Frame Timing Module

The PFT-314 basically has the same system responsibility as its sister unit, the PGS-315 Generator Substitute unit. That is, its primary function is to receive an external signal and supply the PFM-300 frame mother board with all the six drive signals. The PFT-314 has major differences: The input signal is a Composite Reference Signal (CRS) instead of individual drive signals; provides a complete set of output signals for use external to the frame; has advanced timing capabilities instead of just delay, and subcarrier is phase locked to H Sync.

PFT-314 \$ 1095.00

PFT-314

300 SERIES (cont'd)

PGS-315 Sync Generator Substitute Module

The PGS-315 Sync Generator Substitute module is a valuable member of the overall 300 System concept. It has the primary function of replacing the PSG-310 or PSG-311 Sync Generators when external drive sources are available to the PFM-300 Frame. The PGS-315 accepts Sync, Blanking, H-Drive, V-Drive and Subcarrier from an external source, processes these signals and distributes them to the proper buses in the frame. The identical digital delay circuits, as described in the PSD-340 System Delay Module, are also in the PGS-315 Module, providing the system timing capabilities for the frame. Because the PGS-315 is not a generator, although in this application it is performing the same function, the pulses supplied to the frame are absolutely jitter free and can be perfectly timed.

PGS-315\$663.00

PGS-315

PFI-316

PFI-316 Frame Interface Module

The PFI-316 Frame Interface Module is a unique and inexpensive way of allowing an external generator to supply signals to the PFM-300 Frame. It has the primary function of replacing the PSG-310 or PSG-311 when external drive pulses are available to the PFM-300 Frame. The PFI-316 accepts Sync, Blanking, H-Drive, V-Drive, Subcarrier, and Burst Flag from an external source for proper distribution to the mother board buses in the frame. There are no delay circuits in the PFI-316. Its function is simply to apply the proper level and impedance of each signal to the frame.

PFI-316\$413.00

PCO-317

PCO-317 Automatic Sync Changeover Switch

The PCO-317 Automatic Sync Changeover Switch is a remarkable state-of-the-art device designed to instantly recognize the failure of any synchronizing signals and immediately switch to an alternate source. Signal sensing circuits monitor each input for the level and timing of the Sync, Blanking, Horizontal Drive, Vertical Drive, Burst Flag, and Subcarrier signals. Upon loss of the primary generator, the PCO-317 will supply the frame buses with the alternate source only if their signals are acceptable to the changeover module's parameters. It will not switch to a faulty generator.

PCO-317\$655.00

PCO-318 Automatic Sync Generator Changeover with Black Burst (for PFM-301 frame only).\$922.00

Option 2 Remote Control for PCO-318.\$220.00

PCB-320

PCB-320 Encoded Color Bar Generator

The PCB-320 Encoded Color Bar Generator is a precision test signal generator engineered to conform to the EIA RS-189-A and NTSC specifications. Reflecting the progressive concept of the 300 System, the PCB-320 includes the new SMPTE Alignment Color Bar Test Signal with chroma and black set signals. The encoder is a true NTSC standard as evidenced by the precise filtering of the I and Q channels shown by the waveform.

One of the exclusive features of the PCB-320 is the single control composite video delay circuit which, for the first time, allows system timing of test signals.

PCB-320\$1082.00

PBB-321

PBB-321 Black Burst Generator

The PBB-321 Black Burst Generator is a precision professional broadcast quality Black Burst Generator that provides a "Color Black" video signal composed of composite sync, set-up and color burst. This signal is used as the black reference input to switching systems, cameras or may be used as a signal source to genlock remote sync generators to "House" sync.

PBB-321\$655.00

PBD-322

PBD-322 Bar Dot/Visual Reference Generator

The PBD-322 Bar Dot/Visual Reference Generator is one of the 300 System's most technically advanced signal generators. It is two separate and independent generators providing the standard dot grading signals, and a new linearity test signal, including a "Safe Title" signal.

The Bar Dot Generator digitally produces EIA standard horizontal and vertical bars, cross hatch, and dot signals used in the testing for convergence of color monitors and camera sweep circuits. Horizontal and vertical position controls, plus pattern selection, are located on the front panel.

PBD-322\$922.00

LENCO, INC.

Terminal Equipment

300 SERIES (cont'd)**PMB-323 Multiburst/Sweep Generator**

The PMB-323 Multiburst and Sweep Generator is a combination of two precision test signal generators which are required for overall system frequency response measurements. A front panel switch provides for selection of either the Multiburst signal, the Sweep signal, or both (on alternate lines). Other switches allow for the selection of full or reduced amplitude and burst on-off. The multiburst frequencies are preset to EIA standards but burst frequencies can be adjusted to 10MHz if required. Stability of both amplitude and frequency is assured by a precision function generator operating within a feedback loop. The burst levels are fixed and cannot change as are the sync and setup levels. The Sweep Generator provides a linear sweep at a horizontal rate from 0.5MHz to approximately 12MHz with overall flatness of 0.2dB. Fixed markers are provided at 2.0MHz intervals.

PMB-323 \$1025.00

PSS-324 Stairstep/Ramp Generator

The PSS-324 Stairstep/Ramp Generator provides a precision test signal for measuring differential phase and gain, luminance linearity, and burst phase error of a video system. An exclusive feature of the generator is a negative signal for all combinations of test signals. This is a very important function for the testing of differential phase and gain in the burst region. Strict conformity to the standards of IEEE 206 is adhered to, as well as a true video bounce test that conforms to standard APL definitions.

PSS-324 \$1133.00

PPB-325 SIN² Pulse Window Generator

The PPB-325 Sin² Pulse Window Generator is another in the series of fine, precision, state-of-the-art signal generators. Unique engineering and packaging techniques have provided the following nine precision test signals in a one module width plug-in unit: Modulated 12.5T and 20T, T, 2T, or T/2 pulses, window or bar signals and the exclusive "pluge" pulse. The PPB-325, with a combination of front panel switches and internal strapping options, can provide almost any combination of the nine signals. This feature was designed to allow the user to determine the proper test signals which are best suited for his particular system application.

PPB-325 \$1334.00

PFF-329 Black Burst/Background Generator

The Black Burst section of the PFF-329 provides a "Color Black" video signal composed of composite sync, setup, and color burst. This signal is used as the black input to switching systems, or may be used as a signal source to genlock remote sync generators to "House" sync.

The Color Background section produces a solid field of color and, when connected to the input of a special effects generator or video insert keyer, provides color backgrounds for titles and other inserts. A standard feature of all 300 System Generators is a composite delay which provides for delaying the output signal up to 1.5μs to assist in system timing.

PFF-329 \$700.00

PSD-340 System Delay Module

The PSD-340 System Delay Module has completely changed the traditional system timing techniques as they are now used. This unique system concept obsoletes the use of pulse and subcarrier distribution amplifiers, as well as excessive cable or other external delay devices used in system timing. The PSD-340 will supply all drive signals to any video source, including subcarrier, with the unique capability of timing these signals to your system requirements. This jitter-free device can be compared with having an individual genlock sync generator driving each camera, switcher, VTR, etc.

PSD-340 \$605.00

PMB-323

PSS-324

PPB-325

PST-341

PBT-342

**PST-341 System Timing Module with Optional Black Burst Output**

The PST-341 System Timing Module is a new generation of system timing equipment added to the "300 System". It not only has delay, but advance as well. The PST-341 requires the Composite Reference Signal (CRS), from the PMG-312 Master Sync Generator via the PFM-300 Frame mother board. This Composite Reference Signal supplies Master Sync Generator timing information to the PST-341 for the purpose of system distribution and timing.

PST-341 \$1095.00

PBT-342 Black Burst Timing Module

The PBT-342 Blackburst Timing Module not only has delay, but advance as well. The PBT-342 requires the Composite Reference Signal (CRS) from the PMG-312 Master Sync Generator via the PFM-300 Frame mother board. This Composite Reference Signal supplies Master Sync Generator timing information to the PBT-342 for the purpose of system distribution and timing of blackburst required devices.

PBT-342 \$1095.00

PPA-343 Pulse Distribution Amplifier

The PPA-343 Pulse Distribution Amplifier is an important module in the overall concept of the 300 System. Although the PSD-340 System Delay Module is the modern method of pulse distribution and system timing, there are still many applications where the standard methods of individual pulse distribution are required.

PPA-343 \$314.00
Option 1 Pulse Delay Assembly for PPA-343 214.00

LENCO, INC.*Terminal Equipment***300 SERIES (cont'd)****PFO-344 Fan-Out Pulse Distribution Amplifier**

The PFO-344 is a universal fan-out amplifier consisting of six separate and independent DA cells. Each cell has one input and one output with unity gain. Each cell can be programmed by changing connector positions to select any combination of drive pulses. The pulses are made available on the frame mother board by any of the 300 Series sync generators or an interface module.

PFO-344 \$413.00

PSA-346 Subcarrier Distribution Amplifier

The PSA-346 Subcarrier Distribution Amplifier was designed to supplement the versatile 300 System's unique concept and incorporates the same state-of-the-art design techniques found in all of the 300 System modules. The PSA-346 is a precision, ultra-stable, regenerative subcarrier amplifier whose advanced circuitry provides a pure, distortion-free 3.58MHz sine wave.

PSA-346 \$435.00

PVA-350 Video Distribution Amplifier

The PVA-350 Video Distribution Amplifier reflects a new concept in engineering techniques, bringing to the 300 System a versatile state-of-the-art video amplifier with outstanding performance characteristics. The PVA-350 is flat to 15MHz, has a unique automatic DC offset control, and offers low noise, excellent stability, and virtually no distortion. A differential amplifier on the input is standard in the PVA-350, and provides 70dB of common mode rejection.

PVA-350 \$319.00

Option 1 Feedback Clamp Assembly \$121.00

Option 2 Cable Equalizer Assembly \$99.00

Option 3 Sync Adding Assembly \$66.00

PVA-351 White Clip Video Amplifier

The PVA-351 Video White Clip Distribution Amplifier has a differential high impedance looping input that is standard and provides more than 60dB of common mode rejection for reduced ground loop hum pickup. Gain is front panel adjustable over a ± 6 dB range. Frequency response is flat to 10MHz. The PVA-351 offers low noise and excellent stability with virtually no signal degradation. Four 75 ohms source terminated DC coupled outputs are provided with excellent low frequency transient response and 40dB of isolation.

PVA-351 \$424.00

PVA-352 Utility Video Distribution Amplifier

The PVA-352 provides the quality-conscious as well as cost-conscious user the features and performance expected by broadcasters and video production houses.

Dependable video distribution within a television facility is critical. The front mounted power status LED remains lighted when the PVA-352 is correctly powered. A front mount gain control provides precise adjustments of each distribution amplifier for a variety of applications. The front mounted video test points allow critical system analysis without removing the module from the frame.

PVA-352 \$197.00

PVD-354 Variable Delay Video Amplifier

The PVD-354 Variable Delay Amplifier is a precision device that has widespread system applications when quality and accuracy of video timing is desired. Most passive video display devices have a very sharp frequency roll-off above 5MHz and show an insertion loss of about 6dB. This requires the use of a video distribution amplifier with enough gain to bring the signal up to normal. The PVD-354, however, is a wideband device that has no insertion loss, and will provide up to 1,051 μ s of equalized video delay, with infinite resolution of delay setting.

PVD-354 \$1095.00

**PVA-350****PVD-354****PRC-365****PSW-367****PRC-365 Processing Amplifier with Sync Generator**

The PRC-365 is a high performance video processing device. It is designed for use in studios, master control facilities or transmitter locations. It features standard or helical lock, differential video input, luminance only black clip, a soft white clip, internal digital sync generator, vertical interval line select, front panel controlled pedestal, genlock capability and a front panel LED that indicates the presence or absence of video. The PRC-365 requires only the PFM-300 Frame and Power Supply for operation.

PRC-365 \$2079.00

PSW-367 6x1 Vertical Interval Switcher

The PSW-367 6x1 Test Switcher was designed to provide a unique and economical method of selecting the various output signals from the test signal generators that may be installed in the PFM-300 Frame. In addition to the six test module signals, provisions have been included to allow the PSW-367 to switch to either the "Genlock Video" or one other external video source. The PSW-367 will switch during the vertical interval and the LED display will constantly monitor the switch status.

PCO-418

Automatic Sync Pulse Changeover for PSG-12*

The PCO-418 Automatic Changeover Switch instantly recognizes the failure of any of nine pulses and immediately switches to an alternate generator. There are nine LEDs metering each generator. A nine position DIP switch allows the lock-out of any of the nine generator pulses. A front panel switch selects GEN-1 or GEN-2 or Auto. The unit switches on failure of HD, VD, SY, SC, BL, CRS, BF, BB and CFI.

- PCO-418 \$1995.00

VNM-428 Video Noise Meter*

The VNM-428 is a Video Noise Meter that offers the in-service capability of making accurate real time signal-to-noise measurements. It has a built-in calibrator that insures an accuracy of 1% through its range of 28.5dB to 76dB. The signal-to-noise ratio is shown directly on a large LED display. The VNM-428 can be calibrated to read directly in either the EIA or PAL-M system standards.

- VNM-428 \$2145.00

PVS-430 Videoscope

The PVS-430 provides a true method for certifying the correct SC/H phase relationship. The PVS-430 will measure very accurately the SC/H phase relationship and compare the video input of a switcher or mixer for precise and accurate system timing. In an editing system, the Videoscope provides a useful method of determining off-tape SC/H phase.

- PVS-430 \$3245.00
- PVS-435* Videoscope with video display and LED readout 4153.00

T8C-450 Digital Time Base Corrector

The T8C-450 high performance unit is sophisticated in its techniques yet its simplistic design allows unparalleled performance in a wide range of professional broadcast applications.

At less than 15 lbs. and only 1 rack unit tall, this digital device with its remarkably low power consumption requires no external cooling. The T8C-450 is engineered to be ultra reliable to keep downtime to a minimum, yet its totally digital design allows for quick and easy servicing. An essential part of any professional editing system, this compact unit has been constructed to be rugged enough to withstand the toughest applications.

With its state-of-the-art components, the T8C-450 is the answer to today's requirements for space-saving design, superior quality and unbeatable economy for the professional video user.

- T8C-450 \$5995.00

*Indicates availability for PAL System also

PRC-465 Processing Amplifier

The PRC-465 is a self-contained stand alone processing amplifier. The unit features chroma processing, a 10MHz luminance band pass, luminance only black clip, white clip, and a line by line VIT-VIR pass or delete selector. The unit has its own built-in sync generator, but may be set up to run off of an external video reference source such as blackburst. An internal switch allows the unit a greater lock range and enables the device to process the output of a helical scan VTR. Front panel controls provide adjustment of Burst Phase, Horizontal Phase, White Clip, Set Up, Video Gain, Chroma Gain, and Proc On/Off switch.

- PRC-465 \$2525.00

PCE-466 Color Encoder*

The PCE-466 Encoder produces an NTSC/EIA color signal from either a three or four channel video source. The fourth, or luminance channel, is optional. The encoder requires red, green, blue, sync, SC and blanking input. Split field color bars meeting RS-189A are standard. Full field or split bars are selectable internally. Front panel switches allow the selection of operate, color bars, black burst or mono. All inputs are 75 ohm loopthrough. Two video outputs.

- PCE-466 \$3450.00
- PCE-4661* Plug-in luminance channel 795.00
- PCE-4662 Plug-in genlock option 747.00

PSW-467 Vertical Interval Bridging Switcher*

The PSW-467 is a 12 x 1 vertical interval bridging switcher. It is designed to efficiently and economically route or delegate video signals.

- PSW-467 \$1150.00

PAF-467 Audio Follow Bridging Switcher*

The PAF-467 is a 12 x 1 Audio Follow Video Switcher designed as a companion to the PSW-467 Video Switcher.

- PAF-467 \$940.00

PSR-467 Remote Control*

The PSR-467 Remote Control is a self-contained rackmounted unit that can be located up to 1000' from the switcher location. It requires no external power source because it receives its power from the PSW-467 or PSW-468 Video Switcher.

- PSR-467 \$604.00
- PSR-4673* Remote control P.C. board assembly 289.00

PSW-468 Remote Vertical Interval Video Switcher*

The PSW-468 is a 12 x 1 remotely controlled, vertical interval video switcher. This switcher has no push buttons. All input switching is controlled by the companion PSR-467 remote control unit or PSW-467 vertical interval switcher.

- PSW-468 \$985.00

PCD-473 NTSC Component Decoder

The PCD-473 is a self-contained chroma demodulator. The unit provides outputs of red, green, and blue signals or Y, R-Y, B-Y, signals, or I, Y, Q signals. Selection of outputs is internal to the unit through a jumper system. The unit features a comb filter which is switchable in and out of service through a lighted front panel switch. The front panel controls provide adjustment of Hue, Saturation, and Video level. A regenerated composite sync output is standard on the PCD-473.

- PCD-473 \$3190.00

LENCO, INC.

Terminal Equipment

PFM-600

PPS-602

PEX-602

PAA-600

PAA-601

600 SERIES AUDIO TERMINAL EQUIPMENT

PFM-600 Main Frame and Power Supply*

The PFM-600 Main Frame is designed to accommodate both audio and video components. It is a nondedicated frame that will have virtually any configuration of audio and video components.

The nine cell design will house any 600 Series Audio modules and most of the 300 Series Video modules. The frame includes the PPS-602 Power Supply, a switchable tap transformer, RFI shielding and an exclusive rear panel design.

PFM-600 \$875.00

PPS-602 Power Supply*

The PPS-602 Power Supply is available as a separate unit for the PFM-600 Main Frame. The unit provides the frame with unregulated DC supplies of $\pm 15\text{VDC}$ and $+8\text{VDC}$ for the video modules and $\pm 24\text{VDC}$ for the audio modules. The individual modules regulate these voltages to 12 , $+5$ and 20VDC . Each supply on the PPS-602 is fused for maximum protection.

PPS-602. \$165.00

PEX-602 Extender Board*

The PEX-602 is an extender board for the PPS-602 Power Supply. The PEX-602 extends the PPS-602 out front of the PFM-600 Main Frame for easy servicing. The unit is made up of two extender boards mounted back to back.

PEX-602 \$87.00

PAA-600 Rear Module Cell*

The PAA-600 is the rear module cell for the PAA-650 and PAA-651 Audio Distribution Amplifiers. The PAA-600 is a one in, six out, into 600 ohms rear module cell. The PAA-600 is RFI shielded with ferrite beads and a capacitor network. The unit utilizes captive pressure screw terminals to

secure the audio cables. Signal feeds can be connected externally to the PFM-600 Main Frame and after all connections are made, the PAA-600 can be secured to the frame with only two screws.

PAA-600 \$72.00

PAA-601 Rear Module Cell*

The PAA-601 is the rear module cell for the PAA-650 and PAA-651 Audio Distribution Amplifiers. The PAA-601 is a one in, two out, into 150 ohms rear module cell. The PAA-601 is RFI shielded with ferrite beads and a capacitor network. The unit utilizes captive pressure screw terminals to secure the audio cables.

PAA-601 \$70.00

PAM-600 Rear Module Cell*

The PAM-600 is the rear module cell that is to be used with the PAM-626 Audio Monitor Amplifier. The PAM-600 features A and B channel external inputs, either balanced or unbalanced, A and B internal bus outputs, and A and B outputs to drive 8 ohm speakers. All connections are made with a captive pressure screw terminal block.

PAM-600 \$66.00

PMA-600 Rear Module Cell

The PMA-600 is the rear module cell that is to be used with the PMA-670 Impedance Matching Amplifier. Two phono jacks accommodate the low level, high impedance, unbalanced outputs and the other two phono jacks are the inputs from low high impedance sources. There are two sets of captive pressure screw terminal blocks. One set is for the inputs from two high level, low impedance 600 ohm level sources. The other set is the outputs for two high level, low impedance, 600 ohm signals.

PMA-600 \$66.00

*Indicates availability for PAL System as well as NTSC Systems as shown.

Refer to Green Section for Addresses and Telephone Numbers.

LENCO, INC.

Audio Terminal Equipment

PAM-626

PAA-651

PAA-650

PMA-670

600 SERIES AUDIO TERMINAL EQUIPMENT (cont'd)

PVA-600 Rear Module Cell*

The PVA-600 is the rear module cell compatible with all usable 300 Series video modules. This single wide module cell contains 8 isolated BNC connectors. The PMG-312, PFT-314 and the PSW-367 will require 2 PVA-600 rear module cells to operate in the PFM-600 Main Frame.

PVA-600 \$68.00

PBL-605 and PBL-606 Blank Rear Panels*

The PBL-605 and PBL-606 are blank rear panels for the PFM-600 Main Frame. These rear module cells will provide a clean environment for the mother board and connectors by isolating the unit from dust and debris. The PBL-605 is a single wide blank rear module cell and the PBL-606 is a double wide blank rear module cell.

PBL-605 \$13.00

PBL-606 15.00

PAM-626 Audio Monitoring Amplifier*

The PAM-626 is a 4.5 watt per channel audio amplifier for the PFM-600 Main Frame. Four inputs provide for two internal and two external signal sources, either combination of which can be monitored on the two, 10-LED peak level meters. The convenient headphone jack permits monitoring either combination of inputs. Headphone volume is controlled by means of the speaker/headphone volume control on the front panel. A front panel switch selects either the two internal A and B bus signals or the two external A and B input signals. The correct rear module cell must be specified to match the appropriate module.

PAM-626 \$495.00

PAA-650 Audio Distribution Amplifier*

The PAA-650 features a transformerless balanced bridging circuit, with the input AC coupled to protect it from excessive DC and diode protected to prevent overloading of the input cell. The common mode circuit provides over 70dB

of common mode rejection on the input signal. The balanced input circuit can be converted to accept an unbalanced input simply by connecting the + or - input to ground. Signal-to-noise ratio is approximately -105dBv and frequency response is +0 to -0.2dB from 20Hz to 20kHz. The PAA-650 also features front panel selection of of the A/B bus system for monitoring purposes. The appropriate rear module cell must be specified when ordering this unit.

PAA-650 \$424.00

PAA-651 Audio Distribution Amplifier with Peak Level Metering*

The PAA-651 Audio Distribution Amplifier is identical in electrical specifications to the PAA-650. The PAA-651 features a front panel peak level meter. The peak level meter consists of 10 LEDs that operate in the range from -25dBm to +15dBm. The LEDs also serve as an overload indicator. A front panel switch on the PAA-651 allows the operator to take the output signal and place it on the A or B bus in the PFM-600 Main Frame. This allows a PAM-626 Monitoring Amplifier to select these signals and deliver them to speaker or headphone outputs. The appropriate rear module cell must be specified when ordering this unit.

PAA-651 \$495.00

PMA-670 Impedance Matching Amplifier*

The PMA-670 was designed to address the problems of two channel record-playback interfacing of balanced and unbalanced lines. The PMA-670 accepts two channels of high impedance unbalanced audio and outputs these two channels as 600 ohm balanced audio. The unit will also accept two channels of 600 ohm balanced audio and output these signals as unbalanced outputs. Phono jacks are used for low level high impedance inputs and outputs. Captive pressure screw terminals are used for the 600 ohm balanced high level inputs and outputs. The appropriate rear module cell must be specified when ordering this unit.

PMA-670 \$407.00

*Indicates availability for PAL System as well as NTSC Systems as shown.

LEXICON, INC.*Delay/Synchronizers/Compressor/Expanders*

1300

1300 Mono/1300S**Stereo Digital Audio Delay Synchronizers**

- Allows broadcasters to effectively solve lip sync problems
- Decodes the hysteresis and frame offset information from any video synchronizer
- Three standard decoding options are supplied: Pulse-width decoding, "wild-feed"/genlock decoding or serial data decoding
- Removable delay configuration control module
- Available in stereo or mono
- Allows synchronous operation of multiple units in master/slave configurations
- Up to two seconds of delay
- Full 20Hz to 20kHz bandwidth
- <0.025% distortion
- Dynamic range: >90dB
- Channel separation: >80dB
- Balanced inputs and outputs
- Displays and indicators have been engineered for ease of operation

At the heart of the 1300 is a microprocessor-controlled removable Delay Configuration Control Module. This module can be software-and/or hardware-configured to conform to any delay/sync decoding scheme for optimum compatibility with any video synchronizer or broadcast environment, now or in the future. This not only provides tremendous flexibility, but is also a protection against obsolescence. Three standard decoding options are provided: a pulse-width decoding scheme, a "wild feed"/genlock decoding scheme, or a serial data decoding scheme. Each has its own specialized software and corresponding interface panel. Any other decoding scheme may be customized to suit a specific application.

On the front panel, digit switches can set a delay offset value (displayed in milliseconds or frame units). The Delay Configuration Control Module determines the frame offset time, based on control signal input and the particular decoding scheme set-up, and scans the front-panel control settings to set the total delay. For those decoding schemes requiring a separate hysteresis signal, a dedicated logic input on the panel of the respective Delay Configuration Control Module decodes hysteresis information to ensure accurate determination of the frame offset time.

The 1300 has also addressed a potential problem in large broadcast set-ups, that of communication with the separately-located video and audio distribution areas. A Remote Video Sensing Module has been designed for physical placement in the video distribution area, with the ability to communicate frame offset and hysteresis information to the main chassis of the 1300 located in the audio distribution area. Communication with the Delay Configuration Control Module of the main chassis is enabled through an RS-422 communications link and Serial Data Interface Panel. The Remote Video Sensing Module can be hardware-configured to match the input requirements of the video sync signals, with standard interface panel options for "wild feed"/genlock inputs (Video Sense Interface Panel), pulse-width inputs (Pulse-Width Interface Panel), or serial data inputs (Serial Data Interface Panel).

1300 Mono with 683ms delay	\$3,700.00
4096ms delay	4,500.00
1300S Stereo with 341ms delay	4,200.00
2048ms delay	4,995.00

2400

1200C Mono/2400 Stereo Audio Time Compressor/Expanders

- Compact three unit high (5 1/4") rackmount
- Modular construction
- On-board diagnostics
- Hinged front panel for ease of servicing

Designed for use on both polyphonic music and voice, the 2400 is a true stereo device which employs digital signal processing algorithms to provide mono compatibility and precise stereo imaging. The 2400 is designed to change the running time of video, film or audio program material while maintaining the original audio pitch.

The 2400 system is designed to interface with SMPTE or EBU time code referenced synchronizers or directly to tape machines with time code follow capability. By generating variable rate time code, the 2400 is able to control play time precisely. Using a synchronizer, both audio and video machines can simultaneously time compress/expand in sync—a major benefit for post production applications.

The front panel, which is ergonomically designed for ease of operation, features a 40-character alphanumeric display, 10 storage registers with battery backup for saving complete front panel set-ups and "soft" knob control for changing expansion/compression parameters. The system enables the user to remote an additional panel via a 9-pin sub-miniature "D" type RS-422 connector.

Built-in programmable relays provide contact closures for external switching. This enables interfacing with control switchers and other machine control systems. Special machine control functions can be custom-designed by the user for a particular application, such as normal play, variable speed play, etc.

Interfacing of time compression/expansion for station automation can thus be provided.

The 2400 can also perform as a pitch shifter with adjustments made by the pitch shift ratio control on the machine's front panel. Entries can be made in either musical interval or pitch ratio formats. Applications extend to all requirements for high quality pitch shifting such as single tracks, special effects or a full mix.

The ten storage registers (or memory groups) feature a nonvolatile memory. Once the parameters for a particular requirement are set up, they can be recalled automatically. The memory groups can be labelled to create a "comment field" for each. All functions, parameters and registers, even for those not shown on the front panel, have battery backup.

1200C Mono	\$ 9,500.00
2400 Stereo	14,950.00

LEXICON, INC.

Digital Reverberation/Effects

480L Digital Effects System

- Built with proprietary Lexicon custom VLSIs, the HSPs provide the processing power necessary to create sophisticated reverb and effects. The 480L can perform 16 million operations per second
- 18-bit equivalent analog-to-digital conversion for superb dynamic range
- Optoisolation of analog circuits from digital circuits ensure optimum S/N ratio. Ground loops between digital and analog sections are eliminated
- Active balanced inputs and outputs provide superior isolation from both audio and RF common mode noise
- High input and output levels for optimum compatibility
- A 68000 microprocessor mediates all communications from the motherboard, LARC, automation connector, digital I/O connector, MIDI connectors and the non-volatile memory cartridge
- Phase-lock loop circuitry gives the 480L the ability to lock onto an external clock and to become a slave to an external digital device
- Detailed system diagnostics
- User registers for storing program setups are located in the host's internal non-volatile memory. There are 50 user registers inside the box and 50 in a removable cartridge for the convenience and security of your clients
- The 480L has two LARC connectors allowing a number of different configuration possibilities. For example, you can have two LARCs hooked up to one 480L. This allows you to simultaneously and independently control two programs running in the same box or you can have a LARC in one control room using half of the 480L, and a LARC in another control room using the other half of the box
- The 480L can run any two of its programs simultaneously. For example, you can run a sampling program in one half of the box while a reverb program is running in the other half. The two programs can be used entirely independently, or they can be internally "patched" together in any of several flexible configurations
- In addition to its analog inputs and outputs, the 480L is also equipped with a digital I/O connector. This allows you to add signal processing to a stereo mix without ever leaving the digital domain. If you have a signal that's already in the digital domain, you avoid any signal degradation associated with extra conversion. This I/O also allows you to connect the output of one 480L to the input of another 480L without leaving the digital domain

200 Digital Reverberator

- Rackmountable
- On-board, front-panel reverb mix and level controls
- Ideally suited for use by small-to-medium-size studios, live performers, broadcasters and sound reinforcement companies
- Extremely broad range of control over all reverberant parameters
- Bandwidth of 10kHz
- High quality audio circuitry for wide dynamic range and freedom from distortion
- Adjustable front panel input level and mix controls
- Two inputs and two outputs provide spacious stereo returns from mono or stereo sources
- A whole range of subtle enhancements for recording electronic or acoustic instruments
- Non-volatile, memory-storage registers and numerous factory presets make the full range of processing functions instantly accessible
- Input mute and reverberation stop functions make it easy to set up and control reverberation
- Remote function jacks
- Standard keypad

The 200 is a full-featured digital reverberation/room simulation system that puts the capabilities of advanced Lexicon reverbs within the reach of modest budgets. Engineered to provide the versatility and sound quality in ambience processing, the rackmountable 200 features on-board, front-panel reverb mix and level controls and is ideally suited for use by small-to-medium-size studios, live performers, broadcasters, and sound reinforcement companies. It provides superb reverb performance heretofore only available to world-class studios.

PCM41 Digital Delay Processor

- High performance
- Versatile digital delay
- Compact, affordable package
- Single delay output (800ms max. delay), blend and recirculation with phase invert and EQ
- Flexible sweep section with sine or square wave combined with envelope follower modulation provides rich chorusing and unique effects
- Designed with the needs of stage performers and small studios in mind

PCM41 \$715.00

PCM42 Digital Delay Processor

- An enhanced signal processor derived from the PCM41 framework
- Includes all features of the 41; plus delay times to 4800ms (with infinite repeat), numeric delay readout, metronome/clock output
- 2-stage limiter to protect against input overload, and foot pedal control of blend and recirculation

PCM42 1200/2400ms, 1 input, 1 output,
2.4 sec delay \$ 1000.00
PCM42 w/MEO — 2400/4800ms, 4.8 sec delay . . . 1235.00

PCM70 Digital Effects Processor

- Choose from more than 40 imaginative factory programs
- Using these factory programs as a basis, you can create 50 of your own individualized programs and store them in separate user registers
- That gives you instant access to a total of more than 90 available programs
- To help you create your own programs, there are up to 50 parameters per program
- Full basic MIDI control—you can switch any factory program or user program register remotely
- The PCM70 can utilize all 128 MIDI-specified channel presets
- Any program number on your MIDI controller can be assigned to any factory program or user program register on the PCM70, with the aid of its built-in corresponding register table

MRC MIDI Remote Controller

- Standard MIDI controls
- Factory and user-programmed setups
- Expanded control for the LXP-1
- Remote operation for the PCM70
- Macro programming for FM synthesis

PCM41

PCM42

PCM70

- Alphanumeric display
- Multiple MIDI inputs and outputs
- 4 programmable slide controls
- 4 programmable pushbuttons
- Assignable external controllers
- Expansion capability

The MRC (MIDI Remote Controller) is an intelligent, alphanumerically based, remote terminal that brings a new level of versatility to the world of MIDI. The MRC is a multi-faceted device that can handle both standard, generic MIDI controls and system exclusive protocols under software control. It provides special control for the LXP-1 Digital Multi-Effects Processing Module, the PCM70, and a unique "macro" mode for programming FM synthesizers, as well as MIDI program change and standard MIDI controllers.

MRC \$399.00

LXP-1 Multi-Effects Processor

- Simple, intuitive operation
- Hall, plate, and room reverberation in different sizes and brightnesses
- High quality delay and chorus effects
- Variable decay time and delay parameter offer hundreds of variations on each program
- MIDI program change response; fully mapped
- Dynamic MIDI, and System Exclusive Implementation provide detailed control functions in real time

The LXP-1 offers superb sound quality, a full range of delay and reverberation effects, fast intuitive programming, and an industry-leading MIDI implementation, all at an affordable price.

LXP-1 \$499.00

LIGHT WAVE SYSTEMS

Microphone Windscreens/Mount

SUPER-SCREEN/SUPER-MOUNT SYSTEM

Super-Screen

- Enhanced midrange (dialogue) with 100 loss
- Reduced sibilance/rumble
- High wind noise attenuation 25+ dB with screen alone
- 4 pin, 4 pos. bayonet lock
- Extremely low sound bounce
- Super light and strong
- Unaffected by rain and snow
- Cable exit at shockmount
- Small cable loop

Super-Mount

- The quietest and original LWS design
- Upper and lower twin vee way jaws slip into windscreen breech and lock
- Variable soft to hard suspension
- Modular design — interchangeable isolator cradles
- Use pistol grip or fishpole yoke
- Tough solvent proof plastic
- Clean lines — superb finish

Super-Screen/
Super-Mount

MINI-SCREEN/MINI-MOUNT SYSTEM

Mini-Screen

- Enhanced midrange (dialogue)
- May be boom or fixture mounted, or used handheld
- Can be used in severe rain and snow
- Expected lifetime is 15 to 20 years
- Made of tough polyethelene, polyurethane and nylon
- Primary use is for the professional video camera microphone
- Will attenuate wind noise 20dB or more than the largely inefficient foam sock

Mini-Screen-BC

Mini-Mount-BC

Mini-Mount

- Low profile and lightweight
- Natural frequency of 3 to 5 cycles
- Double cantilevered suspension
- Balanced to function with or without a matching Mini-Screen
- Clip for fast loading and unloading
- Available for most all short and long range directional microphones

The Mini system is designed for all ENG, EFP, documentary and areas of feature work. It is recommended for all manner of inside work, where fast pans of pop can cause real problems. The Mini system will provide a balanced indoor/outdoor clean recording with reduced sibilance and scratch for a deep enhanced midrange presence.

Tripod Systems/Dollies

Ultra I

Consists of: Ultra I Fluid Head and Claw Ball Assembly, JRA-83M Tripod with Spider Assembly, MQR-84S Quick Release with 2" adjustment and safety lock, Dual Handles

Specifications

Load: Up to 30 lbs.
Weight: Head and tripod—17 1/2 lbs.
Size: 7" H x 7 1/2" W
Height: Head and tripod—closed 45" / extended 59" / at rest 40 1/2"
Pan: 360°
Tilt: 90°
Base: Ball or flat
Finish: Black vinyl
Accessories: Reversible feet, strap, Sta-Sets, case

Ultra I \$2137.31

Ultra II

Consists of: Ultra II Fluid Head and Claw Ball Assembly, JRA-74 Tripod with Spider Assembly, LQR-84S Quick Release with 2 1/2" adjustment and safety lock, Dual Handles

Specifications

Load: Up to 50 lbs.
Weight: Head and tripod—22 lbs.
Size: 8" H x 8" W
Height: Head and tripod—closed 45 1/2" / extended 59" / at rest 42"
Pan: 360°
Tilt: 90°
Base: Ball or flat
Finish: Black vinyl
Accessories: Reversible feet, strap, Sta-Sets, case

Ultra II \$2463.43

Ultra 250

Consists of: Ultra 250 Fluid Head and Integral Aluminum Tripod with Handle

Specifications

Load: Up to 18 lbs.
Weight: Head and tripod—11 lbs.
Size: 5" H x 5 1/4" W
Height: Head and tripod—closed 42" / extended 59" / at rest 45"
Pan: 360°
Tilt: 90°
Base: Flat
Finish: Black vinyl
Thread
Size: 1/4"-20" or 3/8"
Accessories: Quick release, strap

Ultra 250 \$1538.05

Ultra 500

Consists of: Ultra 500 Fluid Head and Claw Ball Assembly, JRA-83M Tripod with Spider Assembly.

Specifications

Load: Up to 25 lbs.
Weight: Head and tripod—15 lbs.
Size: 7 1/2" H x 5" W
Height: Head and tripod—closed 44 1/2" / extended 60" / at rest 42"
Pan: 360°
Tilt: 90°
Base: Ball or flat
Finish: Black vinyl
Accessories: Reversible feet, strap, quick release

Ultra 500 \$1650.00

Ultra Classic

Consists of: Ultra Classic Fluid Head and Claw Ball Assembly, JRA-74 Tripod with Spider Assembly

Specifications

Load: Up to 50 lbs.
Weight: 28 lbs.
Size: 14" H x 11 1/4" W
Height: Head and tripod—closed 51" / open 64"

Camera

Platform
Dimensions: 5 1/2" W x 6" L
Elevation: Approximately 2"
Pan: 360°

Tripods/Accessories

JRA-83M Tripod System

• True fluid action maintains a smooth regulated motion by a sensitive system without brake shoes, bands, or other mechanical parts to interfere with its operation. Separate positive locks and drag are featured on the pan and tilt. Tilt achieves a full 90° vertical position • Sealed leak-proof chamber • Adjustable quick release will counterbalance camera and lens requirements (optional) • Spider assemblies available • Versatile control—use right, left or dual handles • Reversible foot, rubber-tipped for interiors and standard metal points for outside use, can be ordered with either of the JRA tripods (optional) • Tripods come with various top castings to accommodate existing systems • Tripod weighs 7 lbs., 16 lbs. with head

JRA-83M \$517.16—\$558.21

JRA-83M Tripod and Fluid Head

JRA-74 Junior Motion Picture Tripod

• Finely machined tubular aluminum legs and stainless steel parts and nylon bushings. Rustproof and noiseless • Regular, intermediate and baby versions • Adjustable from 39" closed to 60" open. Flexible leg adjustment • Adjustable spider assembly • Weight: 9 1/2 lbs.

JRA-74 \$550.00—\$599.25

LST-80 Heavy-Duty Tripod

• Built for cinema and video weighing • Only 22 lbs. complete with built-in spider assembly • Aluminum legs and stainless steel parts and nylon • Will support 200 lbs. • For studio and location use • Available in standard, regular, intermediate and baby versions

LST-80 \$1017.91—\$1050.75

LST-80

LQR-84S Quick Release System

• Safety lock feature • Two parts to the system • Lower section mounts to tripod with 1/4" or 3/8" threaded thumbscrew • Upper section mounts to camera tripod socket • For most movie, television press and view cameras • All aluminum except latch

LQR-84S \$229.00

LQR-84S

MQR-84S Medium Duty Quick Release System

• Rapid mounting • Lightweight, only 9 oz. • Quick release plate • Durable and accurate • Stands up to all conditions

MQR-84S \$221.00

The Re-Inforcer Tripod Adaptor

The Re-Inforcer is a unique accessory for the Sony tripod adaptor which is supplied with the Sony line of industrial CCD color cameras such as the DXC-3000 and the Sony line of broadcast portable cameras and camcorders.

The Re-Inforcer is an aluminum plate which attaches to the two sliding devices on the bottom of the tripod adaptor and is then screwed into any head. The unit will allow the user to move the tripod adaptor forward and backward in order to obtain the best center of gravity for proper balance, but when tightened down, gives a very rigid base. The adaptor, as it is originally supplied, is not as rigid as when the Re-Inforcer is attached.

A-2200

A-5000T

The PDD is a stand-alone display device providing formatted prompting text from standard text created on a host computer or a newsroom computer system. Connection from the host computer to the PDD can be direct for local situations or by means of a telephone modem for remote operation. Display of prompting text may be controlled by the host computer, a terminal, or the optional remote control box. Control functions available include speed, reordering of run-down and other functions.

The PDD may be connected to any host computer which has the capability to edit plain text files, send ASCII text files to a serial port at a data speed up to 9600 baud and for optimum integrity support the Xon/Xoff protocol. This feature allows the host computer to request prompter display to return catalog of stories in memory.

- A-5000T** Stand alone prompting device, providing formatted text from host computer running standard word processing. Accepts commands and returns information from host or standard terminal.\$4995.00

LITTLITE

Gooseneck Lamps/Accessories

LITTLITE SETS

High intensity Littlite has a 5W bulb with a finned hood. Low intensity has a 2.4W bulb with a smooth tubular hood.

"L" Series sets come complete and ready for easy surface mounting. All sets include bulb, mounting base and fully adjustable dimmer. Sets also include a 6' cord, 2-piece snap mount, screws for permanent mounting and a wall plug-in transformer. "A" versions do not include the transformer, and can be powered by any available 12V supply.

Low Intensity Series

Detachable Lamp with Base

Accessories

DM Dimmer Rheostat

Varies the intensity of P, G, or X Series Goosenecks. Will dim two low intensity or one high intensity lamps \$5.00

PS Panel Socket

Mates with the G Series Gooseneck Swivel Connector. Mounts in a 3/8" hole in material 1/8" or less thick, or in an MP \$2.40

WB Weighted Base

A heavy metal plate that is screwed onto the bottom of the light allowing an L model to become a movable free-standing light source . \$6.00

MP Mounting Plate

A 1 1/4" square metal plate with a 3/8" hole in its center \$3.00

HIC High Intensity Conversion Set

A high intensity hood and Q-5 bulb to convert low intensity lamps to high intensity. Simply remove the old hood and bulb, insert the Q-5 bulb and slip on the HI hood. \$15.00

CL Adjustable Clip

Adjusts to clamp on edges from 1/16" to 3/4" thick. Included are a mounting bracket, springplate, screws, and washers \$4.00

1815 Bulb

12V, 230mA, 2.4W bulb for the low intensity lamps \$1.00

Q-5 Bulb

12V, 380mA, 5W tungsten halogen bulb for the high intensity lamps. \$7.00

WXF Wall Transformer

Plugs into a 110VAC outlet and supplies 12VAC up to 930mA . . \$12.00

SM Snap Mount

A pair of self-adhesive pads used whenever you need quick easy placement and removal of an L-series lamp \$2.00

CF Color Filter

For use with the high intensity Gooseneck lamps, which have a slot in the hood for the filters. They come in a set of four colors: dark and light red, amber and blue. \$3.00

CP Cigarette Lighter Plug

Used to power a lamp from a cigarette lighter outlet \$3.00

LV Low Voltage Hookup Kit

Included parts and instructions for wiring lamps into a 12V system. Included fuse and holder, connectors and line taps \$6.50

SC Storage Clips

Use to secure Littlites for transit or storage. Includes two mounting screws \$1.00

LNR COMMUNICATIONS, INC.

Redundancy Switches/Video Exciters

Redundancy/Protection Switches

A number of integrated redundant receiver, exciter and converter configurations are available. Switchover to a back-up unit may be

- automatic (controlled by summary alarm, OBN or other operating parameter)
- manual
- by patching
- by remote command

With the addition of a Receiver Select panel, automatic switchover to a redundant unit is accomplished in less than 100msec. Both receivers are preset to the same operating frequency and gain. When an alarm from the on-line unit appears, the Receiver Select automatically pulses the latching transfer switch to transpose its outputs. Switchover may also be manually performed. Contact closures for operation from a console mimic panel are standard.

A Remote Receiver Select panel is an available option. Similar exciter protection panels for one-for-one selection of exciters are available.

The converter switch slides into the main frame of the converter assemblies. The output transfer switch provides access to both converter outputs. This feature enables the use of both converters simultaneously with one channel on-line and the other in a test mode. The switch includes manual override and remote monitoring and control capability.

The converter 1:1 redundancy switch is also available in a 19" rack-mountable version.

A manual 1:N back-up represents the lowest cost solution for applications containing more than two Receiver or Exciter Chains. LNR's modular construction simplifies plug-in and patching for this requirement.

For stations requiring automatic switchover, a 1:N Protection Switch can be provided which automatically tunes the frequency-agile converter in the back-up receiver or exciter to the operating frequency of the malfunctioning on-line unit. The baseband switch section simultaneously transfers the baseband line to the back-up unit. Manual override and remote control capability are provided.

LVE-6 C-Band and LVE-14 Ku-Band**Low Profile Video Exciters**

- Small size—only 1 rack unit (1³/₄" high)
- Light weight—15 lbs. (7 kg.)
- High RF output—0dBm standard
- RF, video and audio performance exceeds RS-250B
- Front panel full/half transponder selection
- Compatible with NTSC, PAL, B-MAC, SECAM and other video standards
- Up to 4 audio subcarriers, synthesized 4.2 to 8.1MHz in 2kHz steps, optional
- 1:1 protection switch with automatic switchover, optional
- Remote frequency control (BCD/TTL, RS422 or other), optional
- Increased power output (+6dBm), optional

The LNR LVE-6 and LVE-14 Low Profile Video Exciters are broadcast-quality satellite video exciters designed for the special requirements of mobile satellite newsgathering systems. Advanced highly integrated RF and baseband circuitry provides RS250B performance in a light-weight cost-effective package just 1³/₄" high and 24" deep. The LVE series features synthesized RF tuning in 0.5MHz steps, and includes up to four front-panel-selectable subcarriers that are synthesized in 2KHz steps. Pushbutton selection of full- or half-transponder operation is standard, and high power (0dBm) output is included at no extra cost.

A human-engineered front panel includes only operator-significant controls to minimize possible operator error in the field. For example, the unit provides front panel monitor points for video and RF output power and frequency, as well as on/off selection and alarm indication for each subcarrier.

The LVE series video exciters have been specifically designed with portable and truck mounted uplinks in mind by offering substantially reduced weight (15 lbs.), size (1³/₄" high) and power consumption (100W).

Converter Switch

Baseband Switching Unit
8880

For the UC6 and DC4 Frequency Converters, the protection switch employs a Model ALO5 Auxiliary Local Oscillator to obtain the requisite frequency agility for the back-up Up or Downconverter.

8880 Baseband Diversity Switch

The 8880 Baseband Diversity Switch selects the better of two output signals from two Message Receivers. The preferred baseband signal is determined by monitoring the Out-of-Band Noise of the two receivers. The fully solid-state subsystem fits in a standard 19" rack.

Video Exciter

LVE-14

Performance Specifications

RF Output Frequency:	14.0 to 14.5GHz (Ku-band model LVE-14) 5.925 to 6.425GHz (C-band model LVE-6)
Power Output:	0dBm (+6dBm available as option)
Carrier Type:	525/625 line video (switch selectable)
Bandwidth:	Full or half transponder (frontpanel select)
Signal Level	
Adjustment Range:	0 to -15dBm
In-band Spurious:	-70dB
Muting:	Activated by summary alarm (with bypass for test) or by lighted, guarded front panel switch
Connector Impedance:	SMA 50 ohms (Ku-band)—Type N female/50 ohms (C-band)
Return Loss:	23dB (typ.) 21dB (min.)

LOGITEK ELECTRONIC SYSTEMS, INC.

Audio Consoles

PERFECTIONIST AUDIO CONSOLES

- "Workhorse" 8-mixer and 12-mixer consoles with outstanding audio performance
- Easy installation using pre-wired stand-alone punch blocks
- 32 Selectable stereo inputs labeled with patch-panel style designer strips
- P&G rotary or slide faders plus solid-state switches for unsurpassed reliability
- Simple, one-button operation simultaneously assigns bus, turns on channel and starts external equipment

The Perfectionist is built like a tank, with an all-steel case, rugged P&G rotary or slide faders and dependable solid-state half-effect switches.

And, it uses the latest in low-noise amplifiers, silent photoresistor audio switching, balanced mixing buses and toroidal power transformers for the cleanest sound from any console on the market today.

A single pushbutton on each mixing channel simultaneously assigns the signal to the program bus, turns on the channel and starts external machines.

The four stereo inputs on each mixer are labeled with patch-panel style strips for uncluttered, unambiguous designation.

All controls are located on the wrist-level mixing deck, eliminating awkward controls on the meter bridge.

And, our exclusive AUD ↔ PGM pushbutton makes complicated programs easy to set-up and mix.

All inputs and outputs are pre-wired via a cable snake to standard telephone punch blocks, which can be mounted up to six feet from the console.

Machine control signals can be set for level or pulse operation, and are steered through the input selector switches.

And, a built-in distribution amp provides four isolated outputs from each program and audition channel, eliminating external gear.

Of course, all ICs are mounted in collet-style sockets for reliability and easy replacement, and complete diagrams and parts lists come with each console.

SPECIFICATIONS

Mixing Channels	
Perfectionist-12	12
Perfectionist-8	6
Line Inputs	4 Active-balanced line-level stereo inputs per mixing channel totalling 48 on the Perfectionist-12 or 32 on the Perfectionist-8
Microphone Inputs	4 Active-balanced monaural microphone preamps per console, which may be routed to any 4 line-level inputs. 4 additional preamps may be added as an option
Input Levels and Impedances	
Line Inputs	0 dBm normal, +23 dBm maximum, 600 ohms
Microphone Inputs	-60 dBv normal, -30 dBv maximum, 1000 ohms
Frequency Response	20-20,000Hz, ±0.25 dB
Signal-to-Noise Ratio	
Line Inputs (ref. 0 dBm input)	88 dB
Microphone Inputs (ref. -50 dBv input)	75 dB
Total Harmonic Distortion	
At +4 dBm Output	.008% maximum
At +23 dBm Output	.02% maximum

PERFECTIONIST-8SL

Crosstalk	-80 dB typical
Overall Gain	> 120 dB
Program/Audition Outputs	4 isolated active-balanced distribution outputs from each program and audition channel
Program/Audition Output Levels	+4 dBm = 100% VU, +23 dBm maximum (VU meters may be adjusted for 0 dBm - +10 dBm = 100% VU.)
Program/Audition Output Impedance	600 ohms resistive
Headphone/Monitor Inputs	Two balanced external inputs (air and aux) plus program and audition channels feed separate headphone and speaker selectors. Cue is also fed to headphone selector only
Headphone Amplifier	15 watts/channel fed to parallel jacks mounted below desk level to operator's left and right
Monitor Outputs	2 stereo line-level active-balanced outputs of which one stereo output has fixed level and one stereo output has level controlled by the Speaker pot on console
Cue Amp Power Muting	5 watts Muting control inputs are accessed on punch blocks and fed from any four remote control outputs. Each monitor output is separately muted. Cue muting matches control room monitor muting
Remote Control Outputs	Open-collector transistor to ground sinks up to 250 mA when mixing channel is switched to program bus. Each mixing channel can be switch-selected for pulse or constant control output. Control outputs are steered through input selector pushbuttons
Remote Control Inputs	Momentary SPST closure activates program, audition, off and AUD PGM functions
Meters	
Perfectionist-12	5 meters: left program, right program, left audition, right audition and mono. Mono meter source is switchable for program, audition or an external input
Perfectionist-8	3 meters: left, right and mono, switchable for program or audition
Dimensions	
Perfectionist-12	47-3/4"W x 15"D x 8-1/4"H overall, 5"H above table
Perfectionist-8	35"W x 15"D x 8-1/4"H overall, 5"H above table
Finish	Textured beige epoxy-painted steel
Perfectionist-12SL	12 mixers, 48 inputs, stereo, slide faders
Perfectionist-12RY	12 mixers, 48 inputs, stereo, rotary faders
Perfectionist-8SL	8 mixers, 32 inputs, stereo, slide faders
Perfectionist-8RY	8 mixers, 32 inputs, stereo, rotary faders
Extra 4 microphone preamps for Perfectionist	

LOGITEK ELECTRONIC SYSTEMS, INC.

