OUR NAME IS

HARRIS

Introducing the Only Camera Better than the Z-31

Z31A

The Z-31A, Hitachi's newest member of the Computacam family, further enhances the performance, features and functions that have made the Z-31 so successful.

With newly developed Twist Field Saticon tubes and improved video processing, the Z-31A delivers 800 lines of resolution and 60dB signal to noise ratio.

We increased the power of the auto set-up system and cut the set-up time in half.

The price — it's as good as the specs.

Call the regional office nearest you and ask to see the camera that beats the Z-31... and every other camera in it's class.

 **HITACHI**

THE FIRST INTELLIGENT BROADCAST COLOR MONITOR

BARCO INDUSTRIES' new CVS professional broadcast monitor is microprocessor-based to make it intelligent in operation and easy to use.

It has both a digital and an analog bus for maximum flexibility. Plus four "open" slots that let you plug in today's options and those yet to come. As new features do come along, you'll be able to add them through software - no hardware changes!

All CVS functions are controlled from the front of the monitor or from a remote keyboard. An optional master remote permits control of a series of monitors.

WE PUT THE FUTURE IN THE PICTURE.

**BARCO
INDUSTRIES**

You can also store, and automatically call up, either calibrated presets or your own preferred presets.

Like our best master control monitors, the CVS has Automatic Kinescope Biasing (AKB) to maintain color and black level stability.

The CVS also generates more internal test patterns than any other monitor. They include white field, cross hatch and color bars.

The CVS is available in both 14 inch and 20 inch versions, and provides outstanding picture quality in any TV standard.

For complete specifications, contact your local BARCO INDUSTRIES Dealer or BARCO INDUSTRIES, 170 Knowles Drive, Suite 212, Los Gatos, CA 95030. Phone (408) 370-3721.

BARCO INDUSTRIES is a member of the ACEC-group

STABILINE® Voltage Conditioning & Monitoring Equipment

Also provide common-mode noise rejection to help prevent computer errors, loss of information and other noise-related problems. Available in 50 or 60 Hz types in ratings to 2kVA. UL and CSA listed.

Transient Voltage Suppressor Power Center — Type TVS151P6DU attenuates spikes and transverse mode noise (line-to-line) transients consistently regardless of where on the sine wave or in which direction the transient (spike) is applied. Does not rely on absolute magnitude before attenuation occurs. Attenuation of approximately 40dB per frequency decade above 5kHz, 99% efficient at full resistive load. Ideal for microcomputer protection. Cord and plug connection and 6 output receptacles.

WHR Series Automatic Voltage Regulators — High power units that can correct wide fluctuations in input voltage. These units are typically 99% efficient and are insensitive to the magnitude and power factor of the load. Can be used with almost any load, even those with high inrush currents. Harmonic distortion less than 0.25%. Available in ratings from 2 to 1000kVA.

EMT, EMS and IES Series Automatic Voltage Regulators — EMT and EMS Series units are highly efficient electromechanical/solid state regulators which cover a majority of voltage control applications. They are insensitive to the magnitude and power factor of the load and have no effect on the system power factor. Electronic IES Series units are very fast, extremely accurate regulators with very high kilowatt efficiency. They provide the reliability of solid state design without moving parts. Ratings from 0.5 to 275kVA.

AC Voltage Monitor Systems — Have detachable detector modules to reduce cost of multi-site voltage monitoring. Consist of a REMOTECTOR® Detector Module and a microprocessor based Printer/Controller Module housed in a briefcase. Distinguish and identify AC line perturbations exceeding operator set thresholds. Either 120 or 240VAC lines may be monitored. Data is presented in a categorized format with a summary of the 10 worst events in each category followed by a list of the last 10 chronological events. Can operate over telephone lines when used with Modem Adapters and Bell System Standard 103B or CCITT V.21 compatible modems. Models available for single or 3-phase operation.

REMOTECTOR® Detector Modules — Portable multiphase/multichannel monitors that remotely detect, identify and quantify incoming voltage aberrations on single and 3-phase power lines up to 680 volts. Information can be communicated directly for display on any ASCII terminal screen or RS232C equipped display computer.

Uninterruptible Power Supply/ Conditioners — Prevent power related equipment malfunctions by providing clean, stable power even during utility power outages. These on-line units condition power and deliver continuous sine wave voltage to sensitive equipment by regulating voltage, attenuating transverse and common-mode noise and providing 10 minutes or more battery backup. Optional battery packs can extend the time to as much as 80 minutes at full rated load. Sealed gel-cell batteries never require maintenance and have an internal charger to keep fully charged. Models available for 50 or 60 Hz in ratings of 200VA, 500VA, 800VA, 1kVA, 3kVA, 5kVA, 7.5kVA and 10kVA.

BCR Series Power Conditioners — Provide protection by regulating voltage, supplying isolation from common-mode noise and attenuating transverse mode noise. Models in 3, 5, 7.5 and 10kVA ratings having 115, 208, 220, 230 or 240V output. For 50 or 60 Hz operation. UL and CSA listed.

CR Series Power Conditioners — Maintain constant, conditioned voltage to computers and other voltage-sensitive equipment. Simple plug and cord connection to voltage source; 2 or 4 grounded receptacles for equipment connection. Provide output of 120V, rms, $\pm 3\%$, 60 Hz over an input voltage range of 95 to 130V, rms

Portable Standby Power Supplies — PSP Series Portable Standby Power Supplies provide uninterrupted AC power to microcomputers and other voltage sensitive equipment in the event of a sag, brownout or outage. Units also provide surge protection which filters and attenuates voltage transients (spikes) and line noise. The portable design allows convenient horizontal or vertical placement. Depending upon load, units provide 10 to 75 minutes of battery backup. Available for 120, 220, 230 or 240V service in ratings of 200, 400, 600, 800 or 1200VA.

BILL DANIELS' **ILLUSTRATED** **TRADE REFERENCES**

BROADCAST

EQUIPMENT BUYER'S GUIDE AND REFERENCE

1988/89 Edition

The **BILL DANIELS ILLUSTRATED TRADE REFERENCES BROADCAST EQUIPMENT BUYERS' GUIDE AND REFERENCE** is published for professionals who recommend and purchase quality equipment for ENG/EFP, Remotes, Broadcast, Recording Studios, Audio-Video Production and Post-Production by the Bill Daniels Co., Inc., P.O. Box 2056, Shawnee Mission, KS 66201. All rights are reserved throughout the world. Any reproduction or copying, in whole or in part, without written permission is prohibited.

All the information published has been developed from specification sheets, price lists, sales brochures and technical manuals provided by vendors and/or their dealers.

Prices shown on these catalog pages are furnished for information only—they are not included as quotations, and may not be the current resale price. Participating manufacturers reserve the right to change specifications, revise prices or discontinue items without notice.

While every precaution has been taken to assure accuracy of content, the publisher cannot be responsible for manufacturers' claims and representations, nor can any guarantee be made against the possibility of error or omission.

PREFACE

Today, almost any dealer catalog you consult contains selected information from our ‘‘Equipment Trade References’’. A number of years ago, we began developing pages for dealer catalogs from sales brochures, spec sheets, photos, and price lists. The end result is a ‘‘Catalog Page Bank’’ of over 15,000 pages. This page bank has become a product information library for the industries we serve. It became clear to us that most practitioners needed this information daily; therefore, we created the ‘‘Illustrated Trade References’’. Each volume serves a particular industry, providing the details necessary to design, specify, compare, or purchase equipment. In the past, we attempted to publish these books as annuals. The magnitude of this effort was awesome. We now have the systems in place to bring these books out on a regular schedule. To those who have waited for this edition, we appreciate your patience. We know you will find these volumes to be the dependable reference source you have come to expect from the Bill Daniels Company. If within 15 days you are not completely satisfied with our product, you may return it in resaleable condition for a full credit to your account. Please send us your comments on how we might improve these books. Your remarks will be seriously considered, and may benefit all of us in the future.

ABEKAS VIDEO SYSTEMS, INC.**Video Slide Projector****A42 Video Slide Projector**

Dedicated to optimum picture quality and ease of operation, the A42 is a compact and reliable digital still store system. Advanced digital video processing yields high quality images, and a microprocessor-based control system ensures powerful and easy-to-use features. A built-in 5 1/4" Winchester disk drive provides the safest on-line picture storage available.

Virtual Picture Numbering

The picture numbering scheme employed in the A42 is completely independent of disk storage locations. Pictures are identified by serial numbers ranging from 0 to 9999 regardless of the on-line storage capacity. The user is no longer unnecessarily burdened with keeping track of the actual picture location on disk.

Backup and Off-Line Storage

Utilizing a high speed digital streaming tape drive, the A42 stores pictures on a compact quarter-inch tape cartridge. For the first time, unlimited off-line picture storage is practical due to low media cost and compact size. This facilitates easy transport of pictures from one system to another, or from the studio to the mobile truck. With selective backup, any number of pictures up to 50 frames/100 fields can be transferred to the tape cartridge. In a similar manner, selective restore allows either the entire contents or only selected pictures to be transferred from the cartridge to the disk.

Sequence

Three sequences of 100 pictures each can be created using any of the recorded pictures. A sequence can be edited at any time by inserting, deleting or substituting pictures. The forward and back arrows on the control panel allow a sequence to be played at random. A sequence can be temporarily exited to perform other functions.

Simple Basic Operation

Regardless of the function selected, operation is always easy. A complete status display is superimposed on the preview video output to provide information to the operator. When a picture is grabbed, it can be recorded as a field or frame, as determined by the field/frame button. When the picture is played back, the system automatically selects field or frame depending on how the picture was recorded.

Independent Output Channels

In the dual channel system, pictures can be recalled to both channels independently. While one channel is displaying a picture, the other channel can be fully used to record, playback or create sequences. Dissolves or vertical interval cuts can be programmed for on-air transitions between the channels. The dissolve rate can be varied from the control panel.

Graphics Compose

The A42 provides excellent multi-generation capability which is essential in the composition of multi-layer graphics. The special graphics compose mode optimizes the use of the two channels for easy graphics creation. Each layer, or the entire graphic, can be stored on the disk. The A42 makes it possible to recover from mistakes when composing multi-layer graphics, because it automatically saves the previous layer in the other frame buffer.

Built-In Test Signals

The A42 has the ability to generate digitally multiburst, color bars and other useful test signals to aid in the maintenance and troubleshooting of the system.

**A42**

The A42EX houses two additional disk drives to expand the on-line storage and a high speed digital streaming tape drive for off-line storage.

Digital Interface

An optional digital interface provides composite digital input and output ports. These ports make it possible to interface the A42 to the A52 Digital Special Effects system.

Library System (optional)

The A42 offers an easy-to-use library system. Each still on the A42 can be labeled with a title of more than 60 alphanumeric characters, including an automatic time and date stamp. Flexibility in searching for a picture eliminates the need to set up categories that other systems require. To group certain pictures together, all that is necessary is to include a common word anywhere in their titles. For example, if searching with the word '49ers', any picture that includes '49ers' anywhere in its title would be listed on the screen.

The A42 library system employs an extremely sophisticated searching algorithm to perform complex searches with unequalled speed. When all or part of a title is typed for a search, the system initiates a word-by-word comparison to find the right picture. Even if the operator misspells or changes the order of the words in the title, the system will find the picture that most closely matches what was typed.

Compatibility

The library system is compatible with all A42 systems. Pictures already on the A42 instantly become a part of the library system. Although pictures without titles are recognized by serial number, a title can easily be added.

A42LT	35 Watts	Desk Top	25 Lb

Basic A42 Single input/output channel. Slide to slide transition by vertical wipe. Includes one control panel. (must add at least one disk drive) **\$17,900.00**

A42WD100 Winchester disk drive provides 100 frames/200 fields on-line storage* **2,000.00**

A42WD350 Winchester disk drive provides 350 frames/700 fields on-line storage* **5,500.00**

* Maximum 3 drives per system; drive types cannot be intermixed.

A42SC Second output channel provides complete preview/program operation. Transitions by vertical wipe, cut and programmable dissolve **\$5,000.00**

A42STR Digital streaming tape drive for off-line storage and backup. One A42TC included. **5,000.00**

A42CP Additional control panel **2,000.00**

A42TC Tape cartridge for off-line storage. 50 frames/100 fields per cartridge **50.00**

A42DIO Digital video input/output port for interfacing to the A52 or A53-D digital special effects systems **3,750.00**

(For system requiring update to accommodate the A42-DIO) **POR**

A42 Library System (compatible with all A42 systems) Library system for complete on/off-line management of stills. Titles of up to 60 alphanumeric characters can be added to each picture. Searching for pictures is easily accomplished by typing in any part of the picture title **\$12,900.00**

A42

Typical System Configurations

Basic System:

- Single channel output
- One disk drive provides 100 frames/200 fields on-line storage
- Transitions between slides by vertical wipe
- Includes one control panel

..... **\$19,900.00**

Basic system with second channel output **24,900.00**

System A – WD100 Drive

Basic system

Second channel output	1 Drive	2 Drives	3 Drives
On-line storage			
frames/fields:	100/200	200/400	300/600
Streaming tape drive for off-line storage	\$29,900.00	\$31,900.00	\$33,900.00

Transitions between slides by vertical wipe, cut, and programmable dissolve

System B – WD350 Drive

Basic system

Second channel output	1 Drive	2 Drives	3 Drives
On-line storage			
frames/fields:	350/700	700/1400	1050/2100
Streaming tape drive for off-line storage	\$33,400.00	\$38,900.00	\$44,400.00

Transitions between slides by vertical wipe, cut, and programmable dissolve

Library System (compatible with all A42's):

- Complete on/off-line management of stills
- Pictures can be labeled with a title of up to 60 alphanumeric characters
- Terminal and keyboard

..... **Add \$12,900.00**

A42-DIO

Digital interface to A52 or A53-D Digital Special Effects Systems **Add \$3,750.00**

Maximum 3 drives per system, drive types cannot be intermixed. With the purchase of a second drive or the streaming tape drive, the A42EX expansion unit is included at no charge. Other configurations are available.

Prices and Specifications Subject to Change Without Notice.

ABEKAS VIDEO SYSTEMS, INC.**Digital Special Effects System****A52 Digital Special Effects System****Transparent Picture Quality**

The A52's transparent picture quality is the direct result of advanced digital signal processing. The incoming composite signal is immediately digitized to eliminate the usual analog decoding problems such as drift and complex adjustments. Digitally decoded into 4:2:2 components, it is then processed to ensure signal transparency and long-term stability.

Smooth Picture Movement

The A52 completely eliminates the stepping usually associated with moving a picture slowly across the screen. For flawless motion while keying the A52 over another source, the key output moves as smoothly as the picture.

The A52 Control System

The A52's control system is ideal for the speed required by on-air effects and the accuracy needed for post-production. By providing instantaneous access to a large number of effects, it makes on-air operation extremely simple. The power and sophistication are reflected in the ease with which complex effects can be created. Precise control over all parameters is provided to satisfy the most demanding requirements.

The A52 Control Panel

The control panel consists of a high-resolution graphics display, a professional 3-axis joystick, numeric keypad, optically encoded fader bar, dedicated keys and the DataKey. The heart of the control panel is the graphics display and associated "softkeys". Because information is clearly displayed above the softkeys, operation is easy. Instead of searching for buttons all over the control panel, simply press the softkey below the function desired. The joystick is used for specifying parameters during programming. For instance, the joystick is used to choose the hue, saturation and luminance of a background color. The numeric keypad allows precise entry of parameters. Duplicating the exact size, position, or other parameters of a previous effect is easy. The fader bar manually runs effects forward or reverse. With one full throw of the fader bar, an effect can be run in its entirety. The position of the fader bar directly corresponds to a given point on the time-line of the effect, thus enabling precise control when manually rehearsing any part of an effect.

Mini Control Panel

The A52MP mini control panel, one of the smallest ever designed, retains the majority of the A52CP functions. It also consists of a 3-axis joystick, display and the DataKey. Operation of the A52MP is similar to the A52CP, allowing them to be used interchangeably.

On-Air Operation

For fast on-air operation the A52 provides the user with 36 on-line effects. Twelve frequently used effects are pre-programmed and presented in picture form on the graphics display. These include flips, tumbles and a variety of compressions. As an added advantage, the user can modify the pre-programmed effects to meet specific needs.

The remaining 24 locations can accommodate simple to very complex effects created by the user. The 12 pre-programmed and 18 user-programmable effects are stored in non-volatile memory and are therefore protected from power down. The A52 offers additional effects such as mosaics, solarization, iterative freeze (strobe effect), 4, 9 and 16 picture multi-freeze, plus a variety of picture splits. These effects are always immediately available to the operator.

Off-Line Storage

The DataKey is a small, reusable memory device that is fast, economical and fits right into the control panel. About the size and shape of a car key, the DataKey stores up to a 16 keyframe multi-channel effect. Whether an effect for a client or the open for a newscast, the DataKey is the most practical off-line storage available.

Programming The A52

Effects on the A52 are made up of keyframes. A keyframe is a collection of parameters such as size or position, at a specific point in an effect. The system simply looks for a difference in parameters from one keyframe to the next, and smoothly interpolates between them. This makes it possible for a 2-keyframe effect to be quite complex. Effects can range from 2 to 16 keyframes in length. Each keyframe is created by specifying parameters with the joystick or keypad. As parameters are varied, the output monitor instantaneously responds to all changes, providing visual feedback. In addition, the exact values of the parameters are shown on the graphics display.

Editing

The power of the control system is really evident when editing an existing effect. Easy-to-understand menus presented in simple English help the user every step of the way. Individual keyframes or groups of keyframes can be inserted, deleted or moved from one part of an effect to another. Furthermore, any parameter within a keyframe or an entire effect can be modified, eliminating the need to start all over again. For example, a border can be added to every keyframe of an existing effect with one simple command.

**A52****Motion Types**

In addition to linear motion, any effect can be programmed with trajectory for a curved path between keyframes. As many as 16 keyframes can be used to define a trajectory. The path of a given trajectory can then be altered with tension.

Graphics

The A52 can compose layer after layer of backgrounds, stripes, pictures or even drop shadows for creating graphics. Because all layers are generated within the A52, the graphic is created digitally with no generation loss. Once a graphic has been composed, it can be played back at any speed.

Complex Shapes

Another advanced feature of the A52 is its ability to create complex shapes with still video images. A variety of shapes can be created, limited only by the imagination of the user.

RGB Outputs

Digitally-decoded RGB outputs are offered as an option for the A52. One of the many applications for the RGB outputs is high quality chroma keying.

External Control

RS232 and RS422 serial ports are standard on the A52. Through these ports, all of the functions of the control panel can be emulated by a computer. For a simple interface to switchers and editors, four contact closure inputs are provided. These can trigger the A52 to run an effect forward or reverse, pause an effect already in progress, or freeze the incoming video. Contact closure outputs can be used to trigger an external device such as a video switcher for A/B switching.

Digital Interface

The A52 provides composite digital input and output ports. These digital ports make it possible to interface the A52 to the Abekas A42 digital still store system.

Key Softness

The A52 produces a variable soft edge key signal, to obtain hard or soft edges when keying the output of the A52 over another source.

Dual Channel Operation

The A52 digital effects combiner provides a truly flexible multi-channel system. It accommodates up to four control panels and two channels. A remote assignment panel allows the system to be configured either as a dual channel, or as two completely independent single channel systems. As a dual channel system, operation can be from any one of the four control panels. When operated as two single channel systems, one control panel is assigned to each channel. True dual channel operation is achieved by allowing each channel to be programmed independently to its fullest extent along a common time-line. In this way, different effects can be programmed on each channel and run simultaneously. For time critical applications such as live newscasts, there are also pre-programmed, complementary effects. As with the single channel A52, custom effects can be created and stored in non-volatile memory. Off-line storage is provided on the standard DataKey.

Variable Priority

In dual channel operation, a channel can be defined as the foreground or background, depending on its priority. The effects combiner offers variable priority, allowing programmable dissolves between the two channels.

Internal Keyer

An extremely versatile luminance keyer is also part of the effects combiner, which makes keying titles over a picture and manipulating them separately very easy.

Single Channel A52 with CP

One A52 signal system and one standard A52CP control panel with DataKey for off-line storage **\$31,900.00**

Single Channel A52 with MP

Same as above except one A52MP mini control panel instead of the standard control panel **\$29,900.00**

Dual Channel A52 With CP

Two A52 signal systems, one A52C Combiner with remote assignment panel and one standard A52CP control panel. The assignment panel allows any of four control panels to operate the dual channel system, or any two to operate the two channels separately **\$66,800.00**

Dual Channel Upgrade to Existing Systems

Includes additional A52 signal system and A52C Combiner **\$34,900.00**

A52CP

Additional standard control panel with graphics display, 3-axis joystick, T-bar and DataKey **\$5,900.00**

A52MP

Mini-panel (8.5" x 4") for critical space requirements. The mini-panel retains the majority of the A52CP functions and also has a display, 3-axis joystick and the DataKey **\$3,900.00**

A52DK

DataKey for off-line effects storage. Can store up to two 16-keyframe effects **\$75.00**

A52RGB

High quality RGB outputs for single channel A52 **\$5,900.00**

A52C Combiner

Combines the output of two single channels for dual-channel operation **\$8,900.00**

Custom Control Panel Cable

50' Control Cable **\$100.00**
 100' Control Cable **200.00**

(One 30' control cable is standard with each control panel).

ABEKAS VIDEO SYSTEMS, INC.**Digital Special Effects System****A53-D Digital Special Effects System**

The A53-D is a three-dimensional digital special effects system. Benefitting from state-of-the-art architecture, the A53-D performs rotation, translation, perspective and scaling transforms on the incoming video source, thus providing maximum flexibility in three-dimensional manipulation of images.

Signal Processing

The A53-D's outstanding picture quality and extremely smooth motion are the direct result of advanced digital signal processing. The incoming composite video signal processing. The incoming composite video signal is immediately digitized to eliminate the usual analog decoding problems such as drift and complex adjustments. The signal is digitally decoded into 4:2:2 components and processed to ensure long-term stability. Special emphasis has been put on key signal and picture boundary processing in order to completely eliminate jagged edges on keyed pictures.

The Control System

The control panel is simple and uncluttered. A powerful programming tool, the high-resolution menu display and its associated soft-keys are the heart of the control panel. The professional 3-axis joystick provides the tool for freehand-style creativity and the numeric keypad is used to enter exact values for the parameters — for instance, to choose the hue, saturation and luminance of a background color. The fader bar manually runs effects forward or reverse with its position directly corresponding to a given point on the time-line of the effect. This enables precise control when rehearsing any part of the effect. Complementing the control panel is a 3 1/2" floppy disk drive for off-line storage, mounted within the reach of the operator. Each micro floppy disk stores 200 effects, all of which can be 16 keyframes long.

Creating Effects

Effects on the A53-D are made up of keyframes, ranging from 2 to 16 in length. A keyframe is simply a set of parameters, defined by the operator, at a given point in an effect. The system then interpolates the intermediate values allowing the effect to run smoothly and continuously. These parameters could be size, position, border width, background color, perspective or rotation of the picture, etc. To edit an effect, the operator can step through it in forward or reverse direction. Parameters can be modified on one, all, or a group of keyframes saving time. Individual or groups of keyframes can be inserted, deleted, or moved from one part of the effect to another. Complete effects can be copied from one effect location to another or to the workspace.

Post-Production Operation

The A53-D is ideal for post-production, each parameter can be programmed with utmost accuracy. Numeric keypad entries allow the exact duplication of parameters making it simple to reconstruct an effect. Matched frame editing can be performed not only at keyframe boundaries, but also at every point between keyframes.

Live Operation

The A53-D provides the broadcaster with 24 on-line effects, each of which can be accessed at a stroke of a key. In addition, a repertoire of off-line effects can be quickly recalled from the disk. The 24 on-line effects are user-programmable and stored in non-volatile memory, protected from power down.

The Mini Control Panel

Ideal for space limited applications, the A53-D Mini Panel retains the majority of the A53-D standard control panel functions. The Mini Panel consists of a 3-axis joystick, a menu display and function keys. Provides 20 on-line effects, each 16 keyframes long. A micro floppy disk drive is provided for off-line effect storage. Operation of the Mini Panel is similar to the A53-D standard panel, allowing them to be used interchangeably.

**A53-D****A53-D Create Effects**

- True 3-D perspective • 3-D location • Rotation about H, V, Z axes
- Variable rotation axes • Global locate, rotate, axis • Expansion, compression • Variable inside or outside border • Background of any color
- Field and frame freeze • Full manipulation of frozen pictures
- Variable aspect ratio • Strobe • Cropping from any and all sides • Full manipulation of cropped pictures • Solarization/Posterization
- Variable effect time • Programmable pause • Contact closures for remote operations • Built-in A/B video switching • Forced monochrome
- Inverted luminance • Multi-pictures live • Switchable fold-over
- Auto-keying of multi-faceted objects • Cube maker • Timing setup from the control panel • Variable motion types

3-D Features

The A53-D is designed as a true 3-dimensional effects system. The operator can perform simultaneous 3-axis rotations and translations with variable perspective on the input picture. The picture can be reduced or expanded in size and moved to any location in the 3-D space. The system adds the appropriate perspective to the picture, but the operator can add any amount of perspective desired. Rotations can be performed about the picture axes or the H, V, Z axes of the 3-D space. The picture can rotate about its own center or any specified center. With a combination of 3-D controls on the A53-D, any imaginable 3-dimensional move can be applied to the plane of the input picture.

Motion Types

Every effect in the A53-D system can be programmed to have a linear and smooth motion. Manipulating the trajectory can result in an accelerating and decelerating linear motion. This feature can be programmed for any of the H, V, Z axes on a keyframe-by-keyframe basis. Further, the path of a given trajectory can be altered by varying the tension values to obtain a variety of curved paths for the same effect.

ABEKAS VIDEO SYSTEMS, INC.**Digital Special Effects System****A53-D Cont'd****Globals**

The A53-D features true Global manipulations. Globals are additional 3-D manipulations applied to previously programmed effects. Globals are used in a variety of applications. A typical example would be in the creation of multi-faceted objects. First, the different faces of the object are defined in relationship to each other. Then, the Globals are applied to all the faces for manipulating the multi-faceted object in the 3-D space while maintaining the facets' spatial relationship intact.

Cube Maker

In general, to make a cube on a single channel effects system, each one of the six sides of the cube is programmed as a separate effect. Then, using a video recorder, six recording passes are made to assemble the cube. The cube maker in the A53-D is a facility which allows the operator to build a cube by making three passes only. When a VTR is used for recording, the cube maker becomes extremely useful in saving several passes and thereby significantly reducing generation loss.

Auto-Keying

The A53-D can be used to make solid objects with any number of sides. To achieve this, each side is programmed as one effect. Then the assembled object is obtained through multipass recording.

Auto-key is a feature which determines the switching point between the front and back of each side of an object; it then automatically turns off the key signal every time the back of a side faces the viewer. When using tape as the recording medium in building multi-faceted objects, generation loss becomes the limiting factor after merely a few passes. Auto-key, therefore, is of great importance in reducing the generation loss in the construction of multifaceted objects. Using the Abekas A62 digital disk recorder as the recording device, of course, eliminates the issue of generation loss. Auto-key can then be used as a totally dramatic feature in creating effects.

Designed for the Greatest Degree of Flexibility for System Integration

External interfaces of the A53-D are all part of its standard features and accommodate various means of communication with other studio equipment.

Serial Ports

Two connectors, a 25-pin D and a 9-pin D, provide RS232 and RS422 communication paths respectively. Through these ports the A53-D can communicate with a variety of other equipment. An example of such devices would be the I² compatible editors or switchers with Emem type effects memory. Communication with switchers, editors or other devices which conform to the SMPTE time-line protocol is also supported through these ports. Via the RS232 port, a computer can emulate all of the A53-D control panel functions. The Abekas A62 digital disk recorder can interface serially to the A53-D through the RS422 port.

GPIs

For a simple interface to switchers and editors, four input general-purpose interfaces are provided. These contact closures can be triggered to run an effect forward or reverse, pause an effect already in progress or freeze the incoming video. A special GPI setup allows the effect to be advanced by a field at a time. This mode is especially desirable for film transfer or animation work. The two output contact closures can be used to trigger external devices. Specifically, using a routing switcher, any two of four video sources could be assigned to the front and back of the picture.

Two-Channel Operation

The A53-D Digital Effects Combiner provides a truly flexible multi-channel system. It accommodates up to four control panels and two channels. A remote assignment panel allows the system to be configured either as a dual channel, or as two completely independent single-channel systems. As a dual-channel system, operation can be from any one of the four control panels. When operated as two single channels, one control panel is assigned to each channel. True dual-channel operation is achieved by programming each channel independently to its full extent and along a common timeline. In this manner, different effects can be programmed on each channel and run simultaneously. As with the single-channel A53-D system, custom effects can be created and stored on non-volatile, on-line memory. Off-line effects can be stored on micro floppy disk.

Dual Channel Priority Assignment

In dual-channel mode, a channel can be defined as foreground or background, depending on its priority. Unlike other systems, the effects combiner offers variable priority, allowing programmable dissolves between the two channels, as well as instantaneous priority inversion. The channel priority can be changed at any point in the effect and from one keyframe to another.

Internal Keyer

An extremely versatile and adjustable luminance keyer is built into the effects combiner to allow keying the output of one channel over the other. The gain and clip level of this keyer can be adjusted from the control panel. A typical application of this keyer would be to key titles over a background and flying them together.

A53-D/A62 Digital Interface

The A53-D system provides composite digital video input and output ports. Through these ports the A53-D can be interfaced to the much acclaimed Abekas A62 Digital Disk Recorder. The combination of the two systems introduces a tremendously powerful tool for on-line post production. It is now possible to manipulate and composite an infinite number of layers in a completely digital environment and in real time. A typical A53-D/A62 setup is illustrated here using two channels of A53-D for video and key manipulation. The advantage of using a dual-channel A53-D as compared with one channel of a conventional effects system with a key processing channel is two-fold. First, with two channels of the A53-D, you have a full bandwidth key processing channel and a color video channel. Secondly, you get all the power and benefits of a full two-channel system whenever the key manipulation is not the order of the day.

Single Channel A53-D With CP

One A53-D signal system and one standard A53-D control panel with 3.5" micro-floppy disk drive for off-line storage and one pre-programmed disk.

- Digital CCIR 601 input and output video ports
- Digital CCIR 601 key output
- Analog Y, R-Y, B-Y or RGB and key output

.....\$44,900.00

A20 Digital Video Encoder

Provides conversion of analog RGB or Y, R-Y, B-Y to CCIR 601 Component Digital Video. The A20 also offers remotely controlled, A/B switching between two analog inputs

.....\$4,900.00

Warp Option (plug-in board)

Adds picture bends, warps, and splits to basic A53-D. Includes page turns/page peels, rolls, cylinders, twists and more. (One board per channel needed for some dual channel effects.)

.....\$9,900.00

Key Channel

The A53-D Key Channel is an 8-bit, full bandwidth key processing channel for simultaneously manipulating a key signal along with the input video. The key channel can also produce a drop shadow which corresponds to the shape of the key signal. Any degree of transparency or color may be programmed for the drop shadow. The key signal or drop shadow may be positioned horizontally and vertically relative to the video being manipulated. The key channel is an upgradeable option to all existing single or dual channel A53-D's

.....\$14,000.00

Dual Channel A53-D With CP

Two A53-D signal systems, combiner with remote assignment panel and one A53-D control panel with micro-floppy disk drive and one pre-programmed disk. The assignment panel allows any of four control panels to operate the dual channel system, or any two to operate the two channels separately

.....\$97,800.00

Dual Channel Upgrade to Existing System

Includes additional A53-D signal system and A53-D Combiner

.....\$52,900.00

A53-D Control Panel

Additional control panel with graphics display, 3-axis joystick, T-bar, and 3.5" micro-floppy disk drive with one disk

.....\$5,900.00

A53-D Mini Panel

Mini-panel (8.5" x 4") for critical space requirements. The mini-panel retains the majority of the A53-D standard control panel functions and also has a display, 3-axis joystick, and 3.5" micro-floppy disk drive with one disk

.....\$3,900.00

A53-D Combiner

Combines the output of two single channels for dual channel operation.

- Digital CCIR 601 video and key input
- Digital CCIR 601 video and key output
- Analog Y, R-Y, B-Y or RGB and key output

Digital Disk Recorder

A60 Digital Disk Recorder

- Full bandwidth 4:2:2 component digital recording
- 25- or 50-second capacity in 525-line system
- 30- to 60-second capacity in 625-line system
- CCIR 601 inputs and outputs
- Ethernet and SCSI ports
- GPI inputs and outputs
- RS232 and RS422 computer ports
- Timecode input as an external trigger
- Serial editor port for interface to a variety of editors
- High-speed GCR tape drive interface for off-line storage

The A60 is a real time component digital recording device ideally suited for recording single frames from graphics systems. Using Winchester disk drives, the A60 provides real time playback in forward or reverse, variable playback speeds and random access to recorded material. The A60 conforms to the 4:2:2 component digital standard and provides CCIR 601 input and output ports for interface to other CCIR 601 equipment. Unlike the Abekas A62 and A64, the A60 does not provide internal keying functions or the ability to simultaneously play and record. The A60 offers capacities of 25 and 50 seconds in the 525-line system or 30 and 60 seconds in the 625-line system.

The Perfect Recording Device

The A60 provides the ideal means of recording frames from 3D animation or paint systems. Single frames or fields can be recorded with perfect accuracy at a rate many times that of a video tape recorder. When used in conjunction with pin-registered film transfers, the A60 offers the fastest single-frame recording possible.

Simple Operation

The A60 is both flexible and easy to operate. A well-defined, compact control panel presents the necessary information for typical operations.

Transport controls for recording and playback are provided in addition to a trackball for browsing through material on the disks. A numeric keypad enables access to specific frames/fields by entering either a timecode or frame number. The current position of the disks may also be indicated on the control panel display as either a timecode or frame number. A monochrome status output provides additional information such as system timing and macro programming to complement the control panel.

Random Access

Because the A60 uses disk drives for storage, single frames or fields can be accessed immediately. A sequence of frames may be defined as a segment for playback. Segments may be linked and a total of 99 segments may be defined for random playback. Each segment may be accessed independently, different speeds set, and continuous segment loops defined. The expanded version of the A60 provides real time random access during segment playback.

Ethernet Port

- RCP or FTP for video file transfers
- RSH, RLOGIN or TELNET for specific A60 control
- RGB to 4:2:2 digital conversion using Ethernet

In order to be truly compatible with computer animation devices, an Ethernet port which uses the ARPA standard TCP/IP communications protocol has been implemented. Commonly used network services are supported to allow file transfers in the form of video fields or frames and specific machine control of the A60. Using TCP/IP, the A60 may become an Internet node by simply specifying an Internet address from the A60 control panel. The A60 also provides an automatic conversion of RGB files into 4:2:2 as part of an Ethernet transfer.

Additional Interface Ports

An RS422 and RS232 port, an editor port and an SCSI port provide a variety of interface possibilities to the A60. The RS422 and RS232 ports are intended as standard computer ports for emulating the functions of the control panel. The A60 may be controlled from computerized editing systems* through a single editor port (RS232/RS422 selectable). The A60 becomes an ultra-fast random access digital playback or record device while being controlled in the same manner as a video tape recorder. An SCSI port enables both digital video transfer and control for interface to existing devices with SCSI interfaces.

Specifications:

Video:	Available in either 525/60 or 625/50 television standard
Bandwidth:	4:2:2 13.5MHz sampling (Y) 5.75MHz (R-Y) 2.5MHz (B-Y) 2.5MHz
K Factor:	1%
Signal to Noise:	56dB
Reference:	Analog composite sync
Inputs:	Digital CCIR 601 video (2) (for use with component analog signals, the Abekas A20 is available)

Outputs	Digital CCIR 601 (2), Analog RGB and Sync or Y, R-Y, B-Y
Program:	Analog RGB and Sync or Y, R-Y, B-Y, timecode or frame number superimposed
Preview:	Monochrome analog status display from control panel
Status:	
SCSI and Ethernet	Digital video data transfer and machine control interface
Ports:	
External Control:	RS232 control port, RS422 control port, serial editor port RS422/RS232, GPI inputs and outputs (4), Timecode input as trigger
Interconnects:	A60 to control panel: Serial RS422, 2000' maximum
Storage Capacity	
525-Line System:	25 seconds expandable to 50 seconds
625-Line System:	30 seconds expandable to 60 seconds

Unit	Power	Size	Weight
A60 system	< 650W	12 1/4" H x 19" rack-mount x 22" D	100 lbs. (45.5 kg)

ABEKAS VIDEO SYSTEMS, INC.**Digital Disk Recorder****A62 Digital Disk Recorder**

The A62 brings the well-known advantages of digital recording and playback into the existing analog post-production suite. High-speed Winchester disk drives provide a precisely controllable real time record and playback device with storage capacities of 50 and 100 seconds.

The Way the A62 Works

The A62 has the unique ability of simultaneously playing and recording in real time. The 100-second version of the A62 can be configured as a 50-second playback and a 50-second record device, making digital real time layering possible. Background video is first recorded onto the A62. Foreground video to be keyed or matted onto the background is then fed into the A62 with its associated key signal. These signals may come directly from an Ultimatte™ or from an effects device such as the Abekas A53-D. As the background is played back from one part of the A62, another part of the A62 is recording the result of the keying process. In this way, layer after layer of video can be composited in real time while maintaining the cleanest look possible.

Controlling the A62 from an Editor

The A62 has been designed to fit right into the existing editing suite with two SMPTE-style editing ports. The A62 may be either a playback device, a record device, or both a playback and a record device when controlled from the computerized editing system. * In this way, the A62 can be controlled in the same manner as a tape machine. Because the A62 uses random access disk drives instead of tape, even the fastest VTR is slow compared to the A62. As an example, searching for the IN point of an edit is immediate with the A62.

Less Equipment, Less Time With Increased Quality

Because generations are not a problem with the A62, there is no need to use multiple VTRs and many channels of effects in order to save generations. The typical editing configuration consists of a VTR, an effects device such as the Abekas A53-D, and the A62.

The A62 as an Instant Editor

As a stand-alone editor, the A62 provides the fastest editing possible. Using IN and OUT buttons, an operator can quickly define segments of video with absolute control. In and out points can be entered from the keypad or by rolling the trackball to the desired point. The order of the segments can easily be changed, in and out points can be trimmed, and each segment may have a different playback speed. Once defined, the segments can immediately be played back in real time regardless of where the video is physically recorded on the disks. There's no waiting for the machine to reassemble the segments. The A62 actually edits in real time as the segments are being played back.

Dissolves

With a single source as an input to the A62, dissolves may be programmed and recorded in real time. The A62 can dissolve from video on the disks to incoming video while recording at the same time. This provides A/B roll editing with dissolves while using only one VTR and the A62. A sequence of dissolves may be programmed then triggered from the control panel or the editing system.

Internal Digital Keying and Matting

One of the most significant features of the A62 is its internal keying and matting ability. The digital linear keyer provides the control necessary for perfect transparent keys while maintaining edge detail previously sacrificed. The A62's matte function is able to add elements such as smoke and glass to a background while preserving the depth through the smoke and glass that are lost with a key. Self-keying as well as variable key timing are included in the A62.

Customizing the A62 with Macros

The A62 offers twelve on-line macros for custom operations to be defined by the user. Simply put, a macro is a list of key presses from the control panel recorded in the A62. This allows complex operations to be recorded once in a macro, then used repeatedly as a single function by the user. Full editing capabilities are provided for changing existing macros. For flexibility, the macros may be triggered through the GPI inputs. A DataKey provides off-line storage of macros.

Field and Frame Animation

The disk drives used by the A62 provide the fastest and most accurate means of recording frames or fields from an animation system. Automated control of this process can be easily accomplished with a general-purpose interface (contact closures) or through computer ports provided on the A62. The A62 can also be used to composite small elements of a complex animation quickly for previewing.

A62-50-Second Version

Pin-registered Film Transfers and Compositing

The A62 provides the ideal means of recording pin-registered film frames at a rate many times faster than a VTR. Interface to the pin-registered gate is through contact closures or a serial port provided on the A62. Once a background is recorded, multiple layers of film can be directly composited with first-generation quality using the internal keyer of the A62.

Rotoscoping and Retouching

The A62 is ideal for operations such as rotoscoping and retouching which involve drawing mattes and foreground elements a frame at a time. The A62 can digitally composite these elements with video already recorded on the A62 thus eliminating the need to output each frame to the paint system. As an example, a matte and foreground may be drawn by the artist, then fed into the A62 to be keyed onto a background. The video remains in digital form in the A62 guaranteeing no generation loss during the compositing.

Digital Off-Line Storage

The A62 uses a standard 9-track computer magnetic tape drive for off-line storage. Digital video is transferred to and from the tape drive through the A62 framestore port at a rate of approximately one frame per second. As much as twenty seconds of video can be stored on a single reel of tape. For work that needs to be set aside or for storing the production master the tape ensures a perfect copy that can be reloaded into the A62 at any time.

The A62 Signal System

The A62 is a full bandwidth 14.3MHz, composite digital record and playback system. To achieve the highest possible picture transparency, no color processing is used during realtime playback. For optimal variable playback and still frame processing a digital decoder is used. Composite digital input and output ports are provided for interface to additional A62's and the Abekas A53-D special effects system.

RGB Outputs

As an option, digitally decoded RGB outputs are provided on the A62. Because of the decoding performance of the A62, the RGB outputs provide the ideal means of feeding paint systems or other component equipment.

Interfacing to the A62

The A62 may be controlled by a variety of external devices through ports provided on the A62. An RS232 port is provided as a standard computer interface. The RS422 keyboard port may be used by computers to emulate the functions of the control panel. GPI inputs and outputs are provided for quick interface to equipment by means of contact closures. A parallel digital framestore port provides direct memory access to 3D animation systems. This port allows animation systems to render directly into the A62 framestore.

The 50- vs. 100-second A62

The A62 is available as a 50- or 100-second system. The systems are identical except for capacity and the ability to play and record simultaneously in real time. The simultaneous play and record feature of the 100-second A62 is a necessity for real time compositing in the on-line editing environment. The 50-second A62 is designed for applications that are not geared to the real time nature of the on-line edit suite. Such applications are animation, pin-registered film transfers, retouching and rotoscoping.

ABEKAS VIDEO SYSTEMS, INC.

Digital Disk Recorder

A64 Digital Disk Recorder

Patterned after the award-winning Abekas A62, the A64 Digital Disk Recorder dramatically enhances many aspects of analog or digital post-production. The A64 brings the same advantages of digital recording and playback into the areas of graphics and component post-production that the A62 has brought to the composite post-production environment. In addition, using the A64, a D-1 format VTR, and the A53-D it is now possible to create a 4:2:2 digital edit suite capable of real time layering, editing and effects. High-speed Winchester disk drives provide a precisely controllable real time record and playback device with storage capacities of 50 and 100 seconds.

50- or 100-Second Capacities

The standard configuration of the A64 provides a total capacity of 50 seconds. During real time layering operations, the A64 is used as simultaneous 25 second playback and record devices. The total capacity of the A64 may be increased to 100 seconds with the addition of two disk drive modules. The expanded A64 allows 50 seconds of simultaneous playback and record for layering operations.

The Way The A64 Works

The A64 has the unique ability of simultaneously playing and recording in real time. The 50 second version of the A64 can be configured as a 25 second playback and a 25 second record device, making digital real time layering possible. The expanded 100 second version offers 50 seconds of playback and 50 seconds of recording. Background video is first recorded onto the A64. Foreground video to be keyed or matted onto the background is then fed into the A64 with its associated key signal. These signals may come directly from digital VTR's or from a digital component effects device such as the Abekas A53-D. As the background is played back from one part of the A64, another part of the A64 is recording the result of the keying process. In this way, layer after layer of video can be composited in real time while maintaining the cleanest look possible.

Controlling the A64 From an Editor

The A64 has been designed to fit right into the existing editing suite with two SMPTE style editing ports. Through these ports, the A64 may be either a playback device, a record device, or both as seen from the computerized editing system*. In this way, the editor can control the A64 in the same manner that tape machines are controlled. Because the A64 uses random access disk drives instead of tape, even the fastest VTR is slow compared to the A64. As an example, searching for the IN point of an edit is immediate with the A64.

The A64 As An Instant Editor

As a stand-alone editor, the A64 provides the fastest editing possible. Using IN and OUT buttons, an operator can quickly define segments of video with absolute control. In and out points can be entered from the keypad or by rolling the trackball to the desired point. The order of the segments can easily be changed, in and out points can be trimmed, and each segment may have a different playback speed. Once defined, the segments can immediately be played back in real time regardless of where the video is physically recorded on the disks. There's no waiting for the machine to re-assemble the segments. The A64 actually edits in real time as the segments are being played back.

Less Equipment, Less Time With Increased Quality

Because generations are not a problem with the A64, there is no need to use multiple VTR's and many channels of effects in order to save generations. The typical editing configuration consists of a VTR feeding a single channel effects device such as the A53-D, and the A64.

Dissolves

With a single source as an input to the A64, dissolves may be programmed and recorded in real time. The A64 can dissolve from video on the disks to incoming video while recording at the same time. This provides A/B roll editing with dissolves while using only one source and the A64. The dissolves may be programmed as part of a recording process or may be manually triggered from an AUTO TRANS button on the control panel.

Internal Digital Keying and Matting

One of the most significant features of the A64 is its internal keying and matting ability. The digital linear keyer provides the control necessary for perfect transparent keys while maintaining edge detail previously sacrificed. The A64's matte function is able to add elements such as smoke and glass to a background while preserving the depth through the smoke and glass that are lost with a key. To further complement the A64, self and external keying of either chrominance or luminance type are available in the A64.

The Mask Framestore

A valuable addition to the keying system of the A64 is the mask framestore. The mask framestore provides a stencil or holdback function during a keying process. This allows the keying process to be inhibited in areas defined by the mask. Simple masks may be "drawn" directly into the framestore using the internal graphics processor. In addition, video from a pattern generator, paint system, or video already recorded on the A64 may be used to feed the mask framestore.

A64 50-Second Version

Field and Frame Animation

The disk drives used by the A64 provide the fastest and most accurate means of recording frames or fields from an animation system. Automated control of this process can be easily accomplished with a general-purpose interface (contact closures) or through computer ports provided on the A64. The A64 can also be used to composite small elements of a complex animation quickly for previewing.

Pin-registered Film Transfers and Compositing*

The A64 provides the ideal means of recording pin-registered film frames at a rate many times faster than a VTR. Interface to the pin-registered gate is through contact closures or a serial port provided on the A64. Once a background is recorded, multiple layers of film can be directly composited with first generation quality using the internal keyer of the A64.

Rotoscoping and Retouching

The A64 is ideal for operations such as rotoscoping and retouching which involve drawing mattes and foreground elements a frame at a time from a paint system. As an example, a matte and foreground may be drawn by the artist, then fed into the A64 to be keyed onto a background. The video remains in digital form in the A64 guaranteeing no generation loss during the compositing.

Customizing the A64 With Macros

The A64 offers twelve on-line macros for custom operations to be defined by the user. Simply put, a macro is a list of key presses from the control panel recorded in the A64. This allows complex operations to be recorded once in a macro, then used repeatedly as a single function by the user. Full editing capabilities are provided for changing existing macros. For flexibility, the macros may be triggered through the GPI inputs. A micro-floppy provides off-line storage of macros.

The A64 Signal System

The A64 is a full bandwidth 13.5MHz, 4:2:2 component digital system. In addition to component inputs and outputs, the A64 is equipped with CCIR 601 digital video input and output ports. Accepted as the digital standard, these ports provide interface to other CCIR 601 compatible equipment such as D-1 digital VTR's.

Interfacing to the A64

The A64 may be controlled by a variety of external devices through ports provided on the A64. An RS232 port is provided as a standard computer interface. The RS422 keyboard port may also be used by computers to emulate the functions of the control panel. GPI inputs and outputs are provided for quick interface to equipment by means of contact closures. A parallel digital framestore port connected to an optional SCSI interface provides direct memory access to 3D animation systems. This allows animation systems to render directly into the A64 framestores.

The Graphics Processor

The A64's integral graphics processor can directly access all four framestores for a variety of useful functions. By "drawing" into the mask framestore, simple masks may be created to be used as holdbacks during keying operations. Key signals can be generated inside the A64 by drawing into the key framestore. The cut and paste function allows small areas of video to be "cut out" of a frame and pasted onto other areas of the same or different frame. This provides a quick and convenient method for basic fix-ups without leaving the A64. A grab function is also provided which enables automatic matching of a selected color to either of the color fill generators or the chroma keyer.

ABEKAS VIDEO SYSTEMS, INC.

Digital Character Generator

A72 Digital Character Generator

The A72 Digital Character Generator utilizes a powerful 4:4:4 component architecture to deliver character quality superior to any other character generator.

Outstanding Character Quality

The A72 uses digital master typefaces from major print typeface manufacturers. Master typefaces precisely describe the look of an entire character set. There are presently over 1500 typefaces available. Combined with the advanced signal processing techniques of the A72 the result is extremely high resolution characters with 256 levels of antialiasing.

Instant Character Sizing

Any character can be sized from 8 to 256 scan lines high, instantly. The size changes are made by using the cursor up/down keys or the value is directly entered via the keypad. Once selected, the A72 can produce characters at the selected size faster than the operator can type. This capability completely eliminates the time required to size characters off-line.

Font Compose

The A72 allows the operator to create new fonts by a simple definition process. In addition to the size, many other attributes may be part of a font. Drop shadows can be added in any one of eight directions surrounding a character. Character outlines may be added to give the character a border of adjustable color. Italics slant the character left or right in 1 degree increments. All attributes are combined to define the font. All fonts defined are considered on-line which means a page of text can contain an unlimited number of fonts.

Full Color Scan-In

An advanced feature of the A72 is the ability to scan in full bandwidth RGB pictures. The video may be either analog or comply with the CCIR 601 standard. To enhance the scan-in process, both luminance and RGB chroma keyers are included. Since scanned-in images, or icons, are treated as typeface elements, full sizing and placement capability are possible.

Palette Colors

With over 16.7 million colors on hand the A72 provides the ultimate in color flexibility. Selection is made easy by picking a color chip and adjusting the hue, saturation, and luminance level for the desired color. All colors defined are considered on-line which means a page of text can contain over 16 million colors.

Background

A variety of attractive backgrounds can be created quickly within the A72. Color selection is from a palette of over 16.7 million colors. A background can be one solid color or multiple bands of many different colors. Select two different colors on the screen and the machine will interpolate between these colors to form an attractive color contour between the two points. This color contour can be from top to bottom or left to right.

Effects

The A72 provides ultra smooth rolls, crawls, and slow reveals in the form of preprogrammed effects. The speed of each effect is infinitely adjustable. If preferred, the overall length of the effect may be specified in seconds and frames. The speed or time of the effect can be preprogrammed or entered just prior to running the effect. An adjustable roll window is provided to restrict the effect to only a certain portion of the screen.

Multi-Channel Operation

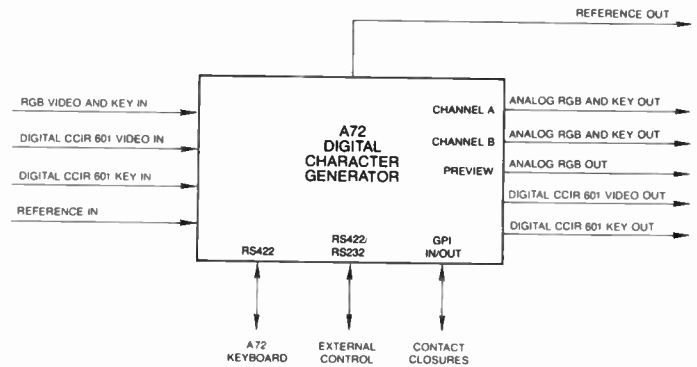

Multi-channel effects are made possible by adding the second channel to the A72. The second channel is a full bandwidth frame store. The transition between frame stores is completely programmable and includes cuts, variable rate dissolves, and variable softness wipes. Effect transitions are initiated simply by pushing the transfer key.

Standard Typefaces

The A72 comes equipped with 15 master typefaces. The collection includes the most popular serif, sans serif, and cursive styles.

Specifications

Video: 525/60 or 625/50 television standard
Inputs: Analog RGB, analog key, digital CCIR 601 video, digital CCIR 601 key, composite sync or black as reference
Outputs: Channel A: analog RGBS
 Channel A: analog key
 Channel B: analog RGBS
 Channel B: analog key
 Digital CCIR 601 video
 Digital CCIR 601 key
 Preview: analog RGBS
 Reference out: Sync, subcarrier, blanking

Interconnects: A72 keyboard to A72 signal system: serial RS422, 2000' maximum

Control Ports: Signal system: 2 keyboard RS422, 1 aux RS422/RS232, 1 general purpose interface

Keyboard: 2 keyboard RS422, 1 RS232, 1 external keyboard power

Physical and Electrical

Unit	Power	Size	Weight
A72 signal system	< 600W	8.75" H x 19" W x 22" D	90 lb.
A72 keyboard	< 20W	4" H x 22" W x 12.5" D	12 lb.

Single Channel A72

- Instant sizing, italics, drop shadows and borders
- Continuously variable roll and crawl speeds
- 100M byte Winchester disk drive
- 16.7 million colors
- Background generator
- Includes 15 master typefaces and one keyboard
- Preview and on-air output RGB (encoder not included)

Single Channel A72 \$34,900.00

Dual Channel A72

Includes all single channel A72 features plus:

- Full color RGB scan-in
- Two independent on-air output channels
- Variable cuts, wipes and dissolves between output channels

Dual Channel A72 \$44,900.00

A72MT

Additional master typefaces \$150.00

A72DI0

CCIR 601 compatible input and output for video and key \$8,000.00

A72CP

Additional keyboard complete with 3 1/2" floppy disk drive \$5,900.00

A72SC

Second output channel to upgrade single channel A72 to dual channel A72 \$10,000.00

Custom Control Panel Cable

50' Control Cable \$100.00

100' Control Cable 200.00

(One 30' control cable is standard with each keyboard)

ABEKAS VIDEO SYSTEMS, INC.**Switcher****T8 Switcher**

- Program preset flip flop bus
- Single key bus
- Integral downstream keyer and fade to black
- 64-register effects memory system
- Non-volatile memory
- Credit card off-line storage
- Two independent pattern generators
- True linear keying techniques
- Full transition preview facility
- Built in auxiliary bus
- Serial edit interface and GPI
- Independent auto-transitions (0-999 frames) at: Main transition, Downstream key, Fade-to-black
- RGB chroma key
- Encoded chroma key
- Key edging facility
- Key masking facility
- Video timing aid
- Interface to DVE's
- Composite genlock

The T8 was designed to meet the requirements of broadcast, production and post-production applications which constantly demand performance from a video switcher. The T8 is in a class by itself offering features that can only be found on larger switchers.

The T8 is a high-quality, compact switcher featuring a three-bus structure, eight primary inputs in addition to color background and black. A logical control panel with well-defined control groups, informative displays and a consistent operating philosophy makes the T8 extremely easy to operate.

Dual Pattern Generators

The T8 offers two independent pattern generators, the primary being the wipe pattern and the secondary being the split screen pattern generator. The T8 produces over 80 different patterns including rotary and clock wipes. Borders and/or softness can also be added to wipes to enhance the overall effect. Most patterns may be positioned and the aspect ratio of some can be altered. In addition the direction of the wipe can also be changed.

Keying

The T8 offers extremely high quality and flexible keying capabilities. It has a single mix effects system comprised of a program/preset bus and a key bus. In addition an integral downstream keyer and fade-to-black provides further keying flexibility.

Internal/External Luminance Keying

The T8 can perform luminance keying in two ways: internal keying from any primary input or external keying from one of two separate key inputs. In addition to normal keying techniques, true linear keying can be produced from a character generator or similar key source. This will enable characters of only 10 lines high to be displayed with perfect clarity.

Chroma Keying

An optional chroma keyer can perform RGB chroma keying from up to three independent sources or encoded chroma keying from a single source. In both cases there is full variable hue and shadow processing.

Split Screen Generator

The split screen generator repeats the first 9 patterns of the main wipes independently; similarly, the borders, softness and position can be adjusted. The split screen can also adopt the main wipe pattern shape to produce a wipe limit effect.

Key Modifiers

A key edger at both foreground and DSK can be fitted to enhance the key and produce black, white or colored outline borders or drop shadows of various thicknesses. An internal mask generator utilizing the split screen output can be used to hide the unwanted visual effects or for rolling credits. Soft or hard edge masks can be produced internally or the operator may select an external mask generator.

Downstream Keyer

Both DSK and fade-to-black are controlled by auto-transitions of independent rate duration. As with the key bus there are two luminance key inputs plus a facility to perform true linear keying. The key can be modified in a similar fashion to the key bus and a full key preview is incorporated.

Memory Controlled Effects

A non-volatile effects memory system can learn up to 64 complete control panel setups including all colors, borders, softness, etc. These registers may be recalled manually or via an editor. An auto sequence mode enables even the most complex set of control panel registers to be recalled one after the other in a single edit pass.

There is an optional facility to download all 64 registers to a storage medium that resembles a credit card, thus if more than one operator uses the edit suite each one can have their own set of registers, or the cards can be used for archiving for future edits on the same subject.

The switcher can also control a peripheral device such as a DVE so that a recalled event may capture the combined effects of both machines.

Auxiliary Bus

An auxiliary bus which is totally separate from the main mix effects system enables the selection of any of the eight primary inputs or the program output. This bus would be typically used to source a DVE or engineering station.

Automatic Non-Sync Detector

Each of the inputs may be declared synchronous or non-synchronous with respect to the reference. In addition an automatic detection mode will indicate as soon as a source is non-synchronous and will display this regardless of selection. During non-synchronous operation, dissolves and wipes are inhibited. Any attempt to perform such transitions will result in a cut at the end of the fader movement. This will ensure greater picture stability during live operation.

Video Timing Aid

The switcher requires just black burst as a reference which it subsequently reinserts for greater picture stability. A video timing aid assists operators and engineers in checking system timing by displaying the sync timing and subcarrier phase with respect to the reference on the preview output.

Component T8

The component T8 has identical operation and appearance to the composite version but accepts Betacam* or MII** format signals. The video timing aid and encoded chroma key facilities are not applicable to this switcher.

ACRODYNE INDUSTRIES, INC.*Exciter***FL Series TCV VHF Exciter**

The standard exciter features video correction, stereo and monaural sound compatibility, a SAW IF filter, a phase locked local oscillator, digital and analog power control and IF precorrection.

The video input processor provides front panel adjustment for video gain, sync gain, differential phase and differential gain.

The modulator produces an IF output to the linearity corrector that drives the frequency converter. Vestigial side band shaping is accomplished in the modulator by means of a SAW filter complete with envelope delay and phase precorrection. The aural carrier is phase locked to the visual carrier to maintain stable carrier separation. A front panel switch is provided to select either mono or stereo (MTS) audio input. Dual channel sound versions are available also. Front panel metering includes percent video and aural carrier modulation.

An adjustable linearity corrector at IF compensates for any distortions present in the various amplifier stages.

The frequency converter is a modular front accessible plug-in design. All modules are RFI shielded and all RF connections are on the front panels. This frequency converter features a phase locked local oscillator with a 10MHz TCXO reference, digital and analog power control, Class A broadband amplifiers plus diagnostics and digital metering. Input connections are provided for overall AGC control.

Ease of access is provided by the plug-in modules and an extender board supplied with the system.

Enhanced frequency stability is achieved through the use of a 10MHz TCXO reference and a low noise, phase locked local oscillator.

A multi-pin connector provides a wide variety of interfaces with external equipment for AGC feedback, on/off control, interlocks, protective circuits as well as remote control interface.

The use of microstrip techniques results in high reliability and a low component count with consistent response between modules.

Amplifiers are all bipolar devices operating Class A that provide exceptional linearity. Voltage regulators and EMI filters on the DC input to each module provide isolation from any power supply variations and RF pickup, preventing degradation of video performance. And, each amplifier stage contains active bias circuitry for optimum operating stability and thermal protection.

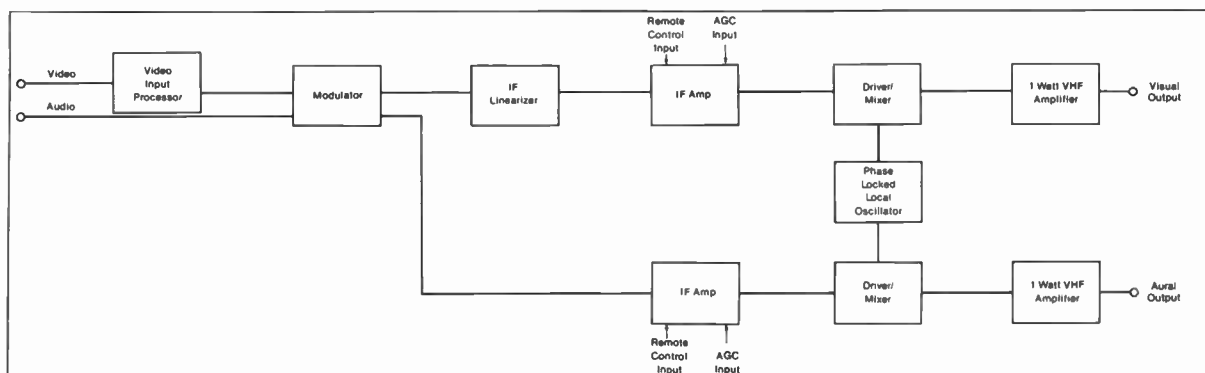

The IF amplifier contains analog and digital circuitry to control IF amplifier gain for output power control. Power can be controlled in a variety of ways: manually by a front panel switch, automatically through an AGC circuit, or by remote control. The front panel also contains an LED display that includes module status, video and transmit indicators.

Solid-State IPAs

The standard exciter delivers 1W peak visual, 1W average aural power output. Solid-state IPAs can be furnished to provide higher levels of drive power. For retrofits or standby applications.

TCV Exciter with 200W Solid-State IPAs

TR Series**5kW to 20kW VHF Television Transmitters**

- FCC and CCIR formats
- Built-in diagnostics
- Modular plug-in design
- Stereo ready
- Overall AGC
- PLL local oscillator
- Internally diplexed

These VHF transmitters are internally diplexed designs using output amplifiers incorporating tetrodes from RCA and either tube type or solid-state drivers. The simultaneous amplification of visual and aural carriers in common amplifiers eliminates the need for separate visual and aural power amplifier circuits reducing the complexity of the transmitter. This design simplification improves field reliability. TRL models are for use in Band I and TRH models are for use in Band III.

VHF Exciter

The Acrodyne standard exciter features video correction, stereo and monaural sound compatibility, a SAW IF filter, a phase locked local oscillator, digital and analog power control, and IF precorrection. The video input processor provides adjustment for video gain, sync gain and differential phase and gain adjustments.

The modulator produces an IF output to the linearity corrector that drives the frequency converter. Vestigial side band shaping is accomplished in the modulator by means of a SAW filter complete with envelope delay and phase precorrection. The aural carrier is phase locked to the visual carrier to maintain stable carrier separation.

An adjustable linearity corrector at IF compensates for any distortions present in the various amplifier stages.

The frequency converter is a modular front accessible plug-in design. All modules are RF shielded and all RF connections are on the front panels. This frequency converter features a phase locked local oscillator with a 10MHz TCXO reference, digital and analog power control, class A broadband amplifiers plus diagnostics and digital metering. Input connections are provided for overall AGC control.

Driver Amplifiers

These transmitters can be supplied with either tube or solid-state driver amplifiers.

Tube drivers can reduce the initial cost of the system in certain applications. Dial type front panel controls facilitate tuning. Anode cooling fans provide filtered high pressure air that can be exhausted to the outside. Pressure switches ensure that sufficient air flow is present.

Solid-state broadband drivers are available, eliminating the tuned driver stage, periodic tube replacement and enhancing overall reliability. These Acrodyne designed modules use linear devices for combined amplification or separate visual and aural amplification depending on the application. Thermal protection circuits are provided for these amplifiers. A linear power supply ensures noise free operation and features current foldback and overvoltage protection. The modules are mounted in slide-out drawers with dedicated cooling fans.

Tetrode Final Amplifier

The tuned coaxial cavity final amplifiers use tetrodes from RCA operating in Class AB1. The tuned bandwidth of these amplifiers ensure that tube aging will have minor effects on the signal bandpass. The final output is a composite TV signal with in band intermodulation (IM) products down -54dB or better. Output notch filters reduce the out-of-band IM products to -60dB and a low pass

20kW Band I (Low Band) VHF TV Transmitter

filter provides harmonic rejection to -60dB. Air cooling is used exclusively to cool these tetrodes. The anode cooling fan may be located in a separate cabinet permitting it to be in another room or it may be ceiling mounted where floor space is limited.

Logic Interface

Self-protection and control circuitry are centrally located in the logic interface chassis. Critical transmitter parameters such as video presence, power supply voltages, thermal conditions, DC levels, safety interlocks and remote control inputs are processed to verify proper system operation and/or to operate automatic shutdown sequences.

Metering and Status

Visual indication of the system status is provided by the use of appropriate LED indicators, metering of DC voltages and current levels and forward/reverse RF power metering.

Logic Display

The transmitter incorporates a logic status panel which provides the operator with a positive LED display of the transmitter start-up and shutdown sequence. In case of a momentary fault, the system logic automatically recycles up to four times to maintain service. The event remains indicated until it is manually reset.

Protection

Special protection has been designed into this equipment to avoid damage from transient line conditions. All supplies in the final amplifier, except the plate supply, are regulated. The plate supply is designed for transient suppression through the use of choke filtering and high voltage, high current rectifiers. All power supplies are protected from voltage transients by MOVs at their AC input.

ACRODYNE INDUSTRIES, INC.*Transmitters/Translators***TL Series 1W to 1kW VHF and UHF
Television Transmitters/Translators**

The TL Series TV Transmitters and TV Translators are designed to meet the needs of domestic LPTV/Community TV broadcasters and translator users. They are also well suited for international applications from 1W to 1kW. This series of UHF and VHF equipment offers unmatched economy along with Acrodyne's traditional quality. Plus, all of today's high technology innovations have been designed into each system.

Modulator (Transmitter Service)

The modulator provides an IF output at 38.9 or 45.75MHz depending on the CCIR system. Vestigial side band shaping is accomplished at the IF frequency with a SAW filter complete with envelope delay and phase pre-correction. The aural carrier is phase locked to the visual carrier to maintain stable carrier separation.

Translator/Transposer Service

For these applications, the modulator is replaced by a VHF or UHF down converter which maintains video and audio transparency while producing an IF output. For special applications, both a modulator and a down-converter can be supplied.

Type T Upconverter

Standard systems are supplied with our Type T upconverter. This slide-out chassis is provided with a front panel meter, power control and on/off control and features:

- Class A broadband amplifiers
- 1W output
- Crystal or optional phase locked oscillator
- Built-in power supply

Optional TCU Upconverter

The TCU upconverter is a modular, front panel plug-in design for ease of access. Each module is RFI shielded and all connections are on the front panels. All RF circuitry is the same as the standard upconverter. In addition to the standard upconverter features, the TCU design offers the benefits of:

- Phase locked oscillator (standard)
- Built-in diagnostics
- Overall AGC
- Digital metering

Solid-State Amplifiers

VHF and UHF solid-state amplifier designs for the IPA stages and as final amplifiers are broadband and Class A operated to assure excellent visual and aural performance. These amps are mounted on slide-out drawers or hinged panels for easy access and are forced air cooled for long term reliability.

Power Amplifiers

Most standard systems are solid-state. Certain systems are available with either solid-state or tube type output amplifiers.

1kW tube models use industry standard tetrodes from RCA or Thomson. These systems also feature our logic interface chassis which processes critical system parameters to verify proper operation and/or to operate automatic shutdown sequences. Front panel LEDs and metering provide diagnostic information. Critical tetrode power supplies are protected with an AC line regulator. Double filtered high pressure air cools the tetrode and pressure sensing logic ensures that sufficient air pressure is always present.

Cooling

All systems with over 1W output are forced air cooled for long term reliability.

Stereo Compatibility

With optional wideband or dual channel exciters, all TV transmitters are stereo ready. The use of broadband Class A solid-state amps and ultra linear tetrodes assures virtual transparent transmission of stereo signals. TV translators will not degrade incoming stereo audio signals.

Options

- Phase locked oscillator (required for offset applications)
- TCU upconverter
- Stereo audio input
- Translator service
- Frequency agile systems
- Station ID

**100W Solid-State UHF TV Transmitter****Type T Upconverter****TCU Upconverter**

ACRODYNE INDUSTRIES, INC.**Transmitter/Translator****TRU/1KAC/TLU/1KAC****1kW UHF Television Transmitter/Translator**

The 1kW UHF transmitter utilizes IF modulation and low level diplexing to produce 1kW visual and 100W aural power. A solid-state driver, operating at approximately 30W, drives the final tetrode amplifier stage to its 1kW rated output power. The final amplifier is air-cooled.

This space efficient, self-contained television transmitter incorporates many features of high power equipment and may be used to drive high power UHF tetrode amplifiers.

Modulator TRU/1KAC

The modulator provides an IF output at 38.9 or 45.75MHz depending on the CCIR system specified. Vestigial side band shaping is accomplished at the IF frequency with a SAW filter complete with envelope delay and phase pre-correction. The aural carrier is phase locked to the visual carrier to maintain stable carrier separation. The modulator includes front panel metering of video and aural modulation.

Translator/Transposer Service TLU/1KAC

In translator/transposer applications, the modulator is removed from the system and replaced with a receiver chassis. The receiver chassis maintains video signal transparency while down converting to the required IF frequency. For special applications, the TLU/1KAC can be supplied with both a modulator and a receiver input.

Upconverter

The TCU upconverter is a modular plug-in design for ease of servicing and maintenance. Each module is RFI shielded and all RF connections are on the front panels. The upconverter features broadband amplifiers, digital and analog circuitry for power control, a phase locked local oscillator with a 10MHz TCXO reference for transmitter applications (fixed crystal oscillators for standard translator applications) plus extensive built-in diagnostics and metering. Input connections are provided for overall transmitter AGC.

Tetrode Amplifier

The tuned coaxial cavity final amplifier uses a high efficiency tetrode operating in Class AB1. The tuned bandwidth of this amplifier is 10MHz which insures that tube aging will have minor effects on the signal bandpass.

Filtered air cools the tube using a high pressure blower mounted on vibration absorbing pads. An air pressure switch and thermal sensor provide redundant protection in the event that cooling air is lost.

Output notch filters reduce the out-of-band intermodulation products to -60dB. The filter output is a complete TV signal containing both aural and visual carriers to a single transmission line antenna feed.

Protection

Special protection has been designed into this equipment to avoid damage from transient line conditions. Critical filament and bias supplies in

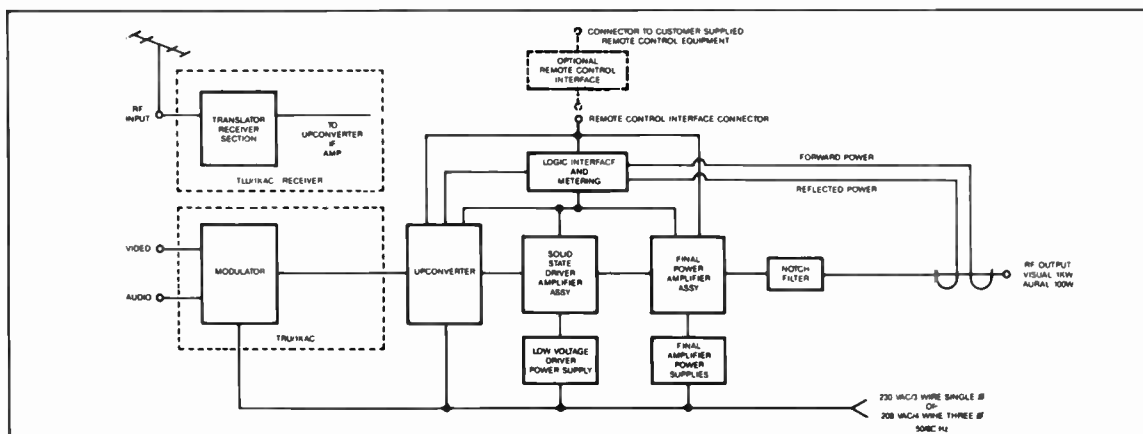

**TRU/1KAC
TLU/1KAC**

the final amplifier are AC regulated by magnetic regulation transformers. The plate and screen supply is designed for transient suppression by the use of choke filtering and high voltage, high peak current rectifiers.

The solid-state driver assembly is protected by a regulated DC supply that operates over $\pm 10\%$ input variations. Over-voltage protection by SCR crowbar and current foldback also protects all transistor circuits.

Optional logic control also provides for a 10 sec. turn-on if AC power is interrupted for less than 10 secs.

Refer to Green Section for Addresses and Telephone Numbers.

ACRODYNE INDUSTRIES, INC.

Transmitters

**TRU/5KA/TRU-5KA
5kW UHF Television Transmitter**

The 5kW UHF transmitters utilize IF modulation and low level diplexing to produce 5kW visual and 500W aural power output. A single driver, tetrode or solid-state driver operating at approximately 200W drives the final amplifier to rated power.

These units are completely air-cooled in either configuration. The transmitter is prewired for remote control and telemetry and can be easily interfaced with most RC systems by adding the optional RC interface board which provides prescaled outputs.

Modulator

The modulator provides an IF output at 38.9 or 45.75MHz depending on the CCIR system specified. Vestigial side band shaping is accomplished at the IF frequency with a SAW filter. The aural carrier is phase locked to the visual carrier to maintain stable carrier separation. The modulator includes front panel metering of video and aural modulation.

Upconverter

The TCU upconverter is a modular plug-in design for ease of servicing and maintenance. Each module is RFI shielded and all RF connections are on the front panels. The upconverter features broadband amplifiers, digital and analog circuitry for power control, a phase-locked local oscillator with a 10MHz TCXO reference plus extensive built-in diagnostics and metering. Input connections are provided for overall transmitter AGC.

TRU/5KA Solid-State Driver Amplifier

The solid-state driver consists of separate visual and aural amplifier chains to minimize in-band intermodulation products. The solid-state driver array features in-phase combined modular amplifiers with a common high current power supply with fused branches for each amplifier. The visual and aural signals are combined at approximately 200W peak visual. A single amplifier design covers the UHF spectrum and includes temperature compensating biasing techniques. Amplifier thermal protection and high temperature alarms are included in the basic logic design.

TRU-5KA Tetrode Driver Amplifier

The combined visual/aural upconverter output drives a 5W solid-state amplifier which in turn drives a Thomson TH-338 air-cooled tetrode operating in class AB1. The tuned bandwidth of this amplifier is 10MHz which insures that tube aging will have minor effects on bandpass or intermodulation products.

Tetrode Final Amplifier

A Thomson TH-382 air-cooled tetrode with a tuned bandwidth of approximately 12MHz is the final amplifier stage for the TRU-5KA or TRU/5KA transmitter. The output filter assembly reduces out-of-band intermodulation products to -60dB or greater and a low pass filter provides harmonic rejection. Overall AGC is provided by a sample coupler at the output with feedback to the TCU upconverter.

Logic Interface

Self-protection and control circuitry, metering and status indicators are centrally located in the logic interface chassis. Critical transmitter parameters consisting of video presence, power supply voltages, thermal conditions, DC levels, safety interlocks and remote control inputs are processed to

**TRU/5KA
TRU-5KA**

verify proper system operation and/or to operate ASD and drive shutdown sequences. An output power meter with selector switch for visual and aural power is located on the front panel of the chassis.

Logic Display

The transmitter incorporates a logic status display panel which operates in conjunction with an automatic recycling circuit. In case of a momentary overload, the unit automatically recycles in an effort to maintain service. Four recycles occur before complete shutdown.

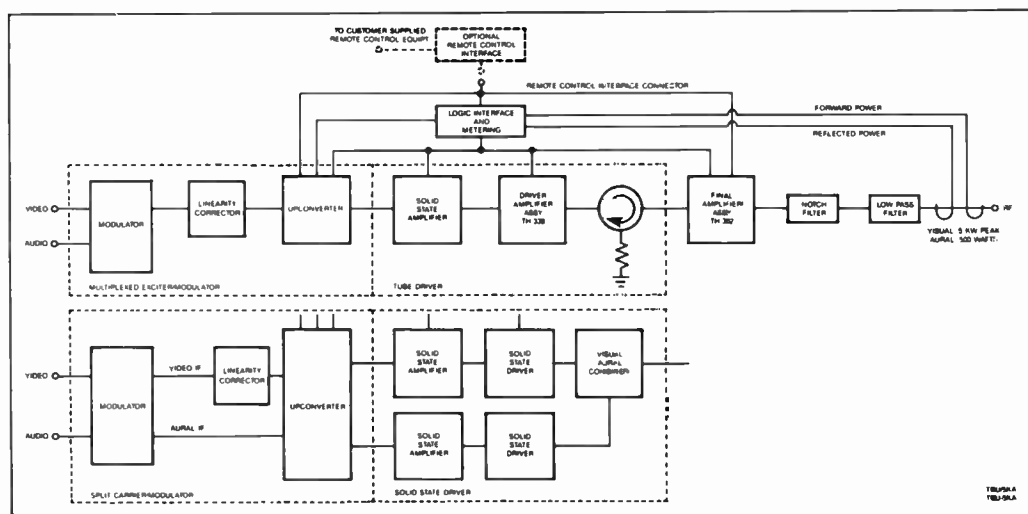

Metering and Status

The TRU/5KA and TRU-5KA are equipped with extensive built-in metering functions for DC voltage and current levels plus forward and reverse RF power measurements. In addition, LED indicators are employed for quick identification of normal (green) or alarm (red) conditions in critical subassemblies of the transmitter.

Protection

Special protection has been designed into this equipment to avoid damage from transient line conditions. Critical filament and bias supplies in the final amplifier are AC regulated by magnetic regulation transformers. The plate and screen supply is designed for transient suppression through the use of choke filtering and high voltage, high peak current rectifiers.

The solid-state driver assembly is protected by a regulated DC supply that operates over $\pm 10\%$ input variations. Over-voltage protection by SCR crowbar and current foldback also protects all transistor circuits. Standard logic control also provides for a 10 sec. turn-on if AC power is interrupted for less than 10 sec.

ACRODYNE INDUSTRIES, INC.

Transmitter

TRU-10KVC**10kW UHF Television Transmitter**

This 10kW UHF transmitter utilizes IF modulation and low level diplexing to produce 10kW visual and 1kW aural power. A single tube driver operating at approximately 400W drives the final amplifier stage to its 10kW rated output power.

The driver tube of the TRU-10KVC is air-cooled, while Hypervapotron® cooling is used for the final amplifier stage. These cooling systems insure minimal system maintenance and reliable operation, while minimizing high pressure air requirements.

Video Input Processor

The video input processor provides adjustment for video gain, sync gain and differential phase and gain adjustments to permit the operator to adjust the transmitter for optimum video performance.

Modulator

The modulator provides an IF output at 38.9 or 45.75MHz depending on the CCIR system specified. Vestigial side band shaping is accomplished at the IF frequency with a SAW filter complete with envelope delay and phase pre-correction. The aural carrier is phase locked to the visual carrier to maintain stable carrier separation. The modulator includes front panel metering of video and aural modulation.

Upconverter

The TCU upconverter is a modular plug-in design for ease of servicing and maintenance. Each module is RFI shielded and all RF connections are on the front panels. The upconverter features broadband amplifiers, digital and analog circuitry for power control, a phase locked local oscillator with a 10MHz TCXO reference plus extensive built-in diagnostics and metering. Input connections are provided for overall transmitter AGC.

Solid-State Driver Amplifier

The solid-state driver amplifier consists of a single 30W plug-in module operating at 10W nominal output. The amplifier is designed for 50 ohm interfacing and permits operation on any TV channel between 470MHz and 810MHz without adjustment. Gain variations over the 340MHz band are less than 1dB.

Tetrode Driver Amplifier

The tuned coaxial cavity driver amplifier uses a high efficiency tetrode operating in class AB1. The tuned bandwidth of this amplifier is 10MHz which insures that tube aging will have minor effects on the signal bandpass. This 1kW rated amplifier normally operates at 400W output resulting in extended tube life and exceptional performance.

Tetrode Final Amplifier

The tuned coaxial cavity final amplifier uses a high efficiency Thomson CSF TH-582 tetrode operating in class AB1. The tuned bandwidth of this amplifier is 12MHz which insures that tube aging will have minor effects on the signal bandpass. Output notch filters reduce the out-of-band intermodulation products to 60dB and a low pass filter provides harmonic rejection. The filter output is a complete TV signal containing both aural and visual carriers to a single transmission line antenna feed.

Hypervapotron Cooling

The TRU-10KVC utilizes a vapor phase cooling system. This system uses water and an external heat exchanger. The heat exchanger can be located up

TRU-10KVC

to 30' from the transmitter and contains all the necessary purification filters and control monitors for continuous unattended operation. It is designed to exhaust hot air into a duct for building heating or direct exhaust.

Logic Interface

Self-protection and control circuitry, metering and status indicators are centrally located in the logic interface chassis. Critical transmitter parameters consisting of video presence, power supply voltages, thermal conditions, DC levels, safety interlocks and remote control inputs are processed to verify proper system operation and/or to operate ASD and drive shutdown sequences. An output power meter with selector switch for visual and aural power is located on the front panel of this chassis.

Logic Display

The transmitter incorporates a logic status display panel which operates in conjunction with an automatic recycling circuit. In case of a momentary overload, the unit automatically recycles in an effort to maintain service. Four recycles occur before complete shutdown.

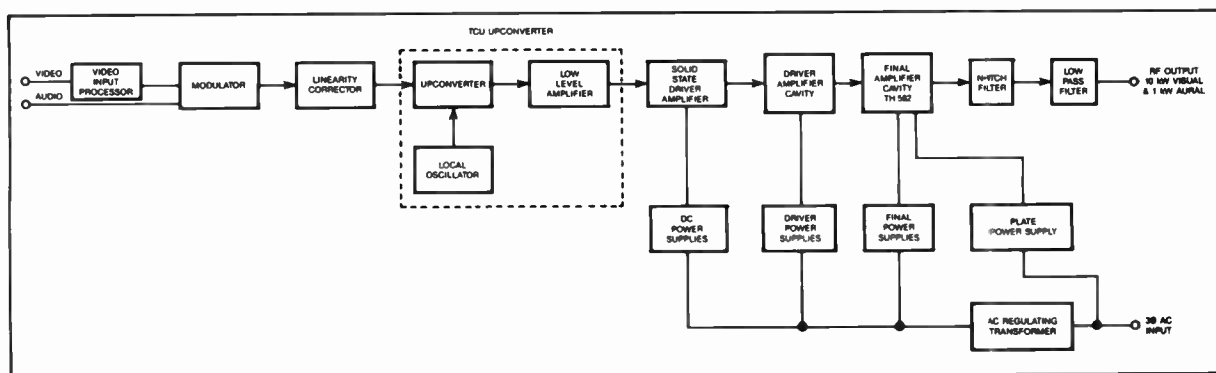

Protection

Special protection has been designed into this equipment to avoid damage from transient line conditions. All supplies in the final amplifier, except the tetrode plate supply, are AC regulated by magnetic regulation transformers. The plate supply is designed for transient suppression through the use of choke filtering and high voltage, high peak current rectifiers.

The solid-state driver assembly and low level electronics are protected by a magnetic regulator prior to any regulated DC supply. Over-voltage protection by SCR crowbar and current foldback also protects all transistor circuits. The solid-state amplifier is protected against load mismatches by means of a circulator.

Final Amplifier Bypass Option

This option affords the broadcaster the advantage of a 1kW standby in the event of final amplifier malfunction. Both manual and automatic final amplifier bypass switching are available.

Prices and Specifications Subject to Change Without Notice.

ACRODYNE INDUSTRIES, INC.**Transmitter****TRU-30KV****30kW UHF Television Transmitter**

This 30kW UHF transmitter utilizes a single tetrode final amplifier and IF diplexing to produce 30kW visual and 3kW aural power. A single tetrode driver operating at approximately 1200W drives the final amplifier. The driver is air cooled while Hypervapotron® cooling is used for the final amplifier. These cooling systems are designed for minimal maintenance and reliable operation.

UHF Exciter

The use of ultra linear tetrodes and class A solid-state amplifiers permits the use of relatively simple exciters that do not include extensive precorrection circuits as required with klystron type UHF transmitters. The standard exciter consists of two plug-in chassis with front accessible plug-in modules.

The video input processor provides adjustment for video gain, sync gain, differential phase and differential gain from the front panel.

The modulator produces an IF output to the linearity corrector that drives the frequency converter. Vestigial side band shaping is accomplished in the modulator by means of a SAW filter complete with envelope delay and phase precorrection. The aural carrier is phase locked to the visual carrier to maintain stable carrier separation.

An adjustable linearity corrector at IF compensates for any distortions present in the various amplifier stages.

The frequency converter is a modular front accessible plug-in design. All modules are RFI shielded and all RF connections are on the front panels. This frequency converter features a phase locked local oscillator with a 10MHz TCXO reference, digital and analog power control, class A broadband amplifiers plus diagnostics and digital metering. Input connections are provided for overall AGC control.

Solid-State IPA

The solid-state IPA is mounted in a slide out drawer with forced air cooling. This class A amplifier is designed for 50 ohm interfacing and permits operation on any TV channel between 470MHz and 810MHz without adjustment.

Tetrode Driver Amplifier

The tuned coaxial cavity driver uses a high efficiency Thomson CSF TH-393 tetrode operating in class AB1. The tuned bandwidth of the amplifier is 10MHz which ensures that tube aging will have minor effects on the signal bandpass. This 2kW rated amplifier normally operates at 1200W visual, 120W aural output resulting in extended tube life and exceptional performance.

Tetrode Final Amplifier

The tuned coaxial cavity final amplifier uses a high efficiency Thomson CSF TH-563 tetrode operating in class AB1. The tuned bandwidth of this amplifier is 10MHz which ensures that tube aging will have minor effects on the signal bandpass. The final output is a composite TV signal with in band intermodulation (IM) products down -54dB or better. Output notch filters reduce the out-of-band IM products to -60dB and a low pass filter provides harmonic rejection to -60dB.

Hypervapotron Cooling

The TRU-30KV utilizes a vapor phase cooling system. This system uses distilled water and an external heat exchanger. The heat exchanger can be located up to 30' from the transmitter and contains all the necessary purification filters and control monitors for continuous unattended operation. It is designed to exhaust hot air into a duct for building heating or direct exhaust to the outside.

**TRU-30KV****Logic Interface**

Self-protection and control circuitry are centrally located in the logic interface chassis. Critical transmitter parameters such as video presence, power supply voltages, thermal conditions, DC levels, safety interlocks and remote control inputs are processed to verify proper system operation and/or to operate automatic shutdown sequences.

Metering and Status

Visual indication of the system status is provided by the use of appropriate LED indicators, metering of DC voltages and current levels, and forward/reverse RF power metering.

Logic Display

The transmitter incorporates a logic status panel which provides the operator with a positive LED display of the transmitter start-up and shutdown sequence. In case of a momentary fault, the system logic automatically recycles up to four times to maintain service. The event remains indicated until it is manually reset.

Protection

Special protection has been designed into this equipment to avoid damage from transient line conditions. All supplies in the final amplifier, except the plate supply, are regulated. The plate supply is designed for transient suppression through the use of choke filtering and high voltage, high current rectifiers. All power supplies are protected from voltage transients by MOVs at their AC input.

Overvoltage protection by SCR crowbar and current foldback also protects all transistor circuits.

Final Amplifier Bypass Option

This option affords the broadcaster the advantage of a 2kW standby in the event that the final amplifier must be taken out of service.

ADCOM

Tonearm Cartridges

XC Series

High Output Moving Coil Cartridges

The XC Series of Crosscoil cartridges offer the utmost in performance. Every aspect of cartridge design has been explored in the XC development. Differences in models are basically due to choice of diamond shape and cantilever material. As with all Adcom Crosscoil designs, a pre-amplifier or transformer is not necessary for optimum performance.

SXC/VDH The flagship cartridge from Adcom. A van den Hul stylus tip is precision fitted to a tubular sapphire cantilever for extremely low phase shift.

The SXC-vdH cartridge is the most sophisticated cartridge currently available and will perform up to its potential in almost any currently available quality tonearm and turntable combination. The van den Hul stylus tip has a contact area of .15 x 3.3 mil allowing it to keep intimate contact with the record groove wall. This allows for not only outstanding sound quality, but also minimal record wear during the tracking process.

SXC/VDH \$500.00

XC-MR II An Adcom modified Micro-Ridge stylus tip, offers a level of performance that up to now has not been available in a cartridge at its price. The Micro-Ridge stylus tip along with the Crosscoil design allows tremendous recovery of detail

from the record groove. The contact area (.15 x 3.0 mil) of the stylus tip allows for the accurate tracing of record grooves along with improved tip life due to the unique shape of the Micro-Ridge stylus.

XC-MR II \$360.00

XC-LT II The "Best Buy" XC cartridge featuring a newly designed line trace stylus. The XC-LT II will provide a remarkably high level of performance and offers non-critical compatibility with nearly all tonearms currently available. The contact area of the line trace stylus (.25 x 1.5 mil) is both taller and narrower than typical elliptical shapes and therefore can retrieve more detail from the record groove.

XC-LT II \$290.00

HC Series

High Output Moving Coil Cartridges

The HC Series of Crosscoil cartridges is a major step forward in moving coil design at a price that almost everyone can afford. From the experience gained in producing the highly-regarded XC Series, the HC Series has been engineered to retain these design concepts and still offer a quality and value combination unavailable before now.

HC-VDH II All the performance of the HC-E-II with the addition of a van den Hul II stylus tip. The van den Hul II shape offers superior tracing of the record

groove wall for improved detail and depth. The contact area (.2 x 2.8 mil) of the vdH II stylus tip is radically different from the standard elliptical shapes and offers not only superior sound quality in comparison to standard elliptical shapes, but also increased record and stylus life.

HC-VDH II \$250.00

HC-E II Adcom's most affordable high output moving coil cartridge, it retains almost all of the design concepts and quality assurance of our costlier Crosscoil models. A highly polished elliptical stylus is used for fine overall performance.

HC-E II \$160.00

HP/E II Owners of P-mount turntables may now obtain superior playback quality with the introduction of the Adcom HP/E II P-mount cartridge. The HP/E II is the first P-mount cartridge that offers almost all the outstanding design elements of the Adcom Crosscoil design. Weight, stylus overhang and vertical tracking angle have been engineered to give optimum performance with any P-mount turntable. An adaptor to allow the HP-E II to be used with non P-mount turntables is included at no extra charge.

ADC TELECOMMUNICATIONS, INC.

Video/Audio Patching

Pro-Patch Video Jackfield

PPV-24 MK II

The Pro-Patch Video Jackfield features a 2 x 24 array of ADC switching (self-normaling) coax jacks wired back to quick and simple BNC connectors on a clutter-free rear panel. Self-normaling loops internal to the jackfield are color-phase compensated for cross patching. No phase shift occurs between self-normal and patch cord providing a phase coherent patching system.

4-26792-0010 2 x 24 (48 Jacks) \$1750.00

Note: Use only 3' patch cord to preserve phase coherent capability of ADC Pro-Patch Video Jackfield.

Note: Use only 36" patch cords for Pro-Patch units.

Note: When ordering, G denotes gold plating on all contact surfaces, N denotes gold plating on the center conductors/springs only.

PPI Panels

- You can select the SJ3000 in terminating, non-terminating, nickel or gold versions
- The SJ3000 coax jack is rated for 10,000 insertion/withdrawal cycles
- PPI Panels are available in 1³/₄" and 3¹/₂" heights with 12, 20, 24 or 26 circuits for greater installation flexibility
- PPI Panels with various hole and spacing configurations are sold separately or loaded with your choice of jacks

Our innovative PPI Panel with SJ3000 switching (self-normaling) coax jacks makes accessing and connecting video circuits easy.

The PPI is available in several configurations to suit your particular application need.

VAMP—Video, Audio Modular Patchbay

- Chassis accepts 20 video and audio modules
- Audio module features unique QCP terminations
- Video module comes with the ADC SJ3000 self-normaling coax jack
- ADC supplies blanks for unused positions to give the appearance of a fully loaded patchbay

Offers all the flexibility you need in a single bay. Ideal if you have limited or changing patching requirements or need audio and video patching in the same bay.

Ultra-Patch Panels

Utilizing Split Cylinder Technology

Ultra-Patch panels can be terminated at the factory to any of ADC's standard or custom jackfields and may be rack or wall mounted. Accessory brackets are available for racks with nonadjusting rear supports as well as for wall mount applications. Cable troughs, front and rear, provide for a clean and professional look for any system. Ultra-Patch panels are available separately.

- UP-3N MK II** Tip/ring/sleeve and normals brought out, 48 positions \$125.00
- UP-3 MK II** Tip/ring/sleeve only, 48 positions 110.00
- UP-W MK II** Wall mount brackets 20.00
- UP-R MK II** Rackmount brackets 20.00
- UP-96N MK II** 96 positions 210.00
- UP-96 MK II** Tip/ring/sleeve, 96 positions 75.00

Wire Insertion Tools

The insertion tools are used for insertion of wire into the split cylinder modules. The impact tool applies the correct force to the wire by a spring loaded mechanism within the tool. Either of 2 impact forces can be applied, as selected by the LO-HI thumbwheel on the side of the tool. The LO position installs 24 or 26 AWG wire, the HI position installs 22 AWG wire. The impact tool includes 1 removable tip which comes stored in the tool's handle.

The manual tool performs identical functions as the impact tool without the aid of a spring loaded tip.

- Q114** Manual Wire Insertion Tool \$20.00
- Q814-804** Impact Wire Insertion Tool 65.00
- Q804** Spare Tip 25.00

Q150 Tool Holder

Tool Holder keeps Impact or Manual Tool at the bay where it is easily accessible. Mounts on either side of frame with two mounting screws.

Q150 \$ 15.00

BCS Series Stereo Television Console**Mainframe Features**

- 24 or 32 input channel mainframe sizes
- Patchbay (full size, tip-ring-sleeve)
- Console completely pre-wired to easily accept all plug-in modules
- Rugged construction of lightweight, anodized aluminum trimmed with formica covered wood end caps
- Full wiring harness and module accessibility
- All PC cards removable from front
- All customer interface points (audio connectors, power) located in rear opening rackmounted housings
- Gold card edge connectors
- All internal console wiring numbered in accordance with schematics
- All power wiring color coded and identified
- Reverse screen Lexan overlay on all module panels
- Preselect buttons custom engraved to user requirements
- Removable meter turret
- Large individually illuminated VU meters for submasters, masters, and utilities. PPM ballistics optional
- Built-in cue amplifier with speaker
- Illuminated on-air and power supply status indicators

Operational Features (Standard and Optional)

- Mike level input preselect: 4 sources per designated mike input
- Line level input preselect: 8 sources (stereo or mono) per designated line input
- Each input assignable to any or all of 4 stereo submasters
- Available input modules include: mono mike/mono line, mono line and stereo/mono line, all with phase reversal
- Hi/Lo pass filters on all input modules
- Group muting for news and live production
- Stereo pan on mono modules, stereo balance on stereo modules
- Ultra smooth VCA Slidex® spirallinear attenuators with cue detent and mute logic
- Choice of 2 or 4 independent stereo auxiliary sends plus a reverb (echo) send
- 4 independent aux (P.A.) sends from subs and masters
- 2 reverb returns to subs and masters
- 4 independent monitor buses
- Utility meter select matrix
- 6 sets of machine remote controls
- 5 frequency oscillator/slate assignable to subs and/or masters
- 2 studio talkback
- Optional signal processing includes 4 band Mono or Stereo EQ, compressor limiter/de-esser, noise suppressor and sound effects filters

The BCS Console is designed to address the needs of Stereo Audio for television. This means a functional easy-to-use layout, advanced fabrication and manufacturing techniques, high quality proven components, extensive module and system burn-in and test.

The console mainframe may be ordered with up to 24 or 32 inputs, with or without a patchbay, and is built in a floor stand configuration.

Input Preselection: There are 2 types of Input Preselection available with the BCS Console—microphone and line.

Above and in-line with input module positions 1-12 (or 1-20 on a 32 input console) are 4 LED illuminated pushbuttons which represent the 4 discrete mike sources which may be assigned to that input. Since the BCS is set up for 2-studio operation, the proper muting signals for each studio are derived from this preselect matrix.

BCS 2443

The balance of the input strips, dedicated to line level sources, have 8 LED illuminated pushbuttons above each input which select 1 or 8 line level sources that are individually available at those inputs.

The source preselect pushbuttons are custom engraved in accordance with the customer's needs.

Inputs: The BCS is capable of accepting several different types of inputs: mono mike/line, mono line only, stereo/mono line. Those modules capable of accepting stereo sources enable the operator to control both left and right channels with a single fader. Additionally, the stereo modules are also capable of accepting either the left or right channel only from the stereo source or a mono source, making these modules extremely flexible. Each module has phase reversal, and input level attenuation. This attenuation ranges from -80dBV to +10VU on the mike line modules to -12dBu to +8dBu for the line modules.

All mono modules feature a stereo pan control to acoustically place the audio signal where desired. All stereo modules include a stereo balance control to trim the left or right channel. Each input module also contains separately switched in and out high and low pass filter. Individual LED lamps indicate the status of both the high and low pass filters.

The BCS may be ordered with input modules having 2 or 4 auxiliary sends and a reverb/auxiliary send. In either case, all sends may be designated as pre or post fader and have individual master controls.

Each module also has a Phase Reversal switch to permit placing the signal 180° out of phase from the remaining console inputs. LED illumination informs the operator of the phase reversal status.

Each module also contains 2 independent module off/on muting functions designated GRP1 and GRP2. These Group Muting switches assign the off/on function of the module, or modules, to remote group 1 or group 2 master group switches. This enables the operator to assign a series of inputs to group 1 or group 2 and turn those inputs on or off at the same time. This function is especially useful on news sets or in live situations where multiple mikes must be switched on or off together.

BCS Series**Stereo Television Console (Cont'd)**

Submaster Bus Selection: This matrix permits assignment of any input module or combination of input modules to any submaster or combination of submasters.

Submasters: Each BCS console is wired and tested to accept up to 4 Stereo submaster modules. Each submaster may be assigned to any combination of the stereo masters and the mono master. Four PA/auxiliary sends are bused across the submasters and masters and have their own 0 output level controls. There are 2 reverb return buses which may be intermixed with the program outputs from the submasters. Each submaster is also capable of a left and right channel signal processor such as a Compressor/De-Esser or Noise Suppressor. The submasters also use a VCA Slidex® attenuator.

Masters: Each BCS console may have 2 stereo masters and 1 mono master. Each of the stereo submasters may be assigned to the mono master. The masters have the same PA/auxiliary send buses across them as the submasters. They also have 2 reverb returns which may be intermixed with the program output. The masters also use Slidex VCA attenuation.

Auxiliary Controls: There is an auxiliary attenuator panel with the input auxiliary send master level controls. This panel also contains the solo level control. A second auxiliary attenuator panel has the output level control for the reverb send bus, the 4 submaster/master PA/auxiliary send buses and the cue bus level control.

Auxiliary Positions: The BCS has 5 integral auxiliary signal processing positions which may be utilized to accept any of the available signal processors. A signal processor in this position may be inserted into the patch points of the console through the patch bay.

Mike Panel: The microphone panel contains the talkback microphone and the on air indicators for studio 1 and studio 2. This panel also contains the PPM ballistic meter switches for the submasters and masters.

Monitor Buses: Each BCS console is capable of 4 independent monitor modules. These modules are designated control room, studio A, studio B and director. Each of the 4 monitor modules, in stereo, are totally independent of each other but are identical in all respects and may be physically interchanged. A comprehensive selection of submaster, master, and external inputs is pushbutton selectable on each module. Each selection will be indicated via an LED tally light.

Each module also contains a Solo LED tally indicator and a mute defeat switch which, when depressed, will override any mute logic in the module and permit an output. Line level is the nominal output of the monitor modules. Each module contains the necessary program amplifiers with a monitor level control.

Studio Speaker Muting: Muting of the monitor speaker in the designated studio is accomplished when the following conditions are met:

- 1) Microphone preselect activated (inputs 1 through 12 or 1 through 20 in the BCS 32)
- 2) Input module attenuator in the microphone position
- 3) Input module turned on
- 4) Slidex and module out of cue
- 5) Input module assigned to a submaster bus
- 6) Input module not turned off by a group mute function

When all 6 of the above conditions are met, the designated studio speaker will mute automatically.

Oscillator/Talkback: Each BCS Console may be equipped with a Model 7510 Oscillator/Talkback module. This module contains a selectable 5 frequency oscillator (50, 400, 1,000, 7,500 and 15,000Hz) and a level control for precise adjustment of the oscillator output. The oscillator output is selectable for insertion into any one of, or combination of, submaster and master buses. A separate pushbutton labeled OSC activates the oscillator output to its preselected location. In addition, the

BCS Console

oscillator output also appears at the console terminal blocks (or Patchbay, if included) at a microphone level of -70dBu, as well as a line level of +8dBu.

The talkback portion of the 7510 module provides a level control for the talkback output. Associated with this portion of the module is a microphone as well as 2 push-to-talk controls which are located in the lower right console panel. This talkback system also provides a slating facility, which is selectable to the submasters and masters via the slate switch and the oscillator preselect pushbuttons. When the slate function is energized a 50Hz tone is superimposed on the audio at -20dBu for quick aural reference when a tape machine is in a high speed mode.

Patchbay: The BCS Console may be provided with a full size tip-ring-sleeve patchbay as an option. This patchbay will contain 208/256 patch points. This will permit patching at each module input, each submaster and master output and all +8dBu points in the console. The patchbay is recessed in the console housing to eliminate patchcords layout out over the operational controls.

Meter Turret: BCS Consoles come equipped with a meter turret containing thirteen 3 1/2" illuminated ADM VU meters. There are 2 meters for each stereo submaster and master bus as well as a left and right utility and mono position. As an optional feature these may be replaced, at the user's option, with ADM5110 PPM/VU meters in the submaster and master positions.

An illuminated switch is provided to permit the operator to select either PPM or the VU metering. 0 VU is equivalent to +8dBu line level.

Located in the meter turret housing is a 60 minute digital timer, a cue speaker, and the power supply status indicator tallies.

Machine Control: Each BCS Console comes equipped with 2 reel-to-reel audio tape and 4 audio cartridge remote machine controls as standard equipment. These controls provide contact closure to the associated machine and function. A return logic signal from the machine may be used to illuminate the lamp in the switch to provide closed-loop status indication.

Power Supply: The BCS Console is provided, as standard equipment, with 1 ADM 2110, ±20VDC, 10A, bi-polar power supply for all console audio functions. There is also 1 ADM 110, +20VDC, 10A power supply for all console lighting and logic functions. The 2110 and 110 are capable of supplying all necessary power for the console with a more than adequate safety factor.

Provision has been made for the inclusion of 2 additional optional supplies, one of each, to provide 100% redundancy with automatic changeover in the unlikely event of failure. Status indicators for the supplies are located in the right corner of the meter turret housing.

ST Series II Production Consoles

- Totally modular design, utilizing plug-in modules throughout
- Transformer balanced inputs and outputs
- Many variations of microphone and line module
- 2 preselect inputs per module
- Stereo pan-pot on microphone modules
- Stereo balance control on line modules
- Machine control logic built-in
- Input Slidex® Linear Attenuators drive VCAs for superior tracking and longevity
- 8 position stereo preselectors
- Variety of signal processors
- Independent studio and control room monitor matrices
- Headset jack with separate volume control
- Broadcast quality talkback microphone
- Large illuminated VU meters
- Built-in cue amplifier and speaker
- Simultaneous program and audition master outputs
- Independent auxiliary master output
- Selectable monaural master output
- 100% redundant power supply with automatic changeover
- All pushbuttons illuminated or with companion LED
- CMOS logic throughout
- Plug-in Op-Amps and ICs
- All circuit board and input/output connectors are gold plated

The ST Series II Stereo Radio Consoles are desk mount, modular consoles designed specifically for radio on-air and production applications. The ST Series II Consoles consist of 4 basic units, each identical with the exception of the number of input modules available.

These are:

- ST 100 II—a 10 input, 3 stereo and 1 monaural output console
- ST 160 II—a 16 input, 3 stereo and 1 monaural output console
- ST 200 II—a 20 input, 3 stereo and 1 monaural output console
- ST 240 II—a 24 input, 3 stereo and 1 monaural output console

The ST Series II Consoles are full stereo with 10, 16, 20 and 24 input modules. There are 3 independent stereo output modules and 1 monaural output module. Each console comes factory wired for its maximum capability, but may be ordered with a lesser number of modules for future expansion capability. Various combinations of signal processing devices (equalizers, limiter/de-essers) may be supplied with the console or added later, as usage dictates. This may be quickly accomplished on a plug-in basis. The ST Series II Consoles utilize the patented ADM Slidex driving stereo VCAs which provide superior tracking, noise-free attenuation and extreme longevity.

The unique 202 Discrete Operational Amplifier exemplifies ADM's ingenuity by giving the user an input noise figure unobtainable with conventional integrated circuitry.

Inputs: The ST Series II Stereo Broadcast Consoles are wired and tested to accept up to 10, 16, 20 or 24 ADM Microphone and/or line input modules, each with their associated Slidex VCA attenuator modules. Any number of these modules may be utilized in any combination within the input section.

There are 3 variations of the microphone input consisting of a 2716, 2717 and 2718 module. There are also 3 variations of the stereo line input consisting of a 2726, 2727, and 2728 module. Each of the above modules is capable of operating from 1 of 2 preselectable sources, designated A and B. Each preselect switch has an associated LED indicator for maximum operator visual information. Also associated with the stereo line inputs are two 8 x 1 stereo preselect matrices. These may be assigned to any of the stereo line modules via a plug-in connector.

Each input module has facility for a totally independent auxiliary output which is selectable from either the preamplifier output (PRE) or module output (POST). The auxiliary output has its own isolated level control, located concentric with the switch function. In the PRE position it will be totally independent, while in the POST position it will follow the module output.

Output bus assignment from each input module is available to both audition and program master buses simultaneously via the illuminated push-on/push-off AUD and PGM switches located on each input module. These output buses may be fed individually or simultaneously as required.

ST-160

Microphone Inputs: The 2716 Microphone Input Module may be selected to either mike A or mike B via this switch function. Logic control for the 2716 module will follow this source selection. The input attenuator will accept a normal microphone level within the range of -60dBu to -30dBu and is continuously variable. Should the user so desire, this attenuator control knob and shaft may be removed and a screwdriver adjustment through the front panel may be utilized.

The auxiliary bus output from the 2716 is a completely independent output from the module which is derived from the output of the input preamplifier when the associated concentric switch is in the PRE position. In the POST position the auxiliary bus will derive its signal from the output of the input module chain and will follow the Slidex fader movements. The OFF position totally removes it, electrically, from the circuit.

The 2716 Microphone Module features a full stereo pan left-to-right control with an associated switch to select either the stereo mode or the mono mode of operation. This switch is concentric with the panner control. In addition to the above, provision has been made for phantom powering of condenser type microphones.

The 2717 Microphone Input Module is identical to the 2716 except that the input attenuator knob and shaft have been removed, leaving the attenuator itself as an internal screwdriver adjustment. The Auxiliary bus circuitry has also been removed.

The 2718 Microphone Input Module is identical to the 2717 except that the stereo pan-pot and selector switch have also been removed.

Associated with each of the above microphone input modules is an ADM 4711 Slidex VCA Attenuator Module. The VCA provides superior tracking, noise free attenuation and extreme longevity for many years of trouble free service.

All logic functions for the microphone input strip are contained within the 4711 VCA Slidex Module.

These functions are:

- Control room speaker muting
- Studio or announce booth speaker muting
- Local on/off module control
- Remote on/off module control

Each of the above functions are user-programmable, via PC board mounted plug-in jumpers, to suit the user's particular requirements. All logic functions are CMOS. On-air relay contact closures are provided from both control room and studio speaker mute logic buses for station usage.

ST Series II**Production Consoles (Cont'd)**

Line Inputs: Each 2726 Stereo Line input module may be selected to either Line A or Line B via its A or B switch function respectively. Again, logic control for the 2726 module will follow this source selection with an associated LED indicator. The input attenuator will accept a normal line level within the range of -12dBu to +8dBu and is continuously variable. This control may also be removed as in the 2716 Microphone module.

The Auxiliary bus output from the 2726 is a completely independent output from the module which is derived from the output of the input preamplifier when the associated concentric switch is in the Pre position. In the Post position the Aux bus will derive its signal from the output of the input module chain and will follow the Slidex® fader movements. The Off position totally removes it, electrically, from the circuit.

The 2726 Line module features a full stereo Balance control to permit trimming level differences in the program source material. Located concentric with the Balance control is a switch to select Left (L), Right (R), Monaural (M), or Stereo (ST) mode of operation for the module. Maximum flexibility and utilization of the module is achieved with this function.

The 2727 Stereo Line input module is identical to the 2726 except that the input attenuator knob and shaft have been removed, leaving the attenuator itself as an internal screwdriver adjustment. The Auxiliary bus circuitry has also been removed.

The 2728 Stereo Line input module is identical to the 2727 except that the Balance control and the Input Source Selector switch have also been removed.

Associated with each of the above stereo Line input modules is an ADM 4721 Slidex VCA Attenuator module. Again, this VCA provides superior Stereo tracking, noise free attenuation and extreme longevity for many years of trouble free service.

External control of the VCA from a remote location is also available. All logic functions for the Stereo Line input strip are contained within the 4721 VCA Slidex module.

These functions are:

- Local or remote On/Off control
- Remote machine Start contact closure when the module is turned on
- Remote machine Stop contact closure when the module is turned off. (These contact closures are user programmable for either a constant closure or a 1/10 second pulse.)
- Timer reset/start function when the module is turned on
- Optional jumper arrangement which permits the Start/Stop pulsing to occur on the same contacts for machines which require this facility

All of the above functions are user programmable, via the PC board mounted plug-in jumpers, to suit the user's particular requirements. All logic functions are CMOS.

Masters: The ST Series II Broadcast Consoles are wired and tested for up to 4 Master Output modules. These modules are the 3 ADM 3826 Stereo Master modules designated Audition (AUD), Program (PGM), Auxiliary (AUX) and the 3816 Monaural Master module. Each module includes a continuously variable Master level control. The knob and shaft are removable for preset, screwdriver only, adjustment when desired.

The 3816 Monaural Master module is selectable, via its illuminated switch matrix, to the Audition, Program or Auxiliary buses. This module derives, and sums, the signal directly from these stereo buses prior to the 3826 Master modules and thus permits totally independent operation with no relationship to the Stereo Masters.

Signal Processing: The ST Series II Stereo Broadcast Consoles are wired and tested for up to 11 Signal Processing Modules. These modules may consist of Equalizer, Sound Effects Filter, Noise Suppressor or Limiter/De-Esser modules.

The ST Series II Consoles have provision for insertion of an Equalizer or Filter module in any of the 4 input signal processing positions prewired in the Console. These modules may be then assigned to any of the input modules via a simple internal plug-in connector.

The Program, Audition and Auxiliary outputs have Right and Left channel signal processing positions adjacent to each output module. The Mono Output module has a single signal processing position. Each of the above positions will accept any of the 4 ADM Signal Processing Devices.

Any Master Output Processing position which is not initially equipped will be provided with a Jumper Card and Blank module panel to maintain both the electrical path and the aesthetic appearance of the Console.

1316 Noise Suppressor: The ADM 1316 Noise Suppressor is a true gain expander with continuously varying gain. The device has no threshold clicks or pops, nor is the ear aware of the threshold. Threshold and decay time are adjustable to suit program content. There is a variable intensity LED to indicate when the unit is on. The 1316 is primarily designed to reduce studio background noise between audio passages.

1346 Limiter/De-Esser: The 1346 is both a Limiter Compressor and a De-Esser. Each function, although independent of the other, is contained within the same module housing. The compression ratio of the 1346 Limiter Compressor is variable from 1:1 to 20:1. The ratio changes from 1:1 to the selected value as signal power increases from 8dB below, to 8dB above threshold. The gradual ratio change minimizes signal distortion and results in natural sound at all times. Front panel controls permit individual adjustment of the attack and decay rates, as well as threshold and gain, providing maximum versatility for the operator.

The De-Essing function of the 1346, when activated, limits sibilants to natural levels with no adjustments required by the operator. Broadband gain is proportionally reduced only during the times of excessive sibilants. Both Compression and De-Essing functions may be used simultaneously, or individually, to meet all necessary program requirements.

1546 Equalizer: Featured in the ST Series II Stereo Consoles is the exclusive ADM 1546, 4 band, 14 frequency reciprocal Equalizer. This Equalizer has been developed, through exhaustive listening tests, for maximum effect on both Voice and Music Programs. Reciprocal EQ functions are provided in 4 frequency bands: Low Frequency (LF), Low Mid Frequency (LMF), High Mid Frequency (HMF) and High Frequency (HF). The unit is activated with a push-off/push-on switch and has an LED status indicator.

1586 Sound Effects Filter: The ADM 1586 is a High Pass/Lo Pass Filter module specifically designed for sound effects. Each section is independent of the other and has 10 selectable frequencies with an In/Out switch. Both sections may be used simultaneously. The High Pass section comprises frequency selection of 50, 70, 100, 150, 200, 300, 500, 700, 1000, and 2000Hz.

The Low Pass section comprises frequency selection of 700, 1K, 1.5K, 2K, 3K, 4.5K, 6K, 7.5K, 10K and 12.5kHz. The attenuation rate is approximately 18dB octave.

ST Series II Production Consoles (Cont'd)

Cue: As previously described in the input section, each 4711 and 4721 VCA Slidex® Attenuator Module is equipped with a cue detent, as well as a cue switch. The output of each module cue function is bused, feeds a 2W power amplifier and level control (located on the cue/talkback module) and cue speaker mounted in the meter turret housing.

In addition, this cue output appears at an output connector for use with an external cue speaker. The cue signal is also available at the headset jack and is accessed via the monitor/cue switch. Muting logic for the cue speaker, via plug-in jumpers, is provided when a control room microphone is live. However, the headset output is never muted.

Cue-Talkback: The talkback portion of the cue/talkback module provides a level control for the talkback output. Associated with the module is a turret-mounted microphone, as well as a push-to-talk control.

The talkback signal is normally fed over the studio monitor bus, overriding any signal being fed to the studio monitors. An extra talkback output is also available at the console output connector for station usage.

Monitor Buses: The ST Series II Stereo Broadcast Consoles are wired for 2 comprehensive monitor selector matrices, each totally independent of the other.

These modules are designated control room and studio. Each matrix is identical in the selection available. These are program, audition, auxiliary, monaural, external 1 and external 2. Each module contains its own program amplifiers, as well as individual rotary level controls.

Headphones: The control room headphone jack is located on the right front section of the console directly below the monitor matrices. This jack is selectable, via the MNTR/cue switch to hear either the program, as selected on the control room monitor matrix, or the cue bus.

Metering: Each ST Series II Console is capable of four 3 1/2" VU meters. Two of these meters, designated Program, are dedicated to the console program outputs. The other 2 meters are designated Utility and are switch selectable to monitor the audition bus, the monaural bus, the auxiliary bus and 2 spare inputs designated external 1 and 2. This illuminated selector matrix is located on the lower left of the console beneath the input signal processor area. 0 VU is equivalent to a nominal +8dBu line output level.

Timer: Each console may be equipped with an ADM 5060 Timer Assembly. This is a 60 minute timer with its associated timer controls. It may be operated in conjunction with the on/off logic in the stereo line input modules or independently. The timer is designed to count up or down as desired and preset times may be entered into the display via the second and minute advance functions.

Power Supply: Each ST Series II Console is provided with one 2107 Power Supply for all console functions. This unit is capable of supplying all necessary power for the consoles with a more than adequate safety factor. Provision has been made for the inclusion of 1 additional optional power supply to provide 100% redundancy with automatic changeover in the unlikely event of failure. LED status indicators for the supplies are located in the meter turret housing.

Console Specifications

Frequency Response:	No equalization. Measured at any output level up to clipping. ± 1 dB, 20Hz-20kHz ref. 1kHz
Distortion:	The total harmonic distortion at +24dBm or lower at 1kHz will be less than .07% and will not exceed .15% THD over the band 100Hz-20kHz at +24dBm or lower
Max. Output Level:	The clipping level at any output when terminated in 600 ohms shall be +27dBm 30Hz-20kHz
Noise:	The equivalent input noise of any microphone shall be lower than -125.5dBu referred to a 250 ohm impedance measured on an average response meter. Any line level input (+8dBm ref.) to any output channel (+8dBm ref.) will exhibit a maximum noise of -72dBm (S/N 80dB). All noise measurements based on a bandwidth 20Hz-20kHz
Crosstalk:	Better than 72dB measured between adjacent channels at normal operating levels over the band 100Hz-10kHz
Temperature:	Over the temperature range 0-55°C no apparent changes in operational characteristics are discernible
RF Susceptibility:	Based on the tailored roll off characteristics and proper manufacturing techniques, ADM consoles will operate in high RF environments

VP Series**Audio Post-Production Consoles**

- Stereo production capability
- Totally modular design utilizing plug-in components
- VCA based attenuator in each input strip
- Dual attenuation control bus assignable to each input
- Opto-isolated bus selection inputs
- External or local control of control bus and/or strip assignments
- Variable intensity LED indication of input control voltage
- Dual independent monitoring facility with local or external control of all monitor functions
- Input vs. output monitoring with bus/play switch
- "Invert" switch on each control fader allows smooth cross fade
- Phase reversal function for each input
- Up to 16 microphone/line inputs
- 1 auxiliary mix bus output
- 2 master output buses
- Built-in cue amplifier and speaker
- 5 illuminated VU meters
- Gold plated card edge connections throughout
- Patented, ultra smooth, sealed Slidex® linear attenuators
- 5 frequency oscillator
- Talkback and slate facilities
- Illuminated power supply status indicators
- Plug-in signal processors for each strip

The VP Series are full featured desk mount consoles which incorporate the latest technological advancements for coupling of the video editing system to the audio console.

The VP Series represents a new audio system designed specifically to meet the unique audio processing and control requirements of modern video production centers. It offers the necessary features to complement the video editing process by allowing extensive control of the audio mixdown, synchronized with the video editing control from a single editor.

The VP Series is available in three versions. The VP1603; which is a 16 input, 3 output console. The VP1203; a 12 input, 3 output console, and the VP803; an 8 input, 3 output console. Each console is identical in all respects except for the number of input strips and monitoring positions. The physical size of the console mainframe is scaled down appropriately.

Each VP Series Console utilizes the ADM 2783 Input Module with its associated 4158 VCA controlled Slidex attenuator, the ADM 3984 Master Output Module for the left/right outputs and the ADM 3985 Auxiliary Output Module. Various combinations of signal processor modules, such as the ADM 1310 Noise Suppressor, 1340 Limiter-Compressor/De-Esser, 1540 Equalizer and 1580 Sound Effects Filter may be utilized within the VP Console mainframe.

Each VP Series Mainframe is prewired for its maximum complement of modules, but may be ordered with any lesser number of input strips and signal processors as initially required. Future expansion (up to full mainframe capacity) is accomplished on a straight forward "plug-in" basis.

Console Specifications

- Frequency Response:** No equalization. Measured at any output level up to clipping. $\pm 1\text{dB}$, 20Hz-20kHz ref. 1kHz
- Distortion:** The total harmonic distortion at +24dBm or lower at 1kHz will be less than .07% and will not exceed .15% THD over the band 100Hz-20kHz at +24dBm or lower
- Max. Output Level:** The clipping level at any output when terminated in 600 ohms shall be +27dBm, 30Hz-20kHz
- Noise:** The equivalent input noise of any microphone shall be lower than -125.5dBu referred to a 250 ohm impedance measured on an average response meter. Any line level input (+8dBm ref.) to any output channel (+8dBm ref.) will exhibit a max. noise of -72dBm (S/N 80dB). All noise measurements based on a bandwidth 20Hz-20kHz
- Crosstalk:** Better than 72dB measured between adjacent channels at normal operating levels over the band 100Hz-10kHz
- Temperature:** Over the temperature range 0-55°C no apparent changes in operational characteristics are discernible
- RF Susceptibility:** Based on the tailored roll off characteristics and proper manufacturing techniques, ADM consoles will operate in high RF environments

Post-Pro Series Audio Consoles

- Stereo production capability
- Totally modular design utilizing plug-in components with gold card edge connectors
- 2 mainframe sizes: 8 or 12 inputs
- Optional 3 band equalizer with hi/lo pass filter for each input
- A and B VCA control buses may be operated manually or remotely by a video editor or switcher
- "Invert" switch on each control bus enables fingertip crossfades
- 2 master outputs
- ADM's patented Slidex®
- VCA controlled inputs
- 2 independent monitors for true stereo monitoring
- 4 large illuminated VU meters
- Cue bus built-in
- Oscillator, talkback and slate facilities standard
- Parallel general purpose interface standard, serial interface optional
- Opto-isolated control inputs for noise free remote operation

With up to 12 inputs, the ADM Post-Pro Audio Console can handle audio edits, crossfades, inserts and cuts with the necessary speed and accuracy to become an integral part of your video editing suite. This unit was designed specifically to provide a compact and convenient answer to audio control by the video editor or switcher. It can be used either manually or at any one of three levels of automation. ADM's in-line equalizers permit program sweetening and special effects to be inserted during the actual editing session.

Since the console is totally modular, you can equip it to meet current requirements and have room for future expansion as your facility grows. The Post-Pro is equipped with a standard parallel interface and a serial interface is optional, which makes the unit fully compatible with most editing systems.

The Post-Pro is specifically designed for ease of operation with minimal operator training. Scaled down dimensions and a very low profile make it an ideal choice for any post production facility where space is at a premium.

Console Specifications

Frequency Response: No equalization. Any line input to any master output will not vary more than $\pm .4$ dB over the frequency range of 20Hz-20kHz

Harmonic Distortion: Total harmonic distortion from any line input (+ 24dBu) to any master output (+ 24dBu).
 30Hz: $\leq -.2\%$ 100Hz: $\leq .08\%$
 1kHz: $\leq .05\%$ 20kHz: $\leq .08\%$

Intermodulation Distortion: Intermodulation distortion from any line input (+ 24dBu) to any master output (+ 24dBu) with a standard SMPTE 60Hz: 7kHz signal at a 4:1 ratio will not be greater than .2%

Max. Output Level: The clipping level at any output when terminated in 600 ohms shall be $\geq + 27$ dBu 30Hz-20kHz

Noise: Any line input (+ 8dBu ref.) to any master output (+ 8dBu ref.) will exhibit a maximum absolute noise of -75dBu over a 20Hz-20kHz bandwidth
 SNR ≥ 83 dB (ref. + 8dBu nominal); 79dB (ref. + 4dBu nominal)

SNR ≥ 99 dB (ref. + 24dBu distortion measurement level)
 SNR ≥ 102 dB (ref. + 27dBu clipping measurement level)

Crosstalk: Measured between adjacent channels (adjacent line inputs to adjacent master outputs) at normal operating levels
 30Hz: ≤ -80 dB 100Hz: ≤ -80 dB
 1kHz: ≤ -85 dB 10kHz: ≤ -80 dB

Temperature: Over the temperature range of 0-55°C no apparent changes in operational characteristics are discernible

RF Susceptibility: Based on the tailored roll off characteristics and proper manufacturing techniques, ADM consoles will operate in high RF environments

Filters: Low Pass: -3dB at 10kHz, 12dB/octave
 High Pass: -3dB at 100Hz, 12dB/octave

Equalization: ± 15 dB in 3 bands
 LF: 40-400Hz peaking (switchable to shelving with -3dB point at specified frequency)
 MF: 200 to 7.2kHz peaking
 HF: 2K-15kHz peaking (switchable to shelving)

Mechanical: Overall Width: Post-Pro 8 25.25"
 Post-Pro 12 31.25"
 Max. Height above Table: 3.625"
 Max. Front to Back Depth: 20.25"

ADM TECHNOLOGY, INC.**Stereo Television Console****S/TV Stereo Television Console**

- 16 or 24 input mainframe
- Any combination of mike or stereo line input modules with two source pre-select and two mono auxiliary sends
- Patented Slidex[®] VCA spiralinear attenuators
- Optional machine control or AFV logic
- In-line 8 x 1 pre-select or 3-band EQ available on each input
- Six auxiliary positions for pre-select or EQ
- Submaster mix may be operated as four mono channels or two stereo channels
- Stereo program master
- Mono program master
- Two monitor buses
- Echo return
- 4-track tape return monitor
- Talkback system
- Oscillator and voice/tone slate
- Cue/headphone jack
- Studio and control room muting
- Timer
- Output metering

The S/TV is available in 16 or 24 input mainframe sizes. The 16 input is a tabletop version while the 24 input is a floor stand model. Even the 24 input version may be removed from its floor stand and permanently mounted in a table if desired.

The S/TV is configured so that each input strip consists of the following modules:

- In-line 8 x 1 pre-select or equalizer
- Mike or stereo line module
- Attenuator module

There are also six auxiliary positions which may house 8 x 1 pre-select or equalizer (mono or stereo) modules. These units may be wired to any input or may be used with the submaster or master outputs.

The output section contains separate stereo and mono program outputs. Additionally, the S/TV may have four mono submasters which can also be grouped together and used as 2 stereo subs.

Two mono auxiliary sends with master output level controls are fed from independent level controls on each input module. The aux sends from the input modules can be selected to Pre, Post, or Off.

There are two monitor modules (control room and studio) as well as cue and talkback buses, plus a headphone jack.

As an option, the S/TV may be equipped with a 4-track tape return monitor feed which may be used in conjunction with the mono submasters for 4-track production. An echo return bus is available at the submasters.

There are seven output meters and an up/down timer.

The S/TV is powerful, yet simple to operate. It gives the user maximum flexibility because the console can be configured specifically to suit the needs of virtually any facility.

Input Options

In-line and above each mike or line input module may be an 8 x 1 mike or stereo line pre-selector or a 3-band mono or stereo equalizer with continuously variable frequency selection. The high frequency (2-16K) and the low frequency (40-400Hz) may be peaking or shelving, while the mid frequency (200Hz-7.2kHz) is peaking. There is also a high pass and a low pass filter, both of which may be switched in or out.

Additionally, the 8 x 1 pre-select or the EQ module may be used in any of the six auxiliary positions and wired to any input. In the auxiliary position, the pre-selector may feed modules with in-line EQ, or vice-versa. The auxiliary position modules may also feed the submasters and masters.

The EQ module is interconnected to the input attenuator via a multi-conductor cable and high density connector. The 8 x 1 pre-selector is connected to the input module through a multi-conductor cable and a Molex connector. Wiring to the pre-selector through a high density connector is done by the customer.

This concept enables the S/TV to be configured exactly as required by giving the user the option of in-line pre-select or EQ, plus pre-select or EQ in the auxiliary position.

Input Modules

Both the mike and line modules have two source pre-selectors standard. Inputs which are utilizing the in-line EQ module will then have two sources which may be selected.

On inputs with an 8 x 1 pre-selector the two source pre-select switching may be used to select the primary input ('1') or the 8 x 1 pre-selector ('2').

Both the mike and line modules have front panel variable gain range adjustments for the input levels. The mike module has a range of 30dB (input level of -30dBu to -60dBu) while the line module has a 20dB range (-12dBu to +8dBu).

The two mono auxiliary bus sends are selectable as either pre or post fader. These sends may be used for any purpose such as mix minus, foldback, reverb send or a telco feed.

Mike modules have a stereo pan pot to acoustically place the mono signal in varying degrees of the stereo spectrum. In the mono position the signal is centered; by activating the pan pot the signal placement corresponds to the position of the pot.

S/TV Console (Cont'd)**Input Modules (Cont'd)**

On the stereo module the input selector enables the operator to choose between left, right, mono or stereo inputs. In the L or R mode the input signal (L or R) is applied equally to the module L and R outputs. In the mono mode the L and R signals are summed so the output is mono, and of course in the stereo mode the L and R signals remain separate.

In the stereo module the balance control attenuates either the L or R channels enabling the other channel to be accented. This is particularly useful if program audio is on one channel with wild footage on the other. A "two track" mix is then easily accomplished with a single input module.

The submaster assignments are made by sending the input module output to a pair of submasters (A-B, C-D). With the mono modules, if the pan pot is in the mono mode, the signal will be sent to subs A and B equally (left and right); if the pan pot is all the way left, only the A sub will receive signal and if the pot is all the way right, only the B sub will get the output. Operation is similar if assignment is made to C and D. Using a stereo line module, the left channel is sent to A (or C) and the right channel is sent to B (or D). In this manner all signals (mono mike, stereo L and R) may be processed individually at the submaster level—another measure of the S/TV's versatility.

Attenuator Module

The S/TV uses ADM's exclusive Slidex attenuator. This spiralinear device is impervious to dust, dirt and spills because the "spiral" activates a sealed rotary pot. This in turn drives a VCA. In the stereo version a single pot drives a dual VCA which makes the stereo tracking characteristics outstanding.

The S/TV uses a "dual cue" function which enables the operator to "cue" (pre-fade listen) a module two ways:

- Pull the Slidex into the cue detent position
- Turn the module off, engage the cue switch and use the fader to pre-set a level. The cue function will be disengaged when the module is turned on

An additional feature is the optional 2-way communications offered through the attenuator module which enables the module to be controlled (off/on) by a contact closure activated by a video switcher or other device. This AFV feature is extremely useful for early morning news cut-ins when it may be advantageous to have only one operator for video and audio.

On the line side, inputs may have "cart start" logic built into the module. With either the audio-follow-video or cart start options a communications cable and rear connector are supplied. This connector is located on the rear panel of the console.

Submasters/Masters

A unique feature of the S/TV is the submaster section.

Inputs are assigned to the A-B and/or C-D submasters from the inputs. If the input is mono it may be assigned only to the left (A or C) or right (B or D) sub using the pan pot on the input.

If the input is stereo, assignment is made by sending the left channel to the A or C sub and sending the right channel to the B or D sub. Using the balance control on the stereo module will have the same effect on the input send as the pan pot has on the mono module.

Input
Attenuator
Module

4-Track
Tap Return
Monitor Module

Oscillator
Module

An optional 4-track return mix module enables each track from a 4-track ATR to be monitored individually. This combination of a 4-track output plus the 4-track tape return feed enables true 4-track production.

For simplified operation the A and C submasters have a stereo tie switch. When this switch is depressed both left and right channels of each submaster pair are controlled by using only the fader with the tie switch.

The submaster section—with its ability to be used as 4 single sends for production or two stereo pair for air use—gives the S/TV user real versatility.

Each of the subs may be assigned to the L and/or R channels of the stereo program master. Both L and R channels of this master are controlled by a single fader. Additionally, the subs and stereo master may be assigned to the mono master. In this manner a "second audio program" may be derived from the submasters, or a summed mono output may be attained from the subs or masters.

Additional Features

The following features are also available on each S/TV:

Oscillator

A five frequency oscillator with level control is standard. This unit has frequencies set at 50Hz, 400Hz, 1kHz, 7.5kHz, 15kHz.

Talkback and Slate

A talkback microphone is built into the S/TV and is activated by a "push to talk" switch. A level control pot enables output volume to be raised or lowered. The slate function combines a 50Hz tone 20dB down with the talkback function and routes the output to the selected subs and/or masters. In this manner voice slating of various "takes" is possible with the tone used to identify the start of each take in the rewind mode of a VTR or ATR. The slate function may be used with any sub or master.

Echo Return

An echo return bus is available on the submasters. Typically this would be used as the return from a signal processing device. The send to the device may originate from the S/TV's stereo auxiliary bus.

S/TV Console (Cont'd)**Monitors**

Each S/TV has two monitor buses: control room and studio. Each of the 2 monitors has switch selectable sources including the subs, masters, auxiliary (stereo auxiliary bus), and the 4-track tape return. Each monitor has its own level control. There is also a headphone jack with a level control for additional control room monitoring. The cue bus also has a level control for the cue speaker.

Muting

Studio or control room muting is tied into the source selectors (1 or 2) on the input module. The user may determine and program which monitors will be muted when source selectors 1 or 2 are used.

Timer

The S/TV has an up/down timer with up, down, stop, reset and disconnect controls. (The disconnect function is used so program times are not affected if a machine is remotely started from a module.) There is a digital readout on the meter panel.

Monitor
Module

Connectors

Input and output audio connections are made via sturdy Molex mating connectors. This type of connector is also used for remote module on/off and machine control. Pre-select terminations are made by the customer with AMP high density mating connectors.

Power Supply

The S/TV uses a 10A \pm 20V regulated power supply. A second supply with auto changeover may be added as an option.

Construction/Assembly

Rugged anodized aluminum with custom extrusions are used for frames and sub assemblies. Formica covered end plates and housings, with Lexan overlays on the panel, insure long life. All components, modules and systems are subjected to three levels of testing, and a full power burn-in cycle on all modules assures a minimum of in-field failures.

Specifications**Frequency**

Response: No equalization. Measured at any output level up to clipping. \pm 1dB, 20Hz-20kHz Ref. 1kHz

Distortion: The total harmonic distortion at +24dBm or lower at 1kHz will be <.07% and will not exceed .15% THD over the band 100Hz-20kHz at +24dBm or lower

Max. Output Level: The clipping level at any output when terminated in 600 ohms shall be +27dBm 30Hz to 20kHz

Noise: The equivalent input noise of any microphone shall be lower than -125.5dBu referred to a 250 ohm impedance measured on an average

response meter. Any line level input (+8dBm ref.) to any output channel (+8dBm ref.) will exhibit a maximum noise of -72dBm (S/N 80dB). All noise measurements based on a bandwidth 20Hz to 20kHz

Crosstalk: > 72dB measured between adjacent channels at normal operating levels over the band 100Hz to 10kHz

Temperature: Over the temperature range of 0° to 55°C no apparent changes in operational characteristics are discernible

RF Susceptibility: Based on the tailored roll off characteristics and proper manufacturing techniques, ADM consoles will operate in high RF environments

ADM TECHNOLOGY, INC.

Switching Matrix/Audio Mixer

RM1010 Stereo Switching Matrix

• Input instrumentation amplifier • Output floating balanced • Self contained • Stereo input with selection of left only, right only, stereo or monaural sum • Left channel phase reverse • LED indicators on all source selectors • Unity gain • Stereo monitor output with level control • Front panel 600 ohms headphone jack • 1 $\frac{3}{4}$ " x 19" EIA rackmount • Optional transformer output (RM1010T) • Two VU meters adjustable (+4 or +8)

The RM1010 was designed to be inserted between a line level stereo source (VTR, VCR, etc.) and its load. The RM1010 includes the features necessary to accept a stereo input and redistribute it in the proper stereo format. Inputs for left only, right only, stereo and monaural are front panel selectable. In the event of the loss of either the left or right channel of your stereo source, you can immediately select the functioning channel and feed it to your stereo output channels.

In addition, the phase of the left channel can be reversed which solves the "monaural sum" problem associated with "out of phase" stereo program material. Stereo monitor circuit, consisting of line-level outputs with metering, level control and a headphone jack, are provided for on-line monitoring.

The front panel measures only 1 $\frac{3}{4}$ " x 19" and fits a standard EIA rackmount. XLR input and output termination, instrumentation amplifier input and active balanced output are a few of the significant features found in the RM1010. +27dBu maximum input and output levels are available if the optional transformer (RM1010T) is used.

Specifications

Nominal Level:	+4 or +8dBu = 0VU
Input Impedance:	> 10K ohms
Output Load Impedance:	600 ohms
Frequency Response:	\pm .2dB, 20Hz to 20kHz

ADM TECHNOLOGY, INC.**Modular Audio Distribution System**

T16C

D16A

DAT 16C/DAD 16A Audio Distribution Amplifiers

These unique amplifiers are available in either transformer input/output (DAT 16C) or differential input/output (DAD 16A). Each amplifier is a 1 input by 6 output plug-in card, and has individual front access output gain controls to compensate for the different level requirements often found within the larger plant. Both amplifier types have input and output test points located on the front edge of the card for ease of setup and adjustment. Each card is also individually fused, preventing total system failure in the event of a single card failure.

The DAT 16C card, with its input and output transformers, is ideal for those locations dealing with outside sources over which you have no control and thus require transformer isolation. The DAD 16A card, with its differential inputs and outputs is best suited for in-house systems where common mode voltages are more readily controllable. The outputs are capacitor coupled, assuring that there is no DC offset voltage. The output circuits of the DAD 16A are capable of operating into a direct short.

DAT 16C/DAD 16A Common Features

- 1 monaural input by 6 monaural outputs
- Input level up to +27dBu
- Output level up to +27dBm
- Input and output test points for setup adjustments
- Each card is individually fused
- Socketed IC construction
- Gold plated card edge connectors

DAT 16C

- Bridging input transformer
- 6 transformer isolated outputs
- Individual output gain adjustments -5 to +20dB

DAD 16A

- Bridging differential input
- Input gain adjustment—unity to +20dB
- 6 active balanced outputs
- Outputs capacitor coupled for zero offset voltage
- Individual output gain adjustments—off to +5dB

CH20C Self-Contained Rack Frame

Houses up to 6 DAT 16C or DAD 16A cards, in any configuration, in 5 1/4" of rack space. Regulated, redundant power supplies, with automatic switchover, assure uninterrupted operation. Front panel LEDs provide instant visual indication of the power supply status. The CH20C frame uses motherboard construction and includes screw type barrier strips for easy input/output connections. The hinged front panel permits easy access for rapid card insertion and removal.

For the larger installation, the CH10 rack frame will accept up to ten DAT 16C or DAD 16A DA cards. In this instance the power supplies are externally mounted. This frame is recommended for those installations using fifty or more of the DA cards.

CH20C

DA261 Audio Distribution Amplifier

- 1 stereo input by 6 stereo outputs plus 1 mono sum output—or 1 stereo input by 13 mono outputs—or 1 mono input by 13 mono outputs—or 2 independent mono inputs with 6 mono outputs each
- Optional VCA boards may be supplied for remote gain control on each channel
- Inputs are true instrumentation amplifiers
- Individual input gain trim of ± 20 dB
- High/low frequency input trim for optimum CMRR
- Outputs are electronically balanced
- Input and output test points for setup adjustments
- LED power status indicators on each card
- On-board power rectification, fuses, filtering and regulation
- Outputs are short circuit proof
- Socketed IC construction
- Gold plated card edge connectors

For the professional monaural installations that wish to ultimately become stereo. The DA261 has the ability to be either a monaural or stereo distribution amplifier.

When used in the monaural configuration the DA 261 becomes a 1 input by 13 output amplifier. In the stereo configuration the DA 261 is a 1 stereo input by 6 stereo output amplifier. In this configuration, the amplifier will also accommodate two monaural signals offering two 1 x 6 high density amplifiers on a single plug-in card. In addition to the mono, stereo and dual channel output configurations, the DA 261 always provides a summed monaural output. This summed output may be used for monaural audio to foldbacks, IFB mix-minus, monitors, etc.

Another feature of the DA 261 is the optional VCA controls that may be supplied with individual DA cards. When remote gain control of the distribution amplifier is a requirement, the DA 261 may be equipped with 2 input VCA modules. With both VCA's installed, it is possible to cross-fade between the left and right channels as well as remotely control them.

CH27 Distribution Frame

Houses 10 DA 261s in 5 1/4" of rack space and includes 2 toroidal transformers, 2 AC indicators, 2 fuses and 2 line cords. For an additional level of redundancy the output of each toroidal transformer is distributed on its own power bus within the CH 27 frame. The standard input and output terminations are high density solderless connectors for fast, reliable installation.

ADVANCED MICRO-DYNAMICS, INC.**Remote Control System****TC-8 Remote Control System**

- 8 metering channels • 8 status inputs • 8 raise, 8 lower outputs
- Delayed failsafe output • One-person calibration • Non-volatile memory • Large dot-matrix display • Optional computer interface
- Radio or wire link • Space saving 1³/₄" rack units

The TC-8 is designed to provide highly reliable transmitter control at a modest cost. Eight metering channels are displayed on a large, easy to read dot-matrix array. The status display provides continuous tally for eight on/off inputs. Controls are easy for non-technical operators to learn and push button setup and calibration makes the TC-8 easy to install and operate.

Non-volatile memory stores all setup and calibration data for ten years without power, allowing convenient maintenance and providing orderly recovery from power outages. All inputs are filtered to provide RF immunity. Hefty open collector outputs are protected from over-current by individual crowbar circuits. An optional interface panel can be conveniently located away from the unit to provide relay outputs and barrier strip connections for all outputs and status and metering inputs. With this option, the transmitter unit can be easily removed from the rack for maintenance without disturbing the individual connections. An optional computer interface allows interconnection with several popular personal computers. This expands the capability of the TC-8 to include full screen display, automatic control functions, limits monitoring, and logging.

Specifications**Description:**

Microprocessor based transmitter control system. Studio and transmitter units are physically identical

Analog Inputs:

8 inputs ± 4.5 VDC maximum referenced to ground

Status Inputs:

8 inputs 5-28VDC or switch closure

Control Outputs:

16 open collector outputs (8 raise, 8 lower) will sink 250 ma., 28V max. Each output has over-current protection

Failsafe and Alarm**Outputs:**

Open collector failsafe output activated 45 seconds after detection of studio to transmitter link failure. Link alarm o.c. outputs activated when either link fails for more than one second

Controls:

Front panel selection of mode (normal, maint, setup, calib) and channel plus On/Raise and Off/Lower

Calibration:

Each channel is calibrated by using the raise and lower keys to adjust the reading to the proper value. The speed of the change in value is proportional, permitting ± 1 digit adjustment or rapid gross changes

Communications Link:

One bell 3002 or equivalent 2-wire circuit or STL subcarrier (command) and FM subcarrier (telemetry). Modem boards are installed for the class of service requested. Boards will be exchanged at customer request for a nominal handling charge

Modem**Characteristics:**

Wire modems: 600 ohms balanced, 0dBm out, -30dBm min. in. Radio modems: 2200 ohms unbalanced, 1.5V p-p out, 0.25V p-p min. in; FM on selected subcarrier between 26kHz and 185kHz

Modulation:

FSK 1070Hz and 1270Hz transmitter to studio, 2025Hz and 2225Hz studio to transmitter

Date Rate:

300bps full duplex with error detection

Display:

5-digit LED dot matrix array for channel and value plus 8 status LED's and 3 mode indicators. Values from -999 to +9999 are displayed with decimal point appropriate for each channel (defined by user)

**Update Rate:**

< 400ms for status and analog value (reading appears immediately when channel is selected due to continuous scan. Updates then occur at the rate of 3 per second)

A/D Converter:

12-bit dual slope integration with auto-zero

Measurement**Accuracy:**

> 0.1% for 4V input. > 0.5% at min. 0.25V input

Temperature Stability:

5 ppm/°C from 0°C to +50°C

Memory Retention:

Non-volatile storage of calibration constants and all setup information for ten years without power

External Connections:

Analog and status inputs: DB-37P submin. D conn.

Control outputs: DB-37S submin. D conn.

Link (radio) BNC

Link (wire) Barrier strip

AC power IEC power cord

Power Requirements:

117VAC nominal; 50/60Hz; 30W. May be strapped for 230V. Toroidal power transformer allows operation from UPS or inverter

Physical:

1³/₄" H x 19" W x 11" D

ADVANCED MUSIC SYSTEMS*Delay, Reverberation/
Time Compression/Expansion***DMX 15-80S COMPUTER CONTROLLED STEREO DIGITAL DELAY**

The DMX 15-80S is a modular dual channel device capable of providing two independent programmable channels of delay and/or pitch change at a full 18kHz bandwidth and a 90dB dynamic range. The DMX 15-80S can accommodate up to 25 seconds of audio delay at full bandwidth and either one or two intelligent pitch change modules.

For the user requiring the highest quality of pitch change the new de-glitch card offers an unbeatable standard of noise free pitch-changing anywhere in the 2 octave range. Also unique is a Loop Editing System (LES) which allows a digital recording equivalent to the maximum memory size of the system to be stored, edited and triggered from the unit on demand.

The DMX 15-80SB is a dual channel version of the DMX 15-80S for those requiring two independently selectable channels of delay only.

The DM-DDS is a high quality digital system which offers a 27kHz bandwidth and a 96dB dynamic range specifically for disc cutting.

**DMX 15-80S****RMX 16****RMX 16 DIGITAL REVERBERATION SYSTEM**

The RMX 16 is a compact, high quality digital reverberation system. The unit uses sophisticated 27 bit pipelined data processing and offers an 18kHz bandwidth and a 90dB dynamic range.

It features a large display showing all adjustable parameters and alphanumeric program description. Once programmed, complex set-ups may be stored in any one of up to 99 easily accessible user memories — making the RMX 16 at home in the studio or in any live application.

A conveniently sized remote terminal is available for the RMX 16 which connects to the mainframe by a slim 3 core cable. The remote has the added facility of being able to accept a bar code wand which can be used to upgrade the system with new programs without having to change EPROMs.

The remote terminal has the added advantage of being able to store and transport both reverberation programs and user settings between different RMX 16 mainframes.

DMX 15T TIMEFLEX STEREO TIME COMPRESSION/EXPANSION UNIT

Timeflex is a time compression/expansion device which ensures correct pitch of audio when film or video/audio tape machines are speeded up or slowed down. The intelligent de-glitched pitch changers employed in the DMX 15-80S are also used in Timeflex to ensure the highest quality pitch transposition anywhere within the half to double speed range of the Timeflex. Operation of Timeflex is simplified by alphanumeric LED descriptions of all selectable functions including old time, new time and pitch deviation.

A most important feature of Timeflex is that the system is a true stereo device incorporating special circuitry to ensure preservation of the stereo image and a correct mono summed performance. Stereo or dual channel performance is selectable from the front panel controls. Timeflex can also be programmed to accept audio delays to allow synchronization of sound track and vision should track pick-up be offset from the picture. Percentage time changes may be entered via the front panel keypad.

Condenser Microphones

O/A/Q/8

C-34 Stereo Condenser Microphone
Small-diaphragm (CK-1) stereo microphone with FET preamplifier. Nine polar patterns selected via remote control. 9-52V phantom powered. Complete with S-42E remote control, MK-42/20 66' (20m) cable, W-34 windscreen, H-15/6 suspension mount/stand adaptor and foam-lined carrying case.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -47dBV

C-34 \$2295.00

O/A/Q/8

C-422 Stereo Condenser Microphone
Large-diaphragm stereo microphone with FET preamplifier. Nine polar patterns selected via remote control. 0, -10dB, -20dB pre-attenuator. 9-52V phantom powered. Includes unique LED "aiming lights." Complete with S-42E remote control, MK-42/20 66' (20m) cable, W-42 windscreen, H-15/9 suspension mount/stand adaptor and foam lined carrying case.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -44dBV

C-422 \$2995.00

O/A/Q/8

AKG-Tube Microphone
Large diaphragm condenser using the low noise 6072 vacuum tube combined with new circuit design provides the classic AKG tube sound. Nine polar patterns and three bass-rolloff positions (flat, 75Hz, 150Hz) selected via remote control. 0, -10, -20dB pre-attenuator. Includes N-tube power supply. H-15T shock-suspension, 30' (10m) connecting cable, W-42 foam windscreen and professional metal flight case.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -41dBV

AKG-Tube \$2295.00

Q

C-460B ULS Microphone Combination
12-52V cardioid condenser-microphone combination. With switchable bass-rolloff, 4 positions: flat, 70Hz, 150Hz and 10dB attenuation. Consists of: C-460B preamplifier and CK-61 cardioid capsule. Satin-black finish; W-32 foam windscreen; SA-40 stand adaptor and foam lined case.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -40dBV

O/A/Q/8

C-414B/ULS Microphone
FET condenser microphone with large diaphragm capsule, providing four selectable patterns (omni, cardioid, hypercardioid, figure eight), with three position bass-rolloff switch (flat, 75Hz, 150Hz) and 0, -10dB, -20dB attenuator switch. For 9-52V low-current drain (1 mA) phantom powering. Complete with W-26 windscreen, SA-1B/3 clamp stand adaptor and case.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -38dBV

C-414B/ULS \$ 995.00
C-414B/TL Transformerless version 1195.00

Q

C-451EB/CK-9 Microphone
Shotgun condenser-microphone combination. Consists of: C-451EB preamplifier; CK-9 shotgun capsule; B-18E battery power supply; W-19 windscreen; SA-1B/3 black stand adaptor; SA-70/3 pistol-grip and boom suspension adaptor; H-7 pistol grip; H-70 boom suspension shock mount; and MC-25 cable. CC-9 foam-lined carrying case included.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -39dBV

C-451EE/CK-9 Black combination \$1100.00

Refer to Green Section for Addresses and Telephone Numbers.

AKG ACOUSTICS, INC.

Microphones

C-535EB Microphone
Versatile studio-quality cardioid microphone for demanding applications in broadcasting, recording or sound reinforcement. Special 4-position output-padding/bass-rolloff switch. (1) 0 padding, 0 rolloff; (2) 0 padding, 12dB/octave rolloff below 100Hz; (3) 14dB padding, 0 rolloff; (4) 14dB padding, 6dB/octave rolloff below 500Hz. Removable windscreen; field-replaceable shock-mounted transducer with integral FET pre-amplifier. 9-52V phantom powered. Includes: SA-41 stand adaptor, and case. Satin-black finish.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -41dBV

C-535EB\$350.00

C-567E Lavalier Microphone
Miniature wide-range lavalier microphone for exceptional clean speech and music coverage in film, TV and general theatrical sound reinforcement. May be user worn or clipped to musical instrument. Couples unobtrusive appearance and durable metal construction with shock/noise resistance and ease of field service. 9-52V phantom powered. Includes: W-37 windscreen; H-16 belt clip; H-20 tie tack; H-21 tie bar case. Satin-black chrome finish.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -44dBV

C-567E Lavalier\$275.00

C-568EB Shotgun Microphone
Rugged one piece short shotgun. Outstanding performance and attractive appearance enables mike to be used in film, TV (handheld or camera mount), stage, and audio or video recording. System includes two-position bass-rolloff switch, SA-40 stand adaptor and W-68 foam windscreen. Integrated preamplifier is phantom powered by 9-52V. Satin black finish.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -42dBV

C-568EB\$350.00

C-410 Microphone Boom Set
Featherweight (0.9 oz. without connector) boom set secures behind the head. Utilizes a high quality cardioid microphone for 20-20kHz response. Perfect for singing keyboard players and drummers. 9-52V phantom powered. Includes: removable windscreen, H-45 cable clip and case. Matte-black finish.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -50dBV

C-410\$215.00

D-224E Two-Way Microphone
Studio two-way cardioid dynamic microphone. Dual-transducer design eliminates proximity effect. Small-diaphragm design provides condenser-type extended response without high susceptibility to wind and popping noises. 3-position bass-rolloff switch. Includes W-2 (front) and W-2A (rear) windscreens. SA-40 stand adaptor and case.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -58dBV

D-224E\$600.00

C-522 Stereo Microphone
Handheld or boom X-Y stereo microphone. Internal rechargeable battery, or 9-52V phantom powerable. Ideal for ENG/SNG applications. Includes: W-52 windscreen; SA-41/1 stand adaptor; H-30 shock mount; balanced MK-52/3 and unbalanced MK-52/3U cables; and carrying case. Satin-black finish.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -40dBV

C-522\$995.00

D-222EB Two-Way Microphone
Rugged two-way cardioid dynamic microphone. Modular dual-transducer design eliminates proximity effect and simplifies field service. Integral sintered bronze windscreen/pop filter makes unit equally suitable for studio or location use. Three-position bass-rolloff switch. Includes: SA-40 stand adaptor and case.

Frequency Range: 20-16kHz
Sensitivity at 1kHz: -57dBV

D-202E
Frequency Range: 20-20kHz
Sensitivity at 1kHz: -56dBV

D-222EB\$350.00
D-202E\$425.00

C-562 Boundary Layer Microphone
Newly developed condenser transducer mounted in a flat round plate (6.25" x 0.25") with holes for mounting. Phantom powerable 9-52V. Includes: Stand adaptor, W-62 windscreen and integral steel (10') cable with XLR-type connector. Satin-black finish.

Frequency Range: 20-20kHz
Sensitivity at 1kHz: -33dBV

C-562\$435.00

AKG ACOUSTICS, INC.

Microphones

D-12E Microphone

Large-diaphragm cardioid dynamic microphone with high proximity effect. For miking bass drums and other low-pitched instruments, as well as for general vocal applications. Features shock suspended transducer and fixed wire-mesh windscreen. Integral XLR-type connector in microphone shaft. Includes: SA-40 stand adaptor and case.

Frequency Range: 30-15kHz
Sensitivity at 1kHz: -53dBV

D-12E \$390.00

D-112 Microphone

Large-diaphragm cardioid dynamic microphone handles extreme (168dB) Sound Pressure Levels. Excellent on all bass instruments. Rugged construction. Finished in non-reflective dark gray. Includes SA-40 stand adaptor and case.

Frequency Range: 20-17kHz
Sensitivity at 1kHz: -55dBV

D-112 \$220.00

D-125E Microphone

Anti-feedback cardioid dynamic microphone perfect for sound reinforcement. Wire-mesh windscreen and diecast housing assure reliability. Includes: SA-40 stand adaptor and case.

Frequency Range: 100-18kHz
Sensitivity at 1kHz: -54dBV

D-125E \$170.00

D-130E Microphone

Ruggedized omnidirectional microphone for field broadcast use. Designed for newscast and ENG applications where durability is of utmost importance. Includes: SA-40 stand adaptor and case.

Frequency Range: 50-13kHz
Sensitivity at 1kHz: -55dBV

D-130E Nickel finish \$135.00
D-130NR in non-reflective dark-gray finish 150.00

D-190E Microphone

Cardioid dynamic microphone with sintered bronze windscreens/pop filter. Cardioid pattern reduces feedback. Smooth frequency response makes it an excellent speech or music microphone for performing and recording use. Includes: SA-40 stand adaptor and case.

Frequency Range: 30-15kHz
Sensitivity at 1kHz: -53dBV

D-190E \$135.00
D-190ES w/On-Off Switch (shown) 155.00

D-1200E Microphone

Rugged cardioid dynamic microphone. Unique B-M-S switch allows for on-mike equalization to adjust sound of mike for almost any application without sacrificing performance. Includes: SA-41 adaptor and case. (Replaces D-1000E).

Frequency Range: 25-17kHz
Sensitivity at 1kHz: -52.8dBV

D-1200E \$250.00

D-310 Microphone

Ruggedized cardioid dynamic microphone for vocal-music coverage in the home or studio. Shock mounted transducer, diecast housing and dual windscreens/pop filter for reliability. Includes: SA-41 stand adaptor and case.

Frequency Range: 80-18kHz
Sensitivity at 1kHz: -58dBV

D-310 \$160.00
D-310S w/On-Off Switch 175.00
D-310NR Same as D-310S but in non-reflective dark-gray finish (shown) 165.00

D-321 Microphone

Ultra-rugged hypercardioid dynamic microphone for vocalists on the road. Patented magnet/diaphragm suspension system reduces handling noise. Diecast housing and dual windscreens/pop filter withstands repeated abuse. Captive locking screw to secure cable connector to the microphone. Includes: SA-41 stand adaptor and vinyl case.

Frequency Range: 40-20kHz
Sensitivity at 1kHz: -57dBV

D-321 \$210.00
D-321S w/On-Off Switch 225.00

D-330BT Microphone

Ultra-rugged feedback-rejecting hypercardioid design demanded by top vocalists. Unsurpassed reliability ensured by shock-mounted plug-in field-replaceable transducer, diecast housing and dual windscreens/pop filter. Two equalizer switches (3-pos. bass rolloff, 3 pos. treble rise) for ultimate flexibility in tailoring response to specific voices and ambient acoustics. Includes: SA-41 stand adaptor and case.

Frequency Range: 50-20kHz
Sensitivity at 1kHz: -58dBV

D-330BT \$250.00
D-330NR in non-reflective dark-gray finish 265.00

All AKG microphones are low impedance balanced-output units fitted with a standard 3-pin XLR-type connector. Nominal output impedance is 200 ohms and is suitably matched by all low impedance (25-1000 ohms) inputs.

Prices and Specifications Subject to Change Without Notice.

AKG ACOUSTICS, INC.

Microphones

D-70M Cardioid Microphone
 Low cost musical instrument microphone. Ideal for home recording and sound reinforcement. Medium impedance (200-1000 ohms). Rugged construction with fixed 9.8' (3m) cable and 1/4" phone plug. Includes nickel plated plug-in stand.

Frequency Range: 50-18kHz
Sensitivity at 1kHz: -58dBV

D-70M \$75.00
D-70ME Same as D-70M except with an integral XLR connector. Includes: SA-40 stand adaptor.
D-70ME \$85.00

D-109 Lavalier Microphone
 Lightweight lavalier dynamic microphone with matte-nickel finish. Includes 29 1/2' (9m) non-detachable cable with stripped and tinned leads at free end, nylon neck cord, tie clasp, cable spool, and case.

Frequency Range: 70-12kHz
Sensitivity at 1kHz: -59dBV

D-109 \$125.00

Q-15/10 Boom Set
 Ultra-lightweight boom set, secures behind the head, with single side dynamic earphone and condenser microphone. Includes 6'4" (1.9m) non-detachable cable and H-45 cable clip. Weight 1.3 oz.

Q-15/20 Single earpiece with dynamic microphone 165.00
Q24/10 Dual earpiece with condenser mike 165.00
Q24/20 Dual earpiece with dynamic mike . 185.00

D-58E Dynamic Microphone
 Differential noise-cancelling dynamic microphone for communications, paging and talk-back applications. Extremely small and lightweight.

Frequency Range: 70-12kHz
Sensitivity at 1kHz: -63dBV

D-58E \$125.00

D-900E Shotgun Microphone System
 Shotgun dynamic microphone system. Includes W-19 windscreen, W-9A windscreen, SA-16/1 stand adaptor, SA-70/9 pistol-grip and boom suspension adaptor, H-7 pistol grip, H-70 boom suspension shock mount, MC-25 cable and CC-9 foam-lined carrying case.

Frequency Range: 60-12kHz
Sensitivity at 1kHz: -50dBV

D-900E \$430.00
D-900E System 775.00

D-510B Microphone
 Omnidirectional dynamic microphone on flexible gooseneck shaft. 12 3/16" (310mm) long overall. Includes 3 3/4" (1.15m) cable and mounting hardware. Table stand not included.

Frequency Range: 125-20kHz
Sensitivity at 1kHz: -59dBV

D-510B \$140.00

D-541 Microphone
 Cardioid dynamic microphone on flexible shaft. 13 3/4" (350mm) long overall. Includes 5' (1.6m) cable and mounting hardware. Black finish.

Frequency Range: 80-15kHz
Sensitivity at 1kHz: -55dBV

D-541 \$115.00

D-558B Microphone
 Differential noise-cancelling dynamic microphone on flexible gooseneck shaft. 12 3/16" (310mm) long overall. Includes 3 3/4" (1.15m) cable and mounting hardware. Table stand not included.

Frequency Range: 70-15kHz
Sensitivity at 1kHz: -63dBV

D-558B \$160.00

D-590 Microphone
 Cardioid dynamic microphone on flexible gooseneck shaft. 11 1/4" (285mm) long overall. Includes 3 3/4" (1.15m) cable and mounting hardware. Table stand not included.