**Audio Console Switcher/
Meter/Monitor**

Audiorack Compact Audio Console

- A complete 6-in, 2-out broadcast console in a 19" rackmountable or tabletop cabinet
- Built-in talkback, tone generator and distribution amp eliminate out-board equipment
- Conductive plastic faders and hall-effect switches for reliability, mike/line selectors for versatility, and a built-in tone oscillator for mixing accuracy
- Exclusive "preview-program swap" pushbutton that lets interview hosts switch from mikes to spots and back using a single control
- Complete capability for remote control, machine start and audio-follow
- All integrated circuits and program, preview and off pushbuttons are socket-mounted for simple maintenance

**PRE-10 Input Expander and
MON-10 Multi-Source Meter/Monitor**

- Reliable audio switching, metering and monitoring
- Easy to install, simple to operate
- Excellent for recording booths, edit suites, vans or audio test rack

Audiorack

PRE-10

MON-10

The PRE-10 input expander is a passive routing switcher which feeds any of ten monaural inputs to either of two outputs. You can use it any place where you have more sources than you have audio inputs to connect them to, such as at the input to a console or to a tape deck.

The MON-10 multi-source meter/monitor feeds any of ten stereo inputs to a single stereo output, and also feeds the selected input to a multi-range meter, a 6W speaker, and a front panel headphone jack. So you can not only select your source, you can meter and monitor it as well.

Once you've selected your input, you can choose the left ("A") channel, the right ("B") channel, the mono sum (A+B) or the out-of-phase sum (A-B) to feed to the meter and speaker.

PRE-10 10-input, 2-output mechanical switcher \$370.00
MON-10 10-input selector/meter/monitor-stereo 735.00

PRE-10 Specifications

Inputs: 10 monaural
Outputs: 2 monaural

Input/Output Levels and Impedances:

Any input level and impedance can be used since the unit is totally passive. Inputs may be balanced or unbalanced. Output level, impedance and balancing will match that of the selected input.

Dimensions: 1 3/4" H x 19" W x 4 1/2" D (one rack unit)

MON-10 Specifications

Inputs: 10 stereo
Line Outputs: 1 stereo

Input Level

Normal: 0dBV
Maximum: +23dBV

Input Impedance: 140K ohms balanced

Line Output Level: Line output switching is passive so the output level, impedance and balancing is the same as that of the selected input

Connectors: Wire-capturing terminal blocks

Dimensions: 3 1/2" H x 19" W x 7" D

LOGITEK ELECTRONIC SYSTEMS, INC.

Console/Crossfader

Crossfire

Stereorack

Crossfire

- 4-input automated crossfader
- Automatically fades between any 2 stereo or mono buses
- Add to any mixer or feed directly from VTRs or ATRs
- Optional 10 x 2 manual input expander
- Controlled by GPI, computer-generated ramp, external pots or manually
- 3 selectable fade types, variable fade duration

The Crossfire is an automated audio crossfader driven by GPI or ramp control, which lets you start three different kinds of audio crossfades hands-free, or lets your video edit system run audio levels for you.

The Crossfire turns any four-channel mixer into an automated mixer, by letting you crossfade between output channels.

You just set the pre-fade and post-fade levels, start your edit sequence, and let your controller's GPI signal do the rest.

You don't even really need a mixer, since you can connect the outputs of two VTRs (or any two dual-channel sources) directly to the Crossfire and use it to ride gain either automatically or manually.

The Crossfire lets you choose between a direct crossfade (where the two signals "criss-cross" at equal rates), a fade-out (music fades under a "hot" voice at the beginning of a segment), and an up-and-under (music fades up gradually under voice, at the end of a segment).

Plus, you can set the fade rate, in either seconds or approximate frames, anywhere from instant (cut) to ten seconds.

If your edit controller provides ramp signals for direct audio control, the Crossfire can use those as well.

Just connect the ramp up to the Crossfire's "Remote" inputs, and do everything through the controller.

Or, if you just want to control your audio in one location without actually having the audio board right there, you can use the Crossfire as a remotely-controlled console and install remote audio pots where you need them.

The Crossfire is designed to be quick to install and easy to use.

All inputs and outputs are balanced, and can be connected to any combination of balanced and unbalanced equipment.

All connections are made on durable, wire-clamping terminal blocks, so you don't need costly connectors.

Controls are carefully arranged and clearly labeled, so you don't have to be an audio wiz to run the Crossfire.

And, when it comes to audio performance, the Crossfire is fully "broadcast quality," with extremely low noise and distortion, high headroom, and near-perfect frequency response.

The Crossfire is built using premium components for years of trouble-free use.

All integrated circuits are mounted in reliable collet-style sockets for easy replacement, and all parts are standard items, fully identified in the accompanying manual.

Crossfire \$1350.00

Stereorack

- 11-input, 2-output rackmount console-stereo
- Stereo pan control on each input channel
- Low-noise, low-distortion circuitry for excellent audio performance
- 11 balanced stereo inputs, 2 stereo output channels
- Up to 7 assignable mike inputs
- Built-in talkback, tone generator, machine controls, output DAs

Our Stereorack console is a complete stereo studio console in a 19" rackmountable package.

The Stereorack has six balanced stereo input channels, selectable from 11 stereo sources or a built-in tone generator.

Each input channel can feed either or both of two fully-metered stereo output channels, and each output channel feeds a built-in 1 x 4 stereo distribution amp.

Any of the input sources can be pre-routed through one of seven mike pre-amps, for maximum flexibility.

So you have all the "ins" and "outs" you might need, to get you out of tight spots you may find yourself in.

Each input pot includes a concentric pan control for stereo balance, and a detent cue switch feeding a built-in 6W cue amp.

For reliability, conductive-plastic pots are used throughout, and socketed hall-effect pushbuttons control bus switching.

Separate headphone feeds are included for the operator and for three talent, crew or guest positions, and the operator and the director can talk to the crew through a built-in talkback system using a remote mike or the talkback mike on the front panel.

And, the Stereorack can start machines remotely and can itself be controlled externally for audio-follow applications.

High performance op-amps minimize distortion and hiss, while careful grounding, balanced buses and a toroidal power transformer virtually eliminate hum.

So you can use the Stereorack for any type of program without making excuses for your sound.

And, to keep your Stereorack running, all integrated circuits as well as the hall-effect switches are mounted in high-reliability collet-style sockets, all connectors are gold-plated, and all components are commercially available.

Stereorack \$4250.00

LOGITEK ELECTRONIC SYSTEMS, INC.

Modular Distribution System

Audio Accessory System

- Wide variety of audio amplifier modules including distribution amps, AGC amps and mike preamps
- Optional twin power supplies for full redundancy
- Up to ten 1-in, 6-out distribution amp modules per frame
- Extremely reliable, excellent audio performance

The Audio Accessory System is an excellent audio distribution amp if you have several, or many, different audio sources to distribute.

It's also an automatic-level amp, a multiple-input monitor amp, a mike preamp, a line amp, a balancing amp, a voltage-controlled amp, or any combination of these. As your needs change, you can add or re-arrange audio modules to fit your requirements.

All Audio Accessory System modules, as well as its mainframe and optional redundant power supply, are rugged and extremely reliable.

A single printed circuit board connects all audio modules to the power supplies and input/output terminals, so internal wiring is eliminated.

Each audio module has built-in power regulators, so a failure in one module is unlikely to cause other modules to fail.

The optional redundant power supply shares the load with the standard supply and each automatically assumes the full load if the other fails.

And, each supply has status lights and an indicating fuseholder to let you know what's happening inside.

Audio Amplifier Modules

MAS-DA Distribution Amp: 1-in, 6-out audio DA with front panel input gain control and fixed-level outputs.

MAS-ADJ Distribution Amp: 1-in, 6-out audio DA with independent front panel level controls for the input and for each output.

MAS-MKE Dual Microphone Preamp: Two microphone preamps with front panel level controls and internal high/low gain switches.

MAS-MON Speaker/Headphone Amp: 6W speaker/headphone amp with front panel level control and headphone jack, fed from any of five selectable inputs. Occupies two amplifier positions in mainframe.

MAS-LA Line Amp: 1-in, 1-out audio line amp with front panel level control. For balanced or unbalanced inputs and outputs.

MAS-AGC Automatic Gain Distribution Amp: 1-in, 6-out audio DA with automatic gain riding plus front panel level control. Automatic gain can be bypassed using front panel AGC/Standby switch. Automatic gain range is 35dB, with user-adjustable attack time from 100-1000 μ s and release time from 1-10 sec. (for 10dB change).

Audio Accessory System

MAS-VCA Remote Gain Distribution Amp: 1-in, 5-out audio DA with front panel level control plus remote gain adjustment using external pot or voltage. External control can be bypassed using front panel VCA/Standby switch.

Mainframe and Accessories

MAS-MF Mainframe: Can hold up to ten amplifiers and two power supplies. Shipped complete with one power supply, an extender board and a manual describing the mainframe and all amplifier and power supply modules.

MAS-PS Power Supply: Supports a full frame of amplifiers or can share the load with a second supply. Power rails are diode-steered for automatic switchover. One MAS-PS module is included with each mainframe at no extra charge.

MAS-BKS Small Blank Panel: Covers one amplifier module space.

MAS-BKL Large Blank Panel: Covers two amplifier module spaces, or one power supply module space.

20Hz-20kHz	0.25	0.25		0.25	0.25
Total Harmonic Distortion: typical	0.006%	0.05%		0.01%	0.03%
maximum	0.05%	0.18%		0.1%	0.2%
Intermodulation Distortion: typical	0.004%	0.05%		0.01%	0.03%
maximum	0.01%	0.15%		0.04%	0.2%
Signal/Noise: measurement	80dB	65dB		74dB	85dB
reference input	0dBm	0dBm		-50dBV	0dBm
Output Isolation: typical	80dB	80dB			
minimum	75dB	75dB			

Notes: 1) MAS-MKE modules have internal gain switches for each input, which provide a 20dB gain reduction for high-level microphones. Input levels depend on the setting of these switches.
2) All 600 ohm and 150 ohm impedances can be increased to 50K ohms by removing input load resistors. Other impedances can be achieved by replacing the input load resistor of the desired value.

LOGITEK ELECTRONIC SYSTEMS, INC.

Distribution Amplifier/Audio Interface

ADA-8 AUDIO DISTRIBUTION AMPLIFIER

- Rugged output stage not damaged by output shorts or overloads
- High-slew-rate circuitry accurately reproduces audio and SMPTE time code
- Extremely low noise and low distortion for high-quality audio distribution

The ADA-8's output circuitry is actually an audio power amplifier with isolation resistors added. Which means that even with all outputs shorted or grounded, the amplifier is still operating well below its maximum capacity.

So you can feed all sorts of balanced and unbalanced audio equipment simultaneously, and they won't load each other down, or crosstalk from one to another.

The ADA-8's high-slew-rate amplifier circuitry is virtually free of harmonic and intermodulation distortion. And frequency response is essentially perfect. So the ADA-8 is good enough to distribute high-quality sources, like your main program line or the output of a digital audio player.

And, the ADA-8 will accurately distribute SMPTE time code.

- ADA-8M** 1 balanced input, 8 balanced outputs-mono \$365.00
- ADA-8S** 1 balanced input, 8 balanced outputs-stereo 460.00

Specifications— ADA-8

Frequency Response	50Hz-15KHz, ±0.1dB; 20Hz-20KHz, ±0.25 dB

Input Impedance	Balanced or unbalanced 600 ohms, (Load resistor can be removed to change to 300 kohms)
Output Impedance	Balanced 600 ohms
Dimensions	1-3/4"H x 19"W x 7"D (standard rackmount)

PAI-4 PRO AUDIO INTERFACE

- Reduces audio hum and RFI on VTRs, digital disks, audio recorders
- Front-panel playback controls allow mixer-free level matching

To add hum-resistant balanced audio to your 3/4" VTRs, compact disc players or unbalanced audio recorders, add the PAI-4 to the equipment you already have.

You'll reduce hum, interference and crosstalk picked up by unbalanced audio lines. And, your balanced mixers and DAs will work better because they'll be matched with the proper impedances and levels.

The PAI-4's front-panel playback level controls let you adjust channel levels without using your mixer.

Of course, the PAI-4 itself adds no significant noise or distortion to your audio signals.

- PAI-4** 2-channel balanced/unbalanced interface \$360.00

Power Amplifiers

PWR-30 FRONT PANEL (Top) BACK PANEL (Bottom)

PWR-80 FRONT PANEL (Top) BACK PANEL (Bottom)

PWR-30 AUDIO POWER AMPLIFIER

- Crisp clean, audio performance and moderate power perfect for edit suites, small studios, trucks
- Balanced inputs eliminate input noise and RFI
- Built-in overload protection, oversized heat sinks for excellent long-term reliability

Since the PWR-30 is a broadcast-quality amplifier, it, of course, has fully balanced inputs and complete RFI protection. So it won't amplify noise picked up by your input wires. And, it won't amplify signals from nearby broadcast transmitters.

Like all of our products, the PWR-30 is built to last. All output transistors are mounted on an oversized heat sink to reduce long-term temperature wear.

Each output stage is fused to minimize damage from output shorts or speaker failures. And, all integrated circuits in the PWR-30 are socketed for quick, simple replacement.

PWR-30 30-watt power amplifier \$415.00

SPECIFICATIONS

Audio Output Power (load: 4-8 ohms)	Monaural 30 watts RMS 50 watts peak; stereo-per-channel 15 watts RMS 22 watts peak

PWR-80 AUDIO POWER AMPLIFIER

- Standard connectors and built-in muting simplify installation
- Rugged design
- Balanced inputs and toroidal power transformer for low-noise operation
- Normally available from stock for same day shipment

Our products are known for reliability and simple service, and the PWR-80 is no exception.

We overbuild our heat sinks so you can run the PWR-80 at full output power with full confidence.

Each speaker output is fused, and our overload protection circuit prevents output shorts from damaging internal circuitry.

Each side of the PWR-80's milspec circuit card can be accessed easily by removing the unit's top and bottom covers.

All ICs are mounted in gold-plated sockets, for quick replacement. And, of course, a complete maintenance manual with parts lists and diagrams is included with each unit.

Cabinet Construction: High density particle board
Cabinet Finish: Walnut with black perforated grill
Level Indicators (Two): Green for 1/2W input, Red for 100W input

T-100 Presettable Up/Down Timers

- Rugged, reliable operation
- Choice of stand-alone or rackmount models
- Large, easy-to-read digits

T-100 timers are simple to install and use. Each T-100 operates in count-up or count-down mode and has a full 99-minute, 59-second range, displayed on large, bright orange digits. In count-up mode, grounding the rear panel reset jack sets the time to 00:00 and restarts the count. In count-down mode, independent preset pushbuttons for each digit make the T-100 easy to set. And, in case you're not watching closely, the display flashes when it gets down to 00:00.

LOWEL-LIGHT MFG., INC.

Location Lighting

Lowel systems and kits have been in use since 1959 for video, film and still photography. They are a successful combination of innovative design, high strength materials, and careful workmanship. As a result, the lights and accessories are extremely efficient, lightweight and

durable. Their versatility is unequalled. We have received eight United States patents, an Academy Award Certificate and International acclaim.

Tota-Light

- Interchangeable 1000, 750 and 500 watt tungsten halogen lamps—120 volts • 800 watt lamp—220/240 volts • Patented gull-wing reflector produces remarkably efficient output • Exceptionally wide, smooth beam angle. One unit can provide even illumination of four walls from the corner of a room • Basically non-focusing, however, reflecting doors offer some intensity and spread control • Light control system: umbrella, gel frame, gels, small flags, and others • Mounting system: stand, wall/door mount, clamps • Weighs only 2 1/4 lbs. (1.02 kg). Closes up compactly for storage/travel • Patent #3,852,582

T1-10 Head \$112.00

Omni-Light

- Interchangeable 650, 600 and 420 watt tungsten halogen lamps—120 volts • 650 watt lamp—220 and 240 volts • 250 watt lamp—30 volts (battery operation) • 100 watt lamp—12 volts (automobile and battery operation) • Unprecedented spot/flood focusing range • Interchangeable, special purpose reflectors • Uses many Tota-light accessories • Light control system: four way expandable barndoors, high intensity and other reflectors, umbrella, gel frame, gels, snoot, scrims, dichroic filter, cookaloris and others • Mounting system: stand, clamps, wall/door mount • Weighs only 2-5/8 lbs. (1.19kg) • Patent #4,187,531

O1-10 Head \$135.00

DP Light

- Interchangeable 1000, 750 and 500 watt tungsten halogen lamps—120 volts • 1000 and 650 watt lamps at 220 and 240 volts • Wide smooth beam pattern with continuous focusing to intense spot • Quick change, special purpose reflectors • Convenient, fast, one-hand tilt control • Light control system: four way expandable barndoors, high intensity and other reflectors, large umbrella, gel frame, gels, scrims, dichroic filter, snoot, cookaloris and others • Mounting system: famous KS stand, clamps, wall mount, and others • Weighs only 3-7/8 lbs. (1.76kg) • US Patent #D210927

D2-10 Head \$150.00

Softlight 2

- 2000 watt maximum capacity. Uses two 1000, 750 or 500 watt lamps at 120 volts or two 800 watt lamps at 220/240 volts • Unit folds in half, nearly flat, for storage/travel • Large, soft-shadow source utilizes aluminized Nomex reflecting surface which will not scorch or discolor • Light control system: adjustable and fixed barndoors for flare control, subject shading and gel mounting; gels • Mounting system: stand, clamps • Weighs only 8 lbs. (3.63kg) • Both lamps can be switched on and off individually • US Patent #3,712,978

S2-10 Head \$285.00

Lighting

V-light (ViP System)

i-light (ViP System)

ViP System

The ViP System is both a practical and sophisticated system designed to take advantage of fast films, lenses and video cameras. ViP consists of three very small, highly compatible, professional lights. The ViP System also includes a wide range of unique light control and mounting components, most of which can be used interchangeably among the three fixtures. Many Tota-light and other Lowel accessories (already in the field) can also be used with the three ViP lights.

A distinguished collection of ViP and other existing Lowel accessories position all three lights on stands, on cameras, on walls, on doors, on sets, in hand, in seconds. This unprecedented component integration provides maximum versatility and economy.

V-light

The V-light is a broad, efficient 500W halogen source with a protective glass shield. It is bright enough to light a small room, small enough to fit in a large pocket.

V1-10 V-light \$95.00

i-light

The tiny, focusing i-light uses an inexpensive 12V, 100V or 55W halogen lamp. Whether handheld or camera mounted it can provide that essential fill light, eye-light, highlight, and contrast control, without overwhelming the available, natural light.

i-110 i-light \$110.00

Pro-light

The focusing Pro-light uses various voltage lamps: 250W, 120V; 200W, 30V, 100W, 12V. It has interchangeable special purpose reflectors, unique barndoors, five swing-away accessories, plus a gel frame and brella. All of these components are shared with the i-light.

ViP Kits

P1-10 Pro-light \$105.00

ViP Kits

All ViP kits are unusually compact and ideal for many video, film and still photography assignments ranging from basic to sophisticated, from soft to dramatic, from studio to remote locations.

ViP KitsPOR

Light-Array

The Light-Array uses six standard 4' fluorescent tubes. It travels in one portable case with its own boom, ballast, barndoors and stand. It is ideal for shoots where existing fluorescent illumination is photographically unacceptable without some fill or side modeling light. The tubes for the Array can usually be borrowed at the supermarket, office, school or showroom location to assure perfect color balance with the prevailing fluorescents.

This 8 sq. foot, cool, lightweight, super-soft location or studio source can be rotated horizontally, vertically or diagonally, even boomed over the subject. The Array is available with a 120V, efficient electronic ballast, which also serves to counterbalance its boom.

LPB, INC.

AM Transmitters

AM-50/150 Series AM Transmitters

The LPB AM-50/150 series of AM broadcast transmitters is the result of over 20 years of internationally recognized low power AM broadcast equipment experience. With over 1500 units of the AM-50/150 series basic power amplifier and more than 5000 total units of low power AM transmitters in the field, LPB continues to be the leader in low power AM technology.

The AM-50/150 series transmitters are modular in construction to provide 3 nominal power classifications—50W, 100W, and 150W carrier output, designated by model numbers AM-50, AM-100, and AM-150 respectively. The separate exciter provides continuously variable RF drive to the RF power amplifier to allow adjustment to TPO from approximately 50% of the nominal rating to 110% of nominal for precise adjustment of radiated power.

The AM-50, AM-100, and AM-150 transmitters are composed of three rackmountable sub-assemblies—power supply, exciter, and RF power amplifier.

The exciter (designated the AM-5E) is actually a self-contained transmitter mounted in an enclosure occupying 5 1/4" of rack height. The AM-5E contains power supply, crystal, oscillator, modulation stage, and the driver stage for the power amplifier. Front panel controls include an AC power switch and accompanying green LED power-on indicator, recessed screwdriver-adjustable audio gain and RF drive controls, and a professional VU meter with a red LED 100% peak modulation indicator. The VU meter indicates RMS averaged audio levels while the LED indicator is set to indicate 100% peak modulation. This combination provides total modulation indication to prevent overmodulation on peaks and rapid transients which are too brief to be indicated on the VU meter. Connections to the exciter are made on the rear panel and consist of a 3-wire grounded line cord, screw terminals for audio input and a standard SO-239 (UHF type) connector for RF output.

The power supply sub-assembly occupies 7" of rack space and provides the DC power requirements for the RF power amplifier and an AC outlet for the exciter so the entire transmitter may be activated in a single step by throwing one switch to the "on" position. The power supply unit also contains a 24VDC relay which may be used to turn the transmitter on from a remote location. Front panel controls are the AC on-off switch, a remote-local control switch, power-on LED and resettable circuit-breaker. Connections to and from the power supply are made through a 4-pin connector (for DC output), a 2-pin connector (for remote control), a chassis mounted AC outlet and 3-wire grounded line cord.

The RF amplifier assembly occupies 8 3/4" of rack space. This assembly contains metering for the RF amplifier modules, power splitters and combiners, and fuse protection for each RF module. The power rating of the transmitter is determined by the number of individual chassis-mounted RF modules—2 for the AM-50, 4 for the AM-100, and 6 for the AM-150. Front panel controls and indicators include switchable RF amplifier collector current and collector voltage meters, relative RF output meter, power on indicator, fuses for each RF amplifier, and red LED fuse-fail indicators. Rear panel connectors include a 4-pin connector (for DC input), SO-239 connectors for both RF input and output and a BNC jack for feeding an RF sample to the modulation monitor.

Interconnect cables for power supply to RF amplifier and exciter to RF amplifier are supplied with the equipment. When specified, LPB can also provide connectors for remote control of the transmitter and other cabling requirements.

Specifications

R.F. Power Output: AM-50: 25 to 55W; AM-100: 50 to 110W; AM-150: 75 to 165W
Type of Emission: 30A3, amplitude modulation
Frequency Range: 530kHz to 1610kHz, crystal controlled
RF Output Impedance: 50 ohms nominal, unbalanced, type SO-239 connector
RF Load Range: 30 to 70 ohms resistive, 3:1 VSWR reactive
Carrier Frequency Stability: +10Hz, -20° to +50° C. at 105V to 128V line or 210 to 256V line

AM-50

AM-100

AM-150

RF Harmonic Suppression (minimum): AM-50: 60dB; AM-100: 63dB; AM-150: 65dB
Carrier Shift at 1kHz: < 2% at 100% modulation
Noise Level: At least 55dB below 100% modulation
Audio Input: -10 to +10dBm for 100% modulation, 600 ohms balanced
Audio Frequency Response: 1dB, 20Hz to 15kHz, at 95% modulation
Audio Frequency Distortion: 2% max. 50Hz to 7500Hz, 3% max. 20Hz to 15kHz
RF Sample Output: 5-10V rms, 50 ohms, BNC connector
Metering: Modulation level (VU; average and peak)
 RF power amplifier collector current
 RF power amplifier collector voltage
 Relative RF power output

Furniture/Tone Arm*

DA-1-8/DA-1-16 Audio Distribution Amplifiers

The DA-1-8 provides eight 600 ohm balanced non-transformer line outputs with isolation in excess of 80dB between outputs. Nominal output level is +8dBm from inputs in the range of -14 to +20dBm. A gain control is included, as is a headphone monitor of the outputs. The input is either 600 ohm balanced line terminating or 6K ohm balanced line bridging. Audio response is ± 0.25dB from 10Hz to 20kHz and distortion is well below 0.5% throughout this range at an output level of +22dBm.

The DA-1-8 is built in a standard 1 3/4" EIA rack panel of satin brushed aluminum finish. Power switch, LED power indicator and input level control are all front panel mounted. Input and output connections are via convenient barrier screw terminals on the rear of the unit.

The DA-1-16 is a pair of DA-1-8 Audio Distribution Amplifiers side-by-side on a single similar 1 3/4" EIA rack panel. The DA-1-16 offers the flexibility of use in two modes: as a mono input 16 output (1 x 16) or a stereo input, 8 output (2 x 8) distribution amplifier.

- DA-1-8 \$245.00
- DA-1-16 425.00
- DASK Semiconductor Spares Kit for DA-1-8 or DA-1-16 35.00

S-2 Audio Compressor/Limiter

- Separate gain and output level controls
- Asymmetric modulation capability
- Controls wide range of input levels
- Stereo and quad operation provisions
- FM model available
- Very low distortion
- High signal-to-noise ratio
- Integrated circuit construction

The S-2 is designed to automatically control the audio signal level applied to transmitter (AM, FM and TV), recording, sound reinforcement and public address circuits. The S-2 is a compact total system for compressing the dynamic range of audio signals to enable the use of higher average audio levels. These higher levels assure operation with maximum allowable power. In an AM broadcast transmitter application, the effect is higher average percent modulation, hence a much louder audio signal at the receiver output.

- S-2 \$550.00
- S-2SK Semiconductor Spares Kit
for S-2 45.00

dj-10 Modular Studio Furniture System

The dj-10 Modular Studio Furniture System provides the necessary flexibility required for custom studio design while retaining modular capabilities for future expansion.

Available in the conventional height of 29", the dj-10 System will satisfy most requirements demanded of production and "on-air" studios.

Constructed of 3/4" and 1 1/2" warp-free materials and finished with durable formica type laminates, the dj-10 System presents a sturdy and pleasing contemporary appearance. Console table tops and turntable cabinet tops are finished in "Antique Ivory," the turntable bases, and console table supports are finished in "Regency Walnut."

Furniture is shipped disassembled and is easily reassembled with all hardware included.

- C-1 Single Turntable Cabinet \$495.00
(for turntable cutout, specify type and add \$15.00)
- C-2 Double Turntable Cabinet. 695.00
(for turntable cutouts, specify type and add \$30.00)
- T-1 Console Table, 66" x 24" top surface,
with legs 575.00
- T-2 Console Table, 88" x 24" top surface,
with legs 625.00

Audio Consoles

Signature III Audio Consoles

LPB Signature-series broadcast audio consoles began almost two decades ago. Well over 2,000 units at stations throughout the US and overseas have won many friends and repeat sales for their rugged reliability, ease of installation and operation, and for outstanding value received.

The new Signature III series is in production. Many are already in use. They are a significant update of prior models, and include 6, 8, 10 and 12 mixer duals, both mono and stereo. All are identical functioning full duals, i.e., the only difference between any two stereo (or mono) consoles is the number of mixers (and associated inputs).

Signature III consoles offer a more modern look in the familiar "form factor" of prior Signatures. Knobs and VU meters are all new. The cabinet is a bright new textured cream, with oak wood end panels. The new VU meters are bright and improve access to the meter lamps.

State-of-the-art semiconductors have improved many specifications. A headphone amplifier has been added with jacks on both sides of the front panel. On stereo models, all mixers may operate in mono or stereo, with the status of each indicated on panel LEDs. Remote start pushbuttons are standard, and optional mono mixdown is available on all stereo models.

Signature III consoles offer 3 inputs per mixer, rotary Shallco step or optional P&G stepless faders, plug-in modules, LED peak indicators, switchable mike gain, all transformer inputs and outputs and demonstrated RFI immunity. Mixers 1 through 4 accept either microphone or high level plug-ins (option available for more), others are fixed high level. Monitor speaker muting and tally relays are provided for mixers 1 through 3. Every fader has a cue position, and the consoles include an internal cue amplifier and 5" cue speaker as well as 12W/channel monitor amplifiers.

Models Available**Mono:**

PVA voltage regulator	65.00
PQH headphone amplifier	125.00

SPECIFICATIONS**Mixers:**

Total	6, 8, 10, or 12 (stereo only)
With Cue	all
Type	step atten or opt. stepless

Inputs:

Standard Factory Equipped —	
Mic (mono/stereo)	6
Hi-Level	all others
Optional Maximum —	
Mic (mono/stereo)	6
Hi-Level	all

S-13

Input Impedance:

Mic	150 ohms source, trans. bal.
Hi-Level	600 ohms, trans. bal.

Input Levels:

Mic	selectable —45/—55/—65dBm
Hi-Level	—10dBm

Outputs:

All Pgm.	+8dBm(OVU)
	clipping level above +22dBm
Monitor	12 watts per channel
Cue	1 watt with 5" int. spkr.
Hdprn	1 watt into 8 ohms

Output Impedance:

All Pgm	600 ohms, trans. bal.
Monitor	2 to 8 ohms
Headphones	8 ohms

Frequency Response:

All Pgm	within 1.0dB, 20Hz—2kHz
Monitor	within 1.5dB, 20Hz—20kHz

Total Harmonic Distortion:

All Pgm	0.05%, 20Hz—20kHz
	@ +18dBm output, -55dBm input
Monitor	0.1%, 20Hz—20kHz

I.M. Distortion:

All Pgm	less than 0.15%
	@ +22dBm output
Monitor	less than 0.2% @ 12 watts

Signal-to-Noise:

All Pgm	better than 75dB below
	+8dBm output, -50dBm input

Crosstalk:

	below noise level
--	-------------------

Stereo Separation:

	greater than 65dB
--	-------------------

Power Requirements:

Voltage	11/VAC (234VAC avail.)
Frequency	50/60Hz
Power	60 to 75 watts

Dimensions:

Height	9"
Depth	15"
Width—	
6 mixer	28-5/5"
8 mixer	32-5/8"
10 mixer	38-5/8"
12 mixer	45-5/8"
Weight	30/40/55/60 lbs.

Plug-In Modules:

Types	Mic Preamp, Hi-Level Input, Cue Amp, Line Amp, Power Amp and Voltage Regulator
Total	9 to 17

Cabinet:

Material	0.125" Aluminum
Finish	Textured scratch resistant bright cream exterior, clear anodized interior, oak end panels

Panel:

Material	0.125" Aluminum
Finish	Horizontally ground, brushed and clear anodized aluminum with black epoxy silk screening

Pepper Series — Miniature Quartz Lighting

- Compact, lightweight design location lighting
- Sturdy, cast-aluminum construction
- Full range of accessories, designed for fast and easy attachment and adjustments

The Pepper line consists of five focusing fresnel units, one open face and one soft light. Together they make a complete package for all types of photographic lighting situations.

The Pepper 100, 200, 420, 600 and 500/1K are all fresnel focusing luminaires designed to be used as key lights, back lights, eye lights, kickers and for effects. The Pepper Flood is a small, durable focusing quartz open faced light designed to provide an extremely clean, smooth field in all positions from flood to spot with maximum lighting efficiency. The Soft Pepper is a small, compact soft light designed for use as a fill light or as a shadowless key light.

Microphone Poles

- Carbon and fiber composite material, undentable
- Telescopic extension system
- Knurled friction locks
- Cable access, threaded yoke support, no nut necessary
- International standard threaded stud
- Scratch-resistant black finish
- Robust and super lightweight
- Minimum bow when fully extended
- Five sizes, from 15" to 16'7"
- 4'8" extension (with longest pole measures 21'5")
- Size, weight and balance for the most comfortable feel

Microphone Suspension

- Fits all sizes of poles
- Simple, effective suspension
- Threaded yoke support, no nut necessary
- Non glare black epoxy finish
- 3.25 oz.

LYON LAMB VIDEO ANIMATIONS SYSTEMS, INC.

**Encoder/Sync
Generator**

ENC-VI Encoder/Sync Generator

- Video outputs:
 - RS-170A composite video
 - R-Y, B-Y, Y + sync component video
 - Optional PAL composite video
- Internal sync generator with standard outputs:
 - Composite sync (2)
 - Blanking
 - Burst flag
 - Subcarrier
 - Horizontal drive
 - Vertical drive
- Internal color bar and black burst generator
- Separate sync input accepts either composite sync, composite video or sync on green (of RGB)
- Separate subcarrier input with 360° phase adjustment for matched color framing with other video sources
- Accepts RGB with setup, or if needed, adds setup to video output
- Selectable loopthrough outputs or 75 ohm termination
- Horizontal phase adjustment

The ENC-VI is an advanced design full NTSC bandwidth encoder/sync generator for computer graphics to video applications. Outputs include both RS-170A composite and R-Y, B-Y, Y+ sync component video. The internal sync generator allows for genlock of RGB devices or the ENC-VI operates as a slave to incoming sync from the RGB source. The ENC-VI also accepts a subcarrier input for phase locked color framing to external video. Internal video switch allows for selection of EIA standard color bars or black burst.

- **Video Inputs: Red, Green, Blue**
Impedance: Switchable 75 ohm or high impedance for bridging.

Setup not included in RGB source (encoder's internal NTSC setup optional jumper out, encoder adds setup):
Input level: 0.661V p-p (100% level); 0.496V p-p (75% level).

Black level required during NTSC blanking intervals. Allowable range of DC black level: -2V to 2V.

Setup included in RGB source (encoder's internal NTSC setup option jumper in, encoder does not add setup):
Input level: 0.714V p-p (100% level); 0.549V p-p (75% level).

Blanking level required during NTSC blanking intervals. Allowable range of DC blanking level: -2V to 2V.

ENC-VI

- **Sync Genlocking Input**
Impedance: Switchable 75 ohm or high impedance for bridging.

Input level: 0.3V p-p to 4V p-p negative composite sync or 0.3V p-p to 1.5V p-p negative sync on composite video.

Genlocking is to external sync input if present, otherwise to .3V p-p negative sync on green if green input is present. Sync switch must be in external position for genlocking.

Time delay from genlock sync to composite video sync: Internally adjustable from 350ns to 1950ns in 70ns steps.
 - **Video Outputs: NTSC Composite Video**
Level: 1.0V p-p into 75 ohm termination, sync negative.
DC level on blanking: 0.0V.
Time delay from video input: 1050ns nominal.
 - **Component Video Outputs:**
R-Y, B-Y, Y + Sync
Levels (factory set, internally adjustable):
Y + S: 1.0V p-p into 75 ohm termination, sync negative.
R-Y: 0.7V p-p into 75 ohm termination.
B-Y: 0.7V p-p into 75 ohm termination.
DC level on blanking: 0.0V.
Time delay from video input: 120ns nominal.
 - **Video Internal/External Switch**
Selects Red-Green-Blue inputs or internal patterns for video.
 - **Bars/Black Switch**
Select EIA color bar pattern or black burst when video is switched internal.
 - **Chroma On/Off Switch**
Allows excluding subcarrier component (including burst) from Composite Video output.
- ENC-VI. \$4500.00

LYON LAMB VIDEO ANIMATIONS SYSTEMS, INC.

Animation Controllers

VAS IV Animation Controller

- Field accuracy
- 24 or 30 frames, or 60 fields-per-second selection (Dependent on VTR selection)
- Scene and individual frame numbering up to 325,000
- Frame counter and SMPTE time code display
- Precise editing and replacement of single or multiple frames
- Automatic search to any frame
- Updating data and status display superimposed to monitor
- Exclusive onboard Vertical Interval Frame Code™ Generator
- RS-232 interface at 300 or 9600 baud
- Frame change and hold capability
- User selectable scanner time-out

The VAS IV is a full function microprocessor based animation controller designed specifically for frame by frame recording/editing and frame grabbing. Available in NTSC and PAL, the VAS IV will control Betacam 1/2", U-matic 3/4", or 1" Type C videotape recorders. The system accepts any composite RS-170 A video source.

VAS IV generates and reads user selectable individual scene and frame numbers in the vertical interval, which prevents the loss of even a single frame whether the tape is stopped or in motion. Internal memory will store frame numbers up to 326,000 and scene numbers up to 127. Along with a full function control panel that allows operators to program recording and editing, registration, frame change, etc., all functions can be remoted to a host computer via an RS-232 port.

VAS V Animation Controller

- Field accurate single frame recording
- Recorder controls on front panel
- RS-232 at 300 or 9600 baud
- All functions controlled by host computer
- Onboard Vertical Interval Frame Code generator/reader
- Selectable frame code and data display
- Search to any frame
- SMPTE time code display
- Optional frame grab software
- Interfaces to a broad range of VTRs
- User selectable scanner time-out

VAS V is a rackmounted animation controller designed for direct RS-232 interface with computer graphics and imaging systems. Available in NTSC and PAL, the VAS V will control Betacam 1/2", U-Matic 3/4", or 1" Type C videotape recorders to precisely record or edit on a frame by frame basis. Field accuracy is achieved by incorporating Lyon Lamb's exclusive Vertical Interval Frame Code generator/reader for all recording playback and frame searches.

Video Tape Recorders

- Ampex VPR-2, VPR-2B 1" Type C
- Ampex VPR-80 1" Type C
- Hitachi HR-210 1" Type C
- Sony BVH-2000 1" Type C
- Sony BVU-200 3/4" U-matic

VAS IV

VAS V

- Sony BVU-800 3/4" U-matic
- Sony BVU-820 3/4" U-matic
- Sony BVW-40 1/2" Betacam
- Sony VO-5850 3/4" U-matic
- Sony VO-5850 PAL 3/4" U-matic
- Ampex VPR-2B PAL 1" Type-C

- **Preroll Time**
2.5-4 seconds
Switch selectable setting
- **Front Panel Display**
6 Digits Number of frames recorded
8 Digits Tape position 1" Type C;
3/4" U-matic BVU-800;
1/2" Betacam BVW-40 (with
RS-422 serial interface)
- **Status Information**
Superimposed on video. No separate monitor required
- **Frame Code**
Recorded in vertical interval. Field accurate. (SMPTE time code not required)
- **Auto Search**
Automatic search to any frame within a scene for editing or adding to an old scene

- VAS IV \$9850.00
- VAS IV PAL (25fps) 9850.00
- VAS V (30fps, RS-232 control only) 8850.00
- Additional VTR interfaces for VAS IV and VAS V 1500.00
- Frame grabbing software for VAS IV and VAS V 500.00

Refer to Green Section for Addresses and Telephone Numbers.

LYON LAMB VIDEO ANIMATION SYSTEMS, INC.

Animation Controllers

VAS-DELTA Animation Controller

- Auto pre-black of videotape
- Exclusive vertical interval frame code
- Two-machine control
- Auto frame or field search
- Selectable scene playback from scene file memory
- Frame grab output to frame store or still store devices with selectable advance
- Simultaneous display of frame code or SMPTE time code
- Updating data display
- RS-232 at 9600 baud for remote control
- Expanded time lapse speeds
- Multiple frame recordings in Delta Step mode
- User selectable title matte

The VAS-DELTA is an animation controller specifically designed to interface with the Sony BVH-2500 Delta Time 1" VTR. The intelligent features of the VAS-DELTA and the instantaneous single-frame recording capabilities of the BVH-2500 provide a means to create highly complex animation sequences easily, quickly, and efficiently.

A unique feature of the VAS-DELTA is the frame-by-frame playback control of a Source VTR, either a BVH-2500, BVH-2000 or BVU-820. In addition to remotely controlling all Delta functions of the BVH-2500, users can program recording, editing, and frame grabbing in sequential, cycle, or skip (non-sequential) modes at 24 or 30 frames, or 60 fields per second. The VAS-DELTA generates and reads user-selectable individual scene and frame numbers that are displayable along with prerecorded SMPTE time code.

Computer graphics systems interface directly to the VAS-DELTA via an RS-232 port. The functional controls emulate all tape movement functions of the BVH-2500 for full remote control of both the record VTR and the source VTR.

The combination of the VAS-DELTA and BVH-2500 provides access to 108,000 still frames for direct display or user selectable output of any non-sequential group of frames to external still store devices. Operators can input frame numbers or SMPTE time code data to the memory in any order for recall of single frames. Also works with BVH 2500, BVH 2000, BVH 3000, BVW-40, BVW-75, BVU-800 series and BVU-950.

VAS-DELTA \$12,500.00
Additional VTR Interfaces 1,500.00

MINIVAS Animation Controller

- RS-232 interface at 9600 baud
- Works with all VTRs from same package
- Programmable for 1 or more frames per recording
- Frame grabbing with programmable offsets
- Frame grab trigger programmable from 0 to 9 fields in advance of frame to be grabbed
- Auto or preselectable time-outs
- Programmable in either vertical interval frame code or SMPTE time code
- Accurate search to any frame using VIFC or SMPTE time code
- Programmable playback of recorded segments for easy review
- Status information available through RS-232 with handshaking
- Remote VTR controls including Jog and Shuttle

The MINIVAS is an animation controller specifically designed to perform precise single frame recording and frame grabbing (capture) from PC based computer graphic systems to standard videotape recorders. Operations are performed over an RS-232 interface allowing for automated animation recording, grabbing, searching, and all VTR control functions. Field accuracy is achieved by the use of Lyon Lamb's proprietary vertical interface frame code. Additionally SMPTE time code is used interchangeably with VIFC for VTRs that have time code output available. An LED readout on the front panel displays frame code or SMPTE time code for positioning and location confirmation.

VAS-DELTA

The MINIVAS interfaces automatically to a wide range of VTR formats, from industrial 3/4" U-Matic to broadcast Betacam and 1" Type C machines as well as the high definition machines. All VTR interfaces reside in MINIVAS software so that the user may select or change VTRs at any time. Playback functions are performed directly from the computer keyboard and include operation of VTR controls with Jog and Shuttle, Search to a Frame, and Playback Frames.

MINIVAS \$4,980.00

VAS IIIB Video Pencil Test System

- Switchable recording speeds of 24 or 30 frames-per-second
- Selectable frames per recording
- Frame counter monitor display
- Playback in forward and reverse
- Four slow motion speeds
- Freeze frame
- Single-field advance
- Automatic search in forward and reverse
- 5:1 zoom lens

The VAS IIIB is a versatile, offline VHS videocassette animation system designed for precise frame-by-frame recording. The system, comprised of a specially modified VTR, high resolution camera with zoom lens, and monitor with high speed horizontal AFC circuits, satisfies the requirements of immediate testing of animation, special effects, stop-motion, time lapse, pixilation, and the shooting of storyboards.

Utilizing concepts first introduced in 1977 by the Academy Award-winning Lyon Lamb, the VAS IIIB incorporates additional features and microprocessor control for extremely accurate and efficient operation. A video-generated frame counter is recorded and displayed on the monitor for accurate frame count.

VAS IIIB Black and White System \$5,995.00
VAS IIIB Color System 7,850.00
Audio Option 450.00

LYON LAMB VIDEO ANIMATIONS SYSTEMS, INC.

High Resolution Converters

HRC High Resolution Converter

- Conversion from 1280 x 1024, 60Hz, non interlaced (RS-343) to standard NTSC (RS-170A) video
- High-quality image conversion
- Selectable form factor to conform to NTSC aspect ratio
- Internal sync generator with genlock and NTSC encoder
- Composite NTSC video and component RGB (low resolution) outputs
- Simple RGB connection to computer graphics source
- Self-contained rack-mountable package
- Compatible with Lyon Lamb video animation controllers

The HRC converts up to 1280 x 1024 60Hz non-interlace RGB video to NTSC video or low resolution 525-line RGB with no loss of graphic information. For the first time, users of high resolution display devices will be able to directly record or display their images in a standard video format. Rather than throwing away line and pixel information or simply providing a low resolution window, the HRC performs complex compression operations on the full 1280 x 1024 image. A high quality NTSC output is achieved in a typical conversion time of $1/10^{\text{th}}$ of a second. The HRC can interface to a range of high resolution formats including 1280 x 1024, 1024 x 1024 and 1024 x 768 non-interlace or interlace vertical refresh rates. As inputs, the device accepts RGB with H drive and V drive, RGB and Composite Sync or RGB with Sync on Green. Additional features include: Operator selection of picture aspect ratio, either square or 4:3, full remote control with a standard RS-232 interface, RS-422 interface or a TTL switch, allowing for direct use with all Lyon Lamb animation controllers, selectable outputs of composite video or low resolution RGB (RS-170A).

Specifications

High Resolution Inputs: Red, Green and Blue Video: 1V p-p, 75 ohms \pm volt maximum DC component; Sync Source: VD/HD composite sync or sync-on-green; Vertical Drive/Horizontal Drive, or Composite Sync: 2V p-p nominal, 75 ohms \pm 2V maximum DC component

Other Inputs: Genlock Sync Reference: Either 1V p-p RS-170A video or 4V p-p composite sync 75 ohms; Subcarrier Reference Input: 1-4V p-p, 75 ohms; Time Delay from Reference Sync to Output Sync: \pm 8 μ s in 70ns steps; Start Conversion Signal: TTL level, 75 ohms termination

RS-232/422 Serial Remote Control Interface: 9600 Baud
Output: NTSC/RS-170A Composite Video: 2 outputs, 1V p-p into 75 ohms; Red, Green and Blue: 2 outputs, 1V p-p into 75 ohms; Composite sync on all three outputs

Note: NTSC and RGB outputs are not available simultaneously

Composite Sync Input: For genlocking horizontal phase adjustment
Output Frequency Response: \pm 3dB 0-5.0MHz
 -46dB at 7.1MHz
S/N Ratio: 46dB

NTSC Output Resolution: H x V: 754 x 448 or 754 x 512, selectable
Pulse Outputs: Composite Sync, Composite Blanking: 4V p-p into 75 ohms. Nominally 500ns advanced of composite output. Synchronous with RGB outputs
Subcarrier Output: Continuous subcarrier in phase with burst in composite output. 2V p-p into 75 ohms

Input Subcarrier Phase Adjustment: Approximate \pm 180 $^\circ$ switched adjustment. \pm 100 $^\circ$ continuous adjustment

Output Subcarrier to Sync Phase Adjustment (SCH): Approximate \pm 180 $^\circ$ switched adjustment. \pm 100 $^\circ$ continuous adjustment

Conversion Time: 0.1 sec, nominal. Still frame to be converted must be present for entire conversion time

HRC

Dimensions: 7" H x 19" W x 18.1" D
Weight: 35.2 lbs.

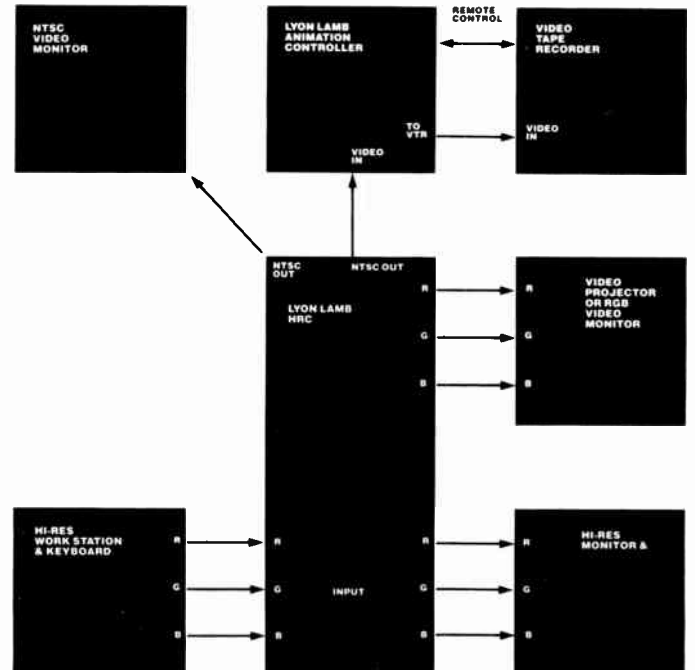

HRC Workstation Interfaces Currently Available For: Tektronix 4115, 4120 Series; Hewlett Packard 320 SRX; Silicon Graphics; Apollo DN580, DN590; Calcomp Vistagraphic 4500; Ramtek 4225, 4229; Imagraph AGC 1024 Series; Sun Microsystems 3100 Series; Megatek; Calma; Chromatics; Custom interfaces available.

 encies • Multi-plane editing and undo function • Cut and
 paste • Continuous tone shading • Instant RGB color frame
 grab from VTR • Instant composite grab, black and white or
 color

The Silver consolidates 6 functions into a single video produc-
 tion workstation. It combines power and reliability with an
 easy-to-use icon menu. Designed for post production and cor-
 porate installations.

The Silver offers literally hundreds of creative applications. It
 can "grab" images from moving videotape and input informa-
 tion from either black and white or color video cameras. With
 the Silver, you can create your own fonts and special effects,
 and control multiple video inputs from VTRs—all from a single
 workstation that's menu driven.

The Silver has dual expansion capabilities through software
 and hardware. It is available as a modular machine to expand
 your hardware system as needed; and, Silver's application
 software is expandable through the use of software cartridges.

Routing Switchers

15X SERIES ROUTING SWITCHERS

The Series 15X Routing Switcher offers an inexpensive method of eliminating patch panels and providing selectable distribution of audio and video signals. Any output channel can be independently programmed to select any input signal. The 15X Series offers very flexible control options which are divided into two categories—local and remote which can be intermixed within the same frame. Units are available in sizes: 2 outputs, 6 outputs, and 12 outputs. Also available with Audio Breakaway.

Plug-in input and output amplifiers are used for video and audio. The audio input amplifiers incorporate balanced inputs with common mode rejection for canceling hum on input lines. The video inputs have looping BNC connectors and terminating switches.

15X

101

15X Series Video/Audio Routing Switchers

- Bridging crosspoints • Choice of local or remote controls
- Modular—field expandable • 3 frame sizes • Low crosstalk • Second audio level (optional) • LED status indicators • Input and output amps
- Terminating switches on inputs • Audio breakaway

Local Control

Mechanically interlocked pushbutton switches are used to select and switch the audio, video and tally signals.

Each video crosspoint is isolated from feeding back through the switch to the newly selected signal eliminating the glitch on other monitors. Each output has a separate plug-in tray containing the mechanical switch as well as the audio and video output amplifiers which are also separate plug-in units. LED status indicators above each pushbutton illuminate when the corresponding switch is depressed.

Remote Control

Standard remote controls are available for momentary pushbuttons. Remote control pushbutton trays are interchangeable with the local modules. Only DC voltages are used for control. Switch module assemblies are available in 12 x 1 and 15 x 1 sizes.

101 Series Vertical Interval Bridging Switcher

A 10 x 1 bridging switcher with built-in video and audio DAs featuring vertical interval switching on all inputs, lighted pushbuttons, and switch position memory. The switch position memory is effective for at least 30 seconds, and longer when connected to an external battery source (terminals provided).

101 Vertical Interval Bridging Switcher \$1,255.00

Accessories/Options

Remote Control	\$450.00
Instruction Manual (one supplied with each unit)	30.00

3M COMPANY

Routing Switchers

Series H Routing Switchers

- No internal maintenance or service adjustments
- DC coupled inputs to outputs allow analog switching circuits to handle certain data signals without DC-restore circuitry
- Bi-directional, parallel control bus with positive feedback from cross-point latches gives immediate and positive confirmation of cross-point latching
- Microprocessor control system simplifies design, maximizes dependability
- Single line coax control capability simplifies wiring and connections
- Separate plug-in video and audio output amplifier cards to assure that failures are isolated to one point and disable only one output if removed
- Each video path can have multiple associated audio paths (i.e., stereo, SMPTE time code, multi-lingual applications)
- The microcontrol system can provide one video with up to 5 audio levels with separate control for each level
- Audio-follow-video, video only, audio only, and audio breakaway for easy adaptation to any switching application
- I/O ports for RS232 computer terminal control, and standardized I/O protocol to allow for external CPU control by a variety of devices
- Improved temperature uniformity, hybrid ceramic substrates have stable and predictable dissipation characteristics
- Modular building block design with full expansion compatibility
- Control circuits are distributed by card, another valuable circuit redundancy feature

16 x 16 Audio/Video Matrix Card

The 16 x 16 audio/video matrix card is the basis of the Series H, 128 x 32 audio/video switching system. It provides up to 16 inputs and 16 outputs of audio and video switching on an 11 1/2" x 15 1/4" circuit board.