Frequency Range: 160-15kHz
Sensitivity at 1kHz: -58dBV

D-590 \$170.00

AKG ACOUSTICS, INC.

Microphone Stands

KM Series Floor and Table/Microphone Stands

KM-5 Short Round Floor/Table Stand

Shock isolated round base floor or table stand. Two section upright is adjustable between 10" and 16". Can be used with KM-211 boom arms. Upright: Chrome plated with 5/8"-27 thread. Net weight 8.1 lbs.

KM-5\$50.00

KM-10/1 Round Floor Stand

Base is shock isolated from floor via a round rubber "donut." Two section upright is adjustable between 39" and 66". Base: 10" diameter, finish black. Upright: chrome plated with 5/8"-27 thread. Net weight 9 3/4 lbs.

KM-10/1\$50.00

KM-10/1 Black Round Floor Stand

Same as KM-10/1 except upright is finished in matte-black.

KM-10/1 Black\$50.00

KM-199 Tripod Floor Stand

Sturdy, lightweight adjustable floor stand. Continuously adjustable in four sections. Maximum height 67 1/4"; minimum height 22". Chrome with matte-black fittings. Folding legs. Net weight 3 lbs.

KM-199\$45.00

KM-265 Tripod Floor Stand

Lightweight yet high quality collapsible floor stand. Height adjustment between 34" and 62". Base radius: 13.5". Collapsed length: 33". 5/8"-27 thread, black finish. Net weight 3.6 lbs.

KM-265\$60.00

KM-211/3 Adjustable Boom Arm

KM quality at a low price. Adjustable boom arm for use with KM-265. Total length 32", black finish. Net weight 1.5 lbs.

KM-211/3\$30.00

KM-251 Tripod Floor Stand

Heavy-duty, collapsible floor stand similar to KM-201A/2, but with three telescoping pieces. Height adjustment from 23" to 53". Folds down to 21" total length and maximum diameter of 3 1/2". 5/8"-27 thread. Chrome with matte-black fitting. Includes handy cable clamp on largest telescoping section. Net weight 5 lbs. (Also available with matte-black finish throughout.)

KM-251\$65.00

KM-275 Tripod Floor Stand With Adjustable Boom Arm

Lightweight yet high quality collapsible floor stand with adjustable boom arm. Stand height adjustment between 34" and 62". Base radius: 13.5". Collapsed length: 33". 5/8"-27 thread. Boom arm total length: 32". Available in red, white, blue, black and chrome. Specify color. Net weight 5.1 lbs.

KM-275\$85.00

KM-200 Anti-Shock Floor Stand

Anti-shock floor stand. Unique suspension attenuates floor vibration. Noiseless height adjustment. Telescoping pole permits continuous height adjustment between 35" and 62". Base radius: 11". Collapsed length 33". 5/8"-27 thread. Chrome with beige fittings. Includes handy cable clamp on main telescope section. Net weight 6 lbs.

KM-200\$90.00

KM-255 Two-Way Stand With Boom

Versatile two-way floor stand. Converts for use as: (1) low-profile stand with telescoping boom arm; (2) conventional upright stand. In boom configuration, boom arm adjusts from 28" to 60". In upright configuration, height adjustable from 41" to 67 1/2". Base radius: 13 1/2". Folds down to 34" length and 3" maximum radius. 5/8"-27 thread. Chrome

KM-10/1

KM-251

KM-200

KM-255

KM-201A/2

with matte-black fittings. Includes cable clamp on vertical section. Net weight 8 lbs.

KM-255\$75.00

KM-259 Black Boom Floor Stand Combination

Heavy-duty low profile boom/floor stand combination. Adjustable vertical height from 17.7" to 49.2". Includes KM-211/1 boom arm. Folding tripod base. Matte-black finish throughout. Net weight 7.5 lbs.

KM-259\$80.00

KM-201A/2 Tripod Floor Stand

Heavy-duty collapsible floor stand. Impact resistant. Noiseless telescopic height adjustment between 36" and 63". Heavy-duty feet with elastic-rubber tips. Base radius: 14 1/2". Collapsed length: 33". 5/8"-27 thread. Chrome with matte-black fittings. Includes handy cable clamp on main telescope section. Net weight 5 1/2 lbs. (Also available with matte-black finish throughout.)

KM-201A/2\$60.00

KM-201A/2 Black Tripod Floor Stand

Same as KM-201A/2, but with matte-black finish throughout.

KM-201A/2 Black\$60.00

AKG ACOUSTICS, INC.

Microphone Stands/Accessories

**KM Series Floor And Table/
Microphone Stands (cont'd)**

KM-212 Boom Stand

Extra heavy-duty collapsible stand with large telescoping boom arm with counterweight. Adjustable height from 60" to 88". Telescoping boom arm from 37 1/2" to 64 1/2". Base radius: 23". Collapsible with folding legs; folds down to 54" (boom: 48" overall) length and maximum radius of 3 1/2". 5/8"-27 thread. Chrome with matte-black fittings. Net weight 22 lbs.

KM-212 \$195.00

KM-212

KM-195

KM-195 Speaker Stand

Extra heavy-duty speaker stand for mounting columns or conventional speakers. Locking height adjustment, with five positions in 8" steps from 48" to 78". Exceedingly stable. Threaded flat mounting plate 6" x 4 3/4" x 1/2". Collapsible with folding legs; folds down to 60" length and maximum diameter of 5 1/2". Matte-black with chrome extension. Net weight 23 lbs.

KM-195 \$155.00

KM-211/1 Telescoping Boom Arm

Telescoping boom arm for KM-200, KM-201A/2 or KM-251. Boom extension 27 1/2" max. 5/8"-27 thread. Chrome with matte-black fittings. Net weight 2 lbs.

KM-211/1 \$30.00

- KM-235/1** Stereo microphone bar adaptor to mount two microphones on KM-199, 200, 201A/2, 251, 255, 257/2 or any similar stand having 5/8"-27 thread. Chrome with matte-black 10.00
- KM-237** Clamp adaptor for microphone mounting on tabletops, etc. 5/8"-27 thread. Chrome 10.00
- KM-238** Microphone adaptor to clamp 2nd microphone to KM-199, 200, 201A/2, 251, 255, 257/2 or any similar stand. 5/8"-27 thread. Chrome. 10.00
- KM-239/2** "Quick Release" mike holder. Two parts. Bottom part screws on to 5/8"-27 stand or gooseneck. Top part "snaps" on to bottom, top has 5/8"-27 thread to accommodate mike stand adaptor. To remove top part depress spring loaded pushbutton. Total length 2 3/8" 10.00

Flexible Cable Assemblies for Microphones

- MC-25** Low impedance without switch (female XLR — male XLR). \$19.00
- MC-25F** Low impedance without switch (female XLR — stripped and tinned ends). 16.00
- MC-25P** Low impedance without switch (female XLR — phone plug) 20.00
- MC-25RC** Low impedance without switch (female XLR — male right angle XLR) 22.00
- MC-25S** Low impedance with switch (female XLR — male XLR) 28.00
- MC-25T** High impedance without switch (female XLR — transformer — phone plug) 31.00
- MC-25TS** High impedance with switch (female XLR — transformer — phone plug) 36.00
- MC-50** Low impedance 50' (15.2m) extension (female XLR — male XLR). 31.00

Note: All cables are 25' (7.6m) long, except MC-50.

AKG ACOUSTICS, INC.

Headphones/Headsets

K-340 Electrostatic/Dynamic Stereo Headphone
Two-way stereo headphone. Offers unsurpassed frequency and transient response, plus accurate spatial reproduction. Patented design combines electrostatic high-frequency transducers, dynamic mid/low frequency transducers, crossovers and 10 passive diaphragms in circumaural earcups. Matches 4-400 ohm outputs. With 10' coiled cable and standard stereo phone plug. Weight 14 oz.
K-340 \$235.00

K-145S Electrostatic/Dynamic Systems
Distortion-free, high frequencies, excellent reproduction of all bass and midrange frequencies. Both dynamic and electrostatic technologies. The "unbreakable" flexi-plastic headband provides vertical adjustment for positive ear alignment. Soft, cushiony ear pads. Dynamic/Electrostatic; 25-24,000Hz. Y-connected, 10' 1/4" phone plug. Weight 6 oz. without cable.
K-145S \$110.00

K-130 Stereo Headphone
The K-130's transducers are microphone-derived moving coil/markrofol-diaphragm systems, not merely small paper-cone loudspeakers as widely used by other manufacturers. The transducers, ear-cushions, and housing are all bio-acoustically designed to form an integrated system with the listener's ear—a system concept that replicates natural listening conditions. This is achieved by utilizing a Supra earcup and maintaining an open-air operating principle. Weight 8 oz.
K-130 \$70.00

K-260 Professional Dynamic Headphone
Open-air, circumaural stereo headphone with newly developed dynamic moving-coil transducers. Provides ultra-wide frequency reproduction and dynamic range. Capable of withstanding high transient peaks without failure. Self-adjusting headband, 10-20,000Hz, Y-connected 9.8' cord, 1/4" phone plug. Weight 9.2 oz. without cable.
K-260 \$170.00

K-141M Deluxe Cardan Stereo Headphone
Quality stereo headphone that is lightweight and comfortable. It is semi-open featuring resonance-free characteristics but with greater freedom from low-frequency side effects. The K-141M provides an extremely broad, flat response almost totally free of coloration—sound which is warm, not boomy; open and present, without harshness. Weight 9 1/4 oz.
K-141M \$100.00

K-45 Supra-Aural Stereo Headphone
Combines lightweight design and high efficiency of a mini with full frequency response and imaging of a studio-quality headphone. Adjustable headband and earcups allow for an extremely comfortable fit. Matches 4-200 ohm outputs and comes with a 9 3/4' cable and standard 1/4" phone plug. Weight 3 oz.
K-45 \$60.00

K-18 Headphone/Boom—Microphone Set
Consists of two monophonically connected dynamic earphones and boom arm with noise-cancelling dynamic microphone. Headphone impedance matches 4-300 ohm outputs. Nominal microphone impedance 200 ohms matched by all low impedance unbalanced (25-1000 ohms) inputs. With 3 1/4' non-detachable cable with stripped-and-tinned leads.
K-18 \$75.00

K-240M Monitor
Preferential use in many professional recording and broadcast studios, as well as the home. An accurate performer with precise bass and distortion-free high frequency capability. Weight distribution over the head is uniform. Its carbon-pivoted earpieces are comfortable, self-adjusting. Dynamic Moving Coil, 20-20,000Hz. Single cord 8' 4" 1/4" phone plug. Weight 8.5 oz. without cable.
K-240M \$120.00
K-240DF Studio Monitor
Frequency range: 20-20,000Hz; channel balance ± 2B; 8' 4" 1/4" phone plug.
K-240DF \$150.00

K-135 Dynamic Systems
It is rugged and durable. Withstands the rigors of broadcast, DJ's, recording studios and the vagaries of the young and the jet set, where its rough and tumble features are most desirable. Moving-coil large dynamic transducers provide a wide frequency listening range. Its patented semi-open air design is rear-vented and is equipped with supra-aural soft earpads covered in a washable kid-glove leatherette. Dynamic moving coil, 25-18,000Hz, Y-connected, 10' 1/4" phone plug. Weight 5.6 oz. without cable.
K-135 \$80.00

K-2 Lightweight Mini Headphone
Two moving-coil dynamic elements produce a well balanced, open sound. Adjustable earcups with washable foam cushions. Perfect for lightweight open-air sound at home, on the go. Includes a combination standard phone/mini stereo plug on a Y-connected 8' 3" cable. Weight 3.2 oz.
K-2 \$45.00

Q34 Professional Headset
The Q34 can be used in audio and video monitoring and talkback, radio and surveillance services, and broadcasting. Features time-tested dynamic transducers and a self-adjusting headband. Microphone boom may be continuously adjusted for positioning. Dynamic two-cond. shielded 200 ohms. 4' 8" 7 conductor with free ends.
Q34 \$145.00
Q35 Single earpiece with microphone. 120.00
Q32 Single earpiece, no microphone. 105.00
Q31 Dual earpiece, no microphone. 120.00

AKG ACOUSTICS, INC.

Phono Cartridges

P100
Utilizing the performance-proven "TS System," the stereo image is real and precise because the patented knife-edge bearing keeps the pivot of the featherweight beryllium cantilever at a defined location—allowing free right-angle movement while restricting axial aberrations. Vertical tracking angle is adjustable, accommodating records which deviate from standard. Choose from two styli versions: P 100LE with multi-faceted Analog 6 diamond tip, tracks wonderfully throughout the audio range. P 100 vdHII, van den Hul diamond, replicates record cutter geometry.
P100 Series \$1000.00

A. P8ES Super Nova
The transducer components include an annular magnet system with a conductive plastic body which constantly grounds accumulated static. Balance and trackability are incomparable. The van den Hul II stylus is cut and polished to replicate the geometry of a record cutting stylus.
Frequency Range: 10—28,000Hz
Channel Separation: 1kHz/10kHz: 30/19dB
Recommended Load Impedance: 47/470K ohms/pF
Tracking Force Range: 1.0—1.5g
Replacement Stylus: X8 Nova
Includes mounting hardware
P8ES Super Nova \$450.00

B. P-25S
Offers the "TS Knife-edge Suspension" and a multi-faceted stylus capable of excellent groove tracking. Low effective cantilever mass provides "feather touch" contact regardless of high or low frequency passages.
Frequency Range: 10—28,000Hz
Channel Separation: 1kHz/10kHz: 30/25dB
Recommended Load Impedance: 47/470K ohms/pF
Tracking Force Range: 0.75—1.25g
Replacement Stylus: X25S
Includes mounting hardware and frequency curve.
P-25S \$250.00

C. P-15S
Hum rejection has been increased by 6dB and crosstalk rejection by 3dB. The frequency sensitivity range has been increased while the coil design provides vital advantages as reduced distortion. Equipped with TS Suspension System and an advanced micro mass stylus.
Frequency Range: 10—25,000Hz
Channel Separation: 1kHz/10kHz: 30/22dB
Recommended Load Impedance: 47/470K ohms/pF
Tracking Force Range: 1.0—1.5g
Replacement Stylus: X15S
Includes mounting hardware and frequency curve
P-15S \$175.00

D. P-10S
Ideal phono cartridge for upgrading the performance of any medium quality system. It will provide noticeable improvement in audio quality throughout the entire range—even over heavily warped records. A more rugged version, the P-10ED Studio, is the ideal cartridge for trouble-free back cueing.
Frequency Range: 20—20,000Hz
Channel Separation: 1kHz/10kHz: 25/15dB
Recommended Load Impedance: 47/470K ohms/pF
Tracking Force Range: P-10ED: 1.0—1.5g; Studio: 2.5—4.5g
Replacement Stylus: P-10ED: X10S; Studio: X10ST
Includes mounting hardware
P-10S \$125.00
P-10ED Studio \$130.00

E. P5ED
Elliptical diamond stylus affixed to a titanium cantilever... to markedly reduce the effective mass of this component so as to greatly improve high frequency tracking performance. The patented TS Knife-edge Suspension System prevents longitudinal or axial shifting of the cantilever point.
Frequency Range: 20—20,000Hz
Channel Separation: 1kHz/10kHz: 25/15dB
Recommended Load Impedance: 47/470K ohms/pF
Tracking Force Range: 1.25—2.0g
Replacement Stylus: X5ED
Includes mounting hardware
P5ED \$80.00

F. P4
Designed for turntables with heavy or medium-heavy tonearms, tracking force of only 1.5g.
Frequency Range: 20—20,000Hz
Channel Separation: 1kHz/10kHz: 20/15dB
Recommended Load Impedance: 47/470K ohms/pF
Tracking Force Range: 1.0—2.0g
Replacement Stylus: X4
Includes mounting hardware
P4 \$60.00

G. P4DP
This version of the P4 is fitted with a standard T4P connector. It may be plugged into a matching receptacle in the tonearm, eliminating the need for fussing with leads, wires or clips.
P4DP \$65.00

Prices and Specifications Subject to Change Without Notice.

ALAMAR ELECTRONICS USA, INC.

Automation Systems/ Remote Interfaces

Alamar's family of products offer flexible solutions for the following:

- Commercial insertion • Program playback • Net delay programming
- Traffic system interface • Management of media resources • Pre-packaged commercial reel • Cart machine replacement

Alamar provides integration with equipment from major manufacturers including Ampex, Sony, JVC, Panasonic, Grass Valley, 3M, Utah Scientific and many more. Features include:

- Supports all VTR formats • Interfaces master control, strip and routing switchers • Provides general purpose telecine control • Compatible with SMPTE/EBU remote control bus

MC-1055 Sequencer System

- 6-channel capability • Stores 10,000 events on disk • ESBUS compatibility • Multi-user allows three workstations • Automatic program cueing and configuration • "As-Aired" station log (optional) • Random access to multiple spots on tape

A most cost-effective way to automate one to six independent program channels while using our general purpose record/play channel for network delay. Operators can access current "on-air" status with the MC-1005's flexible and easy-to-read displays. The on-line event editing feature allows for last-minute changes in the program schedule.

The MC-1055 utilizes SC-2000 interfaces to control up to 32 machines with a variety of formats.

MC-1055 \$17,995.00

Auto-Cart Sequencer System

- Low-cost machine control system • Single-event channel • Includes control of three VTRs and one switcher • Automatic program cueing and confirmation • Interfaces with all VTR formats

Auto-Cart, VTR Sequencer, answers the programming needs of small-to-medium-sized television facilities. It is a compact, single channel system designed for use in commercial insertion and playback. The Auto-Cart controls three mixed-format VTRs and one strip switcher. With additional SC-2000 interfaces the system can be expanded to control up to 32 VTRs.

Auto-Cart \$7,995.00

Copy-Cart Net Delay System

- Interfaces with all VTR formats • Variable pre-roll • Router control of any source to any destination

Copy-Cart Remote Controller permits automatic recording and delayed playback of program material on 1 to 32 VTRs of all formats. A routing switcher interface can be added to preassign switcher cross points prior to net recording.

Copy-Cart \$9,750.00

RCMP-5 Remote Control Panel

Applications

- Multi-format duplication • Remote machine control • Auto-cueing for news playback

The RCMP-5 Remote Control Panel works in conjunction with the MC-1055, Auto-Cart and Copy-Cart systems, and is the product that ties automation together with remote control. Users can add from one to ten RCMP-5 panels, and have full remote control at any location in their facilities. VTRs, switchers, telecines, character generators, still store devices and general purpose interface contacts can all be remotely controlled with the RCMP-5 Panel.

RCMP-5 \$2,750.00

SC-2000 Interface Controller

The SC-2000 Remote Controller provides a modular approach to machine control requirements. The SC-2000 links VTRs, switchers, telecines and other broadcast equipment to the ESBUS standard. No modifications are necessary to most quadruplex, Type C, U-Matic, Beta and M format machines. Program information is recorded on tape to provide for automatic cueing and confirmation of program material.

SC-2000P Remote control of four parallel devices \$3,250.00

SC-2000S Remote control of two serial devices. 2,500.00

- SC-2000T** General purpose remote control of one telecine system \$4,450.00
- SC-2000R** Remote relay control and opto-isolated status of four devices 3,750.00
- SC-RT** Satellite DTMF interface PC board (one parallel port of SC-2000P required) 1,200.00

Schedule Manager Software

Applications

- Educational television • Community access • LPTV scheduling

Schedule manager allows daily logs to be created using the Run-sheet information in the Media Manager's database. Once a log is created, the Schedule Manager downloads the daily logs to the MC-1055. All software is IBM XT/AT compatible.

Schedule Manager \$5,500.00

Media Manager (Software)

Applications

- News clip retrieval • Run-sheet storage • Distribution management • Film/video cataloging • Central library database

Media Manager provides a means of cataloging all film and videotape programming in your facility. A flexible search feature allows easy access to program entries.

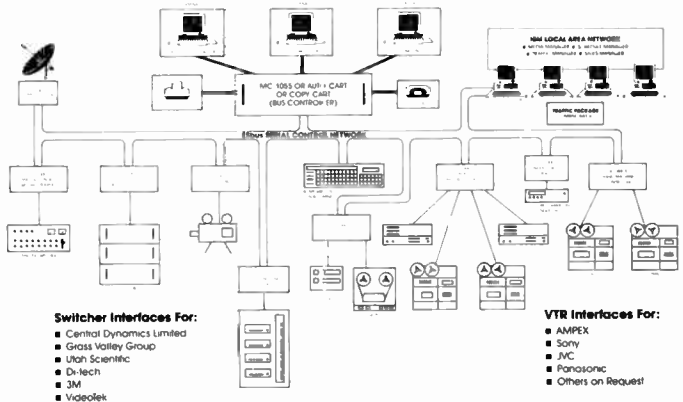

Media Manager \$3,750.00

Traffic Manager (Software)

The Traffic Manager furnishes the interface link between a facility's existing traffic system and Alamar's automation system. When fully integrated, the Traffic Manager will cross reference your catalog entries for media assignment.

Traffic ManagerPOR

Ala-Bus Integrated Network

ALEXANDER BATTERIES

Batteries/Battery Belts

7700 Series Ride Behind Batteries

All Alexander ride behind (on board) batteries are equipped with an Anton Bauer Snap On battery mount. No cables or modifications are needed. All Alexander batteries feature graded and sorted cells so the battery is assembled with premium grade cells.

7700-10	7700-11	7700-12
Voltage: 12V	Voltage: 13.2V	Voltage: 14.4V

Double Adjusting Battery Belts

All Alexander battery belts feature a unique double adjusting system allowing the crew member to adjust the belt to fit his or her figure...large or small. In addition, all Alexander battery belts include a shoulder strap for additional comfort and ease. The belt is leather with polyethylene and nylon stitched pockets. Polyethylene will not crack, split or break even under extreme weather conditions.

Battery Belt Replacement Batteries

2D24 (2 "D" cells, side by side)

Used In: BV to 16V, 4AH battery belts	Voltage: 2.4V
	Capacity: 4AH

S240/T (2 "D" cells, stacked)

Used In: BP90 batteries and 13.2V, 8AH battery belts	Voltage: 2.4V
	Capacity: 4AH

4D4.8S (4 "D" cells, two side by side stacked 2 high)	Used In: 30V, 4AH battery belts; all 8AH battery belts and BP90 batteries
	Voltage: 4.8V
	Capacity: 4AH

6D7.2S (6 "D" cells, three side by side stacked 2 high)

Used In: 7.2V, 4AH battery belts	Voltage: 7.2V
	Capacity: 4AH

ALEXANDER BATTERIES**Chargers and Analyzers****Chargers and Analyzers****TA3877-II TriAnalyzer**

Helps you determine the remaining capacity or life of up to three batteries independently, yet simultaneously. Fully charges, discharges, recharges each battery. Remaining capacity is displayed in mA. The deep discharge process also conditions each battery, extending battery life. The ideal companion for our SM32077 Smart Charger.

Voltage: 12V to 14.4V
Charge Rate: 1600mA
Discharge Rate: 1700mA
Trickle Charge Rate: 10mA

SM32077 Smart Charger

Independently charges up to three batteries. "Smart" because it automatically detects when a battery reaches full charge by using a unique microprocessing system. For use with all types of video batteries.

Voltage: 12V to 14V
Charge Rate: 1600mA
Trickle Charge Rate: 10mA

20-11 Charger

Completely charges three 220mA batteries in 10 hours or less. This includes our 7700 Mini Series, BP-20-11, BP60A, JVC-1 and JVC-11 batteries.

Charge Rate: 200mA

20-40 Charger

Completely charges two 4AH batteries in 10 hours or less. The full size 7700 Series and BP90A are in this category.

Charge Rate: 400mA

SR Series

SR Series Sound Mixing Consoles

- SR8 stereo and mono outputs, 8 input channels
- SR12 stereo and mono outputs, 12 input channels
- SR16 stereo and mono outputs, 16 input channels
- SR416 four group, stereo and mono outputs, 16 input channels
- SR424 four group, stereo and mono outputs, 24 input channels

The AHB SR Series are a versatile range of sound mixing consoles designed for live sound usage and stereo or 4-track recording.

Constructed of high quality durable materials, designed and matched with components that allow ease of use, they represent the ideal equipment for high quality sound reinforcement through fixed installations or touring PA systems.

The panel coloring is designed so that under poor lighting conditions the graphics are easily read, where circumstances prevail, a connector is provided for gooseneck lights.

Specifications

Construction:

1. Steel control panel, stove enamel, epoxy silkscreen legend
2. Steel base, black finish with furniture trims
3. Channel circuit boards are individual, secured to control panel
4. Internal busbar circuits employ removeable harness
5. IC op amp circuit design with discreet transistor input pre amp

Electronic Performance:

0dBV = 0.775RMS 1kHz
OVU = +4dBV = 1.23VRMS

Gain:

- Mike in to Group Out + 80dB max.
- Mike in to L/R out + 70dB max.
- Line in to group out + 50dB max.
- Line in to L/R out + 40dB max.
- Group to L/R out + 10dB max.
- L/R to mono out + 6dB
- FX Return to L/R out + 12dB max.
- Aux. return to group out + 17dB max.

Figures include 10dB input and group fader boost.

Input gain control range 40dB

Frequency Response:

Equalizer set to flat response—20Hz-20kHz +0, -1dB

Outputs:

Max. level + 21dBV, recommended load 2K ohms or more. With 600 ohms load max. level + 18dBm.

Distortion:

THD typically 0.05% 20Hz-20kHz at normal levels and gain settings

AC Supply Voltages:

Supply type MPS8P provides the DC supply for all mixer functions including 48V phantom power. It is factory set for operation on the required AC supply as follows:

- Europe 220/240VAC, 50Hz
- North America 110/120VAC, 60Hz
- Japan 100V or 110/120 or 220/240VAC

The supply voltage setting may be altered to suit local requirements if required. BNC connector (to suit lamps rated 12-15V, 50mA DC)

Noise Performance:

RMS noise 20kHz bandwidth ref. 0VU

Model:	SR8	SR12	SR16	SR416	SR424
i Stereo Output, all inputs routed and faders closed	-87dB	-85dB	-84dB	-84dB	-81dB
ii Group Output, all inputs routed and faders closed			-78dB	-74dB	
iii Aux. Output	-89dB	-84dB	-82dB	-82dB	-79dB
iv Microphone Input	equivalent noise -125dBm (200 ohm source)				

Equalizer:

HF continuously variable ± 12dB with shelving characteristic at 8kHz. 3.5kHz continuously variable peak/dip ± 12dB centered at 3.5kHz, Q=0.6, 250Hz continuously variable peak/dip ± 12dB centered at 250Hz. LF continuously variable ± 12dB with shelving characteristic at 80Hz.

Each model is shipped in protective packing with the power supply and one owner handbook which includes technical service data and schematics.

Dimensions

(mm/ in.):	SR8	SR12	SR16	SR416	SR424	MPS8P

SRM Series

SRM Series On-Stage Monitor Mixers

Available in 18 x 6 and 24 x 8 configurations. Includes passive splitting system and road case.

The SRM Series of "On Stage" monitor mixers are intended for use by artists requiring multiple independent mixes within their performing environment.

To be used in conjunction with a high quality monitor system (i.e. speakers, amplifiers, equalizers, etc.), both the needs of the artist and engineer are easily satisfied by extensive use of patch and insert points, and the liberal use of status LED indicators throughout. Incorporation of an internal microphone splitter eliminates the need for costly external systems.

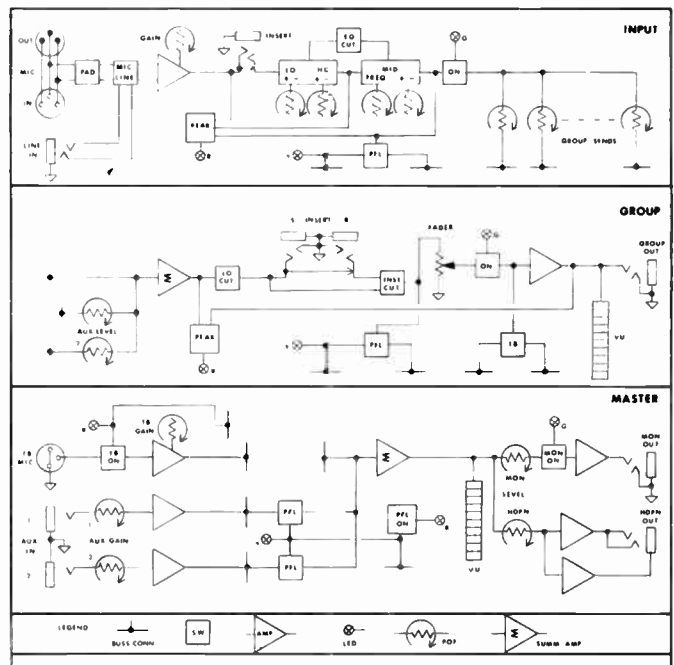

Monitor systems have been shown to be capable of producing higher and more intelligible sound levels before feedback when the mixing equipment and engineer are in the same environment as the artist (On stage, usually behind the main speaker system). Because of the better communications between the artist and engineer, the mix can more easily be tailored to the artist's needs.

Specifications

Input Impedance	
Balanced Microphone	4K ohms
Balanced Microphone w/pad	8K ohms
Balanced Line	40K ohms
Unbalanced Aux In	50K ohms

The engineer's portion of the monitor system is designed so that external equalization can easily be patched into any of the individual groups. The equalized signal can be monitored through the PFL (Solo) system, exactly as the artist is hearing it. The engineer has a choice of monitoring, using headphones or his own speaker system. A mute switch is provided on this output to eliminate the need for adjusting engineering monitor levels when switching between headphones and speakers. A separate LED meter is used to follow the PFL (Solo) function of the mixer. This prevents confusion that could occur if one meter were used for multiple functions, as employed in some current designs.

Physical layout and color selections have been chosen for ease of operation under low light conditions as are often encountered on stage wings during a performance. BNC connectors are provided for use with optional goose neck lighting fixtures. An arm rest is provided for engineering comfort during long performances.

ALLEN & HEATH BRENELL LTD.

Mixing Consoles

1616-D

System 8 Mk III—8 Bus Mixing Consoles

- 16 or 24 input channels
- Discrete differential balanced inputs
- Insert points on all input channels
- Post fader direct outputs on all input channels
- 48V phantom power
- 3 aux. outputs
- 1 stereo cue output
- 100mm Alps top of the line faders
- 2 effect return channels with the capability of sending an effect to the headphone cue system without tying up an input channel
- 16 tape monitor channels can also be used as additional FX returns
- Fader reversal between group out and tape (or FX) input
- Full tie line system enables mixers to be linked together
- EX-8 8 input expander available
- Any input channel can access the left/right outputs without the need of assignment to a group channel
- Insert points on all group and left/right outputs
- Control room monitor section
- Talkback system
- Normal operating level +4dBV or -10dBV selectable
- External power supply
- All steel construction

Designed for use in 8 and 16-track recording, as well as sound reinforcement, input configurations of 16 and 24 inputs are available and may be expanded by linking System 8 mixers together or using the EX-8 expander module, all without sacrificing any inputs or outputs.

Specifications

Frequency Response:	± 1dB (ref. 1kHz) Mike or line input to output — 20Hz-20kHz	
Max. Level:	+ 21dBV into 5K ohms or more + 18dBm into 600 ohms	
Equalization:	HF shelving ± 16dB at 12kHz or 8kHz LF shelving ± 12dB at 120Hz or 60Hz MID peak/dip ± 12dB, 400Hz to 6kHz (Q = 1.5)	
Distortion:	Mike input to output at +4dBV, 45dB gain. Less than 0.05% THD -20Hz-20kHz

ALLEN & HEATH BRENELL LTD.*Mixing Consoles***CMC 24/24 Input Mixer
CMC 32/32 Input Mixer**

- 16 to 24 input/output (in-line) I/O channels
- 8 line input/sub group channels
- Master output/monitor section
- CARS computer aided routing and muting system
- RIAA amplifier for turntables
- Headphone monitor output
- Talkback microphone input
- 2 master outputs, one hi-level, one low level
- Master meters switchable between Peak and VU characteristics
- Peak warning LEDs on all channels
- CMR-MIDI remote controller (optional)
- CMPTE computer interface—SMPTE time code synchronization of routing and muting functions, with SMPTE to MIDI converter (use with Commodore™ 64/128 plus SMPL™ Software) (optional)
- Multi-track meter bridge (optional)

The CMC range from AHB consists of two compact high quality multi-track recording consoles and associated accessories, both the 24 input and 32 input models have the same control functions and automation systems (CARS).

CMC 24

CMC 24 — the 16 track CMC with 16-bus routing under computer control, and 16 track monitoring, coupled with the MIDI/SMPTE control packages it provides a high quality, sophisticated mixing console to use with any 8 or 16 track tape machine.

The CMC 24 is a 24 into 16 into 2 format console, having 16 full facility in-line I/O channels, 8 line input or sub-group channels. The 16 tape monitor inputs can be used as line inputs for mixing with no replugging problems. The line inputs and insert points under the arm rest make easy work of remix when instruments are to be added live.

CMC 32

The CMC 32 is a 24 track capable console. Using the same comprehensive I/O channels the CMC 32 has a 32 into 16 into 2 format, with 24 track output and monitoring capability with outputs 17 to 24 being duplicates of outputs 1 to 8 thus avoiding any difficult interconnections. The CMC 32 has 56 line inputs available for mixing, all with programmable muting.

**CARS****CMC 24****CARS**

The computer aided routing and muting on the CMC is the first stage in console automation giving instant recall and up-date of channel and monitor mutes and routing changes to tape outputs. The routing and muting information is entered using the CARS keypad, with copy and patch delete facilities the system is simplicity itself. The versatility of the system gives you the ability to control your mix with hands free operation, or synced to MIDI sequencers or SMPTE time code.

The CMC internal micro-computer with its keypad and status display provides the following features:

- Routes I/O channels, line inputs/sub-groups to the multi-track outputs
- Mutes I/O channel input and monitor sections, also sub-groups
- 32 on-board patch memories (with battery back-up). Each patch contains a complete set of routing and muting data for the console
- Instantaneous changes of route and mute settings with footswitch control for hands free operation
- Expansion of CARS facilities by use of either the CMR MIDI remote controller or the CMPTE Commodore interface with SMPTE time code synchronization

Mixing Console

CMC MKII (cont'd)

Specifications

Construction: Steel chassis panel, stove enamel painted and silkscreen printed.
High strength ABS base for "tabletop" installation
All connections are easily accessible from the front.
Individual channel circuit board assemblies are interconnected by removeable internal harness.
The audio system features IC op amp design with low noise, and distortion performance. Status indicators are LED type throughout

Connector Types

Mike In: XLR
Multitrack and Monitor: RCA phono
Line Input & Insert Points: 1/4" jack

Audio System

Performance: OVU = 300mVRMS = -10dBV 0dBV = 0.775VRMS

Frequency

Response: Input to stereo or multitrack output, equalizer bypassed or flat. 20Hz-20kHz +0, -1dB

Distortion: At normal operating level and between 100Hz and 10kHz THD typically 0.05%

Headroom: Input headroom between normal level and overload 21dB. Peak indicators illuminate when 3dB of headroom remains

Max. Output

Level: +21dBV, recommended load impedance 5K ohms or more

Noise: RMS 20Hz-20kHz

Mike input

Equivalent Noise: -125dBV

Multitrack Output

Noise—One Line

Input, Routed, Fader at "0": -80dBV

24 Inputs Routed, Faders Closed: -78dBV

Stereo Mix Noise—

One Line Input Routed, Fader at "0": 82dBV

24 Inputs Routed,

Faders Closed: -84dBV

Note: Gain figures are with control setting as follows—

Faders at normal position "0"

Pan pot fully over to one side

Gain control range is then as stated

Additional 10dB gain is available with fader max. settings

Input/Output Channel

Inputs

Microphone: Electronic balanced XLR for dynamic and condenser microphones with 48V phantom power. Sensitivity for OVU output variable between 300 μ V and 30mV, gain range +20 to +60dB. Input impedance 2K ohms
Line: Unbalanced quarter inch jack. Sensitivity for OVU output variable between 10mV and 1V, gain range -10 to +30dB. Input impedance 500K ohms
Tape: RCA phono socket input from multitrack, sensitivity for OVU is 300mV. Input impedance 500K ohms

Outputs

Multitrack: RCA phono socket. Output at OVU is 300mV. Load impedance > 5K ohms

Insert Point: Quarter inch 3 pole jack socket connected in the channel input circuit before equalizer. Nominal signal level 300mV. Tip = return (input). Ring = send (output)

Equalizer: HF \pm 12dB tuneable 6kHz to 12kHz, mid \pm 12dB tuneable 300Hz to 6kHz, LF \pm 12dB tuneable 40Hz to 300Hz. Operates on the selected channel input source Mike, Line or Tape. Equalizer bypass switch provided

Return Channel

Inputs: Quarter inch unbalanced jack in parallel with RCA phono socket. Sensitivity for OVU variable between 35mV and 1.5V. Tip = return (input). Ring = send (output)
Equalizer: HF \pm 16dB at 10kHz, LF \pm 16dB at 100Hz

Master Section

Stereo Tape Inputs: RCA phono sockets for 2 inputs to monitor section. Nominal sensitivity for OVU is 300mV

Gramophone

Inputs: Left and right RCA phono sockets to accept stereo magnetic cartridge. Outputs on RCA phono sockets for connection to mixer channels. Nominal sensitivity 5mV, input impedance 47K ohms

Patch Bay: 3 RCA phono sockets are connected in parallel. Four identical groups are provided

Meters: Left and right LED column meters indicate the signal level of the selected monitor source. OVU is 300mV. Ballistic response may be selected either VU or quasi peak

Footswitch: Quarter inch 2 pole jack accepts footswitch step command for CARS program stepping

Stereo Output: Duplicate L and R RCA phono sockets. Output level for OVU is 300mV, variable up to 1V

Insert Points: Quarter inch unbalanced jack connected before master L & R faders. Nominal signal level 300mV. Tip = return (input). Ring = send (output)

Monitor Output: RCA phono sockets for connection to power amplifiers. Output level is set by monitor level control and is variable up to approximately 1VRMS for OVU

Headphone Output: Quarter inch stereo jack socket for headphones of 8 ohms and greater impedance. Duplicate sockets provided

Aux. Outputs: RCA phono sockets for auxiliary outputs 1 to 6 with duplicates for circuits 1 and 2

CMR

CMR (Optional)

The CMR remote programmer offers powerful facilities without the need for an external computer. The unit has data storage for 100 MIDI patches for MIDI control of console status, 100 routing and 100 muting patches, where any one route patch can be combined with any one mute patch. A 10 song, 100 events per song sequencer (chaining facility available giving maximum of 1 song of 1000 events), MIDI synchronization and song pointer implementation. All CMR memory is held in interchangeable RAM cartridges for fast and economical data storage.

CMPTe Interface

CMPTe (Optional)

The SMPTe time code based AHB option for CMC consoles. It connects between the CMC computer interface socket and a Commodore 64/128 cartridge slot. The ROM based software within the CMPTe interface has a 7 page menu giving:

- Channel index
- Track and take index
- Route Patches: 56 different routing combinations, any of which can be incorporated into the sequencer page
- Mute Patterns: 1024 different muting patterns which can be sequenced in any order with any route patch
- Sequencer: 2048 event sequencer. Each event can have a different route patch (1-56) and a different mute pattern (0000-1023)
- SMPTe time code generation, all formats 24, 25, 30, drop-frame and non drop-frame, with various clocking modes including real time event recording
- Individual data storage and recall from disk or cassettes

Studio 12 Compact Mixer

Combine the expertise and experience of MBI and AHB, draw upon MBI's broadcast knowledge and AHB's ability to provide high quality mixing consoles at affordable prices and the Studio 12 is the result. The Studio 12 answers the demand for a compact mixer encompassing the requirements for on-air broadcast, stereo production, and sophisticated club installation at a sensible pricing level.

For any cost-conscious installation, the Studio 12 offers a comprehensive range of features—some of which are

unavailable on other consoles regardless of price. The console has 6 mono mike/line inputs and 6 stereo line inputs, 3 of which have RIAA amplifiers as standard for operation with turntables fitted with magnetic cartridges. Each mono input can be switched between mike or line input and each stereo input can be switched between two different stereo line sources. Six microphones, 6 line sources and 12 stereo line sources can be permanently connected, which maximizes the potential of the system, allowing a wide variety of programming situations.

CONSTRUCTION

1. Steel control panel, stove enamel, epoxy silkscreen legend.
2. Steel base, black finish with furniture trims.
3. Channel circuit boards are individual, secured to control panel.
4. Internal busbar circuits employ removable harness.
5. IC op amp circuit design with discrete transistor input mic pre amp.
6. DIMENSIONS:

Width	Depth	Height
600mm	644mm	100mm
23.6"	25.4"	4"

Packed weight including PSU = 25kg/55lbs.

SPECIFICATION:

MICROPHONE INPUT: electronically balanced XLR pin 2 = hot. Input impedance = 2K ohms. Noise EIN = -125dBu ref 200 ohms 20Hz to 20kHz. Gain = +24 to +64dB variable (maximum system gain = 75dB).

MONO LINE INPUT: electronically balanced XLR pin 2 = hot. Input impedance = 10K ohms. Gain = -13 to +27dB variable (maximum system gain = +38dB). Gain pot mid position = 0dB.

STEREO LINE INPUT: Line 1 = phono unbalanced. Line 2 = jack unbalanced. Input impedance = 50K ohms minimum. Gain = -12 to +27dB variable. Gain pot mid position = +10dB. Gain pot at position 3 = 0dB. Balance = ± 6dB variable.

RIAA INPUT: Fitted as standard on CH7, 8 and 9 in LINE 1 position. Available as option for CH 10, 11 and 12. Input sensitivity = 5mV. Output = 300mV (-10dBV).

FX RETURN INPUT: Mono input unbalanced. Uses stereo jack for dual level. Input impedance tip = 30K ohms, ring = 130K ohms. Gain tip = +12dB, ring = 0dB.

EXTERNAL STEREO MONITOR INPUT 1, 2, 3: Stereo jack unbalanced tip = left, ring = right. Input impedance = 50K ohms. Gain trim = 0 to +16dB. Left/Right adjustable separately. Trims gain of all three points.

INSERTION POINTS: Stereo jack unbalanced. Tip = SEND at nominal line level, ring = RETURN.

AUX 1, AUX 2, CUE OUTPUTS: jack unbalanced. Output = nominal line level. Maximum gain = +18dB. Normal setting for OdB gain = SEND and MASTER pots at position 7.

LOUDSPEAKER STEREO OUTPUT: Stereo jack unbalanced. Output = nominal line level. Maximum gain = 9dB. Normal setting for OdB gain = LS level pot at position 8.

PRESENTER HEADPHONE OUTPUT: Stereo jack — tip = left, ring = right, sleeve = return. To drive 8 to 600 ohm headphones. Output is stereo.

GUEST HEADPHONE OUTPUT: Stereo jack — tip = signal, ring = signal, sleeve = return. To drive stereo or mono headphones of 80hm or greater impedance. Output is mono. Mono headphones need to be connected using a stereo 1/4" jack plug with ring and tip joined.

TALKBACK INPUT: Stereo jack — tip = signal unbalanced. Input = nominal line level. Input impedance = 25K ohms. Ring = DC to control PFL relay. Connect to jack sleeve to activate relay.

MAIN OUTPUTS — LEFT, RIGHT, MONO: Electronically balanced XLR pin 2 = hot. Output = nominal line level. Three additional pairs of left and right outputs are available on RCA phono connectors. These are unbalanced and unbuffered.

LAMP OUTPUT: BNC — 15V DC via 22 ohms. For 12-14V 250mA max bulb.

EQUALISATION

MONO EQUALISATION:			
8KHz	=	±12dB	shelving
3.5KHz	=	±12dB	peak/dip
	=	Q = 0.8	
250Hz	=	±12dB	peak/dip
	=	Q = 0.8	
STEREO EQUALISATION:			
80Hz	=	±12dB	shelving
8KHz	=	±12dB	shelving
2KHz	=	±12dB	peak/dip
	=	Q = 0.9	
80Hz	=	±12dB	shelving
Lo-filter	=	-24dB at 20Hz	

GENERAL

NOMINAL LINE LEVEL:	
VU Version	= OVU = +4dBu
PPM Version	= PPM 4 = 0dBu
Where 0dBu	= 0.775 v rms.

Maximum output =
 +21dBu into 2K ohms or more
 +18dBu into 600 ohms.

Output impedance = 30 ohms. PEAK leds indicate 3dB before clipping.

FREQUENCY RESPONSE: Equaliser set flat. MIC INPUT 40dB gain to main output +0, -1dB 18Hz to 30KHz ref 1KHz.

DISTORTION (Thd + Noise) : Nominal

+10dBu	80Hz	less than .05%
	1KHz	less than .04%
	16KHz	less than .05%

CROSSTALK: Interchannel crosstalk = better than 75dB at 1KHz. Fader shut-off = better than 70dB at 1KHz. Left/Right crosstalk = better than 70dB at 80Hz, better than 65dB at 1KHz, better than 45dB at 16KHz.

NOISE: measured 20Hz to 20KHz rms. MAIN OUTPUT = Faders off = -82dBu. Stereo line at OdB gain = -78dBu. Mic at 40dB gain = -76dBu. Aux 1, Aux 2, Cue Outputs = sends off, master at position 7 = -73dBu.

AC POWER REQUIREMENT: AHB MPS8P unit provides the necessary DC for the mixer and will operate on the following supplies.

110-120V A.C. 50/60Hz 50VA North America

220-240V A.C. 50/60Hz 50VA Europe

100-V A.C. 50/60Hz 50VA Japan.

ALLEN AVIONICS, INC.

*Rackmountable Video/
Pulse Delay Lines*

A complete rack mountable series of video and pulse delay lines, with the capability of replacing up to 1450 feet of cable, is now being marketed by Allen Avionics.

All models are stocked in our plant in Mineola, New York.

RACK MOUNT showing delay units with switches and terminals available for delay changes. Up to 11 delay units can be housed. Cards for mounting units in rack are purchased separately. Note hinged front panel.

Rack Size: 19" w., 10" d., 5 1/4" h.

Showing 8 individual slide switches for rapid delay changes.

Photo shows 1 of 4 Strappable versions (VRS Series). Note that there are 7 input and output terminals available for strapping desired delay.

Four variable slide switch units are being offered with total delays of 255, 637.5, 1275 and 2270 nanoseconds. Each unit contains 8 individual delay units. Four strappable units are also manufactured with total delays of 317.5, 635, 1270 and 2260 nanoseconds. The strappable units consist of 7 separate delay lines each having their own input and output terminals. The slide switches or terminal strapping provide methods for adding the individual lines together so that the output is always the summation of the individual lines. This eliminates most video distortions and assures good chrominance to luminance delay. Precision delay changes of as small as one nanosecond are easily accomplished. Low insertion loss, amplitude and delay flatness, along with excellent pulse fidelity, are characteristic of this series.

Units are rack mounted by attaching a durable plastic card to the large surface. Note inserts provided for the attachment.

To satisfy requirements other than rack mounting, additional inserts are provided.

All units are manufactured to fit standard 19 inch racks and are provided with additional inserts to satisfy almost any mounting requirement. Delay units and racks can be purchased separately. The rack is manufactured with a hinged panel so that fast delay adjustments can be made. However, once adjustments are made, the front panel prevents further tampering with the slide switches or terminals.

Part No.	Delay Range (Nano-Sec.)	Delay Steps (Nano-Sec.)	Method of Variation	Maximum Insertion Loss (@ 100 KHz (db)	Amplitude Flatness At Any Delay Setting 100KHz to 5.5MHz (db)	Max. Rise Time (Nano-Sec.)	Package Size (Inches)

*±.2db variation at any delay setting.

Impedance: 75 ohms.

Pulse Distortion: Less than 4% with an input pulse rise time of 20 nanoseconds.

Working Voltage: 50 volts maximum.

Return Loss: 15db minimum.

Delay Tolerance: 5% or 1 nanosecond, whichever is greater.

ALLEN AVIONICS, INC.

Video/Pulse Delay Lines

Allen Avionics, an established leader in the design and manufacture of Electromagnetic Delay Lines and L-C Filters has now developed a specialized group of products for the video market.

In color television broadcasting, accurate timing of signals is essential. This was initially achieved by the use of 75 ohm coaxial cable. The cost in time and materials to accomplish precise trimming and the lack of a rapid and convenient method of changing delays is currently responsible for the decline in cable usage. Television studios, studio equipment manufacturers and others engaged in the video industry are changing from 75 ohm cable to a more suitable method of achieving precise short delays. Allen Avionics now offers a line of Video Units for this purpose. Their use will result in a reduction of size, weight, installation cost and an overwhelming saving in time and effort to make delay changes.

Models VPO635, VP1270 and VP2075 are padded to provide a flat loss at any setting. As a result of this padding, these units will exhibit a maximum variation of $\pm .2$ db at any delay setting.

Model VP0010 was designed specifically to be used as a delay trimmer in conjunction with our other delay units or any 75 ohm system. It offers .5 nanosecond switching resolution with excellent amplitude flatness up to 5.5 MHz.

These new delay units feature extremely flat amplitude response to 5.5 MHz, small increments of delay variation, low signal distortion and tight delay tolerance. The delay networks are ideal for pulse applications because of their fast rise times and low distortion. Amplitude equalization is employed to achieve excellent flatness over the video frequency range. The delayed output of any model in this group is the summation of individual lines. It is not the result of a tapped line. This feature insures that output pulse distortions are minimized. Units will match to any 75 ohm system and can be directly connected into the video signal path by means of BNC connectors.

Part No.	Delay Range (Nano-Sec.)	Delay Steps (Nano-Sec.)	Method of Variation	Maximum Insertion Loss @ 100 KHz (db)	Amplitude Flatness At Any Delay Setting 100KHz to 5.5MHz (db)	Max. Rise Time (Nano-Sec.)	Package Size (Inches)

DELAY TRIMMERS—VRM011, VAR011 & VAR005

VRM011

These VAR Units, which permit an infinitely small delay adjustment, insure an amplitude and delay flatness superior to that of any other unit presently available.

The units can be used as delay trimmers alone, or in conjunction with any of our other delay boxes from D.C. to over 5.5 MHz.

VAR011

Part No.	Delay Range (Nano-Sec.)	Toggle Switch Variation (Nano-Sec.)	Trimmer Variation (Nano-Sec.)	Maximum Insertion Loss @ 100 KHz (db)	Amplitude Flatness at Any Delay Setting 100KHz to 5.5 MHz (db)	Package Size (Inches)
VRM011	0 - 11	.5 steps to 10.5	Continuously Variable to .5	.3	.3	1 1/4 x 4 5/32 x 4
VAR011	0 - 11	.5 steps to 10.5	Continuously Variable to 1	.2	.25	4 3/8 x 2 3/8 x 1 1/16
VAR005	3 - 7	---	Continuously Variable from 3 to 7	.2	.2	3 5/8 x 1 1/2 x 1 1/4

VAR005

Impedance: 75 ohms.
 Working Voltage: 100 volts.
 Pulse Distortion: Less than 3% with an input rise time of 20 nanoseconds.
 Return Loss: 20db or greater.

TYPE AV-397 & 75-2A

75-2A
 7-3/8" x 4-11/15" x 2-3/16"

Maximum Delay: 2.075 microseconds \pm 3% variable in .025 μ s. steps from .025 to 2.075 microseconds.
 Time Delay of Individual Lines: 1, .5, .2, .2, .1, .05, .025 microseconds.
 Rise Time for Entire Line: .06 microseconds maximum.
 Frequency Response: 3db down at 5 megahertz for 2.075 microseconds delay.
 Distortion: 2% maximum with .2 microsecond input pulse.
 Impedance: 75 ohms \pm 5%.
 Working Voltage: 100.
 Temperature Coefficient: 50 parts/million/ $^{\circ}$ C from -55° C to 105° C.
 Attenuation: 7% maximum for 2.075 microsecond delay.

AV-397
 2" x 2-1/2" x 5-1/2"

TV LINE EQUALIZERS—VE300 & AV-535

IMPEDANCE: 75 ohms \pm 2 ohms to 8 Megahertz.
 ATTENUATION OF CABLE PLUS EQUALIZER: 3db.

These Equalizers are designed to compensate for losses in RG-11/U (75 ohm) cable and its equivalents. The units are capable of equalizing 50 to 300 feet in 50 foot increments.

VE300
 4-11/16" x 3-11/16" x 2-1/16"

The VE300 is provided with a rotary switch to select the required amount of cable footage to be equalized. It is supplied with BNC connectors for quick input and output connections and is foamed in a metal can.

The AV-535 has terminals on its mounting surface arranged to provide for simplified strapping of different cable lengths. The unit is foamed and hermetically sealed in a metal can.

Attenuation of equalizer alone is as shown. TOLERANCE \pm .07 db.

Feet	0.1 MHz	2 MHz	4 MHz	8 MHz
50	2.97 db	2.86 db	2.79 db	2.67 db
100	2.93	2.68	2.53	2.27
150	2.90	2.51	2.28	1.88
200	2.86	2.35	2.03	1.52
250	2.82	2.19	1.82	1.21
300	2.78	2.02	1.58	0.86

AV-535
 2" x 3-1/2" x 5"

“MVFL” SERIES

DELAY EQUALIZED NTSC LOWPASS FILTERS — VFL, MVFL & VCL SERIES

For the video field, we have built many lowpass filters having sharp roll-offs and good passband delay linearity with cut-off frequencies from .1 MHz to 10 MHz. The most popular of these are used to attenuate the harmonics of the NTSC color sub-carrier frequency 3.58 MHz. The most commonly used filters in this group are tabulated below:

VFL & MVFL SERIES — IMPEDANCE = 75 OHMS

Standard Size Max. Insertion Loss 1db Part No.	Miniature Size Max. Insertion Loss 2db Part No.	Max. .25db Attenuation @ Frequency (MHz)	Max. 3db Attenuation @ Frequency (MHz)	Min. 45db Attenuation @ Frequency (MHz)	Approximate Passband Delay (Nanoseconds)
VFL1P7	MVFL1P7	1.75	1.92	2.41	1691
VFL2P2	MVFL2P2	2.25	2.45	3.10	1325
VFL2P7	MVFL2P7	2.75	3.00	3.77	1082
VFL3P2	MVFL3P2	3.20	3.50	4.40	928
VFL3P5	MVFL3P5	3.50	3.84	4.82	846
VFL3P8	MVFL3P8	3.80	4.16	5.22	781
VFL4P0	MVFL4P0	4.00	4.38	5.51	741
VFL4P5	MVFL4P5	4.50	4.93	6.19	659
VFL5P2	MVFL5P2	5.20	5.70	7.16	570
VFL6P0	MVFL6P0	6.00	6.58	8.27	494
VFL6P5	MVFL6P5	6.50	7.12	8.95	457

DELIVERY FROM STOCK

TYPICAL AMPLITUDE & DELAY RESPONSE OF VFL & MVFL SERIES

Max. Delay Variation = ±3% to -.25 db Freq. Max. Passband Ripple = ±.25db.

VFL Size: 4" x 2" x 1 1/4" in metal can with BNC Connectors.

MVFL Size: 3" x 1 1/2" x 1/2" in metal can with terminals for PC mounting.

VCL SERIES — IMPEDANCE = 75 OHMS

Part No.	Maximum ±3% Delay Distortion to Frequency (MHz)	Maximum .25db Attenuation @ Frequency (MHz)	Minimum 45db Attenuation @ Frequency (MHz)	Approximate Passband Delay (Nanoseconds)
VCL3P2	2.7	3.2	3.63	1100
VCL3P5	2.9	3.5	3.97	1010
VCL3P8	3.2	3.8	4.31	930
VCL4P2	3.5	4.2	4.76	840
VCL4P5	3.8	4.5	5.10	780
VCL4P9	4.1	4.9	5.56	720
VCL5P2	4.4	5.2	5.90	680
VCL5P7	4.8	5.7	6.46	620

Max. Insertion Loss @ 100 KHz = 2.5db. Max. Passband Ripple = ±.25db.

Size: 6" x 2" x 1 1/4" in metal can with BNC Connectors.

NTSC REJECT FILTERS

Some of the most frequent specifications that we encounter in the video industry are based upon rejection of the color information in the video signal to provide isolation from the luminance signal. These specifications require very low phase distortion to the luminance signal. To satisfy this requirement, Allen Avionics has designed a group of band reject filters with phase equalization where necessary. One of the most often used applications for this band reject filter is in color systems for monochrome transmission to prevent color flashes from appearing on the screen. Since various segments of the television industry have different passband requirements, we are listing three filters with different reject bandwidths.

Impedance = 75 ohms.
Maximum Insertion Loss @ 100 KHz = 3db.
Maximum Passband Ripple to 5.5 MHz = ±.25db.

Part No.	Maximum 3db Attenuation @ Frequency (MHz)	Minimum Attenuation @ 3.58 MHz
VFR4P6	1.95 - 6.55	40db
VFR1P3	3.00 - 4.30	40db
VFR0P5	3.37 - 3.88	30db

Size: 4" x 2" x 1 1/4" in metal can with BNC Connectors.

NTSC BANDPASS FILTER

Allen Avionics sub-carrier bandpass filter is a low distortion unit designed to attenuate the luminance information in color TV signals. This filter is useful in most applications where it is required to isolate the chrominance information.

Impedance = 75 ohms.
Maximum Insertion Loss @ 3.58 MHz = 1.5db.
Maximum Ripple = ±.25db.

Part No.	Maximum 3db Attenuation @ Frequency (MHz)	Minimum 30db Attenuation @ Frequency (MHz)
VFB3P6	3.40 - 3.70	2.40 - 5.80

Size: 4" x 2" x 1 1/4" in metal can with BNC Connectors.

Refer to Green Section for Addresses and Telephone Numbers.

ALLEN AVIONICS, INC.

Video Filters

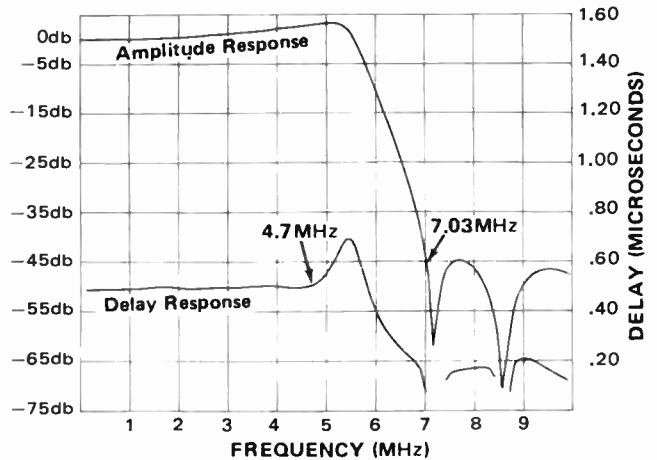

VSL4P5 DELAY EQUALIZED LOWPASS FILTER

This filter is similar to the VFL series and is intended for use at the output of a digital to analog converter. Its special feature is that amplitude equalizers have been incorporated to shape the passband response for $\frac{\text{SIN } X}{X}$ correction.

Impedance = 75 ohms.
 Attenuation = 38db or greater at 7.03 MHz to 20 MHz.
 Maximum Group Delay Distortion = 30 nanoseconds or less to 4.7 MHz.
 Nominal Delay = 500 nanoseconds.
 Size - 4 x 2 x 1/4 inches.

Units supplied in Metal Cans with BNC Connectors

VIDEO GAUSSIAN FILTERS

These filters are used for pulse shaping and bandwidth limiting. They are very useful in the removal of unwanted distortions caused by noise, ringing, preshoot and overshoot. Due to their fine impulse response, they are often used in conjunction with delay lines that must have minimum pulse distortion in the delayed output.

Input Pulse

Output Pulse

An approximate Gaussian Waveshape obtained by passing a pulse through a Gaussian Filter.

Part No.	3db ± .5db Frequency (MHz)	Impedance (Ohms)	17db Min. Attenuation Frequency (MHz)	Delay Time (Nanoseconds) Nominal	Rise Time (Nanoseconds) Nominal

ALLSOP, INC.

Cleaning/Maintenance Products

58000/58010

71200/71300

60200/68000

60100-A VCR Cleaner for VHS

Utilizes an exclusive ribbon that feeds into your machine like a conventional tape. A few drops of Allsop 3 solution are placed on the delicate ribbon which then circles critical parts to remove oxide residues from the video and audio heads. Additional soft pads swab contaminants from the capstan and pinch rollers. This great cleaning system is effective for up to 30 cleaning cycles. Non-refillable.

60100-A \$ 16.95

66000-A VCR Cleaner for Beta

Incorporates Allsop's unique ribbon for thorough, non-abrasive cleaning power. Simply place a few drops of Allsop 3 solution on the soft ribbon and insert the tape into your machine like an ordinary cassette. The ribbon gently swabs contaminants from critical parts, removing oxides and airborne debris from audio and video heads. Good for 20-30 separate cleanings. Non-refillable.

66000-A \$ 16.95

60200 Ultraline VHS Video Recorder Cleaner

Uses a technologically innovative design to provide a cleaning breakthrough offered by no other system. Small "windows" on the surface allow you to directly apply Allsop 3 solution to the internal cleaning ribbon for maximum cleaning coverage. The non-abrasive ribbon cleans entire tape path, removing contaminants from critical VCR parts. Additional felt pads clean capstan and pinch rollers. Replaceable ribbon and pads available.

60200 \$29.95

68000 Ultraline Beta Videocassette Cleaner

The ultimate Beta cleaning system. Strategic "windows" on the cleaning cassette surface allow you easy access to place Allsop 3 solution directly inside the cassette. The moistened cleaning ribbon then gently removes harmful contaminants and oxides from critical parts along the entire tape path. Replacements available.

68000 \$29.95

71300 Ultraline Audio Cleaner

Our gear driven wiper arm and felt cartridge replacement system enables the user perfect cleaning action for all three areas needed. When cleaning felts become soiled, cartridges can be easily replaced to make the Ultraline like new again. System includes 1/2 oz. bottle of Allsop 3 cleaning solution. Use part #71010 for replacement cartridges and solution.

71300 \$8.95

71200 Ultraline Audio Cleaner with Case

Fits nicely into any automotive glove or map compartment. This wet system cleaner performs three important tasks in one cleaning cycle. First our gear driven wiper arm insures positive wiping action for head cleaning; second our felt cartridges on both sides (for auto reverse) of the head wiper cleans the pinch roller as it revolves; and third the Allsop 3 wipes the capstan automatically. Includes a 1 oz. bottle of special Allsop 3 solution, spare felt cartridges and tweezers which all fit into an attractive leather-like case. Uses #71010 for replacement.

71200 \$ 14.95

58000 Orbitrac™ Record Cleaning System

58060 Orbitrac™ Record Cleaning Solution

Takes a totally new approach to record care. By anchoring the cleaner in the record center, the Orbitrac, when rotated around the record surface, delicately wipes and removes dirt from each groove. After one or two revolutions the record should be free of impurities and have no static charge because of the Orbitrac specially formulated cleaning solution. This system comes complete with Orbitrac cleaner, solution and sprayer, wipe off brush, special record cleaner anti-static mat, attractive designer case and complete instructions. Orbitrac record cleaner solution is also available in an 8 oz. refill bottle, and in a refill kit that includes two new cleaning pads with an 8 oz. bottle of cleaning solution.

58000 \$ 16.95

580607.95

60210 Ultraline VHS Replacement Components

Contains fresh ribbon and pad cartridge. Replace after 20-30 cleanings.

60210 \$8.95

68010 Ultraline Beta Replacement Components

Has new ribbon good for 20-30 cleanings. Available from quality videocassette dealers.

68010 \$8.95

71010 Audio Cleaner Replacement

Cartridges and Solution

Makes the Allsop 3 audio cleaning products even more unique. This kit includes four complete capstan and pinch roller cartridges, two head felt cartridges, a 1 oz. bottle of Allsop 3 solution and a pair of specially designed tweezers. This kit is compatible with Allsop #71200 and #71300.

71010 \$7.95

Professional Video Products

- 67000 3/4" U-Matic Video Cleaner with Solution**
Non-abrasive cleaner with an alternating wet/dry cleaning action. Comes in a plastic storage case. \$49.95
- 67500 3/4" U-Matic Refill Kit**
Included two refill spools of tape and a bottle of solution \$29.95
- 62000 1/2" VHS Format Cleaner with Solution**
Non-abrasive cleaner with an alternating wet/dry cleaning action. Comes in a plastic storage case. \$29.95

- 60210 1/2" VHS Refill Kit**
(For Model #62000) includes new cleaning ribbon, drive system cleaning pads, and a bottle of solution \$9.95
- 63000 1/2" Beta Format Cleaner with Solution**
Non-abrasive cleaner with an alternating wet/dry cleaning action. Comes in a plastic storage case. \$29.95
- 68010 1/2" Beta Refill Kit**
(For Model #63000) includes new cleaning ribbon and a bottle of solution. \$9.95
- 65000 8mm Cleaner** \$19.95

1/4" Tape Drive Head Cleaner and Refill

- 54000 Cleaner**
One cleaning cartridge, two plastic boxes each with 6 cleaning pad replacements, two 1/2 oz. bottles of cleaning solution, one pair of tweezers, one cleaning record, one instruction booklet, reusable box to contain above components \$44.95
- 54010 Refill**
Four plastic boxes each with 6 cleaning pad replacements, two 1/2 oz. bottles of cleaning solution, one pair of tweezers, one cleaning record, packaged in tray and box for storage \$12.95

- **Cleaning Components:** Absorbent, non-shedding pads in a spring-loaded holder allowing conformance to the head with controlled movement. Replaceable and good for 40 cleanings
- **Cleaning Solution:** A "trichlorotrifluoroethane" cleaning solution is applied to the cleaning foam prior to insertion of the cartridge
- **Cleaning Action:** A thorough cleaning is accomplished by the cleaning pad passing horizontally across the read-write head. Such movement is derived mechanically from the tape drive's own drive roller. The area cleaned on the head surface is approximately .4" x .7". This can be increased by programming the head to be moved up and down

ALTA GROUP, INC.

Digital Video Production Systems

Pyxis/Pyxis-E Digital Video Production Systems

Common Features

Effects

- Cut (Vertical interval switch between channels) • Dissolve
- Horizontal wipe • Corner wipes • Window • Shutter (R and L edges to center) • Blind (Top and bottom to center) • Fade to black • Vertical wipe

Editor Interface

- GPI connection allows external triggering of selected effect by ground closure

Modifiers

- Midstop • Soft edge (all effects) • Transition speed (16, 24, 32 or 60 frames)

Proc Amp Controls (2 Channels)

- Luminance level • Chroma level • Hue (NTSC only) • Set-up
- H phase • SC phase

Audio Select

- Audio cuts • Audio lead • Stereo production • Audio follow video • Audio hold

Wipes

- Vertical • Horizontal • Four corners • Window, shutter and blind

Sync

- Operates on a stand-alone basis or genlocked

Stereo Audio Mixing

- Audio can be mixed, switched or faded along with the video or locked to the A or B channel using "Audio Hold"

Digital Effects

- Push on • Pull off • Push off • Posterize

Pyxis

- 2-channel TBC • A/B video switcher • Digital video effects
- Audio mixer • 8-bit resolution • Live camera inputs • Editor interface • Dual proc amp picture control

The easy way to move up to professional A/B roll editing. A dual-channel TBC with built-in digital effects and full proc amp control for two video tape sources plus two live cameras. It works with 1/2" and 3/4" VCRs to synchronize timing, correct picture imbalances and provide smooth transitions between scenes...cuts, soft wipes, dissolves and even digital push-ons and pull-offs.

Other features include posterization and selectable source switching. Meets RS-170 broadcast specifications.

- Pyxis NTSC** \$6250.00
- Pyxis PAL** 6950.00

Pyxis-E

- Video channels have independent freeze capability that can be used in field or frame mode • Field mode achieves the clearest image when motion is present • Frame mode delivers the highest resolution for detailed originals and graphics • 8-bit resolution • Built-in dual channel picture freeze • A wide spectrum of special effect possibilities and combinations available
- To ensure smooth operation and broadcast quality results, the output is frame synchronous

This is a video production system that incorporates the same A/B roll editing and special effects features found in Pyxis...plus more, with new features and capabilities.

Pyxis

Pyxis-E

For maximum interfacing flexibility, it is designed with dual eight-bit infinite window TBC/Synchronizers. As a result, the system can synchronize video from any source, even consumer equipment, without advance sync or feedback connections. This means that you can employ equipment ranging from video cameras to remote feeds to 8mm VCRs to VTRs.

- Pyxis-E NTSC** \$8450.00
- Pyxis-E PAL** 9200.00

Celeris Y/C Format Converter

- Interfaces 3/4" U-Matic equipment to S-VHS equipment
- Converts Y/C 688 Dub signals to Y/C 3.58 S-VHS and composite video signals • Converts Y/C 3.58 S-VHS signals to Y/C 688 dub and composite video signals • Maintains full picture quality with 6MHz bandwidth • Unity gain input to output
- Requires no set-up controls or adjustments • Selectable input: Y/C 688 (U-Matic Dub) or Y/C 3.58 (S-VHS) • Provides three simultaneous video outputs: Y/C 688 (U-Matic Dub); Y/C 3.58 (S-VHS); Composite video • 4-pin and 7-pin S-VHS input and output connectors

- Celeris** \$1150.00

Pictoris Infinite Video Compressor

- Key output • 8-bit resolution • Full 4.2MHz bandwidth
- Compressed image over live background video • Colored borders/matte • Variable crop and position • Four programmable presets • GPI remote control • Auto zoom-in and zoom-out • Freeze • Composite and S-VHS (Y/C 3.58) inputs and outputs

- Pictoris** \$9500.00

Refer to Green Section for Addresses and Telephone Numbers.

ALTA GROUP, INC.**Digital Video Production Systems****Cygnus****Cygnus Digital Video Production System
TBC with Effects and Proc Amp Controls**

- "Infinite window" TBC
- Video effects
- H & V image enhance (NTSC)
- 4x1 video and stereo audio routing switcher
- 8-bit resolution

Effects

- Continuously variable picture strobe
- Continuously variable posterization
- Continuously variable colorization
- Digital picture freeze
- 64 levels of mosaic tile
- Cuts (vertical interval switching between channels, audio follows video)

Proc Amp Controls

- Luminance level
- Chroma level
- Hue (NTSC only)
- Setup
- H phase
- SC phase

Cygnus provides an infinite window TBC as well as numerous special effects and 4x1 audio/video switching.

Broadcast television stations, cable stations, corporations, and independent video producers represent a few of the users that have already gained the "Cygnus Advantage."

The system meets broadcast RS-170 specifications.

The system enables you to freeze the video, or achieve stop-action and slow-motion through strobing controls. As a result "Rock Video" effects can be created.

You can artificially colorize or color correct the video, posterize the video and add a mosaic effect. Each effect can be independently adjusted through a variable control.

But the best part is that all effects can be used in any selected combination. This means you can manipulate the video through a virtually endless stream of visual possibilities. Even a frozen screen can be altered through variable colorization, posterization, and mosaic effects.

Cygnus NTSC \$4,990.00
Cygnus PAL 5,600.00

Centaurus Digital Video Production System

- Full 5.5MHz bandwidth
- Y/C 358 and composite input/output
- Full 8-bit video resolution
- Meets broadcast specification RS 170A
- Complete remote operation
- Direct connection to numerous editors
- Simple, single key operation
- Dual proc amp controls: Luma, setup, chroma and hue
- Genlock indicator with horizontal and SC phase adjustments
- Built-in disk drive with removable digital video data disk
- Matched frame editing
- S-VHS inputs/outputs
- GPI interface with internal programmable sequence memory (list mode)
- Display monitor shows full system status, edit listing, retrieval sequence and storage information
- Number key utilizes pad for picture storage-retrieval, programmable transition speeds, variable stops, variable background colors and programmable strobing
- Allows inputs and modifier effects to be changed during split screen operation

Centaurus, a wideband Video Production System for A/B roll editing, provides high resolution still storage and retrieval. The system contains dual infinite window TBCs/synchronizers, a video/stereo-audio routing switcher and special effects generators. Other features include an internal downstream keyer, numerous wipes, digital effects and dual channel fully independent digital frame/field freeze.

**Centaurus**

Pictures, logos, slides and titles can be easily stored and retrieved with either a removable hard disk or an external 500M byte disk drive which stores up to 1000 frames or 2000 fields of video. The entire system features simple key operation, making it ideal for on line operation and post production.

Centaurus NTSC \$16,900.00
Centaurus Without disk drive 13,900.00

ALTRONIC RESEARCH, INC.**RF Coaxial Load Resistors****RF Coaxial Load Resistors**

The "Omegaline" is a direct water-cooled termination for 50-ohm coaxial transmission line systems. Transmitters, microwave components, power tube manufacturers, and transmitting stations can be assured of ideal dummy load conditions during designing, testing, adjusting and aligning of transmitters or components.

- Low cost
- Lightweight
- RF power is dissipated in a proven, ceramic rugged film-type cylindrical resistor
- Resistors can easily be replaced
- No field adjustments needed
- Non-contaminating water circuit
- Ordinary tap or distilled water in open or closed systems
- Brass and aluminum construction
- Bright nickel plate finish
- Rugged construction
- Any operating position

5705

- Impedance: 50 ohms nominal
- Max. power rating: 5kW continuous
- Frequency range: 60Hz to 800MHz
- Max. VSWR: 1.10 to 800MHz
- Max. output water temp: 90°C

- Weight: Approx. 35 lbs.

219B (single resistor)

- Impedance: 50 ohms nominal
- Power rating: 200kW continuous
- Frequency range: 60Hz to 450MHz
- VSWR: < 1.10 to 450MHz
- Output water temp: 90°C
- Input water pressure: 150psi
- Water flow: 19gpm at 45°C inlet
- Water connectors: 3/4" (garden hose) or 1/2" NPT
- Input connectors: 3 1/8" or 6 1/8" EIA flanged
- Dimensions: Approx. 8 1/8" x 42"
- Weight: Approx. 47 lbs.

150 ohm and 300 ohm loads are also available

AMBER ELECTRO DESIGN, INC.

Audio Measurement System

5500 Audio Measurement System

• **Fully Programmable**—all features and parameters, even hidden ones, can be controlled via the IEEE-488 or RS-232 interface • **Comprehensive Features**—measures signal level, weighted and unweighted noise, frequency, THD, narrow band level, crosstalk and spectrum analysis. Options for two kinds of IMD, DC Volts, phase, wow and flutter • **High Performance**—excellent specifications allow testing of the highest quality systems. Software controlled Autocal maintains these specifications over time • **Fast Operation**—sophisticated speed enhancement techniques and thorough programmability for production test and repetitive lab performance tests • **Broadcast Ready**—high level balanced input/output, high RFI immunity, stereo switch matrix • **Simple to Use**—most tests require just one keystroke. Non-volatile user storage of 10 instrument setups • **Flexible Data Presentation**—read level in dBm, dBV, Volts, Watts, change impedance reference in dBm, Watts • **Comprehensive Noise Weighting**—four filters standard, four more optional out of a broad library • **Modular Architecture**—configure the system for changing needs, upgrade to meet new measurement requirements

The 5500 is a fully automatic, programmable, high performance audio measurement system. Equipped with both a generator and a comprehensive measurement section, the instrument can completely characterize virtually all audio performance parameters including signal level, gain, frequency response, total harmonic distortion, weighted and unweighted noise, crosstalk and spectrum analysis. Options can add intermodulation distortion, VDC, phase and wow and flutter.

Measurement settling time is rapid for use both in production test and repetitive R & D applications. Accuracy and measurement performance is state-of-the-art to allow critical testing of the highest quality audio equipment. And flexible interfaces facilitate testing of balanced professional broadcast equipment and telecommunication circuits.

Modular design allows user configurability and convenient upward growth. The broad range of measurement functions and sophisticated instrument software conveys a versatility not previously available.

The instrument may be controlled using the simple, user friendly front panel, the ten internal non-volatile user defined instrument setups or externally via a variety of available interfaces including serial (RS-232) and GPIB (IEEE-488).

Total System

The 5500 contains a high performance programmable generator covering the range of 10Hz to 100kHz. Typical mid-band residual distortion is below 0.001% (-100dB) and maximum output capability is over +30dBm (30V open circuit). Settling time is instantaneous (a few cycles) and free from amplitude bounce.

The 5500 measurement section measures signal level to over 100V (+40dBm), noise to below 1V (-120dBm), total harmonic distortion to below 0.001% (-100dB) and optionally, intermodulation distortion. A high resolution, fast update frequency display indicates either the frequency of an external signal or the internal oscillator. Comprehensive filtering and noise weighting allow measurements to various international standards and conventions. A spectrum analysis mode allows for measurement of crosstalk and noise floor analysis. Data presentation format is easily user definable in Volts, Watts, dBm, dBV, %, etc.

Additionally, several enhancement options are available for the 5500 to even further broaden its capability in measurement and control in a system.

Easy To Use

The instrument's sophisticated internal firmware simplifies operation, enhances speed, performs self-check and auto-cal, and provides external programmability. The user can store up to 10 complete instrument setups in non-volatile memory. Additionally, the last setup at power down is always automatically saved.

Results are repeatable and consistent. The on-board intelligence handles the internal housekeeping allowing the operator to make most measurements with only a single key stroke. Invalid operating setups are automatically inhibited yet this simplicity of operation does not constrain the versatility of the instrument. The user has complete control over instrument configuration, internal parameters and methods of testing.

A powerful data manipulation facility simplifies and enhances data entry and readout. For example, generator output level may be specified in dBm, dBV or Volts into a user defined load. Levels may be read in dBV, dBm, Volts or Watts. The user may specify a reference impedance for dBm or Watts or use the default values of 600 and 8 ohms respectively. Relative readings can be made as a percent or a dB offset from a user defined reference. This reference can be the current measured value or any keyboard entered value.

5500

Powerful Keystrokes

For convenience of source parameter definition, generator amplitude and frequency may be entered as absolute values or variations of existing values. Up and Down keys can be used to increase or decrease the oscillator amplitude or frequency and the user can easily define the increment/decrement magnitude. Again the magnitude of the change may be specified as a percent, dB, Volt or Hz value allowing the versatility of both linear and log stepping.

A comprehensive set of up to eight noise weighting and bandwidth limiting filters is provided for noise measurements to various audio and telecom standards (ANSI, CCIR, CCITT, IHF, etc.) and distortion measurements with restricted bandwidths (30kHz, 80kHz). Additionally, a separate fourth-order variable band pass filter with four programmable percentage bandwidths plus a high pass and low pass mode allows spectrum analysis, crosstalk measurements and variable bandwidth noise measurements. This filter can be set to automatically tune to the input signal, track the internal oscillator or be programmed to a keyboard entered frequency.

Three user selectable detection characteristics are included—true RMS, RMS calibrated average and RMS calibrated quasi-peak. This facility gives the user complete freedom to measure to the requirements of various standards—true RMS for accurate noise, distortion and SINAD measurements; average to correlate results to those of earlier instruments and quasi-peak for CCIR/European requirements.

The 5500 includes two balanced or unbalanced inputs with switch selection of either input (or either generator output for self-check). An optional dual output switch matrix can also be added for stereo system evaluation. The instrument has two oscilloscope monitor outputs for Input signal and Measured signal. Also provided are oscillator sync output and external source input.

ATE Ready

A GPIB/IEEE-488 computer interface is standard and a serial RS-232 interface is also available. Provision is made for the user to change parameters of these to suit the mating equipment. For long distance remote control and data acquisition a modem can be used.

The generalized nature of the 5500 allows its use in a wide variety of applications. Telecommunication and transceiver technicians will appreciate the SINAD measurement capability, balanced input and output and telecom noise weighting filters available (C-message, psophometric, etc.). Radio and TV broadcast users can use it to completely automate a proof of performance and, with an optional accessory for sum/difference output switching, stereo AM and FM measurements are easy. And the excellent RFI immunity and shielding let it work in the high RF fields near transmitters. The +30dBm power output allows full level headroom checking.

Computer interface facilitates documentation in either graphical or tabular format. Tests of tape recorders or satellite links are possible due to the autonomous nature of the analyzer and oscillator—the analyzer asynchronously locks to the input frequency, which need not be the same as the internal oscillator.

The 5500 is fully programmable—not just selected front panel functions. The user can access all front panel controls and most of the hidden internal circuits via the GPIB or serial ports to handle unusual test conditions, optimize measurement setups and gain measurement speed.

Optional digital utility outputs, programmable relays, programmable DC outputs and DC measurement capability can make the 5500 the total instrument in an ATE environment minimizing the need for additional equipment.

AMBER ELECTRO DESIGN, INC.

Audio Measurement System

5500 (cont'd)

Filters

The 5500 system comes with several standard and optional filters to meet various noise measurement standards, enhance measurements and allow analytical work.

Standard Fixed Filters

The 5500 comes with four standard band limiting/weighting filters. They can be used to remove the effects of mains hum or high frequency out-of-band noise from distortion or noise measurement. The fourth filter is supplied as an ANSI/IEC "A" Weighting as standard or, on special order, may be supplied as CCIR 468-3 or Psophometric CCITT/DIN.

Tunable Filters

The Narrow Band measurement capability of the 5500 gives the user a choice of six tunable filters: four 4th order band pass, a 2nd order high pass and a 2nd order low pass. The center frequency of the band pass or corner frequency of the high or low pass may be set by a numerical entry (keyboard, GPIB or serial port), may track the internal oscillator or may be set to automatically tune to the input signal.

Option 005 Audio Fixed Filters

This option provides four common weighting filters used in the audio and broadcast field. If this option is supplied, the four filters can be selected one at a time as the shifted mode of the four filter buttons.

Option 006 Telecom Fixed Filters

This option provides four popular weighting filters used in the telecommunications and communications fields. They meet the requirements of the Bell System Technical Reference 41009 and applicable CCITT and DIN standards.

Applications

Broadcast and Professional Audio

The 5500 comes with balanced (and unbalanced) inputs and outputs. And the balanced output, using a novel transformer coupling scheme, can be completely floated for high ground isolation. Switchable impedances of 50, 150 and 600 ohms, excellent RFI immunity and shielding, stereo inputs and outputs and internal filters and detectors for international standards allow measurement of all broadcast facilities.

Production Test/ATE

The 5500 is 3 to 10 times faster than other automatic audio test systems and over 100 times faster than manual equipment. GPIB and RS-232 ports permit interface to any controller. And the high degree of programmability lets your controller software achieve even greater system speed gains. State-of-the-art performance allows measurement of the highest quality equipment. Comprehensive filtering, measurement modes and detectors let it measure everything from Hi-Fi equipment to communication transceivers. Optional utility DC, digital and relay outputs can be included to control test fixtures. A single 5500 can replace five or more conventional instruments simplifying the system interconnect and controller programmability.

Acoustic Measurements/Speakers

The 5500 includes comprehensive spectrum analysis capability with flat top fourth order filters for accurate measurements to ANSI/IEC specifications. Fine resolution in the generator frequency setting and an optional compressor allows measurement of transducers. And for exceptional speed (over 100 times faster than competitive systems) the high speed plotting option produces high resolution (256 point) swept measurements in seconds. With non-volatile digital storage, normalization to a reference plot and RT60 measurement, the 5500/054 package is one of the most powerful programmable acoustic measurement systems available.

Communications and Telecommunications

The 5500 is available with a wide selection of noise weighting filters. C-Message, Psophometric and Program to name a few, for measurements to various international standards. Companded circuits can be measured in the presence of a pilot tone using the automatic notch mode. The auto-ranging, RMS detection and notch lock features facilitate SINAD measurements. And asynchronous Send and Receive signals are easily handled by the 5500 for satellite and other measurements. The RS-232 port allows remote control and data acquisition using a modem.

AMBER ELECTRO DESIGN, INC.

*Distortion and Noise
Measuring System*

3501 Distortion and Noise Measuring System

- Super high performance: THD to below 0.0008%. Noise to below -120dBm (1 μ V)
- Easy to use: Auto null, auto set level, tracking oscillator/analyzer
- Low Cost: 15% to 60% below competitive units
- Portable: Under 1/2 cu. ft., 12.5 lbs. — smaller than a portable oscilloscope
- Additional unique features: Frequency selective voltmeter for manual spectrum analysis, crosstalk measurements
- Optional IMD: Dual tone measurements to 100kHz as well as SMPTE, DIN, CCIF and IHF standards
- Flexible filtering: Four user changeable filters for weighted noise measurements
- Optional balanced input/output: Output capability to over +28dBm (+30dBm typical) into a 600 ohm load
- Optional rechargeable battery: For field use or ground loop problems
- Optional frequency meter: High resolution and fast update
- User upgrade: All options must be field installed

The Amber 3501 is an ultra high performance distortion and noise measuring system. Distortion measurement capability is the best in the industry with measurements to below 0.0008% (-102dB). The 3501 offers the convenience of automatic nulling and automatic set level in a portable low cost instrument. It provides several unique features for even greater measurement power such as manual spectrum analysis. Comprehensive filtering allows weighted noise measurements to virtually any standard — and the four filters are easily user changeable.

Configured to Your Application

A wide selection of field retrofitable options allows customization to specific user requirements. A powerful Intermodulation Distortion measurement capability allows measurements not only to various international standards but also front panel choice of frequencies from 2kHz up to 100kHz — a feature useful in qualifying TIM and other high frequency phenomena. Rechargeable battery systems are available for field use of floating applications in the lab.

Balanced Input and Output

For broadcast and professional audio applications a balancing option gives a balanced/differential input and a balanced/floating output with the highest output level in the industry — over +28dBm into a 600 ohm load (typically +30dBm). Front panel controls select the configuration: balanced or unbalanced, grounded or floating, terminated or unterminated.

Reliability

System reliability is enhanced by the liberal use of "cold switching" technology and high performance components such as precision conductive plastic controls, enclosed switches and gold contacts. RFI susceptibility is virtually eliminated by the linear front end.

Convenient and Portable

A well engineered front panel layout, automatic operation, comprehensive input/output configurations and full monitoring make the 3501 particularly easy to use and the convenient size and weight will be welcome by both the travelling technician and the crowded lab bench.

AMBER ELECTRO DESIGN, INC.**Distortion and Noise
Measuring System****3501 (cont'd) Options and Accessories**

001 Rechargeable battery and charger system. 12V 2.5AH battery and power supply provides independent instrument power and isolates grounds. Gives approximately 1 1/2 hours or more of operation on a full charge. Automatically shuts down instrument when battery reaches end of life.

002 Extended life battery and charger. Same as 001 above but with 12V 5AH battery for approximately 3 hours or more of operation.

003 International AC adaptor/charger. Replaces 120VAC transformer normally supplied with one suitable for use on 100, 120, 220, 240VAC + 5%, -10% 48-62Hz. Contains IEC standard mains receptacle, voltage tap selector and US/European type fuse holder. Housed in metal box and supplied with mating mains cable with European color code suitable for user terminated AC mains plug.

004 Balanced input. Adds a differential input preamplifier to provide active balanced input for use in professional/broadcast systems and for measurement of non-ground referenced sources. Also useful to break ground loops.

005 Balanced output. Adds a floating/balanced output to instrument and increases capability to provide up to +28dBm (+30dBm typical) into a 600 ohm load. Uses a transformer for true float and a proprietary active correction technique (patent pending) to virtually eliminate distortion contribution.

006 Intermodulation distortion measurement/Generation facility. Adds a second (low frequency) oscillator and mixing circuitry to provide twin-tone composite signal (SMPTE type) and intermodulation measurement circuits to measure SMPTE, DIN, CCIF or IHF distortion. Frequency range 2kHz-100kHz.

358 High resolution frequency meter. Adds a six digit frequency readout of internal oscillator or external signals. Frequency multiplier provides two orders of magnitude improvement in measurement speed/resolution over conventional meters with several readings per second and up to 0.01Hz resolution. "Smart" signal detector automatically blanks display in absence of sufficient signal amplitude. Auto range circuitry (with manual override) permits measurement from below 10Hz to over 500kHz (typically 1MHz). Using the high meter sensitivity and filtering of the 3501, valid measurement of low level and noisy signals is possible. Pushbutton input selection permits measurement of 3501 oscillator, external signal input or the external signal with filtering.

Pushbuttons select either fast (approx. 3 readings/second, 0.1Hz resolution) or high resolution (0.01Hz resolution, 1 reading/second).

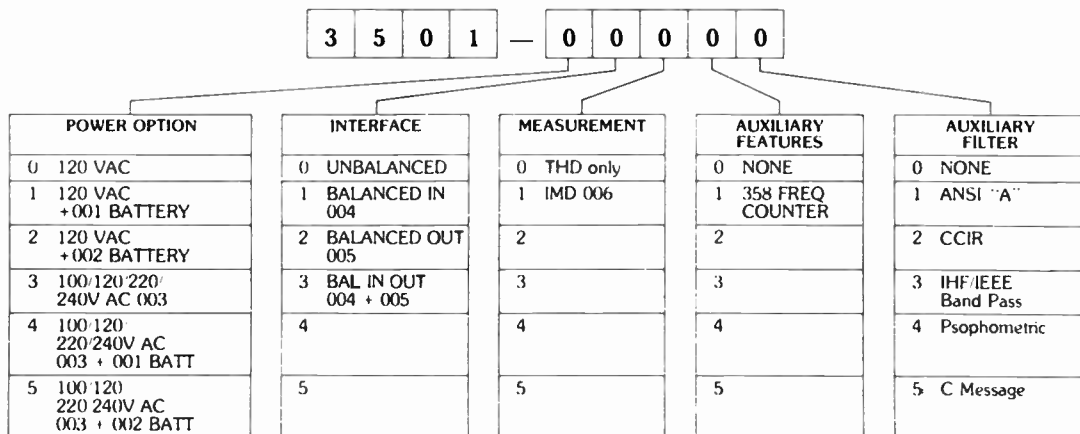

The 358 is powered by the 3501 internal power supply and automatically switches off when the 3501 is turned off. It mounts on the top cover of the 3501 adding approximately 1.2" (3cm) to the height and is 7.7" (20cm) wide by 8.5" (22cm) deep. It plugs into existing connectors on the 3501 and may be field retrofitted.

Filters. To accommodate various noise weighting standards several special and custom filters are available. Normally, if a single optional filter is ordered, it will be fitted to the Aux Filter position of the 3501. Alternatively, any of the four filter positions may be populated with any of several available filters.

Typical choices for standard optional filters include ANSI/IEC "A" weighting and CCIR 468-2.

Custom filters include the IHF-T 200/IEEE 185 receiver band pass, the telecommunications C-message weighting with and without notch, program weighting and psophometric.

One, two and three pole high pass and low pass filters are easily accommodated and may be either purchased from Amber or constructed by the user from data supplied in the 3501 owner's manual.

Ordering Instructions

Example: a basic 3501 with no options is a 3501-00000. A 3501 with the 001 battery option, 004 balanced input, 005 balanced output, 006 IMD and an ANSI/IEC "A" weighting filter in the AUX FILTER position would be a 3501-13101.

Prices and Specifications Subject to Change Without Notice.

RM01 Signal Processing System

The RM01 system is a rackmounting system comprising 3 signal-processing modules for equalization, compressor limiting, and a band pass filter module.

The unit is 3U high and has a separate rackmounting power supply, PS01. Each module plugs into a printed circuit motherboard, and the rack accommodates a total of 10 modules. All input and output connections are via screw terminals labelled on the rear of the case.

PM01 Parametric Equalizer

The PM01 is a four band parametric equalizer. It is identical to those used on the Amek M1000 and M2500 mixing consoles, which are renowned for their total flexibility and musical transparency, and has been introduced as a separate unit due to customer demand.

The unit's four bands are each configured with a center detented dual concentric pot, the upper pot controlling gain, $\pm 14\text{dB}$, the lower one for Q, with a fully variable range. A third pot is used to select the desired frequency. The high and low ranges are selectable for bell or shelving response characteristics via a pushbutton switch. The two mid-ranges have bell characteristics. An EQ in/out switch with LED is also fitted.

With this equalizer it is possible to radically change the sound of an instrument or recording to suit the engineer, while at the same time maintain the coherence of the original sound.

PM01 Specifications

- HF
- Gain: $\pm 14\text{dB}$
- Center Frequency
- Range: Variable between 500Hz and 16kHz
- Curve
- Characteristic: Switchable between bell or shelf with variable Q of 0.35 to 3.5
- MF1
- Gain: $\pm 14\text{dB}$
- Curve Frequency
- Range: Variable between 500Hz and 16kHz
- Curve
- Characteristic: Bell curve with variable Q of 0.5 to 5.0
- MF2
- Gain: $\pm 14\text{dB}$
- Center Frequency
- Range: Variable between 40Hz and 1.6kHz
- Curve
- Characteristic: Bell curve with variable Q of 0.5 to 5.0
- LF
- Gain: $\pm 14\text{dB}$
- Center Frequency
- Range: Variable between 40Hz and 1.6kHz
- Curve
- Characteristic: Switchable between bell or shelf with variable Q of 0.35 to 3.5
- In/out switch with LED. Input and output electronically balanced.
- PM01\$575.00

CL01 Compressor Limiter

The CL01 combines separate compressor and limiting functions in a single compact module. It is a mono unit, with a front panel switch which allows two units to be ganged together for stereo use. The Compressor and Limiter have individual threshold controls for independent use. There are six rotary controls which alter the following parameters: limiter threshold, compressor threshold, attack time, release time, compression ratio and gain.

The module is fitted with 2 in/out switches, one to switch the compressor and limiter in and out of circuit and a secondary switch to enable the limiter to be bypassed while still using the compressor. A 12 segment LED display indicates the following: a single green LED shows when the unit is in the signal chain, a single yellow LED shows when the unit is in limiter mode, and 10 red LEDs display gain reduction.

For greater control of the compressor parameters an 8 position DIL switch is internally mounted on the printed circuit board. Adjustment of this switch greatly increases the effectiveness of this unit for a wide variety of applications.

CL01 Specifications

- Limiter threshold: Variable between 0dB and + 20dB (nominal)
- Limiter ratio: 25:1
- Compressor threshold: Variable between -10dB and + 15dB (nominal)
- Ratio: Variable from 1:1 to 10:1
- Attack time: Variable from 0.25ms to 25ms
- Release time: Variable from 75ms to 5sec
- Auto release: Program dependent
- Gain make up control range: -20dB to + 20dB
- Inputs and outputs electronically balanced.
- CL01\$575.00

BP01 Band Pass Filter

The BP01 band pass filter is identical to that employed on the AMEK M2500 mixing console, and it has a variety of applications for both broadcasters and studio engineers.

The unit comprises three rotary controls, 2 for pass filter frequency selection (low and high), and the third is a gain control ($\pm 10\text{dB}$) with center detent. An in/out switch is also fitted.

In practice the unit is most likely to be used in conjunction with the PM01, although it could be used alone to good effect, for example it may be used to limit the bandwidth of an on-air telephone line, or alternatively to remove low frequency rumble from an old valve organ.

BP01 Specifications

- High Pass: Continuously variable between 20Hz and 400Hz
- Low Pass: Continuously variable between 800Hz and 20kHz
- Filter Slope: 12dB per octave
- Gain: $\pm 10\text{dB}$
- Filter in/out switch. Input and output electronically balanced.
- BP01\$525.00
- RM01 Card Cage 19" rackmount, 10 position345.00
- Power Supply Unit505.00

AMEK/TAC U.S. OPERATIONS*Mixing Consoles***ANGELA Mixing Consoles**

The ANGELA is an extremely flexible, high-performance 24-bus console which is available in a variety of configurations. The ANGELA has proved to be highly suited for use in both multitrack recording studios and video post-production suites.

Chassis Sizes There are three standard chassis sizes, each of which may be supplied with the jackfield on board (denoted OBJ) or external to the console (denoted EJ).

When the jackfield is external to the console it will be supplied on a 3-meter long umbilical cable as standard. If a longer or shorter umbilical is required this must be specified at time of ordering. The external jackfield may not be detached from the console.

The jackfield space occupies 11 module positions. It is NOT possible to remove the jackfield and retrofit modules at a later date. The desk must be supplied either as OBJ or EJ and cannot be converted.

The three chassis sizes are: ANGELA M42: maximum 42 module positions in the EJ version, or 31 positions on the OBJ version. ANGELA M50: maximum 50 module positions in the EJ versions, or 39 positions in the OBJ version. ANGELA M65: maximum 65 module positions in the EJ version, or 54 positions in the OBJ version. The fully-loaded configurations of the 3 chassis sizes available in the ANGELA system are therefore: M42/OBJ: 28/24, M42/EJ: 39/24, M50/OBJ: 36/24, M50/EJ: 47/24, M65/OBJ: 51/24 or 51/48, * M65/EJ: 62/24 or 62/48. *

Modules Three different modules are used in the system. These are ANGELA A10 input/output module. ANGELA A20 and A21 auxiliary send/return — subgroup module. ANGELA A30 stereo bus/master monitor module.

The A20, A21 and A30 modules occupy three module positions in any of the chassis sizes. They are fitted in the chassis after position 24, in other words after A10 i/o modules 1-24.

All versions can of course be supplied short-loaded. A bolt-on 19-inch producer's desk and jackfield/rack of similar profile to the console is available. The bolt-on may be fitted to either right or left hand end of the chassis. 13 rackmounting units of space are available in the bolt-on section. Note that the addition of the bolt-on adds a third leg to the console. All versions have 4 stereo audio subgroups with outputs to the stereo mix bus.

*NOTE that M65 chassis may be set-up for 48-track metering and monitoring, with 24 bus outputs and 24 direct outputs (from inputs 25-48).

Metering Standard metering on all chassis sizes is 27 LED-column meters each with 30 segments including a PEAK LED, with ballistic switchable VU/PEAK. The meters read Bus/Tape 1-24; Left Output; Right Output; and Solo/PFL.

Automation The standard ANGELA is supplied without any automation facilities either in the form of computer-readiness or DC subgroups. The A10 i/o module is however prepared for a VCA-automation ready or non-automation ready directly from the factory, and although it is possible, so far no field retrofits have been performed.

The addition of the VCA card to the module also includes replacement of the standard fader with a Penny & Giles conductive plastic fader.

AMEK/TAC U.S. OPERATIONS**Mixing Consoles****ANGELA Mixing Consoles (cont'd)**

The VCA card provides automation remote controls and 8DC subgroups using the free-grouping system (any fader may be assigned as subgroup master.)

The standard computer offered with the ANGELA is the Audio Kinetiks "Mastermix" SMPTE-synchronized, floppy-disk based computer mix-down system.

Alternatively, the ANGELA can be fitted with automation control cards suitable for interfacing the console to the Sound Workshop ARMS computer. However, we will not install the ARMS computer; this must be done by an authorized Sound Workshop dealer.

The ANGELA may also be interfaced with the Allison 65K programmer.

As a special option and to quotation only, the ANGELA may be fitted with the GML VME-bus computer. The GML computer uses twin 68000 processors with 1M byte RAM and 40M byte hard disk. The power, speed and flexibility of the GML computer are to our knowledge unsurpassed at the present time by any other mixing computer.

The ANGELA may not be supplied as "automation-ready" for the GML system but only with the GML computer and moving faders installed.

The prefix (A) signifies that the console is automation-ready suitable for use with a Mastermix computer and with DC subgroups. Interface cabling is also included for the Mastermix computer.

Reference Code:

M42 = 42 module position chassis (note: the Jackfield is 11 modules wide).

M50 = 50 module position chassis

M65 = 65 module position chassis

OBJ = On-board jackfield

EJ = External Jackfield (10' umbilical standard, longer to special order)

A = Automation ready

(note: all automation ready models can only be fitted with Penny and Giles faders)

AMEK/TAC U.S. OPERATIONS

Mixing Consoles

TAC MATCHLESS Mixing Consoles

- Complete 24 bus, 24-track in-line monitor functions
- 8 Auxiliary send buses and 8 effects returns • 8 Audio groups usable as mono or stereo subgroups • 4-Band semi-parametric equalizer on all input channels • Separate Mike and Line gain controls on all input channels • 2 Independent, overlapping mute groups • Separate monitor mix and stereo buses • LED metering with switchable VU Peak ballistics • External 19" rackmounting power supply • +48VDC phantom power rail • Oscillator and talkback system • 19" Hand-wired TT (Tiny Telephone) patchbay • Complete control room monitor input system

- **Performance data**

Mike input: Equivalent input noise with 200 ohm source, -126dBV DIN Maximum input level without pad, +1dBV CMRR (common mode rejection ratio), at 40dB gain, typically better than 60dB, 20Hz-20kHz

Line input: Noise, at unity gain, measured at insert send with eq out of circuit, -93dBV DIN

Bus output noise, multitrack: With no inputs assigned to the bus, -92dBV DIN. With 24 inputs assigned to the bus, -78dBV DIN

Stereo bus output noise: With 24 channels assigned to the stereo bus but with channel faders down, main faders set at "0" and stereo only assigned to main outputs (normal mixdown mode), -78dBV DIN

Overall performance: With microphone input routed to stereo bus at 40dB mike gain, and with an output level of +10dBV: Frequency response: +/-1dB, 20Hz-20kHz. Distortion (THD): better than 0.05% at 45Hz, 1kHz, and 10kHz. Crosstalk: multitrack bus to bus, typically better than -64dB at 10kHz stereo bus typically better than -60dB at 10kHz

- **Power supply unit:**

19" Rackmounting with console DC supply rails and +48VDC phantom power rail, factory-set for 110, 220 or 240VAC operation

- **Chassis size (jackfield version):**

Length: 77" (195.4cm) including wood; Front-to-back: 37" (94.3cm); Height (including stand) 37" (94.3cm); Height (without stand): 13" (32cm); Length of faceplate (excluding section under meter hood): 27" (68.4cm)

- **Construction:**

The chassis is fabricated from sheet steel with a welded tubular steel frame. The floor stand is manufactured from tubular steel. The console is finished with solid hardwood end cheeks and leather padded armrest.

Modules are interconnected via a hard (printed circuit board) busing system using gold-plated computer-backplane edge connectors. Modules locate by a simple 3-point stud and location hole arrangement and are removed by swinging back the meter hood and armrest. The armrest support is hollow allowing storage of sundry items. The jackfield is hard-wired to the console and standard 19" TT fields are used in preference to printed circuit board mounted jacks

MATCHLESS—LF/JFL Includes 36 inputs, full 24 track routing, 8 sends, 8 returns, 2 programmable mute groups, 8 mono sub-groups, 4 band EQ with swept mids and selectable Q, 27 hi-resolution LED 20 segment meters, outboard power supply, producers desk, 286 point patch field, and console stand. \$32,945.00

MATCHLESS—LF/O Includes all of the above but NO patch field. \$29,645.00

MATCHLESS—SF/JFL Includes 26 inputs, full 24 track routing, 8 sends, 8 returns, 2 programmable mute groups, 8 mono sub-groups, 4 band EQ with swept mids and selectable Q, 27 hi-resolution LED 20 segment meters, outboard power supply, producers desk, 192 point patch field, and console stand. \$27,445.00

MATCHLESS SF/O Includes all of the above but NO patch field. \$25,245.00

MCDS 1000 Input Module 523.00

When shortloading subtract \$366.00

MCDS 2000 Group Module 468.00

When shortloading subtract \$328.00

MCDS 3000 Aux Module 633.00

MCDS 4000 Master Module 633.00

Power Supply 1045.00

Owners Manual 22.00

TAC SCORPION Mixing Consoles

The TAC SCORPION is a console system comprised of two chassis sizes and 6 modules. The chassis are denoted SF (short frame) and LF (long frame). This combination allows us to offer a very wide variety of configurations to suit both multitrack recording and concert sound reinforcement applications.

The S1000 input module has transformerless microphone and line inputs, 4-band equalization, 4 auxiliary sends and 16-bus routing.

The S2000 auxiliary send-return channel has master outputs for two auxiliary send buses, and one high level effects return input with 16-bus routing. Two S2000 modules are fitted in every console.

There are 4 types of subgroup module. S3000 is a single subgroup with Bus/Tape monitoring, two auxiliary sends and fader reverse. This module may be used as a subgroup, as a monitor mixer and bus output for recording, or as an effects input. Using the S3000 module, you can have an 8-bus Scorpion with 8-track monitoring, or a 16-bus Scorpion with 16-track monitoring. The S3300 module is identical to the S3000 except for the inclusion of a 3 band fixed EQ and 4 aux sends instead of 2.

S3100 is a subgroup module with two independent channels of Bus/Tape monitoring each channel including 4 auxiliary sends. Using the S3002 module, you can have an 8-bus Scorpion with 16-track monitoring, or a 16-bus Scorpion with 32-track monitoring.

S3200 is a subgroup/matrix output module purpose-built for sound reinforcement use in concerts and theaters. The S3001 module configures the console with 8 subgroups and an 8 x 8 output matrix for routing the signal to secondary speaker systems.

Given the above modules and chassis, the principal configurations of the Scorpion are as follows:

In the large frame (denoted LF):

24/16/2 with 16-track monitoring; 24/16/2 with 32-track monitoring; 32/8/2 with 8 subgroups; 32/8/2 with 16-track monitoring (alternatively this can be used in sound reinforcement applications as 8 subgroups and 8 extra effects returns); and 32/8/2 with an 8 x 8 matrix.

Because there are two types of standard operating levels for tape machines depending on their make, some mixing desks need modification for them to be compatible with tape machines, while other manufacturers have ignored this fact with the result that the customer never actually achieves the signal quality that he could.

We have recognized this problem and have designed the Scorpion for full dual-level operation.

Thus, the Scorpion is supplied, without needing any modification, to work at either standard +4dBV or Fostex/TEAC -10dBV (more precisely -12dBV) operating levels. This is simply done through providing different levels on input/output connectors.

The power supply is housed in a separate, 19" rack-mounting case and has, as standard, +48VDC phantom power output for powering condenser microphones. The phantom power may be switched in and out on each S1000 input channel.

The Scorpion has full LED-metering. Each meter is calibrated -22 to +3dB. All versions have individual meters for the stereo bus and reading the Pfl/Afl signal. The 8-bus version has 8 bus/tape-reading meters, and the 16-bus version has 16 bus/tape-reading meters.

TAC SCORPION Mixing Consoles (Cont'd.)**Performance data:**

All input module measurements are made at the channel pre-fade insert point with the equalizer out of circuit (except for equalizer measurements). All other measurements are made at the respective bus outputs.

Noise measurements were obtained using a RADFORD ANM3 set to DIN weighting and true RMS characteristics. The signal source is a RADFORD LDO4B oscillator. The distortion measuring set was a RADFORD DMS3.

Frequency response measurements were made on a RADFORD ANM3 set to WIDEBAND weighting and true RMS characteristics.

Microphone input noise: -126dBV DIN AUDIO BAND. Source impedance 200 ohms; 20dB pad out of circuit; input gain set at maximum

Maximum input level to mike amp (without pad): +1dBV. Sine wave source; 20dB pad out of circuit; input gain at minimum; supply rails +/-16.5V

Microphone input CMRR: 64dB. Mike gain set to 40dB; Sine wave source giving output of +10dBV from mike amp; frequency 200Hz, 2kHz

Line amp noise: -85dBV. Input short-circuited; input gain set for unity

Channel distortion, 20Hz-20kHz: Microphone input: 0.02%. Gain set to 40dB; mike amp output +10dBV. Line input: 0.02%. Gain set to unity; amplifier output +10dBV

System measurements:

(Made on 24/16/2 version, comprising 24 S1000 input, 2 S2000 auxiliary send-return, 16 S3000 subgroup/monitor, and 1 S4000 master monitor)

Bus noise, 24 inputs routed to 1 bus, master closed: -88dBV; master at 0 (unity gain); -75dBV. Input faders at maximum attenuation

Distortion, 20Hz-20kHz: 0.05%. From input module with 40dB gain setting, via subgroup and main stereo output at +10dBV with all faders at unity gain. Measured at main stereo output

Frequency response, 20Hz-20kHz, +/-1dB. From input module, via mike amp with 40dB gain setting, to main stereo output.

Crosstalk, at subgroup output: -60dBV. Sine wave signal on input module at 10kHz and 0dBV routed to a subgroup output at 0dB. Measurements made at adjacent subgroup outputs.

Crosstalk, at stereo bus output: -56dBV. (Set-up as for i) **Operating level ref:** 0dBV (.775mV). Subgroup and Stereo bus pre-fade inserts operate at -6dBV.

Aux send output noise, masters closed: -85dBV; masters set for unity gain; -75dBV.

All channel sends closed, 24 input modules.

Power supply unit:

19" rackmounting unit giving console DC supply rails and +48VDC phantom power rail; factory pre-set for 110, 220 or 240VAC operation.

Chassis sizes:

Front-to-back: 33.15" (842mm); Height (at meter hood): 10.35" (263mm); Width, SF: 36" (915mm) LF: 55.55" (1411mm)

Total Audio Concepts "Scorpion" Series

Because there are so many configurations of the Scorpion, a coding system has been devised to describe them. The code gives a quick description of the console in terms of chassis size, number of inputs, number of groups, quantity of buses, number of meters, number of blank modules, and number of auxiliary sends. Each model's code number is the reference number for ordering it. For part-loaded consoles the appropriate number of modules are reduced and an equivalent number of blanks added.

At present the codes are denoted by letter and operates as follows:

A: Chassis Sizes

S=Short—27 module positions; L=Long—43 module positions; X=Extended Long—53 module positions; XPB=Extended Long—45 module positions with Patchbay

B: Total Number of Input Modules To Be Supplied**C: (Sub) Group Module Type**

B=S3000 basic group; D=S3100 dual monitor group; M=S3200 matrix group; E=S3300 basic group with EQ; F=SFB2000 foldback output with EQ; N=SFB2100 basic foldback output with no EQ

D: Total Number Of Group Modules To Be Supplied**E: Total Number of Group Buses In The Console**
(8, 12, or 16)**F: Total Number Of LED Meters To Be Fitted**

(11, 16, 27 or 35 meters are available on the general purpose versions; 9 or 13 on foldback consoles)

G: Total Number Of Blank Modules**H: Number Of Auxiliary Sends**

(8 aux sends can only be fitted on 8 and 12 bus versions of the Scorpion)

In general terms, the configuration of the console is determined by the chassis size. In the description column of the following tables, the expression "+4" (8, 16, 24, 32) indicates the number of Bus/Tape monitor channels available in the console; for example, 16/8/2+8 means 16 inputs, 8 groups, stereo bus, and 8 track monitoring.

Some similar Scorpions are available with different numbers of meters. For example, item 6 has 8 buses and 16 Bus/Tape monitor channels, but only 8 Bus/Tape meters; item 7 is identical but has 16 Bus/Tape meters. The reason for having different quantities of meters is both for price and user preference.

BCII Audio Production Consoles

- Mono and Stereo input modules
- Stepped input gain control with gain range from +15dB to -70dB covering both microphone and line level signals
- 3-Band equalization with swept mid-frequency control
- 2 or 4 Auxiliary sends
- 6 Output buses to give 4 subgroup/2 main output operation
- AFV (audio follows video) channel on/off remote switching port as standard, with VCA option for remote fading
- Remote start facilities fitted as standard
- Penny & Giles 3000 Series faders
- 3 Chassis sizes allowing up to 24 inputs with 4/2 output, including a full studio console version
- Jackfield options
- Metering options
- Signal processing modules may be fitted in some versions
- Compact size 1.18" W (30mm) module allows 16 modules to fit in 19 inches
- Mains AC or battery operation, using external battery pack
- Balanced inputs and outputs

Chassis Systems Three chassis sizes are provided, but in actuality the three are based commonly on a single chassis unit.

Basic 16-Position Chassis BC/16P/MH is the standard chassis unit, 19" W, and thus suitable for rackmounting. The 16P chassis has 16 module positions. Configurations of these positions are described below, but typical are 8/4/2, 10/4 and 12/2.

The 16P chassis is constructed from precision folded steel and is of robust and durable design. The chassis is suitable for installation in mobile studios and is also portable, especially with the flightcase option.

All internal busing and edge connectors are incorporated into a single large printed circuit motherboard. AFV ports and outputs are accessed via Cannon D-connectors mounted on the motherboard, and optionally, D connectors can be fitted to allow insertion points to be brought up to an external jackfield. Inputs to the channels are via XLR and jack connectors. All connectors are brought out on the rear panel of the chassis. The edge connectors are computer-grade with gold-plated pins.

A meter hood with adjustable tilt is fitted at the rear of the console. Two meters are provided, which may be either VU or BBC-type PPM. Inputs to the meters are selected via a bank of 4 switches.

The talkback microphone is located in the meter hood and space is allowed for the installation of a Pfl speaker if required.

The power supply is an external 19" rackmounting unit which gives not only DC rail voltages but also a +48VDC. An external battery supply is also available.

Extender Chassis BC/16/PX is a 16-position, 19" extender chassis which is bolted on to the main chassis to be fitted. The 16/PX is essentially the 16P/MH chassis without the meter hood and power supply.

The addition of the extender chassis is a factory retrofit only.

Studio Chassis BC/32SC is a complete floor-standing console version of the BCII with 32 module positions. In broad terms the SC version comprises two 16-position chassis mounted in a console which also includes a 19" rackmounting bay suitable for a jackfield; a meter hood in which may be mounted various combinations of metering and signal processing devices; and, at the front, a script area.

BCII Audio Production Consoles (Cont'd.)

The actual console input-output configurations which may be obtained using the BC/32SC are identical to those available in the combinations of the two 16-position chassis, but with the benefit of being able to incorporate additional equipment harmoniously into the system.

Two types of jackfield are available, either 1/4" type or TT (bantam). The 1/4" jackfield incorporates 48 sockets in two rows of 24, while the TT jackfield incorporates 96 sockets in two rows of 48.

The standard metering provided on the BC/32SC is 7 VU meters, 4 for subgroups, Left, Right and Pfl. A knockout is provided for fitting the optional Phase Correlation meter.

The Pre-fade Listen speaker is an option.

The meter hood of the BC/32SC may be used to house signal processing devices. Two are provided for the BCII system. These are:

- BC/COMP, which is a combined compressor-limiter; and
- BC/EQ, which is a 3-band equalizer

These devices would normally be brought up to sockets in the jackfield and would be patched according to requirement.

Configurations of the BCII The scope of the BCII system is large. The modules and their options cover a great number of possible requirements. However, the basic configurations available can be described briefly.

In the BCII/16P/MH Chassis The outputs of the mixer can be arranged in three standard ways, and this arrangement in turn determines how many inputs will fit in the chassis.

In every case, one BC1145 Auxiliary Master Module and one BC1155 Dual Monitor Module must be fitted (BC1156 Single Monitor is an optional replacement for BC1155).

Outputs can be set-up as either stereo, 4 out, or 4 subgroups mixed to 2. Given that there are 16 positions in the chassis, and 2 must be used for BC1145/BC1155, then the standard configurations are: • 8/4/2 • 10/4 • 12/2.

Variations are possible, for example, using the BC1136 stereo output module, the 10/4 could be expanded to 12/4 providing that it would be satisfactory to have the 4 outputs controlled by 2 stereo faders. A mono output may also be derived.

It is also possible to mix quantities of mono and stereo input modules as required, so that, for example, the 12/2 could be comprised of 6 stereo and 6 mono inputs.

Within this basic framework it is then possible to add other options, such as extra auxiliary sends, VCA's, direct outputs, and so on.

Using BC/16P/MH with BC/16PX Joining the extender chassis to the main chassis gives an extra 16 module positions. Normally these will be used for either mono or stereo inputs, and the extended configurations become: • 24/4/2 • 26/4 • 28/2.

From this point of departure the other optional additions can be added as required.

The extender chassis is a factory retrofit only.

Using the BC/32SC The studio chassis is, in essence, the extended standard chassis housed in a large frame. This allows the addition of extras such as jackfields to make up a full studio console.

The actual input-output configurations are the same as those described above for the 32-position expanded chassis.

The script table, located in front of the modules, is suitable for remotes, locators, scripts, etc.

The meter hood is 2-U high and has space not only for meters but also for signal processing devices made by this company; the dynamics unit and the equalizer.

A few minor variants on the meter hood configuration are available for the studio chassis version.

Typical Portable Versions

BCII—10/4 with 10 Mono Mic/Line Inputs . . \$11,575.00
Includes:

- 10 x BC1115 Mono Mic/Line Input Module
- 4 x BC1135 Single Output Module
- 1 x BC1145 Aux Master Module
- 1 x BC1155 Dual Monitor Module
- 1 x BC/16P/MH Chassis

Audio Consoles

BCII Audio Production Consoles (cont'd)
Typical Portable Versions

BCII—10/4 with 10 Mono Mic/Line Inputs

Includes:

10 x BC1115	Mono Mic/Line Input Module	
4 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
1 x BC/16P/MH	Chassis	\$12,750.00

BCII—10/4 with 6 Stereo Line and 4 Mono Mike/Line Inputs

Includes:

4 x BC1115	Mono Mike/Line Input Modules	
6 x BC1118	Stereo Line Input Modules	
4 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
1 x BC/16P/MH	Chassis	\$14,700.00

BCII—8/4/2 with 8 Mono Mike/Line Inputs

Includes:

8 x BC1115	Mono Mike/Line Input Module	
4 x BC1125	Single Subgroup Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
1 x BC/16P/MH	Chassis	\$12,575.00

BCII—12/2 with 12 Mono Mike/Line Inputs

Includes:

12 x BC1115	Mono Mike/Line Input Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
1 x BC/16P/MH	Chassis	\$12,900.00

BCII—24/4/2 with 24 Mono Mike/Line Inputs

Includes:

24 x BC1115	Mono Mike/Line Input Module	
4 x BC1125	Single Subgroup Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
1 x BC/16P/MH	Chassis	
1 x BC/16PX	Extension Chassis	\$24,775.00

BCII—24/4/2 with 12 Stereo Line and 12 Mono Mike/Line Inputs

Includes:

12 x BC1118	Stereo Line Input Module	
8 x BC1115	Mono Mike/Line Input Module	
4 x BC1125	Single Subgroup Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
1 x BC/16P/MH	Chassis	
1 x BC/16PX	Extension Chassis	\$28,750.00

Typical Studio Chassis Versions

BCII/SC—24/4/2 with 24 Mono Mike/Line Inputs

Includes:

24 x BC1115	Mono Mike/Line Input Module	
4 x BC1125	Single Subgroup Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
1 x BC/32SC	Chassis	\$33,425.00

BCII/SC/JFL—24/4/2 with 24 Mono Mike/Line Inputs and Jackfield

Includes:

24 x BC1115	Mono Mike/Line Input Module	
4 x BC1125	Single Subgroup Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
2 x Option #46	1/4 Jackfield	
1 x BC/32SC	Chassis	\$36,200.00

BCII/SC/JFL—24/4/2 with 12 Stereo Line and 12 Mono Mike/Line Inputs

Includes:

12 x BC1115	Mono Mike/Line Input Module	
12 x BC1118	Stereo Line Input Module	
4 x BC1125	Single Subgroup Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
2 x Option #46	1/4 Jackfield	
1 x BC/32SC	Chassis	\$40,125.00

BCII/SC/JFL—24/4/2 with 12 Stereo Line and 12 Mono Mike/Line Inputs

VCAs on all inputs for complete Audio Follows Video, 8 BC/COMP

Compressor/Limiters brought up to Jackbay

Includes:

12 x BC1116	Mono Mike/Line Input Module	
12 x BC1119	Stereo Line Input Module	
4 x BC1125	Single Subgroup Module	
2 x BC1135	Single Output Module	
1 x BC1145	Aux Master Module	
1 x BC1155	Dual Monitor Module	
12 x BC/COMP	Compressor/Limiter Modules	
3 x Option #46	1/4 Jackfield	
1 x BC/32SC	Chassis	\$52,175.00

The large number of modules and options make it impossible to include all possible BCII configurations. Many others are possible.

Individual Module Pricing

BC1115	Mono Mike/Line Input	\$ 575.00
BC1116	Mono Mike/Line Input with VCA	750.00
BC1118	Stereo Line Input	910.00
BC1119	Stereo Line Input with VCA	1,150.00
BC1125	Single Subgroup	500.00
BC1126	Single Subgroup with Compressor/Limiter	1020.00

APC 1000 Assignable Production Consoles

The flexible chassis system allows many different input configurations to be created easily. The central keyboard control for assigning module switching functions allows multiples of console routing and switching setups to be recalled either as snapshots or as dynamic routing adjustments in real time synchronized to timecode, and a 'recall' of rotary knob positions using novel and simplified setting up procedures is provided. The console is fitted with AFV (Audio Follows Video) ports as standard; and two levels of fader automation are available as part of the sophisticated systems control technology.

The console may have up to 128 computer-controlled modules.

The central assignment section is comprised of separate keyboards for recall, for individual module configuration, and for memory management.

Almost all the switch functions are removed from the individual modules and relocated to a master assignment panel. Several other functions also retain individual local switches for preview or effects use. The removal of the switches also makes the rotary controls clearer.

Switch functions controlled from the keyboard include:

- Channel input selection, with + 48V, Phase, etc.
- Equalization in/out, including pass filters separately
- Auxiliary output bus selection, with pre/post and in/out
- Up to 48 routing buses and 8 stereo buses
- Characteristics of the (optional) Dynamics section

To access the keyboard from an input module, an 'INT' (Interrogate) button on the module is pressed. The configuration keyboard will then

illuminate, showing which functions have already been selected. If these selections are to be changed, the appropriate switches on the keyboard are pressed and the new setup is stored in RAM.

When the engineer has configured all the input channels and track selection, the setup positions may be stored as a Page in the memory for long-term Reset usage. Thus if the console is used by different engineers and in several applications, the various setup configurations may be stored as pages in the RAM and reset as each new engineer begins work.

A quick visual check of the configuration and selection of switches, buses, etc. can be made using the keyboard and is displayed by a large LED located in the meter hood behind each input module strip. Should the engineer want to check, for example, which channels are selected 'Eq In', he simply puts the keyboard to 'Display' mode and presses the 'Eq' button. The LED behind all those channels selected 'Eq In' will then illuminate. This simple procedure can be followed for all keyboard-assigned functions.

Banks of assignment LEDs are not fitted to individual input channels, since research has shown that this display method does not enhance operational convenience.

Recall of input channel rotary control positions is enabled using the recall keyboard together with the segment displays located behind each module. Each display compares the actual and memorized position. Recall is displayed by function and not by channel. For example, recall the high pass filter and the segment displays immediately show all high pass filter settings for the console.

AMEK/TAC U.S. OPERATIONS

Production
Consoles**APC1000 Assignable Production
Consoles (cont'd)**

A flexible chassis system has been designed which will accommodate various configurations of consoles, and also to include jackfields. The width of individual channel modules is 30.125mm, which means that a large number of inputs will fit into a much smaller area than at present, eliminating the need for a separate effects returns panel. For example, 48 channels will fit into a width of 6' (1830mm). The addition of a jackfield and wooden trim panels (if required) will of course lengthen the console, but offboard jackfields for mounting in a separate rack are a standard option.

Dynamics modules which are the same width as the channels may be located in the meter hood.

All channels have a separate horizontal fader section at the front. Various different types of fader units are available, including, as standard, a VCA-fader with digital grouping which may be interfaced to the Audio Kinetics Mastermix computer; and a motor-driven fader which is linked to the GML computer.

A central 11.8" (300mm) chassis section has a minimum of six module positions occupied by the central assignment section. Master monitor output and auxiliary send modules also located in this section.

The 48 buses may be configured for 48-track recording, as 48 mono subgroups, as 24 stereo subgroups, etc., as required; the console may, of course, be set up with less than the full amount of buses and in principle could even be supplied as a 6 into 1, or 12 into 2. The general configuration of the APC1000 console is (n) inputs with routing up to 48 buses and eight independent stereo buses, from each input. The maximum amount of computer controlled modules which may be used in any one console is 128. Within this framework almost any variant is possible.

When used as a large multitrack console, the APC1000 should be configured with a number of input modules suitably greater than the number of tracks being used to provide adequate amounts of channels for sources and effects. For example, 88 inputs could be a suitable number for a large production studio with 48 track facilities, using 48 for tape returns and 40 for effects and sources. A multi-function 'Trim' pot is incorporated into each input module allowing for a secondary signal path to be set up for dual-channel operation or as an additional auxiliary send with output to the multitrack routing.

Please Note:

- Maximum number of faders controllable by Digital Creations DiskMix is 64; by GML computer, 128
- "Recall" of knob settings, "Dynamic Reset" of switch settings and "Synchronous Reset" of switches are all included in this price
- The GML computer gives real-time control of not only mutes and motorized faders but also allows increased use of the Synchronous Reset and the (REM) remote switching functions
- The AMEK VCA Faders can be switched to bypass the VCA completely. Mute automation is still available when the VCA is bypassed
- All chassis prices include 48 plasma meters normally distributed to 48 buses, and 4 VUs, for the stereo bus and master monitor output. The 32 input chassis only includes 24 plasma meters. Where Dynamics are fitted it may be necessary to add an overbridge to accommodate the metering
- The APC 1000 has a maximum capability of 4 main stereo busses but only one is included in this price. All input modules have 8 auxiliary sends
- The Digital Grouping Fader version of the APC1000 includes the digital creations (ARMS) digital grouping boards, fader computer, Diskmix card and software. We do not supply the IBM PC computer required to run the system
- Frame sizes up to 128 inputs are possible. Typical widths are as follows:

32 Inputs: 74"	48 Inputs: 93"	64 Inputs: 113"
80 Inputs: 132"	96 Inputs: 151"	112 Inputs: 176"
128 Inputs: 190"		

AM-2100 AMHERST INTELLIGENT CONTROLLER

Using advanced microprocessor control, the AM-2100 packs high performance image processing and machine control functions into a rugged, single rack high chassis. Its unique "open bus" design lets you add new functions as you need them, through software.

Standard features include:

- 32-line Time Base Corrector with subcarrier feedback for full bandwidth performance
- RS170A Color Field Sequencer for cleaning up mismatched color frame edits
- Full Proc Amp Controls with presets and front panel LCD display of parameter readings
- SMPTE/EBU Time Code and Control Track Reader
- PC Control from IBM PC or compatible
- Modem Control for remote operation via telephone line, with keyboard override
- Machine Control for VTRs, switchers, etc. Operated from its own front panel or from a PC
- Help menus guide the user as needed
- New functions and updates can be installed in the field
- Multiple units tie together via RS-232, and stack easily with daisy-chain power runs
- Built-in diagnostics can be accessed by phone
- Rear panel circuit breaker resets quickly and eliminates downtime due to blown fuses

Power, expandability, and ease of use make the AM-2100 the ideal tool for broadcast and teleproduction professionals.

Front Panel:

Video adjust, setup adjust, hue adjust, chroma adjust, SCH phase adjust, genlock, (RS-170A) protected power on/off switch and indicator, 16 character x 2 line backlit LCD display, 5 button programmable function control with LED status indicators

Back Panel:

RS-232 (422 on request), GPI port 1, GPI port 2, Slide-out PCB trays, computer reset switch, circuit breaker, Power receptacle, Power outlet

Central Processing Unit:

96-pin Amherst video/computer bus, 8088 processor, 2K to 8K SRAM, 2K increments, 24K EPROM, clock/calendar with battery backup

Modes:

Direct (vertical lock), bypass (E/E)

Specifications

Performance

- Window of Correction:** 32 line window
- Bandwidth:** 4.3MHz, ±0.5dB at unity chroma gain
- Differential Phase:** < 2°
- Differential Gain:** < 2%
- Tilt:** < 1%
- Signal-to-Noise Ratio:** 56dB (plus quantizing effects)

Method

- Digitizing Rate:** 14.3MHz (4X subcarrier)
- Quantization:** 8 bits
- Bus:** Multiplexed, computer/video

Signals

- Video In:** 0.5 to 2.0V p-p into 75 ohms, NTSC
- GL In:** NTSC, RS-170A loop-through, 0.4 to 2.4V p-p
- Video Out (2):** 1V p-p into 75 ohms, NTSC RS-170A
- Advanced Sync Out:** 0.4/4V, selectable, into 75 ohms
- SC Feedback:** 1V p-p (minimum) into 75 ohms

Mechanical

- Dimensions:** 1.75"H x 19"W x 16"D
- Power:** 120VAC, 60Hz, < 30W
- Weight:** 12 lbs.
- AM-2100** \$7750.00

Options

- Sony VO5850/5800 Interface Cable \$250.00
- JVC CR850 Interface Copy 300.00
- Sony BVU-800 Interface Cable 325.00

30mm TUBES**XQ1410 Series Plumbicon® Camera Tube**

1.2" (30mm) diameter Plumbicon television camera tube with high resolution lead oxide photoconductive target, separate mesh construction, magnetic deflection and magnetic focusing and internal light bias. It's intended for highest quality usage in XQ1410L, XQ1410R, XQ1410G and XQ1410B types of color cameras, in broadcast, educational and high quality industrial applications.

The XQ1410 series has increased resolution and internal light bias for reduction of lag under low-key conditions.

XQ1413, XQ1415 Series Plumbicon Camera Tube

1.2" (30mm) diameter Plumbicon camera tube with high resolution lead oxide photoconductive target, with extended red response.

This series is interchangeable with the XQ1023 series, however the XQ1413 series has internal light bias for reduction of lag under low-key conditions.

Tubes of the XQ1415 series are identical to tubes of the XQ1413 Series but incorporate an infrared reflecting filter on the anti-halation glass faceplate.

XQ1430 Series Plumbicon Camera Tube

1.2" (30mm) Diameter high resolution, separate mesh, all magnetic Plumbicon television camera tube intended for high quality color studio cameras which have internal prism of front bias lighting. The XQ1435 is an extended red Plumbicon tube for best red response and includes an integral IR filter.

XQ3410 Series Plumbicon Camera Tube

1.2" (30mm) Diameter rear loading high resolution Diode Gun™ (Patent Pending) Plumbicon Television Camera Tube with a 1" scan format for geometry and low capacitance for high sensitivity and high signal-to-noise. Internal bias light provides for low lag characteristics. The XQ3415 is an extended red Plumbicon tube designed for best red response and includes an integral IR filter.

XQ3430 Series Plumbicon Camera Tube

Diode Gun Plumbicon Television Camera Tube with full 30mm scan format for high resolution and low capacitance for high sensitivity with high signal-to-noise ratio. The XQ3435 is the extended red Plumbicon tube in this series. It is designed for the best red response and includes an integral IR filter.

**1" TUBES****XQ1070 Series Plumbicon Camera Tube**

1" (25mm) high resolution Plumbicon television camera tube with low heater power, separate mesh construction, magnetic focusing and deflection.

This series is intended for use in highest quality broadcast camera equipment.

The XQ1070 series is also mechanically interchangeable with 1" diameter vidicons with separate mesh construction and has the same base pin connections.

XQ1075 Series Plumbicon Camera Tube

1" (25mm) High resolution Plumbicon television camera tube with extended red response, and is intended for use in high quality broadcast camera equipment where infrared filtering is required but not present in the camera optical system.

This series is identical to the XQ1075 series with the exception that it does not have an infrared cutoff filter.

XQ2170 Series Plumbicon Camera Tube

A 1" (25mm) Diode Gun High Resolution Plumbicon Camera Tube. High sensitivity, high resolution, low lag television pick-up tube with lead oxide photoconductive layer, separate mesh and all magnetic deflection and focus. The electron gun assembly is designed to significantly improve resolution and lag. It operates in a diode mode. The beam has a uniform energy distribution, improved beam acceptance and speed of response, and enhanced resolution. The gun also provides very high beam reserve, minimizing comet tailing and blooming in cameras with dynamic beam control.

Note that while the XQ2170 series is mechanically interchangeable with the XQ1070 series, the "diode gun" requires a positive grid 1 voltage (up to +20V) and draws a positive grid current of up to 5mA. Cameras designed around XQ1070 then, must be modified to accommodate this.

©T.M.N.V. Philips of Holland

AMPEREX ELECTRONIC CO.*Camera Tubes***1" TUBES****XQ1500 Series Plumbicon® Camera Tubes**

1" (25mm) High resolution Plumbicon Television Camera Tube which features the Anti-Comet Tail (ACT) gun designed to handle highlights up to four f/stops over peak white. The internal light bias reduces lag to a minimum. The XQ1505 extended red Plumbicon tube for best red response incorporates an infrared reflecting filter on the anti-halation glass faceplate.

XQ3070 Series Plumbicon Camera Tube

1" (25mm) Diameter Plumbicon with high resolution lead oxide photoconductive layer with Diode Gun™ (Patent Pending) construction and high beam reserve for cameras with DBC. Light bias for low lag. Low output capacitance for high signal-to-noise ratio. The XQ3075 extended red Plumbicon tube provides for the best red response and includes an integral IR filter on the anti-halation button.

2/3" TUBES**XQ4187 (85XQ) Plumbicon Camera Tube**

2/3" (17.8mm) Diameter Plumbicon Television Camera Tube with Diode Gun for dynamic beam control DBC and low output capacitance for best signal-to-noise ratio. The R, G, and B has a high resolution lead oxide photoconductive layer, Electrostatic Focus magnetic deflection with high stability (HS) electrode structure. It requires very low power and has low deflection field damping.

XQ3467 Series Plumbicon Camera Tube

2/3" (17.8mm) Diameter Plumbicon Television Camera Tube with lead oxide, high resolution layer. The R, G, and B employs a triode gun with Electrostatic Focus and Magnetic Deflection.

XQ3457 (87XQ) Series Plumbicon Camera Tube

2/3" (17.8mm) Diameter Plumbicon Television Camera Tube with high resolution lead oxide layer, Magnetic Focus and Electrostatic Deflection (MS). The R, G, and B incorporates the Diode Gun for dynamic beam control DBC, Low Capacitance for high signal-to-noise ratio and is only 87.5mm long for smaller cameras.

XQ2427 Series Plumbicon Camera Tube

2/3" (17.8mm) Diameter Plumbicon Television Camera Tubes with special high resolution lead-oxide photoconductive target, low heater power, magnetic focusing and deflection.

Special features are:

- Photoconductive target for increased resolution
- Diode Electron Gun for DBC (Dynamic Beam Control) to minimize comet tailing and blooming

**XQ3427 Series Plumbicon Camera Tube**

2/3" (17.8mm) Diameter Plumbicon Television Camera Tubes with special high resolution lead-oxide photoconductive target, low heater power, magnetic focusing and deflection.

Special features are:

- Photoconductive target for increased resolution
- Diode Electron Gun for DBC (Dynamic Beam Control) to minimize comet tailing and highlight blooming
- Low output capacitance for high signal-to-noise ratio

XQ1427 Series Plumbicon Camera Tube

2/3" (17.7mm) Plumbicon Television Camera Tube with high resolution lead oxide photoconductive target, separate mesh construction, low heater power, magnetic deflection and magnetic focusing.

The XQ1427R, XQ1427G, and XQ1427B types are intended for use in color cameras in Field Production, Broadcast Studio, Electronic News Gathering, educational and high quality industrial applications.

1/2" TUBE**XQ4087 (80XQ) Plumbicon Camera Tube**

1/2" (8mm scan diagonal) Plumbicon Television Camera tube with low heater power, magnetic deflection and electrostatic focusing, assembled with a DT1120 small lightweight deflection unit.

Special features are:

- Diode electron gun for DBC (Dynamic Beam Control), which minimizes comet tailing and blooming
- Low output capacitance achieved by a special signal plate with contact through the window
- Low deflection field damping by wall electrodes
- Excellent geometry and registration capability
- Reduced line pick-up due to side connection of the mesh
- Low power consumption due to electrostatic focus

The XQ4087 tubes are intended for color and monochrome cameras in broadcast (Electronic News Gathering), educational and high quality industrial applications.

Graphic Composition/Storage System

ESS-5G

ESS-5G Graphic Composition and Storage System

- Internal palette for mattes, borders, key fills, character colors, etc.
- Chroma and linear luminance keyers
- Cut and paste with rectangle, circle, oval, or diamond shapes
- Scissors mode for cutting irregular shapes
- Variable compression and positioning
- Character generator with font scan-in capability
- Hard and soft edges for borders and image overlays
- Variable opacity of colors and image overlays
- Selective defocus
- Internal grid generator
- Frame grab or field grab with frame interpolation
- Programmable cuts, dissolves and wipes
- Variable compression and positioning with key signal output
- On-line cataloging and search with ID#, category, date and description
- On-line list building
- List editing in text or small-picture mode
- Browse stills 12 at a time
- 160M byte internal disk drive included
- 4:2:2, 13.5MHz component coding
- Composite input and composite and RGB outputs
- Fixed or removable media storage expandable to 4 external disk drives plus 160M byte internal disk drive
- Modular "framestore-on-a-board" design

ESS™-5G is a single-user, electronic image store/recall and graphics compose system. It is designed to be used as a production workstation and storage center for images utilized by television news, weather and graphics departments, as well as for the formulation of art cards and conceptual materials in post-production facilities. The ESS-5G system's compact size, optional removable disk media, and streamer tape make it ideal for broadcasters, post-production houses, or corporate video facilities.

Storage media includes a built-in 160M byte Winchester disk drive capable of storing 200 NTSC or 160 PAL images. The SMD standard drive controller is also capable of supporting four additional outboard drives to increase on-line storage capacity. An optional internal tape streamer for hard disk back-up is available.

A comprehensive on-line cataloging function which allows the user to store and recall images by ID number, alpha title, category and date is provided, as well as a list management system that allows lists to be viewed as text or represented by 1/16 size pictures.

The ESS-5G system's compose mode offers the user a 10 color palette with a choice of 16,000 colors, cut and paste, luma and chroma keying, scissors, text, grid, defocus, and font-record (text generation).

The ESS-5G system is pack-compatible with ESS-5 and ESS-3 systems, and with the Ampex AVA-3 Video Art system.

The ESS Graphic Composition and Image Storage Systems: ESS-3, ESS-5 and ESS-5G deliver graphics, keying and still-storage with superb video quality. What's more the range of ESS systems lets you choose exactly the right one for your application, and your budget.

If you need a fast and secure way to store and recall still images, the ESS-5 will do a superlative job and keep you within your budget limits, too.

If you also need composition capabilities to add to your graphics for news, presentation slides, art cards, or client-winning conceptals, the ESS-5G is perfect for you.

And if you need all this, plus up to ten stations that allow users to simultaneously and independently store and recall, the ESS-3 is the system you'll want to look at.

Optional Accessories

- Backup tape streamer
- Remote Access Station (RAS)
- Standards conversion kits
- CDC 9710 removable cartridge drive
- CDC 9710 disk pack
- CDC 9715 fixed disk drive (340M bytes)
- CDC 9771 fixed disk drive (825M bytes)
- External SMD drive cable kit
- Printer cable kit

ESS-5G Composition and Storage System

ESS-5 Storage and Recall System

ESS-3 Ten Station Composition and Storage System

AMPEX CORP.**Digital VTR****VPR-300 D2 Composite Digital VTR****The Ampex VPR-300. It Makes Sense Right Now.**

D2 Composite Digital provides all the benefits you'd expect from a digital format: better picture, better sound, easier operation, higher reliability.

But there's another reason the format makes so much sense.

Compatibility. All it takes to put a VPR-300 on line in your composite analog facility are the BNC video and XLR audio cables you already have in place.

An easy operation, but with a major impact.

The improvement in picture quality will be instantly obvious. Velocity errors, impact errors and moire are eliminated. Chroma noise is imperceptible, and other VTR color errors are eliminated entirely.

And no one has to tell you what digital recording will do for your multi-generation work. With a VPR-300, you can count on twenty transparent generations. Which makes post-production, especially compositing, significantly faster—while tying up fewer machines.

Superb Sound: Four Digital Audio Channels.

The 48kHz digital audio sampling frequency used by the VPR-300 is actually higher than the digital sampling rate used for compact disc mastering. There are four 16 bit digital audio channels with totally independent editing on each track. So you'll be able to do more of your audio work right on the VPR-300, instead of going off-line.

And when you layback sound using the digital interface, the integrity of your work is perfectly preserved.

The VPR-300 will record and play back on 32, 94 or 227 minute cassettes.

Digital Technology Makes the VPR-300 Inherently Easier to Operate.

Compatibility and performance are not the only benefits. The VPR-300 is also easier to operate. Since it's a cassette machine, tape is automatically threaded. Since the digital electronics are drift-free, no time-consuming set-up is required.

Controls on the VPR-300 are simple and straightforward and they afford you the uncompromising flexibility your kind of work demands.

And to make operation easy, a large status display provides comprehensive operational information, in plain English.

This remarkable display helps eliminate human error by leading you step-by-step through operational procedures.

But more importantly, it allows you to take full advantage of all the machine's capabilities.

If Time is Money, Spend a Moment with these Specifications.

The VPR-300 will load and thread a cassette, ready for record or playback, in under four seconds. It will recue a thirty-second spot in under 3.5 seconds. And playback lock-up time with scanner up to speed is under 20ms.

The machine's high speed pinchrollerless transport is a descendant of our Emmy Award winning VPR-3. It uses air guide technology to deliver unmatched speeds, gentle tape handling, and durability that's measured in years, rather than in hours.

VPR-300

Full Featured Editing, and Flexible Machine Interface.

As an editing tool, the VPR-300 interfaces with major professional editing systems, as well as other analog and composite digital VTRs.

The VPR-300 will search to a field, jog field by field, and run at 60X play speed with viewable color pictures.

And the automatic and manual assemble, insert, and animate editing modes are engineered to ease your most complex editing tasks.

If your work involves time-compression/expansion or fit/fill, an AST™ automatic tracking system lets you vary play speed continuously from -1 to +3X normal.

Picture bounce and blur are precluded by digital signal processing.

And a computer monitors the machine's operation and reports on status and trends. So you can optimize performance, schedule maintenance, and eliminate costly downtime.

We've Made No Compromises.

The VPR-300 is an exquisitely crafted, high end, no nonsense machine, and it's backed by the most professional service and support organizations in the industry.

Get All the Performance the Format Has to Offer.

The D2 Composite Digital format was developed by Ampex. So we had a head start when it came to developing a digital video tape that could consistently deliver outstanding video quality and reliable performance.

Designed specially for D2, our new cassettes use metal particle tape. So you get higher signal output, better SNR, and shorter wavelength response.

To help prevent dropouts, the cassette shells are molded in special anti-static plastics that reduce the attraction of dust. We combined state-of-the-art plastics technology with our patented low friction hub design to create debris-free precision hub-bearing surfaces. And clamshell door completely protects the tape outside the machine.

AMPEX CORP.

Video Tape Recorder

VPR-3 C-Format Video Tape Recorder Turbo (Real-Time) Animation

The VPR-3's speed and accuracy allows it to do animation in a play-speed, real-time relationship. Unlike stationary mode recording, the VPR-3 does not require the complex (and often picture-degrading) pre-processing of the video signal to rearrange the video frequencies before recording. The VPR-3's play-speed recording is purely a video edit. With an 18 frame pre-roll, 3 frame post-roll and a re-cue, the VPR-3 can accomplish a 6 frame animation sequence in only 1.6 seconds (required for 1 cell) plus only a tenth of a second longer to complete the remaining 5 frames.

True Auto-Assembly with Field Accuracy

The combination of a 20ms lock-up time, 500"/sec acceleration, and speed transitions comparable to disk devices allows a 30 second spot to be recued-to-play in < 2 seconds.

The VPR-3 brings to editing the super-fast speeds required for uninterrupted recording of source material. You can perform single-field edits from the front panel or from the serial port.

Edits will be dead-accurate because a built-in Sc/H circuit gives the VTR immediate comparison between the input and the off-tape signal phasing, thereby ensuring perfect frame edits.

When there is a mismatch between input and off-tape signals, the VPR-3's Sc/H phasing control allows the operator to apply an offset for correction. (And to make editing even easier, an indicator just above the Sc/H meter shows the operator that a wrong frame edit is being attempted).

The VPR-3's machine-to-machine editing capability from a single machine control panel eliminates the requirement for an expensive external edit controller in many facilities. The combination of the full-time synchronized transport and the SMPTE communication bus is the basis for this exclusive feature. Even the most complex split edits can be previewed, trimmed, shifted, performed and then reviewed using only the simple, single-function controls on the record VPR-3.

Zeus™ Video Processing

Integrated with the VPR-3, the Zeus Advanced Video Processor provides revolutionary improvements in the quality and production flexibility of videotape recording.

Production and post-production facilities will especially appreciate the superb video processing and greater creative video control capabilities of the Zeus. Its unique ability to extend practical multi-generation limits of Type C recording improves their product, and saves time and money.

Key Features of Zeus Processing

- No compromise 4Fsc, 9-bit digital system
- Drift and adjustment-free velocity compensation dramatically improves compensation accuracy and multi-generation video performance
- Exclusive frame averaging velocity compensator function reduces head impact error visibility
- Superior spatial-averaging dropout compensation
- Exclusive Multi-Gen Setup mode greatly improves multi-generation video performance
- Unique Decode mode allows replay of non-color framed edits with no picture shift
- Video time compression and expansion with no picture bounce or blur
- Full frame storage on command
- Comprehensive interface with VPR-3 menu control system
- Available full-function serial remote control panel

Multi-Gen Setup

Multi-Gen Setup is accomplished through a series of play-record-play-record recirculations through the VPR-3 and Zeus processor. From pre-recorded 1" generation reference material (i.e., color bars) the VPR-3/Zeus system generates and displays, in real-time, a sequence that quickly duplicates 10 tape generations. This 10-generation sequence is continuously repeated, so that errors are clearly displayed, and can be quickly corrected by proper system adjustment.

Multi-Gen Setup supports an increase in both the number of tape generations routinely used, and the quality of the finished video product.

Professional Audio Quality

The VPR-3's audio system provides phase compensated electronics to improve stereo broadcast performance, and automatic computer set-up of all record parameters by means of a built-in audio test oscillator, audio distortion, analyzer, and digital voltmeter. This allows quick optimization for different tape types, and three complete set-ups can be stored for immediate re-call.

Field-Accurate Automatic Scan Tracking (AST™) System

Taking a precision reference from the direct-coupled capstan tachometer, the VPR-3's AST system knows exact tape position under all conditions and applies the necessary correction factors to produce a stable, disturbance-free picture. In the time compression and expansion modes, this system allows speed variations as small as one second per hour (up to $\pm 15\%$) to be entered.

Field Rate Color-Framer

An integral part of the video signal system is a field rate color-framer which determines the precise parking position when the tape transport is stopped. This color-framer is designed to separate one field out of four in the NTSC system or one field out of eight in the PAL system. This permits the machine, even with its "instant" start capability to operate in a fully synchronous mode at all times.

Microprocessor-Based Control

The VPR-3 control system is based on dual Z80 microprocessors. One of these processors is responsible for system control and the second controls the various input/output functions. The dual RS-422A serial communications ports allow control interface of the VPR-3 to a variety of serial machine controllers, including the Ampex ACE series editors and the VRC-2.

Status-At-A-Glance™ Displays

As a further enhancement of the VPR-3's operational interface, its Status-At-A-Glance system provides a summary, one page, English language video character display of all critical VTR operational status parameters. A second page displays all major Zeus operational parameters. Either page may be easily selected for display on the VTR video monitor.

Accessories

Sync Channel

An option to permit all vertical sync information to be recorded according to the SMPTE/EBU Type C formats.

Four Channel Audio

This EBU option provides a fourth high quality audio channel in the track space normally allotted to the sync channel.

Mounting Configurations

The VPR-3 is available in a variety of physical configurations to suit individual facility requirements.

Video Tape Recorder

VPR-6 Type-C Video Tape Recorder

- All machine operational configuration from control panel
- Status-At-A-Glance display enhances human interface and speeds operation
- Full range variable play speeds (-1 to +3X play)
- Automatic Scan Tracking™ (AST) with True Frame is standard
- Zeus™ decode mode allows replay of non-color framed edits without picture shifts
- Multi-Gen setup and Zeus video processor dramatically improve multi-generation video performance
- Shuttle speeds approach 500 ips with viewable picture
- Gentle tape handling for reel sizes from spot to two hours
- Video and audio record confidence playback
- Optional sync channel
- Optional fourth audio channel (EBU systems)
- Extensive non-standard and fault condition detection and reporting system

The VPR-6 makes "stand-up" 2-machine editing simple. Built-in machine intelligence guides the operator through the editing process and alerts the operator to any conditions which will detract from the quality of the editing program. The editing features of the VPR-6 include:

- Pushbutton selection of insert or assemble modes
- Auto-Edit permits editing from preselected cues
- Edit optimize mode automatically rephases scanner tach to on-tape video signal for perfect interchange edits
- Pushbutton selection of entrance and exit edit points off tape
- Keypad entry of edit points and edit duration
- Pushbutton display of edit duration
- Auto tag feature transfers old exit point to new entrance point and recomputes duration
- "Split" button allows audio and video channels to be edited separately
- "XFR" button allows contents of any edit point register to be quickly transferred to another register
- Preview mode permits rehearsal of video and audio edits prior to edit recording
- "+/-" buttons permit edit point to be trimmed by any number of frames
- "Jog" buttons allow single frame jog in either direction for precise pinpointing of edit points
- Continuous diagnostic system warns of many nonstandard conditions which can affect edit, such as: "not color framed; excessive edit phase error; auto record—edit off; exit before enter; cue point not found; not cued"

Status-At-A-Glance

The Status-At-A-Glance display provides a simple 2-page English language video character display of all VPR-6 operational setup parameters, and a simple interactive menuing system that allows the operator to change setup parameters.

The Status-At-A-Glance feature also displays VPR-6 Servo, System and Machine fault messages as concise English language messages inserted into the VTR monitor video feed.

Multi-Gen Setup

Multi-Generation video performance degradation only significantly exhibits itself after it's too late to correct it. The VPR-6, when equipped with the Zeus Advanced Video Processor, provides an exclusive Multi-Gen Setup mode which helps eliminate operational setup errors—the major contributors to multi-generation performance degradation.

Superior Audio

The VPR-6 Audio System is designed to meet the needs of broadcasting, production and post-production environments. Features include:

- Full audio confidence on all longitudinal tracks
- Optional EBU fourth audio channel
- Dual channel stereo monitoring
- Adjustable azimuth alignment for stereo playback
- Excellent crosstalk performance
- Selectable peak or VU metering response
- Audio processing ports for interface with noise reduction or compression/expansion devices
- Integral speaker and headphone jack

Options and Accessories

A number of options and accessories are available to expand the operational capabilities of the VPR-6. These may be purchased with the machine or added after as operational needs change.

Sync Channel. Permits all vertical sync information to be recorded according to the SMPTE/EBU Type-C formats.

VPR-6

4-Channel Audio. Provides a fourth high quality audio channel in the track space normally allotted to the sync channel.

Time Code Generator/Reader and Character Display with Status-At-A-Glance. Adds longitudinal time code generation and reading, character display and Status-At-A-Glance capabilities to the VPR-6. Total control of these features is available at the control panel.

Vertical Interval Time Code. Adds VITC capabilities to the time code generator/reader and character display accessory.

Parallel Remote Interface. Provides comprehensive, 75-pin connector, parallel remote control pin—compatible with Ampex VPR-2Bs and VPR-80s.

Serial Remote Interface. Provides RS-422A compatible connection to the serial control bus of serial machine controllers such as Ampex ACE Editors and the VRC-2.

Diagnostic Probe. Standard diagnostics capability in the VPR-6, consisting of wake-up and background tests, can identify system malfunctions to assembly or subassembly level. The accessory diagnostic probe allows the maintenance engineer to diagnose all of the integrated circuits which are in communication with the microprocessor.

VRC-2. The VRC-2 is a flexible machine controller that uses RS-422A serial communications to remotely control a combination of up to four VTRs.

Mounting Configurations. The VPR-6 is available in a variety of physical configurations to suit individual facility requirements.

AMPEX CORP.**Video Tape Recorder****VPR-80 C-Format Video Tape Recorder****The VPR-80/TBC-6 Package**

The VPR-80 and its digital time base corrector, the TBC-6, were designed to make your production and editing easier and faster.

Automatic Scan Tracking™ (AST) is a standard feature on the VPR-80. The AST system insures tracking and allows you to vary playback speed from still frame through slow motion to 1½ times play speed — with no picture breakup and no need to adjust.

A complete editing package is standard, too. It's easy to understand, fast and simple to operate, and frame-accurate. It even lets you preview and trim your edits prior to recording.

The exclusive AST tracking system enables the VPR-80 to deliver broadcast quality pictures at any play speed — from stop through slow motion to 1½ times normal forward speed. By providing accurate auto tracking at all tape speeds, AST insures stable, perfect pictures. And, the AST system further improves the quality of your normal playback by automatically servoing the video head to the exact center of the video track.

Gentle Tape Handling, Even at 30X Play Speed

Whether you need two hours of recording and playback time, or just enough tape for a 30 sec. spot, the VPR-80's "intelligent," high-response servo system gently handles reels of any size from 11¾" down to the smallest, lightest spot reel.

Sophisticated Electronics Let You Work Fast and Efficiently

Dual microprocessors are the key to the VPR-80's power and operating simplicity. By dividing the workload, the VPR-80 can respond faster and more efficiently.

One microprocessor manages the VTR control system while the other is dedicated to all the servo subsystems. The result is accurate, dependable performance of all the machine's operations — and instantaneous response to your commands.

All this power has an additional benefit; it makes the VPR-80 simple to operate. Everything from setup to servicing can be done with a minimum of technical skill.

Power Failures Won't End Your Day

If the power fails, a backup battery and voltage regulator system continue to power your machine's memory. Tape time, control panel setup and edit functions are all held until power is restored.

Sophisticated Editing

Sophisticated editing is simple, fast and frame accurate. And, built-in machine intelligence helps guide you through the process.

- Insert and Assemble can be selected by pushbutton
- Auto-Edit permits automatic editing from preselected cues
- Entry and Exit edit points can be selected by pushbutton
- Your edits can be trimmed, frame by frame, on the keypad or by jogging the tape
- Both audio and video edits can be previewed prior to final recording
- A transfer feature automatically sets the next scene's edit entrance point

"No-Fault" Operation Standard on this Machine

The VPR-80 advises you of any system faults or non-standard conditions that could affect machine performance. Status verification and diagnostic routines are performed automatically when the machine is turned on.

The VPR-80 checks for power failure in any of the subsystems, scanner stall, over-heating or absence of control track. It even lets you know when an editing procedure is incorrect — or when there's no video input.

If a fault or non-standard condition is detected, you're immediately alerted. And, the VPR-80 pinpoints the problem and indicates it, specifically, on the control panel display. If the problem could cause tape damage, the machine automatically shuts down.

**VPR-80****Audio**

There are three fully independent audio channels on the VPR-80. Channels 1 and 2 are optimized for use as a stereo pair, and channel 3 has wideband capability for time code.

Individual level meters are standard, and separate level controls are provided for audio record and playback.

Flexible System Interface

A simple five function remote control interface lets you run your VPR-80 from up to 100' away. For 2-machine editing, there's a single, plug-in connector. There's even a monitor jack that lets you keep an eye on critical video and control waveforms. And, parallel remote and serial remote PWAs are optionally available to give your VPR-80 even more flexibility.

The VPR-80 can also be teamed with our ADO™ effects, PictureMaker 3D animation, ACE™ and ACE Micro editors and Ampex switchers in a complete post-production editing system.

In order to provide consistent performance over a wide range of time base error inputs, we've packaged the VPR-80 with the TBC-6 digital time base corrector.

The 28-line correction window in the TBC-6 will handle the wildest gyroscopic errors you can throw at it. And in shuttle, its circuitry provides viewable pictures at 30X play speed, in forward and reverse.

Full color dropout compensation and velocity error correction are built in. And, the SCH phased sync generator includes fully adjustable horizontal and vertical blanking circuitry.

You're in full control of composite video signal adjustments on the TBC-6, with independent video and chroma gain controls, as well as chroma gain controls, as well as chroma phase, subcarrier phase, horizontal phase and black level controls. And primary controls are all remotable via an optional TBC-6 remote control panel.

You can even time share your TBC-6. It's designed to operate with heterodyne recorders, so you get maximum service out of a single piece of equipment.

For applications that don't require the broadcast quality variable speed capabilities of the TBC-6, the low cost TBC-40 is available.

Like the TBC-6, the TBC-40 will time share with other VTRs. It provides all the video signal control of the TBC-6 and, if ever needed, can be easily upgraded to TBC-6 performance specs.

AMPEX CORP.

Digital Effects Systems

ADO-1000/2000/3000 Digital Effects Systems

Common Features and Effects

- A/B video inputs • Continuously variable compression and expansion • Variable aspect ratio
- Horizontal and vertical mirrors • GPI control input • Independent picture and key cropping
- Highly adjustable mosaics • Posterization and solarization • Luma and chroma reversal • Picture blur • Field or frame freeze • Adjustable soft key border edges • Multi-panel, multi-channel software • Logical keyframe programming
- Straightforward numerical programming • Comprehensive CRT display • Channel identification • Global motion control • Auto cube mode • Selectable motion types
- Forward/reverse run modes • Alphanumeric effect storage • Disk copy function • Serial editor interface • Frame-based processing for highest possible performance (ADO-2000 and 3000 only) • 30 on-line effects with one or two button execution (ADO-1000 and 2000 only) • Serial switcher interface (ADO-1000 and 2000 only)
- Color border generator (ADO-2000 and 3000 only) • Full-frame manipulation of frozen video (ADO-1000 only)

All three ADO systems share many of the same basic features, but there are also some significant differences.

The right ADO model depends on your application. And what level of signal performance best matches your system.

Do you plan on using your ADO system live, on-air?

Do you need a 3D system with rotation and perspective? Or will a 2D model meet your needs?

The ADO-1000 is designed for broadcast and production facilities that want award-winning effects—on a budget.

By combining field-based processing for moving video with frame-based processing for frozen images, we were able to keep the ADO-1000 system affordable. And since it employs all the other unique signal processing techniques of the 2000 and 3000, its picture is superior to systems costing much more.

Even the basic ADO-1000 model has a wide range of standard features. Since it stores 30 pre-programmed effects for instant recall, it's ideal for on-air use. And with upgrades like 3D rotation and perspective, Digi-Trail and Digi-Matte, it can be a great production tool.

The ADO-2000 combines frame-based processing with the unique ADO architecture and filtering to deliver the finest picture in the industry.

The 2000 model provides the same superior picture quality the ADO-3000 system provides.

With both the ADO-1000 and 2000 systems operators can incorporate zooms, flips and tumbles into live programming with a single key stroke.

There are also some features on-air producers will really appreciate.

ADO-1000

ADO-2000

Like the ADO-1000 system, the 2000 stores 30 on-line pre-programmed effects for instant recall.

Operators can build their own effects, then store them on inexpensive floppy disks for use on-air.

The ADO Combiner digitally combines signals from multiple channels.

An option for ADO-1000 and 2000 models, the Combiner is available for either two or four-channel systems. It digitally combines channels, then routes a single output back to your switcher, so only one keyer is used.

Channel priorities can be set either manually, or automatically positioned properly in 3D space.

The ADO-3000: combines superior features and picture quality with optional capability and effects that no other system can match.

The Concentrator: digitally combines channels for the ADO-3000 system.

A Concentrator digitally combines and prioritizes multiple channels like the ADO Combiner, but with some important additional features.

Transparency/opacity of each channel is independently variable while a programmable light source adds an illusion of depth to your effects.

With its ability to do unity gain linear keys and digital dissolves, the Concentrator functions like a digital switcher—providing super clean keys, especially with graphics.

Infinity™: it lets you pass frames, planes or objects through each other.

And as these planes and objects are flown through space, rotation and other effects can be simultaneously incorporated.

Swirls, trails and sparkles—with or without decay—are also included in the package.