32 x 32 Routing Switcher Matrix

- No internal maintenance or service adjustments
- I/O parts for RS232 computer terminal control, and standardized I/O protocol to allow for external CPU control by a variety of devices
- The switchers are controlled by the 6600 microprocessor controller or a 6500 controller

The Series H 32 x 32 Routing Switcher provides 1 video and 1, 2 or 3 audio switching levels in the same enclosure. The switcher is designed for studio and remote truck applications.

The switcher design allows a user to install a frame configured to meet initial needs such as a 20 x 20 1 video, 2 audio and provide room for expansion to 32 x 32 1 video, 3 audio within the metal frame by means of plug-in modules. This ensures expansion without obsolescence of previously purchased hardware.

Because video switching demands absolute freedom from signal interruptions, Series H equipment is designed using redundant circuits for all critical functions.

The compact matrix frame is only 19 1/4" H (11 rack units) x 19" W x 17" D. The switcher represents 372 video and audio crosspoints per rack unit (13 3/4").

The 32 x 32 also is available in a video-only switcher or audio-only at 1, 2 or 3 levels. Each audio level is independently addressable, and the system can be configured to switch the audio levels with the video or each separate level independently.

64 x 64 Audio/Video Routing Switcher

The Series H 64 x 64 routing switcher allows a user to install a frame configured to meet initial needs and provides room for expansion by means of plug-in modules.

The switcher provides 2 levels of switching, 1 video and 1 audio, in a matrix frame 22 3/4" H x 19" W x 17" D. The unit also is available with a companion 64 x 64 2 level audio only Series H frame, thus providing 64 x 64 1 video and 3 audios in two frames. The system can control up to five independent levels of audio.

The 64 x 64 routing switcher matrix is controlled by the 6600 microprocessor controller or a 6500 microprocessor-based control system.

Series H 64 x 64

40X-20

40X Routing Switchers

- Microprocessor Control System
- Single line (COAX) control system
- Self powered control panels
- I/O port for RS232 computer terminal
- Five ports for coaxial control lines
- Control lines can be looped from one panel to another
- Microprocessor unit mounts in 5 1/4" H x 19" W frame
- Output oriented routing switcher
- Maximum system reliability
- Wide variety of controls available
- Second level audio (optional)
- Input video clamping — back porch type (optional)
- 3-level switching in same frame — 1 video and 2 audio
- Audio/follow audio breakaway, or video only switching
- Vertical interval switching
- Options: second audio switching path, redundant power supplies

The 40X series switcher is designed to accommodate 40 inputs x 20 outputs in a single frame. Inputs are expanded individually and outputs may be added individually. Each 40 x 1 output channel is mounted on a single switch module board which plugs into the main frame. In the case of a 40 x 10, for example, this is equivalent to having ten 40 x 1 switchers in one frame. If one output card is removed, only one output is lost without affecting the remaining matrix. All output modules are interchangeable and any module may be unplugged while the routing switcher is in operation.

Breakaway audio is a standard feature with the 40X series. Audio can be selected separately from the video. Vertical interval switching is a standard feature in the 40X.

Microprocessor Based Control Panels for 3M Routing Switchers

Alphanumeric Type Control Panel

The alphanumeric control panel can be used as a single or a multiple channel control device. It can also be operated using numeric or alphanumeric addresses. Another feature is a software lockout which allows the operator to lock out selected channels when controlling multiple outputs. The "locked out" channels can only be used by other locations when released by the operator or when released from a designated supervisory location. The nomenclature used to designate the various input sources and output destinations are provided per each customer's requirements.

The alphanumeric control panels are available in the following configurations:

10 category by 99 sources per category, or a total of 999, alphanumeric single bus, multi bus, or full matrix (X/Y) control panel with audio and video breakaway and lockout capability (this panel will provide an alphanumeric presentation of preset and program).

Note: This panel may have limited outputs assigned as determined by the customer.

Four different modes can be chosen: 1) Video only, 2) Audio only, 3) Audio-follow-video, and 4) Audio/video split.

An operator can also initiate a pre-determined salvo group(s). This feature allows group switching of previously stored events.

15 category by 99 sources per category, or a total of 1485, alphanumeric single bus, multi bus, or full matrix (X/Y) control panel with audio-follow-video operation (this panel will provide an alphanumeric representation of preset and program).

*Note: This panel may have limited outputs assigned as determined by the customer.

3 digit 10 category by 99 sources per category alphanumeric single bus, multi bus, or full matrix (X/Y) control panel with audio and video breakaway and lockout capability (this panel will provide an alphanumeric representation of preset and program).

*Note: This panel may have limited outputs assigned as determined by the customer. 3 digit source selection (100-999) is also available.

Touchpad Numeric Type Control Panel

Touchpad controls have the advantage of requiring less space than pushbuttons and the ability of handling 99 source selections with no extra hardware. Readouts are used to tally the preset and line (output) status. A take button is used to provide the switch from preset to line. This panel reads out in numerics only. Audio breakaway capability is a standard feature with the Touchpad Panel. An optional touchpad is also available to provide control of two switcher outputs in an audio/follow or audio breakaway mode of operation.

Pushbutton Control Panel

Standard pushbutton panels are available in 20, 40 and 80 positions, using momentary computer-type pushbutton switches with LED indicator lights. Audio and video breakaway switching is standard with all pushbutton panels. An operator may accomplish audio-follow-video, video constant with audio breakaway, or audio constant with video breakaway type switching.

Illuminated Pushbutton Control Panel

This panel is the same as the LED panel except it uses lighted pushbuttons instead of LED indicators.

5 Position Leverwheel Control Panel

The five position control panel allows an operator from one 3 1/2" control panel, the capability of switching five consecutive outputs.

Both audio and video are selected by the leverwheels and switched in an audio/follow mode by pushing the take button. A lockout function is also available from each leverwheel switch control section. The use of this panel affords the customer a very economical panel and less space required to control a routing switcher.

Video Terminal

Video Terminal

The Video Terminal is probably the most versatile and cost-effective means of control available. It not only provides a keyboard to address the microprocessor with any address possible with the software provided, but it also has a CRT that displays a complete matrix and machine control status as well as all the commands. Any future command changes can be accommodated by changing software. Additional features are included, such as salvo commands, "all call", machine control, etc. The video terminal is ideal for supervisory control.

3M COMPANY**Machine Control System****ESbus Machine Control System**

The ESbus Machine Control System is a powerful digital communications network linking machines and control locations. The system uses an open ended RS-422 serial communications bus which supports the SMPTE/EBU ESbus standard for serially controlled devices. Non-serial devices are controlled with serial to parallel machine decoders. One end of the bus terminates in a Bus Controller which acts in a supervisory role, monitoring the active nodes on the bus, and determining the availability of machines when selected at a control location. A slave bus controller is available to provide full redundancy for the bus controller, eliminating a potential single point failure.

In a stand-alone configuration the ESbus machine control system is a powerful tool for controlling machines throughout your facility. However, the maximum potential of the system is realized when it is integrated with other 3M broadcast control products to form a comprehensive control system which enhances the productivity of any operation. The 3M system concept is constantly evolving to reflect the changes in broadcast and production operations.

The parallel machine decoder converts serial commands into logic level outputs to drive VTR's and film islands with parallel control ports. Most popular machines are currently supported and outputs from the parallel machine decoder can be used for many custom control requirements.

The Series H routing switcher control system can be linked with an ESbus machine control system to provide control locations with integrated switcher and machine control functions. Selecting a controlled machine as an input source on a routing switcher control panel will automatically delegate control of the machine (if available) to the associated machine control panel.

In locations where traditional machine control capabilities are required, eight function pushbutton control panels are used. The machine(s) to be controlled are selected using the delegation pushbuttons (12 and 20 machine panels are available). Salvo starts of multiple machines are possible by selecting multiple machines using the delegation controls. The eight function buttons allow control of standard machine operating modes and indicate the machine's status to the operator.

The 324 Master Control Switcher ties to the ESbus system to provide pre-roll of machines for your "on air" operation. In addition, the 324 is offered with an integral ESbus control panel which provides the master control operator with access to all machines for support of "off air" operations.

With the Universal Machine Control Panel a wide range of features can be controlled on machines which offer enhanced external control capabilities. This controller is menu driven and includes a jog/shuttle control allowing it

324

to exercise many of the advanced features made available through the machine's communications protocol. Depending on the machine, controlled features may include machine editing functions, the setting of mark points by time code entry, time code inquiry, and jog and shuttle of tapes or film.

The Serial Machine Decoder is used with machines that have serial control capability (ESbus and other serial protocols). This includes intelligent devices such as character generators, and still stores. Most serially controlled videotape machines are currently supported. The development of serial interfaces is an ongoing process: 3M will add interfaces as new machines become available and will work with you to develop interfaces for your specific requirements.

Snap Cap™ Hanger Bar System

- Allows maximum storage density (280 videocassettes in a 4' x 8' area)
- Adapts to many locations and space requirements
- Provides maximum protection of videocassettes without additional packaging
- Allows easy and uniform labeling
- Locks firmly onto videocassette but is easily removed
- Locks onto the hanger bar but is easily detached and transported
- Features light high strength aluminum bar
- Installs easily and inexpensively
- 40 units per carton

The Snap Cap Hanger System efficiently protects and stores your valuable videocassettes in a minimum of space while allowing you to transport and quickly access the tape.

Hanger System

Hanger System

A videocassette case design that's triggered a revolution in 3/4" and 1/2" videocassette storage and handling. The shipper/storage case (patents applied for) represents a design concept based upon the idea that hanging your videocassettes not only is the best way to protect them from damage, but it will organize your storage area and simplify the way you transport videocassettes.

Shipper/Storage Case

This sturdy shipping box can be labeled and mailed with no other packaging needed. Its unique hanging hook and slide-snap latch are only two of the features of this case that opens to reveal a recess for storing the record-lockout button when you are not using the record mode. The stabilizer bars on the box bottom and the expandable, spine-handle simplify storage and retrieval in any situation.

CHB-1 Case Hanger

This extruded aluminum bar comes in 4' lengths and can be cut to fit doors, desk backs, cabinets, shelves, walls, etc. Standard screws or bolts anchor them securely to concrete, wood, plaster or metal surfaces, and when properly mounted, the bars can maintain weights of up to 240 lbs.

6 PH Six-Pack Hanger

A sturdy, aluminum frame that easily totes up to 6 videocassettes, with the case or without.

3M COMPANY

Magnetic Film/Recording Cassettes

Magnetic Film

Cinetrak Magnetic Film has the same oxide formulation as 226 Audio Mastering Tape, with a special surface treatment to make it extremely smooth. The result is a dramatic reduction in asperity noise and an increase in high frequency response. For critical mastering applications, Cinetrak Magnetic Film outperforms any other magnetic film on the market. Its superior wearability allows it to be used repeatedly with no noticeable loss in signal-to-noise, output or frequency response.

MA-23VFM

23GHz FM Microwave Video System

- High power output 66mW typical
- Low cost, compact FM microwave system
- Full color compatible video plus audio, data, control
- All solid-state
- Simple installation and alignment
- Weather-resistant RF units
- Built-in 115VAC power supply
- Ready to mount on 2" to 4" O.D. pipe

M/A-COM's MA-23VFM system is a budget priced solid-state FM microwave radio system that provides reliable, short range video communications links in the 21.8 to 22.0GHz and 23.0 to 23.2GHz frequency band. This system is capable of transmitting full color video plus high quality subcarrier program channels with all of the advantages that only FM microwave systems can offer. The MA-23VFM system is ideal for relay of TVRO programs for CSTV systems as well as video conferencing or remote surveillance applications. The standard MA-23VFM system comes completely equipped with one subcarrier program channel for audio, data or telephone use.

The MA-23VFM system is an economical alternative to conventional coaxial cable links, especially where cable installation is impractical such as in congested downtown areas, across landscaped grounds or locations where trenching and aerial lines are not permitted. In these instances, the MA-23VFM system eliminates not only the prohibitive installation costs of cable systems, but also the lengthy delays encountered in obtaining municipal construction permits.

The compact, lightweight MA-23VFM system is engineered to provide reliable performance and simplicity of operation at reasonable cost. Transmitter and receiver subsystems are comprised of weather-resistant RF units equipped with integral high gain antennas designed for outdoor use, and a Control/Interface Unit containing power supply and baseband circuits. Distances of 250' (76m) between the Control/Interface Unit and RF heads are possible with no signal degradation. Units are completely aligned at the factory and do not require any adjustments once installed. Field proven, solid-state technology is employed featuring direct signal conversion Gunn Oscillators that have a long history of trouble-free performance in other M/A-COM products serving the communications industry.

The MA-23VFM is the logical choice for low cost microwave communications links for the following reasons:

- FM superheterodyne design is inherently superior to AM systems in an interference environment—less susceptible to atmospheric conditions (electrical storms), RFI, and EMI
- 7.5MHz bandwidth allows transmission of black and white or full color video
- The MA-23VFM system can be equipped with up to two internal subcarrier channels for audio, data, or telephone line replacement. Plug-in subcarriers are available to allow field upgrading to maximum subcarrier capacity in minutes

Primary Uses

- Teleconferencing
- CATV
- Surveillance
- Telephone via FDM

FM Advantages

- Higher signal-to-noise ratio—Superior picture and audio and data quality
- Higher fade margin—Longer paths without repeaters
- Less susceptible to interference from electrical storms, RFI, and EMI

Options

- 500kHz return for audio, data, or camera control
- 230VAC/625 line video operation

M/A-COM MAC, INC.**Microwave Systems****G-Line Series Point-to-Point Video Microwave System**

- 2, 2.5, 6, 7, 8 and 10 to 13GHz operating frequency bands
- 2GHz ultra low noise linear oscillator
- High power transmitter outputs
- Excellent signal-to-noise ratio
- Digital AFC
- Low transmission distortion
- Multihop capability
- Hot standby and space/frequency diversity options
- Unattended remote operation
- Flexibility

The G-Line series point-to-point video microwave systems operate in the 2, 2.5, 6, 7, 8, 10 and 13GHz bands. The G-Line equipment is fully solid-state, employing a blend of state-of-the-art and proven technologies. Both the high power transmitters and low noise receivers enable system designers the flexibility of optimum performance while maintaining cost effectiveness.

All G-Line series transmitters and receivers are readily accessed for service via a fold-down door on the front of the unit. All modules and test points are then easily accessible from the front of the rack for easy maintenance.

Multihop systems can be economically implemented with G-Line series equipment. This capability is a direct result of the linearity advantage achieved by the use of a high power 2GHz transistor oscillator (with low-order multiplication to higher frequencies). This gives the G-Line an advantage over both earlier high-order multiplication of UHF oscillators and klystrons. Up to four audio program channels can be carried above the video. Multiple subcarriers can be carried above the video signal using sub-carrier multiplex techniques. The MAC PAC-10/PAC-12 program audio system and SC-1 service channel converter allows the user the benefits of "that unused bandwidth" above the video.

B-815

M/A-COM MAC, INC.**Microwave Systems****MA-18CC 18GHz Microwave Communication System**

- Meets or exceeds EIA-250B short haul specs
- Field tunable RF frequencies
- High-stability phase-locked TX source
- Built-in diagnostic alarms
- Receiver image rejection greater than 80dB
- + 18dBm RF output power
- High system gain
- Dual conversion receiver
- Built-in RF and IF monitor
- 10MHz baseband bandwidth standard
- Up to three audio subcarriers built in
- Range up to 15 miles

The 18GHz band offers an opportunity for broadcasters who are running into congestion on lower frequencies. 18GHz is a professional quality band with a range of up to 15 miles, and it still has plenty of available frequencies with a minimal probability of interference from other sources.

MA-18CC System is a solid-state FM microwave communication system, designed for broadcast and high-resolution video applications. It operates in the 17.7 to 19.7GHz frequency band, with the high frequency stability required by the FCC in this band.

It can carry up to three 15kHz subcarriers above the video for transmission of program audio channels, low-speed data or supervisory order wire in any combination. For more than three subcarriers, M/A-COM's PAC 10/12 audio modulators and demodulators may be used.

The compact, lightweight MA-18CC System is engineered to provide troublefree performance. Its weather-resistant RF transceiver assembly is integral to the antenna, and is designed for outdoor use. The two rackmountable baseband units contain power supply and baseband circuits, and are connected to the outdoor units with coaxial cable and power cable. No waveguide is necessary.

The transceiver is easily field tunable over the full 470MHz segment of the band, using dipswitches and the fine-tune control. The System features modular construction with easy access to all RF and electronic assemblies.

The transmitter features a high-stability RF source phase-locked to a stable crystal reference, plus high power output and a built-in RF monitor test port. The dual conversion receiver provides > 80dB of image rejection. The MA-18CC offers a full range of options, including multiplexing with up to four duplex systems using a single antenna, or hot standby for fully-redundant duplex protection.

Options

- Fully-redundant hot standby protection
- LNA for extended range
- Field installable, RX narrow band IF filter with AFC
- AC or DC operation—115/230VAC (50-60Hz), 24 or 48VDC
- 12MHz baseband bandwidth capability for high resolution video
- 525/625 line NTSC/PAL emphasis
- Multiplex configurations—up to four full duplex channels using a single antenna
- 2', 4' or 6' high-performance antennas

**MA-18CC****MA-23CC 23GHz Wideband Microwave System**

- Range to 10 miles
- Broadcast-quality NTSC 525/625 line video with up to 3 audio subcarriers
- Bandwidth to 10MHz \pm 3dB
- 2', 4', or 6' antennas, single or dual feeds
- Simplex or full duplex operation
- AC or DC power
- Compatible with MA-23DR digital microwave system

With up to 12MHz of bandwidth, the MA-23CC is the short-haul choice to deliver professional broadcast-quality or high-resolution video.

The 23CC is a solid-state analog microwave radio system operating in the uncongested 21.2 to 23.6GHz frequency band. With its wide variety of options and configurations, it's easy to design the ideal system to meet your needs.

Three antenna sizes are available in simplex, duplex or multiplex configurations, and allow transmission ranges of up to 10 miles. Repeaters allow even greater distances without significant degradation.

Combined with a digital audio processor, dynamic range audio increases to 110dB to deliver stereo-quality for AM or FM stations. And with the EIA-250B option, the 23CC is popular as a studio-to-transmitter link for television stations.

Transmission of high-resolution images such as CAD/CAM and medical imaging is achieved with 12MHz bandwidth, which delivers 1024 x 1024 video.

Easy access is provided to all RF and electronics assemblies. Transmitter and receiver consist of weather-resistant integrated antenna/RF assemblies designed for outdoor use. Rackmountable indoor baseband processing units contain power supply and baseband circuits. Interconnection between indoor and outdoor units is by coax cable and power cable—no waveguide is necessary.

Options

- EIA-250B
- Up to 3 plug-in audio subcarriers
- 12MHz bandwidth for 1024 x 1024 line high resolution video
- Digital data capability to 10M byte
- RF multiplexing of up to 4 duplex video or digital systems through a single antenna

M/A-COM MAC, INC.**Subcarrier Modulator/Demodulator****PAC-10/PAC-12 Program Audio Channel System**

- "Outstanding" head room and THD
- "Slim-line" — four channels for one rack unit of space
- Plug-in circuit card expansion
- Carrier alarm equipped with dual interface form-C contacts
- Frequencies
- Domestic — 4.83, 5.2, 5.8, 6.2, 6.8, 7.5, and 8.3MHz
- International — 7.020, 7.5, 8.065, 8.3, and 8.59MHz
- Front accessible

The PAC-10 Subcarrier Modulator and PAC-12 Subcarrier Demodulator provide a cost effective means of transmitting and receiving high quality program audio information over conventional microwave relay equipment.

The "outstanding" headroom of the PAC-10/PAC-12 system allows the user to handle those "hot" program sources available in today's competitive environment. This extended headroom keeps the total harmonic distortion at an imperceptible level.

The PAC-10/PAC-12 system conforms to the proposed RS-250C differential phase and gain standards for individual left and right stereo transmission. For those applications requiring composite multi-channel sound transmission, request M/A-COM's Bulletin MAC-MCS.

The "slim-line" PAC-10/PAC-12 system can accommodate up to four PAC-10 subcarrier modulators or PAC-12 subcarrier demodulators in a single rack space. This, along with the optional "slim-line" HSB-10/HSB-12 Hot Standby Switch, provides efficient use of precious rack space.

The PAC-10/PAC-12 program audio channel system provides the ability to insert audio subcarriers above the video channel in conventional microwave relay systems. The efficient use of this unused spectrum gives the system's engineer a solution for those troublesome "house-keeping" chores. The ability to transmit and receive various program audio sources, alarm reporting, status monitoring, and remote control provide an effective means of controlling costs while maintaining performance.

The System operates on its own internal 115VAC power supply. Optional power sources are 220VAC or DC power supply. A barrier strip is provided in the DC format for easy connection.

The System comes equipped with a carrier alarm detector. Four red LED's on the front panel indicate which module has failed as well as providing a summary alarm to a rear mounted 9 pin "D" type connector (mating connector supplied). This alarm is configured for "fail-safe" operation and provides a form-C interface.

The PAC-10/PAC-12 removable front panel provides ready access for servicing needs.

PAC-10 Modulator Operation

The audio input is 600 ohm balanced. This input is attenuated by the deviation control. This control is accessible

PAC-10/12

on the front edge of the printed circuit card. Deviation can easily be reset in the field without expensive test equipment.

Audio input and output preamplifiers isolate the 75 μ s pre-emphasis. They also provide the necessary level to the varactor controlled VCO for proper deviation.

The ECL voltage controlled oscillator (VCO) derives its stability from a phase-locked loop frequency synthesizer. The reference oscillator is crystal controlled.

The tuned subcarrier amplifier filters the desired frequency. A subcarrier level adjust is also provided on the front edge of the printed circuit card. The output is high impedance for easy bridging on the video line.

An alarm detector samples the output level and compares it to a preset threshold. When this threshold is exceeded, an alarm LED on the front panel of the PAC-10 chassis is illuminated. There is also a saturated collector and form-C interface available on the rear panel for remote alarming.

PAC-12 Demodulator Operation

The demodulator input filter is fed composite baseband through a high impedance bridging bus on the backplane of the PAC-12 chassis. The bandpass filter is tuned to the desired subcarrier frequency. A tuned buffer amplifier increases the desired level, while also providing an additional pole to the overall bandpass characteristic.

The filtered signal is fed to a quadrature detector. The quadrature detector integrated circuit contains limiting, detection, signal level sensing, and audio preamplification. The detected audio is fed through an emitter follower to the de-emphasis network. The "raw audio" is then filtered by an active low pass filter before going to the audio output amplifier. The output amplifier is then matched to provide a 600 ohm balanced output up to +18dBm.

A DC signal proportional to the subcarrier level is supplied to an alarm comparator. This level is compared to a preset threshold. When a fault occurs, a red LED on the front panel of the PAC-12 Demodulator chassis is lit. An alarm interface connector on the rear panel provides a saturated collector or form-C contacts for remote alarming.

Options

- 220VAC or DC power supply
- HSB-10/HSB-12 hot standby

M/A-COM MAC, INC.**Transmission Equipment****PA-1202 ADA Power Amplifier**

- High output power
- Compact, solid-state "fail soft" design
- Quick, economical means of boosting signal level
- Integral isolators and harmonic filter readily permit adaptation to existing microwave communications systems
- AC or DC powered models are available as options

The PA-1202 power amplifier is a solid-state, single-stage avalanche diode amplifier (ADA) designed to amplify the output signal of the MA-12G transmitter to a nominal level of 2W in the 10.7 to 13.25GHz frequency band. It is ideally suited for systems that need to be "stretched" or to overcome splitter losses in a point to multi-point system.

It is a compact unit designed for mounting at the rear of an existing M/A-COM MA-12G transmitter. Integral isolators at the input and output ports of the amplifier and a harmonic filter preserve the integrity of the amplifier without the need for extensive modification of the existing transmitter.

The amplifier power supply is contained in a standard 19"/48.3cm rackmount for ease of installation. Three primary supply voltages are available as specified: 115VAC at 60Hz; -24VDC and -48VDC.

DS-1 Baseband Diversity Switch

- Continuous monitoring of pilot and baseband noise levels
- Flexible modular construction
- Single or dual circuit switches
- Access to standby channel output
- Local or remote manual control
- Redundant dual plug-in modules for -24VDC, -48VDC or 115/230VAC power

The DS-1 Baseband Diversity Switch has been designed to complement the baseband hot standby switch for situations where it is important to maintain the best overall signal-to-noise ratio.

A typical application would be at the termination of a multihop system where the ability to monitor and compare the noise build-up in successive repeaters ensures the optimum choice of path. It can also be used at intermediate dropping points without interfering with through transmission at IF or baseband.

Mechanical

The switch is housed in a 3 rack unit (5 $\frac{1}{4}$ ") high 19" shelf unit. It comprises plug-in cards which slot into a printed circuit motherboard to which all baseband and power connections are made. This gives a highly reliable arrangement. The front panels carry clearly labelled LED displays to indicate switch position, relative noise level, local or remote control, etc. Extender cards are available for maintenance of the modules.

Electrical

High impedance pilot/noise monitor modules examine the condition of each of the baseband inputs and a logic

**DS-1****PA-1202****PA-1202 Typical Performance Curve**

module chooses the better channel path. Channel selection is based on the presence of a pilot at an acceptable level, and the lower noise level (with a 4dB differential in the range from close to threshold to 20dB higher). Failure of a pilot overrides the noise monitor to give rapid protection of the working circuit.

One or two plug-in switch modules can be used, for single or dual circuits, with common control but high isolation. A special bypass feature permits switch modules to be removed, without loss of traffic, for inspection or replacement.

Local and remote manual control is available and change-over contacts permit remote indications of switch position and manual override.

Dual positions are available for plug-in power modules and one or two power supply modules can be fitted. These can be any combination of -24VDC, -48VDC or 115/230VAC.

A spare module space is available for optional items to customer requirement (e.g., low pass filter, baseband amplifier, etc.).

Refer to Green Section for Addresses and Telephone Numbers.

MAGNI SYSTEMS, INC.

**Test Signal Generators/
Video Graphics Cards**

1510A

2015

1510A Test Signal Generator

• 10-bit, digital test signal generator with 40 precision test signals: multiburst, NTC-7 composite, SMPTE color bars, matrix, modulated ramp, convergence, field squarewave, window, NTC-7 combination, multipulse, red field, bars/Y, modulated staircase, modulated bar, 50 IRE lum, 0 IRE lum • Field sweep signal to 6MHz • Custom test signals available • Genlocks to external or internal reference • 12 character source ID and audio tone outputs – standard with every unit • Sized to share side-by-side rack with waveform monitor • 16 signal 1510S also available • Choice of rackmount or portable configurations

1510A	Test signal generator	\$3,490.00
1510S	Same as 1510A with 16 test signals	2,490.00
Option 03	Adds black burst and drive signal outputs	600.00
Option AT	Adds audio tone (2-channel) output	350.00
Option 05	D2 output only	750.00
Option 05I	D2 input and output	1,200.00

1515 Component/Composite Test Signal Generators

• Multiple formats: Composite NTSC, RGB and Y/B-Y/R-Y, standard on all units • Betacam™, SMPTE, M-II and S-VHS formats available • Unique signals for testing distortions peculiar to component analog video: "dual timing pulse" signal for setting Y/C delay and gain, color sweep for encoder/decoder tests, crosstalk test, noise coring test, bowtie test for delay matching, linearity test, clamping test • 12-character source ID standard with every unit • D1 output, optional, provides front panel selection of four 4:2:2 component digital signals: 75% color bars, 5MHz line sweep with 2T pulse and bar, split field signal of luminance and color-difference with valid ramps, 100% color bars all of which meet RP125/EBU 3246 requirements

1515S	Component TSG (SMPTE format)	\$5,300.00
1515B	Component TSG (Betacam format)	5,300.00
1515M	Component TSG (M-II format)	5,300.00
1515U	Component TSG (SMPTE, Betacam, M-II and S-VHS formats)	6,300.00
Option 03	Adds black burst and drive signal	600.00
D1 Option	8-bit	1,500.00
D2 Option	10-bit	1,700.00

1517 Component (625/50) Test Signal Generator

• Supports RGB and the following Component Analog Video (CAV) formats: EBU (M-II™), Betacam, Y/CTCM, Y/CTDM • Sized for side-by-side rackmounting with a waveform monitor or vectorscope • 12-character source ID • Drive pulse outputs • Sync-lock • Dual Timing Pulses and timing bowtie test signals • Specific signals to ensure optimum CAV performance • Custom signals also available • Digital signal storage for reliable replication • Modular design allows easy testing and maintenance • In Average Picture Level (APL) Mode, test signals of 12.5% or 87.5% APL are provided by inserting 0% or 100% luminance level on three out of every four lines • Each instrument provides three signal sources, with each available on two isolated BNC connectors • Adaptor cables for connection to a Betacam or M-II 12-pin connector are available • D1 output, optional, provides front panel selection of four 4:2:2 component digital signals: 95% color bars, 5MHz line sweep with 2T pulse and bar, split field signal of luminance and color difference with valid ramps, plus 100% color bars, all which met RP125/EBU 3246 requirements

1517	Component (625/50)	\$6,930.00
Option 02	Drive signals output	350.00
Option 10	Single wide cabinet with handle	65.00
Option 30	Rackmount (for two units)	180.00
D1 Option	8-bit	1,650.00
D2 Option	10-bit	1,870.00

2015/2015PL Programmable Test Signal Generators

• Broad library of test signals in many formats including: Analog: NTSC, PAL, SMAC, CAV, HDTV, and film-to-tape – Digital: Composite and 4:2:2 component • Capability of generating signals from 525/60 (NTSC) to 1125/60 (HDTV) and beyond • Custom signal capability • 10-bit digitizing yielding 30MHz flat analog bandwidth • Utilizes IBM™ (or compatible) personal computer as controller • Software selectable clocks • Up to 3 channels are available, to be used independently or for 3-channel CAV signals

2015	Single channel	\$ 9,950.00
2015	Three channel	14,950.00
2015PL	3-channel 2015 with digital encoder flat to 10MHz for PAL output with 25Hz offset subcarrier	17,450.00
Optional	Non-volatile memory (single channel)	550.00
Optional	Non-volatile memory (three channel)	1,450.00

2021/2021PL Programmable Test Signal Generators

• 3-channel unit which may be configured with up to 4 test signal sets available • NTSC, PAL, SECAM, Component Analog Video (CAV) Signals for all current standards (525 and 625 line formats), 4:2:2 Component Digital, HDTV, and more signals available • Signal sets directly selectable by front panel switch • Non-volatile memory, standard, allows portability • Can be used side-by-side with a personal computer for repeated routines

2021	NTSC	\$ 16,400.00
2021PL	PAL	18,900.00

4000 Series Video Graphics Systems

• Broadcast quality video direct from PC graphics • Available for IBM or compatible PCs and the Amiga™ 2000 • Controlled edges and timing meet broadcast standards • NTSC and PAL versions offered • Full genlock with correct color framing • Software selectable bandwidths • Black burst reference output • Video input for internal graphics keying • External key input • Software controlled fades and keying • Next frame control output • Supports locked or unlocked subcarriers from VCRs • Optional broadcast mode display enhancement

In addition to the basic 4000 Series capabilities, the 4004 (NTSC) and 4005 (PAL) Video Graphics Systems provide these features:

	• Rear panel control. GPI for timecode • Low cost software available
	• 4096 colors • Key on colored backgrounds • Locks Amiga RGB to video rate along with encoded output
4004	(NTSC) for Amiga PC \$ 1,295.00
4005	(PAL) for Amiga PC 1,425.00
4030	(NTSC) for IBM PC 3,750.00
4031	(PAL) for IBM PC 4,345.00

MAGNI SYSTEMS, INC.

*Waveform Monitors/Vectorscopes/
Transcoders*

500 Series Waveform Monitors and Vectorscopes

The 500 Series offers the flexibility to accurately monitor component analog signals as well as composite video. The WFM560 Waveform Monitor provides 6 inputs, enabling you to run two complete channel sets in component format, or to tailor a combination of the two standards for your particular requirements. Switching between formats (SMPTE, Betacam, M-II) and displays (Alternate, Parade, A-B) is accomplished from the front panel, as is front panel memory storage of up to 18 switch position settings for later recall. Front panel status is recalled and restored in the event of a power down and repowering.

Basic component monitoring is available on the WFM530, with three inputs which can be dedicated to a single component train. Supporting either NTSC or PAL environments, the VS560/561 (with six inputs for composite video, color-difference and RGB signals) and VS530/531 (with three inputs for reliable composite vector display) expand their functionality through a serial interface allowing the operator to use line select and memory features through interconnection with one or more waveform monitors. Composite video and stereo audio displays are standard, as are graticule readouts in the VS560/561.

Graticule readouts, synchronously multiplexed with the video signal to ensure accuracy, provide an on-screen display of such parameters as input format, line selection and sweep speed, and are a standard feature of most 500 series instruments.

WFM530 Waveform Monitor

• Three inputs for composite monitoring • Advanced features for basic component capability • Supports NTSC, PAL, SECAM, 525/60 component and 625/50 component standards • Front panel memory • CRT readouts • Optional cursors • VITS display and line readout

WFM530 3-channel NTSC/PAL/SECAM/CAV \$2245.00

VS530/VS531 Vectorscopes

• Three inputs • Composite video and stereo audio displays • Alternate display and remote control • Supports NTSC (530) or PAL (531) standards

VS530 3-channel NTSC \$2245.00

VS531 3-channel PAL 2470.00

WFM560 Waveform Monitor/CAV Vectorscope

• Six inputs for full component and composite measurements, plus component vectorscope functions • Component format switching for SMPTE (EBU), Betacam, M-II • Supports NTSC, PAL, SECAM, 525/60 component and 625/50 component standards • Front panel memory • Time and voltage cursors, including risetime • Graticule readouts • VITS display and line readout • Built-in transcoder to feed RGB monitor

WFM560 6-channel NTSC/PAL/SECAM/CAV \$3600.00

VS560/VS561 Vectorscopes

• Six inputs — composite and component vector displays • Switch selection of composite video and component standards • Stereo audio display • CRT readouts • 560 NTSC and 525/60 component standards; 561 switchable between NTSC, PAL, 525/60 and 625/50 component standards

VS560 6-channel NTSC/CAV \$3600.00

VS561 6-channel PAL/NTSC/CAV 3960.00

WFM560

VS561

125DA

1527 Combined Waveform Monitor, Vectorscope, Test Signal Generator

• Waveform and Vectorscope monitoring with a built-in test signal generator in one package • Simplified differential gain and differential phase measurements • SC-H phase measurement • May be used to measure the absolute SC-H phase of a single video signal even on "Demod Out" of type C recorder, relative SC-H phase of 2 signals, or incorrect color frame matching between 2 video signals even at points where the signals are not matched in time • A 10-bit, 4XFsc test signal generator with an expanded set of 24 test signals: Multiburst, field squarewave, SMPTE color bars, matrix modulated ramp, convergence, NTC-7 composite, calibration signal and more • Optional black burst output for master sync reference • Displays either of 2 external signal sources or built-in test signal generator. Display can be switched between output of TSG and output of device under test for easy comparison • 12-character source ID standard with every unit • Custom test signals available • Unique "auto" mode: matches test signal most often associated with each monitoring mode • Audio tone output standard • Choice of rackmount or portable configurations

1527-20 \$5750.00

1527 With SC-H phase measurement capability 7250.00

Option 03 Adds black burst and drive signal outputs 600.00

125AD/125DA CAV-Digital 4:2:2-CAV Transcoders

• Selectable RP125 8-bit or full 10-bit performance • Adjustable setup level, or setup removal selection • Crystal-locked oscillator • Switchable main/aux. inputs • Filters linear to 5MHz • All front panel functions remoteable • 525/60 and 625/50 switchable • Digital clamping for precise A-D blanking level matching • Three full bandwidth channels option • Built-in 8 signal digital test signal generator option • Optional VITS test signal • Multi-format CAV input (SMPTE, Beta, M-II, RGB) • CAV output switchable (SMPTE, Beta, M-II formats) • Locks to sync and burst • Differential video inputs • Ancillary data input • Simultaneous SMPTE CAV outputs with RGB • 2 isolated digital outputs

125AO Analog to digital \$7990.00

125DA Digital to analog 4995.00

Option 09 Digital test signal generator 1700.00

Option 10 10 digital VITS insertion includes Option 09 . . 2700.00

MARATHON PRODUCTS CORP.

Audio Tape Cartridges/Calibration Cartridges

300 Tape Cartridges NAB Type AA

- Virtually indestructible material for cartridge housing
- Constant tape tension permits lowest flutter and wow of any cartridge in the industry
- Uniform high frequency response
- Differential pulley provides smooth tape movement at speeds up to 30 ips
- Easily reloaded
- Positive action brake retains cue
- High quality polyester tape and heavy duty splice used in all factory prime cartridges
- All Marathon cartridges are run-in and periodically sweep recorded to verify response characteristics

300E Premium Gold Equalizer Cartridge

- Compatible with all type AA equipment
- Designed to improve "on air" sound
- Unique solution applied to relieve tension
- Increased "head wrap" provides better response
- Insignificant wow and flutter
- Ends problems of tape jamming and spillout

300S Azmi-Lock Continuous Tape Cartridge

- Phase aligned for superior fidelity
- Differential hub system for accurate tape tension
- Unique cartridge reel means no tape spillage

301 Head Cleaner

This specially designed Head Cleaner Cartridge maintains top performance of cart machines by a single 20 second pass with automatic stop. It incorporates the latest advances in silicon carbide and chromium oxide coated tapes to clean and polish tape heads.

302 Torque Test Cartridge

A cartridge designed to accurately measure tape pulling force of tape cart machines. By inserting into the deck in normal manner and activating start button, pulling force is read directly from a calibrated scale. Adjustments can then be made to the pressure roller to fall within the torque requirements of the machine manufacturer.

303 Strobe Speed Indicator

A test instrument to provide means of determining the tape speed within any cartridge used in the cart machine. The reading is by means of a rotating strobe disk with bars appearing stationary at correct speed. It is viewed with a separate neon lamp line cord supplied with each unit.

307 Cartridge Splicing Fixture

A fixture used for splicing cartridge tape to consistent, uniform loops. Splice block is built-in with blades, splice tabs and complete instructions.

2-Door Console

4-Door Console

VB-38-8W

MVC Series 2-Door/4-Door Video Consoles
Common Features

- Made from solid hardwoods and selected hardwood veneers
- Each set of doors is equipped with a brass plunge lock system
- Each console is built to meet your requirements, standard interior can be fitted with shelves positioned to suit your equipment exactly
- 4" heavy-duty casters
- 3-outlet power assembly with a 15' cord
- Fabric covered side speaker openings are available for video consoles with side mounted speakers
- Ample ventilation and service access is provided through the rear service opening
- The rear of each interior shelf is cut out to provide for cabling
- Complete enclosure

Video Bases — Stationary

- Designed to raise large video monitors high enough for group viewing
- Upper compartment provides waist-level storage for videocassette recorders
- Available with 8" clearance for 3/4" machines, and 4" clearance for 1/2" machines
- Lower compartment provides tapes and components storage
- Optional center shelf is available
- Optional backstops for tape storage also are available
- Features wood drawer pulls
- Antique brass pulls are available at no extra cost
- Constructed of solid hardwoods and selected hardwood veneers
- Optional extra shelf is solid wood
- 2" casters optional

**STL-10 Aural Broadcast
Studio-Transmitter Links Intercity Relay**

- Provides broadcast quality audio line-of-sight communications with two optional sub-carriers
- FCC approved under Parts 74 and 94
- Available for FCC narrow band channels
- Unexcelled stereo separation, noise and distortion specs
- Four user programmable pre-emphasis options
- Ga As FET LNA
- Five receiver bandwidths available for domestic and international
- Four program channels available in 500kHz bandwidth

R-10 Receiver

- Excellent square wave response
- User selectable audio processing provides 0, 25, 50 or 75 microsecond de-emphasis options
- Low pass filters designed to eliminate overshoot on complex audio waveforms
- Helical resonator pre-selector and double balanced mixer
- Computer designed bandpass filters for high selectivity with optimum phase and group delay
- Test meter on front panel indicates signal level, main channel audio level, subcarrier level, supply voltage, L.O. level and mixer level. Additional test points inside receiver
- Sensitivity switch on front panel provides optional 10dB RF attenuation for interference rejection
- Built-in automatic switching capability
- Accessory plug for external DC power, remote control, remote metering, etc.
- Low power consumption for operation on AC, solar cell, battery or other single polarity DC source
- Terminal strip for balanced 600 ohm audio output, BNC jacks for unbalanced audio output, Sub 1 output, Sub 2 output

STL-10 Transmitter

- Excellent square wave response
- User selectable audio processing provides 0, 25, 50 or 75 microsecond pre-emphasis options
- Low pass filters designed to eliminate overshoot on complex audio waveforms
- Calibrated RF watt meter for forward and reflected power
- Test meter on front panel indicates main channel peak modulation, subcarrier level, supply voltage, PA current, RF driver 1 and RF driver 2

STL-10 Transmitter

R-10 Receiver

- Built-in automatic switching capability by addition of optional plug-in logic board
- Accessory plug for external DC power, remote control, remote metering, etc.
- Low power consumption for operation on AC, solar cell, battery or other single polarity DC source
- Terminal strip for 600 ohm balanced audio input, BNC jacks for unbalanced audio input, Sub 1 input and Sub 2 input

Stereo STL System

- Package 51 includes:
- 2 STL-10/950 transmitters
 - 2 R-10/950 receivers
 - 1 HRC-10 transmitter combiner
 - 1 MTS-10 receiver combiner

Package 51 \$6795.00

Mono STL System

- Package 50 includes:
- 1 STL-10/950 transmitter
 - 1 R-10/950 receiver

Package 50 \$3195.00

Prices do not include antennas and transmission line.

FCC ID: BEN9EZSTL-10/950

R-10 RECEIVER SPECIFICATIONS

Frequency Range 800-960, 400-480, 280-340, 200-260 & 140-180 MHz.
Sensitivity 4 microvolts for 50 db S/N 800-960 MHz
 14 microvolts for 60 db S/N 800-960 MHz
Input Impedance 50 ohms
Frequency Stability ± 0.0025% -10°C to +50°C
Selectivity Filter 3 DB 60 DB
 F200 200 570 KHz
 F85 85 165 KHz
Spurious Response -90 db (2)
Audio Output Balanced 600 ohms, +10 dbm., Barrier strip, BNC connectors for unbalanced output.
Subcarrier Outputs Two BNC connectors for Remote Control and/or Sub-carrier outputs. NOTE: (1).
Front Panel Controls 10 db attenuation switch, program level adjust, meter switch, squelch adjust.
Power Requirements 120/220* VAC, 50/60 Hz 10 Watts.
AC Power Supply Precision, electronically regulated with current limiting
Metering RF signal level, audio output level, subcarrier output level, +13V DC supply, L.O. level, mixer level. LED indicators for power and open squelch
Dimensions 3 1/2" High x 19" Wide x 12" Deep
Weight Net 10 lbs. Domestic packed 17 lbs.
RF Connector UG-58

NOTE (1) For subcarrier operation, R-10 receivers must be ordered with F-200 filters. F-200 filter already in domestic R-10/950 receiver

(2) R-10/950 has -70 db. spurious response

*AVAILABLE ON 220 VAC, 50 Hz UPON REQUEST

**REQUIRES APS-28/18 POWER SUPPLY

Subcarrier Generator/Subcarrier Demodulator

\$695.00

MODEL SCG-10 SUBCARRIER GENERATOR

The Marti Model SCG-10 Subcarrier Generator is designed to operate in SCA service with an FM broadcast transmitter or, with a Model SCD-10 Subcarrier Demodulator, to form a subcarrier link on a microwave (STL) system. The SCG-10 has several options available which allow it to perform a wide range of functions in broadcasting and communications. Audio processing options include selectable pre-emphasis of zero, 75, 150 or 225 microseconds. Low pass audio filters of 3 KHz, 5 KHz or 7.5 KHz are available. For subcarrier link systems using the SCD-10 demodulator, a compander encode board plugs into the generator and a decode board into the demodulator to adapt the system to audio companding.

The SCG-10 employs an illuminated panel meter to aid in adjusting modulation and subcarrier output level.

MODEL SCG-10 SUBCARRIER GENERATOR SPECIFICATIONS

- Subcarrier Frequency Specify 26 KHz, 39 KHz, 41 KHz, 67 KHz, 92 KHz. Frequency test jack on front panel.
- Frequency Stability $\pm 0.18\% -10^{\circ}\text{C}$ to $+50^{\circ}\text{C}$.
- Subcarrier Purity Less than 0.5% THD.
- Modulation Direct FM
- FM Deviation Factory set for $\pm 7.5\%$ of subcarrier frequency.
- Modulator Distortion Less than 1% THD
- Audio Processing **Pre-Emphasis:** Zero, 75 us, 150 us or 225 us, user selectable
Low Pass Filters: Audio cut-off frequencies of 3 KHz, 5 KHz, or 7.5 KHz are specified with original equipment order. The lowest possible cut-off frequency is recommended. Maximum cut-off is 12% of subcarrier frequency.
Companding: An optional compander encode board is available for installation in the SCG-10 when used in a subcarrier link having a SCD-10 subcarrier demodulator with a compander decode board. Companding will reduce noise and can mask certain types of main to sub crosstalk.
- Frequency Response ± 1.5 DB 25 Hz to 95% of low pass filter cut-off frequency
- FM Noise More than 65 DB below 5 KHz deviation (measured through SCD-10 demodulator directly connected to SCG-10 output, 225 us, without companding). With companding -72 DB.
- Audio Input Impedance 600 ohms balanced (screw terminals or "D" connector pins)
- Audio Input Level Front panel adjustment -10 DBM to +8 DBM for 100% modulation.
- Muting Level Adjustable from 0 DB to 40 DB below 100% modulation (soft mute)
- Muted Carrier Level 60 DB below rated Max. output level.
- Subcarrier Output Front panel adjustment 0.3 V. to 7 V. P-P into 600 ohm load BNC connector.
- Remote Control Subcarrier can be remotely controlled by grounding a pin of accessory "D" connector.
- Metering Illuminated panel meter indicates peak modulation or subcarrier output level.
- Controls Meter switch, subcarrier control switch, modulation level, automatic mute delay, mute level, subcarrier output level, subcarrier frequency. Subcarrier frequency test jack also located on front panel
- Connectors BNC Jack for subcarrier output, 9 pin "D" connector for balanced audio input, remote control, FSK/subaudible input, ground, +18-20V. input, +13.5V input. AC receptacle. No. 6-32 screw terminals for balanced 600 ohm audio input.
- RF Protection All input/output circuits filtered for RF. Totally shielded and bonded aluminum enclosure.
- Operating Temp. Range -10°C to $+50^{\circ}\text{C}$.
- Power Requirements 120/220* VAC 50/60 Hz 10 watts, or 12-14 V. DC at 50 MA. or 24-28 V. DC at 70 MA.**
- Dimensions 19" wide x 12" deep x 1 1/4" high
- Weight 4.5 lbs. net, domestic packed 9 lbs.

* 220 V. AC operation to be specified on original order
** Requires APS-28/18 Power Supply

\$695.00

MODEL SCD-10 SUBCARRIER DEMODULATOR

The Model SCD-10 Subcarrier Demodulator is designed for use with Model SCG-10 Subcarrier Generator to provide a high quality subcarrier channel on a microwave link (STL) or FM station. The SCD-10 may be specified for operation on a standard subcarrier frequency used in FM broadcasting. The subcarrier input to this demodulator should be from a high quality FM receiver having adequate IF bandwidth with group delay characteristics sufficient for subcarrier work. The Marti R-10 Receiver with 200 KHz phase linear IF filter is excellent in this respect.

The SCD-10 has several options available, allowing it to perform a wide range of functions in broadcasting and communications. Audio processing options include selectable de-emphasis of zero, 75, 150 or 225 microseconds. Low pass audio filters of 3 KHz, 5 KHz or 7.5 KHz are available. For subcarrier link systems using the SCG-10 generator, a compander decode board plugs into the demodulator and an encode board into the generator to adapt the system to audio companding.

The SCD-10 employs an illuminated panel meter to aid in adjusting subcarrier input level and audio output.

MODEL SCD-10 SUBCARRIER DEMODULATOR SPECIFICATIONS

- Subcarrier Frequency Specify 26 KHz, 39 KHz, 41 KHz, 67 KHz, or 92 KHz
- Subcarrier Input 0.1 to 1 V. RMS, 10K ohms impedance, BNC connector. (Panel adjustment)
- Demodulator Distortion Phase locked FM detector has less than 0.6% THD
- Audio Processing **De-Emphasis:** Zero, 75 us, 150 us, or 225 us, user selectable.
Low Pass Filters: Audio cut-off frequencies of 3 KHz, 5 KHz, or 7.5 KHz are specified with original equipment order. The lowest possible cut-off frequency is recommended. Maximum cut-off is 12% of subcarrier frequency.
Companding: An optional compander decode board is available for installation in the SCD-10 when used in a subcarrier link having a SCG-10 subcarrier generator with a compander encode board. Companding will reduce noise and can mask certain types of main to sub crosstalk.
- Frequency Response ± 1.5 DB 25 Hz to 95% of low pass filter cut-off frequency.
- Signal/Noise Ratio More than 65 DB below 5 KHz deviation (using SCG-10 as signal source directly connected to SCD-10 input, 225 us)
- Audio Output Level +10 DBM maximum output level balanced and isolated into 600 ohms. Front panel adjustment range -60 DBM to +10 DBM
- Subcarrier Squelch Front panel adjustable squelch relay will squelch audio output over subcarrier level range of 0.1 to 2.0 volt input. Normally open relay contacts available at accessory "D" connector for external functions. LED on front panel indicates "squelch open" condition.
- Metering Illuminated panel meter indicates subcarrier input level or audio output level.
- Controls Meter switch, squelch adjust/squelch open (LED panel indicator), subcarrier input level adjust, audio output level adjust
- Connectors BNC jack for subcarrier input, 9 pin "D" connector for balanced audio output, squelch relay contacts. FSK output, ground, +18-20 V. input, +13.5 V. input. AC receptacle. No. 6-32 screw terminals for balanced 600 ohm output
- RF Protection All input/output circuits filtered for RF. Totally shielded and bonded aluminum enclosure
- Operating Temp. Range -10°C to $+50^{\circ}\text{C}$.
- Power Requirements 120/220* V. AC 50/60 Hz 10 watts, or 12-14 V. DC at 50 MA. or 24-28 V. DC at 70 MA.**
- Dimensions 19" wide by 12" deep x 1 1/4" high
- Weight 4.5 lbs. net, domestic packed 9 lbs

* 220V. AC operation to be specified on original order
** Requires APS-28/18 power supply

Studio-Transmitter Links

**ATS-15D
TRANSMITTER SWITCHER**

\$750

Application	Provides switching between two Marti transmitters at power levels up to 500 watts 5db loss or less with type N female connectors
Switching Activation	DC samples of relative power output are provided from each transmitter to the switcher through adjustable pots to a voltage comparator. Switching can be set to occur at any RF power level
Operation	Unit can be operated from front panel and terminals are provided on the back for remote operation
Standby Power	The ATS-15D can be operated with the Marti UPS-12 uninterruptible power supply, so when AC power is lost DC power is supplied through the ATS-15D to both transmitters.
Power Requirements	The ATS-15D operates off 12 V.DC furnished by both transmitters.
Dimensions	1 3/4" High x 19" Wide x 13" Deep
Weight	3 Pounds 9 Oz.