By keeping track of all pixels in X, Y and Z space, the Infinity option is able to do effects that previously could only be done on film—optical effects that draw production customers, and give your station a sophisticated on-air “look”.

AMPEX CORP.**Digital Effects Systems Accessories****ADO™ 1000, 2000 and 3000 Cont'd
Options and Accessories****ADO Combiner**

The Combiner is a digital mixer/keyer capable of combining the outputs of up to four channels of ADO digital special effects. Digital video and key information from each channel are routed through the Combiner, where the operator has complete control over channel priorities. A single digitally combined image is directed from the Combiner back to each of the ADO channels for final composite conversion and output. No external patching, and no system timing adjustments are required. Because separate signals from up to four channels are combined into a single video and key output, only one input into a switcher—and only one keyer in the switcher—is required for even the most complex multi-channel effects. And because all mixing and keying is done in the digital domain, the results are clean, precise, and endlessly repeatable.

The Combiner is an option for ADO 1000 and 2000.

**ADO Concentrator with Infinity™
Multi-Channel Effects Package for ADO-3000**

The Concentrator is a digital mixer/keyer capable of combining the outputs of up to four channels of ADO digital special effects. Digital video and key information from each channel is routed through the Concentrator, where the operator has complete control over signal mixing and channel priorities. The Infinity™ effects package included as a standard feature of the Concentrator even allows you to pass planes, frames, and solids through each other, while the full range of other ADO effects is simultaneously incorporated into each channel's separate image. A single digitally combined image, including any of the unique Infinity effects that may have been added, is directed from the Concentrator to each of the ADO channels for final composite conversion. No external patching, and no system timing adjustments are required. With the ADO Concentrator, separate video and key signals from up to four channels are combined into a single video and key output. That means only one input into a switcher—and only one keyer in the switcher—is required for even the most complex multi-channel effects.

ADO Digital Interface

The Digital Interface is an optional accessory which expands the system flexibility of new and existing ADO units by providing SMPTE/EBU standard component digital input/output ports. With the Digital Interface, any ADO system can be directly connected with other CCIR-601 equipment. Examples are graphics production and storage devices, and component digital tape transports. The Digital Interface allows the user to take full advantage of the superb ADO effects capabilities while maintaining degradation-free signal interchange.

ADO Digi-Trail™ Target Framestore

The Digi-Trail Target Framestore is an optional hardware and software kit which enhances the creative flexibility of an ADO 1000 or 2000 system. With it, a user can create various types of trails and sparkles behind moving images, or "smear" motion within live video. The Digi-Trail kit also provides a matte generator for internally keying ADO images over colored backgrounds. Trails and sparkles can even be different colors than ADO borders. Its unique composite mode gives the user separate access to the high-quality internal framestore. With composite mode, ADO images can be internally keyed over stored backgrounds, and multi-level graphics can be easily built using the unmatched positioning capabilities of the ADO system.

**ADO DigiMatte™ Key Signal Effects
Processor for ADO 1000, 2000 and 3000**

The DigiMatte option provides separate channel of dedicated processing specifically for black and white key signals. The key input fed to an ADO system is simultaneously manipulated through three dimensional space in exactly the same way as the video input. When they're both fed back to a switcher or to a Combiner/Concentrator the DigiMatte key output and video output are precisely aligned for keying.

**Digital Interface****Combiner**

With its full 8-bit resolution, DigiMatte processing can be used to manipulate the detailed key outputs of paint systems or the soft-edged signals from specialized keyers like Ampex Spectrakey™ or an Ultimatte system. Such faithful key reproduction is especially important to achieving quality results from a linear keyer. Key edges can be softened for more natural looking effects. And position can be controlled with a resolution of four nanoseconds. One major feature of the DigiMatte processor is its ability to handle out-of-time inputs. Timing differences usually exist between video sources and key sources. Even in a two channel system, every time the second channel is used for key processing, it must be retimed. And this can be time-consuming. With the DigiMatte processor, re-timing of the key or video sources is eliminated, giving you more time to concentrate on your work.

AVC/ADO Integration System

The AVC/ADO Integration System consists of two separate elements which tie the Ampex AVC™ Standard and Century Series switchers together with the ADO digital effects system. The first element is a 38.4K baud communication link which unites the powerful video handling capabilities of AVC Series video switchers with the unequalled effects capabilities of the ADO special effects system. This communication link allows full integration and control of effects generated on an ADO system from the control console of the AVC Switcher. In essence, the ADO unit becomes an integral part of the wipe pattern system in the AVC switcher. The second element is a mechanical integration package which places the AVC and ADO control panels together in a single compact and efficient layout. Provisions are included for mounting AVC options such as the AVC Audio System, AVC Aux Bus Controllers, and the AVC X-STAR Panel Memory System, so all of your video signal manipulation controls are visually united, at the hands of a single operator. The AVC/ADO Integration System gives you the best of both worlds for on-air and live-to-tape productions—the unequalled power of the AVC Series switcher and spectacular ADO effects. Its design allows even the most dazzling effects to be performed by a single operator with a simple button push. In fast-paced production environments, complex effects can be performed accurately day after day, giving your operations the polished, professional look you would expect from some of the finest video tools available.

AVC Vista™ Series Compact Switchers**Standard Features**

• 10 or 18 inputs including color, black and color background • Powerful mix/effects unit • Downstream mixer keyer with master fade-to-black • Flip-flop operating format • Integrated switcher status display • 5 independent matte generators • 4 auxiliary buses (2 with full re-entries) • Available in NTSC, PAL or PAL-M video standards • Powerful preview system will even preview patterns

Keying

• Three linear keyers capable of Luminance, RGB Chroma, Composite Chroma and ISO keys • Key memory system stores setups for each source, recalls to any keyer • Unikey™ additional DSK external linear gain key • Key masking system • Optional Spectrakey™ advanced chroma key system • Optional flexible borders: 4 shadow styles and border-modify

Patterns

• 32 patterns including rotary wipes and random pixel dissolve • Full screen adjustable borders • 4 pattern border types (hard, soft, soft halo and half halo) • Border width can track pattern size • Pattern can be positioned with auto-panning capability

Microprocessor Features

• Panel memory with event transition and automatic sequencing • RS-232, RS-422 and GPI control ports • AVC audio system compatibility • User-programmable switcher configuration

Options

• RGB chroma keyer/ISO key input matrix • Analog key border generator • Digital effects interface • AVC audio system • Assignable auxiliary bus controllers • Extended panel memory system

AVC Vista Series switchers are available in ten or eighteen input configurations (including black and color background).

The mix/effects system is capable of virtually any combination of transitions involving two keys and two backgrounds. Both keyers can do every type of key — they each have full length, independent source buses as well as operator-assignable automatic isolated hole cutting. Keys may appear over the A or B bus, both buses, or in any combination. And key transitions are selectable at any time as part of — or independent of — the transition system.

A full function downstream system provides two additional levels of keying (one full capability, one ISO only) as well as mix and fade capabilities.

A versatile preview system quickly and easily monitors the video available at any point in the switcher, and even allows pattern previews without tying up the M/E.

The Vista is ideal for small production facilities, editing suites, mobile applications, or any broadcast or post production situation where space is at a premium. The console measures 12 1/4" tall, while the electronics require only 14" of rack space. Since communications between the two are serial, a simple dual twisted-pair cable is all it takes.

A unique electro-luminescent display shows operating status of transition times, memory set-ups, diagnostics and other essential operational information.

Vista will store and recall 24 switcher set-ups, as well as eight different sequences involving any combination of the 24. Sequences can call other sequences, loop, or be paused at any time.

You can design any transition between set-ups, then automatically execute the sequence linearly, or in a variety of non-linear transitions.

Auto transitions can be specified in seconds, tenths of seconds, or frames. And an optional extended memory system lets you save it all on disk.

The Spectrakey chroma keyer lets you chroma key from any color, as well as smoke, glass and transparent objects.

The Spectrakey system is an exceptionally high quality RGB system that uses a patented chroma-nulling process. Its low noise edges make chroma keyed scenes difficult to distinguish from the real thing.

The Spectrakey system is fully integrated into the switcher, so it eliminates the cumbersome problems of external timing compensation or signal routing, and all Spectrakey setups can be stored in the Vista switcher's memory.

The Vista switcher's virtually transparent digital effects interface provides you full-scale creative potential.

A unique digital effects loop has been designed into Vista that allows Ampex ADO™ or other digital effects to be inserted into the video path of the key or bus row, without the need for auxiliary switching. ADO effects can be selected and run from the Vista control panel, saving both time and space.

**Input Characteristics**

Primary Input: Loopthrough bridging: 1.0V p-p composite video
RGB Chroma Key Inputs: 0.7V p-p video with or without composite sync
Reference Video Input: Composite sync and subcarrier loop through burst flag (PAL only) loopthrough
Extended Inputs: Aux. 1, Aux. 2, Key 1, Key 2, ADO loop Ch. 1, ADO loop Ch. 2, all loopthrough
Other Inputs: UNIKEY key in and video in, external key mask in, ext H and V modulation in, ISO 1 through 16, all non-looping
Return Loss: > 40dB at subcarrier with external 75 ohms termination

Output Characteristics

Output Impedance: 75 ohms all outputs
Outputs: Line out-2 outputs, preview monitor, M/E monitor-1 output, auxiliary buses-2 outputs each, four buses
Return Loss: ≥ 37dB at subcarrier frequency

ADO Loop

Outputs: Video and key channel 1, video and key channel 2
Inputs: Video and key channel 1, video and key channel 2

Video Performance

Frequency Response: ± 0.2dB; 100kHz — 5MHz + 0.2
 -0.5dB; 5MHz — 8.0MHz
 Smooth rolloff above 8.0MHz

Line Tilt (IEEE Window Signal): ≤ 1.0%
Field Tilt (IEEE Window Signal): ≤ 1.0%
Chrominance/Luminance Gain Inequality: < 1.0dB
Chrominance/Luminance Delay Inequality (12.5T Modulated Pulse): < 25 ns. max.

Differential Gain: ± 1.5%, 10-90% APL
Differential Phase: ± 1.5°, 10-90% APL
Dynamic Gain: ± 1.0%, 10-90% APL
Signal/Noise Ratio: > 60dB p-p video [1.0V reference to RMS noise (unweighted), 10kHz to 5MHz]

Crosstalk: ≥ 55dB at subcarrier frequency
Path Length Accuracy: 1.5° at subcarrier frequency
Video Switch: Approximately 1μs during vertical interval
K Factor (2T Pulse): ≤ 1.0%

Crossfade Gain Linearity: ± 0.5% luminance, ± 1.5% chrominance
Crossfade Phase Linearity: ± 1.5°

Power Input: 100/110/220/240VAC
 50Hz or 60Hz
Power Consumption: < 600W
Tally Relay: 1 form C 24V, 1A contacts

AVC™ Series Video Production Switchers

With an AVC Series switcher, you can perform complex transitions involving two video backgrounds and three keys of any type, all on a single M/E. AVC Series switchers give you three unrestricted, full capability keyers per M/E. Up to 32 video inputs, plus two external inputs, can be key sources. Each keyer can introduce any type of key: RGB chroma key, character generator and digital effects keys, luminance keys, and as an option, encoded chroma keys. You can mix from one RGB chroma key to another RGB chroma key while adding a title key. Or wipe from one chroma key scene to another behind a third chroma key scene—all on one M/E bank.

Key Memory System

After you've set up and adjusted your key sources, you can store your setup in "Key Memory." Once stored, that key can be called up instantly, and appear perfectly adjusted on any other keyer in the switcher—regardless of the keyer location. Key Memory can hold up to four key setups for each key source. Since every primary input to the AVC can be a key source, Key Memory can store up to 128 key setups on a 32-input switcher.

Pattern System

AVC Series switchers come with 164 standard wipe patterns, including rotating and matrix wipes. Independent pattern systems are dedicated to each M/E. Pattern borders can be either hard or soft, or change from hard on one side to soft on the other. An auto pan feature can even automatically center any positioned wipe for you as it grows to fill the screen, for unique, swooping 3-dimensional effects. Borders are exceptionally clean, even when the pattern is made very small. Borders can also be made exceptionally wide, even filling the screen. This can give the appearance of two wipes with a single fader movement. Plus, all patterns except matrix wipes can be positioned and rotated. With Ampex pattern modifiers, you can change border hue over time, create multi-hued or rainbow borders, rotate, spin or oscillate patterns, and change border width proportionately to pattern size.

Independent Matte Generators

While other switchers combine matte functions in just a few matte generators, the AVC has separate, independent matte generators for each matte function. That means you'll never be locked into one matte color because it is the complement of another color already in use. You can have any color, on any matte function, at any time. To further ease your workload, the AVC switcher's microprocessor monitors all matte generator outputs and automatically prevents colors from upsetting transmitters and VTRs.

Power Backup

All AVC Series switchers are supplied standard with dual power supplies in both the signal system and control console. These power supplies are redundant, so that if one should fail, the other will automatically assume the load without so much as a "glitch" in your production. The AVC Series switchers come with backup batteries in both the signal system power supplies. These batteries hold memory registers and current switcher settings for about eight hours, so you'll never have to start from scratch if power is interrupted during production.

The many options available for the AVC Series switchers extend its already powerful capabilities and make operation even simpler.

Panel STAR™ Memory

Panel STAR Memory is a panel-oriented memory system which can store and recall up to eight complete switcher setups. With the Panel STAR option, you can swap or transfer setups from one M/E to another. When complex production requirements and heavy time pressures are involved, this can be an invaluable time and frustration saver. Panel STAR Memory will also make smooth interpolations of size and position between the setups you've stored in memory. You can transition between setups involving up to three M/Es and the downstream keyer individually, simultaneously or in any combination, at the same or at different rates. This kind of powerful control makes any type of production faster, easier and more flexible.

X-STAR™ Memory

X-STAR Memory is a dual micro-floppy disk system which can store 400 complete switcher setups on one disk, greatly extending the power of Panel STAR Memory. With two disks in operation, over 800 setups can be stored and available for immediate recall. Dual drives mean that disks can be checked, edited, formatted and copied in-house using standard 3 1/2" disks. X-STAR can also store the contents of the AVC Key Memory, for even greater production simplicity. Worst-case access to any AVC X-STAR setup is about ten seconds, with typical access requiring less than five seconds.

ADO™ 2000 System Interface

Designed primarily for live, on-air use, the ADO interface lets you select, trim and run ADO effects from the console as though the ADO were an integral part of the AVC pattern system. The switcher can control up to four ADO channels at once. It even allows you to use the full AVC pattern border capability around ADO pictures. A special "Quad Bus" option is available to route signals—including M/E outputs—to the ADO inputs. The Quad Bus and ADO interface let you build up extremely complex effects that can then be controlled quickly and easily by a single button push at the AVC console. Since the whole AVC/ADO setup can be stored in Panel STAR Memory, the AVC switcher will set up a three M/E effect involving ADO keys and moves, select inputs to the ADO, and set up all other switcher parameters and effects. The ADO moves can then be done using AVC faders or auto-transitions, or it can be part of a complex transition of the entire AVC from one memory to another.

Spectrakey™ Chroma Key System

Spectrakey is an exceptionally high quality RGB chroma key system that uses a patented chroma-nulling process. It lets you key from any color. Spectrakey is fully integrated into the AVC system, so it eliminates the cumbersome problems of external timing compensation or signal routing, and all Spectrakey setups can be stored in Key Memory. The Spectrakey system's low gain edges and patented techniques make chroma key scenes that are difficult to distinguish from real scenes. Chroma keys involving smoke, glass and other transparent objects present no problems for Spectrakey.

Analog Key Border Generator and Encoded Chroma Keyers

This option gives you a smooth, high quality analog key border generator capable of making borders or drop shadows with any luminance value, colored outlines and, on effects keyers, drop shadows which can be varied from zero up to 14 lines deep. Key insert video can be decayed and delayed up to 14 lines for very dramatic effects from even simple graphics. Each key border generator option also includes an encoded chroma keyer. The encoded chroma key portion is fully integrated and fully timed in the AVC. No external rack units or timing devices are required.

Switcher Status Display Output

Every parameter of AVC switcher status can be displayed in easy-to-read bar graphs with this option. Fader status, direction and travel are shown along with pattern modifier menus, error and operating messages. A switch in the signal system converts the status output to a diagnostic display output to help with maintenance and troubleshooting.

Clock/Timer/Safe Area Display

This option is a valuable aid for both live and post production. It provides up to two Clock/Timer displays, and a safe title display keyed over the preview monitor. The Clock/Timer displays can be made to count up or down from any preset time, manually or automatically. The Safe Area display shows SMPTE Safe Title and Safe Action areas (Safe Title only in PAL), plus centering and alignment cursors.

Auxiliary Buses

All AVC Series switchers can accommodate up to 16 auxiliary buses. Auxiliary buses can be video-only, audio-follow-video or audio breakaway. Aux buses can select from all primary switcher inputs plus all M/Es and Program output (fully timed). Numerous control systems are available.

AMPEX CORP.**Computerized Editing Systems****ACE™ Computerized Editing Systems**

Because the ACE Editor is both software-based and modular, it is a superior long-term investment—for both the editor and the engineer. Software enhancements improve the system's capabilities without making the hardware obsolete. Modularity allows you to start out with exactly the system you need, and add capability as your business grows.

A Family of Editors Lets You Choose the Best System for Your Application

From a very affordable interformat system, all the way to a 16-device control system with 6000-line edit list capacity, the ACE Computerized Editing family consists of powerful editors—designed to fit almost any of your editing requirements.

A Systems Approach to Post-Production

When an ACE Editor is the centerpiece of a system in which the major components are Ampex products, you're in charge of a Creative Command Center™. Within the Creative Command Center, ACE has superb control of Ampex switchers, VTRs, Ampex Zeus™ advanced video processors, and even ADO™ special effects systems. RS-422 serial communications and compatible software throughout make machine interfacing a smooth road.

The Creative Command Center offers enough flexibility to satisfy any post-production requirement. Select your switcher from the Ampex 4100 Series, or from the Ampex AVC Series, including the powerful AVC Century or the compact Vista™ switchers. Choose from Ampex's complete line of Type C VTRs. For small format work, Ampex offers a selection of Betacam and Betacam SP™ VCRs. Choose from three versions of ADO systems for digital effects. ACE Editors control them all—via the speed and efficiency of serial communications.

Of course, ACE interfaces with products from other manufacturers, too. RS-422 compatibility, general purpose interface (GPI), superb disk input/output capabilities, and ACE's Trigger Screens help make ACE the right choice for any equipment configuration.

Dedicated Keyboard: Soft Key Superiority

The ACE system offers a choice of human interfaces. The first is the ACE dedicated keyboard, which features a logical, uncluttered layout that positions clusters of keys according to function and frequency of use. It's easy to learn and easy to master.

The true power of the ACE Editor is contained within eight soft keys, grouped at the top of the keyboard. These soft keys provide direct access to the powerful software features ACE Editors offer.

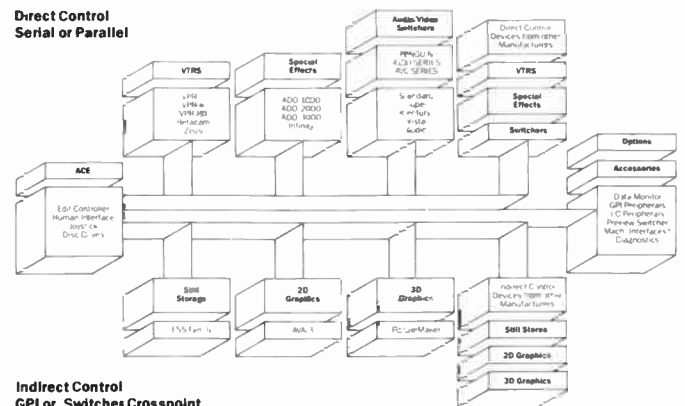

The Second Interface Choice is TouchScreen: Silent Lightning

The TouchScreen: silent, efficient, powerful, and extremely rapid. Instead of keyboarding your inputs, you merely point your finger at an entry on the menu monitor. It provides the editor all the power and features of a keyboard, but allows greater operating comfort and speed.

TouchScreen data is displayed "double spaced," making it easy to move quickly from one command to another. Whenever numbers are required, a keypad display appears. It is arranged much like a standard 10-key array on a keyboard, but with many extra custom features for easy numerical entry, trimming, and storage.

ACE Software: The Power Behind the Screen

One of the unique features of ACE software is the ability to configure menus to an editor's preference. You can display as little or as much data as desired on your Edit Construction List (ECL) or Edit Decision List (EDL). Simplify the menu for a "cuts-only" session, or add important switcher data for a challenging multiple M/E session. ACE does not impose its menus on the user. It lets you custom tailor the display to match your creativity and style.

**ACE****Direct Control
Serial or Parallel****Indirect Control
GPI or Switches Crosspoint****ACE Triggers: The Power of the Pulse****ACE Provides Four Unique Trigger Types: EIPI, Multiple M/E, Zeus, and Panel Memory**

All triggers are indented from the program line for an easy visual cue, with concise titles reading the four information columns. Triggers are fully listed in the EDL—easy to read and easy to modify.

GPIs can be triggered at entry plus, entry minus, or record absolute, with variable pulse durations easily set.

Joystick Control

The multi-function joystick is standard with many ACE models, and complements both TouchScreen and keyboard operation. This is no ordinary joystick, but rather a key element in the synergy of a Creative Command Center. The Joystick not only controls transports, but also controls the EDL and the switcher fader arm.

AMPEX CORP.**Computerized Editing Systems****ACE™ Computerized Editing Systems Cont'd****ACE 200 Editor**

ACE 200 is an NTSC, PAL, and PAL-M compatible distributed processing electronic editor which controls up to 20 GPIs and 16 devices. These devices include VTRs, ATRs, Ampex Zeus advanced video processors, Ampex switchers, ADO special effects systems, as well as equipment from other manufacturers.

ACE Micro Editor

The ACE Micro Editor is an NTSC, PAL, and PAL-M compatible distributed processing electronic editor which provides full computing power and editing versatility at an affordable price. ACE Micro Editors have excellent functionality in broadcast, industrial, interformat, and second suite applications. ACE Micro controls one video switcher, and up to 4 GPIs and 4 VTRs, including type C, 3/4", Betacam and Betacam SP. A printer and one human interface are also supported.

Common Features and Functions**System Startup/Initialization**

- Direct access to initialization parameters • Event number 1-9999
- Individual reel number range 1-9999 • Preroll, Postroll, reaction times • Event out-time in EDL • Event duration in EDL • Channel assignment • Separate audio/video crosspoint assignment • Program duration • Set T.C. generator • PAL pairing indicators • PAL auto 4-field correction, auto 8-field correction • PAL 4-field checking • Save/recall system configuration on disk, multiple hardware files • Save/recall initialization configuration on disk, multiple user files • Save/recall EDL on disk, multiple EDL files, EDL file names • Save/recall programmable key contents on disk, multiple programmable key files

Device/Source/Channel Selection

- 16 total transport (ACE-200) • 4 total transports (ACE Micro) • "R" VTR/ATR • "A" through "O" source VTR/ATRs (ACE 200) • "A" through "C" source VTR/ATRs • Software-assignable AUX source crosspoints • AUX 1, AUX 2, AUX 3 • Black, bars, color • Audio channels 1, 2, 3 and 4

Motion Controls-Keyboards

- Rewind • Fast forward • Jog forward • Jog reverse • Play • Stop • Allstop • Cue • Search (entry-time) • Search (exit-time) • Mark-in, mark-out • Slo-mo set-in/Edit (Single-speed, forward or reverse, with auto shrink/stretch listed in EDL)

Remote Motion Controls/Joystick Controls

- Remote control standard • Rewind • Fast forward • Variable shuttle • Play • Variable play • Jog forward • Jog reverse • Stop • Search (entry-time) • Search (exit-time) • Joystick Slo-mo learn (Single-speed, forward or reverse, editable, listed in EDL) • Mark-in, mark-out • Machine select from Joystick • Joyscroll ECL and EDL

Edit Transition Functions

- Cut, dissolve, wipe, key • Split cut-in, split cut out • Split audio, 1, 2, 3 and 4 • Split cut, mix in • Split cut, mix out • Switcher preview mode (preview dissolve, wipe, key, ADO from joystick—effect and duration) • Delayed effects (dissolve, wipe, key) • Key in (dissolve/cut) • Key out (dissolve/cut) • Wipe keys • Enhanced multiple M/E control from keyboard

Time Code Functions

- 525 full and drop frame • 625 full frame • Set in/set out • Set duration • Trim in/trim out • Trim duration • Undo function • Mark in/mark out • Transfer sets/trims/durations • Tagging (match frame calculations—source tag, reel tag, EDL tag) • Auto set-in of matched in-time • "Pick/put" time code transfer from EDL to ECL • "Pick/Put" copy event from EDL to ECL • Recall last event • Fill mode • Time code storage registers • Jam sync

Switcher Effects

- Switcher preview mode (preview dissolve, wipe, key, ADO from joystick—effect and duration) • Partial effects, set-in, joystick mark-in (dissolve, wipe, key, ADO) with Ampex AVC, Century, Vista, 4100, and Penguin switchers • ADO/DVE control from keyboard • Switcher memory triggers, full EDL listing • Full multiple M/E control (AVC and Century series switchers only) • Enhanced switcher breakaway modes

General Purpose Interface (GPI)/Triggers

- GPI pulse • 4 GPI (standard) • 20 GPI maximum (4 standard plus two 8-closure GPI boards ACE-200) • 32 GPI triggers per event • Single GPI, multiple pulse per edit • AVC series (Standard, Super, Century) multiple M/E triggers • AVC series (Standard, Super, Century) panel memory triggers • GVG 300 E-mem triggers • Full trigger EDL listing (GPI, Multiple M/E, Panel Memory, E-mem)

Perform Edit/Preview Edit Functions

- Frame accuracy with time code • Time code or tape position editing • Multiple record VTRs supported • Insert or assembly • Open ended edits • Replay • Multi-tasking • VVV, VVB, VBV • VV entrance only, exit only • Effect only preview (switcher preview mode) • Multiple VTR sync roll

Filing System

- 4 distinct filing areas • Operator files—system initialization, times, menu configuration • Hardware files—ILC chan., transport configuration, Aux. crosspts. • EDL files • Macro key files • Multiple files per disk in each of the 4 filing areas • User-definable filenames

List Management

- 6000 line EDL (ACE-200) • 300 line EDL (Ace Micro) • Record start time • Modify (re-edit) • Insert, Append, Delete • Ripple, Slide • Copy, Move • Renumber • Clean tails • Sort by record entry • Sort by event number • Set record indicator, clear record indicator • Scroll EDL • User configuration display • EDL logging (write to disk after each edit) • Read in/write out CMX 340x EDL format

Auto Assembly

- Sequential assembly • Checkerboard assembly • Continuous R-VTR roll capability • Lookahead A-mode • Lookahead B-mode • Enable events, disable events • Preview assembly • Resume assembly • Replay assembly • Prompt for reel change

Learn (Macro) Keys

- 4 learn keys on-line • 100 keystrokes per learn key • 300 total keystrokes between the 4 on-line learn keys • Learn keys saved on disk • Changing of learn keys supported • Recursive learn keys supported • Learn key pause with manual "continue" • Learn key titles

Power

- 90-130VAC, 200-265VAC, 50-60Hz

Communications

- RS-422 serial control to all interfaces, 38.4k Baud • RS-232C serial control to a printer and paper tape punch, adjustable baud rate

Human Interfaces/Options

- 15" touchscreen (Ace-200) • Dedicated keyboard • Joystick control unit standard • 15" data monitor • TouchScreen option (ACE Micro) • Integral comments keyboard standard with keyboard or TouchScreen • Aux. standalone comments keyboard optional*

Edit Controller (Standard) ACE-200

- 16-card chassis • LSI 11/73 CPU • Timing generator board • Power line monitor • Phase detector board (multi-standard) • 2M byte RAM • Character generator board • Printer/4-closure GPI board • Extender board

Hard Disk System (Standard) ACE-200

- 8" floppy disk (single) • 20M byte Winchester • Hard disk cable assembly

Edit Controller (Standard) ACE Micro

- Card chassis with Q-bus • LSI 11/23 CPU • Timeline ILC (3 standard) • Dual 8" disk drive • Phase detector board • 256K RAM • Character generator board • Disk I/O board • Printer/4-closure GPI board

* Available upon release

ACE-25 Computerized Editing System

ACE-25 is an NTSC, PAL, and PAL-M computer-based editor, which controls up to 4 VTRs (3 source and 1 record), and 3 GPIs. ACE-25 is a modular editing system; the standard chassis provides slots for optional internal switchers, 1 audio, 1 video.

Standard Features

- 80286 CPU • One (1) Megabyte of on-board RAM • 1000 line SMPTE EDL, battery-backed • Dedicated keyboard with multi-function rotary knob • Two (2) 3.5" disk drives • Floppy disk controller • Monochrome Display Adaptor (MDA), high resolution • 8-channel Intelligent Line Controller (ILC) • Color framer with GPI • Extender board • Internal audio and video switcher capability • Four (4) GPI output ports • On-screen VU meters and EQ bar-graphs with internal audio switcher • Auto-assembly and list management

Functions**System Startup/Initialization**

- Direct access to initialization parameters • Edit number 1-9999 • Individual reel number range 1-9999 • Preroll, postroll • Reaction times • Edit out-time in EDL • Program duration • PAL and PAL-M pairing indicators • PAL and PAL-M auto 8-field, 4-field, 2-field correction • PAL and PAL-M 8-field, 4-field, 2-field checking • NTSC auto 2-field correction • NTSC 2-field checking • Color frame learn • Save/recall system configuration on disk • Save/recall EDL on disk, multiple files, file names • Auto clean tail—on/off • Auto sort—on/off

Device/Source/Channel Selection

- Four (4) total transports • "R" VTR • "A" through "C" source VTRs • 1 "spare" VTR port • Software-assignable audio/video cross-points • AUX 1, AUX 2, AUX 3, black • Audio channels 1 and 2

Motion Controls

- Rotary knob standard • Variable shuttle (rotary knob) • Jog forward, jog reverse (rotary knob) • Variable play (rotary knob) • Play • Rewind, fast forward • Stop, allstop • Cue, search entry, search exit • Mark-in, mark-out • Slo-mo set-in/edit (single-speed, fwd. or rev.) • "All" button controls all txpts, any function • Manual txpt control capability during preview and edit pass

Edit Transition Functions

- Cut, dissolve, wipe, split, key (with ext. video switchers) • Cut, dissolve, key, split (with int. video switchers) • Cut, dissolve, split (with int. audio switcher) • Split video • Split audio 1 and 2 • Split cut in, split cut out • Split mix in, mix out • Split cut, split mix • Delayed effects • Key cut in, cut out • Key mix in, mix out • Key mix in and mix out (single edit) • Downstream key effects • Downstream fade to black (with int. video switchers) • Downstream fade to quiet (with int. audio switcher) • Wipe keys (with ext. video switchers) • Switcher preview mode (preview dissolve, wipe, key from rotary knob—effect and duration) • Partial effects, set-in, rotary-knob mark-in (dissolve, wipe, key) • Manual mode-enable (V, A1, A2) capability during preview and edit pass

Timecode Functions

- 525 full and drop frame • 625 full frame • Set in, set out, set duration • Trim in, trim out, trim duration • Trim all • Mark in, mark out • Undo function • Transfer sets, trims, durations • Tagging (match frame calculations—source tag, reel tag, EDL tag, sync tag) • Auto set-in of matched in-time (auto-tag) • "Pick/put" timecode transfer from EDL to ECL • "Pick/put" copy edit from EDL to ECL • "Pick/put" copy GPI trigger from EDL to ECL • Recall last edit • Fill mode • Constant register

ACE-25

General Purpose Interface (GPI)

- Four (4) GPI ports standard • Ten (10) GPI triggers per edit • Single GPI, multiple pulse per edit • Full GPI EDL listing

Perform Edit/Preview Edit Functions

- Frame accuracy with timecode • Timecode or tape position editing • Insert or assemble modes • Open ended edits • Multi-tasking • VVV, BVB, VBV • VV entrance only, exit only • Effect only preview (switcher preview mode) • Replay • Multiple VTR sync roll

Filing System

- 1 operator file—system initialization, times • 1 hardware file—transport configuration, xpts • Multiple EDL files, user-definable file names (8 characters plus 3 character extension) • Battery-backed RAM stores operator/hardware file

List Management

- 1000 line EDL, battery-backed • Record start time • Recall edit • Delete edit • Ripple • Slide • Copy, move • Renumber • Clean tails • Sort by record entry • Set record, clear record indicator • Scroll EDL via rotary knob • Write to disk after each edit • Print after each edit • Read in/write out CMX 340x EDL format

Auto Assembly

- Sequential assembly • Preview assembly • Resume assembly • Replay assembly • Prompt for reel change

Communications

- 8 SMPTE serial ports (keyboard, VTRs, external switchers), 9-pin "D" • 2 RS-232C serial ports (peripheral devices), adjustable baud rate, 25-pin "D" • 1 parallel printer port, standard IBM printer interface, 25-pin "D" • 4 independent general purpose interface lines (GPI), 25-pin "D" • 2 monochrome data monitor outputs, MDA compatible, 9-pin "D", drivers for cables up to 30 meters

Human Interfaces/Options

- Dedicated keyboard with rotary knob • 14" high-resolution data monitor option • Rackmount monitor option • Standalone comments keyboard option • Composite video data output option

Physical

- Editor chassis, rackmountable, top accessible: 10.5" H x 19" W x 19.5" D • Keyboard: 1.53" H (front), 3.39" H (back) x 17.5" W x 9.69" D; slope: 10.35° • Data monitor (optional): 13.5" H x 12.5" W x 12.5" D

AMPEX CORP.*Betacam ENG Camcorder***CVR-505 Betacam SP ENG Camcorder**

The CVR-505 Camcorder combines all the benefits of a full featured CCD camera with a portable VTR capable of studio quality video and audio.

The CVR-505 Consists of the CVC-5 CCD Camera and the CVR-5 Video Tape Recorder

The CVC-5 3-CCD Camera is rugged, reliable and operates under conditions that are difficult or impossible for other camera types.

The CVR-5 VTR is compact, versatile and can be used in a number of composite and component configurations. And, since it records and plays both Betacam and Betacam SP formats, the CVR-5 is ideal for a wide range of ENG applications.

The CVC-5 Camera**Superior Picture Quality**

In high contrast settings, the CVC-5 allows you to compress high lights with a switchable Dynamic Contrast Control.

And, CCD technology eliminates lag, burn-in and microphonic noise while delivering excellent resolution and exceptional sensitivity. The camera is highly resistant to EMI.

No Registration Hassles

CCD image geometry eliminates the need for registration adjustments — and virtually eliminates registration error in all zones.

A Full Range of Operational Conveniences

- Automatic iris control
- Automatic white/black balance
- 2 white balance memories for each filter position
- Linear matrix
- 2H delay image enhancement
- Shading compensation for lens extender
- Built-in effects microphone
- Automatic white level compression
- 3200° white preset

Viewfinder Displays Provide:

- Record status
- Filter position
- Video level
- Audio level and control (CH. 1)
- Gain setting
- White/black balance status, battery status, tape remaining

Stand-Alone Versatility

When combined with a CA-3A adaptor the CVC-5 can be operated in a stand-alone configuration. It will feed either component or composite video to a remote VTR via a 26-pin connector. An RM-P3 operator control panel may be connected.

Rugged Construction

The CVC-5 features a compact, lightweight, diecast magnesium alloy frame, and is both dust and moisture resistant.

The CVR-5 Portable VTR

The CVR-5 can be configured as an integral part of an Ampex Betacam SP Camcorder, or operated as a stand-alone recorder.

The CVR-5 can also be configured to record input from most existing cameras — in either the component or composite domain.

The CVR-5 records and plays both oxide and metal particle tape, up to the 30 minute size cassette.

Excellent Picture Quality — with 2 Playback Modes — 8 Heads

Luminance or Compressed Time Division Multiplex (CTDM) chrominance pictures can be seen in the camera viewfinder either during recording, using the confidence playback mode, or later, using the normal playback mode.

Four Audio Channels with Performance to Match the Video

With the Betacam SP format the CVR-5 can deliver true studio quality audio performance.

In addition to two high performance AFM tracks, specifications have been improved on the longitudinal channels. Dolby C noise reduction is also provided on the longitudinal channels to further improve sound quality.

And, as with the video capability, you also have audio confidence playback while recording.

Besides recording directly from the camera's microphone, the CVR-5 has four XLR inputs for external microphones or audio lines.

CVR-505

Full Bandwidth Playback Capability

The CVR-5, when combined with an optional CVA-500 playback adaptor, will output at full video bandwidth in color plus 1 channel of audio for recording check or microwave transmission.

Recording Review Function

For a quick confidence check the CVR-5 will rewind and playback the final few seconds of the previous recording, then automatically recue for the next recording.

Multifunction Time Code Generator/Reader with Genlock

CVR-5 offers both Vertical Interval Time Code (VITC) as well as SMPTE/EBU longitudinal track format. VITC is line selectable.

The versatile CVR-5 Time Code System of the CVR-5 includes presettable user bits, free-run or record-run modes, and genlock for setting/synchronization to an external time code master generator.

And, to complement the CVR-5 longitudinal playback capabilities, the time code system now has a built-in reader.

Frame Accurate Automatic Backspace Editing

To eliminate picture breakup between sequences, the CVR-5 provides a backspace assemble editing function. It automatically rewinds at the end of a sequence when the record button of the CVC-5 is pushed, then recues the tape at a clean edit point. Backspace editing can be performed from either the standby or save modes.

Phantom Power Supply

A Phantom Power Supply is built into the CVR-5. It's designed to power a professional quality condenser microphone, providing audio input on Channel 1.

Adaptors Let You Configure Your CVR-5 for a Variety of Applications

- CVA-5 allows the CVR-5 to accept either component or composite input from a wide range of cameras
- CVA-1 allows the CVR-5 to accept component input from a wide range of cameras
- CVA-500 allows color playback at full bandwidth

Designed for Operational Convenience

Two VU meters and controls are provided so you can accurately adjust record and playback levels on all four audio channels.

Other Features Include:

- Time code/tape time display
- Video input level display
- Battery status display

Warning indicators are also provided for status of:

- RF
- Servo lock
- End of tape
- Tape slack
- Condensation
- Low battery

AMPEX CORP.*Betacam Cameras*

CVC-50

The CCU-350 camera control unit remotely controls all functions of the CVC-50 including the speed of the electronic shutter.

CVC-5/CVC-50 Betacam Cameras

Common Features

- Automatic iris control • Automatic white/black balance • 2 white balance memories for each filter position • High resolution, adjustable viewfinder • Genlock capable • Microphone
- Automatic white level compression • Color bar generator

Viewfinder Displays Provide:

- Record status • Tape remaining • Filter position • Video level • Audio level and control (CH1) • Gain position • White/black balance • Battery condition • Shutter speed (CVC-50)

The CVC-5 Camera

Superior picture quality for ENG, even under adverse conditions.

CVC-5 allows you to compress the high light signal with switchable Dynamic Contrast Control.

CCD technology eliminates lag, burn-in and microphonic noise. Imaging geometry eliminates the need for registration controls—the camera is always optimally registered.

The CVC-5 has a lightweight, diecast magnesium alloy frame and is dust and moisture resistant.

The durable solid-state image sensors are shock resistant, too. And, they're unaffected by outside magnetic or electrical interference.

You'll also enjoy longer recording times because power consumption is about half that of a conventional camera.

The CVC-50 Camera

The CVC-50 combines all the durability and convenience of the CVC-5 with the picture dynamics you demand for sports, EFP and high-quality ENG production.

Frame Interline Transfer CCD sensors reduce vertical smear to such a degree that it's no longer visible in most shooting situations.

A switchable electronic shutter makes the CVC-50 especially effective for sports and action news. It allows you to select any of seven shutter speeds: $\frac{1}{100}$ through $\frac{1}{2000}$ NTSC, $\frac{1}{60}$ through $\frac{1}{1600}$ PAL. The speed is displayed in your viewfinder.

The viewfinder can be shifted back and forth as well as right and left for a more comfortable shooting position. And, an adjustable chest brace has been added to both cameras to help balance long lenses and ease fatigue.

A Wide Selection of Equipment and Options

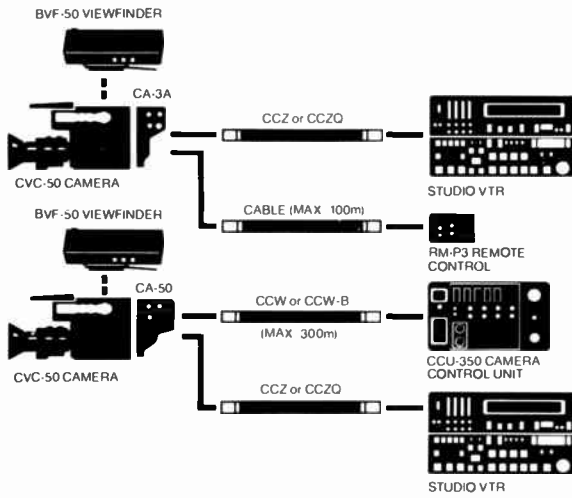

You can assemble a high-performance camcorder by combining either camera with a CVR-1A or CVR-5 on-board VTR.

Or, add a CA-3/CA-3A stand-alone adaptor and feed component or composite video directly to a remote VTR. An RM-P3 Remote Control Unit can be connected to the CA-3A to allow simple remote control.

And for an expanded system, add a BVF-50 5" black and white viewfinder and CA-50 adaptor to your CVC-50 camera and run it all with our CCU-350 camera control unit.

CVC-5/CVC-50 Cont'd

AMPEX CORP.**Camcorder****CVR-200 Betacam SP Camcorder**

The CVR-200 combines an advanced 3-CCD chip camera and Betacam SP VTR in a single compact unit.

The CVR-200 is lightweight, simple to operate and features low power consumption for long operating times.

Advanced CCD imaging technology allows the camera to deliver superior picture quality for ENG, particularly under adverse conditions.

The newly designed miniaturized VTR accepts both Betacam SP particle tape or conventional Betacam oxide tape, giving you the flexibility to match tape to your application.

The one-piece configuration makes the CVR-200 compact, lightweight and rugged enough to meet the demands of almost any ENG or field production environment.

Camera

550-line resolution, high sensitivity and a specially designed enhancement system deliver camera response that's optimally matched to the onboard Betacam SP VTR.

The camera's high sensitivity makes it possible to shoot in extremely low-light locations.

Clear pictures are also possible in high contrast situations by compressing the high light signals with the Dynamic Contrast Control.

This auto knee control is on/off selectable and extends the dynamic range of the camera.

The solid-state CCD sensors in the CVR-200 are bonded directly to the prism block, forming a shock resistant, permanently aligned assembly that eliminates the need for registration adjustment.

CCD technology also eliminates lag, burn-in and microphonic noise and is unaffected by outside magnetic or electrical interference.

Automatic Functions

Basic automatic operational features include:

Automatic Iris Control

The iris responds quickly and automatically without overshoot.

Automatic White/Black Balance

A dual white balance memory is provided for each filter. Color temperature is memorized during white balance adjustment and displayed in the viewfinder.

Viewfinder

The 1.5" monochrome viewfinder employs a magnetic focus-type CRT to deliver resolution of 550 TV lines.

Adjustable dual edge peaking correction is provided for a crisp picture.

The viewfinder rotates and adjusts forward, back and laterally for comfortable shooting in various positions.

A large diameter viewfinder lens makes it possible for operators to see the full CRT—including the corners—even when standing back from the viewfinder.

The unit itself is compact, lightweight, consumes less power than previous models and requires only a 1 second warm-up—eliminating the need for a preheat mode.

Viewfinder displays include the following machine status indications:

- RF • Servo • Humid • Slack • Tape remaining • Tape end • Battery • Record status • Audio level (CH1) • Video level (Zebra control) • White/black balance • Filter indicator • Gain • Color temperature

VTR

A miniaturized tape transport and drum assembly, as well as smaller, higher density circuit boards help reduce the size of the VTR.

The one-piece configuration of the CVR-200 also eliminates the main harness connection between the VTR and the camera, which further reduces weight.

The CVR-200 accepts cassettes of up to 30 minutes in length in either metal particle or the conventional Betacam oxide tape. The Betacam SP metal particle tape provides improvements in the luminance bandwidth, SNR and the pulse and bar response in both the luminance and chrominance channels.

Viewfinder playback in the CVR-200 includes video (luminance or CTDM chrominance) and longitudinal audio.

**CVR-200**

A Record Review function is also provided. It automatically rewinds two seconds of tape and plays it back for review, stopping precisely at the previous position. Review time can be extended to up to 10 seconds if desired.

A built-in time code generator/reader automatically records SMPTE time code on a dedicated time code track. VITC can be inserted and the insertion position can be selected by the operator.

The CVR-200 can also be locked to an external time code—or provide time code for other machines—through the camera's external inputs and outputs.

An LCD display provides time code, user bits, tape time and VTR status. Two channels of audio and battery status are displayed on bar graphs incorporated in the LCD.

Audio

Four channels of audio are provided on the CVR-200: two AFM channels as well as two longitudinal channels with Dolby® Type C noise reduction.

A specially designed microphone is provided that can easily be detached from the body of the CVR-200. When used with an optional extension cable it's ideally suited for interviews and other remote mike applications. A two channel phantom power supply and dual XLR connectors provide power for two remote mikes.

A built-in speaker allows the operator to monitor mixed channel audio, single channel audio, or alarm tone during recording. Separate monitor level and alarm tone level controls are provided.

Operation

The CVR-200 is well balanced and extremely easy to operate. For convenience and comfort both the shoulder pad and the viewfinder are adjustable. Controls are simplified to help avoid mistakes. The play, rewind, fast forward, stop and eject buttons are located under a safety lid on the top of the CVR-200. All keys are automatically locked during record mode.

Options and Accessories

Optional equipment designed exclusively for the CVR-200 makes it an extremely flexible camcorder for a variety of applications.

CVA-500 Field Playback Unit

The CVA-500 is a compact, lightweight adaptor designed to mate with the CVR-200 through a 20-pin interface. It provides full color playback along with one channel of audio (single channel or mixed). Both composite and VHF outputs are provided for microwave transmission and/or recording check on television receivers. An interface for an external TBC is also provided.

RM-P3 Remote Control Unit

For remote control of basic camera functions. Interface via a 6-pin connector.

Battery Cases

Optional auxiliary battery cases are available for either the BP-90 or for an additional NP-1A.

*Dolby is a trademark of Dolby Licensing Corporation.

AMPEX CORP.

Betacam Portable
Recorder/Player**CVR-35 Betacam SP Portable VTR**

Through advanced circuit design and semiconductor technology, power consumption for the CVR-35 is kept to a minimum.

You can choose between NP-1A or BP-90 batteries for up to 120 minutes of recording on one set of batteries.

An AC-500 Power Adaptor is also available for AC operation.

Excellent picture quality — with two playback modes

Now you can insure that you have recorded the picture you need. Luminance or Compressed Time Division Multiplex (CTDM) monochrome pictures can be seen in the camera viewfinder, either during recording using the confidence playback mode, or later using the normal playback mode. In addition, color pictures can be viewed on a monitor during normal playback.

Four audio channels, with performance to match the video

With the Betacam SP format the CVR-35 can deliver true studio quality audio performance.

In addition to two high performance AFM tracks, specifications have been improved on the longitudinal channels. Dolby* C noise reduction is also provided on the longitudinal channels to further improve sound quality.

And as with the video capability, you also have audio confidence playback while recording, to assure that those valuable scene sounds are being captured.

Frame accurate backspace editing and an RS-422 interface makes field editing easier

Automatic frame accurate backspace editing and nearly instantaneous starts on the CVR-35 provide smooth, continuous recording without break-up between sequences.

The CVR-35 is designed to also act as a high quality video/audio "feeder" source for an editing VTR. During the editing process the CVR-35 can be controlled by the editing VTR through the RS-422 serial interface.

Multifunctional time code generator/reader with genlock

Now you can have a choice of time codes for post-production on Betacam SP. In step with the extended performance of Betacam SP, the CVR-35 brings the advance of Vertical Interval Time Code (VITC) as well as the SMPTE/EBU longitudinal track format.

The versatility of the Time Code System of the CVR-35 includes pre-settable User Bits, free-run or record-run modes, and genlock for setting/synchronizing to an external time code master generator.

To complement the CVR-35 playback capabilities, both Time Code Systems now have built-in readers.

TBC interface adds versatility

Through a time base corrector, the CVR-35 is capable of studio-quality color playback for re-recording, microwave, satellite, or on-air transmission.

Advanced video/sync and subcarrier inputs are provided for use with an Ampex TBC-40 or other TBC.

Complete professional connector panel

Although compact in size, the CVR-35 provides a full featured connector panel that allows you to configure a system that meets your specific applications.

Composite and component video inputs and outputs are provided along with audio interfaces, allowing the CVR-35 to be connected to a wide variety of ENG/EPF equipment.

Designed for operational convenience

Independent VU meters and controls are provided so you can accurately adjust record and playback levels on all four audio channels. Other features include:

- Built-in RF modulator
- Time code/tape time display
- Video input level display
- Battery status display

Betacam Players

CVR-60/65 Betacam SP Studio Players**Common Features**

• Built-in time base corrector provides broadcast quality video while eliminating any other signal processing requirements • TBC remote control interface • High speed picture-in-shuttle up to 24x normal speed in monochrome, either forward or reverse • Jog function allows tape movement in either direction, one frame at a time • Versatile editing interfaces: with a CVR-75 or similarly controlled VTR; with an Ampex VRC-2 video recorder controller; with an ACE™ or ACE Micro™ editor • Versatile Time Code System: Vertical Interval Time Code (VITC) and SMPTE/EBU • Two composite outputs • Two dub/component outputs: Y, R-Y, B-Y or Compressed Time Division Multiplexed (CTDM) output for high-quality component editing • Color framing: superior color framing operation, using both the CF flag and the Vertical Interval Subcarrier (VISC) system when operating in a composite environment • Studio-quality audio performance: Four channels: two longitudinal, two AFM; separate playback levels for each channel; low impedance audio monitor outputs for separate or mixed output; Dolby C noise reduction on longitudinal channels • Multi-function hours meter • Headphone jack with volume control • Built-in character generator: time code, system status or setup menus displayed in video monitor output

**CVR-60 Betacam SP Studio Player**

The CVR-60 studio player delivers all the performance of the Betacam SP format in an economical playback machine.

The CVR-60 is compact, lightweight and can be installed in either standard 19" EIA racks or consoles in studios and OB vehicles.

The CVR-60 is ideal for high-quality ENG/EFP and broadcast replay, feeding an editing system in either the composite or component domain, all with a choice of oxide or metal particle tape.

CVR-65 Betacam SP Studio Player

The CVR-65 studio player delivers all the performance of the Betacam SP format with features such as AST™ automatic tracking, dynamic motion control, viewable pictures in shuttle, a built-in time base corrector and a time code reader.

The CVR-65 is compact, lightweight and can be installed in either standard 19" EIA racks or consoles in studios and OB vehicles.

The CVR-65 provides high-quality ENG/EFP and broadcast applications, using either oxide or metal particle tape. It is also ideal for feeding both composite and component editing systems. Interfaces are provided for control of the CVR-65 by other VTRs, an Ampex VRC-2 video recorder controller or an ACE or ACE Micro editor.

AMPEX CORP.**Betacam Recorder/Players****CVR-70 Betacam SP Studio Recorder/Player**

Full featured editor: Assemble and insert Edits for Video, Audio 1 and 2, and time code; Preview/review allows check of edit accuracy; In/Out marks may be trimmed either direction on a frame-by-frame basis • Dynamic motion control: the CVR-70 can memorize rehearsed playback speeds of a connected CVR-65 or CVR-75 over their tracking range (-1 to +2x normal), and then command the CVR-65 or CVR-75 to reproduce these speeds in subsequent editing operations • Versatile time code system: Vertical Interval Time Code (VITC) and SMPTE/EBU longitudinal track format; presettable user bits, free-run or record-run modes; genlock for setting/synchronizing to an external time code master generator; built-in code generator/reader

The CVR-70 studio VTR combines the performance of Betacam SP with features such as dynamic motion control, viewable pictures in shuttle, a full-featured editing system, a built-in time base corrector and a versatile time code system.

The CVR-70 is compact, lightweight and can be installed in either standard 19" EIA racks or consoles in studios and OB vehicles.

The CVR-70 is ideal for high-quality ENG/EFP and broadcast replay, feeding a composite editing system, or post-production recording/editing in the component domain, all with a choice of oxide or metal particle tape.

Versatile interfaces allow the CVR-70 to control other VTRs without an edit controller. An RS-422 interface is also provided for external control by an Ampex VRC-2 video recorder controller or an ACE or ACE micro editor.

CVR-75 Betacam SP Studio Recorder/Player

Automatic Scan Tracking™ (AST) with dynamic motion control • Integrated TBC with remote control • SMPTE/EBU time code generator/recorder for LTC, VITC or User Bits • Built-in character generator • Capstan override capability • Built-in Sc/H phase indicators • Record inhibit switch with indicator • Multifunction hours meter • Four channels: 2 longitudinal, 2 AFM • Separate record and playback level controls for each channel • Four discrete audio level bargraphs with selectable Peak/VU indicators • Integrated mixer for channels 1 and 2 • Low impedance audio monitor outputs for separate or mixed output • Dolby C noise reduction on longitudinal channels

The CVR-75 studio VTR combines all the performance of Betacam SP with features like AST and Dynamic Motion Control.

The unit itself is compact, lightweight and includes a full featured, flexible editing system.

One of the most important features on the CVR-75 is its extended playtime. With the larger cassettes, up to 90 minutes (100 minutes PAL) recording and playback time is available.

These features, when combined with the performance of Betacam SP, make the CVR-75 ideal for high quality ENG/EFP, broadcast replay, feeding a composite editing system, or post-production recording in the component domain.

AMTEL SYSTEMS, INC.

Post Production Management System

Transform-1 Post Production Management System

- The ability to use conventional videotape editing controllers for electronic film post production
- A complete production logging system that allows both data and pictures to be stored for all original material
- The power to accurately conform video edit decision lists to lists suitable for the assembly of the final release media i.e. conform to film, videotape, digital, audio, etc.
- A central edit decision list database with full list management and multi-user capabilities
- The ability to accept and generate video edit lists in all industry formats

Transform-1 is a computerized post production management system designed to integrate all film and videotape editing functions within a facility.

A key element is its ability to work within existing industry equipment. No specialized support hardware of any kind is required to adapt the system to existing facilities.

Multi-User Capabilities

The addition of two remote terminals allows simultaneous, independent access to the system by three users. A single main computer can integrate into three separate logging/editing workstations within a post production facility. Each workstation can be interfaced with total independence to existing hardware.

Production Logging System

The system provides a logical means of storing all pertinent information relating to any number of productions. Random access to all data simplifies information retrieval and speeds the overall production process.

The transfer logging functions allow the user to record detailed information describing the relationship between each reel of film and the corresponding videotape. This allows the system to accurately conform video edit decision lists to film cut lists. The logging system also provides for the transfer of all original dialogue including wild and post sync sound, and can accommodate the conforming of dialogue on other audio post production media, such as digital audio.

The duplication logging function allows information for both the master and working copy tape reels to be stored. This allows the system to make the necessary changes in off-line edit lists when they are used for auto assembly of the original master tape reels.

The descriptive logging function allows information to be stored for each take shot in a particular production. All pertinent information such as tape reel, scene, slate, original camera and sound rolls as well as the time code location of the particular take area stored in the log. The system also provides a field for storing notes regarding the content of the take.

Electronic Story Board

Provides the ability to store a single black and white image for each slate or camera setup shot for a production. The stored images may be recalled to provide the editor with a quick visual representation of the material to be edited. In a simple recall mode, it can display 16 images simultaneously on a monitor.

The images may also be recalled and interactively re-arranged on screen to establish a visual sequencing of an edited segment. Thus, the user is able to create an electronic "storyboard" of a segment prior to editing.

Transform-1

The System provides the ability to accurately conform video edit decision lists to lists suitable for assembly of the final release media. Individually conformed lists for both picture and sound may be created by the system. The production log serves as the basis for referencing each edit decision to original source material.

For film releases, the System generates cut lists for both picture and sound for direct use by an assistant or negative cutter. The system completely accounts for the 3:2 relationship as it conforms time coded video edit lists to foot/frame cut lists. Extensive error checking is performed on all cut lists to identify possible assembly problems such as missing material, holes, overlaps, as well as re-used picture and sound.

If the production is to be released on tape, the System can provide CMX compatible lists optimized for on-line auto assembly.

Using the duplication and descriptive log information the system makes any necessary changes in the off-line edit lists while checking for on-line assembly errors such as video holes and "B-roll" requirements. It provides the ability to generate an audio conform list enabling the dialogue to be rebuilt from original audio material. This list will provide a synchronous dialogue track for either tape or film releases.

Specifications

Main Computer:

Intel 80286 processor, 4M byte internal memory

Operating Environment:

Xenix System V

Storage Media:

5 1/4" Floppy Disk Drive, 1.2M byte capacity

5 1/4" Winchester Disk Drive, 60M byte capacity

I/O Connections

Console Monitor

Output: 9-pin "D" type

Console Keyboard

Input: 5-pin DIN connector

Printer Output:

25-pin "D" connector, Centronix type interface

Terminal/Editor

Serial Ports: 25-pin "D" connector, 4 standard

Logging VTR

Video Input: 9-pin "D" type, 1V p-p 75 ohm switch selectable

Picture/VTR

Video Output: 9-pin "D" type, 1V p-p 75 ohm impedance

SMPT/EBU:

RCA connector, unbalanced

Time Code Input:

-12dBm to +6dBm

Drive Expansion

Interface: 50-pin ribbon connector

AMTEL SYSTEMS, INC.

List Manager

Transform-LM List Manager

The List Manager adds sophisticated list management power to virtually any video editing controller. With the List Manager, the user can generate compatible, "on-line" ready edit decision lists, regardless of the editing controller he may presently own. The List Manager provides tremendous economies by allowing all sophisticated list processing to take place prior to "on-line."

Editor Compatibility

The List Manager works with SMPTE time code based editing controllers which have an RS 232 serial port, including single event controllers. Now you can create CMX compatible eight inch disks from your present editing controller.

List Management

The List Manager contains a full array of list management features including add, delete, recall, replace, ripple, tag, and block moves. More importantly, the system allows you to vastly expand the power of your editing controller by offering high level functions such as list cleaning, unlimited level list tracing, list merging, and auto-assembly list optimization.

List Format Conversion

The system will convert an edit decision list prepared in one format to virtually any other industry format. List formats which are presently supported include: CMX, Sony, ISC/GVG, Ampex, Videomedia, Convergence, and Paltex. You may also create your own custom list formats for proprietary use.

List Comments

The List Manager will allow you to add comments to your edit decision lists from its keyboard. You can also process lists with comments, GPI triggers, and motion memory information in all formats.

Built-In Time Code Reader

Allows you to automatically load time code numbers into an edit decision list from a VTR. You can also use the system as a manual entry station for edit lists.

Storage Media

The List Manager comes with a built-in 8" floppy disk drive, and two 3 1/2" drives. Optional storage media choices include an outboard 5 1/4" floppy disk drive and a 3 1/2", 20M byte hard disk.

Audio Manipulations Of Your EDL

The system will create an audio only edit decision list for audio sweetening, and will perform an Audio Ping Pong. Audio Ping Pong is a unique function with allows you to easily create overlaps on a dialogue track.

Film Conform

An optional film conform package will enable you to accurately conform video edit decision lists to film cut lists. This allows you to take advantage of the speed and convenience of electronic editing while retaining the ability to release on film. The List Manager is a totally self-contained hardware and software device. In addition to the built-in disk drives and time code reader, the unit features a composite video display output, two serial interface ports, and a parallel printer port.

This system diagram illustrates a typical configuration of The List Manager in a video edit suite.

Main Computer:	8086 based CPU, 640K RAM
Operating Environment:	MS DOS based, single user single tasking
Storage Media:	8" floppy disk drive, 1.2M byte capacity, compatible with CMX and ISC/GVG formats; 2-3 1/2" floppy disk drives 720K capacity
Serial Interface Ports:	25 pin D connector, 2 standard
SMPTE Time Code Reader Input:	-12dBm to +6dBm, 600 ohm input impedance, balanced or unbalanced
Control Keyboard Input:	5 pin DIN connector
Display Output:	Monochrome composite video display output, 1V p-p, 75 ohm output impedance
Physical:	5 25" H x 19" W x 16" D
Power:	110/220VAC, 60/50Hz, 2.0A
5 1/4" Floppy Disk Drive Option:	Outboard 5 1/4" floppy disk drive, 1.2M byte capacity
Physical:	3.5" H x 19" W x 16" D
3 1/2" Hard Disk Option:	Internal 20M byte hard disk drive
Transform-LM	\$5995.00

AMTEL SYSTEMS, INC.

Time Code Equipment

6000 Time Code System

- NTSC/PAL time code generator which generates code in 30, drop-frame, 24, and 25 frames per second
- Variable Speed Time Code Reader (to 5X play, forward and reverse) with both momentary and continuous jam sync
- High resolution character inserter with 9 different character display modes and complete raster positioning
- Large (0.8") front panel LED display with variable intensity
- Front panel keyboard entry of time code and user bits
- Two isolated time code outputs
- Parallel input/output of time code and user bits
- Color framing capability
- Generator hold function
- All functions controlled from front panel

600

Specifications

- Dimensions:** 3.5" H x 19" W x 13" D
Weight: 8 lbs. (3.63kg)
Power: 117/235VAC ± 20%, 47-440Hz, 20W
Environmental: 0-60°C, rel. humidity 0-95%, no condensation
Reference Sync: Composite sync or video loopthrough, .5-4.0V p-p
Code Input: -30 to +30dBm, balanced line, 20,000 ohms bridging
Character Keyer: Video input -1V p-p loopthrough. Video output (2) —Unity gain 75 ohms
Color Frame In: AC coupled 15Hz, negative pulse indicating field 1 of 4 field sequence, 2-8V, active on falling edge
Parallel In/Out: 32 TTL compatible signal lines, 2 ground lines, positive logic

6000POR

TCR-500

Rear Panel Connections/Controls

TCR-500 Time Code Reader/Character Inserter

- Characters displayed are 16 scan lines per field in height. External controls for complete horizontal and vertical positioning of display and character level. User selectable display of time code, user bits, or both. Characters may be white with black border or vice versa. Drop-frame, non-drop frame, and reading error indicated in display
- Two isolated video outputs containing video input with or without character display. The outputs are source terminated into 75 ohms and provide unity gain from the video input
- Composite video 2V p-p (not terminated). Looping input via BNC connectors
- Balanced or unbalanced input of SMPTE time code at a signal level from -30 to +40dBm, at tape speeds of 0.1 to 5X play (tape machine dependent). XLR connector

The TCR-500 provides an excellent low cost solution to the recovery and video display of SMPTE time code. The unit contains a high resolution character keyer which inserts the time code display into the active video picture. The compact, rugged design makes the TCR-500 a perfect choice for off-line or field time code reading and "burn-ins."

Specifications

- Power:** 9 to 12VDC at approximately 300mA. An external power transformer is supplied with the unit
Dimensions: 1.6" H x 7" W x 6.6" D
Weight: 2.7 lbs.
Environmental: 0°C to 55°C operating temperature, 0 to 85% relative humidity (no condensation)

TCR-500 \$995.00

800

800 Portable SMPTE Time Code Generator

- Generates time code in 30, drop frame, and 25 fps
- Video sync lock, code error, battery low indicators
- High intensity LED display with blanking capability
- Built-in play speed reader with jam sync
- Generator hold and reader hold functions
- Long battery life
- Large, easy to read keypad
- Full user bit capability, including hexadecimals
- Generator preset function
- Automatic start/stop function for generator

The 800 portable time code generator is the perfect solution to field time code needs. A compact rugged design ensures the unit will withstand the rigors of constant EFP usage. A built-in play speed reader with jam sync offers advantages not found in other portables. The 800 is truly the price/performance leader in its class.

800 \$1395.00

AMX CORP.**Time Base Corrector/Switcher****ATS-550 Digital Time Base Corrector**

- Handles signals of > 450 lines resolution
- Full frame correction window
- Frame and field freeze
- Selectable composite and Super (YC358) inputs and outputs
- 58dB S/N ratio
- 1% K factor in Super mode, 2% in composite
- 13.5MHz sampling frequency
- 8 bits sampling-Y and C
- D/G D/P; 2% 2°
- Built-in chroma control circuit
- Easy-to-replace PCBs
- Slim, attractive, rackmountable

S-VHS and ED Beta have created a new concept in low-cost, high-performance video production. The ATS-550 with its sophisticated signal processing, Super (YC358) inputs and outputs (as well as standard composite video), plus > 450 lines signal processing capability, make it the ideal Digital Time Base Corrector to be used with these tape handlers.

High S/N ratio, low K factor, low D/G and D/P and 8 bits sampling enable the ATS-550 to process signals to the most exacting standards. With Automatic Chroma Control (ACC) as standard, the ATS-550 offers the features expected of a truly high grade TBC.

In addition to the special input and output connectors for S-VHS and ED Beta, the ATS-550 also has composite inputs and outputs to enable it to time base correct conventional signals from U-matic or any type of VHS, Beta and 8mm VCRs.

Flexibility is enhanced by incorporating an infinite correction window that can handle signals from even domestic VCRs and satellite or microwave feeds. This feature produces signal stabilization, and produces automatic freeze on the last frame if the video signal is disconnected. ATS-550 comes complete with a full set of proc amp controls allowing adjustment of video and chroma levels, hue and set-up.

ATS-550 \$3995.00

ASW-500 Audio/Video Switcher

- 4x4 A/V matrix switching
- RS-232 compatible
- Vertical interval switching
- Test mode
- Audio breakaway
- Full stereo audio compatibility
- BNC video connectors
- AMX SX system compatible
- Rackmountable
- Black finish

True matrix switching means any combination of four video and stereo audio inputs can be assigned to any combination of four video and stereo audio outputs. Four independent operations occur simultaneously for maximum switching power.

The ASW-500 is easily integrated with a complete AMX SX Remote Control System and may be used in many ways. As a distribution amp, it routes any of the input signals to all four outputs with full bandwidth and strength. As a routing switcher, it chooses from multiple sources during editing or presentations. Inputs or outputs can be added to an existing

**ATS-550****Composite Signal Editing System****S-Signal Editing System****ASW-500**

patch bay or production board. Use the ASW-500 off-line in lieu of a production board to mix different audio and video inputs. And, because the ASW-500 features vertical interval switching, it provides excellent direct cuts.

The ASW-500 is easily controlled with a personal computer via its RS232 port for automated operations. You can route signals with the touch of a button and use the front panel LEDs for visual confirmation. A built-in test mode makes it easy to check for proper operation. And battery back up is not needed, since the microprocessor-controlled non-volatile memory means your settings are retained even after "power-down."

Up to sixteen ASW-500s can be "daisy-chained" without signal degradation. You can create a patch-bay with up to 64 inputs and outputs, all under PC or AMX SX system control.

ASW-500 \$630.00

SX Series Media Control Systems

The SX Series Control System has been designed as a universal remote control system for media and environmental equipment found in conference rooms, training centers, auditoriums, teleconferencing areas and other types of presentation sites. All functions of slide and film projectors, audio and video tape decks, volume, lights, drapes, screens etc. may be controlled wirelessly (up to 150' away) or by wired control panels in walls or podiums.

Based around the SX 16+ Relay Controller, the SX System will interface with virtually any type of equipment controllable by a contact closure, logic level signal or serial data. Up to 16 control functions may be dedicated to each SX 16+.

SX 16+

SX16+ Programmable Relay Controller

Control, data, and interconnect center of the SX Series Control System.

- Programmable • Rackmountable enclosure with 16 relays • Front panel controls and channel status indicators • Link up to sixteen SX-16+ 's to form systems with up to 256 functions • SX16+ Controllers may be controlled using AMX SoftWire® Multiplexed Control Panels • Wireless (RF) Control Panels, MX Series two and four button transmitters or most computers with serial outputs \$1010.00

SX-DCU Programmable Serial Control Unit

Controller for consumer infrared controlled TVs, VCRs, tape decks, CDs, laser discs etc.

Can also be used for 2-wire control of professional VCRs, audio tape decks or laser disks.

Each SX-DCU can store up to 32 serial commands which can be "played back" using AMX Wireless Controls, SoftWire Control Panels or Personal Computers.

Each unit has the following ports:

- (3) Serial outputs, 1 auxiliary logic output • (1) RS232C port • (1) AMX SX System Bus Interface • (1) Wireless (RF) input \$675.00

SX-IRE Infrared Emitter

Used to emit infrared commands from SX-DCU. Connects to 1 of 3 serial output ports. 12' cable has Infrared LED on end which may be attached to sensor of any Infrared controlled device \$37.50

SX Series Wireless Control Panels

Portable or surface mounted RF transmitter panels will control SX 16+ Relay Controllers from up to 150'. All functions on panel are grouped and engraved to specifications. Requires use of SX-RM Radio Receiver Module.

- TX08 8 button transmitter \$ 240.00
- TX12 12 button transmitter 315.00
- TX16 16 button transmitter 390.00
- TX24 24 button transmitter 570.00
- TX32 32 button transmitter 720.00
- TX40 40 button transmitter 870.00
- TX48 48 button transmitter 990.00
- TX56 56 button transmitter 1110.00
- TX64 64 button transmitter 1230.00

Note: TX24-TX32 transmitters are shipped in Satin Black wooden enclosures unless otherwise specified.

SX-RM Radio Receiver Module

Receives coded radio signal from transmitters. Will drive up to thirty-two SX 16+ Relay Controllers. Built-in tuning LED maximizes range and reliability \$150.00

SX-RI Ratio Interface Module

Allows multiple SX-RMs to be used in a single system \$225.00

SX-WPO Wired Option for Control Panels

Provides security and reliability of a hardwired control system without multiple conductor cable. For control only (no feedback). One end of 2-conductor cable plugs into transmitter housing, the other end into data connector on SX16+. \$150.00

SW-SP16 SoftWire® Control Panel

3-wire multiplexed control and status panel can control from one to sixteen SX 16+ Relay Controllers. Basic panel includes 16 buttons with LEDs and all engraved panel legends. Up to 64 buttons and legends may be arranged on compact, 5.25" x 10" panel. \$1495.00

SW-CP64 SoftWire Control Panel Interface

Converts custom or existing hardwired control panel to 3-wire multiplexed system. Sixty-four switch and lamp connections on compact board allows control of up to thirty-two SX16+ Relay Controllers. \$1050.00

SX-DM SoftWire Panel Driver Module

Provides balanced differential inputs and outputs for long control line runs (over 100') between SoftWire Panels and SX16+ Relay Controllers. Also provides convenient connection point for control and feedback lines of multiple SoftWire Control Panels. \$225.00

Accessories

- VX-1 Stereo, line level volume control \$367.00

- AC-RK Accessory rack kit 60.00
- SX-CL Logo engraved on control panel. 120.00
- SX-CC Custom transport interface cables POR
- SW-WB Custom Satin Black Wooden enclosure for SoftWire Panels 300.00
- TX16-WB Custom Satin Black Wooden enclosure for TX08-TX16 60.00

Helix® Foam Dielectric Coaxial Cables

Helix flexible coaxial cables are ideal for broadcast use because they are supplied in continuous lengths, permitting a one-piece installation. Because only two flange junctions exist in the entire Helix transmission line system, a lower system VSWR can normally be achieved. Helix cables readily accommodate thermal expansion/contraction cycles eliminating the need for spring hangers and expansion loops. The result is a lower installed cost. All Helix cables are supplied with a black polyethylene jacket which makes them suitable for direct burial or installation in corrosive environments.

Helix cables are designed for efficient transmission of RF energy at broadcast frequencies. The cables range in size from 1/4" to 1 5/8" for foam-dielectric versions. Helix foam-dielectric cables for not require pressurization and are recommended for most low power applications.

The dielectric materials used in Helix cables have been extensively evaluated to assure reliable and trouble-free service during continuous high-power operation. Helix cables are conservatively rated for power handling capability and include allowances for premature voltage breakdown.

ANDREW CORP.*Waveguides/Cable/Connectors***FSJ1-50 1/4" Superflexible Heliax® Cable**

This 1/4" superflexible Heliax foam-dielectric cable offers the small bending radius of braided solid dielectric cable with the lower attenuation and superior shielding characteristics of a continuous solid-sheath copper outer conductor. A polyethylene jacket provides abrasion protection. The cable is ideal for patch cord and jumper cable applications, where bending to a tight radius is a prime consideration, and in long lengths for temporary tactical or restoration systems, where cable must be handled quickly and easily to provide reliable connections. It is also well suited for use in densely arranged equipment rooms. The cable is suitable for installation down to -40°F (-40°C) and for operation up to 176°F (80°C).

FSJ1-50

FSJ4-50B 1/2" 50 ohm Heliax Superflexible Cable

This 1/2" superflexible Heliax foam-dielectric coaxial cable with seam-welded corrugated copper outer conductor, features low attenuation and superior shielding characteristics. A polyethylene jacket provides abrasion protection. The cable is ideal for patch cord and jumper cable applications where repeated flexing is a prime consideration, and in long lengths for temporary tactical restoration systems where cable must be handled quickly and easily to provide reliable connections. It is also well suited for use in densely arranged equipment rooms. The cable is suitable for installation down to -40°F (-40°C) and for operation up to 176°F (80°C).

FSJ4-50B

Connector seals keep moisture out, providing reliable performance. The connector design simplifies assembly, provides excellent electrical contact, and is highly resistant to connector pull-off and twist-off.

**EW20 1.9-2.7GHz Heliax Elliptical Waveguide**

The Heliax elliptical waveguide is precision formed from high conductivity corrugated copper tubing and includes a black polyethylene jacket for protection. It is available in long continuous lengths and can be cut to specified lengths.

The EW20 is designed for use in the 1.9-2.7GHz ITFS band.

EW20

EW63 and EWP63**5.850-7.125GHz Heliax Elliptical Waveguide**

The Heliax elliptical waveguide is precision formed from high conductivity corrugated copper tubing with a black polyethylene jacket for protection. It is available in continuous lengths that can be cut to specified lengths.

The EW63 and EWP63 are designed for use in the 5.850-7.125GHz frequency band. Tunable and non-tunable connectors are available for factory-fitted and field-fitted assemblies. Pre-tuned connectors for field-fitted applications eliminate the need for field tuning.

Assemblies of low VSWR EWP63 waveguide with tunable or pre-tuned connectors are recommended for long-haul or high channel density systems. Assemblies of EW63 standard waveguide with non-tunable connectors are recommended for short- and medium-haul radio relay systems with low and medium channel densities and medium-haul color television microwave systems.

EW63

EW132 and EWP132**11.0-15.35GHz Heliax Elliptical Waveguide**

The Heliax elliptical waveguide is precision formed from high conductivity corrugated copper tubing with a black polyethylene jacket for protection. It is available in continuous lengths that can be cut to specified lengths.

Types EW132 and EWP132 are designed for use in 11.0–15.35GHz frequency band and offer low attenuation. Tunable and non-tunable connectors are available for factory-fitted and field-fitted assemblies. Assemblies of low-VSWR EWP132 waveguide with tunable connectors are recommended for long-haul or high channel density systems. Type EW132 uses non-tunable connectors and is recommended for short- and medium-haul radio relay systems with low and medium channel densities.

EW132 is ideal for 14.0-14.5GHz band earth station receive applications.

EW132

Prices and Specifications Subject to Change Without Notice.

B-131

Standard Antennas (P and PL Series)

Includes a standard or low-VSWR feed, a vertical tower mount and unshielded reflector. They are economical and reliable for use where frequency planning or coordination within or between systems does not require a high degree of back or side radiation suppression. The low-VSWR versions minimize the noise contributed by echo distortion. Radomes are ordered separately for standard antennas.

"F" Series antennas for 2.45-2.50GHz and LDF Series foam-dielectric Heliac® cables provide a completely weatherproof, unpressurized antenna system for transportable, low channel density applications. The system is high in quality yet low in cost because pressurization equipment is not required.

Teglar Radome

R8E

Flexible Planar Radomes

All Andrew shielded antennas and horn-reflector antennas include a flexible planar radome stretched across the opening of the shield. The radome flexes slightly in the wind and readily sheds ice and snow in most environments.

Using a polymer-coated fabric of extreme durability, the Teglar™ long-life radome excels in resistance to heat, rain, snow, fungus, ice accumulation, corrosive atmosphere and ultraviolet light. The polymer surface readily sheds water and dirt. Performance under normal conditions is equal to or better than other designs, and under severe conditions is significantly better.

The Teglar long-life radome is included as standard with certain shielded antennas. Others include a Hypalon radome, and the Teglar radome is optional at extra cost.

Planar radomes are included as part of the antenna. The standard color is aviation white. Aviation orange is available as an option for some antenna types. Note that the Teglar radome cannot be painted.

Molded Radomes

Optional molded radomes are available for most Andrew standard antennas to protect against accumulation of ice, snow and dirt and to reduce windloading. Depending on antenna size or type, molded ra-

domes are either conical or parabolic in shape, and are clamped or bolted to the rim of the reflector. Molded radomes are highly resistant to ultraviolet rays and provide high reliability under severe environmental conditions.

Unheated radomes offer suitable protection for most installations. In areas subject to severe sleet or heavy snow, heated radomes are recommended. These have nichrome wires molded between layers and an air-sensing thermostat to energize the heaters in the critical icing range 22°F to 38°F (-6°C to +3°C).

Except for the special 890-2300MHz versions, the heating wires are laid in a helical pattern to eliminate the need for polarization alignment, and to accommodate dual-polarized operation with negligible added loss.

Attenuation and system VSWR effects are listed in the table below. To determine the maximum VSWR across the band for the antenna/radome combination, add the figure from the table to the maximum antenna VSWR.

The standard color is dark gray. Aviation white and aviation orange are available on request.

LENSES FOR 2/3" AND 1" CAMERAS

Zoom 40x Lenses – Microprocessor Controlled

This lens is incredibly small, very lightweight 43 lbs. (19.5 kg), yet it has a remarkably fast relative maximum aperture. The limitations of minimum object distance no longer exist because of microprocessor control, focusing is now possible at any distance.

The 40x is a lens with high transmission, minimum iris ramping, superior MTF (Modulation Transfer Function) and reduced chromatic aberrations.

The 40x is a multipurpose lens, it will cover all the angles from a wide 49.75° to a tight 1.33° and more, with the standard 2.1x extender and optional 1.45x extender.

Advanced three lamp diascope, a modular PC board layout, circuit breakers, ribbon cable wiring, interchangeable servo modules and a heater are standard. Even the operational ease has been taken into account with external LED readouts for zoom position, iris position, and extender/diascope position.

Also adding to the operational ease of the 40x are an easily accessible electronic back focus adjustment with a lock, a manual back focus adjustment and manual overrides for the iris and the extender/diascope turret.

Magnetometers/Demagnetizers

Audiophile Han-D-Kit

Check Magnetism in Recorder Components

The Annis Pocket Magnetometer quickly and accurately measures residual magnetism levels in recorder heads, drive capstans or tape guides. Indicates when it's time to demagnetize and lets you know when it's again safe to use the recorder.

Demagnetize Components When Necessary

Whenever the Magnetometer indicates any appreciable level of magnetism in a tape transport component, you can demagnetize it effectively with the powerful Annis Han-D-Mag before it causes permanent damage to recorded tapes.

Valuable audio and video tapes can be damaged when played on equipment that is not thoroughly and regularly demagnetized. Magnetism can easily build up in capstans, tape guides or recorder heads to a point where it will degrade the magneti-

cally recorded signal on tapes passing over them. Tape damage is first apparent as a loss of recorded high frequencies and a progressive increase in background noise each time they are played on magnetized equipment.

Until recently, there has been no easy way to tell when demagnetizing was needed, and most Demagnetizers on the market were far too weak to be effective, particularly on offending hardened steel guides or capstans, etc. Now, with the introduction of the Audiophile Han-D-Kit, both measurement and correction problems can be solved easily at modest cost.

Here in one convenient package is everything needed to measure magnetic levels quickly, along with a handy, powerful unit to demagnetize components completely before they can spoil valuable tapes.

Annis Pocket Magnetometer
Measures level of magnetism in components.
Calibrated to read directly in gauss.
Model 20/B5 shown.

Test Strips
One of these sensor strips is magnetically soft and the other magnetically hard. For experiments and testing your demagnetizing technique.

Clip-On Extension Probe
Extension probe is 1³/₄" long. Can be formed with fingers. Improves checking of magnetism in hard to reach components.

"Notes On Demagnetizing" Etc.

Explains causes of magnetism, with particular reference to tape recorders. How to measure it accurately and how to eliminate it. Interesting experiments also included.

Annis Audiophile Han-D-Mag
A rugged, dual-use Demagnetizer having a powerful, sine wave demagnetizing field strength of over 350 oersteds 1/4" beyond the tip of the 2 1/4" long probe.

Standard Han-D-Kit K20/B5

Includes all items listed above. Model 20 Magnetometer has polarity indicating center zero scale, calibrated to read 5-0-5 gauss.

Deluxe Han-D-Kit K25/S5

Same as K20/B5 except for the Magnetometer. This kit includes the larger, more rugged Model 25 jewelled Magnetometer with ten times the calibration stability of standard Model 20.

How Recorder Components Become Magnetized

Magnetism is everywhere. It is often found as residual magnetism in iron or steel objects. Magnetic tape recorder components such as heads, steel capstans and tape guides generally become magnetized through use and sometimes from accidental exposure to external magnetic field sources, such as loud speakers, transistor radios or meter type photometers, all of which contain strong permanent magnets. Heads, normally made of magnetically "soft" material, pick up magnetism readily but are easily demagnetized. Capstans and guides are made of harder steels which are more difficult to magnetize, but retain such magnetism and are much harder to demagnetize.

Why Demagnetizing is Necessary

The magnetic coating on recording tape is very sensitive to extraneous magnetism since the recorded signal itself is only a modulation of the residual magnetism retained in the thin layer of magnetic coating compound. Exposure to subsequent magnetic fields of any consequence degrades the recorded signal. Such degradation is noticeable as a loss or attenuation of the higher recorded frequencies, as well as an increase in unwelcome "hiss" or background noise which can amount to several dB. Unless offending tape transport components are demagnetized, the condition worsens each time the tape is played. The only way to correct this condition effectively is to measure magnetism levels regularly, and then demagnetize offending components whenever necessary.

How to Measure Magnetism in Components

The lower (test) edge of the Annis Pocket Magnetometer is placed in contact with the component being tested. If troublesome magnetism is present, the pointer will instantly deflect, showing magnetic polarity and a scale reading proportional to the level of magnetism in the component at that point. The higher the reading, the stronger the magnetic field. Magnetometer scale readings relate to magnetic field strength, in gauss, at the staff of the instrument which has been calibrated in a standard, uniform field source traceable to National Bureau of Standards. Use of the Clip-On Probe considerably improves the ability to

HAN-D-MAG can also be used for occasional bulk erasing of tapes

The opposite, flush pole end of the Han-D-Mag has a demagnetizing field strength of over 800 oersteds at 1/4". It is so powerful it can be used for limited bulk demagnetization of reels or cassettes with oxide tapes up to 1/4" wide, if a regular bulk eraser is not available.

detect magnetism present in recessed components but does reduce the Magnetometer reading as compared to direct contact. Additional details on Magnetometers may be found in our "Pocket Magnetometers" bulletin.

How to Demagnetize

First: Turn off the recorder. Make sure all tapes are at least 12" away from the energized Demagnetizer.

Second: Plug the Han-D-Mag into any convenient 115VAC outlet.

Third: Approach the component to be demagnetized with the plastic jacketed probe. It is rarely necessary to actually touch the part. Just bring the probe tip to within 1/8" or 1/4", wave sideways slightly then withdraw slowly, while still energized, at a rate no faster than 3" to 4" per second; to a distance of at least 12".

Fourth: Disconnect Han-D-Mag from its power source.

For maximum demagnetizing efficiency, the Han-D-Mag is rated for practical intermittent duty. It may be left connected to power for six to eight minutes at a time without overheating. If, by accident, you should forget to disconnect this powerful Demagnetizer, an internal calibrated thermal protector will permanently open the circuit, thus eliminating a fire hazard. Such "forgotten" units can be repaired at a modest cost. VU meters, etc. are safe as long as the energized Han-D-Mag is not brought closer than 1" distance to the meter movement. After demagnetizing is completed, you may use your Magnetometer again to check your proficiency.

Two Magnetometer models offered for tape recorder use

The 5-0-5 gauss Pocket Magnetometer is the optimum range for Audiophile use, though a number of other ranges are available. Standard Model 20, 2" diameter shown on the left. Deluxe Model 25, 2 1/2" diameter, on the right.

Annis Han-D-Mags are available in 8 different models. The "thin probe" models (.315" thick as compared to .415") are still the most powerful probe type, head demagnetizers, plus their having a husky 2000 gauss flush pole face.

Prices for complete Han-D-Kits are shown for the particular Han-D-Mag desired. Most orders are for the first listed standard model 115-S. Complete kit designation should also include the Han-D-Mag model number as: (K25/115-S), plus the price.

Han-D-Kits include your selected Han-D-Mag, a Pocket Magnetometer, a Clip-On Extension Probe plus a set of Steel Test Strips and instructions. For professional or serious users, we recommend the K 25 kit due to superior stability and accuracy of the Model 25 instrument.

Note: All 220V Han-D-Mags become continuous rated on 115V.

Han-D-Mag Designation	Description of Han-D-Mag		Han-D-Mag Order Only	Standard Kit (K20)	Deluxe Kit (K25)
50/60Hz					
115-S	Short probe (2 1/4")	115V	\$31.00	\$51.00	\$83.00
220-S	Short probe for	220V	34.00	54.00	86.00
115-L	Long probe (4 1/4")	115V	38.00	58.00	90.00

115TS	Thin, short probe	115V	35.00	55.00	87.00
220TS	Thin, short probe	220V	38.00	58.00	90.00
115TL	Thin, long probe	115V	42.00	62.00	94.00
220TL	Thin, long probe	220V	45.00	65.00	97.00
20/5	Range 5 gauss	\$16.50	Clip-on extension probe		\$3.50
25/5	Range 5 gauss	49.00	Set of steel test strips		2.00
115-S/400					\$51.00
Special 400 cycle Han-D-Mags					
115-TS/400					.55.00

ANTON/BAUER, INC.

Batteries

Snap-On® NiCad Batteries

• Snap-On batteries feature • Quick change design for instant camera mounting without cables or connectors • Premium fast charge cells and exclusive all-cell sensing • Batteries are individually computer tested and shipped with a print-out • Accessories are available for mounting Snap-On batteries on belts, VTRs, monitors, and other portable equipment

Pro Pac® 14 4AH, 14.4V Snap-On NiCad Battery. Fast or slow charge. 4³/₄ lbs. Typical run time: 2 hours at 25W, 3 hours at 18W, 4 hours at 13W\$525.00

Pro Pac 13 4AH, 13.2V Snap-On NiCad Battery. Fast or slow charge. 4¹/₄ lbs. Typical run time: 2 hours at 24W, 3 hours at 16W, 4 hours at 12W\$505.00

Trim Pac® 2AH, 12V, Compact Snap-On NiCad Battery. Fast or slow charge. 2¹/₂ lbs. Recommended for applications drawing under 15W. Typical run time: 1¹/₂ hours at 12W.\$250.00

Recommended Battery Applications: The Pro Pac 13 is a universal battery that will power virtually all ENG/EFP cameras, VTRs, and monitors. However, the Pro Pac 14 will yield superior performance and capacity on those cameras that can accept the higher voltage.

Pro Pac 14/Com Pac 14	Pro Pac 13	Trim Pac
Ikegami	Panasonic	JVC KY-1900
RCA	Bosch	Sony BVP-110
Sharp	Hitachi	
Thomson	Ampex	
Philips	JVC	
	Sony	
	NEC	

Pro Pac® 90 Professional VTR Battery

The Pro Pac 90 is a premium professional version of the Sony BP-90 type VTR battery. Unique features include: • Special fast charge premium cells • Printed circuit board design instead of wiring • Individual cell sensing system • Low temperature protection circuit • Special Tri-conn® 3-conductor connector (eliminates need for separate fast charge cable) • Accessible fuse with spare fuse • Heavy duty molded housing and steel reinforced molded strain relief on cable • Can be charged directly with all Lifesaver Chargers • Can also be charged with other brand conventional chargers but without benefit of the individual cell sensing protection system

Pro Pac 90. 4AH, 12V NiCad VTR Battery. Fast or slow charge. 3¹/₂ lbs. Typical run time: more than 3 hours at 14W\$330.00

T-SO-90. Pro Pac 90 to Snap-On Adaptor. Allows Pro Pac 90 to fit any Anton/Bauer Snap-On Bracket; i.e., for on camera mounting or for wearing on a belt with UniPac holder. Adapts Pro Pac 90 to charge on the mobile fast charger\$195.00

NP-1A. High Capacity (1.7AH) 12V NiCad VTR/Camera Battery. Direct replacement for NP-1 type battery applications. Can be charged with any NP-1/NP-1A charger. Typical run time one hour at 18W ...\$85.00

Power Strap. A multi-purpose battery strap designed for use with all portable video recorders and low voltage portable lighting equipment • Can be worn as a belt for lighting applications • At 12V, 4AH, the Power Strap will continuously run a VO-6800 recorder for 3 hours or power a 25W Ultralight bulb for 2 hours • User accessible 8A circuit breaker • Made of 1000 denier Cordura • Supplied with a nylon strap for belt mounting and a 14-16 hour overnight charger • Can be fast or quick charged with any Anton/Bauer Lifesaver® charger with the optional CA-30 charge cable. Accessory cables are available for most DC power requirements\$395.00

Pro Pac 90

30/13 Battery Belt

Power Strap

DBH. Dual Battery Holder

Pro Pac 13/14

PPSA-D. Perpetual Power Belt

CC-68 Cable. VTR coiled cable with right angle connector to power most popular recorders. 4-pin DC input\$70.00

Universal NiCad Battery Belts/holders

The ultimate battery belt. Powers virtually all portable equipment, including 30V lights, all 13V cameras and VTRs, and UltraLight Modular Lighting System. Unique construction features include: • Leather belt • Lexan® battery modules • Quick release military buckle • Anatomical design • Can be worn around the waist, over the shoulder or bandolero style • 30V, 4AH or 13.2V, 8AH switchable • Built-in 115/230V overnight charger • Voltage display • Charge indicator • Input and output circuit breakers • Multiple charge sensors • In low voltage lighting applications 80W maximum total light output (one or two bulbs)

30/13 Battery Belt. • 30V, 4AH or 13.2V, 8AH switchable • Built-in 115/230V overnight charger • One hour fast charged • 10A circuit breaker • Waist size: 32" to 48" adjustable • Wt. 11¹/₂ lbs. .\$.885.00
CA-30. Fast Charge Cable. Connects 30/13 belt to Lifesaver 1 hour fast charger (LSFC)\$65.00

PPSA-D. Perpetual Power Belt-Automatic. • Accepts two Snap-On batteries of any type • When first battery is depleted, the belt automatically draws from the second • First battery may be replaced and the process repeated providing uninterrupted power • Leather belt • Quick release aircraft buckle • Lexan control module with voltage display • Circuit breaker • 2 output connectors for powering a camera and a VTR simultaneously\$335.00

DBH. Dual Battery Holder. • Accepts a pair of either 2 Pro Pac 13 or Pro Pac 14 Snap-On NiCad batteries • Provides 8AH of continuous power to run a typical camera 4 hours • Control module monitors battery capacity and switches automatically to the second battery when the first is depleted • First battery may be replaced and the process repeated, providing uninterrupted power • Low-battery warning LED • 5A circuit breaker • Universal 5-pin XLR output • Size: 5¹/₂" x 3" x 6" Wt. 1¹/₂ lbs.\$295.00

ANTON/BAUER, INC.

Battery System/Chargers

Silver Battery System

• Silver Zinc batteries will operate equipment approximately three times longer than NiCad batteries of equivalent size and weight. In many cases the SV-13 Silver Battery will operate a camera for an entire day • Fully compatible with Anton/Bauer Snap-On accessories and Snap-On mounts, and will power all video cameras and VTRs • Not recommended for lighting applications • Silver batteries can only be charged with the Anton/Bauer SVDC-13 Silver Battery Charger

SV-13. 12AH, 13.5V Snap-On Silver Battery. • Expected life: 80-100 charge/discharge cycles (one year maximum) • Typical run time: 6 hours at 25W • Wgt. 4 1/2 lbs. • Individually computer tested and packaged with computer printout. **.POR**

SVDC-13 Digital Control Silver Charger. • Charges two SV-13 Silver Batteries simultaneously and independently • Overnight or 6 hour charge rate, selectable • Dual protection circuits • Charge rate indicators and green ready lights • Size: 8 1/2" x 5 1/2" x 10 1/2" • Wgt. 14 1/2 lbs. • 115/230V, 50/60Hz **\$1985.00**

SVSC. Silver System Shipping/Carrying Case. • Heavy-duty case features custom foam interior that holds one SVDC-13 Charger and two SV-13 Silver Batteries • Rugged hardware and an outer shell of high density polyethylene fully protects battery charger during shipment • Size: 18" x 11" x 16 1/2" **\$295.00**

Lifesaver® NiCad Chargers

The first 100% safe charging systems. Lifesaver circuit safely maintains fully charged battery indefinitely. All Lifesaver chargers feature • 3 automatic charge rates • Logic controlled charge monitor circuit • Battery coupled cell sensing system with hot and cold temperature protection • Integral Anton/Bauer Snap-On bracket directly accepts Snap-On type batteries • Special Triconn 3-conductor connector accepts Pro Pac 90 and other BP-90 type VTR batteries

LSFC. Lifesaver Fast Charger. • Single position, one hour charger • Accepts all Anton/Bauer 4AH Snap-On, Pro Pac 90, NiCad batteries • And all Anton/Bauer battery belts • Size: 7 1/2" x 6 1/4" x 4" • Wgt. 4.4 lbs. • 115/230V, 50/60Hz **\$595.00**

LSQC. Lifesaver 8 Hour Single. • Single position, 8 hour quick charger • Accepts all Anton/Bauer 4AH Snap-On, Pro Pac 90, and Pro Pac 60 NiCad batteries • Charges other brand BP-90 type batteries at the overnight rate • Size: 6 1/2" x 4 1/8" x 3 5/8" • Wgt. 5.5 lbs. • 115/230V, 50/60Hz **\$395.00**

LSQ4. Lifesaver 8 Hour Quad. • Four position 8 hour quick charger • Independent charge circuits and LED indicators for each position • Accepts any combination of Anton/Bauer 4AH Snap-On, Pro Pac 90 and Pro Pac 60 NiCad batteries • Charges other brand BP-90 type batteries at overnight rate • Size: 10 1/4" x 3 5/8" x 7" • Wgt. 5 lbs. • 115/230V, 50/60Hz. **\$995.00**

MP-8 Lifesaver 8 Position Microprocessor Charger. • Automatically identifies any combination of battery • Equalizing routine restores batteries to full capacity • Red and green LED's for each position • 24 character two line LCD provides detailed charge information for each battery. **\$3370.00**

MP-4 Lifesaver 4 position microprocessor charger **\$2370.00**

PROBE Programmed Battery Evaluator. • Diagnostic and Rejuvenation access for MP-8 and MP-4 chargers **\$795.00**

Special Purpose Charger

MFC. Mobile Fast Charger. • Single position universal one hour fast or 16 hour, overnight charger • Operates from most vehicles with or without engine running • Accepts all Anton/Bauer Snap-On NiCad batteries and Pro Pac 90 batteries using TSO-90 XLR adaptor • Protection circuit that disconnects charger if vehicle voltage becomes too low • Operates on 10-15VDC input • Size: 6" x 7 1/2" x 3 1/2" • Wgt. 2 3/4 lbs. **\$595.00**

Micro Chargers

Micro Chargers are designed for travel or as back up chargers and are not recommended as a primary charge system. Prolonged use of Micro Chargers may contribute to premature battery aging.

Silver System Batteries and Charger

Lifesaver Fast Charger

SVSC Shipping Case (shown with Silver System)

Mobile Fast Charger

Lifesaver 8 Hour Quad Charging the Pro Pac 13 and 14, and two Pro Pac 90 batteries

MP-8

MC-14. Micro Charger 14 Volts. Miniature wall mount overnight (16-18 hours) charger for Pro Pac 14. Must not be used with 13V or 12V batteries. For 115VAC only **\$95.00**

MC-13. Micro Charger 13 Volts. Miniature wall mount overnight (16-18 hours) charger for Pro Pac 13. Must not be used with 14V or 12V batteries. For 115VAC only **\$95.00**

TPMC-12. Trim Pac Micro Charger. Compact overnight charger for 12V Trim Pac battery. Full charge in 16-18 hours. For 115VAC only . . . **\$95.00**

U-12MC. Micro Charger 12 Volts. Miniature wall mount overnight (16-18 hours) charger for the Power Strap. Must not be used with 14V or 13V batteries. For 115VAC only **\$95.00**

CPMC-14. ComPac Micro Charger 14 Volts. Miniature wall mount overnight (16-18 hours) charger for the ComPac 14 battery only. Not to be used with any other battery types. For 115VAC only **\$95.00**

ANTON/BAUER, INC.**Accessories/Power Supplies****Snap-On Accessories**

Snap-On accessories will accept both Anton/Bauer Snap-On NiCad and Silver batteries except as noted.

UP. UniPac Single Snap-On Battery Holder. • Accepts any Anton/Bauer Snap-On battery • Includes loops (for any size pants belt) • Integral power cable with female XLR-4 DC input connector • Cameras and VTRs not equipped with an XLR-4 DC input require SO/XLR adaptor \$130.00

UL-UP. UltraLight[®] UniPac. • As above with XLR-2 DC input connector for new UltraLight system • NiCad only \$130.00

SO/XLR. Snap-On Bracket to XLR-4 Adaptor. • Fits any Anton/Bauer Snap-On Bracket • Provides universal 4-pin male XLR DC input connection to any camera or other device with an Anton/Bauer Snap On bracket \$95.00

ULPA. Light Tap[™] Power Adaptor. • Allows camera battery to power UltraLights, and camera simultaneously • Maximum 85W total light output (one or two bulbs) • Accepts 12-14V Snap-On NiCad batteries • Operates 12-14V bulbs. NiCad only \$130.00

PSXLR5. Snap-On Battery to XLR-5 Adaptor. • Compact adaptor snaps onto any Anton/Bauer Snap-On battery or power supply converting it to a 5-pin XLR female power output connector \$95.00

TSO-9Q. Pro Pac 90 to Snap-On Adaptor. • Allows Pro Pac 90 to fit any Anton/Bauer Snap-On bracket; i.e., for on camera mounting or for wearing on a belt with UniPac holder • Will not accept other brand BP-90s \$195.00

PPSA-D. Perpetual Power Belt-Automatic. • Accepts two Snap-On batteries of any type \$335.00

Gold Mount[®] Quick Release Brackets

QRG. Universal Snap-On Quick Release Bracket. • This is the basic bracket that is the standard of the video industry and included as standard equipment with virtually all ENG cameras. Includes: • Metal to metal electrical contacts, internal wire connections • 4 mounting screws (6x32) • Designed to be installed on any portable device allowing use of any Anton/Bauer Snap-On battery • Bracket measures 4^{11/16}" x 3^{5/8}" \$95.00

QRGC. Universal Snap-On Compact Bracket. • Designed for the new smaller cameras • Fully compatible with all Snap-On products • Includes electrical contacts • Internal wire connectors and 4 mounting screws (6x32) • Bracket measures 4^{11/16}" x 3" \$95.00

QR-BVP-3. Snap-On Quick Release Bracket. • With integral power connector and plate for custom mounting on Thomson 601/701 and Sony BVP-300 Series cameras • No camera modifications required \$125.00

QR-DXC-M3. Snap-On Quick Release Bracket. • As above, but for Sony DXC-M3 camera • Built-in circuit operates low battery level indicator in viewer \$145.00

QR-DXC-M3A. Snap-On Quick Release Bracket. • With integral power connector and plate for custom mounting on Sony DXC-M3A, DXC-M2, BVP-150 and BVP-3 (with CA-3/CA-30 adaptor) cameras • No camera modifications required \$130.00

QR-DX-3000. Snap-On Quick Release Bracket. • For custom mounting on the rear of the Sony DXC-3000 camera • With integral power connector. \$130.00

LPS-4

QR-BETA-5

QR-777. Snap-On Quick Release Bracket. • With integral power connector for custom mounting on the rear of Panasonic 777, 888, or 555 camera • No camera modifications required. (Same as Panasonic WV-PS355 bracket) \$145.00

QR-BETA-3. Snap-On II Quick Release Bracket. • With integral power connector and plate for custom mounting on Sony/Thomson Betacam camera/recorders • No camera modifications required \$150.00

QR-BETA-5. Snap-On II Quick Release Bracket. • Features a unique dual mounting system for the Sony BVW-105 camera/recorder • Rear mount when used on tripod • Under mount for field use (Same as QR-BETA-3 Bracket) \$195.00

QR-BETA Back Mount. • Snap-On II Quick Release Bracket with integral power connector and plate for custom mounting on the back of Sony/Thomson Betacam camera/recorder or to power the recorder alone \$125.00

SP-BETA Kit. Snap-On Quick Release Bracket. • Mounting system for the new "SP" series AMPEX and Sony cameras/recorders . . . \$195.00

Charge Adaptor Cables

CA-30. Fast/Quick Charge Cable. • Connects the 30/13 belt to Lifesaver Fast Charger (one hour) only • The UltraKit 12V U12VCO Clip-On battery to Lifesaver Fast Charger (one hour) • Lifesaver Quick Charger (8 hour) or Quad Charger 4 position (8 hour) • And to Mobile Fast Charger \$65.00

TCA-30. Tektronix Fast Charge Cable. • Connects Tektronix BP1 battery (Waveform Monitor DC power source) to Lifesaver 1 hour Fast Charger) \$65.00

Power Supplies

The Anton/Bauer SPS-3 is an advanced switching-type power supply and the LPS-4 is a linear regulator with a toroidal transformer. Superior filtering techniques and design make these power supplies the coolest, most efficient and noise-free units available to the video industry. The integral Snap-On mount allows these supplies to be conveniently snapped onto the rear of any camera just like a battery pack.

SPS-3. Advanced Switching Type 3 Amp Power Supply with Snap-On Mount. • Output: 13V at 3A (max.) • Input: 115VAC only . . . \$495.00

LPS-4. Linear Power Supply 4 Amp with Snap-On Mount. • Output: 12V at 4A (max.) • Input: 115/230VAC \$595.00

ANTON/BAUER, INC.**Battery-Operated Lights****UltraLight® System**

The UltraLight System provides compact, lightweight, and versatile portable lighting. UltraLights become fill, spot or flood lights according to the selection of quick-change bulbs, filters, and focus adaptors. The removable lighthead module allows bulb changes in the field without direct handling. A working system requires one or more of the power cables/adaptors listed below as well as a bulb of corresponding voltage.

ULS. UltraLight Single. • Single base and head module with single power input • Includes one BAB 24W bulb. \$195.00

ULD. UltraLight Dual. • Dual base with two head modules • Two switches and single power input • Includes two BAB 25W bulbs Bulb voltages must be matched • Total power draw not to exceed 100W \$350.00

UL-HM. UltraLight Head Module • Extra quick-change rugged aluminum module to house alternate or spare bulbs \$75.00

UltraKit® Complete 12 Volt Lighting Kit

- UltraLight Single
- UltraLight Dual

Kits include the following:

- 12V Power Strap NiCad fast charge battery pack with integral belt loop and detachable ULC-L power cable • Wall-type Micro Charger • One (Single UltraKit) or two (Dual UltraKit) 12V BAB 25W flood bulb • Heavy duty shipping case with custom fit foam interior (extra spaces allowed for accessories).

Filters, spare head modules, and power adaptors/cables may be purchased separately if required. Lifesaver fast charge (LSFC) with the optional CA-30 charge cable adaptor.

Single \$595.00
Dual. 750.00

Power Adaptors

ULPA. UltraLight Light Tap Power Adaptor. • Allows camera battery to power UltraLight(s) and camera simultaneously • Maximum 85W total light output (one or two bulbs) • NiCad only.

. \$130.00

ULAC. UltraLight AC Power Supply. • Compact AC power supply allows use of low voltage bulbs (12-14V) where AC power is available • Maximum 90W of light output (one or two bulbs) • 115/230V, 50/60Hz, 12-14VAC for lighting applications only • (Requires ULC-LAC cable) \$265.00

UL-UP. UltraLight UniPac. • Compact Anton/Bauer Snap-On bracket with integral belt loops and 5' cable with XLR-2 DC input connector • Maximum 85W total light output (one or two bulbs) • NiCad only \$130.00

Adaptors/Filters

UL-WA. UltraLight Wide Angle Adaptor. • Optical device that provides a smooth, even pattern that will cover the widest angle zoom lenses • Can also be used with flood bulbs to smooth out uneven bulb patterns \$55.00

UL-DF. UltraLight #1 Diffuser. • For use with spot bulbs • Lowers light output by one "F" stop (50%) while softening the edges of the beam pattern. 55.00

UL-DC. UltraLight Dichroic Filter. • Converts output of all bulbs to match 6000°K daylight • Must be used when using UltraLight for daylight fill or cool white fluorescent fill 98.00

UL-BD. UltraLight Barn Door Kit. • Includes two hinged barn doors to fit UltraLight. 75.00

UltraLight Single with
UL-WA Focus Adaptor

UltraLight Dual

UltraKit

ULPA Power Adaptor allows
battery to power UltraLight and
camera simultaneously

UltraLight head module
with Adaptors and Filters

ULAC

Brackets

These brackets are used for quick mounting the UltraLight on all popular cameras. The UltraLight can be mounted to any 5/8" stud mount or light stand in either a horizontal or vertical position (facing down.)

BR STUD 1/4. For all cameras with 1/4-20 threaded accessory hole. \$55.00

BR STUD 3/8. For all cameras with 3/8-16 threaded accessory hole. 55.00

BR SHOE. For all cameras with microphone/accessory shoe 55.00

BR UNIV. Universal mount that clamps onto the handle of virtually any camera 55.00

BR U2. Similar to BR UNIV but permits mounting of two UltraLight Singles or one stud may be replaced by a microphone holder to allow operation of UltraLight Single or Dual with a microphone. 75.00

UL-HH. UltraLight handle with 5/8" stud for off camera hand-held applications. 55.00

Cables

ULC-L. 5' cable for 12-14V application. 5 pin male to 2 pin XLR female \$60.00

ULC-30. 5' cable for 30V applications. 2 pin male to 2 pin XLR female 60.00

ULC-110. 8' 110V cable. Wall plug to 2 pin XLR female 50.00

ULC-LAC. 8' cable for operating UltraLight from ULAC power supply. 2 pin male to 2 pin XLR female 60.00

ULC-BETA. 2' cable for operating UltraLight directly from QR-BETA brackets. Eliminates need for UltraLight power adaptor (ULPA). 4 pin male to 2 pin XLR female 60.00

ANTON/BAUER, INC.

Test Equipment/Light Kit/Accessories

Diagnostic and Service Equipment

Data-Tap™ Battery Testing and Monitoring Device. Gives the user accurate information on the constant state of discharge of their battery pack • Measures 1/2" thick and sandwiches between the existing Anton/Bauer Snap-On® camera bracket and Pro Pac® system battery • Equipped with a digital read-out in ampere hours • This device monitors power consumption • Weighs 12 oz.

Data-Tap \$375.00

ADM (Automatic Discharge Module) Designed to be used in conjunction with Data-Tap to calibrate/discharge Anton/Bauer Snap-On, Pro Pac or Pro Pac 90 VTR type batteries (12-14V), giving the user accurate information as to the battery's ampere hour capacity. Can also be used as a stand-alone to discharge NiCad or silver batteries which may not have been fully depleted during operation • The unit has a 2-position switchable automatic cut-off circuit • LED indicates when discharge is complete • Will discharge a standard 4AH battery in 2 hours • Weighs approximately 2 1/2 lbs.

ADM \$295.00

SCD. Silver Cell Equalizer. This unit is designed to enhance silver cell battery life through equal discharging of the individual cells • Digital voltmeter capable of monitoring individual cell voltages • 9 LED display which indicates the discharge status of each individual cell

SCD \$595.00

Extend. Extender board of servicing SVDC-13 silver charger control boards. \$45.00

UltraKit® 30V Light Kit

30V light kit combines either a single or dual Ultralight system with the 30/13 battery belt in a heavy duty shipping case with custom fit foam interior for protection. The kit includes a ULC-30 5' cable with 2 pin Amphenol male to 2 pin XLR female connectors. Single kit has one spare 30V bulb and the dual comes with 2 spare 30V bulbs.

Filters and spare head modules may be purchased separately. 30/13 battery belt may be charged in 1 hour with the Lifesaver fast charger using the CA-30 cable.

Single \$1265.00

Dual 1395.00

Bulbs for Ultralight

Triple Purpose Low Voltage Bulbs — The ESX, EYR and EYF/FPA bulbs provide three beam/output options.

1. Spot (15°)-plain bulb. 2. Medium Spot (approximates 21°)-with #1 diffuser (UL-DF). 3. Flood (36°)-with wide angle adaptor (UL-WA) this bulb covers most zoom lenses down to 9mm length (for 2/3" tube cameras).

Dual Purpose Low Voltage Bulb — The EXZ bulb provides two beam/output and is a good all around bulb.

1. Medium Flood (24°)-plain bulb. 2. Full flood (36°)-with wide angle adaptor.

Single Purpose Low Voltage Flood Only Bulbs — The BAB, EYP, and EYC bulbs provide full flood (36°)-plain bulb.

Results of extensive testing have shown that the 25W ESX bulb used with the wide angle adaptor or the plain BAB bulb provide the most pleasing lighting conditions for most indoor interviews in the typical 3' to 6' range.

Bulb	Watts	Spot	Med.	Flood	Amps	Run Time w/4AH Battery	Price
ESX	25	200	85*	30**	1 2/3	120 min.	\$28.00
EYR	50	400	170*	60**	3 3/4	60 min.	28.00
EYF/FPA	85/75	700	300*	120**	6 1/4	35 min.	28.00
EXZ	60	—	175	70**	4 1/2	45 min.	28.00
BAB	25	—	—	35	1 2/3	120 min.	28.00
EYP	50	—	—	65	3 3/4	60 min.	28.00
EYC	85	—	—	125	6 1/4	35 min.	28.00

Note: All above data measured at 14V.

*With #1 Diffuser (ULDF)

**With wide angle adaptor (ULWA), wattage ratings shown above are higher than those indicated by bulb manufacturer; when bulbs are used at higher voltages (13.2 or 14.4), the wattage ratings increase to those shown above.

Data-Tap

ADM

Ultrakit

UltraLight head module securely holds bulbs. Removable lighthouse module permits field changes without direct handling of bulb.

30V Bulbs. While the first low voltage bulbs offer maximum versatility, the following bulbs can be used with 30V battery belt to provide excellent results in certain applications.

Bulb	Watts	Amps	Footcandles at 5'	Run Time w/4AH Battery	Price
EXS	200	6 2/3	400	35 min.	\$28.00
EKP/ENA	80 Note 1	2 1/2	140	90 min.	28.00
ENZ	50 Note 1	1 2/3	90	140 min.	28.00

Note 1: Bulbs ELB and ENZ must be used with UL-WA Wide Angle Adaptor. The beam pattern of the plain bulbs is unacceptable.

115/230VAC Bulbs

The UltraLight will directly accept several 115 and 230V bulbs. However, while AC powering is desired, we recommend using the low voltage bulbs powered with the model ULAC 115/230VAC power supply. Anton/Bauer does not offer 230V bulbs.

Bulb	Watts	Volts	Footcandles at 5'	Price
FMG	150	115	300	\$20.00

Video Cables

Anton/Bauer stocks the 5-pin XLR universal cable for purchase with open end (customer installs equipment connector) or with dedicated connector.

CC-U2. Coiled 1 to 6', 2 conductor, open end cable. Specify one of these cables when ordering connector-type. Price includes cable.

CC-U2.	\$ 50.00
CC48 4-pin DIN male	70.00
CC75 4-pin Hirose female	70.00
CC76 Bendix female	140.00
CC77 7-pin female	70.00
CC79 5-pin female	70.00
CC88 4-pin XLR female	70.00

APHEX SYSTEMS LTD.

Audio Processors

The Compellor Compressor/Leveler/Limiter • Delivers invisible compression • Leveling • Peak limiting simultaneously • Ideal for broadcast pre-processing microphone control • Audio production • Tape duplicating • Live sound and film dubbing

The control circuits are actually analog computers that constantly monitor the input, adapt and control a single VCA per channel for minimal signal path.

Compellor intelligently varies all the parameters for you. All you need to do is set input level to control the amount of processing, adjust output level, and set the balance between compression and leveling.

Cat. No. 300 Compellor Stereo \$1195.00
 Cat. No. 301 Compellor Mono 795.00

Compellor/Aural Exciter A single, one rack height package combining two of your favorite tools. A monaural Compellor for completely automatic gain control, and the circuitry of the Aural Exciter to produce dramatically improved clarity, dimension and detail.

Once the Compellor/Aural Exciter is installed and set up in a PA or other sound system, no user adjustments are needed. The Compellor section will remain consistent regardless of the source material or who is operating the system. The Aural Exciter increases intelligibility and penetration...even at reduced power levels, or in highly reverberant rooms, or under high ambient noise conditions. An indispensable flexible tool for basic paging systems or complex touring sound systems.

Cat. No. 303 \$949.00

Studio Dominator The Studio Dominator is an intelligent 3-band peak processor with a proprietary circuit which varies the threshold for limiting. A unique transient enhancement circuit increases the perception of transients while maintaining absolute peak limiting.

Tunable crossover frequencies, plus high and low frequency drive controls allow the user to create different effects. Limiting can be preshaped to match the medium's saturation characteristics for maximum S/N performance, as well as for broadcast pre-emphasis.

The Studio Dominator is ideal for use in any situation where clipping is a problem, such as digital audio, disc mastering, video post production and optical film.

Cat. No. 700 Stereo \$1195.00

- Options**
 702 The 700 plus matrix/de-matrix add \$200.00
 703 The 700 plus pre/de-emphasis card add 200.00
 704 The 700 plus pre/de-emphasis card/low-pass add 600.00
 510 Interface Cards to Optimode (Trademark) 8100A pr./158.00

Note: All options listed are factory installed

Aural Exciters A family of Aural Exciters, all utilizing a unique proprietary audio processing device that makes use of highly advanced psychoacoustic principles to effectively restore and enhance audio presence, brightness and intelligibility. The patented psychoacoustic process creates the perception of an increase in mid and high frequency energy, with no actual increase in power or level.

The Aural Exciter can produce dramatically improved clarity, dimension and character in any sound system or application. It can also reduce distortion in PA and sound reinforcement applications by providing increased penetration and audibility at reduced power levels. The device can be added to virtually any new or existing system with no danger of overloading other components or triggering compressors or limiters.

The Aural Exciter is a single-ended process, requiring no decoder. Once encoded, copies made from a processed tape sound as good as the original.

Aural Exciter II-S (Studio) • Allows complete control of enhancement parameters with a wide array of controls • Controls the amount of drive to the side chain • Tuning set the corner frequency of the high pass network • Damping adjusts the damping ratio of the side chain filter network • Timbre varies the spectral quality of the generated harmonics • Limiter prevents "splashiness" • Mix set the amount of side chain output added into the total output and may be bypassed to allow output of the side chain only • All controls are duplicated for each channel

Cat. No. 201 \$1995.00

Compellor

Studio Dominator

Aural Exciter II-B

Aural Exciter "C"

Aural Exciter "E"

Aural Exciter II-B (Broadcast) Complete RF shielding and safety bypass relays in the event of power failure. Designed specifically for on-air use, this unit provides AM stations with the clarity and brightness of FM, while restoring to FM the naturalness and openness normally lost due to processing.

The most impressive aspect is the fact that the lower the quality of the playback system, the better the comparative benefit derived. The sound of your broadcast will satisfy the most demanding audiophile, and at the same time grab the attention of the rush-hour commuter.

Cat. No. 211 \$1995.00

Aural Exciter Type C The Exciter Type C utilizes the same psychoacoustic principles of the II-B made possible with an Aphex designed monolithic chip. The Type C is a little less flexible than the larger unit with fewer operating controls. Compared to its predecessor, the Type B, the Type C offers improved performance, including a greatly improved drive window for input tolerance. All this makes genuine aural excitement available to small clubs, studios, halls, restaurants, musicians, tape duplicators and sound contractors operating on a more modest budget...while retaining the most important features of its bigger brother. Phone and RCA jack inputs and outputs. Comes with detachable rack ears.

Cat. No. 103A \$299.95

Aural Exciter Type E The Type E is designed expressly for the performing musician. Instruments or mikes can be plugged directly into the Type E for stage, recording and P.A. use without the necessity of a preamp or mixer. In fact, the Type E can serve as a low noise, high quality preamp and direct box while enhancing the sound. The Type E features "High Z" ins and outs, plus line level ins and outs. Optional rackmounts are available for mounting one or two units in a standard 19" equipment rack. Like all Aural Exciters, the Type E generates musically related harmonics to restore natural clarity, detail and brightness. Aural Exciters actually recreate missing harmonics. The effect is especially helpful for digital audio effects, samplers and synthesizers because they are digitally constructing the sound which is bandwidth limited by the sampling rates.

Cat. No. 110 \$149.95

- Allows track by track enhancement control — no more compromises
- Fits dbx F-900 rack
- Peaking control for extra versatility
- Jumper selectable for -10, 0, +4, or +6dBm operating levels
- Uses latest Aphex hybrid technology for improved performance
- Balanced input

Modular Aural Exciter™

It is no longer necessary to compromise on one setting for all parts of a mix. With a rack of 9001's you now have complete creative control on every track. For that difficult vocal, stubborn drum, or mushy string section, you can select exactly the right enhancement for all tracks simultaneously, and you don't have to add yet another rack system to your facility.

The modular Aural Exciter uses patented psychoacoustic principles to restore missing harmonic detail, giving a natural brightness, presence and intelligibility to your sound, and does it without affecting overall level or EQ.

The modular Aural Exciter is also perfect for live use, allowing individual settings for each voice and instrument mike, so that male or female, bass drum or cymbal, each derives the maximum from the Aural Exciter.

Cat. No. 9001 \$199.00

612 Expander/Gate

- Key Filters — Variable high and low pass filters allow the 612 to respond only to a desired band of frequencies
- Filter Switch — Switches the key filters completely out of the circuit for flat frequency response if desired, as well as eliminating the circuit in the control path which would slow down response
- External Key Switch — Allows use of a rear panel jack input to the key circuits so the 612 can be controlled from an external source
- Key Listen — Switches the key signal to the main output making adjustment of the filters and key controls very easy
- LED Function Display — Three LED "Traffic Light" display instantly shows status of each channel of the 612, whether above threshold (open), holding or below threshold (closed)
- Threshold — Adjustable from -50 to +20dBm for exceptional range
- Attack Time — Variable from an incredible 2µs (with no clicks) to 10ms
- Hold — Allows a programmed delay of 10ms to 4s before the release function is activated

- Release Time — Adjustable from 40ms to a full 4s
- Ratio — The ratio of downward expansion may be varied from 1:1 (off) through low ratios for accentuating musical dynamics to 20:1 for gating
- Range — Sets the amount of expansion, from 0 to 100dB
- In/Out — Each channel of the 612 may be individually switched in or bypassed
- Master/Slave Switch — Allows one channel to follow and be controlled by the other for true stereo operation from one audio or key input
- Servo-Balanced Inputs And Outputs — For highest quality signal path, maximum common-mode hum and noise rejection and short-circuit proof outputs that can instantly be used single-ended or balanced
- Key In And Out Jacks — For maximum flexibility
- Multi-Voltage Operation

612 \$795.00

124 10/4 Audio Level Interface

- Low distortion
- Low noise
- All I/Os active buffered
- Full RF protection
- Servo-balanced inputs and outputs (high level)
- Low output impedances
- Selectable 600 ohm input termination
- Compact 1/2 rack package (rackmountable)

The 124 10/4 Box will easily interface consumer audio equipment with professional studio and broadcast facilities. Active, servo-balanced circuitry converts +4dBm (or +8dBm) line levels to -10dBm (IHF hi-fi) levels, and back again. XLR and RCA-type connectors enable quick hookup.

Strict attention to details such as good common-mode rejection, flawless squarewave response, exceptionally wide bandwidth and dynamic range and low distortion make the 10/4 box ideal for connecting digital disc and tape machines in the studio. Other examples of semi-pro and

consumer devices that may be used in professional environments are: videocassette recorders, audio cassette recorders, graphic equalizers, reverb and ambience devices, noise reduction systems, electronic crossovers and power amplifiers.

The differential high level inputs are RF protected and jumper selectable for +4 or +8dBm operation. They are servo-balanced to prevent high common-mode voltages from affecting input headroom. A front panel switch provides 600 ohm termination.

124 \$219.00

Aries 16

Aries 16 Multi-track Recording Console

All mike inputs are electronically balanced and have 20dB pads available. Phantom power at 48V can be switched on or off. Equalizers are ± 14 dB, switchable to 60 or 120Hz; sweepable from 350Hz to 7kHz; and switchable from 6kHz to 12kHz. Switchable filters are shelving, sweepable filters are peaking.

There are 8 group outputs and 16 monitor/FX returns—8 with 2 band EQ. There are 4 aux sends per channel which are switchable pre/post. High quality 100mm long throw faders are standard, and the meter bridge is adjustable for the most comfortable viewing angle. Both solo and mute facilities are standard. The power supply is remote, and rackmountable for convenience.

The Aries 16 is available with either 16 or 24 inputs.

Input Channel

- Mike Input: 1K ohm, electronically balanced input
- Mike Gain: +20 to +60dB
- Mike Pad: -20dB
- Phantom Power: +48V with on/off switch
- Mike/Line: Input select
- Equalizer: HF ± 14 dB at 6kHz or 12kHz (switchable); Mid frequency ± 14 dB at 350kHz to 7kHz (sweepable); Low frequency ± 14 dB at 60Hz or 120Hz (switchable)
- Insert Point: Post EQ-prefader
- Auxiliary sends: 1, 2 and 3, 4 are switchable pre/post fader
- Mute: aux sends and outputs to group and remix
- PFL: Prefade listen
- Overload Indicator: Illuminates 3dB before clipping

Group/Monitor Section

- PFL: Prefade listen
- Insert Point: Stereo prefade
- Tape: Selects tape returns (switch in) or group outputs as monitor source
- Level and Pan: Routes control level of monitor mix to stereo bus
- Auxiliary Sends: Aux 1 is prefade for headphone mixes. Aux 3 selected by depressing Aux 3 switch. Aux 2 is postfader and allows effects to be added to monitors without affecting tape sends. Aux 4 may be selected by depressing Aux 4 switch
- FX Return: When depressed,

signals present on fader are added to the remix. When using "Tape" and "FX" switches together, any signal that is present at the tape inputs is routed through the monitor level control and pan pot to the group fader and the remix

- Monitor Equalizer: 8 extra line level inputs with 2 band equalizer are available on the monitor section. HF ± 14 dB at 6kHz; LF ± 14 dB at 120Hz
- Metering: 16 meters follow the monitor source select switch. There are separate L and R and PFL meters

Master Section

- Insert Point: Prefade
- Auxiliary Returns: Two returns with PFL routing to group and remix. Aux 1 is prefade and Aux 2 postfade
- Auxiliary Masters: Overall level control for all 4 aux outputs with AFL monitoring
- Talkback: Level can be routed to all groups (slate) and aux buses with XLR input for low impedance microphones
- Monitors: Control room output level
- Mix: Selects the stereo bus as monitor source
- St. Tape: Routes stereo master machine to monitors
- Mono: Sums L and R monitor signals for mono capability checks
- Dim: Reduces monitor output by 20dB
- PFL/AFL LED: Indicates if AFL/PFL switch is depressed
- Level: Control room monitor level control
- Headphones: Stereo jack
- PFL to Monitor: Overrides headphone amplifier and stereo meters for solo function

Technical Specifications

- EIN > -126dBV (200 ohm source)
- CMRR > -70dB
- THD: < .03% at +4dB output
- IM Distortion: < .01%
- Frequency Response: ± 1 dB 20Hz to 20kHz
- Noise Level: < -80dBV (group and mike)
- Max. Output: +20dBV
- Operating Level: -10 or +4dBV
- Adjacent Channel Crosstalk: -80dB
- Input Impedance: Mike 1kHz, others 10kHz
- Output Impedance: 50 ohm
- Dimensions: 16 input 39 $\frac{1}{2}$ " x 26" x 8"; 24 input 50 $\frac{1}{2}$ " x 26" x 8"
- 16 x 8 x 16 \$6895.00
- 24 x 8 x 16 \$8595.00

Audio Consoles

150 Series 6 Channel Consoles

- Ideally suited for small on air production or newsroom studios • 6 channels • 18 balanced inputs (150SC-6), 22 inputs (150SC-8)
- Balanced program output with mono mix standard • VCA level controls—stereo tracking within 1dB • DC controlled audio—no audio on faders or switches • NE5532 integrated circuits • Regulated open frame power supply • Solid oak end panels and armrest • Taut band VU meters • Motherboard construction eliminates unreliable wiring
- 10W/channel monitor amp • 2W earphone and cue amp per channel • Telephone mix minus standard

Inputs:	2 per channel, channels 1 - 6, all A inputs may be mike or line level 1 remote select switch — 7 inputs 18 total balanced inputs to 6 channels Low level — 1000 ohms, -50dBm typical input level Trim pot adjustable level, -60 to -30dBm input levels High level — 100,000, 0dBm typical input level, 30dB trim adjustable A and B inputs
Program Outputs:	600 ohms balanced + 27dBm maximum output
Monitor Amp:	Selectable between program, and external input, 10W per channel at 8 ohms, THD .1% at 1W. Line out for external amps
Cue Amp:	Selected by detent on the individual volume pot. 2WRMS at 8 ohms stereo
Earphone Amp:	Selectable between program, external and cue. 2WRMS at 8 ohms per channel
Meters:	Taut band, VU response. Meters are buffered and adjustable
Muting Relay:	3 Pole Double Throw (3PDT) 5A, 110VAC relay contacts are provided for On The Air light or telephone

150 Series

Dimensions:	8" H x 30" W x 17" D Console
Weight:	38 lbs.
Finish:	Aluminum sheet metal, screened enamel, oak sides and armrest
Faders:	Rotary, 100,000 operation
Switches:	Schadow by ITT, Morn. - 100,000 Op. Interlock 50,000 Op.
Frequency Response:	± .5dB over 20Hz to 20,000Hz
Hum and Noise:	Mike -70dB below +8dBm (-50dBm In), Line -100dB below +18dBm
Total Harmonic Distortion:	.02% typical
Stereo Tracking:	± 1dB over a 40dB range
Crosstalk:	Normal levels, into the noise at 1kHz
DC Power Supply:	± 15V regulated, modular
AC Power Supply:	110VAC, 210VAC (optional)

150SC-6M (mono)	\$1895.00
150SC-6S (stereo)	1995.00

500 Series 8 Channel Consoles

- 25 balanced inputs total • Balanced program and audition outputs with mono mix down standard • VCA level controls — stereo tracking to within 1dB • DC controlled audio — no audio on pots or switches • NE5532 integrated circuits • External regulated power supply • Solid oak end panels and armrest for lasting beauty • VU meters monitor program and audition simultaneously • Plug-in PC boards for ease of service • Motherboard construction eliminates unreliable wiring • Remote start standard • Telephone mix minus bus standard • 40W/channel monitor amp (optional) • Designed for on the air production or portable broadcast applications

Inputs:	2 per channel — any "A" input is mike or line level selectable 1 remote select switch with 7 inputs 25 total balanced inputs to 8 channels Lo level — 1000 ohms, -50dBm typical input level Trim pot adjustable from -60 to -30dBm High level — 100,000 ohms, trimpot adjustable from -20 to +10dBm
Program, Audition Outputs:	Identical 600 ohm balanced + 27dBm maximum output
Monitor Amp:	Selectable between program, audition, and 4 unbalanced external inputs. 10WRMS at 8 ohms per channel. Line level output for external amp
Cue Amp:	Selected by detent on the individual volume pot. 2WRMS at 8 ohms stereo
Earphone Amp:	Selectable between program, audition, cue and external. 2WRMS at 8 ohms per channel
Meters:	Taut band, VU response, separate sets for program and audition. Meters are buffered and adjustable
Muting:	Jumper selection enables any of the 8 channels to mute the monitor and cue amp to prevent mike feedback. Muting is electronic, 3PDT muting relay
Remote Start:	Each of the inputs has a ground closure for start. Jumpers determine momentary or sustained action. A and B inputs start independently

Audio Consoles

600 Series Deluxe 8 Channel Consoles

• Engineered to combine the ultimate in mechanical reliability with the remarkable sound and performance of todays high tech consoles
 • Penny and Giles rotary faders • 28 balanced inputs total • Balanced program and audition outputs with mono mix down standard • VCA level controls — stereo tracking to within 1dB • DC controlled audio — no audio on pots or switches • NE5532 integrated circuits • External regulated power supply • Solid oak end panels and arm rest for lasting beauty • VU meters monitor program and audition simultaneously • Plug-in PC boards for ease of service • Motherboard construction eliminates unreliable wiring • Remote start standard • Telephone mix minus bus standard • 40W/channel monitor amp (optional) • ESE clock and timer standard

Inputs: 2 per channel — any "A" input is mike or line level selectable
 2 remote select switch with 7 inputs
 28 total balanced inputs to 8 channels
Lo level — 1,000 ohms, -50dBm typical input level
 Trim pot adjustable from -60 to -30dBm
High level — 100,000 ohms, trim pot adjustable from -20 to +10dBm

Program, Audition Outputs: Identical 600 ohm balanced +27dBm maximum output

Monitor Amp: Selectable between program, audition, and 4 unbalanced external inputs. 10WRMS at 8 ohms per channel. Line level output for external amp

Cue Amp: Selected by detent on the individual volume pot. 2WRMS at 8 ohms stereo

Earphone Amp: Selectable between program, audition, cue and external. 2WRMS at 8 ohms per channel

Meters: Taut band, VU response, separate sets for program and audition. Meters are buffered and adjustable

Muting: Jumper selection enables any of the 8 channels to mute the monitor and cue amp to prevent mike feedback. Muting is electronic, 3PDT muting relay

Remote Start: Each of the inputs has a ground closure for start. Jumpers determine momentary or sustained action. A and B inputs start independently

600 Series

Electrical: 1 channel on, fader -15dB
Frequency Response: ±.5dB, 20Hz to 20kHz
Hum and Noise: Mike -70dB below +8dBm (-50dBm input), line -100dBm below +18dBm

Total Harmonic Distortion: .02% typical at +8dBm
Stereo Tracking: ±1dB over a 40dB range

2000 Series 12 Channel Consoles

• Designed for ease of operation, uncompromising performance, and maximum durability • 24 balanced inputs total • Balanced program and audition outputs with mono mix downs standard • Penny and Giles slide faders • VCA level controls — stereo tracking within 1dB • DC controlled audio — no audio on pots or switches • NE5532 integrated circuit • External regulated power supply • Solid oak end panels and armrest • VU meters monitor program and audition simultaneously • Motherboard construction eliminates unreliable wiring • Remote start standard • Telephone mix minus bus standard • 40W/channel monitor amp (optional)

Inputs: 1 per channel — any channel is jumper selectable mike or line level
 2 remote select switches — 7 inputs each
 24 total balanced inputs to 12 channels — all channels are trim pot level adjustable
Lo level — 1000 ohms, -50dBm typical input level
 Trim pot adjustable level -60 to -30dBm input levels
High level — 100,000, -10 to +20dBm trim pot adjustable input levels

Program, Audition Outputs: Identical 600 ohms balanced +27dBm maximum output

Monitor Amp: Selectable between program, audition and 4 external inputs. 10WRMS at 8 ohms per channel. Line level output for external amp

Cue Amp: Selected by detent on the individual volume pot. 2WRMS at 8 ohms, per channel, stereo

Earphone Amp: Selectable between program, audition, cue, and external. 2WRMS at 8 ohms per channel

Meters: Taut band, VU response separate sets for program and audition meters are buffered and adjustable

Muting Relay: 3 Pole Double Throw (3PDT) 5A, 110VAC relay contacts are provided for On The Air light or telephone. Any or all channels may be muted via jumper

Remote Start: Each of the 12 channels has a set of 2PST reed relay contacts for start/stop. Jumpers determine momentary or sustained action

2000 Series

Electrical: 1 channel on, fader -15dB
Frequency Response: ±.5dB, 20Hz to 20kHz
Hum and Noise: Mike -70dB below +8dBm (-50dBm input), line -100dB below +18dBm

Total Harmonic Distortion: .02% typical at +8dBm
Stereo Tracking: ±1dB over a 40dB range
Crosstalk: All buses into the noise at 2kHz
DC Power Supply: ±15VDC 1.5A, +15VDC 3.0A regulated external
AC Power: 110VAC, 220VAC (optional)
Dimensions: 8"H x 30"W x 17"D console
Weight: Console — 38 lbs.; power supply — 17 lbs.
Finish: Aluminum sheet metal, screened enamel, oak sides and armrest

Faders: Penny and Giles 3000 Series
Switches: Schadow by ITT, Mom. -100,000 Op. Interlock 50,000 Op.

2000SC-12M (mono) \$4495.00
 2000SC-12S (stereo) \$4695.00

Refer to Green Section for Addresses and Telephone Numbers.

ARRAKIS SYSTEMS, INC.

Audio Consoles

2100 Series 12 Channel Consoles

• 34 balanced inputs • Balanced program and audition outputs with mono mix down standard • Penny and Giles slide faders • VCA level controls — stereo tracking within 1dB • DC controlled audio — no audio on pots or switches • NE5532 integrated circuit • External regulated power supply • Solid oak end panels and armrest • VU meters monitor program and audition • Motherboard construction eliminates unreliable wiring • Remote start standard • Telephone mix minus bus standard • 40W/channel monitor amp (optional)

Inputs: 2 per channel, channels 1 - 10; channels 11 and 12 are 7 inputs each.
 "A" inputs are selectable mike or line
 2 remote select switches — 7 inputs each for channels 11 and 12
 34 total balanced inputs to 12 channels
Low level — 1000 ohms, -50dBm typical input level
 Trim pot adjustable level from -60 to -30dBm
High level — 100,000, -20 to +10dBm trim pot adjustable

Program, Audition Outputs: Identical 600 ohms balanced + 27dBm maximum output

Monitor Amp: Selectable between program, audition and 4 balanced external inputs. 10WRMS at 8 ohms per channel. Line level output for external amp

Cue Amp: Selected by detent on the individual volume pot. 2WRMS at 8 ohms per channel

Earphone Amp: Selectable between program, audition, cue and external 2WRMS at 8 ohms per channel

Meters: Taut band, VU response, program and audition selectable. Meters are buffered and adjustable

Muting Relay: 3 Pole Double Throw (3PDT) 5A, 110VAC relay contacts are provided for On The Air light or telephone

Remote Start: Each of the 12 channels has a ground closure for start. Jumpers determine momentary or sustained action. A and B inputs start independently

2100 Series

Electrical: 1 channel on, fader -15dB
Frequency Response: ± .5dB, 20Hz to 20kHz
Hum and Noise: Mike -70dB below +8dBm (-50dBm input), line -100dB below +18dBm

Total Harmonic Distortion: .02% typical at +8dBm
Stereo Tracking: ± 1dB over a 40dB range
Crosstalk: All buses into the noise at 2kHz
DC Power Supply: ± 15VDC 1.5A, + 15VDC 3.0A regulated, external 110VAC, 220VAC (optional)
AC Power:
Dimensions: 8" H x 30" W x 17" D console
Weight: Console — 38 lbs., power supply — 17 lbs.
Finish: Aluminum sheet metal, screened enamel, oak sides and armrest
Faders: Penny and Giles 3000 Series
Switches: Schadow by ITT, Mon. - 100,000 Op. Interlock 50,000 Op.

2100SC-12M (mono) \$5495.00
 2100SC-12S (stereo) \$5695.00

5000 Series 16 Channel Modular Consoles

• 16 channels — modular • 2 balanced inputs per channel • Balanced program and audition outputs with mono mix down standard • Penny & Giles slide faders • VCA level controls — stereo tracking within 1dB • DC controlled audio — no audio on pots • Clock and timer standard • NE5532 integrated circuit • External regulated power supply • Solid oak end panels and armrest • VU meters monitor program and audition • Motherboard construction eliminates unreliable wiring • Remote start and stop plus remote module control • Telephone mix minus bus standard

The mainframe features 16 channels plus a channel for accessory modules and the standard Control Room Monitor module. The meter bridge boasts meters for both Program and Audition stereo outputs, and clock and timer. The power supply is external, regulated, and protected. The entire modular front panel hinges up and back to expose the input/output terminal strip connectors. All wiring is performed from the front of the console. The compact 30" W by 17" D mainframe is ideal for efficient studio design.

Specifications

Electrical: 1 channel on, fader -15dB
Frequency Response: ± .5dB 20Hz to 20kHz
Hum and Noise: Mike -70dB below +8dBm (-50dBm input)

Audio Routing Switchers

RS Series — Audio Routing Switchers

- All switchers come complete with all input and output connection sockets and pins
- Rack or table mount
- Remote controllable
- Terminal strip inputs and outputs on back
- Expandable
- Signetics NE5532 ICs
- Modular regulated computer grade power supply
- 1,000,000 operation thumbwheel select switches
- All ICs socketed

The RS Audio Routing Switcher is the professional alternative to patch panels, mechanical switches, and distribution amps. Ultrareliable—the power supply is regulated, protected and has a 10 year meantime before failure. LSI integrated circuits reduce parts count to a minimum. All ICs are socketed for ease of replacement. The thumbwheel control switches are 1,000,000 operation. Due to the ultrareliable design redundant power supplies are unnecessary. These switchers may be used in the most critical sections of the audio chain with total confidence.

The 100RSM features plug-in cards accessible from the front panel. A motherboard on the back contains the bus and input/output terminal strips. The other models use an ultradense 5" by 16" PC board that contains all circuitry and input/output terminal strips. This motherboard is on the back of the unit and provides instant access to plug-in ICs for service. The front panel holds the control switches and is removable to provide access to the power supply. The switcher need never be unwired or removed from the rack for service.

These switchers are transparent to audio. Flat within .1dB and with a distortion typically of .02% they don't color your sound.

Routing switchers perform many applications that are difficult with other technologies. A single audio line with remote control can link a satellite system to a studio. This replaces several DAs and a massive cable bundle. Studios can be linked together and to the transmitters. The larger models can switch an entire studio. The 1100A-RSS 16 by 4 stereo model is ideal for an audio preselector for 4 tape recorders. The possibilities are limited only by the imagination.

Specifications

Gain:	Unity, non-adjustable
Input Level:	+ 24dBm maximum
Output Level:	+ 24dBm maximum
Total Harmonic Distortion:	.1% maximum + 8dBm (.02 typical)
Frequency Response:	20Hz to 20kHz ± .1dB
Noise:	85dB below + 8dBm (100RSM -70dB)
Input Impedance:	100,000 ohms balanced (100RSM - 4,400 ohms)
Output Impedance:	600 ohms balanced
Crosstalk:	-85dB typ. at 16kHz (100RSM -65dB)
Bus Loading:	.1dB maximum
Control:	4 bit binary with enable
Size:	5 1/4" x 19" rackmount
Power:	110VAC input (DC — ± 15VDC regulated)

1100A-RSS and RSM Routing Switchers

- 16 inputs by 4 outputs • Control by 4, 16 position binary thumbwheels. One per output • Size — 5 1/4" x 9" rackmount • Expandable in and out • Remote control — 4 bit binary plus enable
- 1100A-RSM (mono) \$895.00
- 1100A-RSS (stereo) 995.00

1100B-RSM and RSS Routing Switchers

- 16 inputs by 8 outputs • Control by 8, 16 position thumbwheels. One per output • Size — 5 1/4" x 19" rackmount • Expandable in and out • Remote control — 4 bit binary plus enable
- 1100B-RSM (mono) \$1195.00
- 1100B-RSS (stereo) 1695.00

1100B-RSS

1100A-RSS

2100A-RSM

2100A-RSM Routing Switcher

- 32 inputs by 4 outputs • Control by 4, 16 position thumbwheels and 4 A/B select switches. One each per output • Size — 5 1/4" x 19" rackmount • Expandable in and out • Remote control — 4 bit binary plus enable
- 2100A-RSM (mono) \$1695.00

2100B-RSM and RSS Routing Switchers

- 32 inputs by 8 outputs • Control by 8, 16 position thumbwheels and 8 A/B select switches. One each per output • Size — 5 1/4" rackmount (RSM) 10 1/2" rackmount (RSS) • Remote control — 4 bit binary plus enable
- 2100B-RSM (mono) \$1695.00
- 2100B-RSS (stereo) two 2100B-RSM units 3495.00

Remote Controls (for audio routing switchers)

- 16TH-1T Single—16 position thumbwheel — table mount (16 input switchers) \$ 75.00
- 32TH-1T Single—A/B 16 position thumbwheel — table mount (32 input switchers) 105.00

Broadcast Studio Cabinetry

Arrakis Systems is a full line manufacturer of broadcast studio cabinetry. Contact factory for a custom quotation, or our off the shelf "Modulux Series"

ARRAKIS SYSTEMS, INC.

Studio Cabinetry/Storage Racks

BSC Series Broadcast Studio Cabinetry

• Full line of studio furniture • Hardwood plywood only • Solid oak trim • Matching tabletop cart racks and rack cabinets • Durable, warm and attractive • Custom quotes encouraged

All wiring is easily accessible. Extensive built-in equipment rack space often removes the need for expensive freestanding equipment racks. Solid oak trim and cabinet edges combine with heavy-duty plastic laminate to make for a long lasting and attractive appearance. Construction is exceptional with oak veneered plywood.

While the BSC series is designed to fit the needs of the average studio, we realize that many stations have unique requirements for space and operation. Arrakis therefore provides a custom furniture service.

Broadcast Studio Cabinetry

- BSC-LP** Left pedestal — 29" H x 24" W x 37 1/2" D
17" rack space 19" width \$514.00
- BSC-RP** Right pedestal — 29" H x 24" W x 37 1/2" D
17" rack space 19" width \$514.00
- BSC-CC** Connecting counter — 37 1/2" D x 44 1/2" W \$228.00

The left and right pedestals combine with the connecting counter to form a table 29" H x 7'8 1/2" W x 37 1/2" D. This forms the base for a horseshoe furniture studio. The table can be used stand alone or combined with the slope face cabinet and turntable return to form a horseshoe studio. There is 17" of rack space in each pedestal.

- BSC-SF** Slope face rack cabinet
29" H x 24" W x 24" D — 21" rack space

This cabinet provides 21" of equipment rack space and is very useful for processing equipment, modulation monitors, etc. \$546.00

- BSC-TT** Dual turntable return
29" H x 48" W x 24" D — 2 10 1/2" rack spaces

This cabinet provides a base for 2 turntables. Two 10 1/2" equipment rack spaces in the cabinet provide space for mounting auxiliary equipment such as preamps. \$748.00

Tabletop 19" Equipment Racks

- BSC-TR5** 5 1/4" tabletop rack cabinet \$199.00
- BSC-TR10** 10" tabletop rack cabinet \$245.00
- BSC-TR17** 17" tabletop rack cabinet \$285.00

These freestanding tabletop equipment racks provide convenient mounting for cart machines, patch panels, and other equipment that requires tabletop access. Other sizes available.

Cartridge Racks

- BSC-TC20** Cart rack — 20 cartridges oak — 25 1/8" x 5 7/8" \$ 45.00
- BSC-TC40** Cart rack — 40 cartridges oak — 25 1/8" x 10 3/8" 75.00
- BSC-TC100** Cart rack — 100 cartridges oak — 25 1/8" x 23 7/8" 155.00

These matching oak cartridge racks can be tabletop or wall mounted.

BSC 100 Series Wall Cart Racks

• High quality and durable • Constructed entirely of plywood • Will not warp, twist, split, or sag • Corners are mitered (not butt joints) while construction is dado-rabbit jointing • Real wood veneered plywood

ARTEL COMMUNICATIONS CORP.

Fiber Optic Systems

SL3000 Series

Frequency Modulated Fiber Optic Systems

- For simultaneous transmission of broadcast quality video, audio and data
- More than a 40km range without repeaters
- More than a 130km range with repeaters
- Wide range of audio subcarriers, including microwave compatible frequencies
- On-line self-diagnostics and metering
- 75 ohm or 124 ohm (balanced) input/output
- 840/1300nm multi-mode LED transmission
- 1300/1550nm single mode laser transmission
- Coaxial input/output equalization adjustments
- Very transparent video and audio
- Flexible modular construction
- Easy user operation and maintenance
- Single mode fiber

Optional Features

- Automatic Protection Switch Module (A-3400)
- Automatic alarming (remote and remote)

The SL3000 Series exceeds the stringent EIA-250B short haul broadcast quality video and audio transmission standards. The system's bandwidth is a full 20MHz, allowing simultaneous transmission of wideband video and multiple audio subcarriers over a single optical fiber. Audio frequency response is ± 0.1 dB from 20Hz to 20kHz, with better than 70dB signal-to-noise ratio and less than 1.0% total harmonic distortion.

Transmission of video, audio and data is performed by audio subcarriers and video transmitters/receivers separately packaged on compact plug-in modules. Up to eight video, audio or data modules can be housed in a single 19" card cage. The video receivers can be configured for high resolution (up to 20MHz) video or for standard video plus two or more audio subcarriers. Subcarrier modules are switch selectable for either audio or data transmission and can be incrementally added to the rack as needed. All modules are easy to change and to troubleshoot with self-diagnostic indicators on the front of each module.

The SL3000 Series offers several transmitter/receiver pairs for broadcast quality video and several subcarrier modules for broadcast audio or serial TTL data. The SL3000 Series can transmit or receive a video signal plus as many as six subcarrier frequencies on a single optical fiber.

The distinguishing characteristics of single mode fibers are their very small optic cores (roughly $9\mu\text{m}$ versus the $50\mu\text{m}$ for graded index multi-mode fiber cores) and enormous bandwidth distance capacity.

Rear panel video connections are made via BNC female connectors. Transmitter inputs are DIP switch selectable for unbalanced (loop-through) connections or balanced (on-board terminated) 124 ohms. Receiver outputs are also switch selectable to provide two 75 ohm unbalanced outputs, or a single 124 ohm balanced output.

T3050-00 Short distance (0-4km) transmitter—840 multi-mode/APD. Used with audio/data modules

T3060-00 Medium distance (0-10km) transmitter—1300 multi-mode/APD. Used with audio/data modules

T3065-20 Medium distance (0-25km) single-mode transmitter with biconic connectors. Used with R3060/3061 receiver

T3065-30 Medium distance (0-25km) single-mode transmitter with FC connectors

T3070-00 Long distance (10-30km) transmitter with biconic connectors (1300nm single-mode laser/PIN). Used with audio/data modules

T3075-00 Extra long distance transmitter with biconic connectors (1500nm single-mode laser/PIN). Used without audio/data modules

R3050-00 Short distance (0-4km) receiver—840 multi-mode/APD. Used with audio/data modules

R3051-00 Short distance (0-4km) receiver—840 multi-mode/APD. Used with T3050-00 transmitter without audio/data modules

SL3000 Series

R3060-00 Medium distance (0-10km) receiver—1300 multi-mode/APD. Used with audio/data modules

R3060-20 Medium distance (0-25km) single-mode receiver with biconic connectors

R3060-30 Medium distance (0-25km) single-mode receiver with FC connectors

R3061-00 Medium distance (0-10km) receiver—1300 multi-mode/APD. Used without audio/data modules

R3061-20 Same as R3061-00 except single-mode/biconic connectors

R3061-30 Same as R3061-00 except single-mode/FC connectors

R3070-00 Long distance (10-30km) receiver with biconic connectors (1300nm single-mode laser/PIN). Used with audio/data modules

R3071-00 Same as R3070-00 except used without audio/data modules

T3111-00 Audio/data (11MHz) modulator module

T3114-00 Audio/data (14MHz) modulator module

T3118-00 Audio/data (18MHz) modulator module

T3120-00 Audio/data (20MHz) modulator module

Racks (Used with SL3000 Series)

C5001-00, 120VAC

C5001-01, 240VAC

C5001-02, 20-67VDC

Options

Alarm Control Units (Monitor Major, Minor, Main and Backup Power Supply)

ACU2400-00, 120VAC

ACU2400-01, 240VAC

ACU2448-00, 20-67VDC

Wavelength Division Multiplexers

WDM3001-00, 1300/1550nm transmitters to one single-mode fiber

WDM3002-00, two 1300/1550nm transmitters to two single mode fibers

Repeaters

RPT3013-00 optical repeater for 1300 ± 30 nm systems (3060/3070)

RPT3015-00 optical repeater for 1550 ± 30 nm systems (3075)

11 and 7 Series Color Monitors

- Ideal as a master monitor or studio monitor at broadcasting stations, for supervising video quality at field pick-up stations, as a VTR monitor or for installation in field van
- There are two series of color monitors to meet with every monitoring need. Whether you choose from the model CMM20-11/CMM14-11 having high-resolution shadow mask CRT's or model CMM20-7/CMM14-7 adopting the in-line black stripe system, you'll find all your specific requirements in a color monitor have been fully realized
- Fully unitized construction and systematic plug-in unit design assures complete unit interchangeability in respective series

11 Series Color Monitors

These CMM20-11 and CMM14-11 high-performance color monitors are designed to supervise color video signals, and have high-resolution shadow-mask CRT's. As they maintain excellent performance, they can be used for various purposes: such as master monitors at broadcasting stations, studio monitors, video-quality surveillance at field pick-up stations, VTR's and picture monitors.

They feature compact, lightweight design and the use of IC's makes them shock resistant to make installation possible even in field vans. The CMM20-11 and CMM14-11 are available in series to meet specific requirements.

Adoption of a CRT of high fineness has greatly upgraded resolution; with up to 600 lines at the center of the picture and up to 550 lines around its center, clear pictures are reproduced without moire patterns.

Also, the black-matrix (BM) system is incorporated for maximum control in bright locations.

In addition to the NTSC system, two other (PAL or SECAM) systems or all three of these can be built into the CMM20-11 series. Using a separate device these system changes are also possible on the CMM14-11 series models. As a result, all of these models are ideal for signal source surveillance.

7 Series Color Monitors

The compact CMM20-7 and CMM14-7 high-performance color monitors are designed to supervise color video signals. With a low price, they maintain the excellent performance of conventional color monitors. And they serve a variety of purposes: including master monitors at broadcasting stations, laboratories and TV production lines for supervising video quality. Due to their low power consumption, they are ideal for installation in field vans as VTR's.

Choose from the ordinary or high-resolution CRT (HR type). With the HR-type you'll find resolution has been upgraded; with up to 600 lines at the center of the picture and up to 550 lines around its center, crystal clear pictures reproduced without moire patterns.

Also, the in-line black stripe system is incorporated for maximum contrast control in bright locations.

Normal CRT and high-resolution CRT (HR type) are available. The HR type CRT has a built-in comb filter which greatly upgrades resolutions with a clear picture reproduced without moire patterns.

The comb filter is optionally available for models with a normal CRT. And due to the adoption of the in-line black stripe tube, high-quality picture contrast can be obtained even in bright locations.

NTSC

ASTON ELECTRONICS, INC.**Character Generator****Aston 4 Video Character Generator**

- Software anti-aliasing
- 10ns effective resolution
- Typographic excellence
- Library of over 1600 typefaces
- Fonts in any size from 10 to 100 lines
- Multi-colored logos in any size from 10 lines to full screen
- Diagonal writing
- Optional second multi-layer background
- Plane displays
- Multi-layer background plane for graphics
- Up or down roll and multi-row left or right crawl
- Timed roll or crawl
- Caption management system
- Remote disk drives
- Multiple keyboard option
- Dual channel option

The Aston 4 provides clean, clear text copy. Large and small characters are provided without flicker or stairstepping. With the optional LogoMaster, flicker free multi-colored logos and symbols can be merged to provide a smoothness which pleases the graphic designer, director and customer.

Basic Video Character Generator Includes:

- 1 Keyboard
- 2 Disk drive units mounted in mainframe
- 5 Typeface master disks selected from Aston 4 standard typeface library
- 1 Display font disk
- 1 Page store disk
- 1 Software disk
- 1 Set of technical manuals and operating instructions

Aston 4 \$32,500.00

Aston 4 With Dual Channel Option 47,500.00

Optional Accessories

- Remote DDU Case \$ 325.00
- Additional DDU 250.00
- Additional Keyboard 4,500.00
- LogoMaster 4,500.00
- Additional Typeface Masters selected from our Standard Typeface Library 250.00
- Shaded Backgrounds 1,700.00
- Hard Disk Drive Option 2,900.00

Specifications**Characters**

High resolution: Characters specified by 74ns x 1 TV line pixels, 8 anti-alias levels (tones) per pixel, providing an effective resolution of 10ns.

(The Aston 4 pixel width of 74ns is chosen to be compatible with the sampling rate used in the international digital television standard (CCIR 601) for direct interfacing of digital component systems).

**Aston 4**

- Character Height:** 10 to 100 TV lines (height of capital H) in 1 line increments
- Italics:** Variable from 4 to 30° slope
- Edging:** 8 angles of variable-thickness drop shadow, and variable-thickness all-round edge
- Diagonal:** Variable in 1° steps from vertically up, through horizontal, to vertically down
- Kerning:** Automatic
- Inputs**
- Syncs:** 2 to 4V mixed syncs or standard color black, looped through via BNC connectors. Internal non-broadcast sync source provided, when external source not present
- AC Power:** Mainframe: 184V to 256V, 50Hz. Consumption 1000VA (absolute maximum rating for dual channel machine with full set of peripherals). 102V to 128V, 60Hz available to special order. Keyboard: 194V to 256V, 50Hz. Consumption 125VA (absolute maximum rating including remote disk drives). IEC Power Connectors
- Interface Connections**
- Keyboards:** Two 2Mbit/second bi-directional data links, Manchester encoded, using dual code driver. Each 4V p-p (nominal) into 75 ohms (BNC connector). Maximum distance is 300 meters. A total of 6 keyboards can be connected
- Serial Ports**
- Port A:** Full RS232-C serial port, providing all handshake lines for full modem capability. All lines may be optionally configured for RS422 levels. Programmable number of stop bits plus parity. Data speed programmable in standard steps from 45.5 to 38400 baud
- Port B:** RS232-C serial port supporting RTS/CTS handshake only. All lines may be optionally configured for RS422 levels. Programmable number of stop bits plus parity. Data speed programmable in standard steps from 45.5 to 38400 baud
- Parallel Port:** 16-bit unidirectional or 8-bit bi-directional with handshake. Fully programmable
- Outputs**
- Program:** RGB, Red, Green and Blue, 0.7V p-p non-composite into 75 ohms. BNC connectors
- Key:** 0.7V p-p non-composite linear key signal into 75 ohms. BNC connector
- Edit:** RGB, Red and Blue are 0.7V p-p non-composite. Green is 1V p-p composite ("syncs-on-green") or 0.7V non-composite, user preset. BNC connectors. The edit output displays safe title area, cursor, characters and (by switch option) system status information
- "Add-Edit"**
- Input:** 75 ohms 1V p-p. Output from color encoder. BNC connector

ATLAS/SOUNDOLIER

Microphone Stands/Boom Attachments

Microphone Floor Stands

• Long lasting, rust resistant, chrome plated • Seamless upright steel tubing • Standard 5/8"-27 threads for microphone or microphone holder • Wear-proof clutches for positive locking control • Low silhouette bases with edge-concentrated one-piece base weights for maximum stability • Self-leveling shock absorbing pads to protect desk, table or floor • Textured charcoal bases finished in baked epoxy

MS-4 Special Height Stand • Three section tube assembly with two grip-action clutches • Adjusts from standard to extra low heights for seated performers or children • Height: 25"-65" • Base: 10" dia., charcoal • Weight: 11 lbs.

MS-4\$55.98

MS-11C General Purpose Stand • Grip-action clutch • Low-profile chrome base with added weight for extra stability • Height: 34"-62" • Base: 10" dia., chrome • Weight: 12 lbs.

MS-11C\$42.55

MS-12C General Purpose Stand • Same profile and stability as MS-11C • Textured charcoal base

MS-12C\$35.48

MS-11S Automatic Clutch Stand • Effortless, instantaneous changes in height by grasping of decorative control sleeve and raising or lowering the microphone • Removing hand automatically locks stand height • Low silhouette chrome base • Height: 39"-62" • Base: 10" dia., chrome • Weight: 13 lbs.

MS-11S\$92.68

MS-10C Floor Stand • Circular, cast iron base, textured charcoal finish • Height: 35"-63" • Base: 10" dia., charcoal • Weight: 10 lbs.

MS-10C\$35.48

MS-12S Automatic Clutch Stand • Identical to MS-11S with low silhouette base in textured charcoal finish • Height: 39"-62" • Base: 10" dia., charcoal • Weight: 12 lbs.

MS-12S\$87.25

MS-20 Heavy-Duty Professional Stand • Grip-action clutch • Extra height, oversize 1 1/8" dia. tube assembly with 5/8"-27 thread top adaptor • Low contour base • Height: 37"-66" • Base: 12" dia., charcoal • Weight: 14 lbs.

MS-20\$69.43

MS-25 Stage and Studio Floor Stand • Integral air suspension system to counterbalance microphone weight • Extra heavy triangular base with concave sides • Extra height, over-size 1 1/8" dia. tube assembly with 5/8"-27 thread top adaptor • Height: 38"-67" • Base: 17" dia., charcoal with chrome cover • Weight: 23 lbs.

MS-25\$114.80

Boom Attachments

BB-77 Microphone Boom Attachment with Integral Counterweight • Single action positive locking • Easy grip knob to control motion and positioning • Durable diecast universal swivel for screw mount to any 5/8"-27 threaded microphone or desk stand • Finished in durable baked ebony epoxy • Chrome tube 34" L • Weight: 2.08 lbs.

BB-77\$26.03

PB-1 Standard Termination for Microphone Holder • Clamp on diecast swivel in nonreflective ebony epoxy finish • Adjustable tapered counterweight for precision balance • Attaches to any microphone stand terminating in 5/8" dia. • Tubing or adaptor 31" L • Weight: 4 lbs.

PB-1\$32.88

PB-10 Professionally Styled Fixed Length Porta-Boom • Diecast ebony epoxy swivel • 5/8"-27 female thread to facilitate screw type fastening for optimum stability • Over-sized hardware with individual high impact plastic knobs allow free or sliding control of motion and stationary positioning • Integral tapered counterweight finished in ebony epoxy • 34" L • Weight: 1.9 lbs.

PB-10\$32.88

PB-10X Extendable Porta-Boom • Adjusts from 32 1/2" to 55 1/2" in length for optimum application flexibility • Swivel in ebony epoxy finish • 5/8"-27 thread on mounting and over-sized knobs to control motion and positioning • Integral counterweight finished in ebony epoxy • 32 1/2"-55 1/2" L • Weight: 3.2 lbs.