ATS-15D TRANSMITTER SWITCHER SPECIFICATIONS

**ASO-200D
RECEIVER SWITCHER**

\$650

Application	Provides Audio and SCA switching between two receivers on the same frequency
Switching Activation	The ASO-200D switches all functions to the backup receiver upon loss of signal to the main receiver. The switching threshold is determined by the setting of the squelch relay in each receiver
Remote Operation	The standby receiver may be selected by using a latching relay tied to the station's remote control. A positive voltage output indicates which receiver is in use and the remote signal level sample is also available to be metered by the station's remote control
Local Operation	Two leds are provided on the front panel to indicate which receiver is in use. The standby receiver can be selected by pushing the test switch
Fail-safe	The ASO-200D provides two separate fail-safe outputs both normally closed, and open contacts are available
Power Requirements	12 volts D.C. - supplied by each receiver
Dimensions	1 3/4" High x 19" Wide x 13" Deep
Weight	3 Pounds

ASO-200D RECEIVER SWITCHER SPECIFICATIONS

MW-500 SPECIFICATIONS

Frequency Range	944-952 MHz
Gain (Power)	60 DB Max (Adjustable 35-60 DB)
Output (Power)	+27 DBM (500 MW) maximum operating power +30 DBM (1 watt) maximum output
Selectivity	MW-500 has three section input and output bandpass filters 3 DB bandwidth ± 3 MHz NOTE One or more external bandpass cavity resonators may be required for additional selectivity
Emission and Bandwidth	Meets requirements of Part 74.535 (g)
Stability	Input-output antenna and coaxial line attenuation must exceed amplifier gain for stability
Metering	Accurate RF output power meter is provided on front panel (0-2 watts) AC supply and battery voltage can be measured at accessory connector on rear of unit.
Connectors	Input and output RF connectors are UG-58 (Type N Female) Accessory connector is subminiature D 15 pin male
Power Supply	Internal AC Supply - Precision regulated 13.6V supply with current limiting and thermal shut-down AC supply also charges internal battery at constant voltage 115V 60 Hz standard 220 V 50 Hz available on request Internal Battery Supply - A 12 volt 6.5 amp-hour sealed lead-acid maintenance free battery is included in the MW-500 for back-up power. This battery is charged by the AC supply and will power the unit up to 36 hours
Temp. Range	-20°C to +50°C operating
Dimensions	3 1/2" High x 19" Wide x 12" Deep
Weight	Net 12 lbs with battery Domestic packed 17 lbs

\$2495

**MW-500
AURAL
BROADCAST
MICROWAVE
BOOSTER**

The Model MW-500 MICROWAVE BOOSTER is designed to receive, amplify and redirect an aural STL signal over or around an obstructing object in the direct path between the transmitting and receiving antennas. Since the booster uses the same frequency for re-transmitting, scarce spectrum is conserved. The booster will provide a maximum of 500 milliwatts output

power. It will also provide 60 DB power gain at any point it is inserted in the microwave path. Where applicable, the MW-500 can provide considerable cost savings over other types of repeaters. The MW-500 is available with internal battery backup and charger capable of operating the unit for 36 hours without commercial power.

FCC ID: BEN9EZMW-500

**UPS-12 UNINTERRUPTIBLE
POWER SYSTEM
\$425 LESS BATTERY**

The Marti model UPS-12 is a battery backup power system designed for use with Marti equipment capable of both AC and 12V DC operation. The system will instantly and automatically switch to a battery power source when the primary AC power fails. The UPS-12 is suited for backup power for Marti STL-10/R-10 Radio Link Systems as well as Marti RPT-15/CR-10 automatic relay stations and TSL-15 data links.

The DC power source is a sealed 12 Volt GEL Electrolyte maintenance free Lead-Acid battery

of sufficient amp-hour capacity to power the equipment for the required length of time. Batteries of 24, 38 and 60 amp-hours are available. The user may choose to purchase the battery locally to avoid shipping charges.

The Model UPS-12 is equipped with a precision constant voltage "Taper" battery charger to maintain the battery in a charged condition. The charger is set at 13.6 volts and is current limited to three amps (for battery discharged to 10 volts). Fully charged batteries are trickle-charged by the constant-voltage charger.

REFER TO PRICE LIST FOR BATTERY OPTIONS & PRICES.

UPS-12 SPECIFICATIONS

Type of System	DC-DC (Loss of primary AC power causes relay to select 12 Volt battery power)
Panel Indicators	Led indication of AC or DC operation
OC Power Source	Sealed maintenance free GEL Electrolyte Lead-Acid battery rated at 12 Volts 24 Amp hours. The battery is external and priced separately. Optional batteries of 38 and 60 A/H available
AC Power Source	120 V 50-60 Hz (220 V AC Available on special order) AC source must be same as radio equipment source
Battery Charger	Precision constant voltage charging with current limiting and trickle charge 3 amp current limit
OC Polarity Protection	Circuit breaker, fuse and diode reduce reverse polarity damage
Connectors	Screw terminals for DC, 3-Pin, receptacle for AC
Panel Size	Standard 19" x 3"
UPS-12 Weight	3 1/2 Lbs
Battery Weight	19.5 Lbs shipped separately. Approved for shipment as "Dry Cell" by DOT and IATA

Studio-Transmitter Links

STL-23 Digital Aural Broadcast Studio-Transmitter Links

23 GHz DIGITAL STL

- * Simplex (STL) and duplex (STL/TSL) links available
- * FCC type accepted under parts 21 and 94
- * Compatible with digital PCM video format processors (not included)
- * Typical stereo audio quality delivered to broadcast transmitter using 16 bit processor.

RESPONSE: 10-20,000 Hz ± 0.5 DB
 NOISE: - 90 DB
 DISTORTION: Less than .005%
 STEREO SEPARATION: More than 80 DB

The Marti STL-23 digital studio-transmitter link delivers all the remarkable performance of today's compact disc digital audio to the input of the broadcast transmitter. With a dynamic range of better than 90 DB and stereo separation of more than 80 DB, the STL-23 emphasizes the obsolescence of the old "composite" STL concept. The STL-23 transmitter, receiver and subcarrier boards are located inside the weatherproof antenna assembly for cost saving and ease of installation. When comparing the cost of the STL-23 to 950 MHz "composite" STL's, the cost of antennas, coaxial cable and connectors, subcarriers and telemetry return link with antennas must be charged to the real costs of 950 MHz STL's. Such comparison will show the STL-23 to be cost effective. Microwave path length at 23GHz is limited by atmospheric absorption, with rainfall having the greatest effect. Contact Marti for data for use in calculation of 23GHz links in your area.

STL-23

SPECIFICATIONS

General

Frequency Band 21.2 to 23.6 GHz
 FM Deviation ± 7 MHz, designator 33800F9

TC-8/ARC-16 Remote Control Systems

The AMD model TC-8 (8 Channel) and ARC-16 (16 Channel) Remote Control systems are simple to operate, reliable, and cost effective. They are available for operation with Telco, STL, SCA or TSL with interface options for antenna monitor, computer or DTMF telephone. Status alarms may be programmed to display at the transmitter and studio and, optionally, call a programmed series of numbers with a voice message. Dial-up with speech may be added to either the transmitter or studio end, as well as the computer interface.

FEATURES

- * Metering Channels
- * Status Inputs
- * Raise & Lower Outputs
- * Delayed Failsafe Output
- * One Person Calibration
- * Non-Volatile Memory
- * Large Dot-Matrix Display
- * Optional Computer Interface
- * Radio or Wire Link
- * Space Saving 1 1/4" Rack Units

R-10 Receiver	STL receiver in 150, 215, 300, 450 or 950 bands, low pass filter, two IF bandwidths, low power consumption, test meter.	\$1,597.50
MW-500 Booster	On-frequency microwave booster for re-transmitting STL signal around obstructions. 500 mw output power. Comes with internal battery.	\$2,495.00
STL-10/950 System	Domestic STL Mono System in 800-960 MHz band with one STL-10 transmitter and one R-10 receiver.	\$3,195.00
STL-10/950 System	Domestic STL Stereo System in 800-960 MHz band with two transmitters and receivers, combiners, etc.	\$6,795.00
STL-10/150 System	Export STL Mono System in 140-180 MHz band with one STL-10 transmitter and one R-10 receiver.	\$3,195.00
STL-10/215 System	Export STL Mono System in 200-260 MHz band with one STL-10 transmitter and one R-10 receiver.	\$3,195.00
STL-10/300 System	Export STL Mono System in 280-340 MHz band with one STL-10 transmitter and one R/10 receiver.	\$3,195.00
STL-10/450 System	Export STL Mono System in 400-480 MHz band with one STL-10 transmitter and one R-10 receiver.	\$3,195.00
STL-30/150 System	Export STL Mono System, 140-180 MHz, one 45 watt STL-30/150 transmitter and one R/10 receiver.	\$3,592.50
STL-30/215 System	Export STL Mono System, 200-260 MHz, one 40 watt STL-30/215 transmitter and one R/10 receiver.	\$3,592.50
STL-30/300 System	Export STL Mono System, 280-340 MHz, one 35 watt STL-30/300 transmitter and one R/10 receiver.	\$3,592.50
STL-30/450 System	Export STL Mono System, 400-480 MHz, one 30 watt STL-30/450 transmitter and one R/10 receiver.	\$3,592.50

STL Accessories**REMOTE CONTROL**

ID Code or Name	Description of Item	Price
TC-8	AMD Remote Control, 8 each metering, raise, lower, status.	\$2,495.00
ARC-16	AMD Remote Control, 16 each metering, raise, lower, status.	\$3,495.00
IP-8	Transmitter relay interface panel (two required for ARC-16)	\$495.00
CI-8	Optional computer interface	\$495.00
TSU	Telephone Speech Unit	\$595.00
ST4A	SCA receiver for metering	\$168.00
580-016	AC cord for STL-10 transmitters and R-10 receivers	\$5.50
APS-28/18	Power supply for operation of STL-10 transmitter and R-10 receiver from 24 VDC	\$65.00
ASO-200D	Unit for switching between two STL receivers. User needs to specify frequencies.	\$650.50
ATS-15D	Automatic transmitter switcher: (2) PG-1.5 cables with UG-58 "N" female connectors.	\$750.00
BPF-39/67	39/67 KHz subcarrier band pass filter/amplifier for R-10 receiver. Filters and amplifiers sub signal at STL relay station.	\$249.00
WP-498-1	Wacom single section, selective cavity resonator, 950 MHz	\$215.00
Crystals	Hi-accuracy STL-10 and R-10 crystals	\$17.95
WP430-1	Selective Cavity Resonator, single-section for operation in the 148-174 MHz band.	\$180.00
WP470-1	Selective Cavity Resonator, single-section for operation in the 406-512 MHz band	\$150.00
WP-688	Duplexer, 6-cavity, Combines transmitter and receiver to common antenna & line; 3.6 MHz separation	\$663.00
TBC-800-2	Transmitter combiner with cables to combine output of 2-STL-10/950 transmitters to antenna. Nominal isolation 70 DB.	\$1,198.00

STL Accessories		
ID Code or Name	Description of Item	Price
K-1	Grounding and weatherproofing kit	\$8.00
RMC-10	Remote control for STL-10 transmitters	\$315.00
SCG-10	Subcarrier Generator tuned to 26, 39, 41, 67 or 92 KHz. Rack mount. 120 VAC (220 VAC onrequest)	\$695.00
SCD-10	Subcarrier demodulator tuned to 26, 39, 41, 67 or 92 KHz. Rack mount. 120 VAC (220 VAC on request)	\$695.00
800-263	Optional Comander board for factory or field installation in SCG-10 and SCD-10. Two (2) plug-in PC boards.	\$360.00
UPS-12	Uninterruptible Power System for Marti STL-10, R-10 ARS-15 relay and TSL-15 data link (less LCR-12V-24P battery)	\$425.00
LCR-12V-24P	Battery, Sealed Gel Lead-acid, 12 volt. 24 amp.-hours for use with Marti uninterruptible power supply UPS-12	\$122.00
040-007	Spare battery for MW-500	\$60.00

STL Antennas		
TYPE N FEMALE CONNECTORS		
ID Code or Name	Description of Item	Price
DB-438	Yagi antenna, 6 element, 10.0 db gain, 450-470 MHz. N Female connector.	\$176.00
P-9A48GN-1	Mark Product parabolic antenna, 4' multi-element dish, 18.9 db gain, non-pressurized feed, 890-960 MHz	\$890.00
P-9A72GN-1	Mark Product parabolic antenna, 6' multi-element dish, 22 db gain, non-pressurized feed, 890-960 MHz	\$1,110.00
P-9A96GN-1	Mark Product parabolic antenna, 8' multi-element dish, 25 db gain, non-pressurized feed, 890-960 MHz	\$1,760.00
P-9A120GN-1	Mark Product parabolic antenna, 10' multi-element dish, 27 db gain, non-pressurized feed, 890-960 MHz	\$2,450.00
SH-872GN	Mark Products "Shorthaul" cylindrical antenna, 19 db gain, 890-960 MHz	\$690.00
YC-150	Yagi antenna, 5 element, 9.0 db gain, 140-180 MHz	\$150.00
YC-215	Yagi antenna, 5 element, 9.0 db gain, 200-260 MHz	\$150.00
YC-300	Yagi antenna, 5 element, 9.0 db gain, 280-340 MHz	\$150.00

STL Transmission Line, Cables, Connectors		
ID Code or Name	Description of Item	Price
L44N	Type "N" female connector for 1/2" foam transmission line	Contact factory
L44W	Type "N" male connector for 1/2" foam transmission line	Contact factory
L45N	Type "N" female connector for 3/8" foam transmission line	Contact factory
L45W	Type "N" male connector for 3/8" foam transmission line	Contact factory
LDF4-50	Foam transmission line, 1/2", 50 ohm, jacketed, priced per foot	Contact factory
LDF5-50	Foam transmission line, 3/8", 50 ohm, jacketed, priced per foot	Contact factory
PG-1.5B	Jumper cable, 1.5' of RG-214 with UG-21 connectors	\$16.50
PG-2A	Jumper cable, 2' of RG-8U with PL-259 & UG-21 connectors	\$15.00

Telemetry Links

MARTI TSL-10 SYSTEMS FOR PART 94, 928-960 MHz

If you are serious about data/voice transmission (TSL, ICR, TRL, etc.), you should look at part 94 "Private Operational-Fixed Microwave Service" in the 928-960 MHz band. Bandwidths of 25, 50, 100 and 200 KHz are available to broadcasters for many uses except the final link of an STL. These frequencies are professionally data base coordinated interference free channels for reliable communications. Marti has been providing FCC authorized equipment for this service over the past two years. Bandwidths are licensed based upon demonstrated need; the wider channels reserved for wide band FM, high data rate, or multichannel uses. Marti multichannel systems are not time-shared, which means that data flows continuously on each channel. License application is on Form 402. Frequency coordination is by approved firms like Spectrum Planning (214) 680-1000, Moffet, Larson and Johnson (703) 841-0500, Com Search (703) 620-6300. If you have requirements not met by the following part 94 packages, contact Marti for assistance.

- | | |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PACKAGE 94-1 SINGLE CHANNEL \$3,195.00 | PACKAGE 94-4 FOUR CHANNELS \$7,365.00 |
| 1 STL-10 Transmitter | 1 STL-10 Transmitter |
| 1 R-10 Receiver | 1 R-10 Receiver |
| | 3 Subchannels |
| PACKAGE 94-2 TWO CHANNELS \$4,585.00 | Additional Receive sites \$2,292.50 |
| 1 STL-10 Transmitter | |
| 1 R-10 Receiver | |
| 1 Subchannel | |
| PACKAGE 94-3 THREE CHANNELS \$5,975.00 | Antenna systems for above packages depend upon path length, number of receive sites, etc. See prices on page 10 or contact factory for assistance. For transmitter and receiver specifications, see page 3. |
| 1 STL-10 Transmitter | |
| 1 R-10 Receiver | |
| 2 Subchannels | |

TSL-10 FEATURES (PART 94, 928-960 MHz)

- ★ Four continuous data/voice channels on single carrier.
- ★ Multiple receive sites possible.
- ★ 25 KHz, 50 KHz, 100 KHz, 200 KHz bandwidths available.
- ★ Transmitter FCC authorized for part 94 service.
FCC ID: BEN9EZSL-10/950
- ★ Battery Backup Available with Marti UPS-12.

MARTI TSL-15 AND TSL-30 SYSTEMS FOR PART 74, 450-456 MHz

The Marti TSL-15 and TSL-30 Telemetry Links provide reliable telemetry circuits for AM, FM and television stations. Expensive and unreliable Telco lines can now be replaced with cost effective Marti TSL Systems. These links are simple to install, easy to operate and maintain. Marti has assembled complete equipment packages consisting of Transmitter, Receiver, Yagi Antennas, Identifier and optional items.

- TSL-30 PACKAGE (30 WATTS)**
 RPT-30/450 Transmitter
 1 CR-10/450 Receiver
 1 Model 1300 Station Identifier
 1 700-253 Rack Mounting Kit
- PACKAGE PRICE** **\$2979.50**
- TSL-15 PACKAGE (15 WATTS)**
 1 RPT-15/450 Transmitter
 1 CR-10/450 Receiver
 1 Model 1300 Station Identifier
 1 RMH-3B Rack Shelf
- PACKAGE PRICE** **\$2294.50**

- PART 74 TSL ANTENNA PACKAGE***
 2 DB-438 Yagi Antennas
 1 PG-2A Jumper Cable
 1 PG-2B Jumper Cable
 2 K-1 Grounding Kit
- PACKAGE PRICE** **\$398.00**

SYSTEM SPECIFICATIONS

Frequency (Group P) 450.01, 450.02, 450.98, 450.99
 455.01, 455.02, 455.98, 455.99 MHz.
 FCC 74.402 (a) (7)

Modulation 10F3 (± 1.5 KHz Deviation)

Frequency Response 50 Hz - 2800 Hz ± 2.0 DB

Distortion 2% THD

Signal to Noise Ratio 45 DB

TRANSMITTER
 See specification for RPT 15/450 or RPT-30

RECEIVER
 See specification for CR 10/450 receiver.

STATION IDENTIFIER
 A model 1300 station identifier is required by FCC rules for all domestic TSL systems to identify the TSL transmitter. Call signs for the identifier are assigned by the FCC when TSL frequencies are approved.

RPT-30 FCC ID: BEN9EZRPT30-450
 RPT-15 FCC ID: BEN9EZRPT15-450

*Package prices do not include cost of two "N" female and two "N" male connectors and 1/2" transmission line.

RPT-30 TRANSMITTER

TSL-15 AND TSL-30 FEATURES (PART 74, 450-456 MHz)

- ★ Choice of Transmitter Power 15 or 30 watts Continuous Duty.
- ★ Transmitters are FCC type accepted.
- ★ Super-Selective Receiver with 90 db spurious rejection.
- ★ Test Meter built into both transmitter and receiver.
- ★ Receiver has adjustable squelch and carrier operated relay.
- ★ Built-in modulation control.
- ★ Internal AC supply in transmitter and receiver with provision for external DC operation. (UPS-12)
- ★ Optional Automatic Station Identifier
- ★ Analog or Digital Telemetry or Voice Modulation in 50 Hz-2800 Hz band.
- ★ Mic and Line Level inputs with mixing controls.
- ★ Built in 27 Hz status channel with relay contacts.

Remote Pickup Transmitters

RPT-30 Remote Pickup Broadcast Transmitter

Single Freq. \$1695
Dual Freq. \$1725

RPT-30 SPECIFICATIONS

Frequency Range and Maximum Power Output	140-180 MHz - 45 Watts 200-260 MHz - 40 Watts	280-340 MHz - 35 Watts 400-480 MHz - 30 Watts
RF Connector	SO-239	
Operating Temp. Range	-10°C to +45°C	
Modulation (Specify)	10F3 (± 1.5 KHz Deviation) 25F3 (± 4 KHz Deviation) 50F3 (± 8 KHz Deviation)	
Channels (Frequencies)	Two frequencies selected by switch Freq. separation 1 1/2% max	
Frequency Stability	Mobile .0005% Base .00025% (above 400 MHz)	
Spurious Emission	Meets FCC Requirements	
Audio Inputs	Four Balanced microphone (150 ohm) inputs (XLR3) with mixing controls. One input switchable to balanced line level at mic. No 4 input and "D" connector on rear.	
Modulation Control	Broadcast quality Compressor/Limiter built in.	
Encoding	Subaudible tone (27 Hz.) encoder built in.	
Metering/Indicators	Illuminated meter indicates audio compression, relative RF output, relative supply voltage. Flashing LED's indicate "Antenna" (VSWR) and high "Temp."	
Controls	(4) input level, meter sw., encode sw., power sw., frequency sw., monitor jack.	
Power Requirements	110-125 V, 50-60 Hz (220 V, 50 Hz. available on special order) DC operation on 11-13.5 V negative ground.	
Accessory Connector	9 pin "D" connector for DC power, remote control, encode, line level input	
Weight	12.4 lbs net, 16 lbs shipping wt.	
Dimensions	11.5 in wide x 3.5 in high x 13.3 in deep	

FCC ID: BEN9EZPT30-150
BEN9EZPT30-450

THE LEADING EDGE OF SIMPLICITY

Before we designed the RPT-30, we talked directly to hundreds of broadcasters to learn their needs, then we used that information and our 31 years experience in supplying thousands of RPU systems, to produce the ultimate in performance, reliability, quality and simplicity. Broadcasters want remote pickup equipment that can be operated by non-technical personnel to achieve professional sounding live remote broadcasts. They want rugged equipment that will operate continuously for days without "meltdown". The RPT-30 will operate with other Marti RPU equipment to form a complete wide coverage communications system with mobile and fixed repeaters. See pages 13, 14 and back cover.

RPT-30 FEATURES:

- ★ Frequency switch selects both frequency and deviation - simply-preventing operator error and interference.
- ★ Subaudible encoder activates repeaters or other equipment simply by a single switch (standard equipment on all Marti RPU)
- ★ Illuminated meter displays compressor gain reduction, relative power output or power supply voltage
- ★ Flashing LEDs indicate antenna VSWR problems and over-temperature condition.
- ★ Automatic modulation control by built-in FM compressor-limiter
- ★ Four balanced microphone mixing inputs, one switchable to balanced line level
- ★ Continuous duty-broadcast quality
- ★ FCC type accepted
- ★ Compatible with Marti mobile repeater, fixed automatic repeater and base station

RPT-30 ACCESSORIES

Part No.	Description	Price	Part No.	Description	Price
Crystal	Factory installed with original order - second frequency of DF	\$30.00	586-073	12' microphone cable for push-to-talk control of 700-251 mobile kit (requires MCD-70B mic.)	\$18.00
MCD-70C	Microphone with 3-pin XLR-3 plug, 14' cord	\$80.00	586-074	DC power plug, fuse, cable for RPT-30	\$19.50
MCD-70D	Microphone with 3-pin XLR-3 plug, 9' coil cord	\$80.00	585-037-1	Fixed repeat cable, CR-10 to RPT-30	\$27.50
TR-3	Antenna relay for RPT-30 for 2-way operation	\$35.00	585-037-2	Mobile repeat cable, AR-10 to RPT-30	\$27.50
700-251	Mobile mounting kit for RPT-30, 4 mtg. fasteners with DC power plug, fuse & cable	\$48.60	700-253	Rack mounting kit for RPT-30	\$19.50

RPT-15 Portable/Mobile/Airborne Transmitter

RPT-15 SPECIFICATIONS

Frequency Range	400-480, 280-340, 200-260 & 140-180 MHz
RF Output	15 watts max into 50 ohms
RF Connector	SO-239
Operating Temp. Range	-10°C to +45°C
Modulation	See System Specs
Dual Frequency	Selectable dual-frequency operation Freq. separation 1 1/2% max
Spurious Emission	Meets FCC Requirements
Audio Inputs	One microphone and one high level unbalanced input. Individual mixing gain controls
Audio Input Level	Microphone input level can be from -68 DB to -35 DB. High level can be from 0.2 volts rms 8-600 ohms
Audio Input Impedance	Will accept microphone from 150 to 500 ohms
Audio Connectors	Input No. 1 (XLR-3), Input No. 2 miniature phone jack
Power Requirements	110-125 V AC, 50-60 Hz, 12.6 V DC (neg. gnd.) 2.25 Amps
Modulation Control	Broadcast quality Compressor/Limiter built in
Metering	Panel meter indicates audio compression, RF output, power supply DC
Weight	9 1/4 lbs net, 14 lbs gross
Dimensions	8 1/2" wide x 3 1/4" high x 12 1/2" deep

*28 V. DC operation requires APS-28 18 power supply.

MODEL RPT-15 is a compact 15 watt transmitter designed for portable and mobile remote broadcast service. It delivers the maximum power allowed by the FCC for airborne remotes such as traffic reports. The RPT-15 has a built-in power supply for operation on 115V. AC. It will also operate on an external 12-14 volt DC supply. Standard features include dual frequency and subaudible encoder for use with Marti automatic mobile repeaters and automatic fixed repeaters. All this plus famous Marti broadcast quality and continuous duty operation.

Single Freq. \$975
Dual Freq. \$1005

SYSTEM SPECIFICATIONS SAME AS RPT-30 ABOVE

FCC ID: BEN9EZPT15-150
BEN9EZPT15-450

RPT-15 FEATURES:

- ★ Type accepted on all VHF-UHF RPU channels.
- ★ 15 watts continuous output.
- ★ Dual frequency capability.
- ★ Sub audible encoder.
- ★ Built-in metering.
- ★ Built-in AC supply.
- ★ FM Compressor-Limiter.
- ★ Mixing mic and line inputs.

RPT-2 Hand-Carried Transmitter

RPT-2 Features

- ★ Type accepted on all VHF-UHF RPU channels
- ★ 2.5 watts continuous output
- ★ Dual frequency provision
- ★ Sub-audible encoder
- ★ Built-in metering
- ★ 3-way power option
- ★ Internal ni-cad battery
- ★ Internal charger and AC supply
- ★ FM Compressor-Limiter
- ★ Mixing mic and line inputs

RPT-2

HAND-CARRIED TRANSMITTER

The RPT-2 is a hand-carried broadcast quality, continuous duty transmitter. It will operate from its internal ni-cad battery, from 115 V. AC power, or from external 12 V. DC power. A special sub-audible encoder enables the RPT-2 to access Marti mobile repeaters for coverage of indoor events. 2.5 watts is the maximum power allowed by FCC Rule 74.431 (C) (1).

	Single Freq.	Dual Freq.
RPT-2 without Internal battery	\$895	\$925
RPT-2 with internal battery	\$945	\$975

CR-10 Base Receiver

Model CR-10 is a rack-mounted VHF or UHF base station receiver designed for broadcast remote pickup service. This receiver has dual frequency capability built in. Marti Technology has provided the highest frequency response with the lowest noise and distortion possible for the assigned channel band width. Special attention has been given to solving today's high interference problems. The CR-10 features a built-in test meter, squelch relay, monitor speaker, subaudible tone decoder, special noise reduction circuit, 90 DB spurious rejection.

CR-10 Single Frequency \$1045
CR-10 Dual Frequency \$1075

CR-10 SPECIFICATIONS

Frequency Range	400-480, 280-340, 200-260 & 140-180 MHz.		
Dual Frequency	Provision for Dual Frequency. Separation 0.2% Max.		
Sensitivity	0.5 microvolts for 20 db. S/N.		
Input Impedance	50 ohms.		
Frequency Stability	+.00025%-10° C to +50° C.		
Selectivity	Filter	3 DB	60 DB
	F 50	50 KHz	100 KHz
	F 36	36 KHz	60 KHz
	F 25	25 KHz	42 KHz
	F 10	8 KHz	15 KHz
Spurious Response	-90 db.		
Audio Output	Balanced 600 ohms. +10 dbm., Barrier strip.		
Monitor Output	0.5 watt monitor amp, speaker and level control.		
Subaudible Tone Decoder	800-229 Decode Board provides relay closure upon receipt of 27 Hz. tone.		
Front Panel Controls	Frequency select switch, program level adjust, meter switch, squelch adjust.		
Power Requirements	120/220° VAC, 50/60 Hz. 10 Watts. 13.5V.DC 300 MA.		
AC Power Supply	Precision, electronically regulated with current limiting.		
Metering	RF signal level, audio output level, sub. level, +13 V.DC supply, L.O. level, mixer level. LED indicators for power and open squelch.		
Dimensions	3½" High x 19" Wide x 12" Deep.		
Weight	Net 10 lbs. Domestic packed 17 lbs.		
RF Connector	UG-58		

FCC Approved Under Part 15 FCC ID: BEN9EZCR-10/150 BEN9EZCR-10/450

*Available on 220 Vac, 50 Hz. upon request.

Monitor Output	Built-in Monitor Amp. (0.5 watts) Monitor speaker and level control. Headset monitor jack mutes speaker.		
Subaudible Tone Decoder	800-229 Decode Board provides relay closure upon receipt of 27 Hz. ± 0.1 Hz. Tone.		
Front Panel Controls	Frequency select switch, line level adjust, meter switch, squelch adjust, monitor speaker level, power switch, headset jack.		
Power Requirements	120/220° VAC, 50/60 Hz. 10 Watts. 13.5V.DC 300 MA.		
AC Power Supply	Precision, electronically regulated with current limiting.		
Metering	RF signal level, audio output level, decode level.		
Dimensions	3½" High x 9" Wide x 13½" Deep.		
Weight	Net 5½ lbs. Domestic packed 10 lbs.		
RF Connector	UG-58		

FCC Approved Under Part 15 FCC ID: BEN9EZAR-10/150
 BEN9EZAR-10/450

*Available on 220 Vac, 50 Hz. upon request.

The Marti AR-10 series receiver is a portable or mobile repeater receiver. This receiver has a built-in AC power supply, and will operate from an external source of 12-15 volts DC. A built-in sub-audible tone decoder meets FCC rule 74.431 allowing this receiver to automatically turn on a mobile transmitter upon receiving an encoded signal from a hand-carried portable transmitter, thus automatically relaying a broadcast to the base station receiver over a greater distance. The receiver operates on all remote pickup frequencies and band widths. Other built-in features include dual frequency capabilities, monitor speaker, and terminals for feeding telephone lines in portable operations. A special noise reduction circuit provides an improvement of 6 db in S/N ratio for weak signals. The unit weighs only 5½ pounds.

AR-10 Single Frequency \$1045.00
AR-10 Dual Frequency \$1075.00

Voice or sound travels one direction, from the event to the studio. Programming from an aircraft requires special equipment which is included in Package 7. *Where connectors and transmission line are required use Female connectors and 1/2" transmission line and contact factory for pricing.

Unattended Automatic Mobile Relay

In applications where the Marti One-Way RPU system will not communicate from the event to the studio, an AUTOMATIC MOBILE RELAY station may be required. Additional components can be added to the Marti One-Way system to make it a Mobile Relay System. Components from the Marti One-Way system would still be used in the mobile relay system. Components listed below would make-up the F2 part of the Mobile Relay link.

ON ALL MOBILE REPEATERS F-2 MUST BE AT LEAST 4.0 MHz FROM F-1.

Unattended Automatic Fixed Relay Stations

Automatic Relay Stations greatly increase the operating range and coverage areas of broadcast news and remote coverage of events. When used with MARTI portable, mobile and base station units, full broadcast quality audio is provided. Unlimited transmitting time is available since this equipment is designed for continuous 24 hour per day operation. Automatic Relay Stations (ARS) are available in two models. An ARS-15 transmits with a RPT 15 transmitter and an ARS-30 transmits with a RPT 30 transmitter. Both systems transmit the F3 frequency above in the 450 to 455 MHz band. F-3 must be at least 4.0 MHz from F-1.

550-038	Microphone connector, 4 pin, fits RPT-2 transmitter	\$7.50
550-047	Microphone connector, 3 pin, fits RPT-30 transmitter, RPT-15 transmitter	\$7.50
580-116	AC cord for RPT-2, RPT-15, AR-10 & CR-10	\$5.50
585-069	DC cord for RPT-2 transmitter with connectors	\$17.50
585-070	DC cord for RPT-15 transmitter with connectors	\$17.50
586-073	12' microphone cable for push to talk control of 700-251 mobile kit (requires MCD-70B mic.)	\$18.00
586-074	DC cord for RPT-30 transmitter with fuse & cable	\$19.50
633-6	Duplexer with cables to connect AR-10/450 receiver & RPT-30 transmitter to common antenna. MOBILE USE ONLY.	\$350.00
APS-28/18	Airborne power supply 28-18 VDC for RPT-15	\$65.00
Crystal	Hi-accuracy crystal for RPU transmitters & receivers	\$17.95
800-226	Coaxial relay board, 50 ohm, N female connectors	\$54.60
DX-1	CRL noise reduction unit for RPM work	\$700.00
WP-430-1	Selective cavity resonator, single section for operation in the 406-512 MHz band	\$180.00
WP-470-1	Selective cavity resonator, single section for operation in the 406-512 MHz band	\$150.00
WP-678	Duplexer with cables to join CR-10 & RPT-15 or RPT-30 to common line & antenna. USED WITH FIXED AUTO RELAY.	\$663.00
K1	Grounding and weatherproofing kit	\$8.00
MCD-70	Microphone with push to talk switch & 14' standard cord 4 pin XLR-4	\$80.00
MCD-70B	Microphone with push to talk switch & 9' coil cord 4 pin XLR-4	\$80.00
MCD-70C	Microphone with 3-pin XLR-3 plug & 14' cord	\$80.00
MCD-70D	Microphone with 3-pin XLR-3 plug & 9' cord	\$80.00
MX-3000	Programmable mobile receiver for 2-way use, 12 VDC	\$350.00
Racom 1300	Station identifier for use in TSL system	\$200.00
RMH-3	Rack shelf for mounting RPT-2 transmitter	\$55.00
RMH-3B	Rack shelf with fan for mounting RPT-15	\$74.50
TR-2	Coaxial switching unit required in RPT-15 if used for base station or mobile two-way communications	\$35.00
TR-3	Antenna relay for RPT-30 for two-way operation	\$35.00
700-251	Mobile mounting kit for RPT-30, 4 mtg. fasteners with DC power plug, fuse and cable	\$48.60
700-252	Mobile mounting kit for RPT-15 or AR-10	\$25.20
700-253	Rack mounting kit for RPT-30 transmitter	\$19.50
WP-440-1	Selective cavity resonator with female connectors 200-300 MHz.	\$170.00

All Matthews products are available in stainless steel on request

All roller heads are delivered standard with "L" Handle. Butterfly type handle is available on request at no extra charge

Matthews has been providing stands to the professional industry for well over a decade. The complete line includes over 35 professional stands serving every possible production requirement. All stands are constructed of durable lightweight alloys, providing both ease of handling as well as stability.

MATTHEWS STUDIO EQUIPMENT, INC.

Dollies/Lighting Control

Doorway Dolly

The Doorway Dolly was designed to be an inexpensive camera dolly narrow enough to fit through most standard doorways. Over the years, Doorway Dollies have been used not only for this purpose, but also as efficient equipment transporters for camera cases, lighting fixtures, cables, etc.

Pneumatic tires are standard, but the doorway can be fitted with track wheels for use on straight dolly tracks.

Steering is accomplished by use of a pull handle (like a wagon). A steering feature has been added which allows the operator to steer from on board the dolly. This is accomplished by inserting the pull handle through the push bar on dolly front.

A recent addition available for the push bar is an angled fitting to allow the bar to tilt down 34° for more clearance between the dolly and dolly operator.

Tube Dolly

A specialized dolly originally designed to ride on sections of straight standard dolly track or tubing. The Tube Dolly was created to serve as a tracking platform for the older conventional type crab dollies (which were not capable of being adapted for track use). The crab dolly would be physically loaded onto the Tube Dolly. The rear carriage of the Tube Dolly is adjustable back and forth to compensate for differing wheel length of crab dollies.

Another application of the adjustable rear carriage is to serve as an outrigger platform for lighting or sound when camera is riding on the main platform.

Star Track Dolly™

The latest addition to the Matthews family of dollies, the Star Track is a versatile, portable dolly that travels in a bag. Even with the compact, lightweight design, the Star Track is as sturdy as a rock.

The unit offers creative camera control in the most remote or restricted locations.

Butterflies and Overheads

Butterflies and Overheads are portable, lightweight tubular frames that are designed to support any lighting control textile material, such as "silk" (diffusion), "net" (reduction), "solid" black (cutting), or "griffolyn" (reflective). The perimeters of all textile materials are color coded for easy identification (white/single scrim; red/double scrim; gold/silk/black/solid, etc.) The frames are designed to break down into easily assembled components for transportation and storage.

Reflectors

A Reflector is designed to redirect natural or artificial light. The two faces (sides) offer a choice of intensities. The "hard" side can be compared to the spot position of a studio lighting fixture. The "lead" or "soft" side yields a more diffused pattern of light. Similar to that of a fill light.

Tulip Crane™

The Academy Award winning Tulip Crane is a portable, professional camera crane system ideally suited for film and video commercial and feature applications. At home on rough terrain, studio floor, or standard dolly track, the Tulip Crane with its full range of accessories offers economy and portability without sacrificing creative versatility. The Tulip Crane folds to 8' for easy transport. The unit allows for fast set-up and strike time, offering a maximum height of 16.5' with a negative drop of minus 3'. The Crane was computer designed and is constructed of lightweight aerospace alloys. When totally assembled, the system weighs approximately 600 pounds. The Tulip Crane is certified to be mechanically safe.

Cam-Remote™

The Cam-Remote is a sophisticated electronic pan and tilt head, designed by Ernst "Bob" Nettmann (two-time Academy Award winner/Technical & Scientific Category), in conjunction with Matthews' engineers. This system allows a camera to be completely operated without any artistic compromise from any distance as required.

The unit facilitates shooting from a limitless array of unusual, precarious, or tightly confined camera positions. In addition, the Cam-Remote brings a new element of safety to action and special effects photography, since it now allows cameramen and crews to capture dangerous shots or angles from a safe distance.

759854	Power Supply	4,54 Kg	10 lb	POR

Mini-Jib Arm™

A portable, versatile offset jib arm that is compatible with all dollies, the Mini-Jib may also be mounted on to its own heavy duty tripod. The Mini-Jib is capable of rotating 360 degrees with a minimum diameter of 2 feet and a maximum diameter of 7 1/2 feet.

The mounting configuration of the Mini-Jib is compatible with Elemack and may be adapted for use with Mitchell.

Additional arm length may be achieved with the use of one or more extension arms. The camera mounting elbow on the end of the arm may be attached at various heights, upright or inverted, to provide a multitude of camera positions.

MATTHEWS STUDIO EQUIPMENT, INC.

Mounting Equipment/Accessories

French Flag

The French flag is a small metal, opaque flag (used to shade the camera lens) mounted on the end of an articulating arm. The joints are spring-tensioned ball, and the arm terminates in a screw locking "U" clamp (3/4" inner diameter)

Articulating Arm (Flex-Arm)/French Flag

Cat. No.	Description	Metric Weight	Weight	List
209077	Articulating Arm/French Flag Camera Lens Shade (Spring Ball Joint)	4.82kg	1 lb/1 oz	\$ 64.00

*Set represents one Mafer Clamp and one each of all Snap-in accessories. Set list price reflects a savings of 5%

Sandbags

Sandbags are employed on a set to provide additional ballast to objects, tall stands, or large surfaced units subject to wind (e.g., reflectors, butterflies, silks, etc.) Sandbags are also used as counter-balance weights for "boom arm" type configurations.

Weight descriptions (15 lbs., 25 lbs., 35 lbs., and 50 lbs.) refer to their capacity when filled. "Empty" refers to Sandbag shells that are sewn completely except for one inch in the seams, to accommodate filling the shells with sand. The seams are then to be sewn closed by the purchaser. This allows a savings in one-time shipping charges.

Sandbags

Cat. No.	Description	Metric Weight	Weight	List
299550	15 lb	6.80kg	15 lb	\$24.00

Century Stand Accessories

Grip/Gobo Heads

The term "Grip Head" refers to a head which seats onto or into a stand. "Gobo Head", on the other hand, is the mounting head on the end of an extension arm.

There are two sizes of Grip Heads available: the 2 1/2" or the 4 1/2". The 2 1/2" Grip Heads mount onto a standard 5/8" pin, similar to that found on Century Stand and "Baby" stands and other related mounting hardware.

The 4 1/2" Grip Head is intended for use with "Junior" (1 1/8" receiver) and other heavy-duty stands.

Century Stand Accessories

Cat. No.	Description	Metric Weight	Weight	List
349577	Grip Head w/Single Extension Arm	1.47kg	3 lb/4 oz	\$ 65.00
349578	Grip Head w/Double Extension Arm	2.47kg	5 lb/7 oz	102.00
349575	Grip Head only 2 1/2" (Century Stand Type)	.48kg	1 lb/ 1 oz	37.00
349576	Grip Head 4 1/2" (Roller Stand Type) w/1 1/8" Male Pin and Receiver for 1 1/8" Pin	2.35kg	5 lb/3 oz	95.00

349557	Mini Extension Arm (20" Arm)	.54kg	1 lb/3 oz	32.00

MATTHEY

Video Delay Systems

Video Delay Boxes (Variable), DV Series

• Impedance: 75 ohms • Frequency Response: ± 0.05 dB Ripple up to 5.5MHz (0.1dB p-p) • Return Loss: 27dB • Temperature Range: 0-70°C • Max. Input Voltage: 2VDC • Performance of box and 19" rack units is a function of the delay line combinations used

Small metal boxes with BNC connectors provide infinitely variable video delay either with switches (type 180 or 360) or taps (type 097) over a range of 10-665ns. A ± 1 ns trim achieves precise timing at installation and will compensate for temperature and aging variations during subsequent maintenance. For longer delay requirements, these variable boxes may be cascaded with lump delay boxes (type DV 0100-1000) for a maximum delay of 2500ns. The prefix DV identifies boxes which can be used as "stand-alone" units or can be mounted on a 19" rack panel (Type 5) which accommodates 15 separate boxes. The prefix DN refers to similar boxes which are not rackmountable.

Adjustment of time delay in TV signal routes is important in all countries of the world. 75 ohm delay units are suitable for use in all TV systems including NTSC, PAL, SECAM, and all variations.

The Smaller Video Delay Units are designed to make the fullest use of the miniature DIP video delay line modules, and retain feature important to TV engineers.

Boxed Delay Lines

175/350 Series

Zero Loss Delay Video Delay Line

• 1 Input 1 Output • 1V p-p 'in' -1V p-p 'out' • 75 ohm active • Delay selection 10-1830ns • Delay trim at front 5ns (8° Ø PAL) 6.4 Ø NTSC

The Zero Loss Delay unit is designed to delay a composite color TV signal without significant distortion. The printed circuit card selected will determine the delay time available. If additional delay is subsequently required, the user may add more Matthey DIP delay modules in spaces provided. Gold plated switches or "handbags" ensure a long lifetime of very low noise operation.

The Zero Loss Delay unit can be fitted into any rack frame equipped with ± 15 V nominal DC power supply and an Amp-Blade 23-pin socket (such as the 3400 Series made by Grass Valley Group Inc.)

Features accessible without removing the PC card:

1. 5ns adjustment via 2 x 2ns switches and ± 1 ns fine trim screwdriver adjust.
2. Optional gain variation by screwdriver adjust ± 0.7 dB. (Note: gain is automatically compensated for each delay step switched).
3. Optional DC offset by screwdriver adjustment over the range ± 750 mV.

Items 2 and 3 are normally not necessary but can be fitted if stated on the order.

Professional Video Tape/Videocassettes

Broadcast Quality 1" Tape

- Most consistent RF output • Highest chroma S/N • Incredibly low dropout rate • After 1000 passes retains 100% of original signal
- Withstands three hours of still life without scoring or clogging • S version features shipper

UDS II-90	90 min.	10/100	2.99

XLII Cassettes (Cobalt Ferrite Epitaxial — High Bias)

To be used with cassette decks that have a chrome position. By using the setting for chromium tape, the recorder will be adjusted for a different bias current. The difference is easily heard upon playback, where the noise level between sound and tape is reduced between 4 and 5dB.

Product	Length	Quantity	Price
XLII-46	46 min.	10/100	\$2.69
XLII-60	60 min.	10/100	2.99
XLII-90	90 min.	10/100	3.99

XLI-S Cassettes (Studio Series — Normal Bias)

The XLI-S is the finest ferric-based tape formulation available in a cassette designed to use normal bias and EQ. Frequency response extends to the widest limits ever achieved in this class of cassette, with greater sensitivity throughout the entire tonal range as well.

Product	Length	Quantity	Price
XLI-S-60	60 min.	10/100	\$3.99
XLI-S-90	90 min.	10/100	5.49

XLII-S Cassettes (Studio Series — High Bias)

The XLII-S represents an advanced tape formulation, high epitaxial, with notably finer magnetic particles, plus an entirely new molecular fusion binder system. (Use XLII-S with the recorder's Hi, or Chrome settings for bias and equalization — 70µs).

Product	Length	Quantity	Price
XLII-S-60	60 min.	10/100	\$3.99
XLII-S-90	90 min.	10/100	5.49

MX — Metal Tapes

When MX is recorded on a metal-compatible deck, the Maximum Output Level (MOL) is 2dB greater in the high frequency range than the output of a non-metal premium tape. Distortion is also dramatically reduced at the same input level.

Product	Length	Quantity	Price
MX-46	46 min.	10/100	\$4.49
MX-60	60 min.	10/100	5.29
MX-90	90 min.	10/100	6.99

UD 1/4" Open Reel Tapes

UD Ultra-Dynamic. The quality choice of professionals. Wide dynamic range and full frequency response has made this polyester tape the longtime favorite of studio professionals.

Product	Length	Quantity	Price
UD35-90	1800' x 7" RL-1 1/2 Hr.	10/40	7.49
UD35-180	3600' x 10 1/2" RL-3 Hr.	10/20	22.99

UD25-120	2400' x 7" RL-2 Hr.	10/20	9.49

UD Microcassettes

Made with Maxell's famous UD tape formulation, UD microcassettes exhibit surprisingly high fidelity at both speeds of microcassette recorders.

Product	Length	Quantity	Price
MC-60UD 3 pack	60 min.	10/100	\$6.49

Professional Open Reel

XL Professional Back-Coated. Unsurpassed for high performance mastering. Totally responsive to all the demands of a live performance. Available in the "professional thickness" of 1.5 mil in addition to 1.0 mil thickness.

XLI-50-120B	Back-coated open reel tape on 10.5" NAB metal reel. 2500'		26.79
XLI-35-90B	Back-coated open reel tape on 7" precision plastic reel. 1800'		10.39
XLI-35-180B	Back-coated open reel tape on 10.5" NAB metal reel. 3600'		28.99
XLII-35-90	Open reel tape on 7" precision plastic reel for use with EE capable decks. 1800'		13.79
XLII-35-180	Open reel tape on 10.5" NAB metal reel for use with EE capable decks. 3600'		37.59

MCL, INC.**"C" Band High Power Amplifier System****10717 Traveling Wave Tube Amplifier C-Band 3kW**

The 10717 TWTA represents a major milestone in the development of 3kW C-band TWT Satcom amplifiers. The 10717 combines state-of-the-art traveling wave tube technology with state-of-the-art power supply design.

The advent of the Permanent Magnet (PM) Brazed Helix TWT obsoletes the coupled-cavity solenoid focused TWT and its associated bulky, inefficient circuitry.

The 10717 (specifically designed for the Brazed-Helix TWT) is contained in a single rack-type enclosure for simplified operation and maintenance, along with easier and less costly integration into earth station shelters.

Because of the dramatic reduction in system size, system control becomes much more centralized. Ten front panel mounted switches are all that is required for system control.

The Helix-Type TWT does not require an electromagnet focus solenoid power supply or an ion power supply. As a result, the savings on size and power efficiency are passed on to the system and ultimately the user.

The cathode and modulator high voltage power supplies are of switch-mode power converter (SMPC) configuration. The SMPC configuration is inherently much greater in power efficiency and can be made much smaller than a "linear" type power converter of equal output. The continuing technological advances occurring in both the high power FET switch transistor and integrated circuit regulator controller (pulse-width modulator) industries have allowed the design of the 10717's SMPC to focus on reliability, ruggedness, and trouble-free operation.

System maintenance is simplified by allowing access to all critical sub-assemblies. RF components are accessible behind the hinged control panel. The cathode P/S is mounted on slides, and the AC distribution panel/collector P/S is configured as a roll-out unit, mounted on wheels. In addition, vital system operating parameters are displayed, when desired, on front panel mounted high accuracy digital panel meters. Internal test points are provided. The cabinet is dark gray, panels are light gray.

Specifications

Frequency Range:	5.850-6.425GHz
Bandwidth:	575MHz at -1dB
Gain:	70dB rated power, 73dB small signal minimum
Gain Slope:	See table below
Gain Stability:	± 0.25dB/24 hours with constant drive
Gain Adjustment:	20dB continuously adjustable

	Power Variation In Band (dB)	40MHz BW dB/MHz
Mode 1 (PS = 3kW)	0.5	.02
Mode 2 (PS = 2kW)	1	.03
Mode 2 (PS < or equal to 500W)	3	.04

Output Power: At cabinet flange \geq 2700W (Mode 1)
Where Mode 1 = operation at $P_s \geq$ 3kW. Mode 2 = adjustment for optimization of 3rd order IM. P_s = output power at tube flange and waveguide losses are 0.6dB

Note: Two pairs of cathode and anode voltages may be needed

Output Power

Stability: ± 0.1dB/hr. ± 0.25dB/24 hours
Input VSWR: 1.20:1 maximum
Output VSWR: (As seen by antenna feed system) 1.25:1 maximum

Load VSWR: 1.5:1 for specification compliance; trip set at 25% rated output power

AM-PM

Conversion: Mode 1, 6°/dB $P_s =$ 3kW
Mode 2, 3°/dB $P_s =$ 500W

Harmonic Output: 60dBc at rated output

**10717**

Group Delay:	Linear, 0.1nsec/MHz. Parabolic, 0.05nsec/MHz ² . Ripple, 2.0nsec p-p
Residual AM:	Below 4kHz — 32dBc minimum — 4kHz to 500kHz, — 20(1 + log F) with F in kHz — above 500kHz — 60dBc minimum (measured in dB below rated single carrier in a 4kHz band)
Noise and Spurious:	From 4.2 to 12.0GHz — 60dBw/4kHz From 3.7 to 4.2GHz — 130dBw/4kHz From 12.0 to 40.0GHz, — 110dBw/MHz
RF Connectors:	Input, type N, output, CPR 137F
Line Voltage, Frequency and KVA:	480V ± 10%, 3 ϕ , 4-wire, 47-63Hz plus ground, 15KVA
Inrush Current:	250% maximum
Line Unbalance:	2% line to line voltage (3 phase units only)
Line Harmonics:	3% maximum line to line (3 phase units only)
Load Unbalance:	5% at maximum load (3 phase units only)
EMI Susceptibility:	Will survive ± 35% voltage transients
Dimensions:	78" H x 26" W x 32" D
Weight:	1300 lbs.
Operating Environment:	Temperature: 0 to +50°C Humidity, 85%/ Altitude to 10,000'
Shock and Vibration:	As encountered at satellite tracking ground stations

MCL, INC.**Transportable KU Band TWT Amplifiers****10844 Ku Band 300W Traveling Wave Tube Amplifier****General Performance Information**

- FET Switch Mode Power Supply (SMPS)
- Complete TWT protective circuitry
- Forced isolated air cooled; 400Hz blower used
- External RF inhibit available
- Redundant operation available
- Audible alarm
- Optical arc detection circuitry
- The TWTA is provided with two front panel switches to control external RF and/or WG switches (115AC). These can be used by the operator to control dummy load operation, optional excitation, etc.
- Digital Attenuator: 27C1802 with D16329-006 PCB, optional
- Remote Panel: 15313, optional
- Interconnect cable from remote panel to 10844, optional 03C1773-001. 25' std.
- Computer interface, optional
- 28VDC operation for external coax or WG switches, optional
- VDE line filter, optional

This single drawer TWTA is designed for small volume and 8³/₄" rack height. The unit uses a 300W traveling wave tube. It is designed to have additional features: power output metering, reflected power monitoring, digital attenuator option, waveguide and coax switch control, commonality with other units, arc detection, and additional monitors.

**10844****Electrical Specifications**

Power Out	
(Flange):	262W
Gain (dB):	Std., 45. With optional SSA, 70
Gain Adjustment	
Range:	20dB min.
RF Sample	
(N-F):	-48dB
Connectors:	Input SMA-F. Output WR75 flat flange
Line Power	
(Std.):	120VAC, 1 phase, 60Hz KVA: 2.2 max. P.F. 0.75 nominal

10906 Single Traveling Wave Tube Amplifier with Separated RF Module

- Remote Panel: 15346, optional
- Cable-Rem Pnl. to 15351, optional
- Digital Attenuator Remote: 27C1802 + PCB D16329-006, optional
- Cable Digital Attenuator Remote: 03B1788-001, optional
- Aluminum Heat Sink: 19D1430, optional
- 28VDC operation for external RF switches, optional
- Side Connector Exit RF Module: Order 10876, optional
- Computer interface, optional

This amplifier consists of two modules and is suitable for antenna mount or flyaway usage. It incorporates the same features as the 10844 and contains the same RF chain, TWT, blower assemblies, control modules, power supply, etc. A complete system consists of an RF module, a controller drawer, and interconnecting cables. This amplifier forms the basic unit for several of the redundant systems.

The 15346 RF module contains the TWT with input assembly including manual attenuator (or SSA and/or digital attenuator when ordered), output waveguide assembly (including arc detector), and cooling assembly (isolated forced air). The unit is watertight and suitable for outside use. It can also be utilized in a "flyaway" when properly shock-mounted for airline handling.

The standard unit with copper heatsink weighs 51 lbs. This can be reduced by using an optional aluminum heatsink (which also reduces the upper ambient limit from 50°C to 40°C).

**10906**

The 15351 control drawer occupies minimum rack space (5¹/₄"H) while housing all system electronics (except for arc detector PCB). Centralization of electronics allows operation in a more benign environment and increases system MTBF. The drawer is forced air cooled.

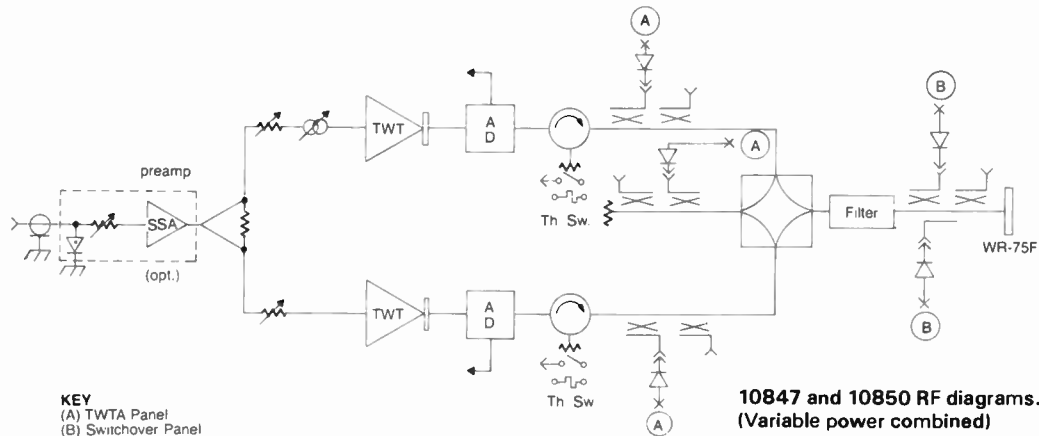

The interconnecting cables consist of a 37-pin "D" connector molded cable and an HV cable. The HV cable consists of HV wires covered successively by (1) a mylar wrap, (2) heavy metal shielding, and (3) sturdy industrial grade plastic tubing. Hermetic HV connectors are used and sealed with shrink tubing. These cables are watertight and are 25' long.

Electrical Specifications

RF Power Out	
(min.):	TWT: 300W; TWTA: 262W usable min.
Gain (dB):	Std., 45 (with opt. SSA, 70)
Input Line Power:	120VAC, 1 phase, 60Hz std. (options available); KVA: 2.2 with 0.75 P.F.

MCL, INC.

Redundant Systems Test Loop Translator Coax Switch Assembly

Transportable Redundant Systems

1-For-1 Switchover and Variable Power Combined (VPC)

Redundant systems are available for standard and custom input and output configurations. These units are designed to employ 10844 or 10901 as the basic TWTA module. Redundancy insures greater on-line availability and should be used where mission success is critical. The failure of one TWTA does not prevent completion of the transmission.

Typically, an RF power output sensor is used to detect the absence of power on an individual amplifier and initiate the action of placing the operative amplifier on-line.

There are two major types of redundant configuration:

1-For-1 Switchover

The basic system consists of two TWTAs and a switchover network, and switches between the two TWTAs. When a "power fail" signal occurs, action is taken to switch the other TWTA on line. The user is limited to the power output of a single amplifier. In addition, during TWTA switching there is typically a 100 μ s interruption of signal.

Variable Power Combined

This system consists of two TWTAs and a variable power combiner. The VPC has the capability of combining the output of both TWTAs—thus doubling the output power. Another advantage is "soft-fail" (no power interruption during transfer). This type of system is more expensive due to the VPC, phase equalization requirement, and additional circuitry. Most customers typically order the VPC configuration since they desire the additional power output capability on marginal days.

Fixed phase combining can also be used but it has the disadvantage of lower power out for single amplifier performance (-6dB from max. power while a VPC is -3dB).

MCL's standard configuration is a power divider with manual attenuators. As options, MCL offers digital attenuators and a preamplifier. Custom configurations including coaxial switches can be furnished as specified.

15364 SYSTEM

15327 Test Loop Translator

- Designed for TNG
- Front panel control, maintenance and monitoring
- 3.5" rackmount height, 30 lbs. total

The 15327 is a 14GHz to 12GHz frequency translator designed for testing of the up-link and down-link RF electronics. It is conveniently packaged for EIA standard 19" rackmounting. (The 15327 and 15330 are designed as half rack units and jointly require 3.5" height by EIA standard 19" W.) Front panel access allows input selection from 3 different sources, monitoring capabilities of DC voltages, and adjustments of phase voltage and frequency of the internal local oscillator.

15330 Transmit Receive Coax Switch Assembly

- 12/14GHz coaxial switching
- Operator manual switch override

15364

The MCL 15330 provides coaxial switching for communications down converter input and redundant video exciter outputs. In addition it provides a 950MHz to 1450MHz output from a 4 port antenna feed for video receivers. Diode coupled DC power supplies (15334) furnish redundant power to the block down converters. This unit is EIA standard 19" rack-mountable.

MERLIN ENGINEERING WORKS

Video Standards Converter/ Audio Synchronizer/Monitor

ME-888B Digital Video Processor/Standards Converter

- Merlin ME-888B accommodates all world standards, including PAL-N used in Argentina, Uruguay and Paraguay
- Two modes of motion interpolation
- SECAM output encoder
- Eight-bit resolution — luminance and chrominance
- International television standards conversion
- Time base correction and color correction
- Noise reduction and detail enhancement
- Multistandard synchronization and freeze frame
- Genlock, DOC, Lum/Chrom Delay and Output Fade

In addition to being a bidirectional television standards converter, the ME-888B is also a synchronizer, noise reducer, color corrector, image enhancer, field and frame store and time base corrector.

Designed to the highest multistandard broadcast signal specifications, the ME-888B is capable of handling "worst-case" conditions found in converting standards via videocassette—unstable VTR's disturbed sync, noise generated by "available light" shooting and even multi-generation recordings.

Specifications

- Frequency Response:** (PAL, SECAM, NTSC, 4.4NTSC) ± 0.5dB 0 to 3.3MHz, -3dB at 3.5MHz
- Tolerance:** All SPG outputs are derived from the subcarrier (except 4.4NTSC)
- Signal-to-Noise Ratio:** 52dB CCIR weighted, flatfield. (Rhode and Schwarz UPSF2 meter)
Output luminance stability ± 15ns
- Luma/Chroma Displacement:** Horizontal: 600ns chroma advance, 100ns delay. Continuous adjustment. Vertical: 6 lines chroma advance, 1 line retard
- Power Supply:** Voltage 99-132V/187-264V (47-440Hz)
- Dimensions:** 10.5"H x 17.5"W x 16"D rackmountable

Inputs (75 ohm terminated)

- PAL, PAL-M, SECAM, NTSC, 4.4NTSC:** Monochrome 525/60 or 625/50. Level: 1V p-p ± 6dB. Continuous adjustment. High and low indicators
- D.O.C. (A & B channels):** RF or digital (switch)
- Reference:** Black burst or composite video, 0.3V p-p syncs

Outputs (75 ohms)

- Video, Video Monitor:** 1V p-p composite
- Y-U-V (optional RGB):** 0 ~ 1V p-p constant (fully adjustable)
- SPG (2V p-p pulses):** Burst gate; mixed blanking; mixed syncs; PAL indent; vertical drive; horizontal drive; black burst (0.3V p-p sync; subcarrier 1V p-p)

VISTEK	V4022 NTSC Decoder (NTSC input/RGB, YUV Output)	7,300.00
VISTEK	V4032 NTSC Coder (RGB, YUV input/composite video output)	3,950.00

ME-158S

ME-888B

ME-278 Digital Frame Audio Delay for Lip Sync Restoration

- Thumbwheel selection (in half-frames of 1/2 to 7 1/2) of amount of delay
- Locks to composite video or sync, or free runs at approximated locked input
- 60dB LED bargraph input display
- Local or remote selection of frame delay and bargraph display
- Loopthrough video or sync frame lock
- Transparent digital coding/decoding (16 bit)
- PAL or NTSC (jumper select)
- Headphone monitor output
- Rackmount (19" x 1 3/4" rack)
- 120V 60Hz or 220V 50Hz AC power (jumper select)

The ME-278 Digital Audio Delay utilizes the latest in digital audio techniques to correct audio-to-video timing errors which are introduced when video programs are passed through framestores, standards converters, synchronizers, or digital effects systems. These units introduce lip-sync errors of several frames. This type of error is particularly objectionable because the audio is ahead of the video.

In the ME-278 the audio signals are digitized, stored in memory and clocked out with a delay corresponding to the video delay. The delay line in the ME-278 is manually selected in one-frame increments by a thumbwheel switch on the front panel. Half-frame increments are selected by a toggle switch. Alternatively, the ME-278 delay can be remote controlled via a BCD-coded signal. This allows control by frame store units which generate internal error signals. When signals with multiple audio channels are to be corrected, a number of ME-278 delay units can be ganged together with single unit control.

Specifications:

- Input Impedance:** 600 ohms balanced or 22K ohms unbalanced (jumper select)
- Output Impedance:** 600 ohms balanced
- Max. Input Level:** + 8dBm (other levels optional)
- Output Level:** + 8dBm (other levels optional)
- S/N Ratio:** > 60dB from peak operating level
- Frequency Response:** +/- 5dB 40Hz - 15kHz
-3dB at 10Hz and 18kHz
- Distortion:** < .07% at 1kHz

ME-278 \$3400.00

ME-158S Audio Monitor with Stereo Switching

A compact studio-quality audio monitor, with 3 balanced high impedance audio inputs via XLR connectors. Inputs 1 and 2 may be summed for a quick check of the audio phase in stereo.

Designed specifically for VTR or compact studio use, the ME-158S is completely self-contained with its own 40W power supply and fits directly into the standard Tektronix dual rackmount frame. The ME-158S employs a long-excursion 4" woofer with high frequency acoustic-suspension soft dome tweeter driven by a wide band high fidelity audio amplifier.

ME-158S \$980.00

Prices and Specifications Subject to Change Without Notice.

MERLIN ENGINEERING WORKS**Tape Delay/Conversion Kits****ME-488 Automated Tape Delay System**

The ME-488 Automated Tape Delay System is designed for those applications where continuous 24 hour delaying of program material is required or where blocks of programming need to be recorded and rebroadcast for time zone considerations.

The System consists of software, an IBM compatible AT computer and color monitor (rackmount or tabletop configuration), serial I/O boards, a computer-compatible time code reader board and a 10X1 audio follow video switcher with serial control.

The system will run any Sony Protocol RS-422 tape recorder including Sony BVU and BVW series VCR's, BVH-2000's, BVH-3000's and Panasonic MII's. Recorders not compatible with Sony RS-422 Protocol can be used with the addition of a protocol adaptor interface for each VTR.

Time code from the master time code generator is routed via a distribution amplifier to the VTRs and the computer controller to establish time of day. For continuous duty the system is simply started and allowed to run. In network delay applications where blocks of programming are delayed, the operator simply enters the time delay offset and start and stop times for delay. The system will then automatically cycle the recorders to achieve this delay. No operator intervention is necessary once the system is running. The computer monitor will display the status of each recorder at all times and the switcher position for operator confidence. A cycle counter will record the number of passes on each tape to facilitate tape replacement at appropriate intervals.

A system configured with 3 VTRs with a maximum record time of 90 minutes each can continuously delay program material for 2 hours. A 3 hour continuous delay can be achieved using four 90 minute VTRs.

Optional Equipment

- Uninterruptible power supply for computer
- Audio and video distribution amplifiers
- Time code distribution amplifier
- Audio and video monitoring
- Interfaces for non RS-422 serial controlled VTRs
- Redundant back-up system
- Pre-wired racks for turnkey installations

ME-488 with one day installation and training, excluding travel expenses **\$23,950.00**

ME-238 Extended Play Conversion Kits

The ME-238 series of extended play kits are carefully engineered to fit specific models of Sony and Ampex 1", type "C" VTRs to allow most full-length movies and sporting events to be recorded on a single 14" reel (early Sony machines are limited to a 12 1/2" reel).

Extended play kits are currently available for the following VTRs.

Sony BVH-1000, BVH-1100 and BVH-1100A

- Record/play time: 2 hours, 40 minutes—12 1/2" reels
- Kits for older Sony machines are available for rackmount or stand-alone cabinet installations. Because of increased height, consoles must be modified to fit

Extended Play Conversion Kit as shown on
Sony BVH-1000
Sony BVH-1100
Sony BVH-1100A

Sony BVH-2000

- Record/play time: 3 hours—14" reels
- Although cabinet height is increased, the modified Sony BVH-2000 will fit into a standard rackmount

Ampex VPR-1, VPR-1C, VPR-2, VPR-2B

- Record/play time: 3 hours—14" reels
- This kit replaces the older version which accommodated only 12 1/2" reels. 3 hour kits are available for console or stand-alone machines. Because of the required extra width, modified VTRs cannot be rackmounted
- Extender panels are available for VPR-2 and VPR-2B consoles

Ampex VPR-80, VPR-6

- Record/play time: 3 hours—14" reels
- Kits are available for VTRs in stand-alone cabinets, rackmount or standard Ampex console

Marconi MR2-B

- Record/play time: 3 hours—14" reels
- The Marconi extended play kit is similar to the version used for the Ampex VPR-2B
- When ordering ME-238 Extended Play Kits, it is important that model and mounting configuration be specified

ME-238A	Extended play kit—Ampex VPR-2/2B console or table top	\$2,000.00
ME-238A-80	Extended play kit—Ampex VPR-80 console or table top	3,000.00
ME-238A-6	Extended play kit—Ampex VPR-6 console or table top	3,000.00
ME-238S	Extended play kit—Sony BVH-1000/1100	2,000.00
ME-238S-2000	Extended play kit—Sony BVH-2000	3,400.00
ME-238M	Extended play kit—Marconi type C VTRs	2,000.00
ME-268	Flywheel kit for plastic spot reels—Ampex/NEC/Sony	188.00

MICRON AUDIO PRODUCTS, LTD.**Wireless Microphone Systems****CNS 500 SERIES****COMPLEMENTARY NOISE SUPPRESSION**

- Wider Dynamic Range • Lower Noise • Extended Operating Range
- Increased Immunity from Interference • Improved Multi-Channel Performance

The standard MICRON range is joined by the 500 series, featuring the substantial enhancement of Complementary Noise Suppression.

TX-501/502**CNS POCKET TRANSMITTERS**

- > 115dB S/N Ratio • Wide Choice of Microphones
- Sophisticated Level Controls

Stringent testing at every stage of production ensures a high level of performance and long term reliability. Housed in lightweight stainless steel cases for durability and strength, the transmitters are capable of withstanding the heavy demands of location use. The shape of the case is both aesthetically pleasing and comfortable to wear, especially when concealment is important.

- TX-501** "CNS" pocket transmitter—single battery. Supplied with TFA2 flexible antenna, Lemo FC-2308 microphone connector and TBP-1 pouch \$1650.00
- TX-502** "CNS" pocket transmitter—double battery. Supplied with TFA-2 flexible antenna, Lemo FC-2308 microphone connector and TBP-2 pouch \$1700.00

TX-503 CNS HAND-HELD TRANSMITTER

- Strong Lightweight Stainless Steel Body • Interchangeable Heads
- Built-In Anti-Popping Filters • Dual Low Battery Warning • Line Up Oscillator

Omni-directional and cardioid versions are available and both types include an integral two layer windscreen. The power switch features an audio mute position allowing the transmitter to be powered without transmitting audio.

A three position audio sensitivity switch maximizes the signal-to-noise ratio for various applications. Particular attention has been paid to the successful handling of high sound pressure levels.

An electronic anti-popping filter affords protection against overload, even at high SPL. Further front end protection is provided by a 3 position bass roll off filter, which can be used to reduce wind noise or counteract close microphone effects.

- TX-503C** "CNS" handheld transmitter. Supplied with high performance AKG cardioid condenser microphone element and helicoil antenna \$1750.00
- TX-5030** "CNS" handheld transmitter. Supplied with high performance AKG omni-directional condenser microphone element and helicoil antenna \$1750.00

MR-510 CNS MOBILE RECEIVER

- Multifunction LED Display • Standard & Noise Suppressed Versions • Compatible with All Sound, Film and Video Recorders

The MR-510 is housed in a rugged diecast case and is specifically designed to withstand the rigors of location work.

The balanced audio output is transformer isolated at low impedance microphone level.

The front panel jack socket provides headphone monitoring and can also be used as a high level auxiliary output.

External powering can be from any 12-30VDC supply with either +ve or -ve ground.

- MR-510** "CNS" mobile receiver. Supplied with HAR right angle helicoil antenna, RAO10PCM-R audio output cable and P-6973 power connector \$1650.00

**MDR-530 CNS DIVERSITY RECEIVER**

- Full Monitoring Facilities • Line and Mic Level Outputs • AC/Ext. 12V Powering

The MDR-530 is a compact, true diversity receiver utilizing the CNS noise suppression system which provides a dramatic improvement in the operating reliability of the radio microphone system. Dead spots are virtually eliminated and the effective operating range considerably increased.

Housed in a single unit, the MDR-530 receiver contains two high quality receiving sections which operate on the same frequency. A sophisticated selector circuit automatically provides the best audio output signal. Manual override is provided for unusual situations which require one antenna to be temporarily disabled.

- MDR-530** "CNS" mobile diversity receiver. Supplied with 2-HAD helicoil dipole antennas, 2-MAC20 coaxial cables and 1-RAO20CCM audio output cable \$4400.00
- MDR-530S** "CNS" mobile space diversity system. Supplied with TX-501 pocket transmitter, TFA2 flexible antenna, Lemo FC-2308 microphone connector, MDR-530 mobile space diversity receiver, 2-HAD helicoil dipole antennas, 2-MAC20 coaxial cables and 1-RAO20CCM audio output cable \$6050.00
- MDR-530SH** Same as above but with TX-503 handheld transmitter \$6150.00

MICROTIME, INC.

*Time Base Correctors/Synchronizers/
Scramblers*

Tx2 Time Base Corrector

• Color field identification pulse • RS-170A output in NTSC • Proc-amp controls with presets • Optional remote control • Shuttle to $\pm 40X$ • 13.5MHz sampling • Available in NTSC, PAL B and PAL M • Infinite window TBC • Freeze frame • Interpolated field freeze (field 1 or field 2) • Component and composite outputs • Noise reduction • Drop-out compensator • Standalone sync generator • Genlock • Can operate as a single TBC or two TBCs in one chassis for A/B roll • Operates with or without advanced sync • Dub or Component and composite inputs • Compatible with S-VHS, U-Matic, U-Matic SP, Betacam, and MII formats • RGB outputs available • VARI-TRAK™ mode allows dynamic tracking equipped VCRs to broadcast quality pictures from -1 to +3X play speed and viewable images up to $\pm 40X$ • Operates in PAL high band and low band dub

- Tx2 Single Component TBC \$ 8,995.00
- Tx2 Dual Component TBC 14,995.00
- Upgrade from Single to Dual 6,995.00
- Extender Card 500.00
- Remote Control 1,295.00
(Dual TBC Controls with 75' cable)
- RGB Output Option 495.00
- Betacam R, R-Y, B-Y interface 150.00
- S-VHS interface 150.00

Tx4 S-VHS Time Base Corrector

• Component 4:1:1 design • Y/C or composite processing • Full frame of memory provides freeze frame and interpolated field freeze • Can be operated with or without advanced sync • Chroma comb filter noise reduction • Will genlock or automatically reference to internal RS-170A sync generator (standalone mode) • Drop-out compensator • Proc amp controls with presets • Shuttle performance to $\pm 40X$

- Tx4 \$4,995.00
- Tx4 Remote Control 650.00

Tx4 Effects Remote Control

Operates complementary to the Tx4 TBC • Proc amp controls • Freeze selection • Timing controls • Variable picture position with joystick control • Quarter-size image with variable position • Variable mosaic checkerboard tiles • Variable horizontal, vertical blind effect • Variable posterization with luminance inversion • Chroma solarization with inversion • Preset transitions—push left, right, up, and down • Horizontal vertical wipe • 4 selectable transition speeds

- Tx4 Effects Remote Control \$3,995.00

S-134 Four Field Synchronizer with Scrambling Option

• Composite digital sampling • Noisy signal/non-synchronous signal "freeze" threshold adjustment • Stores two complete frames in memory, ensuring proper vertical interval processing • Four field/two frame Freeze selection • Can be interfaced with audio delay correctors to eliminate lip sync problems • Video scrambling/descrambling for secure transmission

- S-134 NTSC, PAL-B, PAL-M \$9,500.00
- Remote control with 75' cable 1,295.00
- Additional cable ft./2.50
- Remote control with 75' cable 1,295.00
- Additional cable ft./2.50
- Scrambler option 3,995.00

S-234 Four Field Synchronizer/TBC with Scrambling Option

The S-234 has all the features of the S-134 plus an infinite window, NTSC heterodyne TBC which will work with virtually all heterodyne VTRs with or without advanced sync. Auto mode switching samples the incoming video and automatically switches to TBC or synchronizer mode.

- S-234 NTSC only \$10,995.00
- Remote control with 75' cable 1,295.00
- Additional cable ft./2.50
- Scrambler Option 3,995.00

**Tx4 TBC
with Effects
Control**

S-134

300 Series

Features Common To All Three TBCs

• Wide window • Genlock or standalone operation • Constant RS-170A output in genlock, regardless of reference changes • LED to indicate optimum SCH calibration • Proc-amp controls with presets • Sync and blanking derived digitally for stability and repeatability • Composite or noncomposite outputs • Top access to all circuitry — no extender board required

T-300 Time Base Corrector

• 35 line memory—handles large gyro errors • Pictures in shuttle to $\pm 5X$ for rapid editing and previewing of tapes • 3.58MHz subcarrier feedback for wideband video processing • 8 bit 4X subcarrier sampling for transparent performance • Averaging velocity correction for best color performance • Lightweight, low profile, and low power consumption—ideal for mobile or ENG applications

- T-300 \$4,995.00
- Remote Control with 75' cable 1,295.00
- Additional cable ft./2.50
- Rack Slide Mounting Adaptor 95.00

T-320D Time Base Corrector

• Freeze, field 1/field 2 selectable • Vertical interpolator to minimize flicker in freeze • Digital comb filter for improved separation of luminance and chrominance • RF sensing drop-out compensator • Pictures in shuttle to $\pm 40X$ • Optional VARI-TRAK (factory installed) for Dynamic Tracking operation with BVU-820 and BVU-870 • Heterodyne and 3.58MHz feedback modes

- T-320D \$6,995.00
- VARI-TRAK option (factory installed) 500.00
- Remote Control with 75' cable 1,295.00
- Rack Slide Mounting Adaptor 95.00

T-320 Time Base Corrector

• 35 H-line window • RF sensing drop-out compensator • Pictures in shuttle to $\pm 40X$ • Heterodyne and 3.58MHz feedback modes

- T-320 \$5,995.00
- Remote Control with 75' cable 1,295.00
- Rack Slide Mounting Adaptor 95.00

MICROTIME, INC.

Digital Effects Systems

RP-1 3D Digital Effects System

- Rotation with three variable axes
- Variable perspective with simultaneous rotation
- Continuous compression and expansion
- Full 3D manipulation of frozen image
- Linear or curvilinear trajectory selectable by keyframe
- Variable aspect ratio
- Strobe
- Freeze
- Cropping of all four sides, independently or together
- Border with variable width
- Background/borders with variable color parameters
- Picture splits
- Mosaic, posterization, solarization, false colors and memory trails
- Y, R-Y, B-Y analog component inputs/outputs are standard in addition to the composite inputs/outputs
- Dual video inputs with 2 x 1 switcher
- Internal key with soft edge and position variable on four sides
- Timing and proc-amp parameters adjustable via control panel
- Advanced 16-bit digital filtering providing improved transparency
- High precision floating point arithmetic for accurate perspective
- Comprehensive directory of stored effects
- 20 on-line run registers
- Automatic input timing, frame synchronization
- Fluid smooth motion
- Numeric keypad for data entry
- Trajectory walk function via joystick
- Five soft keys for menus and future software developments
- Storage capacity of 256 sequences of 5056 keyframes per disk
- High resolution monitor
- Central diagnostic system
- Matte channel for flying linear key signals, dual inputs for front/back switching, optional
- Curved pictures — wide range of twists and curves
- Internal re-entry effects — uses the internal linear keyer to create tunnel, hall of mirrors and kaleidoscope effects
- Montage — up to five quarter size images can be frozen and then processed
- Varicomb NTSC decoder with 2 x 1 switching of component inputs, optional
- Varicomb PAL decoder with 2 x 1 switching of component inputs, optional
- Each RP-1 system can have up to 8 control panels

RP-1

RP-1	\$49,995.00
Matte Channel	8,995.00
Varicomb Decoder and 2 x 1 component switcher	9,995.00
Spare high-resolution IBM compatible 12" CRT	495.00
Extra RP-1 control panel	9,500.00
Extra extender card	500.00

Genesis 1/ACT 1™ Digital Effects System

ACT 1, the Artistic Control Terminal, combined with the Genesis 1 mainframe, increases creative capabilities to your imagination's limit. ACT 1 functions through the ease of the joystick.

- Flips, tumbles, zoom, variable position
- Drop shadow
- Mosaic
- Posterize
- Freeze, strobe
- Linear or curvilinear motion
- Border
- Crop
- Programmable 2 x 1 switcher
- Built-in preview keyer
- Key output signal for switcher interface
- Single keystroke operation for on-air application
- Edit controller interface for post production
- Component or composite mode
- Available in NTSC, PAL B, or PAL M

Genesis 1/ACT 1

Genesis 1/ACT 1 With 25' control cable	\$19,995.00
Extender Card	500.00
Additional Cable (2000' maximum)	ft/2.50
DATAKEY® 5 per package	475.00

MICROTIME, INC.

Graphics Systems

Image Plus

- 3D modeling and animation • Texture mapping and shaders • Metamorphosis
- Preview • Off-line rendering • 3D fonts and font generation • 32-bit paint system • Frame grab and video interface • Film interface • Disk storage options
- Extended memory

High resolution 3D graphics, animation and paint—all fully integrated. The user interface is designed by artists, for artists, to help you master this sophisticated graphics system and, whether you are an expert or a beginner, you will create stunning, complex images, in next to no time.

The Image Plus 3D is a full feature graphics workstation incorporating 32-bit full color paint, real time RGB frame grab, 3D modeling and animation, internal VTR controller and font generator software.

The Image Plus is based on a PC-AT compatible CPU with 80386 microprocessor and math co-processor for optimum rendering speed. Lower cost systems based on the 80286 CPU are also available.

3D Modeling and Animation:

Simple or complex models can be constructed quickly and easily, with a minimum of keyboard entries. The menu system guides you through the process from sketches, line art or free hand drawing to the finished model. After defining the models, create the paths (trajectories) for the models to follow. Several models can be on a single path, or each model can have its own unique path. Initially, the camera is fixed, but for more complex animation, you can program the camera position, and its point of attention. The result is models, camera and lights, all changing independently during the animation.

Texture Mapping and Shaders:

Phong, Gouraud, metals, reflectance maps, texture maps, solid and transparent surfaces are all standard. Texture maps can be created from scratch in paint, or from a frame grabbed image. All or part of an image can be mapped onto all or part of a model. Anti-aliasing to eliminate the "jaggies" is standard. Select horizontal, vertical, horizontal and vertical, or none, depending on the model.

Metamorphosis:

3D shapes, color and transparency can all undergo metamorphosis during an animation. Just define the starting model and the finishing model, and let the system do the rest. Turn a pumpkin into a vase, create a beating heart, or any number of unique transformations.

Preview:

If you want client approval of a preview, before final rendering is started, use wireframe preview to check the position and orientation of the models. Or use the fast rendered preview to check lighting and surfaces. You can even try several "what if" previews before committing to final rendering.

Off-Line Rendering:

With an Off-Line Renderer, your overall productivity at the creative workstation is increased significantly. Completed designs are transferred on the Local Area Network (LAN) to the off-line renderer, freeing up the workstation for the next design. The LAN can also be used to link various combinations of workstations and rendering stations for special applications. A 3-D system can be upgraded at any time by adding the rendering station.

Each frame is normally rendered to the internal disk drive, and then edited to tape as a sequence. This avoids tying up the VTR during the entire rendering process and eliminates unnecessary wear and tear on the tape deck.

3D Fonts and Font Generation:

6 vector based fonts are standard with all 3D systems. The paint-systems do not have this feature. Use these fonts to create text for subsequent 3D modeling and animation or use the font generator to scale and modify them. You can even create custom fonts from a frame grabbed input, or create them free-hand.

Paint:

The 32-bit paint system allows you to create or modify images with the full 16.8 million color spectrum. A complete set of brushes, including variable air brushes, and tools for cut, paste and move, etc. are provided. A set of 2D fonts for titling is standard in the paint system, and anti-aliasing can be turned on or off as required.

Frame Grab and Video Interface:

Hardware and software for real time RGB frame grab are standard. You can capture flat art, stills from a slide chain, or live video from a camera for use as a background, texture map or model outline. Digital matting is also standard. Create a model, matte it over a background and save the composited picture as a new background (all digitally). Keep adding new layers until the project is complete. In addition to frame grabbing, the paint system can matte an image over a live background for post production.

Image Plus video inputs and outputs are RGB. If you have a Betacam or MII video system, just add a component transcoder (available from Sierra Video Systems and other suppliers). If the system is composite NTSC, you will need to add an NTSC encoder, and possibly a decoder (available from Faroudja Labs, and other suppliers).

Serial remote control of a VTR for frame-accurate editing of the finished animation is also standard. The RS-422 controller is built into the system software. The Sony, BVW-40[®], BVH-2500[®], VO-5850[®], and other VTRs can be controlled.

Image Plus

Film Interface:

If the application calls for film output (transparencies, separations, etc.), Image Plus can optionally give high resolution rendered images. Frames can be rendered by the resolution independent software at standard TV resolution, or up to 8000 x 8000 pixels, without re-drawing the input. The Matrix PCR/QCR digital film recorder is currently supported for these high resolution formats, with aspect ratios of 2048 x 1536 and 4096 x 3072.

Disk Storage Options:

A Bernoulli box with removeable 20M byte cartridges allows you to transport data from one site to another. Conventional hard drives can also be added to suit your requirements.

Expanded Memory:

If your application calls for complex models to be rendered over high detail, frame grabbed backgrounds, you may want to add the EMS option. Models assembled over black which are merged with backgrounds in post production will not usually need the extra memory. In addition, EMS is a prerequisite for certain options.

Hardware Configuration:

The hardware supplied will depend on the model ordered as shown below.

Description	IP-1	IP-2	IP-3	IP-4	IP-5	IP-6
80386 CPU, Co-processor and keyboard		1		1		2
80286 CPU, Co-processor and keyboard	1		1		2	
1.2M byte floppy disk drive	1	1	1	1	2	2
40M byte hard drive*	1	1	1	1	2	2
Graphics tablet and puck	1	1	1	1	1	1
32-bit frame buffer	1	1	1	1	2	2
12" RGB video monitor	1	1	1	1	1	1
12" menu monitor	1	1	1	1	2	2
RS-422 VTR controller	1	1	1	1	1	1

* In some systems, two 20MB drives may be provided.

IP-1 Basic paint system	\$31,995.00
IP-2 Turbo paint system	37,995.00
IP-3 Basic 3D system	44,995.00
IP-4 Turbo 3D system	50,995.00
IP-5 Basic-plus 3D system	64,995.00
IP-6 Turbo-plus 3D system	75,995.00

3D 3D modeling and animation upgrade. Converts IP-1 basic paint to IP-3 basic 3D, or IP-2 turbo paint to IP-4 turbo 3D	\$15,995.00
RS-422 Second VTR controller for off-line systems IP-5 or IP-6) to allow rendering to a VTR from both the workstation and the off-line renderer	1,995.00
EMS-2MB Extended memory support - adds 2 MB of RAM to a basic system. Order quantity of 1 for IP-1, 2, 3, 4 and quantity of 2 for IP-5, 6. Includes hardware and software	1,795.00
EMS-3MB Extended memory support - adds 3 MB of RAM to a basic system. Order quantity of 1 for IP-1, 2, 3, 4 and quantity of 2 for IP-5, 6. Includes hardware and software	2,795.00
Render-1 Off-line rendering CPU (80286) with keyboard, menu monitor, 32 bit frame buffer, 1.2 MB floppy disk drive, 40 MB hard drive, LAN, RAM. Converts IP-3 basic 3D to IP-5 Basic-Plus 3D	18,995.00
Render-2 Off-line rendering CPU (80386) with keyboard, menu monitor, 32 bit frame buffer, 1.2 MB floppy disk drive, 40 MB hard drive, LAN, RAM. Converts IP-4 turbo 3D to IP-6 turbo-plus 3D	25,995.00
Matrix Digital film recorder interface for Matrix PCR QCR	2,995.00
Bernoulli Bernoulli 20 MB cartridge disk drive	5,495.00
Cartridge Bernoulli 20 MB cartridge	245.00
Maxtor Maxtor 140 MB hard disk drive to replace the standard 40 MB drive.	5,495.00
RIO Resolution independent object software. Requires extended memory support option	1,250.00
RIO-Font #1 Library of 8 outline fonts licensed from Bitstream, Inc. for use with RIO	445.00
RIO-Font #2 Library of 4 outline fonts licensed from Flamingo graphics for use with RIO	295.00

MICRO-TRAK CORP.**Broadcast Audio Consoles****6510/6509 Broadcast Consoles****Features Common to Both Models**

- **Microphone:** Balanced transformer input, low impedance microphones, adjustable
- **High Level:** 10K ohm input impedance, 20dBm nominal level
- **Phono:** Stereo magnetic phono cartridge, 47K ohm impedance, 5 to 10mV nominal level. RIAA equalized
- **High Level:** 10K ohm input impedance. 0dBm nominal input level
- **External Monitor Input:** Stereo input provides feed to monitor amplifiers when switch selected at front panel

Output Level

Program: + 8dBm into 600 ohm balanced stereo

Monitor Line: 0 into 600 ohm, unbalanced

Headphone: 2W into 8 ohm, monaural

Cue: 2W into internal speaker

Muting: One form C-contact for external "On-Air" light, etc.

6510

6510DBS 10-Channel Stereo-Mono Broadcast Console Dual Bus

Inputs: Fourteen (10 mixer channels)

Standard Configuration: 1 microphone, 9 high level preamplifiers. Channel 9 and 10 have three switch selected input lines. Optional input preamplifiers may be selected to customer choice. Price may vary according to input, preamplifiers selected.

6509

6509RS (Stereo)/6509RM (Mono) 5-Channel Broadcast Consoles

Inputs: Nine (5 mixer channels)

Standard Configuration: 1 microphone, 4 high level preamplifiers. Channel 4 and 5 have three switch-selected input lines. Optional input amplifiers may be selected to customer choice. Price may vary according to input preamplifiers selected.

93020-001 Console-Stereo Broadcast 6510-DBS, 10 Ch, Dual Bus	\$3595.00
92000-001 Console-Broadcast 6509-RS 5 Ch, Single Bus Remote Stereo	1995.00
92000-003 Console-Broadcast 6509-RM 5 Ch, Single Bus Remote Mono	1795.00

PM5-MX

IIXL-5 and IIXL-10 Audio Consoles

- VCA and FET switching
- 10W per channel amp
- Can be equipped with an optional monaural mix card
- Ideal for high quality FM or AM with stereo in mind
- Cue speaker 2W pushbutton switch with LED indicator
- Headphone jack located on front

97001-001 Console-Stereo Broadcast IIXL-10 10 Ch, Slide Fade, VCA	\$4750.00
97001-002 Console-Stereo Broadcast IIXR-10 10 Ch, Rotary Fade, VCA	3995.00

PM5-SX/PM5-MX Audio Consoles

- PM5-SX stereo
- PM5-MX monaural
- 2 inputs per channel
- FET switching 1 through 4
- 13 total inputs
- Mike/line all channels
- 10W monitor amp
- Channel 5, 5 pushbutton switch selected
- Panel mounted analog VU meter
- 3" diameter cue speaker

98014-001 Console-Stereo TV/Broadcast PM5-SX 5 Ch, Panel Mount	\$2495.00
98001-001 Console-Monaural TV/Broadcast PM5-MX 5 Ch, Panel Mount	1795.00
98020-001 Console-Monaural Radio/Broadcast PM5-RS 5 Ch, Panel Mount	1795.00

Power Amplifiers/Remote Mixer*

6411 Professional Stereo Phono Preamplifier

- Low noise and distortion
- Input: magnetic cartridge, stereo 47K ohms, 5mV nominal (15pf nominal)
- Input Level for Clipping: 300mV at 1kHz, RIAA
- Frequency Response: RIAA position $\pm .5$ dB RIAA phono equalization 40Hz to 15kHz
- Flat Position: $\pm .5$ dB 20Hz to 20kHz
- Adjustable HF Position: Corner frequency 5kHz, high frequency response plus or minus 10dB at 15Hz via 20 turn pot
- Rumble Filter: Switchable 3dB/octave high pass corner frequency at 40Hz, down 12dB at 5Hz
- Gain: RIAA 44dB at 1kHz flat 50dB adjustable
- Output: 600 ohms, transformerless balanced
- Nominal Output Level: 0dBm
- Maximum Output Level: 22dBm
- Signal-to-noise: 72dB typical
- Power Supply: 110-120VAC 50/60Hz

84100-000 \$229.50

7116/7213/7216 Audio Distribution Amplifiers

- Individual output level controls
- Rackmountable
- Input and Output level: +8dBm nominal
- Frequency response: ± 1 dB40 = 18,000Hz
- Hum and Noise: 70dB below +8dBm output level
- Power input: 115VAC 60Hz

82300-0017 7116 Distribution Amplifier 1 x 6 . . \$249.50

Sport IV

Sport IV Portable Console With Telephone Dial Option

- Hybrid talkback for set-up
- Built in AC supply
- Low cost batteries
- Telephone dial option
- Three headphone outputs

The Sport IV is a sports/remote portable console. This four channel console has all the features found desirable for sports and other remote broadcasts. The Sport IV has four mixing microphone inputs, and full talkback capability using a hybrid transformer at the output. It has a fifth microphone input that feeds one side of the headphones only for an action spotter. It has three headphone jacks, for use by the announcers and action spotter. Channel four has a switch selectable auxiliary input so that pre-recorded interviews can be run from cassette tape, or carts can be aired directly from the stadium or other remote location. The electronic rotary dial option allows use of regular telephone lines and lowers the cost of long distance game coverage.

Both AC and battery power supplies are built in, and switching is automatic in case of power loss.

Program outputs are balanced, transformer isolated, 600 ohm level: +8dBm nominal, +15dBm max. The meter zero reference level is internally adjustable.

81944-002 Sport IV console \$729.50
 81933-000 Sport accessory case (18" x 12" x 5") . . \$99.95

MICRO-TRAK CORP.

Tonearms/Cart Storage/Portable Audio Console

303 and 306 Tonearms

Tracking capabilities to a tenth of a gram, resonance below 10Hz, high compliance, rugged, dependable strength offered by an impregnated wood body and super smooth performance with jewel bearings make the 303 and 306 tonearms the best buy for the broadcaster today. 30,000 broadcast and professional users demonstrate how their rugged simplicity of design can give you the best possible performance. Specify 303 12" and 306 16" Professional Tone Arms for your studio.

- 75900-000 Model 303 12" Arm \$149.50
- 75971-000 Model 306 16" Arm 199.50

303

TT-72 Lazy Susan Cartridge Tape Rack

The TT-72 is an attractive and durable tape rack at a reasonable price. Designed to complement the Series L studio furniture line, the TT-72 provides a small, but substantial rotary tape rack for use at the console. Only 10 1/2" square and 22" high, the TT-72 packs in 72 of the most used spots for easy access by your DJs.

- 79001-000 TT-72 Cart Rack. \$89.50

L-90 Wall or Console Cartridge Tape Rack

The most useful member of the Series L Cartridge Rack group is the L-90. The L-90 can be used as a wall mounted unit, stacked from floor to ceiling, mounted on the inside and outside of a closet door, or as a stand-alone unit at the console. Also with addition of simple 2 x 4 supports the L-90 can be mounted over the top of your turntables.

- 79015-000 L-90 wall mount. \$89.50

The Ditty Desk

The Ditty Desk is for low cost audio production or remote broadcast use. It's designed to do powerful production or be on location at the latest happening in your station's area. The Ditty Desk can be equipped either the mono or stereo 6509 Console. The Ditty Desk comes equipped with high quality Micro-Trak consoles, tone arms, and Technics' SP-25 turntables. The formica covered housing is built to last and be beautiful for many years. Folding legs make it easy to carry and provide a sturdy basis for operations. Size: 32" H x 57" W x 24" D. Weight: 115 lbs. with all standard equipment.

- 83000-003 Audio Control Desk
w/6509-RS Console \$3795.00

NEW

PROFESSIONAL BULK DEGAUSSER FOR HIGH ENERGY TAPES

AUDIO • VIDEO • DIGITAL

The new Microtran Model HD-30 erases up to 1200 oersted video tapes with its powerful 3300 gauss field strength yet draws *only* 15 amps @ 115V 50/60 Hz.

Erases audio, video (including metal), computer data tape and magnetic film on reels, cartridges and cassettes (ideal for U-Matic). Also for demagnetizing tools and components.

SPECIFICATIONS

- Media:** Reels up to 17" diameter x 2" wide, cassettes and cartridges through D-1 size.
- Spindle:** 5/16" N.A.B. 3" hub adapter Model HD-11-AD available.
- Erasure:** To 60-90 dB below recorded level. Erases new high energy video tapes up to 1200 oersted.
- Field strength:** 3300 gauss.
- Power requirements:** 115V. 50/60 Hz 15 amps. 1600 watts. (Model HD-30-230 available on special order for 230V.)
- Duty cycle:** 10 minutes On, 10-20 minutes Off. Thermal overload cutoff with auto reset.
- Size:** 12" x 14" x 4 1/8" high.
- Weight:** 28 lbs. (Shipping weight 31 lbs.)
- Construction:** Steel case with phenolic face for heavy-duty professional use.
- Price:** Model HD-30 (115V degausser) \$595.00
Model HD-11-AD (N.A.B. hub adapter) \$12.50
Model HD-50 (foot switch) \$49.50
Model HD-30-230 (230V degausser) \$635.00

OPTIONAL FOOT SWITCH

Permits hands-free operation with faster and better control of demagnetizing. Momentary switch prevents burn outs. Plug-in connection — no wiring required. UL approved. 8' 3 - conductor cord. 20 Amp. switch. Low smooth styling with skid-proof base. Black wrinkle finish over aluminum casting.

MODEL HD-50
Size: 5 1/2" x 3 1/4" x 1 1/4" H.
Weight: 2 lbs.

MICROWAVE RADIO

Antenna

Omnipole™ Central Receive Antenna System

- 360° coverage, 50 mile range
- Allows rapid ENG sequencing — no manual steering
- 2.5dB noise figure, 22dBi gain LNA provides low noise reception and extended range
- Low wind load — lightweight, streamlined design
- Simplified installation — no moving parts
- Reliable, unmanned operation — remote control not required
- Lowest cost ENG antenna
- Weather resistant, lightning proof construction
- Low cost RF cable
- Beam tilt feature, optional
- Channel filter, optional
- 16dBi directional Omnipole antenna, optional
- 1.5dB noise figure LNA, optional

The Omnipole Central Receive Antenna System is a low cost alternative to the more expensive manually steerable, quad horn, or auto-tracking antenna systems in the 2GHz and 2.5GHz broadcast auxiliary service bands. It provides unmanned, 360° omnidirectional coverage at ranges up to and exceeding 50 miles. The Omnipole antenna system is ideally suited for small-market or ENG news bureau operations. It is also recommended for use as a back-up ENG antenna.

The Omnipole has a nominal 13dBi gain in a 360° azimuth pattern. Its vertical beam width is 6.5° with null fill and 0° beam tilt. Beam tilt is available on request. A band filter and 2.5dB noise figure, 22dB gain LNA are standard equipment with the Omnipole. A channel filter and high performance LNA's are optionally available. LNA DC power is via the RF cable using a DC block. Power supply included.

The lightweight, streamlined design of the Omnipole antenna features simplified installation, unmanned operation, and very low windloading. Choose from tower top or side mount models.

Specifications

Frequency Ranges	1.990 to 2.110GHz, 2.450 to 2.5GHz or 2.350 to 2.7GHz
Gain	
Standard	13dBi ± 1.5dB
Optional	16dBi (directional)
3dB Elevation Beamwidth	6.5°
Beam Tilt	0° (up to -3° is available upon request)
Polarization	
Standard	vertical
Optional	horizontal
VSWR	1.4:1 maximum
Length	4-1/2 ft. (139cm)
Diameter	3.5" (8.9cm) diameter radome
Weight	10 lbs. (4.5kg)
Mount	tower top or side mount (standard brackets supplied)
Junction Box	LNA and RF Filter enclosed in weatherproof box
LNA	
Noise Figure	2.5dB (1.5dB optional)
Gain	22dB (35dB optional)
DC Power	LNA powered through RF Cable 115/230VAC LNA Power Supply included
RF Filter	
Standard	Bandpass Filter
Optional	Channel Filter

ROOFTOP MOUNTED OMNIPOLE™

HORIZONTAL PLANE RADIATION PATTERNS

DIRECTIONAL OMNIPOLE™ (OPTIONAL)

360° COVERAGE (OMNIDIRECTIONAL ± 1.5 dB MAXIMUM)

MICROWAVE RADIO

Antenna

"Prostar" 2A20 Transmit Antenna

- Broadband (2/2.5GHz and 6.5/7GHz) offset-fed, low sidelobe rugged antennas in either single or dual band configurations
- Low RF input—high RF output mast-mounted power amplifiers designed to meet current FCC regulations
- Self-contained broadband (2/2.5GHz) low noise amplifiers (LNA) integrated within the ProStar's feed
- Mast-mounted 7 or 13GHz block downconverters for microwave repeater applications
- Telescoping masts and motorized pan/tilt pedestals
- Self coil assemblies available for ProStar transmit/receive systems
- Low cost frequency agile transmitters and receivers for single or dual band operation
- Designed for all ENG operations

Microwave Radio Corporation offers a fully integrated complement of equipment for mast-mounted transmit/receive systems.

The basic van transmit system consists of a ProStar offset-fed antenna, mast-mounted power amplifier and self-contained portable transmitter. This concept allows the transmitter to be removed easily for independent tripod-mounted transmit applications. Operation is available in either the 2GHz, 2.5GHz, or 6.5/7GHz frequency bands.

The ProStar PA200 or PA250 mast-mounted power amplifiers feature high (12W) and low (3W) RF power outputs and provide a status of proper RF power output from within the vehicle. For 7GHz operation, the ProStar PA700 is available for mast-mounted transmit applications requiring greater antenna RF input than would normally be supplied by the remotely located 7T2 portable transmitter. A combination rack-mounted power supply/portable transmitter support shelf comes standard with each power amplifier.

An optical low noise broadband (2/2.5GHz) amplifier (LNA) which is installed in the ProStar's feed allows for transmit or receive operation through the same antenna. A mast-mounted 7GHz and/or 13GHz block downconverter in conjunction with the MRC receiver provides additional frequency flexibility when designing van repeater systems at a very reasonable cost.

Miniscan 2' x 4' Parabolic Reflector

Miniscan™ 2GHz and 7GHz Central Receive Antenna

- 2-2.5GHz broadband operation (2 and 7GHz dual band optional)
- Gain with 4' parabolic: 26dBi at 2GHz and 36dBi at 7GHz with 2' x 4' truncated: 24dBi at 2GHz and 34dBi at 7GHz
- Beamwidth: 4': 2GHz—7.7°; 7GHz—2.3° Beamwidth 2' x 4': 2GHz—7.7 x 15.4°; 7GHz—2.3 x 4.6°
- AZ—360° continuous rotation
- EL—4' and 2' x 4' + 20° to -25°
- Remotely selectable polarization, horizontal, vertical, left or right circular
- Withstands winds up to 125 mph, operational to 60 mph
- Weight: 155 lbs.
- Temperature: operating -30°C to +70°C
- Nonoperating -50°C to +85°C
- Power consumption: without heater 300W; with heater 1000W, with heated radome 2kW
- Dual band operation includes 7GHz in the same 22.5GHz feed, optional
- A 7GHz block converter which converts the 6.4 to 7.1GHz frequency band to 2-2.5GHz can be included, optional. (This permits 7GHz signals to be sent down the tower via 2GHz coaxial cable rather than 7GHz waveguide.)
- Dual rotary joints for transmit and receive operation, optional
- Heated and unheated radomes, optional
- Monopulse autotracking (single axis—azimuth only), optional
- NAVTRACK™—dual axis autotrack system (AZ/EL), described in AIRBORNE SYSTEMS

The Miniscan is a full featured antenna system which may be equipped with a 4' parabolic or a 2' x 4' truncated reflector. The feed and control system is identical to the Superscan. Wiring consists of a single control cable (Belden 9776 or equivalent) and an RF cable from the pedestal to the slave controller and the receiver respectively.

Primary power of 115VAC or 230VAC must be supplied to the pedestal. The standard Miniscan covers the frequency range of 2-2.5GHz. Optionally, 7GHz can be included in the same feed. Other frequency bands can be supplied.

Miniscan Receive System, Includes Slave Controller MRC-200

- 844146-1** Without LNA

MICROWAVE RADIO

Airborne Systems/Van Antenna Systems

Airborne System

• NAVTRACK™, optional • Channel filter switching unit, optional • Loran-C sub-system, optional • High rejection/low loss channel filter, optional • Portable Skypod III™ gyro/antenna control system mounted in transit case, optional

Microwave Radio Corporation offers a complete system for airborne microwave operation in the 2-2.7GHz frequency band. The system includes the Skypod III helicopter mounted antenna system, receivers, transmitters and ground based tracking antenna systems. Any of the ground based systems may be interfaced with the Navtrack control system for completely automatic operation.

The Skypod III consists of three antennas, a downlook, an omni and a steerable 16dBi directional, all housed in a low profile aerodynamic pod. Any of the antennas can be selected via a control panel for receive or transmit operation. The directional antenna may be steered toward a ground based receive site manually. Once oriented, the antenna then receives direction from a gyro compass system which will maintain the bearing of the antenna.

Optionally, the airborne system can be interfaced with a Loran-C or Omega navigation system. This option will provide automatic acquisition and will also compensate for aircraft drift.

A second option, the Navtrack system transmits navigational coordinates from the airborne Loran-C or Omega system to the ground receive site. This enables the ground based receive site to automatically track the helicopter.