PB-10X\$41.98

"Two In One" Stand

MSB-21 Microphone Stand/Boom • "Two-In-One" converts easily from conventional floor stand to stand-with-integral microphone boom without disassembly • Heavyweight diecast base for optimum stability • 40"-70" H • Boom extension to 30" L • Weight: 14.5 lbs.

MSB-21\$67.80

ATLAS/SOUNDOLIER

Microphone Stands/ Booms

Porta-Series Stands

PS-C Telescopic Stand • Fully portable and foldable, tripod microphone floor stand designed for the performer • All-metal grip-action clutch • $\frac{5}{8}$ "-27 termination for U.S.-standard microphone holders • Charcoal diecast base • Height: 35"-63" (89-160cm) • Base Spread: 25" (63cm) • Storage/Shipment Length: 32" (81cm) • Weight: 4.5 lbs. (2kg)

PS-C\$51.10

PS-C3 Special Height Stand • Three section telescoping vertical tube assembly • Two all-metal grip-action clutch assemblies • $\frac{5}{8}$ "-27 termination for microphone holders • Height: 26"-66" (66-168cm) • Base Spread: 25" (63cm) • Storage/Shipment Length: 22" (56cm) • Weight: 4 lbs. (1.8kg)

PS-C3\$59.80

PSB-21 "2 in 1" Stand Porta-Stand/Boom • Portable • "Two-in-one" stand • Microphone boom/stand combination with folding tripod base for maximum portability and flexibility • Requires no assembly or dis-

assembly for use or transportation • 35" to 65" H • Boom extension to 30" L • Weight: 5.0 lbs.

PSB-21\$60.45

Ebony Stands and Booms

• Contemporary professional microphone stands and boom attachments • Non-reflective surfaces specifically designed to eliminate the specular visual effects of high intensity lighting • Recommended for use by performers whenever appearance is a major consideration • All "E" (Ebony) model microphone stands and horizontal booms are supplied with an attractive electrostatically-applied, baked powdered epoxy coating that withstands the rigors of transportation and assures prime appearance even after repeated use.

MS-10CE Microphone Floor Stand • Recommended for use in schools, clubs, lecture halls, and restaurants, wherever sound systems are utilized • 35" to 63" height

MS-10CE\$37.13

MS-12CE General Purpose Floor Stand • Wearproof grip action clutch and low silhouette base • For stage and studio applications and for use in auditoriums, meeting rooms, churches, hotels, indoors and outdoors

MS-12CE\$37.13

MS-20E Heavy-Duty Professional Stand • Oversized grip action clutch • Extra height • Oversized $1\frac{1}{8}$ " dia. tube assembly with $\frac{5}{8}$ "-27 thread top adaptor • Low contour base height 37"-66" • Base 12" dia. • Weight: 14 lbs.

MS-20E\$72.35

PS-CE Portable Single Unit Tripod Floor Stand • For fast and instant setup • Shipment length: 32"; 35"-63" height

PS-CE\$52.63

DS-7E Adjustable Desk Stand • $\frac{5}{8}$ "-27 U.S. standard microphone thread termination • 8" to 13" height

DS-7E\$21.50

PB-20XE Expandable Length Porta-Boom • Integral counterweight for microphone placement flexibility • $\frac{5}{8}$ "-27 thread on mounting • Easily adjusts from 25 $\frac{1}{2}$ " to 44 $\frac{1}{2}$ " L • Weight: 2 lbs.

PB-20XE\$35.15

PB-10E Fixed Length Porta-Boom • Standard single length microphone boom attachment • $\frac{5}{8}$ "-27 thread on mounting • Oversized controls • 34" L • Weight: 1.9 lbs.

PB-10E\$34.43

Studio Stands and Boom Attachments

SB-100W Studio-Quality Mobile Microphone Boom • With 110" (279cm) horizontal arm • Integral operator-controlled 350° arc microphone-follower • Adjustable upright height from 61 $\frac{1}{2}$ " to 91 $\frac{1}{2}$ " (156-235cm) • Includes tapered counterweight for precision balance • Cable guide clips • Cable hanger • Heavy-duty rubber wheels with locks • Base Dia.: 34" (86cm) • Weight: 47.2 lbs. (21.5kg)

SB-100W\$821.2B

SB-36W Mobile Model • Same as SB-36 • With rubber casters for mobility • Weight: 40 lbs. (18kg)

SB-36W\$299.65

SB-36 Professional Boom Stand • Grip-action clutch with integral air suspension system to counterbalance boom weight • $\frac{5}{8}$ "-27 thread at microphone end • Boom length 62" (157cm) • Adjustable vertical height from 48" to 72" (122-183cm) • 17" (43cm) dia. triangular

base • Textured charcoal base with chrome cover • Furnished with cable hangers • Weight: 36 lbs. (16kg)

SB-36\$254.40

751 Tape Loader

The 751 Tape Loader is available in various types to load blank and pre-recorded cassettes, 8-track, reels and NAB carts. This ruggedly built machine has been engineered to perform with virtually no maintenance. Almost every wear part is easily replaced in the field. It is simple to operate. Because of the versatility of the 751, it can be specially modified to handle many different tape loading requirements.

751-C

Our basic cassette loader designed to produce an average of 75 to 80 C-60s per hour, 500 or more per day on one shift. Like all of our loaders; you choose any length you wish and the bulk tape of your choice. A digital counter reads in minutes and seconds, or footage if requested, and a built-in memory repeats the same setting until you either change it or turn off the power.

751-C\$2975.00

751-CT

The same as above, but with a digital lock waveform analyzer cue tone sensor and no counter. Designed to load pre-recorded tape only.

751-CT\$3075.00

751-C + CT

Combines both versions listed above permitting you to load blank as well as pre-recorded tape. Use the counter for blank tape or stop on cue-tone and the counter shows the amount of playing time loaded.

751-C + CT\$3375.00

751-D 1/4"

Designed to spool blank 1/4" tape on disks for 8-track and broadcast (NAB) carts. Time counter can be set for either of two combinations: (1 7/8 ips and 3 3/4 ips) or (1 7/8 ips and 7 1/2 ips). A footage counter is available if preferred. Has EIA takeup. Reversing switches are not provided.

751-D 1/4"\$3075.00

751-CD Cassette and 1/4" Combination

Incorporates the qualities of the 751-C and 751-D to permit loading blank cassettes or blank 8-track and broadcast disks. Includes reversing switches and two sets of tape guides.

751-CD\$3125.00

Special Outboards

These are available to load larger Fidelipac (B and C) disks or 1/4" tape from pancakes to 5" and 7" reels.

751-V

An audio cassette tape loader that can be expanded at a later time to also load VHS, Betamax and U-matic video cassette housings; the same loader can be equipped to load 8-track and broadcast carts and nagra reels. Even though the loader has an annual capacity of over 100,000 audio cassettes per single shift, it can generally be cost justified for users with requirements of about 5,000 cassettes per year. When loading video cassettes, output per shift is 40,000 to 60,000 annually. Also available are other video qualities to rewind and wipe tape in existing cassettes and to remove old tape so the housings can be reloaded without taking them apart.

751-V\$3975.00

751 Specifications

Running Speed:	134.98 ips (60Hz mains)
Accuracy:	± 2" per 100'
Readout:	Light emitting diode display
Operating Controls:	Pushbutton
Capstan:	Non-magnetic stainless steel
Braking:	Dynamic, zero tension on tape
Motors:	Heavy-duty precision ball bearing
Pinch Roller:	Self-aligning ball bearing
Pay-off:	Equipped with "Quick Lock" hub (NAB)
Case	
Construction:	Heavy wall, ribbed castings
Weight:	58 lbs. net.
Power:	105-130VAC, 60Hz, 70W average consumption, 500W maximum (braking surge .2 second)

AUDICO, INC.

Tape Rewinders/Impulsing System

200-9

200-2 Cassette Tape 2 Position Rewinder

Each position operated independently by 2 direct drive DC motors — one for each spindle. Rewinds a C-60 in 17 seconds. No strain on the tape or the pins because a special sensing system distinguishes the tape from the leader and brakes the cassette to a gentle stop. Senses jams by stopping automatically if there is any slowing down of the tape. Since each position operates independently at high speed, the 200-2 will operate faster than other makes with 4 to 6 stations

200-2 \$520.00

200-8 Cassette Tape Rewinder/Exerciser

As a rewriter the 200-8 operates exactly the same as the 200-2. In addition each position can also be used as a continuous exerciser—or tester—to run the tape back and forth until the cassette breaks down. The counter, working automatically, counts to 9,999 and then starts over. 3 position switches on each station permit you to control both torque and tension. The 200-8 lets you test the pins, the tape, the friction, etc.

200-8 \$730.00

200-9 Cassette Tape Rewinder/Exerciser/Timer

In this mode, one station operates in exactly the same way as the 200-8, permitting you to rewind or exercise the cassettes. The other station works either as a rewriter or a timer. The timer counter reads in 5 digits—minutes, seconds and tenths of seconds. It is accurate to within 1 second per 100' of tape or 3 seconds per C-60...and it times a C-60 in just 17 seconds. It does not time the leader—only the tape.

200-9 \$940.00

Common Specifications (200 Series)

• Size: 4" H x 12 1/2" W x 8 1/2" D • Power: 115VAC, 50/60Hz • Weight: 10 lbs. • Built on a rigid aluminum casting and contained in heavy gauge steel • The electronics are all modular, plug-in type (NOTE: The exercising function will not operate with leaderless cassettes.)

MF-6B

MF-6B Impulsing System

The MF-6B Impulsing System is a complete impulser which can be front panel "patched" to generate the majority of the Audio-Visual formats in use today and most importantly, to accurately and precisely generate the 50Hz format pulses. It is equipped with several modularized functions:

Triggering of the unit can be pushbutton, external contact closure, to a tone impulse applied to the tone trigger input. The inputs are buffered to prevent false trips from electrical noise, glitches and editing noise on a recorded pulse track, and contact bounce of external trip devices.

Time length of the pulse to be generated is continuously adjustable from less than .024 seconds to 3.0 seconds. The digital readout can be used to display the precise length of a pulse being generated or even previously recorded.

An envelope generator with separate attack and decay controls can be used to produce bell tones or other audible markers without objectionable instantaneous turn-on—turn-off effects. The bell tones are free from conventional bell percussion and thus avoid over-recording the tape.

A zero crossing detector and gate permit the recording of tones most importantly 50Hz, which have no turn-on spike or turn-off spike, no ringing or fading in/fading out characteristics. The Gate has a 120dB on/off ratio to insure no continuing reduced level tone.

Three self contained precision Wein Bridge Oscillators, normally provided at 50Hz, 150Hz and 1,000Hz. The 50Hz oscillator is equipped with a buffered output to provide absolute protection of the frequency and waveform. You may use any general purpose audio oscillator in conjunction with the MF-6B.

Two relay contacts (normally open) are provided for actuating projectors directly from the MF-6B. The relay will withstand high voltage solenoid trip mechanisms used in some projectors. The relay is separately timed so that its closure period will not exceed .2 seconds. This prevents multiple tripping of slide projectors which might malfunction on a 440ms pulse such as in the 50Hz format.

Both the envelope generator and the zero cross systems function simultaneously from the timer allowing for making both formats in one pass. Remote timer jacks are provided for each function should they need to be operated separately.

A 3 digit counter is included in the MF-6B and frame and number (sequence count).

The F-74 filter circuit is included in the MF-6B and is available on three phono (pin) jacks at the rear of the unit.

Two high impedance input, low impedance output buffer pre-amps are available at the rear of the MF-6B for use as desired. They are not connected to the MF-6B except for power. Their outputs may be tied in parallel and their gains independently set for fixed mixing applications.

A test button is provided which yields continuous tone output from both the envelope generator and the zero cross gate to permit easy setting of levels. This button also resets the counter to zero.

A ± 15V output is provided for operation of various op amp based filters, oscillators or preamplifiers.

Specifications

• Power: 115VAC, 50/60Hz • Size: 5 1/8" H x 19" W x 5 5/8" D • Optional Wooden Case: 6 3/4" H x 20 1/2" W x 7 1/8" D

MF-6B \$1295.00

AUDICO, INC.

Tape Loading Systems/Accessories

System III with 609-P Pay-Off Unit

System III

609-R Rewinder

Hockey Puck Splicer

Video Tape Loading Systems

U-matic, VHS and Beta

System can be equipped to load and reload U-matic, VHS, Beta, 8mm, M-II, Betacam and 19mm video cassettes and cookies, plus load 1" and Nagra reels and audio cassettes, carts, and reels. Video cue-tone available. Tape loading speed is 135" per second. Counter allows selection of exact tape length desired. Built-in cleaner can wipe video tape during loading or rewinding.

All systems consist of a 751-V delivery unit and an 829 receiving unit with one interchangeable take-up module. Systems II and III also include the 29R unloading unit. The 829 receiving unit, which contains a processor that continuously monitors in-path tape loading tension, may be upgraded: System I or II to System II or System III.

Systems I and II require only one take-up module for both VHS and Beta; System III requires separate modules for each format. U-matic modules handle both KCA and KCS housings. When ordering, specify desired module—U-matic or 1/2" on System I or II; U-matic, VHS or Beta on System III.

System I Video Loader Loads new tape into new cassette housing \$6,800.00

System II Video Loader/Reloader Has additional feature that automatically removes old tape from cassette housing without taking them apart, and thus allows for their convenient reuse. 7,800.00

System III Video Loader/Reloader/Rewinder Adds ability to rewind and fast-forward cassettes, and to wipe tape while rewinding. When re-loading, tape can be removed from either reel 8,100.00

Take-up Modules Extra interchangeable modules (in addition to one selected with Receiving Unit).

Load (All Systems) 500.00

Load/Reload (Systems II and III) 625.00

Load/Reload/Rewind (System III) 750.00

Audio Tape Loading Options (1) Audio Cassettes, (2) Type-A Broadcast and 8-track Carts, and (3) Nagra Reels.

First Option 375.00

Second and Third Option (each) 75.00

609-P Pay-off Unit Used with video loader to transfer tape directly from a cassette housing or cookie into another housing. Mounts to left of Delivery Unit which counts desired length. Stops on leader and indicates length loaded. VHS unit transfers tape from VHS housing to both VHS and Beta housings.

U-matic or VHS \$ 975.00

U-matic and VHS 1,175.00

Economy Video Loader Loads new tape into new cassette housings. Includes 751-V Delivery Unit and 609-T Take-up Unit with tape wiper and one Take-up Module, either 1/2" (VHS and Beta) or U-matic, Audio tape loading options also available \$5,000.00

Second Take-Up Module 500.00

Video Cassette Rewinder, Cyclor, Counter, Unloader

609-R Video Cassette Rewinder, Cyclor, Counter, Unloader Rewinds and fast-forwards U-matic, VHS and Beta Cassettes. Cyclor fast-forwards tape to leader and then automatically rewinds it. Counter displays tape length in cassette in feet. These units can also be used as pay-off unit or as take-up unit on Economy Loader.

609-R Rewinder/Cyclor—One format: U-matic, VHS, or Beta \$1,125.00

Each additional format 700.00

609-RC Rewinder/Cyclor/Counter—One format: U-matic, VHS or Beta. 1,400.00

Each additional format 975.00

29-R Unloader—When added to 609-R or 609-RC, removes old tape from housings so they can be reused 950.00

Video Tape Splicers

Hockey Puck Splicer Tape and leader are butted together and held in place by vacuum holes in tape slot. Splicing tape is placed on top of block across ends to be spliced. The "puck", a precision fitting, hardened metal roller, is rolled down the slot and cuts and applies splicing tape in one motion.

1/2" Tape \$600.00

3/4" Tape 600.00

Vacuum Source The Hockey Puck Splicer requires a vacuum source for tape hold-down, either a small vacuum pump or a compressed air source connected through a venturi.

Venturi Kit Consists of venturi, flow control and fittings to generate vacuum from compressed air source \$100.00

Vacuum Pump 150.00

Costs for various formats and features, including optional Hockey Puck Splicer(s) and vacuum pump.

Economy Loader	System I	System II	System III
U-matic (or one 1/2" format on System III)			
\$5,750.00	\$7,550.00	\$8,550.00	\$8,850.00
VHS and Beta			
\$5,750.00	\$7,550.00	\$8,550.00	\$9,600.00
U-matic, VHS and Beta (two Hockey Puck Splicers)			
\$6,850.00	\$8,650.00	\$9,775.00	\$10,950.00

Above System III for U-matic, PLs:
U-matic Pay-off Unit \$9,825.00
VHS/Beta System II Load/Reload Module, and 1/2" Hockey Puck Splicer \$10,075.00

Add \$375.00 to above prices for audio cassette or broadcast cart loading option; add \$450.00 for both.

Subtract \$50.00 from above prices for Venturi Kit instead of Vacuum Pump.

Prices and Specifications Subject to Change Without Notice.

AUDI-CORD CORP.**Recorders/Reproducers****DL Series Cartridge Recorders and Reproducers**

- Replay lock-out and reminder to prevent accidental replay errors. Manual or automatic muting of output audio (from SEC cue operation). Status indicator lamps show at a glance cue tones presence, both SEC and primary. Latched lamps verify that both have been sensed
- Mute lamp to indicate audio on or off status
- Automatic motor turn-off if selected conserves power and heat
- Full +8dBm output ability with 12dB of headroom
- Cart holding system (over top for stereo) for positive location of the cartridge
- Slide back cover design allows for quick and easy access for cleaning
- Complete remote control connections. Plugs are furnished
- Front access tone editing and line level controls are in the mini-drawer
- The optional digital recording timer is available for accurate timing
- Full VU meters for accurate level monitoring
- Bias and tone presence indicators
- Automatic meter switching from record to replay
- Recording shut-off with the end of SEC tone option is provided
- 100% solid state design with high noise immunity CMOS logic
- Extensively modular design with plug-in circuit cards
- Heavy-duty deck and head mounts that stay adjusted
- Pressure roller regulating system that insures best phase performance
- Many selectable operating features to adapt to individual needs
- Easy to use instruction book and readily available renewal parts used throughout
- Internal cue tone play level metering
- Internal level sensing LED's for visual indication of bias on each channel
- Alterable recording timer option displays SEC-tenths or min-SEC
- Selectable 600/150 ohm balanced transformer outputs
- Bridging 5K ohm recorder input
- Internal resistance pads alterable to match needed levels
- Dual adjustable equalizers both play and record
- Regular single deck recordings, made on the right hand deck. Left deck may be playing as needed
- Dual recordings, load the cartridge and push the buttons
- Copies (dubs), place cartridge to be copied in left deck and select dub mode, make a perfect copy in the right deck, all switching is automatic
- Composites are easily performed in dub mode using 1kHz inhibit facility provided
- Stereo to mono mix dubs, special models on request with 1 deck of each
- All models meet or exceed the 1976 NAB Cartridge Standards
- All models are equipped with 1kHz primary and 150Hz secondary cues as standard

Recorders/Reproducers

Cartridge Recorders and Reproducers**S Series Playback**

- All front access controls in pull-out drawer
- Dual play equalization—Hi & Lo
- Replay lock-out to prevent accidental replays*
- Off speed motor lock-out to prevent start WOW*
- Automatic motor shut-off for long idle periods*
- Off cue indicator avoids un-cued carts
- SEC & TER signal lines
- Selectable 600 or 150 ohm outputs with internal pad space
- Full +8dBm output, +20dBm clipping
- All solid-state control system of modern CMOS and linear IC's
- Thick aluminum deck, overlaid with stainless steel for wear
- Very rugged head mounts with top adjustments that stay put
- Split polished stainless steel tape guides that are individually adjustable and reversible for wear, offer ultra precise internal guiding
- Pressure roller regulating system insures proper pressure and indent to reduce tape (phase) skew
- Complete remote facilities (plugs furnished)
- Attractive textured vinyl clad cabinet with slip/lift cover for easy cleaning access
- Polycarbonate panel inserts with permanent control markings
- Extensive use of plug-ins and easy maintenance access
- *Indicates customer selected options

S Series Recorder

- Plug-in companion to any similar playback. Easily field exchanged to distribute transport wear if desired
- All front access operator controls in pull-out drawer
- Multi-function meter system with automatic switching from record to replay
- Dual recorder equalization—Hi & Lo
- Internal three tone response check facility
- Bias and tone recording indicators
- Record shut-off with end of SEC tone
- Timed tone bursts with manual override
- Recording timer selectable for min-sec or sec-tenths mode, front or end of SEC tone stop action
- 5K ohm bridging transformer input with internal pad space
- Complete remote control facilities (plugs furnished)
- Compatible with all known automation encoders
- Polycarbonate panel inserts and control markings
- Extensive use of plug-in's and easy maintenance access
- Attractive textured vinyl clad cabinet with slip/lift cover

TDS Series Twin Deck Reproducer

- The lower deck is an adjustable slide-out assembly for easy maintenance
- Extensively modular design with plug-in circuit cards thru-out
- Most electronic and renewal parts same as the "S" Series family
- Front panel controls attractively and functionally placed for easy operation
- Attractive vinyl-clad cabinet and polycarbonate panel inserts
- SEC, TER & PLAYED signal lines for each deck
- Replay reminder system with full selectable use options
- Dual reproduce equalizers—Hi & Lo frequencies
- Selectable 600 or 150 ohm balanced transformer audio outputs
- Full +20dBm clipping point audio amplifier system
- Complete remote control facilities
- Automatic motor shut-down when both carts have played
- Audi-Cords heavy-duty deck and head mounts with split tape guides
- Side azimuth adjustment (lower deck only)
- 100% solid-state design with high noise immunity CMOS logic
- Dimensions: 7 1/2" H x 8 1/4" W x 14" D

AUDIO DIGITAL, INC.

Audio Processors

TC-2 Digital Delay Processor

The TC-2 offers exceptionally clean and natural sounding audio performance, even at delay times of over 2 full seconds. With full 16kHz bandwidth you can now have low distortion, low noise and no unwanted artifacts that are sometimes prevalent in digital audio equipment.

Entertainers use the TC-2 to create effects that no other digital delay can offer such as:

- Simultaneous positive and negative flanging
- Deep "analog-sound" flanging
- Pitch-controlled flanging and chorusing—a dramatic new effect
- Triple tracking through the use of the TC-2s second ("aux") delay output
- Independent control of initial echo and repeat delay times
- Over 2 seconds of delay time (with accessory memory expansion) with no degradation of bandwidth, noise, or distortion
- Real time display of delay times in all modes

The TC-2 features over one second of delay at full bandwidth. The memory expander option enables delay time to be extended to over 2 full seconds—without degradation. The real time four digit display indicates the actual delay time at any moment under all operating modes.

TC-2 \$1095.00

TC-2

TC-4

TC-5

TC-3 Pre-Reverb Digital Processor

- 20-20kHz bandwidth
- Less than .1THD + noise at 1kHz
- 90dB dynamic range (A-weighted)
- Balanced inputs/outputs
- Delay time factory expandable to 520ms; user expandable to 1040ms after factory expansion
- Input display and separate adjustments for input, output gain—as well as regeneration, mixing
- One rack space

The Pre-Reverb Digital Processor is useful in studio applications requiring enhancement of a mechanical reverb system. Because of its flexibility it will also perform as a stand alone studio quality digital delay. Delay time is selectable in 1ms increments up to 260ms, with a 20kHz bandwidth, and 90dB dynamic range. Built-in mixing and regeneration controls enhance the TC-3 as a stand alone processor in live as well as studio applications.

TC-3 \$649.00

ADX-2000

TC-4 Broadcast Digital Processor

- 20-15kHz bandwidth
- Less than .2THD + noise at 1kHz
- 85dB dynamic range (A-weighted)
- Balanced inputs/outputs
- Input gain display, as well as independent control of input and output gain
- Display of active and catch-up status
- Dump system is remotable to your system
- One rack space

The TC-4 Broadcast Digital Processor is a state-of-the-art advancement in broadcast profanity delay. It features delay time of 6.8 seconds, with a 15kHz bandwidth and 85dB dynamic range. The optional (user-installable) auxiliary card allows memory dump in less than 2 seconds, as well as a delay time catch-up feature to allow starting in near real time. Two TC-4 processors can be linked together with a factory installed stereo synch option for a stereo system.

TC-4 \$1395.00

TC-4A Catch-up Option 250.00

Stereo Sync Option 70.00

TC-5 Industrial Digital Processor

- 20-20kHz bandwidth
- Less than .1THD + noise at 1kHz
- 90dB dynamic range (minimum)
- Parallel and couple jacks for expanding number of outputs
- 500ms delay time standard
- Delay time internally expandable to over 1 second
- Input display and separate adjustments for input/output gain
- Adjustable in .5ms steps
- One rack space

The Industrial Digital Processor is the first delay intended for permanent installation that features a 20kHz bandwidth, up to 1 second delay time—and expandable for more outputs.

TC-5 \$649.00

Memory Expansion Module 250.00

Security Cover 15.00

ADX-2000 Digital Signal Processor

- Install any combination of up to 6 input modules and 40 output modules
- Programmable delay time, channel on/off and gain (optional)
- Page mode for setting and storing multiple configurations in non-volatile memory (12 pages standard, 24 pages optional)
- Switch selectable input and output bus assignments, output channel number unity or front-panel controlled input gain and input meter display
- RS-232 port for remote terminal control
- Displays delay in time (milliseconds) or distance (feet)
- Active balanced XLR inputs and outputs
- Roadworthy steel chassis
- Security lock-out code

The ADX-2000 is a versatile digital signal processor designed for any application where numerous inputs and outputs are desired. The first module available performs delay, gain and on/off functions making the ADX-2000 ideal for cluster alignment, touring sound and distributed system synchronization.

ADX-2000 \$3500.00

ADX-2001 Input Module

Occupies one expansion slot space **\$349.00**

ADX-2002 Output Module

Includes 261ms delay time standard, expandable to 1048ms. Occupies one expansion slot space **\$549.00**

ADX-2000 Slave Chassis

Slave chassis with eight expansion slots and power supply. Requires three standard rack spaces (19" x 5.25") **\$299.00**

Cables for Slave Chassis

Required for slave chassis operation; custom made for your system configuration. **POR**

MS38 DM Dual Mode Line Level, Active Matrix for Post Production/MS380 TX Stereo Microphone Preamp with Dual Mode Matrix for Production and Post Production

Both models feature an exclusive dual mode matrix circuit. This makes it easy to manipulate the stereo width of program material during any phase of production. The MS mode retains its unique combination of discrete mono compatibility, easily adjustable stereo perspective and automatic ambience control.

MS38 DM Line Level Matrix Processor May be inserted into the signal chain at any point after the mike preamps. It may be used in real time or post production situations. Either MS or conventional signals may be input. Stereo width, from mono through stereo to hyper-stereo, is under single knob control.

MS380 TX In addition to our dual mode matrix, this unit has balanced and floating microphone inputs using Jensen transformers for consistent performance even in high RF areas. Both phantom and AB (T) microphone powering are provided. A quality two stage mike preamp with adjustable gain is followed by a switchable three pole high pass filter. Patch points are available at these outputs and at the matrix inputs and outputs.

The master outputs provide additional gain, a stereo level control and +25dBm transformer isolated balanced outputs. A matrix bypass mode, for operation directly from the mike preamps, is front panel switch selectable.

A.C. or battery power, convenient operation, quality performance and rugged construction make the MS380 TX an ideal choice for many stereo applications.

MS38 DM \$ 495.00
MS380 TX 1695.00

AUDIO KINETICS, INC.**Machine Controllers/Synchronizers/
Editing Systems****Q•LOCK****Professional Machine Controllers, Synchronizers and Editing Systems**

- 2, 3, 4 or multi-machine systems
- EBU/SMPTE time code based
- 2 levels of control for different budgets and applications
- Interfaces to virtually all tape transports
- Synchronizes video, audio and film machines
- Integral time code generator and readers

All Q•LOCK machine control systems use standard EBU/SMPTE time code as the reference for synchronization, and each configuration includes as standard a time code generator capable of delivering 24, 25, 30 fps and drop-frame codes.

Event control of remote equipment is available, with two levels of central system control.

Full Central Control**The Q•LOCK 4•10 Series**

For most aspects of post-production, some type of central control is required, where the system, in whole or in part, is always under the direct control of the engineer.

Speed is of the essence, and time is money. Q•LOCK has been designed to keep post-production time to a minimum.

The Q•LOCK 4•10-A Series is just such a system. Based on the enormously successful Q•LOCK 3•10 products, the 4•10-A System consists of a computer frame and the Alpha Controller.

The 4•10-E Series uses the Eclipse Editor, an intelligent controller with a clear, multiline display of system status and messages.

The 4•10 frame contains the main control electronics—machine interfaces, time code generator, time code readers for each machine, and the main processor card governing the synchronizing routines. Four full machine interfaces may be installed. In addition, there are several relays accessible to the operator, with connections via the "services" socket on the rear of the frame.

Event Relays. Three single "make" relays for firing external equipment from time code addresses.

"On Air" Relay. A change-over relay which closes when a record command is issued, and opens when the un-record is fired.

Sync Unmute. This relay only closes when all machines are cued, or in synchronized play, which means audio can be muted at other times.

The integral time code generator has separate feeds to all machines, and may be referenced to either the internal crystal or an external source such as video syncs.

Selection of whether a machine is designated master or slave is made via switches on the front of the cards in the frame—there is no need to recable any machines just for master status.

Q•LOCK 4•10 + Alpha

The Alpha Controller will control and synchronize 2 or 3 machines out of the maximum "pool" of 4 (the 4th machine is selected to be "off line").

Full transport control of individual machines or the whole group is provided, with industry standard locator functions and 10 locate/numeric memories. The integral time code generator may be preset to any desired value, and genlock software allows code to be restriped or generated for consistency, in time code value and rate, with existing tapes.

A special version of the Alpha Controller, the Beta, has been specifically designed for flush mounting in a mixing console, with a width of 160mm (typically 4 modules).

Offset calculations can be performed by the system automatically, while automatic record drop-in and drop-out can be programmed on-the-fly or from an edit list.

**Q•LOCK Synchronizer****Eclipse Editor**

Specialist software is available for particular tasks which demand repetitive routines, such as dialogue replacement (dubbing or looping). Each package reduces to single keystrokes routines which normally would require several. Such software is available (as an option) for Sound Effects Assembly (Q•SOFT-SFX), Dialogue Replacement (Q•SOFT-ADR), Audio/Video Conforming (Q•SOFT-CONFORM), and Automatic Machine Selection (Q•SOFT-RELAY).

A typical setup for the Q•LOCK 4•10 is with a U-matic Video Machine as master, a multitrack machine as Slave 1 and a 2-track audio machine as Slave 2. This configuration is typical of that used in video-audio post-production, where music, sound effects and dialogue are transferred from the twin-track, or direct, onto the multitrack in sync with picture, for later mix-down and layback onto video.

Q•LOCK 4•10 + Eclipse

The Eclipse Editor may be used as the central controller for either the 4•10 computer, giving full four machine editing or combined with a future family of synchronizers expandable up to 32 machines on the SMPTE studio bus system.

Eclipse offers 12 user-programmable keys so that engineers derive a routine of keystrokes and execute it with one key depression.

Dual tasking may be performed: any single machine may be accessed for other functions while the group is editing, saving possibly large amounts of on-line studio time—for example, some sound effects may be spotted while an audio tape is being laid back to video.

Each event relay with the 4•10 frame may be associated with 3 time code cue points.

Up to 100 loop memories are available, each loop containing the data for Loop Start, Loop End, Record-In, Record-Out, and machine configuration and offsets.

AUDIO KINETICS, INC.

Synchronizer/Generator Resolver

**Pacer and Pacer Pad 2
Synchronizer Generator/Resolver**

Pacer is a self-contained two machine synchronizer that can be used for any chase lock requirements within the audio and video post production environment. The unit has an integral time code generator. A wide range of machine interfaces are available; the machine file is selected by externally mounted switches. Pacer Pad 2 provides remote control of all functions plus a time code display. Pacer is an efficient, easy to use, professional product for standalone chase synchronizer applications.

Facilities

Each Pacer has an independent EBU/SMPTE multi-standard time code generator; output level can be adjusted from the front panel. The generator can be started from a programmed time code value or jam-synced to an incoming code source. The unit can be referenced to an external video sync source or frame rate TTL pulses from a standards converter such as the AK Gearbox.

Offsets, which can be trimmed by frames or sub-frames, are entered automatically or pre-programmed from the Pad 2. The slave machine can be dynamically slewed in both frame and sub-frame increments.

The system is calibrated for tach pulses per time code second which allows very precise locate performance. Calibration is carried out by Pacer automatically when the routine is enabled.

Synchronization

Two high speed code readers monitor master and slave positions. When no code is present (for example when tape is lifted during fast wind) Pacer switches automatically to read tach and direction information.

Three lock modes are selectable; frame, auto and phase. Frame-lock constantly compares master and slave time code. Auto-lock references to frame edges after initial time code synchronization allowing the use of discontinuous time code. Phase-lock synchronization uses frame edge and phase information only; this allows use of external video sync references for genlock and resolve applications.

All interface information is held in software and is selected from a bank of DIL switches mounted on the back panel.

Pacer Pad 2

The Pad provides a time code display for master and slave time code data as well

Pacer

Pacer Pad

as remote control of all of Pacer's functions. The Pad permits entry of generator start, offsets, record in and out points and a locate memory. An additional offset function calculates the offset between a stored slave time code value and the current master machine position. In addition the slave machine transport functions can be controlled from the Pad, including record.

Communication to Pacer is via an RS232/422 serial interface using an AK ASCII protocol which is published in the manual. This interface allows a high-speed serial interface between Pacer and external devices such as personal computers, video editors and disk based editing systems.

GPI Port (Option)

The Pacer GPI port provides a simple method of interfacing Pacer to external control units such as video editors. A 15-pin connector on the rear of the unit provides TTL logic level signals for commands and tallies to the external device.

**Specifications
Pacer and Pacer Pad 2**

Outputs	
LTC output balanced	XLR 3-pin socket
Serial port	15-way "D" plug

Time Code Equipment

Striper Time Code Generator And Reader With "Quickstripe"

- Multistandard time code generator
- Code output at 1X, 2X and 4X playspeed
- Reads time code and user bits
- Genlock facility, in forward and reverse
- Presettable generator start times
- Auto preroll generation

The Striper can output code at 2 or 4 times playspeed; simply switch the machine to the higher speeds and record time code in a half or even a quarter of the time.

For example, if your machine has speeds of 15 and 30 ips, and you want code on tape at 15 ips, set the machine to 30 ips, Striper to 2X speed and save half the time.

The generator can be referenced to internal crystal, or external pulse such as video syncs or the frame rate output of the Audio Kinetics Gearbox unit. It is also compatible with the revised EBU/SMPTE format with the included parity bit.

This combination offers a sophisticated time code standards conversion system.

Striper can also be preset to any hour start from 0 to 10 hours, with an option to automatically start with a 15 second preroll. The generator level is user adjustable on the front panel.

Striper can also be set to read time code, or user bits, and so new code can be generated from bad code.

An intelligent time code reader front-end detects time code direction and sets the generator direction to the same when the JAM command is given, so code can also be generated backwards to, for example, extend code at the start of material to provide pre-roll for synchronizers. This is easily achieved by turning the tape over and feeding the existing code into Striper, pressing JAM and recording the extending code over the end (start) of the old code. The reader can also display User Bits, and a run/stop key allows the display to be held. A "good code" LED shows whether incoming code is suitable for jamming.

The run/stop key can also stop the generator, and then continue from the same point.

Striper also has a comprehensive self-diagnostic program, so in the unlikely event of IC failure, the display will show which IC is faulty.

Striper \$1785.00

Gearbox Electronic Time Code Reshaper and Reference Converter

Gearbox is a 1U 19" rackmounting unit which provides two functions—a time code reshaper and a standards converter. A remote connector provides access to all operating controls.

Reshaper

Poor quality code can be reshaped and jittery time code relocked; input phase and output shape are adjustable from the front panel. The output time code is distributed on three connectors, each with its own front panel level control. Output 3 can be switched from re-

shaped time code to a 50 or 60Hz sine wave derived from the internal reference.

Standards Converter

The gearbox section references itself to one of six input sources: time code, video syncs, FM pilot tone, Pulse, AC Mains, or the internal crystal. Gearbox can then generate an output frequency absolutely locked to the incoming signal. A flywheel circuit compensates for any input instability and dropouts.

Gearbox is capable of converting the referenced input frequency to an output of a different standard. For example a 25 frame input can be altered to a 30 frame output while remaining referenced to the speed of the original time code.

The outputs for the gearbox section are on BNC connectors and provide a frame and field (twice frame) rate reference for an external time code generator, such as that used in the AK Striper or ES 1.11.

Using the frame rate reference Gearbox can be used to restripe a tape which has an incorrect code standard but is still related to the original code speed.

Gearbox \$1785.00

VTL Translator

The VTL Translator is designed for real time conversion of Vertical Interval Time Code (VITC) to Longitudinal Time Code (LTC). VITC is essential for video editing as it is the only way that code may be accurately read in still frame. Additionally, VITC eliminates the need to utilize a VTR audio channel for the time code reference track. The LTC produced by VTL is a direct, phase locked replica of the decoded VITC so that time code striped onto a slave machine is automatically resolved to the original video material. VTL's time code output can be used for any device that requires LTC for its operation, such as video editors, and Audio Kinetics ES 1.11 and Pacer synchronizers.

The VTL has two modes of operation, Translator and Editor, selected by an external switch.

Reader

VTL accepts PAL or NTSC composite video signals with encoded VITC; the standard is selected from the front panel. The range of the VITC reader is from 0 to approx. 20X play

speed, which is outside the capabilities of most video machines. An external sync input has been provided to assist in the continuous recovery of VITC when the video signal itself is of poor quality or intermittent, or from a video machine that outputs artificial blanking pulses in pause mode.

A front panel display for the Vertical Interval Time Code has a facility for freezing time code values and user bit information.

LTC output from a rear mounted XLR is continuous in the Editor mode as long as valid VITC is being received, which is indicated by a front panel LED. A serial communications port provides an additional output from the VITC decoder which operates at 9600 baud and broadcasts code values, user bits and code validity information. This can be used by an external computer to assemble an automatic EDL.

VITC Windows

VTL can define a "window" to enable the detection of code from within a specific set of video lines, between 6 and 22 for PAL signals, or 10 and 20 for NTSC. Several sets of VITC can be encoded on a single tape; for example, edited code may be left intact for the creation of an EDL, while fresh continuous code is encoded on a different set of lines for synchronization use. An automatic mode is provided which accepts the first valid VITC lines transmitted to VTL. Selection of a window of lines 19 and 21 illuminates a front panel LED for instant visual confirmation that this standard has been selected.

Translator Mode

In the "Translator" mode, the VTL's words progress forwards or backwards depending on the direction of the video, providing the correct type of code for use with synchronizers. Video recorders provide sufficiently good video in shuttle wind to allow VTL to output periodic snatches of deciphered code for synchronizers to follow when in chase mode. To avoid confusing intelligent synchronizers, the VTL has hysteresis built into the LTC output in the form of a "flywheel" effect. The LTC generator ignores changes in the direction of an input VITC until it reaches a rate of 3 frames per second in the opposite direction.

VTL \$2235.00

AUDIO KINETICS, INC.

Synchronizer

ES 1.11 Synchronizer

The ES 1.11 is a 1U rackmounting synchronizer/generator/emulator which can be bused to form an ESBUS local area network of up to 256 machines. The ESBUS controller's capabilities define the number of controlled machines that can be accessed within a system. Two switchable ESBUS network ports are provided on each ES 1.11 supporting separate controller sites or allowing different synchronizer configurations without re-cabling.

Each ES 1.11 can optionally take advantage of the enhanced AK-ESBUS specification which provides a one cable solution for control networking, sync referencing and system time code distribution. The system code can be used to drive console automation systems such as Audio Kinetics Reflex and MasterMix or ADR cueing devices such as Audio Kinetics Wiper.

Facilities

Each ES 1.11 has an independent EBU/SMPTE multi-standard time code generator; output level and shape can be adjusted from the front panel. An AK custom gate array, DAK010, handles all time code processing; a Vertical Interval time code (VITC) reader option can be retrofitted.

ES 1.11 automatically identifies TC standards and machines with different time code standards can be freely mixed and synchronized within a system. Four softkeys provide manipulation of all system and machine setups which are menu accessed and displayed on an 80 character LED backlit LCD screen. Specific machine parameters can be "fine tuned" utilizing the softkeys; the unit's parameters are stored in battery backed RAM. The system and machine parameters can also be accessed by an ESBUS controller like ES Eclipse. All popular audio, video and film machine interface parameters are held on EPROM in a front panel program module which can be updated without powering down. Selection of an interface file is made automatically when a machine cable is connected. ES 1.11 can also interface to machines which require serial control.

An Emulation mode converts the ESBUS A port to either Ampex or Sony protocols which allows direct control by a video editor.

MIDI control is possible when an Audio Kinetic's ES SSU system services unit is added to the ESBUS.

ES 1.11

Synchronization

Each ES 1.11 has two processors to maximize comms speed and machine control. The first dedicated processor handles all the system commands and ESBUS communications allowing the second to deal exclusively with servo control.

Lock performance is enhanced by the timeline bus which provides a system wide reference to which all machines lock when in synchronous play. As every machine is effectively resolved to the timeline bus system lock times are determined by the ramp up time of the slowest machine in the system, typically 1 to 2 seconds. 24-bit servo resolution allows ES 1.11 to deal with a wide range of machine requirements, especially those associated with film machine interfacing.

When a machine incapable of servo control or a vari-speed master is required, the timeline is effectively "locked" to that master with the rest of the group following the timeline. The system code may also be locked to the time code of the master machine. A crash record bus is provided for rhythmical manual punch into and out of record. Although the "Live" ESBUS serial command delays are minimal, the Crash Record bus provides direct parallel control for instantaneous record entry and exit.

Specifications

Inputs	Connector

AUDIO KINETICS, INC.

ES Bus Controller

ES Eclipse 16 Machine ES Bus Controller

ES Eclipse—a 16 machine controller designed for advanced audio post production applications. This EBU/SMPTE bus controller is based on the original Audio Kinetics Eclipse and reflects the latest developments in machine control technology. When used with Audio Kinetics ES 1.11 synchronizers the ES Eclipse represents an innovative step forward in remote systems control.

Physical

A high resolution 40 character 20 line electroluminescent display provides clear monitoring of all functions; a composite video output is provided for remote screens.

System

The ES Eclipse is selectable between 8 or 16 machine control utilizing any ES-bus synchronizer such as the Audio Kinetics ES 1.11. When combined with the ES SSU systems services unit, sophisticated events manipulation is provided.

Dual tasking allows manipulation of an off-line machine during synchronous group operations. A and B groups instantly reset the system into two separate on-line machine configurations.

The ES Eclipse supports all time code standards as well as feet and frames for film work.

Machine Control

Accessing the machine screen provides control of individual transport functions as well as all status information, including a label identifying the machine. Additionally, a start point value can be programmed for film machines.

Variable crawl and jog is provided; system crawl is determined by the speed of the slowest machine.

Head and tail stop limits can be programmed for the group and individual machines with display warnings when being approached. This enables confident remote machine room operation.

Offsets

The offset screen provides various operational offset options, including an auto offset key; offsets can be trimmed to frame and sub-frame resolution.

Loops

The loop mode is capable of storing 100 loop memories, each containing loop start and end, record in and out, machine offsets and machine on-line/record enable status. Each loop can be labelled with up to 10 characters for

ES Eclipse Shown with ES 1.11, and ES CPSU

easy reference. "Next" and "Last" keys provide rapid EDL sequencing.

Events

80 sequential events can be programmed to sub-frame resolution. Each event can trigger relays individually or as a group; these are provided by the Audio Kinetics System Services Unit ES SSU.

Q. Keys

12 Q-keys allow users to program command sequences for specific applications such as ADR and SFX assembly; these can be easily edited and labelled.

Off-Line

The ELQ software package supports MS-DOS disc storage for all ES Eclipse loop, offset, event and Q-key information. ELQ can also be used for the off-line entry, editing and labelling of loops to assemble an Edit Decision List (EDL). All the ES Eclipse event memories can be preset. Q-Keys can be written and reconfigured onto a separate Q-key disc for instant entry of operator setup parameters. ELQ utilizes an IBM or compatible computer which is connected to the system via the ELQ port provided on the Controller Power Supply Unit (CPSU).

System Service Unit

ES SSU System Services Unit

ES SSU is a self-contained system services unit which provides an EBU/SMPTE bus with all the auxiliary features required within a machine control network. The module provides event and system relays as well providing a system time code source to drive external equipment such as console automation. This unit will operate on any EBus system but when utilized with the AK-ESbus various time code and sync source references can be distributed throughout the bus.

Interfacing

The ES SSU has a time code bus input port which can be used for the input of an external time code generator; the AK-ESbus can then be used for network distribution of the external time code reference. The System Services Unit can also be used to reference the system timeline bus; if no ES 1.11 synchronizer is assigned as the reference master the ES SSU takes over this function automatically.

A time code bus output allows distribution of time code to external devices such as Audio Kinetics MasterMix and Reflex automation systems, time code inserters (Wiper) or musical instruments within a MIDI system. The time code on this bus may be sourced from an ES 1.11 synchronizer's reader or generator without any external patching allowing any machine to be the system time code master.

Similarly, composite video syncs or a video frame rate can be distributed for system wide referencing of the ES 1.11 generators.

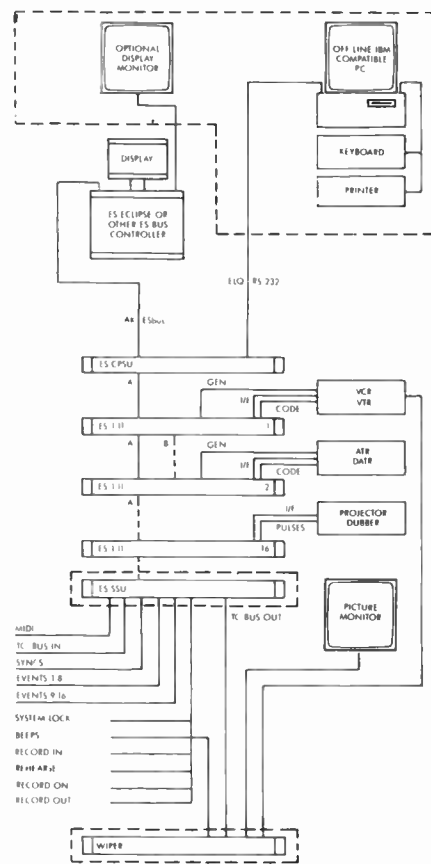

System

The ES SSU provides 16 changeover relays which are able to execute an eighty event sequence. A relay group can be defined to allow multiple outputs for one programmed event. Additional relays provide status indication of record in and out points, record enabled, rehearsing, system lock, and audio beeps. The Beeps relay has a coincident audio output of clicks or beeps. The relays can be programmed to sub-frame or millisecond accuracy. Additional event units can be added to a system to expand the relay capability.

AUDIO KINETICS, INC.**Computer Assisted Mixing Systems****MasterMix Computer Assisted Mixing Systems**

- Floppy disk based • Time code referenced • Automatic mix merging
- Interfaces to most consoles • VCA faders available for retrofit • Integral time code generator • Extremely simple to use

MasterMix interfaces with most automation ready consoles, including Amek, DDA, MCI JH600 and complete packages with VCA faders for Neotek, Neve, Soundcraft and Trident, and many more.

One of the prime reasons for MasterMix's operational simplicity is the fact that whatever updates are made to a mix, the whole current version of the mix is available for replay—there is no need for labelling and assembling sections of mixes.

The mixes are stored in one of four memories on the floppy disk, and reference is taken from standard SMPTE/EBU time code recorded on the multitrack.

Each pass of the mix is stored in the next memory in sequence. Even if only the middle two minutes of a long mix are updated, the whole mix, with its updates, is always transferred to the next memory.

Being disk based, the traditional disadvantages of tape-based systems are eliminated, these being accumulative delay of mix data, using at least two tracks of tape, corruption of data on tape and cost of making archive copies.

- **Disk based** — Storage of mixes is faster, cheaper, more convenient
- **Independent level and mute** — MasterMix allows level and mute data to be written independently giving instant retrieval of level information should a channel be un-muted after a mute has been programmed. (This is console dependent, and may not be available on some DC grouping consoles).
- **Automatic on line edit and merge**
- **Full interface with digital grouping** — When used with Digital Grouping Consoles, the unlimited grouping facilities are supported, with console grouping structures recorded with the mix data
- **Integral time code generator** — The MasterMix MX644 is a complete system incorporating a bidirectional multistandard time code generator. Reverse running code may be generated to extend preroll at the start of a mix
- **Independent of console** — MasterMix systems are available for Digital Grouping and DC Grouping automation ready consoles, or for consoles not prepared for automation
- **Disk-to-disk copying** — Archive copies of mixes may be made on a separate disk
- **Off-line splice** — An option within the software allows sections of a mix stored in memory A, say, to be merged with other parts of a mix stored in memory D, and the resulting mix stored in memory B, for example. This way, preferred sections of two mixes can be quickly merged, off-line
- **Instant mix comparison** — The Compare mode allows instant A/B replay of two stored mixes

System Configurations

MasterMix Consoles Interfaces are available in two forms:

Digital Grouping consoles, where the fader section, grouping and automation controls are under central processor control, and **DC Grouping** consoles, where only data lines for fader level Read and Write are provided, and the Mute command normally overwrites level data.

**Master Mix
MX644**

VCA Faders

The system components required will depend on the console to be fitted but will normally consist of:

MX644—Central Computer and Controller
MX700—Digital Grouping Interface, or MX800—DC Grouping Interface and where necessary, a Power Supply Unit.

Non-automation ready consoles also require the Audio Kinetics VCA Fader.

Interfaces may be fitted within the console if space permits, or supplied in a rackmounting enclosure.

TD-1B TAPE DEGAUSSER

- Erases audio, video, computer, data tape, magnetic films, cartridges and cassettes
- For tapes up to 3/4 inch
- Accommodates up to 10-1/2 inch NAB reels
- Provides a wide focused magnetic field to assure complete erasure
- Positive results every time with a simple two pass operation for broadcast NAB audio cartridges
- Transient protection to prevent permanent tape damage
- Internal fuse protection
- 115 and 220 volt, 50-60Hz models available

Power

Requirements: TD-1B 115VAC ± 10% 50-60Hz

TD-1BF 230VAC ± 10% 50-60Hz

Duty Cycle: One minute ON — Three minutes OFF

Dimensions: 5-1/4" x 7-1/4" x 3"

Weight: Net: 9-1/2 lbs. Shipping: 10 lbs.

Reel Size: Up to 10-1/2" in diameter. Removable center post for large carts

TD-1B - \$125.00
(115V 50-60Hz)

TD-1BF - \$136.00
(230V 50-60Hz)

TD-4A TAPE DEGAUSSER

- Erases audio, video, data tapes, U-Matic cassettes up to 750 oersteds, reels to 16 inches in diameter. See performance chart
- Provides 2550 effective gauss field
- Built-in timer has adjustable "on" cycle and automatic shut-off
- Automatic cooling fan operation
- Overheat light with automatic thermal protection prevents exceeding duty cycle on "Hi" position. Thermal protection resets to normal operation automatically
- Hi-Lo operation allows continuous duty erasing on Lo position for most tapes. See performance chart
- Standard 5/16 inch center post with 3 inch NAB hub supplied
- Conservative design assures long, reliable performance

MODEL NUMBER	LINE VOLTAGE	LINE FREQUENCY	LINE CURRENT		MAXIMUM GAUSS		PRICE
			HI	LO	HI	LO	
TD-4A-115-60	110-125VAC	60Hz	8A	4A	2550	2000	\$895.00
TD-4A-115-50	110-125VAC	50Hz	8A	4A	2550	2000	920.00
TD-4A-230-60	220-250VAC	60Hz	4A	2A	2550	2000	955.00
TD-4A-230-50	220-250VAC	50Hz	4A	2A	2550	2000	955.00

Duty Cycle: Hi position 50%, 20 minutes. Lo position — continuous

Dimensions: 13" x 17" x 4"

Shipping

Weight: 46 lbs.

Erases audio, video, computer, and cartridge tape.

TD-5 TAPE DEGAUSSER

- Erases audio, video, data U-Matic cassettes up to 1100 oersteds and 16" diameter
- Provides 3700 effective gauss field
- Built-in timer has adjustable "On" cycle and automatic shut-off
- Automatic cooling fan operation
- Overheat light and automatic thermal protection prevents exceeding duty cycle on "Hi" position, resets to allow normal operation
- Hi-Lo selectable operation allows continuous duty erasing on Lo position for many tapes. See performance chart
- Standard 5/16" center post with 3 NAB hub supplied
- Conservative design assures long reliable performance

MODEL NUMBER	LINE VOLTAGE	LINE FREQUENCY	LINE CURRENT		MAXIMUM GAUSS		PRICE
			HI	LO	HI	LO	
TD-5-115-60	110-125VAC	60Hz	10	4	3700	2600	\$1080.00
TD-5-115-50	110-125VAC	50Hz	10	4	3700	2600	1140.00
TD-5-230-60	220-250VAC	60Hz	5	2	3700	2600	1170.00
TD-5-230-50	220-250VAC	50Hz	5	2	3700	2600	1170.00

Duty Cycle: Hi position 50%, 20 minutes. Lo position — continuous

Dimensions: 13" x 17" x 4"

Shipping

Weight: 46 lb.

Erases audio, video, computer, and cartridge tape.

AUDIO LTD.

Wireless Microphones

RMS2000 HIGH FREQUENCY WIRELESS MICROPHONE

Size: 3 1/2" x 2 1/2" x 3/4"

RF Freq.: 150-216MHz

Deviation: Max. FCC allowable

Power Output: Max. FCC allowable

Two frequencies switchable transmitter and receiver

Microphone dynamic and electret ± powered

Overload protection to 0dB on all gain setting

8 x 4dB switched gain setting for mikes

2 x 4dB gain settings for 600 ohm line input

Mike switched LF cut

Power Switch: Both on/off and plug

Transmitter shows 80dB on RF level meter

Transmitter shows battery power on receiver

Overall system distortion: .15%

System Signal-to-Noise: < 100dB

Power: 9V MN1604 mallery

Audio compander compression and indicator

Audio response 40-15000kHz ± 1.5dB

Input plug 6 wire lemo

Modulation: FM

The Receiver:

Size: 5 1/2" x 4 1/2" x 1 1/2" with battery compartment

Power Supply: Pack on back with dovetail; 12VDC (8AA cells) or 8 1.2V rechargeable cells—replacing DC pack with 110VAC pack or receiver can also operate without supply pack on an external 9 15V from a Nagra or Video recorder

Outputs: Low impedance mike level (150 ohms) on XLR 3 male plug

Headphone output (+ 10dB) on separate volume control and switch

High impedance output at -10dB on lemo power plug.

This permits getting power from Nagra and putting Audio into middle position of Nagra on one adaptor cable

Meters: Battery and RF level—Switchable to transmitter battery voltage

Harmonic Distortion: .2%

Signal-to-Noise Ratio: -100dB down at 100%

1/2 IF Frequency: 85dB down

Image Frequency: In excess of 90dB, this gives no chance of crosstalk

RF Signal-to-Noise Ratio: 40dB at 2.5µV

RF Sensitivity: .3µV

Antenna Impedance: 75 ohms, BNC plug

Circuitry: Two printed circuit boards, one RF and one Audio, Mute and Meter circuits. They each plug into the chassis for easy repair and replacement. This also makes for easy advanced circuit changes.

RMS2000

Available Models

- RMS2000** Complete receiver, transmitter, antennas, case and Tram TR50 LAB lavalier, freq. 150-216MHz Dual frequency \$2500.00
- RMS2000U** Complete UHF freq. 450-451MHz, 455-456MHz 3000.00
- RMS2000H** Same as RMS2000 but has handheld transmitter with Shure SM78 microphone 2700.00
- RMS2000UH** Same as RMS2000U but has handheld Shure SM78 microphone. 3200.00
- RMS14FD** Dual receiver and two transmitters on different frequencies, two lavaliers and case. Single frequency transmitter. 3800.00
- RMS2000D** Diversity receiver, all other items and freq. same as RMS2000. . . 3900.00

Accessories

- RMS Receiver only** \$1100.00
- Receiver right angle or straight antenna BNC connector 40.00
- Receiver 110VAC power supply 165.00
- Receiver complete battery pack 40.00
- Battery pack insert to hold batteries 7.00
- Receiver battery slide 17.00
- Receiver ground plane antenna. 250.00
- Receiver rubber ducky antenna 22.00
- Transmitter only with one antenna 1100.00
- Transmitter antenna 15.00
- Transmitter adaptor cables. 60.00
- Transmitter battery clips 5.00
- Transmitter battery cover 5.00
- Tram TR50 LAB lavalier 185.00
- Tram TR50 LABXL lavalier with own plug-in power supply 295.00
- Receiver RMS14 only 1900.00
- Receiver RMS14 adaptor yoke for audio output XLR5 to two XLR3 plugs 80.00

3600' Hub	17-636-613	24.10

Note: The AA-3 cartridge is available on a replacement basis only.

The key feature of the AA-4 is the new SGS-4 broadcast mastering tape. When recorded on a high quality cartridge recorder, the SGS-4 tape can produce virtually identical copies of the best analog or digital master tapes. The SGS-4 tape, available exclusively in AA-4 cartridges, offers nearly 5dB higher saturation headroom at 16kHz (7 1/2ips) compared to the HOLN tape in AA-3 cartridges. No bias adjustment is usually necessary when recording on machines optimized for HOLN or other "hot" tapes. If the high end is overly bright, a touch up of record equalization will restore flatness and further improve the signal to noise ratio. The new binder formulation used in the SGS-4 tape also has improved physical properties, which result in longer life, less maintenance and a cleaner sound than is obtainable with most other broadcast cartridges. The AA-4 cartridge consists of SGS-4 tape loaded into the reliable and time proven AA-3 plastic case. The plastics are tinted to a lighter blue shade than AA-3 to provide a clear distinction between the two products. The combination of the SGS-4 tape and AA-3 plastics results in unbeatable recording performance and the longest life with the same ruggedness and exceptional phase stability as the AA-3.

Microphones

800 SERIES MICROPHONES

AT801 Electret Condenser (Omni)

• Sensitivity: -48dBm • Impedance: 600 ohms • Frequency Response: 40-18,000Hz • Max. Input SPL: 125dB, 1% THD • S/N: 50dB/ μ bar • Battery: 1.5V AA Type, 6 month life • Switch: on/off • Connector: XLRM

AT801 \$115.00

AT802 Moving Coil Dynamic (Omni)

• Sensitivity: -56dBm • Impedance: 600 ohms • Connector: XLRM • Frequency Response: 50-15,000Hz

AT802 \$110.00

AT803a Sub-Miniature**Clip-On Electret Condenser (Omni)**

• Sensitivity: -49dBm • Impedance: 400 ohms • Max. Input SPL: 130dB, 1% THD • S/N: 45dB/1kHz/1 μ bar • Battery: 1.5V N Type, 4 month life • Switch: on/off audio/battery • Connector: XLRM • Frequency Response: 30-20,000Hz

AT803a \$126.00

Note: Also operates on 9-52V phantom power

AT805A Miniature Clip-On Electret Condenser (Omni)

• Sensitivity: -57dBm • Impedance: 600 ohms • Frequency Response: 50-15,000Hz • Max. SPL: 130dB, 1% THD • S/N: 50dB/ μ bar • Battery: 1.4V Mercury cell, 600 hours life • Switch: on/off • Connector: XLRM

AT805A \$77.00

AT811 Electret Condenser (Uni-Cardioid)

• Sensitivity: -57dBm • Impedance: 600 ohms • Frequency Response: 50-20,000Hz • Max. Input SPL: 130dB, 1% THD • S/N: 50dB/ μ bar • Battery: 1.5V AA Type, 6 month life • Switch: on/off • Connector: XLRM

AT811 \$125.00

AT812 Moving Coil Dynamic (Uni-Cardioid)

• Sensitivity: -60dBm • Impedance: 600 ohms • Frequency Response: 50-15,000Hz • Switch: on/off • Connector: XLRM

AT812 \$135.00

AT813 Electret Condenser (Uni-Cardioid)

• Sensitivity: -55dBm • Impedance: 600 ohms • Max. Input SPL: 125dB, 1% THD • S/N: 50dB/1kHz/1 μ bar • Battery: 1.5V AA Type, 6 month life • Switch: on/off • Connector: XLRM

AT813 \$138.00

AT813/XLR 141.00

AT813R Remote-Powered**Electret Condenser (Uni-Cardioid)**

• Sensitivity: -49dBm • Impedance: 200 ohms • Max. Input SPL: 141dB, 1% THD • S/N: 50dB/1kHz/1 μ bar • Power Requirement: 9-52VDC phantom power • Connector: XLRM • Frequency Response: 30-20,000Hz

AT813R \$198.00

AT814a Moving Coil Dynamic (Uni-Cardioid)

• Sensitivity: -56dBm • Impedance: 250 ohms • Connector: XLRM • Frequency Response: 50-16,000Hz

AT814a \$159.00

AT814a/XLR 164.00

AT815a Electret**Condenser/Line/Gradient (Uni-Directional)**

• Sensitivity: -44.5dBm • Impedance: 600 ohms • Max. Input SPL: 115dB, 3% THD • S/N: 50dB/1kHz/1 μ bar • Battery: 1.5V AA Type, 4 month life • Switch: flat/roll off • Connector: XLRM • Frequency Response: 40-20,000Hz

AT815R \$330.00

AT831a Sub-Miniature Clip-On Electret Condenser (Uni-Cardioid)

• Sensitivity: -50dBm • Impedance: 400 ohms • Max. Input SPL: 130dB, 1% THD • S/N: 45dB/1kHz/1 μ bar • Battery: 1.5V N Type, 4 month life • Switch: on/off audio/battery • Connector: XLRM • Frequency Response: 40-20,000Hz (close); 70-20,000Hz (distant)

AT831a \$150.00

AT835 Electret Condenser Line/Gradient (Uni-Directional)

• Sensitivity: -44.5dBm • Impedance: 600 ohms • Max. Input SPL: 115dB, 3% THD • S/N: 50dB/1kHz/1 μ bar • Battery: 1.5V AA Type, 4 month life • Switch: flat/roll off • Connector: XLRM • Frequency Response: 40-20,000Hz

AT835 \$235.00

AT836 Moving Coil Dynamic (Uni-Cardioid)

• Sensitivity: -56dBm • Impedance: 250 ohms • Connector: XLRM • Frequency Response: 50-17,000Hz

AT836 \$147.00

AT836/XLR 152.00

AT838G Moving Coil Dynamic (Uni-Cardioid)

• Sensitivity: -63dBm • Impedance: 600 ohms • Connector: XLRM • Frequency Response: 100-10,000Hz

AT838G \$99.00

AUDIO TECHNICA US, INC.

Microphones

UniPoint™ Series Microphones
AT837 and AT859

Common Features

Frequency Response: 40-18,000Hz (close)
70-18,000Hz (distant)

Battery: NEDA Type 910 ("N-Type")

Switch: On-Off (battery only)

Phantom Power Requirements: 9-52VDC (2mA)

Output Connector: 3-pin XLRM, phased and balanced

AT837 Designed specifically for permanent sound reinforcement installation, the AT837 mounts directly to any podium, pulpit, or table surface. From the microphone, 9'9" (3 meters) of shielded cable is terminated by a screw-on mini-plug for positive connection to the AT8504 power module.

• Output Impedance: 600 ohms with or without power module • Signal to Noise Level: >40dB at 1kHz/0.1Pa • Weight (microphone less cable): 5 oz. • Microphone Length: 14¹/₁₆" above mounting surface • Accessories Furnished: AT8102 Windscreen, AT8504 Power Module, Battery

AT837\$150.00

AT859 The AT859 lets you instantly vary the length from 11" to 19" with its telescoping wand. It fits any standard A-T stand mount for use on podiums, floor, or desk stands.

• Output Impedance: 400 ohms • Signal to Noise Level: >45dB at 1kHz/0.1Pa • Weight (microphone less cable): 3.6 oz. • Microphone Length: 11⁷/₁₆" to 18²/₆₄" • Accessories Furnished: AT8102 Windscreen, AT8405 Stand Clamp, Battery

AT859\$190.00

AT853, AT855, AT857AM and AT857QM

Common Features

Frequency Response: 30-20,000Hz

Sensitivity: -50dB (0dB = 1mW/Pa)

Output Impedance: 400 ohms with power module, 600 ohms without module (AT857QM 400 ohms)

Signal to Noise Level: >47dB at 1kHz/0.1Pa

Battery: NEDA Type 910 ("N-Type")

Switch: On-Flat/On-Roll-off/(Off-battery only) (AT857QM Flat/Roll-off recessed)

Phantom Power Requirements: 9-52VDC (2mA)

Output Connector: 3-Pin XLRM, phased and balanced

AT853 This tiny microphone is barely over 1³/₁₆" long, < 1/2" in diameter, and weighs just 1/2 oz. Comes with two mounting methods, cable hanger or stand adaptor.

• Cable: 25' permanently attached to microphone, TA3F output connector • Accessories Furnished: AT8102 Windscreen, AT8505 Power Module, Battery, Desk Stand Adaptor, Steel Hanging Adaptor

AT853\$210.00

AT853W White finish version of AT853.\$240.00

AT855 For those installations where the flexibility of a gooseneck is not desired, the AT855 with fixed tube is offered. Ideal for both speech and full-range music applications.

• Cable: 9'9" permanently attached to microphone TA3F output connector • Accessories Furnished: AT8102 Windscreen, AT8505 Power Module, Battery

AT855\$210.00

AT857AM The AT857AM is similar in size to the AT857QM, except that it has a separate power module. It directly mounts to any 5/8"-27 desk or floor stand, or to the threaded surface adaptor included.

• Cable: 9'9" permanently attached to microphone, TA3F output connector • Accessories Furnished: AT8102 Windscreen, AT8505 Power Module, Battery

AT857AM\$250.00

AT857QM Intended for both quality sound reinforcement and professional recording and broadcasting, the AT857QM provides virtually ruler-flat response for both voice and music, with a low frequency roll-off option built-in. Almost 14" in length, the microphone plugs into any standard XLR surface or cable connector. Supplied with the AT8102 windscreen.

AT857QM\$220.00

AT857QML 19" long version of AT857QM\$238.00

AT871 UniPlate™ Unidirectional Boundary Microphone

The AT871 is a wide range condenser microphone with a hemi-cardioid (half-space cardioid) polar pattern. It is useful in surface mount applications such as high quality sound reinforcement, professional recording, television, and other demanding sound pickup situations. The AT871 incorporates a specially modified UniPoint microphone capsule.

• Element: Fixed charge condenser • Polar Pattern: Half-cardioid (cardioid in hemisphere above mounting surface) • Frequency Response: 30-20,000Hz • Impedance: 400 ohms • Battery Type: Use only "leak-proof" N.E.D.A. type 910 batteries • Switch: Off, Flat, "roll-off" ("off" only for battery operation) • Phantom Power Requirements: 9-52VDC • Output Connector, Power Module: Integral 3-pin XLRM, phased • Cable: 25' (7.6m) long, 1/8" (3.2mm) diameter 2-conductor, shielded cable with TA3F connectors • Accessories Furnished: AT8505 power module, battery, vinyl carrying case

AT871\$260.00

Prices and Specifications Subject to Change Without Notice.

AT4071/AT4073 40 Series Line and Gradient Capacitor Microphones

Common Features:

- Element: Externally polarized (DC bias) capacitor • Polar pattern: Lobar (AT4071) Narrow Directional (AT4073) • Frequency response: 30-20,000Hz • Impedance: 250 ohms balanced, transformerless • Hi-pass filter (lo-cut): 150Hz, 12dB/octave • Power Requirements: 12-48VDC Phantom • Current Consumption: 2.9mA • Accessories Furnished: AT8405 snap-in clamp for standard 5/8" — 27 threaded stands • Protective carrying case

The AT4071 and AT4073 are transformerless, externally-polarized capacitor microphones. These highly-directional, precision transducers have been specially created to meet the critical long-distance pickup demands of broadcasting, film/TV sound, professional recording and theater sound reinforcement.

Extended, Flat Response — On or Off Axis

Each of the two Line + Gradient microphones features a broad-band, linear on-axis frequency response, with maximum rejection of sounds from both the sides and the back of the microphone. Off axis, the response remains highly uniform. The resultant lack of sound coloration on and off axis makes these microphones particularly useful for miking dynamic action in film/TV audio as well as in "spot" miking techniques in the music studio or theater.

Unrestricted Sonic Purity Through Transformerless Output

Each of the 40 Series microphones delivers its balanced output without the use of a transformer. The result is a cleaner output even under high-output conditions.

Higher Output — Lower Noise

The AT4071 and AT4073 provide extremely high output and a noise floor so low it is hardly measurable, much less audible. The result is microphones that can be used with unreserved confidence in distant miking applications and even under the stringent demands of today's digital recording systems.

Unprecedented Lighter Weight, Shorter Length

Overall length of the AT4071 is 15⁹/₁₆" while the shorter AT4073 is only 9¹/₈". The AT4071 weighs 5.8 oz. and the AT4073 4.2 oz., adding practically no noticeable weight to the end of a fishpole or the top of a mini-cam.

Innovative Capsule/Interference Tube Design Offers Two Real Benefits

An ordinary line microphone has its capsule positioned immediately at the rear of the interference tube. The AT4071/4073 capsule is located entirely within the tube. Both the diaphragm and the side ports are exposed to the same acoustic environment.

One significant result is that the 40 Series Line + Gradient microphones are noticeably less sensitive to noise caused by wind turbulence or the "encounter" noise of panning action.

The second benefit is a marked reduction in proximity effect. This means that recordings made at varying distances will remain more consistent in response, making both production and editing quicker, easier, and less costly.

Built-in, Selectable High-Pass Filter

An integral 150Hz high-pass filter may be selected to "roll-off" the low frequency response, thereby attenuating unwanted sounds such as noise from traffic or air-handling systems.

Convenient Powering

The AT4071 and AT4073 will operate in conjunction with any remote "phantom" or "simplex" power source supplying from 12 to 48VDC. This voltage not only powers the microphone's impedance converter, but is stepped-up to a higher voltage internally to polarize the capacitor element.

AT4071 \$900.00
AT4073 750.00

AT4031 40 Series Cardioid Capacitor Microphone

- Element: fixed-charge, permanently polarized capacitor • Polar Pattern: unidirectional (cardioid) • Frequency Response: 30-20,000Hz; • Sensitivity: -44dBm (0dB = 1mW/Pa*) • Impedance: 100 ohms balanced • Signal to Noise Ratio: > 50dB at 1kHz, 0.1 Pa* • Power Requirements: 9-52VDC • Current Consumption: 4mA typical, 9-52VDC • Hi-pass Filter: 3dB down at 80Hz, 12dB/octave • Weight (less cable and clamp): 4.8 oz. (136g) • Dimensions: 6⁵/₁₆" (159.5mm) long, 1³/₁₆" (21mm) body diameter

The AT4031 is a pressure-gradient capacitor microphone with a uniform cardioid polar pattern. The frequency response is smooth over an extended 30-20,000Hz range, with a slight rise occurring in the high-frequency region. It is recommended for professional recording and critical applications in broadcast.

The AT4031 combines low self-noise, high output and a very high SPL (sound pressure level) handling capability, facts that contribute much to the ease with which it may be used to record or reinforce sound sources of extremely wide dynamic range. The AT4031 may be subjected to SPL's as high as 140dB before producing even 1% THD.

And, while the AT4031 delivers uncompromised studio performance, its rugged construction makes it a reliable choice to meet the tough physical demands of sound reinforcement or field recording. The case of the AT4031 is turned brass, not thin-wall aluminum, and the surface is plated in black chrome for durability and low reflectivity.

AT4031 \$325.00

Accessories:

AT8202 In-line Attenuator \$39.00
AT8314 2-conductor, shielded, vinyl-jacketed, broadcast type cable with XLR connector at microphone end, XLRM connector at equipment end. Available in 10', 25', 30', 50' and 100' lengthsPOR
AT8407 Universal "clothes-pin" stand clamp 14.95
AT8415 Shock Mount for boom or stand operation 40.00
AT8506 48V Microphone Power supply 150.00

AUDIO TECHNICA US, INC.**Production Mixer****AT4462 Stereo Field Production Mixer**

The AT4462 has four input channels. Channels 1 and 2 are mono, and continuously pannable. Channels 3 and 4 are true stereo inputs; each dual-concentric control adjusts the level of a pair of inputs, such as a stereo microphone, a pair of microphones, or external tape. This combination of mono and stereo inputs will accommodate practically any set-up for field production mixing.

Every exterior surface on the AT4462 is 1/16" sheet metal. Corners are rounded to prevent cable hangups and protect adjacent equipment. Additional side flanges of 1/16" steel add structural integrity and extend forward to protect all front-panel controls from impact damage.

Weighing only 74 oz., the AT4462 can be comfortably carried for long periods. When used in the supplied protective bag, the impact-absorbing inserts rest against the body for added comfort, while the shoulder strap evenly distributes the weight.

The AT4462 operates from two readily-available 9V alkaline batteries. An optional third battery works with these to supply 12V phantom power. Battery life, at maximum load, is a full four hours.

The AT4462 will accept any external power from 12 to 18VDC. A special circuit allows the mixer to accept external power of either polarity. Battery pack, an automotive battery, auxiliary power feed from a VCR, or virtually any AC adaptor—the AT4462 operates from all these sources.

Inputs

Each XLR-type channel input on the AT4462 will accept either mike or line level signals, by setting the associated switch to Line or Mike. When a channel is set to the Line position, phantom power cannot be applied to that channel.

An additional switch next to each input reduces incoming signal levels by 20dB, in either the Line or Mike position. When switched in, the attenuator decreases overload distortion potential when miking close, or when mixing high-level line signals. Full gain is preferred for distant miking, or normal line signals.

Each input features a selectable lo-cut filter, for reduction of microphone handling noise and general ambient low-frequency noise. The filters operate at 6dB per octave with a 3dB down point of 150Hz.

Outputs

Both Left and Right program outputs are transformer-coupled balanced. An individual switch for each output selects mike or line level. The Output Mode switch converts the stereo outputs to dual mono. In the Mono mode, the AT4462 can mix up to 6 inputs; the summed signal is available at either output.

The AT4462 output is remarkably quiet, with an equivalent input noise level < -127dBV.

A built-in oscillator provides amplitude-equalized reference tones at 1kHz, 400Hz, or 4.5kHz. The Master level control adjusts the output level of the oscillator. The different frequencies ensure quick verification of telco line equalization.

**AT4462**

Pressing and holding the Slate button activates a one-second tone, with the same selectable frequencies as the tone oscillator. When the tone is finished, an internal omnidirectional electret condenser microphone becomes live for track and cueing announcements. The internal mike is good enough to use as an emergency back-up broadcast mike.

Turning any input channel level control fully counterclockwise activates a pre-fader cue which disconnects that channel from the mixer and bus outputs. The cue mix is available only at the headphone output. This allows off-air monitoring of auxiliary signals, and allows the mixer operator to be fully aware of any important upcoming information.

The AT4462 has two automated circuits. A true stereo limiter and Lev-Alert.

The limiter operates in one of two modes—Sync or Sep. In the Sync mode, any excessive signal on either channel will activate limiting on both channels. This prevents collapse of the stereo image. The SEP mode engages two discrete limiters—one for each output channel, for situations where the left and right outputs are handling unrelated material.

The limiter action is very rapid, to maintain maximum signal integrity; attack time is 3ms, and release time is 500ms. The limiter threshold is user-adjustable.

Lev-Alert is a unique Audio-Technica circuit that is an audible analog of the peak LED display. When the Lev-Alert circuitry is active, a tone is heard, only at the headphone output, whenever peaking or limiting occurs. This can alert the mixer operator to an overload situation without having to continually watch the VU meters. An internal trim adjusts the output level of the Lev-Alert tone oscillator.

Multiple AT4462s may be interconnected with a single cable, at the 1/4" stereo Bus In and Bus Out jacks. The buffered signal at the Bus Out jack is a premaster mix of all input signals, and presents a very low source impedance (15 ohms), allowing operation into virtually any load impedance.

AT4462 \$1295.00

MM100

DP100

MM100 — The Match Maker™

Bi-Directional IHF ↔ PRO Level/Impedance Interface

Interconnects consumer/industrial reel to reel and cassette recorders, graphic equalizers and noise reduction systems, audio effects processors and digital reverbs into professional 600 ohm balanced, +4dBm systems without loading distortion, hum loops, RF pickup or high frequency rolloff.

60dB line input CMR hum rejection, effective RF protection, adjustable IHF output level. True transformer balanced and protected line outputs drive +22dBm at under .01% THD, 20Hz to 20kHz with +0, -.25dB response and over 98dB dynamic range. Adjustable line outputs. Self-contained power supply, Velcro™ or rack panel mounting, one or two units in 1 3/4".

Match-Maker \$249.00
P/N 20273-501 Rackmount panel, single or dual \$22.00

DP100 — The Disc-Patcher™

Uni-Directional IHF → PRO Level/Impedance Interface

Interconnects compact digital audio disc players. Off-air monitor tuners, ENG cassettes, console audition outputs into professional 600 ohm balanced, +4dBm systems without loading distortion, ground loops, RF pickup or high frequency rolloff.

True transformer balanced, isolated and protected outputs with greater dynamic range (102dB), flatter response (+0, -.25dB) and lower nominal THD (.005%, 20 to 20,000Hz) than digital audio disc systems. Adjustable outputs, self-contained power supply, Velcro or rack panel mounting.

Disc-Patcher \$199.00
P/N 20273-501 Rackmount panel, single or dual \$22.00

Distribution Amplifier Systems

DA10000

MicroAmp Series

DA 10000 Modular Distribution Amplifier Systems

• Ten 1 x 6 DA modules in 5 1/4" • Dual redundant plug-in power supplies • Five interchangeable types of DA modules • Active balanced or transformer outputs • Metering and compressor options • Safe, attractive closed front design • Barrier block or mass termination connectors • State-of-the-art, high slew rate design

DA 100 Basic 1 In, 6 Out Distribution Amplifier

Single power stage drives six active balanced outputs at +22dBm each. Split and by-passed build-out resistors give protection against shorts and RF. Balanced bridging input. Single panel level control sets all outputs. Headphone monitor jack.

DA100 \$250.00

MDA100 Metered 1 x 6 Distribution Amplifier

Adds a LED bargraph VU meter to the basic amplifier described above. Measures -21 to +6 VU with 0 VU adjustable for outputs from 0 to +18dBm. Signal alarm indicator and output warns of dead channel.

MDA100 \$335.00

CDA100 Compressing 1 x 6 Distribution Amplifier

Adds a gated compressor to the MDA100. Controls on inputs above -30dBm. Compression slope adjustable up to 20:1. Input level sensor gates compressor gain recovery to prevent background noise build-up during program pauses. Meter is switchable to output or gain reduction levels. Switchable linear amplifier mode.

CDA100 \$395.00

IDA100-1 Independent 6 Output Distribution Amplifier

6 transformer outputs. Individual trimmers provided for each output along with a master level control. Headphone output.

IDA100-1 \$375.00

MIDA100-1RC

Metered Remote Control Distribution Amplifier

1 input to 4 independent transformer balanced outputs at +22dBm. Remote/Local VCA master gain control. LED bargraph meter.

MIDA100-1RC \$495.00

MIDA100-1

Metered Independent Output Distribution Amplifier

6 transformer outputs with independent level controls. LED bargraph meter switchable to all outputs

MIDA100-1 \$449.00

PS 100 Power Supply

A bi-polar unregulated 18VDC supply drives the system power bus through fused isolation diodes. Operates singly or as a redundant pair in the right hand positions of each rack frame. Front panel LEDs indicate low voltage and blown fuses. Power failure alarm relay contacts close for any power loss and can activate external alarm. Dual power transformers in each module run cooler and generate minimal hum field, 115 and 230VAC operation

PS100 \$299.00

RM100 Rack Frame Assembly

Mounts 10 amplifier modules and 2 power modules in a 5 1/4" high by 19" wide Eurocard specification enclosure 14 1/2" deep. All modules plug in from the front, are secured with captive hardware and present an attractive and safe closed front panel. Aluminum extrusion construction makes a strong and rugged enclosure and allows free convection for vertical air flow. The basic frame includes power bussing for all positions. Individual modules include mating connector assemblies which mount on the rear of the card frame and plug into the power bus. Connector assemblies provide barrier block connections with fanout strips for studio wiring, consult factory for alternate insulation displacement, mass termination connector systems which allow simple plug-on audio connections.

struction makes a strong and rugged enclosure and allows free convection for vertical air flow. The basic frame includes power bussing for all positions. Encore Series Distribution Amplifiers

• 8 or 16 active balanced +18dBm output • Individual smooth log taper level adjustments • Combine channels by paralleling inputs for 1 x 8, 2 x 8 or 1 x 16 configurations • LED clipping indicators for each channel warn of any overdriven output • 20dB gain, .10% max THD, -75dBm maximum outputs noise, ±.25dB response, 30-20,000Hz • -70dB isolation and crosstalk • 30K ohm balanced inputs bridge +22dBm lines • High slew rate, 13V/μs for minimum TIM distortion • Excellent RF protection • Barrier block terminals with fanning strip • Rackmount in only 1 3/4"

DA208 Dual 1 x 4 \$329.00
DA416 Quad 1 x 4 469.00

VU1000 MicroAmp Line Switcher,

Meter and Monitoring Amplifier

• Eight active balanced inputs bridge +24dBm lines • Remoteable digital input selection mutes all audio during scan • 12 segment, 3 color LED meter has switchable VU, average and PPM ballistics • Range switch selects OVU meter reading at -10, 0, +4, +8 or +18dBm input • Line output drives +22dBm into 600 ohm balanced load, select 0, +4 or +8dBm output at OVU meter indication, +.25dB response, .1% max THD, 20-20kHz • Monitor, VU1000-1 drives 600 ohm headphones and external amplifier, VU1000-2 drives 6W into Lo-Z phones or external speaker, phones interrupt external feed • Mount singly or as stereo pair in 1 3/4"

VU1000-1 Drives external power amplifier \$625.00
VU1000-2 Internal 6W/8 ohm amplifier 725.00

Accessories

P/N 20209-501 Stereo interconnect cable \$15.00
P/N 20214-501 Remote control scan cable 12.00
P/N 20021-501 Rackmount, single, centered 17.00
P/N 20024-501 Rackmount, dual, side-by-side 22.00

VU-800

Micro-Meter Studio Metering System

• Useful tools in the studio for visually monitoring many audio lines simultaneously • Expandable AT1 Micro-Meters display one, two, three or four stereo signal pairs (eight channels) on bright, two color vacuum fluorescent bar-graph indicators with peak storage • Balanced bridging inputs prevent line loading and are individually switchable for OVU indication at -10, +4 or +8dBu • Compact 3 1/2" rackmount

VU200 One stereo display \$339.00
VU400 Two stereo displays 439.00
VU600 Three stereo displays 539.00
VU800 Four stereo displays 639.00

AUDIO TECHNOLOGIES, INC.**Broadcast Audio Consoles****BC12DSL****BC8DSR****Vanguard Series Broadcast Audio Consoles**

• Raised, silent, tactile feedback • Backlighted membrane switch control panel • Digitally scanned and stored • Five color graphics are protected by a seamless rugged polycarbonate overlay • 12 stereo inputs to 8 mixers (BC8) • 24 stereo inputs to 12 mixers (BC12) • Optional 5 x 2 input expander • Gain switched, high level instrumentation amplifier inputs accept +4, -10 or -20dBm nominal levels with excellent common mode hum and RF rejection • 2 mono mike preamps with internal pan pots are standard • May be wired to any input • Additional preamps (2) or full stereo preamps are optionally available • All faders and level controls drive DC operated voltage controlled amplifiers (VCA) • Dual, stereo +22dBm program outputs with dual mono sum program outputs and 2 switched analog VU meters • Optional 4 channel, 2 color vacuum fluorescent bargraph output displays • 5W cue amplifier • Stereo headphone amplifiers • Control room and studio muted monitor outputs for external optional power amplifiers • Modular amplifiers plug-in to mother board interconnection system • Punch-block type insulation displacement connections • Panel hinges forward 180° for full access • RF protection • External power module minimizes hum and isolates power line conducted RF pickup

BC8DSR AB type J rotary faders control dbx™ VCAs \$3395.00
BC8DSL 60mm, linear faders control dbx VCAs \$3395.00
BC12DSL 60mm, linear faders control dbx VCAs \$4995.00

VFD Vacuum Fluorescent Display

Two stereo, two color fourteen segment VU displays with peak storage. Replaces conventional VU meters and allows continuous metering of both stereo program outputs. \$175.00

EXP Input Expander

Increases console input capability with two banks of five self-indicating input switches wired to any two mixer inputs. Remote program cue capability \$275.00

SSS Stop/Start Switches

Eight momentary lighted pushbutton switches with terminal board for remote start-stop control of four tape decks, cart machines or turntables. Mounted into lower front panel between phone jacks and aligned with center mixers. (Lamps not included.) Two SSS options may be used with BC12DSL to control eight machines \$125.00

MIC Dual Microphone Preamplifier

Additional pair of 40dB microphone preamplifiers each with an on-board pan pot. Drive two stereo hi-level inputs with mono or use as stereo pair feeding a single mixer \$150.00

RLY Speaker Muting and Tally Light Relay

A two relay module board provides relay operated speaker muting and tally light control for the control room and one studio \$125.00

PLF Premium Linear Faders

Eight Penny and Giles 3010 65mm Travel \$600.00
 Twelve Penny and Giles 3010 65mm Travel. \$900.00

Maintenance Kits**SCK Semiconductor Kit**

Spare integrated circuits, transistors, diodes, LEDs, regulators and bridge rectifiers useful for local repair \$125.00

FDR-8 Replacement Rotary Fader Kit for BC8DSR

Quantity — Eight \$80.00

Replacement Linear Fader Kits for:**FDL-8 BC8DSL**

Quantity — Eight \$50.00

FDL-12 BC12DSL

Quantity — Twelve \$75.00

AUDIO-VIDEO SCIENCES CO.

Tape Eraser/Degausser

409 Tape Eraser

Precision Professional Equipment

Rugged, heavy construction provides stability. Erases all reel-to-reel magnetic tapes from 150 mil to 2" widths, as well as cartridges, cassettes, 16" reels, and all magnetic film stock.

Eraser Field Control

Erase field is electronically diminished at the end of each 20 second cycle, by the latest state-of-the-art tape control, minimizing residual noise caused by turn-off transients.

Overheat Protection

Complete electrical protection from overheating damage is provided by an overheat "start interlock" and continuous fan blower operation.

Erasure

30Hz to 15kHz the depth of erasure is 90dB below saturation (from reference control tape)

Cycle Time Erase

20 seconds

Thermal Protection

At 150° to 170°F coil surface temperature, the automatic heat overload circuit activates internal blower circuit indicated by front panel red light.

409

Power

95-135VAC, 60Hz, 1 phase 210-230VAC 50Hz, 1 phase (both 3 wire)

The 409 Tape Eraser completely erases all audio, video, instrumentation tapes and magnetic films (widths over 1" must be turned over). Audio and video cartridges, as well as tapes on reels or in boxes, can be efficiently degaussed. Reel sizes up to 16" can be accommodated.

409 115V, 60Hz\$ 1295.00
 409 220V, 50Hz1295.00

1500M Automatic Tape Degausser

Precision Controlled Erasure

Automatically erases all tapes by moving the tape through a strong field while electronically diminishing the field over a precisely controlled decay of the erase field.

Easy Operation

Tape reels or film stock up to 2" wide including U-Matic, VHS, Ampex and RCA Quad carts are erased on the 1500H and tape reels or film stock up to 1 1/2" including metal tape, U-Matic, VHS are erased on the 1500M. The tape control mechanism either rotates the reels or conveys cassettes through the field while the electronics decay the field, thus providing the smoothest and deepest erasure yet accomplished.

Degaussing Efficiency

1500H-tape with coercivity up to 750 oersteds (depending upon the tape format) will be erased to a depth of 90dB. 1500M-metal tape with coercivity of 1500 oersteds will be erased to a depth of 85dB and 750 oersted tapes to a depth of 90dB as measured from a reference control tape.

Reel Size

Up to 19" reel of 2" video tape or audio tape or 1" instrumentation tape on the 1500H and 19" reels of 1" tape or 35mm film stock on the 1500M.

Cassette Video or Audio

Erases any size video cassette, VHS, U-Matic, 2" quad cartridge, audio cartridge or cassette on the 1500H and up to 1 1/2" width on the 1500M.

Erase Time

5 to 55 seconds depending on tape format and power configuration.

1500M

Thermal Overload

Thermal protection is accomplished by automatic shutdown of power circuit when coil surface temperature reaches the range of 105° to 170°F.

Power Requirements

Current requirement is a function of tape reel size and/or cassette/cartridge configuration. It will range from 25 to 45A on 115VAC units and half that on 220VAC units of the 1500H and 20 to 40A on the 1500M.

 1500M 60Hz models6495.00

AUDITRONICS, INC.**On-Air Broadcast Control Consoles****200 Series On-Air Broadcast Control Consoles**

- VCA controlling faders, eliminating noise due to contamination or wear
- Noiseless hall-effect controlled CMOS muting
- Comprehensive user-oriented logic system
- On-board power regulation on each module
- + 30dBm output capability
- Control room monitor with 8 input selections
- Headphone amplifier with local EQ

The 200 Series offers a high degree of reliability together with simplicity of use in a compact, operator oriented package. It satisfies the requirements of both engineering and on-air personnel, while offering the station owner a very cost effective investment.

Consoles are available in four mainframe sizes to cover a range of applications from newsrooms to the largest multi-studio installations. The totally modular construction allows initial purchase of only the functions and accessories needed at the time, while allowing for simple future expansion.

Signal level for all inputs, both mono and stereo, is controlled by tested and proven VCA (Voltage Controlled Amplifier) technology. This means that the fader is outside of the audio signal path, acting only to vary a DC control voltage input to the VCA, thus eliminating typical noise problems caused by contaminated or worn fader elements. The use of VCA's also ensures precise stereo tracking of the left and right channels within 1/4dB over a 90dB range.

Penny and Giles conductive plastic linear motion faders are used on all inputs. Each fader is equipped with an off position switch which may, depending on user preference, be used to turn the module on and off, to control external devices, or for automatic cueing.

Microphone inputs use high quality Jensen transformers, featuring wide bandwidth and low distortion characteristics. Stereo line inputs feature a unique, actively balanced input stage with separate internal gain trims for both "A" and "B" inputs on each channel, permitting perfect channel balance. Both microphone and line inputs exhibit an excellent common mode rejection ratio (the ability to reject extraneous external noise).

Input module off/on control is accomplished by CMOS logic controlled by hall-effect switches, ensuring high reliability, noiseless switching, and an extremely long life (five million cycles typically).

The comprehensive, flexible, and easy-to-use logic system provides a number of benefits for both technical and on-air personnel. The stereo line input modules may be configured to start an external device or to turn on via control of an external device. Microphone input modules may be disabled via an external cough button, or commanded on by the intercom function of the studio monitor module, completing an integral two-way communications system capable of interface with two studios. Logic for tally lamps is also provided. All logic circuitry is DC voltage controlled.

The stereo headphone amplifier provides ample power for use even with low impedance headphones. It also includes a two band equalizer, with in/out switch, which may be used for local equalization without affecting the program output. Source selection follows the control room monitor source or the cue bus, and both may be selected simultaneously, split between the left and right outputs.

Program, audition, and mono line outputs are transformer isolated and capable of + 30dBm, providing the user with extensive operational headroom, excellent phase response, low distortion, and short circuit protection. Control room and studio monitor outputs are balanced and transformerless and capable of + 24dBm.

Each module in the 200 Series includes on-board voltage regulation with current limiting, providing excellent signal isolation, the elimination of power sensing lines and simplification of powering requirements, and protection from mass failure due to individual module problems.

Careful system design has virtually eliminated hand wiring, enhancing the reliability of the console. Installation is simplified by the use of solderless, locking, strain relieved interface connectors which mount directly to the console's motherboard. Both the meter panel and console module/motherboard assembly flip up inside of the outer shell to facilitate easy installation and maintenance; all access may be obtained while seated in the operator's position.

Standard wood trim provided is solid mahogany; however, walnut, oak or cherry are optionally available at an additional charge if specified at time of order. Each console includes all mating connectors, installation tools, basic spare parts kit, and service manual at no extra charge.

Available with both mono and stereo outputs, and a wide choice of functions and accessories, the 200 Series is the logical choice for those progressive facilities needing to install equipment with provisions for future adaptability and growth.

200 Series Cont'd Specifications:

Mono Microphone Input

Source selectable from A or B input
 Source Impedance: 150 ohms, nominal
 Input Impedance: >1K ohms, 20 Hz-15KHz, balanced, transformer isolated
 Input Level: -65 dBm to -41 dBm, adjustable (ref 0.775V rms)
 Input Headroom: 22dB over nominal input level
 CMRR: >60 dB 10Hz to 100 KHz

Stereo Line Input

Source selectable from A or B stereo input
 Source Impedance: 600 ohms, nominal
 Input Impedance: >10K ohms, balanced, active differential
 Input Level: -12 dBm to +8 dBm, adjustable (ref 0.775V rms)
 Input Headroom: 20 dB over nominal input level
 CMRR: >60 dB 10 Hz to 100KHz

Stereo Program, Audition, and Mono Outputs

Load Impedance: 600 ohms, nominal
 Output Impedance: <50 ohms, balanced, transformer isolated
 Output Level: +8 dBm nominal, adjustable -10 dBm to +16 dBm (ref 0.775V rms)
 Maximum Output Level: +30 dBm (ref 0.775V rms)

Stereo Control Room and Studio Monitor Outputs

Load Impedance: 600 ohms, nominal
 Output Impedance: 600 ohms, balanced, active differential
 Output Level: 0 dBm nominal (ref 0.775V rms)
 Maximum Output Level: +24 dBm (ref 0.775V rms)

Stereo Headphone Output

Load Impedance: 8 ohms or greater
 Output Level: 2 watts per channel, maximum

Cue Output

Output Level: 4 watts maximum, into built-in speaker

Overall:

Frequency Response: 20 Hz - 20KHz +0, -1dB at +8 dBm output level, Mic or Line Input to Program or Audition Output

Signal to Noise Ratio, Microphone In to Program or Audition Output: >78 dB or -128.5 dBV equivalent input noise, 20 Hz - 20 KHz with 150 ohms source impedance at nominal gain settings

Signal to Noise Ratio, Line In to Program or Audition Output: >82dB, 20 Hz - 20KHz with 600 ohms source impedance at nominal gain settings

Distortion (THD)

Microphone In to Program or Audition Output at +24 dBm (ref 0.775V rms)

<.01% at 1KHz

<.15% 30 Hz -20KHz

Line In to Program or Audition Output at +24 dBm (ref 0.775V rms)

<.01% at 1KHz

<.1% 20 Hz - 20KHz

Distortion (IM)

Microphone or Line In to Program or Audition Output at +24 dBm (ref 0.775V rms)

<.02% SMPTE

Crosstalk

Program Left Output to Program Right Output, Mic or Line Input

<-74 dB at 1KHz

<-63 dB at 20KHz

Program Outputs to Audition Outputs, Mic or Line Input

<-85dB at 1KHz

<-83dB at 20KHz

Mains Requirement

115/230 VAC ± 10%, 50/60Hz

Approximate Shipping Weights

Model 206	80 lbs. (36Kg)
Model 212	100 lbs. (45Kg)
Model 218	120 lbs. (54Kg)
Model 224	140 lbs. (63Kg)
Model PS-60	35 lbs. (16Kg)

Console Mainframes (Note 1)

206-MF	Six input position mainframe	\$5,300.00
212-MF	Twelve input position mainframe	5,600.00
218-MF	Eighteen input position mainframe	6,600.00
224-MF	Twenty-four input position mainframe	7,400.00
200-TR	Alternate wood trim (Note 2)	100.00

Modules (14")

201-MIS	Microphone input module	\$700.00
202-SLI	Stereo line input module with mode selector switch	700.00
200-CSM	Communications/studio monitor module	575.00
200-B14	Blank panel—14" (must be ordered for all unused input positions)	20.00

Accessory Modules (7") (Note 3)

201-PEQ	Personality equalizer module, including one (1) 201-EQP plug-in card (Note 4)	\$425.00
200-SEQ	Sweep equalizer module (Note 4)	495.00
201-LS8	Stereo line selector—8 station (mounted on 7" blank) (Note 4)	310.00
200-LS8-14	Stereo line selector—8 station (mounted on 14" blank) (Note 4)	350.00
200-VC	Voice controller module (Note 4)	550.00
201-VC	Voice controller module, with recessed controls (Note 4)	530.00
200-TEL	Telephone interface module (Note 4)	595.00
200-TR5	Tape remote control module—5 buttons (unwired)	220.00
200-TR6	Tape remote control module—6 buttons (unwired)	260.00
200-UM	User modification module—blank top panel, chassis and connector	90.00
200-L13	Triple stereo input module (Note 4)	625.00
200-MX6	6 into 1 line level mixer module (Note 4)	525.00

Accessories

202-DTK	Digital timer kit—includes 202-TC timer control module and cable	\$495.00
	Digital clock	340.00
202-DC	Digital clock	340.00
201-EQP	Plug-in personal equalizer card for 201-PEQ	30.00
200-SRC	Studio remote control panel	95.00
200-RY2	Logic relay interface for warning lights	85.00
200-PB	Rackmount module patchbay—6 row, 156 jacks (unwired)	2,800.00
PC-2	Patchcord, 24", nylon sheathed cable	35.00
PSI-60	Rackmount power supply isolator, for redundant powering (Note 5)	265.00
200-PPS	Phantom power supply—for powering condenser microphones	90.00

Spares

200-CRM	Control room monitor module	575.00
201-SLO	Stereo line output amplifier module	350.00
201-MLO	Mono line output amplifier module	260.00
PS-60	Rackmount power supply	500.00
200-E7	Extender module—7"	55.00
200-E14	Extender module—14"	70.00
200-B7	Blank panel—7"	15.00

Note 1.

All console mainframes include two (2) 201-SLO stereo line output amplifiers, one (1) 201-MLO mono line output amplifier, one (1) 200-CRM control room monitor module, built-in cue speaker and amplifier, power supply, installation kit, extender boards, basic spare parts kit, operations/service manual, and blank panels for all unused accessory positions.

Note 2.

White oak trim is standard with a clear finish, or unfinished suitable for custom finishing on-site. Other species of wood available by factory quote. Must be specified at time of order.

Note 3.

Up to seven (7) accessory modules may be ordered with each six input mainframe, or up to nine (9) with each twelve, eighteen or twenty-four input mainframe.

Note 4.

Standard factory wiring supplied.

Note 5.

An additional PS-60 power supply is required.

AUDITRONICS, INC.**Audio Production Console****310 Series Audio Production Console****Standard Features**

- 4 or 8 outputs, plus discrete stereo and mono mix
- Output submastering, with mix-minus capability
- Mono and/or stereo inputs, with or without equalization
- Hi cut and lo cut filters on each input
- VCA level control on all inputs and stereo mix outputs
- VCA control of submaster and mono outputs, with external level and mute control capability
- VCA input grouping
- 4 auxiliary sends
- Auxiliary returns
- Built-in monitor mixer
- Control room monitoring
- Stereo solo system
- Aural phase check capability
- Cue system with built-in speaker, amplifier, and metering
- Stereo headphone monitoring
- External level and mute control capability
- Output metering
- Microphone phantom power supply
- Wide armrest trough area, for user customization
- Penny and Giles conductive plastic linear motion faders
- All tools and mating connectors required for installation

Options

- Comprehensive equalization for mono or stereo inputs
- Audio-follow-video capability

Accessories

- Complete studio monitoring with communications facilities
- Test oscillator
- Logic interface system, for control of or by external equipment
- Compressor/limiter/noise gates, for mono or stereo operation
- Telephone interface
- Multiple input selectors
- Remote controls
- Digital clocks and timers
- Redundant powering
- Audio distribution amplifiers
- External patchbay
- High output line amplifiers (+ 30dBm)

Designed specifically for stereo TV and larger radio production operations, the 310 series represents an advanced design in audio control technology. As the second generation of audio consoles in the highly acclaimed 300 series, the series 310 features leading edge technology, expanded functional capability and advanced ergonomic design.

The 310 series affords the value conscious broadcaster a user defined selection of functional features and a dynamic array of the most important options necessary for uncompromising performance.

Specific attention has been given to not only the audio quality, but to logically located and labeled controls. A comprehensive, built-in user-programmable logic system simplifies the operation of many internal and external functions. External control ports have been included to provide the possibility of interface to any of several types of external equipment, such as video switchers, editors, etc.

Designed as a modular system, the 310 series is easily expandable in capabilities, with no sacrifice in performance specifications. All input modules include multiple source selections, and each input has dedicated active balanced input circuitry for optimization of level, noise, common mode rejection, and crosstalk. All output bussing assignments are made via CMOS "load-lift" switching, thereby ensuring optimum noise specifications throughout the system at all times.

Several output configurations are assignable. Stereo mix may be fed from the console inputs or submaster outputs. Mono mix may be independently derived or summed from stereo, pre- or post-stereo master fader. Output submastering provides control of signals routed to a multichannel tape recorder, as well as allowing, in combination with the mono and stereo mix systems, for a multiplicity of grouping and mix-minus combinations. The built-in submixer includes complete monitor mixing capabilities with logical, easy to use, program/tape and overdub switching. The flexible auxiliary send systems, with multiple source and control possibilities, may be utilized for foldback or effects outputs, and auxiliary returns are assignable to any output.

Optional input equalization, available in mono or stereo tracking configuration, provides a wide range of signal shaping possibilities without the radical parameters which belong in rarely utilized outboard signal processing equipment. The standard Hi and Lo cut filters permit rejection of hiss, rumble, and other undesirable effects.

Complete monitoring and communications facilities are available. The stereo solo system, in combination with the aural phase check capability of the control room monitor module, permits total isolation and scrutiny of any stereo signal point in the console. The mono cue system, with built-in speaker, amplifier and metering, allows checking of input signal presence and level. Tape returns may be internally muted to both the input modules and monitoring for ease of installation and configuration. A stereo headphone output is provided with source selection of control room monitor follow and/or cue. Studio monitoring is optionally available and includes communications capabilities to both the studio and auxiliary sends.

Adequate space is reserved for accessory mounting, both in the operational area, where signal processing equipment, line selectors, or remote controls may be mounted, and under the console in conveniently located 19" equipment rack spaces.

Rugged mainframe is fabricated in our own inhouse metal facility. Quality components are used throughout. Ergonomic engineering, precision metal works, quality components, advanced circuitry, and superior mechanical design all add up to the outstanding performance required by the demanding broadcaster.

Standard metering is VU for multichannel/submaster, stereo mix, and mono outputs. Mono metering is selectable as mono mix, cue or external. Each meter is buffered to maintain signal integrity. PPM metering is optionally available.

All inputs and outputs, as well as optional insertion points, logic, and external control ports, are brought to the conveniently accessible termination panel. All audio connections are made via locking and strain relieved AMP connectors, while DC logic and remote level control connections are made via "D" connectors.

310 Series Cont'd Standard Mainframe Modules and Accessory Modules

Mono Input Modules

Mono input modules, and associated submaster assignment modules, provide input selection, level control, and processing of microphone or line level inputs, signal routing to multichannel, stereo mix, or auxiliary outputs, as well as solo, cue, and logic facilities.

Mono input modules include input selection for 1 microphone and 2 mono line level inputs. Each input is actively balanced and includes its own input amplifier and internal adjustments for absolute optimization of level and common mode rejection. An overload LED monitors the input level of the microphone source. Input level trims are provided in stepped course and continuously variable fine adjustments for microphone inputs, and fine adjustments for line inputs only. Audio polarity and accompanying LED indicator are also provided and are operable for all input selections.

Equalization is optionally available and includes 3 bands of reciprocal control. Hi and Lo bands each have 3 selectable frequencies (Hi: 5KHz, 8KHz, 13KHz and Off; Lo: 40Hz, 80Hz, 150Hz and Off) of shelving equalization with ± 12 dB of continuously variable frequency (400Hz to 4KHz) and ± 12 dB boost/cut control, as well as Hi/Lo Q selection. An equalizer In/Out switch and associated LED are provided to completely bypass the equalizer when desired. An overload LED monitors the internal operating level of the equalizer at all times.

Hi and Lo cut filters are standard on all module versions and provide 18dB/octave filtering at 8KHz and 80Hz, respectively.

Stereo panning is provided to the stereo mix bus and multichannel assignments. A stereo mix assign button routes the module output directly to the stereo busses. (The module output may also be routed to the multichannel outputs, and ultimately to the stereo or mono mix busses via the submaster faders and assignments.) Level control is by Penny and Giles conductive plastic linear fader controlling an on-board VCA, and channel On/Off is selected by a silent, illuminated switch. In addition to providing a visual on/off indication, the switch lamp will also flash to indicate invalid input selection.

Stereo solo is provided for a monitor solo of the channel output (with associated LED indicator), and mono cue with associated LED indicator is provided for monitoring of the channel input via the console's built-in cue monitor. The cue function may be internally programmed for manual operation, activation upon fader down, or for automatic cancellation on activation of fader up/channel on, then reinitiable at any time.

Four auxiliary outputs are provided for creation of foldback or effects mixes. Each includes its own level control, as well as pre/post fader source selection and on/off switching. Pre-fader selection is internally programmable for pre- or post-equalizer.

VCA input grouping is a standard feature and includes selection for control by any of 4 VCA group master faders.

Stereo Input Modules

Stereo line input modules and associated submaster assignment modules provide input selection, level control, and processing of stereo line level inputs, signal routing to multichannel, stereo mix, or auxiliary outputs, as well as solo, cue, and logic facilities.

Stereo line input modules include input selection for 2 stereo line level inputs. Each input is actively balanced and includes its own input amplifier and internal adjustments for absolute optimization of level and common mode rejection. A stereo tracking input level trim is provided for ± 6 dB adjustment, together with a right channel trim control to achieve input balance. Left input only audio polarity reverse with an accompanying LED indicator is also provided.

Stereo tracking equalization is optionally available and includes 3 bands of reciprocal control. Hi and Lo bands each have 3 selectable frequencies (Hi: 5KHz, 8KHz, 13KHz and Off; Lo: 40Hz, 80Hz, 150Hz and Off) of shelving equalization with ± 12 dB of continuously variable frequency (400Hz to 4KHz) and ± 12 dB boost/cut control, as well as Hi/Lo Q selection. An equalizer In/Out switch and associated LED are provided to completely bypass the equalizer when desired. An overload LED monitors the internal operating level of the equalizer at all times.

Stereo Hi and Lo cut filters are standard on all module versions and provide 18dB/octave filtering at 8KHz and 80Hz, respectively.

A mode selector selects input source of left only, right only, mono sum of both left and right, stereo or reverse stereo. A stereo mix assign button routes the module output directly to the stereo busses. (The module output may also be routed to the multichannel outputs, and ultimately to the stereo or mono mix busses via the submaster faders and assignments.) Level control is by Penny and Giles conductive plastic linear fader controlling on-board VCAs, and channel on/off is selected by a silent, illuminated switch. In addition to providing a visual on/off indication, the switch lamp will also flash to indicate invalid input selection. A VCA control port is provided for level or on/off control from an external source.

Stereo solo is provided for a monitor solo of the channel output (with associated LED indicator), and mono cue with associated LED indicator is provided for monitoring of the channel input via the console's built-in cue monitor. The cue function may be internally programmed for manual operation, activation upon fader down, or for automatic cancellation on activation of fader up/channel on, then reinitiable at any time.

Four mono auxiliary outputs are provided for creation of foldback or effects mixes. Each includes its own level control, as well as pre/post fader source selection and on/off switching. Pre-fader selection is internally programmable for pre- or post-equalizer.

VCA input grouping is a standard feature and includes selection for control by any of 4 VCA group master faders.

Submaster Control Module

Submaster control modules each include 2 submaster/multichannel output level controls and assignments, a submixer for each multi-channel output, and an auxiliary return. Submastering enables "output grouping" for rapid and accurate control of related signals or creation of simultaneous yet different mixed outputs, such as mix-minus or second language programs.

Two submaster control modules are provided as standard in a four output console, and four are provided as standard in an eight output console. Submaster level control is by Penny and Giles conductive plastic linear faders and are supplied with on-board VCAs, including VCA control ports for level or on/off control from an external source. Each submaster includes a line level (active balanced) multi-channel output which is active at all times, stereo pan, and assignment capability to the stereo mix or mono mix. Stereo solo is provided for a monitor solo of the submaster outputs.

A 4 into 2 (or 8 into 2, depending on the console output configuration) multichannel submixer with overdub capability is provided for the creation of a monitor mix, or for auxiliary mixes for foldback or effects use. The inputs to each mixer channel are selected from multichannel outputs or multichannel tape returns via a combination of the program/tape selector on the control room monitor and the individual illuminated overdub switches. Multichannel tape returns are interfaced directly to mono input module sources and internally routed to the submixer. Each multichannel submixer position includes level control, On/Off switch, overdub switch, and stereo pan.

The auxiliary return includes an active balanced line level input, level control, and stereo pan and is assignable to the stereo or mono mix busses, to the control room monitor for monitoring with echo, or to the multi-channel outputs via an associated submaster assignment module. Stereo solo is provided for the Aux return.

Stereo/Mono Master Module

The stereo/mono master module includes active balanced line level outputs and controls for the stereo mix, mono mix, and the four auxiliary outputs.

Stereo mix output level control is by a Penny and Giles conductive plastic linear fader controlling on-board VCAs. VCA control ports are provided for level or on/off control from an external source. Recessed trims are also provided for output level calibration.

Mono mix output level control is by a rotary conductive plastic fader. Mono mix source is selectable from pre- or post-stereo master fader summed to mono, or a discrete mono mix derived from the mono assignments on the submaster and auxiliary return outputs.

Four auxiliary outputs are provided, each with level control and source selection. Sources may be selected from the mono mix output, multichannel submixer output, or a mix derived from the auxiliary outputs of the input modules.

Control Room Monitor Module

The control room monitor module provides control of all control room monitoring, stereo headphone, and cue functions.

Control room monitoring sources are selectable from stereo mix, mono mix, auxiliary output pairs, an external stereo source, and the output of the multichannel submixer. A monitor level control is provided, as well as recessed trims for output level calibration and dim level preset. Dim or mute is activated during communications system use, or as commanded by the console's internal programmable logical system (LED indicators show status of mute or dim circuitry.) A solo level preset is also provided pre-control room monitor level, and a solo LED indicator signifies that the solo system is in use. Individual speaker On/Off buttons are provided, as well as an L + R sum switch for mono operation and a momentary audio polarity reversal switch on the left monitor source only to allow aural audio polarity checking of any monitored signal, including solo.

A cue level control and amplifier are included for the built-in cue speaker. Provisions are made for connection of an external cue amplifier, if desired, for cue metering pre-level control, and an LED indicator illuminates when in the cue mode.

The program/tape selector, with associated LED indicators, performs master source selection for the multi-channel submixer incorporated into the submaster control modules.

A stereo headphone amplifier is provided with a level control and input source selectors for control room monitor source follow or cue output. When both are selected simultaneously, the control room monitor source is summed to mono and routed to the left, while cue is sent to the right, ensuring that program monitoring is never lost.

VCA Group Master Modules

The VCA group master modules (310-GM2) each provide 2 master faders for use with input modules VCA input grouping switches. Each 310 console input module provides for VCA group selection of any of four groups.

Submaster Assignment Module

Provides multichannel assignment of input module or auxiliary return outputs to the submaster/multichannel busses via illuminated switches. Its source is selectable for mono or stereo odd/even assignment. Multichannel assignment modules are available in 4 and 8 output versions, depending on the console configuration. One module is required for each input position.

Provides multichannel assignment of input module or auxiliary return outputs to the submaster/multichannel busses via illuminated switches. Its source is selectable for mono or stereo odd/even assignment. Multichannel assignment modules are available in 4 and 8 output versions, depending on the console configuration.

310 Series Cont'd Accessory Modules

Communications/Studio Monitor Module (Optional)

The optional communications/studio monitor module (CSM) provides control of all studio monitoring and communications functions. Studio monitoring sources are selectable from stereo mix, control room monitor source selection, auxiliary output pairs, a spare stereo source, and the output of the multi-channel submixer. A monitor level control is provided, as well as individual speaker on/off buttons and an L + R sum switch for mono operation. Mute may be commanded by the internal programmable logic system of the console. Communications facilities include separate switches for activating voice and tone slating, a talkback switch for talking to the studio via the studio monitors, and facilities for talking to any of the auxiliary outputs. A built-in microphone is included with the independent recessed level controls for studio talkback and slate levels and a studio talkback on/off switch.

Communications/Studio 2 Monitor Module

The optional communications/Studio 2 monitor module (CSM2) provides source selection, level control, talkback and logic for a second studio operation.

Test Oscillator Module

The test oscillator accessory module provides a quality on-board oscillator for signaling or alignment purposes. It includes an on/off switch with LED indicator, 11 selectable frequencies, level control, assignment to the mono, stereo, or multi-channel buses, and an independent line level output with enable switch.

Power Supply Control Module

The power supply system is controlled and system status monitored with the power supply control module. Controls in the power system B section are intended to control an optional redundant supply.

Telephone Interface Module

The telephone interface accessory module provides handling, processing, and routing of incoming telephone calls without compromising other console functions. It interfaces with telephone lines through a commercially available hybrid and includes a 250Hz to 5kHz bandpass filter switchable into the incoming line, level control, announcers input (shared with a designated microphone source), and cue and solo functions. A direct stereo line level output is provided for feed to a delay or recorder.

Tape Remote Control Accessory

Available in 5 or 6 button versions, the 310-TRC features illuminated momentary switches terminated in connectors at the rear of the module for user installation as tape machine remote controls.

Compressor/Limiter/Noise Gate Module

The compressor/limiter/noise gate accessory module uses the VCAs incorporated in any of the console's inputs or outputs to accomplish either mono or stereo signal processing. It includes a section for compression and limiting with in/out, threshold, ratio, output level controls, and a gain reduction indicator. A separate section for noise gating includes in/out and threshold controls and a mute indicator. Internal adjustments are provided for variable attack and release times of each section. Versions are available both with (310-VCP) and without (310-VCN) operator accessible controls.

310-LS8 Stereo Line Selector Accessory

Allows up to 8 stereo sources to be pre-selected to an input of a stereo line input module.

Timer Control Accessory

Provides manual or automatic control of the timer. Remote S/S allows control from a user-installed remote location. Input on/off allows control by any stereo line input module wired for this function, and the operator may choose from either reset on start or reset on stop in this mode.

Specifications:

Microphone Inputs

Input Impedance: > 1.5K ohms, active balanced, bridging, transformerless
Nominal Input Level: -65dBV to -10dBV (ref. 0.775Vrms)
Equivalent Input Noise: < -129dBV, 20Hz-20KHz, at 65dB gain and with 150 ohms input termination
CMRR: < 60dB, 20Hz-20kHz

Line Inputs

Input Impedance: > 50K ohms, active balanced, bridging, transformerless
Nominal Input Level: -12dBV to +8dBV (ref. 0.775Vrms)
CMRR: > 80dB, 20Hz-20kHz

Line Outputs

Output Impedance: < 60 ohms, balanced, floating, and transformerless
Nominal Output Level: +4dBV (ref. 0.775Vrms)
Maximum Output Level: +24dBV (ref. 0.775Vrms)

Patch Points (Optional)

Send Impedance: 100 ohms, unbalanced
Return Impedance: > 10K ohms, active balanced, bridging, transformerless
Nominal Level: -2dBV (ref. 0.775Vrms), inputs
 -8dBV (ref. 0.775Vrms), output section

Stereo Headphone Output

Acceptable Load
Impedance: 8 ohms, or greater
Output Level: 1W per channel
Cue Output
Output Level: 3W, into built-in speaker

Overall

Frequency Response: +0, -1/2dB, 20Hz-20kHz
Signal to Noise Ratio: > 84dB, ref. +4dBV, at nominal settings
Distortion: < .01% THD, 20Hz-10kHz at maximum output level
 < .05% THD, 20Hz-20kHz at maximum output level
 < .05% IM/SMPTE, at nominal output level
Crosstalk: < -80dB, at 1kHz, ref. +18dBV
 < -65dB, 20Hz-20kHz, ref. +18dBV

 Note 1. Each 4 output mainframe system includes seven (7) VU meters, 310-SM2
 and 310-SM4 sub-master modules, two (2) 310-BA4 sub-master assign
 modules, 310-SMM stereo/mono master module, 310-CRM control room
 monitor module, 310-GM2 and 310-GM4 group master faders, built-in cue
 speaker and amplifier, power supply system, installation kit, extender
 boards, basic spare parts kit, operations/service manual, and blank panels
 for all unused accessory positions.

Note 2. Each 8 output mainframe system includes eleven (11) VU meters, 310-SM2,
 310-SM4, 310-SM6 and 310-SM8 sub-master modules, four (4) 310-BA8
 sub-master assign modules, 310-SMM stereo/mono master module, 310-
 CRM control room monitor module, 310-GM2 and 310-GM4 group master
 faders, built-in cue speaker and amplifier, panels for all unused accessory
 positions.

Note 3. Required with each input module.
 Note 4. Includes standard factory wiring.
 Auditronics Patchbays are available which are suitable for use with the 310
 series console.

QC66 Quality Control Three-Way Monitor

- 8 ohms impedance • 100W program power handling • Anechoic frequency response: 50-20kHz \pm 2dB • Sensitivity: 90dB 1W/1M
- Dimensions: 13 $\frac{1}{2}$ " H x 16 $\frac{1}{2}$ " W x 12 $\frac{1}{2}$ " D • Also available in black vinyl finish

Control room and mobile recording reference monitor, studio playback, mastering monitor, residential and commercial sound systems. Two 6 $\frac{1}{2}$ " (165mm) polypropylene cone woofers with rubber suspensions; 1 $\frac{1}{4}$ " (34mm) soft dome midrange-tweeter; $\frac{3}{4}$ " (19mm) polyamide fiber dome super tweeter.

QC66pr./\$595.00

T66 Compact Two-Way Monitor

- 8 ohms impedance • 100W program power handling • Anechoic frequency response: 55-18kHz \pm 2 $\frac{1}{2}$ dB • Sensitivity: 90dB, 1W/1M
- Dimensions: 12" H x 18" W x 12 $\frac{1}{2}$ " D • Also available in black vinyl finish

Near field control room reference and mixdown monitor, broadcast monitor, sound reinforcement and sound distribution system for small and midsize auditoriums, churches, classrooms, performer's or musician's monitor. Two 6 $\frac{1}{2}$ " (165mm) polypropylene cone woofers with foam suspension; 1 $\frac{1}{4}$ " (34mm) soft dome midrange-tweeter.

T66pr./\$495.00

T6 Sub-Compact Two-Way Monitor

- 8 ohms impedance • 80W program power handling • Anechoic frequency response: 60-20kHz \pm 3dB • Sensitivity: 88dB 1W/1M
- Dimensions: 14 $\frac{1}{2}$ " H x 9 $\frac{1}{2}$ " W x 10" D • Also available in vinyl finish

Near field control room auxiliary monitor for mixdown reference, broadcast monitor, residential high fidelity system, and commercial sound distribution where space is limited. 6 $\frac{1}{2}$ " (165mm) polypropylene cone woofer with foam suspension; 1" (25mm) soft dome tweeter.

T6pr./\$300.00

T5 Ultra-Compact Two-Way Monitor

- 8 ohms impedance • 40W program power handling • Anechoic frequency response: 90-20kHz \pm 3 $\frac{1}{2}$ dB • Sensitivity: 87dB 1W/1M
- Dimensions: 10 $\frac{1}{2}$ " H x 7" W x 7 $\frac{3}{8}$ " D

Neutral response small system reference monitor, A & R demonstration speaker, high quality extension speaker system for home and commercial applications. 5 $\frac{1}{4}$ " (133mm) polypropylene cone woofer with foam suspension; 1" (25mm) soft dome tweeter.

T5pr./\$225.00

RT5-V/RT6-V Rackmountable Monitors

- $\frac{3}{4}$ " W dispersion • Polyamide dome tweeter • 12dB per octave crossover network • Frequency response: 3dB from 70-20kHz
- Power handling: 40WRMS • 6 ohms impedance • Enclosure occupies 5 $\frac{1}{4}$ " vertical rack space; 16 $\frac{1}{2}$ " W x 8 $\frac{1}{2}$ " D

The RT6-V acoustic design is derived from the T6 Sub Compact Two-Way monitor, with the same 1" soft dome tweeter, 12 or 8dB per octave crossover network and nearly identical Thiele Small woofer parameters, except that the magnet structure is heavier and shielded against flux leakage. Frequency response is a quoted 2 $\frac{1}{2}$ dB from 60-20kHz, with 50WRMS power handling. 8 ohms impedance, and enclosure measures 8 $\frac{3}{4}$ " H x 16 $\frac{1}{2}$ " W x 9 $\frac{1}{2}$ " D

5CV

5MCV Multi-Channel Video/Broadcast Monitor

- Anechoic on axis frequency response is 3 $\frac{1}{2}$ dB from 160Hz-12.5kHz
- Shielded magnets reduce flux leakage to minimize deflection of nearby CRT images • 8 ohms impedance • Program power handling is 30W per channel • 5 $\frac{1}{4}$ " H x 16 $\frac{1}{2}$ " W x 8 $\frac{1}{2}$ " D

The 5MCV is a shielded magnet three channel audio monitor for the Video/Broadcast and Recording industries. May be mounted in standard 19" relay racks with optional metal rack ears or placed on consoles, desks, stands or wall mounted horizontally or vertically. The 5MCV was developed specifically for radio broadcasters, to provide separate audio channels for a variety of feeds such as cue, program, emergency channel, talk back, news and sports.

R/TV-20

R/TV Live Assist

LiveAssist Package for R/TV Series Radio and TV Stereo Consoles

The Live Assist Package consists of:

- One microprocessor board
- One control panel
- One interface board with cable

It allows automatic operation of one bus while live work is being done on the other bus. It also enables the operator to program up to 32 sequential steps per program on each of four programs: a total of 128 steps.

The system offers complete and random selection of all console channels. It also allows remote control of each channel on the console using a small eight-wire cable.

The Live Assist Package is an option for use with the R/TV series stereo radio and TV audio consoles: the R/TV-12 offers 24 stereo inputs; the R/TV-20 offers 34 stereo inputs.

The Live Assist Panel plugs into the R/TV series console and offers full remote control plus four live assist programs. Each program contains up to 32 steps.

With Live Assist, the operator can:

- Start, stop and select audio bus for each console channel via remote control
- Pre-program the start time and program sequence with bus selection for each channel
- Activate and set silence sense timing for program and audition buses
- Observe live assist status at all times
- Monitor sources to transfer on EOM or silence-sense
- Use multiple live assist panels for tandem remote control
- Override live assist at any time
- Obtain limited real-time updates for program format control
- Repeat or chain live assist programs for longer walk-away time

The Microprocessor Board plugs into the console's card cage. It decodes logging from tapes encoded by the Autogram Production Center and collects and dumps channel usage data to an external printer.

The microprocessor board has:

- A parallel printer port
- An RS232C port for communicating to either an external printer or a computer for optional computer control

Live Assist Package \$2,995.00

Note: The external printer or computer and related interconnect cables are not included in the Live Assist package.

AUTOGRAM CORP.

Audio Console/Autoclock

Microgram Audio Console

Microgram Audio Console Multimation System Inputs

• Sources: 64 stereo inputs max. • Impedances: Microphone, 200 ohm • High level, 10K or 600 ohm terminate • External monitor, 10K • Levels: Microphone, -65 to -50dBm (single input chassis only) • High level, -10dBm to +10dBm • Noise: -80dB at +18dBm outputs • Power source: 117 or 230VAC 50/60Hz single phase power supply (external)

Outputs

• 3 stereo buses • 1 mono program • 2 cue amplifiers • 2 headphone amplifier • 4 line output (feed external monitor amplifiers) • Impedances: Program and monitor, 600 ohm balanced or unbalanced • Headphone: 8 ohm unbalanced • Levels: Program and monitor, +8dBm nominal, +24dBm max. • Cue and headphone, 1W into 8 ohm load • Frequency response: Program and monitor, ±0.5dB, 30 to 15kHz • Cue and headphone, ±15dB, 30 to 15kHz • Distortion: Program and monitor, <0.5% THD • Cue and headphones, <1.5% THD

Dimensions:

11" above table (279.4mm)
33" D (838.2mm)
43" W (1092.2mm)

Programming Options:

• 5 front panels: 5 control sections max., including 1 monitor • Any combination of 4 single line or multiline sections • **Single line:** 4 microphone or hi level inputs • **Multiline:** 16 hi level inputs • Machine control for remote starts • RS 422 computer interface • Add external computer to automate up to two stereo audio buses • Add external printers and accessories for complete program logging • 12-hour clock display • Stop watch display

Basic with Live Assist 24 Inputs \$16,535.00
Basic with Automation 24 Inputs \$21,356.00

Stand-Alone Version

Autoclock

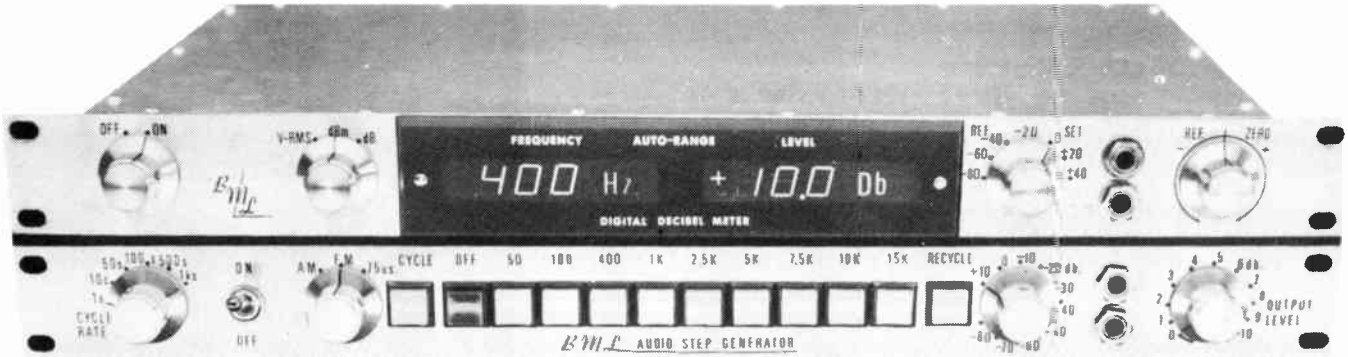

- **Time (HH MM SS):**
PM indicator, battery backed, top of the hour sync for maximum accuracy (WWV or Network)
- **Date (MM DD YY DOW):**
Automatic Leap Year Compensation, battery backed
- **Stopwatch (MM SS):**
0:00 to 99:59, functions include: Restart/Stop, Start/Continue, Reset
- **Count-Down (SS):**
Adjustable from 1 to 32 seconds for fixed count-down timings
- **Temperature (F/C):**
External probe, High of Day and Low of Day plus Time occurred
- **Autoclock:**
Syncs any number of Autoclock units for same Time/Date/ Temperature displays (Stopwatch and Count-Down controlled locally)

Autoclock

Console-Mounted Version 100C \$359.00
Stand-Alone Version 100D \$359.00

BALD MOUNTAIN LAB

Decibel Meter/Audio and EBS Generators

1760FM

BML 575A

781F Decibel Meter With Frequency Readout

- Auto-Ranging ≈ -90dBm to +40dBm
- dB Reference adjustable throughout above range
- Input—600 ohms balanced—floating
- Reference adjustment for dB measurement
- Fixed reference for dBm measurement
- Three place readout with sign
- Input by front panel jack or rear terminal strip

With the dedicated rackmountable instrument it is now possible to resolve either level differences, or absolute levels in 600 ohm audio circuits to one-tenth of a decibel.

Used as a companion unit to the 1760FM Audio Step Generator this instrument is useful in making audio equipment and line checks in broadcast and recording facilities.

781F (To be used as companion to the 1760 FM Audio Step Generator) **\$ 1795.00**

1760 FM Audio Step Generator

- Frequencies can be sequentially stepped one time, or repeatedly, making possible one man line checks. Stepping rates from one second to 1000 seconds are available
- Easier to use than sweep, because the frequency in use is always known at a remote location
- Very low distortion—difficult to obtain in sweep generators
- Frequencies cut off at 7.5kc for AM use
- Frequencies extend to 15kc for FM checks
- 75μsec roll off available for overall FM checks
- Continuously variable output attenuator
- Front panel output jack
- 1 3/4" Rackmount
- Output level + 20dBm in 600 ohms max.
- Frequency stability .01%
- Distortion < .05%
- Output impedance 600 or 150 ohms

An Audio Generator with nine precise crystal controlled frequencies instantly available. These frequencies correspond to those used in proof of performance measurements, and are pushbutton selectable.

1760FM **\$ 1795.00**

BML 575A Two Tone EBS Generator

- 1 3/4" Single unit rack height for minimum space
- Visual indication of tone presence by pressing test button. This test does not go on the air
- Complete isolation from audio line by way of a positive action reed relay when unit is in stand by
- Fail safe circuitry—digital or power supply failure cannot cause tone to be transmitted. Tone can only be transmitted by closing reed relay
- Designed for use in heavy RF fields such as found at transmitting sites
- Individual level control for each tone
- Positive abort will kill tone at any time
- Dual redundant encoders available

The 575A is designed to meet the exacting requirements of the two tone attention signal for the Emergency Broadcast System.

The regulations require tones of 853Hz and 960Hz to be transmitted for 20 to 25 seconds. The tones must be accurate to .5Hz and have distortion of less than 5%.

The tones in the 575A Generator are generated by digital division and filtering of two highly stable crystal oscillators. The 960Hz tone is further divided and gated to give an accurate 22.5 second timing interval.

Specifications

- Frequency Stability:** < 1Hz
- Output Impedance:** 600 ohms balanced or floating
- Output Level:** + 8 Maximum
- Distortion:** < 5%

Remote Control Requirements for Operate and Abort: Momentary contact

For Encoder and Decoder in Single 1 3/4" Rack Space:

BML575A **\$850.00**

BARCO INDUSTRIES, INC.

Color Monitors

CVS Series Broadcast Color Monitors

- Automatic set-up • Microprocessor based • Password protection
- American Standard Phosphor (ASP) • EBU Phosphor (optional) • Automatic Kinescope Biasing (AKB) • 2 Coded Video Inputs: loopthrough and floating • Quad decoder • RGBS input • Component video input (optional) • Internal test patterns • Notch filter/comb filter • Switchable color temperature • Front RGB switches • Simple or full remote
- Master remote for up to 48 monitors • Adjustable aperture correction • Presettable functions per input • Pulse cross
- Underscan/overscan • Safe area • Program display (optional)
- Rackmountable

Stable and matching pictures

Display controls such as contrast, brightness, saturation and hue are value-related. When set to identical values different monitors will display matching pictures.

AKB-circuitry maintains color temperature independent of tube-aging and ambient temperature.

Flexible set-up

Settings of display controls, display functions (INT/EXT sync, H&V delay, etc.) and decoder functions (mono, aperture etc.) can be memorized and recalled.

In calibrated position, pictures are displayed as recommended by the EBU and SMPTE.

In preset position, the settings of the display controls, display functions and decoder functions are user selected.

Flexible, easy color temperature alignment

While manual adjustment is provided for, three different standard color temperatures (6500°K, 3200°K, 9300°K) can be automatically aligned.

Flexible full modular design

CVS design reflects extreme modularity, independent boards exchange information over an analog and digital bus while a microprocessor controls all communications.

The standard monitor is equipped with an RGBS-input on the RGB-amplifier board and 2 coded inputs on the Quad-decoder board, thus leaving three slots empty. Here other options can be inserted at any time, while no hardware modifications are needed.

Flexible remote control facilities

As the CVS has full remote capabilities, Barco Industries developed a multi-monitor remote control. From this MMRC all settings of display controls, display functions and decoder functions can be accessed, for any or all CVS monitors of a production gallery.

Also, a handheld keyboard was designed to remotely control a single CVS monitor.

14" Monitors

- CVS/37/PS/Q CRT Pitch .62mm (330 TV lines) . . . \$4,650.00
- CVS/37/IH/Q/ASP CRT Pitch .31mm (680 TV lines) . . . \$5,920.00

20" Monitors

CVS Series

CTVM4/37

CTVM 4 Series Broadcast Precision Color Monitors

- ASP • EBU phosphor (optional) • AKB • RGBS input • Component video input (optional) • Internal test patterns • Notch filter/comb filter
- Front RGB switches • Decoded RGBS and B-Y and R-Y outputs
- Pulse cross • Underscan/overscan

Cathode Ray Tubes

Delta Gun Dot Mask CRT (D): If accurate monitoring at every stage, when keen observation for the slightest error in color picture reproduction is vital, the monitor must be equipped with a delta gun dot mask picture tube.

In-line Gun Dot Mask CRT (I): Combining the advantages of in-line CRT (no dynamic convergence adjustments) with the resolution of delta gun tubes, the high resolution dot in-line CRT accurately displays every detail.

In-line Gun Slot Mask CRT (P): In broadcast situations where color monitors are used for picture identification, a slightly lower standard of reproduction can be accepted and sometimes it may be advantageous to employ monitors fitted with in-line gun slot mask picture tube.

14" Monitors

- CTVM4/37/IH/N2/ASP In-line Dot Mask CRT

Monitors/Demodulators/Modulator

TVM 3/37 Master Control Monochrome Monitor

- Illuminant D phosphors (6500°K color temperature) • Switchable notch filter • Pulse cross and underscan • Front panel presets for brightness and contrast • Internal/external sync • Remote control • Modular design

The TVM 3/37 precision monochrome monitor is a measuring instrument for broadcast, industrial and educational applications where high quality, transparency and reliability are important. Derived from the CTVM master control monitors, the TVM 3/37 produces sharp, clear and stable pictures.

Applications

Any quality-oriented, monochrome application, such as program evaluation or viewing that does not require color information. The unit can also be used for camera and telecine alignment.

TVM 3/37 14" Monochrome Monitor	\$3650.00
RM/37 Rackmount for TVM 3295.00

VSD Series Television Demodulators

- High grade video and sound signals • Overall gain independent of picture content • Automatic Gain Control (AGC) eliminates the effects of variable field strength resulting from different input signals • Video and sound level meter • Relative indication of field strength on front panel meter • Excellent 2T and 20T pulse response • Modular, all solid-state design

VSD demodulators are used where high grade video and sound signals from a broadcast signal are needed. Three models are available: VSD1 Multi-channel, multi-standard; VSD2 Multi-channel single standard (VSD1 and VSD2 have five presettable channels); and the quartz-controlled VSD2/X single channel, single standard, which is available for any TV channel between 5 and 890MHz.

VSD 1000 BG/IF only	\$6850.00
VHF/IF Converter (47-225MHz)	1250.00
VHF/IF Converter (225-400MHz)	1250.00
UHF/IF Converter (400-900MHz)	1250.00
SPC/IF Converter (5-25MHz)	1650.00
Input Synthesizer	1625.00

Options

High stability quartz for the quartz controlled input converter . . \$110.00

Sound Trap Off (for measurements on the video output signal) \$1290.00

VSD 1 Multistandard, multi-channel TV demodulator with 5 presettable channels available in the following combinations: BGH, I, L, CF; BGH, DK, L, CF; BG, MN; BG, DK	\$2950.00
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------

VSD 1 Options

Input failure info outlet \$120.00

Combined VHF and UHF input 270.00

VSD 2 Single standard, multi-channel TV demodulator with 5 presettable channels available for all world systems: BG, DK, I, L, MN	\$3050.00
----------------------------------------------------------------------------------------------------------------------------------------------------	------------------

VSD 2 Options

Additional IF input \$ 70.00

Input failure info outlet 120.00

VSBM 1000

VSBM 1000 IF Only Television Modulator

- Available for MN, BG, DK, and I • Sound Modulator generates the aural carrier and modulation of the audio on this carrier • Video processor pre-corrects the input video signal for group delay. DC-level and white limiting • Vision modulator generates the IF video carrier and ensures modulation of the video signal on the carrier • VSB+ COMBS V/S realizes vestigial sideband filtering on the video IF signal (through SAW filtering) and combines both aural and vision IF to the IF output signal • IF to channel converters converts the IF outputs frequency of the modulator to a specified RF channel (between 5 and 900MHz)

VSBM 1000 IF	\$6490.00
IF/VHF converter (50dBmV)	1250.00
IF/VHF converter (60dBmV)	1580.00
IF/UHF converter (40dBmV)	1250.00
IF/SPC converter (40dBmV)	1650.00
SPC = 1 channel between 5 and 25MHz.	1650.00

VSBM Options

Auto Selector	Enables automatic selection between two video and audio input signals . . . \$ 370.00
Phase Lock Module	Locks RF output channel on an external reference 1060.00
Sound Coder BG	Encodes both R and L input audio signals according to the German dual carrier sound system. 1160.00
2nd Sound Carrier BG (33.16MHz)	Generates 2nd aural carrier for stereo sound 720.00
2nd Sound Carrier DK (32.16MHz)	Generates 2nd aural carrier for stereo sound 720.00
High Stability Quartz	Increases the stability from 20 ppm to 3 ppm. Applies to the IF frequency and the output RF channel 110.00
Vision Carrier PLL	Locks the IF oscillator on the incoming video signal 530.00
OCXO-Board (Oven Controlled Crystal Oscillator)	Improves IF output frequency stability to .15 ppm. 1750.00
Character Inserter	Adds up to 40 characters to the standby video input signal 1160.00
Sound Intercarrier Input	Takes sound on intercarrier frequency to the sound modulator. Input may be stereo or mono sound 1160.00

BARCO INDUSTRIES, INC.

Color Monitors

CM 22 9" Professional High Resolution Portable Color Monitor

- Two composite video inputs, looped through and floating
- One RGBS input plus RGB fast insert
- Automatic Kinescope Biasing (AKB) maintains color temperature and black level stability
- Comb filter, switchable to notch
- AC or DC operation (external 12V battery)
- Built-in audio amplifier, speaker and front panel headphone output
- Pulse cross and underscan/overscan
- Blue-only for tape noise evaluation and for monitor adjustment using SMPTE color bars
- Front panel pre-set controls for hue, brightness, chroma and contrast
- Internal/external sync (fast or slow)
- Remote control and tally light
- Modular design: all active and passive components on plug-in boards
- RG off

CM 22 Applications

Television picture evaluation; preview of individual video sources; video/data combinations; systems for combined video and graphics display; background and character generators; and editing suites. The CM 22 is also ideal for ENG, EFP and other outside applications where high resolution and color temperature stability must be combined with compact size and portability.

CM 22 CRT pitch .30mm (420 TV lines) \$3050.00

CM 22 Options

Rackmount tray for mounting of two CM 22s in a 19" rack **\$220.00**

CVM Series Professional Color Monitors

- PAL (notch) or NTSC (comb) decoder
- Input configuration; 3 coded inputs or 2 coded inputs and 1 external sync input (loop through and floating)
- Fast/slow sync time constant
- RGB switches/blue only
- Size (underscan/overscan)
- H/V delay and pulse cross
- Aperture control
- Monochrome switch: Color—Monochrome filtered—monochrome full bandwidth
- Automatic manual degaussing
- Scan failure protection
- 2 tally lights
- Front panel control of geometry and colorimetry (protected)
- FS slot mask in-line gun CRT
- Supreme brightness
- Excellent screen uniformity
- Decreased reflection
- 15% more active screen area

CVM is a high quality monitor, available in two sizes: 14V and 20V. Like its big brother, CVS, it is fully micro-processor controlled. CVM is characterized especially by its excellent brightness, outstanding raster size stability and unmatched color temperature stability. It offers full broadcast features. In its price range it is the only monitor that combines so many advantages for the user.

CVM Series

CM 22

Excellent color temperature and raster size stability

The AKB-circuitry allows you to maintain color temperature independent of tube-aging and ambient temperature fluctuations. CVM features excellent raster size stability even under extreme brightness levels.

Fully modular design

With no active/passive components in the mainframe. Passive membrane control panel.

Affordable Intelligence

- Faster and more accurate picture matching. CVM has both a calibrated and preset control memory for all display parameters and control functions. Fast and easy control of monitor walls is the result.
- Full remote control. All display parameters and functions can be controlled remotely. You have the choice of two options: simple remote control for simultaneous control of up to 12 monitors, multi-monitor remote controller for up to 48 monitors, both CVS and CVM, which can be addressed individually, per group or in total
- Configuration flexibility. CVM has an option slot and is fully software driven. Consequently it gracefully accepts optional plug-in modules.

14" Monitor

CVM 37/FS/NTSC CRT pitch .55mm (500 TV lines, preliminary). **\$2930.00**

BARDWELL & MCALISTER, INC.

Lighting Equipment

Slimline II 2000W Tungsten-Halogen Light

Lightweight and portable, designed for broad fill applications. It is ideal for TV, motion picture, and still photography, and provides a flat, even pattern of light over a wide area.

Slimline II comes with 4-leaf barndoors and accepts a wide variety of accessories. Lamping options include a complete range of 120/240V lamps for AC or DC operation.

For Television Studios

With 4-way barndoors, 36" long 3-wire hi-temp silicone-rubber cable; no switch; yoke with 3-way mounting bracket for 5/8" dia. male stud.

- TV29001 With 20A grounded pin plug \$299.00
- TV29003 With 20A grounded twistlock plug. 299.00

For Motion Picture and Still Studios

With 4-way barndoors, 25' long 3-wire detachable Neoprene rubber cable; in-line switch; yoke with 3-way mounting bracket for 5/8" dia. male stud

- MP29000 With 20A grounded twistlock plug. \$299.00
- MP29002 With fused half stage plug. 316.95
- 29106 25' replacement cable neoprene rubber with plug. 89.95

Scrim (10" Stainless Steel)

- 29304 Single 10.00
- 29305 Double 12.00
- 29307 Extended accessory holder (for 12" gel frame and scrims) 44.75
- 49369 Gel and diffusion frame 12" 23.75

Scrim - 12"

- 49148 Single 11.50
- 49149 Half single 11.50
- 49150 Double 13.50
- 49151 Half Double 13.50
- 49104 "C"-clamp assembly - for hanging M.P., or TV Model. 21.75

Stands

- LS116 Heavy-duty alum. light stand, 4-section with 5/8" spud (45" folded, 156" extended). 96.50
- S200 Standard lightweight folding stand with casters (41" folded, 96" extended). 114.95
- S203 Standard heavy-duty folding stand with casters (40" folded, 92 1/2" extended). 154.95

Recommended Lamps, (AC/DC) Tungsten-Halogen "Quartz" Lamps

- Double Ended - 5 5/8" M.O.L., 3200°K, CL Type**
- 91040 (FEY) 120V 2000W 300 hrs. \$121.00
 - 91041 (FER) 120V 1000W 300 hrs. 80.00
 - 91043 (DWT) 120V 1000W 2000 hrs. 93.85

Mini-Mac 650 and Mini-Mac 1000

Tungsten-Halogen Broad Lights

The Mini-Mac 650 and Mini-Mac 1000 Tungsten-Halogen Broad Lights feature a rugged, compact design ideal for general lighting applications. Mini-Macs provide a wide range of lamping options in different wattages and produce an even pattern of light over a wide area. 4-leaf barndoors included.

The Mini-Set 1000 flood and set light is indispensable anywhere a wide wash of light is required. It is available with stand or C-clamp mounting and comes with 2-leaf barndoors. Full range of lamping options available.

Mini-Mac 650

For Motion Picture and Still Studios

- MP18011 With 4-way barndoors, 25' long 3-wire Neoprene rubber cable; In-line switch and parallel blade, U-ground plug; yoke with 3-way mounting bracket for 5/8" dia. male pin \$168.95

Softlights

2111H

2121H

CONVERTIBLE SOFTLIGHTS

Rugged frame constructed of lightweight high stress aircraft tubing. Convertible design with non-removable soft reflector facilitates instant set up and knock down of fixture. High performance soft reflector coated with easy to clean, ultra high temperature white reflecting surface that resists color temperature shifts associated with conventional painted softlights. Rotating light bar provides ultimate control of light intensity and direction. Lamp reflectors designed for maximum lamp cooling. Wiring operates inside ventilated heat sink channel. Switches removed from lamp housing for cooler operation. Complete line of accessories.

2111H 1000W Handy Light

21" 1000W convertible softlight for multiple purpose location or studio operation. Supplied with inline switched 12.5' power cord and choice of plug.

- **Size:** 21" x 18"
 - **Weight:** 11.5 lbs. with cable
 - **Rating:** 8.3A maximum at 1000W. 120/240VAC or DC operation
 - **Cable:** 12.5' 3 conductor #16 AWG SO power cord with choice of plug
 - **Switching:** Single inline switch
 - **Lamp:** Single Tungsten-Halogen lamp
- 2111H\$345.00

2121H 2000W Handy Light

21" 2000W convertible softlight for multiple purpose location or studio operation. Supplied with inline switched 12.5' power cord and choice of plug.

- **Size:** 21" x 18"
 - **Weight:** 11.5 lbs. with cable
 - **Rating:** 16.6A maximum at 2000W. 120/240VAC or DC operation
 - **Cable:** 12.5' 3 conductor #14 AWG SO power cord with choice of plug
 - **Switching:** Single inline switch
 - **Lamp:** Single Tungsten-Halogen lamp
- 2121H\$349.00

2111S 1000W

21" 1000W convertible softlight for multiple purpose location or studio operation. Supplied with inline switched 25' power cord and choice of plug. Includes rotating light bar feature.

B & B SYSTEMS, INC.

*Phase Monitors/Audio Meter Panels/
Signal Display*

AM-1B Phase Monitor

- CRT X/Y display with calibrated graticule for phase and studio operating level • SMPTE time code display of phase and genlock • CRT display of individual channel levels, with calibrated graticule for studio operating level • ANSI calibrated VU meters and peak meters for each channel • Self-contained in 3 EIA rack units • Magnetic shielding

Designed for Post Production—Real time monitoring of stereo audio phase, program average and peak levels, and SMPTE time code phase/genlock.

A quick glance by the operator gives a complete "picture" of the stereo audio signal. Audio level monitoring, both PPM Peak and VU and the CRT display allows you to easily avoid out-of-phase stereo signals and prevent peak audio distortion.

The AM-1B includes the B & B TC Monitor—a single pushbutton gives you an instant real time display of SMPTE time code for quick and easy verification of phase and genlock.

AM-1B \$2800.00

AM-1B

AM-2

AM-2 and AM-2B Phase Monitors

- CRT X/Y display with calibrated graticule for phase • ANSI calibrated VU meters and peak meters for each channel • Self-contained in 3 EIA rack units (AM-2), or 2 EIA rack units for the AM-2B • Magnetic and EMI/RF shielding

Designed for all stereo audio applications. Real time monitoring of stereo audio phase, program average and peak levels. The AM-2 is available as the compact AM-2B where space is at a premium.

AM-2 \$2100.00

AM-2B 1800.00

AM-2HR

AM-2HR Phase Monitor

- A cost effective and space efficient solution to the "real world" needs of today's broadcasters and post production facilities • Requires only one half of a standard side-by-side rack adaptor • Built-in audio power amplifier for headphones or speakers with rear balanced line outputs • Front panel selection of listening in stereo or L + R

AM-2HR \$995.00

AM-3B Phase Monitor

- For all stereo audio applications • Real time visual and audible monitoring of stereo phase, program VU levels, peak threshold levels, including L + R or AUX • Two sets of 3-channel inputs • Front panel volume control of balanced line outputs and internal audio amplifier driving headphones or speakers

AM-3B \$2100.00

AM-3B

MP-4 Audio Meter Panels

- Four independent input circuits • Precision buffered, balanced, active, bridging amplifiers • Any combination of VU or PPM styles available. 4VU, 4PPM, or 2VU and 2PPM are standard packages • VU meters meet ANSI 16.5-1954 specifications for accurate consistency • PPMs meet BBC or EBU specifications

A complete, cost-effective metering package, the MP-4 is four independent VU or PPM meters. The self-powered MP-4 has four rear panel XLR connectors tied to precision, active, buffered, balanced, bridging amplifiers. These amplifiers drive either VU or PPM illuminated meters, all contained in one 3 1/2" package. And, the MP-4 is available engraved to your specifications.

MP-4 \$995.00

MP-4

Imagescope™ IM-1 Audio Signal Display

- Mono compatibility • Stereo separation • Stereo balance • Stereo image/perspective • Image levels • Not an "X/Y" display

For all stereo audio applications. Real time monitoring of stereo audio phase, program average and peak levels.

The ideal tool for any television stereo production and post-production facility, film sound studio, stereo radio broadcaster, or recording studio. The Imagescope gives you a CRT display of the audio signal showing both left/right direction and level—in real time.

IM-1 \$1495.00

Imagescope

BCD-4000 Professional Video Controller

- One expansion slot
- Tape and disc
- Disc and disc
- Tape and tape
- Full function control variable speed
- Edit function select 2 VTR editor option
- RS-422 SMPTE protocol
- 2 VTR SMPTE code
 - Read and write
 - Non-drop frame
 - Drop frame
 - EBU 25 fps (optional)
- Vertical interval video switching
- 4 "GPI Triggers"

The BCD-4000 Professional Video Controller for slot-compatible IBM PC type computers controls virtually all industrial and broadcast video tape and disc machines as well as many other video devices.

The controller can simultaneously control a pair of Industrial or Broadcast video tape or video disc machines with full variable speed, and function select. RS-232 and RS-422 SMPTE protocols are available for 1", Betacam, M-II and other sophisticated devices. The unit can be equipped with a built-in 2-machine editor.

The main CPU board occupies one expansion slot in the computer with no adaptors, making it suitable for advanced "AT" and 386 machines. The board is short enough to fit small computers.

For Interactive Video Systems, the controller responds to the same command protocol as BCD's VIPc with the added capability of interrupting the host computer on the user's choice of interrupt lines.

For video editing and animation support, the unit may be equipped to read and write SMPTE Time Code: Drop Frame, Non-Drop Frame, or 25 fps EBU Time Code.

The optional internal video editor can control any two appropriate video tape or disc machines for straight-cuts editing. BCD's EDL-4000 Edit Decision List Management system takes full advantage of all the features.

The unit is currently at home in production, post-production and video animation environments.

Provides a basic accuracy of better than one second per year; includes 1AH reserve battery backup. Provides expansion capabilities including ability to synchronize to external signal. Modular Design. \$5,825.00

2QMS-2 Dual Master Clock

Automatic changeover to second timebase upon demise of first. Includes all features of QMS-1 plus second isolated LS Driver Module and heavy-duty 9.5AH reserve battery backup. \$17,015.00

BELAR ELECTRONICS LABORATORY, INC.

**FM Modulation Monitors/
RF Amplifier**

FMM-2 FM Modulation Monitor

- Ultra-linear digital discriminator
- Digitally selectable peak indicator, adjustable in 1% increments from 1 to 199%, independent of modulation polarity
- Built-in voltmeter for AM and FM noise measurements
- Carrier alarm with front panel indicator
- Two wideband outputs
- True peak or semi-peak metering
- Separate fixed 100% modulation indicator
- High visibility rear-illuminated meter

The FMM-2 FM Modulation Monitor is a precision wideband, all solid-state FM monitor, designed to measure the total modulation characteristics of monaural as well as multiplexed FM transmitters. The FMM-2 is also used as a low distortion and low noise FM demodulator to drive the companion stereo and SCA monitors, as well as providing audio outputs for aural monitoring and proof of performance measurements.

The FMM-2, which utilizes such advanced design features as an ultra-linear digital discriminator, an almost distortionless and absolutely flat baseband signal is produced to ensure precise stereo and SCA decoding.

In addition to the normal FCC defined semi-peak metering, the FMM-2 incorporates a sample-hold peak modulation meter circuit, independent of modulation polarity, to allow the meter to respond accurately to program peaks.

FMM-2 **\$1450.00**

FMM-2

FMS-2

FMS-2 FM Stereo Modulation Monitor

- Two independent semi-peak modulation meters for simultaneous monitoring of left and right channels
- Front panel switchable deemphasis for noise measurements
- Pilot alarm with front panel indicator
- Outputs for audio proof-of-performance measurements
- Two auto-ranging voltmeters with LED displays for 0 to -80dB range measurements
- Stereo separation measurement capability of over 70dB at 15kHz
- High visibility rear-illuminated meters

The FMS-2 Stereo Modulation Monitor is an all solid-state precision stereo monitor designed to operate in conjunction with the Belar model FMM-2 baseband modulation monitor. The FMS-2 is also used for test functions in conjunction with the FMM-2 to ensure the proper performance of FM stereo transmitters. The test and measurement capability of the FMS-2 is further enhanced by the integration of two independent auto-ranging voltmeters allowing automatic measurement of channel separation and crosstalk, along with subcarrier suppression and noise. For example, depressing the left and right channel buttons automatically registers the wanted and unwanted channel for instant separation measurements. A front panel hold button can be used to lock the autorange to the displayed range.

FMS-2 **\$1650.00**

SCM-1

SCM-1 SCA Frequency and Modulation Monitor

The SCM-1 SCA Frequency and Modulation Monitor, when added to the FMM-2 Modulation Monitor, provides complete monitoring and test functions for SCA storecasting, data transmission and remote telemetering applications. Up to four crystal switch positions allow four channels to be operated and tested.

Features include three deviation ranges for optimum operation of a particular subcarrier. Narrow deviation (2kHz deviation) is for remote telemetering applications and selective call systems. Normal operation (6kHz deviation) is for storecasting and other background programming applications; 4kHz deviation is for simultaneous stereo operation. The discriminator is wideband for minimum distortion. Maximum versatility is thus provided for future applications as well as present needs.

The SCM-1 features unlimited SCA frequency selection by incorporating interchangeable crystals into its unique design. Select the one to

four frequencies best suited to your application. Plug in the appropriate crystals. Monitor four channels by means of pushbutton selection. To test other frequencies or to change frequencies, merely plug in new crystals. The separate SCA peak flasher is independent of SCA modulation polarity. The front panel pushbutton modulation calibrator allows the calibration accuracy to be checked at any time.

SCM-1 **\$1695.00**

RFA-1 FM RF Amplifier

The RFA-1 FM RF Amplifier is a sensitive, high gain, all solid-state preamplifier designed for off-air monitoring of both monaural and multiplexed FM transmitters.

The RFA-1 amplifies the signal to a level suitable for the input requirements of Belar FM modulation monitors. The RFA-1 utilizes an IF bandwidth of 400kHz to assure low distortion of a multiplexed signal, while IF selectivity is such that an adjacent channel, 800kHz removed, is attenuated 50dB. The dynamic range of the amplifier is such that no adjustments are necessary over an input range of 100µV to 0.5V.

RFA-1 **\$575.00**

BELAR ELECTRONICS LABORATORY, INC.

AM/TV Modulation Monitors

AMM-2B AM Modulation Monitor

The AMM-2B Modulation Monitor is an all solid-state AM demodulator designed to measure the total modulation characteristics of AM Broadcast Transmitters. Since the input circuitry is non-frequency discriminating, the AMM-2B is suitable for measuring shortwave and VHF transmitter modulation. Metering provisions allow direct measurement of carrier level deviation and modulation. An adjustable peak modulation flasher is provided along with fixed 125% peak positive and 99% peak negative indicators. A modulation calibrator is also provided as well as a carrier level alarm. The AMM-2B is a direct replacement for the Model AMM-2A.

AMM-2B \$1195.00

AMM-3 AM Modulation Monitor

The AMM-3 Modulation Monitor is a precision, all solid-state AM demodulator designed to measure AM Transmitter Modulation characteristics over a frequency range of 200kHz to 160MHz. Utilizing true ratio-type peak indicators and unique modulation cancellation circuitry, modulation peaks are referenced to unmodulated carrier for extremely accurate program peak indication. Two meters are provided for simultaneous positive and negative modulation, along with individual thumbwheel programmable peak flashers. Fixed 125% peak positive and 100% peak negative indicators are also provided. Metering of carrier level as well as AM noise is provided, as well as a built-in modulation calibrator and remote outputs for all indicators.

AMM-3 \$1450.00

AMM-4 Frequency Monitor

The AMM-4 AM Frequency Monitor is a digital frequency deviation monitor designed for use in the 10kHz to 50MHz frequency range. An LED readout displays a range ± 1999 Hz deviation from the assigned channel. Front panel indicators warn of low RF level, loss of carrier and ± 10 Hz/ ± 20 Hz off frequency conditions. Logic outputs duplicate all front panel indicators, and an optional relay circuit assembly is available for ease of interface for ATS and alarm requirements.

AMM-4 \$1095.00

RFA-2 AM RF Amplifier

The RFA-2 AM RF Amplifier is a sensitive solid-state unit designed to provide the required signal level for Belar AM Modulation and Frequency Monitors when the monitors are located remotely from the transmitter site. The RFA-2 requires a suitable antenna such as a whip or loop. (The Belar LP-1 Loop Antenna is recommended). The outstanding feature of the RFA-2 is the AGC range—more than 30dB—which allows proper operation of the monitors when transmitter power or antenna patterns are changed.

TVM-1 TV Modulation Monitor

TVM-1 Television Modulation Monitor is a wideband, all solid-state TV monitor designed for measuring the monophonic aural carrier modulation characteristics of TV transmitters in the 54 to 890MHz frequency

TVM
220

AMM-2B TVM
210

range. The TVM-1 is also a low distortion, low noise FM demodulator for driving audio monitor amplifiers and SCA monitors. Metering and testing provisions include a peak reading total modulation meter, an adjustable peak modulation indicator, and a deviation type modulation calibrator. Outputs include an aural output for monitoring, distortion meter test point, and a wide band output for driving an SCA monitor.

TVM-1 \$2295.00

TVM-2A & TVM-3A TV Frequency Monitors

Models TVM-2A (VHF) and TVM-3A (UHF) are digital TV frequency monitors designed expressly to measure TV visual carrier and aural carrier or aural intercarrier deviations. Since the units incorporate true frequency counter circuits that are multiplexed between aural and visual carriers, the aural and visual carrier frequencies may be measured independently. The monitors also incorporate inhibited off frequency alarm drivers. The input to the monitors may be from either a composite visual-aural signal or the output of a Belar RFA-3 RF Amplifier.

TVM-2A \$2595.00

TVM-3A 2795.00

TVM-100 TV Modulation Monitor (Mono-Stereo Compatible)

TVM-100 Television Aural Modulation Monitor is a precision wide band monitor designed to measure the total modulation characteristics of mono as well as multi-channel television audio. Utilizing split sound and quasi-parallel detection modes, automatic deviation calibrators for 25kHz (mono) and 73kHz (BTSC Stereo) and a digital display for indication of actual deviation, the TVM-100 satisfies all requirements for mono and stereo baseband monitoring and test.

TVM-100 \$2995.00

TVM-200 BTSC Stereo TV Modulation Monitor

The TVM-200 TV Stereo Modulation Monitor System consists of two separate units: the TVM-210 BTSC Reference Monitor and the TVM-220 BTSC Program Monitor.

The TVM-210 is designed to operate in conjunction with the Belar TVM-100 TV Aural Monitor or other precision wide band demodulators. The TVM-210 may be used separately from the TVM-220 for the setup, test, and measurement of BTSC Stereo TV Transmission Systems, as well as providing accurately decoded left and right channel audio outputs. Two auto-ranging voltmeters allow easy measurement of total modulation, channel separation, signal-to-noise ratio, L + R modulation, L-R modulation, pilot level and 2H rejection level, along with decoded left and right audio levels. A professional dbx decoder card is used to assure optimum stereo separation.