Specifications

Antenna/Antenna Controllers

Superscan 2GHz and 7GHz Central Receive Antenna

- 2-2.5GHz broadband operation (2 and 7GHz dual band optional)
- Gain: 2GHz—29dBi; 7GHz—39dBi
- Beamwidth—2GHz—6.3°; 7GHz—1.7°
- 360° continuous rotation
- -20° to +25° elevation control
- Remote selectable polarization, horizontal, vertical, left or right circular
- Withstands winds up to 125 mph, operational to 60 mph
- Heated pedestal for cold weather operation
- Weight: 400 lbs.
- Temperatures: Operating -30°C to +70°C
Non-operating: -50°C to +85°C
- Power consumption: without heater 500W; with heater 1450W; with heated radome 3kW
- LNA bypass feature standard
- Autotrack steer rate: 10°/sec
- 4°/sec slow to 10° fast (adjustable) from master
- Tracking accuracy: ± 1.5° max.
- Dual band operation includes 7GHz in the same 2-2.5GHz feed, optional
- Optionally, a 7GHz block converter which converts the 6.4-7.1GHz frequency bank to 2-2.7GHz can be included. This permits 7GHz signals to be sent down the tower via 2GHz coaxial cable rather than 7GHz waveguide
- Dual rotary joints to transmit and receive operation or simultaneous operation in 2 and 7GHz band, optional
- Heated and unheated radomes or silo radome, optional
- Monopulse autotracking (single axis—azimuth only), optional
- Navtrack™—dual axis autotrack system (AZ/EL), optional

The Superscan antenna is designed for applications requiring maximum antenna gain. Heavy-duty construction and extensive surge protection make the Superscan extremely reliable. Full feature remote control is provided with the controllers. Tower wiring consists of a single control cable (Belden 9776 or equivalent) and an RF cable which connects the Superscan to the slave controller and the receiver respectively.

Primary power 115VAC or 230VAC must be supplied to the pedestal. The standard Superscan covers the frequency range of 2-2.5GHz. Other frequency bands can be supplied.

Superscan Receiver System, Includes MRC-200 Slave Controller

- 844145-1 Without LNA
- 844145-2 With 24dB Gain Bypassable LNA
- 844145-3 With 35dB Gain Bypassable LNA

- 844145-5 With 35dB Gain Bypassable LNA and 7GHz Block Downconverter
- 844145-6 With 24dB Gain Bypassable LNA (2GHz) and 30dB Gain Bypassable LNA (7GHz) with Dual Rotary Joint
- 844145-7 With 35dB Gain Bypassable LNA (2GHz) and 30dB Gain Bypassable LNA (7GHz) with Dual Rotary Joint
- 843400-8 Control Cable

MRC-300 Master Controller, MRC-200 Slave Controller

The microprocessor based Superscan, Miniscan II and Microscan Tracking Antenna Control system is comprised of an on-site Slave Controller unit and an optional Master Controller Unit for remote control capability via dedicated 3002 type telco line (2-wire or 4-wire) or optionally by means of external dial-up modems. The dial-up system is designed to work with any Hayes compatible modems at 1200 bps.

The Slave Controller provides all of the control and status reporting functions for antenna systems operation including automatic or manual tracking mode selection, antenna heading (azimuth and elevation), polarization, band selection, LNA bypass function and RF channel and offset. In addition, the Master Controller provides the capability to control up to 8 (optional) different ENG receive sites. The Master may be programmed for 8 memory preset positions per site in advance scheduling autotrack switching and steering. Also, 15 digital and 3 analog site management functions are available for user defined control and monitoring functions.

The Master will also provide complete control of the MRC Receiver including: channel, offset, band, audio subcarrier frequency, squelch functions and IF bandwidth select. Signal strength and squelch status are displayed on the Master.

2MR™ Multiband Portable Receiver

- Remote control capability
- Built-in AC and DC power supply. Power input 110VAC (50-60Hz) or 220VAC (50-60Hz) or 11-32VDC, all included
- Twist lock adaptor (option) for quick disconnect disc rod antennas
- Size: 5" H x 6.5" W x 12" D
- Weight: 14.5 lbs.
- Dual synthesized audio demodulators, independently programmable standard subcarrier frequencies
- Low noise preamplifier standard
- Dual conversion frequency synthesized
- Superior adjacent channel rejection. Receives a weak desired signal in the presence of a strong adjacent channel signal
- Frequency coverage—2MR: 2-2.7GHz or 1.7-2GHz
2 + 7MR: 6.4-7.1GHz and 2-2.7GHz
Multiband MR: 12.7-13.25GHz and 6.4-7.1GHz and 2-2.7GHz

• Tracking RF filter

The 2MR is a dual conversion receiver which provides superior performance in crowded RF environments. Careful design and component selection enables the MR receiver to properly receive a weak desired signal in the presence of a strong undesired adjacent channel signals. Key design features include a tracking RF filter, high level mixers and an advanced frequency synthesizer. The MR multiband model provides coverage of other frequency bands in addition to the 2-2.7GHz band by means of block converters which are built into the receiver. Block converters are available for the 7GHz band and the 13GHz band. Either or both may be built into the MR multiband receiver.

The MR receiver is housed in a weather-resistant enclosure machined from an aluminum block. Covers and controls are gasketed to prevent water leakage.

- 841286-1** 2MR Receiver (2-2.7GHz)
842650-1 2 + 7MR Receiver (2-2.7GHz and 6.4-7.1GHz)
900001-1 MR Multiband (2-2.7GHz and 6.4-7.1GHz and 12.7-13.25GHz)

Specify two audio subcarrier frequencies.

Accessory

- 842221-1** Transit Case

MRC 2, 7 and 13GHz Central Receiver

- Dual conversion, frequency synthesized
- Superior adjacent channel rejection
- Tracking control capability

MRC

- Frequency coverage—2-2.7GHz or, with optional block converters, 6.4-7.1GHz and 12.7-13.25GHz
Optionally: 1.7-1.85GHz
- Designed for high RFI environment
- IF bandwidth selectable from front panel
- Selectable audio subcarrier frequencies optional
- 115/230VAC (50-60Hz)

The MRC is a dual conversion receiver which provides superior performance in crowded RF environments. Careful design and component selection enables the MR receiver to properly receive a weak desired signal in the presence of strong undesired adjacent channel signals. Key design features include a tracking RF filter, high level mixers and an advanced frequency synthesizer. The MRC provides coverage of other frequency bands in addition to the 2-2.7GHz band by means of optional block converters. The block converters may be mounted in one rack unit, 19" high enclosure or in a weather-resistant enclosure which may be mounted near the receiving antenna. The block converters translate the 7 or 13GHz frequency bands to the 2-2.7GHz band. This enables the use of coaxial cable rather than waveguide to interconnect 7 or 13GHz antennas to the rackmounted receiver.

The MRC is equipped with three IF filters—10MHz, 15MHz and 20MHz bandwidths. The desired filter may be selected by means of a front panel switch or via remote control. All functions of the MRC may be remote controlled, these include channel, offset, frequency band, IF filter bandwidth and squelch enable, disable. The MRC may also be equipped with an optional switchable dual audio demodulator which permits independent control of the subcarrier frequencies either by front panel control or by remote control.

Remote control may be accomplished with the controller system or by the interbuilding controller which permits remote control of the MRC via cable interconnect of up to 1000'.

A microprocessor based receiver interface unit permits long distance remote control of the receiver functions over standard dial-up telephone lines.

- 842200-1** MRC Receiver (Specify 2 audio subcarrier frequencies)
842200-2 MRC Receiver with Switchable Audio Demodulators

MICROWAVE RADIO

Microwave Transmitters

Super 2MX

2MX

Super 2MX™ 2GHz Self-Contained Transmitter

- Video plus two audio subcarriers
- Frequency coverage 1.99-2.11GHz
- 21 RF channels, frequency synthesized
- Built-in AC and DC power supply Power input: 110AC (50-60Hz) or 220VAC (50-60Hz) or 11-32VDC. All included
- Dual audio program channels with independently selectable mic (-50dBm) or Line (0dBm) inputs. Mic input protected with an automatic peak activated gain control
- Video low pass filter standard, protects the audio channels from extraneous noise applied to the video input
- High/low power output, 12W/3W typical
- Remote control capability
- Standby mode permits instant RF transmission on frequency
- Twist loc adaptor (option) for quick disconnect disc rod antennas
- Size: 5.25" H x 8" W x 7.5" D
- Weight: 13 lbs.

The Super 2MX is a rugged, field proven, self-contained transmitter with hundreds in use worldwide. It is housed in a weather-resistant enclosure machined from a solid block of aluminum. Covers and controls are gasketed to prevent water leakage. The circuitry features hermetically sealed critical circuits, digital frequency synthesis and a stripline output amplifier which is protected against output load changes and temperature extremes. A universal power supply permits operation from a wide variety of power sources.

Super 2MX Self-Contained Transmitter
841732-1 Super 2MX Transit Case

2MX/2.5MX™**2GHz or 2.5GHz Remote Controlled Transmitter**

- Video plus two audio subcarriers
- Frequency Coverages — 2MX: 1.99-2.11GHz or 1.7-1.9GHz
 2.5MX: 2.3-2.7GHz

- Weather sealed RF head intended for outdoor installation
- Remote control unit permits full control capability
- Dual audio program channels with front panel selectable mic (-50dBm) or Line (0dBm) inputs. Microphone input protected with an automatic peak activated gain control
- Built-in DC power supply 11.5-32VDC. External AC supply optional
- High/low RF output power 12W/3W typical
- 21 RF channels frequency synthesized (2MX)
- 10 RF channels frequency synthesized (2.5MX)

The 2MX/2.5MX is intended for use in applications requiring a transmitter which can be permanently mounted outdoors and remotely controlled. Hundreds are in use on vans, where the RF head is mounted near the antenna on a mast or in airborne applications. The RF head may also be tripod mounted. The RF head is machined from a solid block of aluminum, sealed with gasketed covers and uses weather-proof connectors for inputs and outputs.

The same control unit is used for both the 2MX and the 2.5MX. It permits front panel control of RF channels, mic or line audio inputs and high/low RF output power. Indicators are provided for primary power and RF output power.

The RF head may be mounted on a heat dissipating surface or it must be used with the optional heat sink assembly. With the RF head mounted to the heat sink assembly, it may be used with a variety of antennas.

The 2MX, 21-channel transmitter and the 2.5MX 10-channel transmitter both include RF head, controller and 10' interconnect.

Accessories

- 841021-1** Power Supply 115VAC/28VDC Rackmount
- 840421-1** Heatsink for RF Head
- 842403-1** Transit Case for 2MX and 2.5MX
- 841021-2** Controller Rackmount Shelf
- 809979-20** 20' Interconnect

MICROWAVE RADIO

Microwave Transmitter

Prostar 2T2 Transmitter

- Low cost
- Self-contained, lightweight transmitter
- Full broadcast quality for domestic and international applications
- 21-channel synthesizer—rapid and precise channel selection
- Standby mode for instant RF transmission on frequency
- Internal power supply 12VDC, 115/230VAC operation
- Two audio program channels
- Standby
- Independently selectable microphone or line audio input—either channel
- Auto peak limiting on microphone input
- Rugged, weather-resistant construction
- Lightweight antenna, optional
- Quick-disconnect tripod antenna, optional
- Battery pack/charger, optional
- Transit case, optional

The low-cost 2T2 affordable portable ENG transmitter is a self-contained, frequency agile radio transmitter that offers a combination of performance, reliability, and functional features unmatched in the industry. This high-performance transmitter handles a color television channel and two audio program channels while producing a 2W output in the 2GHz frequency band. It was developed for broadcast and cable ENG portable applications that require high mobility and quick response. As a self-contained low cost system, it is feasible to install this unit on a semi-permanent or seasonal basis for re-occurring local events such as ball games and meetings.

Utilizing sophisticated, field-proven RF circuitry, the 2T2 features a 21-channel synthesizer for multi-channel flexibility. Frequency congestion, especially when other stations are in the scene of a widely-covered news event, is avoided by this high-stability synthesizer. A unique channel selection scheme provides rapid and precise channel selection capability. No elaborate tuning or adjustment procedures are needed. In the event of adjacent channel interference, the 2T2 can be quickly switched up or down one-half channel.

2T2 electronics are enclosed in a rugged, weather-resistant case designed to function reliably under the most adverse field conditions. All connectors, switches and indicators are weather-resistant and designed to withstand rugged use.

A unique advantage of the 2T2's transmitter is its ability to operate from AC or DC power sources without the need for modification or external inverters. The built-in AC/DC power supply allows operation from a 12VAC source or 115/230VAC sources.

Specifications**Frequency Range**

- Standard:** 1.99 to 2.110GHz
Optional: 2.3 to 2.7GHz

Channel Plan

- Standard:** 21 channel (7 basic channel with offset)
Optional: 10 channels with offset

MICROWAVE RADIO*Microwave Transmitter/
Receiver Systems***40MX 40GHz Transmitter****40MR 40GHz Receiver**

- Frequency coverage: 38.6-40GHz, 28 channels
- Rugged, weather-resistant construction
- Lightweight miniature transmitter
- Power requirements—Transmitter: 11.5-14VDC
Receiver: 115VAC or 230VAC or 11-32VDC

The 40MX Transmitter and 40MR Receiver are capable of transmitting high quality video plus two audio channels reliably over short distances. Equipped with the horn antennas which are supplied with the system (one 15dBi, one 25dBi) a range of one mile can be achieved. A 1' parabolic antenna is optionally available for the receiver (39dBi) which will extend the range.

The 40MX Transmitter can be equipped with the optional "walk-around" antenna. This permits the transmitter to be used with an ENG camera for wireless operation at ranges up to 100 yds. with the 25dBi receive antenna.

842500-1 40TX/RX System 1 Includes:

- 842440-1** 40MX Transmitter
 - 841975-1** 40MX Receiver
 - 842536-120** TX DC Harness Assembly
 - 841915-1** 115VAC RX Power Cord
 - 842538-1** 40GHz TX Horn Antenna (15dBi)
 - 842535-1** 40GHz RX Horn Antenna (25dBi)
 - 842515-1** 40GHz System Transit Case
- System components may be ordered separately.

842500-2 40MX TX/RX System 2

Includes all components of System 1 except:

- 843800-1** Add 12" Parabolic Antenna
 - 842506-1** Change Transit Case to 842506-1
- Specify two audio subcarrier frequencies.

Accessory

- 843202-1** Walk-Around Antenna

13FA 13GHz, 10-Channel Transmitter and Receiver

- Self-contained multi-channel transmitter/receiver
- Transmits video plus one audio
- Built-in AC and DC power supplies 12VDC or 115/230VAC
- Weather-resistant construction
- Dual audio, optional

The 13FA is a 10-channel, 13GHz portable system covering any 220MHz band in the frequency range of 12.95-13.25GHz. This modular radio is housed in a weatherproof aluminum housing.

- 808100-1** 13FA Transmitter

- 808090-1** 13FA Receiver

Specify one audio channel and up to 10 RF channels.

• Miller 80 fluid head 150 • Maxi tripod with spreader 290 • Set of 3 rubber feet 235 • Dual telescopic handles 274
System 80 (80 lb. capacity) \$5,645.00

Also Available:

- System 10W Cat. 333** Includes Junior fluid head 101, Senior tripod 330, spreader, feet and handle (10 lb. capacity) \$ 690.00
- System 15 Cat. 335** Includes Senior F fluid head 102, Professional Series Tripod 320, feet, handles (20 lb. capacity) 1,495.00
- System 20 Cat. 338** Includes Miller 20 fluid head 104, compact tripod with spreader 301, rubber feet 235, two handles 271 (20 lb. capacity) 1,680.00
- System 25 Cat. 341** Includes Light Professional fluid head 106, Professional Series Tripod 321, spreader feet and handles (30 lb. capacity) . . 2,030.00
- System 30 Cat. 344** Includes Miller 30 fluid head 114, compact tripod with spreader 302, rubber feet 235, two handles 271 (30 lb. capacity) 2,805.00
- System 35 Cat. 347** Includes VG50 fluid head 118, ENG Tripod 310, spreader, feet, telescopic handles (50 lb. capacity) 2,580.00
- System 40 Cat. 350** Includes Miller 50 fluid head 119, midi tripod with spreader 285, rubber feet 235, two telescopic handles 272 (50 lb. capacity) 3,265.00

20

30

50

80

Miller 20 Fluid Head Cat. 104

• Capacity 20 lbs. • Features integrated counterbalance system • Sliding camera platform and integrated claw ball level **\$900.00**

Miller 30 Fluid Head Cat. 114

• Capacity 30 lbs. • Features integrated variable counterbalance system • Multi-step drag control and integrated claw ball level **\$2,025.00**

Miller 50 Fluid Head Cat. 119

• Capacity 50 lbs. • Features integrated variable counterbalance system • Multi-step drag control • Sliding camera platform and integrated claw ball level. **\$2,295.00**

Miller 80 Fluid Head Cat. 150

• Capacity 80 lbs. • Features integrated variable counterbalance system • Multi-step drag control • Sliding camera platform and integrated claw ball level. **\$4,650.00**

All Heads Supplied with One Handle

Also Available:

- Miller Junior Fluid Head Cat. 101** Capacity 10 lbs. Features independent, variable pan and tilt drag adjustment. Supplied with flat base (claw ball level available). **\$325.00**
- Senior F Fluid Head Cat. 102** Capacity 20 lbs. Features independent, variable pan and tilt drag adjustment and independent tilt lock. Supplied with flat base (claw ball level available) **\$710.00**
- Light Professional Fluid Head Cat. 106** Capacity 30 lbs. Features independent, variable pan and tilt drag adjustment and independent tilt lock. Supplied with flat base (claw ball level available) **\$1,095.00**
- VG50 Fluid Head Cat. 112** Capacity 50 lbs. Features independent, variable pan and tilt drag adjustment and independent tilt lock. Supplied with flat base (claw ball level available) **\$1,210.00**

MITEQ

Redundancy Switches/Video Exciters

1:1 Redundant Switchover Units

- Fully redundant power supplies
- Remote control/status
- Front panel monitoring of power supplies
- Local/auto/remote operation
- Uplink/downlink frequency bands
- Offline monitoring

The 1:1 Redundant Switchover unit is used with two converters, one on-line (Converter A) and the second in a standby mode (Converter B). A fault condition in the on-line Converter A, or an operator generated command, will switch the standby Converter B into the transmission path and remove Converter A from operation.

Therefore, the 1:1 Redundant Switchover unit ensures continuous operation allowing a fault to be repaired and/or routine maintenance of a converter without disruption of signal transmission.

Modes of Operation

Local Mode—Local selection of operational converter is made by push buttons on the front panel. Automatic control is disabled in this mode.

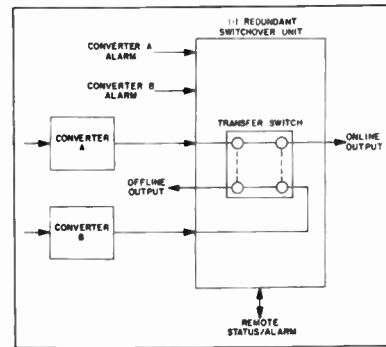

Auto Mode—In the Auto mode the switchover unit is activated by an on-line converter alarm. Front panel controls are disabled in this mode.

Remote Mode—In the Remote mode converter operation is selected by specified contact closure commands. Front panel controls and Auto switchover are disabled in this mode.

Remote/Auto Mode—In the Remote/Auto mode (a special case of Remote mode) the Auto switchover is enabled. Front panel controls and remote commands are disabled. However, the Auto mode may be disabled from the remote location, returning operation to Remote mode.

RIU-70

	Frequency	Insertion Loss dB (Max.)	Loss Flatness/ 40MHz dB (Max.)	Return Loss dB (Min.)	Isolation dB (Min.)
RIU-70	70 ± 20MHz	0.20	0.2pp	23	75
RIU-140	140 ± 40MHz	0.20	0.2pp	23	75
TIU-5964	5.925-6.425GHz	0.35	0.2pp	18	55
TIU-7984	7.9-8.4GHz	0.40	0.2pp	17	55
TIU-140145	14.0-14.5GHz	0.45	0.2pp	15	45

*For unit containing two transfer switches, for both uplink and downlink frequency bands, the model number is specified as follows: e.g. for 70 ± 20MHz and 14.0-14.5GHz bands—model number TIU-140145/RIU-70

Video Exciters

- For C-Band and Ku-Band Applications
- Data quality upconverter
- Gated AFC option
- 70MHz IF input accessible for dual purpose data/video applications
- RF power output options to +20dBm
- Up to three synthesized audio subcarriers
- Switchable IF filter/equalizer option
- Superb RF, video and audio performance
- Fully modular for ease of maintenance
- Excellent modulator linearity
- Baseband DC-coupled circuitry
- Compatible with NTSC, PAL, SECAM, and most scrambler and telex standards
- Front panel switch selection: 525/625 lines and THRU
- Extensive monitoring and alarms
- Internal/external frame synchronization capability option

If you contemplate using your video exciter also for present or future data transmissions, then Miteq's video exciter is the answer for your dual requirements.

The frequency stability and spectral purity of the local oscillators and frequency synthesizers used in conventional video exciters do not meet the requirements for data transmission. Miteq has solved the problem by designing the frequency sources in the upconverter with data quality phase noise performance.

MODULATION SCIENCES, INC.

Broadcast Audio Processing

MYB-2 StereoMaxx Spatial Image Enlarger

MYB-2 StereoMaxx operates in the spatial domain, enhancing and enlarging the stereo image. The effect is compelling and dramatic without becoming overwhelming. StereoMaxx gives the station a "Big Sound" stereo image that adds new audio excitement to hi-fi stereos, auto radios and even portable "boom-boxes". The StereoMaxx spatial image enlarger is totally mono compatible and avoids the undesirable side-effects of other image enhancement techniques.

MYB-2 \$3195.00

MYB-2 StereoMaxx

CP-803 Composite Audio Processor

- Reduces amount of audio processing required
- No variable gain element, gives you more loudness without audible distortion
- Upgrade the quality of your signal, a brighter, more "open" sound

CP-803 Composite baseband processor for FM stereo. Automatically reduces filter overshoot present in every stereo generator or composite STL. Allows transmitter to be modulated with lower peak to average ratio. Restores "lost" modulation capability and loudness. Specify 120 or 240VAC. Includes rackmount.

CP-803 \$1095.00
Optional rackmount \$35.00

CP-803

Receiver

CLD-2500 System

CLD-2500 Composite Line Driver/Receiver System

The Wired STL™ system sends stereo composite baseband over long lengths of inexpensive transmission line. Made up of a driver and a receiver, the Wired STL can easily operate with 2500' of cable. Lengths as great as 10,000' are possible on special order. One driver can feed two separate runs of different lengths, each with its own receiver. The driver can also stand alone as a composite distribution amplifier to drive up to four separate coaxial lines.

Technically the CLD-2500 system consists of a high current, balanced, impedance matched driver that couples to twinax line. At the receiver end, the cable is terminated and an active circuit translates the balanced twinax circuit to a coax drive suitable for the short run to the exciter.

CLD-2500 \$1550.00

SCA-186

SCA-186 Sidekick SCA Generator/Audio Processor

- Excellent RF shielding
- Built-in transmitter tuning aid
- Stable over a wide temperature range
- Compatible with compander, data or telemetry systems
- Integral audio processing can be optimized for music and speech
- Peak holding deviation meter can eliminate need for a modulation monitor
- Quartz crystal controlled synthesizer can be programmed to any SCA frequency

SCA-186 also includes crystal-locked frequency synthesizer, built-in audio processor, and front panel deviation, gain reduction metering and a device to help minimize crosstalk-causing incidental AM modulation. Specify SCA operating frequency: 92 or 67kHz

SCA-186 \$2875.00

DSCA-189 "Data Sidekick"

- 4800bps data rate with measured bit error rate of < 1 in 1E7
- Operates synchronous or asynchronous
- RS-232/RS-422 standard input
- Automatic check of data before transmission (specify SCA frequency)

DSCA-189 \$4200.00

MOSELEY ASSOCIATES, INC.

Microprocessor Remote Control

MRC-1600 Microprocessor Remote Control System

The MRC-1600 offers flexibility and reliability in an economical package. The MRC-1600 provides 16 status channels, 16 telemetry channels, and 16 raise/lower relay-isolated command channels. Setup data is stored for up to ten years in Moseley Memory, at the Control Terminal, to ensure swift setup after a temporary power down. Plug-in modules allow the MRC-1600 to be used with almost any interconnection network, including 2 or 4 wire telephone line, subaudible, FM subcarrier or a combination of these.

Status inputs may be set to alarm on rising, falling, or rising and falling waveforms, or muted completely. Each telemetry channel can be calibrated in one of four modes: power, indirect power, linear, or millivolt. Upper and lower telemetry limits may be set or disabled independently. In operation, telemetry data is checked against these alarms. Data needed to bring telemetry back within limits is automatically displayed when an operator acknowledges an alarm.

The MRC-1600 has full control fail-safe features and maintains special channels to monitor data-link conditions and A/D ratios. A maintenance override mode continues to update status and telemetry data while locking out command signals from the Control Terminal. CRT and Logger options are available. The CRT gives the operator full control of the transmitter from the keyboard at the Control Terminal, and all necessary data in an easy to read, plain-English format. The Logger may be added to the CRT to provide a printed log of station operation.

Specifications**Type of System:**

- Microprocessor-based control terminal and remote terminal

Types of Memory Used:

- Programmable read-only memory for system firmware
- Random Access Memory for user-programmed functions

Moseley Memory:

- Retains data for ten years minimum, on electrically-alterable read-only memory (EAROM)
- Holds calibration factors, status and command assignments
- With CRT, or CRT and Logger options, stores CRT text and logger setups

System Configuration:

- One control terminal, one remote terminal per system

Command Lines:

- Two (one raise, one lower) per channel, momentary, total of 16 "raise", 16 "lower"
- Command response time: 400ms to implementation, nominal
- Form C relay (SPDT) output standard, up to 2A, 30VDC or 120VAC (non-inductive) per relay

Telemetry Channels:

- 16 channels, unbalanced input
- One-person digital calibration, via remote terminal keyboard
- Fully tolerance alarmed, one high and one low limit
- Linear, power-to-linear conversion, indirect power, millivolt calibration
- Full four-digit LED display with decimal point and polarity sign
- Resolution: one part in 4096
- Overall measurement accuracy: > 0.5%
- Response time: 500ms, nominal, with audible data
- Full-scale input level: 0.25V minimum, 1V minimum recommended, 4.5VDC maximum

Status Channels:

- 16 channels, each displayed by individual LED's on control terminal and remote terminal front panels
- User programmable N.O./N.C., momentary or latching, alarm on rising and/or falling waveform
- Status response time: 400ms, nominal, with audible data
- TTL-compatible input standard (+ 5VDC switched by external contacts)

Aural Alarms:

- Control and remote terminals, defeatable and remoteable

Fail-Safe:

- Control: complies with current FCC requirements for AM and FM radio station operation

MRC-1600

Maintenance Override:

- Remote terminal front-panel button
- Provides remote terminal "go home" relay closure, control terminal and remote terminal LED indication

Number of Data Interconnection Links:

- One

Data Transmissions:

- 8-bit ASCII plus parity
- 300 baud each direction standard
- 9.4 baud telemetry with subaudible telemetry option
- 2-way, simultaneous via FSK

Wire Interconnection:

- 2-wire or 4-wire, 600 ohm, balanced
- Series 3002 unconditioned data channel per Bell System Technical Reference Publication 41004 (FCC tariff No. 260) for 300 baud (standard)
- 2-way simultaneous
- Nominal send level: 0dBm; minimum receive level: -30dBm

Radio Interconnection:

- Single or duplex, internal subcarrier systems
- Available on standard frequencies between 26 and 185kHz
- Nominal send level: 1.5V p-p at 2.2K ohms
- Nominal receive level: 0.25V p-p at 2.2K ohms
- Specify frequency and exact radio link when ordering

Remote Terminal Connectors:

- Terminal strip connector for status, telemetry inputs, command outputs

Operating Temperature Range:

- 0°-50°C

Power Requirements:

- 120/240VAC, 50/60Hz, 30W typical (per terminal)

Physical Size:

- Control terminal: 7" H x 19" W x 8.5" D, depth less connectors
- Remote terminal: 7" H x 19" W x 9" D, depth less connectors

MRC-1600	\$4595.00
MRC-1600 Remote only	4075.00

Dial Access/Voice Response Option for MRC-1600

- Accessible through any DTMF telephone
- Digitally-synthesized voice reporting
- Passwords prohibit unauthorized control
- Dial access control lockout
- Automatic alarm reporting to 9 telephone numbers
- Immediate confirmation of control action
- Non-volatile memory
- RS-232C interface provided
- Unlimited vocabulary with text to speech algorithm

The MRC-1600 Dial Access Option connects a standard MRC-1600 Remote Control System to the public telephone network, providing cost-effective, multi-point monitoring and control of unattended equipment sites. To provide maximum flexibility, the Dial Access Option can be located at either the MRC-1600 Control or Remote Terminal. For applications requiring multiple command points, the MRC-1600 Remote Terminal with Dial Access Option will operate without a Control Terminal in a standalone configuration. (Factory installed) . . . \$1080.00
Retrofit Kit 1380.00

MOSELEY ASSOCIATES, INC.

Microprocessor Remote Control

MRC-2 Microprocessor Remote Control System

The MRC-2 controls and monitors as many as 99 remote sites, with multiple control terminal capability to let you delegate control from master to master as needed. Up to 255 status, 255 telemetry, and 255 command channels supervise your sites. Dual tolerance limits can be set to prevent a telemetry parameter from reaching critical levels. Choose from 6 modes in which to calibrate telemetry inputs, and set status inputs to initiate alarms or events on rising or falling waveforms, or both.

Control Options

Optional automatic loggers provide a printed record of system operation, and CRT terminals display your data in plain language. An optional ACU-1 Automatic Control Unit automates your operation by issuing programmable time and feedback actuated sequences of commands without operator assistance. Add Multiple Direct Command Multiple Status Display options for streamlined operator interface.

MRC-2 System

MRC-2 Microprocessor Remote Control System

With stand-alone remote terminal, consisting of one control terminal, one remote terminal. Remote terminal includes Data Acquisition/Command capability, precludes CRT, MDC, MSD capability for terminal. System is configured with 16 command lines (open collector electronic switching), 16 status channels (TTL/contact closure), and 16 analog telemetry channels, indicated as 16/16/16. System includes two sets of modems for dedicated main/backup wire interconnections. Shipping weight: 60 lbs. (27.3kg) \$12,850.00

ST-60 Semiconductor spares kit for MRC-2
microprocessor remote control 536.00

MRC-2 Microprocessor Remote Control System

With Data Acquisition Remote Terminal, consisting of one control terminal, one remote terminal, and one standard Data Acquisition/Command Unit (DACU-1). System is configured with 32 command lines (open collector electronic switching), 32 status channels (TTL/contact closure), and 32 analog telemetry channels, indicated as 32/32/32. System includes two sets of modems for dedicated main/backup wire interconnections. Shipping weight: 90 lbs. (40.9kg) \$17,995.00

ST-60 Semiconductor spares kit for MRC-2
microprocessor remote control 536.00

MRC-2 Control Terminal Only

Up to two standard control terminals can be used with any single standard remote terminal. Up to four control terminals can be used with any single standard remote terminal by the use of additional modems. In standard configuration, system expansion of up to nine additional expansion/option modules is possible. Shipping weight: 30 lbs. (13.6kg) \$7,090.00

MRC-2 Stand-Alone Remote Terminal Only

Includes data acquisition/command capability, precludes CRT, MDC, MSD capability for terminal. Configured with 16 command lines (open collector electronic switching), 16 status channels (TTL/contact closure), and 16 analog telemetry channels, indicated as 16/16/16. Terminal includes two modems for dedicated main/backup wire interconnections. Shipping weight: 30 lbs. (13.6kg) \$7,980.00

MRC-2 Remote Terminal Only

Incorporates individual programmable site code for multiple remote terminals per systems. Requires use of one standard Data Acquisition/Command Unit, as listed below. Shipping weight: 30 lbs. (13.6kg) \$7,090.00

MRC-2

DACU-1 MRC-2 Standard Data Acquisition/Command Unit Only

One unit required for use with each MRC-2 remote terminal. Equipped as MRC-2 system above (32/32/32). Allows for system expansion of up to four additional expansion/option modules. Shipping weight: 30 lbs. (13.6kg) \$7,180.00

MRC-2 System Expansion

- DACU-1E MRC-2 Data Acquisition/Command Expansion Unit Only \$4,270.00
- MRC-2 Remote Terminal Command Expansion 415.00
- MRC-2 Remote Terminal Status Channel Expansion 415.00
- MRC-2 Remote Terminal Analog Telemetry Channel Expansion 625.00
- CEU-1 Communications Expansion Unit 5,995.00
- General Purpose Interface Bus (GPIB)
Used as standard interface in MRC-2 system and required for interfacing specific expansion/option features 605.00

MRC-2 Options

- CRT Terminal \$ 2,995.00
- CRT Terminal Less CRT 1,795.00
- Automatic Logging 2,995.00
- Automatic Logging Less Logger 1,795.00
- File Memory Expansion Module 695.00
- Optically Isolated Command Lines 210.00
- CIP-2 Relay Isolated Command Lines 495.00
- Relay for CIP-2 9.00
- BSP-1 Barrier Strip Interface Panel 195.00
- BSP-1 Expansion (per 16 lines or channels) 150.00
- Optically Isolated Status Channels (per 16 channels) 210.00
- Digital Telemetry Input 495.00
- Telemetry Failsafe Module 550.00
- Expansion Modem 695.00
- Wireless Operation (ordered w/MRC-2) 225.00
(ordered separately) 385.00
- MDC-2 Multiple Direct Command 2,495.00
- MDC-2E Multiple Direct Command Expansion 1,995.00
- MSD-1 Multiple Status Display 2,595.00
- MSD-1E Multiple Status Display Expansion 1,695.00
- Dial-Up Option (ordered with MRC-2) 890.00
(ordered separately) 1,030.00
- Personal Computer Interface 2,495.00
- Video Analyzer Interface 2,395.00
- PC control terminal interface allows interconnection of IBM-PC Compatible computer over RS-232 communications to an MRC-2 remote terminal. Includes firmware, software and interconnecting cable 2,495.00

MOSELEY ASSOCIATES, INC.

SCA Equipment/STL's

SCG-9 Stereo Generator

The Model SCG-9 Stereo Generator provides a composite stereo signal of the highest quality. Although this all solid-state generator is intended primarily as a companion to the Moseley Associates composite STL (a single link for stereo), it may be used with most direct FM exciters. The SCG-9 easily meets the requirements of section 73.322 of the FCC rules and regulations. A minimum of adjustments and rigid manufacturing tolerances promise excellent quality and dependable performance.

**SCG-8 Subcarrier Generator
SCD-8 Subcarrier Demodulator**

Series "8" Subcarrier System forms a revolutionary FM system providing superior performance. The Series "8" System consists of the Model SCG-8 Subcarrier Generator and Model SCD-8 Subcarrier Demodulator. These units may be individually used to meet specific requirements such as SCA service on an FM broadcast transmitter, or telemetry service. This system is ideally suited to aural studio transmitter link (STL) service. Providing a means of establishing a secondary program channel, the Series "8" System enables multi-plexing SCA program audio, provides for remote pickup link audio, or serves as an intercom on an STL. Command information from a remote control system can also be conveyed by the SCG-8 and SCD-8.

SCM-1 — Subcarrier Main Frame. Accommodates two subcarrier modules. System includes one generator or demodulator module. Specify generator or demodulator, subcarrier frequency (26-185kHz) and STL model when ordering for utility/control/telemetry service **\$895.00**

SCG-9A — FM Stereo Generator, includes power supply and peak-reading deviation meter **\$2095.00**

SCD-9 — FM Stereo Demodulator, includes power supply. Demodulates composite stereo signal into discrete left and right channels **\$1695.00**

Solid-State Multiplex Equipment For Stereo, SCA, and STL Applications

SCD-8 — Subcarrier Demodulator, with automatic muting and front-panel peak-deviation meter, including self-contained power supply. Available for operation at a specific frequency in the 26kHz to 185kHz spectrum. Specify operating frequency when ordering **\$995.00**

SCG-8 — Subcarrier Generator, with automatic muting and front panel peak-deviation meter, including self-contained power supply. Available for operation at a specific frequency in the 26kHz to 185kHz spectrum. Specify operating frequency when ordering **\$995.00**

Additional Subcarrier Generator for SCM-1 (26-185kHz) . . **350.00**

Additional Subcarrier Demodulator for SCM-1 (26-185kHz) **350.00**

AURAL STUDIO-TRANSMITTER LINK AND ASSOCIATED EQUIPMENT

PCL-606 and PCL-606/C (950MHz, 450MHz, 300MHz and 150MHz)

The Models PCL-606 and PCL-606/C Studio-Transmitter Links provide broadcasters and industrial users alike with the highest quality program interconnect currently available in equipment of this type.

Designed for monaural audio service, the PCL-606 can be used in a dual configuration for stereo service. The PCL-606/C, composite stereo version, conveys composite stereo waveform with virtually no degradation.

PCL-606 STL Transmitter and Receiver with self-contained power supplies and crystals. Tuned and tested on operating frequency. Shipping weight 66 lbs./30.0kg

300-330MHz, 440-470MHz, 890-960MHz **\$ 10,490.00**
1.5GHz-1.71GHz* **13,890.00**

PCL-606/C Composite STL Transmitter and Receiver with self-contained power supplies and crystals. Tuned and tested on operating frequency. Transmits composite stereo waveform over single STL. Shipping weight 66 lbs./30.0kg.

300-330MHz, 440-470MHz, 890-960MHz **\$ 10,490.00**

Communications Link

CL-100

CL-100 Communications Link

- Telemetry or voice transmission
- Superior adjacent channel rejection
- AC/DC operation
- 1W or 10W options
- Data and voice versions
- Microphone (handheld) with push-to-talk cutting data circuit

Options

- ID with station license in code, separate power-fail message
- 10W transmitter output

The CL-100 Communications Link provides an alternative to expensive subcarriers and leased telephone lines for conveying control and telemetry data between the studio and transmitter locations.

The systems provide independent control and telemetry circuits, while freeing the STL or program subcarrier channels for other uses. Data transmission is extremely reliable, even over a path length of 50 miles (line of sight).

The CL-100 comes in Data and Voice versions. The Data version has increased audio bandwidth and controlled group delay characteristics to allow 9600 baud data rates. In highly congested RF environments, the improved selectivity and sensitivity of the Voice version can be used, providing data rates up to 4800 baud.

The system consists of a 1W or 10W transmitter and companion receiver in the 450-512MHz range and is type-accepted for user under parts 21, 74, and 90 by the FCC. Audio inputs are provided on the transmitter rear panel, with a microphone input for voice communication on the front panel. The CL-100 Receiver is supplied with audio outputs and internal or external speaker drive.

An optional MCW Identifier for transmitter identification and power-fail identification and optional provision for external transmitter battery for operation during power failure are available. When both are used, the ID module identifies the transmitter continuously, providing power failure indication. Antennas, transmission line, isocouplers and connector kits are available to complete a CL-100 installation.

Power Requirements	Rear panel RF carrier keying
	120/220VAC, 50/60Hz, 30W (60W with 10W RFA)
Dimensions	13.6V, 1.5A nominal (3.5A with 10W RFA)
	1W: 3.5" H x 19" W x 14" D
	10W: 3.5" H x 19" W x 16" D
Net Weight	1W: 19 lbs.
	10W: 21 lbs.
Receiver Frequency Range	450MHz-512MHz (crystal select operating frequency)
RF Input Connector	Female Type N
RF Input Impedance	50 ohms
Sensitivity	CL-100 Data: 45dB SNR (at 60µV (-71.2dBm))
	CL-100 Voice: 12dB SINAD at 0.5µV (-112.9dBm)
	20dB SINAD at 1µV (-106.9dBm)
Selectivity	CL-100 Data: -3dB bandwidth: ± 3kHz or greater; -40dB bandwidth: ± 12kHz or less; down approximately 30dB at adjacent group P carrier (± 10kHz)
	CL-100 Voice: -3dB bandwidth: ± 6kHz or greater; -80dB bandwidth: ± 20kHz or less
Line Outputs	0dB nominal, -16dBm to + 7dBm adjustable, balanced 600 ohm
Output Connectors	Terminal strip
Line Output Monitor	Front-panel speaker (level adjustable). Connections for external speaker available on terminal strip
Received Signal Level LED	Carrier-operated, adjustable; normally green SNR above 25dB. Open-collector output on rear for hot standby/remote control use
Power Requirements	120/220VAC, 50/60Hz, 15W nominal
Dimensions	3.5" H x 19.4" W x 14" D
Net Weight	17 lbs.

CL-100 Communications Link Transmitter and Receiver with self-contained power supplies and crystals. Tuned and tested on operating frequency. Nominal 1W transmitter output. Shipping weight 40 lbs./18kg.

450-512MHz\$3980.00

CL-100 Communications Link Transmitter and Receiver with self-contained power supplies and crystals. Tuned and tested on operating frequency. Nominal 10W transmitter output. Shipping weight 40 lbs./18kg.

450-512MHz\$4980.00

Optional MCW Identifier Module installs internally to CL-100 Transmitter. Nominally transmits ID every 20 minutes. Specify call letters/ID when ordering.\$275.00

Optional Microphone KitN/C

Spare Semiconductor Kit

ST-188A for CL-100. Shipping weight 1 lb./450g.\$188.00

PCL 6000

PCL 6000 Series Studio-Transmitter Links

Monaural or composite operation is available from a single system. By selecting appropriate jumpers, a user can enable wideband composite stereo or 15kHz monaural basebands. Two PCL 6000 systems can be used in a dual discrete configuration to transmit right and left stereo programs with no measurable crosstalk. Receiver IF bandwidth can be factory or field set for channel spacing of 100kHz to 500kHz.

Both the PCL 6010 transmitter and PCL 6020 and 6030 receivers employ a synthesized reference oscillator to eliminate fixed-frequency crystals.

The physical module count on the PCL 6000 Series has been kept to a minimum for the highest MTBF without compromising operational or maintenance ease. All oscillators, up converters, and discriminator, audio sections can be individually isolated by appropriate jumpers for alignment or repair.

Since the PCL 6020 and PCL 6030 systems use a common PCL 6010 transmitter, the most important consideration depends on the 950MHz aural STL activity in your area. If, for example, you wanted to replace an older PCL-505/C, and have no adjacent channel interference, then the PCL 6020 System will offer superior performance.

PCL 6010 Transmitter

The PCL 6010 uses direct modulation techniques. A synthesized reference oscillator is used for FM generation. Conversion of the transmitter FM-modulated oscillator frequency to the final output frequency is done via an up converter mixer technique, instead of the usual frequency-multiplication of the modulated signal. An optional extended baseband is available for users conveying 67kHz and 92kHz FM SCA through baseband.

For long STL paths, an optional 15W transmitter power output is available. IF Repeater technology is also available for STL paths requiring a midpoint.

PCL 6020 Receiver

The dual conversion PCL 6020 Receiver uses an FM quadrature detector to provide maximum fidelity. Excellent selectivity characteristics ignore adjacent channels in your area. The receiver IF bandwidth can be set for channel spacing of 100kHz to 500kHz, depending on RF congestion and channel availability.

Built-in transfer circuitry allows automatic changeover to a standby receiver in the event of a detected malfunction.

The front-panel meter indicates true RF input level in microvolts, program output level, subcarrier level, oscillator levels, and supply voltages.

When used in conjunction with the optional composite stereo generator and built-in stereo decoder, the PCL 6020 System is an excellent choice for AM stereo.

PCL 6030 Receiver

The triple conversion PCL 6030 Receiver uses a digital pulse counting discriminator to provide extremely low distortion and low noise characteristics. Excellent selectivity characteristics ignore adjacent channels 20dB stronger than your received signal.

Front-panel meter allows the monitoring of several parameters, including RF input in microvolts, audio and subcarrier outputs, power supply and oscillator levels.

Built-in automatic changeover circuitry is included for hot standby operation. The receiver IF bandwidth can be set for channel spacing of 100kHz or 500kHz, depending on RF congestion and channel availability.

Audio Routing/Mixing System

ARS-256 Smart Switcher
Audio Routing/Mixing System

- Up to 256 Crosspoints Configured in Groups of 8 Inputs/Outputs
- 4 System Memories for Preset Matrices
- Multiple Source Summing Capability
- RS-232 Control Port
- Superior Audio Performance

The ARS-256 Audio Routing Switcher is an advanced audio routing/mixing system with a highly versatile control interface. This switcher will operate with, and/or slave to, most industry standard equipment for audio-follow-video or automation directed systems.

External control is possible through a number of standard or optional ports. The standard GPI, RS-232, and RS-422 ports provide outboard control interface capabilities for signal processing and post production requirements. Optional interfaces, for most popular routers, allow the addition of multilevel high-quality audio routing to a plant's existing switcher. Manual control panels interconnected via a party line control system permit the ARS-256 to be accessed from as many remote locations as desired.

A single ARS-256 can contain up to 256 crosspoints in 3 rack units. Typical matrices can include 8 x 8, 16 x 8, 16 x 16, etc. in groups of eight. The system can be configured in multilevels, (i.e. stereo, SAP, time code, etc.) Units can be easily stacked and there is no limit to expansion.

As multichannel, multilevel protocol demands grow, the bank switchable CPU controller with 96K of memory has the power to meet the most demanding interface and performance requirements.

The Moseley party line control system enables the use of up to 32 remote control stations. Microprocessor-control provides instantaneous communications. A "take" command is executed at the next vertical interval allowing true real time use during production or post production. Standard controllers include relegendable X-Y crosspoint-oriented switch panels. The party line system has a matrix scratch pad allowing the user to set up an entire matrix and either store it off-line or "salvo" take it to the program at any time. Four system memories are provided to store complete matrix configurations.

The GPI port allows communications with such external device as a real time clock, an automation system, or an editor-synchronizer. For radio stations this means that network feeds can be switched with msec accuracy. Complex audio assignments can be preprogrammed and done instantly under editor control or synchronizer event control for production.

An RS-232 port provides a VDT approach to displaying and/or modifying current matrix configurations, as well as system diagnostics. All Smart Switcher systems feature a standard ASCII terminal interface, which provides the capabilities to communicate with commonly available computer terminals. The ASCII terminal interface allows you to preset the next matrix, setup and salvo the matrix at the right moment, check matrix status at any time, and change one or all of the input/output combinations individually or in groups. The RS-232 port will also allow more sophisticated software control via the use of microcomputers.

ARS-256

Specifications

Frequency Response:	± 0.2dB 10Hz-30Hz, ref 1kHz
Crosstalk:	-80dB, 15kHz worst-case crosstalk
Input/Output Isolation:	-80dB
Common Mode Rejection:	-80dB, 50-120Hz
Signal-to-Noise Ratio:	-100dB re. +24dBu
THD:	< .01% 20Hz-20kHz re. max. input. < .01% 20Hz-20kHz re + 8dBu* op. level
IMD (SMPTE):	< .005% re. max. input
Maximum Input Level:	+28dBu* balanced or unbalanced
Maximum Output Level:	+24dBu* balanced
Channel Gain/Loss:	± 3dB adjustable
Input Impedance:	> 20K ohms
Output Impedance:	< 100 ohms balanced
Minimum Load Impedance:	600 ohms
Dimensions:	5.25" H x 19" W x 18" D
Gross Weight:	45 lbs.
Power Requirements:	150W *0dBu = .775V

ARS-256 Audio Routing Switcher. Basic system equipped for 8 audio inputs, 8 audio outputs and 64 crosspoints. Each unit includes RS-232C, GPI and RS-422 control ports and four system memories for preset matrices. Shipping weight 40 lbs./18kg. **\$3725.00**

ARS-1024 Audio Routing Switcher. Basic system equipped for 16 audio inputs, 16 audio outputs and 256 crosspoints. Each unit includes RS-232, GPI and RS-422, with four system memories with preset matrices. **\$7960.00**

Expansion Assemblies

8 input, 8 output, 64 crosspoints	\$1075.00
8 input, 64 crosspoints	920.00
8 output, 64 crosspoints	920.00
64 crosspoints	815.00

Options

16 x 16 X-Y Front Panel Controller. Relegendable X-Y crosspoint-oriented switch panel. Shipping weight 10 lbs./4.5kg. **\$890.00**

16-Channel Expansion Unit for above X-Y front panel. Shipping weight 5 lbs./2.3kg. **\$115.00**

16 x 16 Desktop Wedge Controller Shipping Wt. 5 lbs./2.3kg. **785.00**

Rackmount Kit for X-Y Panel Controller. Includes hardware, 50' of cable, and power supply. Allows front-panel casting to be removed from an ARS-256 main frame. Shipping weight 5 lbs./2.3kg. **\$240.00**

Video Display Terminal (VDT) duplicates and allows control of X-Y matrices. Shipping weight 30 lbs./13.5kg. **935.00**

ACP-1 Audio Connection Panel provides convenient XLR interface connections for ARS products 19" rack panel. Configured with 8 audio inputs and 8 audio outputs. **490.00**

ACP-2 Audio Connection Panel used in conjunction with ACP-1. Configured with 8 audio inputs. **365.00**

ACP-3 Audio Connection Panel used in conjunction with ACP-1. Configured with 8 audio outputs. **365.00**

MOSELEY ASSOCIATES, INC.

Remote Programming System

RPL 4000 System Remote Programming System

- Broadcast quality performance
- Audio bandwidths from 5-15kHz
- 25, 50, and 100kHz channels
- Encoding and decoding for repeaters
- Noise-reduction companding

RPL 4010 Transmitter

- Fully synthesized 450-456MHz
- RF output 20W maximum
- Two XLR microphone inputs, one switchable to line
- Subaudible encoder
- 120VAC or 12VDC
- Comprehensive metering
- Lightweight, less than 8 lbs.
- Optional DTMF decoder
- Optional variable deviation and channel selection

The RPL 4010 Transmitter is a portable Remote Programming Link. Fully synthesized and lightweight (less than 8 lbs.), it is ready-to-use in conjunction with your existing repeater and portable audio meters. Extensive metering on the front panel lets you operate with confidence.

RPL-4010

RPL 4020 Receiver

- Excellent selectivity
- Excellent adjacent channel rejection
- Dual-frequency operation with remote select
- Subaudible decoder
- Low distortion
- Optional DTMF decoder
- Optional variable IF and channel selection

The RPL 4020 Receiver has channel rejection characteristics, which are essential in crowded UHF bands. An industry standard connector is provided for audio and control interface with existing equipment.

AM Stereo

"C-Quam" AM Stereo

The name "C-Quam" is derived from the phrase Compatible Quadrature Modulation. This means that the system has the advantages of quadrature modulation for stereo transmission, and is compatible with the hundreds of millions of existing monaural AM radios. In fact, the C-Quam system simply takes the sum of left and right stereo channels (L+R) and directly amplitude modulates the broadcast signal. This is the precise signal that monaural radios were designed to receive.

To provide stereophonic information, angle modulation results from straightforward Quadrature Modulation followed by limiting. That is, the monophonic (L+R) provides in-phase modulation while (L-R) provides quadrature phase modulation. The limiter assures constant level exciter drive to the transmitter.

A separate signal, 25Hz pilot tone, is added to the quadrature difference (L-R) signal for indicating the presence of a received stereophonic C-Quam broadcast.

Existing AM broadcast transmitters may be adapted to C-Quam with relatively simple and inexpensive modifications.

Specifications:

The following performance is typical closed loop performance of the exciter operating into the monitor.

- Stereo Separation:** 35dB minimum from 20Hz to 7.5kHz
- Frequency Response:** L, R 20Hz to 15kHz \pm 1.5dB
- *Distortion,**
- Harmonic:** L=R Monaural 0.25% max. at 85% mod. L=R pure stereo 0.5% max. at 85% mod. **L, R single channel 1.0% max. at 70% mod.

Exciter

- RF Output:** Adjustable internally up to 5W into 50 ohms
- (L+R):** Adjustable under cover on front panel via 10 turn potentiometer up to +16dBm, 600 ohms balanced
- Stereo-Monaural:** Switched under cover on front panel. Switches L=R for monaural. Stereo, Monaural indicated by LED on front panel
- Audio Input:** Right 0dBm to +10dBm balanced 600 ohms, left 0dBm to +10dBm balanced 600 ohms, both inputs adjustable with factory installed pad per customer requirement
- Meter Functions:** (L+R)_o (L-R)_o Range -20dB to +3dB, dB = 100% modulation.
Right, Left: Meter functions switched at front panel between meters.
- Phase Equalization:** Internally adjustable phase equalization is provided to compensate for phase variations in the transmitter chain.