The TVM-220, as used with the TVM-210, provides full time monitoring of L+R and composite signal modulation levels. Both functions include digitally selectable peak indicators along with fixed 100% peak modulation indicators. An exclusive microprocessor programmed Peaks-of-Frequent Recurrence mode allows extremely accurate (no overshoot) indications of pre-selected L + R and composite modulation peaks occurring within a moving one minute window.

BELDEN WIRE AND CABLE

Microphone Cables

Microphone Cables

Belden microphone cables are designed for flexibility, service and reliable signal transmission at audio frequencies. They are not only used for microphones, but also for home entertainment equipment, musical instruments, tape recorders, and shielded power supplies.

Shielded single conductor cables are used in high impedance systems, while multiple-conductor cables are generally used in low impedance applications.

All cables are precision engineered to transmit clear signals, while cancelling out hum and cross-talk interference. They're especially designed to withstand the flexing and normal abuse of studio, laboratory and home usage.

Plastic Cables Recommended for: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller diameter.
 Rubber Cables Recommended for: Greater abrasion and impact resistance and extra limpness so cable will lie flat on stage or studio floor.
 Neoprene and Hypalon Cables recommended for: Outside use, cold weather applications. Resistant to effects of sun, oil and ozone.

Rubber, Hypalon® or Neoprene Jacketed

Product Description: Bare copper, polyethylene insulated, conductors cabled, tinned-copper braid shield (96% coverage), matte PVC jackets in brown, red, green, orange, yellow, blue, violet, gray, white, ivory, chocolate brown, translucent and black — In actual use, it is a two conductor cable — the blue conductors are joined to form one conductor and similarly the two white conductors combine to form the second conductor. Conductors joined in this manner lower the possibility of induced noise.

BELDEN WIRE AND CABLE

Video Cable

75 ohm Precision Video Cables

The 9231 is a precision 75 ohm Video cable manufactured with rigid control of concentricity and all dimensional tolerances offering superior return loss characteristics, a quality Video transmission cable which provides exceptional picture definition and eliminates problems resulting from periodicity. It has a non-contaminating PVC jacket for more flexibility. The double braid 8281 75 ohm Video cable is made to tight tolerances for excellent return loss performance. Our 8279

miniature 75 ohm Video cable is for applications where space is critical. The gray PVC and black polyethylene jackets are made of non-contaminating, non-migratory compounds.

Typical Application: Video signal transmission in Color and Monochrome TV studios.
100% Sweep Tested.

BENCHER, INC.

Camera Stands

M3 Camera Stand - Table Model

Consists of • 4' M3 column • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 baseboard • M3 column/baseboard support base

430-02\$675.00

M3 Camera Stand - Table Model

Consists of • 5' M3 column • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 baseboard • M3 column/baseboard support base

430-04\$700.00

M3 Camera Stand - Wall Model

Consists of • 4' M3 column • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 wall mounting brackets

430-06\$575.00

M3 Camera Stand - Wall Mount - EX

Consists of • 5' M3 column • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 wall mounting brackets

430-08\$600.00

M3 Column & Carriage Only

Consists of • 4' M3 column • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly

430-80\$550.00

M3 Column & Carriage - EX

Consists of • 5' M3 column • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly

430-81\$575.00

M3 Quartz Camera Stand - Bench

Consists of • M3 column (4 1/2' net, 6' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 baseboard • Sidelight arms, pair • Sidelight arm braces, pair • Dual quartz copy lights, pair • Copy light control • Camera stand bench

430-15\$1650.00

M3 Quartz Camera Stand - Pedestal

Consists of • M3 column (4 1/2' net, 7' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 baseboard • Sidelight arms, pair • Sidelight arm braces, pair • Dual quartz copy lights, pair • Copy light control • Camera stand pedestal

430-16\$1825.00

M3 Strobe Camera Stand - Bench

Consists of • M3 column (4 1/2' net, 6' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 baseboard • Sidelight arms, pair • Sidelight arm braces, pair • Dual strobe copy lights with power supply • Camera stand bench

430-17\$2350.00

M3 Strobe Camera Stand - Pedestal

Consists of • M3 column (4 1/2' net, 7' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 baseboard • Sidelight arms, pair • Sidelight arm braces, pair • Dual strobe copy lights with power supply • Camera stand pedestal

430-18\$2500.00

M3 Quartz Illuma Stand - Bench

Consists of • M3 column (4 1/2' net, 6' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 illuma baseboard • 14 x 17" opal plexiglass • 14 x 17" clear glass • Quartz base illuminator assembly • Sidelight arms, pair • Sidelight arm braces, pair • Dual quartz copy lights, pair • Dual function copy light control • Camera stand bench

430-20\$2000.00

M3 Quartz Illuma Stand - Pedestal

Consists of • M3 column (4 1/2' net, 7' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 illuma baseboard • 14 x 17" opal plexiglass • 14 x 17" clear glass • Quartz base illuminator assembly • Sidelight arms, pair • Sidelight arm braces, pair • Dual quartz copy lights, pair • Dual function copy light control • Camera stand pedestal

430-21\$2150.00

M3 Strobe Illuma Stand - Bench

Consists of • M3 column (4 1/2' net, 6' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 illuma baseboard • 14 x 17" opal plexiglass • 14 x 17" clear glass • Strobe base illuminator assembly • Sidelight arms, pair • Sidelight arm braces, pair • Dual strobe copy lights with power supply • Camera stand bench

430-22\$2700.00

M3 Strobe Illuma Stand - Pedestal

Consists of • M3 column (4 1/2' net, 7' overall) • Auxiliary dual counterbalance springs • Column scale • M3 camera carriage assembly • M3 illuma baseboard • 14 x 17" opal plexiglass • 14 x 17" clear glass • Strobe base illuminator assembly • Sidelight arms, pair • Sidelight arm braces, pair • Dual strobe copy lights with power supply • Camera stand pedestal

430-23\$2825.00

M3 remote control motor drive options are availablePOR

BENCHMARK MEDIA SYSTEMS, INC.

Audio Distribution/ Amplification Equipment

System 1000 Modular Audio Distribution and Processing Package

- Direct connection of audio to the card edge connector via Amp Module connectors gives very high density. The wire wrap connector grid is now an audio patch panel. Amplifier systems may be reconfigured quickly at any time
- Signal wire drain is the center of a 3-pin, in-line housing, making polarity inversion a simple matter of inverting the connector
- Signal inputs may be series connected, outputs may be added with no fear of inadvertently shorting connector pins already in use
- Miniature audio cable—available as pigtails

- B-1000** (12-Card frame) \$550.00
- B-1000P** (9-Card frame with internal power supply) 995.00

System 1000 Modules

DA-101 Audio Interface Distribution Amplifier

- Mono audio interface with dual inputs • L, R, L+R, L-R or timecode distribution
- Variable gain, off to +20dB, or fixed unity
- 1kHz THD=0.0010%, 20kHz THD=0.0035%
- Output noise=-96dBu, S/N=100dB
- CMRR: 100dB to 1kHz, 80dB at 20kHz
- Max. in/out = +27dBu, dynamic range= 123dB
- Ten 60 ohm balanced plus two direct outs
- 40W at 8 ohms will drive up to 100 DA outputs
- Metering: 12 segment LED plus peak O/L indicator
- Compatible with all system 1000 daughter boards

- DA-101** \$297.00

DA-102 Stereo Distribution Amplifier

- Universal audio interface for stereo distribution
- Gain: variable, off to +20dB, or fixed unity
- 150kHz bandwidth
- 2kHz THD=0.0008%, 20kHz THD=0.0025%
- Output noise= -104dBu, S/N=108dB
- CMRR: 100dB at 2kHz, 80dB at 20kHz
- Crosstalk: 100dB at 2kHz, 80dB at 20kHz
- Max. in/out = +27dBu, dynamic range= 131dB
- Five 60 ohm balanced plus direct outs per channel
- Compatible with all system 1000 daughter boards

- DA-102** \$401.00

MDA-101 Microphone

Preamplifier Distribution Amplifier

- Six 60 ohm outputs
- Gain, variable from +12dB to +70dB
- Noise figure of less than 1dB i.e. with a gain of 40dB, noise out is -90dBV
- Differential bandwidth is 200kHz hence very low phase shift at 20kHz and extremely fine transient response
- A common mode choke—L/C filter virtually excludes RF from ever reaching the input of the preamp.
- -3dB at 26kHz, -60dB at 1MHz
- Provision for accessory daughter boards. i.e. remote gain control, a safety limiter, patch out and in for external processing

- MDA-101** \$325.00

DIA-1 and DIA-2 Differential Input Amplifiers

- Differential input eliminates ground loops
- THD = 0.0012% at 2kHz, 0.0025% at 20kHz typ.
- 102dB avg. & 118dB peak S/N ratio typ.
- 13V/μsec slew rate = TIM free operation
- FET op-amp, ferrite beads = no RF problems
- Bridging 100K differential input impedance
- Ruler flat response past 100kHz
- Derives power from host equipment
- Zener regulation allows wide supply range

DOA-1 and DOA-2 Amplifiers Line Level Input

- Balanced outputs
- Variable gain, -infinity to +26dB
- Ultra low distortion, 0.0009% at 2kHz and 0.0016% at 20kHz typical
- High slew rate, 18V/μsec typ.
- Ultra low noise, -92dBV out at A = +14dB at A = 0dB, -99dBV out typ.
- Ruler flat response past 100kHz
- 10K ohm input impedance minimum
- Low output impedance, 60 ohms balanced. (Drives long lines)

System 1000

Daughter Boards

Daughter Boards

RGC-02

- 2 channel remote gain control
- Stereo, mono, left/right distribution
- Logic level switching will computer interface

- RGC-02** \$215.00

MTX-02

- Stereo, mono, left/right, matrix distribution
- Encode and decode matrix from discrete stereo
- Channel reversal in discrete stereo mode
- Remote polarity reversal in all modes
- Logic level switching will computer interface

- MTX-02** \$215.00

OSC-01

- Ultra low distortion oscillator (0.001% THD)
- Use for level and THD spot checks
- Remote select normal DA input or oscillator
- External test signal input
- Logic level switching will computer interface

- OSC-01** \$145.00

EQ-02

- Dual 3 band "Semi-Parametric" EQ
- Variable cut/boost to 15dB
- Low band: variable frequency shelving filter
- Mid band: variable frequency "presence" EQ
- High band: variable slope 7kHz shelving filter
- Balanced insertion can be used as third input

- EQ-02** \$145.00

DIA-1, DIA-2, DOA-1 and DOA-2

	1-11	12 +
With XLR Connector	\$55.00	\$49.50
With 1/4" Connector	50.00	45.00
Without Connector	48.00	43.20

RPM-1 Remote Program Meter Card

- Peak or VU mode operation on VU meter
- Peak hold, to "catch" the highest peak over a given time interval
- System reference levels of 0, +4, or +8dBV (VU to Peak differential = +8cB)
- IEC time constants for the peak mode
- Peak overload indicator, may be mounted in the meter, +12 to +26dBV range
- Modes are locally and gang switchable
- Illuminated indicators of meter modes
- 100K ohm bridging differential input

	1-11	12 +
RPM-1	\$160.00	\$144.00

BEYER DYNAMIC, INC.

Studio Condenser Microphones/Microphone Systems

**MCM System Series
Studio Condenser Microphones**

Each unit contains both the powering module, which forms the body of the microphone, and an interchangeable microphone capsule. By changing the capsules on a matching power module, the user can create different microphones for a variety of applications. In addition, all components are available separately to insure individual adaption of the microphone to the relevant recording situation.

MCM Series Condenser Microphone Capsules

CK701 Omnidirectional Condenser Microphone Capsule • The high frequency emphasis of the free-field voltage response compensates for the attenuation of high frequencies occurring in the reverberant sound field • Can be used where no feedback can occur and a constant recording sensitivity is required all around • Frequency response: 40-20,000Hz \$255.00

CK702 Omnidirectional Condenser Microphone Capsule • Similar to CK701 but with elastic cartridge suspension of capsule system • Built-in protective wind and pop filter • It is therefore particularly insensitive to mechanical vibrations and wind and pop noises • Frequency response: 40-20,000Hz \$315.00

CK703 Cardioid Condenser Microphone Capsule • Very low feedback • Flat frequency response throughout the entire transmission range with a slight rise at the high end • As a directional microphone it permits excellent recording results even in acoustically unfavorable surroundings, as in the case of acoustic reverberation tending towards feedback and where disturbing ambient noise is present • Frequency response: 40-20,000Hz \$315.00

CK704 Cardioid Condenser Microphone Capsule • Similar to CK703, but with elastic cartridge suspension of capsule system • Built-in protective wind and pop filter • Ideal as a microphone for soloists, as it is particularly insensitive to handheld noise and popping • Frequency response: 40-20,000Hz \$330.00

CK706 Cardioid-lobe, "Short Shotgun" Condenser Microphone Capsule • 16.4cm in length • The CK706 is a combination of pressure gradient and interference tube • Its pick-up characteristic corresponds at low frequencies to that of a cardioid • At frequencies above 2kHz it changes into a lobe form • Permits high quality sound pick-up even under difficult conditions such as severe surrounding noise and room reverberation • Particularly suitable for soloists' recordings and for reporting • An additional protective windscreen is recommended for outdoor recording • Built-in protection from pop and breath noise • Frequency response: 40-20,000Hz \$540.00

CK707 Lobe, "Long Shotgun" Condenser Microphone Capsule • 43.4cm in length • The combination of interference tube and gradient principle results in a lobe form pick-up characteristic • Extremely high directivity factor • When recording outdoors or in the case of rapid swiveling movements of the microphone a windscreen is recommended • Frequency response: 40-20,000Hz \$650.00

CK708 Figure-Eight Condenser Microphone Capsule • High performance condenser microphone with a frequency independent, directional pick-up • Elastic suspension of the capsule system • The perfect microphone for difficult recording situations in studios \$600.00

Note: All condenser microphone capsules must be used with one of the powering modules from the MCM Series.

MCM Series Powering Modules

CV710P48 • Pre-amp powering module for the MCM Series • Permits use of any 48V phantom power • Built-in 10dB attenuation pad • Bass roll-off switch \$290.00

CV720PV • Pre-amp powering module for the MCM Series • Permits use of any 8-52V phantom power • Built-in 10dB attenuation pad • Bass roll-off switch \$340.00

CV750 • Pre-amp powering module for the MCM Series • Permits remote use of any capsule from the pre-amp powering module when used with the AV750 adaptor and MVK750 cable • Built-in 10dB attenuation pad • "Foot-fall" filter • Bass roll-off switch \$390.00

Note: All powering modules must be used with the MCM Series microphone capsules.

MCM Series Complete Microphone Systems

MC711	CK701 capsule plus CV710 pre-amp powering module	\$535.00
MC712	CK702 capsule plus CV710 pre-amp powering module	595.00
MC713	CK703 capsule plus CV710 pre-amp powering module	595.00
MC714	CK704 capsule plus CV710 pre-amp powering module	610.00
MC716	CK706 capsule plus CV710 pre-amp powering module	820.00
MC717	CK707 capsule plus CV710 pre-amp powering module	930.00

MC727	CK707 capsule plus CV720 pre-amp powering module	980.00
MC728	CK708 capsule plus CV720 pre-amp powering module	930.00

BEYER DYNAMIC, INC.**Studio Condenser Microphones/
Accessories****Studio Condenser Microphones**

MCE80 Condenser, unidirectional, vocal microphone with supercardioid polar pattern • Operable by 4.5V battery (supplied) or any 12-48V phantom power • Features on-off switch • Battery condition LED and built-in 'foot-fall' filter • The battery is automatically switched off when the mike is being fed by phantom power \$459.00

MCE81 Studio quality unidirectional condenser microphone with cardioid polar pattern • Internal shockmount reduces handling noise and vibration • Wide range frequency response • Multistage™ pop filter • Weight balanced • Slim profile \$299.00

MCE86 Shot Shotgun Microphone with condenser element and hypercardioid polar pattern • Designed for broadcast professionals who require a lightweight, high quality shotgun microphone • 95 grams • Frequency response is 50Hz-18kHz • Can be phantom powered generations 12-48V • Can be used in studio, on location for camera mount • Fishpole boom or handheld applications POR

MC734P48 Condenser, unidirectional, vocal microphone with cardioid polar pattern • Designed for handheld use in studio or on-stage • Features 3 position bass roll-off and built-in 'foot-fall' filters • Requires any 48V phantom power • Matte-nickel finish \$785.00

MC734PA Condenser, unidirectional, vocal microphone with cardioid polar pattern • Designed specifically for 'live' stage use • Features same as MC734P48 except the MC734PA can attain a 6dB higher audio level • Matte-black finish \$800.00

MC736P48 Condenser, cardioid-lobe, 'short shotgun' microphone • Features 12dB gain attenuation pad and bass roll-off switch • High signal-to-noise ratio and high sound pressure level capability • Requires 48V phantom power \$900.00

MC736PV Condenser, cardioid-lobe 'short shotgun' microphone • Features 12dB attenuation pad and bass roll-off switch • High signal-to-noise ratio and high sound pressure level capability • Requires 12-48V phantom power \$875.00

MC737P48 Condenser, lobe, 'long shotgun' microphone • Features 12dB attenuation pad and bass roll-off switch • High signal-to-noise ratio and high sound pressure level capability • Requires 48V phantom power \$950.00

MC737PV Condenser, lobe, 'long shotgun' microphone • Features 12dB attenuation pad and bass roll-off switch • High signal-to-noise ratio and high sound pressure level capability • Requires 12-48V phantom power \$950.00

MC740N(C) Studio quality, large diaphragm condenser microphone • Features 5 selectable polar patterns • Cardioid • Wide-cardioid • Hypercardioid • Omnidirectional and figure-eight • Includes 10dB attenuation pad and 2 position bass roll-off switch • Requires 48V phantom power \$1325.00

MC740N(C/5) Same as the MC740N(C) terminating in a special 5 pin XLR connector • Designed to interface with the MSG740 48V phantom power supply • The MSG740 will also permit remote selection of the 5 polar patterns \$1400.00

Power Supplies for Condenser Microphones

MSB9N(C) Battery power supply 9V for condenser microphone when using the CV720PV pre-amp powering module • Must be used with balanced inputs \$150.00

MSB9N(C).1 Same as the MSB9N(C) with • Built-in balancing transformer for unbalanced inputs \$165.00

MSB48N(C).1 Battery power supply (5 x 9V) for condenser microphones 48V phantom power • Built-in balancing transformer for unbalanced inputs • Battery condition LED and belt clip \$325.00

MSG248N(C) AC power supply providing 48V phantom power for up to 2 condenser microphones • Must be used with balanced inputs \$230.00

MSG248N(C).1 Same as the MSG248N(C) with • Built-in balancing transformer for unbalanced inputs \$260.00

MSG740N(C) AC power supply • Specifically for the MC740N(C/5) studio condenser microphone • Will supply 48V phantom power and remote polar pattern selection for up to 2 MC740N(C/5) microphones \$675.00

MC737PV

EA717

MC734

MC740

MCE81

Microphone Suspensions and Fishpole Booms

EA21 Elastic isolation suspension for microphones with 19-24mm shaft diameter • Nickel-plated finish \$150.00

EA21TV Same as the EA21 in matte-black finish \$150.00

EA25 Elastic isolation suspension for microphones with 23-27mm shaft diameter • Nickel-plated finish \$150.00

EA25TV Same as the EA25 in matte-black finish \$150.00

EA717MCM Elastic isolation suspension for the MC717 and MC727 'long shotgun' condenser microphones • Supplied with MZP767 'pistol-grip' handle or MZG1 stand/boom adaptor \$180.00

EA736MCM Rubber isolation suspension for the MC716, MC717, MC736P48 and MC736PV 'short shotgun' condenser microphones • Supplied with MZP767 'pistol-grip' handle or MZG1 stand/boom adaptor \$180.00

EA737 Rubber isolation suspension for the MC737P48 and MC737PV 'long shotgun' condenser microphones • Supplied with MZP767 'pistol-grip' handle or MZG1 stand/boom adaptor \$180.00

EA740 Elastic isolation suspension for the MC740N(C) studio condenser microphone \$150.00

MZA 716 Carbon fiber fishpole extends to 15' \$225.00

MZA 717 Lightweight aluminum fishpole. Adjustable 26" - 66" \$150.00

BEYER DYNAMIC, INC.

Electret Condenser Microphones

Acoustical Boundary Microphones

MPC40 Condenser "Half-Spherical" Polar Pattern Acoustic Boundary Microphone • 2 3/4" diameter • 5/8" high • Matte black • The power supply MES40VN(C) can supply battery power (9V) or act as pre-amp adaptor for any 48V phantom power • The CV750N(C) pre-amp can be used as an adaptor for any 48V phantom power. \$295.00

MPS40.1 • The MPC40 and MES40VN(C) power supply packaged together. \$550.00

MPS40.2 • The MPC40 and CV750N(C) pre-amp packaged together. . \$800.00

MPC50 • Same microphone found in the MPC40 mounted in an oak panel • 8 3/4" square • 5/8" high • Built-in pre-amplifier operable with 9V battery or any 12-48V phantom power • On/off switch and battery condition LED . . . \$700.00

MPC40 With Power Supply

Mini Clip-On Lavalier Condenser Microphones

MCE5 Condenser "Omnidirectional" Clip-On Lavalier Microphone • 7mm diameter • 23mm long • Matte black • Designed for use in TV and radio broadcasting and film and video production • Terminates in a 6-pin DIN connector to be used in conjunction with the MES5VN(C) power supply • Supplied with a 4' cable • WS5 windscreen and MKC5/1 tie-clip holder \$195.00

MCE5-3m • Same as the MCE5 • Supplied with 10' cable instead of 4' . . \$200.00

MCE5.1N(K) • Same as the MCE5 terminating in a 2-conductor 1/4" connector • The connector incorporates the power supply operable by a 5.6V battery (supplied) • Supplied with a 10' cable. \$295.00

MCE5.9 • Same as the MCE5 terminated open-ended for use with any wireless transmitter (with appropriate connector) • Supplied with a 10' cable . . \$180.00

MCE5.11N(C) • Same as the MCE5 terminated in 3-pin XLR connector • The connector incorporates the power supply operable by a 5.6V battery (supplied) or any 48V phantom power • Supplied with a 10' cable. \$375.00

MCE6 • Same as the MCE5 designed to handle high SPL up to 150dB for trumpet, saxophone and trombone sound reinforcement • When used with MTH5 horn suspension mount • Supplied with a 4' cable \$195.00

MCR6.1N(K) • Same as the MCE6 terminating in a 2-conductor 1/4" connector • The connector incorporates the power supply operable by a 5.6V battery (supplied) • Supplied with a 10' cable. \$295.00

MCE6.9 • Same as the MCE6 terminated open-ended for use with any wireless transmitter (with appropriate connector) • Supplied with a 10' cable . . \$180.00

MCE6.11N(C) • Same as the MCE6 terminated in a 3-pin XLR connector • The connector incorporates the power supply operable by a 5.6V battery (supplied) or any 48V phantom power • Supplied with a 10' cable. \$375.00

MCE10 Condenser "Hypercardioid" Clip-On Lavalier Microphone • 9mm diameter • 30mm long • Matte black • Designed for theater musicals • Live TV productions • Church installations • To be used when feedback problems exist from simultaneous sound sources • Terminated in a 6-pin DIN connector to be used in conjunction with the MES5VN(C) power supply • Supplied with a 4' cable and MKV5/1 tie-clip holder \$295.00

MCE10.1N(K) • Same as the MCE10 terminated in a 2-conductor 1/4" connector • The connector incorporates the power supply operable by a 5.6V battery (supplied) • Supplied with a 10' cable. \$395.00

MCE10.9 • Same as the MCE10 terminated open-ended for use with any wireless transmitter (with appropriate connector) • Supplied with a 10' cable . . \$250.00

MCE10.11N(C) • Same as the MCE10 terminating in a 3-pin XLR connector • The connector incorporates the power supply operable by a 5.6V battery (supplied) or any 48V phantom power • Supplied with a 10' cable. \$395.00

Power Supplies

MES5VN(C) Battery Operated Power Supply (9V) • For MCE5, MCE6 and MCE10 microphones • 6-pin DIN input and 3-pin XLR output • Can also be used as a pre-amp adaptor for any 48V phantom power. \$175.00

MES40VN(C) Battery Operated Power Supply (9V) • For the MPC40 • Mini 3-pin connector input and 3-pin XLR output • Can also be used as a pre-amp adaptor for any 48V phantom power \$250.00

MPC50

MCE5

MCE10

Accessories

- WS5** Black wiremesh windscreen for the MCE5 and MCE6 \$12.00
- ZWS5** Black polyurethane foam windscreen for the MCE5 and MCE6 \$4.00
- MKV5/1** Tie/lapel clip to hold one MCE5, MCE6 or MCE10 \$16.00
- MKV5/1D** Same as the MKV5/1 with a turnable mike clip for better microphone directionality \$40.00
- MKV5/2** Tie/lapel clip to hold two MCE5, MCE6 or MCE10 \$20.00
- MSV5/1** Stick pin to hold one MCE5, MCE6 or MCE10 \$10.00
- MSV5/2** Stick pin to hold two MCE5, MCE6 or MCE10 \$14.00
- MAG5** Acoustic guitar clip for MCE5, MCE6 or MCE10 \$26.00
- MGH5** Violin, viola or cello mount for MCE5, MCE6 or MCE10 \$45.00
- MFH5** Flute mount for MCE5, MCE6 or MCE10 \$60.00
- MTH5** Trumpet, saxophone or trombone suspension mount for MCE5, MCE6 or MCE10 \$45.00
- MHV5** Belt carrier-clip for the power supplies found on the MCE5.1N(K), MCE6.1N(K), MCE10.1N(K), MCE5.11N(C), MCE6.11N(C) and MCE10.11N(C). \$10.00
- ZHV5** Belt carrier-clip for the MES5VN(C) power supply \$7.00

BEYER DYNAMIC, INC.

Dynamic Microphones/Accessories

Studio and Instrumental Microphones

- M58 Omnidirectional moving coil dynamic microphone • Internal shock-mount • 40-20,000Hz \$199.00
- M69 Dynamic unidirectional studio microphone • Hypercardioid characteristic • 50-16,000Hz \$209.00
- M88 Dynamic unidirectional studio microphone • Hypercardioid characteristic • 30-20,000Hz 385.00
- M101 Dynamic studio microphone • Omnidirectional characteristic • 40-20,000Hz 230.00
- M130 Dynamic bi-directional studio microphone • Figure-eight characteristic • 40-18,000Hz • Double ribbon element 500.00
- M160 Dynamic unidirectional studio microphone • Hypercardioid characteristic • 40-18,000Hz • Double ribbon element 460.00
- M201 Dynamic unidirectional studio microphone • Hypercardioid characteristic • 40-18,000Hz 260.00
- M260 Dynamic unidirectional microphone • Hypercardioid characteristic • 50-18,000Hz • Ribbon element 270.00
- M260S Same as M260 • With lockable noise-free on/off switch . . 285.00
- M380 Dynamic directional microphone • Bi-directional characteristic • 15-20,000Hz • Figure-eight pick-up pattern 280.00
- M420 Dynamic unidirectional microphone • Hypercardioid characteristic • 100-12,000Hz 199.00
- M422 Dynamic unidirectional microphone • Supercardioid characteristic • 100-12,000Hz 135.00

Vocal and Instrumental Microphones

- M300 Dynamic unidirectional microphone • Cardioid characteristic • 50-15,000Hz \$179.00
- M300S Same as M300 • With lockable, noise-free on/off switch . . 189.00
- M400 (Soundstar MKII) Dynamic unidirectional microphone • Supercardioid pick-up pattern • 40-16,000Hz 225.00
- M400S Same as M400 • With lockable noise-free on/off switch . . 245.00
- M500 Dynamic unidirectional microphone • Hypercardioid characteristic • 40-18,000Hz 300.00
- M500S Same as M500 • With lockable noise-free on/off switch . . 320.00
- M600 (Soundstar MKII) Dynamic unidirectional microphone • Hypercardioid characteristic • 40-16,000Hz 335.00
- M600S Same as M600 • With lockable noise-free on/off switch . . 355.00
- M700 Dynamic unidirectional microphone • Hypercardioid polar pattern 275.00
- M700S Same as M700 • With lockable noise-free on/off switch . . 295.00

Dynamic PA and Sound Reinforcement Microphones

- M260.80 Dynamic unidirectional microphone • Hypercardioid characteristic • Similar to the M260 with built-in bass roll-off for high reverberation applications • 100-18,000Hz \$250.00
- M640 Dynamic unidirectional microphone • Cardioid characteristic • 100-12,000Hz 115.00
- M680S Same as M640 • With permanently attached gooseneck, 500mm long and 15mm diameter • On/off switch • Terminated in 3/8" female thread 200.00
- M682 Same as M640 permanently attached to 300mm long, 11mm diameter gooseneck • Without on/off switch • Terminated in 3/8" female thread 195.00
- M682N(C) Same as M682 • But gooseneck terminates with 3-pin male XLR connector on the bottom 200.00

Microphone Clamps

- MKV6 Clothespin type plastic clamp for cylindrical shafts with diameter from 19-32mm \$14.00
- MKV8 Swivel stand adaptor clamp for cylindrical and conical mike shafts with diameter from 22-32mm 15.00
- MKV9 Same as MKV8 but designed for 19-21mm shafts only 15.00

Cables

- MVK C-C/20 20' black Neutrik male XLR to black Neutrik female XLR \$20.00
- MVK C-C/25 Same as above but in 25' length 22.00
- MVK C-C/50 Same as above but in 50' length 30.00

Popscreens

- PS88 Open-cell polyurethane foam popscreen • Protects mike against explosive breath sounds • For M69 and M88 mikes • Dark gray color . . . \$16.00
- PS260 Same as above • For M260, M300 and M400 mikes 16.00
- PS500 Same as above • For M500 mike • Gray color 16.00
- PS500 Also available in yellow, red, green and blue 16.00
- PS600 Same as above • For M600 mike 16.00

Windscreens

- WS69 Open-cell polyurethane foam windscreen • Provides maximum wind noise suppression • Protects against mechanical shock for M69 and M88 mikes • Black color \$21.00
- WS69 Same as above • Available in red, blue, yellow and green . . . 24.00
- WS86 All metal wire mesh windscreen • Built-in elastic suspension for M69 and M88 195.00
- WS101 Same as WS69 • For M101 and M201 mikes • Black color . . 13.00
- WS101 Same as above • Available in red, blue, yellow and green . . 15.00
- WS260 Same as WS69 • For M130, M160 and M260 mikes • Black color 20.00
- WS260 Same as above • Available in red, blue, yellow and green . . 22.00

Carrying Case

- MZK5 Plastic vinyl carrying case for five microphones. \$50.00

BEYER DYNAMIC, INC.

Microphone Stands/Booms

- ST201/1 Adjustable floor stand** • From 36" - 63" with noiseless screw type locking device • 10" screw-in tubular legs • Chrome with matte black fittings \$56.00
- ST201/1 Black** Same as above in all matte black 56.00
- ST201A/1 Adjustable floor stand** • From 36 1/2" - 64" with noiseless screw type locking device • 13" heavy-duty screw-in tubular legs • Chrome with matte black fittings \$62.00
- ST201A/1 Black** Same as above in all matte black 62.00
- ST201/2 Adjustable floor stand** • From 35" - 63" with noiseless screw-in type locking device • 10" fold-away tubular legs • Chrome with matte black fittings \$54.00
- ST201/2 Black** Same as above in all matte black 54.00
- ST201A/2 Adjustable floor stand** • From 35" - 62 1/2" with noiseless screw type locking device • 13" heavy-duty fold-away tubular legs • Chrome with matte black fittings \$56.00
- ST201A/2 Black** Same as above in all matte black 56.00
- ST205A/1 Adjustable floor stand** • From 36" - 64 1/2" with noiseless screw type locking device • 13" fold-away legs • Chrome with matte black fittings \$48.00
- ST205A/1 Black** Same as above in all matte black 48.00
- ST210/1 Adjustable floor stand and boom** • Including the SCH211 boom • 36 1/2" - 64" stand adjustment with noiseless screw type locking device • 13" heavy-duty screw-in tubular legs • Chrome with matte black fittings \$86.00
- ST210/1 Black** Same as above in all matte black 86.00
- ST210/2 Adjustable floor stand and boom** • Including the SCH211 boom • 33 1/2" - 63" stand adjustment with noiseless screw type locking device • 13" heavy-duty fold-away tubular legs • Chrome with matte black fittings \$84.00
- ST210/2 Black** Same as above in all matte black 84.00
- ST220 Anti-shock adjustable floor stand** • From 35" - 62 1/2" with noiseless screw type locking device • 10" heavy-duty fold-away legs which incorporate a unique suspension that attenuates floor vibration • Chrome with gray metallic legs \$90.00
- ST234 Low profile adjustable floor stand** • From 14" - 24" that can be angled between 0-90° • Chrome stand with heavy-duty diecast matte black base \$72.00
- ST251 Adjustable floor stand** • From 23 1/2" - 61" featuring a 2 position noiseless screw type locking device • 13" heavy-duty fold-away legs • Chrome with matte black fittings \$70.00
- ST251 Black** Same as above in all matte black 70.00
- ST255 Low-profile, non-adjustable stand and boom combination** • Stand is 11 1/2" high with 12" fold-away tubular legs • The boom adjusts From 33" - 60" • Chrome with matte black fittings ... \$88.00
- ST255 Black** Same as above in all matte black 88.00
- SCH211/2 Adjustable boom arm** • From 22 1/4" - 38 1/2" • Slide adjustable with screw type locking device • Chrome with matte black fittings \$36.00
- SCH211/2 Black** Same as above in all matte black 36.00
- SCH212 Extra heavy-duty adjustable boom arm** • From 46" - 83" • Slide adjustable with screw type locking device • Chrome with matte black fittings \$100.00
- SCH212 Black Lightweight aluminum, adjustable boom arm** • Like the SCH212 in all matte black \$105.00
- ST401 Multi-purpose music/reading stand** • For both left and right use • Adjustable from 26" - 43" • Table measures 12 1/4" H x 16 1/2" W • Chrome with a brown table \$56.00

ST201/A/1

ST201/2

ST220

ST251

ST401

ST255

ST232

ST233

Accessories

- ST200** Heavy-duty angled table stand with cast alloy base. 1 1/4" H x 2 1/4" W x 5 1/4" L \$28.00
- ST232** 6" high table stand with 5" diameter black cast alloy base 40.00
- ST233** Adjustable height table stand from 13 1/4" - 21 3/4", 7 1/8" diameter black cast alloy base 46.00
- ST300** Lightweight plastic fold away tripod, 2" height ... 15.00
- 221C** 27/8" diameter table flange for microphone or gooseneck mounting. 3/8" top or side mounting possible 8.00
- 221D** 27/8" diameter table flange for microphone or gooseneck mounting 6.00
- 235** 7 1/2" fixed mounting rail for mounting two mikes at the top of a microphone stand. 15.00
- 237** Padded microphone clamp for tabletop mounting up to 1 3/4" thick 8.00
- 238** Clamp adaptor for mounting an extra microphone to a mike stand. 10.00
- ZMS-1** 8" adjustable mounting rail for mounting two mikes at the top of a microphone stand 12.00
- 160/1** Spring-type clip-on ashtray 6.00

Thread Adaptors

- 215** 5/8" outside to 3/8" inside diameter \$3.00
- 216** 3/8" outside to 5/8" inside diameter 3.00
- 217** 5/8" outside to 3/8" inside diameter 3.00
- 218** 3/8" outside to 1/2" inside diameter 3.00
- 219** 1/2" outside to 3/8" inside diameter 3.00

BEYER DYNAMIC, INC.

Headphones/Headsets/Cables

Special Purpose Headphones

DT 48A Dynamic headphones for audiometric use. Calibrated Reference Standards for acoustical measurements. Supplied with frequency response printout. 16-20kHz. Available only in 5 ohms with an open ended straight cable **\$320.00**

DT 48K* Dynamic headphone for professional applications. Considered the standard headphone for use in live recording, film monitoring, broadcasting and ENG work. 16-20kHz. Supplied with 3m straight (K), non-detachable, cable terminated in 1/4" connector **\$300.00**

DT 48WK* Same as the DT 48K supplied with 1.5m coiled (WK), non-detachable, cable terminated in 1/4" connector. **\$315.00**

***Note:** Specify straight (K) or coiled (WK) cable, stereo or mono wiring and impedance.

Stereo: 8, 25, and 200 ohms.
Mono: 16, 50, and 400 ohms.

DT 96AK* Dynamic, multi-purpose headphone used in many language labs. 30-17kHz. Supplied with 3m straight, detachable, open ended cable (K96.00) **\$140.00**

DT 96AWK* Same as the DT 96AK supplied with 1.5m coiled, detachable, open ended cable (WK96.00) **\$150.00**

***Note:** When ordering DT 96 specify straight (K) or coiled (WK) cable and 50 or 400 ohm impedance.

DT 100K* Dynamic, studio headphone used in audio recording and monitoring applications. 30-20kHz. Supplied with 3m straight, detachable cable terminated in 1/4" connector (K100.05 Mono/K100.7 Stereo). **\$165.00**

DT 100WK* Same as the DT 100K supplied with 1.5m coiled, detachable cable terminated in 1/4" connector (WK100.05 Mono/100.07 Stereo). **\$172.00**

DT 102K* Dynamic, single-muff communication headphone designed for monitoring broadcast, TV, theater and discos. 30-20kHz. Supplied with 3m straight, detachable cable terminated in 1/4" connector (K100.05 Mono) **\$115.00**

DT 102WK* Same as the DT 102K supplied with 1.5m coiled, detachable cable terminated in 1/4" connector (WK100.05). **\$122.00**

***Note:** When ordering the DT 100 and DT 102 specify straight (K) or coiled (WK) cable, stereo or mono wired and impedance. DT 102 Mono only.

Stereo: 8, 50, 100, 200, 400, 600, 800 and 2000 ohms
Mono: 16, 100, 200, 400, 800, 1200, 1600 and 4000 ohms

Professional Dynamic Headsets

DT 108K* Dynamic, single-muff headset with • Built-in dynamic boom mike (200 ohm) • Designed for live remote broadcasting, studio, film and TV, two-way communication • Standard headset for most intercom systems • Supplied with 1.5m straight, detachable, open ended cable (K109.0) **\$182.00**

DT 108WK* Same as the DT 108K but supplied with 3m coiled, detachable, open ended cable (WK 109.00) **\$189.00**

DT 108.4 Same as the DT 108 supplied with built-in amplifier for carbon-level mike inputs found on many ENG cameras. 200 or 600 ohm balanced mike line. Available in 400, 600, 2000 or 6000 ohm headphone impedance. Straight, non-detachable, open ended cable **\$214.00**

DT 108.5 Same as the DT 108.4 without built-in amplifier. Available in 6000 ohm headphone impedance only **\$190.00**

DT 109K* Same as the DT 108K in a dual-muff configuration . . **\$214.00**

DT 109WK* Same as the DT 108WK in a dual-muff configuration **\$221.00**

***Note:** For ordering purposes please specify straight (K) or coiled (WK) cable and impedance. DT 108 and DT 109 are available in the following impedance: 8, 50, 100, 200, 400, 800 and 2000 ohms.

DT 108

DT 109

DT 108 and DT 109
Available in Black or Light Gray

DT 48

DT 100

DT 109.4 Same as the DT 108.4 in a dual-muff configuration . . **\$268.00**

DT 109.5 Same as the DT 108.5 in a dual-muff configuration . . **\$240.00**

DT 209 Dynamic, dual-muff headset with built-in dynamic boom mike (200 or 600 ohm). Low cost alternative for broadcast and intercom communications. Available in 50 or 400 ohm headphone impedances. Straight, non-detachable, open ended cable. **\$150.00**

DT 505 Dynamic, mini earphone supplied with ear loop (OB 506) and straight, open ended cable. Mono only. Optional ST 505 'steto-clip' available for binaural listening. Available in 50 ohm impedance **\$35.00**

Accessory Cables

- K96.00** Straight 5' (1.5m) open ended cable for the DT96 **\$16.00**
- WK96.00** Coiled 5' (1.5m) (relaxed) version of the K96.00 . . **24.00**
- K96.05** Straight 5' (1.5m) cable with 1/4" phone jack wired mono for the DT96 **22.00**
- WK96.05** Coiled 5' (1.5m) (relaxed) version of the K96.05 . . **28.00**
- K96.07** Straight 5' (1.5m) cable with 1/4" phone jack wired in stereo. **22.00**

- K109.0** Straight 5' (1.5m) cable open-ended for the DT108 and DT109 **22.00**
- K109.00** Straight 10' (3m) cable for the DT108 and DT109. . . **28.00**
- WK109.00** Coiled 10' (3m) open-ended cable for DT108 and DT109 **35.00**

BEYER DYNAMIC, INC.**Headphones****Lightweight Open Headphones**

DT990 Lightweight (8 oz.), circumaural, open design headphone • Extremely low mass diaphragm and moving coil assembly, resulting in exceptional transient response, found only in the best electrostatic models, and a reduction of non-linear distortion • The 5-35kHz frequency response is equalized to the Diffuse Sound Field • The DT990 offers excellent sound characteristics along with exceptional wearing comfort • 600 ohm impedance

DT990 \$199.00

DT990

DT880

Lightweight Semi-Open Headphones

DT880 Studio Lightweight (7 oz.), circumaural, semi-open design headphone • Similar to the DT880 supplied with wider frequency response 5-35kHz transducers and an uncorrected treble response • For recording engineers and serious semi-pro applications

DT880 Studio \$219.00

DT880 Lightweight (7 oz.), circumaural, semi-open design headphone • Low mass transducers combined with 'rare earth' magnets offer excellent transient response and highly detailed imaging • Wide 5-25kHz frequency response • Very comfortable for extended wearing periods • 600 ohm impedance

DT880 \$159.00

DT550 Lightweight (7 oz.), circumaural, semi-open design headphone • Low mass transducers combined with 'rare earth' magnets offer excellent transient response and high sound pressure level ability • Smooth frequency response 10-22kHz • Very comfortable and highly accurate • 600 ohm impedance

DT550 \$139.00

DT330 MKII Lightweight (7 oz.), circumaural, semi-open design headphone • Rare earth magnets combined with low impedance transducers offer high output with exceptionally low distortion • The wide 15-20kHz frequency response supplies detailed mid and high frequencies along with full bass response • 40 ohm impedance

DT330 MKII \$89.00

DT320 Extremely lightweight (3.75 oz.) circumaural, semi-open design headphone • The 20-20kHz frequency response offers transparent sound reproduction along with excellent bass response • 50 and 600 ohm impedance available • 1/4" and 'mini' connector available

DT320 \$75.00

Studio Quality Closed Headphones

DT770 Circumaural, closed design headphone • The DT770 combines the low mass transducer technology of the DT990 along with a 'Bass Reflex' system. As a result the bass response is pronounced yet accurate, while the sound image is well defined in the other frequencies • Wide 5-35kHz frequency response has been equalized to the Diffuse Sound Field • The DT770 supplies exceptional transient response along with complete isolation and comfort in a lightweight (9.25 oz.) headphone • 600 ohm impedance

DT770 \$179.00

DT220 Circumaural, closed design headphone • Wideband 20-20kHz transducers result in excellent impulse fidelity and sonic transparency even at high sound pressure levels • Comfort and isolation in a lightweight (9.25 oz.) headphone

DT220 \$129.00

DT770

DT220

BIMIX Legend Series – Recording Consoles

- Four-transistor discrete pre-amplifier stage, using 5532 and TLO72 op-amps throughout for high slew rate, low distortion and low noise (12BdBV EIN) operation
- 3 band EQ with all filters sweepable, EQ bypass switch and switchable high pass filter
- Four sends per input channel
- Tape returns with complete tape monitoring on each input channel
- Assignable, 12-segment high intensity meters on all inputs and all outputs
- Direct outputs and insert patch points on all input channels and group outputs
- Full solo capability on virtually every signal path
- Separate control room, studio and tape outputs
- Assignable internal talk-over microphone and oscillator
- Balanced group outputs and tape returns

The Legend In-Line mixing console is a highly compact, modular mixing system designed primarily for multitrack recording applications.

The Legend is available in three frame sizes ranging from B to 32 inputs and from 4 to 24 group outputs. Each unit consists of a communications module, a stereo mixdown module and multiple input/output modules. The external power supply is rackmounted and passively cooled for silent, reliable operation.

Compact In-Line Architecture

One of the first things you'll notice about the Legend is its size. The in-line architecture packs the most mixer into the least space. In the 20 input 16 group output configuration, you'll need less than 37" of wall space, only about 7 square feet of floor space. Compared to many recording consoles of comparable capability you'll have enough space left over for a couple of racks of equipment. And you'll find this compactness makes the Legend much easier for one man operation.

Digital Ready

The dynamic range of analog tape decks is typically in the range of 60 to 70dB. Digital Audio Recording, however, with a dynamic range of 90 to 95dB requires much more of a recording mixer. The Legend has a dynamic range well over 100dB.

Attention to Detail

The PS100 external power supply has fully discrete regulator circuits for low noise regulation with less than 1% voltage change from idle to full drive. All inputs, group outputs and tape returns are electronically balanced. Input transformers are available as an option.

Sonic Excellence

The Legend uses a four transistor preamp with high slew rate, low noise IC's. The result is a preamp with a clean, undistorted signal which maintains a constant input impedance, common mode rejection ratio and frequency response regardless of where the trim control is set.

The EQ section uses true shelving high and low frequency filters resulting in transparent, uncolored equalization.

Specifications

Frequency Response	
Mic Input:	40dB gain to direct out + 0 - .5dB 20Hz to 20kHz
Mic Input:	40dB gain to any output + 0-1dB 20Hz to 20kHz

- *THE ORIGINAL uniVUer*
- *AUDIO BARGRAPH INTO VIDEO*
- *STEREO PHASE/POLARIY ERROR DETECTOR*
- *AVAILABLE WITH VU, PPM AND CUSTOM BALLISTICS*
- *COMPATIBLE WITH 525, 625 AND 1125 LINE SCAN RATE*
- *HORIZONTAL AND VERTICAL SIZE AND POSITION VARIABLE*
- *REMOTE CONTROL FUNCTIONS, INCLUDING BYPASS*
- *WIDE RANGE OF AUDIO INPUT LEVELS*
- *VARIABLE PEAK FLASHER AND SILENCE SENSE*

PRACTICAL AUDIO MONITORING

The uniVUer places a stereo audio bargraph meter into a video signal for display on a video monitor. It is the first truly practical means of monitoring audio program levels in the video environment. With the uniVUer it is even possible to monitor stereo phase coherency with the MonSter option.

Whatever your field, whether teleproduction, post-production, audio mixing, videotape duplicating or any of the many other uses where the video program monitor competes with audio for operator attention, the uniVUer can make it possible to give equal attention to the two equally important portions of the total program.

FOR THE MOST DEMANDING APPLICATIONS

The uniVUer has been designed with quality and precision in mind. We expect that in most cases the signal will be applied to a professional quality video monitor, therefore, we have made certain that it will not degrade video quality, nor will it "burn in" on the monitor. We also expect that you want accurate metering, not "consumer lookalikes", therefore, both the VU and PPM models have been designed to meet industry approved standards for ballistics, accuracy and graticle markings.

FLEXIBLE OR ANY APPLLICATION

The uniVUer is compatible with NTSC, PAL, and 1125 line HDTV video standards. It has both horizontal and vertical size and position adjustments which allow you to place the display anywhere on the screen at any size from "uselessly small to uselessly large." You can adjust the video level for viewing comfort, and there is even a black box "surround" which can be switched in for increased visibility. Of course there is an active bypass switch which removes the display from the screen, as well as a protective relay which automatically bypasses video in case of power supply failure, or removal from the rackframe. Both the active bypass and black surround can be remotely controlled.

The audio input can be calibrated to zero read at any level from -20dBu to +8dBu and is a balanced bridging type. We've even included peak flashers which are adjustable so you can monitor to your system headroom requirements. We've also included an adjustable silence sense to feed your off-the-air alarm system from a contact closure. In silence, the display area is set to black to indicate the duration of the audio dropout and also to protect your monitors when the system is not in use.

STEREO COHERENCY MONITORING

The MonSter option is a MONo-STEReo coherency evaluator which plugs into the uniVUer circuit board. This continuously monitors left-right energy coherency to provide an indication of out of tolerance material such as a phase delayed channel or, more commonly, a polarity flip. When an error condition occurs the bargraph display changes to a distinctive checkerboard pattern. You can still monitor levels, but will know something is wrong. Users have told us that this option has totally eliminated their concerns with system phase errors.

SEVERAL MODELS AND CONFIGURATIONS AVAILABLE

The uniVUer is available in both VU and PPM models. We understand, however, that sometimes you may have specialized applications which require another standard. Our engineers specialize in adapting our products to such unique requirements and have already produced numerous custom uniVUers for specialized needs.

The standard Rack Frame is 1 rack unit high, houses three uniVUers and contains the common power supply and bypass interface. For applications requiring large numbers of uniVUers, we also have a 3 rack unit high frame which houses 10 uniVUers and power supply.

Specifications:

RG341

- *PRECISION STAR (SAFE TITLE AREA RETICLE) GENERATOR*
- *PULSE CROSS GENERATOR WITH H AND V BLANKING VERIFICATION*
- *MICRO-MARK CURSOR FOR PRECISION MEASUREMENTS ANYWHERE ON THE SCREEN*
- *CONFORMS TO SMPTE SCREEN UTILIZATION SPEC'S*
- *3 SEPARATE "DRY" FEEDS OF STAR OUTPUT*

URNS YOUR VIDEO MONITOR INTO AN INFORMATION INTERFACE

The RG-341 produces Safe Title Area Reticle (**STAR**) markings and places them into a video signal for display on any monitor. Even an inexpensive monitor can be used as a precision titling monitor for graphics and camera shot alignment. The markings are in conformance with SMPTE Recommended Practices 27.3 and indicate 80% and 90% of picture area, and an exact center cross-hair. That standard also recommends a minimum character height for legibility and a separate marker is included in the display for that purpose.

The MICRO-MARK CURSOR display can be thought of as a horizontal ruler with 1-microsecond markings for measuring horizontal positioning. The Micro-Mark can be moved both vertically and horizontally anywhere on the screen. It is especially useful for locating titles and other graphics elements on the screen for repeatable setup.

EVEN INEXPENSIVE MONITORS CAN HAVE PULSE CROSS AND MEASUREMENT CAPABILITIES.

The precision pulse cross feature incorporated into the RG-341 creates both horizontal and vertical delay to place the pulse cross display into the monitor. It also raises the video brightness level to make the various blanking elements visible for measurement. Dashed line markings are generated at the 10.9 microsecond H-Blanking and 21 line V-Blanking points to give you a quick and simple means of verifying RS-170A blanking conformance. When shifted into the pulse cross mode the Micro-Mark display remains unshifted to provide a measuring tool to help determine exact blanking intervals.

FOR THE MOST DEMANDING APPLICATIONS

The RG-341 has been designed with quality and precision in mind. We expect that in most cases the signal will be applied to a professional broadcast quality video monitor, therefore, we have made certain that it will not degrade video quality. The rock stable, digitally generated measurement graticles themselves are calibrated to exacting standards.

REMOTE OPERATION AND EXTRA FEATURES

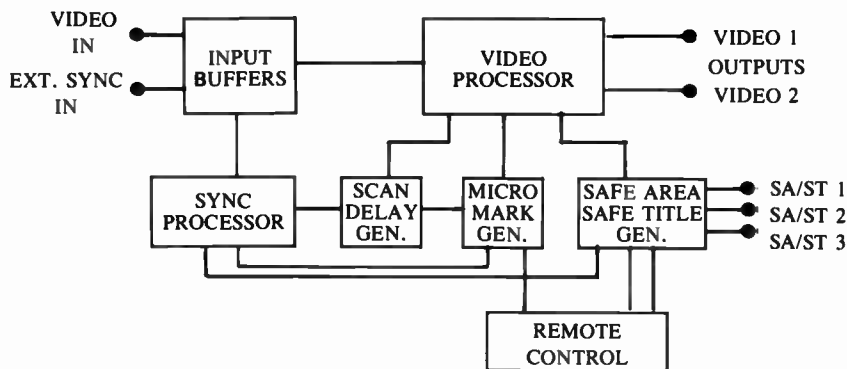

The STAR features and the Micro-Mark display can be remotely controlled with the optionally available console mount remote panel. This allows you to rack-mount the generator in your central equipment racks and control it from your production or editing console.

The RG-341 can take sync from input video, or you can externally sync it. It also provides three "dry feeds", that is, STAR output without video, can be mixed with camera viewfinder returns to provide framing references to production personnel, or sent to additional switcher preview buses.

Specifications:

BIRD ELECTRONIC CORP.

Wattmeter/Plug-In Elements

**Model 43
THRULINE® RF DIRECTIONAL WATTMETER**

The Model 43 THRULINE Wattmeter is comprised of a line section and a direct-reading 3 scale meter housed in a rugged, corrosion-resistant aluminum case. QC (Quick Change) Type Connectors and a full range of Plug-In measuring elements (ordered separately now or later to meet your existing needs) give Model 43 amazing flexibility and adaptability. Two extra elements can be stored in the housing, one on each side. Easy to use and simple to service in the field.

Line Section: A precise 50 ohm coaxial air line is designed for insertion into the transmission line between transmitter and antenna or load. The line section is equipped with a socket into which the Plug-In element with the desired power and frequency range is inserted. It is also equipped with QC Connectors.

- **QC Type Connectors:** The Bird Model 43 is normally supplied with two Female N Connectors. However, at the time of ordering, other types of connectors may be specified including: Male or Female BNC, TNC, UHF, C, SC, LC, N, SMA, HN, LT, General Radio Type 874, 7/8" EIA Flanged and Mini-UHF. All of these QC Connectors are interchangeable in the field without affecting the instrument's calibration.
- **Indicating Meter:** A shock-mounted 30mA meter with three expanded scales of 25, 50, 100 unit calibration to permit full scale direct power reading from 100mW to 10,000W.
- **Plug-In Elements:** These elements read both forward or reflected power as indicated by the direction in which the arrow is pointing. Frequency range and full scale power are marked on each element. Use a lower power element (e.g. 10:1) for increased resolution of reflected power readings.
- **Remote Installation:** When it is more convenient, the RF line section can be easily removed from the Model 43 case and inserted at any desired point in the line. The meter may then be located at another point for optimum visibility. 32" of meter cable is supplied in the instrument housing for this purpose. Additional lengths available as required.
- **0.45-2300MHz • 0.1-10,000W • Impedance:** 50 ohms nominal
- **Insertion VSWR:** With N connectors 1.05 max.
- **Finish:** Light navy gray baked enamel
- **Nominal Size:** Including connector 67/8" x 51/8" x 35/8" (175 x 130 x 92mm)
- **Weight:** 3 lbs. (1.4kg)
- **Element Weight:** 3 oz. (85g)
- **Accuracy:** ± 5% of full scale
- **Optional Cases:** Cowhide Carrying Case CC-1, Plug-In Element Carrying Case EC-1

4410P – 115/230VAC 50/60Hz or battery 19" rackmount

4412 – 115/230VAC 50/60Hz or rechargeable NiCad battery operation

Inside the 4410 Series is an amplifier employing an inherently self-balancing measurement technique. A patented bridge circuit – with its four legs divided between the base and each of the proprietary plug-in elements – permits reading accuracies without equal in a directional wattmeter with a 5000-to-one dynamic element range, and unaffected by temperature extremes. The 4410 Series elements plug into the wattmeter's element socket and are simply rotated for either forward or reflected measurements. Each Element, however, provides seven power ranges instead of one, covering 0.01/0.03/.1/.3/1/3/10W, 0.1/0.3/1/3/10/30/100W, 1/3/10/30/100/300/1000W or 10/30/100/300/1000/3000/10,000W – with full rated accuracy of meter Reading from 20% to 100% of each scale of the seven overlapping ranges, i.e. a 37dB (5000 to 1) power range. The desired range is instantly selectable by a rotary switch on the front of the wattmeter.

This switch also includes a convenient battery test position.

APPLICATIONS

1. Field-service use where a single handful of Elements will now cover unparalleled power and frequency ranges under wide environmental conditions – and anywhere else where dozens of Elements used to be required.

2. Laboratory work where high accuracies and power levels as low as 2 milliwatts are required.

3. Any application where accurate THRULINE measurements at milliwatts, watts or kilowatts need to be performed simply, quickly and at minimum cost.

• **Power Range:*** 0.01-10W, 0.1-100W, 1W-1000W or 10W-10,000W full scale in one single Plug-in Element. Any Bird Series 4410- Element may be used.

• **VSWR:** with N Connectors 1.05 max. (4410P: 1.07 max.)

• **Frequency Range:*** 200kHz to 1000MHz, CW or FM.

• **Accuracy:** ± 5% of Reading, for any reading above 20% of the power range selected, for FM or CW signals without AM. This accuracy is maintained for a full 37dB dynamic range with each 4410 Element (except No. 4410-1 0.200-0.535MHz, which is accurate to ± 10% of reading).

• **Ambient Temperature Range:** Elements 4410-1 thru 8 and -10 thru 14 are temperature-compensated for rated accuracy from 32° to 122°F (0°C to 50°C), and 4410-20 thru 26 from 68° to 86°F (20°C to 30°C).

- **Over-Range Protection:** To 120% of nominal full scale (i.e. 12W, 120W, 1200W, or 12,000W). No damage or degradation to the unit will result, regardless of the Range Selector Switch position.
- **Nominal Impedance:** 50 ohms
- **Battery Life:** 4410A, 4410P, 4411: One standard 9V alkaline "transistor" battery (NEDA No. 1604A supplied). 24 hour operation minimum. (A Lithium battery with a minimum of 180 hours operation is available. Order Part No. 5-1576). 4412: 7 hours minimum, rechargeable.
- **AC Power:** 4410P, 4411, 4412: 105-125/210-250VAC, 50/60Hz with integral selector switch.
- **Connectors:**** QC Type (Female N normally supplied).
- **Finish:** Light Navy gray baked enamel
- **Weight:** 4410A, 4411, 4412: 3¹/₃ lbs. (1.5kg), 4410P: 5 lbs. (2.3kg).
- **Nominal Size:** Incl. Connectors 4410A, 4411, 4412: 6⁷/₈" x 5¹/₈" x 3⁵/₈" (175 x 130 x 92mm) 4410P: 19" x 5⁷/₃₂" x 3¹⁵/₁₆" (483 x 133 x 100mm).
- **Optional Carrying Case:** CC-1: For Wattmeter and 7 Elements. CC-3: For Wattmeter, 25W Load Model 8080 and 4 Elements. EC-1: For 12 Elements.

*Frequency Band and Power Range is determined by Plug-in Element selected. Only 4410 Series Elements can be used.

**Available Bird QC-Quick Change Connectors, which are interchangeable in the field, include Male or Female N, BNC, TNC, UHF, C, SC, LC, HN, LT and 7/8" EIA flange. Also SMA and new Mini-UHF.

BIRD ELECTRONIC CORP.**Wattmeter/Field Strength Measurement**

4304

4030
Element4041
Meter

4304 Wideband, Directional, THRULINE® RF Wattmeter

- Broadband Frequency Range: 25 to 1000MHz
- Four Built-In Power Ranges
- RF Sampling Port
- Low Insertion Loss
- Rugged Shock-Resistant Design
- Engineered to Handle Rough In-the-Field Conditions
- Field-Changeable SQC (Small-Quick-Change) Connectors
- Light Weight for Portability
- Sturdy Carrying Strap for Handling Security

Operation simplicity is a feature of Model 4304. The desired RF power range is selected with the right hand switch. Power is read directly and has a dependable accuracy of $\pm 6\%$ from 100 to 512MHz and $\pm 7\%$ from 512 to 1000MHz. In the low frequency range of 25 to 100MHz, a correction factor chart, provided on the back panel, keeps measurement tolerance below $\pm 7\%$. The entire length of the measurement scale is usable.

Unless otherwise specified, the Model 4304 meter comes equipped with two female UHF type SOC connectors (SO-239). Bird SQC connectors are also available in female N (Catalog No. 4100-014).

The RF Sampling port on the right side panel utilizes a female BNC output connector for easy attachment to low level inputs of a frequency counter or spectrum analyzer. The sample level is 43dB \pm 5dB below the actual power level in the transmission line. This means that no external attenuators are needed for most applications.

- Full Scale Power Ranges: 15, 50, 150, 500W
- Impedance: 50 ohms nominal
- Insertion VSWR: 1.05 max. from 25 to 512MHz, 1.10 max. from 512 to 850MHz, 1.15 max. from 850 to 1000MHz (with N Conn.), 1.2 max. from 800 to 1000MHz (with UHF Conn.)
- Insertion Loss: Less than 0.1dB to 1000MHz
- Accuracy: 25 to 100MHz, $\pm 7\%$ of F.S. with chart; 100 to 512MHz, $\pm 6\%$ of F.S.; 512 to 1000MHz, $\pm 7\%$ of F.S.
- RF Sample Output: 43dB \pm 5dB (BNC/F Conn.)
- Weight: 2 $\frac{1}{4}$ lbs. (1kg)

4030/4041 Relative Field Strength Measurements

- Frequency Range: 1 to 1000MHz
- Dynamic Range: 30dB min.
- Typical Sensitivity: Full scale deflection at 8 ft. (2 $\frac{1}{2}$ m) from a 1W source broadcasting at 150MHz through a quarter wave antenna
- Output Characteristics: (4030) compatible with 30 microampere meter instruments (e.g. models 43, 4431, etc.)
- Battery Life: 4030: 100 hours min. 4041: 200 hours min.
- Battery Type: 4030: Three 3V Lithium-Manganese Dioxide cells (Duracell DL2032 or equivalent); 4041: One 9V Alkaline "Transistor" battery (NEDA No. 1604A)
- Ambient Temperature Range: 0°C to +50°C
- Weight: (Incl. batteries) 4030: 3 oz. (85g), 4041: 10 oz. (283g)

4030 Relative Field Strength Element expands the usefulness of models 43, 4430, and 4431 Wattmeters to help you optimize the radiated signal of any transmitter from 2-1000MHz. Increase the reach of business or personal transceivers, extend the range of H.T.s. by tuning, adjusting, positioning antennas for maximum meter indication on THRULINE Wattmeters.

The 4030 Elements consist of a flexible receiving antenna, a high pass filter network, and a variable gain RF amplifier/detector. The amplifier is turned on automatically when the Element is plugged in. The amplifier's DC output drives the 30 microampere meter of the listed model THRULINE Wattmeters to indicate the presence of an RF field at the receiving antenna. A gain control adjust sensitivity of the device to various field intensities.

Since the 4030 responds to the field intensity at a particular location, it is easy to perform antenna-transmitter peaking simply by obtaining the maximum field intensity reading on the meter while optimizing antenna match.

If you prefer an independent instrument, the 4041 Relative Field Strength Meter performs exactly the same functions as the 4030 Element, plus a battery level test.

Typical 4041 sensitivity (or 4030 plugged into a model 43) with the gain control at a maximum is a full scale meter deflection with one watt of radiated power at 150MHz from a 2-meter H.T. at 8 ft. distance.

BIRD ELECTRONIC CORP.

Wattmeters/Signal Samplers

MODEL 4431

THRULINE® RF Directional Wattmeter

- Provides Model 43 Power Measurement Versatility
- Built-In, Variable RF Signal Sampler
- **Power Rating:** 5000W, 2-30MHz; 1000W, 30-1000MHz*
- **Insertion VSWR:** 1.07 to 1.0 max.* (with N Connectors)
- **Connectors:** QC Type (Female N normally supplied) (Female BNC RF output)
- **Insertion Loss:** 0.1dB max. (2-512MHz); 0.2dB max. (512-1000MHz)*
- **RF Coupling:** -15 to -70dB
- **Accuracy of Wattmeter:** ± 5% of F.S.

*Specifications above are applicable only if coupling used is less than 30dB.

The combination Model 4431 THRULINE Wattmeter provides the advantage of an RF signal sample (for use with counters, oscilloscopes, spectrum analyzers, etc.) at the same time a power measurement is made. Amplitude of the RF sample is readily adjusted by a depth-of-insertion control knob mounted on the front of the wattmeter case. Model 4431 uses the same plug-in elements as the Model 43 wattmeter within its frequency and power ratings.

MODEL 4300-064

Mobile-Service Test Kit

Kit Includes:

- (1) Model 43 Thruline Wattmeter (Standard QC-NIF connectors)
- (1) Model 4275 100 RF Sampler with variable level control and mounting screws
- (1) Model 8164 100W "dry load" TERMALINE® Load Resistor (Standard QC-NIF connector)
- Instruction manual (P/N 4400-012)
- Cushion-fit inset equipped, one-piece, hi-density, Polyethylene carrying case (P/N 4300-061) with nests for seven plug-in elements and all other items listed above.

When purchasing test set, order as many or as few elements as your present needs dictate. They will be added to the price of the kit. To order case alone for your present equipment, order P/N 4300-061.

MODELS 4273 and 4275

Variable RF Signal Samplers

- **Frequency Range:** 20-1000MHz (4275); 1.5-35MHz (4273)
- **Max. Power:** 1000W 4275/5000W 4273
- **Insertion VSWR:** 4275/1.1 max. 2-512MHz (with N connectors); 1.25 max. 512-1000MHz; Model 4273 1.07 max. (with N connectors)
- **Insertion Loss:** 0.1dB max. 2-512MHz (with N connectors); 0.2dB max. 512-1000MHz
- **Coupling:** Adjustable as shown ± 3dB
- **Connectors:** QC Type as specified
- **Weight:** 10 oz. (280g)

"Stand alone," wide-range, THRULINE RF coupling probes for spectrum analysis, RF signal observation on a scope, or frequency counting and control. They feature a very low VSWR throughout their broad frequency and attenuation range. Insertion loss is a negligible 0.1dB.

For low frequency RF sampling (between 1.5 and 35MHz), order a Model from the 4273 line. For frequencies between 20 and 1000MHz, order a 4275 Model. Note that, once it is adjusted, the setting can be locked.

Models 4273-100 and 4275-100 are accessory samplers which fasten directly to the input of QC equipped Bird TERMALINE, THRULINE and TENULINE® products. These Accessory Samplers eliminate the need for one connector pair and provide on-the-spot sampling.

BIRD ELECTRONIC CORP.

Wattmeters

**Microprocessor-Based ThruLine®
RF Directional Wattmeters**
0.45-2300MHz, 0.1-10,000W

- Models for two-way communications, Avionics, C³, Radar, etc.
- Power range¹ 0.1W to 10kW full scale using Bird Plug-in elements.
- Accuracy not guaranteed with components not supplied by Bird • Usable over-range to 120% of nominal full scale (for compliance with FCC 110% regulations without the need to buy and use higher power elements) • Frequency Range¹ 0.45 to 2300MHz • Sampling rate 2 to 3 readings per second • Display 3 1/2 digit, .8" LED-strobed (4385, 4387) .3" LED-strobed (4381, 4383, 4391)

Accuracy

- Power readings $\pm 5\%$ of full scale • SWR $\pm 10\%$ of reading • Return loss $\pm 0.3\text{dB}$ to corresponding SWR value • Modulation Frequency 50-10,000Hz • AC power 100-130/200-260VAC 50/60Hz, 8W • Panel dimensions 19" x 5 7/32"

¹Frequency band and power range is determined by Plug-in element selected. Select two elements in a 10:1 power ratio.

²For pulse modulation the minimum parameters are: 50 microseconds pulse width, 100 pps repetition rate and 1% duty cycle, except for model 4391 the parameters are:

Minimum duty factor: 1×10^4

Minimum repetition rate: 25 pps

Minimum pulse width: 100-2300MHz 0.8 μsec
25-125MHz 1.5 μsec
2-30MHz 15 μsec

³4381, 4383: Specify voltage at time of order.

4385, 4387, 4391: Voltage is selected by integral switch.

At the push of a button, the digital RF Wattmeters with nine-mode system versatility read incident and reflected CW and FM power in watts of dBm, incident and reflected peak-envelope-power of SSB/DSB and symmetrical AM in watts, incident and reflected peak pulse power as narrow as 0.8 μ in watts (model 4391); calculate SWR, dB return loss, percent modulation; remember your peak and valley readings when you adjust for maximum or minimum signal levels; overrange at least 20% beyond nominal full scale, and will do all this with Plug-in elements you may already own from other ThruLine wattmeters.

Uses the same elements as the model 43 (Tables 1, 2, 3, 4, and 6) plus the following: Table 5.

High Power Elements (Peak Only)

Power Range	Frequency Bands (MHz)					
	25-60	50-125	100-250	200-500	400-1000	950-1260
500W						500J
1000W						1000J
2500W	2500A	2500B	2500C	2500D	2500E	2500J
5000W	5000A	5000B	5000C	5000D	5000E	5000J
10000W	10000A	10000B	10000C	10000D	10000E	

4381 is portable with a built-in coax line section, with an eight-hour battery and separate charger, optional carrying case.

4385 is the stationary, rackmounted version.

4383 is similar to the 4381, but without a coax line section.

4387 is the stationary, rackmounted version. These are intended for use with permanently installed line sections.

4391 is a portable Peak and CW Wattmeter with built-in coax line section, battery, international power supply, and charger. It is designed for pulsed systems such as avionics surveillance, collision avoidance and navigation, as well as CW, FM, AM, SSB/DSB transmissions.

Termaline® RF Absorption Wattmeters
50 ohms nominal
6104 60 Watts*

- Power Rating: 60W • Power Scales: 0-2/0-6/0-20/0-60W • VSWR: 1.1 max. DC to 512MHz • Frequency Range: 25-512MHz • Input Connector: Female N • Nominal Size: includes connectors 6 3/8" x 3 15/16" x 9 5/8" • Weight: 7 lbs. • Accuracy: $\pm 5\%$ of full scale 25-512MHz

6154/6156 150 Watts*

- Power Rating: 150W • Power Scales: 0-5/0-15/0-50/0-150W • VSWR: 1.1 max. DC to 1000MHz (to 512MHz, model 6156) • Frequency Range: 25-1000MHz (to 512MHz, model 6156) • Input Connector: Female N • Nominal Size: includes connectors 6 3/8" x 3 15/16" x 12 3/16" • Weight: 8 lbs. • Accuracy: $\pm 5\%$ of full scale 25-512MHz, $\pm 10\%$ of full scale 512-1000MHz

6732A 250 Watts*

- Power Rating: 250W • Power Scales: 0-10/0-50/0-250W • VSWR: 1.15 max DC to 1000MHz • Frequency Range: 25-1000MHz • Input Connector: QC type (female N normally supplied) • Nominal Size: includes connectors 8 1/2" x 5 15/16" x 12 5/8" • Weight: 16 lbs. • Accuracy: $\pm 5\%$ of full scale 25-512MHz, $\pm 10\%$ of full scale 512-1000MHz • **Meter:** 4 1/2" meter, shock mounted in aluminum carrying case with 10' (3m) shielded meter cable. Dimensions: 6 1/2" H x 5 9/16" W x 3 1 1/32" D

6734A 500 Watts*

- Power Rating: 500W • Power Scales: 0-25/0-100/0-500W • VSWR: 1.15 max. DC to 1000MHz • Input Connector: QC type (Female N normally supplied) • Nominal Size: includes connectors 8 1/2" x 5 15/16" x 19 15/16" • Weight: 27 lbs. • Frequency Range: 25-1000MHz • Accuracy: $\pm 5\%$ of full scale 25-512MHz, $\pm 10\%$ of full scale 512-1000MHz

6734A-030 Watts*

- Frequency Range: 1.5 to 35MHz • Accuracy: $\pm 5\%$ of full scale 2-32MHz, $\pm 10\%$ of full scale 1.5MHz and 32-35MHz

*Meter Housing can be detached from load for convenient reading with 3" cable.

**Finish: Light navy gray enamel

**Termaline® RF Coaxial Load Resistors**

• 50 ohms nominal • Oil dielectric • VSWR: 1.1 max. DC to 1000MHz • Ambient air temperature range: -40° to +45°C • Operating position: horizontal only • Finish: light navy gray baked enamel • Input Connector: QC type (female N normally supplied for models 8135, 8141 and 8201); QC type (female LC normally supplied for models 8251 and 8860)

Termaline load resistors are used in place of the antenna during testing, adjustment and alignment of 50 ohm coaxial RF transmitters.

Their low VSWR (1.1 or less, at mobile radio frequencies) assures an excellent match and the absorption of at least 99.75% of the RF energy generated.

8135 150 Watts

• Power Rating: 150W continuous duty • VSWR: 1.2 max. 1000 to 2500MHz; 1.3 max. 2500 to 4000MHz • Nominal Size: includes connectors 6³/₈" x 3¹⁵/₁₆" x 9¹/₂" • Weight: 6 lbs.

8141 250 Watts

• Power Rating: 250W continuous duty • VSWR: 1.2 max. 1000 to 2500MHz; 1.3 max. 2000 to 2500MHz • Nominal Size: includes connectors 8¹/₂" x 5¹⁵/₁₆" x 9⁹/₁₆" • Weight: 10 lbs.

8201 500 Watts

• Power Rating: 500W continuous duty • VSWR: 1.25 max. 1000 to 2500MHz • Nominal Size: includes connectors 8¹/₂" x 5¹⁵/₁₆" x 16¹³/₁₆" • Weight: 21 lbs.

8251 1000 Watts

• Power Rating: 1000W continuous duty • VSWR: 1.25 max. 1000 to 2000MHz; 1.3 max. 2000 to 2400MHz • Nominal Size: includes connectors 8¹/₂" x 5¹⁵/₁₆" x 17¹⁵/₁₆" • Weight: 24 lbs.

8860 1500 Watts

• Power Rating: 1500W continuous duty • Nominal Size: includes connectors 13¹/₈" x 7¹/₂" x 17⁷/₁₆" • Weight: 28 lbs.

Termaline RF Coaxial Load Resistors

• 50 ohms nominal • Dry loads • VSWR: 1.1 max. DC to 1000MHz • Operating position: any, except model 8173 (horizontal only) • Finish: lusterless black enamel (Fed. Spec. TT-E-527) except Series 80-silver plated • Ambient air temperature range: -40° to +45°C

Series 80 5 Watts

• Power Rating: 5W continuous duty • VSWR: 1.2 max. 1000 to 3500MHz; 1.3 max. 3500 to 4000MHz • Input Connector: 80 F: female N, 80 M: Male N • Nominal Size: includes connectors 1¹/₁₆" Hex x 3³/₈" • Weight: 4 oz.

8052-53 10 Watts

• Power Rating: 10W continuous duty • VSWR: 1.2 max.; 1000 to 3500MHz • Input Connector: Female N (8052), Male N (8053) • Nominal Size: includes connectors 1¹/₁₆" Hex x 3⁷/₁₆" • Weight: 4 oz.

8080 25 Watts

• Power Rating: 25W continuous duty • VSWR: 1.25 max. 1000 to 3500MHz • Input Connector: QC type (male N normally supplied) • Nominal Size: includes connectors 1¹/₄" x 1¹/₄" x 5¹/₈" • Weight: 9 oz.

8085 50 Watts

• Power Rating: 50W continuous duty • VSWR: 1.25 max. 1000 to 3500MHz • Input Connector: QC type (Male N normally supplied) • Nominal Size: includes connectors 1³/₄" x 1³/₄" x 5¹/₈" • Weight: 15 oz.

8164 100 Watts

• Power Rating: 100W continuous duty • VSWR: 1.2 max. 1000 to 2500MHz • Input Connector: QC type (female N normally supplied) • Nominal Size: includes connectors 2³/₄" x 2³/₄" x 7" • Weight: 48 oz.

8166 150 Watts

• Power Rating: 150W continuous duty • VSWR: 1.2 max. 100 to 2500MHz • Input Connector: QC type (female N normally supplied) • Nominal Size: includes connectors 4" x 4" x 7¹/₂" • Weight: 96 oz.

8173 300 Watts

• Power Rating: 300W continuous duty • VSWR: 1.25 max. 1000 to 2000MHz • Input Connector: QC type (female N normally supplied) • Nominal Size: includes connectors 9⁹/₁₆" x 5¹⁵/₁₆" x 9³/₄" • Weight: 6¹/₄ lbs.

8431 600 Watts

• Power Rating: 600/500W* continuous duty • VSWR: 1.25 max. 1000 to 2500MHz • Input Connector: SQC type (female N normally supplied) • Nominal Size: includes connectors 8³/₈" x 9¹/₄" x 13¹/₈" • Weight: 13 lbs.

*Continuous power rating 600W in vertical position; 500W in horizontal position.

SQC type connectors, as used on models 8431, 8072 and all Minimonitor Thru-line Wattmeters, are available in Male N, Female N, UHF, C, SC, BNC

BIRD ELECTRONIC CORP.**RF Monitoring System/Power Monitor/Alarm****3170 HIGH-SPEED WATTCHER®
RF MONITORING SYSTEM**

Initiates instantaneous switchover to remote standby transmitter as a feed-back of signal drop-off.

Based on the accurate power level measurements of its reliable built-in THRULINE® Directional Wattmeter, the solid-state Wattcher System will...

- Provide a fast fault-response-time of 200 μ s for forward and reflected power monitoring
- Signal forward power drop-off below a set level (e.g. to conform with FCC part 21.107 specifications)
- Activate audible/visual alarms when reflected power increases
- Implement stand-by switchover in case of main transmitter malfunction
- Allow remote reset in event of false alarm or momentary disturbance which leaves transmission unimpaired

WATTCHER RF Monitoring System warns a remote operator of (1) low power due to detuning, component deterioration, or AC line difficulties (2) high VSWR due to antenna icing, transmission line problems, physical accidents, lightning strikes, etc.

With the addition of extraneous switching hardware, the system can be programmed to activate a back-up transmitter and antenna when primary equipment performance is below predetermined parameters. Because of the WATTCHER'S high reaction speed (250 times faster than other monitors), switching to standby equipment is inaudible to listeners.

If the disturbance is not catastrophic and equipment returns to acceptable operating status, the alarm system can be reset from many miles away. An engineer needs to be dispatched to the transmitter site only when the alarm cannot be deactivated by the remote reset.

- **Power Range:** 100mW to 10kW full scale*
- **Accuracy:** \pm 5% of full scale
- **Over-range (Alarms):** beyond 200% of scale
- **Response Time:** 25 μ sec. max.
- **Activate Forward Monitor Adjustable Delay:** 73 μ sec. to 50msec nominal
- **Inputs and Outputs:** TTL-compatible
- **Insertion VSWR:** With N Connectors 1.05 max. DC to 1GHz
- **AC Power:** 115/230VAC, 50/60Hz, 10W max.
- **Nominal Size:** 19" x 5 $\frac{7}{32}$ " (483 x 133mm)

*Frequency and Power Range determined by Plug-in Elements

3170

3128 WATTCHER® RF POWER MONITOR/ALARM

- **Power Range:** 100mW to 10kW full scale*
- **Accuracy:** \pm 5% of full scale
- **Insertion VSWR:** With N Connectors 1.05 max. DC to 1GHz
- **AC Power:** 115VAC, 50/60Hz, 10W (230VAC optional)
- **Nominal Size:** 19" x 5 $\frac{7}{32}$ " (483 x 133mm)

Installations which do not require the fast response time and the forward-power drop-off alarm of model 3170 are protected from high VSWR by WATTCHER model 3128.

Abnormal load conditions quickly cause transmitter shut-down, a buzzer alarm and a change of illumination color of the reset button from green to red. Audible and visual alarms indicating system malfunction may be remotely. Fail-Safe or Non-Fail-Safe Modes are switch-selectable and the Reflected Power meter-relay has a front-adjustable trip-level.

3128

NOTE: Model 3170 incorporates a Line Section with sockets for two Plug-in Elements. For model 3128, a double-socket Line Section (e.g. P/N 4522-002), two Quick-Change Connectors (e.g. 4240-062 for Female N) and two 25 ft. cables (P/N 4220-097-10) must be ordered to complete the installation. Also select two Plug-in Elements for either model in a 10/1 power ratio to suit your power and frequency requirements.

Tripods/Heads/Dollies

Fluid Heads

Mini Fluid Head Measuring just 5" x 5" x 5" (excluding handle), this lightweight, fluid-type damped tripod head pans a full 360° and features a camera platform that measures 2 3/4" x 3". The Mini Fluid Head comes with a versatile handle which is positionable on either side and can be separated into two individual segments, each 9" in length. The Mini Fluid Head can be tilted 45° up and 90° down continuously, with detent at -45°, and has separate pan and tilt locks. Vertical drag is continuously adjustable.

3063 \$145.95

Micro Fluid Head Only 2 lbs. including an adjustable handle. Perfect for light weight (up to 6 lbs.) VCR cameras. It measures 4 1/4" x 5 3/4" x 2 3/4" (excluding handle); pans smoothly a full 360°; can be tilted up or down 90°; has pan and tilt locks, and continuously adjustable drag. Platform has adjustable positioning slot designed so handle can be on either left or right side.

3126 \$73.50

Cine/Video Fluid Head This lightweight, professional quality, fluid-damped tripod head is designed for Cine and Video cameras weighing up to 22 lbs. The large, removable camera platform has a mounting stud that travels in a 3 1/2" slot and facilitates balancing at the camera's center of gravity. In addition, there are three locking detents for the platform, any of which can be used. Pans smoothly 360° and the panning drag can be adjusted by a large pawl-controlled lever. The tilting range is 60° up to 90° down. Detent can be set to limit the downward movement to 45°. Separate locks, independent of the drag system provide a positive hold in any position.

3066 \$355.95

XL Fluid Head Lightweight fluid head capable of handling cameras up to 9 lbs. Features a special "quick release plate" which lets you attach and detach the camera quickly and easily. The adjustable handle can be located on either the right or left side of the head.

3160 \$95.95

Ball Camera Leveler This is an ideal adjunct to the 3063 Mini Fluid Head. It works like a claw ball in that you mount it to your tripod, you can remove the camera and head quickly to mount on another tripod similarly equipped, and you can level your camera even if you haven't leveled the tripod. Ideal for use in the field on uneven terrain.

3115 \$39.95

Tripods with Fluid Heads

3170 Tripod with Micro Fluid Head Versatile, easy to handle and sets up quickly and easily. Sturdy legs are made of tubular hard-finish aluminum and each has sure-grip lever locks. Designed for VCR cameras (our 3001) can hold up to 6 lbs.

3170 \$134.95

3165 3011 Tripod with 3160XL Fluid Head 161.95

3124 Tripod With Micro Fluid Head A lightweight all-aluminum tripod (our 3011) that's sturdy, stable, versatile, easy to use and easy to carry. It weighs only 7 lbs. with our Micro Fluid Head (Order Code 3126) that features real, fluid-effect action.

3124 \$167.95

3122 As above but in black anodized finish 172.95

3129 3011 Tripod with 3126 Micro Fluid Head and 3127 Dolly 244.95

3145 Video Tripod Caddy 35.95

3149 3126 Micro Fluid Head with 3211 Tripod with black anodized finish and 3127 Dolly 256.95

3163 3160XL Fluid Head with 3011 Tripod 184.95

3164 As above plus 3127 Dolly 261.95

3046 Sturdy Tripod All aluminum double-braced, two section design weighs only 7 lbs., 4 oz. It extends to a full 73" with the Mini Fluid Head. 19" geared center post. Folds to a compact 32 1/2" for traveling. Legs are furnished with convertible cushion/spike tips.

3046 Cine/Video Tripod w/o head \$160.95

3140 Cine/Video Tripod with Mini Fluid head 299.95

3142 Same as above in black anodized finish 315.95

3068 Universal Cine/Video Tripod Weighs less than 12 lbs., extends to 66". Legs are furnished with convertible cushion/spike tips. For precise positioning, there is a centerpost which permits 9" of extension. The unique variable-angle center brace system on the tripod allows minimum elevation of the tripod platform as low as 16".

3068 \$263.95

3065 Universal Tripod with 3066 Fluid Head 613.95

3069 Universal Tripod with 3066 Fluid Head and 3067 Dolly 832.95

3118 Universal Tripod with 3063 Mini Fluid Head 393.95

3061 Heavy-Duty Cine/Video Tripod Ideal field tripod. Closed length is only 37 1/2", extends to a full 63". It can be set as low as 12". With its built-in claw ball, the camera head can be leveled quickly under all use conditions. The Heavy-Duty Tripod weighs just 17 lbs. 2 oz.

3061 \$317.95

3062 Heavy-Duty Cine/Video Tripod with 3066 Fluid Head 665.95

3064 Heavy-Duty Cine/Video Tripod, with 3066 Fluid Head and 3067 Dolly 886.95

Dollies

Deluxe Cine/Video Dolly Designed specifically for use with the Universal and Heavy-Duty Tripods. Individually braked wheels measuring 5" in diameter, and a unique leg locking system make it easy to assemble and disassemble for transporting. The tripod legs are captured in a 38" diameter circle and the doorway clearance needed for the fully assembled dolly is only 39 1/2".

3067 \$220.95

Portable Video Dolly Features sure-lock no rock system. Heavy-duty quick fastening rubber straps hold tripod in place. 20" radius, folds to a compact 22 1/2".

3127 \$79.95

Variable Leg Spread Dolly Has a special feature that allows you to adjust the radius from a max of 20" to as little as 12 1/2".

3137 \$97.95

Auto Dollies When you depress the centrally located foot pedal of either the Auto Dolly or the Folding Auto Dolly, you release all three wheels. When you lift the pedal, cam action raises the wheels free of the ground and the weight of the dolly and tripod rest on separate feet.

- The Auto Dolly weighs 6 lbs.
- Incorporates Shepherd Casters, and is easily assembled
- Spread from center to tripod leg socket is 18 1/2"
- The Folding Auto Dolly features 3" wheels • Weighs 9 3/4 lbs.
- Spread from center to tripod leg socket is 20"
- Folds to a compact 29"

On either dolly, mounting and dismounting the tripod is accomplished by cam operated kick-locks.

3056 Auto Dolly \$128.95

3156 Folding Auto Dolly 167.95

3254 8lack Folding Auto Dolly 185.95

BOGEN PHOTO CORP.

Light Stands/Accessories

3079 Super Stand

The bigger your light, the more you need this strong, tall, stable stand. Made of aluminum, it's comparatively lightweight (slightly over 15 1/2 lbs.), yet will support large lighting units such as movie and TV floodlights, including 228mm sockets. Full extension is just under 12'. Standard 5/8" stud and 1/4-20 adaptor to take strobes, smaller professional Q.H. lights, and other lights. Clamp-on leveller can be ordered which keeps the Super Stand on an even footing, when the terrain isn't. For indoor use, there's an accessory set of 100mm casters.

- Closed length: 55.9" • Minimum elevation: 56.3" • Max. elevation: 143.3" • Diameter of base: 64.5" • Legs are 30mm diameter aluminum
- Sections are respectively, 50, 40, 30mm
- 3079** **\$240.00**

Accessories

- Extension Leveller** • 22mm diameter tube which clamps on to one of the legs of the Super Stand • Provides a 15" (40cm) range of adjustment so that the center column of the stand can be kept level on uneven ground.
- 3080** **\$51.00**
- Caster Set** • 100mm (3.9") diameter casters • Provides easier movement when the stand is used indoors.
- 3081** **\$40.00**

Cine Stands

Designed to hold heavy lights, reflectors and scrims. The Wind-up 2 and Wind-up 3, Cine and Cine 3 Stands, as well as the Super Stand all accept 1 1/8" (28mm) bushings and supplied with adaptors for 5/8" (16mm) and 1/2" female yoke sockets. The Tall Cine accepts 5/8" bushings and female yoke sockets.

345 Three Section Light Stand

• Extends to 13' • Closes down to 41 1/2" • Weighs 6 lbs. 4 oz. • Will support any of four Monolite units or lights of comparable weight • The 345 comes with Shepherd casters • Mounting stud is 5/8" for standard studio strobes with 1/4-20 thread adaptor.
- 3082 (345)** 13' light stand with casters . . **\$130.00**
- 3365** Same as above in black anodized finish **139.95**

251 The Workhorse for Portable Strobe and Q.H. Lighting

• Stable 8' stand • Weighs under 2 1/4 lbs. • Closed length is 34 1/4" • Mounting stud is 5/8" for standard studio lights with 1/4-20 thread adaptor • 42" diameter legs spread
- 3086 (251)** 8' light stand with 1/4-20 stud **\$59.95**
- 3361** Same as above in black anodized finish **63.95**
- 3088** Shepherd Casters, for use indoors . . . **30.50**

3089 Bantam Weight Stand

• 6' light stand • Lightweight for its size and relative sturdiness • For use with small strobes and quartz lighting units • Mounting stud is 5/8" diameter • Closed length is 24 3/4" • Minimum extension is 32" • Weight 2 lbs.
- 3089** **\$47.00**

Accessories

BOGNER BROADCAST EQUIPMENT CORP.

TV Broadcast Antennas

TV Transmitting Antennas (Low and Medium Power)

- Full broadcast quality and versatility
- Every unit fully tested
- Wide variety of standard patterns and gains

Bogner broadcast quality broadband slot antennas are designed for translator and low/medium power TV broadcasters. Bogner antennas are fully comparable in quality and versatility to the finest high-power antennas available to broadcasters today, but are substantially lower in cost. This is achieved through use of the inherently simple Bogner single slot per bay design, standardization of radiation patterns, and the utilization of modular construction and modern manufacturing techniques.

Antennas with any of twelve horizontal patterns, and a choice of vertical patterns, gains, and power input ratings up to 10kW, can be delivered in a very short period of time after order. These antennas are available for any High VHF (Band III) channel up to 8MHz wide (between 170 and 230MHz); for any one, or for any group of contiguous, UHF (Bands IV and V) channels up to 30MHz wide (between 470 and 890MHz); or for any SHF group up to 42MHz wide (1990 to 2700MHz).

MDS 2150 to 2163MHz Band, O and A Patterns

(other directional patterns 25% additional)

Model	Price
B4SO, B4SA	\$ 3,950.00

Terminal Equipment

T518 Series Video and Pulse Distribution Amplifier

• Extremely high performance • High density packaging • Central power supply or self powered • HDTV bandwidth achievable • Optional plug-in cable equalizer • Compatible with pulse, composite, RGB and subcarrier signals • Differential inputs • Desktop versions available

The T518 offers an extremely high performance means of distributing composite video, pulse, RGB and subcarrier signals.

The series offer plug-in equalizer functions to compensate for cable lengths of up to 150m with front panel HF and LF gain adjustment.

High density packaging enables the use of up to 14, 6 output T518 VDAs into a 19" 3 "U" rack frame powered by a central bulk unregulated power supply of ± 15V at 2.5A each and comprising independent regulation.

ADT557 Audio Distribution Amplifier

• 10 electronically balanced isolated outputs • Transformer coupled balanced input • Front panel access to gain adjustment • Harmonic distortion 0.03% at 0dB • Up to 14 modules in 19" rack width

Designed as a low cost high performance ADA the ADT557 provides 10 electronically balanced isolated outputs from a transformer coupled balanced input in only 25mm (5E) of rack width.

Each ADT557 contains on-board regulators with front panel indication of power as well as access to a gain adjustment control.

Constructed on the industry standard extended Eurocard format, this module is fully rack compatible with other units in the Brabury range and may be used in the CFT 170, CRT 175 Series or CFT 190 card frames.

Amplifiers

VDT518	Video and pulse distribution amplifier 6 output unsupported card	\$152.00
VDT518A	6 output VDA on 5E chassis	172.00
VDT518B	6 output VDA on 5E chassis with front panel access to equalizer adjustments	174.00
ADT557	10 output ADA unsupported Eurocard	164.00
ADT557A	10 output ADA on 5E chassis	202.00

Card Frames for T518 Series and ADT557

CFT170	3RU high 84E wide card frame for up to 14 x 5E modules + PST600 PSU	\$130.00
CFT175	20E wide portable card frame	193.00
CFT176	40E wide portable card frame	210.00
CFT177	60E wide portable card frame	228.00
CFT190	1RU spacesaver housing with integral PSU for up to 3xEurocard modules	441.00

Power Supplies for T518 Series and ADT557

PST600	14E wide ± 15V, 2.5A bulk PSU for CFT 170 card frame	\$251.00
PST625	10E wide bulk PSU for use with CFT 175 and CFT 176 portable frame	251.00
PST626	15E wide bulk PSU for use with CFT 177 portable frame	251.00

Termination Panels

TPT604	Termination panel for PST600.	\$104.00
TPT640	Termination panel for PST625.	104.00
TPT641	Termination panel for PST626.	104.00
TPT558	ADT557 rear connector assembly for use in CFT 170 card frame	104.00
TPT521	ADT557 rear connector assembly for use in CFT 175 series portable card frame.	104.00
TPT549	ADT557 rear connector assembly for use in CFT 190 "Spacesaver" card frame.	104.00
TPT519	Termination panel for VDT518A or B when used in CFT 170 frame	80.00
TPT520	Termination panel for VDT518A or B when used in portable card frames	104.00
TPT548	Termination panel for VDT518 when used in CFT 190 spacesaver frame	80.00
TPT516	Termination panel for DLT 594 when used in CFT 170 frame	76.00

T518

TPT591	Termination panel for DLT594 when used in CFT 175/6/7 portable frames	\$62.00
TPT559	Termination panel for DLT594 when used in CFT 190 "Spacesaver" frame	62.00

Equalizers for T518 Series

EQT593A	For 0-30m, of PSF 1/7m cable	\$70.00
EQT593B	For 30-65m of PSF 1/7m cable.	70.00
EQT593C	For 0-25m of PSF 1/3m cable.	70.00
EQT593D	For 25-60m of PSF 1/3m cable.	70.00
EQT593E	For 60-90m of PSF 1/3m cable.	70.00
EQT593F	For 0-75m of PSF 1/2m cable.	70.00
EQT593G	For 75-150m of PSF 1/2m cable	70.00

(If uncertain, specify cable length and type when ordering)

Delay Modules for T518 Series

DLT594	5E wide delay module without delay blocks appropriate for use with Matthey or balanced components	\$124.00
DLT594-195	Delay block of 195ns tappable	90.00
DLT594-200	Delay block of 200ns fixed.	94.00
DLT594-500	Delay block of 500ns fixed.	156.00

Blank Panels for T518 Series

BPT595A	5E wide blank panel.	\$14.40
BPT595B	7E wide blank panel.	17.80
BPT595C	10E wide blank panel.	18.40
BPT595D	14E wide blank panel.	21.00

CFT 190

CFT 190 Spacesaver Eurocard Housing

• Designed as an economic solution to the requirement for a compact and yet flexible packaging system for Eurocard modules and their associated back connector assemblies • Frequently no need for complete 3U rack frame systems where space is a limiting factor or distribution needs are minimal.

The CFT 190 comprises a 1RU chassis and PSU with a removable front panel offering access to 3 Eurocard slots into which any of the Brabury modules may be slotted. Similarly the rear termination assemblies are fitted as required in any of the 3 positions behind the appropriate Eurocard module.

Cards currently available for use in the CFT 190 are as follows:

VDT518 6 output unsupported VDA modules; ADT557 10 output unsupported ADA module; *CMT599 Unsupported analog to component matrix module; TPT548 VDT518 VDA termination panel; TPT549 ADT557 ADA termination panel; TPT596 CMT599 matrix termination panel

*These modules may be configured to suit the application. Four options are available as standard options although other requirements may be accommodated on request.

BRABURY LTD.

Terminal Equipment

CMT599

CMT599 Analog — Component Matrix

- Conversion between R,G,B and Y, R-Y, B-Y (and vice-versa) • Variable configurations and signal amplitudes • External syncs or syncs from Y
- Composite or non-composite outputs

The CMT599 has been designed to satisfy a growing need to accurately convert between R,G,B and Y, R-Y, B-Y component video signals.

Tests have shown that, when working in the analog component domain, relative color channel gain errors as little as 0.1dB are noticeable. The CMT599 has a matrixing accuracy of >0.05dB.

The unit is constructed using the industry standard Eurocard format and is chassis compatible with other units in the Brabury range.

CMT599	2 output per channel unsupported Eurocard matrix.	\$631.00
CMT599A	5E wide 2 output per channel matrix card.	669.00
CMT599B	10E wide 2 output per channel matrix card for use with TPT523.	671.00

(Please specify required configuration for matrix when ordering)

Termination Panels

TPT522	5E wide termination panel for use with CMT599A when used in CRT175/6/7 portable rack frames	\$ 84.00
TPT523	10E wide termination panel for CMT599B when used in CFT175/6/7 portable rack frames	156.00
TPT597	5E wide termination panel for CMT599A when used in CFT170 3RU card frame84.00
TPT598	10E wide termination panel for CMT599B when used in CFT170 3RU card frame	156.00
TPT596	Termination panel for CFT599 when used in CFT190 "Spacesaver" card frame.84.00

Card Frames

CFT170	3RU high 84E wide card frame for up to 14 X5E modules plus PST600 PSU	\$130.00
CFT175	20E wide portable card frame	193.00
CFT176	40E wide portable card frame	210.00
CFT177	60E wide portable card frame.	228.00
CFT190	1RU "Spacesaver" housing with Integral PSU for 3x Eurocard modules	441.00

Power Supplies

PST600	14E wide ± 15V, 2.5A bulk PSU for CFT170 card frame	\$251.00
PST625	10E wide bulk PSU for use with CFT175/6 portable frames	251.00
PST626	15E wide bulk PSU for use with CFT177 portable frame	251.00

CFT175 Series Portable Eurocard Housing

- Portable, lightweight and rugged • Appropriate for any Brabury Eurocard module • Available in 3 sizes • Simple modular construction

The CFT175 series has been developed primarily to provide a flexible, portable means of distributing video and/or audio signals in the ENG/EFP/Desktop environments.

CFT175

The range comprises three rugged case sizes equipped with Eurocard frames appropriate to accept the Brabury ADT557 ADA and the VDT518 VDA, complete with accompanying termination panels and a common central power supply.

The modular nature of the system also facilitates the insertion of other Brabury Eurocard modules currently available (CMT599 analog-component matrix), or yet to be introduced.

CFT175	20E wide portable card frame	\$193.00
CFT176	40E wide portable card frame	210.00
CFT177	60E wide portable card frame.	228.00

Power Supplies

PST625	10E wide bulk PSU for use with CFT175/6 portable frames	\$251.00

TPT521	Termination panel for use with ADT557 when used in portable system	104.00
TPT522	Termination panel 5E wide for use with CMT599A in portable system (1 output per channel only)84.00
TPT523	Termination panel 10E wide for use with CMT599B in portable system (2 outputs per channel)	156.00

T115/123

T115/123 Script Lighting

- Controls light beam width and positioning • No special fixings required
- Three sizes available • Ease of tube replacement • Designed to provide lighting in studio and OB operational areas

The 115 generates an adjustable light beam which may be directed onto control desks and equipment racks and minimizes the effect of light scatter on surrounding monitor displays.

The 123 offers a similar facility but may be fitted flush with solid ceilings where no roof void exists and comprises a row of fins on each hinged cowling, thus enhancing the reduced light scatter effect.

115A	2'	\$361.00
115B	3'	375.00
115C	4'	391.00
123	4' webbed aperture	351.00

PORTABLE/LOCATION LIGHTING

MINI-FILL-F

The FREZZOLINI® Mini-Fill lights are used as "on board" camera lights.

UNIQUE MINI-FILL FEATURES

- Extremely lightweight—only 12 oz.
- Compact size 2" x 4 1/4"
- Operates from any 12–14.4 or 30V battery
- Utilizes the latest high efficiency multi-mirror lamps—(20-100W)
- Completely serviceable
- Field tested
- Field proven
- Mounts on camera, pistol grip or lightstand
- Dual-lighthouse configuration from one power source
- Rugged construction—Built by Frezzolini—The world leader in portable lighting and power

YOUR CHOICE OF POWER CONNECTOR

- A** Frezzi Amp Connector
B 2-Pin Amphenol (30V)
C BP-90 In-Line
D Cigarette Lighter Type
E XLR (4 or 5 Pin)
- Shown with convenient flip-up dichroic filter model MFDF-F and diffused front surface.

SINGLE LIGHT CONFIGURATION (Including 100W or 75W Bulb)

- MF12P-F** Mini-Fill w/Cigarette Lighter plug (Fig. D) **\$149.95**
- MF12C-F** Mini-Fill w/BP-90-F Type Co-Ax Plug (Fig. C) **149.95**
- MF12V-F** Mini-Fill w/Frezzi Amp Connector (Fig. A) **149.95**
- MFSV-F** Mini-Fill w/Short (18") Cable & Amp Connector (Fig. A) **149.95**
- MF4X-F** Mini-Fill w/XLR-4-F Connector (Fig. E) **149.95**
- MF5X-F** Mini-Fill w/XLR-5-F Connector (Fig. E) **149.95**
- MF30-F** Mini-Fill w/2-pin Amphenol Connector for 30V Operation (Includes 80W Bulb) (Fig. B) **154.95**

DUAL LIGHT CONFIGURATION

- DMF12-F** Twin Mini-Fill Interconnected for Power from one (1) Source. Choice of Power Connectors: Sony BP-90-F In-Line, Frezzi-Amp, XLR-4-F or Cigarette Lighter Type **\$295.00**
- DMF30-F** Same as DMF12-F Except Wired for 30V Operation. Including 2-Pin Amphenol Connector **\$298.00**
- MFDF-F** Mini-Fill "Flip-Up" Dichroic Filter **88.00**
- MFCC-F** Mini-Fill Carrying Case **80.00**
- LP90-F** Leather Pouch w/Belt Loops for BP-90-F **38.00**
- LPS100-F** AC Adaptor/Power Supply, 100W w/Cigarette Lighter Type Mating Connector **195.00**
- LPS400-F** 4-Channel AC Adaptor/Power Supply, 400W w/XLR4-F Connector Output **295.00**
- FLLS-102-F** Mini-Fill Short Stand **36.00**
- CLPA-F** On-Camera Power Adaptor (XLP-4-F) **125.00**
- 1340-A-F** Replacement Socket and Base Plate **25.00**

FREZZI™ HIGH CAPACITY 6AH MULTI-PURPOSE POWER BELTS

- Features:**
- High capacity—full 6AH (at 6A discharge rate)
 - Batteries housed in rugged aluminum cassettes mounted on a genuine leather belt
 - Built-in overnight (14 hrs.) charger
 - Fast charge (1 hr.) capability with Model BC-77U charger
 - Fuse & thermal protection
 - Low belt profile—only 4" wide
- Model F-12-EXFA-F Model F-12-77
- 12.0V at 6AH • ± 6.0V at 6AH
 - Standard five (5)-pin XLR • HL-77 connector connector • Weight 8 lbs.
 - Weight 8 lbs. \$475.00 \$475.00
- Model F-14-EXFA-F
- 14.4V at 6AH
 - Four (4)-pin XLR connector
 - Weight 8.5 lbs. \$495.00

FREZZI POWER BELTS FOR 30V SUN GUN 30VDC OPERATION WITH FREZZI F-30-EC-F AND F-30-EXFA-F HIGH-CAPACITY BATTERY BELTS

- Full 4AH capacity using selected NiCad cells
 - Operates 30V 250W DYG lamp for 30 minutes
 - Batteries housed in rugged aluminum cassettes which are mounted on a genuine leather belt
 - Built-in overnight charger (14 hrs.)
 - F-30-EXFA-F has fast-charge capability (1 hr.) w/ optional Frezzi BC-30D-F fast charger
 - Fuse and circuit-breaker protection
 - Weight: 10 lbs.
- Model F-30-EC-F \$595.00

BATTERY PACKS

FREZZI ON-BOARD™ BATTERY PACKS

- "Superior To Camera-Manufacturer Supplied"
- Extended life with no memory
 - Battery mounts direct to camera-manufacturer-supplied Anton/Bauer bracket or optional Frezzolini® camera battery mounting bracket
 - No cables or modification required
 - Full 4AH capacity—only premium selected NiCad cells used
 - Custom-designed mounting brackets available
 - Rugged welded aluminum case
 - Lightweight 2AH models available
 - Internal fuse and thermal protection—internal spare fuse included for field replacement
 - Complete charge compatibility with camera-factory-supplied charge systems, or Frezzolini fast, overnight or multiple battery chargers available

Frezzi On-Board BP-12-F 4AH, 12V	\$455.00

CHARGERS

FREZZI SINGLE-BATTERY UNIVERSAL FAST CHARGERS MODEL BC-77U/MODEL BC-77UB SINGLE-BATTERY UNIVERSAL FAST CHARGERS

General:
 The line of Frezzolini Universal fast chargers were specifically designed to fast charge (1 hr.) all models of Frezzolini 12V and 14.4V 2—6AH battery packs. The Frezzi chargers also have the capability to safely fast charge Anton/Bauer 12V and 14.4V NiCad on-board battery packs. All chargers are transformer-type line-isolated and designed per European IEC-65 safety code specifications. The chargers are constructed of heavy-gauge aluminum in a compact size to withstand abuse in the field. The universal feature of this charger enables operation anywhere in the world.

Model BC-77U/BC-77UB-F \$395.00
 Model BC-30D-F (for use with 30V batteries with fast charge capability) 395.00

FREZZI MULTIPLE BATTERY CHARGING STATIONS "We custom-design per your specific charging requirements"

MBC-2-F (All Feature Model)
 Fast-charges five (5) Frezzolini or Anton/Bauer 12-14.4V NiCad battery packs in less than one (1) hour while simultaneously charging eight (8) additional Frezzolini, Sony, JVC or Panasonic VTR battery packs overnight. Universal AC inputs. Deluxe shipping case available. Weight: 45 lbs.

MBC-2-F \$2400.00
 MBC-4-F

Fast charges (1 hr.) five (5) Frezzolini or Anton/Bauer 12-14.4V NiCad battery packs while simultaneously charging eight additional Sony BP-90 type battery packs in 14 hours. Universal AC inputs. Deluxe shipping case available. Weight: 45 lbs.

MBC-4-F \$2090.00
 MBC-4A-F

Fast charges (5) Frezzolini or Anton/Bauer 12-14.4V battery packs. Weight: 43 lbs.

MBC-4A-F \$1595.00
 MBC-5-F, Charges Eight (8) BP-90

- Type Batteries Simultaneously
- Universal AC inputs
 - Compact size
 - Line-isolated
 - Current-sensing LED's
 - Other models available for all VTR or camera battery packs

Charge eight (8) BP-90 type battery packs simultaneously in 14 hours with MBC-5 Charging Station. Universal AC inputs. Weight: 8 lbs.

MBC-5-F \$495.00
 Overnight Trickle Chargers

- Fully charges battery packs in 14 hours
 - Switchable 115-230VAC 50/60Hz input
 - Miniature size
 - Transformer-type line-isolated
 - Current-sensing LED
- Model FTC-12/13/14-F (For BP-12/13/14-F) Fig. B \$80.00
 Model FTC-122/132/142-F (For BP-122/132/142-F) 90.00

CHARGERS/POWER SUPPLIES

FREZZI DUAL CHANNEL

AC ADAPTOR AND FAST CHARGER

The Frezzolini RPS-2-F Dual-Channel combination power supply/fast charger consists of two totally independent power sources. Each power source has the capability of either functioning as a precise regulated power supply for ENG Camera/VTR Power or switching over to a NiCad battery fast charger. Either one or two battery packs are simultaneously fast charged with automatic high-charge termination when the battery packs reach full charge.

Specifications

AC Input: 115/230VAC ± 10% 50/60Hz
Regulated DC Output: 13.25VDC (3.0A max. each channel)

Line Regulation: ± .05% for 10% line change
Load Regulation: ± .05% for 50% load change
Output Ripple: 5.0mV p-p maximum
Overload Protection: Automatic current limit/foldback

Fast Charge Time: 12.0V battery — 75 min.
14.4V battery — 180 min.

Size: 8 1/2" x 5" x 5 1/2"
Weight: 8.5 lbs.

RPS-2-F **\$895.00**

FREZZI ON-BOARD™ AC POWER SUPPLIES

MODELS RPS-3-F AND RPS-40-F

Ultra lightweight, compact size, mount directly to ENG/EPF professional TV cameras with on-board battery mounts. Replacing battery with either unit allows for "continuous" operation when 120 or 240VAC 50/60Hz is available. Easy voltage selection slide switch on unit. On-off lighted switch. Advanced switching design with full RFI/EMI suppression. Supplied as OEM and replacement equipment to major manufacturers.

Specifications

	RPS-3-F	RPS-40-F
Power:	50W	40W
Output Current:	4A max.	3A max.
Output Voltage:	13VDC nominal	
Output Ripple:	10mV typical	
Input Line Selection SW.:	120/240VAC 50/60Hz	
Line Regulation:	± 0.1% (10% line change)	
Load Regulation:	± 0.2% (50% load change)	
Current Limit:	Output protected and fully isolated	
Size:	5.0" x 4.0" x 3.4"	5.25" x 4.125" x 2.0"
Weight:	2.3 lbs.	1.8 lbs.
RPS-3-F	\$595.00	
RPS-40-F	545.00	

HMI DAYLIGHT LIGHTING

STRAND HMI lighting is a must for controlled daylight videography. HMI lamps incorporated in the fresnels give the same quality of light as found in the studio, only at 5400 kelvin instead of 3200 kelvin. If your production dictates a lot of quality daylight location work, HMI is the way to go.

GRIP EQUIPMENT

MATTHEWS GRIP EQUIPMENT

When your video or film production calls for grip equipment, Matthews has it! Call WBC for a complete Matthew's catalog.

Our LOW BOY KIT STAND (389780-MT) is our shortest stand measuring only 18" when extended. The LIGHTWEIGHT (387476-MT) KIT STAND is our most economically priced stand. It's light weight and small size make it ideal for the traveling location photographer. The LIGHT/MEDIUM (387483-MT) STAND is identical to the Light-weight except it has tubular legs making it more stable. The MEDIUM KIT STAND (387477-MT) has larger diameter tubing and heavier construction over all. The all new LIGHT/HEAVY STAND (387493-MT) has Beefy Baby risers with tubular legs. Casters are optional. While not as stable as the regular BEEFY BABY, it is lesser priced. BEEFY BABY STANDS Designed for use with baby lighting fixtures. These aluminum stands terminate in a 5/8" pin. The "Rocky Mountain" (R.M.) articulated leg adjusts to facilitate leveling on uneven terrain. PREMIE BABY STAND, the low boy version of the Beefy Baby Stand, the Premie Baby is designed for use with baby lighting fixtures. It terminates in a 5/8" pin. BABY/JUNIOR STANDS These stands are equipped with the new style caster wheels and terminate in a 5/8" pin. They are available in either double or triple riser configurations.

REFLECTOR (COMBO) AND LIGHT STANDS

Combo Reflector Stands are considered to be the standard type of stand for use with reflectors. The stand was originally designed for mobile or location production back when studios were just beginning to get away from the back lot concept. The Combo Stand features a three-leg base with a folding brace in each leg. The stand is portable, yet has enough heft to withstand a moderate gust of wind blowing against the reflector surface. The name "combo", an abbreviation for "combination", refers to the fact that the stands are used to support a variety of exterior lighting fixtures.

The Combo/Light Stands are available with a "Rocky Mountain" (RM) articulated leg which is adjustable to facilitate leveling on uneven terrain.

DOORWAY DOLLY-MT

As the name suggests, the Doorway Dolly was designed to be an inexpensive camera dolly narrow enough to fit through most standard doorways. Over the years, Doorway Dollies have been used not only for this purpose but also as efficient equipment transporters for camera cases, lighting fixtures, cable, etc.

Pneumatic tires are standard, but Doorway can be fitted with track wheels for use on straight dolly track.

Steering is accomplished by use of a pull handle (like a wagon). A new steering feature has been added which allows the operator to steer from on board the dolly. This is accomplished by inserting the pull handle through the push bar on dolly front.

The basic construction is a wooden platform attached to a steel tubing frame. The platform is fitted with a recessed camera tiedown and is carpeted for a non-slip, low maintenance surface. For extra low angles shots, the dolly can be inverted, thereby positioning the platform closer to the ground.

Additionally, the latest version of the Doorway Dolly includes the ability to extend the rear wheels outward in order to provide greater operating stability.

- 395000-MT DOORWAY DOLLY, Complete w/Push Bar Handles and Side Boards, 94 lb. \$1570.00

FOG AND SMOKE SYSTEMS

Rosco's Fog and Smoke system is specially designed for applications in theater, film, television and live entertainment. It has been thoroughly tested for both safety and effectiveness. The products listed here have been proven over thousands of hours of use throughout the entertainment industry. The Academy of Motion Picture Arts and Sciences noted this achievement by voting Rosco an Academy Award "for the development of an improved, non-toxic fluid."

Model 1500

Rosco's newest addition to its range of Fog/Smoke Machines provides the opportunity for high reliability and continuous production of dry smoke at a remarkably low price.

The Model 1500 features an external tank, allowing fluid to be pumped from any container, ranging from the standard one-liter bottle or a huge drum. This, plus some uniquely reliable components permits non-stop operation without interruptions for re-cycling or re-filling.

Features of the 1500 include continuously variable smoke control, allowing you to design the smoke effect you need, from wispy cigarette smoke to billowing clouds.

The machine's heat exchanger (the component that atomizes liquid into smoke) as well as its electrically-operated internal pump and the associated electronics package, are all state-of-the-art devices. The model 1500 comes equipped with a standard remote control module, 6' power cord, and instruction manual.

- 150010-R Model 1500 \$695.00
150050-R Carrying Case 235.00
150060-R Super Remote Control 124.95

150085-R 50' Remote Extension 55.00
150086-R 100' Remote Extension 65.00

Standard Fog/Smoke Fluid

Rosco's Fog/Smoke Fluid is the standard of the industry. Unlike the products used for this purpose previously, Rosco Fluid contains no petroleum. When vaporized, this unique formulation produces a dense, realistic smoke which is non-toxic and non-irritating. It has no unpleasant odor and leaves no slippery residue and will not irritate eyes, nose or throat. Gallons are packed two gallons per case.

- 820613-R Fog Fluid gallon \$ 49.00
820711-R Fog Fluid liter 12.95
820712-R Fog Fluid 24 liter-case 310.80

LTM MICROPHONE POLES

The LTM Microphone Poles are now being made of a new composite material, carbon and fiberglass, making the best microphone poles even better.

They are lighter, stronger, and extremely reliable. There is an access hole at the top if there is a need to run a wire inside the pole.

The new poles are manufactured in five sizes, ranging from 15" collapsed to 3'7" extended for the smallest pole, to 5'2" collapsed to 16'7" extended for the largest pole. The latter also has a 4'8" extension to make it a full 21'.

MAIN ENTRY POWER CONTROL BOX

Main power entry with CAM-LOK connectors to 50A 240V, 3 phase/4 wire main breaker distributed to eight 20A breaker/switches protecting two each 20A recessed plugs all housed in an approved enclosure. Box is constructed from aluminum. 150 usable amps at 125V.
04439-WB Main Entry Power Control Box \$2300.00

Note: All Portable Distribution exposed cabling is of S.O. Standards (resists oil, water, etc.). Other wire types and configurations may be Custom Fabricated upon request. (All grounded wiring).

GAFFER SUPPLIES

THORN LAMPS

Thorn, an English corporation, is one of the world's largest manufacturers of quartz lamps. The CYX, one of the most used lamps in the industry, has a stronger base than those of competitors...made from super strong glass/mica plus a high temperature metal retaining clip assures maximum strength from the base to the quartz envelope. Lamp tests show they are 50% quieter and last up to 60% longer life at 3200K^o, 125V.

GAFFER SUPPLIES

Table with columns: ANSI Code, Case Qty., Watts, Color Temp., Cat. Price. Includes sub-section 'CONTINUED' and lists various gaffer supplies like EGG-WK, EGJ-GE, etc.

Table with columns: ANSI Code, Case Qty., Watts, Color Temp., Cat. Price. Lists various gaffer supplies like EXN-GE, EXT-TH, etc.

Table with columns: ANSI Code, Case Qty., Watts, Color Temp., Cat. Price. Lists various gaffer supplies like FFN-TH, FFP-GE, etc.

HMI LAMPS

Table with columns: ANSI Code, Case Qty., Watts, Color Temp., Price. Lists HMI lamp models like BA200-SY, BA575-SY, etc.

FLUORESCENT TUBES

Table with columns: Model, Case Qty., Watts, Color Temp., Price. Lists fluorescent tube models like T12-24-DT, T8-36-DT, etc.

ROSCOLUX

Rosco has been a leading producer and innovator of color filter products since early in the 20th century. Its premier range, Roscolux, is manufactured using a unique technology to insure the longest possible life under hot theatrical lights.

Table with 2 columns: Product Name and Price. Includes items like 880710-R Swatchbook and 881510-R Roscolux Designer Color Selector.

Large table listing Roscolux color selector items with columns for product name, color, and price. Includes items like 1001-R Lt. Bastard Amber and 1052-R Light Lavender.

DAYLIGHT CONVERSION FILTERS

RoscoSun Daylight Conversion Filters are used when shooting in an interior at a 3200°K balance. They are required at windows or other openings to convert incident daylight to an approximation of 3200°K.

Table listing Daylight Conversion Filters with columns for product name, description, and price. Includes items like 3401-R RoscoSun 85 Converts 5500°K daylight to a nominal 3200°K.

NEUTRAL DENSITY FILTERS

RoscoSun Neutral Density Filters reduce the level of incident daylight. Two of the materials also convert daylight to a nominal 3200°K.

Table listing Neutral Density Filters with columns for product name, description, and price. Includes items like 3402-R RoscoSun N3 Reduces light intensity one stop.

TUNGSTEN CONVERSION FILTERS

Rosco Tungsten Conversion Filters convert incandescent 3200° Kelvin sources to nominal daylight. These filters offer a deep-dyed base for optical clarity and high heat stability.

Table listing Tungsten Conversion Filters with columns for product name, description, and price. Includes items like 3202-R Full Blue (CTB) Boosts 3200°K to nominal 5500°K daylight.

For Cinegel rolls, add 13 to product number. Form Cinegel sheets add 11 to product number.

CINEGAL SELECTOR

Table listing Cinegal Selector items with columns for product name and price. Includes 880910-R Large Size Cinegel (3 1/4" x 6") Swatchbook.

DIFFUSION MATERIAL

Table listing Diffusion Material items with columns for product name, description, and price. Includes 3006-R Tough Spun, 4 1/2" x 22' Roll.

PAINT

Table listing Paint items with columns for product name, description, and price. Includes 5710-R Chroma Key Blue (gal.).

TAPE

(2" x 60 yds. — 24 Rolls Per Case)

DUCT TAPE

Table listing Duct Tape items with columns for product name, description, and price. Includes 3988L-WB Black and 3988R-WB Gray.

(2" x 60 yds — 24 Rolls Per Case)

Table listing Duct Tape items with columns for product name, description, and price. Includes 398-BL-WB Black, 398GR-WB Gray, and 398-CLR-WB Red, Green, Blue, Gold, Yellow, and White.

(2" x 60 yds. — Per Roll)

CAMERA TAPE

Table listing Camera Tape items with columns for product name, description, and price. Includes 1" x 60 yds. — Per Roll.

GAFFERS TAPE

Table listing Gaffers Tape items with columns for product name, description, and price. Includes PC-628-WB Gray, Black, White, Red, Yellow, Blue and Olive Drab.

(2" x 60 yds. — Per Roll)

DOUBLE SIDED TAPE

TC-19-100WB 2" x 36 yds. \$13.50

PAPER STRIPPING/CODING TAPE

546-WB 1" x 60 yds. Red, Green, Yellow, Black, and White \$3.00

GLOW TAPE

GLO-WB 1" x 10 yds. Yellow Glow (Variable widths available) (5 roll minimum) \$25.00

FILAMENT SHIPPING TAPE

410-WB 3/4" x 60 yds. \$2.00

REINFORCED PAPER

SHIPPING TAPE

Table listing Shipping Tape items with columns for product name, description, and price. Includes 653-WB 3" x 500' Brown and 630-WB 3" x 500' White.

CURTAINS, TRACK & ACCESSORIES

CURTAINS

—CYC

Cyclorama curtains are seamless up to 125' in length and 28' in height. The cloth is inspected before fabrication to assure against weaving flaws and sewn to our rigid specifications.

SEAMLESS LINO-WEAVE

This curtain has a 4" heavy-duty binding at the top with spring harness snaps on one foot centers. The 2 3/4" bottom hem has a #90 lead tape weight sewn 1" above the bottom of the hem in a separate muslin pocket.

Table listing Seamless Lino-Weave items with columns for product name, description, and price. Includes 07005-WB White, 07006-WB CBS Gray, and 07007-WB Powder Blue.

SEAMLESS SCRIM

Table listing Seamless Scrim items with columns for product name, description, and price. Includes 07038-WB White and 07039-WB Black.

TAUTING POLE

Tauting poles are used generally with the CYC curtain to assure proper vertical tension on the cyclorama. They stand vertical at both ends of the CYC with adjustable claws attached through the vertical eyelet on the curtain.

Table listing Tauting Pole items with columns for product name, description, and price. Includes 07013-WB Tauting Pole Base, 07014-WB (8') Tauting Pole, 07015-WB (9') Tauting Pole, 07016-WB (10') Tauting Pole, 07017-WB (11') Tauting Pole, 07018-WB (12') Tauting Pole, 07019-WB (13') Tauting Pole, and 07020-WB (14') Tauting Pole.

STUDIO DISTRIBUTION

CONTINUED

any possible situation, standard 18" or 24" pigtail with connector of your choice. A unique four circuit cyc box for powering your cyc lights. Unit available completely assembled including 1 1/2" ID pipe (not included in price below) ready to hang...saving time and cost at installation. Comes primed and painted with 3" permanent decal assuring circuit identification from the control console.

GRID CONNECTOR STRIPS

05015-WB	
10' Strip, 4 20A * Pigtails	\$439.50
05018-WB	
13' Strip, 5 20A * Pigtails	543.25
05021-WB	
16' Strip, 6 20A * Pigtails	672.00

Other Configurations Available
Price on Application

*Add \$16.00 per Circuit for 20A NEMA Twist Lock.

Add \$10.50 per circuit for Parallel Blade "U" Ground

Note: Price for Connector Strip Bracket Assemblies, Single Pipe are included in price of Connector Strip and are completely assembled ready to install. They are shipped in a wooden crate, price included.

WALL BOXES

Fabricated to the high standards of the above mentioned connector strip with desired number of circuits and ampacity. Ready for wall or pipe mounting.

05310-WB	
Two Pigtails, 2-20A	\$112.00
05315-WB	
Three Pigtails, 2-20A, 1-50A	161.50
05311-WB	
Three Pigtails, 3-20A	150.00

Other Configurations Available
Price on Application

Replacement 3", 3 color circuit numbers **.50**

GRID HARDWARE

All hardware may be purchased to suspend the complete lighting grid system. Included would be load channel, for ceiling mounting positions, all thread, required nuts and bolts, beam clamps, concrete anchors, grid hardware and pipe cut to length.

05107-WB LIGHT PIPE **ft./\$2.80**

The heart of good lighting is the grid system. It is very important to use 1 1/2" ID light pipe.

05194-WB LIGHT PIPE Handling Charge **ft./\$.15**

05109-WB GRID LOCK **\$13.00**

Used to fasten perpendicular 1 1/2" ID light pipe together when constructing a grid. Also used for movable light pipe to place a light at any position in the grid. The grid lock will not let the pipe torque.

05113-WB	Beam clamp 3/8", attaches "Load Channel" to most types of angle iron, such as truss deck beams	\$6.25
05114-WB	Bolt Assembly 3/8", attaches "Load Channel" (as above) when slots are provided by truss deck beams (money savings)	.80
05115-WB	Sleeve Anchor 3/8" (for low PSI density concrete ceiling and floors)	.80
05116-WB	Wedge Anchor 3/8" (for high PSI density concrete ceiling and floors)	2.00
05117-WB	Toggle bolt 3/8" assembly for hollow wall	\$1.00
05118-WB	Load Channel, slotted sections, 20' x 1 5/8" x 1 5/8", 12 gauge	82.00
05112-WB	Load Channel Splicing Clamp	10.00
05119-WB	All Thread Suspension Rod, 3/8" x 12' plated	7.50
05120-WB	Locking Spring Nut	1.25
05121-WB	Square Locking Washer	1.10
05122-WB	Hex Head Nut, 3/8"	.10
05123-WB	Flat Washer, 3/8"	.10
05124-WB	Lock Washer, 3/8"	.05
05125-WB	Connector Strip Bracket Assembly, Single Pipe	25.00
05126-WB	Connector Strip Bracket Assembly, Double Pipe	31.50
05191-WB	Corner 90° Cyc Light Pipe, 4 1/2' radius, 1 1/2" ID Slip Couplings — both ends	90.00
05192-WB	Pipe Cuts, 1 1/2" ID	1.75
05193-WB	Pipe Threads, 1 1/2" ID	6.00
05195-WB	Light Pipe Coupling	4.00
05196-WB	Light Pipe Wall Flange, 1 1/2" ID	12.95
05197-WB	Movable Light Pipe, 6' x 1 1/2" ID	18.00
05198-WB	Light Pipe end plug 1 1/2" ID	1.75
05109-WB	Grid Locks, 1 1/2" x 1 1/2" for Movable Light Pipe	13.00

STUDIO LADDERS

Designed to meet or exceed all safety standards. These ladders are manufactured to work to grid height providing a 6' reach from ladder platform to grid with a 30" safety rail. The ladder is fabricated from 1" square tubing with all joints welded. Gaffers storage chest and basket for extension cables and other frequently used studio equipment are recommended. The large casters are rubber with toe touch locking. A second ladder is recommended for larger studios. Finished with two coats of durable enamel.

09210-WB	Studio Ladder for 8' Grid	\$ 720.00
09211-WB	Studio Ladder for 9' Grid	785.00
09212-WB	Studio Ladder for 10' Grid	840.00
09213-WB	Studio Ladder for 11' Grid	910.00
09214-WB	Studio Ladder for 12' Grid	930.00
09215-WB	Studio Ladder for 13' Grid	995.00
09216-WB	Studio Ladder for 14' Grid	1050.00
09217-WB	Studio Ladder for 15' Grid	1120.00
09218-WB	Studio Ladder for 16' Grid	1145.00
09219-WB	Studio Ladder for 17' Grid	1200.00
09220-WB	Studio Ladder for 18' Grid	1270.00
09221-WB	Studio Ladder for 19' Grid	1335.00
09222-WB	Studio Ladder for 20' Grid	1400.00
09228-WB	Gaffers Basket	65.00
09229-WB	Gaffers Tool Box, Locking	275.00

LIGHTING CONTROL SYSTEM

DIMMER BANKS — PORTABLE

ALPHA DIM TO INCLUDE:

(For Portable/Location Use)

Alpha Dim 2.4kW portable dimmer with integral potentiometer is used to dim 2-1000W or 1-2000W fixtures. It is used in small studios or on location. A 10' low voltage cable with remote control can be purchased.

0600502-SL	Parallel Blade "U"	\$325.00
0600506-SL	Pin Plug	325.00
0600503-SL	Twist Lock	325.00
06006-SL	Remote Control Unit	B1.00

CD80 PACKS-SL

Designed for portable or wall-mounted use, these packs are available with analog or multiplex inputs in the following configurations: twenty-four 1.2KW dimmers, twelve 2.4KW dimmers, six 6.0KW dimmers and six 12.0KW dimmers. All have GR, GP, GTL or terminal strip outputs, Toroidal chokes, Terminal block phase change facility.

LIGHTING CONTROL SYSTEM

CONTINUED

- 8124-SL 120V with 12.24kW dimmers, two 20A GTL receptacles per dimmer, 65 lb. **\$4035.00**
- 8125-SL 120V with 12.24kW dimmers, two 20A GP receptacles per dimmer, 65 lb. **4035.00**
- 8126-SL 120V with 12.24kW dimmers, two 20A GR receptacles per dimmer, 65 lb. **4035.00**
- 8127-SL 120V with 12.24kW dimmers, terminal strips for hard wiring, 65 lb. **4035.00**
- 8066-SL 120V with six 6kW dimmers, one 50A GTL receptacle per dimmer, one 50A test outlet, 65 lb. **4625.00**
- 8067-SL 120V with six 6kW dimmers, one 60A GP receptacle per dimmer, one 60A test outlet, 65 lb. **4625.00**
- 8068-SL 120V with six 6kW dimmers, terminal strip for hard wiring, 65 lb. **4625.00**
- 8063-SL 120V with six 12kW dimmers, one 100A GP receptacle per dimmer, one 100A test outlet, camlock plugs, 85 lb. **5510.00**
- 8064-SL 120V with six 12kW dimmers, terminal strip for hard wiring, 85 lb. **5310.00**
- 8124SA-SL 220/240V with 12 2.2kW dimmers, two 10A GTL receptacles per dimmer, 65 lb. **4230.00**
- 8125SA-SL 220/240V with 12 2.2kW dimmers, two 10A GP receptacles per dimmer **4230.00**

OPTIONAL EQUIPMENT FOR CD80 PACKS

- 8033-SL 18" Daisy Chain control for jumper cable **\$ 63.00**
- 8034-SL 72" Daisy Chain control jumper cable **72.00**
- 11052-10-SL Daisy Chain control jumper cable for 1.2kW packs only **68.00**
- 8179-SL Trouping Case for CD80 packs **790.00**
- 8127A-SL 220/240V with 12 2.2kW dimmers, terminal strips for hard wiring, 65 lb. **4085.00**
- 8066SA-SL 220/240V with six 6.6kW dimmers, one 30A GTL receptacle per dimmer, one 30A test outlet, 65 lb. **4895.00**

- 8068SA-SL 220/240V with six 6.6kW dimmers, terminal strip for hard wiring, 65 lb. **4895.00**

DIMMER BANKS Studio

CD80 DIMMER BANK AND MODULES-SL

With over 1000 permanent installations, this is the most successful dimmer ever produced. CD80 offers compact, high-density dimmer banks with dual 2.4kW, single 6.0kW and 12.0kW dimmer modules.

Dimmer Rack Features

- Extremely shallow —only 17 1/4" deep
- Up to 96 plug-in 2.4kW dimmers in 24 1/2" width
- Full-length guides and self-aligning dimmer connectors for positive dimmer alignment
- Only four modules controlled per driver card
- Equipped with quiet fans to maintain proper operating temperature
- Easy to install
- Easy to troubleshoot and maintain
- Optional "status quo" feature to maintain lighting output
- Optional "split rack" control

Dimmer Module Features

- Heavy-gauge aluminum chassis
- Heavy-duty, self-aligning power and control plugs
- Toroidal chokes
- Available for 220/240V operation
- Easy to service

Custom Built Price on Application

NEW CD80/8 DIMMERS-SL

- High-performance toroidal chokes for increased filtering
 - Reduced electrical noise in audible harmonic range
 - Enclosure is the same size as standard CD80 modules
- Custom Built Price on Application

CD80 ROLLING RACKS-SL

The reliability of CD80 in a touring rack.

Features

- Heavy-duty construction
- Compact design, up to 96.2kW dimmers per rack
- Camloc power connectors as standard
- Electronic cage easily accessible
- Wide variety of back panel configurations
- Optional internal patch panel and main breaker
- Also available with CD80/8 modules

DC90 DIMMER SYSTEMS-SL

DC90 is a full-size dimmer system that uses AC line power, and produces DC output to the connected load.

Features

- Available in full and half rack, standing and rolling configurations
 - Dimmer status feedback
 - Plug-in dimmers with self-aligning dimmer connectors
 - Superior cooling with vertical air plenums and fan arrays
 - Built-in boost capability
 - Dual 2.4kW, 6.0kW and 12kW dimmer sizes
 - AC modules and non-dims also available
- Custom Built Prices on Application

QUAD DIMMER SYSTEM-EC/SL

Available in four heights (43", 59", 76", 85") DCF Cabinets provide independent ventilation for each dimmer, thus preventing cross-temperature effect and increasing dimmer life. Standard 19" EIA. Dimmers are available in 10, 20, 50, 60 and 100A ratings. Contractor access is assured by removable panels on all faces.
Custom Built Prices on Application

Studio dimmer racks are modular to simplify installation. This system is complete with needed dimmer plug-in modules, wiring, breakers and all other components ready to be set in its permanent location.

NOTE: SUPPRESSION OF RADIO FREQUENCY INTERFERENCE IN DIMMERS

SCR dimmers utilize rapid switching of electrical current for effective dimming. This rapid switching creates radio frequency interference (RFI) that causes "noise" problems in audio systems. All well-designed dimmers contain choke coils to filter most of the RFI. There is confusion, however, about the best method to describe such filtering. A common approach is to quote a total rise time, which does not consider spikes. A more accurate approach is that proposed by Motorola Semiconductor Products in their article AN-295 on RFI suppression, wherein the rate of current rise is recommended to be less than 0.35A (350mA) per μ sec. All dimmers meet or exceed these recommendations.

CONTROL CONSOLES Manual

PRELUDE MANUAL PRESET CONTROL CONSOLE-EC/SL

Designed as a powerful basic console, perfect for portable use. Also ideal for auxiliary control in large systems and is compatible with most electronic dimmers.

Features

- 12 to 48 channels
- 2 scene configuration
- Selectable A/B/I per controller
- 4 submasters
- Split crossfader with separate times
- Timed independent master
- Time range: Manual to 6 minutes
- Grand master
- Blackout switch
- Variable bump level
- Real-time analog output
- Adjustable output-mates with many brands of dimmers

- 01-7810-12-SL Basic Module **\$1288.00**
- 01-7712-20-SL 12-Two scene expansion module **496.00**
- 01-7740-00-SL Patch module **1360.00**

Options Include

- Digital communications—superior protocol
- 12 channel effects module
- Operation light
- Key switch
- Auxiliary panel/houselights, etc.
- Digital output model offers these additional options
 - Full matrix, proportional patch module
 - Handheld focus control
 - Library storage of patch data
 - Printout of patch assignments
 - Video monitor of channel outputs

POA

CONTROL CONSOLES Manual/Memory/Patch

Mantrix 2S-SL

A classic in manual control systems, Mantrix 2S continues to meet the needs of an ever demanding industry, with switch-selectable four-scene preset or two-scene preset with overlapping submaster capability. Matrix 2S controls 288 dimmers on a maximum of 84 channels.

Features

- Electronic proportional patch
- 1 grand master and blackout switch
- 2 split crossfaders with rate control
- 8 overlapping submasters
- Modular construction for easy expansion and service

All prices include 25' control cable.

2 Scene preset console has up to 56 overlapping submasters.

8108-SL	36-Channel without Patch, 45 1/2" one-tier console	\$3420.00
8109-SL	48-Channel without Patch, 45 1/2" one-tier console	4050.00
8110-SL	12-Channel without Patch, 20 1/4" one-tier console	2070.00
8111-SL	12-Channel with Patch, 20 1/4" one-tier console	3150.00
8112-SL	24-Channel without Patch, 33 1/2" one-tier console	2700.00
8113-SL	24-Channel with Patch, 33 1/2" one-tier console	3780.00
8114-SL	36-Channel with Patch, 45 1/2" one-tier console	4500.00
8115-SL	48-Channel with Patch, 45 1/2" one-tier console	5130.00
8116-SL	36-Channel with Patch, 33 1/2" two-tier console	4950.00
8117-SL	48-Channel with Patch, 33 1/2" two-tier console	5580.00
8118-SL	60-Channel with Patch, 45 1/2" two-tier console	6300.00
8119-SL	72-Channel with Patch, 45 1/2" two-tier console	6930.00
8120-SL	84-Channel with Patch, 45 1/2" two-tier console	7560.00

MANTRIX 2S WITH MEMORY-SL

All prices include 25' control cable.

8181-SL	12-Channel, 33 1/2" one-tier console	\$ 8,186.00

MINI LIGHT PALETTE 2-SL

The next generation of mid-range console design, MLP/2 controls 384 dimmers on 200 channels, with 200 average cues, 100 groups and 100 effects.

Features

- Dual color high-resolution CRTs
- 10 submasters, pile-on or split, with bump buttons assignable individually or with recorded groups
- 3 playback faders
- Standard electronic or full tracking backup
- Support for optional hand held remote, desire remote and printer included as standard

Custom Built Price on Application

CELEBRITY-EC/SL

(For use with Custom Studio Dimmer Banks and the Playmate II Portable Dimmer Pack)

Modular celebrity comes in many different models; in single or two-tiered designs. (There's one perfect for you.) Either 24 or 48 celebrity Scene Masters can be configured with up to 96 control channels, and with patch, celebrity controls up to 512 dimmers. Controller comes with vinyl cover, 25' control cable, and 10' power cable.

7700-10-SL	Basic Celebrity Control Console, 24 Scene 12 Channel with operator's light	\$2600.00
7720-00-SL	24 Scene Master Expansion Module	756.00

7790-40-SL	Blank Plate	40.00
7791-10-SL	Wall Plug-in Box	60.00

LIGHTBOARD M-SL

A full memory system with modular two-scene preset feature, LBM combines the ease of memory control and flexibility of manual control. LBM controls 768 dimmers on 96 control channels, with 200 cues and FX memories.

Features

- Single high-resolution color CRT
- Up to 48 overlapping submasters, with bump buttons, assignable individually or in groups
- 1 electronic crossfader
- 2 timed/manual split crossfaders
- 2 independent FX memory playback faders
- 8 function keys to record a series of console actions for instantaneous playback. Accessible on the main console or remotely
- Support for optional hand held remote and printed included as standard

Custom Built Price on Application

CELEBRITY PLUS-EC/SL

Celebrity plus provides greatly enhanced memory capacity in an easy to use format. It can also be used with the celebrity, or as a stand-alone memory control. Celebrity plus offers access to 250 memory cues and 125 channels through autosequencing, by means of a split wheeled A/B crossfader and a single wheeled C/D crossfader. It may be installed initially, or added to your celebrity console. Celebrity plus is CRT compatible, displaying data updates in both "on-stage" and "pre-view" modes.

6780-25-SL	Basic celebrity plus Control Console, 125 Channels and 200 Cues	\$6199.00
6780-64-SL	Basic celebrity plus Control Console, 64 Channels and 250 Cues	6199.00
7740-00-SL	Patch Module	1360.00
7700-01	Single tier console stand with casters	1020.00
7750-00-SL	Tape Module Plus (10) Tapes	1195.00
7790-40-SL	Blank Plate	40.00
7791-10-SL	Wall Plug-in Box	60.00

STUDIO PACKAGES

IMPACT-SL

The newest addition to the Strand Lighting control line, Impact controls 960 dimmers on 350 channels, with over 400 average cues. Impact outputs AMX 192 or DMX 512 dimmer communications protocol and provides a LAN for system expansion.

- Single high-resolution color CRT
- 24 group masters, with bump buttons
- 2 independent electronic crossfaders
- 1 manual split crossfader
- Simultaneous cue sequences, with plus and minus cue ability on a single crossfader
- 100 "Super Cues" for immediate reloading all playback buffers
- Support for optional hand held remote, printer and full tracking backup included as standard
- A unique feature, "multi-view," for cue comparisons

Custom Built Prices on Application

LIGHT PALETTE 3-SL

The most respected name in lighting control, LP/3 controls 1536 dimmers on 800 channels, with 300 average cues, 100 groups and 100 effects.

- Dual color high-resolution CRTs
- Operator-selectable Q-only or track operation
- Variable number of submasters, up to 13
- Variable number of playback faders, up to 6
- Default fade time and profile
- Circuit/dimmer alpha labeling
- Full tracking backup available
- Support optional for hand held remote, designer's remote and printer included as standard

Custom Built Price on Application

PREMIERE-EC/SL

For the most sophisticated control. Ideal for large production studios where large lighting jobs have to be made manageable—fast. Up to 4000 2K or 5K dimmers patch to 500 channels with 2 to 4 color CRTs for the ultimate control available.

BILL OF MATERIALS

KEY AND BACK LIGHTS

- 30 1000 Watt 6" Sweep Focus Fresnel
- 18 2000 Watt 10" Focusing Fresnel

BASE AND FILL LIGHTS

- 10 1000/2000 Watt 14" Screw Focus Scoop
- 6 1500 Watt Focusing Broad
- 2 1000/4000 Watt Featherlite Super Softlight
- 16 Floor Adjustable Telescoping Hanger

CYCLORAMA, SET AND BACKGROUND LIGHTS

- 12 1000 Watt Two Light Two Circuit Cyc Light
- 6 1000 Watt Four Light Four Circuit Cyc Light

SPECIAL LIGHTS

- 2 1000 Watt 6" x 9" Ellipsoidal
 - 1 Porta Kit 4000
 - 3 Medium Duty High Riser Stand
 - 2 Heavy Duty Low Riser Stand
 - 6 Extension Cable (225')
 - 3 Male-Female Pigtail Adapter
 - 3 Power Box
 - 3 Inline 1000 Watt Dimmer
- Gaffers Tape, Diffusion Material, Gel Primaries

ELECTRICAL DISTRIBUTION

- 11 Connector Strips (109') with 44 - 20 Amp and 12 - Four Light Cyc Pigtail Receptacles
- 4 Wall Boxes with 8 - 20 Amp Pigtail Receptacles

LIGHTING GRID

- 203 feet 1 1/2" I.D. steel light pipe with beam clamps, load clamps, load channel, grid locks, bracket assemblies and other hardware as required for complete grid installation.

DIMMING EQUIPMENT

- 96 20 Amp QD Dimmers with SCR's, toroidal RFI filters and System Analysis Indicators

LIGHTING CONTROL

- 1 24 Channel Two Scene Preset PM Board with 96 x 24 low voltage patch.
- 2 Wall Mount Control Receptacles

CYCLORAMA AND CURTAINS

- 1 60' White Lino-weave 13' curtain
- 2 20' Chroma Key Blue Background 13' curtain
- 140 feet Curtain Track with 8 corners

Note: Cyclorama, Curtains and Double Track come complete with tauting poles and bases, sandbags, eyelet claws, velcro fasteners, carriers, brackets and clamps as required for complete track installation and operation.

GAFFER'S EQUIPMENT

- 1 Studio Ladder with Basket and Locking Tool Box
- 2 Footcandle Meter

Note: Lamps are included for all lighting instruments and fixtures. Spare lamps are not included. (Lamps are normally a supply item rather than a capital expenditure.)

For simplicity of illustration, cyclorama lights are not shown under grid pipes.

Refer to Green Section for Addresses and Telephone Numbers.

BROADCAST AUDIO CORP.**Audio Consoles****Series IV Broadcast Consoles**

All basic features, dimensions, and panel layouts of the System 16, 12 and 8 have been retained, so that virtually every new feature of the Series IV can be retrofitted to any Series II or UMC console manufactured by Broadcast Audio Corporation.

Operating Mode:	3 stereo outputs, plus mono/sum
Mixing Channels:	Up to 16 mixers, each with separate mono mike and stereo high level inputs. ± 10 dB gain trim switch for unusual input levels
Audio Inputs:	Up to 48 stereo inputs—3 inputs per mixer
Audio Outputs:	Total of 8—stereo Program, stereo Audition, stereo Utility, Mono/Sum, stereo Monitor, stereo Headphones, stereo Cue and stereo auxiliary (studio) Monitor. Program, Audition, and Utility outputs are +8dBm transformer balanced. Note: Utility output not available on System 8
Source Impedance:	Microphone—150 ohms transformer balanced and floating—input impedance 1500 ohms. Optional active balanced mike input. Line—20,000 ohms active balanced and floating. Output source impedance—150 ohms
Patch Points:	Prefader, with connectors on mixer motherboard. Connector also provided for phantom power supply
Remote Control:	Each mixer can be turned on/off with momentary contact to ground. Relays are assignable to any combination of mixers. Two 2-Form B (mute) Three Form C (start) on SYS 8; eight on SYS 12/16, momentary or maintained
Power:	105-125VAC, 50/60Hz, 250VA max. 210-250VAC, 50/60Hz optional
Size:	System 16—8.75" H x 44" W x 25" D System 8 and 12—8.75" H x 35" W x 25" D
Frequency Response:	Within ± 0.5 dB, 20-20,000Hz, all program and monitor circuits
Harmonic Distortion:	Less than 0.15% THD 20-20,000Hz at +8dBm output level. Less than 0.02% at 1,000Hz, +28dBm
Intermodulation Distortion:	Less than 0.03% SMPTE at +28dBm or below
Noise:	Mike inputs -125dBV equivalent input noise, 20-20,000Hz, unweighted, with -55dBV input level to one active mixer input. Line inputs -90dBm equivalent input noise, 20-20,000Hz, unweighted, with 0dBm level to one active mixer input
Crosstalk:	Better than 80dB between any adjacent program or cue bus, 20-15,000Hz
Gain:	Mike inputs 90dB nominal; Line inputs 38dB nominal for 0 VU output (+8dBm)
Monitor Outputs:	Stereo headphone—4V into 10 ohms; stereo cue—5W into 8 ohms; stereo control room and auxiliary monitor outputs—0.5V into 10K ohm load, unbalanced

System 16-IV Stereo Broadcast Console. Includes heavy-duty regulated power supply and 8 mixers, expandable to 16. Two muting and eight control relays. Walnut or oak trim \$11,350.00

System 12-IV Stereo Broadcast Console. Includes heavy-duty regulated power supply and 8 mixers, expandable to 12. Two muting and eight control relays. Walnut or oak trim \$10,250.00

System 8-IV Stereo Broadcast Console. Includes heavy-duty regulated power supply and 6 mixers, expandable to 8. Two muting and three control relays. Walnut or oak trim \$7,750.00

System 6-IV Stereo Broadcast Console. Includes rackmount power supply and 4 mixers, expandable to 6. Electronic monitor and cue muting. Walnut or oak trim \$4,550.00

System 16

Series IV Extender, with 4 mixers, expandable to 6 \$2850.00

System 6 RM Modular Rackmount console. Includes internal power supply and monitor amplifier \$4950.00

Console prices include pressure-sensitive matched color in/out labels, blank panels, plus Molex crimping tool and input connectors (Electrovert connectors on 6 RM).

Accessories

(Most will retrofit to Series II)

Additional Stereo Mixer Modules. Plug into existing connectors, replacing blank panels supplied in unused mixer positions \$550.00

Pan Pot Option on Standard Series IV mixer \$50.00

Equalized Stereo Mixer Modules, with 5-frequency EQ and Pan Pot, replacing 3 input selector switch. If substituted, add \$200.00 per EQ Mixer Module to base price \$750.00

Aux Send Mixer Module, with EQ and Pan Pot. Includes audition program, and mono outputs, plus 2 pre/post fader sends to L & R utility \$850.00

Peak Level Indicating System with high brightness focused LEDs behind meter to illuminate red area. Price includes meter buffer amplifiers. System 8/12—Series II or Series IV \$275.00

System 16—Series IV \$375.00

System 16—Series II includes 12V power supply module \$475.00

3-frequency Headphone EQ Panel for retrofit to all System 6, 8, 12, and 16 consoles. Mounts in place of trim panel at right side of console \$375.00

Studio Monitor Control, for remote selection of monitor output to studio speakers (requires additional monitor amplifier). Includes panel with 6-position switch and level control. 25' cable is provided (will not retrofit to Series II consoles) \$350.00

Remote input/output panel. Mounts in unused mixer position. Two 4-position selector switches, to add additional audio inputs or feed output of console to multiple locations \$350.00

Remote Input/Output Panel, with a single reel/reel control \$450.00

Remote Input/Output Panel, with dual reel/reel control \$550.00

Single Reel/Reel Control. Mounts in unused mixer position \$160.00

Dual Reel/Reel Control. Mounts in unused mixer position \$235.00

Redundant Power Supply. Two independent systems in 5 1/4" rack space. Order with console \$450.00

Spare Power Supply. Requires 5 1/4" rack space \$600.00

Fixed Copy Stand. Tinted plexiglass with walnut or oak base. Mounts on top of console meter panel. 17" W x 12" H \$55.00

Free Standing Sliding Copy Stand. Tinted plexiglass with walnut or oak base. Not for use with overbridge \$150.00

System 8/12 37" W x 20" H \$200.00

System 16 46" W x 20" H \$200.00

Overbridge. 5 1/4" panel space (includes blank panels) \$450.00

Stereo Cue Speakers, mounted in overbridge \$150.00

LED Digital Timer, with 16 reset inputs, mounted in overbridge \$350.00

Prices and Specifications Subject to Change Without Notice.

B-279

System 20 Stereo Broadcast Console

System 20 is a model of engineering simplicity, using motherboard construction, and a plug-in interconnecting harness. 3 independent industrial grade power supplies are rackmounted in a common housing, with front panel AC and DC status indicators. The power supply is short circuit proof.

System 20 has options that enable you to design your own audio console, for on-air use or production. 3 plug-in mixers are available: Type A (left) has in/out selectors, 7 frequency graphic equalizer, low cut filter, stereo/mono mode switch and pan pot; Type B (center) has in/out selectors, stereo/mono mode switch and pan pot; Type C (right) has in/out selectors only. Each mixer has a transformer balanced mike input and a differential balanced line level input. A universal output amplifier is used as line amplifier, stereo headphone and stereo cue amplifier.

Operating Mode:	3 stereo outputs, plus mono/sum.
Mixing Channels:	Up to 20 mixers, each with separate mono mike and stereo high level inputs. ± 10 dB gain trim switch for unusual input levels
Audio Inputs:	Up to 66 stereo inputs — 3 inputs per mixer plus two 4 position remote input switches, user assigned to mixer inputs. These can also be used for submaster assignments
Audio Outputs:	Total of 8 — stereo Program, stereo Audition, stereo Utility, Mono/Sum, stereo Monitor, stereo Headphones, stereo Cue and stereo auxiliary (studio) Monitor
Source Impedance:	Microphone — 150/250 ohms transformer balanced. Line — 600 ohms differential balanced (20K ohms balanced bridging optional)
Patch Points:	Mixers — prefader; Line amplifiers — between summing and output circuits
Remote Control:	Each mixer can be turned on/off with momentary contact to ground. Relays are assignable to any combination of mixers. Two 2-Form B (mute) eight 1-Form C, momentary or maintained (start) four 1-Form C, momentary (stop)
Power:	105-125VAC, 50/60Hz, 250VA maximum. 210-250VAC, 50/60Hz optional
Size:	10.5" H x 50.25" W x 33.5" D (85.1 x 127.6 x 26.7 cm)
Frequency Response:	Within ± 0.3 dB, 20-20,000Hz, all program and monitor circuits
Rise Time:	Less than 6 μ sec. line input to any program output, less than 12 μ sec. microphone input to any program output
Slew Rate:	9V/ μ sec
Harmonic Distortion:	Less than 0.09% THD 20-20,000Hz at +8dBm output level. Less than 0.02% at 1,000Hz, +28dBm
Intermodulation Distortion:	Less than 0.03% SMPTE at +28dBm or below
Noise:	Mike inputs -125dBV equivalent input noise, 20-20,000Hz, unweighted, with -55dBV input level to one active mixer input. Line inputs -90dBm equivalent input noise, 20-20,000Hz, unweighted, with 0dBm level to one active mixer input
Crosstalk:	Signal to crosstalk greater than 70dB, 20-15,000Hz, any program input to any program output
Gain:	Mike inputs 91dB nominal; Line inputs 38dB nominal for 0 VU output (+8dBm)
Input Headroom:	30dB with nominal gain setting

System 20

Monitor Outputs:	Stereo headphone — 4V into 10 ohms; stereo cue — 10W into 8 ohms; stereo control room and auxiliary monitor outputs — 0.5V into 10K ohm load
-------------------------	----------------------------------------------------------------------------------------------------------------------------------------------

System 20 Stereo Broadcast Console. Mainframe price includes power supply, all electronics except mixer modules and optional accessories. Plus a MOLEX crimping tool and input connectors. Specify walnut or oak trim **\$9,550.00**

BROADCAST AUDIO CORP.

Amplifiers

Amplifiers

All 4 amplifiers share the same 1³/₄" enclosure, which can be rack or table mounted. The amplifier circuits are on individual plug-in cards, which are inserted at the rear of the enclosure, and can be removed or installed with power on. Each amplifier has recessed front panel gain controls.

BA-235/435 Monitor Amplifiers

2 or 4 35W amplifiers, with internal bridging switch. Toroid power transformer eliminates buzz or vibration. Dual power supplies in BA-435. MOSFET transistors used as output power amplifiers.

Rated Power	
Per Channel:	35W (8 ohm load), 45W (4 ohm load)
Rated Power, 2 Channels Bridged:	90W (8 ohm load)
Harmonic Distortion at Rated Power:	20Hz-20kHz, 8 ohm load. Less than 0.05%
Intermodulation Distortion:	Less than 0.05% SMPTE
Frequency Response at Rated Power:	20Hz-20kHz \pm 0.1 dB
Slew Rate:	20V/ μ s
Voltage Gain:	30dB (adjustable)
BA-235	\$650.00

Input Impedance:	30K ohms balanced differential, 10K unbalanced
Signal-to-Noise:	100dB (600 ohm source)
Phase Shift:	\pm 10° 20Hz-20kHz
Damping Factor:	400 (8 ohms, 35W)
Overload Recovery:	10dB over clipping, 1 μ s
Output Protection:	Timed current limiting
Input overload:	+ 24dBm
Connections:	Input—phone jack. Output—barrier strip
Power Requirement:	120/240VAC, 50/60Hz
BA-435	\$1,050.00

BA-6x4 Distribution Amplifier

Accepts up to 6 amplifier cards, each with active balanced inputs and 4 transformer balanced outputs. LED bar level indicator with 7-position switch. Maximum output of +30dBm, with superb isolation and ultra low distortion.

Rated Output:	+ 8dBm
Max. Output:	+ 30dBm
Output Impedance:	600 ohms nominal (floating, transformer, balanced) 100 ohms internal impedance
Input Impedance:	20K ohms balanced active
Max. Input Level:	+ 24dBV
Frequency Response:	10Hz-30kHz \pm 0.5dB at +28dBm output level or lower
Harmonic Distortion:	Less than 0.07% 30Hz-20kHz at +18dBm output. Typically less than 0.006% at 1kHz with output level of +18dBm

Intermodulation Distortion:	Less than 0.06%, -18dBm to +18dBm output level
Signal-to-Noise:	Greater than 95dB at +28dBm output, with 20dB gain, 20Hz-20kHz unweighted
Gain:	Adjustable -80dB to +20dB
Temp. Range:	0°-40°C ambient
Connections:	Inputs—barrier strips. Outputs—individual plugs for each amplifier output
Power Requirement:	120/240VAC \pm 10% 50/60Hz
BA-6x4	\$1,250.00

BA-205/405 Phono Preamp

Two or four plug-in amplifier cards, with passive RIAA equalization to eliminate TIM caused by feedback EQ circuits. Internal switches adjust loading for specific cartridges. Subsonic rumble filter. Maximum output of +30dBm. Automatic redundant power supply.

Rated Output:	+ 8dBm
Max. Output:	+ 30dBm
Output Impedance:	600 ohms nominal (floating, transformer, balanced) 100 ohms internal impedance
Input Sensitivity:	7mV at 1kHz input level for +8dBm output level
Input Overload:	350mV
Frequency Response:	RIAA or IEC \pm 0.2dB 20Hz-20kHz
Harmonic Distortion at Rated Output:	0.01% at 1kHz
BA-205	\$750.00

Intermodulation Distortion:	0.006% SMPTE
Signal-to-Noise:	85dB 30Hz-15kHz unweighted
Gain Adjustment:	38-48dB
Crosstalk:	90dB at 15kHz
Input Characteristics:	Adjustable input loading. 50K ohms resistive, 100pF capacitive nominal. Non-reactive due to passive EQ network
Rumble Filter:	f _c 25Hz, rolloff 18dB/octave
Connections:	Input—RCA phono. Output—barrier strip
Power Requirement:	120/240VAC \pm 10% 50/60Hz
BA-405	\$1,050.00

BROADCAST ELECTRONICS, INC.**Tape Cartridge Equipment****Phase Trak 90 Series 9000
Tape Cartridge Playback Machines**

• Automatic stereo phase correction • Superb audio performance • Dynafex® noise reduction • Non-repeat lockout • Automatic audio muting • Phase Lok V precision adjustment head block • Innovative cartridge guidance system • True modular design with plug-in assemblies • All cue tones standard—including FSK detection • Reliable DC servo motor • Hall effect switches • Optional digital timer

Automatic Non-Encoding Phase Correction

The phase correction circuit continually monitors and corrects the phase relationship between the playback audio of the right and left channels. The output of any cartridge will undergo automatic phase correction when it is played through the Phase Trak 90—regardless of what machine was used to produce the cartridge originally

Excellent Audio Performance

The Phase Trak 90 boasts a signal to noise ratio of > 80dB (stereo, with Dynafex noise reduction operational). At ± 2 dB, 40Hz to 16kHz, the excellent frequency response delivers audiophile quality in any application. Wow and flutter specifications are also outstanding at < .12%

Automatic High/Low Level Sensing

Provides automatic level switching for cartridges recorded at higher levels (typically 250nW/m) through the application of optical sensing tabs on the front of the cartridge.

Automatic Audio Muting

No outboard audio switcher is required for multi-machine applications. When a particular machine is started, all others in the chain are automatically muted.

Four Standard Cue Circuits

The Phase Trak 90 comes equipped with four standard digital cue sensor circuits including an FSK (3.5kHz) decoder which provides an RS-232 compatible data output for automatic logging.

Phase Trak 90 Series 9000

(Long life head(s), three cue tones and fast forward standard) 117/220VAC 50/60Hz tabletop mounting, 7.5 ips (3.75 and 15 ips selectable)

Modular Construction

The Phase Trak 90 is completely modular for the ultimate in servicing convenience. All modules are easily removed from the back of the cabinet. Test points and adjustments are reached by removing the top cover. In addition, all modules feature gold-to-gold pin and socket contacts to enhance long term reliability.

A rear panel headphone jack is provided for independent monitoring.

Air Damped Solenoid

Firm pinch roller pressure is ensured through the use of a powerful, air damped solenoid. This solenoid features electronic current regulation for superior reliability. It applies sufficient pressure to pull virtually any type of tape while maintaining cool, silent operation.

Reliable DC Servo Motor

The Phase Trak 90 features a crystal-controlled, brushless DC servo motor. This provides dependable operation with low wow and flutter, high efficiency and low acoustic noise. Through the Vari Speed control it is possible to adjust the motor speed $\pm 10\%$ with an external oscillator.

Cartridge Guidance System

Right and left side guides grip the cartridge as it enters the deck and applies just enough force to ensure proper positioning. At the same time, two spring loaded top guides apply downward pressure. The result is silky-smooth cartridge insertion and excellent positioning regardless of variations in cartridge size.

Phase Lok V Head Block

The Phase Lok V head block utilized in the Phase Trak 90 is one of the only head assemblies in the industry to offer a locking azimuth adjustment that is independent of the height and zenith adjustments. This allows the user to achieve near-perfect head alignment quickly and easily.

Optional Timer

An optional timer is available for the Phase Trak 90. This counter timer is always synchronized to the motor speed for an accurate reading of "tape time" regardless of the actual elapsed "real time". The timer will re-set to zero whenever a cartridge is inserted and will stop counting when the cartridge stops playing. The display can also be set to freeze when an EOM (End of Message) tone is detected. This allows the operator to determine the actual length of the message.

**Phase Trak 90**

PT90P	900-9000-000 Mono, playback (A and AA size carts)	\$2195.00
PT90PS	900-9002-000 Stereo, playback (A and AA size carts)	2595.00

Phase Trak 90 Record/Playback

Includes all the features of the Phase Trak 90 PS, plus front panel metering with two 18 segment LED meters, automatic tape analysis, four record cue circuits, automatic splice finder and a built-in test oscillator.

Front Panel Metering

The LED meters will indicate left and right channel input or output audio. The meter scale extends from +5 to -4dB in 1dB intervals, with VU ballistics for the meter section and peak ballistics for the peak indicator.

Automatic Tape Analysis

A microprocessor tape analysis system eliminates the fear of introducing a new brand of audio tape. The Phase Trak 90 RPS will automatically evaluate a new tape and memorize the bias, level and EQ settings to obtain optimum performance.

Four Record Cue Circuits

The four standard cue circuits include 150Hz, 1kHz, 8kHz and an RS232-to-FSK encoder. The RPS also incorporates record defeat and cue erase functions.

Automatic Splice Finder

When the SPL switch on the front panel is pushed, the RPS will run at 22.5 ips until the splice detector locates the tape splice.

Test Oscillator

A built-in test oscillator facilitates maintenance on the Phase Trak 90RPS. Eight tones can be selected ranging from 50Hz up to 16kHz, along with a convenient "sweep mode" switch.

PT90RP	900-9001-000 Mono record Playback (A, AA, B and BB size carts)	\$3495.00
PT90RPS	900-9003-000 Stereo Record Play (A, AA, B and BB size carts)	3795.00

Options and Accessories

900-9013	Rack shelf for 19" EIA rack, 7" H.	\$ 150.00
900-9014	Rack shelf filler panel, 1/3 rack, for 9013	30.00
900-9015	Rack shelf filler panel, 1/2 rack, for 9013	40.00
910-9007	Test Extender PC Board.	100.00
900-9016	Tape timer, 4 digit, factory installed	100.00
970-0099	Tape sensor foil tab kit (package of 100)	10.00
900-5409-001	Record amplifier, mono with cues	1200.00
900-5410-001	Record amplifier, stereo, with cues	1300.00
970-0087	Adaptor cable kit for PT90P/PS to 5409/5410 record amp	115.00
970-0088	Record head connector kit for PT90P/PS when used with record amp	140.00

BROADCAST ELECTRONICS, INC.

Tape Cartridge Equipment

**SERIES 5300C AND SERIES 5400C
THREE-DECK TAPE CARTRIDGE MACHINES**

Non-repeat Lockout in Both Models

Non-repeat lockout prevents any tape cartridge from being played more than once unless the operator resets it from the "lockout" mode by pressing the appropriate STOP button, or by removing and re-inserting the cart. The illuminated STOP switches for each deck will flash on and off to indicate that a cart is in the lockout mode. The Non-repeat Lockout feature may be disabled through an internal jumper if desired.

Toroidal Transformer

Both series incorporate a toroidal transformer in the primary power supply for cool, efficient operation with a significant reduction in stray magnetic fields.

Phase Lok V Head Assembly

The removable Phase Lok V head assembly provides tight alignment control with a locking azimuth adjustment independent of height or zenith adjustments.

Powerful, Air Damped Solenoids

Both series utilize air damped solenoids that guarantee firm, reliable, cartridge engagement. The solenoid control circuit utilizes solid-state switching and a regulated current source for cool, quiet operation.

Series 5300C Three-Deck Tape Cartridge Machines

The 5300C cart machine incorporates many of the popular innovations of its companion model 5400C, but adds the capability to handle A, B, and AA cartridge sizes.

The 5300C is also one of the easiest machines to install and maintain. It is fully equipped with plug-in decks and PC cards. Tabletop mounting can be utilized, or a rackmount option is available.

Solid Mechanical Design

The 5300C features an internal structural bulkhead which insures stable, accurate deck and capstan positioning. The top capstan bearing is mechanically supported by the sturdy aluminum bulkhead for consistent alignment independent of front panel reference.

Series 5300C (A, AA, B and BB Size Carts) (Long Life Head(s) standard)

Model	Stock No.	Description	Price
117VAC 60Hz Tabletop Mounting (220VAC 60Hz available)			
5301C	900-5301-001	Mono, Playback	\$3500.00
5302C	900-5302-011	Mono, Playback with Cue Tones	3700.00
5303C	900-5303-001	Stereo, Playback	4000.00
5304C	900-5304-011	Stereo, Playback with Cue tones	4200.00

Series 5400C Three-Deck Tape Cartridge Machines

The 5400C is designed for the user who requires the utmost in long-term reliability and ease of operation. As a three deck cart machine, the 5400C will fit perfectly in any production or on-air studio environment.

The 5400C is fully equipped with plug-in decks and PC cards for quick, easy servicing. The trim line design of the 5400Cs makes it easy to rackmount as many as three machines side by side.

Series 5400C (A and AA Size Carts) (Long Life Head(s) Standard)

Model	Stock No.	Description	Price
117VAC 60Hz Tabletop Mounting (220VAC 60Hz available)			
5401C	900-5401-001	Mono, Playback	\$3600.00
5402C	900-5402-011	Mono, Playback with Cue Tones	3800.00
5403C	900-5403-001	Stereo, Playback	4100.00
5404C	900-5404-011	Stereo, Playback with Cue Tones	4300.00

5300C

Rack Shelves

900-5406	Rack Shelf for 19" EIA rack, 12 1/4" H for mounting 1 or 2 units, 5300 Series	\$200.00
900-5415	1/4 Rack Filler Panel for 5406 shelf	40.00
900-5406	Rack Shelf for 19" EIA rack, 12 1/4" H for mounting 1 to 3 units, 5400 Series	200.00
900-5405	Four Position cart storage rack for 5406 rack shelf	150.00
900-5407	Ten Position cart storage rack for 5406 rack shelf	180.00
900-5408	1/3 Rack Filler Panel for 5406 shelf	37.00
919-1806	Test Extender P.C. board	74.00

BROADCAST ELECTRONICS, INC.

Tape Cartridge Equipment

**Series 3000A
Tape Cartridge Machines**

- Automatic/Manual fast forward and 3 cue tones standard
- Phase Lok V head block
- Improved cartridge guidance system
- More powerful, air damped solenoid
- Direct drive synchronous motor
- Gold to gold contacts
- Flat response long life heads

Series 3000A retains the features that made its predecessor famous and adds extra features that all users are sure to appreciate. These new improvements include the addition of the Phase Lok V head block, an innovative cartridge guidance system, a powerful air damped solenoid, and flat response long life heads. In addition, automatic/manual fast forward and three cue tones are now standard in the Series 3000A.

3200ARPS

3100APS

3400APS

3100A Slim Line

For use with NAB A and AA cartridges. Available in mono and stereo playback models. Three units can mount side-by-side in a 19" rack shelf.

3200A Compact

For use with NAB A, AA and B cartridges. Available in mono or stereo record/playback and playback only models. Two 3200A units can mount side-by-side in a 19" rack shelf.

3400A Rackmount

The 3400A's come standard as rack-mount units with no shelf or filter panels necessary. The 3400A's handle all cart sizes.

3200A RP/DL and 3400A RP/DL Delay Machines

In addition to providing normal playback and record functions, delay units allow the use of the machine whenever a delay might be required. These machines can handle from a six minute delay (for live talk show editing) to a 30 minute network programming delay. The time span of the delay is determined by the length of the tape in the cartridge.

Series 3000A

(Long Life Head(s), three cue tones and fast forward standard)

Standard Models — No options — 117VAC/60Hz (220VAC/60Hz available)

TABLETOP MOUNTING

Model	Stock No.	Description	Price

Tape Cartridge Equipment/Accessories

2100CRPS

Series 2100C Tape Cartridge Machines

• Two cue tones standard (1kHz and 150Hz) • Exclusive mono/stereo switching • Precision adjust Phase Lok V head block • Flat response, long life heads • Precision machined deck with improved cartridge guidance system • Direct drive transport • Modular construction • Low voltage air-damped solenoid • Advanced electronics—meets or exceeds 1975 NAB standards

Phase Lok V Head Assembly

The Series 2100C features Phase Lok V head block. The Phase Lok V offers a locking azimuth adjustment that is independent of the height and zenith adjustments. With the Phase Lok V, precise head positioning

is possible through an azimuth adjustment that can be easily manipulated without affecting height and zenith. This permits quick, accurate positioning with a minimum of difficulty. (For correct stereo tracking, a dummy head is included in each playback model.)

Precision Transport and Deck Assembly

The improved cartridge guidance system permits precise cart positioning. The cartridge is directed to the head block area by right and left side guides. In addition, two spring loaded top guides apply firm pressure to hold the cart in place. The result is smooth, positive cart insertion regardless of variations in cartridge thickness.

Series 2100C (A, AA size cartridges) (Long Life Head(s) and two cue tones standard)

Model	Stock No.	Description	Price
2100CP	900-2110-001	Mono, Playback only	\$1425.00
2100CRP	900-2111-001	Mono, Record/Playback	2095.00
2100CPS	900-2112-001	Stereo, Playback only	1525.00
2100CRPS	900-2113-001	Stereo, Record/Playback	2395.00
2100CPA	900-2114-001	Mono, Playback with Audition/ Speaker	1550.00

Options and Accessories

900-2013	Rackmount Shelf for EIA 19" rack 5 1/4" H Holds up to three Series 2100C	\$75.00
900-2010	Top Cover for 2013 Shelf	45.00
900-2014	Rack Shelf Filler Panel, 1/3 rack for 2013 shelf	26.00
900-2016	Rack Shelf Filler Panel, 2/3 rack for 2013 shelf	38.00
919-2100	Test Extender P.C. Board	69.00

Cartridge Storage Racks

RM20V	818-0014	Cartridge Rack, 20 Carts, Fits 1/3 Rack Shelf for 5500 Series	\$175.00
RM20H-001	818-0020-001	Stores 20 A Size Cartridges, Rack-mounting (5 1/4" H)	95.00
RS25	816-0025	Wire Rack Section, holds 25 A Size Cartridges	45.00
RM100	810-0100	Wall Mounting, Formica Covered, holds 100 A Size Cartridges	125.00
DM20	812-0655	Wall or Table Mounting; Walnut Finish Cabinet, holds 20 A Size Cartridges	25.00
LZ20	800-2000	Lazy Susan, Tabletop, Wood/Formica, holds 20 A Size Cartridges	45.00
DM40	812-0650	Tabletop Lazy Susan, Walnut Finish Cabinet holds 40 A Size Cartridges	35.00
DM72	812-0072	Lazy Susan Module, Formica Covered for tabletop use, holds 72 A Size Cartridges	150.00
DM200	812-0200	As per above, holds 200 A Size Cartridges	200.00
LS200	814-0200	Lazy Susan Wire Unit, Floor Stand with Heavy-duty Casters, holds 200 A Size Cartridges	350.00

Cartridge Winders

TW-120	900-0100	Tape Cartridge Winder 117V, 50/60Hz	\$380.00
TW-240	900-0200	Tape Cartridge Winder 220V, 50Hz	430.00

Demagnetizers and Erasers

200-3T	820-0200	Bulk Tape Eraser, Handheld 115V, 50/60Hz	\$115.00
220-3T	820-0220	Bulk Tape Eraser, Handheld 220V, 50/60Hz	125.00
TD1B	820-0300	Bulk Tape Eraser, Heavy-Duty, Tabletop 115V, 50/60Hz	119.00
TD1BF	820-0301	Bulk Tape Eraser, Heavy-Duty, Tabletop 220V, 50/60Hz	128.00
K20/B5	800-3000	Annis Standard Han-D-Kit. Pocket Magnetometer, test strips and clip-on extension probe and Han-D-Mag demagnetizer, 115V, 50/60Hz	62.00
K25/B5	800-3001	Annis Deluxe Han-D-Kit, same as above, except with larger Model 25 jewelled demagnetizer, 115V, 50/60Hz	104.00
PF-380	800-3002	Nortronics Carbide Head Degausser, 117V, 60Hz only	41.00

BROADCAST ELECTRONICS, INC.

Audio Consoles

150A SERIES MONO/STEREO MIXERS

5M150A/5S150A 5-MIXER The 5M150A mono dual-channel and the 5S150A stereo five-mixer consoles employ high quality conductive-plastic attenuators. Identical plug-in preamplifier modules, presettable for microphone or line input service, feature gold-to-gold contact fingers. Interlocked pushbutton selection of two sources per mixer is provided. Separate headphone and monitor amplifiers permit full aural monitoring.

8M150A/8S150A 8-MIXER Eight-mixer consoles are also available in the 150A Series. Other than the number of mixing channels, these models are essentially identical to their five- and ten-mixer counterparts. All consoles in the 150A Series feature durable styling with clean, crisp front panel graphics protected by a laminated polycarbonate overlay.

10S150A/10M150A 10-MIXER The newest members of the Series 150A family are the 10S150A stereo and 10M150A dual-channel mono, 10-mixer models.

150A Series Mono and Stereo Consoles*

Model	Stock No.	Description	Price
5M150A	901-0531-000	5-Mixer Monophonic Console, Sealed Pots, Dual Channel	\$2450.00
8M150A	901-0831-000	8-Mixer Monophonic Console, Sealed Pots, Dual Channel	2950.00
10M150A	901-1030-000	10-Mixer Monophonic Console, Sealed Pots, Dual Channel	4350.00
5S150A	901-0530-000	5-Mixer Stereophonic Console, Sealed Pots	2995.00
8S150A	901-830-000	8-Mixer Stereophonic Console, Sealed Pots	3695.00
10S150A	901-1032-000	10-Mixer Stereophonic, Sealed Pots	5295.00

Options and Accessories

918-3604	Line amplifier for stereo audition channel 5S150A and 8S150A (2 required) for dual channel operation . . .	\$135.00
918-3602	Mono Matrix PC Board for 5S150, 8S150 and 10S150	125.00
971-0021	Second Muting relay for any Series 150 Console	30.00
838-0200	Additional Cost for 230VAC/50Hz Power Source	100.00

*Supplied with One Muting Relay

250A SERIES MONO/STEREO DELUXE DUAL CHANNEL MIXERS

Series 250A consoles are deluxe. 5, 8 and 10 mixing channel models available in mono or stereo with dual channel provisions. Precision step type ladder attenuators are used. Channel keys are telephone type roller cam design for long life and silent operation. Three muting relays are included.

In addition to preamplifier and line amplifiers, all Series 250A consoles are supplied with required monitor, cue and headphone amplifiers. A sum derived mono matrixed output is optional for stereo models. Styling adds durability and enhances the attractiveness of the 250A Series consoles.

The 10S250A stereo console accommodates twenty inputs into ten mixing channels. The console features identical line level stereo program and audition output channels with VU meter switching to either stereo pair. Mixing controls are maintainable, step type dual ladder attenuators. Quiet operating, telephone type channel select switches are used. A mono model, the 10M250A is also available.

Model	Stock No.	Description	Price

10S 150A

10S250A

10S350A Dual Channel, Stereo Outputs

SERIES 350A MIXERS

10-MIXER, VERTICAL FADER, DUAL-CHANNEL MONO/STEREO MODELS
The 350A Series consoles feature 22 inputs into 10 mixing channels. Available in either mono or stereo models, they are ideal for multiple-mix applications. Mixers #1 through #8 accept two inputs per mixer; Mixers #9 and #10, three each. Attractive front panel graphics are protected by a laminated polycarbonate overlay for maximum durability.

350A Series Slider Mixer Audio Consoles

Model	Stock No.	Description	Price
10M350A	901-1051-000	10-Mixer, Slider-Fader, Dual Channel, Monophonic Console	\$5195.00
10S350A	901-1050-000	10-Mixer, Slider-Fader, Dual Channel, Stereophonic Console	6195.00

SERIES 50A 4-MIXER, MONO/STEREO/RACKMOUNT

4M50A MONO The 4M50A is a complete console ideal for production or on-air use. The 4 mixers each accept two switch selectable inputs and each preamplifier can be wired for either microphone or line level sources. Speaker and headphone amplifiers are built-in for monitoring console output, an external source, or the cue circuit.

4S50A STEREO This four mixer, 12 input stereo console features quality performance at a practical price. Easily installed, it has cue-switches on all faders. In addition to level selectable preamplifiers, the 4S50A has individual monitor, cue and headphone amplifiers.

Series 50A Mono/Stereo/Rackmount Consoles

Model	Stock No.	Description	Price
4M50A	901-0450-000	Mono Four 4-Mixer Monophonic Console	\$1150.00

4S50AP	901-0451-021	Stereo Four 4-Mixer Stereophonic Console with XLR Plug-in Connectors	2250.00

BROADCAST ELECTRONICS, INC.

Studio Equipment

Turntables 12"/16"

- Rim drive assures minimum rumble, maximum starting torque
- Rugged construction, only three moving parts
- Stereo rumble < -3BdB (Exceeds NAB standards)
- Instant start and no speed overshoot

These turntables reach operating speeds in a fraction of a second. They perform with a minimum of rumble, wow and flutter. The use of an acoustic-absorbing, high-memory rubber idler, as well as motor isolation mounts and statically-balanced motor/counter-weight assemblies contributes to the highly desirable low rumble, wow and flutter characteristics.

Available in two- or three-speed 12" or three-speed 16" versions. Attractively styled, the turntables are finished in a hard wearing gray with a black felt platter pad. Control panels are protected by durable polycarbonate overlay for long term protection of labelling and legends.

Specifications

16C THREE-SPEED 16" TURNTABLE

EP-1/EP-2 Turntable Preamplifier

The EP-1/EP-2 Phono Preamps feature superb RFI immunity, exceptional S/N performance and excellent -70dB channel separation. EP-1 provides 600 ohms balanced transformer-less output. The EP-2 utilizes high quality output transformers for 150/600 ohms balanced floating outputs.

Preamplifiers

EP-1	903-0020	Equalized turntable preamplifier, RFI protected 117/220/240V, 50/60Hz	\$395.00
EP-2	903-0021	Equalized turntable preamplifier, RFI protected, w/transformer output, 117/220/240V 50/60Hz	415.00

BETMS-100/200 Turntable Preamplifier

The BETMS-100/200 series are economical professional quality dual channel turntable preamps for use with either mono or stereo cartridges. The BETMS-200 has transformer output.

BETMS-100	903-0100	Equalized turntable preamplifier	\$225.00
BETMS-200	903-0200	Equalized turntable preamplifier, with transformer output	295.00

AD1B Audio Distribution Amplifier

Provides five isolated audio output channels for audio distribution to multiple points or to telephone lines. All five isolated outputs have individual front panel monitoring and level controls. Bridging or matching balanced or unbalanced input with VU meter. Model AD1B/T has transformer output.

AD1B	903-0010	Audio D.A., 1 in, 5 out, rackmounting, Emitter Follower Output	\$625.00
AD1B/T	903-0011	Audio D.A., 1 in, 5 out, rackmounting, Transformer Outputs.	815.00

Rek-O-Kut Tone Arms

Optimum tracking capability ensures superior stereo reproduction. Available in 12" or 16" models, S-320 or S-260.

Tone Arms			
S-320	950-0061	S-320 Rek-O-Kut 12" Tone Arm, Chrome plated	\$175.00

Transmitting Equipment

FX-30

FX-30 Synthesized FM Exciter

With more than 550 in use (1984) the synthesized FX-30, 30W FM exciter/transmitter has been universally accepted as the industry standard. The FX-30 provides excitation for each of the B/E FM transmitter models. It is however readily adaptable to interfacing with FM transmitters of any manufacture or vintage to dramatically update performance to today's most stringent standards. The FX-30 utilizes an ultra-linear modulated oscillator for unsurpassed performance; features typical THD and IMD at < 0.02%; is extremely quiet in operation with a typical SNR of 80dB; and is completely broadband, requiring no tuning adjustments. It is of semi-modular mechanical design. Slide-mounting ensures ready access to sub-assemblies. Pushbutton-selectable analog metering and a color-coded LED digital display afford highly-accurate parameter and modulation monitoring.

FX-30 909-0009 FX-30 Solid-state 3-30W FM exciter/transmitter, frequency range 87MHz to 109MHz with automatic power control, synthesized frequency control, and low pass filter, 19" rackmount, for operation on ___ MHz and for single phase 97 to 133VAC or 194 to 266VAC, 50/60Hz power source **\$5795.00**

FS-30

FS-30 FM Stereo Generator

Teamed up with the widely acclaimed FX-30 FM exciter, the new digital FS-30 stereo generator provides the very best stereo performance available. Includes linear, delay equalized audio low pass filters for minimum overshoot without the use of clippers or other non-linear devices. Front panel LED peak reading modulation status display; RFI protection; ready for remote control.

FS-30 909-0050 **\$2495.00**

FC-30 SCA Generator

FC-30 SCA Generator

The FC-30 SCA Generator assures very low FM noise high stability and, with its ultra linear 67kHz modulated oscillator, minimum distortion is obtained. Front panel LED peak modulation indicator; extensive RF filtering and front panel test jacks are other features. Controlled delay muting designed to be compatible with today's SCA receivers.

FC-30 909-0051 **\$1495.00**

AS-10 AM Stereo Modulation Monitor

• RF AGC for optimum C-Quam® decoder performance • Front panel audio output for transmitter alignment and proof of performance

The AS-10 AM stereo modulation monitor represents a technological advancement in C-Quam monitoring technology. The state-of-the-art design of the AS-10 makes it a perfect companion for the AX-10 AM stereo exciter. The AS-10 features a single RF AGC system to avoid the tracking errors that appear in monitors with a matrix AGC design.

The filtering circuitry keeps overshoot errors at < 1%. A carrier shift reaction time of < 300ms permits easier and more accurate readings of the LED display.

AS-10 907-0100-000 C-Quam AM stereo modulation monitor, 120V, 50/60Hz **\$4500.00**

AS-10 907-0100-300 for 220V, 50/60Hz **4500.00**

AX-10

AX-10 AM Stereo Exciter

• Second generation C-Quam digital design • Advanced-technology, independent right and left channel IF modulation technique • Interfaces with virtually any existing AM transmitter

The AX-10 stereo exciter is compatible with essentially any existing AM broadcast transmitter. Utilizing independent, non-interfacing left- and right-channel modulators in an IF modulation configuration, the AX-10 combines superior stereo performance with full monaural compatibility. Independent, switch-selectable, equalization networks for two-transmitter or dual antenna pattern operation are standard. The AX-10 is fully capable of remote control operation. It delivers up to 10W RF output and features a separate TTL-compatible output for use with transmitters with digital input capability. Balanced 600 ohm audio output is variable from -10 to +26dBm with independent day/night level adjustment. The AX-10 occupies only 3 1/2" of standard 19" rack height.

AX-10 907-0010 AM Stereo Exciter, 10W, solid-state, 117V, 60Hz, with independent day/night two (2) transmitter equalization **\$5500.00**

TZ-30w/TP-30 and TS-30

TZ-30 TV Stereo Generator

The TZ-30 is an advanced, second generation MTS generator incorporating a digital pilot generator, digital modulator, and a genuine dbx* encoder card. Audio filtering of both L and R as well as L + R/L-R channels minimizes crosstalk and guarantees excellent stereo separation. If your TV stereo requirements include audio processing, broadcast electronics has complete processing packages designed to complement the TZ-30.

The TZ-30 can be easily interfaced with the TS-30 SAP (Second Audio Program) generator and/or the TP-30 PRO (Professional Channel) generator. These generators will expand your MTS system to offer profitable audio/data subchannel capabilities.

TZ-30 906-0030-000 **\$5500.00**

TP 30 906-0032-000 Professional channel **1500.00**

TS-30 906-0031-000 Second Audio program. **2500.00**

BROADCAST ELECTRONICS, INC.

FM Transmitter/Accessories

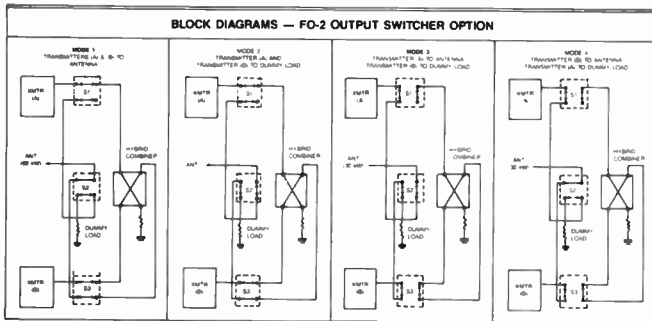

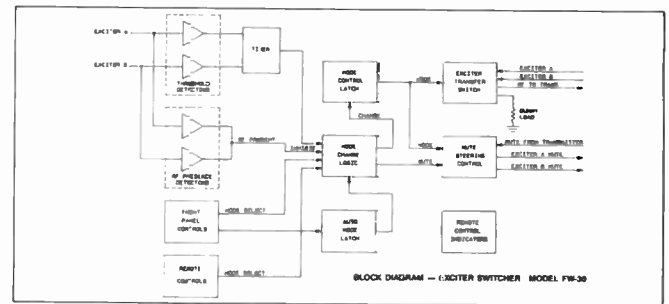

FD-2 Dual Transmitter Controller

- Control any two Broadcast Electronics FM transmitters in a combined configuration
- Monitor and control both transmitters from one panel
- Raise and lower output power of both transmitters together or separately
- Expanded scale reject load metering
- Output monitoring with combined output VSWR protection for both transmitters
- Field tested, reliable design
- Modular assembly for easy service
- Remote or extended local control capability
- Optional FO-2 Automatic Output switcher

The FD-2 dual transmitter controller forms the heart of a combined system utilizing two B/E FM transmitters. The FD-2 allows complete monitoring and control of the entire system from a single center cabinet. In addition, the FD-2 permits extended local and remote control through momentary contact closures.

FO-2 Transmitter Output Switcher

The optional FO-2 transmitter output switcher provides an extra measure of operational redundancy in dual transmitter systems. The FO-2 constantly monitors the output of both transmitters and will respond to a loss of power in either unit. If the output from one transmitter falls below a pre-set failure level for a designated period of time, the FO-2 will automatically switch the defective transmitter into a dummy load and place the remaining transmitter directly on-line to the antenna. The FO-2 can also activate the Preset power mode in the on-air transmitter. (The preset power mode can be set for virtually any emergency output level desired—even full output). The output failure switching level is user adjustable.

FA-2 Transmitter Output Switcher

- Maximum flexibility for Main/Alternate configurations
- Adjustable switching threshold
- Adjustable switching delay timer
- Automatic or manual switching modes
- Automatic alarm system
- Easy interfacing to motorized coaxial switches
- Remote control capability
- Direct connection with any B/E transmitter having an output of 1.5kW or greater

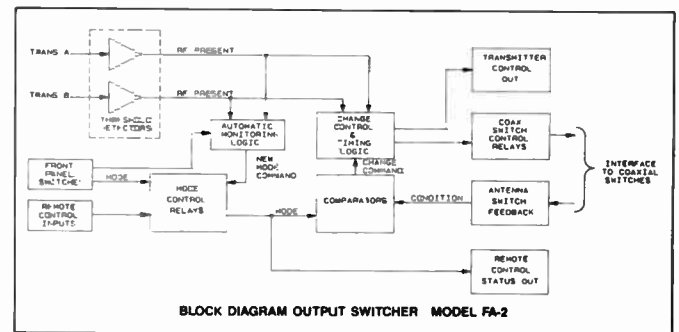

The FA-2 transmitter output switcher is designed to provide the greatest amount of redundancy through automatic transmitter switching in Alternate/Main configurations.

Operating Modes

Two primary operating modes may be automatically or manually selected:

1. Transmitter A to the antenna, transmitter B to Load (A air)
2. Transmitter B to the antenna, transmitter A to Load (B air)

* Coaxial switches not supplied

FW-30 Exciter Switcher

- Fast, automatic switching to back-up exciter
- State-of-the-art CMOS design
- Built-in high isolation coax transfer switch
- Built-in dummy load with modulation monitor sample port
- Attractive styling to match B/E equipment

The exciter occupies a crucial position in the transmission chain. A failure in its complex, delicate circuitry can cause a total transmitter shutdown. It makes perfect sense, therefore, to provide a system for automatic switching between primary and back-up exciters in the event of a failure. Such redundancy yields a substantial increase in overall transmitter reliability.

BROADCAST VIDEO SYSTEMS LTD.

Video Products

EV-4061

EV-4061 Combination Waveform/Vector Monitor

- Switchable between waveform and vector display modes
- Full broadcast specifications
- A/B encoded video inputs with buffered video output
- Half rack width, 5 1/4" high
- Mounts beside half rack picture monitor for complete monitor bridge
- 3 vertical and 3 horizontal sweep rates
- High brightness trace on all sweep rates
- Variable brightness illuminated graticule
- Int./Ext. reference in either mode
- Parade display

Controls and Features Common to Both Displays

Front Panel Controls

- Waveform/Vector mode switch
- Power on/off toggle switch
- V and H centering
- DC restorer on/off switch
- A-B-CAL switch
- Int./Ext. reference switch
- Intensity, focus, scale illumination

Rear Panel Controls (screwdriver adjust)

- Trace rotation

Display

- 10 x 8cm rectangular flat faced CRT with P31 phosphor
- Accelerating voltage 6kV regulated

Power Requirements

- 108-125V, 216-238V, 50/60Hz switchable on rear panel, 35VA

Operating Temperature

- 0° to 45°C

Mechanical

- Dimensions: 5 1/4" H x 8 1/2" W x 18" L
- Weight: 18 lbs.

The EV-4061 can be installed beside the following half rack width picture monitors:

- Conrac SNA9/RK
- Electrohome EVM910, EVM920
- Sony PVM-8200T
- Panasonic WV5311
- Videotek VM-8PRW
- JVC TM-41AU (with BVS rackmount)

EV-4061	\$3650.00
Bench case for tabletop	75.00
Dual rackmount	285.00

DK-400

HB-800

Input

Output

DK-400 Downstream Keyer

- Two independent, stand alone video mixing amplifiers in one rack unit
- Each mix amp may be operated separately or may be cascaded
- First mix amp is switchable between A/B mix and mix-to-key from remote panel
- Preview output to allow presetting of clip level
- Second mix amp allows convenient master fade to black or second A/B mix
- Switchable between self key or external key mode
- Back porch clamping on all video and key inputs
- Optional automix gives 4 selectable speeds of automatic A/B mix or mix-to-key

Specifications

Electrical:	110/230V, 50/60Hz, 8VA
Mechanical	
Electronics:	1 rack unit (1 3/4" x 19" x 10")
Remote Panel:	5" x 7" (mating connectors supplied)
Auto Mix	
Remote Panel:	5" x 2" (mating connectors supplied)
Connectors:	BNC for video Amphenol 25-pin for control
Video Inputs:	Four, IV p-p 75 ohm, terminating
Key Input:	IV p-p composite, looping
Video Outputs:	Five, IV p-p 75 ohm, 2 outputs from each amplifier plus key prev out

DK-400	\$2450.00
Auto Mix Option	525.00

HB-800 Hum Bucking Coil

Eliminate up to 6V p-p ground induced hum.

Specifications

Dimensions:	5" x 2 1/4" x 5 1/4"
Connectors:	BNC
Flat Loss:	<0.1dB
Freq. Response:	<0.1dB down at 5.5MHz
Diff. Phase:	<0.1°
Diff. Gain:	<0.1%
Path Length:	21ns

HB-800	\$ 175.00

BROADCAST VIDEO SYSTEMS LTD.

Generator/Keyers

SA-101 Safe Area Generator

- Any pattern may be added to any of 5 independent, synchronous video sources
- Safe Action and Safe Title Areas (as per SMPTE RP 27.3) displayed simultaneously
- Display can be switched on/off, black/white independently on each source from remote panel
- Center cross to locate exact picture center
- Markers inserted to show legal H & V blanking limits
- All patterns and markers digitally generated and locked to subcarrier, assuring accurate, drift-free reference for precise picture positioning
- Movable Box Generator Option — An optional plug-in PC board allows the user to generate and store in memory ten different rectangles which can be keyed into any of the five video sources, with or without the Safe Area patterns. Each rectangle can be programmed for size and position at two rates of speed from the remote panel. Recall of any of these rectangles is via a remote thumbwheel. This option is very useful for positioning graphics, news shots, chroma keys, etc.

Specifications

Electrical: 115V ± 10%, 60Hz
Line Standard: 525
Video Inputs: Five, 1V p-p, 75 ohm, terminating
Ref. Input: 1V p-p looping (Color black or one of video inputs)
Video Outputs: Five, 1V p-p, 75 ohm
Frequency Response: < ± 0.15dB to 6MHz
Diff. Phase (10-90% APL): < 1°
Diff. Gain (10-90% APL): < 1%
Line Tilt: < 0.25%
Field Tilt: < 1%
Random RMS Noise: > 55dB to 5MHz
Hum: > 55dB
Input Return Loss: > 40dB
Crosstalk: > 60dB
Path Length (Each Channel): 13ns
Operating Temp.: 0-45°C

Pattern Details

Safe Action Graticule: 90% of scanned area
Safe Title Graticule: 80% of scanned area
Center Cross: Selectable on/off on all five channels simultaneously
Blanking Markers: Selectable on/off with center cross
Horiz. Blanking: 11.1, 10.8 and 10.5µs shown simultaneously
Vert. Blanking: 21 lines

All Graticules and Markers selectable on/off, black/white from remote panel.

SA-101 \$1650.00
MBG Option \$810.00

Masterkey Linear Keyer

- Switchable between linear and fast key modes
- Smooth, seamless inlay of digital effects and paint boxes
- Faithfully preserves the anti-aliased edges of modern character generators
- Variable edge softness with key slope control
- Unique key window allows masterkey to differentiate down to a 5 IRE level difference, anywhere in the gray scale
- Full key control in internal, external, normal and invert modes
- Mix to key or cut to key
- All user controls on remote panel, supplied complete with 25' cable
- Optional auto mix provides 4 selectable speeds of automatic mix to key initiated via control panel pushbutton or external GPI

Masterkey \$2900.00

VK-900 Video Keyer Mix Amp

- Switchable between self key (internal) and external key
- Local or remote, key on/off and clip level
- Mix to key via optional fader panel or user supplied pot
- A/B mix between any two synchronous sources
- Optional auto mix gives 4 selectable speeds of automatic A/B mix or mix to key

VK-900 Composite video keyer \$1185.00
Single fader remote panel option \$165.00
Auto mix option \$255.00

SA-101

Safe Action and Title Graticules

With Center Cross and Blanking Markers Enabled

With Addition of Box Generator Option

Masterkey

VK-900

CDK-1000

CDK-1000 Downstream Keyer

- Switchable between mix or mix key mode
- B input may be switched from RGB to Y, B-Y, R-Y via remote panel
- Mix mode provides an A/B additive mix between two component signals or a component and RGB signal via the first fader handle
- Mix key mode (internal) allows the component or RGB signal on the B input to be keyed into the component signal on the A input. The dissolving in of the key is controlled by the first fader handle
- Mix key mode (external) allows a composite signal on the ext. key input to cut the hole into the component signal on the A input. The hole is filled with the RGB or component signal on the B input. The first fader controls the dissolving in of the key
- The second fader handle provides master fade to black in both mix and mix key modes
- All inputs clamped to ensure proper mixing and keying of bipolar signals
- Supplied complete with twin fader remote panel and 25' control cable
- Optional auto mix gives fully automatic operation of first fader control with 4 preset rates

CDK-1000 Component downstream keyer with fade to black . . . \$4950.00
Auto mix option \$255.00

BROADCAST VIDEO SYSTEMS LTD.**Video and Pulse Delay Lines****DL-500 Series****DL500 Series Rackmounted Video Delays**

- 75 ohms equalized to 5.5MHz
- Isolated grounds between channels
- 16 cards in 3 1/2" x 19" rackmount
- > 70dB crosstalk between channels

The DL501 and DL502 are infinitely adjustable within their specified range via soldered jumpers and variable fine trim. They will mount in an FR505 frame.

Part No.	Range	Price
DL501	10-165ns	\$215.00
DL502	10-325ns	345.00

DL505 Series Rackmounted Video Delays

- 75 ohms equalized to 5.5MHz
- Isolated grounds between channels
- 16 cards in 3 1/2" x 19" rackmount
- > 70dB crosstalk between channels

The DL505 Series, utilizing dual-in-line delays offers the widest range of video delay concurrent with small size, rigid specifications and economy. The gold contact "Bergstrip" jumpers provide quick and easy delay selection while maintaining the circuit integrity of a soldered connection. The total range of any card may be extended in the field by simply adding an additional line.

Cards are infinitely adjustable within specified range via jumpers and fine trim.

Card Type	Range	Price
DL505-1	10-165ns	\$ 239.00
DL505-2	10-245ns	289.00
DL505-3	10-455ns	430.00
DL505-4	310-745ns	618.00
DL505-5	410-845ns	651.00
DL505-6	510-945ns	657.00
DL505-7	610-1045ns	804.00
DL505-8	710-1145ns	837.00
DL505-9	810-1245ns	843.00
DL505-10	910-1345ns	878.00
DL505-11	1010-1445ns	885.00
DL505-12	1110-1545ns	1018.00
DL505-13	1210-1645ns	1065.00
DL505-14	1310-1745ns	1098.00
DL505-15	1410-1845ns	1104.00
DL505-16	1510-1945ns	1110.00

DL605 Series Rackmounted Active Video Delays

The DL-605 Series is similar to the DL-505 Series with the addition of an on-board video amplifier. The thick film amplifier provides up to 10dB gain to allow unity video output level at any delay setting.

Using the dual-in-line delays, the DL-605 Series can accommodate video delay of over 1900ns with 5.5MHz equalization. Gold jumpers, combined with a fine trim section make each card infinitely adjustable throughout its specified range.

Ten cards may be housed in a 2 rack unit frame (3 1/2") complete with power supply.

Card Type	Range	Price
DL605-1	10-165ns	\$ 356.00
DL605-2	10-245ns	407.00
DL605-3	10-455ns	548.00
DL605-4	310-745ns	735.00
DL605-5	410-845ns	769.00
DL605-6	510-945ns	775.00
DL605-7	610-1045ns	921.00
DL605-8	710-1145ns	955.00

75 Ohms Pulse Delay Lines mounted in metal box complete with BNC connectors. Delay sections can be connected to obtain specific delays within ranges shown.

BSM BROADCAST SYSTEMS, INC.

*Distribution Amplifiers/
Routing Switchers*

10 X 10 BCD BASED ROUTING SWITCHER

10 X 1 VIDEO ROUTING SWITCHER

AUDIO DISTRIBUTION AMPLIFIER

VIDEO DISTRIBUTION AMPLIFIER

Self-contained, 1-3/4" x 19" rack mount, level control, standard BNC connections, power supply included.

- 2 x 12 (Dual 1 x 6's) \$495.00
- 4 x 24 (Quad 1 x 6's) 795.00

10 X 1 ROUTING SWITCHER

Direct access momentary pushbutton controls, 1-3/4" x 19" rack mount, 10 inputs/1 output, power supply included, transformer input.

- Audio**
- 110-Mono \$695.00
- 120-Stereo 995.00
- Video**
- 210-Video Only \$1095.00
- 220-Audio Follow Video (1 level audio) 1295.00
- 230-Audio Follow Video (2 level audio) 1495.00

AUDIO DISTRIBUTION AMPLIFIER

Self-contained, regulated power supply, 1-3/4" x 19" rack mount, individual front panel output level controls, shielded power supplies and transformer inputs. Available with either active or transformer outputs.

- 1 x 10-MA-Mono, Active Out \$395.00
- 1 x 10-DMA-Stereo, Active Out 595.00
- 1 x 10-MT-Mono, Transformer Out 695.00
- 1 x 10-DMT-Stereo, Transformer Out 895.00

10 X 10 AUDIO ROUTING SWITCHER (BCD BASED)

Thumbwheel control with LED Matrix display of active crosspoints, 5-1/4" rack mount, power supply included, remote controls available. (Please specify on order).

- 510-Mono 10 x 10 \$3595.00
- 520-Stereo 10 x 10 4595.00

THE MODULAR SERIES

A complete line of Audio and/or Video Routing Switchers...Price On Request

BTS BROADCAST TELEVISION SYSTEMS, INC.**Frame Transfer-CCD
ENG Camera System****LDK 90****Frame Transfer-CCD ENG Camera System**

Three high-resolution Frame Transfer CCDs together with a shutter give superior picture quality with perfect geometry and negligible registration error, with corner-to-corner sharpness and without any lag, burn-in, comet-tailing, smear or microphonics. The Dynamic Contrast Control (DCD) handles in excess of 500% signal level over peak white without loss of detail.

FT-CCDs continue to produce perfect pictures with no deterioration in quality and no aging. They are stable and permanent. The robust solid-state LDK 90 is built to withstand the hectic pace of ENG and on-camera recorder operation. And with no tube changing, cost of ownership is extremely low.

Flexibility in Operation

The LDK 90 FT-CCD camera has been designed as the precise answer for ENG use. But bearing in mind the many and varied needs of broadcast and production companies throughout the world, BTS has provided quick fit adaptors and appropriate control systems for Betacam and other standards of on-camera recording, and for EFP use.

No Maintenance

Having CCD sensors the camera is completely solid-state and will require no maintenance. Equally, the built-in shutter is maintenance free. Therefore, even under rigorous working conditions the camera will be extremely reliable throughout its lifetime.

With Ease-of-Use

Microprocessor control of automatics. Electronic color temperature control, with two presets for studio and daylight operation. An operational menu system. A very wide range of viewfinder indicators. These are some of the built-in features that help make sure the cameraman can shoot quickly and easily.

The CCD-FT Principle

The Frame Transfer structure has a photosensitive imaging section with 350,000 pixels PAL, 300,000 pixels NTSC located next to a storage region and connected to it by parallel shift registers.

Each separate image is transferred to storage and a completely new image takes its place. The shutter is timed to operate during the transfer to ensure that the image remains unchanged and unaffected by incoming light. Each frame of the picture is thus clean and independent of previous frames and highlights (no smear).

System Control

A remote control unit, which can be used up to 300m from the camera, is available for EFP or studio use with RGB, CCVS and monitoring outputs, together with a cameraman intercom facility. A very compact local control panel can be connected to the remote control unit for control of iris, masterblack level, individual gain and black level for red and blue. The LCP may also be used for ENG and on-camera recorder use.

The BTS camera with Frame Transfer-CCD offers these additional advantages over other cameras (mainly equipped with Interline CCDs):

- Higher resolution obtained by 604 PAL, 610 (NTSC) pixels
- Total elimination of smear because of the CCD/shutter combination
- Shorter picture exposure time of $1/50^{\text{th}}$ second (50Hz) or $1/60^{\text{th}}$ second (60Hz) rather than $1/25^{\text{th}}$ and $1/30^{\text{th}}$ second respectively. These shorter exposure (integration) times result in higher dynamic resolution, which is especially important when shooting moving objects (slow motion replay)
- Vertical resolution clearly better than can be obtained with tube cameras
- Future proof—special sports version with exposure control available soon

Higher Sensitivity

Electronic color temperature compensation eliminates the use of color conversion filters. The result is approximately one f/stop more sensitivity in daylight operations.

**LDK 90****Four Position Gain Control**

A choice of 4 positions to suit different applications: -for applications where an extremely high (+6dB) signal-to-noise ratio is required; 0 for normal operation (signal-to-noise ratio 56dB PAL, 58dB NTSC); + for low light level operation; + + for extreme low light operation

Operation Memory Menu

For more demanding applications (such as extreme conditions) as well as for EFP use, a special menu control panel with a protective cover is available for the cameraman.

Its functions are: • **Master black:** 0, -10%, -20% • **Black stretch:** on/off • **Gamma 1:** 0.45 • **Gamma 2:** 0.55 or customer setting • **Contour:** -, nom, + • **Exposure control:** (provision for)

Local Control Panel

This special accessory is for use in the field with painting, iris and master black control.

Matte Box

A matte box accessory allows use of all standard bellows, filters, "french flags," etc. This is particularly suitable for the LDK 90 in film-style applications where additional artistic and creative possibilities are required.

Computerized Control

A built-in microprocessor fulfills several functions including: Switch-function communication with the camera viewfinder and, if present, the Remote Control Unit (RCU), as well as auto-iris control via intelligent picture sampling methods.

Viewfinders

The $1\frac{1}{2}$ " viewfinder is X-Y-Z adjustable and rotatable. There is a complete range of indicators. These include filter, color balance, gain, tape-end, rec, batt, menu, and range extender, together with tape bar, audio level, white balance window, and selectable zebra level. A 5" viewfinder is also available for EFP/studio use.

Light, Compact, Efficient

Extremely light and compact, the LDK 90 weighs only 5 lbs., basic camera. Visibility is extremely good. Hand grip and balance are perfect. Shoulder, flat bottom or tripod use are all designed for convenience. Power consumption is less than 11W.

LDK 90 Triax Camera

The LDK 90 camera system with frame transfer CCD's can now cover every aspect of television from ENG with or without on-board recorder in all popular formats, to EFP with up to 300 meters of multicore. And now EFP with up to 2000m of triax still with full remote facilities and production control.

BTS BROADCAST TELEVISION SYSTEMS, INC.**CCD Color Camera****LDK 900****Frame Transfer CCD Production Camera System**

• Smallest and lightest full facility production camera • Superb picture quality with proven CCD-FT sensors • Reliability with solid state electronics and no deterioration of picture quality through aging • Maintenance-free with rugged and rainproof case, solid state sensors, sealed-in shutter • Menu control with personalized settings for stand alone operation • Microprocessor control of important functions • Electronic shutter exposure control for blur-free slow motion and freeze-frame recording • Triax cable extends operations up to 2000m from the base station • Portable companion, the LDK 90 with the same CCD-FTs for matching colorimetry • Ergonomically designed by cameramen for cameramen • Both studio and field lenses up to 50 times zoom range • 7" high performance viewfinder • Two external video inputs • Extended intercom facilities • Utility power outlet (70VA) • Hi-Fi audio channel • SMPTE/EBU VTR connector for stand alone operation • Teleprompter channel • Minimum cost of ownership—with frame transfer CCD sensors, no maintenance cost and economic triax cable • Uniform resolution corner to corner. Microprocessor controlled automatic black level, with black reference built into the CCD itself

The LDK 900 production camera system consists of a small, light-weight camera head, base station, and operational control panel (OCP). The OCP has full operational facilities including iris and black level mono-knob control as well as black and white matching, and other production controls such as gamma, gain, color temperature, knee, etc. The base station has outputs of composite, full bandwidth RGB, and component signals, as well as picture and waveform monitoring signals. The LDK 900 camera head may be used in a fully self-contained mode, feeding directly into a suitable portable recorder, or over the triax camera cable to the base station and OCP.

Full production facilities provided by the LDK 900 include a comprehensive talk-back system, high quality microphone channel, selectable exposure control for high speed action, a full size high brightness, high performance, seven inch viewfinder with maximum pan and tilt, and a full range of operational facilities including knee circuits, color balance memories and automatic color balance, auto iris, and teleprompter channel.

The LDK 900 has one of the lowest centers of gravity and lowest optical axis available, and the effective optical center is directly over the pan and tilt head. This allows the camera to obtain spectacular low level action shots and at the same time minimize positional picture movement due to off axis optical center line. This gives the cameraman a much more natural "feel" for the camera in complex action shots.

Specifications**Camera Head**

Transmission System:	PAL or NTSC
Power Supply:	220-240V: 48-410Hz 110-120V: 48-410Hz
Power Consumption:	170W including lens, viewfinder and 70VA utility output
Picture Elements:	610H x 492V NTSC, 604H x 576V PAL
Optical System:	4 position filter wheel, f/1.4 prism with quartz filter
Inputs Signals:	Playback video signal at VTR connector, composite or black burst, external 1, external 2, teleprompter
Output Signals:	Composite output at camera head and VTR connector, sync S at VTR connector, components (Y, P _r , P _b) at VTR connector, viewfinder signal, color bars (full field, EBU white level)
Sensitivity:	1750 lux (160' cord) at f/4.0 with 90% reflectance
Signal to noise Ratio:	At normal gain 58dB NTSC, 56dB PAL typical

**LDK 900**

Modulation Depth:	Horizontal modulation depth at 5MHz typically 45% in red, green and blue (equates to a limiting response > 650 TV lines in a 2/3" tube camera)
Registration:	< 25nS (0.05%) in all three zones
Contour Correction:	Edge of band, contours from red and green
Gain Control:	-6dB, 0dB, +6dB and +12dB
Color Temperature:	Electronic presets for Studio (3200°K) and for daylight (5600°K) 7500°K available on OCP
White Balance:	Two selectable memories
Exposure Control:	Down to 1/500 sec
Gamma Correction:	0.45 or 0.55 pre-select via switch pane or remoted to OCP
Contour Correction:	3 selectable levels pre-select via switch panel or remoted to OCP
Black Level:	0%, -10%, -20% pre-select via switch panel
Black Stretch:	On/off via switch panel or remoted to OCP
Intercom:	From base station to camera head, 1 channel; from camera head to base station, 1 channel
Dimensions:	Camera head including bottom plate: 11.8" H x 9.5" W x 10.2" L
Weight:	< 40 lbs.
Viewfinder	
Power Supply:	~ 10.5-14V
Power Consumption:	30W
Picture Sharpness:	> 700 Lines
Dimensions:	5.3" H x 7.5" W x 11.2" D
Weight:	15 lbs.
Base Station	
Transmission System:	PAL or NTSC
Power Consumption	Approx. 280W including camera, lens, viewfinder and utility
Input Signals:	External 1, external 2, teleprompter, video reference
Output Signals:	Composite; R, G, B; Components (Y, P _r , P _b)
Intercom Inputs/Outputs:	Production, engineering, program, 2 or 4 wire system
Dimensions:	5.2" H x 19" W x 19" D
Weight:	< 56 lbs.

BTS BROADCAST TELEVISION SYSTEMS, INC.**Automatic Studio/
Field Camera****LDK 6A****Television Camera System with Total Computer Control and Distributed Intelligence****Superb Picture Quality**

Through 25mm or 30mm Plumbicon tubes and optimized digital scan, shading and dynamic focus correction.

Operational Flexibility

For a wide range of broadcast applications under varied weather and light conditions. The interactive computer system with operational and set-up memories allows quick set-up and smooth operation for single or multi-camera systems. The RGB triax system allows great cabling flexibility.

Reliable—Ready for Operation

Assured by digital control components, self-diagnostics and easy interchangeability of main units without the need for further adjustments. Tube change takes about 10 minutes. The "full auto set-up" program aligns the green channel automatically, using the diascope integral to the camera head. Red and blue are then aligned to green.

Future-Proof

State-of-the-art in concept and design, having a transparent computer system with distributed intelligence that can also accommodate future developments. And COACH, the Philips remote control and monitoring system, gives double assurance of perfect performance.

Memories—A Major Advantage

The LDK 6A camera has 6 operational, 2 set-up and 4 lens memories. All 6 operational memories can be recalled so that there is immediate access to pre-arranged special production effects or lighting conditions.

Each of these operational memories can store: • Gains RGB • Blacks RGB • Filter wheel 1 • Filter wheel 2 • Color temperature • Master black • Gain • Black stretch • Gamma • Contours • Auto-iris presets

For special creative and technical applications over 700 parameters can be stored in 2 separate selectable set-up memories.

Each LDK 6A camera can also store the complete characteristics of up to 4 lens types and recall their parameters when required. These parameters are: • Color temperature • Registration • Flare • Shading • Back focus

These lens files can also be used to store range extender characteristics and are called up automatically with servo extender selection.

Diagnostics

There are two comprehensive diagnostics systems in the LDK 6A. The first is an advance warning system for fault detection to avoid costly downtime. The second is able to pinpoint the location of a fault to a specific board.

Diagnostics-1 operates on-line, and is active whenever a camera is "on." It makes no decisions which will interfere with normal "on-air" operation. However, where important characteristics deviate from normal, it warns the operator a decision is needed, and provides a character display readout on the engineering monitor.

Diagnostics-2 operates off-line, and on demand, by using signal injection techniques throughout the camera system. Messages are displayed on the picture monitor indicating probable fault location.

Selectable Automatic Programs

Selectable automatic programs in the LDK 6A include: • Full auto set-up • Auto daily check • Auto white • Auto black • Auto shading white • Auto shading black • Auto video levels • Auto lens registration calibration • Auto tube adjustment • Auto centering • Auto registration—full range

These automatic programs provide for ease-of-use and produce the best possible results in the shortest possible time.

LDK 6A

Because of the computer-controllable back focus and the full range computer control of the tube parameters, it is even possible to set up the camera fully automatic after tube replacement without any manual pre-setting. The green channel is automatically aligned to a digital electronic test pattern, with red and blue, subsequently aligned to green.

COACH—Double Assurance

COACH is a tool for centralized maintenance and monitoring of the LDK 6 family of cameras. It consists of 2 components—an interface and an IBM-compatible personal computer. Simple to use, COACH provides: • Remote control and monitoring of LDK 6 family camera systems • Flexible retrieval, storage and control of camera data • In depth diagnostic monitoring • Remote access via standard modems over telephone lines • Remote video measurement. It therefore helps make more cost-effective use of engineering staff and allows contact and control at the local Philips Service Center.

Status Feedback

The unique status feedback system is another important advantage of the LDK 6A.

The data transparency of the design enables access to, and retrieval from, any unit on the bus. While all operation settings are displayed on the common control panel, virtually all setting-up and operational control parameters are available for display on the master control panel. All settings generated by digi-pots are fed back to the alphanumeric displays and are shown by an exact percentage readout. This permits settings to be checked at a glance, without physically measuring them.

The Camera Head

• Dynamic lens error correction • Remote control scan reversal • Rain-proof housing and RFI shielded • Quick lens change • 4 different lens memories • Built-in diascope • Optical axis of the lens and viewfinder in one vertical plane • Two 5-position filter wheels—one controllable by cameraman • Extensive viewfinder signal selection • Auto-iris • Momentary auto-iris by spot measurement • Auto-white balance control by spot measurement • Extensive intercom facilities • Rotatable, tiltable and removable 7" high resolution viewfinder with extreme tilt range ($\pm 60^\circ$) • Extensive indicators and markers in the viewfinder • Provision for remote facility for intercom and external viewfinder switches (e.g. on pan bars) • Two audio channels • Utility power • Integrated lens support • Large, switchable tally light visible from every direction • Contours from red (option)

And it is in the camera head, not in the lens, that the diascope is located, making a wider selection of lenses available for different production situations. Full range extender facilities are maintained.

BTS BROADCAST TELEVISION SYSTEMS, INC.**Automatic Studio/
Field Camera****LDK 26A Television Camera System**

• Excellent picture quality through 18mm Plumbicon tubes and optimized digital scan, shading and dynamic focus correction • Operational flexibility. Maximum flexibility for a wide range of broadcast applications under varied weather and light conditions. The interactive computer system with operational and set-up memories allows quick set-up and smooth operation for single or multi-camera systems • Reliable and ready for operation. Assured by digital control components, self-diagnostics and easy interchangeability of main units without the need for further adjustments. And COACH, the Philips remote control and monitoring system, gives double assurance of perfect performance • Safety for the future. A camera that is built to last, having a transparent computer controlled system with distributed intelligence that can also accommodate future developments

Computer Control—For Perfect Performance

The LDK 26A System has 3 microcomputers—in the camera head, the camera processing unit and the master control panel. Each unit can converse with the others in the chain enabling constant check on status of camera performance. Each camera has its own set-up computer. Because of this "distributed intelligence" system it is possible to set up independently, simultaneously and automatically any number of camera chains. And, system units can be interchanged, without the need for resetting, checking or adjusting.

The control system is fully digital, and digital/analog converters with "pulse-pot" technology permit manual and automatic adjustment over the whole control range. Because of this system no manual preset is required for automatic set-up.

The extensive automatic control of parameters makes the LDK 26A a total automatic 18mm camera with perfect, consistent performance.

Memories—An Aid For Production

Every LDK 26A camera has 2 set-up and 2 lens memories as standard. Optionally, there are 6 operational memories available.

The set-up memories may be used for special creative and technical applications. Each memory can store over 700 parameters.

The lens file can store color temperature, flare, shading and registration.

Each of the operational memories stores gains, RGB, blacks, filter wheel position, color temperature, black stretch, gamma and contours.

COACH—Double Assurance

COACH is a tool for centralized maintenance and monitoring of the LDK 6 family of cameras. It consists of 2 components—an interface and an IBM-compatible personal computer. Simple to use, COACH provides: • Remote control and monitoring of LDK 6 family camera systems • Flexible retrieval, storage and control of camera data • In depth diagnostic monitoring • Remote access via standard modems over telephone lines

Status Feedback

The unique status feedback system is another important advantage of the LDK 26A.

The data transparency of the design enables access to, and retrieval from, any unit on the bus. All setting-up and operational control parameters are available for displays on the master control panel. All settings in the camera processing unit and camera head are generated by the digi-pots on the master control panel and are fed back to the alphanumeric displays and are shown by an exact percentage readout. This permits settings to be checked, at a glance, without physically measuring them.

Diagnostics

There is one standard diagnostic system (Diagnostics-1) and one optional system (Diagnostics-2) available for the LDK 26A.

Diagnostics-1 operates on-line, and is active whenever a camera is "on." It makes no decisions which will interfere with normal "on-air" operation. However, where important characteristics deviate from nor-

mal, it warns the operator a decision is needed, and provides a readout on request.

Diagnostics-2 is a very valuable optional extra. It operates off-line, and on demand, by using signal injection techniques throughout the camera system. Messages are displayed on the picture monitor indicating probable fault location.

Automatic Programs

The following selectable automatic programs are available in the LDK 26A: • Full auto set-up • Auto daily check • Auto white balance • Auto black balance • Auto lens registration calibration • Auto lens shading, flare and color temperature calibration

These auto programs provide full automatic control not only to give ease of use, but also to produce the best results in the shortest time.

The auto lens programs can be used when the zoom lens is equipped with a built-in diascope.

After setting the back focus, it is possible to set up the camera fully automatically after tube replacement without any manual presetting. This is made possible because of the full range of computer controlled tube parameters.

Ahead Of Its Time

The LDK 26A camera head is smaller in size with high brightness, high resolution 5" viewfinder which makes it one of the most versatile 18mm cameras in the studio or on location. It has a number of outstanding features: • Dynamic lens error correction • Remote controlled scan reversal • Integrated lens support • Quick lens change • Optical axis of the lens and viewfinder in one vertical plane • A 5-position filter wheel • A separate (controllable) auto cap • Rotatable, tiltable and easily removable viewfinder (tilt range $\pm 60^\circ$) • Extensive indicators and markers in the viewfinder • Provision for remote facility for intercom and external viewfinder switches (e.g. on pan bars) • Utility power e.g. for teleprompter • Rainproof housing • Extensive intercom facilities • R, G and B and external video on VF display • Unparalleled service accessibility

The LDK 26A has an integrated camera lens support which ensures correct balance of the combined camera head and lens—whatever the size of the lens being used—light or heavyweight. Then there is the flexible viewfinder for extremes of pan and tilt movement. Finally, there is a wide range of indicators and signal selectors together with full communication facilities.

For the engineer and video operator, the master control panel acts as the surveillance center for the whole system—a sort of electronic screwdriver for maintenance and diagnostics. It monitors and controls hundreds of functions. Used with the individual operational control panels, the video operator has control over the whole system.

Immediate reading of lens f/stop numbers, preprogrammed contours, etc. is possible after selection of the relevant camera by means of the MATCH knob on the operational control panel.

KCH 1000 Multi-Standard HDTV-Camera**Special Features**

- Scanning parameters adaptable to all proposed standards
- $f/1.5$ prism splitter
- Nominal sensitivity 1000 lux, maximum sensitivity 100 lux
- High resolution mixed field tubes
- Dynamic lens error correction, including dynamic pincushion correction
- Automatic high-order correction of registration, geometry and shading with diascope in the lens
- Dynamic knee processor and automatic beam control (ABC)
- Optional two-dimensional image enhancer with unique noise suppression
- Automatic cable length equalization up to 300m
- Cheapernet control bus, extensible for multi-camera operation
- Sophisticated master setup unit with electroluminescent (EL) display and incremental controls
- Four-wire intercom multi-communication system
- Two high-quality microphone channels
- Teleprompter facility
- Error diagnosis system (in preparation)

Video Signal Processing

- Bandwidth $> 30\text{MHz}$
- Gain selection -6dB, -3dB, 0dB, +3dB, +6dB, +9dB
- Knee processor, static or dynamic up to 400%
- Knee-detail signal (horizontal)
- Automatic beam control (ABC) up to 1000%
- Independent control of black and white balance
- Test signals: sawtooth, grid, color bar, external
- Analog aperture processor (horizontal)

Automatic Functions

- Basic adjustments
- Geometry, fine
- Image registration, fine
- White/black shading
- Pre-operating adjustments
- White/black balance
- Filter selection
- Cable length compensation
- Continuous automatic functions
- Automatic iris
- Dynamic lens error correction

Viewfinder

- 7" monochrome viewfinder, aspect ratio 16:9
- Electronic peaking and variable box cursor

Control Unit

- Menu controlled operation
- EL display
- Incremental controls
- Scene file facility
- Cheapernet bus connection to CCU
- Multi-camera operation including automatic setup

Audio

- 3 intercom channels: production intercom, engineering intercom and program sound
- Headsets for cameraman, reporter and dolly driver can be connected to camera head
- Service intercom
- Two high-quality microphone channels with connections for dynamic and condenser microphones

Specifications:

Scanning: 1125 lines, 60 fields/s, 2:1 interlaced or 1250 lines, 50 fields/s, 2:1 interlaced or 1050 lines, 59.94 fields/s, 2:1 interlaced or 625 lines, 50 frames/s, 1:1 progressive or 525 lines, 59.94 frames/s, 1:1 progressive, aspect ratio 16:9, other standards on request

**KCH-1000**

Vidifont Vidityx II™

Vidityx II is the latest in the Vidifont line of distinctive operator-oriented design systems. Providing corporate, educational and commercial users new heights in character graphics generation.

The Vidityx II boasts many of the basic features of the higher-end Vidifont Graphics V™, with the capability to incorporate optional features including Animation, Time Sequential Overlays, Vidityclock™ and the Playback Sequence Controller. And Vidityx II has access and compatibility with Vidifont's extensive font library, including creative services for custom graphics and logos.

System Configuration

Vidityx II's compact design invites installation in virtually any graphic environment, particularly where space is at a premium.

Keyboard: Combines the standard typewriter keyboard with conveniently grouped function, editing and operational keys. Special attention to detail provides an environment that is both ergonomically efficient and user-comfortable.

Disk storage: Each double density 5 1/4" flexible disk holds up to 20 fonts, or provides random access of up to 600 display pages. Fonts and messages can be stored on the same disk. In a two-channel system, disk formatting or duplicating can be performed simultaneously with editing and composition.

MultiChannel: Directory controlled, high-capacity RAM and disk memory treat each message, regardless of length, as a single page, under a single identification. Over 10 instantly available on-line from RAM. Font IDs, colors, table locations, predesignated update windows, and all other user-environment parameters are recorded as part of each message. Allows multiple off-line channels rapid access for updates and changes, while on-line use can occur simultaneously utilizing different fonts, colors, formats and messages.

Display Characteristics

Fonts: Eight full-set fonts per channel, each containing up to 106 characters, may be accessed and intermixed for instant composition. Resident font memory has a capacity up to 24, with additional fonts available from flexible or hard disk.

Vidityx II has complete access and compatibility with Vidifont's complete graphic and font library of over 100 typefaces and 250 sizes.

Colors: The color collection contains 4,096 choices. On-line you can manually select, or automatically load, any combination of 16 Color Quads. Multicolored fonts and logo graphics may be displayed in up to 48 colors per character with or without multi-colored edge.

Backgrounds: Can be created independently of the character plane or linked to the foreground plane, dimensioned by one of the display items, and enlarged or reduced. Background sizes range from one TV line high and two pixels wide to a full display. 32 colors may be selected from the 4,096 palette independently of those on the foreground character plane.

Composition/Editing

Multiplanar: Up to 16 rows may be stacked by composing the first plane, pushing it back, composing the second, pushing it back, etc. Access to any plane is available by temporarily peeling away forward planes.

Justification: Vidityx II provides horizontal centering, left or right and left and right justification. Vidityx II suggests an initial justification point and moves the cursor to that location. You may begin to compose at that point, manually move to a new point or specify a preselected location by X and Y coordinates.

Tab: Each page may contain unlimited tab locations set at any horizontal and/or vertical point and recorded as part of the message. Upon playback, information at these tab points can be accessed instantly with forward or back tabbing, then updated and rerecorded.

Lower Thirds: The cursor is automatically centered on the bottom row. As a message is composed, it is centered unless otherwise designated. When the operator moves the cursor to the next row, the message scrolls up and the cursor is centered for the next entry.

Acquire/Deposit: Font style, color and edge may be "acquired" from any character and "deposited" on any other entity (character, word, row, group or entire page). This eliminates reentry steps, saves time and encourages artistic creativity.

Display Dynamics

Rolls/Crawls: Vidityx II has 7 bidirectional speeds, with 224 speed/direction combinations. Roll or crawl movements may be stopped at any point, then resumed at the same or different rate.

Ripple-On/Ripple-Off: Provides character-by-character appearance or removal, at any of 127 different preselected rates, as fast as 1/1000 second.

Flash: An infinite number of flash speeds are available on a character-by-character basis. Underlines and backgrounds can be independently flashed.

Expansion

Beyond the basic Vidityx II are expansion capabilities with which to grow.

- **Animation.** Of characters, rows, pages and backgrounds
- **Time Sequential Overlays.** For frame-accurate editing of events
- **Playback Sequence Controller.** For creation of an ordered or randomly sequenced playback list
- **Vidityclock.** Provides time of day, elapsed and split time plus stop, pause and resume up or down
- **Vidivote.** Election reporting package
- **Vidicast/Vidisports.** Weather and sports package
- **GraphicStore.** Paint and library system
- **Twenty-megabyte hard disk drive.** Increases font and message storage

BTS BROADCAST TELEVISION SYSTEMS, INC.**Graphic System****Vidifont GraphicStore™ Paint and Library System**

The Vidifont GraphicStore combines the multiuser flexibility of Vidifont Graphics V and Viditext II with full-color, full-frame graphics creation, cataloging, storage and playback. These expanded capabilities can be added to one or both high resolution channels, assisting you in the creation of your own art/graphics library.

Video Capture

The Vidifont GraphicStore is fully integrated to capture full-color artwork of freeze-frame live video from external sources or directly from the Vidifont. At the touch of a button, pictures containing motion can be stored as a field. An external key input accepts video sources with key outputs for overlaying images without generation loss. A keyhole is punched directly into the composite picture and the associated video inserted.

Image Creation/Modification

You can recall a stored image or start from scratch. Create and touch up. Enlarge the image 2 or 4 times with real-time scroll for easy detailing. The single screen system also displays menus called up whenever needed. Resize, crop, change perspective, position and border. Stencil, cut and paste, rubber stamp, color fill, blend and airbrush. Select from a variety of brush strokes and sizes or design your own. Montage two or more pictures. Add background mattes in solid or graduated colors. A complete menu of drawing and painting functions is available by selection on both the digitizing tablet and the keyboard.

Paint/Draw

• Color-fill a bounded area • Mosaic creation • Flip and move • Edges, drop-shadows, borders, italics • Create geometric shapes as outlines or solids • Reference grids: defined by size, horizontal/vertical density; moveable centerpoint • Temporary disk memory makes earlier versions available for recall • Global color change • Color cycling: marqueeing • Copy, rubber stamp, mirror image

Penpalette Menu

A wave of the stylus brings up the unique PenPalette menu, a centralized workplace providing easy access to a wide variety of artist tools and options. Start with a full-range spectrum of 32 paintpots chosen from 16 million available colors, including over 2,000 on screen. Or specify your own start/end color range, and the magnified spectrum between the two will automatically fill into your paintpots. Colors can also be picked up from a picture custom-mixed by varying hue, saturation and luminance, RGB values, or by personal blending in the large mixing area available. PenPalette indicators always show both current color and the new color as it's being blended.

Choose your stylus pen point from six different round pens. Or select from five calligrapher pens or an airbrush, each available in seven different sizes. There's also a single pixel pen for detail work. If you need more than these 49 possibilities, you can custom-design your own pen point, perhaps using one of the picture elements. Then store your customized pen for on-line use.

In fact, your entire PenPalette can be stored with its associated artwork to make changes, updates and segmented working sessions easier.

Stencil/Montage

The stencil and montage functions make it easy to create new graphics quickly by combining elements of pictures already in your library. They work together like an "electronic clipbook," helping you to stencil or "cut" elements from two or more pieces of artwork and "paste" them together to form a montage. All the tools and features are there to make the process flexible, quick and easy.

Define stencil by:

• Freehand drawing • Rectangles/squares • Circles/ellipses • Color or area • Point-to-point

After stencil definition:

• Matte with a single or blend of colors • Crop outside stenciled area • Stencil can be reversed

Your stencil outline may be stored on its own or with its associated cut-out picture. Two or more pictures can be combined as a montage.

• Resize, rotate or reposition cut-out while maintaining standard 4 x 3 aspect ratio • Reshape or stretch, vertically, horizontally or at any angle • Change image perspective • Foreground and background planes can be position-swapped, layers reordered • Image merges with full opacity or any degree of transparency • Editing function allows experimenting before final image merge

**The Library**

Captured or created pictures are cataloged and stored on disk, in one or more Vidifont GraphicStore electronic slide trays. Each of these storage trays can hold up to 100 slides in any chosen order. Search/select by keyword and/or date can quickly retrieve any slide or group of slides from your library. Further selection can pinpoint just those you need at the moment. Both slides and trays may be arranged in any sequence. Slides can be re-sorted, moved from one tray to another, or duplicated to appear in several trays.

A handy indexing system speeds sorting and sequencing by listing the name and numbers of the previous two and following two slides. An optional printer provides hard copy. Or use the "light table" to simultaneously display either 4 or 16 slides. Highlight any one, and enlarge it to full screen. The Vidifont GraphicStore accommodates up to 100 storage trays of 100 slides each.

Playback

Pictures may be played back manually in slide tray sequence using forward, backup and skip functions. Or playback timing and sequence may be linked to and automatically triggered by Vidifont Graphics V or Viditext II messages and animations. Either way, you can use a variety of transitions including cuts, wipes, venetian blinds and posterizations. And because of a double-buffered frame store, these transitions require only a single GraphicStore channel, leaving the second available for other uses.

Vidifex 3-D

The Vidifex 3-D package provides a variety of full-screen perspective and animation options. Text and other graphic images may be recalled and depth added by extruding. Perspective may be altered by varying the viewpoint distance from the screen. Scaling, moving and rotation can occur independently or together around the X, Y and/or Z axis.

Pictures may be recalled from the library and used as backgrounds. Cell animation begins by simply defining the start and end images and their positions, along with the desired duration time. Vidifex automatically computes in-between key frames and merges the images with the background using high-definition anti-aliasing. These key frames may be transferred directly to tape or previewed from the library before transfer.

Storage

The Vidifont GraphicStore is available with a 40 or 140M byte hard disk drive with a capacity of 70 or 250 full-frame, randomly accessible pictures. Capacity is doubled by adding a second drive to the basic storage unit. Up to three additional storage units may be added, each with one or two drives for a total system capacity of 2,000 full-frame pictures.

An optional high-density Kodak® flexible drive provides hard disk backup, library portability for interfacility use and off-line archiving. The system employs a high speed SASI controller allowing for upward compatibility as higher capacity drives become available.

FGS 4500 Elite Computer Graphic System

- Latest techniques in shading include solid texture mapping, reflectance mapping and texture wrapping
- Ability to interactively design sophisticated motion
- Dynamic human interface providing with continuous response for quick results
- Ability to complex grouping of objects for animation
- Accurate control over every motion parameter by trajectory editor
- Special effects with glows, streaks, texture mapping, smooth shaded textured objects and multiple light sources
- Ethernet interface for satellite workstations
- Automated single frame recording control for VTR and digital disc recorder

The FGS 4500 is capable of modeling 2 and 3 dimensional objects, choreographing animation sequences up to the greatest complexity and rendering the images in realtime or as single frames and recording it under host control onto videotape or into digital single frames disk recorders.

For high resolution imagerendering images will be rendered as digital datas on to streamer tape for reading by high resolution printing scanners. Imageresolution may go up to 4000 by 4000 pixels for this application.

FGS 4500 Illustrator Paint System

- 2- and 3-dimensional object modeling
- Selectable brushes
- Selectable transparency
- Color selection of 16 millions colorshades, all displayable
- Cut and paste, stenciling, masking functions
- Illustration of images with 3 dimensional objects applying smooth shading, texture mapping and setting of colored light sources
- Realtime framegrab for illustration in full color resolution
- Rotoscoping facility

The FGS 4500 is a high quality 3D illustrator paint system. It's the basic FGS 4500 hardware with 2 and 3 dimensional object modeling and painting software. The FGS 4500 three dimensional capabilities make it the most sophisticated paint system. By adding on the animation and the special effects software it will become a full facility FGS 4500 Elite.

FGS 4500 Satellite Modeling Workstation

- SUN computer based off line package
- Data transfer over high speed Ethernet data link to FGS 4500 for animation/rendering
- Enhanced modeling capability with 2- and 3D editor
- Model building like extrusion, merging and surface of resolution
- Lofting capability for interconnecting two dimensional boundaries in a definable path

The modeling satellite is a stand alone system for object modeling with the latest sophisticated modeling software available.

It communicates with the FGS 4500 Elite over high speed Ethernet Bus. With use of this satellite workstation more jobs may be processed through the FGS Graphic Network for increased production.

Pixelerator — High Speed Rendering

The Pixelerator has a unique architecture which allows multiple CPUs to be linked together for high speed performance. With just one CPU the Pixelerator is expected to perform 10-30 times faster than the FGS. As CPUs are added, a near linear

FGS 4500 Elite

increase in performance is realized. There is no practical limit to the number of CPUs in one system, and a system with more than one CPU can be configured to run multiple jobs simultaneously.

While the display for the Pixelerator is video, the system is actually resolution independent. Higher resolution images may be rendered to disk, then transferred via the Satellite to magnetic tape for recording. To preview the image, a filtered version is displayed in video.

The Pixelerator communicates with the FGS over Ethernet. Animations are sent from the FGS to the Pixelerator, which takes over from there. The Pixelerator has its own built-in machine control for single frame recording. Inputs and outputs are provided via analog (R, G, B, Key) and digital CCIIR 601. System supervision for the Pixelerator is handled by the Satellite; this includes file management, system start-up, complete diagnostic control, and access to Unix. A terminal-based user interface provides for set-up and control of the rendering and recording process.

The Pixelerator offers a number of features to the network. The Pixelerator Z Shader allows for automatic depth sorting and object interpenetration with no limitations. Objects may be arbitrarily scaled in any direction for squashing and stretching. The Pixelerator RGBK out includes a soft key that can be recorded at the same time as the animation. These features combine with the rendering speed to create the ideal system for the synthetic image market.

The implications of fast rendering may alter your approach in working with clients. Consider the fact that a job which took 30 hours to render may take one hour on the Pixelerator. When a job takes thirty hours to render, the client is usually locked into the finished piece. When the time is reduced to one hour, the client may play a much more interactive role in the animation process. A job could now be rendered on the Pixelerator a number of times, producing the perfect result, while the FGS is available for interactive work.

BTS BROADCAST TELEVISION SYSTEMS, INC.*Distribution Switching
Systems***TVS/TAS-2000****Distribution Switching Systems**

- Redundant control card capability • Multilevel breakaway capability
- SMPTE-422 computer control optional • Internal refresh memory with 30-day memory save • Power supply failure indicators on all boards • Power supply alarm indicators with contact closure for remote alarm • Fused power supply outputs • Redundant power supply capability • No PROM changing on crosspoint boards • Vertical interval switching of video • Clamped video inputs • Output delay trim • Field expansion of inputs and outputs without rewire • Compact—10 x 10 matrix arrangement. 60 x 10 audio and video or 130 x 10 audio or video in 8³/₄" card cage • Internal cooling fans. Fans removable during normal operation • Matrix board "in use" indicator • Computer automated system testing of audio and video through all possible signal paths • BNC video and party line connectors • Dual video outputs • Capable of interface to TCS-1 machine control system

The TVS/TAS-2000 is a modular switching system consisting of a matrix, output and control cards. The cards—the basic building blocks of the system—are installed in rackmounted card cages which utilize pin and socket connectors to increase reliability and provide low circuit card insertion force. Systems may be configured and interconnected to create switching systems with capabilities ranging from 10 x 10 to 450 x 150. Redundant power supplies can be housed in each card cage.

Control Configurations

Desktop and rackmount control panels are available for use with the TVS/TAS-2000 switcher to meet virtually any control requirement.

Power Supplies

The PS-2000 Power Supplies provide unregulated DC voltages for on-card regulation. Because the supplies are interconnected in a redundant manner, either supply can power the card cage. Cost savings can be achieved by eliminating the redundancy and replacing the second power supply with a blank panel.

Monitor test points, a green LED indicator for each voltage and a red alarm LED, are located on the front panel of the power supplies.

Polling Card

The CE-2000 Polling Card is the system's master controller. It polls panels for switching commands and periodically refreshes all switcher outputs.

Using a nonterminated coaxial cable, the serial bidirectional party line offers a highly efficient communications medium for system control. The CE-2000 provides four separate and identical party line outputs. A short in one party line will automatically trigger the logical removal of the shortened line, allowing the other three lines to continue normal operation.

Card Cages

The RF-2000 Card Cages are 8³/₄" (five rack units) high and 18" deep. They mount in standard 19" racks, and feature easily removable front doors for quick access to circuit boards.

Each card cage has its own ventilation system. Air is drawn in through the front panel and exhausted through the right rear side. Fans are mounted to a removable panel on the rear of the chassis to allow replacement without turning the switcher off.

Input connections for the switcher system are located on the first card cage, and each cage in the system contains its own output connectors.

Internal cabling carries video and audio between card cages within a single rack. Plug-on cables and terminators are used to facilitate future expansion of inputs and outputs.

Alarm Circuits

Alarm circuits are contained within all circuit boards. The loss of any power supply voltage used on any individual circuit card creates an alarm condition which is indicated by the activation of a red LED. This alarm condition is bused to the power supplies where it generates a card cage alarm.

**TVS/TAS-2000****Matrix and Output Circuit Cards****Video Card**

The VS-2100 has 10 input amplifiers, each with a plug-selectable sync tip clamp option. The video matrix card contains 100 solid-state crosspoints for video switching. An LED is used on each card to indicate when the card has one or more crosspoints selected.

Audio Card

The AS-2100 Audio Matrix Card switches audio signals. This card has 10 solid-state bridging input amplifiers with high common-mode rejection. Balanced input signals are converted to a single-ended signal for switching by crosspoints. When the card is in use, output bus amplifiers and output crosspoints feed the matrix output bus. When the card is not in use, these are disconnected from the bus. Cards can be added to a system to supply the required number of inputs. For interchangeability, DIP switches are used to select the card addressing. An "In Use" LED indicates when one or more card crosspoints are selected.

TVS/TAS-2000 Matrix Configurations

Type CAV: Combined Audio and Video This configuration combines both audio and video switchers in a single 8³/₄" card frame. While the unit is limited to 60 inputs, it may be ordered with (or expanded to) 100 outputs.

Type CAA: Combined Audio Audio The CAA design can be configured as a dual audio switcher (channel 1 and 2) with 60 inputs to 10 outputs or as a single audio with 60 inputs to 20 outputs in each 8³/₄" card frame.

Type CVV: Combined Video Video Type CVV provides as many as 60 inputs to 20 outputs per 8³/₄" card frame.

Type MSO: Multiple Chassis with Single Output Card per Chassis These switchers are supplied with one card frame for each video output decade and a separate card frame for each audio output decade. Expansion to facilitate matrices of any size may be ordered initially or at a later date.

TVS/TAS-2001 Wide Band Distribution Switcher

The TVS/TAS-2001 provides a video bandwidth of more than 30MHz—measured with a full-amplitude (1V p-p) sine wave or video signal.

It takes advantage of surface mount technology to reduce signal path length and stray capacitance effects, providing the flattest possible response through every stage.

Featuring a companion line of 30MHz distribution amplifiers, the TVS/TAS-2001 is designed to deliver wide band performance with matrix sizes of 250 inputs x 250 outputs or more.

The bus technique maintains bandwidth performance across a wider motherboard than was possible in previous designs, allowing more inputs to be brought directly to the main matrix. This technique also increases the number of output buses that can be added before it becomes necessary to use the input distribution amplifiers.

The switcher can interface to older Bosch control panels delivered with TVS/TAS-1000 and 2000 series.

BTS BROADCAST TELEVISION SYSTEMS, INC.**Control Panels****SWITCHER PARTY LINE CONTROL PANELS****CP-1410 Multibus Control Panel**

- Twenty bus control • Keypad entry—16 key • Alpha-numeric LED display • Individual level control • Up to four separate matrix levels • Input status tracking • Category number control • Displays can consist of any combination of up to four letters or numbers, and are complemented by descriptive labels

CP-1410

CP-1420 Pushbutton Control Panel

- Expandable to 200 buttons • Illuminated pushbuttons • Single bus • Dual bus • Full matrix XY • Programmable • Lock • Provides for 20 pushbuttons to select inputs for one switcher output

CP-1420

CP-1406 Battery-Powered Lever Wheel Control Panel

- Single bus • Designed to sit on a desk or tabletop • Provides control in offices and conference rooms when switcher status indication is not necessary • Operates on a single 9V radio battery • The battery will operate for up to one year under normal operation • A power connector is also provided to be operated with an AC adaptor • LEDs are provided to indicate the transmission of data to the party line and the condition of the battery

CP-1440 3-Lever Wheel Control Panel with Status

- Lever wheel entry • Single bus • Dual bus • Full matrix • LED displays • Downloadable mnemonics • Chop • Lock • Internal switches allow selection of operational modes, output number, switcher levels, normal or extended party line and numeric or alphanumeric operation

CP-1420

CP-1450 Series Microprocessor-based Control Panels

- Lever wheel entry • Category number selection • Alphanumeric LED displays • Level select buttons • Programmable override buttons • Downloadable mnemonics • Chop • Lock • Single bus alphanumeric lever wheel control panels • CP-1450/4 provides control of 2 output buses • CP-1450/3 is a full matrix control panel

CP-1450

CP-1501A Full Matrix Alphanumeric Control Panel

- Full matrix XY, seven levels • Keypad entry, 10-key • Alphanumeric LED display • Individual level control • Input status tracking • Category number selection • Downloadable mnemonics • Chop • Lock

TI-2000 Telephone Interface

- Switcher control from Touch-Tone® phone • Synthesized voice prompting • 100 programmable access codes • Multi-language capability • Contains a certified telephone voice coupler to conform to FCC regulations • Includes a power supply alarm indicator, on-board indicator and test lights, full or restricted matrix control capability

SM-2000 Status Monitor

- Video only takes • Audio only takes • Dual take status • Separate audio and video takes • Repeated dual takes • Inactive crosspoint • Up to four SM-2000 cards can be utilized in the system at one time • Each SM-2000 provides up to eight pages of information, each of which can be programmed to display the status of the matrix in either normal or reverse video or a combination of both

CI-2000 Computer Interface

- Provides interface between external computers and TVS/TAS-2000 switcher systems • Permits mnemonics download for CP-1420, CP-1440, CP-1450, and CP-1501 series control panels and the SM-2000 status monitor

Prices and Specifications Subject to Change Without Notice.

B-303

BVA-350 Video Distribution Amplifier

- 30MHz bandwidth (with full slew rate capability)
- Six rear panel outputs and one 75 ohm front panel output
- Differential input
- Back porch clamp
- Front panel video and voltage presence indicators
- Front panel controls include gain, which provides ± 1.5 dB of adjustment, and cable equalization in 10 steps as well as continuously variable fine control
- Plug-in options: Continuously variable 300m cable equalizer (30MHz). Adjustable video delay (to 235ns) in 5n sec steps with plug-in optional fixed delay units available

BPA-350 Pulse Distribution Amplifier

- Wide band amplifier
- Six rear panel outputs and one 75 ohm front panel output
- Front panel pulse and voltage presence indicators
- Plug in options: Pulse delay/regen. Cable equalizer for up to 300m

BAA-350/525 Audio Distribution Amplifiers

- One input/six outputs
- Handles balanced or unbalanced inputs and outputs
- Six balanced or 12 unbalanced outputs
- Mix and match balanced and unbalanced outputs
- Very low noise, > 100 dB at typical reference levels
- Very low distortion, typically $< .002\%$ at any level up to $+24$ dB
- Totally transformerless circuitry for superior audio performance
- Front panel 10-segment LED VU meter

BAA-350 Gain in four selectable ranges, maximum of $+6$, $+12$, $+18$ or $+24$ dB; ± 20.5 VDC; $> +27$ dBV balanced, $> +21$ dBV unbalanced, input/output max.

BAA-525 Gain in two selectable ranges. Maximum of $+6$ dB in LO position, maximum of $+24$ dB in HI position, > 24 dBV balanced, > 19 dBV unbalanced, input/output max; optional phono jacks for unbalanced use

TVA-528 Video Distribution Amplifier

- Differential input
- One input/six outputs
- Precision-grade components assure long-term stability
- 1% bounce (overshoot)
- 0.25% distortion and tilt, 50Hz square wave (servo on)
- Accepts delay and equalizer plug-in operations
- DL 525 delay plug-in option—up to 300ns delay with frequency response/ripple of < 0.25 dB to 5MHz
- EQ525 equalizer plug-in option—corrects for up to 1000' of 8281 cable
- Delay/equalizer combinations possible

TPA-527 Precision Pulse Distribution Amplifier

- One input/four outputs
- Precision design assures long-term stability
- Separate output stages
- Individual output 350-4000ns delay adjustments

TBB-525 Black Burst Generator/Sync Blanking and Burst Adder

- Burst adder
- Permits smooth fades to black without loss of colorlock
- Two separate outputs permit simultaneous sync/blanking/burst addition to monochrome source with separate blackburst output to switcher
- Remote on/off control of burst on either output
- Either output can be used for sync/blanking adder and/or burst adder
- 360° burst phase adjustment

BVA-350

TAS-525

TVS/TAS-525 Video/Audio Distribution Switchers

- 5 x 1 modules can be stacked for additional inputs with common latching or for multiple bus operation
- Video-loop/audio-bridge inputs
- Video switching is vertical interval, with a sixth crosspoint for improved isolation specifications in multimodule systems, (0.2° differential phase, 0.2% differential gain), (-60 dB crosstalk)
- Switchers self-latch, require only momentary closures
- TAS-525 audio distortion: 0.1dB overall; Crosstalk: -75 dB
- 5 x 1 illuminated pushbutton control panel available
- The RC5 pushbutton remote control panel can be mounted in RP-203 rack frame. The RC5 will operate either a TVS-525 or a TAS-525, or both simultaneously (audio follow video). Looping control connections allow two control panels to operate in parallel. Each RC5 requires a CC5 interconnecting cable.

THE-100 Hum Eliminator

- For use in color and monochrome systems
- Greatly reduces common mode power line hum in video circuits
- Passive, failure-free
- Compact
- Flat frequency response
- No differential phase or gain distortion

LDK-4210

LDK-4210 Genlock Sync Pulse Generator

- Single or double systems with automatic changeover unit
- Black burst with 8 field ident, and color bar generator
- PLUGE and grid pattern generator
- LSI technology ensures very stable and reliable operation
- Pulse outputs 4 or 2V p-p
- SC/H phase relation according to EBU recommendation for PAL
- 8V flag pulse optional output
- PAL, PAL-M, NTSC, PAL-N and SECAM versions available
- 19" rackmounting

TCE-2000N NTSC Digital Color Encoder

- Digital color bar generator
- Pulse delay module
- Drift-free digital modulators (U.S. Patent No. 3721755)
- All-digital color bar generator—full/split bars—optional
- Level-dependent proportional aperture correction
- 100% circuit access during operation—no extenders required—no phase shift or gain change during adjustment
- Umbilical connection for instant service replacement
- Subcarrier rejection typically 55dB
- No DC shift with APL change
- Drift-free current summing matrices (U.S. Patent No. 3715470)
- Meets all specifications over 100-130VAC, 0° - 60° C range without readjustment

DCR-100 Digital VTR in SMPTE/EBU D-1 Standard

- Recording and playback in SMPTE/EBU standard
- Any of the three D-1-cassette sizes can be used
- Can be switched between 525/60 and 625/50
- Modular construction
- Flexible overall design
- Reliable precision mechanics
- Serial control interface
- Digital video inputs and outputs according to CCIR 601
- Digital audio inputs and outputs according to EBU/AES
- Analog video/audio inputs and outputs (option)
- Internal machine-to-machine editor (option)
- Automatic tracking
- Automatic optimization of recording current and playback equalizer

As the system is of modular construction, the machine can easily be equipped to meet specific user requirements or applications.

Top quality coders and decoders enable the DCR-100 to be incorporated into existing systems.

The control panel, a useful feature of the DCR-100's modular construction, is laid out in a clear and practical way and is available in two versions: a basic version for applications where the unit is mostly remote controlled, and a deluxe version—as shown in the picture—with every refinement.

The front cassette compartment is directly above the control panel. It is unique in that it accepts all three sizes of D-1 cassette.

XD-CD 7184 Digital Encoder

- Conversion of analog component signals R, G, B, or Y, Pr and Pb to digital component signals as specified by CCIR Rec. 601
- Analog filters designed to CCIR Rec. 601 specification
- Two separate outputs (25 pins) for digital component signals (SMPTE RP 125/EBU Tech 3246)
- Insertion of H, V, and F in the blanking of the digital signal
- Built-in test signal generator for color bars, sawtooth and modulated signal. Switchable to one of the two outputs as separate test signal and/or to be inserted as line-test signal in line 20 and 333 in the vertical interval
- Pushbutton control from the front panel with LCD display
- Self diagnostic in case of failure
- Remote control (serial data line)
- Serial port for diagnostic data terminal

XD-DC 7184 Digital Decoder

- Two separate digital 4:2:2 inputs (25 pins)
- Pushbutton control from the front panel with LCD display
- Remote control (optional)
- Built-in diagnostics
- Serial port for diagnostic data terminal
- Full screen display of test signals in the vertical interval
- Cable equalizer for 250m cable length (optional)
- Analog filtering according to CCIR Rec. 601, annex III
- Menu-driven control
- Individual switch-off of the components y, CR, CB
- Generation of standard blanking and sync signals
- Line delay board (optional—maximum of two can be installed inside decoder)

Options**XD-0160 Cable Equalizer**

Suitable for cable lengths up to 250m.

XD-0164 Line Delay Board

For test line storage over 1 V/interval. Maximum of two boards, can be installed within decoder.

**DCR-100****XD-ST NR 631 4:2:2 Noise Reducer**

- Selectable noise reduction: -3, -5, -7dB
- 525/60 and 625/50 signals
- Automatic switchover between 525/60 and 625/50
- 4:2:2 digital signal input, loopthrough
- Separate luminance and chrominance noise reduction
- Still store operation
- Local internal or optional remote control
- Input: parallel digital 4:2:2 component signals
- Output: parallel digital 4:2:2 component signals
- Output signals locked to external (studio) reference
- 19" rackmount
- Noise reduction of 4:2:2 digital signal (according to CCIR 601/656) with studio bandwidth
- Accepts analog component video signal through analog—digital converter
- Digital output signal can be reconverted into desired analog signal

DNR-7 Digital Noise Reducers

- 4:2:2 signal processing unit for the noise reduction of 4:2:2 digital signals with full studio bandwidth
- Also accepts composite or analog component video signals via analog-digital converters
- Digital output signals can be reconverted into the desired analog signals
- Range of noise reduction is selectable with separate processing of luminance and chrominance
- Facilities for still store operation
- Switching between 625/50 and 525/60 signals is possible
- Remote control is available

PD-TB 7184 Digital Test Pattern Generator

- Test signal generator for digital component signals according to CCIR Rec. 601
- Two separate outputs for digital component signals
- Eight-line repetitive test signals selectable with or without programmable color area
- Selectable output for test signals
- Additional H- or V- sweep for luminance and chrominance (with or without motion, programmable motion frequency)
- Line repetitive test signals can be used as test signals in vertical blanking interval (line 20 and 333)
- Adjustable horizontal position
- Pushbutton control from front panel with LCD display
- Self diagnostic in case of failure
- Remote control (optional)
- Provision for serial output to connect a terminal for diagnostic menu-driven control
- Separate switch-off facility for digital components

BTS BROADCAST TELEVISION SYSTEMS, INC.**Master Control/
Automation Systems****MCS-2000 Master Control Switcher
With Built-In Stereo Capabilities**

- Full TVS/TAS routing switcher access to up to 250 video/audio sources
- Programmed source name display for 16 input buttons
- Manual and automatic-fades, dissolves and wipes
- Two independent key stages
- Key colorizing and bordering
- Communication with TCS machine control system
- Over/under audio mixer
- 4-channel stereo meter bridge with real time display
- On-air bypass

The MCS-2000 can offer the most sophisticated and yet still the simplest preroll system you can get. It offers the capacity to multi-roll A/V splits and backup machines, to automatically handle film chain multiplexers, and to provide automatic full-function machine control at the operator's fingertips.

The MCS-2000 can provide complete on-air automation, with every function of the switcher available to an automation system. The automation system can even adjust the clip levels of a keyer.

The MCS-2000 can provide automatic logging of all switcher events, even without an automation system.

**MCS-2000**

The switcher can be interfaced to a complex machine control system such as the TCS-1 and will provide complete full-function control of any machine selected on the preset or program bus.

TCS-1 Machine Control System

- Controls up to 100 VTRs/film chains
- Dual twisted pair wiring simplifies installation
- Control of each VTR/film chain can be delegated to any one of eight studio control panels or machine control multiplexers
- Central microprocessor can be programmed to provide special functions such as permanent assignment of specific machines to specific control panels
- System can be integrated with the TVS/TAS-2000
- Distribution switcher to provide dynamic machine selection
- System can be integrated with the MCS-2000 master control switcher
- Integrates with the BTA-2300 automation system

- MI-8** 8-function machine interface, 1³/₄" rackmount
- MI-24** 24-function machine interface, 3¹/₂" rackmount
- MD-8** Machine delegate panel, 1³/₄" rackmount
- MC-24A** Single-machine control panel, requires MCM-1000
- MC-12/3** Twelve function three machine control panel
- MCM-1000** Machine control multiplexer, connects up to 30 MC-24A's

**TCS-1****BTA-2300 Television Automation System**

Designed to provide television station operators with a powerful yet easy to use, computer-assisted television station automation system of high reliability. The system is intended to be used as a tool by the operators—it does not presume to do the operators' job.

The automation system features include a traffic computer interface, switcher and auxiliary equipment control, alternate schedule selection, log creation, media pull list generation, machine assignment, and cart machine play list generation. The software is configurable to meet the needs of individual stations. The system makes extensive use of color displays, touch screens, and mouse pointing devices to streamline the operator interface. Fill-in-the-blank forms and labeled softkeys make the system easy-to-use.

The system controls an MCS-2000 Master Control Switcher and its associated TVS/TAS-2000 Distribution Switcher and TCS-1 Machine

Control System. Nearly all of the master control switcher functions and adjustments which can be performed manually can be controlled automatically from the switching schedule.

A typical system would consist of:

- The processor
- 4M bytes of RAM
- An 80M byte hard disk drive used to store the software, switching schedules and logs
- A 7770K byte, 3.5" floppy disk drive used for schedule backup, log archiving and cart machine play list output
- A color terminal used as the main console
- A color video output used for monitors around the station
- Several additional color terminals used to provide access from around the station (optional)
- Two printers, one used to print the log on-line and the other used as a utility printer to print various reports
- A serial interface to a separate traffic computer system

BTS BROADCAST TELEVISION SYSTEMS, INC.**Editing System****BBE 900 Automatic Editing Control Unit****4 VTR Control $\frac{1}{2}$ " , $\frac{3}{4}$ " or 1"**

Up to four VTRs can be controlled in an A/B Roll edit. Any unused VTR can also be selected and controlled while an automatic event involving the other VTRs is taking place.

Switcher Control for Full Effects

Serial and parallel switcher controls of crosspoints, main fader, keyer, wipes, and dissolves.

Audio Mixer Control

Fader selection and VCA control. This allows individual automated control over audio switching and cross fades.

2 Auxiliary Sources

Both of these sources can be assigned to access; for instance, a live camera, black, or color bars.

Multiple Source Selection

Select all four sources for simultaneous control. Used for live cuts and dissolves.

Longitudinal, Vertical Interval Time Code, Control Track

Time Code can be read in any combination, and selected independently for each machine.

Battery Backup

Protects EDL (Edit Decision List) events in case of power failure.

Non Volatile Memory

For storing user selectable system setup parameters.

Color Framing

NTSC or PAL color framed edits by either the VTR's detector or an optional plug-in color framing detector.

Cue Tone Record/Playback Option

Places tones on the audio channel.

Advanced Graphic Effect Mode Display

Tells at a glance what the displayed event is without having to analyze the time code values.

Full Synchronization Accuracy Selection

Synchronization using various time code grades, or no time code at all, can be accomplished by using the six accuracy grades provided. These grades are: absolute time code synchronization, ± 1 frame tolerance, rough sync, preroll and play, play only, or manual start. These help overcome a large number of time code quality reading problems.

DMC (Dynamic Motion Control)

-1 to +3 times normal speed synchronization, manual override possible. Automatically assigns the outpoint to an inpoint for matched edit.

Crosspoint Selection

Switcher crosspoints are assignable.

Matched Frame Edits

Allows back to back effects in a multi-machine special effects sequence.

Automatic Time Tracking

Allows automatic calculation of the player matched frame. An enormous amount of time is saved with this feature. Also, time tracking can be initiated manually, when the automatic mode has been disabled.

Specifications

Power Requirements:	100VAC to 240V $\pm 10\%$, 48Hz-64Hz
Power Consumption:	50W max. including all BKE boards
Operating Temperature:	0°C-45°C (32°F-113°F)
Storage Temperature:	-40°C + 60°C (-40°F + 140°F)
Weight:	Card file unit—Approx. 19.7 lbs. (9 kg) Keyboard—Approx. 5.5 lbs. (2.5 kg)
Dimensions:	Card file unit—Approx. 6.9" H x 16.7" W x 10.3" D (175 x 424 x 262mm) Keyboard—Approx. 2.1" H x 16.7" W x 10.8" D (53 x 424 x 275mm)
Video/Reference Signal:	External sync input—0.2-5.0V p-p sync signal or 1.0V ± 0.2 V p-p video signal, 75 ohms

**BBE 900**

Cue Tone Signal:	Reference video input—1.0V ± 0.2 V p-p, 75 ohms (with BKE-901/BKE-902) Field reference input (PAL only)—Nominal 4.0V p-p, 1.5k ohms, negative going edge in line 1 through line 15 of fielt 1 (with BKE-902) VDU output—1.0V ± 0.3 V p-p, 75 ohms Frequency—1kHz (begin cue), 400Hz (end cue) Cue audio input— +4dB, 600 ohms, balanced, XLR 3-pin Cue audio output— +4dB, 600 ohms, balanced, XLR 3-pin
Operation:	Data and source controlled by keyboard with VDU of edit data and source status
Edit Reference:	Control track signal, SMPTE/EBU LTC (Longitudinal Time Code), VITC (Vertical Interval Time Code)
Editing Accuracy:	± 0 frame with time code operation (normal play mode)
Edit List:	128 edits
GPI:	3 ports, programmable pulse output
External Edit Control:	RS-232C, programmable BAUD rate and bit
VDU:	6 x 7 dot matrix, 80 characters x 24 lines
Supplied Accessories:	Extension board for Card File Unit (x1), 8-pin keyboard cable (5m x 1), 15-pin D subconnector (male, x 1), 25-pin D subconnector (male, x 1), AC power cord, operation and maintenance manual

Optional Accessories**BKE Series Interface Boards**

BKE-901: NTSC color framing detector; BKE-902: PAL color framing detector; BKE-903: Cue tone record/playback adaptor; BKE-904: 9-pin interface with two 9-pin connectors; BBE 900 $\overset{RCC-G}{\leftrightarrow}$ BVU-800 series, BCB Betacam; BKE-911: Parallel switcher interface; BBE-900 $\overset{RCC-G}{\leftrightarrow}$ BVS-500, GVG 50CV; BKE-912: Serial switcher interface; BBE-900 \leftrightarrow GVG 100/1680; BKE-915¹: Serial switcher interface; BBE-900 $\overset{25-pinD}{\leftrightarrow}$ SEG-2550; BKE-916²: Parallel mixer interface

¹25-pin (5m) switcher control cable supplied

²15-pin (5m) mixer control cable supplied

Prices and Specifications Subject to Change Without Notice.

BTS BROADCAST TELEVISION SYSTEMS, INC.**Camcorder/Betacam
Recorder/Player****KCB 590 Recorder Camera System
for Betacam SP Videocassettes**

The KCB 590 is a combination of the LDK 90 frame transfer-CCD camera with the Betacam SP recorder BCB 5.

Camera System (LDK 90)

- Three chip CCD camera
- 610 (NTSC)/604 (PAL) pixels in horizontal direction
- Low profile camera body
- No smear due to frame transfer principle
- Viewfinder playback
- Full bandwidth high-grade recording plus a parallel broadcastable video signal
- 8V genlockable sync generator
- 1 1/2" viewfinder with tape length indication, audio level control, signal-inserted border, white balance, momentary iris window in the picture area; around the picture area: record/on-air indication, gain readout, two white balance memories and presets, no filter, range extender, tape-end signal, low battery warning, standby save and video level indication

Recorder System (BCB 5)

The quality-enhanced BCB 5 Betacam SP recorder for metal particle tapes gives wider bandwidth coverage, superior signal component recording, improved signal-to-noise ratio and better-than-ever picture quality for playback/editing.

**KCB 590**

- Betacam SP recordings are compatible with Betacam format
- Video and audio off-tape monitoring
- Immediate playback of recorded events in the viewfinder
- Lightweight and compact
- Four audio channels. Two FM audio channels are added to the normal two longitudinal ones
- 48V phantom supply for audio CH1

**BCB 35 Portable Field Recorder/Player
Betacam SP Format**

- RS-422 interface for field editing
- Frame accurate back space editing
- 4 audio channels with individual meters
- 48V phantom supply for audio CH1
- Built-in RF modulator
- 19.2 lbs.
- Built-in time code generator/reader with 8-digit LCD readout
- Composite and component input/output
- Battery compartment accepts either two NP-1A or one BP-90 battery. AC operation is also possible using an AC-500 power adaptor
- Supplied with extension board, soft carrying case, shoulder belt, antenna selector switch, coaxial cable with F connector
- Search mode is \pm normal playback
- 45 minutes continuous operating time with NP-1A

**BCB 35**

BTS BROADCAST TELEVISION SYSTEMS, INC.**Betacam Recorder/
Players****BCB 75/70/65/60 STUDIO RECORDERS/
PLAYERS FOR BETACAM SP VIDEOCASSETTES****BCB 75 Betacam SP Recorder/Player**

The BCB 75 employs the Betacam SP standard which, together with metal particle tape, raises the picture quality to a remarkably high level. Other techniques also introduced contribute to the VTR's video reproduction standard. In particular, the FM carrier frequency has been raised, making possible significant improvements in luminance bandwidth, signal-to-noise ratio and the pulse-bar response in both luminance and chrominance channels.

Dynamic-Tracking Playback

With the DT head and circuit technology, the BCB 75 can playback broadcast quality video from -1 to +2 times normal speed continuously. It also has a variable memory for storage and recall of tape speeds within that range.

Extended Recording-Playback Time

The BCB 75 accepts, beside the S-Cassette (5, 10, 20 or 30 minutes), the L-Cassette (60 or 90 minutes). In the PAL-Standard the time increases for S-Cassette to 36 min. and L-Cassette to 108 min.

Built-In Editing

- Split audio-editing with independent In and Out memories
- Frame by frame forward and reverse trim
- (Dynamic Motion Control) DMC is provided during editing. Using a DT equipped player VTR with RS-422 interface (BCB 15, 65, 75) the BCB 75 can memorize the tape speed of the player VTR achieving broadcastable playback at -1 to +2 times normal speed. After memorizing, the DMC function can be used either in edit or play mode.

Video/Audio Confidence Heads

The unit is equipped with video and audio 1 and 2 confidence heads for simultaneous playback during recording.

Built-In TBC

A built-in time base corrector provides broadcast quality video signals. A high quality digital dropout-compensation also ensures consistent picture performance.

Maintenance Alleviation

The BCB 75 has built-in indicators for power on, drum running time and threading/unthreading cycles. Quick serviceability is supported with comprehensive self diagnostics.

Multichannel Audio

Four channels—two longitudinal ones with Dolby C and two FM channels (simultaneously recorded with the video signal by the rotary video heads)—are provided.

The adjustment of record and playback level can be done with the individual potentiometers. By pressing those buttons the channels are set to unity gain. The bar graph display can be selected either for VU- or peak-display.

Built-In Time Code Generator, Reader and Character Display

- Built-in time code generator for LTC, VITC and User-Bits
- Presettable User Bits can be stored in the non-volatile memory
- External/Internal time code (Regen/preset—Rec run/free run)

SMPTE/EBU Component Connectors

In addition to the 12-pin dub connectors, the Betacam SP studio models are equipped with separate BNC connectors for Y, R-Y, B-Y, which are adjusted for the proper SMPTE/EBU component levels.

**BCB 70****BCB 65 Studio Player with Dynamic Tracking**
Player version only of BCB 75**BCB 70 Studio Recorder/Player**

The BCB 70 is the workhorse for editing suites, which provides full edit capabilities for mastering purposes.

Capstan override

Normal playback-speed can be varied by $\pm 16\%$ using the search dial or by $\pm 8\%$ using the TRIM buttons.

High Speed Picture Search

Picture search can be done at various speeds up to 24 times normal speed in forward and reverse mode. Up to 5 times normal speed, a color picture can be obtained.

Color Framing

A 4 field/8 field capstan servo provides for color framing to be introduced in cases where it is necessary for maintaining a good playback-encoded NTSC/PAL composite video signal, without degradation or horizontal shift. The color-framing is based on ID-Pulse and VISC (Vertical interval subcarrier).

SC-H Indicator

The BCB 75 has two independent SC-H phase indicators for composite input and output. Using these, the operator can easily check the status of input and output signals.

Initial Set-Up Menu/Character Display

An initial set-up menu has been introduced. It can be scrolled and modified by the search dial while monitoring video out 3 or the timer display on the front panel. The individual set-up is stored in a non-volatile memory. The character display, which is super-imposed via video output 3, displays VITC/LTC/U-BIT or CTL data, furthermore, function status and shuttle speeds.

BCB 60 Studio Player

The BCB 60 is the ideal machine, where only playback of recorded Betacam SP cassettes is necessary. Due to the built-in TBC, the player can be used in the transmission area or as a slave machine in an editing suite. The usage of the small and large size cassettes allows for continuous playback of up to 90 min. (NTSC) and over 100 min. (PAL).

FDL-60 Film to Tape Transfer System

- CCD line sensors — extreme long life, no burn in, no afterglow
- Capstan drive — smooth quiet film motion, gentle handling of original negative film, fast shuttle up 625 frame/s
- Digital signal processing — progressive scanning avoids flicker and shrinkage problems, slow motion and fast motion, forward and reverse and freeze frame in high picture quality
- Quick format change — change from 35mm to 16mm optical block in seconds
- Select-A-Speed — variable speed between 16.00 and 30.00 frames/s
- Freeze start and instant stop — broadcastable
- Pan scan cinema scope (only B1, B2)
- Negative and positive film operation
- Automatic shading and fixed pattern correction
- Automatic color correction with manual access
- Black stretch for high contrast cinema prints
- 16mm and 35mm COMOPT, 16mm COMMAG
- Low operational costs — high stability and reliability by digital processing and CCD sensors, long life mechanical parts, inexpensive 24V halogen lamp
- Film timer for cue, autocue, freeze and changeover
- All color TV standards, component video output
- Change from spools to cores in seconds
- Two independent audio channels — stereo or two different languages

Options

- Digital film grain reducer FDGR — unique improvement in picture quality
- Secondary color processor FDSC — including six sector correction of hue, saturation and luminance, independent colorimetric improvement of red, yellow, green, cyan, blue and magenta
- Negative matching
- Super 8 optical block and COMMAG unit
- 35mm Dolby optical stereo sound
- 35mm COMMAG one-track and four-tracks
- SEPMAG interface for different sound followers
- WETGATE system from Schmitzer — eliminates film scratches
- 1-2 changeover — continuous reproduction of cinema films
- A/B interface for synchronous start of two FDLS
- X-Y zoom with ATX-100 and camera aperture optical block 35mm
- CCD 134 sensor
- Anti blooming sensor — improved shadow reproduction of high contrast prints without the danger of blooming effects
- Improved low light level parameters

The FDL 60 is a Telecine without Tubes

It uses generation long life CCD line sensors eliminating burn-in and lag problems. Each frame is scanned only once, line sequentially and without deflection voltages, so field flicker cannot occur and the vertical resolution is absolutely constant.

The result is first class picture quality with high resolution, excellent signal to noise ratio and brilliant color rendition allowing even those red hues to be faithfully reproduced.

FDL-60

Capstan Drive and Digital Signal Processing Provide

Slow motion and fast motion, forward and reverse, and freeze frame are all in excellent quality. Finding scenes or single frames is made easy by the variable programmable search facility and step mode — with full format color pictures. Start and stop are instant and frame accurate and the deck can handle film lengths up to 1200m.

The FDL-60 Dramatically Reduces Costs

The digital signal processing needs no maintenance and the CCD sensors are free from wear with typical semiconductor reliability and operating life. Forget about drifting circuitry, expensive tube changes and line up problems.

FDGR Film Grain Reducer

The film grain reducer reduces the visibility of film grain and noise. It is a fully digitized unit with an ECL-interface for the in- and outsignal. In principle the FDGR is a recursive filter with a frame store. A part of the output signal is fed back to the input. The ratio of the direct signal to the delayed signal defines the grain/noise reduction. An automatic circuit, measuring the input noise as well as the movement in the picture signal, optimizes the signal to noise ratio and prevents smearing and lag effects at moving pictures.

FRP 60 Film Reproduction Programmer

- 12 bit resolution for all 48 analog channels
- 800 events in battery buffered solid state memory (> 256 K RAM)
- Standard event list for 32 basic correction set-ups of different film stocks
- 8 scratch pad memories for direct comparison of different color corrections (simulate camera matching)
- Unlimited reediting: Reuse of any stored event (instantaneous random access) for actual scene
- V-synchronized switching of corrections
- Human Interface: Messages, warnings in plain text, Plain text identification of scenes and standard events
- Automatic test- and diagnostic system TADS: access via commercial data terminal

Performance Characteristics

- **Override—Mode:** no need to center the pots and joysticks when recalling events
- **Coupled—Mode:** transparent orientation in even less by electronic interlock of data display and film position
- **Fade—Corrections:** dynamic linear interpolated transition between different corrections, also used for Pans (S-curve customer selectable)
- **Adjust—Mode:** global edits for the whole event list
- **Update—Function:** global corrections scene beginnings in the event list, after cutting or splicing a piece of film

Options

- **Secondary color correction:** corrections of color hue, saturation and luminance in six sectors; continuous chroma control; dark desaturation; white, black and gamma level of the luminance signal, separate activated function: six sector—chroma—luminance
- **Automatic scene change detector:** automatic marking of the scene changes without the presence of the operator
- **Digital film grain reducer FDGR programmable:** for matching scenes with different graininess
- **User definable functions—**for programming switchers, sub-titlers, etc.
- Floppy disk, printer
- **Automatic field—**accurate film-to-tape transfer by means of an integrated editing system
- **C-format interface—**for BVH 2000, PAL, NTSC; for VPR 6, PAL, NTSC under development

Film-To-Tape-Editor

- Reproducible film-to-tape edits
- Field-accurate edits
- FDL slow motion edits
- Automatic edit simulation (preview)
- Edit out point decision by telecine or by VTR
- Auto preset mode
- Auto assemble mode
- Synchronous playback of telecine and VTR—assists A/B-roll transfer

The FRP 60 provides for film post production a programmable correction system. It has independent programmers for primary and secondary color correction, PanScan, audio level and sources, playback speeds and a general purpose interface for switching and analog functions, which can be defined by the user as required. The FRP 60 is very easy to operate. In contrast to menu techniques, the operator controls the system

interactively, which enables much faster operation. The outstanding feature is an integrated field accurate editor—even for slow motion speeds—and interfaces for B- and C-format VTR's.

The master processor consists of standard Intel P.C.'s:

- Microcomputer—SBC 86/14 • CMOS RAM/EPROM • Serial I/O extension • Two analog input interfaces • Data display control unit • 256K RAM

Two BOSCH interfaces for:

- Analog output • Digital output, sync sep., film timer

Distribution of analog channels:

Color corrector: 8; secondary color correction: 18; Joysticks: 6; Negative matching: 6; Contour correction: 1; Audio 1: 1; Audio 2: 1; Pan position: 1; User functions: 6; Total: 48

Specifications

Microprocessor:	Intel 8086
Microcomputer:	S.B.C 86/14
Data Monitor:	B/W monitor: M 24 BA/BB or M 38 BA/BB or M 51 /BB
Floppy Disc:	8" single sided, single density 800 events incl. comments, 32 standard events
Capacity:	Number of analog channels: 48 Number of digital channels: 52 Resolution: 12 bit Max. number of event in battery protectable store: 800 Storage capacity of the RAMs for the events: > 256K Program length (basic version): 120K
Cable Lengths:	Operating console—master processor: max. 150m Master processor—FDL 60: max. 7m Master processor—floppy disc: max. 300m
Input Reference:	FDL 60 film timer (data line) + studio pulses
Power Consumption:	Operating console: 150W Master processor: 700W
FDL 60 Configuration:	1. Operating console 2. Main frame (Intel ICS 80) 3. Connection cable

LDH 6200/LDH 6220/LDK 7020 Color Monitors**Common features:**

- Two video inputs and RGB input
- Vertical split screen between inputs A and B
- Special effects display between selected video inputs and RGB inputs
- Selectable internal/external sync
- Switchable normal and underscan mode
- Color/mono selection for A and B video inputs
- Remotely controlled tally indicators
- Modular design, compact, and lightweight plus easy servicing
- Comb filter (NTSC version)
- Automatic degaussing
- Keyed back porch clamping ensures stable black level
- Excellent monitor to monitor matching
- High reliability
- At home in broadcasting studios or mobile production vehicles
- Ideal for cable television, education studios and production houses
- In line gun CRT and integral yoke design replaces user's need for adjustable convergence controls
- Close proximity, multiple monitor use is possible as these monitors can operate without influencing each other, even when working from asynchronous signals

Accessories Supplied

- Power cable with sealed connectors, length 1.75m
- Exchangeable transparent text-plates for tally indicators
- Operating manual, including circuit diagram

LDH 6200 14" Color Monitor**Shares common features plus:**

- In-line 'Hi-Bri' self-converging CRT
- Pulse cross mode
- Optional 19" rackmounting kit (LDH 6250)*

- LDH 6200/51:** 14" color monitor NTSC, 60Hz—525 lines
- LDH 6200/01:** 14" color monitor PAL, 50Hz—625 lines

Optional

- LDH 6250/00:** 19" rackmounting kit*
- LDH 6260/00:** Automatic PAL/SECAM decoder module, to convert a PAL monitor into a PAL/SECAM version

LDH 6220 20" Color Monitor**Shares common features plus:**

- In Line 'Hi-Bri' self-converging CRT
- Setup switch for low level white balance adjustment
- 19" rackmounting kit*

- LDH 6220/51:** 20" NTSC, 60Hz—525 lines
- LDH 6220/01:** 20" PAL, 50Hz—625 lines

Optional

- LDH 6260/00:** Automatic PAL/SECAM decoder module, to convert a PAL monitor into a PAL/SECAM version

LDK 7020 20" Color Monitor**Shares common features plus:**

- Fine pitch (0.40mm) dot type shadow mask self-converging CRT

**LDH 6200**

- Setup switch for low level white balance adjustment
- 19" rackmounting kit*

- LDK 7020/52:** 20" color monitor NTSC, 60Hz—525 lines
- LDK 7020/01:** 20" color monitor PAL, 50Hz—625 lines

Optional

- LDH 6260/00:** Automatic PAL/SECAM decoder module, to convert a PAL monitor into a PAL/SECAM version

*Note: Most proprietary sliding rails are suitable, but are not part of 19" rackmounting kit.

CABLEWAVE SYSTEMS, INC.

FM Educational Antennas

Educational FM antennas using the same general design concepts as the commercial High Power and Low Power antennas are available.

However, these antennas, because of the normally lower power required in the educational service, are fabricated of 7/8" stainless steel tube. The circularly polarized antenna is a 1½ turn helix and the horizontal polarized element has a U configuration. The educational antennas are complete with a matching harness of RG type cables and are designed to mount on tower legs or support pipes 1¼" to 2¾" diameters. The multi-element arrays have an element spacing of 10 feet.

All educational FM antennas are completely grounded structures. Each radiating element is fabricated of a single piece of stainless steel tubing. The coupling loop is a stainless steel strip attached to the radiating element with a worm-type all stainless steel clamp. The coupling loop is fed through a type N feed-through connector and an insulator. The type N connectors used in the binary feed harness are sealed to the cables with heat shrink tubing. Where icing may be a problem radomes are available for circularly polarized but not horizontally polarized antennas.

Educational FM Antennas are designed to mount on tower legs or support pipes having diameters up to 2¾". The spacing between bays is 10 ft. Education FM Antennas are fed with RG-8 and RG-11 cables and all have a type N Male Input Connector.							

CABLEWAVE SYSTEMS, INC.

**Super Power Circularly Polarized
FM Broadcast Antennas**

The new series of Super Power Circularly Polarized FM Broadcast Antennas are very high power antennas which use a minimum number of bays. A massive 3 1/8 inch (79.4mm) two tube balun provides wider match bandwidth than loop coupled designs. The new element has a much lower Q than previous designs. These new antennas have a VSWR of 1.1:1 for approximately 500 KHz, 2 1/2 times the bandwidth of standard circularly polarized low power and high power antennas. Two bay and four bay arrays are also available. All elements are fed inphase to produce maximum gain on the horizon with the two element array end fed and the four element array center fed.

All antennas are precisely cut and matched at the factory. A fine tuner is supplied for final matching of the antenna after installation. The input impedance of each element is carefully adjusted for optimum results in the final array configuration.

If required, stainless steel internal deicer heaters are available. Due to the much wider bandwidth produced by the new Super Power Circularly Polarized Antennas the impedance change due to icing is minimized, therefore deicers are not required under light icing conditions.

Length of antenna in feet is 984 divided by frequency in MHz times (number of bays less 1) plus 9.

Power gains are for 50/50 horizontally and vertically polarized ratios.

Antenna polarization is circular in all directions of azimuth.

Prices include complete mounting hardware for leg or face mounting on uniform towers 24" (609.6 mm) face or less. Brackets for other than uniform towers are extra and will be quoted upon request.

Antenna weights include standard mounting hardware. Add 15 lbs. (6.8 kg) per bay for deicers. Deicers require 230 volts single phase balanced to ground with 1000 watts consumption per bay.

When ordering, specify:

- Antenna Type No.
- Frequency (88.1 to 107.9 MHz)
- Description of tower, make and model
- Beam tilt and null fill, if required

- SPC-1** Super Power Circularly Polarized Baluned Element with 3 1/8" (79.4 mm) Fine Matcher
- SPC-2** Super Power Circularly Polarized End Fed 2 Element Array with 6 1/8" (155.6 mm) Fine Matcher
- SPC-4** Super Power Circularly Polarized Center Fed 4 Element Array with 6 1/8" (155.6 mm) Fine Matcher

CABLEWAVE SYSTEMS, INC.

Horizontally Polarized FM Broadcast Antennas

Standard horizontally polarized FM antennas are fabricated of 1 5/8" O.D. copper tube formed into a U shape. This element produces a horizontally polarized signal that is equal in all azimuth directions and has a vertical pattern similar to a vertically polarized dipole.

As with the circularly polarized High Power and Low Power antennas, single element antennas are available. Multi-element arrays are available with all elements fed inphase to produce maximum gain on the horizon with 2 through 8 elements end fed and 10 through 16 elements center fed. If beam tilt and/or null fill is required, the multi-element array will be center fed with appropriate power divider and phaser supplied.

Deicers are also available with the horizontal High Power and Low Power antennas.

Thermostat & Control Box **PD-1202**

CABLEWAVE SYSTEMS, INC.**Microwave Antennas/Radomes****Standard Series Microwave Parabolic Antennas**

- Antennas utilize heavy gauge spun aluminum reflectors and center fed dipole feeds mounted from the rear. 12' antennas are sectionalized; 8' and 10' antennas are supplied in one piece, and available sectionalized as an option
- Feeds can be pressurized up to 10 psi and feature 360° polarization orientation
- Antennas will withstand 125mph wind with 1" radial ice without damage
- Feed guy wires are included with antennas of 6' diameter and larger
- All antennas include vertical mounts for attachment to a 4 1/2" outer diameter pipe (pipe not included) with azimuth and elevation adjustment of $\pm 5^\circ$. All hardware is stainless steel. One azimuth stabilizing strut (sway bar) is included on 8' and 10', two on 12' units. Other type mounts are also available
- Radomes are available for all sizes
- Cross Polarization discrimination is better than 30dB
- All Cablewave Systems' antennas meet EIA Standards RS-195B and RS-222C

*Optional flange type UG-343B/U available on request.

Fiberglass Radomes

These are optional for all standard antennas — Series PA/PAL/PAX/PAF, and are shown on this page. The fiberglass surface is protected against deterioration by ultraviolet rays with a gel coat finish. Radomes may be parabolic or conical in shape. Some may include feed rf absorber material for improved electrical performance.

All Cablewave Systems' fiberglass radomes provide minimal contribution to increased return loss of the antenna system. The fiberglass radome design will give a VSWR contribution of 1.03:1 between 2 and 12GHz to the antenna VSWR when the two are combined. Typical attenuation is given in the table below.

Heated radome details are available upon request. All radomes are light blue; other colors are available on request.

Parabolic Fiberglass Radome

Conical Fiberglass Radome

CABLEWAVE SYSTEMS, INC.

Coaxial Cable/Connectors

3/8" Foamflex FXA

Cablewave Systems Foamflex coaxial cables combine excellent performance and reliability with a simple, economic cable construction. The design includes a copper clad aluminum center conductor, low loss cellular polyethylene foam dielectric, smooth wall aluminum outer conductor and a protective black polyethylene jacket. No pressurization is required. Providing greater efficiency than flexible braided outer conductor types, Foamflex cable is a logical choice for lower loss, more reliable cables in communications and electronic equipment from HF through the microwave frequency range.

Standard 3/8" Foamflex cable is supplied with a protective black polyethylene jacket. For indoor applications such as pre-formed cable assemblies, delay lines, and inter-equipment cabling, the cable may be special ordered without a jacket by dropping the "J" suffix.

Copper clad aluminum meets ASTM-B-566-72.

CABLEWAVE SYSTEMS, INC.

Coaxial Cable/Connectors

1/2" and 7/8" Cellflex Low Loss Foam FLC

Cablewave Systems Low Loss Foam Cellflex coaxial cables are designed to exhibit lower attenuation than prior foam cables. The proprietary design features a closed cell foam dielectric with low density and high velocity specifications. These cables provide low loss performance characteristics that are almost as low as air dielectric cables but with none of the pressurization requirements associated with air cable. The outer conductor is annularly corrugated for flexibility, crush resistance, and prevention of moisture migration. The cable center conductor is copper clad aluminum. Cables are supplied with a black polyethylene jacket for improved handling and for use in direct burial applications.

Low Loss Foam Cellflex offers optimum performance for many applications throughout the Land Mobile, Microwave, Broadcast and Radar bands.

CABLEWAVE SYSTEMS, INC.

Coaxial Cable/Connectors

1 5/8" Cellflex Low Loss Foam FLC

Cablewave Systems Low Loss Foam Cellflex coaxial cables are designed to exhibit lower attenuation than prior foam cables. The proprietary design features a closed cell foam dielectric with low density and high velocity specifications. These cables provide low loss performance characteristics that are almost as low as air dielectric cables but with none of the pressurization requirements associated with air cable. The outer conductor is annularly corrugated for flexibility, crush resistance, and prevention of moisture migration. The center conductor is corrugated copper tube. Cables are supplied with a black polyethylene jacket for improved handling and for use in direct burial applications.

Low Loss Foam 1 5/8" Cellflex offers higher power for many applications throughout the Land Mobile, Microwave, Broadcast and Radar bands.

CABLEWAVE SYSTEMS, INC.

Coaxial Cable/Connectors

3/8", 1/2" and 7/8" Spirafil SLA

Cablewave Systems air dielectric Spirafil coaxial cable uses a unique extruded helical insulator to attain outstanding mechanical and electrical performance. The design includes a copper or copper clad aluminum center conductor, extruded spiral polyethylene dielectric insulator, smooth wall aluminum outer conductor and a protective black polyethylene jacket. For indoor applications such as delay lines or inter-rack cabling, an unjacketed version may be special ordered by dropping the "J" suffix.

The helix is extruded directly onto (and covers) the center conductor, to achieve higher voltage breakdown, lower attenuation, lower VSWR, and better stability than competitive coaxial cables. The "locked" insulator construction results in superior phase stability through temperature changes and bending. Spirafil is used extensively in multiple array radars and communications and electronic systems from HF through microwave.

Copper clad aluminum meets ASTM-B-566-72.

Rigid Line Hardware

Flexible Section/Breakaway Section

Flexible Section accommodates vibration and angles up to 30° for 1½" and 20° for 3½" and 6½". Maximum offset or compression is .25" (0.64 cm) for 1½" and .5" (1.27 cm) for the 3½" and 6½" units. EIA fixed male flanges both ends. Two sets of "O" rings and hardware supplied.								Flexible Section 30—

Custom Rigid Line Assemblies

Rigid Line Assembly consists of three sections of Seal-O-Flange, EIA, 50 ohm Rigid Line—a taper reducer of 1½" to 7⁄8", 7⁄8" line, and 7⁄8" miter elbow—joined by flanges.

Used in the corporate feed harness of a multi-element corner array, this power divider is fitted with tees to provide a 2:1 power split. VSWR is 1.02:1 at center of frequency. All connectors are 50 ohm EIA flange type and all assemblies are of the pressure type. This custom assembly has two output ports matched to the input by an internal ¼ wavelength linear transformer.

Four 3½", 50 ohm lines are matched into one 6½", 50 ohm line by means of this power divider. The 6½" port is matched to the four 3½" ports by means of a 2-section linear transformer in the large diameter section.

This fitting provides a gas tight termination for 3½", 50 ohm EIA rigid transmission line. It may be used to terminate the transmitter end of the line where link or π output circuits are used. Another usage is at the antenna feed point for feeding open wire antennas or for feeding open wire transmission lines through the use of a Balun.

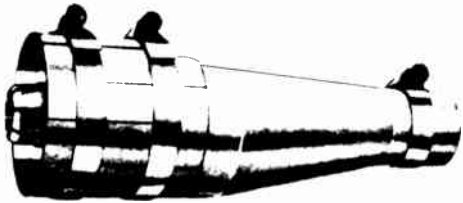

Phase and power matching for multi-element arrays. This 12-way power divider provides for 12 elements to be fed from a single 3½", 50 ohm transmission line. A matching transformer is included in the 3½" leg of the divider. The output fittings of this unit are designed to accept 7⁄8" air dielectric, semi-flexible coaxial cable.

CABLEWAVE SYSTEMS, INC.

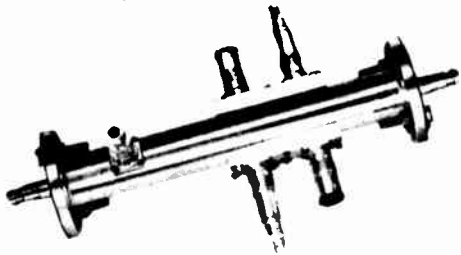

Rigid Line Hardware

Custom Rigid Line Assemblies (cont'd)

	<p>This ungasged reducer, used with the transmission line requiring a size change, is not pressurized but is protected from the weather. It is ideally suited for use in the factory for temporary test set-ups as well as in AM, FM and TV permanent indoor interconnections.</p>
-----------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<p>Line size changes can be made in a minimum overall axial length by means of step-type reducers. In this case the requirement was for a female inner conductor with removable connectors at each end creating a length of approximately 8 inches. If a male-to-male connector had been required the entire length, excluding the inner conductor connectors, could have been made as short as 1½”.</p>
-----------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

FM Broadcast Directional Couplers/Low Pass Filters

<p>Shims are provided with each directional coupler to position the coupler loops so as to produce 1 volt D.C. into a 5000 ohm load at the specified power level, i.e., 3, 5 or 10 kW for Part No. 936005 and 20 or 25 kW for Part No. 936006. In addition to the D.C. outputs of the directional loops, an RF monitor non-directional port is provided which can couple as much as 2 watts into a 50 ohm load.</p>	<p>Directional Coupler</p>

P/N 913843	Floor Stand
P/N 913907	Relay Rack Mtg. Brkt. Kit
P/N 940008	Wall Shelf for APD-130
P/N 940009	Wall Shelf for APD-131, 132

The APD-130 Automatic Pressurization Dehydrator, 1.3 SCFM 115 volts 60 Hz, is designed for operation in larger systems with up to 1,200 ft. of 6 1/8" diameter line. The dehydrator utilizes the heatless, dual canister molecular sieve drying system with completely automatic operation and no need for replacement or manual reactivation of desiccant. The APD-130 generally is similar in design and features to the APD-20 series, except that the APD-130 includes an expanded metal rear cover as standard equipment and has the larger 1.3 SCFM capacity.

From normal room environments, the APD-130 delivers typical dry air dew points of -60°F. The pressure output control is factory set at 3 psig (0.21 Kg/sq.cm) "on" and 7 psig (0.49 Kg/sq.cm) "off". A check valve prevents loss of pressure back through the dehydrator. A standard low pressure alarm switch, factory set for 1 psig (0.07 Kg/sq. cm) is included for remote monitoring.

APD-130 DEHYDRATOR CAPACITY RATINGS

Trans. Line	Approx. Length	
	feet	(meters)
7/8"	90,000	(27,500)
1 1/8"	24,000	(7,500)
3 1/8"	6,000	(1,800)
6 1/8"	1,200	(300)
6 to 12 GHz waveguide	20,000	(6,000)
4 to 5 GHz waveguide	6,000	(1,800)

NOTE

The pipe fittings referred to in this section are to U.S. National Pipe Thread standards and are abbreviated as 1/8" MPT for 1/8" NPT male and 1/8" FPT for 1/8" NPT female. These fittings may be mated with the International 1/8" pipe thread fittings although the U.S. standards include 27 threads per inch while the European International Standards Organization fittings have 28 threads per inch.

The SPD-10 Series Semi-Automatic Dehydrator is designed for applications where cost is a factor and where periodic desiccant replacement is practical.

The SPD-10 dehydrator consists of a 1/10th h.p. shaded pole motor compressor with permanently lubricated and sealed ball bearings, a 10,000 hour 2-ply Buna N with nylon cord diaphragm, a 0 to 15 psig pressure gauge, a pressure switch, a low pressure alarm, a high pressure safety relief valve, and a clear plastic canister with two (2) pounds of desiccant — anhydrous calcium sulphate impregnated with cobalt chloride.

Output capacity rating is 1.0 scfm (0.47 liters/sec.). Output pressure is factory set to 3-8 psig. (0.21-0.56 kg/sq. cm) but may be readjusted in the field to operate anywhere between 2 and 15 psig. (0.14-1.05 kg/sq. cm). Differential is fixed at 5 psig (0.35 kg/sq. cm). A check valve prevents loss of pressure back through the compressor, and a standard low pressure alarm switch, factory set for 1 psig (.07 kg/sq. cm) offers SPST contacts for remote monitoring.

The High Pressure Safety Relief Valve protects transmission line components in case of excessive pressure buildup. The valve is set at 10 psig (0.7 kg/sq. cm); leak rate will keep up with the capacity of the compressor (1.0 SCFM). With the safety relief valve in operation maximum pressure is limited to 10 psig (0.9 kg/sq. cm).

A Bleedoff Orifice is located in the input connector fitting to the manifold block and should not be interpreted as an air leak. The purpose of the bleedoff is to (1) bleed pressure from the canister so it is not under pressure when shut off, thereby allowing safe removal when it is necessary to restore desiccant, and to (2) remove pressure from the head of the pump so it is not under load when the motor-compressor is turned on.

Dry desiccant is blue color, when the desiccant becomes moisture saturated it turns pink and requires replacement or regeneration. Regeneration can be accomplished by heating the desiccant in an oven at 350°F (180°C) for four (4) hours, or until it is dry as indicated by change to a blue color.

SPD-10 DEHYDRATOR CAPACITY RATINGS

Transmission Line	Approx. Length	
	feet	(meters)
7/8"	30,000	(9,000)
1 1/8"	8,000	(2,400)
3 1/8"	2,400	(700)
6 1/8"	400	(120)
6 to 12 GHz waveguide	6,000	(1,800)
4 to 5 GHz waveguide	2,000	(600)

Typical service time of desiccant is approximately six months. This is based on dry air makeup of 1 cu. ft. (0.028 cu. m) per day under 50% R.H. at 65°F (18.3°C).

CHARACTERISTICS

Power Source SPD-10 P/N 933629	115 V 60 Hz
Power Consumption	250 watts
Output Rating	1.0 scfm (0.47 liters/sec) Below -35°F (-37°C) Dew Point @ 90°F (32.2°C) 90% R.H. input
Ambient Temperature	-20° to 120° F (-28.9° to 48.9°C)
Output Pressure	
—Factory Set	3-8 psig (0.21-0.56 kg/sq. cm)
—Field Adjustable	2-15 psig (0.14-1.05 kg/sq. cm)
High Pressure Safety Relief Valve	Factory Set 10 psig (0.7 kg/sq. cm)
Standard Low Pressure Alarm	Factory Set 1 psig (.07 kg/sq. cm)
Low Pressure Alarm Contacts	SPST 24 volts 4 amps dc
Output Connection	3/8 inch (9mm) plastic tube fitting
Dimensions, H x W x D	
Inches	13 x 9 x 11
(mm)	(330 x 229 x 280)
Net Weight, Lbs. (kg)	21 (9.5)
Shipping Weight, Lbs. (kg)	28 (12.7)
Standard Items Supplied	15 ft. (4.6 m) 3/8" plastic tubing 1/8 inch mpt fitting.

OPTIONAL ACCESSORIES

Part No. 920184	High Pressure Alarm Set at 10 psig (0.7 kg/sq. cm)
------------------------	-------------------------------------------------------

NOTE: Due to the limited service time of desiccant, the SPD-10 is not recommended for purging. If used for purging it may be necessary to run the desiccant through several regeneration cycles, depending on moisture content of air, before putting unit into service.

SCED Series Computer Assisted Video Editing Systems

• SCED MK-II offers direct control of a mix of up to 6 Ampex and Sony protocol machines as standard • SCED is compatible with Calaway Engineering Translators and Sony BVH-2000, BVU-800/820, and BVW-10/40 machines • CED series offers standard RS-422 direct switcher control of popular audio and video switchers

Features Common to All Models

• NTSC (PAL available) • Compatible with CMX and GVG • Optional 8" disc • Numeric keypad with double zero • Motion controller: Variable speed, Frame advance, Mark in/out keys • Extended motion controller keyboard • Preview Switcher: Audio/Video Previews, Sync Generator NTSC w/Genlock, Black Burst Generator NTSC, GPI Pulse • Video and Audio Switcher Control: Cross Point Selection w/Aux and Black, Transition Setup, Transition Execution • Exit to MS-DOS w/out reboot • OutEdit preview • Open end key (shift Set-Dur) • Save/recall marks flip-flop (current marks are saved when last saved marks are recalled) • Klean and Keen • Frame Accurate • Color framed • Preview Field Select • Full Range Synchronizer • Save Editor Setup to disc • Save A/V switcher assignments • Save macro set • Save GPI labels/mode • Error/Help Messages • Automatic Assembly—Sequential and Checkerboard • Sync Roll • Previews: VVV, VBVB, VBVB • Replay • Edit Types: Video, Audio 1, Audio 2 • Transitions: Cuts, Wipes, Dissolves • Split Edits • Trim Times • Set Times • Move Times • Constants: 8 • Master Slave • Saved to list • Looping and Branching • English Display of Macros • Transport Controls: FFW, FREV, Play, Stop, Slow Cue, Cue to In-point, 2X Play Very Slow, and More • Mark Keys • List Functions: Compatible with CMX, GVG/ISC, Conversion between Formats, Notes, Insert Edits/Notes, Delete Edits/Notes, Replace Edits/Notes, Shift Times, Renumber, Move, Ripple, Load EDL from Disc, Save EDL to Disc, Save EDL to Printer, Multiple Lists on Each 5 1/4" Disc, Seek for Event by Event Number, Seek Event by Record in Time, Scroll List Up/Down by Page, Jump to Head/End of List • List Sort: Event Number, Modified Record In, As Stored, Change Mode at Any Time

All Models Include:

• Motion controller • Power cord • Installation manual • Operation manual • Software: edit program and diagnostics • Edit support card • upPV preview switcher

CED upPV Preview Switcher: Provides preview switching and synchronizing signals for the basic editing system (Composite sync and black burst). It also provides an output pulse at the start of a transition which can be used to trigger an external device.

SCED + MK-II Six VTR Editor

• 6 VTRs standard • Fast 80286 computer • GPI w/V-EFX and Slo-Mo • All software options • Mixed Sony/Ampex Control • Powerful macros • Multiple record • Display recalled • Master/slave link marks displayed • Display recalled event number • Preview switcher pre-select software for record machine assignment • 24 macro keys (12 single key and same 12 shifted for 13-24) including all macro features: macro counter, macro delay, macro pause, and macro edit • Eight VTR ports connected with any six assigned and synchronized simultaneously • Multiple record • Super user mode • Keyboard active in preview for going directly to record or for marks during preview

Includes

• Rackmount electronics chassis with: 80286 processor with serial and parallel printer ports • GPI card • Two 4-channel serial cards • Floppy disc interface • Monochrome display adaptor • Single 5 1/4" drive • Desktop green screen monitor • Extended color-coded keyboard • MS-DOS

SCED + MK-II Editor for Serial VTR Control \$22,495.00

SCED Series

SCED + Six VTR Editor

• 6 VTRs standard • A/B mix standard • User supplied computer • Variety of switchers/mixers • Optional control of Ampex VTRs • Display recalled event number • Master/slave link marks displayed

Includes

• Two 4-channel serial cards • Extended color coded keyboard

SCED + Six VTR Editor \$12,995.00

SCED + Six VTR Editor with MK-I Computer 13,995.00

SCED+ requires either the Calaway Engineering MK-I computer or the Compaq Deskpro I, II or 20. The computer must have one 360K floppy disc drive, 640K of memory MS-DOS or compatible operating system version 3.0 or later. SCED+ requires 3 free slots in the computer.

SCED Four VTR Editor

• 4 VTRs standard • User supplied computer • A/B mix standard • Powerful off-line system • Variety of switchers/mixers

Includes:

• 4-channel serial card • Color coded keyboard

SCED Four VTR Editor \$9,995.00

SCED Four VTR Editor with MK-I computer 9,995.00

SCED requires either the Calaway Engineering MK-I computer, the IBM PC/XT, or the Compaq Deskpro I, II or 20. The computer must have one 360K floppy disc drive, 512K of memory MS-DOS or compatible operating system version 3.0 or later. SCED requires 2 free slots in the computer.

CALAWAY ENGINEERING

Editing Accessories

SCED + MK-II SIX VTR EDITOR ACCESSORIES**B" Disc Option**

MK-II Disc Includes: rackmounted 8" drive, 50 pin interconnect cable, power cable, format program **\$2,495.00**

Floppy and Hard Disc Options

CE-525 5 1/4" floppy disc* **\$295.00**
CE-350 3 1/2" floppy disc drive* **295.00**
CE-20M 20M byte hard disc drive. **995.00**

*Room for only one extra floppy drive in the MK-II. This may be either the 5 1/4" or the 3 1/2" drive.

AX-KBD Extended motion controller (replaces standard motion controller) when ordered with new system . . \$ **995.00**
 When ordered for field retrofit **2495.00**

Software option preview pre-selector control **\$500.00**
 Requires 646-10X or similar switcher

RGB-Preview Switcher

RGB-PVW Includes: upPV-RGB preview switcher (video only, three 3 x 1 channels), power cord, 6' interconnect cable **\$2,795.00**

Interconnect Cables

RS-422 SCED to VTR, 25' **\$120.00**
SWCH SCED to Switcher/Mixer, 25' ** **300.00**
MK-II-CG MK-II to Character Generator, 25' **120.00**
MCXTR Motion Control extension, 50' **150.00**
KDXTR Keyboard/display extension, 50' **350.00**

**The SWCH switcher control cable includes 3 cables: 1 for the preview switcher and 1 each for the audio and video switchers.

Special Length Cables:

RS-422X \$100.00 plus \$1.00 per foot, max. 150'
SWCHX \$250.00 plus \$3.00 per foot, max. 150'
MK-II-CGX \$130.00 plus \$1.00 per foot, max. 150'

Allow extra time when ordering for fabrication of non-standard length cables.

Audio Connector Kit

ACONN 8 connectors for preview switcher **\$50.00**

SCED + SIX VTR ACCESSORIES**Hardware Option**

GPI+ General Purpose Interface. Includes: software upgrade, connector, diagnostic software **\$1,995.00**

Note: GPI+ requires one free slot in computer.

Software Options

Mixed Mixed control of Sony/Ampex allows control of Ampex VPR-3, VPR-6, VPR-80 and Abekas A-62 **\$1,995.00**
Film Film entry mode **495.00**
SCED-CG Character generator control, specify Quanta Q8 or QCG-500 **2,495.00**

SCED FOUR VTR AND SCED + SIX VTR EDITOR ACCESSORIES**Hardware Options**

GPI General Purpose Interface. Includes: Software upgrade, connector, GPI card **\$1,495.00**

Note: GPI requires one free slot in computer.

SCED-Disk 8" Disc Option. Includes: 8" rackmounted disc drive, formatting software, power cord, 50 pin interconnect cable, replacement disc controller. **\$3,175.00**

Note: When used with the Compaq Deskpro, you will loose the parallel printer port supplied with the Deskpro.

AX-KBD Extended motion controller (replaces standard motion controller) when ordered with new system . . \$ **995.00**
 when ordered for field retrofit **2,495.00**

CE-MXP29 Interface for controlling the Sony MXP-29 mixer (for use only with the Calaway Engineering Editors) . . **2,250.00**

Includes: Interconnect cable, manual, power cord

upST Series Translators

000 Cabinet. Includes: Cabinet, power cord, power supply, sync separator **\$2,300.00**
210 Sony VO-5850. Includes: Framing kit. **1,550.00**

Note: The upST series translators are used to translate the commands required by the particular machine (serial or parallel) into an RS-422 format compatible with the SCED direct control format. Machines equipped with the upST translators may be intermixed with a Sony machine on a system. There is room in each cabinet for up to four translator cards.

Each upST includes the control cable and an internal play speed time code reader.

SCED-MK-I Computer Includes: Fast 8088 processor card with 640K memory, RS-232 interface card, parallel printer port, floppy disc controller card, case, desktop amber screen monitor, power cord, monochrome display adaptor, software: MS-DOS **\$2,595.00**

SCED-MK-1 rackmounting kit. **495.00**

Floppy and Hard Disc Options for MK-I Computer

CE-525 5 1/4" floppy disc* **\$295.00**
CE-350 3 1/2" floppy disc drive* **295.00**
CE-20M 20M byte hard disc drive. **995.00**

*Room for only one extra floppy drive in the MK-I. This may be either the 5 1/4" or the 3 1/2" drive.

RGB-Preview Switcher

RGB-PVW Includes: upPV-RGB preview switcher (video only, three 3 x 1 channels), Power cord, 6' interconnect cable **\$2,750.00**

Interconnect Cables

RS-422 SCED to VTR, 25' **\$120.00**
SWCH SCED to Switcher/Mixer, 25' ** **300.00**
MK-II-CG MK-II to Character Generator, 25' **120.00**
MCXTR Motion Control extension, 50' **150.00**
KDXTR Keyboard/Display extension, 50' **350.00**

**The SWCH switcher control cable includes 3 cables, 1 for the preview switcher and 1 each for the audio and video switchers.

Special Length Cables:

RS-422X \$100.00 plus \$1.00 per foot, max. 150'
SWCHX \$250.00 plus \$3.00 per foot, max. 150'
MK-II-CGX \$130.00 plus \$1.00 per foot, max. 150'

Allow extra time when ordering for fabrication of non-standard length cables.

Audio Connector Kit

ACONN 8 connectors for preview switcher **\$50.00**

CALAWAY EDITOR ACCESSORIES**Edit List Processing Software**

KLEAN Edit list cleaning package **\$750.00**
KEEN Edit list tracing software* **750.00**

Note: KLEAN and KEEN will operate on any IBM compatible computer.

Time Code Equipment

TCPC Time Code Phase Indicator. Includes: TCPC phase indicator, power supply with cord, instruction manual. **\$695.00**

SCED UPDATES AND UPGRADES**SCED Software Update Option**

SCED **\$375.00**
SCED + **500.00**
SCED + MK-II **675.00**

Note: The first update released after purchase of a Calaway Editor will be provided to the user at no charge.

To receive subsequent software updates, the user must purchase the software update option. With this option, they will receive all software updates for one year. (There will be at least one update released each year.) If the user skips one or more years, the cost of the update will be the total of the years missed plus the current year.

SCED Upgrades

SCED to SCED + **\$ 4,600.00**
SCED to SCED + MK-II **15,500.00**
SCED + to SCED + MK-II **11,000.00**
GPI to GPI + **575.00**

Note: The upgrade includes any necessary hardware and software to upgrade the user's current system to the desired system.

CALIBRATION STANDARD INSTRUMENTS

Monitors

MDM-4 Mix Down Monitor for Nearfield Monitoring

The MDM-4 is a loudspeaker designed specifically as a Nearfield Monitor. The acoustic output of the MDM-4 is blended to produce a uniform plane wave radiation within .5m from the center of its baffle and has a time offset of less than 100 μ s from 200Hz to 16kHz.

The MDM-4 can be used in close, allowing outstanding loudspeaker and headphone monitoring. "Acoustical Noise" caused by the room boundary reflections is eliminated, as with headphones, but the ability to move across the listening field between the loudspeakers to check for phasing, comb filter effects, and panning accuracy is retained.

MDM-4pr./\$990.00

SPECIFICATIONS

FREQUENCY RESPONSE	\pm 3dB 60Hz to 17kHz (4 π Steradians)
MATCHED PAIR RESPONSE	\pm 5dB
TIME OFFSET	Less than 100 microseconds 200Hz to 16kHz
SENSITIVITY	81dB SPL/Volt/Meter
POWER REQUIRED	1 Watt for 89dB at 1 Meter
POWER RECOMMENDED	100 Watts per channel minimum
POWER HANDLING	40 Watts continuous (below 1kHz) 160 Watts instantaneous (above 1kHz) 15 Watts continuous (below 1kHz) 60 Watts instantaneous (above 1kHz)
DISTORTION	Less than 5% THD or IM, 60 Hz to 20kHz. Less than 1% THD or IM, 100 Hz to 20kHz (94dB SPL at 1 Meter)
IMPEDANCE	8 Ohms nominal, 5 Ohms Minimum
SYSTEM TYPE	Dual Woofer, Ported with Velocity Control High Pass Filter
CROSSOVER	Equalizer/Filter Type at 1500kHz
DRIVERS	Two CSI BD-8/102 Bass, 160mm One CSI TD7/38 Mid-High, 70mm
ENCLOSURE VOLUME	27 Liters (.95 cubic feet)
ENCLOSURE DIMENSIONS	483mm x 310mm x 248mm 19" x 13" x 9 3/4"
FINISH	Rosewood Laminate, Aluminum Trim, Brown Grill
SYSTEM WEIGHT	11.4 kgm Net, 12.7 kgm Shipping 25 lbs Net, 28 lbs Shipping

MDM-TA3 Time-Align[®] Monitor

The MDM-TA3 will allow you to hear the effects of limiters, compressors, noise reduction systems, digital recorders, splices, dropouts, and many other things to a degree that you have never before experienced. You will also hear more detail, at a distance, in poor acoustic environments. This means that you will be able to exercise more control over your recordings than you have been able to in the past.

Special switches are provided which allow different settings to be used for monitoring original recording and broadcast material from those used for monitoring final product. The MDM-TA3 is designed to be used against or flushed into a wall and so the 3 fuses for the bass, midrange and treble drivers are also mounted on the front plate.

MDM-TA3pr./\$ 1390.00

MDM-TA2 Time-Align Monitor

The MDM-TA2 is a Time-Align monitor designed to be used as a Nearfield Monitor as well as a distant monitor. Because it is a Time-Align design, the MDM-TA2 allows you to hear and correct the bad effects of limiters, compressors, noise reduction systems, digital recorders, splices, dropouts, etc. to a degree never before possible. The MDM-TA2 may be used at 1m or less thus overcoming "acoustical noise" caused by room boundaries. Because Time-Align causes the direct sound to be presented as a tight, coherent package of acoustical energy, you will also hear more detail, at a distance, in poor acoustic environments.

[®]Time-Align and ^{*}Nearfield Monitor are Trademarks of E.M. LONG ASSOCIATES

The Calrec UA8000 – Music Studio Console

- 48 or 64 channel consoles, partially equipped if required
- 32 output groups for 24 or 32 track recording
- 2 stereo outputs with full dynamics and auxiliaries on each
- 48 buttons for separate or mixed sources to control room and studio monitor plus alternative and "mini" LS checks, allowing instant A–B comparisons
- VU and bargraph main metering from 18-way selectors with touch changed PPM or VU characteristics for the bargraphs and sensitivities with adequate headroom indication. Similar bargraph multi-track metering responds to all selections
- UA8000 zoned status control for instant desk modes; the Left tracking section (1-24 or 32) can be controlled entirely independently of the Right section (25 or 33 upwards). Local overrides can themselves be overridden for fast replays
- 9 VCA master faders control selected groups of large faders
- Full automation of output, group and monitor faders—large or small—and silent monitor mutes; separate automation grouping facility
- 4 echo plus 4 stereo cues from Left and Right sections make a total of 24 auxiliary bus; easily mixed if required
- Two 7-way stereo foldback mixers from all cues, stereo output, control room monitor and RTB, maintained at constant level irrespective of mix
- High performance microphone amplifiers with phantom power and line performance at high levels plus wide band second line inputs. Exceptional headroom level of 28dB in channels and in groups
- 4-band parametric EQ wide-range high and low filters
- Very comprehensive dual acting dynamics, sampling peak and average signals, provides an unequalled range of effects in every channel. Wide range expander/gate produces superb drum sounds
- Talkback, reverse talkback, alignment tones and confidence checks
- Unique 1.38" (35mm) modular construction for easy maintenance, spares and development changes
- Beautifully styled and elegant console ergonomics and furniture
- State-of-the-art technology based on 15 years of front line custom broadcast design is used throughout the UA8000 producing the customary clean sound
- Outstanding performance figures: well inside stringent broadcast specifications and easily matched to digital performance
- The design of the UA8000 involved respected recording engineers at all stages

UA8000 Console Performance Specification

MICROPHONE AMPLIFIER

Special Balanced Transformer in

Sensitivity Range:

-70/-30dBu

Input Impedance:

1200 ohms

Electronically Balanced in Sensitivity Range:

-25/+10dBu

Input Impedance:

10,000 ohms

Continuous Overall Sensitivity:

-70/+10dBu in 5dB steps

Trim:

±10dB

Headroom:

28dB at all settings to maximum input

Maximum Input:

24dBu

Equivalent Input Noise (EIN):

<-12B, 5dBu RMS, 20Hz-20kHz, 150 ohm source

Frequency Response:

+0/-0.3dB, 20Hz-20kHz -3dB at 13Hz and 30kHz and falling rapidly outside these limits due to fixed sub and supersonic filters

Total Harmonic Distortion:

	Setting	Output Level	50Hz	1kHz	10kHz
Transformer —	-30dBu	0dBu	0.06%	0.006%	0.009%
	-50dBu	+20dBu	0.022%	0.007%	0.008%
Electronic —	-20dBu	0dBu	0.008%	0.007%	0.008%
	0dBu	+20dBu	0.01%	0.007%	0.008%

Input Balance:

>-80dB at 1kHz and -65dB at 10kHz

LINE INPUT AMPLIFIER

Electronically Balanced

Input Impedance:

20,000 ohms

Sensitivity/Trim:

0dBu, ±10dB

Headroom:

28dB to maximum input

Maximum Input:

28dBu

Equivalent Input Noise:

<-90dBu RMS, 20Hz-20kHz 300 ohm source

Frequency Response:

+0/-0.1dB, 20Hz-20kHz

Total Harmonic Distortion:

	Setting	Output Level	50Hz	1kHz	10kHz
Transformer —	0dBu	0dBu	0.007%	0.007%	0.008%
	0dBu	20dBu	0.01%	0.007%	0.008%

Input Balance:

>-90dB at 1kHz, -75dB at 10kHz

EQUALIZER

Gain:

0dB at line-up

Headroom:

28dB

Noise (controls flat):

<-80dBu RMS, 20Hz-20kHz

Frequency Response at Line-up:

0/-0.5dB, 30Hz-16kHz
(falling at extremes due to filters nominally -3dB at 13Hz and 30kHz)

Total Harmonic Distortion:

	Setting	Output Level	50Hz	1kHz	10kHz
Transformer —	at all settings and	0dBu	0.008%	0.008%	0.009%
	+15dB levels	20dBu	0.008%	0.008%	0.009%

DYNAMICS

Headroom:

28dB

Noise:

<-81dB, RMS 20Hz-20kHz

Total Harmonic Distortion (Compressor/Limiter):

	Input	Output	50Hz	1kHz	10kHz
No gain reduction —	0dBu	0dBu	0.012%	0.013%	0.013%
No gain reduction —	+20dBu	+20dBu	0.05%	0.014%	0.01%
20dB gain reduction —	+20dBu	0dBu	0.05%	0.017%	0.06%

— Attack and recovery times do not affect measurements

LINE OUTPUT AMPLIFIERS

(Main Stereo, Multi Record, Auxiliary)

Transformer balanced using special transformer in unique low-distortion, low impedance, high level circuit, independent of load impedance.

Output Impedance:

22 ohms

Line-up Level:

+4dBu (0VU)

Maximum Level:

26dBm in 600 ohm (minimum)

Typical Noise Level:

<100dBu RMS, 20Hz-20kHz

Frequency Response:

+0/-0.25dB, 20Hz-20kHz

Total Harmonic Distortion:

	Setting	Output Level	50Hz	1kHz	10kHz
Transformer —	at +20dBm in 600 ohms	0dBu	0.02%	0.007%	0.007%

OTHER INPUTS/OUTPUTS

Monitor Inputs and Insert Returns:

Similar performances to line input amplifiers

Insert Send Outputs:

Electronically balanced

Output Impedance:

75 ohms

Normal Level:

0dBu

Maximum Level:

28dBu

Frequency Response:

+0/-0.25dB, 20Hz-20kHz

Total Harmonic Distortion:

<0.005% at 20dBm in 600 ohms, 30Hz-16kHz

COMPLETE SIGNAL PATHS

Record. Measured from microphone input at 30dB gain, via one channel VCA at line-up to one group output.

Frequency Response:

+0/-0.5dB, 20Hz-20kHz

Noise:

Typically -80dB below +4dBu output

Total Harmonic Distortion at +12dBu Output:

>0.04%, 20Hz-20kHz

Headroom (Typical Record Conditions):

+28dB

Group Bus Crosstalk:

-80dB

Interchannel Crosstalk:

<-90dB

All taken 100Hz-10kHz

Mixdown. Monitor input to Stereo output via Monitor and Output VCAs.

Frequency Response:

+0/-0.5dB, 20Hz-20kHz

Noise:

Typically -78dB below +4dBu output

Total Harmonic Distortion at +12dBu Output:

>0.025%, 20Hz-20kHz

Headroom (Typical Mixdown Conditions):

+28dB

Stereo Separation:

Worst path: -75dB taken 100Hz-10kHz

NOTE: 0dBu = 775mV

CALREC BY AMS

Mixer

Mini Mixer

For Professional Recording and Broadcasting

- Tabletop, drop-in, flight case or 19" rackmounted styles
- Up to 16 channels
- Optional 1 or 2 compressor/limiters with provision for stereo linking
- Optional channel, group and output insert system, pre or post faders
- Low power consumption from mains or batteries
- 2 Group or Stereo A and B faders with pre fade listen
- 4 auxiliary controls pre or post fader from each channel and 4 auxiliary output controls
- Mono master fader output with separate mix controls pre or post A and B fader
- Full throw conductive plastic faders with pre fade and after fade listen
- Wide range low noise input switching on each channel with optional phantom power
- Sophisticated 3-band equalizer, HF and LF filters on each channel
- Comprehensive stereo output monitor selection and control system
- Channel pan controls
- Stereo/mono high level playback or outside source inputs with pan and after fade listen
- Switched talkback from internal microphone to each auxiliary, main and external outputs
- Wide range alignment oscillator also used for tone to line
- Monitor headphones output
- Choice of peak program or VU metering
- 2 or more units may be connected in series with no loss of channels
- Full professional specification on all outputs

Frame Sizes:

The mini mixer design allows for up to 18 channel strips 30mm wide and 1 or 2 compressor/limiter strips also 30mm wide in 8, 12 or 18 "strip" frame sizes in the tabletop, drop-in and flight case styles and 8 "strip" only in the 19" rackmounted style. Compressor/limiters are usually fitted between channels and the output section. Blank panels are fitted to cover unused strip locations, working from the left.