"C-Quam"

Sample Transmitter Output:

A sample transmitter output is provided on the rear. This contains all of the modulation aspects (L+R)_o, (L+R)_i, (L-R)_o. This is provided for diagnostics and comparison of transmitter characteristics vs. exciter characteristics.
Sample transmitter output 2V p-p into 50 ohms.

Monitor

RF Input: Frequency crystal controlled, Input level = 1V to 10V RMS, Impedance = 50 ohms.

Modulation Meters: Meter range 0 to 140% (-20dB to +3dB), Attenuator range 0 to -50dB in -10dB steps, accuracy at 100% modulation 400Hz \pm 2%, meters switchable to \pm left or (L+R), \pm right or (L-R).

Peak Modulation Indicators:

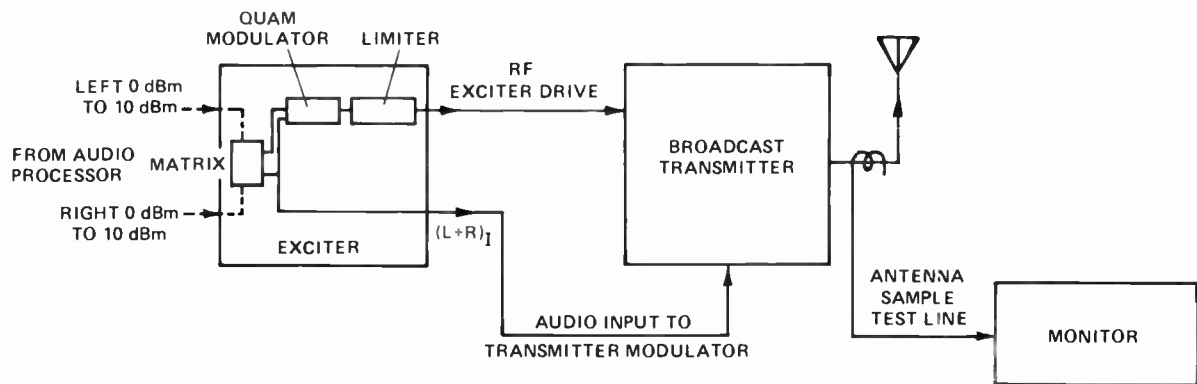

(L+R) group: -100% indicator internally set to flash when modulation exceeds -99%, +125% indicator internally set to flash when modulation exceeds +124%, peak indicator adjustable via thumb wheel switches from 30% to 150%. Modulation selectable via pushbutton switches + or - (L-R) group. Negative limit set internally to flash at 1.46 radians or 83.67°. (L-R) limit set internally to flash when modulation exceeds 99%. Peak flasher adjustable via thumb wheel switches for 30% to 125%

Output BNC Connectors on Rear:

Remote flashers (L+R), (L-R). Remote meters (L+R), (L-R). Left audio 600 ohms balanced and unbalanced, Right audio 600 ohms balanced and unbalanced, (L+R), (L-R), 25Hz pilot tone.

- 1400 Exciter (includes day/night card) \$ 6,000.00
- 1410 Modulation monitor 4,800.00
- "C-Quam" Exciter and Modulation Monitor (package) 11,000.00

SIMPLIFIED SYSTEM BLOCK DIAGRAM

* Actual measurements of stereo separation, frequency response and distortion are supplied with each exciter monitor pair.

** This is equivalent of 150% modulation, 75% envelope modulation, simultaneous with 75% stereo information.

Also available: White noise, pink noise, 3150Hz speed and flutter, and specials to your specifications. All items with IEC equalization. NAB cartridge reproduce calibration tapes.

1200

501 VR Portable VHF Wireless System

- Patented companding circuitry gives 120dB dynamic range for crisp, clear, noise-free operation
- Double-heterodyne receiver for over 100dB image and spurious rejection
- Choice of lightweight handheld, or miniature lavalier transmitter in a body-pack
- Internal power supply, with flexible external powering options

The 501 VR wireless system was specially designed for ENG/EFP applications. The system operates on VHF high-band frequencies, with five channels between 170 and 216MHz offered standard, and other frequencies available.

The 501 VR Receiver is housed in a lightweight metal case compact enough to fit into equipment pockets. The receiver's unique double-heterodyne design allows unmatched image and spurious rejection. This enables the system to be used with confidence in the most RF-polluted environments.

The receiver is internally powered by a 9V battery, or externally powered from any 12V to 35V power source. Controls and indicators include a switchable combination RF/battery level meter, and a combination On/Off/Headset Level control. An LED Peak Meter indicates audio overmodulation. Headphone output and audio output (mike level) are provided.

Overall System Performance

Frequency
Response: 25-20,000Hz ± 3dB
Dynamic Range: 120dB (max. SPL to A-weighted noise level)
Harmonic
Distortion: <.3%
RF Carrier
Frequencies: Five channels: A through E, between 170-216MHz
Frequency
Stability: ± 0.005% crystal controlled
Modulation: FM/ ± 15kHz
Operating Range: 200', adverse conditions, up to 1,500' line-of-sight

- 501 VR/LT Professional video camera wireless microphone system for ENG, EFP-lavalier **\$850.00**
- 501 VR/HT Professional video camera wireless microphone system for ENG, EFP-handheld **\$900.00**

1200 VHF Wireless System Preliminary Information

- True diversity for drop-out free performance
- Instrument, handheld and lavalier transmitters available
- Features completely redesigned handheld transmitter with user-switchable elements

Specifications

Overall System Performance

Frequency
Response: 25-20,000Hz ± 3dB

NAGRA MAGNETIC RECORDERS, INC.

Portable Studio Recorder

T-AUDIO TRANSPORTABLE STUDIO RECORDER

Tape Transport: Twin capstan open loop system ensuring very low wow and flutter and modulation noise.

Preset Calibrations: Direct access to four preadjusted recording calibrations in respect of speed, type of tape (bias) and standard.

Playback Speed: Selection of four playback speeds with respect to standard (CCIR, NAB, NAGRAMASTER).

Fast Copying facilities at 30 ips

Editing Standard: Manual with free spools, bidirectional hand pull, and built-in cutter. Optional: Servo controlled with automatic displacement of edit point to built-in cutter.

Remote Control: Detachable, individual control unit with full remote capabilities and access to all functions including counter by means of a 25-pin cannon connector.

Power Supply: AC/DC operation with very low power consumption.

Warning Display: Two levels of alarm: close to limits, out of limits for: power (internal DC voltage supply), phase lock (servo-control of capstan motor speeds) and interhead tape tension.

Matrix Display: For "record" and "output" modes.

Tape Counter: Time display, 5 digits (h.mm.ss.) bidirectional, 7 segment LED (8 digits for optional timecode: hh.mm.ss.frames). Time indication corresponding to selected speed. Accuracy better than 0.1% at all speeds including spooling mode. Zero locator and reset pushbutton.

Optical Clear tape and end of tape sensor.

Speed Variator: Variable playback speed $\pm 6\%$ and variable spooling speed 0 to 10 m/s in both directions.

Skip: 3 speeds in both directions by non-latching switches: nominal speed and 2X nominal speed with listen facilities; fast winding speed without listen.

Size: With 17" (180mm) reels and without control unit 238H x 400W x 335Dmm. With 11.8" (300mm) spools and without control unit 250H x 610W x 420Dmm. Control Unit: 50H x 400W x 110Dmm.

Power Supply: Mains adaptor or 11 to 14VDC.

Power Consumption: AC typ. 65VA max. 85VA. DC typ. 40W.

The T-Audio analog recorder is a microprocessor controlled twin capstan recorder utilizing 1/4" tape. Electronic real time counter with go to zero function incorporated in the detachable keyboard controller. Four possible tape speeds: 30, 15, 7 1/2 and 3 3/4 ips. Up to four changeable TACAL* circuits incorporating wide band predistortion circuitry.

Timecode Package

Ready to work — includes: Nagra T-Audio timecode version with two 2mm audio tracks and one 0.35mm center timecode track for 1/4" tape. Four tape speeds, electronic counter, four directly accessible recording calibrations, separate erase heads for audio and timecode signals. Fitted with double high speed timecode reader (simultaneous reading of tape signal and external source) and an internal timecode generator.

NTA. 3-TCS Two track main frame w/tc record/play electronics

4 TACAL-S Without wideband anti-distortion

1 TACA-TC-2 Keyboard

1 TASC Edit servo for TACA-TC-2

1 TA-RAM Connecting facilities for remote control and audio monitoring

1 TAIRS For standard RS-422 port

1 TASYN Internal time code synchronizer allowing the chasing of any SMPTE/EBU 80 time code signal up to 60 times the nominal recording speed

1 TAHSX High stability time base (1 ppm)

2 TASIM Circuit for playback through the record head

1 TAONP Neopilot playback head

1 TAPS Mains power supply

2 TPBC Cine type reel holders

2 TPNN NAB hubs \$19,950.00

NTA.3-TCR Same as above with external remote control interface according to RS-422 standards (38,400 baud rate) for connecting the Nagra NTA.3-TCS to an existing editing system. Note: When ordering, specify editor being used

..... \$22,450.00

Stereophonic Package

Ready to work — includes:

1 NTA-S Stereophonic mainframe (2.75mm)

1 TAPS Internal mains power supply with mains cable

1 TACA-S Complete servo editing controller with manual edit (detachable)

8 TACAL Record calibration circuits with predistortion (speed/tape type/standard)

1 TAIRS For standard RS-422 port

2 TPBC Cine type reel holders

2 TPNN NAB type reel holders \$17,950.00

B-888

T-Audio Accessories

TACO-3 Overbridge for TACO series of accessories
Available space is 3 standard rackmount units (5.25") \$440.00

TACO-5 Same as above. Available space is 5 standard rackmount units. (8.75") 460.00

TACO-7 Same as above with 7 units of space (12.25") 480.00

TACO-B1 Blank 1 unit panel (1.75") 15.00

TACO-D2 Monitor module for pilot or time code signals fitted with two meters; pilot or time code level plus phase deviation of resolver/synchronizer. Takes up 1 unit rackmount space (1.75") 427.00

TACO-D2R Pilot/time code monitoring option w/bi-phase interface 1,180.00

TACO-M1 Audio monitoring unit with two VU-meters for audio level display, two potentiometers per channel for input and output level adjustment, two speakers and two headphone outputs. Peak version available upon request. Takes up 3 units of rackmount space (5.25") 1,455.00

Options

TAHP Headphone and loudspeaker amplifier includes 2 monitoring speakers \$427.00

TACAL Additional recording calibration circuit, factory adjusted for any specified combination of speed/type of tape/standard. One per channel and per calibration. (Includes predistortion circuitry) 256.00

TARSA External remote control interface according to RS-422 standards (38,400 baud rate) for connecting the Nagra TA-TC to an existing editing system. Note: When ordering, specify editor being used 2,345.00

TAC-42.5 RS-422 cable 16.5' 103.00

TASIM Self-sync option allows simultaneous playback of one channel while recording on the other in sync 214.00

TAPCR High speed copying 214.00

TAIRS Internal remote control interface according to RS-232 standards for connecting the Nagra TA-TC to a computer 642.00

TAPFM Neopilot and FM (Nagrasync) resolver 342.00

TAONP Neopilot playback head (supplied) 342.00

Reel Holders

TPBC Cine type reel holder \$ 56.00

TPNN NAB hub holder 167.00

TPBA-2 AEG type reel holder 77.00

Monitor

DSM Field monitor and amplifier with selectable filters. Includes battery pack, AC mains cable and handle \$2,247.00

Carrying Accessories

TMU Roll-around console with storage compartment \$934.00

TA CASE ATA shipping case 330.00

TACH Set of carrying handles 171.00

Miscellaneous

TACR 10' high speed copy input/output cable with connectors \$ 34.00

Instruction/service manual 125.00

Nagra Swatch watch 35.00

Prices and Specifications Subject to Change Without Notice.

NAGRA MAGNETIC RECORDERS, INC.

Recorders

4.2L Standard Sync Recorder

Self-contained professional single-track tape recorder for the cinema, television and radio

Also available with QPAU-T mike preamps which are universal or QPM-3-5 for Sennheiser.

Three speed recorder: 15 1/2, 7 1/2 and 3 3/4 in/s, 1/4" tape. Full track with Neopilot synchronization system. High-pass filters, automatic level control, limiter and patented predistortion circuit.

Specifications

- Microphone inputs (with QPSE) 200 ohm, 0.2-43mV • Automatic level control range for 0dB 0.65 to 22mV, with an average distortion of h3 ≤ 0.3% at 1kHz
- Unbalanced line input, impedance 100K ohm, 0.37-120V • Mixer direct input, fixed level 560mV for 0dB, impedance 9K ohm • Pilot signal input, imp. 5K ohm, 0.5-25V • Line output at 0dB, 4.4V into 600 ohm or 560mV into 100K ohm at the Mixer connector • Pilot signal output 350mV, or 1V with QSLI • Loudspeaker amplifier 1W • Modulometer integration time 7.5ms • Performance obtained by recording, nominal level 0dB = 320nWb/m, maximum peak level (MPL) = +4dB
- Frequency response at -20dB: 15in/s 30Hz-20kHz ± 1.5dB; 7 1/2in/s 30Hz-15kHz ± 1.5dB, 3 3/4in/s 30Hz-8kHz ± 2dB • Signal-to-noise ratio at MPL, ASA A weighted, 7 1/2in/s: low-noise tape NAB 73dB CCIR 72dB standard tape NAB 70dB, CCIR 68dB • Distortion at MPL, CCIR h3 ≤ 0.4%, h2 ≤ 0.3%; NAB h3 ≤ 1.0%, h2 ≤ 0.4% • Speed stability at 15, 7 1/2 and 3 3/4 in/s: ± 0.1% • Wow and flutter, DIN 45 507 weighted p-p value, 15 in/s ± 0.05%, 7 1/2in/s ± 0.07%, 3 3/4in/s ± 0.12%

- Internal power supply: twelve 1.5V cells, D or R20 type, current drain by recording 240mA; battery life with Eveready 950 in continuous use 8 1/2h or 18h if used 2h every 24h • External power supply from mains with ATN2 • Permissible operating temperature between -4 and +160°F • Dimensions 13 1/8" x 9 1/2" x 4 1/2" • Weight with batteries and tape 15 lbs.

4.2L \$7970.00

Internal Modules — select one or two preamplifiers, add other modules before or after purchase (for IV and 4.2)

QPSE200	
XOYO	(Can be strapped for 50 ohms) General use \$ 232.00
QPM3-5	For Sennheiser "Static 5" MKH 105, 405, 415, 805 and 815 Neuman, type KM 73, 74 and 76 272.00
QPM6	High level input (for additional "line input") 144.00
Add ALC	For automatic mixing of speeches, meeting, interviews, but not for dramatic sound recording 320.00
Add QFM60	Camera speed and flicker indicator (50Hz units also available) 160.00
Add QSLI	Self resolver and sync playback 176.00
Add QGX60	Time sync generator eliminating cables when working w/crystal controlled camera (can be strapped for 50Hz) 304.00
QPAU-T	Universal microphone preamplifier for position one (1) only 320.00
QPU-T	Universal microphone preamplifier for position two (2) only. (Must be used with QPAU-T) 160.00

Accessories for Nagra III, IV, 4.2, S, SJ and E

ATN-3	Mains power supply w/cable (QCAA) (For IV, 4.2, S, SJ, LPS synchronizer and E) \$ 430.00
ATN-3C	Mains power supply w/built-in charger 602.00
BMT-3	3 mike mixer w/input transformer (For III, IV, 4.2 and E) 1,085.00
BS	External mike-line preamp (50 or 200 ohms dynamic) (for III, IV, 4.2, E) 353.00
MAG	Degausser for tape deck 110-117V mains (all recorders) 594.00
PAR	Charger for nickel cadmium batteries (Use w/ATN for III, IV, 4.2, S, SJ, E) 240.00
PPD	Multiple connector box for plugging into Nagra power pack connector. Required when both QSV-2 and ANT-2 are used with IV, 4.2, S, SJ, E 167.00
QCA	Remote start stop cable (For IV, 4.2, S, SJ) 39.00
QCL	In-line amp for SLO to IV or 4.2 304.00
QCP	Replacement pilot cable (for IV, 4.2, S, SJ) 27.00
QGB	10 1/2" reel adaptor (for 4.2, S, SJ) w/1 pr. QGBN adaptors 2,327.00
QGBA-2	Adaptor for using AEG type reel with QGB ea./75.00
QGBN	Adaptor for using NAB type reel with QGB ea./182.00
QPLE200	External preamp connected to dynamic 200 ohm mike and fed by preamp QPM3-5 249.00
QRAC	Tape cleaning blade (For 4.2, S, SJ and E) 56.00
QSV-2	Speed varier (for 4.2, S, SJ and E) 328.00
QTIM	Tape timer (for 4.2, S, SJ and E) 62.00
SLO	Resolving synchronizer (For III, IV, 4.2, SL, SJ) 3,246.00

Stereo Recorders IV-S

Self-contained professional stereophonic tape recorder for very high quality musical recordings

4.2L

DV-S

Three speed recorder: 15, 7 1/2 and 3 3/4 in/s, 1/4" tape. Two sound tracks and one Nagrasync pilot track. Equalization NAB, CCIR or Nagra-master. High-pass filters and anti-distortion circuit.

Specifications

- Input level for 0dB: 200 ohm dynamic microphone 0.28mV; capacitor microphone 1.4-4.2mV; line 7.8µA, current drive, impedance 5 or 10K ohm • Line output at 0dB, 1V into 5K ohm • Loudspeaker amplifier 1W • Modulometer integration time 10ms • Performance obtained by recording, nominal level 0dB = 510nWb/m, maximum peak level (MPL) = +4dB • Frequency response at -20dB: 15in/s 30Hz-20kHz ± 1dB, 7 1/2in/s 30Hz-15kHz ± 1dB; 3 3/4in/s 30Hz-10kHz ± 2dB • Signal-to-noise ratio at MPL, ASA A weighted, 15in/s Nagra-master 74dB, 15in/s NAB or CCIR 71dB, 7 1/2in/s NAB 71dB and CCIR 68dB
- Distortion at MPL, h3 ≤ 0.6%, h2 ≤ 0.3% • Crosstalk attenuation at 1kHz > 60dB, at 10kHz ≥ 50dB • Phase fluctuation ± 12° between tracks at 7 1/2in/s and 10kHz • Pilot track at 15 and 7 1/2in/s: Carrier frequency 13.5kHz; Maximum frequency deviation ± 45%; p-p input voltage 2V; Frequency response 0Hz to 4kHz -3dB, Signal-to-noise ratio 44dB • Speed stability at 15, 7 1/2 and 3 3/4 in/s: ± 0.1% • Wow and flutter, DIN 45 507 weighted p-p value, 15in/s ± 0.05%, 7 1/2in/s ± 0.07%, 3 3/4in/s ± 0.12%

- Internal power supply: twelve 1.5V cells, current drain by recording 250mA; battery life with Eveready 950 in continuous use 8 1/2h or 18h if used 2h every 24h • External power supply from mains with ATN2 • Permissible operating temperature between -4 and +160°F • Dimensions: 13 1/8" x 9 1/2" x 4 1/2" • Weight with batteries and tape: 15 lbs. 9 oz.

SD Non Sync \$8,775.00
SL With Sync 9,775.00
STC With Time Code 10,895.00

Internal Module Accessories

QFMS-60	Camera speed indicator (SL, SJ) (50Hz units also available) \$232.00
QSGX-60	Time sync generator (SL, SJ) (50Hz units also available) 280.00

Accessories for Nagra STC, SL and SD

ATN-3C	Mains power supply w/built-in charger \$ 602.00
DSM	Field monitor and amplifier (QCAA, QHP, IBAT supplied) 2,247.00
QCLS	In-line amp to connect SLO (SL, SJ) 361.00
QCTC	Time code reset cable 5' to be used w/VPR-5 video recorder or Aaton time code camera. Fitted w/5-pin lemo connector at both ends 36.00
QCTCU	Time code reset cable 5' to be used with any other machine. Fitted w/5-pin lemo connector at one end and an interconnection box allowing the use of any plug at the other end 35.00
QGB	10 1/2" reel adaptor (for 4.2, S, SJ) with 1 pr. QGBN adaptors 2,327.00
QGBA-2	Adaptor for using AEG type reel w/QGB ea./75.00
QGBN	Adaptor for using NAB type reel w/QGB ea./182.00
QRAC	Tape cleaning blade (for 4.2, S, SJ and E) 56.00
QSCM	Cue microphone equipped with ALC and preamp (for SL, SJ) 377.00
QSET	Cover for 7" reels (for 4.2, S, SJ and E) 409.00
QSIATC	Optional internal time code interface allowing the setting of the Nagra STC from Aaton "Origin C" and vice versa (1 hr. installation charge) 401.00
QSIIP	Resolver interface for stereo time code 801.00
QSL	External synchronizer (for SL, SJ) 581.00
QSO-3	Converts the STC to 50/60Hz sync (as in the SL) 583.00
QSV-2	Speed varier (for 4.2, S, SJ and E) 328.00
QTIM	Tape timer (for 4.2, S, SJ and E) 62.00
SLO	Resolving synchronizer (for III, IV, 4.2, SL, SJ) 3,246.00
TCGR	SMPT/E/BU 80 time code reader/generator 30 and 25 frames per second version. Can be used as a master clock (± 2 ppm from -10 to +50°C). Fitted w/5 pin miniature lemo connector 2,006.00

Recorders

SNN Miniature Full-Track Professional Tape Recorder

The SNN recorder, in spite of its diminutive size, produces exceptionally high quality recordings. It is much appreciated by reporters, who can record broadcast quality tapes and, at the same time, be more mobile. The SNN solves film-makers' synchronous sound recording problems: it can easily be concealed during filming and strict synchronization is guaranteed. Data can be recorded aboard propelled craft of all kinds, for scientific research.

Reels of narrow $1/8"$ (3.81mm) tape are used, and tape drive is by a slaved capstan motor. Rewind is manual using a small folding crank handle, but rapid thanks to an overdrive system.

$3\frac{3}{4}$ ips and $17/8$ ips (9.5cm/s and 4.75cm/s). The tape-deck is milled from one solid piece of metal and the case and lid are of drawn light metal alloy. All the electronic circuits are very highly developed and they include a voltage converter with variable ratio and an automatic level control. A special miniature omnidirectional capacitor microphone can be used and it is also possible to work with a conventional dynamic microphone. A small meter indicates the compression rate of the automatic level control; the battery voltage can also be checked on the meter by pressing a small button at the side of the recorder. Headphones can be connected at a small jack for monitoring the tape during recording.

Specifications

- Microphone input, source impedance ≥ 200 ohm, SNN 3 to $80\mu\text{A}$
- Line input, fixed level 160mV for nominal recording level, source impedance ≤ 500 ohm
- Playback at nominal level and 1kHz 630mV
- Performance obtained by recording at $3\frac{3}{4}$ ips with SNN: Frequency response on line input, SNN 60Hz-15kHz ± 2 dB, (playback equalization SNN $50\mu\text{s}$ and $3180\mu\text{s}$ • Signal-to-noise ratio at nominal level (250nWb/m), ASAA weighted, SNN > 62 dB • Third harmonic distortion at 400Hz and nominal level, SNN 1% • Erase efficiency 70dB
- Wow and flutter, DIN 45, 507 weighted RMS value, SNN 0.1%
- Recording time with 18μ tape, SNN 26 min., each track; with 12.5μ tape, SNN 38 min., each track
- Internal power supply: two 1.5V batteries or rechargeable cells; average battery life by non-stopping recording
- External power supply by ASN
- Consumption during recording 125mA
- Permissible operating temperature between -40° and $+158^\circ\text{F}$
- Dimensions: $5\frac{3}{4}" \times 4" \times 1"$
- Weight with batteries and tape 1.3 lbs.

SNN — $3\frac{3}{4}$ ips and $17/8$ ips Mono mini recorder. Includes 1-SCU output cable terminating in 2 banana plugs, 1-SCN transfer cable SNN to Nagra III, IV or 4.2 (accessory input), 2-Batteries, 4-TTA standard reel of tape, 2-TEA long playing reels of tape, 1-TYS empty reel, 1-SB storage case. \$4100.00

E Self-Contained Professional Tape Recorder, Mono

The E is a professional self-contained tape recorder essentially intended for broadcasting and especially designed to be easy to use, reliable, long lasting and reasonably priced.

Derived from the already well known, well tried and robust 4.2, the E has been designed to fulfill the following requirements: • Lightweight and robust • Possibility to use most of the Nagra 4.2 accessories • Single microphone input • One line input, with current and voltage input, easily convertible to a second microphone input with an external accessory • Separate record and playback heads • Tape deck and transport similar to that of the 4.2 • Servo controlled capstan motor

Specifications**General characteristics**

- Size: $12.4" \times 8.8" \times 4"$ (315 x 226 x 104mm)
- Weight with tape and batteries: 12.1 lbs. (5.5kg)
- Power supply: 12 "D" cells or rechargeable cells or ATN-2 main power supply
- Tape speed: $7\frac{1}{2}"$ - 19.05cm
- Reel size: 7" cover open, 5" cover closed
- Tape width: $1/4"$ (6.25mm)
- Equalization: NAB or CCIR
- Track format: mono, full track
- Headphone control: tape-direct

**Microphone input: one**

- Type of microphone input: dynamic 200 ohm 0.138mV/0dB; condenser T + 12V 2mV/0dB; T + 12V 4mV/0dB; can also be used as symmetrical line input, 2, 5mV/0dB

Line input

- Voltage line input source impedance $> 1\text{K}$ ohm: 0, 4V 150K ohm
- Current line input impedance 330 ohm: $3\mu\text{A}$

Line output

- Asymmetrical with output load ≥ 300 ohm: 0.94V for 320nWb/m 1.55V for 510nWb/m • Floating with 600 ohm load (option) 4.4V for 320nWb/m
- Mixing microphone and line input: Yes

Other characteristics

- Overall frequency response: 50-15,000Hz within ± 2 dB
- Signal-to-noise ratio: 62dB weighted
- Third harmonic distortion at 400Hz: $< 0.9\%$ at 0dB; $< 2\%$ at $+3$ dB
- Erase depth of a 1200Hz recorded signal: > 79 dB

Wow and Flutter

- $\pm 0.1\%$ (DIN 45507)
- Tape used for all above measurements: PER 525
- Reference oscillator 1kHz signal: 0 VU level = 8dB
- Reference oscillator used for tape calibration: 1kHz -12dB; 6.3kHz -12dB; 10kHz -12dB
- Autonomy in continuous use: 13h
- Permissible operating temperature: -20° to $+70^\circ\text{C}$; -55° to $+70^\circ\text{C}$ (opt.)
- Large reel adaptor: QGB
- Correction filter: Yes

EL

Synchronous recorder 1 speed at $7\frac{1}{2}$ ips with universal preamplifier, sync circuit including crystal generator and resolver with balanced line output (EFO) 4.4V. Includes 1 QHC carrying strap, 1 empty reel, 2 reel nuts, 1 QCP pilot cable \$5995.00

ED

Non-synchronous recorder, 1 speed at $7\frac{1}{2}$ ips, with internal universal preamplifier without balanced line output (EFO) 4.4V. Includes 1 QHC carrying strap, 1 empty reel, 2 reel nuts. \$4995.00

Note: No carrying handle (QHP) supplied with recorders.

NAKAMICHI U.S.A. CORP.

Cassette Decks

MR-1

MR-2

MR-1 Discrete Head Professional Cassette Deck

- Discrete 3-head recording system
- High-inertia direct-drive capstan motor with wide bandwidth FG servo
- 4 tracks/2-channel stereo
- Low-distortion direct-coupled electronics
- Balanced inputs: 1/4" front panel XLR rear panel
- Unbalanced inputs: 1/4" rear panel
- Line input selector switch
- Outputs: XLR rear panel (balanced), 1/4" rear panel (unbalanced)
- Self-contained Dolby® B and C noise reduction
- Provision for external noise reduction systems
- 16-segment linear scale (2dB steps) peak-responding meters
- Independent L/R record level controls
- 3-position tape selector
- 2-position equalization selector
- Defeatable MPX filter
- Defeatable subsonic filter
- One-touch record pause
- Record mute
- Tape monitor indicator
- Line output level control
- Headphone jack with independent headphone volume control
- Playback pitch control ($\pm 6\%$)
- 4-digit LED tape counter
- Memory stop
- Timer record/play
- Automatic slack-tape takeup
- Remote control (via optional RM-200)
- EIA rackmount adaptor with carrying handle

The MR-1 brings to the professional market a unique Asymmetrical Dual-Capstan Diffused-Resonance Transport so accurate that no pressure pad is required to maintain tape-to-head contact. The Discrete 3-head recording system provides perfectly accurate azimuth alignment, extended bandwidth and exceptional dynamic range, and custom electronics which have established a reputation for ultra low-noise/high-headroom performance.

The MR-1 is specifically designed to meet the needs of the professional market. Front-panel 1/4" balanced line input jacks simplify temporary connection of signal sources with the MR-1 while balanced XLR input and output jacks on the rear provide permanent connection. An input selector chooses between front and rear inputs. Quarter-inch rear-panel jacks provide unbalanced connection to the MR-1 with the unbalanced inputs given priority over the XLR inputs when a jack is inserted.

MR-1 \$995.00

Optional Accessories

SP-7	Stereo headphones	\$80.00
RM-5	Remote control for MR-1	45.00
DM-10	Head demagnetizer	38.50

MR-2 2-Head Professional Cassette Deck

- 2-head performance that rivals a 3-head deck
- 4 tracks/2-channel stereo
- Microprocessor-controlled single-capstan "Silent-Mechanism" transport
- Hyperbolic-contour laminated-sandust record/play head
- Dual-gap ferrite-core erase head
- Low-distortion/low-noise recording and playback amplifiers
- Separate tape and equalization switches for Type-I, -II and -IV tape
- Ultra-stable balanced bias oscillator operating at 105kHz
- Bias tune control
- Dolby B and C noise reduction
- Defeatable MPX filter
- Independent left and right record-level controls
- Dual-speed (4 second/2 second) master fader
- 37dB peak-responding electronic level indicators
- Line output level control with -10dBV to +4dBm range
- RCA and 1/4" input/output connectors
- Wired remote input/output ports
- Copy-out jacks
- One-touch rec/pause
- 3-digit tape counter
- Memory stop
- Auto repeat
- Timer rec/play
- Pitch control
- 19" EIA standard rackmount package
- Headphone output with independent level control

The MR-2 proves that it's possible to design a budget-priced professional deck with sound quality that stands above the crowd. If you operate a professional or semi-professional recording studio, real-time tape-duplication facility, or need an affordable top-quality professional deck for commercial-sound use, look no further. The MR-2 has been created for you. It has the professional features you need, the sound quality you demand, and it's surprisingly affordable. The secret of its remarkable performance/price ratio is a design that concentrates on the four essentials: transport, heads, electronics and quality control.

MR-2 \$595.00

NALPAK VIDEO SALES, INC.

Test Charts/Slides

Accu-Chart

Accu-Slides

Accu-Chart™ Set

Video Test Chart System for Field and Studio use includes: Color Chart, Logarithmic Reflectance Chart, Resolution Chart, Registration Chart, Linearity Chart.

ACCU-2 Set of 5 charts with cover and pouch . . . \$117.50

Individual 9" x 12" Charts

Gray Scale Chart

Basic standard for setting light response characteristics of cameras. Essential for balancing R, G and B channels in 3-tube color cameras. Chart consists of 2 sets of 9 neutral gray patches on uniform gray background. Reflectances vary from 3% to 60% according to EIA Logarithmic (2) Law. Dead black (R 0.5%) patch establishes black level.

AC-GS Gray Scale \$34.95

Color Reference Chart

A subjective reference chart for checking color rendition. Consists of three primary (Red, Green, Blue) and three secondary (Yellow, Cyan, Magenta) plus 4 gray levels. In color bar format, but not intended for quantitative use. Use to evaluate overall system color reproduction by comparing transmitter image with original chart. Also for use as a field standard; record image of chart at beginning of each tape and adjust monitor on playback for proper color rendition.

AC-CR Color Reference. \$34.95

Linearity Chart

Standard EIA "Ball Chart" for adjustment of camera and monitor linearity. Use with electronically generated grating test pattern for quantitative measurements as specified in EIA RS-170

AC-LN Linearity \$21.95

Resolution Chart

For evaluation of frequency response of video systems. Adapted from EIA standard chart, includes resolution targets for 200 to 800 TV lines in center and at four cor-

ners. Also, test objects to detect ringing and streaking. Continuous neutral gray background for shading adjustments.

AC-RS Resolution. \$21.95

Registration Chart

Similar to EIA standard chart, used primarily for registration of 3-tube color cameras. Black square grid on white background includes 200-600 line resolution wedges and circular targets for evaluation of linearity.

AC-RG Registration. \$21.95

Mini-Charts

Includes: Color Reference, Registration and Logarithmic Reflectance Chart. All charts are 4 1/2" x 6" pattern size

MCS-1 \$59.95

Accu-Slides™

Provides the same accuracy for use with Telecine set-up and alignment as the standard Accu-Chart system. Accu-Slides are available in either a positive or negative image. They are mounted in a 2" x 2" glass protected format which is supplied with approved pin registered television mounts and anti-Newton ring optical glass. The Accu-Slideset consists of the same five test patterns as the Accu-Chart set and comes in a custom designed wooden box. Accu-Slides are also available individually.

Accu-Slides

Test Slides, available as positive or negative

AS-ST Set of 5 slides complete with wooden box \$88.00

Individual Slides

AS-RG Registration \$12.00

AS-RS Resolution 12.00

AS-LN Linearity 12.00

AS-CR Color Reference. 12.00

AS-GS Gray Scale 12.00

WB-1 Wooden Box, holds total of 7 slides 43.00

All Purpose Carts

TK-150 Travel Carrier

- Large 11 1/2" x 9 1/2" steel base
- Ideal for soft luggage
- Patented "one-motion" opening and closing feature
- Double telescopic self-locking rods
- Can be pushed or pulled when loaded
- Weighs 4 1/2 lbs., supports up to 150 lbs.
- Extended height 41", collapses to 18 5/8"
- Carry-aboard feature
- High quality 4" rubber wheels
- Elastic cords permanently attached
- Wheel guard for added protection
- Handsome carry case included

TK-150 \$ 83.50
 TK-154 with extra rear wheels 107.50

TK-300 Travel Carrier

- Heavy-duty model for large loads
- Sturdy, double telescopic self-locking rods
- Large 12 1/2" x 16" steel base
- Patented "one motion" opening and closing feature
- Load can be pushed or pulled
- "Step Glide" feature for easy access over stairs and curbs
- Weighs only 12 lbs., supports up to 300 lbs.
- Extended height 49", collapses to 20 1/8"
- Fits easily under airline seat
- 6" ballbearing wheels with solid rubber tires
- Elastic cords permanently attached
- Wheel and Mud guard for added protection
- Optional zippered carrying case available

TK-300 \$ 121.75

TK-400 Travel Carrier

- Big 300 lbs. load capacity
- Can be used as a 2 or 4 wheel cart—all weight is on the wheels, no load on the arms, just push or pull
- Patented design back-support swivel-bearing caster wheels for added stability
- Sturdy 6" pneumatic rubber rim front wheels
- Sturdy, double telescopic self-locking rods
- Large 12 1/2" x 16" steel base
- Patented "one-motion" opening and closing feature
- Back-support caster wheels easy to extend and close
- "Step-Slide" feature for easy access over stairs and curbs
- Mud guards for added protection
- Weighs only 17 lbs., and supports up to 300 lbs.
- Extended height 49" collapses to 20 1/8"
- Fits easily under an airline seat
- Elastic cords permanently attached
- Optional zippered carrying case available

TK-400 w/extra rear wheels \$ 133.50
 CB-100/200 carry bag 26.25

TK-300

TK-150

TK-400

TK-500 Production/Travel Carrier

- Upper removable platform 18" x 15" expands to 18" x 33" — 70 lb. capacity
- Lower platform with adjustable tilt—12 1/2" x 16"
- Total load capacity — 300 lbs.
- Sturdy 6" pneumatic rubber rim wheels
- Patented "one-motion" opening and closing feature
- "Step-slide" feature for easy access over stairs and curbs
- Mud guard for added protection
- Locking rear wheels
- Extended height 49" — collapses to 20 1/8"
- Elastic cords permanently attached
- Includes additional equipment straps
- Shipping weight fully assembled — 26 lbs.

Across town or across country the TK-500 will handle that special production job with ease.

Easily removable upper platform allows the TK-500 to be converted to a 300 lb. capacity luggage carrier and yet this beauty folds easily to fit under an airline seat.

TK-500 w/removable shelf \$248.00
 AC-500 accessory basket 34.50

Tripak™ Tubular Cases

- Tubular case design for tripods, light stands, gels, seamless paper
- Rotationally molded from cross-linkable polyethylene for extra corner strength
- Strong and durable for long term service
- Octagonal shape to prevent roll-around
- Each size provides over 5" of additional telescoping cap height
- Foam in base and lid to cushion against shock
- Shock, abrasion, dent, weather and temperature resistant
- Twin handles for instant balancing
- Custom colors, logos and/or interiors available
- Standard color: black

Standing seven strong the NVS line of rotationally molded tripod cases offers a model for every application from tripods to light stands and anything in between. Three heights in the 11" diameter from 23" to 49". Four heights in the 9" diameter from 26" to 52".

The handy 9" diameter 36" tall case which NVS refers to as "This one stands alone" is ideally suited for shipping light stands, gobo arms, etc. Constructed to the same specifications as its big and little brothers, the TP-0936 has twin molded handles, telescoping cap, improved buckle and webbed strap.

Model	Diameter	Interior Height	Price
TP-0926/TP-1B	9"	26"-31"	\$215.00
TP-0936	9"	36"-41"	220.00
TP-0942/TP-1R	9"	42"-47"	225.00
TP-0947/TP-1S	9"	47"-52"	230.00
TP-1123/TP-2B	11"	23"-28"	235.00
TP-1139/TP-2R	11"	39"-44"	250.00
TP-1144	11"	44"-49"	260.00

NEC AMERICA, INC.

Color Camera

SP-3A CCD COLOR CAMERA

- Horizontal Resolution/450 lines
- 2/3" CCD Solid-State Image Sensor
- Signal-to-noise more than 58dB
- NTSC Color Signal
- f/1.4 Prism Optics
- -20°C to +45°C Operating Temperature
- Head Weighs 6.71 lbs.
- Optional Built-In VTR

The SP-3A CCD color camera is designed to be used as an ENG stand-alone camera as well as in combined camera/recorder systems using on-board component VTRs for ENG applications. To enhance the versatility of the SP-3A camera, camera adaptor attachments are available to interface with external conventional portable VTRs, remote control unit and newly developed triax system.

The SP-1AD NTSC adaptor is used to generate composite video signal output for conventional VTR recording. Since the SP-1AD NTSC adaptor contains genlock and I/Q type encoder modules, it generates a burst signal and color frame pulse which meet both RS-170A standard as well as NTSC color signal requirements.

The SP-3AD II camera adaptor is used for EFP and studio camera applications in combination with RCU-3 remote control unit and 5" view finder. Gain, pedestal, iris, auto white/black, SC and horizontal phase, etc. can be controlled by the RCU-3 through a 41-pin camera cable. For chroma key and image processing applications, either R/G/B or Y/R-Y/B-Y component signals can be obtained from the RCU-3.

The SP-TRX triax adaptor extends EFP and field sports applications for the SP-3A camera in combination with TCU-3 triax control unit. In addition to the triax cable transmission, coaxial cable transmission, microwave link transmission and modem link transmission are available.

100% Solid-State

Instead of conventional pickup tubes, the SP-3A uses the Charge Coupled Device. By using three CCD chips, broadcast-quality output is obtained in an extremely reliable and lightweight system.

Free from Burn-In

The SP-3A is free from the burn-in, sticking and comet-tails which occur in conventional pickup tube cameras when high-intensity objects are viewed. CCD chips incorporated in the SP-3A are inherently resistant to blooming and smear.

550 Lines Resolution

Two CCD chips are used for the Green channel to provide high resolution and to reduce aliasing.

Stable and Accurate Registration

CCD chips are stable in operation. Disturbances like electrical circuit deviations or the earth's magnetism that can affect registration or cause geometric distortion in conventional tube cameras are totally ignored by the SP-3A.

Minimization of Aliasing Noise

A low-pass filter is inserted into the optical system to reduce "aliasing noise" without affecting resolution.

Image Sharpener Circuit

2H delay lines are built into a special image sharpener circuit to improve vertical resolution.

Optional Built-In VTR

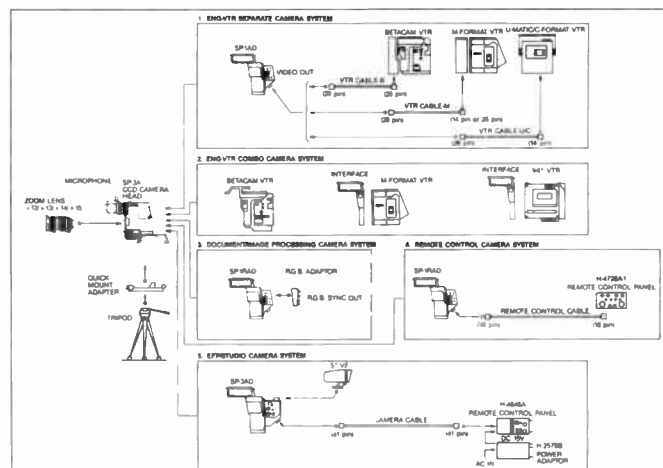

To provide the greatest ENG flexibility, an optional Beta or M2-format 1/2" or 8mm VTR can be attached to the back of the camera, creating a lightweight durable combined system.

Built-in Electronic Shutter

The SP3-A Three-Chip CCD camera has an Electronic Shutter featuring sixteen step-variable electronic-shutter speeds — from 1/60th through 1/2000th of a second. In contradistinction to mechanical shutters, CCD electronic shutter characteristics guarantee reliable, dependable and stable performance that is free from mechanical failure.

The SP-3A camera is ideally suited for a host of applications, including television coverage of competition sports, aerial shows and other fast-moving events, as well as graphics and scientific applications.

B-895

NEC AMERICA, INC.**Digital Video Effects Systems****DVE System 100 Digital Video Effects System**

- Infinite compression • Compression split • 4, 9, 16 multi-freeze
- Automatic flip & tumble • Continuous posterization • Negative chrominance
- Forced monochrome • Variable cropping • Utility switcher control • 2 system control • Learn mode • Smooth moves • Frame freeze • Multi-freeze • Programming control • Battery back-up for memory
- Variable event transition time • 3 temporary memories
- Key tracking • Variable background • RS-170A specifications • Fine adjustment control • Expansion • Slide/slide split • Pushbutton pattern selection • Continuous mosaic tile • Negative luminance • Negative picture • Field tear • Variable aspect ratio • Built-in combiner
- A/B switching • Linear moves • Field freeze • Incremental freeze
- Random multi-freeze • 100 event on-board memory • 10 separate programs • Global program transition time • Off-line micro-floppy storage • Variable border • Digital shaft encoder • Low price • Image inversion control

The automatically centering joystick gives you accurate control over image positioning, aspect ratio, degree and position of image cropping, key gain and much more.

Use it to control saturation and hue of the on-board dynamic background and border generators. You can discretely control the Y & C output data to create posterization/solarization effects.

You have 100% digital control over compression size and continuous mosaic. The digital processing involved eliminates "cogging" or "stepping" movements. Your transitions will be very smooth.

Choose the major types of effects: compression, slides, mosaic/tile, splits, expansion, multi-freeze, tearing, and the optional chroma key tracking. In the multi-freeze mode, the DVE System 100 captures, freezes and displays 4, 9, or 16 images on a single screen. You may use the pattern select keyboard to control the pattern of those images appearing on the screen.

Each DVE System 100 can accept two video inputs so that if channel A is your normal source, channel B would automatically appear on the reverse side of the image as you manipulate it through flip/tumble mode.

The DVE System 100 features a built-in digital combiner so you can control two systems by a single control panel. When a second DVE System 100 is interconnected, these two buttons give you to activate the second unit and determine its priority on the screen (whether it is foreground or background).

If you have two DVE System 100s interconnected and being controlled by a single control panel, the CH 1 and CH 2 buttons determine which system is being manipulated. The systems may be used separately or simultaneously as you choose.

An exclusive feature of the DVE-100 is the learn mode which allows you to program the on-board memory by manipulating the image through an external device such as your production switcher. The DVE System 100 samples the incoming signal at a rate you select and stores the data on image manipulation into its memory. You can then edit the effects, play it back or store it on micro-floppy disk as you choose.

16 preset pattern effects are immediately available for live presentations or for use in a programmed sequence. This area also is used as the selection sequence touch-pad for multi-freeze effects in combinations of 4, 9 and 16 images.

Every effect parameter on the control panel can be loaded into the on-board memory registers. More than 100 events can be stored in the CMOS RAM registers. These events can be combined into up to 10 separate programs stored. You have complete control over the event-to-event transition time, duration of incremental freeze, the number of automatic flips or tumbles as well as total, or global, program transition time. The memory is battery protected so your programs are safe even when the power is off. Additionally, the on-board memory can be saved on micro-floppy disks for long term storage and to be loaded into the system in the future.

**DVE 10**

In addition to the programmable memory, you have three event registers (scratch pads) available. Each takes a "snapshot" of the screen when pushed, and when pushed again, will restore the original screen. This can be extremely useful in programming precisely repeating effects.

The 3.5" micro-floppy disk used with the DVE System 100 has 19 sectors, each of which can hold the full 100 + events of the on-board memory. You control which sector will be used to store events, or which sector will be loaded into the DVE System 100 for editing or playback. The capability and ease of operation of this feature gives you quick access to any project, sequence, spot, commercial, open, close, and so on, that you are producing.

If for any reason one of the two fans used to cool the main shelf of the DVE System 100 stops, this alarm will alert you so that you can prevent equipment damage due to overheating.

DVE System 10 Digital Video Effects System

The DVE System 10 offers all of the features of the DVE System 100 plus 3-dimensional control and perspective. The system allows you to determine the angle of rotation about an axis. You place the center of rotation practically anywhere you wish. The size of the image, the position of the image on any of the three axes and the amount of perspective to be added to the image are continuously adjustable and completely under your control. You can even create 3 or 6 sided cubes at the push of a single button and then manipulate the cube as you wish. The DVE System 10 also has the ability to output a command word during A/B switchover that can signal your switcher to switch video inputs so that you can use a number of video inputs during a single edit. This capability can really save you time and effort. Another built-in function of the system is external key masking so you can use a key signal to mask the incoming video into the DVE System 10.

Compression Effects Package Upgrade for DVE System 10

Optional hardware/software upgrade package for DVE System 10 enhances the capabilities of NEC's digital effects generator to create a whole new range of compression effects normally associated with opticals produced on film, rather than video.

Consists of a hardware modification, adding one new board and modifying other existing system components. Once modified, the upgraded hardware is activated by new software (Version 4.0 of the operating system). Just like the previous Transition Effects Package option, the Compression Effects are essentially two-dimensional effects that provide a 3-D simulation.

Activated through the "soft" keys select menu, the software provides three new capabilities that involve the ability to manipulate and move each individual line of video within the image area.

FS-18/FS-19 Frame Synchronizers

- **TBC Optional** TBC for both direct and heterodyne VTRs. Being able to correct either type of VTR with your frame synchronizer gives you unlimited flexibility. The TBC also includes automatic input detection circuitry to recognize either a direct or heterodyne VTR and properly compensate. No manual switching is needed
- **Freeze Optional** freeze function uses a three line digital comb filter for better frequency response and no loss of picture resolution
- **Four-Field Memory Optional** expanded memory lets the synchronizer process four fields simultaneously. The entire four field signal is processed at one time to prevent 140ns picture shifting. This is especially important when both input and reference video meet RS-170A specifications
- **Data Rotation** Built-in data rotation and memory analyzer allow for quick diagnosis of suspected problems. By substituting the most important information in the memory for the least important, the data rotation feature provides protection from memory failure. Some signal degradation may occur but not complete signal loss
- **Separated sync output** to your external input video switcher for vertical blanking switching
- For processing amplifier and mode switching a single coaxial remote control cable is used, thus simplifying installation. This is valuable when the FS-18 will be used in temporary or remote locations
- Four times subcarrier sampling and 8-bit (FS-18), 10-bit (FS-19) quantizing to provide a totally transparent output signal
- Built-in interface with AS-18 Audio Lip Synchronizer

Small and lightweight, they have an optional time base corrector so they are suitable for use in remote locations or in a mobile studio truck.

Their design allows you to purchase only the features you require. Options for time base correction, freeze frame, and four field color processing are available as simple, plug-in boards.

Video Output 1:	1V p-p composite or 0.7V p-p non-composite
Video Output 2:	1V p-p composite or 0.7V p-p non-composite
Separated Sync Output:	4V p-p
Advanced Sync Output:	4V p-p
SC Feed Back Output:	2V p-p
Mechanical	
Dimensions:	5.25" H x 19" W x 19" D
Weight:	44 lbs. (FS-18), 33 lbs. (FS-19)
Power Requirements:	90 ~ 132VAC, 170VA (with full options)

NEC

FS-19

AS-18 Digital Audio Synchronizer

- 2 audio channels, third audio channel capability is optional
- Audio delay time up to a maximum of one second per channel. With optional memory, delay can be increased to a maximum of four seconds per channel
- Can be used with any frame synchronizer, but when combined with the FS-18 no fine offset adjustment is required
- With optional controls up to three audio channels can be controlled independently
- In non-video applications such as radio broadcast programming the AS-18 can be used as an audio delay line with a delay capability of up to a maximum of 12 seconds. This can be useful for monitoring and modifying (spot erasing) live radio broadcasts

The AS-18 is designed to give complete flexibility in matching audio to video, or in providing audio delay. The standard model can delay the audio signal up to one second; with optional memory, the delay time is as long as four seconds. This AS-18 is a perfect complement to the FS-19 Frame Synchronizer since, when combined with this unit, it can provide automatic compensation for audio-to-video delay without the necessity for fine offset adjustment. But that's just the beginning; in fact, the AS-18 is ideal for virtually any audio delay or audio timing application.

Options

- Audio-2 card for third audio channel
- Additional memory to extend the maximum delay time of up to three channels from one second to four seconds
- Independent control of three audio channels
- Remote control panel

Specifications

Sampling Frequency:	48kHz
Quantizing:	16-bits
Audio Input Level: (Channels 1-3)	-20dBm/0dBm, 10K ohms bal.
Input Video (Channels 1-3):	1V p-p loopthrough
Reference Video (Channels 1-3):	1V p-p loopthrough
Input Frame Pulse (Channels 1-3):	TTL level
Reference Frame Pulse:	TTL level
Audio Output Level (Channels 1-3):	-20dBm/0dBm 600 ohms bal.
Frequency Response:	+0.5, -1.0dB, 20Hz ~ 20kHz
Dynamic Range:	> 90dB
Third Harmonic Distortion:	Below 0.05%
Delay Time:	Max. 1 sec. (standard) Max. 4 sec. (optional)
Delay Step:	Min. 1ms
Power Requirements:	90 ~ 132VAC {110VA}
Dimensions:	3.5" H x 19.0" W x 19.7" D
Weight:	Approx. 33 lbs

NEC AMERICA, INC.

Microwave Link

TVL-800-6F TRANSMITTER

TVL-800 SERIES ENG MICROWAVE LINK

The TVL-800 Series Microwave Link is unmatched for size, weight, power and noise characteristics. It makes use of NEC's decade-long experience in solid-state television equipment manufacture. It features advanced electronic components such as C-MOS and FET devices, and simplified circuit designs to reduce power requirements and enhance the performance.