Specifications

Inputs:	Microphone:	Balanced transformer	1.2K ohm
		Sensitivity:	-10/-70dB in 10dB steps
		Input Headroom:	30dB at all settings
Line:		Max. Input:	+8dBu
		Balanced Transformer:	10K ohm
		Sensitivity:	+20/-20dB in 10dB steps
Playback/Direct:		Max. Input:	+28dBu
	Insert:	Electronic Balanced:	20K ohm, 0dBu
		Electronic Balanced:	20K ohm, -6dBu
Outputs:	Main/Aux. (7):	Bal. Transformer:	0dBu for 600 ohms min.
	Secondary (2A, 2B, 2 Mono, 4 Aux.)	Balanced Transformer:	0dBu for 10K ohms min.
	Talk-back/Insert:	-bridged on above	
Monitor/Phones:		Balanced, C.T. Earthed:	0dBu/-6dBu for 600 ohms min.
		Unbalanced:	0dBu for 300 ohms min.
		Max. Outputs:	24dBm in 600 ohms
Dynamics:	Compressor:	ON Button:	
		Threshold, Variable:	-20/+6dBu
		Ratio, Variable:	1.5/1 to 100/1
		Recovery, Variable:	0.1/3 seconds
		Auto-Recovery Button:	Fast at first, slow later
		Attack Button:	Normal: 5m secs. Fast: 0.1m secs.
			Gain reduction indicator
			Bar Graph:
			On Button:
			Threshold, Variable:
Compressor/Limiter:		Peak Limit Lamp	
		Stereo Link Button	

Performance: Noise:	Microphone:	Better than -127dBu, 20Hz, 300 ohms
	Line:	Typically better than -80dBu, 20Hz-20kHz
Distortion:	at +12dBu:	Better than 0.05% 40Hz-16kHz
Frequency Response:	Any Circuit:	±0.5dB, 30Hz-15kHz, -3dB and falling 18Hz and 30kHz due to steep cut filters

Connections:

Channel and Playback Inputs:	XLR 3F (pin 2 hot)
Main/Aux./Monitor/Osc. Outputs:	XLR 3M (pin 2 hot)
Secondary Signal Outputs:	Varicon 38: for connection in fixed locations and recorder feeds Varicon 38: for connection to separate patch field
Inserts:	
Direct Inputs	
(Units in series):	Varicon 38: also includes optional remote connections
Mains Input:	IEC (3-pin) 240/120V*, 50/60Hz (switched change over)
Battery Input:	XLR 4M: ±12V (±10V min.); Pins: +3, -2, CT1
(or DC output when on mains):	+48V phantom power: Pin 4 (not required if low voltage mikes are used)
	*Specification holds down to 200VAC or ±10VDC below which performance is slightly compromised

General:

8-Strip Frame:	Dimensions:	485 (19")W x 220D x 311H (7U) (Add 30mm width for each additional strip)
(Equipped)	Weight (8-strip):	Approx. 12kg

Mixers:

8 Channel	\$10,450.00
10 Channel Plus 2 Dynamics Modules	13,120.00
12 Channel	13,340.00
16 Channel	16,020.00
16 Channel with 2 Dynamics	16,980.00

Modules:

Channel Modules	590.00
Dynamic Modules (Compressor/Limiters)	480.00

There are 3 frame sizes: 8, 12, and 18 channel.

There are 4 styles: 19" rackmount (8 ch. only)

- Tabletop
- Drop-In
- Flight Case (Additional \$190.00)

The total number of channels possible (minus Dynamics) is 16.

Intermediate packages to those above are available and can be priced by subtracting the cost of the appropriate modules from the next package/frame size up the scale.

CM4050 SOUNDFIELD MICROPHONE

The need for perfectly natural reproduction of all types of sound in all environments makes the condenser microphone the obvious choice for broadcast, film and recording studios, where the highest fidelity is essential. Our range of condenser microphones has been evolved and perfected over the last 20 years to meet this requirement.

Construction throughout is of brass and stainless steel and all screwed parts use a large profile cross-resistant thread. The capsules have a light, aluminum coated, polyester diaphragm producing a very smooth, virtually flat frequency response and an excellent transient response. This combination produces high quality microphones which are immune to heat, damp, mechanical shocks and are extremely reliable.

The CM4050 Soundfield Microphone represents a departure in microphone technology giving the recording engineer and producer freedom and flexibility of microphone technique. Its outstanding characteristic is that it enables the effective polar pattern of the microphone, as well as its direction of pointing both in pan and tilt, to be adjusted not only remotely at a live recording session but also by post session processing of master tape.

General Accessories

- CW 870** Polyurethane foam microphone windshield
- CA 110** 3-pin Cannon XLR microphone plug
- MC 2** Quick release half lap Microphone Clip
- MC 4** Standard Microphone Clip
- MC 6** Spring loaded quick release Microphone Clip
- CS 1** 15" Swan neck 3-pin XLR/3-pin XLR, 2 meters cable

Microphone Connecting Leads

- CL 1060** 3-pin XLR/OPEN END 2 meter Balanced microphone lead
- CL 1061** 3-pin XLR/3-pin XLR 2 meter Balanced microphone lead
- CL 1064** 3-pin XLR/3-pin XLR 10 meter Balanced microphone lead
- CL 1081** 3-pin XLR/OPEN END 2 meter Balanced microphone lead with built-in 15dB attenuator for matching down to 30 ohms

Power Supplies

CP 1022
Free standing mains powered unit 200/250V or 100/120VAC only providing 48V phantom power for 2 microphones on XLR connectors suitable for 1000, 2000 and 2100 series.

Bulk Phantom Power Supplies and Power Injection Boards available to special order. Please enquire for details.

CP 2111
Small in line 9V PP3 battery operated supply unit suitable for 2100 series only. Approximately 400 hours use.

Microphone Stand Thread Adaptors

- STA 3** Stand Adaptor 5/16" Whit. Internal 5/8" 26 TPI External with Flange
- STA 4** Stand Adaptor 3/8" Whit. or 26 TPI Internal 5/8" 26 TPI External
- STA 5** Stand Adaptor 5/8" 26 TPI Internal 3/8" Whit. External
- STA 6** Stand Adaptor 3/8" Whit. Internal 1/2" 26 TPI External
- STA 7** Stand Adaptor 1/2" 26 TPI Internal 3/8" Whit. External
- STA 8** Stand Adaptor 5/16" Whit. Internal 1/2" 26 TPI External with Flange
- STA 9** Stand Adaptor 3/8" Whit. Internal 1/2" Whit. External
- STA 10** Stand Adaptor 5/16" Whit. Internal 1/2" 26 TPI External

- STA 11** Stand Adaptor 1/2" 26 TPI Internal 5/16" 22 TPI BSF External
- STA 12** Stand Adaptor 5/8" 27 TPI Internal 5/16" 22 TPI BSF External
- STA 13** Stand Adaptor 5/16" BSF Internal 1/2" 26 TPI External
- STA 14** Stand Adaptor 5/16" BSF Internal 5/8" 27 TPI External
- STA 15** Stand Adaptor 5/16" BSF or 1/2" 26 TPI Internal 5/8" 27 TPI External
- STA 16** Stand Adaptor 1/2" 26 TPI or 3/8" Whit. Internal 5/8" 27 TPI External

Microphones/Accessories

SERIES 1000/2000/2100 MICROPHONES

- 1000 Series microphones are phantom powered at 48V 0.5mA and have fixed capsules.
- 2000 Series microphones are phantom powered at 48V 0.5mA and have detachable capsules.
- 2100 Series microphones are phantom powered from 7.5V to 50V 0.5mA and have detachable capsules.

To identify a microphone, the first two digits indicate the series, the second two the directional characteristic.

Examples

- Fixed capsule type
CM 1050C—1000 Series Cardioid
- Detachable capsule types
CM 2051C—2000 Series Cardioid
Comprising Amplifier CB20C; Capsule CC51
- CM 2150C—2100 Series Cardioid
Comprising Amplifier CB21C; Capsule CC50

All microphones operate on conventional balance line cables and produce a positive going output for an increase in sound pressure on pin 2 of a standard 3 pin XLR plug.

Power Connectors

**E1016 SERIES
LEKTRALINK™ CONNECTORS**

CAM-LOK's E1016 Power Series field attachable style connectors feature the patented Lektralink principle. The Lektralink design permits assembly to cables in seconds without vulcanization and without the danger of exposed set screws or pins.

The locking ring is permanently molded into the insulator. (See illustration below). The ring, made of high strength material, cannot cause inductive heating. As the contact is pulled into the insulator a drive pin is captured by the ring, locking the contact into an immovable position. That's all there is to it.

CAM-LOK's patented strain relief system distributes flexing over a wide area. A retaining wire prevents cable jacket from pulling away from contacts exposing dangerous bare wires.

Insulator compound has superior heat, weather, ozone, and abrasion resistance.

The patented Lektralink™ design eliminates unnecessary shock hazard and provides an easily attachable moisture resistant connector.

V3-3C/V4-3C/V5-3C V-Series Multi-Channel Video Cable

- 75 ohm high definition video coax (3C-2V NHK Standard)
- Super flexible (stranded conductor) for handling ease, and smooth cable layout
- Choice of 3, 4, or 5 channels in a common jacket
- Easy channel color code identification (Red, Green, Blue, Sync/White or Yellow available)
- Multi-channel cable design maintains circuit phase
- Keeps cable runs neat, safe and uncluttered
- High density shield blocks stray RF and electrostatic noise
- Use with Canare BCP-C3, 75 ohm, BNC connectors

75 Ohm BNC Connectors

- BCP-C3** For use with: Canare remote video camera cable and "New" V-series/Multicoax videocable (3C-2V)
- BCP-C4** For use with: Canare LV-61S 75 ohm coax cable and any standard RG-59B/u, RG62A/u
- BCP-S3** For use with: Canare remote video camera cable and "New" V-series/Multicoax videocable (3C-2V)
- BCP-S4** For use with: Canare LV-61S 75 ohm coax cable and any standard RG-59B/u, RG62A/u
- BCJ-R** Female panelmount to solder pin
- BCJ-JR** Double female panelmount
- BCJ-RU** Female recessed panelmount to solder pin
- BCJ-JRU** Double female recessed panelmount

- Discontinuity compensated circuit design maintains low VSWR characteristics (< 1.1) up to 2GHz
- Correct impedance match when using 75 ohm coax cable
- Damage preventing bulkhead connector
- Audible snap on pin insertion to confirm assembly

TYPICAL CONNECTOR SPECIFICATIONS & PERFORMANCE

Characteristic impedance:	75 ohms
Frequency range:	DC to 2 GHz
PERFORMANCE:	
VSWR:	1.1 or less up to 2 GHz
Insulation resistance:	1000 Mohms or more at 500 VDC
Rated voltage:	1500 VAC (rms) for 1 minute
CONTACT RESISTANCE:	
External contact:	3 Mohms or less
Center contact:	6 Mohms or less

Support Equipment

MC-200 and MC-300 Pedestals

• The innovative Modular Cassette Counterbalance (MCC) System highlights the Easy To Balance Pedestal Column • The MCC System reduces the total weight of the unit, resulting in light maneuverable camera operation • Needle bearings incorporated in the casters help to reduce rotational friction and resistance • Specially designed rubber wheels and axles guarantee smooth starting and running operation • Sturdy adjustable cable guards are made of special 3-layer structure material to absorb shock and noise

MC-200 Specifications

Min. Height: 24.0" (61cm)
Max. Height: 49.2" (125cm)
Min. Width: 31.1" (79cm)
Max. Width: 34.3" (87cm)
Dead Weight: 363 lbs. (approx. 165kg)
Mounting Weight: 66 ~ 286 lbs.
 (30 ~ 130kg)

MC-200 \$15,500.00

MC-300 Specifications

Min. Height: 22.8" (58cm)
Max. Height: 60.6" (154cm)
Min. Width: 31.1" (79cm)
Max. Width: 34.3" (87cm)
Dead Weight: 374 lbs. (approx. 170kg)
Mounting Weight: 66 ~ 242 lbs.
 (30 ~ 110kg)

MC-300 \$18,900.00

Tripods and Dolly

TR-60 Tripod Specifications

Max. Height: 45.3" (115cm)
Min. Height: 20" (51cm)
Loading Capacity: 132 lbs. (60kg)
 (When used together with CD-10.....198 lbs. (90kg))
Dead Weight: 16.5 lbs. (7.5kg)

TR-60 \$1,450.00

TR-90 Tripod Specifications

Max. Height: 47.6" (121cm)
Min. Height: 25.6" (65cm)
Loading Capacity: 264 lbs. (120kg)
Dead Weight: 24.2 lbs. (11kg)

TR-90 \$1,950.00

CD-10 Dolly Specifications

Loading Capacity: 286 lbs. (130kg)
Dead Weight: 17.6 lbs. (8kg)
Dimensions: 25 x 114 x 114.8cm

CD-10 \$1,680.00

TR-90

MC-300

SC-15

SC-15 and SC-05 Cam Heads

- Weight of the camera is balanced by a cam system $\pm 50^\circ$ of tilt angle
- Total sliding adjustment of 16.5cm for front to rear camera balance
- V-Shaped wedge plate for easy camera mounting

CTD10

CTD10 Color Television Demodulator

- Synchronous/envelope detection • Zero carrier chopper • Video squelch • Switchable sound traps • Split carrier/intercarrier sound
- Audio squelch • Balanced audio output • DC and AC input powering

The CTD10 Series Demodulators are solid state and have been designed for use in cable system applications. The demodulated signal is available for monitoring, video processing, or remodulation for transmission over cable system or microwave systems.

Synchronous/Envelope Detection

Both synchronous and envelope video demodulation are available in the CTD10. Selection of the desired detection mode may be chosen by front panel control, or remotely from rear panel contacts. Logic circuitry automatically enables the envelope detection mode with removal of the optional synchronous detector module. Rear panel terminal jumpering also permits automatic transfer to envelope detection with synchronous detection phase unlock.

Specifications

Input Level Range:	-20dBmV to +30dBmV VHF channels -10dBmV to +30dBmV UHF channels
Operating Channels:	Any standard VHF 2 thru 13 Any standard UHF 14 μ thru 83 μ Sub-low cable channels T7-T11 Cable channels 14 thru 36 (A-W)
Noise Figure:	6dB channels T7 thru T11 and 2 thru 6 7dB channels 7 thru 13 12dB channels 14 μ thru 83 μ 75 ohms nominal
Input Impedance:	75 ohms nominal
Input VSWR:	16dB (1.37:1) 6MHz channel width, over specified input level range
AGC Type:	Keyed AGC, sync tip referenced
AGC Control:	± 0.5 dB maximum video variation over specified input level range
Image Rejection:	60dB VHF, 50dB UHF
IF Rejection:	60dB
Adjacent Channel Rejection:	60dB
IF Frequency:	45.75MHz visual carrier 41.25MHz aural carrier
Video Output Impedance:	75 ohms, 30dB min return loss
Video Output Level:	Adjustable to 1.5V p-p, sync tip to peak white

Video Frequency Response:

- Envelope detector ± 0.5 dB, 30Hz-3.58MHz
- Synchronous detector, sound traps in: ± 0.5 dB, 30Hz-4.18MHz
- Synchronous detector sound traps out: ± 0.5 dB, 30Hz, -4.5MHz

Envelope Delay:

- Sound traps in circuit, Chroma/Luminance delay within ± 25 nsec of complement of FCC transmitter nominal delay
- Sound traps out of circuit, Chroma/Luminance delay within ± 25 nsec (synchronous detector only)

Linearity:

Differential Gain:

Differential Phase:

Chopper:

- 2% synchronous, 5% envelope detection
 $\pm 1\%$ Synchronous; $\pm 2.5\%$ Envelope detection
 $\pm 0.5^\circ$ Synchronous; $\pm 1.0^\circ$ Envelope detection
Position adjustable within vertical blanking interval, width adjustable between 30 μ sec and 60 μ sec

Chopper Carrier Cutoff:

Video Squelch:

- 55dB
Activation selectable from one or more of 3 modes
a) Carrier loss
b) Adjustable threshold carrier level
c) Synchronous Detection Phase Unlock

Audio Output Level:

Adjustable to 2.0 VRMS across 600 ohms (before de-emphasis starts). The main output is balanced or unbalanced to ground depending on the selected option. The monitor output is always unbalanced to ground

Audio Frequency Response:

Audio Deemphasis:

Audio Harmonic Distortion:

± 0.5 dB from 30Hz to 15kHz
75 μ sec

4.5MHz Output:

0.5%, 30Hz to 15kHz, 25kHz deviation at specified maximum audio output level

CTM11

CTM11 Television Modulator

- Quality performance to 550MHz
- Advanced SAW filter circuitry
- Automatic mode switching
- Complete scrambler interface
- BTSC stereo compatible

The CTM11 Television Modulator is a high performance AM modulator designed to provide quality television signals for use in CATV headends or to meet any broadband requirement where standard television signal generation is required.

Auxiliary video and IF filters are unnecessary, enhancing system performance and increasing reliability. Phase equalization circuitry provides ideal shaped group delay predistortion specified for color television transmission. The CTM11 can generate television signals on any channel from channel 2 to channel 78 (550MHz), on sub-low channels T7 to T11, and on special channels in the A minus band. Frequencies up to 800MHz are available by special order. Complete system design, including optional advanced phase lock circuitry, allows the CTM11 to function on standard harmonic or incrementally related carriers, all within the limits of FCC, Docket 21006. In the event of a loss of input signal to the phase lock module, transfer to a non-phase lock operation or return to phase lock is accomplished without disruptive transients in the picture by using a crystal voltage controlled oscillator (VCO) as the adjustable frequency control element.

Standard features include high level IF switching, which allows it to operate from an external IF signal, and separate video and audio IF loops for easy integration with IF scrambling. The IF switcher may be manually controlled externally or functions automatically in conjunction with a built-in video loss sensor to assure continuity of output signals. Optional IF AGC is available to provide constant IF levels with signal input variations of ± 8 dB.

The modulator can be equipped with an aural separator circuit to accept a 4.5 MHz modulated audio signal, either monaural or BTSC. When only 4.5MHz subcarrier is utilized no audio modulator module is required. If both baseband and 4.5MHz audio are desired, the CTM11 includes internal switching capability to select either system or it can automatically switch to baseband audio if the 4.5MHz signal is lost.

The modular design allows the user to configure the unit to meet exact applications. Use of plug-in modules also allows upgrading and simplifies frequency changes in the field. All modules mount in a 5.25" (133mm) EIA rackmount chassis with built-in power supply. The chassis is pre-wired for the addition of optional modules such as the phase lock and meter monitor, simplifying future expansion.

Specifications

Input Level:	0.5V p-p min. for 87.5% modulation depth
Input Impedance:	High impedance, loopthrough
Input Return Loss:	30dB min., 25Hz to 6MHz, with supplied 75 ohms termination
Frequency Response:	± 0.5 dB, 25Hz to 4.18MHz
Differential Gain:	0.3dB max. at 87.5% modulation, 10 to 90% APL
Differential Phase:	0.5 deg. max. at 87.5% modulation, 10 to 90% APL

AM Hum and Noise:	60dB min. below 87.5% modulation depth 1% max. on 60Hz, 50% squarewave	
Tilt or Sag:		
Input Type:	Monaural High impedance balanced loopthrough or 600 ohms balanced	BTSC Stereo Zero source impedance unbalanced, Hi-Z or 600 ohms balanced
Input Level:	250mV RMS min. for 25kHz deviation	1.0V RMS min. for 50kHz deviation
Modulation Response:	Within ± 0.75 dB of 75 microsecond pre-emphasis, 50Hz to 15kHz	Within ± 0.75 dB 50Hz to 15kHz
Harmonic Distortion:	0.5% max., 50Hz to 15kHz at 25kHz deviation	0.5% max., 50Hz to 15kHz at 50kHz deviation
Modulation Range:	40kHz max.	100kHz max.
FM Hum and Noise:	60dB min., below 25kHz deviation	60dB min., below 50kHz deviation
Intercarrier Frequency:	4.5MHz \pm 500Hz above video carrier	4.5MHz \pm 500Hz above video carrier
Output Channels:	T7 to T11, 2 to 13, 14(A) to 78	
Output Impedance:	75 ohms	
Output Level:	+60dBmV max. video carrier, 5 to 450MHz, continuously adjustable, +50dBmV to +60dBmV +55dBmV max. video carrier, 450 to 550MHz, continuously adjustable, +45dBmV to +55dBmV	
Spurious Outputs:	60dB below video carrier at any output level between +50 and +60dBmV, 5-450MHz and between +45 and +55dBmV, 450-550MHz	
Frequency Accuracy:	± 10 kHz, Channels T7-T11, 2-13, 17(D)-24(K), 54-78 ± 5 kHz, Channels 14(A)-16(C), 25(L)- 53(QQ), 1(A-1)-95(A-5)	
Group Delay Response:	Meets FCC predistortion requirements for color transmission	
Sound Carrier Level: Vestigial Sideband Response:	Adjustable 10 to 20dB below video carrier -20dB channel edge -40dB adjacent picture and sound carriers and any frequency farther removed from channel	
IF Output Level: Power:	+40dBmV 100 to 130VAC, 60-50Hz, 35W 21.5 to 30.0VDC, 1.05A max.	
Size:	5.25" H x 19" W x 16" D	
Weight:	24 lbs.

CTM20

CTM20 Color Television Modulator

- Microcomputer Control
- Extensive Control and Monitoring Capability
- Central Control Serial Data Interface
- Totally Modular Expansion
- Multiple Audio/Visual Switching
- Internal Message Generator
- Complete Scrambler Interface
- Surface Acoustic Wave (SAW) IF Filtering
- Bar Graph Modulation Indicators
- Calibrated Detent Modulation Controls
- Self Test Mode
- Audio/Video/IF AGC Signal Level Normalizing

The CTM20 is a high performance digitally controlled modulator designed for all applications in CATV system headends, local origination, terrestrial microwave service, and satellite TVRO signal remodulation for cable distribution. The modulator incorporates an on-board microcomputer control system, complete audio, video, and IF signal switching, and provisions for controlling operating levels, signal switching, and the monitoring of system performance from a central terminal or under local control.

System Design Flexibility

The modulator is designed to give total configuration control to the system operator. All options for the modulator can be readily field installed by the equipment user. System revisions, updates, or reconfiguration can be made from the central control computer and through the option hardware within the modulator.

SAW Vestigial Sideband Filter

A surface acoustic wave IF filter is utilized in the CTM20. Inherently linear phase and a flat amplitude response across the channel passband are achieved with the SAW filter, insuring excellent video signal transparency and waveform fidelity. The exceptional shape factor obtained with the SAW filter affords excellent adjacent channel protection. Auxiliary video and IF filters with attendant all-pass delay correction circuits are not required with the SAW filter.

Phase Equalization

The SAW IF filter exhibits an inherently flat group delay characteristic across the channel passband. The shaped group delay characteristic specified for color television transmission is provided by an all-pass phase equalizer in the video module.

Control and Monitoring System

A microcomputer based control system contained within the CTM20 provides extensive controlling and monitoring capability. All switching functions as well as modulation levels and the channel output level are controllable from a headend terminal. Up to four audio and three video signal sources may be accepted by each modulator. A video message generator option located within the modulator offers preprogrammed, custom messages as the fourth video signal source.

Local control of the modulator's audio, video, and IF switching is accomplished by means of parallel, hardwired switch input lines to the modulator's control module.

Audio and video modulation levels are internally precalibrated to normalized values. Adjustment of detent type front panel controls permits local override of the preset levels or central controller command if desired.

Control Features

AGC — Automatic level control of selected audio, video, and IF signal inputs is optionally available within the CTM20. These options serve to normalize the modulator's modulation characteristics and carrier level under all conditions of signal switching, and provide the means for remote programming and monitoring of these functions.

Signal Switching

The internal signal switching provisions within the CTM20 will accommodate multiple signal sources (both baseband and IF) and various modes of switch program control. All commands for signal switching are processed by the microcomputer located within the modulator and permit the control of switching functions by local commands generated at the headend site, by automatic prioritized signal selection, or by override of both these through central controller commands.

Baseband Switching

The audio/video switches respond to the microcomputer generated commands, with switching decisions based on 4 data input types:

- hardwired, parallel data switch commands into the modulator
- presence of video at each of 4 audio/video switch locations in the modulator
- the priority level of each switch relative to all other switches

- central controller serial data input commands to the modulator
- Audio switching normally will follow the associated video switch unless otherwise specified by central controller command. The hardwired, parallel data inputs permit audio override to energize the emergency audio alert switch or to switch off all audio sources.

IF Switching

The substitute IF signal switching control may be enabled by either local, hardwired input line commands, or by the central controller data input. Automatic switching to an external IF signal source may be initiated by the loss of a selected video input signal source if so desired.

Signal Scrambling

A scrambler interface for both IF and baseband encoders is included in the CTM20 chassis. Separate picture and sound carrier loop through connectors provide the interface to IF scramblers. Video loop through connectors at the video output bus allow baseband scrambling of the CTM20 switch selected video source. An aural subcarrier input provides for sound security in baseband encoding systems.

Monitoring Features Self Test Mode

The self contained local monitoring system provides a self test mode that is automatically initiated with power up of the modulator, or at the request of the local keyboard. Ten parameters are sequentially checked against internal preset limits contained in ROM. The measured parameters are:

- Audio, video, VSB filter, and converter module currents
- Audio and video modules local 5 and 15 volt regulator outputs
- Audio module and output converter AFC levels

Model No.	Output Channel	Price
CTM20*	VHF 2-13 Cable	
	T7-T11, 14-36	\$2400.00

Signal Processor

HSP1

HSP1 Heterodyne Signal Processor

- On or off channel signal conversion
- Widest choice of input and output frequencies
- Automatic carrier substitution
- Separate IF input switching
- Optional video and audio modulation
- BTSC stereo compatible

The HSP1 Heterodyne Signal Processor offers system designers and operators a cost-effective, quality method of processing and frequency conversion for standard AM television signals. Designed for operation in CATV headends or any broadband application where signal processing or channel conversion is desired, the HSP1 will accept any standard VHF or UHF off-air television signal, CATV sub-low channel, AML microwave output channel or broadband cable network channel. The signal is converted to IF, amplified and processed. After processing, the signal is converted to an RF output, either on the same channel as the input or on any other available channel from sub-low channels T7 to T11, to VHF channels 2 to 13, or any cable channel from 14(A) to 78 (550MHz).

The HSP1 contains a keyed AGC system to increase noise immunity and assure consistent output levels, and group delay correction circuits minimize chroma luminance displacement and waveform distortion. Audio circuits in the HSP1 are fully compatible with BTSC stereo sound and will pass the signal unchanged.

The HSP1 is part of a complete family of Catel AM headend products. The modular design of these products allows the HSP1 to share common input and output converters and phase lock modules with other members of this family, which includes the CTM11 and CTM20 Modulators and the CTD10 Demodulator. The HSP1, like others in this product line, will meet all requirements of FCC 21006 when operated on channel or in a system of harmonically related (HRC) or incrementally related (IRC) carriers. The HSP1 has a high output level (up to $\pm 60\text{dBmV}$). Double balanced diode mixers in both input and output converters, and the hybrid module amplifier in the output converter insure 60dBmV spurious control at these high output levels.

The HSP1 offers a wide range of features and applications in addition to signal processing. Various IF and baseband modulation options can provide automatic program substitution, automatic or manual video/audio substitution. The HSP1 will support all of these options together. There are no forbidden combinations. The HSP1 includes a substitution carrier generator to allow either unmodulated or modulated IF substitution of the incoming signal. Control can be manual or tied to a carrier loss sensor and provide automatic switching in the event the incoming signal is lost. High level IF substitution/switching prior to output conversions is standard and there are provisions for optional low level IF substitution/switching. Any of the various switching functions can be made automatic by interconnecting terminals on the back of the unit.

Specifications:

Input Channels:	VHF channels 2 thru 13, UHF channels 14 thru 83 Sub-low cable channels T7 thru T11, Cable channels 14(A) thru 78 (550MHz)
Input Impedance:	75 ohms
Input Level Range:	-20dBmV to +30dBmV, VHF channels -10dBmV to +30dBmV, UHF channels
Noise Figure:	6dB max., channels T7-T11 and 2-13 7dB max., channels 14U-83U and 37(AA)-78 60dB min., VHF; 50dB min., UHF
Image Rejection:	60dB min.
Adjacent channel rejection:	60dB min.
AGC Control:	$\pm 0.5\text{dB}$ max. level change for -20dBmV to +30dBmV input range
Passband Response:	$\pm 0.5\text{dB}$, video carrier -0.75MHz to video carrier +4.18MHz
Group Delay:	± 25 nsec. video carrier to chroma subcarrier
Conversion Accuracy:	$\pm 10\text{kHz}$ off channel conversion. Meets $\pm 5\text{kHz}$ FCC 21006 with on-channel conversion or when operated in an HRC or IRC system
Sound Control:	$\pm 0.5\text{dB}$ max. level change for -20dBmV to +30dBmV input range
Sound Output Level:	Adjustable from 10 to 20dB below visual carrier
Output channels:	VHF channels 2 thru 13, sub-low cable channels T7 thru T11, Cable channels 14(A) thru 78 (550MHz)
Output Impedance:	75 ohms
Output Level:	+60dBmV max. video carrier, 5 to 450MHz, continuously adjustable, +50dBmV to +60dBmV +55dBmV max. video carrier, 450 to 550MHz, continuously adjustable, +45dBmV to +55dBmV
Spurious Outputs:	60dB below video carrier at any output level between +50 and +60dBmV, 5-450MHz and between +45 and +55dBmV, 450-550MHz
Power:	100 to 130VAC, 60-50Hz, 30W, 21.5 to 30.0VDC, 800mA, max.
Ambient Temperature:	0 to 55°C, operating
Size:	5.25"H x 19"W x 16"D 133.4H x 482.6W x 406.4Dmm

VP712 Video Distribution Amplifier

1 x 20 distribution of video in one unit • Input loopthrough for efficient signal distribution • Switchable 75 ohm termination on input • Differential input • Internal gain adjustment • Designed bandwidth of 8MHz • Switchable equalization to compensate for cable losses • Isolated outputs for short-circuit protection • Small size, 1U high and 19" rackmounting • Optional DC clamp version available

VP712\$465.00

VP-710

VP-716

VP715 Audio Distribution Amplifier

• Low noise (S/N 120dB), flat frequency response, low distortion and high overload margin • Suited to professional hi-fi audio distribution in video tape duplication systems • Highly reliable—isolated outputs offer short-circuit protection • Loopthrough on audio inputs enabling daisy chaining for economic audio distribution • Switchable selection of balanced or unbalanced audio input • Internal gain adjustment, accessible from rear • Small size, 1U high and 19" rackmounting • Low power consumption

VP715\$450.00

VP716 Audio Level Adjust—2 Group

• Flexible signal switching—input stereo channels can be reversed, mixed or re-routed to both or individual channels • 2 audio stereo inputs—balanced or unbalanced • Dual bargraph PPM display • Auxiliary stereo inputs and line-outs • Additional group 1 and 2 line-outs for extra monitoring • XLR balanced input connectors, locking 5-pin DIN balanced output connectors • Dynamic range 108dB • Crosstalk between audio groups 90dB, 20Hz to 20kHz • 24dB headroom • Signal-to-noise ratio >108dB (ref +24dBu), 20Hz to 20kHz • Flat frequency response ±0.2dB, 20Hz to 20kHz • Compact module, 1 U high and standard 19" rackmount • Accommodates two stereo audio input groups, either balanced or unbalanced • Level of each individual channel can be adjusted and displayed on the PPM bargraph LED display • Two channels (one stereo) of PPM monitoring are provided, switchable to select group 1, group 2 or auxiliary outputs.

VP716\$650.00

VP710 Audio Level Adjust—5 Group

• Flexible signal switching—input stereo channels can be reversed, mixed or re-routed to both or individual channels • 5 audio stereo inputs—balanced or unbalanced • 2 x 5 audio stereo outputs with individual channel level adjustment • 5-group dual bargraph Peak Program Meter display • 10 channels of continuous PPM monitoring • PPM incorporates a precision full-wave peak detector • 8 meter sensitivity ranges (-12dBu to +8dBu), measurement range +20dBu to -27dBu • 1kHz calibrated tone signal • Dynamic range 120dB • Crosstalk between audio groups 100dB, 20Hz to 20kHz • > +27dB headroom • Flat frequency response ±0.1dB, 20Hz to 20kHz • Signal-to-noise ratio >120dB (ref +24dBu), 20Hz to 20kHz • Compact module 3.5" (2U) and standard 19" rackmount • XLR input connectors, locking 5-pin DIN output connectors

DWIGHT CAVENDISH CO.

System Monitoring/Machine Controls

VP709 Stereo Audio Monitor

- Simultaneous VU monitoring of four audio channels • Simple pushbutton selection for A/B stereo audio signal comparisons
- Two headphone jacks, one mono and one stereo • Built-in loudspeaker with volume control • Line-out of selected stereo signal for external monitoring • Built-in power supply

The VP709, designed primarily for video cassette duplication applications, provides comprehensive monitoring of stereo audio (or 2-channel audio) signals from two sources.

The panel has a good quality loudspeaker, stereo and mono headphone jacks and VU metering.

The monitor panel fulfills a variety of applications, typically the A/B comparison of stereo audio signals from two VCR sources, such as the master and slave in a video cassette duplication system. Another application is the monitoring of the two linear audio and two Hi-Fi audio signals from a Hi-Fi VCR.

VP709 \$700.00

VP704 Automatic Signal Switcher-10 Way

- Small size, 1 U high, 19" rackmounting • Switching of 10 video inputs • Manual selection of any input • Automatic sequencing of all 10 inputs • Skip facility in auto mode • Dwell time adjustment • Vertical interval switching • Very low crosstalk • Switching capability for time code or other data signals
- Can be configured as 10 in—1 out or 1 in—10 out

For recording applications, surveillance monitoring or situations where clean switching is important, the VP704 provides vertical interval switching between inputs which are synchronized.

VP704 \$650.00

VS-611-01 Remote Control Panel with Interface

- Allows full 7-function remote control of a group of up to 10 video cassette recorders • Within the Copymaster 10 concept, the module can be interfaced with other Dwight Cavendish modules to simultaneously control up to 100 VCRs • Front panel houses seven function control buttons and one control lock button to prevent inadvertent function selection • Each button has an associated LED indicator • Mains on lamp also indicates the presence of the mains supply • Uses only one VS-611-01 with a mains supply to simultaneously remote control a group of up to 10 VCRs • Functions remotely controlled, where compatible, are eject, rewind, fast forward, stop, play, record, and pause • Different module variants are available

VS-611-01 \$650.00

VS-616 Machine Control System—Single Group

- Single slave group system for simultaneous control of up to 2000 slave VCRs • Control of serial, parallel or infrared remotely-controllable VCRs • Full 7-function control of eject, rewind, fast-forward, stop, play, record and pause • Direct remote control of up to 10 serial or infrared VCRs • Master expansion output to drive interfaces or signal distributors • Momentary press buttons with LED status indication • Lock button to override function buttons and so prevent accidental operation • Master eject facility • Looping input/output connectors for daisy-chaining additional control modules • Compact, one rack, 19" mounting

VS-616-01 For Group 1 with basic serial-IR, parr and status opt. \$725.00

VS-616-02 For Group 1 with basic IR—Serial, parr and status opt. \$750.00

VP704

VS-615

VS-615 Machine Control System—5 Group

- Selection of slave group(s) G1 to G5 for simultaneous remote control of up to 1000 slave VCRs • Full 7-function remote control of eject, rewind, fast forward, stop, play, record and pause
- Individual group status memory display of play, record and pause • Lock button to override function buttons and so prevent accidental operation • Master eject facility • Momentary press buttons with LED indication • Operation of any type of remotely-controllable VCR • Compact one rack unit, 19" mounting

The VS-615 Machine Control System provides full 7-function remote control of up to five groups of slave VCRs in a video cassette duplication system. The modules have been designed to provide an inexpensive solution to the user who wishes to tailor his own customized systems.

VS-615 \$800.00

VS-608-03 Interface for VS615 (1 required for 10 VCRs) \$340.00

VP700 Automatic VCR Changeover Module

- Built-in cue-tone generator enables cue-tones to be placed onto the existing audio track • Switching of video, RF (off-tape), balanced or unbalanced audio CH1 and CH2 • Auxiliary signal input which can be addressed manually • Electronic control interlock to prevent inadvertent switching in the auto sequence • Vertical interval switching • Integral power supply • Professional XLR connectors • VCR playing sequences switchable 1-2-1, 1-2-3 or continuous 1-2-1 option • Dub switcher option available

The VP700 VCR changeover module is designed to automatically control the playing sequence of two or three hi-band or low-band U-Matic video cassette recorders. Both audio tracks are switched.

The module operates in any of three modes—manual, prewind or fully auto.

In manual operation, independent control of three VCRs is possible for the front panel. The prewind start enables the exact position of each prerecorded sequence on each tape to be found automatically prior to starting the program sequence. In fully auto, after the prewind sequence, the unit automatically generates the required control outputs which, for example, may be used to put slave recorders into the record sequence, as applied to mass duplication applications. At the end of the sequence all three VCRs are rewound. Leads are provided to suit the VCR type.

VP700 \$1600.00

DWIGHT CAVENDISH CO.

Automatic Videocassette System

CS811

CS811 Automatic Video Cassette System

- Very simple to use • No software or cueing tones on tapes
- Versatile expandable modular system • Single or multi-channel configuration • Stand-alone modules with 19" rackmounting cabinet option • Automatic VCR mains switch-off when not in play, also monitor mains if required • Change-over from one VCR to another or continuous repeat play mode
- Optional text generator during VCR down-time • Adjustable pre-roll timing for each VCR • Internal or external UHF modulator • 24-hour real time clock with weekday indicator • Programmable memory allowing clock to play VCRs up to 20 times per day • Four independent clock outputs • Short mains interrupt protection • Mains failure battery back up for clock • Will operate domestic VCRs which have wired remote control of play/stop/rewind • Loss of video detector

The CS811 budget system is ideal for playing video programs or text for a wide variety of commercial applications. The system is very simple to operate and does not need any special software or cueing tones on the tapes. It uses only two module types and can be simply configured to customer requirements in any combination from the minimum system (one automatic video controller and one VCR) to an expanded system with optional cabinet.

Minimum System

This system requires only one module to control the VCR in either of two modes:

Each play is started by the clock, stopped and rewind automatically or each play is continually repeated after rewind.

An optional text unit can be incorporated to display text between video programs

Expanded System

This system shows two channels with two VCRs per channel. Within each channel, automatic changeover occurs from one VCR to the other.

The two channels can be played completely independently. When each VCR has finished playing, its mains supply is switched off automatically. The maximum expanded system can control 6 VCRs.

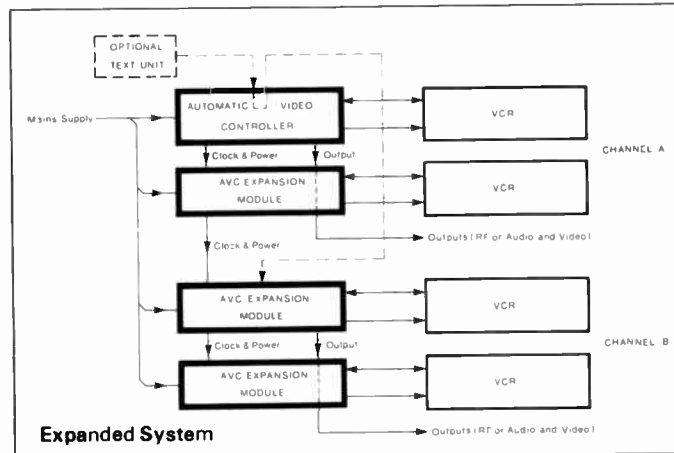

Specifications

- Inputs**
VCR Video: 1V p-p, 75 ohm BNC
Text Video: 1V p-p, 75 ohm BNC, switched loopthrough
VCR and Text Audio: -5dBm / > 10K ohm, unbalanced, phono

Note: In some configurations text input is output from previous module.

- Outputs**
Video: 1V p-p, 75 ohm, BNC
Audio: -5dBm, unbalanced, phono
RF (only if mod. used): Nominally channel 30 to 39 (adjustable, 3mV, 75 ohm)
Remote: Lead supplied to suit customer VCR model used
Power Voltage: 220VAC to 240VAC, 50/60Hz (110V/120V on request)
Consumption: 12W (24W with three VAC Expansion Modules)
Control Clock: 24 hour format with day of week, 20 memories, 4 independent outputs, battery back-up for 12 hours

- Dim. (HxWxD) & Weight**
Auto Video Cont.: 87 x 440 x 330mm, 6.5kg approx.
AVC Expansion Module: 45 x 440 x 330mm, 4.5kg approx.

DWIGHT CAVENDISH CO.

Video Tape Duplication System

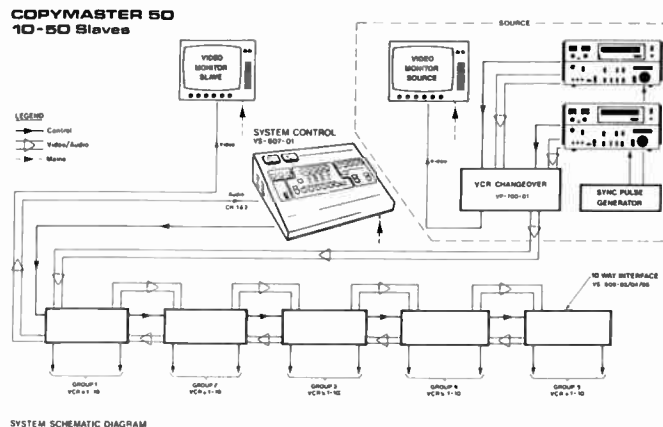

Copymaster 50 Video Tape Duplication System

- Desk top system control keyboard
- Full 6-function remote control of five groups
- Status monitoring for 50 slave VCRs
- Two audio channels throughout
- Manual or auto slave signal monitoring
- Up to 10-high slave VCR stacking
- Level metering of both slave audio channels
- Selection of either auto channel or mix of both
- Built-in loudspeaker with volume control
- Master eject facility
- Simple modular expansion from 10 to 50 slave VCRs

The Copymaster 50 video cassette duplicator is designed for use in systems employing from 10 to 50 slave VCRs, all of which may be monitored and controlled from a desktop "keyboard." The keyboard provides full function remote control for all slaves with five group selection. Each group may contain from 1 to 10 slaves. An LED readout provides status monitoring of all VCRs, giving indication of the failure of any VCR to take a remote command. (Status monitoring operates only with VCRs having status reporting electronics included.) The keyboard also provides video and audio monitoring from each VCR for complete quality control checking. This built-in QC system is employed both while recording (through the E to E of the VCR) and when the program duplication is complete and the VCRs are placed in the playback mode for spot checking of the finished tapes. An auto-cycle function allows constant monitoring of all VCRs in the system. Two channels of audio follow video are provided throughout. An audio monitor with speaker and VU metering is included in the keyboard controller. Video monitoring is accomplished by use of a desktop color video monitor.

The slave racks are standard Cavendish Copymaster racks allowing stacking of VCRs up to ten high. Each slave rack can hold two stacks of VCRs allowing a maximum of 20 slave VCRs per rack. Rack shelving is adjustable to allow the use of any size VCR. Racks come with AC power distribution, electronics and all cabling including remote control cables and signal cables for the slave VCRs. Since the system is totally modular, slave racks can be added at any time without cost penalty.

The Copymaster 50 is shipped complete. Installation consists of plugging several control cables into the keyboards controller and connecting the VCRs. Remote control cables and electronics are available for any remotely controllable VCR, including consumer as well as industrial VCRs.

Specifications

General

- Video Signal System:** PAL/SECAM/NTSC
- Slave Formats:** U-matic/VHS/Betamax/V2000
- Mains Power Requirement:** 200/250V, 50Hz
100/125V, 60Hz on request
- Power Consumption:** (electronics only)
90W for 50 VCR system

Video

- Gain:** Unity \pm 0.5dB
- Inputs:** 1V p-p composite, BNC 75 ohm
- Frequency Response:** -1dB, 15Hz to 6MHz
- Hum and Noise:** 60dB below 1V
- Input Return Loss:** -35dB at 5 MHz

Audio

- Gain (balanced input):** -6dB \pm 1dB
- Gain (unbalanced input):** Unity \pm 1dB
- Inputs to VP-700-01:** XLR Cannon balanced or unbalanced
- Inputs to VS-609-03/04/05:** 5-pin locking DIN balanced or unbalanced with loopthrough
- Input Nominal Level:** Balanced + 1dBm
Unbalanced -5dBm
- Input Impedance:** > 30K ohm
(balanced and unbalanced)

- Frequency Response:** \pm 0.5dB, 20Hz to 20kHz
- Total Harmonic Distortion:** < 0.05%, 100Hz, 1kHz, 10kHz
- Hum and Noise:** > 65dB below -5dBm
- Number of Channels:** Two (CH1 and CH2/or stereo)

DWIGHT CAVENDISH CO.**Videocassette Duplicator****Copymaster 250 Videocassette Duplicator**

• 4 in/2 out routing switcher • 2 audio channels throughout • 5 group signal distribution • 5 group audio level adjust • 4 source signal monitoring • 6 function remote control • 2 simultaneous programs • Status monitoring for 50 VCRs • Manual and autocycle QC system • Modular expansion to 250 slaves • Master and QC eject capability • Up to 10 high slave stacking

Control Rack

The Copymaster 250 is a professionally designed system, engineered specifically for videocassette duplication. Control modules provide signal routing, remote VCR control with status monitoring, source video/audio/waveform/VU monitoring and complete slave signal QC monitoring. Control and monitoring equipment is housed in a control rack with lower shelves to accommodate source machines. An optional two tier low silhouette console is also available.

The signal routing switcher provides inputs from four video and eight audio signals. Any two video signals (followed by their respective two audio channels) may be selected for duplication at one time and routed to any one or all of five VCR groups in any permutation. Each basic group will accommodate 10 VCRs and each group is expandable to a maximum of 50 VCRs. Signal routing to groups is accomplished with color coded pushbuttons for ease of operation. After signal selection is made, the electronic lock buttons may be used to prevent accidental disruption of signals during duplication. Audio signals are distributed balanced from the control panel to the slave racks.

The remote VCR control selection allows separate control for each slave group, thus providing the ability to duplicate two programs and accomplish a quality control function on a third group of VCRs all at the same time. Slave groups may be selected for control in any combination. Remote functions provided are: Rewind, Stop, Play, Record, Pause and Eject. An electronic lock avoids accidental mis-control during a duplication run. Front panel LED display of machine control status of each VCR (first 50 VCRs) is supplied. This status function operates only on VCRs with internal status reporting electronics.

A slave monitoring section is provided to allow video and audio viewing from each VCR. Quality control check can thus be made on each VCR both during recording (through the E to E of the VCR) or during playback after the recording is complete. An auto cycle mode allows a quality control check of each machine without an operator having to make manual selections. An optional module will provide Sequence Hold and Eject buttons. This function will permit the operator to hold the signal being viewed for further study and then to eject only the cassette being viewed in the event of a defect.

A 2-channel audio monitor panel with 4 VU meters provides the ability to monitor both source and program audio simultaneously. A built-in speaker and ear phone jack with channel one, channel two and mix capability completes the audio monitoring function. Additional switching is included for signal selection for waveform monitoring for an optional vector scope. Picture monitoring is accomplished with two 8" color monitors, each with underscan and pulse cross capability.

A master AC power distribution panel with an on/off key switch is provided. A single AC power cable plugs into a 110V-15A circuit and provides all power to the system, less the VCRs. All cabling is supplied cut to length with connectors affixed and pre-tested. A substantial reduction in cabling is achieved through multiplexing and daisy chain techniques. Additional space is available in the control rack or console for accessory equipment or system expansion modules. The system is modular in design and by addition of modules and racking may be extended to almost any size.

Slave Rack

Slave racks are designed with variable spacing shelving to accommodate any size VCR and will allow stacking of front load VCRs up to ten high. Slave racks are 82" H, x 47" W x 22" D. Each rack is wide enough to permit two vertical stacks of VCRs, thus permitting a maximum of 20 VCRs per rack. A 10 VCR interface module mounts on top of and in the rear of the slave rack above each stack of VCRs. All cables route along the top of the racks and are concealed by a 3" decorative plinth. AC power is distributed vertically down the center of the back of each

**Copymaster 250**

rack. Two vertically mounted cable troughs are provided to allow an organized distribution of VCR interconnect cables. The racks come complete with all system interconnect signal and control cables including all signal and control cables to the slave VCRs.

DWIGHT CAVENDISH CO.

Video Cassette Duplicator

Copymaster 250-5 Videocassette Duplicator

• Five simultaneous duplication programs • Full 6-function remote control of 5 groups of slave VCRs • 6 in—6 out source routing matrix • Two audio (stereo) channels throughout • 5-group signal distribution • 5-group audio switching with output level adjustment • 6-source signal monitoring • VCR status monitoring display • Auto-sequence or manual step slave signal monitoring • Master eject facility • Monitoring sequence hold with QC eject/reject • Ten-high slave VCR stacking • Professional performance specification • System will duplicate in any standard, any format and from any source machine • Simple modular expansion to 250 slave VCRs

Copymaster 250-5 Videocassette Duplicator

The Copymaster 250-5 video cassette duplicator is designed for use in systems employing from 10 to 250 or more slave VCRs when there is a requirement to be able to dub as many as five different programs at the same time.

Control Rack

The Copymaster 250-5 is a professionally designed and factory manufactured system, engineered specifically for video cassette duplication. Control modules provide signal routing, remote VCR control with status monitoring, source and slave video, audio and waveform monitoring. Control and monitoring equipment is housed in a control rack with lower shelves to accommodate source VCRs if required. An optional two tier low silhouette console is also available.

Source signal routing is accomplished by use of modular 6 x 1 routing switchers with looping inputs to allow "stacking." From one to five switchers may be "stacked," one required for each program to be dubbed concurrently. A sixth routing switch is used to select source signals for test and monitoring. With a full complement of routing switchers (6), it is then possible to dub five different programs at once and have the ability to monitor any one of six possible input program signals. All signal paths in the system are video with two channels of audio follow. Audio signals are distributed balanced from the routing switcher to the VCR interfaces located at the slave rack.

The remote VCR control section allows separate control for each of the five slave groups. Slave groups may be selected for control in any combination. Remote functions provided are: rewind, stop, record, play, pause and eject. Front panel LED's display machine status of each VCR group (and each VCR up to the first 50 VCRs). The status function operates only on VCRs with internal status reporting circuitry.

A slave monitoring section is provided to allow video and stereo audio signal monitoring from each VCR. Quality control checks can thus be made on each VCR both during recording (through the E to E of the VCR) or during playback after the recording is complete. An auto cycle mode allows quality control checking of each VCR without an operator having to make manual selections. A sequence hold and defective cassette eject buttons are provided to allow the operator to stop the auto cycle function temporarily (in order to study a cassette in question) and then if defective to eject only the defective cassette.

A stereo audio monitor panel with VU metering provides the ability to monitor both slave and source audio in stereo through an operator stereo headset or in mono with a built-in speaker. Line level audio output connections are provided for use in driving external stereo audio amplifiers.

A control rack master AC power distribution panel with an on/off key switch is provided. All cabling in the system is supplied cut to length with connectors affixed and pre-tested. A substantial reduction in cabling is achieved through multiplexing and "daisy chain" techniques. Additional space is available in the control rack or console for accessory equipment or system expansion modules. The system is totally modular and, by addition of modules and racking, may be expanded to almost any size.

Slave Rack

Slave rack are designed to accommodate any size VCR and will allow stacking of VCRs up to ten high. Each rack is 82" H x 47" W x 22" D. Each rack contains two vertical stacks of VCRs, thus allowing a maximum of twenty VCRs per rack. A ten VCR interface module mounts on top and in the rear of the slave rack above each stack of the VCRs. All trunk cables route along the top of the racks and are concealed by a 3" decorative plinth. AC power is distributed vertically down the center of the back of the rack. Two vertically mounted cable troughs are provided to allow an organized distribution of VCR interconnect cables. The racks come complete with all system interconnect signal and control cables including all signal and control cables to the slave VCRs.

DWIGHT CAVENDISH CO.**Video Cassette Duplication System****Copymaster 500 Videocassette Duplication System**

• Five simultaneous duplication programs • Full 7-function remote control of 5 groups of slave VCRs • 6 in—6 out signal routing matrix • Two audio (stereo) channels throughout • 5-group signal distribution • 5-group audio switch-mix with stereo audio level adjustment • 6-source signal monitoring • Video, audio, waveform and VU monitoring • Master eject facility • Serial, parallel and infrared VCR remote control • Ten-high slave VCR stacking • Professional performance specification • System will duplicate in any standard, any format and from any source machine • Simple modular expansion in increments of 10 slave VCRs

Control Rack

The Copymaster 500 is a professionally designed and factory manufactured duplicator, engineered specifically for high volume video cassette duplication. System modules provide signal switching and distribution, remote control, video waveform monitoring and audio monitoring. Control and monitoring equipment is housed in a control rack with optional lower shelves to accommodate source VCRs if required. An optional two tier low silhouette console is also available.

The signal routing provides for the input of six video and six stereo audio signals. The routing switch program output bus is modular and may be configured to allow from one to five different programs to be duplicated at the same time. (Duplicators ordered with less than five program capability may expand up to a maximum of five program buses at any time.) Slave VCR groups can be wired in increments of from 1 to 100 VCRs, allowing a total basic system capability of 500 VCRs. The addition of more signal distribution electronics permits expansion to almost any size.

A five group stereo audio Switch-Mix and audio level adjust panel is provided to accommodate the wide variety of audio levels and audio track configurations found on video tape masters. This panel allows moving of audio track 1 to audio track 2 and reverse. It allows either track to be selected and installed on audio track 1 or on audio track 2. It permits the combining of audio track 1 and audio track 2 to be added to either or both audio tracks in monoral form. Audio gain of up to 9dB is front panel adjustable. Individual channel level adjust is provided along with a bargraph level display for each channel. A 1kHz audio calibration signal is included. The audio signals are distributed balanced from the control rack to the slave racks and unbalanced from the slave rack distribution amplifiers to the VCRs.

The remote control panel provides control selection to five VCR groups. Full function remote controls with group status indicators will allow the control of up to five different programs at one time. In addition to the normal controls, a master eject button is included. From the control panel, master control cables feed to the five slave group locations. The basic five group remote control panel is capable of controlling five hundred and more VCRs. This remote control system will operate with any remotely controllable VCR including parallel wired, serial wired, infrared and DC matrix types of control. Control interfaces of all types may be intermixed in the system.

A 13" color monitor (or optional dual 8" color monitor) with pulse cross and underscan along with a waveform monitor is provided to allow viewing of the various source signals. A dual stereo audio monitor with built-in speaker, headphone jacks and VU metering is included. Individual audio channel monitoring is accomplished with the built-in monitor speaker. Stereo audio is monitored by use of headphones. Switching is included to connect video, waveform and audio monitors to the various incoming signals. Audio "line output" connections are available from the audio monitor for driving external amplifiers if required.

A master AC power distribution panel with key switch is provided. All power, signal and control cables are included. One AC cable plugs into a 15A, 110V outlet for powering of the complete system, except for VCR AC power, which is supplied separately.

By use of NTSC, PAL or SECAM monitoring equipment and the appropriate VCRs, the Copymaster 500 Duplicator will dub any of the formats.

By the use of optional modules the Copymaster 500 easily accommodates distribution of four channels of audio for those cases where separate stereo audio distribution is desired.

Slave Rack

Slave rack are designed with variable spacing shelving to accommodate any size VCR. Racks are 82"H x 47"W x 22"D. Front load VCRs can be mounted up to ten high, side by side, permitting twenty VCRs per rack. An AC power outlet strip is mounted vertically in the center of the rear of the rack supplying power to all VCRs and DAs. The video/audio distribution amplifiers and VCR remote control interfaces mount on top and in the rear of

the racks. All trunk cables route across the top of the racks. A 3" front dress plinth conceals all cables. Trunk cables may also be routed under the racks through cable ports provided. Vertical cable troughs in the rear of the racks are provided to allow an organized distribution of VCR interconnect cables. The racks come complete with all system interconnect signal and control cables including all signal and control cables to slave VCRs.

DWIGHT CAVENDISH CO.

Videocassette Quality Control Station

Copymaster QC-10/50 Videocassette Quality Control Station

• Monitors picture video • Monitors pulse cross and underscan • Monitors video waveform • Monitors linear and Hi-Fi stereo audio • Monitors video and audio RF envelope • Monitors up to 50 slave VCRs • VU metering of audio • Full-function remote control • View hold control • Manual and automatic sequencing • Auto rewind timer • Master eject facility • Sequenced reject-eject • Easily expandable from 10 to 50 slave VCRs

The Copymaster QC-10/50 quality control station consists of a control rack (or optional console), slave racking, all cabling, remote VCR control and signal sequence switching for video, audio, video RF envelope, HI FI audio RF envelope, and defective cassette eject. Waveform monitoring, video monitoring, audio monitoring and special operator controls are included. QC stations are available for use with from ten to as many as fifty slaves.

When the QC VCRs are loaded, the operator places all slaves in the play mode. The video and audio signals are played back from each cassette player, either in manual or automatic sequence. In the automatic mode, the operator has the option to set the dwell time to a comfortable period. A 13" color video monitor with pulse cross and underscan is provided for picture viewing.

A waveform monitor is included for video waveform inspection. The B input of the waveform monitor is used to view the RF envelope signal. An optional second waveform monitor can be employed to monitor the video RF envelope and/or the RF Hi Fi audio signal.

A four channel audio monitor with VU metering is included for audio monitoring of linear of Hi Fi audio tracks. Audio monitoring with earphones will monitor stereo sound while a built-in speaker can be selected to monitor individual track audio channels. Line level audio output signals are supplied for use in driving external stereo audio amplifiers if required.

The remote control panel provides five function remote control including master eject. A sequenced eject button is provided to allow the operator to eject only the defective cassette.

A rewind timer is provided to allow the operator to preset and automatically rewind to any point on the tape for QC inspection.

In the signal viewing process, a "signal hold" button is provided to allow the operator to "hold" a cassette playback signal for closer scrutiny.

The system comes complete with all slave racking, all VCR cables and VCR AC power distribution. Any remotely controllable video cassette player can be used in the system. Some VCRs may require modification for RF envelope inspection and eject functions. VCRs must be specified at time of order so the system may be supplied with proper mating connectors.

Depending upon inspection procedures, tape length and operator variables, cassette inspection outputs of 300 to 400 or more per hour can be expected when using the Copymaster QC-10/50 with a full complement of slave VCRs.

CEL ELECTRONICS LTD.

Digital Effects Systems/Editing Systems

MS101 (Maurice Minor) Zoom Effects Controller

Consists of:
P147-30 TBC/frame store synchronizer with NDS filter
P148/1 Serial interface with key combiner (DKC)
P153 Touch pad controller
 • Joystick • Zooms • Folds • Slides • Reveals • Moves • Quarters
 • Montages • Pixelation • False coloring • Posterization • Adjustable
 move speed • Remote control of framestore setup
MS101 \$10,995.00

P153

MS102 (Maurice EFX-II) Single Channel Zoom System

Consists of:
P147-30 TBC/frame store synchronizer with NDS filter
P148/1 Serial interface with key combiner (DKC)
P152 "Maurice" touch screen controller
 Software disk program
 • Zoom • Flip • Tumble • Border • Variable aspect ratio • Slide • Joy-
 stick positioning • Montage • Pixelation • False color • Quantization
 • Programmable moves • Updatable disk based software
MS102 \$17,750.00

P152

MS203 (Maurice EFX-III) Dual Channel Zoom System

Consists of:
(2) P147-30 TBC/frame store synchronizers with NDS filters
P148/2 Serial interface with key combiner (DKC)
P152 "Maurice" touch screen controller
 Dual channel software disk system
 • Push on/off • Reveal/conceal • Digital effects on both channels si-
 multaneously • Up to 8 video inputs with optional P169V routing
 switcher • Built-in dual key combiner with software controlled priority
MS203 \$27,750.00

P148

MS304 (Maurice EFX-IV)

Dual Channel Zoom System with Mix Effects
 Consists of:
(2) P147-30 TBC/frame store synchronizers with NDS filters
P148/3 Serial interface with mixer (SEG)/combiner (DKC)
P152 "Maurice" touch screen controller
 Dual channel software disk program
 • Mix • Fade • Wipe • Internal color matte generators • Multi-level
 keying all under software control • Vignette of color matte • High
 grade internal SPG • Programmable mix, fade and wipe
MS304 \$29,990.00

P147-30

Eric Editing System

• Expandable from basic 2 machine to 12 and beyond • Usable with
 most VTRs/VCRs and other machines in any mix • Comprehensive jog/
 search/cruise control of all machines • Frame accurate and full color
 framing • Split audio facilities with auto fade • Integrated with CEL
 Maurice system effects • Three external GPIs as standard • Edit list
 management options • Easy trim functions • Auto preview, replay, re-
 turn, tag, match tag, go to, timecode burn-in, readers and generators,
 dub facilities, laser disk controllers, etc.
P158 Basic 3 machine control \$3,500.00
 Used with existing EFX systems
 Controlled by Maurice (P152)
Eric System — Consists of P158 and P152 controller . . . \$7,995.00

MS101 to MS203
 Includes 2 NDS filters and key combiner (DKC) \$18,525.00
MS101 to MS304
 Includes 2 NDS filters, mixer and key combiner (DKC) . . .20,945.00
MS102 to MS203
 Includes additional NDS filter and key combiner 12,775.00
MS102 to MS304
 Includes additional NDS filter mixer and key combiner
 (DKC) 15,140.00
MS203 to MS304
 Includes mixer 5,240.00

Upgrades

EFX I to MS101 (Maurice Minor) \$ 4,990.00
EFX I to MS102 (EFX-II)
 Includes NDS filter 9,995.00
EFX I to MS203 (EFX-III)
 Includes 2 NDS filters and key combiner (DKC) 20,495.00
EFX I to MS304 (EFX-IV)
 Includes 2 NDS filters, mixer and key combiner (DKC) . . .21,995.00

CEL ELECTRONICS LTD.

Digital Effects Standards Converter/Switcher

P147-15 Frame/Store Synchronizer TBC

- Full digital frame store • Freeze frame • Field 1 or 2 buttons • Operates as a TBC/synchronizer • DOC on/off • Drop out and hot cut concealment • Fast freezes of last picture in the event of sync disturbances • Operates w/dynamic tracking for improved slow-mo pictures • Offers Bypass facility • Can operate as a transcoder • Extended euro card type construction • Low power construction • Optional input decoder • Dual standard input decoder PAL/SECAM or NTSC 3.58/4.43 • YUV component inputs are available

The P147-15 is a stand alone all digital television frame store synchronizer/TBC intended for industrial commercial, educational and corporate video applications.

This unit features a full frame store making it an 'infinite' window TBC and requiring only a single composite signal as an input. The unit will accept inputs from virtually any source \$6,500.00

P147-15

P147-30 TBC-Frame Store Synchronizer —

Digital Effects

- Time base corrector • Frame store synchronizer • Color corrector/proc. amp. • Comb filter (optional) • Dynamic tracking • Drop out compensation • Border and background color generator • Remotable front panel controls • Smooth horizontal movement • Digital effects • LED switches

This unit is able to take video from virtually any source including VHS or Betamax. After time base correction, a wide variety of digital effects can be performed with pictures utilizing CEL's P148 Serial Interface Unit which attaches to the P147-30 via auxiliary connectors. The front panel allows manual control of signal level setups, drop out compensator, error control and effects such as posterization, pixelation and false color imaging.

Component video input is available as an option with the P147-30(C). This enables the unit to be used in conjunction with Recam and Betacam, with other studio equipment or external broadcast standard decoders using YUV outputs. This gives the P147-30 a virtual broadcast standard frequency response \$ 10,750.00

P156/2

P156-2 Standards Converter

The P156-2 is a digital TBC, frame store, standards converter that features Interpolation Circuitry which corrects the geometry of picture sizes while converting from 625 line to 525 line standards or vice versa. (Dependant on standards format ordered).

The unit is intended for industrial, commercial, educational and corporate video applications and may also be used as a back-up unit in broadcast applications.

P156-2 is available in two configurations:

- PAL/SECAM input with an NTSC output
- NTSC input with a PAL output

The PAL/SECAM input converter can automatically or manually switch between standards. As an option, either unit can be fitted with a PAL-M decoder.

Seven (7) bit digital processing is used for Y, U and V signals and is also able to cope as a TBC/synchronizer for both the PAL/SECAM and the NTSC source.

P156/2 N-P NTSC input to PAL output \$9,995.00
 P156/2 P-N PAL/SECAM input to NTSC output 9,995.00

P169V

P169V Video Routing Switcher

P169A-3 Audio Follower

The units in the P169 Series are designed as general purpose routing switchers for both audio and video. They are intended for broadcast, industrial, commercial and educational television production environments. They allow the system components to be routed conveniently and used manually, or digitally controlled by means of serial or parallel link from computer or edit controller.

P169A

Due to the built-in intelligence of these units, they may be interfaced either to CEL's digital effects equipment or, alternatively, to any terminal, microcomputer or edit suite with an RS232/423 interface. The 8 x 4 routing switchers may be stacked, as many as 7 units may be used together to produce larger matrix combinations.

The P169V unit contains the master control processor and video matrix. An optional Audio Follower unit, the P169A (also 8 x 4) is available with up to three separate channels allowing for stereo plus timecode. Unlike most other routing switchers, the PV169V is able to accept synchronous and non-synchronous feeds through any of its inputs and switching always occurs during the field blanking interval of the currently selected input. There are two fully buffered outputs for each of the four output channels which all add up to make the unit uniquely versatile.

P169V Digitally Controlled Routing Switcher. 8 x 4 general purpose routing switcher for studio environment. Used manually or digitally controlled by means of serial or parallel link from computer or edit controller \$2,500.00

P169A-1 Audio Matrix Follower 8 x 4 x 1 channels for use with the P169V 710.00

P169A-3 Audio Matrix Follower 8 x 4 x 3 channels for use with the P169V 1,150.00

SECAM option available **POR**

CENTURY PRECISION OPTICS

Video Camera Accessories

Achromatic Diopters

- 86mm thread to fit most lenses
- Original lens maintains all zoom capabilities
- Edge-to-edge sharpness
- Lack of chromatic aberration
- Excellent contrast
- No light loss
- Highly corrected 2-element design
- Glass elements fabricated to strict mil spec standards
- Hard anti-reflection coated elements
- 86mm thread with adaptors to most lenses
- May be stacked for additional magnification

AD-8616	+ 1.6 Achromatic Diopter	\$325.00
AD-8620	+ 2.0 Achromatic Diopter	325.00
AD-8626	+ 2.6 Achromatic Diopter	325.00
Step-Up Rings For Century Achromatic Diopters			
FA-6786	67mm to 86mm screw-in type	\$37.50
FA-7286	72mm to 86mm screw-in type	37.50
FA-7786	77mm to 86mm screw-in type	37.50
FA-8086	80mm slip-on to 86mm	37.50

Video Duplikins For Economical 35mm Slide To Video Transfer

- Superior multi-element lens
- Slide holder providing vertical, horizontal and rotational adjustments
- Slide-in holder for 2 x 2 filters
- Hinged swing-away diffusion plate for even illumination
- Black anodized aluminum housing
- 2 focusing mounts for variable magnification, (2:1), and adjustable back focus
- Designed to work with many of the Sony, Sharp, Panasonic, NEC, JVC, Hitachi, etc. cameras. (Please specify camera model when ordering).

Video Duplikins let you incorporate 35mm slides into video productions in your studio without using costly transfer equipment. This stand-alone system easily attaches to the lens port of your 2/3", 3-tube or CCD professional camera. The Video Duplikin lets you control cropping or add effects filters to increase creativity.

CD-323C	Duplikin III in "C" Mount for 2/3" Cameras	\$750.00
CD-323S	Duplikin III in Sony Mount Designed to work with many of the Sony, Sharp, Panasonic, NEC, JVC, Hitachi, etc. cameras. (Please specify camera model when ordering.)	750.00
CD-323I	Duplikin III in Ikegami Mount for HL-79	750.00

Wide Angle Adaptors For 2/3" Video And 16mm Macro Zoom Lenses

- Precision construction
- Aluminum alloy housing
- Glass elements yield high definition low distortion images and resist scratches
- Lightweight
- No light loss to the taking lens
- Easy to use: Mount to the front of the lens, set the lens focus at infinity, and adjust the macro setting until the picture is sharp. Lenses without a macro feature require back focus adjustment
- Adaptors available to fit most popular 2/3" video zooms
- Custom accessories available

WA-7X52X	.5X and .7X Wide Angle Adaptor Set	\$695.00
WA-7X93	.7X Wide Angle Adaptor	345.00
WA-5X45	.5X Super Wide Angle Adaptor. Must be used with .7X to yield a total of 50% additional coverage to the original zoom lens	445.00

Duplikin

Step-Up Rings For Wide Angle Adaptors

FA-7X67	67mm screw-in type	\$37.50
FA-7X72	72mm screw-in type	37.50
FA-7X75	75mm slip-on type	37.50
FA-7X77	77mm screw-in type	37.50
FA-7X80	80mm slip-on type	37.50
FA-7X86	86mm screw-in type	37.50
FA-7X90	90mm slip-on type	37.50

Video Lens Adaptors

Optical Relay Systems

LA-CSYO	C to Sony (optical relay system) Allows use of C mount lenses on many of the Sony, Sharp, Panasonic, NEC, JVC, Hitachi, etc. cameras. (Please specify camera model when ordering. Note: image inverted and reverted.)	\$500.00
LA-CSYP	C to Sony (optical relay system) with prism for proper image orientation	\$1700.00

Mechanical Adaptors

LA-CSYM	C to Sony (mechanical) (For close-up work only. Does not allow infinity focus.)	125.00
LA-A8EC	Arri Bayonet to Ikegami EC35 (requires slight camera modification)	495.00

Periscope V16

- Highest professional optical and mechanical quality
- 1:1 Relay system. (Field of view same as for objective lens alone.)
- Accepts standard C mount lenses with adaptors to fit most professional 2/3" format lenses. Other lenses may be used with Century C-mount Adaptors
- Fast T3.2, f/2.5
- Accepts Century Interchangeable Mount System for use with most 2/3" three-tube and CCD video cameras
- Adjustable back-focus
- Custom systems available
- Weighs 2.5 lbs.

V16 Periscope establishes a standard in optical relay systems. Ideal for 2/3" three-tube and CCD cameras, the lightweight and economical V16 promises to get into tight corners, up to new highs and down to new lows, increasing the effectiveness of your shots.

Century Periscopes require Interchangeable Camera Adaptors (TM Series).

PR-1125	Periscope V16, with case. Accepts C mount lenses directly and Century C Mount Adaptors	\$3450.00

CETEC VEGA

Wireless Microphone Receivers Microphone Systems

R-41, R-42 and R-42W PRO PLUS Wireless Microphone Receivers

• GaAsFET front end for ultra low noise and widest RF dynamic range • ULNR (ultralow noise receiver) with highest signal-to-noise ratio and widest dynamic range. "Quiet as a wire" • Switch selectable DYNEX® II, a new standard in audio processing • Highest adjacent channel rejection, with 16 poles of IF filtering • "Infinite gain" receiver technology for highest performance • Low distortion. Wide, flat frequency response • True dual receiver diversity (R-42) or single-channel (R-41) modules • Independent headphone amplifier with front panel level control (high quality, usable as an auxiliary output) • Adjustable, four range, balanced audio output with audio phasing switch • Mu-Metal shielding for power transformer and other critical circuitry to eliminate hum and power line noise • High performance, silver plated, four pole, true helical resonator front end filter • Dual 115/230VAC, 50-60Hz operation (user selectable) with internationally approved power line hardware • Attractive, modern, professional styling • Large, internally illuminated audio and RF signal level meter with VU ballistics as well as VU scale • Special high speed squelch • Front panel overload and audio processing mode LED indicators

R-41	Nondiversity version of R-42 PRO PLUS receiver. Includes one 120U whip antenna	\$2199.00
R-42	PRO PLUS diversity receiver with DYNEX II. Includes two 123U high performance dipole antennas	2835.00
R-42W	Same as R-42 except with two 120U whip antennas instead of the 123U dipole antennas	2865.00
R-42X	Same as R-42 except with two 123 heavy-duty dipole antennas and metal balun cases instead of the 123U dipole antennas	3075.00
R-42Y	R-42 diversity receiver with 123U high-performance dipole antennas (telescoping elements)	2997.00

R-33 Miniature Portable Wireless Microphone Receiver

• 0.8"H x 3.3"W x 5.5"D • Single-piece welded case, as well as the one-piece front panel and chassis, are made of high-strength aircraft-alloy aluminum • Weight of the R-33 is just under 12 oz. with the battery installed • Receiver is available in "Camera Black" (Model R-33-B) and in "PRO Brown/Cream" (Model R-33-T) • DYNEX® II audio processing • High signal-to-noise ratio • Wide dynamic range • GaAsFET preamplifier transistor, which provides both improved sensitivity and excellent intermodulation performance • Miniaturized true helical resonator filter, along with 10 poles of IF filtering, provides razor-sharp selectivity • 9V alkaline battery will run the receiver about 10 hours, if the display is turned "off" • Power-saving battery condition display is included

R-33-B	Miniature DYNEX II portable, battery-powered receiver, with "Camera Black" case. Includes 9V battery, one Model 121BNC whip antenna, one Model 124 "rubber-duckie" antenna with Model 225 right-angle adaptor, one limp-wire antenna, one Model 219 audio output plug, one power adaptor for external DC, one metal belt clip, one leather holster, one soft carrying case, and Velcro strips (for camera mounting)	\$1199.00
R-33-T	Same as Model R-33-B receiver, but with "PRO Brown/Cream" case	1199.00

PRO 1 and PRO 2 Wireless Microphone Systems

PRO 2 and PRO 1 Series wireless microphone systems have eight standard configurations to match virtually any application.

The PRO 2 systems are configured around the Model R-32 true-diversity receiver, and the PRO 1 systems around the Model R-31B nondiversity receiver. The PRO 2-B and PRO 1-B systems include the Model T-37 bodypack transmitter. The "BM" systems add the Shure 838 miniature omnidirectional electret mike. Other mikes are available for the "B" systems. The PRO 2-H and PRO 1-H are handheld systems. The "HE" systems include the Model T-36 transmitter with an Electro-Voice BK-1 "Black Knight" condenser element, and the "HS" systems include the Model T-39 transmitter with a Shure SM-96 condenser element.

The PRO 2 and PRO 1 systems can operate on any crystal-controlled frequency from 150 to 216MHz, at a range of up to 1200'. The systems feature Cetec Vega's advanced DYNEX II audio processor for the highest signal-to-noise ratio, widest dynamic range, and most natural sound.

PRO 1-BM	Bodypack system; T-37 transmitter and R-31B receiver with accessories, with Shure 838 miniature omnidirectional electret mike	\$1539.00
PRO 1-B	Bodypack system with accessories, without mike	1439.00
PRO 1-HE	Handheld system; T-36 transmitter and R-31B receiver with accessories	1710.00
PRO 1-HS	Handheld system; T-39 transmitter and R-31B receiver with accessories	1800.00

R-41/R-42

PRO 2-BM	Bodypack system; T-37 transmitter and R-32 diversity receiver with accessories, with Shure 838 miniature omnidirectional electret mike	\$1825.00
PRO 2-B	Bodypack system with accessories, without mike	1725.00
PRO 2-HE	Handheld system; T-36 transmitter and R-32 diversity receiver with accessories	1998.00
PRO 2-HS	Handheld system; T-39 transmitter and R-32 diversity receiver with accessories	2088.00
T-37	DYNEX II pocket transmitter. Includes 153A belt-clip; short flexible antenna, 9V battery, miniature XLR audio input plug, and C-157 soft zippered protective case for transmitter	600.00
T-36	Handheld transmitter with advanced technology, including DYNEX II, and Electro-Voice BK-1 (Black Knight) element. Includes 9V battery, 126 mike stand holder, and C-158 soft zippered protective case	875.00
T-39	Same as T-36 transmitter but with Shure SM96 condenser microphone element. Includes same accessories as T-36	965.00
R-31B	PRO receiver with DYNEX II. Includes one 120U whip antenna	855.00

Accessories

Multicouplers and RF Line Amplifiers

M-1178	Wideband (169-216MHz) multicoupler to split the RF signal from a 50 ohm antenna (such as a 123) to feed four receivers. Includes four 155 coaxial cables, and AC adaptor	\$360.00
A-118	Wideband (169-216MHz) line amplifier (RF preamplifier), for increasing antenna signal level to overcome coaxial line loss. Requires +12VDC, which is available at the R31A receiver terminal block	329.00

Antennas

120U	Quarter-wave whip antenna with universal (straight or right angle) PL-259 connector	\$ 15.00
121 BNC	Same as the 120U except BNC connector	15.00
123	Dipole receiving antenna, with balun in heavy-duty metal case. Includes 25' cable	120.00
123U	High performance telescoping-whip dipole antenna with permanently attached 25' cable	81.00
124	"Rubber-duckie" antenna with BNC connector, approximately 6" long. Supplied with the C-446A Quad Case	24.00

Cases, Holsters, Belt Clips

150	Fitted heavy-duty road case for smaller Cetec Vega wireless microphone systems (transmitter, receiver and accessories). Case has room for three portable systems	\$150.00
152	Leather holster for T-37 transmitter	24.00
153A	Heavy-duty metal belt clip with strong adhesive pad for mounting to side of T-37 transmitter	6.00
C-156	Fitted heavy-duty road case for Cetec Vega PRO PLUS wireless microphone system. Holds one R-41 or R-42, one pocket transmitter, one handheld transmitter and all accessories	240.00
C-157	Soft-zippered protective case for T-37 transmitter	9.00
C-158	Soft-zippered protective case for T-36 handheld transmitter	12.00
C-159	Small low cost minicase for single PRO 1 system	105.00

Miscellaneous

BN-102	Rechargeable 9V NiCad battery for all transmitters	\$18.00
CH-102	Charger for BN-102	9.00
114X	5' audio cable. Connects any microphone with XLR-type 3-pin male connector to T-37 transmitter	38.00
119X	Spare miniature XLR audio input plug for T-37 transmitter	9.00
126	Plastic mike stand holder for T-36 handheld transmitter	9.00
RK-131	19" rackmounting tray; holds two R-31A receivers	84.00
RK-140	19" rackmounting tray; holds two R-41 or R-42 receivers	90.00
RK-132	19" rackmounting tray; holds two R-32 diversity receivers	75.00

CETEC VEGA

Wireless Microphone Systems

PRO PLUS 77 DYNEX® II

Professional Wireless Microphone Transmitter

The 77 DYNEX II is small enough to fit in a shirt pocket, and weighs only 5 oz. Transmitter circuitry is sealed in a separate compartment from the battery, all within an impact-resistant cycloac case. The standard 9V battery (Duracell MN1604 alkaline) can be replaced without exposure of other circuitry.

The mike connector is a Lemo "Quick-Loc" with positive-mating gold contacts, push-lock security, and rugged strain-relief cable fitting. Bias for an electret-condenser microphone can be obtained from spare pins in the Lemo connector.

The 77 DYNEX II is designed for compatibility with Cetec Vega's latest professional receivers such as the R-31 PRO and R-41 and R-42 PRO PLUS featuring DYNEX II, a new standard in audio processing for wireless microphone systems. With DYNEX II, the system provides lower noise and wider dynamic range, improved dynamic response for natural sounding audio, and flatter frequency response.

The preamplifier in the 77 DYNEX II incorporates an ultra low noise input stage, using the latest IC technology for lowest noise and distortion. It features improved gain control circuitry and improved "soft" gain compression circuitry for modulation control. Other features include compression-point metering and battery-status metering. Positive and negative microphone bias is available.

Specifications

Frequency Ranges: 150-174MHz, 174-216MHz

Frequency

Stability: $\pm 0.005\%$, worst case, 20°C to +56°C

Power Output: 50mW

Spurious

Radiation: 40dB below carrier, minimum, typically 55 to 60dB below carrier

Audio Input: -43dBm (10mV) to -4dBm (0.5V) for full deviation; -58dBm (1mV) to -19dB (50mV) for normal overhead allowance

Input Impedance: 10K ohms, minimum

Microphone Bias: ± 5 VDC, nominal

Controls: Power on/off, microphone gain

Metering: Dual function meter; battery condition indication, audio compression metering

Modulation Limiting

(Compressor): Per FCC requirements; "soft" compressor action, 24dB range (minimum), typically system distortion is less than 0.4% at 25dB compression

Connector: Microphone; 4-pin Lemo (Type 304)

Antenna: 1/4 wavelength flexible wire whip, permanently attached

Battery: 9V alkaline, Duracell MN1604 recommended

Dimensions: 3.8" L x 2.8" W x 1.0" D

Weight: 5 oz., including battery

Transmitter

77/DII DYNEX II pocket transmitter. Includes 153A belt-clip, short flexible antenna, battery, 119 audio input plug, and C157 soft zippered protective case for transmitter \$983.00

PRO PLUS T-80 Series

Handheld Wireless Microphone Transmitters

- Lower noise and wider dynamic range
- Improved dynamic response for natural sounding audio
- Flatter frequency response

High Performance Audio Circuits

- Ultralow noise input stage
- Latest IC technology for lowest noise and lowest distortion
- Improved "soft" gain compression circuitry for modulation limiting
- Effective handling noise filter

Other Features

- Patented internal dipole antenna, no performance compromises
- Attractive contoured styling
- All switches and controls on the bottom—out of the performer's way

Transmitters

- T-81*** Handheld transmitter with advanced technology, including DYNEX II, and Shure SM58 dynamic microphone element. Includes battery, 126 mike stand holder and C-158 soft zippered protective case \$1098.00
- T-82*** Same as T-81 transmitter, with Shure SM85 condenser microphone element. Includes same accessories as T-81. 1098.00
- T-83*** Same as T-81 transmitter, but with AKG C-535 condenser microphone element. Includes same accessories as T-81. 1098.00
- T-86*** Same as T-81 transmitter, but with Shure omnidirectional microphone element. Includes same accessories as T-81. 1098.00
- T-87*** Same as T-81 transmitter, but with Shure SM87 condenser microphone element. Includes same accessories as T-81 1098.00

*Non-DYNEX versions of all transmitters are available.

CETEC VEGA

Wireless Microphone System

Traveler and Reporter Portable Wireless Microphone Systems

- Ideal for ENG, on location production
- TV/film/commercial production
- General field use
- Professional audio quality

Cetec Vega Traveler and Reporter portable wireless microphone systems are ideal for ENG, on-location production, TV/film/commercial production, and general field use. The systems provide professional audio quality at a reasonable price. Specify frequencies when ordering transmitters or receivers. (Frequency range is 150 to 216MHz). Remember to check the list of accessories for completing your system. Microphones are not included with the bodypack transmitters, but are listed in the accessories section.

Traveler*

1-B	Bodypack system (T-37 transmitter and 66B receiver), without mike	\$ 1599.00
1-BM	Bodypack system, with Shure 838 mike	1699.00
1-HE	Handheld system (T-36 transmitter and 66B receiver)	1879.00
1-HS	Handheld system (T-39 transmitter and 66B receiver)	1969.00
T-37	DYNEX® II bodypack transmitter. Includes C-157 protective case, 9V alkaline battery, 119X miniature XLR audio input plug, wired-in flexible wire antenna, 153A heavy-duty belt clip, power on/off switch, mike on/off switch, mike level control, and instruction manual.	600.00
T-36	DYNEX II handheld transmitter, with Electro-Voice BK-1 (Black Knight) element, 9V battery, 126 mike holder, C-158 protective case, built-in antenna, and instruction manual	875.00
T-39	Same as T-36 transmitter, but with Shure SM96 condenser microphone element. Includes same accessories as T-36	965.00
66B	DYNEX II portable, battery-powered receiver. Includes four 9V batteries, 121BNC antenna, connector for external DC power, and instruction manual	1010.00

Reporter*

1-B	Bodypack system (T-23 transmitter and R-26 receiver), without mike	\$ 1199.00
1-BM	Bodypack system, with Shure 838 mike	1299.00
1-H	Handheld system (T-24 transmitter and R-26 receiver)	1299.00
T-23	CVX™ bodypack transmitter. Includes C-157 protective case, 9V alkaline battery, 119X miniature XLR audio input plug, wired-in flexible wire antenna, 153A heavy-duty belt clip, power on/off switch, mike on/off switch, and mike level control	435.00
T-24	CVX handheld transmitter. Includes C-158 protective case, 9V alkaline battery, built-in antenna, and instruction manual	535.00
R-26	CVX portable battery-powered receiver. Includes four 9V batteries, 121BNC antenna, connector for external DC power, and instruction manual	775.00
113X	Shure 838 miniature omnidirectional electret condenser microphone. Includes 3' cable and miniature XLR connector.	100.00

Reporter

LM-201X	ECM-44B miniature omnidirectional electret condenser microphone. Includes 3' cable and miniature XLR connector.	\$ 132.00
LM-202X	Crown GLM-100/E miniature omnidirectional electret condenser microphone, with wind-screen, tie bar, and belt clip. Includes 3' cable and miniature XLR connector.	171.00
LM-203X	Audio-Technica AT831C miniature unidirectional electret condenser microphone. Includes 3' cable and miniature XLR connector.	129.00
114X	5' audio cable. Connects any microphone with XLR-type 3-pin male connector to T-24 or T-37 transmitter. (Low-output dynamic microphones may require an inline matching transformer)	38.00
119X	Spare miniature XLR audio input for T-24 or T-37 transmitter	9.00
121BNC	Quarter-wave whip antenna with BNC connector for R-26 or 66B receiver	15.00
124	"Rubber-duckie" antenna with BNC connector, approximately 6" long. (Note: This type of antenna is much less efficient than a whip antenna and range will be decreased by 25 to 40% when it is used in lieu of the 121BNC antenna)	24.00
126	Plastic mike stand holder for all handheld transmitters	9.00
150	Fitted heavy-duty road case. Holds up to two systems	150.00
152	Leather holster for T-24 or T-37 bodypack transmitter.	24.00
153A	Heavy-duty metal belt clip with strong adhesive pad for mounting to side of all bodypack transmitters.	6.00
C-157	Soft zippered protective case for T-24 or T-37 bodypack transmitter	9.00
C-158	Soft zippered protective case for all handheld transmitters.	12.00
C-159	Small low-cost minicase for single Traveler or Reporter system.	105.00
C-266	Kangaroo soft canvas shoulder carrying case for R-26 or 66B receiver	30.00
225	BNC right-angle adaptor for 124 "rubber-duckie" antenna.	9.00
BN-102	Rechargeable 9V NiCad battery for all transmitters and R-26 and 66B receivers.	18.00
CH-102	Charger for BN-102.	9.00
PS-67A	AC adaptor for 66B receiver.	30.00
PS-26A	AC adaptor for R-26 receiver	30.00

*Traveler Dynex II transmitters and receivers are not compatible with Reporter CVX receivers and transmitters. System prices are slightly less than the sum of the individual transmitter and receiver prices.

CETEC VEGA

Wireless Microphone Systems

Ranger 1 and 2 True-Diversity Wireless Microphone Systems

- True dual-receiver diversity for maximum range and reliability
- CVX audio processing for high signal-to-noise ratio, wide dynamic range, and clean, natural sound
- VHF high-band frequencies for clear, reliable audio
- Eight system configurations (for virtually any application)

The Ranger Systems permit total freedom of movement without the restrictions of microphone cables. Operation is clean and clear up to 1000', line of sight, between transmitter and receiver. The systems incorporate CVX™ audio processing for high signal-to-noise ratio, wide dynamic range, and clear, natural sound.

Audio is sent by the bodypack or handheld transmitter to the Ranger receiver on a clear radio frequency. The receiver, in turn, feeds the audio to your public-address system, microphone mixer, or recorder (just like any standard wired microphone).

Specifications (Overall for 1 and 2)

Frequency Range:	169-186MHz
Stock Frequencies:	169.505, 170.245, 171.045, 171.905, 179.200, 184.425, 185.125MHz; special frequencies in the 169-186MHz range are also available (contact factory for price and delivery)
Frequency Stability:	± 0.005%
Working Range:	Up to 1000' under ideal conditions; usually somewhat less in typical applications
Emission/Modulation:	Direct FM, crystal-controlled 60F3
Frequency Response:	60Hz to 14kHz, ± 15dB
Harmonic Distortion:	0.5% maximum, below transmitter limiting; 0.25% typical at 1kHz
Ultimate S/N:	100dB (flat) minimum (105dB typical A-weighted), excluding microphone electronics and/or element noise
Operating Temp.:	-4°F to +122°F (-20°C to +50°C)
RANGER 2-BM	Bodypack system with Model LM-206X mike, including Model T-93M transmitter and Model R-98 diversity receiver, with accessories \$1249.00
RANGER 2-B	Bodypack system without mike, including Model T-93 transmitter and Model R-98 diversity receiver, with accessories \$1175.00

RANGER 2-HA	Handheld system, including Model T-96 transmitter and Model R-98 diversity receiver, with accessories \$1315.00
RANGER 2-HV	Handheld system, including Model T-94 transmitter and Model R-98 diversity receiver, with accessories \$1285.00

Ranger 1 Non-diversity Wireless Microphone Systems

RANGER 1-BM	Bodypack system with Model LM-206X mike, including Model T-93M transmitter and Model R-97 receiver, with accessories \$ 999.00
RANGER 1-B	Bodypack system without mike, including Model T-93 transmitter and Model R-97 receiver, with accessories \$ 925.00
RANGER 1-HA	Handheld system, including Model T-96 transmitter and Model R-97 receiver, with accessories \$1065.00
RANGER 2-HV	Handheld system, including Model T-94 transmitter and Model R-97 receiver, with accessories \$1035.00

VS-1 VECTA Wireless Microphone System

The VECTA VS-1 is an affordable, high quality wireless microphone system designed and priced for school, church, business, entertainment, and similar applications.

The VECTA VS-1 system includes a clean sounding electret lavalier microphone (with wind screen and clip) wired into a miniature radio transmitter. At the other end of the system is the VECTA receiver, on the same radio frequency as the VECTA transmitter, plugged into your audio amplifier (or audio recording equipment).

The transmitter power output is 30mW, nominal.

Standard Frequencies:	169.505, 170.245, 171.045, or 171.905MHz
Range (Transmitter to Receiver):	400' typical, 1000' or more under good conditions
Audio Output:	0dBm (nominal)
Audio Response:	70 to 12,000Hz, ± 3dB
Signal-to-Noise Ratio:	> 78dB

VS-1	VECTA system (models VT-1 and VR-1, with accessories) \$640.00
VS-1A	Same as VS-1, but with VT-1A (see below) \$716.00
VT-1	Bodypack transmitter for use with VR-1 receiver. Includes Vega RSX-11 miniature omnidirectional electret lavalier mike attached with 36" cable, short flexible antenna, 9V alkaline battery, heavy-duty belt-clip, power on/off switch, mike on/off switch, and gain control \$320.00

VT-1A	Same as VT-1 but with Audio-Technica AT831C miniature unidirectional electret lavalier mike attached with 36" cable \$396.00
VR-1	Wireless receiver for use only with VT-1 transmitter. With LEDs to indicate power on and transmitter modulation. Has audio gain control. Includes power supply and whip antenna. \$332.00

Refer to Green Section for Addresses and Telephone Numbers.

*Wireless Microphone Receivers/
Lavalier Microphones*

67B/66B Portable Wireless Microphone Receivers

- Battery-operated receiver with low power consumption; can be powered by external sources for true portability
- High signal-to-noise ratio and wide dynamic range
- Low distortion and wide, flat frequency response
- Multiple-pole crystal IF filter for superb IF selectivity
- Independent headphone amplifier with front-panel level control
- Dual-range, balanced audio output matches line or microphone inputs
- True helical-resonator front-end filter
- AC power adaptor available for in-studio use
- Internal battery pack (uses four 9V alkaline batteries) for true portability
- External power capability for field and portable use, from a 12V camera belt pack or other +10.5 to 18VDC source
- Large multipurpose audio and signal level with VU scale

Designed for "on-location" and portable use, these models are fully compatible with all previous "Pro" transmitters, and now offer higher performance and expanded compatibility. The receivers are extremely sensitive, highly selective, and very stable. The preselector is a true two-pole helical-resonator filter, silver-plated for low loss and long term durability. Low-noise, overload-resistant, dual-gate MOSFETs are used for the RF amplifier and mixer stages. The local oscillator is an overtone, crystal-controlled design, ensuring years of stable, drift-free operation. These models use a combination of LC and multiple-pole crystal IF filtering to provide outstanding IF selectivity and adjacent-channel rejection. The wideband, low-distortion FM demodulator has low distortion (system THD is typically 0.3 or less) and excellent dynamic range.

Either line-level or microphone-level audio output is available via the front-panel mounted XLR connector. (Mike level audio is now externally adjustable). A monitor output is provided for use with headphones; this output is completely independent of the main audio circuitry. A high-quality VU scale meter is included to allow monitoring of the audio output level. This meter may also be used to indicate the relative RF signal level and to meter the DC supply voltage.

67B Wireless Microphone Receiver

The 67B is fully compatible with all "Pro" transmitters equipped with the DYNEX® audio processor, including Cetec Vega's "T" Series transmitters. Because it is equipped with Cetec Vega's DYNEX II audio processor, its usable dynamic range is in excess of 100dB.

67B DYNEX II portable, diversity, battery powered receiver. Includes four 9V alkaline batteries and two 121BNC antennas **\$1398.00**

66B Wireless Microphone Receiver

The 66B professional portable wireless microphone receiver is designed around a GaAsFET (gallium-arsenide field-effect transistor) front end, for high sensitivity, and therefore, greater range (up to 1000'). It incorporates DYNEX II audio processor for the highest signal-to-noise ratio and widest dynamic range, and clean, clear, natural sound.

The compact, lightweight, battery-powered wireless receiver is intended for on-location film and TV production and other portable wireless applications.

The 66B has improved audio performance (including lower distortion) and better squelch characteristics as compared to previous versions.

66B

67B

66B DYNEX II Portable, battery-powered receiver. Includes four 9V batteries and one 121BNC antenna **\$1010.00**

PS-67A Wall-type power supply for 66B and 67A portable receivers. Note: Cannot be used with 66 receiver **30.00**

Accessories

114 5' audio cable. Connects any microphone with XLR-type 3-pin male connector to 77/DII transmitter **\$ 50.00**

123U High-performance dipole antenna with telescoping elements and permanently attached 25' cable **81.00**

C-159 Small low-cost minicase for single 66B or 67A systems. **105.00**

C-266 Kangaroo soft canvas shoulder carrying case for 66B receiver **30.00**

C-267 Kangaroo soft canvas shoulder carrying case for 67A receiver **33.00**

C-466C 66B Quad Case. Compact package includes antenna multicoupler and battery pack for 12 alkaline "D" cells (not included). Holds four 77/DII-66B portable systems **2199.00**

Lavalier Microphones

(113, LM201 and LM202 include 3' cable and Lemo connector to plug into 77/DII transmitter)

113 Shure 838 miniature omnidirectional electret condenser microphone **\$112.00**

LM-201 ECM-44B miniature omnidirectional electret condenser microphone **169.00**

LM-202 Crown GLM-100E miniature omnidirectional electret condenser microphone, with windscreen, tie bar, **183.00**

LM-203 Audio-Technica AT831C miniature unidirectional electret condenser microphone **149.00**

CETEC VEGA

Wireless Intercom Systems

"Q" Plus VHF FM Full-Duplex Beltpack Wireless Intercom Systems

"Hands-free" Continuous Communications

- Freedom from trailing cables
- Easy-to-use full-duplex operation
- Simplified operator controls
- Up to six portables per system
- Ties into existing wired intercom
- Reliable, low-noise, high-band VHF frequencies
- Easy to install in minutes
- Rugged, reliable, professional
- Crystal-clear radio communications for your application

"Q" Plus wireless intercom system provides continuous "hands-free" full-duplex communications between up to six remote beltpack units (portables) through a central master station. The portables are similar in size and configuration to conventional wired-intercom beltpacks.

The system is very easy to operate. For example, untrained personnel can easily use the QTR-1 portable, which has only two operating controls—a combined on/off and headset volume control, and a pushbutton audio control switch (internally programmable for push-to-mute with continuous transmit, or push-to-talk with transmitter and audio "off" until pushed).

A 168X headset (using a Beyer DT-108) plugs into the heavy-duty connector on the QTR-1. The QTR-1 also accepts Clear-Com headsets without any changes, or other headsets equipped with a four-pin female XLR connector. Any one of these headsets also plugs directly into the front panel of the master station.

The QX-6 master station provides a full set of convenient controls for monitoring and troubleshooting. The master station has a "universal" intercom interface, enabling the portables to communicate with all stations on most types of wired intercom systems. Also, two master stations can be linked together, allowing full-duplex communications between up to 12 portables, plus operators plugged into the master stations, plus stations on connected wired intercom systems.

The "Q" Plus wireless intercom system features a single-package wireless beltpack remote, simplified operation, near-program-quality audio, improved operating range, "universal" intercom interface, and 115 or 230VAC or DC operation. This price list shows complete configurations from two-up to six-up systems, plus prices for spare modules and accessories. The system packages include all required equipment (i.e., base-station receiver and transmitter modules, portable beltpack units, two 9V alkaline batteries for each beltpack unit, etc.), except for headsets. A "universal" intercom interface is included as a standard feature, and no wired-intercom interface option need be specified.

Frequency Range: 150-216MHz

Systems

Model	Description	User Price
Q + /M	Two-up "Q" Plus system, consisting of 2 QTR-1 beltpack remotes	\$ 1698.00
Q + /1	One-up "Q" Plus system, consisting of a QX-6 master station with one TQX-6 transmitter module, one RQX-6 receiver module, and two 121 BNC antennas, plus one QTR-1 beltpack remote	3676.00

Q + /2	Two-up "Q" Plus system, consisting of a QX-6 base station with one TQX-6 transmitter module and two RQX-6 receiver modules, plus two QTR-1 remote belt-pack units	\$4854.00
Q + /3	Three-up "Q" Plus system, consisting of a QX-6 base station with one TQX-6 transmitter module and three RQX-6 receiver modules, plus three QTR-1 remote belt-pack units	6032.00
Q + /4	Four-up "Q" Plus system, consisting of a QX-6 base station with one TQX-6 transmitter module and four RQX-6 receiver modules, plus four QTR-1 remote belt-pack units	7210.00
Q + /5	Five-up "Q" Plus system, consisting of a QX-6 base station with one TQX-6 transmitter module and five RQX-6 receiver modules, plus five QTR-1 remote belt-pack units	8388.00
Q + /6	Six-up "Q" Plus system, consisting of a QX-6 base station with one TQX-6 transmitter module and six RQX-6 receiver modules, plus six QTR-1 remote belt-pack units	9566.00

Accessories, Remotes, and Spare Models

168X	Beyer DT-108 with 166X connector installed for QTR-1 beltpack remote.	\$ 269.00
166X	Audio connector for QTR-1 remote belt-pack unit	11.00
QTR-1	Spare (or nonsystem) remote beltpack unit (includes two 9V batteries)	849.00
RS-1	Rocker-switch option (momentary in one position and locked in the other) for QTR-1. Duplicates push-to-talk or push-to-mute function (as selected internally) of momentary push-button switch normally supplied with QTR-1	15.00
RQX-6	Spare receiver module for QX-6 base station (six maximum)	329.00
TQX-6	Spare transmitter module for QX-6 base station.	299.00
QX-6	Spare base station (without transmitter or receiver modules, but with full audio interfacing circuitry)	2199.00

CHANNELMATIC, INC.**Automatic Videocassette Changer****BROADCASTER II™****Automatic Videocassette Changer**

- Random access of up to 15 videocassettes
- Total microcomputer control
- Easy 7-day programming with 100 events per day
- No VCR modification required
- Computerized stepper motor drive—indexing accuracy within 0.005"
- Minimal moving parts for high reliability and long service life
- Units may be cascaded for additional capacity
- Will play multiple sequential segments on each tape
- Built-in vertical interval switching
- Automatic switch to auxiliary source during cassette change
- Automatic record/delayed playback optional
- Optional electronic modules can add numerous features
- More cost-effective than multiple VCR systems

The Broadcaster II is a stand-alone, highly reliable videocassette changer mechanism. Totally microprocessor-controlled, the unit can randomly access from its internal storage trays any of fifteen standard 3/4" videocassettes.

The unit is designed to be used in broadcast television stations, CATV systems, LPTV studios, hospitals, schools, hotels, and other facilities where high quality video programming must be originated automatically on a pre-determined weekly time schedule. Available options allow the Broadcaster II to serve as a self-contained record/delayed playback system, a versatile editing suite library, or as part of an automated commercial insert system.

System Operation

The Broadcaster II can randomly access from a library of up to fifteen standard 3/4" videocassettes, insert them into an unmodified Sony Type 5 videocassette machine (VCR), and cue the pre-encoded tapes automatically.

At an operator-programmed time, or upon receipt of a "start" command, the Broadcaster II prerolls the tape to speed and switches it on-air during the vertical blanking interval of network (or other "auxiliary" source) video. With a sync-locked VCR (Sony Type 5 equipped with a Channelmatic Handimod I sync-lock accessory module), clean, glitch-free, broadcast quality video transitions occur.

At the end of the tape program, audio and video output are returned to the network or auxiliary source. The tape is rewound and removed (if so programmed) or simply removed in a "played" condition and replaced in its storage slot.

Operator Programming

All system commands are microcomputer controlled and are entered by the operator on an integral display/keyboard module, the CCU-1A. A full seven day schedule consisting of up to 100 events per day may be entered by the operator at one time.

The 20-pushbutton keypad and large 12-digit LED display allow not only simple schedule entry, but quick and easy error checking, schedule editing (including event insertion or deletion), and the ability to copy entire schedules from day-to-day.

Events may be scheduled to occur at pre-determined times or as sequential occurrences. The operator may choose whether to automatically rewind individual videocassettes either before or after they air, or to rewind all previously aired videocassettes at the end of the programming day.

Additional scheduling functions allow audio/video switching, message generator page turning, and limited external equipment control.

Summary

Field proven in many installations around the world, the Broadcaster II offers up to 15 hours of automatic programming without the need for operator intervention of any kind. The unit is an economical alternative to multiple videocassette machine sequencing systems of the same capacity. Full seven day scheduling ability makes the Broadcaster II a valuable addition to any television system.

Broadcaster II \$ 15,000.00

**Broadcaster II****Optional Equipment**

Options allow the Broadcaster II to perform such varied functions as DTMF tone decoding, built-in color message generation, automatic recording, and external VCR control. Two or more Broadcaster II units may be cascaded together for continuous programming. Other Channelmatic control, function and interface modules are available to adapt the Broadcaster II to perform many other desired functions.

Automatic Sync Lock: The Handimod I can be added to automatically sync lock the VCR, assuring broadcast vertical-interval switching.

Video Monitoring: A panel is provided for the addition of a 5" monochrome video monitor to allow monitoring of the system video output. Pulse-cross is also available optionally.

Character Generator: The CMG-3008A Color Message Generator module and related CSG-3001A Sync Generator module can be added to provide a built-in 8-page/8-line per page alternate video source to fill time during cassette change or to provide a backup in event of VCR malfunction.

Tone Decoding: Various tone decoder modules may be added to allow control of Broadcaster II to be initiated by tones fed through a telephone or other voice-grade audio path or by satellite service cue tones.

Distribution: Channelmatic 1x6 video, audio, and pulse distribution amplifier modules may be added to enable Broadcaster II to provide multiple isolated outputs.

Cascading: Two or more Broadcaster II units may be interfaced together electronically to increase the capabilities of the system.

Backup Source: The VPD-3001A Universal Signal Presence Detector module may be added to enable Broadcaster II to automatically switch to a secondary video source if output video is lost for any reason.

Installed VCR: An installed and tested Sony VP-5000 is optionally available.

Record and Play: Electronics may be added to enable automatic recording and delayed playback of programming.

Balanced Audio: The UAA-3031A audio amplifier module may be added to provide balanced audio inputs and outputs for broadcast interface.

External VCR Control: A VCR-3001 videocassette controller module enables an external VCR to provide fill programming during cassette changing.

CHANNELMATIC, INC.

Ad Insertion System/Accessories

Adcart 2 + 2 Random Access Ad Insertion System

- Full random access of up to 100 30-second spots per 60-minute tape
- Direct spot-to-spot cueing
- Plays spots from eight seconds to full tape capacity or sequence four VCRs for hours of programming
- Provides all playback options—run of schedule, random pod, and full random access
- Operator selected bypass mode if VCR fails—switch to network, switch to next VCR, switch to auxiliary source
- Broadcast quality vertical interval switching
- Fully integrated circuit audio and video switching (has relay bypass)
- Broadcast quality audio and video performance specifications
- Interface for low-cost CRT terminal or personal computer
- Network sync output for locking up VCRs
- Remote tape encoder with CRT terminal control
- Remote control option enables system operation via dial up line
- Interfaces with, and auto-downloads from, traffic and billing software packages
- Operator selectable switch back to network priority—either tape, time, tone, or percent-of-play priority
- Multiple spot cueing options—DTMF tones, contact closure, programmable real time, or operator initiated manual cue
- Automatic VCR preroll calculation—calculates VCR tape loading time for accurate parking
- Video quality detection circuitry monitors output of VCRs
- Optional Ad Manager traffic and billing package optimized for use with Adcart 2 + 2
- Prints out schedules and tape directories
- Programs multiple DTMF cue tone codes per channel

The Adcart 2 + 2 is a random access and insertion system. It can be operated in random pod or full random access modes. The basic Channel Control Unit is housed in a 3 1/2" high rack enclosure and inserts ads into two CATV networks. Channel Control Units can be chained together to form a system of any desired size. The VCR-to-channel assignments can be easily made from the terminal keyboard without moving any jumpers or cables. The system can be configured to have one, two, three, or four VCRs on one channel, 1 or 2 VCRs on each of two channels, or 4 VCRs shared between two channels.

Adcart System Components

- CCU-2A** Channel Control Unit
The Channel Control Unit (CCU) is the heart of the Adcart 2 + 2 system. It handles all ad insertion functions for one or two satellite networks, controlling up to four videocassette players. The CCU contains all necessary audio and video switching and VCR control for normal ad insertion requirements. The CCU can be utilized "stand-alone" or multiple CCUs can be connected together requiring a System Control Unit (SCU), which allows one CRT terminal to control all CCUs. (Requires 1 CAV-015A VCR cable for each VCR used and requires 1 CAL-005A Link Cable between each CCU-2A) **\$6,500.00**
- SCU-1A** System Control Unit
The System Control Unit (SCU) is a communications controller, linking multiple CCU's to a common CRT terminal and printer, or personal computer. It is required when two or more Adcart 2 + 2 CCUs are linked together. (Requires 1 CAL-005A cable) **\$1,500.00**
- TEU-1A** Tape Encoder Unit
The Tape Encoder Unit (TEU) is used for generating and placing advertiser I.D. and spot location digital data on videocassettes. A CRT terminal and editing recorder are minimally required in conjunction with the TEU for tape encoding. The TEU can be connected between a Sony RMM-440 editing controller and recorder. This allows the RMM-440 to be used to accurately position the tape during encoding. A Sony cable with 33-pin connector is required with the TEU. (Requires cable number RCC-005A) **\$2,500.00**

Video Display Terminal

- WSE-060A** Wyse 60A CRT Terminal
The terminal is required for programming, controlling, and monitoring system operation. A terminal is not required in systems that have a PC controller. The terminal is recommended for backup in case of PC failure or for troubleshooting. The Wyse 60 has a pop-up CRT displayed calendar, calculator, and alarm clock built-in. The terminal also includes an auxiliary serial printer port. (Requires CAT-015A cable) **\$650.00**

Remote Systems

- MOD-2400A** Hayes 2400 Baud Smart Modem
For remote systems the Hayes 2400 baud auto-dial auto-answer modem is recommended **\$600.00**

Adcart 2 + 2

Printers

- PLX-800** Epson LX-800 Printer, narrow carriage, with tractor drive **\$ 300.00**
- PLX-286** Epson FX-286E Printer, wide carriage, with tractor drive **800.00**
- PWH-351** Toshiba 351 Printer, 240 CPS, wide carriage, with tractor drive **1,800.00**
- OKI-2410** Okidata 2410 Printer, 350 CPS, wide carriage, with tractor drive **2,300.00**
- NOTE: Printers connected to the Wyse 60 Terminal must have serial control

Adcart Software

- APC-100** Adcart PC Software
Runs on IBM PC-AT or PC-AT compatibles. Enables the Adcart System to be controlled either locally or remotely from a PC **\$1,500.00**
- CTS-2018** Channelmatic "Ad Manager" Traffic Software
20 networks, 18 weeks. Runs on IBM PC-AT or PC-AT compatibles. Requires 30M hard disk, 256K of RAM, 1.2M 5 1/4" floppy, color video and clock boards, tape backup system recommended **11,500.00**
- CTS-1000** Channelmatic "Ad Analyzer" Traffic Software
Runs on IBM PC-XT or PC-XT compatibles. Requires: 10M hard disk, 256K of RAM, 5 1/4" floppy **3,995.00**
- SWZ-150** Spotmatic PC Control Software
Runs on IBM PC-XT, PC-AT, and IBM PC compatibles. Required for use with all Traffic Software packages with computer interfaced directly to a Spotmatic system **3,500.00**
- SWM-200** Spotmatic MCU Software and Hardware Upgrade
(Installed at factory, loaner unit sent to field.) Includes upgrade to interface with specified personal computer for Traffic System or remote control **550.00**
- LSW-100** Logmatic PC Software
Required when interfacing an IBM PC or compatible to an ALS-5A Logmatic for local or remote control. Logmatic PC software can interface with the Channelmatic "Ad Analyzer" software **1,250.00**

Cables and Accessories

- CAV-015A** VCR remote control cable, CCU to VCR **\$ 50.00**
- CAP-025A** Printer cable, CCU or SCU to printer (parallel) **50.00**
- CAP-020A** Printer cable, terminal to printer (serial) **50.00**
- CAT-015A** Terminal cable, CCU or SCU to terminal **50.00**
- CAM-015A** Modem cable, CCU or SCU to modem **50.00**
- CAC-025A** PC to Adcart cable, CCU or SCU to PC **50.00**
- ATA-002A** AT adaptor, 9-pin to 25-pin AT converter cable **50.00**
- CAM-010A** Terminal to modem cable **50.00**
- MOD-150A** PC to modem cable **50.00**
- RCC-005A** Sony, RCC5F, 33-pin TEU to VCR/RMM-440 cable **150.00**
- CAV-001A** Audio/video jumper cables, included with CCUs **30.00**
- CAL-005A** Link communications cables, CCU to CCU or SCU **50.00**
- CAV-002A** VCR A/V cable kit, audio and video cables from CCU to VCRs **200.00**
- MCK-001A** Mating connector kit, all mating connectors for CCU **150.00**
- MST-030B** Masterspot 30, pre-encoded tape, 90-30 sec., 5-60 sec. spots **150.00**
- MPT-060B** Masterpod 60, pre-encoded tape, 50-60 sec. spots **150.00**
- MPT-120B** Masterpod 120, pre-encoded tape, 22-120 sec., 6-60 sec. spots **150.00**
- MPT-690B** Masterpod 120, pre-encoded tape, 35-60 sec., 10-90 sec. spots **150.00**

CHANNELMATIC, INC.

Logging/Insert Systems/Controllers/ Switchers

SERIES 1000

ALS-4A Logmatic Jr.™ Automatic Logging System

- Automatic, unattended operation • 20 character alphanumeric printout
- Prints advertiser and spot ID, event times • Built-in real time clock • Complete 4-channel logging printout • Uses standard 2 1/4" thermal calculator tape • Complete unit fits in 1.75" x 19" rackspace • Connects easily to almost any commercial insert system • Ideal mate to VCR-3004A insert system • Very low cost full-featured logging • Attractive self-contained package

ALS-4A \$2000.00

ALS-5A Logmatic Automatic 4-Channel Logging and Verification System

- 4-channels—automatic operation • Logs advertiser and spot ID event times
- Full size 80-line printer available • Expandable to 400 channels • Use with Li'I MoneyMaker™, Spotmatic Jr.™, or other insert systems • Stack multiple units for large systems • Local or remote download of data to personal computer • Remote controllable via telephone modem • 4000 event memory storage • Allows full sales traffic system when combined with the Channelmatic "Ad Analyzer" software

ALS-5A \$2750.00

BBX-1A Billibox™ Bypass and Test Switcher

- Automatic bypass • Manual bypass • Preview bus • Test signal bus • High speed DTMF tone encoder • Digit-by-digit steppable tone generator • Sync loss annunciator • Vertical interval switching • Front panel LED status indicators
- Adjustable missing pulse detector • Automatic recovery after two minutes
- High performance specifications • Compact one rack unit package • Preview monitor output • Sync loss output • Annunciator output • Stereo processor interface • Wide bandwidth integrated amplifiers

BBX-1A \$1000.00

CIS-1A Spotmatic Jr.™ Single VCR Commercial Insert System

- Lowest price full-featured system available today • Microcomputerized satellite tone decoder • Automatic operation • Built-in logging and verification printout
- Vertical interval switching • Attractive self-contained package • Complete system fits in 1.75" x 19" rackspace • Simplicity-versatility • Lithium battery memory provides months of memory retention • Selectable VCR/satellite priority
- Operational modifications to meet almost any need • Spot sequential mode
- Multiple spot mode • Power and VCR failure protection • Logging and verification • Preview feature • Automatic fill

CIS-1A \$2750.00

- SPP-005 Seiko printer paper, 5 rolls per box, for CIS-1A and ALS-4A \$12.50
- PAC-001 Panasonic VCR adaptor cable, for CIS-1A 70.00
- JAC-001 JVC VCR adaptor cable, for CIS-1A 70.00

CIS-2A Li'I MoneyMaker Single VCR Commercial Insert System

- Fully automatic operation • Microprocessor controlled • Complete system fits in 1.75" x 19" rackspace • Simple to operate, yet highly versatile • Easy portable tonepad programming • Complete preview capability • Vertical interval switching • Digital DTMF tone decoding • Programmable preroll times • Selectable VCR or satellite priority • Selectable VCR start delay—perfect for interconnects
- Built-in aux source fill switcher for blackouts • Compatible with most 1/2" and 3/4" VCRs • Totally compatible with Logmatic and Logmatic Jr. logging and verification systems

CIS-2A \$1995.00

LCC-1A Li'I Ben™ Clock Controller

- Simple, easy to use, four-key keypad • Four-digit LED display • One second resolution • 7 day programmability • 100 event capacity • Power backup • 8 open collector outputs • Optional relay outputs • Optional 2 x 1 stereo audio/video switcher • Optional 4 x 1 stereo audio/video switcher

- LCC-1A Controller with 8 open collector outputs \$ 850.00
- LCC-2A Controller with 8 Form C relay outputs 1000.00
- LCC-3A Controller with 2 x 1 stereo A/V switching 1250.00
- LCC-4A Controller with 4 x 1 stereo A/V switching 1450.00

NSS-4A Network Share Switcher

- Inserts ads into four networks from one ad source • Inserts ads one network at a time on a first come first served basis • Four digital DTMF cue tone decoders
- Four preroll delay timers—one for each network • Composite sync output to facilitate vertical interval switching • Cue tone decoder disable switches • Power fail relay bypass • Inputs and outputs for controlling and insertion devices

NSS-4A \$2750.00

- ADA-3A Same as above except with 3 independent amplifiers 800.00
- ATS-1A Programmable automatic DTMF tone, 4 x 1 audio/video vertical interval switcher, with control signalling 1000.00
- AVS-8A "8 Ball", 8 x 1 stereo audio follow video monitor switcher 750.00
- AVS-10A "Patchmaster" 10 x 1 expandable audio/video bridging switcher, remote control input, broadcast specs. 1200.00
- AVS-10AS Same as above with 2-channel (stereo) audio 1450.00
- RCP-10A Remote control panel for AVS-10A and AVS-10AS 475.00
- ACP-10A Expanded audio connection panel with cable 200.00
- ACP-10AS Stereo audio connection panel with cable 250.00
- DTG-101A Automatic high-speed DTMF tone generator with memory 450.00
- DTG-102A 16-digit DTMF tone generator for Spotmatic Jr., Li'I MoneyMaker, Logmatic, ATS-1A, and Broadcaster I 225.00
- SAV-1A Stereo audio/video distribution amplifier, 1-in x 6-out 800.00
- SDA-1A Sync stripping pulse distribution amplifier, 1-in x 6-out, looping input, 75 ohm source terminated outputs 550.00
- UAA-6A Universal audio amplifier, six amplifiers each with Hi-Z bridging input and level-adjustable 600 ohm outputs UAA-6X-XLR (with XLR type audio connectors) 750.00
- UAA-6A-TB (with barrier strip audio connections) 700.00
- VDA-1A Video distribution amplifier, 1-in x 6-out, looping input, source terminated outputs, level adj. broadcast specs. 375.00
- VDA-2A Same as above except with 2 independent amplifiers 600.00
- VDA-3A Same as above except with 3 independent amplifiers 800.00

CHANNELMATIC, INC.**Controllers/Sequencers/Generators****Series 3000 Custom Systems**

The Series 3000 "Building Blocks" provide the system designer with a diversified group of standard prepackaged and pretested, plug-in modules which can be easily combined to satisfy a large variety of requirements. Over 50 modules, each with different functions, are available.

Through many years of providing custom designed switching and control systems for Cable and Industrial Television users, these modules represent the most reliable and economical solution to many specialized system requirements.

PCM-3000A Superclock™**Programmable Controller Module**

The PCM-3000A Programmable Controller is a microprocessor-based 7-day clock module for the Series 3000 frame. It has a 1-minute resolution and a large memory for storage of program events. The system is bus-oriented and provisions are included for input-output capability and addition of a multitude of special control interfaces. The basic system has eight programmable closure-type outputs which can be preprogrammed to open or close on any desired weekly time schedule.

The PCM-3000A is designed to be used in any application where local or remote control of equipment is required on a 7-day schedule. By adding appropriate modules, it can be used to control almost any electrical or electronic device, including satellite receivers, video cassette machines, audio-video switchers, relays, IF switching, message generators, solenoids, motors, etc.

A UAD-3000A Unattended Telephone Answering Device module and related CTD-3001A DTMF Decoder module can be added to a clock-controller subsystem, enabling it to be operated over standard telephone lines.

PCM-3000A \$2000.00

PCM-3000A-1. Programmable 7-day, 1683-event clock with eight outputs. Assembled in Series 3000 frame with blank filler panel. Outputs are open collector transistor type, which will sink 40mA at 30VDC. \$2430.00

PCM-3000A-2. Same as -1, except outputs are eight form A (SPST) relay closures. \$2530.00

PCM-3000A-3. Same as -1, except also has UAD-3000A Automatic Telephone Answering Device module and CTD-3001A Tone Decoder for telephone override capability. \$3030.00

PCM-3000A-4. Same as -3, except outputs are eight form A (SPST) relay closures. \$3130.00

PCM-3000A-13. Remotely programmable 7-day, 1683-event clock having both transmit and receive subsystems. Transmit subsystem is provided with an answering device and telephone override. Receive subsystem has decoding for twenty independently programmable decimal outputs, each of which are provided with a form-A (SPST) relay. Receive system can be expanded to control hundreds of devices, including satellite receivers, audio/video switches, etc. Transmit and receive subsystems can be connected by any voice-grade audio path. Multiple hubs can be controlled by a single transmit subsystem (PCM) by adding receive subsystems for each. Includes modems, card extenders, and blank panels. \$7660.00

Receive Subsystems (add. ea.) \$3555.00

VCR-3005A-5 Vertical-Interval**Videocassette Sequencers**

Automatic vertical-interval videocassette sequencer system for playback of locally generated programming. Frame is wired to handle up to five VCRs, and provisions are included for cascading two or more mainframes as the sequential control of any number of machines. Front panel Sequence Selector Switches allow each VCR to: 1) continue sequence normally, 2) bypass to the next VCR in sequence, or 3) terminate the sequence. In broadcast-quality performances, all switching occurs in the vertical blanking interval of program video. This allows glitch-free transitions if the VCRs in the sequence are sync-locked with an accessory such as the Handimod I. Systems include ATG-202A Tone Generator/Verifier for videotape encoding. Sequence may be initialized manually using pushbutton relay closure, or automatically on a real-time basis by the PCM-3000A Clock Controller.

VCR-3005A-5 \$5005.00

VCR-3005A-2. Same as above except with modules to control two VCRs. \$3155.00

VCR-3005A-3. Same as above except with modules to control three VCRs. \$4005.00

VCR-3005A-4. Same as above except with modules to control four VCRs. \$4505.00

PCM-3000A-VCR. Same as VCR-3005A-5 except frame includes built-in PCM-3000A 7-day programmable clock controller. \$7435.00

MCU-3000A Master Control Unit

Special-purpose, microprocessor-based, programmable control unit provides a means of automating local commercial insertion into ad-supported satellite programming. Sixteen front panel pushbuttons facilitate operator programming of spot playback sequence on a 24 or 48 hour basis and program entry is monitored on a 12-digit, 7-segment LED display panel. Single or multiple VCR configurations

**PCM-3000A****MCU-3000A****TDG-3016A****DCG-300A****VCR-3005A-5**

as well as multi-channel systems can be developed with the MCU-3000A. Designed to operate with the SDD-3001A Serial Data Decoder and the UCC-3000A Universal Computer Controller to provide logging and program data for printout on a commercial-quality 80-column alphanumeric printer.

The MCU-3000A is a multispace module and occupies the space normally used for the power supply plus four additional module spaces.

MCU-3000A Printer included, PLX-800 \$4850.00

DCG-300A Digital Code Generator Console

Provides the means for encoding videotapes for use with random access within tape VCR control systems. Unit prompts operator for proper data entry, automatically senses tape position, accepts entries on 16-pushbutton front panel keyboard for both segment position and identification data, encodes videotape using high speed AFSK data stream on Channel 1 audio track. All operator entries are verified on a 12-digit LCD display panel. Designed specifically for use with VCR-3201A Random Access VCR Control modules and Sony Type 5 editing VCRs.

DCG-300A \$1500.00

TDG-3016A Time/Date Generator**(Includes KMG-3016A)**

Unit is designed to inject time and date information onto a video signal. Crystal-controlled clock is set with a BCD set switch and a start pushbutton. Module includes a KMG-3016A 8-line, 16-page Keying Message Generator. Time and date is one of 16 selectable messages and is superimposed in white or black letters over video. One TDG-3016A can supply time and date information for up to 30 KMG-3016A Keying Message Generators.

TDG-3016A \$950.00

VCR-3201A Random Access VCR Controller

Unit accepts start signal and controls VCR automation. Incorporates necessary timing circuits to allow delays for intermission, preroll, and rewind functions. Includes tone decoding and logic circuitry to automate fast forward, rewind, and "next VCR" operations. Sets up audio/video switch for vertical interval switching and contains provisions for power-fail restart and VCR bypass. Front panel pushbutton permits manual cue-up and LEDs indicate "Park" or "Play" status. Microprocessor-based module can be used to implement most VCR control systems, including random access within a tape.

VCR-3201A \$1000.00

UCC-3000A Universal Computer Controller

Provides an interface between the MCU-3000A Master Control Unit and peripheral serial data devices. Collects, stores, and formats data to permit the maximization of the MCU-3000A.

UCC-3000A \$1000.00

Prices and Specifications Subject to Change Without Notice.

CHRISTIE ELECTRIC CORP.

Batteries/Charger/Analyzer

Ultra Series Batteries

- Ultra fast 30-minute recharge time when using CASP/1000®
- Higher capacity – 4.5AH
- 1-hour recharge on TCO chargers
- Premium quality cells
- Thermal and fuse protection

Temperature cut-off thermal design keeps battery cells cooler. Other battery packs have only 4 TCO sensors. We use 6 sensors in close contact with every cell to ensure that TCO is fast and sure and to prevent internal overheating of any cell.

Ultra 90	10 Cell, 12.0V, 4.5AHTBA

Ultra Series

CASP/1000

Charger/Analyzer/Reconditioner

The CASP/1000 is a microprocessor-based precision instrument for maintaining any rechargeable batteries at the peak of performance. As such, it is vital to the operation of video equipment, communications gear, portable computers, and medical electronic systems. Through the systematic use of CASP/1000, battery operated equipment becomes more reliable, safer, and far more cost effective.

The CASP/1000 has six channels which automatically process up to six batteries of any type sequentially. The system performs the following functions:

Battery Reconditioning

By virtue of the ReFLEX charging technique, the system can be used to recondition, or "rejuvenate," NiCad batteries, even when these batteries have deteriorated to the point that they will no longer hold a charge. This dramatic capability by itself literally justifies the use of CASP/1000.

Battery Recognition

When a battery is connected to any one of the channels, the system senses the type of battery which is involved, and automatically provides the kind of processing that battery requires.

Battery Analysis

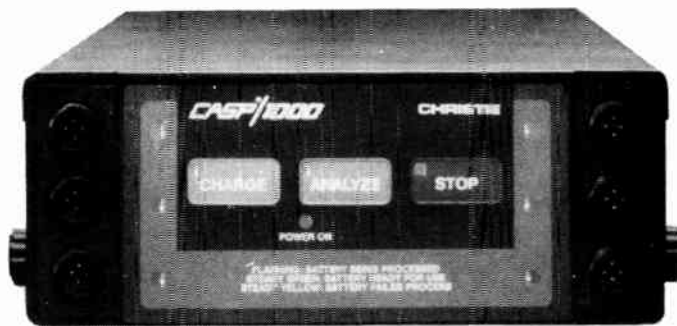

The system can analyze the condition of a battery, and report that condition on an optional serial printer. It can be determined from the hard-copy printout what action should be taken. In this mode, the system can analyze battery discharge capacity and battery charge capacity.

Battery Charging

The system has the capability for different types of charging, as appropriate to the kinds and conditions of the batteries being processed. This capability includes fast charge, slow charge, dual-rate charge, and simultaneous trickle charge of up to six batteries. Charging can be very rapid, and Christie NiCads can be charged in as little as 30 minutes.

Cost Effectiveness

An outstanding benefit of CASP/1000 is that it saves its own cost by rejuvenating worn-out NiCads, allowing them to be returned to useful service, and by charging batteries more completely, improving their reliability, and extending their life.

CASP/1000

Advanced Processing Methods

The ReFLEX charging process has numerous advantages over other battery charging methods. Foremost among these is the ability to erase "memory" and restore badly faded battery capacity.

With the ReFLEX method, batteries also get charged faster, and more fully charged, stay cooler, have less cell imbalance, and last appreciably longer.

Universal Application

CASP/1000 handles every rechargeable battery type, and all voltage and current ratings. The system is preprogrammed for the most popular battery makes, with the flexibility to handle new batteries as they are developed.

Unattended Operation

In using CASP/1000, the operator first selects the processing function. The system sequences through each channel indefinitely, processing all connected batteries. If a fully charged battery is removed and a discharged battery installed, the system will recognize the new battery and charge it appropriately. The only attendance CASP/1000 requires is the loading and off-loading of batteries.

Worldwide Operation

The lightweight, portable CASP/1000 operates on mains power anywhere in the world. The system accepts inputs from 90 to 265VAC, at frequencies from 47 to 440Hz.

CASP/1000 1H Version, 4.4V Software\$2495.00

CHYRON CORP.**Character and Graphics Generator/
Video Printer/Paint System****VP-2 Plus Character and Graphics Generator**

- **Character Resolution:** 35ns resolution, equivalent to 1510 pixel elements
- **Colors:** 512 color choices available, 16 per page for characters, edges, and backgrounds
- **Fonts:** Six full fonts (upper and lower case) on line selectable from a library of 41 Chyron face styles with international fonts available. Custom font and logo compose service is also available (3 fonts standard)
- **Multiple Character Planes:** Full horizontal and vertical overlap of characters, symbols, and logos to any depth
- **Background Editing Capabilities:** Color every two raster lines, if desired for background effects and graduated color
- **Auto Display (Read from Disk):** Display selected graphics pages from disk memory in any sequence at variable rates (cued or automatic)
- **Palette Animation:** Cycles color in characters or backgrounds at frame rate increments
- **Edge Types:** The three edge types for any font—full drop shadow, character offset, and bordered edge—can be varied in extent, direction, and color
- **Menus:** Complete menus and prompting displays to guide you through graphics composition
- **Composition and Control Features:** Cursor commands: up, down, right, left, backspace, return, home. Insert, delete, or move characters, words, lines. Select fonts, character colors, palette edge types, edge colors, key color. Set tab, clear tab, right justify, center page, line or column. Italicize a font (left or right), and display menu. Change character, word, line, color, font, edge, or edge color

Multifont Option

Allows VP-2 to use up to six font styles in six sizes, providing up to 36 fonts on-line. Each multifont chip contains one typestyle in scanline sizes: 18, 24, 30, 36, 42 and 48. Available as a field-installable kit, or as an option on VP-2 Plus systems.

VP-2 Plus Includes software enhancement and three standard fonts\$6,115.00

VP-2 Plus With multifont 6,895.00

VP-2 Plus With multifont (International) 7,495.00

Multifont Upgrade Kit

Field Installable in an existing VP-2 Plus \$920.00

Multisize Fonts ea./150.00

Available in PAL, PAL-M and NTSC.

VP-1SG Video Printer

- **Fonts:** ROM based minimum of two fonts, each with full upper and lower case. Optional expansion to six fonts. (Face style library of 41).
- **Hardware:** Microprocessor controlled—dual 32K byte frame store memory—ROM Program—4000 bytes of message memory—internal sync generator with genlock and NTSC video generation
- **Color Select:** Any 1 of 8 colors may be assigned to backgrounds, characters or edge
- **Color Table:** Any 8 of 512 colors
- **Sync:** Genlock to external sync or composite video from a stable source. (VCR may not be a stable source)
- **Keying:** Full downstream keying included
- **Output:** NTSC composite video (Optional RGB video board)
- **Commands:** Select background color, character color, edge type, edge color, font type. Skip scan lines (push down), center line, center page, roll display, page delay, repeat message, end of page, horizontal and vertical margin control. Adjust character spacing, italicize, set color table
- **System:** Microprocessor based with ROM program
- **Interface:** Multibaud rate serial RS-232 interface. Max 9600 Baud
- **Frame Store:** 32K bytes of run length encoding. 2 frame stores to provide sequential picture generation. (35ns resolution)
- **Video Memory:** Is organized as a dual frame buffer which allows one page to be displayed while the next page is being created
- **Design:** Single PC board design for computer and video with switching power supply. Enclosed in a metal chassis with power switch and video connectors on rear of unit (rackmountable)

VP-1SG Includes 3 standard fonts\$2,995.00

VP-2 Plus

Chameleon

Chameleon Paint System

- **Input Device:** Tablet, stylus, camera/video capture, text grab
- **Operator Interface:** Dynamic icon-oriented menu
- **Resolution:** NTSC: 768 x 525; PAL: 768 x 625
- **Colors:** 256 on-line, 4096 total
- **Color Program:** Tint, shading, color pickup, area fill, color smear, palette memory, color cycling, color definition by hue, luminance, saturation or by red, green, blue
- **Memory:** 10M byte removable Winchester cartridge for storing images, palettes, brushes, grids and cut and paste
- **Software:** 2D paint
- **Drawing Tools:** Free hand lines, point-to-point lines, curve drawing. Out-lined or filled circles, rectangles, polygons. Definable grids
- **Brushes:** Unlimited user definable brushes, single or multi-color brushes. 14 standard brushes
- **Cut and Paste:** Rotate, mirror, scale, skew, perspective, flip, duplicate, stencil, overlay
- **Magnification:** 16 level zoom, pan and scroll
- **Video Input:** Genlockable to composite video source (RS-170), internal variable rate downstream keyer. Complete timing adjustments
- **Video Outputs:** Broadcast NTSC or PAL plus RGB and SYNC. Two composite outputs plus 1 which includes downstream keying, key out, RGB and SYNC out

The Chameleon is a high resolution paint system which consists of a 16" x 16" digitizing tablet with pen, and uses an icon-oriented menu for selection of the large array of functions. It has a 10M byte Winchester removable hard-disk which can store unlimited graphic images by simply inserting another cartridge.

Although it will accept input from a camera or any video source, it can also be interfaced directly to Chyron's VP-2 character generator (via RS232) or VP-1 character generator (via video input) to produce graphics which combine superior text with dynamic images created on Chameleon.

Chameleon\$11,900.00

CHYRON CORP.**Graphics and Titling System/Digital
Video Effects Generator****RGU-2 Graphics and Titling System**

- 27nsec resolution
- Versatile multi-font library compatible with Chyron IV Standard Font Library
- Proportionally-spaced characters
- Background stripes and solids
- Choice of character edging
- See-through characters
- Four full font-loading positions
- Multiple roll and crawl speeds
- Slow reveal
- Automatic centering
- Flexible VidiDisc magnetic storage system
- Disc duplication
- Flash
- Automatic lower third display
- Visibly-bordered safe title area
- Insert and delete controls
- 256 tab positions
- Modular design
- Horizontal/vertical character shift
- Logo compose
- 64 color choices
- Character size—maximum character height of 420 lines (logos may be full-screen), minimum character height of 4 lines
- Auto pause of rolls and crawls
- Automatic instruction displays
- Auto color/font change
- Clock/event timer
- RS232 interface
- Programmed animation (PSC)
- Color encoder/downstream keyer

The RGU-2 is a high-quality graphics and titling system for studio and mobile production which provides many of the most-wanted features of the industry-standard Chyron IV.

Operation of the RGU-2 is flexible and uncomplicated. Just load a software program and automatic instruction displays appear on the monitor to provide an interactive communications channel between the operator and the RGU-2.

Optional Features

Motion functions as an optional module of the Chyron RGU-2 to produce high-resolution video graphic effects. Titles, logos and background graphics can be manipulated and positioned anywhere on screen. Versatile digital effects can be selected and displayed in seconds while each image maintains the superb resolution that is the standard of every Chyron system.

Motion/Channel Control Module (CCM) combines or mixes the dual channels of the Chyron RGU-2 with selective priority control, along with all effects of Motion. There are ten wipe patterns with ten selectable speeds providing the user with a wide range of graphic effects when wiping between Chyron channels or program video.

Full-Resolution Second Channel converts the Chyron RGU-2 into a dual-channel system. Both channels provide full function capabilities for graphics composition and display.

Additional "Vididisc" Drives provide additional storage and flexibility during multiple studio operations.

Additional Full-function Control Keyboards can be connected in series to any system. A keyboard delegate switch and channel delegate key control the keyboard-to-channel assignments in multi-keyboard or dual-channel systems.

**RGU-2**

Recall-only Keyboard is a compact unit which contains all keyboard functions necessary for recall and playback of messages from a remote location.

Additional Font Libraries supply pre-designed fonts on an individual basis or a supplemental Chyron font library package containing 100 additional fonts (20 typefaces in 5 sizes each).

International Font Libraries provide additional characters not found in the English alphabet.

Subtitling Interface converts the Chyron RGU-2 into a versatile subtitling system capable of creating, recording and displaying an unlimited number of subtitles in synchronization with SMPTE or EBU time code.

Camera Font Compose enables RGU-2 users to create high-quality custom fonts, logos and other graphics according to their own requirements.

Custom Factory Font/Logo Compose provides end users with professional creation of custom fonts and logos from customer-supplied artwork.

Sports Scoreboard Unit allows quick updating and display of numerical data such as sports scores, through the use of four 3-digit thumbwheels.

General Purpose Interface (G.P.I.) permits remote execution of any Chyron keyboard function through the use of contact closures.

Specifications

Power Requirements: 117V \pm 10% at 60Hz, 8A (available on order 230V \pm 10% at 50Hz, 6A)

Dimensions

Main Chassis: 15²³/₃₂" H x 19" W x 20¹/₂" D, 65 lbs.
Control Keyboard: 4⁵/₈" H x 21" W x 11¹/₂" D, 30 lbs.
Recall Keyboard: 4⁵/₈" H x 8" W x 11¹/₂" D, 15 lbs.
Colorizer/Keyer: 1³/₄" H x 19" W x 14" D, 10 lbs.

Single Channel RGU-2

(Includes color encoder and downstream keyer) \$15,990.00

Dual Channel RGU-2

(Includes 2 color encoders and downstream keyers) 20,190.00

CHYRON CORP.*Text Generator***Scribe Text Generator**

- Unsurpassed print quality resolution with 16 levels of anti-aliasing
- 1500 master typeface library
- Automatic font resizing from 10 to 400 scan lines
- 512K font memory expandable to 4M bytes
- Eight font loading positions
- Fonts loadable during message playback
- Automatic playback with recorded fonts
- Automatic character kerning
- Row exchange
- Unlimited character, word, or row underlap or overlap
- Automatic centering horizontal and/or vertical
- Squeeze/expand for characters, words, or row
- Cut and paste
- Adjustable safe title area
- Color encoder and linear keyer/fader
- 16.7 million color choices for characters, edges, and backgrounds
- Multiple character edges in variable size and color
- Multicolored logo/character display
- Background colors selectable on scan line basis
- Automatic color ramping for shaded backgrounds
- Automatic color and font change
- Dual frame buffer
- 1.2M byte floppy disk plus 20M byte Winchester Disk for storage of messages, fonts, and programs
- Insert/delete controls
- Right/left/center justification
- 256 tab positions
- Multiple speeds of roll/crawl
- Programmable timed roll
- Multiple speeds of slow reveal
- Programmable function keys
- Clock/event timer
- Built-in sync generator with genlock
- Programmable directory for operators includes auto font loads, with color palettes, tab, edges
- Software intensive
- Remote event triggering
- **Mechanical:** All electronics in the main chassis are VME compatible PC boards; backplane is all PC and uses DIN pin connectors
- **Power Requirements:** Main Chassis—900W max.; Keyboard—125W max.
- **Dimensions:** Main Chassis: 19.25" H x 19" W x 22" D; Keyboard—4.75" H x 21.25" W x 11.75" D

Options

- **Advanced Font Utility I:** Variable 3D viewpoint control; Variable light source shading; Texture mapping; Metallic shadings; Word compose
- **Advanced Font Utility II:** 3D texture mapping; Neon tube effect; Custom character shading; Inner/outer glows; Bevel effects; Multiborder effects; Chisel effect
- **Dynamic Read Effects:** Permits rows or pages to be displayed with a variety of video effects such as flips, tumbles, wipes and slides—with variable speed control
- **Color Video Capture:** Allows capture of color image via RGB camera or other video input to the system. Once captured, images can be resized, positioned, mixed with text, overlapped, allocated to a particular font, or assigned to any key on the keyboard

**Scribe**

- **Logo Compose:** For customized creation of anti-aliased logos from artwork. Automatically resized with no loss of resolution
- **Supercharger/High-Speed Processor:** Increases the processing power of the CPU, improving rendering time of machine fonts and execution time of the Advanced Font Utilities
- **I/O Expander:** Provides 5 external communication channels—four serial and one parallel
- **Auxiliary Entry/Election Reporting:** Provides an additional CPU expander board and software supporting off-line entry via computer terminal in addition to third-party supplied election reporting services
- **Preview/Offline Edit Channel:** Allows simultaneous composition and update of messages while main channel remains on air
- **Networking:** Permits multiple systems to be linked together for shared access to all pages, fonts and files—or for sophisticated multi-channel displays
- **Expanded G.P.I.:** Provides 8 additional inputs to be used by external devices for controlling the execution of preprogrammed sequences on the SCRIBE
- International keyboard
- Font memory expansion to 4M byte in 512K increments
- Expandable storage available in 42 and 280M byte fixed disc or 20M byte removable discs
- Additional keyboard
- RGB or component outputs

The Scribe is a revolutionary, high performance text and graphics generator featuring fully anti-aliased print quality display and choice of type styles. It offers the most perfect resolution possible on today's video systems.

In addition, the Scribe provides unlimited sizing of fonts, unlimited coloring (including multicolored logo/character display), and color ramping for shaded backgrounds. Add to this the ability for unlimited overlap and underlap of characters and graphics, automatic character kerning, and an impressive array of composition and editing functions which combine to make the Scribe the most sophisticated text generator available.

Scribe \$29,800.00

CHYRON CORP.**Character/Graphics Generators****THE CHYRON IV SERIES CHARACTER AND GRAPHICS GENERATORS****4200 and 4100 EXB Character/Graphic Generators**

- 27 Nanosecond Chyron character resolution
- Full-function control keyboard
- Versatile, high quality font library
- True proportionally-spaced characters
- Automatic character kerning
- 12 full font-loading positions
- True character overlay
- See-through characters
- 512 color palette selection
- Solid or multicolored backgrounds
- Multicolored character and logo display
- Multiple character edges
- Roll and crawl in multiple speeds
- Adjustable roll window size
- Slow reveal in multiple speeds
- Automatic lower third displays
- Animation program sequence controller (PSC)
- *Motion II - High resolution digital graphic effects
- *Motion II/Channel Control Module (CCM) - mixes, wipes, fades
- Automatic centering
- Insert/delete controls
- Automatic left or right justification
- Row exchange
- Squeeze and expand for characters, words or rows
- Automatic color and font change
- Re-position for character or row
- Block message move or delete
- 256 tab positions
- Automatic right or left italics in 14° increments
- Diagonal typing
- Flash
- Clock/event timer
- Visible safe title area
- Off-line edit channel
- Flexible "Vididisc" floppy disc storage system
- RS232 standard computer interface
- Software intensive/modular design

The Chyron IV Series expandability has been the predecessor to Chyron's philosophy that systems need not be obsolete from one year to the next. That is as true of the Chyron 4100 EXB as it has been with other generations. The 4100 EXB contains all of the standard features of the 4200 with the exception of Motion II and can be easily field converted to a 4200 with the addition of Motion II and the Motion II/Channel Control Module (CCM).

Multimode Graphics Module (MGM)**Option For Chyron IV**

- Standard RS170 input
- 512 color palette
- Full screen display capability
- Accepts drawing tablet input
- Resizing of graphics
- Cut and paste
- Standard geometric library
- Infinite montaging of multiple graphics
- Montaging of text channels
- Area fill
- Custom brush compose
- Palette animation
- Satellite weather service interface

The Multimode Graphic Module (MGM) provides a multitude of graphic abilities never before associated with a character generator. In addition to standard camera font compose, the MGM offers an advanced camera font compose that is unparalleled in the industry today.

An important extra dimension is added by the MGM's background graphics abilities. High resolution background graphics (1024 x 512 pixels) can be created either from standard black-and-white camera input or hand drawn with an optional digitizing tablet. Up to 16 colors may be selected from a 512 color palette, as well as a wide variety of brush sizes and styles, color fill, color pick-up, etc. Circles, rectangles

B-388**Prices and Specifications Subject to Change Without Notice.****4200****Optional Features**

- Full-resolution second channel
 - Multimode graphics module (MGM)
 - *Motion II - High resolution digital graphic effects
 - *Motion II/Channel Control Module (CCM) - mixes, wipes, fades
 - Digitizing tablet
 - Winchester hard disc
 - Multiple "Vividisc" drives
 - Additional full-function control keyboards
 - Recall-only keyboard
 - Additional font libraries
 - Camera font compose
 - Custom font/logo compose service
 - International font libraries
 - Right-to-left text entry
 - Subtitling interface
 - includes: SMPTE/EBU time code reader/generator
 - Election reporting interface
 - Weather service interface - included with MGM
 - Sports scoreboard unit
 - General purpose interface (G.P.I.)
 - Color encoder
 - Downstream keyer
- 4100 EXB and 4200 with Motion II priced from \$41,000 to \$90,000, depending upon configuration.
*Motion II and Motion II/Channel control module (CCM) are options which will convert the 4100 EXB to a 4200.

and other graphic primitives are automatically drawn at the touch of a key. Completed portions of the background graphic can be cut and pasted and varied in size. Backgrounds can also be montaged over other backgrounds for an unlimited layered effect. Palette animation is an important function of the MGM. The colors of the background graphics can be animated for exciting effects such as glow glitter, neon and color trails.

Weather service interface of the MGM can accept and display high resolution weather graphics from Weather Service International (WSI) or Environmental Satellite Data, Inc. (ESDI). The weather graphics are transmitted over telephone line* to the Chyron IV and stored on Chyron's Winchester disk for subsequent display on command.

In foreground mode, the MGM provides an extremely advanced form of camera font compose that will quickly and easily create standard and multicolor graphics. Fonts can be automatically modified and added to your font library.

When background graphics are created with the MGM, they can be displayed as a single graphic or combined with text and other graphics on Chyron IV's channel one or two and stored as a single message on Winchester disk.

MGM \$8000.00
Digitizing Tablet 1900.00

4 3/4" width

8 Amp.-Hr.
5 3/4" width

14 Amp.-Hr.
6 1/4" width

These unique Battery Belts replace On-Camera Batteries, BP-90, NP-1, and any other built-in or attached Battery Packs. Used world-wide by entrepreneurial professional ENG/EFP Camera Persons and Broadcast News Persons, Cine 60 Battery Belts offer more reliability, more power, more mobility, better balance with more comfort and greater economy with obsolete-proof versatility.

- **Most economical.** Longer life gives more hours of power per dollar than any other type NiCad battery
- **Lifetime investment.** Never discarded. All components of the battery purchasable to replace those that wear out
- **Most convenient.** Charger and Charge Cable built-in means less equipment to keep track of
- **More comfort.** Worn, not carried like 5 lb. On-Camera Batteries
- **Cameras and Betacam** become easier to handle, lighter to carry without On-Camera Battery
- **Undisturbed balance,** unimpeded movement from uniformly distributed weight around waist
- **Universal use.** Runs any equipment, lights, cameras, monitors, microwave devices. Run two or more devices simultaneously

CINE 60, INC.

Video Battery Packs

12V, 4AH Style; 2" x 5 1/2" x 7". With built-in belt loops, shoulder strap.

12V, 7AH; 13.2/14.4V, 4AH Style; 2" x 6 1/2" x 8". With built-in belt loops, shoulder strap.

13.2V/14.4V, 7AH, 8AH Style; 4 1/2" x 6" x 10". With built-in handgrip, shoulder strap.

Rugged, compact housings designed to withstand ENG/EFP field abuse and provide optimum portability possible. Utilizes the same components, cells and chargers used in Cine 60 Battery Belts.

14AH Style; 4 1/2" x 8" x 10". With built-in handgrip, shoulder strap.

20AH Style; 6 1/2" x 6 1/2" x 14 3/4". With built-in handgrip.

Properly cared for, Cine 60 Battery Belts and Packs provide many years of reliable service. Due to many variations in possible use, the number of re-cycles or life expectancy cannot be stated exactly. There are so many factors to consider which will influence battery life, such as high discharge, low discharge, temperature, environment, charging modes, etc. For instance, a battery constantly used at high discharge will not have as many re-cycles as a battery used for low discharge applications. Life expectancy can vary from 500 to 20000 re-cycles. But from our 26 year experience in making and selling batteries, we have seen batteries out of service after 4 years and we have seen batteries in use after 10 years. Again, the above mentioned factors will apply to the disparity in re-cycle life for any battery.

CINE 60, INC.

Battery Belts/Packs/Battery System

30V Battery Belts/Packs

For Cine 60 Sun-Guns, Lowel, Colortran, Frezzi, Anton-Bauer, Mole-Richardson, Cinema Products, De Sisti, Kobold, lanero, and other battery lights. 4AH capacity operates 30V 250W lamp 26 minutes. 7AH capacity operates 250W lamp 42 minutes. 2-pin Amphenol connector and 5-pin XLR on fast charge models, 2-pin Amphenol on Overnite models.

30V/14.4V/13.2V All-Purpose Battery System

Cine 60's versatile power for most portable equipment and Sun-Guns. The Battery provides 14.4V and 30V. With an in-line plug-in voltage converter, it becomes a 13.2V battery. And with a power adaptor, it will power both a Sun-Gun and camera simultaneously. 13.2V mode limited to applications drawing under 48W. Equipped with 2-pin Amphenol and 5-pin XLR connectors. A complete system requires the battery, voltage converter, and power adaptor, plus 1 or more video cables.

Applications for the All-Purpose Battery System are virtually unlimited. It will power all 13.2V cameras, VTRs, Betacams, and other similar systems, all 14.4V cameras, most 12V cameras, VTRs, plus all 14.4V and 30V battery lights and Sun-Guns.

All-Purpose Battery Belts. Require the Voltage Converter for 13.2V operation.

3014	30V, 4AH/14.4V, 8AH	Overnite		11 lbs.	\$ 783.00

1430	30V, 10AH/14.4V, 20AH	Overnite		26 lbs.	1996.00

VRX Voltage Converter. Plugs in between battery and video cable. Converts 14.4V to 13.2V. Allows battery to power all 13.2V cameras, VTRs, Betacams. Maximum 48W. 5-pin male XLR input, 5-pin female XLR output. \$49.00

6400-Y Power Adaptor. Allows battery to run a battery light and camera simultaneously. Plugs in between battery, video cable, and light cable. 5-pin male XLR input, two 5-pin female XLR outputs. With the VRX plugged into one output to power a 13.2V Betacam or camera, and the second output providing 14.4V to operate a 14.4V, 70W battery light, excellent battery utilization is assured. \$54.00

*Requires Fast Charger. Overnite charger built-in.

Batteries/Chargers

Cine 60's 12V 4AH

Replacement Batteries for Sony's BP-90

Built to Cine 60 standards with fish paper-insulated, deep welded NiCad cell modules protected by precision "Lifeguard" cell sensors for cooler, more efficient fast charging. Housed in a rugged molded case, it utilizes Sony's original non-shorting split connector and has an autoreset circuit breaker protecting the battery against external shorts while eliminating fuses.

BP-912S. Charges overnight with all BP-90 chargers.
May be fast charged with Sony's BC-210 or other 2-wire fast chargers. \$230.00

BP-912FC. As above but also may be fast charged with all
Cine 60 Fast/Lifeguard/Quik Chargers. Requires BPA charge adaptor 255.00

BP-2C Dual BP-90 Battery Charger. Charges 2 BP-90 batteries (any brand) overnight. In molded housing 1 1/2" x 2 7/8" x 4 3/8". Wt. 8 oz. 115V 116.00

BP-2C-220. As above but 220V 116.00

BP-612S. 13.2V 2AH NiCad replacement battery for Sony's BP-60 lead-acid battery. Higher voltage and NiCad reliability assure long life and run time. With autoreset circuit breaker. 205.00

BP-25C Dual Battery Charger. Charges 2 BP-612s overnight. Size and weight same as BP-2C. 115V 116.00

BP-25C-220. As above but 220V 116.00

BP-512S. 12V 2.5AH NiCad replacement battery for Sony's BP-20, -20A lead-acid batteries. Equipped with an autoreset circuit breaker. Charge with BP-25C dual overnight charger. . . 215.00

NP-1. 12V 1.5AH replacement battery for Sony's NP-1. Charge with Sony's NP-1 chargers . . 66.00

CBP-2J5S. 12V 2.5AH NiCad replacement battery for JVC/Panasonic PBP-1 lead-acid battery. Equipped with an autoreset circuit breaker. Charge with CBP-2J charger. 215.00

CBP-2J Dual Battery Charger. Charges 2 CBP-2J5S batteries overnight. Size and weight same as BP-2C. 115V 116.00

CBP-2J-220. As above but for 220V 116.00

CBP-2J5S

For "Hitch-Hiker"™ and OEM types Anton-Bauer Snap-on® batteries (with BP3XF charge adaptor), Cine 60 BP-912FC battery (with BPA charge adaptor), Cine 60 "OB" batteries directly. All Lifeguard chargers feature a manual start 1A charge rate and an automatic start of a 150mA. Lifeguard rate permitting batteries to be fully charged in 4 hours and then safely maintained in a "ready" condition indefinitely. Sensing circuits and visual indicators provide continual monitoring of battery condition. Equipped with 5-pin XLR connector. Can also be used for other types of 2, 4 and 7AH 12 to 14.4V NiCad batteries which have a 3rd wire cell sensing circuit.

LC2-914 Lifeguard Two Position 4 Hour Charger. Two independent positions charge 2 batteries in 4 hours. Equipped with "Hitch-Hiker"™ and OEM Camera Battery connector. Line-isolated and line and load regulated. Lightweight, small size. 2 1/2" x 6 1/4" x 8". Wt. 1 3/4 lbs. 115/220V, 50/60Hz \$485.00

LC4-914 Lifeguard Four Position Fast Charger. Four independent positions charge 4 batteries in 4 hours. A unique parallel patching circuit permits increasing the charge rate of the "Master's" position to 4A to charge 1 battery in 1 hour. Requires BP3XF charge adaptor for BP-912FC Cine 60 BP-90 battery. Line isolated, line and load regulated. Lightweight, small size. 4 1/2" x 6 5/8" x 7 1/2". Wt. 4 lbs. 115/220V, 50/60Hz \$765.00

LC2-914

LC4-914

Universal Sofbelts feature highest quality, high drain, long-life, fishpaper-insulated NiCad cells, matched and deep-welded into battery modules encased in thick walled, precisely sized module boxes designed to protect cells and intercell connections against harsh field abuse. Module boxes are mounted on a flexible, soft, body-molded, foam-cushioned belt that assures lifetime comfort. Universal Sofbelts are available in two types: standard (cannot be fast charged) and Fast Charge. Both are equipped with a built-in high efficiency Overnite Charger, and Auto-reset Circuit Breaker. Fast Charge types feature precision cell sensors of ceramic, hand-calibrated to an accuracy of $\pm 5\%$, assuring a full, safe, fast charge. Sofbelt weight is evenly distributed around the waist for excellent balance and comfort.

Universal Sofbelts

Cat. No.	Volts/Amp. Rating	Charge Rate	Weight	Price
1314304	13.2V/14.4V-8AH/30V-4AH	Overnite	11 lbs.	\$ 849.00
1314304FC	13.2V/14.4V-8AH/30V-4AH	Fast Charge* 1 Hour	11 lbs.	902.00
1314307	13.2V/14.4V-14AH/30V-7AH	Overnite	15 lbs.	1265.00
1314307FC	13.2V/14.4V-14AH/30V-7AH	Fast Charge* 2 Hours	15 lbs.	1315.00

Universal Battery Packs utilize the same components and incorporate the same features as the Universal Sofbelts. The housings are rugged, thick-walled enclosures designed to accept the heavy duty encountered in the field. The 8AH and 14AH versions are styled for carrying with a padded shoulder strap (supplied) or a tubular metal handle in the housing. The 20AH Model is equipped with a metal handle for portability.

Universal Battery Packs

Cat. No.	Volts/Amp. Rating	Charge Rate	Price
901314	13.2V/14.4V-8AH/30V-4AH	Overnite	10 lbs. \$ 849.00
901314FC	13.2V/14.4V-8AH/30V-4AH	Fast Charge* 1 Hour	10 lbs. 902.00
901317	13.2V/14.4V-14AH/30V-7AH	Overnite	14 lbs. 1265.00
901317FC	13.2V/14.4V-14AH/30V-7AH	Fast Charge* 2 Hours	14 lbs. 1315.00
90131430	13.2V/14.4V-20AH/30V-10AH	Overnite	26 lbs. 1996.00

*Require Fast Charger. 115V Overnite Charger built in.

All Universal Sofbelts and Battery Packs have a 115V Overnite Charger built in. For 220V or 115/220V built-in Overnite Chargers, the following options are available:

8994	220V Charger. Built into Universal Sofbelt or Battery Pack. Overnight Charging in lieu of the 115V Charger	\$25.00
6994	115/220V Charger. Built into Overnite Charge type Universal Sofbelts or Battery Packs. Not available for Fast Charge types	49.00
8994/22	220V, Overnite and Fast Charging in lieu of 115V	25.00
'U'	115V/220V. Fast Charging in lieu of 115V	88.00
'U-21'	115V/220V. Overnite and Fast Charging in lieu of 115V	112.00

Video Equipment Battery Cables

Coiled cable, 1' retracted, 6' extended. Supplied with 5-pin XLR connector and OEM's mating connector.

Cat. No.	Application	Price
6400IKE	Ikegami TM-10R-9H Monitor	\$ 65.00
64020E	Open end cable for customer's installation of equipment's connector	32.00
6406	All Hitachi "FP" and "SK" Cameras, Z-31 Camera	65.00
6408	Ampex Betacam, ARC-10, FPC-10, FRC-10; Cinema Products Camera Prompter; JVC CR-4700U, CR-4900U, CY-8800U, all "KY" Cameras; Panasonic AG-6400, AU/AK 100, AU-220, AU-400, AU-500, AK-30; BTS-700N, NV-9450, WV-V3, WV-555, WV-777, WV-888, WV-890, WV-6000, N-3; Sharp XCA1, XC-800, XC-900; Thomson MC-301, 501, 601, 701, Betacams, TTV-1623, TTV-1624	65.00
6421	Hitachi HR-100 Recorder	65.00
6431	Ampex VPR-20 Recorder	65.00
6471	Ikegami HL-78, HL-79A, D, L, E, HL-95, ITC-350, ITC-730	65.00
6473	Ampex BCC-14, BCC-20/Philips LDK-14, LDK-54	80.00
6475	Sony Betacams, BVH, BVM, BVP, BVU, BVW Equipment, DXCM3A, DXC3000, VO-6800, DXC-M2	65.00
6476	RCA TK76	170.00
6477	Ampex VPR-5 Recorder	85.00
6478	Panasonic AK-710, 750, 760, WV3600, 3700, 3800, 3900, 3890, 3990	65.00
6483	Ikegami HL-83	80.00
6486	RCA TK-86	80.00

13/14/30V Universal Batteries

- Triple Voltage:
13.2V for cameras
14.4V for lights
30V for lights
- Simultaneously runs 13.2V camera and 14.4V light
- 2 and 3 times more power than any camera battery
- Comfortable Sofbelt or compact battery pack styles

1314304FC 8AH Universal Sofbelt

901317 14AH Universal Battery Pack
Size 4 1/2" x 8" x 10"

901314 8AH Universal
Same style as 14AH Pack
Size 4 1/2" x 6" x 10"

90131430 20AH Universal Pack
Size 6 1/2" x 6 1/2" x 14 3/4"

CINE 60, INC.

Chargers/Battery Dememorizer/Adaptors

Universal Fast Chargers

One Hour Fast Chargers for 4 and 8AH batteries. Two Hour for 7 and 14AH batteries.
 Used for charging all Cine 60 Fast Charge Battery Belts and Packs. Can also be used for Hitch-Hiker™, and OEM Camera Batteries (Require BP3XF Charge Adaptor), and Cine 60 BP-912FC Battery (Requires BPA Adaptor). Two charge rates, Fast, Trickle. Size 2 3/4" x 3 3/4" x 8". Wgt. 3 lbs. 9400-U, 9400-UB Size 2 3/4" x 4 1/2" x 8 3/4"

9400	115V Fast Charger with 5-pin XLR connector	\$346.00
9400B	As above but with 4-pin XLR connector	346.00
9422	220V Fast Charger with 5-pin XLR connector	346.00
9422B	As above but with 4-pin XLR connector	346.00
9400-U	115/220V Fast Charger with 5-pin XLR connector	436.00
9400-UB	As above but with 4-pin XLR connector	436.00

Mobile Fast Chargers

One Hour Mobile Fast Chargers. Designed for safely and fully charging Fast Charge Batteries in the vehicle with the engine running. Equipped with LED indicators for DC input and Charge Mode, Charge Current Ammeter, Start Button, On-Off Switch, Back Up Automatic Cut Off of Fast Charge if battery's sensing circuit fails to operate. Can be used to charge other similarly rated batteries equipped with 3rd wire cell sensing circuits. Operates on 10.5-14VDC.

94DC30 Mobile 20 to 24 Cell Fast Charger. For charging 12, 13.2 and 14.4V, 8AH and 14AH, and 24 to 30V, 4AH and 7AH batteries. Charge time 1 hour for 4 and 8AH batteries, 2 hours for 7 and 14AH batteries. Size 3 1/2" x 5" x 10 1/2". Wgt. 8 lbs. **\$545.00**

Overnite Chargers

9401-5 14-16 Hour Overnite Charger. For Hitch-Hiker and OEM types Anton-Bauer Snap-On® Batteries (with BP3XF charge adaptor). Cine 60 "OB" batteries directly. Line-isolated, line and load regulated. LED indicator, 5-pin XLR. Lightweight, small size. 1 1/2" x 2 7/8" x 4 1/4". Wgt. 8 oz. Operates on 115V, 50/60Hz. . . **\$136.00**

9402-5. As above but for 220V operation.
 Note: Available with 4-pin XLR. Specify 9401-4 & 9402-4.
 (For OB14-4 battery). **\$136.00**

Battery Dememorizer

DM1214A. Equipped with current drain device, voltage sensor, automatic voltage cut off, voltmeter, voltage selector, start switch, 5-pin XLR connector, and BP-90 connector. Requires BP3XFM Charge Adaptor for OEM and Hitch-Hiker On-Camera Batteries. NiCad battery "memory" is created by the build-up of excess crystals in the cell. Repetitive long periods of overcharging and shallow discharging can bring about this condition which is apparent by a loss of capacity. The Dememorizer, properly used will break down the excess crystals in the cell thereby restoring the lost capacity. In the process it will also re-balance the cells. It will "dememorize" 12V, 13.2V, and 14.4V 1.5 to 20AH NiCad batteries. Size 3 1/4" x 5 1/2" x 7 1/4". Wgt. 2 lbs. **\$295.00**

Charge Adaptors

BPA Charge Adaptor. Connects BP-912FC Battery to any Cine 60 Fast/Lifeguard/Quick Chargers	\$46.00
BP3XF Hitch-Hiker Charge Adaptor. Connects Hitch-Hiker or OEM Camera Batteries to any Cine 60 Fast/Lifeguard/Quick Chargers	49.00
BJ3XM "OB" Battery Charge Adaptor. Connects "OB" Camera Battery to Anton-Bauer OEM Battery Chargers	49.00
BP-1C Tektronix Charge Cable. Connects Tektronix BP-1 Battery to Cine 60 9400-U	49.00
4F-5M Charge Adaptor. Connects 4-pin XLR Charger to 5-pin XLR battery	32.00
5F-4M Charge Adaptor. Connects 5-pin XLR charger to 4-pin XLR battery	32.00

CINE 60, INC.

Sun-Gun System/Kits

Sun-Gun System

For ENG/EFP 12 to 30VDC Soft, Wide-Angle Focusing Light.
Ideal camera mounted. Double wall aluminum construction.

- 6201-A Sun-Gun. With integral B' cable terminated in 2-pin Amphenol connector, removable handle, and bulb. (Specify which bulb) **\$218.00**
- 6202 Swing-Away Dichroic Filter. Converts Sun-Gun light to daylight **95.00**
- 6203 Swing-Away Diffusion Filter. Softens Sun-Gun light. Lowers output by f/stop **72.00**
- 6204 Swing-Away Safety Glass. For extra safety when Diffusion or Dichroic Filters are not used **60.00**
- SG-6510 Power Cable Adaptor. Connects to Sun-Gun's cable converting it to 5-pin XLR to run Sun-Gun with 12 or 14.4V battery. 12 or 14.4V bulb required **40.00**
- Sun-Gun Mounting Brackets. Two piece, machined sleeve, machined stud. Allows rapid mounting of Sun-Gun on camera **45.00**
- A-1/2. For all cameras with accessory shoe **45.00**
- B-1/2. For all cameras with 1/4-20 threaded accessory hold **45.00**
- B-1/26. For Ikegami ITC-730 Camera **45.00**
- B-1/25. For JVC KY-1900 Camera **45.00**
- C-1/2. For RCA TK-76 Camera **45.00**
- D-1/2. Universal. For most cameras. Clamps onto the camera's handle **45.00**
- E-1/2. For Ikegami HL-79A-D **45.00**
- F-1/2. For RCA TK76B, TK76C, TK-B6 **45.00**
- Stud only. (Specify which type) **27.00**
- Sleeve only. **27.00**

Bulbs For Sun-Gun:			Run Time With Various Capacities Of Batteries

- 6207B. Heavy-duty carrying case. Customized for Sun-Gun, Battery Belt, and Accessories. Size 11 1/8" x 19" x 7 1/4" **\$121.00**
- 6207P. As above, but for Battery Pack **121.00**
- APC. Heavy-duty carrying case. Customized for Sun-Gun, Battery Belt, and Accessories. Size 22 3/4" x 17 1/2" x 8 3/4" **210.00**

All-Purpose Sun-Gun Kits

APSGK-8 All Purpose Sun Gun Kit. Combines the Cine 60 Sun-Gun to provide 14.4 and 30V portable lighting with a versatile Battery Belt system that runs virtually all portable equipment including 12, 13.2, and 14.4V cameras, VTRs, and TV monitors. The belt can be charged in one hour with a Mobile Fast Charger operating from most vehicles or a Universal 115/220V Fast Charger. This unique kit is a complete working system requiring only one or more of the video cables for connecting the Battery Belt to the manufacturer's equipment. **\$2195.00**

Includes:

- 6201-A Sun-Gun
- 6202 Dichroic Filter; 6203 Diffusion Filter; 6204 Safety Glass
- 6212 14.4V, 70W Bulb; 6209 30V, 250W Bulb
- SG-6510 Power Cable Adaptor
- A-1/2 Sun-Gun Mounting Bracket; B-1/2 Stud only
- 3014FC 30V, 4AH/14.4V, BAH Fast Charge Battery Belt with built-in 115V Overnight Charger
- 6400-Y Power Adaptor. Allows Battery Belt to run Sun-Gun (with 14.4V bulb installed) and a 14.4V camera simultaneously
- VRX Plug-In Voltage Converter. Connects in-line between 6400-Y Power Adaptor and Video Cable. Allows Battery Belt to run Sun-Gun (with 14.4V bulb installed) and 13.2 or 12V camera simultaneously. Maximum drain 4BW
- 94DC30 Mobile Fast Charger. Operates from car battery (with engine running)
- 9400-U Universal Fast Charger. Operates from 115/220V, 50/60 cycles
- APC All-Purpose Sun-Gun Kit Carrying Case

APSGK-14 All-Purpose Sun-Gun Kit. As above but with 30V, 7AH/14.4V 14AH Battery Belt that can be charged in two hours **\$2624.00**

Sun-Gun with Dichroic Filter

Sun-Gun Mounting Brackets

SG-6510 Power Cable Adaptor

APSGK-8 All-Purpose Sun-Gun Kit

Complete Lighting Kits Consisting of:

- 6201-A Sun-Gun with Bulb (specify which bulb), Handle, Integral Cable
- 6202 Swing-Away Dichroic Filter
- Battery Belt or Pack with 115V Overnight Charger
- 6207 Heavy-Duty Customized Carrying Case
- 9400 Fast Charger is included in Fast Charge Sun-Gun Kits
- SG-6510 Power Cable Adaptor is included in 12V, 14.4V and 30V/14.4V Sun-Gun Kits
- 6212 FLP 14.4V Bulb is included in 30V/14.4V Sun-Gun Kits

Note: Sun-Gun Mounting Bracket not included in kits. May be ordered separately.

SGK-8304FC Sun-Gun Kit

SGK-9704FC Sun-Gun Kit

VRX Voltage Converter. For using 14.4V batteries to power all 13.2V cameras, VTRs, Betacams. Converts 14.4V to 13.2V maximum 48W. Plugs in between battery and video cable. 5-pin male XLR input, 5-pin female XLR output. \$49.00

6400-Y Power Adaptor. Allows battery to power a light and camera simultaneously. Plugs in between battery, video cable, and light cable. 5-pin male XLR input, two 5-pin female XLR outputs. \$54.00

CINE 60, INC.

Video Cable/Equipment Run Time Chart

Required Video Cable for connecting Cine 60's Battery Belt or Pack to the manufacturer's equipment. Cables with an (s) are 6' straight type, with a (c) coiled type, 1' retracted, 6' extended. The 1st number in the Run Time Chart, 4, 7, 8, 14, and 20 is the battery's Amp.-Hr. capacity. The number alongside it is the approximate hours of equipment run time using that battery capacity.

Equipment	Video Cable		Price	Approximate Hours of Run Time

Video Cable/Equipment Run Time Chart

Required Video Cable for connecting Cine 60's Battery Belt or Pack to the manufacturer's equipment. Cables with an (s) are 6' straight type, with a (c) coiled type, 1' retracted, 6' extended. The 1st number in the Run Time Chart, 4, 7, 8, 14, and 20 is the battery's Amp.-Hr. capacity. The number alongside it is the approximate hours of equipment run time using that battery capacity.

Equipment	Video Cable		Price	Approximate Hours of Run Time

Video Cable/Equipment Run Time Chart

Required Video Cable for connecting Cine 60's Battery Belt or Pack to the manufacturer's equipment. Cables with an (s) are 6' straight type, with a (c) coiled type, 1' retracted, 6' extended. The 1st number in the Run Time Chart, 4, 7, 8, 14, and 20 is the battery's Amp.-Hr. capacity. The number alongside it is the approximate hours of equipment run time using that battery capacity.

Equipment	Video Cable		Price	Approximate Hours of Run Time

Accessories

ED-18 Cell Module, 4.8V, 4AH. Used in 30V, 4AH and all 8AH belts. BP-90 and Hitch-Hiker camera batteries	\$ 65.75
1/2ED-18 Cell Module, 2.4V, 4AH. Used in BP-90 and 13.2V, 8AH belts	33.85
BD-17 Cell Module, 2.4V, 4AH. Used in 8 to 16V, 4AH belts	32.75
TD-35 Cell Module 3.6V, 4AH. Used in 4 and 8AH softbelts, OB batteries.	48.95
AA-69 Cell Module 1.2V, 4AH. Used in 8 and 13V, 4AH batteries	16.25
F-1 Cell Module 1.2V, 7AH. Used in all 7 and 14AH belts and packs	26.35
SF-1 Cell Module 1.2V, 10AH. Used in all 10 and 20AH packs	65.75
PB-8B ED-18 cell module box	5.00
PB-77 BD-17 cell module box	5.00
PB-2F F-1 cell module box. (For 2 F-1 Cell Modules)	5.00
NRT-1 Non-resettable thermal fuse	5.00
TS-1 Precision ceramic cell sensor	24.75
MRCB Manual reset circuit breaker	11.00
ARCB Autoreset circuit breaker	11.00
TOS1 Toggle switch	24.00
CIL-1 Charger indicating light	5.00
2AMP 2-Pin Amph. receptacle for 30V batteries	15.00
2CNN Cap and chain assembly for #2 Amp receptacle	9.00
C5F 5-pin XLR receptacle	13.00
C4F 4-pin XLR receptacle	13.00
RBBJ Red or black banana jack	5.00
RBBC Red or black insulating cap	2.00
RA4F 4-pin pre-wired connector for OB4-14 Camera Battery.	24.00
RA5F 5-pin pre-wired connector for OB5-14 Camera Battery.	24.00
C4MC 4-pin cable connector, male, XLR	9.00
C5MC 5-pin cable connector, male, XLR	9.00
C4FC 4-pin female cable connector, XLR	13.00
C5FC 5-pin female cable connector, XLR	13.00
CP2M 2-pin male cable connector for Sun-Gun	17.00
115C4 Replacement 115V built-in charger for 4AH and 8AH batteries.	116.00
115C7 Replacement 115V built-in charger for 7AH and 14AH batteries.	127.00
220C4 Replacement 220V built-in charger for 4AH and 8AH batteries.	116.00
220C7 Replacement 220V built-in charger for 7AH and 14AH batteries.	127.00
1120C4 Replacement 115/220V built-in charger for 4AH and 8AH batteries	165.00
1120C7 Replacement 115/220V built-in charger for 7AH and 14AH batteries	176.00
BD-B 13.2 and 14.4V, 4AH replacement battery belt housing, 8-pocket	138.00
BD-9 16.8V, 4AH replacement battery belt housing, 9-pocket	138.00
F-B 13.2 and 14.4V, 7AH replacement battery belt housing, 8-pocket	150.00
ED-B 30V, 4AH, 12 to 14.4V, 8AH replacement battery belt housing, 8-pocket	165.00
HTCH Replacement Hitch-Hiker™ camera battery housing only	\$ 95.00
(Does not include Anton/Bauer battery connector and stud base)	
HOB Replacement Hitch-Hiker "OB" type battery housing complete with Cine 60 Stud Base and 5 or 4-pin XLR (specify)	150.00

Note When ordering replacement parts, it is necessary to furnish with the part number, the catalog number of the battery belt or pack in which the part is used.

High drain, long life NiCad cell modules. Insulated with porous fish-paper to radiate cell heat more efficiently than plastic promoting longer life. Assembled with deep-seated spot welds to minimize "break-away" open circuits. Selected, graded, and matched.

Built-in charger. Precisely matches cell's impedance allowing more efficient conversion of charge current to stored energy in the cell rather than heat. This superior charge acceptance assures fully charged cells. Less heat promotes longer cell life.

Cine 60 Cells and Chargers are designed and matched to each other to provide optimum performance. Use of replacement cells other than Cine 60's is not recommended.

Battery belt housing. Multi-pocket design results in superior cell heat radiation. Allows cells to charge and discharge more efficiently than when clustered together in a block or pack battery. Also lengthens cell life.

Snaplok Mount

6700 Single-Action Snaplok, instantly and safely mounts camera antenna, or any portable device to a tripod, shoulder port, stand, truck, any flat surface. Double pushbutton release permits instant removal. Complete Snaplok Mount includes a precision machined aluminum alloy base, mating camera plate, two 3/8-16, one 1/4-20 mounting screws. Size 3/4" x 3 1/8". Wt. 17 oz. \$180.00

6700B Snaplok base only 160.00
6700A Snaplok camera plate only 33.00
67SS1 3/8-16 Mounting screw 4.00
67SS2 1/4-20 Mounting screw 4.00
6701 Same as 6700 but smaller size (5/8" x 1 1/2" x 4 1/4", Wt. 8 oz.)
 Double action type mount then "push to lock" 160.00
6701B Base only 144.00
6701A Plate only 27.00

Arri Camera Accessories

Battery Cables. Coiled, 1' (6' extended). Supplied with original molded plug and mating connectors to O.E.M. specifications.

6401S For Arri 16S. With 2 prong molded battery connector \$ 52.00
6401S5 For Arri 16S. With 5-pin XLR battery connector 69.00
6401M For Arri 16M. With 2 prong molded battery connector 59.00
6401M5 For Arri 16M. With 5-pin XLR battery connector 79.00
6401BL For Arri 16BL. With 4-pin XLR battery connector 93.00
6401BL5 For Arri 16BL. With 5-pin battery connector 95.00
6401SR For Arri 16SR, 35BL, 35-III cameras 95.00
6402V For Arri 35, variable speed motor. With 2 prong molded connector 52.00
6402V5 For Arri 35, variable speed motor. With 5-pin XLR connector . . 69.00
6402C For Arri 35, constant speed motor. With 2 prong molded connector 52.00
6402C5 For Arri 35, constant speed motor. With 5-pin XLR connector . . 69.00
6900 **Offset Motor Base for Arri 35 IIC or IIB.** A gear box providing a flat camera base and low center of gravity. Essential for professional tripod mounting. Mounts constant or variable speed motor 600.00
6900A As above but with built-in contacts for automatic clapstick . . 787.00
6504 **Focusing Device for Arri 35.** For uninterrupted easy follow focusing by camera man or assistant. Includes 3 lens scales and 3 gears B20.00
6910'C **Lens Mount Adaptor.** Precision machined lens mount permitting the use of Arri mounted lens on cameras with "C" mounts 192.00
6910B As above but for cameras with "Bayonet" mounts 192.00

Arri Camera Batteries

12V/2A. 2AH Arri SR Camera Battery. Totally compatible. No adaptor, special mounting or connections required. 2AH cells provided a 30% increase in run time. Can be charged with Arri SR Battery Charger or Cine 60 Dual Charger. Size 2 1/2" x 3 5/8" x 4 1/2". Wt. 2 lbs. \$357.00

O-NC2000 Dual Charger. Charges two 12V/2A batteries in 8 hours. Independent charge circuit and LED indicator for each channel. Automatic 115/220V operation. Size 2" x 3 1/2" x 4 1/2". Wt. 1 1/2 lbs. \$357.00

9707AOB Arri 35BL-3 "Flat Pack" Camera Battery. Slim 12V 7AH battery designed to mount inside the Arri Geared Head. Features two 5-pin XLR output connectors, Autoreset Circuit Breaker; Built-in 115V Overnite Charger; Charger Cable (in compartment); Charge Indicator, Charge/Operate Switch. Size 1 1/2" x 6 5/8" x 9 5/16". Wt. 7 lbs. \$765.00
Note 1. 9707AOB can be supplied with 4-pin XLR connectors on request.

9727HLSP Arri 35-III "Oouble Pack" Camera Battery. Provides two 12V 7AH outputs switchable at the camera to 24V for high speed operation. This battery is 2 complete and independent 12V 7AH battery systems totaling 14AH combined in one housing. Each with a 115V Overnite Charger which automatically disconnects each battery when full charge is reached; Charge indicator, and Autoreset Circuit Breaker to protect each battery against external shorts. With padded shoulder strap and hand grip. Size 4 1/2" x 8" x 10". Wt. 14 lbs. \$1119.00
9727FCHLSP As above but capable of being fast charged in 2 hours with 9400 Series Fast Chargers 121B.00
Note 2. 9727HLSP can be supplied with 4-pin XLR connectors on request.

20120HLSP Arri/Panavision "Double Pack" Camera Battery. Higher capacity model of 9727HLSP. Has two 12V 10AH 5-pin XLR outputs, switchable, total 20AH and two 24V 10AH 3-pin XLR outputs (not switchable) to run Panaflex Camera and associated video assist. Size 6 1/2" x 6 3/4" x 14 3/4". Wt. 22 lbs. \$1975.00
Note 3. 20-120HLSP can be supplied with 4-pin XLR connectors on request.

6900 Offset Motor Base

6401S Cable

6504 Focusing Device

Moviemcam Batteries

The original equipment batteries for the Moviemcam Camera. Equipped with 4-pin XLR, Selector Switch for 12V and 24V operation, built-in 115V Overnite Charger, Charge Indicator, Charge Cable, and Autoreset Circuit Breaker. Padded shoulder strap and hand grip supplied with battery pack.

6316 **Battery Belt, 12V 8AH/24V 4AH** Wt. 10 lbs. \$ 704.00
7016 **Battery Belt, 12V 14AH/24V 7AH** Wt. 14 lbs. 1065.00
9116 **Battery Pack, 12V 8AH/24V 4AH** Wt. 9 lbs. 737.00
9716 **Battery Pack, 12V 14AH/24V 7AH** Wt. 13 lbs. 1105.00
12-224 **Battery Pack, 12V 20AH/24V 10AH** Wt. 22 lbs. 1595.00

Direct Replacement for the OEM Anton/Bauer Snap-On® Batteries.

This premium quality battery features a rugged housing with air vents for life-extending lower charge/discharge temperatures, precision "Lifeguard" ± 5% cell sensors for more accurate charge control, and Cine 60 quality long-life NiCad cells. A built-in Autoreset Circuit Breaker protects the battery against external shorts. Mounts instantly without cables or connectors. Side-ribs in the housing assure non-slip handling. Can be charged directly with OEM Chargers. May also be charged with all Cine 60 Slow, Quick, and Fast Chargers (with BP3XF Adaptor).

Hitch-Hiker™ H-14 14.4V 4AH Camera Battery \$495.00
Hitch-Hiker H-13 13.2V 4AH Camera Battery 485.00
Hitch-Hiker H-12 12V 4AH Camera Battery 475.00
BP3XF Charge Adaptor. Snaps onto Hitch-Hiker or OEM's battery to permit charging with Cine 60 Chargers. 49.00

Direct Replacements for Cine 60 "OB" Newspak Batteries. Same features as "Hitch-Hiker" Camera Batteries but require "Shorty Cable" for connecting to the camera. Mounts onto Cine 60 "NMB" or Anton/Bauer Snap-On® OEM brackets. Can be charged directly with all Cine 60 chargers. May also be charged with OEM chargers (with BF3XM Charge Adaptor).

OB14-5 **14.4V 4AH Camera Battery.** Replaces all OB5-14 type Batteries \$435.00
OB14-4 As above but replaces OB4-14 Battery 435.00
OB-13 **13.2V 4AH Camera Battery.** Replaces all OB5-13 Battery 425.00
OB-12 **12V 4AH Camera Battery.** Replaces OB5-12 type Batteries 412.00
"Shorty" Cables. Required for connecting the OB Battery to the camera

SHB-6XC7 For Sharp XC-700 Camera 49.00
SHB-6400IKE For Ikegami HL-77 Camera 49.00
SHB-6406 For all Hitachi Cameras 49.00
SHB-6408 For all JVC "KY" and Sony BVP Cameras, Betacams 49.00
SHB-6471 For Ikegami HL79A-E, ITC-730 Cameras 49.00
SHB-6473 For Ampex BCC-14, BCC-20, Philips LDK-14 Cameras . . . 73.00
SHB-6476 For RCA TK-76, -A, -B, -C 160.00
SHB-6483 For Ikegami HL-83, HL-95 Cameras 63.00
NMB "OB" Battery Mounting Bracket. (Specify for which camera) 75.00
BJ3XM Charge Adaptor. Connects "OB" Batteries to Anton/Bauer OEM Chargers 45.00

Film/Video Camera Prompting Systems

CAMRAPROMPTER

**Complete Camera Prompting System
For 16mm Cine and ENG/EFP Video Cameras**

- Bright, easy-to-read script information. Copy "frame" size: •can be typed (bulletin-style) or handprinted on matte-finish 6 1/4" W x 5" H plastic rolls (7" W x 25' L)
 - Small remote control unit (with 10' detachable cable) provides continuously variable speed control (forward or reverse)
 - Ultra-silent, miniaturized motor drive
 - Power supplies: standard 12V battery packs or belts, as well as AC mains (with a 12V regulated power supply). 1.75A max. **
 - Side-mounted light source utilizes two standard fluorescent lamps (GEF4T5-CW)
 - Weight: Camraprompter unit (complete with universal camera mounting plate, adjustable bracket, remote control, scroll and cables) weighs approximately 9 lbs. 8 oz. (4.3kg.)
- ** Power supplies not included.

Mounted in a matte box-type enclosure, the Camraprompter* utilizes a clear acrylic optical flat set at a 45° angle in front of the camera lens. The optical flat acts as a mirror reflecting the bright, easy to read script to the subject being photographed, with virtually no light loss to the lens.

A side-mounted light source is used to back-light the script "scroll." The script copy can be hand-printed or typed (bulletin-style) onto the matte-finish clear plastic 25-foot roll which is advanced by means of an ultra-silent, miniaturized motor drive. (Optional script board/roller unit available for convenient and legible hand-printing).

A compact remote control unit provides continuously variable speed control (forward or reverse). The remote control unit may be operated by the "on camera" subject or by the person in charge of pacing the sequence (who is viewing the script roll from the side of the Camraprompter unit).

Camraprompter can be operated—tripod-mounted or handheld—with most portable motion picture and ENG/EFP cameras currently in use. (It can also be mounted and operated independently on its own stand).

Camraprompter is the ideal prompting system for news/documentary, educational or industrial assignments, as well as TV commercials and other applications shot on location.

* Patents pending.

Camraprompter

5P001	Camraprompter (complete camera prompting system for film and video cameras). Includes universal camera mounting plate	\$2950.00
5P000	Script "Scroll" (plastic, 7" x 25'). Spare roll	11.50
5P011	Script "Scroll" (vellum 7" x 60'). Replacement roll	13.00
5P003	Lamp (replacement fluorescent lamp, GE F4T5-CW)	12.00
5H020	Carrying case, for Camraprompter (only)	200.00
5P009	Scriptboard unit. (Script scroll feed roller assembly is not included)	150.00
5P008	Script scroll feed roller assembly, complete. Includes Spool (5P007) and Spindle (5P006), as spares	185.00
5P007	Script spool, as spare	65.00
5P006	Script feed roller spindle, as spare	120.00
5P005	Clear acrylic optical flat, as spare	30.00
5P004	Base plate with hardware, as spare	265.00
5J008	Extension cable (25'), for speed control box	110.00
5P010	Speed control box with 8' cable, as spare	175.00
5J009	Power cable (supply end uncommitted), as spare	70.00

CAMRAPROMPTER "L"

**Complete Camera Prompting System
For 16mm and 35mm Cine and Studio Video Cameras**

- Quick to set up and easy to operate
- Large, clear 8 1/2" x 11" script viewing area
- Matte finish plastic roll, 12 1/8" W x 25' L, on which copy can be typed, handwritten or computer printed
- Compact remote control unit (with detachable cable) provides continuously variable speed control (forward or reverse)
- Silent, miniaturized motor drive
- 6" x 6" Filter and matte holder
- Power supplies (not included): 12V battery packs or belts, as well as AC mains (with a 12V regulated power supply). Under 2A
- Side-mounted light source uses two standard fluorescent lamps (GE F8T5-CW)
- Weight: Camraprompter "L" unit (complete with Universal "L" Mounting Plate Assembly, remote control, script scroll, scroll roller assembly, and cables) weighs approximately 21 lbs. (9.5kgs)
- Unit may be quickly disassembled into three pieces which pack into a compact case (purchased separately)

The Camraprompter "L" is designed to accommodate larger camera systems than the original Camraprompter. Lighter, more portable and lower cost than conventional prompting systems, it operates easily with handheld 35mm film and electronic cinematography cameras, as well as 16mm film and ENG/EFP and compact studio video cameras.

The clear acrylic optical flat is set at a 45° angle in front of the camera lens in a mattebox-type enclosure. The subject being photographed can easily read the script on the flat which acts like a mirror, clearly reflecting the text.

The script "scroll" is available in a 25-foot matte finish plastic roll, or a lighter gauge material, such as vellum, may be used. It is back lighted by a side-mounted light source. Script copy can be hand-printed, typed with a prompting typewriter, or computer printed onto the scroll. A silent, miniaturized motor drive advances the script "scroll".

Camraprompter "L"

5P300	Camraprompter "L" (Complete camera prompting system). Includes Universal "L" mounting plate	\$3600.00
5P305	Script "Scroll" (plastic, 11 7/8" x 35'). Spare roll	18.00
5P012	Script "Scroll" (vellum 11 7/8" x 60')	25.00
5H300	Carrying case for Camraprompter "L" system	250.00

NOTE: Power supplies are not included. Camraprompters require a standard 12V battery pack or belt, or 12VDC regulated power supply.
Prices F.O.B. Factory (Los Angeles).

CINEMA PRODUCTS CORP.

Zoom Control Systems

J-6

J-6 Joystick Power Zoom Control

• Compatible with major professional 16mm, 35mm film cameras, the EC-35 electronic cinematography system, and several EFP video cameras • Operates off internal 12V rechargeable battery or external power of 10VDC-35VDC from the camera head • Provides variable zoom rates from 2 seconds to 30 minutes • Highly responsive Joystick-type sliding thumb control provides logarithmic speed variation (from zero to maximum) in direct response to thumb position • Gradual start/stop system permits extremely smooth precision feathering of the zoom throughout the speed range • Speed rate dial; limits maximum rate of the zoom motor from 2 seconds to 3 minutes per revolution • Field serviceable. The J-6 is easily tested with a standard voltage meter. All parts are standard. I.C.'s (in plug-in sockets) can be replaced without a soldering iron • A pair of zoom direction LEDs blink for positive indication when operating at very slow zoom rates up to 30 minutes • 20X speed fast return button provides for quick return to mark • Direction-reversing toggle switch assures easy motor mounting and realignment with sliding thumb control • Bright LEDs indicating: Low voltage and motor on/off • Convenient camera run on/off switch • Optional VTR start/stop, and return video switches • Highly reliable solid-state electronics featuring LVD transformer (a ceramic core moving within a magnetic coil) eliminates all microswitches, cams and pots. No potted "mystery" modules • Plug-in cables for easy replacement • Highly rugged contoured aluminum case with all controls and connectors recessed • Perfect partner for J-4 and J-5 Zoom Motors

J-5 Handgrip Servo-Zoom Control & Motor

- 2C302** J-6 Joystick/J-5 Motor Power Zoom Control package complete with J-6 self-contained joystick control with rechargeable battery, battery trickle charger, J-5 Zoom Servo Motor, and J-6 Control to J-5 Motor Cable. **\$2,625.00**
- 2C300** J-6 Joystick Power Zoom Control, as spare. Complete with built-in rechargeable NiCad battery, and J-6 Battery Trickle Charger **1,750.00**
- 2C162** J-6 Battery Trickle Charger, as spare. Recharges internal NiCad battery in 14 hrs. Capable of either 120VAC or 240VAC, 50/60Hz operation **90.00**
- 2C320** J-6 Service Tool Kit **100.00**
- 2E263** Tripod handle mounting clamp. Clamps to J-6 to tripod pan handle. **180.00**

J-6 Motor Cables

- 2J223** J-6 control to J-4 motor cable **\$135.00**
- 2J224** J-6 control to J-5 motor cable **135.00**
- 2J225** J-6 control to Heden motor cable **135.00**

J-6 Camera Cables

Note: The J-6 may be powered either by its own internal battery, or from the camera battery. Unless otherwise indicated, cables listed below provide 2 functions, auxiliary power for the J-6 from the camera, and camera remote start/stop from a button on the J-6.

- 2J230** J-6 Camera Cable for Arri 35BL, 35III, and 16SR, (11-pin Fischer connector) **\$150.00**
- 2J231** J-6 Camera Cable for Arri 16SR, and 35III, (4-pin custom connector) **165.00**
- 2J232** J-6 Camera Cable for Arri 35BL, (6-pin Lemo connector) **160.00**
- 2J233** J-6 Camera Cable for Moviecam **160.00**
- 2J234** J-6 Camera Cable for FX35 **140.00**
- 2J235** J-6 Camera Cable for CP-16R, GSMO **140.00**
- 2J236** J-6 Camera Cable, unterminated **120.00**
- 2J237** J-6 Auxiliary Power Cable, with Banana connector **120.00**

J-5 Handgrip Power Zoom Control

- 2G105** J-5 Handgrip Servo-Zoom Control and Motor for GSMO and CP-16R. Includes pover cable (2J119) and motor cable (2J218). Note: For use with GSMO, add 1L009 Mounting Plate **\$1,850.00**
- 2J218** J-5 Motor Cable, as spare (Note: Can also be used as a spare for CL-3 Cable 1J160) **120.00**
- 2J219** J-5 Power Cable, as spare **120.00**
- 2J222** J-5 Remote Operation Cable Set (4 1/2', includes 2J220 and 2J221 Power and Motor cables **275.00**
- 2J220** J-5 Long Power Cable, for remote operation (4 1/2') as spare **140.00**
- 2J221** J-5 Long Motor Cable, for remote operation (4 1/2'), as spare. **140.00**
- 2G132** J-5 Control-to-J-4 Motor Adaptor. Permits J-5 Control Handle (2G225) on CP-16R to drive J-4 Motor (2C123). Requires J-5 Motor Cable (2J218). **70.00**

J-5 Motor Bracketry (Motor to Lens)

- 2H133** J-5 Bracketry for Angenieux 10-150mm **\$275.00**
- 2H115** J-5 Bracketry for Angenieux 9.5-95mm or 12-120mm **275.00**
- 2H125** J-5 Bracketry for Angenieux 9.5-57mm **275.00**
- 2H145** J-5 Bracketry for Angenieux 12-240mm **300.00**
- 2H100** J-5 Bracketry for Angenieux 17.5-70mm **240.00**
- 2H232** J-5 Bracketry for Zeiss 10-100mm T2 **300.00**

J-5 Zoom Motors and Accessories

- 2C123** J-4 Servo Motor, as spare (without D clamp) **\$950.00**
- 2G146** J-5 Servo Motor, as spare **825.00**

NOTE: Bracketry is not included with J-5 or J-6 zoom controls, or with J-5 motor. The same servo motor can be used with different lenses by ordering the appropriate bracketry.

CINEMA PRODUCTS CORP.

Stabilizing System

Steadicam Camera Stabilizing Systems (Universal Model III) for Film and Video Cameras

• Total mobility and portability • Double-jointed stabilizer support arm freeing the arm to move 360° horizontally from the elbow • Cameraman can change support arm from one side of the vest's front plate to the other, allowing left or right hand operation • Operator safety ensured by pin and cone quick-release system • Single Steadicam can be used interchangeably with most handheld 35mm, 16mm and video cameras with no interface

All Steadicam (Universal Model III) systems include:

• Operator's vest • Stabilizer support arm (adjusted for an average camera weight load) • Camera mounting assembly (featuring a 3^{3/4}" high-intensity adjustable viewing monitor) • Camera mounting platform • Two (2) NC-12 NiCad battery packs • Two (2) NCC-12 chargers • West docking bracket • Three cases (accommodating the camera operator's vest, stabilizer support arm, camera mounting assembly, and related accessories)

- 3C015** Steadicam (Universal Model III) with adjustable standard-load stabilizer arm. For use with film and video cameras weighing up to 40 lbs. **\$38,500.00**
- 1C007** Steadicam (Universal Model III) with adjustable light-load stabilizer arm. For use with film and video cameras weighing up to 30 lbs. **\$38,000.00**

NOTE: For most 16mm cameras and EFP video cameras use 1C007. To use Steadicam interchangeably in all formats substitute or adjust the stabilizer support arm and servo control system.

Steadicam Stabilizer Support Arms

- 1L144** Adjustable standard-load stabilizer arm, as spare. May be adjusted in the field. For use with cameras weighing up to 40 lbs. Features include: adjustable springs, articulated elbow, and quick right/left hand connecting system. **\$13,000.00**
- 1L151** Adjustable light-load stabilizer arm, as spare. Features are same as adjustable standard-load arm (1L144) but for cameras weighing up to 30 lbs. **\$12,500.00**

Power Supplies For All Versions Of Steadicam (Universal Model)

- 1K216** Battery pack — NC-12 **\$ 525.00**
 - 1K217** Charger — NCC-12, for above. Overnight charge **425.00**
 - 5K214** Quick charger — NCQC-12. Charges NC-12 battery pack (S/N #709000 and above) in approximately 35 minutes. NCQC-12 Quick Charger is supplied in integral carrying case which features 2 charge wells **4,000.00**
- NOTE: The NCQC-12 Quick Charger will charge NC-12 Battery Packs (with serial numbers below #709000) overnight.

35mm Modifications and Accessories

- 3G141** CP/Arri 400' magazine modification, for customer supplied magazine **\$2,000.00**
- 3J184** Power cable for CP/Arri 35 2C, as spare **400.00**
- 3J185** Power cable for Arri 35 III, 35BL, and 16SR. **400.00**
- 3H100** Case for 2 CP/Arri 400' magazines, as spare. **200.00**
- 3J183** Switch cable, for Arri 35BL/Steadicam, as spare **200.00**

Accessories for Steadicam

- 3L140** Steadicam Universal Model III Camera Operator's Vest. Features removable washable pads and "pin-and-cone" parachute-style, quick-release system **\$4,250.00**
- 3M000** Low mode cage, for use with most portable film or video cameras and existing Steadicam **600.00**
- 3M005** Low mode bracket, for use with Arri 35BL and existing Steadicam. **550.00**
- 3M007** Robings J Bracket, required for use with low mode cage (3M000 or 3M005) and existing Steadicam. **150.00**
- 1L260** Camera mounting plate for CP-16R/Steadicam, as spare **100.00**
- 3M001** Camera mounting plate for Moviecam/Steadicam, as spare **385.00**

Steadicam

3M000

- 3M003** Camera mounting plate for Arri 16SR/Steadicam, as spare **\$100.00**
- 3M004** Camera mounting plate for Aaton/Steadicam, as spare **100.00**
- 3M002** Camera mounting plate for Sharp XC-700/Steadicam, as spare **300.00**
- 3M010** Camera mounting plate, multi-purpose for many portable video cameras **100.00**
- 3M008** West Docking Bracket, permits camera mounting platform portion of Steadicam to be mounted on existing lighting stand (5/8" stud) when not in use by operator **225.00**
- 3M009** Wheelchair Mount, permits Steadicam arm to be mounted to moveable or fixed objects **800.00**
- 1L417** "Compact Vehicle" Kit Model III — Ideal for use with Steadicam while shooting in tight quarters, inside a vehicle (helicopter, small airplane and boat, compact car, etc). **675.00**
- 5L100** Garfield Adaptor, mounts existing Steadicam arm to dolly or tripod **750.00**
- 1J273** Ground Strap (for camera mounting plate), as spare **10.00**
- 1J240** Coaxial Cable, 30' length, with terminations to power supply unit and monitor **40.00**
- 3M020** Steadiworm accessory. Facilitates precision left/right balance of camera mounting assembly. Provides fingertip control for rotation of the electronics module **675.00**
- 3M011** Clamp plate assembly for Arri 35BL **300.00**
- 3M022** Clamp plate assembly for Ikegami HL-79 **475.00**
- 3M024** Standard clamp plate assembly, as spare **300.00**

Steadicam Cases

- 3H300** Hard case for Steadicam camera mounting platform **\$475.00**
- 3H302** Soft case for stabilizer support arm. Conveniently made to fit inside of vest case **60.00**
- 3H301** Soft case for Steadicam vest **150.00**

WRC-3A Wireless Lens Control System

- Provides convenient radio control of focus, iris and zoom functions on motion picture and video zoom lenses
- Battery powered system eliminates the need for physical contact between the camera assistant and camera, enhancing flexibility of shooting positions
- Ideal for dolly, crane, or Steadicam shots
- Handheld transmitter features individual dual control knobs
- JB-3 junction box mounts on the shooting camera and permits use of the WRC-3A system when not being used in conjunction with Steadicam
- Universal motor mounting bracketry allows WRC-3A servo-motors to be mounted off of the Steadicam Camera Mounting Plate, so that the lens is free of the motor weight
- This system of support tubes and clamps may be used with most camera/lens combinations

1S306	3-Channel Wireless Servo-Control System Includes WRC-3A 3-channel wireless servo-control transmitter (1S300); RCR-3A 3-channel receiver (1S301); RCR-3A to programmer cable (1J200); NC-4 battery pack (1K152); NCC-6 charger (1K161) NOTE: Add appropriate Motors/Bracketry Kit . . . \$4,000.00
5S306	3-Channel Wireless Servo-Control System for Video Cameras Please specify Fujinon, Canon or Angenieux Lens. Same components as 1S306. \$4,125.00
1S350	Universal Motors/Mounting Bracketry Kit (Video or film cameras). Includes: two (3S400) LM-3 servo motors; two (1S351) long Motor Mounting Brackets for 1/2" rods; two (1S358) 1/2" Main Support Rods. NOTE: For use with wireless or cable operated servo control systems. \$3,000.00
5S350	Universal Motor/Mounting Bracketry Kit (Video or film cameras). Includes: one (3S400) LM-3 servo motor; one (1S351) long Motor Mounting Bracket for 1/2" rod; one (1S358) 1/2" Main Support Rod. NOTE: For use with wireless cable operated servo control systems \$1,500.00
1S300	3-channel wireless servo-control transmitter, as spare. Model WRC-3A (includes antenna). \$3,000.00
1S301	3-channel wireless servo-control receiver. Model RCR-3A (includes antenna). \$900.00
3M006	Junction Box (JB-3), permits WRC-3A 3-channel wireless control to be used with most film camera/lens combinations when Steadicam is not in use \$450.00
3S400	CP LM-3 Servo Motor, high-torque with two operating ranges. Includes: installed idler gear, servo assembly potentiometer and cable \$1,400.00
1S345	Heden Servo Motor. Includes: installed idler gear, servo assembly and potentiometer with cable (1J260) \$1,850.00
1J260	Cable, for focus, zoom or iris motor. NOTE: For use with Cinema Products' servo motors only \$120.00

1S306/1S350/3M006

1S347	Heden Motor Kit for focus, iris, or zoom. Provides Idler gear and potentiometer so that customer may convert existing motor to be used with Cinema Products WRC-3A. Does not include mounting bracketry or lens gears \$1,000.00
1K152	Battery pack — NC-4 \$160.00
1K161	Battery charger — NCC-6 (for use with NC-4 battery pack) \$70.00

Servo-Control Universal Motor Mounting Bracketry, (as spares)

1S358	Universal main support rod, 1/2". Mounts onto Steadicam clamp plate \$ 40.00
1S351	Motor support bracket, long. Clamps around motor and 1/2" rod \$140.00
1S352	Motor support bracket, short. Clamps around motor and 1/2" rod \$110.00
1S353	Parallel rod clamp. Permits "stacking" of 2, 1/2" tubes \$110.00
1S354	Parallel rod adaptor clamp. Adapts 5/8" rod to 1/2" \$110.00
1S355	Parallel rod adaptor clamp. Adapts 15mm rod to 1/2" \$110.00
1S356	Parallel rod. 2" long, 1/2" dia. \$30.00
1S357	Parallel rod. 4" long, 1/2" dia. \$30.00

CM-1

4 Input Professional Microphone Mixer

- A nonvisual distortion control system for one-man camera/sound work
- 12V phantom power for shotgun mikes, switchable for any or all four channels
- Low cut roll-off equalization down 12dBs at 50 cycles, switchable for any or all four channels
- 1000 cycle sine wave tone for lineup. Level adjustable internally
- VU meter which also reads battery condition
- Four balanced microphone inputs. 50 to 250 ohms XLR connectors
- Output in up position: Line output 600 ohms. In down position: Balanced output mike-level 10mV
- Phone plug headset output will accept any impedance from 8 to 400 ohms. Slotted screw adjusts headset volume to comfortable listening level
- Separate twist lock battery compartment allows 30 sec., no harness battery change without exposing electronic circuitry
- Strap brackets for over-shoulder operation
- External power input
- Four individual audio channel controls
- Peak level indication LED: Adjustable to activate at the distortion point or any other desired head room level point before distortion

The CM-1 Mixer was specifically designed to fill requirements which were not satisfied by existing equipment in the TV and motion picture industries. It is ideally suited for one-man camera and sound operation as well as conventional use for ENG and film work. The CM-1 Mixer is a nonvisual distortion control system for one-man camera and sound work. For audio level control without VU meter monitoring, this system provides a distortion-free output to a film or video recorder at a consistent level for best audio without utilizing automatic level control. The CM-1 processes the last audio stage of the amplifier before recording through a clipping circuit which induces easily detected distortion in the headset circuit only. This distorted audio is actually 12dBs before the level at which distortion will occur on the tape. By reducing gain until this distortion is not heard in the headset, the operator restores his 12dBs of head room before audio quality is affected on the tape.

Specifications

- Frequency Response:** 40 to 18,000KC ± 1dB
- Power System:** An extremely versatile power system designed principally to draw power from external sources such as Nagra, ENG camera systems, or any power source 9 to 20VDC with plus or minus ground. The system provides that, if the external source fails or drops below the voltage of the internal 9V batteries, these batteries will automatically take over and supply power without any down time.
- Power Consumption:** 26mA with no phantom power. 7mA additional draw for each channel supplying phantom power.
- Size:** 6.5" x 2" x 3.5"
- Weight:** 31 oz.
- CM-1**\$977.00

Modifications Available for the CM-1 Mixer

- Additional mike level output mini-jack below output selection switch\$30.00
 - Turn all XLR connectors 180° (for use with right angle plugs)NC
 - Phantom power 12V pin 1-, 2+, pin 3+35.00
 - Requires extra switch in battery compartment to switch manually from internal power to external power with positive ground. In the external position, the batteries only supply power to the microphones.
- For Each or Every Input**
- Reversed AB powerNC
 - Input switchable to line level instead of mike power. . . \$25.00
 - Balanced 10dB attenuator in front of input transformer rather than mike power20.00
 - Power connector changed to XLR 4-pin male attached to the side of the mixer.25.00
 - When ordering modifications at a later time, add \$45.00.

Power Supply for 12V Microphones

- Metal-cased power supply
- True balanced in- and outputs
- Twistlock battery cover for rapid battery change
- Activated by a slide switch
- 10dB attenuator and low cut 1dB to 100Hz, 12dB at 30Hz and a phasing switch
- 12V phantom, 12V AB and 12V AB reversed (red dot)
- Built-in battery and cable tester

To test cables, simply connect input to output. LED lights dim or blacken when battery levels are low. LED lights indicate a broken shield, individual broken wires, or reversed phasing.

The unit automatically switches off when microphone is unplugged. Uses two standard 9V batteries. Belt hook included.

Power Supply for 12V Microphones\$175.00

CDI-716A**Microprocessor-Based Time Code Generator**

• Microprocessor-based for future upgrades • Operational parameters and preset easily loaded via front panel • Generates SMPTE, EBU or film code formats • All frame rates • Multi-function jam-sync • Jam-sync coding with user selectable offsets • Generates 4-field NTSC RS-170A or 8-field PAL color code • Internal time of day clock • Selectable SMPTE "Phase Bit" • Programmable operation modes from front panel • Non-volatile memory on user presets and set ups

Specifications

Video Input	
Loophrough:	.5V to 2V, 75 ohm not terminating Black burst composite sync
Color Field ID:	Field ref pulse line 3 to line 20 field 1
Tachometer Input	
Frame Rate:	X1 through X256 per frame
Code Output	
SMPTE/EBU or	
Film Standards:	.5V to 2V p-p, factory set 1V p-p
Jam Code Input	
SMPTE/EBU or	
Film Standards:	300mV to 10V p-p
Rate Output	
2X Frame Rate Tone:	.5V to 2V p-p Factory set 1V p-p
Power:	115V/230V, 50/60Hz
Dimensions:	1 ³ / ₄ "H x 19"W x 14"D Rackmounting ears
CDI-716A	\$2650.00

**CDI-735L Time Code Reader
With Front Panel LED Display**

• Decodes 30-frame SMPTE and 25-frame EBU code formats • Eight-digit front panel display selectable for time or user data • Error bypass eliminates faulty readings by replacing defective code with sequentially correct code • Frames-delete function for uncluttered viewing • Hold for capture of edit points • Wide range decoding and high sensitivity front end • LED time or user data readout • Single rack unit

Specifications

Code Input	
Amplitude:	10mV to 10V p-p
Bandwidth:	1/30 to 80X play speed
Impedance:	10K ohm, balanced, 3-pin XLR connector
Reshaped Code Output	
Format:	Same as input, reshaped
Amplitude:	+ 4dBm in 600 ohm, 3-pin XLR connector
Risetime:	Selectable 25 μ sec/50 μ sec
Controls:	Time/user select Display freeze Frames delete
Indicators:	Drop frame Color frame Data present Error
Options:	Serial RS-232/422 data output Parallel BCD data output
Power:	115V or 230V
Dimensions:	1 ³ / ₄ "H x 19"W x 14"D

CIPHER DIGITAL, INC.**Time Code System/Synchronizer Controller****CDI-750 Time Code System**

• Extended sync source selection • Reads longitudinal time code from 1/30th to 80 times play speed • Built-in time-of-day clock • Microprocessor based, software controlled • Programmable jam sync mode operation • Instant selection of 24, 25, 30 or Dropframe Time Code • Two 8 digit LED displays showing reader and generator time code • Clustered Key Switches "operator friendly" • Memory Retention of set-up on power loss • Fully positionable video inserter • Meets both SMPTE and EBU longitudinal time code specifications, including time date, user data, status bits and drop frame or color frame indicators • Accepts color field I.D. pulse required for color video editing • Recognizes 4-field NTSC and 8-field PAL encoding standards • Time base selectable between external video sync or internal crystal reference • Generates a two-times frame rate sine wave output for resolver applications • Generates "burst" and "continuous" time code formats • Full-featured video keyer with two separate outputs and four character sizes • Configured with opto-isolators or optional Form C relays • 16 programmable, time code operable general purpose interfaces control studio or special effects equipment with frame-accurate timing • Communicates with or controlled by a computer via its RS-232/422 computer interface • Fully compatible with the SOFTOUCH™ Audio Editing System

The reader and generator can be individually tailored to immediate needs, while the system's state-of-the-art software controls make it readily adaptable to future enhancement.

Specifications**CODE INPUT**

Amplitude:	10mV to 10V p-p
Bandwidth:	80 bps to 192K bps
Impedance:	10K ohm balanced on 3-pin XLR connector

CDI-4800**Shadow II Synchronizer Controller**

• Typically interlocks in a two to four seconds in play • Exclusive chase mode maintains strict interlock even when the master machine is in fast forward or rewind • Wide Band reader assures time code readability from 1/50th to 80 times normal play speed • At higher wind speeds, the Shadow II utilizes available tach pulses to maintain synchronization until head contact is made again • Interchangeably locks to code, video sync and 50/60Hz tone • A unique software "filter" can eliminate wow and flutter transfer for the smoothest, most stable lock possible in any application • Specifically designed for direct computer interface • RS-232C/RS-422 interface control makes it compatible with video/audio editing systems, mixdown consoles and virtually any computer device, including personal computers

Its powerful internal microprocessor enables the Shadow II to dynamically learn the control characteristics using SMPTE/EBU standard time code as the reference, optionally augmented by an external sync signal, the Shadow II continually adjusts a transport's capstan speed to keep it accurately synchronized to another transport within 1/100th of a frame (1/3000th of a second). When multiple Shadow IIs are connected in a series, numerous transports can be interlocked to a Master transport.

Use a Softouch or Shadowpad controller with Shadow II, for additional power of transport control. Along with standard transport motion and autolocation commands, this power includes offsets up to 24-hours, selection of the speed and type of transport interlock, subframe-accurate record and mute commands, time code and offset memory.

Specifications**SYNCHRONIZATION TOLERANCES**

Accuracy:	± 50µs
Resolution:	± 0.5µs
Transport Speed:	1/50 th to 80 times play speed
Normal Lock Rate:	1/2 play speed or 2x play speed
Slow Lock Rate:	18 subframes/sec. to 15 frames/sec., selectable
Typical Lock-Up Time from Stop:	2-5 sec.

**CDI-750****RESTORED CODE OUTPUT**

Format:	Same as input, reshaped, retimed
Amplitude:	+ 4dBm into 600 ohm 3-pin XLR connector
Risetime:	Selectable 25µs/50µs (internal selection)
Amplitude:	Preset 1V p-p, adj. .5V to 2V p-p

VIDEO INPUT

Format:	NTSC, PAL, SECAM composite video
Level:	0.5V to 2.0V p-p
Impedance:	Non-terminated, bridging, BNC connector

CODE OUTPUT

XLR connector, SMPTE/EBU standards, Factory set 10PK to PK, adj. .5V to 2V

RATE OUTPUT

2x XLR connector, Frame rate (Format C), SMPTE/EBU standards, Factory set 1V p-p, adj. .5V to 2V p-p

VIDEO OUTPUTS (2)

Format:	Same as input with Time/User characters from reader, generator or both
Level:	1.0V p-p (adjustable)
Impedance:	75 ohm unbalanced, BNC connectors, Keyer black & white, Level internally adjustable

CDI-750 \$3995.00

**CDI-4800****INPUTS****MASTER AND SLAVE**

Time Code:	24/25/30 frames/sec. and Drop Frame
Auxiliary:	50/60Hz

Command Indication (tallies):

Active low/variable threshold

Direction Sense:

Floating logic input

Tach Frequency Range

Play:	> 4Hz
Maximum Wind Speed:	< 2.5kHz

OUTPUTS**MASTER AND SLAVE**

Commands: Opto-isolated open collector

SLAVE ONLY**Capstan Speed Override**

Voltage Output (1x): 12V max. swing within ± 12V range

OUTPUTS**SLAVE ONLY**

Voltage Output (2x): 30V, 15V max. swing within ± 30V range (user supply required)

Frequency Output: 45Hz-40kHz floating TTL compatible

SPECIAL INPUTS**Video Reference Input:**

Nominal impedance—1M ohm or 75 ohm, switch selectable

Video Reference Types:

Composite sync, vertical drive, black burst, color bars, composite video

CDI-4800 Shadow II Transport Synchronizer \$3395.00

CIPHER DIGITAL, INC.

Editor Interfaces

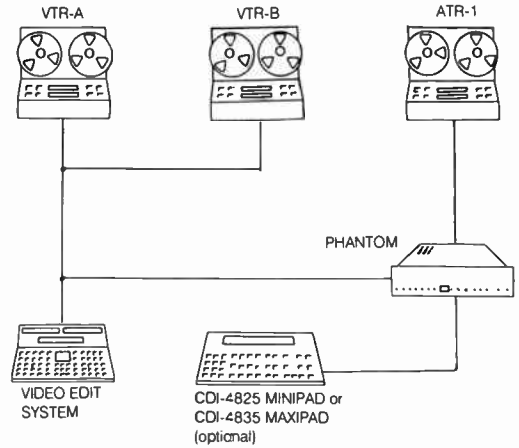

CDI-4810 Phantom VTR Emulator

- Interfaces Video Editing Systems to Audio Transports
- RS-422 in • Parallel out • Compatible with Ampex, Sony and other protocols (Selectable from an externally accessible dip switch)
- Event Controller (x4 Events)
- Interface with Shadowpad Mini and Shadowpad Maxi

The Phantom Emulator accepts information from the video editing system via the RS-422 interface and provides parallel information to the audio transport. In addition, you can use it to control U-Matic type VCRs to video editing systems designed for 1" VTRs.

Designed around a high speed microprocessor, the Phantom also provides control of up to four events. It can interface with the 4835 Shadowpad-Maxi to provide event control and offset entry as well as external control of the slave transport if required.

Specifications

- Mechanical:** Dimensions: 3 1/2" H x 17" W x 13" D, rack-mountable
Weight: 16 lbs.
 - Electrical:** Voltage—115/230, switch selectable
Frequency—50/60Hz
Power—40W (typical)
 - Standard Accessories:** Power Cord
Instruction Manual
- CDI-4810** \$2550.00

CDI-4825 Shadowpad-Mini Offset Controller

- Enter offset register information to the Shadow II Transport Synchronizer
- RS-232 Communications
- Highly Legend Display
- Control of System Registers
- Offset Control

The Shadowpad-Mini allows you to enter offset register information and recall and modify system register information. Plus it enhances the power of the Shadow II Transport and can be used with both the 4700 and 4800 Shadows.

Primarily developed to control offset between transports, the Minipads keyboard display provides status information of the Shadow II and transports connected to it. The Minipad keyboard allows such features as trim, recall, retard, store, advance, message, and display modes.

CDI-4825

Specifications

- Mechanical:** Dimensions: 2 3/4" H x 6 1/2" W x 8 1/2" D
Weight: 2 lbs.
 - Electrical:** + 8VDC from Shadow II
 - Standard Accessories:** 20' Interconnect Cable
Instruction Manual
- CDI-4825** \$695.00

CDI-4835 Shadowpad-Maxi Controller

- Team it with the Shadow II Transport Synchronizer
- RS-232 Communications
- Independent Transport Control
- Highly Legend Display
- Control of System Registers
- Full Function Keypad
- Offset Control

The 4835 gives the operator complete control of the Shadow II's information display. Plus the full function keypad displays status and operation of the Shadow II and transports connected to it.

Independent transport control, speed, type of interlock and modification of slave offset parameters are just a few of its extended features.

CDI-4835

Specifications

- Mechanical:** Dimensions: 2 3/4" H x 11" W x 8 1/2" D
Weight: 2 lbs.
 - Electrical:** + 8VDC from the Shadow II
 - Standard Accessories:** 20' Interconnect Cable
Instruction Manual
- CDI-4835** \$995.00

CIPHER DIGITAL, INC.

Audio Edit Controller/TC Generator/Reader

CDI-4890 Softouch-PC Audio Editing Controller

- Simplifies and controls time-code applications. Facilities generating or reading both SMPTE and EBU standard longitudinal or VITC code in choice of 24, 25, or 30 drop-frame format
- Regenerating code or jam syncing code eliminates drop-outs or "patch work" code easily and quickly
- Allows optional triggering of events with frame-accuracy, so special effects cart machines and other studio equipment can be easily brought into the editing process
- Supplies a time-adjustable beep tone for cueing talent
- Permits "hot" or preprogrammed record "punch in" for frame-accurate "on the word" edits and overdubs
- The preview function is a valuable tool, enabling review of edit decisions without recording

The Softouch-PC's power comes from its ability to streamline the audio editing process. Its range of memory functions speeds up editing sessions and helps eliminate costly errors.

Sixteen Softkeys™ permit repetitive or intricate pre- and post-production editing routines to be executed at the touch of a single key. Any command or routine that can be executed manually on the Softouch keyboard can be done automatically with Softkeys. Set up each Softkey to perform a single task, string together multiple tasks or multiple Softkeys, even perform calculations and carry messages and prompts for the operator. Plus, the Softkey sequences can be modified, erased or replaced at any time.

Loop Memory provides the flexibility to define, modify and save all pre- and post-roll data, beep-tone setting, trim, mark in/out and record in/out data for up to 100 loops at one time. Choose to cycle through any individual loop, or execute complex assemblies with a minimum of key-strokes. Additional "scratch-pad" memory (to store edit points) is yet another feature of Softouch's intelligence. A virtually maintenance-free internal battery preserves the programmed keys when the unit is shut off.

As more powerful microprocessors and memory modules become available, Softouch will support them. Standard personal computer operating systems techniques are also employed to allow for integration of a wide variety of future studio-related products. The Softouch-PC's architecture ensures that system functionality can expand at a pace consistent with the latest technical advances in sound recording, engineering, producing and editing.

Softouch-PC

Specifications

Interfaces:	Four Communications Ports: 3 Shadow II (4700 or 4800) 1 CDI-750 or Cypher

CDI-4890	\$2195.00

CDI-735V Time Code Reader with Video Character Inserter

- Decodes 30-frame SMPTE, 25-frame EBU and 24-frame film formats
- Frame-accurate, wide-speed decoding from 1/30th to 80 times play speed
- Multi-function video character inserter. Switchable to display time or user data. Full-raster positioning via "soft control". Multi-size characters. Remote keyer control
- Unique error bypass eliminates faulty readings by replacing defective code with sequentially correct code
- Front panel frames and mask control
- Reshaped code output to feed edit computer
- Front panel and video display of drop frame and color frame modes
- All set-up parameters stored in nonvolatile memory
- High sensitivity front end

Designed around a high speed microprocessor, this time code reader allows error-free, frame-accurate decoding of time and user data. Plus it has a multi-function integral video character inserter that supplies a monitor display of combined code information superimposed over program video.

The CDI-735V is ideal for generating "burned in" workprints.

Specifications

Code Input	
Amplitude:	10mV to 10V p-p

Processors/Controllers/Limiters

TVS-3001 Studio Audio Controller

- Input sync suppression filtering • Stereo input phase reversal correction • Linearized +30dB AGC range capability • Improved CBS loudness controller • Audio asymmetry removal • On-board pink noise generator • Full functional metering • L/R or L+R/L-R outputs

The TVS-3001 is a state-of-the-art MTS stereo television processing system that offers maximum control of the audio program material. Many features not found on other MTS processing systems have been incorporated, eliminating the need for additional product purchases. When combined with the TVS-3002 Limiter/Generator, the ultimate MTS audio control and stereo generation system is formed.

TVS-3001 \$4595.00

TVS-3002 MTS Audio Limiter/Generator

- L/R or L+R/L-R inputs • 20dB input AGC range • Program controlled stereo enhancement • Variable transfer function pre-emphasis limiting • Sync input/video sync separator • Digitally synthesized stereo signal generation • Advanced 15.734kHz input filtering • Factory dbx® encoding • Improved dbx noise reduction • Full function and diagnostic metering • On-board Bessel tone calibration generator

The TVS-3002 combines a state-of-the-art digitally synthesized MTS Generator with new generation limiter concepts to provide a complete stand-alone stereo television audio system. This allows the station to transmit MTS programming with minimal expenditures of time and money.

TVS-3002 \$5995.00

TVS-3004 Professional Channel Generator

- Crystal controlled digitally synthesized subcarrier generator with audio processing and separate data input facilities

TVS-3004 \$1695.00

TVS-3010 MTS Audio Processor/Limiter

- Compatible with any MTS generator • Linearized +30dB AGC range • Program controlled stereo enhancement • Variable transfer function pre-emphasis limiting • Improved CBS loudness controller • Input sync suppression filtering • Stereo input phase reversal correction • Selectable pre-emphasis/de-emphasis • Peak limiting • Full functional metering • L/R or L+R/L-R outputs

The TVS-3010 combines all the features and circuitry found in the TVS-3001 Processor with the latest in limiter technology to provide the ultimate in audio control. The TVS-3010 is easily interfaced with any MTS Generator to provide the latest in MTS stereo audio control technology.

TVS-3010 \$6495.00

BAP-2000 FM/TV Monaural Audio Processor

- Complete stand-alone audio processor for any mono FM or TV application • Advanced 2-band AGC and variable transfer function pre-emphasis limiter • Linearized AGC action provides over 30dB of AGC range • Integral Fh filter for television applications • dynafex® single ended noise reduction system included • Dual 10-segment LED display for easy set up of gain reduction and relative output • Rugged 1 3/4" rackmount chassis with integral RFI protection

The CRL BAP-2000 is an advanced dual band audio AGC and limiter in a slim 1 3/4" package. The versatile design of the BAP-2000 allows it to be used in a wide range of monaural applications that require exacting level control. Included in the unit is the CRL patented single ended noise reduction system called dynafex™, integral selectable Fh filters on the input to the unit, and an overshoot-corrected low pass filter on the output. User selectable internal options allow the BAP-2000 to be tailored to handle most any audio control job.

BAP-2000 Mono and FM/TV audio processor \$1695.00

SCA-1 System—SCA-300B Subcarrier Limiter/Generator

- Digitally synthesized, frequency locked subcarrier generation • Integral two band audio limiter increases intelligibility of voice or music • User can program different subcarrier frequencies and deviation

TVS-3002

TVS-3010

DX-1

- levels • Full remote control capability • Superior crosstalk protection • Direct modulator inputs via RS-232 or BNC connectors • Rugged 1 3/4" rackmount chassis with integral RFI protection

SB-412A

Beltpacks and Wall Mount Headset Stations

RS-501 Beltpack • Single-channel, lightweight beltpack • All digital, noiseless, electronic switching • "Remote Mike Kill" function • Visual signalling • Accepts dynamic or electret microphones • Carbon type headset jack optional • The RS-501 is the standard beltpack station for use in all applications. (Replaces RS-100A and CP-100) **\$198.00**

RS-502 Beltpack • Two-channel beltpack • Allows access to either one of two separate intercom channels • Includes all features of the RS-501 Plus • Dual channel signalling • Applications include: video/theatre production, industrial (Replaces CP-100/2CH.) **\$270.00**

RS-522 Beltpack • Two-channel, dual listen, binaural beltpack • Allows completely selectable simultaneous listening and talking on two separate channels • Binaural "split-feed" headset output. (Monaural option available) • Includes all features of the RS-501 and RS-502 • Applications include: video/theatre production, industrial, lighting design • (Replaces RS-201) **\$298.00**

MR-102A Wall-Mount Station • Two-channel wall-mount headset station • Selectable to either one of two channels • Also available as MR-104A, selectable to any one of four channels • Applications include: permanent video • theatre • Industrial facilities **\$198.00**

RS-501

MR-102A

Station/Camera ISO System

The ISO-4000 Station/Camera ISO system is designed to easily and quickly establish private, two-way communications between two (or more) Clear-Com intercom stations. The ISO-400 uses a microprocessor to provide maximum user flexibility and minimum control/tally cabling. It provides priority/override, individual and global reset, and group preset capabilities. It is a modular system that can expand to accommodate up to sixteen "ISO" stations and six "Control" stations. The system is comprised of the following components:

ISO-4000 ISO Central Electronics This unit contains all of the audio, switching, and control/tally logic to implement the "ISO" function. The basic unit will support up to four "ISO" stations and either three or six "Control" stations. It can be expanded in groups of four ISO stations.

IXM-4 ISO Expansion Module This is an add-on module for the ISO-4000 Central Electronics that expands the ISO station capability in groups of four. Up to three IXM-4 modules can be installed in the ISO-4000 to provide the maximum system capacity of sixteen ISO stations.

ITO-1 ISO Transfer Option This is a factory modification to a multi-channel intercom station. It is required to implement the ISO function transfer of the station's listen/talk circuits from the normal intercom paths to the special ISO channel.

ICP-4 ISO Control Panel This is a four button stand-alone control panel to select any combination of four ISO Stations to be isolated with an associated Clear-Com intercom station. Multiple ICP-4's can be linked together to select larger numbers of ISO stations.

ISO-4 ISO Control Module This is a four button control module, electrically equivalent to the ICP-4, designed for installation in a MS-808 Main Station.

Note: ISO system pricing depends on the specific system requirements and configuration.

CLEAR-COM INTERCOM SYSTEMS

Audio Equipment

MS-808 Master Station

This modular, rackmount master station can provide signalling and communication access to a maximum of 16 separate Intercom, IFB, and Point-to-Point channels plus additional functions through the use of up to four plug-in modules. Additional modules can be conveniently installed providing for ease of future expansion. The MS-808 can operate either hands free (with speaker and gooseneck microphone) or with a headset \$1368.00

MS-808

SP-4 Speaker Module

This double space module provides an internal loudspeaker, eliminating the need to use an external speaker. \$69.00

BP-4 Blank Panel

This single space panel is required to fill any spaces not occupied by an operational DLC module. \$24.00

CH-4 Intercom Control Module

This single module provides individual channel listen/talk switching, program insert level control, and sidetone adjustment for four intercom channels \$562.00

CH-4

IFB-4 Program Interrupt Module

This single space module provides access to four channels of IFB (Program Interrupt). It requires the PIC-4000B IFB Control Electronics. \$455.00

IFB-4

ISO-4 ISO Control Module

This is a four button control module, electrically equivalent to the ICP-4, designed for installation in a MS-808 Main Station \$475.00

IFB (Program Interrupt) Systems

The Clear-Com IFB system is a modular system capable of operating as a stand alone system, or being integrated with MS-808 Master Stations. It transmits an interruptible program signal to individual talent receivers via standard two conductor shielded microphone cable. It is a distributed amplifier system with the earphone amplifier located at the talents' position. It features unlimited expansion capabilities (up to 96 talent channels and 50 control locations). Wiring required between Talent Access Stations and the IFB Electronics is only six conductors per each four talent channels, and can be either homerun or loop through wiring method. The system is composed of the following components:

PIC-4000B IFB Electronics

This unit contains all of the audio and switching circuitry for selecting one of two program signals, routing the signals to four independent talent channels, and interrupting, with variable program attenuation, the signals from one or more control points. It requires 24VDC power from a Clear-Com Intercom System or power supply. \$685.00

PIC-4000B

TR-50 Talent Receiver

This small, portable unit contains the amplifier to power the talent's earphone. It connects to the PIC-4000B via standard two conductor shielded microphone cable. A miniature in-the-ear receiver is included with each TR-50 \$118.00

MA-4 Plus 2 AX-4's

TR-532 Stereo/Split Feed Talent Receiver

This unit contains two discrete amplifiers to feed the "Interrupt" and "Non-interrupt" signals from the PIC-4000B on a standard mike cable to separate ears of a sportscaster type headset or standard stereo earphones. It also provides a passive loop through output of the headset's microphone for on-air applications \$270.00

MA-4 Talent Access Master Control Station

This unit provides individual access to four talent channels and All Call access to all of the talent channels in the system. It is designed for direct console mounting or rackmounting in an optional rackmount adaptor. It includes a panel mounted gooseneck microphone and all required local electronics \$615.00

TR-50

AX-4 Talent Access Expansion Station

This unit connects to the MA-4 Control Station, expanding the talent channel selection capabilities by four additional channels per AX-4. Multiple AX-4 units can be linked together to control a maximum of 96 talent channels \$425.00

IFB-4 Program Interrupt Module

This unit is the equivalent of the AX-4, designed for mounting in the MS-808 Master Station \$455.00

CLEAR-COM INTERCOM SYSTEMS

Audio Equipment

Remote Speaker Stations

KB-111A Speaker Station

2-channel select speaker station, uses handset or push-to-talk mike. Mount in 6" x 8" electrical box or portable enclosure. Applications include: theatre/security . . . \$275.00

KB-112 Speaker Station

Speaker station with push-to-talk mike; talk/listen can be controlled by other stations. All functions selectable. Applications include: Dressing rooms/paging/security . . . \$299.00

Power Supplies

PS-20 Portable Power Supply

Portable or rackmount; regulated. Selectable one- or two-channel. Supports up to 60 stations . . . \$365.00

PS-452 2-Channel Power Supply

2-channel; regulated; with short circuit and overload monitoring. Supports up to 100 stations. For all large permanent installations . . . \$562.00

Dynamic Headsets

CC-26 Headset

Single-muff, ultra-lightweight headset with dynamic, noise-cancelling mike element (4-pin XLR) . . . \$142.00

CC-35 Headset

Our lightweight, low-cost headset. Field-serviceable, noise-cancelling; ideal for TV camera operators . . . \$86.00

CC-55 Headset

Double-muff version of CC-35 . . . \$99.00

DT-109/6 Headset

Beyer headset matched to Clear-Com specs and wired with split-feed earphones. Broadcast-quality mike. High noise-attenuation; very comfortable. Applications include: sportscasting . . . \$236.00

DT-108 Headset

Single-muff Beyer headset with straight cord and ear sock. (4-pin XLR) . . . \$215.00

CC-75B Headset

Our most rugged model; good sound-attenuation, flexible boom-mount mike with auto-on/off switch. Indestructible ABS plastic construction, supplied with ear sock for extra comfort. Applications include: theatre, rental firms . . . \$130.00

CC-240B Headset

Double-muff version of CC-75B . . . \$150.00

PH-7 Headset

Double-muff, high-fidelity, noise-cancelling mike—our most sound attenuating model . . . \$225.00

HS-6 Handset

Telephone-style handset with push-to-talk switch . . . \$78.00

PT-4 Mike

Rugged push-to-talk mike . . . \$48.00

KB-111A

KB-112

PS-20

CC-35/CC-55

PS-452

IF4-4

Minicom

SM-1 Headset

Single-muff headset station with in-line, single-channel intercom electronics (no signalling). Applications include: portable and budget-conscious use . . . \$215.00

DM-1 Headset

Double-muff headset station, same specs as SM-1 . . . \$231.00

PK-3 Power Supply

Portable regulated power supply; low-cost, single-channel. Operates up to 25 Minicom headset stations . . . \$150.00

System Interfaces

AC-10H Interface

Universal interface to two-wire cameras and telephone lines; has holding coil and built-in test tones for balancing . . . \$616.00

TW-12B Interface

Interface to RTS-type systems or allows up to 12 CP-300 or RTS-type belt-packs to work in Clear-Com System. 1 3/4" rack-mount . . . \$532.00

IF4-4 Interface

Interfaces to virtually any 3-wire/4-wire TV camera; up to four cameras per unit. Individual transmit/receive level controls . . . \$625.00

TWC-10 2-Channel/3-Pin Cable Adaptor

Combines two standard Clear-Com channels (on two separate cables) onto a single 3-pin microphone cable. Requires "TW" option on stations . . . \$99.00

CC-26

CC-75B

Accessories

MX-820/MX-840 Matrix Switch

These units are designed for multiple channel intercom systems. They enable individual stations, or groups of stations, to be easily switched to any one of eight channels. The MX-820 handles 20 stations; the MX-840 handles 40 stations.

MX-820 . . . \$475.00

MX-840 . . . \$625.00

WP-2 Wall Plate

Selectable 2-channel wall plate for connection to portable single-channel stations. Ideal for large facilities/permanent installations . . . \$38.00

QP-100A Line Splitter

Interconnect line splitter: one input and three output connectors in a die-cast aluminum box . . . \$75.00

RMK-1 Remote Mike Kill Control Unit

Shuts-off series 500 belt-pack mike circuits . . . \$145.00

CMX CORP.*Editing System***CMX 100 ELECTRONIC EDITING SYSTEM****Integrated:****Edit Controller/Video Switcher/Audio Switcher & Mixer**

- Commercials/news/sports/promos/short segments • A/B roll with cuts/dissolves/fades • 3 lightweight, portable pieces: 3 1/2" rack electronics; console; 12" monitor

Video:

- Sources: VTRs A/B • Aux 1 and 2 • Black keying via customer supplied DSK or CGN

Audio:

- Sources: • VTRs A/B (2 channel) • Aux 1 and 2 (1 channel)—aux can be mike or line • 6 input faders • Built-in tone generator • VU type meters for 2-channel output • Audio-follow-video (user defined) or breakaway

Console Organization:

- Track selection • REC/PVW keys • Video program/preset • Audio program/preset • VTR motion and selection keys • Keypad • Transition keys • Audio faders • 4 GPIs • 2 keyer-triggers • VU metering

Machine Control:

- SRCH knob • Play/stop/still/jog • Allstop

Backspace Editing or Marks**Assemble or Insert Editing:**

- Time code or tape timer (control track)

Time Code/Tape Timer Numbers—Ease of Entry:

- Set in/out • Trim • Duration

CRT Display:

- Menus • Windows • Highlighting • Edit Area: VTR position/status, edit in/out/duration • Display control: remove/display durations, unused zeros, etc.

Keypad:

- Numbers: Becomes number pad when required i.e. setting in timecode • Direct Functions: • Go to • Trigger list • Initialize • More (key): BVB preview, recall marks, match-cut calculate (into last edit) keys 1-4 become GPIs during preview or record • Set/duration/trim • CGN • Help • Replay • Open edit

Initialization:

- Time code/timer • Lock tolerance • Fast/slow dissolve rates • Saves setup in memory • Port assignments • Audio-follow • Marks or backspace • Display control

Trigger List (20 Triggers):

- Triggers made on-the-fly in preview or record • Trigger scroll highlights active trigger

The following can be triggered in an edit: • Track select • GPIs • Audio and video crosspoints • Motion control (speeds not saved) • Keyers 1 and 2 • Cuts/dissolves

Modify individual or all triggers (delete, trim, enable/disable); Create (pre-program) trigger.

**CMX 100****Record List (Non-Volatile Memory saves list even when powered down):**

- Any of previous 50 events can be recalled with triggers
- Memory can be divided into up to 9 segments • Record in-time, duration, tracks and segment are shown

Event	DUR	Track	Segment
1.	10:00:00:00 30:09	VI2	1
2.	10:00:30:09 10:00	VI	3

The CMX 100 is an on-line three-VTR electronic editing system aimed directly at the short segment program production market. The CMX 100 provides control of A and B source VTRs, the record VTR, two auxiliary sources and black. In addition to four General Purpose Interfaces (GPIs), two Keyer triggers are included. The CMX 100 is available in both NTSC and PAL standards.

The 100 combines into a single desktop console all of the equipment needed to do finished product (on-line) television program editing. An operator has at his or her fingertips a 5-input video switcher, a 6-input audio switcher, and motion control of 3 VTRs. There is easy access to video dissolves, cuts and fades, and audio mixing.

The 100 is specifically designed for rapid assembly of short program segments in the most efficient and economical manner. Used as an on-line tool for the effective creation of high-impact promos, commercial spots, news or sports program segments, it can perform all of the necessary editing functions without tying up an entire studio and/or editing suite.

CMX 100 \$13,950.00

CMX CORP.

Editing System

330A Large-Scale Editing System

The 330A is a high-performance, large scale editing system priced to suit the most basic budget. Designed for both offline and online needs, features include Motion Memory, Match-Cut Calculation, Autoclean, Learn Keys, Master/Slave and Sync Roll. The 330A allows for future expansion by being directly upgradeable to the CMX 3100, 3400A, or 3600.

Machine Control Functions

- Rewind • Fast forward • Play • Stop (individual devices) • Slow
- Slow reverse • Shift/retard slow • Shift/retard slow reverse • Cue (individual devices) to head of preroll • Go to • Replay: replays any recorded event • Still frame • Jog forward • Jog reverse • Retard jog rate • Advance jog rate • Search (with GISMO option): up to seven speeds forward and reverse • Variable speed jog (with GISMO option)
- Multiple machine motion control (with GISMO option) • Allstop • Record • Automatic reset of interface communications

Edit Transition Selections

- Cut • Split cut ("L" cut) • Dissolve from/to • Dissolve rate • Short cut dissolve (with last dissolve rate) • Wipe from/to • Wipe code
- Wipe rate • Short cut wipe (with last code and rate) • Key in (background/foreground/duration) • Key out (background/foreground/duration) • Delayed key • Key fade up from black • Key fade to black
- Key cut in • Key cut out • Open end edit • Closed end edit

List Management Functions

Sort modes: Sort by event number, Sort by record in time, Sort off Move event(s) in EDL • Re-edit events in EDL • Insert re-edited events in EDL with list update • Exit re-edit • Single or Block Move event(s) in program with Pull Up • Record start time • Delete events with pull up • Record on/off • Renumber events **Autoclean:** On or off during record, Cleans overrecords, Deletes duplicate events, Cleans multi-line events. **Notes:** Any edit in EDL may have notes, Multiple lines available, Delete a single line, a group or all lines off a note

Edit Decision List Display/Input/Output

• Scroll List Up • Scroll List Down • Scroll to Event Number requested (Display) • Disk On: Saves each edit to disk after record • Punch On: Saves each edit to papertape after record • Print EDL in hard copy • Reads papertape EDL • Disk Out: Stores EDL on disk • Single event • Range of events • All events (default) • Multiple EDL files on floppy disk • Print: Prints EDL in hard copy • Increased display of events in NDF/DF EDL • Initialize Disk: Erases EDL from disk • Autoscroll: EDL scroll with Master (Record) machine motion • Print disk file directories in hard copy

Automatic Edit Assembly Functions

• Sequential assembly ("A" mode) • Enable for assembly (by event number) • Disable for assembly (by event number) • Resume assembly

Hardware Options

• General Purpose Interface (GPI) • Fast, direct access to relays • All information goes to disk • Eight relays controlled • Up to 16 GPI triggers per event • GISMO • Jam sync (machine dependent) • Time code reader board (available with Multi-I²) • Motion memory (M²)

Specifications

System Configuration:	Distributed processing
Central Controller:	DEC microcomputer
Device Interface:	Microprocessor controllers
Device Interface Memory:	EPROM
Communication Format:	Serial/9600 Baud/RS-232
Communication Protocol:	CMX 8-bit binary
Edit Decision List Size:	500 events. 500 additional lines for ancillary data
Edit Decision List Format:	CMX 3400A, CMX 3400, CMX 340X, CMX 3100, CMX 336XL, CMX 330XL, CMX 50, The Edge
Edit Decision List I/O Disk:	8" single-sided, single density, IBM 3740 format (option on 330A)

Edit Decision List

Printer/Paper Tape:	Serial/300-9600 Baud/RS-232
CRT Display Format:	80 Characters per line/25 lines/60Hz refresh rate/non-interlaced
Display Monitor (option):	High resolution CMX terminal/broadcast video monitor
Number of Devices Assignable:	8 (330A)
Number of Devices Controllable:	5 + GPI
Edit Accuracy:	Frame accurate, color framed, PAL-pair self-correcting or manual for 4- or 8-field correction
Time Code Standards:	SMPTE drop/non-drop frame, EBU
Tape Timer (machine dependent):	Alternative to time code with use of Multi-I ²
Television Standards:	NTSC/PAL/SECAM
User's Keyboard:	Alphanumeric Color Coded (330A)
Remote Motion Control Device (option):	Rotary control for search/slow motion/frame jogging (memorized recall available)

330A Including switcher interface and super kit interface for three VTR's from \$16,995.00

330S Large Scale Editing System

The 330S is a compact, yet complete online/offline post-production system which includes the edit controller, 3-VTR interfaces, an internal V/A switcher, and general purpose interface (GPI).

The system is based on the 330A edit controller. The 330S includes features such as Learn keys, match-cut calculation, autoclean, master-slave, and sync roll. The 330S also includes a 3.5" floppy disk drive, providing the standard Edit decision list (EDL), with multiple files per disk.

The electronics for the entire 330S system will fill into 10" of rack space.

Internal Video/Audio Switcher

This option provides cuts, dissolves and fade-to-black for video and two channels of audio. It fits into a CMX Multi-I² chassis. The video switcher fits in one slot, the audio switcher fits into a second slot, and the serial interface fits into a third slot. The video switcher has five inputs: A, B, C machines, auxiliary and black. TBC's are required for source VTR's for dissolves, but a non-TBC mode allows cuts, and fades to black without the use of time base correctors. The audio switcher has six inputs: A, B, C/auxiliary, machines as stereo pairs. There is also a test tone generator output on the audio switcher. Audio input levels may be adjusted on the rear Multi-I² I/O panel to allow for system setup.

330S Includes 330A with internal audio/video switcher, super kit interface for three VTR's and GPI \$24,900.00

3100/3400A/3600 Large-Scale Editing Systems

The 3100 is the industry-standard for large-scale editing systems. It offers the editor major advantages in productivity and speed including such features as Precue Auto Assembly, Auto Clean, eight user-defined keys, multiple EDL files, Match Cut Calculate, and Switcher Memory Upload/Download. The 3100 maintains versatility and plug compatibility with all CMX Intelligent Interfaces (I²s).

The 3400A provides expanded GPI, and Dynamic Motion Memory (DM²). DM² allows speed changes to be programmed, learned on the fly, stored to the EDL, and previous triggers may be modified. Fit/Fill mode allows 3400A to calculate expansion or compression of scenes. The 330XL, 336XL, 340X and 3100 may be upgraded to the 3400A.

The 3600 offers the editor major advantages in productivity and speed, including such features as 4-channel audio control, Precue Auto-Assembly, Dynamic Motion Memory, Switcher Memory Upload/Download, Multiple EDL files, and Match Cut Calculate. The 3600 maintains versatility and plug compatibility with all CMX's Intelligent Interfaces (I²s). Any CMX 330XL, 336XL, 340X, 3100, 3400 or 3400A may be upgraded to a 3600 system.

Machine Control Functions

- Rewind • Fast forward • Scan (dedicated key) • Reverse scan
- Play • Stop (individual devices) • Slow • Slow reverse • Shift/retard slow
- Shift/retard slow reverse • Cue (individual devices) to head of preroll
- GOTO (individual devices) to in-time displayed • Replay: re-plays any recorded event
- Still frame • Jog forward • Jog reverse
- Retard jog rate (machine dependent) • Advance jog rate • Search (with GISMO option): up to seven speeds forward and reverse
- Variable speed jog (with GISMO option) • Multiple machine motion control (with GISMO option) • ALLSTOP • Record • Automatic reset of interface communications

Edit Transition Selections

- Cut • Split cut ("L" cut) • Dissolve from/to • Dissolve rate • Short cut dissolve (with last dissolve rate) • Wipe from/to • Wipe code
- Wipe rate • Change wipe pattern • Short cut wipe (with last code and rate) • Key-in (background/foreground/duration) • Key out (background/foreground/duration) • Delayed key • Key fade up from black • Key fade to black • Key cut in • Key cut out • Open end edit
- Closed end edit

List Management

- **Sort Modes:** Sort by event number, Sort by record in time, Sort off
- Move Event(s) in EDL; Re-Edit events in EDL; Insert Re-edited events in EDL with list update • Exit re-edit • Resequence events in program with pull up • Record start time • Delete events with pull up • Record on/off • EDL text editing: Re-number events, Change A/V modes, Change reel numbers • **Autoclean:** On or off during record, cleans over-records, deletes duplicate events, cleans multi-line events, may clean entire EDL while loading from disk • **Notes:** Any edit in EDL may have notes, multiple lines available, delete a single line, a group or all lines of a note

Edit Decision List Display/Input/Output

- Scroll list up/down • Page scroll up • Page scroll down • Autoscroll: EDL scroll with Master (record) machine motion • Display: move EDL highlight by event number; by record time code • Disk on: saves each edit to paper tape after record • Punch on: Saves each edit to paper tape after record • Punch save: punches paper tape EDL • Reader: reads paper tape EDL • Disk save: stores EDL on disk • Disk load: loads EDL from disk single event; range of events; all events (default) • Multiple EDL files on floppy disk • Print disk file directories in hard copy • Print: prints EDL in hard copy • Increased display of events in NDF/DF EDL • Choice of 3600 or downward compatible output for CMX PDP or LSI based systems (3600) • Event highlight for all lines in event (3600)

3400A

Automatic Edit Assembly Functions

- Sequential assembly ("A mode") • Reel-by-reel assembly ("B mode") • Precue sequential assembly (looks ahead 30 events) • Precue reel-by-reel assembly (looks ahead 30 events) • Enable for assembly (by event number) • Disable for assembly (by event number)
- Resume assembly • List enabled events • List disabled events
- Enabled/disabled status saved on disk, printout (3600)

Hardware/Options

- General Purpose Interface (GPI) (standard on 3400A) • Fast, direct access to relays • All information goes to disk • Eight relays controlled
- Up to 16 GPI triggers per event • GISMO (3400) GISMO II (3400A, 3600 standard) Jam sync (available with conventional I²) • Time code reader board (available with Multi-I²) • Motion memory (M²) (3100)
- Dynamic Motion Memory (3400A standard) • Fast, direct access to relays • One page relay/trigger screen • Devices activated with pulse or on/off trigger • All information goes to EDL and floppy disk • 16 relays standard, 3400A, 3600 • Additional relays (up to 64) optional 3400A, 3600 • Programmable pulse duration • Switchable TTL open collector • Up to 16 GPI triggers per event

Specifications

Central Controller:	DEC microcomputer (LSI 11/73, 3600)
Communication Format:	Serial/9600 Baud/RS-232
Communication Protocol:	CMX 8-bit binary
Edit Decision List Size:	3000 lines/EDL; approx. 6000 additional lines available for ancillary data
Edit Decision List Format:	CMX 3400A, 3400, 3100, 336XL, 340X, 330XL, 50, The Edge
Edit Decision List I/O Disk:	8" single-sided, single density, IBM 3740 format (3 1/2" double-sided, double-density, IBM System 34 modified format)
Edit Decision List Printer/ Paper Tape:	Serial/300-9600 Baud/RS-232
CRT Display Format:	80 characters per line/25 lines/60Hz refresh rate/non-interlaced
Display Monitor (option):	High resolution CMX terminal/broadcast video monitor
Number of Devices Assignable:	24
Number of Devices Controllable:	8
Edit Accuracy:	Frame accurate, color framed, PAL-pair self-correcting or manual for 4- or 8-field correction
Time Code Standards:	SMPTE Drop/non-drop frame, EBU
Television Standards:	NTSC/PAL/SECAM
Remote Motion Control Device (option):	Rotary control for search/slow motion/frame jogging

EDL Optimizer**Superclean, Lookback, Text Editing, Sorting, Speed Assembly, Utilities**

- This is the ultimate tool for edit decision list (EDL) management
- Handles any combination of video, audio 1, audio 2, audio 3 and audio 4
- Handles any combination of non-drop frame or drop frame time code
- Available for NTSC/SMPTE or PAL/EBU
- Program has modules for EDL cleaning, text editing, sorting, auto-assembly optimization, and much more
- Versions available for either CMX LSI-based systems or IBM PC/Compatible
- Accepts CMX-standard EDL format, as well as other EDL formats
- Help function: user has on-line assistance at all levels
- 8 character reel identification

Superclean

- Cleans overrecords on cuts, dissolves, wipes, keys
- Deletes events written over by later events
- Deletes duplicate events
- Places inserts after master edits
- Retains Notes, GPI, SW-MEM, Sync Roll Master-Slave offsets, and Dynamic Motion Memory triggers unless entire event is deleted

Lookback

In off-line videotape editing, the first cut or rough cut of a program will generally be too long and not entirely satisfactory, aesthetically.

When it is necessary to do a second cut on a program, the first cut may be used as a source. In other words, as a time-saving technique, those parts of the first cut that remain satisfactory are recorded in the second cut, unchanged.

The result of this process is one Edit Decision List (EDL) for each edited version of the same show. The EDLs are loaded into the Lookback program module in a specific order (e.g., last EDL first). Each of the EDLs will have a unique record reel number assigned to it. The Lookback program will start with the last EDL and look back to each previous generation of EDL to find the original source reels.

The result of the Lookback process will be a single EDL that will be an accurate representation of the final edited show, with all edits coming from the original source tapes, rather than the edited sub-masters.

5 1/4" Disk Utilities

- Rename EDL files
- Initialize disk
- Format EDL disk
- Merge EDLs
- Set PC configuration
- 3 1/2" EDL disk drive compatible CMX format and MS-DOS

5 1/4" and 8" Disk Utilities

- Upload/download EDL
- Erase EDL files
- Delete EDL files
- Print EDL disk directory

Text Editing

- Change reel numbers
- Change A/V modes
- Change transition type from dissolve to wipe, and vice versa
- Ripple source time codes, global or by reel number
- Ripple record time codes (record start)
- Delete master-slave relationships and offsets
- Delete sync roll sources
- Delete GPI, DM², and switcher memory triggers
- Global trims for GPI absolute triggers

Sorting

- Arranges all edits by edit mode: video and audio 1 and 2; video and audio 1; video and audio 2; video-only; audio 1 and 2; audio 1 only; audio 2 only. User can choose the order of the groups
- Sort by transition type: cut, dissolve, wipe and key. User can choose the order of the groups
- Sort by record-in time codes
- Sort by record-out time codes
- Sort by ascending source in time: all edits from the same reel are arranged from the lowest to highest source time codes
- Sort by source out time
- Sort by edit number
- Sort by reel number

Speed Assembly Auto Assembly Optimization

- B-roll auto-assembly
- Compressed list
- B-mode auto-assembly with sort by source in-time

Mixer/Clap Board

MX-80 Portable Mixer

- 6dB midrange equalizer
- Peak overload indicator/VU meter
- Individual channel phase reverse switches
- Plug-in active components
- High pass filters that really work
- Variable gain/attenuation controls
- Built-in line up oscillator
- Internal high-quality electret microphone
- Powerful monitor amplifier
- Rechargeable or throw-away batteries
- Built-in battery compartment
- Modular design and construction for ease of service
- 22dB headroom over Nagra zero level; 34dB headroom over video recorders requiring -10dB for zero VU
- Peak limiter, switchable in or out
- Rugged, taut band meter illumination for use at night or in poorly lit locations
- Extensive EMI and RFI shielding
- Ferrite beads
- Low-battery indicator
- Optional carrying strap and case for over-shoulder use
- Sealed rotary switches
- Conductive plastic rotary potentiometers
- Monitor level adjustment; provisions for external power (between 12 and 24V) and for external charging

The MX-80 offers more features, functions and versatility of application than any other really small mixer; and its sound is second to none.

MX-80 dimensions are 3 1/2" H x 9 1/4" W x 7 3/4" D. Weighs 5 lbs. 3 oz. It uses Jensen transformers, and runs on internal batteries.

- MX-80A** Portable Mixer, DC (12-24V) or AC operation (with AC-80 power supply listed below) **\$1260.00**
- MX-80B** Internal battery operation or external DC (12-24V) or AC operation (with AC-80 power supply listed below) **1330.00**
- AC-80** 115-230V—50-60Hz power supply for MX-80A or MX-80B. **87.50**
- RM-80** Rack module for mounting MX-80, with storage compartment **125.00**
- SC-80** Shipping case, waterproof, very heavy-duty plastic with room for accessories **137.00**

TC-500A Smart Slate™

- Drastically cut time to sync picture and audio
- Automate video/sound transfer
- Eliminate intermediate transfer to mag when syncing to production sound tracks
- See your multi-camera, multi-take footage in sync, almost immediately
- State of the art, ultrabright displays
- Aerospace, weight-saving materials and 1st class construction
- 3M anti-glare filter for top visibility in direct sunlight
- The only time code reader/generator/slate available in one convenient package

The Smart Slate can be used in lieu of a camera module to provide time code information at the beginning or end of a take. It is similar to a conventional slate clapboard, except that there are 8 very bright 1" high LED numbers (hours, minutes, seconds and frames). This information, once filmed, can be used to easily sync picture with audio. The TC-500A must be plugged into a TC-100A Master Module, TC-200A Tape Recorder Module, or other source of standard SMPTE time code. The TC-500A is especially useful for syncing music playbacks.

MX-80

Smart Slate

The inclusion of a precision, crystal timebase (accurate to 1 frame in 16 hours, at 24 fps), allows the TC-500 to function as a completely self-contained time code reader and generator. The Smart Slate can alternately display time and user-bits or two different time codes. If connected to a tape recorder, the Smart Slate™ can optionally display an offset time code to compensate for the time code head placement. For playback applications, the TC-500A can also function as a Dumb Slate™ Time Code Reader. Other features are similar to the TC-200A Tape Module, including user bit display.

Specifications

- Size** 10" H x 12" W x 1.5" D
- Weight:** 3.6 lbs. without batteries, 4.5 lbs. with batteries
- Batteries:** 6 "C" Cells
- Display:** 1" "Super Bright" Light Emitting Diodes, with 3M Contrast Enhancement Filter
- Frame:** Magnesium/Aluminum
- TC-500**
- Accuracy:** ± 0.7ppm, -22°F to 140°F (-30°C to +60°C)
- Time Code:** SMPTE according to ANSI 12M-1986
- Offset:** 2nd time code can be offset ± 15 1/2 frames
- TC-500A** **\$1995.00**

COHERENT COMMUNICATIONS, INC.

Time Code Equipment/Video Transmitters

TC-100A Master Module Time Code Generator/Reader

• Generates and reads SMPTE time code at 24, 25, 29.97, or 30 fps., with or without drop frame • Liquid crystal display shows time, user bits, offset and error messages • User bits may be from an internal or external source • Module can be a master or slave • Low battery warning • 8 hour time code reset reminder • Time code status indicators • Precision crystal timebase (+/-0.7ppm -30C to +50C, or 1 frame in 16 hours at 24 fps.)

TC-100A\$1895.00

TC-200A Tape Recorder Module Time Code Generator/Recorder

• Generates and locks to external SMPTE time code at 24, 25, 29.97, or 30 fps • Module can be a master or slave • User bits may be from internal or external source • Powered by the tape recorder • Internal back-up battery with automatic shutoff. 8 hour reset reminder • Time code status indicators • Precision crystal time base • Automatic record head offset correction

TC-200A\$1495.00

VT-200/300 Professional Video Transmitters

Common Features:

• May be connected to any standard video source. It will transmit a high quality color or black and white picture to any television receiver or video tape deck with a tuner • Difficult to observe or dangerous camera placements can safely be monitored on a regular TV set. A simple scrambler (optional on Model VT-300), helps protect sensitive subject matter when required • Monitoring of helicopter, race car, stunt or other action filming and taping can now be done at a safe distance. News-gathering with remote or hidden cameras can be monitored conveniently • Production personnel can use battery operated TV sets to check the shot from anywhere in the area • Set-up speed is increased by eliminating the need for monitor feed cables • Up to 1/2 mile (0.8km) range is possible under line-of-sight conditions. This range may be greatly limited by metal objects, metal reinforced structures, terrain, poor antennas, etc. • Only slightly larger than a pack of cigarettes, yet protected against abuse by an extremely rugged but light aluminum enclosure

VT-200

• Designed to be used on an unoccupied TV channel between U.S. channels 7 and 13. TV tuner permitting, it may be operated at higher frequencies (equivalent to 2 more channels above 13) • Lower VHF frequencies, compared to the VT-300's UHF channels, have somewhat greater range. Fewer problems seem to arise with objects between the transmitter and receiver causing signal dropouts. Fewer channels are available in the VHF band • Features include: black level control, video gain, video in (BNC), power and video in (multi-pin Fischer connector), antenna (BNC), and pilot light

VT-200\$1395.00

VT-300

• Up to 7 VT-300s may be operated simultaneously for multiple camera shoots. With the addition of option B, audio from a microphone or line level source will be transmitted as well • Option C adds a simple scrambler that will protect the video information from the casual viewer, but not from a professional video engineer. Some decoder boxes may also unscramble the picture • Features include: black level control, video gain, output power control, audio level, scrambler on/off, video in (BNC), power and video in (multi-pin Fischer connector), audio in (4 pin Fischer), antenna (BNC) and pilot light

COMARK COMMUNICATIONS, INC.

FM Antennas

FM Antennas
Circular Polarized

• 1 1/2 turn circular polarized helix (same phase center for horizontal and vertical field components). Picture A • 1.7" diameter copper elements minimizes corona effects. Allows 20kW testing of basic elements • Available 1 5/8", 3 1/8" as standard feed systems. Larger size feed systems available for special applications • Supplied with triple stub tuner for matching to any supporting structure. (Picture B) • Optional 400W, 230VAC deicers available. Shield cable designed for trouble-free service • Optional directional pattern available

Mechanical Description

The series of FM Circularly Polarized Antennas utilizes identical radiating elements for both the Lower Power (L) and High Power (H) series. The L series utilizes 1 5/8" feed line while the H series uses 3 1/8" feed line. Both series of antennas are available in systems that incorporate 1 to 14 elements. Normally, systems with 8 or less elements are fed at the bottom while above 8, the system is fed from the center.

Each of the radiators is constructed of 1.7" diameter, thick-walled copper with substantially rounded surface that eliminates corona problems.

The element is essentially a 1 1/2 turn helix with a standard 1 5/8" EIA flange fitting which fits into the transmission line feed.

Each side of the helix radiator contains facilities for accepting deicer elements. This permits easy replacement of heating elements in the field.

Each antenna contains a matching tuner which is approximately 6' long. It is extremely simple to adjust and has a fool-proof method of adjustment without losing pressure.

Mounting brackets are supplied with the antenna to assure proper mounting to the supporting structure.

Electrical Description

The FM series of circularly polarized antennas are basically 1 1/2 turns helices separated one wavelength apart.

The radiation centers of both the vertical and horizontal components are identical, thus the FM antennas are one of the few antennas with phase coincidence so essential for true circular polarization.

The basic element with a minimum of retuning can serve as a radiator at any frequency in the standard FM broadcast band.

The free space circularity patterns of the FM antenna are within ± 1dB of optimum circularity. However, when side mounted on a wide tower, the antenna patterns will degrade with some scalloping and loss of circularity. In practice the antenna will provide the urban area with considerably better coverage than a horizontal only radiating system.

The antenna is supplied with a triple stub tuner which provides adjustable capacitors at discrete positions in the feed line. These adjustments are such that they compensate for impedance changes due to mounting environment and still achieve a matched condition.

The deicers of the FM series antennas require approximately 400W of power consumption per bay. They are capable of achieving ice-free operation at ambient temperatures of 0°C and 50 MPH winds. They require 230V, single phase AC power.

FM Model No.	dB Gain	Power Gain	Field Gain 1	MAXIMUM INPUT POWER				Net Weight Pounds 4	Windload 5

Notes:

- To obtain the effective free space field intensity at one mile MV/M for one kilowatt antenna power, multiply field gain by 137.6
- Listed for power handling purposes only. Electrical and mechanical data listed is nominal for 1 5/8" and 3 1/8" feed systems
- Includes all hardware
- Windload based on 50 psf on flat surfaces and 33 psf for cylindrical surfaces (actual wind velocity 110 MPH) computed for midband antenna structure

• Power gains are for 50/50 horizontally and vertically polarized ratios • Antenna polarization is circular clockwise, in all directions of azimuth • Prices include complete mounting hardware for leg mounting on uniform guyed towers • Brackets for face mounting or self-supporting towers are extra. Prices upon request • Antenna input flange on H series is 3 1/8" EIA Female. The L series is 1 5/8" EIA Female • Windload ratings are 50/33 PSF, 110 miles per hour • Antenna weights include standard mounting hardware. Add 10 pounds per bay for deicers • Deicers require 230V, single phase AC power with 400W consumption per bay

When ordering be sure to specify:

- Antenna type number • Deicers, if any
- Exact frequency • Description of tower—make and model

CA-7

CA-7 Audio and Video Cable Tester

- A single instrument that does the job previously requiring two separate instruments
 - Accepts 3-pin XLR, standard (1/4") phono, BNC, UHF, "F", Phono (RCA), and (3.5mm) Mini plugs
 - Tests for shorts, broken conductors, continuity
 - No meters or technical skills required
 - Built-in lights indicate test conditions
 - 9V battery included
- CA-7 \$72.00

Two Phono (RCA) Plugs, Stereo both ends

COMPREHENSIVE VIDEO SUPPLY CORP.

Video/Audio Accessories

Video Distribution Amplifier

Overcome line loss, provide additional equipment outputs and line equalization, or any combination of these. 4 output Video Distribution Amplifier contains two input connectors to permit signal looping, thereby allowing the units to be "ganged" if more than four outputs are needed. Mounts easily on any flat surface.

CVA2B-4 \$199.95

Passive Video Switchers

Passive video switchers with audio pass-along offer a fast simple way to interconnect video and audio equipment. Pushbuttons select the input and automatically terminate the other video inputs, for constant impedance.

CPS-4A 4 pair video with audio pass-along \$145.00
CPS-8A 8 pair with audio pass-along 210.00

Comprehensive has recognized the benefits of making all types of video supplies and accessories, and below is listed a small sampling of what is available.

VDAP-1 Video Adaptor Kit

Adapt and interface with Video Connectors — includes 75 ohm terminators.

Field Interface and Repair Kits

The Monster

Shooting on location is like going on safari; small problems that are a nuisance in the studio are monsters to contend with in the field. The "location" jungle is filled with monsters. To tackle them, you need a monster of your own.

The Monster is everything you need to make standard and emergency audio and video hook-ups in the field. Twenty audio and video adaptors. Seventy-three audio and video connectors, including crimp-on, solder-on, emergency fast-fit and right angle types. Plus cables, tools—even a soldering iron and flashlight are included. It all comes packed in the

Monster

revolutionary Roly Kit tool box, and the whole package comes to you at a very special package price.

The Monster Includes:

- (1) Soldering Iron, (1) Tool Set, (24) Assorted Adaptors, (68) Assorted Connectors, (1) BNC Terminator, (1) BNC Crimp Tool, (1) Emergency Solder Pack, (1) Electrician's Knife, (1) Mini Mite Lite, (5) Assorted Cables, (1) Tool Kit, (1) Roly Kit Tool Case

Monster \$399.00

MSTR-A Audio Monster

Monster peace of mind for the audiophile. Helps prevent unwanted "silent movie syndrome" on your next location shoot.

The Audio Monster Includes:

- (23) Assorted Adaptors, (28) Assorted Connectors, (2) Chassis Mounts, (10) Assorted Cables, (1) Tool Kit, (1) Solder, (1) Emergency Solder Pack, (1) Mini Mite Lite, (1) Soldering Iron, (1) Roly Kit Tool Case

MSTR-A Audio Monster \$260.00

Lighting Kits
Comprehensive

Lighting Kits

Virtually all lighting kit suppliers face a similar challenge—selecting component pieces that best handle the requirements of the largest number of users. Comprehensive kits are therefore divided into two general categories: kits featuring a full assortment of accessories for a wide variety of locations; and kits that offer the bare necessities, but provide extra room for accessories of your choice. Either way, Comprehensive lighting kits offer you a substantial savings over purchasing individual component pieces.

B-2 Basic 2 Kit

- (1) VL-601 light
- (1) VL-601 VF focusing light
- (1) VL-BD-2 Barndoors for VL-601 VF
- (1) GUH Gel/Umbrella holder
- (1) MS Modular stud
- (1) U-30 Umbrella (30")
- (2) LS-2 light stands
- (2) DYH lamps
- (1) C-2 kit case
- Size: 8 1/4" H x 10" W x 25" L
- Weight: 18 lbs. 5 oz.
- (Lamps included) \$438.00

B-3 Basic 3 Kit

- (1) VL-601 light
- (2) VL-601 VF focusing light
- (1) VL-BD-1 Barndoors for VL-601
- (1) VL-BD-2 Barndoors for VL-601 VF
- (1) GUH Gel/Umbrella holder
- (1) MS Modular stud
- (1) U-30 Umbrella (30")
- (1) VLS-1 Single scrim for VL-601
- (1) VLS-V Single scrim for VL-601 VF
- (3) LS-2 light stands
- (3) DYH lamps
- (1) C-2 kit case
- Size: 8 1/4" H x 10" W x 25" L
- Weight: 25 lbs.
- (Lamps included) \$667.00

UM-300 Ultra-Mini Kit

- (3) VM-300 lights
- (1) UAMV umbrella/ stand adaptor
- (1) UMMV Mini umbrella
- (2) SAMV stand adaptors
- (1) TCMV table clamp
- (1) HGMV handgrip
- (2) TRS mini stands
- (3) FNB lamps
- (1) MC mini case
- Size: 15 1/4" H x 4" W x 20 1/2" L
- Weight: 14 lbs. 6 oz.
- (Lamps included) \$969.00

UM-1

Same as UM-300 with M-250 lights and ELH lamps instead of VM-300 lights and FNB lamps. \$579.00

T-2 Take 2 Kit

- (2) K-600 focusing lights
- (2) KBD Barndoors for K-600
- (1) GUH Gel/Umbrella holder
- (1) MS Modular stud
- (1) UMMV mini umbrella
- (2) TRS mini stands
- (2) DYS lamps
- (1) KC kit case
- Size: 16" H x 6 3/4" W x 22" L
- Weight: 19 lbs. 14 oz.
- (Lamps included) \$689.00

ENG-3 Kit

- (2) K-600 focusing lights
- (1) VM-300 focusing light
- (2) KBD Barndoors for K-600
- (1) DFK diffusion filter for K-600
- (1) DIV dichroic filter for VM-300
- (1) CSMV camera mount for VM-300
- (1) VC-30 30V battery cable for VM-300
- (1) HGMV handgrip for VM-300
- (1) SAMV stand adaptor for VM-300

- (3) TRS mini stands
- (2) DYS lamps
- (1) FNB lamp
- (1) EPL lamp
- (1) KC case
- Size: 16" H x 6 3/4" W x 22" L
- Weight: 23 lbs. 5 oz.
- (Lamps included) \$995.00

ENG-312C ENG-3 kit with 12V battery mode option set up for Comprehensive batteries with 7-pin connector \$995.00

ENG-312D Same as above for use with 12V batteries with 4-pin XLR connectors \$995.00

ENG-312E Same as above for use with 12V batteries with 5-pin XLR connectors \$995.00

T-4 Take 4 Kit

- (2) V-10/6 focusing light
- (2) VBD barndoors for V-10/6
- (2) VAH accessory holders for V-10/6
- (2) MF-10 flood lights
- (4) LSP light stands
- (2) DXW lamps
- (2) FHM lamps
- (1) PRC Kit case
- Size: 15 3/4" H x 11 1/2" W x 35" L
- Weight: 45 lbs.
- (Lamps included) \$1359.00

P-4 Production 4 Kit

- (2) V-10/6 focusing light
- (2) VBD barndoors for V-10/6
- (2) VAH accessory holders for V-10/6
- (2) VSS single scrim for V-10/6
- (1) VDS double scrim for V-10/6
- (2) MF-10 flood lights
- (2) FLS-1 single scrim for MF-10
- (4) GUH Gel/Umbrella holders
- (4) MS Modular studs
- (1) U-43 Umbrella (43")
- (4) GF gel frames

- (1) LGP Location gel pack
- (2) CSC Ceiling scissor clip
- (2) CC C-clamp
- (4) LSP Light stands
- (2) DXW lamps
- (2) FHM lamps
- (1) PRC Kit case
- Size: 15 3/4" H x 11 1/2" W x 35" L
- Weight: 53 lbs. 13 oz.
- (Lamps included) \$1629.00

T-3 Take 3 Kit

- (2) V-10/6 focusing light
- (2) VBD Barndoors for V-10/6
- (2) VAH Accessory holder for V-10/6
- (1) MF-10 flood light
- (3) LSP light stands
- (2) DXW lamps
- (1) FHM lamp
- (1) PRC Kit case
- Size: 15 3/4" H x 11 1/2" W x 35" L
- Weight: 36 lbs. 14 oz.
- (Lamps included) \$1079.00

EFP-3 Kit

- (2) V-10/6 focusing light
- (2) VBD barndoors for V-10/6
- (2) VAH accessory holder for V-10/6
- (2) VSS single scrim for V-10/6
- (1) MF-10 flood light
- (1) FLS-1 single scrim for MF-10
- (3) GUH Gel/umbrella holders
- (3) Modular studs
- (1) U-43 umbrella (43")
- (3) GF gel frames
- (1) LGP location gel pack
- (1) CSC ceiling scissor clip
- (1) CC C-clamp
- (3) LSP light stands
- (2) DXW lamps
- (1) FHM lamp
- (1) PRC Kit case
- Size: 15 3/4" H x 11 1/2" W x 35" L
- Weight: 43 lbs. 4 oz.
- (Lamps included) \$1285.00

COMPREHENSIVE VIDEO SUPPLY CORP.

Computer Video Software

Edit Master™

Turn your personal computer into the world's most powerful cuts-only editing system

Edit Master brings the features and capabilities of sophisticated computer editing systems to cuts only editing. Edit Master consists of a set of 3 compact and easy to install hardware interfaces and a control program for MS-DOS computers.

Edit Master works with either time code or control track, and is compatible with NTSC and PAL standards. You have complete control of all tape transport functions from your computer's keyboard, including variable-speed tape shuttle.

You can mark in and out points on the fly, or with tape paused. You can then preview, perform and replay the edit. Edits that have already been performed may be re-opened, modified and rehearsed at any time.

Edit Master is the perfect tool for off-line editing. Dissolves, wipes and keys are performed as cuts, but are entered into the list in their designated form, ready for assembly during the on-line edit.

You have available a generous 900-event memory, along with high-powered list management capabilities which include re-edit with ripple, block move and delete, and multi-mode automatic list cleaning, plus many other features.

Text notes may be added to edits in memory. You can search the list by note or note fragment.

Auto assembly of edit lists may be performed in either A-mode (sequential) or B-mode (checkerboard). Single events, groups of events or the entire list can be enabled or disabled for assembly.

Edit Master provides frame-accurate control of virtually all of today's popular editing recorders and players, from half-inch industrial to one-inch broadcast. It's the perfect way to move up to time code editing. Its local area network design leaves room for future growth. Its compact size also makes it an ideal portable editing system. With the hardware components in a briefcase and using a laptop computer, you can now edit even on location.

Edit Master is also fully compatible with Edit Lister, Edit Tracker, with the D-Link 8" disk drive, and with other editing systems that save and load edit lists as MS-DOS text files. It supports CMX, Convergence and Grass Valley list formats.

Edit Master supports the following VTRs: Ampex VPR 3, VPR 6, VPR 80; JVC CR-850, CR-600, CR-8250, CR-6650, BR-8600; Panasonic MII AU-650, AU-500, AG-6500, AG-7500; Sony BVU, BVW and BVH series, VO-5800, VO-5850, Type VII, Type IX

Edit Master requires an MS-DOS compatible computer with at least 256K memory, an RS-232 serial port and two disk drives or a hard disk.

An optional color coded keyboard using industry standard key layout is also available.

The Edit Master package includes Edit Master software, manual and 2 VTR hardware interfaces and one master computer interface. A set of keyboard overlays is provided for use with a standard PC keyboard.

Note: Interfaces are also available for the following machines: Sony Type 7 with BKU-701, Type 9 with BKU-701, JVC CR-850, 600 Panasonic MII, Ampex VPR-3, VPR-6 and VPR-80. When ordering an inter-format system or additional node, please specify the model number of your player and/or recorder machines.

*Edit Master's distributed-processing Network Design allows for expansion. Users will be able to upgrade to A/B Roll and beyond with hardware and software updates to be offered.

EM-2-S5U	For Sony 5850, 5800	\$3995.00
EM-2-J85	For JVC BR-8600, 8250, 6650	3995.00
EM-2-AG6	For Panasonic AG-6500	3995.00
EM-2-AG7	For Panasonic AG-7500	3995.00
EM-2-SBV/TC	For Sony BVU Series without built-in time code reader	3995.00
EM-2-SBV	For Sony BVU, BVW and BVH Series with built-in time code reader	3495.00
Color coded keyboard (optional)	650.00

COMPUTER PROMPTING CORP.

1511 K Street, N.W., Suite 831, Washington, DC 20005 (202) 783-2051

IBM-PC BASED COMPUTERIZED TELEPROMPTERS

CPC-1000: Computerized Teleprompter

Features:

- Operates on IBM-PC/XT/AT and most compatibles including several LAPTOP computers
- Over 5 hours of smooth continuous scroll capacity
- Hard copy printout with line numbers coordinated with the built-in word processor line numbers
- 3 crisp, clear fonts (All upper or upper/lower case)
- 16 text/background colors
- Instant help screens
- 3 different controls—Dial/Mouse/Keyboard—available to get smooth variable scroll in forward and reverse directions
- Scripts (in ASCII format) typed on any computer may be down loaded using a modem and scrolled
- Scripts (in ASCII format) from most word processors running on an IBM PC may be directly loaded without using a modem

System Requirements:

- IBM PC or Compatible with a parallel printer port and at least 256K of memory
- Enhanced Graphics Adaptor (EGA) with 256K of internal memory on board
- RGB or composite monitor
- Game adaptor to be connected to the "Dial" type hand control
- Optional Mouse for additional "Mouse" type hand control
- Optional Serial port to be connected to the optional mouse control

CPC-1750: Computerized Teleprompter to Interface to a Newsroom System

Features: All the features of the CPC-1000 computerized teleprompter as described above

- Simultaneously edits script while prompting
- Interfaces to Newsroom systems, and acts as a "dumb" display unit
- Down loads and up loads scripts from other computers

System Requirements: In addition to the system requirements for the CPC-1000, one monochrome adaptor, one TTL monochrome monitor, and a modem are also required

CPC-2000: Computerized Teleprompter with Closed and Open Captioning Option

Features: All the features of the CPC-1000 computerized teleprompter as described above

- Real-Time Closed Captioning: It allows text which is entered and scrolled for teleprompting, to be simultaneously entered and output as closed captions with no additional cost or effort
- Post Closed Captioning: Any prerecorded video tape can be easily closed captioned using only one key stroke per line of text that has been previously entered into the CPC's word processor
- Open Captioning: Both Real-Time and Post Captioning may be used to create open captions on a video tape, and may also be used for sub-titling foreign language video tapes

System Requirements: In addition to the system requirements for the CPC-1000, a line 21 Encoder is also required

CPC-500: Closed and Open Post Captioning System

- Features:**
- Post Closed Captioning: Any prerecorded video tape can be easily closed captioned by using only one key stroke per line of text that has been previously entered into the CPC's word processor
 - Open Captioning: Both Real-Time and Post Captioning may be used to create open captions on a video tape, and may also be used for sub-titling foreign language video tapes

System Requirements: An IBM PC with a serial port and a line 21 Encoder

-
- **CPC Software packages:** CPC-1000, CPC-1750, and CPC-2000 software systems come with an EGA card which outputs both composite B&W and RGB signals, a game adaptor, hand control and manual. CPC-500 system consists of software
 - **Mount/Computer System:** Computer Prompting Corp. is a distributor for several camera mount, monitor and computer manufacturers and can provide a choice of Mount/Monitor/Computer systems at a price below the list price

COMTEK COMMUNICATIONS TECHNOLOGY, INC.

Microphone Transmitter

M-72 Wireless Microphone Transmitter

- Professional quality
- Reliable
- Versatile
- Easy to use
- Small size
- No external antenna

The M-72 wireless microphone transmitter meets the highest professional standards, yet because of its design, it offers operational success to even the nonprofessional user. When used with our receivers, the M-72 transmitter reproduces the microphone's quality with indistinguishable difference. The wide dynamic range of this transmitter is made possible because of its soft compressor system which, along with very linear modulation characteristics and low residual FM noise, gives the most natural sound possible from a wireless microphone.

Transmitter circuitry allows biasing of electret condenser microphones, or the M-72 can also be used with dynamic microphones. The M-72 transmitter has an LED indicator to monitor RF output and battery condition, and a microphone sensitivity adjustment is provided to optimize the signal-to-noise ratio for different applications. The M-72 transmitter utilizes a body induction antenna system. Only the microphone cord extends from the transmitter package enabling the transmitter to have a more uniform radiation pattern when the unit is placed on the body or held in the hand. A new slide-open battery compartment exposing only the battery makes changing batteries fast and easy. Higher efficiency circuitry provides even longer battery life while maintaining the same high fidelity and maximum FCC allotted power.

Specifications

Audio Input:	Low impedance (150 to 600 ohms) with external control to adjust sensitivity for -60 to -40dBm input level. Also, will self power electret condenser microphone
Microphone Connectors:	1/8" mini jack, micro "lock plug," Tini TA4F
Controls and Indicators:	Microphone level input sensitivity control, and LED for RF output and battery condition indicator
Modulation Limiter:	Soft compressor type with high linear overload protection, attack time—less than 1ms, recovery time - 10ms
Frequency Modulation:	Up to 30kHz deviation
Residual FM Noise:	Less than 20Hz (30kHz BW)
Frequency Stability:	.005% crystal controlled
Operating Radio Frequency:	70 to 216MHz
Harmonic and Spurious Emissions:	-45dB below carrier
RF Power Output:	8000µV at 30m (72 to 76MHz) 50mW at output port (174 to 216MHz)
Antenna:	Body induction type with microphone cable or plug-in handheld microphone (no external antenna)
Current Drain:	15mA 72—76MHz 20mA 174—216MHz
Battery:	9V alkaline NEDA 1604 type (Eveready 522)
Dimensions:	1 1/16" x 2 1/4" x 3 1/4" (27mm x 57mm x 83mm)

M-72

Transmitters

- M-72L** Wireless microphone transmitter for use with electret condenser or dynamic microphones. P-1 belt-clip carrying pouch included. \$404.00
- M-72C** High performance wireless microphone transmitter with companded audio. Will self power ± electret condenser microphones. Comes with P-1 belt-clip carrying pouch. \$445.00

Transmitter Connector Options

- 750 Mono mini connectorN/C
- 850 Micro mini connectorN/C
- 851 Micro mini locking connectorN/C
- TA4 ConnectorN/C
- Special 4-pin Lemo connector. \$15.00

Options for M-72 Transmitters

- Option 1.** Separate microphone muting switch for quiet audio switching. \$20.00
- Option 2.** Permanently mounted boom for handheld applications in interviewing and group participation. \$76.00
- Option 3.** Detachable boom microphone with TA4F connector enables transmitter to be used as either a handheld or lavalier microphone. Available only from 169 to 216MHz. C-12 carrying case included. \$96.00
- Option 4.** XLR-3 connector allows transmitter to plug directly into boom of any low impedance dynamic or electret condenser handheld microphone. C-12 carrying case included 15.00
- Option 5.** Push-to-talk power switch with extended pushbutton for use in P-1 carrying pouch. For use with half duplex operation with RPT-182 repeater. Not available on M-72C transmitters . .N/C
- Option 6.** Push-to-talk audio switch with extended pushbutton for use in P-1 carrying pouch. For use with full duplex operation with RPT-182 repeater system. May be used with M-72L or M-72C transmitters 20.00
- Option 7.** BNC RF output with 851 micro mini locking connector for line level audio input. Comes complete with BNC whip antenna for battery powered remote transmitter applications. 40.00

COMTEK COMMUNICATIONS TECHNOLOGY, INC.

Transmitter Adaptor/
Companion Receiver

M-72BS

M-72BS Base Station Transmitter Adaptor

- AC powered for permanent installation
- Adds versatility to wireless sound transmission
- Quick frequency change capability

The M-72 base station adaptor was designed to add flexibility and variety to the M-72 wireless microphone transmitter. The M-72 wireless microphone transmitter conveniently plugs into the back of the base station adaptor enabling the M-72 transmitter to operate in a permanent, AC powered installation and, if necessary, with an external antenna. This "base stationed" transmitter accepts its audio input from any line level output (microphone level optional) audio system and transmits this signal to any of our receivers.

The base station adaptor is equipped with RF output indicator that monitors normal RF output level and a modulation meter to insure normal modulation for maximum signal-to-noise performance. While it is self contained for portable applications, it may be rackmounted for permanent installations.

The base station adaptor allows the M-72 wireless microphone transmitter to be used in a variety of applications. In churches, theaters, and auditoriums, it retransmits the audio from the sound system to the hearing impaired. It may also be used as part of a wireless intercom system for duplex communications, as a transmitter to monitor live soundtrack, or as a base transmitter providing a wireless audio point-to-point link.

Specifications

- Audio Input:** Line level +5dBm or speaker level up to 50V (microphone level optional)
- Connectors:** XLR-3 for line level (microphone level optional), RCA connector for high speaker level
- Operation Indicators:** Meter displays audio input (modulation). LED displays normal RF power output
- Antenna:** Telescopic antenna mounts directly into top of transmitter or optional external antenna through type "F" RF connector
- Power Requirements:** 115VAC or optional 12VDC battery pack
- Dimensions:** 2 1/2" H x 8" W x 7 1/2" D (63mm x 203mm x 190mm), a rackmounting adaptor kit is available (RMK-1) for standard 19" rackmount

System Performance with Receivers

- Frequency Response:** 40Hz to 15kHz
- Audio Distortion:** Less than 1% at 80% modulation
- Signal-to-Noise Ratio:** Better than -70dB with MR-72 receiver
- Operating Range:** Typical range of 500' when used with Com-Tek receivers

M-72BS (Includes M-72L plug-in transmitter) \$590.00

Options for M-72BS Base Station

- Option 1.** M-72C transmitter included in place of M-72L for use with MR-182 receiver \$45.00
- Option 2.** Microphone level input \$8.00

PR-72b Companion Receiver

- Narrow and wide band reception
- Phase lock loop detection
- Extended frequency response
- Plug-in channel selection
- No external antenna

The PR-72b Companion Receiver is a high performance miniature receiver. This receiver may be used for a variety of applications due to its excellent performance. While its primary use is individual auditory assistance, the PR-72b receiver may be used for many specialty applications including remote personal cueing and professional studio and industrial communications. Because of its extended frequency response and low noise level, the PR-72b is a convenient receiver to use with video cameras and portable tape recorders.

The PR-72b incorporates state-of-the-art technology offering a lower power efficiency circuit for even longer battery life (up to 50 hours). The PR-72b receiver includes a plug-in channel selector, LED battery condition indicator, automatic on/off power switch, battery charging access through the output jack, slide open battery compartment, and no external antenna—only the output cable extends from the receiver unit. Its small size and light weight make it easy to conceal in a pocket or pouch. The low cost of this receiver is an added plus.

Specifications

- Audio Outputs:** 2.5VRMS, adjustable volume control nominal load 50-100 ohms
- Connectors:** 1/8" mini jack (locking plug optional)
- Indicators:** LED battery condition indicator
- Audio Frequency Response:** 100Hz to 10kHz with M-72 transmitter
- Operating Radio Frequency:** 50-216MHz
- Frequency Stability:** .005% crystal controlled
- RF Sensitivity:** 1µV for 20dB of quieting
- Adjacent Channel Rejection:** -55dB with 50kHz channel spacing (72-76MHz)
- Image and Spurious Response:** At least -60dB (72-76MHz)
- Ultimate Quieting:** Better than -65dB related to output
- Bandwidth Acceptance:** Up to 30kHz deviation
- Antenna:** Integral with output cable (no external antenna)
- Current Drain:** 14mA nominal
- Battery:** 9V alkaline NEDA 1604 or 9V NiCad Varta Type TR 7/8 or equivalent
- Dimensions:** 1 1/16" x 2 1/4" x 3 1/4" (27mm x 57mm x 83mm)
- Special Attractions:** Charging access through output jack or use with RBC 9-2 battery conditioner of NBC 9-12 NiCad battery charger, automatic receiver turn off if output plug is removed, LED battery indicator, plug-in channel selector

PR-72b \$184.00

Options for PR-72b Receiver

- Option 0.** PR-72b receiver without plug-in crystal selector for single channel operation. N/C
- Option 1.** Has plug-in frequency selector. Comes standard with PR-72b personal receiver N/C
- Option 2.** External microphone input for specialty application. Will self power electret microphones. Not available with PR-72b options 3, 4 or 5 \$50.00
- Option 3.** Switch for 2-channel operation. Not available with PR-72b Option 1, 2, 4 or 5 \$35.00
- Option 4.** On/off switch for PR-72b personal receiver. Not available with PR-72b Option 2, 3 or 5 \$15.00
- Option 5.** Extremely rugged volume control for general public use. Not available with PR-72b options 2, 3 or 4 \$15.00

Refer to Green Section for Addresses and Telephone Numbers.

COMTEK COMMUNICATIONS TECHNOLOGY, INC.

Wireless Microphone Receivers

MR-72 Wireless Microphone Receiver

- Reliable
- Easy to operate
- High signal-to-noise ratio
- High fidelity
- High sensitivity

The MR-72 receiver when used with the M-72 transmitter reproduces the most natural sound possible from a wireless microphone system. This advanced receiver design offers successful operation even under adverse conditions.

The MR-72 receiver requires no adjustments. The output levels have been factory set for a typical low impedance microphone level and for an auxiliary line level output. The noise-activated automatic squelch circuit silences the output until the transmitter is turned on. Excellent quieting is achieved by high abrupt limiting characteristics, and the MR-72 receiver has features for hum rejection. LED indicators monitor presence of RF carrier and analog meter displays audio output.

The MR-72 was designed for fixed or portable installations. The receiver has rugged all metal construction and operates from 115VAC power supply. It is also available with an optional internal rechargeable battery providing ten hours of continuous operation. A telescopic antenna mounts directly on top of the receiver cabinet, or a remote external antenna can be used for permanent installations.

Specifications

Audio Outputs:	Microphone balanced 150 ohms with -40dBm max. output, or auxiliary line level with 0dBm max. output.
Audio Frequency Response:	40Hz to 15Hz
Operating Radio Frequency:	70 to 216MHz
Frequency Stability:	.005% crystal controlled
RF Sensitivity:	Less than 1µV for 35dB of quieting
Image and Spurious Response:	-65dB
Ultimate Quieting:	Better than 70dB
Bandwidth Acceptance:	± 30kHz
Antenna:	Telescopic antenna mounts directly into top of receiver or external antenna through type "F" conductor
Dimensions:	2 1/2" H x 8" W x 7 1/2" D (63mm x 203mm x 190mm)

MR-72 \$402.00
 Option 1. Internal NiCad battery pack and internal charging circuit \$60.00

MR-182 Wireless Microphone Receiver

- Helical resonator for maximum front end RF selectivity
- Switchable processing for companded/noncompanded transmitters
- DC isolated audio outputs for use with phantom powered mike inputs
- Headphone output can also serve as high quality auxiliary output
- LED peak level monitoring for audio status
- Extended frequency response with absolute minimal distortion
- Operates on 115/230VAC, internal/external battery power
- Compact and durable all metal styling for field/studio
- Separate amplifiers for each audio output
- Optional "Phase-Right" antenna for greater signal gain

MR-182

Field tough enough for electronic news gathering punishment, sophisticated enough for studio, film production, and the performing arts. Abrupt-quieting feature maintains surprisingly high signal-to-noise performance even with weak RF signals. Our receiver's IF filter system allows the highest level of channel selectivity while maintaining full audio fidelity.

The MR-182 tells you the exact RF field strength signal the transmitter is producing. Result: better antenna placement, better critical distance determination.

Squelch circuit operates so fast you hear no squelch-tail noise when you turn off the transmitter.

Specifications

Carrier Frequency:	174 to 216MHz
RF Input:	50 ohms
RF Sensitivity:	45dB quieting at 1µV (squelch setting)
Ultimate Quieting:	95dB typical (flat)
Image, Spurious and Adjacent Channel Rejection:	Better than 90dB
Antenna:	Nylon flex 1/4 wavelength whip. Or optional 1 1/4 wavelength long "Phase-Right" external remote antenna system
Deviation Acceptance:	Up to ± 30kHz
Audio Outputs:	Line level balanced: ± 10dB 600 to 250 ohms (± DC isolated). Mike level balanced: -40dB 200 ohms (± DC isolated). Headphone unbalanced: +10dB 20 ohms
Squelch System:	Ultra high speed, double-gated, silent switching type
Dimensions:	2" H x 5.5" W x 7.6" D (5.1cm x 14cm x 19.3cm)

General System Performance

Operating Range:	Up to 1500' under good conditions
Frequency Response:	40Hz to 15kHz ± 2dB
Signal-to-Noise Ratio:	95dB typical (flat)
Harmonic Distortion:	.5% maximum below compressor action
Operating Temperature Range:	-20°C to + 55°C

MR-182 \$650.00
 Option 1. Internal nickel-cadmium battery pack and internal charging circuit \$60.00
 Option 2. Cascadable audio input for repeater and mixing applications \$20.00
 Option 3. Internal 25W audio amplifier for driving 4 ohm speaker system. Not available with option 1 \$250.00
 Option 4. Phantom power for Phase Right + 1 antenna system \$20.00

COMTEK COMMUNICATIONS TECHNOLOGY, INC.

Cuing System

RC-72 Receive-A-Cue Cuing System

- A complete RF wireless cuing system
- Easily concealed—no wires to the ear
- Up to 500' of operating range
- Extremely small and lightweight

We have developed a complete, long range cuing system providing a performer with first quality auditory assistance. The RC-72 Receive-A-Cue System transmits clear, high fidelity cues up to 500'. It's simple and easy to use. The director wears the M-72 Wireless Microphone Transmitter. The performer wears the small PR-72b Companion Receiver and neck-loop transducer which transmits the audio to the miniature wireless inductor receiver which is comfortably concealed in the ear. It's possible for more than one transmitter to cue the same performer with the additional use of the RPT-72 Repeater.

Specifications**M-72L Transmitter and PR-72b Receiver**

Frequency Response: 100Hz to 10,000kHz with AT-831A microphone

Signal-To-Noise Ratio: Better than 65dB related to output

Receiver Audio Output Level: 2.5VRMS adjustable with volume control

Transmitter Modulation

Limiter: Soft compressor with 35dB overload range protection
Attack time—less than 1ms
Recovery time—10ms

Connectors: 1/8" mini jack or optional "microlock" jack

RF Carrier Frequency: 70 to 216MHz

Receiver Channel Separation: 50kHz

Receiver Channel Selection: Plug-in frequency module

Frequency Tolerance: .005% crystal controlled

Transmitter Modulation: Frequency modulation up to 30kHz deviation with 100µs transmitter pre-emphasis

System Range: Usable range up to 500' under favorable conditions

Antenna: No external antenna, integral with microphone and neck-loop

Battery Life: Up to 40 hours when used with a 9V alkaline NEDA 1604 type battery or six hours with a rechargeable NiCad VARTA type TR7/8 battery

Construction: Impact resistant cyclac case with shock mounted .050" glass-epoxy circuit board, easy slide open battery compartment with pull tab

Size: 1 1/16" x 2 1/4" x 3 1/4"
(27mm x 57mm x 83mm)

Special Attractions: Charging access through input and output jacks for rechargeable batteries, automatic receiver turn off when output plug is removed, LED operation indicators

RC-72 Kit

NBC 9-12

NBC 9-12 Charger/Carrying Case

- Charges 12 receivers/transmitters overnight
- Convenient carrying case
- Easy to use—just insert units

The NBC 9-12 charger/carrying case is designed for storage and overnight charging of 12 PR-72b personal receivers and/or M-72AT transmitters which are equipped with NiCad batteries (VRT 9-100).

Light emitting diodes (LEDs) give indication of charging for each receiver and transmitter being charged. Twelve hours of charging will give a full charge. Although longer charging will not damage the batteries, extended storage in the charging mode is not recommended.

NBC 9-12 charger/carrying case comes complete with power cord for 115VAC, 60Hz power. Dimensions: 12 1/2" x 15 1/2" x 4 3/4".

NBC 9-12\$195.00

CONRAC DISPLAY PRODUCTS GROUP

Color Monitor System

6545/6550 Micromatch™ Color Monitor System

- Automatic setup with 6550 Micromatch Photometer
- Soft-touch user controls
- SMPTE "C" Phosphors (Colormatch™)
- Beam current feedback and comb filter
- Auto-sensing of NTSC and PAL B signals
- 13" or 19" in-line dot matrix CRTs
- Selectable RGB or decoder inputs

Designed for the professional studio environment, its advanced technology sets standards in performance, stability and operation. Critical evaluation of broadcast signals, color balancing and matching, animation and graphics are among the many uses.

Available in 13" and 19" screen sizes. For ready access and convenience, all user controls are mounted on the front panel. The 6545 is set up at the factory to match broadcast standards, however, if you desire to change the factory default settings to better fit your environment or professional preferences, just use the soft-touch controls. Your new settings can be stored in memory, and by using Conrac's exclusive 6550 photometer, new settings can be duplicated on other 6545 monitors in just a few seconds—automatically. Whether you use default settings or your own, patented signal processing circuitry assures unequalled stability.

Front panel controls provide convenient, quick and precise control of all critical parameters, soft-touch controls and accurate digital electronics replace tricky knobs and potentiometers.

The parameters of the display are stored in two areas of working memory. Initially, one memory area contains the factory presets (default) and these parameters are used at power-up. The other memory area is your "working" memory which changes at the touch of a front panel control. At any time, you can store your working settings into default memory (replacing the factory settings) for future reference as you adjust the 6545, and other 6545s, to suit your application. When desired, the front controls can be locked out preventing unauthorized entry to the memory settings. Some controls can be operated remotely via a rear panel jack.

Specifications

Visual Performance

- Resolution:** > 800 TV lines
- Linearity and Geometry:** ± 1.5% of raster height
- Black Level Stability:** < 1% change of peak luminance from 10% to 90% APL
- Raster Size Stability:** < 0.4% change from 0 to 100% APL at 20fL peak luminance
- Max. Usable Brightness:** 60 fL with a sine² window
- Interface:** 2:1 > 90%
- Aspect Ratio:** 4:3
- CRT Type:** 13V or 19V precision-in-line gun, dot mask, clear faceplate

CONRAC DISPLAY PRODUCTS GROUP

Monochrome Monitors

2600 Series 9" Medium and High Resolution Monochrome Monitors

- 9" diagonal CRT
- 750 lines minimum resolution
- P4 or P45 phosphor standard; many other phosphors available
- Wide range of scan frequencies; up to 34kHz
- 12, 25 or 30MHz video bandwidths
- 50 fL brightness

The various models in the 2600 9" series give you a choice of high performance, low cost monitors to best fit your application. Excellent linearity, geometry and raster size stability ensure consistently superior display quality.

2620C9 9" CRT Broadcast Monitor

Additional features are added to the 2600 to create the 2620. Switchable pulse cross, underscan and notch filter are provided as front panel controls. In addition, an audio speaker with volume control, VTR input connector and AFC select are included to give you the features and flexibility you require in broadcast and video production environments. The 2620 is also available in many rackmount configurations.

The 2620 is capable of displaying a minimum of 10 discernible shades of gray. This highly stable, high performance monitor also features 525/60 or 625/50 line rates, 12VDC operation, composite video or external sync, solid-state circuitry, single board design for easy maintenance and service, front panel adjustments for display height, vertical hold and horizontal hold and convenient brightness, contrast and volume controls.

2620C9 \$460.00
 Rackmounts 175.00

2640C9 9" Medical Monochrome Monitor

The 2640 offers a crisp, stable and distortion-free display for critical evaluation of images generated by CT scanners, MR, ultrasound and many other medical diagnostic equipment. High video bandwidth, high scan rates and switchable reverse video are additional features of the 2640.

2640C9 \$695.00

2680C9 9" CRT Medical High Performance Monitor

A P45 phosphor CRT, greater brightness stability (G2 regulation), 25MHz video and dynamic focus—all standard features—the 2680 easily meets the stringent requirements for a medical display. Analysis of images generated by medical diagnostic equipment is an application best suited for the 2680.

2680C9 \$1695.00
2680N9 1585.00

2600 Series 15" / 19" Low to High Resolution Monochrome Monitor

- 15" and 19" CRT sizes
- 800 line resolution
- 25MHz video bandwidth
- Non-synchronous operation
- Internal/External sync
- Dynamic focus
- Differential video input
- Modular electronics
- Back porch clamp (jumper select sync tip)

The 2600 Series monochrome raster scan monitors for broadcast, computer display, medical and other high resolution applications. Premium components, excellent geometry and linearity, and careful craftsmanship provide for consistently superior display quality.

2400 High Resolution Monochrome Raster Scan Displays

- 1280 horizontal x 960 vertical pixels, at 1225 line scan resolution
- 19" diagonal, 90° deflection, 19V CRT
- 50 fL calibration, 150 fL maximum
- 50Hz to 40MHz, -3dB video bandwidth
- 15kHz-37kHz interlaced or non-interlaced. Up to 3 selectable line rates optional—525/60, 875/60, 1024/60, or customer specification

The 2400 is ideally suited to applications requiring a high resolution, high performance monochrome display. Such demands may be found in computer-aided design (CAD), computer-aided manufacturing (CAM), medical imaging, process control and similar sophisticated systems.

QQA Series High Resolution Monochrome Monitors

- 3 switch-selectable preset line rates, from 500-1225 lines, internally adjustable
- Locks to any field rate, from 37 to 60 fields per second
- Variable aspect ratio; width and height controls are continuously adjustable to provide a range sufficient to adjust from a full to a square raster
- Differential video input to minimize hum and other extraneous pickup on long video cables
- Accepts composite video or non-composite video plus separate composite sync
- Dynamic focus
- Linearity within ± 1.5% of picture height
- DC restoration: Keyed sync tip, keyed back porch, or zero DC restoration may be selected
- Video bandwidth flat within ± 1dB to 30MHz
- Video polarity inversion, switch selectable from the front panel, option
- Separate horizontal and vertical sync input option

The QQA series high resolution monitors are used widely in such applications as medical X-ray, displays of varying scan rates, document viewing, high resolution television, and display of computer-generated images.

COOL-LUX LIGHTING INDUSTRIES, INC.**Lighting/Lamps/Accessories****Mini-Cool Portable, Photographic Light**

The Mini-Cool is designed especially for photography. All its interchangeable lamps provide light which is essentially free of heat, infrared and ultraviolet radiation.

The Mini-Cool is small and light enough to attach to any video, motion picture or still camera, using the camera adaptor supplied. Or it may be handheld, using the handle included with each unit. (The handle has a hollow underside which can be fitted over a 5/8" diameter light stand column or post, but this is recommended only as an occasional practice. A far more secure mounting is provided by the stand adaptor.)

The Mini-Cool is operable from a variety of AC and DC power sources, simply by installing a lamp of corresponding voltage and an appropriate adaptor cord. The lamp socket, switch and wiring are all heavy-duty construction, easily capable of handling DC currents as well as AC. A 120V, 250W lamp is included.

Depending upon which lamp is installed, the Mini-Cool will require a power source of 120, 30, 14.4 or 12V. 12V battery packs and belts are available in several capacities (running times) and provide portable 12V power, completely independent of wall outlets.

When a wall outlet is used, the 120/12V Power Transformer (C4455) provides adequate power (up to 100W) for any of the 12V lamps. More than one lamp may be powered from the transformer, so long as their combined wattages do not exceed 100W.

The following are specific voltage requirements for each of the lamps:

FOS-1 (the standard lamp supplied with the Mini-Cool). This lamp requires 100 to 120VAC, which is the standard voltage.

FOS-2 This lamp requires 30VDC, provided by some battery packs and belts, most of which have a 2-pin receptacle. An adaptor cord for connecting this receptacle to the Mini-Cool is available (C4444).

FOS-3 through FOS-9. These lamps all require 12V, provided by a transformer or battery pack. Commercially available battery packs and belts use several styles of connector, including 3-pin, 4-pin, 5-pin and cigarette-lighter types. Adaptor cords for all these are available from Cool-Lux, as well as cords with clamps to fit posts of automotive-type batteries.

FOS-10. This lamp requires 14.4V, which is the voltage used by many video cameras and recorders. Using this lamp the Mini-Cool allows using a common power source for all items.

The Mini-Cool is supplied with a 1' power cord, which includes an in-line switch and terminates in a standard (household) 3-prong plug. This plug is connected to battery packs through an appropriate adaptor cord, or to a wall outlet or transformer through an extension cord. It is advisable to use 16-gauge extension cords, especially with 12V lamps. The extension cord (C4442) is 10' long, 16-gauge, with 3-wire safety construction (provides a safety ground when used with household voltage).

C4440 Mini-Cool Standard Pack (AC). Includes one each Mini-Cool Light, FOS-1 lamp, camera adaptor (C4447), and handle (C4441). Supplied in foam carton. \$99.95

C4460 Mini-Cool AC/DC Pack. Includes all items listed in standard pack plus FOS-9 lamp and 12VDC adaptor cord (C4453). Supplied in foam carton \$129.50

C4461 Cool Kit I. Includes Mini-Cool Light, Olympic L-5 battery pack (12V, 5AH), with charger, 12VDC adaptor cord (C4453), Extension cord (C4442), FOS-1 Lamp, FOS-9 lamp, stand adaptor (C4446), camera adaptor (C4447), handle (C4441), spring-clamp mount (C4452), and diffusion lens (C4449). Supplied in foam-fitted carrying case \$299.95

C4462 Cool Kit II. Includes two Mini-Cool lights, two light stands (C4451), three FOS-1 lamps, one FOS-4 lamp, two stand adaptors (C4446), two camera adaptors (C4447), two spring-clamp mounts (C4452), two scissor-clip mounts (C4469), one putty-knife mount (C4464), one 12VDC adaptor cord (C4453), three extension cords (C4442), one daylight filter (C4448) and one diffusion lens (C4449). Supplied in foam-fitted carrying case \$675.00

Mini-Cool

AC/DC Pack

C4463 Cool Kit III. Includes three Mini-Cool Lights, five FOS-1 lamps, one FOS-3 lamp, three stand adaptors (C4446), one camera adaptor (C4447), three spring-clamp mounts (C4452), two scissor-clip mounts (C4469), one putty-knife mount (C4464), one 12VDC adaptor cord (C4453), three extension cords (C4442), one cube tap (C4471), one daylight filter (C4448) and one diffusion lens (C4449). Supplied in foam-fitting carrying case \$675.00

Lighting/Power Belts and Packs

Micro-Lux Camcorder Light

- Greatly improves picture quality of Low-Lux cameras
- Uses only 35W at 12VDC (or AC via adaptor)
- Will run off (Olympic) L-6.5 for two full hours
- Quartz 3200°K lamp (included)
- Life 2000 hours
- Capable of producing 9000 candle beam power
- Built-in diffusion lens
- Capable of delivering high volumes of halogen treated luminescence, from a near point tungsten source, encapsulated in an all-quartz envelope, and delivered through its efficiently engineered, interchangeable reflector system
- Size: 3 1/4" x 1 3/4" x 1 3/4"
- Weight: 3 oz.
- Material: High grade aluminum
- Finish: 25µ anodized (high temp.)
- Colors: Black, silver, red, gold or blue

MICHAEL COX ELECTRONICS LTD.

Color Corrector/Encoder

600J Color Corrector

- Exceptionally wide range of color correction
- Accepts any NTSC video signal from any source
- Virtually transparent, does not decode
- User friendly control panel cuts post-production time
- Full control of chroma gain, luminance gain, set-up and black stretch/compression
- Up to 350ns of chroma/luminance delay correction
- Each correction parameter may be switched in or out independently, together with correction in or out
- Sync, blanking and subcarrier regenerated from input video, no external pulses required
- Optional SMPTE time code control for frame by frame correction and event storage

The 600J is available with either a manual "on the fly" control panel or a time code control system for integration into a VTR edit suite, enabling frame by frame color correction.

The color corrector may be ordered with time code control or may be field updated at any time with this option.

The time code control system consists of three separate units: a color corrector control panel, a time code control panel and a time code electronics unit.

As all remote functions must be digitized in order to be stored, a different remote control panel must be used with the time code control option. This panel has "sprung center" joysticks and pots with two color LEDs on all correction parameters to give a visual indication of control panel settings. All correction on/off switching is done via push-buttons.

A second control panel contains readouts for the self-contained SMPTE time code reader plus current event and next event readouts.

A fourth readout indicates preset information from the on-board keypad. Pushbuttons for entering and modifying time code, previewing, etc. are also contained on this remote panel.

- 2 modes switch in, with background fade out or dissolve foreground in

Luminance Keys:

- 2 keys on in each ME system Wipe key, Mix key, Mask key
- Downstream key (matte)
- DSK with shadow and border (option)

Pulse Drive System:

- Inputs: Sync and Subcarrier (360° adj.) PAL requires additional Blanking & B. Gate
- Genlock Sync Generator (option) Auto change-over on loss of inputs

Signal Processing:

- Blanking processor
- Test Mode for system timing
- Dual clamps on all video inputs
- Master Fade to Black

Video Inputs:

- 8 looping primary
- 2 external ME key inputs
- 4 inputs for optional DSK
- RGB and ENC for optional Chroma key
- RGB for standard Chroma key

Downstream Keyers:

- 2, standard matte keyer optional matte or insert keyer with drop shadow and outline (outline only in matte mode)
- 4 input selector for optional DSK

Colorizers:

- Three, one background, two for borders (one border colorizer for DSK fill)

Over a background video signal, the 6129AHK can insert two video signals each with a different pattern, a chroma key between the two pattern levels, a matte DSK over that, with a second DSK having border and drop shadow capability (insert or matte key) over the entire combination. Its Insert Chroma keyer is an additional video input which permits foreground dissolve-in or background dissolve-out. Each Mix-Effects system has its own keyer which can be wiped, masked, or mixed in. Fader arms can be delegated to Effects transitions, Chroma keyer, DSK and Fade to Black. All fader arm operations can be controlled by 0-999 Frame auto transitions, GPI or Panel triggerable (Five ramps).

**6129AHK**

Automation is very sophisticated. Two modes, five independently triggerable, resettable ramps with different durations, and 100 Sequences which can run all stored analog functions smoothly between Events (border color, positioner, symmetry etc.) Automated effects can be controlled from Editor.

Specifications

Video Inputs:	8, looping
Signal-to-Noise:	> 65dB
Crosstalk:	> 53dB
Path Difference:	± 1°
Differential Phase:	< 1°
Differential Gain:	< 0.04°
Tilt:	< 0.25%
Power:	110/220V, 70W
Black Burst Outputs:	4
Genlock Inputs (option):	1
Pulse Inputs:	Sync, subcarrier (PAL requires Burst Gate and Blanking)
Weight:	45 lbs.
Dimensions:	Control panel table mount — 20.5" x 12.5" — 3.5" front 7" rear Rackmount: 19" x 12.5" — 3.5"D Electronics: 19" x 7" — 20"D

6045

6800 Programmable VTR Audio Mixer

- Designed primarily for use with VTR editing controllers
- Can perform automatic cuts and mixes, with durations accurately programmable up to 999 frames
- Seven stereo inputs with individual gain controls for each channel
- The two channels (tracks) may be reversed at the output, or combined into either output channel
- This allows the use of the SMPTE time code on the free audio channel of the recording VTR
- Input selection may be manually overridden by switches on the front panel
- Mixing may also be performed manually from the front panel, if required
- Each output channel has a gain control
- A separate VU meter is provided for each set of stereo inputs
- Both mixers are simultaneously controlled by a single slider or by the automatic ramp generator

6800 \$3,623.00

8105 Digital Timebase Corrector

- 16 line window
- 8 bit resolution producing 320 lines
- 4X subcarrier sampling
- Heterodyne operation also features mosaic, posterization, built-in sync generator and other unique features

8105 \$4,990.00

6065 Encoded Chroma Keyer

- Provides key output for any switcher
- Self contained
- Requires no external drives
- Accepts external key input
- Keys on any color

6065 \$1,428.00

6045 RGB Chroma Keyer, Color Bars Tone

- Full field bars
- RGB chroma keyer
- External key input
- Provides key output for any switcher
- Derives power from any CLC switcher or from 6030 power supply

6045 \$895.00

6030 Power Supply 296.00

6070 Sync Generator

- RS170A; genlockable
- 3 1/2" rackmount
- Field identification pulse
- 6 black burst outputs
- SMPTE color bars
- Special test outputs for checking Sc/H phase on any video signal
- High stability subcarrier oscillators without ovens (oven available as option)
- 5Hz (1.4p-p m), or 1Hz (0.3p-p m) without oven or 0.1Hz (0.03p-p m) with oven
- Available in PAL or NTSC PAL version has PAL ID and line switching
- Locks to correct 4 field sequence in NTSC and 8 field sequence in PAL
- Subcarrier adjustable through 360°
- Horizontal adjustable plus or minus 5µs

6070 Subcarrier stability ± 10Hz \$1,595.00

6070 Subcarrier stability ± 1Hz 2,265.00

6051 Precision RGB Encoder

- Broadcast quality, RS170A
- Genlockable with internal sync generator
- Locks to correct 4 field NTSC; 8 field PAL
- Sync and subcarrier outputs
- Locks to black burst, comp video or sync
- Operates with non-standard sync
- Internal color bars for test
- Front panel subcarrier and horizontal controls for genlock mode
- 1 3/4" rackmount

6051 \$2,400.00

CROWN INTERNATIONAL, INC.

Microphones and Accessories

PZM®, PCC®, GLM™ and CM
Microphones and Accessories

PZM (Pressure-Zone Microphone) works on a principle of sound detection, utilizing the pressure zone at an acoustic boundary to eliminate phase-cancellation problems common to other microphones.

The active element in a PZM mike is an electret-condenser capsule, mounted so it faces the boundary and lies within the pressure zone. All incoming sound is received free of coloration caused by phase interference between direct and reflected sound. The sound pickup pattern of the PZM is hemispherical with no axis.

The PZM family of microphones will reproduce sound levels up to 150dB without distortion. Whispered conversations thirty feet away are clearly reproduced.

The GLMs (Great Little Microphones) are miniature condenser microphones of professional quality. They attach to musical instruments or clothing for sound reinforcement and recording. A full line of mounting accessories is available.

PZM-30RB, 30RG Studio PZM, 5" x 6" boundary plate, black or gold, XLR connector. Emphasized high-frequency response \$349.00

PZM-30FS Studio PZM with flat high end. 6" x 5" silver-colored boundary plate, XLR connector349.00

PZM-6RB, 6RG Low-profile PZM for conference or plexiglass panel. Emphasized high-frequency response, 2 1/2" x 3". Male XLR connector on 15' cable, black or gold.349.00

DATATEK CORP.**Video-Audio Routing Switchers****D-2000 SERIES ROUTING SWITCHERS**

• Compatible matrix frames of 50 x 25, 25 x 25 and 25 x 20 used as building blocks for systems of up to 256 inputs, with up to 8 levels of control • Easily field expandable—no need to specify initially the future matrix size • Switcher is output oriented with each output bus having its own microprocessor control system, independent of every other output bus • Serial data control system using RG-59/U coax—with opto-isolators in the control lines to avoid compromising reliability due to ground loop hum • D-4300 series switching units can be furnished with compatible microprocessor controls, for use where small auxiliary switchers are needed for special purpose additional levels • Non-proprietary components, available through electronics distributors, used throughout • All plug-in modules interchangeable with other modules of same type. Switcher remains within specifications, without readjustment, when modules interchanged.

The Datatek D-2000 series of Video and Audio Routing Switchers use a variety of compatible matrix frames to make up systems of various sizes for video, audio, SMPTE time code and intercom.

The D-2000 series switchers are easily field expandable without down time, by adding matrix frames and interconnecting them with plug-in cables. There is no need to specify initially the future size of the switcher, provided the ultimate size is not greater than 256 inputs.

The switchers are output oriented both from a signal and a control standpoint. Output modules are either 25 x 1 or 50 x 1 and each output module has its own microprocessor control system which is completely independent of the control system on any other output bus. This provides maximum bus security since failure of a microprocessor or shorting a control line will affect only one bus and not the entire matrix.

Further, since each output bus has its own control system, the crosspoint tally fed back to the control panel is generated on the same module as that on which the crosspoint is located. A positive crosspoint tally status for the bus is generated, rather than a tally generated from a central control module serving many output busses.

Serial data is used over standard RG-59/U coaxial cable to connect the matrix frames to the control panels. This simplifies installation and reduces cost. To insure that ground loop hum does not compromise the reliability of the serial data control system, control panels are equipped with opto-isolators.

By combining a video matrix frame with one or more audio, time code, etc. matrix frames, multi level systems can be assembled for video, audio, stereo audio (left and right), SMPTE time code, intercom, tally, and machine assignment. The control system provides for up to 8 levels of control, any of which may be "follow video" or "breakaway".

Where an auxiliary matrix of small size is needed, D-4300 series switching units can be equipped with compatible microprocessor control modules, and controlled as part of the D-2000 switcher. This is useful where a small video or audio auxiliary matrix is needed for special purpose additional levels for switching audio, tally, intercom, SMPTE time code, synclock, cursors, time base correctors, etc.

D-2000 Series Video and Audio Routing Switchers

The D-2000 Series Routing Switchers use a serial data control system and have expansion capability to 250 inputs x 250 outputs.

- D-2000-25x20V** Video Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 20 output busses. Frame size is 7 inches.
- D-2000-25x25V** Video Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 25 output busses. Frame size is 8-3/4 inches.
- D-2000-50x25V** Video Routing Switcher. Basic "Building Block" matrix frame capacity is 50 inputs x 25 output busses. Frame size is 10-1/2 inches.
- D-2000-25x20A** Audio Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 20 output busses. Frame size is 7 inches.
- D-2000-25x25A** Audio Routing Switcher. Basic "Building Block" matrix frame capacity is 25 inputs x 25 output busses. Frame size is 8-3/4 inches.

D-2000-50x25A

Audio Routing Switcher. Basic "Building Block" matrix frame capacity is 50 inputs x 25 output busses. Frame size is 10-1/2 inches.

**100x25 AUDIO SWITCHER**

There are no proprietary components used in the Datatek switching systems. All components are available through electronics distributors as standard items.

All plug-in modules are interchangeable with other modules of the same type, and the switcher will remain within specification, without adjustment, when modules are interchanged. If cable equalization is used, the cable equalizer would of course normally need to be reset. Removal or insertion of modules with power on will not disturb other signals, and will not blow fuses.

**MATRIX FRAMES**

- D-2021** Power Supply System, 5-1/4" rack mounting. Includes fault monitoring and alarm.
- D-2044** Latch Retention (Battery) Supply.
- D-2045** Control Buffer Frame, 3-1/2", for use with X-Y Control Panels.
- D-2014** Source Tally Relay Frame, 1-3/4"
- D-2019** Parallel Interface Frame, 5-1/4"

Refer to Green Section for Addresses and Telephone Numbers.

B-445

D-2047 Three Bus Lever Switch Control Panel

D-2029 Single Bus Touch Pad Control Panel

D-2000 Series Control Panels

Each Datatek control panel is equipped with its own microprocessor to communicate with an associated output bus microprocessor in the matrix frame. The serial data control system uses RG-59/U coaxial cable, with an optoisolator in each bus to prevent errors due to ground loop hum.

Control panels are available to operate either a single bus, or multiple busses. They are also available for audio-follow-video, audio or video breakaway, and for controlling multiple levels, either on a follow or breakaway basis. In addition, the control panels can be lever switch, touch pad keyboard, or pushbutton per input.

Modems and RS-232-C interfaces are available to operate single or multiple busses over standard telephone lines, or connected to automation systems.

Control Panels — Some of the D-2000 series control panels are listed below.

- D-2029** Single Bus Touch Pad Control Panel, 1-3/4" Rack Mounting, for video-only, audio-only, or audio-follow-video switching. With two LED displays, one for preset (selection) and one for line. With reset and take button.
- D-2030** Single Bus Touch Pad Control Panel, 1-3/4" Rack Mounting, for one video and two audio channels, with provisions for switching audio-follow-video or breakaway of one or both of the audio channels. Includes three LED displays, one each for video and audio channels 1 and 2. Includes switch level select switch, reset and take button.
- D-2031** Single Bus Touch Pad Control Panel, 1-3/4" Rack Mounting, for audio-follow-video or audio breakaway switching. With two LED displays, one for video source and one for audio source. Includes split-audio switch, reset and take button.
- D-2032** Portable Diagnostic Control Unit, for checking matrix status from front of rack. Includes LED displays and touch pad keyboard. May also be used as a single bus control panel.
- D-2033-25** Single Bus Pushbutton Control Panel, 1-3/4" Rack Mounting, with 25 illuminated pushbutton switches.
- D-2033-25S** Single Bus Control Panel, 1-3/4" Rack Mounting, with 25 illuminated pushbutton switches. Provision for split audio switching.
- D-2033-25P** Single Bus Control Panel, 1-3/4" Rack Mounting. Programmed to control any 25 specified inputs out of the matrix.
- D-2033-50** Single Bus Pushbutton Control Panel, 3-1/2" Rack Mounting, with 50 illuminated pushbutton switches.
- D-2033-50S** Same as above, but with additional switch for split audio switching.
- D-2034 S** Multi-Bus Touch Pad Control Panel, 3-1/2" Rack Mounting, for operation of the full matrix or a portion of the matrix, including provision for split audio operation. Includes two LED displays, one for output bus and one for input selected. With touchpad, reset and take button. Equipped with key-lock inhibit of the take switch to prevent accidental interference with individual bus control panels. Requires also D-2045 Control Buffer Frame.

B-446

Refer to Green Section for Addresses and Telephone Numbers.

- D-2037** Single Bus Control Unit, 2-digit lever switch input selection, no take button. Signal switches as lever switch changed. In miniature housing.
- D-2040** Single Bus Desk Top Control Panel, touch pad input selection with reset and take button, and LED status display.
- D-2041** Single Bus Desk Top Control Panel, lever switch input selection with take button.
- D-2042** Single Bus 2-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting, with LED status display and take button.
- D-2042A** Single Bus 3-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting, with LED status display and take button.
- D-2047** Three Bus 2-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting.
- D-2049** Two Bus 2-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting.
- D-2049A** Two Bus 3-Digit Lever Switch Control Panel, 1-3/4" Rack Mounting.
- D-2050** Supervisory CRT Terminal and X-Y Control Panel. Requires also D-2045 Control Buffer Frame.
- D-2036** Alpha-Numeric Single Bus Control Panel, 1-3/4" Mounting, 10 Alphas and 10 numerics/Alpha.
- D-2069A** Alpha-Numeric Single Bus Keypad Control Panel, 1-3/4" Rack Mounting, 12 Alphas and 99 numerics/Alpha.
- D-2098** Two Bus Keypad Control Panel, 3-1/2" rack mounting.
- D-2100** Single Bus Keypad Control Panel, 3-1/2" rack mounting.
- D-2103** Eight Bus Keypad Control Panel, 3-1/2" rack mounting, permits split audio, with nine LED displays.

Machine Assignment and Control System

The Datatek Machine Assignment and Control System is designed for operation in conjunction with the D-200 Video-Audio Routing Switcher.

- D-2000-25x25D** Bi-Directional Data Matrix, 8-3/4", for 25 Source Buffer Modules and 25 Destination Switch Modules.
- D-2000-50x25D** Bi-Directional Data Matrix, 10-1/2", for 50 Source Buffer Modules and 25 Destination Switch Modules.
- D-2204** Source Buffer Module (one needed for each machine interfaced into system).
- D-2205** 25x1 Destination Switch Module (one needed for each machine control panel).
- D-2206** 50x1 Destination Switch Module (one needed for each machine control panel).
- D-2207** Machine Interface Unit, 8 function.
- D-2208** Machine Interface Unit, 16 function.
- D-2213** Machine Control Panel Module. Provides: (A) RS 422 connection to 25x1 or 50x1 Destination Switch Module and (b) Connection to readouts and momentary normally open switches on console for up to 8 functions.

Control Panels—Price dependent on customer requirements. Customer can use existing switches if desired or can build own panels.

Because of options and system configuration affecting price, all prices are on a "Price on Application" basis.

D-2400 Routing Switcher

- Compact design—up to 450 crosspoints per RU
- Inherent capability for up to 8 levels—individually addressable
- Up to 4 levels accommodated in one card frame
- Unlimited expansion, inputs and outputs
- Field expansion without rewire
- Wide video bandwidth (60MHz) to handle HDTV, MAC or Digital Video signals
- Vertical interval switching standard—external reference not used
- High audio level and low noise give wide dynamic range of 116dB minimum
- Very short, consistent access time, regardless of size
- Independent control microprocessor for each two buses in the system
- Minimum of two X-Y control ports for overall matrix control, with computer control capability
- Control system compatible with D-2000, D-2200, D-2300, D-4300 systems and control panels
- Modules are not slot conscious—no PROM nor switch changes required
- All crosspoints computer tested at factory

An extremely flexible control system is used, providing for comprehensive control of up to eight levels, for field programming either the whole or part of the matrix, for external RS-232/422 control, etc. The system is compatible with D-2000, D-2200, D-2300 and D-4300 series systems.