FEATURES

- Compact size and lightweight
- High-power output: 1-watt standard, optional 5-watt power amplifier
- Frequency stability and easy selection of more than ten switchable channels in the 7 GHz band
- Double heterodyne method of modulation employs 800MHz band SAW oscillator at the 1st local stage of the transmitter and the 2nd local stage of the receiver
- Simplified circuitry employing C-MOS and FET devices for lower power consumption
- Adaptable for use as a 70MHz IF transmission system
- 2 audio channels, standard

SPECIFICATIONS

Frequency Range	6,875 ~ 7,125MHz (10 Basic channels)
Frequency Stability	$\pm 5 \times 10^{-5}$
Transmitter Output Power	+ 30dBm nominal
Receiver	
Noise Figure	4.5dB
IF	70MHz
Video (Per Hop, NTSC/PAL Color TV, Emphasis CCIR Weighting, -40dBm Receive Carrier)	
Level	1V p-p/75 ohms
Signal-to-Noise Ratio (Thermal)	10kHz ~ 5.0MHz, min. 60dB (p-p/RMS)
Signal-to-Noise Ratio (Hum)	50dB (p-p/p-p)
Frequency Response	50Hz ~ 5.0MHz, within ± 0.5 dB
Differential Gain	10-50-90% APL, less than 1%
Differential Phase	10-50-90% APL, less than 1°

TVL-800-6F RECEIVER

Audio

Transmitter Input	0dBm, 600 ohms, balanced (Note 1)

Receiver Output	0dBm, 600 ohms, balanced (Note 1)
System Frequency Response	50Hz ~ 12kHz, within ± 0.5 dB
Distortion	50Hz ~ 12kHz, less than 1%
Signal-to-Noise Ratio	Min. 60dB

Power Requirements

Input Range	115VAC ± 10 + or 230V ± 10 % (with AC power pack) + 13.8V ± 15 %
Battery	AC approx. 20VA DC approx. 18W
Power consumption	

Connectors

Video	BNC Type
Audio	XLR Type
IF	BNC Type

Antenna

Gain/VSWR	
0.3m	Min. 22dB/VSWR ≤ 1.5
0.5m	Min. 26.5dB/VSWR ≤ 2

Ambient Conditions

Temperature	
Specification	-10°C ~ +45°C
Operating	-20°C ~ +50°C
Relative Humidity	Up to 95% in normal temperature range

Physical Data

Dimensions	
Transmitter/Receiver	4.8"W x 3.6"H x 9.3"D (122 x 92 x 236mm)
Weight	
Transmitter	Approx. 1.8kg
Receiver	Approx. 2.2kg

Notes:

- 1) Other levels are applicable.
- 2) This subcarrier is used for 2-channel audio.

FREQUENCY AND CHANNEL NUMBER

TVL-800-6F		
6875 ~ 7125MHz	10CH	FCC Standard

PCU-910H 10kW UHF TV TRANSMITTER

PCN-1435AH/1 35kW VHF TV TRANSMITTER

PCU-900 SERIES UHF TELEVISION TRANSMITTERS

PCU-900 series provides high-performance exciter, wide-band klystron power amplifier, high reliability, stability with power ranges of up to 120kW and frequency coverage of 470 to 860MHz. Also, it meets all FCC and CCIR standards and provides excellent color transmission in either NTSC, PAL or SECAM standard.

With the recent hybrid IC technology and developed circuit techniques, the quantity of parts has been considerably reduced, resulting in longer MTBF.

Transmitter output deviation can be limited by a pedestal AGC circuit in which the output is sampled during blanking periods, detected to obtain the blanking level, fed back to the exciter, then compared with the reference voltage for controlling the exciter output. The transmitter maintains constant output.

Local frequency long term stability of 0.5×10^{-4} per year is available by the frequency synthesizer which is locked in the internal 10MHz crystal oscillator frequency. The synthesizer enables channel frequency to be changed easily.

SAW vestigial sideband filter uses LiTaO₃ (Lithium Tantalate) as the substrate, with which temperature stability of -18 ppm/ C can be obtained without oven.

Efficiency of the klystrons is typically 45% obtained by virtue of a unique linearity correcting circuit at the IF stage. These klystrons have frequency coverage of 470 to 860MHz.

Beam current of visual klystron is controlled by applying different voltages to the modulating anode or modulation electrode during sync portion and picture portion to reduce the effective power consumption on the collector.

The high-efficiency klystrons in cooperation with beam control greatly reduces the power consumption. Also, the type of klystrons used are readily available for rapid replacement if necessary.

The equipment has the provision to allow for dual sound broadcasting system. Design schedule of the transmitter is in conformity with IEC Publication No. 215.

PCU-900 SERIES

Type of Transmitter	Output Power (kw)		Power Consumption (kw)		Klystron	W (in)	D (in)	H (in)
	Visual	Aural	w/o pulser	with pulser				
PCU-910H	10	1	34~37	29~31	YK1223/K3270	150.0	47.2	78.7
PCU-920H	20	2	60~68	49~56	YK1233/K3271	150.0	47.2	78.7
PCU-930H	30	3	84~95	68~76	YK1233/K3271	185.0	47.2	78.7
PCU-960H	60	6	166~186	132~148	YK1265	244.1	47.2	78.7
PCU-912KS	120	12	321~360	254~284	YK1265	268.9	118.1	78.7

NOTE: These values are approximate figures.
These values depend on channel and system, not including external cooling equipment.

PCN-1400 SERIES VHF TELEVISION TRANSMITTERS

The PCN-1400 series provides high-performance exciter, high-power transistor power amplifier, high reliability, stability with power ranges of 1 to 35kW, and VHF channel frequency coverage from band I to band III. Also, it meets all FCC and CCIR standards and provides excellent color transmission in either NTSC, PAL or SECAM standard.

NEC's high-power and high-gain transistors with a minimum number of stages provide an output of 600 watts and cover the whole frequency range of whole band III.

Self protection is provided against thermal runaway of transistors caused by over input, instantaneous output short circuit, or excess temperature rise of cabinet.

Designed grid vacuum tube power amplifier uses a computer-aided design printed circuit board to assure broadband frequency coverage without any tuning.

Only one RF coaxial output provides simple equipment configuration.

PCN-1400 SERIES

NEOTEK CORP.

Recording Console

Elite Multitrack Recording Console

The elite offers contemporary multipurpose studios flexible architecture, a large number of input channels, bandwidth and isolation for digitally synthesized tracks, and noise and distortion superior to digital recorders. Signal flow in the elite is based on two separate audio paths within each input module which may be operated independently or in concert, allowing the operator to modify the console architecture for specific applications. These paths have independently selectable inputs and outputs and the filters, insert points, parametric equalizers, and auxiliary sends can be assigned to either path. The result is easily controlled power and flexibility which only the elite's dual channel approach can provide. The comprehensive master section provides logic mute groups, four-way solo functions, and complete monitoring, metering and slating facilities. The elite achieves superlative sonic performance with transformerless design and a new generation of non-op amp hybrid circuits.

The elite is available with frame widths of 28, 32, 36, 40, 48, 56 and 64 input module positions. Custom and partially filled frames are available. Metered Stereo Input Modules may be substituted for standard mike/line Input Modules.

Specifications

Bandwidth: 10Hz to 25kHz, full level .2dB
Distortion: Mike or line input to bus output .01%
Output: Balanced 26dBm
Noise: 1 channel to stereo master, 31 muted, fader-up -90dBu
 24 channels to stereo master 8 muted, faders up -82dBu

Crosstalk: Stereo L/R through mix pan -95dB
 Between multitrack buses -100dB
 Between fader and monitor channels -90dB
 To auxiliary buses -90dB
 Mute to stereo mix -95dB

Physical Dimensions: Height at meter bridge 40.8"
 Height at arm rest 29.0"
 Front to rear 43.5"
 Width, 32 input frame 80.3"
 Width, 40 input frame 94.5"
 Width, 48 input frame 110.3"
 Width, 56 input frame 128.0"
 Width, 64 input frame 143.2"

Complete console system includes:

- Oak hardwood frame with leg set, and integral left-side patch bay
- 28 forty-segment peak/VU high resolution metering system
- 1 pair moving coil VU metering system
- Input modules, effects return module, auxiliary/cue master module, stereo master module, and monitor/communications module
- ELCO 8016 multipin I/O connection system
- Rackmount power supply
- Installation and operation manuals
- Spare parts kit including service fixtures

1. Other configurations are available (i.e. frame sizes, woodwork, auto-switchover power, etc.) Contact your dealer for pricing.
2. Automation and synchronizer interfaces are available on request.
3. Crating and freight charges are additional.

NEOTEK CORP.**Recording Console/Controller****elan Multitrack Recording Console**

The elan provides contemporary multipurpose recording studios with flexible signal flow architecture, bandwidth and isolation performance to handle multiple synthesizer tracks, and noise and distortion superior to digital recorders. Input modules feature microphone and line level inputs, four-band sweep equalizer, six auxiliary sends, assignment to 24 multitrack buses, and a high resolution bargraph meter. The elan affords a second input through each module, doubling the console's capacity to provide 72 inputs and 30 auxiliary buses in a 6' wide frame. The console's performance, flexibility, and capacity make it perfect for complex modern recording and MIDI virtual track mixdown.

The elan is available in frame formats accommodating 28 or 36 input module positions. Standard consoles feature gold ELCO multipin I/O connectors, leg set, and comprehensive patch bay using metal frame Bantam jacks. Fader module options provide logic mute groups with in-place solo, Neotek/JL Cooper MIDI mute automation, or factory installed Audio Kinetics or Digital Creations automation.

Specifications

Bandwidth:	20Hz to 20kHz, full level \pm .2dB
Distortion:	Mike or line input to stereo output .01%
Noise:	1 channel to stereo master, 27 muted -88dBu 24 channels to stereo master, 4 muted -80dBu
Crosstalk:	Stereo L/R through channel pan -94dB Between multitrack buses -96dB To auxiliary buses -92dB Mute to stereo mix -94dB

Physical Dimensions:

Height at meter bridge 39.3"
Height at arm rest 29.0"
Front to rear 38.8"
Width, 28 input frame 64.3"
Width, 36 input frame 76.9"

Complete Console System Includes:

- Oak hardwood frame with leg set, and integral left-side patch bay
- 26 Peak/VU bargraph meters • Input modules, fader modules and master/monitor module • ELCO 8016 multipin I/O connection system with mating connectors • Rackmount power supply • Installation and operation manuals • Spare parts kit and service fixtures

elan 228 console system, 28 input modules/frame \$31,150.00
elan 236 console system, 36 input modules/frame \$37,600.00

Options

Mono Penny & Giles fader substituted for standard fader . . .	\$ 75.00
Stereo Penny & Giles fader substituted for standard stereo fader	210.00
Unwired tape machine remote panel in fader bay with 5 illuminated switches	275.00
Wired tape machine remote panel in fader bay with 5 illuminated switches	350.00
Timer/auxiliary gear remote control panel in fader bay with 6 switches	130.00
Remove input module and replace with blank panels	480.00
Additional patchbay for aux. gear	845.00

Spares:

Power supply	1,000.00
ELCO 8016 120-pin mating connector and gold pins	55.00

**MIDI Direct Microprocessor Controller**

Automation of a console's mute functions provides nearly all the benefits of traditional fader automation. When the comprehensive logic-controlled mute systems of Neotek consoles are combined with MIDI Direct, automation of mutes on the MIDI bus becomes simple, powerful, and affordable. Studios are now able to integrate their MIDI based synthesizer and editing systems with fully professional consoles that provide exceptional flexibility and sonic performance.

MIDI Direct provides read, write, and update of the mute functions on elite and elan consoles; this includes the mute group meters. The data for these commands is sent to the MIDI bus and is stored and replayed by any standard sequencer. The data rate is very low, so even the least expensive sequencer can store more than an album's worth of data in its random access memory. MIDI Direct makes your MIDI system think your console is a powerful musical instrument.

Complete MIDI System Includes:

- MIDI Direct microprocessor controller • Control panel with MIDI In/Out jacks • Installation and operation manuals

28 Input MIDI Direct system	\$2,650.00
32 Input MIDI Direct system	2,850.00
36 Input MIDI Direct system	3,050.00
40 Input MIDI Direct system	3,250.00
48 Input MIDI Direct system	3,650.00
56 Input MIDI Direct system	4,050.00
64 Input MIDI Direct system	4,450.00

Prices above are for systems installed in consoles prior to shipment.

All components mount entirely within the console.

For field retrofit of MIDI Direct, please contact the factory for details.

1. Other options are available (i.e.: flight case, woodwork, auto-switchover power, etc.) Contact your dealer for pricing.
2. Direct Digital Interface for isolated remote logic control off mutes available.
3. Crating and freight charges are additional.

Essence Series Multitrack Recording Console

The Essence series of Neotek consoles was designed specifically to increase the quality and productivity of multitrack effects layout, ADR, and Foley recording. Its audio performance and flexibility also suit it for uses in broadcast-oriented post production applications and in synthesizer sampling and assembly.

A group of 16, 24 or 32 monitor modules provide for monitoring with reference to the multitrack tape machine or an equivalent assembly of record/reproduce functions. A small number of input modules with high quality microphone preamplifiers and powerful parametric equalizers and filters handles input signals. These input modules pan to four mixing buses, the main stereo mix bus, and to another stereo bus which routes to all odd and even tracks of the multitrack recorder. A master section provides extensive monitoring, soloing, and logic control functions. The desk area in the frame includes space for a synchronizer keyboard as well as scripts and cue sheets. The system is completed by a metering section and a comprehensive patch bay.

Essence consoles directly accept various tally lines to facilitate harmonious operation with tape machines, machine synchronizers and computerized editors.

Input Module/Equalizer Functions

Essence input modules provide both microphone and line level inputs, each with wide range gain controls. The microphone preamp is a solid-state hybrid circuit which adds less than .5dB to the intrinsic noise of the microphone at its input. PAD switch makes it ideal for sources such as synthesizers and even consumer CD or R-DAT machines.

The equalizer is a powerful four-band state variable multimode parametric. It provides non-interacting peak/dip, narrow band, and shelving modes at continuously variable frequencies. Band centers from 20Hz to 20kHz are provided. The high-pass filter allows very selective removal of low frequencies which might be picked up by quality microphones and passed by the exceptionally wide bandwidth of the console. The low-pass filter allows removal of high frequency noise from older effects libraries, or adjusting the audio bandwidth for digitally recorded material.

Buses

Input modules also provide two auxiliary mix buses, each with pre/post and on/off switching. The main signal in the module is muted by a silent, ramped discrete FET circuit having very high isolation. Logic control of the mute allows assignment to three master groups, a local or ungrouped mode, a Solo Safe function for the in-place solo mode (also termed exclusive mute, or destructive solo), and control by other logic sources such as external GPI lines or an internal MIDI/SMPTE mute automation computer.

The main input module signal is routed from a 100mm linear fader and pan pot to mix buses 1, 2, 3 or 4. These are available in the patch bay, as are the direct outputs from input modules 5 and up. Input modules also assign to the main stereo Mix bus, which is typically used for monitoring and so also includes signals from the monitor modules. Each input module also pans to the Ready Bus. This bus goes, through a stereo insert in the patch bay and high current buffers, to every odd and even track of the multitrack recorder which has the Record Ready switch pressed on its corresponding monitor module.

Solo Modes

In-place solo is an exclusive mute; when this mode is enabled, all other signals into the bus will be muted except those whose Solo switches are pressed. Two master section switches enable the in-place solo action: In-Place Solo Enable/Monitors and In-Place Solo Enable/Inputs. The enabling refers to the location of the solo switch which will cause in-place solo; all monitor modules and all input modules will be affected unless they are individually switched to solo safe. If neither switch is latched, pressing a Solo switch will cause its module's pre-fader signal to be isolated in the monitoring or auxiliary mix.

Monitor Modules

The complement of monitor modules is grouped behind the input modules in a steeply inclined section of the frame. Standard Essence configurations provide 16, 24 or 32 monitor modules, reflecting the requirements of layout onto multitrack recorders. An additional monitor module can be provided as an easy means of controlling beeps.

Monitor modules have two Solo switches, allowing their signal to be soloed in two different mixes: the main stereo mix and the auxiliary foldback mixes.

The two send controls to auxiliary buses have an associated Solo switch, distinct from the module's Solo switch, which isolates soloed auxiliary sends in the auxiliary mix only. Like input modules, monitor modules are muted with a special logic controlled FET circuit. They also have assignment to the three master mute groups, a local mode, a Solo Safe function for the in-place solo mode, and may be controlled by other logic such as external GPI lines or an internal MIDI/SMPTE computer. Each monitor module has a switch and LED labeled Record Ready. When pressed, this switch arms the associated track of the multitrack recorder and applies signal from the ready bus to that track's input.

The ready bus has its own pair of high resolution Peak/VU bargraph meters, insert point in the patch bay, and high current balanced buffer amps. Essence accepts command lines directly and mutes the control room and studio speaker feeds (but not the talent headphone feed, which otherwise duplicates the studio speaker mix). The Essence allows a listen mode to be actuated automatically by a logic command line from the synchronizer or tape machine. In this mode, rewind noise from machines is automatically muted, but input modules with their Listen switch pressed are heard in the monitors as if they were soloed. An exterior logic port is provided to the listen mode so that talent on the stage can manually engage listen mode by a simple low voltage switch closure to ground.

Meter Bridge

The meter bridge area provides high-resolution LED meters which switch individually or simultaneously between peak and VU ballistics. Also in the meter bridge is a small loudspeaker. When the master section switch labeled Listen + Solo to Bridge Speaker is latched, those signals will appear in the meter bridge speaker and the control room monitor mix will then be unaffected. The Essence provides an optional overpress cue function for faders on input modules.

24 monitors, 4 input modules \$21,690.00
24 monitors, 8 input modules 25,450.00
32 monitors, 4 input modules 29,690.00
32 monitors, 8 input modules 33,450.00

GEORG NEUMANN GMBH

Professional Condenser Microphones

KMF 4mt Condenser Microphone with Remote Amplifier

The KMF 4mt Microphone consists of an amplifier unit and a miniature condenser microphone capsule with impedance converter connected by a cable.

Specifications

• Acoustical operating principle: Pressure gradient transducer • Polar pattern: Cardioid • Frequency range: 40Hz to 20kHz • Sensitivity: 14mV/Pa • Source impedance: 150 ohms • Minimum load impedance: 750 ohms • S/N ratio according to DIN 45 590 (ref. level 1 Pa): 69dB • Equivalent noise (weighted noise level according to DIN 45 590): 25dB • A-weighted equivalent loudness level due to inherent noise (IEC 179): 17dB • Power supply (P48, DIN 45 596): 48V ± 4V Phantom-powering • Current consumption: 0.9mA • Minimum operating time on batteries: 10 hours • Required cable connector: A3F Switchcraft • Weight: 20g • Dimensions: 17mm in diam., 38mm long and 21mm in diam., 132mm long

KMF 4mt matte finish \$925.00

KMR 81 Condenser Microphone

The KMR 81 is a studio condenser microphone featuring excellent directional characteristics for its relatively compact dimensions and low weight. Supplied in matte or satin finish.

Applications

• Pickup from the stage with simultaneous audience, reinforcement feed • Ideal instrument/section isolation, e.g., in orchestra or bands • Outdoors news coverage or in a noisy environment • As a handheld microphone for vocalists • On the conference podium

Specifications

• Acoustical operating principle: Pressure gradient-interference transducer • Polar pattern: Super-cardioid/lobe shaped • Frequency range: 40Hz to 18kHz • Sensitivity: 16mV/Pa • Source impedance: 150 ohms • Minimum load impedance: 750 ohms • S/N ratio according to DIN 45 590 (ref. level 1 Pa): 75dB • Equivalent noise (weighted noise level according to DIN 45 590): 19dB • A-weighted equivalent loudness level due to inherent noise (IEC 179): 12dB • Power supply (P 48, DIN 45 596): 48V ± 4V Phantom powering • Current consumption: 0.8mA • Minimum operating time on batteries: 10 hours • Required cable connector: A3F Switchcraft • Weight: 145g • Dimensions: 21mm diam., 226mm long

KMR 81 \$975.00

TLM 170 Condenser Microphone

The TLM 170 condenser microphone is the first transformerless microphone of the FET 80 series. The direct, balanced signal output was achieved through the use of an electronic circuit, while maintaining a high degree of interference freedom and low current consumption. It reduces the self-noise level of the microphone compared to similar types. Five directional characteristics may be selected: omni, wide cardioid, cardioid, hypercardioid and figure-8. Excessive output levels, caused by high sound pressure levels, may be reduced by a 10dB attenuation slide switch, while another switch rolls off frequencies below 100Hz to eliminate low frequency interference. This microphone may be operated from the usual 48V phantom powering circuits but will perform identically when operated from a 24V phantom source as well, without the need for switchover. The TLM 170 is equipped with a tiltable, elastically suspended mounting bracket, which isolates the microphone. Supplied in matte or satin finish.

Specifications

• Acoustical operating principle: Pressure gradient transducer • Polar pattern: Omni/wide angle cardioid/cardioid/hypercardioid/figure-8 • Frequency range: 40-18,000Hz • Sensitivity at 1kHz: 8mV/Pa ± 1dB • Source impedance: 100 ohms • Minimum load impedance: 750 ohms • Equivalent weighted selfnoise level: CCIR 468-1 26dB, DIN 45 405 22dB • S/N ratio according to DIN 45 590 (ref. level 1 Pa) 72dB • A-weighted equivalent loudness level due to inherent noise (ref. level 1 Pa, IEC 179, DIN 45 643) 14dB • Maximum SPL for 0.5% THD at 1kHz with pre-attenuation max. output voltage 140dB±200 Pa, 150dB±631 Pa, 1600mV • Total dynamic range of the microphone amplifier (Referred to IEC 179 weighted equivalent loudness level) 126dB • Phantom powering (P48, IEC 268-15 A, DIN 45 596) current consumption 48V ± 4V 2mA • Or phantom powering (P 24, IEC 268-15 A, DIN 45 596) current consumption 24V ± 4V 4mA • Required cable connector: A 3 F • Weight: 22 oz. (625g) • Dimensions: 2.4" (60mm in diam) 6" long (152mm)

TLM 170 \$1750.00

RSM 190S Condenser Stereo Microphone System

Stereo Shotgun condenser microphone system combines hypercardioid capsule with a short interference tube and a figure 8 capsule at right angles. MTX 190 active matrix amplifier provides either M-S or X-Y output and remotely switchable directional characteristics includes WSR 30 foam wind screen, KT 3 interconnect cable and AC 20 adaptor cable; supplied in matte finish and packaged in an aluminum carrying case.

Specifications

• Acoustical operating principle: Middle—pressure gradient interference transducer, Side—Pressure gradient transducer • Polar pattern: hyper-cardioid figure-8 • Frequency range: 40Hz-18kHz • Sensitivity, at 1kHz: 30mV/PA, ± 1dB • Side-signal, adjustable: -9, -6, -3, 0, +3, +6dB • Source impedance: 50 ohm • Minimum load impedance: 1000 ohm • Max SPL for 0.5% THD at 1kHz: 132dB, +79PA • Max. output: 2450mV • Power supply, P48, DIN 45 596: 48V, ± 4V • Current consumption: 2 x 1.8mA • Required cable connectors: 2 x (3AF) Switchcraft • Weight, RSM 190: 270g • Dimensions, RSM 190: Ø 30mm x 212mm • Dimensions, MTX 190: 145 x 80 x 37mm • Dimensions, carrying case: 480 x 380 x 140mm
1PA = 10 µBAR
0dB = 20µPa

RSM 190S \$2445.00

GEORG NEUMANN GMBH

Professional Condenser Microphones

KMR 82 Condenser Microphone

The KMR 82 is highly overload-proof and has a remarkably low noise level. Its current consumption of 0.7mA, its light weight of 250g and its insensitivity to wind noise and handling noise make it also ideally suited for on-the-spot reporting. For outdoor use an additional protection from wind is recommendable. For this purpose an expanded polyurethane windscreens WS 82 is available, which doubles as soft padding when the microphone is in its leather carrying case (the WS 82 and the leather carrying case are standard accessories of the microphone).

Specifications

- A-weighted equivalent loudness level due to inherent noise (IEC 179): 12dB • Max. SPL for 0.5% THD at 1kHz: 128dB • Max. output: 1050mV • Power supply (P 48, DIN 45 596): 48V ± 4V phantom powering • Current consumption: 0.7mA • Minimum operating time on batteries: 10 hours • Required cable connector: A3F Switchcraft • Weight: 250g • Dimensions: 395mm long, 21mm in diameter • Acoustical operating principle: Pressure gradient-interference transducer • Polar pattern: Lobe shaped (shotgun) • Frequency range: 40Hz-20kHz • Sensitivity: 21mV/Pa • Source impedance: 150 ohm • Minimum load impedance: 1000 ohm • S/N ratio according to DIN 45 590 (ref. level 1Pa): 75dB • Equivalent noise (weighted noise level according to DIN 45 590): 19dB

KMR 82\$1080.00

KMR 82

KMS 84

U 89

U 87Ai

KMS 84 Condenser Microphone

The KMS 84 soloist condenser microphone. An acoustical filter in front of the condenser capsule and the use of an overload-proof operational amplifier prevent overloads caused by the sub-audio parts of sibilants and explosives. At the same time, the individual speech characteristics of the vocalist are transmitted with the brightness typical of condenser microphones.

Specifications

- Polar pattern: Cardioid • Frequency range: 40-18,000Hz • Sensitivity: 5mV/Pa ± 1dB • Source impedance: 150 ohms • Minimum load impedance: 1000 ohms • S/N ratio according to DIN 45 590 (ref. level 1 Pa): 69dB • Max. SPL for 0.5% THD at 1kHz: 138dB • Power supply (P48, DIN 45 596): Phantom powering

KMS 84\$1140.00

U 89 Condenser Microphone

The U 89 microphone, similar in shape but smaller than the U 87 is a studio microphone with switchable directional patterns. Its grille houses dual-membrane capsule with a particularly linear frequency response for all polar patterns. In order to protect the capsule from mechanical shock transmission it is elastically suspended. A rotary switch beneath the grille permits selection of one of 5 directional patterns. This makes the U 89 highly adaptable to both large instruments and wide sound sources and makes it suitable for distant pick-ups as well.

Specifications

- Polar pattern: Omni/wide-angle cardioid/cardioid/hyper-cardioid/figure-8 • Frequency range: 40-18,000Hz • Sensitivity: 8mV/Pa ± 1dB • Source impedance: 150 ohms • Minimum load impedance: 1000 ohms • S/N ratio according to DIN 45590 (ref. level 1 Pa): 70dB • Max. SPL for 0.5% THD at 1kHz: 134dB, with sensitivity reduction: 140dB • Power supply: 48 ± 4V • (P 48, DIN 45 596): Phantom-powering

- U 89S** w. IC 4/25 elegant swivel-ended cable.\$86.00

U 87 Ai Condenser Microphone

The U 87 Ai condenser microphone is a studio microphone with excellent pick-up characteristics, a number of special features, and a most attractive outward form. It is well suited for a wide variety of applications in recording, broadcasting, television and motion picture studios. The capsule features two polyester foil membranes which are gold vapor deposited. Beneath the grille protecting the capsule are 3 separate switches for the selection of the directional pattern, frequency response and pressure sensitivity. The microphone can therefore be especially recommended for close range use without a resulting unnaturally harsh sound.

Specifications

- Sensitivity at 1kHz — 20/28/22mV/Pa (omni/cardioid/figure-8) — ± 1dB • S/N ratio (according to 1 Pa, DIN 45590) — 72/75/73dB • Equivalent noise (DIN 45590) — 22/19/21dB • A-weighted equivalent loudness level due to inherent noise (DIN 45634, IEC 179) — 15/12/14dB • Max. SPL at 1kHz for 0.5% THD (cardioid) — 117dB 14Pa — with sensitivity reduction — 127dB 45Pa • Max. output voltage — 390mV • Power supply — (P 48, IEC 268-15A) — 0.8mA

KM 83

KM 84

KM 85

KM 84 Condenser Microphone

The KM 84 miniature microphone has a cardioid directional pattern and is outstanding because of its nearly frequency-independent directivity. Its capsule works according to the pressure-gradient transducer principle and features an acoustical delay network.

Specifications

- Polar pattern: Cardioid • Frequency range: 40-20,000Hz • Sensitivity: 10mV/Pa ± 1dB • Source impedance: 200 ohms, switchable to 150 ohms and 50 ohms • Minimum load impedance: 1000 ohms/250 ohms • S/N ratio according to DIN 45 590 (ref. level 1 Pa): 70dB • Max. SPL for 0.5% THD at 1kHz: 120dB, with sensitivity reduction: 130dB • Power supply: 48V 4V, (P 48, DIN 45 596): Phantom-powering

KM 84\$485.00

KK 83, 84, 85 Microphone Capsules

Microphone capsules for KM83, KM84, KM85 may be quickly converted to any other directional characteristic by installing the appropriate screw-in condenser capsule.

KK 83, 84, 85\$285.00

KM 83 Condenser Microphone

The KM 83 miniature condenser microphone is a pressure transducer with gold sputtered polyester membrane and omni-directional pattern. The self-resonance of its membrane lies in the high frequency domain. The frequency response of the KM 83 is linear except for a desirable slight rise at the high frequency end.

Specifications

- Polar pattern: Omni • Frequency range: 40-20,000Hz
- Sensitivity: 7mV/Pa ± 1dB • Source impedance: 200 ohms, switchable to 150 ohms and 50 ohms • Minimum load impedance: 1000 ohms/250 ohms • S/N ratio according to DIN 45 590 (ref. level 1 Pa): 67dB • Max. SPL for 0.5% THD at 1kHz: 120dB, with sensitivity reduction: 130dB • Power supply: 48V 4V, (P 48, DIN 45 596): Phantom-powering

KM 83\$485.00

KM 85 Condenser Microphone

The KM 85 miniature microphone has a cardioid directional pattern and is a special version of the KM 84 with its virtually frequency-independent directivity. In addition, the KM 85 intentionally attenuates more distant low-frequency sounds such as undesirable sound from sources nearby as well as wind noise (12dB at 50Hz), while close-up sound sources will be recorded with linear frequency response.

Specifications

- Polar pattern: Cardioid • Frequency range: 40-20,000Hz • Sensitivity: 9mV/Pa ± 1dB • Source impedance: 200 ohms, switchable to 150 ohms and 50 ohms • Minimum load impedance: 1000 ohms/250 ohms • S/N ratio according to DIN 45 590 (ref. level 1 Pa): 69dB • Max. SPL for 0.5% THD at 1kHz: 120dB, with sensitivity reduction: 130dB • Power supply: 48V ± 4V, (P 48, DIN 45 596): Phantom-powering

SM 69 fet

SM 69 fet Stereo Condenser Microphone

The SM 69 fet stereo condenser microphone is a studio microphone for high quality stereo recordings. The microphone head houses two completely separate condenser elements, mounted one above the other. The SM 69 fet also contains two completely separate microphone preamps.

The upper capsule may be rotated against the lower one through an arc of 270 degrees. The directional patterns of both systems may be selected by remote control independently of one another.

Specifications:

- Polar Pattern: Omni/cardioid/figure-8 and intermediary patterns
- Frequency range: 40-16,000Hz • Sensitivity: 19mV/Pa ± 1dB
- Source impedance: 200 ohms, switchable to 150 ohms and 50 ohms
- Minimum load impedance: 1000 ohms/250 ohms • S/N ratio according to DIN 45,590 (ref. level 1 Pa) -74dB • Max. SPL for 0.5% THD at 1kHz-123dB • Power supply (P 48, DIN 45,596): 48V ± 4V phantom powering

NOVA SYSTEMS, INC.

Time Base Correctors/ Frame Synchronizer

NOVA Series Digital Time Base Correctors

All NOVA time base correctors give you optimum performance for a wide variety of applications using 3/4" and 1/2" video tape recorders. Each of the 1 3/4" high extruded aluminum packages includes the following features:

- Presets for the front panel controls
- Digital, full color dropout compensation (DOC)
- Twenty times forward and reverse shuttle operation
- A test mode which applies a color bar signal to the video output
- Black burst output from a built-in sync generator for locking up SEG's, character generators, etc.
- Remote control capability that provides all front panel controls except power on/off and phasing controls found behind the adjusting slot. Dimensions: 3 1/2" H x 8 1/2" W x 4" D
- 8-bit, 4X subcarrier sampling for maximum transparency
- Perfect RS170A relationship regardless of reference SCH
- Digital clamp for the most stable performance
- Low power consumption for long, trouble-free operation

NOVA 620

Full Frame of Memory

Offers full frame of video storage to instantly freeze a field or frame for special effects. Time base correct even non-capstan servo type VTRs. Also includes a comb filter for maximum picture quality.

Model 100C Fluid Camera Heads

Fluid Head with 500" lb. counterbalance spring, Mitchell base with tiedown assembly, side loading or fixed platform and one 15" handle \$3985.00
 Extra Handle (5/8" x 15") 100.00
 Extended Handle (3/4" x 26") in place of 15" handle add 40.00
 Anvil "ATA" case for above (100C-094) 365.00 †

Model 100-HD Fluid Camera Heads

Fluid Head with 800 or 1000" lb. counterbalance spring, Mitchell base with tiedown side loading platform and one extendable handle \$4495.00
 Extra Handle (5/8" x 15") 100.00
 Extended Handle (3/4" x 26") in place of 15" handle add 40.00
 Anvil "ATA" case for above 365.00

Model 150B Fluid Camera Heads

Fluid Camera Head with 1000" lb. counterbalance spring, Mitchell base with tiedown assembly, side loading platform and one 15" handle \$5995.00
 Mitchell to Super Claw Ball Adaptor with tiedown 275.00
 Extra Handle (15") 100.00
 Extended Handle (3/4" x 26") in place of 15" handle add 40.00
 Anvil "ATA" case (150B-110) 460.00 †

Tripods

Model 35 Quick Release Tripod—Multi-Ball

• Multi-Ball top casting fits all fluid camera heads with 100mm ball, 150mm ball and O'Connor Claw-ball • Rated at 60 lb. capacity, the 35 Tripod is set up by simply lifting the top release ring, the feet instantly extend and lock with a slip-proof mechanism • Folds to a compact 34" and weighs approximately 7 lbs. \$550.00

Model 55M-C Tripods—Claw Ball

Claw Ball Metal Tripod Complete: (regular tripod, spreader and spike guards) \$875.00
 Claw Ball Metal Tripod only:
 Regular (24" to 60") 675.00
 Baby (16" to 24") 655.00

Model 55W-C Tripods—Claw Ball

Claw Ball Wooden Tripod Complete: (regular tripod, spreader and spike guards) \$775.00
 Claw Ball Wooden Tripod only:
 Regular (24" to 60") 575.00
 Baby (16" to 24") 565.00

Model 155M Tripods—Super Claw Ball or Mitchell

Super Claw Ball or Mitchell Metal Tripod Complete: (regular tripod, Model 54 spreader) \$1275.00
 Super Claw Ball or Mitchell Tripod only:
 Regular (36" to 65") 1095.00
 Baby (22" to 38") 1085.00

Model 155W Tripods—Super Claw Ball or Mitchell

Super Claw Ball Wooden Tripod (Please specify Super Claw Ball or Mitchell top casting)
 Regular (38" to 67") \$875.00
 Baby (22" to 38") 865.00

Model 100C

Model 55M-B, Regular and Baby

127A

127A Aeroped Pedestal

• Full floating column pedestal for small broadcast and industrial studios • Pneumatic column can support up to 120 lbs. of camera, prompter, and fluid head yet floats its 22" of travel with a very light touch on the 16" diameter column ring • 3-way selector valve located on the control panel permits quick adjustment of the column pressure for perfect balance • Self-contained air reservoir • Cast aluminum base is over 40" in diameter, for stability but can pass through a 29" wide doorway \$7995.00

Hi Hats

Model 45

Claw Ball Hi Hat (5 1/2" height) \$175.00

Model 145

Super Claw Ball Hi Hat (6" height) \$235.00

Model 53 Tripod Dolly

Tripod Dolly with 6" diameter wheels; choice of:
 Regular (43" diameter) \$1295.00
 Wide Stance (48" diameter) 1295.00

Model 54 Tripod Spreader

Spreader, internal adjustable with locking pins \$180.00

Molded Cases—For Systems and Tripods

Fits Systems 30 and 50 or Model 55 Metal (08143) \$225.00 †
 Fits Model 55 Baby (08144) 215.00
 Fits System 30 and 50, wooden (08174) 230.00 †
 Fits Model 155 Regular (08170) 250.00
 Fits Model 155 Baby (08169) 235.00

Soft Pak Systems Case

Soft carrying case for any System 30 or 50. Made of 1000 denier Cordura with foam padding, inside pockets, handles, and shoulder strap \$875.00 †

Model 51 Claw Ball/Column Adaptor

Claw Ball to Round Column Adaptor (Please specify 1 3/4", 1 7/8", or 2") \$260.00

Model 21 Video Monitor Side Mount

A Universal Side Mount Plate for mounting any monitor beside a video camera, with 2 3/8-16 screws \$185.00

† Price applies if purchased with system or tripod.

- 08112 Arri 35 ball base. 95.00
- 08073 Super claw base or Mitchell to super claw ball adaptor 65.00
- 08113 Mitchell to Arri 35 adaptor 95.00

ORBAN ASSOCIATES, INC.

TV Stereo Generators/Cards

8185A

8185A Television Stereo Generator

All the features of the original 8182A/SG plus:

- Digital baseband encoder
- Works with any audio processor
- Easier to install and operate
- Built-in Bessel null calibration tone
- Improved built-in peak-indicating meter for input, circuit, and output levels
- Better protection from aliasing

- Group delay equalization of low-pass filters to minimize overshoots
- Improved subchannel noise reduction encoder

The 8185A second-generation Stereo Generator improves on the 8182A/SG's performance, and adds several features designed to make installation, operation, and maintenance more convenient. The 8185A will work with any audio processor, not just with the Orban 8182A as was the case with the 8182A/SG.

The earlier 8182A/SG far exceeds BTSC requirements, delivers unimpeachable subjective audio quality, and uses high-performance low-pass filters to achieve excellent high-frequency response and the industry's best aliasing rejection. The 8185A Stereo Generator adds a digital baseband encoder, group equalization, and upgraded noise reduction circuitry for better overall performance and better measured specifications.

8185A includes group-delay corrected low-pass filters, dbx noise reduction encoder, Hadamard Transform Stereo Baseband Generator, Bessel null set-up tone, monitoring circuit with dbx noise reduction decoder, connection for separate SAP Generator, slots for optional 8185A/PRO Channel Generator plug-in cards. 115/230V, 50/60Hz. **\$6295.00**

8182A

8182A/SAP Optimod TV SAP Generator

8182A/SAP is a high-performance audio processor and BTSC-standard Second Audio Program Generator for TV multi-channel sound. Orban's generator was designed from the ground up for SAP—it's not a rehash of an FM SCA generator. Accordingly, it includes the built-in audio quality appropriate to the first-class broadcast service that SAP was intended to be.

The audio processing in the 8182A/SAP is essentially a single channel of Optimod TV processing, but with 10kHz band limiting. This processing provides full interband-referenced multi-band compression to prevent bass energy from modulating the midrange, and a CBS Automatic Loudness Controller.

- Meets all BTSC standards for SAP generators
- Includes Orban's optimization of CBS Automatic Loudness Controller
- Embeds Orban's patented distortion-canceled clipper and frequency-contoured side-chain overshoot compensator within the required dbx noise reduction encoder to achieve very efficient peak control, superior occupied bandwidth control, and better signal-to-noise ratio
- Output can drive 75 ohms, allowing stand-alone use or with Orban 8182A/SG Stereo Generator
- Comprehensive metering
- Full remote control of SAP on/off and Loudness Controller on/off
- Split configuration available using 8182A/ST Studio Chassis Accessory, to make most operating controls available at the studio, and to protect STL and maximize signal-to-noise ratio

8182A/SAP **\$4995.00**
ACC-021 dbx Monitor Card **.595.00**

8182A/PRO and 8185A/PRO Channel Generator Cards

The PRO Channel Generator Cards plug into the 8182A/SG or 8185A TV Stereo Generator chassis to generate the PRO Channel signal for communications or data.

One card provides audio and data signal processing and bandpass filtering, while the other card accurately generates the 102kHz subcarrier.

- Switchable speech or data processing circuitry
- 7th order Cauer phase-corrected 3kHz lowpass filter prevents interference to other parts of the baseband
- Speech processing carefully tailored for maximum intelligibility, and highest RMS modulation to cut through noise. Incorporates

compression, frequency contouring network, BTSC-standard pre-emphasis, and the patented Orban Clipper/Overshoot Corrector System

- Data processing mode offers flat frequency and phase response to 3kHz to prevent inter-symbol interference while protecting the baseband from interference. Usable for high-band FSK
- Remote control of subcarrier on/off
- LED to indicate 100% modulation (3kHz deviation) for easy alignment of data drive level. In speech mode, deviation is automatically limited to 3kHz by compression clipping and overshoot compensation circuitry

8182A/PRO **\$995.00**
8185/PRO **.995.00**

ORBAN ASSOCIATES, INC.

Broadcast Audio Processing Systems

OPTIMOD-AM

9100B/1 Optimod-AM Audio Processing System (Mono)

Complete audio processing for AM broadcast. Includes broadband AGC, NRSC-standard and alternative pre-emphasis, six-band limiter with distortion-canceled clipper, switchable NRSC 10kHz filter, jumperable 5kHz low-pass filter, transmitter equalizer for two transmitters day/night. One ACC-023 NRSC Monitor Rolloff Filter supplied. Field convertible to stereo. 115V/230V, 50-60Hz . . . \$4395.00

9100B/2 Optimod-AM Audio Processing System (Stereo for C-QUAM or Kahn)

As 9100B/1 above, equipped for stereo operation. Uses sum and difference control of processing to assure maximum loudness on mono receivers. Switchable features include L and R 75% negative peak limiter as recommended by Motorola for C-QUAM, adjustable stereo enhancer that increases L-R, 200Hz high-pass filter for telemetry or LF SCA. Two ACC-023 NRSC Monitor Rolloff Filters supplied. 115V/230V, 50-60Hz . . . \$5995.00

AM Accessories

ACC-023 NRSC Monitor Rolloff Filter (one per channel)

Approximates typical receiver rolloff when monitoring from modulation monitors and wideband receivers. Includes rolloff to the NRSC standard 75 μ s de-emphasis. Included in all 9100B/1, 9100B/2 and several Stereo Upgrade Kits. . . . \$50.00

Upgrade Kits For Optimod-AM Systems

RET-033 Alternate Pre-Emphasis Module Retrofit Kit

For 9100A/1 and 9100A/2 prior to S/N 700000. (Supplied standard on later units). Provides socket for field-selectable alternative pre-emphasis curves. Includes one Transition PCB Assembly, one each Green, Yellow, Red Pre-Emphasis Module. Two RET-033 kits required for stereo . . . \$50.00

RET-041 NRSC Pre-Emphasis/Filter Retrofit Kit (Mono)

For 9100A/1. Provides NRSC-standard pre-emphasis and 10kHz low-pass filter, and jumperable 5kHz low-pass filter (other filter frequencies available on special order). Filters can be preset or switched to follow day/night switching. Includes one #1F10 NRSC Mono Filter Card, one NRSC Blue Pre-Emphasis Module, one set NRSC monitor de-emphasis resistor and capacitor. (RET-033 must first be installed in units prior to S/N 700000.) . . . \$295.00

RET-042 NRSC Pre-Emphasis/Filter Retrofit Kit (Stereo)

For 9100A/2 and 9100A/2C. Provides switchable NRSC-standard pre-emphasis and 10kHz low-pass filter, jumperable 5kHz low-pass filter (other filter frequencies available on special order), L and R 75% negative peak limiter as recommended by Motorola for C-QUAM, adjustable stereo enhancer that increases L-R, 200Hz high-pass filter for telemetry or LF SCA. Filters can be preset or switched to follow day/night switching. Includes one #1S10 NRSC Stereo Filter Card, two NRSC Blue Pre-Emphasis Modules, two sets NRSC monitor de-emphasis resistor and capacitor. (Two RET-033 must first be installed in units prior to S/N 700000.) . . . \$495.00

RET-043A Stereo Upgrade Retrofit Kit

Upgrades 9100A/1 to 9100B/2 (Stereo for C-Quam or Kahn). Adds stereo NRSC-standard pre-emphasis and low-pass filter. Includes Cards #1S10, #5, #9, #10, two NRSC Blue Pre-Emphasis Modules, two ACC-023 NRSC Monitor Rolloff Filters . . . \$1950.00

RET-043B Stereo Upgrade Retrofit Kit

Upgrades 9100B/1 to 9100B/2 (Stereo for C-QUAM or Kahn). Includes cards #1S10 to replace #1F10, cards #5, #9, #10, and one additional ACC-023 NRSC Monitor Rolloff Filter. . . . \$1895.00

RET-044 NRSC Pre-Emphasis/Filter Retrofit Kit

For 9000A and 9000A/1. Provides NRSC-standard pre-emphasis and 10kHz low-pass filter, and jumperable 5kHz low-pass filter (other filter frequencies available on special order). Includes one #1F10 NRSC Mono Filter Card, modification parts to install filter card and pre-emphasis, one set NRSC monitor de-emphasis resistor and capacitor. (Requires considerable rework of existing cards and backplane.) . . . \$395.00

OPTIMOD-FM AUDIO PROCESSING/STEREO

8100A/1 GENERATOR SYSTEM

Dual-band stereo compressor, high frequency limiter, smart clippers, stereo generator. 115/230V, 50-60Hz. 75 μ s standard; order OPT-11 for 50 μ s installed (no charge) . . . \$4995.00

8100A/ST Studio Chassis

Separates 8100A and 8100A/1 Audio Processing into two chassis to locate compressors at studio. Controls average levels into STL or phone lines, and optimizes signal-to-noise ratio. 115V/230V, 50-60Hz. . . . \$895.00

9100B

8100A
8100A/XT2

8182A

8100A/XT2 Six-Band Limiter

Accessory to 8100A/1. Provides aggressive multiband processing where bright, loud, "highly-processed" audio is desired that jumps out of auto and table radios. Especially suited for CHR formats. (May sound overly processed to home hi-fi enthusiasts.) . . . \$2075.00

FM Accessories

ACC-22 Lowpass Filter Card

Accessory to 8100A/1. Used to provide 25dB more protection to 67kHz SCA than provided by standard 8100A/1. Will also increase average modulation capability by about 0.5dB. Installs in 8100A or 8100A/1. Usable with XT Six-Band Limiter . . . \$595.00

RET-27 8100A Retrofit Kit To Accept XT2

Used to upgrade 8100A to 8100A/1, to accept 8100A/XT2 Six-Band Limiter. Includes replacement circuit card, prewired connector assembly . . . \$395.00

ATE-3F Interface Panel for Harris TE-1 or TE-3 Exciter . . . \$75.00

RCA-1 Shorting Connector for RCA BTE-15 Exciter . . . \$10.00

Note: For Continental 510R-1, Collins 310Z-2 and 310Z-1 exciters, obtain interface from Continental. Most other direct-FM exciters with broadband inputs do not require special interface.

OPTIMOD-TV

8182A Optimod-TV Audio Processing System

Audio processing optimized for television. Includes two-band stereo compressor, CBS Automatic Loudness Controller, high frequency limiter, Hilbert-Transform Clippers. 115V/230V, 50-60Hz. 75 μ s standard; order OPT-18 for 50 μ s installed (no charge) . . . \$4995.00

8182A/ST Studio Chassis for 8182A

Separates 8182A Optimod-TV Audio Processing into two chassis to locate compressors and CBS Automatic Loudness Controller at studio. Controls average levels into STL or phone lines, and optimizes signal-to-noise ratio. 115V/230V, 50-60Hz . . . \$895.00

RET-037 8180A Connector To Accept 8182A/SG

Field retrofit to add interface and stereo matrix circuitry to connect to 8182A/SG for BTSC TV stereo. (RET-025, below, is preferred to RET-037). . . . \$65.00

Factory Conversions

RET-025 8180A To 8182A Optimod-TV Conversion

Adds Hilbert-Transform Clipper, CBS Automatic Loudness Controller, stereo matrix circuitry, and interface connector. Requires return of unit to factory for modification and alignment—allow approximately three weeks after receipt. Loaner Optimod-TV provided for rental charge of \$100.00 plus shipping, as available . . . \$995.00

RET-026 8180A/ST To 8182A/ST Studio Chassis Conversion

Requires return of unit to factory for modification and alignment—allow approximately three weeks after receipt. Loaner Studio Chassis provided for rental charge of \$50.00 plus shipping, as available. . . . \$295.00

1118/1 Spring Reverberation (2 Channel)

• Dual-channel spring reverb with six springs/channel for smoothness and natural sound • "Floating threshold" limiter attenuates "spring twang" and protects against overload • Shelving bass and quasi-parametric mid-range EQ • Unbalanced input accepts line-level or semi-pro (-10dB) gear • Transformer-balanced main output; unbalanced "mixed" output allows use "in-line" without external mixers • Compact, rugged, and reliable
1118/1\$899.00

222A

222A Stereo Spatial Enhancer

• Proprietary, patent-pending technique detects and enhances psychoacoustic directional cues which are present in all stereo program material • Increases brightness, impact, and definition of music • Front-panel enhancement and width limit controls allow tailoring of processing to user requirements • No increase in FM multipath distortion, no unnatural exaggeration of reverberation, and no increase in sensitivity to vertical tracing distortion in disc playback • Full mono compatibility • Complements any broadcast audio processor without changing the station's "sound" • Easy-to-read LED bargraph displays indicate status and degree of enhancement • Stereo inputs and outputs

Designed to be inserted in the program line at the studio prior to processing, the 222A dynamically changes the amplitude and phase content of the program material to increase apparent width, depth, and transient definition. It does not add "musical distortion". Intelligent gating makes the unit immune to small errors in channel balance, prevents over-enhancement, and avoids the "mushy," homogenized sound that has so often been the result with earlier techniques.

The 222A does not increase multipath distortion, exaggerate reverberation, or increase sensitivity of vertical tracing distortion in disc playback.
222A\$995.00

245F

245F Stereo Synthesizer

Creates a pseudo-stereo effect from mono original. Left and right channels sum back to original mono for total compatibility in disc cutting and FM stereo broadcast. Doesn't affect the frequency balance of the mono original. Easy to use; only three operating controls. Unbalanced line level input and outputs.

245F\$399.00

Accessories

RET-19 Balanced output transformers (2) for both outputs\$32.00

275A

275A Automatic Stereo Synthesizer

The 275A is a system approach to solving unique TV broadcasting problems. It includes four essential features in a single space, 19" rackmount package: • Two modes of stereo synthesis (wide and narrow) • Automatic mono and single-channel recognition • Automatic polarity correction • Single-ended noise reduction

The 275A is a natural companion to Orban's TV stereo system (consisting of the 8182A Audio Processor, the 8182A/SG Stereo Generator, 8182A/SAP Second Audio Program Generator, and the 8182A Pro Channel Generator) but will work with any system.
275A\$1895.00

Accessories

275/RC Remote Control\$295.00

412A/414A Compressor/Limiters

Wide-range attack time, release time, and ratio controls permit extremely natural processing or special effects. Threshold control with 20dB range allows user to determine the level at which gain reduction first occurs, without changing below threshold gain. Ideal for sound reinforcement applications. User controls interact to simplify and speed set-up. Front panel output attenuator control with output clip LED to indicate line amplifier clipping. Illuminated, true peak-reading gain reduction meter is accurate and more readable than LED displays. Gain reduction overload lamp warns of control circuit overload. Mono unit (412A) requires only one rack space.

412A (1-channel)\$425.00

414A (2-channel) Stereo unit requiring 2 rack spaces and featuring stereo coupling switch\$799.99

RET-28A XLR type connectors for input and output (for 412A) ...\$12.00

RET-288 XLR type connectors for inputs and outputs (for 414A) ...\$24.00

422A/424A

**Gated Compressor/Limiter De-essers
 "The Studio Optimod"**

Production AGC device which achieves high average loudness without undesirable artifacts. Separate compressor/limiter and de-esser control loops, with program-controlled parameters. Defeatable gate with adjustable threshold freeze gain. Adjustable attack time, release time, and compression ratio. Independent de-esser similar to the 526A De-esser. Low distortion operation. 25dB gain reduction. >25dB de-ess gain reduction in addition to 25dB compressor/limiter gain reduction. True peak-reading output level meter. True peak-reading gain reduction meter. Selectable linear or exponential release time characteristics. 19" rackmount package. Extensive RFI suppression. Balanced input and output and 115/230V, 50/60Hz power supply standard.

422A (1-channel)\$629.00

424A (2-channel) Available in mono/stereo; channels can be strapped or used independently\$989.00
